At Byblos (ancient Gebal) pottery-storage jars, large enough to contain the flexed body of an adult, were used as tombs or coffins. Smaller jars containing the skeletons of infants and small children have been found at several biblical cities. A more common practice was to place the deceased in the tomb without enclosing it in any kind of box. At the end of the Late Bronze and beginning of the Early Bronze period, *ca.* 1200 B.C., some Canaanites adopted the practice of burying their dead in anthropoid clay coffins on the tops of which were molded in relief human features such as the face and hands. Excellent specimens found at Beth-shean are now in the Palestine Archaeological Museum in Jerusalem. Dating *ca.* three centuries later, and from Dibon, onetime capital of Moab, comes a terra-cotta coffin having on the lid a similar type of representation of the human features.

In this connection mention should be made of the stone sarcophagi,* like that of King Ahiiram of Byblos.* Dated by some scholars as early as the thirteenth century B.C., they were carved from natural rock, sculptured on the sides and ends with scenes depicting the deceased ruler and his attendants, and inscribed on the edge of the massive lids with a Phoenician inscription. In the Hellenistic and Roman periods, similar stone sarcophagi of marble were beautifully carved on the outside surfaces with representations of human figures and symbols of the deities. Figs. SID 58; GEB 15.

There appears to have been a degeneration in the

construction of tombs about the beginning of the Early Iron Age, coinciding with the period of Israelite settlement in Canaan. Caves continued to be used as tombs, and even where there is evidence of some attempt to shape the cave, the result was a plain cavern without decoration or individual loculi. However, before the end of the Early Iron period, ca. 900 B.C., tombs were carefully hewn, usually in rock formation near the surface of sloping hills. Examples excavated at Megiddo, Lachish, Tell en-Nasbeh, and elsewhere follow a pattern of a small courtyard outside a shaped entrance which led down several steps into a rectangular or oval chamber on the sides and ends of which were shelves or ledges cut from the native rock. The preparation of such a tomb would have required considerable time and labor; this suggests that Hebrew leaders, like the Egyptian Pharaohs,* who could afford the cost, arranged for the construction of their tombs during their lifetime. See, e.g., the report of Asa's burial: "They buried him in the tomb which he had hewn out for himself in the city of David" (II Chr. 16:14). Fig. TOM 69.

Beginning in the Hellenistic period and continuing through the Roman period, tombs became larger and more elaborate in their construction. Of course, for burial of the poor of the land in every generation, pits, caves, and cisterns continued in use; see, e.g., a reference to the "graves of the common people" (II Kings 23:6) in the Kidron Valley E of Jerusalem in the time of Josiah. Just as the style of construction of Jewish houses and public buildings (I Macc. 1:14; II Macc. 4:9-15) was influenced by Hellenistic architecture and art, the building of tombs was similarly affected. Before the destruction of the second temple, several tomb complexes were carved in the rock formations N and E of Jerusalem. Among them were the mausoleum of Queen Helena of Adiabene* (Jos. War V.iv.2), the tombs of James and Zacharias in the Kidron Valley near the "Tomb of Absalom,"** and the so-called "Tombs of the Judges."* The front of the latter included an inscribed architrave, porch, and doorways, all carved from the native rock into which were cut six chambers on two levels containing ledges and *kôkhim* to accommodate seventy bodies at one time. Some smaller tombs of the period, and also in Byzantine times, were carved with rectangular entrances into which a stone could be set, or with grooves in front where a rolling stone could be placed*

71. Tomb cut in the rock, in Palestine

(Matt. 27:60; Mark 15:46; Luke 24:2; John 20:1). At the time of new burials, such entrances were opened, the bones from previous burials were placed in stone boxes (see OSSUARIES)* for which small niches were often carved in the walls, and the body was placed on a ledge, or in a *kôkh* that projected into a wall and could be sealed on the end from the main chamber by a stone slab. Pl. XXVIa; Figs. TOM 70; ART 81; TOM 71; OSS 13-15.

Among the most elaborate tombs excavated thus far in Palestine, Syria, and Jordan are those at Marissa, Palmyra, and Petra. The famous painted tombs of Marissa, dating from the Ptolemaic period and showing Egyptian and Phoenician influence, were of the *kôkhim* type. The walls were richly decorated with brightly colored paints, which have faded considerably since the discovery of the tombs ca. 1902. The paintings include representations of various types of animals, objects such as vases, and musical instruments carried by human figures. Greek inscriptions and graffiti, as well as an Aramaic inscription, offer some information about the owners of the tombs, including the name of one Apollonophanes, head of a Sidonian colony at Marissa. The necropolis included at least four tomb complexes. The largest was approached through a court and door over which there was a Greek inscription. From the antechamber there radiated three large chambers like the arms of a cross. In the walls of these rooms were cut *kôkhim* for forty-one burials and three other recesses for large sarcophagi.

Tombs at Palmyra, some of which date during the second and third centuries A.D., varied considerably in style; the two chief types were the great subterranean "houses of eternity" and the equally impressive tomb towers. Both were located W of the city. The former were often beautifully painted and contained skilfully carved statues and reliefs representing the members of the family buried in the tombs—Aramaic inscriptions often mention their names. The towers, some of which were four stories high, built of carefully hewn stone blocks, were richly decorated with colors and contained sculptures of the deceased.

Tombs at Petra varied considerably in size and shape; most of them date from the late first century B.C. and the first two centuries A.D. Pylon (tower) tombs were carved from the native sandstone and were usually surrounded by simple shaft graves; sometimes graves of a later period were sunk into the

roofs of the pylons. Even more impressive were the great rock-hewn mausoleums, like el-Khazneh, the Corinthian tomb, and the Tomb of the Urn, whose architectural façades, containing doors, columns, niches, and sculptures, were all cut from the colorful sandstone. Constructed by the Nabateans, whose control of caravan traffic through the region resulted in the wealth of which the tombs are a lasting memorial, the architecture shows Roman influence; one of the tombs was that of a Roman soldier. Some of the buildings, one of which was used in later times as a Christian chapel, contained large chambers extending more than forty feet into the mountains from which they were cut. Doubtless the large chambers were used as mortuary chapels. In their walls were cut niches for sarcophagi, and in the stone floors were carved loculi for individual graves. A large columbarium was carved in the face of one of the mountains (el Habis); its numerous niches once contained small burial urns; traces of ashes testify to the local practice of cremating the dead. A similar columbarium at 'Araq el-Emir (W of Amman) may be seen near the rock-cut chamber tombs, one of which has the name "Tobiah" inscribed on the outside surface near the large doorway. Cf. Fig. TOM 72.

Trans World Airlines Photo

73. The so-called "Garden Tomb" at Jerusalem

The type of tomb used as the burial place for the body of Jesus cannot be identified with certainty. Tradition dating back to the early fourth century A.D. has located the tomb in the edicule beneath the dome of the Church of the Holy Sepulchre (see SEPULCHRE, CHURCH OF THE HOLY).^{*} Excavations in Jerusalem have demonstrated that the city walls in the Herodian period were situated so that the tomb was outside the city; this discovery enhances the traditional location, although positive proof of the identification is lacking. The Garden Tomb,^{*} located outside the present N wall of Jerusalem near "Gordon's Calvary," is a rival site. This tomb—a rock-hewn chamber, the door of which was originally sealed with a large rolling stone—has been identified by archaeologists, since its discovery in modern times, as a Jewish tomb of the Roman period; there is no literary or archaeological evidence to identify it as the burial place of Jesus. The gospels record the information that the tomb was a new one located in a garden (John 19:41); it was the property of Joseph of ARIMATHEA (Luke 23:50); it was sealed by a rolling stone, and the chamber was large enough for Jesus' followers to enter (Luke 24:2-3). Figs. HOL 29-30; TOM 73.

Certain features of tomb construction are mentioned in the Mishna. Exact dimensions in terms of cubits are specified for the size of the vault or chamber, the niches (*kôkhîm*), and the courtyard, although Rabbi Simeon ben Gamaliel held that "all depends on the nature of the rock" (B.B. VI.8). A tomb might be sealed with either a wooden beam or a stone (Oh. XV.8). It was a custom to mark the graves in order to give warning of uncleanness by pouring over them whiting mixed with water (Ma'as Sh. V.1; Shek. I.1; M.K. I.2; cf. Matt. 23:27).

Finally, mention may be made of the catacombs,^{*} the most famous of which are in the vicinity of Rome and include both Jewish and Christian burials. Among the catacombs there is considerable variety of form, depending on the nature of the rock formation and the number of burials. However, the basic pattern was that of a large, subterranean network of corridors and chambers carved with burial niches large enough to contain a single body. The corridors, usually *ca.* three feet in width and in some cases forty or fifty feet high, are lined with several tiers of loculi, each a square-cornered, horizontal recess, which could be sealed with bricks or a marble slab. Interspersed among the labyrinthine corridors were chambers to which Christians fled in time of persecution and where worship was conducted. The walls were often decorated with paintings representing Christian and Jewish symbols, as well as scenes from the Bible. With the catacombs at Rome may be compared those found in Palestine at Sheikh Abreiq (identified as Beth-shearim, a city mentioned often in the Talmud). The entrances, corridors, and chambers were carved in imitation of Roman buildings; the walls were inscribed with many Jewish symbols, including several varieties of the *menorah* (see LAMPSTAND). Greek, Latin, and Aramaic inscriptions identify by name some of the persons buried in the catacombs. Fig. DES 27.

4. Contents. In addition to the objects mentioned in the preceding sections, many others are often

found in excavated tombs. The number and type vary greatly, according to the degree of wealth and the cultural backgrounds of the persons who were buried in the tombs. In general, they may be classified as objects of personal adornment, military equipment, household use, and AMULETS of various kinds. Of course, tombs of the poor were devoid of valuables, or contained a few simple pieces of pottery beside the body; the tombs of the wealthy were often robbed of their treasures by later peoples.

Among the objects of personal adornment may be mentioned necklaces, bracelets, anklets, finger rings, earrings, pendants, and headdresses. Bone, bronze, iron, silver, gold, and semiprecious stones were used in the making of such objects. Great numbers of scarabs are often found in Palestinian tombs that were used during periods of Egyptian influence. The presence of mirrors, combs, and cosmetic palettes indicates further an interest in personal appearance.

Military equipment of the "dagger type" in the Jericho tombs usually included a single copper dagger in a grave. Others at Jericho and elsewhere contained bronze daggers as well as javelin heads, flint arrowheads, and stone blades.

Even more numerous are the objects of household use. These include pottery lamps, jars, bowls, pitchers, cups, and other vessels which were used in the homes of the deceased. Small juglets contained oil or perfume; they were doubtless fashioned in imitation of the pottery jugs used for storage purposes in the home. Some Jericho tombs of the Middle Bronze Age, of which scores were excavated beginning in 1952, were found to contain materials that are, under ordinary circumstances, perishable. These included pomegranates and raisins or grapes, bones of sheep, and fragments of flesh; with such food were also found wooden stools, boxes, a bed, a table, and woven mats and baskets. Fig. ARC 43.

Miniature figurines of bone or clay in the shape of animals, birds, and human figures attest the custom of burying amulets of various kinds with the dead.

5. Significance. It is certain that ancient peoples did not all attach the same significance to the practice of burying their dead in tombs. Although the difference between the tombs of the poor and the rich in ancient Palestine can often be determined, there is uncertainty regarding the motivation and the ceremonies relating to burial practices. Scholars do not agree concerning the religious views evidenced by the custom of building tombs in the shape of houses and of depositing food and other objects in them. It is possible that the worship of the dead was involved, that the dead were feared and needed to be placated so as not to harm the living, or that a belief in physical resurrection led to an effort on the part of the living to make provision for the comfort and happiness of the dead in a future life.

Finally, attention may be called to several biblical references which shed some light on the significance of Palestinian tombs and graves. The burial of Deborah, Rebekah's nurse, under an oak tree may reflect a belief in sacred trees and the custom of locating graves near them (Gen. 35:8). In exceptional cases it was thought that the sin of a man might prevent him from having a burial in the tombs of his fathers (I Kings 13:22). It was considered a suitable

reward for a righteous ruler to "lie in glory, each in his own tomb," but to be removed from a sepulchre was a sign of great evil (Isa. 14:18-19). To be deprived of burial was considered a great calamity (II Kings 9:36-37; cf. Ezek. 32:27, which may imply that a punishment was involved when a warrior was buried without his weapons). It was an act of piety to protect the bodies of slain warriors until they could be buried (II Sam. 21:1-14), and to bury those who were killed during times of persecution (Tob. 1:18-19; 2:8-9). It is reported about Jason, who slaughtered many of his fellow countrymen and left them unburied, that he "had no one to mourn for him; he had no funeral of any sort and no place in the tomb of his fathers" (II Macc. 5:10). It was a mark of honor to have a watch kept over one's tomb (Job 21:32), but the practice of sitting in the tombs was condemned (Isa. 65:4; the reason for such a custom is not specified, although the context suggests a pagan practice). Persons thought to be possessed by demons lived in or among the tombs (Matt. 8:28; Mark 5:1-5; Luke 8:27). Well-known tombs such as those of Rachel* (I Sam. 10:2) and David (Acts 2:29) were important landmarks. Jesus' rebuke of the scribes and Pharisees as hypocrites for building the tombs of the prophets and adorning the monuments of the righteous was doubtless not directed against these practices as such, but against those who ignored the living prophets while honoring the dead. Fig. RAC 3.

W. L. REED

TOMBS OF THE KINGS [קברות המלכים] (II Chr. 21:20; 24:25). Alternately: **TOMBS OF THE KINGS OF ISRAEL** [קברי מלכי ישראל] (II Chr. 28:27); **SEPULCHRES OF DAVID** [קברי דוד] (Neh. 3:16); **TOMBS OF THE SONS OF DAVID** [בני דוד] (II Chr. 32:33); **KJV** always **SEPULCHRES**. The tombs of the Judean kings of Davidic descent.

1. Biblical data. The necrological formulas with which the authors of Kings and Chronicles conclude their notices on the kings of Judah refer to burial grounds in the City of David (see **DAVID, CITY OF**), where the rulers of the Davidic dynasty were interred, apparently each one in his own tomb, as may be inferred from II Chr. 16:14; II Kings 9:28. References to the tombs of the sons of David (II Chr. 32:33), or to the sepulchres of David (Neh. 3:16), taken collectively, do not imply that there was a family vault in which the bodies were laid to rest, but rather a reserved area within the walls of the city, in which individual graves were provided.

The notices in Kings are stereotyped. Those in

Chronicles are generally freer, and record with greater detail the circumstances of the royal interments, especially when, by way of exception for such reasons as violent death, leprosy, or notorious impiety of the deceased, the interment did not take place in the royal necropolis. Here is the list of these exceptions: Jehoram was buried "in the city of David, but not in the tombs of the Kings" (II Chr. 21:20)—i.e., within the precincts of the city, although not in the royal enclosure; for Joash (II Chr. 24:25), we find the same formula; Uzziah was interred "in the burial field which belonged to the kings, for they said, 'He is a leper'" (II Chr. 26:23), a formula which has been diversely interpreted, but which suggests a contrast with the usual mode or place of royal interments; Josephus states that Uzziah "was buried alone in his gardens" (Antiq. IX.227), perhaps the gardens surrounding the house in which he was confined (II Chr. 26:21); Ahaz was buried in the city, but not in the "tombs of the kings of Israel" (II Chr. 28:27), where "Israel" is obviously a scribal error; Manasseh was interred "in the garden of his house, in the garden of Uzza" (II Kings 21:18), "in his house" (II Chr. 33:20); Amon, "in the garden of Uzza" (II Kings 21:26); in the last two instances, it is questionable whether the garden of Uzza ought to be identified with the burial place of Uzziah. The place of interment of the last four Davidic kings is not mentioned in the Hebrew text and its derivatives. Exceptionally Jehoiada, who had exercised the regency of the kingdom during the minority of Joash, was buried "in the city of David among the kings" (II Chr. 24:16).

2. Localization. The notice relative to Hezekiah in II Chr. 32:33 states that his tomb was "in the ascent" (מעלה) of the burial ground of the kings. This piece of information ought to be pieced together with the topographical data of Neh. 3:15-16, where the sepulchres of David are mentioned in geographical sequence after the "stairs [מעלות] that go down from the City of David." These texts point to the hill wedged between the valleys of the Tyropoeon and the Kidron, where excavations have led to the discovery of a flight of stone degrees leading to a postern of the E fortifications, possibly the FOUNTAIN GATE, and of much-dilapidated rock-cut tombs, the original disposition of which was diagnosed with some difficulty. It seems that individual burial chambers, in the shape of barrel vaults, were accessible from the surface through sunken rectangular shafts similar to those of the dynastic tombs of early Phoenician rulers. These chambers were distributed along a strip of ground, some 350 feet in length from N to S. Their identification as the tombs of the kings, even though not certain, is at least probable.

There are no positive clues to the localization of the garden of Uzza, nor of the private burial ground of Uzziah. One would incline to seek the latter out of town. An Aramaic inscription on a stone tablet refers to a possible transfer of Uzziah's remains at a later date. It reads as follows (translation by E. L. Sukenik): "The bones of Uzziah, King of Judah, were brought hither; not to be opened." The script is very similar to that used on ossuaries immediately before or around the beginning of the Christian era. Unfortunately the tablet was not found in its origi-

nal location, but among curios collected by an archimandrite of the Russian monastery on the Mount of Olives. The authenticity of the inscription, although not generally contested, has not been established beyond doubt. See INSCRIPTIONS. Fig. UZZ 19.

3. Late traditions. Miscellaneous traditions have diversely located the tomb of David in Bethlehem, in the domain of Gethsemane, or on the SW hill of Jerusalem, the Christian ZION. The latter tradition is based on an abusive exegesis of Acts 2:29, following which David's tomb was shown to pilgrims in the medieval chapel of the Upper Room, which has now become a mosque.

74. Plan of tomb of Helene of Adiabene, the so-called Tombs of the Kings

The so-called Tomb of the Kings of Judah, in the N suburb of Jerusalem, E of Nablus Road and close to the Anglican cathedral of Saint George, is in reality the hypogeum of Helen, queen of Adiabene, a district in Upper Mesopotamia. This monument antedates the ruin of Jerusalem in A.D. 70 by one or two decades. It is mentioned by Josephus (War V.147), in relation to the N wall of Jerusalem or wall of Agrippa.

burning coal from the altar (Isa. 6:6). Bronze and iron tongs of tweezer or forceps type are known archaeologically (Fig. TON 75). See also SNUFFERS.

P. L. GARBER

TONGUE [ἰσῆ, γλῶσσα]. The biblical understanding of "tongue" includes: (a) its function as a part of the physical make-up of man whereby he eats and drinks (Judg. 7:5; Isa. 41:17); (b) its employment as a term for "language" and therefore "nation" (see TONGUES, CONFUSION OF); (c) a mode of the working of the Spirit (see TONGUES, GIFT OF); (d) its usage for the action and dynamic of the whole life of man; and (e) its use as a figure for that which has extension in a material sense.

Because it is the agent of speech, the tongue represents the various languages and dialects which men used. Men were recognized as being different in an essential matter when they spoke another language. Indeed, not only different; this difference is a part of a vague threat (Jer. 5:15). It is a synonym for "people" and "nation" (Isa. 66:18).

The more general and characteristic meaning of "tongue" begins with the recognition that the primary function of the tongue is to speak. While this in the most fundamental way is a function parallel to eating, the activity of speaking assumes a much greater significance. Speaking is not a mere verbal activity; it is an expression of the totality of man, his purposes and values. The tongue is the agent through which what is in man is effectively released into the world (Ps. 39:3—H 39:4). It is the agent to make manifest man's inward character. Thus "tongue" and "bitter words" stand in close relation to "secret plots of the wicked" and "scheming of evildoers" (Ps. 64:2-3—H 64:3-4). Frequently the tongue is an agent closely related to the HEART (25) of man (Ps. 45:1—H 45:2; Prov. 10:20; 17:20). The tongue, as other members of the body, is a way of acting for the whole man. In the speaking of the tongue, all the powers of intellect and will are given expression.

The wisdom literature regards this from a utilitarian point of view. Man's speaking may bring upon him either good or ill: "Death and life are in the power of the tongue" (Prov. 18:21). A tongue which speaks words of kindness and courtesy may enhance the well-being of the speaker (12:18). In a negative way, the same possibility is stated:

He who keeps his mouth and his tongue
keeps himself out of trouble (21:23).

On the other hand, he who speaks carelessly or irresponsibly is sure to bring trouble upon himself (21:6; 26:28; 28:23).

So also, as a possible means to good or bad, in Ecclesiasticus: "A man's tongue is his downfall" (5:13). But the tongue need not lead to ruin:

A pleasant voice multiplies friends,
and a gracious tongue multiplies courtesies
(6:5).

This same awareness of the great potentialities of the tongue is clear in James. The tongue, as the rudder of a ship, or the bit in the mouth of a horse (Jas. 3:3-8), is able to determine the whole course of one's life.

The thought of James, however, is not based sim-

ply on utilitarian motives. The ethical context in which James writes gives expression to a deeper dimension, which permeates the biblical understanding. Because the tongue reveals what is in the heart, there are moral implications to the speaking of the tongue. It is related to the doing of good (Ps. 34:13—H 34:14), not for the sake of personal benefit, but because the ethical life is man's way of seeking God. The tongue is the way man "speaks justice" (37:30). Much more often it is the instrument of acting wrongly in human relations. By the tongue, man boasts as he ought not (12:4); he slanders (Prov. 25:23); he speaks deceitfully (Pss. 109:2; 120:2). This is not simply speaking maliciously. The tongue is also the agent of cunning and scheming, which is more than outward action; it is setting one's heart, one's very life, against another to his damage (Ps. 140:2-3—H 140:3-4; Isa. 59:3). The tongue has related to it all the potentialities for the right or wrong ordering of life. It is an effective tool in the role of creating or destroying community. See WORD.

This suggests the profound implications involved in the biblical concept, which never separates ethical behavior from religious life. Indeed, "he who mocks the poor insults his Maker" (Prov. 17:5). The use of one's tongue in "speaking justice" or practicing deceit and slander have to do with the religious potentialities of the tongue. It, as all of human life, can be an instrument in expressing praise to God (Pss. 35:28; 51:14—H 51:16; 71:24; Rom. 14:11; Phil. 2:11). What proceeds from the tongue can cause alienation from God—i.e., SIN (Job 15:4-5; Pss. 39:1—H 39:2; 78:35-37). The tongue possesses all the potentialities for goodness and all the possibilities for badness which belong to man's createdness. "With it we bless the Lord and Father, and with it we curse men, who are made in the likeness of God. From the same mouth come blessing and cursing." (Jas. 3:9-10.)

The tongue, which is alive to all the possibilities of life, reveals the essential unity of man's life. Man's self-interest, his relation in the community of men, his relation with his God, all prosper or suffer as he affirms or denies the order of life which his Sovereign has willed. The tongue is an instrument man has been given (Isa. 50:4), that he might give expression to his affirmations and denials of the God of Israel as the Lord of all life.

The tongue is the means of expressing the total character of the person. God also is a conscious, willing personality, who by his tongue is able to release his power and purpose into life (Isa. 30:27). As the Bible understands man as being equipped to act freely and effectively, so much more God, who has given tongues to men.

Aside from this personal dynamic usage, "tongue" is also employed in a figurative sense as a projection, or extension, of that which in the material world is elongated. Examples of this are to be found in Josh. 7:21-24, which speaks of a "tongue" ("bar"; KJV "wedge") of gold; and Isa. 11:15, which refers to the "tongue of the sea." Clearly these usages disregarded the dynamic character of the term in its personal nuances, using it rather in a physical sense.

***TONGUES, GIFT OF** [γλῶσσα, tongue; λαλεῖν, to speak]. Speaking in tongues, also called "glossolalia," γλῶσ'α λα'λι'α, a striking phenomenon of primitive Christianity. It consisted in articulate, unintelligible speech issuing from Christians who, in a state of ecstasy, believed themselves to be possessed by the Spirit. It was prevalent in the Pauline churches, particularly at Corinth (I Cor. 12-14), but appeared earlier when the church was constituted in history and began its expansion into Judea and Samaria (Acts 2:1-42; 10:44-48; 11:15-17; 19:2-7).

This phenomenon was not limited to Christianity but was found in many of the religions of the ancient world. Wherever it appeared, the common element was the belief that the spirit of the god worshiped took possession of the devotee, spoke through him, and often produced bodily movements of abnormal character. During such ecstatic states the vocal organs were affected, the tongue moved as if by the operation of a power beyond the mental control of the subject, and utterances poured forth which, to the observer, were as impressive as they were incoherent.

1. **The tongues at Pentecost.** The glossolalia first appeared in the Christian church at Pentecost, when the apostles, and those associated with them, became convinced, after much rethinking and prayer (Acts 1:24), that the risen Jesus was God's Anointed (Acts 2:36), that the messianic age had begun (Acts 2:29-33), that they were the people of the New Covenant inheriting all the promises made to the people of the Old (Acts 2:16-17; 3:25). They were so overwhelmed by the force of these convictions that, with all their inhibitions released, resources of spiritual power became available to them, creating new levels of spiritual experience which found abnormal channels of expression. Luke, describing this momentous event, says: "They were all filled with the Holy Spirit and began to speak in other tongues, as the Spirit gave them utterance" (Acts 2:4). Similar manifestations continued, for the converts at Caesarea and Ephesus also "spoke in tongues" when they received the Spirit (Acts 10:46; 19:6), and Peter declared that the experience was similar to that at Pentecost (Acts 10:47). Glossolalia seems to have been the sure, to many perhaps the surest, evidence of the Spirit's indwelling. Note also that in some texts of the late addition to Mark at 16:17 there is reference to speaking "in new tongues."

A number of explanations, or rationalizations, of the "tongues" at Pentecost have been offered:

a) For the purpose of evangelization a miracle of language is said to have taken place, whereby the audience heard what was said in a number of foreign languages. Many of the early church fathers held this view.

b) The multitude, all of whom spoke either Greek or Aramaic, and many of them both, would under-

stand, particularly those who knew the various dialects, what Peter and the others were saying.

c) It has been suggested that the speech of the apostles was filled with foreign phrases and idioms, heard over the years, which, under the intense emotion and excitement, began to pour forth automatically from the subconscious. Precedents are cited to illustrate this.

d) Another view is that because of the close spiritual rapport, the thoughts and feelings of the speakers were transferred to the hearers, and there was general understanding of what was said.

All attempts at rationalization are conjectural and are dubious especially when viewed in the light of what is said about glossolalia elsewhere in the NT.

2. **The Lukan account.** The story in Acts is clear. The "tongues" spoken on the day of Pentecost are foreign languages, understood by a bewildered and astonished crowd. But when "tongues" were spoken at Caesarea and Ephesus (Acts 10:46; 19:6), Peter equated the experience with his own, without any reference to a linguistic miracle. There is no evidence later that the apostles enjoyed the benefit of such a miracle, nor was there need of it, since Greek and Aramaic were sufficient to meet the needs of the church. Moreover, long before Luke completed Acts, the phenomenon of tongues was common in Pauline churches, but was certainly not thought of as the ability to speak foreign languages. Paul, indeed, declared that the glossolalia was not intelligible speech, would not be understood, and might even be construed as insanity (I Cor. 14:9, 23). Plainly an irreconcilable difference exists between the Lukan account in Acts 2:4 and Pauline accounts. The widely accepted view is that both writers were dealing with the same ecstatic phenomena.

What then has Luke done? Certain suggestions have been made. According to one view, Luke has taken the older and more reliable tradition concerning glossolalia, in which emphasis was mainly on the ecstasy of the disciples—as witness the reference to drunkenness (Acts 2:13)—and on the revival of the prophetic spirit (Acts 2:15; 3:24-25), and transformed it, shaping and dramatizing the event according to the rabbinic tradition of the giving of the law in every language, and in the interests of Luke's own emphasis on the universal appeal of Christianity.

Another suggestion is that, under Pauline influence, Luke sought to reinterpret the original speaking in tongues with a view to reducing the prestige of the current glossolalia, which had become damaging to the church.

Again, it is said that Luke has literalized the glossolalia, or perhaps has taken the view that, though unintelligible, it was nevertheless a form of language which, under the right conditions and by the proper people, could be understood.

3. **The glossolalia in Pauline churches.** Speaking in tongues was so well known at Corinth and elsewhere that Paul did not explain or describe it but simply stressed its unintelligible ecstatic character. There were "various kinds of tongues" because of differences of native language or diversity of spiritual mood (I Cor. 12:10, 28). Some Christians did not possess the gift (I Cor. 12:30), and others, wishing to safeguard the purpose of worship, sought to curb it

(I Cor. 14:39; Col. 3:16; I Thess. 5:19-20; cf. Eph. 5:18-20). Many believers (possibly members of the Cephas party [I Cor. 1:12]), tremendously impressed with it as convincing evidence of Spirit-possession, gave it primary value and eagerly desired it.

This Pauline glossolalia has been described as angelic speech (I Cor. 13:1), a heavenly language beyond human eloquence in which God is praised by the heavenly hosts; or again as antiquated or unusual speech, unintelligible because archaic, known only to someone with expert philological knowledge. This is meaningless speculation. Quite possibly, among the ecstatic outpourings, sounds which resembled syllables and words from current tongues gave the impression of a real language. This could hardly have been otherwise, and proves little.

Because of the exaggerated emphasis upon glossolalia at Corinth, Paul was compelled to deal with it. He does so by recognizing it as: (a) a genuine gift of the Spirit, not to be forbidden, and acknowledges that he shares the gift himself (I Cor. 14:5, 18, 39); (b) an aid to private devotion, a means of personal communion with God, an opportunity to express thoughts and feelings which could find no outlet through ordinary channels (I Cor. 14:4; cf. Rom. 8:26-27); (c) a sign to unbelievers (I Cor. 14:22), an evidence of divine power which, like the "sign of Jonah" (Matt. 12:39), though genuine enough, was yet unrecognized by the hardhearted and unbelieving scoffers and critics.

Paul saw the dangers in the practice even more clearly than its values. He gave it no precedence or encouragement in public worship (I Cor. 14:19, 28). It is last in his list and in point of value (I Cor. 12:10, 30; 14:19). He indicates methods of control:

a) By applying regulatory principle. The use of spiritual gifts must be determined by their worth in building up the church "in love" (I Cor. 13; 14:4-5, 17-19; Col. 3:14; cf. Eph. 4:16). Tongues are too individualistic, encourage self-centeredness and self-importance, and are detrimental to the solidarity of the Christian fellowship (Rom. 12:3; I Cor. 13:5; Phil. 2:3-4).

b) By maintaining orderly worship. The edification of the church is primary. The glossolalist must restrain himself and keep silent unless interpreted (I Cor. 14:27-28). When worship is not understood, or repels seekers after truth, it fails. Order and decency are of first importance (I Cor. 14:13-19, 23-33, 40).

c) By exercising the gift of interpretation. The capacity to interpret tongues was the special gift of some (I Cor. 12:10, 30; 14:28)—the ability to convey a supposedly rational account of what was said, possibly by thought-transference effective through spiritual rapport. The ecstatic lacking this gift should pray for it, since he has a responsibility both to himself and to the church (I Cor. 14:13-14).

4. **Parallel phenomena.** Such ecstatic speech as described above prevailed among the earliest Hebrew prophets, the professionalized *nabi'im* (בני הנביאים), who, as Yahweh enthusiasts, wandered about the country in bands, working themselves into religious frenzy by means of music and dancing (I Sam. 10:5-13; 19:18-24; II Sam. 6:13-17; I Kings 20:35-37). The word *nabi* (נביא), by which they were called,

was probably suggested by their ecstatic babblings, and their *hith-nabbe* (חִיתְנַבֵּה), "prophesying," may well have corresponded to the glossolalia, though scholars are not agreed upon this. In Hellenistic circles also, followers of the Dionysian cult, or of some mystery religion, under powerful emotional pressures of ceremonial rites, often slipped into ecstatic states bordering on frenzy, and expressed themselves in forms intelligible only to the initiated. Through the centuries glossolalia has frequently reappeared among Christian groups, the Montanists, the Camisards, the Irvingites, and many modern sects given to emotional extremes. The psychological aspects are patent.

TONSURE. See **BALDNESS.**

TOOTH [טֶּשֶׁת; ὀδούς]. Biblical references to tooth and teeth are many and varied. Under OT law the loss of a tooth was considered equally as grave a matter as the loss of an eye (Exod. 21:24, 27; Lev. 24:20; Deut. 19:21; Matt. 5:38; on the *lex talionis*, see also **LAW IN THE OT**), and perfect teeth are a mark of special beauty in Song of S. 4:2; 6:6 (cf. Gen. 49:12).

The teeth of voracious animals, both real (Deut. 32:24; Job 41:14) and visionary (Dan. 7:5 ff; Rev. 9:8), signify predatory power (Job 29:17; Ps. 124:6; Dan. 7:5; Zech. 9:7). Thus the "enemy" or the "wicked man" may be characterized as a gnashing beast (typically the lion; Pss. 35:16-17; 57:4; 58:6; cf. also Ps. 37:12; Prov. 30:14; Lam. 2:16; Joel 1:6; Acts 7:54).

In Job 29:17 the righteous man breaks the "fangs" (lit., "jawbone") of the unrighteous, releasing the defenseless from his "teeth." Similarly, Yahweh is called upon by the psalmist to break the teeth of the wicked (Pss. 3:7; 58:6); but in his wrath he himself may be likened to a ravening beast (Job 16:9; Lam. 3:10-11; cf. also Lam. 3:16).

In other figures, the teeth may represent pain (Prov. 25:19) or distaste (10:26). The proverb in Jer. 31:29; Ezek. 18:2 ("set on edge"; lit., "become dull, insensitive") refers to the doctrine of corporate guilt and retribution (cf. Lam. 5:7), which was being strongly challenged in the seventh and sixth centuries (cf. Deut. 24:16; Ezek. 14:13-20).

The "gnashing of teeth" in Matt. 8:12; 13:42; 22:13; 24:51; 25:30; Luke 13:28 (cf. Ps. 112:10) has no close parallel in other literature, but clearly describes the despairing rage and remorse of those excluded from the kingdom.

TOPARCHY τὸπ'ἀρ κῆ [τοπαρχία]. A small district administered by a toparch. In the time of Josephus

and Pliny, Judea was divided into ten or eleven toparchies. The word (translated "district"; KJV "government") is used in I Macc. 10:30, 38; 11:28 to denote three provinces, in 11:34 called APHAIREMA; LYDDA; and RATHAMIN, which were added to Judea from Samaria by Jonathan. See also PROVINCE.

N. TURNER

TOPAZ [טופז], cf. Sanskrit *pita*, yellow; τσαζίζον; Vulg. *topazius*]. An orthorhombic mineral, frequently occurring in transparent prismatic crystals. It is characteristically yellow to orange in color. The topaz is a stone in the breastpiece of judgment (Exod. 28:17; 39:10), a stone on the covering of the king of Tyre (Ezek. 28:13), and the ninth jewel in the foundation of the wall of the New Jerusalem (Rev. 21:20). Job 28:19 declares that the topaz of Ethiopia is of less value than wisdom. See also JEWELS AND PRECIOUS STONES § 2.

W. E. STAPLES

TOPHEL תֹּפֶל [תפל] (Deut. 1:1). One of the limits of the general locality where Moses addressed the Israelites "beyond the Jordan in the wilderness, in the Arabah over against Suph, between Paran and Tophel, Laban, Hazereth, and Dizahab." Tophel has been usually identified with modern et-Ṭafleḥ, a village located in a fertile valley on the road from Kerak to Petra, ca. fifteen miles SE of the Dead Sea. However, this identification has been questioned on phonetic grounds; the Arabic "ṭ" does not correspond with the Hebrew "t." Although not mentioned elsewhere, Tophel may have been one of the stopping places of the Israelites in the wilderness.

J. L. MIHELIC

TOPHETH תֹּפֶת [תפת]; KJV TOPHET —fit in Isa. 30:33; Jer. 7:31-32; 19:6. A place in the Valley of Hinnom (see HINNOM, VALLEY OF THE SON OF), close to the POTSDAM GATE, and in the vicinity of the Potter's Field (Jer. 19; see AKELDAMA). There is a general agreement as to its location in the lower tract of the Wadi er-Rababi, toward its junction with the Kidron (see KIDRON, BROOK). The name Topheth is derived from the Aramaic תפת and meant originally a hearth or a fireplace, previous to being used as a toponym. The Masoretes gave it the vowels of *bōsheth*, "shameful thing," on account of the shocking associations of the place. Topheth is described as an illicit open-air sanctuary or HIGH PLACE in the Valley of Hinnom, which became involved in the same reprobation (Jer. 7:31). Children were sacrificed as burnt offerings in honor of Baal, who is mentioned in parallelism with MOLECH (Jer. 32:35). It is not altogether clear whether these practices were those of a foreign cult, or of a corrupted form of Yahwism. They were popular under the reigns of Ahaz and Manasseh, who are recorded as having offered of their own children (II Chr. 28:3; 33:6). The high place of Topheth was desecrated by Josiah, in execution of his program of religious reformation (II Kings 23:10). Jeremiah, denouncing the past sins of the nation, cursed Topheth and the Valley of Hinnom, which he foretold would be called appropriately "valley of Slaughter," because of the number of men

and women slain in the day when God would exercise his vengeance on Judah and Jerusalem, and when the corpses should be interred in Topheth, for lack of vacant burying grounds. This, according to Semitic ideas, would be the ultimate profanation of the high place (Jer. 7:32; 19:6-7, 11). An oracle of Isa. 30:33 contains an uncertain reference to Topheth either as a toponym (KJV "Tophet"), or as a common name (RSV "a burning place"); the Hebrew has here תפתה.

G. A. BARROIS

***TORAH** תֹּרָה [תורה], presumably from ירה, to direct, point the way; Apoc. νόμος]. General OT term for divine instruction and guidance, particularly through the law (see LAW IN THE OT); translated "law." The promulgation of Torah is particularly associated with the tribe of Levi and appears in an early text in connection with the oracular use of Urim and Thummim, the sacred lots (Deut. 33:8-11). Torah, while not the exclusive concern of the priests, is their particular responsibility (Jer. 2:8; 18:18; Hos. 4:6).

The term appears to have developed in meaning in the following way: (a) In early passages, priestly instruction is provided on the basis of oracles and traditional understandings of the requirements of Yahweh; (b) by the time of the later monarchy, "Torah" refers to the basic instruction and direction provided to Israel by Yahweh, particularly in the legal materials; (c) in the postexilic period (certainly by the time of Ezra, last half of the fifth century B.C.), "Torah" means the substance of the Pentateuch (Neh. 8:8), the book of Moses (Ezra 3:2; 7:6; Neh. 8:1; etc.); (d) finally, "Torah" becomes the standard term for the Pentateuch in its entirety, as distinguished from the Prophets and the other books (Prologue to Ecclesiasticus).

W. J. HARRELSON

TORCH [תפיד; λαμπάς]. A brilliantly burning flame produced primitively by a highly combustible stick of wood or by an absorbent combustible material tied on the end of a rod or stick and dipped into oil and ignited. Yahweh signifies his commitment to the covenant with Abraham, he seals the covenant, by passing between the severed halves of animals in the form of a torch (Gen. 15:17; cf. for the significance of the account, Jer. 34:18). By the strategic use of torches, Gideon wins his incredible victory (Judg. 7:16 ff). In the poem on Leviathan, in Job 41, the remarkable description includes the lines:

Out of his mouth go flaming torches;
sparks of fire leap forth (vs. 19).

Zion's redemption is assured by the prophet in Isa. 62:1 in these terms:

Her vindication goes forth as brightness,
and her salvation as a burning torch.

The Greek term is ambiguous, sometimes (as in

the story of the virgins in Matt. 25) denoting the more sophisticated oil lamp and wick; but it is clearly the dramatic torch in John 18:3.

See also LAMP IN THE NT; LANTERN.

B. D. NAPIER

TORTOISE. KJV translation of טַבַּי (Lev. 11:29; RSV GREAT LIZARD).

TORTURE. The translation of two Greek words in the Bible. In Heb. 11:35 the word translated "tortured" (ἐτυμπαίνθησαν) refers to a method of torture or execution by some instrument (τύμπανον) now unknown. In Rev. 9:5 the word translated "torture" is βασανισμός, which has both a verb and a noun form. It is rendered differently elsewhere (usually "tortment"). See CRIMES AND PUNISHMENTS.

B. H. THROCKMORTON, JR.

***TOTEMISM.** A primitive social system based on belief in kinship with animals or plants. Members of the totem clan ascribe their origin to an animal or plant and regard themselves as related by mystical descent from it. The clan bears the name of the totem animal or plant, which is also its ethnic emblem, painted or tattooed on the bodies of the individuals and engraved on the clan shield. The sacred character of the totem excludes the species from use as common food, but the totem animal is the victim in the ritual meal of the clan. Kinship is reckoned through the mother, and marriage is exogamous—i.e., one belongs to his mother's totem and may not marry a member of his own totem.

The view that totemism was the original religion of the Semites and persisted among the early Hebrews was developed chiefly by W. R. Smith. The arguments can be noted only briefly here.

1. Animal and plant names
 2. The worship of animals
 3. Exogamy and kinship through the mother
 4. Food taboos
 5. Clan markings and standards
- Bibliography

1. **Animal and plant names.** These are common in the OT, but constitute less than one per cent of the total personal names. Moreover, animal names are everywhere common—they were frequent even among the early Christians. Greater weight is to be given to animal names of clans. In the genealogies of the Edomites (Gen. 36), more than a third of the clans have animal names. The Edomites, according to tradition, were hunters, and totemism in full force has been found only among hunters. Some of the Israelite clans also had animal and plant names, the Arodites (ass clan; Num. 26:17), the Tolaites (worm clan; Num. 26:23), the Elonites (oak clan; Num. 26:26), the Becherites (camel clan; Num. 26:35), the Shuphamites (viper[?] clan; Num. 26:39), and the Calebites (dog clan; I Sam. 25:3). Such names may be survivals of totem-clan systems, but hardly more than that. See AROD; TOLA 1; ELON 1; BECHER 1; SHEPHUPHIM; CALEB.

2. **The worship of animals.** Persistently practiced despite the Second Commandment, animal-worship has been connected with totemism. The

worship of powerful or mysterious animals, such as the bull or the serpent, is intelligible without resort to totemism, but the worship of a great variety of creatures may best be explained by totemism. The numerous theriomorphic gods of Egypt are strong evidence that the Egyptians passed through a true totemic stage, but among the Semites the evidence is meager. Perhaps the most striking example that can be adduced from the OT is Ezekiel's vision (8:7-11) of abominations committed in the temple, of "all kinds of creeping things, and loathsome beasts, and all the idols of the house of Israel" portrayed on the temple walls, with Jaazaniah the son of Shaphan (rock badger) leading the worship. This has been seen as a reversion to totemism in a time of stress. For J. Jacob's arguments against this view, however, see *bibliography*.

3. **Exogamy and kinship through the mother.** There are in the OT many instances of marriage outside the clan or nation, but Hebrew marriage was generally endogamous. In Judg. 12:9 there is explicit reference to exogamy. Traces of kinship reckoned through the mother may be seen in Gen. 22:22; Judg. 8:19; Ruth 1:8; II Sam. 17:25; Song of S. 1:6. In such a system, half brothers and sisters have no relation and may marry, as in the case of Abraham and Sarah (Gen. 20:12), or Amnon and Tamar (II Sam. 13:13). In the genealogies of temple servants in Ezra 2:43-60; Neh. 7:46-59, most of the ancestors have names with the Hebrew or Aramaic feminine ending. It has been suggested that these ancestors with ostensibly feminine names were temple prostitutes whose offspring became temple servants. The paternity of such offspring would naturally be indeterminate, and the reckoning of descent through the mother would have no connection with totemism.

4. **Food taboos.** These are an integral part of totemism, and it has been supposed that the OT dietary laws have this origin. There are apparent references to eucharistic eating of unclean animals, swine and mice, in Isa. 65:4; 66:17. Lists of forbidden foods such as those of Lev. 11; Deut. 15 may in part derive from totemism. The evidence, however, is equivocal, since of the animals that occur as personal or clan names in the OT, the proportion of clean and unclean is about equal.

5. **Clan markings and standards.** Incising or tattooing the body is forbidden in Lev. 19:28, but there are allusions to such practices in Gen. 4:15; Isa. 44:5; Ezek. 9:4; Zech. 13:6. There is no evidence that the marks in question were connected with totemism. In Ezek. 9:4 the purpose of the mark is to identify and protect those who shun animal worship. However, it may be that the animal-worshippers also had their own distinctive markings. In Revelation the different markings—the name of the Lamb and the Father (Rev. 14:1; 22:4) and the name or the number of the beast (Rev. 13:16-17; 17:5)—served to distinguish the worshipers of God and his Christ (Rev. 7:3; 9:4; 14:1; 22:4) and the worshipers of the beast (Rev. 14:9, 11; 16:2; 19:20). The symbolism, however, is explicitly connected with the marking of slaves (Rev. 7:3).

The Israelites had tribal standards (Num. 1:52; 2:2). According to tradition (Midrash Rabbah Num-

bers), some of these flags had animal representations. The symbolism is derived from the blessings of Jacob (Gen. 49) and Moses (Deut. 33), where several of the tribes are equated with animals. The symbolism, however, is not entirely consistent in the two poems. In Gen. 49:17 Dan is a serpent, while in Deut. 33:22 he is a lion's whelp. The symbolism seems to be mere poetic metaphor rather than vestigial totemism. The evidences for totemism among the Israelites seem to be mere vestiges of the prehistoric past.

TOU. Alternate form of TOI.

TOUBIANI. See TOB.

TOUCH [ἅπτεσθαι]. The verb which is always used of Jesus' "touching" or being "touched." It implies a touch which tends to hold and even sometimes to cling.

This is not the same as handling or feeling (as if in search of something), as when Jesus invited the Eleven to "handle" (ἠψαφᾶν) him after the Resurrection (Luke 24:39). Much less is it the more casual brush of contact. We may therefore suppose that Jesus really held the leper and was not quick to withdraw from contact with him (Matt. 8:3; Mark 1:41; Luke 5:13), and that he gripped the fevered hand of Peter's mother-in-law (Matt. 8:15). There was nothing remote, therefore, in his handling of the infants (Mark 10:13; Luke 18:15) or the bier (Luke 7:14), or the injured ear of the high priest's slave (Luke 22:51), the mute's tongue (Mark 7:33), or the eyes of the blind men (Matt. 9:29; 20:34); and probably, therefore, he did more than merely prod the disciples out of their fear at the Transfiguration (Matt. 17:7). Moreover, the woman with a flow of blood and other diseased folk took a good grip on his garment (Mark 5:27, etc.) and probably upon his person (Mark 3:10; Luke 6:19), a grip as real and restraining as that of the woman who anointed his feet (Luke 7:39). N. TURNER

TOWEL [λέντιον, borrowed from Lat. *linteum*] (John 13:4-5). A linen cloth. Jesus' washing his disciples' feet and drying them with a towel was an act, not of degradation, but of humility.

TOWER. The translation of several words in the Bible. Towers were a common feature of the biblical landscape, and were located in cities, pastures, vineyards, and farm lands. Built of brick or stone, towers varied greatly in size; they served chiefly for refuge or defense against military attack. See also CITY;

FORTIFICATION; WAR, METHODS OF; WATCH TOWER.

The usual word translated "tower" is מגדל, *migdāl* (Gen. 11:4; II Kings 9:17; Isa. 2:15; etc.). Translators render the same word, where the context requires it, as the name of a city, MIGDOL (Ezek. 29:10; 30:6; KJV "from the tower"; RSV "from Migdol"); the latter is preferable and is a reference to an Egyptian city). מגדל, Qere מגדול, in II Sam. 22:51 is used figuratively of God as a tower of salvation (so KJV; the RSV, with Kethibh, versions, and Ps. 18:50—H 18:51, renders the word as a verb).

Other words for "tower" are: בחון (Jer. 6:27; KJV "tower"; RSV "assayer"); בחון (Isa. 23:13; KJV "tower"; RSV "siege tower"); ביהו (Isa. 32:14; KJV "tower"; RSV "watchtower"); מצור (Hab. 2:1); עפל (II Kings 5:24; KJV "tower," KJV mg. "secret place"; RSV "hill"); פנה (Zeph. 1:16 [KJV "tower"; RSV "battlement"]); 3:6 [KJV "tower," KJV mg. "corner"; RSV "battlement"]; משגב (II Sam. 22:3; Ps. 18:2—H 18:3; 144:2; KJV "tower"; RSV "stronghold"); πύργος (Matt. 21:33; Mark 12:1; Luke 13:4). מגדל עץ (Neh. 8:4; KJV "pulpit of wood," "margin," "tower of wood"; RSV "wooden PULPIT") is a wooden platform which could be ascended by stairs (Neh. 9:4).

Towers mentioned by name include the following: tower of David (Song of S. 4:4); tower of EDER (Gen. 35:21; "tower of the flock" in Mic. 4:8); Tower of the Ovens (Neh. 3:11; 12:38 [KJV "Furnaces"]); Tower of Hananel; tower of Lebanon; Tower of the Hundred (KJV "Meah"); tower of PENUEL (1); Tower of Shechem. Towers in Jezreel, Tyre, and Siloam and others in Jerusalem are mentioned. Gen. 11:4 has usually been interpreted as indicating Hebrew knowledge of the Babylonian temple towers, the *ziquurat* (see BABEL). Uzziah built towers, not only in Jerusalem (II Chr. 26:9), but also in the wilderness (II Chr. 26:10). Jotham built them on wooded hills (II Chr. 27:4), and Hezekiah constructed towers in Jerusalem (II Chr. 32:5). See SHECHEM, TOWER OF; OVENS, TOWER OF; HANANEL, TOWER OF; HUNDRED, TOWER OF THE.

Some towers were large enough to serve as citadels or fortresses into which the population of a village could retreat at a time of danger (Judg. 9:51). Others were doubtless nothing more than small stone rooms which served as watch towers in vineyards (Mark 12:1); such towers can still be seen in Palestine. See WATCH TOWER.

Towers are mentioned figuratively in references to God's protective power (Ps. 61:3—H 61:4), and as a symbol of human strength (Song of S. 4:4) and feminine beauty (Song of S. 7:4: "Your neck is like an ivory tower"; 8:10).

Archaeologists have excavated many city towers from as early as the Neolithic period; see JERICHO; BETH-SHAN; MEGIDDO; LACHISH; MIZPAH; SAMARIA; SHECHEM; etc. Explorations have disclosed the towered fortresses and fortress towers which guarded the E frontiers of Edom, Moab, and Ammon.

TOWER OF BABEL. See BABEL.

TOWER OF SHECHEM. See SHECHEM, TOWER OF.

TOWN CLERK. The term used to translate γραμματεὺς in Acts 19:35. This is the one appearance in the Bible of this word in a non-Jewish context. The Greek term, appearing constantly in the gospels, elsewhere designates the Jewish SCRIBE.

1. **The problem of translation.** Because of the shifting patterns in civic administration and the concomitant fact that names of offices are frequently retained although function and status may greatly vary, the translation of γραμματεὺς in Acts 19:35 is very difficult. Since Ephesus was a "free city," by the same token it was a city-state. Therefore, either city or state terminology could be appropriate. And since γραμματεὺς roots in the meaning "scribe," "secretary" (English "clerk"), the translation "town clerk" is possible on the one hand, as is that of Moffatt, "secretary of state," on the other. Yet neither of these terms is very satisfactory: American cities have no official designated as "town clerk." Towns do have secretaries, keepers of records, but their functions are hardly those of the "town clerk" in Acts 19. And if the functions of the officer in Acts 19 are more than those of a town secretary as we know him, they are less than those of our "secretary of state." Nor does Goodspeed's choice, "recorder," help. *The Twentieth Century NT* (1900), and more recently C. H. Rieu (1957), translate "mayor." French and German translators more commonly prefer "chancellor" (*chancelier, Kanzler*). The difficulty here is that the word "chancellor," like γραμματεὺς, has an extended history of meanings. Both words began humbly and increased in function and prestige. The office of chancellor arose from the Roman *cancellarius*, originally an usher or doorkeeper stationed at the lattice bar or chancel of a basilica or other law court; then, in the Eastern Empire he became a notary or secretary with judicial powers; finally, in the kingdoms of the Western Empire, he became an officer of increasingly important functions. Hence the title was used of the chief minister of state in Austria-Hungary (where it survived from the Holy Roman Empire) and in the German and Austrian republics of recent times. The objection to "chancellor" would be the same as that to "secretary of state."

Nevertheless, even if both these translations are overtranslations, they have the merit of suggesting that the γραμματεὺς was the chief executive officer of the city (-state), the most important Ephesian official. Zahn urges that "Luther's *Kanzler* is still the best translation for it at least permits one to think of a high civil official—which can hardly be said of the *scriba* of the Latins, the city-secretary of Bengel and Weizsaecker, . . . or the *town clerk* of KJV."

2. **Status and functions.** It is clear from Acts 19 that the γραμματεὺς was the principal municipal officer of Ephesus, the executive officer under whose immediate responsibility such situations as the riot over Paul would fall. His high status in the community is confirmed by coins and inscriptions from Ephesus, and by the fact that generally in Asia Minor his administration dated the year. Also, on occasion he might be an ASIARCH.

His functions in general would fall under three heads:

a) He would be responsible for keeping the rec-

ords of the city, for taking the minutes of the council, or senate, and the assembly; he would file copies of decrees, of treaties, of edicts of emperors and governors—indeed, of the mass of miscellaneous documents which are involved in city and state administration.

b) He might be called upon to draw up the official decrees as approved by the senate and present them to the assembly, sometimes being himself the chairman, directing the debates. He might have charge of the endowment for doles to be given the citizenry, or distribute the annual money gifts from the public treasury on Antoninus' birthday, or direct the erection of statues decreed by senate and people in honor of emperors or other notables. The clerk was in a position to know much about affairs of state. Hence he became a more and more dominant figure in these affairs; and in the Roman period he, either alone or with the support of the leading magistrates, often moved decrees and took the lead in council and assembly.

c) As executive officer he would be the liaison officer between the civil administration and the Roman provincial administration, the headquarters of which were also in Ephesus. Since he would be held responsible for any riot, he naturally took hold of the situation quickly and quieted the mob by calling to their attention that "the courts are open, and there are proconsuls." Thus for Luke's purposes in Acts it is very important that the chief executive of Ephesus should declare himself for Paul and against Demetrius the silversmith, whose opposition to Paul was on economic grounds, and against the partisans of Artemis, whose opposition was on religious grounds. If, on the one hand, Luke describes the Ephesian incident in such a way as to show that Christianity is the end of paganism (vss. 26-27), on the other hand the town clerk will assure the Ephesians that their own special deity, Artemis, is really in no danger (vss. 35-37)! It is no less a person than the γραμματεὺς who exonerates Paul from the charges of economic and religious subversion.

TRACHONITIS trāk'ə nī'tīs [Τραχωνίτις, rough, stony district] (Luke 3:1). A district in N Transjordan, mentioned in the Bible only in connection with the dating of John in the reign of Herod Antipas "and his brother Philip tetrarch of the region of Iturea and Trachonitis."

1. Location
 2. Description
 3. History
 4. Economy
- Bibliography

1. **Location.** Ancient Trachonitis can be defined only in the general terms given by Josephus. It lay ca. twenty-five miles S of Damascus and the River Pharpar. To the W the boundary was Gaulanitis, and to the NW Ulatha and Paneas at the foot of Mount Hermon (Jos. Antiq. XV.x.3).* On the SW the border was along Batanaea and Auranitis (Jos. Antiq. XVII.ii.1; War I.xx.4). To the E there was

an indefinite border along the mountainous area now called Jebel Druze. Fig. HER 15.

2. Description. The area is a portion of the N Transjordan plateau which was known as BASHAN in the OT, in modern times called the Hauran. The most distinctive feature of Trachonitis, which gave it its name, is a large pear-shaped mass of black basalt covering ca. 350 square miles. This congealed flood of volcanic lava rises to a more or less uniform height of twenty to forty feet above the plateau. In the course of cooling, deep fissures and holes appeared in the lava. This formed the heart of Trachonitis, although portions of the surrounding plain were also included in the district. The Greek word for Trachonitis is properly an adjective, though the name of the district is at times given as a noun, the Trachon (ὁ Τράχων; e.g., Jos. Antiq. XV.x.1, 3; Strabo XVI.ii.16, 20).

This portion of the Hauran, so wild and rugged that it is difficult to enter, has always been an excellent refuge for robbers and rebels; hence the Arabic name, *el Leja*, "the Refuge." The first mention of Trachonitis seems to be in Strabo. He writes of "the two Trachones," referring to both Trachonitis and a similar but uninhabited area farther E, known today as *es-Safa*. He mentions the wildness of the terrain and its inhabitants (XVI.ii.20). Josephus speaks of it as habitually inhabited by robbers: "The inhabitants of those places lived in a mad way and pillaged the country of the Damascenes. . . . It was not an easy thing to restrain them since this way of robbery had been their usual practice, and they had no other way to get their living" (Antiq. XV.x.1; cf. XVII.ii.1-2).

3. History. This area, like the mountains of Jebel Druze to the E, has always been difficult to rule. The first mention of the ruler of Trachonitis comes from ca. 25 B.C., when it was ruled by Zenodorus with the tacit consent of Rome (Strabo XVI.ii.20; Jos. Antiq. XV.x.1-2). Later it was given by Augustus to Herod the Great, who was forced ca. 9 B.C. to assert his authority with troops to suppress a revolt (Jos. Antiq. XV.x.1; XVI.ii.6; ix.1). At the death of Herod in 4 B.C., and in accordance with his will, Trachonitis was given to his son Philip to form part of his tetrarchy, as is indicated in Luke 3:1 (Jos. Antiq. XVII.viii.1; xi.4; War II.vi.3). Philip seems to have been a strong ruler and able to maintain the peace for nearly forty years. Philo wrongly uses the name Trachonitis for the whole territory of Philip (*Legation to Caius* 41). After Philip's death in A.D. 34 it was included in the Roman province of Syria (Jos. Antiq. XVIII.iv.6). In 37 it was given by the Emperor Caligula to Herod Agrippa I, who ruled it until 44 (Jos. Antiq. XVIII.vi.10). Following Agrippa's rule it was governed by Roman officials until it was ruled by Herod Agrippa II (53-100). It was then placed under the direct rule of Roman officials as part of the province of Syria or Arabia, the latter becoming a Roman province in 106. The peak of prosperity for Trachonitis seems to have begun with the reign of Trajan (98-117).

4. Economy. In spite of the rugged terrain, some agriculture has always been possible in Trachonitis. There are springs and sufficient rainfall for the

meager crops grown in the small patches of soil strewn with rocks. Although better suited to vineyards than to grain, the land is best suited to raising sheep and goats. The surprising number and size of the ruins of ancient cities indicate that it supported a much larger population than now, especially in the early Christian centuries. These are the famous "black cities" of the *Arabian Nights*. Because of the almost complete absence of wood suitable for building, these ancient cities were built entirely of stone. Even the roofs, stairs, windows, and doors were made of the gloomy black basalt. Some of the doors are still in place and in working condition.

Bibliography

1. Real-estate transactions. The Law and the Prophets are not favorable to unlimited freedom of transaction in matters of real estate. There is a strong feeling in Yahwistic circles that earth belongs to God, and that men are only his tenants. On the other hand, the strong organization of the family as a social unit tended to prevent the alienation of family property, or at least to keep real-estate transactions within narrow limits. To achieve this, the Law contained provisions for the privilege of the next of kin to redeem the land of an impoverished relative compelled to sell out (Lev. 25:25-34; see REDEEM). Such a privilege amounted in certain circumstances to a moral obligation. The institution of the Jubilee (see JUBILEE, YEAR OF) also tended toward the stabilizing of family ownership, although its modes of execution remain obscure to us (Lev. 25:10, 13-16). In spite of their late formulation, the laws on real-estate deals originated in ancient customs, as may be inferred from such texts as Ruth 4:3-4; Jer. 32:7-8, and from parallel documents found in the archives of NUZI (fifteenth century B.C.).

The transformation of social and economic conditions under the monarchy resulted in many transgressions of the old customs, and in a general neglect or outright contempt of the contemporary legislation. Kings were among the worst offenders, either when

they usurped by violence the family estate of their subjects (I Kings 21:1-16), or when they acquired lands through forced purchases to grant them to members of the royal household, state officials, or tenants of fiefs, just as the rulers of the Canaanite city-states had done before them (I Sam. 8:14). The prophets condemned the greed of rich owners who seized the heavily mortgaged land holdings of poorer neighbors (Isa. 5:8). The rise of sects like that of the Rechabites toward the middle of the ninth century B.C. must be interpreted in part as a protest against the unethical business practices of the ruling class (Jer. 35:1-11). See RECHAB.

Biblical references to the legal instruments of transmission of real estate are scarce and much involved. The discussion between Abraham and Ephron the Hittite for the purchase of the cave of Mach-pelah, and the record of the business as it was understood by the author of Genesis, suggest that the legal acquisition of what was to become the burial ground of the patriarchs constituted a symbolic title to the occupation of the soil of Canaan by the Israelites (Gen. 23:3-18). Hence Abraham's insistence that all forms be observed. The entire episode, however, ought to be reconsidered in the light of Hittite laws, according to which the act of securing a full title to land property bound the purchaser to various feudal obligations. If these legal clauses really apply to the case, one might be led to reconstruct the narrative as if Abraham, who was understandably anxious to avoid any kind of servitude, and only interested in the acquisition of a burial plot, finally had to submit to the formal procedure.

A passage of Jeremiah describes in detail the writing of a real-estate contract (Jer. 32:9-14). Unfortunately, the text is corrupt, and the prophet was less interested in the accurate description of the procedure than in its symbolical application. We may gather, however, that, in usual practice, the contract would have been written in duplicate, the original sealed and kept in an earthenware vessel as a document of archive, while the purchaser retained the copy at hand.

A contract of sale of land, written in Babylonian cuneiform script and dating apparently from the fourteenth century B.C., was found at Shechem. A similar document from Gezer, written in Assyrian, dates from the seventh century B.C.

The gesture of the purchaser's setting his foot on the land marked the act of taking possession. There are indirect references to this usage in Pss. 60:8; 108:9. This symbolic gesture may be at the origin of the ritual of taking off one's shoe, by which a man would signify the transmission of his right (or obligation) to his kinsman in procedures of redemption or of levirate (Ruth 4:7-8; see MARRIAGE § 1g). The ritual, however, was interpreted desultorily in later times (Deut. 25:9-10).

2. Local trade. The predominantly rural economy of Palestine in antiquity gave the local trade its distinctive character. The bulk of the wares brought to market consisted of agricultural produce not actually consumed by the peasants, who traded it on regional markets for a few indispensable artifacts manufactured by town craftsmen, insofar as these artifacts could not possibly be homemade.

There was a steady trade in barley and wheat, olives and olive oil, grapes and wine, as well as in lentils, dried peas, raisins, dried figs and dates, almonds and other nuts. The demand for fresh vegetables and fruit varied according to local conditions, since all towns and villages were not equally endowed in gardens and orchards, because of unequal water supply.

Livestock was offered principally by nomads and seminomads, and by those peasants who owned extensive pastures or pasture lands—e.g., in the villages located on or by the N-S crest of the Palestinian highlands, with the wastelands sloping down toward the Valley of the Jordan, the Dead Sea, and the Negeb, as their grazing grounds. The trade in saddle or pack animals was naturally limited, while the sale of oxen, sheep, and goats, went on extensively, with a seasonal peak in the late spring, when lambs and kids were brought to market. Dairy products, such as milk (sweet and sour), cheese, butter fat, were sold to city people the year around.

Wild game and the catch of fishermen were not an important item on the food market in Canaanite and Israelite Palestine. Fishing and the preparation of salted fish, however, took a considerable extension in Hellenistic and Roman times, as one may gather from miscellaneous references in the NT, especially in the gospels, and from the Aramaic and Greek surnames of the little town of Magdala on the W shore of the Lake of Tiberias: respectively Migdal Nunayâ, "Migdal of the fish," and Ταριχέαι, "the salting houses."

The sale of agricultural products from the royal domains influenced the conditions of the market. Already Canaanite rulers had traded extensively in grain and olive oil, stored in the cellars of their palaces or in special warehouses. Similar activities on the part of the Hebrew kings must have created a very serious competition to private business. The promotion of agriculture and animal husbandry by Uzziah king of Judah was not altogether disinterested (II Chr. 26:10), and the kings of Israel had a quasi monopoly on oil and wine, as may be inferred from the extensive storehouses of the palaces at Samaria, in which they stocked the produce of the crown lands and the taxes of private landowners, which were levied in kind.

The market place was usually located at the gate of the city, where peasants from nearby villages or farms brought their produce (II Kings 7:1), and where foreign merchants offered their wares (Neh. 13:16). Quite often, the market of one particular gate was reserved for one or several categories of wares, while livestock was sold at another gate.

Craftsmen established in the towns supplied the local trade with pottery and textiles, chiefly wool and woolens. Much of the textile, however, was homespun, at least in Canaanite and early Israelite times. At a more advanced stage of the monarchy, some cities specialized in the weaving and dyeing industries, as archaeological discoveries at Tell ed-Duweir (Lachish) and Tell Beit-Mirsim (Kiriathsepher) abundantly show. This, of course, made it necessary that the goods be offered to the buyers by the intermediary of merchants. Utensils of metal, such as kettles, tools, and weapons, as well as silver

and gold ornaments, were sold by itinerant distributors or were manufactured locally.

Each branch of these trades or industries was usually carried in a specialized quarter of the town. In Jerusalem, potters had their workshops in the S suburbs, as one may infer from such toponyms as the Potter's Field (see AKELDAMA), the Gate of Potsherd (see POTSHERD GATE). Bakers had their street (Jer. 37:21), presumably in the vicinity of the Tower of the Ovens (see OVENS, TOWER OF THE). Josephus mentions also the wool market and the quarter of the smithies (War V.viii.1).

Barter was the primitive means of transaction on the city market or in the shops. A head of cattle constituted the basic standard of value, as one may infer from the Hebrew word קֶשֶׁט as a monetary unit referred to in RSV as "piece of money," while the Greek and Latin versions have ἄμνον, *ovis*, according to etymology (Gen. 33:19; Josh. 24:32; Job 42:11). Objects of metal, and bars or rings or ingots of gold and silver in the case of important deals, soon replaced cumbersome bartering methods. It must be kept in mind, however, that money as we understand it did not appear in Palestine prior to the Persian and Hellenistic periods, and that, consequently, earlier texts mentioning a number of silver shekels—e.g., Gen. 23:16; 37:28; Judg. 16:5; etc.—refer in reality to corresponding amounts of silver counted on the basis of the shekel as unit of weight, and not of coinage. See MONEY.

3. Import-export in Canaanite and Israelite Palestine. Any level of industrial development, however mediocre, and the unavoidable specialization of certain crafts which attends growing standards of living, make it necessary, as a rule, to import both raw materials and wares not readily found on the local market. These importations suppose, in return, balancing exports. This elementary principle of economics can be verified in Canaanite, as well as in Israelite, Palestine. Furthermore, it was natural that Palestine, by reason of its geographical location at the crossroads of trade routes between Mesopotamia, Syria, Asia Minor, the Mediterranean isles and lands, Egypt, and the countries beyond the Red Sea and the Persian Gulf, would have become involved in international commercial transit.

A good index of the participation of Syro-Palestine in international trade is the very fact of the technical and artistic syncretism characteristic of the industrial products of these countries during the Middle and the Late Bronze Age, which implies manifold exchanges, generally on the increase, between the various regions of the Near and Middle East. In particular, the composite style of the ivories of Megiddo and of Samaria, as well as of miscellaneous artifacts, shows a standardization of artistic methods and patterns which is obviously the result of intensified trade relations. See ART §§ 2c, 3b.

a. Wares of importation and exportation. The raw materials or produce and wares imported in, or exported from, Canaanite and Israelite Palestine are known to us through biblical references and archaeological discoveries. The principal exports from Palestine proper and the Transjordanian and Negeb districts were agricultural products, such as olive oil and cereals (I Kings 5:11; Ezek. 27:17). Some spe-

cialties of Palestine seem to have been much in demand on foreign markets: costly balm, odoriferous resins, gum, myrrh, and also honey, dried nuts, pistachios, and almonds, such as Jacob sent to Joseph as a present (Gen. 43:11; Ezek. 27:17). One may surmise that wine, pressed figs, raisins, and dates were also shipped abroad. Industrial exports were raw wool, woolen cloth, and embroidered or woven garments of many colors. Exporters from the region of Damascus, with their overseas expeditions of dried fruits, wine from Helbon, and fine woollens (Ezek. 27:18), must have been serious competitors to Palestinian traders.

The main articles of importation are industrial raw materials: tin, lead, and silver from Khurasan (?), Italy, Spain, Brittany, and Great Britain; copper from Asia Minor and Cyprus; iron from Asia Minor, inasmuch as the demand for copper and iron ores may have exceeded the production of the mining centers of the Arabah, which at any rate were not exploited intensively prior to the reign of Solomon (Ezek. 27:13); gold from S Arabia (Gen. 2:11; I Kings 9:28; 10:10-11, 14-15; II Chr. 8:18; 9:9); timber from Lebanon (I Kings 5:6, 8-9).

A certain amount of white linen was probably imported at all times from Egypt and from Syria (Exod. 9:31; Ezek. 27:7, 16), to supplement the limited supply of flax fiber which was harvested in Palestine and which was of inferior quality. Palestinian flax is mentioned in the so-called Calendar of Gezer (see AGRICULTURE; INSCRIPTIONS) and in Josh. 2:6; Hos. 2:5, 9. Purple-dyed wool and cloth came from Phoenicia, which had always had the *de facto* monopoly of this industry. The mantle from Shinar which Achan appropriated to himself after the conquest of Jericho (Josh. 7:21) may have been an isolated piece of curiosity, and there is as yet no evidence of a regular importation of textiles from this country, which is to be identified with Lower Mesopotamia.

Pottery from Cyprus, the Aegean isles, and continental Greece had been much in demand in Palestine during the latter part of the Late Bronze Age. The little port of Tell Abu Hawam, near Haifa, specialized in this importation. Under Solomon, and intermittently under his successors, shipments of precious woods, gems, ivory, spices, drugs, and exotic curiosities were brought from S Arabia, Ethiopia, and India by land caravans and by sea (I Kings 10:2, 10-11, 22; II Chr. 9:9-10, 21).

b. Trade routes. Prior to the advent of Hellenism, tribesmen from the Syro-Arabian desert had monopolized the organization of land caravans for the transportation of foreign goods. They are referred to in the Bible as Ishmaelites—a most general term, which may have included as well the early guilds of traders from Midian (Gen. 37:25-28), unless Ishmaelites and Midianites competed in long-distance convoys. At a lower level, local peddlers in Israelite Palestine were nicknamed Canaanites (Prov. 31:24; RSV "merchants").

Caravans from Asia Minor, once they had crossed the Taurus Mountains, followed the W border of the Syrian Desert and supplied the markets of Aleppo, Hama (Hamath), and Damascus, before they reached Palestine. Convoys from central and S Mesopotamia

also had to take the devious road detouring to the N of the Syrian Desert, through Harran and Aleppo, since a direct crossing was, if not impossible, at any rate hazardous. It is possible, however, that direct connections were achieved, at least for some time, under the reign of Solomon, if there is any historical truth in the report that he fortified TADMOR (Palmyre) in the desert, according to II Chr. 8:4, and to a variant of the Hebrew of I Kings 9:18, usually read "Tamar" and translated accordingly in the versions.

The importance of the trade routes to and from the S of the Arabian Peninsula, and eventually Ethiopia and India, is well illustrated by the semi-legendary account of the visit of the Queen of Sheba to Solomon (I Kings 10:1-10; II Chr. 9:1-9). The route of gold and spices ran parallel to the Red Sea shore. From Aqabah, the caravans either continued N to Damascus via Moab and the tableland of Gilead, or NW to Jerusalem through the Negeb.

Transports by sea had always been in the hands of the Phoenicians, who succeeded in maintaining their monopoly on the traffic of tin ore, indispensable for bronze industry, even in the face of Aegean and, later, Greek competition. Phoenician sailors had been instrumental in making possible the lively exchange of ideas, arts, and crafts, which took place between the Asian mainland, Cyprus, the Aegean isles, and Greece during the latter half of the second millennium. Their so-called "ships of Tarshish" (see TARSHISH 3) continued to ply the Mediterranean and East Atlantic sea lanes as late as Roman times. Their coastal vessels carried timber from Lebanon to Palestinian and Egyptian seaports, as may be gathered from such documents as the Egyptian tale of Wen-Amon, which dates from the Ramesside period, and from the biblical accounts of rafts of cedar and cypress wood shipped from Tyre for the construction of Solomon's temple.

The list of the ports of call of the Phoenician mariners along the Palestinian coast line can be drawn from ancient geographical documents, Greek authors, and archaeological information. From N to S, these ports and landings were: Minet el-Baida (the port of Ugarit), Byblos, Beirut, Sidon, Tyre, Acco, Tell Abu Hawam near Haifa, 'Atlit, Dor (which is mentioned in the texts of el-Amarna, and may have been controlled by Solomon; see I Kings 4:11), Caesarea, Jaffa, and the ports serving the inland towns of Ashdod, Ashkelon, Gaza, Raphia, and el-'Arish at the Egyptian border. Under the Hebrews all the coast line S to Jaffa was under the domination of the Philistines, with whom the Phoenicians had presumably a treaty of commerce. The same ports continued to be prosperous in Hellenistic and Roman times, and in many instances the shore accommodations, wharves, warehouses, etc., were substantially improved. Phoenician merchantmen may have sailed on the Red Sea and the Indian Ocean perhaps as early as the second millennium, as some texts of Ugarit would suggest; yet no sites of the Bronze Age have been discovered thus far on the shores of the Gulf of Aqabah. At any rate, there is ample evidence, textual and archaeological, of a brisk commercial traffic on the Red Sea during the first millennium B.C., at least intermittently. The

fluctuations of the maritime trade in these parts were due to the insecurity of the land link between the landings of the Gulf of Aqabah and the commercial cities of Palestine and Syria. See SHIPS AND SAILING (OT).

c. *Royal enterprises.* Rulers and kings have always played an important part in the foreign trade. The documents of TELL EL-AMARNA show them in active communication with one another concerning the delivery of raw materials and industrial metals or artifacts. The tale of Wen-Amon pictures the king of Gebal (Byblos) refusing to deliver price timber from his mountains to an Egyptian envoy who had had the misfortune of being robbed by pirates, and had become unable to pay cash. On the contrary, the king of Tyre agreed to sell cedar wood for the construction of the temple of Solomon against payments in kind, consisting in territory and foodstuffs (I Kings 5:11; 9:11). Solomon is reported to have engaged in the importation of horses and chariots (I Kings 10:28-29). The MT is certainly corrupt, and its rendering in the RSV "from Egypt and Kue" ought probably to be emended and read "from MUSRI and KUE" (or Qoa, cuneiform *Qu'e*), which are two well-known districts of Cilicia, from which the Hittites and the Syrians also purchased horses and war chariots. Such importations, however, were not of an outright commercial character, as the text seems to suggest, but rather were means of securing suitable teams for the chariot forces of the king.

It may be inferred from a reference to store cities in the kingdom of Hamath (II Chr. 8:4), that Solomon also took part in strictly commercial activities. This became standard practice for the kings of Israel, who obtained from the Syrian kings a franchise for the establishment of commercial quarters (הַחוֹצוֹת, bazaars) in Damascus, similar to the concessions which Syrian traders had in Samaria (I Kings 20:34). A valid analogy in modern times is that of the concession by the Ottoman government of bazaars to European traders in the ports and commercial centers of the Levant. The Bible refers to the commercial agents of the king as the סוֹחְרֵי הַמֶּלֶךְ ("traders"), who were carrying on his business in foreign lands (I Kings 10:29).

Solomon and the kings of Judah became the principal partners of the Phoenicians in the commercial enterprises of the Red Sea and the countries beyond. These, indeed, were possible only if the wastelands between the Gulf of Aqabah and the S of Judah, as well as the routes of Edom, were adequately policed, so as to guarantee the safety of the caravans to and from the base of ELATH. Elath is identified with Tell el-Kheleifeh on the NW shore of the Gulf of Aqabah. The exploration of this site shows that it was occupied first during the Early Iron Age; Aramaic ostraca found in the ruins range from the sixth to the fourth century B.C. The toponym EZION-GEBER may well be an alias of Elath, although certain texts seem to refer to two different places. The creation of the base and the details of the joint enterprise of Hiram and Solomon are recorded in I Kings 9:26-28; 10:11-12, 22; II Chr. 8:17-18; 9:10-11, 21. Later, Jehoshaphat declined, at least for a time, the participation of Ahaziah of Israel in the Red Sea expeditions to Ophir; some of his own ships were wrecked at

Ezion-geber (I Kings 22:48-49; II Chr. 20:36-37). Uzziah restored Elath, which seems to have been abandoned in the meantime (II Kings 14:22; II Chr. 26:2). It finally fell into the hands of the Edomites during the reign of Ahaz (II Kings 16:6).

d. Means of transaction. The development of international trade in Canaanite and Israelite Palestine implies a considerable traffic of gold and silver, as is also evidenced by the repeated references to the abundance of precious metal under the reign of Solomon. The handling of gold and silver as the regular means of exchange was in the hands of a fast developing class of merchants and professional changers who weighed the ingots and tested their purity. Some system of banking and of credit may have been devised by the king's commercial agents before the Exile, in order to avoid the risky transfer of large amounts of metal; however, documentary evidence to this point is still lacking or inconclusive. Elaborate banking methods, letters of credit, and the like were in regular use in Mesopotamia. Many of the Jewish exiles took to these methods and turned in increasing numbers to the commercial professions and to international trade for their living, as one may infer from the names found in the documents of large commercial firms of Nippur and Babylon. It seems, however, that commerce and international trade in postexilic Palestine were still largely in the hands of foreigners—Phoenicians, Arabs, and Idumeans—as if the successful Jewish businessmen had voluntarily remained abroad.

Regular money appeared in Palestine under the Persian domination. Gold darics (אֲדַרְכִּינִים) are mentioned by anachronism in I Chr. 29:7, while Ezra 2:69; Neh. 7:70-72 seem to have confused the Persian darics with Greek drachmas (דֵּרַכְמוֹתַיִם), which do not fit in the historical context. The silver shekels and minas mentioned in these passages and in Neh. 5:15; 10:32 may be Persian silver coined in connection with the gold daric. The Persian province of Judea had even received and exercised the privilege of having its own silver coinage. Money, however, was still something of a rarity in Palestine, and it became abundant only under the Hellenistic rulers. See MONEY.

4. Import-export in Hellenistic and Roman Palestine. The conquest of Western Asia by Alexander and the subsequent Hellenization of Syria and Palestine brought about important demographic and economic changes. To be sure, the regional production, based as it was on agriculture, and thus depending on geographical and climatic conditions, remained more or less what it had always been, with perhaps three exceptions: an intensified cultivation of flax in the Valley of the Jordan and the region around Beth-shan, a notable increase in the production of chickens and eggs, and the essentially local development of fisheries on the Lake of Tiberias. These changes did not alter much the character of the regional market, and it is in the participation of Palestine in international trade—viz., export, import, and transit—that modifications are most significant.

a. Wares of importation and exportation. The exportation of Palestinian olive oil must have been affected, to a degree which cannot be evaluated easily, by the institution of a state monopoly in

Ptolemaic Egypt. The oil shipped from Palestine was stored in the government warehouses of Pelusium in the Delta.

For the first time in its commercial history, Palestine began to export high-grade linen, as a result of the increased and improved production of flax fiber, so that linen from Beth-shan-Scythopolis was at a premium on the international market.

Meanwhile, new textiles were imported in increasing quantity. Cotton (כִּרְפָּס), imported from India, was considered a luxury article (Esth. 1:6); rabbinical texts call it "shrubby wool." Silk was brought from China in increasing quantities, and was not produced in Palestine until after the Arabic conquest, when mulberry trees were planted to provide food for the silkworms.

New fashions in the feeding habits of the population were the cause of a massive importation of Greek wines, which were shipped in large earthenware containers manufactured by Rhodian potters, whose marks were stamped on the handles or shoulder of the containers (Fig. POT 63, no. 8*d*). Salted fish from the Mediterranean, as well as sharp condiments and spices imported from Greece, were particularly appreciated by winebibbers. The Hellenized Sidonians established at Marissa in Idumea were among the traders specializing in this type of imports. They seem also to have dealt, at least occasionally, in exotic curiosities from Arabia, as may be inferred from the papyri of Gerza. Some of these are lists of animals, wild and domestic, shipped to Egypt for the stables of the Ptolemaic kings, and for the menageries which they maintained in the gardens of their palaces: Arabian horses, white camels, greyhounds, panthers, onagers, and hybrids of onagers and asses.

The trade of slaves, male and female, became a significant feature of Palestine economy in the Hellenistic and Roman periods. The principal factor which contributed to this development was the substitution of a pagan, secularized culture, for the civilization of the Canaanites and of the Hebrews, in which slaves, who for the major part were refugees and members of the community fallen into despondency, did not constitute really a caste. In the culture of Greece and Rome, however, slavery was a firmly established institution, and accordingly slaves were marketed, sometimes in the most literal sense, like merchandise or livestock.

Ptolemaic papyri contain much concrete evidence with regard to shipments of slaves, particularly young boys, from the Transjordanian districts to Egypt, via Idumea, where the Sidonians of Marissa took an active part in this kind of commerce. Among the women that were sold as slaves, some seem to have specialized in entertainment, not unlike the Japanese geishas. A tomb in the Hellenistic necropolis of Marissa had been reserved for such persons, whose names suggest that a strong proportion of them were of foreign origin, the Semitic names being in a minority.

Palestinian slave trade was particularly active under the Seleucid domination. Dealers followed advancing armies and bought at low price war prisoners, as well as the women and children whom soldiers captured as booty (I Macc. 3:41). Accord-

ing to II Macc. 8:10-11, Nicanor, the commander of the expeditionary corps of Antiochus IV Epiphanes in Palestine, advertised a huge sale of Jewish prisoners, to be held in the thoroughly Hellenized cities of the Mediterranean seaboard, at the rate of ninety "bodies" (σώματα) for one talent. See SLAVERY.

b. Trading centers and trade routes. Archaeology and historical research have made available some concrete information on the material equipment of trading centers and the organization of commercial routes during the Hellenistic and Roman periods.

The excavation of Tell Sandahannah, the acropolis of Marissa in Idumea, has brought to light the foundations of large buildings most similar in plan to modern khans or caravansaries, consisting of storerooms distributed along the four sides of a square courtyard, the gate of which could be closed at night. The pack animals were herded into the courtyard and unloaded, the goods stored in the cubicles of the ground floor, whereas the personnel took their quarters in the rooms on the second-floor gallery.

The network of overland trade routes passed under the control, amounting to a monopoly, of the NABATEANS and of the Palmyrenians, originally guilds of caravan leaders established along the borders of the Syro-Arabian Desert, who organized themselves as autonomous states, distinct from the nomadic tribes of the Arabian Peninsula. They had their own idioms, derived from Aramaic, and their government and religion. From the second century B.C. to the beginning of the second century of the Christian era, the Nabateans controlled the N-S trunk road from Hamath and Damascus to the SW corner of Arabia. Petra, conquered over the Edomites, was their capital and main center, from which the merchandise brought from Arabia, or from India and Ethiopia, was directed northward toward Damascus through the Hellenized district of the Decapolis, or westward to Palestine and Egypt. The Nabateans competed fiercely and successfully with the maritime routes developed by the Ptolemies, by pillaging vessels forced by the weather to the Arabian coast, and controlling the port of Leukè Komè, from which their privateers set out to intercept the merchantmen sailing on the Red Sea. The establishment of a system of customs by the Emperor Trajan broke the monopoly of the Nabateans and freed the sea lanes again.

In the N part of the Syrian Desert, the oasis of TADMOR became the capital of the Palmyrenian state, which flourished during the second and third centuries of the Christian era, at first under the protectorate, and later under the direct rule, of the Romans. Palmyre controlled the N Syrian traffic and the caravans to and from Central Asia. It became the chief emporium for Chinese silk. Palmyrenian caravan leaders cut straight across the wilderness, instead of detouring to the N by the antique road of the patriarchs, via Harran and Aleppo.

Sea transports continued in the Mediterranean in the hands of the Phoenicians and of the Greeks, whatever were the vicissitudes of their political allegiance. The harbor facilities of such cities as Tyre, Atlit, Dor, Caesarea, and Ashkelon were

greatly increased, as evidenced by historical accounts or archaeological exploration. In Egypt, the Ptolemies and their successors strove to develop relations by sea with the countries bordering the Red Sea and the Indian Ocean, but were hampered for a long time by the fierce opposition of the Nabateans (see above). The decline of the latter by reason of economic and political measures taken by Trajan resulted in an unprecedented activity in the maritime traffic, the cargoes being unloaded at the Egyptian ports of the Red Sea, and at the renovated base of Aila, formerly Elath, on the N shore of the Gulf of Aqabah.

c. Money and banking. The intensification of international trade relations during the Greco-Roman period was accompanied by the appearance of local currencies throughout the Mediterranean world and the Near and Middle East, and the generalization of banking procedures.

In addition to the Persian money which was still found on the market, Macedonian, Ptolemaic, Seleucid, and Roman coins were legal tender, as well as the bronze coins issued by the Maccabean and Herodian princes, the money of the franchised towns of the coast, and the coinage of the Jews during the first and second insurrections. The fact that the relative value of these various currencies was subject to continuous fluctuations according to denominations, the varying proportion of precious metal in the alloy, and the actual credit value on the market, made the profession of MONEY-CHANGER all-important. The gospels make a special reference to the changers established in the courtyards of the temple of Jerusalem, whose office it was to exchange the foreign coins of the pilgrims against the half shekels of the head tax, weighed according to the "shekel of the sanctuary" (Matt. 21:12; Mark 11:15; John 2:14; cf. Exod. 30:13). The money-changer was called in Greek κολλυβιστής, from κόλλυβος, which was the name of a small coin changers used to charge as their fee for the exchange of a given sum of money. Another term for "money-changer" was κερματιστής, from κέρμα, "small change." The Greek term for "banker" was τραπεζίτης, from τράπεζα, "table, counter," and, by extension, the banking house itself (Matt. 25:27; Luke 19:23). See MONEY.

The expatriation of Palestinian Jews by reason of deportations or of political and religious persecutions had as its consequence the fact that the exiles, unable as they were to continue in the rural occupations which had been their fathers' on the soil of Canaan, increasingly turned to international commerce and banking. This movement, which had begun in the time of the Babylonian exile, became generalized and gave the Jewish colonies of the Diaspora, in Egypt, Asia Minor, Greece, and Italy, the character which they retained for centuries. This factor was influential in the development of the Christian church, inasmuch as some of its earliest congregations outside Palestine grew out of Jewish communities.

TRADER [*chiefly* טַחַר, *active participle of* טַחַר, go around travel]; **KJV MERCHANT**. One whose business is **TRADE** and **COMMERCE**; in the **OT**, usually a traveling **MERCHANT** or peddler. He might travel far (Gen. 37:28), overseas (Isa. 23:2), form partnerships (Job 41:6), or even work in the temple (Zech. 14:21). Canaanites were the ancient traders and gave their name to the occupation (see **CANAAN** § 1). Rich and important traders were known (Isa. 47:15; Ezek. 17:4). Although not all were honest (Hos. 12:7), their extinction would be a time of catastrophe (Zeph. 1:11). C. U. WOLF

TRADES. See **OCCUPATIONS**.

* **TRADITION, ORAL**. Tradition is the foundation of culture, a spiritual bond between the present and the past, between the individual and the greater fellowship in space and time, of which he is an integrated member. What man knows, his experiences and insights, what he has felt and thought and expressed in words, has, as far as it has been deemed important for the life and welfare of the community, been handed down by the tradition of mouth and example. This means also in rather fixed forms, but nevertheless always gradually and unconsciously adapted to the changing circumstances and interests of the changing ages. Man's memory of the past and his religious ideas and usages make no exception.

1. OT tradition
2. Local origin
3. Fixity and development

4. Genuine and secondary tradition
 5. Tradition and texts
 6. The transition from tradition to script
 7. Traditio-historical and literary criticism
- Bibliography

1. **OT tradition**. The **OT** includes many "memories" older than script, and many stories stamped by the storytellers' oral style. In fact, behind every type of **LITERATURE** represented there, lies a longer or shorter time of oral tradition. This is (since Gunkel) one certain result of the use of **FORM CRITICISM** and its methods: the definite type (*Gattung*) has sprung from a definite need in a definite "situation in life" (*Sitz im Leben*), and its forms have been created out of this necessity.

Many of the characteristics of the style forms point clearly back to the oral origin of the species. Both the priestly "decision" and the prophetic "oracle" are a "word" (דָּבָר); the artistic mastership of the old tales of Genesis, Judges, Samuel, is just due to the fact that they were given their form by the storytellers, not by the rhetoric "literates" of that time, the scribes.

This applies to **MYTH**; **LEGEND**; historical narratives; and all sorts of popular stories; to customs, morals, and law; to geographical and cosmological knowledge; to individual and tribal **GENEALOGY**; to popular and sacral **POETRY**; and to cultic rituals and prayers and **PSALMS**.

The bearers of the tradition were those persons or circles who were especially concerned with the area of life and interests in question—the elders of the clan, or tribe, or city (see **ELDER**); the **JUDGE** of the tribal amphictyony; the priests with their "instructions," ordeals, and oracles, their rituals and cultic words (see **PRIESTS** and **LEVITES**); the prophets (see **PROPHET**); the wise scribes of court and temple (see **SCRIBE**); and last but not least, the professional "storytellers," known in the Orient unto this day, and the "bards" or "rhapsodes" (מוֹשֵׁלִים).

Accordingly the "places in life" were the many different occasions where people met—the cultic feasts, where the legends about the foundation of the sanctuary and the traditions from the foundation of the people (Exodus, covenant, etc.) were retold; "in the gates," where judicial affairs were settled according to old custom and law, and where stories from old times, the deeds of the tribal heroes, were told in the council (סֹדֵר) of the community. But also there were private feasts such as nuptials, and vintage, and sheep-shearing, where love songs and other songs were sung, riddles put forth, etc.

2. **Local origin**. Every tradition that has come to us has passed through Jerusalemite mouths and pens; very much of it is, however, older than the Davidic "Great Israel." As "Israel" before that time was the N Israelite ten-tribe amphictyony; it makes no wonder that practically all pre-Davidic historical and quasi-historical tradition is of N Israelite origin. (This fact, thus, does not prove a N Israelite origin of the supposed book "E"—if it ever existed.) In the Davidic kingdom some Judean traditions, such as in Gen. 38; Judg. 1:9-17; and the interesting Hebron tradition in Num. 13:22b, were included. The Saul tradition and the Saul-David tradition lived at the

courts of Saul and David respectively. The patriarch tales (see PATRIARCHS) lived partly in the N, partly in the S, among the pre-Israelite, originally Mesopotamian, Hebrew tribes, with which the Israelites fused. This does not preclude that the connection of Abraham or Jacob with this or that famous cult place may have taken place in Israelite times. Myths and legends about the primeval times, Creation, the Sea Monster, the Flood, etc., may partly have come in with the patriarchal tribes, and may partly have been taken over from the Canaanites, in both cases often with Mesopotamia-Babylonia as the ultimate source. The oldest law traditions probably were collected at the central sanctuary of the tribal amphityony Shiloh or Shechem; in the later evolution Jerusalem no doubt played the greatest role. The same is certainly the case with the "wisdom" tradition (see LITERATURE § 2), and with most of the sacred poetry, while the priestly rituals and "rights" represent a fusion of old Israelite and pre-Davidic Jerusalemite tradition and later development. Jerusalem is also the place where the prophetic tradition and sayings, even from the N, were transmitted and collected, and got their present shape. Even the love poetry in the SONG OF SOLOMON, which is at least partly of Israelite origin, got its last "redaction" in Jerusalem.

3. Fixity and development. There are areas, such as cultic rituals and words, the wording of a traditional "law," etc., where conscious stress is laid upon accuracy, both of content and of form; the tradition must consciously be learned by heart. Within a definite circle and milieu the fairy tales, e.g., keep their relatively fixed form for centuries. But the same story often exists in many rather different variants in the different regions and circles. Fixity is often the last stage of a development.

First there is the selection. A tradition lives as long as any practical, sociological, or ideological interest is connected with it; without this interest it will die. A narrative must also appeal to the fancy and the emotions of the audience; it must have a thrill. Thus the immanent poetic and aesthetic forces, the "epic rules" of the human mind, always are at work, even in the mouth of the first narrator. The heroes and the events told become points of crystallization for all sorts of current anecdotes and motifs and interesting stories. In addition there is the unconscious modernization according to the changes of the material culture and of the religious and moral ideas.

Already in the oral stage the collecting of the originally separate and independent stories, law paragraphs, etc., begins. This also means that, to some degree, they must be adapted to one another, the variants must be combined, connecting links must be inserted, etc. Local "schools" of storytellers and "traditionists" thus may have created different forms of composition as well—a fact with which we have to reckon when we are dealing with the different forms represented by the MT and the LXX in Jeremiah and Proverbs.

Investigations of old Norwegian family traditions from isolated districts, the legendary content of which could be controlled by official documents, long forgotten by the "traditionists," have shown that after ca. three hundred years, tradition still could tell the historian something about the "what" of the events,

but very little or nothing about their "how" and "why."

Tradition thus is not only the process of transmission, but also that of development and creation as well. Before using a tradition as a historical source, one must discuss the literary type (*Gattung*; see LEGEND; LITERATURE) to which it belongs. The question to put to the Ai history (Josh. 8) is not: What is its historical content? but: To which literary type does it belong? With the correct answer: An etiological *sagn* (see LEGEND § 2d), the answer to the other question is given: The factual "kernel" is the Tell! This is the answer that has been corroborated by archaeology.

4. Genuine and secondary tradition. A genuine tradition has its point of departure in something "real"—an event, a locality, a sociological and political relation, etc. Through a traditio-historical investigation and literary documentation it can with greater or lesser certainty or probability be traced back to its origin. But a tradition can also have its origin in some "learned" theory or combination or speculation of later times, and "tradition says" may often not mean more than that. Every visitor to Palestine knows from the stories of the guides this sort of tradition.

5. Tradition and texts. Even long after the more occasional use of script (see LITERATURE § 1) the oral transmission of "spiritual" knowledge was considered normal. In the East learning by heart is unto this day the normal way of transmitting even the longest written texts, as the Koran and its commentaries. With the Jews both Mishna and TALMUD were orally transmitted for centuries; in the synagogue it was long forbidden to say the Torah from a written scroll; also the Aramaic and Greek translations (see TARGUM) were originally given orally, but in a traditional fixed form.

The whole "authorship" of ISAIAH was restricted to some six words (8:1-2; 30:7); the transmission of his sayings he, as he metaphorically says, "bound together and sealed in my disciples"—i.e., committed to their memory. The prophets' use of the script was only occasional, for special reasons and circumstances, as the letter of JEREMIAH to the exiles (ch. 29) and the writing down of his oracles (ch. 36). The "writing" in Hab. 2:2 refers only to the oracle in vss. 4-5. The common memory of the circle and the "chain of traditionists" were for long considered to be securer than the script. (It must be remembered that here we have to do with generations whose memory was not spoiled by magazines and dictionaries.)

The first writings thus do not put an end to the development of the tradition. After Baruch had written and rewritten the book of Jeremiah's *ipsissima verba* in their original poetic and metrical form, the same sayings continued to live in oral form, and under the influence of Deuteronomistic theology and phraseology they were reshaped as longer Deuteronomized "sermons," which now are found side by side with the original short sayings. Also the words of other prophets continued to live as spiritual forces in the Isaian circles, sometimes being adapted to new circumstances, inspiring additional and new prophecies. In this way the Judean additions to the collections of AMOS and HOSEA, the "anti-Assyrian"

oracles in Isaiah, or the transformation of the "Woe" against ARIEL 1 (Isa. 29:1 ff) into an oracle of salvation may be explained.

The many variants now included in the saga of J that have given rise to the hypothesis about a contingent parallel "source" E are better explained as the result of the development of the existing oral tradition beside the written J. The selection of the matter and the pragmatism of J "made school"; the still orally transmitted material, however, continued its life and underwent the inevitable development, being adapted to the religious ideas and spiritual interests of later times. Of this younger form parts were incorporated in the J—perhaps partly already during the oral transmission of the "genuine" line. There can scarcely be any doubt that, e.g., the Sinai story (Exod. 19–24; 32–34) or the Balaam story (Num. 22–24) is braided together of two variants respectively, which already had acquired their fixed form, which the "redactor" wanted to respect as far as possible.

In the same way the separate material in CHRONICLES must be explained. Traditions which the Chronicler's main written source, Samuel-Kings, had not taken up, continued their oral life and more and more developed into legends. These, however, in many cases may include a historical kernel, and in some cases have certainly preserved definite historical knowledge—e.g., the tunnel of Hezekiah, or the captivity of Manasseh. Written pre-exilic records, older than Samuel-Kings, scarcely existed any more at the time of Chronicles.

We are thus confronted with an interaction of oral and written transmission.

6. The transition from tradition to script. The fundamental, conscious transition from oral transmission to script is done when critical outer and/or inner circumstances threaten to break off the living tradition. This happened with Israel at the fall of state, city, and temple and the deportation of the leading classes in 587 B.C. Both archaeology (Ingolt) and modern experiences from the deportations during the two world wars show that at such a catastrophe it is practically impossible for the exiles to save such luxuries as books, let alone tables; what existed of such things in the archives of Jerusalem was destroyed, and many of the bearers of tradition killed. The remnant of Israel was obliged to have the old sacral tradition written down in order to keep the connection with its spiritual foundations.

But even learning by heart continued to be the normal form of transmission, and the development of tradition could still take place (see § 5 above).

The idea of the primacy of the written text and of its unchangeability is the result of canonization. See CANON OF THE OT; TEXT, OT.

7. Traditio-historical and literary criticism. The interaction between oral tradition and written texts (see § 5 above) demonstrates that both traditio-historical and literary methods are necessary in OT science, and they must be in constant interaction. Clear instances are the Sinai story, the Saul-Samuel complex, and the flood story.

See FORM CRITICISM.

TRADITION OF THE ELDERS [παράδοσις τῶν πρεσβυτέρων]. Jewish oral law intended to expound the written law by applying it to new circumstances or finding in it support for long-accepted custom (see HALACHAH; LAW IN FIRST CENTURY JUDAISM; TRADITION, ORAL). Developed by an elaborate commentary on OT texts (see MIDRASH), either legal or homiletical (see HAGGADAH, NT), it was also arranged topically, somewhat apart from its scriptural base, for teaching and discussion (see especially MISHNA; also GEMARA; TALMUD).

"Tradition of the elders" occurs only in Matt. 15:2; Mark 7:3, 5 (cf. Acts 6:14; Gal. 1:14). The rejection of unwritten tradition by Jesus here recorded is not fully supported elsewhere. He often ignored (Mark 2:13–17) rabbinic custom (see TAX COLLECTOR; SINNER), and so freely interpreted the written law that he often transgressed rabbinic principles (see SABBATH; DIVORCE; CLEAN AND UNCLEAN). But he also respected Jewish tradition (Mark 1:44), and his teaching (see SERMON ON THE MOUNT) was certainly influenced by it (Mark 12:28–34). Scholars are divided on the question of Jesus' treatment of the "tradition of the elders." Rabbinic tradition was in flux (see CORBAN), Jesus' attitude was complex, and the evangelists' later reporting of both was often unduly biased (Mark 7:3, 19b).

TRADITIONS OF MATTHIAS. See MATTHIAS, TRADITIONS OF.

TRAIN. The translation of שׂוּל, meaning a trailing extension of a robe or skirt, in Isa. 6:1 (elsewhere "skirt"; KJV alternately "hem"). In Isaiah's vision the train of the enthroned Lord filled the temple.

TRANCE [ἔκστασις] (Acts 10:10; 11:5; 22:17). Alternately: AMAZEMENT (Mark 5:42; Luke 5:26; Acts 3:10); ASTONISHMENT (Mark 16:8). The state of mind of one who is receiving revelation.

The Greek term was used with a variety of meanings—e.g., literally, a change of place, or to put or be put outside; then, to mean the state in which one is "beside oneself," to indicate an intense but temporary emotional reaction to the presence of anxiety, terror, or the uncanny, the numinous; or, if the state

was permanent, to signify insanity. In a more mystical sense, the term could stand for a prophetic rapture or trance, in which the body and its functions become quiescent and the soul withdraws or is released from the bonds which fetter it to earth and is ushered into the direct presence of the divine and made to hear the "words of God," and see the "vision of the Almighty" (Num. 24:4, 16).

In his use of ἔκστασις in Acts, both with Peter (10:10; 11:5) and with Paul (22:17), Luke is concerned with the trance only as a state which was commonly recognized as being a vehicle of revelation. By the form and sobriety of his language, he makes it clear that the trances into which Peter and Paul "fell" happened to them; they were not induced by orgiastic frenzy. Both Peter and Paul are described as at prayer, Peter on the housetop, alone, and Paul in the temple—i.e., they were in readiness for revelation.

In summary, Luke employs the trance pattern to show (a) that the free admission of the Gentiles to the Christian fellowship was an act of God, not of man: as a revelation event, it was commanded; and (b) that neither Peter nor Paul could have arrived at the decision to bring about such a radical shift in his own behavior or have dared to proclaim it in the church on the basis of his own experience or will. The Gentile mission is thus declared to be the work of God.

TRANSCENDENCE. See GOD, OT VIEW OF.

TRANSFIGURATION. The transforming event in the life of Jesus, when his appearance became glorious in the presence of three disciples on a mountain-top (Matt. 17:1-9; Mark 9:2-10; Luke 9:28-36; II Pet. 1:16-21).

1. The event
 2. The time
 3. The place
 4. The significance
- Bibliography

1. **The event.** Three wonders occurred in this mysterious event: (a) Jesus was transfigured or changed by an unusual radiance or GLORY of face and garments; (b) Elijah and Moses, long dead, appeared; (c) a divine voice spoke from a cloud.

The gospels agree that Jesus took Peter, James, and John to a mountain; that Peter said it was good to be there and that they should make three booths (KJV "tabernacles") for Jesus, Moses, and Elijah; that the disciples were beset by fear; that the voice from the overshadowing cloud assured them about Jesus: "This is my (beloved) Son," and that they should hear him; that they were to say nothing of what they had seen until the resurrection of the Son of man (Matthew and Mark); and that they told no man about their experience (Luke).

Matthew omits Mark's statements about the fuller and about Peter's ignorance, but he adds details: Jesus' face "shone like the sun"; the "bright" cloud; the words "with whom I am well pleased"; the disciples fell on their knees; Jesus touched them and bade them rise with no fear. Luke also amplifies

Mark: Jesus was praying, and his countenance was altered; the conversation of Moses and Elijah with Jesus concerned his coming death in Jerusalem; "my Chosen"; glory attended both Jesus and these men; the disciples were heavy with sleep but awoke fully and witnessed the radiance.

2. **The time.** The Transfiguration shortly (six days, Matthew and Mark; eight, Luke) follows the famous declaration of Peter that Jesus was the Christ, after which Jesus first forecast his sufferings, death and resurrection, the necessity of a cross for his disciples, and the coming of the kingdom (Mark and Luke) or of the Son of man (Matthew). This is the decisive period during a northward trip in Jesus' ministry immediately before he began his final journey to Jerusalem. On the minor point as to whether the Transfiguration took place during day or night, Luke infers it was night (9:32).

3. **The place.** The mountain is not named. Matthew and Mark state that it was "high"; II Pet. 1:18 says that it was "holy." The events preceding the Transfiguration took place near CAESAREA PHILIPPI. Following the Transfiguration, Jesus and his disciples passed through Galilee (Mark 9:30). If the mountain is to be named, it is probably one of the S foothills of lofty Mount Hermon,* which rises N of Caesarea Philippi. This location is usually accepted, though Mount Tabor (see TABOR, MOUNT)* has its advocates. Cyril of Jerusalem and Jerome (fourth century) claimed Tabor for the Transfiguration. Since the sixth century, churches have been erected at intervals and pilgrimages made to commemorate the event. This identification with Tabor is improbable, because the Synoptic setting for the story is near Hermon (see HERMON, MOUNT), because Tabor is not high, because the Gospel of Hebrews (second century) and other writings were understood to refer to Tabor as the scene of the Temptation, and because the entire top of Tabor was walled (Jos. War II.xx.6; IV.i.8). Figs. HER 15; TAB 3.

4. **The significance.** "The Transfiguration is the paradise and the despair of commentators." (a) The Fourth Gospel omits the Transfiguration because the glory of God in Jesus is not centered in one event but is manifested throughout his life, death, and resurrection (1:14; 2:11; 5:44; 7:18, 39; 11:4, 40; 12:16, 23, 28, 41; 13:31; 17:1, 4-5, 10, 22, 24; 21:19).

b) II Peter contains the earliest reference, after the Synoptics, to the Transfiguration. The writer, using the name and the authority of Peter, cites the incident as an eyewitness of Christ's majesty to prove that Christians do not believe in myths; that they believe in God's gift of honor and glory to his beloved Son, and that this made more sure the prophetic words about Christ's coming. This interpretation of the story verifies the second coming (see PAROUSIA) of Christ.

c) The second-century Apocalypse of Peter rehearses the transfiguration story and interprets it as descriptive of paradise and of the Second Coming.

d) The church fathers frequently allegorized the Transfiguration. In the Eastern church the story became a mystical symbol of the transformation of this world and of the world to come. The celebration of the day (August 6), by the eighth century, equalled any other holy day except Easter. In the Western

church the day was not ordered for general observance until the fifteenth century.

e) Faced with the complexities of the narratives, modern commentators vary widely in their interpretations. Orthodox defenders accept the account as historical and credible. Oppositely stand those who rationally reject any objective aspects of the story and prefer a symbolical treatment which illustrates theological motifs of the early church. Others view it as a postresurrection story of an appearance of Jesus to Peter, which has been misplaced in the gospel records. But the present position of the story in the gospel narratives is preferable, because it may represent a real and decisive experience of Jesus and his disciples. Matthew's report that Jesus called the experience a "vision" (17:9) is best accepted, although the term has many meanings. The actual historical circumstances can probably never be recovered or explained for entire satisfaction. The gospel narratives, laden with later meanings, unite facts and symbols. We may, however, distinguish some probable significance for the disciples and for Jesus: It was a visionary moment that revealed to his disciples Jesus' true nature (symbolized by the light) and his future glorious state after death. Their vision of Moses and Elijah, most notable in law and prophecy in Israel, signifies that law and prophecy support Jesus and his mission. The cloud and the voice are well-known symbols which localize the presence of God, who repeats Jesus' baptismal blessing so that the disciples may hear him. Only after the coming death and resurrection could they explain what their vision meant. Luke places more emphasis on Jesus, who, facing death, found in prayer the support, "with him," of great spiritual leaders and especially of God, who chose him for the way of suffering, death, and resurrection. A divine glory illumines these transforming moments and confirms Jesus for the hard days ahead. See JESUS CHRIST.

TRANSGRESSION. See SIN.

TRANSJORDAN trānz jōr'dən. The general term for the area that lies immediately E of the Jordan Valley, the Dead Sea, and the Arabah, roughly equivalent to the kingdom of Transjordan as constituted in 1923. It comprises the biblical areas of BASHAN; GILEAD; AMMON; MOAB; EDMO; as well as the desert regions to the E. The term is not used in the RSV-KJV, but the general area is often designated "beyond the Jordan" (עבר הירדן), which may also refer to the land W of the Jordan (nine times).

1. **Description.** The Transjordan is an elevated plateau, rising in height from N to S. Bashan is a level plain, with mountains to the E; Gilead, Ammon, and Moab contain hills that rise to three thousand

to four thousand feet, intersected by valleys; Edom is a tableland that is for the most part five thousand feet or more above sea level. The region is intersected by numerous rivers and wadis that run across it in the general direction of E to W: the Yarmuk, Arab, Jurm, Jabis, Rajib, Jabbok (Zerqa), Nimrim, Zerqa Ma'in, Arnon (Mojib), and Zered (el-Hesa), as well as numerous smaller streams. The entire region is generally well watered, especially toward the N; Bashan was famous for its wheat, oaks, and cattle, Gilead for its grapes, olives, and balm, and Moab for its sheep. The King's Highway, starting at Damascus, ran the entire length of the area N to S.

2. **History.** There were well-developed settlements in Transjordan at least as far back as the Early Bronze period, in the third millennium B.C. In that part of the region which was below the Jabbok, however, there was a period of depopulation which lasted from the twentieth to the thirteenth century, possibly because of the destructive raid of Chedorlaomer (Gen. 14). After that the lower portions were settled by the Moabites and Edomites and the N parts were in the hands of the Amorite kings Sihon and Og, who were in turn dispossessed by the Israelites (Num. 21). The Ammonites began moving in from the desert not long after the Israelite conquest, probably in the twelfth century.

During the next four centuries the possession of the parts of the Transjordan area was fiercely contested by the various nations that lived there. Under David and Solomon the entire Transjordan was under Israelite rule, but after the division of the kingdom (ca. 935 B.C.) the struggle began anew and was complicated in the ninth century by the invasion of the Syrians of the kingdom of Damascus. The wars continued with varying results until 732, when the entire region was either annexed or made tributary to the Assyrian Empire. When the latter fell, it was succeeded by Babylonian (604-536) and Persian (536-332) rule.

The conquest of Persia by Alexander the Great brought a new element into the population of Transjordan, for numerous Greek colonists settled in the cities of the DECAPOLIS. About the same time the NABATEANS had extended their rule into Edom and were pushing northward into Moab. During the period of the Maccabean rulers (165-37 B.C.) the N portions of the region were resettled by Jews and became part of the kingdom of Herod. In NT times this part of Transjordan, known as PEREA, was ruled by the latter's son Herod Antipas, and was part of the kingdom of Herod Agrippa I and II until the end of the Jewish state in A.D. 73. TRANSLATIONS. See VERSIONS, ANCIENT; VERSIONS, MEDIEVAL AND MODERN; VERSIONS, ENGLISH.

TRAPS AND SNARES [פח, properly a bird trap, πάγος; מוקש, properly the bait for a trap, hence trap; חבל, מצודה, מצוד, קיש, חבל (in this sense only in Job 18:8); θήρα; βρόχος (snare in I Cor. 7:35 KJV; RSV "restraint"); יקש, נקש, קוש, verbs for setting traps]. Contrivances for catching birds or animals; frequently used metaphorically to describe sudden and unexpected death or disaster. See also HUNTING.

The numerous, but scattered, biblical references to traps, most of them poetic or metaphorical, give no precise picture of the instruments used in trapping, but three types of trap may be distinguished:

a) The most common is the automatic bird trap (פּח), the familiar "snare of the fowler" (Pss. 91:3; 124:7). It is used by present-day Arabs and called *fahh*. An Egyptian device, which corresponds closely to the biblical data, consisted of a roughly circular wooden base on which two nets were mounted.

76. Ramses II (1290-1224 B.C.) snaring birds with the gods Horus and Khnum, from Karnak

When the trap was set, the nets were drawn down to one side and held in place by a trigger, which, when released, allowed the nets to spring up and envelop the victim. The trigger could be released by hand, or sprung when the victim touched the bait attached to it. One scholar sees in this the original distinction between מוקש and פּח, although in common OT usage the two are virtual synonyms. The מוקש was the manned, and the פּח the self-springing, trap. The netlike nature of these traps (Job 18:8) and the suddenness with which they spring up (Amos 3:5) are repeatedly referred to in the OT. Fig. TRA 76.

b) Some traps for animals were nets (Ps. 141:9; Ezek. 12:13) or nooses of rope (Job 18:10) concealed in the bushes or along the paths which the animals frequented (Prov. 22:5; Hos. 9:8). They either fell upon the animal from above or trapped it by the feet (Job 18:9; Ezek. 17:20; I Cor. 7:35). Presumably the net or noose might sometimes be thrown by hand like a fish net or a lasso.

c) A third type of trap was the pit, covered with a camouflaged net which gave way when the victim walked upon it (Isa. 42:22; Jer. 18:22; 48:43-44).

Metaphorically "snare" is used of peril or death which strikes suddenly from hiding (Job 22:10; Ps. 18:5—H 18:6; Luke 21:34). There are overtones of maliciousness when the trap is set by an enemy (I Sam. 28:9; Ps. 140:5—H 140:6). Because of its association with the bait of the trap, מוקש has the distinctive connotation of that which first attracts and then destroys (e.g., false gods [Exod. 23:33], or the friendship of a hothead [Prov. 22:25]).

TRAVEL AND COMMUNICATION IN THE OT. From early times the inhabitants of Palestine were road-conscious. The country—whether organized in small city-states as in the Tell el-Amarna pe-

riod, or in a united state as under the Hebrew monarchy—was geographically a bridge between the great empires of the Nile Valley and the fertile plains of Mesopotamia. Its position astride the vital international roads linking Africa with Asia made the country into what was aptly called an "apple of discord" among the nations. Egyptian, Assyrian, and Babylonian armies bringing death and destruction in their wake, as well as caravans carrying goods from many parts of the then-known world, traversed its borders on routes along the Mediterranean Sea coast, on paths through mountain ranges, and on highways and byways.

Although most of the caravans crossed the country in transit to distant destinations, Palestinian merchants, either on their own account or as agents of the king, engaged actively in the export of agricultural goods and in the import of raw material and luxury articles. All these activities, military and commercial, presuppose not only the existence of roads in the middle of the second millennium but also a conscious effort to maintain them in serviceable order (cf. Tell el-Amarna Letter 199:10-13, in which an unnamed local prince writes to the pharaoh that he "made ready all the ways of the king, the lord, as far as Busruna"; see also the Moabite Stone Inscription, line 26, where Mesha king of Moab says: "I built Aroer, and I made the highway in the Arnon [Valley]").

1. **Roads.** The disruption of roads, or the inability to use them, was a portent of great misfortune. The Song of Deborah characterizes the chaotic situation in the country in the complaint that "caravans ceased and travelers kept to the byways" (Judg. 5:6); as did Isaiah (33:8) later when he exclaimed:

The highways lie waste,
the wayfaring man ceases.

Conversely, felicitous times are distinguished by well-constructed roads. Isaiah (40:3-4) expressed this fact eloquently when he proclaimed:

A voice cries:
"In the wilderness prepare the way of the LORD,
make straight in the desert a highway for our God.
Every valley shall be lifted up,
and every mountain and hill be made low;
the uneven ground shall become level,
and the rough places a plain."

The term "way" is often used figuratively in the Bible in the sense of "justice," "righteousness," and the "good life" (cf. Prov. 2:13; 15:19; Isa. 26:7), and Jesus referred to himself in the words: "I am the way, and the truth, and the life" (John 14:6).

The OT employs the following terms for "road":

a) דרך, "way, road, route," is the most common word, and it is used in such expressions as דרך הים, "the way of the sea" (Isa. 9:1—H 8:23); דרך המלך, "the king's highway" (Num. 20:17); אם הדרך, "crossroads" (Ezek. 21:21 KJV—H 21:26; RSV "the parting of the way").

b) מסלה, "highway" (and once מסלול, in Isa. 35:8; cf. Akkadian *sullu* and *mušlalu*, "main road").

c) ארה, "path, way."

d) נתיב and נתיבה, "path" (cf. Ugaritic *ntb*), used in such expressions as נתיבות עולם, "ancient paths" (Jer. 6:16), and בית נתיבות, "crossroads" (Prov. 8:2 KJV; RSV "in the paths").

ע) שביל, "path, road" (cf. שבילי עולם, "ancient roads" [Jer. 18:15]).

פ) בשעול, "narrow path" (Num. 22:24), and מעגלה, "track [of wagon], course" (Ps. 104:5; Prov. 2:15 [RSV "path, wayside"]; Isa. 26:7).

Road building in the classical sense began with the appearance on the scene of the Romans. The ancient routes linking one community with another, or connecting one country with another, were originally trodden paths made by the feet of men and animals. The common Hebrew word for "road" is derived from the root ררך, "to tread." The Egyptian author of the famous Satirical Letter (*ANET* 478a) describes the roads in Palestine as being filled with boulders and pebbles and overgrown with reeds, which made the passage of chariots extremely hazardous. In the course of time some roads, particularly those forming part of the international highways, were improved by government efforts in order to facilitate traffic and the movements of troops. The necessity for road construction may have arisen with the building of the cities for chariots and horsemen by Solomon (I Kings 9:19).

The texts refer to the following methods of improving the "ancient paths": (a) פנה, "to prepare" (Isa. 40:3; 57:14; 62:10; Mal. 3:1; lit., "to make clear, clear the ground" of obstacles); (b) ישר, "to make straight, smooth" (Prov. 3:6; Isa. 40:3); (c) סקל, "to remove stones" (Isa. 62:10); (d) פלס, "to level" (Ps. 78:50; Isa. 26:7); and (e) טלל, "to build up" (Isa. 57:14; 62:10). The latter term indicates that road construction—i.e., the artificial "casting up" of a trodden path for the traffic of passengers and vehicles—was practiced in biblical times. (Cf. the expressions ארה סלילה, "The path of the upright is paved" [Prov. 15:19; RSV "is a level highway"], and דרך לא סלילה, "an unpaved road" [Jer. 18:15; RSV "not the highway"]).

The reference in Deut. 19:3 to the preparation of roads to the cities of refuge so that a person who killed without intent might find his way to one of them, and Jeremiah's advice to the exiles (31:21) to set up waymarks and to make guideposts on the road in the desert, show familiarity with road signs in the period of the monarchy.

2. International routes. The international highways of the ancient Near East linked together the great powers of Egypt, Assyria, and Babylonia, and the important cities of Syria and Asia Minor. One main route led from the Persian Gulf N to the cities of Ur, Babylon, and Ashur; then, turning W, to Harran; and from there SW to Carchemish, Halab, and to Ugarit on the Mediterranean coast opposite Cyprus. From Carchemish a route led NW to Kanish in the Hittite country. A parallel road led from Babylon along the Euphrates River to Mari, from there to Tadmor "in the wilderness" (built by Solomon, according to II Chr. 8:4), and thence turning SW to Damascus. From Damascus two great roads branched out to the S. One ran through the territory E of the Jordan to Elath on the Gulf of Aqabah and thence to Arabia; and the other ran through the territory W of the Jordan to Megiddo, Gaza, and from there to Egypt. With the domestication of the camel (some-time during the eleventh century), a road led from Tema (a rich oasis in the heart of the Arabian

Desert) to Dumah in the Syrian Desert; from there it branched off into two sections, one leading E to Babylon and the other W to Damascus.

During the period of the monarchy the kings took advantage of the country's geographical position as a link joining Babylonia and Syria with Egypt and Arabia by levying a toll on goods in transit, and also by taking an active part in international commerce. David's conquests of the lands lying to the N and the S gave him mastery of the most vital arteries of commerce. Solomon's control of Ammon, Moab, and Edom in the S, and of the territories northward to Damascus, actually meant that he monopolized the entire caravan route between Arabia and the N. From Arabia routes of commerce led northward to Damascus, westward to Gaza and Egypt, and eastward via Dumah and Tema to the Euphrates and the Persian Gulf. Hence the strengthening by Solomon of the defenses of Hazor, Megiddo, Gezer, Beth-horon, Baalath, and Tamar (I Kings 9:15, 17-18), cities lying along a route leading from Edom to Damascus, undoubtedly had, besides strategic, also commercial purposes. The commendation of Balaam (Num. 23:9) that the Hebrews were a "people dwelling alone, and not reckoning itself among the nations," giving the impression that Israel was cut off from all contact with the surrounding world, does not reflect the situation of the monarchic period.

The two central international highways which passed through Palestine were the "King's Highway" (Num. 20:17) and the "way of the sea" (Isa. 9:1—H 8:23). The King's Highway,* a N-S route, starting at the great communication center of Damascus, led to Ashtaroth in Bashan and from there, through the territories E of the Jordan, to Ramoth-gilead, Rabbath Ammon, Heshbon, Rabbath Moab, Kir-Hareseth, and then along the way of the Desert of Edom, to Elath. Many of the cities mentioned in Num. 21:21-35 which the Israelites conquered on their way from Egypt (such as Edrei, Jazer, Heshbon, Medeba, and Dibon) were situated along this road. The way of the sea, a road trodden by Egyptian, Assyrian, and Babylonian armies, led from Damascus SW to Hazor, and from there, running along W of the Sea of Galilee, turned to Mount Tabor and thence to Megiddo in the Plain of Jezreel. From Megiddo a side road led N to Mount Carmel and Acco, where it joined the road along the Phoenician coast to Tyre and Sidon. The main highway continued from Megiddo along the Plain of Sharon to Japho and thence by the "way of the land of the Philistines" (Exod. 13:17) to Ashdod, Gaza, and Raphia to Egypt. S of the Sea of Galilee a branch of the Damascus highway proceeded W of the Jordan to Beth-shean, Jericho and from there to Jerusalem; another branch, starting at Beth-shean, ran to Shechem, Bethel, Gibeath, Jerusalem, and thence along W of the Dead Sea to En-gedi and Tamar. From Jerusalem two side roads branched off, one leading N to Japho and the other S to Gaza. From Bethlehem a road led to Beer-sheba, where it joined the road of Shur (Gen. 16:7) to Egypt. The country, particularly the N part, was crisscrossed with numerous ways and by ways connecting the major cities of the land. Fig. KIN 7.

It should be noted that the great international highways passed through Israel, while Judah was re-

moved from the main stream of communication. The relative position of the two kingdoms to the great highways may have been one of the reasons why Judah was able to maintain its independence *ca.* 120 years after the fall of Israel. *See also* ROAD; SHIPS AND SAILING.

1. **NT journeys.** The journeys that first come to our attention in the NT are those which involve the child Jesus and his parents. Luke 1:39-56 records that shortly after his mother, Mary (*see* MARY MOTHER OF JESUS), had conceived the child at NAZARETH of GALILEE, she went to Judah to visit ELIZABETH and spent three months with her. According to 2:1-7, Jesus was born in BETHLEHEM because Joseph had taken his wife, Mary, with him to register in compliance with a decree of AUGUSTUS. Vss. 22-39 relate that the parents took Jesus to Jerusalem to comply with the Jewish law of purification (*see* CLEAN AND UNCLEAN), which occurred, according to Lev. 12:2-5, when the child was forty days old. Thus between the time of the conception and the purification Mary made no fewer than three trips to Jerusalem. As the distance from Nazareth to Jerusalem is *ca.* seventy-five miles, the journey on foot each way must have required five days; this indicates something of the importance of these journeys, and the difficulty with which they were executed. According to Luke 2:41, the parents of Jesus went to Jerusalem every year for the PASSOVER. Vss. 42-51 tell of a trip they made when Jesus was twelve. It is evident that Joseph and Mary were zealous in keeping the law, especially in attending the festivals. As there were several festivals each year, we may assume that during his youth Jesus went to Jerusalem many times. We might infer also that this pattern of travel was characteristic of every devout family of Palestine, and beyond also, insofar as they were able to go up to the Holy City.

John 2:13 mentions a trip of Jesus from Galilee to Jerusalem for a Passover; 5:1 tells of his going up to another feast; 7:1-14 says that Jesus and his brothers went up to Jerusalem for the Feast of Tabernacles; 10:22, that Jesus was at the Feast of Dedication; 12:1, that he was back at Passover again

(which is mentioned also in Matt. 26:17; Mark 14:12; Luke 22:7). Matt. 28:16-20 relates that after the Crucifixion the eleven disciples returned to Galilee, and that Jesus himself went there and appeared to them after his resurrection. But Acts 1:12 ff indicates that the disciples shortly thereafter had reassembled in Jerusalem. The trip from Galilee to Jerusalem was one of the most frequent journeys of early Christians.

The journey of the MAGI (Matt. 2:1-12) is only alluded to, with no indication of the land from which they came. No details are recorded concerning the flight into Egypt (vss. 13-23), but the casual way in which it is introduced shows that such a journey would not have been considered unusual. The distance was two hundred miles or more each way.

We do not know the exact location on the Jordan where John was baptizing (Mark 1:1-11) when Jesus made the journey there; but if it was near JERICHO, it was *ca.* seventy miles from Nazareth. The excursion which Jesus made into the region of TYRE and SIDON (7:24-30), which is *ca.* thirty miles from Galilee, as well as the similar retreat to CAESAREA PHILIPPI (8:27-30), shows freedom and ease of travel in these areas. Jesus was almost constantly on the move from one village to another. Once or twice he was in SAMARIA (Luke 17:11; John 4:4). Several times he crossed the SEA OF GALILEE in fishing boats (Mark 4:35-41; 5:1-20; *see* FISHER). His last journey to Jerusalem was down the Jordan Valley (*see* JORDAN), by Jericho, and up through the hills to the Holy City (Mark 10:1, 46; 11:1). Once or twice he visited LAZARUS and his sisters, MARTHA and MARY 2, in BETHANY, just over the crest of the Mount of Olives from Jerusalem (Matt. 21:17; 26:6; John 11:1; 12:1).

The location of Emmaus, where the walk of two disciples with the risen Christ culminated (Luke 24:13-35), is uncertain. But JOSEPHUS (War VII.vi.6) speaks of an Emmaus sixty furlongs from Jerusalem where Titus established a colony of eight hundred soldiers after the Jewish war, which may have been on the site of the modern village of Kolonieh in a valley *ca.* four miles W of Jerusalem.

We note in Acts 8:5 that Philip went down to Samaria, that he was joined there by Peter and John (vs. 14), and that he went next toward Gaza (vs. 26). Peter then went to LYDDA (9:35), JOPPA (vs. 39), and from there to CAESAREA (10:1). Gal. 2:11 informs us that Peter was at ANTIOCH of Syria, *ca.* 350 miles N of Jerusalem; and from I Cor. 1:12 we learn that he got as far away as Corinth, some eight hundred miles from Jerusalem across the Mediterranean. There is a tradition that Peter went as far W as ROME, but of this we are not certain.

The best-known Christian traveler of the period was Paul. Although born at Tarsus of Cilicia, on the S coast of Asia Minor, as a young man he went to Jerusalem as a student (Acts 22:3). As a persecutor he visited DAMASCUS (9:2). After returning to Jerusalem, he was sent back to TARSUS (vs. 30). Later he was brought to Antioch of Syria to assist the church (11:25-27). With this church as a base, he then became the greatest missionary.

On the first of Paul's missionary tours (Acts 13-14), accompanied all the way by Barnabas and part

of the way by Mark, he sailed to CYPRUS; and from there to ATTALIA on the coast of PAMPHYLIA. Then he went *ca.* a hundred miles N through rugged hills to Antioch of PISIDIA, SE some seventy miles to ICONIUM, *ca.* twenty miles SW to LYSTRA, and some thirty miles SE to DERBE. Retracing his course to Attalia, he sailed back to Antioch. Acts 15:1-35 reports a journey of Paul and Barnabas to Jerusalem.

Paul's second missionary journey is recorded in Acts 15:41-18:22. The first part of this journey was overland from Antioch of Syria to TROAS on the Aegean. It is a difficult route of more than 600 miles. His way probably led to Tarsus, up through the Cilician Gates (*see* CILICIA) of the Taurus Mountains; by his Galatian churches at Derbe, Lystra, Iconium, and Antioch; turning at Tralla; through Philadelphia, Sardis, Pergamum, Adramyttium; and on to Troas. He went by ship to Neapolis; overland to Philippi, Thessalonica, and Beroea; by ship from there down to Athens; and by land to CORINTH. On his return he sailed to EPHESUS, *ca.* 250 miles, and then continued to Jerusalem, a voyage of some 600 miles.

The third missionary journey is reported in Acts 18:23-21:17, the first part of which was through Asia Minor to Ephesus, *ca.* five hundred miles. Then by land and sea he visited all his churches on the Aegean until he got to Corinth. After a time he retraced this course, bidding farewell to the churches, and sailed from Miletus to Jerusalem.

Then followed the trip to ROME of Acts 27:1-28:16, which was by sea, with the exception of the short distance from Puteoli to Rome. In this voyage he was shipwrecked on Malta.

Even this list does not exhaust Paul's travels. Acts does not give us a complete record. In II Cor. 11:25, Paul himself refers to three shipwrecks, all of which had occurred before the one which took place on his final voyage to Rome. Only the latter is mentioned in Acts. Gal. 1:17 notes a trip into Arabia about which Acts is silent. Further travels of Paul are indicated in the Pastoral letters, which may or may not be Pauline. I Tim. 1:3 speaks of a trip from Ephesus into Macedonia. II Tim. 4:13 knows of a sojourn in Troas; and vs. 20 of a visit at Miletus. Tit. 1:5 shows knowledge of a trip to Crete, while 3:12 seems to indicate that he visited Nicopolis and wintered there.

There were interesting travels also by less-known early Christians. Acts 18:24 tells of Apollos, an Alexandrian (*see* ALEXANDRIA), who preached in Ephesus even before Paul did. Acts 20:4 lists seven men from churches of Macedonia, Asia, and Galatia, who accompanied Paul on his last swing around the Aegean. Rom. 16:1-25 appears to be a letter of introduction, written by Paul, for Phoebe of CENCHREAE, as she was leaving on a visit to Asia. I Cor. 1:11 suggests that I Corinthians was occasioned by news Paul had received from persons of the household of Chloe of Corinth, who visited him in Ephesus. Phil. 2:25-29; 4:18 indicate that Philippians was written in response to a visit of Epaphroditus, who went from Philippi to Rome to see Paul in prison and care for his needs. Col. 1:2; 4:12 show that Epaphras had gone from Colosse in ASIA to visit Paul. Eph. 6:21 probably

indicates that Tychicus had come from Ephesus for the same purpose. The Letter to Philemon seems to mean that the slave Onesimus had deserted his master, Philemon, at Colossae in Asia, and succeeded in getting to Rome, where he became stranded, and then attached himself to Paul, whom he may have known first in Asia. One of the most fascinating journeys is that of Tychicus as he returned from Paul to Asia, apparently carrying in his brief case letters from Paul to Ephesus (Eph. 6:21), Colossae (Col. 4:7), Laodicea (Col. 4:16), and Philemon, and probably with the slave Onesimus in his care. But on these matters *see* the articles on the various letters.

2. Occasions of travel. Then as now there were many reasons for travel. Various enterprises of religion were among the most important. This is further illustrated by Acts 2:5-13, where it is said that devout Jews from every nation under heaven were in Jerusalem at Pentecost. While this statement is hyperbolic, it is nevertheless essentially true. No fewer than sixteen areas are mentioned as places from which these pilgrims had come. They extend from ROME to ELAM and MEDIA, and from PONTUS to ARABIA. Yet this is only a selection of places where Jews lived at the time; such important centers as SYRIA, CYPRUS, and GREECE are not included.

At any time of the year, but especially during festivals, Jerusalem had a cosmopolitan character. One of the chief industries of the city must have been the entertainment of pilgrims. This was true to some extent of all the cities through which these pilgrims passed year by year. Inns and hostels were largely dependent on pilgrims. So also were Palestinian agriculture, which provided food, and shepherds and cattlemen, who afforded animals for sacrifices. Jerusalem was a center, not only of religion, but also of economic life and travel.

But similar situations prevailed in other nations of the time. Religion was as essential in them as it was in Palestine. Whether in Egypt, Italy, Greece, or Asia Minor, e.g., the construction, operation, and use of temples not only inspired and sustained the religious life of the people, but also provided for expression of their artistic talent and were a basis for important trades and industries. Vivid pictures of contemporary life and institutions of Greece and adjacent lands are given by Strabo's *Geography* and the *Description of Greece* by Pausanias. As Greek religion was a polytheism, it had many temples. Some of them, such as the Parthenon at Athens, were of exceptional beauty. The Eleusinian mysteries of S Attica drew initiates and pilgrims from all over that world. The cult of Dionysus inspired the Greek theater, which migrated far beyond Greece. Two of these were built at Gerasa (modern Jerash), and one at Philadelphia (modern Amman), whose remains stand to this day.

The Greeks also had religious festivals. The Panathenea were celebrated annually at Athens in honor of Athena, and all the people of Attica joined as pilgrims. But popular festivals also brought together people from all Greek states. The Olympian games occurred every four years in Elis, and the Nemean in Argolis every two years, in honor of Zeus; the Isthmian, every other spring at Corinth for

Poseidon; and the Pythian, every fourth year at Delphi for Apollo. All of them attracted visitors and pilgrims.

Greek religion was famous for its interest in healing, which was usually associated with temples of Asclepius. Pausanias (I.21.7) mentions temples of Asclepius at Athens, Cenchræe, Epidaurus, Smyrna, Pergamum, and in such remote places as North Africa and Crete. As they were the hospitals of that world, such temples attracted numerous pilgrims.

Wars continued to be important reasons for travel. The Hellenistic period was ushered in by the conquests of Alexander the Great. After first overrunning Greece, his armies marched through Asia Minor, Syria, and Palestine to Egypt, and back through Mesopotamia and Persia all the way to India. Then followed the less co-ordinated campaigns of his successors, until Rome emerged as the world power, absorbing all lands bordering the Mediterranean and extending from Spain and Britain to Mesopotamia, and from Cappadocia to Ethiopia. Palestine was taken over in 63 B.C.

The organization and government of this empire was possible only because of efficient means of travel and communication. Transportation of food, raw materials, and manufactured goods by both land and sea was indispensable. Travel by students to university centers, such as Athens and Tarsus, and to Jewish teachers at Jerusalem, as in the case of Paul (Acts 22:3), was common. Pliny's *Natural History* is evidence of travel for scientific reasons. That there was travel also just to see the world is indicated by such men as Strabo, Pausanias, and Diodorus of Sicily, whose works are little more than guidebooks.

3. Means of travel. The most common means of travel on land was to walk. This was the usual way in which Jesus traveled about during his ministry. The disciples often walked on longer journeys. It is related in Acts 8:26-31 that Philip encountered an Ethiopian on the way to Gaza who invited him to get into the chariot and ride with him, which Philip did. Saul of Tarsus went on foot even to Damascus, as indicated in Acts 9:8, where it is said that after he was blinded by a vision, his companions led him by the hand. It is probable that Paul went by foot on many strenuous journeys during his career. But this is the method of travel to which common people were accustomed.

Animals were also used for transportation. The most common animal was the donkey (Ass). It was used not only to carry baggage and other heavy burdens, as modern persons use pick-up trucks, but also to ride upon. The entry of Jesus into Jerusalem on a donkey (Mark 11:1-11) was unusual only in the sense that the action had a ceremonial meaning. It was based on the Hebrew custom of causing the crown prince to ride on the king's mule (I Kings 1:32). While πῶλον, used in Mark 11:2, is ambiguous, and might mean "young horse," the author of Matt. 21:2 has rendered it ὄνον, "ass"; and in John 12:14 it is ὄναριον, "young ass" or "little donkey." These writers were familiar with customs of the time. In Luke 10:34, where the Samaritan places the wounded man on his own κτήνος, the animal is probably a

donkey. Common use of donkeys is indicated by the ease with which they enter into the conversation of Jesus (13:15; 14:5). In such journeys as that of Mary to Bethlehem just before Jesus was born (2:5) and the earlier visit with Elizabeth (1:39), presumably donkeys were used. The Near Eastern donkey is strong, sure-footed, good-natured, and inexpensive, and he travels at a comfortable gait.

That camels* were widely used for transportation is also to be presumed. References to them are frequent in the OT (cf. Gen. 24:10; I Kings 10:2; see CAMEL). They were especially useful for caravans which carried heavy loads through regions where food and water were scarce. They are still used extensively in the Near East. Yet there are only incidental references to them in the NT. Mark 1:6 states that John wore a camel's-hair garment, a prophetic garb apparently reflected in II Kings 1:8; Zech. 13:4. This indicates that camels were to be found in the area. The picturesque sayings of Jesus in Matt. 19:24; 23:24 are likewise evidence that the camel was well known at the time. Otherwise Jesus could not have used them in this familiar way. In any case, camels were not so widely used as donkeys. They were more expensive, less docile, and altogether less reliable for general use. Fig. CAM 6.

The HORSE was well known among Hebrews at least from the time of Solomon (I Kings 4:26). But because of cost their use was limited mainly to persons of wealth, government officials, and military personnel. In the days of Judas Maccabeus the Syrians sent to invade Judah an army which contained a contingent of 7,000 horsemen (I Macc. 3:39). When Theudas, who claimed to be a prophet, gathered a disturbing band of fanatical followers, Cuspius Fadus, the procurator, sent a troop of horsemen who cut off the prophet's head and dispersed those who had been excited by him (Jos. Antiq. XX.v.1). In organizing the defense of Galilee against the Romans in A.D. 66, Josephus was able to muster only 350 horsemen (War II.xx.8). His description of the Roman forces (War III.iv.1) mentions three different units of 1,000 horsemen each, not including mules and other beasts of burden (War III.v.4). Moreover, 120 horsemen appear to have been attached to each legion (War III.vi.3). Josephus indicates a similar extensive use of horses in Adiabene and Parthia (Antiq. XX.iii.2; iv.2). The poetic language of the Revelation of John reflects the elaborate use of horses in military communications and operations (6:1-8; 9:16; 14:20).

Acts 23:23-32 states that after Paul's arrest in Jerusalem, he was sent to Caesarea with an escort of two hundred soldiers, two hundred spearmen, and seventy horsemen, with a mount for himself. They left Jerusalem at 9 P.M. and arrived at Antipatris forty miles away by dawn; the horsemen continued on to Caesarea the next day. As a forty-mile journey is too great for foot soldiers in one night, the text must be confused. It probably means that they turned back when it was certain that the horsemen could safely go the rest of the way alone. Acts 8:26-39, which tells of the Ethiopian pilgrim returning along the road to Gaza, shows that there was a chariot road from Jerusalem via Gaza and Egypt to

Ethiopia. The chariot was, no doubt, drawn by horses.

Elephants* were too ponderous for much practical use in travel, but they found a place in military campaigns (see ELEPHANT). Antiochus of Syria invaded Egypt with a force of chariots, cavalry, elephants, and a fleet (I Macc. 1:17). Syrians appeared in Judah at one time with an army which had thirty-two elephants (I Macc. 6:30-35). Mounted on each elephant was a tower carrying four soldiers and the Indian driver. The formation assigned to each elephant a thousand armored footmen and five hundred horsemen. Fig. SEL 40.

4. Highways. Highways of the NT period traversed both land and sea. SHIPS AND SAILING were fundamental in the life of the NT world. Romans considered the Mediterranean their sea, and it was a life line of the Empire. Roman food ships followed all sea lanes from Italy to ports of the Mediterranean, Aegean, Euxine, Adriatic, and even into the Atlantic along Africa and toward Britain. Ships also provided the most convenient means of transportation for individuals from E Mediterranean ports to Rome, and between the various cities on the shores of adjacent seas. Claudius offered commercial ship operators substantial inducements and subsidy against losses (Suetonius *Claudius* 18).

But Romans were also good road builders. They realized the strategic importance of land highways for military, commercial, and other purposes. Their policy was to build and maintain good roads into every new area as the Empire expanded. Unification of the various lands under Roman rule eliminated most border difficulties, and their police power maintained peace. Travel by land in the Empire was generally safe. Inns for travelers were frequent, but not always good. Christians usually depended on hospitality of their own brethren for entertainment (Acts 16:5; 17:7; 21:16; 28:7, 14; Heb. 13:2).

A traveler by land from Rome to Syria and Egypt set out on the Appian Way. He went via Capua and Tarentum to Brundisium, 360 miles; by ship across the Adriatic to Dyrrachium or Aulona, two days; by the Egnatian Way across Macedonia to Neapolis, port of Philippi, 381 miles; by ship usually to Troas, three days; to Antioch of Syria by Philadelphia and Julia, 880 miles; or to Antioch of Syria by Laodicea, 930 miles; to Caesarea, 365 miles; and to Alexandria, 435 miles—total, five days by sea and 2,420 miles by land, or, if by Laodicea, five days by sea and 2,470 miles by land. As travel on foot averaged ca. 16 miles per day, such a journey from Rome to Alexandria would have required ca. five months. By horse or carriage, time would have been cut at least in half. For roads and sea routes of the Roman period, see Map XXI, Vol. I. Figs. SHI 50-51.

5. Other means of communication. As travel was slow, difficult, and expensive, other means of communication were essential. One of the most popular was letter writing. Readers of the NT learn this first from the letters of Paul. But according to Acts 15:23-29, the first Christian letter was written by the apostles and elders at Jerusalem to the churches of Asia Minor. This was delivered by Paul and Barnabas as couriers—a method which Paul himself later

employed. Such persons as Timothy (I Thess. 3:2), Tychicus (Col. 4:7), and Epaphroditus (Phil. 2:25; 4:18) served as messengers for Paul. This same custom was followed by Ignatius bishop of Antioch of Syria, on his journey as a prisoner through Asia Minor to Rome, where he became a martyr in 108. From Smyrna he wrote letters to Ephesus, Magnesia, Tralles, and Rome. Then from Troas he wrote to Philadelphia and Smyrna, and to Polycarp, bishop of Smyrna. Usually he mentions his messenger in the letter. As time is short, he asks Polycarp himself to write to churches ahead of him, requesting that they send him either messengers or letters by Polycarp's messengers.

The Roman government had its own official postal service, whose messengers went by both land and sea, depending on the season of the year and the destination. But there was no government post for private persons. If they wrote letters, they had to find their own ways of sending them.

S. V. MCCASLAND

TRAVELERS, VALLEY OF THE [גי העברים] (Ezek. 39:11); KJV VALLEY OF THE PASSENGERS. A valley E of the Dead Sea—therefore outside the Holy Land proper (Ezek. 47:18)—to which the slain forces of Gog, with whom Israel will be at war in the latter days, are to be brought for burial by their Israelite vanquishers (Ezek. 38-39). Thereafter the place is to be known as the Valley of Hamon-gog (39:11-15).

H. F. BECK

TRAY [טחתה, *lit.*, a thing for snatching up (live coals)] (Exod. 25:38; 37:23; Num. 4:9). Alternately: **FIRE PAN** (Exod. 27:3); **CENSER** (Lev. 10:1). A word representing a group of utensils used for handling fire or live coals. The translation "tray" refers specifically to the golden bowl on which the implements used for adjusting the wicks of the lamps in the tabernacle were placed.

See also CENSER; SNUFFERS.

L. E. TOOMBS

TREASURE, TREASURER, TREASURY. Wealth in general, the sacred vessels and objects of the temple, the possessions of a king or of an individual. Wherever these are kept, there is a treasury; the OFFICER in charge is the treasurer.

1. Treasure
 - a. General definitions
 - b. Symbolic treasures
 - c. Treasure during war and defeat
 - d. Protecting treasure
2. Treasury
 - a. General definitions
 - b. Temple treasury
 - c. Royal treasury
3. Treasurer
 - a. In the OT
 - b. In the NT

1. Treasure. a. General definitions. All wealth, regardless of the owner, is a treasure. Any valuable

gift, silver or gold as well as any possession, may be called a "treasure" (אוצר [Gen. 43:23]; אוצר [Isa. 30:6; Nah. 2:9]). In WISDOM literature it was axiomatic that the righteous would gain much treasure and be prosperous, while the wicked would suffer poverty (Ps. 17:14; Prov. 8:21; 15:6 [אוצר]; 21:20; cf. Luke 16:25). Those who gain through unrighteous means shall lose their treasure (Prov. 10:2; 21:6). Yet Jesus sees such earthly treasures (θησαυρός) as transitory and vain (Matt. 6:19 ff; Luke 12:33 ff; cf. Prov. 27:24 [חטת]; Jer. 48:7; 49:4). In fact, such seeking after earthly treasures may lead to idolatry (Matt. 6:21; Luke 12:20-21). So Jesus urges they be given up in order to have wealth in heaven (Matt. 19:21; Mark 10:21; Luke 18:22). Job in his affliction seeks death like a treasure (Job 3:21).

Temple treasures are listed in Ezra 1:9-11 (cf. Ezra 2:69-70; Neh. 7:70 ff) and include basins of silver and of gold, bowls of silver and gold, miscellaneous vessels, priestly garments, money. The decoration and trim, the candlesticks, altars, etc., were also considered treasures by plunderers.

The royal treasures are listed in II Chr. 32:27-29 (cf. II Kings 20:13 ff; Eccl. 2:8), including silver, gold, precious stones, spices, shields, costly vessels, and probably grain, wine, oil, cattle, and sheep. Solomon's wealth is described in I Kings 10:10-25. The Wise Men presented royal treasures to the child Jesus (Matt. 2:11). The disaster impending upon Judah would involve the loss of all treasures to Babylon (II Chr. 36:18; Jer. 20:5; 50:37).

Gifts presented to the temple were considered treasures (Neh. 10:39). Joshua dedicated the booty from Jericho to the Lord (Josh. 6:19 ff). Such gifts, as well as the tithes and taxes, could be used for many purposes, including the cost of repairs (II Kings 12:9-16).

b. Symbolic treasures. Figuratively the forces of nature are treasures (Job 38:22; Ps. 135:7; Isa. 45:3; Jer. 10:13; etc.). So wisdom is a hidden treasure (Prov. 2:4; cf. Isa. 33:6). Israel is the treasured possession of God (Exod. 19:5; Ps. 135:4). Man should store up in heaven good treasures of salvation by faith and loyalty (Matt. 6:20-21). The gospel of salvation is a treasure for Paul (II Cor. 4:7; cf. Matt. 13:44, 52). Ultimately all treasures and wisdom belong to and are found in Christ (Col. 2:3). To possess these eternal treasures is greater joy than having even a royal treasure (Heb. 11:26). Out of the good treasure ("treasure"? θησαυρός) of their hearts good men bring forth more good (Matt. 12:35; Luke 6:45).

c. Treasure during war and defeat. In warfare all treasure of whatever kind was fair game for the conqueror (Isa. 39:6 ff). So SHISHAK took away the temple treasures, the royal treasures, everything (I Kings 14:26). Plunder was a normal method for the international exchange of wealth (I Kings 15:18; II Kings 14:14; 24:11-13; Isa. 10:13; 23:18; etc.). TRIBUTE was a partial transfer of such wealth to the more powerful ruler (II Kings 12:18; 16:8; 18:13 ff; etc.). The fall of Jerusalem meant that all temple treasures, royal treasures, and private wealth went to Babylon (Jer. 15:13; 17:3; 51:13; Ezek. 22:25; Dan. 1:2; cf. II Chr. 36:18). In the last times plunder will be frequent (Dan. 11:43; cf. Hos. 13:15).

d. Protecting treasure. The possession of wealth caused care and trouble (Prov. 15:16). Guards, sentinels, treasurers (*see below*), and strong treasure houses (*see below*) were needed. Wealth was defended by one's life. Personal treasure was usually carried on the person for safekeeping (Luke 10:30 ff; cf. Matt. 6:19) or buried in the ground (Matt. 13:44; cf. Job 3:21; Jer. 41:8). Archaeologists frequently find hoards or caches of coins hidden beneath floors.

2. Treasury. a. General definitions. In the plural of the KJV "treasuries" may mean wealth or treasures of various kinds (*see above*) or the places for storing such treasures. A CHEST may be used for storing personal possessions (Ezek. 27:24). The casket of the wise men could be a treasury (θησαυρός; Matt. 2:11). God's grace and providence exercised through nature reveals the treasury of his blessings (Deut. 28:12; 33:19; cf. Isa. 45:3).

b. Temple treasury. The earliest temples of Sumer were rich and had treasuries. Some consider them to be the first capitalistic institutions. Tyre is said to have a city treasury (Ezek. 28:4), but this may mean the general personal wealth of the merchant city. The TABERNACLE seems to have had a treasury (Josh. 6:19). The TEMPLE in Jerusalem had rooms for various kinds of treasure (I Kings 7:51; I Chr. 28:11 ff). Solomon stored treasure in the temple treasuries (I Kings 7:51; II Chr. 5:1). Excavation of Canaanite temples reveals grain pits and other places that could be treasuries.

In Herod's temple tithes and taxes were paid at the treasury. Josephus (War V.v.2) mentions thirteen boxes for the receipt of the temple tax. The Mishna describes the treasure chests as trumpet-shaped receptacles in the Court of the Women. Judas returned the pieces of silver, but the priests would not put it into the treasury (Matt. 27:6; κορβανάς). Jesus often seated himself in the vicinity so he could watch the contributions to the treasury (γαζοφυλακείον; Mark 12:41 ff; Luke 21:1 ff; John 8:20).

c. Royal treasury. The temple treasury and the royal treasury in Solomon's day may have been identical. But Hezekiah had treasuries and storehouses for his wealth (II Chr. 32:27-28; Isa. 39:2). Records and tax receipts have come from the palace in SAMARIA. Documents and decrees may have been kept in the royal treasury (Ezra 5:17 [גז; LXX γάζα; "royal archives"; *see* ARCHIVES, HOUSE OF THE]). In Persia bribes went to the royal treasury (Esth. 3:9; 4:7; *see* GENIZAH). Nehemiah followed the Persian customs concerning public treasures (Neh. 10:37; 13:7; LXX γαζοφυλακείον). Public records were kept there in Maccabean times (I Macc. 14:49). "Treasury" may at times not refer specifically to a place but to the accumulated assets of the king, wherever they may be (Ezra 7:20). The granary and the treasure or store-cities were also royal treasuries (Neh. 13:12; cf. Gen. 41:48 ff; Exod. 1:11 [גז]; I Kings 9:19; II Chr. 8:4-6; etc.). *See* STORE-CITIES.

3. Treasurer. a. In the OT. The treasurer is the officer in charge of royal or sacred treasures composed of goods, documents, money, and jewels. He is STEWARD of the possessions of the king and OVERSEER of the treasury (*see* § 2 *above*).

AZMAVETH was treasurer for David (I Chr. 27:25). He was in charge of the royal treasury. Probably

ranking below him was Jonathan son of Uzziah (see JONATHAN 7), who was over treasuries throughout the kingdom. He was probably watchdog and overseer for royal tax collections, and supervisor of royal lands. Both are called stewards as well (I Chr. 27:31). אֲחִיָּהּ is listed as treasurer over the treasury of the house of the Lord under David (I Chr. 26:20). Jehiel was over the same treasury in Solomon's day (I Chr. 29:7-8; see JEHIEL 2). Isaiah speaks of SHEBNA as "steward" (Isa. 22:15; KJV "treasurer") in the time of Hezekiah.

Nebuchadnezzar also had treasurers among his officers (Dan. 3:2). MITHREDATH was treasurer for Cyrus and was in charge of the booty captured and then returned to the original peoples (Ezra 1:8). Artaxerxes commanded all his financial representatives beyond the river to help Ezra with material aid in re-establishing the devastated land (Ezra 7:21-22). Nehemiah appointed several treasurers to care for the contributions (Neh. 13:13; I Chr. 9:26; cf. Neh. 12:44).

b. In the NT. The Ethiopian EUNUCH was in charge of the treasury of Candace the queen (Acts 8:27). The CHAMBERLAIN of Corinth in charge of that city's finances was Erastus (Rom. 16:23; see ERASTUS 1).

TREE OF KNOWLEDGE, TREE OF LIFE. Two miraculous trees which stood in the garden of Eden. The relationship between the two is difficult to determine because of conflicting sources used in Gen. 2-3. The significance of the expression "the tree of the knowledge of good and evil" is also much debated. The tree was the means to a knowledge which was, by right, a divine prerogative. The disobedient eating resulted in man's shame and guilt and his expulsion from the garden. The tree of life plays a significant role only after the Fall. Man is driven from the garden to prevent his attempting to gain immortality through the false means of this magical tree.

1. Terminology and usage. The expression "the tree of the knowledge of good and evil" (עֵץ הַדַּעַת) appears only twice in the OT (Gen. 2:9, 17). The same tree is presupposed, however, in Gen. 3:1-21 and is designated merely as "the tree which is in the midst of the garden" (vs. 3). One's eating from it brings the knowledge of good and evil (vss. 5, 22). A more exact translation of the expression is "the tree of the knowledge good and evil." According to Hebrew grammar, the noun is not in the construct state

followed by a genitive. Rather, it is an infinitive construct preceded by an article and followed by two accusatives. The syntax is important in indicating that the study of this difficult expression must be concerned with the entire phrase and not merely with "good and evil."

"The tree of life" (עֵץ חַיִּים) appears in Gen. 2:9; 3:22, 24; Prov. 3:18; 11:30; 13:12; 15:4; and four times in the NT (τὸ ξύλον τῆς ζωῆς; Rev. 2:7; 22:2, 14, 19). It occurs occasionally in the Jewish non-canonical books (I Enoch 24:4 ff; II Enoch 8:3 ff; II Esd. 8:52). Ezekiel possibly alludes to the tree of life without naming it (31:3-9; 47:12).

2. Parallels in comparative religion. The description of the trees in Eden stems from traditions which are not indigenous to Israel. The material belongs to that part of Israel's inheritance of Near Eastern mythology which either was transmitted directly from N Mesopotamia by the Hebrew ancestors during the Middle Bronze Age or was mediated through Canaanite culture. The parallels in comparative religion are significant in showing the peculiar form into which Israel reworked these ancient mythical motifs. See MYTH.

The tree of life belongs to that category of objects which have the power of bestowing eternal life, such as life-giving plants, water, and fruits. The mythical idea conceives of life in terms of a material substance which can be possessed through eating. This belief is manifest everywhere in the history of religion. In Egypt the tree of life is pictured as a tall sycamore upon which the gods sit and obtain immortality from eating. The mythology of India describes a tree in heaven from which Yama and the other gods partake of the life-giving drink, "soma." "Ambrosia," the sacred food of the Greek gods, also belongs to this class.

In Sumerian mythology the evidence is too scanty for certainty; however, the *gishkin* tree in the temple at Eridu may well represent a mythical tree of life. Its appearance is like a shining stone with roots reaching to the subterranean ocean. The presence of a life-giving plant is more certain. In the Babylonian-Assyrian literature there are no direct parallels to the tree of life; however, reference to magical plants which bestow immortality are frequent. Utnapishtim promises eternal life to Gilgamesh from a magical plant growing in the sea. In the Adapa myth it is magical bread and water which bestow the gift of immortality. These myths offer etiologies to explain why man has failed to attain immortality. They are an early witness to man's concern with the problem of life and death.

Ancient Near Eastern literature offers no parallels to the tree of knowledge. The earlier attempt to find a reference to a "tree of truth" in the Sumerian name *gishzida* must be abandoned as a mistranslation. It is highly significant that the biblical writer has refashioned his material in such a way as to shift the emphasis away from the Near Eastern concern with life and death to the question of man's obedience, which is without ethnic parallels.

3. Literary analysis. OT scholarship has long recognized the difficulty of understanding the role of the two trees in Gen. 2-3. According to 2:9b the tree of life stood in the midst of the garden along

with the tree of knowledge. Gen. 3:1-21, however, speaks of only one tree in the midst of the garden, which is the tree of knowledge. The sudden introduction of the tree of life into the story (3:22-24) only increases the difficulty. If this tree was also forbidden, why was the writer silent about it? If it was not forbidden, how is one to understand man's free access to it?

The older literary criticism tried to solve this problem by unraveling two accounts within Gen. 2-3, J¹ and J². Each source was assigned one tree. This solution seemed to have much in its favor, since there are abundant signs pointing to a composite source: (a) the double name, Yahweh Elohim, is peculiar to these chapters; (b) the tree of knowledge in 2:9b is tacked on the verse in a manner which is syntactically clumsy; (c) 3:22, 24, offer a doublet to 3:23. Many literary critics felt that the tree of life was secondary and should be eliminated entirely from the story.

More recent scholarship also has recognized the composite nature of the biblical account. Instead of attempting a mechanical division, it has traced the internal friction in the story back to its stage of oral tradition. The gradual process of assimilating older material did not succeed in eliminating all the discrepancies. In the opinion of most modern scholars a division of the story into two independent sources has not commended itself. The elimination of one of the trees has also not been successful.

4. The tree of knowledge. The tree of KNOWLEDGE presents such great problems in understanding that no generally acceptable solution can be offered. The following are the chief theories which have arisen in the history of interpretation:

a. Moral judgment. The tree of knowledge is the means to moral judgment, by which man distinguishes right from wrong. This traditional interpretation rests upon the frequent OT usage of the terms "good and evil" in an ethical sense (Isa. 5:20; Amos 5:14; Mic. 3:2). However, it raises the problem of whether there could have been real disobedience without a prior sense of right and wrong. It is difficult to reconcile the fact that God sought to prevent man from acquiring a sense of moral judgment with the Hebrew concept of the Deity.

b. Secular knowledge. The tree of knowledge is the means to secular knowledge, culture, and reason. This view recognizes that good and evil in the OT frequently have a far broader meaning than the merely ethical. Good and evil can mean salutary and harmful (II Sam. 13:22). Gen. 2-3 is interpreted as the first step toward wider knowledge, which means a retreat from the fear of God. In this view Gen. 3:24 reflects the familiar Promethean theme.

Several objections have been raised to this interpretation: There is no indication that Adam's sin caused an increase in worldly knowledge. The change is rather in terms of a sense of shame and guilt. Again, the discovery of the arts and crafts is not attributed in the OT to Adam, but to his descendants (Gen. 4:20 ff).

c. Sexual knowledge. The tree of knowledge is the means to sexual knowledge. The advocates of this interpretation have pointed out that the verb *יָדַע*, "know," occurs frequently as a euphemism for sexual

relations (Gen. 4:1; 19:5). When Adam and Eve acquired the knowledge of good and evil, they recognized their nakedness and experienced feelings of shame. Finally, several parallel passages containing the phrase "knowing good and evil" can be reasonably interpreted as referring to sexual knowledge (Deut. 1:39; II Sam. 19:35; 1QS^a I.9-11).

The chief objections leveled against this interpretation are as follows: Gen. 2:23-24 already includes the idea of sexual knowledge and presents the etiology of the sexual relationship. Nowhere does the writer equate insensitivity to nakedness with lack of sexual knowledge. Nakedness is not merely shame before the other sex, but the exposure of oneself. Also the word *טוֹב*, "good," appears very infrequently with an exclusively sexual connotation. Finally, in Gen. 3:22, Yahweh affirms that man has become as "one of us" through this knowledge. This can hardly be reconciled with a similarity in sexual knowledge. Nor can this difficulty be avoided by understanding human procreation as a counterpart of divine creation.

d. Universal knowledge. The tree of knowledge is the means to universal or divine knowledge. The defenders of this interpretation point out that it is idiomatic in Hebrew to express a totality by using two extremes, "downsitting and uprising" (Ps. 139:2 KJV), "neither good nor bad" (Gen. 31:24). Furthermore, the totality of knowledge appears in II Sam. 14:17, 20, which is a close parallel. David is described as being "like the angel of God to discern good and evil." The commentary in vs. 20 adds that the angel of God knows "all things that are on the earth."

The following argument has been raised in objection to this interpretation: Unless the element of discernment is allowed within the idea of totality, the interpretation of 3:22 becomes extremely artificial. Man did not achieve omniscience from the tree. This difficulty cannot be evaded by understanding vs. 22 as an ironical statement.

e. Summary. The question can be seriously raised as to whether the uncertainty of the interpretation of the tree of knowledge does not stem ultimately from the fact that the author does not say precisely what he means anywhere. The error comes about when commentators attempt to solidify a concept which was originally fluid. Perhaps one should be satisfied with drawing a few broad lines: (a) Knowing good and evil is, in some sense, to be like God (Gen. 3:5, 22); (b) the knowledge brought a new relationship between God and man (3:8 ff); (c) the effect of the knowledge was not beneficial, as man had expected, but resulted in shame and guilt (3:7 ff).

5. The tree of life. What is the role of the tree of LIFE in the story? Gen. 3:22 clearly depicts the tree as being a means to immortality. Yet, if man had had access to it, why had he not already obtained eternal life? Some have tried to solve this dilemma by claiming that immortality was possible only in the continual eating the fruit. When man was driven out of the garden and cut off from the source of the fruit, immortality was forfeited. This interpretation cites as support the many parallels from comparative religion where immortality rests on continual nourishment. Further proof is offered

by translating בָּרָא in 3:22 as "again" instead of "also." This theory has not met with general acceptance among scholars. It neglects to take into account the urgency of man's expulsion from the garden, which rested on the real possibility of his obtaining immortality through a single eating.

In attempting to understand the role of the tree of life in the story, it is important to find the point of view of the biblical writer. Many of the logical questions of the modern reader are simply not answered by the saga. Nor can the several discrepancies be completely resolved. What is significant is that the biblical writer presents the tree of life as an important factor only after man's disobedience.

Gen. 2, in spite of its naïve language, is a highly theological description of the Hebrew's understanding of the ideal life. The life intended for man by God is depicted as a quality of harmonious existence. Man became a "living creature" (נֶפֶשׁ חַיָּה) when first infused with the breath of God. He has life in obedient dependency upon God (2:7), within a human group (2:18 ff), performing an assigned task (2:15, 19-20).

Through disobedience man lost this kind of life. God said: "In the day that you eat of it you shall die" (2:17). Death is characterized as shame, guilt, and expulsion. God then feared lest man seek to substitute immortality through the tree of life for the loss of genuine life. This mythical idea is rejected as a false substitute. True life is not gained through a magical tree, but only through the proper relationship to God. It is because he has lost this relationship that man is expelled from paradise. The Genesis writer has skilfully employed this older mythical motif to symbolize a false solution to man's ultimate problem of life and death.

The tree of life reoccurs in the NT in the book of Revelation. Using the language of apocalypticism, the writer pictures man's restoration to fellowship with God in terms of the return of the blessings of Eden. The NT emphasis no longer rests on the magical qualities of the tree, but focuses on its purposes as a means to the healing of the nations (Rev. 22:2).

6. The theological significance. To tell his story, the biblical writer of Gen. 2-3 used ancient mythical motifs, one of which is the magical tree of paradise. Although the foreign material contained ideas generally strange to the OT, the writer has skilfully reworked this material to give a genuine Hebrew witness.

The story of Gen. 2-3 is a theological etiology explaining man's separation from God and the loss of the full life. The writer has broken the typical Near Eastern pattern by shifting the focus away from the loss of the mythical tree of life as the reason for death. Instead, he has placed the full emphasis on man's disobedience as the cause of his plight. He has created a vehicle for this theological message in the tree of knowledge. In the final analysis, the tree has become merely a stage setting for the real action between God and man.

TREES. See FLORA.

TRELLIS [עֵץ מְבֻרָךְ , *lit.*, interweaving of wood] (Ps. 74:5). Although Ps. 74:5 is corrupt, the words translated "trellis" most probably refer to the elaborately carved woodwork on and around the main entrance to the sanctuary in the temple. This trellis was hacked down by invaders for its gold overlay. See TEMPLE (JERUSALEM). L. E. TOOMBS

TRESSES. The translation of a difficult word, רֶהַט (KJV GALLERIES), in Song of S. 7:5.

***TRIAL OF JESUS. 1. Before the Sanhedrin.** It is often asserted that the SANHEDRIN trial, as depicted in the gospels, was illegal. Then, since the Jews were meticulous about judicial process, the NT accounts must be erroneous. Two answers may be made: (a) The destruction of Jerusalem, in A.D. 70, erased records for the very period in which we are interested. If NT records do not accord with earlier or later practices, this may prove little regarding Jesus' own time. (b) The gospels all make this a preliminary hearing, for binding Jesus over to Pilate. In that case, and considering the intense anger the Jewish hierarchy felt toward Jesus, full judicial procedure would probably have been thought unnecessary.

Their real complaint against him cannot have been his claim to messiahship. This was no crime in Jewish eyes. Nor, apparently, had he personally violated the Mosaic law, though he had proposed other than Pharisaic interpretations of it, and had befriended law-violators. He was regarded, however, as a sorcerer (Matt. 10:25; Mark 3:22 ff; cf. Mark 6:14); this charge reappears in the Talmud (Sanh. 43a; 107b). He had defied the priests by cleansing the temple (Mark 11:15-19), refusing to account to them for his actions (Mark 11:27-33), and, perhaps, making them appear ridiculous by his answer on the resurrection (Mark 12:18-27). According to John 11:47 ff, the Sanhedrin also feared that Jesus might cause a popular uprising, and bring retaliation from Rome. Finally, they found him guilty of blasphemy. In Matthew and Mark this is fused with the question of his messiahship (Matt. 26:63-64; Mark 14:61-62), but in Luke, which is certainly more accurate here, the two are kept separate (Luke 22:67-69). By Jewish custom one tore one's garments on hearing blasphemy. The high priest did so now. This, and not

the messianic claim, was the crime deserving of death under Mosaic law (Lev. 24:16; John 19:7).

Most of this would be meaningless to Pilate, however, and the Sanhedrin apparently lacked authority to sentence to death (cf. John 18:31; the killing of Stephen [Acts 7:54 ff] was in the nature of a lynching). So, according to Matthew and Mark, the council sought vainly for testimony regarding acts that Pilate might deem criminal. The gospels do not agree as to whether Jesus spoke during most of this. Finally, adjured in a manner that no Jew could refuse to answer (Matt. 26:63), he declared his own claim. This claim, which was not the ground on which the council itself condemned him, could nevertheless be laid before Pilate.

2. Before Pilate. The NT gospels, and particularly Luke, are kinder to the Roman authorities than they may have deserved. Doubtless this was to shield the feelings of Gentiles whom NT writers wished to convert. Certainly PILATE was not more lenient toward Jesus than he is here pictured. A harsh man, he had more than once so flouted Jewish sensibilities that bloodshed had ensued. During the Passover, Jewish patriotism was at fever pitch, and the governor would be especially on the alert to suppress any sign of rebellion.

Of the "many things" of which Jesus was accused before Pilate (Mark 15:3), only three are named, all at Luke 23:2:

a) Perverting the nation. This vague expression could mean any of the offenses listed in § 1 *above*, but more likely means that Jesus had excited the crowds. Cf. Luke 23:4.

b) Forbidding the giving of tribute to Caesar. In the light of Luke 20:25, this reads like false witness. However, Jesus' words on the earlier occasion are somewhat ambiguous, and might have been understood to mean, "Give Caesar not one whit more than his bare due."

Had the foregoing charges been true, they would make Jesus a sympathizer with the revolutionary Zealots. See ZEALOT.

c) Claiming to be a king—the only accusation that appears in all four gospels. Each repeats the word at least four times (John twelve times) in recounting Jesus' trial and crucifixion. In pressing this charge, the Fourth Gospel says, the accusers avowed their own exclusive loyalty to Caesar (John 19:12, 15).

All the gospels depict Pilate as perplexed, uncertain, and anxious to shift the decision to others. He sends Jesus to Herod Antipas (Luke 23:6-13), who is visiting Jerusalem, but who has no jurisdiction here. He seeks to release Jesus instead of BARABBAS, but is overruled by the clamor of the accusers and of the mob that, gathering meanwhile, has been stirred up by the priests. So he washes his hands, as a public disclaimer of responsibility for his own decision (Matt. 27:24).

In the Synoptics, Jesus is silent during most of this trial. Confronted with the direct question, however: "Are you the King of the Jews?" he replies: "You are saying [it]" [σὺ λέγεις]. Whether these words are a refusal to answer, or an acknowledgment, in any case he is delivered to execution. The INSCRIPTION ON THE CROSS shows him guilty of

insurrection against Rome, in his claiming to be king.

***TRIBE.** The normal social unit among Semitic nomads and seminomads, especially Israel before the conquest of Canaan. The basic unit was the family or household. It was a corporate personality consisting of clans and families held together by kinship. The belief in kinship by blood, marriage, adoption, or covenant is essential to the life of the tribe. Interest in genealogy is common to all tribal societies.

1. Tribes in the ancient Near East. The earliest records of Semitic nomads (see SEMITES; NOMADISM) show that the tribal structure is common to all. The Amorites and Arameans set a pattern early in history. Edom (Gen. 36:15 ff), Midian (Num. 25:15), Ishmaelites (Gen. 25:16), and Arabians (Gen. 25:1; Isa. 13:20) have a tribal organization similar to that of Israel. In the OT ancestors are given for most of these tribal kingdoms, as well as for Ammonites and Moabites (Gen. 19:37-38). They were ruled by a PRINCE or chief, seldom a king. With settlement and the pursuit of agriculture, the tribal organization tended to fall apart. This is true of Amorites in Mari as well as Israel in Canaan. Perhaps only pasturage remained tribal after the establishment of the monarchy. David and Solomon, like the monarchs in other countries, deliberately undercut the tribal loyalties in order to develop nationalism. When they are first met, the Canaanites do not seem to have a tribal organization but are more in a city-state and monarchic pattern.

2. Tribes in the Bible. a. Terminology. The fullest description of Israel's early tribal organization is in Josh. 7:16-18, where four subdivisions are incidentally listed as follows: (a) nation (בְּנֵי יִשְׂרָאֵל; οἱ ὕιοι Ἰσραὴλ); (b) tribe (שִׁבְט; φυλή); (c) clan (מִשְׁפָּחָה; δῆμος); (d) household or family (בֵּית־אָב; οἶκος; I Sam. 9:21; 10:20 ff). Thus Achan is reached, "son of Carmi." Although this schematization is clear

and logical, the use of the terms is not fully consistent in the OT.

The "children of Israel" constitute a people or nation (עַם). The term occurs in the Code of Hammurabi and in Aramaic; it is a cognate to Arabic 'amm(un), "community," and the Akkadian *ummanu*, "troops" and "people." The root originally meant "to join." The Greek in the LXX is usually λαός. The foreign nations are usually גו (LXX ἔθνος). The term "people" is not limited to a nation, but could be the population of an area. Even ants are a people (Prov. 30:25-26), as is true of locusts (Joel 2:2).

The Greek word φυλή is commonly used to translate the Hebrew words for "tribe" and "clan." Obviously this is too broad to be of value. The שבט was the over-all social group. It considered itself to be one family or unit (Jer. 33:24; Amos 3:2). In the late writings—e.g., Chronicles—שבט appears. Both these Hebrew words have the meaning "staff." The concept of "tribe" is thus apparently derived from the ruler's or commander's staff, a symbol of authority and order. Occasionally these words are used for the subdivision of the tribe—namely, a clan (Num. 4:18; Judg. 20:12; I Sam. 9:21).

A "clan" (הַשְּׁבֵטִים) was a group of households or an expanded family (Exod. 6:14; Num. 3:24). Usually they claimed a common ancestry (Gen. 24:27; 29:15; I Sam. 20:29). Usually the father lived on in the clan (Josh. 7:18; Judg. 9:1). The clan was the link between the family and the larger unit, the tribe (Num. 2:34). In the Priestly Code this Hebrew word is regularly and consistently used for a subdivision of the tribe. A stranger could be adopted into the clan. At one time Dan and Judah are called "clan" (Judg. 17:7; 18:1, 11; etc.). The מְלוּחָם was probably the same as a clan (Judg. 6:15; I Sam. 10:19; Mic. 5:2). Perhaps these could be considered clans before federation into a tribal unit had taken place. The LXX translates מְשֻׁפָּחִים at least thirty-seven times with φυλή and more than two hundred times with δήμος, "district" or "people."

In the strict language of the Chronicler the clan was subdivided into the "father's house" (בֵּית־אָב). This is almost a compound noun and occurs in the plural in many passages in Numbers. The father's house, or family, was usually larger than a modern Western European family because of polygamy, concubinage, and possession of servants and slaves. A family could therefore include what we might call several families living as one household (Num. 3:24; 34:14). They might include persons who were not kin by blood, such as the association of the Rechabites (Jer. 35:18). Strictly speaking, the father's house was the group centering around the father or grandfather and could be further subdivided into the individual families. In Josh. 7:18, Achan belonged to the household of Zabdi (his grandfather), but he was the son of Carmi. It is difficult except in such passages to distinguish the father's house from the individual family (Gen. 24:38-41; Deut. 29:18; I Sam. 9:21). A man took his own household with him wherever he went (Gen. 12:1; I Sam. 27:3). It is probable that the term מוֹרֶת in the Hebrew Bible has a nontechnical sense with reference to the nearest blood relation or kin-

folk. It is literally the "breeding group" (Gen. 12:1; 31:3; 32:9; etc.).

b. Origin, division, and growth. Tribes, clans, and families normally developed from an original breeding group or family unit. A prominent man, perhaps the patriarch himself, gathered his own close kindred around himself. Here was almost an absolute blood unit. Only a few slaves and daughters-in-law were not blood kindred. As the group grew in wealth, size, and power through birth and conquest, smaller and weaker family groups of similar origin were attracted to or subjugated by the more prominent and more powerful group, and the family extended beyond pure blood kinship, eventually including a strong territorial tie as well. It is probable these alliances were within a similar language group. Tribes might also arise from common occupation and from contiguity. Thus the Arab group, the herders' Anazeh, were not necessarily from a common ancestor. There may be traces of such an associational origin reflected in the names Rachel and Leah. The tribes of Caleb may have been ass nomads with both common life and common ancestors. It is dangerous to oversimplify tribal origins.

In the early wanderings of the Israelites, old tribes seemed to disappear and new ones arise. In the first stages of the Conquest each may have lived relatively isolated from the other among the hills of Canaan. The tribes changed in importance and relative strength. Reuben, once first, was replaced by Judah. Benjamin is significant because of the role of Saul, and because of David's capital on the edge of their territory. Some, like Simeon and Levi, became territorially insignificant. Others, like Dan, might change territory. A clan might grow into a tribe. It might become so large that it divided, as did Joseph. Tribes could originate out of other tribes as the earlier ones increased in size and perhaps became too unwieldy for the political organization. Such was the origin of Ephraim and Manasseh, originally clans or even families of Joseph. These groups became tribes which were independent and controlled a large territory. Ultimately the territorial tie became as strong as the original blood kinship. There are those who believe that all three of these tribes were originally independent and that they coalesced through an alliance. The origin of Benjamin may be similarly a breaking off of one portion, the right hand or S portion of Joseph, after the entry into the Promised Land.

c. Associations of clans. Mutual affinity, common ancestry, a common enemy, as well as a religious covenant, may bring tribes together. The attachment of the family of Lot to Abraham may be an example of a coalition on a family basis. Abraham allied with similar tribes to fight a common enemy in Gen. 14. It is quite possible that some non-Israelitic groups made coalitions with Israel as the Conquest became more complete. The basic coalition within Israel was that based on the amphictyonic covenant at Shechem (Josh. 24:1 ff; cf. II Chr. 10), and Shiloh (Josh. 18:1 ff; 21:2; I Sam. 1-4). Similar amphictyonies have been noted in the first millennium B.C.

d. Number of tribes. The lists of the tribes in the OT vary in number (Num. 1; 26; etc.). There are

ten in Deut. 33:6 ff; II Sam. 19:43; eleven in I Kings 11:31; but thirteen in Gen. 46:8 ff; 48:5 ff. There are more than twenty variant lists in the OT. Certain of these lists are geographical (Num. 2-3; 34:14; Deut. 27:12; I Kings 4:7; I Chr. 6:54; Ezek. 48:1 ff; etc.). Some are genealogical (Gen. 35:23; I Chr. 2-3; etc.). The tradition of the twelve is maintained in most of the lists (Gen. 35:22-26; Deut. 27:12-13; I Chr. 2:1-2; Ezek. 48:1 ff). This seems to be an artificial arrangement established after the tradition had arisen or after the twelve tribes had suffered a varied career. Thus we have twelve divisions in Gen. 29-30 only by including Dinah in place of the missing Benjamin. Likewise in I Chr. 2-3; 6:54-80, the twelve is maintained only by doubling or by counting both halves of Manasseh. In Deborah's Song, however, there are only ten tribes, who rallied to help her against the enemy (Judg. 5:14 ff). Warriors came from only some of the tribes. This may be because the S tribes were too far away from the battle scene or were not yet involved in Israel's federation. Simeon is omitted in two lists (Deut. 33:6 ff; Judg. 5:14 ff). There are no lists in II Kings, Ezra, or Nehemiah.

This artificial schematization is maintained in almost all the lists from the book of Numbers. There is artificiality in finding twelve clans for Levi and Judah. There are also twelve tribes of Nahor (Gen. 22:20), of Ishmael (Gen. 17:20; 25:13-16), of Esau (36:9-14; cf. vs. 40-43). Solomon had twelve administrative districts (I Kings 4:7-19). Some believe he used twelve to complete the tribal tradition. Others feel it is the twelve districts that are projected back into the other lists that caused the confusion in number. If Solomon's plan for redistribution was successful, the absence of lists in II Kings is a historical result. Nevertheless, the ideal of twelve remains (Ezek. 48). In the NT many people are still concerned with their tribal connection: Anna out of Asher (Luke 2:36), Barnabas out of Levi (Acts 4:36), Paul out of Benjamin (Rom. 11:1), and Jesus out of Judah (Heb. 7:14). Jesus promised his apostles that they would judge the twelve tribes, probably meaning all Israelites (Matt. 19:28). James writes to the twelve tribes in the Diaspora (Jas. 1:1). Paul likewise uses the term to mean all Israel (Acts 26:7). John in his vision has the list of twelve tribes, but Dan is missing (Rev. 7:1 ff).

The frequent use of the number twelve throughout the Bible and the Near East is perhaps based on the signs of the zodiac.

e. Government of tribes. The prince, elder, patriarch, or sheik was the tribal ruler. In his own clan or family he had almost absolute rule. The council of elders, consisting of the heads of all households, directed the affairs of the larger tribe (Gen. 36:15; Exod. 34:31; Num. 1:16). See ELDER.

Tribal customs readily became fixed, and government by customary law was simple. In the desert there was a deep-seated loyalty to the tribe, and a sense of brotherhood was firm. Solidarity and vengeance went hand in hand. Tribal government usually enforced a strict moralism, the nomadic ideal See NOMADISM.

f. Tribal boundaries. Some of the names reflect location, such as Benjamin. Some of the tribes, as

noted in § 2*b* above, moved. Many of the tribes continued only as territorial designations long after the tribal organization had disappeared. The allotment of tribal territory is given in several lists (Josh. 13-19). Other geographical lists have been noted above. It is obvious that some of the tribes were given a specific territory to have and to hold. Certain tribal names occur again and again for a territory or district and not for the tribe or individual—e.g., Ephraim and Gilad. In Judg. 6:35, Manasseh and Asher are treated as place names. In Manasseh we have a good evidence of personal names used for place names recurring in the Samaritan ostracoon. Some place names occur in the genealogies under more than one tribal name, so that they may have belonged to more than one tribe or territory at various times.

3. History or myth: individuals and tribes. Israel traces its tribal unity to a common ancestor through the genealogy of Jacob and his sons. Some stories can hardly be interpreted mythologically or allegorically—e.g., Joseph's robe (Gen. 37:3) and Potiphar's wife (Gen. 39:7). Yet Gen. 49 is clearly tribal in character. Marriages among the individuals may be symbolic of other covenant relationships. We cannot say positively that the marriages in the early patriarchal stories and in the early chapters of Chronicles were not marriages of persons at all but solely alliances and coalitions of tribes. Judah married Canaanite wives (Gen. 38:1). Undoubtedly this caused Judah's family or tribe to increase and even to envelop some Canaanite enclaves, but to say that this represents the fusion of Judah with a specific Canaanite tribe is more than the record allows. The handmaid tribes—i.e., those tribes whose namesakes were the children of Bilhah and Zilpah—are sometimes considered as originally non-Israelite and late additions to the confederation. The record is clear that Asher, Naphtali, Dan, and Gad were weaker, less significant tribes, but this does not mean that they became handmaid tribes because of their weakness.

The relationship of tribes through their reputed mothers is not at all clear. Reuben and Zebulun are of a common mother, but they give evidence of no geographical, historical, or religious affinities beyond that of any random pair of the sons of Jacob. Benjamin is the only one of the sons of Jacob born in Palestine (Gen. 35:16-18). This may mean that Benjamin was the youngest and weakest of the tribes. All the tribes after the coalition and federation considered themselves as brothers (Exod. 2:11; Lev. 10:6; II Sam. 19:9; etc.). The significance of the first-born has been noted above. Yet there is no extra-biblical evidence that Reuben was ever the most powerful of the tribes. Judah was the first-born in prominence and power, at least in the days of the kingdom (I Chr. 2:3-9:1, etc.).

The death of an individual was sometimes explained as the disappearance of a tribe or clan. The deaths of Er and Onan are reported in Gen. 38:7-10. The fact that other names in the genealogy of I Chr. 2-3 also appear as clans does not prove that Er and Onan once existed as clans and were lost. The others may have originated out of the families or individuals surviving these two.

Corporate personality affords an explanation of this enigma. The one is the many and the many are the one. The tribe, the father, the chief, and the eponymous ancestor were all the same. When the father of a tribe died, he still lived on in the experience of his tribe. To distinguish a tribe from the individual is not within the provenance of the OT. The OT does not acknowledge such sharp classifications. The patriarch is neither an individual nor the personification of the tribe. He is the father who forever participates in the ongoing life and destiny of the tribe. Gen. 48 reflects what we would consider both traditions. In Gen. 48:21 Israel speaks as a person concerning his death, but in vs. 22 he speaks of his tribal accomplishments. Whether these are accomplished in person or not is irrelevant.

* **TRIBES, TERRITORIES OF.** The territories of the tribes do not represent areas which can be defined once and for all; on the contrary, they have been subject to historical change, particularly during the beginnings of the history of Israel. In the course of time, the tribe of Judah incorporated the groups of Caleb, Cain, Kenaz, and Jerahmeel, as well as the remnants of the tribe of Simeon; in this way its territory grew even after the time of the occupation of the land proper; and one must distinguish between Judah in the narrower and Judah in the broader sense. The tribe of Dan gave up the territory NW of Judah to which it had initially aspired, and finally established itself in the extreme N of Palestine. Together with Levi, the tribe of Simeon was driven out of its original domain in central Palestine; and even though it was not forced to forgo the possession of land entirely, like the tribe of Levi, which was entirely obliterated, it could, with its remnant, just barely gain a foothold at the S border of Palestine. Similarly, after failures in the W, the stunted tribe of Reuben finally found refuge beyond the Jordan in the territory of Gad, where its own settlements, interspersed among those of Gad, can be regarded as tribal territory only in a modified sense. For these and similar separate fates of the tribes, information is provided in the respective articles on the individual tribes.

The question of the extent of the tribal territories is vexed by still another difficulty; this lies embedded in the nature of the sources. Fortunately, we possess among the pertinent materials one presentation which attempts to picture the state of affairs when the situation had been somewhat solidified. This con-

sists of a system of a series of fixed boundary points which outline fairly precisely the territories of the tribes still existing at that time. It is very probable that this system dates back to the time before the monarchy, although not (as later tradition believes) to the generation following directly after Moses. Nevertheless, the figure of Joshua, who also took an active part as a mediator of territorial claims in Josh. 17:14 ff, is probably not associated with it merely by accident and may not be too far removed in point of time. If, therefore, there is no objection to the usefulness of this source from the historical point of view, there is all the more, from a literary point of view. That is to say, it has not been preserved in its original state but has been revised repeatedly in later times. First of all, the mere lists of names were changed into an actual description of the boundaries by means of a connective text, which takes account of the direction in which the boundary runs, its situation in the terrain, and the like. As an example we may take the following, in which the old fixed boundary points are italicized: "The boundary on the north side runs from the bay of the sea at the mouth of the Jordan; and the boundary goes up to Beth-hoglah, and passes along north of Beth-arabah . . ." (Josh. 15:5 ff). Unfortunately, the transformation of the text did not take place regularly; and since, apparently simultaneously, regular lists of town names were worked in in order to fill out the framework with content as much as possible, it is not always easy to distinguish the original text of the fixed boundary points from the original text of the lists of town names. At this point, particularly, the differences of opinion among the scholars appears.

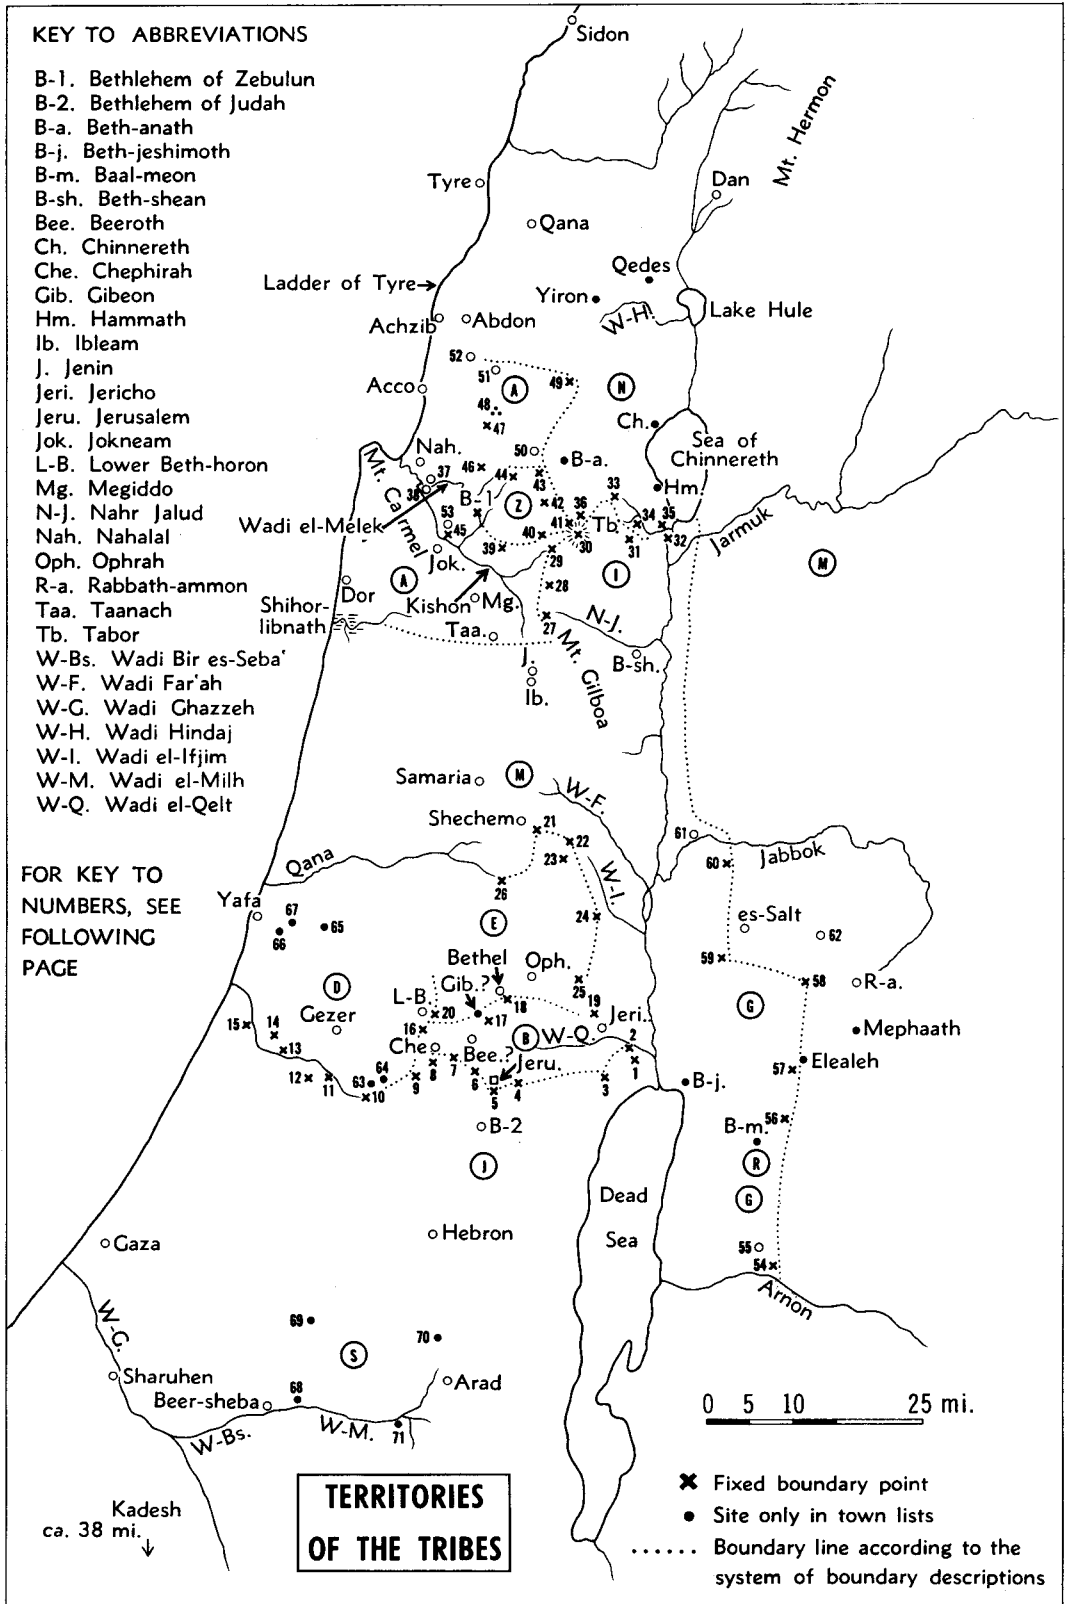

The difficulty is still further increased by the fact that this combined text, in the process of being worked into the Deuteronomic historical work, has undergone transpositions, abbreviations, additions, and other retouchings. On the other hand, precise isolation of the old boundary-description text is necessary, because the lists of place names (town lists) are in part considerably more recent in date. So, e.g., the Judean list of place names (Josh. 15:21 ff), parts of which are also in the description of Benjamin (18:21 ff) and constitute the whole of the present description of the territory of Simeon (19:1-9) and Dan (vs. 40-48), dates from the time of Josiah, as Alt has plausibly demonstrated. Alt's line of argument has not been invalidated by the recently expressed doubts of Cross and Wright, or of Kallai and Aharoni, who suggest a dating in the ninth century.

Another difficulty is inherent in even the older system of boundary points insofar as it notes not only the actual property of the tribes but, in addition, certain territorial claims, without indicating the transition from reality to theory. Here, to be sure, a second early document is of assistance, one whose origins go back to the period before the monarchy and is based upon the same conviction that Yahweh had promised the land of Canaan to his people without any reserve. This "negative inventory of possessions," as Alt called it (Judg. 1:27 ff; also vs. 18-21), lists those territories, particularly in the great plains, which single tribes could not wrest from the Canaanites. It corrects, therefore, those overextended

boundary demarcations; but since that is accomplished in bold outlines and in part deviating from the system of fixed boundary points, all kinds of questions remain as to details.

In spite of intensive work in the field, in which, since the twenties, the American and the German School of Archaeology in Jerusalem under Albright and Alt have especially taken part, the purely topographical questions which arise from location of bib-

ary (vs. 5a). This boundary runs alongside the E slope of the mountains, the "wilderness of Judah," useful, in general, only as pasture land. But if it goes as far N as the mouth of the Jordan, it includes also a tip of the Jordan Valley. The course of the N boundary fully confirms the latter fact (vss. 5b-11). It begins in the vicinity of the mouth of the Jordan (hardly just at the southernmost point) and, passing by Beth-hoglah¹ ('Ain Hajlah), protrudes even up to the Wadi Qelt at Beth-arabah² ('Ain el-Gharabeh), but then swings back, apparently, to the general line of the Wadi Mukelik. At the point where this valley emerges from the mountains, "the stone of Bohan³ the son of Reuben" should most likely be sought. The hinterland (דְּבִיר, "Debir," is a descriptive name) of the Achor Valley (el-Buqei'ah) and the region (read הגְּמִימוֹת, "Gilgal"; see Josh. 18:17) across from the Ascent of Adummim (Tal'at ed-Damm) likewise point to the mountain ranges along the Wadi Mukelik and its most northerly upper course, the Wadi es-Sidr. At En-shemesh⁴ ('Ain el-Hod) the boundary reaches the last rise before Jerusalem, but then bends S around the city to En-rogel⁵ (Bir 'Ayyub) and along the S slope of the Valley of Hinnom to the elevation at 3,212 feet between the railroad station and the Convent of the Cross. From there it extends N-NW to the spring of the Waters of Nephtoah⁶ ('Ain Lifta), to again turn back—with a bulge at Mount Ephron⁷, S of Bet Suriq, and near Kiriath-jearim⁸ (Tell el-Azhar)—in a westerly direction and to arrive along Mount Seir on the N side of the "Forest Range" (Mount Jearim; still extant today in splendid remnants, between the Wadi el-Ghurab—or its many-named upper course stretching up to Kiriath-jearim—and the railroad valley) past Chesalon⁹ (Kesla), at the descent to the so-called 'Artuf fault line. In the hill country the boundary goes through Beth-shemesh¹⁰ (Tell er-Rumeileh) and Timnah¹¹ (Tell el-Batashi) to the "shoulder of Ekron"—i.e., in all probability to the hills NE of Khirbet el-Muqannah (=Ekron¹²), around which the Wadi es-Surar bends from the NW in a westerly direction—and arrives by way of Shikkeron¹³ (Tell el-Ful) and Mount Baalah¹⁴—i.e., the hills by el-Mughar(?)—at Jabneel¹⁵ (Yebna) and at the Mediterranean Sea. It is surprising that this description of the N boundary—apart from meticulously bypassing the territory of the city of Jerusalem—can present a relatively large number of points in the mountains, but then contents itself with a few main points along the not very much shorter way through the hill country and the coastal plain. The contrast is even greater if Ekron is identical with 'Aqir and if we agree that Shikkeron and Mount Baalah in Josh. 15:11 are secondary. Obviously only the stretch in the mountains represents the historical boundary of the tribal territory of Judah at the end of the period before the monarchy, while the rest exists as a boundary in idea only. Actually, even Beth-shemesh (HAR-HERES), according to Judg. 1:35, belonged to the cities which were not conquered. Furthermore, Kiriath-jearim may probably have defended itself for a relatively long time against the loss of its autonomy (Josh. 9), as it is unlikely that the Jebusites were quick to permit to be disputed their rights to the possession of the Plain of Rephaim, im-

mediately to the S of their city. In fact, the forward movement of the Judean settlement to the NW probably belongs to the movements of the tribe when it had already gained strength. From the foregoing it is automatically apparent that the "Great Sea" (Josh. 15:12) is once more merely the theoretical W boundary. The true boundary was formed for a long time by the wooded mountain slope along the 'Artuf fault line. Only gradually did the Judeans succeed in pushing their settlements forward to the edge of the hill country so that these areas then belonged to the permanent holdings of the state of Judah in the period of the kings. Cf., in addition, the location of Rehoboam's fortresses (II Chr. 11:6-10) and, finally, Josiah's division of the country into districts (especially Josh. 15:33-44).

2. Benjamin. Benjamin adjoins Judah on the NE. As a consequence its S boundary (Josh. 18:15-19) is identical with Judah's N boundary, but essentially only with its E tract; for Benjamin's settlement extended barely across the main watershed toward the W. As the W boundary, to be sure, a line is given (vs. 14) which runs from the "mountain [Ras en-Nadir¹⁶] that lies to the south, opposite Beth-horon" (i.e., Lower Beth-horon), almost due S to the bounds of the Judean city Kiriath-jearim⁸ (Tell el-Azhar). In that way, however, the territories of Canaanite cities like Chephirah (Khirbet Kefireh, close to this border), Gibeon (el-Bireh? ej-Jib?), and Beeroth (ej-Jib? el-Bireh?), which were able to preserve in part their autonomy (Josh. 9) even until Saul's time, are, in the beginning, only ideally ascribed to Benjamin. That the same is true for Jerusalem is expressly confirmed by Judg. 1:21. In fact, the names of the Benjaminites list of towns in Josh. 18:21 ff, which originally constituted a portion of the list of districts in the kingdom of Judah at the time of Josiah, generally lead close to the main watershed or on across it toward the E. The N boundary (vss. 12-13) goes from the above-mentioned border mountain in the NW corner toward Ataroth-addar¹⁷ (Khirbet 'Attarah; perhaps more to the W), consequently, up to the Wadi Selman rather directly toward the E. On the ridge of the mountains it swings toward the N, but leaves out the city of Bethel, earlier called Luz (cf. Josh. 16:2), and includes only the sanctuary (Burj Beitin¹⁸) which lies one kilometer to the SE on a knoll. From there it runs in a southeasterly direction through the "Wilderness," unfavorable to any settlement, down to the "shoulder of Jericho," whereby the last steep slope of the mountains is probably meant, and N past Jericho to the Jordan. Also in the Jordan Valley the Benjaminites settlement was probably rather feeble in the early period (cf. 6:26). The editor, who added the list of places in 18:21 ff, can, at a later period, name only Keziz, in addition to Jericho, and, according to its place in the list Keziz is more likely to have belonged to the tribe of Judah. Besides, the editor overextends the territory of Benjamin in the S by taking in Jerusalem, and, likewise in the N, by including Bethel (Beitin) and even Ophra (et-Taiyibeh), perhaps also Chephar-ammoni, if this name has been preserved in bowdlerized form in that of the present-day village of Rammun.

3. Joseph. The oldest form of the series of fixed boundary points appears to have treated Ephraim

and Manasseh as a unit. The special development of Ephraim resulted in a special description of its boundaries—the heading now in Josh. 16:9a.

a. Ephraim. Ephraim's S boundary appears twice in Josh. 16: in vss. 1-3, as Joseph's boundary; in vss. 5-6a, as Ephraim's boundary. Its E portion (vs. 2) coincides naturally with the N boundary of neighboring Benjamin and lays claim expressly for Ephraim only to the "waters of Jericho," the oasis area of the 'Ain ed-Duq¹⁹ and the 'Ain en-Nu'eimeh at the foot of the N "shoulder of Jericho." On the mountain ridge the city of Bethel (Beitin) across from the border sanctuary (el-Burj) falls to the Ephraimite side. The W part of the S boundary, then, runs N from Ataroth-addar¹⁷ (Khirbet 'Attarah) across the Arkite territory along the transverse ridge later used by the most northerly Roman road from Jerusalem to Lydda, on which both Beth-horons lie, and presses forward to the sea by the way of Gezer (Tell Jezer). Again it follows from Judg. 1:29 (= Josh. 16:10) that the boundary, even in the hill country, is only theoretical; for this reason, as in the case of Judah, additional points to fix the boundary are lacking here. Otherwise, it is significant that this boundary does not coincide with that of the S neighbor, Judah. It is clear that the later redactor has saved the space here, which in his opinion belonged to the tribe of Dan and for which his sources provided no boundary description (see § 9a below). From Judg. 1:35 one can conclude that this territory, too, was theoretically ascribed to "Joseph" when the series of fixed boundary points came into existence and that in no case did Benjamin's strip reach to the sea, but only in theory. In the severely abbreviated special description of Ephraim, Upper Beth-horon²⁰ (Beit 'Ur el-Foqa) occurs as an addition, while the detailed description of the complete Josephite S boundary names Lower Beth-horon (Beit 'Ur et-Tahta) at this point. Obviously the old series of fixed boundary points outlined only the area of the actual settlement of Ephraim, which, as was the case with Judah, found its limit first of all at the step downward from the hill country to the Shephelah. The actual W boundary ran along this rim, which with its forests constituted a good natural boundary, northward to the River Kanah. In just the same way the E boundary specified for Ephraim (Josh. 16:6-7) obviously follows the actual edge of the settlement when it runs from the most northerly point, Michmethah²¹ (Khirbet Juleijil across from Shechem) SE to the landmark of the Taraniq (elevation ca. 3,400 feet) in the immediate vicinity of which both Taanath-shiloh²² (for the early period probably Khirbet Ta'nah et-Tahta rather than Khirbet Ta'na el-Foqa) and Janoah²³ (Khirbet Yanun) lie. The boundary then is not drawn generously to the Jordan but goes down the Wadi el-Ifjim to Tell Sheikh edh-Dhiab²⁴ (Ataroth?), if not still farther along the edge of the mountains toward the S, not coming down into the Jordan Valley until the Khirbet el-'Oja el-Foqa.²⁵ Even then the boundary is not the Jordan, but Naarah¹⁹ (Tell ej-Jisr at the "waters of Jericho") where it runs into the Plain of Jericho, which was first resettled under Ahab, from Ephraimite Bethel (I Kings 16:34). Ephraim's N boundary (Josh. 16:8; 17:7) turns S from Michmethah first and does not

turn off toward the W until near Tappuah²⁶ (Tell Sheikh Abu Zarad near Jasuf) to reach, with a great sweep back to the N, the Brook Kanah (Wadi Qanah)—and along this deep-cut valley, the edge of the plain (and across it, the sea). On the Brook Kanah the new 1:100,000 map records in grid 159-174 a Khirbet Qanah, ca. two miles SW of Jinn Safut. At what point the actual W boundary met this N boundary cannot be said. The mention of the sea in Josh. 16:8 is to be credited to the redaction, as also that in vs. 6 and the mention of the Jordan River in vs. 7.

b. Manasseh. The territory of the tribe of Manasseh is more difficult to ascertain. The S boundary (Josh. 17:7-10a) naturally corresponds to Ephraim's N boundary. Ephraim's E boundary must also be considered Manasseh's S boundary; here on the far side of the main watershed a broad wedge of Manasseh territory pushed forward toward the S, at least as far as the latitude of Qarn Sartabeh, thus including the mouth of the Wadi Far'ah, and possibly even that of the Wadi el-Ifjim, in addition. That the Jordan constitutes the E boundary is obvious; but the question is, How far N? The description of this boundary was a victim of redaction and is replaced by the note that "on the east Issachar" is reached by Manasseh (vs. 10b). The additional note of the redactor in vs. 11 states that Manasseh still had towns in Issachar (and Asher), evidently Bethshean (Tell el-Husn) and Ibleam (Khirbet Bel'ameh); with Dor (et-Tanturah) the list of places in Asher begins (Endor is secondary; cf. LXX). From this it may be concluded that the old description of the boundaries theoretically ascribed these unconquered Canaanite towns, or more precisely only Bethshean (not Ibleam, which only the redactor took to be Issacharite because he confused the En-gannim mentioned in Josh. 19:21 with Jenin) to Issachar. The "negative inventory of possessions" (Judg. 1:27) awarded them to Manasseh—probably at the time of the temporary decline of Issachar, as Issachar is not mentioned at all in Judg. 1 and its Bethshemesh is included in Naphtali. The redactor resolved the contradiction after the manner of Solomon. Most probably, however, the actual E boundary of Manasseh ended already at the S end of the Plain of Beisan. The description of the N boundary again is replaced by the note that "on the north Asher is reached" by Manasseh (Josh. 17:10b). Once more the comment following (vs. 11) permits the conclusion that along with Dor, and also with Taanach (Tell Ta'annak) and Megiddo (Tell el-Mutesellim), unconquered Canaanite towns, were theoretically included in Asher in the original boundary description. The later redactor took care of the matter in the same manner as in the case of Issachar. While the possession of the Plain of Jezreel continues to be largely theory in any case for the period before the monarchy, the boundary description of Asher (see § 7 below) seems to show that Manasseh's settlement actually did not include the Carmel area (for the more exact course of the N boundary, see also §§ 4, 7, below). That the sea constitutes the W boundary only in theory and that Manasseh's settlement scarcely advanced into the coastal plain, although the crossings are easier everywhere here, requires no discussion.

4. **Issachar.** Here the problem becomes urgent as to how much of Josh. 19:17-23 is boundary description or the text of a town list (see above). It is certain that the available series of boundary points has been supplemented by other place names; it is not so certain that the names there only concern the Levite towns in Josh. 21:28-29. Some possibilities of the identification of sites lying to the side of the presumed boundary lines are very tempting (Hapharaim = et-Taiyibeh; Beeroth = el-Bireh; Anaharath = en-Na'urah; En-hadda = Kerm el-Hadethih); they are by no means conclusive. A boundary line appears clearly in the W (Josh. 19:18-19); from Jezreel²⁷ (Zer'in), which evidently is the corner point (this makes either the equation of En-gannim [vs. 21] with Jenin or the inclusion of En-gannim in the boundary fixed points series impossible) by way of Chesulloth, which is not identical with Chisloth-Tabor⁴⁰ (et-Tireh) near Iksal, toward Shunem²⁸ (Solem) and northward on toward Hapharaim²⁹ (cf. Bir el-Hufeijir) up to Tabor³⁰, which the system of boundary descriptions ascribes to Issachar. Also the N boundary (Josh. 19:22) is recognizable to some extent. It runs from Tabor eastward by way of Shahazumah³¹ (probably Kerm el-Hadethe, rather than Tell Mekarkash, if not still farther N; see § 5 below) and thus to the Jordan immediately to the S of the Sea of Chinnereth. The Jordan naturally formed the E boundary, at Beth-shemesh³² only in theory, since the town could not be captured (Judg. 1:33). The question is only how far the E boundary extended to the S before it joined Manasseh. However, if Issachar could still be considered Manasseh's E neighbor (Josh. 17:10; see § 3b above), the whole Plain of Beisan up to the Wadi el-Malih must be included in its territory, at least theoretically, but the "slave at forced labor" (Gen. 49:15) already had more substantial relations with the Canaanites of the plains. Whether Issachar also possessed land on the top of the mountains bordering the plain on the W is open to question. In any case, the equation Rabbith = Rabe at Ras Ibiq is no proof, since הרבייה is merely an error in writing הרבירה, "Daberath," and thus represents the Zebulunite town (Josh. 19:12) which, deviating from the old series of fixed boundary points, is added to Issachar in the list of the Levite towns (ch. 21), just as En-gannim (if this is Jenin) probably is. The actual settlement territory of Issachar is the fertile basalt plateau to the N of the Nahr Jalud up to the Tabor line.

5. **Naphtali.** Naphtali is Issachar's N neighbor, although, strange to say, Josh. 19:34 names Zebulun specifically as Naphtali's S neighbor. Did the redactor merely forget to mention Issachar, or does Josh. 19:33 contain the rest of the S-boundary fixed points, which then in vs. 22 were given only insofar as the places are Issacharite? There are, indeed, remarkably few points on the long stretch in vs. 22! In the second case, if one accepts the generally well-founded identification suggestions of Saarisalo, one gets a line which runs from the Tabor district first of all toward the NE to Khirbet Damiyeh (= Adami-nekeb³³, surely not Adamah of vs. 36, which is to be found N of Chinnereth = Tell el-'Oreimeh), then along the SW edge of the Sahl el-Ahmah back toward Yemma, in the vicinity of which (Tell

en-Na'am? Khirbet Shemsin?), Jabneel³⁴ is probably to be sought, and by way of Khirbet el-Mansurah (= Lakkum³⁵) across from el-'Abeidiyeh (= Beth-shemesh³²) along the N side of the Wadi Fejjas out to the Jordan. Against this solution speaks the fact that the second point named in 19:33, Elon-be-Zaananim (RSV "the oak in Zaananim"), lies near Kedesh according to Judg. 4:11. If that is not an incorrect gloss or does not imply a Kedesh other than the one to be identified with Qedes near Lake Hule, one would have to regard Josh. 19:33 as, not the S, but rather the N, boundary, and, of course, to assume a mistake on the part of the redactor when he thinks of the series as running toward the E instead of toward the W, since it would be impossible to find room for three additional villages between an Elon near Tell Qades and the Jordan. The W boundary of Naphtali (vs. 34) must coincide for a part of the way with the boundary of Zebulun, which is directed from Tabor toward the NW. This is revealed in the summarized statement of the redactor that Naphtali borders on Zebulun in the S. But beforehand he mentions by name two points, of which at least the first is probably, although not necessarily (cf. I Sam. 10:3), to be sought in the vicinity of Tabor, while the second might lie on the common boundary with Asher, for which, otherwise, the corresponding summarizing formulation must again suffice. For the first, Aznoth-tabor³⁶, Alt suggested Khirbet Umm Jebel, which might be considered for Heleph (Josh. 19:33), if Saarisalo's suggestion of Khirbet 'Arbathah is not adequate. Perhaps, however, Aznoth-tabor lies still farther to the W or even the NW. The other, Hukok, is hardly the well-known Jaquq, but presumably at the angle in the curve of the W boundary, where it turned away from the part common to it and Zebulun directly toward the N as the part common to it and Asher. Thus Hukok should probably be sought on the Sahl el-Battof. The point corresponds farther N to Ramah (er-Rameh), allotted by the redactor to Asher, whereby the Wadi Sellameh appears as a border valley. In the forests of the interior of Galilee the boundary was probably to a large extent a theoretical matter, as a continuation of the fixed-boundary-point series in Upper Galilee appears to be lacking altogether. Naphtali pushed its settlements out mainly from the Valley of the Jordan, which is given as the E boundary (Josh. 19:34; ביהודה is a corruption of בירון; cf. LXX), up into the Galilean highland and in the old period scarcely advanced far beyond the edge, as the town list appended in vs. 35b-38 shows. The towns enumerated here from Hammath (Ham-mam Tabariyeh) in the S to Kedesh in the N hardly lead out of the Jordan Valley. Qedes lies ca. 3.1 miles to the W of the edge of the valley. If Yiron should actually be identified with Jarun, that shows a route up the Wadi Hindaj, rich in water, and along which the name Merj el-Hadireh could reflect En-hazor, which in the list precedes Yiron! Besides, the last two names on the list are taken over secondarily from the "negative inventory of possessions" (Judg. 1:33), where Beth-shemesh is included with Naphtali, in contradiction to the boundary description of Issachar (Josh. 19:22). Issachar's claims were evidently divided among his two neighbors during a

period of temporary weakness (cf. Judg. 1:27, where Beth-shean is Manassite). Beth-anath could be el-Eb'eineh on the E part of the S edge of the Sahl el-Battof and thus the Canaanite counterpart of the Naphtalite Hukok, as Beth-shemesh is to Naphtalite Lakkum at the outlet of the Wadi Fejjas.

6. **Zebulun.** Among the Galilean tribes Zebulun is the only one whose territory is provided with a relatively complete boundary description (Josh. 19:10-14). In this instance the redactor of the old fixed-boundary-point series, as in the case of Ephraim, found no theoretical overextension of the boundaries. That Zebulun did, nevertheless, at one time lay claim to the S Plain of Acco is shown by the other old document (Judg. 1:30) which is brought in at the beginning of the town list in Josh. 19:15 as a supplement. Nahalal is Tell en-Nahl and Kattath or Kitron probably Tell el-Far³⁷ or Tell Harbaj³⁸. The system of boundary descriptions leaves the whole Plain of Acco and the Carmel area, in addition, to Asher, and it confines Zebulun within easily recognizable boundaries which amount to only its actual settlement area. Accordingly, the S boundary (Josh. 19:10-12) runs at an obtuse angle from the vertex Shadud³⁹ (Tell Shadud) westward to the "brook which is east of [lit., 'opposite'] Jokneam"—i.e., the brook which to the NE across from the Tell Qeimun, comes down from the region between Bethlehem and Umm el-'Ammad, and eastward by way of Chisloth-Tabor⁴⁰ (et-Tireh N of Iksal) toward Daberath⁴¹ (Khirbet Dabureh). It keeps strictly to the N mountain rim of the Plain of Jezreel between Bethlehem in the W and Tabor in the E. Bethlehem (Beit-lahm) is first brought up, strange to say, in the town list in vs. 15, perhaps because it belongs with the unconquered Canaanite cities. From the foot of Tabor the E boundary (Josh. 19:13) turns inward into the hilly country by way of Japhia (which has nothing to do with Yafa SW of Nazareth) toward Gath-hepher⁴² (Khirbet ez-Zerra' near el-Meshed) and Eth-kazin (Kefr Kenna or already at the Sahl Tur'an) and on farther, always north-northwestward, toward Rimmon⁴³ (Rummaneh) at the S edge of the Sahl el-Battof. Beyond this plain Zebulun's settlement did not extend to the N at the time of the old boundary description. The N boundary (vs. 14) is fixed by Hannathon⁴⁴ (in all probability Tell el-Bedewiyeh) at the W end of the plain and, in addition, by the "Valley of Iphtahel," the upper course of the Wadi el-Melek, which drains the Sahl el-Battof toward the SW and, with a bend to the W, N past Bethlehem on to the coastal plain. A W boundary is not explicitly named; it resulted of its own accord from the two "brook" valleys complementing each other by following the same direction, behind which a protective forest belt spread out to the coastal plain. Thus Zebulun's territory is a model of settlement by an Israelite tribe which worked its way into the hill country away from the great plains ruled by the Canaanites.

7. **Asher.** Asher's territory is the most difficult to reconstruct, because in Josh. 19:25-30 the fusion of the boundary description text with extraneous material is simply indissoluble, and, in addition, the topography at this very spot is still in a sad state. It is clear that the boundaries, as in the case of Judah

and Joseph, are again theoretically extended through to the sea. And indeed, as the SW point, Shihor-libnath is specified (vs. 26)—i.e., the swamp which fills the narrow strip of coastal plain S of Dor, shortly before the mountains recede from the sea. The NW point cannot be determined with the same certainty, since Hosah (vs. 29), mentioned before the end of the boundary at the sea, is not known. Tyre, which is named before Hosah, and which is itself already situated on the coast, and likewise Sidon in vs. 28 have come in secondarily. Asher's dreams hardly went farther N past Ras en-Naqura. The E boundary (Josh. 19:27-29) is also clear to some extent. It touches the territory of Zebulun—i.e., the SW corner—in all probability from the same point of departure as the boundary described in vss. 26-27, thus from Helkath⁴⁵ (perhaps Tell Harbaj³⁸ in the SE corner of the Plain of Acco, but more likely at the opposite end of the Kishon Gorge and closer to Jokneam), perhaps Tell el-Qassis and the Valley of Iphtahel (i.e., that part of the Wadi el-Melek which runs E-W, since a section which runs N-S cannot "touch" [reach] a line leading "northward" [vs. 27a]), and goes on beyond the valley "toward the north," through Beth-emek and Neiel, to come out first at Cabul (Kabul), "to the north" of the town (vs. 27b). Beth-emek⁴⁶ is thus not to be sought on the Sahl el-Battof but possibly on the Sahl et-Ta'yibeh, ca. 3.1 miles farther W, and Neiel is S of Cabul⁴⁷, so that Khirbet Yanin⁴⁸ is eliminated. Since the list of names which follows in vs. 28 seems to be secondary and can be interpreted in connection with the extension of the Asherite territory northward to Tyre and Sidon, Ramah (er-Rameh below the Jebel Heidar) might well be the next point in the original description of the E boundary. The change in direction would be expressed appropriately in "turns" (vs. 29). But it is strange that the border contact with Naphtali, which is to be expected from Josh. 19:34, is not mentioned; presumably the mention of Ramah sufficed for this. Or is one, after all, to regard the Kanah mentioned in vs. 28, not as the Qana in the vicinity of Tyre, but rather as Khirbet Qana⁵⁰ on the N edge of the Sahl el-Battof? The boundary with Naphtali in the early period is to a large extent theoretical, but nevertheless an advance by Asher into the interior of the land along the great rise or fault from Lower to Upper Galilee is quite conceivable, and would then lead to that definition of claims over against Naphtali. From Ramah the boundary leads back toward Hosah and comes to an end at the sea. One does not have the impression from vs. 29b that it makes a special bend near Hosah, and can conclude from this that it actually represents already the N boundary of Asher. Thus a location for Hosah on the edge of the mountains may be considered perhaps in the vicinity of Yerka⁵¹-Amqa⁵². The old system of boundary descriptions does not seem to have gone so far N with the N boundary as the somewhat later list of the unconquered cities which is worked into Josh. 19:29 (at the end), 30, from Judg. 1:31, and which claims for Asher N of Acco in addition: Achzib (ez-Zib), Mahalab (Mahalib between Tyre and the Nahr el-Qasimiyeh), and even Sidon; nor so far as the other secondary series (Josh.

19:28), which keeps then to the same latitude with Abdon (Khirbet 'Abdeh) but goes beyond the Ladder of Tyre with Hammon (on the Wadi Hamul?) and Kanah (Qana, ca. 7 miles SE of Tyre). The older boundary system did not need to go so far to the N because it could already satisfy Asher's claims in the S. The shifting of Asher's claims to the N is evidently only compensation for the fact that Asher had to relinquish to Manasseh (Judg. 1:27) the strip from Dor to the peak of Carmel, and to Zebulun (vs. 30) the southernmost part of the Plain of Acco.

The S boundary of Asher presents problems in other respects. It is described in Josh. 19:25-26 in such a way, unfortunately, that the redactor gives the series of fixed points with the exception of the end without connecting text and thus leaves the reader without indication as to the position of the places with regard to one another. The reason for this procedure is probably the fact that he had to reconcile sources which differed among themselves. It is clear that if the boundary "touches [lit., 'reaches'] Carmel on the west," it must come from the E. It is also clear that whether one puts Helkath to the N or to the S of the Kishon ravine, there is no room for the series of six towns between it and Carmel in a straight line. If one considers further that, according to Josh. 7:10, Manasseh borders on Asher in the N, but not on Zebulun, and that in the list of Thut-mose III the towns of Achshaph, Mishal, and perhaps Allammelech, which also figure in Josh. 19:25-26, stand in close proximity to Taanach and Ibleam, then one cannot avoid the conclusion that the series in vs. 25-26a is to be sought on the Plain of Jezreel and therefore belongs naturally to those places which Manasseh claimed afterward (Judg. 1:27) and which the redactor likewise conceded to it in Josh. 17:11 with the conciliatory formula "in Asher." Perhaps a series of villages is meant, running diagonally across the SE tip, which reached the W mountains somewhere near Taanach, thus allocating the large portion of the plain, including Taanach and Megiddo, to Asher. The fact that the redactor has ignored the border contact with Zebulun and Issachar on the N and E edges of the plain is not stranger than the same situation with Naphtali on the N part of Asher's E boundary. Thus Asher becomes Manasseh's N neighbor (Josh. 17:10) already at the SE tip of the Plain of Jezreel. Asher finally becomes Manasseh's neighbor—and here the boundary is no longer theoretical—in the section of the boundary which leads diagonally through the mountains to Shihor-libnath and includes Dor, on the coastal plain, and, in the mountains, even the so-called Bilad er-Ruha, S of the present Jebel Karmel. It is in this area that Asher's origins seem to have lain, which provided the tribe at first with claim upon the Plain of Jezreel, until it pushed its settlement across the bridge of woods N of Sheikh Abreik⁵³ westward past Zebulun farther N and could lay claim to the Plain of Acco as compensation when the stronger Joseph group contested its claim to the Plain of Jezreel.

8. The Transjordan tribal territories. The land E of the Jordan, like the territory of Joseph, is treated as a uniform territory in the old system of the series

of fixed boundary points. But, while the description of Joseph was supplemented already in the older period by an appropriate special description of Ephraim, the division of the land E of the Jordan among Reuben, Gad, and the half-tribe of Manasseh is the work of later redaction and just as unreliable historically as carving out the so-called tribal territories of Simeon and Dan in the land W of the Jordan.

a. Gad. Originally Gad may have given its name to this whole area. The list of places in Num. 32:34-38, far from being systematized and therefore not suspect, shows Gadites in the S as well as in the N and the Reubenites, who had apparently immigrated later, only in the middle in mingled settlement with the Gadites. According to the text of the boundary description, the S boundary (Josh. 13:16) is evidently formed by the Arnon, on the N side of which lies Aroer⁵⁴ (Khirbet 'Ara'ir) and in whose broad ravine, though probably downstream, the "city that is in the middle of the valley" is probably to be sought. The E boundary (Josh. 13:16, at the end [read ער], 26-27aδ, b) leads from Aroer straight N at first (rather along the present-day pilgrimage road) by way of Medeba⁵⁶ (Madeba) and Heshbon⁵⁷ (Hesban) toward Ramath-mizpeh⁵⁸ (Khirbet es-Sar). The list of places in Num. 32 mentions Dibon⁵⁵ (Dhiban) here as Gadite. Then the boundary turns westward toward Betonim⁵⁹ (Khirbet el-Batneh, S-SW of es-Salt) and from there runs N again toward the Jabbok, where, on the S side, Mahanaim⁶⁰ (Tell Hejjaj) is situated and, on the N side, Lo-debar may be sought. Then the boundary shifts a bit to the W and proceeds along the Jordan Valley close to the edge of the mountains, to reach the S end of the Sea of Chinnereth, including the plain to the E of the Jordan outlet from the sea. The narrow strip in the Jordan Valley opposite the Canaanite cities of Bethshean and Bethshemesh, which were still independent when the old boundary system originated, was Gadite only in theory; it is not by chance that town names are missing here. Even the more recent list of towns which has been worked into the description of the boundaries (Josh. 13:17-20, 25, 27a; cf. Num. 32:3, 34-38) mentions N of Sukkoth⁶¹ (Tell Deir 'Alla), in addition, at most, Zaphon. It was the "half-tribe of Manasseh" that crossed the Jordan here and pressed ahead into the mountains (for this, see § 8c below). Gad's settlement territory was limited to the lower Jordan Valley and to the S part of the mountain ascent up to the line designated above. The lists of places, which do not coincide completely with the E boundary, show that Gad, too, went beyond this line in the course of time—e.g., up to Jogbehah⁶² (Khirbet Jebelbah). That Gad also included primarily the mountains of Gilead (in the narrower sense, the forest district to the N and NE of es-Salt up to the Jabbok) in its expansion, is attested by the not-infrequent equation of the names Gad and Gilead.

b. Reuben. The position of Reuben's territory is fixed only by the town list. There is better or worse recollection according to whether one must date the list early or late. In any case, the redactor of Josh. 13 apportioned the places differently from Num. 32:

34-38, which probably belongs to one of the older Pentateuchal sources. If one relies on the latter, the Reubenite settlements lie between the latitude of Elealeh (Khirbet el-'Ale, two miles N-NE of Heshbon-Hesban) and that of Baal-meon (Ma'in), and extend westward from the ca.-eleven-mile-long route between these two places, not as far W as that distance: Kirjathaim, according to Euseb. *Onom.* 112.16-17, was only ten Roman miles westward from Medeba. The list in Josh. 13 (aside from the insertion of the Levite cities [vs. 18=Josh. 21:36-37], which assumes an extension of Reuben in the E to Mephaath [Khirbet Nefa'a, S of 'Amman] as in the S to the Arnon) holds to the same general latitude, so far as the additional towns can be located, and adds Beth-jeshimoth (Tell el-'Azeimeh near Khirbet Suweimeh) in the Jordan Valley. Even thus there was scarcely a compact Reubenite area of settlement between a N and a S portion of Gadite property, a fact which follows from the uncertainty of the apportionment. But the later references may be correct in indicating that in the designated area the majority of the stunted tribe of Reuben could finally settle down among the Gadites.

c. *The half-tribe of Manasseh.* The wooded mountain country between the Jabbok and the Jarmuk, the so-called 'Ajrun, is designated in the later literature as the territory of the "half-tribe of Manasseh" (also in Josh. 13:29-31). In the system of the series of fixed boundary points the corresponding description is lacking; it is not to be expected, in view of the route of the Gadite boundary in the Jordan Valley (see § 8a above). The area became colonial land in the strict sense. The settlement, which certainly began even before the period of the kings (see MANASSEH), probably did not take place from the first by the same tribe. Even more in the period of the kings, all the N Israelite tribes certainly had a part in opening up the territory until it embraced "from Mahanaim, through all BASHAN," or "half GILEAD."

9. *The remaining W Jordanian tribes.* There are also no boundary descriptions in existence which make it possible to discern the actual extent of the territory of these tribes in the premonarchical period. What the place lists in Josh. 19 present is the artificial concept of a much later time.

a. *Dan.* It has been established above that the S boundary of Joseph does not coincide with the N boundary of Judah in the hill country and that the redaction artificially created a space for Dan here, although there was no corresponding boundary description at its disposal. Evidently when the system of the boundaries was set up, the little tribe had already migrated to the N or was on the way there, where, on the other side of the closed Israelite settlement territory (Kedesh in Naphtali appears to be the most northerly point, which at that time had perhaps not yet even been reached), it established itself in a city-state at the foot of Mount Hermon (Josh. 19:47). Boundaries could not be determined there. As a substitute the later redactor felt he should describe the territory of Dan, known from the traditions of Judg. 13-18, and for this purpose used a portion of the district list of Josiah in which the new acquisitions of the king in this area were already specified (Josh. 19: 41-46). At the beginning he placed the two towns

Zorah⁶³ (Sar'ah) and Eshtaol⁶⁴ (Eshwa'), which were well known from the Danite story of Samson (Judg. 13:2, 25) and were named in the second district in Josiah's list (Josh. 15:33), and he attached to them the whole series of the fifth district, after he had filled in the gap, which arose in Josh. 15:45, by taking in the entire land of the Philistines with the use of the catchword "Ekron." In so doing it did not matter in the least to him that places which were claimed for Judah in the boundary description in vss. 10 ff suddenly become Danite (Beth-shemesh¹⁰, Timnah¹¹, Ekron¹²), nor did it matter that the northward curve of this incomplete tube-shaped district toward Jehud⁶⁵ (el-Jehudiyeh) or Azor⁶⁶ (LXX Jazur) and Bencberak⁶⁷ (Ibn Ibraq) transgressed the old boundary of Joseph or Ephraim, which runs from Beth-horon to the sea by way of Gezer. There is no need for further proof that this reconstruction of the tribal area of Dan can make no claim to historical probability.

b. *Simeon.* The case of Simeon is like that of Dan. Here, too, later redaction first created out of Joseph's list of districts a substitute for the missing old boundary description. Only this time the redactor did not simply make use of a whole district, but, instead, made an extract of the district in question (cf. Josh. 19:2-7 with 15:26-32) and reused it as the territory of Simeon, with the express statement that this was a portion of Judah's territory (19:9). For this, too, there is a historical fact to start with, insofar as the remnant of Simeon, after the catastrophe at Shechem, was actually able to gain a foothold once more in the extreme S, in the territory of the town of Zephath-hormah (Judg. 1:17). Hormah⁶⁸ is probably Tell es-Seba', three miles E of the sanctuary of Beer-sheba (Bir es-Seba'), which likewise grew into a town in the period of the kings, and because of its religious importance was moved up by the redactor to first place in the Simeon list. The territory stipulated by the list appears not to go beyond the Wadi es-Seba' or el-Milh in the S, and the ridge of Khashm el-Buteiyir running northward from Beer-sheba and its continuation to Ziklag⁶⁹ (Tell el-Khuweilfeh) in the W, and to keep to the edge of the mountains of Judah in the N; while in the E the ridge extending from Darejat to the SW and perhaps the Wadi el-Qarjetein, which accompanies it on the E side, could be considered the border (Moladah⁷¹ = Tell el-Milh? Bethul⁷⁰ = Khirbet el-Qarjetein?). Sharuhén (Tell el-Far'ah) is an outpost and definitely not an old Simeonite possession. In other respects, too, doubts arise as to the historical knowledge of the redactor, for his Simeon list probably does not represent an "extract" which has been carefully considered in its details: the three names of Josh. 15:27 are omitted in 19:2, probably only because they have the same beginning (והצר), and likewise Iim (עיים) of Josh. 15:29 in 19:3 (וע), while מרכבות (ביתח) and מרמנה (חצר) in 19:5 are attempts to correct סוסה and סניכנה, but only made changes for the worse. If this is so, then the redactor has given as Simeonite the second part of the list of the southernmost district of Josiah just as it was. He was approximately correct in so doing. To be sure, a place like Hazar-gaddah, "above the Dead Sea" according to Euseb. *Onom.* 68.17 ff—in fact, everything beyond Arad

(Tell 'Arad) to the E—was Kenite and thus belonged to larger Judah (Great Judah) but not to Simeon. But the tract of Beer-sheba certainly identifies Simeon's old territory in a way which is essentially and historically correct.

TRIBULATION [צרה; תלאה; θλιψις, pressing, squeezing]. A term denoting affliction of various kinds. The Greek word is used especially to refer to the "great tribulation" of the end time, from which the elect will be rescued, as foretold in Dan. 12:1, where the LXX and Theod. render צרה by θλιψις

(cf. Mark 13:19 and parallels; Rev. 7:14). The sufferings of Christians in apostolic times signified that the "great tribulation" was approaching. See also SUFFERING AND EVIL. F. F. BRUCE

TRIBUNAL [βήμα]. An alternate form of JUDGMENT SEAT.

TRIBUNE trīb'ūn [χιλιάρχος, commander of a thousand]; **KJV CHIEF CAPTAIN**. A Roman military officer in charge of a COHORT, such as that in Jerusalem at the time of Paul's visit (Acts 21-25). The CAPTAIN who seized and bound Jesus (John 18:12) was likewise a tribune. N. TURNER

TRIBUTE [מסכ (Num. 31:28); מנחה (Judg. 3:15); ענש (II Kings 23:33); משא (II Chr. 17:11); מדה (Ezra 6:8)]. A compulsory contribution exacted by one prince or state of another, or by a superior power of an inferior, as in a suzerainty treaty.

Samuel clearly warned Israel what it would mean in terms of taxation and oppression if they set up a king to rule over them (I Sam. 8:10-18). One does not present himself empty-handed before his own king or other rulers (I Sam. 10:27). To submit to a king's rule is to recognize his sovereignty or to enter into a suzerainty covenant; to do so is to accept the obligation of rendering tribute. Such giving of gifts, we know from the tablets from TELL EL-AMARNA,* was mutual to overlord as well as vassal. When Hezekiah king of Judah was ill, his superior, Merodach-baladan prince of Babylon, sent gifts to him (II Kings 20:12; Isa. 39:1). Figs. CLA 35; TEL 10.

Usually, however, the tribute was paid by the inferior power in the treaty or covenant to the superior. Insofar as Israel's COVENANT was of the suzerainty type, her sacrifices and offerings to Yahweh are to be viewed in this light. See SACRIFICE AND OFFERINGS.

Aside from what the kings of Israel and Judah exacted of their own people for support of the royal court (see TAX), these Israelite rulers not infrequently received tribute from foreign princes and peoples. It is specifically said that the Syrians brought tribute to David (II Sam. 8:6) and that "all the kingdoms from the Euphrates to the land of the Philistines and to the border of Egypt" brought tribute to Solomon (I Kings 4:21—H 5:1).

In N Israel the house of Omri, especially Ahab, received tribute from Israel's weaker neighbors. On Ahab's death Mesha king of Moab ceased to pay tribute and rebelled against Israel (II Kings 3:4-5; see MOABITE STONE). When Judah was defeated by Jehoash of Israel, the latter exacted gold and silver from temple and palace in Jerusalem (II Kings 14:14). Jehoshaphat as well received tribute from the Philistines and Arabs (II Chr. 17:11), and Uzziah accepted tribute from the Ammonites (II Chr. 26:8). Among the royal psalms is a prayer for the prosperity of the king to whom all nations should render tribute (Ps. 72:10).

Tribute is to be distinguished from the booty which the conqueror forcefully takes in war. However, from the spoils of war a certain amount may be levied as tribute to God (Num. 31).

Apart from certain periods of national aggrandizement Israel was accustomed in her turn to give tribute to foreign powers. Israel was more often in the position of vassal than of overlord. The sons of Jacob, when they went to Egypt to seek relief because of famine, took with them tribute gifts (Gen. 43:11-12). Ehud, one of the judges in Israel's early history, carried tribute on a visit to Eglon king of Moab (Judg. 3:15-18).

Soon after the N kingdom, Israel, broke away in independence of the Davidic monarchy in Judah, Shishak king of Egypt invaded the S kingdom and took away both temple and palace treasures, as well as the shields of gold Solomon had made. Archaeological evidence from Megiddo in Palestine and Byblos in Phoenicia attest to Shishak's prestige and the tributes paid him. *See bibliography.*

When the house of Omri in N Israel waned in power, it was Syria which was in a position to command tribute (II Kings 12:18).

When the new Assyrian Empire asserted itself in the ninth and eighth centuries, Israel frequently felt the burden of its expansion in the form of tributes paid, to Adad-nirari III, to Tiglath-pileser III, to Shalmaneser V (II Kings 17:3; cf. Hos. 10:6), to Sargon II, and to their successors until Babylonia arose to weaken Assyria's hold, when tribute was exacted either by Egypt (II Kings 23:33) or by the Neo-Babylonian Empire (II Kings 16-25). For extrabiblical sources on Assyrian and Babylonian dominance, *see bibliography.*

Judah was normally obligated to Egypt for its military security (II Kings 18:21) but at times was forced, as was Ahaz, to appeal to Assyria for help. Tribute was the price for the help Tiglath-pileser afforded (II Kings 16:5-9). After the defeat of Samaria by Shalmaneser V and Sargon II, Judah was subject to Assyria's ambitions and was forced to withstand siege by the Assyrian forces under Sennacherib. Whatever was the cause of the failure of the siege (II Kings 19:7, 35-36), Hezekiah was forced to pay heavy tribute to Sennacherib, who states in what is now called the Sennacherib Prism (*see bibliography*) that he exacted a second tribute in addition to the former mentioned in the book of Kings (II Kings 18:13-16; cf. Isa. 36-39).

Though Hezekiah opened his storehouses as a gesture of submission to Merodach-baladan of Babylonia (II Kings 20:12-15), it was still Assyria which held the dominant position in the seventh century until near the close of the century, when Judah's allegiance was constantly torn between the new Babylonian power and her old friend Egypt. In all these positions Judah was the debtor, and tribute was the price of military and political stability. Pharaoh Neco laid a tribute on Jehoiakim, to be paid in silver and gold (II Kings 23:33-35). When Nebuchadnezzar defeated Judah in 597 B.C., it was Babylonia which reaped Judah's substance. However, as is now known, Egypt was by no means a weak power, and both Jehoiakim (II Kings 24:1) and Zedekiah (24:20) turned toward Egypt for help (Ezek. 17). However, Babylonia finally dominated the picture and absorbed as tribute the last of Judah's wealth (II Kings 25).

For the subsequent history of the tribute obliga-

tions of the Jewish people and the half-shekel temple tax, *see TAX.*

Bibliography. J. B. Pritchard, *ANET* (1955), pp. 263-64, 281-301, 307-11, contains Egyptian, Babylonian, and Assyrian historical texts where exaction of tribute is a recurring boast of the conqueror. J. A. SANDERS

TRIGON τριγών. *See* MUSICAL INSTRUMENTS § B4b.

TRINITY [Lat. *trinitas*, coined by Tertullian; cf. τριάς, first used in this sense by Theophilus of Antioch]. The coexistence of Father, Son, and Holy Spirit in the unity of the Godhead. While not a biblical term, "trinity" represents the crystallization of NT teaching. Thus, in I Cor. 12:4-6, Paul correlates "Spirit," "Lord," and "God" (cf. Eph. 4:4-6); a similar correlation appears in the benediction of II Cor. 13:14. Cf. the trinitarian baptismal formula of Matt. 28:19 (echoed in Did. 7:1), which may have replaced the earlier formula "into the name of the Lord Jesus" for purposes of the Gentile mission. *See also* Acts 2:33; I Pet. 1:2; Rev. 1:4-5a. The text about the three heavenly witnesses (I John 5:7 KJV) is not an authentic part of the NT. A further adumbration is provided by the logion concerning the Father and the Son in Matt. 11:27 = Luke 10:22, alongside the parallelism of the "Son of man" and the "Holy Spirit" in Matt. 12:32 = Luke 12:10. The OT concepts of the Wisdom and Spirit of God (cf. especially Prov. 8:22 ff) have influenced many NT passages used as foundations for the later formulation of trinitarian doctrine (e.g., John 1:1 ff; Col. 1:15 ff; Heb. 1:2-3).

TRIPOLIS τριπῶλις [Τρίπολις, three cities]. The Greek name of a Phoenician seaport N of Byblos, representing a league of three cities dating from the fourth century B.C.; the modern Tarabulus.

Neither the founding nor the original name of the city is known. Older views related its origins to the decline of BYBLOS; others, which connect it with the colonization of Aradus in the eighth century B.C., are no longer considered tenable. The Canaanite name 𐤕𐤓𐤏 has been found on a coin dated 189-188 B.C., but the interpretation is highly uncertain. Probably during the late Persian period the city became a center of conclaves for Phoenician cities in this region, the name signifying that it was a joint colony founded by peoples from the three cities of Sidon, Tyre, and Aradus. Strabo (Geography XVI.2.15) and Pliny (Nat. Hist. V.78) describe the three walled sections as separated a stadium's distance from one another. After the Battle of Issus more than four thousand Greek mercenaries in the Persian army fled to Cyprus and Egypt in boats seized in the harbor at Tripolis. In 162 B.C., Demetrius I came to Tripolis, and after killing Antiochus V and Lysias regained his father's kingdom (II Macc. 14:1-2; cf. I Macc. 7:1-4; Jos. Antiq. XII.x.1). The city gained its freedom from Seleucid control in 111 B.C.; under Pompey's reorganization it became a city-state. According to Josephus (War I.xxi.11), Herod built a gymnasium at Tripolis. Christianity is said to have been established here by the apostle Peter (Clementine *Homilies*

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

77. Tripolis, with snow-covered Lebanon Mountains in the background

11:36; *Recognitions* 6:15), and the list of bishops in the Christian community is known from A.D. 325 on.

TRIREME *trī'rēm* [τριήρης]. A galley with three men on each bench, each rowing one oar. The three oars passed together through the oar box. See SHIPS AND SAILING.

Jason sent sacred ambassadors to the games at Tyre, with three hundred silver drachmas, for the sacrifice to Hercules; but those who took the money used it instead to outfit triremes (II Macc. 4:18-20).

B. H. THROCKMORTON, JR.

TRIUMPH. The translation of a number of different words and expressions (nouns and verbs). It is difficult to isolate "triumph" from such other words as "victory" and "overcome."

In the OT "triumph" is usually God's triumph on behalf of Israel, over her enemies (cf. Exod. 15:1, 21 [גאה]; Deut. 33:29 [גאוה]; I Kings 22:12, 15 [צלח]; Pss. 18:50 [ישע]; 60:8 = 108:9 [רוע]; Isa. 45:25 [צדק]; Zech. 9:9 [צדיק]). The word also appears, especially in the Psalms, to describe known or hoped-for personal triumphs over enemies (Pss. 41:11 [רוע]; 54:7; 118:7 [ראה]; cf. Job 17:4 [רום]; Prov. 28:12 [עלצ]).

The most important passages in the NT are Col. 2:15, where God triumphs (in the Cross, or in Christ) over hostile supernatural powers; and II Cor. 2:14, which may be translated as in the RSV or as follows: "causes us to triumph," or "leads us in public procession." The Greek verb in both passages is θριαμβεύω.

B. H. THROCKMORTON, JR.

TRIUMPHAL ENTRY. The approach and entrance of Jesus, riding on a colt, into Jerusalem at the beginning of his last days; signifying an aspect of his messianic mission (Matt. 21:1-11; Mark 11:1-11; Luke 19:28-44; John 12:12-19). Mark indicates little messianic triumph in this event, but Matthew shows the city stirred at the coming of the "Son of David." In Luke the disciples hailed Jesus as "King," a title which John emphasizes, though the disciples did not at first understand "these things." John alone reports palm branches (12:13), from which the later term "Palm Sunday" originated. The

entry has been variously interpreted: (a) that Jesus, knowing messianic prophecy, fulfilled it in symbolic actions as he presented himself to Jerusalem; (b) that the event was originally an enthusiastic greeting of disciples, rejoicing over their leader coming to the Holy City, and was later filled with messianic meanings. D. M. BECK

TROAS *trō'ās* [Τρωάς, Ἀλεξάνδρεια ἡ Τρωάς]. A city located in Mysia in NW Asia Minor, on the shore of the Aegean Sea. It was opposite the island Tenedos and lay ca. ten miles S of ancient Troy (Ilium).

The ancient name of the site was Sigia (Strabo *Geography* XIII.1.47). The city was founded by Antigonos, one of the successors of Alexander the Great, and named Antigonía Troas. Later, ca. 300 B.C., Lysimachus king of Thrace added improvements and renamed it Alexandria Troas (Troas was originally the name of the region around ancient Troy). It was for a time the residence of Seleucid kings, and then for a time a free city. In 133 B.C. it came under Roman control, and was a large and important city.

Julius Caesar, according to Suetonius (*Julius Caesar* 79), thought of moving his capital to "Alexandria or Ilium," and similar hints are given of Augustus and Constantine. These stories at least show the prominence of Troas in Roman times. Under Augustus, Troas received a Roman colony, and Strabo called it "one of the renowned cities" of his time (*Geography* XIII.1.26). In the early second century an aqueduct was built to bring water into the city from Mount Ida. Its ruins and the ruins of baths, theater, etc., can still be seen. The city walls can be traced; they are ca. six miles in length.

Paul visited Troas at least three times, but never stayed long. After being turned away from Bithynia as a possible field of work, he passed through Mysia and came to Troas, still uncertain where to go. A vision at night gave him a call to Macedonia, and he and his helpers promptly sailed from Troas to Neapolis, stopping overnight at the island of

Samothrace (Acts 16:7-11; here in vs. 10 begins the first of the "we passages" of Acts).

When Paul left Ephesus on his so-called third missionary journey, he went northward and "came to Troas to preach the gospel of Christ," and found "a door was opened for me in the Lord"; but because of uncertainty about the rebellious church at Corinth his "mind could not rest," and he "went on to Macedonia" to meet Titus and learn how things were at Corinth (II Cor. 2:12-13).

After his visit to Macedonia and Greece, Paul returned through Macedonia and crossed to Troas to meet a party of his friends who had assembled there and were waiting for him. This time Paul stayed seven days, and "on the first day of the week, when we were gathered together to break bread, Paul talked with" his companions and the church people of Troas (Acts 20:1-12). A second "we passage" (see ACTS OF THE APOSTLES) begins at Philippi and includes the report of the stay at Troas; Luke was familiar with Troas, though it is odd that he does not say whether Paul made any converts there on his first stop, just as Paul says nothing of converts in II Cor. 2:12-13. The existence of a church there, however, is clear in Acts 20:11-12. If II Tim. 4:13 is part of a letter Paul wrote during the period covered by Acts, he must have left his cloak and books with Carpus at Troas on this third visit. But if Paul was released from imprisonment at Rome and traveled again in Asia Minor, this verse will indicate that he again visited Troas.

In later times Troas became the seat of a bishopric.

Bibliography. D. Magie, *Roman Rule in Asia Minor* (1950), Index under "Alexandria Troas." F. V. FILSON

TROGYLLIUM τρῶγιλλιον [Τρωγύλλιον, Τρωγύλιον, Τρωγυλία, etc.]. A promontory formed by the W part of Mount Mycale on the W shore of Asia Minor. Near it on the W was the island of SAMOS, whose E end lay just N of the end of the promontory; a strait less than a mile wide separated island from mainland.

According to the Western and Syrian texts of the "we narrative" in Acts 20:15 (DHLP, etc.; cf. RSV mg.), "we crossed over to Samos, and having tarried (overnight) at Trogyllium we came on the next day to Miletus." The usually superior early MSS (8 ABC, etc.) omit the reference to anchoring at Trogyllium; they indicate that Paul's ship anchored overnight at Samos and the next day reached Miletus (so RSV). If the reference to Trogyllium is original, the ship could have reached it from "opposite Chios" by sailing either along the W and S sides of Samos or through the strait on its E side.

An anchorage just E of the W tip of Trogyllium is today called "St. Paul's Bay."

Bibliography. Strabo *Geography* XIV.1.12-13; W. M. Ramsay, *St. Paul the Traveler and the Roman Citizen* (1896), pp. 292-94; J. H. Ropes, *Beginnings of Christianity*, III (1926), 194-95. F. V. FILSON

TROPHIMUS τρῶφῶμας [Τρόφιμος, nutritious]. An Ephesian (Acts 21:29) who, with Tychicus, met Paul at Troas on his final visit to Jerusalem (20:4-5) and accompanied him to Jerusalem, where he represented

the Asian churches in the presentation of the collection for the church there.

Jews from the province of Asia saw Paul and Trophimus together in Jerusalem and supposed that Paul had taken him into the temple—i.e., within the barriers which separated the Court of the Gentiles from the Court of Israel (Acts 21:29). As Trophimus was apparently an uncircumcised Gentile convert to Christianity, Paul was accused by these Jews of defiling the temple (Gentiles were absolutely forbidden to enter the Court of Israel). This was the occasion of Paul's arrest.

II Tim. 4:20 says: "Trophimus I left ill at Miletus." If this is the same Trophimus, the statement is not reconcilable with Acts, according to which Trophimus was not left behind in Miletus on the trip to Jerusalem, but was seen there with Paul (Acts 21:29); and according to which Paul did not pass through Miletus on the trip from Jerusalem to Rome (cf. 27:7-8) and so could not have "left" Trophimus there.

B. H. THROCKMORTON, JR.

TROUGH [טרה]; **WATERING TROUGH** [תקש]. A watering receptacle for animals. See RUNNEL.

TRUMPET. See MUSICAL INSTRUMENTS.

TRUSTEE [οικονόμος] (Gal. 4:2); **KJV GOVERNOR.** An administrator or manager. In both the KJV and the RSV the word is usually translated STEWARD.

TRUTH.

1. Terminology
 2. In the OT
 3. In the NT
 - a. General
 - b. John
 - c. Paul
- Bibliography

1. **Terminology.** The understanding of the biblical view of truth encounters special difficulties on account of the long and intricate history of the terminology. To most modern people, truth is the agreement between the intended subject matter of a word or a sentence, on the one hand, and the nature of the fact to which the word or sentence refers, on the other. But such a definition fails to do justice to what is designated as truth in the Bible. The English word "truth" is the common rendering of ἀλήθεια in the NT and the LXX. However, in both of them the term corresponds frequently to the Hebrew אמת, a noun derived from the verb אמן, which means "to sustain, to support." The basic meaning of the root is most clearly seen in the adjectival *Niph'al* participle אמת, which is rendered "firm, solid, reliable" (Gen. 42:16), "faithful, tested" (Deut. 7:9; Isa. 1:21), "perceptible" (especially painfully so; Deut. 28:59), "true" (Ps. 19:9), and "lasting" (Ps. 89:29). The multiplicity of the renditions is an indication of the complexity of the fact to which they refer. Accordingly, אמת designates a reality, which is firm and unchanging. But these are not abstract properties. As synonyms indicate, the noun implies the ability to keep unchanged and whole and to be

firm on account of an intrinsic energy. Consequently it is capable of imparting itself to other entities. Thus in legal language, אמת designates the factual action or an ascertained condition (e.g., Deut. 13:14), as contrasted with unfounded statements, and as modifier of other nouns it characterizes them as "right, correct, genuine, moving toward their intrinsic goal."

Thus, according to context, אמת should be translated "steadiness," "unchangeableness," "stability," "soundness," "faithfulness," "constancy," "truth," "loyalty," or "justice." The LXX has therefore considerably narrowed down the meaning of the word by rendering it in four fifths of all passages by ἀλήθεια and congeners, and twelve times by δικαιοσύνη ("righteousness"). The revised versions have frequently replaced the "truth" of the KJV by "faithfulness" (e.g., Gen. 24:27; 32:10; Exod. 34:6; Deut. 32:4; Josh. 24:14; I Sam. 12:24; II Sam. 2:6; 15:20). Similarly in Exod. 18:21, the "men of truth" of the KJV has given room to "men who are trustworthy" in the RSV; in Isa. 39:8 the text refers to "peace and security" rather than "peace and truth"; Isa. 42:3 says that God will "faithfully bring forth justice" (RSV) or probably "a justice the results of which cannot be broken." Josh. 2:12 does not speak of a "true token" (KJV) but rather of a "sure sign" (RSV), which is not misleading, or perhaps a "reliable sign," in which one can trust on account of the circumstances in which it has been given. On account of the complex meaning of the root אמ, the noun אמת is rendered in the LXX both πίστις ("trust, trustworthiness, faith") and ἀλήθεια, and thus its meaning often merges with that of אמת.

2. In the OT. Though the noun originally designates a property of things, it is found in the OT applied to God as well as to human beings. God is a God of truth (Deut. 32:4; II Chr. 15:3), not "the true God" as contrasted with false ones, but rather one upon whom his people can rely. He "keepeth truth [RSV 'faith'] for ever" (Ps. 146:6 KJV). In Ps. 85:11 the rendering "Truth [RSV 'faithfulness'] will spring up from the ground" is in either case inadequate. The passage states that God's will shall be manifested everywhere without meeting opposition, just as a plant grows up naturally. The fact that in not a few passages God's אמת is coupled with his אהבה ("steadfast love") indicates that his "truth" is not so much contrasted with falsehood as with fickleness (cf. Gen. 32:10; Pss. 25:10; 26:3; 40:11).

With reference to God, "truth" designates a quality of his nature or will—viz., constancy and unchangeableness. His actions give full and adequate expression to his nature, and this is to be so permanently, because he does not want it to be otherwise. Thus he can rightly be called a fortress, a refuge, or a rock, and his "truth" is the reason why people can trust in him. In a universe which is constantly in flux and change (it "floats upon the waters"), he proves to be the only unchanging reality. Thus, while in the Greek view of truth the cognitive element predominates, it is the ontological one in the OT. The fact, nevertheless, that אמת was rendered in the LXX by ἀλήθεια is best explained by the tendency inherent in God's אמת to manifest itself or rather to manifest himself as a person who is known by the way he acts (Exod. 3:14: "I AM WHO I AM"). Since this "truth"

of God is not an incidental property, but rather the very nature of God's will, which cannot be altered by changing circumstances, it follows that God's commandments are not arbitrary demands, but rather have "truth" in them (Neh. 9:13; Hos. 4:1). Such usage implies that the OT standard of justice is not found in an abstract sociological or ethical principle but in God's way of dealing with this world. Hence, belief in whatever is contrary to God's truth—e.g., false gods, false prophets, false doctrine—is not to be considered as regrettable ignorance but rather as something which ought not to be and therefore is to be stamped out.

Since according to the OT everything in this world is created by God and has its destination through the divine purpose, for which it has been brought into being, God's "truth" is to reflect itself in man's life. Thus the king, e.g., who is God's representative as ruler, must show אמת (e.g., Ps. 45:4), not "truth" (RSV) but rather unwavering adherence to the standards of the law (cf. Prov. 29:14). Likewise, the covenant demands of the Israelites to serve God in constancy, not to fall away (I Sam. 12:24, where the KJV has "in truth," the RSV, more appropriately, renders "faithfully"; cf. I Kings 2:4; II Kings 20:3; II Chr. 32:1). In Hos. 4:1 ("There is no truth [RSV 'faithfulness'] . . . in the land"), the RSV is probably correct in rendering "faithfulness." The prophet seems to allude to Israel's marital relationship with God.

As the manifestation of God's will, אמת is therefore synonymous with his commandment (e.g., Ps. 43:3), and thus in turn with man's appropriate response to it—e.g., "Thou desirest truth in the inward being" (Ps. 51:6), or "Truth has fallen in the public squares" (Isa. 59:14; cf. vs. 15: "Truth is lacking"). Thus while "truth" implies veracity, truthfulness, it is not confined to it, but rather designates the whole field of religious and moral life, as it agrees with God's will. This usage has become dominant in rabbinical Judaism. The man "who speaks truth from [or in] his heart" (Ps. 15:2) is a person whose thoughts and aspirations, which according to the OT originate in the heart, are directed toward God's אמת. Similarly the "men of truth" (Exod. 18:21 KJV; RSV "men who are trustworthy") are, as the context shows, people who in their judgments are eager to bring the facts to light. Calling upon the Lord "in truth" (Ps. 145:18) is not contrasted with hypocrisy, but rather, as the parallels in Josh. 24:14; Isa. 10:21 show, refers to a devotion in which the God of the covenant is worshiped—i.e., which is in accordance with what God has done for his people.

In addition to this specifically religious usage of אמת, the term is also found in the OT in a general sense. Thus the "right seed" (Jer. 2:21 KJV; RSV "pure seed") is one that will not deteriorate but will reproduce a plant having the same qualities as that from which it was taken; and Joseph wants to find out whether in his brothers there is "truth"—i.e., truthfulness (Gen. 42:16). In other instances, "truth" designates the actual fact over against mere contentions, particularly in a trial (e.g., Deut. 13:14; Zech. 8:16). "True" judgment (e.g., Zech. 7:9) is therefore one which is based upon established facts and cannot be disputed. In other instances, "truth" is con-

trusted with appearance or pretense (e.g., Judg. 9:15: "if in truth [RSV 'in good faith'] you anointed me." The "true" laws of God (Neh. 9:13) are laws which suit the actual conditions (cf. Pss. 19:10; 119:160).

3. In the NT. a. In General. In the NT, usage of ἀλήθεια and congeners goes back to the OT. However, under the influence of the LXX, and probably also the Hellenistic environment in which the Jews had lived for more than three hundred years, when the NT was written, the cognitive element is predominant in the Christian writings. However, particularly in references to God, not only do OT phrases recur, but also in the newly coined ones the ontological element is an essential ingredient. Failure to notice this fact has here, as in the case of "knowledge," led to seriously wrong interpretations.

The ontological aspect of truth is emphasized in phrases such as: "You . . . are established in the truth that you have" (II Pet. 1:12), which does not refer to doctrines but rather to saving facts, though known ones. In Hebrews, I and II Peter, and James (e.g., 1:18; 3:14; 5:19-20) this connotation is particularly outspoken. "Truth" is the true and eternal reality. Similarly truth is reality as contrasted with imagination and mere appearance—e.g., in Acts 12:9, where the KJV rendering: "[Peter] wist not that it was true," has been correctly altered by the RSV into: "He did not know that [it] . . . was real" (cf. I John 2:27). The RSV has improved the rendering of John 7:26, by altering the KJV rendition: "Do the rulers know indeed that this is the very Christ?" into: "Can it be that the authorities really know that this is the Christ?" In I Pet. 5:12 the "true grace" does not designate a grace that is in accordance with a true proposition, nor is it contrasted with hypothetical "false" graces, but rather Peter points out that despite the oppression and persecution which the readers experience, God's grace is the real and solid foundation of their faith. In other passages the true is the genuine over against the conventional or the pretended—e.g., in Luke 16:11, where the "unrighteous mammon" is confronted with the "true riches," or, more exactly, the "true good" (e.g., Weymouth). Often truth is contrasted with error, falsehood, or lies (e.g., Mark 5:33; John 4:18; 10:41; Rom. 9; II Cor. 6:8; 7:14; 12:6; Phil. 1:18; I Tim. 2:7; I John 2:27; cf. Matt. 22:16; Mark 12:14).

A true Hebraism in the NT is the frequent use of *amen* or its Greek equivalent, ἀληθώς, particularly as introducing words of Jesus, and commonly rendered "truly" or "verily" (e.g., Matt. 14:33; 26:73; John 4:42; 17:8). It characterizes a statement as being beyond doubt and irrefutable. Another Hebraism is probably the characterization of the Christian witness as true (e.g., John 5:31-32; 8:13-14; 21:24; Tit. 1:13; III John 12; see TESTIMONY; WITNESS). The phrase describes the testimony, not only as being in agreement with the facts, but also as based upon facts that are reliable, so that others can use it as the foundation of their life. In John 7:18 the rendition of the RSV obscures the Hebraic background by reading: "He who seeks the glory of him who sent him is true, and in him there is no falsehood." The KJV translates the last word correctly as "unrighteousness." But "true" also follows OT usage. It does not mean "truthful" but rather, as evidenced by its opposite,

"complying with the will of God." In a few instances "truth" denotes "veracity" (e.g., Mark 12:14; I Cor. 5:8), but more sparingly than the older exegetes assumed. Greek influence is also noticeable in Rom. 1:25, where Paul charges the pagans that "they exchanged the truth about God for a lie." The truth here designates that which lies hidden behind the appearances yet can be apprehended by the mind (vs. 20). But here, too, the modern translation detracts from the Hebraic background of the phrase by reading "truth about God," where the KJV has correctly "truth of God." The RSV thinks of a propositional truth which, however, could not be contrasted with the "lie" which consists in "worshiping and serving the creature rather than the Creator." The "truth of God" is the true nature of God, which all men apprehend intuitively, but which idolaters adulterate by wrongly interpreting it.

Particularly controversial in recent exegesis are those passages in which the "way of truth" or "the truth" in an absolute sense is referred to. The prevailing tendency was to understand these expressions as referring to a set of propositions, or to the supreme idea of truth in a Platonic sense. There can be no doubt but that both in the OT and in the NT truth is expressed in verbal statements, and that none of the NT writers refers to a truth or knowledge that is purely mental and without, or above, words. This fact implies, especially in the NT, the intrinsic consistency of the statements expressing the truth, and the absence of contradiction. However, whereas in Greek philosophy and science a true statement is one whose subject is a general concept, the truth of which the NT speaks describes a particular fact. In Heb. 10:26, e.g., acting contrary to the "knowledge of the truth" is explained as "spurn[ing] the Son of God and profan[ing] the blood of the Covenant" (vs. 29). Furthermore, this truth is characterized as a "present" one, or probably one that has come to the believers (II Pet. 1:12). This is not a Greek mode of expression, as little as the phrase "being established in the truth." A Greek philosopher would speak of a truth which had been established by means of demonstration, and of a thinker who establishes himself by means of right thinking. The phrase in II Peter points rather to an intrinsic dynamic of the truth, as in the OT. The "way of truth" (II Pet. 2:2) is obviously a reminiscence of Ps. 119:30 and designates primarily the conduct that is in keeping with the divine אמת. It is identical with the "way of God" (Matt. 22:16; Mark 12:14; Luke 20:21) which, according to the Pharisaic interlocutors, Jesus was "teaching in truth"—i.e., in accordance with God's אמת. But when it is said in II Pet. 2:2 that on account of the licentiousness of some members of the congregation the way of truth will be reviled, the author can hardly think of a doctrinal system. The term "way of truth" is obviously here a self-designation of the church, reminiscent of the simple "Way" found in Acts 9:2; 19:9, 23; 24:14 (cf. 16:17; 18:25-26). The addition of "truth" intimates its self-realization in the life of the church.

b. John. More frequently than all the other NT writers together, John and Paul use ἀλήθεια and its congeners—an indication of the importance they assigned to this concept. Both are also aware of the

fact that they are moving in a world in which truth is conceived of in terms of philosophy, mythology, or mystagogics. Thus as they present their views, they are engaged in polemics against those approaches to the truth. It is obvious that to John ἀλήθεια is the OT אמת. He adds two new features to it, however—viz., the identification of Christ with the truth, and the description of the appropriation of the truth. That the problem of truth occupies the central place in John's Gospel is indicated by the fact that the judge Pilate, who represents the powers of this world, asks the question: "What is truth?" (John 18:38). Jesus reiterates constantly that God is "true" (John 3:33; 7:28; 8:26; 17:3; I John 5:20; cf. Rev. 6:10). Hereby he does not want to say that God is sincere, nor that he is the true God, but rather that he acts in accordance with the relation which prevails between the Creator and a sinful world. God never loses sight of the goal which he had "from the beginning"; this is evidenced by his sending the Son. Accordingly his ways (Rev. 15:3), his judgments (Rev. 16:7), and his words (John 17:17; cf. Rev. 19:2; 21:5; 22:6) are true—i.e., in accordance with his plan. Thus, as the one who determines himself and is not deflected from his course by the things of the world, he is the only one that may be called God.

Whereas the OT places the emphasis upon God's being unchangeable and unchanging and thus the determining center of the universe, John lays stress upon the intrinsic energy of the divine truth, which comes to men and wants to be known (e.g., I John 5:20; cf. John 5:33; 18:37). While John shares with certain tendencies in Hellenism the conviction that God's truth is in opposition to a world which is under the Devil (John 12:31; I John 5:19) and thus lacks truth (John 8:44), he differs from Hellenism in describing God as one who saves this world and makes this fact universally known. There is no Gnosticism in John. It is against this background that Jesus calls himself the Truth (John 14:6; cf. 16:13), not for what he is, but for what he does—viz., as one "who has told you the truth which I heard from God" (John 8:40; cf. 5:33; 8:13-14). All that he does originates in the divine truth and makes the latter real in this world. The intimations of God's saving plan, which were given in the history of Israel, have now become actuality in Jesus. Thus he is the "true light" (John 1:9); the "true vine" (John 15:1, referring to Jer. 2:21), which bears fruit; and the "true bread from heaven" (John 6:32), which, unlike the manna in the wilderness (Exod. 16), will never perish, but rather sustain life everlasting in all who eat of it (John 6:55). All the "I am" predications of John's Gospel proclaim the same truth. Unlike the beings of this world, which come into existence and pass away again, Jesus, like the Yahweh of Exod. 3:14, has being in himself. He is.

This is not Platonism, with its contradistinction between the idea and its imitation in concrete reality, but rather the contrast between the provisional and the final. Thus Christ is not the "essence of all truths," because he is not a truth that is distilled from the things of this world, but rather his ministry indicates the goal for which this world is destined. Truth has therefore an eschatological character in John, though the evangelist places more emphasis

upon the contrast between announcement and fulfillment than on that between past and future. As the truth Jesus is not simply disclosing what is in God; he is the manifest saving presence of God in this world. As a result, all that Jesus does and offers is true (e.g., John 7:18; 8:16)—i.e., in accordance with his nature and with God's plan. But this is not "realized eschatology." As the operation of God's presence in this world, the Truth is engaged in a battle against all falsehood (e.g., John 8:40, 44). Furthermore, far from being a static "principle" of truth, Jesus as the Word that was in the beginning (John 1:1) communicates himself to other people by consecrating them (John 17:17) and making the truth known to them (John 1:17). In accordance with his function of communication, Jesus can therefore promise that his work will be continued by the "Spirit of truth" (John 14:17; cf. 15:26; 16:31; I John 4:6; 5:7). Through him people will not only be familiarized with the truth, as in Greek mystagogics, but also be transformed according to their divine destination—i.e., to become like Christ (e.g., I John 3:1-2).

In order to reach this goal, people must accept or receive Christ (John 1:11-12), so that the truth is "in us" (I John 1:8; cf. III John 4) as the "true imperative" (I John 2:8; RSV "commandment") which determines our self. In this way we are "of the truth" (e.g., John 18:37; cf. I John 3:12)—i.e., the truth becomes our very nature, we are "true worshipers" (John 4:23), whom this indwelling truth (John 14:17) has delivered from the slavery of sin (John 8:34) and the Devil (John 8:44). These effects presuppose a knowledge of God and of Christ (e.g., I John 2:22-23; cf. John 8:19) and thus of the Bible (e.g., John 5:39), but it is the truth, or the unction of the Holy Spirit (I John 2:20, 27), which by its intrinsic energy (III John 8) leads man from confused knowledge to insight (e.g., John 8:32; III John 12) and from sin to love (e.g., I John 1:8; II John 1-3) and sanctity (John 17:17). Thus we "walk in the truth" (II John 4 KJV; III John 3-4 KJV) or "in the light" (I John 1:7), and worship "in spirit and truth" (John 4:23-24)—namely, in Him, who is the Truth (*see* LIGHT).

Most characteristic of John's view of truth is the phrase "to do the truth" (John 3:21; I John 1:6). It indicates that the truth is not a proven proposition, in consequence of which one does certain things, but rather a divine impulse, which the believer actualizes (cf. Rev. 22:7). Accordingly all progress in the apprehension of truth depends on one's willingness to accept the indwelling truth as the regulatory principle of both knowledge and actions.

c. Paul. Like John, Paul adopts the OT view of truth. This is particularly obvious when he speaks of God. In the argument of Rom. 3:1-7, the apostle has the אמת of God in mind, when he uses πιστις ("faithfulness"; vs. 3) and ἀλήθεια ("truthfulness"; vs. 7) as synonyms, and characterizes God as being "true" (vs. 4)—i.e., as keeping his covenant. In I Thess. 1:9 the "true" (ἀληθινός) God is the "real" God, as contrasted with idols. Similarly, in the contrast between iniquity and truth (RSV "right") in I Cor. 13:6, the latter term is used as indicating God's demanding will (cf. Rom. 2:8, 20; Eph. 5:9; 6:14; Phil. 4:8). Christ, who as a servant of the circumcised "shows God's truthfulness" (Rom. 15:8),

manifests not so much God's truthfulness (RSV) as his faithfulness. But Paul comes closer to Greek mentality, when, e.g., in Rom. 1:18 he speaks of suppressing the truth of God by means of iniquity. Yet even here the emphasis falls not so much upon the conceptual content as upon the will to manifest itself implied in truth (cf. Rom. 1:25 and the "wicked deception" [II Thess. 2:10]).

An original feature in Paul is his view of the truth as a historical process, which reaches its climax in Christ and the church. In Christ the hidden or veiled aspects of God's reign of mankind come to light (e.g., Rom. 1:1-6; 16:25-26; II Cor. 4:6). When Paul says that the "truth is in Jesus" (Eph. 4:21), he thinks in the first place of the realization of God's redemptive work in Christ. Hence "truth" does not so much designate the demanding will of God, but rather the gospel (e.g., Gal. 2:5, 14; Eph. 1:13; 4:20; Col. 1:5). Like the former, it has an intrinsic energy which is divine (Rom. 1:16; II Cor. 6:7), thus overcoming the resistance of sin (II Cor. 13:8) and moving people to propagate Christ's cause (II Cor. 11:10). The truth of the gospel, according to Paul, is therefore not simply the message about Christ or salvation, but rather the process in which Christ and the church are jointly engaged in bringing salvation to mankind. The truth is God's saving work made manifest (II Cor. 4:2); in it one believes (II Thess. 2:12-13) and one loves it (vs. 10). For in hearing the "word of truth" one is in Christ (Eph. 1:13; cf. II Cor. 11:10: "The truth of Christ is in me"). Thus one can "obey the truth" (Gal. 5:7) without falling into the works of the law. In turn, a false gospel is one which cannot save, because Christ is not in it (Gal. 2:5; cf. 1:6-7). The same usage is found in the Pastorals (e.g., I Tim. 3:15; 6:5; II Tim. 2:15, 18; 3:8; 4:4; Tit. 1:14).

TRYPHAENA AND TRYPHOSA τριφῆνα, τριφῶσα [Τρύφαινα, dainty; Τρυφῶσα, delicate]. Christian women, recipients of a greeting in Rom. 16:12, where Paul also calls them "workers in the Lord"; the word indicates that they were "toilers." Because their names come from the same Greek root (meaning "to live luxuriously"), it has been inferred that they were sisters, or even twin sisters.

Both names are found in Greek and Latin sources; Tryphaena is used of Jewish women in the papyri. Tryphaena is also the name of a queen who be-

friended the heroine Thecla in the Acts of Paul and Thecla 27 ff.

F. W. GINGRICH

TRYPHO τριφῶ [Τρύφω]; KJV TRYPHON —fōn. A murderous upstart who usurped the throne of Syria for three years (142-138 B.C.). As Diodotus, he had been a general of ALEXANDER BALAS, and after the latter's overthrow he took advantage of unrest among the soldiers of the next king, Demetrius II Nicator, to strengthen his own position, and in the S he also gained the support of Jonathan and the Maccabean party (I Macc. 11:57 ff).

Trypho had already brought from Arabia the young son of Balas, in pretense of placing him on the throne instead of the now defeated Demetrius II, but in reality Trypho was after the throne for himself. He felt that Jonathan and the Maccabees might be a hindrance rather than a help to him, and he marched with an army toward Jerusalem. Jonathan met him at BETH-SHAN in 143 B.C., but he was induced by promises and flattery to go to Ptolemais and was there imprisoned (I Macc. 12:39-53). Simon, who succeeded Jonathan, in Jerusalem, tried to effect his brother's release by sending hostage money, but Trypho did not keep his word. Instead, he invaded Judea, and had Jonathan put to death at Bascama after he had twice tried to reach Jerusalem.

78. Trypho

According to 13:31, which there is some reason to distrust on this point, Trypho then murdered the young king whom he had brought from Arabia, Antiochus VI, and took the throne. He did not keep it long, for he now found Simon and Demetrius united against him.

It was Demetrius' younger brother, Antiochus VII Sidetes, who finally forced Trypho to flee to ORTHOSIA (I Macc. 15:10-37). Trypho committed suicide (Strabo XIV.5.2).

N. TURNER

TRYPHOSA. See TRYPHAENA AND TRYPHOSA.

TUBAL τῶβελ [תובל, תבל]. Son of Japheth (Gen. 10:2; I Chr. 1:5); hence a country in Asia Minor. The name is usually referred to in conjunction with MESHECH 1 (Ezek. 27:13; 32:26; 38:2-3; 39:1) or other nations of Asia Minor (Isa. 66:19). The equation with Tabal of the Assyrian sources is as evident as the correctness of the association with Meshech-Mushki (Μόσχοι). Herodotus still lists the Tabaleans (Τιβερηνοί) with the Μόσχοι (III.94; VII.78). Tubal and Meshech traded in bronze (copper) vessels

(Ezek. 27:13). Archaeology has confirmed that metalurgy was one of the outstanding industries of these two countries, and Assyrian texts refer to precious metal vessels of Tabal (Sargon, eighth campaign; 358, 361).

Although the exact location of Tabal is disputed, it is clearly a region in the Cappadocian part of Asia Minor, which played an important political role in the ninth and eighth centuries B.C. Under Shalmaneser III (859-824) twenty-four kings of Tabal sent presents to Assyria. In the eighth century the country was united under one king, Uassurme, whom the Assyrians dethroned in 732 B.C. A later king, Ambaris, conspired unsuccessfully against Sargon with Mushki (Meshech) and Urartu (Ararat).

M. J. MELLINK

TUBAL-CAIN תּוּבַל-קַיִן *tōō'bāl kān'* (תּוּבַל-קַיִן, *see below*; θοβελ και ην [for καιν?]) (Gen. 4:22). Son of Lamech and Zillah; brother of Naamah.

The name is often identified with Akkadian *Tabal* (*see TUBAL*), but this is uncertain here. Mowinckel interprets *tūbhal* as "one who brings forth, produces, property," from יָבַל, thus meaning the same as its second element, קַיִן, "smith" (perhaps a gloss). The name Tubal-cain is intentionally similar in form, as possibly in meaning, to the names of the half brothers, Jabal and Jubal (vss. 20-21).

In its immediate context Gen. 4:22 serves to include smithery in the arts and crafts associated with early man. That "Tubal the smith" is the eponymous ancestor of ancient metalworkers is clearly the intent of the sentence, despite textual difficulties. In its wider context this sentence serves the Yahwist's general theme in Gen. 1-11 by showing that as mankind developed in civilization, he progressed also in sin. For Tubal-cain looks both backward to Cain's homicide (4:1-17) and forward to Lamech's unsavory boast (vss. 23-24).

Bibliography. S. Mowinckel, *The Two Sources of the Predeuteronomiac Primeval History (JE) in Gen. 1-11* (1937), pp. 81-82; W. F. Albright, *JBL*, LVIII (1939), 95-96.

L. HICKS

TUBIENI. KJV form of TOUBIANI. *See TOB.*

TUMORS [עַפְלִים, טַחְרִיּוֹם] (I Sam. 5:6, 9, 12; 6:4-5, 11, 17); KJV EMERODS עִמְרֹדִים *em'ō rōds* (archaic form of "hemorrhoids"). A dreaded infection of high mortality, transmitted by rodents. The chief symptom was an inflamed enlargement of the inguinal glands (buboes). The narrative indicates an epidemic more characteristic of bubonic plague than hemorrhoids (cf. KJV). *See PLAGUE.* R. K. HARRISON

TUNIC כְּתוֹנֶת (Job 30:18), *see COAT* 1; Aram. טַשִּׁישׁ (Dan. 3:21; KJV HOSEN); χιτών. An undergarment. *See DRESS AND ORNAMENTS* § A2.

TURBAN. The translation of several words:

a) תַּאֲרָ (from Egyptian *ḥjt*; alternately "head-dress"), an ornamental head-covering, made of

linen or fine linen, for men. It was removed at periods of mourning (Ezek. 24:17, 23; KJV "tire"). In Ezek. 44:18 (KJV "bonnet") this is the turban of the priest, and in Isa. 3:20 ("headdress"; KJV "bonnet") the finery of women (cf. Exod. 39:28). The Hebrew word is used figuratively in Isa. 61:3, 10 (*see GARLAND* 2; cf. Pss. Sol. 2:22).

b) צִנִּיף (alternately "crown"; "diadem"), something wrapped around the head. This was the turban of priest and king. In Zech. 3:5 (KJV "mitre") it refers to the clean headgear for Joshua the high priest. It is a special mark of royalty in Ecclus. 11:5; 40:4 ("crown"); 47:6 ("diadem"; KJV "crown"). In Job 29:14 it is a metaphor for "justice." In Isa. 62:3 (Qere) it appears to refer to a figure for the redeemed group in relation to other peoples. In general, this term appears to be parallel to 1 *above*, though it may refer to a headcloth more frequently wrapped around the head. Fig. AKH 10.

c) מִצְנֵפֶה (KJV "diadem"; "mitre"), a term related to *b above*, but confined to the headdress of the high priest (Exod. 28:4, 37, 39; 29:6; 39:28, 31; Lev. 8:9; 16:4) with the exception of Ezek. 21:26—H 21:31, where it is used in parallel with עֹטָרָה, the crown of the prince of Israel. It was made of fine linen (Exod. 28:39; 39:28) and was an article of priestly attire for the Day of Atonement (Lev. 16:4). Josephus (Antiq. III.vii.3, 6) says that the headgear of the priests was seamed at the folds and so became a cap.

d) מְרוּחֵי טְבוּלִים (Ezek. 23:15; "flowing turbans"; KJV "dyed attire"), the long, flowing hoods of the Chaldeans.

e) Κίβητος (Jth. 4:15; Ecclus. 45:12; KJV "mitre"), the priestly turban; the reward for the winner of a contest, who would sit next to the king (I Esd. 3:6; KJV "headtire").

J. M. MYERS

TURPENTINE TREE. A KJV form of TEREBINTH.

TURQUOISE. A blue, bluish-green, or greenish-gray hydrous basic aluminum phosphate containing a little copper. The most famous mines are in Persia. It was used in Egypt from early Neolithic times, and came from Wadi Maghara and Serabit el Khadim in Sinai. The gem must have been favorably known in Palestine, yet no English version has noted it. Egyptian *mfk'it* may have become נִפְךָ, *nōpkekḥ*, CARBUNCLE. The Arabic version renders שַׁפִּיר (Isa. 54:11, etc.; usually "SAPPHIRE") "turquoise," also אַחֲלָמָה (Exod. 28:19; AMETHYST).

TURTLEDOVE [תּוֹר, תֵּר (KJV TURTLE in Song of S. 2:12; Jer. 8:7), probably onomatopoeic, cf. Akkad. *turtu*, Lat. *turtur*; τρῦων, from τρῦζω, to make a low murmuring sound]. Alternately: DOVE (Ps. 74:19). Any of the smaller varieties of PIGEON. Tristram noted three species of turtledove in Palestine (probably *Streptopelia turtur turtur*, *Streptopelia decacto decacto*, and *Streptopelia senegalensis aequatorialis*). The seasonal appearance of some turtledoves seems to be referred to in Song of S. 2:12; Jer. 8:7.

In the OT the turtledove is, for the most part, grouped with the pigeon in a cultic or sacrificial role. This is reflected in Luke 2:24 when Mary, observing the requirements of Lev. 12, made the usual bird offerings after the birth of Jesus.

The use of the word as a metaphor for Israel appears only in Ps. 74:19. W. S. McCULLOUGH

TUTOR. KJV translation of ἐπίτροπος (RSV GUARDIAN) in Gal. 4:2.

TWELVE. The special significance of this number may have derived from several factors: the divisions of the lunar year, the signs of the Zodiac (cf. II Kings 23:5; Job 38:32), or the fact that it is the sum of five and seven and the product of three times four. The practical advantage of the number, its maximum divisibility, as well as its importance in the Sumerian duodecimal or sexagesimal numerical system, must have contributed to its development of symbolic significance.

The fact that the tribes of Israel were twelve (Gen. 35:22; 42:13, 32; 49:28; Num. 1:44) was enough to give the number religious significance for the Israelites. The tribes of Ishmael were also twelve (Gen. 17:20). There is something important about the number itself, as indicated by the effort to retain it in spite of losses or gains in the actual number of the tribes. When the tribe of Levi disappeared, the Joseph tribes Ephraim and Manasseh were counted separately to preserve the sacred number, and so also in the NT it was necessary to find a replacement for Judas Iscariot in order to keep the proper number of disciples. Often representative persons and things in the OT are explicitly chosen in accord with the number of the tribes (Exod. 24:4; 28:21; Num. 7:3; 17:2, 6; Josh. 4; I Kings 18:31; Ezra 6:17; 8:35; Ezek. 48:31); and so too in the NT the disciples are related to the tribes of Israel (Matt. 19:28). The twenty-four classes of priests and Levites (I Chr. 24:4; 25:31), the twenty-four elders round the heavenly throne (Rev. 4:4; 5:8; 11:16; 19:4), and the forty-eight Levitical cities (Num. 35:7) are implicitly correlated with the twelve tribes. The seventy-two elders, counting Eldad and Medad (Num. 11:24-26), presumably were chosen equally from each of the tribes. The number of the young men who fought and died at the Pool of Gibeon, twelve each from Israel and Judah, may have symbolized the issue at stake, which was the unity of the original twelve tribes (II Sam. 2:12-17). The twelve gates of heaven (cf. Ethiopian Enoch 34:2; 35:1; 36:1), the celestial Jerusalem (Rev. 21:12-14), are inscribed with the names of the tribes of Israel, and the twelve foundations of the city wall with the names of the twelve apostles. The twelve kinds of fruit of the tree of life, however, are related to the months of the year (Rev. 22:2). Solomon's twelve officers who supplied food for the royal household, each for one month of the year, were only partially assigned according to the tribes (I Kings 4:7-19). The Chronicler attributes to David also a monthly system of royal service, each division consisting of 24,000 men (I Chr. 27:1-15). Of the 144,000 servants of God (Rev. 7:4), 12,000 are taken from each of the tribes. Twelve occurs in

many other relations, ritual and otherwise, without explicit or implicit connection with the tribal system (Exod. 15:27; Lev. 24:5; I Kings 10:20; Jer. 52:20; Ezek. 43:16; Matt. 14:20; Rev. 12:1).

The "more than twelve legions of angels" (Matt. 26:53) suggests that the number may sometimes be merely an inexact round figure, as is probably the case with the twelve baskets of scraps picked up after the feeding of the five thousand (Matt. 14:20).

M. H. POPE

TWELVE, THE. A group of disciples especially selected and instructed by Jesus to assist him in his earthly mission (Matt. 10:1-4; Mark 3:13-19; Luke 6:12-16; cf. John 6:70), and at the coming judgment (Matt. 19:28; Luke 22:30). The number was symbolic of the twelve tribes of Israel (cf. Rev. 21:12-14). After the Resurrection, the vacancy left by the defection of Judas was made up by the choice and inclusion of Matthias (Acts 1:15-26). The number of the group was thereby closed, and no further additions to it were ever made. According to Paul, the Twelve (minus Judas) were among the first recipients of the appearances of the risen Lord (I Cor. 15:5; cf. Mark 16:7); and this tradition is confirmed by the resurrection narratives of Matthew, less precisely by Luke and John. In Acts 1-6, the Twelve are portrayed as the initial leaders of the church; but they were soon merged into a larger company of apostles. *See* APOSTLE; MINISTRY.

The lists of names of the Twelve in the Synoptic gospels do not exactly correspond. The Fourth Gospel introduces the name of Nathanael; and other variants in the names occur in uncanonical sources. All attempts to harmonize the lists are speculative. The NT tradition that Simon Peter was the first to be chosen by Jesus, as he was the first to see the risen Lord, is indisputable; but the nature of Peter's pre-eminence in the group, other than that of a ready spokesman for his colleagues, has been a constant subject of controversy among biblical critics and theologians (cf. Matt. 16:18; Luke 22:32; Acts 1:15; 2:14; 5:3; Gal. 2:8; *see* PETER).

Almost nothing of a trustworthy nature is known about the lives and labors of the Twelve, other than what is told in the NT—e.g., the martyrdom of James son of Zebedee in Acts 12:2. (*See* APOCRYPHA, NT.) The tradition of Peter's martyrdom and burial in Rome is doubtless authentic (cf. I Clem. 5.4; Dionysius of Corinth and Gaius in Euseb. Hist. II.25.7-8). But much obscurity surrounds the tradition concerning the residence and death of John in Ephesus (*see* JOHN THE APOSTLE).

M. H. SHEPHERD, JR.

TWIN BROTHERS [διδσκούροι; Lat. *dioskuri*, sons of Zeus] (Acts 28:11). Castor and Polydeuces (Latin *Pollux*), who have an ancient and widespread history in classical mythology. Their mother was Leda, wife of Tyndareos, king of Sparta in legendary times. Hence they are sometimes called Tyndaridae. More often and after Homer's time they are called "Sons of Zeus." In the traditions they are one or both his sons, and one, both, or neither immortal.

As tutelary deities they served a variety of func-

tions. Castor the horse-tamer became the god of horsemen (in iconography the two gods are commonly accompanied by their horses); Polydeuces, the master of the art of boxing, became the god of wrestlers. However, their chief function came to be as saviors (θεοὶ σωτήρες) of mariners. Poseidon had rewarded their brotherly love by giving them power over wind and waves. Having attained a blessed immortality, they were identified with the constellation Gemini (the Twins, the third sign in the Zodiac), the two brightest stars of which are known as Castor and Pollux. They are therefore in a position to look down upon and save those in peril on the sea. Indeed, they might show themselves in the form of "St. Elmo's fire," the glow accompanying the brushlike discharges of atmospheric electricity appearing as a tip of light on the ends of pointed objects such as masts of ships, during storms.

Since Castor and Pollux were the tutelary deities of the navigators, many a ship would bear their insignia. This might mean that symbols or images of the Twins would be affixed as figureheads to the prow, perhaps with the name or names carried beneath.

Courtesy of the Italian State Tourist Office, New York

79. Holy precinct of the temple of Castor and Pollux at Agrigento, Sicily

The translation "with the Twin Brothers as figure-head" doubtless gives the sense of Acts 28:11, although the language of the text presents some difficulty. See *bibliography*.

Castor and Pollux were adequately honored in Rome. Their worship was early introduced following their assistance to the Romans at the Battle of Regillus, ca. 496 B.C. Temples were subsequently built in the Forum, the Circus Maximus, and the Circus Flaminius. A ship plying between Alexandria and Rome and bearing their insignia might well expect to be favored with a prosperous voyage. But Luke knows who the true Savior of mariners is.

TWINED LINEN [שש משי]. A superior quality of LINEN made from yarn whose threads were composed of numerous fine strands. The curtains of the tabernacle (Exod. 26:1; 36:8), the veil (26:31; 36:35), the hangings for the door of the tent (26:36) and of the tabernacle (36:37), the hangings for the court of the tabernacle (27:9; 38:9, 16), the hangings for the gate of the court (27:16, 18; 38:18), the ephod (28:6; 39:2, 24), the girdle of the ephod (28:8; 39:5, 29), and the breastplate (28:15; 39:8) were made of this exquisite linen material. TYCHICUS τῖκ'ᾶ κᾶς [Τύχικος] (Acts 20:4; Eph. 6:21; Col. 4:7; II Tim. 4:12; Tit. 3:12). A man described as a beloved brother and fellow slave of Paul's and as a faithful minister of the Lord, and who—together with Onesimus—is the bearer of the Colossian letter. Tychicus and Onesimus are to make known all matters concerning Paul, who is imprisoned, probably in Rome.

Eph. 6:21-22, with one slight omission and one slight addition, is a letter-for-letter copying of the Colossians passage. The setting in Colossians is natural, but that in Ephesians is quite artificial—constituting a part of its Pauline pseudepigraphical presentation.

In Acts 20:4, Tychicus, along with Trophimus, is designated a native of the province of Asia, who was with Paul in Greece and accompanied him overland to Troas at the end of the third missionary journey. Though not mentioned again in Acts, he was probably one of the "we" who traveled subsequently with Paul. II Tim. 4:12 tells only that Paul had sent Tychicus to Ephesus—probably an authentic Pauline word, but there are no means for determining when or from where Tychicus was sent. Tit. 3:12, probably a genuine Pauline word, indicates only that Tychicus was a possible replacement for Titus in the work in Crete, but there is nothing to indicate when and from where Titus was written.

Some suggest that Tychicus was the unnamed "brother" in II Cor. 8:22, and tradition says that Tychicus was later a bishop of Colophon and a martyr, but this is based on conjecture.

J. M. NORRIS

TYNDALE'S VERSION tɪn'dəl. William Tyndale published his translation of the NT in 1525, an octavo edition without notes and a quarto edition with marginal notes. In 1530 he published his translation of the Pentateuch with marginal notes of a highly controversial nature, and in 1535 his revised NT with a brief introduction to each book (except Acts and Revelation) and with softened marginal notes. Tyndale's Version provides the basic text of

The Fifth Chapter.

When he sawe the people he went up into a mountaine and when he was sett downe a man had his mouth opene and taught them sayinge: Blessed are they which hunger and thirst for righteousnes: for they shall be filled. Blessed are they which are persecuted for righteousnes: for they shall receive the crowne of life. Blessed are they which are persecuted for my sake: for they shall receive the crowne of life.

When he sawe the people he went up into a mountaine and when he was sett downe a man had his mouth opene and taught them sayinge: Blessed are they which hunger and thirst for righteousnes: for they shall be filled. Blessed are they which are persecuted for righteousnes: for they shall receive the crowne of life. Blessed are they which are persecuted for my sake: for they shall receive the crowne of life.

All these verses here repeated as to non-be peace, to suffer persecution, and so forth. Many hear a man have grace and blessing, neither deserve to be rewarded of heaven: but declare and testify that we are happy and blessed and that we shall have grace and promise of heaven, and certainly in your hearts that we are goddesses and that the holy god of us, for all good things are given to us freely of god for christes blood sake and his merites.

80. From Tyndale's NT (A.D. 1525), beginning of the Sermon on the Mount (Matt. 5)

the KJV and is the most important of the early versions.

TYRANNUS, HALL OF τῖρανός [τύραννος] (Acts 19:9). The place at Ephesus where Paul preached daily for two years. When Paul first reached Ephesus for a settled period of preaching, he worked in the synagogue for three months. At the end of that time the opposition to him had grown so strong that he withdrew, taking with him the disciples he had won during the three-month period. He continued his preaching in the hall of Tyrannus.

The Greek word for "hall" is σχολή. It means "leisure" or "rest"; then the activity for which leisure from work is used, such as discussion, debate, or lecture; or the group to which lectures are given ("school"); or the place where such a school meets.

This last meaning appears in Acts 19:9. The place could hardly have been a public building provided for the use of lecturers; since it is connected with an individual, Tyrannus, and since Paul was not disturbed in his daily preaching for two years, it is quite unlikely that the meeting place was a public forum or building. The fact that "all the residents of Asia heard the word of the Lord" suggests that the place was not a private residence but a well-situated hall which could house a well-attended preaching service.

Nothing definite is known about this Tyrannus. The name, as ancient inscriptions show, was common. If the place where Paul preached was a public building, Tyrannus was most likely the donor. If it was a private residence, Tyrannus was, no doubt, the owner. If, as is probable, it was a privately owned hall for lectures, he could have been the owner, or the lecturer whose name had become attached to the hall, or both. Unless he had become a Christian—and there is no evidence that he had—he must have rented the hall to Paul. That he did so shows at least a tolerance of Paul's preaching.

In the usually superior MSS (8AB), Acts 19:9 ends with the words "in the hall of Tyrannus." The "Western" type of evidence offers two additions. One addition is τινός after τυράννου, "a certain Tyrannus," making clear that an individual is meant and per-

haps implying that he was not a prominent public figure. The other addition, made by some "Western" authorities, is ἀπὸ ὥρας πέμπτης ἕως δεκάτης, "from the fifth to the tenth hour"—i.e., from ca. 11 A.M. to 4 P.M. This was the period of the midday rest, and since we have evidence that school began in the early morning and that school and business broke off ca. 11 A.M. (Juvenal VII.222 ff; Martial IX.68; XII.57), this addition in Acts would mean that Paul could rent the hall, probably for a modest cost, at the hours when the usual lecturer, whether Tyrannus or some other, no longer wished to use it. While this time of day would conflict with the normal schedule of lunch and rest, it had two advantages for Paul: he could work to support himself in the early morning (cf. Acts 18:3), and he could reach many workers in trades and business during the time they were free to hear him. Whatever the disadvantages of the hour, Paul's strategy, if the "Western" reading is accepted, was eminently successful in reaching great numbers and winning many to faith in Christ. It is not at all certain that this "Western" reading is original in Acts, but it accords with the ancient living schedule and explains easily how Paul could get a hall for so long at a cost he could afford. It may well be a part of the original text of Acts, though it is hard to see why it was omitted in so many good ancient MSS and versions.

TYRE τῖρ [צור, צור; Phoen. צר; Ugar. Ṣr-m; Amarna and Akkad. ṣurru; τύρος]; TYRIANS τῖρ'ιανζ. An important Phoenician city in the southernmost part of the country, famous for its navigators and traders.

1. Location. Tyre was situated on a small island which was originally unconnected with the mainland. The rocky isle is ca. twenty-five miles S of Sidon, close to the borderland of the Israelite tribe of Asher (Josh. 19:29). Excavations indicate that the main harbor was probably on the S side of the island. It was protected by a breakwater, traces of which can now be found fifty feet below the surface. It was built in the tenth century B.C. by King Hiram, who was a contemporary of King Solomon. The breakwater was 820 yards long and ca. 9 yards thick. Behind it was one of the best harbors in Phoenicia. The mainland settlement of Tyre was called Ushu

From Atlas of the Bible (Thomas Nelson & Sons Limited) 81. Aerial view of Tyre

in cuneiform records. King Sennacherib (704-681) and King Ashurbanipal (668-633) both boast that they captured Ushu, which at least Ashurbanipal treated hard, but they were not able to get over to Tyre.

Tyre is now connected with the mainland. The first connection was made by Alexander, who built a mole, *ca.* half a mile long, when he besieged the city in 333 B.C. Tyre's location on a rocky isle gave it a strong position in cases of siege, and it was very hard to conquer in the time before Alexander.

Fig. TYR 81.

2. History. It is supposed that Tyre is an old city, but very little is known about its foundation. The Greek historian Herodotus has suggested that Tyre was founded in the twenty-eighth century. More reliable information is found in the Tell el-Amarna Letters, from the fourteenth century. At a time when several Phoenician princes allied themselves with the Amorites, the king of Tyre, Abimilki (Abimelek), remained faithful to the former lord of the country, the Egyptian Pharaoh. From this time also comes the Ugaritic Keret epic (*see* UGARIT), which mentions the "shrine of Asherah of Tyre," an indication that the Asherah temple of Tyre was already famous then.

Phoenicia had been firmly connected with Egypt since the sixteenth century, when Pharaoh Ahmose drove the Hyksos out of Egypt and conquered the countries along the Mediterranean coast. Thutmose I and III in the sixteenth and fifteenth centuries made several campaigns in Syria. Egypt's hold loosened in the Amarna period under Amen-hotep IV (1370-1353), but then Ramses II (1290-1224) marched as far as Beirut. However, *ca.* 1100 Wen-Amon, who also visited Tyre, is a witness to how far Egypt had lost the respect of the Phoenician governors. Tyre was on its way to attaining an independent position and the leadership among the Phoenician cities. It played a great role in trade and shipping, and its navigators and craftsmen were known to be excellent.

Also, Israel used craftsmen from Tyre in the time of David and Solomon. The border of the Israelite kingdom extended to Tyre (II Sam. 24:7). King Hiram of Tyre (981-947) sent messengers to David, along with cedar trees, and carpenters and masons who helped to build his palace (II Sam. 5:11; I Chr. 14:1). Hiram, who was considered a friend of David, was also in contact with his successor, King Solomon, whom he also supplied with timber of cedar and cypress (I Kings 5; I Chr. 22:4; II Chr. 2:3-18). Solomon paid with wheat and oil. Another Hiram from Tyre, a skilled bronze worker, made most of the molten objects in the new temple (I Kings 7:13-45). Solomon also gave King Hiram twenty cities in Galilee, but they did not please him (I Kings 9:11-14). Hiram sent able seamen to the new fleet which Solomon built at Ezion-geber to sail in the Red Sea and to Ophir (I Kings 9:26-28).

It was Hiram who built the big breakwater in Tyre, which made the harbor one of the best in the E Mediterranean. He developed the trade with Cyprus and Spain. His successor reigned only for a short time; then there was a revolution. Later the dynasty was restored.

In the time of Ahab of Israel (875-852) Ethbaal was king of Tyre and priest of Ashtart. He married his daughter Jezebel to Ahab (I Kings 16:31). She and her daughter, Athaliah, who was married to King Joram of Judah, tried to introduce Phoenician religion in Israel and Judah. It was, however, not because of these attempts that the prophets prophesied the imminent destruction of Tyre by Nebuchadnezzar (Jer. 27:3-6). The wealth and the pride of Tyre made it a dangerous opponent, and therefore Tyre would surely be doomed (Isa. 23:1-17; Jer. 25:22; 27:3; 47:4; Ezek. 26:2-29:18; Joel 3:4-8; Amos 1:9-10; Zech. 9:2-4). The psalmists saw Tyre in the same way (Pss. 45:13; 83:7—H 83:8; 87:4). Characteristic are the words of Ezek. 26:17:

O city renowned,
that was mighty on the sea,
you and your inhabitants,
who imposed your terror
on all the mainland!

So are also the words of Zech. 9:3:

Tyre has built herself a rampart,
and heaped up silver like dust,
and gold like the dirt of the streets.

Tyre played an important role in purple production, and its purple was the most famous and precious of the dyes of ancient times. Tyrian ships sailed to Egypt, Cyprus, Rhodes, Sicily, and the colonies in North Africa and Spain. In addition to dyed cloths they delivered timber, wheat, oil, and wine. Also, metal, slaves, and horses were sent to Egypt. Carthage, the most famous of the colonies which Tyre founded, dates from *ca.* 850. The gold mines of Thrace, N of Greece, were first worked by men from Tyre, according to Strabo.

The main deity in Tyre in this period was Melqart, actually an aspect of Baal, whose cult was taken over also in Carthage. It was probably the same god whom Jezebel wanted to introduce in Israel and against whom Elijah was fighting (I Kings 18).

The Assyrian king Tiglath-pileser I raided Syria in 1094, but first King Ashurnasirpal in 876 was able to have tribute from Tyre and other Phoenician cities. In 853 King Shalmaneser III (at Qarqar) defeated the army of the allied states and cities, of which Tyre was one. Tyre had to pay tribute, but retained so much of its independence that Tiglath-pileser III and Shalmaneser V had to try to break it again. Tyre was besieged for five years but was able to endure and to press through a treaty in 722. The defense was planned and led by King Elu-eli, whose aspirations did not stop with Tyre. He dominated most of Phoenicia, and also tried to extend his authority to Cyprus. He got there at last, after having been driven out of Phoenicia by King Sennacherib of Assyria (705-681), who replaced him with the king of Sidon, Ethba'al. However, when Sennacherib's son Esarhaddon destroyed Sidon in 677, King Baal of Tyre made a treaty with him and paid tribute.

The Neo-Babylonian Empire also tried to extend its domination to the coast of Phoenicia. Tyre was still hard to subdue. King Nebuchadnezzar besieged it for thirteen years before it yielded to the conqueror. The long struggle had exhausted its power,

and the defeat of Tyre in 572 meant the end of Phoenician national life. When Cyrus of Persia conquered Babylon in 539, Phoenicia also came under his sway. Tyre lost its dominating position on the coast to Sidon, and Carthage detached itself politically from Tyre in 520. But Tyre was still active in trade and shipping, in spite of the loss of the colonies. Cedar trees and other products were exported (cf. Ezra 3:7; Neh. 13:16).

When Sidon revolted against Artaxerxes III Ochus (358-338), it was supported by Tyre and other Phoenician cities. The terrible destruction of Sidon in 351, however, was a warning to the other cities, which did not hesitate to capitulate. The whole situation was soon changed when Alexander arrived in Asia, swept through Asia Minor, and defeated the Persians at Issus in 333. Sidon, which had been crushed by Artaxerxes, surrendered at once, and so did also the other Phoenician cities, with the exception of Tyre, which again relied on its favorable position on an island and chose to resist the conqueror. Tyre received no help from the other Phoenician cities; on the contrary, their ships were used against it. Alexander did not want to besiege Tyre for years, so he conceived a device which made him able to attack the city without a long wait. He had a mole built from the mainland to Tyre, ca. half a mile long and two hundred feet wide. He pressed against Tyre for seven months, and then the city was no longer able to resist this persistent opponent. Its fate was hard. Ca. thirty thousand of the inhabitants were sold as slaves, and two thousand of the leaders were hanged. Victory celebrations took place in the Melqart temple, with sacrifices, rites, and processions. The mole which Alexander built, partly from houses and monuments torn down on the mainland, remained and connected Tyre with the coast for all the future.

Under the Seleucid kings who followed after Alexander, Tyre rose again slowly, though it never attained its former power and glory. Hellenistic culture was gradually adopted. Trade and industry were again developed. Pottery and glassware were produced. The glass from Sidon and Tyre was excellent and had a high reputation in all countries of the Western world. The production of dyes and of wine continued. Tyre was relatively undisturbed by

the later Seleucid rulers, and in 126 B.C. it acquired a status of independence. It was able to retain this status when Pompey conquered the country in 64 B.C., but it was constantly under some kind of control by the Roman legate in Syria.

Tyre is mentioned in I Macc. 11:59; II Macc. 4:18. Also in the NT we hear about it several times (Matt. 11:21-22; Luke 10:13-14; Acts 12:20). Jesus withdrew to the district of Tyre (Matt. 15:21; Mark 7:24, 31), and he preached to people from that city (Mark 3:8; Luke 6:17). In the time of Paul, Christians were living there, and he visited them and stayed with them seven days while the ship with which he sailed unloaded its cargo (Acts 21:3-7).

Tyre remained a center of trade and industry in Roman times. Philosophy and poetry also had a home there. Eastern and Western influences met, and in the fourth century A.D. it glided definitely into the Byzantine sphere. In A.D. 636, Tyre was conquered by the Arabs. Today Tyre is only a minor town, called Şur, with ca. six thousand inhabitants.

TYRE, LADDER OF. See LADDER OF TYRE.

TYROPOEON VALLEY tī rō'pī ʔn [φάρραγξ τῶν τυροποιῶν, valley of the cheesemakers]. The Greek name of the small N-S valley in JERUSALEM dividing the Hill of Ophel, site of the City of David, from the Western Hill or Upper City. Known today as el-Wad, it is only a shallow depression from the debris dumped into it for centuries. In Herod's day two bridges probably spanned the valley connecting the W hill to the temple platform.

- Bibliography

1. **Location.** Ancient Ugarit was located *ca.* half a mile from the coast of the Mediterranean, in a valley through which the little river Nahr el-Fidd flows. It was situated *ca.* seven miles N of Laodicea ad Mare on the Syrian coast, straight E of the easternmost point of Cyprus. In the bay where Nahr el-Fidd runs into the sea, Ugarit had a port which could be used by seagoing tradeships. There was a harbor town here which was of considerable dimensions in the best time of Ugarit. In Greek times it was known as Leukos Limen, the White Harbor. It is now called Minet el-Beida and is used only by small fishing boats. Ugarit itself had a favorable position between the low hills. It is now a tell, lying between the two arms of the Nahr el-Fidd. It is called Ras Shamra, "Hill of Fennel," because fennel is growing there. The tell which comprises the ruins of the ancient city has the form of a trapezium, where the longest side is *ca.* 670 yards (N-S) and the longer diagonal *ca.* 1,100 yards. The hill is *ca.* 22 yards high. Fig. UGA 1.

Located close to the coast, Ugarit was an important center of trade. The road along the coast, from Egypt to Asia Minor, went through Ugarit. Another trade way went from Ugarit to Aleppo, Mari on the Euphrates, and Babylon. Export articles from the Eastern countries came this way. From Ugarit the sea route over to Alashiya (Cyprus) was a short one, and Ugarit very early traded with the Aegean islands. It became an important transit harbor. One of the main export articles was copper, which was used for the production of bronze. It was imported from Asia Minor and from Cyprus, and bronze was produced in Ugarit. Like other Phoenician cities, Ugarit delivered timber to Egypt; not only cedars, but also other kinds of wood. There were factories of

UCAL ū'kəl [כַּלּ] (Prov. 30:1). A name in the title of a collection of proverbs: one of two pupils or contemporaries to whom Agur addressed his reflections. The address "Surely you know!" (vs. 4) confirms the reading of names in this difficult Hebrew verse. The LXX finds no proper names in the verse and translates here according to the verb כָּלָה ("and I cease"). The Hebrew consonants can be retained and still provide variant reading by altered punctuation (ASV mg. "and am consumed").

T. M. MAUCH

UEL ū'əl [אֱל] (*see below*; LXX A Οὐήλ) (Ezra 10:34). Alternately: **JOEL** jō'əl [Ἰουήλ (L)] (I Esd. 9:34); **KJV JUEL** jōō'—. One of the contemporaries of Ezra who are listed as having taken foreign wives. The name as given in the MT is unusual and may possibly be corrupted or contracted from אֱבִי אֵל, "God is father"; cf. the analogous "Iezer" (אִיעֶזֶר; Num. 26:30) for "Abiezer" (אֲבִיעֶזֶר; Josh. 17:2). For other conjectures, *see bibliography*.

From Schaeffer, *The Cuneiform Texts of Ras Shamra-Ugarit* (The British Academy, Schweich Lectures, 1937)

1. Air view of Ras Shamra (Ugarit), with the mound outlined in black and showing excavated areas on the mound

purple dye, as great heaps of murex shells indicate. These shells are found in abundance in the E Mediterranean.

2. Excavations. The exact location of Ugarit was unknown till 1928. In the early spring of that year a Syrian peasant was plowing his field a little N of Minet el-Beida. Suddenly his simple plow struck a stone, which no doubt looked like a tombstone. As was his duty, he notified the French *Service des Antiquités en Syrie et au Liban* in Beirut, at that time in charge of such matters. The tomb was of a Mycenaean character,* as was found out by L. Albanèse, whom the director, Charles Viroilleaud, sent to Minet el-Beida to investigate the place. It was also likely that here was an ancient cemetery, which might be worth digging up. But farther to the E was the tell, Ras Shamra. If there was a cemetery here, it was probable that there had once also been a city, and that city could only be hidden in the tell. The *Académie des Inscriptions et Belles-Lettres de Paris* decided to start diggings here, and on April 2, 1929, work began at Minet el-Beida, under the direction of Claude F. A. Schaeffer. After a month's work he changed over to Ras Shamra. Only a few days' work was sufficient to show how important the new site was. On May 20 they found the first tablets, twenty of them,

2. Late-Mycenaean-period tomb at Ugarit (fourteenth-thirteenth centuries B.C.)

From Schaeffer, *The Cuneiform Texts of Ras Shamra-Ugarit* (The British Academy, Schweich Lectures, 1937)

3. Clay cuneiform tablets as originally found at Ugarit

written in a hitherto unknown cuneiform writing.* They were dug out from the corner of a room which had been burned black by a devastating fire. That was the beginning of a series of important finds which have yielded texts of enormous value for the study of Phoenician and Canaanite religion. The tell of Ras Shamra contained the ruins of a city which had been destroyed and rebuilt several times. The deepest layer, next to virgin soil, goes back before the Copper Age. Figs. UGA 2, 3, 4.

The cuneiform writing and the language of the tablets were not known. The tablets were made of clay and were technically produced in the same way as the Akkadian tablets. The signs were not Akkadian, and there were only about thirty of them—a fact which revealed that this was an alphabetical writing. The words were separated by a vertical stroke, which was of great help for the decipherment. The length and type of the words indicated that the language was Semitic. These facts were the starting point for the scholars who tried to decipher the writing on the tablets.

The first texts were published in the French archaeological journal *Syria* in 1930. The first scholar to publish an attempt at a solution was the German Hans Bauer, on June 4, 1930, in a German newspaper. He was followed immediately by two French scholars, Edouard Dhorme and Charles Viroilleaud. Their solutions were not quite identical, but they worked their systems together and attained a solution which has since undergone only minor alterations.

In one of the texts which were found in the beginning of the campaign, there was a colophon which attested that the copy was made in the reign of Niqmad king of Ugarit (Gordon 62.56). Also other indications make it completely sure that the ancient city hidden in the mound of Ras Shamra is Ugarit, a city which was already known from the TELL EL-AMARNA Letters.

Schaeffer and his archaeologists had struck a complete library, with hundreds of tablets. Some of them had been used for teaching and practice, and there was sufficient reason to assume that there had been a scribes' school in the house where they found the library. The house was a great building, with many rooms. It was an official building, where also the chief priest (*rb khn*) had lived. Under the stone floor in one of the rooms a whole collection of tools and weapons was found. The collection had probably been given to the chief priest as a kind of offering or simply as a gift. It was made of bronze, and some of the weapons had dedications showing that they were gifts to the chief priest.

The building which housed the library, the scribes' school, and the chief priest was situated between two other great buildings which were soon excavated. They were well built and had a dominating position on the top of the hill. They had the same size and ground plan. Dedications show that one of them was a temple built for Baal, the other one for Dagon. They had a great inner room, the "holy of holiest," where the images of the gods were placed. Before it was another room, an anteroom for the inner room. Outside this was a forecourt with the remains of an

4. Plan of the excavations of the NE section of Ugarit: (1) temple of Baal; (2) temple of Dagon

altar. Here the people are supposed to have gathered. The construction of the Baal temple is much the same as that of King Solomon's Temple in Jerusalem. A staircase led up to the tower, where offerings were brought on the open terrace.

The texts give indications about the cult. So do also several objects which have been found in Ras Shamra and Minet el-Beida. Small golden amulets, in the shape of a naked woman, reveal that the fertility cult was popular and widespread. In a tomb there was found an ivory box, on whose lid the picture of a goddess was carved.* She wears a skirt in Cretan-Mycenean style. In her hands she holds ears of corn, and two goats, standing on their hind legs,

attempt to reach them. Also a little statue of a sitting fertility goddess was found, probably showing Anath, the consort of Baal. The goddess was wearing a stylized sheaf of corn on her head. So were also two other statuettes of bronze, representing the weather and fertility god Baal. One of them has horns on the helmet. On a great stone stele Baal is shown with ox horns on his helmet and brandishing a club in his right hand.* In his left hand he holds a stylized thunderbolt ending in a spearhead. Like some of the statuettes, the figure on the stele has a certain Egyptian character. Some features, such as the sword and the helmet, are not Egyptian but are clearly Asiatic. This is characteristic, not only for the composite

character of Ugaritic art, but for Ugaritic culture on the whole. Figs. UGA 5, 6 (*cf.* UGA 7).

The houses which were found in the first layer were built in the fifteenth and fourteenth centuries. Many of them were spacious and well built, around an open court and with a flight of stairs leading up to the first floor. They had many rooms, even bathrooms and sanitary arrangements. Waste water could be led away into cesspits. Under many of the houses or under the courtyards were found funeral vaults,

where the deceased members of the family were buried. The tombs were built in Cretan style. Stairways of stone led down to the vault, where the corpses were placed, wrapped in reed mats, with tools, weapons, ornaments, and pottery around. Much had been stolen or broken when Ugarit was destroyed, but much of the pottery and some other objects were left. The pottery is of late Mycenaean type and had probably been imported from Cyprus or Rhodes. It is not only these objects which indicate that the people of Ugarit took good care of their dead. In many tombs there are arrangements with a pit, or close to the grave there was a gutter which could lead the water down to the pit and had its opening level with the ground. Here water could be poured down as libations for the deceased. There are so many of these and similar arrangements in Ugarit that it is obvious that this funerary rite must have been widely observed. It is well known also from Mycenaean tombs in Greece and Crete. Some other jars which have been found point in the direction of fertility cult; they are big jars which have had their bottoms knocked out and which have been placed over libation channels.

During war times there were no excavations at Ras Shamra, but they were resumed in 1948 and have been going on regularly since. Work has been concentrated on uncovering the great palace,* under the direction of C. F. A. Schaeffer. The palace is *ca.* 130 yards long, in the N-S direction, and *ca.* 90 yards E-W. It thus covered a large area. The most important discoveries in the palace were the royal archives. The so-called central archive, the S archive, and the E and W archives were found here, and were named after the part of the building in which

7. Two views of a statue of Baal, found at Ugarit in a tomb

they were found. While nearly all texts found in the library in the first years of excavation were of a mythological-ritual kind, the archives in the palace yielded the historical material which had been lacking till then. The archive in the W wing contained largely administrative documents relating to the royal estates, that in the E wing had documents relating to the capital city, while those in the central archive were mainly legal documents. In addition there were letters in the archives. Almost all documents were written in the international language of these centuries, Akkadian, and only a few in Hurrian and Ugaritic. The script is Middle-Babylonian, with a few peculiarities. Twelve names of Ugaritic kings are found in the documents, which date from the eighteenth to the thirteenth century. The seals on the royal acts are remarkable, as they all bear the same design at the top, without regard to the identity of the reigning king. The motif is well known from Babylonian glyptic art; it is that of homage to a deified king. The seal was so well known in Ugarit that some rascals tried to forge it. One of the letters of the collection tells about this episode. Fig. UGA 8.

8. Plan of the palace at Ugarit, showing location of the royal archives

Many fine objects have been recovered from the palace. The ivory pieces from the king's bedroom are among them.* The foot panel of the bedstead of the king is supposed to be the largest single piece of ivory carving hitherto unearthed in the Near East. It is more than a yard wide and *ca.* twenty inches high. It is divided into sixteen panels, beautifully carved with pictures from the king's private and official life. Figs. UGA 9; ART 67.

9. The royal couple, on an ivory plaque, from the palace

Another remarkable piece, found in the season of 1952-53, is the ancient Ugaritic alphabet, with thirty letters, written probably in the fourteenth century and thus the oldest known ALPHABET in the world. Like the previous piece, it is now found in the National Museum of Damascus.

3. History. Civilization on the E shore of the Mediterranean goes very far back in time. N of Ugarit traces of Early Paleolithic civilization have been found. Nothing as old has been dug out in Ras Shamra. Excavation down to the bottom rock has taken the excavators down to the earliest level (V) where no pottery was found, only flint and bone tools. These tools indicate that stratum V belongs to Neolithic times. They were found twenty yards down from the surface of the tell. On the same level, but a little higher up, sherds of simple pottery were found. They have some linear decorations and seem to be of a type analogous with pottery found in N and E Syria, and also in Jericho. The level above this (IV) can be dated *ca.* 4000-3500. It shows a finely developed civilization from the Chalcolithic or Copper Age, with beautifully painted pottery, of a type well known from other sites in Syria and Palestine. It is often connected with the name of Tell Halaf.

In the next level (III), *ca.* 3500-2100, the pottery has again changed character. This was the period of the Early Bronze Age, from which historical docu-

ments are existing. Here is pottery of types connected with al-Ubaid and Jamdet Nasr. Influence from Mesopotamia can be seen clearly in this period. This is no wonder, as there was direct contact. King Sargon I of Agade and his successor Naram-Sin marched with their armies toward the W and reached the coast of the Mediterranean in the twenty-fourth century. Trade contacts had been established before this time, and they were developed further after the conquest of Sargon. Pottery, poorer in quality than previously, shows that a cultural downfall followed the fall of the Dynasty of Agade. This was the time of the ethnic movements in many parts of the Near East. The Amorites were streaming northward and established themselves in Syria and N Mesopotamia. They also reached Ugarit, probably coming along the coast.

Level II in Ras Shamra comprises the centuries 2100-1500, the Middle Bronze Age, one of the most turbulent periods in the history of the Near East. The excavations show that Ugarit already at this time had grown to a city of importance. The temples which have been unearthed seem to go back to this period, and there is no doubt that it was a city with a lively commerce. The royal seal, used by the Ugaritic kings, seems to be from this time. Several stylistic features point to the nineteenth or eighteenth century. The inscription "Yaqarum, Son of Niqmad, King of Ugarit" may indicate that this king and his father had been brought into their dominating position by the Amorite migration wave, which flowed into N Mesopotamia and Syria in the beginning of the second millennium B.C. It was in this time that the Hittites were building up their state too, and Hurrians (Horites) and Mitanni caused disturbances. Indo-European tribes came plundering along the coast of the Mediterranean. Also the Egyptians were active, and there are proofs that they played a role in Ugarit. Pharaoh Sen-Usert I (ca. 1971-1928) sent presents with his ambassadors, and a statuette of Princess Khnumit, who later married Sen-Usert II (nineteenth century). It is not unlikely that the princess was of Syrian origin. From about the same time is the stele of Sen-Usert-Ankh, an Egyptian representative at the court of the king of Ugarit. But this situation did not last long. The Hyksos overran Egypt, and also Ugarit was shaken, probably by Hurrites, but it soon recovered. Its ancient relations with Crete were developed. Trade was increased, new cultural influences absorbed, and Ugarit prospered. New houses were built, often in Cretan style, and a new rampart and wall were erected. After the fall of the Hyksos, Thut-mose I and III tried to re-establish Egyptian domination over Syria. Archaeologically this has left its traces in Ugaritic level I (ca. 1500-1100), Late Bronze Age and Iron I. Thut-mose III (1490-1435) stationed an Egyptian garrison in Ugarit in order to keep the area under control. The Egyptians first had trouble with the Mitanni, but from the time of Thut-mose IV there came a change in this. From 1440 to 1380 an Egyptian-Mitanni alliance existed. After that time the Hittites soon took the place of the Mitanni. King Suppiluliumas (1375-1335) conquered Mitanni and dominated N Syria. King Niqmad II of Ugarit,

whose city-state had risen to great wealth at this time, could only nominally accept the rule of Pharaoh Amen-hotep IV; actually he sided with the Hittites. So did also his successors, Niqmepa and Ammistamru II. Letters written to the Pharaoh, found in TELL EL-AMARNA, witness to this double-dealing.

In the fourteenth century Ugarit was shocked by a catastrophe, an earthquake, which devastated the city and the port. They were rebuilt, but never attained their former splendor. The Egyptians tried to resume their domination, especially after the battle at Kadesh, where Pharaoh Ramses II (1290-1224) fought against the Hittites. In 1276 the two combatants made a treaty, and the relatively peaceful conditions which followed gave Ugarit a new opportunity to develop its trade. The Mycenaean influence was great in this time, so extensive that Ugarit tended in the direction of becoming a Mycenaean colony. But in the twelfth century Ugarit came to its end. Along the coast from the N came new invaders, the so-called Sea People. On their way toward the S they burned and destroyed Ugarit, which was never rebuilt. The harbor was used by Greek sailors in the sixth century B.C.; they called it Leukos Limen.

4. **Texts.** Already in the first season the excavators of Ras Shamra happened to strike the library in the house of the chief priest. Most of the texts were of a mythological character, and they have yielded a wealth of new information on the religion of Syria and CANAAN in the first half of the second millennium. The historical texts which were found later in the royal palace have been mentioned above. The tablets containing the mythological texts can be arranged in groups according to their contents. In the case of the long Baal-Anath text there is some discussion among scholars about the arrangement of the tablets. An additional difficulty is also that different scholars use variant designations of the tablets.

The liveliest picture of the Ugaritic gods and their life is given in the Baal-Anath text cycle. Here we meet El (or Il),* the leading god of the Ugaritic pantheon. He is represented as king of the gods. He is old and wise, the "Father of Years" (though *ab.šnm* may as well mean "Father of Shunem"). Several times in the texts he is characterized as *tr*, "Bull," a well-known symbol of masculine fertility. His procreative power was indicated also in the title *ab*, "Father." He was considered to be the father of the other gods, with the exception of Baal, who was called Dagon's son. El was the leader of the assembly of the gods, and the other gods needed his permission to start new enterprises. To him came Prince Sea, who asked permission to build a palace. Prince Sea also asked another favor in the assembly of the gods—namely, that Baal, Dagon's son, should be delivered into his hands. In this case we meet another side of El. He had grown old and anxious and was on the verge of yielding, together with the other gods, who were no better. This made Baal furious. Baal was the real hero of this cycle, the active, fighting god. One large temple in Ugarit was dedicated to him, another one to his father, Dagon. Baal was a rain, storm, and fertility god, "Lord of the Plowed Furrows." He was also seen as a bull, living in the good and beautiful fields, where he met the goddess

Anath, in the figure of a cow. Baal was identified with Hadad, the W Semitic storm and rain god. The designation Hadad is used of him several times in the text. Fig. UGA 10.

Baal was a hard fighter. Therefore he wanted to meet Prince Sea in an open fight. He got two magic clubs from the craftsman-god Kothar-wa-Khasis, and with the help of these he destroyed Prince Sea. This victory was claimed also by the goddess Anath, as is the case also with Baal's victory over Lotan, the

From Schaeffer, *The Cuneiform Texts of Ras Shamra-Ugarit* (The British Academy, Schweich Lectures, 1937)

10. El seated on a throne accepting an offering from the King of Ugarit; from Ras Shamra (fourteenth century B.C.)

“crooked serpent” (cf. Ps. 74:12-14). Baal and Anath may have been regarded as a unit in their capacity as fighters. We can see this also in the standing struggle with Mot, the god of the dry half of the year.

Prince Sea, who was defeated, did not get his palace built. Instead, Baal let Kothar-wa-Khasis build a palace for him on the mountain of the gods, Sapan, the “Mountain in the North.” Through the help of the goddesses Anath and Asherah he was able to obtain the permission of El, and the palace (and temple) was erected. Then it was solemnly dedicated through a great banquet for the gods, with great sacrifices. The rites indicated in the text point in the direction of a New Year festival, of which Baal was considered founder.

But Baal was not always victorious, in spite of his fighting capacity. In a certain period he was unable to fight Mot, his ancient opponent. He sent his messengers to Mot and claimed the domination, but his time was up and he was no longer able to act. Mot knew that his time had come, that victory would be his without battle. Baal had to go into the earth, taking with him the clouds, the wind, the rains. A dry

period was coming over the earth while Baal was away. As soon as El and Anath heard of the disappearance of Baal, they mourned and sacrificed. Their mourning is described in a way which makes the text look like a ritual manual.

The throne of Baal was taken in possession by one of Asherah's sons, Athtar, who acted as a substitute king. But Anath, Baal's consort and cofighter, did not give in. She attacked Mot: “She seizes the god-son Mot, with a sword she splits him, in a sieve she scatters him, with millstones she grinds him, so that the birds may eat his remains.” Mot is here treated like grain, and this fact may give a clue to the understanding of the character of this god. He may have represented the dry season with its drought but also with its ripening fruits and grain. Likewise, Baal may have represented the rainy season. In any case, after a while he returned to the earth with his rain and fertility. He drove away the substitute king, Athtar, and fought a terrible fight with Mot, whose turn it was now to go into the earth. Baal resumed his kingship and entered his throne in the palace on Mount Sapan. He was saluted with the cult cry: “Our king is Aliyan Baal, our judge, and none is above him!” The term “Aliyan” was used to denote Baal as the strong one, the one who prevailed. The cult cry clearly pointed out Baal as the dominating god; the words are without any reservations. This raises the question of his relationship to El. To this question different answers have been given. Some scholars see in the cult cry only an exalted expression of the power and the glory of the victorious young god, without any relation to the position of the leading god, El. Others hold that Baal challenged El and wanted to take over his position. They find analogies to this situation in other religions—e.g., Hurrian and ancient Greek. Every god had his worshippers, and changes in historical or ethnic circumstances may have changed the accent on the importance of the different gods. The texts indicate that while Baal was a young and active god who was popular in the Ugaritic cult, El was a more remote and shadowy figure. The Baal-Anath cycle has given much new information on the character of El and Baal, and also about Anath and Asherah.

The Legend of Aqhat,* Danel's son (previously called the Legend of Danel), is tolerably well preserved. After prayers to El and Baal, King Danel was blessed with a son, Aqhat. On a visit by Kothar-wa-Khasis, Aqhat was bestowed with a bow of unusual quality. The warlike and impetuous goddess Anath coveted this bow, but Aqhat was not willing to sell it, in spite of the offer of Anath to make him immortal. She had Yatpan transformed into an eagle, and he killed Aqhat. Aqhat's connection with fertility can be seen from the fact that “Baal failed for seven years,” “without dew, without showers.” Even the bow was lost at his death. Danel, the father of Aqhat, let Baal bring down the eagles and opened them, in order to find the remains of his son. He found them, buried them, punished the town where the murder had taken place, and had professional mourners to bewail the death of Aqhat for seven years. Pigat, Aqhat's sister, painted her face and went out with sword and dagger to avenge her brother. She met

11. The legend of Aqhat

Yatpan, who betrayed himself under the influence of wine. But here the text breaks off. It seems to be a myth which tells about the death and resurrection of Aqhat, but nothing more definitely can be said. Fig. UGA 11.

The Legend of King Keret is harder to interpret, and several attempts have been made. In the first interpretations a series of biblical names was found in this text, but they mainly rested on a number of mistranslations which have now been abandoned. The hero of the story is King Keret of Hubur, who moans over the loss of his palace, his wife, and his children. El, the supreme god, comes to his help and shows him what to do. Keret invades the country of Udum and marries Huriya, the daughter of the king there. Baal urges El to bless Keret, and the king gets new sons and daughters. After a time Keret falls seriously ill, and his son Elhu wonders how he could really be a son of El, as the king was supposed to be. The king's illness influences the fertility of the field, and Elhu makes an offering to Baal. El finds it necessary to act, and with the help of Sha'taqat he restores Keret to his health. King Keret's son Yassib, who covets the throne of his father, is too late with his demands and is cursed by his father.

Some scholars think there is a nucleus of historical facts in the Keret story; others consider it a pure cultic myth. Most usually it is seen as a mythic hero legend, but it has also been characterized as some kind of social myth.

Some of the minor texts are of great interest, but very often hard to interpret. In the myth of the Rephaim, El summons the "Shades" (Rephaim) to a sacrificial feast, and on this occasion he announces that the victorious Baal is to be anointed with oil

and become king and occupy his throne. The role of the Rephaim is not clear, but there are parallels with the REPHAIM of the OT. The tablet which tells about Hadad-Baal has also new features about the "Bull Baal," "Dagon's son." Baal fights against devouring beasts, but is caught in a swamp. For seven years he is kept there while "the watercourses are parched dry," until his friends find him and help him out.

Two other texts worth mentioning are Shahar and Shalim, and Nikkal and Kathirat. The first one opens with a solemn declaration that glory shall be given to the gracious gods. A hymn shall be recited to the lute, in praise of the milk flowing from the breasts of the goddesses Athirat and Rahmay, who are in search of divine children to suckle. Seven times the sacrificers cook a kid in milk over the fire. Then it is told how the supreme god El comes to the shore of the great sea. Two women also arrive, and it is stated that "the organ of El grows long as the sea." Words are exchanged between El and the women. Then he kisses and embraces them. They bear two children—Shahar, "Dawn," and Shalim, "Dusk." The two sons are born in one day and suck the breasts of the goddesses. The words of the two women seem to indicate that they tease the aging god with his growing impotence, and the text will show how El is rejuvenated. It is a text connected with a feast with a sacred marriage and certain sacrifices, possibly of first fruits in early summer.

Nikkal and Kathirat is a song of Nikkal-and-Eb, the moon goddess and goddess of fruit, daughter of Hirhibi, king of summer, and of her marriage with Yarih, the West Semitic moon-god. The Kathirat, "shining daughters of the crescent moon," are asked to give their support when a son is going to be born. Yarih asks Hirhibi to give him his daughter Nikkal, pieces of silver, ten thousand pieces of gold, brilliant stones of sapphire, vineyards and orchards. Hirhibi wants to give him Pidriya, the daughter of Baal, but Yarih wants Nikkal. "Thereupon Yarih brings the betrothal gift for Nikkal; her sire sets the standard of the scales, her mother the tray(s) of the scales, her brethren arrange the plummets(?), her sisters (attend) to the weights of the scales" (Driver's translation; see WEIGHTS AND MEASURES § A). So Nikkal-and-Eb became "the light of Yarih." The poem ends in an appeal to "let her dowry and her wedding gifts be weighed out unto her with shouts of applause." In some way the poem reflects ancient marriage customs as they were in use in the Middle East (see MARRIAGE § 2c). It may possibly have been used at weddings, ensuring fertility for the bride and the bridegroom through the story of the divine marriage.

On the whole, the minor texts present additional features of the picture of the Ugaritic pantheon painted in the long texts. Through all these texts new light has been thrown on gods mentioned in the OT, such as El (see GOD, OT); BAAL (4); ANATH; and ASHERAH.

The historical texts found in the royal palace have been mentioned above. They consist of juridical and economical documents and a large collection of letters which give valuable information about the last centuries of Ugarit's history. They have yielded exact dates and details about ancient Ugarit and

have confirmed the dating previously given to the mythical and cultic texts.

Bibliography. A bibliography of the enormous literature in the Ugaritic field can only be selective and will even then have to leave out works well worth reading. Nearly all the mythological texts were originally published by C. Viroilleaud in the French journal *Syria* from 1929 on.

Decipherment: H. Bauer, *Entzifferung der Keilschrifttafeln von Ras Shamra* (1930).

A. S. KAPELRUD

UKNAZ ūk'nāz [וקנז]. KJV marginal note at I Chr. 4:15. The LXX and the Vulg. omit the ך. Read with the KJV text "even KENAZ," though possibly a preceding name has dropped.

ULAI ū'lī [אולִי] (Dan. 8:2, 16). An artificial canal near SUSA, where Daniel received the vision of the ram and the he-goat. It is the Akkadian *U-la-a*, whose waters Ashurbanipal claims to have reddened with the blood of his enemies on his invasion of Elam. By the classical writers it was known as the Eulaeus. Near ancient Susa were three rivers—to the SW the Kerkha (ancient Choaspes), to the E the Abdizful (ancient Coprates), which flowed into the Karun (ancient Pasitigris). The Ulai was a wide artificial canal which connected the Kerkha and the Abdizful, and passed close by Susa on the N or the NE.

The word translated "river" in Dan. 8:2-3, 6 (אֲוִיָּבַל in vs. 2, but אֲוִיָּבַל and with the definite article in vs. 3, 6), is variously interpreted by scholars. Some derive it from a Semitic root "to bring, carry," yielding a noun "conduit" or "artificial canal." Others read the word as אֲבֹל (Aramaic אֲבֹל; cf. Akkadian *abullu*), "gate," and this reading is supported by LXX. In the latter case the reference in Daniel would be to the Ulai gate, probably so named because it faced the Ulai canal.

Bibliography. L. Waterman, "A Note on Daniel 8:2," *JBL*, LXVI (1947), 319-20; H. L. Ginsberg, *Studies in Daniel* (1948), pp. 57, 84. R. F. SCHNELL

ULAM ū'lām [אולָם, first, leader]. 1. Eponym of a clan or family of Manasseh (I Chr. 7:16-17).

2. The first son of Eshek; head of a Benjaminitic family famous as archers (I Chr. 8:39-40). Benjaminitic archers are mentioned in II Chr. 14:8.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 231. T. M. MAUGH

ULCER עֵפֶל [עפֶל] (Deut. 28:27; I Sam. 5:6-12; 6:4-5); KJV EMEROD. A lesion of the skin or mucous

membranes. עֵפֶל was generally used to describe inguinal buboes or "plague boils," rather than staphylococcal swellings or hemorrhoids. R. K. HARRISON

ULLA ū'l'ā [עלִיא] (I Chr. 7:39). A family of the tribe of Asher. Various scholars suggest the name be read "Shua" (שׁוּעָא; cf. vs. 32), "Shual" (שׁוּעֵל; cf. vs. 36), "Amal" (עֵמֶל; cf. vs. 35), or "Ara" (אַרָא; cf. vs. 38).

Bibliography. W. Rudolf, *Chronikbücher*, HAT (1955), p. 74. T. M. MAUGH

UMMAH ūm'ō [עמֶה] (Josh. 19:30). A town in the territory allotted to the tribe of Asher. Ummah is generally regarded as an error for ACCO, which is conspicuously absent from the list (cf. Judg. 1:31). This reading is supported by several Greek MSS.

G. W. VAN BEEK

UMPIRE מוֹכִיחַ [מוֹכִיחַ, *Hiph'il participle from יָכַח, commonly Hiph'il, to decide, adjudge*] (Job 9:33); KJV DAYS-MAN. A mediator suggested for resolving the conflicts of God and man.

Bibliography. S. Terrien, *Exegesis of Job, IB*, III (1954), 985. B. D. NAPIER

UNCIAL ūn'shāl. The form of letters—large and rounded—characteristic of most Greek and Latin MSS of the Bible between the fourth and ninth centuries, after which the MINUSCULE style became more common. Both terms are therefore applied to MSS written in the respective styles. The use of the word "uncial" has been traced to Jerome, who speaks disapprovingly of many books in his day as written in "*uncialibus . . . litteris*." His meaning has been much disputed; but since the Latin word *uncia* means a "twelfth part," and therefore an inch or an ounce, it seems likely that he is saying derisively that books were being written with letters an inch wide.

For descriptions of the great uncial MSS, see TEXT, NT, § B3. J. KNOX

UNCIRCUMCISED, UNCIRCUMCISION. See CIRCUMCISION.

UNCLEAN, UNCLEANNES. See CLEAN AND UNCLEAN.

UNDERSSETTERS [כַּתְּמֵי]. KJV obsolete term (I Kings 7:30, 34; RSV SUPPORTS) for the supports at the four corners of the bronze stands in the temple. See LAVER.

UNDERSTAND, UNDERSTANDING. Words which belong to the distinctive vocabulary of the wisdom literature (although they also appear occasionally in the Prophets), and which translate a number of Hebrew and Greek words that mean, in varying degrees, either "to grasp the full meaning of something said or done" or—in the context of action—"to have the knowledge and skill requisite for accomplishing a desired end." In the latter sense "understanding" is pre-eminently characteristic of the activity of God (Job 26:12; Prov. 3:19), and all understanding ultimately has its source in him (Prov. 2:6; II Tim. 2:7).

For "understanding" in its simplest and most superficial sense, that of being able to comprehend words spoken in a foreign language, the Hebrew word in the OT is always שָׁמַע (lit., "to hear"; Gen. 11:7; Ezek. 3:6; cf. the use of ἀκούω in I Cor. 14:2). Since the dividing line between KNOWLEDGE and "understanding" is a fairly fluid one, the English versions must sometimes translate "understand," where the Hebrew is content to say merely "know" (יָדָע; II Sam. 3:37). In the great majority of passages in the English OT, however, the words "understand" and "understanding" translate the various stems and cognates of the Hebrew roots בִּין and שָׁמַע. The root בִּין means primarily "to discern with the senses," "to perceive distinctions," then "to give close attention to," and finally—particularly in the derived stems—"to gain comprehension" or "give" it to others. The root שָׁמַע seems likewise originally to have expressed the idea of "paying close attention to," although in OT usage it has come to mean specifically "to have insight" or "to be prudent"; consequently it and its derivatives are often translated by some form of the word "wise" or "WISDOM" (Ps. 2:10; Prov. 23:9), as well as by "understand" and "understanding" (Ps. 111:10; Isa. 41:20). Both these basic words imply an active and habitual effort at comprehension rather than a mere passive state of possessing knowledge, and so they have connotations which are important for the moral as well as the intellectual life.

It is significant for OT anthropology that the noun "understanding," besides being used to translate several words that have a specific connection with man's intellectual life, must also be used in some instances in the wisdom literature to translate the Hebrew word for "heart" (לֵב or לִבָּי), which is often used in a figurative sense to denote the deepest recesses of the human personality where man's being centers and where the issues of his life are determined. (It is therefore sometimes translated in the English versions by "mind"; see HEART; MIND.) Typical passages where the sense of "understanding" seems the most appropriate are Job 34:10; Prov. 6:32 KJV; 9:16 KJV, in all of which the translators of the LXX also render the Hebrew word "heart" by a Greek word denoting "understanding" or the absence of it. This use, rather than indicating that the heart was regarded as the special "seat" of the intelligence, is perhaps best understood in the light of such English idiomatic expressions as "a deep person," "a shallow person," "a person lacking in depth," which are closely parallel in meaning to the Hebrew phrases "a man of heart" (Job 34:10) or "a man) deficient in heart" (Prov. 6:32).

In the NT, the English verb "understand" is used to translate a large variety of words with varying shades of meaning: συνίημι, meaning specifically "to understand" (Matt. 16:12); νοέω, "to think or consider" and so "to arrive at understanding" (Matt. 15:17 KJV); γινώσκω, properly "to know, to be cognizant of" (John 8:27); ἐπιγινώσκω, "to recognize" (I Cor. 13:12; RSV-KJV "know"); εἶδον, "to see or perceive" (i.e., with the mind; I Cor. 13:2). The following verbs are also each translated at least once in the English NT by "understand": ἀκούω, "to hear" (I Cor. 14:2); γνωρίζω, "(to make) to

know" (I Cor. 12:3); ἐπίσταμαι, "to know, or know about" (Mark 14:68); and φρονέω (I Cor. 13:11 KJV; the RSV more accurately translates "to think"). The noun "understanding" in the NT translates either σύνεσις, a Greek word of precisely equivalent meaning (Col. 2:2); διάνοια, "thought," "thinking" (I John 5:20); καρδία ("heart"; Eph. 4:18); or νοῦς, literally "MIND" (Phil. 4:7).

R. C. DENTAN

UNFORGIVABLE SIN. A concept resting, first of all, on Jesus' words in Mark 3:29-30: "Whoever blasphemes against the Holy Spirit never has forgiveness, but is guilty of an eternal sin"—for they had said, 'He has an unclean spirit.'" This passage which refers to the scribes is commonly connected with Paul's word in II Thess. 1:8-9 about those who do not obey the gospel and who will suffer the punishment of eternal destruction. The writer of the Letter to the Hebrews declares that the apostate ones who crucify the Son of God and hold him up to contempt cannot be restored (6:4-6); he also says that deliberate sin after baptism cannot be forgiven and that rejection of the Son and the blood of the covenant and the Spirit of grace can merit only fiery judgment (10:26-31). The author of I John encourages prayer for a sinning brother, but he hesitates to encourage prayer for a brother whose sin is mortal (5:14-17).

Thus the unforgivable sin is not an "erratic boulder" appearing in a single passage of the Bible. In general, it fits into the threat of stern judgment, which is a persistent feature of the biblical background (Num. 15:30-31; Matt. 11:21-24; Mark 14:21; Luke 10:13-15; Rev. 14:9-11).

On the other hand, no emphasis on the unforgivable sin should be allowed to obscure or limit God's purpose to forgive, which is a constant note in the gospel message. In the Lord's Prayer, Christians are to pray for forgiveness. Jesus asked for forgiveness even for those who crucified him. Peter was restored after his threefold denial.

Negatively, the unforgivable sin does not describe a single act that merits eternal judgment. Certainly it does not refer to an inadvertent word or deed which might be the result of thoughtlessness. And it does not concern the unevangelized heathen who have never heard the Word.

The unforgivable sin applies to those who, after knowledge, deliberately and persistently reject Christ and refuse to recognize his work as the work of God. In its extreme and radical character the term points up the life-and-death claims of Jesus in his words and work as a Revealer of God. To reject him after knowledge is to shut oneself from the gospel truth and to condemn oneself to utter loss. As such, these harsh prophecies serve as warnings to men not to reject so great a salvation. Loss and destruction are the only alternative to the grace of God in Christ.

For men to deny what the Spirit attests is to make God a liar (I John 5:10). It is to pervert the whole spiritual order and to disqualify oneself from the kingdom of righteousness. In this perversion men lose the capacity to accept God's free offer of grace.

UNGODLY. See **GODLY.**

UNICORN. KJV translation of ראם, רים, and רמים (RSV WILD OX). The unicorn, a fabulous beast, was said to have a single horn on its forehead. The KJV derived "unicorn" from the LXX μονόκερωσ, "single-horned" (ἄδρῳι, "strong ones," in Isa. 34:7), and the Vulg. *unicornis* and *rhinoceros*. The LXX translation may have been based on accounts traceable to remarks by Ctesias (fourth century B.C.) on the Indian rhinoceros, a beast which Ctesias had never seen. The legend of the unicorn grew to vast proportions in the Middle Ages.

Bibliography. W. Ley, *The Lungfish, the Dodo, and the Unicorn* (1948), pp. 19-34, gives a sprightly history of the unicorn legend. See also: E. Schrader, *Keilschriften und der AT* (2nd ed., 1883), p. 256; O. Shepard, *The Lore of the Unicorn* (1930).

UNIVERSE. The translation of κόσμος (elsewhere **WORLD**) in Gal. 4:3; Col. 2:8, 20; and of τὰ πάντα (lit., "all things") in Heb. 1:3.

UNKNOWN GOD, ALTAR TO AN. Paul's sermon on the Areopagus (Acts 17:22-31) takes for its text an altar inscription "To an unknown god" (Ἄγνωστω Θεῷ). No other evidence for the existence of such an inscription has ever been found, and most classical scholars hold that the use of this exact wording on a Greek altar is inconceivable. In the late fourth century Jerome had already affirmed that it actually ran: "To gods of Asia and Europe and Africa, gods unknown and alien." Accordingly, most modern commentators, whether they regard the speech itself as Pauline or not, follow E. Norden in holding that the dedication was in the plural: "To unknown gods"; and that it has been transposed into the singular to make it conform to the monotheistic doctrine of the author. For inscriptions worded in this way there is plenty of evidence; according to Pausanias (second century A.D.), there were "altars of unknown gods and of heroes" along the way from the harbor of Phalerum to Athens, and one such inscription has actually been found. There are also references in literature to sacrifices made to "a nameless god," and "to the appropriate god."

In all these instances, the significance seems to be the same: men are honoring a god whose name is unknown to them, for benefits received at his hands. The phrase cannot be taken as reflecting the notion of a god unknowable. Of course, the maker of the sermon was not concerned to expound the original intent of the inscription, but only to adapt the words to his own exposition of the revelation of God in Christ.

The Unknown God," in F. J. Foakes-Jackson and K. Lake, eds., *The Beginnings of Christianity*, pt. 1, vol. V (1933), pp. 240-46; B. Gärtner, *The Areopagus Speech and Natural Revelation* (trans. C. H. King; 1955), ch. 9: "The altar inscription."

F. W. BEARE

UNLEAVENED BREAD [מַצֵּה, from מצה, drained out, unfermented; LXX ἄζυμος]. Bread or cakes baked without yeast; mandatory for certain cultic occasions and uses but also utilized as ordinary food (Gen. 19:3; Judg. 6:19; I Sam. 28:24).

Unleavened bread is most intimately associated with the Feast of Unleavened Bread (see **PASSOVER AND FEAST OF UNLEAVENED BREAD**), for the duration of which only unleavened bread was permitted. It was eaten with bitter herbs (Exod. 12:8; Num. 9:11) and commemorated the haste in which Israel left Egypt. All the *matsôth* prepared for this feast were to be consumed within the seven-day period; the Samaritan Passover specified a quota for each of the seven days.

All baked cereal offerings brought to the altar were also always unleavened bread (Lev. 2:5 ff, etc.), and what remained of these offerings was to be eaten by the priests (Lev. 10:12).

Beginning with the offering of the sheaf at the beginning of the harvest (Lev. 23:11; Deut. 16:9), it was permissible to bake unleavened bread from the grain of the new crop (cf. Josh. 5:11); but until the Feast of Weeks (see **WEEKS, FEAST OF**), fifty days later, concluding the harvest, the use of the new crop for leavened baking was prohibited. This prohibition came to an end with the special cereal offering of two leavened loaves of bread at Weeks, consumed by the priests (Lev. 23:17).

The absence of leaven was a mark of separateness or holiness; leaven was kept from the holiness of God's altar, and, in times of states of special sanctity, from his people also. Just as the blood is drained (Lev. 1:15; נִמְצָה) from the sacrificial animal, so the life or power of leaven is kept separate from the bread offered to God.

J. C. RYLAARSDAM

UNNI ūn'ī [עִי, probably hypocoristic for (Yahu) has answered; cf. עִיָּה, ANAIAH] (I Chr. 15:18, 20). Alternately: UNNO —ō [עִי (Kethibh), עִי (Qere)] (Neh. 12:9); KJV UNNI. 1. A Levite; one of the musicians who accompanied the ark of the covenant when David had it brought up to Jerusalem (I Chr. 15:18-20).

2. A Levite of the postexilic period, contemporary of the high priest Jeshua (Neh. 12:9, where read "Unni" with the KJV).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 39, 185. On text and etymology in Neh. 12:9, see R. A. Bowman, *Exegesis of Nehemiah, IB, III* (1954), 786.

UNPARDONABLE SIN. See **UNFORGIVABLE SIN.**

UNTIMELY BIRTH [נִמְלָה; LXX ἔκτρομα] (Job 3:16; Ps. 58:8; Eccl. 6:3; I Cor. 15:8). In antiquity a birth which occurred before the full gestation period of approximately forty weeks had been completed was regarded as "fallen" or "miscarried," regardless of whether the fetus was nonviable or capable of independent existence. Modern medicine has made a distinction between abortion, in which the uterus is evacuated prior to the fourth month of pregnancy; miscarriage, where the uterus discharges the fetus during the fourth, fifth, or sixth month of gestation; and premature delivery, in which a fetus capable

of independent life is born after the beginning of the seventh month but prior to full term. Since the OT untimely births "never see the light," it can be assumed that the references are to abortion or miscarriage. Num. 12:12 may indicate a missed abortion, in which a dead embryo is retained for a prolonged period in the uterus before being expelled. The rendering in Isa. 14:19 is an attempt to clarify a textual obscurity, the Hebrew being "a loathed branch."

Paul's use of ἔκτρομα (I Cor. 15:8) suggests the unusual nature of his entrance into Christianity. He was a miscarriage of Judaism, precipitated suddenly from an alien, moribund mother and transformed from persecutor into apostle. The other apostles experienced a normal spiritual birth at a time when Paul could not be called an apostle any more than a miscarriage or an abortion could be regarded as a living child. Paul was keenly sensitive to the errors of earlier days, and consequently was overwhelmed by his dramatic conversion through divine grace.

R. K. HARRISON

UNWRITTEN SAYINGS. See AGRAPHA.

UPHARSIN ū fär'sîn. See MENE, MENE, TEKEL, AND PARSIN.

UPHAZ ū'fāz [אֶפְזָא]. A place mentioned as a source of gold (Jer. 10:9; Dan. 10:5). Its location is unknown. The suggestion has been advanced that "Uphaz" is an error for "OPHIR," which is also noted for its gold, and this suggestion is supported by the Targ. and the Syr. Hexapla, which read "Ophir" in Jer. 10:9.

G. W. VAN BEEK

UPPER BETH-HORON. See BETH-HORON.

UPPER CHAMBER. See CHAMBER.

UPPER GATE שַׁעַר בֵּית יְהוֹה הָעֶלְיוֹן, the upper gate of the house of Yahweh (II Kings 15:35); KJV HIGHER GATE. A gate built by Uzziah for the temple of Jerusalem. The exact location is unknown. See TEMPLE (JERUSALEM).

G. A. BARROIS

UPPER ROOM [ἀνάγαιον, ὑπερφῶν]. The place chosen by Jesus for his last meal with his disciples (Mark 14:14-15; Luke 22:11-12). Here it is called ἀνάγαιον. This commonly is taken to be the same room, ὑπερφῶν, in which the disciples gathered after the Ascension (Acts 1:13) and which now they were using as a common living room. This would be a room in the upper story of a large house or a room on the roof, as the room which the wealthy woman made for Elisha (II Kings 4:10), probably like the upper chamber (עלייה) of the widow's house where Elijah lodged (I Kings 17:19). In the home of the mukhtar or the principal house in an Arab village today there is likely to be an upper room, *medhafeh*, for the entertainment of guests.

According to Epiphanius, Hadrian found the building of which the Upper Room was a part still standing when he visited Jerusalem in A.D. 135. The building was identified by Cyril of Jerusalem, the Bordeaux Pilgrim, Sylvia, and others. The room,

called the Cenacle, is now on the first floor of the mosque En Neby Daud, remodeled from a fourteenth century church, S of the modern Zion gate. A Christian church adjoining the Cenacle existed as early as the fourth century.

Eglon was sitting in a roof chamber when he was slain by Ehud (Judg. 3:20). Josiah in his reform pulled down the altars on the roof of the upper chamber of Ahaz (II Kings 23:12). Daniel prayed in his upper chamber with his window open toward Jerusalem (Dan. 6:10). See ARCHITECTURE; CHAMBER; HOUSE; ROOF.

O. R. SELLERS

UPRIGHT. See RIGHTEOUSNESS.

UR ūr [אור, flame or light]. The father of Eliphaz, one of the company of the Mighty Men of David known as the "Thirty" (I Chr. 11:35). However, there are indications that the name has suffered corruption, since in the parallel catalogue the father of Eliphelet (=Eliphaz) is AHASBAI (II Sam. 23:34).

E. R. DALGLISH

UR (CITY) [אור; Assyrian-Babylonian *Uri*, from Sumer. *Urim*]. An ancient city on the Euphrates in Lower Mesopotamia (present-day Iraq), mentioned in the Bible as Ur of the Chaldees, home of Abraham.

The ruins of Ur, known as al-Muqayyer, were first investigated by the English archaeologists Loftus and Taylor in 1854; later explorations were made by Campbell Thompson in 1918 and Hall in 1918-19. Systematic excavations on the site were undertaken in 1922 by a joint expedition of the British Museum and the University of Pennsylvania, University Museum, under the direction of Leonard Woolley. The expedition, after completing twelve highly successful campaigns, ended its work on the site in 1934.

The site of Ur is roughly oval in shape, with the long axis of the oval pointing N-S. At the N end of the oval and at the middle of its W side are the remains of harbors for the river traffic, called by the excavators the North Harbor and the West Harbor respectively. An imaginary line drawn NW-SE through the mound would soon reach and pass along the main axis of the rectangular walled sacred area of the city, which occupies the middle third of the N half of the site. This area was very fully explored by the expedition. Continuing beyond the sacred area, the line drawn would pass in front of a large excavated area of private dwellings of the Isin-Larsa Period (twentieth-nineteenth centuries). A similar area of private houses was excavated between the S corner of the sacred area and the West Harbor. Immediately to the S of the North Harbor a large Neo-Babylonian palace was excavated. S of this palace a Neo-Babylonian temple, the Harbor Temple, was cleared. Two smaller temples on the E and SE edges of the site were likewise cleared.

The sacred area of Ur is, as mentioned, roughly rectangular. It contains in its NW part the main temple of the city, E-temen-ni-guru, dedicated to the moon-god Nanna (Akkadian Sin). Entrance to the temple was through a great towered gate in the NE side which led into a large rectangular forecourt surrounded by rooms of various kinds. In the NW corner of this court the excavators found a group of

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

12. Ziggurat at Ur. Notice its size in comparison with the person at its foot.

Courtesy of the University Museum of the University of Pennsylvania

13. Isometric projection of the ziggurat of Ur-Nammu restored

throne daises, presumably for the use of various gods when they met in assembly with Nanna. Across the court from the entrance, stairs led up to a larger rectangular inner court on a higher level. This court was also surrounded by rooms serving ritual and practical purposes such as temple kitchen, etc. In the middle of this court stood the temple tower, or ziggurat (Figs. UR 12-13).^{*} It was at the time of Ur III (*ca.* twenty-second and twenty-first centuries) a stepped pyramid with three massive steps. The core was constructed of mud bricks, but the outer surfaces were encased in a skin of burned bricks. A long, monumental free staircase led up to the first stage at the middle of its E façade, while two flanking staircases led up along the façade from the right and left corners to join the middle stairway in a gate room at the top. Further, smaller stairs led from here up to the second and on to the third stage, on top of which stood the temple of the moon-god itself. From the court in which stood the ziggurat a gate and stairway at the SE corner led down to a lower terrace. This gate, venerated as the place where the god rendered judgment, was in the Ur III period closed and converted to serve as a separate temple, the E-dublal-mah. To the left of this converted gate, in the corner between the smaller forecourt and the wall of the ziggurat terrace, the excavators found the main storehouse of the temple, known as the Ga-nun-mah. It consisted of huge, narrow, rectangular storerooms for wool, cloth, and other goods, and had in its center

a double cella, possibly for Nanna and his consort Ningal, possibly for deities of the storehouse. To the right of the Dublal-mah, adjoining the SE side of the ziggurat terrace, lay another, different structure, the Giparku. This large complex housed in its SE part a temple for Ningal, the divine consort of Nanna. Behind this, in the SW corner of the building, was an elaborate temple kitchen with fireplaces, work tables, well, etc.; and in the NW part of the complex were located the quarters of the *entu*-priestess, a girl of royal descent chosen as the human bride of the moon-god and officiating at the yearly ritual of the sacred marriage. To the SE of the Dublal-mah the excavators came upon the scant remains of the royal palace of Shulgi of the Third Dynasty of Ur, and SE of this the magnificent mausoleum of the kings of the Third Dynasty of Ur. The mausoleum was solidly built of baked bricks laid in bitumen. Its plan was that of a private house, but the recessed outer wall and rebated doorways, characteristic of temples, made it a suitable resting place for deified rulers. Below the floors of the rooms in the back of the building two brick stairs led down to corbeled underground tomb chambers. The doors of these chambers had been bricked up and the stair well filled in after the burial ceremony. The central and earliest part of the mausoleum was built with bricks of King Shulgi. On the SE and NW smaller, similar buildings, built with bricks of Amarsin, had been added; they had much the same plan as the central unit and likewise contained subterranean tomb chambers. The buildings and tombs had all been thoroughly plundered in antiquity. Fig. ASS 105.

The mausoleum of the kings of the Third Dynasty of Ur was the last tomb in a royal cemetery located in this area and dating back to the middle of Early Dynastic times (*ca.* 2600 B.C.). This cemetery, carefully and skilfully explored by the excavators, yielded a wealth of treasures and threw new and unexpected light on ancient Sumerian burial customs and beliefs. Most striking were the royal tombs of Early Dynastic III date.^{*} The findings left little doubt that the kings and queens of Ur were followed in death by their courtiers and personal attendants, who, dressed in their best, the soldiers with their spears, the musicians with costly harps, the grooms leading the royal ox cart, entered the grave chamber or the sloping ramp that led into the burial pit in order to follow their master into the world beyond. The peaceful sleeping positions of their bodies when found suggest that they had voluntarily let themselves be killed, possibly by drinking poison or by taking a strong sleeping draught before the burial pit was filled in over them. This custom—that the retinue of a ruler followed him in death—is now attested also in literary texts. The story of the death of Gilgamesh and his burial, told by an ancient Sumerian poet, relates that Gilgamesh' closest servants entered the grave with him. A variant interpretation of the findings at Ur, much in vogue in the years just after the discovery, assumed that the chief occupants of the royal graves were not actually kings and queens of Ur, but rather participants in a fertility rite who had to be killed after completion of the rite. This interpretation accords less well with the data, especially

after further finds have shown that several of the occupants of the tombs were directly designated as "king" and "queen" on seals found in the cemetery, and since the literary evidence mentioned above has shown that the findings accord with Sumerian custom. Figs. UR 14-18; GAM 6; WEA 9.

At the site of the royal cemetery and at other points of the mound deep soundings were made to

17. The gold lyre from the great death pit at Ur, Early Dynastic period

clarify the stratigraphy of the site. It was found that occupation at Ur went back beyond the Early Dynastic Period to the Proto-literate Period, the Warka Period, and the Al-Ubaid Period (*see SUMER*). The last-mentioned period is the one in which S Mesopotamia generally seems to have been first settled. In two of these soundings the excavator found, separating the early and later layers of the Ubaid Period, a heavy deposit of silt laid down by water. Since the Euphrates in antiquity flowed close by the site, such a layer can fairly easily be accounted for by changes in the course of the stream bed or local inundations. Similar layers datable to various archaeological periods have been found in other ancient settlements in Mesopotamia. In the case of the silt layer at Ur, however, the excavator saw it as evidence, not of a change in the river bed or a local inundation, but of a catastrophic flood covering all of S Mesopotamia in Ubaid times. He further assumed that memories of this event were handed down to take the form which we have in the Sumerian and Assyro-Babylonian flood stories, stories

18. Gold cup and lamp, from Ur royal tombs, Early Dynastic period

which would have spread by oral tradition to underlie the biblical story of Noah and the Flood. Few Mesopotamian archaeologists have accepted this interpretation.

In an area SW of the sacred area and in an area between it and the West Harbor sections of private houses of the Isin-Larsa (twentieth-nineteenth centuries) and Old-Babylonian periods (nineteenth-sixteenth centuries) were excavated. In the preliminary reports these were named private houses of Ur in the times of Abraham, a designation which begs the question whether Abraham and the biblical tradition about him may be considered historical and, if so, which date may be assumed for his *floruit*. The houses were generally two stories high. A central court surrounded by rooms, a staircase in the corner leading up to an upper story with rooms opening upon a balcony around the court supported on wooden pillars, were the basic features. The roofs seem to have been flat. The plan is remarkably similar to that of older Iraqi houses of today. The streets along which the houses lay were narrow, winding lanes opening now and again on irregularly shaped open spaces. Here and there among the houses small public shrines dedicated to minor deities were found.

URBANUS *úr bā'nəs* [Οὐρβανός; Lat. *Urbanus*, refined, elegant] (Rom. 16:9); KJV URBANE *úr'bān*. A Christian man greeted by Paul. He is referred to as a "fellow worker" (συνεργός) of Paul, together with Prisca and Aquila in vs. 3 and Timothy in vs. 21 of the same chapter; this puts him in exceptional company. F. W. GINGRICH

URI *uṣṣor'í* [אוריין, fiery; perhaps a contraction of אורייה, URIAḤ]. 1. A Judahite; the father of Bezalel, one of the builders of the tabernacle (Exod. 31:2; 35:30; etc.).

2. A gatekeeper in the restored temple (Ezra 10:24).

3. The father of Geber, the district officer in Gilead under Solomon (I Kings 4:19). J. M. WARD

URIAḤ *uṣṣō'f'ō* [אורייה, אורייה, Y is a light; cf. Hurrian *Ariya*, Akkad. *U-ri-ia-a*; Οὐρίου]; KJV alter-

nately URIJAH —jə; KJV NT URIAS —əs. 1. A Hittite; one of the Mighty Men in David's select order of the "Thirty," many of whom were foreigners (II Sam. 23:39; I Chr. 11:41). It is possible that his name originally was Ariya, which popular etymology transformed into Uriah. It is more probable either that he received the name Uriah from a sojourning father, or that he himself took the name Uriah, already current in Israel, when he became a SOJOURNER in Israel and joined in the worship of Yahweh. His wife was Bathsheba, perhaps a daughter of that Eliam who like Uriah was a member of the Thirty (II Sam. 23:34), in which case she was a granddaughter of Ahithophel. King David summoned Uriah from the battlefield at the siege of Rabbah, the Ammonite capital, in order to make it appear that Uriah was the father of the child that would be born to Bathsheba. However, Uriah conducted himself according to the campaigning army's discipline for psychic integrity and strength in combat. He observed the taboo which forbade sexual intercourse to warriors consecrated for battle (cf. I Sam. 21:4; see BAN). His words express loyalty to the ark, to his commander Joab, and to David. Even when David made him drunk, he maintained his identity with the army in the field, sleeping with the royal guard. Uriah carried to Joab the letter in which David told Joab to place Uriah in the front of a sortie, and then to retreat from him so that he would be slain. When Bathsheba heard that he was dead, she lamented for her husband; afterward David took Uriah's wife to be his wife (II Sam. 11). Nathan declared to David that his action was a sin against Yahweh, and David agreed with the prophetic evaluation (II Sam. 12:1-15; cf. the comment of a scribe in I Kings 15:5bβ). In a genealogy of Jesus Christ, "David was the father of Solomon by the wife of Uriah" (Matt. 1:6).

2. A priest; one of two reliable men, evidently prominent and trusted citizens, whom Isaiah got as witnesses to a prophetic oracle written on a tablet (Isa. 8:2). Either their action added to the oracle the weight of legal formality; or, especially when it was fulfilled, they could support the evidence showing that Isaiah had indeed delivered a sign from God (cf. Deut. 18:22).

3. Chief priest in the reign of Ahaz; almost certainly the same as 2 above. While meeting Tiglath-pileser king of Assyria at Damascus, Ahaz sent him detailed instructions to build a new altar for the temple exactly like the altar he saw at Damascus. It was ready when Ahaz returned, and the king gave the high priest directions for its use (II Kings 16:10-16). Perhaps Uriah subjected himself to the king's command when he should have protested (which might account for the omission of his name in I Chr. 6:4-15). Isaiah's evident estimation of the integrity of this priest (see 2 above) suggests the possibility that the motive behind the addition of this altar to the temple was not wholly wrong; the reason may have been, not political (if it was an Assyrian altar), but aesthetic enrichment of the ritual.

4. A prophet, son of Shemaiah of Kiriath-jearim. His story is told in an appendix added to show the grave danger facing Jeremiah after his temple

sermon (Jer. 26:20-23). Uriah was remembered as having been killed for declaring a message similar to Jeremiah's temple sermon. When King Jehoiakim sought to kill him, he fled in fear to Egypt. Elnathan the son of Achbor (cf. 36:12, 25) headed a mission that brought him back, and Jehoiakim slew him and cast him into the common graveyard. The only other OT record of an execution of a prophet is II Chr. 24:20-22.

5. The father of Meremoth; a descendant of Hakkoz (Ezra 8:33; Neh. 3:4, 21).

6. One of the men, named without title or paternity and thus probably laymen, who stood with Ezra at the public reading of the law (Neh. 8:4).

Bibliography. K. Tallqvist, *Assyrian Personal Names* (1914), p. 243; M. Noth, *Die israelitischen Personennamen* (1928), pp. 18, 168. T. M. MAUGH

URIEL עֹרִיֵּאל [אוריאל, El is light]. 1. The chief of the sons of Kohath in the time of David. He assisted in the bringing up of the ark of the covenant from the house of Obed-edom to Jerusalem (I Chr. 6:24—H 6:9; 15:5, 11).

2. A resident of Gibeah whose daughter Maacah was the mother of Abijah, king of Judah, according to II Chr. 13:2. In this verse the MT represents the name of the daughter of Uriel as Micaiah (so RSV), but this is certainly erroneous, since Maacah appears in the LXX and Syr. as well as in the seven other instances in the MT where she is mentioned. However, Maacah is represented to be the daughter of Absalom (II Chr. 11:20-21; Abishalom in I Kings 15:2, 10). The explanation most generally given to account for this difficulty proposes that Maacah was the granddaughter of Absalom and had for her parents Uriel and Tamar, daughter of Absalom (II Sam. 14:27 LXX; Jos. Antiq. VII.viii.5; VII.x.3; VIII.x.1). Maacah appears to have maintained her position in the Judean court as queen mother (גבירה) until she was deposed by her (grand)son Asa (I Kings 15:10, 13; II Chr. 15:16). E. R. DALGLISH

URIEL (ANGEL) [Οὐριήλ=אוריאל, flame of God]. One of the four chief angels (the others being MICHAEL; GABRIEL; and RAPHAEL) mentioned in Enoch 9:1 (but cf. 40:9, where Uriel is replaced by Phanuel). Uriel figures prominently in various parts of the book of Enoch, serving as God's messenger to Noah, the "watcher" over "the world and Tartarus," and the principal guide of Enoch in his visions (10:1; 19:1; 20:2; 21:5 ff; 27:2; 33:4; 72:1; 74:2; 75:3-4; 78:10; 79:6; 80:1). He also appears in II Esdras, as sent to enlighten Ezra in his perplexity about the problem of evil and the ways of God (II Esd. 4:1; 5:20; 10:28). In midrashic literature Uriel is associated with light and is called the "one who brings light to Israel" (Num. Rabbah II.10).

S. B. HOENIG

URIAH. KJV alternate form of **URIAH.**

URIM AND THUMMIM $\text{עֹרֹתִים, תְּחֻמִּים}$ [אורים; תמים]. Oracular media by which the will of God in relation to particular problems was ascertained. The initiator in this process of communication was man—he laid before God a question couched in precise

words and expected an answer, or decision, in like manner, usually in the form of "yes" or "no" (in some of the Babylonian omen literature the supplicant's prayer is answered by the deity either with *anna*, "yes," or *ulla*, "no"; cf. *bibliography*).

Clear examples of the direct question-and-answer type of procedure are I Sam. 23:9-12; 30:7-8. In the first instance David asked the priest Abiathar to bring the ephod (in these two cases the term "ephod" is substituted for the "Urim and Thummim"; see below). After the ephod was brought, David addressed two direct questions to God: "Will Saul come down, as thy servant has heard?" and "Will the men of Keilah surrender me and my men into the hand of Saul?" Both inquiries were answered by the Lord in the affirmative: "He will come down"; and "They will surrender you." In the second instance the ephod was brought again, and David inquired: "Shall I pursue after this band? Shall I overtake them?" The answer was: "Pursue; for you shall surely overtake and shall surely rescue."

There are no explicit examples of a negative answer to an inquiry, but in two cases the refusal of God to respond was tantamount to a "no." In I Sam. 14:36-37 we are told that "Saul inquired of God, 'Shall I go down after the Philistines? Wilt thou give them into the hand of Israel?' But he did not answer him that day." The other case is recorded in 28:6. The large army of the Philistines encamped at Shunem frightened Saul, and he tremblingly inquired of the Lord in the hope of receiving some sign of encouragement. However, "the LORD did not answer him, either by dreams, or by Urim, or by prophets." (For a similar case where a refusal to answer was understood to be a negative response, cf. the incident reported about Ah-Mose I [ANET 448b]. The pharaoh, acting in the role of a deity, was asked for a decision, but he remained silent; when asked a second question, "the god nodded very much"—i.e., the answer was a "yes.") According to Num. 27:21, Joshua was commanded to direct his questions to the priest Eleazar, who in turn "shall inquire for him by the judgment of the Urim before the LORD; at his word they shall go out, and at his word they shall come in, both he and all the people of Israel with him, the whole congregation." It seems plausible to assume that in matters of military strategy some answers must have been in the negative.

Other instances of the use of oracular media are mentioned in I Sam. 14:18, 41. The first is an inquiry about a missing person, and the other is concerned with the detection of guilt. When Saul was informed that Jonathan was missing from the camp, he said to the priest Ahijah: "Bring hither the ark of God," in order to inquire about the whereabouts of his son. (The term "ark of God," or "ark of the covenant of God" [Judg. 20:27], is another name for the ephod or Urim and Thummim. This is evident from I Kings 2:26, where it is said of Abiathar that he "bore the ark . . . before David"; the ark could not possibly have been "borne" by a priest.) In the second case, Saul wanted to find the guilty person who had broken his oath forbidding the people to partake of food until evening. He said: "O LORD God of Israel, give *thāmim* [so vocalized instead of the usual *thum-*

mim] and Jonathan and Saul were taken, but the people escaped." The RSV, following the LXX, reads I Sam. 14:41: "'O LORD God of Israel, why hast thou not answered thy servant this day? If this guilt is in me or in Jonathan my son, O LORD, God of Israel, give Urim; but if this guilt is in the people of Israel, give Thummim.' And Jonathan and Saul were taken, but the people escaped." See *bibliography*.

There are a number of cases where the question laid before God is introduced by the technical term שאל ביהוה, "to inquire of the LORD." Although no mention is made in these references to the ephod, the ark, or the Urim and Thummim, they may be considered in the category of oracular inquiries (e.g., Judg. 1:1-2; 20:23; I Sam. 10:22-23; 23:2-3; II Sam. 2:1; 5:19, 23-24).

The functionary in charge of the divinatory implements was a priest, and inquiries could be directed to any place where one carrying an ephod was present. According to Exod. 28:30; Lev. 8:8, the chief priest carried the Urim and Thummim on his body; Deut. 33:8 implies that the whole tribe of Levi—i.e., all members of the priestly class—had access to the Urim and Thummim (see also Ezra 2:63 = Neh. 7:65). It was to the chief priest that the leaders of the people and the kings turned when a decision of national importance was to be made. This was done by Joshua (Num. 27:21), by Saul, and by David. Whether the Urim and Thummim were made use of in behalf of private individuals is not known. David consulted them when he was a leader of a small band (I Sam. 23:10-13). The five representatives of the tribe of Dan asked the Levite in the employment of Micah (who had an ephod): "Inquire of God . . . that we may know whether the journey on which we are setting out will succeed"; and the priest said: "Go in peace. The journey on which you go is under the eye of the LORD" (Judg. 18:5-6).

The Urim and Thummim are not mentioned after the period of David (the reference in I Kings 2:26 to Abiathar, who "bore the ark"—i.e., the ephod—relates to the reign of David). The passage in Ezra 2:63 = Neh. 7:65 is ambiguous. It is doubtful whether Ezra meant to emphasize the need for the Urim and Thummim under the new dispensation, or whether he had in mind to introduce them anew after a lapse of ca. five centuries. Josephus' statement (Antiq. III.viii.9) that the "oracle" had been silent for two hundred years before his time, is not supported by the facts. It is the opinion of some scholars that the rise of prophecy, the new medium through which the word of God was communicated to the people and the kings, made the use of the Urim and Thummim unnecessary, and hence they are not mentioned in the texts since the time of Solomon. However, the protest of Hos. 4:12 that "my people inquire of a thing of wood, and their staff declares unto them" (the RSV renders גידר לו "gives them oracles"), Ezekiel's remark (21:21—H 21:26) that the king of Babylon consulted the teraphim, and Zechariah's statement (10:2) that the teraphim "utter nonsense," would seem to point to the continuous use of the oracular media throughout the pre-exilic period.

The exact meaning of the words "Urim" and "Thummim" is not known. They are mentioned as a hendiadys five times (Exod. 28:30; Lev. 8:8; Ezra

2:63; Neh. 7:65; and in reverse order "Thummim and Urim," in Deut. 33:8), twice only "Urim" is given (Num. 27:21; I Sam. 28:6), and once *thāmim* (I Sam. 14:41). The etymologies that have been suggested are unsatisfactory, nor are the interpretations of the LXX and the Vulg. of any help. The same uncertainty exists concerning the material the Urim and Thummim were made of, their shape, and the signs or symbols impressed on them. According to the texts the Urim and Thummim were deposited in the "breastpiece" (שׁוֹט), a small, square pocket made of multicolored stuff and twined linen, which the chief priest carried on his "heart" above the ephod (Exod. 28:16, 29-30; 29:5; Lev. 8:8). The "breast-piece" was attached to the ephod, and hence the latter term was in some cases used as a synonym for the Urim and Thummim. This information would suggest that the Urim and Thummim were small objects, perhaps in the shape of dice, made of metal or precious stones and having some symbols impressed on them (somewhat similar to the two onyx stones set on the shoulder pieces of the ephod, on which were engraved the names of the twelve tribes as described in Exod. 28:9-10). The symbols were necessarily reduced to a single letter or sign on each object—e.g., "a" representing an affirmative response and "b" a negative one—and accordingly interpreted by the priest in charge.

In complicated issues the divinatory media were used several times in order to decide the case in the most precise manner. In the Saul-Jonathan case they were used twice: first, to decide whether the guilt was with the people or with Saul and Jonathan; and the second time, to determine which of the latter two was the offender (cf. the case of Achan in Josh. 7:16-18, where the lot was cast four times until the guilty person was apprehended).

The technique employed by the priest in handling the Urim and Thummim is not stated. Since they were kept in a pocket, the priest either shook them in the receptacle and then pulled one out or used the same method as in the case of the "lots"—namely, he "cast" both of them on the ground or on any other surface.

I. MENDELSON

UR-MARKUS ōr mār'kās. A primitive form of the Gospel of Mark affirmed in some theories of the origin of the gospels. See MARK, GOSPEL OF, § 6; SYNOPTIC PROBLEM.

URN [στάμνος]; KJV POT. The term used in Heb. 9:4 in reference to the golden jar which held the manna. There is no archaeological clue to the form of the original OT vessel referred to, but it was probably a modified Egyptian pattern of the period of Ramses II, the time of the Exodus. J. L. KELSO

USURY. KJV translation of נִשְׁךְ and τόκος (RSV INTEREST; see also DEBT).

UTENSILS [כלים]. A general word for implements, vessels, weapons, instruments, etc.; translated "utensils" with particular reference to the gold and bronze instruments of the tabernacle service: the snuffers, trays, shovels, pots, basins, forks, firepans, hooks, etc., particularly the instruments of the table, the lampstand, the altar of burnt offering, the altar of incense (Exod. 25:39; 27:3, 19; 30:27-28; 31:8-9; etc.). The word is also used of the utensils of the temple (I Chr. 9:28-29; II Chr. 24:14-19; "vessels" in I Kings 10:21; II Chr. 9:20; Jer. 27:18-21).
H. G. MAY

UTHAI ū'thī [עוּתַי, perhaps hypocoristic for (Yahu) has shown himself supreme; cf. Arab. 'atā; Apoc. Οὐτά (I Esd. 5:30); Οὐθι (I Esd. 8:40)]; KJV Apoc. UTA ū'tā; UTHI. 1. A descendant of Judah resident in postexilic Jerusalem (I Chr. 9:4; cf. Neh. 11:4, where Athaiah [עֲתַיָּה] apparently stands for this name).

2. Son or descendant (see ZACCUR 5) of Bigvai; listed as having returned from Babylon with Ezra (Ezra 8:14; I Esd. 8:40).

3. According to the RSV, the head of a family of temple servants who returned with Zerubbabel (I Esd. 5:30; but read correctly "Uta" with the KJV, omitted in the parallels Ezra 2:46; Neh. 7:48; cf. Οὐτά in LXX Neh. 7:48 Codices A &). See NETHINIM.

B. T. DAHLBERG

UZ ūz [עוּז]; KJV HUZ hūz in Gen. 22:21. An undefined territory in the Syrian Desert E of Palestine between, roughly, the latitudes of Damascus and Edom. Lam. 4:21 speaks of the daughter of Edom as living in Uz. Job is, according to the Prologue (1:1), native to the "land of Uz," quite possibly a purposely vague designation of the scene of the drama, which is elsewhere indicated as lying to the E of Palestine (vs. 3), as essentially a part of the desert (vs. 19; see also vs. 15, 17) yet comprising farming areas (vs. 14) as well as towns of considerable size (29:7).

Other OT references tend to confirm this general location. In Gen. 10:23, Uz is an Aramean tribe, counting, according to 22:21, their descent from Nahor, and, in 36:28, in some way related to the HORITES.
B. D. NAPIER

UZAI ū'zī [אֲזַי, perhaps hypocoristic for (Yahu) has heard; cf. אֲזַנְיָה (AZANIAH)] (Neh. 3:25). The father of a certain Palal, one of those helping Nehemiah with the repair of the Jerusalem wall.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 40, 185.
B. T. DAHLBERG

UZAL ū'zāl [אֲזַל]. A son of Joktan and hence the name of an Arabian locality (Gen. 10:27; I Chr. 1:21). According to Arabic tradition, Uzal, or more properly Auzal, was the original name of Sanaa, the capital of Yemen in both Himyarite and modern times; the present name means "beautiful" in Ethiopic and was given to the city by its Abyssinian conquerors. Glaser, however, found inscriptions that indicate that the original name of Sanaa was Tafidh

and holds that the name Auzal was not applied to the city until as late as the third century A.D. and then under the influence of the Arabian Jews, who made the identification from the Bible. He suggests for Uzal a town in the neighborhood of Medina, named Azalla, and mentioned as having been reached by Ashurbanipal of Assyria in his campaign in Arabia. Furthermore, that king mentions two nearby towns, Yarki and Hurarina, which recall the two sons of Joktan who are mentioned just before Uzal: Jerah and Hadoram, the latter possibly having been an original "Haroram," which was changed to its present form because of a confusion of 7 and 7.

Ezek. 27:19, which occurs in the midst of a passage describing trading relations between Tyre and a number of other nations, has an especial bearing on the identification of Uzal. The opening words of this verse in the present MT are: "And Dan and Yavan going to and fro gave (products) for your wares" (וְדָן וְיָוָן מֵאוּל בְּעִבְרֵיךָ נָתַן). This, however, is surprisingly different from the rest of the passage (vs. 12-23), in which no verse begins with a conjunction, but always with the name of a country. A widely accepted emendation (RSV), following the LXX, is: "And wine from Uzal they exchanged for your wares" (וְיַיִן מֵאוּל בְּעִבְרֵיךָ נָתַן). This also contradicts the strict form of the passage, in which no verse begins with a product. It seems better, therefore, to regard the first three words of the verse as names: Waddan, Javan, and Uzal. Waddan is known as a station on one of the pilgrim roads between Medina and Mecca. On another pilgrim road between these two cities is a place called Yayn, somewhat to the SW of Waddan. "Yayn" could easily have arisen as a corruption of "Javan" (Hebrew *yāwān*), which would then be a designation for a Greek colony from Asia Minor, of which there were several in Arabia in ancient times. Since the Azalla of Ashurbanipal is located in the same region, it is probable that this is the best identification for the biblical Uzal.

S. COHEN

UZZAH ū'zā [עוּזָה, עוּזָה]. Alternately: UZZA. KJV Apoc. AZIAS ὁ ζι'ᾶς. 1. A Levite of the family of Merari. His father was Shimei, and his son was Shimca (I Chr. 6:29-30—H 6:14-15).

2. An obscure Benjaminite (I Chr. 8:7).

3. A son of Abinadab. He was fatally smitten while he was driving the oxcart which conveyed the ark of the covenant in its journey toward Jerusalem (II Sam. 6:1-7; I Chr. 13:1-10).

When David arranged to transport the ark to Jerusalem from the house of Abinadab, where it had remained for two decades after the disaster at Bethshemesh (I Sam. 6:19-7:2), Uzzah drove the oxcart bearing the ark amid the accompanying festal procession. When they arrived at the threshing floor of Nacon (II Sam. 6:6; Chidon in I Chr. 13:9), the oxen stumbled. Uzzah put out his hand to secure the ark and suddenly died. In the popular mind his death was attributed to his violation of the sacrosanct character of the ark (II Sam. 6:7; I Chr. 13:10; 15:13). Greatly displeased at this incident, the king immediately canceled the journey, depositing the ark nearby,

in the house of Obed-edom, and called the name of the place Perez-uzzah—"the breaking forth upon Uzzah."

4. The owner of the garden where kings Manasseh and Amon of Judah were buried (II Kings 21: 18, 26).

5. Ancestor of temple servants who returned from exile with Zerubbabel (Ezra 2:49; Neh. 7:51; I Esd. 5:31).

E. R. DALGLISH AND J. M. WARD

UZZEN-SHEERAH ūz'ən shē'ə 𐤅𐤆 𐤏𐤍 𐤔𐤏𐤁𐤏 [אֶזְנֵן שֶׁרָח, ear of Sheerah(?)]; KJV UZZEN SHERAH shīr'ə. A village built by Sheerah, daughter of Ephraim (or Beriah), along with Upper Beth-horon and Lower Beth-horon (I Chr. 7:24). Though Beit Sira, three miles SW of Lower Beth-horon, has been proposed for Uzzen-sheerah, most scholars feel the site has yet to be identified.

UZZI ūz'ī [עִזִּי, (Y is) strength; a shortened form]; KJV Apoc. EZIAS ī zī'əs; OZIAS ō—. 1. A priest in lists of the Aaronite line descended from Eleazar (I Chr. 6:5-6, 51); an ancestor of Ezra (Ezra 7:4; I Esd. 8:2; II Esd. 1:2).

2. A descendant of Tola; eponym of a clan of the tribe of Issachar (I Chr. 7:2-3).

3. A name in what may be a tripartite grouping of postexilic Benjaminitic families, or a list of families of Zebulun otherwise lacking in the lists of the tribes in Chronicles (I Chr. 7:7).

4. A postexilic Benjaminitic family name (I Chr. 9:8), a datum which perhaps supports the first identification suggested in 3 above.

5. A Levite, descendant of Asaph (Neh. 11:22). He was overseer of the Levites in Jerusalem during a time considerably later than the return from exile, since he was a great-grandson of Mattaniah the son of Mica (vs. 17).

6. A priest, head of the priestly family of Jedaiah during the time of the postexilic high priest Joiakim (Neh. 12:19).

7. A Levite individual or division, in a group probably of musicians, in the clockwise procession on the walls of Jerusalem during their dedication (Neh. 12:42).

T. M. MAUGH

UZZIA ə zī'ə [עִזְיָהּ] (I Chr. 11:44). An Ashterathite whose name is among the sixteen additional ones the Chronicler adds to the lists of the Mighty Men of David known as the "Thirty."

UZZIAH ə zī'ə [עִזְיָהּ, Yahu is (my) might; 'Oz[αc]; KJV Apoc. (and) NT OZIAS ō zī'əs. Alternately: AZARIAH əz'ə zī'ə [עֲזַרְיָהּ]. 1. A Kohathite of the tribe of Levi (I Chr. 6:24). Cf. AZARIAH 10.

2. The father of Jonathan, who was one of the twelve stewards of King David's property. Jonathan's task was the oversight of the king's treasuries in the country, in the cities, in the villages, and in the towns (I Chr. 27:25).

3. King of Judah ca. 783-742 B.C.; son and successor of Amaziah.

It is to be noted that in the two names of this king,

עִזְיָהּ (י) and עֲזַרְיָהּ (ו), there is a difference of only a single consonant. The meaning is practically the same in both cases—"Yahu is (my) might," and "Yahu is (my) strength." To explain the two names, however, as due to textual corruption is inadequate. They may be accounted for by the suggestion that one is a throne name, the other a personal name. In view of the fact that the prophetic references (Isa. 1:1; 6:1; 7:1; Hos. 1:1; Amos 1:1; Zech. 14:5) all use the name Uzziah, one might assume that this was the throne name and Azariah the personal name. But both names were used—Azariah in II Kings 15:1, 6-8, 17, 23, 27; Uzziah in 15:13, 30, 32, 34. The explanation is probably to be found in the king's leprosy. In the circumstances he was no longer able to perform his royal duties and so became a private citizen again, while his son Jotham acted as regent in his stead. The textual evidence seems to indicate that an attempt was made to substitute the throne name for the personal name. In the Peshitta the name Uzziah is used throughout.

Uzziah was sixteen years old when he came to the throne, and he is said to have reigned for fifty-two years. His mother was Jecoliah of Jerusalem (II Kings 15:2; II Chr. 26:3). It is noteworthy that he became king by action of "all the people of Judah" (II Kings 14:21; II Chr. 26:1; cf. II Kings 11:17 ff). The figure of fifty-two years for his reign cannot be correct. The evidence of the Annals of Tiglath-pileser III of Assyria indicates that Uzziah disappeared from the scene ca. 742. Thus he seems to have reigned ca. forty-two years.

The Assyrian Annals mention a contemporary figure, Azriau from Ia-ū-da-a-a, in telling of events connected with the year 743. The identification with Azariah (Uzziah) of Judah gives a different picture both of the power and of the position of Judah from that which could be gathered from the biblical record, but it may very well be true. With the death of Jeroboam II of Israel, ca. 746, Azariah was probably the outstanding leader in the West. He was a leper and so was prevented from exercising kingly functions; but he still seems to have been the power behind the throne, and he became the center of opposition to Assyria during the period 743-742. Presumably he died soon afterward, as no further mention of his name occurs in the Assyrian records.

As in the case of Jeroboam II of Israel, the writer of Kings records but little of the long and prosperous reign of Uzziah. Fortunately, the Chronicler has preserved a long list of his achievements. These indicate the power and wealth of Judah during his reign. They are generally accepted as reliable history, although set in the familiar theological framework of the writer. This is clearly seen in the Chronicler's arrangement. Like his grandfather Joash (II Chr. 24:2), Uzziah had a tutor whose name was Zechariah (26:5), and he became strong; but with strength came pride, and the king proved false to Yahweh. The result was that he was stricken with leprosy.

The Chronicler reports a successful campaign against the Philistines in the West (II Chr. 26:6). The walls of Gath, Jabneh, and Ashdod were demolished. The following words: "and he built cities in the territory of Ashdod and elsewhere among the

Philistines," are difficult. The most likely explanation is that Uzziah subdued the N and E parts of Philistia. In this territory he established fortified posts which enabled him to maintain control over the caravan routes which passed through the Philistine Plain. The MT of II Chr. 26:7-8a is again difficult. "Gurbaal" is unknown; the LXX reads here "Petra." For "Ammonites" the LXX reads "Meunites," perhaps in both cases correctly. The general emphasis of the Chronicler here seems to be on military campaigns in Arabia—against the Arabs who dwelt in Petra, and the Edomite Meunites, who paid tribute to Judah. Uzziah's purpose in these campaigns would again appear to have been control of the trade routes from Arabia. This seems to be borne out by the datum that "he [presumably Uzziah] built Elath and restored it to Judah, after the king slept with his fathers" (II Kings 14:22; II Chr. 26:2). The wording of this verse, however, is obscure, with its strange chronological reference. It seems to be out of place in its present context. That Judah controlled Elath at this time has been verified by archaeological investigation which brought to light a seal bearing the inscription: "Belonging to Jotham" (Uzziah's son), in the excavations at Ezion-geber-Elath. Uzziah was so successful in all the military activities which he undertook that his reputation extended as far as the borders of Egypt (II Chr. 26:8). It is interesting to note that no interference or activity is recorded on the part of the powerful N kingdom. Fortress towers were built in Jerusalem (vs. 9) and also "in the wilderness" (vs. 10)—i.e., the Negeb. The term may possibly also include the Moabite Plain. It is probable that these latter were established to control the trade routes from Arabia. At the same time they served as a means of defense for flocks and herds. Under Uzziah agriculture prospered and livestock increased. For the latter the king had great water cisterns hewed out. He seems to have had a personal interest in farming. The general picture is one of prosperity throughout the country. Archaeology furnishes an interesting confirmation of the situation, for it indicates that the eighth century B.C. was the period of greatest building activity in the Negeb.

The king also built up his army and supplied the troops with weapons and equipment (vss. 11-14). As usual, the numbers given cannot be regarded as historical. Special attention is drawn to a new type of weapon, which has usually been understood as a kind of catapult mounted on a tower, capable of shooting arrows and great stones (vs. 15) against an attacking enemy. Such a weapon is known also from Egyptian and Assyrian inscriptions of this period. It has been plausibly argued, however, that the new weapon was not a catapult at all, but a shield for protecting slingers and bowmen. See WEAPONS AND IMPLEMENTS OF WAR.

Ca. 750, Uzziah was stricken with leprosy (cf. for the date I Chr. 5:17, where Jotham, Uzziah's son, and Jeroboam II of Israel are mentioned as contemporaries). Jotham, therefore, must have been acting as regent before the death of Jeroboam, which occurred ca. 746. From the Chronicler's point of view Uzziah must have been guilty of some serious crime to have become the victim of this disease. This crime

the Chronicler found in an invasion of the temple by the king "to burn incense on the altar of incense" (II Chr. 26:16b-20). The story is told in very dramatic fashion. The writer of Kings makes no mention of this incident, but it seems clear that the Chronicler found it in his source and used it because it suited his purpose. Its historicity, however, is questionable. That it was a popular tradition which lent itself to later embellishments can be seen in the additions in Josephus (Antiq. IX.x.4). At the same time, a historical reminiscence may lie behind it of a break between the king and the priesthood. The latter challenged the king's right to burn incense, claiming that this was the prerogative of the priests, the sons of Aaron, alone. However this may be, Uzziah contracted leprosy. This prevented him from carrying out his royal duties. In the circumstances he "dwelt in a separate house" (II Kings 15:5; II Chr. 26:21). The literal meaning of the MT is "a house of freedom." This is usually understood in the sense that he was isolated because of his disease and through fear of contagion. But a better suggestion seems to be that it means rather that he was relieved of his official duties because of his affliction. That this is so is indicated by II Kings 15:5b: "Jotham the king's son was over the household, governing the people of the land"—i.e., Jotham was appointed as regent for his father. He continued to act as regent until the latter's death ca. 742, but the reputation which Uzziah had won was remembered, and his influence was still felt in state affairs.

The Chronicler adds, probably with more exactness than II Kings 15:7, that on Uzziah's death "they buried him with his fathers in the burial field which belonged to the kings, for they said, 'He is a leper'" (II Chr. 26:23). Archaeology has provided a remarkable confirmation of this. In 1931 a carved stone tablet was found on the Mount of Olives, which dated from post-Maccabean times. It bore this inscription in Aramaic: "Hither were brought the

Courtesy of the American Schools of Oriental Research

19. First-century-A.D. stone tablet marking the burial place of the bones of King Uzziah

bones of Uzziah, king of Judah—do not open!" Fig. UZZ 19.

In the memory of later generations Uzziah's reign was exceeded in glory only by Solomon's. This period marked the zenith of Judah's power.

4. A priest who had married a non-Israelite wife in the time of Ezra (Ezra 10:21). Cf. AZARIAH 19.

5. A Judahite; father of Athaiah, who lived in Jerusalem at the time of Nehemiah (Neh. 11:4).

6. Chief elder of Bethulia (Jth. 6:15, etc.).

H. B. MACLEAN

UZZIEL ūz'ī'el [זְעִיֵּל, El (God) is strength]; **UZ-ZIELITES** —ə līts. Alternately: **AZAREL** āz'ə rēl [אֶזְרֵל] (5 below); **KJV AZAREEL** —rēl. 1. A grandson of Levi; one of the four sons of Kohath. As a son of Kohath he was a brother of Amram the ancestor of Aaron and Moses, and a brother of Izhar the ancestor of Korah (Exod. 6:18; Num. 3:19; I Chr. 6:2, 18; 23:12). He was the father of Mishael, Elzaphan,

and Sithri (Exod. 6:22), and the founder of a subdivision of the families of Levites (see **PRIESTS AND LEVITES**), descended from Kohath (Exod. 6:22; Lev. 10:4; Num. 3:19, 30; I Chr. 6:18; 15:10; 23:20; 24:24). This subdivision of the families of Levites is called Uzzielites in two places: Num. 3:27, where "the families of the sons of Kohath were to encamp on the south side of the tabernacle" (vs. 29) and their role in the service of the ark and tabernacle is described (vs. 31); and I Chr. 26:23, where citation of their activity, probably concerning temple treasuries, has been lost. Members of this subdivision were among the Levites who transported the ark when David brought it to Zion (I Chr. 15:10), and they were among the Levites whose functions in the cult were ascribed to David's preparatory arrangements for the temple (23:12, 20; 24:24).

2. One of the captains of a successful expedition of Simeonites against the Amalekites at Mount Seir, expanding their territory, possibly during the reign of Hezekiah (I Chr. 4:42).

3. A Levite of the family of Jeduthun, in a list of Levites with which the Chronicler sets forth the cleansing of the temple by Hezekiah (II Chr. 29:14).

4. A name in what may be a tripartite grouping of postexilic Benjaminite families, or a list of families of Zebulun otherwise lacking in the lists of the tribes in Chronicles (I Chr. 7:7).

5. A postexilic family of singers of the Heman group (I Chr. 25:4). In vs. 18 he is called Azarel (cf. Uzziah and Azariah as names for the same king). See **HEMAN**; **MUSIC**.

6. A member of the guild of goldsmiths. He helped to rebuild the wall of Jerusalem (Neh. 3:8).

VALIANT MAN. See **MIGHTY MEN.**

VALLEY. The translation of several words in the Bible, referring to depressions between mountains, broad plains or plateaus, narrow ravines, and low terrain. (See also **PLAIN**; **SHEPHELAH.**) The RSV uses "vale" twice (Pss. 60:6; 108:7) where the KJV has "valley"; "vale" is used frequently in the KJV (Gen. 14:3; 37:14; Deut. 1:7; I Kings 10:27; Jer. 33:13), where the RSV translates variously as "valley," "lowland," and "Shephelah."

The following words are usually translated "valley":

a) עמק (Num. 14:25; Josh. 8:13; I Sam. 6:13; etc.).

The same word is mentioned in designating the level areas or valleys adjacent to the following places: **ACHOR**; **AJALON**; **BACA**; **BERACAH**; **ELAH**; **GIBEON**; **HEBRON** (1); **JEZREEL** (1); **KEZIZ** (see **EMEK-KEZIZ**); **REPHAIM**; **SHAVEH**; **SIDDIM**; **SUCCOTH** (1). It designates also the valley of **DECISION**; the King's Valley (see **SHAVEH**), and the valley of **JEHOSHAPHAT** (Gen. 14:17; II Sam. 18:18; Joel 3:2, 12, 14).

b) בקעה (Deut. 8:7; Isa. 41:18; Ezek. 37:1; etc.).

The same word is employed to designate the level areas or valleys in the vicinity of **JERICHO**; **LEBANON**; **MEGIDDO**. Cf. the Valley of Mizpeh (see **MIZPAH** 2).

c) גיא (Num. 21:20; Deut. 34:6; II Kings 2:16; Ps. 23:4; etc.). The same word occurs in expressions referring to the valleys of the **CRAFTSMEN**; **HINNOM**; **IPHTAH-EL**; **Mountains**; **SALT**; **Slaughter**; **TRAVELERS**; **Vision**; **ZEBOIM** (2); **ZEPHATHAH**.

d) נחל (Gen. 26:19; Num. 24:6; Deut. 21:4; I Sam. 15:5). It also is used with the following place names: **ESHCOL**; **GERAR**; **SHITTIM**; **SOREK**; **ZERED**. Although it usually refers to a level area such as a valley, it may also designate the water flowing in the valley (see **BROOK**; **RIVER**).

e) שפלה (Josh. 9:1; 10:40; Judg. 1:9; etc., where the KJV has "valley" and "vale"; the RSV, "lowland" and "Shephelah"). The reference is to the foothills between the central highlands and the Philistine coastal plain.

f) φάραγξ (Isa. 40:4 LXX; Luke 3:5; Jth. 2:8; 7:4; etc.).

The contours of Canaan are such that valleys are located in every part of the land and vary considerably in shape and size. Ones like those running between Bethlehem and the Dead Sea are precipitous canyons or narrow gorges. Others, like those in the vicinity of Jezreel, are broad plains noted for their fertility.

Valleys are mentioned in designating geographical boundaries (Deut. 3:16); as well-watered regions (Gen. 13:10); and as the location of cities (Gen. 19:29) and springs (I Kings 18:5). They were also scenes of military combat (Gen. 14:8); the location of vineyards and orchards (Num. 13:23); the tradi-

VAIL. KJV alternate form of **VEIL.**

VAIN [הבל, ריק, תהו, שווא; κενός, μάταιος, εικη, δωρεάν, etc.]. The commonest modern sense of "vain"—"conceited," "given to empty personal pride"—is expressed in the NT by κενόδοξος, "self-conceit" (Gal. 5:26; KJV "desirous of vainglory"); cf. κενοδοξία, "conceit" (Phil. 2:3; KJV "vainglory"). Otherwise the term renders a variety of Hebrew and Greek words expressing something ineffective, unreliable, insubstantial, transient, like vapor. Paul's statement (Rom. 8:20) that the creation was subjected to "futility" (KJV "vanity") may echo Eccl. 1:2, etc., where "vanity" is הבל ("vapor"; see **VANITY**). In general, all resources or enterprises from which God is excluded are vain (Ps. 127:1). To resist God or attempt to frustrate his purpose is a particularly vain thing (Ps. 2:1, quoted in Acts 4:25). God's own work is never vain, nor is he sought in vain (Isa. 45:18-19).

In Acts 14:15 pagan gods or their cults are called "vain things" (μάταια), by contrast with a "living God"; the same implication of idolatry may be present in the "futile ways" (KJV "vain conversation") of I Pet. 1:18, addressed to converts from paganism. This use of μάταιος appears in the LXX in I Kings (III Kingdoms) 16:2; Jer. 2:5; 8:19 (הבל); Add. Esth. 14:10 (LXX, expansion of Esth. 4:17); III Macc. 6:11.

To take Yahweh's name "in vain" (Exod. 20:7; Deut. 5:11) is to invoke it lightly or to no purpose, especially in blasphemy (cf. Lev. 24:10 ff) or perjury (Ps. 24:4).

The "empty phrases" (Matt. 6:7; KJV "vain repetitions") which Gentiles use in prayer (βαρταλογέω, "heap up empty phrases") are meaningless babblings, sounds without sense. To approach God with lip service only, neglecting true heart obedience, is to worship him "in vain" (Mark 7:7, quoting Isa. 29:13 LXX). To turn away from Christianity is to "receive the grace of God in vain" (II Cor. 6:1; cf. I Cor. 15:2; Gal. 3:4); to have evangelized such people is to have run or labored in vain (Phil. 2:16; cf. I Cor. 15:10; Gal. 2:2).

F. F. BRUCE

tional home of the Canaanites (Num. 14:25) and their deity (I Kings 20:28). Valleys were grazing areas for herds (I Chr. 27:29); sites for the growing of grain (Ps. 65:13—H 65:14) and the harvest of wheat (I Sam. 6:13); the habitat of ravens (Prov. 30:17) and doves (Ezek. 7:16). The destruction or filling of the valleys is used in figures of speech referring to God's judgment upon an unfaithful people (Mic. 1:6; Zech. 14:5). The "valley of deep darkness" ("shadow of death") symbolized the dangers of life (Ps. 23:4), and the "valley of the son of Hinnom" became a designation of the place of eternal punishment (see GEHENNA).

W. L. REED

VALLEY GATE [שַׁעַר הַגִּיּוֹת]; KJV GATE OF THE VALLEY in Neh. 2:13. A gate of Jerusalem, leading W or SW into the Valley of Hinnom (see HINNOM, VALLEY OF), a thousand cubits from the DUNG GATE, and in the vicinity of the JACKAL'S WELL; restored by Nehemiah (Neh. 2:13, 15; 3:13). Its towers had been built by Uzziah (II Chr. 26:9). Fig. NEH 13. See also JERUSALEM §§ 6b, 7b.

B. T. DAHLBERG

VANITY. A word used to translate several biblical terms. It has a variety of meanings, ultimately deriving from physical concepts of insubstantiality, inanity, nothingness, or chaos, but never connoting the subjective attitude of false pride as in modern English. "Vanity" often connotes "idolatry" or "idols."

The most common word translated "vanity" in the OT is הַבֵּל, meaning primarily, as the Arabic cognate suggests, "vapor, breath" (e.g., Prov. 21:6, comparing wealth accumulated through lies to a "fleeting vapor"; Isa. 57:13, where הַבֵּל is parallel with רוּחַ, "wind"). In Eccl. 1:14; 2:11, 17; 4:16; 6:9, הַבֵּל stands in apposition to the phrase "striving after wind" and preserves a nuance of its primary meaning (cf. Ps. 144:4, comparing man to הַבֵּל and צֶלַח, "shadow"). Breath suggests evanescence, and in Ps. 39:11 man is הַבֵּל, and his comeliness passes away as a moth. The word expresses that which is light and insubstantial, which will always be outweighed (e.g., Ps. 62:9). In Ps. 39:5 הַבֵּל stands virtually parallel to אֵין, "nothingness." Ps. 62:9 describes men of low degree as הַבֵּל and men of high degree as כִּזְבוּ, "lie, delusion." In Prov. 13:11 הַבֵּל as a means of acquiring wealth is contrasted with solid work, and refers to appearance or pretension apart from substance.

The notion of delusion or unreality underlies the use of הַבֵּל to describe the life of the Gentiles (II

Kings 17:15) or of the man who is indifferent to divine law (Ps. 94:11) or has deliberately rejected it (Ps. 78:33). This way of life, unregulated by divine discipline, is haphazard and futile, the prey of chance rather than governed and stabilized by the moral law; and the state in which there is no discrimination between righteous and wicked, wise and foolish, is described as הַבֵּל (Eccl. 2:17; 8:14).

Specifically הַבֵּל refers to idolatry (Jer. 16:19) or to idols or pagan gods (Deut. 32:21; I Kings 16:13, 26; Ps. 31:6; Isa. 57:13; Jer. 2:5; 8:19; 10:8; 14:22; 51:18; Jonah 2:8). In Jer. 51:18 there is a wordplay—the graven images are said to be without רוּחַ (primarily "wind," secondarily "spirit") and to be הַבֵּל (lit., "vapor"). "Vanities" in Acts 14:15 (μᾶταια; RSV "vain things") similarly refers to pagan deities, for whom the people of Lystra mistook Paul and Barnabas.

"Vanity" may also be expressed by רִיק (lit., "emptiness"). This may mean "annihilation" (e.g., Hab. 2:13) but generally, as הַבֵּל, expresses the futility of life apart from the guidance of God (e.g., Pss. 2:1; 4:2, where it is in parallelism with כִּזְבוּ, "delusion").

The word שׁוֹא, used apparently in its primary sense of "nothingness" in Job 15:31, may mean the frustration of a futile life (e.g., Job 7:3, where it is parallel to עִמְלָה, "trouble") but generally means "unreality" which a man creates for himself by dissembling (לִבּוֹ לֹבֵן; e.g., Pss. 12:2; 41:6), by deceit (מִרְמָה; e.g., Job 31:5; Ps. 24:4), or by lying (שִׁקְרָה; e.g., Ps. 144:8). It may mean simply "lie, delusion" (Prov. 30:8; Ezek. 13:6, 8-9, 23; 21:29; 22:28). As הַבֵּל, it denotes that life outside the positive purpose of divine providence, to which the Gentiles were condemned (Isa. 30:28; possibly Hos. 12:11), and, like הַבֵּל, it may denote "idols" (Jer. 18:15).

"Vanity" is expressed also by תְּהוֹמוֹ, "chaos," found in parallelism with אֵין, "nothing," in Isa. 40:17, 23, and in Isa. 40:17 with אַפְסֵם, referring to idols and their makers. It is found in parallelism with "lying" in Isa. 59:4.

As the Arabic cognate suggests, אֵין should probably be translated "trouble" or "mischief" rather than "vanity"; its parallels in Job 15:35; Ps. 10:7; Prov. 22:8 also suggest this. In Isa. 41:29, where אֵין, like הַבֵּל, שׁוֹא, and תְּהוֹמוֹ, denotes "idols," it is parallel to אַפְסֵם, "nothing," which suggests that it may be a corruption of אֵין.

In the NT "vanity" (μᾶταιότης) has a similar range of meaning, from "nothingness" (II Pet. 2:18) to "chaos" (Rom. 8:20), and the futile life without the law of God (Eph. 4:17). The neuter plural of the adjective μᾶταια in Acts 14:15 refers to idols.

VASHNI vāsh'nī [וַשְׁנִי] (I Chr. 6:28—H 6:13). See JOEL 5.

VASHTI vāsh'tī [וַשְׁתִּי], possibly Pers. *vašti*, one who is desired].

The wife of Ahasuerus (Xerxes I), according to the book of ESTHER (1:9-22). King Ahasuerus, on the seventh day of a banquet, sent for Queen Vashti to

show off her beauty to the guests. When Vashti refused to come, the king banished her and proclaimed the edict throughout his empire "that every man be lord in his own house" (vs. 22). It was this deposal of Vashti which led to the search for other beautiful maidens, and eventually to the choice of Esther as the new queen.

The historicity of this account is questionable. Xerxes' queen was Amestris and not Vashti (Herodotus VII.61; IX.108-12). The attempt to identify Vashti with Stateira, the wife of Artaxerxes II, does not seem wholly successful. If the origin of Purim is found in Babylonian mythology, it is possible that Vashti represents an Elamite goddess allied with Haman and Zeresh against the Babylonian Marduk and Ishtar (cf. *bibliography*). On the other hand, the role of Vashti in the book of Esther may be simply a fictional device for introducing Esther.

VASSAL. A subject or subordinate ruling under another. Frequently the vassal was the defeated king appointed to rule in a subservient position over his own people or territory as a GOVERNOR. The Hebrew words for PRINCE and SERVANT are used for such vassals. This fall from rank and power is described in Lam. 1:1, although some scholars would emend the text and translate "labor gang" or "slave" instead of vassal. Vassals usually had some dignity and wealth left to them in spite of TRIBUTE required by the conqueror. C. U. WOLF

VAT, WINE VAT. A square or circular cavity cut into the rock, in which grapes and olives were pressed into wine and oil. See OIL § 1; WINE §§ 2, 5.

VATICANUS vāt'ī kān'əs, —kā'nəs. An early-fourth-century Greek uncial codex MS of the Bible (symbol "B"). Originally it contained the whole Greek Bible, with the exception of the Prayer of Manasses and the books of Maccabees. It is one of the most important witnesses to the text of both the LXX and the NT. See VERSIONS, ANCIENT; TEXT, NT.

The codex has suffered considerable mutilation. It now lacks Gen. 1:1-46:28; II Sam. 2:5-7, 10-13; Pss. 106:27-138:6; Heb. 9:14-13:25; the Pastoral

1. Codex Vaticanus (fourth century A.D.)

letters; Revelation. It contains 759 leaves (617 in the OT, 142 in the NT) of very fine vellum out of an original total of ca. 820. Each leaf measures 10½ by 10 inches. Each page of the poetical books of the OT contains two columns of text, with 40-44 lines to the column. The rest of the codex contains three columns of text to the page, with 40-44 lines to the column. The MS was written by two scribes.

The codex has been in the Vatican Library since before the publication of the earliest catalogue of that library in 1475. When or how it came to the Vatican is unknown.

Fig. VAT 1.

Bibliography. A photographic reproduction of the MS was published by the authorities of the Vatican Library, *Bibliorum SS. Graecorum Codex Vaticanus 1209* (1904-7). See also: F. H. A. VAU vō (Heb. wou) [ו, w (Wāw)]. The sixth letter of the Hebrew ALPHABET as it is placed in the KJV at the head of the sixth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

VAULTED CHAMBER; KJV EMINENT PLACE. The translation of גג (lit., "something convex," "back") in Ezek. 16:24, 31, 39.

VEGETABLES זרע[נ]ים (Dan. 1:12, 16; KJV PULSE; ירק (KJV HERBS); λάχανα (KJV HERBS)). The vegetables most commonly cultivated in Palestine were LENTILS; CUCUMBERS; ONIONS; LEEKS; and BEANS. But Palestine was inferior to Egypt as a vegetable land; in Egypt one merely sowed the seed and watered it, and a vegetable garden appeared (Deut. 11:10). Vegetables were generally planted in gardens; Ahab demands Naboth's vineyard for such a purpose (I Kings 21:2). Of course, vegetables alone provided an insufficient diet; Paul can compare the man who eats only vegetables to the man who is weak in faith (Rom. 14:2). For the vegetables eaten by Daniel and his friends, see PULSE. J. F. ROSS

VEIL; KJV alternately VAIL. There is relatively little material on veils worn by women in the OT. The Talmud has no designation for "veil." The veiled ladies in the present-day Muslim communities would have been out of place, for the most part, in OT times. It follows that several of the terms rendered "veil" in the Bible do not really refer to veils but to ornamental coverings of one kind or another, and their specific meanings are far from clear. Terms translated "veil" are:

- a) צעיף, the veil or shawl mentioned in connection with Rebekah, who put it on when she approached Isaac before her marriage (Gen. 24:65). Here the veil appears to have been the mark of the marriageable maiden, and was removed in connection with the marriage ceremony (cf. Akkadian *kallatum kutumtum*, "veiled bride"). Such a veil was used by

Tamar to trick Judah (Gen. 38:14, 19); here it was a device to conceal her face.

b) רדוד, the veil-like garment worn by the women of Jerusalem (Isa. 3:23) and the maiden in Song of S. 5:7 ("mantle"). The LXX understood it as being a thin summer garment (θήριστρον), probably something like the stoles worn by women today.

c) צמה (KJV "locks"), a face veil, probably of ornamental character (Song of S. 4:1, 3; 6:7; Isa. 47:2).

d) מסוה, the mask wherewith Moses covered his face so that the Israelites were able to abide in his presence after he returned from the mount of God (Exod. 34:33-35). In the NT, Paul, referring to this incident, uses the word κάλυμμα, "hood" or "veil" (II Cor. 3:13-16), as a metaphor for that which conceals a thing from being understood.

e) מסכה (Isa. 25:7), probably some sort of cover, as indicated by its parallelism with "covering." In Isa. 28:20, where the word refers to a bedcover, it is translated "covering."

f) מספחת (KJV "kerchief"), a covering for the head. In connection with the activities of sorceresses (prophetesses), Ezekiel describes the making of these veils for the heads of persons of every stature (Ezek. 13:18).

g) KJV translation of מספחת (RSV CLOAK) in Ruth 3:15.

On רעלה (Isa. 3:19), which is literally "veil," see SCARF.

J. M. MYERS

VEIL OF THE TEMPLE [פרכת, perhaps from Akkad. *paraku*, bar, or *parakku*, shrine; KJV καταπέτασμα (LXX for פרכת; Matt. 27:51; Heb. 6:19; RSV "curtain")]. The veil which hung at the entrance to the Most Holy Place in the temple (II Chr. 3:14) and before the inner room containing the ark and the mercy seat in the tabernacle (Exod. 26:33; 35:12; 39:34; Lev. 24:3). It was figured with cherubim on blue, purple, and scarlet material and fine twined linen (Exod. 26:31; 36:35; II Chr. 3:14) and was hung by clasps from four pillars of acacia wood (Exod. 26:32). In early days no one could enter through the veil except Levitical priests (Num. 18:7), in later times no one but the high priest on the Day of Atonement (Lev. 16:2). The veil was said to be taken down when the tabernacle was to be moved, and used to cover the ark (Num. 4:5).

At Jesus' death (Matt. 27:51; Mark 15:38) or during the Crucifixion (Luke 23:45), the veil of the temple was rent from top to bottom, thus exposing the Most Holy Place to view. The meeting place of God with man (Exod. 30:6) was now open to all. The veil is used in Hebrews as a symbol of the flesh of Christ (10:20), by which believers enter into the inner shrine of faith (6:19; 9:3).

See also TEMPLE, JERUSALEM; TABERNACLE; MOST HOLY PLACE.

***VENGEANCE.** The restoration of wholeness, integrity, to the community, by God or man. The various terms translated "vengeance" are a part of the legal terminology of the Bible.

The chief OT terms for "vengeance" are the nouns נקם (Judg. 16:28) and נקמה (Jer. 50:15). The verb from which they are derived is נקם, generally trans-

lated "avenge" (Num. 31:2). The AVENGER OF BLOOD (נאול הדם) is the next of kin of a slain man who is required by law to requite the life of his kinsman (Num. 35:9-34). Other terms for "vengeance" include ישע (lit., "to assist, save"; I Sam. 25:31), ריב הריב ("to plead the case of someone"; vs. 39), השיב (lit., "to cause punishment to return"; II Sam. 16:8), and שפט ("to judge," "to vindicate"; Ps. 26:1).

The LXX shows considerable variety in the rendering of these Hebrew terms into Greek, but the most common translation is given by the verb ἐκδικέω and its derivatives. The same verb and its derivatives, ἐκδικησις and ἐκδικος, lie behind the translations "to vindicate" (Luke 18:3, 5), "to avenge" (Rom. 12:19), "vengeance" (Heb. 10:30), and "avenger" (I Thess. 4:6).

Seldom does "vengeance" in the Bible carry the connotation of "vindictiveness" or "revenge." Only twice does the noun "revenge" occur (Prov. 6:34; Jer. 20:10), and only two occurrences of the adverb "revengefully" are found (Ezek. 25:12, 15), both in reference to the actions of Israel's enemies. Vengeance was understood to be a necessary means for the healing of the breach made in the solidarity of the family or the community as a result of manslaughter. The avenger of blood was considered to be acting, not only in behalf of family or community, but in God's stead (Gen. 9:5-6). Yet in times of despair, God the vindicator could be counted on as the avenger. When Second Isaiah refers over and over again to Yahweh as Israel's REDEEMER (גאל), he has in view Yahweh's coming restoration of his people to their land and the fulfilment of the promise to their forefathers. I.e., Yahweh is Israel's vindicator and avenger (Isa. 41:14; 43:1, 14; 44:6; etc.). The cries to Yahweh for vengeance, therefore, are cries for redemption, restoration, health, and healing, even though such redemption and healing may involve Yahweh's retributive justice (Jer. 15:15; 20:12).

In the NT, however, vengeance is reserved to God alone for its execution: "Vengeance is mine, I will repay, says the Lord" (Rom. 12:19; cf. Deut. 32:35; Heb. 10:30). God will vindicate his elect who cry to him day and night (Luke 18:7-8; cf. Rev. 6:10). At the last day, he will execute vengeance upon all who stand in opposition to his purpose (Luke 21:22; II Thess. 1:8), thus publicly displaying that redemption, that vindication, which has already been provided in Jesus Christ.

VENISON. KJV translation of צידה, צידה, in Gen. 25:28; 27:3, 5, 7, 19, 25, 31, 33 (RSV GAME).

VERMILION [ששן; cf. Akkad. *šaršarru*, *šaršeru*; LXX μίλτος]. A mineral product obtained from the

widely used red (hematite) ochre; an ideal pigment for painting or "illumination." For the interior of rooms a renewable coat of pigment was spread over plaster. For exterior surfaces and more permanent requirements, ochre combined with clay was fired to produce a solid enamel. Probably a foreign import, it was highly resented by the prophets. Jehoiakim was condemned for neglecting justice while painting the palace with vermilion (Jer. 22:14). Jerusalem, pictured as the prostitute Oholibah, whose lovers were the Egyptians and Babylonians, "saw men portrayed upon the wall, the images of the Chaldeans portrayed in vermilion" (Ezek. 23:14; LXX ἐν γραφίδι).

Wooden idols were painted with vermilion (Wisd. Sol. 13:14; "red paint"). The Greeks employed it for the making of pottery (Pliny Nat. Hist. XXXV.152), and the Athenians attempted to monopolize its production (*Inscriptiones Graecae* II.1.546). The earths *sinopis* and *rubrica* used for pigment by the Romans (Pliny Nat. Hist. XXXV.13-15) were doubtless red ochre.

VERSIONS, ANCIENT. Translations of the Scriptures or of some part of them, produced in ancient times for those who found it difficult or impossible to read the original language or languages. During the last centuries B.C., when certain congregations of Aramaic-speaking Jews became less and less familiar with the classical Hebrew of the OT, paraphrases in Aramaic, called Targums, were produced. About the same time other groups of Jews rendered the OT into Greek, both for themselves and for Gentile readers, who, of course, knew no Hebrew or Aramaic. Subsequent versions into other languages were made, either from the original Hebrew or from the Old Greek translations.

In the early Christian church, a similar need arose for rendering the NT from the original Greek into various other languages. In order to assist in the missionary work of the early evangelists, and to provide converts with the Scriptures in their mother tongue, versions of the NT were made into the languages of the major ethnic groups of the Near East and Southern Europe. In some of these cases the OT had already been available; in other cases the NT was followed by a translation of part or all of the OT.

1. **Aramaic Targums of the OT.** After the Exile the practice arose among Palestinian Jews of accompanying the public reading of the Hebrew scriptures in the synagogue with an oral paraphrase in the Aramaic vernacular for the benefit of a growing number of Jews who were more familiar with Aramaic than with Hebrew. The beginnings of this custom may be reflected in Neh. 8:8, which refers to the explaining of obscure words and phrases in the Hebrew of the Pentateuch. At first this oral interpretation was a simple paraphrase, but later it became more elaborate, and the various explanations tended to become fixed and traditional. Still later these Aramaic Targums (or Targumim)* were reduced to writing. Subsequently, however, by a strange irony of fate, the fact that they were now in a relatively fixed written form operated to abolish their use in the synagogue. As it had been ignorance of Hebrew which had called the Targums into existence, so Aramaic, in the course of time, shared the same fate as Hebrew and was as little understood. Even where Aramaic continued to be the spoken language, it altered its character, so that the dialect of the

2. Scroll of Hebrew text with Aramaic Targ. in alternate verses, written ca. the eleventh century A.D. (Vatican Hebrew MS 448 [Kennicott 283]), showing Targ. of Exod. 40:9 ff

Targums became archaic and difficult to understand. Fig. VER 2.

Today Targums exist for the Pentateuch, the prophetic books, and most of the Hagiographa. Characteristics common to all these paraphrases include the following: (a) a tendency to avoid direct reference to the ineffable name of God, frequently by the use of the word *Mēmā* ("the Word"); (b) in passages referring to God, anthropomorphisms and anthropopathisms are usually avoided and the narrative is recast; (c) some of the Targums include longer or shorter stories (similar to the Midrashim) that serve to illustrate the scripture text.

a. The Pentateuch. There are three Targums for the Pentateuch. The oldest appears to be the so-called Palestinian Pentateuch Targ., which until recently was known only through fragments but now is available in its entirety through the Codex Neofiti I of the Vatican. It preserves the idiomatic Aramaic used in Palestine perhaps as early as the first centuries of the Christian era. Secondly, the Jerusalem Targums of the Pentateuch (I and II), also called the Pseudo-Jonathan Targums, exhibit many of the linguistic and theological characteristics of the Palestinian Pentateuch Targ., but surpass it in the elaboration of angelology and demonology. Thirdly, the Targ. of Onkelos, which became the official Targ. of the synagogue, dates from perhaps the second or third century A.D. Though originally based on Palestinian traditions, in its present form it discloses many marks of Babylonian re-editing. It is quite literal, and of all the Targums is the most restrained in the introduction of extraneous matter. The Hebrew text from which it was made was in all essentials the MT. Gen. 49:10; Num. 24:17 are interpreted messianically.

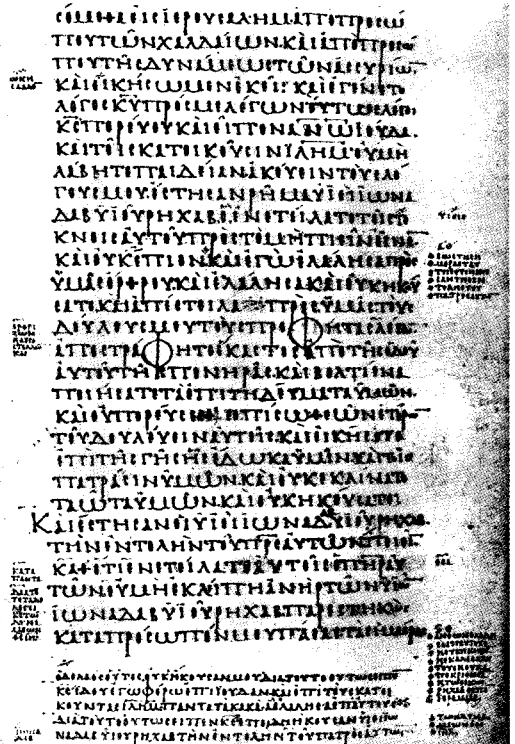

Reference may be made here to the Samaritan Targ.* Early in the Christian era the Samaritan Pentateuch (i.e., Hebrew written in Samaritan characters) was translated into the Aramaic dialect used by the Samaritans. This version differs from the Jewish Targums in being considerably less literal than they. Fig. SAM 21.

b. The Prophets. The official Targ. on the Prophets is known as Targ. Jonathan bar-Uzziel. Like Targ. Onkelos, this one also had its origin in Palestine but was given final form in Babylonia. On the whole, it is not so literal as Onkelos, adhering more closely to the text of the Former Prophets (i.e., Joshua, Judges, I and II Samuel, I and II Kings) than to the text of the Latter Prophets (i.e., Isaiah, Jeremiah, Ezekiel, and the twelve minor prophets). A messianic interpretation is given to numerous passages, including Isa. 53.

c. The Hagiographa. One or more Targums exist for all books of the Hagiographa except for Ezra, Nehemiah, and Daniel. In general, these Targums differ widely among themselves as to dialectal peculiarities, as well as the degree of freedom of paraphrase (some are not translations but commentaries). None of the extant Targums on the Hagiographa is older than ca. the fifth century, and most of them are much later. It is likely, therefore, that they were never meant for public use in the synagogue or school, having been composed after the need of Aramaic translations had ceased.

2. Greek versions of the OT. a. The LXX. The word SEPTUAGINT (LXX) means "seventy" and refers to the legend that seventy (or seventy-two) Jewish scholars prepared a Greek translation of the Hebrew OT at Pharos in the harbor of Alexandria in Egypt. The story is first told in the so-called "Letter of Aristeas"; ARISTEAS pretends to be a contemporary of the translators during the reign of King Ptolemy Philadelphus (285-246 B.C.). Amid many unhistorical details in this story, the nucleus of fact appears to be that the Pentateuch was translated into Greek in Egypt sometime during the first half of the third century B.C. During the following two centuries the rest of the OT was translated, as well as certain noncanonical books (Sirach, Tobit, etc.). To all these, along with still other apocryphal books composed in Greek, the name LXX came to be given. When the NT authors quote from the OT, most of them quote it, not from the original Hebrew, but from the LXX or other Greek versions. In the early church, Gentile converts (who, of course, were ignorant of Hebrew) made use of the OT exclusively in its Greek form. As a result of the widespread use of the LXX by Christians, the Jews repudiated this version, and other Greek translations were prepared for their use. Notable among these were the renderings made by Aquila, Theodotion, and Symmachus. See § 2b below. Fig. VER 3.

In the course of the transmission of MS copies of the LXX, its text underwent several major changes

From Lietzmann, *Specimina codicum graecorum Vaticanorum* (Berlin: A. Marcus and E. Weber, 1910); by permission of Alired Töpelmann, Berlin

3. Codex Marchalianus of the LXX, written not later than the sixth century A.D. (Vatican Greek MS 2125), showing Jer. 42:11 ff

beyond the usual amount of alteration inevitable in copying by hand. The first of these modifications was occasioned by the production at the beginning of the third century of Origen's famous Hexapla. This monumental work, the product of twenty years of stupendous energy on the part of the greatest Christian scholar of his time, was a sixfold version of the OT. In parallel columns, at each opening of his book, stood the following different texts: (a) the Hebrew text, written with only one or two words per line; (b) a transliteration of the Hebrew into Greek letters; (c) Aquila's Greek version; (d) Symmachus' Greek version; (e) the LXX; (f) Theodotion's Greek version.

The text of the LXX which Origen provided was a revised text. He marked with an obelus (— or ÷) Greek words which were not in his Hebrew text. Words occurring in the Hebrew but not in the LXX were inserted in the latter from Theodotion's Greek version, such insertions being marked by an asterisk (*). A metobelus (: or % or <) marked the conclusion of the passage to which the asterisk or obelus referred.

So enormous was the Hexapla (containing, as it did, the OT copied out six times, involving perhaps seven thousand pages), that it probably was never recopied as a whole. Fragments of his magnum opus, however, are preserved in quotations made by various church fathers, and several editions of the fifth column, containing the LXX, were subsequently made. In recopying this column, however, it was inevitable that scribes would misunderstand the several critical symbols which Origen had used, and, as the LXX was now separate from the Hebrew column, would misplace them or, more often, omit them entirely. Thus the additions from Theodotion's version were confused with the LXX text, and Origen's painstaking labors unwittingly worked to introduce chaos into the text of the original LXX.

During the century following Origen's researches, three editions or recensions of his LXX text were published: (a) Eusebius of Caesarea, with the assistance of his friend Pamphilus, supplied Constantine the Great with fifty copies of the Greek Bible, containing in the OT Origen's fifth column, with alternative readings from the other versions in the margins.

b) Lucian of Samosata, a presbyter of Antioch who died a martyr's death at Nicomedia in A.D. 311 or 312, issued a revised text of the LXX, of which the most distinctive characteristic was his habit, when he found different words or phrases in different copies, of combining them into a conflated reading, and so of preserving both.

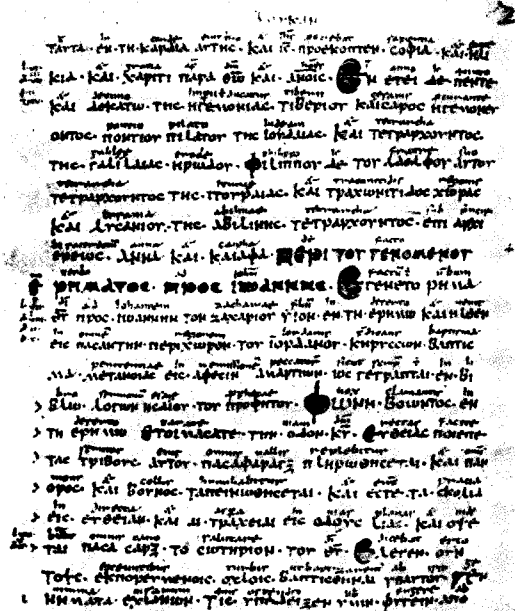

c) A third edition of the LXX was prepared by a certain Hesychius, who, so it is thought, was the martyr-bishop in Egypt mentioned by Eusebius (Hist. VIII.13).

Thus it came about that, at about the same time (ca. 300), three forms of the LXX were circulated in different regions: the edition of Eusebius and Pamphilus was generally used in Palestine; that of Lucian was accepted, not only at the place of its origin in Antioch, but in Constantinople and Asia Minor as well; while the Hesychian recension was disseminated in Egypt.

Even from this abbreviated account of the history of the transmission of the LXX, it will be readily perceived that many problems confront the scholar who seeks to recover the earliest Greek translation (or translations) of the OT. There is much mixture in extant MSS of the several earlier editions of the LXX, and only by patient comparison of readings in the MSS with the quotations of the Greek OT which church fathers made in Palestine, Constantinople and Asia Minor, and Egypt can one ascertain the recension to which each MS belongs. Furthermore, it is only by comparing the evidence of early versions made from these forms of the LXX, or made from the pre-Origenian form of the LXX, that progress can be made in charting the history of its transmission. At each stage of its transmission, the possibility of fresh corrections made from a Hebrew text that may have differed from the MT must be taken into account. Finally, the investigation becomes still more complicated if it be true, as some present-day scholars urge, that in various localities Greek-speaking Jews were accustomed to make renderings of the OT, after the manner of a Greek Targ., for the use of the local congregations. Thus, the MSS of the so-called LXX would not go back ultimately to one archetype made in Egypt, but to a multiplicity of renderings made at various localities. To the extent that this may be the situation, the task confronting the modern scholar in seeking to chart the vicissitudes of the transmission of the Greek OT, and to ascertain its earliest form, becomes one of bewildering proportions.

4. Greek Gospels MS with an OL interlinear, written during the ninth century A.D. (Codex Sangallensis, Greg. Δ), showing Luke 2:51 ff

ticularly in polemics against the Jews, the latter repudiated it as an inaccurate version of the Scriptures. Of several rival renderings of the OT that were produced, three are known today by the name of their translators, and three others must be referred to anonymously. Unfortunately all these are preserved only in relatively small fragments and in a limited number of patristic citations.

Ca. A.D. 130, Aquila, a native of Pontus and a proselyte to Judaism, completed an extremely literal rendering of the OT (see AQUILA'S VERSION). It was evidently his aim to find a Greek equivalent for every word in the original and to translate the derivatives of a Hebrew root by derivatives from the corresponding Greek root. As a result, his work was so slavishly literal as often to be unintelligible to readers who did not already know Hebrew as well as Greek. Aquila expressed his opposition to the Christians by rendering some of the messianic passages differently from the translation given by the LXX and upheld by the church.

Sometime during the second century A.D., THEODOTON, a Jewish proselyte of Ephesus (so Irenaeus; but Jerome says he was an Ebionite Christian), produced what seems to be a free revision of the LXX on the basis of the Hebrew. In Job it follows the MT much more closely than does the LXX, which is about one sixth shorter than the Hebrew text. In Daniel, Theodoton's Version lacks certain midrashic expressions which are present in the LXX, and, probably for this reason, his rendering became the accepted text used by the church. A characteristic of this version is the frequency with which Hebrew words have been transliterated and not translated.

One of the problems relating to Theodoton's Version arises from the circumstance that several quotations of the OT occur in the NT in a form differing from the LXX and agreeing with his rendering. The usual explanation is that Theodoton made use of some earlier version, perhaps a Greek Targ., oral or written, current in Ephesus during the first Christian century.

Toward the end of the second Christian century an Ebionite named SYMMACHUS produced a Greek translation of the OT quite different from Aquila's literalistic rendering. It is, in fact, distinguished by the purity of its Greek and the absence of Hebraisms. At the same time the freedom of his rendering sometimes lapses into paraphrase marked by anti-anthropomorphic renderings under the influence of the later Jewish tendencies.

The researches of Origen brought to light three anonymous Greek versions of portions of the OT. These are generally called, from their position relative to the four Greek versions in his great Hexapla, the Quinta, the Sexta, and the Septima versions. According to Eusebius, Origen found Quinta at Nicopolis, near Actium, and one of the other two near Jericho buried in a clay wine jar, partly sunk in the ground. To judge by the fragmentary quotations which survive, Quinta was written in very elegant Greek, comparable to the best Greek authors of the period. Sexta also shows some command of Greek and is marked by occasional tendencies to paraphrase.

Several Greek patristic writers of the fourth and fifth centuries quote non-Septuagintal renderings of the OT from a translator who is called "the Hebrew." "The Syrian" is also cited, who sometimes is said to agree with "the Hebrew." Nothing definite is known of these.

3. Latin versions. a. Old Latin versions. The name "Old Latin" is used here to denote the Latin translations of the Bible which existed prior to, or independent of, the great revision made by Jerome at the close of the fourth century. It appears that the Scriptures were translated into Latin first in North Africa sometime during the last quarter of the second century A.D. The OT was not translated from the Hebrew, but was based on the Old Greek text; it therefore is of importance in determining the pre-Origenian form of the LXX. In the third century A.D. several Old Latin versions circulated in Europe, including versions current in Italy, in Gaul, and in Spain. Divergent renderings of the same verse (at least eight variant renderings exist at Deut. 31:17, and at Luke 24:4-5 there are at least twenty-seven variant readings) bear out Jerome's complaint that there were almost as many readings as copies of the Old Latin. Undoubtedly what Augustine called the "infinite variety of Latin translations" (*On Christian Doctrine* II.11) arose from the circumstance that "in the early days of the faith, every man who happened to gain possession of a Greek MS and who imagined that he had any facility in both languages (however slight that may be) dared to make a translation" (II.13). The language of the Old Latin fragments corroborates this information as to their origin; instead of being the polished, literary language of that time, it is the vernacular and sometimes uncouth dialect of the common people.

To what family or text type do the Old Latin versions belong? It is easier to answer this for the NT than for the OT. In the NT the Old Latin witnesses support the so-called "Western" text, which is reflected in the bilingual MS Codex Bezae (see TEXT, NT). In the OT, where the textual families of LXX MSS have not been as fully worked out, it appears that in the historical and prophetic books the Old Latin not infrequently supports the Lucianic recension of the LXX.

b. The Latin Vulg. The Latin Vulg. Bible, prepared by Jerome at the end of the fourth century, has exerted a pervasive and profound influence throughout Western Europe. Not only did it become the authoritative text of the Roman church, influencing ecclesiastical terminology, but even in the secular world its Latinity left its mark as Latin developed into the Romance languages.

By the close of the fourth century the limitations and imperfections of the Old Latin versions had become evident to the leaders of the Roman church. In the OT the renderings rested on the Greek of the LXX instead of the original Hebrew, and in both testaments scribal corruptions had disfigured still further what had never been scholarly translations. It is not surprising, therefore, that ca. 382 Pope Damasus requested the most capable biblical scholar then living, Eusebius Hieronymus, known today as Jerome, to undertake a revision of the Latin Bible. Jerome accepted the task, and in 383 he sent

Damasus the first installment of his work, the four gospels. In his prefatory letter Jerome explains that he made a careful comparison of the ancient Greek MSS and altered the current Old Latin only when it seemed absolutely necessary, retaining in all other cases what had become familiar Latin phraseology. This procedure probably accounts for the presence of quite diverse renderings of identical expressions in Greek (thus, "high priest" is translated in Matthew by *princeps sacerdotum*, in Mark by *summus sacerdos*, in John by *pontifex*). When and how thoroughly he revised the rest of the NT has been debated by scholars. The commonly accepted opinion is that he performed his work in a much more cursory manner. Several scholars, however, have argued that Jerome had nothing to do with the making of the Vulg. text of the rest of the NT, but that, by a curious twist of literary history, the work of some other translator came to be circulated as Jerome's Vulg. text.

Jerome's first work on the OT was a revision of the Psalter on the basis of the LXX, undertaken soon after he had finished the gospels. Known as the Roman Psalter, it was introduced immediately into the liturgy (it is still used at St. Peter's in Rome and in Milan). A few years later in Palestine, Jerome revised the Psalter a second time. Dissatisfied with the Greek text he had used previously, for this revision Jerome obtained from the library at Caesarea a copy of the Psalms in the fifth column of Origen's Hexapla (see § 2a above). Known as the Gallican Psalter, because it was first used chiefly in Gaul, this version came to be incorporated in the traditional Vulg. Bible, and thus was the basis of Coverdale's English translation, which, through the "Great Bible" of 1539, passed into the Psalter of the Book of Common Prayer. Sometime later, as it seems, Jerome made a third translation of the Psalms, this time from the original Hebrew. In spite of its superior accuracy, this version never circulated widely and is found today in only a limited number of MSS. The text of the Gallican Psalter differs from the Hebrew at many places, perhaps the most noteworthy being the addition of three verses (from Rom. 3:13 ff) after Ps. 14:3, an interpolation which is still reproduced in the Prayer Book.

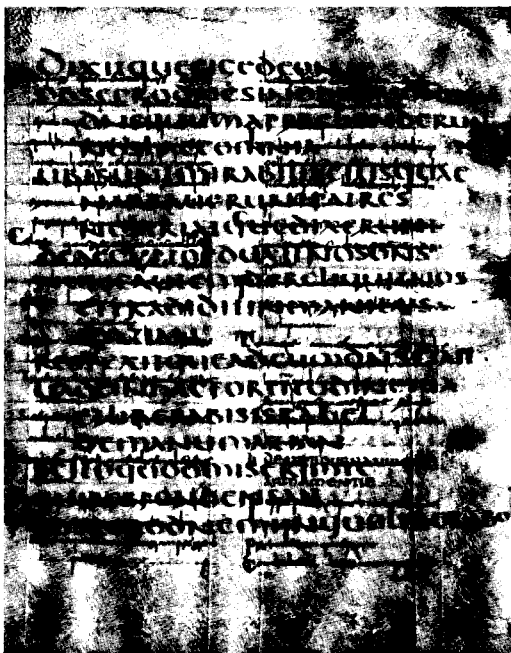

After revising other OT books from the LXX, Jerome came to realize that the only satisfactory procedure was to translate the *Hebraica veritas*. In his labors Jerome frequently consulted Jewish rabbis, whose influence is to be seen in occasional coincidences between the Vulg. and the Targums.

Outside the circle of Jerome's friends and admirers his revision was greeted with suspicion and even hostility. The sweeping nature of some of the changes that he introduced, as well as the marked difference of the text which he translated, alienated those who loved the older Latin renderings and could not understand the critical reasons for the alterations. Even Augustine was troubled that, by choosing the Hebrew OT as the basis instead of the LXX, Jerome seemed to cast doubts upon the divine inspiration of the latter! Jerome's naturally irascible temper showed little patience with his critics; in a letter to one of his friends he describes them as "two-legged asses." During subsequent centuries, however, the intrinsic

worth of Jerome's version came to be more widely appreciated, and eventually it was accepted throughout Western Christendom, thus earning for itself the name Vulg. (*vulgata [versio]*, "the common version").

It was perhaps inevitable that, in the course of its transmission, scribes would corrupt Jerome's original work, sometimes by carelessness in transcription, sometimes by deliberate conflation with copies of the Old Latin versions. In order to purify Jerome's text a number of medieval recensions or editions were produced. Notable among these were the editorial work of Alcuin, Theodulf, Lanfranc, and Stephen Harding. In the thirteenth century numerous "Correctoria" of the Latin Bible were collected by scholars at the University of Paris and elsewhere. Unfortunately, however, each of these several attempts at purifying current copies of Jerome's versions resulted eventually in still further textual corruption. As a result, the more than eight thousand MSS of the Vulg. known today exhibit the greatest degree of bewildering cross-contamination of textual type.

The decision at the Council of Trent (1546) to prepare an authentic edition of the Scriptures in Latin was finally taken in hand by Pope Sixtus V, who issued an edition in 1590. After his death, in 1592 Pope Clement VIII called in all copies he could find and issued another authentic edition—differing from the former in some three thousand variants. This latter edition has remained the official text of the Roman church until today. Since 1907 work has been going forward among Benedictine scholars on a revised edition of the Latin Vulg.; most of the

volumes of the OT have now been finished. A critical edition of the NT has been published at Oxford by several Anglican scholars. Begun by John Wordsworth and H. J. White, the first fascicle (Matthew) appeared in 1889; the last fascicle (Revelation), the work of H. F. D. Sparks, was issued in 1954.

Fig. VER 5.

4. Syriac versions. Syriac, a Semitic language, was the Aramaic dialect used at Edessa and in W Mesopotamia. It was similar to, but not identical with, the Aramaic dialect used in Palestine during the time of Jesus and his apostles.

a. The Old Syriac (and Tatian's Diatessaron). The oldest translation of part of the NT into Syriac was made sometime during the second century. Except for quotations by Syriac patristic writers, this version has been preserved in only two MSS; they are fragmentary copies of the four gospels, usually designated the Sinaitic Syriac MS (dating from *ca.* the fourth century) and the Curetonian Syriac MS (*ca.* the fifth century). The form of text in these MSS belongs in general to the "Western" family (see TEXT, NT), and is characterized by many striking omissions. Fig. VER 6.

6. MS of the Old Syriac Gospels written during the early part of the fifth century A.D. (Curetonian MS; Brit. Mus. Add. 14451), showing John 6:30 ff

Related to the Old Syriac version (but whether antecedent or subsequent is debated) is Tatian's famous Diatessaron, or Harmony of the Gospels. Drawn up *ca.* A.D. 170, it circulated widely in the Near East until zealous Syrian ecclesiastics sought out and destroyed copies after Tatian had been adjudged heretical. Unfortunately no MSS of the complete Diatessaron are known to exist today; except

for a tiny Greek fragment dating from *ca.* 220, our knowledge of Tatian's work rests only on secondary sources (e.g., quotations preserved in Ephraem's Syriac Commentary on the Diatessaron, and an Arabic translation of a form of the Diatessaron, the text of which had been partially conformed to the Peshitta Syriac Version).

b. The Peshitta. The word "Peshitta" means literally "the simple [version]," in contradistinction to more elaborate forms of Syriac text, such as the Hexaplaric Version of the OT and the Harclean Version of the NT, both of which had marginal variants and other critical apparatus. The origin of the Peshitta Version is obscure, both as to date and as to identity of the translators. The OT Peshitta was the work of many hands. Perhaps the Pentateuch was translated first, sometime in the second or third century A.D. Since its text follows closely the Masoretic Hebrew and resembles the Targ. Onkelos, many scholars have surmised that it was produced by Jews or by Jewish Christians. Subsequently the other books of the OT were added, some rendered freely after the manner of Targumic paraphrases. Later some of the biblical books were sporadically revised to conform to the LXX. The oldest extant MS of the Peshitta has the distinction of being the oldest copy of the Bible in any language of which the exact date is known; it is a MS of the Pentateuch dating from A.D. 442.

The Peshitta Version of the NT appears to date from the latter part of the fourth century. By this time the Old Syriac, like the Old Latin, had come to exist in a variety of forms. A uniform Syriac version was desirable, and as Jerome made a Vulg. text for the Latin church, so someone produced a common text for the Syrian churches. It was not a new translation, but a revision of the Old Syriac on the basis of the Greek text. The version was adopted by both Jacobite and Nestorian branches of the Syrian church, and has been transmitted very faithfully with a minimum number of scribal variants in the MSS.

Since the Syrian church did not accept as canonical the four minor Catholic letters (II Peter, II and III John, Jude) and the book of Revelation, the Peshitta did not include these five books.

c. The Philoxenian and/or Harclean. Among the Jacobites (a Monophysite branch of the Syrian church) several attempts were made to displace the popularity of the Peshitta Version. At the beginning of the sixth century Philoxenus, bishop of Mabbug, commissioned his coadjutor Polycarp to prepare a translation of the Greek Bible (LXX and entire NT). Very little of this version, which was finished in 508, has survived. To judge by extant fragments of Isaiah, a Lucianic text was used as the basis of revision of the OT. For the first time the minor Catholic letters and Revelation were included in a Syriac Bible. Printed editions of the Peshitta NT frequently contain these five books in the Philoxenian Version. No other part of the NT in this version appears to have survived.

Ca. a century after Philoxenus, the work of revision was resumed. Thomas of Heraclea (Ḥarḳel of Mesopotamia) published a version equipped with marginal notes of variant readings found in several Greek MSS. Scholars are not agreed as to whether

Thomas' work involved a complete revision of the Philonenian Version, or whether he merely reissued the earlier version with the marginal additions. It is, especially for Acts, one of the most important witnesses to the "Western" form of text.

d. The Palestinian Syriac. Toward the close of the fourth century the Melchite Christians of Palestine appear to have reduced to writing the version which heretofore had been provided orally when the Greek scriptures were read in church services (Aetheria [Silvia] *Peregrinatio* XLVII.3). The dialect, which differs slightly from Syriac, should more properly be called Palestinian Aramaic; its chief resemblance to Syriac is the form of script in which it is written. Of the OT only fragments remain of several books; of these the Psalter is best represented with forty-two psalms complete and stray verses of others. The general view is that the OT version was made from the

7. Palestinian Syriac lectionary of the Gospels, written A.D. 1104 (MS B; Monastery of St. Catherine on Mount Sinai), showing John 12:24 ff

LXX, though a few scholars have thought that in the Pentateuch it rests upon a Jewish Palestinian Targ. Of the NT the most extensive remains are in the form of gospel lectionaries. Here the text, while not free from the influence of the Peshitta, reflects a form of Greek text current in Palestine during the fourth and fifth centuries.

Fig. VER 7.

e. Paul of Tella's Syro-Hexaplar. Corresponding to the Harclean revision of the NT was the version of the OT known as the Syro-Hexaplar. This was made by Paul, bishop of Tella de-Mauzeleth near Alexandria, who undertook the work at the request of Patriarch Athanasius I. Finished in 616/617, it is a translation of the LXX text in the fifth column of

Origen's Hexapla with the asterisks and obeli preserved (see § 2a above), together with many marginal renderings from other Greek translators, such as Aquila, Symmachus, and Theodotion. Happily the version is extant for most of the books of the OT. The oldest Syro-Hexaplar MS (now in the Ambrosian library at Milan) is only a century younger than the original translation. It contains the poetical and prophetic books and has been published in a photolithographic edition. The importance of this version is very great, for it is an early and extensive witness to the Hexaplaric text of the LXX along with the Hexaplaric signs. It also witnesses to the original LXX text of the book of Daniel, a text which was almost totally supplanted in the church by Theodotion's version.

5. Coptic versions. Coptic is the latest form of the ancient Egyptian language, which until Christian times was written in hieroglyphs and their two derivatives, hieratic and demotic. During the early Christian era the language came to be written in the Greek alphabet, with the addition of seven characters taken from demotic. During the course of the centuries several dialects of Coptic developed at settlements along the Nile River. Today portions of the Bible are extant in six dialects: (a) Sahidic, formerly called Thebaic, used in Upper (i.e., S) Egypt; (b) Bohairic, formerly called Memphitic, used in Lower (i.e., N) Egypt, including Alexandria; (c) Achmimic, used in Upper Egypt around Achmim, the ancient Panopolis; (d) sub-Achmimic, used S of Asyut; (e) Middle Egyptian; and (f) Fayyumic, formerly known as Bashmuriac, used W of the Nile and S of the Delta.

Of these dialects the first two are the most important for the study of the early versions of the

8. Coptic papyrus codex of John, written in the sub-Achmimic dialect ca. the third quarter of the fourth century A.D. (now in the Library of the British and Foreign Bible Society), showing John 6:14 ff

Bible. Portions of the NT were first rendered into Sahidic by *ca.* the beginning of the third century. By perhaps a century later, most of the books of the Bible were translated. Indeed, if one may judge on the basis of the existence of widely divergent Sahidic texts, some books were translated several times by independent translators.

The Bohairic Version, which appears to be one of the latest of the Coptic versions, came in the course of the centuries to supersede the use of the other versions. More MSS in this dialect have been preserved than in any other, but almost all of them are relatively late in date (twelfth to fourteenth centuries).

For the OT the Coptic translators utilized the LXX. In the Sahidic Version of Job, it appears that the translator used a pre-Hexaplar copy of the Greek, for it lacks about 375 lines (i.e., half-verses) which Origen inserted into the LXX text from Theod. The Sahidic Version of Daniel, on the other hand, was made from Theodotion's text. The Bohairic version of the Prophets discloses textual affinities with the Hesychian recension of the LXX.

In the NT both the Sahidic and the Bohairic versions agree often with the Alexandrian type of text.

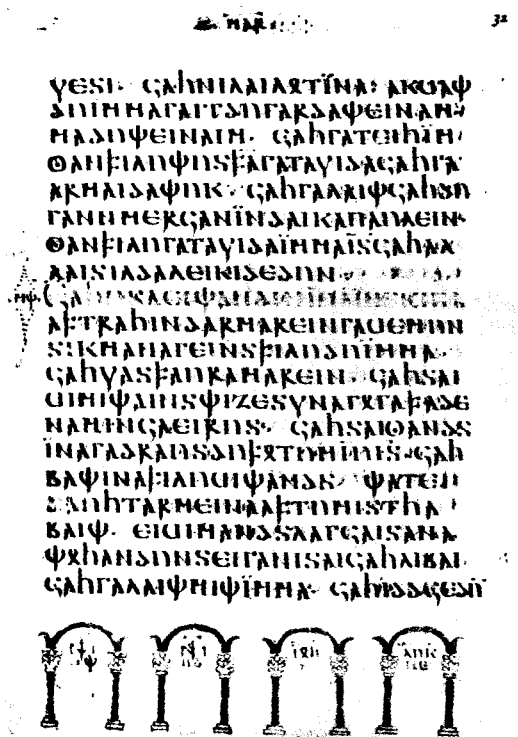

Except for an important MS of the Gospel of John in sub-Achmimic,* dating from the fourth century, only relatively small fragments have been preserved in the other dialects. Much study remains to be done on questions of date, mutual relationships, and textual type of the Coptic versions. Fig. VER 8.

6. The Gothic Version. The Gothic Version is noteworthy in several respects: it is the earliest one of which we have information regarding the identity of its translator; it is one of a few versions for which an alphabet is said to have been invented by the translator; it is the oldest surviving literature in any Teutonic language; and it is the only version of any considerable extent of which all the known MS evidence has been utilized. Produced by the learned Bishop Ulfilas, the apostle of the Goths of the Danubian provinces during the mid-fourth century, this version survives today in only six MSS, all of them fragmentary. The most complete is a deluxe copy dating from the fifth or sixth century and containing portions of all four gospels, which stand in the so-called "Western" order (Matthew, John, Luke, and Mark). It is written on purple vellum in large letters of silver ink, whence the name that is commonly given to this MS: Codex Argenteus (i.e., the Silver Codex).

Of the OT very few fragments survive (namely, Gen. 5:3-32; Ps. 52:2-3; and portions of Nehemiah). The translation is based on Lucian's recension of the LXX (*see* § 2a above). Of the NT more or less extensive remains are extant for all the books except the Acts, the Catholic letters, and Revelation. The character of the text appears to be similar in certain respects to the form of the Old Latin that circulated in Italy.

Fig. VER 9.

7. The Armenian Version. In the early years of the fifth century of the Christian era, Mesrop, the inventor of the Armenian alphabet, and Sahak the Patriarch began a translation of the Bible and of the liturgy into the national language as a reaction

9. Deluxe Gothic MS of the Gospels, written in the fifth or sixth century A.D. (Codex Argenteus of Uppsala), showing Mark 5:18 ff

against the prevailing use of Syriac in the worship.

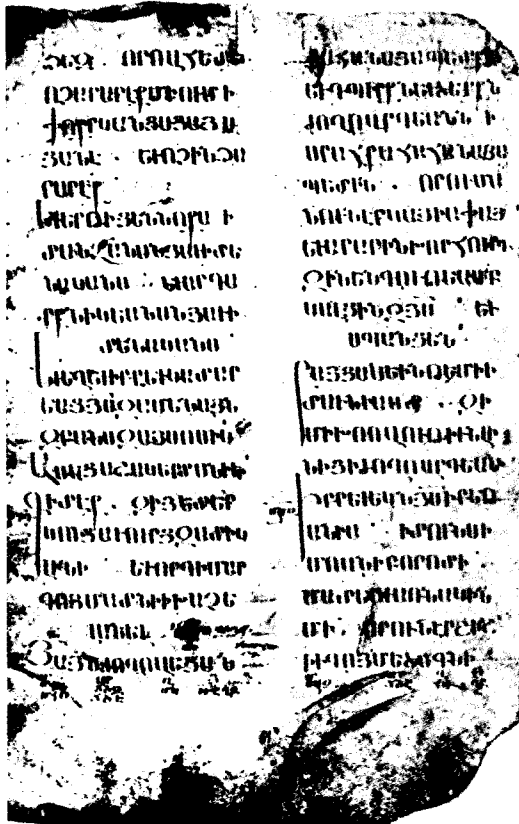

Tradition is divided as to the textual basis of the rendering of the OT. Moses of Chorene (said to have been a nephew of Mesrop) states that the work was made, at least at the beginning, from the Syriac Version, because the Persian king Meroujah had burned, thirty years before, all the Greek books of the Armenians. Other early Armenian historians, however, declare that the rendering was made at the outset from Greek copies which had been secured at Constantinople and Alexandria. In any case, an examination of surviving Armenian MSS indicates that the OT rests upon the Hexaplaric recension of the OT. On the other hand, certain passages (notably in Jeremiah) disclose evidence of a (later?) revision from the Syriac.

Whether the NT was translated from the original Greek or from an intermediate Syriac version has been debated by scholars. The inclusion of the apocryphal Third Letter of Paul to the Corinthians in the early canon of both the Syrian and Armenian churches, and the presence of traces of Syriac orthography of proper names and Semitic syntax in the older Armenian patristic quotations of the NT, suggest a strong influence from Syria. On the other hand, most extant MSS embody a more Hellenized form of text. Probably, therefore, the original Armenian Version underwent a subsequent revision sometime between the fifth and eighth centuries. There is also a certain amount of evidence that the earliest form in which the gospels circulated in Ar-

menian was that of a harmony, modeled upon Tatian's Diatessaron. See § 4 above. Fig. VER 10.

The book of Revelation underwent a remarkable series of revisions, of which Conybeare thought he could distinguish at least five. First rendered into Armenian in the fifth century (perhaps from an Old Latin original; so Conybeare), the most thoroughgoing revision was made during the twelfth century by Nerses of Lambron, bishop of Tarsus.

On the whole, the Armenian Version is unsurpassed for beauty of diction and accuracy of rendering. Called the "queen of the versions" (La Croze), it deserves far more attention than scholars have been accustomed to devote to its study.

From A. Vööbus, *Early Versions of the New Testament*
10. Armenian MS of the Gospels, written A.D. 887 (Codex Lazareff), showing Matt. 25:45 ff

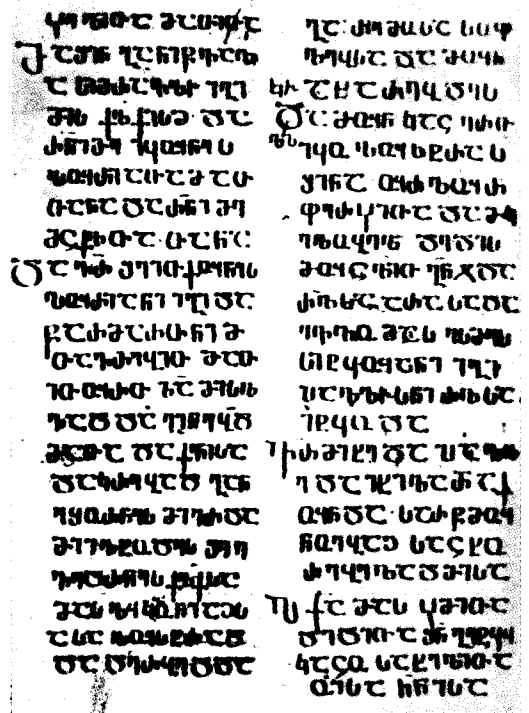

8. The Georgian Version. The Georgian language, used by a strong and vigorous people living in the Caucasus between the Black Sea and the Caspian, appears to be unrelated to any other known tongue. After Christianity had been introduced among the Georgians in the fourth century, Mesrop, according to Armenian traditions, invented and introduced an alphabet into Georgia. Who it was that made the earliest translation of the Scriptures into Georgian, what portions were first to be rendered, and what the textual basis was (Greek, Syriac, or Armenian), are questions more easily asked than answered. Probably the gospels and the Psalter were translated during the first part of the fifth century;

the book of Revelation, on the other hand, was not rendered until the end of the tenth or beginning of the eleventh century.

As regards the Georgian OT, the evidence of the MSS indicates that different parts were translated at different times and from different archetypes. One version of the Octateuch was made from the LXX. Another version, in the Prophets at least, was made from the Armenian. The NT, on the other hand, despite an ecclesiastical tradition which asserts that it was made directly from the Greek, is believed by those who have studied the version to rest either upon a Syriac or (more probably) an Armenian basis. Scholars have distinguished five versions or recensions of the Old Georgian gospels prior to a thoroughgoing revision made by Euthymius at the close of the tenth century. During the following century George the Hagiorite completed on Mount Athos a revised version of the Georgian NT which, in substance, has remained the basis of various printed editions.

Fig. VER 11.

9. The Ethiopic Version. The origins of Christianity in Ethiopia are hidden in the mists of history. How far the Ethiopian eunuch whom Philip baptized (Acts 8:26-39) may have spread the faith in his own country, we have no knowledge. The first definite historical figure in the Christianization of that land is Frumentius, whom Athanasius, patriarch of Alexandria, consecrated bishop of Aksum sometime ca. the middle of the fourth century. Presumably at or soon after this date a need was felt for translating por-

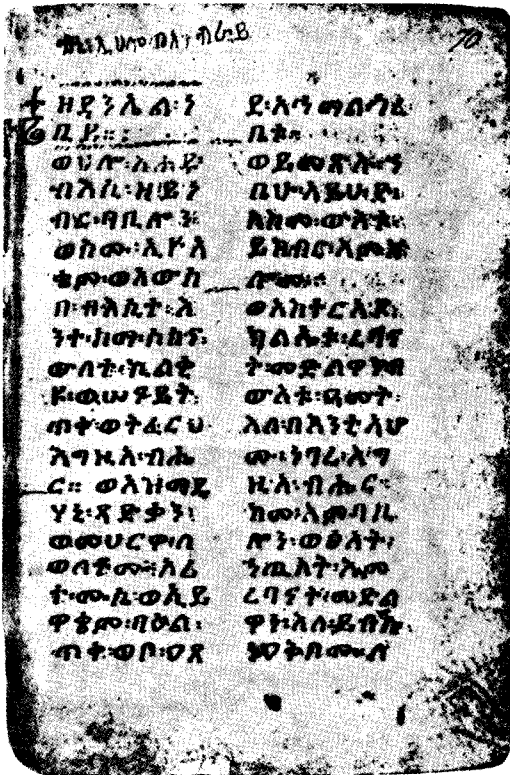

From A. Vööbus, *Early Versions of the New Testament*
11. Georgian MS of the Acts and the Catholic letters, written A.D. 974 (Monastery of St. Catherine on Mount Sinai), showing Acts 14:4 ff

tions of the Scriptures into the native tongue. It is not known whether Frumentius began the work of translation or whether (in accord with Abyssinian traditions) this was done by a group of nine Syrian monks who as Monophysites fled after the Council of Chalcedon in 451 from Syria to Egypt, whence they made their way to Ethiopia.

Wide textual differences exist among the extant Ethiopic MSS, none of which is known to antedate the thirteenth century. Most MSS after the fourteenth century preserve a text which has been extensively revised on the basis of the medieval Arabic text current at Alexandria. In the OT it appears that the original Ethiopic Version was made in the main from the LXX (though some scholars have thought they could discern influence from the Hebrew). In I Kings the type of text resembles the Greek of Codex Vaticanus, with strong Lucianic influence. The Ethiopic text of the NT is quite variegated: at times the translators followed the Greek text slavishly, even as regards the order of words, but at other times, perhaps where the Greek proved to be too difficult for them, they paraphrased wildly. The earlier type of text is predominantly Antiochian, but with occasional agreements with certain early Greek MSS (P⁴⁶ and B) against all other witnesses.

Fig. VER 12.

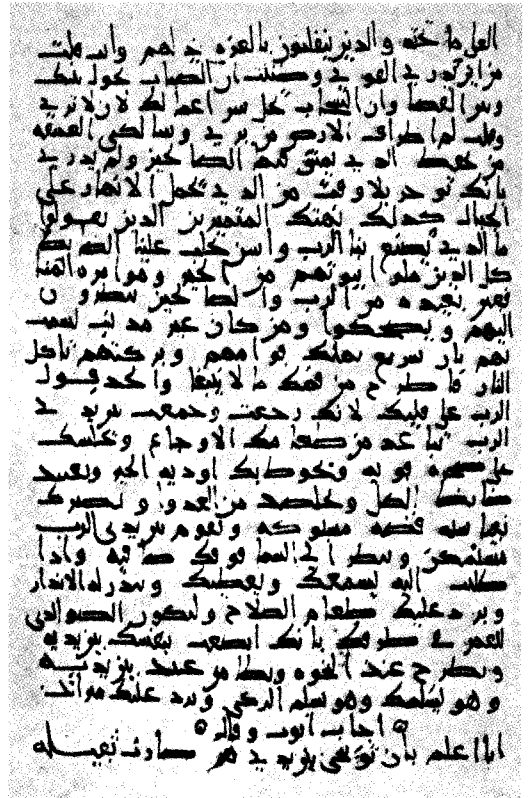

10. Arabic versions. Opinion differs as to when the first Arabic translation of the Scriptures was

From Würthwein, *Der Text des Alten Testaments*; courtesy of Privilegierte Württembergische Bibelanstalt, Stuttgart

made. Most scholars believe that not until after the death of Mohammed (A.D. 632), when the success of the Koran had made Arabic into a literary language, was the need for an Arabic version of the Bible really felt. (Prior to this time, it appears, Syriac was the ecclesiastical language among Christians in Arabia.) Other scholars, however, maintain that it is improbable that missionaries, who had introduced Christianity into Arabia long before this date, would have neglected to provide their converts with sacred literature in the vernacular. However this may be, the earliest extant biblical references are in quotations made by ninth-century writers.

13. Arabic MS of the book of Job, written in the first half of the ninth century A.D. (British Museum add. 26116), showing Job 22:12 ff

The Arabic MSS of the Bible preserve a multiplicity of versions, made from Hebrew, Greek, Samaritan, Syriac (several forms), Coptic (several dialects), and Latin. Some of the more interesting are the following:

The first and most important rendering from Hebrew was made by Sa'adya the Ga'on, a learned Jew who was head of the rabbinic school at Sura in Babylon (died 942). The translation discloses traces of Talmudic exegesis (such as the removal of anthropomorphisms) and of Sa'adya's own philosophy.

In 946 Isaak the son of Velásquez, a Spanish Christian of Córdoba, made a translation of the gospels on the basis of a Latin MS that contained Old Latin and Diatessaric readings.

In Alexandria during the thirteenth century two Arabic recensions of the gospels were produced. Ca. 1250 a Christian named Hibat Allāh ibn al-'Assāl revised an Arabic text translated from Coptic, using other Arabic translations made from Greek and Syriac, also furnishing his revision with a complicated critical apparatus. This proved to be too cumbersome for popular use, and was superseded at the close of the century by what has come to be termed the modern "Alexandrian Vulg." While depending chiefly upon the Coptic, it takes into account texts translated from Greek and Syriac. The unknown translator combined general fidelity to the original with a certain smoothness of style.

Fig. VER 13.

11. **The Old Church Slavonic Version.** See VER-SIONS, MEDIEVAL AND MODERN, § 9a.

12. **Other ancient versions.** The Anglo-Saxon Version can be treated best as the historical antecedent to the English versions.

The Sogdian Version and the Nubian Version were made sometime during the sixth or seventh centuries, the former for Christians of Central Asia, the latter for the flourishing church of Nubia, between Egypt and Ethiopia. All that survives today of each version is a fragmentary lectionary MS.

***VERSIONS, ENGLISH.** The first English version of the complete Bible appeared in 1382, although Christianity had entered Britain more than a thousand years earlier. This early date for the beginnings of the church there rests on a statement of Tertullian (*Against the Jews* 7) that the gospel had progressed in Britain beyond the limits of Roman arms. Origen also (before A.D. 230) makes references in his homilies that support this early date. In 314 three bishops of Britain attended the Council of Arles. But while we can speak with assurance of the Christian movement in Britain probably earlier than the third century of the Christian era, there is no evidence of translation of the Bible. We may assume that the

work of the missionaries was carried on by means of a running oral paraphrase of the biblical text. No written version was required at first. Moreover, the mingling and commingling of languages on the Isles of Britain placed a barrier to earlier translations of the Bible.

- Bibliography

1. Anglo-Saxon beginnings. There was no translation of the Bible into Anglo-Saxon, but there were poetic versions of biblical stories, such as those ascribed by Bede to Caedmon, who died in 680. Caedmon listened to biblical stories and set them forth in poetic paraphrase, sung to the accompaniment of the harp. Aldhelm Abbot of Malmesbury was also cleverly doing the same kind of thing. But there was no idea of translation of the Bible in its entirety; indeed, there were not many who could have read it. Not long afterward certain favorite sections began to be translated for the use and edification of the priest and for use in preaching. In the eighth century a number of translations of the Psalms appeared, and other small sections like the Decalogue and the Lord's Prayer. Bede is credited with a translation of the Gospel of John, completed at the very moment of his death. It may be assumed that by the time of the death of Bede in 735 the four gospels were in Anglo-Saxon. We know that Aldhelm, then bishop of Sherborne (died 709), translated the Psalms into Anglo-Saxon English, and that at his request Egbert, bishop of Holy Island, translated the gospels. In the next century King Alfred (848-901) took an active interest in the Bible and its translation, causing a translation of the Psalms to be made, and using the Ten Commandments and other sections of the Pentateuch in his code of laws.

Several MSS of the Psalter in the vernacular are extant, but they probably stem from the next two or three centuries. *Ca.* 950, the priest Aldred wrote a paraphrase of the gospels between the lines of a Latin text. It was during this century that translations of the gospels appeared without the Latin text, the earliest coming at *ca.* 1000 through the work of the Abbot Alfric of Bath. The translation of the Psalms into English by William de Shoreham of Kent in 1325 ought to be mentioned, as well as that of Richard Rolle of Hampole in 1330.

Yet all these translations, important as they are from a historical point of view, are relatively unrelated to the great stream of English translations,

which began in a serious way with the work of William Tyndale but which had definitely been set under way by John Wyclif. Before Wyclif the sporadic and piecemeal efforts at translation were not designed primarily for the use of the average man, nor produced in quantities that would touch him. They were not complete Bibles but small sections. They were designed for few readers, principally among the clergy. Moreover, they did not create the ecclesiastical problems later translations often produced, probably because of the very nature of the sections translated and because the laity had so little access to them in any case.

2. Wyclif's Version. The first complete Bible in English appeared in 1382. The work of John Wyclif is different from any translations before him. He planned and executed the translation of the entire Bible with the average man in mind and for the specific purpose of placing the Bible in the hands of laymen. His work of translation was a part of a more comprehensive effort to reform the church which caused him to be called the "morning star of the Reformation." He was assisted by Nicholas of Hereford, who is credited with having translated the OT before he was excommunicated. Wyclif carried the task forward, and the finished NT appeared in 1380 and the complete Bible in 1382. John Purvey may have assisted in this work also. At any rate, he is credited with the revision of the entire work, which appeared in 1388. In line with his pastoral purpose of putting the Bible into the hands of laymen, Wyclif organized the "Poor Priests" or Lollards, who went forth teaching the Bible and delivering it to lay people. It was joyfully received.

Wyclif died in 1384, but his body was exhumed and burned in 1428, just as in 1415 his Bible had been condemned and consigned to the flames. His work, however, stands as a beacon, and greatly influenced later translations. In spite of the fact that reproductions of this translation were terribly expensive, since they were hand written, and in spite of the opposition of the church and state authorities, who ruled that anyone who read the Scriptures in the mother tongue "should forfeit land, catel, life, and goods from their heyres for ever," at least 170 MS copies of this first English Bible have survived; and several have been traced to the royal family and other prominent persons. Other, less pretentious MSS, written in small hand and crowding the page, were obviously the property of individuals of the common people.

For 150 years this Bible enjoyed a wide usage and was the only complete English Bible in use. Yet it had its weaknesses. For one thing it was based on the Latin Vulg. and made no use of older texts. Again, it was already archaic in language, using the earliest style of the language, which was rapidly changing as it blossomed into a literary vehicle. The OT translation especially was stiffly literal. John Purvey, who calls himself "this simple creature," attempted to revise the OT to harmonize with Wyclif's better version in the NT. Nevertheless, when printing was discovered, no one thought of publishing the translation of Wyclif. It had served its purpose magnificently, but the times demanded a better version of the Scriptures. Fig. WYC 43.

3. Tyndale's translation and early related versions (1525-35). Exactly a hundred years after the death of Wyclif in 1384, William Tyndale was born. During this century between Wyclif and Tyndale the printing press had appeared. The Turks had driven the Christian Greek and Hebrew scholars of Constantinople into Western Europe. Greek and Hebrew then began to be taught in the universities of Europe. It was inevitable that these events, along with the electrifying atmosphere of the sixteenth century with all its intellectually stimulating factors, should greatly affect the study of the Bible. Tyndale was reared in the midst of these exciting events. He studied at Oxford under the classical scholars Grocyn, Latimer, Linacre, and at Cambridge came under the influence of Erasmus, the great NT Greek scholar, who in 1516 was to publish the NT in Greek (see TEXT, NT). As a matter of fact, it was at Cambridge between 1511 and 1514 that Erasmus prepared his epoch-making edition for publication.

Having been ordained, Tyndale became chaplain and tutor in the family of Sir John Walsh. It was in his pastoral work that he said he "perceived by experience how that it was impossible to stablysh the laye people in any truth excepte the scripture were playnly layde before their eyes in their mother tonge" and added "which thynge onlye moved me to translate the NT." He began to discuss his project with clerical acquaintances and met with serious opposition. He was a man of inflammable spirit, as the notes in the margins of his translation of the NT were later to reveal, and he replied to one of his opponents, called a "learned man": "If God spare my lyfe, ere many yeares I wyl cause a boye that dryveth the plough shall know more of the scripture than thou doest."

The bishop of London, Cuthbert Tunstall, had the reputation of being a friend of learning, but when Tyndale asked for his approval and support, the bishop affirmed that his house was full and that "he had more than he could well finde." The bishop may have been afraid of the ecclesiastical attitudes of Tyndale rather than of translation itself. At any rate, no help came from Tunstall. Nevertheless, an alderman of London, Humphrey Monmouth, took Tyndale into his home and agreed to pay him a stipend of ten pounds. Tyndale remained under his roof for a year and worked diligently at his task, and at the same time met merchants from the Continent who brought him information which would be of value to his later work. At the end of one year he said: "In London I abode almoste an yere . . . and understode at the laste not only that there was no rowme in my lorde of londons palace to translate the new testament, but also that there was no place to do it in all englonde." Therefore he left England and went to the free city of Hamburg in 1524. He soon went to Wittenberg and was in close fellowship with Luther. He returned to Hamburg in the spring of 1525, where he received funds from his London patron, Monmouth. He hurried to Cologne in 1525 and began the printing of his finished NT translation in a quarto edition. Cochlaeus, an enemy of Luther, in a clever move discovered Tyndale's project and reported it to the authorities. Tyndale fled with some printed sheets to Worms. Here an octavo edition

without notes was completed, and the quarto edition, which had been started in Cologne, was also completed with marginal notes. These editions were shipped into England hidden away in cases of merchandise. Three thousand copies of the octavo edition were shipped to England.

The Tyndale Version was eagerly purchased by the people to be read—and by Archbishop Warham to be burned. Funds were raised to be used in buying copies for the archbishop's fire; speeches were made against it. Bishop Tunstall said he had found two thousand errors in it—referring, no doubt, to the many changes made by Tyndale on the basis of the Greek text as over against the Vulg. The speech of Cochlaeus against it is a classic and shows the spirit of the opposition to any translation. "The NT translated into the vulgar tongue," said Cochlaeus, "is in truth the food of death, the fuel of sin, the veil of malice, the pretext of false liberty, the protection of disobedience, the corruption of discipline, the depravity of morals, the termination of Concord, the death of honesty, the well-spring of vices, the disease of virtues, the instigation of rebellion, the milk of pride, the nourishment of contempt, the death of peace, the destruction of charity, the enemy of unity, the murderer of truth."

The opposition was so strong that only a fragment of the quarto edition survived, now in the British Museum; and of the three thousand copies of the octavo edition only two are extant, one in the Baptist College in Bristol, England, and another in the library of St. Paul's, London. These few fragments are all that remain of the eighteen thousand copies printed 1525-28.

As soon as Tyndale had finished translating the NT, he began at once to translate the OT from Hebrew. In 1530 he published the Pentateuch with marginal notes of a highly controversial nature. He also translated Jonah. But he interrupted his work to revise the NT translation, probably to answer some of his critics and to forestall his erstwhile colleague George Joye from issuing an unauthorized edition in which he planned to present Tyndale's Version without notes, restoring the much-loved ecclesiastical terms, more in harmony with the Vulg., and more in line with his own theological ideas. Joye did indeed publish his version and did translate the OT from Psalms through Lamentations from the Hebrew, and Isaiah from the Latin. But Tyndale's revision also appeared in 1535 with brief introductions to each NT book except Acts and Revelation. He softened his marginal notes and added "extracts" (lections) for certain days of the church year—these were a sort of church service book. (See pp. 247-48 in the work of I. M. Price in the *bibliography*.)

It was soon after this that Tyndale, living at the English House, an English merchant's club at Antwerp, was betrayed by a supposed friend; and on October 6, 1536, he was strangled and burned. As he died, his last words were: "Lord, open the King of England's eyes."

The Tyndale translation is significant far beyond the fact of its being the first in a line of translations. It was the work of a man who was capable of handling seven languages with ease, whose knowl-

edge of Greek especially is unquestioned, and whose style was so impressive that eighty per cent of the KJV is Tyndale. He knew how to consult freely Luther's translation, the Vulg., and the Latin translation of Erasmus, and yet remain gloriously creative. He was forced to do his work under most adverse circumstances and in the midst of the most serious threats of his life. But he persisted and accomplished the great purpose of his life, to give the Bible in the vernacular to the layman. And he also did more: he created such a desire and demand for the Bible that church and state at the very time of his death were moving toward the admission that there was need for a legal translation. So indeed the Lord opened the eyes of the King of England, and Tyndale's life ambition was fulfilled and his dying prayer was answered. Moreover, his translation remained the model, as to both style and content, so that all the translations from his day to the advent of modern-language translations are, in fact, revisions of his work. Also, his translation played a vital part in making the English language an able literary vehicle. Such is the importance of the Tyndale English Bible.

Fig. TYN 80.

a. The Coverdale Version (1535). Miles Coverdale (born 1488), who is said to have become acquainted with Tyndale in Hamburg, was himself busy with the production of a translation of the Bible. He stood in favor with King Henry VIII, and was also aided by Thomas Cromwell in gaining approval for his projected English Bible. It was published on the Continent, probably at Zurich in 1535, and was dedicated to Henry VIII. There is no word about a license by the King, but the 1537 edition distinctly says: "set forth with the Kynges moost gracious license." In his 1535 dedication to the King, Coverdale identifies his sources: "Douche and Latyn." He mentions "fyue sundry interpreters" in this same document. These have been identified as the Swiss German Bible of Zwingli and Leo Juda, Luther's Bible, the Vulg., the Latin version of Pagninus, and Tyndale's NT and Pentateuch. Since he did not know Hebrew, he obviously was leaning on the Latin translations for his OT text where he did not have Tyndale's translation of the Hebrew. He was greatly influenced by the German translations, of which he was very fond. He was more of an editor and compiler than a translator, yet his text contains many phrases of surpassing beauty, especially in the Psalms. His effort was very successful, perhaps because he was conciliatory in spirit, and because he was ready to make concessions in the interest of his primary goal: the complete Bible in English, with governmental license. He restored many of the ecclesiastical terms which had been rejected by Tyndale as incorrect translations of the Greek text. He omitted the caustic, controversial elements in the marginal notes and introductions. His character shines through these elements of his work as that of a gentle, sympathetic, and agreeable person. He shows great modesty and insists that he had "nether wrested nor altered so moch as one worde for the mayntenance of any maner of secte, but have with a cleare conscience purely and faythfully translated this out of five interpreters, havynge onely the many-

fest trueth of the scripture before myne eyes." This he said in his Preface to the King, and in his Address to the Reader he considered "how excellent knowledge and lernynge an interpreter of scripture oughte to have in the tongues and pondering also myne owne insufficiency therein and how weake I am to performe the office of translatooure, I was the more lothe to medle with this worke." These quotations describe the attitude and spirit which aptly fitted Coverdale to fulfil the task needed in his day. So within the year of Tyndale's arrest his work appeared with strong support. Leaning on Tyndale's scholarly work and supplementing it, where it had not been finished, by his own translation from German and Latin, he presented to England her first complete English Bible in print.

b. The Thomas Matthew Bible (1537). The next version to appear was more of a revision of Tyndale than a new translation. It was printed on the Continent, perhaps at Antwerp, in the year 1537. It came out under the name of Thomas Matthew, though it has long been ascribed to John Rogers, chaplain of the English House in Antwerp and a close friend of William Tyndale. When Tyndale was arrested in 1535, he turned over to Rogers his work, including the translations of books of the OT. During his imprisonment he did further work, and this too was placed in Rogers' hands. Rogers was an able man for this task of editing and completing Tyndale's work. He was an Oxford graduate of 1525 and had served in the English House, where he had met and come to sympathize with Tyndale and his views; but it was also true that he stood in the midst of the cross-currents of thought on the Continent, where Luther and other Reformers were working. He adopted Reformation views, and eventually under Bloody Mary became a martyr, being burned at the stake on February 4, 1555.

Rogers does not seem to have been a creative scholar, but he was a faithful editor and a courageous Christian, devoting his life to the propagation of the English Bible. He used Tyndale's translation wherever it was available. In other areas he used Coverdale's Version. His astute editing may be seen in the Psalms, where various readings are introduced in the margin and technical expressions carefully explained. He made use of extensive notes. His outlook is boldly Protestant, but he does not seem to have suffered for this at first, nor did his translation fail to gain a wide reading. His Dedication may have helped: "Dedicated to the moost noble and gracyous prynce Kyng Henry the Eyght and Queen Jane." Also, Cranmer and Cromwell gave his work their unreserved support. Cranmer wrote to Cromwell: "You shall receyve by the bringer herof a Bible in Englishe, both of a new translacion and of a new prynte, dedicated unto the Kinges majestie . . . and as for the translacion, so farre as I have redde therof, I like it better than any other translacion heretofore made. . . . I pray you, my Lorde, that you woll exhibit the boke unto the Kinges highnes, and to obtaign of His Grace, if you can, a license that the same may be sold and redde of every person, withoute danger of any acte, proclamacion, or ordinance heretofore graunted to the contrary, astill such tyme that we, the Bishops shall set forth a better trans-

lacion, which I think will not be till a day after domesday." This request was made on August 4, 1537, and on August 13, 1537, Cranmer wrote a note of appreciation to Cromwell that he had "not only exhibited the Bible I sent unto you to the Kinge's Majestie, but [had] also obtaigned of his grace that the same shal be alowed by his auctoritie to be bowght and redde within this realm." So less than a year after the martyrdom of Tyndale, his translation was authorized by the king at the request of Cranmer, the archbishop of Canterbury.

From Cranmer's note it is evident that the bishops had projected a Bible, but that Cranmer felt deep pessimism about the success of the project. He may not have recognized the true nature of the Matthew edition when he gave it the status of a new translation and a "new prynte." Or he may have been motivated by the desire to secure royal support for a Bible for the period before the appearance of the Bishops' Bible. He obviously feared a long delay—"not till a day after domesday." Thus we may feel that Cranmer was seeking to meet a need as soon as possible. The Matthew Bible was a better version than Coverdale's, and so the best available to Cranmer. But Cromwell knew of the danger that the dependence of Matthew's Bible on the Tyndale Version might well become an issue. The notes, too, could cause some trouble because of their controversial nature.

4. The period of the Great Bible (1539-68). With this danger in mind, Cromwell urged Coverdale to prepare a new Bible. It may be that churchmen were not too well pleased with the Matthew Bible, either because they saw Tyndale's hand in it or because of its caustic marginalia. At any rate, Coverdale was assigned the task of producing a new revision. John Rogers' edition of Tyndale was, without doubt, the work back of this Great Bible, so called because of its size. Other helps were Münster's Latin OT, a translation from the Hebrew in 1534-35; the Vulg.; and Erasmus' Latin NT. But the Matthew Bible was the basic text, and the other resources were used as supplementary factors. It is then a revision of Tyndale. Coverdale mentioned the work of "diverse and learned men." This might refer to earlier translators or to employment of scholars proficient in Hebrew, Greek, and Latin to help him with the preparation of the text, as some think. Foxe, in *Acts and Monuments* (see bibliography), gives a real understanding of the legal hurdles and ecclesiastical problems encountered in this venture. It was carried out by Coverdale successfully. After the text had been prepared, he was forced to take the project to Paris printers, since no press in England could handle such a large page.

The work was begun with the license of the French king, Francis I, at the request of Henry VIII, and the printer Regnault began his work in 1538 on massive pages 15 by 9 inches with the text 13 by 8½ inches. But the work had hardly begun when the officers of the Inquisition stopped the printing and attempted to seize the pages which had been completed. But most of the printed materials had been shipped to England, and of the pages seized, "four great dryfattes full" were sold to a haberdasher "to lap in caps." These were afterward recovered and

transported to England. When the trouble began, Coverdale and his colleague Grafton fled back to England. Shortly the large press in Paris was itself removed to London, where the printing was resumed. And so the large Bible was completed in the spring of 1539 and presented to the clergy with an order from Cromwell that it be "set up in summe convenient place within the church that ye may have care of, whereat your parishioners may most commodiously resort to the same and rede it."

It was largely Tyndale's Version with the marginal notes removed. Coverdale objected to the removal of some of them, but they were never included. The chapter summaries of the Matthew Bible were retained with slight changes. The work was enthusiastically received by the people, and the Bible passed through seven printings within three years. The second edition appeared with a long introductory Preface by Archbishop Cranmer, and has often been called the Cranmer Bible. Even Bishop Tunstall, the man who opposed Tyndale so fiercely, spoke in its favor. The popularity of this Bible among the lay people caused the clergy trouble, for while the clergy were still the official and most able interpreters of the intent of scripture, the readers would crowd around the Bible and noisily discuss it among themselves and also in their own houses. The clergy became so aggravated that Henry VIII had a warning issued against such debates and enjoined the people to seek the aid of "learned" men wherever the text was not clear. When the Roman Catholic reaction began, Coverdale fled to the Continent, while Cromwell and the Archbishop were both executed.

Fig. GRE 39.

a. The Taverner Bible (1539). At the very time that the Great Bible was being completed, another revision of Tyndale was ready for the press. This was the work of a layman, Richard Taverner, a graduate of Oxford, a good student of Greek, and a man with a gift for writing. While the OT follows the text of the Matthew Bible, with only slight changes due to a comparison with the Vulg., the NT shows clearly the editorial hand of one who knew the Greek text. This work in the NT exerted an influence upon later translations. It contained no notes of a controversial nature. It has the distinction of being the first complete Bible printed in England, since it appeared before the Great Bible. Because this work appeared alongside the official publication of the Great Bible, it did not make the impression which otherwise it might have made. There were two editions of the whole Bible, a folio and a quarto, and the NT was published separately in two editions, a quarto and an octavo.

b. The Geneva Bible (1560). 1525-39 was a period of translation and revision, with a growing spirit of toleration on the part of the king. However, a strong Roman Catholic reaction brought the downfall and execution of Cromwell in 1540. Henry VIII was forced to reverse his more tolerant policies, and in 1543 "all translations of the Bible bearing the name of Tyndale" were proscribed. All notes were expunged from other versions. No laboring man or woman was allowed to read the Bible, under pain of imprisonment. Finally all Bibles were proscribed

except the Great Bible, and it was available only to the upper classes.

The death of Henry in 1547 was followed by the reign of Edward VI (1547-53), who was a Protestant, and who sought to restore the Bible to the people. Archbishop Cranmer was active in this program. Reformers who had fled began to return, but Edward's reign was short, and he was succeeded in 1553 by Mary Tudor. She was fiercely Roman Catholic, and three hundred Reformers and Bible students were martyred, among them Cranmer and John Rogers. Coverdale managed to escape and wandered across the Continent, finally stopping in Geneva, a free and liberal city where many British scholars had congregated.

This was the home of the NT scholar Theodore Beza and of John Calvin the theologian. The brother-in-law of Calvin, William Whittingham, who was John Knox's successor at the English church in Geneva, was most responsible for the preparation and publication of the Geneva NT in 1557. The complete Bible appeared in 1560, sometimes called the "Breeches Bible" because of the translation of Gen. 3:7: "They sewed fig leaves together and made themselves breeches." Coverdale assisted with this translation; but Whittingham in his Preface says that a group of scholars worked on it night and day for two and a half years. This version used for the first time in English the verse divisions of Robert Estienne, originally employed in his Greek NT in 1551.

The Geneva Bible was a revision of the Great Bible. Tyndale's contribution was basic, but the OT was thoroughly revised on the basis of the Hebrew text with appeal to the Latin text of Münster, Leo Juda, and Pagninus. The OT work, headed by Anthony Gilby and Thomas Sampson, was ably done. The NT was largely a revision of Tyndale, but had a new set of marginal notes, Protestant in emphasis, but generally not as polemical as Tyndale—though one does recall that in Rev. 9:11 the pope is identified as the "angel of the bottomless pit," the "anti-Christ, King of hypocrites, and Satan's ambassador." The Bible was issued in a smaller, less expensive form than earlier English Bibles. It was printed in the Roman type as in our day, instead of the old block letter, the so-called Old English type.

It was simply dedicated to Queen Elizabeth, who came to the throne in 1558 with strong Protestant sympathies. She neither licensed nor condemned the Bible, but it enjoyed a wide popularity. The printing cost was assumed by the congregation in Geneva.

While this version did not displace the Great Bible in the churches, nevertheless it was extensively used by the people, so that the two Bibles stood side by side until the Bishops' Bible made its appearance. As a matter of fact, it passed through about 140 editions before it was eclipsed by the KJV. It was the Bible of Oliver Cromwell and of his army, of the Pilgrim fathers and the Mayflower Compact, of John Bunyan, of Shakespeare, and even of King James himself. This is by far the best edition which had been produced and amply justified the claims made for it in the Preface: "It was diligently revised by the moste approved Greke examples, and conference of

translations in other tongues as the learned may easily judge, both by the faithful rendering of the sentence, and also by the propriety of the words, and perspicuity of the phrase." But it was designed that "both the learned and the others might be holpen." The Preface emphasizes the intention of the editors that the Bible must be in the hands of the people, accurately and clearly translated, with difficult passages clarified by means of notes.

The Geneva NT was revised in 1576 by Laurence Tomson with a commentary accompanied by the claim "that there is not one hard sentence, nor dark speech, nor doubtful word, but is so opened and hath such light given to it that children may go through with it, and the simplest that are, may walk without guide, without wandering and going astray." It claims to be a translation of Theodore Beza's Greek. But it seems to lean most heavily on Beza's Latin translation. In later printings of the Geneva Bible this revision is sometimes substituted for Whittingham's of 1560.

5. The Bishops' Bible (1568). The Geneva continued to be the Bible of the people, while the Great Bible was the pulpit Bible for the churches. The superiority of the Geneva Bible was evident, and because of this, Archbishop Parker took steps to revise the Great Bible, with the hope that it would take the place of both the Great Bible and the Geneva Bible. This was, in fact, the project which several years before had been in the mind of Cranmer, but which had come to nought, even as he had feared. The hope of Parker was that this new version would be so good that it would unite the churches and the people with one official, universally used Bible. Many of the scholars who participated in this project were bishops, and hence the name "Bishops' Bible."

Parker began his work by organizing the committee in 1564. His method was to parcel out to a large number of individuals portions of the Bible for revision, and to himself he assigned the position of general editor and director of publication. He asked that each man sign his initials at the end of his work, which he says, "I thought a policie to show them, to make them more diligent as answerable for their doings." They were directed to follow the text of the Great Bible except where "it varieth manifestly" from the Greek or Hebrew, or as he says to the Queen, "where the text was by sum negligence mutilated from the originall." They were to make use of the Latin texts of Pagninus and Münster "and generally others learned in the tongues." They were to make "no bitter notis upon any text, or yet to set downe any determinacion in places of controversie." Matters of genealogies and "other such places not edefieng" were to be indicated so that the reader may "eschue them in his publike readinge." Language that "gave any offence of lightnes or obsenitie [should] be expressed with more convenient termes and phrases." "Ink-horn terms" were to be avoided in favor of "usual English words." These directions clearly indicate the policy of Parker. The various books were parceled out and the work began. The fault in Parker's method was that it allowed men to work in isolation, so that the resultant text ran the risk of being uneven. This is precisely what resulted.

In the OT the text is that of the Great Bible, with slight changes, and the Apoc. is also almost identical with it. In the NT, where Parker himself did a large share of the work, there is evidence of real scholarship. A large share of the marginal notes was taken from the Geneva Bible in the NT, as much as two thirds. Yet even in this area the Bishops' Bible did not measure up to the Geneva Version. It resorted to an older version of the Lord's Prayer, chose "charity" in I Cor. 13, and in general used less accurate language than some earlier translations. The verse division of the Geneva Bible was followed.

Parker appealed to Queen Elizabeth for authorization of the text, and for some reason this was never given; yet because of the sanction of the bishops, this became the second authorized version. It was endorsed by the Convocation of 1571, and its possession and use by bishops and archbishops was ordered. In time it displaced the Great Bible as that version "appointed to be read in the churches," and from 1577 it was "set forth by authoritie." However, it was never able to displace the Psalter of the Great Bible, which had now been in use for about thirty years. Archbishop Parker in the 1572 edition published in parallel columns the Psalter of the Great Bible and that of the Bishops' Bible, with a strong appeal: "Now let the gentle reader have this Christian consideration within himselfe that though he findeth the Psalmes of this later translation following, not so to sounde agreeable to his eares in his wanted woordes and phrases, as he is accustomed with: yet let him not be to much offended with the worke, which was wrought for his owne commoditie and comfort. And if he be learned, let him correct the worde or sentence (which may dislike him) with the better, and whether his note ryseth either of good wyll and charitie, either of envie and contention not purely, yet his reprehension, if it may turne to the finding out of the truth, shall not be repelled with griefe, but applauded to in gladnesse." But this appeal did not increase the popularity of the Bishops' Psalter. Perhaps the reason was largely that the Prayer Book had used the Psalter of the Great Bible, and people had become familiar with it through long usage and were unwilling to change. Moreover, this version did not displace the Geneva Bible in popular usage. It did, however, continue for forty years as the authorized version and pass through twenty editions before 1606, and was actually the basis of the KJV, which did win its place with the people. But the Bishops' Bible was never satisfactory to many scholars.

6. The Douay (Douai) Version (1609-10). While these versions were pouring forth from the presses, Protestants were extensively using the text in preaching and debate, while the Roman church simply fretted and exerted every effort to stop the work. At the time of the Diet of Worms in 1540, Surius said: "The heretics want the Bible to be the authority, but only on condition that it shall be for them to interpret it. We have no controversy with the heretics about the Bible, but about the meaning of the Bible. They want to unearth its meaning by aid of their own none too erudite brains; we say that that meaning is to be discovered in the perpetual agreement of the Catholic Church. They continue to spread the Bible abroad among the illiterate." Cardinal William

Allen wrote to the professor of canon law at Douay in 1578: "Catholics educated in the academies and schools have hardly any knowledge of the scriptures except in Latin. When they are preaching to the unlearned and are obliged on the spur of the moment to translate some passage into the vernacular, they often do it inaccurately and with unpleasant hesitation because either there is no English version of the words or it does not then and there occur to them. Our adversaries on the other hand have at their fingers' ends from some heretical version all those passages of scripture which seem to make for them, and by a certain deceptive adaptation and alteration of the sacred words produce the effect of appearing to say nothing but what comes from the Bible. This evil might be remedied if we too had some catholic version of the Bible, for all the English versions are most corrupt. . . . If his Holiness will permit (we) will endeavor to have the Bible faithfully, purely and genuinely translated according to the edition approved by the Church—perhaps indeed it would have been more desirable that the scriptures had never been translated into barbarous tongues; nevertheless at the present day, when either from heresy or other causes, the curiosity of man, even of those who are not bad, is so great, and there is often such need of reading the scriptures in order to confute our opponents, it is better that there should be a faithful and catholic translation than that men should use a corrupt version to their peril or destruction; the more so since the dangers which arise from reading certain more difficult passages may be alleviated by suitable notes."

Further light is shed upon the Roman position in the Preface to the Rheims NT: "Which translation we do not for all that publish upon erroneous opinion of necessitie that the holy scriptures should alwaies be in our mother tonge, or that they ought or were ordained by God to be read indifferently of all, or could be easily vnderstood of every one that readeth or heareth them in a knowen language; or that they were not often through man's malice or infirmitie, pernicious and much hurtful to many; or that we generally and absolutely deemed it more convenient in itself and more agreeable to God's word and honour or edification of the faithful to have them turned into vulgar tonges, than to be kept and studied only in the Ecclesiastical learned languages: not for these nor any such like causes doe we translate this sacred booke, but vpon special consideration of the present time, state, and condition of our countrie, vnto which, diuers thinges are either necessarie or profitable and medicinable now, that otherwise in the peace of the church were neither much requisite nor perchance wholly tolerable."

The Roman church then submitted to this work of translation as a tolerated necessity. The version would be based on the official Latin of the church, the Vulg., which was itself a translation. The work was projected by Allen, an Oxford scholar and a canon under Queen Mary and later a cardinal; however, Gregory Martin carried the translation to its completion. The work was started at the English College, Douay, France, but political upheavals caused it to move to Rheims, where the NT was completed. In 1593 the college returned to Douay,

where the OT was completed, but publication was delayed because of a lack of funds till 1609-10. Thus we see why the NT is known as the Rheims NT, and the whole Bible as the Douay Version. It was a translation of the Vulg.—or, as it says, "of the authentical Latin"—and, while no reference is made to the Geneva Bible, there is unmistakable evidence of its influence. Hebrew and Greek originals are mentioned, but the use of these does not seem to be extensive. The translation is woodenly literal in numerous places, and often obscure in meaning. The Psalter is especially defective. It made extensive use of Latin words which had become the ecclesiastical terms of the Roman church. It used peculiar transliteration of feasts, money, etc., without an effort at translation. It used technical terms of Catholic doctrine where the meaning was not clear (e.g., "super-substantial" bread, "exinanited himself," "do penance," "for which hostes God is promerited"). So on the basis of the Vulg. text this translation abounds in terms from the Latin language. These were influential in the writing of the KJV.

7. **The KJV (1611).** The long reign of Queen Elizabeth came to an end in 1603. During her reign the Catholic-Protestant struggle was largely settled. The propriety of Bible translation was accepted, and even the Roman Catholics had published a NT in English. Education had advanced, and England had produced men of letters whose names are among the greatest in English literature. In 1604 James VI of Scotland came to the throne as James I of England. He was a religious man, and was also interested in Bible translation, having himself attempted to translate some psalms and to write a paraphrase of the book of Revelation.

In the year of his accession he summoned a conference of high and low churchmen to meet at Hampton Court to consider complaints of the Puritans regarding matters alleged to be amiss in the church. Four Puritans were summoned before nine bishops, seven deans and archdeacons, five ecclesiastical lawyers, and the king himself. The complaints presented did not make much impression on the group; but James is reported to have spoken for five hours on the corruptions in the church. One bishop (Andrewes) said: "On that day his majesty did wonderfully play the puritan." But he ended his speech by attacking powerfully the Puritans, so that the bishops were highly pleased, at length, with his peroration. While the necessity for Bible revision was not on the list of Puritan complaints, Dr. Reynolds, the Puritan president of Corpus Christi College, Oxford, proposed that the English Bible be revised. There does not seem to have been great enthusiasm for this proposal in the conference, if we may judge from the tone of the Preface to the KJV. However, the idea appealed to the king, as the Preface says: "And although this [the motion to revise the English Bible] was judged to be but a very poor and empty shift, yet even hereupon did his majesty begin to be-think himself of the good that might ensue by a new translation, and presently after gave order for this translation."

On February 10, 1604, the king ordered "that a translation be made of the whole Bible, as consonant as can be to the original Hebrew and Greek, and

this to be set out and printed without any marginal notes and only to be used in all churches of England in time of divine service." By July, 1604, King James says that he had "appointed certain learned men to the number of four and fifty for the translating of the Bible." These men were to be the "best learned" in Westminster and in "both the Universities" and their work was to be "reviewed by the bishops and the chief learned of the church," and "to be ratified by Privy Council and by royal authority." The men appointed were to be able, efficient biblical scholars and were chosen from among Anglican churchmen, Puritans, and laymen. Only forty-seven names have been included on the list of those who actually worked on the edition. Those men divided into six groups, four working on the OT and two on the NT.

In the OT the Westminster group worked through the Pentateuch to I Chronicles; one Cambridge group took II Chronicles through Ecclesiastes, the other Cambridge group to the Prayer of Manasseh and the rest of the Apoc. One Oxford group took all the Prophets; the other Oxford group took the four gospels, Acts, and Revelation; and the other Westminster group took the NT letters. The rules by which these were to proceed were as follows:

a) "The Bishops' Bible [is] to be followed, and as little altered as the truth of the original will permit."

b) Proper names were "to be retained as nigh as may be as they were vulgarly used."

c) "The old ecclesiastical words [are] to be kept, viz. the word *church* not to be translated *congregation*, etc."

d) When a word had "divers significations, that [is] to be kept which hath been most commonly used by the most ancient fathers, being agreeable to the propriety of the place and the analogy of the faith."

e) No change was to be made in chapter divisions "unless necessity so require."

f) "No marginal notes at all [are] to be affixed, but only for the explanation of the Hebrew or Greek which cannot without some circumlocution, so briefly and fitly be express'd in the text."

g) Cross references were to be inserted.

h) "Every particular man of each company [is] to take the same chapter or chapters, and having translated or amended them severally by himself, where he thinketh good, all to meet together, confer what they have done, and agree for their parts what shall stand."

i) "As any one company hath dispatched any one book in this manner they shall send it to the rest to be considered of seriously and judiciously, for His Majesty is very careful in this point."

j) "If any company upon the review of the book so sent, doubt or differ upon any place to send them word thereof; note the place, and withal send the reasons, to which if they consent not, the difference [is] to be compounded at the general meeting, which is to be of the chief person of each company, at the end of the work."

k) "When any place of special obscurity is doubted of, letters [are] to be directed, by authority, to any learned man in the land for his judgment of such a place."

l) Bishops were to send letters to their clergy requesting the assistance of men "skilful in the

tongues," and to report to Westminster, Oxford, or Cambridge.

m) "Directors in each company [are] to be the Deans of Westminster and Chester for that place; and the regius [King's] professors in Hebrew or Greek in either University."

n) "These translations [are] to be used when they agree better with the text than the Bishops' Bible: Tindoll's, Matthew's, Coverdale's, Whitechurch's [the Great Bible was called Whitechurch's because Whitechurch was the publisher of the fifth edition] and the Geneva."

o) "Besides the said Directors before mentioned, three or four of the most ancient grave divines in either of the universities not employed in translating [are] to be assigned by the Vice Chancellor upon conference with the rest of the heads to be overseers of the translations as well Hebrew as Greek, for the better observation of the 4th rule above specified."

So the work went forward, and when it was finished, two members of each of the three centers were a committee of six to pass upon the final revision before it went to press. We have no reliable information about how carefully the fifteen rules were applied nor how completely the committee of six edited the work. But the version itself is a testimony to what was accomplished.

Internal evidence shows that the Tyndale-Coverdale versions are predominantly the source, but great use was made of Latin versions of Pagninus, Münster, Tremellius, Junius, and Beza, and of the Greek and Hebrew texts, which were available only in limited numbers and quality. The Rheims NT was certainly consulted on several occasions, and Luther's German version exerted some influence. The revisers made their own particular contribution in their critical linguistic work and in maintaining and heightening literary polish, especially in vocabulary, majestic quality, clear sparkling English style, and force of utterance.

This version met with opposition, as the editors expected when they said in the Preface: "Many men's mouths have bene open a good while (and yet are not stopped) with speeches about the translation so long in hand or rather perusals of translations made before and ask what may be the reason, what the necessitie of the employment." As soon as the version appeared, it was sharply criticized, and for forty years had to fight for its position. The Long Parliament in 1653 passed a bill for its revision and even had a committee formed, but the dissolution of the Parliament ended the action. But the King James was winning the day. The conciliatory attitude expressed in the Preface may have been of great help. It says: "We never thought from the beginning that we should neede to make a new translation, nor yet to make of a bad one a good one—but to make a good one better, or out of many good ones, one principall good one, not justly to be excepted against; that hath bene our indeavour that our worke." Ten pages earlier in the Preface they frankly state the relationship between earlier translators and themselves: "We are so farre off from condemning any of their labours that traveled before us in this kinde—that we acknowledge them to have bene

raised up of God for the building and furnishing of his church and that they deserve to be had of us and posteritie in everlasting remembrance . . . so if we building upon their foundation that went before us, and being holpen by their labours, doe endeavour to make that better which they left so good; no man, we are sure hath cause to mislike us; they, we persuade ourselves, if they were alive, would thank us." So the excellent attitude of those who prepared this version, coupled with its own excellence, made for the victory which was to make this version the Bible of the English-speaking world for more than 250 years and makes it still perhaps the best loved and the most widely used. It belongs among the great treasures of English prose.

The KJV used the chapter divisions of Stephen Langton, archbishop of Canterbury in the thirteenth century, and the verse divisions of Robert Estienne of 1551. As was first done in the Geneva Bible, each verse was printed as a paragraph. This led to fragmentation of the original documents, and to the interpretation of verses out of context. On the other hand, the verse divisions as separate paragraphs had the advantage of "giving light" to the page. The version was first printed as a folio Bible, larger even than the Great Bible, the pages measuring 16 by 10½ inches. It was regarded as the authorized version, but though it was promoted by King James and executed by leading churchmen, there is no evidence of any official decree regarding it. It included about seventeen thousand cross references and footnotes.

There were weaknesses in the version from the beginning. The second rule was not carefully followed, so that the OT spelling of names does not agree with those in the NT. "Isaiah" is the spelling in the OT, "Esaias" in the NT; "Jeremiah" in the OT and "Jeremias" in the NT; "Hosea" in the OT and "Osee" in the NT; "Jonah" in the OT and "Jonas" in the NT. Again, the same Greek or Hebrew word was often unnecessarily translated by a variety of English words. Identical passages in the Synoptic gospels were often translated differently, thus distorting literary relationships. Often one English word was used to translate two entirely different Greek words in a short passage, and so real meaning was obscured. There were awkward passages: "I am verily a man which am a Jew." "Whom do men say that I am?" There were misprints, the most famous of which was corrected early. At Ruth 3:15, "he" was printed for "she" in the final clause. On this basis copies of the earliest printings are distinguished as "He" and "She" Bibles. Another glaring misprint, which was never corrected, is in Matt. 23:24: "straining at a gnat" (which the Douay Version also reads, when the reading should be "straining out a gnat"). There were other obscurities and mistranslations. The text of the Hebrew and Greek versions which were reverently mentioned as the "originalls" were not the relatively good texts we know today. Nothing better than the texts of Erasmus and Beza was available (see TEXT, NT; TEXT, OT). There is too much use of terms of Latin derivation which fail to translate the original Hebrew and Greek accurately. These and other weaknesses of the version could be emphasized. Some of them could not have been avoided—as, e.g., those due to faulty Hebrew and

Greek texts. Some were due to slips in editorial work—e.g., the variety of spellings and the misprints. Some must be attributed to a failure to distinguish between the true meaning of the original biblical terms and ecclesiastical usage—e.g., the use of "justification," "propitiation." Some were the result of failure to come to a clear understanding of the text, as in the case of Job 31:35.

Yet in spite of these faults, so clear after 350 years of study, the KJV came in one generation to stand as the greatest Bible of its day, rapidly displacing the Bishops' Bible as the pulpit Bible, and capturing first place in popular usage over the long-established favorite, the Geneva. It was revised several times, first in 1615, when a small edition containing hundreds of changes, mostly in spelling, was issued. Again in a new edition in 1629 the Apoc. were omitted, and in 1638 another revision appeared. The attempted sweeping revision of 1654 failed. The famous chronology of Archbishop Ussher (died 1656)—which dates the Creation in 4004 B.C.—was used in 1701 in Lloyd's edition. In 1762 the KJV was issued by Dr. Paris as the Cambridge Bible, with 383 marginal notes and other changes. In 1769 the Oxford Bible, issued by Dr. Blayney, appeared with 76 changes and corrections dealing with weight, measurements, and money. This edition remained as the standard version. Down through the years changes were made, generally of an explanatory character, or in the form of attempts to modernize spelling, and to provide marginal notes, but the essential text of the KJV remained unchanged. (See OBSOLETE TERMS.)

8. Other translations. While the KJV reigned supreme between 1611 and 1881, when the ERV of the NT appeared, this does not mean that there were no efforts at translation during this long stretch of time. As a matter of historical fact, a rather large number of translations were published. In the seventeenth century there were publications of the Bible in paraphrase like those of Henry Hammond in 1653; of Woodhead, Allestry, and Walker in 1675; and of Richard Baxter in 1685. In the eighteenth century More's translation of the NT in 1729 was noteworthy, as were Wheaton's in 1745 and John Wesley's in 1755. There were others of considerable value, such as Purver's in 1764, Harwood's "Liberal translation" of the NT in 1768, Worsley's in 1770, Wakefield's in 1791, Newcome's in 1796, Scarlett's in 1798. The nineteenth century saw many more, among which were Charles Thomson's entire Bible from Greek and Hebrew texts (1808), Alexander's complete Bible (1822), Noah Webster's entire Bible (1833), Penn's NT (1836-37), Kenrick's NT (1842), Brenton's OT (1844), Norton's four gospels (1855), Conant's NT and parts of the OT (1857-61), Bromfield's gospels (1863), Anderson's NT (1865), Bower's NT (1870), Alford's NT (1870), Rotherham's NT (1872), Julia Smith's Bible (1876). There were many more translations from the pens of Protestants, and several independent Roman Catholic translations, including Nary's NT of 1719, which had church approval, and two which were not sanctioned by the ecclesiastical authorities, Gedde's whole Bible in 1802 and Lengard's four gospels in 1836.

Important in stimulating this ever-growing stream

of translation was the discovery and publication of MSS of the Bible, especially of the NT. On the basis of these discoveries better reconstructions of the Hebrew and Greek texts of the Bible were published. The availability of such ancient MSS as Vaticanus and Alexandrinus made textual study and revision a necessity. Lachmann, on the basis of the wide variation between MS evidence and the "received" text, totally disregarded the "received" text in 1831. The discovery and publication of Sinaiticus by Konstantin von Tischendorf in 1859 caused renewed emphasis to be placed on textual study. Tischendorf edited a text, and so did Tregelles. Dean Alford in England did extensive work in Greek. Westcott and Hort spent about thirty years studying the Greek text of the NT before they finally published their important text in 1881. By the end of the nineteenth century the text which lies at the basis of the KJV was widely discredited. During this same period progress was being made on the text of the OT also. The essentially noncritical text of the Hebrew OT was being corrected by translations in the Latin, Greek, Syriac, Armenian, and other versions. The tenth-century MT of Ben Asher, which is a copy "of the men of Tiberias" of the eighth century, was accepted as basic. Work on the nature of Hebrew poetry, and archaeology and the study of comparative religion of the surrounding civilizations, threw light upon the OT. New translations were clearly demanded.

9. The ERV (1881-85) and the ASV (1901). For years there had been talk of a revision of the Authorized Version, but always strong opposition defeated any serious consideration of such an undertaking. However, the mounting evidence of need for such a revision reached such proportions that action could no longer be delayed. On February 10, 1870, a move was made in the upper house of the Convocation of Canterbury. Bishop Wilberforce presented a resolution that a committee of both houses be appointed to report on the desirability of a revision of the Authorized Version of the NT. An amendment to include the OT in the proposed action was adopted. The committee was appointed and unanimously recommended that the revision be attempted. The work was begun almost immediately by this committee, and others of capable scholarship were invited to participate regardless of nationality or religious affiliation. Consequently, with the Anglicans leading, Baptists, Congregationalists, Methodists, Presbyterians, and Unitarians participated in the work. Roman Catholics were invited, but none accepted. Fifty-four scholars were asked to form two divisions of twenty-seven members each for the work on the two testaments. By June of 1870 the two companies had begun their work.

Eight principles were drawn up for the work: (a) to introduce as few alterations as possible into the text of the Authorized Version consistently with faithfulness; (b) to limit, as far as possible, the expression of such alterations to the language of the authorized and earlier English versions; (c) each company to go twice over the portion to be revised, once provisionally, the second time finally; (d) that the text to be adopted be that for which the evidence is decidedly preponderating; and that when the text

so adopted differs from that from which the Authorized Version was made, the alteration be indicated in the margin; (e) to make or retain no change in the text on the second final revision by each company, except by two thirds of those present approving of the same, but on the first revision to decide by simple majorities; (f) in every case of proposed alteration that may have given rise to discussion, to defer the voting thereupon till the next meeting, whensoever the same shall be required by one third of those present at the meeting, such intended vote to be announced in the notice of the next meeting; (g) to revise the headings of chapters, pages, paragraphs, italics, and punctuation; (h) to refer on the part of each company, when considered desirable, to divines, scholars, and literary men, whether at home or abroad, for their opinions.

The OT company began with the Pentateuch and the NT company with the Synoptic gospels. Each company was urged to confer with the other as sections of work were completed, so as to guarantee uniformity in language and style. In August, 1870, American biblical scholars were invited to participate in the project with the eight principles of the British committee governing their work also. The British committee promised to send confidentially their revision at its various stages to the American committee, who would in turn send their criticisms and suggestions to the British companies before the second revision. The final revision was to be submitted to the American committee before publication, and the latter were to be allowed to publish in an appendix those readings of theirs which the British committee should decline to adopt. The American committee agreed not to publish a revision of their own for fourteen years.

The work of the NT was completed first and was published in England on May 17 and in America on May 20, 1881. It was enthusiastically received. One million copies were ordered in advance from the Oxford University Press and almost as many from that of Cambridge. Three million copies were sold in Britain and the United States in the first year. Chicago newspapers published the entire text for their readers on May 22, 1881. Such a reception was without precedent. The OT was completed four years later and was published in 1885 without so much excitement.

The ASV was published in 1901 incorporating many of the readings listed in the Appendix of the ERV. A large number of antiquated words were replaced, and an even larger number of purely British words were replaced by more American English words. Other changes took the form of the removal of archaisms and old expressions. The revision was widely acclaimed in America, and often described as the "most perfect English Bible in existence."

The Revised Version of the NT made about 30,000 alterations in the Authorized text, about 4½ per verse. Verse paragraphs were abandoned for sense paragraphs, with verse numbers in the margin. Cross references were not used. Italics were systematized and reduced in number. Poetry was more clearly indicated. The Greek text upon which it was based was much better than that used by the KJV.

Greek grammars and syntax were taken into consideration. The version omitted the liturgical conclusion of the Lord's Prayer, and deleted the additions of Erasmus to I John and Revelation. Many archaisms, obscurities, and inconsistencies were removed from the text. There is no doubt that this was a decided improvement over the older versions. It was immediately adopted for use in schools and churches and displaced the KJV in Canterbury and Westminster.

The initial popularity of the version soon began to wane. Criticisms mounted, and opposition to any revision of the Authorized Version, which had existed before the publication itself as a general prejudice, now became a specific attack upon this version. This antagonism was so pronounced that Gladstone spoke against its authorization. Canterbury, which had sponsored it, coolly accepted it. Charges were made that it had departed unnecessarily from the KJV in phrasology and had created an awkward literalism devoid of beauty, and that in this revision there was actually an impoverishment of the English language. Serious objections were raised against changes in the text, especially the changes in the Lord's Prayer and in some of the nativity passages, and to the version's way of handling the conclusion of Mark, the woman taken in adultery in John 7:53-8:11, etc. Many of these criticisms are now thoroughly discredited.

10. Modern-speech translations. The increasing number of NT Greek MSS had been an important factor in the background of the Revised Version. New study of Greek grammar had also played a part. But now something happened which would make sweeping changes in the understanding of the Bible in general and of the NT in particular. This was the discovery and study of ancient Greek papyri. Adolf Deissmann and others saw at once that the language of the papyri was exactly that of the NT (see GREEK LANGUAGE). It became clear that the language of the NT was not a sort of "holy dialect" or "Holy Ghost Greek," but the language of ordinary people. Since the NT was obviously written in popular nonliterary Greek, it seemed to many that it ought to be translated into nonliterary and modern English.

The recognition of this fact gave rise to a veritable flood of modern-speech translations of the NT; and similar attempts were made to translate the OT into modern speech. Mrs. Helen Spurrell of London in 1885 published a translation of the OT. Ferrar Fenton published his translation of the NT in 1895 and his OT in 1905 in the style of modern English in Great Britain. While these two translations are Protestant, it is worth while to note that the Catholic scholar Father F. A. Spencer published a modern-speech translation of the four gospels in 1901 and completed the translation of the entire NT in 1912, just before his death; but this was not published till 1937. During the first half of the twentieth century numerous translations were made, among the most important of which are: *The Twentieth Century NT* of 1899-1901, anonymously published; *The NT, A New Translation*, by James Moffatt in 1913, and the complete Bible in 1924-26; *The NT in Modern Speech* in 1903 by Richard Francis Weymouth, a

layman of Mill Hill School, England; *The NT, an American Translation*, in 1923 by Edgar J. Goodspeed, and *The OT, an American Translation*, by J. M. P. Smith, A. R. Gordon, T. J. Meek, and LeRoy Waterman in 1927; the Centenary translation of the NT in 1924 by Helen Barrett Montgomery; *The Riverside NT* in 1923 by W. G. Ballantine; and more recently the NT translations of J. B. Phillips, beginning with *Letters to Young Churches* in 1947. Roman Catholic scholars began producing *The Westminster Version of the Sacred Scriptures* in 1913. A small edition of this, with 479 pages, was published in 1948. Monsignor Ronald Knox in 1944 published a modern-speech translation of the NT and in 1947 of the Psalms. There are many other Roman Catholic translations available.

11. The RSV (1946, 1952). Within ten years after the ASV was published, there was serious talk of a revision. The papyri discoveries, the great popularity and obvious value of some of the modern-speech translations, new MS finds, and developments in the textual criticism of the Bible, not to speak of the faults in the ERV and ASV, helped create the demand for a new version, so that when the International Council of Religious Education in 1929 secured the copyright covering the ASV of the Bible, it took steps to produce a revision. The American Standard Bible Committee was formed to consider the advisability of revision, and if it were advisable, to propose what principles should govern such a project. Thirteen leading biblical scholars constituted the committee and after two years of discussion and debate reached an almost unanimous conclusion favoring revision. It was prescribed that "the revision should embody the best results of modern scholarship as to the meaning of the scripture," and that it should be "designed for use in public and private worship," and that it should be "in the direction of the simple classic English style of the KJV." It was planned that from three to five members of the revision committee should be selected for their competence in English literature, in the conduct of public worship, or in religious education. All other members were to be chosen for their competence as biblical scholars.

After delays caused by the financial depression and by the death of some members of the original committee and the retirement of others, the committee, revitalized by new appointments, met in 1937 for serious work of revision. By agreement the task was outlined as revision of the ASV in the light of the KJV, and not a new translation, but as Dean Weigle of Yale, the chairman of the committee, said: "It was in effect a new translation, and for three reasons. The first is that no adequate revision can be made except upon the basis of a thorough study of the Greek text, and as careful procedure in putting its meaning into English, as would be required in the case of a new translation. The second is that the committee has used the new evidence concerning the Greek text and the new resources for understanding the vocabulary and grammar of the Greek NT which have been afforded by the remarkable discoveries of the past sixty years since the revisions of 1881 and 1901 were made. The third is that the present committee was not obliged, as the

former committees were, to maintain the peculiar forms of Elizabethan English in which the KJV is cast." So in many areas the revision was a new translation.

The consonantal Hebrew text of the OT and the Westcott and Hort's Greek text of the NT were the authoritative original texts employed. Textual emendation on the basis of ancient versions was admissible, but conjectural emendation must be rarely and cautiously practiced. The use of "Jehovah" was to be rejected, and "Lord" was accepted. Archaic forms were discarded, including the archaic forms of the pronouns. Quotation marks and sense paragraphs were adopted as a policy. The translation of any given word was not necessarily limited to one word but was to be determined by usage in its context. Changes from the ASV were to be made only for good reason. A majority vote determined the change, but in the final action a two-thirds vote was required.

The OT section began at once with Genesis and the NT section with the Gospel of Matthew. These sections were subdivided into three pairs of two each. These pairs of scholars were supposed to prepare their revisions of assigned portions of scripture and to submit them to other members in previously arranged order of rotation, and these were to return their criticisms and comments to the revisers. This plan failed to work; so the individual member mimeographed his results and forwarded these to other members, who in turn mailed their criticism back to the reviser, so that at the meetings discussions in detail could at once take place. Each member took fifteen chapters as an assignment. The individual revisions were well prepared, but wide differences of opinion required lengthy meetings before agreement could be reached. It was obvious that the task, conducted in this fashion, would require far more time than could be given to it. So geographically sectional meetings were arranged for revision of assigned bodies of text to be submitted to the general meetings. This procedure proved effective, and in this manner the work proceeded.

The NT was completed in August, 1943, and was published on February 11, 1946. It was splendidly printed. On each page the name of the book and chapter appeared at the outside top margin. Chapter numbers were indented, and verse numbers in small figures were used in the text. Footnotes of two types were used, first, to cite variant readings, meanings, or other explanations, and second, to list parallel passages. This RSV was joyfully received and enjoyed great popularity. The OT was published September 30, 1952, and was equally well received. Though the task of the committee of revisers was completed, the group was maintained as a committee to receive suggestions and ideas for reconsideration.

***VERSIONS, MEDIEVAL AND MODERN (NON-ENGLISH).** By the middle of the twentieth century the Bible, or a significant portion of it, had been translated into more than one thousand different languages and dialects. Less than a score of these translations were made prior to the year 1000; all the others fall into the period to be comprehended herein. Furthermore, within some of the languages (e.g., French and German) the different renderings are numbered by the hundreds. Several of the more significant versions in certain representative European languages will be described. The languages (or groups of languages) are arranged alphabetically; the versions within each language are dealt with chronologically.

1. Dutch (and Flemish) versions
 2. French versions
 3. German versions
 4. Greek (modern) versions
 5. Hungarian versions
 6. Italian versions
 7. Portuguese versions
 8. Scandinavian versions
 - a. Danish (and Norwegian)
 - b. Icelandic
 - c. Swedish
 9. Slavic (Slavonic) versions
 - a. Old Church Slavonic
 - b. Bohemian (Czech)
 - c. Bulgarian
 - d. Polish
 - e. Russian
 - f. Serbo-Croatian
 - g. Slovak
 - h. Slovenian
 10. Spanish versions
- Bibliography

1. Dutch (and Flemish) versions. From a philological point of view, the term "Dutch" includes both Dutch proper—i.e., the N Dutch of Holland—and Flemish, the S Dutch of Belgium.

The earliest rendering which is still extant of the Scriptures into a Dutch dialect appears to be a paraphrase of the Psalms dating from ca. the beginning of the tenth century. The translator is unknown, but, to judge from the dialect, he seems to have lived in Limburg. The precursors of versions properly so called are the *Bibles historiales* (see § 2 below). The most ancient of these, the metrical or Rijmbijbel of Jacob von Maerlant, dates from 1271. This is a rather free paraphrase in verse imitating Peter Comestor's *Historia scholastica* (a digest of parts of Bible history, with many legends and a good deal of secular history). Of literal translations of the whole or of parts of the Bible, the oldest, dating from the fourteenth century, is the work of an unknown translator; certain lexicographical features suggest an origin in Holland. From about the same century there originated several harmonies of the gospels in a dialect that is associated with Alost in Flanders. Some of these harmonies preserve Tatianic readings mediated through the Old Latin versions.

Ca. 1300 a translation was made from the Latin Vulg. by a Fleming, perhaps a layman, for the benefit of those unlearned in Latin. Some parts, which

the unnamed translator was unwilling to popularize (as Deut. 22:13-21), are passed over with merely a reference to the Latin text. Difficult passages have explanations drawn mostly from Comestor's *Historia scholastica*; these are distinguished from the text by being written in a different character. After circulating in MS for several generations, this translation was made the basis of the first printed scriptures in Dutch; this was an edition of the OT (lacking the Psalms) which appeared at Delft in 1477. The comments of Comestor are omitted. The Psalms were issued in 1480.

The first NT printed in Dutch was published at Antwerp in 1522. This was translated from the Latin Vulg., but with reference to the Greek. Luther's German version of the NT (1522) was soon rendered into the Dutch language by various unknown translators, who published their work at Antwerp and at Amsterdam in 1523, as well as at several other places during the immediately succeeding years. Other versions were made from Erasmus' Greek text and Latin version, and were published at Delft in 1524 and at Antwerp in 1525 and 1526.

The earliest complete Bible in Dutch was prepared by a group of scholars whose names have escaped record. The section from Genesis to the Song of Solomon and the whole of the NT are based on Luther's German version; the other books appear to follow the Low German Bible published at Cologne ca. 1480. The honor of printing this first Dutch Bible (1526) goes to J. van Liesvelt, who, it should be mentioned, subsequently printed half a dozen other editions of the Bible. The publication of his edition of 1542 cost him his life.

Among Roman Catholic translations, mention should be made of renderings of the NT which appeared in 1527, 1530, and 1533, and in Dutch and Latin in 1539. The complete Roman Catholic Bible in Dutch did not appear until 1548, when a revision of the early version from the Vulg., first issued in 1477, was prepared by Alexander Blankaert, a Carmelite monk, and others, and was published at Cologne under the supervision of the authorities of the university at that place. In the same year another revision of the same early version was published at Louvain. It was prepared by Claes (Nicholas) van Winghe, one of the canons regular of Louvain, and contained a vigorous Preface in which Protestant Bibles were condemned. This version passed through many revisions, and for several centuries remained the standard Bible for Dutch Roman Catholics.

After Dutch Protestantism divided into various groups (Lutheran, Mennonite, Reformed, and Remonstrant), each group wished to have its own version; as a result, many translations of the Scriptures competed for supremacy. Among these was the so-called States-General Bible. It was proposed first in 1594, the rules for translators were discussed at the Synod of Dort in 1618-19, and the work was finally published at Leyden in 1637. This version became the standard Bible for the Dutch Reformed Church, corresponding to Luther's Version in Germany and the KJV in England.

The most important versions of the nineteenth and early twentieth centuries include the translation prepared by members of the theological faculty at

Leyden. The NT was published in 1866; after several interruptions the OT was finished in 1901. In 1928 an interdenominational committee, which had been at work since 1911, was formally commissioned by the Netherlands Bible Society to produce a version in accord with modern Dutch idiom and based upon the oldest attainable text. The NT was published at Amsterdam in 1939, the Bible in 1951.

Among renderings by Roman Catholics is the translation by R. Jansen, B. Alfrink, J. Cook, and others. It was published in five volumes in honor of the Jesuit Peter Canisius (Amsterdam, 1936-39). Another version, *De katholieke Bijbel*, somewhat less satisfactory than the "Canisius" edition, is the work of the two Franciscans, Laetus Himmelreich and Crispinus Smits, who translated the OT and the NT respectively (Brugge, 1938).

2. French versions. The extant MSS of the earliest translations of parts of the Bible into French dialects date from the twelfth century. These include the Psalter (in two forms, each with the Latin and French text interlinear), the books of Kings, Revelation, and five chapters of John's Gospel. Toward 1170 Peter Waldo and several of his followers produced vernacular translations of the gospels, Paul, and other portions of the Bible. Despite the efforts of Pope Innocent III to suppress these Waldensian MSS, several escaped the vigilance of the Inquisitors at Metz and Liège.

Sometime between 1226 and 1250 the first complete French Bible was made by a corps of translators working at the University of Paris and using several Latin MSS. The style and accuracy of the translation vary widely in different parts of the Bible. Another version was begun between 1291 and 1295 by Guyard (Guiars) des Moulins of Aire, in the NE of France. Taking Peter Comestor's *Historia scholastica*, he made a free translation of it, adding or substituting other résumés of other parts of Bible history. Subsequent editions were made more and more complete and received the title *Bible historiale*. In ca. 1487 what is generally regarded as the first complete Bible was printed at Paris by the order of Charles VIII. This was called *La Grande Bible*; twelve editions appeared between 1487 and 1545.

At the beginning of the sixteenth century the distinguished Renaissance humanist Jacques Lefèvre d'Étaples (Faber Stapulensis) produced a literalistic revision of the *Bible historiale*. His translation of the NT was published anonymously at Paris in 1523. Because the marginal notes were thought to be biased toward Protestantism, the French clergy attempted to suppress the book, and Lefèvre's version of the complete Bible had to be issued at Antwerp (1530).

The first French Protestant version was the work of Pierre Robert Olivétan, a cousin of John Calvin's. Published in 1535 at Serrières near Neuchâtel in Switzerland, at the expense of the Waldensians, this translation, judged by the standards of the time, represents an "erudition really prodigious" (Reuss). Calvin himself wrote for it the Latin Preface and an Introduction to the NT, and introduced several emendations into the revision issued in 1545. Another revision of Olivétan's work, brought out by the Protestant printer Robert Stephanus (Estienne) at

Geneva in 1553, is said to be the earliest entire Bible, in any language, to contain Stephanus' division of the text into chapters and verses familiar to us. The first definitive revision of Olivétan's translation, undertaken by a group of pastors at Geneva, appeared in an edition, published in 1588, which was very frequently reprinted during the next two centuries. In this edition the divine name Yahweh was translated by *l'Éternel*, a rendering which has been retained in the Protestant Bible of France, and which was also adopted by James Moffatt in English.

Among half a dozen other revisions of Olivétan's version made by various scholars, the careful work of J. F. Osterwald, a pastor at Neuchâtel, is the most important. Publishing the version at Amsterdam in 1724, Osterwald continued to labor at the task of revision, and issued a much more thorough revision in 1744, embodying the results of the exegetical science of the time. Toward the latter part of the nineteenth century Louis Segond, a professor at the University of Geneva, published a translation of the OT (Geneva, 1874) and the NT (1879).

During the twentieth century the "Synodal Version," a revision of the Osterwald text, was sponsored by the Synod of the Reformed Churches of France and published by the Bible Society of France (Paris, 1910). This has been revised several times. A modern, vernacular version of the NT, prepared by several prominent scholars (including Maurice Goguel and Henri Monnier), was published in 1929. In 1947, the Protestant Bible Society of Paris issued the *Bible du Centenaire de la Jeunesse*, which embodies the latest results of scholarly investigation.

Of the many French versions made by Roman Catholics, the most important include Richard Simon's rendering of the NT, published anonymously at Trévoux in 1702, and a series of versions which proceeded from Port Royal and the Jansenist school. Perhaps the most idiomatic of the latter is that associated with Louis Isaac le Maistre, better known as De Sacy. The NT, based chiefly on the Greek, appeared at Mons in 1667; the OT, translated from the Latin Vulg., was finally authorized in 1695. This version was republished many times, even by Protestant Bible societies. Among twentieth-century Roman Catholic versions, mention must be made of Abbé Crampton's *La sainte Bible*, revised by the Jesuit fathers with collaboration of the professors of St. Sulpice (Paris, 1907); the version of the Latin Vulg. issued by the Pieuse Société Saint Paul (1932); a modern vernacular rendering by the Belgian Benedictine, Paul George Passelecq (Brussels, 1950); a revision of Crampton's OT, made by J. Bonsirven, with a new rendering of the NT by A. Tricot (Paris, 1952); and the translation, with excellent textual and exegetical notes, prepared by the professors at École Biblique in Jerusalem (Paris, 1949-54).

3. German versions. After the Gothic version of Ulphilas (see VERSIONS, ANCIENT, § 6), the oldest fragments of the Bible in a Germanic language are probably the Frankish version of Matthew made at the Bavarian monastery at Monsee in the year 738. The MS is bilingual, with Latin on the left-hand page and Frankish on the right. The unknown translator strove after an idiomatic, rather than a literalistic, rendering.

What has been called the "German Tatian" is a bilingual MS of the ninth century, originating at Fulda and now at St. Gall. This is a translation of Tatian's harmony of the gospels (see VERSIONS, ANCIENT, § 4a) in two columns per page, left in Latin, right in German. The Latin version rests on that of the Fulda codex of the sixth century, and the German rendering is in an East Frankish dialect, being clear and smooth but not so vigorous as that of the Monsee fragments.

Passing over many other Germanic versions made by known and unknown translators during the following centuries, preserved today in more than two hundred MSS (most of them from the fifteenth century), we turn to printed editions of the German Bible. It is not generally realized that eighteen editions of the complete German Bible (fourteen in High German and four in Low German) were published prior to Luther's translation. The first, which was also the first Bible printed in a modern European language, appeared in 1466 at Strassburg from the printing press of Johann Mentel. All fourteen editions in High German give, in the main, one and the same version, and all contain the apocryphal Epistle of Paul to the Laodiceans. Who made the version originally is not known, but it was already more than a century old when first printed; to judge on the basis of linguistic considerations, it probably originated near Prague. Perhaps interest in vernacular Bibles was stimulated by the Hussite movement.

The translation by Martin Luther marks an epoch in the history, not only of the German Bible, but of the German language as well. Based upon the court tongue of electoral Saxony, Luther's rendering was enriched from a number of other German dialects. He completed the first draft of his translation of the NT (from Erasmus' Greek Testament, second edition) in three months; it was published September 21, 1522. The entire Bible was finally translated and published by Hans Lufft of Wittenberg in 1534. Luther's rendering, noted for its majesty of diction and sweep of vocabulary, exerted a profound influence upon the rise of modern German literature. Never satisfied with having achieved the most felicitous translation, to the day of his death Luther continued to polish and revise his work. Though portions of the Bible had been previously translated from the Hebrew and the Greek, this was the first complete Bible translated from the original languages into a modern European vernacular. It became popular immediately; eleven editions were published during Luther's lifetime, besides numerous reprints. It formed the basis of several other versions, including the first translation of the Bible into Swedish (1541), Danish (1550), Icelandic (1584), and Slovenian (1584).

So influential was Luther's rendering that for almost a century other attempts at translation were few. The next complete Bible appeared at Herborn in 1602, being the work of the theologian Johannes Piscator (Fischer). Unlike Luther's rendering, this was scholastic in tone and abounded in Latinisms. In the following century Johann H. Haug, who introduced into Germany the mysticism of the Philadelphia sect (founded by Jane Lead of England), pre-

pared a version on the basis of Luther's in comparison with the Zurich Bible and several English and French versions. It was published at Berleburg in eight folio volumes (1726-42), the last of which was devoted to the Apoc., Pseudep., and postapostolic books. It was partly from this edition (which contained the "missing" section in II Esd. 7) that Christoph Saur of Germantown, Pennsylvania, printed the first Bible in a European language to be published in America (1743).

During the centuries various attempts were made to revise Luther's translation, ridding it of obsolete words and expressions. By the middle of the nineteenth century six or seven recensions of his version were in circulation in Protestant Germany, but none of them had found widespread acceptance. In 1863 a committee, representative of different theological views, was appointed in order to undertake a revision involving only the very minimum of necessary changes. The NT appeared in 1867, and the complete Bible in 1883. This was issued as a *Probe-Bibel* ("Test Bible"), and additional comment and criticism were solicited from the church at large. Finally, after reviewing all proposals, a definite revision was issued by the Canstein Bible Press at Halle in 1892.

Among modern vernacular versions, special mention must be made of the "Menge Bible." Generally recognized to be one of the best of contemporary German versions, this was published by Hermann Menge at Stuttgart in 1926 after twenty years of unremitting labor. Like Luther, Menge continued to improve his work, and, a few months before his death in 1939, in his ninety-seventh year, he gave to the printer his final revision, which was incorporated into the eleventh edition and represents the "textus receptus" of the Menge Bible.

In 1931, on the four hundredth anniversary of the death of Zwingli, a committee which had been appointed by the Synod of Churches of the Canton of Zurich published a revision of the old Zwingli Version. Particularly in the OT, this version is generally regarded as one of the most satisfactory of modern German versions.

Another revision of Luther's Version was undertaken by the Evangelical Church of Germany in conjunction with the Union of German Bible Societies. In 1938 a "test edition" of the NT was issued, and in 1951 a "test edition" of the OT. After prolonged discussion and diverse criticism, a definitive revision of the NT was published in 1956.

Among Roman Catholic versions of the Bible, in German, of which there have been many, reference should be made to the following: In 1527 Hieronymus Emser, secretary to Duke George of Saxony, published a translation of the NT which was merely a slight revision of Luther's NT (1522), made to conform here and there to the Latin Vulg. In 1534 a Dominican, Johann Dietenberger, issued a revision of Emser, following Luther in the OT and the Zurich Bible in the Apoc. This version, revised in 1630 by Caspar Ulenberg and in 1662 by the clergy of Mainz, came to be called the "Catholic" Bible. The version made by Johann Eck, Luther's famous antagonist, was in the NT based closely on Emser and in the OT followed the pre-Lutheran rendering from the Vulg. His idiom, in the Bavarian dialect,

was so awkward and difficult to understand that his own biographer, Wiedemann, calls it the "worst of all Bible translations in the German language." First issued in 1537, it was not very successful and saw only two editions and seven printings, the last being in 1555.

H. Braun's work, which appeared in thirteen volumes from 1788 to 1805, was revised by J. F. Allioli and published in six volumes (1830-32). This translation, as well as that of J. H. Kistemaker (1825), achieved an even wider circulation by being issued by the British and Foreign Bible Society.

During the twentieth century Fritz Tillmann translated Vogels' edition of the Greek NT (Munich, 1927), and in 1937 Peter Ketter revised his earlier translation (Stuttgart, 1915) on the basis of Merk's edition of the Greek Testament.

Two members of the Order of Capuchian Monks, Konstantin Rösch and Eugen Henne, prepared a translation of the Bible, the former being responsible for the NT (Paderborn, 1932), and the latter for the OT (1936). Two other Roman Catholic scholars, P. Riessler and R. Storr, translated respectively the Old and New Testaments (Mainz, 1949). One of the most successful of modern Roman Catholics to put inexpensive copies of the Scriptures into the hands of the laity was Pius Parsch, a monk at Klosterneuberg, Austria. His translation of the Bible, from the original languages, was finished in 1952.

German translations of the OT by Jewish scholars have been made from time to time. Mention may be made of those prepared under the direction of L. Zunz (Berlin, 1837), S. Bernfeld (Berlin, 1902), N. H. Tur-Sinai—i.e., Harry Torczyner (four volumes; Frankfurt am Main, 1935-37; revised edition, Jerusalem, 1955—). Publication of the paraphrastic rendering by Martin Buber and Franz Rosenzweig was begun in Berlin in 1926 (new edition, Cologne, 1954—).

4. Greek (modern) versions. Modern colloquial Greek, which began to appear as early as the eleventh century, is the natural development of the Koine Greek of the Hellenistic age. Syntax underwent noticeable simplification; many new words were borrowed from Turkish, Slavic, and other languages; and the inflectional endings were greatly modified or eliminated altogether.

The first printing of a modern Greek version of any portion of the Scriptures was in a polyglot issued by the E. B. G. Soncino Press at Constantinople in 1547. This contained the Pentateuch and was prepared for the use of Jews who had been driven out of Spain. The Hebrew text is flanked by a Spanish translation in the right-hand column and by a modern Greek version in the left-hand column. The Targ. of Onkelos is above and the commentary of Rashi below. All these versions and texts are printed in Hebrew characters.

The first publication of a modern Greek version printed in Greek characters was issued in 1638. It is the NT in modern Greek and was prepared by Maximus, a Greek monk of Kallipolis (i.e., Gallipoli). The illustrious Cyril Lukar, patriarch of Constantinople, contributed a Preface to the volume. It was printed at Geneva by Pierre Aubert, and Lukar himself revised the proof after the death of the translator.

A revision of Maximus' rendering, based on orthographic and lexical corrections made by Anastasius Michael, was edited by the German theologian August H. Franke. It was published at Halle in 1710, largely at the expense of Sophia Louisa, queen of Prussia.

Another translation was made by Hilarion, head of the monastery of Mount Sinai at Constantinople. The NT was published by the British and Foreign Bible Society in 1828. As regards the OT, certain difficulties arose regarding the Bible Society's decision not to circulate the books of the Apoc. Hilarion was basing his translation on the LXX, which contains the Apoc.; the Bible Society decided that the version should be made from the basis of the Hebrew. Another committee was formed, composed of two English scholars, with a knowledge of Hebrew, and several learned Greeks, notably N. Bambas. Their version of the OT was published in 1840, of the NT in 1844. The Greek church, however, would not circulate the version lacking the Apoc. Hilarion's version of the NT was also revised by Bambas (1848), but this also, because of certain political reasons, found only limited approval, even though both ancient and modern Greek texts were printed in parallel columns.

A similar fate befell the modern Greek version of the gospels which was published at Athens in 1900, under the auspices of Olga, queen of the Hellenes. In the following year Professor Alexander Pallis published a frankly vernacular version of Matthew's Gospel in *The Acropolis*, an Athenian newspaper. What was considered to be undue license in his version aroused bitter hostility, which extended to Queen Olga's version also. The populace connected the latter book with a supposed Pan Slavist conspiracy, and riots broke out in the streets of Athens. This agitation led the government to issue a decree prohibiting the use of any modern Greek version of the Scriptures. (The prohibition was repealed in 1924.) Pallis published his completed version of the gospels (based on the Vatican Codex, B) at Liverpool in 1902.

In 1927 the Psalms in modern Greek were published at Athens by K. Kalinicos. Twenty years later two other renderings of the Psalter were issued at Athens, one by K. Phrilingos, and the other, which is designated a poetical paraphrase, by T. B. Konstantinos. Still other renderings of the Psalms appeared in 1950 (by T. Gritsopoulos) and in 1953 (by A. Kalamboussis).

In his commentary on the minor prophets (Athens, 1947), B. Vellas of the University of Athens included a new rendering of the Hebrew text into modern Greek. In 1954-55 Athanasios Chastoupsis and Nikolaos Louvaris published at Athens the complete Bible in Greek, the NT of which is a paraphrase rather than a strict translation. Similarly the versatile and energetic P. N. Trembelas issued the textus receptus of the Greek NT with a modern Greek paraphrase in parallel columns (two volumes; second edition, 1955). In 1955 Trembelas also published the LXX text of the Psalms (including the 151st Psalm) with a modern Greek paraphrase. A paraphrase of the Gospel of Luke and of the Acts was prepared by Bishop Athenagoras of Elaias and published in

Greek under the title *A History of Jesus Christ and of the Apostles* (Brookline, 1957).

5. Hungarian versions. The earliest Hungarian version of which any fragments survive dates from the beginning of the fifteenth century, and is the work of two Franciscan monks, Thomas and Valentine, who found asylum in Moldavia from Hungary, where they had been persecuted for Hussite doctrines. The translation, which is based on the Latin Vulg., is described as terse and exact. Also to the first half of the fifteenth century belongs the translation of Ladislas Batori, who, though from the family of princes of Transylvania, became a hermit in the Order of St. Paul. The first book printed in Hungarian was an edition of Paul's letters, translated from the Vulg. by Benedek Komjáthy. It appeared at Cracow in 1533. A translation of the gospels, prepared by G. Pesti, was published at Vienna in 1536. This is said to be a more free and independent rendering than that of Komjáthy. The first complete NT in Hungarian was the work of János Erdösi (Silverster), who had been a pupil of Melanchthon at Wittenberg. Translated from the Greek, it was printed on the first Hungarian Protestant printing press and published at Uj Sziget in 1541. The sixteenth century was marked by great literary activity in Hungary, and several other translations of the NT and of most of the OT appeared from various presses.

The first complete Bible in Hungarian was the work of Gáspár Károli, a pupil of Melanchthon and Reformed pastor of the little town of Göncz in Upper Hungary. It was rendered from the original languages, with reference to the Latin Vulg. and other versions. Since it was first printed at Visoly near Göncz in 1590, it is frequently known as the Visoly Bible. The appearance of this version exerted a notable influence, not merely on the spiritual life of the Magyar people, but on their national life and literature as well. More than one hundred editions of Károli's translation, often in revised forms, had appeared before the tercentenary of its publication was celebrated at Göncz in 1890.

During the Counter Reformation in Hungary, the printing of the Bible in the vernacular was prohibited, and consequently Hungarian Bibles had to be printed in other countries. One of these, a version prepared by a Reformed pastor of Debreczen, György Csipkés, who had studied Hebrew under J. Leusden at Utrecht, was completed in 1675, but arrangements for it to be printed could not be consummated until 1719. When the edition was crossing the Hungarian frontier, most of the copies were seized by the intervention of the Jesuits and were eventually burned.

At the beginning of the seventeenth century, in order to counteract the influence of Károli's Bible, the Roman Catholic archbishop of Esztergom (Gran), Péter Pásmány, had the Bible translated by a Jesuit scholar named György Káldi, who produced a vigorous and faithful rendering of the Vulg. This appeared at Vienna in 1626. It was revised several times, notably by the learned Béla József Tárkányi, who brought the version into conformity with the modern form of Hungarian speech. This version was published in 1865 at Eger (Erlau) with

a Preface by Béla Bartakovics, archbishop of Eger.

In 1886, at the initiative of Theodore Duka, Hungarian patriot and scholar, a revision of Károli's Bible was undertaken. The OT, which was published at Budapest in 1898, aroused so much adverse criticism that another revision committee was appointed to bring the work into general accord with the ERV. The work of this committee, published in 1908, was no more successful than that of its predecessors. Several other attempts were made to produce a version that would be satisfactory to all Hungarian Protestants. The most recent of these is the work of a Joint Bible Commission composed of representative Reformed and Lutheran scholars, seven for the OT and seven for the NT. Taking as a textual basis the latest editions of Kittel's Hebrew Bible and of Nestle's Greek Testament, the Commission declared its aim to render as faithfully as possible the original languages into a modern Hungarian language which incorporates all that is best and still alive in the idiom of the old translation. The NT was completed in 1952, and several books of the OT have been published.

6. Italian versions. The earliest surviving portions of scripture in Italian are in the form of harmonies of the gospels. One such harmony, in the Tuscan dialect, is preserved in twenty-four MSS dating from the thirteenth and fourteenth centuries; another harmony, in the Venetian dialect, is extant in a MS dating from the fourteenth century. The first printed Bible in Italian appeared at Venice in 1471; it was the work of a Benedictine monk named Nicolo di Malherbi (Malermi). A champion of Florentine liberty, Antonio Brucioli, who was accused of Protestant leanings, published the NT at Venice in 1530, and two years later the complete Bible appeared. Though on his title page Brucioli claims that his version was made from the original languages, his knowledge of Hebrew was not great, and he probably relied upon Paginus' Latin version of the OT and that of Erasmus for the NT.

A new translation of the NT was made from the Greek by M. Teofilo, and printed at Lyons in 1551. The Preface is from the Preface by Calvin in Olivétan's French Bible. A revision of Brucioli's Version, prepared for the Protestant refugees in Geneva, was printed by F. Durone at Geneva in 1562.

The first Protestant translation of the Bible into Italian was prepared by Giovanni Diodati, whose family was compelled by religious persecution to flee from Italy. He was a very able scholar and when only twenty-one was appointed by Beza to teach Hebrew in the Academy of Geneva. His translation of the Bible from the original languages, rendered into pure Tuscan, the standard of Italian style, was published at Geneva in 1607. Despite the prohibition of Pope Pius IV, in 1564, of the reading of the Bible in the vernacular, Diodati's version met with a success comparable with that of Luther's German version.

In 1757 Pope Benedict XIV gave a qualified permission for the laity to read the Scriptures, and in 1776 Antonio Martini, who later became archbishop of Florence, published a translation of the Latin Vulg. in elegant Italian.

During the nineteenth century portions of the Bible, in the majority of cases a gospel, were translated into more than a dozen Italian dialects. Most of them were prepared at the instance of Prince Louis Lucien Bonaparte. During the twentieth century a number of fresh translations, many in inexpensive form, have been issued by Roman Catholic scholars. Most of them are based on the Latin Vulg., and all of them have, of course, notes and comments. Martini's Version, revised and corrected, was published at Turin in 1920. In 1929 the Cardinal Ferrari Society issued at Florence a version of the Bible prepared by Giuseppi Ricciotti and a group of other scholars. Although based on the Vulg., variations from the Hebrew and Greek are noted in the margin. An excellent translation in modern, dignified, and simple Italian, prepared under the care of the Pontifical Biblical Institute, and directed by Alberto Vaccari, began to appear in separate volumes in 1922. Another version, prepared by a Dominican scholar, Marco Sales, was published at Turin in 1931.

Among Protestant efforts, that of Giovanni Luzzi of the Waldensian theological faculty, Rome, has been most prominent. He served as the head of a committee which revised the old Diodati Version; this was published by the British and Foreign Bible Society in 1925. In 1930 he published at Rome his own translation of the Bible.

7. Portuguese versions. The earliest printed scripture in Portuguese is a harmony of the gospels, prepared by order of Leonora, wife of King John II of Portugal, and published at Lisbon in 1495. It was based on the popular Latin *Vita Christi* by Ludolphus of Saxony. Incredible though it may seem, the complete Bible has been available in Portuguese for only *ca.* two hundred years. This was the translation made by a Roman Catholic priest, João Ferreira d'Almeida, who, upon going as a missionary to the East Indies, became a Protestant. His rendering of the NT was published at Amsterdam in 1681, and the entire Bible, completed by other missionaries, was published at Batavia in 1753.

The first translation of the Bible in the vernacular to be printed in Portugal itself (where, despite several centuries of a flourishing literary productivity, the Scriptures remained unavailable in the language of the people) appeared in 1783-90. It was the work of a Roman Catholic priest named Anton Pereira de Figueiredo, and was published, with copious annotations, at Lisbon in twenty-three volumes. Obviously a Bible in such an expensive format remained inaccessible to all except the wealthy. Both these versions have been revised several times, and both (Pereira's minus the notes) have been printed by the British and Foreign Bible Society.

During the nineteenth and twentieth centuries several Portuguese versions of the NT were published in Brazil. A revision of the d'Almeida Version of the entire Bible was undertaken by an interdenominational committee, which patterned its work upon the American Standard Version of 1901. The NT of this revision (called the *Versão Brasileira*) was published at Rio de Janeiro in 1910, the entire Bible in 1914 (corrected edition, 1926). In 1951 the Bible Society of Brazil issued an "authorized revi-

sion" of the d'Almeida NT, which seeks to preserve in modern orthography much of the familiar and beloved phraseology of the older rendering. The revision of the OT appeared in 1958.

8. Scandinavian versions. a. Danish (and Norwegian). Prior to the Reformation portions of the Scriptures in Danish were to be found chiefly in parish churches and in the monasteries. The first complete translation of the NT was prepared under the auspices of the Danish king Christian II, who, a friend of the Reformation, had to leave his country as a refugee (1523). His secretary, Hans Mikkelsen, a former mayor of the Swedish city of Malmö, and Kristian Winther prepared the translation from the Latin Vulg. and Luther's German translation. It was published at Leipzig in 1524. The language of the version was a mixture of Danish and Swedish, and for this reason, as well as the fact that in the Preface King Christian II was defended and his enemies attacked, the version was not well received in Denmark. The first idiomatic Danish version of the NT was the work of Christen Pedersen (1480-1554), who may be said to be the father of Danish literature. His translation was published at Antwerp in 1529 and again in 1531. In the latter year he also issued a metrical version of the Psalms.

These and several other translations of parts of the Scriptures were preliminary to the appearance of the complete Bible in Danish. The Lutheran Church in Denmark, established in 1537, received a translation of the whole Bible in 1550. The work of preparing the version was entrusted by the Danish king Christian III to the bishop in Copenhagen, two professors at the university, and two ministers. These five, who made use of a draft of the entire Bible prepared by Pedersen, finished their work in 1548. In accordance with the command of Christian III, Luther's German translation was to be followed as closely as the Danish would allow. The German printer Ludvig Dietz was secured to print the edition, and in eighteen months after he had come to Copenhagen three thousand folio copies were ready for the binder. When it was published in 1550, the edition was distributed to the parish churches in both Denmark and Norway, the price being the cost of a good steer. In 1589 a second revised edition, the so-called Frederick II Bible, was issued, in which many of the archaisms of the first edition were removed.

All these translations were made from Latin and/or German versions; the first Danish Bible to be translated from the original languages was completed in 1607 by Hans Paulsen Resen, bishop of Zealand. Resen's translation, however, erred on the side of literalism and was lacking in respect of Danish idiom. It was subsequently revised by Bishop Hans Svane (Swaning) in 1647, and remained in wide use up to the middle of the nineteenth century.

In 1814 Norway was separated politically from Denmark, and certain creative forces in language and literature began to assert themselves. The rise of a composite of various rural dialects, called Landsmaal or New Norwegian, developed side by side with the official Norwegian language (Riksmåal). During subsequent generations significant changes in both forms of language, as well as the awakening

of new spiritual life in both Denmark and Norway, called forth several new translations of the Bible. In Denmark, Jacob Christian Lindberg, a disciple of the prominent bishop, poet, and hymn writer, Grundtvig, published a translation of the OT in 1837-53 and of the NT in 1856. Among noteworthy versions of the NT that of Axel Sorensen, who prepared the first translation or paraphrase into the modern spoken vernacular (1881), and that of Bishop T. Skat Rørdam, who used a better Greek text established by modern critical scholarship (1886), deserve special mention. The first translation of the entire NT into Landsmaal appeared in 1889, the work of several scholars (Belsheim, Skard, and Blix); the OT was finished in 1921. During the twentieth century a Royal Commission, consisting of prominent Danish scholars, issued in 1931 a new and excellent rendering of the OT which was authorized to be read in churches. In 1942 a "test revision" of the NT was circulated, looking forward to eventual authorization. Several Norwegian translations of parts of the Bible also appeared, including work by Buhl, Mowinckel, and Schjott. In 1938 the Norwegian Bible Society published a revised version of the Bible in "New Norwegian," prepared by Pastor R. Indrebø.

b. Icelandic. The earliest rendition of portions of the Scriptures into Icelandic exists in a work entitled *Stjorn* (or *Stjórn*, "Dispensation" [of God]) and dates from the thirteenth century. Attributed to Brandr Jónsson, who became bishop of Hólar in Iceland (1263), this version is in part translation and in part paraphrase of a portion of the OT (from Genesis to II Kings) and is based on the Latin Vulg., with explanatory remarks drawn from various authors.

The first printed portion of the Bible to appear in Icelandic was published at Roskilde, Denmark, in 1540; this was a translation of the NT made by Oddur Gottskálksson from the Vulg. and with reference to Luther's German version.

The *editio princeps* of the Bible in Icelandic was due to Gudbrandur Thorláksson, bishop of Hólar. After sending a man to Copenhagen to learn the art of printing, and another to Hamburg to learn book-binding, he finally published the Bible at Hólar in 1584. The cost of printing was mainly defrayed by the financial assistance of King Frederick II of Denmark, who ordered that every church in Iceland should have a copy. In the opinion of many, this version is marked by a singular beauty of language and faithful simplicity of style, worthy to stand beside the work of Ulfilas, Luther, and Tyndale. This version has been revised many times, the most recent being in 1908. This revision was the result of a resolution of the Icelandic Bible Society, at Reykjavík in 1897, to sponsor the preparation of a translation based upon the original languages. The OT is the work chiefly of Haraldur Nielsson; the books of the NT were assigned to several translators connected with the theological seminary at Reykjavík.

c. Swedish. The first printed translation of the NT in Swedish was issued at Stockholm in 1526. At the request of King Gustavus Vasa, the version was prepared by Olaus Petri, who had attended Luther's lectures at Wittenberg, and by others who assisted in establishing the Reformation in Sweden. It was based on Luther's German translation of 1522, with refer-

ence to the Latin Vulg., and compared throughout with Erasmus' Greek text of 1522.

The complete Bible in Swedish was published in 1541; it was prepared by Laurentius Petri, archbishop of Uppsala, in collaboration with his brother Olaus Petri, assisted by other colleagues. The translation of the OT was based on Luther's Version, with reference to the Latin Vulg. The NT is a thorough revision of the text previously published in 1526. By royal decree a copy was provided for every church throughout the country. In the next century several attempts were instigated to revise the Gustavus Vasa Bible, but these came to no fruition. It was finally resolved to reprint the text of the 1541 Bible with corrections in orthography and the introduction of verse numbers, chapter headings, marginal subject headings, and other aids for readers. This edition, called the Gustavus Adolphus Bible, was published at Stockholm in 1618. In 1703 a revised edition appeared under the supervision of Eric Benzelius, archbishop of Uppsala. Very few changes were made in the text, but the chapter headings, notes, marginal matter, etc., were more extensively revised. It is known as Charles XII's Bible.

A new version of the Bible, based on the original texts and Luther's German version, was prepared by H. M. Melin, professor of theology at Lund. It was published at Lund in six parts between 1858 and 1865.

Several translations of the NT, prepared by individual scholars, both Protestant and Roman Catholic, appeared during the late nineteenth and twentieth centuries. The most recent revision of the text of the complete Bible, approved by the Church Diet of the Lutheran Church, was published in 1917. This final approval was given after several Bible commissions had been laboring for 140 years and had submitted many specimens of their work to the members of the Church Diet, which had rejected some and authorized others.

9. Slavic (Slavonic) versions. a. Old Church Slavonic. Slavonic, the ancient form of Slavic speech still used ecclesiastically in Russia and other Slavic countries, was one of the earliest languages in Europe to possess a Bible. In the second half of the ninth century Cyril (Constantine the philosopher, an erudite polyglot, formerly professor at the University of Constantinople) and his brother Methodius went as missionaries from Macedonia (Salonika) to Great Moravia. Here they organized a national church with services in Slavic. For this purpose they translated portions of the Scriptures, writing it in an alphabet which Cyril created for the purpose. Since at this time there was very little dialectic differentiation of the primitive Slavic languages throughout Central Europe, there were no linguistic obstacles to the spread of the literary language (which is called today Old Church Slavonic) among the great majority of the Slavs. Though the Moravian mission was forcibly terminated by the Roman clergy of S Germany in 885, after some two decades of work enough impetus had been given to continue the circulation of the Scriptures in Slavonic. During the next few centuries the original version underwent certain modifications reflecting the development of local Slavic dialects. Thus, Old Church Slavonic MSS of the gos-

pels, the Psalter, and other portions of the Bible, are extant in several distinct recensions, including the Bohemian, Bulgarian, Croatian, Macedonian, Russian, and Slovenian. During subsequent centuries the several Slavic languages developed to such an extent that the Old Church Slavonic Version, used in the church liturgy, came to be less and less understood by the common people in the various Slavic countries.

The first printed edition of the complete Bible in Slavonic was prepared under the auspices of Konstantin, prince of Ostrog, in Volhynia, Russia. This edition was published at Ostrog in 1581 on the basis of a Slavonic MS dated 1499 and named after Genadius, archbishop of Novgorod. For the OT it follows the text of the Greek LXX. A revision of the Ostrog Bible, prepared by Arsenios, a Greek, and by several others, was published at Moscow in 1633. This, in turn, was revised during the following century at the behest of the emperor, Peter the Great, in 1712. After many vicissitudes, and upon the issuance of a ukase by the Empress Elizabeth, the work was finally completed and issued at St. Petersburg in 1751. This edition, known as the "Bible of Elizabeth," takes into account the Hebrew text of the OT. Reprinted many times, it has remained the standard edition of the Slavonic Bible.

b. Bohemian (Czech). During the fourteenth century several unknown translators rendered the Psalter and other parts of the Bible from the Vulg. into Bohemian. The Reformer Ján Hus (1369-1415) made use of these versions in his revision of the Old Church Slavonic text. Later this version was revised by several of Hus's followers. The NT in this revision was issued in 1475, being the first printed scripture in the language, and the complete Bible, the fifth Bible printed in a modern European language, appeared at Prague in 1488. During the sixteenth century, when about three fourths of the country was Protestant, this Bible was revised and reprinted many times in various cities. Toward the end of the century a new rendering was prepared by members of the United Brethren from the Hebrew and Greek originals by a committee of eight distinguished scholars under the chairmanship of Bishop Blahoslav, and was issued in six volumes as fast as completed from 1579 to 1593. The translation came to be called the Kralitz Bible, from the Moravian castle where it was printed at the expense of Baron von Zerotin, and has remained the standard version for Protestants.

After the year 1620 the publication of non-Catholic Bibles in Bohemia and Moravia was prohibited, and efforts were made to prepare a translation from the Latin Vulg. for Roman Catholics. After some fruitless beginnings the work was entrusted to several Jesuits. The NT appeared in 1677, the complete Bible in 1715. It was called the Wenceslaus Bible because it was published at the expense of the society founded to honor Wenceslaus. This was subsequently revised on the basis of the text of the Kralitz Bible; several other Roman Catholic versions likewise made large use of the Protestant rendering.

During the twentieth century F. Zilka, a pastor of the Evangelical Church of the Czech Brethren and professor at the Hus Theological Faculty, Prague, published a translation of the NT (1933).

c. Bulgarian. "Old Bulgarian" is a designation sometimes given to Old Church Slavonic, and translations into this language are mentioned above (see § 9a). The first printed version of the NT in modern Bulgarian was published at Smyrna in 1840. It was translated from the ancient Slavonic Bible by a schoolmaster of Gabrova named Neophytus Papa Petros (or Neophyte Rilski). The first translation of the NT to be made from the original Greek was published at Bucharest in 1859, and the first translation of the OT from the Hebrew appeared in three parts between 1862 and 1864. In 1891 the Synod of the Bulgarian Orthodox Church appointed a committee, headed by Metropolitan Boris, exarch of Bulgaria, to prepare a revision. After five committees had worked successively on the project, the translation was published at Sofia in 1925. Another Bulgarian version was made by a committee under the leadership of Robert Thomson; the NT was issued at Sofia in 1921 and the Bible in 1923.

d. Polish. The earliest translation of any part of the Bible into Polish was the Psalter. Several MSS of this version survive, the oldest dating from the second half of the fourteenth century. The first printed NT was issued in two volumes in 1553; it was translated from the Greek by a Lutheran pastor at Königsberg, Jan Sieklucki (generally called Seklucyan), a friend of Luther.

Early Polish Bibles are associated with the names of the towns where they were published. The first edition of the entire Bible is known as the Cracow Bible (1561). Its origin is very obscure. It purports to be a rendering from the Latin Vulg. made by an anonymous translator, revised and prepared for the press by Jan Lwowczyk (i.e., John of Lemberg), a Roman Catholic theologian. Remarks in the Preface regarding persecution and intrigue have led some to suggest that the translation was really of Protestant origin, foisted upon Roman Catholics by the printer's trick of having the MS revised by Lwowczyk, whose orthodoxy was above suspicion. It has been observed that the translation does not adhere closely to the Latin, and that its idiom and orthography bear clear traces of influence from the Bohemian Bible of 1557. Other theories of the origin of the Cracow Bible have also been advanced. Curiously enough, the wood cuts in Revelation are borrowed from Luther's German Bible; in two of the cuts representing the dragon, the triple crown of the Papacy placed on his head has obviously been altered to a double crown, while in the cut representing Babylon, the triple crown has been altered to a single crown.

The second edition of the Bible in Polish, this one made from the original languages, was prepared by a group of eighteen or more scholars, gathered for this purpose by an eminent Polish prince, Nicolas Radziwiłł. Finished after six years of work, it was published in 1563 at Brest, Lithuania. Unfortunately this translation was not generally welcomed: adherents of the Lutheran and Reformed confessions suspected it of Socinian influence, and the Socinians complained that it was not accurate enough. After the prince's death (1565), a Roman Catholic member of his own family sought out and burned all copies he could locate. Subsequently a Socinian pastor at Łosk, Simon Budny, prepared a revision of the

Brest Bible; this was published at Nesvizh in 1572.

What became the standard Roman Catholic version of the Bible in Polish was translated from the Latin Vulg., with reference to the original texts, by a Jesuit, Jakub Wujek. It was published at Cracow in 1599 with an Introduction by Stanislaw Karnkowski, archbishop of Gnesen and primate of Poland. In 1935 a revised edition was published.

The Brest Bible was superseded by the so-called Danzig Bible, which finally became the edition used by all Evangelical Poles. It was prepared by ministers of the Reformed, Lutheran, and Moravian churches, and was published at Danzig in 1632. The archbishop of Gnesen, having discovered a trifling error (*do* for *od*) in Matt. 4:1, used this as a pretext for suppressing the edition, and all the copies of this Bible which could be seized were burned. The version was reprinted many times both in and outside Poland.

In 1928 the Mariavite archbishop O. J. M. Michal Kowalski published his translation of the NT at Płock.

e. Russian. Since Church Slavonic is not intelligible to the Russian people, the Ostrog Bible of 1581, as well as its revisions in 1633 and 1751, was not satisfactory for the laity. An effort was made to produce a version in the White (or Polish) Russian dialect by Franciscus Skorina, a native of Polotsk in White Russia. He translated from the Latin Vulg., but used also the Slavonic Version and the Bohemian Bible of 1506. Probably his intention was to translate the whole Bible, and he may have succeeded in doing so, but only portions of his version are extant today. These are twenty-two books of the OT and the Acts and letters of the NT. Most of these books were printed in Prague in 1517-19; two parts were printed at Vilna a few years later.

No other editions in the vernacular appeared until the nineteenth century, when they were published in connection with the founding of the St. Petersburg Bible Society in 1813. In 1821 the NT in Slavonic and in Great Russian was issued, translated by a committee appointed by the Holy Synod at the request of Czar Alexander I. The work had been undertaken by a group of professors at the theological academy at St. Petersburg, under the direction of the eminent churchman and scholar Vasily M. D. Philaret, afterward metropolitan of Moscow. In 1820 the translation of the OT from the Hebrew was begun, and the portion from Genesis to Ruth was finished. In 1825 this was printed by the Bible Society at St. Petersburg, apparently just before it was compelled to cease operations, in accord with a ban by Czar Nicholas I upon all private associations, even when nonpolitical. All copies of the Scriptures in stock were ordered burned. It may be mentioned here that during the short period of its existence, the Russian Bible Society had opened 290 depots in different parts of the Empire, portions of the Bible were translated and edited in fourteen new languages, and more than 876,000 copies of the Bible, or of some part of it, were printed in 26 different languages and dialects.

The accession of Czar Alexander II in 1856 made it possible for the Holy Synod, under the leadership of Philaret, to resume the work of translating the Scriptures. Under the general editorship of E. I.

Loviagin, professor of Greek in the theological academy at St. Petersburg, a group of scholars from this and three other theological academies (at Moscow, Kiev, and Kazan) began a fresh translation of the gospels, which appeared in 1860. The Synod also appointed a committee (including Loviagin and D. A. Chwolson, professor of Hebrew) to prepare a version of the OT. This appeared in installments in a church magazine and later was printed in one volume (St. Petersburg, 1875). As in the case of the Slavonic Bible, the apocryphal books form part of the Russian Bible. This has been reprinted at various times, the most recent edition being published at Moscow in 1956 with the authority of Alexei, the patriarch of Moscow and All Russia.

The Little Russian, or Ruthenian, dialect, which is used by people in the Ukraine, Galicia, and Bukovina, was employed as a vehicle for the Scriptures first in 1869. In that year P. A. Kulisch, a Ruthenian litterateur, published at Lemberg his translation of the Pentateuch. Continuing his work, with the assistance of D. I. Puluj, Kulisch prepared a translation of the entire Bible, conforming it to the ERV. After his death his MS was supplemented by I. C. Levitsky and edited for printing by Alexander Slusarczyk. It was printed (in Russian characters) at Vienna in 1903. In 1921 another version of the NT in Ruthenian was published at Ždŕgief (near Lemberg). This was made by Yaroslav Levitsky, and revised by a committee of professors and officials of the Greek Orthodox Church.

f. Serbo-Croatian. Today Serbo-Croatian is the standard language of most of the inhabitants of Yugoslavia. The Serbs belong almost entirely to the Greek Orthodox Church and use the Cyrillic characters in writing; the Croats belong to the Roman Catholic Church and use the Roman characters in writing.

The first publication of portions of the Bible was an edition of the liturgical letters and gospels, translated by a Franciscan, Bernardinus Spalatensis, and published in 1495 at Venice. The first entire NT was translated from Erasmus' Latin version and Luther's German version by Antonius Dalmata and Stephanus Consul Istrianus. This was issued from the press of Baron Jan Ungnad, at Urach, near Tübingen, in 1563. One edition was printed in Glagolitic and one in Cyrillic characters. Though the Prophets were issued in Roman characters the following year (the identity of the translator is doubtful), the entire Bible in Serbo-Croatian was not published until the beginning of the nineteenth century. The Bible in Cyrillic characters was published at Budapest in 1804; the name of the translator is unknown. *Ca.* a quarter of a century later the Bible in Roman characters, translated from the Vulg. by Matia Petar Katančić, a Franciscan, was issued at Budapest in 1831.

The purest tradition of the Serbo-Croatian language was preserved orally during the centuries in folk stories and ballads. Until the nineteenth century, however, the literary language was not modeled on this tradition, but rested upon a Serbianized form of Church Slavonic. Through the efforts of the linguistic and literary reformer, Vuk Stefanović Karadžić (1787-1864), though without academic training him-

self, the language of the common people came to be regarded as a suitable vehicle for polite literature. In the interests of literary reform, Vuk issued his translation of the NT at Vienna in 1847.

Other translations and several revisions of Vuk's rendering have been published. The most important of these is the Bakotić Bible, prepared by Dr. Lujó Bakotić, a minister of high cabinet rank; it was published in Roman characters at Belgrade in 1933. His translation is said to be "inescapably lucid." A translation of the original languages into Croatian was undertaken by Ivan E. Šarić, archbishop of Sarajevo. The first fascicles of the OT appeared in 1941; a second edition of the NT was published in 1953.

g. Slovak. The Slovak language, which is the predominant native language of Slovakia (an autonomous part of Czechoslovakia), though existing for hundreds of years, first became stabilized and a vehicle of literary composition in the late eighteenth century. At the beginning of the nineteenth century the Bible was translated from the Latin Vulg. by Jiří Palkovič, a Roman Catholic canon of Gran. It was published in Gothic character in two volumes at Gran in 1829 and 1832. This version was replaced in 1926 by a translation made by Ján Donoval and a group of Roman Catholic scholars, revised by Richard Osvald. It was published by the Vojtech Union in Trnava in 1928.

A Protestant translation appeared in the work of Josef Rohaček, a Lutheran pastor, whose NT was published in Budapest in 1913, and whose complete Bible was issued at Prague in 1936.

The most recent version of the NT is that prepared by Stefan Žlatoš and Anton Jan Surjanský; it was published at Trnava in 1946.

h. Slovenian. Slovenian is used in the Slovenian People's Republic (an autonomous unit within Yugoslavia) and in small adjacent areas of Austria and Italy. For centuries the Slovenes have enjoyed the reputation of being a hard-working, intelligent, and reliable people. The first publication of any part of the Bible in Slovenian was the Gospel According to Matthew, translated in 1555 by Primož Truber, a Reformed minister in Carniola in S Austria. His translation of the entire NT was completed in 1577. The OT was translated by a Lutheran pastor, Jurij Dalmatin, whose work was reviewed by a commission of Lutheran Church authorities of Carniola, Styria, and Carinthia. This first Slovenian Bible was printed at Wittenberg in 1584 under the patronage of the elector of Saxony. In the Preface it is stated that the version was made from the original languages and other versions (meaning particularly Luther's Bible, which it follows closely, even as regards the prefaces to the books of the Apoc.).

As in other countries, the Reformation in Slovenia was followed by a vigorous Roman Catholic counter-reformation in which Protestant clergy were persecuted and their Bibles burned. Toward the end of the eighteenth century several Roman Catholic ecclesiastics prepared the first version of the Bible for Slovenian Catholics. From 1784 to 1802 the parts of this translation, which was made from the Vulg., were issued at Laibach by Jurij Japelj, Blaž Kumerdey, and five others. At the middle of the nineteenth century another Roman Catholic version appeared

at Laibach; this was translated from Allioli's German Bible by a group of priests (1856-59).

During the first part of the twentieth century, under pressure for Yugoslav political unity there was some agitation to drop the Slovenian language in favor of Serbo-Croatian. The tide of popular opinion among Slovenes rallied strongly in favor of retaining their own Slavic dialect, now somewhat modified through the centuries. Two revisions of the Scriptures were carried out. The British and Foreign Bible Society published Anton Chraska's version of the NT at Laibach in 1908, and of the Bible in 1914. The bishop of Ljubljana (Laibach), Antona Bonaventura Jegliča, issued a translation of the NT in 1929.

10. Spanish versions. The earliest allusion to the existence of a Spanish version is the decree of John I, king of Aragon, issued in 1233 at Tarragona, that no one, clergy or laity, was to keep in his house any translation of the OT in the vernacular tongue. This implies the existence of such a translation. Later in the thirteenth century King Alphonse X not only relaxed this prohibition but ordered, it is said, that a translation be made of Jerome's Latin Vulg.

An unusual feature in the history of the Spanish version of the Bible, as compared with those made in other countries, is the large proportion of early translations made by Jewish rabbis from the Hebrew text. Some of these were made in the Castilian dialect and others in Judeo-Spanish, or Ladino, a dialect used by Jewish exiles from Spain, who settled in Turkey, Italy, and the Netherlands in the latter part of the fifteenth century. The first printed edition of the OT in Spanish appeared in 1553 and is a revision of an old Jewish version, made from the Hebrew and existing previously in MS form. Since the edition was produced under the protection of the Duke of Ferrara, it is generally called the Ferrara Bible.

The first printed NT in Spanish was translated from the Greek by Francisco de Enzinas, a young Spanish student at Wittenberg, in the house of his tutor and friend, Melanchthon. A few weeks after it came from the press in 1543, and before many copies had been circulated, Enzinas was arrested and the printed copies suppressed because of alleged heretical leanings. After a year's imprisonment Enzinas managed to escape; thereafter he lived in exile until his death at the age of thirty-two. Only a few copies of his translation have survived.

The second edition of the NT in Spanish was translated from the Greek by Juan Perez de Pineda. It was published in 1556 at Geneva, where Perez had fled to escape the Inquisition. Copies of this edition, which is regarded as a model of Castilian style, were smuggled into Spain by Julian Hernandez, who later was apprehended by the authorities and executed.

The first complete Spanish Bible was the work of Cassiodoro de Reina, one of the Spanish Reformers who had escaped from Spain ca. the year 1557. Soon afterward he began his translation, which was based on the original languages, with comparison made of other versions. It appeared at Basel in 1569. This version was later revised by another refugee from Spain, Cipriano Valera, who had been a monk but had come under the influence of the Reforma-

tion. The NT was published at London in 1596, and the complete Bible at Amsterdam in 1602. In this edition the books of the Apoc. are placed between the OT and the NT and are prefaced by a discussion of their authority. Many editions of this and other Spanish versions were published at various places outside Spain.

It was not before 1793 that the complete Bible in Spanish was printed on Spanish soil. This was the work of Felipe Scio de San Miguel, who later became bishop of Segovia. It was translated from the Latin Vulg. and was printed at Valencia in ten volumes. A second and revised edition appeared at Madrid, 1794-97, in nineteen volumes. Naturally few individuals could afford to buy such expensive editions, which contain many annotations. During the years a need was felt for a rendering that would take some account of the original languages. This was produced in 1825 by Felix Torres Amat, afterward bishop of Astorga, who made a fresh translation of the Vulg., with comparison of the Hebrew and Greek. Though often reprinted, it did not supplant Scio's rendering.

Since the Spanish used in Latin America differs not a little from that of the Iberian Peninsula, almost insuperable difficulties stand in the way of producing a version satisfactory to the whole Spanish-speaking world. An attempt to achieve this goal was made by a joint committee of Spanish and South American translators meeting in Spain, who prepared a rendering of the Nestle text of the Greek NT. It is called the Hispano-Americano NT and was published at Madrid in 1916.

The first complete translation of the Scriptures into Spanish made directly from the original languages by Roman Catholic scholars was published at Madrid in 1944. It was prepared by Canon Eloíno Nacar Fuster and Alberto Colunga under the auspices and direction of the Pontifical University of Salamanca. In 1947 another version from the original languages was published at Madrid, translated by Francisco Cantera and José Maria Bover. During the twentieth century several Roman Catholic renderings into modern, vernacular Spanish have appeared in South America.

VESPASIAN vēs pā'zhī ʼn, —zhōn. Titus Flavius Vespasianus, Roman emperor (A.D. 69-79), founder of the Flavian Dynasty. He was born into a prosperous but undistinguished Italian moneylending family on November 17, A.D. 9. Passing through the normal equestrian offices, he became praetor in the reign of Caligula, commanded a legion under Claudius, and became *consul suffectus* in 51. *Ca.* a dozen years later he was proconsul of Africa, and in 66 accompanied Nero to Greece.

Vespasian was given command of three legions in order to suppress the Jewish Revolt, and he set about his task slowly and systematically. After Nero's murder, while Otho and Vitellius were contending for power, Vespasian came to believe that he himself should become emperor. The Jewish historian Josephus had already predicted this event (War III.viii.9); and on July 1, 69, the ex-Jew Tiberius Julius Alexander, nephew of Philo and prefect of Egypt, had his legions swear allegiance to Vespasian. The emperor-designate left the Jewish war to his son Titus and proceeded in leisurely fashion to Rome, winning popular support along the way and arriving in September, 70. Meanwhile Titus had taken Jerusalem, and in the early summer of 71 he joined his father at Rome, where they celebrated a joint triumph. Vespasian made Titus his partner in the imperial government, denying his other son, Domitian, any real power.

An excellent administrator, he recognized Rome's need for financial stability and therefore increased taxes—a small price to pay for order after anarchy. His way of life was simple and he treated the notion of deification with ridicule; when his last illness began, he said, "Unfortunately I suppose I am becoming a god." He died on June 24, 79, and was succeeded by Titus. The Senate consecrated him without hesitation.

In his reign, as far as we know, there were no persecutions of either Jews or Christians, though he expelled Cynic and Stoic philosophers from Rome because of their seditious statements. Josephus' devotion to him doubtless improved the position of Jews in the Empire, and Jewish Christians had been fortunate to leave Jerusalem on the outbreak of the revolt. It is only in Christian legend that we hear of Vespasian's seeking to have all the members of the family of David killed (Euseb. Hist. III.10.12).

On the other hand, he retained Palestine as part of the imperial estate, and the head tax of two drachmas, previously paid to the temple by adult male Jews, was transferred to the temple of Jupiter Capitolinus.

Since he became emperor as a result of crisis and civil war, he tried to provide a new solution for the

problem of the succession, but it lasted only a generation because of Domitian's despotism. Vespasian's real contribution was conservative: he saved the Empire at a time when it seemed to be perishing.

R. M. GRANT

VESSELS. Hollow utensils used for holding any substance, dry or liquid. In Bible times pottery was the most common material so used, followed in turn by baskets, metalware, leather material, cloth bags, and wooden containers. The archaeologist seldom finds anything but pottery. The tombs around Jericho have furnished the best finds in basketry, leather, cloth, and wood. Metal would have lived through, but it was one of the first objects plundered in war, and tomb robbers soon removed metalware from the graves. The Hebrew term for vessels of all kinds is כלי; the NT does not have a similar broad term.

1. **Leather, cloth, wood, basketry.** Vessels made of these materials were necessities for nomadic peoples, for pottery was too fragile and metal wares were too expensive. Only a small percentage of Bible people were nomads. For a sedentary people, as most of the Israelites were, leather's chief uses as a vessel were: (a) the leather bucket with which water was drawn from the well, (b) the waterskin in which it was carried, (c) the wineskin, and (d) the butter churn. The main use of cloth was the bag, which served primarily in transportation rather than storage. Cloth was not only expensive, but also easily subject to accident. The modern reader of the Bible seldom realizes how expensive cloth was in those days. Grain would be transported in sacks but not stored in them. Wood was used far less often than now, because of the expense of working it. The basket was a good, cheap container for many materials and could be used both for transportation and for storage.

2. **Ceramic and metal wares.** Pottery* was in most cases the best container. (For a detailed description of pottery vessels, see POTTERY.) It is much harder to identify metal vessels with accuracy than it is to identify ceramicware. The largest metal bowl used in sacrifice was the אגן, "basin" (Exod. 24:6; KJV "bason"). A related bowl was the מזרק, also "basin." It came in copper (Exod. 27:3; KJV "bason"), silver (Num. 7:13; KJV "bowl"), and gold (II Chr. 4:8; KJV "bason"). אגרטל (Ezra 1:9; RSV "basin"; KJV "charger") is a postexilic synonym for מזרק. The כפית, which came in silver and gold (I Chr. 28:17; Ezra 1:10; 8:27; RSV "bowl"; KJV "bason"), seems to have been a smaller bowl in temple usage. This category included the rarest of all metal vessels mentioned in the Bible—namely, those made of brass (Ezra 8:27; RSV "bronze"; KJV "copper"). This passage is one of the earliest references to this copper-zinc alloy that we have anywhere in literature. יע (SHOVEL; Exod. 38:3 ff; I Kings 7:40, 45, etc.) seems also to have been a member of the bowl family, but it cannot be definitely placed. In general, metal cooking pots and metal cups bear much the same names as their ceramic counterparts (see POTTERY). A number of metal vessels were used only in the sacrificial system (see SACRIFICES AND OFFER-

15. A variety of stone vessels, from the Pre-dynastic period and the Old Kingdom (before 2280 B.C.)

INGS). For a detailed vocabulary of metalware, see BASOR Supplementary Studies, nos. 5-6. Fig. POT 63.

3. **Stoneware.** Before metals came into common use for household dishes, some of the most expensive ones were made of stone.* The Egyptians were the best craftsmen in this field.* As soon as metal became cheap, however, it replaced stone in most instances. Alabaster, nevertheless, was so beautiful a stone that it continued to be the container of the finest-grade perfumes (Matt. 26:7). Glass was only coming into use by NT times. Large stone vats were used in the dyeing industry in OT times. John 2:6 speaks of large stone jars for purification purposes. For various kinds of vessels, see BASIN; BOWL; CALDRON; CRUSE; FLAGON; FLASK; GOBLET; POTTERY; etc. Figs. VES 14-15.
J. L. KELSO

VESTIBULE [אולם, אולם, אולם, that which is in front, see 1 below; מסדרון, perhaps pillared hall, balustrade, see 2 below]. 1. A room at one end of a structure, serving as an entry room. The term is used once (I Kings 7:6; "porch") of such a room in Solomon's Hall of Pillars (see HALL). Elsewhere it is always associated with the TEMPLE in Jerusalem. It is used of the first room in the main building of the temple of Solomon (I Kings 6:3; 7:12, 19, 21; I Chr. 28:11; II Chr. 3:4; 8:12; 15:8; 29:7, 17), Ezekiel (Ezek. 40:48-49; 41:15, 25-26), and Zerubbabel (Joel 2:17). The dimensions of the vestibule of Solomon's temple are given as 20 by 10 cubits (ca. 30 by 15 feet), with the height presumably 30 cubits (ca. 45 feet), as already stated of the temple as a whole (I Kings 6:2-3). However, II Chr. 3:4 MT gives the height as 120 cubits (ca. 180 feet), for which the LXX and the Syr. have 20 cubits. Ezekiel's measurements, which are said to be in "long cubits, each being a cubit and a hand-

breadth in length" (Ezek. 40:5), are 20 by 12 (vs. 49 LXX; MT has 11). Each of the gates to the outer court of Ezekiel's temple is also described as having a vestibule at its inner end measuring 20 by 8 cubits (vss. 7-26), while each of the gates to the inner court had a vestibule at its outer end measuring 25 by 5 cubits (vss. 29-37). One of these contained four tables where the animals for the offerings were to be slaughtered, as well as the door to a room where the offerings were to be washed (vss. 38-39); and additional tables were outside the vestibule of the N gate (vs. 40). The prince was to enter for sacrifice by way of the vestibule of the E gate (44:3; 46:2, 8).

2. An antechamber(?) outside the roof chamber of the palace of Eglon king of Moab (Judg. 3:23).

E. M. GOOD

VESTMENTS. Translation of three related Hebrew words, derived from לבוש, "to put on": לְבוּשׁ and מְלִבוּשׁ (II Kings 10:22) referring to special dress of devotees of Baal; מְלִבוּשִׁים (lit. "attired"; Ezra 3:10) to the clothing of priests. See also DRESS AND ORNAMENTS.

J. M. MYERS

VIAL. 1. The container (יָרֵךְ) from which Samuel anointed Saul (I Sam. 10:11). The same word is translated "flask" (KJV "box") in the account of the anointing of Jehu (II Kings 9:1, 3). It denotes the small Hebrew perfume juglet. See POTTERY § 3b.

2. KJV translation of φιάλη (Rev. 5:8; 15:7; 16:1-3, 17; 17:1; 21:9). The Greek word means a broad shallow cup or "bowl" (RSV). See POTTERY § 3a.

J. L. KELSO

VICES. See LISTS, ETHICAL.

VILLAGE. A collection of dwelling places and other assorted buildings having a simpler organization and administration than a CITY. In the OT the distinction between city and village is generally maintained (Lev. 25:29, 31; Deut. 3:5; I Sam. 6:18; I Chr. 27:25). The city was larger and walled. The village was unwalled, and in it the simple one-room house prevailed. Mud huts are still common in villages of the Near East, and grass huts are found in the Arabian Peninsula. The village did not have moats, ramparts, or a strong defense (Ezek. 38:11). It was an open town (Esth. 9:19). It probably had a guest house, but no temple. In Talmudic times a village was defined as a place without a synagogue. The NT did not keep this religious differentiation (Mark 1:38-39), but the OT duality persists in the Synoptics (Matt. 9:35; 10:11; Mark 6:56; Luke 8:1; 13:22).

In biblical times, especially in the OT, even the city was small. Megiddo and Jericho covered ca. twelve to thirteen acres, Lachish fifteen, and Debir less than eight. Jerusalem was a walled city, yet "bound firmly together" (Ps. 122:3). Perhaps it could be said that Israel inherited or captured its cities, but established its own villages in the hill country during the Conquest.

A village could grow over the years. Thus a village might be fortified (I Sam. 23:7). The size varied perhaps with the general security of the times. In years of peace, the people did not hesitate to live outside the fortified city walls. The growth of a vil-

lage into a city is perhaps reflected in the proper names CAPERNAUM ("village of Nahum") and HAZAR-ADDAR ("village of Addar"). BETHLEHEM is called both a city (πόλις; Luke 2:4) and a village (κώμη; John 7:42). A destroyed city could become a village (Zech. 2:4). Many of the villages in Galilee in NT times were walled.

Often the village was dependent upon the city for protection and certain economic and political matters. This is perhaps indicated by the word בת, "daughter." In such instances jurisdiction of the village was controlled by the city-state; however, the council of elders was the local court and board. This dependency is evident in the distribution of the land under Joshua; 114 cities are listed as all allotted to Judah "with their villages" (Josh. 15:32-62; cf. 18:24, 28; I Chr. 6:54 ff; etc.).

Villages were close to the city wall (perhaps even built against the wall, as in medieval times in Europe). They can be likened to modern city suburbs (note, however, the KJV use of "suburb" for "open field" or PASTURE; e.g., Lev. 25:34). Often city dwellers would go out into villages for recreation and rest (Song of S. 7:11). It is possible that the village outside the wall may later have been walled in, as some double-walled towns suggest. A group of villages may indicate a district or region —e.g., Amorite villages (Num. 21:32), those of Caesarea Philippi (Mark 8:27), and those of the Samaritans (Acts 8:25). Many cities are spoken of as having such villages: Beth-shean (Josh. 17:11; Judg. 1:27), Shechem (I Chr. 7:28), Gezer (7:28), Gath (18:1), Dor (7:29), Taanach (7:29), Megiddo (7:29), Rabbah (Jer. 49:2), Heshbon (Num. 21:25; Judg. 11:26), etc. Beth-saida, Bethany, Emmaus, are villages in the NT.

The villages were mainly involved in AGRICULTURE. The surrounding lands were variously shared by the inhabitants of the village. It was thus a farming center and a gathering place for shepherds in the winter. One or more threshing floors were the common property of the village. The farmers and shepherds were often away from the village in the spring and summer. The Near East still knows this seasonal alternation. The pasture land is specifically noted as belonging to the village in I Chr. 6:54 ff.

Nomadic enclosures or encampments are called villages. So the circle of tents of the Ishmaelites (Gen. 25:16; cf. Kedar in Isa. 42:11) make up a village. Such an encampment is clearly intended by the poetic parallelism in Ps. 69:25. The proper name HAVVOTH-JAIR suggests a similar collection of tents in a temporary camp (Num. 32:41).

Out of the villages came many great men in Israel. Saul and David were both villagers. The peasant was not the least in Israel (Judg. 5:11). C. U. WOLF

VINDICATE. The translation of several Hebrew and Greek words used when the text emphasizes the successful establishment of a man's cause as just. The KJV uses "judge," "justify." See REDEEM; JUDGMENT; JUSTIFICATION.

VINE, VINEYARD. Along with the olive and fig trees, the grapevine is one of the most characteristic plants of Palestine. The three are mentioned together

in Jotham's fable (Judg. 9:8-13), and elsewhere they symbolize the fruit of the land (cf. Josh. 24:13; I Sam. 8:14; II Kings 5:26; Jer. 5:17; 40:10; Hos. 2:12—H 2:14). In biblical times many individuals had no other financial resources than their vineyards; this in part accounts for Naboth's refusal to sell his vineyard to Ahab (I Kings 21:1-4).

1. Terminology of viticulture. The usual Hebrew word for "vine" is גפן, and the standard Greek term is ἀμπελος. Although these usually denote the grapevine, other vines were also known. Melons and cucumbers are mentioned in Num. 11:5, and gourds are specifically associated with vines in II Kings 4:39. Similarly, although כרם usually means "vineyard" (ἀμπελών), it may also refer to a garden in general; Ahab wanted Naboth's vineyard so that he could plant a vegetable garden (I Kings 21:2). Other terms used are: (a) שריג, "tendril," from the root שרר, "to interweave"; (b) שרקה or שרוק, "choice vine," a superior vine producing grapes with a rich, dark hue; and (c) בצר, "to gather grapes." For the terms used for grapes, see § 3e below.

2. Antiquity of viticulture. The J source presents Noah as the father of viticulture (Gen. 9:20), and thus preserves the tradition that the growing of grapevines reaches back to the origins of civilization.

16. Gathering of grapes from an arbor, treading of grapes, and storing of wine in jars; from an Egyptian wall painting in tomb of Nakht at Thebes (fifteenth century B.C.)

Indeed, there are references to viticulture from the reign of Gudea, and the vine was cultivated in pre-dynastic Egypt. Egyptian military inscriptions from the Old Empire refer to the vine in Palestine, and Sinuhe tells of the grapes of Syria-Palestine. Although the above-mentioned story of Noah implies that the vine was imported to Palestine from Armenia, it is probable that it had a spontaneous origin in many regions. However this may be, it is certain that viticulture is one of the oldest forms of AGRICULTURE. Fig. VIN 16.

3. Planting of vineyards. Isaiah provides us with a detailed description of the planting of a vineyard (Isa. 5:1-6), and much of the following material is derived from this account.

a. Location. The climate of Palestine is particularly well suited for the growing of vines. There is enough heat, but not too much; the rainfall, although scanty in certain areas, is generally sufficient. Ordinarily vineyards were planted on hills, since this land was less used for cereal crops (cf. Ps. 80:10—H 80:11; Isa. 5:1: "on a very fertile hill"; Jer. 31:5; Amos 9:13). But occasionally flat land was used, particularly the Philistine plain. Although vineyards were usually to be found in the open country, they were sometimes attached to houses; Naboth's vineyard was beside Ahab's palace (I Kings 21:1).

b. Preparation of ground. Before the vines themselves could be planted, a careful preparation of the plot was necessary. The larger stones were cleared away, and the first plowing was done. Furthermore, every vineyard was provided with a stone wall or HEDGE, to protect the vines from foxes (Song of S. 2:15), boars (Ps. 80:13—H 80:14), and thieves (Jer. 49:9). Finally, each vineyard had a stone watchtower (Isa. 5:2; see TOWER). During the vintage season the vinedressers and the guardians of the fruit lived in these towers; sometimes the ground floor was used for a wine press or a stable.

c. Planting of vines. The usual method of planting vines was to place them in rows from eight to ten feet apart. The stems were allowed to trail on the ground, but the clusters of grapes were propped up with forked sticks. Occasionally, however, the vine was allowed to climb a nearby tree; Ezekiel refers to a vine which

towered aloft
among the thick boughs;
it was seen in its height
with the mass of its branches
(Ezek. 19:11).

It was therefore possible for a man to sit under his vine (I Kings 4:25—H 5:5). Artificial trellises were not used until Roman times.

d. Pruning. After the vine had budded and the blossoms had become ripening grapes, the vinedresser cut off the nonbearing branches (Isa. 18:5; cf. John 15:2). The result was that the remaining branches were stronger and thus produced more fruit.

e. Harvesting of grapes. Although the grapes began to ripen toward the end of July, the actual harvest did not take place until August or September. The early grapes (בטר) were, of course, quite sour and set the teeth on edge (Jer. 31:29-30; Ezek. 18:2). The fully ripe grapes (ענבים) were either: (a) eaten in their natural state, (b) dried and made into RAISINS, (c) boiled down into a thick grape syrup (see HONEY), or (d) made into WINE. There is no evidence for the normal yield of a vineyard; we are merely told that as a result of Yahweh's anger "ten acres of vineyard shall yield but one bath [of wine]" (Isa. 5:10). A bath was approximately six gallons. According to Isaiah, each vine was worth a shekel.

4. Use of vineyards. Most vineyards were cultivated either by the owners themselves or by hired laborers (Matt. 20:1-16). But it was also a common

practice for a large landowner to rent out his vineyards to a tenant (Song of S. 8:11; Matt. 21:33-43 and parallels). The owner would, of course, receive a share of the harvest (Matt. 21:34). Furthermore, in OT times various laws governed the use of vineyards. The owner was not allowed to reap a vineyard twice; rather, the gleanings were to be left for resident aliens, widows, and orphans (Lev. 19:10; Deut. 24:21). Vineyards were to lie fallow in the sabbath year (Exod. 23:10-11; Lev. 25:3-5), and were not to be sown with other seeds (Deut. 22:9); the latter rule was apparently not enforced in NT times, however, since we read of a man who had a fig tree planted in his vineyard (Luke 13:6). The importance of a vineyard is seen in the law that he who has planted one is exempt from military service (Deut. 20:6).

5. "Vine" and "vineyard" in biblical imagery. Viticulture has provided an abundant store of images in both the OT and the NT.

a. *In the OT.* "Vine" and "vineyard" are often used as symbols of Israel. She was brought out of Egypt and planted by Yahweh (Ps. 80:8-13—H 80:9-14); although she was a "choice vine" (see § 1 above), she became a "wild vine" (Jer. 2:21; cf. Isa. 5:1-7; Hos. 10:1). Just as the "wood of the vine" is useful only as fuel, so the inhabitants of Jerusalem will be destroyed (Ezek. 15; cf. 19:10-14). Similarly an individual can be referred to as a vine. Ezekiel (17:1-8) propounds an allegory in which the "seed of the land" (Zedekiah) is planted by a "great eagle" (Nebuchadrezzar) and grows up to be a "spreading vine." However, it is then transplanted by another eagle (Hophra). Again, the wife of one who fears Yahweh will be like a fruitful vine (Ps. 128:3).

Naturally an abundance of vines and vineyards is an expression of Yahweh's favor. Forgiven Israel will be given vineyards (Hos. 2:15—H 2:17), and in the days to come "the treader of grapes [shall overtake] him who sows the seed" (Amos 9:13). Of course, the vineyards will yield miraculous fruit in the eschatological age; according to the Apocalypse of Baruch, each vine will have 1,000 branches, each branch will produce 1,000 clusters, each cluster will contain 1,000 grapes, and each grape will give 120 gallons of wine (29:5). Similarly grapes are used in metaphorical expressions. Yahweh found Israel "like grapes in the wilderness" (Hos. 9:10), and the remnant is compared to a cluster of grapes (Isa. 65:8).

b. *In the NT.* Jesus often mentions vineyards in his parables. He compares the kingdom to a vineyard for which its owner hired laborers; some worked all day, and some only a short time, but all received the same pay (Matt. 20:1-16). Those who will enter the kingdom are also compared to the son who first refused to work in his father's vineyard but then repented and went (Matt. 21:28-32). And the Jews are symbolized by wicked tenants of a vineyard who beat those sent by the owner (God) to collect some of the fruit; finally they killed even the owner's son (Christ) in order to gain control of the vineyard. Naturally the tenants were put to death and the vineyard was rented to others (the Christians; Matt. 21:33-43; Mark 12:1-11; Luke 20:9-17).

Of even greater significance, however, is Jesus' description of himself as the "true vine" and his Father as the vinedresser (John 15:1-11). Jesus is

probably comparing himself to the vine of the Jews, which has become degenerate (see § 5a above). The main point, however, is that the Christian must "abide in [Christ]" if he is to bear the fruit of faith; otherwise he will be cast aside. Furthermore, the intimate bond between Christ and the church is strongly emphasized: "I am the vine, you are the branches."

VINE OF SODOM [סדום וצדום; ἀμπελος Σοδόμων]. A vine with bitter clusters of poisonous grapes, to which Moses compares Israel (Deut. 32:32). Ancient and modern writers describe an orange-colored fruit which, because of its black, powdery interior, was taken as indicative of the destruction of the "cities of the Valley." See APPLE.

VINEDRESSER. See FARMER.

VINEGAR [γαστήρ, from the root to be sour; ὄξος, related to the adjective ὄξυς, sharp (of taste)]. In biblical times vinegar was most commonly procured from grape WINE which had gone sour or had been over-fermented (Num. 6:3; KJV "vinegar of wine"; however, this passage may also refer to "vinegar of STRONG DRINK"). It was also prepared by pouring water over the skins and stalks of grapes left over after the juice was pressed out (see WINE § 2) and allowing the whole to ferment.

When diluted, vinegar was regarded as a refreshing drink. It provoked thirst, however; the psalmist complains that his enemies gave him "poison for food, and . . . vinegar to drink" (Ps. 69:21—H 69:22). More commonly it was used as a condiment, particularly as a seasoning. Thus Boaz invites Ruth to "dip [her] morsel [of bread] in the vinegar" (Ruth 2:14 KJV; RSV "wine"; γαστήρ). Vinegar was, of course, forbidden to the Nazirites because of its association with wine and strong drink. See NAZIRITE.

The acrid qualities of vinegar are mentioned in Proverbs. It stings when poured on a wound (25:20, following the LXX; KJV "upon nitre"), and its effect upon the teeth is like that of smoke upon the eyes (10:26).

In the NT vinegar is mentioned only in connection with the CRUCIFIXION. In all four gospels (Matt. 27:48; Mark 15:36; Luke 23:36; John 19:29-30) we read that Jesus was offered vinegar shortly before his death. The evangelists do not cite the OT in this connection, but the event was probably interpreted as a fulfilment of Ps. 69:21—H 69:22 (see above). Possibly, however, the drink was the Roman *posca*, made of vinegar, water, and egg, a customary drink of soldiers and slaves; Luke specifically mentions

"soldiers." In this case the act would be one of mercy.

According to Matt. 27:34 KJV, Jesus was offered "vinegar . . . mingled with GALL" just before the Crucifixion. This was intended as a drug. The RSV, however, follows the earlier MSS and reads "wine" instead of "vinegar." See DRINK.

VINEYARDS, PLAIN OF THE. KJV translation of אבֵל כֶּרָמִים (RSV ABEL-KERAMIN).

VIOL וִי'וֹל. See MUSICAL INSTRUMENTS §§ B4c, B5b.

VIOLET [תכלת; LXX ὑάκινθον] (Jer. 10:9); **KJV BLUE.** A purple-blue color obtained from a Mediterranean mussel. Elsewhere in the OT the translation of תכלת (nearly fifty references) is "blue." The exact shade is uncertain. See BLUE; COLORS.

C. L. WICKWIRE

VIPER [תפעה] (Job 20:16; Isa. 30:6; 59:5), cf. Arab. 'afay, viper, LXX (three different words) snake; עכשוי; (Ps. 140:3—H 140:4; KJV ADDER), in Jewish tradition spider (cf. עכביש, spider), followed by Bodenheimer (see FAUNA § C), LXX ASP (so also Paul in Rom. 3:13); שפיטן (Gen. 49:17; KJV ADDER), cf. Akkad. *šep̄pu*, snake, viper, Arab. *shipp* (Lane 1368), snake, LXX LYING (verb); ἔχιδνα (Matt. 3:7, etc.), cf. ἔχιδ, viper]. Any of a family of poisonous snakes (Viperidae), of which the Old World vipers (Viperinae) are the most representative.

The meanings of the three Hebrew words cited above are not certain. That עכשוי and שפיטן are used in parallel constructions with נחש, "serpent," appears to indicate that both point to some variety of snake, but more particular identification is hazardous. The desert saw viper (*Echis colorata*) and the common Palestine viper (*Vipera palaestinae*) are found in the biblical lands, as is the horned viper (*Cerastes cerastes cornutus*), the latter being known to attack even horses (cf. Gen. 49:17; Tristram, *Natural History of the Bible*, pp. 273-74). The viper of Acts 28:3 was probably the *Vipera aspis* of the Mediterranean region. For "viper" as a term of reproach (Matt. 3:7, etc.), cf. Aeschylus *Choëphoroe* 994; Euripides *Ion* 1262; Sophocles *Antigone* 531. For Rabbi Eliezer's favorable comparison of the Jewish sages with jackals, scorpions, and serpents, see M. Ab. 2.10.

***VIRGIN** [בתולה; παρθένος]. One who has had no sexual intercourse. The word usually refers to a woman.

1. Terminology
 2. The identification of a virgin
 3. The value of a virgin
 4. The protection of virgins
 5. A unique term for "virgin"
 6. "Virgin" applied to communities
- Bibliography

1. **Terminology.** The word בתולה, translated "virgin," may derive from a Semitic root בתל, which

in Arabic means "sever," "separate." These words signify that an individual has arrived at the age when he or she is capable of sex relations but has not yet had this experience. The Greek equivalent for this Hebrew word is παρθένος, also translated "virgin." Its use in the NT supports the meaning indicated by the Hebrew term. E.g., before Joseph and Mary "came together she was found to be with child"; being a virgin (Matt. 1:18), she had had no intercourse with a man (vss. 18-25). The Greek word is translated "unmarried" in I Cor. 7:25 (cf. vss. 28, 34). Again, applied to men, it describes those who are chaste because they "have not defiled themselves with women"—i.e., have not had intercourse with them (Rev. 14:4a).

Derived from the Semitic root עלם, perhaps meaning "be mature sexually," the word עלמה appears several times in the OT. In most instances it is used of young women who are ready for sexual relations and for reproduction, although it does not reveal whether or not they are virgins. In one case, however, the translation "virgin" appears in the LXX (Isa. 7:14). In the masculine gender, the word עלם usually means "youth" and fails to reveal whether there has been previous sexual experience (I Sam. 20:22; cf. 17:42).

2. **The identification of a virgin.** Proof of virginity may be demanded before the consummation of a MARRIAGE. If the bridegroom becomes suspicious, he may require her parents to exhibit suitable evidence that the bride is in fact a virgin (Deut. 22:13-21). A root which signifies both "pierce" and "profane" in the Hebrew is used (Lev. 19:29; 21:7, 14) in such a way as to suggest that the "piercing" is the result of sexual intercourse with a virgin. If she is unpierced, then she is obviously still a virgin. There was public evidence of virginity. Her garb probably showed that she had such a status. Tamar, raped by her brother Amnon (II Sam. 13:2-19), was a virgin (vs. 2b). The writer of the story adds that "she was wearing a long robe with sleeves; for thus were the virgin daughters of the king clad of old" (vs. 18a). Josephus says of this story that virgins in ancient times wore loose coats tied at the hands and reaching down to the ankles, so that their long, tight-fitting inner garment might not be seen (Antiq. VII. viii; see DRESS AND ORNAMENTS § B2). It may be that the veil was another means of identifying a virgin. When Rebekah the virgin (Gen. 24:16) saw Isaac, she took a veil and covered herself (vs. 65). This act may have simply been one of conformity to the custom which forbade a woman to show her face to a stranger, however.

3. **The value of a virgin.** In justifying his righteousness on the basis of the ideals by which he has lived, Job declares that he has avoided looking "upon a virgin" (31:1). A virgin was also a likely candidate for royal honors, as seen in the story of Esther. A virgin's greatest value, however, was her usefulness as a producer of children, especially sons who could carry on their father's name and give him a continued existence. For this purpose the full use of a woman's unimpaired sexuality was imperative. To carry on the line of Abraham, the story of Isaac's marriage stresses the fact that Rebekah was a virgin

(Gen. 24:16). His daughter's virginity was important to the father, and if it was lost, the offender must pay him the marriage price and make her his wife (Exod. 22:16). If a man falsely swore that his bride was not a virgin, he must pay the father one hundred shekels of silver and marry the woman, "because he has brought an evil name upon a virgin of Israel" (Deut. 22:19). The importance of virgins to the life of the community is underscored when destruction overtakes a population in a time of disaster. Virgins, together with young men, were to be destroyed by the wrath of God (Deut. 32:25). On the other hand, because of their value, conquerors did not kill virgins, although the other women were destroyed (Num. 31:17-18).

4. The protection of virgins. It was the duty of the family, especially the parents, to protect the virginity of their daughter. Legislation showing this may be noted: The father is to be compensated when a charge of unchastity against a daughter is not sustained; but, if it is sustained, the daughter shall be stoned to death at the door of her father's house (Deut. 22:19-21). If a man seizes and lies with an unbetrothed virgin and they are caught, the man must pay the father fifty shekels of silver (vs. 28-29). If a man seduces an unbetrothed virgin, he must pay the bride price to the father and marry her. If her father does not consent to this marriage, the guilty party must nonetheless pay the marriage present (Exod. 22:16-17).

While protected because of their value to their families and to society, virgins in biblical times were given considerable freedom. A parable about a marriage feast includes several allusions to virgins who prepare to meet the bridegroom (Matt. 25:1, 7, 11). In the day of restoration "the maidens [virgins] [shall] rejoice in the dance" (Jer. 31:13).

5. A unique term for "virgin." Isa. 7:14 reads in part: "Behold, a young woman [עלמה] shall conceive and bear a son, and shall call his name Immanuel" (for the root of this Hebrew term, see § 1 above). The LXX reads "virgin" (παρθένος), as does also the quotation of this passage in Matt. 1:23. An examination of the occurrences of עלמה in the OT does not remove the possibility of the meaning "virgin." E.g., Abraham's servant speaks of the "young woman" who comes out to draw water as the one appointed to be the bride of his master's son (Gen. 24:43-44). From the context, it is certain that this עלמה is a virgin. To be a bride of Abraham's son would be inconceivable had she not been a virgin. Again, in the story of the infant Moses placed in a basket in the river, we read that "the girl" (Moses' sister) went to call his mother (Exod. 2:8). The sister is called עלמה. While there is no indication that she was not a virgin, the text does not directly affirm that she was.

"The way of a man with a maiden [עלמה]" is strange and wonderful (Prov. 30:18-19). In contrast to her, the writer names the way of an adulteress, who, of course, was not a virgin. In the Song of Songs "maidens," the ecstatic lover declares, love her beloved; and rightly so, she adds (1:3-4). The "darling of her mother," the writer of these love poems asserts, is observed and praised by maidens [עלמות], and by the queens and concubines also.

Finally, at Ugarit, the word *glmt* is placed in parallelism with the word *bill*, "virgin," precisely in a story of annunciation.

In none of these references is the meaning "virgin" precluded, although in none is it specifically affirmed. One authority connotes the meaning of "virgin" when he identifies the young woman in Isa. 7:14 as a supernatural woman, the birth of whose son would be an omen of a wonderful transformation (see *bibliography*). He adds that this meaning was sensed by the translators of the LXX when they used the Greek word for "virgin," παρθένος.

6. "Virgin" applied to communities. By far the most frequent use of the word "virgin" is in the Bible's figurative description of cities, nations, and communities. The usage "virgin daughter" occurs often. This phrase describes Jerusalem/Zion (II Kings 19:21; Isa. 37:22; Lam. 2:13); "my people" (Jer. 14:17); Judah (Lam. 1:15); Egypt (Jer. 46:11); Sidon (Isa. 23:12); and Babylon (Isa. 47:1). Without the word for "daughter," biblical writers speak of "the virgin Israel" (Jer. 18:13; 31:4b, 21; Amos 5:2). The word "virgin" is applied by Ignatius in his Letter to the Smyrnaeans to those women who are admitted to the church office of "widows," an office which is described in the NT as available to women sixty years of age or older and who have been married only once (I Tim. 5:9). The later order or community of virgins which appeared in the church may rest upon the practice disclosed in Acts 21:9, where we read that Philip the evangelist had four unmarried (virginal) daughters who prophesied. The Christian church is figuratively addressed by Paul as one who is betrothed to Christ "as a pure bride" (παρθένος ἀγνή; lit., "an undefiled virgin"; II Cor. 11:2).

O. J. BAAB

VIRGIN, APOCALYPSES OF THE ʿpōk'ə līps ʾz. Two unrelated apocalypses, the one extant in Greek, the other in Ethiopic, in which the Virgin is shown the torments of the damned. Both writings are late and of but antiquarian interest.

In the Greek apocalypse the Virgin, in answer to her query as to the torments of hell, is conducted by Michael to see the torments of the wicked—a strange medley of unbelievers: those who did not worship the Trinity, wicked priests, nuns who did not arise at the entrance of the priest, Jews who crucified Jesus, those who denied baptism, sorcerers, and murderers. The Virgin is pained at the sight, entreats the saint to aid her in intercession, and is finally met by the Son, who appoints all subsequent days of Pentecost to be times of rest for the tormented.

The other apocalypse, now extant only in Ethiopic but not improbably composed in Greek and subsequently translated into Arabic and from Arabic to Ethiopic, is scarcely more than a plagiarized transcript of the central section (chs. 13-44) of the Apocalypse of Paul (see PAUL, APOCALYPSE OF). There are some alterations and several additions,

especially having to do with the torments of nuns guilty of abortion and infanticide. The setting for this tasteless plagiarism is John's account of the story the Virgin had told him of what had recently happened to her as she had been praying at Golgotha. The Son had appeared and had promised to show her a great mystery. After the tour the Virgin asks: "Wilt thou not forgive them?" and receives the answer: "Yes, if they repent from their heart. But as for their pastors, who did not admonish them, their part shall be with Eli and Fola. Eli did not reprove his sons; Fola sold his daughters for an ox."

See also APOCRYPHA, NT.

Bibliography. A brief but more than adequate summary of these two tasteless writings is provided by M. R. James, *The Apocryphal NT* (1924), pp. 563-64. For the Greek text, see M. R. James, *Apoc. Anecdota* (1893), vol. I; for the Coptic, M. Chaîne, *Corpus scriptorum christianorum orientalium* (1909), Series I, vol. 7.

VIRGIN, ASSUMPTION OF THE. See ASSUMPTION OF THE VIRGIN.

***VIRGIN BIRTH.** The doctrine, based on the narratives in Matt. 1:18-25; Luke 1-2 and related passages in the Scriptures, that Jesus was miraculously conceived by the Holy Spirit and born of a virgin mother. Problems both literary and theological have been debated in early and modern controversy over this critical point.

The literary questions, rooted in the quotation of the annunciation formula of Isa. 7:14 in Matt. 1:23, are complicated by the parallels in the Ugaritic literature, as well as in the OT. Since the excavation of the Nikkal poem at Ras Shamra (UGARIT) in 1933, the following lines have produced a small literature: (a) 77:5: "a virgin [*bethulah*] will give birth"; (b) 77:7: "Lo, a young woman [*almah*] bears a son."

Similar wonder births are found in Gen. 16:11 (Ishmael); 17:19 (Isaac); Exod. 2:2 (Moses); Judg. 13:3, 5, 7 (Samson); I Sam. 1:20 (Samuel); Isa. 8:3, 18 (Maher-shalal-hash-baz); but Isa. 7:14 has received most attention because of its messianic associations. One interpretation, calling attention to the promise of immediate fulfilment in Isa. 7:14-24, has denied any messianic reference altogether. Another view appeals to certain words in the formula to defend an exclusive reference to the Messiah. Delitzsch says *hinneh* ("behold") "is always used by Isaiah to introduce a future occurrence," but this is difficult to maintain in the light of 5:7; 8:18; 12:2; 20:6; 21:9; 37:36; 40:9-10; 47:14; 48:10; 51:22; 59:9; 62:11; 65:6. Machen, insisting on the miraculous meaning of *'oth* ("sign"), has followed early Christian apologists (Justin, Irenaeus, Origen) by failing to note the usage in the immediate context (8:18) and other OT passages. The most vigorous discussion has been centered around the meaning of *almah*, which means a "marriageable girl, young woman (until the birth of her first child)" (Koehler and Baumgartner, *Lexicon*, p. 709). Those who hold that it always carries the connotation of an untouched virgin have great difficulty with Gen. 24:43; Exod. 2:8; Ps. 68:25; Prov. 30:19; Song of S. 1:3; 6:8, as well as with the usage

of the Greek word *παρθένος* in the LXX (cf. Gen. 34:3). The case is even more difficult when the adjective *harah* ("conceive") is examined (cf. Gen. 38:24; II Sam. 11:5). Since the time of Jerome a number of Christians, recognizing fully the immediate reference to a fulfilment in the time of Ahaz, have found it tenable to defend both the messianic reference of Isa. 7:14 and the virgin birth of Jesus, by noting the use of typological interpretation in the Gospel of Matthew (e.g., 2:6, 15, 18, 23).

There is no decisive evidence that the narrative in Matthew based the virgin birth on Isa. 7:14. The quotation of the promise in Matt. 1:23 is only one of a number of OT proof texts in this gospel, and the teaching about the miraculous conception does not require the verse. Two facts establish the miracle: (a) after the betrothal and (b) before they came together, Mary was found to be with child "of the Holy Spirit" (1:18, 20). Strack and Billerbeck have pointed out that this idea of the life-giving and creative power of the Holy Spirit is absolutely new and has no parallels in Jewish thought.

The Eshnunna Law Code (3800 B.C.) required "bride money" of the prospective groom and provided for a refund with twenty per cent interest if the betrothed virgin died before the consummation of marriage. In early OT times betrothal was effected by payment of *moher* (fifty shekels) to the bride's father as a compensation for loss (Gen. 34:12; I Sam. 18:25) and presentation of gifts to the prospective bride (Exod. 22:16-17; 34:12; Ruth 4:5, 10). The bride used the time of betrothal to collect her trousseau and property, and the groom was exempt from military service for the year (Deut. 20:7). The marriage was complete after a marriage feast of joyous celebration (Matt. 25:1-13; John 2:1-11). Only after this ceremony could they live together as husband and wife (Matt. 1:18, 25), although they were considered husband and wife from the time of betrothal (Matt. 1:19-20), and the woman was considered a widow if her husband died.

It is the statement that Jesus was conceived (Matt. 1:18) and born (Matt. 1:25) to Mary "before" she and Joseph had sexual contact that constitutes the second evidence for belief in the virgin birth. Even if Joseph knew he was not responsible for the conception, there was the law that demanded death by stoning for both man and woman in cases of seduction (Deut. 22:23-24) and death for the man in cases of rape (Deut. 22:25-27). Joseph was not only "unwilling to put her to shame" (Matt. 1:19), but he also feared for his life. The strong verb in the phrase "as he considered this" (*ἐνθυμηθέντος*), in Matt. 1:20, suggests this and explains why Joseph wanted to divorce her quietly (Matt. 1:19). This was difficult to do quietly, since an engagement could be terminated after betrothal only by divorce and the payment of the dowry. The narrative teaches clearly that the Holy Spirit, not Joseph, was the agency of the conception.

In the nativity narrative in Luke 1-2, in which Mary is the central figure, a more complete presentation of the miraculous conception is found. Here again questions both linguistic and literary emerge. Some scholars view Luke 1:34-35 as an interpolation into the Lukan text, an attempt to strengthen the

idea of the virgin birth. The linguistic study is in favor of the virgin birth, but this is not so strong as the literary factors. The word *παρθένος* ("virgin"; Luke 1:27) appears a second time in the Lukan writings in reference to Philip's "four unmarried daughters, who prophesied" (Acts 21:9). The "bridesmaids" of Matt. 25:1, 7, 11, who were also unmarried, are called *παρθένοι*. In the writings of Paul *παρθένος* not only has the connotation of the unmarried status, but also the associated idea of purity is present. In I Cor. 7:25, 34, 36-38, the word is used six times. Here the translation of the RSV rightly recalls the marriage customs discussed as the background of Matt. 1:18-25, with the additional factor of "spiritual marriage." It seems that *ἄγαμος* ("unmarried") and *παρθένος* are used as synonyms in vs. 34. At least the parallels of vss. 32-33, where the contrast is between the unmarried and the married man, would suggest a parallel contrast in vss. 34-35 between the unmarried and the married woman. Furthermore, the singular verb (*μεριμνᾷ*) is most natural with the singular subject (*ἡ γυνὴ ἡ ἄγαμος καὶ ἡ παρθένος*). In II Cor. 11:2, Paul is jealous for the church of Corinth, which he has betrothed to Christ in order to present her "as a pure bride [*parthenon hagnen*] to her one husband." Paul fears "that as the serpent deceived Eve by his cunning," false teachers (vss. 13-15) would lead the church "astray from a sincere and pure devotion to Christ." This emphasis on purity develops into an ascetic meaning in Rev. 14:4, where chaste men who had not been defiled with women are also called *παρθένοι*. This emphasis of the NT on the unmarried status which develops into ascetic purity is certainly in favor of the spotless virginity of Mary, but classical and Koine Greek at times have only the idea of the unmarried status. An example from the papyri says: "I have charged you more than once, 'take away your virgin-born [*παρθένεια*] children.'"

The literary factors in favor of the virgin birth in the Lukan narrative may be most forcefully seen by comparing the annunciation to Zechariah (Luke 1:5-7, 11-20) with the annunciation to Mary (vss. 26-38):

a) Vss. 5-7: "In the days of Herod, king of Judea, there was a priest named Zechariah, of the division of Abijah; and he had a wife of the daughters of Aaron, and her name was Elizabeth. And they were both righteous before God, walking in all the commandments and ordinances of the Lord blameless. But they had no child, because Elizabeth was barren, and both were advanced in years."

Cf. vss. 26-27: "In the sixth month the angel Gabriel was sent from God to a city of Galilee named Nazareth, to a virgin betrothed to a man whose name was Joseph, of the house of David; and the virgin's name was Mary."

b) Vs. 11: "And there appeared to him an angel of the Lord standing on the right side of the altar of incense."

Cf. vs. 28: "And he came to her and said, 'Hail O favored one, the Lord is with you!'"

c) Vs. 12: "And Zechariah was troubled when he saw him, and fear fell upon him."

Cf. vs. 29: "But she was greatly troubled at the saying, and considered in her mind what sort of greeting this might be."

d) Vss. 13-17: "But the angel said to him, 'Do not be afraid, Zechariah, for your prayer is heard, and your wife Elizabeth will bear you a son, and you shall call his name John.

And you will have joy and gladness,
and many will rejoice at his birth;
for he will be great before the Lord,
and he shall drink no wine nor strong drink,
and he will be filled with the Holy Spirit,
even from his mother's womb.
And he will turn many of the sons of Israel
to the Lord their God,
and he will go before him in the spirit and power
of Elijah,
to turn the hearts of the fathers to the children,
and the disobedient to the wisdom of the just,
to make ready for the Lord a people prepared.'"

Cf. vss. 30:33: "And the angel said to her, 'Do not be afraid, Mary, for you have found favor with God. And behold, you will conceive in your womb and bear a son, and you shall call his name Jesus.

He will be great, and will be called the Son of
the Most High;
and the Lord God will give to him the throne of
his father David,
and he will reign over the house of Jacob for ever;
and of his kingdom there will be no end.'"

e) Vs. 18a: "And Zechariah said to the angel, 'How shall I know this?'"

Cf. vs. 34a: "And Mary said to the angel, 'How can this be . . . ?'"

f) Vs. 18b: "For I am an old man, and my wife is advanced in years."

Cf. vs. 34b KJV: "seeing I know not a man" (RSV "since I have no husband").

g) Vss. 19-20: "And the angel answered him, 'I am Gabriel, who stand in the presence of God; and I was sent to speak to you, and to bring you this good news. And behold, you will be silent and unable to speak until the day that these things come to pass, because you did not believe my words, which will be fulfilled in their time.'"

Cf. vss. 35-38: "And the angel said to her,

The Holy Spirit will come upon you,
and the power of the Most High will overshadow you;
therefore the child to be born will be called holy,
the Son of God.

And behold, your kinswoman Elizabeth in her old age has also conceived a son; and this is the sixth month with her who was called barren. For with God nothing will be impossible.' And Mary said, 'Behold I am the handmaid of the Lord; let it be to me according to your word.' And the angel departed from her."

Special attention should be given to three units of contrast. The first is the contrast between Luke 1:5-7 and Luke 1:26-27. Elizabeth was an old woman, but Mary was a *παρθένος*. The second contrast is between vss. 18b and 34b. The great age of Zechariah and Elizabeth raised Zechariah's question: "How shall I know this?" Mary's question was raised by the fact that she had never had sexual relations with any man (Luke 1:34b). Mary's question cannot be avoided: "How can this be?" Here the manner of the miraculous conception is attributed to the

Holy Spirit, in contrast to the conception of John through the agency of an aged man. A third contrast is between vs. 15 and 35. John the Baptist was filled with the Holy Spirit even while he was in his mother's womb (vs. 15), and this apparently took place when "the babe leaped in her womb; and Elizabeth was filled with the Holy Spirit" (vs. 41) three months before John the Baptist was born. The greatest of the prophets was *filled* with the Holy Spirit six months after he was conceived by natural generation, but the Son of God was *conceived* by the Holy Spirit by supernatural generation. Therefore, by the miraculous work of the Holy Spirit, Mary became the tabernacle of the SHEKINAH glory of God as the "power of the Most High" overshadowed her (vs. 35). The word ἐπισκιάσει ("will overshadow") has these associations.

The problem of the virgin birth has brought forth claims of parallels in literature outside the Scriptures. Philo Judeus (*On the Cherubim* 40-52) uses the ideas, but he is speaking of the begetting of the soul or the virtues of the soul. Plutarch (*Numa* 4.4) suggests that a woman can be approached by a divine *pneuma* (spirit) and made pregnant, as he tells the legend of Numa, who, after the death of his wife, withdrew into solitude to have intercourse with the divine being Egeria; but he is speaking of real sexual intercourse, and the *pneuma* he mentions is none other than the Egyptian designation for Zeus (Amon; cf. *Isis and Osiris* 36). This and other stories about how Zeus begat such persons as Hercules, Perseus, and Alexander constitute nothing more than mythological fornication. The same sordid state is found in the stories about Apollo's begetting Ion, Asclepius, Pythagoras, Plato, and Augustus. The yawning chasm between these pagan myths of polytheistic promiscuity and the lofty monotheism of the virgin birth of Jesus is too wide for careful research to cross.

VIRTUES. See LISTS, ETHICAL.

VISION. In general, the communication of that which is not otherwise accessible, divinely imparted to the man of God, most often the prophet. In Hebrew the terms employed are immediately related to the two OT designations of "seer" (see PROPHECY). The most common words for "vision" are *חָזוֹן* (cf. *חָזָה*, "seer") and slightly variant forms; but *מַרְאֵה* (cf. *רָאָה*, also "seer") appears not uncommonly in Ezekiel and Daniel and in Gen. 46:2; Num. 12:6; I Sam. 3:15. In the NT, "vision" is *ὄραμα* in Matt. 17:9 and in Luke-Acts; uncommonly *ὄρασις* (Luke 1:22; 24:23; Acts 26:19; II Cor. 12:1) and *ὄρασις* (Acts 2:17; Rev. 9:17).

In Daniel the term is employed in varying forms some thirty times and denotes the marvelous disclosure of that which purports to be knowledge of the future. In Ezekiel, where, after Daniel, the terms for "vision" are most frequently used, the content of

vision ranges from the "appearance of the likeness of the glory of Yahweh" (1:28) to the disclosure of the nature and meaning of present Israel and her times (e.g., ch. 8) and on to the idealized organization of the redeemed Israel in the future (chs. 40-48). It may be that the vision in Ezekiel is an accompaniment or product of the abnormal psychological experience (certainly so, from the point of view of our psychological norms, which, however, are hardly those of the ancient East); but it is hazardous to attempt firm validation or invalidation of Ezekiel's visions in psychological terms.

Among the earlier classical prophets, the vision is a conventional (in prophetism's understanding) means of Yahweh's communication to the prophet of the meaning of immediate events in Israel's immediate history. The vision is at one with the disclosure of the Word of Yahweh. So we understand Amos 1:1: "The words of Amos, . . . which he saw concerning Israel in the days of Uzziah king of Judah and in the days of Jeroboam . . . king of Israel." So, too, we understand Isa. 1:1: "The vision [חִזְוִן] of Isaiah . . . , which he saw [חָזָה] concerning Judah and Jerusalem in the days of Uzziah, Jotham, Ahaz, and Hezekiah, kings of Judah." Even more pointedly equating vision and Word is the opening of Obadiah: "The vision of Obadiah. Thus says Yahweh . . ."

In prophetism (in both OT and NT) the mystery of the vision is the mystery of the Word—the mystery of God's disclosure of himself and of the meaning of history in the light of his effective impingement upon it, his reign over it, and of his purpose ultimately to redeem all history. B. D. NAPIER

VOCATION [Lat. *vocatio*]. The biblical doctrine of God's call to his people to become instruments of his purpose at work in history and to be the recipients of his grace and salvation. In the OT, vocation is the calling of Israel to be the people of God; and in the NT, the doctrine refers to the calling of men to follow Christ, to become incorporated in the fellowship of the church, and to share in the Christian hope. Strictly speaking, these biblical ideas are quite different from the modern understanding of vocation as a job, position, or profession. See *bibliography*.

1. **In the OT.** The primary word used to express vocation in the OT is the Hebrew verb *קָרָא*, "to call" (LXX *καλέω*). The term is frequently used in an ordinary sense meaning "to call," or "to cry out" (Judg. 9:7; Isa. 6:4); but it may also mean "to invite" (I Sam. 16:3), "to summon" (II Sam. 1:15), or "to name" (Gen. 11:9). The word is used in a "vocational" sense when God as the subject invites, summons, or names his people and thus claims them for his service (Isa. 43:1; 49:1; Hos. 11:1-2; etc.).

In the thought of Second Isaiah, the vocation of Israel is understood in terms of a God who enters into a personal relationship with the people of Israel, names the nation as "his son," and claims Israel as his own (Isa. 43:1-7; 48:12; 49:1-4; 51:2; 54:6-8; see ELECTION; SELF-DENIAL § 1). Within the context of this national vocation, God calls certain individuals for a particular task, such as in the case of Moses (Exod. 3) and the prophets (Isa. 6; Jer. 1:4-10; Amos 7:14-15; etc.).

2. **In the NT.** The NT word corresponding to אָרַךְ in the OT is the verb καλέω, "to call," "to invite," "to summon," or "to name" (cf. προσκαλέω, "to summon" or "to call to oneself"; Matt. 10:1; Mark 3:13; Acts 2:39). While καλέω is used throughout the NT in a technical sense (except in the Johannine literature), referring to an action of God or Christ in calling men, the term is thus employed most frequently and with special emphasis by Paul and in the literature which bears his influence. The adjective κλητός, "called," and the noun κλήσις, "calling," are used to designate some aspect of vocation almost exclusively in the literature written and influenced by Paul. Thus, the doctrine of vocation as it appears in the NT finds its most articulate expression in Pauline theology.

a. In the gospels and Acts. Insofar as the idea of vocation appears in the gospels and Acts, it is portrayed as the call, invitation, or summons of God or Christ to men (Acts 2:39). The call of Jesus is given to sinners rather than to the righteous (Matt. 9:13; Mark 2:17). Outside the parallel passage in Luke 5:32 (and some MSS of Matt. 9:13; Mark 2:17), where the words "to repentance" are added, the specific nature of this calling is not defined. A similar general calling or invitation of God is portrayed in the parable of the banquet (Matt. 22:1-14; cf. Luke 14:16-24 [these passages may have been preserved in the gospel tradition in order to explain how and why God's call to Israel was rejected by the Jews and then was extended to others; cf. Rom. 9-11]).

More specifically, Jesus called his disciples (*see* DISCIPLE) to follow him (Matt. 4:21-22; Mark 1:19-20; cf. Luke 5:1-11), and he sent them out to preach and cast out demons (Matt. 10:1-4; Mark 3:13-19; 6:7-13; Luke 6:12-16; cf. Acts 13:2; 16:10; *see* SELF-DENIAL § 3a). In the Fourth Gospel, the call of Jesus to the disciples is described with the verb ἐκλέγομαι, "to choose" (cf. John 6:70; 13:18; 15:16, 19); but the meaning of the relation between Jesus and the disciples is very similar to that in the Synoptic gospels.

These scattered references in the gospels and Acts seem to be based upon a general understanding of vocation as the call, invitation, or summons given by God, Christ, or the Holy Spirit to men to participate in some way in the work of God, to become followers of Christ, or to benefit from the promise of divine blessing.

b. In Pauline literature. In the Pauline literature (including those documents influenced by Paul), vocation is the calling of God to men which has its origin in the divine purpose of election; it is a call to participate in the Christian fellowship, and it includes an invitation to share in the Christian hope. The grand sweep of God's purpose and action is set forth in Rom. 8:28-30, where Paul's description moves from predestination, through calling (vocation), to final glorification. The movement of God's purpose in history as related to Israel and the Gentiles is then elaborated upon in Rom. 9-11. To participate in this glorious design for the salvation of men, God has called both Jews and Gentiles (Rom. 9:24).

Since Christian vocation, according to Paul, has

its origin in God himself, it is appropriately described as a "holy calling" (II Tim. 1:9). Because it is a vocation which looks forward in hope (Eph. 4:4), it may also be designated as a "heavenly call" (Heb. 3:1). While the vocation of Christians is thus rooted in the divine purpose and looks forward in hope, it has at least these implications for the present life of those who are called: (a) The assumed context of Christian vocation for this present life is the church (I Cor. 1:9, 26; Eph. 4:1-7; I Pet. 2:9-10). In this fellowship, church members are called to be saints (Rom. 1:7; I Cor. 1:2; cf. the various functions of Christian members in the body of Christ [I Cor. 12:28-30; Eph. 4:11]). Similarly, Paul himself was called to be an apostle (Rom. 1:1; I Cor. 1:1). (b) Those who are called must live morally upright and responsible lives (Eph. 4:1; I Thess. 4:7; II Thess. 1:11). (c) Christians will ordinarily remain in the status in which they were called (I Cor. 7:17-24). They will pursue their normal occupations, remembering that their principal duty in every situation of life is to regard themselves as servants of the Christ who called them (I Cor. 7:22-23). (d) Those who are called according to the divine purpose know that "in everything God works for good with those who love him" (Rom. 8:28).

- Bibliography

1. **Kinds of vows.** **a. Bargains.** In return for God's presence, protection, provision, etc., Jacob at Bethel promised worship, shrine, and tithe (Gen. 28:20-22[E]). Jephthah promised a living sacrifice for military victory and fulfilled his vow though it meant the sacrifice of his daughter (Judg. 11:30-31). Hannah prayed for a son, promising him to the temple at Shiloh (I Sam. 1:11). Absalom vowed sacrificial worship on condition of his return to his father's

favor (II Sam. 15:7-12). Jonah's shipmates made vows in the hope of safety (Jonah 1:16). The vows of the four men in Acts 21:23 were probably of this kind.

b. Unselfish devotion. David sought to further his plan of establishing the ark at his new capital, Jerusalem, and so identifying divine and human rule, by undertaking not to go home, or go to bed, or sleep, until the ark was housed in Jerusalem (Ps. 132:2-5; cf. the vow of Paul in Acts 18:18).

c. Abstinence. Israel undertook to put the people and cities of Arad to the ban—i.e., to “devote them,” to gain no advantage of spoil or renown from the battle—provided that Arad was delivered into their hands (Num. 21:1-3). Similar vows, oaths, of abstinence are recorded of Saul and his people (I Sam. 14:24) and of the forty Jews who compassed the death of Paul (Acts 23:21). In all three classes it is clear that a vow accompanies or is intended to strengthen prayer. It is possible that “his vow” in I Sam. 1:21 and “my vows” in Prov. 7:14 do not mean particular vows, but are general terms descriptive of the duties of worship in general (cf. Prov. 31:2; Nah. 1:15). When the Egyptian people will worship the Lord, they will, like Israel, offer sacrifices and will make vows and perform them (Isa. 19:21). Similarly, apostate Israelites will sacrifice and perform their vows to the queen of heaven (Jer. 44:25). In Mark 6:23 “he vowed” simply means “he promised faithfully.”

For votive offerings or gifts promised to God, see SACRIFICES AND OFFERINGS.

2. Laws concerning vows. The laws of the OT and of Mishna tractate Nedarim—vows—also illustrate how constant a feature the vow is of Israel's life. The main sources are:

a) Lev. 7:16-17, which ordains that a vowed peace offering must be eaten within two days or what is left burned on the third (cf. Prov. 7:14, where this has been carried out).

b) Lev. 22:17-25, which prescribes that all sacrifices in fulfillment of vows must be without blemish (cf. Mal. 1:14).

c) Lev. 27, which is an appendix of laws relating to vows and tithes with instructions how these may be commuted or redeemed. Money values to rank as a fixed rate of exchange for vows are placed on men and women of different ages and wealth, on animals, on a man's house, and on his inherited land in relation to the year of Jubilee. But things or people devoted—i.e., put to the ban—cannot be redeemed. But neither firstlings of animals (Lev. 27:26), which already belong to the Lord (but contrast Hannah), nor the hire of sacred prostitutes, female or male (Deut. 23:18), may extinguish a vow.

d) Num. 6, laws regarding Nazirite vows.

e) Num. 15:1-10 (cf. 29:39), which lays down what must be sacrificed for, among other things, fulfilling a vow.

f) Num. 30, which requires that vows must be fulfilled, though the vows of an unmarried woman still at home, or of a married woman in her husband's house, depend upon the will of her father or husband respectively. A widow or divorced woman can make a binding vow. Like Num. 30:3; Deut. 23:21-23 de-

mands the fulfilment of vows, though in the latter passage not to vow is no sin (cf. Prov. 20:25; Eccl. 5:4-6).

g) Deut. 12, which holds that vows are also controlled by the law of the central sanctuary.

3. Vows in the Psalms. Gunkel has re-emphasized the place of the vow in those psalms known as laments of the community, and of the individual. Such laments frequently use the vow as an expression of hope of and thanksgiving for deliverance. Thus in 56:12-13 the worshiper says:

My vows to thee I must perform, O God;
I will render thank offerings to thee.
For thou hast delivered my soul from death.

Even clearer are these verses from an individual thanksgiving (66:13-15):

I will come into thy house with burnt offerings;
I will pay thee my vows,
that which my lips uttered
and my mouth promised when I was in trouble.
I will offer to thee burnt offerings of fatlings.

This passage shows the vow at its inception—something promised in trouble—and then later in its fulfilment, when it is not merely the fulfilment of a promise but is also the expression of thanksgiving to God, and is, in fact, accompanied by the appropriate sacrifices. Other passages are 22:25; 50:14; 61:5, 8; 65:1; 116:14, 18. But, of course, the making and fulfilling of vows does not necessarily require the use of the word “vow.” “Heart's desire” in 20:4 could mean a royal vow, and in the community lament the vow appears thus:

Then we thy people, the flock of thy pasture,
will give thanks to thee for ever;
from generation to generation we will recount thy praise
(79:13),

where the first word “then,” as in 80:18, makes the transition to the vow (cf. 20:6; 21:13—H 21:14; 54:6; 89:1-2; 144:9; etc.). Similarly, Ps. 101 could be considered as a statement of the king's duties in the form of a vow. Correspondingly, divine promises, oaths, and covenants to individuals and to Israel could be described as God's vows (cf. Gen. 12:2-3, 7; 15:5-6; II Sam. 7; and parallels in the Psalter—e.g., 89:3-4).

VULTURE [נשר (Prov. 30:17; Lam. 4:19; Hos. 8:1), see EAGLE; פרס (Deut. 14:12), see OSSIFRAGE; קאת (Ps. 102:6—H 102:7; Zeph. 2:14), see PELICAN; רחם (Lev. 11:18; KJV GIER EAGLE) and רחמה (Deut. 14:17; CARRION VULTURE; KJV GIER EAGLE), cf. רחם *Pi'el*, to have compassion; Arab. *rakham*, *rakhama*, vulture; LXX κύκνος, swan (Lev. 11:18), λέραξ, hawk, falcon (Deut. 14:17); Vulg. *porphyrio*, water hen; Targ. (Onq.) ירקקא, possibly gier eagle; KJV איה (Job 28:7; RSV FALCON); דאה, דיה (RSV KITE)]. Any of several large diurnal carrion-eating birds of prey of the family Accipitridae of the subfamily Aegyptiinae, of the genera *Gyps*, *Gypaëtus*, etc.

Vultures quite surely existed in Palestine in the biblical period, but it is impossible from the biblical

data to offer more than a tentative identification of those which were known. The word נשר may have designated vultures as well as eagles (see EAGLE); Tristram, Bodenheimer, and G. R. Driver propose that in some cases this word refers to the Griffon Vulture (*Gyps fulvus fulvus*), which in Tristram's time was the commonest of all the large birds of prey in the Holy Land (cf. Prov. 30:17; Lam. 4:19; Hos. 8:1). A larger vulture, but less frequently found in Palestine, is the Lammergeier (*Gypaëtus barbatus aureus*), known for its partiality for marrow bones and tortois; this may be the unclean bird designated פרס (Lev. 11:13; Deut. 14:12). Another vulture seen by Tristram (but not in the rainy season) is the Egyptian Vulture (*Neophron percnopterus*), a true scavenger. Possibly רחם (Lev. 11:18) and רחמה (Deut. 14:17) refer to this bird, though G. R. Driver favors identifying these words with the osprey. See bibliography.

W

WAFERS [רַקִּיקִים, *from the root* רַקַּק, to be thin; צִפְיָהָ (Exod. 16:31), *cf.* Arab. root make broad]. With one exception (*see below*), wafers are always mentioned in connection with offerings: (a) those made on the occasion of the consecration of priests (Exod. 29:2, 23; Lev. 8:26), (b) cereal offerings in general (Lev. 2:4; *see* CEREAL OFFERING), (c) thank offerings (Lev. 7:12; *see* THANK OFFERING), (d) NAZIRITE offerings (Num. 6:15, 19), and (e) Levitical offerings as a whole (I Chr. 23:29; KJV "cakes"). *See* SACRIFICES AND OFFERINGS.

Wafers were also eaten as a part of the everyday diet, however, as may be seen from the comparison of the taste of MANNA with that of "wafers made with honey" (Exod. 16:31). *See also* BREAD § 1d.

J. F. ROSS

WAGES [שָׂכָר (*sākār, šeker*), מִשְׁכָּרָה, *from* שָׂכַר, to hire; פְּעֻלָּה, פְּעֻלָּה, (compensation for) a piece of work; μισθός; rarely δαπάνια (*always plural*)]. Alternately: HIRE; RECOMPENSE; REWARD. The compensation given to a person hired for performing some work or service. In a primitive economy, like that of the nomadic Hebrews of the patriarchal era, or among the Israelite peasants, wage earners did not form a distinct social class. They worked for their maintenance, to which some wages paid in kind would be added (Gen. 29:15; 30:32-33; 31:7, 41). The complexity of urban civilization and the development of specialized crafts and trades, however, tended to increase the number of salaried auxiliaries, who received at least part of their wages, or even the entire amount, in weighed bronze or silver, during most of the period covered by the historical books of the OT. It should be remembered that coined money as we know it did not appear in the lands of the Bible before the Persian period, and that not before Hellenism did it become the normal means of payment.

The Bible mentions or implies the paying of wages to hired shepherds (Gen. 29:15; 30:32-33; John 10:12), laborers and farm hands (Matt. 20:1-16; Luke 10:7; 15:17; John 4:36; Jas. 5:4), crewmen on fishing boats (Mark 1:20), mercenary soldiers (Luke 3:14), nurses (Exod. 2:9). The hire of a harlot is mentioned in Deut. 23:18; Isa. 23:17; Ezek. 16:31; Hos. 9:1;

Mic. 1:7; etc., and the prophet Micah speaks of the (illegal) hire of priests (Mic. 3:11). The above list of occupations for which wage earners were engaged is far from complete. Industrial and commercial concerns certainly employed a large number of wage earners, but the Bible has few direct references to the guilds of workers, and the references found in the Prophets, as well as in the NT, are mostly borrowed from agriculture and husbandry.

Wage earners as a class intermediary between the landowners and slave labor were known in Assyria as the *hupšû*, a term corresponding to the Hebrew *הַפְּשִׁי* (*hophshî*). The latter applies to an emancipated slave who earns his living by hiring his services to an employer, without reference to any specific type of work (Exod. 21:2, 26-27; Deut. 15:12).

The determination of wages was debated informally between the master and the person whom he wished to engage. The story of Jacob offers a good example of the type of bargaining and of the many ways in which both parties tried to get the best of each other by cheating or deceit (Gen. 30:31-43; 31:6-7). In the parable of the laborers in the vineyard (Matt. 20:1-16) the master shows an unusual liberality; the reference to the men standing idle in the market place would find an apt illustration in pre-Fascist Rome, when unemployed workers used to gather near the Ponte Fabricio in the hope of getting hired.

The law had some provisions to prevent or restrain the exploitation of wage earners by greedy masters. The wages of the hireling, whether he were an Israelite or a foreigner, must be paid daily before sunset (Lev. 19:13; Deut. 24:14-15). But the law was often ignored or flouted, and the prophets repeatedly condemned the foul practices of the employers (Jer. 22:13; Mal. 3:5). As a whole, the condition of a wage earner was not considered a happy one, while he was in continual anxiety concerning his meager retribution, and had to live from hand to mouth (Job 7:1-2; 14:6).

In figurative usage, the Hebrew or Greek terms rendered in English by "wages" and also by "recompense" and "reward" apply to the favors God grants to men (Isa. 23:18; 40:10; 62:11), and to the retributions of divine justice (Ps. 109:20; Rom. 6:23; II Pet. 2:15).

WAGON. *See* CART.

WAHEB wā'hēb [וְהֵב; Ζωσβ] (Num. 21:14). A place, apparently in Moab, probably near the Arnon. The RSV understands two proper names: "Waheb in SUPHAH," while the KJV translates: "What he did in the Red sea." The Hebrew (וְהֵב אִתּוֹ) shows that Waheb is the object of a verb, but this bit from

the Book of the Wars of the Lord does not include the verb in question. E. D. GROHMAN

WAILING. See MOURNING.

WAISTCLOTH [אָוּרִי] (Job 12:18; Isa. 5:27; Jer. 13:1-2, 4, 6-7, 10-11). Alternately: GIRDLE; KJV always GIRDLE. The innermost garment, worn around the loins and ordinarily never removed. It was made of leather (II Kings 1:8) or linen (Jer. 13:1). Workmen removed their outer garments and wore only the waistcloth when on the jobs. See DRESS AND ORNAMENTS § A2. J. M. MYERS

WAIT. Both the Hebrew and the Greek language have a number of words which often or on occasion mean "wait," sometimes in the passive sense of "remain" or "defer" and sometimes with the active meaning of "expect" or "look for."

In the OT there are many references to "waiting" in the sense of "remaining" (cf. Judg. 3:25 [הָיוּל]; Ruth 1:13 [שָׁבַר]; I Sam. 14:9 [דָּמַם]; etc.); or of "lying in wait" (cf. Num. 35:20 [צִדְיָה]; Judg. 16:2; I Sam. 15:5; Ps. 59:3 [אַרְבַּי]). But it is pre-eminently for God that the Jew of the OT waits. The word often used of "waiting for God," קָוָה, has an active meaning. Its root connotes "tension" and "endurance." In waiting for God the Hebrew was in tense anticipation, full of hope, and willing to endure till God should come (cf. Pss. 25:3, 5, 21; 27:14; 39:7; Isa. 26:8; 33:2; 49:23; 51:5; 60:9). To wait for God is to set one's hope on him (cf. Jer. 14:22, where the Hebrew verb for "wait for" is translated "set hope on"; and see the relation of "waiting" to "hoping" in Pss. 39:7; 130:5; Isa. 8:17). But to wait or expect is not enough: one who waits (קָוָה) must "keep to his [God's] way" (Ps. 37:34), must "hold fast to love and justice" (Hos. 12:6). And this one "shall not be put to shame" (Isa. 49:23); God will renew his strength (Isa. 40:31), and will help him (Prov. 20:22). God will incline to one who waits and will hear his cry (Ps. 40:1); and "those who wait for the LORD shall possess the land" (Ps. 37:9); they shall rejoice in God's salvation (Isa. 25:9; cf. Gen. 49:18). Finally, God himself waits for ("looks for"; קָוָה) Israel to bear fruit (Isa. 5:2, 7).

In the NT the root of the most frequently used words for "wait" (ἐκδέχομαι, ἀποδέχομαι, and προσδέχομαι) has the active connotation of "take" or "receive." The same word means either "wait" (cf. Mark 15:43) or "receive" (Rom. 16:2). One who waits is expecting to receive; and in the NT waiting usually is related to salvation. There are exceptions to this (cf. Acts 17:16; I Cor. 11:33; Jas. 5:7); but Christians wait for "adoption as sons" (Rom. 8:23) or for a Savior from heaven, the Lord Jesus Christ (Phil. 3:20; see also Mark 15:43 = Luke 23:51; Acts 1:4 [περιμένω]; Rom. 8:19, 25; I Cor. 1:7; Gal. 5:5; I Thess. 1:10 [ἀναμένω]; Tit. 2:13; Heb. 9:28; 10:13; 11:10; Jude 21). And God's patience is said to have "waited in the days of Noah" (I Pet. 3:20).

WALLET [יִלְקוֹט] (I Sam. 17:40); KJV SCRIP. A receptacle used as a shepherd's bag. David put the pebbles for his sling "in his shepherd's bag or wallet."

WALLS. Walls are mentioned often in the OT. Vineyards and fields have walls (גֵּרַר [Isa. 5:5]; שׂוֹר [II Sam. 22:30]), made of unhewn stones set in mud or mortar. House walls* were of unhewn stones, mud, or brick. City walls,* normally of rough-hewn stones with upper courses of brick, were often of great height and breadth. The walls of houses and cities are generally designated by the Hebrew words חוֹמָה and קִיר, without sharp distinction in usage or meaning (Josh. 2:15; 6:5). Figs. JER 12; WAL 1, 2.

***WAR, IDEAS OF.** The concept of the holy war, declared, led, and won by Yahweh himself, governs

OT military thinking. Originating in Israel and reaching its greatest influence during the period of the judges, the concept was overshadowed in the monarchy by considerations of political expediency. The prophets, while supporting the holy-war ideology, thought of war primarily as the judgment of God against rebellious Israel or against the haughty Gentile nations. The apocalyptists saw in war a testing of faith and a sign of the end of the age. They held also that the final era of peace would be preceded by a massive holy war. Jesus taught little directly concerning war, but directed his mission toward creating the conditions of peace. The early church spiritualized the holy war and saw in it a struggle against sin, Satan, and the demonic forces of the cosmos, the decisive battle of which had been won in the death and resurrection of Jesus Christ.

1. **The holy war.** The concept of a holy war demands the presupposition stated in Exod. 15:3: "Yahweh is a man of war [אִישׁ מִלְחָמָה]." When the conviction that Yahweh is a warrior is joined to the confidence that he has the power to win victories (I Sam. 17:47), a holy-war ideology is not only possible but inevitable. I Sam. 17:47 declares precisely this faith: "The battle [הַמִּלְחָמָה] is Yahweh's." The separate elements in the Israelite practice of the holy war have been isolated and studied by Gerhard von Rad (see *bibliography*), and the treatment given here is based on his work.

a. **Preparation.** By its nature the holy war must have the sanction and active participation of the national god. He declares the war (Exod. 17:16; Num. 31:3). Consultation of the deity by one of the numerous methods available was, therefore, a necessary prelude to battle. Dreams, Urim, the ephod, or the word of the prophet was employed for this purpose (Judg. 7:9-14; I Sam. 28:6; 30:7; II Sam. 5:19, 23; I Kings 22:5, 7-8). Since no step could properly be taken without divine approval, "inquiring of the LORD" was an important means of determining strategy while the war was in progress (II Sam. 5:19-23; see WAR, METHODS OF). In general, any defense of Israelite territory against foreign invasion was *ipso facto* a holy war. The enemy, thrusting itself into the sacred land given to Israel in her covenant with Yahweh, would perforce bring the wrath of Israel's God against the invader. This breaks down only when the invader has been called in by Yahweh himself in order to punish his people. Both aspects of war are repeatedly illustrated in the book of JUDGES.

b. **Personnel.** The military commander did not lead in his own name or by his own genius. He was prepared for his office by a special gift of the Spirit of God, and by virtue of this gift he held his command (Judg. 6:34; 11:29; etc.). If for any reason the Spirit was withdrawn from him, his authority to lead went with it (Judg. 16:20; I Sam. 16:14). See SPIRIT.

The men who served under the charismatic leader were required to show complete single-mindedness in the service of Yahweh. The fearful, the newly married, and those entangled in financial or domestic worries were invited by the commanding officers to go home (Deut. 20:5-9). Their presence in the army would break the unity of those who "offered themselves willingly" (Judg. 5:2). The holy war was conducted with the full support of the priests and the cultus (Deut. 20:2; I Sam. 10:1), and the soldier, since he was offering service to Yahweh, took on a priestly quality, becoming for the duration of the war a holy person (I Sam. 21:14; Isa. 13:3). The military camps were places where Yahweh himself "walked" (Deut. 23:14), and, like any shrine, had to be kept ritually clean. Excrement was buried outside the camp area (Deut. 23:12-13), and any soldier who contaminated himself with a bodily discharge underwent a one-day purification ritual outside the camp (vss. 10-11). For a man to have intercourse with a woman would disqualify him from entering the encampment (I Sam. 21:4; II Sam. 11:11). Theologically the holy war appears as a responsibility of the Israelite under the COVENANT, and cultically as a sacrificial act, initiated by the will of Yahweh, and carried out by people devoted to his service and ceremonially pure.

c. **Conduct.** For the conduct of a holy war the number of soldiers in the army is of little importance (Judg. 7; I Sam. 14:6). The soldiers do not fight alone, for "Yahweh your God is he that goes with you, to fight for you against your enemies, to give you the victory" (Deut. 20:4; cf. Exod. 14:14; Deut. 9:3; Judg. 4:14). The holy war was called "Yahweh's war" (I Sam. 18:17; 25:28), and its battle cry was one of the numerous variants of the expression: "Yahweh has delivered them into our hand" (cf. Judg. 3:28; 7:15; I Sam. 7:8). The ram's-horn trumpet (see MUSICAL INSTRUMENTS), symbolic of the voice of Yahweh, sounded the assembly and the attack (Num. 10:9; 31:6; Judg. 3:27; I Sam. 13:3). The familiar divine name, Yahweh of hosts, has overtones of the holy war (see LORD OF HOSTS). In the Song of Deborah the Lord comes into battle from his mountain home and marshals the natural and cosmic powers against Sisera (Judg. 5:4, 20-21). Elisha sees the heavenly army of Yahweh drawn up on the hills around besieged Samaria (II Kings 6:15-19). At a crucial point in the battle the "terror of Yahweh" falls upon the enemy, throws them into confusion, and leaves them an easy prey to the numerically inferior Israelites, whose main function is "mopping up" after the victory, which is won by Yahweh alone (Josh. 10:10; Judg. 4:15; II Sam. 5:24; 7:10). The forty years of wilderness wanderings were a punishment for the people's lack of trust in Yahweh's ability to win the victory in spite of the physical size and military equipment of the Canaanite

cities (Num. 14:1-12). David's willingness to go against Goliath (I Sam. 17:41-47) and Jonathan's singlehanded attack on the Philistines (I Sam. 14) are equally evidence of complete confidence in this premise.

Since the holy-war ideology was not confined to Israel, but was shared by her neighbors, it is not surprising that warfare often resolved itself into a power struggle between the gods of the warring nations, the victory going to the nation with the most powerful god (I Kings 20:28; II Kings 18:28-35). When the hard-pressed Israelites brought the ark of the covenant into battle, the Philistines exclaimed: "The gods have come into the camp. . . . Woe to us! For nothing like this has happened before" (I Sam. 4:7). The Philistines naturally accepted the defeat of the Israelites and the capture of the ark as evidence that Dagon was stronger than Yahweh. Accordingly they presented the ark as a gift to Dagon in his temple. The reader is made aware that the victory of the Philistines is not genuine evidence of the weakness of Yahweh. Dagon fell on his face before the ark (I Sam. 5:1-5). At a later date Mesha, king of Moab, attributed his defeat to the weakness of his god, Chemosh, and sacrificed his son on the city wall in an effort to revitalize the deity. When the Israelites were defeated, he ascribed the victory to the power of Chemosh (II Kings 3:21-27). See MOABITE STONE.

d. Outcome. Deuteronomy envisages three possible results of a holy war (20:10-20). A city brought under attack is to be offered terms of peace. If these are accepted, the citizens are enslaved but not killed. If the terms are rejected, the males are put to the sword, but the other occupants and the property of the city become booty for the victors. Exception is made of enemy cities within the boundaries of the Holy Land, which are to be utterly destroyed. This practice, known as "the ban" (חרם; see DEVOTED), in either the partial or the complete form is a common feature of OT narratives (Josh. 6:17; I Sam. 15:3), and serves to emphasize the sacrificial character of the holy war, which makes a whole city a sacrifice to Yahweh.

It should be emphasized that the holy war, although an important part of Hebrew theology, is never represented as an end in itself. The war looks beyond the day of battle to the time of peace which the victorious conclusion of hostilities will bring. The war itself is an instrument of the delivering God of the covenant by which he brings his people into that condition of well-being and prosperity which in the OT is called "Peace" (שָׁלוֹם; see PEACE, OT; REST). The holy-war ideology is, therefore, an integral part of OT covenant theology, emphasizing the sovereignty of God, his initiative, his concern for his people, and his activity as deliverer and preserver.

2. Historical sketch. The holy-war concept was developed and reached its greatest influence during the period of the judges. In that age the tribes were held together in a loose confederacy for the common worship of Yahweh and for common military action. The semi-independent tribal leaders could not be brought into united action unless they were assured that Yahweh was himself their leader. The cultic aspects of the holy war were reinforced by the fact

that the rallying point of the tribes was at such a religious center as SHECHEM or SHILOH.

a. During the monarchy. With the coming of centralized administration under the monarchy the holy war lost much of its vital power as a living concept, although as an idea or ideal it exercised a profound influence throughout biblical times. During the reign of Saul, who was a rural monarch and desirous of preserving the traditional ways of his people, the holy war remained as active a concept as in the days of the judges, but with the rule of David the tribal organization of Israel was broken down, and Solomon's policies dealt a final blow to tribal society (see DAVID; SOLOMON). Warfare was transformed into an instrument of national policy, declared at the wish of the king to serve his purposes. Lip service might be paid to the older traditions, the king "inquiring of the LORD" before going into battle, or offering a prayer for victory (I Kings 8:44-45; 22:5); but the prophets who gave the divine verdict were creatures of the court (I Kings 18:19; 22:5-6), and only an occasional devoted man like Micaiah ben Imlah dared to stand out against them (I Kings 22:16-23). The king's mandate to control warfare was undergirded by a court theology which saw the monarch as the appointee of Yahweh, and his earthly representative; indeed, his son (II Sam. 7:14-17; Pss. 2; 72; see KING). Symptomatic of the changed outlook is the increasing importance attached to international treaties as a means of guaranteeing security (I Kings 15:18-19; 16:31; II Kings 15:19; 16:5-9; 17:4). The power of Yahweh needed to be bolstered by the might of one of the great powers.

Nevertheless, throughout the monarchy the ancient tradition of the holy war survived. The ordinary citizen and the common soldier were apparently more loyal to its principles than the court officials and generals. Uriah the Hittite, e.g., was faithful to his status as a consecrated warrior when he refused to go down to his house while on leave from the army. By contrast, David was willing to sacrifice this principle for his own convenience (II Sam. 11:6-13).

Holy-war thinking figures prominently in the book of DEUTERONOMY, where in five passages rules of warfare are given in a form which breathes the spirit of the holy war (20; 21:10-14; 23:10-14; 24:5; 25:17-19). The priestly historians in NUMBERS and JOSHUA are controlled by the same tradition. They regard the exodus from Egypt as the holy war par excellence. They report the events of the conquest and settlement of Palestine as the irresistible, triumphant march of the armies of Yahweh (Num. 21:21-35; 31:1-12; Josh. 6:1-21; 8:1-29; 10; etc.), checked only when the nation temporarily lost its faith in the complete sufficiency of Yahweh (Num. 14:39-45; Josh. 23:9-13). The holy-war tradition was thus preserved in that part of the Israelite cultus least dominated by the royal court. It may, like Deuteronomy, have belonged to the specific teaching of the country Levites (see the works of G. von Rad in the *bibliography*), as well as to that of the prophetic schools.

b. After the Exile. With the fall of the Israelite kingdoms another radical change in the idea of war

took place. The nation ceased to exist as a political entity, and, therefore, lost its capacity to wage war either as an instrument of policy or as a response to the call of Yahweh. The only conceivable form of holy war in the postexilic period was revolt against the ruling power of the day.

To a remarkable degree the Maccabean revolt against Seleucid rule (*see* MACCABEES) reflects the ideology of the holy war. Its initiator and first leader, Mattathias of Modin, is described in terms reminiscent of the inspired military commanders of the period of the judges, although in the case of Mattathias the Spirit is not specifically mentioned as the inspiring agent (I Macc. 2:24-26). Judas' exhortation to his troops expresses the leading principles of sacral warfare. "It is easy for many to be hemmed in by few, for in the sight of Heaven there is no difference between saving by many or by few. It is not on the size of the army that victory in battle depends, but strength comes from Heaven" (I Macc. 3:18b-19). "He himself will crush them before us; as for you, do not be afraid of them" (vs. 22). The prayers offered before battle are part and parcel of the same conceptual framework (I Macc. 4:30-32 [note the appeal to the "terror of the Lord" in vs. 32]; 7:41-42). Characteristics of holy-war thought can be detected in accounts of the first and second Jewish revolts against Rome (A.D. 66-73 and 132-35 respectively; Jos. War IV; Dio Cassius LXIX). The fact that none of these revolts was wholly successful prevents them from being presented as thoroughgoing representatives of the holy war.

The foregoing historical sketch omits the important contribution made to the OT view of war by the prophetic and apocalyptic movements. This must now be considered.

3. Prophetic ideas. While the prophets regarded universal peace as a goal to be realized in the "latter days" (Isa. 11:6-9; Jer. 32:36-41; Ezek. 39:25-29; Mic. 4:3-4), they were not opponents of war as such. The earlier prophets were more than once engaged in stirring up internal strife (I Kings 1:11-14; 11:29-39; 16:1-4; 18:17; II Kings 9), or in supporting the king in his military ventures (I Kings 20:22-25, 26-28; 22:13; II Kings 3:13-20; 6:11-12). Elisha was such an active participant in the planning of strategy that King Joash called him "the chariots of Israel and its horsemen" (II Kings 13:14), and he died condemning the king for not wishing to strike down the Syrians more than three times (II Kings 13:14-19). As men of Yahweh these prophets were staunch adherents to the holy war, and if from time to time they did raise their voices against the king's military plans, it was because they felt that the conditions necessary for a holy war were not being met (I Kings 22).

The so-called writing prophets sometimes supported the king in war (Isa. 37:5), but they were far more often opponents than advocates of war. This does not mean that they transcended the traditions of the holy war, but rather that they felt it to be the only type of war in which Israel could validly engage. Since in their analysis of the situation the grounds for such a war were entirely lacking, they were compelled to speak against the participa-

tion of Israel in the power struggles among the great empires of the day.

The necessary prerequisite of holy war is uncompromising trust in the power of Yahweh to give victory. Precisely this quality was missing in Israel. The people trusted in wealth, in the strength of the army, in such alliances as they were able to conclude with foreign powers, and in the apparatus of diplomacy and compromise (Isa. 30:1-5; Jer. 9:23; Amos 2:13-16). Jeremiah declares:

Cursed is the man who trusts in man
and makes flesh his arm (17:5),

and Isaiah's oracle shows the impossibility of a holy war in Israel:

Woe to those who go down to Egypt for help
and rely on horses,
who trust in chariots because they are many
and in horsemen because they are very strong,
but do not look to the Holy One of Israel
or consult the LORD! (31:1).

The Egyptians are men, and not God;
and their horses are flesh, and not spirit
(vs. 3).

Hosea speaks with the same accent:

Ephraim is like a dove,
silly and without sense,
calling to Egypt, going to Assyria
(7:11).

By taking up the religious practices of the nations around her, importing their gods, and abandoning or corrupting the worship of Yahweh, Israel has lost the true source of her strength, the presence of Yahweh with her armies is unthinkable, and the theological basis of the holy war is absent from her life and thought.

In allowing herself to come into this position Israel has denied her covenant vocation—viz., to be a nation marked off from other peoples by her devoted service to Yahweh. She has chosen to "mingle with the nations" (cf. Hos. 7:8), and has taken on their coloration and characteristics. Thus, the people of God stand under judgment, and, in typical biblical fashion, the punishment fits the crime. Yahweh permits them to be a nation like the nations of the earth, and, caught between the great world powers, their tiny army is helpless, and they become a spoil of war. In this way war takes on a new meaning for the prophets. It becomes the judgment of Yahweh on the apostasy and lack of trust of the nation. Striking illustrations of this prophetic reinterpretation of the theological significance of war may be found in Isa. 5:26-30; 10:5-11; Jer. 5:29-31; 6:1-5; Ezek. 5; Hos. 10:7-10; Amos 3:12; Mic. 1:10-16; Hab. 1:5-17. To give an exhaustive list of passages would be virtually to reproduce the prophetic books. The prophetic view of war as divine judgment is a leading idea in the Deuteronomic history work from Judges to the end of Kings, where national disaster and disobedience to Yahweh always go hand in hand.

The OT prophets applied their belief in war as Yahweh's instrument of judgment to other nations as well as Israel. God's control is sovereign over all human history, and he punishes evil where it ap-

pears beyond the bounds of Israel (Amos 1-2:3). Usually the destructive judgment of war is visited upon the foreigner because of his oppression of Israel (Jer. 46:10; Obad. 10-14; Nah. 1:2-3); but often the foreigner is condemned for his overweening pride and his confidence in his own power (Isa. 16:5-7; 19:11-15; Jer. 49:16), or for his brutality and lack of humanity (Jer. 51:25-26; Amos 1:13-14; Nah. 3:5-13). There is a reverse side to the coin. As Yahweh may use war to punish his own people, and to work out his vengeance against the foreigner, so he may use a warrior-king for the deliverance of his own people. Isaiah of Babylon saw in Cyrus of Persia the anointed servant of the Lord whose military campaigns would clear the way for Israel's return from exile (Isa. 45). When we enter this circle of thought, prophecy is passing over into apocalyptic.

4. Apocalyptic ideas. Three elements may be distinguished in apocalyptic ideas of war: it is evidence of the control of demonic powers over the present world order; it is a sign of the impending end of that order; and in the form of a final great holy war it will precede the era of peace and of the rule of God.

The apocalyptists considered the present world order to be under the control of demonic powers, who, using the godless rulers of world empires as their instruments, were leading it toward destruction. The wars engaged in by such rulers are, thus, demonic things, spawned by supernatural powers and carried out by their human servants, or originating in an insensate lust for power on the part of the human ruler himself. The pseudepigraphic book of Enoch traces the origin of war to one of the fallen angels, Gadreel, who "showed the children of men all the blows of death" (Enoch 69:6-7), and Jubilees traces it to the rebellious sons of Noah, who "began to war on each other" and "to teach their sons war" (15:2). Since the course of history is a record of increasing degeneration and decadence (Dan. 2:31-45), wars will increase in intensity, brutality, and destructiveness, and an uncontrolled outburst of warfare is a sign of the imminent end of the age (Dan. 8:23-26; IV Esd. 9:1-3; Mark 13:7-8). The demonic powers, whether human or divine, take special delight in directing their attacks against the people of God (Dan. 7:24-25; 8:23; Enoch 91:5-19). Thus war and persecution test the faith and endurance of the covenant community.

The most characteristic apocalyptic teaching about war is, however, a direct derivative from the ancient Israelite conception of the holy war. When God acts to assert his final control over the cosmos, the people of God will march under the messiah of the line of David against the forces of the pagan world and their demonic masters (II Esd. 12:31-39; 13:5-50; Syr. Apocal. Bar. 72; Pss. Sol. 17:23-24; Test. Levi 18:11-12; Test. Dan 5:10-12; Test. Reuben 6:12; Zadokite Document 9:10-20). This idea begins to appear in postexilic prophecy, where it is a working out of the prophetic view that war may be a judgment on the Gentile nations as well as Israel (Isa. 63:1-6; Joel 3:9-21; Hab. 3). Ezekiel's prophecy of the destruction of Gog is the most complete presentation of the theme in the OT (chs. 38-39). After the

cleansing of Israel and her reconstitution as a united nation under one king, Gog and his hosts invade the land, and Yahweh's wrath flames out against them (38:14-23). The divine call to war (vss. 19-23), the victory won by Yahweh's power alone (39:1-6), and the sacrificial nature of the war (vss. 17-20) are all present in Ezekiel's account, but the whole is highlighted by apocalyptic imagery, and the human forces play no more than a passive role.

The idea of the holy war at the end of the days became a common feature of apocalyptic thought, and continues to the present day in the doctrines of apocalyptically minded groups. The War of the Sons of Light and the Sons of Darkness provides a detailed description of such a war, conducted under messianic leadership, with an army composed of men and angels, engaged in a sacrificial battle against human enemies and their demonic allies (*see* DEAD SEA SCROLLS). OT quotations and allusions in this document show that it is self-consciously in the tradition of the holy war.

NT apocalyptic passages follow the typical apocalyptic views of war. War is seen as an evidence of demonic forces in action, and as a portent of the end of the age (Matt. 24:6-8; Mark 13:7-8; Luke 21:9-11). It provides the setting in which faith is put to the supreme test (Matt. 24:9-28; cf. Mark 13:9-13; Luke 21:12-24). While the Markan apocalypse is about a final holy war, Revelation alludes to it as the victory of the Lamb over the ten kings allied to the beast (Rev. 16:14-16), and locates the final battle at ARMAGEDDON. The same book contains a reference to the struggle against Gog and Magog in which the ideology of the holy war is strongly in evidence (20:7-9).

5. The teaching of Jesus. War is, rather unexpectedly, not a central concern in the ministry of Jesus. Insofar as he made messianic claims for himself, Jesus would be compelled to consider the traditional function of the messiah as leader of the final war. There is NT evidence that the disciples tried to cast their Master in this role (Matt. 20:20-27; Mark 10:35-45; Acts 1:6), and some scholars have attempted to show that Jesus accepted it, at least for a time. The weight of evidence indicates that as early in his career as the temptations Jesus rejected war as a means of carrying out his work (Matt. 4:8-10; Luke 4:5-8; *see* TEMPTATION OF JESUS), and defined his office in terms of the Suffering Servant of Deutero-Isaiah. His rebuke of Peter's use of the sword at the arrest (Matt. 26:51-54; Mark 14:47-48; John 18:10-11) is consonant with this view. Although not considering the figure of the warrior-messiah as applying to himself, Jesus indicates that he could have been such a messiah had he wished to do so (Matt. 26:53).

Jesus never spoke directly against war as an instrument of national policy. In his day war was the business of the Roman Empire and was conducted mainly on the frontiers, so that it could not have been immediately relevant to a Palestinian Jew living in a peaceful province of that empire. Jesus spoke as freely with soldiers as with others. He sometimes illustrated his teaching with an example drawn from war (Luke 14:31). He once called on his disciples to pro-

duce swords (Luke 22:36), and declared that he had "not come to bring peace, but a sword" (Matt. 10:34). In the light of his total message this element seems little more than an honest recognition of the divisive nature of his teaching (Matt. 10:34-39).

The teaching of Jesus is strongly directed toward peace and peacemaking. The kingdom of God needs no force to establish or maintain it. The peacemaker is blessed (Matt. 5:9), and the enemy is to be met with love and good deeds instead of hate and violence (Matt. 5:43-44; Luke 6:27, 35). The ethic of Jesus is the antithesis of the warlike mood, and, if universally accepted, would create an ethos in which war was impossible.

6. War and the NT church. The church, the community of the new Israel, was basically different from OT Israel. The latter was a national structure, a political organism, and was, therefore, by its nature thrust into war. The church was an international and interracial body, and was by this fact delivered from engagement in warfare as a church. Individual Christians might serve in national armies, but a Christian armed force or a Christian military campaign was an impossibility. A doctrine of war like that found in the OT was not a pressing necessity for the NT church.

Consequently the NT writers reinterpret the holy war in a spiritual way (I Cor. 14:8; II Cor. 10:3; I Tim. 1:18-19). The church's struggle is not against human beings but against the demonic powers ruling a disordered cosmos (Eph. 6:10-12; see DEMON), and its weapons are entirely of the spiritual kind, to be used against the powers of evil, not against human enemies (II Cor. 10:4; Eph. 6:13-17). The basic Christian warfare is against sin in any of its manifestations.

Physical warfare belongs to the province of the state, not of the church. It originates in greed and lust for power and is one of the implements by which the demonic powers bring sin and death upon the present world order (Jas. 4:1-2). The Christian's struggle with his appropriate spiritual weapons is, therefore, against the very powers which bring war into existence; and when this struggle is consummated, war will be at an end.

Victory in Christian spiritual warfare, as in the OT holy war, is given by God, not achieved by men. But unlike the Jewish apocalyptists, the Christians did not have to wait until the end of the age for an intervention of God in history. (In the crucifixion and resurrection of Jesus Christ, God had won the decisive battle against the demonic, war-making powers, had broken their control over mankind, and guaranteed their ultimate overthrow.) While the doctrine of the second coming of Christ (see PAROUSIA) made it possible for the NT church to retain the idea of a holy war in the end of the days (see § 4 above), the vital theological importance of such a war was not felt by the Christian, and it became a minor motif in NT thought.

In the period of waiting between the act of God in Christ and the final total victory the Christian's duty was not military action, but endurance and witness to the gospel. In calling men to reconciliation with God in Christ the Christian was calling them

to reconciliation with one another, and hence making peace (Rom. 5:1-5; II Cor. 5:16-21; Eph. 2:11-22; etc.). See ATONEMENT; RECONCILIATION; PEACE IN THE OT.

1. Terminology. The regular words for "war" in the Bible are מלחמה and πόλεμος, along with their corresponding verbs נלחם and πολεμέω. The word מלח is incorrectly rendered "war" by the KJV at Deut. 3:18 (RSV "[men of] valor"); II Chr. 33:14 (RSV "army"). Literally it means "strength"; by extension it also means "wealth," either economic or military, therefore "army" (cf. the English word "force"). The word להם occurs only in Judg. 5:8 in an unintelligible phrase. The root צבא, "to wage war," is most commonly found in its substantival form, צבא ("host of warriors," "war service"). The word קרב derives from קרב, "to come near, approach"; it thus means "an approach with hostile intent"—i.e., "war."

In the NT the following words are used: αντιστρατεύομαι, "to war against" (Rom. 7:23; cf. RSV "at war with"); πόλεμος, "war" (Matt. 24:6; Mark 13:7; I Cor. 14:8 ["battle"]; Heb. 11:34; Jas. 4:1, etc.); πολεμέω, "to war, battle, wage war" (Jas. 4:2; Rev. 2:16; 12:7, etc.); στρατεύμα, "army, troops, soldiers" (Matt. 22:7, etc.; Luke 23:11; Acts 23:10, 27); στρατεύομαι, "to serve as soldier, wage war" (Luke 3:14; I Cor. 9:7, participle "soldier"; II Tim. 2:4; Jas. 4:1, participle "soldier in service"; II Tim. 2:4; I Pet. 2:11, etc.).

2. Geographical conditions of Palestine. To understand Hebrew battle tactics, it is necessary to examine briefly the terrain of Palestine (see Map I). Palestine is divided into four extremes: the coastal plains, the central ridge (the S extension of the Lebanon range), the Jordan Valley, and the Transjordanian Plateau (an extension of the Anti-Lebanons).

The coastal plain, the most fertile and arable part of Palestine, was never completely occupied by the Hebrews—the Canaanites and Phoenicians held the N, the Philistines the S, part. The center of Hebrew culture lay in the central ridge, an almost unbroken range of hill country extending southward to the Negeb. This ridge is broken between the hills of Galilee and of Samaria by the large Plain of Esdraelon, a fertile plain of great strategic importance since the armies of antiquity (Egyptian and Assyrian, e.g.) most naturally traversed this plain. Megiddo (and Taanach to the S) was located at the juncture of this plain and the Plain of Sharon on the coast, thus constituting from earliest historical times a place of outstanding strategic importance from a military point of view. Westward the plain issues in the Jordan Valley through passes above and below the Hill of Moreh.

The Samaritan hills extend from Mount Gilboa overlooking the Plain of Esdraelon southward, with Mount Ebal and Mount Gerizim overlooking the Plain of Shechem. Passes from this plain run in all directions, giving to the plain and the city of Samaria, built by Omri, military significance. The S hill country was Judah, with the bleak Wilderness of Judah toward the E and the Shephelah to the SW. In the Shephelah fortress cities were built by the Israelites to protect their frontier against the Philistines, as well as the marauding tribes of the desert.

The Jordan Rift continues the depression of Coele-Syria southward to its lowest point at the Dead Sea (1,290 feet below sea level), through the Arabah until it issues in the Gulf of Aqabah. E of the Jordan is plateau land dissected by large E-W rifts: the Yarmuk, which flows into the Jordan just below its rise at the Sea of Galilee; and the Jabbok, which rises near Amman and divides ancient Gilead. The Arnon runs through an impressive gorge on the N border of ancient Moab into the Dead Sea. The S border of Moab was probably Wadi el-Hesa (the River Zerod?), flowing into the Dead Sea just above its S tip.

3. Military routes. Palestine constituted the land bridge between the valleys of the Nile and the Tigris-Euphrates. The favorite route lay along the coastal trade route, as the inscriptions on the left bank of the Nahr el-Kelb show. Another route branched off at Megiddo through the Esdraelon Plain to the Jordan and from there northeastward to Damascus. Of some importance for later times was the Transjordan trade route from Damascus to Petra to the head of the Gulf of Aqabah.

For the invading nomads from the desert (Midianites, Ammonites, Moabites, Israelites) these great routes were of no importance. Once the Jordan was crossed, the Jericho Plain gave access to Palestine westward over the central ridge by way of Bethel to Lower and Upper Beth-horon to the coastal regions. Access to the central regions around Shechem was most easily gained from the Jordan Valley through the broad Wadi Far'ah.

4. Fortresses. Prior to the monarchy the Israelites had no walled cities for defense; and as a result, when raiding bands invaded the country, they had to hide in mountain caves (Judg. 6:2) and in holes, rocks, tombs, and cisterns (I Sam. 13:6). Saul forti-

fied his rude capital at Gibeah (Tell el-Ful), but defensive fortifications had their actual beginnings under David with the capture of Jerusalem. Eventually such defense posts as Libnah, Lachish, Gezer, and Beth-horon (especially Upper Beth-horon) constituted a series of fortified cities along the SW border. Omri built and fortified Samaria as the strong capital of the N kingdom. On opposite ends of the Plain of Esdraelon lay the fortresses of Megiddo and Jezreel, both admirably suited for defense. After the division of the monarchy, lines of defense were built on the borders. Baasha attempted to build Ramah as a frontier post, but Asa of Judah, with the bought help of the Arameans, was able to destroy Ramah and build Geba and Mizpah as Benjaminite border fortresses (I Kings 15:16-22).

5. Razzias. The razzia or raid has been from time immemorial the military form of the nomad and seminomad. The Ayyam el-'Arab in the Jahiliyah period find their modern counterparts in clan raids among the tribes of the Arabian Peninsula. Settled states found the sudden raids of such tribes highly disconcerting. Witness the complaint in the Instruction for King Meri-ka-re (twenty-second century B.C.) in Egypt: "Lo, the wretched Asiatic—it goes ill with the place where he is, afflicted with water, difficult from many trees, the ways thereof painful because of the mountains. He does not dwell in a single place, (but) his legs *are made to go astray*. He has been fighting (ever) since the time of Horus, (but) he does not conquer, nor yet can he be conquered. He does not announce a day in fighting, like a thief who . . ." (ANET 416). The ill-starred expedition of Aelius Gallus in 24 B.C. against the Bedouins was obviously not the first to suffer because of the mobility of the desert nomads.

Palestine in the pre-monarchical period was perennially subjected to tribal razzias; in fact, the tribe of Gad itself was a גַּדָּה, a "raiding troop" (Gen. 49:19 RSV mg.). Thus the Israelites suffered from inroads by the Moabites, Amalekites, and Ammonites (Judg. 3:13), the Midianites (6:1-5), the Ammonites (10:9; cf. vs. 12), the Moabites (II Kings 13:20), the Amalekites (I Sam. 30:1-2), and the Philistines (Judg. 15:9; I Sam. 13:17-18). David also made intermittent raids on tribes in the desert S of the Negeb (I Sam. 27:8, 11).

Such raids, aside from the desire for plunder (לָשׁוּ [II Sam. 3:22]), were often occasioned by disputes about wells (Gen. 26:17-22), or about rights of pasturage (Gen. 13:5-7). Raids naturally involved plunder and captives, and it would be the business of the raided village to attempt to recapture what had been lost. Such a raid undoubtedly lies behind the puzzling account in Gen. 14 in which a coalition of E kings are represented as raiding the Cities of the Plain. Abraham with a raiding party of 318 men gave chase and, by dividing his forces in a night attack, repossessed the stolen goods and liberated the captives. Such raiding bands were inevitably small, thereby allowing greater mobility as well as the element of surprise; cf. the story of Gideon and his 300 men who overcame the Midianites and their allies (Judg. 7-8) or the 600 men of Dan who captured Laish (Judg. 18:11-29).

6. Ruses. The success of an attack could often be ensured by the element of surprise. In the account of the capture of Ai (Josh. 8), Joshua lured the inhabitants out of the city by a pretended retreat while a large **AMBUSH**, hidden near the city, captured the defenseless city and sacked it. Shechem was similarly taken by Abimelech (Judg. 9:34-45), as was Gibeah of Benjamin by the Israelites (Judg. 20:29 ff).

The most favorable time of attack was either during the latter half of the night or immediately before dawn. The invading tribes are described as marching all night to surprise a strong Amorite coalition attacking Gibeon at dawn (Josh. 10:9). Saul surprised the Ammonites by a split-troop predawn attack (I Sam. 11:11), and Gideon fell on the Midianites just after midnight (Judg. 7:19) also in a split (three-group) attack. King Mesha of Moab captured Nebo from Israel by a night attack which began at the break of dawn (cf. Moabite Stone, line 15, *ANET* 320).

7. Preparation for war. The spring of the year was the "time when kings go forth to battle" (II Sam. 11:1). Once enemy territory was invaded, the army would live off the land; but in the case of defensive warfare, before the establishment of the Davidic dynasty, troop provisions were the responsibility of the soldiers' families (I Sam. 17:17-18), or of clans (I Sam. 25:18; II Sam. 17:27-29). Under Solomon, levies were made to provide food for the "king and his household" (I Kings 4:7, 27-28).

War was seldom declared, since this would eliminate the element of surprise. The declaration of war by Amaziah of Judah against Jehoahaz of Israel (II Kings 14:8) was unusual, and had disastrous consequences for Judah (cf. vss. 12-14). Negotiations were sometimes attempted in order to avoid actual conflict (Judg. 11:12 ff), but the demands made were often so preposterous that acquiescence was impossible (I Sam. 11:1 ff; I Kings 20:2 ff).

Troops were mustered in various ways: (a) by blowing the שֹׁפָר (a curved war horn; Judg. 3:27; 6:34); (b) by visible signals set on a hill (see **BANNER**); (c) by sending messengers throughout the land (Judg. 7:24), often with some symbol of a bizarre imprecatory rite appealing to the people's emotions, such as pieces of dismembered oxen (I Sam. 11:7) or the body of the ravished concubine cut into pieces (Judg. 19:29 ff).

Before engaging in war, Israel, like other nations, consulted their God to determine whether the times were favorable for the project. Yahweh was אֱלֹהֵי צְבָאוֹת ("god of hosts"), which in early days certainly meant "God of the hosts of Israel." Yahweh is called a "man of war" in Exod. 15:3; he trains hands for war, even fingers for battle (Ps. 144:1). War might be undertaken only by divine sanction (Num. 14:40 ff); Yahweh gave heavenly help in times of battle (Josh. 10:11; Judg. 5:20). A favorable oracle might be sought from prophets (I Kings 22:5 ff; II Kings 3:11 ff). Joash, on Elisha's orders, resorts to arrow divination (II Kings 13:15 ff), and Saul illegally consults familiar spirits through necromancy (I Sam. 28:6 ff), more orthodox means (dreams, Urim, or prophets) having failed. Priestly oracles were probably the most commonly sought. Inquiry

was made before the ark (Judg. 20:27), or the ephod (I Sam. 30:7-8; see **EPHOD** 1), or the **URIM AND THUMMIM** (I Sam. 28:6; cf. 14:41). Priests would accompany the army into battle, as did the ark (I Sam. 4:4; 30:7; cf. Num. 31:6; II Sam. 11:11). The Philistines brought their idols along into the field (II Sam. 5:21). Jewish soldiers were known to carry charms to ensure their safety during the Maccabean Wars, according to II Macc. 12:40.

Before battle, sacrifices had to be made to gain God's favor (Judg. 6:20, 26; 20:26). This was "consecrating war," קִדְּשׁ מִלְחָמָה—i.e., translating the war and its instruments out of a profane into a sacred state (Jer. 6:4; Joel 3[4]:9; Mic. 3:5; cf. Josh. 3:5; Isa. 13:3). Such sacrifices were usually holocausts (see **BURNT OFFERING**; I Sam. 7:9). In particularly grave crises a human sacrifice was considered very potent (II Kings 3:27).

8. Open warfare. The battle array (מַעֲרִיכָה) was of the simplest kind. A solid line of shield-bearing spearmen held the first line of defense, with the archers in the rear. Once battle was engaged, the whole mass of troops joined in hand-to-hand combat. The sounding of the trumpet gave the signal for attack (II Chr. 13:12; I Macc. 16:8) as well as for retreat (II Sam. 2:28; 18:16; 20:22). The army would often be divided for split attack (Gen. 14:15), usually into three parts (Judg. 7:16; I Sam. 11:11; II Sam. 18:2; I Macc. 5:33). Attack was often accompanied with a prearranged war cry, as: "A sword for Yahweh and for Gideon!" (Judg. 7:20; cf. I Sam. 17:52; Isa. 42:13; Amos. 1:14).

Bedouin battles, as in the War of the Basūs or the day of Dahis during the Ayyam el-'Arab, were often settled by the single combat of opposing champions. In similar fashion David killed the Philistine giant Goliath in such an encounter (I Sam. 17:48-51), whereupon the Philistines fled. In a later encounter between the forces of Ish-bosheth and David such a contest was arranged between twelve champions for each side (II Sam. 2:12 ff; cf. **HELKATH-HAZZURIM**).

The Israelites did not master the art of open warfare before the time of David. Saul was outmaneuvered by the Philistines in his last encounter with them when he allowed his army to be lured into open warfare at the base of Mount Gilboa on the Esdraelon Plain (I Sam. 28:4). The Israelites were more at home guarding Benjaminite, Judean, or Ephraimite passes; in fact, such passes as the one at Michmash could be held by very few men (I Sam. 14). Even as late as the ninth century the Syrians thought of Yahweh as a god of the hills (I Kings 20:23).

It was the Philistine crisis which brought about a unification of the tribes and a reorganization of military affairs. The charismatic chieftains (see **JUDGE**) of the premonarchical age were men of the moment, indulging in guerrilla tactics when the need arose. David himself was well versed in these tactics, but after his coronation he appointed as commander in chief of his forces Joab, a man of outstanding military genius. Through a stratagem Joab captured Jerusalem, the Jebusite stronghold, which David thereupon made his capital city. Joab was a master at siegework (II Sam. 11:1; 20:15), and it is doubt-

ful whether this art was well known to the Israelites before this time.

Furthermore, David created an empire by incessant warfare with the Philistines, Moabites, Syrians, Edomites, and Ammonites (cf. especially II Sam. 8); in the course of this warfare horses and chariots were captured, and the methods of both open and siege warfare were developed. Under Solomon, cities to house these accouterments of battle were built (see CHARIOT), and a standing ARMY of mercenary troops became the accepted practice.

9. Siege warfare (מצור, "siege"; צור, "besiege"). Though siege warfare was already known to the Egyptians of the Middle Kingdom, it was actually the Assyrians who became masters of this type of warfare. It was, however, known throughout the Near East. To avoid a long siege, spies might be sent in advance to discover a city's weaknesses (Judg. 1:22 ff; see SPY).

An effective siege cut off all communications of a city without outside help and occupied all the water supplies in the neighborhood. When Joab had once taken the "city of waters" (cf. Polybius 5.71) at Rabbah of the Ammonites, he could send David word that the army was ready for the assault (II Sam. 12:27). Actually the siege of Rabbah is the first recorded siege of the Israelites; prior to this, direct assault was the usual means the Israelites employed in capturing a city. Once a place was invested, a fortress could communicate with other places of defense only by such means as flares, as is known from the fourth Lachish Letter (lines 10-13).

When the Israelites besieged a walled city, they built a siege wall (סללה; cf. דיק, which occurs as a synonym. The difference between the two words is not known. The latter word occurs only with reference to the investiture of Jerusalem by Nebuchadrezzar [II Kings 25:1; Jer. 52:4; Ezek. 4:2; 17:17; 21:22—H 21:27; 26:8; translated "siege walls" and "siegeworks" in the RSV], whereas סללה is used also of the Israelite siege; cf. II Sam. 20:15; the word occurs also in II Kings 19:32; Isa. 37:33; Jer. 6:6; 32:24; 33:4; Ezek. 4:2; 17:17; 21:22—H 21:27; 26:8; Dan. 11:15; translated "mound," "siege mound," "siege wall," "siegeworks" [Dan. 11:15], in the RSV). Such an earthen mound served as a protection particularly for the archers.

The Assyrian siege methods are well known from both cuneiform sources and the bas-reliefs. War machines were usually constructed of materials on hand for which trees in the vicinity would be hewn down (cf. Jer. 6:6). Then causeways would be built

3. City attacked with battering ram, from Nimrud

so that the siege machines, mounted on four or six wooden wheels, could be rolled up to the immediate area of the wall. Such machines were of two kinds: the movable siege platform from which one could shoot directly at the defenders on the walls, and the BATTERING RAM, operated by hand and so constructed as to give room for a body of archers on its tower (Fig. WAR 3). The defenders would try to neutralize the battering ram by chains and grapnels.

Meanwhile, the walls would be further weakened by the digging of a tunnel. Such a long trench approach was found in the Hyksos embankment at Tell ed-Duweir. Once the besiegers felt that the defense was sufficiently weakened to permit a concerted attack, the general assault was made. The first to advance were the heavy armed infantry, equipped with shields and spears. It was they who were to mount the tall scaling ladders. Meanwhile, crouched behind mantelets were the archers, who kept up a heavy barrage of arrows to protect the invading forces. The besieged, defending with the energy of despair, hurled boiling oil and shot burning arrows at the invaders.

The methods of siege warfare so well understood by the Assyrians and the later Babylonians were also adopted by the Seleucids of the second century B.C. in their siege of Jerusalem (I Macc. 6:48 ff). Specialized machines for hurling fire (πυροβόλα) and stones (λιθοβόλα) were used by the besiegers, as well as slings and σκορπίδια εἰς τὸ βάλλεσθαι βέλη σφενδόνας (some type of shooting device for hurling arrows). The catapult may have been known to the Assyrians (if the interpretation of *nimgalli*—lit., "large flies"—as a catapult in Sennacherib's Annals is correct; cf. Luckenbill, vol. II, p. 62, col. IV, 79). Just what σκορπίδια were is not known, though it has plausibly been suggested that they were small crossbows. According to Josephus, slingers were used for investiture by the Romans as well (War I.vii.3).

10. Consequences of war. Once a city was taken, the defenders were put to the sword. The narratives of the Conquest (Josh. 5-12) show complete ruthlessness on the part of the conquerors. Since war was believed to be a sacred duty, divine favor might be assured by declaring the *hērem* (חרם), a pact with the deity by which everything animate was devoted for destruction (cf. Josh. 6:17-21; I Sam. 15:3). Breaking such a promise was a major sacrilege and might involve defeat, as in the story of Achan (Josh. 7). Captured kings and leaders were usually slain. The male populace was often completely exterminated (I Kings 11:15), or mutilated (Judg. 1:6), or taken as slaves (Deut. 20:11). Women and children were the spoils of war, though pregnant women were often disemboweled (II Kings 8:12; 15:16; Amos 1:13).

The cruelty of the Assyrian conquerors was proverbial. Large numbers were impaled or decapitated, the dis severed heads being thrown together in large heaps. Principals were often drawn and quartered. Shalmanezar III boasted of having burned boys and girls alive in the city of Aridi (Monolith Inscription, line 17). Captives were mutilated by cutting off hands, feet, nose, ears, or tongue. Infants were dashed to pieces (Ps. 137:9; Nah. 3:10), and the able-bodied were taken into slavery. Native peoples in the West were deported

to the East and replaced with loyal subjects (II Kings 17:6, 24; cf. 24:14; 25:11).

In the event of a successful siege the walls were broken down (II Kings 25:10), and the city and especially its temples were burned with fire (cf. vs. 9). Anything of value became BOOTY for the pillaging soldiers. Should a city submit voluntarily, however, a heavy tribute (II Kings 18:14-16) was imposed, and hostages might also be taken to ensure submission.

11. Wars of liberation. The revolt of the Maccabees originally had the character of partisan warfare. With the exception of a few sieges (such as the Jerusalem Akra and Beth-zur) the rebels engaged in guerrilla warfare, suddenly appearing seemingly out of nowhere, attacking, and then withdrawing, as suddenly as they had appeared, into the hills. These enervating tactics forced the Syrians to come to Palestine with huge forces including infantry, cavalry, and a scythe-chariot corps (see CHARIOT), as well as an ELEPHANT corps (II Macc. 13:2). In hilly Palestine such an unwieldy group, accompanied as it was with a large train, lacked maneuverability, and small guerrilla bands were able to make raids on it almost at will.

J. W. WEVERS

WAR CLUB. See CLUB.

WARDROBE, KEEPER OF THE [שמר הבגדים]. A servant in the royal household who had charge of the robes of the king. In the time of Josiah's reform (II Kings 22:14) one is mentioned named Harhas (Hasrah in II Chr. 34:22). In II Kings 10:22 the robes for royal worship were in his care. Perhaps there was a special room in the palace for storing the royal robes.

C. U. WOLF

WARE (MERCHANDISE). See TRADE AND COMMERCE.

WARS OF THE LORD, BOOK OF THE. A document mentioned in Num. 21:14 (see NUMBERS, BOOK OF) as the source of the poetic quotation which immediately follows (vss. 14-15). It is possible that the two other poems quoted in this chapter (vss. 17-18, 27-30), or at least the first of them, are to be attributed to the same source; although this is by no means certain, since they are quite different in character.

The fragment which is explicitly assigned to the book gives no clue as to the book's nature or contents, being merely a geographical note from which even the main verb has disappeared. From the title, however, it may be safely presumed that the book was a collection of ancient folk poetry relating certainly to the wars of the conquest in the time of Joshua and perhaps also to those of Saul and David, which led to the establishment of the kingdom and

the empire. The mention of this book is important as confirming the view that the traditions embodied in the present biblical documents are derived in part from older written sources as well as from oral tradition. There is mention elsewhere (Josh. 10:13; II Sam. 1:18) of what is presumably another document of this kind, the "Book of Jashar" (see JASHAR, BOOK OF), which obviously cannot be older than the time of David and may therefore give a hint as to the date of the Book of the Wars of Yahweh.

The "wars of Yahweh" are the wars which were fought on his behalf and in which he personally took part; the interests of the god among ancient peoples were identical with the interests of the nation. For the early Hebrews war was a sacred activity ("to prepare war" is literally, in Hebrew, "to consecrate war" [Jer. 6:4]), and Yahweh himself was the God "of *ybhā'ôth*"—i.e., "of armies" (Ps. 24:10; cf. vs. 8).

R. C. DENTAN

WASH, WASHINGS [בט, *lit.* to trample, usually of garments; רחץ, bathe, usually of persons]. See BATHING.

WASHBASIN [סור רחץ]; KJV WASHPOT. The use of this word in Pss. 60:8; 108:9 is most interesting. The Hebrew term used here normally refers to a wide-mouth cooking pot. In these passages the cooking pot, which must be kept ceremonially clean, has degenerated into a washbasin. In these identical passages Moab is described as God's washbasin, perhaps because of its proximity to the Dead Sea.

J. L. KELSO

WASP [σφηξ] (Wisd. Sol. 12:8; cf. LXX at Exod. 23:28; Deut. 7:20; Josh. 24:12). Any of numerous species of insects of the order Hymenoptera, divided into two groups, the Diploptera (or *Vespoidea*) and the Sphecoidea (or *Fossores*). Most of the wasps are solitary in their habits (e.g., the *Eumenidae*, the mud-wasps), but others are social (e.g., the *Vespidae*), and among the latter is the common hornet (*Vespa crabro*).

See also BEE; HORNET.

W. S. McCULLOUGH

WATCH, WATCHES. See NIGHT.

WATCHER. The conventional rendering (following Aq., Symm., ἐγρηγορος; Vulg. *vigil*) of the Aramaic term עיר, used in Dan. 4:13, 17, 23, to designate a certain type of celestial being. The rendering is based on derivation of the word from the root עיר, "be awake."

The beings in question are more fully described in the pseudepigraphic book of Enoch (second century B.C.), where they are identified (21:10) specifically with the angels, and again (1:5; 10:9, 15; 12:2, 4; 13:10; 14:1, 3) more generally with those denizens of heaven that were expelled for their waywardness and rebellion (cf. Gen. 6:1-8). The latter identification occurs also in the book of Jubilees (4:15, 22; 7:21; 8:3), in the Testaments of the Twelve Patriarchs (Test. Reuben 5:6; Test. Naph. 3:5), in

the so-called Zadokite Document (A ii, 17-19), and in the Genesis Apocryphon discovered among the Dead Sea Scrolls (II.1).

The exact meaning of the term עֵי is uncertain. The LXX renders loosely "angel," and Theod. is content with mere transliteration (εἶρ). As early as the second century B.C., however, it was already understood in the sense of "wakeful," for it is often paraphrased in Enoch by the expression "those that sleep not" (e.g., 39:12-13; 40:2; 71:7). If this view be correct, the name would reflect a common ancient belief that celestial beings are sleepless; this is said, e.g., of the Vedic Adityas (Rig Veda II, 27:9), of the Iranian Mithra (Yasht 10.7) and Ahura-mazda (Videvdāt 19.20), of the Greek Zeus (Sophocles *Oedipus at Colonus* 702), and—in the OT itself—of Yahweh (Ps. 121:4). Considering the lateness of its appearance in Hebrew and Aramaic, and the acknowledged indebtedness of Jewish angelology to Iranian sources (see ANGEL), it is not improbable that the term reproduces a yet unidentified Iranian expression (e.g., *axvafnō*, "sleepless one") for some such mythological being as a fravashi. T. H. GASTER

WATCHMAN. One who keeps vigil, who guards a person or property, usually at night; hence, a sentry or keeper of the gate. In the NT the guard or sentries posted around prisons were acting as watchmen, although not designated as such (Acts 5:23; 12:6, 19).

Watchmen over fields and vineyards were posted usually only during the time of harvesting. They erected booths to serve as shelter from the heat and built watchtowers to facilitate observation (נֹצֵר; II Kings 17:9; II Chr. 20:24; Job 27:18; etc.).

The watchman (שׂמֵר, צֹפֵה) of the city kept the walls safe from the enemy at night and called out the safety of the city like a sentry (I Sam. 14:16; II Sam. 18:24; II Kings 9:17; Song of S. 3:3; 5:7; etc.). He was especially valuable in time of siege (Jer. 51:12). Yet the biblical belief in providence was such that no watchman could protect the city unless God kept it (Ps. 127:1). Figuratively the pious are watchmen who await the Lord's blessings (Ps. 130:6).

The prophets as watchmen of God observed the impending doom on the nation as well and announced it to the sleeping, indifferent people (Hos. 9:8). The commission of a prophet was to be a watchman over God's people (Isa. 21:6; Jer. 6:17; Ezek. 3:17). Preachers and prophets do not always bring bad news to the people (Isa. 52:8; 62:6). The oracle concerning Dumah has become a familiar Advent or Epiphany pericope (Isa. 21:11-12). So the prophet is concerned to bring the people back to God (Jer. 31:6). This burden of responsibility is heavy on God's watchmen (Ezek. 33:2, 6). False prophets or the prophets of false gods are blind watchmen (Isa. 56:10).

An agent of God from heaven is called a "watcher" (עֵי; LXX ἐγρήγορος) in Dan. 4:13 ff. Probably this agent is considered an angel. God is also a watcher over men (Job 7:20). In the apocryphal books the term "watchman" is used to designate fallen angels (ἐγρήγορος; Enoch 1:5; 10:9) and archangels (Enoch 20:1; 39:12).

C. U. WOLF

WATCHTOWER [מגדל (II Kings 18:8; Isa. 5:2); מִצְפָּה (II Chr. 20:24; Isa. 21:8); בֵּרוֹן (Isa. 32:14)]. A structure from which a certain area of land could be guarded.

Towers were built in the fields from which the owner of the land or his workmen could watch the crops as they ripened and thus keep them from being stolen. The towers were generally constructed of stone and usually provided temporary living quarters, since the fields would have to be watched night and day for a period of time.

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

4. Watchtower in a Palestinian field

In present-day Palestine watchtowers are usually round and may be as high as ten feet. Often they consist of two levels—a ground level, where there will be living quarters, and the top level, surrounded by a low wall, from which there is a good view of the entire field.

Fig. WAT 4.

H. N. RICHARDSON

WATER [מים; ὕδωρ]. In many instances, of course, this word is used in the ordinary sense, thus referring to springs, lakes, seas, rain, etc. In other cases the characteristics of water provide the basis for metaphor—e.g., "Unstable as water, you shall not have pre-eminence" (Gen. 49:4); "We are like water spilt on the ground, which cannot be gathered up again" (II Sam. 14:14);

As in water face answers face,
so the mind of man reflects the man
(Prov. 27:19);

or "He who doubts is like a wave of the sea that is driven and tossed by the wind" (Jas. 1:6). Moreover, because of its cleansing power, water figured prominently in ritual usage and symbolism, as indicated by the references to "living" (i.e., fresh, running) water in the priestly literature (Lev. 14:5-6, 50-52; 15:13), WATER FOR IMPURITY (Num. 19:13, 20-21), holy water (Num. 5:17), and, in a special sense, the water of bitterness that brings the curse (Num. 5:18, 23-24). The prophets, critical of the efficacy of external rites, insisted that an inner cleansing was necessary (Isa. 1:16; cf. Ps. 51:7—H 51:9); and the priestly prophet, Ezekiel, proclaimed that this cleansing would take place in the new age, according to Yahweh's promise: "I will sprinkle clean water upon you, and you shall be clean from all your uncleanness" (Ezek. 36:25). The cultic significance of

water is further expounded in the NT, where the people of God are said to be cleansed "by the washing of water with the word" (Eph. 5:26; cf. Tit. 3:5), and individual baptism by water is the sign of baptism by the Spirit (John 3; cf. Heb. 10:22). In I Pet. 3:18-22 it is held that baptism is typologically foreshadowed in the story of the Flood, when "eight persons were saved through water"; and in I Cor. 10:1-5 the crossing of the Red Sea is taken to mean that the Israelites "were baptized into Moses in the cloud and in the sea," even as their thirst was quenched from Christ, the "supernatural Rock which followed them" (cf. Exod. 17:6; Num. 20:11). See BAPTISM.

The symbolism of water, however, is by no means exhausted by these cultic meanings. In a land where existence was often precarious, men knew in an elemental sense their dependence upon "bread and water" (I Kings 13:18; Isa. 3:1) as the basic necessities of life (the value of water is exquisitely portrayed in the Davidic episode, II Sam. 23:13-17), and in such a situation were prompted to confess their utter dependence upon God, who supplies man's daily needs (see BREAD). The theological meaning of the image of water comes to expression in Israel's ancient traditions concerning the sojourn in the wilderness. The lack of water invariably was the occasion for murmuring and doubt; and in these times of trial, according to tradition, faith was given the assurance of Yahweh's presence, for, in a miraculous manner (see SIGNS AND WONDERS), he provided his people with water (see the food-and-water traditions in Exod. 15:22-17:7; Num. 20-21; cf. I Kings 19:6; Neh. 9:15, 20; Pss. 78:15-16, 20; 105:41). According to Deuteronomic interpretation, the people were providentially led through these trying experiences in order that they might come to know that man lives only by the word of God (Deut. 8; note vss. 15-16). From the same viewpoint, the entrance into the Land of Promise would be attended by signs of Yahweh's goodness, "for Yahweh your God is bringing you into a good land, a land of brooks of water, of fountains and springs, flowing forth in valleys and hills" (vs. 7).

In contrast to the alluvial plains of Mesopotamia and Egypt, Palestine is by and large a hilly, rocky country whose fertility is dependent upon annual rainfall. It is, as Deuteronomy states, a "land . . . which drinks water by the rain from heaven" (11:11). Water, therefore, is an element friendly to man, rather than an enemy as in the extraneous flood tradition (see below). Thus the major contrast is between the desert and the fertile ground, as can be seen from the Yahwist's story of the Creation (Gen. 2). There it is said that, before Yahweh caused rain to fall, the earth used to be watered by a "mist" or "flood" (7⁸) which gushed up from the subterranean fresh-water stream (vs. 6), and Paradise is conceived as an oasis from which issued a river to irrigate the surrounding desert. Since Palestine itself is a kind of oasis on the fringe of the Arabian Desert, Israel was tempted to believe, on coming out of the wilderness, that rainfall and fertility were dependent upon the nature gods (see BAAL; RAIN). Elijah threw down the challenge to the Baal by announcing a famine in the name of Yahweh (I Kings 17:1), and the contest on Mount Carmel is best understood as a demonstra-

tion of Yahweh's power to bring rain (I Kings 18:20 ff; see especially vss. 41-46). Hosea declared that Israel had to learn her dependence upon Yahweh, who provides the gifts of fertility (Hos. 2:1-23—H 2:3-25), and criticized a superficial repentance, expressed in the confident testimony that Yahweh

will come to us as the showers,
as the spring rains that water the earth
(6:3).

It is the God of Israel who blesses his people

with blessings of heaven above,
blessings of the deep that couches beneath
(Gen. 49:25)—

i.e., he controls the heavenly and subterranean waters. Thus it came to be a cardinal tenet of Israel's faith that Yahweh waters the earth by sending rain and causing springs to gush forth in the valleys (Pss. 65:9-10—H 65:10-11; 104:10-13; 147:18; Amos 5:7-8; 9:6; cf. Job 5:10; 12:15; 26:8; 28:25-26; 36:27-28).

The significance of water in the Palestinian locale often provided the metaphors of religious language. Amos insisted that justice should "roll down like waters" and righteousness "like an ever-flowing stream" (5:24), rather than like the wadis that dry up quickly when the rainy season is over. Using the same figure, Jeremiah queried whether Yahweh would be to him "like a deceitful brook, like waters that fail" (Jer. 15:18). The gentle waters of Shiloh—an aqueduct which carried water from a spring to a pool inside the Jerusalem walls—were to Isaiah a symbol of quiet and confident faith in Yahweh, the spurning of whom would result in an overflowing flood from the Euphrates (Isa. 8:5-8). Water, therefore, could be a symbol of Yahweh's salvation, as in the summons to "draw water from the wells of salvation" (Isa. 12:3) or to "come to the waters" (55:1), even as the absence of Yahweh's word could be regarded as thirst and famine (Amos 8:11). Jeremiah rebuked the people for relying on water stored up in leaky cisterns and for rejecting Yahweh, the "fountain of living waters" (Jer. 2:13; 17:13; cf. Ps. 36:8-9—H 36:9-10). This theme finds new expression in the story of Jesus, who, at Jacob's Well, promised to provide "living water," in the drinking of which man would never thirst, for it would become in him a "spring of water welling up to eternal life" (John 4:10-15; cf. 6:35; 7:37-38). The book of Revelation affirms that Christ dispenses "water without price from the fountain of the water of life" (Rev. 21:6; 22:17; cf. Isa. 55:1).

Moreover, the contrast between the fertile ground and the wilderness often provides the imagery for expressing the blessing and salvation which God bestows upon his people. In the oracles of Balaam it is said that Israel is

like valleys that stretch afar,
like gardens beside a river,

for "his seed shall be in many waters" (Num. 24:6-7; cf. Gen. 49:22-26; Ps. 107:33-38; Ezek. 19:10-14). The divine Shepherd leads his flock "beside still waters" (Ps. 23:2), and the wise man, who meditates upon the law, is likened to a "tree planted by streams of water," fruitful in its season and evergreen even in the summer heat (Ps. 1:3; cf. Jer. 17:7-8). In escha-

tological literature, especially in the prophecy of Second Isaiah, the dawn of the new age is portrayed in terms of the fertility of an oasis. Not only will Israel be

like a watered garden,
like a spring of water,
whose waters fail not
(Isa. 58:11; cf. 27:2-3;
Jer. 31:10-14);

but the whole arena of nature, affected by Yahweh's redemptive work in history, will be so transformed that springs will gush forth in the desert and the wilderness will blossom like the rose (Isa. 41:17-20; 43:19-21; 44:3-4; 48:21; 49:10; cf. 35:5-7). In the book of Ezekiel this eschatological motif finds expression in the vision of a river of life, issuing from below the threshold of the temple and having its source doubtless in the subterranean Deep; as the river flows down into the Arabah, it brings forth life on every hand, and even the stagnant waters of the Dead Sea are made fresh (Ezek. 47:1-12; cf. Ps. 46:4—H 46:5; Joel 3:18—H 4:18; Zech. 14:8). Also the image of the "river of the water of life" reappears in a NT vision of the end time (Rev. 22:1-2).

In these instances, water is a friendly element which symbolizes divine blessing and redemption, and this is true even when the source of the water is the primeval Deep (as in Gen. 2:6; 49:25; Deut. 33:13; Ezek. 47:1). But in another tradition, derived ultimately from the mythological views of Egypt, Mesopotamia, and Canaan, water is regarded as a foe which God overcomes.* The ancient *Weltbild*, which is taken for granted throughout the Bible, portrayed the universe as a three-storied structure: heaven, earth, and underworld. According to ancient mythology, this structure arose as a result of a primordial battle between gods who emerged from uncreated chaos. Victorious in the struggle, the herogod split the body of the dragon of chaos (Tiamat in the Babylonian myth) and separated the two halves by a firmament. Thus the waters of chaos were not destroyed but pushed back, with the result that man's world was situated between the "waters above" (the heavenly ocean) and the "waters below" (the Deep; cf. Exod. 20:4; Deut. 4:18; 5:8; Pss. 104:3; 136:6; 148:4). The mythological ideas associated with this world view were undoubtedly mediated to the Israelites through the Canaanites. Ugaritic (Ras Shamra) mythology, which represents variations on themes familiar in ancient Egypt and Mesopotamia, relates that the storm-god Baal entered into conflict with the formidable water dragon known as Prince Sea and Judge River and that he was victorious in the struggle, thereby taking his "eternal kingdom" (see BAAL). This "twisting serpent" (cf. Isa. 27:1), known as Leviathan among the Canaanites, is portrayed on a cylinder seal which depicts two deities in the act of vanquishing a seven-headed monster. Concrete evidence of the influence of mythological thinking upon Israel is found in the fact that Solomon installed in the Jerusalem temple a bronze sea, which represented the subterranean fresh-water stream from which all life and fertility were derived (II Kings 25:13, 16; see SEA, MOLTEN).* Moreover, in the OT there are specific references to this dragon under the names Leviathan or Rahab (Job 3:8; 9:13; 26:12;

41:1—H 40:25; Pss. 74:14; 89:10—H 89:11; 104:26; Isa. 27:1; 51:9). Figs. LEV 27; SEA 34.

Faint echoes of this mythology are found in the priestly creation story (Gen. 1:1-2:4a), which begins with a portrayal of uncreated watery chaos (the Hebrew word for "Deep," תְּהוֹם, is cognate with Babylonian Tiamat) and speaks of the interposition of a firmament to separate "the waters from the waters" (see CREATION §§ 1a, 3a). Furthermore, the priestly version of the Flood portrays the near return of the earth to pre-creation chaos as a result of the waters which poured down through the windows of the firmament and gushed up from the fountains of the Great Deep (תְּהוֹם רַבָּה; Gen. 7:11; cf. Isa. 54:9). Against this background of thought we may understand some of Israel's language of praise. Yahweh is king over the whole creation, for he has founded the earth upon the seas, and established it upon the rivers (Ps. 24:1); "the sea is his, for he made it," and "in his hand are the depths of the earth" (95:4-5); he has laid the beams of the heavenly chambers on the waters (104:3) and spread out the earth upon the waters (136:6); he has put the deeps in storehouses (33:7) and has commanded the waters above the heavens to praise him (148:4). Those who go down to the sea in ships may see the "deeds of Yahweh, his wondrous works in the deep," how he makes the waves to mount up to the heavens and to plunge to the depths (107:23-32). Indeed, the sea is full of God's creatures, even Leviathan which he formed (104:24-26). Let the sea roar, then, and let the floods clap their hands, for Yahweh comes to rule the earth (Ps. 98:7-9; cf. 96:11; Isa. 42:10; see ABYSS).

This language not only reflects the ancient *Weltbild*, but it also implies, and often articulates, a dramatic conflict between Yahweh and the waters of chaos. This is frequently the case with the expression "many waters" (מַיִם רַבִּים). In the psalm found in Hab. 3, it is said of Yahweh:

Thou didst trample the sea with thy horses,
the surging of mighty waters (vs. 15).

In the same poem Yahweh's anger was against the rivers (נְהָרִים) and the sea (יָם); Ugaritic *ymn* when he rode forth on his chariots of victory (vs. 8) and that "Deep" (תְּהוֹם) cried out in panic (vs. 10). The restless, rebellious character of the waters is portrayed in other poetic or liturgical contexts (e.g., Ps. 77:16-20—H 77:17-21), where "waters" is used in parallelism with "deep" and "sea"; 93:3-4, where "many waters" is parallel to "floods" (נְהַרְהָה) and "sea"; 104:6-7; cf. 46:2-3—H 46:3-4; 114:3-5), and in some instances the waters are explicitly identified with the dragon of the Deep, called Leviathan or Rahab (Job 26:10-13; Pss. 74:12-14; 89:9-10—H 89:10-11). It is said that at the time of the Creation, Yahweh set a bound which the waters should not pass (Ps. 104:5-9), that he shut the sea with doors so that its proud waves might be restrained (Job 38:8-11), and that he drew a circle on the face of the Deep so that the waters might not transgress his command (Prov. 8:22-31; see also Ps. 65:5-8—H 65:6-9; Isa. 50:2-3; Jer. 5:22; 31:35).

In the religions of the Fertile Crescent the theme of the dramatic conflict with the waters was part of a pattern of myth and ritual which was re-enacted

each year in connection with the seasonal cycle of fertility and summer barrenness, of death and resurrection. When Israel appropriated the theme, however, it was torn out of the cyclical pattern of polytheistic nature religion and was radically reinterpreted within the context of exclusive faith in Yahweh, the Lord of history. It may be, as some scholars hold, that Israel held a New Year's Festival (*see* NEW YEAR) at which time Yahweh's kingship was celebrated by rehearsing his victory over the waters of chaos. Some psalms may come out of such a cultic situation—e.g., Ps. 93, which affirms that Yahweh is enthroned in majesty above the thunder of "many waters" and the restless waves of the sea (cf. also Ps. 29, which may be as old as the tenth century in view of affinities with Canaanite literature; note especially vss. 3-4, 10-11). In any case, the mythological language was historicized. Yahweh's victory "in the beginning" was the evidence of his lordship over history, the assurance of his historical sovereignty in the present, and the prototype of his victory in the end, when all powers opposing his kingship would be vanquished.

The tendency to historicize mythological motifs is evident in the association of the chaotic waters with the Red Sea. Yahweh's victory at the Red Sea was a primary element of Israel's kerygma (Josh. 24:6-7; Neh. 9:11; Pss. 78:13; 106:7-12; etc.). In the Song of the Sea (Exod. 15), a poem which in its original form may date back to the premonarchic period in view of its consonance with early Hebrew and Canaanite poetic style, Yahweh is praised thus:

At the blast of thy nostrils the waters piled up,
the floods stood up in a heap;
the deeps congealed in the heart of the sea
(vs. 8).

Here Yahweh's enemies are not the rebellious waters, but the hosts of the pharaoh. The sea is merely the passive instrument by which Yahweh wins his victory on behalf of Israel. But in other poems, of a later origin, the waters of the Red Sea are none other than the waters of chaos. Yahweh's battle was not fought in the timeless realm of mythology, but in the arena of history—namely, at the beginning, when Israel was created to be his people. Thus Ps. 77, recalling Yahweh's mighty deeds of old when he deemed his people, says that

When the waters saw thee, O God,
when the waters saw thee, they were afraid,
yea, the deep trembled (vs. 16—H vs. 17);

and, as the conclusion of the psalm indicates, the victory at the Red Sea is clearly in the poet's mind when he says:

Thy way was through the sea,
thy path through the great waters
(vs. 19—H vs. 20).

The identification is also clear in the message of Second Isaiah, who appeals to Yahweh to arouse himself "as in days of old" when the sea dragon Rahab was slain and a path was cut through the Great Deep (i.e., the Red Sea) in order that the redeemed could pass over (Isa. 51:9-10; cf. 43:16-17; 63:11-14). And what Yahweh did in the past he is about to do again. The God who commanded the Deep, "Be dry," is on

the verge of inaugurating a new creation and establishing his kingly rule over Israel and all peoples (Isa. 44:24-28). In other passages we read that Yahweh rebuked the Red Sea and led his people through the Deep, that he divided the Sea and thereby performed an awe-inspiring deed, and that the Sea looked and fled (Pss. 66:5-7; 89:9-10—H 89:10-11, where Rahab is mentioned; 106:8-12; 136:13-15; cf. 114:3-5).

To Israel, the raging, unruly waters symbolized the powers which are opposed to God's sovereignty and therefore threatened to destroy the meaningfulness of history, as though the world ever had the possibility of returning to pre-creation chaos (cf. Jer. 4:23-26). These demonic powers could manifest themselves in Israel's historical enemies. Thus the "many waters" are sometimes equivalent to the "many peoples" or the foes who threaten Israel's existence (Ps. 144:5-8; Isa. 17:12-14; Jer. 6:23; Hab. 3:12-15). However, Israel could go through the "deep waters" (Pss. 69:1-2, 14-15—H 69:2-3, 15-16; 124:1-5; Isa. 43:2) in the confidence that Yahweh is Lord over the Deep. For he could bring the Deep over proud Tyre (Ezek. 26:19-21; cf. 27:26) or destroy the Egyptian pharaoh,

the great dragon that lies
in the midst of his streams
(Ezek. 29:3-5; 31-32).

Moreover, the nearness of death—the eschatological event which threatens to separate man from God—is sometimes described as a descent into the waters of the Deep. This is the case in the psalm inserted into the book of Jonah and occasioned by his sojourn in the belly of a fish (Jonah 2:2-9). Another psalmist tells how, when the snares of death confronted him, Yahweh came to the rescue in an earth-shaking storm. At his rebuke the channels of the sea were laid bare, and, reaching from on high, "he drew me out of many waters" (Ps. 18:7-19—H 18:8-20=II Sam. 22:8-20; cf. Job 26:5; Pss. 42:7—H 42:8; 71:19b-21; 88:6-7—H 88:7-8). Thus "at a time of distress, in the rush of great waters" (Ps. 32:6), man could turn to God, confident of his saving power.

Since the Sea symbolizes chaotic, demonic powers that are subdued but not finally vanquished, apocalyptic writers looked to the future when the history-long conflict would be brought to an end. In the end time Yahweh with his victorious sword "will punish Leviathan the fleeing serpent, Leviathan the twisting serpent, and he will slay the dragon that is in the sea" (Isa. 27:1; cf. Ps. 74:12-17). According to Dan. 7, the seer beheld the four winds of heaven stirring up the "great sea" (cf. the wind that moved upon the waters of chaos in Gen. 1:2), and from this tempestuous deep came four beasts (or kingdoms), each of whom was judged by the Lord of history. The Testament of Levi associates the coming Day of Judgment with the breaking of the rocks, the extinguishing of the sun, and the drying of the waters (4:1). Similarly in the Assumption of Moses it is said that

the sea shall retire into the abyss,
and the fountains of waters shall fail,
and the rivers shall dry up (10:6).¹

¹ R. H. Charles, ed., *The Apocrypha and Pseudepigrapha of the Old Testament* (Oxford: The Clarendon Press).

According to the Sibylline Oracles: "In the last time the sea shall be dry" (V.447), and "the deep sea and Babylon itself" will be burned up (V.159). In an eschatological passage in the Gospel of Luke it is said that upon the earth there will be "distress of nations in perplexity at the roaring of the sea and the waves, men fainting with fear and with foreboding of what is coming on the world" (Luke 21:25-26). The book of Revelation draws freely upon this mythopoeic imagery. Satan is identified with the "great dragon, . . . that ancient serpent" (Rev. 12:9); a new version of the beasts rising out of the sea is presented (ch. 13); and the apocalypse reaches its climax in the vision of the new heaven and the new earth, wherein there will be no more sea (Rev. 21:1). Thus history is viewed as a dramatic conflict between the divine and demonic, creation and chaos, God and Satan; and, in the Christian faith, God's victory in Christ is both a foretaste and promise of the everlasting reign of the Lord God omnipotent.

WATER FOR IMPURITY [מי נרה, *lit.*, waters of impurity, *properly* waters for removing impurity]; KJV WATERS OF SEPARATION. A cleansing agent, described in Num. 19 in two slightly divergent accounts (vss. 1-13, 14-22) and used to purify those unclean by contact with the dead (*see* CLEAN AND UNCLEAN; cf. "water of expiation" [Num. 8:7], "water of bitterness" [5:18]). Elsewhere in the OT where uncleanness associated with death is described (Lev. 5:2; 11:8, 24-28; 21:1-4, 10-11; Num. 5:2; 9:6-7, 10-11; 31:19-24), the "water for impurity" is not mentioned, and the Nazirites had a special ritual which did not include its use (Num. 6:6-12).

An unblemished red cow, which had never been yoked, was presented to Yahweh, and then burned outside the camp together with cedar wood, hyssop, and scarlet thread (Num. 19:1-6; for the use of the last three ingredients in cleansing lepers, *see* Lev. 14:1-9). The composite ash, mixed with stream water, constituted the "water for impurity" (Num. 19:17), and was sprinkled from a bunch of hyssop on a dwelling in which death had occurred and on a person who had been in contact with a human corpse, a human bone, or a grave (vs. 18). Failure to undergo the sprinkling on the third and seventh days of the week-long period of impurity meant expulsion from Israel (vss. 11, 13, 20). All who took part in the ceremony incurred uncleanness "until evening" (vss. 7-8, 10, 21).

Although no exact parallel to the "water for impurity" is known (for approximate parallels, *see* RED HEIFER), the ritual use of magical ingredients mixed with water is widely attested in nonbiblical sources and argues an ancient, non-Hebrew origin for the ritual (*see* WATER OF BITTERNESS; and cf. Exod. 32:20; Lev. 14:49-52; Num. 5:16-18). The choice of the

components of the "water for impurity" was apparently governed by the principle of opposites. The cow, an ancient fertility symbol; the red color of the thread and the animal, suggesting blood; the wood of the long-lived cedar; and the "living water" (מים חיים) provide a powerful combination of symbols of life to counteract the uncleanness caused by DEATH.

WATER GATE [שער המים]. A gate on the E side of Jerusalem, restored by Nehemiah (Neh. 3:26; 12:37). Presumably located in the rampart above the spring of GIHON. Ezra read the Law to the people gathered at the entrance of the gate, where also booths were erected for the Feast of Tabernacles (Neh. 8:1, 3, 16). Some scholars identify the Water Gate with one of the S gates of the temple area. Fig. NEH 13. *See also* JERUSALEM § 7b.

G. A. BARROIS

WATER HEN [תנשמת] (Lev. 11:18; Deut. 14:16), *perhaps* the heavy-breather; cf. נשם, to breathe, pant; LXX πορφυρίων, water hen; Vulg. *cygnus*, swan (Lev. 11:18); LXX-Vulg. *ibis* in Deut. 14:16; Targ. (Onq.) בוחא, night bird, owl]; KJV SWAN. A member of the Rail tribe of birds (*Rallidae*), which frequent ponds, rivers, and marshes; the order includes rails, water hens, gallinules, and coots, and totals ca. two hundred species. Tristram says nothing about water hens in Palestine, but he does refer to the Purple Gallinule (*Porphyrio porphyrio*) as being common in the marshes of that country, and he suggests that, as it is omnivorous in its eating habits, it "might reasonably find a place in the catalogue of unclean birds" (*NHB* 249-51). It is purely conjectural that תנשמת designates one of the Rail birds. Koehler, Bodenheimer (*see* FAUNA § B2), and G. R. Driver (*see* *bibliography*) take it to be an owl.

WATER OF BITTERNESS [מי המרים המאורים], water that causes pain (bearing a curse; Num. 5:18-19, 24); מי המרים (vs. 23); המים המאורים, curse-bearing water (vss. 22, 24)]. A quasi-magical drink, consisting of dust from the sanctuary floor, ink from a parchment on which a curse had been written, and holy water, employed in the "ordeal of jealousy" to test a suspected adulteress (*see* JEALOUSY). Num. 5:11-31, where the ordeal is described, has extensive glosses which make it appear that the potion was administered twice.

A husband who suspected his wife of infidelity, but had no legal proof, could bring her to the sanctuary, where, under conditions calculated to terrify the guilty, her innocence was tested. She was seated before the sanctuary facing the altar (in later times at the E gate of the temple; M. Soṭ. 1.5), where she would be exposed directly to Yahweh's power of blessing and cursing (*see* BLESSINGS AND CURSINGS). Her hair was unbound as a sign of her shame, and, according to the Mishna, she was clothed in black and had her bosom bare (Soṭ. 1.5-6). The priest placed in her hands her husband's cereal offering, called an "offering of remembrance" (*see* SACRIFICES

AND OFFERINGS); took dust from the floor of the sanctuary to enhance the sacredness of the potion (see HOLINESS); placed it in "holy water" (LXX "living"—i.e., running—water); and, standing before the woman, pronounced a terrible curse, with which she irrevocably identified herself by a double "Amen." The words of a written copy of the curse were washed into the water, the cereal offering made, and the woman compelled to drink. If she was guilty, the lower part of her body became distorted; if innocent, she was unharmed and received the blessing of bearing children. Ordeals by water, fire, battle, oath, etc., are pre-Hebraic and possibly older than belief in personal deities. Oaths of purgation taken before Yahweh (Exod. 22:9-11—H 22:8-10; I Kings 8:31; see OATH; WORD), the cultic use of semi-magical liquids (Lev. 14:49-52; Num. 19:17-19, see WATER FOR IMPURITY), and testing by sacred dust mixed with water (Exod. 32:19-20) are found in the OT, but genuine ordeals are rare (see Num. 16). For the Israelite the decision in all such tests rested with Yahweh, but the ritual of the "water of bitterness" shows clear traces of the more primitive conception that the water itself was able to destroy a perjured adulteress (vss. 22, 24, 27, and cf. vs. 21). *Protoevangelium* 16 describes how the test was applied to the mother of Jesus, and M. Sot. 9.9 indicates that it went out of use in the first century A.D.

WATER SHAFT. A system providing access for water from a spring into a city. Underground shafts or tunnels have been found at a number of excavated sites, such as GEZER; GIBEON; JERUSALEM; MEGIDDO. The word צנור in II Sam. 5:8, a difficult passage, is usually rendered "water shaft," although some scholars have understood this term as referring to the persons of the Jebusites. See WATER WORKS § 5; WELLS. W. L. REED

WATER WORKS. Man needs water, whether to quench his own thirst and that of his beasts, to grow edible plants, to supply industries, or to scour the dust from himself and his possessions, at the surface of the ground. When nature, as in biblical lands, has confined to relatively few points the places where water is so found, man may either restrict his habitation to those places or use intelligence and skill to bring water from its natural sources to where he can best use it.

In the earliest times, before the arts of building and metallurgy were developed, while the digging of cisterns or the construction of wells and channels was too laborious a task to be undertaken, or even thought of, we find the settlements of men grouped in the neighborhood of springs and lakes or on the banks of perennial streams; or we may picture groups of nomads moving from one source of surface water to another. But as man learned to master new materials and fashion better tools, his command of nature's riches increased; and among these, in Southwest Asia, water was the most vital.

We are concerned, then, with the means by which man in ancient Palestine contrived to conduct the

water provided by nature—underground, in springs and streams, or as rain—to receptacles of his own choice and construction on the surface of the land.

Bibliography

1. **Earliest irrigation works.** There can hardly have been a time when man had not noticed that water flows downhill, and can be held up or diverted by any solid obstacle in its path. These obvious facts will have suggested to the most primitive of Stone Age men the simple ideas of digging runnels, scooping out basins, or piling up barriers to guide, check, or store the rain or spring water that flowed by their early encampments. We cannot expect to find or recognize the traces of these earliest experiments. But we can be sure that they were made; and it is safe to infer that the rough stone terrace walls and unrevetted ditches and channels, which are still today a feature of the fertile lands wherever they rise above the alluvial plains, have been developed from simple irrigation works as old as agriculture itself.

It is not, however, these humble peasant structures, too common to be mentioned by early writers, which need concern us now. We read in biblical literature of springs and wells, but little or nothing of irrigation. For then as now, in all but the great river valleys, cultivators were content to raise such seasonal crops as would germinate in the winter and spring rains, and rarely attempted to extend by irrigation the range or seasons of cultivation. It was not agriculture, in fact, but town life that evoked from early man his most strenuous efforts to conserve and control his never-too-abundant supplies of water.

2. **Assyrian irrigation projects.** There are two important exceptions to this generalization. In the alluvial plains of Mesopotamia and Egypt, where powerful states ruled over large populations, things could be different. The cuneiform texts of Mari, touching affairs in the Euphrates Valley during the eighteenth century B.C., reveal the existence of an extensive system of irrigation canals maintained by the administrative energy of a dynasty of Amorite rulers, and by the labor of many subject villages and tribes. In later Assyrian times Sennacherib (705-681) created a gigantic system of weirs and canals, and a monumental bridge built of masonry, to irrigate with the waters of several rivers wide tracts of land containing fields, orchards, and a game park, round his capital at Nineveh; and in this enterprise he followed and surpassed the example of a ninth-century predecessor, Ashurnasirpal II (883-857), who had

tunneled the rocky bank of the Upper Zab River, and dug a canal, to bring water to the fields of Calah.

3. Springs and wells in Palestine. Such spectacular agricultural projects were possible in the great river valleys, where water abounded, and powerful rulers commanding unlimited man power could harvest the fruits of their enterprise from vast tracts of irrigable land. But for Israel and Judah, and for their Canaanite predecessors, inhabiting a geographically and politically fragmented region, devoid alike of great rivers and of wide tracts of alluvial land, no such ambitious projects were feasible. For the society depicted in the OT, part urban, part agricultural, and part seminomadic, the best that could be done was to maintain or increase the yield of natural springs and wells, and protect them from hostile interference; to catch and store for domestic or communal use the periodic rainfall; and, lastly, to reduce the human labor involved in bringing the water from these sources to the homes of the people.

The task that confronts us, then, is to see what can be learned from the literary and archaeological record of the ancient use of springs and wells; of storage in pools and cisterns; and of the methods devised for improving for friends, and denying to foes, the access to those water supplies on which life and prosperity in Bible lands precariously depended.

a. Natural springs. We can be sure that the presence of natural springs was by far the most potent single factor determining the location of the earliest settlements. Certainly the oldest of those which have been archaeologically investigated, Jericho, owed its existence, in early Neolithic times, to the powerful spring, now 'Ain es-Sultan, which the folklore of a later age coupled with the miraculous career of Elisha (II Kings 2:19-22); and there are few perennial springs in biblical lands beside which there cannot be seen a "tell," or city mound, concealing the ruins of innumerable successive habitations.

Such springs are likely to generate a rich folklore; and the tale of Elisha at Jericho is a good example. But whether because the townspeople of Israel and Judah as a whole lost interest in such tales, or for some other reason, the fact is that in the Hebrew writings the scanty folklore of springs turns almost exclusively on the personalities of Israel's early tribal history. Thus in Exod. 17:6; Num. 20:11, the divine revelation through Moses' rod of the springs of Massah and Meribah concerns the anxieties of a nomadic nation seeking water in the desert; and in Josh. 15:19, the simple secular tale of Caleb adding two springs to his daughter's dowry recalls the allocation of lands in the earliest days of tribal settlement. But of the springs at which, day by day for centuries, the women of Israelite towns and villages drew water, no stories but that of Elisha have been preserved.

b. Built wells. The built wells feature, on the whole, more prominently; but of these too it may be said that the stories about them relate to tribal and pastoral society more than to city and village life. It is not known when man first discovered that reserves of water lay hidden beneath the earth and could be reached by his digging deep enough. The discovery is not likely to have been made very early; and the Bible tradition which attributes the oldest

5. Well at Beer-sheba, showing modern use of ancient water wheel

wells to the patriarchs, living in the second millennium B.C., may well be correct. The tales told of the famous wells round Beer-sheba* and Gerar (Gen. 21:30; 26:18; etc.), of the disputes that arose when they were first dug, and of the courtesies by which these were settled, seem all to be drawn from life; and if their association with Abraham and Isaac was indeed based on tribal memory, an origin about the middle of the second millennium may be inferred. It would be impossible, unfortunately, to recognize in the present wells at Beer-sheba or elsewhere the actual handiwork of the patriarchs; for none has been closely enough examined, and all have undergone many repairs since they were built. Fig. WAT 5.

Of the ancient town wells that have been examined, the most spectacular is the well of Lachish (Tell ed-Duweir); but others have been found at Beth-shemesh, Beth-shean, and Tell el-'Ajjul. The well at Lachish was sited high up the slope of the mound on which the city stood, close beside the wall. It was carried down to the immense depth of 144 feet beneath a circular wellhead in the stone revetment of the mound; and of that depth the first 25 feet, above bedrock, were lined with heavy stone blocks. All that can be said of the date of the well is that it was dug before the wall was built, and that was in the second phase of the Iron Age (ca. 900-600). The well of Haran, as we read in Gen. 29:2, was closed with a stone that could be rolled aside. It was outside the city, and the flocks gathered to it to be watered, probably from stone troughs (Exod. 2:16). So it was, too, at the city of Nahor in the same Mesopotamian region (Gen. 24:11), and so also at Bethlehem in Judah (II Sam. 23:15). Water was drawn from these wells by hand in pitchers or skins (Gen. 24:14-20); there is no evidence for the use of pulleys or any other mechanical device.

The finding of water where there were no springs was neither an easy nor a commonplace achievement; and there was a note of triumph in the servants' message to Isaac at Beer-sheba (Gen. 26:32): "We have found water." The actual digging, too, with the bronze tools available, was no light matter; and one may doubt that the patriarchs, half-nomads as they were, and unaided by professional masons, would have attempted anything so ambitious as the

well of Lachish. The successful sinking of a well was therefore a feat worthy to be ascribed to the national heroes of the past.

Spring up, O well!—Sing to it!—
the well which the princes dug,
which the nobles of the people delved,
with the scepter and with their staves.

(Num. 21:17-18.)

4. **Water storage.** The long summer of Palestine, where from May to October no rain falls, makes the climate seem dry. But in fact, from November to April the average rainfall in the hill country, from Judea in the S to Galilee in the N, is *ca.* twenty-five inches, or the same as in the center of England, commonly thought a wet country. Efficient storage of rain water can therefore do much to overcome the habitual summer drought; and for the common man the possession of a cistern may make all the difference between peace of mind and the direst hardship. Thus in 701 B.C. the Assyrian spokesman at Jerusalem thought to win over the common people by promising to each man his own vine and fig tree and his own cistern (II Kings 18:31); and similarly, *ca.* 830 B.C., King Mesha of Moab proclaimed on the monument which he set up in Dibon: "In the town of Qarhoh there was no cistern; so I said to all the people, let each of you make a cistern in his house for himself." (See MOABITE STONE.) So it has been ever since: until the introduction in modern times of piped municipal supplies, all but the poorest houses, in the towns and villages of Palestine not favored by springs, have possessed cisterns, where rain falling on roofs and courtyards in the winter is stored for use in the summer. Larger cisterns, too, have habitually been built beneath the courts of public and religious buildings. Thus in Jerusalem, beneath the temple area and the Church of the Holy Sepulchre, vast subterranean reservoirs—some vaulted in masonry, some hewn entirely in the rock; some medieval or Christian in origin, some much older—hold a perpetual supply of many millions of gallons.

a. **Cisterns.** It is not easy to say when the first cisterns were made, for the simplest of them have changed little in form since the earliest times. They are roughly bell-shaped chambers, hewn deep in the rock, with a narrow vertical shaft at the top for letting down pitchers. If the rock lies far below the soil, the shaft from the surface is lined with masonry of rough-hewn stones, to which successive generations add a few courses as the surface of the ground rises. At the top there may be a heavy ring stone, grooved by many ropes. In the floor, beneath the shaft, there will be a sump for removing the last drops of water at the periodical cleaning or replastering of the cistern. In Hellenistic or Roman times there was introduced a type of open storage tank, rectangular, and reached by broad or narrow flights of steps, the latter descending to the bottom along one side, the former stretching across the full width of one end. These tanks varied greatly in size; they would be filled by means of conduits brought from far or near, according to circumstances, and fitted with settling tanks near the inlet to retard silting.

Since the limestone rock on which most Palestinian towns were built is more or less porous, a cistern to hold water through the summer must be plastered;

and it has been suggested that the great multiplication of domestic cisterns that archaeologists have observed during the Iron Age (from 1200 B.C.), and indeed the spread of population at that period into hilly regions remote from springs, was made possible by the discovery that a waterproof plaster could be made from burnt and slaked lime. This must have greatly increased the efficiency of existing cisterns and encouraged the construction of new ones. It is thought to have happened about the end of the Late Bronze Age, perhaps a little before 1200 B.C.

In the Canaanite town of Gezer, in the Shephelah of Palestine, excavation revealed the rock to be honeycombed with cisterns, one for each group of houses. The walls were covered by a cement of coarse plaster, but of a composition not recorded. Beth-shemesh, likewise, was described by its excavator as a "city of cisterns." This was in the Late Bronze Age (1600-1200 B.C.), and the cisterns are described as lime plastered. But in the earlier periods of the city there were none, and the inhabitants must have relied entirely on the yield of the neighboring spring. So it was until even later at the more remote and isolated town of Debir, in S Judah, where many lime-plastered domestic cisterns constructed after *ca.* 1000 B.C. were found, but none at all of earlier date.

Some Iron Age towns were almost or entirely devoid of spring water, like Samaria, first settled in the ninth century, or the Judean fortress of Mizpah. Such places, uninhabited or nearly so until Israel settled them, must from the first have relied on the efficient and adequate storage of rain water; and the development of the mortar which made this possible must be counted among the notable achievements of the Early Iron Age.

The building of cisterns was a mark of progressive government, benefiting not only the towns but also the countryside. Thus we are told that the active Jewish king Uzziah (*ca.* 783-742 B.C.) "built towers in the wilderness, and hewed out many cisterns, for he had large herds, both in the Shephelah and in the plain, and he had farmers and vinedressers in the hills and in the fertile lands" (II Chr. 26:10). Many such rural cisterns, of great capacity but easily filled in a normal year, may still be found in use by cultivators and shepherds; and many others are now derelict. Of these by far the most impressive that may be explored today are found among a group of monumental chambers, with spiral staircases and connecting galleries, that have been hewn to a great depth at various times, for varying purposes including water storage, in the soft limestone slopes and valleys round the Judean city of Mareshah.

b. **Pools.** King Mesha bade the men of Qarhoh be self-dependent and dig their own cisterns; but he himself built two pools within that city, together with its gates and towers; and another at Baal-meon. Several famous biblical cities had their pools: Hebron (II Sam. 4:12); Gibeon (II Sam. 2:13; perhaps also Jer. 41:12); Samaria (I Kings 22:38); and Jerusalem (II Kings 20:20). Many of these still exist, but not all can be recognized, as they have many times been repaired or replastered, and the rough masonry or lime plaster with which this was done has not much varied from age to age.

At Gibeon (el-Jib)* there may be seen today, in a valley near the ancient site, a rectangular pool lined with masonry and coated with mortar. Excavation has shown this to be probably of Roman origin; and the same is perhaps true of a similar impressive pool at Hebron, also constructed in a valley and lined with masonry. The ancient pool of Hebron cannot now be identified; but it seems likely that the "pool of Gibeon" (II Sam 2:13) was revealed in a sensational discovery made by excavation at el-Jib in 1956. This took the form of a vast circular pit, thirty-eight feet in diameter and of unknown depth, hewn in the rock close within the city wall; it was served by a spiral staircase, also rock-hewn, which descended, apparently, to the bottom. It was a riddle how the pool was filled, for there were no signs of any inlet. Yet marks of water on the wall, and wear

6. Solomon's pool, S of Bethlehem

and tear of the steps, proved that the pit was indeed a pool and kept well supplied with water. The sides were not plastered, but the rock is hard and, if not fissured, would have retained water. Pottery in the rubbish suggested that the pool had fallen into disuse by the sixth century B.C. See GIBEON § 3*b*. Fig. GIB 29.

At Gezer a similar great rock-cut pool, oblong with rounded corners, and furnished with steps along the side, existed within the wall. There the soft rock was rendered with lime cement. Its capacity has been reckoned at about 600,000 gallons; but again there is mystery how it was filled. See GEZER 2.

For Hezekiah's pool at Jerusalem, see *below* and also SILOAM § 3.

c. Aqueducts. The pool of Samaria has not been found. Waterless by nature, the city in Israelite times depended on rain caught in cisterns; for it was isolated by low ground from the nearest springs. It was only under the Roman Empire, after the city had been refounded under a new name by Herod the Great, and much rebuilt *ca.* A.D. 200, that the engineers of the day brought spring water to Sebaste by a masonry and rock-cut conduit partly hewn as a tunnel through the mountain, partly carried across the valley by a bridge. Only the foundations of the bridge remain; but it can be reckoned to have stood more than 160 feet high.

In the Roman and Hellenistic provinces aqueducts were not uncommon; they were open plastered channels following the contours or crossing low ground on walls or bridges. In Palestine another foundation of Herod's, Caesarea, was supplied by such an aqueduct from springs at the foot of the Carmel Range. It was built of concrete faced with masonry, and it

still bridges the dunes and marshes that surround the site of the ancient city. Where the ground level falls, the open channel is carried on arches.

At all flourishing periods from the Hellenistic to the present age, builders and cultivators in the lands of Jericho have made use of the powerful springs which rise in the Wadi Qelt; and water still rushes down rock-cut, or rubble-built and plastered, channels whose history, through many changes, may be traced perhaps to Herod the Great, the builder of a residence (now Tell Abu el-'Alayiq) overlooking the Jericho Plain. At about the same period similar aqueducts brought spring or flood waters to storage cisterns at the waterless castles of Alexandrium (Qarn Sartabeh) and Masada, and to the desert retreat of the Jewish sect of Qumran. See MASADA; DEAD SEA SCROLLS.

At Jerusalem for many generations the Jebusite inhabitants and the early Israelites could subsist on the yield of the spring Gihon,* which rose in the Kidron Valley at the E foot of the city mound. But as the population grew under the Jewish kings, and the temple became the scene of crowded festivals, a time came when it was determined to supplement the local supply with water brought fresh from springs in the higher hill country some fifteen miles to the S. It is still a moot point when this was first done. There exist today in a valley about halfway between the city and Hebron, three great reservoirs enclosed by three masonry barriers, which are popularly called King Solomon's Pools.* They are linked by a system of contour aqueducts, on the one hand with two groups of springs that feed them, on the other with subterranean reservoirs beneath the temple area. From the same valley a separate and lower aqueduct can be traced to the desert castle of Herod the Great (30-4 B.C.; see HERODION). The Jerusalem aqueducts, built at different levels, are two in number: rock-hewn conduits made up, where they cross hollows, in rubble concrete, or, at one point, siphoned in a pipe of rebated stone drums set in a concrete wall. One conduit has more recently been replaced by a line of earthenware pipes laid in its old channel. Figs. GIH 32; ETA 6; WAT 6.

Many hands have contributed through the ages to these aqueducts: Herod the Great, Pontius Pilate (Jos. Antiq. XVIII.iii.2), the Roman legion at Aelia Capitolina (inscriptions of Leg. X Fretensis), and the Saracenic sultans. These builders are known from written texts. We have no record of earlier builders; but the rough workmanship and archaic-looking tooling visible on some rock-hewn sections of the lower aqueduct have suggested that it may have been the work of one or another of the kings of Judah, designed to give its own supply of running water to the temple of Jerusalem. Of this there can be no certainty on present evidence, and the Bible does not state that Solomon or any of his successors brought water to the temple.

The conduit of King Hezekiah (*ca.* 715-687 B.C.), to which there is reference in II Kings 20:20, and which was rediscovered in 1838, was no less ambitious a project. The purpose of this was to supply, not the temple, but the city, with a safe reserve of water run by gravity from the Gihon spring to a new pool conveniently formed behind a barrage built

across the central valley of Jerusalem. To achieve this, it was necessary to tunnel through the mountain spur on which the ancient city lay. The task was made difficult by strata of hard limestone, and the tunnel consequently traced a wavering S-curve, nearly doubling its length to something over 560 yards. An inscription describing the achievement was engraved on the rocky wall of the tunnel near its outlet. This was rediscovered in 1880 and is now to be seen in a museum in Constantinople (*see* SILOAM). The author of II Chr. 32:30 writes: "Hezekiah closed the upper outlet of the waters of Gihon and directed them down to the west side of the city of David"; and in poetical language Ecclesiasticus says:

Hezekiah fortified his city,
and brought water into the midst of it;
he tunneled the sheer rock with iron
and built pools for water (48:17).

Closing the "upper outlet" presumably meant that Hezekiah blocked the natural flow of the waters into the Kidron Valley, where from earlier times, perhaps from the reign of Solomon until his own day, two open-air channels, the one built, the other rock-hewn, had carried the "softly flowing" waters of Gihon, the "brook that flowed through the land" (II Chr. 32:4), to irrigate, through spaced apertures, the terraced gardens of Siloam. Of these the higher channel, after passing through a rock-cut tunnel beneath the S end of the city of David, helped to fill an older pool than Hezekiah's, which before his time had existed embanked behind a thick barrage near the issue of the central valley (*cf.* the "old pool" of Isa. 22:11).

These early aqueducts, like Hezekiah's tunneled conduit, both started from an enlargement and deepening of the cavern in which the Gihon rises; and this is the probable meaning of the "upper pool" of Isa. 7:3, with its conduit in the Fuller's Field. Fig. SIL 59.

5. Water shafts. a. In Jerusalem. Hezekiah's conduit was hewn at a time of danger to ensure the people of Jerusalem the use of their spring and to deny it to an enemy. The project was helped by the existence of some much earlier workings dug by the old Jebusite inhabitants of the city, centuries before, to bring the waters of Gihon toward the foot of a vertical shaft sunk to water level from above. Through this shaft citizens could draw water without leaving the shelter of the walls. The rock was excessively hard, but the Jebusites had succeeded, after some abortive attempts, in driving a flight of steps and a sloping passage to the head of a vertical chimney, which they bored down through the rock to reach an artificial extension of the cavern in which the spring rose. It was the workings at water level that Hezekiah was able to use for the start of his conduit. But his aim was not merely to bring water within the city, but to store it there in quantity, and to stop the flow outside. *See* JERUSALEM § 6c. Fig. HEZ 18.

b. In Megiddo. Other Bronze Age cities that were founded close to springs had made similar tunnels designed to make their water accessible with safety at all times. Some of these have been explored. One of the most instructive was found at Megiddo.* The

spring there rose in a small cave at the foot of the hill on which the city stood; and this had been deepened and extended from time to time as the water table fell. To draw from this spring, the women would leave the city, walk down the hill carrying their water jars, and reach the water by a flight of steps. At some time during the Bronze Age a covered way lined with masonry was excavated in the side of the hill to give them shelter as they went. This was no protection in time of war; and *ca.* the twelfth century a more efficient and much more ambitious project was undertaken. The plan, as at Jerusalem, was to tunnel inward from the spring, and downward from a point inside the city. The vertical part of the workings began as a great square well with a flight of rock-cut steps descending round its four sides. The well started at least twenty-four feet across, but the stairs caused it to contract so rapidly that there were still thirty feet or more to go to water level when it had grown too narrow to continue. Undeterred, the masons continued with a stepped sloping passage, which duly met a tunnel driven horizontally inward from the spring.* At this stage the staircase and tunnel served simply as a safe approach to the original springhead; but this could still be attained from the outside, and was vulnerable. Consequently it was soon decided to close the exit and prolong the horizontal tunnel inward, by hewing away the sloping passage. At the same time the tunnel was deepened so that the water could flow right in beneath the vertical shaft and be drawn up direct in buckets without the labor of climbing down the stairs. Figs. MEG 30; WAT 7.

For a time this system worked; but it probably failed in dry weather, because water then ceased to reach the bottom of the shaft. So it became necessary in early Israelite times to re-establish internal access to the spring by building up a new staircase where the old sloping tunnel had been cut down.

c. In Gezer, Ibleam, Gibeon. Similar but less ambitious water systems existed at Gezer and Ibleam

8. Tunnel of the water system at Gibeon

(Tell el-Bal'ameh); and the men of Judah made another at Gibeon (el-Jib).^{*} In each case the aim was simple: to enlarge and deepen the actual springhead, and make it accessible underground from within the city. No attempt was made at these sites to bring and store the water, as Hezekiah was later to do at Jerusalem, within the walls of the city itself. Fig. WAT 8.

At Gezer the tunnel consisted of a short flight of steps leading down 20 feet to a landing, from which a much longer flight at right angles descended a further 75 feet on a straight run of 112 feet. There it entered a long cave containing the waters of the spring. Today there is no visible exit; but one must assume that in ancient times the spring came to the surface, and that the people of Gezer knew, before starting their gigantic task of tunneling, that they would strike water.

At Gibeon the system was identical in character. The outer approach to the spring was a deep cave artificially prolonged as a tunnel, which followed the water some forty feet into the hillside. During the Bronze Age, as far as we know, and in the early Israelite period, no special trouble was taken either to protect the spring or to save the women the trouble of carrying their pots down to it; only *ca.* the ninth century or later, when the city was fortified by a wall, was a special postern gate built above the spring to shorten the journey. The tunnel was a later defensive measure undertaken some time after the wall had been built. First, the opening of the cave was fitted with grooves so that it could be barred on the outside or built up; then a steep, dog-

legged staircase of ninety-three rock-cut steps, with a total length of more than fifty-five yards, was tunneled upward to emerge, after two turns, in an open space within the town walls. Two sections of this tunnel, instead of being bored through the rock, were excavated from above and roofed over with slabs.

It is a strange fact that these impressive water shafts, which played a vital part in the daily life of Canaanite and Israelitish cities, have passed almost unnoticed by ancient writers. Besides the Chronicler's laconic references to Hezekiah's great conduit, and the poet's brief commendation in Ecclesiasticus, there is only one allusion, enigmatic though dramatic, to the old Jebusite shaft. In II Sam. 5:8, David before Jerusalem says to his men: "Whoever would smite the Jebusites, let him get up the *šinnôr*." The discovery of the shaft leading from Gihon up into the Jebusite citadel gives support to the interpretation of this rare word as "water tunnel," or something of the sort; and the passage is an intriguing hint that the very strength of the Jebusite position proved, by the irony of fate, to be the Achilles' heel of their stronghold. That is all the historians tell us; but the wording of Ps. 42:7—H 42:8, where the same *šinnôr* recurs, is significantly reminiscent of the cavernous rumblings heard, as Jerome tells us in the fourth century, when the waters of Siloam periodically gushed forth into the pool where the blind man was healed (John 9:7).

WATERCOURSE. The translation of אַפְסֵק (alternately "channel") in Ps. 126:4 (KJV "stream"); Ezek. 31:12 (KJV "river"); 32:6 (KJV "river"), where a dry stream bed (wadi) is indicated.

WATERPOT(S). See POTTERY; VESSELS.

WATERS, MANY [מים רבים]. An OT expression which often designates the waters of chaos, upon which, according to the ancient world view, the earth is founded. See CREATION §§ 1a, 3a; WATER.

WATERS OF MEROM. See MEROM, WATERS OF.

WATERSKIN [גביל, wineskin, waterskin, storage jar] (Job 38:37); KJV BOTTLE. A poetic designation of rain clouds in the phrase "waterskins of the heavens" (cf. Job 26:8). For animal skins as containers for liquid, see WINESKIN.

WATERSPOUT. KJV translation of צְנוּר (RSV "cataract") in Ps. 42:7—H 42:8. See CATARACT.

***WAVE OFFERING** [תניפה, *from* נהג, to wave to and fro; cf. Isa. 13:2 for another use of the verb]. A cultic act of offering agricultural produce before the altar by the Israelite worshiper.

This rite formed a small part of the complex system of sacrifice which developed in the late period of Israel's canonical history (see SACRIFICES AND OFFERINGS). The term gives no information about the motivation or meaning of the practice, but points to "the waving" before the altar of that which is being offered "before Yahweh." It has been suggested that the action was a waving toward the altar to signify the offering to Yahweh, then waving away from the altar. Perhaps the offering was returned to the worshiper. This, however, is an unproved conjecture. What might be offered was not uniformly regulated. A variety of items could be included: i.e., various parts of a ram, together with various kinds of "breads" (Exod. 29:22-24); the sheaf of the first fruits (Lev. 23:9-10; see FIRST FRUITS). The earliest practice was probably symbolic and later became an actual presenting of the real things which were being offered for the priests. At various occasions, both animal and grain offerings were offered in this way. Special emphasis was laid upon the breast of the ram as an important element (Exod. 29:26; Lev. 7:30; 10:14).

The wave offering is closely related to the other more prominent sacrifices of the cult; from the sparse evidence, it appears that the offerings "waved" were parts of the more important sacrifices. The priest was to wave before the altar in connection with (a) the sheaf of the cereal offering; (b) loaves of bread of the first-fruits offering; (c) seven lambs, one young bull, and two rams, which are a burnt offering; (d) the drink offering; (e) one male goat for a sin offering; and (f) two male lambs as a peace offering (Lev. 23:15-20). It is not clear whether all these were directly a part of the wave offering, but they were closely related to it.

As a part of the intricate priestly system of sacrifice, this offering was to be done by the priests, as indicated by the phrase "Aaron and his sons" (Exod. 29:24), though Moses also made such an offering (Lev. 8:29). The reference of Lev. 7:28-34 is less explicit on this point. However, since the priest officiated in the peace offering, it is rightly inferred that the priest also acted in this instance. The wave offering was brought by the worshiper, but was offered only in co-operation with the priest, who must participate (Exod. 29:24-25). It has been proposed that the priest placed his hands upon those of the worshipers who held the offering and caused the waving movement (cf. Num. 6:19-20).

This offering was before the altar—i.e., "before Yahweh." As such, it was holy and could no longer be used for any "unclean purpose" (see CLEAN AND UNCLEAN). Among the "clean" usages, indeed, the primary usage of the offering was the support of priests and their families. The rite is among those in the media of alimentation (see SACRIFICES AND OFFERINGS). According to another form of the rite, the offering was taken from the priests after they had finished the waving, and was burned on the altar with the burnt offering (Exod. 29:25; Lev. 8:28).

W. BRUEGGEMANN

WAX [דבש, probably beeswax; κηρός (Jth. 16:15)]. The ordinary uses of wax—e.g., in sealing documents—are not mentioned in the Bible. Wax appears only in poetry, where its property of melting when exposed to heat provides a metaphor for wasting away and destruction. The heart of the persecuted man (Ps. 22:14—H 22:15), the wicked before God's judgment (68:2—H 68:3), and the mountains in the presence of the Lord (Ps. 97:5; Mic. 1:4; Jth. 16:15) "melt like wax."
L. E. TOOMBS

WAY [דרך, ארה; δόξ]. A common biblical metaphor for courses of nature, modes of human and divine conduct, attitude, habit, custom, undertaking, plan, purpose, fate, and the like.

The flight of the eagle, the locomotion of the serpent, the navigation of a ship, the sex urge, are each a "way" (Prov. 30:19). Menstruation is the "way of women" (Gen. 18:11; 31:35). Two universals, procreation and death, are called alike the "way of all the earth" (Gen. 19:31; Josh. 23:14; I Kings 2:2). Human conduct is a way (I Kings 2:4; 8:25; II Chr. 6:16; Ps. 119:1, 9; Jas. 5:20) or ways (Job 4:6; 13:15; 22:3; Pss. 39:1; 119:5, 26; Ezek. 16:47; Acts 14:16; I Cor. 4:17; Jas. 1:8). There are for men two ways: (a) the good and the right way (I Sam. 12:23), or the way(s) of the Lord (Gen. 18:19; Pss. 18:21; 25:9), and (b) the way of evil (Prov. 2:12; 8:13; Jer. 18:11; Ezek. 3:18; Jonah 3:8, 10; Zech. 1:4), the way of sinners and the wicked (Ps. 1:1, 6). The Lord's way(s) and man's are radically different (Isa. 55:8-9). The Lord's ways are perfect (Deut. 32:4; II Sam. 22:31; Ps. 18:30), right (Hos. 14:9), just (Dan. 4:37), and true (Rev. 15:3). Man's way may be either good (I Kings 8:36; II Chr. 6:27; Ps. 101:2, 6; Prov. 2:20; 29:27; Isa. 26:7; Matt. 21:32; Rom. 3:17; I Cor. 12:31; II Pet. 2:15, 21) or evil (Gen. 6:12; Num. 22:32; Judg. 2:19; I Kings 13:33; Job 22:15; Ps. 36:4; Prov. 4:14, 19).

Man has freedom of the will (Ps. 119:59; Prov. 7:25; 21:29; 23:19) to avoid the evil way (Ps. 119:101, 104, 128), or to follow it (Isa. 53:6; 57:17; 59:8; 65:2; 66:3; Jer. 3:21). Men or nations may change their ways for good or ill (Jer. 18; Ezek. 18). Discipline is effective (Prov. 22:6). Good example may be followed (I Kings 22:43; II Kings 22:2; II Chr. 11:17; 17:3), or evil (I Kings 15:26, 34; 22:52; II Kings 8:18, 27; 16:3; II Chr. 22:3; Prov. 16:29; Jer. 10:2; Ezek. 23:13, 31; II Pet. 2:15; Jude 11), or may not (I Sam. 8:3, 5; II Chr. 21:12). One can be misled (Isa. 3:12).

God observes and knows all man's ways (Job 24:23; 31:4; 34:21; Pss. 119:168; 139:3; Prov. 5:21; Jer. 16:17) and requites each man according to his way(s) (I Kings 8:32, 39; II Chr. 6:23; Job 34:11; Ps. 146:9; Prov. 14:14; Jer. 4:18; 17:10; 32:10; Ezek. 7:3, 27; 11:21; 16:43; 18:30; 22:31; 24:14; 33:20; 36:19; Hos. 4:9; Zech. 1:6; 3:7), in spite of appearances to the contrary (Ps. 37:7-8). Yet the Lord will deal with Israel, when she shows remorse, not according to her evil ways, but for his name's sake and the covenant's (Ezek. 16:61; 20:43; 36:31-32). The Lord desires men to amend their ways and turn from evil and live (II Kings 17:13; II Chr. 7:14; Isa. 55:7; Jer. 7:3, 5; 18:11; 25:5; 26:3, 13; 35:15; Ezek. 18:23;

33:8, 11; Jonah 3:8, 10; Zech. 1:4). The Lord is ever ready to teach man and lead him in His way(s) (Pss. 16:11; 23:3; 25:8-9, 12; 27:11; 32:8; 86:11; 119:27, 29, 33, 35, 37; 143:8; Isa. 30:21; Jer. 32:39; 42:3; Mic. 4:2). To follow the way of the Lord is to observe the Mosaic law (Exod. 18:20; 32:8; Deut. 5:33; 8:6; 9:12; 10:12; 11:22; 19:9; 26:17; 28:9; 30:16; Josh. 22:5; Pss. 18:21; 25:4; 51:13; 81:13; 95:10; 103:7; 119:1, 3; Isa. 2:3; 42:24; 58:2; Jer. 7:23; Mark 12:14; Luke 20:21). Of the two ways open to man, one leads to life and peace (Ps. 16:11; Prov. 3:17; 4:18; 6:23; 8:32; 10:17, 29; 11:5; 12:28; 13:6; 15:24; 16:7, 17; Jer. 21:8; Matt. 7:13-14; Acts 2:28; Rom. 3:17) and the other to death and misery (Prov. 7:27; 13:15; 14:12; 16:25; 21:16; 22:5, 25; Isa. 59:7). Man may be under the illusion that he controls his own destiny and may do as he pleases (Prov. 12:15, 26; 16:9; 21:2; Jer. 10:23), but it is the Lord who guides and guards man's way (Pss. 37:23; 91:11; Prov. 2:8; 16:9; Jer. 10:23; Dan. 5:23) and to whom man should commit his way (Ps. 37:5; Prov. 3:6). Nevertheless, man's final way is a way of no return (Job 16:22). The "way of the LORD," God's purpose, which the prophets proclaimed (Isa. 40:3; Mal. 3:1), is fulfilled in Christ (Matt. 3:3; Mark 1:2-3; Luke 3:4; 7:27; John 1:23; Acts 18:25-26). It is the way of peace (Luke 1:79), of truth (II Pet. 2:2), of salvation (Acts 16:17). Christ has opened the "new and living way" to God (Heb. 10:20). He is the way (John 14:4-6). Thus Christianity came to be designated as "the Way" (Acts 9:2; 19:9, 23; 22:4; 24:14, 22).

WAYFARER. A traveler by road, especially one who journeys on foot. These travelers could be merchants, smiths, musicians, returnees from the Exile, sojourners, or beggars. In times of war it was often unsafe to be a wayfarer (Judg. 5:6; 19:17 ff; Isa. 33:8). He often, however, received good Semitic hospitality (II Sam. 12:4; Job 31:32; Jer. 14:8). One of the families returning from the Exile are children of ARAH, "wayfarer" (Ezra 2:5; Neh. 6:18; 7:10). Jer. 9:2 refers to desert-caravan people as wayfarers.

See also SOJOURNER; TRAVEL AND COMMUNICATION; TRADER. C. U. WOLF

WAYMARK [נִיּוֹן, *šî-yân*; cf. Arab. *šuwwah*, stone heap, and Jewish Aram. *šayyên*, put up a pile]. Alternately: MONUMENT (II Kings 23:17; KJV TITLE); SIGN (Ezek. 39:15). A sign set up along a path or road.

In Jer. 31:21 "waymarks," probably small heaps of stones (the handiest objects), are to be used to mark the route of exile so that Israel can return by the same road. In Ezek. 39:15 the term designates a few stones to mark the location of an unburied human bone. In II Kings 23:17 "MONUMENT" is misleading; this grave would likely be marked only by a pile of stones. WAYSIDE [דֶּרֶךְ, road, way, from דָּרַךְ, tread, march; מַעְגַּל (Ps. 140:5—H 140:6), track, from עָגַל, roll; ד, hand, side]. The side of a road or path.

We find the following expressions: "by the wayside" in Gen. 38:21 and "by the way" in I Sam. 24:3—H 24:4 (עַל הַדֶּרֶךְ); "at the road side" (KJV "by the way") in Gen. 38:16 (אֵל הַדֶּרֶךְ); "by the road" (KJV "by the wayside") in I Sam. 4:13 (דֶּרֶךְ, "side of road," for דֶּרֶךְ); "by the wayside" in Ps. 140:5—H 140:6 (לִיד מַעְגַּל, "at the side of a track").

*WEALTH.

1. In the OT. In the OT wealth must be considered in relation to the synonymous term "riches." Both designate abundance of property (land, buildings, agricultural commodities, livestock, slaves), the basic economic commodity in an agricultural economy such as prevailed in Palestine (for another type of wealth, see MONEY).

"Wealth" is used to translate two Hebrew words, הוֹן and הִיל, both meaning "faculty," "ability," or "power," which come to have the metaphorical meaning "wealth"—the observable and tangible evidence of the ability to acquire and the power it gives over others. The term "riches" is regularly used to translate the Hebrew root עָשָׂה. Originally this root probably meant "abound," but in OT usage the abundance so consistently signifies riches that metaphorical meaning has been lost to literal meaning.

The distinctive OT attitude toward wealth is largely determined by religious understanding. Since Yahweh is Creator and Sovereign over all creation, all things belong to him. "The earth is the LORD's and the fulness thereof" (Ps. 24:1). Such an affirmation is understood by Israel through her particular historical and religious experience. It was Yahweh who had given his people the land of Palestine after the exodus from Egypt (Num. 34-36; Josh. 13-19). As Yahweh graciously gave Israel her inheritance in the Promised Land, so also he blesses individuals with wealth, foremost examples being Abraham (Gen. 13:2; 14:23) and Solomon (I Kings 3:13). Yahweh has given the wealth of the earth to his people for their enjoyment. They, in turn, must not forget or say: "My power and the might of my hand have gotten me this wealth" (Deut. 8:17). Israel's overlooking her resources as the sign of her dependence on God is inextricably related to her breaking the covenant and going after other gods. When Israel did forget and break the covenant, then her land and wealth were taken from her and she was sent into exile. Throughout Israel's history stern warnings are directed against those who strive for wealth through greed, trickery, and treachery, and against the pride and glory in it (II Sam. 12; Isa. 10:3; Jer. 5:27; 15:13; 17:3; Ezek. 7:11; 28; Hos. 12:8; Mic. 6:12). Their end was destruction. And yet, to a faithful Israel, Yahweh promises that even the wealth of the nations will be brought to Zion (Isa. 45:14; 60:5, 11; Mic. 4:13). Wealth and riches may be a sign of God's blessing or the cause of God's wrath. Israel's faithfulness or unfaithfulness is central in the determination of which it shall be.

The book of Job strongly protests against the view that goodness brings wealth and wickedness brings poverty (see JOB, BOOK OF). And in a number of psalms (10; 12; 14; 37; 40; 41; 52; 70; 72; 74) "rich" is synonymous with "wicked" and "poor" with

"righteous and godly" (*see* POOR). While the term "poor" is to be understood as a religious term, it undoubtedly reflects an economic situation in post-exilic Judaism in which there was a growing concentration of wealth among those who were increasingly secularized (or Hellenized), especially the priestly aristocracy. Even so, there is the hope that God will vindicate himself and the righteous poor by a complete reversal of the situation. A more prudential, less theological attitude toward wealth is found in Proverbs. Riches are the reward of man's diligence (10:2, 27), a source of security (10:5; 18:11), protect a man's life (13:8), win friends (19:4). And yet, "a good name is to be chosen rather than great riches" (22:1). The desire for wealth may make men greedy (28:22), overconfident (28:11), arrogant (18:23), and eventually lead to loss of wealth (13:11; 22:16). For the explanation of this atypical attitude, *see* PROVERBS, BOOK OF.

2. In Jesus' teaching. The NT term for "wealth" or "riches" is usually ὀ (τὸ) πλοῦτος; occasionally τὰ χρήματα. Its attitude toward wealth, while consistent with that of the OT, lays added emphasis on its dangers. This emphasis derives from Jesus' own teaching. The saying: "How hard it will be for those who have riches to enter the kingdom of God!" (Mark 10:23) clearly illustrates his point of view. It is in relation to his proclamation of the kingdom that Jesus' words on riches must be understood. Jesus is frankly pessimistic about the ability of men who possess wealth to escape being beholden to it. The rich fool is a fool because the security and meaning of his life are rooted in his riches (Luke 12:16 ff). The rich young man finds his zeal for "eternal life" quenched when he is told to give away his possessions and follow Jesus (Mark 10:17 ff). Jesus believed that possessions invariably lay a man in bondage. In his saying: "You cannot serve God and mammon" (Matt. 6:24), Jesus draws a sharp line between service to God and service to mammon. He actually personifies riches (*see* MAMMON), probably to heighten his emphasis on the demonic power which mammon exercises over man. In view of such language it is questionable to speak glibly of riches as a "neutral" quantity in Jesus' view. The facts betray the probability that the person with possessions will fail to commit himself in thought and action to the truth that "a man's life does not consist in the abundance of his possessions" (Luke 12:15). And so Jesus positively taught his disciples: "Provide yourselves with purses that do not grow old, with a treasure in the heavens that does not fail . . . For where your treasure is, there will your heart be also" (Luke 12:33-34). This was not economic reform in any technical sense. Jesus was combatting the insidious power of possessions to enslave men and destroy their ultimate trust in God and his kingdom. He did not condemn possessions as such. There is no reason to believe he expected the publicans he befriended to quit their remunerative occupation, nor did he expect all who heard him to give up working. The special demands on his close disciples were necessitated by the nature of a particular task. Neither did he commend poverty as such. The poor widow who gave the penny was not praised for her poverty but for the freedom with which she could give all she had in devotion to God (Mark 12:41-44). It was this freedom to sit lightly

to one's possessions in wholehearted service to God that was the heart of the matter. Historically speaking, it was the poor of the land who responded to Jesus. When he said: "Blessed are you poor" (Luke 6:20), the word "poor" (*see* POOR) undoubtedly reflects the religious meaning of the Psalms: Blessed are you who in your destitution humbly await God's gracious action. But more than Jesus' words, his life itself carried his message. For he was a living renunciation of all that might stand between himself and complete trust, devotion, and service to God.

3. In the early church. The early church's attitude consistently reflects Jesus' teaching. This is vividly illustrated in the account of the sharing of possessions in Acts (4:32-35). This communal sharing was not communistic in any modern sense, but shows the early Christians' desire to express their love for one another and their self-abandonment in service to God while they hopefully awaited Christ's imminent return. The apostle Paul urged Christians to work, not only to provide for their own needs (I Thess. 4:11; II Thess. 3:12), but primarily in order that those who had more might help those who had less (II Cor. 8:13-15). Even so, the process of acquiring possessions was to be carried on as if they were not acquiring possessions (I Cor. 7:30-31). I.e., they were to avoid enslavement to either the process or the possessions, both of which were passing away. The Letter of James deplors obsequious praise and deference for the rich—which inevitably breaks the bond of fellowship of the church (2:1-7). The same letter sternly warns the rich who have gained their wealth through questionable means and who live in luxury and pleasure. A day of reckoning is coming (5:1-6). And so the words: "Come now, you rich, weep and howl." In I Timothy, Christians are admonished to be content with the necessities of food, clothing, and shelter. Those who desire to be rich fall into temptations and snares that plunge men into ruin (I Tim. 6:8-9). The rich are warned against pride and "setting their hopes on uncertain riches" rather than on "God who richly furnishes us with everything to enjoy" (6:17). "They are to do good, to be rich in good deeds, liberal and generous, thus laying up for themselves a good foundation for the future, so that they may take hold of the life which is life indeed" (vs. 18). The book of Revelation strongly denounces the church at Laodicea for its lukewarmness. "For you say, I am rich, I have prospered, and I need nothing; not knowing that you are wretched, pitiable, poor, blind, and naked" (Rev. 3:17). The same author paints a vivid, prophetic picture of the collapse of the whole economy of the Roman world, built, as he believed, on the false grounds of "impure passion," "wantonness," "self-glory," and "deception" (ch. 18). "In one hour all this wealth has been laid waste" (vs. 17). It is a sharp warning against the inevitable idolatry of riches which accompanies denial of God as the supreme source of and answer to man's deepest needs.

In the NT, then, while wealth is not condemned as such, there is a strong pessimism over the possibility of its being a blessing rather than a demonic snare to man. Unfortunately, later efforts to accommodate and rationalize its rigor drastically obscure the stark NT attitude.

1. Development of weapons in the Near East.

a. Stone Age weapons. Weapons in some form or other are as old as man himself. Early man may simply have heaved unfashioned rock as an offensive weapon, but as far as is known, man has always used weapons of some sort, both in search of food and against inimical forces.

Exactly at what time prehistoric man began fashioning tools and weapons is not known. In fact, it is often very difficult to determine whether a stone used as tool or weapon found in the earliest sites was fashioned or natural.

Up to the latter part of the fifth millennium B.C. all tools and weapons were made of stone, hence the use of the terms Paleolithic, Mesolithic, and Neolithic (Old, Middle, and New Stone Age) to designate the periods of man's development up to the introduction of metal. These divisions are merely for the sake of convenience, and what is intended by them will become clear below.

Stone Age man made tools and weapons of various kinds of stones: of flint, obsidian, coarse granite, and quartzite, though flint was on the whole most popular for finer work. These were fashioned by varied techniques of chipping and flaking, and in later developments of these techniques involved a fairly extensive knowledge, not only of the properties of the kind of stone to be worked, but also of the physical laws of angles and pressures involved in the process of shaping a stone instrument into its desired form.

It ought also to be stated emphatically that a carefully drawn distinction between tool and weapon is quite impossible to delineate for the prehistoric Near East. An axe, e.g., though normally used for felling trees and shaping wood, could also be used for hunting in hand-to-hand combat with some animal, as well as for warfare. Even in the metal ages a clear-cut distinction is not always possible. The bow and arrow was certainly an implement of warfare, but it was used for hunting food as well.

What man's first fashioned weapon may have been cannot be known. Certainly the spear (wooden) is an old weapon. From a clear-cut hole in a thigh

bone extending into the pelvis in a Neanderthal skeleton at Mount Carmel, it has been suggested that wooden spears were known to Neanderthal man. He also appears to have used hafted narrowed flint points as detachable spearheads. The simple club must range as one of man's earliest tools as well. The mace, a stone bound with thongs in tomahawk style to a wooden handle, must have been in use from time immemorial. In the nature of the case it is impossible for prehistoric archaeologists or anthropologists to answer this question. In the main, only stone objects have remained intact as silent witness to the use they may have had. Wood and leather, both certainly used, have disintegrated throughout the succeeding millenniums, and only shrewd reconstruction can approximate the use to which certain stone objects found in Paleolithic levels may have been put. In any event, the oldest occupied caves in Palestine show evidence of a fairly extensive flint industry. Hand axes which may be even earlier than the cave deposits have also been found. During the Middle Paleolithic period flake tools appear to replace in part the hand axes of the Lower period. This is the age of the Neanderthal skulls found at Mount Carmel.

Exactly when the Paleolithic Age ended and the Mesolithic began, or more particularly what the chronological dimensions of the Mesolithic Age were—i.e., the beginnings of agriculture—is becoming increasingly difficult to determine, since the pre-pottery Neolithic Age is being pushed back in time with each successive expedition to the early Neolithic site at Jericho. It now appears that Mesolithic cultures were practically contemporaneous to the early Neolithic Age at Jericho. The most characteristic Mesolithic culture thus far found in Palestine was the Natufian (ca. 8000-6000 B.C.), in which grain cultivation was well known, though the Natufians were still mainly food-gatherers. The Natufians as well as the Helwanians (near Cairo in Egypt) were a microlithic culture. These microliths were of varied types, including lunate, triangular, and trapeziform shapes. Arrowheads particularly of the last-named type were mounted on shafts of wood or bone for use as arrows. Agricultural implements of various kinds (sickles, pestles, and mortars) were also found in abundance, indicating their essential Mesolithic character. Incidentally, the oldest known fishhooks come from the later Natufian period.

The beginnings of the Neolithic Age in Palestine cannot as yet be determined chronologically. The Neolithic Age has usually been thought of as the beginnings of village life, usually about some shrine. It was the age of the domestication of cattle (although the dog apparently had already been domesticated by the Natufians), of the invention of pottery, and of the manufacture of ground and polished stone celts. Actually pottery was not invented until late in the Neolithic period, so that archaeologists usually divide it into pre-pottery and pottery Neolithic.

The stone implements of this period are much better than those of the Mesolithic. This marked improvement was due to a major discovery. It was found that grinding the edge of a stone celt and then polishing it created a much finer edge than that of

a merely flaked tool. This meant that felling trees and shaping wood and bone became much simpler and more accurate. The process of grinding also meant that holes could be bored in stone during this period; this was particularly advantageous for shafting handles for axes—shafting being much superior to hafting with thongs for certain implements. In a sense, ground celts, found throughout Neolithic Egypt and the Near East as early as 5000 B.C., go hand in hand with agricultural pursuits. (Mixed farming seems to have started in Egypt by ca. 5000 B.C.) After all, a hoe culture depends in large part on ground celts. On the other hand, polished stone celts were abandoned in Egypt already in predynastic times, since the increasing aridity of the climate created a greater scarcity of trees for cutting. In dynastic times almost all wood had to be imported, mainly from Syria.

In contrast to the axe, which was either hafted into the end of a wood or bone handle or shafted (as was the mace), the adz was usually thonged. The adz differs from the axe in that the blade runs at ninety degrees to the handle. Since its blade was usually much narrower, the perforation of the adz seriously weakened the stone, thereby making shafting impractical.

Stone arrowheads are ancient, but the tanged variety was probably invented in Late Paleolithic times by the Aterians in North Africa, from which it quickly spread. The tanged arrowhead was particularly well adapted to the use of reed shafts. By the advent of the metal age a large variety of arrowhead types is attested. Already mentioned are the triangular (probably the most popular of all) and the lunate, both known from the Natufians. The transverse or chisel-end type is attested from Uruk times in the Mesopotamian Valley in the E, and in Egypt in the W. Similarly widespread is the leaf-shaped type found as far E as Susa, and as far W as Badari in Egypt. The tanged and the hollow-based varieties were both found in Egypt, particularly in the Fayyum.

Other stone weapons from the Neolithic (as well as the Chalcolithic) period are daggers, slingstones, maceheads, and battle-axes. At Tell el Hassuna (fifth millennium) baked clay pellets, probably for sling ammunition, were found in quantity. Many slingstones have also been found throughout Phoenicia and at Tepe-Gawra (ca. 3500 B.C.). Hassuna also produced a number of points of imported obsidian, possibly for ammunition for reed darts. Early daggers of flint with hollow-based hilts were used in predynastic Egypt and are of exceptionally fine workmanship. Maceheads of various types were common in Western Asia and in Egypt, as were battle-axes. The latter weapon is a celt of which the butt end is elongated and carefully shaped. Stone battle-axes are known, but it is uncertain whether they are copies of earlier metal weapons or simply a development of early antler axes. The earliest specimens of battle-axes known are clay models from the Ubaid period (ca. 3500 B.C.).

b. The Chalcolithic period. The latter part of the fifth millennium is usually known to archaeologists as the period in which copper tools and weapons began to replace stone, although the latter remained

in common use as late as the Iron Age. Metallurgy was widely practiced in the Near East from ca. 4000 B.C. onward, but metal replaced stone slowly. Even in Assyria polished stone celts were not largely replaced by metal (bronze) ones until a millennium later, whereas in Egypt this did not occur until ca. 2000 B.C., and in the Aegean, ca. 1500 B.C. Thus it is convenient to refer in general terms to a Chalcolithic Age, when metallic and nonmetallic tools and weapons occur side by side. In the Third Dynasty in Egypt soldiers were often equipped with metal weapons, whereas laborers still used stone tools. In fact, it was really for battle that the advantages of metal weapons became fully apparent. Such early metal weapons were at first copied from stone, but gradually the greater flexibility of metal allowed for the evolution of new forms as well. The advantages of metal weapons were quickly seen. Not only is a variety of new forms now possible, but they are much more durable. Stone edges if broken were useless; even if the stone were of some use, a tedious process of refloating, grinding, and polishing was necessary before the instrument could again be used. On the other hand, a metal-edged instrument seldom broke, and the dulled edge could be quickly resharpened by hammering.

The earliest metal tools were made of native copper; this was before smelting was understood. Ancient native copper was of very high purity and as a result extremely soft. It could, however, be hardened by cold-working, especially by hammering. The earliest copper tools were the flat celts (axes and adzes). Metal celts with shaft holes were much superior to the old hafted stone implements; examples of the oldest found appear in the Sumerian hatchets and the adzes at Susa.

Daggers also constitute one of the earliest metal weapons. These were usually flat and triangular, the latter being necessary to provide lateral strength. Already before the Third Dynasty, Egyptian daggers were provided with a midrib both for giving firmness and allowing for a finer blade.

Metal was, of course, exceedingly precious, and hurling weapons would only be provided with metal tips. Whether spearheads evolved simply from the idea of a dagger mounted on a long shaft, as some have suggested, is not known, but already in early dynastic times in Egypt copper-tanged spearheads were fairly numerous, whereas copper arrowheads are very rare, probably because metal was too expensive simply to be thrown away and not recovered. For the evolution of the battle-ax the use of metal was all-important. It commonly consisted of a rounded body with a splayed blade and a cylindrical butt behind the shaft hole. Such a weapon was almost impossible to make from stone.

c. The Bronze Age. The most important discovery for the evolution of metal tools prior to the use of iron was the discovery of hardening copper by the addition of tin alloy to the copper, usually about five to fifteen per cent, thereby creating bronze. A greater amount of tin made the metal harder but also more brittle; a proper balance between flexibility and hardness had to be found (ca. ten per cent being the best amount). Furthermore, bronze can also be work-hardened, whereupon it yields about

twice the tensile strength of copper. Pure copper is also almost impossible to cast except for flat celts, whereas bronze is easily adaptable to casting.

Bronze was particularly useful for the longer piercing weapons. The dagger with or without tang now became common in Western Asia. By casting the dagger with a hilt, the blade could also be kept slender throughout. The SWORD is simply the evolution of the dagger at the beginning of the Bronze

Age. The earliest common form was triangular with a riveted hilt. With the development of the midrib the dagger/sword gradually became longer and more slender. The casting of a bronze sword called forth all the skill of the ancient workman. The sword necessarily had to be made of good metal, and any nonmetallic materials or flaws had to be avoided. The proper balance between hardness and flexibility had to be found. Then after casting, the cutting edge had to be carefully work-hardened.

As stated above, copper spearheads were normally tanged. With the advent of bronze and the consequent possibility of casting metal in more complex molds, socketed spearheads made their first appearance. As in the Copper Age, metal arrowheads were still rather rare, still normally being made of flint or bone.

Figs. WEA 9-10.

d. The Iron Age. The earliest iron implements were made of meteoritic rock, as is apparent from their high nickel content. At first such implements, because of the rarity of the metal, were used only for ornamental or magical purposes.

Ancient smelting techniques would only produce wrought iron, which was not hard enough for swords or ancient cutting implements. To overcome this difficulty, the implement was first shaped and then carburized or case-hardened. This technique consisted of heating the object in contact with carbon, thereby in effect transforming the surface into steel.

The chief advantage of iron over bronze lay in its great hardness and strength. The sword in particular benefited from the use of iron, since the blade could be made almost unbreakable. Short swords or daggers also became common with the advent of the Iron Age, as may be seen from the excellent dagger found in the tomb of Tut-ankh-Amon.

2. Classification of weapons. Implements of warfare may be divided according to the use for which they are intended—i.e., as either offensive or defensive weapons. Many offensive weapons are naturally also used for defense. Defensive weapons consisted mainly of shields (of various forms) and protective armor. Defense in warfare consisted rather in strategic location of cities, walled defenses (such as already attested by 6000 B.C. at Jericho), moats, and the like. See WAR, METHODS OF.

Generally speaking, offensive weapons can be classified into three types: (a) The basic and undoubtedly the earliest type are the various hand-welded weapons. These in turn are used in different ways. Some weapons are used for crushing the skull. Included in this category are clubs, battle-axes, and maces. Other weapons such as the ordinary ax (primarily used domestically) are intended for cleaving. Closely related to this is the cutting weapon exemplified by knives and edged swords. Still another type is the thrusting weapon, by which the wielder attempts to pierce or stab his opponents. This includes the dagger, lance, and pointed sword. In all these the weapons remains in the possession of the wielder.

(b) A second type is the missile weapon. These are not retained in the hand, but the entire weapon is discharged by hand or arm action. It was suggested above that when man first emerged, an unfashioned

10. Weapons found in Palestine: (a) Hittite axe head; (b) sickle sword; (c-d) daggers (or swords); (e-f) spearheads; (g-j) arrowheads; (k) blunted arrowhead; (l) piece of armor

stone probably constituted such a missile weapon. Included here are darts, spears, and javelins, all of which are attested from Paleolithic times.

c) Probably later in the evolution of weapons is the third type, in which the weapon discharges the missile. Here the discharging weapon is retained but the ammunition is propelled. As this type becomes more effective, the distance between the enemies becomes greater, until in modern times battle lines may be at quite some distance from each other. Examples of this type are slings (cf. Judg. 20:16), bows (and arrows), and catapults.

3. **Offensive weapons.** a. **Dagger** (חרב). This is a short sword used for stabbing. The word occurs only in the KJV of the Ehud story in Judg. 3 (vss. 16, 21-22) as a rendering of חרב, more commonly

Courtesy of the University Museum of the University of Pennsylvania
11. Gold dagger, from Ur, early Dynastic period

rendered "sword" in English versions. In form it is a sword, but shorter, probably of the dirk type.* Weapons under ca. 16 inches in length are usually called "daggers" by archaeologists, though, as far as is known, the Hebrews made no such distinction. Since the weapon which Ehud made for himself in order to assassinate Eglon was a cubit in length (ca. 17½ inches), it is properly rendered "sword" (RSV). Fig. HUN 36.

On the other hand, the Hebrews undoubtedly knew the shorter, stabbing sword as well, and it is quite possible that the original writers may often have intended "dagger" by the word חרב. Innumerable daggers have been found on Bronze and Iron Age sites throughout Egypt, Palestine, and Mesopotamia.* The dagger worn in a small scabbard is today a favorite weapon of the Bedouins in Transjordan. Fig. WEA 11.

b. **Spear** (חנית, בידון, קין, צלצל, רמח; λόγχη; cf. δεξιολάβος ["spearmen"; Acts 23:23]). This is an offensive weapon consisting of a long wooden shaft (קין) on which was mounted a (spear) head of stone or metal (להבת [I Sam. 17:7] or להב [Job 39:23]).

The חנית is the spear proper, whereas the בידון, also a hurling instrument, is translated "javelin" in the RSV (except in Jer. 6:23; 50:42). The רמח is a longer weapon and was used for thrusting; this might better be rendered by the word "lance." Both the words חנית and רמח were borrowed from Canaanite into Egyptian as *hnyt* and *mḥ*. The word צלצל is a *hapax legomenon* in Job 41:7—H 40:31, where it occurs in the phrase צלצל דגים, probably a technical word for "fish spear" or "harpoon." Another *hapax legomenon* is the word קין at II Sam. 21:16. Ishbi-benob, a Philistine champion, had a קין weighing three hundred bronze shekels. The word literally means "a forging," and the LXX interpreted it as δόρατος, "spear," a tradition perpetuated to the present day. The tradition is almost certainly wrong, however, since only the spearhead would have been made of bronze.

The spear is a very ancient weapon, probably as early as the Middle Paleolithic Age. The stone spear-

heads were normally tanged, and the wooden shaft would be split or bored to take the tang. The advent of the metal age made the spear more popular, since it permitted a socketed spearhead which could be riveted to the shaft. Most bronze (and iron) spearheads are of this latter type. Bronze heads are usually longer and narrower than the stone ones, which in the Syrian type were often triangular in shape. The tip was often equipped with two sharp hooks or barbs which rendered the extraction of the spear from a wound dangerous. The opposite end of the shaft was sometimes equipped with a socketed shoe used for setting the spear in the ground (cf. I Sam. 26:7).

Such spears were often carried by royalty, military leaders, or champions (I Sam. 17:45; 19:9; 20:33; II Sam. 2:23), as well as being equipment of the guard (II Kings 11:10). In fact, together with the shield (צנח), the spear constituted the tribal weapon of the Naphtalites. Mention is made of giants carrying extra heavy spears (I Sam. 17:7; II Sam. 21:16). It has been conjectured that the spear of Goliath was equipped with a thong (μεσάκυλον) at the middle of the shaft. The shaft of his spear is said to be like a מנור ארגים, "weaver's heddle rod" (not "beam"), so called from its shape rather than its size. If this is correct, the Philistine's hurling spear was of the *amentum* or ἀγκύλη type, which when released would revolve, thus giving a greater force for throwing.

The λόγχη which pierced Jesus' side (Matt. 27:49 RSV mg.; John 19:34) was undoubtedly the Roman *pilum*, a javelin consisting of a long, thin iron shaft about three feet long, inserted at one end in a wooden shaft of the same length. All legionnaires in imperial times were equipped with such *pila*.

The word δεξιολάβος in Acts 23:23 is a *hapax legomenon* of uncertain meaning. The rendering "spearmen" in the KJV and the RSV is simply based on the Vulg. interpretation of this word (*stipatores*). According to Theoph. Simocatta (*Hist.* 4.i), a seventh-century writer, it meant a light-armed soldier. A scholion from Matthaeci refers to such as παραφύλακες ("bodyguard"). An earlier textual variant reads δεξιοβόλους, from which it has been inferred that they were javelin-throwers. Two hundred δεξι and two hundred soldiers and seventy horsemen were ordered by a tribune to guard Paul and bring him to Felix in Caesarea.

Fig. ELA 23.

c. **Javelin** (חנית [KJV]; בידון [RSV]; סגר [Ps. 35:3 RSV]; רמח [Num. 25:7 KJV]). The RSV translates בידון "javelin" except in Jer. 6:23; 50:42, where it has "spear." In all places where the KJV has "javelin" (חנית or רמח), the RSV has "spear." In Ps. 35:3 the word סגר occurs in the difficult line והרק חנית וסגר לקראת רדפי ("And draw forth the spear and סגר to meet my pursuers"). Many scholars have thought of the word σάραρις, a Scythian and Persian weapon—a rather unlikely suggestion in view of the vocalization. It is not at all certain that a weapon is intended; since the root סגר means "to shut, close up," it might simply be a pregnant construction for "closing up ranks."

The בידון was certainly a different weapon from the חנית, but what the exact difference was is unknown. All that can be definitely known from the

biblical evidence is that it was stretched out in the hand (Josh. 8:18-19, 26), carried by a rider (Job 39:23), and quivered (רעש; Job 41:29—H 41:21). It was carried along with the bow (Jer. 6:23; 50:42). It has been suggested that it was a light form of the חנית carried by riders and commonly used on the chase. This could, however, not apply in the case of Joshua against Ai.

d. Lance (בידון [Jer. 50:42 KJV]; רמה [I Kings 18:28 RSV]). For בידון, cf. § 3c above. The רמה was a spear with a longer shaft and used for thrusting rather than for hurling (Num. 25:7-8). It was a weapon also in use by Egyptians (Jer. 46:4), as well as being the favorite offensive weapon of the Gadites (I Chr. 12:8) and the Judeans (vs. 24; II Chr. 14:8). It is often referred to together with the "shield," since the lance was used in battle array. The front line would be drawn up closely shield to shield with lances protruding, a formation well known from Assyrian monumental reliefs. The Arabs still use the *rumh* today, though they commonly use it in charging from the saddle.

e. Lancet (רמה [I Kings 18:28 KJV; RSV "lances"]). The word "lancet" is a textual error in modern editions of the KJV for the original "lancers," an Old English word adapted by the KJV translators from the Bishops' Bible's reading "lausers," meaning "lances." The change to "lancet" did not occur before the latter half of the eighteenth century.

f. Maul (מפין [Prov. 25:18 KJV; RSV "war club"]). The word מפין literally means "shatterer, disperser," as in Nah. 2:1. The rendering "maul," or "war club" as in the RSV, in the Proverbs passage is apparently based on understanding מפין as *mappès*. See CLUB § 2.

4. Defensive weapons. a. Shield (buckler, target) (בדון [KJV]; מגן, סחרה, צנה, רמח, שלט; θυρεός). The word בדון is incorrectly interpreted by the KJV as "shield" in I Sam. 17:45; Job 39:23, and as "target" in I Sam. 17:6. The RSV renders it correctly as "javelin" (see § 3c above). The KJV renders רמח wrongly as "buckler" in I Chr. 12:8 (RSV "spear"). The two common words for "shield" and "buckler" are מגן and צנה (see below). Since two different types of shields are obviously intended by these words, one might expect the rendering "buckler" to be retained for צנה, and "shield" for מגן, but the English versions are quite inconsistent. (See BUCKLER.) The word סחרה occurs only in Ps. 91:4 in the statement describing God's faithfulness: צנה וסחרה אמתו. Both the KJV and the RSV render the word "buckler." The root סחר means "to go around"; hence a סחרה must be a protection which surrounds. In view of the Akkadian *sehertu*, "enclosure," it has been suggested that the words mean either "armor" or "wall of defense." The word שלט occurs seven times in the OT. It may simply be a synonym for מגן, but this is uncertain; others suggest that the word means "armor" or "armaments." Fig. HUN 36.

Unfortunately, ancient Near Eastern shields were usually made of perishable materials, and thus no shield has as yet been found in Palestine. Both Egyptian and Assyrian reliefs give us numerous illustrations, however, of the various forms employed.* In Egypt a wooden shield covered with skin seems to

have been the only defensive weapon in the oldest period. The Egyptian shield was rounded at the top and square at the bottom. The Assyrians had many different types of shields. Common was the large rectangular shield (but rounded at the top like a Gothic arch).* These were made of wickerwork and leather. For siege warfare they used massive shields of this type to serve as protection for the bowmen. Figs. LAC 1; ASS 99, 102.

Syrian shields are attested in the tribute lists of Thutmose III's thirteenth campaign ("bronze spears, shields, bows—all weapons of war"—ARE II, 509). Such Syrian shields were probably of the same type as the Egyptian, as may be seen from the representations of the Syrian god Resheph on Egyptian reliefs. The Amarna Letters mention no Syrian shields, though Tushratta of Mitanni does refer to leather shields decorated with silver or bronze as being included among gifts sent to Amen-hotep III. The Hittites also had simple rectangular shields curving inward. The Mitanni also used the smaller round shield. It has been suggested that this type of shield was due to Indo-Aryan influence, since the Philistine shields were also apparently round.

Among the Hebrews both types of shields were known. The smaller and more common round type was the מגן, known from the Lachish relief and frequently mentioned in the OT. This shield was used by the light-armed infantry and by chieftains. The large rectangular shield was the צנה, used to erect a solid-front battle line behind the protruding lances (רמחים). Goliath is said to have had an attendant for carrying his shield.

Shields were made of leather stretched over a wooden frame (like the well-known Roman *scutum*), or of wickerwork. The surface, being made of leather, had to be oiled regularly to guard against cracking (II Sam. 1:21; Isa. 21:5). On the march the shield was covered (Isa. 22:6), and in peacetime hung in arsenals (Song of S. 4:4; Ezek. 27:10). Metal shields were rare and probably used only for ceremonial purposes. Such were undoubtedly the gold-plated shields and bucklers which Solomon had made (I Kings 10:16-17), later carried off by the invading Shishak and replaced by bronze substitutes by Rehoboam (14:26-27). Ordinary soldiers, however, had the simpler and more practical leather shields, often bedecked with a heavy boss at the center to give added protection (Job 15:26), and equipped with a handle on the inside. That shields were usually non-metallic is apparent from the fact that they were combustible (Ezek. 39:9).

The shield is often used figuratively to denote God's relation to his people. He is a shield about his servants (Gen. 15:1; Ps. 3:3; cf. Pss. 18:2, 30; 33:20; etc.). It is the symbol for divine deliverance (Ps. 18:35) as well as of God's anointed (84:9). In the NT the word θυρεός occurs but once (Eph. 6:16), as a symbol for the faith as being the vital defense for the Christian.

b. Armor (זנות [KJV]; חגורה [II Kings 3:21]; חליצה [II Sam. 2:21 KJV]; כלי, מדר, נשק; ἄπλα, πανοπλία). According to I Kings 22:38, after Ahab's body was brought back to Samaria, his chariot was washed out and the dogs lapped his blood, והזנות רחצו ("and the harlots washed themselves [in it]").

Early Jewish (and Christian) interpreters found this repugnant and avoided it by finding an Aramaic root זין, "armor"; hence Targ. זני זינא; Peshitta *zayneh*, "his armor"; and Vulg. *habenae*, "thongs, reins" (the LXX, however, correctly reads αὐτόματα). The KJV perpetuated this wrong tradition by its "and they washed his armour."

The most common word for "armor" is כלי, a general word for "article," "vessel"; thus by extension it is used of the range of equipment carried by a warrior. (For נשק, see COAT OF MAIL.) The word הגוּרָה properly means "girdle belt," an important part of a soldier's defensive armor, and in II Kings 3:21 is probably used by metonymy for the entire equipment. The KJV incorrectly renders חליצה by "armour" in II Sam. 2:21, whereas the RSV rightly uses "spoils." The word refers to that which is stripped off a slain warrior for plunder. The only word in Hebrew which is actually known to designate military dress is מִדָּה, literally meaning "measure" and by extension "garment." This usage is apparent from I Sam. 17:38-39, where Saul clothed David in his מִדָּה, which included a bronze helmet and a coat of mail. The same usage appears in 18:4, where, however, the KJV renders by "garments." The NT seldom refers to "armor" (Luke 11:22; Rom. 13:12; Eph. 6:11, 13); two words occur: ὄπλα, which like כלי is a general word for "weapons," and πανοπλία. The latter word refers to the "whole armor" of the Roman soldier, and is used by Paul as a figure for the defensive armor of the Christian in the world (Eph. 6).

Little is known of Hebrew armor. Saul and Jonathan both had armor, which must at least have consisted of a HELMET; a breastplate or coat of mail; GREAVES; and a shield. Probably a girdle belt (חגורה) was used for tying down the breastplate.

A puzzling bit of information occurs in I Kings 22:34; II Chr. 18:33. Ahab was struck by an arrow בין הדבקים ובין השיוון ("between . . . and the breastplate"). The word דבק etymologically means "a thing joined"—hence, an appendage. It thus probably refers to the scale armor covering the abdomen, which was joined to the coat of mail or breastplate. It thus appears that Hebrew armor consisted of two parts: the שריון, "breastplate," and the דבקים, "lower scale armor," the whole cuirass also being known as שריון.

Roman armor in NT times consisted of helmet, cuirass, and greaves. Greaves were usually made of bronze and molded to fit the leg, with a cloth, felt, leather, or sponge lining to prevent chafing. Greaves (*ocreae*) consisted of two parts and covered the forepart of the leg only (in distinction from the Greek type, which encircled the leg) from knee to ankle. According to Arrian, the Roman warrior wore only one πρὸ τῆς κνήμης τῆς ἐν ταῖς μάχαις προβαλλομένης.

The earliest Roman helmet was a leather cap (*galea*), whereas later the metal helmet (*cassis*) became more prominent (though in later Roman times the two terms were no longer clearly distinguished). It consisted of various parts: the protective cap itself, a highly decorative and elaborate crest, two cheek pieces (*bucculae*), and a hinged visor. For comfort the helmet was normally lined with felt or sponge.

The cuirass or body armor (*lorica*) was of various kinds, but the simplest and most common consisted of a leather corselet made of strips of leather faced with metal and wrapped around the torso. These strips were then wired together to form a flexible and protective corset. Two shoulder pieces (*humeralia*), possibly of the same material, were hung over the shoulder and wired to the corset itself. This made a kind of sleeveless coat which after being donned would be laced at the back like a corset. Underneath the *humeralia* a plate of bronze was worn "a square span in size" and called a "heart guard" (Polybius 6.23).

Other types of armor made of metal were also known, though they were not so common as the simple *lorica*, probably because of their cost. Such were chain-mail armor (*lorica hamata*), already known to the Greeks in early times but likely oriental in origin. Another type was made of scale armor (*lorica squamata*), made of scales of bronze or iron and tied together with wire. Metal armor was worn by the praetorian guard in imperial times.

W. S. McCULLOUGH

WEATHER. The Bible has no word for "weather" but many references to weather phenomena. These may be classified as (a) incidental references in narrative (e.g., I Kings 18:45); (b) similes (e.g., Prov. 16:15); (c) figurative language in poetry and prophecy (e.g., Ezek. 1:4); (d) popular weather lore (e.g., Prov. 25:23); (e) meteorological speculations (e.g., Job 38:22). See PALESTINE, CLIMATE OF. R. B. Y. SCOTT

WEAVING. See CLOTH.

WEDDING. See MARRIAGE.

WEEDS. The translation of several words in the Bible:

a) באשה (Job 31:40), "foul weeds" (KJV "cockle"). Since the word is derived from a root

meaning "to stink," it may refer (so RSV) to foul weeds in general. Others have suggested a useless grass having the appearance of barley. A third possibility is the corn cockle (*Agrostemma githago* L.), a common grainfield pest in Palestine.

b) קנה (Jonah 2:5—H 2:6). Elsewhere in the OT the word is translated "reed"; here it seems to mean some kind of seaweed. The Targ. and Aq. read "sea of reeds" or "Red Sea"; the LXX reprints *sûph* as *sôph* ("end," "period") and treats the word as a verse-divider.

c) שׂשׂ (Hos. 10:4), "poisonous weeds" (KJV "hemlock"). See GALL.

d) Ζιζάνιον (Matt. 13:25-27, 29-30, 36, 38, 40; KJV "tares"). These weeds, probably darnel (*Lolium temulentum*), grow in grainfields and resemble wheat. Because they cannot be distinguished easily from wheat, they are sometimes left to grow until the harvest approaches, when women and children weed them out by hand.

In the so-called parable of the tares, found in Matt. 13:24 ff, Jesus teaches his disciples to be patient until the final judgment. Premature separation of the wheat from the weeds is rejected (cf. I Cor. 4:5), and patience until the harvest is urged. Jesus offers two reasons for this: (a) men root up the wheat along with the weeds (Matt. 13:29) because they cannot know the hearts of others; and (b) God has determined the time of separation, which is not to be foreshortened (cf. 13:48a). The parable of the seine net (Matt. 13:47-48) teaches the same thing. These two parables are an example of Jesus' use of a double parable to emphasize an idea.

The interpretation of the parable of the tares in Matt. 13:36-43 is late and was probably composed by Matthew himself. It allegorizes the parable and interprets it as concerned primarily with the Last Judgment.

R. W. CORNEY AND B. H. THROCKMORTON, JR.

***WEEK.** A period of seven days, a basic unit of time reckoning current in various calendric systems, both ancient and of the present day. An institution of early Semitic origin, its use was mediated to the modern world by the Bible and by Jewish and Christian religious practice.

The customary term in biblical Hebrew for "week," שבוע (Gen. 29:27-28; Lev. 12:5; Dan. 9:24-27; 10:2-3), characterized it as "a seven" (שבַּע)—i.e., a time unit of seven days. The days of the week were designated in biblical usage by number, "first day," "second day," etc. However, the final day of the week, originally referred to as "seventh day" (Exod. 20:10; 23:12; 31:15; 34:21), came eventually to be known as the SABBATH. Accordingly in late biblical writings the term שבת has occasionally the connotation "week" (Lev. 23:15; Isa. 66:23), and correspondingly also in Aramaic, rabbinic Hebrew, and NT Greek (τὸ σάββατον; Mark 16:9; Luke 18:12).

The week, just as the sabbath, had its origin in the ancient Semitic pentecontad calendar. Of this calendar the week was, in a very positive sense, the primary unit of time reckoning. Actually, under the

conditions that produced this calendar, the week was originally an institution of primitive Semitic agricultural civilization, a time unit consisting of six days of field labor plus a seventh and culminating day of complete desistance therefrom. Furthermore, in this calendar seven weeks plus one additional day, a day of festal character, constituted a pentecontad, a second and larger time unit, one of fifty days. And, in turn, seven pentecontads plus two festival periods, each of exactly one week's duration, plus one further festal day—that of the NEW YEAR—365 days in all, constituted the year. From all this it is clear that in this pentecontad calendar the week, despite its basic role, did not run consecutively through the year, but was interrupted in its course by the seven one-day festivals, one at the conclusion of each pentecontad, and also by the New Year's Day, all of which, designated each by its particular name, stood outside, and so were not reckoned as integral with, the week.

Inasmuch as the Babylonians of the third millennium B.C. employed this pentecontad calendar, it is a reasonable inference that they were acquainted with the week as a time unit. This inference finds a measure of support in the ancient Babylonian custom, well attested for this relatively early period, of observing various religious festivals each for a period of seven days, and by the additional fact that in the later Babylonian luni-solar calendar the seventh, fourteenth, twenty-first, and twenty-eighth days of certain months, and also the nineteenth day of those same months—i.e., the forty-ninth, the seven-times-seventh, day from the commencement of the preceding month, and, not at all improbably, even though not yet attested in Babylonian literature, likewise the corresponding days of all months—were regarded as taboo days, upon which, much as on the biblical sabbath, certain specific forms of labor were interdicted. Certainly a seven-day week seems to have been basic here. But beyond this little is known of the role which the week may have played in Babylonian time reckoning and religious practice.

With the erection and dedication by Solomon of the first TEMPLE in Jerusalem in the second quarter of the tenth century B.C., and in response to changing political organization, increasing international contacts, and expanding commercial activities on the part of the Israelite nation, the solar calendar supplanted the pentecontad calendar as the official system of time reckoning for Israel. In this calendar the seven-day week had no logical and essential place as a unit of time reckoning. Instead, this solar calendar reckoned time, quite naturally, in terms of days, months, solar seasons, and solar years. But between the day and the month the seven-day week was a convenient, and even a more or less needed, unit of time reckoning. Moreover, so firmly rooted were the ancient sabbath and, as a corollary thereof, the week, in the tradition and practice of the Israelite people at large, and especially of that major section thereof whose primary occupation continued to be tilling the soil, that the sabbath lived on as a fundamental institution in the religious observance of Israel, and with it the seven-day week persisted as a convenient instrument of time reckoning, especially for fixing the incidence of the two annual

seven-day agricultural festivals, UNLEAVENED BREAD and Ingathering (see BOOTHs, FEAST OF), and also that of the one-day Feast of Weeks (see WEEKS, FEAST OF).

Eventually—though just how early, and whether under the influence of this solar calendar or of that of the luni-solar calendar (see CALENDAR), officially adopted by the Jewish religious community at some time during the final quarter of the fifth century B.C., we do not know—the seven-day week, with its culmination upon its final day, the sabbath, came, in Jewish usage, to run uninterrupted through the year and the years, with complete disregard of the incidence of festal days, even those of the ancient, pentecostal calendar which had originally stood outside the week; these days were now largely discarded or radically changed in character and manner of observance. And so the week has continued to function, not only in Jewish, Christian, and Muslim religious practice, but also in general and conventional time reckoning.

Bibliography. See bibliography under SABBATH.

J. MORGENSTERN

WEEKS, FEAST OF [תג שבועות (Exod. 34:22; Num. 28:26; Deut. 16:10; II Chr. 8:13); cf. LXX ἐορτή ἐβδομάδων]. The second of the three great festivals in Israel, often treated as the conclusion of the cycle that began at Passover; celebrated after the fall of the temple to commemorate the giving of the law.

Other names by which this festival is known are: "Feast of Harvest" (תג הקציר), "feast of reaping/binding"; Exod. 23:16 [cf. LXX ἐορτή Θερισμοῦ; ἡ πεντηκοστή [ἡμέρα]]; "Pentecost" (יום חמשים, "fifty days"; Tob. 2:1; II Macc. 12:32; Jos. Antiq. III.x.6; XIII.viii.4; XIV.xiii.4; XVII.x.2; Jos. War II.iii.1; VI.v.3; Philo *De Septen.* 21; Acts 2:1; 20:16; I Cor. 16:8; cf. Lev. 23:16); "Assembly" (עצרה, Aramaic ארתא, "restraint" [?]; especially in Targ., Mishna, and Talmud; cf. Jos. Antiq. III.x.6: ἀσπεθᾶ); "Day of First Fruits" (יום חבבורים; Num. 28:26; cf. LXX τῆ ἡμέρα τῶν νεῶν).

Weeks was basically a harvest festival, and throughout its biblical history it maintained its original character in this respect. Exod. 23:16 designates it as the "feast of harvest," and this is probably its oldest title. The term "Weeks," while used as a title for the special festival day on which the first fruits of the wheat harvest were presented to the Lord, actually has reference to the entire period of the grain harvest, beginning with the first cuttings of barley and ending with the completion of the wheat harvest, about seven weeks in all. This entire period was one of special sanctity in which Israel was called to recognize God as the source of rain and agricultural fertility (Jer. 5:24). The feast is also known as the Day of First Fruits (Num. 28:26; cf. Exod. 23:16; 34:22; Lev. 23:17), and it really marked the beginning of the season in which it was appropriate to bring the voluntary offerings of first fruits, a season which ended with the Feast of Booths (see BOOTHs, FEAST OF). Among Greek-speaking Jews the feast was known as the (Day of) Pentecost (lit., "the fiftieth [day]" and having reference to the seven-week period of harvest). It is an interesting fact that in secular Greek usage the adjective πεντηκοστή was a technical

tax term, deriving originally from a two-per-cent cargo tax in the harbor of Piraeus. There is, however, apparently no evidence that the term was selected as a title for the Jewish feast to suggest the "tax" of the first fruits as well as the duration of the cereal harvest, of which it marked the conclusion. Jub. 6:21 says: "This feast is twofold and of a double nature," and it explains this with reference to the weeks and the first fruits. The term עצרה, "assembly," focuses on the ceremonial of the feast day as such, thus comparing it to special days in the feasts of Passover and Booths (cf. Lev. 23:36; Deut. 16:8; see also CONVOCATION, HOLY). However, the Talmud, in which this occurrence is common, occasionally interprets this as the Assembly which closes the Passover cycle, thus also relating it to the harvest season. The feast, therefore, both by virtue of its relation to Passover and the entire harvest period, and as the season of the offering of first fruits, is agricultural in character. Neither the OT nor Josephus and Philo hint that it memorialized events in Israel's history. The book of Jubilees also treats the feast as a harvest observance (22:1) but makes it a covenant-renewal ceremony for the covenant of Noah founded on its day (6:1-21). It is possible that connection with the covenant of Noah facilitated its association later with the revelation of the law on Sinai. What is apparently the oldest reference to this is a saying in the Talmud (Pes. 68b) attributed to Rabbi El'azar ben Pedath (ca. A.D. 270): "Pentecost is the day on which Torah was given."

In Palestine, Weeks proper lasted only one day. In the Diaspora, to avoid not celebrating on the correct day, the duration was extended to two days. The date was set as the fiftieth day "from the morrow after the sabbath, from the day that you brought the sheaf of the wave offering" (Lev. 23:15). I.e., the ceremony of the sheaf fell on a day immediately after a sabbath; counting this day as the first, we find that Weeks fell on the fiftieth day. But there is a historic disagreement about what the term "sabbath" implies: does it refer to a weekly sabbath? or to some other day of rest? The phrase "after the seventh sabbath" (Lev. 23:16) speaks strongly for the former alternative. On this basis Weeks would always occur on the same day of the week, Sunday. This computation was adhered to by the Sadducees and the literalistic Karaites. It also has a parallel in the Christian day of Pentecost, though the "morrow after the sabbath" with which the count for it began was the "first day of the week" (Mark 16:2)—Easter Day, rather than the Day of the Sheaf. But according to the rabbis this "sabbath" was not a weekly day of rest, specifically that one which fell in the week of the Feast of Unleavened Bread; it was the first day of this feast, the fifteenth day of the month of Nisan, which is described as a day of "holy convocation" and of the cessation of work (Lev. 23:7). The Day of the Sheaf, accordingly, fell on the following day, the sixteenth of Nisan. Moreover, the Jews actually celebrated Weeks on the basis of this computation. This is still true, except that the Falashas place it fifty days after the seventh day of Unleavened Bread (vs. 8).

The sheaf presented as a wave offering (Lev. 23:

11) was the fistful of stalks produced when, in ceremonial fashion, the sickle was first put "to the standing grain" (Deut. 16:9). It was brought to the altar as the ἀπαρχή of both the country and all mankind (Philo *De Septen.* 2.20; cf. I Cor. 15:20, 23). It paid tribute to God as the owner of the land and the source of its products; and until its offering it was unlawful either to begin reaping or to use the new harvest as food (Lev. 23:14; M. Men. 10.6-7). Its offering by the priest was a communal rite in behalf of all the people, which opened the harvest season. Part of it was put on the altar; and the priest consumed the remainder. A male lamb was offered as a burnt offering (Lev. 23:12). The ceremony of the sheaf was integrally a part of the Feast of Unleavened Bread. See PASSOVER AND FEAST OF UNLEAVENED BREAD.

The day of the feast was one of solemn joy and thanksgiving that God's protection had watched over and brought to successful completion the activities of the cereal harvest season begun seven weeks before. It was a day of "holy convocation" (Lev. 23:21). Work was to cease; through its male representatives, and, especially in later periods, through the temple priesthood, the whole community of Israel presented itself before the Lord. As at the other great feasts, in addition to the daily burnt offering, offered at sunrise, there were other festal offerings (Num. 28:26 ff). But central to the significance of the day was the special cereal offering, consisting of "two loaves of bread" (Lev. 23:17). These loaves, from flour milled from the new wheat crop, and baked with leaven, were presented by the priest as a wave offering in behalf of all the people. Since the bread was baked with leaven, none of it was put on the altar; it was consumed by the priests. Along with the two loaves two lambs were presented, also as a wave offering. The presentation of the sheaf, seven weeks earlier, was the mark permitting the use of the new grain as food; beginning with this sacrifice, it was permissible to use it also for liturgical purposes. All males attending the ceremonies assisted by dancing an "altar dance," during which they sang the Hallel (Pss. 113-18). The feast was brought to a conclusion by the eating of communal meals to which the poor, the stranger, and the Levite were invited. Thus a basically agricultural rite honored the God of Israel and also recognized the fraternal bond of responsibility uniting the community bound by his covenant.

Weeks was also the Feast of First Fruits (Num. 28:26). After the sacrificial presentation of the loaves it was possible for individual worshipers to make offerings of the new grain crop as personal sacrifices of first fruits. The season for this apparently came to a close at the Feast of Booths (see BOOTHS, FEAST OF). It seems that the private offerings could be made at any time during the season now begun, not only at the high feasts. These offerings were ceremonially presented by the worshiper to the priest, accompanied by the moving confessional recital of thanksgiving which recalled the great acts of God in Israel's deliverance from slavery and its inheritance of Canaan as the Land of Promise (Deut. 26:1-11). Weeks, therefore, not only celebrated God as the giver of grain but also, in the ceremony for the offer-

ing of first fruits, interpreted the meaning of harvests in the light of Israel's sacred history.

Following the destruction of the temple, Weeks continued to be observed by its gradual transformation into a feast commemorating the gift of the law. The joy of the feast was for the sake of the law. A compendium of Torah readings arose, to be read in preparation for the eve of the feast. The Zohar interprets the fifty days of the harvest season as the "courting days of the bridegroom Israel with the bride Torah" and makes the further statement that "in the third month (Siwan) the table of the Law was given to the third people" (Yitro 78b).

But, as already noted, the association of the revelation of the law with Weeks is a later development. The custom of the reading of Exod. 19 on this day seems to have begun ca. A.D. 200. Long before this it was customary to read the book of Ruth, with its characteristic harvest setting; and this custom has been maintained, despite the reorientation of the observance of a feast of the law. It is historically incorrect to describe Weeks as a "feast of revelation" at the time of Jesus, as has sometimes been done (cf. the work of I. Elbogen in the *bibliography*); and it is consequently misleading to attempt an interpretation of Acts 2 and of the meaning of Pentecost in the Christian church on the assumption that it constitutes a literal displacement of, or substitution for, a feast of the law. And, indeed, there is no evidence for this in the NT. Its allusions to Weeks are in terms of the symbolic meaning of the sacrificial loaves as first fruits (Rom. 8:23; 11:16; I Cor. 15:20, 23).

WEIGHTS AND MEASURES. In early days of human communication standards of metrology by which weights, capacities, and distances could be understood became necessary. Long before any part of the Bible was written, man had learned to count and to exchange commodities. When trade advanced beyond the stage of simple barter, there developed means to determine the amount of goods involved beyond merely considering items that met the eye. At first measurements were probably made by reference to well-known physical phenomena. Weight was determined in terms of such objects as grains of a standard cereal or eggs of a common fowl, capacities by such estimates as the handful, distances by such expressions as "day's journey," "flight of an arrow," and lengths by references to parts of the body—finger, palm, span, or space between elbow and finger tip.

For weighing there were necessarily balances, and in prehistoric times stones came to be used as standards, instead of the less durable grains and eggs. Undoubtedly from the first attempts at measurement

there was great variety in the objects used for weighing and measuring. Ur-Nammu, founder of the Third Dynasty of Ur, ca. 2050 B.C., in the earliest law code known up to 1960, established official weights and measures to curb dishonest merchants. And in an old Sumerian hymn to the goddess Nanshe, who was concerned with justice, there is a passage denouncing evildoers, among whom are those "who substituted a small weight for a large weight, who substituted a small measure for a large measure." So there was a long ancestry before the "two kinds of weights, a large and a small," and the "two kinds of measures, a large and a small," which are forbidden in Deut. 25:13-14.

There had been weights and measures in the civilizations around the E end of the Mediterranean in the two millenniums before the appearance of the Israelites, and their systems affected the Hebrew and Jewish standards as did the Persian, Greek, and Roman in later times.

A. BALANCES. For the use of weights, balances (מאזנים; Ugaritic *mznm*) were necessary. In Bible times and previously the balance consisted of a beam either suspended on a cord held in the hand* or mounted on an upright support. Both hand balances and standing balances are mentioned in Egyptian literature. A pan was suspended by cords from each end of the beam.* In Egypt some pictures show the cords passing into a tubular beam.* A fixed descend-arm at right angles to the beam indicated when the pans were at equal height; the standard weight and the object to be weighed would be equal. In Egyptian judgment scenes the heart of the deceased is pictured being weighed in the balance against the feather denoting truth or a full figure of the deity Ma'at.* The graduated scale using the principle of leverage apparently did not appear before the fourth century B.C. References to just balances in the literature of the ancient Near East show that dishonest manipulation of balances was not uncommon. Just balances are prescribed in Lev. 19:36; Job 31:6; Prov. 16:11; Ezek. 45:10. False or deceitful balances are denounced in Prov. 11:1; 20:23 ("scales"); Hos. 12:7; Amos 8:5; Mic. 6:11 ("scales"). Ezekiel was ordered to divide his hair into equal parts by the use of a balance (Ezek. 5:1). Balances are mentioned figuratively in Job 6:2; Ps. 62:9; Dan. 5:27. In Isa. 40:12 *peles* (פלים), like *mōzenayim* (מאזנים), is an instru-

ment for weighing. The two are translated "scales" and "balances." The *peles* may be the indicator arm. See BALANCES. Figs. GOL 34; BAL 13; WEI 12-13; BAL 14.

B. WEIGHTS. What we know of weights in the ancient Near East comes from literary references and objects of stone, metal, or glass which evidently were used in balances. Most of these weights are uninscribed and have been the source of many conjectures and arguments. The few that are inscribed give us information, but even this is not definitive; for there is considerable variety in some weights with the same inscription.

1. Egyptian. Much that has been written about Egyptian weights is conjecture. Sir Flinders Petrie collected and classified more than 5,400 weights from Egypt and Palestine and assigned to them names taken from Egyptian, Hebrew, Greek, or Persian weights. While his work is important in showing the widespread use of weights, it does not prove that the Egyptians had an elaborate system. Egyptian numbering was in the decimal system, with hieroglyphs for the powers of ten up to a million. There were also hieroglyphs for the fractions from half to sixty-fourth. Earliest Egyptian weights from prehistoric times were of various stones, generally in blocks. Later they appear as cubes, spheres, cones, cylinders, domes, animals (bulls, cows, ibexes, hippopotamuses, ducks), or parts of animals.* Many reliefs show the weighing of metal rings in a balance against the animal-form weights.* Three weights are mentioned in Egyptian texts—the *dbn* (generally called "deben"), the *ḳdt* (referred to as "qedet" or "kitē"), and the *šty* (seal). From known examples the *dbn* weight in the form of cows is found to be *ca.* 91 grams, approximately 3.2 ounces avoirdupois or 3 ounces troy. One weight in the Metropolitan Museum, New York, inscribed "Sesostris, given life eternally, 70 gold *dbn*,"

14. Bronze weights inlaid in gold with the figure of a beetle, found at Nimrud, but probably of Egyptian origin; smaller weight is 5 oz., 296 gr.; larger weight is 8 oz., 263 gr.

weighs 945 grams, which indicates a Middle Kingdom weight of only 13.43 grams or 0.474 ounces avoirdupois for the *dbn*. Apparently the *dbn* varied greatly during Egyptian history. The *ḳdt* was a tenth of a *dbn*, *ca.* 9.1 grams. A *šty* was a twelfth of a *dbn*. Smaller measures were indicated by fractions. While there was considerable commerce between West Asia and Egypt and accountants of one country may have known something of the system of another country, the Egyptians kept their records in *dbn*. In the Bible there is no reference to the Egyptian weights. Figs. WEI 14, 12.

2. Mesopotamian. The weights of Babylon and Assyria conformed to no general standard through the ages. Changes in government brought about changes in standards. The Semitic verb meaning "weigh" is *šql*, and from this we get the noun "shekel," which from early days was a standard of weight and at the development of coinage came to designate the basic piece of silver money. In Akkadian this was *šiqu*, in Hebrew שֶׁקֶל. There were two other common weights: the mina (Akkadian *manû*, Hebrew מִנָּה) and the talent (*biltu*). "Talent" is from the Greek τάλαντον, once meaning "balance" and then applied to a weight. Apparently this measure is meant by the *gaggaru* in the Amarna Letters; the Hebrew word is כֶּכֶר.

These weights varied greatly. The Babylonian-Assyrian method of counting was sexagesimal, with the number sixty used in computation instead of ten as in our system and that of ancient Egypt. Our division of the hour into sixty minutes of sixty seconds each comes from ancient Babylon. This standard has the advantage of easy division by three or four.

Ordinarily the talent consisted of sixty minas and the mina of sixty shekels; but there were also minas of fifty shekels. Moreover, there were "heavy" and "light" standards, with the heavy weighing twice as much as the light. And each of these seems to have varied as much as has the ton or the pound in England and America. There has been diversity of opinion among scholars as to what was the most generally accepted standard for these weights. Now it is evident that the ancient systems were loose and that the best we can do is to accept the evidence of inscribed weights and the testimony of later Greek writers.

An early Babylonian oval stone is inscribed "one half mina true weight." Its weight is 244.8 grams. This would make the mina 489.6 grams, approximately 1.08 pounds avoirdupois. Another, slightly damaged, cone-shaped stone, inscribed "one mina true weight . . .," weighs 978.3 grams and is presumed to have weighed, undamaged, 979.5 grams, approximately 2.16 pounds avoirdupois. Clearly the first represents the light mina and the second the heavy mina. Some lion-shaped weights bear, in addition to the mina designation, the phrase "of the king." They represent both light and heavy standard, but they were some five per cent heavier than the ordinary weights. So it has been supposed that the "royal standard" indicated that payments to the royal treasury were slightly larger than the same sums used in ordinary transactions.

Since it is impossible, from the literature and the

artifacts now available, to give a definitive calculation of the Babylonian and Assyrian weights, and it is certain that these weights varied, only a rough estimate of them may be presented. See Table 1.

Table 1

COMMON WEIGHT

	<i>Light</i>	
Talent	30 kilograms	66 pounds
Mina	500 grams	1.1 pounds
Shekel	8.33 grams	0.295 ounce
	<i>Heavy</i>	
Talent	60 kilograms	132 pounds
Mina	1 kilogram	2.2 pounds
Shekel	16.67 grams	0.6 ounce

ROYAL WEIGHT

	<i>Light</i>	
Talent	30.6 kilograms	69.6 pounds
Mina	525 grams	1.16 pounds
Shekel	8.37 grams	0.31 ounce
	<i>Heavy</i>	
Talent	61.2 kilograms	138 pounds
Mina	1.05 kilograms	2.32 pounds
Shekel	16.74 grams	0.62 ounce

Figs. WEI 15-17.

3. Canaanite. The term "Canaanite" here is understood as applying to the ancient inhabitants of the land at the E end of the Mediterranean other than the Israelites. Thus it includes the Ugaritic and the Phoenician. It has long been known that the weights in this territory were in general the same as those of Mesopotamia, except that the mina in many instances consisted of fifty rather than sixty shekels (cf. Ezek. 45:12). In Ugaritic texts discovered at RAS SHAMRA there are references to the *kkr* Hebrew כֶּכֶר, "talent") and the *tkl* (Hebrew שֶׁקֶל, "shekel"). There

17. Bronze lion-weights of two-thirds mina, from palace of Shalmaneser, king of Ashur

is an occurrence of *-mn*, which possibly means "mina"; but this is uncertain. It is doubtful that the mina was in common use, for large weights are given in such expressions as "eight talents, one thousand heavy shekels, two hundred shekels." The count of so many shekels, instead of twenty or twenty-five minas, would show that talents were reckoned directly in shekels (cf. Exod. 38:24: "twenty-nine talents and seven hundred and thirty shekels"). The talent probably was 3,000 rather than 3,600 shekels. Specification of heavy shekels shows that, as in Babylonia and later in Israel, there were two standards of weight, and it was important in transactions to specify the standard to be used. As in Babylonia, there was variety in the weight of the shekel, which we may roughly estimate as 8 or 10 grams for the light and twice that for the heavy.

Ras Shamra has produced weights of ca. 470 grams, one of which in the form of a lying ox has the hieroglyphic notation for "twenty," indicating a unit of 23.5 grams, which would approximate the heavy shekel of Palestine (see below § 2d, i). From the same location also are many uninscribed weights of 44 or 45 grams, indicating the same unit.

4. Israelite. In Israel computation was in the decimal rather than the sexagesimal system; but the weights were reckoned in the Babylonian and Canaanite units, and there is indication that in some instances, at least, the weights were identical. E.g., in II Kings 18:14 we read: "The king of Assyria required of Hezekiah . . . three hundred talents of silver and thirty talents of gold." In Sennacherib's prisms recording the same incident the amount of gold is the same thirty talents, though he claims eight hundred talents of silver. The discrepancy may be due to the Assyrian habit of boastful exaggeration, but the similarity of the two accounts is noteworthy.

a. Shekel. In the West Asian systems the shekel was the basic weight; but besides the differences represented by light and heavy, common and royal, there are marked variations shown in objective evidence from weights which have been found. No two inscribed weights with the identical notation measure exactly the same. The Hebrew shekel has been computed by various authorities as slightly over 11 (11.3-11.47) grams. At Tell Beit Mirsim (see KIRIATH-SEPPER) from an Iron II stratum there was

found an uninscribed spherical weight of polished limestone weighing 4,565 grams. It is proposed that this is eight minas, and on the basis of fifty shekels to the mina (in the Ugaritic and Israelite systems) therefore four hundred shekels. According to this the shekel was 11.41 grams.

b. Inscribed weights. Objective evidence comes from inscribed weights found in excavations at Lachish, Zahariyeh, Samaria, Tell en-Nasbeh (Mizpah?), Beth-zur, Gezer, Silwan, and Salah, and acquired in Anathoth and Jerusalem. These are marked in old Hebrew characters and provisionally are dated seventh-sixth century B.C. There are three groups of these weights, nearly all of dome-shaped stone, marked נטפ (netseph), פים (pim, or according to some payem), and בקע (beqa', "beka"; KJV "bekah").

c. Netseph. The netseph is not mentioned in the Bible. From its similarity to the Arabic *nusf*, "half,"

Courtesy of the Oxford University Press

18. Inscribed weights from Lachish: (a) "netseph"; (b) "pim"; (c) "beka"; (d) "8 shekels"; (e) two parallel hooks, meaning uncertain

it has been thought by some that the netseph was half of something. A shuttle-shaped weight purchased in Nablus in 1890 was marked רבע נטפ (one fourth of a netseph) and רבע של (one fourth of a shekel, surmising that של was an abbreviation of שקל). According to such interpretation "netseph" and "shekel" were synonyms, with the netseph as the common shekel, but this is doubtful, and the meaning of "netseph" may be called uncertain. See § B4f below. Fig. WEI 18a.

d. Pim. Discovery of the pim cleared the meaning of a hitherto obscure passage in I Sam. 13:19-21, where there is recorded the trouble of the Hebrews because "there was no smith to be found throughout all the land of Israel" and it was necessary to go to the Philistines for the sharpening of implements. In the KJV the word was translated "file," and in some margins there was the notation "a file with mouths," based on the supposition that *pim* was the plural of Hebrew *pē*, "mouth." Samuel Raffaeli surmised that the pim was the amount of weight (paid in silver) used in the transaction. This conjecture was confirmed when a pim weight was found. So the RSV has: "The charge was a pim for the plowshares and for the mattocks." The pim may be two thirds of a shekel. Fig. WEI 18b.

e. Beka. The בקע in Gen. 24:22 is translated "half shekel" on the basis of Exod. 38:26, where it is defined as "half a shekel, by the shekel of the sanctuary." The noun is related to the Hebrew verb *bāqā'*, which means "split." The bekas found so far are slightly heavier than half the shekel as estimated

above, but not enough to invalidate the calculation. Fig. WEI 18c.

f. Variations. In grams the netsephs found weigh 10.515, 19.210, 10.160 (on the basis of a fourth of a netseph at Samaria weighing 2.540), 10.105 (estimated from the Anathoth specimen weighing 8.680, but with a hole bored to make it a bead), 10.04, 9.998, 9.946, 9.935, 9.8, 9.76, 9.54, 9.447, 8.324, 9.28—average, 9.84.

The pims weigh 8.591, 8.13, 7.805, 7.75, 7.61, 7.27, 7.18—average, 7.762.

The bekas weigh 6.65, 6.15, 6.11, 6.095, 5.87, 5.8, 5.66 (possibly not a beka)—average, 6.11 or 6.05.

These weights, about only a few of which there can be any question, demonstrate the inexactness of the Israelite weight system. It would be gratuitous to say that the average represents the standard; doubtless the average will be changed as more inscribed weights are found. The difference between the heaviest netseph and the lightest is greater than the difference between the lightest netseph and the heaviest pim, and the difference between the heaviest pim and the lightest is greater than the difference between the lightest pim and the heaviest beka.

There are also inscribed weights with what appears to be the sign for shekel followed by the sign for a numeral—2, 4, 8,* or 16. From Lachish come weights marked by two parallel strokes with a hook on the end of each. Figs. WEI 18d-e.

g. Weights in the OT. Weights mentioned in the OT are the gerah, which is a twentieth of a shekel (Exod. 30:13; Lev. 27:25; Num. 3:47; 18:16; Ezek. 45:12); a third of a shekel (I Sam. 13:21); the beka or half shekel (Gen. 24:22; Exod. 30:13, 15; 38:26); the shekel (*passim*); the mina (I Kings 10:17; Neh. 7:71; Ezek. 45:12; "pounds" in I Kings and Nehemiah and "maneh" in Ezekiel); the talent (*passim*); and the qesitah, translated "piece of money" (Gen. 33:19; Josh. 24:32; Job 42:11).

The qesitah (קשיטת) is an enigma. The LXX translates by ἀμνός ("male lamb") in Gen. 33:19 and by ἀμνός ("female lamb") in Josh. 24:32; Job 42:11. The weight may have been in metal in the form of a lamb. Another suggestion is that ἀμνός is an expanded form of μνᾶ ("mina"). Jacob paid Hamor of Shechem a hundred qesitahs for a parcel of land. In Job's final state all his relatives and friends came to him, each bringing a qesitah and a gold earring. The Arabic *qesita* has been estimated at 1,429 grams or 3.15 pounds. Still another suggestion is that it was a quantity of silver equal to the price of a lamb.

Taking the shekel as 11.424 grams, the OT weights may be estimated as in Table 2.

Table 2

Gerah, 1/20 shekel	0.571 gram	8.71 grains
½ shekel	3.808 grams	0.134 ounce
Beka, ½ shekel	5.712 grams	0.201 ounce
Pim, ⅓ shekel(?)	7.616 grams	0.268 ounce
Shekel	11.424 grams	0.403 ounce
Mina, 50 shekels	571.2 grams	1.26 pounds
Talent, 3,000 shekels	34,272 kilograms	75.6 pounds

The Hebrew of Ezek. 45:12, followed by the KJV, calls for a mina (KJV "maneh") of "twenty shekels,

five and twenty shekels, fifteen shekels," which would indicate that Ezekiel was following the Babylonian sixty-shekel system rather than the common or Phoenician system of fifty shekels to the mina. Following the LXX, the RSV has "fifty shekels." If the Hebrew of Ezekiel is correct, his mina would be ca. 685.44 grams or 1.536 pounds, and his talent 41.126 kilograms or 90.7 pounds.

According to Maimonides, the early Hebrew shekel weighed 320 grains of barley. If these grains are equivalent to troy grains, the shekel was ca. 0.292 ounce avoirdupois or 6.57 grams, considerably lighter than the shekel as computed above. Maimonides says that in the second temple this was supplanted by the *sela'* (שֵׁלָה), the equivalent of the heavy Phoenician shekel.

In II Sam. 14:26 the yield of the annual cutting of Absalom's hair is stated as two hundred shekels "by the king's weight." This, by various estimates, would be from 3½ to 4 pounds. Some commentators assume that twenty shekels was meant. One LXX MS has "one hundred."

Goliath's coat of mail (I Sam. 17:5), weighing five thousand shekels of bronze, has been variously estimated from 90 to 220 pounds; according to the table given above, it would be ca. 126 pounds. His spear-head (vs. 7) was "six hundred shekels of iron." Estimates of this have varied from 11 to 27 pounds. According to the table above, it would be ca. 17.12 pounds.

The "shekel of the sanctuary" (Exod. 30:13, 24; 38:24-26; Lev. 5:15; 27:3, 25; Num. 3:47, 50; 7:13-86; 18:16) is an expression peculiar to P. Repeatedly it is said to be equal to twenty gerahs. Some authorities translate "sacred shekel" and presume that it was different from the ordinary shekel. On occasion transactions with the priest involved adding a fifth to the normal value (Lev. 27:13, 15). On the other hand, it may refer to a standard weight which was kept in the sanctuary. The LXX has "sacred didrachma" (τὸ διδραχμὸν τὸ ἅγιον) and takes the gerah to be an obolus. A didrachma is ca. 8.72 grams, lighter than the ordinary shekel. And the Attic obolus is a sixth of a drachma, so that the didrachma would contain twelve oboli. It appears, then, that the Greek translators were dealing in approximations, as were the English translators who reckoned the mina as a pound.

For convenience we may think of the Israelite shekel as weighing ca. as much as an American half dollar, the mina as ca. 1¼ pounds, and the talent as ca. 75 pounds.

In Dan. 5:25 the words "Mene, mene, tekem, and parsin" are sometimes interpreted as a play on the words "mina, mina, shekel, and a half [shekel]," with references to the Babylonian rulers Nabopolassar, Nebuchadnezzar, Nabonidus, and Belshazzar, indicating that the first two were great, the third much smaller, and the fourth still smaller. For other explanations, see MENE, MENE, TEKEL, AND PARSIN.

h. Weights in the Apoc. The Apoc. mentions shekels (I Macc. 10:40) and minas (I Esd. 5:45; KJV "pounds"). Bel 27 in the LXX, which the RSV follows, has "thirty minas of pitch." The "thirty minas" is not in Theod., which the KJV follows. Talents

are mentioned in I Esd. 1:36; 4:51-52; 8:56; Tob. 1:14; II Macc. 3:11; 4:8; 5:21; 8:10-11.

i. Weights in the NT. The talent in the NT parables was used to represent a large sum of money (Matt. 18:24; 25:15-28) or an indeterminate large weight (Rev. 16:21), as the heavenly hailstone weighed a talent (the RSV "hundredweight") gives the idea but certainly is not to be taken as the exact equivalent). The mina (μνᾶ), translated "pound," in Luke 19:13-25, like the talent in Matthew, doubtless represents a sum of money. "Pound" (λίτρα, Latin *libra*) as weight or possibly as a measure of capacity appears in John 12:3; 19:39, to indicate an amount of precious ointment. This was doubtless the Roman pound of twelve ounces.

C. MEASURES OF CAPACITY. 1. Egyptian. The standard measure of capacity in ancient Egypt was the *hkt*, which has been estimated as 5.03 liters, amounting to slightly more than the English gallon or 1¼ American gallons. This measure was used for grain or metal. It was divided into fractions of one half, one fourth, one eighth, one sixteenth, and one sixty-fourth. In one *hkt* there were 320 "ro" (*r*) measures. Occasionally there is mention of a third and a tenth of a *hkt*. There were also the double *hkt* and the quadruple *hkt* and the "sack," *h'r*, which amounted to four quadruple or sixteen single *hkt*. In the Rhind Mathematical Papyrus the "sack" was five quadruple or twenty single *hkt*. For liquids such as beer, milk, and honey there was the "hin" jar, *hnw*, which from inscribed examples is shown to be ca. 0.503 liter, or a little more than a pint. It was used also for a dry measure and was considered one tenth of a *hkt*. Other vessels named in inscriptions are the *ds* jar, specially for beer, the *hbnt* jar for wine or incense, the *st'* jar for a small amount of beer, and the *mny* for incense. Their capacities are undetermined.

2. Mesopotamian. Names of measures for capacity abound in the Sumerian, Assyrian, Neo-Babylonian, and Nuzian texts. From the references it is evident that there was considerable variation in standards, which changed from country to country and from time to time. The evidence is highly complicated, and widely differing inferences have been drawn by scholars. Some of them have changed their opinions as new evidence has appeared or as they have examined the old.

Among the ancient Mesopotamians the basic measure of capacity seems to have been the Semitic *qa*, the equivalent of the Sumerian *sila*. The next higher unit was the *sutu*, which in the Old Babylonian period contained ten *qas*. (Later there are references to *sutus* of six, eight, and twelve *qas*.) Many of the calculations of the capacity of the *qa* are based on a ritual text which refers to the "*sutu* of ten minas." Since the mina was a weight, the cubic capacity of a *sutu* would depend on the material used in the calculation. First calculations were on the supposition that the material was water, which was used in the establishment of the metric system; but later calculations have been on the basis of barley, since this was the most commonly cultivated grain and the substance most frequently designated in connection with measures. Two most recent evaluations of the *qa* are

1.004 liters and 1.34 liters, roughly 1 or 1.33 dry quarts.

In the Middle Assyrian and Nuzian texts there is a third unit, *imeru*, which means "ass" and is represented in the cuneiform ideogram derived from the picture of an ass. Presumably it was the normal load an ass was expected to carry. This has been reckoned as *ca.* ninety kilograms, which would be about 138 liters of barley, roughly a hundred *gas*. Thus for Middle Assyrian and Nuzian times we may provisionally consider the standard measures of capacity: the *qa* (*ca.* 1.34 liters or 1.22 dry quarts), the *sutu* of ten *gas* (*ca.* 13.4 liters or 1½ pecks), and the *imeru* (134 liters or 3.8 bushels).

3. **Canaanite.** In the Ugaritic literature there are occurrences of a few units of measure. The *hmr* (homer) means "ass" and, like the Akkadian *imeru*, is used as a unit of dry measure. The *lth*, corresponding to the Hebrew *lethech* (לֶתֶחַ), also is a unit of dry measure. The *lg*, corresponding to the Hebrew *log* (לֹג), may be a liquid measure. It is probable that the Canaanites had measures essentially like those in Mesopotamia; but there is not enough evidence to hazard any calculations about them.

4. **Israelite.** Undoubtedly the Hebrew measures of capacity never were finally fixed. They were related mostly to the Assyro-Babylonian system rather than the Egyptian. In several instances two names were used for the same unit.

a. **Homer.** The homer (הֹמֶר; Akkad. *imeru*; Ugar. *hmr*) was a standard dry measure (Ezek. 45:11), the normal load of an ass, and, on the basis of the reckoning given above, would be *ca.* 134 liters or 3.8 bushels. Other calculations make this measure considerably more than this amount—229.9 liters or 6.524 bushels, and in some of the older commentaries 11 bushels. References in the OT indicate that it was a fairly large measure. A homer of barley was worth fifty shekels of silver (Lev. 27:16). Divine punishment would reduce the yield of a homer of seed to an ephah (Isa. 5:10). The homer was equal to the cor and contained ten baths or ephahs (Ezek. 45:11-14). In the story of the miraculous provision of quails in the desert (Num. 11:32), when the people gathered the birds all day, all night, and the next day, "he who gathered least gathered ten homers." Even conservatively this would be 38 bushels.

b. **Cor.** Equal to the homer was the cor (כֹּר; Sumerian GUR; Akkadian *kurru*; KJV usually "measures"). It was used both for dry measure (I Kings 4:22; 5:11—H 5:2, 25; II Chr. 2:10—H 2:9; 27:5) and for oil (Ezek. 45:14, where it is said like the homer to contain ten baths). Only in Ezek. 45:14 does the KJV use "cor." The cor may have contained 3.8–6.524 bushels or 35.4–60.738 gallons.

c. **Lethech.** The *lethech* (לֶתֶחַ; Ugaritic *lth*) was a dry measure, mentioned only in Hos. 3:2, where Hosea is told to buy the woman for fifteen shekels of silver and a homer and a *lethech* of barley. The LXX omits the word, and the Vulg. has *dimidio coro*. The Mishna also evaluates the *lethech* as half a cor, and accordingly the KJV translates "a half homer." If this is correct, the *lethech* was 1.9–3.26 bushels.

d. **Ephah.** The ephah (אֶפָה, אֶפְסָה; Egyptian 'p; Coptic *uipa*; LXX οἶφι) was a dry measure equal

to a tenth of a homer (Ezek. 45:11). It would then be 1.52–2.42 pecks, roughly three eighths to two thirds of a bushel. Evidently the ephah was in common use, as it is frequently mentioned in the OT (Exod. 16:36; Lev. 5:11; 6:20; 14:10, 21; 19:36; 23:13; Num. 5:15; 28:5; Judg. 6:19; Ruth 2:17; I Sam. 1:24; 17:17; Isa. 5:10; Ezek. 45:10-11, 13, 24; 46:5, 7, 11, 14; Amos 8:5; Zech. 5:6-10). The term is used to indicate the amount of cereal such as flour, barley, parched grain, wheat; or the container in which the cereal was measured, as in the prophetic demand for a just ephah. In Zech. 5:5-11 there is described an ephah with a lead weight on the mouth and the woman "Wickedness" inside. If this woman is considered life-sized, Zechariah's ephah would have to be considerably larger than the ephah estimated above. There are passages where the RSV inserts the word "ephah" to give the full meaning, as in Lev. 24:5: "Two tenths of an ephah shall be in each cake." The Hebrew has merely: "Two tenths will be the one cake." Other passages where the word "ephah" is inserted in the RSV are Lev. 23:17; Num. 15:4, 6, 9; 28:9, 12, 20, 28; 29:3, 14. In such passages the KJV inserts "deal," an indefinite amount.

e. **Bath.** Throwing some light on the ephah is the bath (בַּת), a liquid measure said to be equal to the ephah (Ezek. 45:11, 14). At Tell Beit Mirsim there was found a fragment of an amphora with the inscription "bath" (בַּת) and at Lachish the neck of a jar marked "royal bath" (בַּת לַמֶּלֶךְ).^{*} On epigraphic evidence these jars have been dated in the eighth century B.C. By extrapolation from the fragments it is estimated that each of these jars contained 21-23 liters, *ca.* 5½ gallons, corresponding roughly to the ephah of three eighths to two thirds of a bushel. The bath was used to indicate both small and large quantities (from one to thirty thousand) of liquids (I Kings 7:26, 38; II Chr. 2:10; 4:5; Isa. 5:10), and a just bath, like the just ephah, was prescribed (Ezek. 45:10). Fig. WEI 19.

19. Fragmentary jar from Lachish, bearing the inscription "royal bath" (lit., "bath to the king"; eighth century B.C.)

f. **Seah.** The seah (סֵאָה; Akkadian *še'u*; Greek σάτον[?]) was a dry measure, about the size of which there are divergent opinions. In the KJV-RSV (Gen. 18:6; I Kings 18:32; II Kings 7:1, 16, 18; Isa. 27:8), after the LXX μέτρον, the word is translated by the noncommittal "measure." If the Greek is an exact

equivalent, its capacity would be $1\frac{1}{2}$ modii or 0.367 bushel or 1.452 pecks. By some it is proposed that the seah is the equivalent of the *šālīs* of Isa. 40:12, which means "a third," is translated "measure" in the KJV-RSV, and is supposed to be a thirtieth of a cor or a third of an ephah. According to the reckoning above, this would be 0.127–0.217 bushel.

g. Hin. The hin (יִין; Egyptian *hn, hyn, hnw*, represented by a jar and by actual examples shown to be ca. 0.46 liter) was a liquid measure, according to Josephus (Antiq. III.viii.3), containing two Athenian choas, which equalled twelve sextarii. The bath (Jos. Antiq. VIII.ii.9) was seventy-two sextarii, so that the hin was a sixth of a bath. Accordingly the hin should be 3.5–3.9 liters, 3.68–4.22 quarts, or ca. a gallon. Besides the whole hin (Exod. 30:24; Ezek. 45:24; 46:5, 7, 11) there were fractions of the hin, one half (Num. 28:14), one third (Num. 28:14; Ezek. 46:14), one fourth (Exod. 29:40; Lev. 23:13; Num. 15:4; 28:5, 7, 14), and one sixth—the daily ration of water, ca. two thirds of a quart (Ezek. 4:11). There was prescribed a just hin (Lev. 19:36).

h. Omer. In the story of the gathering of manna (Exod. 16:13–36) the measure used was the omer (עֹמֶר; LXX γομορ), not to be confused with the homer. One omer was the daily ration (vss. 16, 18), with two omers to be gathered for the sixth day and the sabbath (vs. 22). One omer was to be kept as a memorial (vss. 32–34). The omer was a tenth of an ephah (vs. 36). Hence it would be ca. 2.3 liters, a little more than two dry quarts.

i. Issaron. Probably another name for the omer was the issaron (עֵשָׂרוֹן), which means a tenth, evidently of an ephah. Like the omer, it was a dry measure. In Exod. 29:40 the RSV has merely "tenth measure." In other passages (Lev. 14:10; 23:13, 17; Num. 15:4) the RSV adds "of an ephah," while the KJV uses the indeterminate word "deal."

j. Kab. A measure mentioned only once in the Bible (II Kings 6:25) is the kab (כַּב, KJV cab, possibly Eyp. *kb*). During the Syrian siege of Samaria an ass's head brought eighty (shekels?) of silver, and the fourth part of a kab of what seems to have been dove's dung brought five (shekels?). The Hebrew of this verse is corrupt, and there is no conclusive evidence as to what a kab was. Josephus (Antiq. IX.iv.1) takes the fourth of a kab as a sextarius (ξέστης). According to rabbinical sources it was an eighteenth of an ephah, or about 1.16 dry quarts.

k. Log. The smallest biblical measure of capacity was the log (לֹג; Ugaritic *lg*; Coptic *lok*). It is named only in Lev. 14:10, 12, 15, 21, 24, and only as a measure of oil. The LXX translates κοτύλη, ca. half a pint. The Vulg. translates *sextarius*. It appears, then, that the log was equal to a fourth of a kab, or 0.67 pint.

l. Table of OT measures of capacity. Obviously measures of the Bible varied, as today the English gallon is different from the American gallon and the Connecticut bushel of 2,748 cubic inches is different from the Colorado bushel of 2,500 cubic inches. There was no absolute standard of measurement until the introduction of the metric system. So, with only a provisional attempt at approximate evaluation, we can give a table with the supposition that

sometime somewhere some of these estimates would be good. See Table 3.

Table 3

Dry Measures

kab	1.16 quarts
omer, issaron, 1/10 ephah	2.09 quarts
seah, 1/3 ephah	3/4 peck
ephah	1/2 bushel
lethech, 1/2 homer	2.58 bushels
homer, cor	5.16 bushels

Liquid Measures

log	0.67 pint
hin	1 gallon
bath	5 1/2 gallons
cor, homer	55 gallons

It is possible that all these measures, like our liter, were used for both dry and liquid substances.

m. Handful. The handful gives a general impression of quantity, though it could hardly be called an exact measure. We have it in such expressions as "handfuls of barley" (Ezek. 13:19), "handfuls of ashes" (Exod. 9:8), "handful of quietness" (Eccl. 4:6), "handful of meal" (I Kings 17:12), "handful of the fine flour and oil" (Lev. 2:2), "handful of it" (Lev. 5:12), and "handful of the cereal offering" (Num. 5:26).

n. Later Jewish measures of capacity. In Bel 3 it is told that the Babylonians offered daily to their idol Bel twelve ἀρτάβαι of fine flour and six μετρήται of olive oil (KJV-RSV "wine," following Theod.). The artabe was a Persian measure estimated as 1 4/5 bushels. The metretes, which means "measurer," was an Attic vessel containing eight to ten gallons. The KJV translates "great measures" and "vessels" respectively; the RSV performs a calculation and arrives at "bushels" and "fifty gallons."

Postbiblical Jewish literature contains considerable discussion of measures of capacity using material objects, such as grains (of barley) and eggs, to determine amounts. The Talmud mentions the "desert measure," the "Jerusalem measure," and the "Sephoris measure."

o. NT measures of capacity. Measures of capacity listed in the NT are Greek or Roman. The ξέστης (Mark 7:4, and some MSS of vs. 8) is the sextarius of ca. a pint, but here it is probably a general term for a small vessel, and the translation "pot" is justified. The μετρητής (John 2:6) is definitely a measure, as described above. It is translated "firkin" in the KJV. In the RSV the two or three metretai are "twenty or thirty gallons."

The bushel of Matt. 5:15; Mark 4:21; Luke 11:33 is the Greek μόδιος, a measure of 0.245 American bushel, meaning here a vessel which could cover a light.

The amount of ointment Mary used to anoint the feet of Jesus (John 12:3) was a λίτρα, the Roman pound of twelve ounces, used as a measure of both capacity and weight (cf. our two-ounce bottle). The mixture of myrrh and aloes which Nicodemus brought for the dressing of Jesus' body weighed ca. a hundred of these pounds. See § B4i above. The

χοῖτιξ (Rev. 6:6; "quart"; KJV "measure") was *ca.* a quart.

D. MEASURES OF LENGTH. 1. Egyptian. In ancient Egypt small objects were measured by dimensions of the lower arm. The cubit, *mh*, length from the elbow to the tip of the middle finger, was represented by the hieroglyph showing the horizontal forearm with the palm down. It was *ca.* 52.3 centimeters or 20.6 inches. The Egyptian cubit, however, was variable.* Graduated scales found by archaeologists show a "strong" cubit of 52.5 centimeters divided into seven palms or twenty-eight fingers and a "weak" cubit of 45 centimeters equal to six palms or twenty-four fingers. The palm, *šsp*, width of the hand not including the thumb, pictured as an arc, was a seventh of a cubit, *ca.* 7.47 centimeters or 2.67 inches. The finger, *db'*, pictured by an upright finger, was a twenty-eighth of a cubit or a fourth of a palm, *ca.* 1.82 centimeters or 0.67 inch. Fig. WEI 20.

For longer measures there was the rod, *ht*, represented by the hieroglyph of the branch of a tree. It was a hundred cubits, *ca.* 52.3 meters or 57.2 yards. It was called also "rod of cord," *ht n nwh*. There was a much larger measure called the "river," *ytrw*, the hieroglyph of which contains the picture of a channel filled with water. Its length is uncertain, but it is presumed to be at least two kilometers.

2. Mesopotamian. Like the Egyptian, the Sumerian and Akkadian small measures for length were based on parts of the forearm with the cubit (Sumerian *kus*; Akkadian *ammatu*) as a standard. It is thought that the Mesopotamian cubit was a bit shorter than the Egyptian, *ca.* 50.1 centimeters or 19.7 inches. Also, the Mesopotamian cubit varied. Graduated rules on statues of Gudea show that one cubit of Lagash was 49.584 centimeters and another 49.574 centimeters. While the difference is not large,

it shows that the standard was not absolute. The Sumerian ideogram *ŠU BAD* represents the open hand or span from the tip of the thumb to the tip of the little finger. It is a half of a cubit, *ca.* 25 centimeters or 8.8 inches. The finger (Sumerian *šusi*; Akkadian *ubānu*) was a thirtieth of a cubit, 1.67 centimeters or 0.66 inch. In Neo-Babylonian times the finger was a twenty-eighth of a cubit.

For larger measures there was the rod (Sumerian *gi*; Akkadian *qanû*) containing 6 cubits and equal to *ca.* 3 meters or 3.27 yards. A Sumerian measure *ninda* was 12 cubits, *ca.* 6 meters. The rope (Sumerian *zer*; Akkadian *ašlu*) was 120 cubits, *ca.* 60 meters, corresponding possibly to the Egyptian "rod of cord." The double stadion (Sumer. *giš*) was 720 cubits, *ca.* 360.7 meters. The walk of a Babylonian hour, equal to two hours of our time (Sumerian *danna*; Akkadian *bēru*), was 1,800 *NINDA*, equal to 21,600 cubits, *ca.* 11.82 kilometers or 7.35 miles.

3. Canaanite. Evidence of Canaanite measures of length are scarce, but in all probability they corresponded to the measurements of ancient Mesopotamia and later Israel. Ugaritic *'mt* is like Akkadian *ammatu*; but where it occurs, it means "elbow," as do the Akkadian and Hebrew words for "cubit."

4. Israelite. Like the Egyptians, the Sumerians, and the Assyro-Babylonians, the Israelites used the cubit as a standard.

a. Cubit. Undoubtedly the cubit (אמה; Akkadian *ammatu*; Ugaritic *'mt*) was the length of the forearm to the tip of the middle finger; but, as human arms are of different lengths, the Israelite cubit was not absolute. There are more than a hundred occurrences of the word for "cubit," including the dual אמתים and the plural אמותה, and four occurrences of the Aramaic plural אמתין in Ezra 6:3; Dan. 3:1. Also there are instances where the word "cubit," like "shekel,"

Courtesy of the Oriental Institute, the University of Chicago

20. Cubit measuring stick covered with gold overlay and containing the name of Amen-hotep II; New Kingdom, Eighteenth Dynasty (*ca.* 1570-1310 B.C.)

is implied and is inserted in the RSV and italicized in the KJV. E.g., in Ezek. 43:16-17a the Hebrew has: "The altar hearth shall be square, twelve long by twelve broad. The ledge also shall be square, fourteen long by fourteen broad." Since the word "cubit" is used in vs. 15, 17b, it is evident that the dimensions are in cubits. And in Ezek. 46:22 the Hebrew has: "In the four corners of the court were small courts, forty long and forty broad." In both instances the LXX adds the word "cubits."

Ehud's sword (Judg. 3:16) was a *gōmed* (גומד) in length. This is the only occurrence of the word in the OT. It is translated "cubit" in the KJV-RSV, but the LXX has σπιθαμῆς ("span") and the Vulg. *palmae manus* ("palm of a hand"). A weapon of a cubit or a span in length would be lethal; but, in view of Eglon's corpulence, one of only a palm in length might not have reached a vital spot.

In Palestine as yet there have been found no cubit measures. One bit of objective evidence is in the SILOAM INSCRIPTION, giving the length of Hezekiah's tunnel as 1,200 cubits. The survey of this aqueduct has put its axial length as 533.1 meters. According to this calculation the cubit was 17.49 inches. It is evident, however, that 1,200 is a round number, and the points considered as the starting of the digging at the ends of the tunnel are not certain. Other calculations have placed the Siloam cubit at 17.58 inches. The inscription's 100 cubits from the tunnel to the surface is clearly a round number.

Jehoash king of Israel, after capturing Amaziah king of Judah, broke down the wall of Jerusalem for four hundred cubits, from the Ephraim Gate to the Corner Gate (II Kings 14:13; II Chr. 25:23). Hanum and the inhabitants of Zanoah repaired the Valley Gate and repaired a thousand cubits of the wall as far as the Dung Gate (Neh. 3:13). If archaeologists ever locate these gates, there will be more evidence on the length of the cubit, though four hundred and a thousand seem to be round numbers.

The cubit is used extensively in giving dimensions of Noah's ark (Gen. 6:15-16); of the ark of the covenant and other paraphernalia of the tabernacle as ordered by the Lord through Moses (Exod. 25:10-27:19; 30:1-5) and executed by Bezalel and Oholiab (Exod. 36:1-39:30); of Solomon's temple and its paraphernalia (I Kings 6:2-7:38); of the city, the temple, and the land in Ezekiel's visions (Ezek. 40:5-43:17; 45:1-5); and of the second temple (Ezra 6:3).

That there were different cubits in Israel is clear. The bed of Og king of Bashan (Deut. 3:11) is said to have been nine cubits long and four cubits broad "according to the common cubit" (KJV lit., "after the cubit of a man"). This suggests that there was another cubit. If one of the Egyptian cubits is meant, the bed was from thirteen to sixteen feet long and from six to seven feet wide. The measuring reed of Ezekiel's escort in his visions extended in length "six long cubits, each being a cubit and a handbreadth in length" (Ezek. 40:5). The word "long" (RSV) is not in the Hebrew, but clearly the text implies that there was a short cubit, the more common one, and that Ezekiel's cubit was this short one plus a handbreadth. The length of this cubit again is specified in Ezek. 43:13. If we take the common cubit, like

the short Egyptian cubit, to consist of six palms, Ezekiel's cubit would be, like the long Egyptian cubit, seven palms, so that the six-cubit measuring reed would be seven ordinary cubits long. This would be, according to the foregoing calculation, 51.829 centimeters or 20.405 inches.

In many cases cubits are named in round numbers. The waters of the Flood covered the mountains fifteen cubits (Gen. 7:20). Quails on the ground were two cubits deep (Num. 11:31). The people were to follow the ark at a distance of ca. two thousand cubits (Josh. 3:4). When his guide led Ezekiel E of the temple, it was by four stages of a thousand cubits each (Ezek. 47:3-5). Benaiah slew an Egyptian five cubits tall (I Chr. 11:23). Zechariah's flying scroll had a length of twenty cubits and a breadth of ten cubits (Zech. 5:2). The gallows that Haman erected was fifty cubits high (Esth. 5:14; 7:9). The image that Nebuchadnezzar built was sixty cubits high and six cubits broad (Dan. 3:1). With more of an attempt at exactness, Goliath's height is given as six cubits and a span, which would be ca. 9½ feet.

The two bronze pillars, Jachin and Boaz, were eighteen cubits high (I Kings 7:15; II Kings 25:17; Jer. 52:21). The capitals upon them were five cubits high according to I Kings 7:16; Jer. 52:22, but only three cubits high according to the account in II Kings 25:17.

The NT word for "cubit," like that of the LXX, is πῆχυς. In Matt. 6:27 (=Luke 12:25) the RSV has: "Which of you by being anxious can add one cubit to his span of life?" The KJV translates: ". . . unto his stature?" In both versions "cubit" is incongruous. It is not a measure of time, and a smaller measure would make better sense as an addition to the human stature. The Greek ἡλικίαν can signify either stature or a time of life.

When the disciples started to bring in the boat after their large catch (John 21:8), they were not far from land, but "as it were two hundred cubits" (KJV) or "about a hundred yards off" (RSV). The RSV interpretation illustrates the popular conception of the cubit. Most people are content to think of it as 1½ feet, which is about right, though probably a little less than the actual cubit when in biblical times it was used for accurate measure. It is easy to think of Solomon's temple, sixty cubits long, twenty cubits wide, and thirty cubits high (I Kings 6:2), as ninety feet long, thirty feet wide, and forty-five feet high.

b. Span. The distance between the extended thumb and the little finger was the span (זרת), the next inferior measure. While the LXX translates correctly σπιθαμῆς, the Vulg. mistakenly translates *palmas*, which belongs to the next lower category. Both the ephod (Exod. 28:16) and the breastpiece (Exod. 39:9) were a span square. Goliath's height exceeded six cubits by a span (I Sam. 17:4). In the poetic verse Isa. 40:12 there is asked who has marked off the heavens with a span. That the span was half a cubit is shown by Ezek. 43:13, where the border of the altar is given as a span, and in vs. 17, where it is given as half a cubit. According to Ezekiel's scale it would measure 25.914 centimeters or 10.202 inches. On the common scale it would be ca. 22.212 centimeters or 8.745 inches.

c. **Handbreadth.** The handbreadth or palm (כַּמַּחְסֵי, vocalized *tephach* or *ṭōphach*), breadth of the hand at the base of the fingers, generally is considered a sixth of a cubit, which would be 7.404 centimeters or 2.915 inches. With the vocalization *ṭōphach*, the measure is given as the thickness of Solomon's molten sea (I Kings 7:26; II Chr. 4:5) and is used figuratively in "made my days a few handbreadths" (Ps. 39:5). With the vocalization *tephach*, it is used to define Ezekiel's cubit (Ezek. 40:5; 43:13), and it is given as the length of some pieces of equipment (RSV "hooks") in Ezekiel's temple (Ezek. 40:43). It was the width of the frame around the acacia table made by Bezalel (Exod. 25:25; 37:12). The LXX word is *παλαστής*. The Vulg. translates by *palmus* except in Exod. 25:25 (*quatuor digitis*); 37:12 (*quatuor digitarum*); I Kings 7:26 (*trium unciarum*, "three inches"); Ps. 39:5 (*mensurabiles*, "small measures").

d. **Finger.** The smallest Israelite linear measure was the finger (אֶבְטָח; Egyptian *ḏb'*), a fourth of a handbreadth. As a measure the finger in the MT occurs only in Jer. 52:21, where the thickness of the two hollow pillars is given as four fingers. In the LXX of I Kings 7:15—G 7:3, followed by the RSV, the four-finger thickness of these pillars is mentioned; but the clause is not in the Hebrew or the KJV. The finger would be 1.85 centimeters or 0.728 inch.

With the understanding that there was variation, the small units of linear measure are listed in Table 4.

Table 4
Linear Measures

Common Measures	
Finger	0.728 inch
Handbreadth, 4 fingers	2.915 inches
Span, 3 handbreadths	8.745 inches
Cubit, 6 handbreadths	17.49 inches
Ezekiel's Measures	
Span, 3½ handbreadths	10.202 inches
Cubit, 7 handbreadths	20.405 inches

e. **Uncertain measures.** For distances there are several words for which no exact value is certain. There is the "pace" (צֶעַד), so translated in II Sam. 6:13 but elsewhere translated "step."

The fathom (δρυιά), a measure for depth of water (Acts 27:28), is considered to be four cubits or six feet.

The stadion (στάδιον; II Macc. 12:9-10; Luke 24:13; John 6:19; 11:18; Rev. 14:20; 21:16) contained four hundred cubits, which would be 215.5 yards in our estimate of the Israelite measure. According to the Greek standard it was 200 yards, according to the Roman 206.3 yards. In Rev. 14:20; 21:16 the RSV has "stadia." In other occurrences it converts loosely into miles; e.g., sixty stadia (Luke 24:13) are "about seven miles." This would be according to the Roman unit. The KJV regularly uses "furlong."

The mile (μίλιον) in Matt. 5:41 probably was the Roman mile of 1,000 double paces, 5,000 Roman feet, or 1,618 yards.

A day's journey (יוֹם דֶּרֶךְ יוֹם, ἡμέρας ὁδοῦ) was a general term (Gen. 30:36; 31:23; Exod. 3:18;

5:3; 8:27; Num. 10:33; 11:31; 33:8; I Kings 19:4; II Kings 3:9; Jonah 3:3-4; Luke 2:44). Its length would depend on the method of transportation and the kind of terrain covered. A fair estimate is that under ordinary conditions it would be *ca.* twenty to twenty-five miles. A day's journey, three days' journey, and seven days' journey are mentioned.

A sabbath day's journey (σαββάτου ὁδοῦ) is given as the distance between Olivet and Jerusalem (Acts 1:12). According to Josephus this was six stadia, which would be 1,237.8 yards. Another explanation is based on Exod. 16:29, which forbids a man's leaving his "place" on the sabbath, and Josh. 3:4, where the distance between the people and the ark is given as *ca.* two thousand cubits. Presumably some could go to the ark to worship on the sabbath. So the sabbath day's journey would be *ca.* two thousand cubits.

E. **MEASURES OF AREA.** 1. **Egyptian.** In Egypt the cubit (*mh*) was used in computing areas. A strip of land one cubit wide and a hundred cubits long was reckoned as a cubit in area. A hundred cubits—i.e., an area a hundred cubits square—was a *ṣṭ't*, like the Greek *aroura*. This is estimated as *ca.* 2,735 square meters or approximately two thirds of an acre. A half *ṣṭ't* was a *rmn*, a quarter a *ḥsb*, and an eighth a *s'*. Ten *ṣṭ't* were a *ḥ'*, which means a thousand—i.e., a thousand cubits, as above.

2. **Mesopotamian.** In Babylonia and Assyria it was customary to measure land by units of capacity; an area was measured by the quantity of seed (presumably barley) necessary to sow it properly. Thus we have such expressions as an *imeru* of land. There would be variations depending on the rate at which the seed was distributed and the distance between furrows. On occasion areas are described by linear measures. Thus a piece of land could be described as a *NINDA* square. The relative literature is complicated, as the measures varied in different times and places.

3. **Israelite.** There is no special terminology for measures of area in the OT. The word צֶמֶד, *ṣemedh* (Ugaritic *ṣmd*), means "stick" or "yoke," by metonymy a pair of oxen. The *ṣemedh* is presumed to be what a yoke of oxen could work in a day. In I Sam. 14:14, Jonathan and his armor-bearer are said to have killed *ca.* twenty men within *ca.* half a furrow's length (KJV half an acre) in a *ṣemedh* of land. The Hebrew of the clause is not clear; the LXX indicates a different text; the Vulg. translates צֶמֶד by *jugerum* (etymologically related to *jugis*, "yoke," which means a measure of land containing 28,000 square feet, approximately five eighths of an acre). In the KJV the word מַעֲנָה, *ma'anā*, is translated "acre," and *ṣemedh* regularly "a yoke." In Isa. 5:10 the word צֶמֶד is interpreted "acre" in the KJV-RSV, *jugerum* in the Vulg., and "yoke of oxen" in the LXX. Clearly it indicates a measure of land.

Elijah's trench about his altar on Mount Carmel was as great as would contain two sheaves (KJV-RSV "measures") of seed (I Kings 18:32). See § C4f above.

From Talmudic sources it is evident that the Israelites and Jews, like the Babylonians and Assyrians, estimated acres by processes of seeding.

F. **CONCLUSION.** No weight or measure in biblical times was sufficiently fixed to enable us to give its

exact metric equivalent; but there were ideals for just balances, just weights, and just measures. There were different standards in the various countries of the Near East; and frequently two standards, such as short and long, light and heavy, common and royal, were used simultaneously in the same country. Generally the evidence is clear enough to give us approximate values for the metrological terms.

WELLS. Because of the scarcity of rainfall, wells have always been important in Bible lands, and they are mentioned frequently in the Bible. Their depth and shape often vary in accordance with the type of soil and the water level, some being shallow pits and others great shafts many feet deep. This variety makes it difficult to choose the most descriptive English word for translation. See CISTERN; FOUNTAIN; PIT; RESERVOIR; WATER; WATER WORKS.

The most common word for "well" is בַּר (Gen. 21:30; Num. 21:18; etc.; but see Gen. 14:10; Pss. 55:23—H 55:24; 69:15—H 69:16, where the meaning is "pit"). The root בַּר occurs in several place names such as BEER (Num. 21:16); BEER-ELIM (Isa. 15:8); BEER-LAHAI-ROI (Gen. 16:14); BEEROTH (Deut. 10:6); and BEER-SHEBA (Gen. 21:14), where famous wells were located.

Other words for "well" are: בּוֹר, בּוּר (I Sam. 19:22; II Sam. 23:15; the RSV often uses "cistern" where the KJV has "well"—e.g., Deut. 6:11; II Chr. 26:10; Neh. 9:25); מַעְיָן (Isa. 12:3; the RSV often uses "spring" where the KJV has "well"—e.g., Josh. 18:15; II Kings 3:19); מַקְוֵה (Prov. 10:11 KJV [RSV "fountain"]); עַיִן (Neh. 2:13, with RSV "Jackal's Well"; the RSV usually uses "spring" where the KJV has "well"—e.g., Gen. 24:13; Exod. 15:27). Greek words are πηγή (John 4:6) and φρέαρ (John 4:11).

Biblical wells were located in the wilderness (Gen. 16:14), in valleys (Gen. 26:17), near cities (Gen. 24:11), in fields (Gen. 29:2), and in courtyards (II Sam. 17:18). They were especially important in a nomadic society (Gen. 26:18), supplying water for both families and flocks (Gen. 29:2). The water supply of villages and cities from cisterns and springs was often supplemented from wells (I Sam. 19:22; II Sam. 23:15; John 4:6). Because of their importance the possession of wells was frequently a cause of strife (Gen.

26:20-21), one which has continued among the Bedouins.

Some wells were large enough for men to enter as places of concealment (II Sam. 17:18-19). The mouths of the wells were covered, doubtless to keep the water clean and to prevent persons or animals from falling in (Gen. 29:3; Exod. 21:33, where "pit" refers to a type of well). Water was carried from the wells in jars (Gen. 24:16) and doubtless was removed from the deeper wells by means of jars or waterskins attached to ropes (John 4:11).

In a primitive society wells, like springs and streams, were thought to be places inhabited by spirits (Gen. 16:14); the Song of the Well (Num. 21:17) is an early Hebrew folk song which suggests the Lord's power over the well. According to Gen. 26:20-22, wells were named (see ESEK; SITNAH; REHOBOTH 2) to commemorate events in tribal history. Among the figurative uses of "well" may be cited the comparison of a harlot or adventuress to a narrow well (Prov. 23:27), and that of a wicked city which keeps fresh her wickedness as a well keeps its water cool or fresh (Jer. 6:7). W. L. REED

WEN. KJV translation of יבולה (RSV DISCHARGE; see also PLAGUE) in Lev. 22:22. The reference is to a cattle disease marked by suppurating sores, perhaps symptomatic anthrax or malignant anthrax. R. K. HARRISON

WEST. See ORIENTATION.

WESTERN SEA [הַיָּם הַחֲתוּמִים, *lit.*, the sea behind]. The designation of the Mediterranean in Deut. 11:24 (KJV "uttermost sea"); 34:2 (KJV "utmost sea"); Joel 2:20 (KJV "utmost sea"); Zech. 14:8 (KJV "hinder sea"). See GREAT SEA. W. L. REED

WHALE [καῖτος (Matt. 12:40); KJV תַּנִּין in Job 7:12 (RSV SEA MONSTER); Ezek. 32:2 (*erroneously* תַּנִּים; RSV DRAGON)]. Any of several species of large warm-blooded, air-breathing sea mammals of the order Cetacea.

Quite apart from any belief they entertained about mythical monsters in the seas, the biblical Hebrews may have known or heard about various large marine animals, any one of which could be referred to as a "great fish" (Jonah 1:17) or as a "sea monster" or "whale" (Gen. 1:21). These terms might refer to a true fish such as the shark, some species of which attain lengths of over thirty feet. They might also designate the whales and dolphins. The whales most likely to be encountered in the Mediterranean, Arabian, and Red seas would be the humpback whale (*Megaptera böops*) and the fin whale (*Balaenoptera*); the dolphins (*Delphinidae*) might be Risso's dolphin (*Grampus griseus*), the common dolphin (*Delphinus delphis*), and the bottle-nosed dolphin (*Tursiops tursio*). W. S. McCULLOUGH

WHEAT [חִטָּה, *hittâ* (cf. Aram. חִטִּין, *hittin*; Ugar. *hitt*; Arab. *hinta*); בָּר, *bar* (alternately GRAIN; KJV alternately CORN); דָּגָן, *dāghān* (RSV GRAIN); KJV רִיפְחוֹת, *riphōth* (Prov. 27:22; RSV CRUSHED GRAIN; in II Sam. 17:19, RSV GRAIN; KJV GROUND CORN); σῖτος]. An annual grass, *Triticum aestivum* L. or *Triticum durum* Desf., which

produced one of the most important grains for food in ancient biblical times. It has been cultivated for food in the area at least since Neolithic times.

The KJV translates *bar* with "wheat" in Jer. 23:28; Joel 2:24; Amos 5:11; 8:5-6 (the RSV retains "wheat" in Jer. 23:28 and the passages in Amos), while elsewhere the word is given its more general meaning, "corn" (i.e., "grain"; so RSV). "Wheat" is also found in the KJV for *dāghān* in Num. 18:12; Jer. 31:12, where "grain" (so RSV) is expected. *Rîphôth*, which probably meant "crushed grain," is translated "wheat" in Prov. 27:22 KJV (cf. II Sam. 17:19, where the KJV has "ground corn" for the same word). For related words, see BREAD; FLOUR; GRAIN; SHIBBOLETH.

Botanists have disagreed concerning the identification of the many species and subspecies of wheat, but recent studies have classified them according to chromosome count—i.e., I Einkorn, 14; II Emmer, 28; and III Spelt, 42. Zohary (see FLORA §§ 1a-b) claims that the biblical wheats were from the emmer class, *Triticum dicoccoides* (Koern) A. Schulz and *Triticum durum* Desf.; but other botanists identify them with the spelt class, *Triticum spelta* L. and *Triticum aestivum* L. (common bread wheat). The former is common to Egypt and southerly areas, while the latter is common to Asia Minor and more northerly areas. The absence of wild specimens of the spelt group in Palestine today (they are common to N Syria) argues in favor of Zohary's position (cf. references to wheat in Egypt: Exod. 9:32, etc.). Gen. 41:5-7 clearly refers to *Triticum compositum* L. (spelt group), club wheat, in Egypt.

The presence of both *kšmm* (Hebrew *kussemeth*) and *hîl* in Ugaritic texts from N Syria, where the spelt group is common, implies that there the words referred to that group of wheats. Thus it seems probable that *hîlîdā* was used for both kinds of wheat, and *kussemeth* for inferior varieties of them. See SPELT.

The harvest of wheat was an ancient time reference (Gen. 30:14; Exod. 34:22; Judg. 15:1; cf. GEZER CALENDAR), the Feast of Weeks (i.e., of the wheat harvest; see WEEKS, FEAST OF) being one of the three principal ancient yearly festivals (Exod. 34:22; Num. 28:26-31). There are frequent references to the processing of wheat: harvesting (Ruth 2:23; I Sam. 6:13), threshing (Judg. 6:11; I Chr. 21:20), cleaning (II Sam. 4:6), and winnowing (Matt. 3:12). Wheat was an important item of trade with Tyre (I Kings 5:11—H 5:25; II Chr. 2:10, 15—H 2:9, 14; Ezek. 27:17 [cf. Acts 12:20; Rev. 18:13]). Poetically, wheat appears as a symbol of God's care (Ps. 81:16—H 81:17; 147:14) or of a curse (Job 31:40; Jer. 12:13), and of the beauty of the bride (Song of S. 7:2—H 7:3). In the NT wheat is mentioned in allegory (Matt. 3:12; Luke 3:17) and parable (Matt. 13:25-30; Luke 16:7). Paul (I Cor. 15:37) and John's Gospel (12:24) use the sowing of the wheat kernel to illustrate the transformed spiritual life.

Grains of wheat, mostly carbonized, have been discovered in several excavations in the Holy Land (frequently in the tombs of ancient Egypt). About a bushel of what was probably wheat has come from Dhiban (ancient Dibon, capital of Moab), illustrating the importance of Transjordan as a grain-producing country (Gen. 30:14; II Chr. 27:5).

J. C. TREVER

WHEEL [גלגל, 'ôphan; Heb. and Aram. גלגל (usually *galgal*; cf. *gilgal* in Isa. 28:28), from גלגל, roll; τροχός (Jas. 3:6), from τρέχω, run]. A disk or circular object capable of turning on a central axis. The OT writers took the wheel for granted and were probably unaware that it had been invented in Mesopotamia before 3000 B.C.

1. Structure
2. Vehicles
3. Temple stands
4. Yahweh's throne
5. Figurative use

1. Structure. Early wheels were of solid wood, and were often in three parts, plus rim, perhaps because of the scarcity of wide planks (Fig. WHE 21; cf. CHA 23). Doubtless this type of wheel survived into the biblical period. But the spoked wheel, which was developed ca. 2000 B.C., is well known in the

Courtesy of the University Museum of the University of Pennsylvania

21. A plaque found at Ur, showing a war chariot with wooden wheels

OT, and in I Kings 7:33 certain wheels (see § 3 below) are reported to have had axles, rims, spokes, and hubs, in this instance of cast bronze. Figs. CAR 15; CHA 24.

2. Vehicles. The wheel was used on wagons or carts (Isa. 28:27-28) and also on chariots (Exod. 14:25; Isa. 5:28; Jer. 47:3). "Wheel" by metonymy may designate any of these vehicles (Ezek. 23:24; 26:10; Nah. 3:2).

3. Temple stands. In the account of Solomon's temple, ten "stands" are described, each with four wheels (1½ cubits in diameter), and upon these stands were placed the ten lavers of the temple court (I Kings 7:30-33). See TEMPLE, JERUSALEM, § A1a.

4. Yahweh's throne. In Ezekiel's visions of the Divine Presence (1:4-28; 10) there appear the four cherubim who support Yahweh's throne, beside each of whom is a gleaming wheel (possibly a double wheel) equipped with eyes. The significance of these wheels can only be surmised: perhaps we have an echo of the chariot of the sun-god (cf. II Kings 23:11). In Dan. 7:9 these wheels have become the wheels of God's throne, as they are in Enoch 14:18. Later, however, in Enoch (61:10; 71:7), the wheels of Ezekiel ('*ôphannîm*) have been transformed into the angels Ophanin, who like the Seraphim and Cherubim guard the divine throne.

5. Figurative use. A broken wheel at a cistern or well, making it impossible to draw up the life-giving water, supplies a metaphor for death in Eccl. 12:6.

In Ps. 77:18—H 77:19 "wheel" (*galgal*) appears to mean "whirlwind." In Ps. 83:13—H 83:14; Isa. 17:13, the same word (RSV "whirling dust") may refer to the "wheel-shaped dried calix of the thistle *Gundelia Tournefortii*."

Driving a wheel (of a royal chariot) over the wicked (Prov. 20:26) is presumably a figure for their punishment.

Ben Sirach alludes to the heart of a fool as a "cart wheel" (Ecclus. 33:5).

The meaning of the phrase "wheel of origin (or creation)" in Jas. 3:6 is uncertain. Moffatt renders it the "round circle of existence," the RSV the "cycle of nature," and Arndt and Gingrich "course of life."

W. S. McCULLOUGH

WHEEL, POTTER'S. See POTTER'S WHEEL.

WHELP [גור (CUB in Nah. 2:11—H 2:12; young (of jackal) in Lam. 4:3); בן, *lit.* son (of a lioness) in Job 4:11]. One of the young of a lion.

In Jacob's blessing (Gen. 49:9) Judah is praised as a lion's whelp, presumably because of his strength and alacrity in leadership (cf. Deut. 33:2, a reference to Dan). When judgment befalls Babylon, her residents

shall roar together like lions,
they shall growl like lions' whelps
(Jer. 51:38).

Judah is personified as a mother lioness, Jehoahaz and Jehoiachin as her whelps (Ezek. 19). Nineveh is compared to a lions' den in which whelps were raised (Nah. 2:11-13—H 2:12-14). Eliphaz uses figures of the lion and the lioness and her whelps for the wicked and violent (Job 4:10-11).

See also LION; DEN OF LIONS.

H. F. BECK

WHET [שטט, *also* hammer, strike, tap, sharpen (Ps. 7:12—H 7:13); שטן (Deut. 32:41; Ps. 64:3); קלקל (Eccl. 10:10)]. "Whet" is used in allusive and figurative phrases—e.g., to whet the tongue or the sword—expressing incitement and preparation for attack or other action. In Deut. 32:41; Ps. 7:12 it indicates the Lord's preparation for judgment. H. F. BECK

WHIP [שוט (I Kings 12:11, 14; II Chr. 10:11, 14; Prov. 26:3; Nah. 3:2; *alternately* SCOURGE; DIS-ASTER); φραγγέλιον (John 2:15; KJV SCOURGE)]. An instrument of punishment or of coercion, both of men and of animals. According to John 2:15, Jesus used a whip to drive the sellers, the money-changers, and the sheep and oxen from the temple. See SCOURGE.
H. F. BECK

WHIRLWIND [סערה, סערה, high wind, windstorm; סופה, destructive wind; גלגל, whirling wind (Ps. 77:18—H 77:19; Isa. 17:3)]. The designation of several types of winds. סערה and סערה are roughly synonymous and designate a violent wind or windstorm, but not specifically a whirlwind or tornado, unless the context demands it. Even Jer. 23:19 (סערה פתחולל, "whirling tempest"; KJV "grievous whirlwind") may mean no more than the swirling eddies which mark the approach of a stormwind; cf. Isa. 17:13: "whirling dust [גלגל] before the storm [סופה]."

Stormwinds are not unusual in the rainy season, but true whirlwinds or tornadoes are rare and occur chiefly near the coast in early winter when the air is unstable. Such whirlwinds as have been recorded are destructive along a narrow path, and it may be that the סערה which swept up Elijah (II Kings 2:11) was thought of as sucking him up in the funnel-shaped vortex. The chariot and horses of fire, in II Kings 2:12; Hab. 3:8, are a figure for thunder and lightning, expected to accompany a tornado.

Whirlwinds of a lesser sort are the "dust devils" or whirling columns of dust which sometimes are drawn up from a hot, dry surface in unstable air; these are probably meant by the "palm-columns [תימרות]; RSV "column"; KJV "pillars"] of smoke" in Song of S. 3:6. See PALESTINE, CLIMATE OF.

Bibliography. D. Baly, *The Geography of the Bible* (1957), pp. 65-66; D. Nir, "Whirlwinds in Israel in the Winters 1954-55 and 1955-56," *IEJ*, VII (1957), 109-17.

R. B. Y. SCOTT

WHITE. The translation of a number of biblical words, chiefly לבן and λευκός. In the OT "white" generally describes the natural color of an object—animals (Zech. 1:8), the results of leprosy (Lev. 13), stripped branches (Joel 1:7), milk (Gen. 49:12), snow (Isa. 1:18). White garments are also mentioned (Eccl. 9:8); the cloth would be washed with a detergent, bleached in sulphur fumes, and left to dry in the sun. This process is used as an analogy for the purification of the sinful man (Ps. 51:7—H 51:9; Isa. 1:18; Dan. 11:35; 12:10). In the NT white garments indicate the glory of their wearer: the transfigured and risen Lord (Matt. 17:2; 28:3), angels (John 20:12; Acts 1:10), and the various inhabitants of heaven in Revelation are so attired.

The NT also speaks of "whitewashed" (κοινάω) objects in much the same way we use the word today; on the outside everything looks fine, but within there is uncleanness and corruption (Matt. 23:27; Acts 23:3).

R. W. CORNEY

WHORE. See PROSTITUTION.

WICK [פשתל (FLAX in Exod. 9:31; KJV FLAX; TOW); λίνον (KJV FLAX)]. See FLAX; LINEN.

WIDOW [נהנה; χήρα]. Many references to the widow indicate that hers was an unfortunate state and that she was frequently subjected to harsh treatment. As an object of public concern she is often linked with the orphan or fatherless. When judgment and destruction threaten or are imagined as having come, she is included among its victims. A special class of widows is found in the early Christian community. Cities may be symbolically designated as widows.

1. Laws concerning widows
 2. Harsh treatment of widows
 3. The widow as an object of compassion
 4. Special class of widows in the Christian community
 5. Symbolical use of the term
- Bibliography

1. **Laws concerning widows.** "In every code except the Hebrew, the widow has rights of inheritance but in Hebrew law she is completely ignored" (see the work of T. J. Meek in the *bibliography*). One reason for this strange neglect may be the Hebrew belief that death before old age was a calamity, a judgment for sin which was extended to the wife that was left. It was therefore a disgrace to be a widow (Ruth 1:20-21; Isa. 54:4: "the reproach of your widowhood"). On the other hand, several laws do consider her plight or recognize her existence. The law of levirate marriage, whatever its primary purpose, gives her considerable security (see MARRIAGE § 1g; INHERITANCE). A childless widow could return to her father's house, at least if she was the daughter of a priest (Lev. 22:13; cf. Ruth 1:8), where she might wait for a levirate marriage, even with a late husband's brother who was too young for marriage or not yet born (Gen. 38:11; Ruth 1:11). But if there were no brothers or if they were too poor to support the widow, she was without other recourse. The law gave her some recognition, nonetheless. If she took an oath, it stood, since she had no husband who might revoke it (Num. 30:9). The widow could remarry (Lev. 21:14; Ruth 1:9, 13; I Sam. 25; Ezek. 44:22).

2. **Harsh treatment of widows.** The stern condemnations voiced by the prophets and other writers against injustice include attacks upon the mistreatment of widows (Isa. 1:23c; 10:2; cf. Job 22:9; 24:3; 31:16; Ps. 94:6). In the day of judgment God will take swift action against those who oppress hired laborers and the widow and the orphan (Mal. 3:5). The prominence of these strong words of denunciation abundantly testifies to the prevalence of oppressive treatment of the widow in biblical society. "Widow" in Hebrew resembles the word meaning "be mute," דלם, suggesting the muteness induced by disgraceful widowhood. Her plight may have been aggravated by the possibility that she wore identifying garments (Gen. 38:14, 19).

3. **The widow as an object of compassion.** The biblical concern for the widow is evidence that she needed it because of her inferior position in the com-

munity. She evidently had only the protection which public compassion afforded her by acts of charity and justice. The Law and the Prophets, as well as some of the Writings of the OT, contain evidence of this situation. It appears also in NT writings. As a member of the covenant community the widow must receive the same merciful treatment as that which is given to the sojourner and the fatherless (Deut. 14:29); her garment must not be taken in pledge (24:17; cf. Amos 2:8), because she may own only one, in all likelihood. The process of gathering grain and grapes should take into account the hunger of the widow and leave some of the harvest for gleaning purposes (Deut. 24:19-21). The Levite, the sojourner, the fatherless, and the widow are to be given the tithe of the produce in the third year (26:12; cf. 27:19).

The widow is under the special care of God, who provides her with food and clothing (Deut. 10:18). So gracious will be the kindness of God that he will sustain the fatherless children and preserve the widows if they put their trust in him (Jer. 49:11). God is declared to be the "father of the fatherless and protector of widows" (Ps. 68:5). He watches over the forlorn and needy, the fatherless and those without husbands (146:9). Jesus reaffirmed the biblical view of God's concern for the widow by speaking with anger of those who devour widow's houses and then make long prayers (Luke 20:47). This biblical emphasis is interestingly paralleled by a passage in the so-called "Legend of King Keret" (see *bibliography*): "Thou [the king] didst use to judge the cause of the widow . . . to drive out them that prey upon the poor" (Krt. C:45). God's compassion for the widow must be reflected in the concern of the faithful for her welfare (Jas. 1:27).

4. **Special class of widows in the Christian community.** Judging from the language of I Tim. 5:3, 9, there appeared in the early church a group of women called "real widows" (cf. Acts 6:1; 9:39). This was a group to which not all women who were widows could belong. The passage cited states that the "real widow" is to be honored. She must learn her religious duties as these relate to life in her own family, and help her parents. She sets her hope on God and engages in prayer day and night. She must be at least sixty years of age and married only once. Her duties include rearing of children, showing hospitality, "washing the feet of the saints," and helping the needy. Younger widows should not be enrolled as "real widows," for they will desire to marry again (I Tim. 5:11). The existence of this order of widows is attested by early church leaders, such as Ignatius (Smyr. 13:1) and Polycarp (Phil. 4:3).

5. **Symbolical use of the term.** The term for "widow" is applied to the city of Babylon. To her will come both widowhood and loss of children (Isa. 47:9)—loss, i.e., of her population. Desolated Israel is to be of good cheer and to forget the "reproach of [her] widowhood" (54:4d). Sad at heart, one poet says that Jerusalem sits lonely; she has become like a widow (Lam. 1:1). Another cries out: "Our mothers are like widows," and then mentions poverty and servitude as proof of this (5:3-4). A Christian seer hears an angel cry out that Babylon is fallen

and another voice exclaim that she is complacent, confidently declaring: "I am no widow, mourning I shall never see" (Rev. 18:7d).

WIFE. See MARRIAGE.

WILD ASS [ערוֹד (Job 39:5; also SWIFT ASS), Aram. ערר (Dan. 5:21), cf. Arab. 'arida, flee; 'ard, ass; פראס (פרה in Jer. 2:24; KJV WILD MAN in Gen. 16:12), cf. Arab. fara'a, wild ass; Akkad. parū, mule]. A wild quadruped, *equus hemionus hemihippus*, of the horse family, known also as the onager. For the domesticated animal, see Ass.

In the biblical period and for centuries later, wild asses roamed the less settled parts of Western Asia. Xenophon (end of the fifth century B.C.) refers to these animals in the Mesopotamian region (*Anabasis* I.5), as does A. H. Layard in the nineteenth century (*Nineveh and Its Remains* [1849], I, 324-25). For H. B. Tristram's account of wild asses in the deserts of North Africa, see *NHB* 41-43.

Wild asses, swift and untamable, are usually referred to in the OT either to reinforce a point that is being made, or in a figure of speech. In Gen. 16:12 the intractable Ishmael is described as, literally, the "wild ass of mankind." In Isa. 32:14 the presence of wild asses in what was formerly a human habitation suggests the complete absence of men, and in Jer. 14:6 the threatened drought will be so complete that even the wild asses will suffer. Hosea compares Israel to a solitary wild ass wandering off to Assyria (Hos. 8:9), and Jeremiah takes up this figure to assert that the people's devotion to the baals is like the lust of a wild ass in heat (Jer. 2:24). The reference to wild asses in Dan. 5:21 emphasizes the extent of the change in Nebuchadnezzar's fortunes. In Ps. 104:11 wild asses share with other animals in the waters provided by the Lord. It is in Job that we find more allusions to the wild ass than in any other OT book: to its braying (6:5), its colt (11:12), and the Lord's giving it freedom to roam the steppe (39:5-8); this wilderness, however, is the proper habitat of wild asses and the like, and poverty-stricken men who go there do so only in desperation (24:5).

WILD GOAT [קִיָּו, possibly suckling; cf. נָקָה, to suck; Akkad. unīqu, kid; יעל; cf. Ugar. y'l, wild goat; Arab. wa'l, wild goat, from wa'ala, to ascend, climb]. An untamed horned ruminant mammal of the genus *Capra*, with backward-curving horns. It is believed that the wild goat of biblical Palestine was the Nubian ibex (*capra ibex nubiana*; see FAUNA § A2fiii). The allusions in the OT indicate that these animals were known to the Hebrews as living in rocky re-

gions (I Sam. 24:2—H 24:3; Job 39:1; Ps. 104:18). The feminine word, יעלה ("doe"; KJV "roe"), is used in a complimentary sense of one's wife in Prov. 5:19.

Bibliography. Rock drawings from Petra and vicinity (probably pre-Islamic but later than A.D. 100) point to the ibex as a common game animal hunted with the dog and the bow. See *BASOR*, no. 142 (April, 1956), p. 30; *BA*, vol. XIX, no. 2 (May, 1956), p. 33. Somewhat similar drawings in the Negeb are described by E. Anati as pictures of antelopes in *Archaeology*, VIII (1955), 31-42. For wild goats in Palestine in the nineteenth century, see Tristram, *NHB* (1867), pp. 95-97. W. S. McCULLOUGH

WILD GOATS' ROCKS [צוֹרֵי הַיְעָלִים] (I Sam. 24:2—H 24:3); **KJV ROCKS OF THE WILD GOATS.** The location of a cave where David showed magnanimity to Saul. Although the site is not precisely known, it was in the limestone wilderness near En-gedi, ca. halfway up the W shore of the Dead Sea, where ibexes are still plentiful.

L. E. TOOMBS

WILD GOURDS [פִּקְעוֹת, bursters]. A plant with trailing, vinelike shoots, usually identified as the colocynth. It produces a fruit resembling an orange in color and shape and could easily be mistaken, as by the prophets associated with Elisha (II Kings 4:39), for an edible melon. A powerful purgative, it could be poisonous and fatal if eaten in quantity.

H. F. BECK

WILD OLIVE [עֵץ שֶׁמֶן; ἀγριέλαιος]. See OIL TREE; CYPRESS; FLORA § A9m.

WILD OX [רָמִים (רִים in Job 39:9; plural רָמִים in Ps. 22:21—H 22:22; KJV UNICORN), cf. Akkad. tēmu, wild bull; KJV תָּאוֹ (Deut. 14:5; RSV ANTELOPE)]. A wild two-horned quadruped, *bos primigenius*, called in Europe the aurochs, thought to be the stock from which the domesticated ox was derived.

The nine references in the OT to wild oxen would appear to indicate that the biblical Hebrews had some knowledge of these beasts. Not only are their horns alluded to, but their great strength is recognized (cf. Job 39:9-12). Thus the psalmist praises the Lord for having exalted his horn "like that of the wild ox" (Ps. 92:10—H 92:11; cf. Num. 23:22; 24:8; Deut. 33:17). Contrariwise, when in Isa. 34:7 it is prophesied that even the wild oxen of Edom will fall, the terrible thoroughness of the Lord's judgment on this nation is emphasized.

Wild oxen were known in ancient Mesopotamia and are mentioned in the Assyrian records (see *bibliography*). For allusions to such oxen in classical literature, see Herodotus VII.126 (in Macedonia);

Aristotle *History of Animals* 488a, 499a; Pliny Nat. Hist. VIII.30 (in Ethiopia).

Bibliography. A. T. Olmstead, *History of Assyria* (1923), pp. 64, 78, 92, 95, 240. For an illustration of the hunting of these animals, see Figure 49 opposite p. 92.

W. S. McCULLOUGH

***WILDERNESS.** The translation of several different words (מדבר, וְשִׁמּוֹן, עֲרֵבָה, ἔρημος, etc.); often used interchangeably with "DESERT." An accurate translation is difficult, because the so-called wilderness regions included arid and semiarid territory as well as sandy desert, rocky plateaus, pasture lands, and desolate mountain terrain. Such regions existed in Canaan (see PALESTINE, GEOGRAPHY OF) and beyond its E and S borders (see ARABIA; SIN, WILDERNESS OF). "Wilderness" is mentioned also in connection with the following: BEER-SHEBA; BETH-AVEN; DAMASCUS; EDOM; ENGEDI; ETHAM; GIBEON; JERUEL; JUDAH, HILL COUNTRY OF; KADESH; KEDEMOTH; MAON; MOAB; PARAN; SHUR; SINAI; TEKOA; ZIN; ZIPH 2.

WILL. The translation of διαθήκη in the NT. The word does not occur in the OT, but a common Hebrew term, ברית, meaning "covenant, agreement, alliance," is translated by διαθήκη in the LXX. This Greek word had the meaning of "will" exclusively in Hellenistic times. When it is used for ברית, the sense of "will" is lost, although one aspect is retained—namely, the idea that the διαθήκη is the declaration of the will of one person and not the result of an agreement between two parties; God alone determines the conditions of the covenant.

In the NT a man's "will," in the human context, may not be annulled once it has been ratified (Gal. 3:15; RSV mg. "covenant"). This reference deals primarily with the appointment of an heir. Irrevocability was a characteristic of such a will in Greek communities, while in Roman practice a will could be revoked by the testator at any time before his death. In another passage, "where a will is involved, the death of the one who made it must be established" (Heb. 9:16) before the promised inheritance can become effective (vs. 17). Apart from these passages, διαθήκη regularly expresses the idea of COVENANT (Luke 1:72; Acts 3:25; Rom. 11:27).

O. J. BAAB

WILL OF GOD. "Will" as applied to God must be understood in terms of its meaning with reference to man. It is an act or process of volition; something wished by a person, especially one with power or authority; strong purpose, intention, or determination; power of self-direction, or self-control; conscious and deliberate action or choice; disposition or attitude toward others.

The intention herein is to note how this concept is applied to God by biblical writers, and to observe also how they relate it to the will of man, to phenomena of the natural world, and to the course of history, as well as to discuss the views of science and philosophy concerning the issues raised.

1. Terminology
2. The Creator
 - a. The natural world

- b. The creation of man
 - c. The kingdom of God
 - d. Satan overcome
 3. The humanity of God
 4. Will of God and will of man
 5. Will of God and moral law
 6. Is anthropomorphism true?

1. **Terminology.** Biblical Hebrew contains a variety of verbs carrying such meanings as "to determine," "to desire," "to take pleasure in," "to favor," "to love," "to choose," "to please," "to covet"; and nouns for "favor," "grace," "purpose," "delight," "pleasure," and "will." These words are applied to God as well as to man, carrying the implication of full personality. But there is no word in biblical Hebrew for "will" in the technical psychological sense in which it is used in scientific studies of personality.

E.g., the noun נָפֶשׁ is used with reference to God in Isa. 44:28; 46:10; 48:14. In each case it is translated in the RSV as "purpose," and in the Vulg. as *voluntas*. In 44:28; 48:14 the LXX uses θέλημα, but in 46:10, βουλή. "Will" is used here in the objective sense of "purpose," or "commandments which one can keep."

Another Hebrew word for "will" is רָצוֹן, which occurs in Ezra 10:11; Pss. 40:9; 103:21; 143:10. In every case it is rendered as "will" by the RSV. In Ezra 10:11 the LXX uses ἀρεστόν, and the Vulg. has *placitum*. For all the passages from Psalms the LXX gives θέλημα; the Vulg., *voluntas*. Here also the reference is to the objective will of God, which a person can keep, not to will as a subjective psychological process. There is no indication of an effort to distinguish between will, feeling, and intellect. There is no speculation about the psychological constitution and nature of human personality.

Biblical language with reference to man is functional and practical. Without being critically concerned about it, ancient Hebrews tended to treat personality as an unanalyzed unity, with no interest along philosophical lines. Their language contains no words for abstractions. They were familiar with will as desire and as an act of desire, but not with will as a faculty of the mind as contrasted with intellect, feeling, or emotion. Our study of the will of God, so far as Hebrew is concerned, therefore, is not based on Hebrew words, but on actions ascribed to God, and various roles attributed to him by Hebrew writers in the course of the development of their culture and religion.

Almost the same situation is found in the Greek of the NT. The will of God is usually expressed by θέλημα, and in most cases it means God's objective will, which one can keep. In Matt. 7:21, Jesus speaks of ὁ ποιῶν τὸ θέλημα τοῦ πατρὸς μου, "he who does the will of my father." In John 4:34 he says: ποιήσω τὸ θέλημα τοῦ πέμψαντός με, "[I] do the will of him who sent me." These passages use "will" with the meaning which we have noted in the LXX.

However, there is evidence of the beginning of a use of θέλημα in the psychological sense. E.g., I Pet. 3:17 says: εἰ θέλοι τὸ θέλημα τοῦ θεοῦ (lit., "if the will of God should desire it"). Even more to the point is II Pet. 1:21: οὐ γὰρ θελήματι ἀνθρώπου ἠνέχθη προφητεία ποτέ, "No prophecy ever originated by

the will of man." In these words from the latest document of our NT, we probably have the closest approach to the true psychological concept of will which occurs in biblical literature. It is, of course, a reference to the will of man, but it would imply by contrast the will of God. It shows that by the middle of the second century Christian thought was beginning to adapt itself to the abstract pattern of psychology. But generally speaking, θέλημα and related nouns and verbs are used in the NT with essentially the same meanings which they have in the LXX, and in their Hebrew prototypes. Although there are minor exceptions, on the whole, NT thought remains prephilosophical.

2. The Creator. There are at least four distinct strands in biblical thought which present God as Creator. Each of these in its own unique way reveals a conception of the will of God. The idea is derived from attitudes and actions attributed to God in the different phases of creation. The role which God takes in each case is like that of a man, and his will is analogous to the human will. The four presentations of creation cover the entire range of biblical revelation, and, because of the contrasting nature of the stories themselves, they give a vivid portrayal of the will of God as it was apprehended by the people of the Bible.

a. The natural world. The most primitive idea of the creation of the natural world is contained in a few allusions to an almost forgotten epic of the slaughter of RAHAB, the dragon of the sea, by Yahweh. It appears in the great poetry of Job 9:13; 26:12; Ps. 89:9-10; Isa. 51:9-10. These faint echoes out of the past remind us of the Babylonian myth of the slaughter of Tiamat by Marduk; the Rig-Vedic combat between Indra and Vritra; and, among others, the Shinto myth of Susanowo and the dragon. In this primeval Hebrew story we catch a glimpse of creation as Yahweh begins to impose his will upon chaos in a violent combat. He slays the dragon of the sea. God is the cosmic warrior. He wins the contest by the skill of his mighty arm.

The J story of Gen. 2:4-24 (see PENTATEUCH § A3) in its fascinating way relates how Yahweh created man, animals, birds, and woman. He forms the bodies of man and the animals and birds out of the formless earth, but makes woman out of one of man's ribs, which he takes from man's side after he has put him to sleep. Moreover, he plants a garden in Eden as their home. This story presents God, first of all, as a potter shaping forms out of clay; second, as a gardener selecting and planting appropriate seeds for his paradise; and third, as a surgeon, who puts man to sleep and deftly removes a rib and builds it into a woman. No greater contrast can be imagined between conceptions of will than that between the ferocious conqueror of Rahab and the gentle Yahweh who presides over the pastoral scene of Eden.

The most complete and advanced account of the creation of the natural world is given by P in Gen. 1:1-2:3. It begins with a picture of chaos. What is to become the earth is still formless substance floating in a primeval sea, which is shrouded in darkness, but the Spirit of God is moving over it. Creation takes place as God brings his omnipotent will to bear upon

this orderless mass in a series of seven decisive actions, each of which in turn is one day of time. The seven days are the world's first week. Creation begins on Sunday. On that first day God creates light, and then divides it into day and night. On the second day he creates the sky, which is a solid dome. It separates the waters which are above it from those which are below it. This firmament of sky God calls the heavens. On the third day God divides the waters below the heavens into the dry land and the seas. Then he causes the dry land to produce vegetation. On the fourth day the sun, moon, and stars are created and set in the sky to be signs of day and night and the seasons. On the fifth day God creates living creatures of the sea and birds. On the sixth day he makes land creatures of all kinds, including man. With his labors finished, on the seventh day God rests from all that he has done. He blesses this seventh day and sets it apart. This is the origin of the Hebrew sabbath.

The unique element in this story is the omnipotence of God's will. Unlike the primordial struggle with chaos, in which Yahweh slaughters the dragon in fierce combat, in this majestic conception there is no exertion of physical energy whatever; nor is there the experimental hesitation of Yahweh in Eden as he makes one animal after another in search of a suitable companion for man. Here God has omniscience, omnipotence, certainty, precision, complete mastery. The strength of his will is absolute. He creates by merely uttering a word. His role has no complete human analogue. Remote similarities are suggested by persons occupying positions of great power, such as rulers, military leaders, presidents of corporations, architects, engineers, or surgeons, whose simple commands are enough to inaugurate and carry to their consummation gigantic enterprises or operations. Perhaps the nearest analogy is the shaman, thaumaturge, or magician of primitive life, the mana of whose incantations is supposed to be automatic and instantaneous. But this primitive concept also falls short. God uses no magical device; he utters no incantation; omnipotence is within himself; his word is self-sufficient. There is no uncertainty, no struggle, as he transforms chaos into the natural world, which in his sight is good.

b. The creation of man. As was noted above, the creation of man, on the biological level, belongs to the natural order. The structure of his body and his cycle of life are in essential ways like those of the animals. Yet this is only one aspect of man. Far more important is that which differentiates man from the animals and gives him a unique position in the world. That which distinguishes man from all the animals is the high quality of his intelligence and his freedom of will. This is what P means in Gen. 1:26-27 when he says that man is created in the image of God. In other words, he means that to be in the image of God is to have intelligence and freedom of will. In this respect man is like God; this is something which cannot be said of any of the animals, to which man is biologically related. It could not be said that the animals are created in God's image. They lack both his kind of intelligence and his freedom of will. It is in this way that we are to understand how P could say that God gave man

dominion over every other form of life on the earth.

This conception of man is assumed as the presupposition of biblical religion. One cannot understand the Bible unless he keeps this high conception in mind. But even biblical writers at times express amazement at man's position on the earth. The author of the eighth psalm, e.g., as he contemplates the beauties of the natural world, feels a sense of humility and wonder when he ponders the dignity of man.

The unique nature of man allows us a deeper insight into the will of God. Man's intelligence and freedom of will constitute him a moral being. He may choose evil as well as good, but he cannot avoid the issue of morality. As God has chosen to give man this moral capacity, it is evident that to this extent he must refrain from the exercise of his own omnipotent will and deal with man on a moral level. The creation of man's moral nature introduces a vastly complicated factor into the drama of the divine will.

Whereas P has consolidated his view of the moral nature of man into the remarkable concept of the image of God, J has dealt with this mystery of man's character in the wonderful story of Gen. 3. This allegory portrays man's moral life at the same time that it delineates the will of God. At the moral level the will of man and the will of God impinge upon one another, and light on one clarifies the other. The four characters in the short story are God, Adam, Eve, and the serpent. Submotifs are physical death, fear of serpents and their habits, suffering and subjection of woman, and the custom of wearing clothing. But man's moral nature is the real theme. Four elements which enter into the moral act are the standard of right, which God himself defines, and desire, freedom of will, and intelligence, which are characteristic of human nature. Reason enters in the cynical role of the serpent, who casts doubt on the wisdom of God and then rationalizes the uninhibited satisfaction of desire. This is the eternal picture of man's moral life. God tells him what is right, but then allows him freedom to see what he will do. Man's desire causes him to become a cynic and indulge in self-expression. The same divine act which creates the possibility of moral character in man opens the door to sin, with all the tragedies which follow upon it. The cause of man's plight is not ignorance of the right, but his own desire, which leads him to substitute his will for the will of God. According to the story of Eden, rebellion against God is the dominant tendency of the human will. By deliberate choice man separates himself from God, who creates him and gives him freedom. It is characteristic of the natural state of man, therefore, to be in need of reconciliation and redemption.

c. The kingdom of God. The third stage in the expression of the divine will, as it is revealed in the Bible, is the creation of the KINGDOM OF GOD. It presupposes, absorbs, and transcends the creation of the natural world and man. In fact, both the earlier processes continue. New forms of energy, life, and morality reveal the continuous action of God's will.

God's kingdom begins in the natural world with one man, but its basic concept is the society in which man lives. It is a social order in harmony with God's will. The biblical story begins with Abraham (Gen. 12:1), and unfolds with the growth of his family and

descendants into the Hebrew nation. God prospers his people so long as they keep faith with him. Like Adam, they have to deal with God on a moral basis. The concept of morality is broadened and deepened with the centuries.

In time it was revealed to prophets like Amos (9:7-8) that the Hebrew nationalistic view of God's kingdom was parochial; that God's will included all nations; that God was leading other peoples too; that God's revelation, grace, and redemption were available to all the world. This expanding concept of the kingdom of God was grasped by all the great successors of Amos. The author of Jonah put it into his powerful story as the high point of OT revelation.

But Hebrews found it impossible to give up their nationalistic idea of God's kingdom. This is the basic reason why as a people they rejected Jesus and the Christian gospel of the divine will, in which all forms of nationalism and racialism are repudiated. Building on the broad foundation of the prophets, the NT reveals the will of God to extend his kingdom to every frontier of human habitation. Yet his means of conquest is moral and spiritual. The divine will never coerces man's will, but whoever responds to the overture in Christ finds redemption.

d. Satan overcome. The victory over Satan is the supreme revelation of the will of God in the Bible. Satan finds no place in the early religion of the OT. He appears first in Job 1:1-2:7, where he is the cynical scoffer at moral integrity. Zech. 3:1 gives a glimpse of Satan accusing the high priest before the angel of the Lord. I Chr. 21:1-6 tells how he incited David to introduce military registration. But after these allusions in the late OT writings, Satan achieved full stature as the archrebel against God's will, and the tempter of man. But he also seeks to disorganize, defeat, and destroy man through dangerous creatures of nature (Luke 10:17-19) and diseases, especially mental illness, which the Bible calls demon possession (Luke 11:20; see DEMON; DEMONIAC). Satan is also the prince of this world (Matt. 4:8-10), who permits human kings to serve only as his vassals.

In the concept of Satan the struggle of the will of God to establish the kingdom takes place on a transcendental plane. What we have already seen in the creation of nature, man, and the kingdom of God is now absorbed into a struggle between God and Satan, in which no quarter is given. Satan is supported by the demons, while God works through his Son and the angels.

In this last act of the biblical drama we are reminded of the first. Rahab, who was slain by Yahweh, and the serpent, who led Eve astray, are still carrying on their demonic work. The ancient myth related that the dragon was slain, but now we discover that his death was only apparent. The dragon reappears in later Hebrew and Christian thought. From such passages as Rev. 12:7; 20:1-3 we learn that the combat with Satan in the form of the serpent and the dragon goes on till the end of time. The process of creation, therefore, in which Yahweh is imposing his will upon chaos, continues so long as the world stands. This conception of creation pictures God in the agony of an agelong struggle with

the hostile, rebellious, recalcitrant spirit of the world, expressed first in nature, second in man, and third in human society. Christian faith affirms that in the cross of Christ, God makes atonement for man, whom Satan has led astray; and that the final encounter comes to its close with the will of God in triumph. *See RAHAB (DRAGON); SATAN.*

3. The humanity of God. In the long course of biblical revelation God is presented in many ways, but usually he has the attributes of a man. The myth of Rahab, as we have seen, presents God as a cosmic warrior. Like a giant with good armor and weapons, he grapples with the foe. Hab. 3:1-16 presents a similar picture, where with his glory filling the heavens God mounts his war chariot, draws his bow from its sheath, fires arrows like bolts of lightning, and casts a spear at the enemy. Judg. 5:4-5 relates how Yahweh came by a swift march from Sinai to rescue the Hebrews from the Canaanites. Isa. 63:1-6 describes God as he returns from the slaughter of Edom covered with blood. It is common in the OT to refer to Yahweh as the God of hosts—i.e., of armies.

Vindictive cruelty is sometimes ascribed to the will of God. Exod. 20:5 represents God as saying that he visits sins of fathers upon their children to the third or fourth generation. According to Josh. 7:24-26, God required the Hebrews to punish Achan for his sin by stoning, not only him, but his sons, daughters, and animals to death, burning them, and raising a heap of stones over them. The same vindictiveness is reflected in II Kings 5:27, where Elisha punishes Gehazi for his avarice by afflicting him with leprosy and saying that the disease would cleave to his descendants forever. From our point of view, this is irrational cruelty, but the idea involved is a logical interpretation of a fact of nature. It is still true with us as it was with them that the sins of a father are visited upon his children. Our courts would not punish a child for his father's crime, but children nevertheless suffer from a father's evil reputation. The saying of Elisha about Gehazi's leprosy was a natural inference the Hebrews drew, lacking scientific medicine as they did, from what we know as natural facts of heredity, infection, or contagion. And if we agree that nature is created by God, we too must still grapple with this same cruel fact.

An arbitrary will is sometimes attributed to God. In the story of Exodus about the escape of the Hebrews from Egypt, it is stated several times that after Pharaoh had made up his mind to let the slaves go, God hardened his heart, so that he broke his promise. Probably the explanation of this strange phenomenon is that the Hebrews made the mistake of ascribing to God the conscienceless immorality of the king, who possessed freedom of will but felt himself bound by no moral law. A somewhat similar episode is the passage from II Sam. 24, where God first incites David to take the registration and then sends a pestilence upon the land because he has done it. But the author of I Chr. 21:1-29, who wrote a revision of this story many years later after ideas of God had changed, says that Satan was the one who incited David to make the registration, but that God punished him for doing it. As a matter of fact,

granting their theological presuppositions, both these writers, unaware of bacteria and contagion, drew logical conclusions from the data.

On the other hand, it is a commonplace in the Bible to assign a tender, flexible, responsive will to God. Gen. 18:22-23 relates that Abraham, in order to save Lot from destruction in Sodom, bargained with God as if he were a merchant in a market place. Jesus reflects the same idea by encouraging his disciples to keep on asking God for what they want. He tells about a widow (Luke 18:1-8) who finally got justice from a harsh judge as a result of her continued pleading. Luke 11:5-8 portrays a man who by persistence was able to arouse his neighbor from sleep and borrow a loaf of bread.

Biblical writers also give prominence to the idea that God's will is controlled by love. A notable example in the OT is Hosea, who presents God first as the faithful husband of Israel the faithless wife, and then as the sad father of Israel the obstinate son. This view is central in the teachings of Jesus and early Christians. Luke 15 tells three great stories—the lost sheep, the lost coin, and the lost son—to illustrate how the divine will is guided by an unflinching love.

One of the most extraordinary concepts of the Bible is that God himself must suffer in order to implement his will. God's love for man chains his omnipotent will as he beholds his own Son die. Because of the identity of Father and Son, Christian faith affirms and contemplates a God who himself dies as the ultimate revelation of his will. *See GOD, OT VIEW OF; GOD, NT; ATONEMENT; INCARNATION.*

4. Will of God and will of man. The question here is the tension between the will of God and the will of man. Does the freedom of man's will condition and set limits to the will of God? When God creates man with freedom, does this inevitably mean that God himself accepts a finite status? The general trend of biblical teaching is that God by an act of his own free will limits himself to the extent of allowing freedom to the will of man. Voluntary self-limitation, however, is far different from saying that God is finite. On the other hand, the Bible teaches that conflict arises between man and God only when man attempts to substitute his own will for the will of God; when man fails to realize that the universe in which he lives—physical, moral, and spiritual—embodies the will of God in its structure; and that a full recognition of this fact is the first presupposition of his own freedom. The freedom of God and the freedom of man do indeed constitute a paradox—not a contradiction—the resolution of which is not futile rebellion of the finite against the infinite, but the insight that it is only in the service of God that man can find freedom. *See LIBERTY.*

5. Will of God and moral law. It is accepted in the Bible that the will of God established the moral law for man. Far more difficult is the question whether God himself obeys the moral law which he prescribes. The question receives various answers. The view of Exod. 20:5 that children suffer for sins of their fathers is repudiated in Deut. 24:16; Jer. 31:29-30; Ezek. 18:2-4. In its place the prophets taught that every man suffers only for his own sin, and its corollary that man gets a just recompense in

this life. This is a sound principle as it is applied in courts of law, but when it is used as a theological concept to explain everything that happens in life, whether good or evil, it is dangerous. The idea is challenged and repudiated by the author of Job, who searches in agony for an answer to the question why innocent persons suffer. If the world is controlled by God, how are we to explain irrational tragedies resulting from heredity, infections, catastrophes of nature, and accidents of many kinds? If God is omnipotent, is he good? If he is good, is he omnipotent? If he were both good and all-powerful, would he permit irrational tragedies? One has to face the question whether God's own will is controlled by the moral law. Job's final approach was to recognize the mystery in God and the limitations of human understanding. We can see that the men of Job's time were handicapped by their humanistic view, which limited rewards and punishments to this life; they had not seen that revelation implies a hereafter, in which injustice can be rectified. Further, freedom of will requires the possibility of mistakes, accidents, tragedy. God opens the possibility of tragedy by creating man free. Moreover, through its challenge to intelligence and good will, the stern discipline contributes to moral character. It is one important means God uses in the creation of man.

6. Is anthropomorphism true? The roles attributed to God in the course of this discussion are anthropomorphic. They are roles which men normally take. He is a soldier, king, husband, or father. In each case his temperament is appropriate for the character he takes. Almost all the attributes of man are ascribed to God somewhere in the Bible. In what sense are we to understand these anthropomorphisms? Are they true? The answer is that in these varied symbols biblical writers have attempted to express what they apprehended of the divine revelation. The truth of the symbols is really the question of the validity of biblical faith. That God is personal is the deepest intuition of faith. Roles ascribed to God were refined, broadened, deepened, and came to their culmination in the conception of God as father in the words of Jesus. Faith still provides its own autonomous confirmation in the hearts of believers. See MIRACLE § 10.

WILLOW TREE [צפצפה, *şaphşaphâ*; Arab. *şafşâf*]; **WILLOWS** [עריבים, *'a'ābhîm*; Arab. *gharab*]. A tree commonly found along water courses, belonging to the genus Salicaceae, which includes both the willows (*Salix* L.) and the poplars (*Populus* L.). Both trees, each with several species, are common in the Near East. The similarity of habitat and certain structural features of these trees may have been responsible for confusion in biblical usage. Many scholars prefer "willow" for צפצפה (found in Ezek. 17:5 only) and "poplar" for עריבים (Lev. 23:40; Job 40:22; Ps. 137:2; Isa. 15:7; 44:4; cf. FLORA § A9f).

It has been suggested that the latter might refer to the oleander, which grows very prominently in some spring-fed valleys today (see ROSE). Willows and poplars are especially prominent along the banks of the Jordan River and other water courses which have a steady supply of water.

The ease with which the willow takes root from a twig is used figuratively in Ezekiel's allegory of the two eagles (17:5; cf. Isa. 44:4). The branches were used with others for the Feast of Booths (Lev. 23:40). The Jews exiled in Babylon hung their lyres on the willows (Ps. 137:2). The "Brook of the Willows" (Isa. 15:7) in Moab may refer to the Wadi el-Hesa (see ZERED, BROOK), SE of the Dead Sea. Cf. the "willows of the brook" in Job 40:22.

WILLOWS, BROOK OF THE [נחל העריבים]. A wadi on the frontier of Moab, across which the Moabite fugitives carried their possessions (Isa. 15:7). If, as seems likely, their flight was southward, the wadi in question may be the Seil el-Qurahi, the lower course of the Wadi el-Hesa (see ZERED, BROOK). Here there is a small plain, in places rather swampy and suitable for willows. E. D. GROHMAN

WIMPLE. KJV archaism used to translate מִטְפָּחָה (RSV CLOAK) in Isa. 3:22. A wimple was a covering for the head and neck, worn by women out of doors.

WIND [רוח; πνεῦμα]. There are several uses of the word "wind" in the Bible:

a) The horizontal movement of air, impressing men with its power (Job 21:18), speed (Ps. 18:10—H 18:11), emptiness (Jer. 5:13), immateriality (Eccl. 1:14), rushing sound (Acts 2:2), unpredictability (John 3:8), and variability (Eph. 4:14). It is often a storm wind (כער, כספה), and a token of God's unseen power, especially in judgment (Hos. 13:15). See EAST WIND.

b) The storm wind of Yahweh's theophany (II Sam. 22:11; Ezek. 1:4).

c) The wind (spirit?) which is Yahweh's instrument in overcoming chaos (Gen. 1:2; 8:1), and in transporting a prophet (I Kings 18:12; II Kings 2:16; cf. 2:11; Ezek. 8:3; 11:1).

WINDOW [שקף, outlook; Aram. כיון; ὄρα; KJV צוּרָה, light (Gen. 6:16; RSV ROOF); שמש, sun (Isa. 54:12; RSV PINNACLE)]. In biblical times, a rectangular opening in the wall of a house. It could be covered with latticework, which could be turned aside or through which one could look while it was closed. The movable part was called ארבה, and the opening חלון.

The "windows with recessed frames" (I Kings 6:4; Ezek. 41:16), described also as "narrowing inwards into their jambs" (Ezek. 40:16), in the temple can be illustrated from representations on ivory

WINE. From ancient times Palestine-Syria has been famous for the quality and quantity of its wine; Sinuhe reports that "it had more wine than water" (*see bibliography*). It is not surprising that the spies sent by Moses from the wilderness were impressed by the marvelous fruitfulness of the land; they were able to bring back a cluster of grapes so large that it had to be carried on a pole (Num. 13:21-27). Wine was one of the chief products of Israel throughout its history, and is naturally cited by Ben Sirach as one of the "good things . . . created for good people" (Ecclus. 39:25-26). Nor was it of less importance in NT times; wine and oil alone are to be protected from the apocalyptic famine (Rev. 6:6).

1. **Varieties.** Although wine made from dates and pomegranates was widely produced in the ancient world generally, Palestinian wine was almost exclusively fermented grape juice (cf. Song of S. 8:2, where "juice of . . . pomegranates" stands in parallel to "spiced wine"). Various methods were used for producing this wine, however, and the varieties are increased by adding spices.

a. **Terminology.** Some of the following terms for "wine" are synonyms or poetic expressions; in general, however, distinctions can be made between the various words.

a) יין. This Hebrew term, almost always rendered "wine" in both the KJV and the RSV, denotes wine in general. Statistically it is used far more often in the Hebrew Bible than any of its counterparts, and has cognates in other Semitic languages. The word may not be Semitic in origin, however; it is probable that it was imported from the Caucasus (*see bibliography*). The corresponding Greek term is οἶνος.

b) תירוש. Occasionally the KJV and the RSV translate "new wine," but the usual rendering is again simply "wine"; the LXX always uses οἶνος. The term can refer to freshly expressed grape juice (cf. Mic. 6:15: "You shall tread . . . תירוש, but not drink [the resulting] wine"; Isa. 65:8: "The new wine is found in the cluster" [KJV]). Thus the word is usually derived from the Hebrew root ירש, "to drive out." Nevertheless, the drink was intoxicating; it "take[s] away the understanding" (Hos. 4:11). In actual usage the word came to be an archaic term for "wine." It often appears with similar archaisms for "grain" (דגן) and "oil" (יצהר) in summaries of the products of agriculture (Gen. 27:28; Deut. 7:13; 11:14; 18:4; II Kings 18:32; Jer. 31:12; etc.). In later times it was used as a poetic expression for ritual wine; the Qumran texts thus use תירוש to the exclusion of יין (*see bibliography*). In the NT the term γλεῦκος refers to "new wine"; some of those who heard the speaking in tongues at Pentecost thought that the disciples were "filled with new wine" (Acts 2:13).

c) עסם. Derived from the root עסם, "to press, crush," this term literally means "juice" (cf. Song of S. 8:2), and is apparently a poetic synonym of תירוש. Like the latter, it was intoxicating; Deutero-Isaiah says that Israel's oppressors "shall be drunk with their own blood as with wine" (Isa. 49:26).

d) חבור. This is the usual word in Aramaic (Ezra

6:9; 7:22; Dan. 5:1-2, 4, 23), a poetic term in Hebrew. It is probably derived from חומר I, "to foam, ferment."

Because of its color wine could also be called the "blood of the grape" (Gen. 49:11; Deut. 32:14; Ecclus. 39:26; 50:15; cf. Isa. 63:3; Rev. 14:20). A similar phrase is found in Ugaritic epics (*see bibliography*). It is possible that this terminology was in Jesus' mind when he "took a cup, and . . . gave it to them, saying, 'Drink of it, all of you; for this is my blood of the covenant'" (Matt. 26:27-28; cf. Mark 14:23-24; I Cor. 11:25).

b. Mixed wine. In the Roman period it was quite common to mix wine with water; the author of II Maccabees says that such a mixture "is sweet and delicious and enhances one's enjoyment" (II Macc. 15:39). For the most part, however, the addition of water to wine was considered to be an adulteration. Isaiah says to Jerusalem:

Your silver has become dross,
your wine mixed with water
(Isa. 1:22).

On the other hand, wine was often mixed with spices, following the general usage of the ancient Near East. Such a drink was, of course, especially intoxicating. A cup of "foaming wine, well mixed," is prepared by Yahweh for the wicked of the earth (Ps. 75:8—H 75:9); conversely, mixed wine is appropriate at a banquet (Prov. 9:2, 5; cf. Song of S. 8:2). In general, however, "those who go to try mixed wine" have woe, sorrow, strife, and complaining (Prov. 23:29-30).

Wine mixed with MYRRH or gall was used as a drug; as an act of mercy the soldiers offered Jesus such a potion when he was hanging on the cross (Matt. 27:34; Mark 15:23).

c. Wine districts. In Egypt wines were often named after the districts in which they were produced, and although the Bible does not contain such names for Palestinian wines, certain areas were famous for their products. In Judah the district surrounding Hebron was especially noted; several of the place names have to do with viticulture (*see* ABEL-KERA-MIM; ANAB; BETH-HACCHEREM; ESHCOL 2). Transjordan was also a fruitful district; Isaiah speaks of the vine of Sibmah,

which reached to Jazer
and strayed to the desert
(Isa. 16:8).

But the wines of Syria were world-famous. Among the merchandise sent by Damascus to Tyre were "wine of Helbon . . . and wine from Uzal" (Ezek. 27:18-19). The former is mentioned as one of the ten best brands of wine in a list found in the library of Ashurbanipal, and was preferred above all others by the Persian kings.

2. Preparation. The grapes were harvested in August and September (*see* VINE § 3e) and were spread out in the sun for a time before they were made into wine. The vintage took place in September; it is mentioned in connection with the Feast of Booths, which occurs at that general time (Deut. 16:13).

a. Wine vats. Even after the invention of mechanical wine presses the produce of grapes trodden in

wine vats was preferred because of its quality and consistency. Such vats, used both in OT and NT times, consisted of a pair of square (occasionally circular) pits, usually hewn out of rocky ground.* The vat in which the grapes were trodden (גת; ληνός) was higher than its counterpart (יקב; ὑπολήνιον) and was connected to it by a channel; naturally the expressed juice flowed from one to the other. In area the upper vat was usually about twice as large as the lower; the latter, however, was deeper. The whole vat could be described by any one of the terms mentioned above, or by the term פורה (Isa. 63:3). There were individual variations in construction, of course; in Roman times three or four vats were connected by channels. Fig. GIB 31.

b. Pressing of grapes. Although heavy stones were sometimes used to hasten the production of juice, the chief method of pressing grapes was simply to

Courtesy of the Oriental Institute, the University of Chicago

24. Men pressing out wine; from tomb of Mereru-ka, Saqqarah; Sixth Dynasty (ca. 2350-2200 B.C.)

tread them by foot.* The Hebrew term used is the ordinary word for "walk" (דרך; Neh. 13:15; Job 24:11; Isa. 16:10; etc.). It was customary for several men to tread out the grapes together; this is the point of Trito-Isaiah's reference to treading the wine press alone (Isa. 63:3). Naturally the vintage season was a joyous time. The men shouted as they worked (Isa. 16:10; Jer. 25:30; 48:33), and songs were sung. Three of the psalms (8; 81; 84) have the superscription "according to The Gittith" (על־הגיתית); the root is the same as that of one of the terms for "wine vat," and it is possible that these particular psalms were vintage songs. *See bibliography*. Fig. WIN 24.

Since the harvest of olives is later than that of grapes, it is probable that wine vats were also used for making olive OIL. Furthermore, Gideon used his wine vat to beat out wheat (Judg. 6:11).

c. Fermentation and storage. The first stage of fermentation, which began as soon as six hours after the pressing, took place in the lower vat itself. Then the wine was transferred to jars (Jer. 13:12; 48:11) or skins for further fermentation and storage. These skins were usually made from whole goat hides, the neck and the feet being tied. Naturally an opening was left to allow for the escape of gases formed by fermentation. Elihu, "full of words," says:

Behold, my heart is like wine that has no vent;
like new wineskins, it is ready to burst
(Job 32:18-19).

Of course, freshly made wine was put into new wineskins; old skins would burst under the pressure (Matt. 9:17; Mark 2:22; Luke 5:37-38). *See* BOTTLE.

3. **Uses.** Because WATER was relatively scarce and often polluted in biblical times, wine was used much more extensively than it is today.

a. *In everyday life.* In addition to its use in everyday MEALS, wine was liberally provided at banquets (see BANQUET); indeed, the Hebrew word for "banquet" or "feast" is מִשְׁתֶּה, "drinking." Naturally wine was included in gifts to a superior; both Abigail and Ziba brought skins of wine to David (I Sam. 25:18; II Sam. 16:1). Correspondingly wine was an article of trade; Solomon gave the servants of Hiram, king of Tyre, twenty thousand baths of wine (among other things) in return for the timber required in the building of the temple (II Chr. 2:8-10, 15).

At the meal itself wine was strained through a cloth before it was drunk. This purified it from the LEES and foreign matter, such as insects (Matt. 23:24). Naturally, old wine was preferred to new (Ecclus. 9:10; Luke 5:39) because it was both sweeter and stronger.

Wine was used as a medicine as well as a drink. It revives those who are fainting (II Sam. 16:2), and is generally prescribed "for the sake of your stomach and your frequent ailments" (I Tim. 5:23). Furthermore, it was commonly used in dressing wounds; the Samaritans bound up the traveler's wounds and poured in wine and OIL (§ 2e; Luke 10:34).

b. *In offerings.* Wherever wine is produced, it is used in sacrifices and offerings. Libations were made to false gods (Deut. 32:37-38; Isa. 57:6; 65:11; Jer. 7:18; 19:13; etc.), but this did not prevent the use of wine in the orthodox cult. The worshiper naturally brought a skin of wine whenever he made a pilgrimage to the temple (I Sam. 1:24; 10:3). It is possible, however, that the use of wine replaced an earlier custom of offering blood; however this may be, wine was often treated as if it were blood, and was thus poured out at the base of the altar (Ecclus. 50:15; cf. Jos. Antiq. III.ix.4). But wine was never offered by itself; it was always accompanied by a lamb, fine flour, oil, or a combination of these (Exod. 29:40; Lev. 23:13; Num. 15:7, 10; 28:14; etc.). Wine was not used in the celebration of PASSOVER until Hellenistic times; it is first mentioned in Jub. 49:6. See DRINK OFFERING.

4. **Attitudes toward wine.** Wine is praised and condemned in both the OT and the NT; in this respect a sharp distinction cannot be made between the two testaments. See DRUNKENNESS.

a. *In the OT.* The earliest narratives contained in the OT seem to have a negative attitude toward wine. The J document (see PENTATEUCH § A3) presents Noah as the father of viticulture; he proceeds to become drunk and lies naked in his tent. The ultimate result is the curse of Canaan (Gen. 9:20-27; cf. 19:32-35). The prophets carry on this tradition. Isaiah condemns those who

tarry late into the evening
till wine inflames them!
(Isa. 5:11; cf. vs. 22).

Habakkuk contends that "wine is treacherous" (Hab. 2:5; cf. Hos. 4:11), and Micah complains that the people want a preacher who will speak of wine and strong drink (Mic. 2:11). Of course, excessive use of wine by the leaders of the people was especially blameworthy. Trito-Isaiah mocks the "shepherds"

(kings) who are merely interested in procuring wine and filling themselves with strong drink (Isa. 56:11-12; cf. Hos. 7:5), and Isaiah condemns the priests and the prophets who "reel" and "stagger" because of wine (Isa. 28:7). In consequence priests were later forbidden to drink wine when engaged in their duties (Lev. 10:9; Ezek. 44:21).

The book of Proverbs is most explicit in its condemnation of immoderation. Wine is a "mockery" and strong drink a "brawler" (Prov. 20:1); those who inordinately love wine will not be rich (21:17; cf. 23:20-21). The author warns:

Do not look at wine when it is red,
when it sparkles in the cup
and goes down smoothly
(23:31).

A humorous description of drunkenness follows (vss. 32-35).

As a protest against the orgiastic luxury of Canaanite civilization the Nazirites (see NAZIRITE) took vows never to drink wine, strong drink, or any product of the grapevine (Num. 6:3). Even the mother of a Nazirite was forbidden these (Judg. 13:4, 7, 14). A later group, the Rechabites (see RECHAB), not only abstained from wine but also refused to build houses (Jer. 35:6-7).

In later times, however, the opposition to wine decreased. The psalmist praises Yahweh for giving "wine to gladden the heart of man" (Ps. 104:15; cf. Judg. 9:13; Eccl. 10:19). Ben Sirach concludes:

Wine drunk in season and temperately
is rejoicing of heart and gladness of soul.
Wine drunk to excess is bitterness of soul,
with provocation and stumbling
(Ecclus. 31:28-29).

b. *In the NT.* Whereas John the Baptist, perhaps following a Nazirite vow, drank no wine (Luke 1:15), Jesus did not refute the charge that he was a "glutton and a drunkard" (Matt. 11:18-19; Luke 7:33-34; cf. 1:15). Thus there is no absolute condemnation of wine in the NT; the recommendation to Timothy has already been noted. Of course, the drinking of wine to excess is disapproved; such immoderation will not prepare one for the coming of the kingdom (Luke 21:34). Furthermore, those in positions of authority are to be especially careful; bishops and deacons are not to be drunkards (I Tim. 3:3, 8). Yet no Christian should become drunk with wine; rather, he should be filled with the Spirit (Eph. 5:18). Drunkenness is characteristic of Gentile culture (I Pet. 4:3); therefore, the thoughtful Christian should not drink any wine at all if it will cause his weaker brother to slip back into Gentile ways (Rom. 14:21).

5. **Wine in biblical imagery.** Since wine was one of the necessities of life, expressions derived from its production and consumption are commonly used in biblical imagery. See VINE § 5.

a. *In the OT.* God's judgment upon his own people or upon foreign nations is often expressed in terms of a cup of wine; he will force the wicked to drain the cup, and they will reel and stagger (Pss. 60:3—H 60:5; 75:8—H 75:9; Jer. 25:15; 51:7; etc.). Similarly this judgment is compared to the treading out of grapes. As the agents of Yahweh's wrath the nations are commanded:

Put in the sickle,
for the harvest is ripe.
Go in, tread,
for the wine press is full.
The vats overflow,
for their wickedness is great
(Joel 3:13—H 4:13).

Elsewhere Yahweh is pictured as treading the wine press in his wrath, on a day of vengeance; and the peoples of the earth are his victims (Isa. 63:2-6).

Abundance of wine is an expression of God's blessing, however. Isaac asks that God give Jacob "plenty of grain and wine" (Gen. 27:28), and Joel looks forward to the time when "the vats shall overflow with wine and oil" (Joel 2:24; cf. 3:18—H 4:18; Amos 9:13; Zech. 10:7).

b. In the NT. Jesus' comparison of his blood to the cup of wine at the Last Supper (see LORD'S SUPPER § 3a) is, of course, the most important use of wine in NT imagery. Elsewhere, however, Jesus compares his new teaching to new wine; it cannot be contained by the old wineskins (Matt. 9:17 and parallels). This is paralleled by the miracle of the changing of water into wine (John 2:1-11); the water probably represents Judaism and the wine Christianity. Finally, the book of Revelation contains several descriptions of God's final judgment in terms of the treading of a wine press (14:19-20; 19:15) and the drinking of a cup of wrath (14:10; 16:19).

WINESKIN. See WINE § 2c.

WINEVAT. See WINE §§ 2, 5.

WING [כנף; πτέρυξ]. A word used in its literal sense (e.g., Gen. 1:21; Lev. 1:17; Deut. 4:17; Job 39:13; Ps. 78:27; Ps. 68:13 may refer to an item from the spoils of war), including a wide variety of nuances (e.g., "skirt" of a garment [Ruth 3:9; cf. 2:12; I Sam. 15:27], "extremity" [Job 37:3; Isa. 11:12]); but most often used figuratively. It appears in descriptions of military attack (Jer. 48:40; 49:22), terror before the enemy (Isa. 10:14), glorious national pride and power (Ezek. 17:3, 7), the sustaining care of Yahweh for Israel (Exod. 19:4; cf. Deut. 32:11), vanishing wealth (Prov. 23:5), the talebearer (Eccl. 10:20), the storm of judgment (Hos. 4:19), the speed of daybreak (Ps. 139:9; cf. 55:6). The "land of whirring wings" (Isa. 18:1; cf. 7:18) may refer to the insect-ridden Nile

Delta, or to the "winged" boats of the Nile. For the winged mythological beasts (Exod. 25:20; Isa. 6:2; Ezek. 1; 3:14; 10; cf. Rev. 4:6 ff; 9:9), see CHERUB; SERAPHIM. Winged figures similar to the women of Zech. 5:9 (cf. Rev. 12:14) are found in Eastern folk tales.

Yahweh, conceived as riding through the skies on clouds or cherubim (Deut. 33:26; Pss. 18:10; 68:4; 104:3), moves "on the wings of the wind" (i.e., with dazzling speed) in Pss. 18:10; 104:3. The "wings" of Yahweh are a metaphor of his protection ("shadow" [Pss. 17:8; 36:7; 57:1; 63:7]; "shelter" [Ruth 2:12; Ps. 61:4 (cf. 91:4); Matt. 23:37]), and may refer to the temple in Jerusalem (cf. Pss. 57:1; 61:4; 63:7). Mal. 4:2—H 3:20 apparently alludes to the emblem (originally Egyptian) of the winged sun disk, which was widespread in the ancient Near East, here describing the dawn of the eschatological aeon.

For the five NT occurrences of πτέρυξ, see also BIRDS; FOWL; LOCUST.

WINNOWER [חרטום; Arab. *zarā*, scatter, cause to fly; διασκορπίζω, scatter, strew]. The process of throwing the cut stalks of grain into the air so that the kernels will fall into a pile and the refuse will be carried away by the wind. Fig. WIN 25.

Winnowing follows THRESHING (Isa. 41:15-16). At the beginning of the work a FORK is used and later a SHOVEL (Isa. 30:24). It is done on the thresh-

25. The winnowing of grain

ing floor in the late afternoon and evening, when the wind will be blowing (Ruth 3:2). As the stalks are tossed, the grain falls at the worker's feet, the straw is carried a short distance, and the CHAFF is often blown beyond the borders of the threshing floor (Matt. 3:12).

Winnowing is often used figuratively to represent the destruction of evil (e.g., Jer. 15:7; 51:2).

WINTER. See SUMMER AND WINTER; PALESTINE, CLIMATE OF.

***WISDOM** [חכמה; σοφία; rarely, also, φρόνησις]. A quality of mind distinguishing the wise man, by virtue of which he is skilled and able to live well and

both succeed and counsel success; also a quality in itself apart from man, above and beyond man, existing ideally with God and imparting form to creation.

In what follows, the concrete manifestations of wisdom in (a) the wise man and (b) the literature of wisdom are considered before the abstraction, (c) Wisdom.

1. The wise man
 - a. At court
 - b. Royal wisdom
 - c. In extrabiblical literature
 - d. Prophets and the wise
 - e. Wise men at large
2. The literature of wisdom
 - a. The proverb
 - b. The book of Proverbs
 - c. Job
 - d. Ecclesiastes
 - e. Daniel and IV Maccabees
 - f. Wisdom psalms
 - g. Ecclesiasticus
 - h. The Wisdom of Solomon
3. "Where shall wisdom be found?"
 - a. In man
 - b. With God

Bibliography

1. **The wise man.** The wise man is many things, from artisan to astrologer, from parent to philosopher. And he is found in the royal court as well as the academy.

a. *At court.* Biblical writers often refer to the wise man in a way which suggests that being wise was an occupation, and one which brought men to the attention of kings. Professional wise men were, indeed, frequently resident in the courts of kings, and not in Jerusalem alone but in other world capitals as well.

One of the latest biblical books contains one of the most detailed descriptions of such wise men of the court. A legend in Daniel lays the scene in the court of the Babylonian king Nebuchadnezzar. Troubled by a dream, this sly monarch demands of his "wise men" that they both relate and interpret his dream; and when they insist that he has required the impossible, he orders the execution of their whole corporation, Daniel and his three companions among them. But Daniel with God's help declares and explains the dream, and so saves his own life and theirs.

The general term "wise men" (Aramaic חכמים; Dan. 2:12-14) includes the "magicians, the enchanters, the sorcerers, and the Chaldeans" (Hebrew חרטמים, מכשפים, אשפים, and כשדים; Dan. 2:2) as well as "astrologers" (Aramaic גורין; 2:27; 4:7—Aramaic 4:4; 5:7). Daniel and his companions, who were counted among the wise, are "skilful in all wisdom [חכמה], endowed with knowledge [דעת], understanding learning [מדע], and competent to serve in the king's palace"; furthermore, they were "educated" for three years "to teach them the letters [ספר] and language of the Chaldeans," before they took up their duties (1:4-5). Daniel himself, divinely endowed (2:19-23), is especially gifted in the understanding of visions and dreams (1:17, 20), and rises to the position of "chief prefect over all the wise men of Babylon" (2:48; cf. 5:11-12). But Daniel can also

prescribe for the king the practice of righteousness (4:27—Aram. 4:24).

Though legendary and later and given an imaginary setting, this developed picture of the wise man at the royal court throws light upon the numerous less detailed descriptions of the wise scattered through the Bible. Two of the classes of wise men in this court with Daniel bear the same titles as their colleagues in the court of the Egyptian pharaohs and recall the days of Moses and Aaron. These are the "sorcerers" (מכשפים) and the "magicians" (חרטמים) of Egypt, who match their skill against the skill of the Israelites. When God, through Moses and Aaron, demanded the release of his people from Egyptian bondage, the pharaoh would not "listen" and had to be convinced. To this end Moses and Aaron performed miracles in his presence, but he "summoned the wise men and the sorcerers; and they also, the magicians of Egypt, did the same by their secret arts" (Exod. 7:11; cf. 7:22; 8:7). The success of the pharaoh's wise men was, however, limited; once "they could not," and admitted: "This is the finger of God" (8:18-19—H 8:14-15), and in the denouement "the magicians could not stand before Moses . . . , for the boils were upon the magicians" (9:11); grievous was their defeat. In the contest of magic-wisdom Moses and his brother were, like Daniel and his companions, "ten times better than all the magicians and enchanters" (Dan. 1:20)—and were so because through them God worked his wonders to show forth his power to the end that his name might "be declared throughout all the earth" (Exod. 9:15-16; cf. 7:3-5; Isa. 19:11-12). This wisdom contest is a feature of the "priestly" version of the Exodus narrative—written not too many centuries before the Daniel legends.

Another Israelite in an Egyptian court also resembled Daniel; this was Joseph, whose success as an interpreter of dreams won him advancement, and prefigured Daniel's experience. As Potiphar's slave Joseph gave evidence of superior intelligence (Gen. 39:1-6), and he did not lose his gifts when apparent misfortune sent him to prison (39:21-23). It was there also that he first gave evidence of the God-given wisdom which made him an interpreter of dreams (Gen. 40) and brought him to the attention of Pharaoh. When this pharaoh dreamed, he called "all the magicians of Egypt and all its wise men" (41:8), but it was only after they brought Joseph from the dungeon that the dreams yielded their meaning (41:9-32). Furthermore, Joseph gave sound advice and, being recognized as superior in discretion and wisdom through the spirit of God, became great in the land, second only to Pharaoh (41:33-44).

These three situations (first Joseph, then Moses and Aaron at the Egyptian court, and Daniel at the court of Babylonia) have this in common: in a contest with the wise men of the foreign court, with the help of God the Hebrews triumph. Parts of the Second Isaiah further illustrate this theme—God's agents defeat the "wise men" in Babylon's court. It is Israel's God

who frustrates the omens of liars,
and makes fools of diviners;
who turns wise men back,
and makes their knowledge foolish;

who confirms the word of his servant,
and performs the counsel of his messengers
(Isa. 44:25-26a).

At the approach of Cyrus the conqueror, Israel's God taunts the arrogant "daughter of Babylon" (Isa. 47) and refers with special scorn to the court astrologers. Like the magicians in Egypt, they suffer humiliation and disaster:

Let them stand forth and save you,
those who divide the heavens,
who gaze at the stars,
who at the new moons predict
what shall befall you.
Behold, they are like stubble,
the fire consumes them;
they cannot deliver themselves
from the power of the flame
(Isa. 47:13 [with a minor correction], 14a; cf. Jer. 50:35-38;
51:57).

Somewhat more may be added as concerns the "wise" at foreign courts according to biblical tradition. There were wise women in the court of Sisera (not, probably, the "general of Jabin's army," as he is called in Judg. 4:7, but by his own right king of a Canaanite city), and these too are the butt of cruel irony, in the "song of Deborah" (Judg. 5:29-30). The counselors in foreign courts seem mostly to have been futile (cf. also II Kings 6:8, 11-12), and their advice is sometimes more amusing than sound, as when the wise men about the Persian Ahashuerus advised approximately that every man should "be lord in his own house" (Esth. 1:13-22; cf. 2:2). Another Persian king, Artaxerxes, had a staff of "seven counselors" (Ezra 7:14-15); among the wise men at the courts of foreign kings, of these alone no evil is spoken. (See also I Esd. 3:1-4:41.)

It was not foreign courts alone which according to the biblical sources had their resident wise men. There were official advisers at the courts of Israelite kings as well, distinguished not so much by reason of their magical powers, powers of divination, and insight into the meaning of dreams (though such appear in Isa. 3:3), as by their political sagacity, wisdom, and judgment. No one in this capacity was more famous than David's traitorous counselor AHITHOPHEL (II Sam. 15:31-37; 16:20-17:23); "the counsel which Ahithophel gave was as if one consulted the oracle of God" (16:23). David had at least one other such aid; his uncle Jonathan "was a counselor, being a man of understanding and a scribe" (I Chr. 27:32). Two of David's sons took counsel with various persons—the rebellious Absalom with Hushai (II Sam. 17:14) as well as Ahithophel, and the lovesick Amnon with Jonadab, reputedly a wise man (II Sam. 13:3: "crafty"). The statesman Joab gained David's ear by way of a wise woman from Tekoa (II Sam. 14:1-24). Twice besides, we hear of wise women—the wise woman of Abel, who effectively appealed to this same Joab to spare her city (II Sam. 20:16-22), and the wise women in the court of Sisera (see above). Rehoboam, son of Solomon, forsook the sage counsel of the old men of Solomon's court (so the wise king Solomon also had his royal counselors) and acted according to the counsel of his rash contemporaries there, and to his grief (I Kings 12:3-14).

It is particularly in the days of this cluster of kings, David, Solomon, and Rehoboam, that we read of wise men at the Israelite court to match the magicians, sorcerers, diviners, and astrologers at the courts of Egypt, Babylonia, Persia, and the other nations. But it would be a mistake to assume that only in those early times the kings had their counselors. It is safe to infer from II Chr. 25:16-17 that the expression "royal counselor" was still in use some centuries later. There, silencing a prophet who dared criticize him, King Amaziah asks of the prophet: "Have we made you a royal counselor?" According to Deuteronomy, Moses, though not a king, had a staff of "wise, understanding, and experienced men" (1:9-15; cf. Exod. 18:19-22); for this description the Deuteronomist may have drawn upon his experience of royal courts.

b. Royal wisdom. As Moses towered above the wise and experienced men with whom he surrounded himself, so according to the tradition Solomon outshone his professional advisers. Solomon is renowned as the biblical exemplar of royal wisdom.

David, his father, was graced with intelligence as a youth (I Sam. 16:18) and recognized for his wisdom in old age (II Sam. 14:20). But it is Solomon who is celebrated as the wise king. David was aware of this son's potential for wisdom (I Kings 2:6, 9; cf. I Chr. 22:12). According to the account his potential was realized when God appeared in his dream and granted his request: "an understanding mind," "understanding to discern what is right," "wisdom and knowledge" (I Kings 3:5-14; II Chr. 1:7-12). According to the order of the narrative in Kings, Solomon's wisdom was immediately put to the test in a difficult case at law, and all Israel stood in awe at the divine wisdom he then displayed in rendering justice (I Kings 3:16-28; for a much later parallel cf. Sus. 44-62). But so excellent was his wisdom that his fame at once spread abroad beyond the borders of his land: "God gave Solomon wisdom and understanding beyond measure, and largeness of mind like the sand on the seashore, so that Solomon's wisdom surpassed the wisdom of all the people of the east, and all the wisdom of Egypt. For he was wiser than all other men, wiser than Ethan the Ezrahite, and Heman, Calcol, and Darda, the sons of Mahol; and his fame was in all the nations round about. He also uttered three thousand proverbs; and his songs were a thousand and five. He spoke of trees, from the cedar that is in Lebanon to the hyssop that grows out of the wall; he spoke also of beasts, and of birds, and of reptiles, and of fish. And men came from all peoples to hear the wisdom of Solomon, and from all the kings of the earth, who had heard of his wisdom" (I Kings 4:29-34—H 5:9-14; cf. 5:12a—H 5:26a). Hiram, the king of Tyre, acknowledged Solomon's wisdom (I Kings 5:7—H 5:21; II Chr. 2:11-12); and Solomon had no greater admirer than the queen of distant Sheba, who "came to test him with hard questions" and had to exclaim in breathless astonishment: "Behold, the half was not told me; your wisdom and prosperity surpass the report which I heard" (I Kings 10:1-9; II Chr. 9:1-8). But she was not alone; because "Solomon excelled all the kings of the earth . . . in wisdom," "all the kings of the earth sought the presence of Solomon to hear his

wisdom, which God had put into his mind" (I Kings 10:23-24; II Chr. 9:22-23).

The biblical tales of wise men at the courts of foreign kings are tendentious and polemical, designed to glorify Israel's God and his agents and to unmask all pretenders. The stories told of Solomon have the flavor of folk tales and legend, and they too may not be used uncritically as historical records. Undoubtedly, Solomon was a great organizer and administrator, and his rule brought to the united kingdom new prosperity and prestige; but the tales that are told of him are the efforts of later generations to recover in fancy the then vanished splendor of his glorious times. The attribution to him in the passage in Kings of proverbs and songs is a part of the trend which made him also the author of Proverbs, the Song of Songs, and Ecclesiastes among the biblical books, and of the Wisdom of Solomon of the Apoc.

A passage in Ezekiel also speaks of royal wisdom, this time ironically, in a barb aimed at the king of Tyre (Ezek. 28:2-10; cf. vss. 12-19); another, in Isa. 10:12-13, mocks the presumed wisdom of the king of Assyria; and yet another satirizes the princes of Zoan, sons of ancient Egyptian kings, for their pretense of wisdom (Isa. 19:11-13; cf. also Jer. 10:7; Dan. 8:23).

In view of the biblical tendency to attribute wisdom to kings, it is perhaps not strange that parts of the literature of wisdom should be attributed to King Solomon, or that Hezekiah should be known as a patron of the art of wisdom (Prov. 25:1), together with an unknown King Lemuel, of an unknown kingdom (Prov. 31:1).

Also, it is quite natural that wisdom should be ascribed to the awaited messianic king, descended like Solomon from David, and destined to reign in equal splendor. Properly, then, his symbolic name contains as its first element "Wonderful Counselor" (Isa. 9:6—H 9:5), and he is described as one upon whom "the Spirit of the LORD shall rest,"

the spirit of wisdom and understanding,
the spirit of counsel and might,
the spirit of knowledge and the fear of the LORD
(Isa. 11:2; cf. Prov. 8:15-16).

The data suggest a tendency in biblical times to associate wisdom, both foreign and domestic, in early times and late, with kings and the courts of kings. Literature of the ancient Near East, other than the Bible, has this same characteristic.

c. In extrabiblical literature. Beyond question, the wise man in Israel was part of a general pattern of culture in the ancient Near East. The biblical sources did not invent the fact; there were wise men in the courts of Egypt, Babylonia, Persia, and other neighboring lands. There were kings and others with a reputation for superior wisdom among "all the people of the east." And, for a fact, recorded wisdom in Egypt and the Assyrian-Babylonian cultures was predominantly royal wisdom or wisdom of royal counselors. It was the concern of pharaohs and kings to educate their sons as their successors. The concern of viziers was to train their sons to serve royalty, and wisdom was the content of knowledge in the schools for the royal scribes. The address "my son" is the mode (in that literature as it is in Proverbs), and success is usually the goal of instruction. What most

frequently is taught is prudent behavior, conduct befitting kings, conduct for one who would stand before kings. This type of instruction makes up a large part of the preserved Egyptian and Akkadian wisdom literature (see *bibliography*) but not all of it. There is instruction likewise for everyone, observations too on life and man's fate, much that has a kinship with biblical wisdom in mood and matter.

The common ground occupied by biblical and other Near Eastern wisdom literature is considerable, but the discovery of this common ground has sometimes led to excessive claims. So close is the correspondence between the "thirty chapters" of Amenem-opet and Prov. 22:17-23:14 that the influence of the Egyptian source itself, or at any rate some derivative source, upon this section of Proverbs is pretty much beyond question (see PROVERBS, BOOK OF, § 8). More general but quite probable is the influence also of Canaanite (Ugaritic) and Akkadian sources here and there upon biblical wisdom. The dependence of Proverbs on the Aramaic sayings of Ahiqar is possible but not beyond question. It would be futile and pointless to deny that the wisdom literature of the Bible is a segment of the "wisdom of the east"—but the fact remains that much of the influence of Egypt, Phoenicia, or Babylonia upon biblical wisdom is more diffuse than specific. A considerable area of the specific contact is that in which wisdom is associated with kings and officials of the court.

d. Prophets and the wise. It is quite probable that when Isaiah, Jeremiah, and Ezekiel spoke of the wise, they too referred to advisers in the courts of Judean kings. Isaiah might very well have meant the political counselors of King Hezekiah when, in 29:14 and again in 29:15 plus 30:1-5, he spoke of the wise whose counsel was resistance with the expectation of aid from Egypt (cf. 36:4-6), although God's counsel was otherwise (cf. 31:1-2). Jeremiah and Ezekiel may have meant the same (with changes in terms to suit their times). When Jeremiah complained of those who said: "Come, let us make plots against Jeremiah, for the law shall not perish from the priest, nor counsel from the wise, nor the word from the prophet" (Jer. 18:18), and when Ezekiel threatened: "Disaster comes upon disaster . . . ; they seek a vision from the prophet, but the law perishes from the priest, and counsel from the elders" (Ezek. 7:26), both seemingly pointed to a defined group or caste, which the one called the "wise" and the other called the "elders." Both of these contemporary prophets knew of a group distinguished from priests and from prophets, a group whose function was to provide עצה, "counsel." Ezekiel's elders are surely to be equated with Jeremiah's wise men (cf. Deut. 32:7; Job 12:12; 32:7; see AGE, OLD, § 4); their social role is the same.

Now since Jeremiah's activity must often have appeared to be political, as when he counseled submitting to Babylonia, and since he thus came into conflict with the king's official family, the wise men who were plotting against him may quite well have been the royal counselors; since also the disaster foreseen by Ezekiel would have meant egregious failure for their foreign policy, he too may have pointed the finger at the king's "brain trust," then about to be repudiated, as he thought, by the march of events. Listed along with the "mighty man" and

the "rich man" in Jer. 9:23—H 9:22, the "wise man" here too, though not quite so clearly, appears to be one of a distinguishable group, not impossibly officials of the royal court.

The use of the word *עצה*, "counsel," in these latter passages strengthens the impression that these wise men are the king's counselors; it does so because it aligns these passages with the many which set off God's counsel against that of the strutting nations and taunt the obviously weaker. Passages cited above (§ 1a) ridicule the putative wise men of other nations whose counsel is to yield before God's (cf. also Isa. 7:5-7; 8:10; 14:24-27; 46:10; the thought is frequently expressed). Now Judah with its wise men, the royal counselors in the court at Jerusalem, takes its place among those whose counsel must yield before God's. Isaiah, Jeremiah, and Ezekiel introduce this ironical note. It sounds quite clearly through a passage like Isa. 5:19, 21, where the prophet pronounces a woe upon "those who are wise in their own eyes" and who flout "the purpose of the Holy One of Israel" (cf. Jer. 19:7; Ezek. 11:2).

e. Wise men at large. It would, however, be wrong to count all the wise, so styled in prophetic literature, among the kings and the royal counselors. A prophet can use the word "wise" and be speaking quite generally. It is still possible that Jeremiah is speaking to a group of the king's advisers—those, namely, who supported Josiah in the deuteronomic program—when in 8:8-9 he demands of them:

How can you say, "We are wise,
and the law of the LORD is with us"?
But, behold, the false pen of the scribes
has made it into a lie.
The wise men shall be put to shame,
they shall be dismayed and taken;
lo, they have rejected the word of the LORD,
and what wisdom is in them?

Jeremiah's equation here of "wise men" and "scribes" supports, rather than casts doubt upon, their being counted among the king's counselors; note the similar equation in I Chr. 27:32; Dan. 1:17. But Jeremiah is not pointing to any single professional group when he says of God's people:

They are stupid children,
skilled [wise] in doing evil,
but how to do good they know not
(4:22).

And it would certainly be wrong to put a narrow limitation on the sorts of persons that in biblical literature as a whole are termed wise. The varieties are many. Persons possessing certain skills are counted among those who bear the title: Bezalel and Oholiab (Exod. 31:2-6; 35:30-36:2) and many unnamed craftsmen, and skilled women as well, who worked on the wilderness tabernacle and its fittings (Exod. 28:3; 35:10, 25-26; 36:4, 8) or on Solomon's temple in Jerusalem (I Kings 7:14; I Chr. 22:15; II Chr. 2:7, 13-14—H 2:6, 12-13); these were possessed of *חכמה*, of "wisdom," and even a craftsman who wasted his talents fashioning an idol might be called a *חכם* (Isa. 40:20; Jer. 10:9). The same word was used of skilled pilots and shipbuilders in Ezek. 27:8-9, and Jeremiah referred to women as wise by virtue of their training in the art of lamentation:

Call for the mourning women to come;
send for the skilful women to come
(Jer. 9:17—H 9:16).

In addition, then, to the aristocracy of the wise, the officially wise, there were in Israel the simply wise. These were not only the skilled and experienced, the workmen with technical knowledge, those learned in the ancient arts and lore; the elders, the fathers and the mothers, the teachers in the schools for wisdom, the writers of songs and fables and allegories, the makers of riddles and proverbs, the judges, the philosophers, were also among the wise. A definition too narrow would be false.

The literature, particularly those biblical and apocryphal books known as the wisdom literature, reveals the diffusion of wisdom in Israel, though it was, in fact, somewhat upper-class and not really for the masses. The most of it pertains to the leisure class (cf. Eccles. 38:24-25). The follies, the virtues, and the attitudes illustrated in the literature have their home in upper-class society, and here too the literature has a purpose (see PROVERBS, BOOK OF, § 10; SIRACH, SON OF). In the book of Proverbs (but no longer in Job) there is about wisdom something of the smugness of the fortunate.

Though mostly reserved for the gentry, the appeal of wisdom was general, and its custodians were many. Parents and elders had knowledge and experience:

Ask your father, and he will show you;
your elders, and they will tell you
(Deut. 32:7).

Wisdom is with the aged
(Job 12:12; cf. 32:7).

It seems conventional in wisdom literature to address the learner as "son," in Egyptian and Akkadian wisdom (see § 1c above) as well as in Proverbs and Ecclesiasticus; the use of the term does not, then, prove that a parent is speaking. Usually the "father" in this literature is the master of the academy or the author of the text; nevertheless, occasionally, as in Prov. 31:1; 4:3-4, the words must be taken literally—fathers and mothers share with their sons their wisdom.

Elders, teachers, and parents were custodians of a tradition, in part a literary tradition. They had at hand collections of sayings that were known as "words of the wise" (cf. Prov. 22:17; 24:23), an expression which in turn identifies the wise with poets and writers of proverbs (see PROVERB § 3a), and sages who sought to put in brief and vivid language and in a variety of literary forms the yield of their learning and experience. The wise also were persons versed in law and letters qualified to serve as judges in the gates (cf. I Kings 3:28; Deut. 16:18-20: "A bribe blinds the eyes of the wise") and as recorders (Isa. 36:3) and scribes (I Chr. 27:32; Jer. 8:8-9; Dan. 1:17). Finally, among the wise are to be counted the great independent thinkers who created books like Job and Ecclesiastes and other related but less extensive compositions, some of them now lodged among the Psalms. Of such variety were the "wise men" of Israel in Bible times.

2. *The literature of wisdom.* What the wise men taught and wrote has been preserved in part in the

biblical books of Proverbs, Job, and Ecclesiastes, in some of the Psalms, and in brief passages in other contexts. Some of their writings were not received into the canon and are counted among the apocryphal books (Ecclesiasticus, Wisdom of Solomon) and among the other literary products of early Judaism (e.g., IV Maccabees).

a. The proverb. The seed of wisdom literature, the *māshāl* or PROVERB in its primitive form, is ubiquitous, common to all cultures and times; and no doubt it always existed in Israel. Old men said: "Like mother, like daughter" (Ezek. 16:44), and that settled the matter; or they said: "Out of the wicked comes forth wickedness" (I Sam. 24:13—H 24:14), or "Physician, heal yourself" (Luke 4:23), to suit the situation, and believed they had given expression to a profound truth tested by the generations. There is no reason to suppose that the art form of the proverb developed late in biblical times. On the contrary, poetic bits occur among the earliest literary remains in the Bible, and proverbs in rhythmic form may well have circulated in Israel in premonarchic days. The supposition is strengthened by the observation that such proverbs appear in prebiblical Ugaritic sources, for which literature the Bible has many affinities, and the further observation that Egyptian wisdom, which demonstrably influenced biblical wisdom literature (see § 1c above), has the developed art form and antedates biblical literary production. Proverbs in parallelistic form surely circulated in Israel in earliest times, but to determine which, if any, of such proverbs preserved in the Bible go back to most ancient times is beyond the reach of sober scholarship. Most of those which have come down to us are probably the result of the literary activity of sages in the academies. That portion of Proverbs (22:17–23:14) which is related to Amen-em-opeht is not just a translation of the Egyptian; it is a product of conscious creative literary art by a Jewish wisdom writer who was acquainted with the earlier composition in some form or other.

As well as the proverb in its primitive and its rhythmic form, other wisdom types circulated in early times. A certain skill akin to wisdom went into the propounding as well as the solving of riddles. When he solved all her riddles, the queen of Sheba was impressed by the wisdom of Solomon (I Kings 10:1–5; cf. Dan. 5:12). The RIDDLE was a form of folk wisdom from early times onward, and it could be adapted for prophetic utterance. The numbers proverb too: "Three things . . . ; four . . ." (Prov. 30:18–19), may be a descendant. Also the FABLE was a product of wisdom and served a didactic purpose. The tradition that the wise Solomon "spoke of trees" and "spoke also of beasts" (I Kings 4:33—H 5:13) may mean simply that he was a maker of fables. The PARABLE and the ALLEGORY, the byword and the taunt (see PROVERB § 2d), are forms all more or less related to the proverbial literature of wisdom, and examples of these are scattered throughout the Bible (e.g., the "discourses" of Balaam).

b. The book of Proverbs. The earliest extensive wisdom document is the book of Proverbs (see PROVERBS, BOOK OF). Although a section of the book is related ultimately to an Egyptian composition which took form in the second pre-Christian millen-

nium, although there are traces of Canaanite-Phoenician influence from the same millennium, although folk wisdom from dim antiquity undoubtedly left its mark upon the book, although the possibility exists that the tradition concerning Solomon's interest in proverbs has some basis in fact, and although, finally, the editor who referred to the activity of the men of the King Hezekiah in Prov. 25:1 believed he had some fairly early material before him, the probability is nevertheless very great that the actual authors of the book of Proverbs were wisdom teachers of the fifth or fourth pre-Christian centuries and that these then newly expressed in artistic forms some more ancient wisdom, but mostly created from experience and reflection new texts for the guidance of the youngest generation.

This is the nature of Proverbs, a book designed to help the youth of its day achieve success in life and avoid all snares and dangers. It is an optimistic book, in the sense that it finds an order in the world which a man can know and, knowing, conform with to his benefit. It is this naïve optimism which both characterizes its wisdom and suggests approximately when it was written. A fairly just and individual accounting and balancing is assumed, so that a person will get what he deserves of life; let him only not be a fool, let him act with prudence, and God's justice and the natural law of compensation will do the rest. This complete and unquestioning acceptance of the doctrine of retribution on the *individual* level means that the contest of Ezek. 18 was among the "battles long ago." The belief in rewards for personal merit and penalties for personal guilt has become an orthodoxy, and righteousness can be equated with wisdom and evil with folly (see FOOL). Even as the book of Proverbs presupposes Ezekiel (by at least a generation or two in the slow-moving East), Job and Ecclesiastes presuppose Proverbs (see below).

The book contains a certain variety of materials; single, balanced-line proverbs preponderate, but there are discourses as well, discourses on such subjects as the advantage of wisdom, the folly of unchastity, the worth of the good wife; and there are keen observations on human nature and fine poetic similes.

c. Job. The book of JOB is the unchallenged best of the wisdom literature. Its poetic eloquence, its majesty and profundity, are unexcelled—and not in the literature of biblical wisdom alone but in world literature. Daringly its author explores religion in its deepest depths. For his purpose he chooses dialogue as his literary medium; he sets the perplexing scene with a narrative, introduces interlocutors, and then puts in their mouths his discourses. He chooses as his central figure the pious Job of legend (cf. Ezek. 14:14) and associates with Job three friends whom he brings from the East, traditionally a home of wise men. His device converts a treatise into a living drama; in the dialogue which grows out of the narrative, although each man's thought becomes a discourse, the argument develops vividly with mounting intensity until Job rests his case and God has the last word.

The progress of the thought is marred by the confused order of the text in the third round of dis-

courses (chs. 22–27), by the introduction of an anticlimax in the person of a fourth friend, Elihu (chs. 32–37), and by the addition of a poem glorifying wisdom (ch. 28), a great poem which, however, where it stands, blunts the point of the Job drama. Other parts may be secondary (parts of God's answer, a part of the narrative epilogue), but they do not so much disturb the exposition of the thought.

It is the thought which permits a guess at the time when the book was written. The absolute date of the book of Job is by no means apparent, but Job seems to follow on the book of Proverbs—or at least on most of the matter which makes up that book. In the age in which the argument of Job was conceived the dominant spirit was the spirit of Proverbs. It is the proverbialists' uncritical acceptance of their dogmatic position on personal retribution which compelled the author of Job to write his book. And this suggests that he wrote after Proverbs, perhaps early in the fourth century, though such a date is hardly more than an informed guess.

Job is a religious book. Its author does not deny providence—that would be leaving the orbit of religion. What he denies is the simple arithmetic of divine justice; so doing, he attacks the arrogance of the fortunate and reassures all persons (like Job) who are perplexed by adversity. The author of Job had learned that man is more complicated and God less transparent than the teachers of proverbs and their complacent clients assumed. The orthodox view of those teachers appears in the discourses of Job's three friends (and of the appended fourth); the author himself becomes articulate through Job and God, and he leaves us with his own loyal reservations. Far from denying God or the fact of his dealings with men, he ends by siding with God, with whom he feels sympathy and whose nearness he prizes above all.

The book of Job is a product of the wisdom schools; its author was among the wise, but he stands out as a man apart, a rare religious genius. He gives of his nobility to the literature of wisdom.

d. Ecclesiastes. The book of ECCLESIASTES, another of the wisdom books, is, like Job, the product of a genial, independent, philosophic spirit. Though the book was attributed to Solomon, as Proverbs was, we do not know who wrote it. Its anonymous author, writing with the pen name "Kohelah," was a cultured and cosmopolitan, probably wealthy, elderly sage in Jerusalem who lived in the latter half of the third century.

The book is a fairly unified work with a minimum of glosses, such as there are being mostly designed to correct the false doctrine that the virtuous go unrewarded and the sinful without penalty. For the book Ecclesiastes is shockingly heterodox, and it is not surprising that the authorities thought well before admitting it to the canon, noticing that it contains contradictions and that it is indeed no divine revelation but one man's opinion.

Like the author of Job, the writer of Ecclesiastes was notable in his time for his free and inquiring mind. He took the position that a person knows only what through experience and reflection he finds out for himself. To himself Kohelah said he believed nothing which he had not personally tested; this he

said, but he was in fact less free than he would admit. As concerns right and wrong, he used a conventional vocabulary in a conventional sense, and his attitudes were benevolent. He only said he recognized no standards; his behavior was probably quite correct in all particulars.

Kohelah set out to discover what it is good for a man to do the few days of his life. He experimented with folly and with drink, with commerce and with the arts; he considered the nature of wisdom and the ways of human society; and he concluded that, when all is seen and done, everything is only "vanity and a striving after wind" (1:14), and the best that men can do is "to be happy and enjoy themselves as long as they live" (3:12 and often) and in all things be moderate: neither too wise and good nor yet too wicked and foolish (7:16–18a). This is the benevolently casual attitude which Kohelah achieved. And certain general considerations buttressed his conclusions: There is too much in life that we do not and cannot know (7:23–24; 8:16–17). Moreover, the fate of the righteous and the fate of the wicked are distressingly the same, and "the dead know nothing" (9:2–5).

This argument runs no straight course in Ecclesiastes; the unity is one of mood rather than order. The author's musings frequently take the form of groups of balanced-line sayings (e.g., 7:1–13) which are both reminiscent of Proverbs and characteristic of Kohelah, being tinged with his own brand of humor and irony.

e. Daniel and IV Maccabees. The book of DANIEL is apocalypse and only incidentally related to wisdom—through the person of the wise Daniel, reader of riddles and interpreter of dreams (see § 1a above). And yet, to some extent Daniel (ca. 167 B.C.) looks forward to a book like IV Maccabees (ca. A.D. 100), in which martyrs for the faith prove that reason is stronger than the human passions, even as Daniel and his companions had proved that God protects from martyrdom the faithful. Both books would educate men to loyalty and fortitude. See MACCABEES, BOOKS OF, § E.

f. Wisdom psalms. Among the canonical psalms are a number which share features with the other wisdom literature (see PSALMS, BOOK OF, § B3); the house of instruction was not independent of the house of prayer. Though books like Proverbs, Job, and Ecclesiastes do not give evidence of a lively interest in temple service, or ritual, or devotion, the wisdom teachers prayed. And it is natural to find wisdom within the devotional literature.

The spirit of some of the psalms is akin to the spirit of Proverbs—their authors were fully confident, like Job's friends, that rewards and punishments are dealt out in just measure (Pss. 1; 34; 37; cf. Jer. 17:5–8) and commended the way of righteousness (Pss. 92; 112; 127; 128; 133) or life according to the law (Ps. 19:7–14—H 19:8–15). Similar, but related rather to the Deuteronomic histories, a psalm like 78 draws lessons from Israel's national experience and counsels obedience and faithfulness. The author of one psalm (73) struggled, as did the author of Job, with the problems which the apparent miscarriage of divine justice present, and his psalm is a record of notable achievement. Like Job, he did

not take refuge in the expectation of heavenly reward (this is not the meaning of vs. 24, the Hebrew text of which is in disorder); instead, he found complete satisfaction of his earthly desires in the consciousness of his kinship with God: "It is good to be near God" (vs. 28; cf. vs. 25). The writer of another psalm (49) shared some sentiments with Koheleth, shared at least his wistful skepticism:

Man cannot abide in his pomp,
he is like the beasts that perish
(vss. 12, 20—H 13, 21);

"even the wise die" (vs. 10—H 11), and man can "carry nothing away" (vs. 17—H 18). Unlike Koheleth, the writer of this psalm offered no remedy, even temporary; he only published his sad knowledge of life's vanity (vs. 15—H 16 is a gloss like those in ECCLESIASTES § 6, designed to absorb some of the shock of his unorthodox views, and it does not, at any rate, refer to life after death).

These examples do not exhaust the list of wisdom psalms; there are others which are wholly or in part didactic. The book of Psalms, which took form in the age of wisdom literature, naturally reflects not a few of wisdom's features.

g. Ecclesiasticus. A decade or two older than Daniel, though not like Daniel admitted to the canon, the book Ecclesiasticus is the foremost representative of wisdom literature in the Apoc. This book, also known as Sirach or Ben Sirach (see SIRACH, SON OF), can be quite confidently dated ca. 190 B.C. It has very much in common with the book of Proverbs, which seems to have served its author as model. But unlike the book of Proverbs, it was not ascribed to Solomon. The book was, in fact, known to be a recent product, and it could not for that reason be recognized as "holy" (see ECCLESIASTES § 2). Originally composed in Palestine by Jesus the son of Sirach, the book was brought to Egypt in 132 B.C. by the author's grandson, who translated it into Greek (Prologue to Ecclesiasticus and 50:27). The Greek and a large part of the Hebrew text are preserved.

Balanced-line proverbs sometimes appear singly in Ecclesiasticus, as they do characteristically in Proverbs, but more often they appear clustered according to subject or in an expanded form. As a result, the thought units are longer than in Proverbs, and discourses or brief essays are of more common occurrence. But both the smaller and the larger units in Ecclesiasticus often deal with the topics which also occupied the authors of Proverbs, and from a study of his book Ben Sirach emerges as a schoolman like them (cf. 51:23), concerned as they with the education of patrician youth in the ways of prudence and the good life; possibly Ecclus. 39:1-11 is an uninhibited self-portrait of himself as scribe (cf. 33:16-18).

The content of instruction is in large part the same as in Proverbs. But Ecclesiasticus also contains quite a lot of matter that is without parallel there. The "plus" in Ecclesiasticus includes hymns not clearly reflecting the features of wisdom (prayers like 36:1-17; praise like 42:15-43:33; thanksgiving like 51:1-12) and laudatory poems celebrating great personalities of the Bible (chs. 44-49), along with the author's older contemporary the high priest Simon (ch. 50), and not neglecting the God who gave them

(50:22). These latter poems have a more educational purpose and more obvious relevance to wisdom than do the hymns. Didactic, too, is the poem glorifying God the creator, 16:24-18:14.

When Ben Sirach treats themes touched also by Proverbs and Ecclesiastes, he sometimes goes new ways. In the canonical books of wisdom, folk traditions are notably absent, as well as all references to national figures, happenings, and expectations—the focus is not on a people but on humanity. Ecclesiasticus, to the contrary, alludes at length to great men and events of Bible times in the laudatory poems (chs. 44-49), but also elsewhere to biblical traditions (e.g., in 16:6-10; 25:24; 33:10, 12; 38:5). Significant is the thought that wisdom chose to reside in Jerusalem (24:8-12). Ben Sirach holds also with the tradition that Moses commanded the law for Jacob (24:23). For him the law, and, for that matter, the prophets and "wisdom," all are the source of all wisdom (39:1; cf. 9:15; 19:20; 45:5). Although like the biblical teachers of wisdom he has but moderate enthusiasm for the temple cult and values righteousness above sacrifices (e.g., 7:8-10), he yet speaks more warmly of the rituals, holy seasons, and priests than do any of the others (cf. 7:29-31; 24:10, 15; 33:7-9; 35:4-7; 36:13-14; 43:7; the priesthood particularly in the laudatory hymns in chs. 44-50). Even expectations for national triumph, sometimes with messianic coloring, appear—though rarely (cf. 35:17-19; 36:15-16; 47:22). He combined a concern for his people ("May it never be found in the inheritance of Jacob!" 23:12) with alarm at the current progress of Hellenization.

There is as yet no expression of a hope for personal immortality or resurrection, as, ten or twenty years later, there is in Daniel (12:2). Ben Sirach says: "The decree from of old is, 'You must surely die!'" (Ecclus. 14:17).

h. The Wisdom of Solomon. Probably composed in Alexandria in Greek during the first pre-Christian century, the Wisdom of Solomon carried on further, to the point of radically breaking with OT tradition, tendencies developing in the wisdom literature. Without calling himself Solomon, the author, speaking in the first person, so describes himself in 7:5; 8:21; 9:7-8, that one must think of Solomon (the device used also by the author of Ecclesiastes [cf. 1:12]); and the book was, according to its Greek title, indeed ascribed to him. The ascription only calls attention, however, to the distance which wisdom had traversed since the wise king's day. It had moved from prudence to an otherworldly eschatology.

There is more to the relation between the Wisdom of Solomon and Ecclesiastes than their being ascribed to the same person; in Wisd. Sol. 2 "Solomon" disputes, misrepresents, and deprecates the views which in Ecclesiastes "Solomon" announced as his convictions, the fruit of his extended search. Like Job, Koheleth had questioned the operation of the doctrine of individual retribution, which before him Ezekiel had developed and which had become unquestionable dogma for the generation of Proverbs. For this heterodoxy the author of the Wisdom of Solomon takes the like of Koheleth seriously to task, but not by reaffirming the earlier orthodoxy; he does not defend the proposition that virtue is always

rewarded, evil punished, in life; he replaces it with a doctrine of the soul's recompense after the body's corruption (a doctrine which later the author of IV Maccabees exploits to the full).

In his teachings concerning the soul and its fate and those concerning the nature of wisdom (*see below*) the author of the Wisdom of Solomon draws so heavily upon concepts at home in Greek philosophy that his book has little in common with the earlier literature of wisdom. At any rate, he strikes out on new paths. *See WISDOM OF SOLOMON.*

3. "Where shall wisdom be found?" Wisdom, then, has many faces. Persons may be counted wise for sundry reasons; and the wise, in their literature, speak a varied language. Biblical wisdom is what the wise men are and what they say. The manifestations of wisdom have been reviewed in §§ 1-2 *above*. Yet to be considered is the nature of the abstraction wisdom itself. Biblical thought about wisdom brings it into relation with both man and God.

a. In man. There is some ambiguity in biblical thought as to the source of human wisdom—as to what makes a man wise. It sometimes appears that a man is wise by nature, with a kind of native talent or intelligence (I Sam. 16:18; I Kings 2:9). The thought appears oftener that the originally simple have it in their power to acquire wisdom—that, given a proper attitude, a religious attitude (Prov. 1:7; Ecclus. 1:14), and good will, the unlearned can attain wisdom by their own efforts; accordingly, the custodians of wisdom advertise their wares and urge men to partake—young men in particular (Prov. 1-9; Wisd. Sol. 6:12-20). This wisdom which is at hand to be learned appears to have a tangible form. It is a fund of racial experience which parents and teachers have received as their heritage and dutifully and lovingly transmit to new generations (cf. Proverbs; Ecclesiasticus). It is available in the schools and in the homes. Or else it is what one man in his lifetime of earnest seeking has himself learned by experience and experiment and reflection, which now he records and publishes for others to share (Job; Pss. 49; 73; Ecclesiastes).

As over against this wisdom which a man has or seeks in textbooks and schools or achieves through tortured living and meditation, there is the human wisdom which comes to a man as a gift, divinely bestowed. This is not only the revealed word of God, once recorded and now studied as the Law and the Prophets (Ecclus. 24:23; 39:1; and often), but it is also a present giving (as to Solomon in his dream in response to his prayer; cf. Wisd. Sol. 7-8; also Daniel). It is wisdom through the spirit of God (Gen. 41:38-39; Isa. 11:2, of the messianic king). This is the wisdom of which the poet in Job 28 says: "Man does not know the way to it" (vs. 13 LXX; cf. Ecclus. 3:20-21).

In the development of rabbinic Judaism the tendency to look to the Scriptures for wisdom—wisdom divinely given, revealed, and recorded—became a notable feature. Like Ben Sirach, scribe, scholar, and teacher, searching law, wisdom, and prophets, and declaring wise instruction (Ecclus. 39:1, 8), and like Ezra before him, Ezra the "scribe skilled in the law of Moses which the LORD the God of Israel had given" (Ezra 7:6), the tannaim who wrote the

Mishna and the early midrashim, concerned with both halachah and haggadah, searched the OT for meaning. So also did the community described in the Dead Sea Manual of Discipline, as well as the early Christian community—these two latter groups, however, with a predominantly eschatological interest. They carry on with this type of wisdom, wisdom which God has made available to man.

b. With God. This thought—that human wisdom comes as a gift from God (through ancient revelation, in answer to prayer, or by way of God's spirit)—derives, of course, from the thought that God is wise. This concept indeed appears (Ps. 104:24; Prov. 3:19; Isa. 31:2; Jer. 10:12; Dan. 2:20). It is expressed quite often in the literature, but more usually in a poetic form, a form which leaves room for an alternative interpretation: not that God *is* wise, but that wisdom is *with* God. The Hebrew poet was capable of the vivid personification even of abstractions, and the authors of Job 28; Prov. 8-9; Ecclus. 24; Wisd. Sol. 7-8; and other such compositions probably meant to do no more than describe God as wise when in their poetic exuberance they made of wisdom God's first creation and his delight, "rejoicing before him always" (Prov. 8:22, 30; Ecclus. 1:4, 9; 24:9), hidden in a secret place to which God alone knows the way (Job 28:23), God's breath, an emanation of his glory (Ecclus. 24:3; Wisd. Sol. 7:22-8:1), present with him, his counselor, at the creation of the world (Wisd. Sol. 9:9).

The Egyptians and the Babylonians had gods of wisdom, and mythological features might easily have found lodging in OT wisdom; the idea of wisdom as a person in a heavenly court cannot be ruled out as impossible. But such an explanation would be gratuitous, and the mythological features are probably no more than a literary device.

Jas. 3:17 undoubtedly reflects the description of wisdom in Wisd. Sol. 7:22-24, and the NT *logos* theme did not develop independently of the personification of wisdom in the wisdom literature of the OT and the Apoc. (*see LOGOS*). It was this aspect of wisdom which impressed itself upon emerging Christianity.

Without the literature of wisdom the Scriptures would be decidedly poorer. Meaningful as is the Law, powerful as is the prophetic element, wisdom yet adds a dimension. Wisdom is a deposit of reflections upon human experience, the trivial along with the ultimate, both superficial and profound. It is philosophy rooted in the soil of life: truth springs out of the earth. It is philosophy although it is not reduced to a system. It teaches rational living, which, at the same time, is good and godly living. It teaches that the life controlled by reason is the life beset by the fewest sorrows. And it teaches how when troubles come, as apparently at best they do, the wise can bear them. Righteousness and peace kiss each other.

WISDOM OF SIRACH. See ECCLESIASTICUS.

WISDOM OF SOLOMON *sōl'ō mān* [Σοφία, Σαλωμῶνος]. A book of the Greek, but not the Hebrew, Bible, placed between Job and Ecclesiasticus, called *Liber sapientiae* in the Vulg. (which reproduces the Itala); deutero-canonical in the Roman Catholic Church and apocryphal in other communions. Wisdom ranks high among the apocryphal books for its elevated thought, its artistic style, and its pioneer fusion of Greek and Hebrew elements.

1. **Contents.** The unifying theme is praise of WISDOM, which is hypostatized as in Proverbs but not given so definite a personality or function as the Logos in Philo. In the first portion (chs. 1-9) the theme is righteousness and wisdom, and the second illustrates the effectiveness of righteousness in the early history of Israel. The first part itself falls into two fairly clearly defined segments, so that the book as a whole may be conveniently divided into three sections: *a* (1-5) contrasts the wicked and the pious and their respective destinies (the section as a whole is an admonition to seek God in righteousness and thereby to acquire wisdom and life; 1:16-2:24 reports the frivolous views of the godless and their refutation by the wise; and 3:1-5:23 compares the temporal and eternal doom of the righteous and the godless); *b* (6:1-9:18) describes wisdom, its significance for mankind, and the modes of attaining it (ch. 6 is Solomon's admonition to rulers to strive after wisdom; in 7:1-8:21, Solomon tells how he himself acquired and profited by wisdom; and 9:1-18 is Solomon's own prayer for wisdom); *c* (10-19) recounts the effectiveness of wisdom in history (10:1-11:1 shows wisdom's power to deliver or punish during the period from Adam to Moses; and 11:2-19:22 compares God's chastisement of the Egyptians and his benevolence to the Hebrews). The third section contains two digressions: 11:15-12:22 shows how God fits the punishment to the crime but is merciful withal, and 13:1-15:17 attacks the folly of heathenism. The later chapters are more flamboyant in style and less solid in substance than the earlier, and the tame and abrupt ending has been taken to indicate either that the author had exhausted his matter or that the conclusion of the book has been lost.

2. **Literary character.** Wisdom belongs to the category of wisdom literature but differs from other works in this category in form and temper. Unlike Proverbs and Ecclesiastes, it is not composed in short gnomic utterances but is fluid and varied in style. Its closest affinity is with IV Maccabees, and it is second only to that work as an example of the fusion of Greek and Hebrew elements in late Hellenistic literature. The form of both books is that of a spoken discourse in artistic Greek style employing both Hebrew and Greek modes of thought and expression. In both, the style alternates between exposition and lyrical enthusiasm and employs the various literary devices taught by the rhetoricians (assonance, alliteration, etc.; sorites, syncrisis, antithesis, etc.). Unlike IV Maccabees, which maintains the sermon form throughout and is addressed to a cultured Jewish congregation, Wisdom recalls the more popular Cynic-Stoic diatribe, seems to envisage a Jewish, mixed, and Gentile audience at various points, and interlards the discourse with prayers, historical summaries, definitions, and the like. As in IV Maccabees, furthermore, and other apocryphal writings (and most noticeably in the apocryphal additions to canonical books), the motivation is exclusively religious; any nonreligious material that may be used is given a specifically religious application.

3. **Greek and Hebrew elements.** As would be expected of a cultured writer of Greek in the post-classical period, our author has obviously read Homer and the tragedians and perhaps Xenophon, and is acquainted with the doctrines of Plato, the Stoics, and perhaps Pythagoras. The enumeration of the cardinal virtues in 8:7 is clearly Stoic, and the statement that creation was *ex amorphou hyles* in 11:17 Platonic. Such expressions need not, however, imply special competence in philosophy (the author of IV Maccabees was a better philosopher) but were the common store of contemporary literacy. Some apparently purposeful departures from Hebrew thought may be inevitable extensions of meaning implicit in the use of Greek words, which give the familiar Hebrew ideas they represent new connotations—as "ambrosia" means more than "manna," and as "psyche" means more, and is more precise, than "nephesh." Other current terms to which the philosophers had given quasi-technical meaning similarly introduce new connotations and new precision to vaguer antecedent ideas; providence, conscience, virtue, are examples. Greek modes of thought are obvious in such notions as that wisdom is an emanation of God; that wisdom initiates into its secrets; that God loves humanity; that God is omniscient, omnipresent, and universally active; that wisdom has specific attributes. The definite personification of wisdom (as contrasted with the vaguer personification in Proverbs) is Greek; here wisdom possesses not only moral and religious virtue but also all the secular knowledge the Greeks had acquired. This innovation has special importance as a stage in the development of the doctrine of the Logos. The other innovation attributable to Greek influence which exerted a major influence on subsequent religious development is the explicit doctrines of immortality. See § 7 below.

However significant they may be, the Greek ele-

ments are only in the nature of a modernization and naturalization of a basically Hebraic work. The author looks to and reflects scripture at every point and even emulates the stichic parallelism characteristic of Hebrew scripture. He uses the LXX rather than the MT (at 2:12 he uses LXX Isa. 3:10, which does not agree with the MT; this is convincing proof), but this is not remarkable in the Greek Diaspora. Original compositions for liturgical use employed "translation Greek" for its religious associations; "translation Greek" for all its Hebraisms, Solomon's prayer (ch. 9) may have been composed in Greek for liturgical use in Alexandria. But the Hebraic character of Wisdom is most apparent in its use of traditional midrashic exegesis, which elaborates scriptural texts with fanciful additions (see § 7 below). It is remarkable, and perhaps significant for dating (see § 6 below), that the midrashic method, and not the allegorical method of Philo, is used. In this respect Wisdom is much more integral to Jewish tradition than is Philo.

4. Provenience. The Wisdom of Solomon was certainly composed in and for a Greek-educated Jewish community, probably at Alexandria, for it fits into the Greek-Jewish literary tradition of Alexandria and displays familiarity with the Hellenistic Egyptian environment. The author seems to have seen the cult of animal-worship, which had a revival in late Hellenistic Egypt; he knows Greek art and thought which flourished there, and is particularly concerned with the Egyptian phase of Israelite history. But Palestine (where Greek culture had wider currency even among the pious than has heretofore been suspected) is a possibility. The opening chapters, indeed, seem to fit Palestinian conditions better than any other, and the remainder Egyptian; and the two portions may reflect different sources. See § 5 below.

5. Authorship. The ascription to Solomon was early recognized as merely a literary device (in his preface to the book Jerome says: "The book called Wisdom is not Hebrew; rather, the style itself is redolent of Greek eloquence"), perhaps to give force to the apparent refutation (1:10-2:20) of Epicurean doctrine ascribed to Solomon in Ecclesiastes. All scholars are agreed that in the main the book is an original Greek composition, not a translation; and the general consistency of style, the use of favorite "theme" words which serve to mesh widely separated sections, and the striking fact that the verb μεταλλεύειν is given the same wrong sense at 4:12; 16:25 have convinced all critics that the book in its present form is the work of a single hand. But apparent inconsistencies in point of view and manner between sections of Wisdom have led some critics to question its original unity. Proposals brought forward in the eighteenth and early nineteenth century, to distribute portions of the book among disparate authors, were adequately refuted in the excellent edition of Grimm (1860), but new objections and proposals have been advanced in the twentieth century. The most plausible position (set forth most fully by Focke in 1912) is that section *a* is direct translation from Hebrew and the remainder an original continuation by the translator himself. The basis for the argument that *a* is a translation is that

it contains a smaller proportion of particles, fewer compounds, peculiarities in word order, and a more careful observance of Hebraic parallelism; and that it is Jewish in content and addressed to Jewish rulers, whereas the remainder is in a less constrained style with more rhetorical flourishes and frequent tautology, makes use of pagan teachings, and is addressed to a different audience. Some scholars have sought to prove a Hebrew original for the early chapters on the basis of assumed mistranslations in the Greek. The preponderance of modern scholarship holds to unity of authorship. Roman Catholic editors insist upon it strongly; some others accept it more tentatively.

Actually the problem is of minor importance. Whether or not our author translated directly, it is clear that he used pre-existing materials, as in the prayer of Solomon or the midrashic elaborations, and that he did not always take pains to regularize his composition; in 10:1-11:1, e.g., it is wisdom which directs events, and God does not appear, whereas from 11:3 onward wisdom disappears and God is appealed to and acts directly. In theological and ethical premises there is no significant difference between the parts, but, on the contrary, striking resemblances. If section *a* derives from a pietist group such as that at Qumran, the remainder also reflects their teaching. At 7:1 Solomon asserts:

I also am a mortal, like all men,
a descendant of the first-formed child of the earth.

This is very like the egalitarian ideal insisted upon in the so-called Manual of Discipline.

6. Date. The hypothesis of a Palestinian Hebrew source for the first section and an Alexandrian origin for the remainder facilitates, and receives support from, the establishment of a date. The polarization of the godless and the righteous, the exhortation to Jewish rulers to pursue righteousness, and the outspoken indictment of their worldliness fit the reign of Alexander Janneus most appropriately, when the tension was at its height and Janneus vented his wrath against the pious opposition by crucifying eight hundred of them and slaughtering their women and children before their eyes as he watched the spectacle, while he reveled with his concubines (Jos. War I.iv.6; Antiq. XIII.xiv.2). The source may well have emanated from some such pietist group as that which occupied the retreat at Qumran. This would explain the spiritual tone and warmth of the invective and give point to the attack on the Epicureanism of worldly rulers for which Ecclesiastes had made Solomon himself sponsor (cf. Wisd. Sol. 2:1 with Eccl. 2:22; 3:10; 4:1 ff; 6:12; Wisd. Sol. 2:4-6 with Eccl. 2:16; 9:5).

For fixing the lower limit the best evidence is the denunciation of idolatry, and especially Egyptian theriolatry, in 13-15. This can only have been written when the *rapprochement* with the Gentile environment which Artisteas had sought to promote, and which the Egyptian Jewish community had sought to preserve in order to maintain their social and economic position in the general community, had been destroyed by the advent of Roman rule after the Battle of Actium and had been replaced by uncompromising hostility. The Roman introduction

of the poll tax (*laographia*) for noncitizens had deprived the Jews of their *de facto* privileges and sharply reduced their status. This would place Wisdom at the beginning of Roman rule in Egypt, or near 30 B.C. III Maccabees, which was written under the same pressure, exhibits the same abhorrence of any compromise with heathenism and the same impatience with Jews who had compromised with heathen ways.

An alternative dating makes Wisdom precede Philo (placing its lowest limit at ca. 50 B.C.), on the grounds that if it were later and in the same tradition, the author would surely have copied Philo's use of the Logos (which would be peculiarly appropriate to his approach) and would have followed Philo in interpreting scripture allegorically. He fails to do so in such tempting passages as those dealing with Aaron's vestments (18:24), Lot's wife (10:7), or the brazen serpent (16:5-6), where Josephus too had followed Philo's exegesis. But Philo appears to have stood outside the main stream of Jewish tradition even in Alexandria, and a writer whose object was to resist latitudinarianism might purposely ignore him. It is a sign of our author's adherence to the main body of Jewish tradition that he does in fact employ the midrashic, rather than the allegorical, mode of interpretation.

7. Aims and doctrine. The object of Wisdom is to hearten the pious by showing that the dominance of evil is only apparent and transitory, to admonish backsliders by showing that the secular philosophy which had relaxed their faith can in fact support it, to recover apostates and perhaps convert Gentiles by showing the folly of heathenism. God is ubiquitous and aware of the good and evil in the world; each will receive due requital, but rewards need not be temporal. Death came into the world through the envy of the devil (2:24; *Diabolos* translates the Hebrew *Satan*, who is thus first given this role in literature).

But the souls of the righteous are in the hand of God,

 their hope was full of immortality.

The hope of the ungodly man is like chaff carried
 by the wind. (3:1-4; 5:14.)

Our author would appear to be the earliest Jewish writer to make individual immortality so specific and to make righteousness a condition of eternal salvation. But 3:8; 5:16; 6:17-20 merge into the more usual concept of national immortality. Significant of the eschatological interest of our author is the allusion to Enoch (4:10-14), who is expected to be recognized without his name being mentioned. The second and more traditional part of Wisdom does not speak of messianic hopes. The sacrificial cult is never mentioned, and Moses is spoken of (11:1) as a prophet rather than a lawgiver. This would suit the premise of an origin either among a pietist group in a Palestinian retreat or in the Alexandrian diaspora. Efforts to systematize the theology and eschatology must remain futile, because our author is an ardent preacher rather than a systematic thinker. As in contemporary Stoicism, the reader feels that the communication of faith is more important than the logical theory behind it.

8. Influence. There are no direct citations of Wisdom in the NT, but a number of striking echoes have convinced many scholars that Paul and John made use of it. As in the case of echoes of IV Maccabees, however, the explanation may well be that the Christian and Jewish authors were affected by the same religious atmosphere and the same modes of discourse. Passages in the NT letters which appear to parallel Wisdom are: Rom. 1:18 ff (11; 13; 15); 2:4 (11:23; 12:10, 19); 9:21 (15:7); II Cor. 5:5, 7 (9:15); Eph. 6:11-17 (5:17 ff); Heb. 1:3 (7:25-26); 12:17 (12:10); Jas. 3:17-18 (7:22-23); I Pet. 1:6-7 (3:5-6). John's teaching of the Logos exhibits many parallels—e.g., John 1:1, 18 (8:3; 9:4); 1:3, 10 (7:21; 8:6; 9:1, 9); 5:20 (8:4; 9:9 ff). It may be that the sounding of the trumpets in Rev. 8-9 reflects the arrangement of visitations in Wisd. Sol. 11:16-19. Wisdom is frequently cited by patristic and later authors, generally as inspired; it was recognized as canonical by the Council of Trent (1546) and has been drawn upon in Roman Catholic liturgy.

9. Text and editions. The text of Wisdom is well preserved, in whole or in part, in the four great uncial MSS—B (Vaticanus), \aleph (Sinaiticus), A (Alexandrinus), and C (Codex Ephraemi Rescriptus)—and in a number of minuscules. The best text is B, which is the basis of the critical editions of Swete and of Rahlfs. For textual criticism the most useful of the versions is the Itala, which has passed into the Vulg.; this contains a number of glosses and doublets. There are also Armenian and Syrohexaplar versions.

WISE MEN. See MAGI.

WIT. See HUMOR.

WITCH, WITCHCRAFT. See MAGIC.

WITHERED HAND [ἐξηραμμένην ἔχων τὴν χεῖρα]. The cure of a man's withered hand is reported in parallel by Matt. 12:9-14; Mark 3:1-6; Luke 6:6-11. No accurate diagnosis of the diseased condition is now possible. Luke adds that it was the man's *right* hand. According to Jerome on Matt. 12:13, the Gospel of the Hebrews said that the man was a mason, who wished to earn his living again. The same Greek word is used of Jeroboam's hand in I Kings 13:4,

where the condition appears to have been hysterical paralysis; and in Mark 9:18, referring to an epileptic spasm.

S. V. McCASLAND

WITNESS [עֵד; μάρτυς]. A person who has firsthand knowledge of a fact or an event. Biblical law requires the testimony of at least two witnesses to establish the guilt of any offense (Deut. 19:15; and Num. 35:30; Deut. 17:6 reiterates this in connection with capital offenses); the rule is illustrated in the trial of Naboth (I Kings 21:10, 13). Nothing is said in the Bible regarding qualification. According to Jos. Antiq. IV.viii.15, the credibility of a witness was determined by his past life, but neither women nor slaves were qualified to testify (cf. M. Bek. 4.10; R.H. 1.8; Sanh. 3.3-5).

Important commercial transactions—e.g., the transference of property—were carried out in the forum (Gen. 23; Ruth 4). If a document was involved, it was signed by the witnesses (Jer. 32:12).

Witnesses did not testify under oath. However, if none voluntarily presented himself, the victim of an injustice could publicly adjure all persons capable of testifying on his behalf to do so under pain of a curse (Lev. 5:1; Prov. 29:24; cf. Judg. 17:2).

A witness to a grave public offense was obligated to prosecute the offender (Lev. 24:11 [cf. I Kings 21:10]; Num. 15:33; Deut. 13:8—H 13:9; Jer. 26:8). When the crime was punished with stoning, the witnesses flung the first stone (Deut. 13:9—H 13:10; 17:7; cf. Acts 7:58).

Bearing false witness is banned in the laws (Exod. 20:16; 23:1; Deut. 5:20—H 5:17) and condemned in the wisdom literature (Prov. 6:19; 14:25; 19:5, 9; 21:28; 25:18). One who, upon examination, proves to have been a false witness is subjected to the penalty that he had schemed to inflict upon the accused (Deut. 19:16-21; cf. Code of Hammurabi 1-4). By later interpretation this form of talion was applied only when the false testimony had been accepted and a verdict delivered on its basis (Jos. Antiq. IV.viii.15; M. Mak. 1.6; cf. Sus. 36 ff). Contradictory testimony was thrown out of court (M. Sanh. 5.2; cf. Mark 14:56-57).

God is called upon as a witness—a prosecuting witness and judge (cf. Mal. 3:5)—to solemn undertakings or prophetic warnings (Gen. 31:50; I Sam. 12:5; Jer. 29:23; 42:5; Mic. 1:2; Mal. 2:14). Enduring inanimate objects are invoked as witnesses as well (Gen. 31:48 [stones]; Deut. 31:19, 21, 26 [a traditional poem]; Josh. 22:27-28, 34 [an altar]; Ps. 89:37—H 89:38 [the moon]). The Second Isaiah considers Israel a witness to Yahweh: by its very presence, and as a repository of prophetic predictions which have come true, it attests the power of God as Deliverer and Lord of history (Isa. 43:9-10; 44:8-9).

In the NT the procedural rule of two witnesses is made applicable to the Christian community by Matt. 18:15 ff; I Tim. 5:19. Those who attest truths about God are called witnesses (John 3:11, 32; 8:18; Rev. 1:5; 11:3), as are those who testified what they saw or heard concerning Jesus (Luke 24:48; Acts

1:8; 10:41; 22:20). The violent end that many such faithful met gave the Greek word **MARTYR** its present meaning (Rev. 2:13; 17:6).
M. GREENBERG

WITNESS, ALTAR OF [עֵד, 'ēdh]; KJV transliterates ED ēd. An altar erected by the Transjordan tribes on the W side of the Jordan River, that they might have a "witness" that they, as well as the W Jordan tribes, had a portion in the Lord (Josh. 22:27-34). The altar was given the name "Witness," although the name has been dropped by a scribe from the text of Josh. 22:34 and has to be supplied. This passage may have influenced Isa. 19:19-20.

H. G. MAY

WIZARD [עֵדֵי, necromancer]. See **FAMILIAR SPIRIT**.

WOLF [זֶבֶד, cf. Akkad. *zību*, Arab. *dhi'b*; λύκος]. With the exception of some breeds of domestic dogs, the wolf (*canis lupus*) is the largest living member of the family of carnivorous mammals known as Canidae (which includes wolves, jackals, foxes, and dogs). It hunts singly or in pairs, and also in packs. It is known for its boldness, fierceness, and voracity; it will commonly kill much more than it can eat or take away, being a special enemy of sheep.

The wolf was well known in ancient Palestine, though curiously all the biblical references to wolves, with the exception of Isa. 11:6; 65:25; John 10:12, are figurative (cf., however, M. Ta'an. 3.6; B.K. 1.4; B.M. 7.9; Hullin 3.1). In Gen. 49:27 Benjamin is described as a ravenous wolf; in Jer. 5:6 Judah's enemy is represented as a wolf from the desert; and in Ezek. 22:27 Judah's princes are compared to rapacious wolves. The nocturnal depredations of wolves supply the figures applied to the Chaldean horses in Hab. 1:8 and to Jerusalem's judges in Zeph. 3:3. In Matt. 7:15 false prophets are designated as wolves, as are false teachers in Acts 20:29. In Matt. 10:16; Luke 10:3 the same term is applied to the critics and opponents of the early apostles. The traditional enmity between wolves and sheep (cf. Eccles. 13:17), and the former's predilection for the flesh of the latter, gives point to the hope that in the universal peacefulness of the messianic age, even the wolf and the lamb shall dwell together (Isa. 11:6; 65:25).
W. S. McCULLOUGH

***WOMAN** [יְהוָה; γυνή]. The function and status of woman in the Bible are strongly influenced by the patriarchal form of family life which prevailed. Woman's principal function is performed in her role as wife and mother. In this connection she makes her sexuality available to her husband for his pleasure and for reproductive purposes. As a mother she sustains a relationship to children which involves their care and nurture. In her wider relationships which extend beyond the family, she takes part in the economic and social life of the community and in its political and even military affairs. She shares also in the religious life of her contemporaries, both in the home and in the tribe, city, or national community of worship.

The position of woman in the NT, especially as this is reflected in the activities of those who were

connected with the life of Jesus and with the early church, was of considerable importance.

1. The subjection of woman
 - a. Her status and role as a wife
 - b. Her status and role as a mother
2. Woman in social-economic life
3. Woman in political and military life
4. Woman and the arts
5. Woman in religious life
6. The ideal woman
7. Negative attitude toward woman
8. Woman's beauty
9. Woman's legal rights and disabilities
10. Figurative use of "woman"
11. Woman's role in the NT
 - a. In the life of Jesus
 - b. In the life of the early church

Bibliography

1. **The subjection of woman.** Woman's position in the Bible is largely that of subordination to her father or her husband. In several instances the word for "wife" signifies "woman belonging to a man" (Gen. 2:24-25; 3:8, 17; 4:1, 17). This inferior status is doubtless reflected in the false but popular etymology of the Hebrew words for "man" and "woman" (see SEX). Her father gave a woman to be the wife of another man; her husband could freely divorce her (see DIVORCE); either could decide whether an oath she had taken was valid; her husband ruled over her (3:16), yet she had considerable freedom to act (19:31-35).

a. **Her status and role as a wife.** Although a woman did not usually choose her own husband, her desires were not always ignored (Num. 36:6). The father received a bride price for his daughter and thus engaged in a contract with the prospective husband to make her sexuality available to him. This transaction, however, was not a transfer of chattel property. Rather it was the surrender of authority over a woman by one man to another. She remained a person and could also have personal relations with her husband, by whose name she was called. She evidently kept her own name and individuality also, as may be seen below. She was sometimes the stronger character. We may note the initiative of Sarai in directing her husband to take her maid in order to have children by her (Gen. 16:2; cf. I Sam. 25; II Kings 4:8-10). In spite of her inferior status in the patriarchal family, woman found it possible to experience love in marriage (Gen. 24:67; 29:20; 34:3 ff; I Sam. 1:8). See MARRIAGE; SEX; FAMILY.

b. **Her status and role as a mother.** Respect toward one's mother was demanded in biblical society, and disrespect was severely punished (Lev. 20:9; Deut. 27:16). Her influence was considerable. Perhaps the alleged etymology of the name Eve (חַוָּה), "mother of all living," is motivated by the prominence of woman's role as mother in the Bible. As mother, woman was more than the bearer of children. She also had the responsibility of caring for them. She was busy in the various tasks that the family required, making clothing, carrying water, making bread, and generally providing for her husband and children (Gen. 24:11, 13-16, 19-20; 27:9, 14; Matt.

13:33; 24:41; Tit. 2:4-5 ["domestic" virtues stressed]). See FAMILY.

2. **Woman in social-economic life.** Women's participation in the social life of the community was considerable. Their presence at weddings and funeral obsequies, as well as on other occasions of a social nature, is reported. Mourning for the dead was done by women when Saul and Jonathan were killed (II Sam. 1:24; conversely here there is fear that the women of the Philistines will exult if they hear the news, perhaps by publicly singing and dancing [vs. 20]; see also Song of S. 2:7; 3:10; Jer. 9:17; 31:15; etc.; see MARRIAGE). Women shared in the festivals of the harvest, no doubt, such as the treading out of the grapes (Joel 3:13), although this is not specifically stated.

Woman's economic activities receive attention in Prov. 31, where her real-estate ventures (vs. 16), her manufacture and sale of linen garments (vs. 24), are pointed out with approval. Such business enterprise on the part of biblical women was rare, however, doubtless because of their sexual-social function in Israelite life and also because of the relatively undeveloped economy peculiar to their culture. Yet both Ananias and his wife, Sapphira, sold property (Acts 5:1); one Lydia of Thyatira was a seller of purple goods (16:14); Aquila and his wife Priscilla were both tentmakers (18:2-3).

3. **Woman in political and military life.** It is true that the list of the nation's heroes, "distinguished men," compiled by a second-century writer contains only the names of men (Ecclus. 44:1-50:29). But this hardly does justice to the actual facts. The influence of women as related to affairs of state is seen in the biblical accounts of Deborah (Judg. 5); Bathsheba (I Kings 1:11 ff); Jezebel (19:1 ff); and perhaps the women who are with one exception only named, but who were mothers of kings (II Kings 8:26—the exception [see 11:1]; 12:1; 14:2; 15:2, 33; 18:2; 21:1, 19; 22:1; 23:36; 24:8, 18).

4. **Woman and the arts.** Women more than men engaged in the arts of dancing and singing, preserving their ancient forms and exhibiting these on social and religious occasions. Cultic dancing was practiced by the prophetic bands which roamed the countryside (I Sam. 10:5; I Kings 18:26). This was, of course, done by men; although ritual dancing by women was not unknown (see DANCING). Miriam and other Hebrew women played upon timbrels and danced to celebrate their people's escape from Egypt (Exod. 15:20). The "singing women" who sang laments over the fate of Josiah are named along with the "singing men" (II Chr. 35:25). The whole assembly of Israelites, according to another writer, included 245 singers, "male and female" (Neh. 7:67). Some women practiced magic and literally wove magical spells by sewing wrist bands and veils for the purpose of "hunting souls" (Ezek. 13:18; see MAGIC). Although there are allusions to the art of weaving in the Bible (Exod. 35:35; Ps. 45:13; Prov. 31:19), only the last of these relates it to women as the weavers (cf. Exod. 35:25). There is no indication that this special skill was associated with women.

5. **Woman in religious life.** Women participated fully in the religious activities revolving around the

great festivals of the Passover, Pentecost, and the Feast of Tabernacles. They are undoubtedly included in the words "all the congregation of Israel" (Exod. 12:3). In prescribing the manner of keeping the Feast of Booths (Tabernacles) a man's daughter, maidservant, and widows are specifically named (Deut. 16:14). In the Qumran community described in some of the Dead Sea Scrolls, the whole group, including women, must observe the rules of the order (1QS 1.1). Women attended religious gatherings and shared in sacrificial meals. At the yearly feast of the Lord in Shiloh, the daughters of that place came out to dance (Judg. 21:19-21). A woman might be expected to go to the shrine to engage in the Festival of the New Moon or the sabbaths (II Kings 4:23). She could not serve as a priest. Both her ritual uncleanness and her sexual nature as a woman barred her from serving in this capacity.

Huldah the prophetess was consulted regarding the newly found Book of the Law (II Kings 22:14). The term "prophetess" is used also in connection with Miriam and Deborah (Exod. 15:20; Judg. 4:4). The wife of Isaiah is called a prophetess, probably just because she is a prophet's wife (Isa. 8:3); and a false prophetess, Noadiah, appears in Neh. 6:14 (cf. Joel 2:28; Acts 2:17; 21:9). The religious influence of women, including the unnamed multitudes of mothers of biblical homes and those whose names have survived in the Bible, was undoubtedly great. The bitter feud between Jezebel, Israel's queen from Tyre, and Elijah the prophet was based largely upon the former's effort to establish the Tyrian cult in Israel (I Kings 1).

6. The ideal woman. From several observations we may construct a concept of the ideal woman, especially from the later writings. She is gracious, restrained in speech, discreet, peaceful (Prov. 9:13; 11:16, 22; 21:9). She is also trustworthy, efficient in the conduct of business, industrious, unafraid of the future, provident, wise, kind, and reverent (31:10-31). In the book of Judith the ideal woman is reverent, beautiful, intelligent, loyal (8:28-31, etc.). She forgets her modesty only to use her charms for the purpose of overcoming her people's enemy, Holofernes. Another writer names woman's grace, knowledge, silence, self-control, modesty, beauty, domestic efficiency, good figure, "beautiful feet with a steadfast heart" (Ecclus. 26:13-18). Susanna was a pious, chaste, and beautiful woman; and the piety of the mother of seven martyred sons is told in another story (II Macc. 7:20 ff). Young women should be trained to love their husbands and children, to be sensible, chaste, domestic, kind, and submissive to their husbands (Tit. 2:4). The ideal of patriotism, loyalty to the Jewish community, is strongly revealed in the book of Esther. The power of woman, idealized and rationalized, is brought out in the words of a young Persian attached to the court of Darius. He answered the question, "What one thing is strongest?" with the words: "Women are strongest." He explained that women bear men, nurture them, clothe them. Men give up a fortune looking for a woman, losing their heads for her (I Esd. 3:12).

7. Negative attitude toward woman. Disparagement of woman's character and nature is at times

forthrightly asserted. The most radical relates to the origin of sin:

From a woman sin had its beginning,
and because of her we all die
(Ecclus. 25:24).

Disagreeable characteristics are enumerated also. Woman is, or may be, contentious, noisy, indiscreet (Prov. 9:13; 11:22; 25:24). Even though woman sinned in the garden, she will be saved through childbearing (I Tim. 2:14-15). A late editor of the prophecies of Micah cannot avoid inserting a proverb reflecting a negative attitude toward woman:

Guard the doors of your mouth
from her who lies in your bosom
(Mic. 7:5).

Taking hold of a wicked woman is like grasping a scorpion (Ecclus. 26:7; cf. 42:12-14), affirms another writer.

8. Woman's beauty. A woman's beauty is extravagantly depicted in an anthology of love songs. Her eyes are like doves, her hair like a flock of goats, teeth like shorn ewes, lips like a scarlet thread (Song of S. 4:1a, 1e, 2a, 3). Her cheeks are like a pomegranate, and her breasts are like two fawns that feed among the lilies (4:3-5). The process of beautification involves the use of gold ornaments, scarlet dresses, and the enlargement of the eyes with special paint (Jer. 4:30). "Delicate" women wear veils and robes (Isa. 47:2). In outlining the physical development of a woman from birth to sexual maturity, her beauty is not unnoticed by the prophet Ezekiel, even though he is telling a parable. He writes: "You grew up and became tall . . . ; your breasts were formed, and your hair had grown" (Ezek. 16:7). A woman's hair ought not to be exposed; it should be either covered or cut, because of the temptation it might afford to the angels (I Cor. 11:6-10; cf. Gen. 6:4).

9. Woman's legal rights and disabilities. Many Hebrew laws treat men and women as equals: Both the adulterer and the adulteress are to be put to death (Lev. 20:10); both the father and the mother must receive reverence as parents (Lev. 19:3; Deut. 5:16); food taboos are mandatory upon both sexes (Lev. 11); death is demanded for both in cases of incest (20:11, 17-18). Woman's inferior status, however, is reflected in laws which show discrimination: A daughter is less desirable than a son (Lev. 12:1-5); she could be sold for debt by her father (Exod. 21:7; cf. Neh. 5:5); she could not be freed at the end of six years, as could a man (Lev. 25:40). She could be made a prostitute by her father (Judg. 19:24; but cf. Lev. 19:29). The man had the right of DIVORCE. The valuation of a man differs from that of a woman when a special vow is made (Lev. 27:1-7). See SEX; MARRIAGE; FAMILY.

10. Figurative use of "woman." Traits of feminine character are applied to men or nations considered collectively, by some biblical writers. Feminine characteristics are applied to the Egyptians, who "like women" will tremble with fear (Isa. 19:16). The concept of woman occurs to represent wickedness, sitting in an ephah measure. Two winged women carry the basket and its occupant to the land of Shinar (Zech. 5:7-11). In the book of Revelation

appears the form of a woman clothed with the sun, with the moon under her feet. She is pregnant and cries out in anguish for delivery (Rev. 12:1-2, 5-6, 13-17). The use of this figure to personify wisdom occurs frequently (e.g., Prov. 1:20-21; 8:1-3; etc.; Wisd. Sol. 7:12-22; Eccus. 1:6-20; etc.).

11. Woman's role in the NT. While not differing radically from the concept which the OT presents, the view of woman in the NT reflects the influence of the Christian as well as the Jewish community.

a. In the life of Jesus. Many anonymous women appear in the gospel accounts of Jesus' life and ministry (Matt. 9:20-22; 14:21; 15:22; 26:7-13; Mark 1:31; Luke 13:11-13; John 4:7-26). Women who are called by name include Mary Magdalene, Mary the mother of James and Joseph, and the mother of the sons of Zebedee, as well as the "other Mary" (Matt. 27:55, 61; 28:1). There were also Mary and Martha (Luke 10:38-42; John 11:1 ff) and Mary the mother of Jesus "with the women" (Acts 1:14). The women who are explicitly named or generally alluded to fall principally into two classes—those who were healed by him and those who followed and watched over him. Jesus occasionally taught through allusions to woman's activities in the home: A woman loses a coin and searches for it (Luke 15:8); two women will be grinding grain at a mill (17:35), to show the suddenness of the coming of the end.

b. In the life of the early church. The gospel was available to all men without regard to sex. Women received it and helped to promote it in the NT church. Men and women were dragged to prison for their faith (Acts 8:3; 9:2). On the other hand, the Jews incited "devout women of high standing" against Paul and Barnabas (13:50), but "not a few" joined them (17:4). Both Aquila and his wife Priscilla instructed Apollos in the faith (18:26); women served as deaconesses in the early church (Rom. 16:1). As examples of faith Timothy's mother, Eunice, and his grandmother, Lois, are held up (II Tim. 1:5). Against the power of pagan cults and customs, the Christian community erected a wall of protection in the form of rules of conduct for women. Accepting the biblical view of woman's subordination to man, the writers of the NT stressed the duty of modesty, submission, and piety. Women were not to speak in church (I Cor. 14:34-36), because God had created them from man and *for* him as well. They should not teach or in any other way usurp man's position in the church (I Tim. 2:12). Women should be known for their works and their faith rather than for their words (vss. 14-15). Older women are to be treated like mothers and younger ones like sisters (5:2). The above evidence shows that, in theory at least, woman was expected to exhibit chiefly the domestic virtues as a demonstration of her piety and faith. In actual practice, her leadership and influence extended into the life of the entire Christian community, as the NT itself reveals.

WONDER, WONDERS. See SIGNS AND WONDERS.

WOOD [יער (*alternately* FOREST); עץ; KJV יער, see below; Aram. ܘܥܐ; ξύλον, ξύλινος]. The material provided by various trees for construction of boats, public buildings, houses, furniture, idols, utensils, and musical instruments, as well as for use as fuel. Wood is at a premium in Palestine today, but the evidence from the Bible supports the belief that in ancient times it was much more abundant. Frequent wars and liberal use of wood for fuel, without concern for reforestation, during many centuries, can easily account for the barrenness in modern times. Frequent references to עץ (more often "forest" in the RSV than in the KJV, where "wood" is frequently the translation) in the OT hardly fit the modern scene (Deut. 19:5; I Sam. 14:25-26; II Sam. 18:6; etc.; cf. Ezek. 34:25: "woods"). The implication of Josh. 17: 15, 18, is that the Hebrews found the central highlands heavily forested. Jotham built "forts and towers on the wooded hills" of Judea (II Chr. 27:4). Hag. 1:8 implies that the hills would produce enough wood for construction of the new temple ca. 520 B.C. According to legend, as Elisha was going from Jericho to Bethel, "she-bears came out of the woods," in an area that is a barren wilderness today (II Kings 2:24).

Wood was used freely for burnt offerings on ancient Canaanite and Hebrew altars (Gen. 22:3-9; Lev. 1:7-17; 4:12; Neh. 10:34; cf. Jub. 21:12-13). The temple cultus called for a wood fire that burned continuously (Lev. 6:12-13). "Hewers of wood" were necessary to provide for daily fuel needs (Deut. 29: 11; Josh. 9:21-27), though dried thorns were often used for cooking fires. See THISTLE.

Several different kinds of wood are specifically mentioned: GOPHER WOOD was used for Noah's ark (Gen. 6:14; see CYPRESS); ACACIA (KJV "shittim wood") was used for the tabernacle, its ark, poles, altars, and other equipment (Exod. 25-27; 35-37); CEDAR and PINE (or cypress) from Lebanon were used in great quantities in Solomon's temple and other buildings in Jerusalem for paneling the walls and covering the floors (I Kings 6:15), for the main doors (vs. 36), and for the ceiling beams and pillars (6:36; 7:2-3); carved olivewood (see OLIVE TREE) was used for the doors and posts of the temple's inner sanctuary (6:32-33) and the cherubim (6:23; cf. II Chr. 3:10). Some special woods were imported: ALMUG wood (perhaps sandalwood) for musical instruments (I Kings 10:12) and SCENTED WOOD (Rev. 18:12).

In addition to its use in buildings and for fuel, wood was used for making ships (I Kings 9:26), wagons (I Sam. 6:14), threshing sledges (I Chr. 21: 23), yokes (Jer. 27:2; 28:13), furniture (Exod. 25:9-28), vessels (Exod. 7:19; Lev. 15:12; II Tim. 2:20), and musical instruments (I Kings 10:12), and for

carving (Exod. 31:5; 35:33). Idols were often made of wood and are frequently mentioned as a concern of the prophets (Deut. 4:28; 28:36; Isa. 40:20; 44:9-20; 45:20; Dan. 5:4, 23; Rev. 9:20; etc.). Wood also appears in figures of speech (Isa. 60:17; Jer. 5:14; Lam. 4:8; Ezek. 15:2-6; 39:10; II Tim. 2:20-21).

The difficult "instruments made of fir wood" (II Sam. 6:5 KJV) is probably an error (see PINE; cf. I Chr. 13:8). The puzzling מִסְכָּן (*mesukkān*; Akkadian *musuk-kānu*) in Isa. 40:20 may refer to a type of hardwood used for making idols in Mesopotamia; a good case has been made for the East Indian "sissoo" tree (*Dalbergia sissoo* L.) as the reference here. See bibliography.

חֵרֶשׁ, translated "wood" in the KJV (I Sam. 23:15-19), is now thought to be a place. See HORESH.

J. C. TREVER

WOOL [צמר; עמר; ἔρως]. Prominently a product of Palestine, wool constituted the tribute which King Mesha of Moab paid to King Ahab of Israel (II Kings 3:4). The frequency of the verbal/literary figure of the SHEEP and the shepherd in both the OT and the NT testifies to the significant place of wool in the common economic life of Palestine.

For reasons not now altogether clear, the Israelite law forbade (Deut. 22:11; cf. Lev. 19:19) the wearing of material combining wool and linen, possibly, as the first-century Jewish historian Josephus understood it (Antiq. IV.viii.11), because cloth of mixed wool and linen was the special material of priestly garments.

In a country where snow was seldom seen, wool became the common metaphor of whiteness and purity (Ps. 147:16; Isa. 1:18, which also employs snow as a parallel simile; Dan. 7:9; Rev. 1:14).

WORD, THE. In the OT, the characteristic means whereby God makes his will known to men in law and prophecy, and achieves his purposes in the providential guidance of the world. By it, indeed, he created the heavens and the earth. In the NT, the Word is also important; in some places it still has its OT connotation, but in others shows a development from it. The Word of the Lord is frequently, in fact, the Word of Christ, the gospel which he first preached, and of which later he became the principal theme. A further development appears in John and Revelation, where the Word or the Word of God is a title of Christ, proclaiming him God's agent both in creation and in revelation.

1. Terminology of "Word" in the Bible. The most important equivalent of "word" in Hebrew is דָּבָר; there are others, such as אָמַר and אָמַרְהָא, derived

from the root אָמַר, "say," and מָלַה, but these are used much less frequently than דָּבָר, and then chiefly in poetry. דָּבָר, on the other hand, occurs in all periods and styles of Hebrew.

The etymology of דָּבָר is a matter of dispute. The same root consonants appear in the words דְּבִיר, the inner sanctuary of Solomon's temple; and מְדִבְרָה, "wilderness"; and the attempt has been made to find a root meaning to cover all three terms and those allied to them in other Semitic languages. It has been suggested, e.g., that "back" is the root meaning, and that דְּבִיר means "back room," מְדִבְרָה "hinterland," and דָּבָר what is "behind" a thing, its "sense" or "meaning." But it is doubtful if the etymology of דָּבָר, even if it could be established, would contribute anything very material to the understanding of the term beyond what can already be discovered from its uses in the Hebrew OT. These can all be explained on the simple assumption of a root meaning "to speak." דָּבָר is primarily "word" in the sense of articulate and intelligible utterance. The meaning "matter, affair, thing," is derived from this, as "matter about which one speaks."

In biblical Greek the principal equivalents of "word" are λόγος and ῥῆμα. Both are used in the LXX to render דָּבָר, and are treated as synonymous. There is a marked preference for ῥῆμα in the Pentateuch, and an even more marked preference for λόγος in the Prophets. In the NT also, λόγος is used much more frequently than ῥῆμα. The Homeric term ἔπος, though it continues in use beyond the classical period, occurs in the NT only in Heb. 7:9 in the stereotyped phrase ὡς ἔπος εἰπείν, where it stands as evidence of the more literary character of this letter. Λόγιον, a derivative either of λόγος or of its kindred adjective λόγιος, occurs occasionally in the LXX; in the NT it is found four times only (Acts 7:38; Rom. 3:2; Heb. 5:12; I Pet. 4:11), in each case in the plural and with the meaning "oracles."

Λόγος has a great range of meanings in classical Greek, which reflect those of the verb λέγω, from which it is derived. The root meaning of λέγω appears to be "pick up"; from this come its secondary senses: (a) "count, tell, recount," and (b) "say, speak" (cf. in English the similar double meaning of "tell," "tale," and "account"). Λόγος acquires from the former sense the meanings "account," "explanation," "rule," "ratio," "reason" (both in the sense of "grounds" and in that of the faculty of reasoning), and from the latter sense "narrative," "saying," "talk," "subject matter about which one talks."

Ῥῆμα, derived from an old root meaning "speak," is primarily "that which is spoken." Occasionally in the LXX and in the NT (e.g., Luke 1:37; 2:15) ῥῆμα has the meaning "matter," but this is a Hebraism, due to the use of the word to translate דָּבָר, and not natural to Greek, as is the corresponding use of λόγος. In grammar ῥῆμα is the technical term for "verb," "noun" being ὄνομα ("name").

2. In the OT. The "word of the Lord" is the phrase used most frequently in the OT to describe the medium of revelation. God speaks, and his prophet hears. Thus the books of Jeremiah, Hosea, Joel, Jonah, Zephaniah, Haggai, and Zechariah all have at, or very near, the beginning the formula:

"The word of the LORD that came to . . ." or some slight variation of it, and the formula is frequently repeated in the course of the books. "Thus says the LORD" and "Hear the word of the LORD" also occur very often in the Prophets. Malachi begins: "The oracle of the word of the LORD to Israel by Malachi."

Other prophets, however, describe the content of their prophecies as "visions" (cf. Ezek. 1:1: "I saw visions of God"; Nah. 1:1: "The book of the vision of Nahum of Elkosh"; Hab. 1:1: "The oracle of God which Habakkuk the prophet saw"). Amos, Obadiah, and Micah have opening formulas which combine the two: "The words of Amos . . . which he saw . . ."; "The vision of Obadiah. Thus says the Lord God . . ."; "The word of the LORD that came to Micah . . . which he saw . . ." (cf. Isa. 2:1: "The word which Isaiah the son of Amoz saw"; Jer. 38:21 KJV: "This is the word that the LORD hath showed me"). Visions are described, as in Isa. 6 and elsewhere, but generally words are heard during the vision, which are at least as important as, or even more important than, the vision itself as a medium of revelation.

Thus, while other religions stress vision as the principal means for attaining to the knowledge of God, the religion of the OT tends to regard it as subsidiary, and hearing as primary. It is possible that at an earlier stage vision had been more important than it afterward became. Anciently a prophet was called a "seer" (I Sam. 9:9). The emphasis on word rather than vision may be connected with the Hebrew rejection of idolatry and, indeed, mistrust of any visual aids to religious faith such as are found in most religions, including Christianity itself.

Revelation by word, and, indeed, also by vision, may also be contrasted with that by inspiration or possession, which was typical of primitive Hebrew prophecy. It is not compulsive in the same way. It is true that there is an element of compulsion in the word of God:

The lion has roared;
who will not fear:
The Lord GOD has spoken;
who can but prophesy?
(Amos 3:8).

But the man to whom the word comes remains in possession of his normal faculties; he is not "turned into another man" like the subject of possession (cf. I Sam. 10:6). When Jeremiah says:

If I say, "I will not mention him,
or speak any more in his name,"
there is in my heart as it were a burning fire
shut up in my bones,
and I am weary with holding it in,
and I cannot (20:9),

he at least contemplates the possibility of silence, unthinkable for the prophet inspired by possession. Thus, while the initiative remains with God, the freedom of the prophet is also respected. God communicates with man in a way which men can understand, since it is analogous to the way in which they communicate with one another.

By his word spoken to the prophets, God makes known, not the elaborate information about the

supernatural order which, e.g., the Gnostics claimed to possess, but his righteous will, concerned with man's conduct in this world, which was, indeed, the limit of the Hebrews' hopes and fears. Such information as is incidentally imparted about the supernatural order in visions such as those of Isaiah (ch. 6) and Ezekiel (ch. 1) is subordinate to the message given at the same time as the vision. The sum total of the revelation of God's will is his law; and Ps. 119, e.g., uses "word," "law," "statutes," as if they were virtually synonymous and interchangeable. God's word is a word of command; its characteristic mood, it may be said, is the imperative.

As a word of command it comes not only to man, but also to the whole universe. Indeed, God called all things into being by his word. Men have to labor and contrive, in order to "create," but their "creation" is only the refashioning of already existing material. The creator-gods in ancient mythologies do the same, but in the OT all God had to do was to speak, and his purpose was thereby accomplished. "God said, 'Let there be light'; and there was light" (Gen. 1:3). "By the word of the LORD the heavens were made" (Ps. 33:6). The forces of nature continue to obey the word which called them into being; thus Ps. 148:8 speaks of

fire and hail, snow and frost,
stormy wind fulfilling his command
[lit., "word," דבר].

The power of God's word is illustrated in a vivid simile in Isa. 55:10-11.

That power should be attributed to God's word is not surprising, but it is also attributed to the words of men, particularly to blessings and curses. Words still possess, in Hebrew thought, the quality of a magic spell. A word once uttered takes on a life of its own beyond the control of the speaker and achieves its effect by a kind of innate power. When Isaac had been tricked into blessing Jacob instead of Esau, he could not cancel the blessing (Gen. 27:32-38). Blessings, curses, and words of good and bad omen thus had a power which was something more than that of producing a psychological effect on those who heard them. They were believed to influence the course of events. This comes out, e.g., in the stories of Balaam and Balak (Num. 22-24) and of Ahab, Jehoshaphat, and the prophet Micaiah (I Kings 22:5-38). The "false" prophet was one who was willing to speak favorable words and so produce the result which his patron desired, while the "true" prophet's rule was to say only what God commanded him (Num. 22:38; I Kings 22:14). The false prophets' word must have been regarded as effective, or there would have been no point in employing them.

This belief in the quasi independence of the word, once it had been spoken, must have facilitated the later personification of the word.

3. In nonbiblical Greek. The earliest use of λόγος which has been thought to throw light on its distinctive use in the Prologue of John is that made of it by Heraclitus of Ephesus, born before 500 B.C. He was understood by the Stoics to have anticipated their doctrine that the universe is controlled by λόγος in the sense of "reason" or "law," and accord-

ingly he was regarded by early Christian writers as a kind of prophet of the Gentiles. But Plato, who certainly knew Heraclitus' teaching, did not interpret him in this way, and it seems more likely that the Stoics were simply reading back their own ideas into the admittedly enigmatic words of Heraclitus.

Stoicism (see STOICIS), as taught by its founder, Zeno, and his immediate successors, was a form of pantheistic materialism, or rather hylozoism, in which the universe was identified with God and was regarded as permeated and controlled by a fiery vapor, very subtle but nevertheless definitely material in substance, which was also λόγος. Early Stoicism was uncompromising in its opposition both to Platonic idealism and to popular religion, but later Stoics came to terms with both. Then λόγος was no longer spoken of in material terms, but became the divine Reason governing the world. Moreover, by means of the technique of allegorical exegesis which they elaborated, the later Stoics interpreted popular mythology in terms of their own beliefs. Then the gods of the popular religion were allegorized as personifications of abstract ideas. Hermes in particular was interpreted as λόγος. It was this later Stoicism which was so influential in Hellenistic religion, and which Philo found so convenient for his purposes. Allegory was invaluable to him. But, if it was possible to allegorize gods into abstract ideas, the reverse process, that of personifying abstractions, was also possible. And in the period when Judaism was open to the influence of Stoic ideas, an impetus appears to have been given to the personification of such divine attributes as Wisdom and the Word. The Word of the Lord was assimilated to the Stoic λόγος, though its original connotation had been very different. A similar influence was exercised by Stoicism on other Eastern religions, producing, e.g., the philosophical and religious doctrine taught in the Corpus Hermeticum (see JOHN, GOSPEL OF, § D2d). In *Poimandres*, the first treatise in the Corpus, a creation myth similar to that found in Genesis, if not actually borrowed from it, is reinterpreted with the Stoic λόγος taking the part of the creative divine word.

Thus the way was prepared, if not for the actual teaching of John about the λόγος, at least for its acceptance by the Hellenistic world.

4. In the Greek OT and Philo. In the LXX the use of λόγος to translate דבר understandably enough led readers who had its Stoic associations in mind to interpret the Genesis creation myth in terms of creation by the divine reason, in a manner similar to that found some time later in *Poimandres*. Now it was already taught in the OT that God created the world "by his wisdom" (cf. Ps. 104:24; Jer. 10:12, repeated in Jer. 51:15), and so the "Word" tended, through the Stoic associations of λόγος, to be equated with the originally distinct concept of WISDOM. Moreover, there was in the early Hellenistic period a tendency to put a fresh emphasis on the transcendence of God, so as to remove him from direct contact with the world by interposing angelic intermediaries of various kinds between him and it. The next step then was to personify both "Wisdom" and "Word" and to regard them as divine agents in creation. Wisdom appears already fully personified

in Prov. 8:22-31, and again later in Wisd. Sol. 9:9; Ecclus. 24:9. The Word does not appear until Wisd. Sol. 9:1-2, where it is mentioned along with Wisdom:

O God of my fathers and Lord of mercy,
who hast made all things by thy word,
and by thy wisdom hast formed man.

This does not go any further than Ps. 33:6, but later in the book the Word is clearly personified; cf. Wisd. Sol. 18:15:

Thy all-powerful word leaped from heaven, from
the royal throne,
into the midst of the land that was doomed,
a stern warrior carrying the sharp sword of thy
authentic command.

The next step, taken by Philo (see JOHN, GOSPEL OF, § D2c), was to make the Word or Logos the intermediary between the transcendent God and the created order. In this Philo carried to its logical conclusion the identification of the OT "Word" with the Stoic λόγος. For him God is absolutely transcendent, and it is unthinkable that he should have any direct contact with the universe. He conceived the ideal universe, corresponding to the Platonic world of ideas, as the pattern to be followed by his Logos in the creation of the actual world. Exploiting the two senses of λόγος, Philo calls this ideal universe also λόγος. Thus the Logos is both "pattern" and "instrument" of God in creation (παράδειγμα and ὄργανον). A great variety of titles describe his functions as mediator between God and the world. Thus he is God's "first-born son" (πρωτόγονος υἱός), second only to God himself, his "image" (εἰκῶν) and "shadow" (σκιὰ), and can, indeed, be described as θεός (without the article, to distinguish him from God, ὁ θεός). The Logos is also God's "ambassador" (πρεσβευτής) to men, and man's "suppliant" (ικετής) and "advocate" (παράκλητος) to God, and so "high priest" (ἀρχιερεύς). He is sometimes identified with Wisdom; sometimes Wisdom is the mother of Logos. In all this there is much that recalls John (and also Hebrews), but it is questionable whether Philo is really an intermediary between the wisdom literature and John. John could have developed his doctrine independently. He had available all the material which Philo had, and, in addition to that, the conviction that in Jesus Christ God had spoken, and acted, and revealed himself in a new way. So John goes beyond Philo, whose Logos is never more than a personification, to affirm that in Jesus Christ the "Word" became flesh—a conception which Philo could not have formed, and would certainly have rejected if he could have heard of it.

5. In the NT. The meaning of "word" in the NT, both generally and specifically as a title for Christ, is colored rather by the OT associations of דבר than by the use of λόγος in classical Greek.

a. When not used as a title of Christ. The following special uses of λόγος in the NT, all of which fall within the range of meanings common to λόγος and דבר, may be noted.

"The word of God" (ὁ λόγος τοῦ θεοῦ) is used of: (a) the OT law (cf. Mark 7:13 = Matt. 15:6, where it is contrasted with the tradition of the Jews); (b) a particular OT passage (cf. John 10:35, referring

to Ps. 82:6); (c) in a more general sense, God's revealed will, or his whole plan and purpose for mankind (cf. Luke 11:28; Rom. 9:6; Col. 1:25-27, where it is defined as the "mystery hidden for ages and generations but now made manifest to his saints . . . , which is Christ in you"; Heb. 4:12); (d) the word preached by Jesus (cf. Luke 5:1; perhaps also 11:28, cited in *c* above); and the references made by Jesus to the word of God which he has preached (described as "his word" or "thy word," according to the context) in John 5:38; 8:55; 17:6; etc.; (e) following naturally, and not always clearly distinguishable, from *a*, the Christian message (cf. Luke 8:11; Acts 4:31; I Cor. 14:36; and many instances in Acts and Paul; Rev. 1:2, etc.).

The "word of the Lord" (ὁ λόγος τοῦ κυρίου) is also used in the sense of *d* above, as in I Thess. 4:15 (presumably a word revealed to Paul in prophecy), and also *e* above, as in Acts 8:25, etc. (the MSS often giving θεοῦ and κυρίου as variants); I Thess. 1:8; II Thess. 3:1; etc.

The Christian message is also described as the "word of Christ" (Col. 3:16; Heb. 6:1, where the "elementary doctrines of Christ" is a paraphrase of τὸν τῆς ἀρχῆς τοῦ Χριστοῦ λόγον). In Acts 20:35 the "words of the Lord Jesus" introduce an actual saying of Jesus not otherwise recorded. In I Tim. 6:3, the "sound words of our Lord Jesus Christ" may refer either to the preaching of Christ or to that about him, or more probably to both, no clear distinction being made.

"Word" without further qualification is also found in all the senses listed under the "word of God" above. Cf. the following: (a) Heb. 2:2 ("message"); (b) John 15:25 (Ps. 35:19); Rom. 13:9 (Lev. 19:18; "sentence"); I Cor. 15:54 (Isa. 25:8; "saying"); (c) Jas. 1:21-23 (unless this should be classified under *e* below); (d) Mark 2:2; Luke 4:32; John 2:22; etc. (cf. also the many uses of "my word" and "my words" in the gospels); (e) Mark 4:14-20 = Matt. 13:19-23 = Luke 8:12-15 (Luke 8:11 has "the word of God"); Luke 1:2; Acts 8:4, etc.; Gal. 6:6; I Thess. 1:6.

Λόγος as the Christian message can also be described as, e.g., the "word of truth" (Eph. 1:13; Col. 1:5; II Tim. 2:15); the "word of life" (Phil. 2:16; I John 1:1 [but see § 5b below]; cf. Acts 5:20: the "words [ῥήματα] of this Life").

Ῥῆμα is also used in some of these senses of λόγος (cf. Acts 11:16, where the "ῥῆμα of the Lord" introduces a saying of Jesus; and Rom. 10:8, where the ῥῆμα mentioned in Deut. 30:14 is interpreted as the "ῥῆμα of faith which we preach"); similarly I Pet. 1:25 interprets ῥῆμα in Isa. 40:8 as the "good news which was preached to you." Two passages in which ῥῆμα is used where there is no parallel in the NT uses of λόγος (though both are parallel to OT uses of דבר) are Luke 3:2: "The word of God came to John," and Heb. 11:3: "The world was created by the word of God."

There is an intimate connection between Christ and the word of which he was first the author and then the theme (cf. Heb. 2:3). This is shown by the way in which the verb "preach" (κηρύσσειν) can have as object "the word" (Rom. 10:8; II Tim. 4:2); "the gospel" (Gal. 2:2; Col. 1:23; I Thess. 2:9);

"Jesus" (II Cor. 11:4); "Christ" (I Cor. 1:23; 15:12; Phil. 1:15); "Jesus Christ" (II Cor. 1:19). Moreover, the word is not a formula, but something living and dynamic (cf. Heb. 4:12); it was accompanied by manifestations of divine power (cf. Heb. 2:4), both in the case of Christ and in that of his apostles. It is the "power of God" (I Cor. 1:18; cf. I Cor. 2:4: "My speech [λόγος] and my message [κήρυγμα] were not in plausible words of wisdom, but in demonstration of the Spirit and power"); and a little further on, Paul describes *Christ* as the "power of God" (I Cor. 1:24). This intimate connection of Christ and the word makes less surprising their eventual identification.

b. When used as a title of Christ. Three passages are in question here: I John 1:1; Rev. 19:13; John 1:1-14. I John 5:7 in the KJV reads: "There are three that bear record in heaven, the Father, the Word, and the Holy Ghost: and these three are one," but this is an interpolation, of which there is no trace before the late fourth century.

In I John 1:1, the KJV has the "Word of life," and the RSV the "word of life." The MSS, which do not use capitals in the modern fashion, give no help in deciding between them. The passage gives a perfectly good sense if it is taken as a reference to the gospel (as in Phil. 2:16), with which, in fact, the author is concerned here rather than with cosmology. In favor of the opposite view is the close relationship which exists between the Letters and the Gospel of John. It can hardly be maintained, however, that the usage in I John 1:1 is as explicit as it is in John 1:1-14. Nevertheless, it is on the line of development that leads to it, and a stage further along this line than Col. 1:25-27.

In Rev. 19:13, the rider on the white horse, leader of the armies of heaven, whose name is "The Word of God," is clearly meant to represent the Christ, as may be seen from a comparison of Rev. 19:11-16 with the vision of the "one like a son of man" in Rev. 1:13-16. The imagery of this vision of the Warrior Word is clearly drawn from Wisd. Sol. 18:15-16 (see § 4 above). The precise relationship of this passage to John 1:1-14 is difficult to determine. Revelation offers us a symbol, John a description. For Revelation the exalted Christ is the Word of God; for John the Christ is equally such while still on earth. The writer of one passage may well have known of the other, but which came first is hard to decide. On the whole, it seems more likely that the author of Revelation knew John and was led by the use of "Logos" in the gospel to find in Wisd. Sol. 18:15-16 the convenient imagery for his vision of the exalted Christ.

In John 1:1-14 (see JOHN, GOSPEL OF, § D1), John's assertion that in Jesus of Nazareth the Word became flesh (John 1:14)—i.e., an actual human being (see FLESH IN THE NT)—was an attempt—apparently successful, if the subsequent influence of the gospel is any criterion—to put into language intelligible and acceptable to his contemporaries, pagan as well as Jewish and Christian, the basic Christian conviction that through the life, teaching, actions, and death of the man Jesus a new revelation of God had been given, different in kind from that made through the prophets (cf. Heb. 1:1).

The developments in the use and meaning of λόγος which have already been described may help to explain how John came to choose this term as a description of the status and function of Christ sufficiently intelligible in itself to be introduced without explanation at the very beginning of his gospel. In order to complete the account of the background to John's use of "Logos," it is necessary to consider other attempts made in the NT to find an acceptable terminology for Christ's status and function.

The eschatological terminology of the Jewish messianic hope which had been used by Jesus himself and the first apostles proved inadequate as soon as the gospel came to be preached beyond the confines of Judaism. But there were two titles belonging to the original Christian terminology which it was possible to adapt to a new use—"Son of God" and "Son of man." They had originally described Christ's eschatological function; they were made to express his ontological status.

"Son of God" was seen to imply Christ's pre-existence (cf. Gal. 4:4; Phil. 2:6; Col. 1:15, 17), which is affirmed of the Logos in John 1:1. From his pre-existence, and his function of God's agent in redemption (the new creation), it was inferred that he was also God's agent in creation (cf. John 1:3; I Cor. 8:6; Col. 1:16; Heb. 1:2).

"Son of man" is, of course, not used outside the gospels and Acts 7:56, but it is probable that it underlies Paul's use of the "man from heaven" and the "second Adam" as descriptions of Christ, for "man" (ἄνθρωπος) is the idiomatic Greek rendering of the Aramaic translated literally—and barbarously—as "the son of man" (ὁ υἱὸς τοῦ ἀνθρώπου). Christ is the archetypal, true man, the man "made in God's image" (Gen. 1:27); that Christ is the image of God is affirmed in II Cor. 4:4; Col. 1:15; Heb. 1:3; and implied in John 1:14. Now Wisdom, already personified, and regarded as God's agent in creation, is also described as

a reflection of eternal light,
a spotless mirror of the working of God,
and an image of his goodness
(Wisd. Sol. 7:26).

It is not surprising, therefore, that there are traces in the NT of a tentative identification of Christ with Wisdom (cf. I Cor. 1:24, 30; Col. 2:3). In the wisdom literature (see § 4 above) "wisdom" and "word" are very close to each other in meaning, and, since "wisdom," as a feminine noun in Greek, is not very suitable as a masculine title, it may fairly be said that the adoption of "Logos" in its place was almost inevitable. Paul has very nearly reached it in Col. 1:25-27. So also has Heb. 1:1-3, in which all the christological themes under discussion appear together—the pre-existent Son of God, who is his Father's agent in creation and "bears the very stamp of his nature" (Heb. 1:3), through whom God has spoken to man.

It is this conviction of the author of Hebrews, that in Christ God has spoken to man, and that his whole plan and purpose for mankind has thereby been made apparent, that is the real ground for John's affirmation that Jesus is the Word made flesh. See also CHRIST.

WORKS OF GOD, THE. An expression denoting either (a) "deeds done by God," especially of deliverance or judgment, or (b) "things made by God." In Ps. 145:4, 9-10, 17, both kinds of works are in mind: "that he has made" (vs. 9) and "his doings" (vs. 17) are both for מַעֲשָׂיו, "his works"; and "thy works" is used in the one sense in vs. 4 and in the other in vs. 10.

More often than not, the expression is in the singular, "the work of God," especially when used in sense a. Yahweh's "deed," even when it is manifest in a succession of "mighty acts" (גְּבוּרֹת) or "wonders" (נִפְלְאוֹת; see SIGNS AND WONDERS), is one whole. Sometimes where the MT has the construct plural מַעֲשָׂיו, there are MSS which have the singular מַעֲשֵׂה, and this is probably the original reading (so in Pss. 8:3—H 8:4; 92:4b—H 92:5b; 107:24a; 118:17; 138:8). The forms מַעֲשֵׂיךָ, מַעֲשֵׂי, "thy (his) work(s)," can be construed as singular, the *yodh* being the original *yodh* of the stem עָשָׂה = עָשָׂה. Very much as in the OT the usual expression is "the word" (דְּבַר), not "the words" (דְּבָרִים), of Yahweh, "the work of God" is indivisible, though its manifestations may vary in time and manner.

1. In the OT. A typical passage is Judg. 2:7, 10: "The people served the LORD all the days of Joshua, and all the days of the elders who outlived Joshua, who had seen all the great work which the LORD had done for Israel. . . . And there arose another generation after them, who did not know the LORD or the work which he had done for Israel" (similarly Josh. 24:31). Here the Hebrew is מַעֲשֵׂה, and the reference is to the historical deliverance at the Exodus. In Isa. 5:12:

They do not regard the deed [פְּעִיל; singular;
RSV "deeds"] of the LORD,
or see the work [מַעֲשֵׂה] of his hands,

the stress is upon Yahweh's "work" in judgment (similarly Ps. 28:5; Isa. 5:19). Note the anthropomorphisms "the work of his (thy) hands" (Job 14:15; 34:19; Pss. 8:6—H 8:7; 19:1—H 19:2; 28:5; 102:25—H 102:26; Isa. 5:12) and "the work of thy fingers" (Ps. 8:3—H 8:4), usually with reference to God's work in creation.

The work of God is described as "terrible" (נֹרָא, "to be feared"; Ps. 66:3), "great" (92:5—H 92:6), "wonderful" (139:14). No works are like his (86:8). Idol-gods are but the "work of men's hands" (115:4; 135:15). God's work is "done in faithfulness" (33:4; 111:7), and all that he has made has been made "in wisdom" (104:24). "His compassion is over all that he has made" (145:9). Godly men are to "meditate" and "muse" on all God's works (77:12—H 77:13; 143:5), "call to mind" and "remember" them (77:11—H 77:12; 105:5), "have pleasure" in them (111:2), be thankful for them (107:15, 21, 31), and bless and

praise the God who has done them (72:18; 105:1-2).

Other words besides *מעשה* are used of God's work. Most frequent is *פעל* (*ph'al*), a poetical synonym of *מעשה*, with which it is sometimes parallel (Deut. 32:4; Job 36:24; Pss. 44:1—H 44:2; 64:9—H 64:10; some ten times in all). The RSV also retains the KJV "work(s)" for *גיע* (lit., "toil") in Job 10:3; for *יד* (lit., "hand," in sense of "power") in Exod. 14:31; for *מלאכה* (lit., "occupation") in Gen. 2:2-3; Ps. 73:28; Jer. 50:25; for *מעבר* in Dan. 4:37—A 4:34; for *מעלל* ("deed") in Ps. 78:7; and for three other nouns from the stem *פעל* in Pss. 28:5; 46:8—H 46:9; 66:5. It should be added that a full concordance of the "work(s) of God" should take account of the verbs *עשה* and *פעל* with God as subject.

The relation between the "work" of God and the "word" of God is closer than the very few passages in which they are mentioned together might seem to indicate.

By the word of the LORD the heavens were made,
and all their host by the breath of his mouth
(Ps. 33:6).

In vs. 4 of the same psalm "word" and "work" are in parallelism. This summarizes the account of Creation in Gen. 1, with its "and God said" followed by "and God made" (vss. 6-7, 14-16, 20-21, 24-25, 26-27). The Hebrew *דבר*, "word," can have the sense of "task," "act," "occupation," as in "the acts of" (lit., "the words of the days of"; I Kings 14:29 and frequently), or "they had no dealings [lit., 'word'] with any one" (Judg. 18:7, 28). Action originates in thought, and the formulated thought or "word" is the middle term between thought and deed. The same applies to WISDOM, which in Prov. 8 is hypostatized and becomes the agent in creation.

2. **IN THE NT.** The conclusion of the preceding paragraph is amplified in the Prologue to the Fourth Gospel, in which the Logos, the divine thought or reason, is the creative ground of all existence. "In the beginning was the Word, and the Word was with God, and the Word was God. He was in the beginning with God; all things were made through him" (*πάντα δι' αὐτοῦ ἐγένετο*; John 1:1-3).

The Greek word for "work" in the NT is usually *ἔργον*, but *μεγαλεῖα* ("mighty works"; Acts 2:11), *μεγάλα* ("great things"; Luke 1:49), *ποίημα* ("workmanship"; Eph. 2:10), and *ἐνέργεια* ("working"; Eph. 1:19; 3:7; "power" in Phil. 3:21) are found. See also *δύναμις*, *τέρας*, and *σημεῖον*—the three words occur together in the "mighty works and wonders and signs" which God did through Christ (Acts 2:22).

The most distinctive teaching about "the work of God" is to be found in the Fourth Gospel. The works (*ἔργα*) of Jesus are such as no one else has done (John 15:24), the works which the Father has granted him to accomplish (5:36; 10:32; 17:4), works done in the Father's name (10:25), and in this sense done by the Father himself (14:10-11). Those who believe in Jesus will do even greater works than he has done (14:12). In answer to the question: "What must we do, to be doing the work of God?" Jesus replies: "This is the work of God, that you believe in him whom he has sent" (6:28-29). When the disciples besought him to eat, he said to them: "My food is to do the will of him who sent me, and to

accomplish his work" (4:34; see also 5:20; 7:3, 21; 9:3-4; 10:37-38).

In Rom. 14:20; I Cor. 15:58; 16:10; Phil. 2:30, "the work of God/the Lord/Christ" is used of the spread of the Christian evangel.

C. R. NORTH

WORLD, THE. A term which, in English Bibles, as also in modern English usage, has a wide variety of meanings. In the RSV four Hebrew and two Greek words denoting a spatial entity are translated "world." One of the Greek words, *κόσμος*, has many nuances: it is used of the universe as a whole, of the planet Earth, of "people" generally, of "the world" as being at enmity with God, and of the world as the scene and object of God's redemptive purpose. There are also words and phrases which have a time, rather than a space, reference (cf. "world without end"), in which the rendering "world" is occasionally retained even in the RSV—e.g., *αἰών* (Matt. 13:22) and *ἐκ τοῦ αἰῶνος* (John 9:32). This may seem confusing but is not surprising, since the world is an entity both in space and in time.

The purpose of this article is theological, to deal with the biblical concept of "the world" as the cosmos, the ordered system of nature, in its relation to God. (For this sense of *κόσμος* we should say "the universe," but the universe is on a vastly bigger scale than anything the ancient Hebrews or Greeks envisaged.) But since the world is not devoid of life but is the home of sentient and intelligent creatures (cf. Isa. 45:18), and since "the world" sometimes denotes the human race, as indeed it frequently does in contemporary English usage, the final emphasis will be more on God's providential and redemptive purpose for the world than on cosmology. For biblical cosmology, see COSMOGONY; CREATION; HEAVEN; EARTH; etc.; and for human nature and its psychology, see MAN, NATURE OF.

A. In the OT

1. ארץ
2. תבל
3. חלה and חלה
4. [ה]עולם

B. The Greek concept of κόσμος

C. In the LXX and the Apoc.

D. In the NT

1. Οἰκουμένη
2. Κῶν
3. Κόσμος
 - a. The universe
 - b. The earth and/or its inhabitants
 - c. The scene of human activity
 - d. The world at enmity with God
 - e. The world Christ came to save

Bibliography

A. IN THE OT. Several Hebrew words are translated "world" in both the KJV and the RSV. They are:

1. ארץ. This word occurs 2,407 times, and the corresponding Aramaic ארעא ארעא (Jer. 10:11), 21 times. The most frequent translations of it are

"earth," "land" ("the land of Egypt" [Num. 1:1]), "country" (KJV 140; less often RSV; but cf. Gen. 12:1, etc.), "ground" (KJV 96; less often RSV; but cf. Deut. 15:23). Of the 4 places in which the KJV has "world," the RSV retains "world" in Isa. 23:17; Jer. 25:26; this is because it is followed by "the face of the earth" (אַרְצָה, which properly means "ground"). The reason why ארץ is seldom rendered "world" is that it occurs so often in conjunction with תבל (see § A2 below). Otherwise the natural rendering would sometimes be "world"; e.g., for KJV "in the earth," RSV "on the earth" (Gen. 6:4), we should say "in the world." But ארץ is nowhere the universe. In Gen. 1:10 it even appears to be restricted to the "dry land" (יבשה), as distinct from "seas" (ימים; cf. Jonah 1:9). It is a word common to the Semitic languages, but its etymology is unknown. Its wide latitude of meanings, from "land"—"territory" to "earth"—"world," can be accounted for by supposing that the early Semite gave the name ארץ to the territory with which he was familiar, and continued to use the word for "earth"—"world" as his geographical horizons widened.

2. תבל. This word occurs 36 times in the OT and twice in the Apoc. (Ecclus. 10:4; 37:3). The RSV throughout retains the "world" of the KJV. תבל is used only in poetry, never takes the article, and in 22 instances is parallel with ארץ, with which it is practically synonymous. Its etymology is obscure, but there are indications that, like ארץ, it originally denoted dry land: it is parallel with "sea" in II Sam. 22:16; Pss. 18:15—H 18:16; 98:7 (parallels can be complementary as well as synonymous); and in Akkadian *ēli tabali* ("by land") is parallel with *ēli nāru* ("by water"). A few passages (I Sam. 2:8; Ps. 90:2; Prov. 8:31; Job 37:12—the last two lit. "the world of his earth") suggest that תבל should be distinguished from ארץ; but it would be hazardous to try to form a clear picture of these poetical figures, and in Ps. 90:2 the expression "the earth and the world" is probably a hendiadys. Expressions such as "תבל and its inhabitants" occur in Pss. 24:1; 33:8; 98:7; Isa. 26:9, 18; Lam. 4:12; Nah. 1:5. In Ps. 9:8—H 9:9 is parallel with לְאֻמִּים ("peoples"), and in Pss. 96:13; 98:9 עַמִּים ("peoples"); and in Isa. 13:11 we have "world" parallel with "wicked," as if to anticipate the pejorative sense of κόσμος in the NT. In these passages Yahweh is coming to "judge" the earth/world. This is nowhere expressed more strongly than in Isa. 34:1-2, where we find the elaborate parallelism of "nations"/"peoples" with "earth"/"world." It is clear that תבל is no more the universe than is ארץ. In Ps. 89:11; Jer. 10:12; 51:15 the heavens, the earth, and the world appear to make up a totality (cf. "the heavens and the earth" of Gen. 1:1).

3. חרל and חלד. Of the five passages in which חלד is found, the KJV and RSV twice use "world" (Pss. 17:14; 49:1—H 49:2). The word is related to Arabic *ḥalada* ("abide," "continue"), *ḥaldan* ("eternity"), and is therefore equivalent to αἰών, not κόσμος. The *hapax legomenon* חרל (Isa. 38:11) properly means "cessation" (cf. ERV-ASV mg.: "among them that have ceased to be"). The RSV retains the KJV "inhabitants of the world," which is probably for "inhabitants of (the world of) cessation."

Some few Hebrew MSS read חלד, and this is favored by most scholars.

4. הָעוֹלָם. It should be said that the KJV twice (Ps. 73:12; Eccl. 3:11) has "world" for עוֹלָם, but this rendering is not retained in the RSV. The general sense of עוֹלָם is "long duration." It is not in doubt that the word came in postbiblical Hebrew, Aramaic-Syriac, and Arabic to mean the spatial world, much as αἰών=κόσμος occasionally in the NT (see § D2 below). But even though Eccl. 3:11 is late, the RSV and the ERV mg. rightly substitute "eternity" for "the world." The immediate context, "from the beginning to the end," amply justifies this.

The Hebrews had no one word for the "universe." They had to resort to periphrases like "the heavens and the earth" (Gen. 1:1), or, to be all-inclusive, "heaven and earth, the sea, and all that is in them" (Exod. 20:11), or "heaven, the heaven of heavens, with all their host, the earth and all that is on it, the seas and all that is in them" (Neh. 9:6). Or they could express the totality of things by a simple לַ ("all"; Isa. 44:24) or הַכֹּל ("the all"; Jer. 10:16; 51:19). The skeptical Ecclesiastes might conclude that "the totality of things [הַכֹּל] is vanity" (Eccl. 1:2), but even he (cf. Eccl. 12:1) would hardly have denied the unanimous testimony of the OT, that heaven and earth were created by God, that Yahweh's "kingdom rules over all" (Ps. 103:19), and that his "compassion is over all that he has made" (Ps. 145:9).

The OT is fully committed to the doctrine of creation, which finds its highest expression in Gen. 1:1-2:3; in Second Isaiah; in certain psalms (e.g., 104); and in Job 38 ff. The primary meaning of the Hebrew verb "create" (בָּרָא) was probably "to build," but in the OT (some fifty times) it has become a theological term, always with God as subject. It does not in itself imply creation *ex nihilo*. Indeed, Gen. 1 was written against a background of Babylonian mythology, in which heaven and earth were fashioned from the body of Tiamat the chaos monster (תְּהוֹם, "[the] deep," of Gen. 1:2; see CREATION; COSMOGONY). A literal translation of Gen. 1:1-2 would be: "When God began to create the heavens and the earth, the earth was formless and void . . ." (cf. RSV mg.). This is perhaps the reason why the author of the Wisdom of Solomon (11:17) still wrote of God's "all-powerful hand, which created the world out of formless matter" (κτίσασσα τὸν κόσμον ἐξ ἀμόρφου ὕλης). The contrast between creation and emanation (see § B below) is more significant and important than that between the OT concept of creation and the *ex nihilo* doctrine of the NT (probably) and the early Christian fathers.

B. THE GREEK CONCEPT OF ΚΟΣΜΟΣ. Any treatment of "the world" in the NT must be prefaced by a summary of the Greek concept of κόσμος. The word primarily denoted what is well built or artistically arranged. The Greek could speak of the κόσμος of a horse, or of well-chosen words. He had a lively awareness of the beauty of any such κόσμος, and his appreciation of feminine beauty (γυναικείος κόσμος) is still echoed in the NT (cf. I Pet. 3:3, where women are warned against "outward adorning" and "wearing of robes" [ἐνδύσεως ἱματίων κόσμος]). From denoting what is well ordered, κόσμος

came, in the sixth century B.C., to be used of the world system, the universe as a whole. In this sense it could be synonymous with οὐρανός ("heaven"). Alike for Plato and the Stoics, it is τὸ ὅλον ("the whole") or τὸ πᾶν ("the all"). There is nothing outside the κόσμος, which is without beginning or end.

The relation between God and the world was somewhat differently conceived as between Platonist and Stoic. Platonists distinguished between the world perceptible by the senses (κόσμος αἰσθητός) and the world intelligible to the mind (κόσμος νοητός). God—or whatever name was given to the supreme principle—was either the highest Idea or Essence in the κόσμος νοητός, or the latter's cause and ground. In the *Republic* the idea of the Good so far transcends the other ideas that it is said to be altogether "beyond being" (ἐπέκεινα τῆς οὐσίας). The ultimate logic of this strain in Plato was that no quality, not even the category of being, can be ascribed to God. For the Stoics, God was the principle of reason (λόγος) that pervaded and governed the universe. This λόγος did not transcend the world but was entirely confined within it. Man was a "part" of God, a fragment of the world-soul.

No Greek ever posited the relationship between God and the world as that between Creator and creature. Even though the Platonists were sometimes prepared to place God beyond the κόσμος νοητός, God did not create the world. Creation in the proper sense (κτίζω) was unknown to the Greeks. According to the myth in Plato's *Timaeus*, the Demiurge (called ποιητὰς καὶ πατήρ τοῦδε τοῦ παντός) "begat" the world, but he did so by imposing form on pre-existing matter. Therefore, neither was the Demiurge in the full sense God, nor was the κόσμος properly a creature. The difference between God and every other existent is one of degree, not of kind.

Whether the world is an emanation from the divine being (Platonism) or animated by the divine Logos (Stoicism), there is a sense in which it must itself be divine. Nevertheless, a strain of pessimism was always latent in the Greek attitude toward the world. Each successive emanation meant one farther remove or declension from the source of being. Thus there emerged a kind of dualism: the material world, if not actually evil, was an obstruction to the soul (ψυχή) or mind (νοῦς) by which man was related to the divine. Redemption came to be conceived as a release from matter (ὑλη) or the body (σῶμα). Disparagement of the world was deepened by the independent growth of astrology as Greek thought came into contact with the Orient: the stars, which were so many embodiments of the divine, and which controlled a man's destiny, were obviously capable of exercising bad as well as good influences. This pessimism, and its consequent attitude of world-negation, was deepened with the decline of the polis and the political insecurities of the Hellenistic period.

It should be added that, much as κόσμος came early to signify "heaven," it also came to be used of the earth, as an integral part of the world-whole. In Koine Greek it is found in the sense of the inhabited world (οἰκουμένη), the earth and its inhabitants, and even mankind, "people" generally, much as "the world" can have these meanings in English today. Nero is called on a Greek inscription on Samos the

"lord of the whole world" (ὁ τοῦ παντὸς κόσμου κύριος). Similarly, Nerva is even called σωτήρ τοῦ πάντος κόσμου.

C. IN THE LXX AND THE APOC. All Greek philosophies found a home in Alexandria, where there was a considerable and influential Jewish population. Greek-speaking Jews readily took the word κόσμος into their vocabulary, and for them it came to have a definitely religious connotation.

In the LXX, κόσμος is employed as a rendering of מַצַּח, "the host [of heaven]," in Gen. 2:1; Deut. 4:19; 17:3 (ὁ κόσμος τοῦ οὐρανοῦ); Isa. 40:26; etc. It is also used in the old sense of "adornment," "beauty," for a number of Hebrew words—e.g., עֲרֵי ("ornaments") in Exod. 33:5-6; II Sam. 1:24; etc.; תְּפָאֵרָה ("glory") in Prov. 20:29; מְעַדְנִים ("delight") in Prov. 29:17. This sense is also found in the originally Greek apocrypha, which, of course, were part of the LXX Bible. Especially noteworthy is the παντὶ τῷ κόσμῳ τῷ γυναικείῳ of Jth. 12:15 (cf. § B above).

The translators from Hebrew had no occasion to render "heaven" and "earth" otherwise than by οὐρανός and γῆ (so in Gen. 1:1; Γένεσις κόσμου occurs as the title of Genesis only in Aq.). אָרֶץ is generally γῆ, and אֶרֶץ is οἰκουμένη. But in the originally Greek compositions κόσμος is frequently used for the world-universe (Wisdom of Solomon nineteen, II Maccabees five, IV Maccabees four times), and God is described as "Creator" (κτίστης; II Macc. 7:23; 13:14), "Sovereign" (δυναστής; II Macc. 12:15), and "King" (βασιλεύς; II Macc. 7:9) of the world. Wisd. Sol. 11:22 has it that "the whole world [ὅλος ὁ κόσμος] before thee is like a speck that tips the scales" (cf. Isa. 40:15). In Wisd. Sol. 7:17 the author speaks of knowing the "structure of the world" (συστάσιν κόσμου) and the "activity of the elements" (στοιχεῖα)—both words were used by Plato and were taken up by Philo. In 16:17 (cf. 5:20) the κόσμος—i.e., the whole order of nature—is said to be the defender of the righteous.

As in Hellenistic Greek generally, κόσμος came to be used of the earth-world, as in Wisd. Sol. 9:3, which says that man was formed to "rule the world in holiness and righteousness." For a man to be born is "to come into the world" (εἰς τὸν κόσμον; Wisd. Sol. 7:6; cf. Heb. 10:5). When Adam is called the "first-formed father of the world" (Wisd. Sol. 10:1), "the world" presumably means "mankind" (cf. 6:24; 14:6). Finally, not all is well with the world: by the vaingloriousness of men, idols have entered into it (14:14). In 2:24 death is said to have entered the world (cf. Rom. 5:21) "through the devil's envy."

D. IN THE NT. Three Greek words, οἰκουμένη, αἶών, and κόσμος, are translated "world" in the English NT. (The translation of γῆ by "world" in Rev. 13:3 KJV may be left out of account, even though "world" would better accord with present-day idiom than the RSV "earth"; see § A1 above.) The three words are in some of their meanings near-synonyms and can occasionally, as will appear, be interchanged with one another.

1. Οἰκουμένη. This is an abbreviation of (ἡ) οἰκουμένη (γῆ), "(the) inhabited (earth)." It occurs fifteen times. The KJV translates "earth" in Luke 21:26, otherwise "world." The ERV and the RSV always have "world," but the ERV mg. everywhere

has the note "Gr. *the inhabited earth*." This note does not appear in the RSV, and, without an annotated concordance, the word is lost to the non-Greek-reading student. Οἰκουμένη was originally a designation of the Greek world as opposed to "barbarian" lands. By NT times it had come to be used of the Roman world (so Acts 24:5). "All the world" in Luke 2:1 may be either a "pleasant hyperbole" or a reference to the Roman claim to world-wide empire. In modern missionary thinking, and sometimes even in its contexts, οἰκουμένη is capable of expansion to include the whole world of men, as in Matt. 24:14 (cf. Matt. 26:13=Mark 14:9; Mark 16:15, where the word is κόσμος). Similarly in Rom. 10:18, a quotation from Ps. 19:4—H 19:5, οἰκουμένη has as wide a connotation as לְבַב. A world-wide sense probably attaches to the word in Luke 4:5 (cf. Heb. 1:6), for which the parallel Matt. 4:8 has κόσμος. Heb. 2:5, where the dutifully consistent ERV mg. would sound pedantic, speaks of the "οἰκουμένη to come" (τὴν οἰκουμένην τὴν μέλλουσαν). Here οἰκουμένη clearly has much the same meaning as αἰών=αἰὼν (cf. Matt. 12:32; Eph. 1:21; Heb. 6:5 [ὁ μέλλων αἰών]). It thus passes over to the sense of αἰών=κόσμος (see § D2 below).

2. Αἰών. This word, like αἰὼν, has the general sense of "long duration." It appears in the KJV (rather more than thirty times) as "world"; similarly in the ERV, except in I Cor. 10:11 ("ages"); Heb. 6:5 ("age"). The ERV mg. always has "age," except in I Cor. 2:7-8. The RSV has "age," except that "world" is preferred in Matt. 13:22=Mark 4:19; Luke 16:8 (mg. "Greek age"); Rom. 12:2 (mg. "Greek age"); II Cor. 4:4; I Tim. 6:17; II Tim. 4:10; Heb. 1:2; 11:3. The translation "world" rather than "age" is justified in some, at least, of these passages. Thus, the "cares of the world" (αἱ μέριμναι τοῦ αἰῶνος) of Mark 4:19=Matt. 13:22 are nowise different from the "worldly affairs" (τὰ τοῦ κόσμου) about which the married man "is anxious" (μεριμνᾷ) in I Cor. 7:33. And "this present world," with which Demas is "in love" (II Tim. 4:10), is material enough. The created αἰῶνας of Heb. 1:2; 11:3 must be spatial entities rather than aeons of time. The worlds of space and time cannot be separated from one another, and there are not wanting examples in nonbiblical Greek of αἰών=κόσμος, much as αἰὼν came (see § A4 above) in rabbinical Hebrew to be used of the sensible world.

3. Κόσμος. This word is found 188 times in the NT. More than half (104) the examples are in the Johannine writings, and, of the remainder, 46 are in the Pauline (including the Pastoral) letters. Except in I Pet. 3:3 (see § B above) all the standard English versions translate it "world." Most of the senses which κόσμος acquired in native Greek authors are represented in the NT, but the word came to have other meanings which have no parallels outside the NT and literature directly influenced by it.

a. *The universe.* The fullest definition of the word in this sense is in Acts 17:24: "The God who made the world and everything in it [καὶ πάντα τὰ ἐν αὐτῷ], being Lord of heaven and earth . . ." The expression "heaven and earth" derives from the OT. Further expansions of it are "the heaven and the earth and the sea and everything in them" (Acts 4:24), and "heaven and what is in it, the earth and

what is in it, and the sea and what is in it" (Rev. 10:6; cf. Neh. 9:6). The words "heaven and earth" would come naturally to Jesus, steeped as he was in the OT (Matt. 5:18; 24:35 and parallels), and he addressed God as "Father, Lord of heaven and earth" (Matt. 11:25=Luke 10:21). But it is probably not without significance (see below) that God is never in the NT called κύριος τοῦ κόσμου, after the manner of the Apoc.

A number of passages speak of the "foundation of the world": Matt. 25:34; Luke 11:50; John 17:24; Eph. 1:4; Heb. 4:3; 9:26; I Pet. 1:20 (πρὸ καταβολῆς κόσμου); Rev. 13:8; 17:8 (ἀπὸ καταβολῆς κόσμου). Matt. 24:21 has "from the beginning of the world" (ἀπ' ἀρχῆς κόσμου); Rom. 1:20 "since the creation of the world" (ἀπὸ κτίσεως κόσμου); and John 17:5 "before the world was made" (πρὸ τοῦ τὸν κόσμον εἶναι). In some of these passages the κόσμος in mind in the first instance may have been the Hebrew עָוֶן or לְבַב; but in the context of the NT it must have acquired the wider meaning of the "universe." In Phil. 2:15: "You shine as lights in the world" (ὡς φωστῆρες ἐν κόσμῳ), the figure suggests luminaries in heaven (but cf. Matt. 5:14-15). In John 21:25 "the world itself" may be hyperbolic for the whole universe.

Synonyms of κόσμος are: (a) κτίσις, "creation," in its meaning of the whole created order (Mark 10:6; 13:19; Rom. 1:20, 25; II Pet. 3:4; Rev. 3:14); (b) τὰ πάντα, "all things" (John 1:3 [cf. 1:10: ὁ κόσμος]; I Cor. 8:6; 15:27-28; Eph. 1:10; Phil. 3:21; Col. 1:16-17, 20; Heb. 1:2-3 [RSV "the universe"]; 2:8, 10; I Pet. 4:7). Anything, therefore, that is said of the κτίσις and τὰ πάντα, applies equally to κόσμος in its universal meaning.

That God created the universe is sometimes said (Mark 13:19; Acts 17:24) and is always assumed, following upon the OT; but the doctrine of creation was not prominent in the Christian kerygma. Christianity was concerned with redemption, rather than with the creation of the world. Yet there are two points in which the NT conception of creation is an advance upon that of the OT: (a) The NT shows no trace of the idea of pre-existent matter. A doctrine of creation *ex nihilo* appears to be implicit in Col. 1:15-17 and the Prologue to the Fourth Gospel, though it is not explicitly formulated. (b) Paul, the Letter to the Hebrews, and the Prologue to the Fourth Gospel, all speak of Christ as the agent of creation. In Col. 1:16-17 all things were created in, through, and for Christ, the Son (ἐν αὐτῷ ἐκτίσθη τὰ πάντα . . . τὰ πάντα δι' αὐτοῦ ἐκτίσται; cf. I Cor. 8:6). According to Heb. 1:2, it was through a Son—i.e., Christ—that God made the worlds (δι' οὗ καὶ ἐποίησεν τοὺς αἰῶνας). In the Prologue to the Fourth Gospel "the Word [Λόγος] . . . was in the beginning with God; all things were made through him [πάντα δι' αὐτοῦ ἐγένετο], and without him was not anything made that was made. . . . And the world was made through him [ὁ κόσμος δι' αὐτοῦ ἐγένετο] And the Word became flesh" (John 1:2-3, 10, 14). This is not the place to elaborate these statements or to discuss their alleged "mythological" implications, but only to note that they are made in the NT. See CHRIST.

Two aspects of Paul's thought about the universe

offer a challenge to theologians today. Neither is fully worked out, nor is it clear how, or even whether, they are related to one another. The first is almost prophetic of modern attitudes toward the enigma of the universe. The second appears to have a "mythological" background and received little attention from "liberal" theologians; more recently it has compelled attention, even though there may be no agreement as to how its "mythological" elements should be interpreted.

a) In Rom. 8:19-25, Paul writes that "the creation [ἡ κτίσις] was subjected to futility [ματαιότης; see VANITY], not of its own will but by the will of him who subjected it in hope; because the creation itself [αὐτὴ ἡ κτίσις] will be set free from its bondage to decay [φθορά; cf. II Pet. 1:4: ἡ ἐν τῷ κόσμῳ ἐν ἐπιθυμίᾳ φθορά; see CORRUPTION] and obtain the glorious liberty of the children of God. We know that the whole creation [πᾶσα ἡ κτίσις] has been groaning in travail together until now." This seems to say that ματαιότης and its consequent φθορά were part of the initial purpose of God in creation and that the ultimate purpose it was to serve was the "revealing of the sons of God" (vs. 19), in which the whole creation will share.

b) Paul evidently shared the current and widespread belief that the world was in some way in the grip of a "lowerarchy" of demonic powers. These are variously described as the "prince of the power of the air" (ὁ ἄρχων τῆς ἐξουσίας τοῦ ἀέρος; Eph. 2:2); the "rulers of this age" (οἱ ἄρχοντες τοῦ αἰῶνος τούτου; I Cor. 2:6); the "god of this world" (ὁ θεὸς τοῦ αἰῶνος τούτου), who "has blinded the minds of the unbelievers" (II Cor. 4:4); the "principalities, . . . the powers [αἱ ἀρχαὶ καὶ αἱ ἐξουσίαι; cf. Col. 2:15], . . . the world rulers of this present darkness [οἱ κοσμοκράτορες τοῦ σκότους τούτου], . . . the spiritual hosts of wickedness in the heavenly places" (τὰ πνευματικὰ τῆς πονηρίας ἐν τοῖς ἐπουρανίοις; Eph. 6:12). Over all these powers Christ triumphed on the cross (Col. 2:15); they were created "in" (ἐν), "through" (διὰ), and "for" (εἰς) Christ (Col. 1:16), and it was God's purpose that they should all (τὰ πάντα) be reconciled to him "by the blood of his cross" (Col. 1:20). See DEMON.

b. *The earth and/or its inhabitants.* When ὁ κόσμος is used of the planet Earth, it can have the same ambiguity—or, rather, double meaning—that "the world" has in English. In passages which speak of "coming into" (John 1:9 and several other times in the Fourth Gospel; I Tim. 1:15; 6:7), "being in" (John 1:10; 9:5; 17:11), "being born into" (John 16:21), and "departing out of" (John 13:1; I Cor. 5:10), "the world," ὁ κόσμος = ἡ γῆ. But in "Show yourself to the world" (John 7:4), and "The world has gone after him" (John 12:19), "the world" means "people generally." In Rom. 1:8: "Your faith is proclaimed in all the world" (similarly Matt. 5:14; 13:38; 26:13; I Cor. 4:9), the word may have either meaning. In "all the kingdoms of the world" (Matt. 4:8) and similar expressions, "the world" is ἡ γῆ, but the emphasis of the whole is on its human inhabitants. In Rom. 11:12, 15, "the world" is the Gentile world. The distinction between the geographical earth and its human inhabitants in these passages has no theological significance.

c. *The scene of human activity.* This is the world in which man pursues riches and pleasure, or suffers hardship and grief (λύπη; II Cor. 7:10). It profits a man nothing if he "gains the whole world and forfeits his life" (Matt. 16:26 and parallels). "Worldly affairs" (I Cor. 7:33-34) are an anxiety, and Paul exhorts "those who deal with the world" to be "as though they had no dealings with it. For the form of this world is passing away" (παράγει γὰρ τὸ σχῆμα τοῦ κόσμου τούτου; I Cor. 7:31). Still more emphatic is I John 2:15-17: "Do not love the world or the things in the world [τὰ ἐν τῷ κόσμῳ]. If any one loves the world, love for the Father is not in him. For all that is in the world, the lust of the flesh and the lust of the eyes and the pride of life, is not of the Father but is of the world. And the world passes away, and the lust of it." From this it is but a short stage to the idea of § D3d below.

d. *The world at enmity with God.* This is the fallen race of mankind. Something of this pejorative sense of κόσμος may be seen in Heb. 11:7: "He [Noah] condemned the world," and 11:38: the martyrs "of whom the world was not worthy." It appears also in Jas. 1:27, in which "religion that is pure and undefiled before God" is defined as "to keep oneself unstained from the world," and 4:4: "Do you not know that friendship with the world is enmity with God? Therefore whoever wishes to be a friend of the world makes himself an enemy of God." II Pet. 1:4 speaks of "the corruption [φθορά] that is in the world"; cf. 2:20: "the defilements [τὰ μίσματα] of the world."

Condemnation of "the world" comes to its fullest expression in the Pauline and Johannine writings.

For Paul "the wisdom of this world [ἡ σοφία τοῦ κόσμου τούτου] is folly with God" (I Cor. 3:19; cf. 1:20-21, 26-28). "None of the rulers of this age" (τοῦ αἰῶνος τούτου) understands the hidden wisdom of God (I Cor. 2:7-8). Christians have received "not the spirit of the world [τὰ πνεῦμα τοῦ κόσμου] but the spirit which is from God" (I Cor. 2:12). For his part, Paul testifies: "Far be it from me to glory except in the cross of our Lord Jesus Christ, by which the world has been crucified to me, and I to the world" (Gal. 6:14). This attitude toward the world is entirely unrelated to the strain of pessimism latent in the Greek attitude toward the world, with its conception of redemption as a release from matter or the body (see § B above). Paul would not have denied that "God saw everything that he had made, and behold, it was very good" (Gen. 1:31). But he doubtless took quite literally the story of Adam's transgression, as a consequence of which sin and death had entered the world (Rom. 5:12-14; I Cor. 15:21-22). What he accepted as doctrine was confirmed by what he observed of the corruption of the world in which he lived (Rom. 1:18-32). The true state of the world was revealed to him by the cross as it could never previously have been perceived.

In the Johannine literature condemnation of "the world" is more frequent, and in even stronger terms, than in Paul. This may be because of intensified opposition from "the Jews" (John 7:1 and frequently; cf. 16:2), of Roman persecution (cf. Rev. 18), and, possibly, of dualism of a Gnostic type. It may be noted that the word αἰών is never used in the Johannine writings except in εἰς τὸν αἰῶνα, "for ever"

From Crowfoot and Baldensperger, *From Cedar to Hyssop*
26. Wormwood

salem in 586 B.C. to the bitterness of wormwood and gall (Lam. 3:15, 19).

Rev. 8:10-11 describes the blazing star called "Wormwood" as falling from heaven and turning the waters bitter with wormwood until "many men died of the water" (wormwood is not poisonous). *Artemisia absinthium* L. is the sage known to the Greeks and thus could be the wormwood of John of Patmos. Cf. Heb. 12:15, where the LXX of Deut. 29:18—G 29:17, "root of bitterness," is quoted.

WORSHIP IN THE OT. Worship (from Saxon *weorthscipe*, "worthship") is homage—the attitude and activity designed to recognize and describe the worth of the person or thing to which the homage is addressed. Worship is thus synonymous with the whole of a reverent life, embracing piety as well as liturgy. The range of meaning is therefore very great. Here "worship" is used to describe the activities and attitudes, the behavior, proper to the sanctuary; in Christian parlance, divine worship.

1. **Terminology.** A very rich vocabulary illustrates and defines the activity of worship in the OT. The

verbs עָבַד, "to serve" (cf. עֲבוֹדָה, "service, adoration" = λατρεία), and הִשְׁתַּחֲוֶה, "to prostrate oneself" (προσκυβείν), are basic terms within such generally descriptive terms as "to draw near," "to seek the face of Yahweh," etc.

2. **In the patriarchal age.** It is no longer possible to state that worship in the days of the founding fathers of Israel can be described in terms of animism and the like. The religious background of Canaan revealed by archaeology, and the corresponding account of El religion in Genesis, show that patriarchal religion was at least polytheistic. This in turn permits of a henotheistic possibility as in the case of Abraham. But the patriarchal legends reflect nomadic and eventful tradition in distinction from the agricultural and fertility interests of their contemporaries. There are accordingly theophanies to the individual patriarchs and resultant places of worship, altars for sacrifice and for gifts. Beyond these it is difficult to go for certain, though Genesis provides evidence of various ritual actions (cf. the beginnings of sacrifice in 4:3-4; of worship in 4:26; Noah's altar and worship in 8:20-22). Again in Gen. 14 Abraham is said to have met Melchizedek the king-priest of El Elyon, and to have committed himself to El Elyon (vss. 18-23). The promise of the land in 15:7 is linked with and expressed in various theophanic and ritual actions (vss. 8-21). In Gen. 22 worship is seen to consist in sacrifice, though later interests are, of course, at work in the condemnation of human sacrifice. In 28:17 the sacred Bethel is described in terms reminiscent of cosmic symbolism. Other ritual actions such as purifications, changes of garments, offerings of drink and oil, occur in ch. 35, and blessings also are often given. Israelite worship in Genesis is, however rudimentary, personal and family.

3. **Mosaic worship.** At the bush Moses is bidden to remove his sandals, and he also veils his face. Moses requests Pharaoh to permit Israel to make a pilgrimage feast of three days' journey into the wilderness for sacrifice (Exod. 5:1-3, etc.). Behind the legislative narratives and traditions of the Passover in Exod. 12-13 lies doubtless an old nomadic feast of firstlings, and it is a question if Moses did not use this feast and adapt it as a vehicle of his own faith and message. Certainly Miriam had used her timbrel, and the women had danced and sung before, even if now they did all these things with a new song in honor of a new or revived deity. Jethro led Israel's worship in confession, sacrifice, and sacred meal (18:10-12). Various ritual actions following the theophany are prescribed in ch. 19, and there is no reason to doubt that 24:3-8 gives the details of the covenant acts of worship. Perhaps vision and meal details of 24:11 preserve details of Kenite worship (cf. 3:2; 18:12). These stories show how faith is enshrined in and expressed by ritual action. The place and the acts of worship are part of the covenant religion in the Sinai stories. Ancient religious customs are being pressed into the service of the new faith.

How much religious observance was maintained in the desert cannot be known at present, but the departure from Sinai is accompanied by ritual action (Exod. 33:4-6); and, in the institution of the tent, if not in the ark, provision is made for religious occasions during the wanderings (vs. 6). Elements of

early (false) worship (32:1-6) and late (true) worship (vss. 30-34) are combined in that black chapter of Exodus.

While it is difficult to accept the view that conceptions and events in Exodus and Numbers really reflect the practices of the Jerusalem temple, Israel's crossing into Canaan and the capture of Jericho are as much religious processions as military movements. Doubtless, too, Josh. 4 contains the sanctuary legend for Gilgal, and it is extremely likely that it was this Gilgal which saw Israel's first acts of worship in the new land. The Gilgal sanctuary became a famous one. Saul was crowned there. Amos attacks the place. Perhaps there was an annual celebration at Gilgal of Israel's crossing into Canaan.

In the confused periods of the settlement and the judges, private practices and observance would be maintained, at least for a time. There are various references in Joshua—II Samuel to religious practices and in particular to those associated with the holy war. Inevitably there are periods of change and confusion. This is best described as syncretism, the mingling of two ways of life and worship. The fact of this syncretism is no longer in question, but only its extent and duration. As Israel took over the land, they inevitably took over the sanctuaries. Dan, Gilgal, perhaps Bethel, Beer-sheba, Shechem, and Shiloh are the foremost sanctuaries of the period. Josh. 24 probably relates how Joshua's invading Israel covenanted with the pre-Israelite Hebrew amphictyony centered in Shechem. But numerous were the shrines and altars in the land. Every city and large village would have its own high place, for the practices of worship would be widespread through the land. From this union perhaps Deut. 27 and more likely the Book of the Covenant—i.e., probably Shechem's law code—entered Israel's life. Thus Israel soon adopted the festal calendar of the three feasts as provided for in Exod. 23:14-19. The account of Ephraim's sanctuary at Shiloh, shrine, ark, tent and sacred fire, rooms, altars, festal chamber, elaborate cultus and organized priesthood, shows Israelites participating in Canaanite religious practices (I Sam. 1-3; 9-10). To all intents and purposes Yahweh the God of Israel was becoming a Baal. Rechabites maintained a pristine worship, whatever that was; many Israelite farmers simply turned Yahweh into a Baal; yet others continued to worship Yahweh but did so as though he were a Baal. Hannah's praying and vow (I Sam. 1) are genuine acts of worship; but the corrupt acts of the priests (vss. 12-17), the fetish value of the ark (4:3), reveal other aspects. No doubt, Israel's worship at the high places was being increasingly fused with Canaanite forms motivated by sympathetic magic and directed to the success of the fertility system.

4. The early monarchy. The decline of Israel before the Philistine menace, the loss of Shiloh, the virtual disappearance of the ark from Israel's life, the pathetic but ineffective Yahwism of Saul, must have been reflected in a Yahwism at a low ebb, until David arrived to initiate a revival of Yahwism in a new Israel. It is probable that the religious achievements of David reflect a further and most important installment of syncretism, even though this syncretism exhibits also a synthesizing tendency. On the one side there is David's own personal loyalty to Yahweh,

which is reflected throughout I and II Samuel; there is the revival connected with the purchase of Araunah's threshing floor for a sacred site, and with the bringing of the ark to Jerusalem. There is also the person and the activity of the priest Abiathar. On the other side there is the sudden appearance of Zadok and Nehushtan, and there is the god El Elyon—the ancient deity of Jerusalem. The suggestion that David achieved a synthesizing syncretism of El Elyon with Yahweh, with their respective priesthoods and religious customs, is commanding ever widening support. Out of the syncretism there grows the royal ideology and covenant of the Davidic dynasty. Thus David was probably the architect of the cult and music practiced later in the temple of his son.

5. Temple and cultus. Solomon's erection of the temple, royal sanctuary though it was, was another major event in the syncretism. As David worked out the principles, the spirit, and some of the forms, so Solomon erected the shrine for the Davidic synthesis. The plan, furnishings, cosmic symbolism, and patterns of worship testify to Canaanite (Shechem), Phoenician, and Egyptian influences. It has accordingly been claimed that the erection of Solomon's royal chapel was an idea alien to Israel's Yahwism. From some points of view this is true, but it cannot be claimed that the idea of the sanctuary is anything new in Israel. The idea of the sacred place, whether it be a mountain, a portable shrine like the ark or tent, or a provincial sanctuary like Shechem or Shiloh, is constant and prominent in Israel's religion. Even if certain aspects of Solomon's temple are alien to Yahwism, this is not to say that Yahwism did not benefit from it and, indeed, all church architecture ever since. Thus experience shows that the dimensions of Solomon's chapel are, numinously speaking, sound. This is true of the axis of approach—courts, holy place, holy of holies (cf. the parallel in Exodus: people, 19:17 [cf. 20:21]; priests and elders, 24:1-2, 9-11; Moses, 20:21; 24:2, 18). Similarly cedar wood is most suitable for sanctuaries. Certainly the decorating motifs on the altar, pillars, and walls, and the symbolism of the lights, the bread of the presence, the lavers, and the brazen sea were parts of Israelite worship.

The cultus comprised basically three agricultural FEASTS celebrated throughout the land. There was Unleavened Bread with its eating of unleavened cakes, offering of first fruits, and waving of a sheaf of first fruits, preceded by Passover with its slain lamb, blood-besprinkled doorposts and lintels, and possibly a "limping" dance (*see* PASSOVER AND FEAST OF UNLEAVENED BREAD). The second feast was WEEKS (Pentecost), a midsummer—between barley and wheat harvests—feast with waving of two leavened loaves before God. The third feast, Asiph, In-gathering (*see* BOOTHS, FEAST OF), was the greatest. It was harvest thanksgiving marked by first-night illuminations and dancing (Isa. 30:29), when Israel lived seven days in booths and also celebrated the New Year, poured water and offered prayer for the coming of the former rains (cf. Zech. 14:16-17).

Rites and festivals long familiar to Israel were to be seen in Solomon's temple, but how much non-Israelite also appeared? There were undoubtedly

elements of sun worship (cf. II Kings 23:11; Ezek. 8: 14-16; Suk. V.4), though the cultus was scarcely devoted to sun worship. Did the "myth-and-ritual" pattern, with its myth of creation, the deity's death and resurrection, combat, marriage and procession, and other features find celebration at Jerusalem? Did the New Year Feast also serve as a coronation feast for Yahweh? None of these claims may be said to be fully substantiated, though there is abundant evidence for a more cultic interpretation of many of the Psalms. Even if it is necessary to reject Mowinckel's theory of this New Year Festival, yet his suggestion that the Psalms are to be understood in terms of "cultic reality," rather than "poetic fiction," affords an abiding principle of interpretation. It is this quest for "cultic reality" and the cultic nucleus which now dominates contemporary study of the Psalms, an increasing number of which may be safely regarded as pre-exilic. The Psalter is the prayer book of the first, as well as of the second, temple.

At Jerusalem, as at other sanctuaries through the land, worshippers came to rejoice before their God. With their tithes, first fruits, and their sacrificial offerings in general, they came to sanctuary: music, solos, anthems, shoutings, dancing, processions with all manner of instruments; with incense, rings and jewelry, elementary preaching in the form of all kinds of oracles, oracles of peace and reassurance, sacred recitations of the stories of the shrine and of old Israel, its fathers, heroes, saints, and soldiers, petitions, prayers, vows, vigils, promises, saying of creeds and confessions, sacred meals and washings—fires of altar and illuminations from Boaz and Jachin, and people, people, people everywhere, where God had recorded his name (Exod. 20:24) and had stored up his holiness, his presence, and his blessing for those who sought him out. There is silence, too, in Israelite worship (Pss. 4:4; 46:10; 76:8 [cf. 83:1 of God]). There is also the ministry of memory and remembrance, whereby men in difficulty find the way of spiritual revival as they remember God and all his grace, his covenant mercies, and his mighty deeds of former days. Thus Israel rejoiced before God, seeing God and eating and drinking. The psalmist succinctly defines the character and the purpose of worship by desiring to dwell in the house of the Lord all his life

to behold the beauty of the LORD,
and to inquire in his temple
(27:4).

Perhaps it was the unveiling of the ark that revealed the beauty, as it was certainly the oracles of the sanctuary which answered the inquiries. In this context sacrifices of joy are spontaneous offerings, for God himself says:

"Seek ye my face."
My heart says to thee,
"Thy face, LORD, do I seek"
(27:8).

To how much then does this cultic activity of the Psalms add up? There is no evidence that the Ras Shamra cult was ever paralleled at any Israelite sanctuary. Certainly it is well-nigh impossible that the myths of the death and resurrection of a god could ever be related of Yahweh. Even his marriage is difficult, though the appearance of Anath-Yahu

and other goddesses, at Elephantine, suggests a consort for Yahweh. There was ritual prostitution in Israel. On the other hand, so gifted is Israel in ritual behavior, that there is more to be said for, and ever growing acceptance of, the view that there was for some centuries an annual royal festival which represented a Davidic synthesis. On the one hand there are ancient Jerusalem motifs, El Elyon, NEHUSTAN, righteousness, and welfare, and perhaps a priest-king ideology; on the other, Yahwistic features like ARK OF THE COVENANT; COVENANT; tabernacling PRESENCE; and the GLORY of Yahweh. The ritual center of this thesis is, of course, II Samuel with Ps. 132. With these passages must also be associated such psalms as 2; 18; 23-24; 29; 46-48; 68; 72; 81; 84; 89; 93; 95-101; 110; 113-18; 120-34; 149; etc. These psalms, together with such cultic remains buried in, e.g., Isa. 40-55 and P, are probably the cultic nucleus of the Psalter and of the Davidic festival at Jerusalem.

Whatever the range of cultic activity at Jerusalem, it is clear that Israel rejoiced before God in the ancient sanctuaries. Such joyous attitudes before God no prophet, not even Amos or Isaiah or Jeremiah, could denounce. (Hos. 3:4 shows how the loss of sacrifice and pillar, of ephod and teraphim, are punishment for Israel's sins.) Indeed, they had doubtless shared in it, for Amos is by no means reluctant to express himself in participial hymns of praise. Isaiah was called when at worship, and Jeremiah continually resorted to the temple to preach.

Yet the prophets had much to condemn, and their condemnation is so far reaching as to appear as a total condemnation of sacrifice and worship. There were also the evils attendant upon the division of the kingdom and the practices of the N shrines. Amos denounces ritual lawbreaking (2:8), as well as ritual prostitution (vs. 4), acts of worship not accompanied by repentance (4:4-6), and he announces God's detestation of Israel's feasts (5:21-24). Likewise Hosea promises that God will punish Israel by ending her festive occasions, feasts, New Moons, and sabbaths, for God desired mercy rather than sacrifice. Isaiah complains that his people's whole head and whole heart are sick and faint (1:5), and consequently the entire worship is wrong. Even so, the condemnation of worship and the cult does not bulk so largely in their pages as is commonly supposed. These prophets also testify to the presence of idolatrous emblems in contemporary worship (II Kings 18:4; Isa. 2:8, 20; Hos. 8:4-6; 13:1-2). In their denunciations the prophets had had forerunners, as Deut. 18:9-15 shows. All magical, divinatory, spiritualist, and necromantic forms of religious activity are absolutely alien to Israel's faith and are now denounced and prohibited in laws and prophecy alike.

6. Josiah's reform. The eighth-century prophets had protested in vain. Indeed, Ahaz had set up an Assyrian altar in Jerusalem (II Kings 16:10-16). There had long been a serpent cult in the temple—probably a cult image of the El Elyon god. This Hezekiah had removed from the temple as part of his reform (II Kings 18:4). But his son, Manasseh, in dependence upon Assyria, introduced a new age of syncretism, so that Israel was more wicked than its neighbors. Josiah, following the discovery of the law

book (probably Deut. 5-28), set about the reform of the religious worship of his day. He centralized personal and all other kinds of sacrifice at Jerusalem; he abolished local shrines and disestablished local priestly families. He suppressed local cults and all idolatrous rites, and so sought a purification of worship in Jerusalem and throughout his kingdom (II Kings 23:4-25). But after Josiah's death there was a further relapse (23:32, 37; 24:9, 19; Jer. 44:17 ff). It is clear that in the long history of Solomon's temple the degree of syncretism varied according to the sympathies of the reigning monarch.

7. In the postexilic period. The work of Josiah, Deuteronomy, and Ezekiel eventually brought about a reformed cultus. The main feasts were continued; the relationships of priests, Levites, and other priestly groups were defined. Those who had been cult prophets were probably consolidated into the post-exilic choirs of temple singers, each choir aiming to possess its own book of psalms. Various changes in sacrifices also took place, and the *chattath* (sin offering) and the *'asham* (guilt offering) appear prominently.

In the second temple there was a morning sacrifice and another between the two evenings, with additions for sabbaths and all special feasts (Exod. 29:38-41; Num. 28:9). There is information in the Mishna and other rabbinical writings of the distribution of psalms in the festivals and holy days of the Jewish year. Songs of ascents (Pss. 120-34) were used at tabernacles and the Hallel psalms (113-18; 136) at all the great festivals, and so on.

The postexilic period also saw great changes in the pre-exilic feast of 'Asiph. This was now divided into three separate festivals. On the first day of Tishri, New Year's Day (see NEW YEAR), Rosh Hashanah was celebrated; the tenth day was the most solemn day of all—the Day of Atonement, when the high priest was especially involved in a number of archaic ceremonies; and thirdly, the Feast of Tabernacles, Sukkoth, continued for eight days from the fifteenth of the month. On the Day of Atonement (Lev. 16; see ATONEMENT, DAY OF) an annual purification was made for temple, priests, and people. It is not possible to go into the different items of this chapter, or the form, meaning, and sequence of the different portions of the ritual. Some portions of the ritual are archaic—but both the need for the occasion and the central figure and activity of the high priest are new. It remains a speculation whether Lev. 16 does not now embalm ideas and ritual which, in pre-exilic days, belonged to the king and were performed by him. This speculation offers a plausible approach to the problems of Lev. 16.

8. Personal worship. The rich themes of the community celebrations of Israel's covenant faith must not blind us to the equally rich strains of personal religion and worship present in the OT. Many personal acts of worship are told of the patriarchs, of Moses and Joshua. The story of Hannah at prayer (I Sam. 1) could not have been unique in ancient Israel. Many brought their needs and vows to the sanctuary. Indeed, many of the laws control personal acts of offering and worship. Apart from the possibility that David may have been the author of such psalms as 23; 51, there is a personal side to his re-

ligion. David is portrayed as one of the most gifted individuals in God's presence (II Sam. 7:18-29), and his ritual behavior sometimes causes surprise (II Sam. 6:20-23; 12:16-23). The royal cult must have meant, for good kings at least, acts of personal consecration, as well as the outward fulfilment of the ritual appropriate to the monarchy (e.g., I Kings 8:1-9:9). Further, the Psalter is known to contain personal hymns of thanksgiving, psalms of trust, and individual laments. The "I" of the psalm is rarely a singular collective for Israel; and even if often used by the king, nevertheless the democratization of the royal cult and of the royal "I" made the Psalms available for all and sundry in Israel. The Psalms contain many individual acts of prayer and devotion. It has long been recognized that in the concentration on the law and testimony among Isaiah's disciples (Isa. 8:16-20) there are new insights into a personal religion of faith dependent on God's Word alone. The so-called confessions of Jeremiah, the prophet Habakkuk, the author of Ps. 73, the lyrical outpourings in Isa. 40-55, the personal concentration on law (Pss. 1; 19; 119), and such an appeal as Isa. 55:6-9 disclose vistas of personal religion. Then, too, there are those postures which are appropriate to adoration and to prayer: standing, sitting, prostration, kneeling, bowing; hands folded, outstretched, uplifted, clasped; eyes cast down and lifted up; removal of sandals, the stroking of sacred images or places like altars; the hand to lips (Job 31:27)—perhaps the physical basis of adoration (lit., *adoro*, "I lift my hand to my mouth").

The fall of Jerusalem and of the first temple, the long sojourn in exile away from the shrine, the abandonment of local sacrificial shrines after the building of the second temple, the growth of the idea of scripture, and the decline of the prophetic ministry inevitably gave rise to new modes of worship—meetings for praise, prayer, preaching, teaching, and explanation. At some time or other new centers arose, though it is unlikely that the SYNAGOGUE is mentioned in OT times (cf. Ps. 74:8). The synagogue is vouched for from the third century B.C., at least.

9. Characteristics. Mowinckel may not have gained universal acceptance for his theory of the New Year Festival, but there is no doubt that in his category of "cultic reality" he has established a permanent mode of interpretation for certain psalms in particular and for Hebrew worship in general. As prophetic oracles are sometimes enshrined in prophetic symbolism, so much of Hebrew religion finds ritual expression. Revelation is given ritual expression. Thus the strange ritual of Gen. 15:9-21 carries or embodies a revealed promise (cf. vs. 7-8). In Exod. 24 the divine side of the covenant, as well as the human, is conveyed in ritual. Religion achieves a quasi-sacramental expression in ritual. On the human side, the varied approach to God even achieves appropriate ritual and dramatic expression.

This ritual religion nevertheless is dominated by what has been called holy history. The worship is carried on within a tradition of sacred history. Agricultural feasts have been related to the divine acts within Israel's history. The Psalter contains psalms which recapitulate that sacred story, and many illustrations of sacred recital or the making known of

Yahweh's works. The worshiper remembers and thus makes present to himself the sacred history to which he belongs. The particular form of the historical implications of Israel's worship is the covenant. That is the presupposition of the worship, and very often the substance of the short creedal statements which characterize so many of the Psalms. The aspect of covenant also plays its part in the role of the king and of the Davidic house in Israel's worship. Akin to the sacred history is the Lord's control of and gifts in harvest. Thus harvest thanksgiving and joy are prominent in Israel's festal calendar, and largely control the timing.

Since the system of worship is revealed, then the fulfillment of worship is obedience to God. The Western tendency to distinguish between ethical obedience and ritual obedience divides the life of the worshiper. There are accordingly Torah liturgies in Pss. 15; 24 which lay down ethical requirements for worship, as does Mic. 6:6-8. Without the requirements, experiences, and exhibitions of such ethical behavior in worship, there would be no possibility of the idealizing tendencies which properly belong to worship and which issue in present well-being and eschatological hope.

Israelite worship centers on Israel's God. He is the author of sacrifice (Lev. 17:11) and of Israel's system of worship. He both gives grace and glory and receives worship and glory. True Israelite worship is dominated by enthusiasm for God. Thus Israel's worship is performed, not merely that she may thereby set an example to other nations, and not merely that she may derive blessing or welfare from this worship, but that she may glorify God. Israelite worship centers on the cultic presence of Israel's tabernacling God. The heart of this presence is a divine "I am" sentence—an "autokerygmatic" sentence—"I am Yahweh." This sentence is doubtless the heart of scripture, of revelation, and of Israel's faith as recapitulated in her worship. Correspondingly, to call upon the NAME of Yahweh or to bless in his name is the supreme act of worship. But "call on the name" is not a synonym for prayer and invocation. The phrase means to "call with the name"—i.e., give utterance to the name itself. Similarly, in blessing, Yahweh's name is put upon the people of Israel (Num. 6:17).

Concerning emphasis on the sanctuary, see HIGH PLACE.

WORSHIP IN NT TIMES, CHRISTIAN. Until the middle of the second century, when Justin Martyr provided his pagan opponents with a fairly adequate account of a Christian service, our knowledge of early Christian worship is very sketchy. The NT contains only one record (and that not altogether clear) of the celebration of the Lord's Supper, and none of baptism. We have a curious set of eucharistic prayers, coming perhaps from the late first century, in the Didache; and a few years later a pagan governor, Pliny, wrote his emperor a confused account of a Christian service. For the rest we are dependent upon conjectures made from casual references in the NT, and we have to eke out our knowledge by inferences from current Jewish and Hellenistic worship, and from occasional notices in the early fathers.

Nevertheless, it is possible to trace the main lines of the development and to infer much that is not apparent on the surface. In general we may say that Christian worship in NT times found its focus in baptism, in preaching, and in the Lord's Supper, and was dominated by its faith in Jesus as the risen Messiah and the living Lord. It took over much from its Jewish background, both remolding and reinterpreting it; to a lesser extent it was influenced by Gentile practices; and beyond the central elements we have noted, it enjoyed a quite rich liturgical life of public prayer, psalmody, scripture reading, instruction, and private devotions. There were, too, many special observances such as ordinations, ministry to the sick (with prayer, anointing, and exorcism), benedictions at marriage, funeral banquets, and weekly and annual days of fasting and of celebration.

1. **The inheritance from Judaism.** Born within Judaism, Christianity naturally developed its liturgical life within the context of its Jewish heritage. The earliest Christians, according to Acts 2:46, "day by day, attending the temple together and breaking bread in their homes, . . . partook of food with glad and generous hearts." From this we are to assume that what was distinctive to Christianity was its communal meal, while for the rest it continued to observe the Jewish modes of public and private worship (Acts 5:42). Soon, however, the cleavage between Judaism and Christianity became complete; and, forbidden access to temple and synagogue, the

Christians developed their independent services. Central to these were baptism and the Lord's Supper, with many other acts of worship clustered around.

The break with Judaism was perhaps not so abrupt as we sometimes think, nor did it occur at the same time in all places. Paul, e.g., seems to have begun his missionary labors, as a rule, by preaching in the synagogue, and to have continued worshipping there until, on each specific occasion, he was forced to withdraw, and either to hire a lecture hall, as he did at Ephesus (Acts 19:9; the lecture hall of Tyrannus), or to continue his work from some private house (e.g., that of Stephanas in Corinth; I Cor. 16: 15). The earliest Christians thus worshiped in temple and synagogue, supplementing this worship by their distinctive common meal.

When, however, the primitive Christians were forced to make their own provisions for worship, they naturally relied on the familiar forms they had inherited from Judaism. But these forms underwent a radical transformation in the light of the Christian message. So far as the sacrificial system of the temple was concerned, the Christians abandoned this altogether, regarding it as having been fulfilled in the death of Christ (see especially the leading argument of the Letter to the Hebrews); and, indeed, with the destruction of the temple by the Romans in A.D. 70, it ceased even for Judaism. From temple worship Christianity inherited, not a cultus, but an idea, a way of expressing the meaning of Christ's passion, rather than an actual form of worship. This understanding of the Cross became of fundamental importance for the development of the Lord's Supper, whose sacrificial character lay in the "recalling" or solemnly "proclaiming" before God the sacrifice once offered (I Cor. 11:26). The only other aspect of temple worship which affected Christianity was the psalmody; but this probably entered Christian liturgy not so much directly from the temple as indirectly through the synagogue.

From the synagogue, the local center of worship in postexilic Judaism (see WORSHIP IN NT TIMES, JEWISH), Christianity came to inherit most of what we think of as the service of the word. Scripture reading (especially of the Law and the Prophets), preaching, psalmody, and public prayer had by the second century become the first part of the regular weekly service of the Christians. How early the service assumed this form, we must discuss later. Here we need only remark on the similarity and contrast with Judaism. There was similarity in most of the items, but dissimilarity both in their content and in the order in which they came.

While we do not know precisely how the Jewish service was constructed in the first century (and it doubtless displayed local differences), we may reasonably assume that it went something like this:

- I. Antiphonal recitation of the Decalogue (only in some places)
- II. The Shema (antiphonal recitation of the creed of Israel, Deut. 6:4-9, etc.)
- III. The Shemone Esreh (a series of blessings of God, now nineteen, at that time perhaps six)
- IV. Pentateuch lesson (with translation verse by verse into Aramaic or Greek)

V. Psalmody (perhaps between the lections, and in the responsorial method, the cantor singing the verses, the congregation replying with a constant refrain)

VI. Sermon (only occasionally)

Three further points may be noted. At the conclusion of prayers the congregation recited vigorously the *Amen*—the word expressing God's fixed and constant nature, whereby he would bring the petition to effect. Second, form and freedom seem to have been united in the liturgy. There was a fixed structure, but the leader of the congregation who recited the benedictions was not bound by the actual words, only by the content. Finally, the liturgy was a lay liturgy. The "ruler" of the synagogue would choose different members of the congregation to lead in the Shema and benedictions, to read the lessons, and, on occasion, to preach.

The Christian service will be discussed in § 4. There it will be noted that most of these items of synagogue worship were retained, but the demands of the Christian message altered them considerably.

Another area of Jewish worship which profoundly affected the Christian liturgy was the home ritual of the Passover meal (see PASSOVER AND FEAST OF UNLEAVENED BREAD). This forms the background for the Lord's Supper and raises some of the most insoluble problems of NT study (see LAST SUPPER). It is not clear whether the Last Supper (from which the Lord's Supper is derived) was the actual Passover meal or occurred some twenty-four hours before it. The first three gospels take the former view, while John's Gospel dates the Passion at the time of the slaying of the Passover lambs, and hence a day earlier. It is not possible to tell decisively which is correct; the arguments and objections on both sides tend to cancel each other out. But in either case, what is important is that the traditions of the Passover have vitally affected the development of the Lord's Supper. The essence of Passover (whose remote origins go back to two Canaanite spring festivals) lay in the recalling of Israel's redemption, by a symbolic feast which re-enacted the last dramatic night before the crossing of the Red Sea. A haggadah (tradition) was recited by the master of the house, who in answer to questions posed by the youngest present, retold the slaughter of the first-born, the flight from Egypt, and the delivery from slavery under the Pharaohs. The meal looked backward to God's saving act in Israel's redemption, but it also looked forward to the culmination of his promises in the kingdom. Thus, e.g., of the unleavened bread which was eaten, it was said: "This is the bread of affliction which our fathers ate in the land of Egypt . . . Now we are here, but next year may we be in the land of Israel! Now we are slaves, but next year may we be free men!" This ancient verse, which comes perhaps from the later Babylonian captivity, voices the twofold theme of Passover: it recalls the redemption from Egypt and looks toward the final triumph of God's kingdom.

It is precisely this dual concern which is characteristic of the Last Supper and the LORD'S SUPPER. The redemption wrought by Jesus is "shewn forth" in the bread and wine; while the hope of the future

kingdom also finds expression, in the words both of Jesus (Mark 14:25; Luke 22:16) and of Paul (I Cor. 11:26: "until he comes").

The actual details of a Jewish meal have also provided both the framework for Jesus' act and the structure of the earliest Christian prayers at the Lord's Supper. This applies whether or not the Last Supper was an actual Passover, because in either case the beginning and the end of the meal would be similar, though the Passover forms would be more elaborate. The dinner would open with a grace before meals, which involved both a blessing of God for the bread, and the distribution of small pieces of the loaf to each of the guests. This was (and is still) the normal way for a Jew to say grace. Evidently Jesus took this occasion to relate the bread to the sacrifice of his body; and the memory of this determined the opening of the Lord's Supper, even in a community like Corinth, which was largely Gentile (I Cor. 11:23-24). The meal would conclude, on festive occasions, with the grace after meals said in connection with a cup of wine shared by all (at Passover there would be individual cups, but the evidence for this in the first century is disputed). There would be a preliminary dialogue, depending on the number of guests present, and opening: "Let us bless our God." This would be followed by a blessing of God for the wine and a longer blessing, in three parts, for the food, the land, and the people. There was some dispute in Jewish circles as to which of these two blessings should come first (Ber. 8.9). Apparently Jesus took the occasion of this celebration to relate the wine to his forthcoming passion; and it is clear that the blessing over the cup terminates the meal in Paul's account (I Cor. 11:25).

We must remember that the Lord's Supper was a long period, and perhaps as late as the end of the first century, an actual meal. Thus it retained its distinctively Jewish structure of grace before and after meals said in connection with bread and wine; and, as we see later, the earliest Christian prayers we have reflect the structure of the Jewish graces.

The importance of sacred meals involving bread and wine has been brought home to us in another relation with the recent discovery of the Qumran material. In a fragment probably forming part of the Manual of Discipline we have an account of a communal meal at which the high priest of the community presides, and at which "he utters a blessing over the first portion of the bread and wine, and [stretches out] his hand over the bread first of all." The "Messiah of Israel" then "stretches out his hands upon the bread." The nature of this meal of the Qumran community is admittedly obscure; but it clearly has a messianic reference, though it is not made plain whether the awaited Messiah is actually represented by someone at the recurring meal. What, however, is important is that the Qumran material witnesses to the existence of a type of sacred meal which bears a striking resemblance to the later Lord's Supper, the messianic character of which is discussed in § 3 below.

Judaism provided the background for many other acts of Christian worship besides its central service of word and sacrament. Jewish proselyte baptism, e.g., is a source both for John's rite and for the

Christian one. Similarly in unction, exorcism, ordination, fasting, etc., the Jewish forms affected the Christian. It will, however, be more convenient to discuss these under the separate sections which follow the treatment of the main weekly liturgy.

2. The Gentile inheritance. It is much more difficult to assess the Gentile influences on Christian worship than the Jewish. This is so because the latter are more obvious, and because, with the exception of peripheral items such as the funeral feast and some marriage customs, no specific elements of the early Christian liturgy can be directly traced to Hellenistic sources. Until the fourth century, almost everything important can be explained by Christian remolding of Jewish forms. Yet the question cannot be left there; for while so much of Christian worship stood in marked contrast to pagan (its lack of temples, sacrifices, idols, and augury), there were subtle similarities which have led some scholars to view Christianity as one more example of a prevalent type of pagan worship in the first century—viz., that of the mystery religions.

Fundamental to these mystery religions was the ritual associated with the dying and rising god. Also fundamental were the sacred meals at which the god was believed to be present, and in the course of which holy food was taken, believed to have some relationship with divine life (e.g., the initiation ritual of the cult of Attis, and the communal meal of bread and wine in Mithraism). Obvious connections between these religions and the Christian belief in the death and resurrection of Christ and in the communion of his body and blood in the Lord's Supper, can be made. While the structure of Christian worship is sufficiently accounted for by its Jewish heritage and by the symbolic act of Jesus at the Last Supper, the relation with the mystery religions in these themes is apparent. For the converted Gentile, moreover, the Christian cultus must not have seemed altogether unlike the cult libations and initiations with which he was familiar. (Paul himself seems to have in mind cult libations in I Cor. 10:16-21, which explains why here the cup precedes the bread.) The Gentile convert would read into religious forms which had a Jewish origin, ideas and associations from his pagan background. Christianity, for him, was doubtless some kind of mystery religion, however much it might differ in detail from his previous allegiances.

The main points of difference were clear: the cults were syncretic, while Christianity was exclusive; the cults closely guarded their "mystery" in secret, while early Christianity proclaimed the mystery of God's action in Christ from the housetops (cf. Rom. 16:25); initiation in the cults was, on the whole, costly, while Christianity recruited a large part of its congregation from the underprivileged; the cults were concerned first with the triumph over death, while Christianity related this to the triumph over moral evil; the cult gods were personifications of the fertility myth of dying and rising, while Christianity was rooted in the historic acts of an actual person. But the deepest difference lay in the conception of the divine suffering. The cult gods died unwillingly, smitten by the forces of fate, while Christianity preached a God who willingly took upon himself

the suffering involved in the redemption of man.

There was thus similarity and dissimilarity between Christian worship and pagan cultus. Of the items which most clearly relate to the pagan background, we may mention, first, language and metaphor. "Dying and rising," "regeneration" (Tit. 3:5), and similar expressions have a Hellenistic overtone, whatever their origin; and the privative attributes of God in Christian prayers come from the traditions of Greek philosophy (cf. I Tim. 6:16). When, furthermore, the Gentile Christian addressed Christ as *Kyrios* (Lord), while the term came into Christianity through Aramaic, it must have had for him associations derived from the savior "lords" and "gods" of paganism. Later on, in Clement of Alexandria, the new faith can be directly and consciously spoken of in terms taken from the mystery religions (Protrep. 12).

A second factor concerns the blessing of things. Jewish prayer is marked by benedictions which bless God *for* things; Gentile practice is seen in prayers which ask God's blessing *on* things. The blessing of the bread and wine of the Lord's Supper, e.g. (implicit in the later consecration prayers), betrays Hellenistic usage. It has its origin in the conception of the divine being present *in* things; whereas the prophetic strain of Jewish religion lays the emphasis on blessing God *for* things. Similarly, it is possible to view the stark language in John 6:56 on "eating the flesh" of Christ as reminiscent of the Dionysiac orgies in which the raw flesh of a bull was devoured in the belief that it contained divine power. That there is a trace of pagan language here is likely; but the author's concern to interpret the rite spiritually is also evident (see vs. 63). If he speaks in language familiar to his hearers, it is with a vastly different message.

3. The Lord's Supper. The distinctive communal meal of the Christians, known by the technical term of the "breaking of bread" (Acts 20:7, 11; an expression in Judaism for that ritual act of grace before meals which had special significance for the Christian), was at first supplemental to the temple and synagogue services (Acts 2:46), and was celebrated daily, or at any rate with great frequency. Naturally it was held in the homes of Christians, as it was an actual meal; and to judge by Jewish customs as well as by Paul's reference in I Cor. 11:21, each guest provided either his own supper or a contribution to the common table. It was characterized by "great joy" (the Greek expression in Acts 2:46 is emphatic), because it celebrated the messianic banquet and bore witness to the presence of the risen Christ. The Emmaus story (Luke 24:13 ff) is probably intended as a type of the Christian Eucharist: "He was known to them in the breaking of the bread." This means that the Christian meal was a continuation of the Easter meals of the Resurrection (Mark 16:14; John 21; Acts 10:41), and fulfilled the Jewish expectations of the coming of the Messiah and the kingdom. These expectations had often been clothed in language suggesting a banquet at the end of the ages, when the Messiah would come bringing with him the manna ground in the mills of heaven (cf. Zech. 8:19; Enoch 10:17 ff; 62:14; Luke 14:15; John 6:49 ff). For the Christian this was fulfilled in the

Lord's Supper, which both celebrated the presence of the Messiah and looked toward the final climax when he would appear in glory (I Cor. 11:26).

The meal followed the pattern already explained. There was a grace before meals with the distribution of the bread, a ritual given new meaning by the act of Christ at the Last Supper; and, after the supper, a concluding grace over a cup of wine, again a ritual given a new interpretation in the light of Christ's action. The NT does not preserve for us the form of these graces, to which the sacramental words recorded by Paul were doubtless attached (I Cor. 11:23 ff). The antiquity, however, of the present Jewish forms helps us here; and reconstructions by Jewish scholars lead us to suppose that Jews said grace something like this in the first century: over the bread, "Blessed art thou, O Lord our God, King of the universe, who bringest forth bread from the earth"; after the meal and over the cup, a dialogue:

V. "Blessed be He."

Rx. "Blessed be the Lord our God, the God of Israel, the God of hosts, dwelling between the cherubim, for the meal that we have eaten."

Then follows the blessing: "Blessed art thou, O Lord our God, who hast made the fruit of the vine.

"Blessed art thou, O Lord our God, King of the universe, who sustaineth the whole world with goodness, with kindness, and with mercy.

"We thank thee O Lord our God, that thou hast caused us to inherit a pleasant, good, and wide land.

"Have mercy, O Lord our God, on Israel, thy people, and on Jerusalem, thy city, and on Zion, the abiding place of thy glory, on thy altar and thy temple. Blessed art thou, O God, who buildest Jerusalem."

The Christian forms would doubtless have been reworded in the light of the new faith; and the prayers which have survived in the Didache preserve just such a remodeling of the ancient blessings. Although the Didache itself is a second-century compilation, its eucharistic prayers (chs. 9-10) go back to A.D. 90 or earlier, and come perhaps originally from Judea. They have suffered some displacement, and for some curious reason the wine benediction is given first. But this is probably a scribal error, for we have no evidence that the cup ever preceded the bread. Here are the prayers:

"We thank thee, our Father, for the holy vine of David, thy child, which thou hast revealed through Jesus, thy child. To thee be glory forever.

"Then in connection with the piece [broken off the loaf]: We thank thee, our Father, for the life and knowledge which thou hast revealed through Jesus, thy child. To thee be glory forever.

"As this piece [of bread] was scattered over the hills and then was brought together and made one, so let thy Church be brought together from the ends of the earth into thy Kingdom. For thine is the glory and the power through Jesus Christ forever.

"After you have finished your meal, say grace in this way: We thank thee, holy Father, for thy sacred name which thou hast lodged in our hearts, and for the knowledge and faith and immortality which thou hast revealed through Jesus, thy child. To thee be glory forever.

"Almighty Master, thou hast created everything

for the sake of thy name, and hast given men food and drink to enjoy that they may thank thee. But to us thou hast given spiritual food and drink and eternal life through Jesus, thy child.

"Above all, we thank thee that thou art mighty. To thee be glory forever.

"Remember, Lord, thy Church, to save it from all evil and to make it perfect by thy love. Make it holy, and gather it together from the four winds into thy kingdom which thou hast made ready for it. For thine is the power and the glory forever.

"Let Grace come and let this world pass away.

"Hosanna to the God of David!

"If anyone is holy, let him come. If not, let him repent.

"Our Lord, come!

"Amen."

The reader who compares these prayers with the Jewish ones will note the striking similarity, particularly in the form "We thank thee" (which is synonymous with "We bless thee," or "Blessed art thou"), and in the content of the long thanksgiving at the end which substitutes the themes of Christ, creation, and redemption, for the Jewish ones of the food, the land, and the people. It may be noted that the liturgy in the *Didache* clearly envisions an actual meal (10.1).

The earliest Eucharists seem to have concluded with (or contained at some point) psalm singing, exhortation, prophecy, and speaking with tongues (I Cor. 14:26). Perhaps a vestige of this is to be seen in the ecstatic cries, "Let grace come, let this world pass away," etc., which end the *Didache* service (10.6).

It will be noted that the *Didache* prayers do not directly refer to Christ's words of institution, and while the whole gospel of redemption in Christ is implicit in them, they do not make overt reference to the Passion. Some have contended, therefore, that there were originally two types of early Eucharist—a joyful type centered in the Resurrection, like the *Didache's*, and a more solemn one like that of Paul in I Cor. 11, centered in the Cross. Such a theory is unnecessary to explain the differences. The early Lord's Supper was doubtless a most joyful occasion, and the accent fell upon the themes of Resurrection and messianic banquet. But underlying these were the motifs of the New Covenant and the Cross. The peculiar solemnity of Paul's account may partly be explained by the prominence of the Cross in his theology; but it was the excesses to which the Corinthian feasting went and the unsocial behavior of the well-to-do (who refused to share their "picnic" baskets with their less privileged fellows) which led him to stress the more somber note of the celebration (I Cor. 11:20 ff). We do not need to posit two different types of Eucharist. Rather is there a difference of emphasis because of circumstances.

When the break between Christianity and Judaism forced the new community to provide for its total needs of worship, changes in the supper doubtless occurred. For one thing, preaching would be added to it, and the story in Acts 20:7-12 indicates this. Then again, the Christian liturgy became regularized as weekly worship, and Sunday (*see LORD'S DAY*) was celebrated as the Christian day, the Lord's

Supper coming in the evening, as the same passage from Acts indicates. We have no evidence that a Christian service in the morning parallel to that of the synagogue immediately developed. The first we hear of it is around the turn of the century in Pliny's letter to Trajan, and while it is doubtless considerably older than that, we cannot date its appearance. Nor can we be sure whether the general prayers mentioned in I Tim. 2:1-2, 8, belong to the Lord's Supper or to a separate service. It is possible that some of the items of the synagogue service came to precede the Lord's Supper, as preaching did. Perhaps scripture reading was included, as well as the reading of Christian letters which Paul assumes in Col. 4:16 (though the reference here is not specifically to the Lord's Supper). Many of the fragmentary liturgical echoes which we find in the NT, such as benedictions (e.g., Gal. 6:18; Phil. 4:23), doxologies (e.g., Rom. 1:25; 9:5; II Cor. 11:31; Eph. 1:3; II Tim. 4:18), and new Christian hymns (e.g., Eph. 5:14; Phil. 2:6 ff; Col. 1:12-14; I Tim. 3:16; Rev. 5:9, 12-13; 12:10-12; 19:1-2, 6), probably came to form a part of the meal. What, however, forced the Christians to undertake a thorough revision of the liturgy was the imperial edict (based on the old *lex Julia*) forbidding unlicensed clubs to hold meals. This was enforced in Trajan's time, and from that period there developed a service of word and sacrament distinct from the actual supper, though incorporating its most important features.

4. The service of word and sacrament. The imagery of Revelation gives us our only indication in the NT of the Christian liturgy as it developed at the end of the first century. Because of the nature of these visions it is extremely hard to be sure of the details; but chs. 4-6 suggest that the author has cast his vision in forms derived from the liturgy. The throne would be the bishop's chair; the seats of the elders would be those of the presbyters on either side of the bishop; the lamb would be the consecrated bread and wine; the book would be the gospel MS; some of the refrains might reflect Christian hymns (the Sanctus, e.g., appears in 4:8); and the Amen (5:14) certainly played a significant role in Christian worship, being the congregation's response to all prayers. If we are to read these chapters of Revelation in this way, it would appear that the type of service known to us in the second century by Justin's account (*see below*), was already established by the 90's in some parts of Asia Minor.

We are on somewhat more certain ground when we take into account Pliny's evidence. This governor of Bithynia, in his letter to Trajan on the Christians (10.96; ca. A.D. 113), records the description of their worship given him by some who later apostatized: "They contended that the sum of their guilt or error had lain in this, that they were accustomed on a special day to assemble before daylight and to sing antiphonally a hymn to Christ as if he were a god, and to bind themselves by an oath not for any wrong purpose, but not to commit theft or robbery or adultery, not to break their word or to deny a deposit when asked for. After this it was their custom to depart, and to meet together again to take food, but ordinary and harmless food. Even this they gave up after my edict, by which I had forbidden the exist-

ence of unlicensed clubs in accordance with your orders."

While this text involves some difficulties of interpretation, it would seem that the Christians of Bithynia observed two separate services. They met before dawn for a liturgy which included antiphonal hymnody (perhaps the singing of the messianic psalms in reference to Christ, or of new Christian hymns, fragments of which have survived in the NT), and a recitation of the Decalogue. (The latter is clear, as the last three commandments are specifically mentioned. The tenth is interestingly interpreted by the situation where covetousness was a major temptation—viz., in refusing to give back money or precious goods entrusted by some traveler at a time when there were no banks and safe-deposit boxes.)

Later that same day (the "special day" is doubtless Sunday), they held a communal meal, which they had to abandon when the *lex Julia* was enforced. It is unclear whether this meal was the actual Lord's Supper, or whether the sacramental part of the meal had already been transferred to the dawn liturgy (as we find later in Justin), leaving only an ordinary "church supper" or AGAPE, as it was called. Some have contended that the latter is the case, because Christians would never have given up their most solemn act of worship. Yet it may well be precisely this situation of the enforcement of the *lex Julia* that led to the separation of the actual supper from its sacramental actions. However this may be, what is clear is that a service of the word with features from the synagogue liturgy had now developed and was held very early in the morning. The reason for the choice of this time was partly the desire to accommodate slaves, who formed a large part of an early Christian congregation and were not free at other hours, and partly the necessity that a persecuted group hold its meetings in secret.

With the account of the Christian liturgy in Justin Martyr, who reflects the Roman practice (I Apol. 65-67; ca. A.D. 150), we reach clear daylight. We find the form of service with which we are familiar and which provided the framework for the whole later development. The service was held on Sunday and opened abruptly with the reading of scripture, which by Justin's time included both the LXX and the gospels (there is no evidence of a lectionary system, but as one was probably in vogue in the synagogue, some order may have been adopted in early Christianity). There followed the sermon, with the bishop (Justin calls him the "president"—a term his pagan readers would better understand) seated in his chair in the customary way of teaching in the ancient world (cf. Luke 4:20). Then came the common prayers, for which the congregation rose. They prayed with arms outstretched, in the usual way for Jews and Romans to plead with God, though the Christian saw in this gesture the form of the cross (Tert. *On Prayer* 14). The structure of the prayers is not clear. It is possible that a long intercession of the type preserved in I Clem. 59 ff was in vogue; but it is more likely that a litany form, similar to that in the oldest parts of the Roman liturgy, was in use. A subject of prayer would be proposed by the deacon: "Let us pray for . . ." There would follow

an interval of silence, during which each would offer his individual prayers; and finally the bishop would intone a brief concluding "collect" summing up (as the word suggests) the united prayers of the congregation. The prayers would be intoned in a manner between our speaking and singing, something like the "recitative" of an opera. Such musical speech was the customary mode of Jewish prayer as well as of pagan. It was used for acoustical reasons as well as because of the advantages of musical rhythm. (Spoken public prayer is medieval in origin, and connected with the rise of Low Masses.) The prayers would be extemporaneous. There were no set forms until the fourth century, though there were model prayers and a fixed structure of the service (Hippolytus *Apostolic Tradition* 10.4).

The prayers concluded with a vigorous Amen by the congregation. Justin uses an emphatic word, ἐπεφωμῆι ("shout in applause"). By his time "Amen" was understood to mean merely "so be it," but in the NT there is evidence that the Christian read into the original Hebrew word a good deal more. Instead of the reference being future—the expectation that God *would* bring the petition to pass—the word was connected with the fulfilment already present in Christ. All the promises of God, says Paul, are "Yes" in Christ, and that is why we say "Amen" through him to God's glory (II Cor. 1:20). Behind this lies the conviction that the kingdom is already begun in the work of Christ, though it has not yet reached its climax.

When the common prayers were ended, the kiss of peace was given. This oriental salutation, the equivalent of our shaking of hands (Luke 7:45), had passed into Gentile worship from the natural greetings of Jewish Christians as they assembled for the primitive Lord's Supper, and had become a liturgical action to seal the supernatural fellowship of the church.

The offertory followed. This was not of money (the collection was deposited with the bishop after the service), but of bread and wine. Each Christian had brought his own offering of these (the relics of the time when the Lord's Supper had been a "picnic" meal at which each guest provided something for the common feast). The deacons now arranged these on a table before the bishop, who proceeded to the consecration prayer. This was opened by a dialogue which was a Christian remodeling of the Jewish dialogue before grace after meals. It had assumed the form of the *sursum corda* by the time of Hippolytus (*Apostolic Tradition* 6.3), but it is doubtless considerably older than his time, the late second century, and may well have been known to Justin. The consecration prayer itself is not given by Justin, but we can infer from another work of his (*Trypho* 41) and from Hippolytus that it was composed of a series of thanksgivings to God for creation and deliverance from evil and its powers, and contained some reference to the words of institution at the Last Supper (66). The prayer was extemporaneous (the bishop prayed "to the best of his ability"; 67) and extended (ἐπι πολὺ). It concluded with the congregational Amen, whereupon the deacons served the Communion (the people probably standing before the table), and took portions of it away to those who

had been absent through sickness or for other reasons.

With the Communion the service ended. There was no benediction or other post-Communion devotion. The Communion was the climax, as it is in Hippolytus. What it meant is reasonably clear in Justin (66). The bread and wine were in some way the flesh and blood of Jesus; and the sacramental action thus followed the lines of the Incarnation. As the Word was once made flesh, so he was here made bread and wine. Justin offers no further theory of consecration, but his thought clearly moves along lines suggested by John's Gospel. Where Paul, as a Jew, specifically avoids reference to eating the flesh and drinking the blood of Jesus (he prefers vaguer language, like "participation in the blood . . . [and] body" in I Cor. 10:16, the body perhaps being the church and the blood Christ's sacrifice), this is not true where Gentile influences are at work. The Jewish abhorrence of drinking blood as something taboo was not shared by Gentiles; and the prophetic nature of Jesus' action at the Last Supper (reminiscent of the enacted parables of the ancient prophets—e.g., Jer. 13; 19) was inevitably interpreted in a more realistic way in Hellenistic circles.

The officiant at Justin's service was the bishop. By his time the moniscopacy was the settled form of church government. Earlier the presbyter-bishop (as in I Clem. 44.4) would be the officiant. Earlier still, it is possible that Christians were chosen for this duty according to their special gifts, in the same way that the synagogue liturgy was a *lay* liturgy, and any qualified Jew might be chosen to read the lessons or preach, as Jesus was, on one occasion, in Nazareth (Luke 4:16-30). The picture Paul leaves in our minds when we read I Cor. 14 is of a congregation, each member of which prayed, prophesied, exhorted, spoke with tongues, and even consecrated the Lord's Supper (vs. 16), according as he was called by the Spirit and given the appropriate charisma. But of this we cannot be sure, though a relic of it may survive in the regulation in the *Didache* (10.7) that the prophets may celebrate the Eucharist in their own way.

To summarize: from the home ritual of Judaism and the act of Jesus at the Last Supper, there developed the distinctively Christian Lord's Supper. Around the turn of the first century the sacramental aspect of this meal was transferred to a service very early in the morning. Much of the first part of this liturgy was a Christian form of the synagogue worship, with its prayers, lections, and sermon. Because of these Jewish features it is unlikely that this service of the word was a late development in Christianity. Rather must we assume that, to meet the needs of the primitive Christians when they were banned from the synagogue, *either* (and this is the more probable) some service of the word came to precede the meal of the Lord's Supper, *or* a separate morning service was constructed and to this was later added the sacramental part.

When the sacramental aspect of the Lord's Supper was divorced from the actual meal, the latter lost its original significance and dwindled in importance. It was known as the *agape* (the "love," a word originally used for the Lord's Supper itself; Jude 12; Ign.

Smyr. 8.2), and could only be held intermittently when the *lex Julia* was not strictly enforced. It did, however, retain some of its religious character, and we hear of it from time to time, especially in connection with entertaining the poor (Tert. Apol. 39; Hippolytus *Apostolic Tradition* 26; Chrysostom *Homily* 27 on I Corinthians). Eventually it was suppressed, as it became associated with the cult of the dead and subject to the undue excesses of pagan feasting and debauchery which often characterized such memorials (Augustine *Epistles* 22.6; 29.11; Council of Laodicea, Canon 28).

The Christian services doubtless differed somewhat from place to place. In Bithynia, e.g., the Decalogue was retained, while in Rome it was not. The general structure of the liturgy, however, must have been fairly uniform; and while one author may mention one item and another omit it, we should not take these omissions too seriously. Justin does not happen to mention hymn singing, but it would be extremely unlikely that responsorial psalmody between the lections was lacking in Rome at his time.

For further discussion of this topic, see LORD'S SUPPER; HYMNS; PREACHING; MUSIC; AGAPE, THE.

5. Baptism and confirmation. Owing to the widespread use of lustral purifications in Judaism and in the ancient world in general, it is no matter of surprise that Christianity should have adopted water baptism as its rite of initiation. We do not have to look far, furthermore, to discover the immediate background of Christian baptism. The Jewish custom of proselyte baptism, the lustrations of the Qumran community, and the rite of John the Baptist—all indicate an environment to which Christianity owed much in the development of its ceremony.

Gentile sources play little or no role in the very early period, though at a later date they may have exerted some influence. Reference may be made to the purification ceremonies in Mithra (Tert. Presc. Her. 40); to those undergone by Apuleius previous to his initiation into the cult of Isis (Metam. 11.22); to the significance of "sacred drowning" in the cult of Osiris (Herodotus *History* 2.90); and to the blood bath (*taurobolium*) in Magna Mater and Attis (Corpus Inscr. Lat. 12.1569; 9.3014). The Gentile convert familiar with these and similar rites, doubtless brought over pagan associations to the Christian ceremony, and there are striking similarities between the Christian and pagan language on initiation (see Clement Protrep. 12). But these concern the later development, rather than the origins, of the Christian rite.

The Gentile converted to Judaism was required first to be circumcised, then to undergo a bath of immersion to purify him from his former paganism (a bath from which he emerged as a "newborn child"), and finally to offer sacrifice in the temple. The last requirement was, of course, impossible to fulfil outside Jerusalem, and there is some slim evidence that even the first was on rare occasions dispensed with (see Jos. Antiq. XX.ii.4). In consequence, the initiatory bath was heightened in significance. It was performed by self-immersion in the presence of two witnesses, men learned in the law, who stood near the candidate as he dipped himself, and instructed him in the "lighter" and "weightier" commandments (Yeb. 47a; Gerim. 1). Whether the

rite should be understood to involve the forgiveness of sins is a matter which was in dispute within Jewish circles themselves (Yeb. 48a; Gerim. 1). Its fundamental meaning was separation from a pagan past and entrance into a new and acceptable relation with God. This is why the convert was like a newborn child.

There can be little question that John's baptism owed something to this proselyte ceremony. What was original, however, in John's rite was its application to Jews (the idea being that even one of the chosen race needs purification), and its strong eschatological reference. For John the end of the age was rapidly approaching, and God was about to purge and re-create the world. The transcendent Messiah would soon appear to destroy with his fiery spirit (breath) the ungodly. Hence an act of repentance was essential, even for Israel; and the baptism of John meant a pre-enacting of the divine judgment. The River Jordan was a symbol of the river of fire flowing from the throne of the Ancient of Days (cf. Dan. 7:10; II Esd. 13:10-11), and the repentant convert showed his willingness to submit to God's judgment by undergoing the baptism of repentance (Luke 3:16-17).

From the recently discovered Qumran material we have further evidence of the importance of lustral rites in first-century Judaism. The *Manual of Discipline* has several references to these ceremonies, and associates the sprinkling of water with washing from impurity and the reception of the Spirit of Truth. "God will sprinkle upon him the Spirit of Truth like water for impurity . . . to make the upright perceive the knowledge of the Most High." Perhaps these baptisms are to be associated with the daily lustrations of the Essenes, attested to by Josephus (War II.viii.5).

From these sources, then, the Christian rite of baptism developed; but it owed its distinctive character to the experience and mission of Jesus, and to the understanding of his work and person by the church.

Jesus' ministry began with his association with John's movement, and a number of his first disciples were recruited from John's followers (John 1:37). But a break between Jesus and John became inevitable. For one thing, the experience of his baptism led Jesus to the conviction that in some way the powers of the kingdom were already present in him, being manifested above all in his healings. While the accounts of his baptism in the NT are colored by the church's later reflection upon this event, they surely indicate that at this moment Jesus underwent a decisive experience, both in understanding his unique relation to God and in grasping the sacrificial nature of his mission. The vision of the descent of the dove (Mark 1:10) is important as indicating that for Jesus the breath of God's power, his Spirit, is to be seen in a sacrificial symbol rather than in one of destroying fire. Certainly the latter element is not lacking in Jesus' thought, and the divisive and perturbing consequences of his sacrificial mission are seen in the way he later connects his baptism with fire (Luke 12:49-50). But the central point is that the sacrificial dove has taken the place of John's sterner proclamation.

A second reason for the separation of Jesus from John is to be found in their differing views of ceremonial purification. The "Jew" with whom John's disciples disputed in John 3:25 is probably a reference to Jesus from some Baptist source, and reflects Jesus' freer attitude toward purifying customs.

The break between Jesus and John had as a consequence that the rite of baptism was not continued by Jesus during his mission. In this the proclamation of the coming kingdom and its manifestation in the healings were central. The reference to Jesus' baptizing in John 3:22 must refer to the period before the break with John; and in 4:1 a gloss is added to the effect that not Jesus, but his disciples, did the baptizing.

How then did the church come to adopt baptism, if it ceased to figure in Jesus' mission? The answer lies in several considerations. For one thing, if a significant number of early Christian converts had originally been members of John's movement (see Acts 19:3), the transformation of John's baptism into a Christian type would have been likely in any case. But a more important reason for the emergence of Christian baptism lies in the church's reflection upon Jesus' own baptism. For them this was the first manifestation of Jesus as Messiah, when he was anointed with the Holy Spirit (Acts 10:37-38); and the connection between the Spirit and a water rite was thus firmly established in their minds. For the Christian convert, therefore, to enter the Spirit community of Pentecost, meant to undergo a rite similar to John's but with a new Christian meaning. It meant to wash away sin and to receive the Spirit in the same way Jesus had received the Spirit (Acts 2:38). Baptism in the *name* of Jesus made all the difference. It meant baptism as associated with him, and initiation into the messianic community of his person.

We have no adequate description of the baptismal rite in the NT. From fragmentary references, however, we can gather a few impressions:

The supreme importance of the rite of baptism emerges from the large number of allusions to it as well as from such a verse as Eph. 4:5: "one Lord, one faith, one baptism." It is already a firmly established custom, to be taken for granted, by the time of Paul's ministry, and there is no indication in the NT that it was ever a cause of controversy.

The story of the baptism of the eunuch by Philip (Acts 8:36-39), taken in connection with a number of other references (Matt. 3:13-15; Acts 10:47; 11:17; Gospel of the Ebionites in Epiphanius *Panarion* 30. 13), leads us to suppose it was not self-baptism (as the proselyte rite), but administered by an officiant in connection with a liturgical question and a confession of faith. (That it was not self-baptism is very clear from I Cor. 1:14; though in an emergency it might be, as in Acts of Paul 2:34.) It rather seems, furthermore, that a liturgical question was posed by the candidate: "What prevents my being baptized?" This was followed by the minister's reply: "If you believe with all your heart you may"; and by the candidate's brief confession of the lordship of Christ: "I believe that Jesus Christ is the Son of God." (While the last two items are attested by the Western text, they indicate a very early formula.) These forms might vary. The confession given by Paul in I Cor.

12:3: "Jesus is Lord," is perhaps the earliest, and corresponds to the typical pagan affirmation: "Caesar is Lord" (Mart. Polyc. 8.2). The NT has preserved a number of further confessions, some of which may have a baptismal origin (e.g., John 2:22; Rom. 1:3-6; 8:34; I Cor. 15:3 ff; I Tim. 3:16; 6:13-14; II Tim. 2:8; I Pet. 3:18-22), though there were many other circumstances than baptism, which led the church to develop such formulas (e.g., preaching, instruction, exorcism). It is out of these confessions that the later creeds developed as formulas of faith at baptism. The characteristic of these primitive creeds is the central place given to the confession of Jesus as Lord, Messiah, or Son of God. Later on, the baptismal formula was divided into three distinct parts, as we find it in Hippolytus (*Apostolic Tradition* 21.12 ff). Another point to note is the interrogatory nature of early baptismal creeds. In Hippolytus' time, e.g., the confession is posed in the form of three questions to which the candidate responds: "I believe"; and while very brief declarations may have been in vogue in primitive baptism, the interrogatory form is the one that became current in the early liturgies.

We may note that there was probably no formula of baptism in the early church, such as we are familiar with. Such phrases as that in Matt. 28:19: "baptizing them in the name of the Father and of the Son and of the Holy Spirit," and the briefer ones in Acts 2:38; 8:16, etc.: "in the name of Jesus Christ," do not imply a formula: "I baptize you in the name of . . ." They mean rather that the Christian baptismal act is one "under the auspices of," "in reference to," Jesus Christ. The formula was the confession, either interrogatory or declaratory, of which we have spoken. When such confessions were no longer rendered in the water, because of the widespread use of infant baptism, the new type of formula came into vogue. It is attested in the East by the fourth century (*Apostolic Constitution* 3.16; 7.22), but is considerably later in the West.

In NT times baptism was by a single immersion, preferably in running water. (Triple immersion first appears in Did. 7.) However, in cases of sickness or lack of water, affusion soon came into vogue (Did. 7.3; Cyprian *Epistle* 75.12-16), though it was regarded as exceptional.

There was baptism for the dead. Exactly what the curious reference in I Cor. 15:29 means has never been fully explained. Yet there can be little doubt that Paul knew (at least in Corinth) of cases where vicarious baptism had been undertaken.

Whether or not infant baptism was practiced in NT times is a much disputed question. The first clear evidence of it comes from the late second century (Tert. *On Baptism* 18); and we cannot be sure whether or not children were included in the "households" baptized by Paul (Acts 16:15, 33; I Cor. 1:16). It has been argued that Paul's analogy between baptism and circumcision in Col. 2:11-12 implies that the Christian custom, like the Jewish, was applicable to children. But if we are to press such analogies, we should take account of I Cor. 7:14. There the implication is that, just as in proselyte baptism the children born after the parents' conversion do not need to undergo such a rite, since they already belong to the people of promise by their

birth, so children born of Christian families do not *ever* need to be baptized! On the other hand, those born before the parents' conversion would have been baptized, on the proselyte analogy. In point of fact, the NT evidence is insufficient to solve the problem of infant baptism one way or the other. The most that can be said is that the way the story of Jesus' blessing the children is told (Mark 10:13-16) seems to reflect the church's desire to defend the practice.

Even more difficult is the question of confirmation. Was there a primitive rite of laying on of hands in addition to baptism? The author of Acts recounts two stories which suggest that water baptism, by itself, was an incomplete rite, and needed to be supplemented with the apostolic laying on of hands. In Acts 8:14-17 Peter and John are sent to Samaria to lay hands on the new converts, who, while already baptized, have not yet received the gift of the Holy Spirit, which the apostles thereupon confer on them. Similarly in Acts 19:1-6, after granting Christian baptism to some converts from John's movement, Paul lays his hands on the neophytes, and they thus receive the Spirit and proceed to speak with tongues.

On the other hand, there are NT passages which just as clearly associate the descent of the Spirit with the water rite. This is patent in John 3:5; Acts 2:38; I Cor. 6:11; 12:13; Tit. 3:5; and the discussion in Rom. 6. It is true that some of these passages are ambiguous and that "baptism" for their authors *may* include more than the water rite. Yet it is extremely difficult to imagine that, if the laying on of apostolic hands *alone* guaranteed the gift of the Spirit, such passages could ever have been written in that way. One is always faced with the question, How defective was the initiation which the eunuch received at Philip's hands (Acts 8:38)?

The problem is further complicated by the fact that not only the laying on of hands, but the use of oil in baptism also enters in. In II Cor. 1:21-22; I John 2:20 the gift of the Spirit is spoken of as an anointing, and it has been argued that anointing with oil was a part of primitive baptism and connected with the Spirit's descent.

With the sources available to us it is impossible to solve these problems. It rather looks as if the administration of baptism differed in various localities and was variously interpreted. The water rite certainly included more than mere water. There was an officiant who doubtless laid his hand on the convert as he was dipped in the water. (This is clear from catacomb art, and derives from Judaism. In the latter case a master had to keep his hand on his slave's head during the baptism [Yeb. 46a]. Can the Christian connection be that the convert is the "slave" of Christ?) There was also the process of taking off the clothes and putting them on. There was finally the anointing, since this was a feature of all bathing in the ancient world (cf. Ezek. 16:9; Sus. 17). It was only natural that these various practices should have played a part in the development of the symbolism of baptism. The clothing and unclipping suggests to Paul the putting off of the old man and the putting on of Christ, or the new man (Gal. 3:27; Col. 3:9-11); and eventually the neophytes came to wear white robes to signalize their new estate (Cyril of Jerusalem *Catechetical Lecture* 4.8).

More important for our purposes, however, are the connections made between the gift of the Spirit on the one hand and the anointing and laying on of hands on the other. In the first case the associations go back to the anointing of the OT kings (I Sam. 16:13; Isa. 61:1); in the latter case to the transfer of the Spirit to elders and rabbis (Num. 11:16-17). The reason why these elements in the baptismal rite should have assumed such importance over against the water, has to do with the fact that they more obviously symbolized the descent, the downward motion of the Spirit, than did the process of being dipped in the water. There is a notable absence in the NT of a symbolism of being dipped in the Spirit or drenched with Spirit, which the water rite might have suggested.

Eventually the separate parts of what had been a single rite became distinguished, and the gift of the Spirit was detached from the actual water ceremony, which was viewed as a cleansing preparation for it (cf. Heb. 6:2). The process was long and complicated and issued in different solutions; but it had its roots in the NT association of the descent of the Spirit with anointing and the laying on of hands.

One further factor played a role. In the primitive church the gifts of the Spirit were viewed rather realistically, manifesting themselves in ecstatic utterances, miracles, etc. It was doubtless the lack of such phenomena in Samaria that occasioned the visit of Peter and John in Acts 8:14-25; and it is precisely these charismatic outbursts which the author of Acts notes to be the result of Paul's laying on of hands in 19:6.

From these considerations we cannot say that there were two distinct rites of baptism and confirmation in the earliest NT times. It is more likely that there was originally a single water rite which was viewed as the occasion of the gift of the Spirit; but because of the difficulty of symbolizing the descent of the Spirit adequately, especially in view of the very realistic way his manifestations were thought of, the early Christians tended to give to other, more accidental, parts of the rite a prominence they originally lacked.

It is not made clear in the NT who is the normal officiant at baptism. Certainly the apostles baptized, though Paul does not regard this as his primary duty (I Cor. 1:17); and it was doubtless left to the local ministry of the presbyter-bishops. Philip, one of the Seven (who were probably the first presbyter-bishops, not deacons), baptized in the story in Acts 8:26-38. When the moniscopacy arose, the bishop normally officiated, though the authority to do so could be delegated (Ign. Smyr. 8.1). Lay baptisms in emergency (but not by women) are attested by the time of Tertullian, who argues that one can give as much as one has received (*On Baptism* 17). This, however, probably applies only to the water rite, not to the laying on of hands, reserved to the bishop.

The meaning of baptism is variously interpreted in the NT, but these variations are on a single theme. It is the washing away of sin (Acts 2:38; 22:16); the appeal to God of a clear conscience as a result of this (I Pet. 3:21); it is putting on Christ (Gal. 3:27), and putting off the old man (Col. 3:9-11); it is rebirth (John 3:7; Tit. 3:5); it is burial with Christ in its

simulated drowning (Rom. 6:4), as it is also rising with Christ as one emerges from the water (Col. 2:12). All these are ways of expressing the basic Christian conviction that by baptism a new life begins in the messianic community of the risen Lord. In the symbolism of dying and rising and of rebirth we perhaps have echoes of Hellenistic language; whereas the emphasis on washing away sin and receiving the Spirit are more characteristic of a Jewish milieu. Yet it is the same gospel which lies behind the differing modes of expression.

For further discussion of this topic, see BAPTISM; CONFIRMATION.

6. The ministry to the sick. From its origins Christianity was a healing cult, and salvation was understood to involve the body as well as the soul. The healings of Jesus were signs of the presence of the kingdom (Luke 11:20; John 9:3); and it was not only to preach the gospel but also to heal the sick that Jesus sent forth the disciples on their mission (Mark 6:7; Luke 9:1-2).

Of the modes of healing in the NT, exorcism is the most prominent. Jesus commands the unclean spirits to come out of those possessed (Mark 1:25; 5:8; etc.), and they respond to his word, recognizing in him the Messiah. Exorcism was a familiar feature of Judaism (Jos. Antiq. VIII.ii.5; Juvenal *Satires* 6.542 ff), especially in Galilee; and we hear of "itinerant Jewish exorcists" in Acts 19:13. The primitive church continued this ministry, as many passages of Acts attest (e.g., 8:7 of Philip; 19:12 of Paul). The formula used was one that specifically included the name of Jesus, as is clear from the attempt of the priest Sceva to imitate the Christian practice (Acts 19:13 ff; cf. 16:18). The ability to exorcise was viewed as a special charisma (I Cor. 12:4 ff; Heb. 2:4); and in the early church there developed an order of exorcists or healers who were not ordained, as their gift was personal, not sacramental (Hippolytus *Apostolic Tradition* 15).

Along with exorcism were current other modes of healing. Some, perhaps, had a semimagical character, such as the use of handkerchiefs and aprons which had touched Paul's body, and the power associated with Peter's shadow (Acts 5:15; 19:11-12). More usual, however, was the use of prayer (Mark 10:29), anointing (Mark 6:13; Jas. 5:14), and laying on of hands (Mark 16:18; Acts 9:17). The passage in Jas. 5:14 ff is important as indicating a regular ministry in which the elders of the church visited the sick and anointed them. (A similar use of oil by Jewish healers is attested by the Babylonian Talmud, Yom. 77b.) Confession of sins seems also to have played a role in this ministry.

For further discussion of this subject, see HEALING; HEALING, GIFTS OF.

7. Ordinations. The use of the laying on of hands in connection with appointment to an office goes back to Judaism, whose elders and rabbis were so ordained. The practice was viewed as a continuation of the act of Moses whereby, in Num. 11:24-25, he imparted his spirit to the Seventy. It is probable that the choosing of the Seven in Acts 6:1-6 represents the effort of the church to organize itself in a way not dissimilar to Judaism, where every village had its seven ruling elders. If this is so, the founding, not of the diaconate, but of the presbyterate, is reflected

in this passage; and we may reasonably assume that the ordination prayer for presbyters in Hippolytus (*Apostolic Tradition* 8.2 ff) has preserved a very ancient tradition. There it is prayed: "As thou didst look upon the people of thy choice and didst command Moses to choose elders whom thou didst fill with the Spirit which thou hadst granted to thy servant, so now, O Lord, grant that there may be preserved among us unceasingly the spirit of thy grace." We should perhaps imagine that some such prayer was in vogue in very early times, and used on such occasions as Acts 6:6; I Tim. 4:14; II Tim. 1:6 record. From the second of these passages, furthermore, we gather that ordinations were preceded by prophetic utterances whereby the candidate was chosen for the office. Fasting, moreover, seems to have been observed before ordinations (Acts 14:23).

For further discussion of this subject, see MINISTRY; LAYING ON OF HANDS.

8. Discipline and excommunication. That cases of discipline were handled at gatherings for worship is clear from both Matt. 18:17 and I Cor. 5:3-6. In the latter instance a solemn excommunication "in the name of the Lord Jesus Christ" is to be visited upon the incestuous man; while the other passage suggests that differences between Christians are brought before the assembled church. Appropriate rebukes were given, and in the event an offender proved recalcitrant, he was excluded from the community. From these beginnings then developed the liturgical aspects of the penitential system reflected in Tert. *On Penance* 9 and in the Didascalia, chs. 6 ff.

For further discussion of this subject, see EXCOMMUNICATION.

9. Marriages and funerals. The NT provides us with no information on the Christian form of these rites, and we have to assume that customs familiar to Jews or Gentiles were continued depending on the cultural background of the Christian convert. In Jewish circles marriage involved a ceremony of betrothal, which included the giving of a ring (or sometimes a coin) as part of the earnest money for the bride, and was accompanied by crowning with garlands. The night procession was the principal feature of the wedding—the bridegroom would go to fetch the bride to his house at midnight (Matt. 25:1 ff). A benediction was pronounced on the marriage, and the wedding feast followed. Among Christians the benediction doubtless included some reference to Christ; and it is not impossible that at times the marriage feast was associated with the Lord's Supper.

In Roman circles the betrothal was less ceremonious and involved little more than an initial business arrangement followed by a family party at which the future bride and bridegroom exchanged gifts, to be forfeited if the contract were later broken. In the evening of the wedding the bride was escorted in a torchlight procession to her new home. In the more formal marriage of patricians (*confarreatio*) the bride and bridegroom sat on chairs covered by a sheepskin and ate a special cake (*far*, hence *confarreatio*) together and joined hands. Nuts, sweets, and cakes were then showered among the guests to signify the plenty to attend the union. All this, with the nuptial banquet which followed, took place in

the bride's house. Finally she was brought in an elaborate procession to her future home.

Just how these ceremonies were Christianized in the early period is not clear. A marriage benediction is perhaps implied by Ignatius (Polyc. 5), who requires the bishops' consent for a Christian marriage. The ring is mentioned by Tertullian (Apol. 6), as are also nuptial eucharists (*To His Wife* 2.8).

With regard to funerals we have even less information. No religious ceremonies attended them in Judaism, perhaps because the customs originated before belief in resurrection. There were paid mourners; and the body was buried after anointing and shrouding (Mark 5:38; 15:46; 16:1). Pagan funeral processions were more elaborate, being preceded by actors wearing the wax death masks of the family. The funeral banquet played a large role, and is constantly depicted on sarcophagi and tombs. This was transformed by Christianity into the funeral *agape*, so many pictures of which survive in the catacombs, and which was originally a celebration of the Lord's Supper before the sacrament had been separated from the actual meal.

The two points at which Christian funerals must have stood in marked contrast to Jewish and pagan ones are: (a) the joyful note of resurrection was present. Later this was symbolized in the avoiding of black robes of mourning (Cyprian *On Death* 20.20), by the carrying of palm branches (symbols of triumph), and by the chanting of "Alleluia" (Jerome *Epistle* 77.11; Chrysostom *Homily* 4 on Heb. 7). While none of these customs is early, the spirit which informed them is that of the NT. (b) The celebration of the Lord's Supper at funerals (and later at the anniversaries of martyrs and of the Christian dead; Mart. Polyc. 18), was characterized by the offering of a sacrifice for them, instead of to them. Such oblations for the dead are to be found in Tertullian (*On the Chaplet* 3; *On Monogamy* 10) and in Cyprian (*Epistle* 33.3).

For further discussion of this subject, see MARRIAGE; BURIAL.

10. Private devotions. The Christian times of private prayer are an adaptation of the Jewish practice. The devout Jew prayed three times daily—in the early morning at the time of the temple sacrifices, at 3:00 P.M. when the evening sacrifices were offered, and at dusk when the lamps were lit. Three-fold daily prayer is mentioned by the Didache (8); at each of the three times the Christian is to recite the Lord's Prayer. (It is curious that this model prayer seems to have played no part at first in the liturgy, but to have characterized private devotions. It does not appear in the Eucharist until the fourth century, in Cyril of Jerusalem *Catechetical Lecture* 23.) Further hours of prayer were gradually added until a daily round of six periods of private devotion was established by the time of Hippolytus (*Apostolic Tradition* 36). It is from these hours that the daily offices later developed.

In addition to daily prayer, the primitive Christian undertook vows (Acts 18:18; 21:24) and periods of fasting. The former custom was a familiar feature of Judaism, and Christian vows (such as those of celibacy; Ign. Polyc. 5), owe something to such practices. Fasting also was taken over from Judaism.

The earliest Christians probably observed the one obligatory fast in the Law, the Day of Atonement (see Acts 27:9), and Paul stresses his constant fasts in II Cor. 6:5; 11:27. Christians seemed to have fasted before ordinations (Acts 14:23) and other solemn assemblies (Acts 13:3), as well as before baptisms (Did. 7; Just. Apol. 61). Wednesday and Friday, furthermore, are noted by the Didache (8.1) as the Christian fast days in contrast to the fasts of strict Pharisees on Monday and Thursday. It is possible, too, that the paschal fast is reflected in the saying in Mark 2:20.

For further discussion of this subject, see LORD'S PRAYER; VOWS; FASTING.

11. **The church week and year.** The development of the church calendar was a remarkably slow process in Christianity, and equally striking is the fact that so little of the Jewish year finally found a place in Christian celebrations. Where we should have expected a Christian transformation of Rosh Hashanah, Yom Kippur, Succoth, Chanukah Purim, etc., we find only the retention of the paschal festival. This is due to the fact that the church year was largely the creation of the Gentile church, and the background of such notable days as Christmas, Epiphany, Ember, etc., is pagan, not Jewish.

We must, however, suppose that the earliest Christians continued to observe the Jewish year and week, until the break with the synagogue was complete. Of definitely Christian days, distinct from those of Judaism, the NT affords us only one certain example, that of Sunday. This was observed as the day of the Lord's resurrection and is well attested in the NT (John 20:19, 26; Acts 20:7; I Cor. 16:2; Rev. 1:10). The day was kept by the celebration of the Lord's Supper in the evening (Acts 20:7). As it was a regular working day for Jew and Gentile alike, it could not be observed as a holiday or day of rest. This use of Sunday belongs to the fourth century, when Constantine legislated the public holiday, though by the late third century some Christians had already begun to defer their business in honor of the day (Tert. *On Prayer* 23). However, there was never any confusion in the mind of the early church between sabbath and Sunday. The days were clearly contrasted; and the early Christians never applied the sabbath legislation to Sunday. The sabbath was viewed by them as part of the ceremonial law now abrogated in Christ, and symbolic of the future rest of the kingdom (Barn. 15.8). While Jewish Christians doubtless continued to observe the sabbath, it was never made binding on Gentile converts (Col. 2:16). Indeed, by the second century its celebration was viewed as a feature of "Judaizing" (Ign. Magn. 9.1).

Within NT times—i.e., up to the middle of the second century—three other Christian observances can be traced. There were, in some localities, the Station Days (or "fixed days")—the fast days of Wednesday and Friday, adopted in contrast to the Pharisaic fasts of Monday and Thursday, and mentioned in the Didache (8.1). It is possible that Wednesday and Friday were chosen as the days of Christ's betrayal and passion; but this explanation is no earlier than the fourth century (Peter of Alexandria *Canonical Epistle* 15). There were also martyr's

days, celebrating the passion or "birthday" of the martyr. They are first recorded in the Martyrdom of Polycarp (18), but doubtless antedate that letter of A.D. 155 or 167.

Finally, there was the observance of Easter, which is more ancient than the others and goes back to the Jewish Christian church. (Perhaps there is an echo of it in I Cor. 5:6-8.) It was a Christian form of the annual Passover festival, held like the Jewish feast on Nisan 14, and celebrating the death and resurrection of Christ at an evening Lord's Supper. When it became usual to have the sacrament in the early morning instead of in conjunction with an evening meal, the Easter rite underwent change. The West transferred the celebration to the Sunday morning next after Nisan 14 (Euseb. Hist. 5.24; the custom goes back to A.D. 120), while the East continued to keep Nisan 14, but observed the night in a vigil and held the Eucharist at cockcrow (*Epistle of the Apostles* 7-9). In both instances only one day was kept as Easter (there was no Holy Week), though there was a fast leading up to it. This differed in length in various localities (Irenaeus in Euseb. Hist. 5.24), and is perhaps reflected in Mark 2:20. Attempts have been made to read I Peter as a paschal homily and to see in the farewell discourses of John's Gospel reflections of an Easter rite. While these views are far from conclusive, they may have some substance to them.

For further discussion of this subject, see LORD'S DAY; FEASTS.

WORSHIP IN NT TIMES, JEWISH. In accordance with present-day usage, we shall take worship to mean prayer and the ceremonial reading, quoting,

or interpreting of scripture, frequently, though not always, accompanied by prayer. Burnt offerings characterized worship in the temple at Jerusalem and the temple at Leontopolis in Egypt (Jos. Antiq. XIII.iii.1; War VII.x.2-4; Men. 13.10). See SACRIFICES AND OFFERINGS.

Our chief source of information for Jewish worship in the NT period is the Mishna (see TALMUD), a codification of Jewish laws, rules, and regulations compiled ca. the year 200 of the Christian era. Though produced two generations later than NT times, the Mishna contains fairly reliable accounts of Jewish practices that prevailed during NT times. Like any compilation, the Mishna is a compilation of older material. The authorities quoted in the Mishna were mostly persons who lived during the first 130 years of the Christian era.

1. Places of worship. Places of worship varied according to circumstances. One of the determining factors was the difference between congregate worship and noncongregate worship.

a. Congregate worship. Among the places of congregate worship, we find the temple at Jerusalem (see TEMPLE, JERUSALEM; TEMPLES). Acts of worship in addition to those of burnt offerings had developed at the temple by NT times. Before the priests began their morning sacrifices, they would assemble and recite certain passages from scripture and certain prayers (Tam. 5.1). After the burnt offerings had been rendered, the priests would step to the temple porch and there, facing the multitude gathered in the courtyard, would invoke the Aaronic benediction (Num. 6:24-27; Tam. 7.2). On the Day of Atonement, the ritual of prayer and of reading from scrip-

ture, both inside the temple edifice and in the temple court, was striking (Yom. 6.2).

For congregate worship the chief place was, of course, the SYNAGOGUE. In the NT period synagogues existed, not only in Palestine, but throughout the Greco-Roman world. But there were places of congregate worship other than temple or synagogue. Grace was recited before and after each meal, wherever eaten (Ber. 6.6; 7.1, 3, 4-5; Jos. War II.viii.5; Sibylline Oracles IV.25.26). The same applies to the dinner-table devotions on the evening which marked the beginning of Passover (Pes. 10.1-9). The NT contains frequent reference to the words of thanksgiving spoken at the "breaking of bread" (Matt. 14:19; 15:36; 26:26; Mark 6:41; 8:6; 14:22; John 6:11; Rom. 14:6; I Cor. 10:30), while the dinner-table prayers at the outset of Passover are mentioned in Matt. 26; Mark 14; Luke 22; John 13. Nor was the priestly benediction confined to the temple. Persons of priestly lineage, residing in various parts of Palestine, would invoke the benediction at local religious services (Tam. 4.1).

b. Noncongregate worship. Certain prayers were offered by the individual in the home (Ber. 1.1-3). Matt. 6:5 mentions with disapproval those who pray while standing in the street. Another act of worship that could take place privately was the ritualistic reading of the book of Esther (Meg. 2.3). There were, in addition, the blessings to be recited before partaking of wine or of certain kinds of food (Ber. 6.1-3); a prayer to be uttered when entering and one to be uttered when leaving a fortified city (Ber. 9.4); a prayer when beginning the use of a newly built house or of new furnishings (Ber. 9.3); prayers to be spoken when beholding comets, meteors, lightning, mountains, hills, seas, rivers, or deserts, and when hearing thunder or encountering windstorms or earthquakes (Ber. 9.2); prayers to be said in places of danger (Ber. 4.4), or at the supposed scenes of miracles or in places which had witnessed the uprooting of idolatry (Ber. 9.1). One might perform certain devotions when riding on a beast or on a raft (Ber. 4.5-6), or when working high up in a tree or upon a wall (Ber. 2.4). There was a blessing to be pronounced upon receiving good news and one to be pronounced upon receiving bad news, regardless of one's location (Ber. 9.2).

Wherever he might chance to be, a certain Hanina, who lived in the first Christian century, would pray for the recovery of the sick (Ber. 5.5). There was only one kind of place from which prayer was debarred: when praying, one had to be removed at least four cubits from any filth (Ber. 3.5).

2. Times of worship. Some acts of worship took place as the occasion arose, regardless of date or hour. For other acts of worship the dates or hours or both were fixed.

a. Times not fixed. There could obviously be no fixed date or hour for various of the benedictions previously mentioned. The same would apply to the formalities of marriage and to eulogies for the dead (Meg. 4.3). These acts of worship would occur as occasion demanded.

b. Times fixed. But there were many acts of worship for which the time was fixed. Certain prayers were recited three times a day—morning, afternoon,

and evening (Ber. 4.1). Such may be the prayers to which there is allusion in Wisd. Sol. 16:28; Acts 3:1; 10:30. Other acts of worship occurred twice a day—in the morning any time after there was light enough to distinguish between blue and white or between blue and leek green (Ber. 1.2), and in the evening any time after one could perceive the stars (Ber. 1.1). Grace was pronounced at every meal (Ber. 8.7). The public reading from scripture took place every sabbath (Saturday; Jos. Apion II.xvii; Luke 4:16; Acts 13:14-15; 15:21), every Monday, and every Thursday (Meg. 1.3; 3.6; 4.1). Then there were the forms of worship scheduled for once a week, such as the special prayers for the sabbath (Tosef. Ber. 3.12; Ber. 29a; Palestinian Ber. IV.3). At the temple the contingent of priests beginning duty on a given sabbath would invoke a blessing upon the contingent whose week of duty had just terminated (Tam. 5.1). Another once-a-week act of worship, also at the temple, was the Psalm singing of the Levitical choir: Sunday, Ps. 24; Monday, Ps. 145; Tuesday, Ps. 82; Wednesday, Ps. 94; Thursday, Ps. 81; Friday, Ps. 93; Saturday, Ps. 92 (Tam. 7.4).

The priestly benediction (Num. 6:24-27) would, on certain occasions, be invoked four times a day, twice in the morning and twice in the afternoon. These occasions came three times a year (Ta'an. 4.1). While certain prayers were recited three times a day, certain insertions into these prayers were made only during the months of fall and winter (Ber. 5.2; Ta'an. 1.1-2). Among the DEAD SEA SCROLLS, the Manual of Discipline prescribes that "the general members of the community are to keep awake for a third of all nights of the year, reading the Book (of the Law) and studying the Law and worshipping together."

Somewhat less frequent were the devotions of the "stand-by" (Ta'an. 4.2). For ministering at the temple in Jerusalem, there were twenty-four teams, serving in rotation, each a week at a time, twice a year. Every team consisted not only of priests and Levites but also of laymen who, though not active at the altar, stood by as representatives of the nation. Some, possibly all, of these teams had members who resided in Palestinian localities outside Jerusalem. The priests and Levites who lived outside Jerusalem would go there when the week arrived in which their team was to function. Lay members residing outside Jerusalem did not go there but remained at home, where, during the week of their team's ministry, they gathered every day for religious observance. Such a contingent was called a *Ma'amad*. To translate the word *Ma'amad*, the English "stand-by" seems to be as near as we can get. It is reported (Ta'an. 4.3-4) that during the week of their team's participation those home-town groups would, barring certain special conditions, meet for worship four times a day. There is a reference to these contingents in Jos. Life I.i.

The annual days of observance were PURIM, which fell in February-March (the Feast of Lots), associated with the story of Esther; PASSOVER, which fell in March-April; PENTECOST, the Feast of the FIRST FRUITS, which fell in May-June; NEW YEAR, the day of the hornblowing, which fell in September-October; the Day of Atonement (see ATONEMENT,

DAY OF), which fell in September-October; the Feast of Tabernacles (see BOOTHS, FEAST OF), which fell in September-October; and the Feast of Dedication (see DEDICATION, FEAST OF)—Josephus calls it the Feast of Lights (Antiq. XII.vii.7)—which fell in November-December. The Feast of Dedication (I Macc. 4:56, 59; II Macc. 10:8) commemorated the dedication of the new altar after the Syrian monarch Antiochus had, in the course of his persecutions, brought about the defilement of the previous altar. Passover is mentioned in Matt. 26; Mark 14; Luke 22; John 13. Pentecost is mentioned in Acts 2:1; I Cor. 16:8; as well as in II Macc. 12:32; Jos. Antiq. III.x.6; XVII.x.2; Jos. War II.iii.1; and in Philo's *Concerning Seven* 20. The Feast of Tabernacles is mentioned in John 7:2, and the Feast of Dedication in John 10:22. Each of these anniversaries had its unique elements of ceremonial, prayer, and reading from scripture (Tosef. Meg. IV).

It is reported (Sot. 7.8) that the ordinance in Deut. 31:10-11 was fulfilled by having the king read in public certain passages from Deuteronomy. This occurred once every seven years. A moving incident is related in connection with the reading performed once by King Agrippa (Sot. 7.8). Inasmuch as the last of the kings by this name died in the year 100, the practice must still have prevailed in NT times. An Agrippa is mentioned several times in Acts.

3. Texts of worship. For various prayers of NT times the Mishna proffers the wording. In other instances the Mishna refers to the prayers by title only; the wording has to be sought in later sources.

a. Wording prescribed. These are some samples of prescribed phraseology (Ber. 9.2-3): "Blessed be He whose power and whose might fill the universe"—recited upon beholding meteors, comets, earthquakes, lightning, thunder, and windstorms; "Blessed be He who hath created the world"—upon seeing mountains, hills, oceans, rivers, deserts. Other benedictions read: "Blessed be He who is good and who doth good"—to be spoken upon receiving good news; "Blessed be the truthful Judge"—upon receiving doleful news. Upon beginning the use of a new house or of new furnishings, one was to pray: "Blessed art thou, O Lord our God, King of the universe, who hast permitted us to live, hast enabled us to endure, and hast brought us to this time" (Ber. 9.3).

A certain teacher who lived in NT times proposed a prayer to be recited in places of danger: "Lord, save Thy people, Israel. At every parting of the ways let their needs stand before Thee. Blessed art Thou, O Lord, Who hearest prayer" (Ber. 4.4). Then there were the benedictions to be pronounced before drinking wine, before eating bread, fruit, or vegetables, or before eating any combination of such. These were respectively (Ber. 6.1-3): "Blessed art Thou, O Lord, our God, King of the universe, who createst the fruit of the vine"; "Blessed art Thou, O Lord, our God, King of the universe, who bringest forth bread from the earth"; "Blessed art Thou, O Lord, our God, King of the universe, who createst the fruit of the tree"; "Blessed art Thou, O Lord, our God, King of the universe, who createst the fruit of the earth"; "Blessed art Thou, O Lord, our God, King of the universe, at whose word all things come into being." There was a benediction to be uttered upon

arriving at a place where miracles had supposedly been performed, and one to be uttered upon reaching a place at which had occurred the eradication of idolatry: "Blessed be He who hath performed miracles in this place"; "Blessed be He who hath uprooted idolatry from our land" (Ber. 9.1). There was even a benediction to be spoken before taking a drink of water (Ber. 6.8). See BLESSINGS AND CURSINGS.

The ritual at the fast-day service in time of drought (Ta'an. 2.1) was impressive. An elder would address the multitude: "Brethren, it is not said of the Ninevites 'God saw their sackcloth and their fast,' but it is said: 'God saw their works, that they turned from their evil way' [Jonah 3:10]. Also it is said 'Rend your hearts and not your garments' [Joel 2:13]." Among the prayers offered at such drought-time devotions was one which read: "May He who heeded Abraham at Mount Moriah answer you and this day hear your cry. May He who answered our fathers at the Red Sea answer you and this day hear your cry"; and similarly, "He who answered Samuel at Mizpah," "He who answered Elijah at Carmel," "He who answered Jonah from the entrails of the fish," "He who answered David and his son Solomon at Jerusalem"—"may He answer you and this day hear your cry" (Ta'an. 2.4).

A striking feature of Passover was the solemnities in the home, around the dinner table, on the evening which marked the beginning of the festival (Matt. 26:17; Mark 14:12; Luke 22:8). A child of the family was primed to ask: "Wherein does this night differ from all other nights? On all other nights, we eat both leavened food and unleavened food; to-night it is only unleavened food; on all other nights, we partake of herbs other than bitter herbs; to-night it is bitter herbs. On all other nights, we consume meat that is either roasted or seethed or boiled; to-night all of the meat served is roasted. On all other nights, we dip our morsel into the sauce once; to-night we dip twice" (Pes. 10.4). The father would respond by quoting Deut. 26:5-11, the reference to the Egyptian bondage and the deliverance.

There have been preserved for us the wordings of some of the prayers offered on the Day of Atonement. At a certain moment in the day's sacrificial routine, the high priest would supplicate: "O Lord, I have acted perversely, I have transgressed, I have sinned before Thee. O Lord, pardon the iniquities, the transgressions, and the sins wherein I have acted perversely, transgressed and sinned before Thee, I and my house and the sons of Aaron, Thy holy people, as it is written in the Law of Moses, Thy servant, 'For on this day shall atonement be made for you, to cleanse you; from all your sins shall ye be clean before the Lord'" (Lev. 16:30). Upon hearing the divine name, the multitude, crowding the temple court, would prostrate themselves and exclaim: "Blessed be the name of the glory of His kingdom forever and ever" (Yom. 3.8; 4.2). Later, the high priest, having confessed his own sins and those of his family and of his associates, would speak confession in behalf of the people: "Pardon the iniquities, the transgressions, and the sins wherein Thy people, the house of Israel, have acted perversely, have transgressed, have sinned before Thee, as it is written,"

etc. Again, upon hearing the divine name, the multitude would prostrate themselves and proclaim: "Blessed be the name of the glory of His kingdom forever and ever" (Yom. 6.2).

The following is a passage from the ritual for the Feast of Tabernacles. On the second day of the feast there would occur, within the temple area, a torch-light procession before sunrise. When the marchers reached the E gate, veering around, they would face the W and chant: "Our fathers, in this place, turned their faces east. With their backs toward the shrine, they made obeisance toward the sun. But we turn our eyes toward God" (Suk. 5.4).

In the repertoire of devotional texts, we may now include the hymns preserved in the Dead Sea Scrolls. These hymns are couched in the style of the biblical Psalms and of the pseudepigraphic Psalms of Solomon. The hymns of Qumran dwell upon God's concern for the worshiper; upon the worshiper's sins, repentance, and forgiveness; upon the banefulness of the worshiper's opponents; and upon the divine retribution in store for those opponents.

b. Wording not prescribed. We often come upon references to acts of worship in which, while the prayer is prescribed, the wording of the prayer is not given. The wording appears to have been fluid or optional. An example would be the prayers to be spoken when entering or leaving a fortified city (Ber. 9.4). The Mishna ordains the prayers but does not quote them. For the wording we must go to later sources. This wording may or may not have prevailed in NT times, but the sense indicated by the wording did, in all probability, prevail. The wordings run as follows: "May it be Thy will to bring me to this city in peace"; "I thank Thee that Thou hast brought me to this city in peace"; "May it be Thy will to bring me forth from this city in peace"; "I thank Thee that Thou hast brought me forth from this city in peace" (Tosef. Ber. 7.16; Ber. 60a; Palestinian Ber. 14b).

We are provided with a similar surmise as to the benediction bestowed, every sabbath, upon the withdrawing contingent of priests by the contingent beginning its duties (Tam. 5.1): "He Who hath made this house a dwelling place for His name, may He cause to dwell, among you, love and brotherhood, friendship and peace" (Ber. 12a).

The Day of Atonement was the only day in the year upon which entrance was permitted into the holy of holies, and the only person permitted to enter was the high priest. We are apprised that, immediately upon emerging from the holy of holies, the high priest would offer a prayer, a brief prayer, lest the waiting multitude in the courtyard become anxious over his delay (Yom. 5.1). The Mishna mentions the prayer but does not quote it. The prayer is quoted elsewhere (Yom. 53b; Palestinian Yom. V. 42c). As quoted, the prayer reads: "O Lord, my God, may it be Thy will that, if the year is to be one tending toward drought, the rainfall may nonetheless be sufficient. Let not him who reigns pass from the house of Israel; let not the wielder of rule pass from the house of Judah. May Thy people Israel need alms neither from one another nor from outsiders. Let there not reach Thee the prayers of the wayfarers" (wayfarers prayed for the withholding of

rain). It is a fair guess that such were the high priest's thoughts and possibly his actual words.

Another example is furnished by the praises sung at the torchlight procession on the Feast of Tabernacles (Suk. 5.4). We are apprised that the men of piety and prestige would use the words: "Happy our youth, since our old age is free of shame!" Penitents would say: "Happy our old age that atones for our youth!" All would say: "Happy the sinless and happy the forgiven!" Such may or may not have been the words used in NT times; but the thought is, in all likelihood, correctly reproduced (Suk. 53a).

By all odds the most important of the Jewish prayers was the one known as the "Eighteen Benedictions." Every Jewish person was expected to recite the Eighteen Benedictions every morning, every afternoon, and every evening (Ber. 3.3; 4.1). Here again, though the prayer was prescribed, its wording was not fixed. In the NT period the wording varied from locality to locality, from group to group, and even from individual to individual. We infer the substance from the wording which was committed to writing in later centuries.

The first of these Eighteen Benedictions was eventually formulated to read: "Blessed art Thou, O Lord, our God and God of our fathers, God of Abraham, God of Isaac, and God of Jacob, the great, mighty, and revered God, the most high God, who bestowest lovingkindnesses, and possessest all things; who rememberest the pious deeds of the patriarchs, and in love wilt bring a redeemer to their children's children for Thy name's sake, O King, Helper, Saviour, Shield. Blessed art Thou, O Lord, shield of Abraham."

The second of the Eighteen Benedictions speaks of divine help for the falling, the sick, and the imprisoned, and of the resurrection of the dead. It ends with the words: "Blessed art Thou, O Lord, Who quickenest the dead."

The theme of the third paragraph is the divine holiness. Its terminal words are: "Blessed art Thou, O Lord, the holy God." All the paragraphs follow the same pattern, a pattern which must have existed already in NT times (R.H. 4.5); the terminal sentence usually indicates the paragraph's content. Thus the fourth of the eighteen paragraphs concludes: "Blessed art Thou, O Lord, the gracious giver of knowledge." The fifth concludes: "Blessed art Thou, O Lord, who delightest in repentance." The terminals of the remaining paragraphs are: "who redeemest Israel"; "who healest the sick"; "who blessest the year"; "who gatherest the banished ones of Thy people Israel"; "who rebuilddest Jerusalem"; "who causest the horn of salvation to flourish"; "who hearkenest unto prayer"; "who restorest Thy divine presence to Zion"; "unto whom it is becoming to give thanks"; "who makest peace."

The written paragraphs of later generations are not at all hard to identify with the paragraphs mentioned in the Mishna by title only (Yom. 7.1; Tosef. Yom. 3.18; Soṭ. 7.7; Tam. 5.1). The paragraphs committed to writing give us a significant glimpse into the prayer life of the Jews in NT times.

Between the eleventh and the twelfth paragraphs of the Eighteen Benedictions, there came to be inserted a nineteenth paragraph. It reads: "For slan-

derers let there be no hope, and let all wickedness perish in a moment; let all thine enemies be speedily cut off, and the dominion of arrogance do thou uproot and crush, cast down and humble speedily in our days. Blessed art thou, O Lord, who breakest the enemies and humblest the arrogant." These restive words reflect the conflicts of that day between Israel and Rome. Variant readings of the paragraph indicate that originally it could also have referred to Sadducees, Samaritans, Christians, or Gnostics.

But this paragraph about the "slanderers" was not the only insertion. During the months of fall and winter there would be inserted into one of the paragraphs the sentence: "Thou causest the wind to blow and the rain to fall" (Ta'an. 1.1). On the sabbath, the festivals, and Atonement Day, a special paragraph, differing from the others, was substituted for paragraphs 4-15 (Tosef. Ber. 3.12; Palestinian Ber. IV.3; Tosef. R.H. 4.11). Still other appropriate insertions would take place on the New Year (R.H. 4.5), on the Day of Atonement (Yom. 7.1; Soṭ. 7.7; Tosef. Ber. 3.12), and doubtless on some of the other sacred dates (Ta'an. 1.2; Tosef. Ber. 3.10; Tosef. Suk. 4.5). Vestiges of the Eighteen Benedictions have been traced in the Lord's Prayer of Matt. 6:9-13.

c. Spontaneous and original prayer. Meanwhile, there was abundant scope for prayers that were spontaneous and original. This can be seen from the pseudepigraphic writings, as well as from the NT itself (Luke 1:13; Acts 6:4, 6). Spontaneous prayers can be discerned also in the Mishna. No fixed wording is reported of Hanina's prayers for healing the sick (Ber. 5.5). A Rabbi Nehunya, of the first-second Christian centuries, would offer prayer as he entered and as he left his schoolhouse (Ber. 4.2). When he entered, he would pray that, through him, there might occur no stumbling; upon leaving he would express thanks for his lot as a man of study. But these acts of worship were original and spontaneous. The Rabbi was bound to no fixed forms. An ancient source (Tosef. Ber. 3.6) mentions the practice of adding to the prescribed prayers confession of one's own sins and petitions of one's own composing. In the noncanonical literature reflecting NT times, references to spontaneous and original prayer abound.

4. The use of scripture in worship. Passages from scripture constituted a large part of Jewish worship in NT times (see SCRIPTURE, AUTHORITY OF). But we have to distinguish between scriptural recitations and scriptural readings.

a. Scriptural recitations. Scriptural passages were extensively incorporated into the liturgy. The morning devotions conducted by the priests in the temple at Jerusalem (Tam. 5.1; 7.2; Soṭ. 7.6) would include the Decalogue and the Aaronic benediction. The psalms sung daily in rotation by the Levites have already been noted. The drought-time service utilized the sequence: Pss. 120; 121; 130; 102; I Kings 8:37 ff, Solomon's prayer that there might never be any lack of rain, or Jer. 14:1 ff, the vivid description of a drought and its sufferings (Ta'an. 2.3). At the Passover dinner, as we have seen, the father, answering the child, quoted Deut. 26:5-11, synopsizing the Egyptian bondage and the deliverance (Pes.

10.4). Likewise quoted at the Passover dinner were Pss. 113; 114; 115-18 (Pes. 10.7). A further use of Deut. 26:5-11 was made at the offering of the first fruits (Bik. 3.6). On New Year Day, certain biblical verses were recited before each blowing of the ram's horn (R.H. 4.6). Characteristic of the Feast of Tabernacles was the chanting of Ps. 118 (Suk. 4.1, 5, 8).

b. Scriptural readings. But, in addition to this and outside of this, there existed an elaborate reading schedule. For the New Moon, the reading was from Num. 28:11-15, which lists the offerings to be brought on New Moon Day to the tabernacle in the wilderness (Meg. 3.6). The readings at the local "stand-by" solemnities were taken from the story of creation in the first chapter of Genesis (Meg. 3.6); vss. 1-8 on Sunday, 6-12 on Monday, 9-18 on Tuesday, 14-22 on Wednesday, 20-26 on Thursday, and 1:24-2:3 on Friday (Ta'an. 4.3). For certain fast days, the reading was Lev. 26:3-46, which sets forth the divine rewards for compliance with the divine commands, and the punishments for noncompliance (Meg. 3.6). Once a year, on a certain sabbath, there was to be a public reading about the poll tax in Exod. 30:11-16. To be read on another sabbath was the exhortation in Deut. 25:17-19 to wage war against the Amalekites. On yet another sabbath, the passage was Exod. 12:1-20, with its instructions about the preparation of the paschal lamb (Meg. 3.4).

On the Feast of Lots, in February-March, the reading was the entire of the book of Esther (Meg. 1.1). For the Feast of Lots there was also a public reading of Exod. 17:8-16, which deals with the attack of the Amalekites upon the Hebrews in the wilderness; Haman, the villain of the book of Esther, was on the basis of Esth. 3:1 understood to be a descendant of the Amalekite king Agag, who, according to I Sam. 15:33, was captured by King Saul and slain by the prophet Samuel. The public reading for Passover was the schedule of sacrifices in Num. 28:16-25 (Meg. 3.5).

For Pentecost the reading was Deut. 16:9-12, relating to the observance of the Feast of Weeks (Meg. 3.5). The reading for the New Year included Lev. 23:24-25, in which the observance of the New Year is instituted (Meg. 3.5). On Atonement Day, before the destruction of the temple, the high priest himself would read in public the pertinent passages, Lev. 16:1-28; 23:26-32; Num. 29:7-11 (Yom. 7.1; Soṭ. 7.7). Outside the temple also, Lev. 16 was read on Atonement Day at various places of gathering (Meg. 3.5). The reading for the first day of the Feast of Tabernacles was Num. 29:1-39, which sets forth the sacrificial program for the eight days of the observance. On each of the succeeding days there would be read, from this chapter, the verses pertinent to that particular day (Meg. 3.5). Every seven years, on the eighth day of the feast, the king, compliant with Deut. 31:10-11, would read in public Deut. 17:14; 1:1-6:9; 14:22-27; 28 (Soṭ. 7.8). For the Feast of Dedication in November-December, the section to be read was Num. 7, which lists the offerings donated by the princes of Israel to the newly constructed tabernacle in the wilderness (Meg. 3.6).

Of course, every sabbath there was the reading of some selection from the Pentateuch and one from

the Prophets (Meg. 4.1-5; Luke 4:17; Acts 13:15), except that the public reading of the Aaronic benediction (Num. 6:24-27), also of Ezek. 1, according to some, and of Ezek. 16, was forbidden (Meg. 4.10). Included likewise were readings from the Hagiographa, such as the book of Esther, on the Feast of Lots (Meg. 1.1). But the reading of II Sam. 11, the story of David and Bathsheba, is reported to have been prohibited (Tosef. Meg. 4.38).

c. The use of the Psalms. We have already noted some of the uses of the Psalms, daily and for special occasions. The NT mentions the quoting of Ps. 118:26 by the multitude that greeted Jesus (Matt. 21:9; John 12:13).

The Mishna relates that a part of the temple service once consisted of Ps. 44 but that this was discontinued (Ma'as Sh. 5.15). Later sources allege the reason for the discontinuation to have been the objectionability of vs. 23: "Awake, why sleepest thou, O Lord?" (Soṭ. 48a). Later accounts also maintain—with how much anachronism we can only guess—that, in the ancient temple (according to Masseket Soferim 18.2-3), the Levites sang Ps. 7 on the Feast of Lots, Ps. 83 or Ps. 148 on the First Day of Passover, Ps. 136 on the Last Day of Passover, and Pss. 72 and 104 on the intervening days; Ps. 29 on the Feast of Weeks; Ps. 145 on the Feast of Dedication; and (according to Suk. 55a) Ps. 29 on the first intervening day of the Feast of Tabernacles, Ps. 50:16 on the second, Ps. 94:16 on the third, Ps. 94:8 on the fourth, Ps. 81:17 on the fifth, Ps. 82:5 on the sixth. Such being the synagogal usage of those later centuries, the reports seek to convey that synagogal usage merely copied temple usage. The Mishna further enumerates the formalities observed when extending the areas of Jerusalem and of the temple court (Shebu. 2.2). A later source tells us that those formalities included a sacred procession and that the marchers in such procession would sing Pss. 30; 91:3 (Shebu. 15b). See PSALMS, BOOK OF.

d. The "Hear, O Israel." A liturgical unit, in which biblical material and nonbiblical material are combined, constituted one of the foremost acts of Jewish worship, surely prevalent as early as NT times. This is the set of paragraphs known as the "Hear, O Israel," the name deriving from the initial word of Deut. 6:4. The recitation of the "Hear, O Israel" occurred every morning and every evening. It immediately preceded the recitation of the Eighteen Benedictions.

The biblical passages embraced in the "Hear, O Israel," are Deut. 6:4-9; 11:13-21; Num. 15:37-41; the first dealing with the duty of keeping in mind the divine commands; the second announcing the rewards for obedience, the punishments for disobedience, and the duty of remembering the divine commands and teaching them to the young; the third prescribing that fringes be attached to the garments. Such fringes are mentioned in Matt. 23:5. Deut. 6:8 was construed as bidding, not figuratively but literally, that the sacred words be bound as a sign upon the hand and worn as frontlets between the eyes. Hence the phylacteries mentioned in Matt. 23:5.

This trio of biblical passages was preceded and followed by some paragraphs of supplication. The

supplications voiced in the morning differed from those of the evening. While the Mishna alludes to these supplications by name, it does not supply the wording. To gauge the sense of these supplications as spoken in NT times, we have to look at the wordings written down in later centuries. The following selections come from the two supplicatory paragraphs which open the "Hear, O Israel," in the morning: "Blessed art thou, O Lord, our God, King of the universe, who formest light and createst darkness, and who makest peace and createst all things, who in mercy givest light to the earth and to them that dwell thereon, and in thy goodness, renewest the creation every day continually.

"With abounding love hast thou loved us, O Lord, our God, with great and exceeding pity hast thou pitied us. . . . O our Father, merciful Father, ever compassionate, have mercy upon us; O put into our hearts to understand and to discern, to mark, learn, and teach, to heed, to do and to fulfil in love all the words of instruction in thy Law."

The following is taken from the one paragraph which concludes the "Hear, O Israel," in the morning (Ber. 1.4): "True and firm, established and enduring, right and faithful, beloved and precious, desirable and pleasant, well-ordered and acceptable, good and beautiful is thy word unto us forever and ever. . . . King and God, who liveth and endureth, who is high and exalted, great and revered, who bringeth low the haughty, and raiseth up the lowly, leadeth forth the prisoners, delivereth the meek, helpeth the poor, and answereth his people when they cry unto Him."

The following selections intimate the content of the introductory paragraphs recited in the evening: "Blessed art thou, O Lord, our God, King of the universe, who at thy word bringest on the evening twilight. . . . Thou createst day and night; thou rollest away the light from before the darkness, and the darkness from before the light; thou makest the day to pass and the night to approach, and dividest the day from the night, the Lord of hosts is thy name.

"With everlasting love hast thou loved the house of Israel, thy people. . . . and mayest thou never take away thy love from us. Blessed art thou, O Lord, who lovest thy people Israel."

Finally, one of the two supplications with which the "Hear, O Israel," concludes in the evening is: "Cause us, O Lord, our God, to lie down in peace, and raise us up, O our King, unto life. Spread over us the tabernacle of thy peace; direct us aright through thine own good counsel; save us for thy name's sake; be thou a shield about us; remove from us every enemy, pestilence, sword, famine, and sorrow; remove also the adversary from before us and from behind us."

The Mishna, it must be repeated, while it recurrently mentions these liturgical pieces and refers to them in unmistakable terms, does not anywhere supply us with the wording (Ber. 1.4-5; Pes. 10.6; Tam. 5.1). In NT times and for centuries thereafter, the wording was carried in memory. It is nonetheless probable that those pieces as quoted here did not differ greatly in their content, even if they differed in wording, from the supplications with which NT times were conversant.

5. Accessories of worship. The accessory features of Jewish worship in NT times were many. These include such items as appurtenances, postures, processions, fasts, translations, numbers in attendance, leaders, assistance for the unlettered, exclusions, precautions against heresy, frame of mind, and repetitions.

a. Singing. The NT mentions singing in connection with the dinner-table devotions at the outset of Passover (Matt. 26:30; Mark 14:26). That the hymn consisted of Pss. 113-18 is fairly certain. While Jewish sources do not state explicitly that such singing, outside the sanctuary, was the usage at that period, intimations to this effect are not lacking (Pes. 10.7; Tosef. Pes. 8.22; 10.6-9). Otherwise, Jewish accounts mention singing only in connection with the temple (i.e., Eccclus. 50:18). As a rule, the singers were Levites (Jos. Antiq. XX.ix.6; Tam. 7.4; Bik. 3.4). However, among the singers in the torchlight procession within the temple precincts on the Feast of Tabernacles, layfolk of piety and prestige were apparently included (Suk. 5.4). The same seems to have characterized the procession which took place at the official extension of sacred areas (Shebu. 15b). In the course of time, all Jewish worship was sung or chanted. Our sources, nevertheless, fail to indicate that, as early as the NT period, sacred singing was a practice outside the temple, except at the Passover dinner. See SINGERS, SINGING.

b. Appurtenances. An invariable appurtenance of the synagogue was the ark of the Law, in which were preserved the scrolls of the Pentateuch. At the drought-time service, the ark would be placed in the open. Upon it would be strewn ashes (Ta'an. 2.1). The service would be attended by the highest dignitaries of the community, and these could be seen putting ashes upon their heads.

At the table devotions on the evening which marked the beginning of Passover, there occurred the ceremonial drinking of four cups of wine (Pes. 10.7). Another ceremony was the conveying of the first fruits to the temple in baskets, as ordained in Deut. 26:1-11. The poor may have carried baskets made of stripped twigs of willow, but the rich carried baskets of gold or silver (Bik. 3.8).

The ritual for New Year Day required several blowings of the ram's horn (R.H. 4.1, 5-7). The ram's horn was sounded also in the fast-day service at drought time (Ta'an. 2.5; 3.1, 9) and on other occasions of calamity (Ta'an. 3.4-7). Trumpets, as distinguished from rams' horns, would be blown during the torchlight procession on the Feast of Tabernacles, when there also figured harps, psalteries, and cymbals (Suk. 5.4). The horns and the trumpets were blown by priests, and the musical instruments were played by priests (Ta'an. 2.5). Into the observance of the Feast of Tabernacles entered also the palm branch (Suk. 3.1, 9, 13), the citron (Suk. 3.5-7), and the sprigs of myrtle and of willow (Suk. 3.3-4) held in the hands of every worshiper. The palm branch would be waved when, in the course of the solemnities, the recitation of Ps. 118 would reach vs. 1 and vs. 25 (Suk. 3.9).

Also to be noted apropos of appurtenances, is the report that, when pronouncing the benediction every morning in the courtyard of the temple, some of the

priests would still be holding their sacrificial implements in their hands (Tam. 7.2).

c. Postures of worship. Prostration would, on occasion, be the prayer posture. This applied particularly, though not exclusively, to the ministrations of the priests (Tosef. Ber. 3.5; Sheḥ. 6.13; Tam. 7.1). On the Day of Atonement there were moments when the entire assembled multitude fell upon their faces.

Then all the people together made haste
and fell to the ground upon their faces
to worship their Lord,
the Almighty, God Most High,

says Ecclus. 50:17. And though Ecclesiasticus may date from a period earlier than NT times, the ritual of mass prostration did undoubtedly prevail in NT times (Yom. 6.2; Ab. 5.8). At table, people sometimes sat, but sometimes they reclined on couches. In the former case, each would recite for himself the grace before eating; in the latter case, one would recite for the entire company (Ber. 6.6). It was the practice of some to assume a reclining position for the evening "Hear, O Israel," literally carrying out the directive in Deut. 6:7 about pondering the sacred words not only "when thou risest up" but also "when thou liest down" (Ber. 1.3). The priests were required to hold their hands at a specified height when pronouncing the Aaronic benediction (Tam. 7.2). And when, on Atonement Day, the high priest would speak the formula of confession first for himself, his family, and his associates (Yom. 3.8; 4.2), and then for the entire community (Yom. 6.2), he would have his hands on the head of a bullock to be sacrificed.

d. Processions. There were rituals that involved marching in procession, such as the ceremony of the water drawing, with its hymns and praises, on the Feast of Tabernacles (Suk. 4.1, 5; 5.4). The torchlight procession begun before cockcrow on the morning after the first day of the feast (Suk. 5.4) has already been mentioned. Carrying torches, men of piety and prestige would leap and dance as they marched (Suk. 5.4). Every courtyard in Jerusalem is said to have caught the glow of the illumination (Suk. 5.3). On each of the eight days of the Feast of Tabernacles there would be a circling of the altar; seven times on the last day, once on each of the preceding days (Suk. 4.5). There would also be a procession at the bringing of the first fruits, as ordained in Deut. 26:1-11 (Bik. 3.2-4). Pilgrims would assemble with their offerings at the nearest town. From there they would march to Jerusalem; the procession would be headed by an ox with gilded horns and a wreath of olive on its head. At the outskirts of Jerusalem, dignitaries of the city would come forth to meet the marchers. As the marchers passed through the city, workmen on the streets would salute them: "Our brethren of such-and-such a place, ye have come in peace." Led by a flute player, the visitors would arrive at the temple mount. On such occasions, King Agrippa himself would place a basket on his shoulder and enter the temple court. At the temple the Levites would sing Ps. 30:1:

I will extol thee, O Lord, for thou hast drawn me up,
and hast not let my foes rejoice over me.

e. Fasting. Fasting attended not only the observance of Atonement Day but also the supplications

of drought time (Ta'an. 1.4-7). There would be increasing degrees of austerity as the drought grew worse (Ta'an. 1.4-7; 4.7). During the week of the local "stand-by" services, there would be fasting by the participants (Ta'an. 4.3). See FEASTS AND FASTS.

f. Language of worship. While certain devotional pieces might be recited in any language, there were others that required Hebrew (Soṭ. 7.1). Any language might be used for the Eighteen Benedictions or for grace at meals or for the "Hear, O Israel" (Soṭ. 7.1). But Hebrew was mandatory for the words in Deut. 26:5-10, to be spoken at the depositing of the first fruits in the temple; for the blessings and the curses listed in Deut. 27:15-28:69; for the Aaronic benediction (Num. 6:24-27); and for the rules pertaining to the kingship in Deut. 17:14-30; similarly for the eight benedictions—selected from the Eighteen Benedictions—which the high priest would recite in connection with his public readings on the Day of Atonement (Soṭ. 7.7). Ancient sources indicate that the language of Jewish worship was Greek in Greek-speaking communities.

Only in the temple and not elsewhere, and by the priests but by no others, could there be the pronunciation of the actual name of God (Soṭ. 7.6; Tam. 7.2). The divine name was otherwise not uttered. In its place "Adonai" ("My Lord") was always substituted.

Among those who functioned at the reading of scripture was the translator (Meg. 4.6, 10). Certain readings were occasionally rendered in translation only (Meg. 2.1; Tosef. Meg. 4.13). Of some passages, however, translation was forbidden—e.g., the story of Reuben and Bilhah in Gen. 35:22 or the passage in Exod. 32:21-25 about the golden calf (Meg. 4.10; Tosef. Meg. 4.35). See LANGUAGES OF THE BIBLE.

g. Numbers in attendance. The number participating in an act of worship was also a factor. The presence of ten adult males was required for congregative worship as well as for certain rituals connected with marriages and with obsequies (Meg. 4.3). The wording of the grace after meals depended upon the number of those dining (Ber. 7.1, 3). When three dined together, one of them would open the saying of grace with the words, "Let us bless the Lord" (Ber. 7.1, 3). A different introductory would be used if four dined together, still different if there were nine, still different if the number was ten or a hundred, and so on. There would be corresponding variations in the response formulas of those addressed.

h. Leaders of worship. At congregative worship, leaders performed a variety of functions. There was the person who led at the reciting of the Eighteen Benedictions and the one who led in the "Hear, O Israel" (Meg. 4.5). The admonition is expressed that if, because of some circumstance, the regularly functioning leader becomes disqualified, one should not, out of modesty, decline to step in as a substitute; one should not have to be coaxed (Ber. 5.3; Meg. 4.8). A priest, if present at the service, would pronounce the Aaronic benediction (Meg. 4.5; Ta'an. 4.1; Soṭ. 7.6). According to some, a priest might not raise his hands in benediction if they were stained or blemished (Meg. 4.7). The question is debated whether, on certain occasions, one and the same person might function as priest and also as leader

of prayer (Ber. 5.4). It was held that such a combination of functions was permissible if the person functioning could change from one role to another without committing blunders (Meg. 4.5). At the drought-time service, the officiant had to be not only conversant with the prayers but also old and poor and the father of children (Ta'an. 2.2).

Another function at congregational worship was that of reading from scripture (Meg. 4.5). There was a fairly elaborate system of assigning readers for various passages and occasions. On an ordinary sabbath, the Pentateuchal portion was divided among seven persons (Meg. 4.2). Six would read the section assigned for the Day of Atonement; on certain other sacred days the number would be five. Four would read on New Moon days and on the days between the first day and the last day of Passover and of the Feast of Tabernacles. No one was to read fewer than three verses (Meg. 4.4). Among the several readers, a priest, if present, would read first, a Levite would come second, and then would come the lay folk (Git. 5.8). See PRIESTS AND LEVITES.

According to Luke 4:16-20, Jesus read in the synagogue from Isa. 61. At Antioch, Paul and his associates listened to the readings from the Law and the Prophets (Acts 13:15). We have noticed that there was an occasion when the high priest (Yom. 7.1; Soṭ. 7.7), and also an occasion when the king (Soṭ. 7.8), would read in public. On the Day of Atonement the high priest, after reading before the multitude Lev. 16; 23:27-32, would roll up the scroll and place it in his bosom. Then he would announce: "More than what I have read before you is here written." He would thereupon recite from memory Num. 29:7-11, detailing the sacrificial program for the occasion (Yom. 7.1; Soṭ. 7.7). The robe worn by the high priest was white; if he wished, it would be of linen (Yom. 7.1).

Also in synagogues everywhere, Num. 29:7-11 was, on the Day of Atonement, recited from memory (Tosef. Meg. 4.7). Recitation from memory, in lieu of reading, took place likewise at the afternoon worship of the "stand-by" (Ta'an. 4.3).

Approximating the routine laid down in the Mishna (Yom. 7.1; Soṭ. 7.7-8) was the usage described when Luke 4:16-20 pictures Jesus receiving the scroll from, and returning it to, the attendant. The readings, moreover, would be preceded and followed by suitable benedictions (Yom. 7.1; Meg. 4.1-2).

Another function was that of the translator (Meg. 4.5). A minor might read from the Pentateuch and might translate, but was not qualified to lead at the Eighteen Benedictions or at the "Hear, O Israel" (Meg. 4.6). A poorly clad person was permitted to lead at the "Hear, O Israel," and to act as translator, but was not qualified to read from the Pentateuch (Meg. 4.6). There was difference of opinion whether a blind person might lead at the "Hear, O Israel," or might act as translator (Meg. 4.6). Then there was the one who, on New Year Day, called the several blowings of the ram's horn (R.H. 4.7). There was also the one who led the saying of grace when a number of persons dined together (Ber. 6.6).

i. Assistance at worship. If a person was not conversant with the psalms recited at the Feast of

Tabernacles, someone else might speak them for him. The person thus helped would, under some circumstances, repeat what he had heard; under other circumstances, he would merely respond, "Hallelujah," presumably after each verse (Suk. 3.10). At the offering of the first fruits, there would be available, at the temple, expert assistance for the reading of Deut. 26:3-11 (Bik. 3.7). Originally such assistance was provided only for the illiterate; later, to avert embarrassment, this aid was accorded everyone. Some held that every individual was obligated to recite the prayers, and that the leader could represent only those not versed in the prayers (R.H. 4.9). Others held that the leader spoke for all. Of course, "Amen," as well as other frequent responses, devolved upon everyone (Soṭ. 7.6; Tam. 7.2).

j. Exemptions and exclusions. Women, slaves, and minors (Ber. 3.3), as well as bridegrooms on the wedding night (Ber. 2.5), were exempt from the obligation to recite the "Hear, O Israel." Mourners, before the burial, were exempt from the obligation to recite the "Hear, O Israel," and to recite the Eighteen Benedictions; similarly pallbearers (Ber. 3.1). From certain acts of worship, ritually defiled persons were barred (Ber. 3.4-5); while women, slaves, and minors were not included among those meant by the summons to grace after meals (Ber. 7.2).

k. Disturbing heresies. Jewish worship in NT times entailed unrest over various heresies, among which, no doubt, was that of nascent Christianity. Daily worship outside the temple, as well as in the temple, at one time included the recitation of the Decalogue (Tam. 5.1). Outside the temple the practice was discontinued, because, as later tradition words it, of "the contentions of the heretics" who maintained that the Decalogue only was of Sinaic origin (Ber. 12a; Palestinian Ber. I.3c). There is mention of certain objectionable insertions made by some when reciting the Eighteen Benedictions, insertions such as: "The good shall praise Thee," "Thy compassion extendeth over the bird's nest," "By virtue of good be Thy name remembered" (Ber. 5.3; Meg. 4.9). The same applied to various metaphorical interpretations of the laws against incest in Lev. 18; 20, or to the passage in Lev. 18:21 about giving one's seed to Molech (Meg. 4.9). We are apprised that a certain prayer, offered at the temple, once contained the phrase "from everlasting." When the sect arose which denied a hereafter, the phrase was extended to read: "from everlasting to everlasting," thus affirming the existence not of one world but of two (Ber. 9.5). It was forbidden to pronounce benedictions over lights or spices prepared by idolaters (Ber. 8.6). To a benediction spoken by any sectarian, "Amen" was not to be appended until the benediction had been heard *in toto*; one might inadvertently be saying "Amen" to something heretical (Ber. 8.8). We have noted that an entire paragraph alluding to such troublemakers was inserted into the Eighteen Benedictions.

l. Frame of mind. Other factors considered in connection with Jewish worship in NT times were such as attentiveness, interruptions, errors, audibility, and fluency. The question is raised whether it is permissible to recite the "Hear, O Israel," mechan-

ically and inattentively (Ber. 2.3). Some assert, and some deny, that the reciter has to be conscious of each letter (Ber. 2.3). There is a similar division of opinion as to the permissibility of altering the sequence to the various parts of the "Hear, O Israel." Whether or not the recitation of the "Hear, O Israel," had to be audible was also a matter of debate (Ber. 2.3). To read the book of Esther in a desultory manner was expressly forbidden (Meg. 2.1), although there was no objection to reading the book of Esther interruptedly, even if the reader slept in the intervals (Meg. 2.2).

One was not allowed to interrupt one's recitation of the "Hear, O Israel," except at the breaks between the paragraphs. At these points one might pause to return a salute or, out of respect for someone, even accord a salute (Ber. 2.1). In the midst of a paragraph, such saluting was prohibited except when failure to do so might bring upon the worshiper someone's dangerous enmity.

In the recitation of the Eighteen Benedictions, certain abridgments were permitted to one whose recitation of the prayer lacked fluency (Ber. 4.3). Rabbi Hanina, who lived in the first Christian century, believed that his prayers for the recovery of the sick were efficacious when they proceeded fluently from his lips, but inefficacious otherwise (Ber. 5.5).

If one forgets the requisite benediction before one eats, the benediction continues nonetheless pertinent until the end of digestion (Ber. 8.7). An error in the reciting of a prayer was regarded as an ill omen for the worshiper, and if the error was committed by someone officiating for an assembly, it was an ill omen for the congregation (Ber. 5.5). The Eighteen Benedictions were not to be recited by one who was in a state of sexual defilement, until he had performed certain ablutions (Ber. 3.5-6).

m. Repetitions. On certain occasions, at congregational worship, certain liturgical passages would be repeated at one and the same service. E.g., on sabbaths and on holidays the Eighteen Benedictions, recited in the morning, were, with certain modifications, again recited later in the morning (Ber. 4.1, 7; Tosef. Ber. 3.3; Ta'an. 4.1, 4). On the Feast of Tabernacles, in some localities, when Ps. 118 was read, vs. 21 and each subsequent verse would be read twice (Suk. 3.11). We have already noted the repetition of certain phrases in the supplication for the relief of drought (Ta'an. 2.4). It may be that the reproof in Matt. 6:7 alludes to such repetitions.

6. The spirit of worship. There were Jewish teachers in NT times who cautioned against prayer of the routine mechanical type (Ber. 4.4; Ab. 2.18). Prayer was to be an "appeal for mercy and grace before the All-Present" (Ab. 2.18). Greater devoutness, in fact, was expected for the recitation of the Eighteen Benedictions, which consisted entirely of prayer, than of the "Hear, O Israel," which consisted of prayer only in part (Ber. 2.4). Men might, as we saw, recite the "Hear, O Israel," while working in a tree or on top of a wall, but this was not permitted for the Eighteen Benedictions (Ber. 2.4). For prayer, a reverent mood was indispensable (Ber. 5.1). The Mishna reports that certain of the old-time saints would, before praying, spend an entire hour in silent meditation, "directing their heart

toward the Infinite" (Ber. 5.1). Not even if one were saluted by the king—yes, not even if one's heel became entwined by a serpent—was one's prayer to be interrupted (Ber. 5.1). Ex post facto prayers, however, were deprecated (Ber. 9.3). If one's wife were pregnant, one was not to pray: "God grant that the child be a male"; if, upon returning from a journey, one were to hear a wailing in one's town, one should forbear to pray: "God grant that the house thus afflicted be not my house." Such prayer is "vain prayer" (Ber. 9.3).

Gamaliel, the grandson of the Gamaliel mentioned in Acts 5:34; 22:3, speaking of the ritual for Passover, urged that "in every generation one should feel as if he had himself personally come forth out of Egypt" (Pes. 10.5). And though the book of Ecclesiasticus somewhat antedates the NT period, there can be little doubt that the words of Eccles. 50 were still applicable to the first decades of the NT period in describing the fervor and the impressiveness of the worship in the ancient temple.

WRATH OF GOD. The biblical conception of the Deity's threatening with annihilation the existence of whatever opposes his will and purpose or violates his holiness and love (see HOLINESS; LOVE; SALVATION). Throughout the OT and the NT the divine wrath is regarded, along with the other aspects of God's self-revelation, as a manifestation of the very will of God himself. Its operation is seen, not only as part of a final judgment in the end time, but also in particular historical and natural catastrophes, as well as in private and personal disasters, while not all such events are interpreted in this way necessarily. The biblical writers can draw analogies from the human affect in order to describe the wrath of God, yet ANGER in man is sharply distinguished from God's wrath.

1. Terminology of the wrath of God in the Bible
 - a. In biblical Hebrew
 - b. In LXX Greek
 - c. In NT Greek
2. The wrath of God in the OT
 - a. Irrational wrath

5. The wrath of God in the NT
 - a. The wrath of God and the ministry of Christ
 - b. Wrath and the Atonement
 - c. Wrath and sanctification

d. The Day of Wrath and the lordship of Christ
 e. The termination of the wrath of God
 Bibliography

1. **Terminology of the wrath of God in the Bible.** There are several hundred references to the divine wrath in the OT, and in the shorter NT the frequency is proportionately little less. Here, as with other aspects of the divine activity, the language of scripture is as concrete as the subject with which it has to do.

a. **In biblical Hebrew.** The expression most often used to represent anger—and in particular the anger of God—is the noun אַף (Ps. 96:7), derived from the verb אָפַח, “to be angry” (Isa. 12:1), probably once having meant “to snort.” The noun is also the common Hebrew word for “nose” (Amos 4:10), which organ was for ancient Hebrew psychology the seat of anger. Thus in God’s wrath “smoke went up from his nostrils” (Ps. 18:8). Fire and heat are characteristically associated with the rage and fury of wrath, and the verb חָרָה, “to burn,” is in the *qal* voice used only to refer to the “kindling” of anger (Hos. 8:5). The derived noun חָרוֹן by itself (Ezek. 7:12) or in the more usual combination חָרוֹן אַף (used in the OT only of God, as it happens—e.g., Exod. 32:12) connotes the fierceness of anger (lit., the “burning of anger”). Similarly, another common synonym for אַף is חֶמֶה, “rage,” “heat” (Jer. 4:4), used also to denote the intoxication of wine (Hos. 7:5), the sun’s fierce heat (Ps. 19:6), and the venom of serpents (Deut. 32:24). Other frequently used expressions for wrath or anger are עֲבָרָה, “overflowing rage” (Hos. 5:10; cf. the verb עָבַר in the *hithpa’el*, “to vent one’s wrath” [Ps. 78:62]); the verb קָצַף, “to be angered” (Deut. 1:34), with its noun form קִצְפָּה, “wrath,” “ill humor” (Ps. 38:1); זַעַם, the verb and noun forms denoting “angry indignation” (Nah. 1:6; Mal. 1:4; used only of God in the OT); and כָּעַס (in Job כָּעַשׂ [e.g., 5:2]), the verb and noun forms signifying “vexation,” especially “provocation to anger” (I Kings 15:30; Neh. 4:5). God’s wrath is otherwise often suggested through expressions and metaphors drawn from the vocabulary of flood, famine, and conflagration, or from the language of cursing, devouring, reaping, demolishing, slaughtering, smelting or refining, and the like, and of military siege and battle (see BLESSINGS AND CURSINGS). Such imagery is to be distinguished (but not dissociated) from those concrete natural and historical occurrences which are themselves considered to be directly the operation and manifestation of the divine wrath itself. See § 2c below.

b. **In LXX Greek.** The Greek translation of the OT renders the various Hebrew expressions for God’s anger or wrath by either of two nouns, ὀργή and θυμός, together with their cognate verbs (ὀργίζω, παροργίζω, θυμώω, etc.). Originally θυμός stood in the older Greek for the inner affect or emotion of anger; ὀργή, for the outward effect or manifestation. But in the LXX the two words appear to be interchangeable, and either, or both together, appear to be used indifferently for any of the Hebrew terms.

c. **In NT Greek.** The references to divine anger in the NT seem to follow the LXX terminology, using either ὀργή (Rom. 1:18) or θυμός (Rev. 15:1, 7), each

signifying “anger,” “wrath.” The two appear also in combination with each other: “fury of wrath” (θυμὸς τῆς ὀργῆς; Rev. 16:19). It is difficult to distinguish any clear difference of meaning between the two words, although when the subject is divine as distinguished from human anger, Revelation prefers θυμὸς, the other NT literature ὀργή.

2. **The wrath of God in the OT.** In the OT the wrath of God may be provoked against Israel (Exod. 32:11; Deut. 9:8; Ps. 74:1; Isa. 47:6; Lam. 2:1; Ezek. 5:15; Dan. 9:16; etc.) or against individuals and groups within Israel (Lev. 10:2; Deut. 1:34, 37; Ps. 6:1; Jer. 21:5). Nations and their rulers become objects of the divine anger (Gen. 19:24-25; Ps. 110:5; Isa. 10:12-19; Jonah 3:9; Mal. 1:4) as well as mankind in general (Gen. 4:14; 6:7; 11:8; Job 14; 40:11; Ps. 90:9; Eccl. 5:6; 12:14). It affects the world of nature (Gen. 3:14, 17; Deut. 32:22; Isa. 13:9; 50:2; Jer. 10:10; Mal. 3:11), where even the mythical creatures are overcome by it (Job 9:13; 26:12; Ps. 89:10; Isa. 51:9). In many of these examples the wrath of God is clearly the subject, although the express terminology of anger (see § 1a above) may be absent; cf. God’s “strange work” (Isa. 28:21).

a. **Irrational wrath.** On occasion the OT picture of God contains an undeniable element of irrationality bordering on cruel caprice. “At a lodging place on the way” the Lord met Moses “and sought to kill him” (Exod. 4:24). Israel at Sinai must beware “lest they break through to the LORD to gaze and many of them perish” (Exod. 19:21; cf. Gen. 16:13; Judg. 13:22). The good intentions of Uzzah, steadying the ark of the Lord, do not save him from annihilation (II Sam. 6:7; cf. I Sam. 6:19). One might be inclined to trace such elements to primitive superstitions alien to biblical faith, but the explanation need hardly be sought outside the character of Yahweh himself. In the biblical view, this mysterious and dangerous element is not inconsonant with that aspect of his holiness which is marked by its transcendence, inscrutability, and radical separation from the creatures, and which contains inherently a menace of death for whoever stumbles upon it carelessly. See bibliography; see also FEAR; GOD, OT; HOLINESS.

b. **Wrath and sin.** Normally, however, the OT traces the provocation of God’s wrath to deliberate human attempts to thwart his will and purpose for man’s salvation. Israel herself most often becomes the object of God’s displeasure, whether collectively or through some individual in the community (see SIN).

Sons have I reared and brought up,
 but they have rebelled against me.
 (Isa. 1:2.)

In the wilderness the Israelites murmur against him, bringing down the divine fury upon themselves (Num. 11:1; Deut. 1:26-36; Ps. 78:21-22). God’s anger is kindled at disobedience of his express command (Josh. 7:1), while the Chronicler summarizes Israel’s career until the Exile as a history of scorn for God’s word, which brings destruction and sorrow upon her (II Chr. 36:15-16; cf. Lam. 2:1, 22; Ezek. 22:23-31; etc.). Social injustice within the community of God’s chosen people causes him to pour out his wrath upon them (Ps. 50:21-22; Isa. 1:23-24; 42:24-

25; Amos 8:4-10; Mic. 6). Neither prophet, priest, nor king is exempt from responsibility and divine judgment (II Sam. 12:10-14; Jer. 14:15; 22:15-16; Mal. 2:1-9).

A recurring and major theme is that of Israel's repeated apostasy—the abandonment of Yahweh to “go after other gods” (Deut. 13:2, 6, 13), or to introduce alien cults into Israel to occupy a place alongside that of Yahweh. Thus his anger burns when the people erect the golden calf (Exod. 32:1-10); again when they sacrifice to the Baal of Peor (Num. 25:1-5). The threat of annihilation stands behind the Deuteronomic exhortations to cultic purity (Deut. 11:16-17; 13; 29:16-28; cf. Judg. 2:11-15; II Kings 22:16-17; etc.), and the theme prevails into the latest OT literature (II Chr. 25:14-15; Isa. 65:1-7; Ezek. 7:1-23; Dan. 9:11-16; see JEALOUSY).

When God vents his wrath against the nations, this too is seen by the OT writers as a consequence of the opposition of these powers to the divine purpose in history—usually in terms of their oppression of God's people Israel (I Sam. 15:2-3; cf. I Sam. 28:18; Ps. 2:1-6). At the same time, the nations' idolatry and immorality are seen in their own right as sin against God (Deut. 7:5; Dan. 5:23-28; Amos 1:3-2:3; Jonah 1:2; 3:7-9; Nah. 1-3; etc.). Such passages contain elements of chauvinism on the part of those who speak or write them, yet the fact that they lie everywhere in a context of the divine wrath proclaimed even more strongly against Israel herself prevents the interpreter from reading them merely as unbridled patriotism. The point of view is basically one which sees all history subject to the divine providence, and the object of God's wrath ultimately as man the sinner in rebellion against his Creator (Gen. 4:14; 6:7; cf. Gen. 11:8 with Zeph. 3:8-9; Gen. 19:24-25; Job 14; 40:11; Ps. 90:9; Eccl. 5:6; 12:14). See HISTORY.

c. Instruments of the divine wrath. While the OT does not necessarily see human trouble in every time and place as a manifestation of the divine anger, it nevertheless finds the wrath of God directly revealed in a variety of particular, concrete, natural and historical catastrophes, consonant with its belief in a God who makes his will known through the events of human history. Thus the natural elements may be agents of his fury (Gen. 6:17; 19:24; Ps. 104:4; Isa. 30:30; Jer. 21:14; Joel 1), and his displeasure makes itself felt in sickness, famine, and pestilence (Num. 11:33; Deut. 28:20-24, 58-61; II Sam. 24:15; Ps. 78:50; Ezek. 5:13-17; 7:15). Personal affliction may also be the outworking of his anger (II Sam. 12:15-18; I Kings 17:18; Job 14; 30:23; Pss. 88:16; 90:5-8; 102:9-11).

The mightiest agents of the divine wrath in the OT prove to be the historical powers—the nations. Thus Assyria, threatening Ephraim and Judah, is used:

Ah, Assyria, the rod of my anger,
the staff of my fury!

Against the people of my wrath I command him
(Isa. 10:5-6; cf. 7:17-20; 13:5).

Aggression by neighboring political powers is Yahweh's punishment of Israel for apostasy (Judg. 2:11-15; 4:1-2; 6:1-2; cf. Deut. 28:25-27; II Kings 13:3;

etc.). The great and sobering example for the Jewish people of the later OT period was the fall of Jerusalem and the Babylonian exile (II Chr. 36:17-21; Ps. 106:40-41; Lam. 2, etc.; Zech. 7:11-14).

On the other hand, God's wrath against Israel's enemies, who may thus be enemies of Yahweh, makes itself known in disasters suffered by those nations (Jer. 50:25; Ezek. 20:33; Mal. 1:2-5). Here, in part, is to be found the rationale of such institutions as the *hérem* and holy war, where Israel herself is Yahweh's instrument of wrath against his adversaries (see DEVOTED; WAR, IDEAS OF; cf. Deut. 7:1-5; Josh. 6:17; 7:1; I Sam. 15:3, 20-21, 33).

In this regard, also, a few stylized representations of the divine wrath in the OT show possible literary affinities with some of the literature of NW Semitic cults outside Israel. See *bibliography*.

d. The Day of Wrath. More and more the OT prophetic preaching and finally the apocalyptic writings look for a climactic display of Yahweh's wrath on the day when his saving purpose is accomplished. “The LORD of hosts has a day against all that is proud and lofty, against all that is lifted up and high” (Isa. 2; cf. 13:11; 27:1; Ps. 110:5; Amos 5:18-20; etc.; see DAY OF THE LORD; ESCHATOLOGY OF THE OT). The later psalmists invoke this eschatological wrath upon the heathen as well as upon apostates within the community, while they expect that their own piety will shield themselves from it in that day (Pss. 7:6-8; 11:5-7; 56:7, 9; 79:5-13; 94:1-2, 12-15). However, this faith is scarcely something glib. Whether by prayers seeking this assurance or else boasting of it to the point of exaggeration, the righteous worshiper betrays that he is not without anxiety as he anticipates God's judgment (Pss. 22:1-21; 30:8-10; 139:1-12, 19-24; cf. Lam. 5:22; Dan. 9:3-19; 12:8; Mal. 4:5-6).

e. Salvation from the wrath of God. While God's wrath may operate as his instrument of salvation on behalf of his people, delivering them from their oppressors (I Sam. 15:2; Amos 1:3-15; Nah. 1:2-15), the truly serious concern for Israel is her deliverance from the divine anger itself (Exod. 32:12; Job 7:21; Ps. 79:8; Isa. 6:11; Dan. 9:16; Amos 7:2). There is a fundamental difference at this point between Israel and her neighbors; unlike them, she is denied recourse to magical practices whose purpose is to fend hostile deities. Rather, she is dependent on Yahweh himself for this (Num. 14:17-19; II Sam. 12:13; Joel 2:18; etc.). Even where magic seems formally to be used, it will be noted that the procedure does not constrain Yahweh, but rather depends on his will for its efficaciousness (Num. 21:7-9; cf. Wisd. Sol. 16:7). The circumcision of Moses' son by Zipporah is not an exception to this generalization (Exod. 4:24-26).

OT prophetic preaching sought to avert Yahweh's wrath through the people's repentance—a complete turning about and return to the obedient service of Yahweh—which would lead him to turn his wrath away (Jer. 4:4; 36:7; Amos 5:15; Mal. 3:7, 16; see REPENT). Later tradition saw the priests and the cultic ritual protecting the community: “The Levites shall encamp around the tabernacle of the testimony, that there may be no wrath upon the congregation of the people of Israel” (Num. 1:53). In the older

stories there are times when the divine anger is lifted only by the death of the guilty (Num. 25:1-5; Josh. 7:22-26), while in the later period, again, the Exile could be seen as the great expiation for Israel's sin, moving God to pour out his compassion (Isa. 40:2; 51:22; Lam. 4:22).

The radical seriousness of Israel's situation is set forth, however, where the requirements for her deliverance are found to lie beyond human accomplishment, so that either hope is abandoned (Amos 3:12; cf. 5:18-20), or else the fulfilment of the necessary condition is carried through by Yahweh himself—by his establishing a new covenant with Israel (Deut. 30:6; Jer. 31:31-34; 32:39-40; cf. Ezek. 36:26-27), or by the sending of his emissary to effect the necessary change of heart (Mal. 4:5-6).

f. The wrath of God and his love. It is theologically significant that where a term for wrath is connected with a name for the Deity in the OT, the divine name is almost always that of Yahweh, the covenant God (Exod. 32:1-10; Deut. 11:16-17; 29:16-28; II Kings 24:20; etc.; see *bibliography*; see also GOD, OT; COVENANT). There is thus an intimate association between the wrath of God and the historical election-covenant faith of Israel, a relation given classical utterance through the prophet Amos:

You only have I known
of all the families of the earth;
therefore I will punish you
for all your iniquities
(Amos 3:2).

According to the OT scheme, when collective or individual life in Israel did not comport in terms of reverence, justice, and grace with those unmerited acts of Yahweh's love which called her into being as a people and guided now her destiny in world history, that love had inevitably to display its wrath (II Chr. 36:15-16; Ps. 78:21-22, 56-66; Isa. 63:9-10; Jer. 5:7-9). Israel's deviations from this norm were a denial of the very ground of her historical existence (see ELECTION).

I am Yahweh your God
from the land of Egypt;
you know no God but me,
and besides me there is no savior.
(Hos. 13:4.)

Yet, because Israel had presumed upon this love, says Yahweh: "I will fall upon them like a bear robbed of her cubs" (Hos. 13:8). The theriomorphism is aptly chosen for its fierce imagery of the inherent wrath in wounded love.

If Israel's betrayal of the covenant relationship provokes the divine fury, the faithfulness of God to it in love also constrains his anger:

How can I give you up, O Ephraim!
How can I hand you over, O Israel!
(Hos. 11:8; cf. Exod. 32:10,
12-14; Ps. 103:8; Isa. 54:7-8,
10; Mic. 7:18).

This conflict, which the OT finds in Yahweh himself, is scarcely resolved in the OT, unless it should be in the profound perception of divine grace shown by Deutero-Isaiah in the figure of the Suffering Servant, who was "wounded for our transgressions" and "bruised for our iniquities," and upon whom was

the "chastisement that made us whole" (Isa. 53:5). But even here there is no lasting assurance that wrath has been stayed. The prophetic canon and the Writings both still dwell on it in their closing lines (II Chr. 36:16; Mal. 4:1), as does the Pentateuch in the later chapters of Deuteronomy (e.g., 31:29).

3. The wrath of God in the Apoc. and the Pseudep. With the exception of Aristéas, for whom "God rules the whole world in the spirit of kindness and without wrath at all" (μετ' εὐμενείας καὶ χωρὶς ὀργῆς ἀπάσις; Aristéas 254), the picture of God in the Apoc. and the Pseudep. displays his wrath as both a historical and an eschatological force to be reckoned with. It may operate as a function of his righteousness, punishing the wicked (Prayer Man. 10; Jub. 36:10; IV Macc. 4:21), or of his mercy, disciplining the faithful (Wisd. Sol. 11:9-10). Times of national distress are seen as the divine judgment in wrath (Bar. 4:6, 25; I Macc. 1:64; Asmp. Moses 8:1). The visions of Enoch behold the entire race of man subject to God's anger (Enoch 84:4). Even the moon and the stars have incurred God's wrath (III Bar. 9:7; Enoch 18:16).

The averting of God's wrath is sought variously through prayer (Test. Reuben 1:8; Enoch 84:5); a life of righteousness (Ecclus. 44:17); repentance (Prayer Man. 8, 13; Ecclus. 17:24; Test. Judah 23:5); a new priesthood (Test. Levi 18:1-14); intervention of Moses or of Elijah (Wisd. Sol. 18:21; Ecclus. 48:10; cf. Mal. 4:5-6); or by God's own intercession directly:

He who turned toward it was saved, not by what he saw,
but by thee, the Savior of all
(Wisd. Sol. 16:7; cf. Num. 21:5-6).

The full OT notion of God's wrath is taken up in the Talmudic literature, continuing as a significant feature in the theology of the rabbinical exposition of scripture. See *bibliography*.

4. The wrath of God in the Dead Sea Scrolls. The noncanonical writings among the Qumran scrolls seem to dwell mainly on the effects of God's wrath more than on the "affect" in the Deity himself—a distinction applicable to the NT also. A sharp line is drawn in these writings between those who can expect divine blessing, on the one hand, and those who can expect annihilation at the hand of God, on the other. The "period of wrath" (קָרָן חַרֵּן) is a time of punishment from God in suffering and trouble for the community (CDC 1.5; IQH 3.28), and the author of the Damascus Document reads Israel's history as a repeated kindling of God's wrath (1.17; 2.4; 3.7; 4.7; 7.17; 9.13, 22, 26, 40). The Manual of Discipline promises "eternal perdition in the fury of the God of vengeance" to those who walk by the "spirit of error" (see *bibliography*; IQS 4.12), and among the legends inscribed on the trumpets and standards appearing in the War of the Sons of Light are several that display wrath termini. Prominent in the imagery of divine wrath is the metaphor of refining or the refiner's crucible, denoting an experience through which the saints must persevere (קָרָן [1QS 4.20]; מַצְרָה [1QS 1.16; 8.4; CDC 20.27; 1QM 17.9; cf. Mal. 3:2-3]).

5. The wrath of God in the NT. The view advocated by Marcion in the second century, and by

others since, that the righteous anger of the OT deity is alien to the loving God who is the Father of Jesus Christ, does not gain support from the NT itself (see MARCION, GOSPEL OF). Here, as in the OT (see § 2f above), the dimension of God's love measures the severity of his wrath (cf. John 3:16, 36). Here, as there, the idea draws its seriousness from historical memories and expectations within the believing community. It describes a part of the concrete experience of faith rather than an abstract speculation on the nature of God.

a. The wrath of God and the ministry of Christ.

Only on a single occasion do the gospels attribute anger to Jesus by using an explicit word for it (ὀργή; Mark 3:5), and only once does Jesus himself refer thus explicitly to divine anger (Luke 21:23). But while these passages are important by themselves, there is a large number of others also in which wrath proves to be a significant aspect of God's revelation in the ministry of Jesus.

Certain parables and sayings, considered together, scarcely allow another interpretation when one observes such characters and symbols as the angry householder (Luke 14:21); the angry king (Matt. 18:34; cf. vs. 35!); the house ruined by storm (Matt. 7:27); the punishable stewards (Luke 12:47-48); the vindication of the elect (Luke 18:7); exclusion from the kingdom of God (Mark 10:15); the shut door (Matt. 25:10); outer darkness (Matt. 8:12, etc.); the great tribulation (Mark 13:19); fire (Matt. 7:19; John 15:6); hell (γέεννα; Mark 9:43-48; cf. Luke 12:5 and "eternal fire" in Matt. 18:8-9; etc.); and the rejection at judgment (Matt. 7:23; Mark 8:38; etc.).

The divine anger is clearly the presupposition whenever Jesus denounces those who flout what they know to be the will and purpose of God, or who scorn repentance (cf. Mark 9:42). The "woes" of Matt. 23 condemn the sinfully arrogant and proud, while according to Luke 13:4-5, except each of us repent, he will perish as "those eighteen upon whom the tower of Siloam fell and killed them" (cf. 13:1-3 also), and Jesus finds it possible to speak of him who "never has forgiveness" (Mark 3:29; see UNFORGIVABLE SIN). The compassion and mercy of Jesus find an element of their strength in his very capacity for anger (as much as for sorrow) whenever he finds the gracious will and purpose of God met with human hardness of heart (cf. Mark 3:5). He reacts with angry irritation (ἀγανάκτησις) to the disciples' arrogance toward the children (Mark 10:14). Evident behind his actions at the cleansing of the temple (Mark 11:15; cf. John 2:15) and beneath his stout words against an unbelieving audience (John 8:44; cf. Matt. 12:34; 15:7) is a deep indignation at hypocrisy and at profanation of the holy. These and the many other examples of the deep disturbance within Jesus at human trespass against the divine love point to the reaction in holy wrath of that love itself; indeed, the divine wrath is here operative.

b. Wrath and the Atonement. Jesus treats the divine wrath with full seriousness, but never as if he felt at ease with it; far less, as if he gained satisfaction from its outworking (cf. Matt. 23:37-39!). Rather, he arouses men to its reality as a part of his total work of bringing them to accept with him the regenerat-

ing love of the God under whose wrath the whole race stands. To this end he requests baptism from John, thereby casting his lot with the sinner (Matt. 3:15). He becomes obedient to his Father's will "even [to] death on a cross" (Phil. 2:8). He alludes to his death as the cup that he must drink (Mark 10:38) which the Father has given him (John 18:11); and of this "cup" he prays that, if possible, it pass from him (Luke 22:42-44; cf. John 12:27), before he accepts it in the Cross. Whoever recalls other contexts of crisis in the Bible where the cup is the symbol of divine wrath (e.g., Pss. 60:3; 75:8; Isa. 51:17; Jer. 25:15; 49:12; etc.), and takes with full seriousness the cry of Jesus on the cross: "My God, my God, why hast thou forsaken me?" (Matt. 27:46; Mark 15:34; cf. Ps. 22:1), can scarcely escape the conclusion that as Jesus approached his death, he knew the full weight—without himself being its provocation—of the wrath of God.

It is clear in any case that the NT writers saw in the crucifixion and resurrection of Christ the lifting of God's wrath from all who so accepted it in faith (see JUSTIFICATION). For Paul he is "Jesus who delivers us from the wrath to come" (I Thess. 1:10; 5:9-10; cf. Rom. 5:9), so that "there is therefore now no condemnation for those who are in Christ Jesus" (Rom. 8:1). "For our sake he made him to be sin who knew no sin, so that in him we might become the righteousness of God" (II Cor. 5:21). Nearly all the NT writers proclaim their like conviction on this matter in one fashion or another (cf. Gal. 3:13; Eph. 2:3-7; II Tim. 1:10; Tit. 3:3-5; Heb. 9:15, 26; I Pet. 1:18-19; etc.). See ATONEMENT.

c. Wrath and sanctification. Against those Christians who "outraged the Spirit of grace" (Heb. 10:29) by supposing that they now rested in complacent security apart from moral issues and the serious questions of faith and practice—as if one might "continue in sin that grace may abound" (Rom. 6:1; cf. vs. 15; 3:8)—the NT writers warn that conversion into the New Covenant brings, not less concern with obedience to the divine will, but, for the first time, a true appreciation of its demands on the believer and of his utter and continuing dependence on the grace of God as revealed in Jesus Christ (Rom. 7:15-25; Eph. 4:1, 17; 5:1-2; Col. 3:5-17; I Pet. 1:14-16; 4:17; see SANCTIFICATION)—and, by the same token, a graver consequence if the new responsibility is scorned.

"These things are warnings for us"—thus do Paul and others draw a lesson from the loosing of God's wrath against his chosen people as told in the OT (I Cor. 10:6; cf. vs. 1-12; Heb. 3:7-19; Jude 3-16 [cf. Exod. 32; Num. 25]; etc.). And addressing the church, the author of Hebrews ponders in all soberness: "How shall we escape if we neglect such a great salvation?" (Heb. 2:3).

d. The Day of Wrath and the lordship of Christ. The "Day of the LORD" proclaimed by the OT prophets was for them already a "day of wrath" for all who stood opposed to the divine plan of salvation (see § 2d above). For the NT likewise, the drama of salvation is to play itself out in one final "judgment of the great day" (Jude 6), bringing therewith the conclusion of history. On the presupposition that anyone's rejection of God's redemptive work in

Christ is his own considered choice in that time, far from its being an occasion of general indulgence, the NT anticipates it as the "day of wrath when God's righteous judgment will be revealed" (Rom. 2:5; cf. Rev. 6:15; see DAY OF JUDGMENT; ESCHATOLOGY OF THE NT). The NT both ends and begins with warnings about the "wrath to come" (Matt. 3:7; Rev. 19:15; 22:12, 18), and the theme recurs in the gospels (see § 5a above) and letters (Rom. 5:9; I Cor. 5:5; Eph. 5:6; I Thess. 1:10; II Thess. 2:8; II Tim. 1:12, 18; 3:1; etc.).

One of the most striking images of the unfolding Day of Wrath, and certainly one of the most significant for the understanding of NT thought, is that of the flight of men to hide "in the caves and among the rocks of the mountains" from the "face of him who is seated on the throne, and from the wrath of the Lamb" (Rev. 6:15-16; see PAROUSIA). Under the figure of the Lamb, who is at once the "Lion of the tribe of Judah," Jesus Christ is himself the agent of the divine wrath (Rev. 5:5, 6-14; etc.). Here, indeed, "Jesus Christ is Lord" (Phil. 2:11), and "the Father . . . has given all judgment to the Son" (John 5:22; cf. Matt. 28:18). This aspect of the Lordship of Christ has already been anticipated by Paul, e.g., who sees in him the revelation not only of the righteousness but also of the wrath of God (Rom. 1:17-18), and by the author of the Fourth Gospel, who finds that "he who does not obey the Son shall not see life, but the wrath of God rests upon him" (John 3:36; cf. vs. 18). In fact, it is not impossible to trace the full idea to Jesus himself, saying with regard to his own ministry: "I came to cast fire upon the earth; and would that it were already kindled!" (Luke 12:49; cf. vss. 51-53).

e. The termination of the wrath of God. One may conclude, therefore, that the NT differs on two counts at this point from the OT. On the one hand, it takes a graver view of the wrath of God than do even the OT prophets; on the other, it has discovered a hope of reconciliation with God unknown to the OT. "God has not destined us for wrath, but to obtain salvation through our Lord Jesus Christ" (I Thess. 5:9).

While the concluding chapters of the NT find that "the devil," "the beast," and "the false prophet" will be "tormented day and night for ever and ever" (Rev. 20:10), God's wrath shall not burn in eternity, since whatever opposes his love has ceased to be; for them creation is undone (Rev. 20:14-15). But in the "new heaven" and the "new earth," "death shall be no more, neither shall there be mourning nor crying nor pain anymore"—there is no wrath—"for the former things have passed away" (Rev. 21:1, 4; note Isa. 25:8; 35:10).

WREATH. The translation of the following words, all of which refer to some type of circular adornment:

a) גְּדִילִים (I Kings 7:17). A circle of chain work adorning the capitals of the pillars JACHIN AND BOAZ in Solomon's temple.

b) לִיָּה (I Kings 7:29-30, 36; KJV ADDITION; cf. לִיָּה, "garland"). A decoration of bronze on the stands for the lavers before Solomon's temple. The wreaths surrounded the representations of lions, oxen, cherubim, and palm trees on the stand and were also at the sides of the supports for the lavers. See LAVER.

c) Στέφανος (I Cor. 9:25; KJV CROWN). The prize for winning an athletic contest.

In addition to these words translated "wreath," the KJV uses "wreathen work" to render שְׂבַכָּה (II Kings 25:17; II Chr. 4:12-13; RSV NETWORK) and עֲבָתָה (Exod. 28:14, 22, 24-25; 39:15, 17-18; RSV "cords"; see CORD; BREASTPIECE OF THE HIGH PRIEST).

E. M. GOOD

WRESTLING. In OT times, when warfare had already achieved a series of tactical and strategic levels, with steadily advancing systems of weapons, mankind looked back to a simpler and more romantic past, when heroes triumphed or fell in hand-to-hand combat. This combat is usually reflected in terms of wrestling. The best-known illustration is Gen. 32:25-33, where Jacob "wrestled" (Hebrew root קָמַח) with a divine being and emerged as the victor.

The distinctive form of wrestling in the Bible world is belt-wrestling, whereby the combatants wear special belts upon which the holds are made.* This belt, called by various names in Hebrew, became an important possession of every man of consequence. Thus Judah's three personal articles of identification are his seal, staff, and wrestling belt ([פְּתִילִים]) in Gen. 38:18, 25. The same root (פְּתַל) describes poetically the strugglings of Rachel with her sister (Gen. 30:8) in explanation of the name Naphtali. Fig. WRE 27.

27. Belt wrestlers, in bronze, from Khafajah; Early Dynastic (first part of third millennium)

An awareness of belt-wrestling is necessary for perceiving the imagery in certain passages. E.g., Isa. 11:5 describes the Davidic king in the golden age thus:

Righteousness shall be the belt [רִמּוֹן;
RSV "girdle"] of his waist,
and faithfulness the belt [רִמּוֹן; RSV "girdle"]
of his loins.

The undertones might be paraphrased as follows: The Messiah will be a hero, not of physical violence, but of virtue. Indeed, in the Hebrew expression "gird your loins" (in the sense of "get ready for action," which has become part of the English language also), an echo of ancient belt-wrestling continues to reverberate.

WRITING AND WRITING MATERIALS. Writing was known and practiced in the ancient Near East long before the Hebrews took possession of Palestine. As we shall see, the early claims that writing was unknown in Palestine in patriarchal times are quite unfounded. We shall first discuss the development of the writing systems indigenous to the various areas of the Mediterranean world, then describe the materials employed, and finally trace the evolution of the book from scroll to codex.

A. DEVELOPMENT OF WRITING. 1. Mesopotamia. The first system of writing for which we have evidence is probably that invented in Mesopotamia sometime after the middle of the fourth millennium B.C. This was most likely the creation of the Sumerians (see SUMER) to meet their administrative and economic needs. It developed, as did all the earliest scripts, from a pictographic stage—i.e., the use of pictures to tell a story.* These pictures were then employed to designate both the objects depicted and the ideas associated with them. Thus a picture of the sun represented, not only the sun itself, but also the concepts "day," "bright," etc.; that of a foot

From Driver, *Semitic Writing* (The British Academy, Schweich Lectures, 1944)
28. Archaic pictographic tablet, from Kish

meant also "stand," "walk," or "carry." This stage may be called the logographic, in which logograms—also called ideograms—or "word signs" are employed. Fig. WRI 28.

The limitations of such a system are apparent when it becomes necessary to record an abstract concept or a proper name. An ingenious solution was devised on the "rebus" principle, whereby the logogram for an object might be used to represent a homophone—i.e., another word having the same sound; cf. our use in children's books of the picture of an eye to represent the pronoun "I," or the drawing of a tin can to express the verb "to be able." At this stage the system becomes phonetic, and since Sumerian—an agglutinative language—is composed of elements which are usually of one syllable (rarely two), the phonetic value of the signs tends to be syllabic.

It now becomes possible to indicate grammatical elements by the use of signs with such syllabic values—e.g., *gar*, "make"; *e-gar*, "he made"; *e-gar-re-éš*, "they made"; *é*, "house"; *é-ta*, "from the house." Moreover, the various possible readings of a logogram may be distinguished by the use of "phonetic complements," which indicate the final syllable of the word. Finally, certain signs known as "determinatives" were used as classifiers, to indicate the range of meaning of certain words written by means of logograms, such as objects of wood or stone, proper names, fish, etc. Such means of reducing ambiguity were offset, however, by the system's inherent polyphony, for many signs representing homophones had the same sound, and one sign might likewise possess more than one phonetic value.

These signs were incised on tablets of soft clay with a stylus (see §§ B1c, 2a, below). At first they were written in vertical columns like Chinese, beginning at the upper right-hand corner of the tablet. Later, the manner of holding the tablet was altered, so that the signs were turned ninety degrees, resulting in horizontal lines of writing running from left to right. Since the use of clay as a writing material favored straight lines rather than curved, the pictures gradually became stylized and simplified, and use of the stylus led to the wedge-shaped lines from which comes the name CUNEIFORM. Fig. WRI 29.

During the first half of the third millennium the system was adopted by the Akkadians (see ASSYRIA AND BABYLONIA) to write their Semitic tongue. Logograms, phonetic complements, determinatives, and syllabic signs were all employed, and many addi-

29. Table showing the development of cuneiform signs

tional values were given to signs to express the sounds peculiar to Semitic speech, so that the system became a very cumbersome one, requiring in its classical form some six hundred signs. So effective was it, however, that it was very soon appropriated by the Elamites (see ELAM), in a simplified form, to replace their earlier pictographic script. In the second millennium it was adopted by the Hurrians (see HORITES) and HITTITES, and finally by the Urartians of Armenia in the first half of the first millennium. Thus the system was eventually employed to write at least six unrelated languages. It also influenced the development of two other cuneiform scripts: the alphabetic script of Ugarit (see § A4 below) and the syllabic system of Old Persian, composed of fifty-one signs.

The Aramaic language, written in a cursive alphabetic script (see § A4 below), was also used in Mesopotamia during the Neo-Assyrian period, as is attested by Aramaic notations on some cuneiform tablets. Since papyrus or leather would be the usual writing materials in this case, they have long since perished in the damp Mesopotamian soil. However, Assyrian reliefs of the eighth and seventh centuries B.C. portray scribes writing on a flexible material with pens beside other scribes who use a stylus to incise cuneiform signs on clay tablets.

2. **Egypt.** Archaeological evidence from Egypt points clearly to a period of fertile Mesopotamian influence at the end of the fourth millennium. Since the hieroglyphic system of writing makes its appearance at this point, and springs forth full-blown with no indications of development such as are present in Mesopotamia, it may be assumed that Asiatic influ-

ence was at work here too. This is not to say that the Egyptians took over the Sumerian writing system, but rather that they adopted its principles, including such features as logograms, phonetic complements, and determinatives. See § A1 above.

With this initial impetus, the Egyptians soon developed along independent lines. The forms of the individual hieroglyphs changed but little during their long history,* and were at all times clearly recognizable, unlike the highly stylized cuneiform signs. This was because they were carved in stone, and regarded as a form of art complementary to the finely carved reliefs. A second major difference was the fact that the phonetic symbols were not syllabic, as in cuneiform, but consonantal only. Thus the plan of a house, for which the Egyptian word was *pāru, could be used for any word which required the consonants *pr* in that order, such as *pīre, "to go out." Similarly, the representation of a mouth, Egyptian *ra, could be employed to render the consonant *r*. The picture of a rib, the word for which contained the consonants *spr*, provided a means of writing the word *sāpēr, "to approach." The total disregard of vowels in the hieroglyphic script, a feature of most Semitic alphabetic scripts also, means that we are ignorant of the pronunciation of ancient Egyptian, except insofar as we can reconstruct its vowels from contemporary transcriptions of Egyptian words into syllabic cuneiform or from Coptic, the latest stage of Egyptian, which was written with Greek letters. Fig. WRI 30.

Hieroglyphic					Hieroglyphic Book-Hand	Hieratic			Demotic

From *When Egypt Ruled the East* (The University of Chicago Press)

30. Egyptian hieroglyphs and their cursive equivalents

These logograms which became phonetic signs contain from one to three consonants. The fact that there were sufficient uniconsonantal signs to express all twenty-four of the consonantal phonemes in the Egyptian language made it possible for hieroglyphic to become an alphabetic system. This revolutionary step was never taken, however, and it remained for the Semites in Syria-Palestine to devise such an alphabet. See § A4 below.

Although hieroglyphic was normally reserved for stone inscriptions, it was occasionally written with a pen in a somewhat cursive fashion. For more rapid writing with pen and ink on papyrus, however, a still more cursive form was developed at the very beginning, known to us as hieratic. In this form of script

the signs were much simplified, and ligatures were frequent. At the end of the eighth century B.C. a still more abbreviated form of the script was introduced for letters and business documents, which we call demotic. By this time the original forms of the signs were but rarely recognizable. All three methods of writing were employed side by side for some centuries: hieratic until the third century A.D.; demotic until the end of the fifth century A.D.; and hieroglyphic, in a debased form, till as late as the fourth or fifth century A.D. Finally, *ca.* the third century A.D., the Greek alphabet was adopted for the writing of the Egyptian language. This phase, which is known as Coptic, lasted as a living language until the sixteenth century. Egyptian is thus unique in affording us written evidence of a single language over a period of some four and a half millenniums.

Hieroglyphic was written normally from right to left, but occasionally from left to right, and though at first only in vertical columns, later also in horizontal lines. Hieratic was written only from right to left, until the nineteenth century B.C. in vertical columns, and thereafter in horizontal lines. Demotic is found only in horizontal lines, from right to left.

During the fourteenth century B.C., Akkadian was the international language, and consequently cuneiform writing on clay tablets was also employed by the Egyptian royal scribes in their correspondence with Western Asiatic states. A notable example is the letters discovered at TELL EL-AMARNA* (*see also* INSCRIPTIONS § 2). In the Persian period, Aramaic was in common use, and in a later period, Greek (*see* INSCRIPTIONS §§ 4-5). Figs. CLA 35; TEL 10.

3. Anatolia. At some time during the first half of the second millennium B.C., the inhabitants of E Asia Minor whom we know as the HITTITES adopted the cuneiform syllabary of Mesopotamia (*see* § A1 *above*) to write their Indo-European language on clay tablets. The script was ingeniously adapted to express such characteristics of the language as consonantal clusters unknown to Sumerian or Akkadian. An interesting feature of Hittite cuneiform is "allography"—i.e., the use of Sumerian logograms or syllabically spelled Akkadian words intended to be read with their Hittite equivalents. A few texts contain passages in another language closely related to Hittite, known as Luwian, and written in the same script.

Between 1500 and 700 B.C. another script, indigenous to Anatolia, was in use for inscriptions on stone found at various sites throughout S Anatolia and N Syria. This is a hieroglyphic system, unrelated to that of Egypt, although perhaps stimulated by it. It appears to have been especially in vogue for royal inscriptions of the Neo-Hittite petty kingdoms at such places as Carchemish, Zenjirli, and Hamath. It is the rulers of these states who are described in the OT as the "kings of the Hittites" (II Kings 7:6; II Chr. 1:17).

The hieroglyphic signs, unlike those of Egypt, express syllabic values. They are composed of consonant plus vowel only, unlike the cuneiform system, which also has signs for vowel plus consonant and for consonant plus vowel plus consonant. The texts are written boustrophedon—i.e., in horizontal lines reading from right to left and left to right

alternately. The language of these inscriptions, but recently deciphered, is called, for want of a better name, Hieroglyphic Hittite. Although related to cuneiform Hittite and Luwian, it is not the same. The great bilingual inscription from Karatepe (*see* INSCRIPTIONS § 3), containing versions in Phoenician and Hieroglyphic Hittite, confirms in a remarkable fashion the pioneer efforts to read and understand the language. It is likely that the hieroglyphic script was also written on wood or other perishable materials, but these have long since disappeared.

The Akkadian language was also well known in Anatolia. At Kültepe in E Asia Minor, a colony of Assyrian merchants of *ca.* 1900 B.C. has left a great horde of clay tablets written in Old Assyrian. Some five centuries later, Akkadian was the language of international trade and diplomacy throughout the ancient Near East, and was employed by the Hittite rulers for their treaties with Egypt and their correspondence with the Egyptian pharaoh. Excavations at Hittite sites have also yielded some cuneiform texts in Hurrian, the language of the HORITES.

4. Syria-Palestine. The unique position of this area as a bridge between Egypt and Western Asia, subject to the cross-currents flowing from these culturally productive centers, produced a remarkably complicated development in the history of writing. As a result, many experiments were made, and it was here that the revolutionary step was taken of creating the first true alphabet.

As might be expected, the writing systems of the neighboring empires are to be found in use in Syria-Palestine. Egyptian hieroglyphic inscriptions on a multitude of scarabs* and many stelae and statues (*see* INSCRIPTIONS § 1) testify to Egyptian influence from early times. This should occasion no surprise, as the region formed part of the Egyptian Empire during the Eighteenth to Twentieth Dynasties, and long before this time was in close contact through trade relations. Fig. SEA 35.

The same situation holds true for Akkadian cuneiform. Although the use of clay as a writing material was not native to Palestine, about a score of tablets in the form of letters, business documents, and lists have been found at Taanach, Tell el-Hesi, Gezer, Jericho, Megiddo, and Shechem. As elsewhere dur-

From Driver, *Semitic Writing* (The British Academy, Schweich Lectures, 1944)

31. A pseudo-hieroglyphic inscription, from Gebal

ing the fourteenth century, Imperial Akkadian was the lingua franca, so that the local governors of Syria-Palestine reported to the Egyptian court in that language, as the Tell el-Amarna Tablets bear witness (*see* INSCRIPTIONS § 2). In such cosmopolitan centers in Syria as Ugarit, cuneiform tablets in Hurrian and Sumerian were also found.

A stela from Balu'ah in ancient Moab bears an inscription in a linear script dated by some scholars to the late third millennium. So badly weathered is it that the writing is not sufficiently legible for certainty with regard to the signs. It may be that this is an example of the first indigenous script in the area. It is also possible that the script of the Balu'ah

32. Alphabetic clay tablet, from Ugarit (fourteenth century B.C.), with legend of Keret, king of the Sidonians

stela is the same as that of a small group of inscriptions on stone and bronze tablets unearthed at Byblos, the biblical Gebal (see GEBAL 1).^{*} These "pseudo-hieroglyphic" inscriptions, as they have been called, date perhaps from the period between the eighteenth and fifteenth centuries. Since there are 140 or more signs, the system cannot be alphabetic, but must be syllabic. Whether there was any influence from Egyptian hieroglyphic is doubtful. The writing appears to run from right to left. Although several attempts at decipherment have been made, the inscriptions cannot yet be said to have been satisfactorily read. Fig. WRI 31.

An archaeological event of unusual importance was the discovery in 1929 of hundreds of clay tablets at the site of ancient UGARIT in N Syria.^{*} Dating from the early fourteenth century, these tablets were inscribed in a hitherto unknown cuneiform script. Since there were only twenty-nine signs (some with variant forms), it was evident that this script must be alphabetic. When deciphered, the language proved to be an early form of Canaanite. Like the other cuneiform systems, Ugaritic reads from left to right, although three texts are written in the reverse direction! The alphabet is purely consonantal, but is unusual in that there are three signs for 'āleph (the glottal stop), depending upon whether the accompanying vowel is "a," "i," or "u." The reason for this may be the fact that the Ugaritic script was also employed to write the unrelated Hurrian language, in which, unlike Ugaritic, words might begin with vowels. One of the alphabetic signs, indeed, was specially devised to represent a non-Semitic phoneme peculiar to Hurrian. Figs. WRI 32; UGA 3, 11.

One helpful feature of the script is the use of wedges to indicate the word division. In the development of this script, one may suspect the influence of the cuneiform system of Mesopotamia on the one hand, and that of the Palestinian linear alphabet, to be discussed in a moment, on the other. Two short inscriptions in this script have turned up in Palestine: one on a tablet from Beth-shemesh, and another on a copper knife from the vicinity of Mount Tabor.

As has been suggested, the Ugaritic script was not the first alphabet. This honor belongs to a linear script developed in the S, represented by about twenty-five inscriptions from the Egyptian turquoise

mines in the Sinai Peninsula.^{*} To be dated ca. 1500 B.C., these proto-Sinaitic inscriptions are written in a consonantal ALPHABET which was clearly derived from Egyptian hieroglyphic on the acrophonic principle, to be read in vertical columns or in lines from right to left. The same alphabet is employed in three short inscriptions from Gezer, Lachish, and Shechem, probably of a somewhat earlier date. Far from being illiterate, therefore, the inhabitants of Syria-Palestine were making use of at least five systems of writing during the Late Bronze Age (nineteenth to fifteenth centuries). Fig. WRI 33.

A later stage of this script is represented by a number of inscriptions from such sites as Beth-shemesh, Byblos, and Lachish. These proto-Canaanite texts, as they are termed, dating from the thirteenth and twelfth centuries, form the link between the proto-Sinaitic inscriptions and the tenth-century Phoenician inscriptions from Byblos (see EPIGRAPHY). The script was adopted by the Arameans between the eleventh and tenth centuries. It was they who introduced the practice of using the letters for *w*, *y*, and *h* to indicate the presence of final long vowels (*matres lectionis*), a feature which appears in Moabite and Hebrew texts from the ninth century on. In the eighth-century Aramaic inscriptions this device was further extended to represent medial long vowels, and eventually 'āleph was also employed as a vowel letter. Word dividers were frequently used in the Aramaic, Moabite, and Hebrew inscriptions.

The script, both lapidary and cursive, in which Hebrew was written from the beginning of the tenth century B.C. to the second century A.D., was a form of the Phoenician script.^{*} However, sometime between the third and second centuries B.C., modified forms of the Aramaic characters, which had by this time deviated considerably from the contemporary "Phoenician" forms, were adopted by the Jews. This script was to be known later as the "square" character, and is that of our modern printed Hebrew Bibles. Jesus' reference to the "jot" (RSV "iota")—i.e., *yōdh*—as the smallest of letters (Matt. 5:18) was true only for the square script. The "Phoenician" forms still continued to be used for some time, appearing on Hebrew coins from the second century B.C. to the second century A.D. and, most surprising of all, in some of the DEAD SEA SCROLLS. They also survived in a somewhat ornate form in the Samaritan script. Fig. WRI 34.

An innovation in the Aramaic or square script was the use of special final forms of certain letters. These begin to appear first in papyri of ca. 300 B.C. from Egypt, but did not come into general use until later. The employment of word dividers in earlier inscriptions has already been noted. Such dividers are also used in Dead Sea MSS written in the archaic script. The separation of words by spaces is also a feature of some of these scrolls written in the square characters. Apart from the use of *matres lectionis*, there was no attempt to indicate the vocalization of the consonantal script until the development of vowel signs between the fifth and seventh centuries A.D. At first two supralinear systems were devised, one Palestinian and the other Babylonian. A third system, known as the Tiberian and introduced at the end of the eighth century, was sub-

33. Inscription in alphabetic script, from a statue at Serabit el-Khadem in Sinai

linear. This latter is the method still in use in our Hebrew Bibles.

There is clear evidence, then, for the use of writing in Syria-Palestine from the earliest times. The report of Wen-amon, an Egyptian official who was sent to Byblos ca. 1100 B.C., mentions that five hundred papyrus rolls were delivered to the Syrian ruler in partial payment for a load of timber. This gives some indication of the extent to which writing was

practiced there. The OT references to writing in the time of Moses (Exod. 17:14; 24:4; 39:14, 30; Deut. 27:3; 31:24; cf. Josh. 18:4-9) are thus not to be regarded as anachronisms. An episode from the time of Gideon, in the twelfth or eleventh century, bears witness to the knowledge of writing on the part of a young man from a small town who was captured at random (Judg. 8:14). As in Egypt and Mesopotamia, those who were able to write were usually govern-

34. Examples of alphabetic writing as found on a variety of documents: (1) Ahiram Inscription; (2) Yehimilk Inscription; (3) Samaria Ivories; (4) Gezer Calendar; (5) Moabite Stone; (6) Kilamuwa Inscription; (7) Samaria Ostraca; (8) Shema Seal; (9) Bar Rakab Inscription; (10) Siloam Inscription; (11) Nerab Stelae; (12) Pharaoh Letter; (13) Lachish Ostraca; (14) Jewish Seals; (15) Meissner Papyrus; (16) Leviticus Fragments; (17) Elephantine Papyri; (18) Eshmunazar Sarcophagus

ment officials, as in the case of David's "scribe" (RSV "secretary") Seraiah (II Sam. 8:17). We must assume the existence of scribal schools as in the neighboring nations. The products of such schools would be known as "ready scribes" (Ps. 45:1). Isaiah could read and write (Isa. 8:2) in the eighth century, although this was not true of all (Isa. 29:12). By the late seventh century, however, a certain degree of literacy was presupposed (Deut. 6:9; 24:1).

5. Crete, Cyprus, and Greece. The Minoan civilization which flourished on the island of Crete developed a form of writing *ca.* 2000 B.C. Inscribed on stone or clay tablets, this is a hieroglyphic system as yet undeciphered. It reads from left to right or boustrophedon—i.e., alternately from left to right and the reverse. Between the seventeenth and sixteenth centuries a cursive script known to scholars as Linear A replaced the earlier system. It has been found incised on tablets of stone, metal, or clay, as well as written with ink on potsherds. Unfortunately this too has not yet been satisfactorily deciphered.

Ca. 1400 B.C., Crete came under the domination of the Mycenaean civilization, which had made its appearance on the Greek mainland. Coincident with this a new form of writing known as Linear B came into use which continued to be employed until the overthrow of the civilization *ca.* 1200. Many clay

tablets from the beginning of this period have been unearthed at Knossos, while hundreds of others, dating to the end of the period, have been excavated on the Greek mainland at Pylos and Mycenae.* In 1953 this script was deciphered, and proved to be a syllabary—composed of consonant plus vowel or vowel alone—written from left to right and representing an early form of Greek. Fig. WRI 35.

From these Minoan-Mycenaean linear scripts the inhabitants of the island of Cyprus derived *ca.* 1400 a form of writing, still undeciphered, known as Cypro-Mycenaean. Introduced probably by Mycenaean settlers, it remained in use at least until the middle of the eleventh century. By the seventh century we encounter still another script, which seems to be a further development of the preceding, and was destined to remain until the first century B.C. This Cypriote script is likewise a syllabary of fifty-four signs expressing a simple vowel or consonant plus vowel, and written either from right to left—occasionally left to right—or boustrophedon. It was designed for an undeciphered non-Greek language, but the majority of texts found so far are in Greek.

The most significant development, however, was the adoption of the linear alphabetic system devised in Syria-Palestine (see § A4 above; see also ALPHABET). This purely consonantal Phoenician script was employed for the writing of Greek *ca.* 800 B.C. A major advance was made when certain signs which represented consonants not phonemic to Greek were used to indicate vowel sounds—viz., ' for *a*, *h* for *e*, *h* for *ē*, *y* for *i*, and ' for *o*. To this were later added further symbols. This was the alphabet which was passed on to Italy for the writing of Etruscan and Latin, and which is the ancestor of our own.

First written from right to left as in Syria-Palestine, it was soon written boustrophedon and finally exclusively from left to right. No attempt was made to indicate the division of words. Cursive forms of the letters soon developed for use in business texts. For literary use, however, uncials—i.e., what we call capitals—were used until the tenth century A.D. In the preceding century a literary cursive hand was developed known as minuscule.

B. WRITING MATERIALS. 1. Writing surfaces.

a. Stone. In all ages stone has been used for inscriptions when a high degree of permanence was desired. In Egypt, where stone is plentiful, the walls of countless temples and tombs which were built for eternity were covered with carved hieroglyphic texts. Stelae and rock inscriptions are also common.* Discarded flakes of limestone were sometimes used as a cheap writing material, and were inscribed in ink with hieratic, demotic, or Coptic texts. Figs. BET 33, 36; MER 40.

Stone is relatively scarce in Mesopotamia, however, so that cuneiform inscriptions on this material are confined almost exclusively to royal texts or public stelae like that which bears the Code of Hammurabi.* The same situation holds true for inscriptions in Elamite, Hieroglyphic Hittite, and Old Persian. Fig. WRI 36.

In Syria-Palestine stone was likewise used for inscriptions in Aramaic or Canaanite intended for public display, such as the Moabite Stone,* Siloam Inscription,* etc. (see INSCRIPTIONS §§ 3-4). The He-

36. Weightstone inscribed in three languages: Old Persian, Elamite, and Babylonian

brew Gezer Calendar, incised on limestone, is an example of the use of this cheaper material for less important purposes, since this may well be a school text. There are several references to the use of stone in the OT, beginning with Moses' tables of stone (Exod. 24:12; 34:1; Deut. 4:13). The stone might be prepared to receive the writing by a layer of plaster (Deut. 27:2-3). Joshua is said to have written on stone (Josh. 8:32), and Job cried out that his words might be so inscribed indelibly (Job 19:24). Figs. MOA 66; INS 14.

b. Metal. As a writing material, metal is much less common than stone. Cuneiform inscriptions in Sumerian, Akkadian, and Old Persian were incised on objects made of gold, silver, copper, and bronze, and occasionally on tablets or plaques of such metals. Hittite cuneiform texts also occur on bronze tablets. Some of the pseudo-hieroglyphic inscriptions from Byblos are written on bronze tablets, and inscribed copper arrow or lance heads have been found in Palestine. That bronze plaques were used there is clear from I Macc. 8:22; 14:18, 27, 48. To this must be added the copper scroll discovered at Qumran (see DEAD SEA SCROLLS) purporting to contain a description of the hiding places of the treasures of the sectarian community. It has been plausibly suggested that the word ספר, translated "book" in Job 19:23; Isa. 30:8, may represent the Akkadian *sipparu*, "bronze," since the accompanying verb in both cases is חקק, "to carve, engrave." Gold is mentioned in Exod. 28:36 as a writing surface.

Lead was extensively used in Greece and Italy for magical charms, and occasionally for literary works such as those of Hesiod. A lead roll inscribed with Ps. 80 in Greek was found at Rhodes. Inscriptions on the same material from Carthage bear Punic texts. From a much earlier period is the use of lead

for some Hittite texts. It may be that the enigmatic passage in Job 19:24 refers to this practice, if בעש ברזל ועפרת can mean "with an iron stylus on lead." However, perhaps the last word should be read יצפרן—i.e., "with an iron pen and point" (cf. Jer. 17:1). See PEN.

c. Clay. The alluvial soil of the Tigris-Euphrates Valley made clay the most readily available and thus the cheapest material for writing purposes in Mesopotamia. It was this fact that led to the development of the Sumero-Akkadian pictographic signs into the peculiar cuneiform shapes. The later spread of this script to such peoples as the Hittites, Hurrians, and Elamites was likewise accompanied by the use of CLAY TABLETS. The moist clay was first kneaded into shape, and the surface smoothed with one end of the stylus. Normally the tablets were flat on one side and convex on the other. The signs were then impressed on the clay with the stylus, first on the flat side and then, if necessary, continuing on the convex side. The clay tablets would soon harden, but to increase their strength they were often baked in the sun. If greater durability was desired, they might be baked in a fire.

Legal documents were usually signed by means of cylinder seal impressions. For the greater protection of such documents they might be encased in an envelope of clay,* on which a copy or merely a summary of the contents would be written. For longer

37. A clay tablet in its envelope

literary works a series of tablets, each carefully labeled and numbered, might be employed, or larger tablets containing several columns could be used. Royal annals were usually recorded on clay cylinders or prisms of from six to ten sides. Fig. WRI 37.

The use of clay tablets was not confined to Mesopotamia and Anatolia, but spread to Syria-Palestine and Egypt when Akkadian became the language of

international diplomacy. The best evidence of this is the correspondence between the Egyptian pharaoh and the Babylonian, Mitannian, Hittite, and Arzawan rulers, as well as the local governors of the dependent states in Syria-Palestine between the fifteenth and thirteenth centuries which have come to light at TELL EL-AMARNA in Egypt and several sites in Syria-Palestine.

Probably under Mesopotamian influence, the use of clay tablets with a cuneiform alphabetic system during the early fourteenth century is found at UGARIT in N Syria. The hieroglyphic and linear syllabaries in use on the island of Crete were also written on clay tablets. There is no reference to the use of clay for writing purposes in the OT.

d. Potsherds. The use of pieces of broken and discarded pottery as a writing material was widespread throughout the ancient world. These OSTRACA were always in plentiful supply, and took the place of papyrus (see § B1g below), which was relatively expensive. With no preparation, they could easily be written on with pen and ink and even, if necessary, reused if the previous text were washed off. We find them in common use in Egypt from the Old Kingdom (ca. 2664-2155 B.C.) on, especially for school exercises containing both literary and nonliterary texts and for the needs of daily life such as letters, receipts, accounts, etc. Such texts have been found in Egyptian (hieratic, demotic, and Coptic), Aramaic, and Greek.

The use of ostraca in Mesopotamia was far more limited, since they could be used only for a script like Aramaic, which was written with pen and ink. In classical times the Athenians used them for recording the names of persons to be banished, hence the term "ostracize." A number of ostraca have been unearthed in Palestine, especially at Samaria and Lachish (see INSCRIPTIONS § 3). Although potsherds are mentioned in the OT (Job 2:8; Ps. 22:15; Isa. 30:14), there is no reference to their use for writing purposes.

e. Linen. From the third millennium on, linen is found as a writing material in Egypt, although it is not common. Because of its perishable nature, no trace of its use has survived in Western Asia, if indeed it was used. At a very much later time it was employed in Italy by the Romans and especially by the Etruscans. There is no indication of its use in biblical literature.

f. Wood and bark. Apart from the carving of hieroglyphic inscriptions on wooden statues and reliefs in ancient Egypt,* wooden tablets coated with stucco were frequently used, especially for schoolboy exercises. In Mesopotamia, despite the fact that such wooden tablets must all have perished in the damp soil, there are clear indications of their use, since the Akkadian word *lēu* (Hebrew לוח), "tablet," is often preceded by the determinative for "wood." A Neo-Babylonian letter instructs the reader to "open the tablet of Shamash," so we may conclude that this was a hinged tablet or diptych. Confirmation of this is to be found in the depiction of scribes with just such wooden diptychs on Assyrian reliefs of ca. 700 B.C. Unless these were used for writing with pen and ink, they must have been coated with clay or wax. An eighth-century relief from Zenjirli in N Syria

38. A functionary with his scepter, staff, and writing materials; on a wood panel, from the tomb of Hesi-Re at Saqqarah; Fourth Dynasty (ca. 2650-2500 B.C.)

shows a similar scene. The sole reference to writing in the Homeric epics speaks of King Proetus inscribing signs ἐν πίνακι πτυκτῶ, "on a folding tablet" (*Iliad* VI.169). In Greece of the early sixth century, Solon's laws were inscribed on triangular tablets of wood, according to Plutarch. Fig. WRI 38.

When we turn to the OT, we find clear evidence of the use of wood for writing—e.g., the wooden rods or staves in Num. 17:2-3—H 17:16-17, and the "sticks" (עֵץ) in Ezek. 37:16-17. The fact that the two "sticks" in the latter passage are to be joined together may suggest that a diptych is meant. The suggestion of some scholars that the letter in Isa. 37:14 was also a diptych is unlikely, since the same verb, פָּרַשׁ, "to spread out," is elsewhere used of a scroll (Ezek. 2:10). The use of the term דלת, "door," to describe a column of writing probably derives from the hinged "doors" of the diptych.

The word לוח in Isa. 30:8; Hab. 2:2 most likely means a wooden tablet, although in the former case it may be of metal (cf. § B1b above). The term גליון, translated "roll" in Isa. 8:1 KJV, although thought by some to be a blank sheet of papyrus because of its use in Late Hebrew to mean the margin of a scroll, almost certainly designates a wooden tablet, since it is to be inscribed with a חרשׁ, used for carving in Exod. 32:4 (see PEN). In Greece and Italy wooden tablets were usually coated with wax, and such a tablet is referred to as a πίνακίδιον in Luke 1:63.

Bark was in common use as a writing material at Rome until it was replaced by papyrus late in the second century B.C. However, it continued in use to

some degree until the fifth century A.D. Indeed, the Latin word for "bark," *liber*, acquired the meaning "book."

g. Papyrus. The ancient Egyptians employed papyrus plants, which grew in profusion throughout the land, for many purposes. By far the most important of these was the manufacture of an excellent writing material which the Greeks called PAPHYRUS, from which is derived our word "paper." Strips were cut from the stalk of the plant and laid side by side, then a second layer superimposed at right angles. When beaten and smoothed, it formed a light but sturdy material. The sheets might then be joined together to form a long strip which could be rolled up. See § C below. Fig. EGY 20.

When papyrus was first made in Egypt we do not know, but a blank roll has been recovered from the tomb of Hemaka, chancellor of King Wedimu of the First Dynasty (ca. 3000 B.C.). The earliest extant inscribed roll comes from the reign of Neferirkare of the Fifth Dynasty (ca. 2470). It became the commonest writing material in the ancient world, and remained in use until it was replaced by true paper ca. the tenth century A.D. The latter, invented in China, did not reach the Near East until the seventh or eighth century.

Papyrus was used in Egypt for both literary and nonliterary texts. These were written with pen and ink in hieratic—rarely in cursive hieroglyphs—demotic, and Coptic, as well as in Aramaic and Greek. The use spread to other regions, and the production and export of papyrus became a major industry in Egypt. The receipt of five hundred rolls of "fine quality papyrus" by the Syrian ruler of Byblos in return for a consignment of timber is recorded ca. 1100 B.C. in the report of the Egyptian Wen-amon.

We may assume that the scribes who wrote Aramaic made use of papyrus in Mesopotamia, but the nature of the soil has preserved no remnants of it. The Assyrian reliefs of scribes writing with pens on sheets or rolls of a pliable material probably have to do with leather (see § B1h below). Papyrus was introduced to Greece at least as early as the fifth century B.C., and to Italy by the second century. We have seen that it was extensively used in Syria by the beginning of the eleventh century. That it was also in use in Palestine by the sixth century is proved by the impressions made by the fibers of the now decayed papyrus document visible in the clay seal of Gedaliah excavated at Lachish, although we may be sure that it was already well established by then.

Despite the fact that the OT several times refers to the papyrus plant (ספסל; Exod. 2:3 ["bulrushes"]; Job 8:11; Isa. 18:2; 35:7 ["rushes"]), there is no clear indication of its use in writing. However, the deed of purchase signed by Jeremiah (Jer. 32:10-14) was undoubtedly a papyrus document, folded and sealed like those found at Elephantine. It is also most likely that the scroll written by Baruch at Jeremiah's dictation was of papyrus rather than leather, since the odor of burning leather (Jer. 36:23) would have been quite unbearable. Moreover, the LXX version of this chapter renders the Hebrew מגלה, "scroll," by χαρτίον (36:2, 4, 6, 14—G 43:2, 4, 6, 14) or χάρτης (36:23—G 43:23), both words denoting a sheet of papyrus. Some of the MSS recovered from the caves

in the Wadi Qumran* and the Wadi Murabba'at were on papyrus, and so was the famous NASH PAPHYRUS. Papyrus was the material on which the Pauline letters and other early NT documents were written. This is clearly indicated by the word χάρτης in II John 12. Fig. DEA 10.

h. Leather and parchment. The use of tanned skins for writing purposes goes back to the early third millennium in Egypt. The earliest mention of leather documents is found in a text of the Fourth Dynasty (ca. 2550 B.C.), and the oldest extant example dates from the Twelfth Dynasty (ca. 2000). It remained in use in Egypt until the Arab conquest in the seventh century A.D. A collection of Aramaic letters to Persian officials in Egypt dating from the fifth century B.C. is all on leather.

Leather, like papyrus, could not survive the climate of Mesopotamia, so that no examples survive. However, Assyrian reliefs of the eighth and seventh centuries depict scribes writing, not only on clay tablets, but also on a flexible material which could be papyrus or leather. The probabilities favor the latter. In the Neo-Babylonian period cuneiform texts mention the use of leather for writing, and by the Persian period the Akkadian words for "deed" and "missive" are sometimes preceded by the determinative for leather objects. Diodorus Siculus preserves a statement of Ctesias to the effect that the Persians used διφθέραι, "skins," for their historical records, and Herodotus tells how the Ionian Greeks employed them also.

Though hides were tanned by the Hebrews (cf. Num. 31:20; II Kings 1:8), the OT makes no reference to writing on leather. As seen above, the scroll described in Jer. 36:23 was probably of papyrus rather than leather. Yet most of the DEAD SEA SCROLLS were of leather, and Talmudic law required copies of the Hebrew Torah which were intended for public worship to be inscribed on leather rolls (cf. Aristeas 176).

PARCHMENT began to replace leather ca. the third century B.C. Instead of tanning the hides of sheep or goats, they were now prepared by removing the hair and rubbing them smooth. Pliny mentions the belief that Eumenes II (197-158 B.C.) of Pergamum was the inventor of parchment. But a Greek document on this material dating ca. 195 B.C. has been found at Dura-Europos, which shows that this could not have been so. The story more likely reflects the fact that it was at this time, early in the second century, that parchment became a popular writing material.

The term "vellum" is usually reserved for parchment of an especially fine quality prepared from the skins of calves or kids. It superseded ordinary parchment for the best books in the first half of the fourth century A.D.

2. Writing instruments. a. Stylus. For inscriptions on stone or metal, of course, a chisel would be required. But for the incising of texts on softer materials such as clay or wax, a stylus would suffice. In Mesopotamia this was of reed, hardwood, and perhaps bone or metal. The tip of those employed to write cuneiform was either square or triangular. The representations on Assyrian monuments of the stylus wielded by scribes are unfortunately too vague for certainty on this point. Fig. WRI 39.

39. The Assyrian bearded scribe on the right writes on a clay tablet with a stylus; the scribe on the left is writing with a brush on either skin or papyrus; from a wall painting at Tell Ahmar (perhaps early eighth century B.C.)

The OT speaks of an iron stylus or chisel (עֵט; Job 19:24; Jer. 17:1) for use on stone. In Jer. 17:1 it is associated with a צֶפֶן שְׂמִיר—i.e., a point, or perhaps stylus, of DIAMOND or flint; the term צֶפֶן may also have been present in the original text of Job 19:24 (see PEN). The חֶרֶט of Isa. 8:1, which was a tool for carving (Exod. 32:4), must surely have been a stylus for use on a wooden tablet. See § B1f above.

b. Pen. For writing with ink on papyrus, leather, parchment, wooden tablets, or ostraca, the Egyptians used a rush cut obliquely and then frayed at the end to form a brush. The same kind of instrument was used by the Hebrews to write on the ostraca from Samaria and Lachish, and we may be sure that this is what is meant by the term עֵט—which also means “stylus”—in Ps. 45:1—H 45:2; Jer. 8:8, and hence that Baruch used such a brush to write the scroll mentioned in Jer. 36.

At the end of the third century B.C., about the time when parchment made its appearance, Greek writers in Egypt devised a new type of pen by pointing the end of a reed and splitting it to form a nib. This was adopted by the Egyptians for the writing of their own language at the beginning of the Christian era. This true pen was called κάλαμος, “reed,” in Greek, and is thus named in III John 13.

c. Ink. The Egyptians, because of the nature of their script, used ink from the earliest times. Black ink was made from carbon in the form of soot mixed with a thin solution of gum. This was dried into cakes, and then moistened with water for use. Red ink was also used, especially for headings—hence our use of the term “rubric.” For carbon, red ocher or red iron oxide was substituted.

The Hebrews probably used the same kind of black ink, although that of the Lachish Letters apparently contained some iron. This ink, which was called דִּי (Jer. 36:18), could be washed off (Exod. 32:33; Num. 5:23; Ps. 69:28—H 69:29), as was the case in Egypt. The NT term for “ink” is μέλαν, “black” (II Cor. 3:3; II John 12; III John 13).

d. Scribal equipment. In Mesopotamia scribes carried their styluses in a case, probably made of leather, which was worn in the waistband. In early times Egyptian scribes made use of a hollow reed

Courtesy of the Oriental Institute, the University of Chicago

40. Egyptian scribal outfit consisting of a slate palette with restored water jug and a brush case with a rush pen

case for their brushes. To this they added a wooden palette containing two cavities for the cakes of black and red ink, which was joined by a cord to a small pot designed to hold water for the moistening of the ink.* From this combination came the hieroglyph for “writing” and “scribe.” Fig. WRI 40.

Figs. WRI 41-42.

At a later period, the case and palette were combined. These wooden or ivory palettes had receptacles for the ink as well as a slot for the brushes, and could be tucked in the belt. In this form they became common throughout the Near East and were used by the Hebrews (Ezek. 9:2-3, 11; RSV “writing case”; KJV “inkhorn”). Even the Hebrew word קֶטֶב, denoting the scribal kit, was borrowed from the Egyptian name *gsti*.

A straight edge for ruling lines, pumice stone for smoothing the papyrus, a cloth or sometimes a sponge for washing off the ink when an erasure was required, and a knife for cutting leather or papyrus and sharpening pens (Jer. 36:23; see PENKNIFE) completed the equipment required by a scribe.

C. DEVELOPMENT OF THE BOOK. The use of clay tablets in Mesopotamia meant that long literary works posed a problem, for either large tablets of many columns were required, or else the text had to be distributed over several separate tablets. In the latter case a series of tablets—e.g., seven for the

Creation Epic, twelve for the Epic of Gilgamesh—were inscribed with portions of the text, each ending in a colophon giving the name of the work, the number of the tablet, and a “catchword”—i.e., the opening words of the following tablet.

Egypt was fortunate in that papyrus and leather were much more suitable—or at least manageable—for the production of lengthy works. Sheets of papyrus were pasted together to form long strips which, like leather, could be rolled up into a convenient size. Such papyrus scrolls were usually between nine and eleven inches in height and rarely exceeded thirty feet in length, since longer scrolls would prove unwieldy. There were exceptions, the most outstanding being the Harris Papyrus, which measured 133

41. An Egyptian scribe holding a papyrus roll in his hands; his eyes are inlaid with quartz, ebony wood, and crystal; of the Fifth Dynasty (ca. 2500-2350 B.C.), from Saqqarah

feet by 17 inches, and a copy of the Book of the Dead, which was 123 feet by 19 inches. Our word “volume” is derived from the Latin *volumen*, “something rolled up,” hence “book roll.” Egyptian papyrus rolls were but rarely inscribed on both sides. The text was written in columns of a convenient width, with spaces between them.

The Hebrews also rolled up their documents of papyrus or leather (Isa. 34:4; cf. Rev. 6:14), and hence called them by the term מגלה, “roll,” or ספר, “book roll.” This latter expression is rendered in the NT by κεφαλὴ βιβλίου (Heb. 10:7) in a passage which quotes from Ps. 40:7—H 40:8. Occasionally they would write on both sides of a scroll (Ezek. 2:10; cf. Rev. 5:1). The text was likewise written in columns (ללה; Jer. 36:23), leaving ample margins. Since ca. thirty feet was the normal length of a scroll, it was just sufficient for a book like Isaiah, but necessitated the division of the Pentateuch into five sections. Samuel, Kings, and Chronicles would each fill one scroll in the unvocalized Hebrew

42. A diorite statue of Amen-em-het, a scribe of the Eighteenth Dynasty in Egypt (ca. 1570-1310 B.C.)

script; but when these were rendered into Greek, each book required two scrolls, because the use of vowels in the Greek script doubled the length of the text—hence our present division into I and II Samuel, etc. Scrolls were often stored in pottery jars (Jer. 32:14), as were cuneiform tablets in Mesopotamia, Egyptian and Aramaic papyri in Egypt, and the scrolls from the Dead Sea region.

For legal or business documents the Greeks and Romans had used tablets of wood or lead, the former coated with wax. These were often laid on each other and joined together by boring holes near the edges and securing them by thongs like the earlier diptychs (see § B1f above). The Latin word *caudex* or *codex*, which denoted a tree trunk or block of wood, was used to describe these.

After a time the advantage of this arrangement over the scroll, which was inconvenient, since it required two hands to unroll and roll it for reading or writing, led someone to experiment with a “codex” of papyrus sheets. Four or five sheets of papyrus were folded over and stitched together to make a quire of eight or ten leaves. Parchment was also treated in the same way; but since there was a slight difference in appearance between the flesh side and the hair side, the quires were so folded that the hair sides faced each other, and the flesh sides likewise. A number of such quires produced a codex similar to our modern book.

Influenced still by the practice followed in writing on scrolls, the columns of writing were still narrow. Thus the famous biblical codices SINAITICUS;

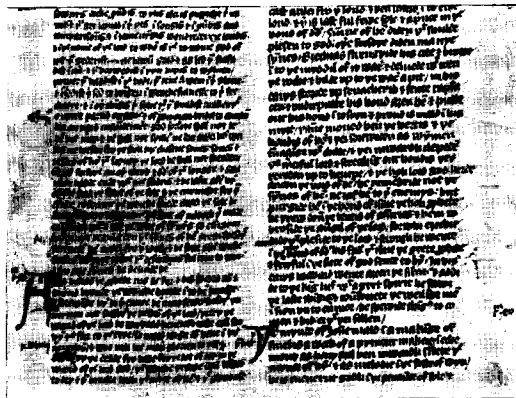

VATICANUS; ALEXANDRINUS were written with four, three, and two columns respectively to a page.* Eventually only one or two columns became usual. Figs. SIN 65; VAT 1; ALE 15.

The codex form gradually displaced the scroll for non-Christian literature at least as early as the first century A.D. By the second and third centuries, however, the codex was in most common use in Christian circles. During the first half of the fourth century parchment gave way to vellum for the finest books.

XANTHICUS zān'thī kəs [Ξανθικός]. A month in the Seleucid or Macedonian calendar, corresponding to the Jewish month Nisan (April), mentioned in the letters of Antiochus V and the Romans to the Jews in II Macc. 11:27-38.

XERXES zûrk'sēz [Old Pers. *xšayāršan*; Elam. *ik-še-ir-iš-ša*; Akkad. *hi-ši'-ar-ša*; Ξέρξης; Aram.-Heb. חַשְׁיָרֶשׁ, חַשְׁיָרֶשׁ (Papyri)]. 1. Xerxes I, a Persian king of the Achaemenian Dynasty (486-465 B.C.).

Xerxes was a son of Darius the Great (see **DARIUS** 1)* and Atossa, daughter of Cyrus the Great (see **CYRUS**); also, the husband of Amestris. Xerxes succeeded his father in 486, after having been designated as his heir apparent, according to his own statement: "Other sons of Darius there were, (but) . . . Darius my father made me the greatest after himself. When my father Darius went away from the throne [died], by the will of Ahuramazdā I became king on my father's throne";¹ this account agrees with the fuller story given by Herodotus (VII.1-4). Figs. XER 1; DAR 4; AHU 6.

The memory of the difficulties, such as revolts in Egypt, Babylonia, and elsewhere, which Xerxes had to meet in the beginning of his reign, is preserved in one of his own inscriptions as follows: "When that I became king, there was rebellion among these countries which are inscribed above [referring to the preceding list of satrapies]. Then Ahuramazdā bore me aid; by the favor of Ahuramazdā I smote that country and put it down in its place." His attitude in matters of religion is illustrated by the following passage from the same inscription: "And among these countries there was (a place) where previously false gods [*daiva*] were worshipped. Afterwards, by the favor of Ahuramazdā, I destroyed that sanctuary of the false gods [*daivadāna*], and I made proclamation, 'The false gods shall not be worshipped!' Where previously the false gods were worshipped, there I worshipped Ahuramazdā."¹

Simultaneously, large-scale preparations for a major war against continental Greece were under way. At first the expedition met with success. Four months after the spectacular crossing of the Helles-

1. Darius (522-486 B.C.) on the throne, with Xerxes (486-465) behind him and the symbol of Ahura-mazda above him; from the Council Hall at Persepolis

pont (480), Xerxes had succeeded in occupying Attica and maneuvering the enemy fleet into a position of virtual blockade in the Bay of Salamis. The ensuing naval battle ended, however, in disaster (480), and after an indecisive land battle at Plataeae (479) the Persian armies withdrew from Greece, while the Persian fleet suffered a surprise defeat at Mycale in Ionia (479). Internal troubles which kept him occupied until the time of his death (465) provide a partial explanation for the little interest taken by Xerxes in the subsequent struggle for the liberation of the Greek cities of Cyprus and the coast of Asia Minor, which was stubbornly fought by Cimon and others in an atmosphere of political tension in favor of continued warfare kept alive by the performance of such dramas as Phrynichus' *Phoenissae* and *Capture of Miletus* and Aeschylus' *Persae*.

The king **AHASUERUS** of the book of Esther has been identified with King Xerxes. See **ESTHER**, **BOOK OF**.

2. Xerxes II (424), who reigned forty-five days.

YEAR [שָׁנָה]. In the course of its political, economic, social, and religious evolution during the biblical period the Israelite people employed several different calendars (see CALENDAR), in each of which the year was reckoned in varying manner.

The oldest calendar, aptly termed the pentecontad calendar (see SABBATH), borrowed from their Canaanite predecessors in Palestine and employed by Israel uninterruptedly until the time of Solomon, was of distinctly agricultural character in that it reckoned time primarily by the state of the annual crop. The day of cutting the first sheaf of the new crop constituted its New Year's Day (see NEW YEAR). Such a year was naturally of practically the same duration as a solar year. This calendar divided its year into seven pentecontads, periods of fifty days each—i.e., seven weeks plus one day, a day of sacred character at the close of the pentecontad, which stood outside the week and bore the distinctive title עֵצְרָה "(Festival of) Conclusion." These seven pentecontads plus two especial, festival periods, each of seven days, one following immediately upon the fourth pentecontad (see BOOTHS, FEAST OF) and the other immediately upon the seventh pentecontad—i.e., during the final seven days of the year (see PASSOVER AND FEAST OF UNLEAVENED BREAD)—plus the New Year's Day, a day naturally of supreme

sanctity, which likewise stood outside the week and followed immediately upon the second seven-day festival, constituted the year of this early calendar, 365 days in all.

Apparently this calendar took no cognizance whatever of the moon and did not in any way reckon time by months. Inasmuch as crop conditions varied considerably even in closely neighboring districts, it follows that this calendar was entirely local in character, and that accordingly there could have been as yet no single, uniform calendar for the entire land or people. However, during the pre-Israelite, Canaanite period, when the city-state, with limited territorial range, was the normal political unit, and likewise during the initial period of Israelite sojourn in the land, when the clan or the tribe was the normal unit of folk organization, during both of which periods agriculture was the dominant occupation, this pentecontad calendar, despite its distinctly localized character, plainly sufficed as an instrument of time-reckoning.

However, with the gradual fusion of the various Israelite tribes into a single nation and the establishment by David of an Israelite empire, the attendant development of international political relations and the inauguration of international commerce, the inadequacy of the localized pentecontad calendar became increasingly apparent. A calendar which would be uniform, not only for the entire Israelite nation itself, but also for its neighbors, was indispensable—in other words, a calendar of international, and even of universal, character. By the first quarter of the tenth century B.C. the Tyrians, then the world's foremost colonizing and internationally commercial people, had evolved such a calendar, one distinctly solar in character. Solomon borrowed this calendar from his Tyrian allies and made it official for Israel. The year of this calendar was, of course, specifically solar. Solomon set its New Year's Day upon the day of the autumnal equinox. This day, and with this, of course, the precise duration of the year, could be determined quite accurately (see NEW YEAR). This solar year consisted normally of 365 days, but, whenever necessary, a leap year was celebrated. This solar year was divided into 12 months, of 30 days each, with a 5- or, in leap years, 6-day supplementary period inserted, most probably at the end of the year, where it was co-ordinated in some meaningful manner with the 7-day Festival of Ingathering, a festival of the earlier, pentecontad calendar, which Solomon incorporated into this new calendar and transferred from its original time of celebration, immediately after the fourth pentecontad—i.e., normally late in October—to a time about a month earlier, the 7 final days of the new solar year, the week immediately preceding the autumnal equinox. The 12 months of this solar year were known in Israel at first by their borrowed Tyrian names. Of these three are cited in the Bible: Ziv (I Kings 6:1, 37), Ethanim (I Kings 8:2), and Bul (I Kings 6:38), and perhaps also a fourth, Abib (Exod. 13:4; 23:15; 34:18; Deut. 16:1). Later, apparently under Assyrian cultural influence, the months came to be designated by number, reckoned, following Assyrian practice, from the vernal equinox. Accordingly the New Year's Day of this solar cal-

endar was celebrated, under this system of month-designation, upon VII/10.

However, even though this solar calendar continued as the official calendar of Judah as long as the temple stood, it never completely supplanted in popular usage the earlier, pentecontad calendar. Farmers and shepherds tend to cherish ancient beliefs, institutions, and customs indefinitely. And when, after the Babylonian overthrow of the Judean kingdom in 586 B.C., agriculture became again the dominant occupation of the people remaining in the land (II Kings 25:12), not at all surprisingly the pentecontad calendar came once again into general use. However, with the dedication of the second temple in 516 B.C., the solar calendar was revived and functioned as the official calendar of the Jewish community of Palestine until the destruction of this second temple in 485 B.C. Even during this period the pentecontad calendar continued to flourish in rural circles. Following the destruction of the second temple, it persisted as the calendar in general use by the Jewish people of Palestine, but in a modified form, because it had borrowed certain elements of the solar calendar, particularly the reckoning of the year by months. In this modified pentecontad calendar the year consisted of 52 weeks or 364 days, divided still further into 12 months, of 30 days each, with 4 additional days inserted, one each at the ends of the third, sixth, ninth, and twelfth months. This calendar, with this distinctive reckoning of the year, came eventually to be employed by various Jewish sects, composed largely of rural groups, for their own inner affairs and religious practice, from the fifth century B.C. onward, and found concrete record in such sectarian writings as Jubilees, Enoch, and the newly discovered Qumran documents, and likewise in some measure in the NT.

At ca. 450 B.C. an altogether new calendar, distinctly lunar in character, was instituted. Of the details of time-reckoning according to this calendar, particularly in the biblical period, we know little, because of paucity of reference thereto in biblical writings. Our main biblical source of information with regard to it is the Priestly Code, particularly its secondary strata. It reckoned the normal lunar year as of 354 days, divided into 12 months of alternately 30 and 29 days each, with a thirteenth, intercalary month, consisting of either 29 or 30 days, inserted, usually following the twelfth month, whenever lunar observation, coupled with solar time-reckoning, indicated a need for this.

As long as the third temple stood, this procedure was undoubtedly regulated by the priests. The practice of designating the months of this new lunar calendar by number persisted for some time; but eventually, apparently in the fourth century B.C., the Babylonian month names came to be employed regularly in connection with this calendar. Probably at this time and as a phase of this same trend, the system of reckoning the day from sunset to sunset superseded the older system of reckoning from sunrise to sunrise. And undoubtedly in connection with this change the two ancient, seven-day festivals, Passover and Booths, were set to begin at sunset of the full-moon days of the first and the seventh months respectively. Such was the lunar calendar

and year in Jewish practice until the close of the biblical period.

Following the downfall of the Jewish state and the destruction of the Herodian temple by the Romans in A.D. 70, and with the consequent speedy termination of priestly authority, supervision of the calendar passed into the hands of the Rabbis. By them during the ensuing three centuries this lunar calendar was developed with regard to precise determination of new-moon days and also coordination with the solar year and its seasons, and thus gradually evolved into the calendar employed for Jewish religious time-reckoning still today.

J. MORGENSTERN

YEAST. The translation of ζύμη (KJV LEAVEN, as elsewhere) in Gal. 5:9.

YELLOW. A color noted in medical diagnosis and the description of gold in the OT. The Hebrew word צהב (LXX ξαυθίζουσα) translated "yellow" in Lev. 13:30, 32, 36, refers to the color of hair indicating the presence of leprous disease. The two final consonants of צהב, a root suggesting the gleam of bronze, are identical with those of יהב, "gold." While the similarity is striking, no etymological relationship between these two words has been established.

Gold plating, on the wings of a dove, represented as "yellow" (KJV) or "green" (RSV) in Ps. 68:13, is a rendering of ירקרק. This word is derived from the root ירק, meaning "to grow green or pale," and elsewhere is translated "greenish."

See also GREEN; COLORS.

C. L. WICKWIRE

YIRON יִרְוֹן [יראון] (Josh. 19:38); KJV IRON ȳrōn. A fortified town in Naphtali. It is probably to be located at modern Yarun, in N Galilee.

YOKE [מוטה, צמד, alternately COUPLE, PAIR]; ζυγός]. Basically, a wooden frame placed over their necks to join two oxen or other draft animals. The pull of the plow, sled, or cart was against the broad shoulders of the draft animal. For horses, a different harness was developed. Construction of the yoke varied. The single yoke-bar (Jer. 28:10) with two loops of rope or nooses for the necks is the most simple form. A rod with two pairs of smaller rods at right angles to the yoke-bar like teeth, fitting over the necks and shoulders, was also used for pulling (Num. 19:2; Deut. 21:3). To the middle of the yoke-bar was

connected a single shaft, which pulled the plow or cart. This was usually lashed to the yoke-bar (עַי; I Sam. 6:7). The carpenter probably made both yokes and plows. Joseph and Jesus undoubtedly had experience in making yokes.

The yoke was used on human beings when they were taken captive (Jer. 28:10; cf. I Kings 12:9; II Chr. 10:4). Slaves were sometimes kept under such a real yoke of wood or iron (I Tim. 6:1). It is a small step from this use to the figurative use of the yoke as a symbol of subjection and servitude. It was predicted that Jacob would put a yoke on Esau (Gen. 27:40). Under Jeroboam the people complained of the forced labor as an unjust yoke (I Kings 11:28; 12:11, 14). Slavery is like a yoke (Ecclus. 33:27); so is any hardship (Lam. 3:27; Ecclus. 40:1). The humiliation and oppression of one nation by another is expressed by the yoke of bondage (Jer. 27:8; 28:4; Hos. 11:7; cf. Deut. 28:48; Isa. 47:6). To break out of slavery or subjugation was expressed as "breaking the yoke" (Jer. 28:2; cf. Isa. 9:4; 14:25). God promises to break the "dominion" (KJV "yokes") of Egypt (Ezek. 30:18). To break away from God and to disobey as a sinner or rebel is to break his yoke (Jer. 2:20; 5:5; Ecclus. 51:39). The yoke of obedience to Christ is easy, compared with the subjugation of a person by the law, sin, and evil (Matt. 11:29). Sin is a yoke (Lam. 1:14). The law legalistically applied is a yoke (Acts 15:10; Gal. 5:1).

A team or pair of oxen tied together with a yoke is called a "yoke" (צַמֵּר; ζυγός; I Sam. 11:7; I Kings 19:21; Luke 14:19; when used of other than oxen, these terms are not translated "yoke"). Oxen usually work in pairs, but occasionally four are used for more pull. To be yoked with Baal is a sin (Num. 25:3, 5). Paul uses the term "yokefellow" to refer to his helpers (Phil. 4:3). This may mean they are a team, but it is probably better to interpret that they are all under the yoke of Christ.

A measure of land translated "acre" was called a צַמֵּר because it was the amount of land a pair of oxen could plow in a single day (I Sam. 14:14; Isa. 5:10).

C. U. WOLF

YOKEFELLOW. See EUODIA.

YOM KIPPUR יוֹם כִּיפּוּר. See ATONEMENT, DAY OF.

YOUTH. The time, with no fixed limit, beyond infancy and before a person's prime; a time of vigor and opportunity, though not of judgment and maturity.

The commonest Hebrew terms are נַעַר (feminine נַעֲרָה), עַלְמָה (feminine עַלְמָה), and בְּחֹרִית, "a youth"; and נַעֲרִים and בְּחֹרוֹת, "youth" (abstract noun). The first of these terms often means "manservant" or "maid," but basically all the terms mean "the young" or "youth." The one word בְּחֹרִית is so often paired with the term for "virgin" that it seems to be

reserved for young men before marriage. But a girl may still after marriage be called a נַעֲרָה (e.g., Judg. 19:3) or an עַלְמָה. See VIRGIN.

The numerical age intended is by no means clear. The word נַעַר is used at times even for infants or the very young (Exod. 2:6; Judg. 13:8; I Sam. 1:22; 4:21), for whom there are also other words (see CHILD), but it is used for the fully grown as well (cf. Gen. 34:19; II Sam. 18:5). Lev. 27:1-8 might suggest the age of twenty as the time when one passed from youth to maturity. There, for the purpose of fixing a scale of values, persons are divided into groups according to age, and twenty appears as the lower age limit of the group most highly valued, therefore presumably in the prime of life. The census taker counted the population from twenty years old upward (Exod. 30:14). These were subject to the poll tax, and the males at this age were "able to go forth to war" (Num. 1:3). From Num. 14:29 we may also infer that moral responsibility arrived with the age of twenty. But Levites were not admitted to service in the tent of meeting until they were twenty-five (Num. 8:24). Yet despite the limit suggested by Num. 1:3, the soldier is often called נַעַר, and the upper age limit of "youth" is not a fixed number.

It is probable that the term "youth" was sometimes used merely to denote immaturity. Several biblical personalities refer to themselves disparagingly as "young." Thus Jeremiah says nothing clearly about his numerical age when he protests: "Ah, Lord GOD! Behold, I do not know how to speak, for I am only a youth" (Jer. 1:6), nor does King Solomon when he prays: "O LORD my God, thou hast made thy servant king . . . , although I am but a little child" (I Kings 3:7); they only display a becoming modesty. Cf. Judg. 6:15.

As "the beauty of old men is their gray hair," so "the glory of young men is their strength" (Prov. 20:29), and when "fair virgins" and "young men . . . faint for thirst" (Amos 8:13), the ultimate in tragedy is at hand.

The young, of course, lack the experience and the wisdom of their elders; therefore the repeated admonitions in such a book as Proverbs, where the "sons" addressed are everyman's sons (e.g., Prov. 7:24). These youth are invited to find wisdom and gain understanding (Prov. 8:32-36 and often), and they are warned to shun the "loose woman" who lies in wait for youthful victims (Prov. 7:4-12).

But Koheleth, aware of the infirmities of old age (see AGE, OLD, § 2), begs youth to have its fling "before the evil days come": "Rejoice, O young man, in your youth, and let your heart cheer you in the days of your youth" (Eccl. 11:9; 12:1).

Not infrequently Israel's early history is poetically termed its "youth" and either regretted as the time of national perversity (Ezek. 23:19), or fondly remembered as a time of good faith between God and people (Hos. 2:15—H 2:17), according to the writer's mood or purpose.

S. H. BLANK

Z

ZAANAIM. KJV alternate form of ZAAANANNIM.

ZAANAN zā'ə nān [צאנן]. An unidentified town in W Judah (Mic. 1:11). Often considered same as Zenan (Josh. 15:37). Both names are mentioned in context with Lachish.

ZAAANANNIM zā'ə nān'im [צאעננים]; KJV BEZAAANANNIM bī zā'ə nān'im [בצעננים] (Josh. 19:33); KJV ZAANAIM zā'ə nā'm [צענים] (Judg. 4:11). A border point in the territory of Naphtali (Josh. 19:33); the site of the encampment of Heber the Kenite, where Sisera was slain (Judg. 4:11).

Textual problems preclude certainty in the reading of the place name. Whether צאנן should be read "oak" (so RSV), or as the first element of a compound name "Elon-bezaananim," is not clear; however, the absence of the article before צאנן supports the latter view. Arguments can also be advanced in favor of reading "Zaanaim" or "Bezaananim" for "Zaananim," although the latter has the weight of tradition on its side.

Its location is unknown, owing largely to the textual disorder of Judg. 4. It has been suggested that the site mentioned in Josh. 19:33 is to be identified with Khan et-Tujjar, a caravan station on the road from Beth-shan to Damascus ca. four miles SE of ADAMI, while that of Judg. 4:11 is located at Lejjun between Megiddo and Tell Abu Qedeis, possibly the Kedesh of this reference. It is also possible that the same site—the one in Naphtali—is referred to in both passages.

Bibliography. G. F. Moore, *Judges*, ICC (1895), pp. 119, 121; F.-M. Abel, *Géographie de la Palestine*, II (1938), 64, 439. G. W. VAN BEEK

ZAAVAN zā'ə vān [צאון], *perhaps* from צוע, tremble, quake; Samar. and LXX *point to* צוען (Gen. 36:27; I Chr. 1:42); KJV ZAVAN zā'vān in I Chr. 1:42. The second son of clan chief Ezer; ancestor of a native Horite subclan in Edom.

ZABAD zā'bād [זבר], he (God) has given, or gift; *shortened form, of Proto-Aram. origin; cf. Palmyrene, S Arab., Elephantine, and Babylonian parallels; Apoc. Σαβανναιοϋς, Σαβαθος, Σαβαδαίας*; KJV Apoc.

BANNAIA bā nā'yə (I Esd. 9:33); SABATUS sāv'ə tās (I Esd. 9:28); ZABADAIAS zāv'ə dā'yās (I Esd. 9:35). 1. A name in a list tracing the descent of Elishama (I Chr. 2:36-37; cf. vs. 41). The list identifies Elishama's ancestor Sheshan (vss. 34-35) with Sheshan the Jerahmeelite (vs. 31), thus placing Elishama in the line of Judah.

2. A link in a postexilic Ephraimite genealogy which traces the genealogical tree of Joshua (I Chr. 7:21), if vss. 25-27 are to be read as the continuation of "Zabad his son" in vs. 21a. Comparison with Num. 26:35-36 suggests that here Ephraimite names have been realigned and several genealogical trees combined in replete presentation of the ancestry of Joshua.

3. Son of Ahlai; one of David's Mighty Men (I Chr. 11:41), in a list of names (vss. 41b-47) which the Chronicler attaches to a list (vss. 26-41a) comparable to the list of David's select fighting order of the Thirty (II Sam. 23:24-39a).

4. One of two servants of King Joash who assassinated him for ordering Zechariah the son of Jehoiada stoned to death (II Chr. 24:26; cf. vss. 20-22). He is called Jozacar in II Kings 12:21, where BH³ and some MSS read "Jozabad" (the differences in the last two consonants may be due to their resemblance in Hebrew). Perhaps in Chronicles somehow "Jozabad" was read and abbreviated to "Zabad." He was the son of Shimeath the Ammonitess (his father in II Kings 12:21).

5. A layman among those who put away their foreign wives and their children according to Ezra's reform banning foreign marriage (Ezra 10:27; I Esd. 9:28).

6. Another layman in the list with 5 *above* (Ezra 10:33; I Esd. 9:33).

7. A third layman in the list with 5-6 *above* (Ezra 10:43; I Esd. 9:35).

Bibliography. G. B. Gray, *Studies in Hebrew Proper Names* (1896), pp. 222-24; M. Noth, *Die israelitischen Personennamen* (1928), pp. 22, 46-47. T. M. MAUCH

ZABADEANS zāv'ə dē'anz [Ζαβαδαῖοι] (I Macc. 12:31). Arab inhabitants of a town called Zabad.

Jonathan Maccabean pursued his enemies, who retired to the other side of the river Eleutherus (modern Nahr el-Litany in the Biq'a), turned against the Arab Zabadeans, and defeated them and carried off their property.

The name of Zabad is found in several other connections and probably refers to different places. In *Corpus inscriptionum graecarum* No. 9893 a town called Zabad is said to have been situated in the region of Apamea, NW of Hamath. Curiously enough, the Greek text has "Kaprozabadeans," a Greek word form from *kepher Zabad*, "the town of Zabad." Since this Zabad is situated not far from the Orontes, it does not seem to be the same as that which is referred to in I Maccabees. But since it is mentioned in connection with the river Eleutherus, the last-mentioned town may have been situated E of that river, for it is said that Jonathan marched to Damascus after his capture of Zabad. Or that town may possibly be modern Zebedani, NW of Damascus. Zebedani is situated in a valley which is a natural line of communication from the Biq'a to Damascus.

Bibliography. E. Honigmann, "Historische Topographie v. Nordsyrien im Altertum," *Zeitschrift des Deutschen Palästina-Vereins*, 46-47 (1923-24). A. HALDAR

ZABBAI zăb'î [זַבַּי, perhaps hypocoristic for זְבַד, (God) has given; Apoc. Ὠζάβαδος (A)]; KJV Apoc. JOS-ABAD jō'zə bād. One of the Jews contemporary with Ezra who were listed as having married foreign wives (Ezra 10:28; I Esd. 9:29). He is perhaps the same individual who is mentioned as the father of a certain Baruch who worked on the Jerusalem wall in the time of Nehemiah (Neh. 3:20), unless with the *Qere* one reads "Zaccai" (זַכַּי).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 39, 47. B. T. DAHLBERG

ZABBUD. KJV form of ZACCUR.

ZABDEUS. KJV Apoc. form of ZEBADIAH.

ZABDI zăb'dî [זַבְדִּי, (Y or God) has given(?), gift (of Y or God)(?), my gift(?); a shortened form; cf. ZABAD]. Alternately: ZIMRI zîm'rî [זִמְרִי (I Chr. 2:6)]. 1. A descendant of Judah, of the family of Zerah; the father of Carmi. He founded a house one of whose members was Achan (Josh. 7:1, 17-18). He is called Zimri in I Chr. 2:6 (perhaps because of confusion in transmission: the last two consonants in these two names are similar in Hebrew; see ALPHABET).

2. A family of the tribe of Benjamin (I Chr. 8:19). 3. A Shiphmite; one of David's officials over the royal possessions. He was in charge of the "produce of the vineyards for the wine cellars"—probably the king's wine steward (I Chr. 27:27).

4. A Levite individual or family descended from Asaph (Neh. 11:17); probably to be identified with Zichri in I Chr. 9:15 (the last two consonants in these two names are similar in Hebrew).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 46-47. T. M. MAUCH

ZABDIEL zăb'dî ʔ [זַבְדִּי ʔ, El (God) has given(?), gift of God(?), my gift is God(?); see ZABAD; cf. Palmyrene *ʔabd-ila*, Akkad. *ʔab-di-ilu*, present of the god; Apoc. Σαβδιήλ]. 1. A descendant of Perez of the tribe of Judah, from whom David also was descended. Zabdiel was the father of Jashobeam (I Chr. 27:2).

2. Overseer of a group of priests. He is called the son of Haggadolim (Neh. 11:14).

3. An Arabian who decapitated Alexander Balas when he fled to Arabia for shelter, and sent the head to Ptolemy Philometer (I Macc. 11:17). Josephus calls him a prince (Antiq. XIII.iv.8).

Bibliography. G. A. Cooke, *A Text-Book of North-Semitic Inscriptions* (1903), p. 272; K. Tallqvist, *Assyrian Personal Names* (1914), p. 245; M. Noth, *Die israelitischen Personennamen* (1928), pp. 33-35, 46-47. T. M. MAUCH

ZABUD ză'būd [זַבּוּד, given; זְבוּר in some MSS; G^l Ζαχουρ] (I Kings 4:5). A son of Nathan. He served in the capacity of priest and royal friend to Solomon.

ZABULON zăb'yə lən [Ζαβουλών]. The Greek (NT) spelling for ZEBULON.

ZACCAI zăk'î [זַכַּי, (Y has) remembered, or (Y) remember(?); a shortened form; cf. ZECHARIAH] (Ezra 2:9; Neh. 7:14). Eponym or head of one of the families members of which returned from exile.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 186-87. T. M. MAUCH

ZACCHAEUS ză kē'əs [Ζακχαῖος=זַכַּי, the righteous or pure one]; KJV ZACCHEUS.

1. An officer of Judas Maccabeus' army (II Macc. 10:19).

2. A tax collector of Jericho, whose life was transformed through contact with Jesus (Luke 19:1-10).

A name with this meaning, borne, e.g., by the famous rabbi Johanan ben Zakkai in the latter half of the first century A.D., must have seemed to pious Jews ill carried by a tax collector, a collaborator with the hated Romans.

As "chief tax collector" (Luke 19:2), Zacchaeus appears as an official with general responsibility for the tax collectors of a district. Jericho, the gateway for Judea's E trade and the center of a remarkably fertile agricultural area, noted especially for its palm and balsam groves (Jos. Antiq. XV.iv.2; War IV. viii.2-3), would provide abundant opportunities for a commissioner of taxes to enrich himself.

The Jericho where Zacchaeus lived lay ca. two miles S of old Jericho. It was enlarged and beautified by Herod the Great, who made it his winter capital. In 1950-51 it was partly excavated by the American Schools of Oriental Research.

Jesus' encounter with Zacchaeus at the sycamore tree and subsequently in his home reveals the depth of Jesus' concern for outcasts, the radical character of his unconventionality, and the redemptive power of his spirit. It discloses Zacchaeus' resourcefulness in the presence of handicaps, his religious hunger, his decisiveness, and his capacity for radical repentance and restitution.

According to late, untrustworthy tradition, Zacchaeus became bishop of Caesarea (Clem. *Homilies* III.63; *Recog.* III.66).

Pritchard, "The 1951 Campaign at Herodian Jericho," *BASOR*, 123 (Oct., 1951), 8-17; J. L. Kelso, *Excavations at NT Jericho and Khirbet En-Nitla* (1955). E. P. BLAIR

ZACCUR zăk'ər [זַכּוּר, remembered, or mindful, a shortened form]; KJV ZACCHUR in I Chr. 4:26; ZABBUD zăb'ūd [*Kethibh*, זַבּוּד] in Ezra 8:14; BACCHURUS bā kyōōr'əs [Βακχούρος] in I Esd. 9:24. 1. An individual or family of the tribe of Reuben (Num. 13:4).

2. A family or clan of Simeon (I Chr. 4:26), descended from Mishma, which in Gen. 25:14; I Chr. 1:30 is an Ishmaelite name. Perhaps this family was a commingling of Simeonites and nomads of N Arabia.

3. A Levite, descendant of Merari; son of Jaaziah (I Chr. 24:27).

4. A postexilic family of singers of the Asaph group (I Chr. 25:2, 10; Neh. 12:35).

5. A descendant of Bigvai named with Uthai as

accompanying Ezra on the return from Babylon (Ezra 8:14); or, emending on the basis of "Uthai the son of Istalcurus" in the parallel (I Esd. 8:40), the father or other ancestor of Uthai. See *ISTALCURUS*.

6. A postexilic temple singer among those forced to put away foreign wives and children (I Esd. 9:24). The name is omitted from the parallel in Ezra 10:24.

7. Son of Imri; one of those who helped to rebuild the walls of Jerusalem (Neh. 3:2).

8. A postexilic Levite among those who signed the pledge of reform (Neh. 10:12).

9. A name tracing the descent of Hanan, appointed assistant treasurer by Nehemiah (Neh. 13:13).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 186-87; D. Diringer, *Le iscrizioni antico-ebraiche palestinesi* (1934), pp. 204-5. T. M. MAUCH

ZACHARIAH, ZACHARIAS, ZACHARY, ZACHER. KJV alternate forms of *ZECHARIAH*.

ZADOK zā'dōk [צדוק], righteous; NT Σαδωκ; KJV Apoc. SADDUC sād'ək; KJV NT SADOCS sād'ōk. 1. Leader of one of the divisions of armed troops which came to Hebron to turn the kingdom of Saul over to David (I Chr. 12:28). Josephus (*Antiq.* VII.ii.2) equates him with Zadok the priest, but it is not certain that this is the Chronicler's intention.

2. See *ZADOK THE PRIEST*.

3. Grandfather of Jotham king of Judah (II Kings 15:33; II Chr. 27:1); possibly the same as 4 below.

4. A descendant of Zadok the priest (I Chr. 6:12—H 5:38; 9:11; Neh. 11:11). But the similarities between these genealogies and those of the earlier Zadok cast doubt on their trustworthiness.

5. A descendant of Baana who repaired a section of the Jerusalem wall at the time of Nehemiah (Neh. 3:4; cf. Ezra 2:2).

6. A descendant of Immer who worked on the Jerusalem wall (Neh. 3:29; cf. Ezra 2:37).

7. A signer of the covenant of Ezra (Neh. 10:21). Probably the name has been added here from the list of builders in ch. 3.

8. A scribe appointed treasurer by Nehemiah (Neh. 13:13; cf. the list in Neh. 3:29, where three of the names which appear here, including Zadok, are found in the same order).

9. An ancestor of Jesus (Matt. 1:14).

R. W. CORNEY

***ZADOK THE PRIEST.** Priest of David. His descendants gained control of the priesthood of the Jerusalem temple. Zadok first appears, together with Abiathar, as priest in charge of the ark at the time of Absalom's revolt (II Sam. 15:24-37). We next hear of him as a supporter of Solomon in the dynastic struggle of David's last days (I Kings 1:22-39). After the exile of Abiathar, Zadok became the chief priest of the Jerusalem sanctuary (2:35).

1. **Origin.** Nowhere does the OT provide us with a clear and accurate picture of the background of Zadok. The genealogy of II Sam. 8:17, which makes Zadok a son of Ahitub and hence a descendant of ELI, is clearly the result of a textual corruption. Indeed, the prophecy *post eventum* of I Sam. 2:27-36 (cf. I Kings 2:27) makes it clear that the house of

Zadok was considered to have supplanted the house of Eli. Nor are the genealogies in Chronicles and Ezra (I Chr. 6:1-8—H 5:27-34; 6:50-53—H 6:35-38; Ezra 7:2), which treat Zadok as a descendant of the Aaronide house of Eleazar, any more reliable, for they repeat the error of II Sam. 8:17. See *below*.

However, it seems likely that David had a strong reason for making Zadok the equal of Abiathar, who had served his king loyally from the time of his break with Saul. This reason is doubtless related to the position occupied by Zadok before he entered the service of David.

a. **Gibeon.** According to I Chr. 16:37-41 there were two important sanctuaries at the time of David—one at Jerusalem, to which David moved the ark, and a second at Gibeon, where the tabernacle was to be found. It was at the latter that Zadok is said to have officiated. Though the historicity of the passage is debatable, it may be argued that it preserves a genuine memory of a connection between the Gibeon shrine and Zadok. Perhaps as part of David's program for making Jerusalem the focal point for the loyalty of the twelve tribes he installed the Gibeonite priest Zadok as one of the chief priests at Jerusalem, even as he brought the ark up from Kiriath-jearim. In support of this theory it is pointed out that after the exile of Abiathar not only was Zadok made the sole chief priest, but also Solomon went to Gibeon to sacrifice (I Kings 3:4).

b. **Kiriath-jearim.** To account for the connection between Zadok and the ark, it has been suggested that Zadok was a priest with the ark at Kiriath-jearim. He is identified as the brother of Uzzah, the son of Abinadab, who helped bring the ark to Jerusalem (II Sam. 6:3, reading "his brother" for "Ahio"). This theory can be combined with that of Zadok's Gibeonite origin by assuming that the house of Abinadab had moved from Gibeon to Kiriath-jearim after the ark had been returned by the Philistines.

c. **Jerusalem.** The most probable theory is that Zadok was the priest of the Jebusite sanctuary at Jerusalem when the town was captured by David, and that David permitted him to retain his priestly function in order to help reconcile the old inhabitants to their new master. The name Zadok seems to have had a special association with pre-Israelite Jerusalem. Adoni-zedek was the king of Jerusalem at the time of Joshua (Josh. 10:1, 3), and Melchizedek was its priest-king to whom Abraham gave a tithe of all he possessed (Gen. 14:17-20). The latter story may well be an etiological legend to justify the retention of the Jebusite Zadok by David; David was doing no more than Abraham had done before him. Melchizedek also appears in Ps. 110:4, where reference is made to an everlasting priesthood "after the order of Melchizedek" (cf. I Sam. 2:35, where the "faithful priest" who is to replace Abiathar is to be priest "for ever").

If Zadok was a Jebusite, it might explain why he supported Solomon instead of Adonijah for successor to David. Those who followed Adonijah had been companions of David in the early struggles of his career; the backers of Solomon appear for the first time in connection with the court at Jerusalem. Perhaps the former desired a king who would rule in

accord with the old Israelite tribal ideals, while the latter desired a more powerful, centralized monarchy based on the common oriental pattern—a desire probably shared by the non-Israelite Zadok.

2. The descendants of Zadok. The triumph of Solomon meant the triumph of Zadok; his descendants became the dominant priestly family in Jerusalem. Solomon appointed one of his sons priest (I Kings 4:2); Hezekiah's chief priest Azariah was "of the house of Zadok" (II Chr. 31:10). The more Jerusalem became the center of national life, the greater was the prestige of the Zadokites.

The fortunes of the Zadokites after the Exile are reflected in the position given to Zadok in Ezekiel and Chronicles. In the plan for the restoration of the temple and its worship given in Ezek. 40-48, the exiled Zadokites expect as the reward for their faithfulness to Yahweh that they alone shall perform the priestly functions in the new temple; the rest of the Levites are to be reduced to the status of servants (Ezek. 40:46; 43:19; 44:15; 48:11). Chronicles shows that after the Return this program was not put into practice, for we find Zadok enrolled in the larger priestly family of Aaron. But the Chronicler reserves for the family of Zadok the position of chief or "anointed" priest by placing him in the family of Eleazar, Aaron's eldest son (I Chr. 6:1-8—H 5:27-34; 6:50-53—H 6:35-38; 24:3; Ezra 7:2; I Esd. 8:2; cf. I Chr. 29:22, where it is stated that when Solomon was anointed king, Zadok was anointed priest).

ZADOKITE FRAGMENTS zā'də kit. The remains from two medieval copies of a sectarian manual in Hebrew, which were found in 1896-97 and are now in the possession of the Cambridge University Library, England. They were related to different Jewish groups like the Pharisees, the Sadducees, or the Dositheans. However, the famous MS finds in the caves near the Dead Sea (see DEAD SEA SCROLLS) have proved that the original Zadokite work was composed and used in an Essene community. Along with the other Essene writings, the Zadokite Fragments are very important for a better understanding of the main trends in Jewish piety at the time of Jesus and of early Christianity itself. A. NAME. "Zadokite Fragments" is one of the titles for an old Jewish writing whose original name is unknown. It was discovered in 1896-97 in the Genizahi—a repository for sacred MSS which were no longer suitable for use—of the Ibn-Ezra Synagogue at Old Cairo, along with other MSS written by the Karaites. The Karaites ("readers" [of the law]) were a Jewish sect flourishing in the Middle Ages, which rejected the rabbinic tradition of the Talmud, restricted itself to the study of the Scriptures alone, and therefore held old, prerabbinical writings in a high esteem.

From S. Zeitlin, *Jewish Quarterly Review*; by permission of Dropsie College for Hebrew and Cognate Learning

- 1. A page from the Zadokite Fragments, from the Cairo Genizah collection in the library at Cambridge University

S. Schechter, who edited these fragments in 1910, called them "Fragments of a Zadokite Work," because he believed that "their text is constituted of fragments forming extracts of a Zadok book," and he related them to the Dositheans, a sectarian offshoot of the Sadducees. This theory, however, is erroneous.

Since the community of this script called itself the "New Covenant in the Land of Damascus" (6.19; 8.21; cf. 20.12), in Germany its writing is usually called *Damaskusschrift*, in France *Écrit de Damas* or *Document de Damas*. The abbreviation for quotations is "CD"; sometimes "CDC" or "Dam" is still found.

The name Zadokite Fragments, however, is right insofar as the name Zadok is mentioned there. Zadok is said to have revealed the Law, which was hidden in the ark of the covenant after the death of Eleazar, Joshua, and the elders, and therefore unknown even to King David (5.2-5). This statement certainly refers to the report in II Kings 22, according to which the priest Hilkiah discovered the Law in the temple and

gave rise to the religious reform under King Josiah in 622 B.C. The sect, however, seems to have ascribed this important deed to Zadok, the chief priest under Solomon and ancestor of the priests of the sect. These priests emphasized their Zadokite origin by reference to Ezekiel, according to whom only the Zadokites are the legitimate priests for the perfect and final worship at the temple (cf. the explanation of Ezek. 44:15 in CD 3.21-4.5). They also claimed to live in a new era of rediscovering the Law. They shared this conviction with the community of the DEAD SEA SCROLLS. Although the name Damascus is not mentioned in these scrolls, the "Sons of Zadok" occur in the Manual of Discipline as the priests of the sect (1QS 5.2, 9; cf. 9.14 and 1QSa 1.2, 24; 2.3; 1QSB 3.22). The use of this name may have been extended also to the lay members of the community, since they all, the "elect of Israel," as those who participated in the holy service of God, were "Sons of Zadok" (5.3). This gave rise to a purposeful play on the words "Zadok" and *zedek* ("righteousness"): the "Sons of Zadok" were the "Sons of Zedek"—i.e., the true worshippers of God (cf. 1QS 9.14).

B. CONDITION. The fragments consist of two parts. To the first (text A) belong eight leaves of parchment measuring 8½ by 7½ inches and written on both sides. These sixteen pages of twenty-one to twenty-three lines each were written in the tenth century A.D., while the second part (text B), consisting of one great leaf with two pages of thirty-five lines each, is of a later date, perhaps the eleventh or twelfth century. Text A presents on its first eight pages a long admonition revealing the eschatological mission of the sect, and on the last eight pages a collection of laws ruling its life. The admonition is better preserved than the laws, for pp. 13-16 are badly mutilated, and sometimes the scribe gave only the headings of a new law collection (12, 19-22; 13, 20). But text A also is incomplete. This is proved in that text B presents on its first page (B 19) a text parallel to the last part of the admonition in text A (7.15-8.21), while the content of the second page (B 20) is not given in text A. On the other hand, A 7.10-20 is omitted in text B. Also, the beginning and the end of both parts, admonition and laws, seem to have been lost. They can probably be partially reconstructed with the aid of some fragments found in the Qumran caves IV and VI. The largest of these fragments offers a text corresponding to A 5.18-6.2. In cave IV have been found fragments of seven copies of the Zadokite work, some of them containing passages hitherto unknown. The number of copies used in Qumran reveals the importance of this work for the sectarians who lived there.

C. AUTHOR. The traces of authorship are scarce. The preacher in the admonition claims to impart a new revelation to his hearers, whom he addresses as "sons" (2.14). This term indicates the intimate and esoteric character of his message and points to the position of the speaker. He is a teacher who in the Thanksgiving Psalms compares his disciples to his sons or to children at the breasts of a nurse (1QH 7.2), and more precisely he can be the "overseer of the camp," who has to love its members as a father loves his sons (13.7-9). The overseer is the primary authority in explaining the exact meaning of the

Torah (13.5). He also gives insight into the mighty deeds of God and even foretells future events in detail (13.8). This task precisely is fulfilled in the two parts of our writing. The admonition illuminates both the present and the imminent future, by drawing a lesson from God's mighty deeds in the past, and the laws of the sect represent the exact meaning of the Torah. Thus the Zadokite Fragments have their setting in the catechetical practice of the sect. They were used as a manual to teach applicants and members the aims and customs of this community.

D. CONTENTS. 1. *The admonition.* *a. The course of history.* At the beginning of his revelation the teacher calls attention to an important statement. He says:

And now, hearken all ye that know righteousness
and consider the works of God,
for He hath a controversy with all flesh
and He executes judgment upon all that despise Him.
Whenever Israel sinned in that they forsook Him,
He hid His face both from them and from His sanctuary
and gave them to the sword.
But when He remembered the covenant
which He had made with their forefathers,
He caused a remnant to remain for Israel
and did not consign them to utter extinction (1.1-5).

His summons strongly recalls the law of history which was recognized by the Deuteronomist and used in his work (cf. Judg. 2:13-23). But this law undergoes change at his hand: For the Deuteronomist, Israel as a whole is punished for its disloyalty and saved by its conversion; but the preacher of the sect knows salvation for only a small part of it, the remnant. This reveals his sectarian standpoint, according to which faithfulness belongs to the few, while the many always forsake God.

The teacher expounds this point of view by going through the Scriptures "from old times until now" (2.17). His arguments, however, are not well ordered or easily understood. The introduction, in which he speaks of a "right-teacher," his followers, and his foes, is rather veiled. It probably refers to the origin of the sect. In 2.2 ff, however, he goes into the remote past. The history of sin and punishment starts with the fall of the angels, who "walked in the stubbornness of their hearts" and therefore did not keep the commandments of God (2.17-18). The sin of the angels penetrated all mankind. It led astray the sons of Noah (3.1), the sons of Jacob and their descendants in Egypt (3.4-5), the generation of Moses in the desert (3.7-8), and the people in the promised land (3.9-10).

On the other hand, there always existed an unbroken line of pious ones. Piety and sin are related to the covenant: piety means faithfulness to the covenant and keeping its orders; sin is leaving it and transgressing the boundaries of the law. God's covenant is an eternal one (3.13), but the way of keeping it differs in the subsequent periods of time. This is because God reveals his will to the elect—i.e., the true meaning of the Torah in their own time. Every successive stage of revelation opens up a new era of the covenant, which can then be called a new one. It is characterized by outstanding men who are called by God to receive and preach his revelation. One can reconstruct seven eras connected with these names:

(a) Noah (3.1); (b) the patriarchs (3.2-3); (c) Moses and Aaron (5.17-18); (d) Eleazar, Joshua, and the elders (5.3-4); (e) Zadok (5.5); (f) the right-teacher of the sect (1.11); (g) the right-teacher of the messianic age (6.11). The seventh stage is a sabbatical one which corresponds to the time before the Fall when Abraham and Enoch lived close to God and were taught by the angels.

b. The goal of history. The sect does not think merely in cycles but knows a development of history toward the end which God has determined for it. God's will and knowledge comprehend all ages, working secretly "from the day of eternity" (2.7) and appearing triumphantly at the end of days. Nothing happens in heaven and on earth which is not ordered and predetermined by God. Before man comes into existence, God has chosen him, or knows his wicked deeds in the future (2.7-8). Both the elect and the sinners are separated into two large groups, the "lots," which are headed by Belial and the "Prince of Light," and these two supreme angels are the acting forces in history (5.17-19). This theory of predestination, though severe, does not exclude the responsibility of man. Even a member of the sect can fail and transgress the limits of the law (20.25), which alone can protect him against the aggressive force of evil (16.5). This struggle against temptation will end in the messianic age. The sect is waiting for two messiahs, one of Aaron and one of Israel (19.10-11; 20.1; 12.23; cf. 1QS 9.11; the singular in the CD passages is due to a change by the Karaite copyist). The messiah of Judah is the victorious fighter against the enemies of God (7.20; cf. Num. 24.17), and the messiah of Aaron probably is identical with the last right-teacher at the end of days (6.11). While the wicked will be punished, the elect will live "in the House of the Law" (20.10, 13)—i.e., in an order where the law is fully revealed and perfectly done.

c. The preparation for this goal. Until this messianic age the law has to be studied in order to be understood, for many things are hidden in it (3.14; cf. 1QS 5.11-12; Deut. 29:28). The teacher of the sect compares the law to a well of living water for which man has to dig (6.3-4; cf. 3.16-17)—i.e., he has to study and find out the exact meaning of God's will. Both human effort and divine illumination are needed for revelation. Thus the faithful of the Mosaic age "dugged a well for many waters" (3.16), and God revealed "hidden things concerning which all Israel had gone astray" (3.14). Here the expositor of the sect refers to the song of the well (Num. 21:18), as he shows (6.3-11), where he quotes and explains it allegorically. He shows the members of the sect digging the well of the Law. Among them especially the "Staff" (*Mšhōqēq*) performs this task. He is not only the "Searcher of the Law," but also the "Law-giver"—a play on the word *mšhōqēq*="staff" is made)—for precisely by searching in the Book of the Law he finds out new commandments, which form the halachah for this era (6.10). The time of Moses represents the great ideal for the sect: Its teacher is a second Moses, and with his followers he even performs a kind of exodus like Moses and his people. But this exodus leads into the opposite direction, since the members of the sect "went out from the

Land of Judah and sojourned in the Land of Damascus" (6.5). It is justified by the passage in Amos 5:26-27, where the prophet announces the terrible way into the exile "beyond Damascus." This dark oracle is explained allegorically as a word of salvation for the sect and is a fine example of the way it digs in the Law. Very often the sect uses the Hebrew words in a double sense, a spiritual and a real one. The exodus too has its real and spiritual aspect, for going away from Judah means turning away from impiety (6.5) and returning to the law (15.9; 16.1-2; cf. 1QS 5.8-9). Together with the members of the sect, God leads the law into exile (7.14-15), but exiling (*gālā*) the law also means to reveal and establish it anew for the new covenant in the "Land of Damascus" where the "Searcher of the Law" does his work (7.18-19).

2. The law. The divine law is the very heart of the sect's life and teaching. The oath by which every member binds himself to the covenant and which resembles the Shema, obliges one "to return to the Law of Moses with all one's heart and with all one's soul" (15.9-10; 16.1-2; cf. 1QS 5.8-9). Every Jew outside the sect is considered to live outside the law. "He goes astray," because he does not know the "exact meaning of the Law" (6.14), which can be found only by the research in the sect (cf. the parallelism of "exact meaning" and "finding" [6.18-19]). The sect is aware of the interim validity of its interpretation when compared with the eventual knowledge in the messianic age, but still contends strongly for it. It inveighs against false teachers, calling them in biblical terms "removers of the boundary" (5.20) or "removers of the landmark" (1.16) and "searchers of smooth things" (1.18; cf. 1QH 2.32). This offense refers to a lax interpretation of the law, and one may think of the Pharisees who tried to accommodate the Mosaic law to actual conditions of the moment. But the main enemies of the sect are the official priests at Jerusalem. They belong to the lot of the wicked, for they are caught in "three nets of Belial" (4.15)—i.e., three main sins: whoredom, wealth, and conveying uncleanness to the sanctuary (4.17-18). They all originate in a wrong interpretation of the law, whereby "whoredom" means allowing divorce or marrying a niece (4.20-5.6), "wealth" an unjust handling of the vows to the sanctuary (6.15-17), and uncleanness a wrong teaching of CLEAN AND UNCLEAN (6.17) and especially the profanation of the holy times by use of a false calendar (6.18-19). The last point is very important. The sect had its own calendar (cf. 3.13-15; 16.2-4), and it was certainly the solar calendar which is found in the Dead Sea Scrolls (1QS 10.1-8; 1QH 11.6-8; 1QM 2.2), in the book of Jubilees (6:23-32), and in the book of Henoch (72-82). Of course, it was impossible for the sect to live together with the Jews in general, who used a calendar based upon the phases of the moon; and this fact necessarily leads to the supposition that all these writings belong to the same religious group.

The laws listed in the legal code do not differ much from the Pharisaic halachah of that time, but many of them reveal the sect's tendency to rigorism. There are regulations regarding the oath (9.9-10; 16.10-12) and vows (16.13-19), the ritual purification with water (10.10-13), and especially the sabbath

(10.14-11.18). These sections all carry headings, while other prescriptions for the holy life of the sect are offered in a rather loose order (11.19-12.22).

E. THE COMMUNITY. 1. Organization. More revealing for the character of the sect are the orders pertaining to its administration, given largely in cols. 13-16.

The members of the community lived in "camps" (12.23; 13.7, 13; 14.3), following the example of Israel in the wilderness (cf. Num. 2) and expecting the holy war at the end of times which is prescribed in the War Scroll of Qumran. They are grouped together in military units of ten, fifty, a hundred, and a thousand, like Israel's army (12.22-13.2; cf. 1QS 2.21-2), and they call themselves "men of war" (20.14). Each camp is headed by an overseer (*mobaqqēr*) who has to examine the applicants (13.11-13; 15.11) and novitiates (15.14), to teach the members (13.7-8), and to decide in difficult cases of various kinds (9.22; 13.5-6; 13.15-17). There also exists an "overseer of all the camps" (14.9-11). The institution of overseers seems to have been derived from the administration of Israel ordered by Jethro and Moses at Mount Sinai (Exod. 18). It also foreshadows the task of the bishop (*episkopos* = overseer) in the early Christian church.

For juridical cases the community has its own court, to which belong four priests and six laymen (10.5-6). They have to be instructed in the "Book of Meditation" (10.6), which seems to be a collection of basic rules, won by meditation of the Torah, and used as a kind of Mishna beside the Law itself (14.7-8).

Along with the court there is the general assembly of the full members (the "Many" [13.7]) of the sect (12.19), who live dispersed among the cities of Israel under the guidance of a priest (14.6-7).

The sect has four different classes: the priests, the Levites, the children of Israel, and the proselytes (14.3-6; cf. 4.2-4). This corresponds to the order of Israel in general and of the community (*yahadh*) in the Manual of Discipline (1QS 2.19-21). The priests, having taken the initiative at the exodus (4.2-3), are the leading element in the sect, and even the smallest unit of it is guided by a priest (13.2-3; cf. 1QS 6.3-8). A Levite might replace him (13.3-4), but otherwise the role of the Levites is unimportant.

2. Life. The priestly element pervades the whole sect. All its members, expecting the adventure of God, strive to perform a permanent holy service. In addition to the Levitical duties prescribed in the Priestly Code of the Pentateuch, the holy service of the sect is characterized by the eschatological order of worship given in the last chapters of Ezekiel. Its laws are sometimes modified and spiritualized. But the sect does not participate in the temple worship at Jerusalem, because it believes that this sanctuary is polluted by the unclean priesthood functioning there. Therefore, it entered upon the exodus to build up a brotherhood of holy worshippers for God. The significant features of the community must be derived from its holy service. Hence the strong tendency to chastity—the order for the camps mentions wives (7.6-7), but sexual intercourse seems to be allowed only for begetting children, and is forbidden "in the

city of the sanctuary" (12.1-2). The brotherhood also becomes defiled by striving for money or by hate and envy of the brother (cf. 6.11-7.6; 8.5-7). Thus it realizes a strong fellowship of love (6.20-21; 9.2-8, interpreting Lev. 19:17-18), of special care for orphans and lonely ones (14.14-17), and of large contributions to the welfare fund (14.14). However, a strict and moneyless economy, as is told of the *ESSENES*, does not exist here.

F. HISTORICAL CONCLUSIONS. The Zadokite Fragments are closely related to the Dead Sea Scrolls, especially to the Manual of Discipline and its attached rule (1QSa). These writings belong to the same sect which had its center at Qumran and was called from outside "the Essenes"—i.e., the pious ones. The differences between these writings are due mainly to the fact that the Manual is written for the closed Essene community at Qumran (the *yahadh*), while the Zadokite Fragments are concerned with those Essenes who settled in different camps and cities of Palestine. They, representing the second order mentioned by Josephus (War II.viii.13), were usually married and lived a less monastic life than was possible at Qumran.

From this we can try to approach the difficult problem of the history of the sect. It is bound up with the person of the "right-teacher" and with the term "Land of Damascus."

The founder of the sect is called the "right-teacher," just as the key figure in the *pesharim* of the Qumran sect. In the Zadokite Fragments this title seems to be used for the principal true teacher in each period of revelation. Thus the founder of the sect is the right-teacher in the present period of wickedness, and there will appear a right-teacher at the end of the days (6.11). The right-teacher of the sect is certainly identical with the "Searcher of the Law" who came to Damascus (7.19) and gave there the rules for fulfilling the law in the present age (6.9-11). According to MS B, this teacher, whose title is slightly different (cf. the terms in 20.1 and 20.14), is dead already (19.35; 20.14).

This man probably is the same as the right-teacher of the *pesharim*. The Zadokite Fragments tell nothing about his controversy with the "wicked priest," mentioning only the "man of lie" (20.15; cf. 1Qp Hab. 2.1-2; 5.11), who must have been a very serious opponent, since Fragment B admits that a part of the members of the sect "have returned with him" (20.14-15)—i.e., have forsaken the sect.

The Fragments offer some dates which seem to give a key to the historical problems. According to 1.5-8, 390 years after the fall of Jerusalem by Nebuchadnezzar, God "has caused to grow forth a root of cultivation, to possess the land." This refers to a group of penitents for whom God 20 years later raised the right-teacher (1.10-11). From the death of the teacher until the final judgment, forty years will elapse (20.14-15). These numbers are probably all derived from the Scriptures—the 390 years from Ezek. 4:5, the 20 years from Neh. 1:1, while the 40 years are the period of one generation and the time of Israel's sojourn in the wilderness. If we reckon another 40 years for the active life of the teacher, we get 490 years altogether, and this is exactly the time

given in Dan. 9:2, 24 (cf. Test. Levi 16:1) as the period between the catastrophe under Nebuchadnezzar and the final judgment. Thus all these figures certainly have a symbolic meaning. But besides this they may also indicate roughly the history of the sect, pointing into the second or first century B.C.

The term "Damascus" too has to be understood in its real, geographical sense. It has sometimes been suggested that Damascus is merely a veiled designation of Qumran. But since Qumran is situated in the area which is called "wilderness of Judah," it would be unlikely to speak of the sect as having left the land of Judah for sojourn in the land of Damascus (= Qumran; cf. 6.5). Moreover, in the exegesis of Amos 5:26-27 in 7.15-18, almost every word of the quotation is explained allegorically except the term "Damascus," which means that it has to be understood literally. Probably the exodus to the land of Damascus took place in the time of King Alexander Jannaeus (103-78 B.C.; see JANNEUS, ALEXANDER), when the Seleucid Demetrius III, reigning at Damascus, after unsuccessfully assisting the pious Jews to revolt against their despotic king, left them to the king's cruelty. According to Josephus (Antiq. XIII; XIV.2), eight thousand Jews left Judea suddenly, and many of them could have gone to the "Land of Damascus" under Demetrius' protection. After the king's death they returned, and some of the Essenes among them may have gone to Qumran and vicinity, where others already lived. There the term "Damascus" probably had an allegorical meaning also. Unfortunately, it is not known. It may have been connected with the number of the word *dmsk*, which is 444, or the term *maskeh* ("drink"), being the most solemn ceremony of the sect (1QS 6.23) and besides this used for teaching and revelation (cf. the "drink of knowledge" [1QH 4.11]). The "Land of Damascus" would have been then a figure for the "land of the drink"—i.e., of teaching God's revealed truth—whereby "d" is taken as Aramaic "of" and "s" replaced by "š." Another historical conclusion might be drawn from 8.11, where it is mentioned that the "head of the kings of Javan" will take vengeance upon the enemies of the sect. This probably refers to the intervention of Pompey, who started from Damascus to Jerusalem and took it in 63 B.C. This year would then be the *terminus a quo* for the composition of this writing, and the *terminus ad quem* is A.D. 68, when the scrolls were hidden in the caves. As the author was still awaiting the final judgment, which was expected forty years after the death of the teacher, his writing must have occurred in the second half of the first century B.C.

O. BETZ

ZAHAM zā'hām [זחם, loathing] (II Chr. 11:19). A son of King Rehoboam.

ZAIN zā'on (Heb. zā'yin) [י, ז (*zayin*)]. The seventh letter of the Hebrew ALPHABET as it is placed in the

KJV at the head of the seventh section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

ZAIR zā'or [זעיר, smallness; a narrow pass(?)]. A place the location of which is unknown, unless it is identical with ZIOR, which may be Si'ir, ca. five miles N-NE of Hebron, as is sometimes suggested (the LXX B reads Σειώρ, Seior). On the basis of the implications of the text, it is more likely that one should look for Zair closer to Edom, perhaps S of the Dead Sea.

It was at Zair that Jehoram (or Joram) of Judah (ca. 849-842) met the Edomites in a night raid. Though his chariotry launched a successful initial attack, his army did not press the attack but deserted, so the Edomite revolution succeeded (II Kings 8:20 ff). In the parallel passage (II Chr. 21:8-10) no place is mentioned.
V. R. GOLD

ZAKKUR zāk'ar. The spelling of ZACCUR 5 in early editions of the RSV.

ZALAPH zālāf [זלף, caper-plant (cf. New Heb. זלף)] (Neh. 3:30). The father of Hanun, who helped repair the wall of Jerusalem in the time of Nehemiah.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 231.

ZALMON zāl'man [זלמן]. 1. An Ahohite who was among the Mighty Men of David known as the "Thirty" (II Sam. 23:28). In I Chr. 11:29 he is called Ilai (עילי), which perhaps should be read "Zilai" (זילי) and construed as a hypocoristic form of "Zalmon."
E. R. DALGLISH

2. Mount Zalmon (הר זלמן), a mountain in the vicinity of Shechem. It was the source of brushwood which was cut by Abimelech and his men for the purpose of burning the Tower of Shechem (Judg. 9:48; see SHECHEM, TOWER OF). Because of the proximity of Mount Gerizim to Shechem, it has usually been assumed that Zalmon was a peak of Gerizim. It is more probable that Mount Zalmon referred to another hill near Shechem, but far enough away so the Shechemites were unaware of the preparation being made to destroy them.

3. A region or mountain in Bashan(?) (Ps. 68:14—H 68:15; KJV SALMON). Some scholars have proposed that זלמן here means "dark" or "dark place" and is not a proper name. However, the mention of the mountain of Bashan in the following verse is usually understood as referring to Zalmon. Because there is often snow on Mount Hermon, it is possible that the psalmist has reference to an unusually heavy snowfall which occurred at a time when the enemies of the Hebrews were being defeated in battle. It is also possible that the snow may be a figure of speech alluding to a mountain in Bashan which was covered with the bleached bones of the slain.
W. L. REED

ZALMONAH zāl mō'na [זלמנה, dark, shady] (Num. 33:41-42). The first stopping place of the Israelites after they left Mount Hor and before they reached Punon. The place cannot be identified. It may be the name of a wooded mountain, as is Zalmon in Judg. 9:48; Ps. 68:14.
J. L. MIHELIC

ZALMUNNA. See ZEBAH AND ZALMUNNA.

ZAMBIS zām'bis. KJV Apoc. form of AMARIAH 8.

ZAMBRI. KJV Apoc. form of ZIMRI 2.

ZAMOTH. KJV Apoc. alternate form of ZATTU.

ZAMZUMMIM zām zūm'īm [זמזמים; cf. Arab *zamzama*, a distant sound, confused and continued, or inarticulate speech uttered while eating]. The apparently contemptuous name which the Ammonites employed for their precursors in the Transjordan territory they came to occupy. Hitherto suggested etymologies are not completely satisfying, and we have no parallels for the name in the onomastic data for the second millennium B.C. The frequent identification with the ZUZIM in Gen. 14:5 cannot be demonstrated.

According to the Deuteronomic historian (Deut. 2:20), the Zamzumim belonged to a larger group known as the REPHAIM, who early in the second millennium suffered a severe blow at the hands of the "kings of the east" (Gen. 14:5). As descendants of the Rephaim, the Zamzumim continued to live in Transjordan following this cataclysm, and the Ammonites had to dispossess them in order to settle in the land of their choice. It would appear that the Ammonites held their precursors in high esteem, as in no other way can we explain the curious observation in Deut. 3:11 that the bed of King Og of Bashan, who is described as the only one left of the remnant of the Rephaim, could be found in Rabbah, the capital of Ammon. The bed may have been brought to Rabbah because certain Zamzumim were still living among the Ammonites in the thirteenth-twelfth centuries. It suggests a desire to venerate the memory of Og, who was beginning to assume something of the nature of a legendary hero among the Ammonites (see AMMON § 2b). Thus, it is not unlikely that the Zamzumim were responsible for a very early Ammonite tradition.

G. M. LANDES

ZANOAH zə nō'ā [זנוח]. 1. A village of Judah in the Shephelah district of Zorah-Azekah (Josh. 15:34). In the parallel list in Nehemiah (11:30), it is noted that Zanoah was one of the cities reoccupied by Jews returning from the Exile. Hanun and the inhabitants of Zanoah were assigned the repairs of the Valley Gate in the program of reconstructing the wall of Jerusalem (Neh. 3:13).

Zanoah is identified with Khirbet Zanu' (or Zanu), ca. three miles S-SE of Beth-shemesh. It is located on a hill, difficult to approach on the E, W, and N. Remains of a city wall and pottery from the period of the monarchy, as well as Byzantine and Arabic ware, have been found.

2. A town of Judah in the hill country district of Maon (Josh. 15:56; cf. I Chr. 4:18). The identification of Zanoah with Khirbet Zanuta, ten miles SW of Hebron, is difficult, since the site seems to date only from the Roman period and it is somewhat out of the provincial territory. Another alternative is Khirbet Beit Amra in the Wadi Abu Zenah, part of the Wadi el-Khalil, ca. 1¼ miles NW of Yattā

(Jutah; Josh. 15:55), a much more satisfactory location. The present Byzantine ruins on the strategically located position may cover remains of earlier occupations (as in the case of Tekoa).

ZAPHENATH-PANEAH zāf'ə nāth pə nē'ə [צפנת פנעה, properly the transcription of Egypt. *dd-pi-ntr-w.f.-nh*, the god speaks and he (the one who bears the name) lives] (Gen. 41:45). The name that was given to Joseph by the Pharaoh when he set Joseph in a position of high authority. The changing of names is a common feature among the biblical stories. Such a change of name was not, however, essential on the part of the Egyptian high officials. We have a number of good Semitic names among the official documents of Egypt (cf. Baal-mahar, Yanhamu, and even the Hyksos ruler Jacob-Har). There was, however, some tendency among the Hyksos to adopt Egyptian names, especially in the case of royal throne names.

There has been much discussion about the meaning of this name. The interpretation given above was first offered by Georg Steindorff in 1889 and offers a grammatically sound correspondence. The vocalization of the Hebrew form is, however, not what we would expect, but we must remember the late date of the Masoretic vocalization. Names which have this particular form do not appear in Egypt before the twelfth century at the earliest, so that this name is a good example of anachronism in the biblical account.

The LXX writing (φουνοφανηχ) apparently reflects some other name, but so far no Egyptian prototype has been convincingly presented.

O. S. WINTERMUTE

ZAPHON zā'fōn [צפון]. A city of Gad, situated N of Succoth (Josh. 13:27). The name probably indicates that it was a shrine of Baal-zephon, one of the chief Canaanite deities. It appears in Egyptian records of the Nineteenth Dynasty as *dapuna*; it is mentioned in one of the Amarna letters as *Sapuna*, and as the residence of a princess known as the "lady of the lions," who appeals to the Pharaoh of Egypt for help. After Jephthah had defeated the Ammonites, the Ephraimites crossed the Jordan and encamped near Zaphon, where they assailed Jephthah for not having called them to participate in his campaign; a battle ensued, probably near the place, and the Ephraimites were trounced (Judg. 12:1-6). A clan of Gad, the Zephonites (Num. 26:15) or Ziphionites (cf. Gen. 46:16), seems to have taken its name from the city.

The site of Zaphon has been identified as Tell el-Qos on the N side of the Wadi Rajeb, which commands a rich sweep of valley lands and is close to the N-S road along the valley. It is also sufficiently far from the fords of the Jordan to fit the narrative in Judg. 12.

ZARA, ZARAH zār'ə. KJV alternate forms of ZERAH 2.

ZARACES. KJV Apoc. form of ZARIUS.

ZARAIAS זרַיָאס [Ζαραίας (A), B omits]. KJV Apoc. form of ΖΕΡΑΪΑΗ; ΖΕΡΑΙΑΗ. In I Esd. 8:2 the name appears in the KJV but not in the RSV; it corresponds, however, to Zeraiiah in the parallel Ezra 7:4. C. T. FRITSCHE

ZARATHUSTRA זַרְ'וֹ תְּהוֹסְ'טְרָא; more accurately ZARATHUSHTRA. The prophet of ancient Iran, founder in the sixth century B.C. of the religion known as Zoroastrianism (see PERSIA, HISTORY AND RELIGION OF, § E) from the Greek form of his name (Ζωροάστρης; Latin *Zoroaster*).

The exact dates of his life are controversial. According to the Zoroastrian tradition King Vishtāspa, Zarathushtra's royal protector and patron, was converted 258 years before Alexander (the Great). If by "Alexander" is meant the beginning of Alexander's rule over Iran in 330 B.C., if Zarathushtra was forty-two years old at the time of Vishtāspa's conversion and if he lived to the age of seventy-seven, his dates may have been 630-553. Other arguments leading to somewhat different results can, however, be given.

Many attempts have been made to explain the prophet's name. In recent years later forms such as *zrdrušt* (*zar(a)društ*; cf. Ζαραθρούστρης), *zrhwšt* (*zar(a)hušt*), and *z'r'wšt* (*zrušt* < **zar(a)huštr*) have become known. These and other factors have led to the theory that it means "he who drives camels" or "he who can manage camels." See *bibliography*.

As to Zarathushtra's homeland and the scene of his activities, many and diverse opinions have been held. Certain indications seem to point to E Iran rather than W Iran. The later commentators may have preferred W Iran and the region of Ray(y), near the modern capital Teheran, for reasons of prestige rather than of historical accuracy.

Zarathushtra's meditations and teachings are contained in the Gāthās (see AVESTA), of which he is traditionally the author. In them he admonishes man to side with the Good against the Evil by means of an appeal to the individual's free decision to make the right choice. Next the Gāthās reflect the social and economic conditions of the people among whom Zarathushtra lived. Insistent emphasis is put on the merits and benefits of husbandry and cattle breeding, and the beliefs of their practitioners and nonpractitioners are sharply opposed. Local areas were ruled by chiefs who are referred to by the generic title *kavi*, and one of them, Kavi Vishtāspa, was the first to lend Zarathushtra official recognition and support. The Gāthās, finally, contain such biographical data to which the later tradition added many an embellishing feature as Zarathushtra's family name (*Spitāma*), the name of his daughter (*Pouručīšta*) and the names of *Frašaōstra* and *Ĵamāspa*—according to the tradition his father-in-law and son-in-law respectively.

Bibliography. A. V. Williams Jackson, *Zoroaster, the Prophet of Ancient Iran* (1899), pp. 12 ff, 147 ff, discusses the older explanations of the name. H. Lommel, *Die Religion Zarathustras* (1930). E. Herzfeld, *Zoroaster and His World* (2 vols.; 1947). J. Duchesne-Guillemin, *Zoroastre, étude critique avec une traduction nouvelle des Gāthā* (1948). W. B. Henning, *Zoroaster, Politician or Witch-Doctor* (1949). A. D. Nock, "The Problem of Zoroaster," *AJA*, LIII (1949), 272-85. H. W. Bailey, *Trans-*

actions of the Philological Society (1953), pp. 40-41, discusses the meaning of the name.

The many problems connected with the general topic of Zarathushtra and the outside world (Judaism, Greece, etc.) are discussed by: J. Bidez and F. Cumont, *Les mages hellénisés, Zoroastre, Ostanès et Hystaspe d'après la tradition grecque* (2 vols.; 1938). J. Bidez, *Éos ou Platon et l'Orient* (1945). W. J. W. Koster, *Le mythe de Platon, de Zarathoustra et des Chaldéens, étude critique sur les relations intellectuelles entre Platon et l'Orient* (1951). J. Duchesne-Guillemin, *Ormazd et Ahriman, l'aventure dualiste dans l'antiquité* (1953); *The Western Response to Zoroaster* (1958).

In his *Also sprach Zarathustra*, Friedrich Nietzsche (1844-1900) used Zarathushtra's personality, or rather his own peculiar concept of it, only as a peg on which to hang his own philosophical speculations and his glorification of the "Uebermensch." M. J. DRESDEN

ZAREAH. KJV form of ZORAH in Neh. 11:29.

ZAREATHITES. KJV form of ZORATHITES in I Chr. 2:53.

ZARED. KJV form of Zered in Num. 21:12. See ZERED, BROOK.

*ZAREPHATH זַרְ'וֹ פַּתְּח [צַרְפַּת; Akkad. *Šarīptu*, from the verb *šarapu*, to dye; Gr. Σαρέπτα]; KJV SAREPTA סַרְפַּתָּא in the NT. A Phoenician town between Sidon and Tyre.

Zarephath was situated on the coast of the Mediterranean, ca. six miles S of Sidon. It is mentioned in a papyrus from the fourteenth century B.C. The town was famous for its production of excellent glassware, made from the same kind of sand which was found near Sidon. The Akkadian name of the town indicates that Zarephath, like Sidon and Tyre, produced dye, for which Phoenicia was famous.

The narrative in I Kings 17:8-24 tells how the prophet Elijah was ordered by God to go to Zarephath, which belonged to the city-state of Sidon, and dwell there for some time. He met a poor widow whom he helped, so that her jar and her cruse were filled till the rains came. The story is also mentioned in Luke 4:26. In Obad. 20 Zarephath is mentioned as part of Phoenicia. It is now called Sarafand.

A. S. KAPELRUD

*ZARETHAN זַרְ'וֹ תְּחָן [צַרְתָּן]; KJV ZARETAN זַרְ'וֹ תָּן (Josh. 3:16); ZARTANAH זַרְ'תָּא נָה (I Kings 4:12); ZARTHAN זַרְ'תְּחָן (I Kings 7:46). A city located on the E side of the Jordan Valley.

1. **History.** The first reference to Zarethan occurs in Josh. 3, where there is a description of the stoppage of the Jordan River which enabled the Israelites under Joshua to cross and attack the city of Jericho. Vs. 16, which describes the extent of the lake which was formed by the backing up of the waters of the river, has a text that is somewhat corrupt, but it must have meant that the waters extended from the city of Adam (Tell ed-Damiyeh), which is almost opposite Jericho, as far N as the side (Glueck suggests "fortress") of Zarethan. It cannot mean, as has been supposed, that Zarethan was across the river from Adam, as obviously the waters extended the width of the valley, and the striking feature of the event was the distance which they backed up.

Zarethan is again mentioned in the time of Solomon. It is described as being part of the fourth district of Solomon, which embraced areas on both sides of the Jordan, and the description shows it was not far from Beth-shan (I Kings 4:12). It was in the area between Succoth and Zarethan that Hiram, the artificer of Solomon, cast the bronze vessels for the temple (I Kings 7:46). It is generally agreed that in the parallel passage in II Chr. 4:17 "Zarethan" should be read instead of "ZEREDAH," unless the change was made to locate the casting in Cisjordan.

2. **Location.** From the passages given above it can be seen that Zarethan must have been a very conspicuous point, located not far from the Jordan, between Adam and Succoth. There is also a statement in the Jerusalem Talmud (Soṭ. 7.5) that it was twelve miles from Adam. The site that fits these conditions is the outstanding double site of Tell es-Sa'idiyah, ca. fourteen miles N of Tell ed-Damiyeh, situated in a strategic position overlooking the Wadi Kufrinjeh, and with a long history of sedentary occupation from the Chalcolithic period all the way through the time of the Israelite settlement. *See also* ZERERAH.

ZEAL [זֵאֵל, zeal, jealousy; ζήλος, zeal, jealousy]; **ZEALOUS** [זָאֵל, to be jealous, zealous; ζηλόω, to be zealous, jealous; ζηλεύω, to be zealous, jealous; παραζηλόω, to be overwhelmingly zealous]. The attitude of single-minded devotion to another. The difference between "zeal" and "jealousy" in the Bible is very slight, the context alone determining which is the meaning of any particular occurrence of the Greek or Hebrew expressions.

See also JEALOUSY; ZEALOT.

E. M. GOOD

***ZEALOT** [ζηλωτής; Aram. זֵאֵלָא, *see below*]. A term currently and particularly used to designate the more radical and warlike Jewish rebels against foreign, especially Roman, rule; but actually a term of much broader meaning. The word occurs in Luke 6:15; Acts 1:13 as a designation of one of the disciples of Jesus, called Simon the Zealot to distinguish him from Simon Peter. The Aramaic form of the name, *qan'ana*, has been preserved in "Simon the Cananaean," found in Matt. 10:4; Mark 3:18. The Hebrew root זָאֵל, lying behind the Aramaic, means "to be jealous." The Zealot gave himself over to God to be an agent of God's righteous wrath and judgment against idolatry, apostasy, and any transgression of the law which excited God's jealousy ("jealousy" and "zeal" both having the same Hebrew root). With reference to the man who calls upon the name of God in vain, Philo writes: "He will never escape [the chastisements of men]; for there are thousands of men keeping watch, zealots of the laws [ζηλωται νόμων], strictest guardians of the institutions of their fathers [τῶν πατρίων], merciless to those who would do anything to subvert these" (*On the Special Laus* 2.253). Jesus was remembered by his disciples to have acted like a "zealot" when he drove the money changers out of the temple: "Zeal [ὁ ζήλος] for thy house will consume me" (John 2:17; cf. Ps. 69:9—H 69:10). Paul's persecution of the church was rooted in zeal for the law.

- Bibliography

1. **In postexilic Judaism.** In postexilic Jewish tradition the prototypes of "zeal" were Simeon and Levi, Phinehas, and Elijah. This is essentially a priestly tradition. Phinehas, a priest, was a descendant of Levi; and Elijah, a priest, was identified in rabbinic tradition as Phinehas redivivus.

a. **Simeon and Levi.** Simeon and Levi were the sons of Jacob who slew the men of Shechem out of vengeance for the rape of their sister Dinah (Gen. 34:4 ff). Ca. the middle of the second century B.C. the story of Simeon and Levi was appealed to in efforts to stop intermarriage with Gentiles: "And thus let it not be done from henceforth that a daughter of Israel be defiled; for judgment is ordained in heaven against them that they should destroy with the sword all the men of the Shechemites because

they had wrought shame in Israel. And the Lord delivered them into the hands of the sons of Jacob that they might exterminate them with the sword and execute judgment upon them, and that it might not thus again be done in Israel that a virgin of Israel should be defiled. And if there is any man who wishes in Israel to give his daughter or his sister to any man who is of the seed of the Gentiles he shall surely die, and they shall stone him with stones; for he hath wrought shame in Israel; and they shall burn the woman with fire, because she has dishonoured the name of the house of her father, and she shall be rooted out of Israel. And let not an adulteress and no uncleanness be found in Israel throughout all the days of the generations of the earth; for Israel is holy unto the Lord, and every man who has defiled (it) shall surely die: they shall stone him with stones . . . , because he has given his seed to Moloch 'See how the Shechemites . . . were delivered into the hands of two sons of Jacob, and they slew them under tortures, and it was (reckoned) unto them for righteousness. . . . And the seed of Levi was chosen for the priesthood, . . . for he was zealous [Ethiopic *kānē'ā*] to execute righteousness and judgment and vengeance on all those who arose against Israel. . . . And we remember the righteousness which the man fulfilled during his life, at all periods of the year; until a thousand generations they will record it, and it will come to him and to his descendants after him' (Jub. 30:5-20).¹

In other circles in the same period it was not Levi but Simeon who was given priority. The pious widow Judith prays: "O Lord God of my father Simeon, to whom thou gavest a sword to take revenge on the strangers who had loosed the girdle of a virgin to defile her, and uncovered her thigh to put her to shame, and polluted her womb to disgrace her; for thou hast said, 'It shall not be done'—yet they did it. So thou gavest up their rulers to be slain, and their bed, which was ashamed of the deceit they had practiced, to be stained with blood, and thou didst strike down . . . princes on their thrones; and thou gavest their wives for a prey and their daughters to captivity, and all their booty to be divided among thy beloved sons, who were zealous for thee [ἐζήλωσαν τὸν ζῆλον σου], and abhorred the pollution of their blood, and called on thee for help—O God, my God, hear me also" (Jth. 9:2-4).

b. Phinehas. "While Israel dwelt in Shittim the people began to play the harlot with the daughters of Moab And behold, one of the people of Israel came and brought a Midianite woman to his family, in the sight of Moses and in the sight of the whole congregation of the people of Israel When Phinehas the son of Eleazar, son of Aaron the priest, saw it, he rose and left the congregation, and took a spear in his hand and went after the man of Israel into the inner room, and pierced both of them, the man of Israel and the woman, through her body. Thus the plague was stayed from the people of Israel" (Num. 25:1-8). Perhaps the most important single passage for understanding the theology of zeal follows immediately: "And the LORD said to Moses,

'Phinehas . . . has turned back my wrath from the people of Israel, in that he was zealous with my jealousy [יְהוָה אֱהַבְתִּי אֶת־בְּקִנְיָתוֹ] among them, so that I did not consume the people of Israel in my jealousy [יְהוָה אֱהַבְתִּי]. Therefore say, 'Behold, I give to him my covenant of peace; and it shall be to him, and to his descendants after him, the covenant of a perpetual priesthood, because he was zealous [אָהַב] for his God, and made atonement for the people of Israel'" (vss. 10-13). The idea that "zeal" for God is propitiatory, and atones for sin, explains the otherwise inexplicable fanaticism and cruelty of the "zealot." Phinehas became the "zealot" prototype par excellence. In the pre-Maccabean period, Ben Sirach in his praise to the fathers, after mentioning the glory of Moses and Aaron, writes:

Phinehas the son of Eleazar is the third in glory,
for he was zealous [ζηλωσαι] in the fear of the Lord,
and stood fast, when the people turned away,
in the ready goodness of his soul,
and made atonement for Israel.
Therefore a covenant of peace was established with him,
that he should be leader of the sanctuary and of his people,
that he and his descendants should have
the dignity of the priesthood for ever (Ecclus. 45:23-24).

In I Maccabees, Phinehas, "because he was deeply zealous [ἐν τῷ ζῆλῳσαι ζῆλον]," was singled out as forefather of Mattathias and his sons (2:54). In Ps. 106, the tradition about Phinehas orients his zealous act around Israel's apostasy in eating sacrifices offered to the gods of the Moabites:

Then Phinehas stood up and interposed,
and the plague was stayed.
And that has been reckoned to him as righteousness
from generation to generation for ever
(vss. 30-31).

The author of I Maccabees interprets the outbreak of the national resistance to the Seleucids as motivated by the theology of "zeal" as it is expressed in the tradition of Phinehas. "Then the king's officers who were enforcing the apostasy came to the city of Modein to make them offer sacrifices But Mattathias answered and said . . . : 'Far be it from us to desert the law and the ordinances' When he had finished . . . , a Jew came forward in the sight of all to offer sacrifice upon the altar in Modein, according to the king's command. When Mattathias saw it, he burned with zeal [ἐζήλωσε] and his heart was stirred. He gave vent to righteous anger; he ran and killed him upon the altar. At the same time he killed the king's officer who was forcing them to sacrifice, and he tore down the altar. Thus he burned with zeal for the law [ἐζήλωσε τῷ νόμῳ], as Phinehas did Then Mattathias cried out . . . : 'Let every one who is zealous for the law [πᾶς ὁ ζηλῶν τῷ νόμῳ] and supports the covenant come out with me!' And he and his sons fled to the hills and left all that they had in the city" (2:15-28). Thereafter they lived outside the law of the Seleucid authorities, and supported themselves in their resistance against the Gentiles by brigandage. Thus they set the pattern for all the later "zealot-like" groups which resisted the authority of Rome, by refusing to pay taxes and living as brigands. We know of one such group of

¹ R. H. Charles, ed., *The Apocrypha and Pseudepigrapha of the Old Testament* (Oxford: The Clarendon Press).

brigands who were actually known by the name "zealots" (War II.xxii.1; IV.iii.9). We do not know the history of this group, except for the part they played in the war of A.D. 66-70.

c. *Elijah*. Elijah had ordered all the prophets of Baal slain (I Kings 18:40; 19:10-14). This was interpreted as an act of "zeal" in later Jewish tradition; "by his zeal [τῷ ζήλω αὐτοῦ] he made them few in number" (Ecclus. 48:2). "Elijah because of great zeal for the law [ἐν τῷ ζηλωσῶσι ζήλον νόμου] was taken up into heaven" (I Macc. 2:58). In this tradition about Elijah the propitiatory power of "zeal" was brought into relationship with the messianic role of Elijah as expressed in Mal. 4:5-6—H 3:23-24.

How glorious you were, O Elijah, in your wondrous deeds!

You who were taken up by a whirlwind of fire,
in a chariot with horses of fire;
you who are ready at the appointed time, it is written,
to calm the wrath of God before it breaks out in fury,
to turn the heart of the father to the son,
and to restore the tribes of Jacob (Ecclus. 48:4, 9-10).

2. *Simon the Zealot*. In addition to Simon the Zealot, the only other instance in pre-rabbinic Judaism where the cognomen "zealot" is applied to an individual is found in IV Maccabees, where Phinehas is referred to as "the Zealot Phinehas" (τὸν ζηλωτὴν Φινεᾶς; 18:12). Simon the Zealot, before becoming a disciple of Jesus, had probably been a member of some "zealotlike" group in the Phinehas-Maccabean tradition of zeal for the law. There are indications that a multiplicity of such groups were active in Palestine during the first century A.D. and that these groups constituted an important part of the hard core of national resistance to Rome from the time of Pompey onward.

3. *Paul*. Before he became a Christian, Paul was chiefly motivated by a theology of zeal for the law. We gain important insights into "zealotism" by a study of Paul's relationship to and statements about this aspect of Judaism. Paul wrote to the Galatians: "You have heard of my former life in Judaism, how I persecuted the church of God violently and tried to destroy it; and I advanced in Judaism beyond many of my own age among my people, so extremely zealous [or 'so strict a zealot'; ζηλωτής] was I for the tradition of my fathers" (Gal. 1:13-14). In another passage Paul directly connects his activity as a persecutor of the church with zeal: "as to zeal [ζήλος] a persecutor of the church" (Phil. 3:6). Paul had been a Pharisee (vs. 5). But he had gone beyond the requirements of this party in taking on the responsibilities of being a "zealot." This interpretation of the above autobiographical statements of Paul is corroborated by the account in Acts. According to it, Paul on his last visit to Jerusalem was warned about the thousands of Jews who were "zealots" of the law (ζηλωταὶ τοῦ νόμου) and who threatened his life because they had heard that he encouraged transgression of the laws of Moses among the Jews of the Diaspora (21:20-21). Later Paul was seized in the temple by a violent crowd, dragged outside, and beaten. The crowd wanted to kill him, without waiting for a trial to weigh the charges against him, but the Roman soldiers intervened (vss. 27-36). There-

upon Paul made a speech to the crowd in which he said: "I am a Jew, . . . educated according to the strict manner of the law of our fathers [τοῦ πατρῶου νόμου], being zealous for God [ζηλωτῆς ὑπάρχων τοῦ θεοῦ] as you all are today" (22:3). In recounting his confession to God following his conversion, Paul says: "In every synagogue I imprisoned and beat those who believed in thee" (vs. 19).

The day following the unsuccessful attempt on the part of those who were "zealous for the law," to kill Paul, forty of them bound themselves by an oath to continue the effort to kill him (Acts 23:12-14). This leads to a consideration of the Sicarii, or ASSASSINS, with whom the tribune in Acts 21:38 confused Paul.

Paul's judgment upon the theology of zeal for the law is given in his discussion concerning Israel's pursuit of the righteousness which is based on law. "Brethren, my heart's desire and prayer to God for them is that they may be saved. I bear them witness that they have a zeal [ζήλον] for God, but it is not enlightened. For, being ignorant of the righteousness that comes from God, and seeking to establish their own, they did not submit to God's righteousness. For Christ is the end of the law, that every one who has faith may be justified" (Rom. 10:1-4). In order to understand Paul, it is necessary to recognize that he came into the church out of a background in Judaism in which the current of zeal for the law ran strong. His doctrine of justification should be studied against the background of a theology in which zeal for the law was regarded as redemptive.

4. *Conclusions*. The theology of zeal which motivated the Zealot originated in the exclusivistic worship of the one true God of Israel: "I the LORD your God am a jealous God," and "you shall have no other gods before me." Israel was a holy people, and the law had been given to keep Israel holy unto God. Thus when Israel excited God's jealousy by her apostasy, his wrath was poured upon his people. The propitiatory act of the Zealot therefore was in a sense prophylactic. Like a surgeon excising a cancerous tissue, the Zealot extirpated the apostates from Israel with the sharp edge of the sword. Once zeal for the covenantal God of Israel was transferred to his law, which certainly happened by the Maccabean period, then the basis was laid for Zealotism as we know it in the Greco-Roman period. The Zealot was the strict interpreter of the law, who was willing to follow the way of "zeal for the law of the God of Israel" unto death (cf. Acts 22:4)—i.e., the Zealot was willing, not only to kill a Gentile, or to lay down his own life rather than transgress the law, but he was quite prepared to take the life of a fellow Israelite, if necessary, out of his zeal for the law.

The theology of zeal was gradually circumscribed by the Jewish spiritual leaders after the crushing national defeats of 70 and 135. In rabbinic Judaism zeal was replaced by "shalom" as the dominant theological motif governing Israel's relations with the Gentiles.

In Christianity zeal was redirected in terms consonant with the new theology (cf. I Cor. 14:12; Tit. 2:14; I Pet. 3:13; Rev. 3:19).

Bibliography. See the important article on "Zealots" by K. Kohler in the *Jewish Encyclopedia* (1905), where an attempt

is made to trace the historical development of the Zealots from the time of Herod onward. The evidence indicating that the Maccabees were historical counterparts of the politically orientated Zealot groups in the Roman period, and the argument that these Zealot groups were inspired and motivated by the example and teaching of the Maccabees, may be found in W. R. Farmer, *Maccabees, Zealots and Josephus* (1956).

ZEBADIAH zēb'ā dī'ā [זבדיהו, זבדיהו, Y has given; see ZABAD; Apoc. Ζαβδαΐος]; KJV Apoc. ZABDEUS zāb'dī'ās (I Esd. 9:21). Alternately: ZERAIAS zē rā'y'ā [Ζαραΐας] (I Esd. 8:34); KJV ZARAIAS —yās. 1. A Benjaminite family, descended from Beriah (I Chr. 8:15).

2. A Benjaminite family, descended from Elpaal (I Chr. 8:17).

3. One of the two sons of Jeroham who joined David at Ziklag (I Chr. 12:7).

4. A gatekeeper, of the Levitical family of Korah (I Chr. 26:2). The name occurs in an organization of gatekeepers presented as one of David's preparatory arrangements for the future temple (chs. 23-26).

5. One of David's officers in charge of one of the twelve divisions of the army which alternated service each month. He was a son of Asahel the brother of Joab (I Chr. 27:7).

6. One of nine Levites (see PRIESTS AND LEVITES; cf. Deut. 6:6-9; 27:11-26; 31:9-13) in a commission of sixteen men (of which only two were priests) sent by Jehoshaphat to teach the law in the towns of Judah (II Chr. 17:8). The story appears only in Chronicles.

7. The eldest of the tribe of Judah (not a royal official, as "the governor of the house of Judah" might suggest) who was the chief judicial functionary for civil cases in a similar and also higher court at Jerusalem which headed a system of local courts established by Jehoshaphat (II Chr. 19:11). Vss. 4-11 are rich in judicial data and perspectives. See also LAW IN THE OT § C; COURT OF LAW; JUDGE.

8. Head of a lay family who returned from Babylon with Ezra (Ezra 8:8; I Esd. 8:34).

9. A priest in lists of those who put away foreign wives and their children according to Ezra's reform banning foreign marriage (Ezra 10:20; I Esd. 9:21).

ZEBAH AND ZALMUNNA zē'bā, zāl mūn'ā [זב, זבח, sacrifice; צלמנע, protection withheld; see below]. Two Midianite kings slain by Gideon in blood revenge for their murder of his brothers (Judg. 8:4-21; Ps. 83:11—H 83:12).

The names of both these kings were probably originally Old S Arabic or Midianite names which have been distorted into their present Hebrew forms suggestive of their fate. זבח (verb, "to slaughter"; noun, "sacrifice") obviously is taken as a proper name meaning "victim which is sacrificed." צלמנע is taken as being from צל, "shadow," meaning "protection," as in Num. 14:9; Ps. 91:1; Eccl. 7:12; Jer. 48:45; Lam. 4:20, and from מנע, "to withhold" or "to deny." Thus the protection of Zalmunna's deity was fore-

gone when he fell into the hands of Gideon and his God.

The original forms of these names are not now recoverable. In Old S Arabic the root meaning of זבח is "born at the day of sacrifice." "Zalmunna" has been properly compared with the name of the priest צלמשזב, "Šalm-shezēb," "(the god) Šalm has delivered," in a probably fifth-century-B.C. N Arabian Aramaic inscription from Teima. The god name "Šalm" may be the proper reading in Num. 14:9: not "their shadow has departed from them" (RSV "their protection is removed from them"), but "Šalm has departed . . ." With צלם, "image," in Hebrew may be compared Akkadian *šalmu*, "image (of the god)," regarded by some as identical with the Arabic divinity Šalm. Thus the name Zalmunna probably comes from an originally genuine Midianite word meaning "(the god) Šalm is king," as though it were צלמנלך.

The story of Zebah and Zalmunna is told in the early narrative of Gideon's pursuit of fleeing Midianites (Judg. 8:4-21). There seems to be an obvious parallel intended between the names of these two Midianite kings and that of the princes Oreb and Zeeb (7:24-8:3) in the later narrative, Zebah corresponding to Zeeb and Zalmunna to Oreb. Thus it has been conjectured that in Hebrew etymology both "Zebah" and "Zeeb" were from "Zebib," "the long-haired," and that Zalmunna was originally Ishmael and Oreb originally Arab.

There are both barbaric primitivity and haughty, kingly dignity in the story of Gideon and these two Midianites. Presumably Zebah and Zalmunna were leaders of the annual camel-riding raids into Israelite farming territory (Judg. 6:2-6). According to the late tradition of the psalmist these raids were for taking possession of the "pastures of God" (Ps. 83:11-12—H 83:12-13), but actually they were simply nomadic forays at harvesttime to steal the settled farmers' crops. Zebah and Zalmunna first appear in the story when Gideon was pursuing the fugitives from his surprise defeat of the Midianite camp at the foot of Mount Gilboa (Judg. 8:4). Gideon's request for help from the E Manasseh communities of Succoth and Penuel on the Jabbok River was refused. The citizens of Succoth, derisive of Gideon's possibly being victorious with only his little band of three hundred Abiezrite clansmen, inquired: "Do you already have the amputated palms of Zebah and Zalmunna in your hands as tokens of victory, that we should feed your army?" (orig. tr.). With a vow of vengeance, Gideon pressed on relentlessly.

According to the exaggerated figures, a mere 15,000 of the original 135,000 Midianites under Zebah and Zalmunna's leadership had been able to escape across the Jordan and then S to Karkor in the Valley of Sirhan E of the Dead Sea. There, more than a hundred miles from the scene of their defeat, they let their guard down. Gideon meanwhile was pushing forward up the Jabbok and S via the "caravan route east of Nobah [site unknown] and Jogbehah" (perhaps modern Jubeihat, fifteen miles SE of Penuel) to their camp.

With victory achieved and his two kingly prisoners taken, Gideon returned "by the ascent of Heres"

(site unknown). After learning the names of the leading citizens of Succoth from a captured youth who could write, Gideon wreaked his primitive vengeance, as he "taught" (the verb in the MT of vs. 16 needs no emendation to "threshed") them by the torture of threshing them with thorns and briers. He later slew citizens of Penuel and broke down the tower of their evidently unwallled city.

It is at this point in the story that the personal motivation for Gideon's relentless pursuit is made clear. It was the solemn duty of blood revenge. Zebah and Zalmunna were answerable not only for raids on the countryside. They had slain Gideon's own brothers at Tabor. This reference to Tabor, not Ophrah, as apparently Gideon's home is one reason for varying interpretations as to the identity and roles of Gideon and Jerubbaal (for discussion, see GIDEON).

Gideon's question (Judg. 8:18), while it may be emended to: "What of the men . . . ?" contains sharp irony as it stands: "Where are the men . . . ?" The reply was that of hardy and haughty desert kings ready for their fate. As in more recent Arabian custom, the high privilege of executing blood revenge was offered to Gideon's youthful son, but he could not bring himself to raise his hand against such sacred personages as kings. Therefore Zebah and Zalmunna properly met their death at the hands of a brave, kingly person like themselves. Then Gideon relieved them of their crescents worn both by camels and by their jewelry-loving Bedouin masters (see CRESCENT; Isa. 3:18).

ZEBAIM zī bā'əm. KJV translation of הצבאים in Ezra 2:57; Neh. 7:59. See *POCHERETH-HAZZEBAIM*.

ZEBEDEE zēb'ə dē [Ζεβεδαιος, from Aram. זבדי = Heb. זבדיה, gift of Y]. The father of the apostles James and John (Mark 1:19-20) by Salome (Mark 15:40; Matt. 27:56).

Zebedee and his sons were associated with Simon and Andrew in a fishing business at Capernaum (Mark 1:16-20; Luke 5:10). The fact that he had servants (Mark 1:20) and that his wife seems to have contributed toward Jesus' support (Mark 15:40-41; cf. Luke 8:2-3) makes it appear that he was a man of some means. The gospels offer no evidence that he actively followed Jesus, though he seems not to have hindered the activities of his wife and sons.

It is interesting that a column of the Capernaum synagogue (built ca. A.D. 200) bore an Aramaic inscription naming a certain son of Zebida (זבדיה בן) as the maker of the column.

ZEBIDAH zī bī'də [זבירה (*Kethibh*), gift] (II Kings 23:36); KJV ZEBUDAH —bū'—[זבורה]. The mother of Jehoiakim.

ZEBINA zī bī'nə [Aram. זבינא, purchased (e.g., a child bought from parents)] (Ezra 10:43). One of the Jews contemporary with Ezra who were listed as having married foreign wives. The name does not appear in the parallel I Esd. 9:35.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 231; R. A. Bowman, *Exegesis of Ezra, IB*, III (1954), 661. B. T. DAHLBERG

ZEBOIIM zī bōi'm [צבויים, צבויים, צבויים]. One of the "cities of the valley," which were destroyed by the Lord because of their wickedness (Gen. 19:24-29). Zeboiim is mentioned in connection with the boundary of the territory of the Canaanites (10:19) and was one of the five cities attacked by Chedorlaomer and the other three Eastern kings. Shemeber king of Zeboiim, with his four allies, joined battle with these invaders in the Valley of SIDDIM and met defeat (14:2, 8, 10).

The destruction of Zeboiim is implied in the account of the overthrow of the cities of the valley (Gen. 19:24-29), and Moses recalls the overthrow of Zeboiim and the other three cities by the wrath of the Lord (Deut. 29:23). Hosea presents the fate of Zeboiim as an example (Hos. 11:8).

Zeboiim is specifically linked with Admah twice (Deut. 29:23; Hos. 11:8), and was probably situated near it, in the area now under the waters of the S part of the Dead Sea. See map under SODOM.

For bibliography, see CITIES OF THE VALLEY.

J. P. HARLAND

ZEBOIM zī bō'əm [צבויים, hyenas]. 1. One of the towns occupied by Benjaminites following the return from Babylonian captivity (Neh. 11:34). Though its location is at present uncertain, it is listed in company with Hadid, Neballat, Lod, and Ono. It should probably be sought, therefore, to the N of Lydda, possibly at Khirbet Sabieh.

2. A valley in Benjamin, located SE of Michmash and between that city and the wilderness overlooking the Jordan (I Sam. 13:17-18). Both the ancient name and the vicinity are probably preserved by the modern Wadi Abu Daba' ("Valley of the Father of Hyenas" or "Hyena Valley"), a tributary of the Wadi el-Kelt.

W. H. MORTON

ZEBUDAH. KJV form of ZEBIDAH.

ZEBUL zē'bū'l [זבול]. A resident prefect (פקיד in Judg. 9:28; שר העיר in vs. 30) of Shechem whose prompt advice to his royal master, Abimelech son of Jerubbaal (Gideon), defeated the rebellious plot of Gaal and his adherents (Judg. 9:30-41).

Political unrest began to develop as soon as Gaal and his clan moved into the city of Shechem, and reached its climax in an incendiary speech by Gaal at a vintage festival, when he clamored that Abimelech be deposed in favor of a full-blooded Canaanite ruler and offered himself as liberator. When Zebul learned of this sedition, he informed the nonresident king immediately and advised him what action appeared best in the circumstances. Speedily Abimelech arrived at Shechem with his forces and stationed them in ambuscades about the city. In the

morning, while standing in the entrance of the gate of the city, Gaal espied the troops, which were advancing from all directions, and directed the attention of Zebul to their movement. Identifying these forces as Abimelech's, Zebul twitted Gaal to make good his boasts now. When Abimelech completely routed the rebels in the ensuing battle, the cause of Gaal was lost, and Zebul expelled him and his clan from Shechem.

E. R. DALGLISH

ZEBULUN zēb'uy lān [זְבוּלֹן], *an abbreviated form with the ending -ūn; the meaning of the element zēbūl is uncertain; the name of a god or an appellative for a dwelling place*; **ZEBULUNITE** —זְבוּלֹנִי [זְבוּלֹן]. The tenth son of Jacob, and the *heros eponymos* of the tribe of Zebulun. He was a younger child of Leah (Gen. 30:20; hence the derivation of the name from זָבַר, "to present," as well as from דָּוַל, "to dwell"). In the lists of the sons he is always the last of Leah's group of six, after Issachar, with whom he belongs especially as a younger child (Gen. 35:23; 46:14; Exod. 1:3; I Chr. 2:1).

The tribe of Zebulun is closely connected in its origins with the tribe of Issachar. This is indicated, not only by its position in the scheme of Gen. 29-30 and the fact that they were neighbors geographically in S Galilee (cf. Josh. 19:10-16, 17-23), but also by the text of the Blessing of Moses, which still refers to Zebulun and Issachar together. It speaks of their economic wealth, which they drew from the sea (probably the Sea of Chinnereth) and "sand" and, in addition, of their common sanctuary, Mount Tabor, at the edge of the territory they had settled, and to which they invited the related tribes of the amphictyony for sacrificial feasts (Deut. 33:18-19).

Zebulun had, in the meantime, begun its own separate development, which enabled it to become an independent tribe, like Ephraim in relation to Manasseh. The parallel with Ephraim forces itself upon one in other respects as well; not only did Zebulun also probably take its name from a geographical factor in the territory in which it settled (a mountain? a village?), but Zebulun also had less to do there with the Canaanites than its brother tribe Issachar, so that its fate was not so negatively destined in that way as was Issachar's—for a time, at least. The territory of Zebulun lay farther off in the country than that of Issachar, which was definitely a thoroughfare. There were no older cities there, and even today it is relatively rich in forest. According to the item in the "negative inventory of possessions" (Judg. 1:30), Zebulun laid claim to the Plain of Acco, but the claim could not be realized and presumably also should not have been made to begin with. Even the old description of the boundaries in Josh. 19:10-16 knows nothing of such territorial expansion. The dwelling on the seashore of which the Zebulun passage in the Blessing of Jacob speaks (Gen. 49:13) refers, then, either to an early period in which Zebulun was still trying, along with Issachar, to become established on the Sea of Chinnereth or else to a very late period, if the reference is not just to the sojourn of a few oarsmen on the coast of the Mediterranean. The mention of the vicinity of Sidon does not argue against the first interpretation, which is the more

probable; "His border [flank] at Sidon" is to be explained without difficulty by the circumstance that the W flank of the S Galilee highland, settled by the Zebulunites, actually borders on Phoenician territory in the Plain of Acco. Zebulun lived its life apart; for this reason there were no complications in the history of its occupation of the land. For the same reason Zebulun, like Asher, had no great importance. Nevertheless, as a fully qualified member of the amphictyony, Zebulun furnished the judge Elon (Judg. 12:11-12). In the Battle of Deborah, Zebulun distinguished itself, so that it is deemed worthy of special praise by the poet and is the only tribe mentioned twice (5:14, 18; cf. also 4:6, 10). Also in the battle which Gideon fought against the Midianites in the Plain of Jezreel, Zebulun performed its duty faithfully (6:35).

Zebulun does not appear in Solomon's list of districts (I Kings 4:7 ff); the territory was added to one of the three other Galilean districts, presumably because of its inferior economic strength. Isaiah mentions the land of Zebulun along with the land of Naphtali at the time when the Assyrians made Galilee their province (Isa. 9:1—H 8:23). The naming of only the princes of Zebulun and Naphtali along with those of Judah and with Benjamin in Ps. 68:27—H 68:28 is strange and yet probably influenced by Isa. 9:1. The later literature knows Zebulun almost exclusively in lists and similar material. It is enumerated regularly after Issachar in the Priestly Code (Num. 1:9, 30-31; 2:7; 7:24; 10:16; 26:26-27). Only in the commission for the division of the land (34:25) does Zebulun precede Issachar, and the list of the scouts puts it in an entirely different position (13:10). In Deut. 27:13, Zebulun belongs to the speakers of the curse. In the list of the cities of the Levites it is ranked in the fourth group, also separated from Issachar, once at the end (Josh. 21:7; I Chr. 6:63—H 6:48), once at the beginning (Josh. 21:34; I Chr. 6:67—H 6:62). In Ezek. 48:26, 33, it follows Issachar as usual. It is the same in the lists of Chronicles: I Chr. 12:33—H 12:34; 27:19. In the genealogies in I Chr. 4-7, Zebulun is missing, probably only because of textual deficiency (cf. Dan, also Naphtali). Otherwise the Chronicler occasionally uses "Zebulun" in paraphrases for N Israel (I Chr. 12:40—H 12:41; II Chr. 30:10 ff, 18).

In the NT, with the exception of the quotation in Matt. 4:13, 15, Zebulun appears only in the list in Rev. 7:8, after Issachar.

For the territory of Zebulun, see TRIBES, TERRITORIES OF, § D6. See the bibliography under ASHER.

K. ELLIGER

ZECHARIAH zēk' ă rō'ō [זְכַרְיָהוּ, זְכַרְיָהוּ, Y has remembered; Ζαχαρίας]; **KJV ZACHARIAH** zāk'—(II Kings 14:29; 15:8, 11; 18:2); **ZACHARIAS** zāk' ă rō'ōs (I Esd. 1:8, 15; 6:1; 7:3; 8:30, 37, 44; 9:27; I Macc. 5:18, 56; Matt. 23:35; Luke 1:5-67; 3:2; 11:51). **ZACHARY** —rī (II Esd. 1:40). Alternately: **ZECHER** zē'kār [זֶכֶר] (I Chr. 8:31); **KJV ZACHER** zā'—. 1. A person or family of Benjamin (I Chr. 9:37). In the parallel list he is called Zecher, probably an abbreviation (I Chr. 8:31).

2. Head of a family of Reubenites (I Chr. 5:7).

3. A Levite gatekeeper; son of Meshelemiah (Shelemiah in vs. 14); descendant of Korah. He is presented as a keeper of the N gate in the ascription to David of arrangements for the future temple (I Chr. 26:2, 14) and as the "gatekeeper at the entrance of the tent of meeting" (9:21) in a passage which glorifies the gatekeepers (vss. 18b-26a). The latter ascription places him at the E entrance of either: the tabernacle at Gibeon, or the tent for the ark during the time of David, or the Mosaic tent (where this focal location was occupied by Moses and the priests; Num. 3:38).

4. A Levite harpist among those whom David charged to provide music during the transportation of the ark from the house of Obed-Edom to Zion (I Chr. 15:18, 20) and to maintain musical worship before the ark thereafter (16:5). *See* MUSIC.

5. One of the priests cited as blowing trumpets before the ark when David brought it to Zion (I Chr. 15:24).

6. A Levite; a descendant of Uzziel (I Chr. 24:25).

7. A gatekeeper, of the Levitical family of Merari (I Chr. 26:11).

8. A Manassite; the father of Iddo (I Chr. 27:21).

9. One of five lay officials in a commission of sixteen men sent by King Jehoshaphat to teach the law in the towns of Judah (II Chr. 17:7). Only two were priests; the majority were Levites. The story appears only in Chronicles, and it may be an ascription to Jehoshaphat of a postexilic practice.

10. A Levite; a descendant of Asaph; the father of Jahaziel (II Chr. 20:14).

11. A son of King Jehoshaphat, who gave him and his brothers great treasures and fortified cities (II Chr. 21:2). He and his brothers were slain by the first-born, Jehoram, when he became king.

12. Son of the priest Jehoiada. During the reign of Joash the Spirit of God took possession of (lit., "clothed itself with") him, and he called the people to account for their apostasy and announced the judgment of Yahweh. The people conspired against him and by the command of Joash stoned him "in the court of the house of the LORD" (II Chr. 24:20-21). Joash forgot that Zechariah's father, Jehoiada, had helped to save his life and had made him king (24:22; cf. 22:10-24:19), and two of his own servants slew Joash to avenge the death of Zechariah (24:22, 25-26). The martyrdom of Zechariah was cited by Jesus when he declared that judgment would come upon his contemporaries for the whole sequence of rejection of those sent by God (Matt. 23:35, where "son of Barachiah," the well-known prophet after the Exile [*see* 21 *below*]), probably is a mistaken marginal note incorporated into the text; Luke 11:51).

13. A man of God who counseled King Uzziah in the early years of his reign (II Chr. 26:5). *See* FEAR § 2e.

14. A king of Israel; son of Jeroboam II, of the dynasty of Jehu. He became king in the thirty-eighth year of Uzziah (Azariah) king of Judah, and after a reign of only six months was murdered by Shallum, who succeeded him (II Kings 14:29; 15:8, 11). Thus the dynasty of Jehu numbered five kings, according to prophecy (15:12; cf. 10:30). The customary Deuteronomic judgment of the kings of N Israel (15:

9) is the only statement in the book of Kings concerning his rule. The rapid replacement of kings in 747-746 B.C. (*see* CHRONOLOGY OF THE OT § 3c) and the words of the prophet Hosea indicate the decay and confusion in the face of resurgent Assyria.

15. Son of Jeberechiah; one of two reliable men, evidently prominent and trusted citizens, whom Isaiah got as witnesses to a prophetic oracle written on a tablet (Isa. 8:2). Either their action added to the oracle the weight of legal formality; or, especially when it was fulfilled, they could support the evidence showing that Isaiah had indeed delivered a sign from God (cf. Deut. 18:22).

16. The father of Abijah (Abi), the mother of King Hezekiah (II Kings 18:2; II Chr. 29:1).

17. A descendant of Asaph, in a list of Levites with which the Chronicler sets forth the cleansing of the temple by Hezekiah (II Chr. 29:13).

18. A Kohathite Levite; one of four Levites who were overseers of the workmen repairing the temple in the reign of Josiah (II Chr. 34:12).

19. One of three high-ranking priests (Hilkiah is named first) who liberally donated animals to the priests for the celebration of the Passover held by Josiah (II Chr. 35:8; I Esd. 1:8).

20. The name occurring in I Esd. 1:15 instead of the Heman of II Chr. 35:15, where the names of the three chief groups of Levitical singers appear: Asaph, Heman, and Jeduthun (cf. I Chr. 25:1; II Chr. 5:12).

21. A prophet (Zech. 1:1, 7; 7:1, 8), one of the twelve Minor Prophets (cf. II Esd. 1:40). He was either a son or a descendant of Iddo. He is called the son of Iddo in Ezra 5:1; 6:14; I Esd. 6:1; and in Zech. 1:1 if "Berechiah" is a corruption of "Jeberechiah" and an insertion to identify this Zechariah with the Zechariah in Isa. 8:2 (*see* 15 *above*). "Son" may also mean "descendant"; he appears as the descendant of Iddo in Neh. 12:16 (where Iddo is a remote ancestor of Zechariah the contemporary representative of the line), and in Zech. 1:1 if Iddo is understood as a distinguished ancestor. He is not called the son of Iddo in I Esd. 7:3 (cf. Ezra 6:14). The Iddo named may be the head of a family of priests who returned with Zerubbabel (Neh. 12:4), in which case Zechariah was a priest as well as a prophet, or Iddo the seer or prophet in the early period of the Divided Monarchy (II Chr. 9:29; 12:15; 13:22). Zechariah's recorded prophetic activity extended from 520 to 518 B.C. during the reign of Darius I Hystaspis (Zech. 1:1; 7:1). He was a contemporary of Zerubbabel, and his early career coincided with the final activity of Haggai. He rekindled the people's hope and urged them to rebuild the house of God (Ezra 5:1; 6:14).

See also ZECHARIAH, BOOK OF.

22. A descendant of Parosh; head of a lay family who returned from Babylonia with Ezra (Ezra 8:3; I Esd. 8:30).

23. A descendant of Bebai; head of a lay family who returned from exile with Ezra (Ezra 8:11; I Esd. 8:37).

24. One of a delegation sent by Ezra to Iddo at Casiphia to obtain Levites, when it was discovered en route that they were lacking in the group returning from Babylonia (Ezra 8:16; I Esd. 8:44).

25. A descendant of Elam in a list of those who put away foreign wives and their children according to Ezra's reform banning foreign marriage (Ezra 10: 26; I Esd. 9:27).

26. One of the men, named without title or paternity and thus probably laymen, who stood with Ezra at the public reading of the law (Neh. 8:4; I Esd. 9:44).

27. A man of Judah, of the family of Perez (Neh. 11:4).

28. A man of Judah, called the son of the Shilonite (Neh. 11:5).

29. A priest of the family of Pashhur, house of Malchijah (Neh. 11:12).

30. A descendant of Asaph; leader of the Levites in the counterclockwise procession on the walls of Jerusalem during their dedication (Neh. 12:35).

31. A priest, listed as one of the trumpeters at the dedication of the walls of Jerusalem, probably in the clockwise procession (Neh. 12:41).

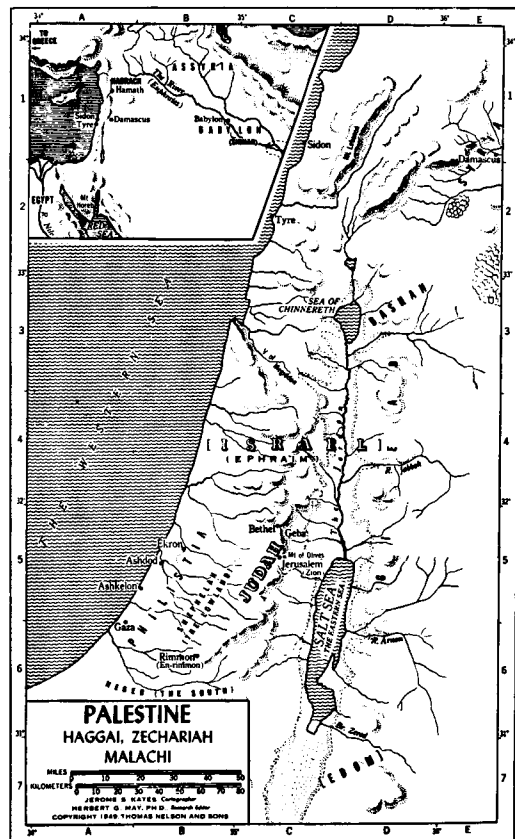

32. The father of Joseph, a Maccabean captain (I Macc. 5:18, 56).

33. The father of John the Baptist (Luke 1:5-67; 3:2). He was a righteous priest of the division of Abijah (cf. I Chr. 24:7-19). At one time, when this division assembled for duty in the temple, the lot fell to him to burn incense. While he was performing this service, an angel of the Lord appeared to him and announced that his old supplication for a son would be answered. The son, to be called John, would be filled with the Holy Spirit and would prepare the people for God's rule. Since Zechariah and his wife, Elizabeth, were aged, Zechariah asked for a sign, and Gabriel declared it: dumbness for unbelief, until the promise was fulfilled. As he was unable to pray for and to bless worshipers when he finally came out of the temple, they knew he had seen a vision (Luke 1:8-23). When the child was circumcised, Zechariah, a deaf-mute, amazed the gathering of neighbors and kinsfolk by confirming his wife's unusual choice of a name, writing on a tablet: "His name is John." Whereupon, able again to speak, he blessed God and, filled with the Holy Spirit, prophesied the fulfilment of Israel's messianic hope (vss. 57-79).

***ZACHARIAH, BOOK OF.** The eleventh in the series of twelve short prophetic books which forms the concluding section of the OT. Together with Haggai and Malachi, it belongs to a group of prophecies delivered after the Exile and sheds valuable light on the thought and conditions of that period. The prophet Zechariah was a contemporary of the prophet Haggai and like him was concerned with the rebuilding of the TEMPLE at Jerusalem in 520. Unlike the book of Haggai, however, the prophecies of Zechariah spread over a wider range than this one topic and contribute considerably to our understanding of the later stages of OT theology. Angelology, messianism, and apocalyptic feature largely in this book, which in parts is more obscure than any other OT writing.

It is generally considered that the prophecies are not homogeneous. The first section, containing the prophecies of Zechariah (chs. 1-8), is approximately contemporary, consisting of oracles and visions recorded by the prophet or a disciple before the end of the sixth century B.C. The second section (chs. 9-14), consisting largely of apocalyptic material, is of later date. Various indications appear to point to the

third century B.C. as the date of this second part of Zechariah, although some commentators detect pre-exilic material in these chapters, while others suggest dates as late as the second century. It is possible that these chapters, together with the book of Malachi, originally formed an appendix to the prophetic corpus, but that the prophecies now contained in Malachi were detached from the rest because of their distinct character and in order to make up the sacred number of twelve prophets. Significant use is made of the book of Zechariah in the NT, notably in the messianic entry into Jerusalem (Matt. 21:1-11; cf. Zech. 9:9-10) and the betrayal (Matt. 26:14-16; cf. Zech. 11:12). It will be most convenient to deal with the two sections separately.

Bibliography

1. **Chs. 1-8. a. The prophet.** Little is known of Zechariah. The name means "Yahweh remembers." He is described (1:1) as the "son of Berechiah, son of Iddo." In Ezra 5:1; 6:14; Neh. 12:16, however, he is referred to as the son, not the grandson, of Iddo. The discrepancy has been accounted for by supposing that a copyist confused the "Zechariah the son of Jeberechiah" of Isa. 8:2 with this prophet, and that the words "the son of Berechiah" are an intrusion. Zechariah would thus be the son of Iddo. Alternatively the discrepancy is held to be only apparent, since in Hebrew *ben* may mean either "son of" or "grandson of."

Iddo, father or grandfather of Zechariah, is included among the heads of the priestly families who returned from exile to Jerusalem (Neh. 12:4). Zechariah himself is numbered among the priests (vs. 16); this would suggest that he may have been a cultic prophet. Whatever his relationship with Iddo, Zechariah is generally assumed to have been still a young man when he was associated with Haggai as an advocate of the immediate rebuilding of the temple (Ezra 5:1-2; 6:14). The oracles of Haggai in this connection are dated within the four months August-September to November-December, 520 B.C. (i.e., the second year of Darius I Hystaspis; Hag. 1:1). Those of Zechariah cover a longer period of two years from October-November, 520 (1:1), to November-December, 518 (7:1). The oracular activity of the two prophets thus overlapped by one month.

b. **Historical background.** The historical background of Zechariah is therefore largely the same as that of HAGGAI. The temple has lain in ruins since its destruction at the hands of the Babylonians in 586. Enemies without and apathy within the city have contributed to this sorry state. The picture which the book of Haggai gives of a poverty-stricken and dispirited community is supported by the evidence of Zechariah (8:10; 1:17). Moved, however, by the twin portents, as he believed them to be, of the general upheaval in the Persian Empire on the accession of Darius in 522, and the presence of a Davidic prince, in the person of Zerubbabel, as governor of Judah, Haggai had been led to rouse the despondent inhabitants of Jerusalem to embark upon the rebuilding of the temple. In his eyes these factors were the certain precursors of the messianic age. Yahweh was about to establish his kingdom. His ancient dwelling place in Zion must be restored to its former glory, so that he might once again be enthroned among his people and from there achieve his purposes.

Fired by the prophet's zeal, the people had begun the work of restoration (Hag. 1:14-15), but it seems that before long the enthusiasm of the builders waned. A month after operations had commenced, the prophet had to rally the people once again (2:3), and it would appear that shortly after this (Zech. 1:1), Zechariah added his plea in prophetic exhortation. When Haggai's voice was no longer heard, Zechariah continued for two years (520-518) to proclaim the coming of the messianic kingdom and to

urge the rebuilding of the temple as the necessary prelude. As a result of the combined vigor of the two prophets, the restoration was completed in 516 (Ezra 6:15).

The emphasis of Haggai had been more upon the material prosperity which would return to Judah when the people recognized their obligation to restore the house of the Lord. Zechariah fixes his eyes rather upon the subsequent glories of the messianic kingdom and ZERUBBABEL its ruler (3:8; 6:12). It would appear from the rather obscure reference in 6:9-14 that Zechariah proposed to crown Zerubbabel king. Whether for this reason (cf. Neh. 6:7) or because Zerubbabel contemplated rebuilding the walls of the city as well as the temple (Zech. 2:1-5), it seems likely that the Persian government relieved him of his governorship. At all events, he mysteriously disappears from the scene, and the text of 7:1-2 may imply that a new governor, Bethel-Sharezer, had been appointed in his place by 518.

c. **The prophecies.** The text of chs. 1-8 has not, on the whole, suffered more in transmission than the prophetic books generally. There is every reason to believe that basically these are the authentic words of the prophet, possibly arranged in their present order by Zechariah himself, but more probably collected and edited shortly after his day. As in the case of Haggai, Zechariah is spoken of impersonally as "the prophet" (1:1, 7), but, unlike the book of Haggai, there is also a large element of personal reporting (1:8, etc.). Such redundancy and corruption as exist may be attributed to copyists, and here the text of the LXX is often helpful, but some of the difficulties are inherent in the nature of the writings. These chapters consist of a mixture of oracles in the normal prophetic style, and night visions, which constitute a distinctive feature of Zechariah. These eight visions, which are represented as having taken place in a single night in February-March, 519, have the general theme of reassuring the people that, despite all appearances to the contrary, the messianic age is about to begin.

The striking difference in style and the difficulty of completely harmonizing the contents of the oracles with those of the visions has led to the view that there may have been, even within these eight chapters, two distinct authors: (a) an earlier writer whose oracles echo, albeit faintly, the themes of the classical Hebrew prophets, and whose eschatological hopes centered on Zerubbabel as the coming messianic king; and (b) a later writer, in the tradition of Ezekiel, who, after Zerubbabel's fall from power, transferred his hopes to a supernatural intervention of Yahweh, which he expresses in apocalyptic visions of the new age, involving the destruction of the Gentiles and the subsequent centrality of the priesthood and the cultus of the temple. The majority of scholars take the view, however, that the oracles and the visions follow each other in a more or less logical sequence, and should be regarded as the work of the same prophet.

In the first oracle (1:1-6) Zechariah calls the whole people to repentance. Then come three visions. These appear to convey the message: (a) that although the widespread revolts in the Persian Empire in 522 had been quelled and the world was now at peace,

Haggai had not been wrong in seeing the "shaking of the nations" (Hag. 2:6-7) as a sign of the impending messianic age. Yahweh's love for his people will ensure his return to his own city and to his own temple (Zech. 1:7-17). (b) The proud and aggressive Gentiles will be laid low (vss. 18-21). (c) Jerusalem's walls will not be able to contain its future population, nor, indeed, will it need walls, since Yahweh himself will protect it (2:1-5).

In the second oracle (2:6-13) the prophet summons to a greater Jerusalem those of Yahweh's people who are still in Babylon. Then come two further visions. In the fourth vision (ch. 3) the prophet sees Joshua, the high priest, symbolically accepted as worthy of his great office. As representative of the people he is declared to be cleansed and forgiven. Charged with the oversight of the civil and religious life of the community, he is promised access to God on terms of equality with the angelic host. The fifth vision (4: 1-6a, 10b-14) is notoriously difficult. The "two anointed" (vs. 14) may be the high priest and his deputy, or, more probably, Zerubbabel and Joshua, the civil and religious heads of the community. The vision guarantees their divine authority and the watchful care of Yahweh for his people.

In the third oracle (4:6b-10a) Zerubbabel's restoration of the temple is to be brought to completion as the prelude to the messianic kingdom. Three more visions follow. The sixth and seventh visions are both concerned with the moral standards of the new community. There will be no place in it for thieves and perjurers; the curse of Yahweh will fall upon them (5:1-4). Sin itself will be rooted out and banished (5:5-11). The eighth and final vision (6:1-8) sees the whole world once again at peace (cf. 1:7-17), but this time under the control of Yahweh.

The remaining chapters (6:9-8:23) consist of a series of oracles which play upon the theme of the glory of the messianic age. Zerubbabel will be crowned as the Davidic messianic king, and the rebuilding of the temple will be completed (6:9-15; cf. 3:8). (It seems probable that after this messianic hope had not materialized, the name of Joshua was substituted for that of Zerubbabel in 6:11 by a later editor.) Unlike their forefathers, the Jews of the new community will live in obedience to Yahweh and in unity with one another (ch. 7). The new Jerusalem will mean peace and prosperity for old and young. Joy and gladness will drive out the memory of past distresses (cf. 3:10). Yahweh's people, gathered from afar, will be joined in his holy city by the Gentiles, who have been led to know the truth by the faithful witness of the Jews, and together they will share in the blessings of the golden age (ch. 8).

d. The significance of chs. 1-8. The work of Zechariah is often dismissed as a blend of unoriginal prophecy, barren formalism, and obscure apocalypticism. It is true that he has nothing to add to the ethical insights of the earlier masters. In his insistence on the moral obligations of the community, he draws on the thought of classical prophecy. But that he emphasizes the inwardness of the religious life so strongly (e.g., 4:6; 5:5-11) is sufficiently remarkable at a time when the ancient fires of prophetic utterance were giving place to insistence on the cor-

rectness of the cultus. Like Haggai, he saw the temple as the focus of the right relationship between Yahweh and his people, but Zechariah has at the same time a far deeper conception of the danger of formalism and of the individual's need for personal commitment and obedience.

While Zechariah is enough of a child of his time to share its nationalist aspirations and its hope in the triumph of Jewry and the destruction of the Gentiles, it would almost seem as if it is with reluctance and hesitation that he does so. His basic thought is the Utopian dream of a world at peace, with Jew and Gentile gathered together in a worshiping community centered on the temple. The downfall of the Gentile oppressors and the material prosperity of the Jews, so strongly emphasized in Haggai, are in Zechariah almost glossed over as incidental. His visions (*see VISION*)—or, more properly, visual allegories—although clearly of an apocalyptic character, have more kinship with the traditional eschatological hopes of the great prophets than with the bizarre fantasies of the intertestamental period.

Zechariah marks a significant stage in the increasing sense of the remoteness of God which Ezekiel had fathered. Not only do angels (*see ANGEL*) feature frequently in the visions as intermediaries between God and man, but the word of God itself, which the great prophets recognized as coming directly to them, is now communicated even to one who is himself a prophet by an interpreting angel. It is in keeping with this development of angelology that the beginnings of a thoroughgoing demonology can also be detected. "The SATAN," not yet the powerful personage of the Prologue of the book of Job, far less the independent demonic power of I Chr. 21:1, paves the way for the NT conception of the ruler of the kingdom of Satan, who wages deadly warfare upon the kingdom of God. It is significant also for future developments in the doctrine of evil that in the seventh vision there is the suggestion that sin is a demonic force, rather than the product of man's disobedience, and that it finds its true home among the Gentiles, the enemies of the people of God.

2. Chs. 9-14. The latter part of the book of Zechariah presents vast and, in part, insoluble problems in respect of authorship, date, and interpretation. While it is not possible to establish beyond dispute whether one, two, three, or a variety of authors were responsible for chs. 9-14, it is almost universally agreed that on linguistic and stylistic grounds, as well as in theological ideas and historical background, the author of these chapters cannot be the prophet Zechariah.

Zech. 9:1; 12:1; Mal. 1:1, each of which introduces the subsequent section as an "oracle, the word of the Lord," suggest that Zech. 9:1-Mal. 4:6 constitutes an anonymous collection of prophecies, which editors of the Book of the Twelve have divided into three parts. Two of these have been added to the last identifiable prophetic work, that of Zechariah; while the final section, being different in character, has been given an independent existence under the name of Malachi to make up the numerically significant total of twelve prophets. The two earlier sections which fall within the present compass of the book of

Zechariah consist therefore of chs. 9-11; 12-14, and may be dealt with separately.

a. *First collection (chs. 9-11)*. The first collection of prophecies opens with an oracle (9:1-12) of the impending judgment of Yahweh upon the cities of Syria, Phoenicia, and Philistia. What then remains of the Philistines will be incorporated in Judah. They will become Jewish by adoption, forswearing their heathen disregard of the Levitical food laws. Yahweh will then encircle his temple with his protecting presence, and the messianic king will enter Jerusalem in triumph to inaugurate a reign of peace. The scattered remnants of Israel will be brought back to the homeland to share in the golden age.

This oracle is generally considered to refer to the victorious campaigns of Alexander the Great, who defeated Darius, king of Persia, at the battle of Issus in 333, and thereafter proceeded southward through Syria and Palestine to the conquest of Egypt. If this is so, the prophecy sees this march of the irresistible world-conqueror as the hand of Yahweh preparing the way for the establishment of the messianic kingdom.

The following verses (9:13-17) may be taken either as an independent oracle or as an integral part of vss. 1-17. In the latter case they would have to precede vs. 8, since they present a picture of the victorious Greeks being laid low by the combined forces of the Jews, which presumably would be the prelude to the arrival of the messianic reign of peace. If, on the other hand, this is a separate utterance, it reflects a historical situation quite different from that of 9:1-12. The Greeks are no longer Yahweh's instrument but enemies who must be exterminated. This is depicted in particularly ferocious terms as a veritable blood bath, after which comes peace.

There is considerable textual corruption in this chapter which is difficult to resolve. Equally difficult is the question of how the chapter should be subdivided. Some authorities detect as many as four independent oracles (vss. 1-8, 9-10, 11-13, 14-17). The main difficulty, however, is to reconcile the ruthlessness of vs. 15 with the idyllic vision of vss. 10, 17.

10:1-2 contains a fragment on divination which appears to have no more than a verbal connection with what precedes and what follows. 10:3-12, on the other hand, bears a marked resemblance to 9:11-17 in that it is an oracle denouncing the foreign rulers of Judah ("shepherds") and predicting their downfall at the hands of the Jews, who are to be restored to their own land from the countries of their dispersion.

The problem here is to identify the "shepherds." They may be the Ptolemies and the Seleucids ("Egypt" and "Syria" [vss. 10-11]). It has, however, been held that the "Cornerstone," "Tent peg," and "Battle bow" in vs. 4 represent Simon, Jonathan, and Judas, thus indicating the Maccabean period as the date of the oracle. On the other hand, these curious allusions may be a triple designation of the Messiah, and the oracle might well refer to a situation a century earlier or more. This prophecy is followed by a fragment (11:1-3) in which the annihilation of the Gentile "shepherds" is hailed with exultation.

The next oracle (11:4-14) is by common consent

one of the most enigmatic passages in the OT. The most convincing interpretation would seem to be that the prophet, in an allegorical vision, sees himself in the role of Yahweh as shepherd of Judah. He tends his flock, knowing full well both that they are themselves worthless, and that they are doomed to slaughter at the hands of their foreign owners. One by one he breaks the two pastoral rods, "Graciousness" and "Bond of Union," with which he controls his sheep, and by this symbolic act signifies the end of the relationship between Yahweh and Judah and also the end of national unity.

In a short allegory which follows (11:15-17), the prophet is charged to assume the role of a worthless shepherd, as an indication to the people of what they may expect if they are unfaithful to Yahweh. This passage is doubtless replete with allusions to a historical situation which must have been crystal clear to the readers, but it is impossible now to do more than speculate on the identity of the "three shepherds" (vs. 8) or the "worthless shepherd" (vs. 17). The oracle has been dated variously from the fall of Samaria to the Maccabean period.

b. *Second collection (chs. 12-14)*. The second collection consists of two main oracles of an apocalyptic character (chs. 12-13; ch. 14) dealing with the final assault upon Jerusalem by the heathen powers, followed by its deliverance and the triumph of Yahweh as Lord of all nations, with Jerusalem as his dwelling place and as the center of the religious life of the world.

In the first oracle the prophet sees the ultimate climax of history. Jerusalem is attacked by the massed array of the Gentiles (cf. Ezek. 38-39). Even the hinterland of Judah joins in the rebellion, until its people see the hand of Yahweh routing the invaders, and they too join in the defense of the holy city (12:1-9). When victory has been won, there takes place a national act of mourning for some notable figure who has died a martyr's death (12:10-14), followed by a purification of the life of the nation from sin, idolatry, and prophecy (13:1-6). The short oracle in 13:7-9 is frequently regarded as misplaced, and is held to belong properly to the "worthless shepherd" allegory of 11:15-17. There is, however, more reason to suppose that it finds its proper place here as a picture of the messianic woes which precede the end.

Once more, historical allusions are rife but puzzling. The antagonism between the city and the country districts (12:2-5) suggests the Hellenizing period before the blundering policy of Antiochus Epiphanes made revolt inevitable. If the assassination referred to in 12:10-14 is that of the high priest Onias III, this date would be confirmed. On the other hand the "shepherd" of 13:7 may be an unspecified messianic figure, identifiable with or distinct from an equally imprecise presentation of the Suffering Servant idea in 12:10. The early church regarded the whole passage as christological.

The final oracle (ch. 14) consists likewise of a description of the end event, with an even stronger apocalyptic emphasis. In the great final assault of the heathen powers upon Jerusalem, the plight of Yahweh's people will be so desperate that half of them will be carried off to exile, but the other half

will escape through a miraculous gorge in the Mount of Olives. When all seems lost, Yahweh intervenes with his heavenly host. The earth is transformed, and Yahweh reigns as king over all the world from the heights of Mount Zion. The heathen warriors perish miserably, but the Gentiles learn by their fate to acknowledge Yahweh's sovereignty. Year by year they come to Jerusalem on pilgrimage to attend his enthronement at the Feast of Tabernacles. Even the former war horses bear the emblem of holiness, and so great will be the throng to perform the Levitical rites that the household pots and pans of Jerusalem must be utilized for the sacred ceremonial, and may be used with impunity, since everything will be consecrated to the service of Yahweh.

c. The significance of chs. 9-14. It is clear from the foregoing brief examination of these chapters that we can say little with certainty about their contents. Possibly the most that can be said is that they constitute a collection of anonymous and mainly apocalyptic utterances, having their origin within a range of time between the fourth and second centuries B.C. Even the apparently cogent argument against a Maccabean date, that it would be impossible to add extra material after the canon of the Twelve had been fixed (cf. *Ecclus.* 49:10; *ca.* 200 B.C.), is not accepted by some authorities.

Nevertheless, these chapters provide us with valuable insights into the theological trends of this Hellenistic period about which relatively little is known. They reflect the various levels of thought which characterized a people who saw little outward evidence of the fulfilment of prophetic promises, yet who never relinquished their invincible hope in the vindication of Yahweh and his people. The strong apocalyptic note, born of despair, looks more and more toward supernatural intervention as the only salvation of the tiny community of God from the world-wide supremacy of paganism.

It is in this light that we must evaluate the blood-thirsty treatment of the Gentiles in 9:15; 14:12. In apocalyptic thinking the Gentiles have almost ceased to be regarded as human beings and have become synonymous with the power of evil that violates every law of God. Yet despite this, there is the emergent realization that the consummation of God's purpose cannot consist merely in the destruction of evil but must include the conversion of evil to good. In the end the Gentiles must be won for God, and Jerusalem must become the spiritual center of the world, even if this is seen within the limited conception of worship as consisting of Levitical correctness (cf. 9:7; 14:16-21). It is not surprising that this restricted view of worship and holiness should exist at a time when prophecy had sunk to such a low ebb, that there was more honor in bearing the scars of a tavern brawl than the marks of a spokesman of Yahweh (cf. 13:4-6). See *WORSHIP IN THE OT.*

For many, however, the supreme significance of these chapters will be felt to lie in the two passages which find their fulfilment in the gospel. On Palm Sunday, Jesus' entry into Jerusalem (Matt. 21:1-11) is a deliberate adoption of the profound messianic symbolism of 9:9; while the paltry thirty pieces of silver in 11:12, which Yahweh receives as the price

of his service from his faithless people, point to a more than mechanical fulfilment in the traitor's price for the body of Christ (Matt. 26:14-16).

ZECHEK; KJV ZACHER. Alternate form of **ZECHARIAH** 1.

ZEDAD zē'dād [צַד]. A place in the N borderland of Canaan (Num. 34:8; Ezek. 47:15). It is identical with Sadad, which is situated N of the road between Palmyra and Riblah.

Bibliography. R. Dussaud, *Topographie historique de la Syrie* (1927), pp. 282-83; A. Alt, *Festschrift Otto Eissfeldt* (1947), p. 15. A. S. KAPELRUD

ZEDEKIAH zēd'ā ki'ā [צִדְקִיָּהוּ, Yahu is (my) righteousness; Σεδεκίας]; **KJV ZIDKIJAH** zīd ki'jā in Neh. 10:1; **KJV Apoc. ZEDECHIAS** zēd'ā ki'ās. 1. Son of Chenaanah; a prophet who promised Ahab victory against the Arameans at Ramoth-gilead (I Kings 22:1-28; II Chr. 18:1-27). At the urging of his Judean ally Jehoshaphat, Ahab consulted the four hundred cultic prophets of Samaria about the chances of the proposed expedition against Ramoth-gilead. The ensuing account provides one of the best pictures of the activity of the group prophet in the OT.

The prophesying took place outside the city on a threshing floor, since a large area was, no doubt, required for the type of activity in which the prophets engaged (cf. I Sam. 10:5-6, 10-11). At first the prophets acted as one man, chanting a prophecy of victory. Then, as the ecstatic activity of the group intensified, Zedekiah stood out from his companions. He placed horns of iron on his head, a symbol of great power (cf. Deut. 33:17), signifying that Ahab would defeat the Arameans. By creating victory before the battle, the prophet ensured the success of his sovereign's mission.

Zedekiah's assurance conflicted with the prophecy of defeat from Micaiah. Yet there was no doubt in the minds of the participants that both prophecies were inspired by Yahweh. The false prophecy was the result of a "lying spirit" sent by Yahweh to tempt Ahab to his destruction (cf. Ezek. 14:9).

R. W. CORNEY

2. A contemporary of Jeremiah the prophet, and son of Maaseiah. Jeremiah charged Zedekiah with immoral conduct and with prophesying falsely, and predicted his death at the hands of Nebuchadnezzar king of Babylon (Jer. 29:21-23).

B. T. DAHLBERG

3. Son of Hananiah; one of the princes of Judah under King Jehoiakim. He heard Baruch read the scroll of Jeremiah's oracles (Jer. 36:12).

J. M. WARD

4. The last king of Judah (ca. 597-587 B.C.); uncle and successor of Jehoiachin; put to death by Nebuchadnezzar.

His given name was Mattaniah (II Kings 24:17; see also the name מתניהו in Lachish Letter No. 1).

Zedekiah was twenty-one years old when he became king, and he reigned eleven years in Jerusalem (II Kings 24:18; II Chr. 36:11). His mother was Hamutal (or Hamital), daughter of Jeremiah of Libnah (II Kings 24:18). He would thus be Jehoiachin's uncle, as II Kings 24:17 states, and a younger brother of Jehoahaz and Jehoiakim. The genealogical list in I Chr. 3:15 makes him the third son of Josiah. II Chr. 36:10, however, calls him the "brother" of Jehoiachin. This is probably an error (cf. Jer. 27:1, where "Zedekiah" is to be read for "Jehoiakim").

Zedekiah came to the throne at a time when Judah's days were numbered. It would appear that in 597 Nebuchadnezzar had deported most of the nobility to Babylon along with King Jehoiachin. This move brought disastrous results, for it meant that the policy of Judah was framed by men with little or no experience of statecraft. Jeremiah used a striking image to describe those left behind in Judah (ch. 24). They were like rotten figs, unfit to be eaten. As he saw it, the future lay with the exiles, whom he likened to good figs. In the circumstances Zedekiah was not the best choice as king. The picture Jeremiah gives is of a man who was continually torn by conflicting emotions. He recognized that the prophet's advice was sound, but he was unable to combat the strong pro-Egyptian feelings of the people, who were sharply divided into pro-Egyptian and pro-Babylonian factions. It is noteworthy that Jeremiah nowhere condemned the king, but he bitterly denounced his advisers. Torn asunder by rival parties, Judah went to her doom.

Both Kings and Chronicles pass quickly over the events of Zedekiah's reign until the final siege of Jerusalem. The Babylonian Chronicle, however, supplies us with a few details of the intervening years. These indicate that Nebuchadnezzar had difficulties both at home and among the conquered peoples. In particular, a revolt broke out in Babylonia in 595-594. This was put down only after the rebel leader had been captured and many of his troops killed. Frequent disturbances seem to have taken place, probably as the result of constant campaigns, but actual details of these are missing. The Chronicle ends with the notice that Nebuchadnezzar gathered his army to march to Syria in December, 594.

Jeremiah, too, has preserved factual material which

deals with these years (see ISRAEL, HISTORY OF). The insurrection which occurred in Babylonia in 595-594 may have given rise to hopes of an early collapse of Babylonian power. It is against this background that Hananiah's speech (Jer. 28:1 ff), dated in the fourth year of Zedekiah (594-593), is to be understood. Hananiah announced that God had broken the yoke of the king of Babylon and that the exiles would return and Jehoiachin be reinstated as king of Judah within two years. It is certain that much intrigue was being carried on, both in Judah and among the exiles, roused by the patriotic zeal of the false prophets (ch. 29). At the same time Egypt continued to foment trouble. In Judah itself there was a sharp division of opinion between following a pro-Babylonian or a pro-Egyptian policy. In such a situation the proximity of Egypt was a factor to be taken into account. Jer. 27:2 ff gives a picture of an attempt by the smaller nations of the West to band together against Nebuchadnezzar.

Envoys came to Jerusalem from Edom, Moab, Ammon, Tyre, and Sidon to persuade Zedekiah to join in a revolt against Babylon. But they were unsuccessful in their mission, perhaps because of the firm attitude taken by Jeremiah. This incident may be related to the death of Neco and the accession of Psammetichus II, ca. 594. In this connection the reference to the visit of Zedekiah to Babylonia in the fourth year of his reign is to be considered (Jer. 51:59). A reliable tradition may be preserved here. If it is historical, it appears that news of the impending revolt had reached Nebuchadnezzar, who summoned Zedekiah to Babylonia. This would serve in part to explain his refusal to join the anti-Babylonian alliance. Judah was in a very difficult position, caught between the two powerful opposing forces of Babylonia and Egypt. The prophecies of Jeremiah and Ezekiel indicate how strong was the opposition to submission to Babylonia as God's appointed instrument. Zedekiah vacillated between the two points of view. He respected Jeremiah, sought him out, and requested his advice. But finally the pressure upon him became too great, and he rebelled against the king of Babylon (II Kings 24:20).

The immediate cause of his rebellion seems to have been the sea attack on Philistia made by the Pharaoh Hophra of Egypt (Jer. 44:30), who had succeeded to the throne on the death of Psammetichus II, and is known otherwise as Apries. Nebuchadnezzar marched to the W and set up his headquarters at Riblah on the Orontes (II Kings 25:6, 20 ff). Zedekiah was forced to make a decision, and he threw in his lot with the pro-Egyptian party. Ammon also joined in the revolt. Ezekiel has preserved a tradition of Nebuchadnezzar's indecision regarding his plan of campaign (Ezek. 21:18 ff). After consulting his oracles he sent his army to attack Jerusalem. It is clear that he himself did not take part in the siege. He remained at Riblah, as II Kings 25:6, 20 ff, indicates. This is also in agreement with Jer. 38:17 ff, where it is said that "if you will surrender to the princes of the king of Babylon, then your life shall be spared."

The account of the siege and fall of Jerusalem in II Kings 25:1-21 is paralleled in Jer. 39:1-10; 52:1-30. The former is an insertion in the book of Jere-

miah, based on II Kings 25:1-12. The siege began in the ninth year of Zedekiah's reign (589), in the tenth month on the tenth of the month (II Kings 25:1; Jer. 39:1; 52:4). In the fourth month on the ninth of the month a breach was made in the city walls (II Kings 25:4; Jer. 39:2; 52:7). Zech. 8:19 mentions that the "fast of the fourth month" and the "fast of the tenth," along with two other fasts, were kept in later times, presumably in memory of these two occasions. But now they would be "seasons of joy and gladness, and cheerful feasts," instead of mourning. The Babylonians thus began the siege of Jerusalem in December, 589. The siege was lifted for a time when word reached them that the Egyptians were advancing (Jer. 37:5). The Babylonian army marched to meet this new threat. No details have been preserved of what happened. It is possible that the Egyptians withdrew. If a battle took place, the Babylonians were victorious, and they immediately resumed the siege of Jerusalem. It is against this background that the oracle of Jeremiah is to be understood, in which he accuses the rulers and people of a breach of faith (34:8 ff). King Zedekiah had made a covenant with all the people in Jerusalem that everyone should set free his Hebrew slaves, male and female. When the Babylonians withdrew from the city to meet the Egyptian army, those who had been set free were enslaved again.

A breach was made in the walls of the city in July, 587. By this time famine had reduced the beleaguered city to desperate straits (Jer. 37:21). Cf. Lam. 2; 4 for what is perhaps an eyewitness account of the horrors of the siege. Zedekiah, seeing that all was lost, tried to escape by fleeing in the direction of the Arabah. But he was overtaken and captured by the Chaldean army. His men of war may have tried to escape along with him, but they became separated from one another. Ezekiel has an acted picture of the king's flight in 12:1-4. Apparently the Edomites gave assistance to the Babylonians at this time, cutting off the stragglers and handing over the survivors. If the oracle in Obadiah (vss. 11-14) is correctly dated ca. 460, as seems probable, the part played by the Edomites more than a century after the sack of Jerusalem was remembered by the prophet, who lashes them with withering invective. Zedekiah was brought before the king of Babylon at Riblah, where sentence was passed upon him. His sons were slain before his eyes. Then he himself was blinded, bound in fetters, and brought to Babylon. The prophecies of Jeremiah (34:2 ff) and Ezekiel (12:13) had been fulfilled.

There is some discrepancy in the biblical records regarding the actual dates of these events. According to Jer. 52:28-29, the first capture of Jerusalem took place in the seventh year of Nebuchadrezzar, the second capture and the destruction in the eighteenth year of Nebuchadrezzar. II Kings 24:12, however, dates the first captivity in the eighth year of Nebuchadrezzar, and 25:8 the second in the nineteenth year of Nebuchadrezzar. The solution to these discrepancies is perhaps to be found in the suggestion that the writer of Kings dated Nebuchadrezzar's reign from 605 because he was in sole command of the Babylonian armies at Carchemish. Actually, he did not become king till the following year.

Zedekiah occupied a somewhat anomalous position as king of Judah, the appointee of Nebuchadrezzar. Although Jehoiachin had been exiled to Babylon, there were many who clearly believed that he would soon return to take his rightful place as king of Judah. This is evidenced in the speech of Hananiah (Jer. 28:3-4, 11). Jehoiachin himself may have had hopes of being restored to his native country (22:24-30). But Jeremiah clearly believed that this would not happen. It is interesting to note that Ezekiel dated his prophecies according to the exile of Jehoiachin (8:1; 20:1; etc.), and not to the reign of Zedekiah. The Babylonians themselves may deliberately have kept Jehoiachin in Babylon against the day of his possible return, should the circumstances be favorable, for Jehoiachin still retained the title of king of Judah. The three stamped jar handles from Kiriath-sepher and Beth-shemesh, with the inscription "Belonging to Eliakim, steward of Yau-qin," may point in the same direction.

H. B. MACLEAN

5. A prominent Jewish official signatory to the covenant of Ezra (Neh. 10:1).

Bibliography. For a summary of theories regarding the identity of this individual, see R. A. Bowman, Exegesis of Nehemiah, *IB*, III (1954), 759.

B. T. DAHLBERG

ZEEB. See OREB AND ZEEB.

ZELA זֶ'לָא [זֶ'לָא, rib, side, slope]; KJV ZELAH. One of the cities allotted to Benjamin (Josh. 18:28); significant as the site of the tomb of Kish—the final repository of the bones of Saul and Jonathan (II Sam. 21:14). The presence of the family sepulchre suggests that the town was Saul's native home. A possible long form of the name would include the word which follows in the Hebrew text of Josh. 18:28 and read "Zela ha-eleph." In either case, however, its location is uncertain, except that it is included in a list of fourteen cities which are generally to be located in the hill country N and W of Jerusalem. Khirbet Salah, between Jerusalem and Gibeon, is a possible identification of the site.

W. H. MORTON

ZELEK זֶ'לֶ'ק [זֶ'לֶ'ק] (II Sam. 23:37; I Chr. 11:39). An Ammonite who was a member of the Mighty Men of David known as the "Thirty."

ZELOPHEHAD zī lō'fā hād [זֶלְפָחָד; LXX Σαλπασαδ, shadow (*i.e.*, protection) from terror(?)]. A descendant of Manasseh. He died in the wilderness without a male heir (Num. 26:33; 27:1, 7; 36:2, 6, 10-11; Josh. 17:3; I Chr. 7:15). Upon Zelophehad's death his five daughters, Mahlah, Noah, Hoglah, Milcah, and Tirzah (perhaps clan names), appeared before Moses to request the recognition of female heirs. This alteration in inheritance laws was sought in order that the father's name might be kept alive. The request was granted, and the line of inheritance was traced for this and other eventualities. No mention is made of the levirate law (*see* MARRIAGE).

The inadequacy of female inheritance as an arrangement to continue the father's name and retain family possession of his property is demonstrated by the additional regulation in Num. 36 that heiresses must marry within the father's tribe. It is the male, then, who is the central figure in preserving family continuity in name and in property, which are intimately related.

Bibliography. J. Pedersen, *Israel*, I (1926), 94-96; M. Noth, *Die israelitischen Personennamen* (1928), p. 256.

R. F. JOHNSON

ZELOTES zī lō'tēz. KJV translation of Ζηλωτής in Luke 6:15; Acts 1:13. *See* ZEALOT; SIMON 8.

ZELZAH zēl'zā [זֶלְצָח]. A site near Rachel's tomb in the territory of Benjamin, significant as the scene of the first of three promised signs confirming to Saul his anointment by the Lord to be prince of Israel (I Sam. 10:1-2).

Though a late and erroneous gloss on Gen. 35:19 would locate Rachel's tomb near EPHRATH, which is there identified with Bethlehem, I Sam. 10:2; Jer. 31:15 suggest that Rachel was buried in the vicinity of Ramah. The name Zelzah, however, is completely unknown and is quite possibly the result of a textual corruption, for the LXX, which reads "leaping mightily" at this point, clearly has behind it a different textual tradition.

Bibliography. E. G. Kraeling, *Bible Atlas* (1956), pp. 177-78.

W. H. MORTON

ZEMARAIM zēm'ā rā'am [זַמְרַיִם, double peak(?)]. 1. A site near the N border of Benjamin, listed in the E division of cities allotted to that tribe (Josh. 18:22). The most probable location is Ras ez-Zeimara, ca. five miles NE of Bethel and in the hill country between et-Taiyibeh and Rammun. W. H. MORTON

2. A mountain in the hill country of Ephraim (I Chr. 13:4); the scene of Abijah's speech of rebuke against Jeroboam and the Israelites. I Kings 15:7, where Abijah is called Abijam, does not refer to the place or the speech but does mention a war between Abijam and Jeroboam. The mountain has not been located; it is only a conjecture which would link its name with 1 *above*. W. L. REED

ZEMARITES zēm'ā rīts [זַמְרִיִּת; Akkad. *Šimirra*; Amarna *Šumur*]. Canaanites from Syria, N of Lebanon.

The Zemarites are mentioned only in Gen. 10:18; I Chr. 1:16, in both cases as sons of Canaan and brothers of the Arvadites (*see* ARVAD) and the

Hamathites (*see* HAMATH). They lived N of Lebanon, between Arvad and Tripolis, where there is today a little town called Sumra. A. S. KAPELRUD

ZEMER zē'mār [צֶמֶר] (Ezek. 27:8). The native city of the ZEMARITES. According to a widely accepted emendation, which has been followed by the RSV, the words חֲכַמֵיךְ צִיר (KJV "thy wise men, O Tyrus") should be read as חֲכַמֵי צֶמֶר, "the skilled men of Zemer." The city is mentioned as *Šumur* in the Tell Amarna Letters and as *Šimirra* in Assyrian texts; the name and location survive in the town of Sumra, between Ruad and Tripoli. S. COHEN

ZEMIRAH zī mō'mā [זְמִירָה; *because of the feminine ending*, Noth suggests זְמִירָה, Zemarlah (*following* LXX AL), according to S Arab. names derived from an original root זָמַר and meaning Y has helped; cf. ZIMRI] (I Chr. 7:8); KJV ZEMIRA. A name in what may be a tripartite grouping of postexilic Benjaminite families, or a list of families of Zebulun otherwise lacking in the lists of the tribes in Chronicles.

Bibliography. M. Lidzbarski, *Ephemeris für semitische Epigraphik*, I (1902), 11. M. Noth, *Die israelitischen Personennamen* (1928), pp. 175-76, 242.

T. M. MAUCH

ZENAN zē'nān [צִנָּן, place of flocks]. A village of Judah in the Shephelah district of Lachish (Josh. 15:37). Probably it is the same as Zaanān (Mic. 1:11) and to be identified with 'Araq el-Kharba.

ZENAS zē'nās [Ζηνᾶς, contraction of Ζηνόδωρος, gift of Zeus] (Tit. 3:13). Someone whom, with Apollos, "Paul" asked Titus to send to him quickly and lacking nothing. Zenas was apparently a Christian who lived in Crete. He is also described as a lawyer, perhaps to differentiate him from others of the same name. Whether he professed Greek, Roman, or Jewish law is not known.

According to late tradition Zenas was the first bishop of Diospolis (Lydda) in Palestine and was the author of a Life of Titus—the association, no doubt, stemming from the reference to Zenas in Titus. B. H. THROCKMORTON, JR.

ZEPHANIAH zēf'ā nī'ā [צְפַנְיָהוּ, Y has sheltered, or Y has treasured; cf. Punic צַפְנַנְעֵל; Apoc. *Sophonias*]; KJV Apoc. SOPHONIAS sōf'ā nī'ās (II Esd. 1:40). 1. A prophet during the reign of Josiah (Zeph. 1:1); one of the twelve Minor Prophets (cf. II Esd. 1:40). In addition to the usual citation of the prophet's father (Cushi), his ancestry is traced back four generations: his fourth ancestor, Hezekiah, must have been the king of this name. Thus he was a distant relative of Josiah. He lived in Jerusalem (cf. Zeph. 1:4) and prophesied there.

See also ZEPHANIAH, BOOK OF.

2. A priest; son of Maaseiah. He was one of two men in a deputation sent by Zedekiah to Jeremiah; they took back to the king an oracle of the prophet denouncing dependence upon Egypt and resistance against the Chaldeans (Jer. 21:1; 37:3). When Shemaiah wrote from Babylon to Zephaniah as overseer of the temple, rebuking him for not imprisoning Jeremiah for his message to the exiles, even though

Zephaniah belonged to the anti-Babylon party, he read the letter to Jeremiah and did not imprison him (29:25, 29). After the final siege and fall of Jerusalem, "Seraiah the chief priest, and Zephaniah the second priest" were among those taken to the king of Babylon at Riblah and put to death (II Kings 25: 18; Jer. 52:24).

3. The father of Josiah, an exile who returned from Babylon (Zech. 6:10, 14).

4. A name in a postexilic list which traces both the Levitical descent of Heman and the Levitical line from Kohath (I Chr. 6:36).

Bibliography. M. Lidzbarski, *Ephemeris für semitische Epigraphik*, I (1902), 25; II (1908), 172. M. Noth, *Die israelitischen Personennamen* (1928), pp. 21, 178. T. M. MAUCH

ZEPHANIAH, APOCALYPSE OF. A lost Jewish pseudepigraphic work, known through a citation by Clement of Alexandria (end of second century A.D.) in his *Stromata* (V.11). The quotation states that Zephaniah was taken by the Spirit to the fifth heaven, where he saw and heard glorious angels on their thrones singing hymns of praise to the ineffable Most High God. This scene resembles several observed by the prophet Isaiah according to the *Ascension of Isaiah* 7-9 (see *ISAIAH, ASCENSION OF*). A short fragment of a Christian Apocalypse of Sophoniah (i.e., Zephaniah) is preserved on two pages of an early-fifth-century Coptic (Sahidic dialect) papyrus MS. Sophoniah saw a human soul in the lower world being terribly flogged by angels for sins which had gone unrepented. He then was taken to another place, where he saw myriads of angels of horrendous appearance. From this point on, the text is illegible. The relation of this Sophoniah fragment to the Zephaniah fragment cited by Clement is uncertain. Another Coptic (Akhmim dialect) papyrus MS of the fourth century contains a much larger fragment (eighteen pages) of a work similar to the Sophoniah fragment. Its title has not been preserved; hence it is called the Anonymous Apocalypse, though some believe that it, too, is from an Apocalypse of Sophoniah. Much of it describes the terrible punishments of the wicked in hell similar to punishments described in the second-century Apocalypse of Peter (see *PETER, APOCALYPSE OF*). There is also a description of the mighty angel who records the good deeds of the living in the Book of Life.

See also PSEUDEPIGRAPHA.

 3. Composition of the book
 4. Zephaniah's teaching
- Bibliography

1. **Political and religious situation.** Zephaniah lived in a period when the power of Assyria in the West was rapidly expanding. The trend toward things Assyrian became increasingly conspicuous. Official protection was given in Judah to the magical arts of diviners and enchanters. Astral religion became so popular that MANASSEH erected on the roof of the upper chamber of King Ahaz altars and chariots for the worship of the sun, the moon, the signs of the zodiac, and all the host of heaven (II Kings 23:11 ff). New impetus was now given to the worship of the Queen of Heaven, the mother-goddess of Assyrian-Babylonian religion.

This worship was extremely popular, for entire Judean families participated in it—fathers, mothers, and children playing distinctive parts in the ritual (Jer. 7:17 ff).

It was the invasion of Palestine by the Scythians that awakened Zephaniah to Yahweh's call to be a prophet. The Scythians were barbarian hordes who poured down through Asia Minor into Palestine and down to the borders of Egypt in terrorist raids, leaving calamity in their track. At the bribe of Psammetichus I of Egypt (Herodotus I.103-106) they retreated from his borders, pillaged Ashkelon, and mastered Beth-shean.

2. **Contents. a. Indictment of Judah (1:1-2:3).** Zephaniah came to feel that the Scythians were harbingers of a judgment which Yahweh was bringing not only upon Judah but also upon all men and animals, birds and fish—indeed, upon the face of the whole earth (1:2-3).

Pagan worship which had infiltrated into Judah led him to condemn the whole nation and the inhabitants of Jerusalem (1:4-6). The businessmen and city leaders thought that demonic spirits dwelt both above and under the thresholds of houses, alien spirits other than Yahweh, and by leaping over the threshold the Judeans avoided perilous contact with them (1:8-9).

Zephaniah's words are source material of firsthand importance for the Jerusalem of his day. Merchants carried on their business at the "Fish Gate," located in the N section, and in the "Makhtesh," which was the trough of the cheese makers in the "Tyropoeon" Valley to the S, the center of trade. In such areas, Zephaniah uttered Yahweh's condemnation. As the prophet contemplated the judgment that awaited the people, in solemn imagination he heard their wailing cries (1:10-11). He also portrayed Yahweh with a search lamp hunting down for destruction the property and homes of those who lived in Jerusalem and whose lives were utterly untouched by concern for ethical conduct in daily business transactions (1:12-13a).

For this prophet more than for any other, the major theme was the DAY OF THE LORD. It was to be a day of wrath, of trouble and distress, of crashing ruin and devastation, of darkness and calamity, of clouds and gloom (1:15), which would mark the destruction of all the inhabitants of the earth (1:18). Would a like fate come to Judah? To Zephaniah there was to this inevitable question but one answer: Yahweh, the master of heaven and earth, shows no favorites. But if Judah would escape a similar judgment, a new spirit must characterize her life. Judah is still a nation. It is with eagerness of spirit and tenderness of appeal that the prophet pleads with his people. These are among his greatest utterances. Influence both of Amos and of Hosea may be seen in the tender and mighty words (2:1-3).

b. Indictment of the nations (2:4-15). Zephaniah, with considerable detail and geographical definiteness, shows how the judgment of God would affect the nations with which Judah is most vitally concerned. First he deals with the four vigorous and prosperous cities of Philistia, Judah's neighbor to the W—Gaza, Ashkelon, Ashdod, and Ekron. Philistia, now populous and wealthy, will be reduced to pastoral solitudes. He then turns to the fate of Egypt. Egypt had begun to reach out its arm of conquest toward Palestine and Syria; but the Ethiopians, who had themselves once ruled Egypt, would themselves fall by the sword (2:12).

Next he deals with Assyria. Yahweh's outstretched hand will make of proud Nineveh a desolation (2:13-14a). What once were beautiful capitals, windows, and thresholds will be but haunts of screech owls, porcupines, and ravens! (2:14b-c.) The prophet, in anticipation, pictures the ultimate and irrevocable collapse of that arrogant, haughty metropolis.

It was with solemnity and awe, and in the deep consciousness of being the spokesman of divine judgment that he contemplated the irrevocable fall of Nineveh. Already the barbarous Medes, precursors of the yet more barbarous Scythians, had attacked Assyria on the E. Now the prophet taunted Nineveh with a mock lament (2:15).

c. Jerusalem refuses correction (3:1-8). The prophet now pronounces impending judgment upon the capital, because Jerusalem has not listened to the prophetic voice, has refused to accept prophetic correction, and has not trusted or drawn near to God (vss. 1-2). Jerusalem's officials, judges, prophets, and priests come under the divine condemnation because they are licentious and profane (vss. 3-4). Yahweh, who remains righteous and blameless, will deal justly with his people (vs. 5). Although he has striven to correct them by showing them the nations' fate, they are unresponsive to his counsel and refuse to change their conduct (vss. 6-7). Yahweh will pour out upon all nations and kingdoms his indignation and judgment (vs. 8).

d. A remnant to be saved (3:9-20). Destruction is not God's last word. There are many evil people in Judah; but Judah is still in the hands of Yahweh, who is at work in the hearts and minds of a righteous minority. In Judah there are those who are not rebellious and proud, but who are humble and lowly, blameless in character and truthful in speech, and who have made God their refuge (vss. 9-13). To this creative nucleus of the future Judah, Yahweh will give spiritual renewal (vs. 17b), and he will find joy in them (vss. 14-17). They will not endure disaster any more. Yahweh will save the lame, gather the outcast, and, having brought home the scattered people, he will cause them to be honored among all the nations of the earth (vss. 18-20).

3. **Composition of the book.** If one admits with the superscription (1:1) that Zephaniah preached only during the reign of Josiah (640-609 B.C.), some elements of the book raise literary and historical problems. A number of scholars consider that chs. 2-3 contain later poems and that even the authentic oracles of Zephaniah have been somewhat amplified in the postexilic period. It is not necessary, however, to maintain that the picture of universal destruction (1:18c; 3:8d) represents the pattern of later apocalypics. Nevertheless, the oracle of Moab and Ammon (2:8-9) may reflect the attitude of later Jewish nationalism (see especially vs. 9d; cf. 2:7a, c). Likewise, the international situation implied by 3:1-7 is characteristically different from that of Zephaniah during the Scythian invasion (chs. 1-2). Then, the nations were not yet destroyed; now, the picture of the international desolation is used as an object lesson destined to bring about the repentance of Jerusalem (3:6-7). Again, the conversion of all peoples to the worship of Yahweh (3:9) and the gathering of the Diaspora (3:10) constitute typically postexilic themes, bearing the influence of Deutero-Isaianic theology. The final poem (3:16-20) belongs to the eschatological pattern in which Yahweh himself, the "king of Israel," is "in the midst of his people," and the NATIONS become witnesses of the restored fortunes of Judah.

4. **Zephaniah's teaching.** While Zephaniah does not offer the same originality as his predecessors, Amos and Isaiah, or of his younger contemporary, Jeremiah, he contributes a note of his own. He knows the corrupting character of magical practices, and he declares that they have no place in the religion of Yahweh. Unless renewed by God, human nature is dishonest and deceitful. Foreign nations are used by the master of history to discipline the chosen people. Zephaniah's oracle on the Day of Yahweh has become classic through the medieval hymn "*Dies irae, dies illa.*"

E. A. LESLIE

ZEPHATH zē'fāth [צפת, watchtower]. A city in the SW part of Judah, in the neighborhood of Arad. According to Judg. 1:17, the tribes of Judah and Simeon attacked the city and utterly destroyed it, changing its name to **HORMAH**.

There is another possible reference to Zephath in II Chr. 14:10—H 14:9, when Asa went out to battle with Zerah the Ethiopian king, and a conflict took place "in the valley of Zephathah at Mareshah." But the Hebrew construction in this verse is awkward, so it is better to follow the LXX and read *μισσηφὸν ἑμάρῆσῃ*, "north of Mareshah."
S. COHEN

ZEPHATHAH zē'f'ā thō [צפתה, watchtower] (II Chr. 14:10—H 14:9). A valley near Mareshah (Tell Sandahannah) in which Asa (ca. 913-873) met and defeated the Ethiopian raiding party under Zerah, commandant of the Egyptian garrison in Gerar. The LXX says the battle occurred N of Mareshah. Zephathah might be Safiyeh ca. 1½ miles NE of Beit Jibrin (Eleutheropolis). Wadi Safiyeh begins ca. a

mile NE of Beit Jibrin and continues for a short distance toward the NE.
V. R. GOLD

ZEPHI zē'fī [צפי; cf. Akkad. *personal name Šupū*; LXX Σωφάρ (cf. Job 2:11)] (I Chr. 1:36). Alternately: **ZEPHO** —fō [צפו] (Gen. 36:11, 15). The third son of Eliphaz the Edomite. The two forms of the name vary only by the slight consonantal confusion observed in Shephi/Shepho.
L. HICKS

ZEPHON zē'fōn [צפון, perhaps from צפה, look out; cf. *personal names* צפו, צפי, צפיון; *place names* צפון, מצפה] (Num. 26:15); **ZEPHONITES** —fō nīts. The eldest son of Gad. The Samar. and the LXX support identification with **ZIPHION**.

ZER zūr [צר] (Josh. 19:35). A fortified town in the territory of Naphtali. It has been suggested that Zer is perhaps to be identified with **MADON**, which is not listed in Josh. 19, and that it is possibly the Israelite name of this town. This suggestion, however, must be regarded as uncertain. The LXX B, following the CT, but with a different vowel, reads "Tyre," which is topographically and textually impossible.

G. W. VAN BEEK

ZERAH zīr'ā [זרח, scarlet(?), or dawning, or shining forth; perhaps a shortened form: he (God) has shone forth (cf. **ZERAHIAH**, S Arab. زرحا, Akkad. *Za-ar-hi-ilu*); NT Ζάρα]; **KJV ZARAH** zār'ā in Gen. 38:30; 46:12; **ZARA** in Matt. 1:3; **ZERAHITES** zīr'ā hīts; **KJV ZARHITES** zār'—. Alternately: **ZOHAR** zō'hār [זחר] (46:10; Exod. 6:15). 1. A chief of Edom; descended from both Esau and Ishmael, since he was a son of Reuel, who was the son of Esau by Basemath the daughter of Ishmael (Gen. 36:13, 17 [cf. vss. 2-4]; I Chr. 1:37). The name appears again as that of the father of an early Edomite king Jobab (Gen. 36:33; I Chr. 1:44).

2. One of the twins born to Judah by Tamar, his daughter-in-law (Gen. 38:30; 46:12; I Chr. 2:4). His name is ascribed to what happened as he and his brother were born: a scarlet thread was tied on his hand before his brother (*see PEREZ*) came out first (Gen. 38:27-30). He was the founder of a family of the tribe of Judah called Zerahites (Num. 26:20) and also called the "sons of Zerah" (I Chr. 9:6; Neh. 11:24). His descendants are named (I Chr. 2:6). He was the ancestor of Achan (Josh. 7:1, 18, 24; 22:20) and of Pethahiah (Neh. 11:24). Alongside Perez, his twin brother, his name appears in a genealogy of Jesus (Matt. 1:3).

3. A son of Simeon (Num. 26:13; I Chr. 4:24). He was the founder of a family of the tribe of Simeon called Zerahites (Num. 26:13). In Gen. 46:10; Exod. 6:15 he is named Zohar.

4. A Levite, of the family of Gershom (I Chr. 6:21, 41).

5. An Ethiopian (RSV-KJV), or a Cushite (Hebrew). Sabeian זרח (Hebrew זרח; *see above*) is a princely title (*see SIBEANS*). He was the leader of an attacking force vanquished by Asa king of Judah at Mareshah and pursued to obliteration at Gerar (II Chr. 14:9-15). He was probably the leader of

raiding Arabian Bedouin tribes: tents and camels are mentioned in the plundering, which took place in Gerar and its environs (vss. 12-15). The Chronicler or a later redactor in 16:8 evidently mistook Zerah as the leader of an Egyptian host. Zerah is not to be identified with Pharaoh Osorkon I or Osorkon II, as some have held.

Rudolf, *Chronikbücher*, HAT (1955), p. 243; W. Albright, *From the Stone Age to Christianity* (1957), pp. 46-47. T. M. MAUCH

ZERAHIAH zēr'ā hī'w [זֵרַחְיָה, Y has shone forth; cf. S Arab. زَرَحِيَا, Akkad. *zā-ar-ḫi-ilu*; Apoc. Ζαραΐά]; **KJV** Apoc. ZARAIAS zā rā'yās. 1. A priest; son of Uzzi and descendant of Eleazar; an ancestor of Ezra (I Chr. 6:6, 51; Ezra 7:4; I Esd. 8:2 **KJV**, omitted by RSV with B; cf. Arna in II Esd. 1:2).

2. A layman; the father of Eliehoenai, who returned to Judah from the Exile with Ezra (Ezra 8:4; I Esd. 8:31).

Bibliography. K. Tallqvist, *Assyrian Personal Names* (1914), p. 247; M. Noth, *Die israelitischen Personennamen* (1928), p. 184. T. M. MAUCH

ZERAHITES zēr'ā hīts [זֵרַחִיִּים]; **KJV** ZARHITES zār'—. A name for a family descended from Zerah. There was a family of this name in the tribe of Simeon (Num. 26:13; see ZERAH 3), and another in the tribe of Judah (Num. 26:20; Josh. 7:17; see ZERAH 2). Two of David's MIGHTY MEN belonged to this family: Sibbecai the Hushathite and Maharai the Netophathite (I Chr. 27:11, 13).

T. M. MAUCH

ZERIAH; **KJV** ZARAIAS. Apoc. form of ZEBADIAH 8.

ZERDAIAH; **KJV** SARDEUS. Apoc. form of AZIZA.

ZERED, BROOK zēr'īd [נְחַל זֵרֶד]. Alternately: VALLEY OF ZERED (Num. 21:12); **KJV** VALLEY OF ZARED zār'īd. The stream which the Israelites crossed marking an end to their thirty-eight years of wandering in the wilderness (Num. 21:12; Deut. 2:13-14). It is identified with the Wadi el-Hesa, which flows into the SE end of the Dead Sea. For a short distance before entering the Dead Sea after it has emerged into the plain, it is called the Seil el-Qerahi. The Zered is ca. 35 miles long and has a fall of ca. 3,900 feet. Through its tributaries it drains the entire N section of the Jebel esh-Shera' (Jebal). The valley itself is 3½-4 miles across at the top.

Trajan's road crosses the Zered at el-'Ainab, following the route dating from the Early Bronze age. A series of Edomite fortresses guarded the approaches to the plateau S of the Zered. The Zered constituted the N boundary of the kingdom of EDOM and the S boundary of the kingdom of MOAB.

The "Brook of Willows" in Isaiah's oracle against Moab is usually identified with the Brook Zered (Isa. 15:7).

Bibliography. N. Glueck, *Explorations in Eastern Palestine*, II, AASOR, XV (1934-35), *passim*; III, AASOR, XVIII-XIX (1937-39), *passim*. V. R. GOLD

ZEREDAH zēr'ā dā [צֵרֵדָה, *locative* צֵרֵדָה]; **KJV** ZEREDA (I Kings 11:26); **ZEREDATHAH** zēr'ā dā'thā (II Chr. 4:17). 1. The home of Jeroboam; his place of residence prior to his working for, and revolt against, Solomon. The only clue to the location of the town is the reference to "Ephraimite," which can be understood as indicating the territory of Ephraim. It has been suggested that Zeredah was not in a central location and that for this reason Jeroboam moved to, and fortified, Shechem rather than his native town. A possible location for Zeredah at the spring 'Ain Seridah in the Wadi Deir Ballut in W Samaria has been suggested. Some commentators have identified it with modern Deir Ghassaneh, located ca. fifteen miles SW of Shechem.

Bibliography. W. F. Albright, "The Administrative Divisions of Israel and Judah," *JPOS*, V (1925), 33, 37.

2. A city in the Jordan Valley (II Chr. 4:17); it probably should be read "ZARETHAN" (צֵרֵתָן), as in I Kings 7:46. Most commentators suggest this should also be the reading in Judg. 7:22, instead of "ZERERATH" (RSV mg. "Zeredah," with some Hebrew MSS; cf. Josh. 3:16; I Kings 4:12; 7:46).

W. L. REED

ZERERAH zēr'ā rā [צֵרֵרָה]; **KJV** ZERERATH —rāth. A place along the route by which the Midianite host fled after its first defeat by Gideon (Judg. 7:22). The exact form of the name is uncertain; if it is merely a variant of ZARETHAN, the **KJV** form would be correct. Other scholars, supposing a confusion between the Hebrew letters *r* and *d* (ר and ד), have proposed a reading "Zeredah" (cf. II Chr. 4:17), which is also probably a variant of Zarethān.

S. COHEN

ZERESH zēr'īsh [זֵרֵשׁ] (Esth. 5:14; 6:13). The wife of Haman, and apparently his chief counselor, first in his plans for vengeance and later in warning him of defeat. The name may be Persian (possibly "gold" or "mophead"; see *bibliography*), or it may represent the Elamite goddess Kirisha.

See also VASHTI; ESTHER.

Bibliography. H. S. Gehman, *JBL*, XLIII (1924), 326.

D. HARVEY

ZERETH zēr'īth [צֵרֵת] (I Chr. 4:7). A descendant of Judah; the first son of Helah, the wife of Ashhur.

ZERETH-SHAHAR zēr'īth shā'hār [צֵרֵת הַשְּׁחָר]; **KJV** ZARETH-SHAHAR zār'—. A city of the tableland of Moab, assigned by Moses to the tribe of Reuben (Josh. 13:19). It was located "on the hill of the valley" (בְּהַר הַעֵמֶק), presumably a hill overlooking the basin of the Dead Sea (cf. vs. 27). Many identify Zereth-shahar with modern Zarāt, at the hot springs of Callirhoe, on the E shore of the Dead Sea not far from Machaerus.

E. D. GROHMAN

ZERI zēr'ī [צֵרִי, balsam] (I Chr. 25:3). Head of a possibly Davidic, and postexilic, family of singers of the Jeduthun group. An initial letter may have been lost (cf. IZRI, יצרי, in vs. 11). See JEDUTHUN; MUSIC.

ZEROR zîr'ôr [צִרּוֹר] (I Sam. 9:1). An ancestor of Saul; a son of Becorath, and the father of Abiel.

ZERUAH zî rōō'ā [צִרוּעָה, having a skin disease] (I Kings 11:26). The mother of Jeroboam.

ZERUBBABEL zî rūb'ā bāl [זֵרֻבָבֶל, Akkad. *zēr-bābili*, scion of Babylon; Ζοροβαβέλ]; KJV Apoc. and KJV NT ZOROBABEL zō rōb'—. A Babylonian Jew who returned to Palestine (Ezra 2:2) to become governor (*pehā*) in postexilic Jerusalem under the Persian king Darius I (Hystaspis; 522-486 B.C.). Zerubbabel is probably not to be identified with Sheshbazzar (1:8, etc.). Although such an identification has often been defended, the latter must rather be Zerubbabel's uncle (on this problem, see *bibliography* and SHESHBAZZAR).

Aroused and spurred on by the prophetic preaching of Haggai and Zechariah, Zerubbabel, with Joshua the high priest, resumed the work of rebuilding the temple at Jerusalem in the second year of Darius (520; cf. Ezra 3:2-13; 5:1-2; Hag. 1:1-2:9; Zech. 4:9)—a work which had been started under Sheshbazzar (Ezra 5:16) but which was only now to be completed (ca. 515; cf. Ezra 6:15), some twenty-three years after the edict of Cyrus (538) permitting the Jews to return to Palestine. The work was accomplished despite the opposition and hostile legal maneuvering of the "adversaries of Benjamin and Judah" in adjacent provinces (ch. 4; 5:3-6:15).

It would seem at first glance that Ezra 3-4 places the beginning of Zerubbabel's work in the reign of Cyrus, but the chronological references in these passages are clearly ambiguous and contradictory. The greater historical trustworthiness of Haggai and Zechariah suggests that the Ezra passages describe events during the reign of Darius, not of the earlier Cyrus. See EZRA AND NEHEMIAH, BOOKS OF; and see *bibliography*.

In every genealogical reference except one, Zerubbabel is the "son of Shealtiel" (Ezra 3:2, 8; 5:2; Neh. 12:1; Hag. 1:1, 12, 14; 2:2, 23; Matt. 1:12; Luke 3:27). In I Chr. 3:19 he appears as the son of Pedaiah. It has been conjectured that Shealtiel may have died childless but that Zerubbabel was born to his widow by the deceased man's brother in a levirate marriage, so that the offspring of Pedaiah the brother would be legally the son of Shealtiel. But if this were the case, it is difficult to understand why Zerubbabel is not listed as Shealtiel's son in this passage also, or such an explanation given. More probably either the Chronicler is in error here, or possibly the reference is to another person, who would then be a cousin of Zerubbabel his namesake. The name is shown by actual inscriptions from the time of Darius to have been a common one in Babylon. In either case Zerubbabel stands in the Davidic line, being a grandson of the exiled king of Judah, Jehoiachin (cf. I Chr. 3:17-19). Matt. 1:12; Luke 3:27 place him in the ancestral line of Jesus Christ.

The prophets Haggai and Zechariah, doubtless prompted by the disturbances in the Persian Empire which followed the death of Cyrus' successor, Cambyses, and the consequent accession to the throne of Darius I in 522 B.C., anticipate as a providential

consequence of the international upheavals Judah's restoration to national power under Zerubbabel, who represents for them now the ideal of the Davidic kingship (Hag. 2:21-22; Zech. 4:6-7). For Haggai he is Yahweh's "servant" and his "chosen one," his "signet ring" (Hag. 2:23; cf. Jer. 22:24), and Zechariah's references to "the Branch" (3:8; 6:12) must be taken to mean Zerubbabel as David's descendant (cf. Isa. 11:1; Jer. 23:5-6; 33:14-16). Zech. 6:12 seems certainly to have referred originally to Zerubbabel, not Joshua (see *bibliography*). Thus a messianic hope focuses on the figure of Zerubbabel. However, a restoration of the Davidic kingdom was consummated neither under him nor afterward, and the Persian rulers evidently did not continue to appoint governors of Judah from the house of David.

The circumstances of the end of Zerubbabel's service as governor are unknown, as are those of his death. Because no known Davidic ruler appears to have followed Zerubbabel in the governorship, and because Ezra 6:14 omits his name from among those mentioned who participated in the completion of the temple construction, it has been conjectured that he was removed from office by the Persian throne for rebelling or threatening to rebel against it. Biblical sources are silent about this, however, unless Zech. 6:11 suggests such an attempt. But probably the coronation here referred to is a symbolic act, particularly in view of 4:6, which is addressed to Zerubbabel: "Not by might, nor by power, but by my Spirit, says the LORD of hosts." In this general connection, an attempt to see the "suffering servant" of Isa. 53 as referring to a martyrdom of Zerubbabel has not received support among most biblical scholars. See *bibliography*.

An anonymous Jewish chronicle of the sixth century A.D., *Seder 'Olam Zuṭa*, asserts that Zerubbabel returned to Babylon after the temple was completed and there succeeded his father, Shealtiel, as an exilarch, or prince of the Exile. But the reference appears in a context where much else is known to be historically erroneous, and this late tradition is unreliable—its primary purpose being an attempt to demonstrate the Davidic lineage of the later Babylonian exilarchs. See *bibliography*.

But it is evident in any case that Zerubbabel received a place of honor in Jewish tradition. Ecclus. 49:11 celebrates him as one of Israel's renowned men, and a midrash in a thirteenth-century A.D. haggadic compilation, *Yalqūt Shim'ōnī* (II.296) represents Zerubbabel as God's herald in the messianic Garden of Eden. Most striking is a passage in the Hanukkah hymn, "Mo'oz tzur," also from the thirteenth century (attributed to Mordecai ben Isaac), which recounts God's redemptive acts toward Israel in part with these words (see *bibliography*):

Torn from all I cherished, almost had I perished;
Babylon fell;
Zerubbabel
Bad'st thou to restore me!

Doubtlessly more familiar is the legend associated in the Apoc. with Zerubbabel which recounts a forensic contest between three young bodyguards of

† J. H. Hertz, *The Authorized Daily Prayer Book* (New York: Bloch Publishing Co., Inc.).

Darius the Persian king (I Esd. 3:1-5:6), and which is followed by the historian Josephus (ca. A.D. 100), who represents Zerubbabel as already having been governor in Jerusalem and an "old friend" of Darius. (Antiq. XI.iii.) One of the young contestants is Zerubbabel, whose display of wisdom gains the admiration of the king, who thereupon provides the enabling decrees and the material support for Zerubbabel's return to rebuild Jerusalem and the temple. Clearly the story is a legendary embellishment of the tradition where historical details were lacking, but it may reflect some valid memory of Zerubbabel's early training in the Persian court, after the analogy of Daniel and his three friends (Dan. 1:1-21).

Bibliography. A detailed and important study of the sources for Zerubbabel's life and work, including an attempted defense of his identification with Sheshbazzar, as well as the quotation from *Yalqut Shim'oni*, is given in J. Gabriel, *Zerubbabel* (in German; 1927).

A valuable discussion of Zerubbabel as a messianic figure is given in S. Mowinckel, *He That Cometh* (trans. G. W. Anderson; 1955), pp. 119-22, 155-62.

For an attempt to see references to Zerubbabel in Isa. 53, see E. Sellin, *Serubbabel* (1898), pp. 148 ff.

On the story of the three youths (I Esd. 3:1 ff), see C. C. Torrey, *Ezra Studies* (1910), pp. 37-61.

ZERUIAH זְרֻיָּה כַּעֲרֻיָּה [צְרִיָּה or (three times) צְרִיָּה, from צִיר, perfumed with mastix]. The mother of Joab, Abishai, and Asahel, three loyal followers of David and commanders of his army (II Sam. 2:18; etc.). These men are identified always as sons of Zeruah, and not by the name of their father. It may be that Zeruah was an outstanding woman, or possibly that the ancient custom of tracing descent by the female line has been preserved in this case. According to I Chr. 2:16, Zeruah and Abigail were sisters of the sons of Jesse. In II Sam. 17:25, however, Abigail is called the daughter of Nahash. It may be that Jesse's wife was once married to Nahash; that the name Nahash has been introduced into vs. 25 from vs. 27, where it belongs; or possibly that a matriarchal reckoning is involved. In any case, Zeruah and Abigail seem to have been sisters or half sisters of David.

D. HARVEY

ZETHAM זֶתָם [זֶתֶם, olive tree] (I Chr. 23:8; 26:22). A Gershonite Levite.

ZETHAN זֶתָן [זֶתֶן, olive tree, or one who deals with olives] (I Chr. 7:10). Listed as a Benjaminitic family in what is probably a list of families of Zebulun.

ZETHAR זֶתָר [זָרַר, possibly slayer or victor; see *bibliography*] (Esth. 1:10). One of the seven eunuchs who served King Ahasuerus as chamberlains.

Bibliography. On etymology, see L. B. Paton, *Esther*, ICC (1908), pp. 68, 148; J. D. Davis and H. S. Gehman, *The Westminster Dictionary of the Bible* (1944), p. 656.

B. T. DAHLBERG

ZEUS zōōs [Ζεύς, genitive Διός, probably from to shine, be bright]. The Greek form of the great Indo-European sky-god, sometimes the divine Sky itself; cf. Sanskrit Dyaus and Latin Jovis or Juppiter (Jovis-pater). Zeus "rains" or sends the rain; he hurls the dreadful thunderbolt; he releases the winds; all aspects of the weather are under his control. But he is also the supreme governor of the universe, lord over gods and men, and none can resist his will. He is the guardian of hospitality, and avenges wrongs done to guest or host. In the representations of sculpture, he sits enthroned in majesty, grave but kindly; this form is subsequently adapted in Christian art for the representation of Christ enthroned and of God the Father. Always the greatest of the Greek gods, the undisputed master of Olympus—"King of kings, most blessed of the blessed ones, most perfect Might of the Perfect" (Aeschylus)—he becomes in later Greek religion a symbol of divinity itself. The Stoics use his name as a personal symbol for the Power that governs all things, which may also be called Fate or Providence or Right Reason or the General Law. In the Hellenistic syncretism, he is identified with the high gods of all the nations.

2. Altar of Zeus at Pergamum

When the people of Lystra called Barnabas Zeus (Acts 14:12), they clearly took him for the manifest form of the high god, who allowed Paul to be his spokesman. It is often suggested that the names Zeus and Hermes have been substituted for some pair of native (non-Greek) divinities, since the people were clamoring in Lycaonian. No such distinction was in the mind of the author of Acts; for the "oxen and garlands" (vs. 13) were the sacrifices appropriate to Zeus, and it was the eloquence of Paul which caused him to be taken for Hermes, the god of oratory. In vs. 13, there can be little doubt that the reading of D should be adopted: τοῦ ὄντος Διὸς Προσόλεως, "the local Zeus-before-the-city"; an inscription "to Zeus before-the-city" (Διὶ Προασσίῳ) has actually been found in a town near Lystra. There is no suggestion of a temple in the Greek text, and it is probable that there would have been only an altar, perhaps with an image, at the city gates.

Fig. ZEU 2.

F. W. BEARE

ZIA זיא [זיא, the trembler(?)] (I Chr. 5:13). A head of a father's house in the tribe of Gad.

ZIBA זיב'א [זביא, זבא (II Sam. 16:4)]. A servant of the house of Saul whose artfulness ultimately gained for him half of his master's possessions. When David sought to locate the surviving members of the house of Saul, Ziba informed the king that Mephibosheth, the lame son of Jonathan, was living in the home of Machir the son of Ammiel, in Lo-debar (II Sam. 9:1-4). The king invited Mephibosheth to become a member of the royal board and bestowed upon him all the lands of the house of Saul. Ziba, who appears to have seized control of the lands of his master, was then appointed administrator of the lands, while his household, consisting of fifteen sons and twenty servants, also became servants of Mephibosheth.

The rebellion of Absalom gave Ziba an opportunity to rid himself of this onerous connection with his new master. David fled the capital so hurriedly that he was without provisions for his entourage. Ziba met the king in his flight with timely supplies and did not find it difficult to convince him that Mephibosheth had remained in Jerusalem because he sought to regain the crown for the house of Saul. Persuaded by this treacherous ruse, David forthwith transferred to Ziba all the possessions of Mephibosheth (II Sam. 16:1-4). After the suppression of the rebellion of Absalom, Ziba and his household rushed to greet the returning king and to be of service (19:17). However, Mephibosheth also met the king at the Jordan and exposed the duplicity of his servant by explaining that when he had commanded Ziba to saddle his ass so that he could join the king in his flight, Ziba had made off with the asses and left him, in his lameness, behind. Convinced, no doubt, of the general integrity of Mephibosheth, but nevertheless grateful for the indispensable aid of Ziba, David ruled that the lands of the house of Saul should be divided between Mephibosheth and Ziba (19:24-29).

E. R. DALGLISH

ZIBEON זיב'ון [זבעון, hyena; cf. ZEBOIM]. The third son of Seir, and a clan chief (אלוף זבעון; perhaps better "clan chief of Zibeon") of the native Horite inhabitants of Edom (Gen. 36:20, 24, 29; I Chr. 1:38, 40). In Gen. 36:2, 14, the KJV "daughter of Zibeon" should be read "son . . ." with the RSV; the writer possibly understood "Anah" to have feminine gender.

L. HICKS

ZIBIA זיב'א [זביה, gazelle] (I Chr. 8:9). A head of a father's house in the tribe of Benjamin; listed among others (one of them a Meshah) as sons of Shaharaim which he had in the country of Moab by his wife Hodesh.

ZIBIAH זיב'יה [זביה, gazelle] (II Kings 12:1—H 12:2; II Chr. 24:1). The mother of Joash king of Judah.

ZICHRI זיכ'רי [זכרי, remembrance, or mindful(?); perhaps a shortened form; cf. ZECHARIAH]. 1. A person or subdivision of the Levitical family of Izhar (Exod. 6:21).

2. A family of the tribe of Benjamin, descended from Shimei (I Chr. 8:19).

3. A family of the tribe of Benjamin, descended from Shashak (I Chr. 8:23).

4. A family of the tribe of Benjamin, descended from Jeroham (I Chr. 8:27).

5. A Levite individual or family (see PRIESTS AND LEVITES) descended from Asaph (I Chr. 9:15). Probably he was the same person called Zaccur (same root) in I Chr. 25:2, 10; Neh. 12:35, and called Zabdi in Neh. 11:17 (the consonants in these three names are identical or similar in Hebrew; see ALPHABET).

6. A Levite; the father of Shelomoth (I Chr. 26:25).

7. A Reubenite; the father of Eliezer (I Chr. 27:16).

8. A man of Judah; the father of Amasiah (II Chr. 17:16).

9. The father of Elishaphat (II Chr. 23:1).

10. An Ephraimite; a mighty fighter in the army of Pekah. The Chronicler attributes to him the slaying of several high personages in the court of Ahaz, in a presentation of the Syrian and Israelite invasions as punishment for Ahaz' idolatry (II Chr. 28:7).

11. A Benjaminite, the father of Joel (Neh. 11:9).

12. A postexilic priest (Neh. 12:17).

T. M. MAUGH

ZIDDIM זיד'ים [זדים, flanks or sides]. A fortified town in the territory allotted to Naphtali (Josh. 19:35). The exact location of the site is unknown. The Talmud identified Ziddim with Caphar Hittaia, modern Hattin el-Qadim, which is located approximately eight miles W-NW of Tiberias, near MADON; but this is not certain.

***ZIKLAG** זיק'לג [זיקלג, זיקלג]. A city, probably modern Tell el-Khuweifeh, ca. ten miles E of Tell esh-Sheri'a, and ca. five miles S-SW of Tell Beit Mirsim (Debir).

Ziklag first belonged to the Simeonites (Josh. 19:5; I Chr. 4:30) and later, in the royal administrative division of Judah, became a part of the Negeb province (Josh. 15:31). After the Philistine invasion in the early twelfth century, it was under Philistine control until the time of David.

During Saul's reign, David was given Ziklag by Achish king of Gath, and used it as a base for raids against the Amalekites and others (I Sam. 27:6, etc.). When the Philistines went up to Jezreel to do battle against Saul and his army, David, at their request, returned to Ziklag and discovered that it had been sacked by the Amalekites and its populace, including David's two wives, carried off by the raiders. He pursued the Amalekites, defeated them, and rescued the booty and citizens of Ziklag. Returning to Ziklag, he sent gifts of appreciation from the booty to the cities in the Negeb and S Judean hill country for kindnesses shown him and his men during their movements among them (I Sam. 30; I Chr. 12:1-20).

It was at Ziklag, a couple of days later, that an Amalekite told David of Saul's defeat and death in the Battle of Gilboa (II Sam. 1:1; 4:10). David's connection with Ziklag and later defeat of the Philistines resulted in the permanent return of Ziklag to Israelite control. After the Exile, Ziklag was among those cities reoccupied by the returning Jews (Neh. 11:28).

V. R. GOLD

ZILLAH zīl'ā [צילה], shadow; cf. *masculine names* and *נצילאל* צלתי and *נצילאל* (Gen. 4:19-23). The second wife of Lamech; the mother of Tubal-cain and his sister Naamah.

ZILTHAI. KJV form of ZILLETTHAI.

ZIMMAH zīm'ā [זימה, a *shortened form*, the second consonant of the original root doubled: (Y has) considered, purposed] (I Chr. 6:20, 42; II Chr. 29:12). A Levite descended from Gershom.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 39, 176. T. M. MAUCH

ZIMRAN zīm'rān [זמרן]. A son of Abraham and Keturah and hence the name of an Arabian locality (Gen. 25:2; I Chr. 1:32). It is apparently the same as the ZIMRI of Jer. 25:25. Its location is uncertain, but it is probably somewhere along the shore of the Red Sea, where Ptolemy mentions a Zabram to the W of Mecca. S. COHEN

ZIMRI zīm'rī [זמרין, awe of Yahy(?); Apoc. Ζαμβριν]; KJV Apoc. ZAMBRI zām'brī. Alternately: ZABDI

zāb'dī [זבדי] (Josh. 7:1, 17-18). 1. One of the five sons of Zerah; grandson of Judah and Tamar (I Chr. 2:6). In Josh. 7:1, 17-18, he is called Zabdi, doubtless through confusion between ז ("b") and ז ("m"), as happened frequently.

2. Son of Salu, prince of Simeon (Num. 25:6-18; cf. I Macc. 2:26).

This story comes from the P source and refers to Israel's intercourse with foreign women and the resultant idolatry. A plague had come upon Israel, and the people were weeping at the door of the tent of meeting. Just at this time an Israelite brought a Midianite woman into his family. Both of them were killed by Phinehas son of Eleazar son of Aaron the priest—an action which stayed the plague, but only after twenty-four thousand had died. The guilty man was Zimri, a prince of Simeon. The woman was Cozbi ("deceiver"), a princess of Midian.

3. King of Israel ca. 876 B.C.; successor to Elah, whom he murdered.

The root of the name is perhaps the Syriac *dmr*, "wonder" or "awe," but it is very old, appearing on Akkadian tablets from Mari. The word itself may be a contraction of זמריה—i.e., Ζαμαρίας, or זמריהו, "strength of Yahu" (?). The name occurs in the LXX and Josephus as Ζαμβρ(ε), which is the older vocalization.

Zimri reigned for seven days in Tirzah (I Kings 16:15). No mention is made of his father. The dynasty which Baasha attempted to establish was overthrown with the murder of Baasha's son Elah and the extermination of his whole house by Zimri (vss. 11-13). The reason alleged for the complete destruction of Baasha's house is remarkable in that elsewhere Jeroboam is blamed for causing Israel to sin. No details of the sins of Baasha and Elah are given.

Zimri, an army commander, seized his chance when the army was again occupied with the siege of Gibbethon (cf. I Kings 15:27). King Elah had remained in Tirzah, where he was engaging in a drunken orgy in the house of Arza, the royal chamberlain, when Zimri murdered him, presumably with the aid of his half-squadron of chariots.

When news of Zimri's coup reached the army in the field, they made Omri, the commander-in-chief, king. This was clearly an act of the army, not of "all Israel" (I Kings 16:16-17). The siege of Gibbethon was raised immediately, and Omri marched to Tirzah, which he captured. Zimri had taken refuge in the citadel of the palace, which he burned down, thus causing his own death.

The name occurs again in II Kings 9:31, where Jezebel greeted Jehu as he entered the gate of the city of Jezreel with the words: "Is it peace, you Zimri, murderer of your master?"

Bibliography. J. A. Montgomery, *The Book of Kings*, ICC (1951), p. 289.

4. A Benjaminite; a descendant of Jonathan, Saul's son. His father's name was Jehoaddah (I Chr. 8:36; cf. 9:42, where the father's name is given as Jarah).

H. B. MACLEAN

ZIN, WILDERNESS OF zīn [זין]. A wilderness through which the Israelites passed on their

journey to Canaan (Num. 13:21; 20:1; 27:14; 33:36; 34:3-4; Deut. 32:51; Josh. 15:1, 3). Its location can be ascertained from the description of the future Israelite (Judean) territory in Canaan as given, with slight variations, by both Num. 34:3-4; Josh. 15:1, 3: "Your south side shall be from the wilderness of Zin along the side of Edom, and your southern boundary shall be from the end of the Salt Sea on the east; and your boundary shall turn south of the ascent of Akrabbim, and cross to Zin, and its end shall be south of Kadesh-barnea." The expression "south of the ascent of Akrabbim, and cross to Zin," is identical in both accounts. The word "Zin" occurs by itself only in these two passages, and may refer to an area or a place which gave the surrounding territory its name, "the wilderness of Zin."

Num. 13:21 states that the spies sent out by Moses "spied out the land from the wilderness of Zin to Rehob" (cf. Deut. 1:19-20). Num. 20:1 simply records that "the people of Israel . . . came into the wilderness of Zin in the first month [the year is omitted], and the people stayed at Kadesh; and Miriam died there, and was buried there." In vs. 2-13 the account narrates the events which took place at the "waters of Meribah" (see MASSAH AND MERIBAH). According to these two accounts the Wilderness of Zin lay N of PARAN and included Kadesh. Num. 27:12-14; Deut. 32:49-52 (duplicate accounts) relate the punishment which Moses received from Yahweh for his failure to glorify him "at the waters of Meribah of Kadesh in the wilderness of Zin." And in Num. 33:36 the Wilderness of Zin is referred to as the first stopping place of the Israelites after they left Ezion-geber.

From the above references a number of conclusions may be drawn: (a) The Wilderness of Zin is not identical with the "Wilderness of Sin," even though both the LXX and the Vulg. spell both names the same in all places, except in Num. 34:3-4; Josh. 15:1, 3. The Wilderness of Sin was probably located at Debbet er-Ramleh, on the W fringe of Sinai Plateau (see SIN, WILDERNESS OF). (b) The Wilderness of Zin was adjacent to and N of the Wilderness of Paran, with Kadesh regarded as being in either region. (c) It was a part of the SE border of Judah toward the Dead Sea.

According to archaeological researches the Wilderness of Zin and Kadesh-barnea must have comprised the territory of the modern 'Ain el-Qudeirât, Kos-saima, Muweilleh, and 'Ain Qadeis.

ZINA. Alternate form of ZIZAH.

ZION zî'ôn [זִיּוֹן; Σιών]; KJV SION sî'ôn. Originally the fortified hill of pre-Israelite Jerusalem. The etymology of the name is uncertain. It may be related to the Hebrew זִיּוֹן (šāyôn), "dry place," "parched ground" (Isa. 25:5; 32:2), or to the Arabic *šahweh*, interpreted as "hillcrest," "mountainous ridge," from which the Arabic name for Zion—viz., *Šahyūn* or *Šihyūn*—obviously derives (cf. the Syriac *Šehyūn*). According to a recent hypothesis, mentioned here for the record only, Zion ought to be interpreted by the

Hurrian *šeya*, "river," "brook," and the expression "stronghold of Zion" (II Sam. 5:7) would apply to the Jebusite fortress (see JEBUS), located directly above the spring (and the brook) of GIHON.

The name Zion appears for the first time in the narrative of the conquest of Jerusalem by David (II Sam. 5:6-10; I Chr. 11:4-9) in the expression מְצֻדָּתֵי זִיּוֹן, "stronghold of Zion," which need not be interpreted restrictively as a single building or detached fortress, but rather as the fortified crest of the hill wedged between the valleys of the Tyropoeon and the Kidron, S of the temple area or Haram esh-Sherif, whereas the name of Urusalim (the ancient form of Jerusalem) was that of the city-state as a whole, including miscellaneous hamlets and isolated houses outside the fortifications. The same passage explains how the expression "City of David" (see DAVID, CITY OF) was substituted for the name Zion, to apply to the area within the fortified perimeter restored and eventually modified or extended by David. Conversely, the term "City of David" is explained by means of the gloss, "which is Zion" (I Kings 8:1; II Chr. 5:2). These two passages record the transfer of the ark of the covenant from the city of David to the temple recently built by Solomon.

The transfer of the ark from the city to the temple may explain why the name Zion was subsequently extended to the temple area itself, as evidenced by numerous passages of the Psalms. Yahweh is said to dwell on the mountain of Zion. Some texts associate the King with God, perhaps in view of the architectural unity of the compound palace-temple (Ps. 2:6; 132:13). More frequently, Yahweh alone is mentioned (Ps. 48:2; 74:2; 84:7; Isa. 18:7). Throngs of pilgrims long to mount to Zion and present themselves before God (Ps. 84:5). The topographical equivalence Zion-temple occurs repeatedly in the Maccabean period, when the Jews had fortified the sanctuary to resist the attacks directed by the Syrians from their fortress on the Acra (see JERUSALEM § 9; I Macc. 4:37, 60; 5:54; 6:48, 62; 7:33; 10:11; 14:27—G 14:26). The book of Jubilees also refers to the hill on which the temple stood as "Mount Zion" (Jub. 4:26; 8:19; 18:13).

In the poetic books and the prophetic writings, Zion becomes an equivalent of Jerusalem considered as the religious capital, or as being the object of God's favor or punishment (Isa. 28:16; cf. Rom. 9:33; I Pet. 2:6). In many cases, there is scarcely anything more than mere poetic parallelism (Ps. 51:18; Isa. 10:12; 24:23; 31:4; 40:9; Joel 3:16; Mic. 3:10, 12). In some passages, however, the local sense is clear: The inhabitants of Zion compare with those of Samaria for their self-complacency (Amos 6:1); God encourages his people who "dwell in Zion" (Isa. 10:24); the exiles shall be brought back to Zion (Jer. 3:14).

In similar texts of religious import, "Zion" is often used as a synonym for the people of Jerusalem as a community, or a moral person whose destiny lies in God's hand (Ps. 97:8; Isa. 1:27; 33:5). Such expressions as "sons of Zion" (Ps. 149:2; Lam. 4:2; Joel 2:23), or "daughters of Zion" (Isa. 3:16; 4:4; Jer. 4:31; 6:2; Zech. 9:9; cf. Matt. 21:5; John 12:15), refer to the men and women of Jerusalem as beneficiaries of God's mercy, or the victims visited in his wrath. In

some instances, however, the expression "daughters of Zion" means simply the women of Jerusalem, without special reference to their religious condition (Song of S. 3:11; Isa. 10:32; 16:1).

Eschatological and apocalyptic writings commonly use the name of Zion with the same religious overtones as above: the glorification of the messianic community shall take place on Zion's holy mountain, where the Messiah shall appear, at the end of time, or even beyond the consummation of time; in this last instance, Zion becomes the equivalent of the heavenly Jerusalem (Isa. 60:14; Heb. 12:22; Rev. 14:1). A similar usage occurs in the Pseudep., as, e.g., in IV Esd. 13:35-36. The (rare) references to Zion in the sectarian writings of Khirbet Qumran (see DEAD SEA SCROLLS) are not particularly characteristic.

The religious significance attached to the name of Zion toward the beginning of the Christian era is manifested by the relative popularity of the feminine name Σαλαμῖς, a Hellenized form of צִיּוֹן שָׁלוֹם, the "peace [or salvation] of Zion." It was the name of a daughter of Herod, as well as of several private persons, as evidenced by inscriptions found on ossuaries. The historical objectivity intended by Josephus in his writings may explain his abstention of the use of Zion as a toponym.

In Christian usage, the name of Zion became attached to the SW hill of Jerusalem as early as the fourth century. The reason for this transfer is probably the common belief that the house in which the apostles were gathered together on the day of Pentecost was located in these parts of the city (see UPPER ROOM). Thus the Christian Zion, where the preaching of the gospel had begun, was contrasted with the Mountain of Zion, the center of OT worship.

Epiphanius mentions the existence of a small church which would have outlasted the destruction of the city in the sieges by Titus (A.D. 70) and Hadrian (A.D. 134). Toward the end of the fourth century, it was replaced by a monumental basilica named the "Holy Zion, Mother of All Churches." The Upper Room of the Lord's Supper was identified with the Upper Room of Pentecost prior to the sixth century, and consequently the Eucharistic institution became the object of a special commemoration in the basilica, near which a tradition of the seventh century pointed to the place where Mary died. The basilica lay in ruins when the Crusaders conquered Jerusalem. Part of the medieval chapel which was built as a substitute still exists today, SE of the modern Abbey of the Dormitio (the "sleeping-in" of Mary). The Chapel of the Upper Room became a mosque in 1524, where Muslims visit an apocryphal tomb of David, following a twelfth-century folklore. See TOMBS OF THE KINGS.

The confusion between Davidic Zion and Christian Zion prevailed until the first decade of the twentieth century, when the location of the city of David was established beyond reasonable doubt on the crest of the E hill. Unfortunately the topography of the guides has not generally caught up with the scientific development.

***ZION, DAUGHTER OF** [בַּת צִיּוֹן]. A phrase frequently used in the OT as a poetic synonym for Jerusalem and its inhabitants. The usage is derived from the common Hebrew practice of describing the characteristics of a person in terms of family relationships. Thus "sons of strangers" = "strangers" (Isa. 60:10 KJV), and "children of iniquity" = "iniquitous people" (Hos. 10:9 KJV). The idea behind the idiom is that the children belong to or are identifiable with the parents. Hence while on occasion "daughters" imply specifically women (e.g., "daughters of Shiloh" [Judah. 21:21]; "daughters of Zion" [Isa. 3:16]), the term can also be used to cover the whole community.

Cities, towns, and villages are regarded as "daughters" of the country or of the metropolis (e.g., "daughters [=cities] of Judah" [Ps. 97:8]; "daughters [=cities] of the Philistines" [Ezek. 16:27]; "in Heshbon, and in all its villages" [lit., in all her daughters; Num. 21:25]; "Beth-shean and its villages" [lit., her daughters; Josh. 17:11]). "Daughter of Zion," which occurs frequently, is likewise a personification of the city of Jerusalem, which was built on Mount Zion (cf. "daughter of Tarshish" = Tarshish [Isa. 23:10]; "daughter of Sidon" = Sidon [vs. 12]). It is used in this sense generally in the OT (e.g., II Kings 19:21; Ps. 9:14; Isa. 1:8; 10:32; 16:1; 37:22; 52:2; 62:11; Jer. 4:31; 6:2, 23; Lam. 1:6; 2:1, 4, 8, 10, 13, 18; 4:22; Mic. 1:13; 4:8, 10, 13; Zech. 2:10; 9:9). In the gospels it occurs in Matt. 21:5; John 12:15, where the words of Zech. 9:9 are quoted in connection with the messianic entry of Jesus into Jerusalem.

See also DAUGHTER; FAMILY; ZION.

W. NEIL

ZIOR zī'ôr [צִי'וֹר, smallness]. A village of Judah in the hill-country province of Hebron (Josh. 15:54). Though archaeological exploration would indicate its improbability, Si'ir (or Sa'ir), in a valley ca. five miles N-NE of Hebron, has been proposed for Zior. Nearby tombs hewn in the rock testify to an ancient occupation, but probably no earlier than the Byzantine period. Local tradition reveres one tomb as the tomb of Esau. It would appear that the ancient site of Zior remains to be identified. See ZAIR.

Bibliography. W. F. Albright, "Topographical Researches in Judaea," *BASOR*, 18 (1925), 6-9. V. R. GOLD

ZIPH zif [צִיִּף]; **ZIPHITE** —it [צִיִּיִּת]; KJV once **ZIPHIMS** —imz. 1. A family or clan of the tribe of JUDAH (I Chr. 4:16). T. M. MAUCH

2. A town of Judah in the hill country province of Maon (Josh. 15:55).

Eusebius mentions a village of Ziph ca. nine (Roman) miles E (correctly, SE) of Hebron. It is really ca. five (Roman) miles SE of Hebron to Tell Zif, an excellent location dominating the desert of Judah at about the same latitude as En-gedi.

In the wilderness near Ziph, David hid from Saul (I Sam. 23:14-15; cf. superscription to Ps. 54—H 54:1-2, by which this psalm was associated by tradition

with the events of I Sam. 23:19; 26:1 ff) and in the same area later showed Saul his good will by taking his spear and water jug rather than his life (I Sam. 26:1 ff).

After the revolt of the N kingdom, Rehoboam (ca. 922-915) strengthened the fortifications of Ziph (II Chr. 11:8).

3. A town of Judah in the Negeb province (Josh. 15:24; cf. I Chr. 2:42; 4:16); probably modern Khirbet ez-Zeifeh, SW of Kurnub, about parallel to the S end of the Dead Sea. V. R. GOLD

ZIPHAH זִיפָּה [זִיפָּה] (I Chr. 4:16). A family or clan of the tribe of Judah.

ZIPHIMS. KJV form of ZIPHITES in the superscription of Ps. 54.

ZIPHION זִיפְיוֹן [זִיפְיוֹן] (Gen. 46:16). The eldest son of Gad. The Samar. and the LXX support identification with ZEPHON.

ZIPHRON זִיפְרוֹן [זִיפְרוֹן]. A place in the N borderland of Canaan, near Hazar-enan (Num. 34:9). The exact location is not known.

ZIPPOR זִפּוֹר [זִפּוֹר, צִפּוֹר, bird]. The father of Balak, the king of Moab who summoned Balaam to curse the Israelites (Num. 22:2, 4, 10, 16; 23:18; Josh. 24:9; Judg. 11:25). For the significance of the application of animal names to persons, see NAME; TOTEMISM.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 229-30. R. F. JOHNSON

ZIPPORAH זִפּוֹרָה [זִפּוֹרָה, see below]. One of the seven daughters of Reuel (another name for Jethro); the first wife of Moses; and the mother of Gershom and Eliezer (Exod. 2:16, 21-22). A brief narrative preserved in the J document says that Yahweh sought to kill Moses when he and his family were on their way from Midian to Egypt, but Zipporah circumcised her son and averted the catastrophe (4:24-26; see CIRCUMCISION). She and her sons were later taken back by Jethro (18:2-4). Her name means "swallow" (see ZIPPOR), and similar names are found in Ugaritic, Palmyrene, and Arabic sources. J. F. ROSS

ZITHRI. KJV form of SITHRI.

ZIV זִיב [זִיב, brightness(?)] (I Kings 6:1, 37); KJV ZIF zif. The early (probably Canaanite) name for the second Hebrew month, later known as Iyyar. See CALENDAR.

ZIZ, ASCENT OF זִיז [זִיז, מעלה הזיז, *ma'alê haššîš*]. A mountain pass in the SE part of Judah, not far from En-gedi (II Chr. 20:16), by which the invading Moabites, Ammonites, and Meunites were advancing in the time of Jehoshaphat. It led into a valley near the wilderness of Jeruel, a part of Judah which has not been identified, but was, from the context, not far from Tekoa. This ascent seems to be the same as the Wadi Hasasa, SE of Tekoa and along the road which runs from En-gedi to Bethlehem; in accord with this

the text may originally have read *h* instead of *h*—i.e., מעלה הזיז (*ma'alê haššîš*), "the ascent of Haziz." S. COHEN

ZIZA זִיזָּה [זִיזָּה, a short form fashioned by duplicating, with slight variation, one sound from a full word now unidentifiable; formed out of childhood as a name of endearment]. 1. A chief of Simeon whose ancestry is traced back five generations. His family participated in a Simeonite expansion toward Gedor (I Chr. 4:37).

2. A son of Rehoboam, by Maacah (II Chr. 11:20).

Bibliography. M. Lidzbarski, *Ephemeris für semitische Epigraphik*, II (1908), 20; M. Noth, *Die israelitischen Personennamen* (1928), pp. 40-41. T. M. MAUCH

ZIZAH זִיזָּה [זִיזָּה, see ZIZA] (I Chr. 23:11). Alternatively: ZINA זִינָה [זִינָה] (I Chr. 23:10). Head of a father's house of Levites, of the family of Shimei. In vs. 10 he is called Zina probably by transcriptional error: (a) the middle consonants are similar in Hebrew (see ALPHABET), and the final consonants are similar phonetically; (b) the LXX and one Hebrew MS support the identification. T. M. MAUCH

ZOAN זֹאֵן [זֹאֵן; LXX Τανις]. A city in NE Egypt, known also as Avaris, the capital of the Hyksos; as Per-Ramses, the capital and residence of Ramses II; and later as Tanis.

"Zoan" is the Hebrew version of the Egyptian name *D'n.t*, which survives in Coptic as *Ga'ne* and in Greek as Τανις. The site of the city, known in modern times as San el-Hajar, is strategically located in the E section of the Delta and served as the capital of the Hyksos Empire until it was recaptured by Amosis I ca. 1560 B.C. The importance of the city for biblical studies is due to the prominence it achieved during the rule of Ramses II (ca. 1290-1224), who is presumably the Pharaoh of the Exodus. This king established his capital at Tanis, which was renamed Per-Ramses in his honor, and made the city his official residence.

Although there is still room for doubt, the majority of scholars who have studied the problem see Avaris, Per-Ramses, and Tanis as successive names of the same site. It is thus to be identified with the RAMESES of the OT (see also PITHOM), from the region of which the Exodus was begun. The name Tanis (Zoan), which is found only in post-Ramesside Egyptian texts, occurs in Isa. 19:11, 13; 30:4; Ezek. 30:14. The "fields of Zoan" mentioned in Ps. 78:12, 43, is a faithful rendition of the Egyptian phrase *šht D'n.t*, which is found associated with the region of Tanis.

Bibliography. W. F. Petrie, *Tanis* (1885). A. H. Gardiner, "Tanis and Pi-Ra'messe," *JEA*, 19 (1933), 122-28. P. Montet, *Tanis* (1942); *Fouilles de Tanis*, vol. I (1942); vol. II (1951). J. von Beckerath, *Tanis und Theben* (1951).

T. O. LAMBDIN

ZOAR זֹאֵר [זֹאֵר, צֹוֹר, little]. One of the "cities of the valley" (Gen. 13:12; 19:29), which, along with the other four, was attacked by the four Eastern kings in the Valley of SIDDIM and subjugated (14:1-12).

Though the names of the kings of Sodom, Gomorrah, Admah, and Zeboiim are mentioned (Gen. 14:

2), that of the king of Zoar is seemingly omitted. The text reads: "the king of Bela (that is, Zoar)" (vss. 2, 8). Bela may be the name of the king of Zoar but, by an error of a copyist, given as a variant of Zoar. Or Bela may be an older name of Zoar.

When the Lord decided to destroy the wicked cities of the valley, Lot and his family were to be spared (Gen. 18:20-19:17). Fearing that he could not reach the hills, Lot was allowed to escape to a city, a "little one" (19:18-21). "Therefore the name of the city was called Zoar" (vs. 22)—meaning "little," according to popular etymology.

However, afraid to remain in Zoar, Lot and his two daughters—his wife had already been transformed into a pillar of salt (Gen. 19:26)—"went up out of Zoar, and dwelt in the hills" (vs. 30). Here was born to Lot's older daughter a son, Moab, who became the father of the Moabites (vs. 37).

It would seem that Zoar was not destroyed by the "brimstone and fire from the LORD out of heaven," as were the other cities of the valley, for the Lord allowed Lot to escape from Sodom to Zoar and promised that he would not overthrow that city (Gen. 19:21). In that case, the site of Zoar is not really to be located in the valley, for the Lord destroyed the cities of the valley, "and all the inhabitants of the cities, and what grew on the ground" (vss. 25, 29).

A late tradition—ca. 100 B.C.—indicates that the fire was thought to have descended upon all the Five Cities, or Pentapolis (Wisdom Sol. 10:6), and that Lot was afraid to dwell in Zoar. But his leaving may have been due to the site's proximity to the destruction which was taking place.

However, a Zoar, whether the original one or a nearby, rebuilt Zoar, existed in later times. To Moses on Mount Nebo, the Lord showed the land, extending southward, as far as Zoar (Deut. 34:3). And in the times of Isaiah and Jeremiah—ca. 700 and 600 B.C., respectively—a Zoar existed: Fugitives from Moab fled to Zoar, and a cry over Moab's destruction was heard as far as Zoar, and from Zoar the cry went to other sites (Isa. 15:5; Jer. 48:4, 34).

Josephus (A.D. 37-93) mentions a Zoara of Arabia (Jos. War IV.viii.4), and refers to a place "still called Zoar, that being the Hebrew for 'little'" (Jos. Antiq. I.xi.4). It had submitted to the Maccabean Alexander Jannaeus (A.D. 104-78), with other towns of Moab, and later was ceded to Aretas IV, the Nabatean king, between 9 B.C. and A.D. 40 (Jos. Antiq. XIII.xv.4; XIV.i.4). There is mention of a bishop of Zoara in the year 381.

Sir John Mandeville writes that Segor (i.e., Zoar) was set upon a hill and that its walls could be seen in his day (1322-56). He was, of course, referring to the medieval site.

A site for Zoar in the S part of the Dead Sea Basin and on the E or Moabite side best meets the requirements of the biblical narratives (see above and Gen. 19:37; 21; 25; 29). A proposed location in the center of the peninsula el-Lisan seems too far to the N.

If any weight is to be attached to the tradition that Lot escaped from SODOM to Zoar, then Zoar should have been to the E of Sodom and toward Moab. Now Sodom was probably near Jebel Usdum, and so a site on the stream Seil el-Qurahi, around es-Safi,

seems a logical location for the Zoar of the Genesis legend. See map under SODOM.

Es-Safi is in a fertile region near the present mouth of the Seil el-Qurahi, as the lower end of the Wadi el-Hesa is called. This stream flows into the S end of the E shore of the Dead Sea. Here are remains of Roman and Nabatean settlements. Here also the evidence of sugar and indigo plantations and the ruins of sugar mills amply attest the occupation of this area in Byzantine and Arabic times. In the Middle Ages the Dead Sea was called the Sea of Zugar, a name doubtless derived from Zogara, the Roman and Byzantine name of the town.

Graves, with pottery of the end of the Early Bronze and of the beginning of the Middle Bronze ages—i.e., ca. 2000-1900 B.C.—indicate that this site was inhabited during the time of the cities of the valley. Furthermore, ruins of smelting furnaces have been discovered around es-Safi, which may have been in operation as far back as the Early Bronze Age, when the cities were flourishing. Future excavations around es-Safi may reveal that the Roman-Byzantine-Arabic Zoar may also have been the site of Israelite Zoar and possibly of the more ancient Canaanite city.

If the original Zoar of Genesis was destroyed along with Sodom and Gomorrah in the Valley of Siddim, then its site may be under the waters of the S end of the Dead Sea, possibly on the westward prolongation of the Seil el-Qurahi. Then the Israelite Zoar may have been built eastward up this stream near es-Safi.

But even at es-Safi there seems to have been habitation at the time of the cities of the valley. So the site of the Zoar of Lot's time—if it did escape destruction—may have been situated around the present site of es-Safi by the Seil el-Qurahi.

J. P. HARLAND

ZOBAB זֹבָבָה [צוּבָה, צוּבָה, צוּבָה]; Akkad. *probably Šubiti* (mentioned by Ashurbanipal). An Amorite, later Aramaic, town and kingdom, presumably situated in the Biqa'—i.e., the valley between Lebanon and Anti-lebanon. In I Sam. 14:47 we are told that Saul, the first king of Israel, made war against the kings of Zobah. Also David had to fight against Zobah, where at that time Hadadezer was the king (II Sam. 8:3, 5, 9; cf. I Chr. 18:3, 5, 9). In II Sam. 8:8, David brought much copper from Hadadezer's towns Betah and Berothai. Betah has been assumed to be identical with Tubiḥi, occurring in an Amarna letter (*VAB* 2:1, pp. 690-91; 2:2, p. 1279); and according to the text mentioned, Tubiḥi was situated in the country of Amurru. This is no very concise information about the localization; but if Berothai is identical with Bereitan in the Biqa', Tubiḥi was probably also situated in this region. Since the two towns belonged to Hadadezer's kingdom, Zobah was probably situated

not far from the region mentioned. Other views on the situation of Zobah have been set forth, but they do not seem plausible.

After the events referred to in II Sam. 8, Zobah was in alliance with the Ammonites, who, according to II Sam. 10:6 (cf. I Chr. 19:6), hired a large number of soldiers from Aram-beth-rehob, Aram-zobah, and Maacah; but all the allied were defeated by Joab, David's famous general. According to vs. 2, Ps. 60 refers to these events. In the reign of Solomon a certain Rezon, son of Eliada, a vassal of Hadadezer, the above-mentioned king of Zobah, was one of the king's enemies (I Kings 11:23).

On Hamath-zobah, see HAMATH. A. HALDAR

ZOBEBAH zō bē'ḥ [צֹבְבָה] (I Chr. 4:8). Listed as a family of the tribe of Judah in a difficult sequence of names.

ZOHAR zō'hār [זָהָר, from yellowish-red or tawny; LXX Σααρ]. 1. The father of Ephron the Hittite (Gen. 23:8; 25:9).

2. Alternate form of ZERAH 3.

ZOHELETH, STONE OF zō'ə lēth. KJV translation of זֹהֶלֶת. See SERPENT'S STONE.

ZOHETH zō'hēth [זֹהֶת, proud] (I Chr. 4:20). A family or clan of the tribe of Judah.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 229.

ZOPHAH zō'fā [צוֹפָה, bellied jug] (I Chr. 7:35-36). Eponym of a clan of the tribe of Asher.

ZOPHAI. Alternate form of ZUPH 1.

ZOPHAR zō'fār [צוֹפָר, צוֹפֵר, perhaps twittering bird (cf. צוֹפֵר, bird; see ZIPPOR in Num. 22:2, 10, etc.), or perhaps sharp nail or goatlike jumper (see *bibliography*)]. One of the three friends of Job, called "the Naamathite" (Job 2:11; 11:1; 20:1; 42:9; see NAAMAH).

Bibliography. S. R. Driver and G. B. Gray, *Job*, ICC (1921), pp. xxviii-xix; S. L. Terrien, *Exegesis of Job*, IB, III (1954), 923. B. T. DAHLBERG

ZOPHIM zō'fīm [צוֹפִים, watchers]. A high place near the NE end of the Dead Sea to which Balak took Balaam for his second view of the Israelites. They went "to the field of Zophim, to the top of PISGAH" (Num. 23:14). Zophim may possibly not be a proper name, so that we would simply read "field of watchers." The various places named מִצְפָּה have the same Hebrew root. Possibly the name survives in modern Tela'at es-Safa.

For the compound name Ramathaim-zophim (I Sam. 1:1), see RAMAH 4. E. D. GROHMAN

ZORAH zōr'ā [צֹרְעָה]; KJV ZOREAH zōr'ā (Josh. 15:33), ZAREAH zār'ā (Neh. 11:29); ZORATHITES zōr'ā thīts [צֹרְעָתִים] (I Chr. 2:53; 4:2); ZORITES zōr'its [צֹרְעִים] (I Chr. 2:54); KJV once ZAREATHITES zār'ā thīts (I Chr. 2:53). A city (modern Sar'ah) situated on the N side of the Wadi

es-Sarar (see SOREK, VALLEY OF), on a summit dominating the wadi. Although Eusebius says that Saraa (Σαράα = Zorah) was ten (Roman) miles N of Eleutheropolis (Beit Jibrin), it was actually ca. fifteen.

Zorah apparently first belonged to Dan (Josh. 19:41; cf. Judg. 13:2; 18:2), and then, in the royal administrative division of Judah, became a part of the Shephelah district of Zorah-Azekah (Josh. 15:33).

Zorah was the home of Manoah, Samson's father (Judg. 13:2). At Mahaneh-Dan, between Zorah and Eshtaol, Samson first felt moved by the Spirit of the Lord (vs. 25); he was buried in the tomb of his father between Zorah and Eshtaol (16:31).

In the account of their northward migration, Danite spies from Zorah and Eshtaol reconnoitered at Laish (Dan) and then led their countrymen from the same two places to Laish. En route through Ephraim, they kidnapped the Levite whom Micah had installed as his priest. After their successful attack against Laish, they set up Micah's golden image in the shrine at Dan (Judg. 18 *passim*).

In the list of the descendants of Judah, the Zorathites are mentioned as descendants of Kiriath-jearim (I Chr. 2:53-54; 4:2; cf. Judg. 18:12). The Zorites of I Chr. 2:54 may be the S part of the clan of the Manahathites (reading "Menuhoth" of vs. 52 as "Manahathites"). They are probably not the same as the Zorathites of vs. 53. The center of the Zorites is therefore unknown at present.

After the division of the monarchy, Rehoboam (ca. 922-915) strengthened its fortifications (II Chr. 11:10). Returnees from the Exile reoccupied it (Neh. 11:29). V. R. GOLD

ZORATHITES zōr'ā thīts [צֹרְעָתִים] (I Chr. 2:53; 4:2); KJV ZAREATHITES zār'ā thīts — in I Chr. 2:53. Descendants of Shobal; inhabitants of ZORAH.

ZORITES zōr'its [צֹרְעִים] (I Chr. 2:54). Descendants of Salma, of the line of Judah. Apparently they are to be distinguished from the Zorathites (צֹרְעָתִים) of the preceding verse. See ZORAH.

ZOROASTRIANISM zō'rō ās'trī ān īzm. As a general term, the religion founded by Zarathushtra. In a more restricted sense, the form of this religion as developed by the later Zoroastrian theologians, who aimed at harmonizing the original teachings of Zarathushtra as exposed in the *Gāthās* (see AVESTA) and the ancient Iranian polytheism. Its literary sources are the Avesta and an extensive literature in Pahlavi. For a detailed discussion, see PERSIA, HISTORY AND RELIGION OF, § E.

A tendency toward emphasizing monotheism is noticeable in Parsiism, the form of Zoroastrianism current among the Parsis in India today. The ancient customs, such as the exposure of the dead on "towers of silence" (*dakhma*), and the ancient rites (maintenance of an eternal fire in the temples, keeping pure of the domestic fire, etc.) are still observed. Generosity, formerly restricted to Parsis, is nowadays extended to members of other castes, races, and religions. Religious propaganda is foreign to Parsiism.

Bibliography. In addition to the bibliography under PERSIA, HISTORY AND RELIGION OF, see J. J. Modi, *Religious Ceremonies and Customs of the Parsees* (2nd ed., 1937).

M. J. DRESDEN

ZOROBABEL. KJV Apoc. and NT form of ZERUBBABEL.

ZOSTRIANUS, APOCALYPSE OF זֹסְטְרִיאָנוֹס. A Gnostic work in Coptic, found at Chenoboskion in Upper Egypt in 1945 (see APOCRYPHA, NT). It appears to have been one of the five writings which Plotinus is reported by Porphyry to have attacked. It has been hazarded that another of these five, the Apocalypse of Zoroaster, is actually a part of Zostrianus; but this is, at best, uncertain. M. S. ENSLIN

ZUAR זְוָאֵר [צוּעַר, small or young]. The father of Nethanel, who was the leader of Issachar in the wilderness (Num. 1:8; 2:5; 7:18, 23; 10:15).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 225.

ZUPH זֹפּוּף [צוּפָה, honeycomb(?); *Kethibh* צוּפָה (I Chr. 6:35)]. Alternately: ZOPHAI זֹפּוּפַי [צוּפַי] (I Chr. 6:26). 1. An ancestor of ELKANAH and of SAMUEL (I Sam. 1:1; I Chr. 6:26, 35). In I Samuel he is an Ephraimite (see EPHRAIM) and in I Chronicles a Levite (see PRIESTS AND LEVITES) descended from KOHATH. Possibly he was both, if "Levite" originally was a professional and not a tribal designation (see 2 below).

T. M. MAUCH

2. A district mentioned only in I Sam. 9:5, the "land of Zuph," a region visited by Saul and his servant in search of the lost asses. Elkanah, the father of Samuel, came from Ramathaim-zophim (רַמַּת־צוּפִים) in the hill country of Ephraim, and was a descendant of Zuph, an Ephraimite. The district probably received its name from the family of Zuph, which may have settled there, and the name of the city of Elkanah identified with this district. On the strength of a connection with this city, the region is usually located ca. twenty-five miles SW of Shechem, although the exact area is unknown.

W. L. REED

ZUR זֹר [צוּר, rock]. 1. A Midianite leader; the father of Cozbi, who was slain with her Israelite husband after their marriage (Num. 25:15; 31:8; Josh. 13:21). This marriage is connected with accounts of religious apostasy, and it was followed by war against Midian during which Zur, one of five Midianite kings, was slain. However, according to the account in Josh. 13:21, Zur fell in the battle in which Moses defeated Sihon the Amorite king.

2. A Benjaminite; son of Jeiel, and brother of Kish, Saul's father (I Chr. 8:30; 9:36).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 37, 156.

R. F. JOHNSON

3. An ancient synonym for "God" used frequently in the OT and translated "Rock" (e.g., Deut. 32:4;

II Sam. 22:2-3; Ps. 18:31, 46—H 18:32, 47; Isa. 17:10). Having its background in the mountain imagery inherited by the patriarchs from NW Mesopotamia, it came to designate the traits of God as known within the covenant: strength, constancy, trustworthiness, never-failing mercy. In this sense, Yahweh was known as the "Rock of Israel."

See also GOD, NAMES OF, § D1. B. W. ANDERSON

ZURIEL זְרוּרִיאֵל [צוּרִיאֵל, God is a rock(?), my rock is God(?), rock is God(?)] (Num. 3:35). A Levite of the family of Merari; son of Abihail. In the wilderness he was head of the Merarites, who encamped to the N of the tabernacle and were the carpenters of its framework.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 17-18, 129-30, 140.

T. M. MAUCH

ZURISHADDAI זְרוּרִישַׁדַּי [צוּרִישַׁדַּי, Shaddai is a rock]. The father of Shelumiel, who was the leader of Simeon in the wilderness (Num. 1:6; 2:12; 7:36, 41; 10:19). The use of "rock" with reference to the deity, as in Zurishaddai and other names, is to be understood as a figurative description of God, the source of security, the "Rock of my salvation" (Ps. 89:26—H 89:27). For the meaning of "Shaddai," see GOD, NAMES OF.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), 129-30, 156.

R. F. JOHNSON

ZUZIM זְזִימִים [הַזְזִימִים; LXX ἔθνη ἡσυχῆ; possibly confused with הַזְזִימִים or הַזְזִימִים; cf. Arab. *zizim*, a word imitative of the low or faint sound of the *jinn* or *genii* that is heard by night in the deserts] (Gen. 14:5). The name of a people who lived in HAM, whom CHEDORLAOMER and his allies subdued in the course of their advance through Transjordan against the coalition of kings in the Valley of Siddim. The exact meaning of the name is uncertain, and nothing else is known about the Zuzim. Many scholars identify them with the ZAMZUMMIM in Deut. 2:20. In the Aramaic Dead Sea Scroll (see DEAD SEA SCROLLS), the so-called "Genesis Apocryphon," which preserves a passage elaborating Gen. 14, the Zuzim are represented by what the scribe intended for "Zamzummim" (זַמְזוּמִיָּא; column XXI, line 29). This represents Jewish opinion in the first century B.C., and should not be considered a decisive criterion for identifying the two names. Moreover, the localization of the Zuzim in Ham places them N of the territory where the Zamzummim are found at the beginning of the Iron Age.
