5. **Asclepieum.** The cult of Asclepius was carried to Pergamum from Epidaurus in Greece during the fourth century B.C., and in time the sanctuary of Asclepius in Pergamum became the second most renowned health center in the ancient world. The Asclepieum, located on the outskirts of the city to the SW, was approached by a splendid avenue almost a mile long. Beyond the gateway to the sanctuary was a broad courtyard flanked by colonnades. Immediately to the right was a building used as library and cult center for the deified Roman emperors; farther on was a small open-air theater. To the left rose first the dome of the round temple of Zeus-Asclepius, built on the model of the Pantheon in Rome, and then the roof of the rosette-shaped "treatment center." A subterranean tunnel connected the "treatment center" with sacred wells and pools in the center of the courtyard. Cures were effected here through the physical means of baths and mud packs, diet and exercise, as well as through the use of psychological treatment in the form of dream analysis, isolation, and faith healing.

Also outside the city, burial tumuli and simple shrines have been investigated. The Hellenistic and Roman tumuli with internal chambers remind one in general concept of the much earlier tumuli in PHRYGIA. One of the sanctuaries outside the city was dedicated to the Phrygian goddess Cybele, who in various forms was much worshiped in Pergamum. The heart of this sanctuary was a small cave-like compartment with rock-cut niches and shelves for votives. Nearby stood a structure probably devoted to the worship of Mithras.

\*PETER. 1. **Peter in the Pauline Letters.** Significantly, the symbolic designation "Petros" or "Cephas," i.e., "Rock," which is not a known personal name, dominates in the NT over "Simon" (see PETER §1). While only Matt. 16:18 offers an explanation of the symbolic name (Simon is the rock on which Jesus founds the church), the tradition of the changed name is widely known. Paul, the most ancient Christian writer, never uses "Simon" but always refers to Cephas or Peter. Early usage is attested in Paul's description of his visit to "Cephas" at Jerusalem some three years after his conversion, when he *acquired information*

(the verb ἰσορῆσαι in Gal. 1:18). The formula in I Cor. 15:5, which lists first an appearance to "Cephas," may be one of the oldest items of traditional information received (15:3) by the newly converted Saul-Paul. The similarity between the wording of that passage ("He was raised . . . he appeared to Cephas") and Luke 24:34 ("The Lord has risen indeed, and has appeared to Simon") suggests the possibility that the changing of the name is to be associated with the appearance of the risen Jesus to Simon. Matthew would then be plausible in relating the "rock" symbolism, not to Peter's character, but to his confession of faith and his role in the church; for both confessions of faith and assignment of "church-founding" missions are typical of postresurrection appearances.

Also significant is the frequent reference to Cephas in Galatians. Although Paul characterizes Peter's ministry as being to the circumcised (2:7), he assumes that Peter is an authority well known to this Gentile congregation. Thus, even when a community was evangelized by a noneyewitness of Jesus' ministry (e.g., Paul), information about Cephas was part of the Christian heritage. True, Paul is sarcastic about "those who were reputed to be something," the so-called "pillars" (2:6, 9); but that reference grudgingly implies how well established the repute was. And Paul cites as a paradigm for his own apostolate to the uncircumcised the apostolate of Peter (2:7-8), which seemingly was accepted as a fact by all, even by Galatian Gentiles who had not been evangelized by Peter and by those who questioned Paul's apostolate. Paul felt free to oppose Cephas (2:11); but his letter boasting of this, when read between the lines, tells us much about the fame of Peter in the 50s.

In the Corinthian community there is a Cephas faction (I Cor. 1:12). Had Cephas visited Corinth in the 50s (a plausible implication of 9:5)? If so, his ministry was more widespread than we might have judged from the mission to the circumcised allowed by Paul in Gal. 2:7. If not, the existence of a Cephas faction is all the more indicative of his importance and authority. That there were Apollos and Paul factions at Corinth is intelligible, since these men had preached there; that there was a Christ faction is also intelligible. But why a Cephas faction if he had not been there? Had he sent missionaries? Or was the name of the first among the Twelve so widespread that even those who had no personal contact with him would adhere to him in opposition to factions loyal to local missionaries? That Cephas or his emissaries might be the "superlative apostles" attacked by Paul in II Cor. 11:4-5 for preaching another gospel is unlikely in the light of I Cor. 15:11, where Paul joins himself to Cephas as a fellow preacher of the same kerygma.

2. **Peter in Mark.** MARK is the earliest gospel (the 60s?) and the only one that may have been written during or just after Peter's lifetime; yet it gives the least exalted gospel picture of Peter. While he is depicted as the most prominent among the Twelve, his confession of Jesus as the Messiah receives no real acceptance; rather Jesus accuses him of being on the side of men rather than of

God (8:27-33). Though at the Transfiguration Peter is the spokesman for the special three disciples (see PETER §4), Mark points out his lack of understanding (9:2-13). Peter's denials are dramatically reported, even to the point that he may have cursed Jesus, if that is the meaning of 14:71. In Gethsemane (14:37) Jesus singles Peter out, rebuking him for failing to stay awake and watch. Only one passage unique to Mark can be interpreted as giving Peter a special honor, namely, the instruction at the empty tomb (16:7): "Go, tell his disciples and Peter that he is going before you to Galilee; there you will see him"—perhaps an echo of the tradition that the first appearance of the risen Jesus was to Peter. It is exaggerated to claim that Mark regarded Peter as an adversary. Rather, in Mark the incipient stages of Peter's faith and his failures during the ministry of Jesus have not yet been heavily overlaid by the memory of his subsequent apostolic career. In the later gospels Peter fares much better, so that it is clear that his image among Christians continued to grow after his death, and in some communities more than in others.

3. **Peter in Matthew.** Here Peter is made a spokesman in scenes that Mark or Q attributed to the disciples (cf. Matt. 15:15 and Mark 7:17; Matt. 18:21-22 and Luke 17:4), so that Peter initiates the occasion for having Jesus explain things to his disciples. Similarly, in 17:24-27 Peter is deeply involved in drawing forth Jesus' solution to a tax problem faced by his disciples. For MATTHEW, then, Peter emerges as an intermediary through whom Jesus teaches the church. At Caesarea Philippi (16:13-20) Peter confesses Jesus not only as the Messiah but also as the Son of the living God, and this insight does not originate with flesh and blood but is a special revelation from God. Jesus now reacts positively, designating Peter as the rock on which he will found the church. The Matthean language here is similar to that of Paul when he describes his experience of the risen Jesus in terms of a revelation from God which was not through flesh and blood (Gal. 1:12-16). Granted the common opinion that the Matthean Caesarea scene is composite (see PETER §5), this parallelism in terminology favors the hypothesis that Matthew has enlarged Mark's more negative scene by interpolating elements from a postresurrection scene where Jesus appeared to Simon, who made a confession of faith, was given a special apostolic role, and had his name changed to rock (see §1 above). Thus the rock on which the church is built is the Peter who had postresurrection faith. Matthew was written in the subapostolic period of the last third of the century when the metaphor of the apostles as a foundation was popular (Eph. 2:20; Rev. 21:14), and so Peter as the most prominent of the Twelve is pictured as the foundation par excellence. The power of binding and loosing (excommunicating? making doctrinal decisions?) is another image assigned both to Peter and to the other disciples (Matt. 18:18; John 20:23), but the image of the keeper of the keys is related to Peter alone (Matt. 16:19). Some would derive this image from Isa. 22:15-22 and the description of the prime minister in the Davidic kingdom of Judah. In any

case, it seems that Peter has a type of ecclesiastical priority in the outlook of Matthew.

4. **Peter in Luke-Acts.** Although drawing upon Mark, LUKE omits many Markan details unfavorable to Peter; e.g., there is no rebuke of Peter's messianic misunderstanding (9:20-22), no special rebuke of Peter's sleepiness in Gethsemane, and a milder presentation of Peter's denials. In this last context, Jesus prays that Simon's faith will not fail despite Satan's testing and that, when he has turned, he will strengthen his brethren (22:31-32). Some would detect here an earlier tradition in which Peter did not deny Jesus (a theory that treats "when you have turned again" as a gloss), but more likely Luke is preparing for the role to be attributed to Peter in Acts as a spokesman of and sufferer for the gospel. Luke 5:1-11 introduces into the Markan scene of the call of the disciples a miraculous catch of fish and specifies that Jesus said to Simon (not to the group, as in Mark 1:17-18): "Henceforth you will be catching men." This too seems to prepare for the career of Peter in Acts, where he is the most active missionary among the Twelve and takes the lead in the acceptance of a Gentile into the Christian community (see PETER §7).

Christians have long and acrimoniously debated the relative importance of Peter, JAMES, and PAUL as reconstructed from Acts 1-15 and the Pauline letters (see PETER §9), debates influenced by the claim of the Bishop of Rome to be the successor of Peter in jurisdiction over the whole church. It is important not to read later problems into the biblical accounts and to recognize the possibility of contemporaneous and different roles for these men. The Twelve are never described by Luke as local church administrators despite later traditions making them bishops. Acts 6:2 is a rejection by the Twelve of administrative tasks necessitated by the development of a community large and enduring enough to warrant established structure. Drawing upon the information that the DEAD SEA SCROLL sectarians celebrated "Weeks" or Pentecost as a feast of covenant renewal, we may suspect that the post-Pentecostal Christian community first saw itself as a renewed Israel living in the brief time of repentance allotted until God should send Jesus, the appointed Messiah. (Acts 3:19-20). In this period when little structure was required, the Twelve served as leaders; their role, however, was not permanent but eschatological. They were not to be replaced after death, for their destiny was to eat and drink with Jesus in his kingdom and to sit on thrones judging the tribes of Israel (Luke 22:30). When duration, numbers, and diversity eventually necessitated structured administration for the Jerusalem community, that role fell to men other than the Twelve. Acts 6 describes how the Seven were appointed as administrators among the Hellenist Christians; simultaneously James and the elders may have become administrators for the Hebrew Christians (11:30; 12:17; 15:6, 13, 22; 21:18). Thus, James would not have been the successor of Peter as "bishop" of Jerusalem or as "pope" of the church (both ideas anachronistic for this early period). Rather, Peter was first among the Twelve (as in all the lists and specifically in Matt. 10:2),

while James, the brother of the Lord, was the first administrative leader of the mother church at Jerusalem—a function later designated as a bishopric.

Variant analyses have been offered for Acts 15. It is possibly a composite scene, with only 15:1-12 representing the same meeting described in Gal. 2:1-10. Peter, Paul, and James (and John) would then all have agreed on the decision to admit Gentiles without their becoming Jews—a decision touching the very nature of Christianity and affecting all, including the Twelve, missionary apostles, and local church leaders. But, as obvious in Gal. 2:11 ff., this decision did not determine the way that Jews and Gentiles would interrelate once Gentiles had been admitted. Paul resisted any demand that Gentiles conform to Jewish sensibilities, seeing it as an infringement on gospel freedom; Peter wavered, perhaps because he may have seen it only as a question of how to keep peace, rather than a gospel issue. If Acts 15:13 ff. is interpreted as a second Jerusalem meeting (with Paul absent) provoked by the kind of problem raised at Antioch and described in Gal. 2:11-13, James was intervening as administrator and pastor of Jerusalem and of neighboring communities with a large Jewish-Christian population, evangelized from Jerusalem. His intervention forced Gentiles in this area to observe the better-known Jewish practices in order to avoid scandal (15:19-21). Paul, on the other hand, did not impose similar observances in the churches he had founded (I Cor. 8). Such a reconstruction is hypothetical, but it illustrates the possibility of seeing Peter, Paul, and James as having different kinds of authority and areas of influence, as distinct from a solution involving their succession to or displacement of one another in leadership.

5. **Peter in John.** Simon Peter remains the most prominent of the identified disciples; and he features in scenes not recorded in the synoptic tradition, e.g., with Andrew in the Jordan valley (1:40-42); at the washing of the feet (13:6-11). But the evangelist's greater concern is to show the prominence of the unidentified BELOVED DISCIPLE who is the source of the community's tradition. In the section of JOHN directed to Jesus' "own" (chs. 13 ff.), at the major scenes, namely, the LAST SUPPER, the Jewish interrogation of Jesus, the CRUCIFIXION, the empty tomb, and the postresurrection appearance, this disciple, precisely as the disciple whom Jesus loves, appears in a more sympathetic and perceptive role than does Simon Peter. He is closer to Jesus, does not desert him, perceives the significance of the tomb for faith, and is the first to recognize the risen Jesus. The Johannine community may not have derived its somewhat different traditions about Jesus from a "name" apostolic source, but it insists that its source was an authentic eyewitness (19:35), even closer to Jesus than the best known of the Twelve. In 21:15-23 the comparison comes to a head. As foreseen by Jesus, Peter has glorified God by dying a martyr's death and is thus par excellence a witness (μάρτυς=martyr, witness) in the following of Jesus (21:18-19). A similar death was not willed by Jesus for the beloved disciple (in fact, some mis-

takenly did not expect him to die at all); yet he remains a μάρτυς (21:24) since his career was also foreseen by Jesus (21:22). In consistently setting these two figures side by side, John is not really disparaging or demeaning Peter. Indeed, in ch. 21 (written by a redactor?) Peter remains the great fisherman, bringing to shore an amazing catch of fish made with Jesus' help, as well as a shepherd who loves Jesus and is entrusted with caring for Jesus' sheep—a church-directed role with some resemblance to that given Peter in Matt. 16:18 and Luke 22:32.

**6. Images of Peter.** We know little of Peter's historical career after A.D. 50 and the meeting at Jerusalem. The tradition that he ultimately went to Rome, was martyred and buried there in the 60s, is solid, as attested by the trophy that 150 years later stood in his honor on Vatican Hill (see PETER §11). Whether that trophy marks his actual grave is uncertain, despite Pope Paul VI's acceptance (1968) of the archaeological opinion that Peter's bones had been found. A key to Peter's subsequent importance for Christians may lie in the shift of imagery from fisherman to shepherd in John 21. When they died, the great apostles (not only the Twelve) were idealized as models for meeting the needs of church life (see §1 above for the tendency to describe them as the foundations of the church). Just as in the PASTORAL LETTERS (80s or 90s?) Paul the missionary becomes a pastor worrying about structure in the churches that grew from his mission, so also in the Petrine letters Peter, once a fisherman-missionary, is portrayed as a shepherd-pastor with the care of established flocks as a primary concern. In I Pet. 5:1 he is depicted as a presbyter establishing ideals for the presbyter-bishops of the last third of the century. In II Pet. 1:16-21 his participation at the Transfiguration and the direct revelation he received from God enable him to correct new myths and pseudo-prophecies that are emerging in the early second century. This image of authentic apostolic teacher and source of tradition, which would become dominant by the time of Irenaeus (A.D. 200), had a predecessor in the portrait of Peter as true confessor of the Christian faith in Matt. 16:16-17 and Acts 1-5. Already in II Pet. 3:15-17, this image is so strong that Peter's name can be invoked to correct those who are misinterpreting the Pauline letters. Thus, in the community from which II Peter was written (Rome may be involved, if we can judge from I Pet. 5:13; see II Pet. 3:1), the trajectory of Peter's image has begun to outstrip the trajectory of Paul's image. This trajectory would be continued beyond the NT literature and era; and eventually, when the see of Rome had emerged as the most prominent bishopric in the empire, it would be invoked by the bishops of that city, where Peter had died, to justify the leadership they exercised. The debate on the validity of this claim to "succession," even when thus understood in terms of the trajectory of an image, goes beyond the biblical evidence and belongs to church history and theology.

**1. Definition.** A scholarly class dedicated to the teaching of the twofold law (the written and the oral) and to the dissemination of their belief in the world to come and the resurrection of the dead. They are not mentioned in the Hebrew Scriptures, they taught laws and doctrines not set down in those scriptures, and they promised salvation to the individual in a life beyond the grave, a concept not formulated in the Pentateuch. Yet these Pharisees were so successful in winning over the people to their innovational teachings that in the time of Jesus they are sitting in the chair of Moses, and legitimately so (cf. Matt. 23:1-3).

Unfortunately, this simple definition of the Pharisees has eluded scholars, who have pictured them as a sect of ritual purists, separating themselves from the negligent masses, the *'Am Ha'arez*. On the basis of M. Hag. 2.7, which reads that the garments of an *'Am Ha'arez* are a source of midrash uncleanness for *p'rúšim*, even as the garments of *p'rúšim* are the source of midrash uncleanness to those who eat the heave offering, the majority of scholars have concluded that *p'rúšim* in this text means Pharisees. And since the *p'rúšim* are juxtaposed to the *'Am Ha'arez*, the scholars have further concluded that these *p'rúšim* are to be identified with the *h'bhërim*, who likewise separate themselves from the masses (M. Dem. 2.3). If, then, *p'rúšim* = Pharisees = *h'bhërim*, the Pharisees are a sect of ritual purists who separate themselves from the masses.

The Hebrew word *p'rúšim*, however, is sometimes used as a common noun; i.e., separatists, and sometimes as a proper noun, i.e., Separatists, or Pharisees. In the crucial text, Hag. 2.7, the word does not refer to the Pharisees at all, but to individuals who have taken upon themselves restrictions not required by the oral law (HALACHAH). Like the *h'bhërim* of Dem. 2.3, they are mistrustful of the ritual practices of the masses and voluntarily choose to avoid contact with them. That these are not Pharisees is made clear by a comparison of Hag. 2.7, where the *p'rúšim* are juxtaposed to the *'Am Ha'arez*, with other tannaitic texts (cf. M. Yad. 4:6-7; Tosef. Yad. 2:20; T.B. Yoma 19b; Tosef. Hag. 3:35), with Josephus

(War II.viii.2, 14; Antiq. XIII.ix.9, viii.5, cf. xv.5; XVIII.i.3-4; Life 4-12) and with the NT (Matt. 22:23-40; cf. Mark 12:18-27; Luke 20:27-40; Acts 23:6-10) where they are contrasted with the Sadducees, and never with the masses. Indeed, Josephus stresses (Antiq. XIII.ix.6, xiv.5; XVIII.i.3-4) that the masses were so solidly behind the Pharisees that they were willing to rise up against their Hasmonean rulers when the teachings of the Pharisees were abrogated.

Methodologically, therefore, the definition of the Pharisees must be constructed from Josephus, the NT, and those tannaitic texts where the meaning "Pharisees" is attested to by the juxtaposition of the *p'rūšīm* with the *šedhūkhīm*, i.e., the Sadducees. For unlike *p'rūšīm*, *šedhūkhīm* is always a proper noun.

**a. In Josephus.** Josephus refers to the Pharisees in the *The Jewish War*, *The Antiquities of the Jews*, and in the *Life*, where they are described as the exponents of the dominant "philosophy" among the Jews and are contrasted to the Sadducees, to the Essenes, and to the Fourth Philosophy. The Pharisees (Antiq. XIII.x.6; cf. XIII.xvi.2) "had passed on to the people certain regulations handed down (παρέδοσαν) by former generations and not recorded in the law of Moses, for which reason they are rejected by the Sadducees, who hold that only those regulations should be considered which were written down, and those which had been handed down (παράδοσεως) by former generations should not be observed." They were, he affirms, the most accurate expositors of the Law (War I.v.2; II.viii.14), held the position of the leading school of thought (War II.viii.14), offered to believers a total system of governance (Life 2), preached the immortality of the soul and the resurrection of the body (War II.viii.14; III.viii.5; Antiq. XVIII.i.3; cf. Apion II:31), and affirmed the interplay of fate and free will (War II.viii.14; Antiq. XVIII.i.3). One of their distinguished leaders, Simon the son of Gamaliel, is referred to as an unrivaled expert in the laws (Life 38).

**b. In the NT.** The NT, though hostile toward the Pharisees, presents the same picture. This is most striking in Phil. 3:5-6, where Paul affirms that "as to the law" he had been a Pharisee, and as to righteousness under the law he had been blameless. He echoes this affirmation in Gal. 1:13-14 as one extremely zealous for the traditions (παράδοσεων) of the fathers, the technical expression used by Josephus (Antiq. XIII.x.6, xvi.1) and by the gospel writers (Mark 7:3, 8-9, 13; Matt. 15:2-3, 6) to denote the oral law. The Pharisees thus must have been the teachers of the twofold law, a scholar class, whose interpretation of the Law was viewed by Paul as the authentic one.

The Synoptic gospels and Acts likewise picture the Pharisees as the scholar class of the twofold law. In Mark 7:5, the Pharisees are the exponents of the "traditions of the elders" (παράδοσις τῶν πρεσβυτέρων), traditions which are not written down in Scripture. They appear as authorities over the Law, e.g., when they rebuke Jesus for allowing his disciples to pluck ears of corn on the sabbath (Mark 2:23-27); admonish him for allowing his disciples to transgress the traditions of the

elders (Matt. 15:1-9); challenge him on the legality of divorce (Matt. 19:1-9) and the payment of tribute to Caesar (Matt. 22:15-22); applaud him for his masterful refutation of the Sadducees, who deny resurrection (Matt. 22:23-34); and differ with him on the question as to whether the Messiah must be the son of David (Matt. 22:41-45). Most striking is Jesus' statement that "the Pharisees sit on Moses' seat; so practice and observe whatever they tell you, but not what they do; for they preach, but do not practice" (Matt. 23:2-3). Here the Pharisees are explicitly confirmed as the authoritative spokesmen for the Law—and legitimately so. This, despite whatever hostile feelings they engender in the followers of Jesus and however hypocritical they may seem to be. (They may indeed wish all their deeds to be seen by men; they may indeed wear their phylacteries broad and their fringes long; they may relish the place of honor at feasts, the best seats in the synagogue, and being called rabbi, but withal they sit in Moses' seat and exercise authority over the Law legitimately [Matt. 23 *passim*].)

The Pharisees in Matthew are thus identical with the Pharisees in Mark, just as they are with the Pharisees in Paul: the prestigious and authoritative teachers of the twofold law who rejected the claim that Jesus was the Messiah, the Son of man, and that, following his crucifixion, he was raised from the dead. Neither Paul, nor Mark, nor Matthew defines the Pharisees as pre-eminently concerned with laws of ritual purity, or as ranged against the common masses. Indeed, the one instance in which the Pharisees engage Jesus in controversy over ritual purity is in the matter of the washing of the hands (Mark 7:1-8), a tradition of the elders which had been devised so as to lighten the strict laws of purity set down in the Pentateuch. While the written law required a ritually unclean individual to take a ritual bath at sunset, the oral law prescribed the washing of the hands as sufficient, except for a priest who was to eat the heave offering. This portrayal is further confirmed in Luke and John, and in Acts 5:33-34; 22:3.

**c. In tannaitic literature.** The third major source, the tannaitic literature, when critically analyzed yields the same definition as do Josephus and the NT. However, since it was the failure to discriminate between the two meanings of *p'rūšīm*, separatists or Pharisees, which largely accounts for the prevailing misconceptions, it is essential that the methodology for differentiation be made explicit.

Only one fact has not been challenged: that the Sadducees were in conflict with the Pharisees. Since this alone is secure, only those tannaitic texts in which the *p'rūšīm* are juxtaposed to Sadducees can be used for constructing the tannaitic definition of the Pharisees. These texts are few in number, but they are sufficient to allow us to draw a clear picture of who the Pharisees were.

The tannaitic texts fall into two categories: those which have the formula "The Sadducees say, 'we complain against you Pharisees'" followed by "The Pharisees say, we complain against you Sadducees!" (M. Yad. 4.6-7; Tosef. Yad. II.20, equating Boethu-

sions with Sadducees), and those which simply have the Sadducees and Pharisees involved in controversy or disagreement. (T.B. Yom. 19b; Tosef. Hag. III.35; T.B. Nid. 33b; Tosef. Yom. I.8). In spite of this difference in form, there is complete congruity in the image of the Pharisees that emerges. In all these texts the Pharisees are, without exception, the source of the Law, never its object. The laws which they expound are oral laws—laws which are not written down in the Pentateuch (e.g., Holy Scripture renders the hands unclean: M. Yad. 4.6). These laws they hold to be binding on all Jews, not simply on themselves. The laws deal with the whole range of legislation: cultic, criminal, and civil. Not one of them pertains to rules for ritual purity binding on the Pharisees but not on the common people; nor is there any provision made for a legal barrier between the Pharisees and the masses. And all these laws are rejected by the Sadducees.

The picture which emerges from these texts is that of a class of scholars who teach, with authority, the twofold law. In a word, they sit in the chair of Moses. And those who challenge them are the Sadducees, who reject in principle the claim of the Pharisees that God had revealed to Moses oral laws as well as written laws. This definition from the tannaitic literature thus squares with that which can be drawn from Josephus and from the NT.

The Mishna, Tosefta, and the *b'raithoth* (tannaitic texts which were not included in the Mishna and Tosefta but which are cited in the Palestinian and Babylonian Talmuds) use the term *p'rúšim* for the scholar class only when they are juxtaposed to the Sadducees. In all other instances these authorities refer to the scholars of the twofold Law in the period before A.D. 70 as *Sôph'rim* (scribes), *h'khâmim* (sages), or *z'khênim* (elders).

This discriminating usage can be clearly demonstrated when we analyze two Mishna texts which deal with the question as to whether Holy Scripture renders the hands unclean. In M. Yad. 4.6, the Sadducees complain against the Pharisees for saying that Holy Scripture renders the hands unclean. Here the Sadducees are juxtaposed to the *p'rúšim*. When, however, in the same tractate (3.2), the Sadducees are not arrayed against the *p'rúšim*, the dictum "Holy Scripture renders the hands unclean" is affirmed to be the words of the scribes and, as such, enjoys an equality of status with the Scripture itself. A close analysis of relevant tannaitic texts likewise yields equivalent synonymy between *p'rúšim*-Pharisees and sages, *p'rúšim*-Pharisees and elders, and *p'rúšim*-Pharisees and the anonymous oral law. (See E. Rivkin in bibliog. for an analysis of all the texts.) The care with which the tannaitic teachers refrained from using the term *p'rúšim* to mean Pharisees except in juxtaposition to Sadducees allows us to conclude that for these teachers the term *p'rúšim* must have been a slur coined by the Sadducees to brush aside the teachers of the twofold law as "separatists," "deviants," "heretics."

**2. Scribes and Pharisees.** The equation of *p'rúšim*-Pharisees with scribes within the tannaitic texts is of great importance for shaping a definition

of the Pharisees which is thoroughly objective. Furthermore, it makes clear that the scribes and the Pharisees in the NT are one and the same. The gospels use the terms interchangeably and an analysis of the gospels and Paul reveals that the scribes and the Pharisees invariably hold identical views with respect to the Law and are pictured as the opponents of the Sadducees (cf. Matt. 22:34 [Pharisees] with Mark 12:28 [scribe]; Matt. 12:24 with Mark 3:22, etc.). This identity is underlined in Matt. 23. Indeed, one may even go so far as to suggest that the passages in Mark where the scribes are mentioned without the Pharisees reflect Palestinian Jewish usage which avoided the term Pharisees when the Sadducees were not involved. It is thus likely that in the early form of the gospel story, the Hebrew honorific title *sôph'rim* (scribes) was used exclusively, but as the story unfolded and spread outside Palestine and amongst the Gentiles, the term Pharisees came to be used more frequently. Whereas γράμμαστοι (scribes) for Greek listeners and readers conveyed no notion of legislators or scholars, Pharisees did, at least, evoke an image of leaders. But since the term Pharisees itself meant nothing to the average Greek or Roman, Luke went further and equated Pharisees with the teachers of the Law, νομοδιδάσκαλοι (5:17).

Drawing on the equation scribes=Pharisees=teachers of the Law, we can now add those verses where the term scribes, but not Pharisees, is used, in order more fully to elaborate the definition of the Pharisees as derived from the NT. These passages confirm those already analyzed: the scribes are the teachers of the twofold law and of the resurrection which it promises (Mark 12:18-28). They reject Jesus' claim to a personal authority (Mark 1:21-22), attribute his power to drive out demons to Beelzebul (Mark 3:22), insist that the Messiah must be the son of David (Mark 12:35-37), assert that Elijah must come first (9:11), adhere to the traditions of the elders, a term which is synonymous in the Mishna with scribes-Pharisees (Mark 7:1-8), and are horrified that Jesus would blaspheme God by arrogating to himself the right to forgive sins (Mark 2:6-7).

Nowhere in these texts do the scribes oppose the masses, or display any special concern for the laws of ritual purity. They express astonishment that Jesus would sit with publicans and sinners, but they nowhere espouse separation from the masses or a level of ritual purity beyond that which the Law prescribed for all Jews.

**3. Teaching. a. The twofold law.** We can now spell out the substantive teachings of the Pharisees as derived from the previous sources:

i. God had given to Moses a twofold law, the written and the oral. This twofold law had been transmitted from Moses to Joshua to the elders to the prophets to the men of the Great Synagogue and then to the scholar class (M. AB. 1.1). It had not been transmitted to the priests; nor had the priests been assigned authority over it. They were meant to be sacred functionaries, not authoritative teachers.

ii. Although the written law was not to be altered by so much as an iota, the oral law was

not so fixed. The authoritative teachers in each generation were invested with full authority to determine what the oral law was to be in that generation. The oral law was not so much an immutable body of law as a concept of ongoing authority over the Law as instituted by Moses himself. In this sense, the teachers of the twofold law in every generation sat in the chair of Moses. Whereas the written laws are called מצוות (commandments), תורות (teachings), חקים (statutes), משפטים (judgments), עדויות (testimonies), פקודים (precepts), the oral laws are called *halachoth* (pathways [to salvation]), *gezereth* (decrees), *takkanoth* (ordinances). The scribes-Pharisees never used biblical terms for their oral laws.

iii. This array of laws was transmitted orally and not put down in writing till Judah ha-Nasi promulgated the Mishna at the beginning of the third century A.D. Since the oral law, unlike the written law, was continuously in flux, and since most of the unwritten laws were set down anonymously in the Mishna and the Tosefta, it is difficult to determine whether a particular oral law was operative at an earlier time, unless specific teachers are named, or specific historical situations are presupposed. The fact, however, that the oral laws cannot in each individual case be dated does not nullify the assumption that a system of such laws was operative from the time of the Hasmonean Revolt (see below).

iv. The form of transmitting the oral law was unique, because the Pharisees did not take biblical forms as their model. Biblical law is set within a narrative framework and is associated with a specific historical setting, but the oral law was framed as individual items. Each item could circulate separately or could be combined with other items at the discretion of the teacher. Although there may have been a tendency long before the promulgation of the Mishna to combine these items logically and categorically, they never were set within a narrative framework. Furthermore, the oral laws never used any biblical formula for law, such as "If . . . , then," or "Thou shalt" or "Thou shalt not." Rather, they are phrased as simple declarative sentences, e.g., "There are four principal kinds of damage" (M. Baba Kama 1.1), or as questions raising a legal issue, e.g., "From what time do we read the Shema in the evening?" (M. Ber. 1.1). Similarly, whereas the Pentateuchal law leaves no doubt that it is coming directly from God through Moses, the oral laws are either anonymous or attributed to the scribes, to the sages, to the schools of Shammai and Hillel, or, after A.D. 70, to individual teachers such as Simeon ben Gamaliel, Akiba, etc.

v. Since the oral law is co-equal with the written law, it needs no scriptural proof texts for legitimization (cf. M. Yad. 3.2; M. Sanh. 11.3), but proof texts are still used frequently. This is a radical departure from scriptural models, since as late as Ecclesiasticus no author supported his views with citations from Scripture. Biblical laws and concepts may have been assumed, but they were not directly quoted. By contrast, the Pharisees frequently cite Scripture to undergird or to clarify an oral law, or to elicit the larger meaning of some situation

or event (cf. M. Ber. 1.3, 5; 7.3; 9.5; Pe'ah 5.6; 7.3; 7.7; 8.9, and *passim* throughout all tractates).

In addition to oral law (HALACHAH), there was also oral lore (HAGGADAH). The Haggadah, like the Halachah, was transmitted as free-floating items without benefit of a narrative framework. As such, the haggadic form was nonbiblical and, like the Halachah, frequently underscores its point with situational exegesis.

Because all biblical writings were believed to be divinely inspired, every verse was regarded as saturated with divine insight. Each could be detached from its context and freely joined to other verses from other books to support or elucidate either a halachic or haggadic dictum. Indeed, the fact that verses so far removed from one another as Deuteronomy, Isaiah, and Psalms, seemingly displayed the identical thought was taken as stunning proof of the coherence and consistency of God's revelation. The Pharisees shattered the contextual framework of the biblical books and thereby liberated the verses for situational exegesis. Jesus and his disciples, as well as Paul and the other writers of the NT books, all bear eloquent testimony to this Pharisaic procedure. See INTERPRETATION, HISTORY OF[S] §D; MESSIAH, JEWISH[S].

Whether teaching law (halachah) or lore (haggadah), the Pharisees did not commit their teachings to writing. This gave rise to confusion among non-Jews, who would never imagine that γραμματοι, literally "secretaries," "writers," could possibly be legislators who were committed *not* to write down any of their teachings.

**b. Content.** The fundamental teaching of the Pharisees was a triad: (1) God, the Father, so loved the individual that (2) he revealed his twofold law to Israel, so that (3) each individual who internalized this twofold law and obeyed the teachings of the scholar class could anticipate that after death his soul would enjoy life in the world to come, alongside God the Father, and that in the distant future his soul would be restored to his resurrected body. On this foundation other doctrines were erected:

i. The true community of Israel consisted of all those who affirmed the triad and who adhered to the twofold law (cf. M. Sanh. 10.1; Pe'ah 1.1; Jos. War II.viii.14; II.xvi.4; Apion II.30). Those Israelites who, like the Sadducees, had been born Israelites in the flesh but who rejected the triad were deemed sinners and were to have no share in the world to come. (M. Sanh. 10.1-4; Jos. Antiq. XVIII.i.3; War II.viii.14; XVI.4) By contrast, those Gentiles who had been born pagans in the flesh but had been stirred to convert to the twofold law of Judaism were deemed to be co-citizens in the community of Israel (cf. Jos. Apion II.28, M. Yad. 4.4; Matt. 23:15) and entitled to a share in the world to come and to the resurrection of their bodies. The Pharisees thus had already, long before Paul, distinguished between Israel of the flesh and Israel of the spirit (cf. Jos. Apion II.28).

ii. No longer was the ultimate fate of the individual bound up with the fate of the community at large. Although every other Israelite might sin, and the people might lose its land and its temple, the individuals who adhered loyally to the teach-

ings of the twofold law which they had internalized would not be deprived of eternal life.

iii. Without faith that God had indeed revealed the twofold law and without faith in eternal life and resurrection, the law itself was meaningless. Obedience to the law was the only way in which this faith could be shown to be real and not spurious. See TORAH[S].

iv. This world was transient, uncertain, unreal. The world to come, by contrast, was permanent, secure, and suffused with untarnished serenity and joy. For this reason the Pharisaic leaders acknowledged the legitimacy of all terrestrial rulers, as long as they allowed the teachers of the twofold law to teach the way to eternal life. The Pharisees were teachers of salvation for the individual through a community of true believers in the twofold law, and not nationalists focusing on the land, or on the temple, or on a sovereign state. Their kingdom of God was an internalized kingdom of those who affirmed God's unity (cf. M. Ber. 2.5) and adhered to his laws wherever they were living—Jerusalem, Corinth, Ephesus, or Rome—and under whatever conditions prevailed.

4. **Innovations. a. The Great Senate.** To generate and disseminate the twofold law, the Pharisees created a novel institution which they called the *Bêth Din HagGādōl*, the Great Boulé, or Senate. It consisted of seventy-one distinguished teachers presided over by a *nāšî'* who, it seems, represented the majority opinion, and by an *ābh bêth dîn*, who presumably represented the minority position (cf. M. Hag. 2.2). The *Bêth Din HagGādōl* was the body which determined the status, at any given moment, of the system of twofold law. See, however, SANHEDRIN[S] §3.

b. **The synagogue.** The most durable of institutions which the Pharisees created was the synagogue, but its origins are obscure, and there is no evidence of its existence in Palestine prior to the Hasmonean period. It is mentioned for the first time in sources deriving from the time of Augustus and later.

The synagogue seems to have sprung up originally as the meeting place (*bêth ha-kenesseth*) of the Pharisees and their followers during the Hasmonean Revolt (see, however, SANHEDRIN[S] §3b). Subsequently these meeting houses became gathering places for the so-called *ma'amadot*. These *ma'amadot* had been established by the Pharisees to give the Jews at large a sense of participation in the temple worship. The people were divided into twenty-four *ma'amadot* to parallel the twenty-four watches of the priesthood. While representatives of the *ma'amadot* went off to Jerusalem to be present while the daily offering was being sacrificed by the particular priestly watch with which the *ma'amadot* was associated, the other members of that *ma'amadot* would gather in the synagogues and read from the first chapter of Genesis. Since the daily sacrifice offered in the morning and the evening was for the entire people, it was felt that their representatives ought to be present (M. Ta'an. 4.1-4). This insistence on public participation was opposed by the Sadducees.

In contrast to the temple, the synagogue was a highly decentralized institution which was superbly

tailored to the Pharisaic focus on individuals and their salvation. The synagogue encouraged fellow believers to come together for the reading of Scripture, the mandatory prayer, and mutual support. It allowed the individual to have, through prayer, a direct and ongoing relationship with God the Father. Little wonder, then, that it looms so large in the gospels, and that the followers of Jesus were angry and bitter when they were expelled (Matt. 23:34). Nor is it surprising that Paul, in preaching the risen Christ, sought out the synagogues to reach those Jews who were most likely to hear this gospel. The synagogue was, after all, the gathering place of the followers of the Pharisees. It was an exclusively Pharisaic institution, and no Sadducees were ever found there.

c. **The calendar.** Among the most audacious innovations of the Pharisees was a lunar-solar calendar which was dependent on the testimony of eye-witnesses and which involved the intercalation of both months and years. No such calendar is attested in the Pentateuch. By loosening the festivals and holy days from the grip of the Pentateuchal calendar the Pharisees determined even on which day the Day of Atonement was to fall. It is also interesting to note that the Pharisees, not the Pentateuch, designate the first day of the seventh month as New Year, along with three other New Years (M. R.H. 1.1).

d. **Priestly procedure.** The ultimate revolutionary act of the Pharisees was to insist that the high priest follow Pharisaic procedures on the Day of Atonement. Whereas the Sadducees required the high priest to light the incense before he entered the holy of holies, the Pharisees insisted that he light the incense only after he entered. And the Pharisaic procedure was the one operative in Jesus' day (cf. Jos. Antiq. XVIII.i.2; Tosef. Yom. 1.8).

5. **Origin and history.** Although we know something about the Pharisees in the time of Jesus, we know nothing precise about their origins or any details of their subsequent history. Even Josephus tells us nothing of when and how they came into existence. They simply appear without any introduction in his account of Jonathan the Hasmonean's wars against the Seleucids (Antiq. XIII.v.9). And even after he mentions them for the first time, he fails to follow through with any connected history of their activities. Except for those occasions when the Pharisees became directly involved in political affairs, or when Josephus feels the need to explain who they were, he does not consider them to be relevant to the kind of political history that he was writing. As for the Pharisees themselves, they left no historical records. This is not surprising, for, as we have seen, they were a non-writing scholar class which deliberately refrained from following biblical models or forms for their teachings. Just as their prayers were prose, not poetry, and just as their law and lore were items and bits, not connected narrative discourse, so their factual data of the past were episodes, anecdotes, and illustrative paradigms, not chronicles. Indeed, since the Pharisees focused on the world to come, they considered history to be irrelevant, except insofar as individuals and events

might serve as illustrations of how salvation might be gained or lost. But for such purposes, imagined facts were no less efficacious than real facts. History as continuity, sequence, and process was, for them, pointless, and so they had no interest in preserving the history of their movement.

The NT likewise throws no direct light on the origins and the history of Pharisaism. The gospels are interested in the Pharisees only to the degree that they were involved with Jesus. The Pharisees show no interest in the question as to when or how they got into the chair of Moses. For us, however, this is a core question, and we may be able to hazard some suggestions.

There is no mention of Pharisees in any book of the OT. No pre-Hasmonean source makes any mention of them. Indeed, prior to the Hasmonean Revolt the Aaronides sat securely in the chair of Moses and exercised full authority over the Law (see AARON, AARONIDES[S]). This absolute hegemony is enthusiastically affirmed and endorsed by Ben Sirach (Ecclus. 45:6-22), who does not accord to the scribes of his day any authority over the Law. Furthermore, Ben Sirach knows nothing of an oral law, indulges in no exegesis whatsoever, has no compunction about setting down his wisdom in writing, and has no hesitation in following appropriate biblical models.

The Pharisees, however, are in the chair of Moses during the early years of John Hyrcanus' reign, when he regarded himself as a disciple of theirs (Jos. Antiq. XIII.x.5). That their oral law was fully operative is evident from the fact that when John Hyrcanus broke with the Pharisees and went over to the Sadducees, he "abrogated the laws which they (the Pharisees) had established for the people" (*ibid.*, x.6). These laws, Josephus immediately makes clear, were those unwritten laws which the Pharisees had transmitted to the people "from the Fathers," and which were, on that account, "rejected by the Sadducees" (Antiq. XIII.x.6). It is also evident from the fact that, following the abrogation of these laws, the people rose in revolt (Antiq. XIII.x.7; War I.ii.8), first against John Hyrcanus and subsequently against Alexander Jannaeus (Antiq. XIII.xiii.5; XIII.xv.5). So tenacious was the loyalty of the people to the Pharisees and the twofold law that the civil war could be brought to an end only when Salome Alexandra made peace with the Pharisees and restored "whatever laws introduced by the Pharisees in accordance with the traditions of the Fathers had been abolished by her father-in-law Hyrcanus" (Antiq. XIII.xvi.2).

We may therefore conclude that the Pharisees came to power sometime during the Hasmonean Revolt, but no later than the high priesthood of Jonathan (Antiq. XIII.v.9). They were a revolutionary class since they had no Pentateuchal sanction for their authority. They were no less revolutionary in their unseating the Aaronide priests from the chair of Moses and reducing them to temple functionaries. Indeed, by recognizing Simon, the Hasmonean, as a legitimate high priest even though he was not a direct descendant of the high priestly line and by recognizing the legitimacy of all high priests, even when they were appointed

by Herod and the procurators, the Pharisees displayed their utter independence of the written law. It was for this reason that the spokesman for the exclusive authority of the written law and for the exclusive right of the sons of Zadok to minister as high priests denounced the teachers of the twofold law as *perûšîm*, separatists, heretics.

Following the grand compromise which was worked out between Salome Alexandra and the Pharisees, a compromise which distinguished between the realm of state sovereignty on the one hand and religious sovereignty on the other, the Pharisees ceased to play an active role in affairs of state. For this reason, Josephus has little occasion to include them either in his *Wars* or *Antiquities*. Indeed, he draws them in only when he indicates that they did not challenge Cyrinius' right to take a census and exact tribute (Antiq. XVIII.i.1, 6) and when he pictures the Pharisaic leaders as urging the people not to revolt against Rome (War II.xvii.3-4).

The Pharisaic system underwent three structural phases: (1) That of the *zugôth*, or pairs, who served as *nâšî'* and as *âbh bêth dîn* of the *Bêth Dîn HagGādôl*. During this phase, only the names of those who filled these offices have been preserved; they were not called rabbi; and the oral laws were promulgated by a majority decision of the *Bêth Dîn HagGādôl*, with dissenting views having no legal status. (2) That of the schools of Shammai and Hillel and the establishment of a hereditary *nâšî'* of the *Bêth Dîn HagGādôl*, a descendant of Hillel. During this phase, the *nâšî'* was called rabban (our teacher), but the scholars were not yet called rabbi. Each of the schools could publicly teach oral laws in the name of the school, even when the schools had very different notions as to what the laws should be. (3) That of the free-teaching individual scholar who was ordained and authorized to teach oral laws in his own name. It was during this phase that the title "rabbi" was first used to designate an ordained teacher of the twofold law.

**6. The Pharisees and early Christianity.** Jesus' ministry fell during the second phase, and it is for this reason that the scribes-Pharisees are referred to as a class. The only individual who is mentioned by name is Gamaliel, which is quite understandable since he was the *nâšî'* and therefore legitimately singled out.

As the authoritative teachers of the twofold law, the scribes-Pharisees were both puzzled by and ultimately angered at Jesus. Although they recognized him as a teacher and although they were pleased with his refutation of the Sadducees and his affirmation that God was one and that one should love one's neighbor as oneself, they were hostile to his teaching of doctrines they had not authorized; to his taking the law in his own hand; to his forgiving sins; to his exorcising demons; and, above all, to his affirming, or allowing his disciples to affirm of him, that he was the Son of man, the Messiah. The Pharisees were especially angry over his unwillingness to heed them when they confronted him with his deviations. This rejection, first of Jesus, and then of his disciples

who claimed that Jesus had been resurrected, was bound to stir up animosity toward the Pharisees in both Jesus and his followers. This animosity was exacerbated when the Pharisees proclaimed the early Christians to be heretics and threw them out of the synagogue. Such deepening hostility turned the early Christians against the Pharisees, and unleashed such virulent epithets as "hypocrites" and "whitewashed tombs." For these early Christians, the Pharisaic hallmark of righteousness had been marred by their rejection of Jesus, and by their hounding the Christians out of the synagogue.

As to the role of the Pharisees in the trial and crucifixion of Jesus, only a few aspects are relatively clear. Although the Pharisees had no love for Jesus, they did not bring Jesus to trial before one of their courts, a *bêth din* (Βουλή). Rather, he was brought to trial before a sanhedrin, a council, of the high priest. This sanhedrin must have been a political, not a religious body; for it was presided over by the high priest Caiaphas, a Sadducee who had been appointed by the procurator. This council was concerned with Jesus' religious teachings only insofar as they had political ramifications and only insofar as they might be interpreted as a challenge to Roman authority. The issue was whether Jesus claimed to be the king of the Jews. Having ascertained that this was indeed the case, the Sanhedrin of the high priest turned him over to Pontius Pilate for final judgment. See TRIAL OF JESUS[S]; SANHEDRIN[S].

Although the Pharisees rejected the claims made for Jesus, it was their tenacious belief in eternal life and resurrection which had opened the hearts and minds of Jesus' disciples to the credibility of their witness that Jesus had risen from the dead. Resurrection was not an impossibility; it was the chief cornerstone of the Pharisaic faith. The Pharisees could deny that Jesus had been resurrected, but they could not mock the belief in resurrection. Why did Paul cast off the law when he was stunned into the belief that Jesus had risen from the dead? For him, the system of the internalized twofold law did not guarantee salvation; only Jesus, the Christ, could now give this assurance. It was Christ alone who could dissolve sin and lead the way to God the Father. For Paul, the twofold law was now a fraud. It was a barrier—not the road—to eternal life, because it deluded man into thinking obedience to the law is triumph over sin, when the law is the shield of sin and its most provocative instrument (cf. Rom. 7).

The power of Pharisaism has throughout the centuries been made manifest not only in the continued vitality of Judaism (all subsequent forms of Judaism are derivative of Pharisaism), which alone of the religions of antiquity proved immune to the Christian gospel, but also in the vitality of Christianity itself. For Pharisaism transmitted to Christianity its threefold belief structure: (1) God, the Father, so loved the individual that (2) he revealed his will so that (3) the individual might hope for eternal life and resurrection. For the Pharisees the revealed will was the twofold law; for the Christians it was Christ. This belief

was the enduring achievement of Pharisaism—a belief which was a true mutation from earlier Judaism.

**Bibliography.** For scholarly efforts at defining the Pharisees, see the comprehensive art. and bibliog. by A. Michel and J. LeMoyné, "Phariséens," *DBSup*, Fascicles 39-40 (1964), cols. 1022-1115, as well as R. Marcus, "The Pharisees in the Light of Modern Scholarship," *JR*, XXIII (1952), 153-64. Of special impact have been E. Schürer, *A History of the Jewish People in the Time of Jesus Christ* (1902), second division, vol. II, 10-28; R. T. Herford, *The Pharisees* (1924); G. F. Moore, *Judaism*, I (1927), 56-71; L. Finkelstein, *The Pharisees*, 2 vols. (3rd ed., 1962); and most recently, J. Neusner, *The Rabbinic Traditions about the Pharisees before 70*, 3 vols. (1971).

The definition developed in this article is based on that first set down by S. Zeitlin, *The History of the Second Jewish Commonwealth: Prolegomena* (1933), pp. 41-56, "Hasduquim we-ha prušim," *Horeb*, II (1936), 56-89, and elaborated in my own writings: E. Rivkin, "The Internal City," *JSSR*, V (1966), 225-40, "The Pharisaic Revolution," *Perspectives in Jewish Learning*, II (1966), 26-51, Prolegomenon to Oesterley and Loewe, *Judaism and Christianity* (1969), pp. vii-lxx, "Pharisaism and the Crisis of the Individual in the Graeco-Roman World," *JQR*, LXI (1970-71), 27-52, "Defining the Pharisees: The Tannaitic Sources," *HUCA*, XL-XLI (1969-70), 205-49, *The Shaping of Jewish History* (1971). Although close to Zeitlin on definition, there is no agreement on historical reconstruction; cf. Zeitlin, *The Rise and Fall of the Judean State*, I (1962), 178-87 with E. Rivkin, "Solomon Zeitlin's Contribution to the Historiography of the Interestmental Period," *Judaism*, XIV (1965), 354-67. E. RIVKIN

**\*PHILEMON, LETTER TO.** Recent research notes that the letter addresses three persons rather than one (Philemon, APPHIA, and ARCHIPPUS), indicating it is not a private communication but an apostolic letter. For a parallel, cf. Ep. 142 of Isidore of Pelusium (PG 78, 277).

Debate continues on the question of the letter's place of writing, with increasing preference for Ephesus over Caesarea and Rome, and on the letter's purpose: was Paul simply requesting Onesimus' reinstatement or was he asking Philemon to free Onesimus for missionary service?

The letter effectively shaped early Christian attitudes toward slavery for four centuries. On the one hand it supported laws on slavery respecting the return of runaway slaves; on the other it challenged conventional mores by calling for a new sense of brotherhood (Philem. 16) between master and slave. See also SLAVERY IN THE NT[S].

**\*PHILIP, GOSPEL OF.** A Valentinian document discovered in the Gnostic library of NAG HAMMADI. The passage which Epiphanius quotes from a "Gospel of Philip" is not contained at all in the Nag Hammadi text, and must therefore be from a completely different work.

**1. Text.** The text is contained in Codex II of the Nag Hammadi library, immediately after the Gospel of Thomas. The Coptic MS is dated ca. A.D. 400, but the gospel itself probably goes back to a Greek original dating from the second half of the second century. There are indications to suggest a Syrian origin, probably in Antioch or its neighborhood. The text is on the whole well preserved, but there are lacunae at the bottom of every page.

**2. Structure and composition.** Opinions differ regarding the structure of the work. An editorial division into 127 "paragraphs" is generally employed for convenience of reference. These "paragraphs," however, are not "sayings of Jesus" like those in Thomas, nor can they be considered a Gnostic counterpart. It is probably better to regard the gospel as a didactic and hortatory treatise, presenting the Gnostic message through a series of loosely linked aphorisms and meditations. While the document is certainly not just a string of disconnected sayings, there are abrupt transitions and breaks in continuity. A notable feature is a kind of spiral movement, in which certain favorite themes constantly recur: Adam and Paradise, creation and begetting, the meaning of the names of Jesus, the mystery of the bridal chamber, etc. That the construction is not entirely random is suggested by the fact that the "gospel" reaches something of a climax in §125, and is then quietly rounded off in §§126 and 127.

**3. Character and contents.** This work is not a gospel in any accepted sense, since it does not contain any account of the life and work of Jesus, nor does it present (like many Gnostic "gospels") revelations allegedly given to his disciples by the risen Jesus before his ascension. The ascription to Philip appears only in the title appended at the end, which may be secondary. This may be because Philip is the only disciple mentioned (§91), but it should be noted that in the *Pistis Sophia* (ch. 42) he is one of the three disciples charged with the writing down of all that Jesus said and did.

The nature and structure of the document make it impossible to summarize its contents in brief compass. There is no connecting thread of argument or unifying theme. The document is, however, clearly Valentinian in character, and a knowledge of the Valentinian system as known from the accounts of Irenaeus is sometimes essential for understanding certain allusions. Although it is not yet possible to identify the gospel with any particular branch of that school, the closest affinities appear to be with the Marcosians and the *Excerpta ex Theodoto*. The Manichean parallels

noted by Ménard do not necessarily place the work as late as the third century.

The author counts himself a Christian, and contrasts his present state, and that of his readers, with the period before they became Christians (§§6, 102). His knowledge of the NT is difficult to assess, since the evidence ranges from clear and unmistakable quotations to possible echoes and allusions which appear significant to some readers yet quite unconvincing to others. He certainly quotes from Matthew, John, I Corinthians, and I Peter. A reference to the Good Samaritan suggests knowledge of Luke, while his use of such themes as priesthood, the sanctuary, and the veil may reflect knowledge of Hebrews. But these allusions do not necessarily imply direct knowledge of the book in question, and other echoes are even less certain. At most, the evidence suggests a period when several of the NT books were known but not yet "canonical." This points to the second century rather than the third.

Whatever his knowledge of the NT, the author's theology is distinctly different. Language and imagery familiar to us in a NT context have been transposed into a Gnostic key, as a few examples may serve to show:

**a. The world and man:** This world came into being through a transgression (§99) and is dominated by archons who wish to deceive man (§13). These archons think they do everything of their own will, but in fact the Holy Spirit is working through them (§§16, 34; cf. *Sophia* in the Valentinian system). The names employed in this world are deceptive (§11); its good is not good, and its evil not evil (§§10, 63). The only true realities are those of the other world, described as "the kingdom of heaven" (§24) or "the aeon" (§11).

In this world the soul is captive to the "robbers" (§9). Like a pearl dropped in the mud, however, it does not lose its value (§48), even though it is imprisoned in "a despised body" (§22). The same disparagement of the world and the flesh appears in the admonitions "Love not the world, but love the Lord" (§112), "Be not fearful of the flesh, nor love it" (§62). A distinction is drawn between the sons of Adam and those of "the perfect man" (§28). The condition of natural man is bestial (§84): "There are many beasts in the world which bear the form of man" (§119). The state of man unredeemed is frequently described in terms of slavery. In contrast, he who has the knowledge of the truth is a free man, exalted above the world (§110). With the coming of the light, the slaves are set free and the captives delivered (§125), and this must happen even in this world: if a man does not receive the light while he is in this world, he will not receive it in the other (§127). But for the man who has received it, the world has already become "the aeon." He cannot be detained by the hostile powers and is immune from their attacks.

**b. Salvation:** Christ is the perfect man (§15) whom the Gnostic must put on (§101). He came "to redeem some, to save others, to deliver others" (§9). At several points he is contrasted with Adam (§83). But Philip's Christ comes not to save the world by giving his life but to restore

things to their proper places (§70) and become the father of a redeemed progeny (§§74, 120). The fundamental evil in the human situation is not sin but ignorance. Deliverance comes through knowledge (cf. §110), not through the Cross (although there are references: the Cry of Dereliction is quoted in §72, and §91 contains the curious story that Joseph made the cross). Similarly, death is not the wages of sin but the result of the separation of the sexes (§§71, 78); hence Christ came to remove the separation and effect a reunion. Separately, man and woman are exposed to the attacks of unclean spirits, but united they are immune (§61).

**c. The sacraments:** The gospel provides little or no evidence for any "church" structure or organization, but the numerous references to sacraments give it significance for an aspect of Gnosticism not otherwise well documented. In §68 five sacraments are mentioned, apparently in ascending order: baptism, chrism, eucharist, redemption, and bridal chamber. Eucharist and redemption (*apolutrosis*, cf. the Marcosians) do not figure very prominently. Chrism is expressly said to be superior to baptism (§95: it is from the chrism we are called Christians, not because of the baptism), and apparently olive oil was used (§92). The redemption may have been a sacrament for the dying (Iren. Her. I.xxi.5). The highest sacrament, the bridal chamber, must be interpreted in the light of the Valentinian theory (Iren. I.vii.1): at the consummation Achamoth will enter the Pleroma (i.e., the bridal chamber) to become the bride of the Savior, while the "spiritual" who derive from her become brides of the Savior's angels. This is in some way symbolized or prefigured in the sacrament, but whether the reference is to marriage as such or to a separate rite is not clear. It has been suggested that this too was a sacrament for the dying.

**4. Significance.** The chief importance of the book is that it adds to our original sources for the study of Valentinian Gnosticism, and so helps to shed light on a still obscure period of early church history. It is also of interest for the way in which NT themes and ideas are taken up, interpreted, and transmuted in a Gnostic context. Finally, it is important as helping to show what Gnosticism meant to a Gnostic.

**Bibliography.** The Gospel of Philip was first published in P. Labib's photographic ed., *Coptic Gnostic Papyri in the Coptic Museum at Old Cairo*, I (1956). From this a German trans. was made by H. M. Schenke, *TLZ*, LXXXIV (1959), 1-26 and English trans. by C. J. de Catanzaro, *JTS*, XIII (1962), 35-71, and R. McL. Wilson, *The Gospel of Philip* (1962; with a commentary). See also *The Facsimile Edition of the Nag Hammadi Codices: Codex II* (1974; with plates); J. E. \***PHILIPPI.** Excavation under and around the monumental Roman forum has yielded small finds which confirm Hellenistic occupation of the site

and has uncovered a series of eleven Roman shops to the S. Clearing of the theater to prepare for modern performances led to discovery of the ancient entryways on both sides and staircases beyond them, all of Roman date.

In addition to the two basilican churches explored earlier, three more early Christian churches have been found. The earliest is a fourth-century basilica outside the city walls on a little river to the E, a site which may have been traditionally associated with Paul's preaching (Acts 16:13). This small church, constructed with many materials from earlier, pagan buildings, had a semicircular apse lined with three marble steps in the E, from which a nave extended westward, separated by a single row of columns from aisles on both sides. Within the walls of Philippi N of the Via Egnatia a fifth-century Christian basilica, similar in dimensions to one previously studied to the E of it, has now been investigated. A newly discovered complex S of the Via Egnatia to the E of the Roman forum centered on an octagonal church. Built over the remains of an earlier basilican church, the octagon was entered from the W, where a triple colonnade led N to a monumental gateway onto the Via Egnatia. A baptistery, with a font in the form of a Maltese cross, could be reached both from the octagon to the S and from the N, where lay an extensive bathing establishment with typical features such as steam rooms and pools for hot or cold water. A vaulted Macedonian tomb of the third century B.C. was found beneath a room near the baptistery. To the E and S of the octagonal church a large group of rooms has been identified as an episcopal palace.

\***PHILIPPIANS, LETTER TO THE.** A composition of three letters of the apostle Paul directed to the church founded by him in the Macedonian city of Philippi, now transmitted as one of the Pauline letters in the NT canon. Recent research has been concerned with the place of this correspondence within the missionary work of Paul in the Aegean, the composite nature of the document, and the interpretation of the Christ hymn in Phil. 2:6-11.

**1. The place of Philippians in the mission of Paul.** The probability that this correspondence dates from the period of Paul's stay in Ephesus, and not from his later Roman imprisonment, has become more widely accepted. The receiving of support from Philippi (4:10-15), seen as analogous with the support which Paul received from the same church during his stay in Thessalonica (4:16), and the sending of Timothy and Epaphroditus (2:19-30; 4:18) cannot be explained satisfactorily if Paul was indeed in Rome at that time.

If the Philippian correspondence does in fact reveal that Paul sent three letters to that church within a brief period, and that he also received additional information from Philippi before sending the third letter, the Ephesian imprisonment is the most likely time during which these letters were written. In a letter written when he had left Ephesus, and while he was on his way to Corinth via Macedonia, during the last year of his Aegean activity, Paul refers to the mortal danger he had faced in Asia (II Cor. 1:8-11). Phil. 1:12-26 seems to speak about this same threat to his life.

2. **The composite nature of the document.** Philippians contains several seams, the most obvious one between 3:1 and 3:2 (while 4:4 repeats 3:1 in part); the situation with respect to Epaphroditus has changed after the writing of 4:18, which knew nothing of the sickness reported in 2:25-30; nothing in 1:1-3:1 (and certainly not 1:15-18) prepares the reader for the merciless attack on opponents which one finds in 3:2-21. Several scholars have therefore suggested that the canonical Philippians contains three fragments of Pauline epistles. (The assignment of the several pieces now preserved in 4:1-9 and 4:21-23 must remain uncertain).

i. Phil. 4:10-20 was written early during the Ephesian imprisonment in order to acknowledge the receipt of a gift which the Philippians sent through Epaphroditus. This letter emphasizes the apostle's independence in terms closely reflecting concepts of Cynic philosophy (4:11-12; see CYNICS [S]). Paul wants to point to God as the source of all gifts (4:19-20) and refuses to focus attention upon his own personal fate.

ii. In the second letter, 1:1-3:1 and 4:4-7 (perhaps 4:21-23), the situation has changed. There are more hopeful prospects for a successful defense in court (1:12-14) and Paul expresses his determination to continue the work for his churches (1:22-26). He begins to make plans for his own travel, and sends Timothy ahead to prepare for his own visit (2:19-24). This, no doubt, resumes the plans which Paul had already discussed in I Cor. 16:10-11; it gives evidence that he now is reorganizing the collection for Jerusalem. But meanwhile Epaphroditus has fallen sick, and Paul has to apologize for his delay in returning (2:25-30).

iii. The third letter, 3:2-4:3 and 4:8-9, presupposes that Paul has received another communication from Philippi about the arrival of a new group of Christian missionaries and about a quarrel between two influential church leaders in Philippi—Euodia and Syntyche (4:2). This letter is directed primarily against the missionaries, probably Jewish Christians who preached law and circumcision as a means for reaching perfection. Because of the Gnosticizing views of these opponents, it is unlikely that they were identical with the opponents in Galatia against whom Paul wrote at about the same time (see GALATIANS, LETTER TO THE AND SUPPLEMENTARY ARTICLE), though it is noteworthy that Paul refers to his conversion in Phil. 3:4-10 as well as in Gal. 1:13-16. The question of law and justification, which Paul was to move into the center of the debate in his Epistle to the Romans, written about a year later, is

treated for the first time in these two polemic writings.

3. **The interpretation of the Christ hymn, 2:6-11,** has led to the thesis that neither Isa. 52:13-53:12 nor non-Jewish Hellenistic myth provided the background for the Christology expressed in this hymn, but rather it was provided by a version of the Suffering Servant theme which developed in the speculative wisdom of Judaism (see WISDOM OF SOLOMON §3). While the hymn in that setting spoke about the humiliation and ultimate vindication of divine "Wisdom," who is the true representative of the fate of each wise person, Paul reinterprets the hymn so that it now points to humiliation and obedience as the fundamental expression of the Christian ethos. Christ, who demonstrated this new ethos, is not, like Wisdom, the mythological representative of human fate, but is the crucified Lord, who is worshiped (2:10-11). Paul's reshaping of the older hymn is visible in several prose phrases (2:7a, 8); and because of this reshaping, it is no longer possible to reconstruct the original poetic form.

\***PHILISTINES.** Caphtor, the home of the Philistines according to biblical tradition, is now firmly identified as Crete on the basis of a recently published topographical list of Amen-ophis III (ca. 1400 B.C.); but no archaeological data connecting the Philistines and Crete has been found. Tablets discovered at UGARIT and archaeological finds on CYPRUS give evidence of the troubled period when the Sea Peoples in the late thirteenth century ravaged the area. From Late Bronze Age Cyprus we now have depictions of warriors in kilts and plumed headdresses typical of the Philistines and other Sea Peoples. Mycenaean III C1 wares similar to those found at Enkomi and Sinda on Cyprus have been found at Ashdod, Gezer, Azor, Tell 'Aitūn, and other sites are closely related in appearance and function to objects from the Aegean. These consist of *kernoi*, kraters with cups, rhyta, figurines (of which heads are usually the only remnant), etc. A clay statuette of a female

deity with Philistine decorative elements was found in a twelfth-century stratum at Ashdod. The goddess is schematically portrayed as a seated woman, her body forming part of the chair (see ASHDOD[S] §2 and Fig. A24). This is in the Mycenaean tradition. Of prime importance for the study of Philistine cultic remains are the ritual incense stands discovered at Ashdod and Tell Qasileh (see ASHDOD[S] Fig. 25). These stands, as well as other ritual objects from Tell Qasileh (stratum X), were found in a temple excavated in 1971-72. This is the only building of its kind which can be attributed to the Philistines. The excavator has characterized it as a long house with a "bent-axis" plan and has noted that the principal architectural elements resemble those of other temples in Canaan and of a small temple recently discovered at Mycenae; but he has also pointed out that the layout of rooms, entrances, raised platforms, and pillars has no parallel. Two round stone bases supported the wooden pillars on which the roof rested; this has led to a comparison with the temple in Gaza (Judg. 16:29).

Philistine pottery has been subjected to intensive study, and the various types and styles have been classified. Analysis has shown that from the beginning Philistine pottery was a local product using local techniques but with strong influence from Mycenaean III C1 ware. The anthropoid coffins which had earlier been identified as Philistine are now shown by finds from Deir el-Balah to have been first introduced for burial of Egyptian officials in the Late Bronze Age, and that later in the Early Iron Age they were adopted by the Philistines. The same conclusion has been drawn from renewed study of the anthropoid coffins from Beth-shan (see BETH-SHAN Fig. 38). An Aegean prototype has been proposed for some of the Philistine tombs at Tel Sharuhen. A form of embalmment was found in the tombs (twelfth century) at Tell es-Sa'idiyeh which have been ascribed to the Sea Peoples. See ZARETHAN[S].

Clay tablets inscribed with a form of the Cypro-Minoan script have been found at Deir'alla in the Jordan valley. These have not been deciphered, but they have been taken by some to be possibly Philistine in origin, since Philistine pottery was discovered in the overlying level. Seals inscribed with Cypro-Minoan characters were found in twelfth- and eleventh-century levels at Ashdod, but these also remained undeciphered. No further light has been cast on other aspects of Philistine language or culture, but it has been proposed that there was a relationship between Hebrew מְרִי (which designates the Philistine rulers and is assumed by most scholars to be Philistine in origin) and Neo-Hittite (or late Luwian) *tarwanas*, a title borne by rulers from the eleventh to the seventh century. Two epigraphic items from later periods are important; both were excavated at Ashdod. The first consists of fragments of an inscribed basalt victory stele erected by Sargon which has its parallels in inscriptions from Assyria proper; the second is a late-fifth-century ostrakon inscribed in Aramaic script reading *krm zbdyh*, "the vineyard of Zebedia." This has raised specu-

lation that a document in "Ashdodite" has been discovered.

\***PHRYGIA.** Aspects of the distinct and well-developed early Iron Age Phrygian civilization are becoming clearer year by year as excavations continue at such sites as Gordion, Ankara, Pessinus, and Boğazköy (Hattusha). Advances in the study of the Phrygian language have been coupled with research into the incompletely resolved problems

German Archaeological Institute, Istanbul Division

4. Statue of Cybele-Kubaba with musicians

of Phrygian origins and religion. In aspects of material culture, the stout citadel and megaron houses at the Phrygian capital, Gordion, as well as the colossal burial tumuli both at Gordion and Ankara have been recognized as monuments typical of Phrygian architecture. Phrygian sculpture is now known in the form of cult reliefs of Cybele-Kubaba and by the limestone statue of Kubaba standing between two youthful flute and lyre players from Boğazköy. See Fig. P4.

One millennium after their creation the enormous rock-cut tombs of the Phrygians were taken over and reused by the Christians, albeit with the addition of a cross or inscription and the substitution of the Virgin for Cybele. The Christians also cut into the rock multiroomed houses, individual cells, and even entire churches, just as they did farther W in the Göreme area of CAPADOCIA.

\***PILATE, PONTIUS.** As elsewhere in the PASSION NARRATIVE, Jesus' trial before Pilate reflects each evangelist's theology.

1. **The Synoptic gospels.** In Mark, Pilate three times calls Jesus "king of the Jews" (15:2, 9, 12), which is the titulus on the cross (15:26). For Mark, Jesus is the proclaimer of God's kingdom (1:14-15), but this kingdom is not recognized by the powerful (10:14) or the rich (10:24-25), and is a mystery to outsiders (4:11). In condemning Jesus as king, Pilate is the ironical agent who paves the way for the true meaning of Jesus as king, the one who establishes his kingdom by suffering. Matthew substitutes "Jesus who is called Christ" (Matt. 27:17, 22) for two of the Markan references to Jesus and king. This substitution, as well as the intervention of Pilate's wife (Matt. 27:19), illustrates the Matthean theme that it is the "nations" who will ultimately confess Jesus (cf. Matt. 2:1-12; 28:19). A significant alteration in Luke's trial before Pilate is that Jesus is charged with two clear political crimes: (a) urging nonpayment of the tribute to Caesar (23:2) and (b) stirring up the people (23:5). Luke is anxious to portray the death of Jesus as a juridical murder and to stress that Jesus was innocent of both the civil and religious charges.

2. **The Fourth Gospel.** Here the trial before Pilate is especially important (John 18:28-19:16). It is structured into seven scenes with a clear alternation between outside (18:28-32, 38b-40; 19:4-8, 12-16a) and inside (18:33-38a; 19:1-3, 9-11) scenes. Three main theological themes emerge: (a) the true nature of Jesus' kingship, (b) the crisis that Jesus poses to the powers of the world, and (c) Pilate as a symbol of one who, having failed to believe in the truth, ends up serving only the world.

See also PROCURATOR; TRIAL OF JESUS §2; TRIAL OF JESUS[S] §2.

Sloyan, *Jesus on Trial* (1973), excellent study of historical problems and development of traditions. J. R. DONAHUE

\***PILLAR.** Inscribed stones, or stelae as they are technically called, are the rule in Mesopotamia and Egypt, while uninscribed stones, termed pillars or masseboth, are extremely rare. In Palestine, however, plain masseboth are the rule. Virtually all of the few inscribed stelae discovered in Palestine are demonstrably of foreign origin. They are victory or offering stelae bearing Egyptian or Akkadian texts, erected by invading or occupying forces. The Palestinian tradition apparently preserves the form which standing stones had before writing was common. The lack of strong empires in Palestine apparently contributed to the tradition, since stelae were propaganda tools which glorified kings and officers.

Because they do not bear self-explanatory inscriptions, Palestinian pillars are often difficult to interpret. We must deduce the function and meaning of a particular pillar from hints in the archaeological context, from possible parallels among inscribed stelae elsewhere, and from biblical comments.

1. **Typology.** The pillar was basically a marker; it caught the attention of the onlooker. It performed one or more of four functions: memorial, legal, commemorative, and cultic. Memorial stones perpetuated the memory of the deceased (Absalom, II Sam. 18:18) or marked the place of burial (Gen. 35:20). Legal stones marked the relationship between individuals or groups; they might be treaty stones (Jacob and Laban, Gen. 31:44-50; God and Israel, Josh. 24:27) or boundary markers. Commemorative stones were most common, marking some past event, such as a victory (Saul, I Sam. 15:12) or a sacrifice or vow (Jacob, Gen. 28:20-22), and honoring the participants. The cultic stone marked the immanence of the deity in a sacred area, the point where the deity could be invoked and reached through cultic or sacrificial activity.

An alternate typology sees the pillar as a surrogate, either of the deity or one of the worshipers. The stone either effects the presence of the deity in the sacred place or perpetuates the presence of a worshiper there.

2. **Recently excavated pillars.** Re-excavation has discovered that the ten pillars at GEZER, misnamed "the Great High Place," were erected simultaneously in a large open area within the city wall not long after the major refounding of the city and remained in use for several centuries. This suggests that they served a public, city-wide function as legal stones, marking a treaty by which ten clans (or cities?) joined to form this huge city. (Compare the twelve stones of the twelve tribes at Gilgal, Josh. 4.) The large stone socket before the alignment either held an emblem of the deity

or formed an altar (see Fig. P5). (Compare the stones and altar at Sinai, Exod. 24:4.)

Robert B. Wright  
5. The masseboth at Gezer

A most striking pillar is the single massebah found in the "holy of holies" of the ARAD sanctuary, clearly a cultic stone indicating the presence of the deity and marking the focus of worship. Its presence in a sanctuary originally constructed under Solomon indicates the general use of such pillars even in the worship of Yahweh, before they were proscribed during the reformation instituted by Josiah (II Kings 23).

A number of miniature masseboth have been found at the sacred precincts of HAZOR and Tell Taanach, measuring only six to fourteen inches high. Their size rendered them cheaper, portable, and easily re-usable. Probably they were not used in public worship, where size was important for viewing, but in private, meant only for the eyes of the worshiper and his deity. Presumably they served to create a "holy place" for worship and as a focus for worship and prayer or were left in the sanctuary to remind the deity of a vow, prayer or the piety of the worshiper.

**Bibliography.** C. Graesser, Jr., "Standing Stones in Ancient Palestine," *BA*, XXXV (1972), 34-63; E. Stockton, "Stones at Worship," *AJBA*, I (1970), 58-81. C. GRAESSER, JR.

**\*POETRY, HEBREW.** Perhaps the most significant advances registered in recent study of Hebrew poetry concern parallel pairs and the techniques used by biblical poets. The discovery and analysis of Ugaritic poetry (see UGARIT; UGARIT[S]), with its varied assortment of formal devices, have sharpened the consciousness of biblical scholars, obliging them to inspect OT poetry more intently. Some of the more important formal techniques will be treated here. (All translations are by the author.)

1. Parallel word pairs
  2. Conditioned meaning
  3. Abstract-concrete pairing
  4. Breakup of composite phrases
  5. Double-duty modifier
  6. Inclusion
  7. Ellipsis
  8. Enjambment
  9. Conclusion
- Bibliography

1. **Parallel word pairs.** Since parallelism of thought and corresponding word mass characterize

Hebrew poetic expression, the poet needed numerous pairs of words to sustain his composition. The identification of nearly a thousand word pairs that also occur in OT poetry, and usually in the same order, discloses that OT poets had fallen heir to a parallelistic tradition which they adapted for the composition of Yahwistic poetry. The Ugaritic word pairs, moreover, enable the critic to recover in the OT braces of words misinterpreted by tradition. Thus Ugar. 'd, "seat," //ksu, "throne," favors this rendition of Ps. 89:29 [H 30]:

And I will put his offspring upon his seat (לְעַר),  
and his throne (כִּסֵּא) will be like the days of heaven.

2. **Conditioned meaning.** By reason of their antithetic parallelism (see POETRY, HEBREW §C1b), some words assume a conditioned meaning. E.g., when contrasted with יְמִין, "right hand," יָד, "hand," sometimes specifically designates the left hand, as in Judg. 5:26:

Her left hand (יָדָהּ) she stretched out for the tent peg,  
and her right hand (יְמִינָהּ) for the workmen's mallet.

3. **Abstract-concrete pairing.** Closely related to the preceding phenomenon is the poetic practice of pairing an abstract with a concrete noun, both of which translate concretely. Thus the balance with concrete תִּירוֹשׁ, "new wine," points to a concrete signification for שְׂבֹעַ, "satiety," in Prov. 3:10, where the following literal rendition attempts to reproduce the complete a.b.c./c'.b'.a' CHIASMUS of the Hebrew:

Then filled will be your barns with grain (שְׂבֹעַ),  
and with new wine (תִּירוֹשׁ) your vats will be bursting.

Commentators have long noticed that barns are not properly said to be filled with "satiety," and have accordingly appealed to LXX σίτον, "wheat," to uphold the emendation of MT שְׂבֹעַ, "satiety," to שֶׁבֶר, "grain." The appearance, however, in the eighth-century B.C. Phoenician inscription from Karatepe of the phrase b'l šb' wtrsh, "possessors of grain and new wine," vindicates MT and reveals that the biblical writer broke up (see §4) a composite phrase composed of an abstract and a concrete noun and distributed its components over the parallel stichs of the verse.

4. **Breakup of composite phrases.** Biblical poets sometimes split up the elements of composite or stereotyped expressions for the sake of parallelism. In Isa. 11:2 the prophet employs the phrase עֵצָה רוּחַ, "the spirit of counsel," but in 19:3 he distributes its components over the parallel stichs.

Egypt's spirit (רוּחַ) will gush out of his belly,  
and his counsel (עֵצָתוֹ) will I confuse.

The frequency of this formal device in Isaiah suggests that tradition has missed the meaning when failing to recognize the breakup of the construct chain "the spirit of counsel," in Isa. 40:13:

Who has meted out Yahweh's spirit (רוח),  
what man has taught him his counsel (עצתו)?

The phrases קול רם, "a roaring voice," in Deut. 27:14 and קולו רום, "his roaring voice," in Hab. 3:10, suggest that the suspiciously long *hapax legomenon* רוֹמֵתֶךָ in Isa. 33:3 be broken up into two words, רם מתך, "the roar of your soldiers," and the verse read as a distich with an a.b.c.d./ /a'.b'.c'.d' sequence:

At the voice (*qól*) of your army, may  
peoples flee,  
At the roar (*róm*) of your soldiers, may  
nations be scattered!

This verse illustrates several features: the breakup of קול רום to form an assonant parallel pair קול/רום; the use of the double-duty suffix whereby suffixless המון, "army," shares the suffix of its counterpart מתך, "your soldiers"; the alliteration (see POETRY, HEBREW §§E1, 2) of נפצו/נדרו; and the rhyme of עמים/גוים.

The construct chain כסא קדשו, "his holy throne," in Ps. 47:8 [H 9] appears with its components separated to produce an uncanny instance of delayed identification (see §9 below) in Ps. 11:4:

Yahweh—in the temple is his holy,  
Yahweh—in the heavens is his throne.

A prose writer would merely state that Yahweh's holy throne is in the heavenly temple, but the psalmist, by means of the split construct chain, obliges the listener to wait till the end of the verse to learn what "his holy" modifies. In both halves of the verse the writer also uses the suspended subject construction—here, Yahweh—to heighten the suspense.

To sustain the parallel structure of his prayers, the poet drew from the rich thesaurus of composite divine names and separated the components over the balancing halves of the verse. The original full name of Israel's God, יהוה אל, "Yahweh El," lent itself to this practice in Jer. 15:15:

O Yahweh, remember me and visit me,  
take vengeance for me on my persecutors, O El!

In this verse, by repointing MT negative 'al, "not," to 'el, one recovers the composite divine name אל יהוה with which the prophet forms an inclusion (see §6 below), beginning and ending the line with a divine name. The psalmist employs the same components in Ps. 143:7:

Hasten to answer me, O Yahweh,  
my spirit fails, O El (*'el*; MT 'al)!

**5. Double-duty modifier.** This is one of the most engaging formal devices uncovered by recent research and illustrates the skill and subtlety of the Israelite poets. Also termed the "two-way middle," this device creates an interpenetrating and, as it were, fluid entity, in which phrases will go both with the sentence before and after with no break in the movement of thought. The Elizabethans were trained to use lines that went both ways

(Shakespeare's *Sonnets* and John Donne's *Corona* furnish good examples), and now it appears that biblical poets were also familiar with this technique.

I will thank you, my Lord, my God,  
with all my heart  
I will indeed glorify your name, O Eternal! (Ps. 86:12)

As traditionally understood, the wholeheartedness of the psalmist formally modifies only the first stich, but in this scansion, "with all my heart" modifies both what precedes and what follows.

The appreciation of this prosodic and semantic technique precludes the emendation adopted by some modern versions in II Sam. 1:21. The verse can be translated naturally as follows:

O mountains of Gilboa,  
no dew and no rain upon you,  
O upland fields!

This two-way curse is addressed both to the mountains of Gilboa and to the upland fields in a 6-9-6 syllabic sequence. In this analysis, vocative "O mountains of Gilboa" balances "O upland fields," whose initial *wāw* parses as the vocative *wāw*, attested in Arabic and Ugaritic. Such careful syntactic and syllabic parallelism tells against the emendation proposed by H. L. Ginsberg in 1938 and accepted by RSV, "Ye mountains of Gilboa / let there be no dew or rain upon you / nor upsurging of the deep!"

The Israelite poets often combined CHIASMUS with the double-duty modifier, as in Ps. 109:14:

Recorded be the iniquity of his father  
by El Yahweh  
the sin of his mother never erased!

Between the two chiasmically arranged stichs the psalmist sets אל יהוה as the two-way middle with the syntactic function of the accusative of agency with two passive verbs. The syllable count numbers 8-3-8. Plural אבותיו might be taken as numerical plural, but pairing with singular אמו, "his mother," favors its parsing as a plural of majesty, and thus singular in meaning, as in Isa. 14:21 and the Phoenician inscription from Karatepe.

**6. Inclusion.** Repetition characterizes Hebrew poetry and one special use of repetition has been termed "inclusion." This figure also receives the labels "envelope figure" or "cyclic composition," in which the author returns to the point where he began. In its basic form inclusion consists of the exact repetition of key words or phrases. Ps. 12 concludes with the phrase בני אדם, "the sons of men," the same phrase that ends its opening verse. The repetition may also appear at the beginning and at the end of a distich, as in Song of S. 1:2b-3a:

How much sweeter your love than wine,  
than the scent of your oils how much sweeter?

This distich also illustrates the use of the double-duty בי, "How!" whose force extends from the first to the second stich (see §7).

A less obvious type of inclusion consists not of

repetition of terms but of the resumption or completion of a thought in other words. Synonymous imperatives at the beginning and end of a unit recur often in prayers, such as Ps. 70, whose first line ends with the plea, "Yahweh, hasten to help me!" and whose last words are "Yahweh, do not tarry!"

An inclusion can also be formed by setting the same root at the ends of a line but in different formations, as in Job 37:16:

Do you know how the clouds are balanced,  
the wondrous works of the Perfect in Knowledge?

Using the same root  $\text{וָדַע}$ , "to know," at the extremities of the verse, the poet contrasts the finite knowledge of Job with the infinite knowledge of God.

An even subtler and more sophisticated inclusion results from placing the members of a fixed word pair, not in the parallel stichs of a verse, but in the first and last lines of a larger poetic segment. The roots  $\text{לָוַי}$ , "to prevail, vanquish," and  $\text{הָטָה}$ , "to defeat, break," which form a fixed pair in Ugaritic and in I Sam. 2:3-4, appear at the beginning and end of the unit in Isa. 9:3-4 [H 2-3]:

You have multiplied the nation, O Vanquisher,  
you have increased the joy. . . .  
The oppressor's rod  
you have broken as on Midian's day.

Unexplained MT  $\text{לֹד}$ , "not," takes on meaning when repointed to  $\text{לֵד}$ , "the Vanquisher," here a fitting appellative because it was God who broke ( $\text{הַחִית-תֹּהֲבָה}$ ) the rod of the oppressor.

Hebrew poets also fashioned inclusions by playing on roots containing the same three consonants but arranged in a different sequence. The consonants  $\text{נצח}$  occur in the verb meaning "to find," but in the sequence  $\text{נצח}$  these consonants express the idea of strength. Note the inclusion in the first and fourth stichs of Ps. 89:20-21 [H 21-22]:

I have found David, my servant. . . .  
my arm also shall strengthen him.

**7. Ellipsis.** The omission of a word or words which would complete or clarify the construction has long served as one criterion for distinguishing Hebrew poetry from prose. The highly elliptical quality of Ugaritic poetry, with its double-duty suffixes, prepositions, negatives, etc., has alerted scholars to look for similar phenomena in biblical poetry.

The sense of the fourth parallel stich in Ps. 135:16-17 changes when "they have," repeated three times in the first three stichs, is seen to belong semantically to the fourth stich as well, even though it is omitted.

They have mouths, but do not speak,  
they have eyes, but do not see.  
They have ears, but do not hear,  
nostrils, but there is no breath from their mouths.

Since the final stich already contained as many words as the others, the psalmist may have resorted to ellipsis to avoid overburdening it.

The recognition of the double-duty negative, that is, a negation extending its force from the first to the second stich, uncovers two pointed and coherent questions in Job 22:11:

Or will you not see the darkness,  
and will (not) the cascading waters cover you?

Eliphaz is warning Job that his callousness toward widows and orphans will bring him to the gloom of Sheol, where rushing waters will overwhelm him. One might add that Job's elliptical style helps explain why this book bristles with problems of translation and interpretation. A double ellipsis creates an exegetical problem in Prov. 19:22:

What is desired in a man is loyalty,  
and a poor man is better than a liar. (RSV)

To make complete sense of the second stich, one must mentally supply two adjectives omitted by the author who is really saying, "a poor *truthful* man is better than a *rich* liar."

**8. Enjambment.** A widely held view finds expression in the article POETRY, HEBREW (§C2, p. 834): "We can be sure that no enjambment or 'run-on' lines, typical of Western poetry, will occur in Hebrew poetry." Some modification of this judgment now seems needed. While biblical poets did not employ enjambment nearly as much as do Western poets, they were not strangers to this device.

Zeph. 3:19 illustrates an enjambment which is brought out in a literal translation: "And I will convert for them into praise and renown / in all the earth their humiliation," i.e., "For their sake I will convert their humiliation throughout the world into praise and renown." The direct object of the verb, "and I will convert for them," with a dative suffix of advantage, is forthcoming only with the last word of the line, "their humiliation."

The double-duty modifier or two-way middle discussed above (see §5) may be considered a type of enjambment, as illustrated by Isa. 11:9b:

For the earth shall be filled with  
the knowledge of Yahweh  
shall be like the waters covering the sea.

When the line is scanned as a tristich with a 7-5-8 syllable count, the two-way middle, "the knowledge of Yahweh," serves a double syntactic role. With the first stich it functions as the accusative of material, but of the stich that follows it becomes the subject. The use of a phrase with a double grammatical role in a run-on line indicates the skill of Israelite poets and the refinement of their aesthetic sense.

The frequency of the a.b.b.a chiasmic pattern, which usually extends over two successive verses, further shows that Hebrew poets were adept at running the thought from one line to the next.

**9. Delayed identification.** To create suspense the poet reserves explicit mention of the subject or object until the latter part of the verse. Elihu asks Job in Job 34: 17:

Can it be he will bind up a hater of justice,  
or will you condemn the Just Mighty One?

The identity of "he" in the first stich becomes evident only with the mention of the Just Mighty One in the second stich. Whereupon it also appears that "the hater of justice" is Job himself. The semantic chiasmus is noteworthy: in the first stich God is the subject and Job the object, whereas in the second Job is the subject and God the object.

The prophet shows to what heights of complexity Hebrew poetry could be brought by employing a double-duty negative, a two-way middle, and delayed identification in Isa. 57:12-13:

And they will not avail you  
when you cry out  
your pantheons will not rescue you.

The subject of "avail" does not become explicit until "your pantheons" are mentioned at the end of the line. IQIs<sup>a</sup> grasped the sense but not the technique, inserting an explicit subject in the first stich: "And your pantheons will not avail you/when you cry out your pantheons will not rescue you."

**9. Conclusion.** Because of a growing awareness that the Israelite poets inherited from their predecessors in Canaan a refined poetic tradition with a varied assortment of techniques, modern scholars treat biblical poetry with increased respect. The literary and rhetorical conventions at their disposal enabled the poets and prophets of Israel to give to their religious and theological message a subtlety and sophistication whose extent continues to unfold.

**POLYCARP, EPISTLE OF.** See APOSTOLIC FATHERS [S] §9.

**\*POLYCARP, MARTYRDOM OF.** See APOSTOLIC FATHERS[S] §9.

**\*POOR.** The term refers first of all to the actual socioeconomic state of persons and groups; later it came to have distinct religious meanings, and eventually became a self-designation of a Jewish-Christian sect.

**1. Poverty and wealth in the OT.** The OT has a richer vocabulary for poor persons than does the NT. Certain words (לר, lean, thin, poor; שרר, and מנין) refer to economic deprivation; the virtually synonymous terms, עני (bowed down, lowly, down-trodden) and עניו (afflicted, humble), imply also the dehumanizing impact. In the development of the religious meaning of poverty, 'ebhyón is associated with 'anî and 'anâw; given the phenomenon of *parallelismus membrorum* (see POETRY, HEBREW §C), it is not surprising that these terms are combined in various ways. In Ps. 82:3-4 all four terms occur virtually interchangeably.

The disparity between the rich and the poor developed in distinctive ways during the Israelite monarchy. Though beggary was known, it was never regarded as a holy state; rather, the social and economic well-being of every Israelite was assumed to be the norm (Deut. 15:4). Still, the norm was mocked by reality, "for the poor will never cease out of the land" (Deut. 15:11). This disparity between norm and reality elicited laws for the protection of the poor and produced diverse theological understandings of poverty and wealth.

Among the legal provisions to protect the poor were the law of release, according to which debts were to be cancelled every seven years (Deut. 15), the right of the poor to harvest what was left in the fields (Lev. 19:9-10; etc.; the sojourner, fatherless, and widow are assumed to be poor), prohibition of interest on loans to fellow Israelites, and regulations governing collateral (Exod. 22:25-27; Deut. 23:19-20). In addition, charity to the poor was emphasized (Prov. 14:31; Amos 5:12; Eccles. 4:1-6).

Given the diverse socioeconomic conditions from the Conquest to Maccabean times, the attitudes and theological understandings of poverty and wealth in the OT vary. First, because prosperity was interpreted as God's blessing, as his reward for fidelity (e.g., Ps. 112), poverty and disaster were viewed as signs of God's negative response to infidelity (especially clear in Deut. 28). Thereby prosperity was given a moral and religious meaning, though sometimes the sages could formulate a straightforward "work ethic" as well (Prov. 20:13; 28:19). At other times, they are quite aware of the ambiguity of wealth and poverty (Prov. 28; Eccles. 18:25-26; 25:2; 29:22), and the dangers of both are seen (Prov. 30:8-9; Eccles. 14:3-10), as is the tendency of the rich to exploit the poor (Eccles. 13:3-13). However, this common-sense correlation between rectitude and prosperity was too simple

(Ecclus. 27:1), as the book of Job makes clear. See JOB, BOOK OF §11.

Second, the sense of justice, grounded in Yahweh's own rectitude, induced the prophets to denounce all wealth gained at the expense of the poor (e.g., Amos 2:6-7; 5:10-12; 8:4-6; Isa. 3:13-24; Jer. 6:26-29; Mic. 2:1-2). The prophets' protest is grounded in the same conviction as the simple reward-punishment scheme—that Yahweh rewards rectitude and punishes injustice. New with the prophets is the moral discernment that there is no necessary connection between righteousness and prosperity, since the experience during the monarchies showed that wealth generated power through which the poor were robbed of their rights. (Job 24 is a poignant portrait of the exploited poor.) Therefore the justice of God would lead him to destroy such wealth.

Third, since Yahweh will destroy the nation because of injustice to the poor (as well as for the corruption of Yahwism by the cult of BAAL), it is natural that the expectation of the future would include a portrayal of equity and prosperity for all, and that the ideal ruler would be expected to safeguard the rights of the poor (Isa. 11:3-5). Isaiah's hope of a remnant which would survive disaster comes to be understood by Zephaniah as a remnant of the lowly and poor (עני ורל, Zeph. 3:11-13). During the Exile, Deutero-Isaiah can call God's people the poor (עניים, Isa. 49:13; RSV "afflicted"), though he does not emphasize this; the same understanding of the people of God is found in Trito-Isaiah (Isa. 61:1-2) and Ps. 140:4.

Fourth, given the Hebrew understanding that a just judge not only determines who is in the right but undertakes to rectify the inequity of the case before him, and given the conviction that Yahweh is committed to justice and righteousness, Israelite piety came to believe that God is especially concerned to rectify the plight of the oppressed poor. They are understood to be the special "clients" (*gērim*) of God. This view is expressed frequently in the Psalter (e.g., Pss. 10; 25; 34; 37). Whether these psalms come from a distinct group (the poor), as has been asserted repeatedly, is doubtful. In any case, these psalms articulate two things simultaneously: a refusal to accept one's lot as fate or as God's will, and a confidence that God will "judge" (vindicate, set right) the plight of the oppressed poor (e.g., Ps. 70; so also Ecclus. 21:5; 35:13-17). Thus the poor person comes to be understood as counting on God, as specially devout because he or she does so in the midst of poverty, and as, therefore, humble and expectant before God.

Finally, given the religious understanding of lowliness before God, humility (עניה; Gr. *πραΰτης*) is praised as a virtue, especially by Ben Sirach (e.g., Ecclus. 3:17-20). Humility can be attained by the rich as well as the poor, just as it is seen that poverty can generate greed as well as humility (Ecclus. 31).

2. **Qumran.** The covenanters at Qumran regarded themselves as the true Israel of the end time. Besides developing a dualistic self-understanding (e.g., the Sons of Light against the Sons of Darkness or of Belial), they applied to themselves a wide range

of scriptural terms and motifs, such as saints, covenant, elect, and (God's) people. Not surprisingly, they also claimed to be the poor for whom God was especially concerned. This has led many scholars to conclude that the Qumran covenanters used "the Poor" (either *עניים* or *אביונים*) as a technical title for themselves. In view of their communal life, it has been claimed that Qumran provides a virtually complete precedent for the earliest church in Jerusalem (see §4 below). However, such a view goes beyond the evidence. (1) Most occurrences of the terms for poverty merely describe a concrete social status (e.g., IQH 2.32; 6.15-16; IQM 11.13). (2) When the Habakkuk Commentary accuses the Wicked Priest of destroying the poor (IQpHab 12.2), the phrase can mean the community itself (the Poor), but need not be restricted to it. (3) When other terms are used as self-designations (e.g., the community, *היהוד*), the definite article appears. The only text which actually speaks this way is 4QpPs 37: "The Congregation of the Poor." Its importance should not be overemphasized, however, because the Qumranian view of Scripture and the language of Ps. 37 made coining this phrase virtually inevitable. (4) Texts which discuss regulations for sharing property and wealth do not refer to "the poor," while those which speak of "the poor" do not deal with economic arrangements.

In sum, the community at Qumran understood itself as God's poor people, not because members divested themselves of private possessions in order to become the community of "the Poor," but because they may in fact have been poor and harassed, and because they read the Psalms as referring to themselves. See DEAD SEA SCROLLS §5; DEAD SEA SCROLLS[S] §§8, 9.

3. **Jesus and the gospels.** There is no reason to think that Jesus deliberately impoverished himself in order to lead a mendicant life, or that he was unusually poor by contemporary standards. II Cor. 8:9 speaks metaphorically of the Incarnation, not of Jesus' lack of wealth after leaving his trade. Since for John the Incarnation is not a state of lowliness, as for Paul (see also the hymn quoted in Phil. 2:6-11), John's gospel ignores the matter; the Synoptics do not emphasize Jesus' poverty, and only Luke explains how his needs were met (Luke 8:1-3).

Jesus' concern for the poor is emphasized by Luke, largely in the Q material which he used. For Q, Jesus as the Son of man on earth is homeless (Matt. 8:20; Luke 9:58) and directs his mission to the poor (using language of Isa. 61:1; see Matt. 11:4-5; Luke 7:22). If, as is likely, the woes originally followed the Beatitudes in Q (Luke 6:22-26), then, for Q, Jesus was convinced that the kingdom would bring about a reversal of present circumstances. Q probably preserved Jesus' own understanding that the kingdom would rectify everything now perverted. Thus Jesus' concern for the poor is not simply the reflex of his own socio-economic background, nor an expression of a "proletarian" view of the kingdom, but rather makes concrete the coming eschatological reversal. The economic inequities of the present are symptoms of the need of redemption, as are sickness,

demon possession, or self-righteousness. Jesus did not romanticize the goodness of the poor, idealize poverty, nor regard wealth as inherently evil. His warnings against its dangers apply to both rich and poor, and assume that his hearers had at least enough wealth to need warning (Q: Matt. 6:24; Luke 16:13; Matt. 6:25-34; Luke 12:22-31). There is nothing in the whole Jesus tradition comparable to the bitter hatred of the rich found in Jas. 5:1-6. The call to sell possessions and distribute the proceeds to the poor (Luke 12:33; *see also* Mark 10:17-22; Matt. 19:16-22; Luke 18:18-23) is not programmatic but a summons to emancipation from security in order to rely wholly on God's kingdom in the company of Jesus.

Mark's compilation of materials in 10:17-31 reveals his awareness that following Jesus has in fact cost many Christians their economic security. The recompense (with persecution!) mentioned here is doubtless metaphorical, and probably refers to Christian mutual concern.

Matthew is often accused of "spiritualizing" the Beatitudes, especially in changing "Blessed are you poor" to "Blessed are the poor in spirit" (Luke 6:20; Matt. 5:3). The exact meaning of "poor in spirit" continues to be debated. The Qumran parallel (IQM 14.7) does not permit the translation, "Blessed are they who voluntarily became poor." Rather, the phrase refers to those whose spirit is impoverished, downtrodden by circumstances, as the adjacent "mourning" and "meek" (cf. *'anāwīm*) make clear. (At Qumran the antonym occurs also: the haughty of spirit, IQS 11.1.) In his own way, Matthew has preserved the note of eschatological reversal, and has prevented a strictly economic interpretation of the Beatitudes as well. It is doubtful that he omitted Q's woes (Luke 6:24-26) simply because he was writing for a wealthier church.

Luke strengthened Q's emphasis on Jesus' concern for the poor. The Magnificat (Luke 1:46-55), the story of the rich man and Lazarus (Luke 16:19-31), and Jesus' refusal to be concerned with equitable division of an inheritance, followed by the parable of the rich fool (Luke 12:13-21), are all peculiarly Lukan. The degree to which Luke's portrait of Jesus both incorporates authentic tradition and/or reflects his own concern to show Jesus as a wandering teacher of the Cynic-Stoic type is unclear (*see* CYNICS[S]). His picture of Jesus does not simply reflect the increasing proportion of wealthy persons in the church but confronts it with a Jesus who was poor and concerned especially for the poor, as the opening scene of the ministry makes clear (Luke 4:16-30, using Isa. 61:1-2).

4. **Early Christianity.** Though the early Christians were generally poor, evidence does not indicate that they were destitute or that they deliberately impoverished themselves to become "the Poor" of God. The earliest Jerusalem church apparently did share wealth among its members. However, one must be cautious in painting too clear a picture. Our knowledge rests solely on Acts, which reports only two actual cases (Acts 4:36-37; 5:1-11); the other evidence is in the generalizing summaries written fifty years later, and probably outside of Palestine. Indeed, these summaries are somewhat inconsistent, for according to Acts 2:45

and 4:34-35, Christians shared wealth to meet actual need, while Acts 2:44 and 4:32 imply total abolition of private property. Moreover, some property appears to have been retained, for the community met in private homes (Acts 2:46; 12:12). In any case, whereas the Qumranians were required to share wealth upon entering the community and then generated wealth by common work, the Jerusalem church seems only to have pooled resources already owned. The reasons for the development and demise of the practice are obscure; both a sense of mutuality and the conviction of the impending return of the Lord (when private possessions would be irrelevant) might have been involved. Possibly the famine reported in Acts 11:28-30 was a factor in the demise of the practice. In any case, there is no evidence that Christians elsewhere took up the practice.

Epiphanius (fourth century) reports that the Ebionites ("the poor"), a Jewish Christian sect of the second century, traced themselves back to the earliest Jerusalem church. But this cannot be substantiated. The first reference to this group is in Irenaeus, who classifies them as heretics; the fragment of the Ebionite Gospel (*see* EBIONITES, GOSPEL OF THE) is of no help in understanding the group's claims. It has been argued that early Ebionite texts and traditions are embedded in the Pseudo-Clementine literature, but this remains hypothetical.

In the Hellenistic cities Christianity only gradually attracted wealthier persons. Yet I Cor. 1:26 should not be pressed to mean that the earliest Christians were only the destitute and the slaves. Acts mentions converts who apparently had some means (Acts 16:14-15; 17:4, 12; 18:3, 8). The diverse economic status of Paul's churches is reflected in I Cor. 11:22; II Cor. 8:2; 9:2. Still, Paul apparently did not find it necessary to warn against the moral dangers of wealth, as did a successor (I Tim. 2:9; 3:8; 6:5-10, 17-19). "Love of money" comes to be a standard element in later Christian moral counsel (e.g., Heb. 13:5; Did. 3:5; Polyc. Phil. 2:2; II Clem. 4:3). Likewise the Markan interpretation of the parable of the soils is sensitive to the issue (Mark 4:19), and the Seer of Patmos warns the church at Laodicea not to be proud of its wealth (Rev. 3:17). Nowhere is the antipathy toward wealth sharper than in the Epistle of James (esp. 2:1-7; 5:1-6).

5. **Concern for the poor.** Care for the needy became a standard theme of early Christian PARENESIS (I Thess. 4:12; Eph. 4:28; I Tim. 6:17-19; Jas. 1:27; 2:14-17; I John 3:17; I Clem. 38:2; Did. 4:8). The most eloquent statement of this motif is the parable of the last judgment (Matt. 25:31-46).

In addition to support for the needy within the Jerusalem church, Acts reports that the Antioch church sent Paul and Barnabas with money to Jerusalem during a famine (Acts 11:27-30). This "famine visit" poses many historical problems, largely because it cannot be fitted into Paul's own report of his visits to Jerusalem (Gal. 1:18-2:10). Paul reports that, at the Jerusalem Council, he agreed to "remember the poor" (Gal. 2:10). K. Holl proposed that here "the poor" was actually

a technical self-designation of the early church (the Poor), and that Rom. 15:26 supported this: "the poor, the saints" (RSV "the poor among the saints"). Thus, Paul is said to have submitted to a juridical claim that his churches support the Jerusalem church (somewhat analogous to the annual temple tax required of Diaspora Jews), and Rom. 15 is somewhat obscure because Paul is concealing this in order to affirm his independence. Although the proposal did not gain acceptance when first advanced, it was revived after the discovery of the Qumran texts. If valid, it would help to substantiate the claims of the Ebionites (see §4 above).

However, the hypothesis, including its revived form, must be rejected. (1) There was but one offering, not an annual subvention. (2) Paul clearly does not regard himself or his churches as subject to such claims by the Jerusalem church. (3) He regarded the offering as a concrete gesture of the solidarity of the whole church and of thanksgiving for the gospel (Rom. 15:27). (4) The poor Macedonian churches insisted on participating, and clearly were not obligated to do so (II Cor. 8:3-4). (5) Paul was not even sure that the money would be accepted (Rom. 15:31).

Acts ignores the collection, even though it emphasizes the role of Jerusalem, and despite the fact that it was so important to Paul that he insisted on taking the money personally to Jerusalem before going to Spain. Not until Paul stands before Felix (Acts 24:17 ff.) do we learn that he had brought money to Jerusalem, and then it is said to be "alms and offerings" for the Jews. Perhaps the offering was unknown to the author of Acts (he does not mention it in his account of the council, ch. 15); perhaps Paul's hunch was right—the money was not acceptable, and the author of Acts did not want to mar his account by saying so.

\***POTTERY.** Excavations in Palestine during the 1960s and early 1970s have considerably refined the knowledge of the pottery of biblical lands.

1. **Significance of pottery for dating ancient remains.** The chief value of pottery to the archaeologist and historian is its contribution to a chronological framework. It has had a particular importance in Palestinian archaeology because the land is not rich in cultural or architectural finds, and because written material is lacking for many periods (although the corpus of inscriptional material is gradually increasing: see INSCRIPTIONS, SEMITIC[S]).

Pottery's importance for chronology is due to its cheapness and abundance rather than its value or rarity. It breaks fairly easily, and had to be continually replaced. But it does not disintegrate, and thus the fragments or "potsherds" remain for the archaeologist to study. Design and form were adapted to needs, and for any period a certain amount of standardization resulted. Yet, over the years styles and methods of manufacture changed.

From these changes is derived pottery's chronological importance. Preparation of the clay depended upon the clay beds and the function the vessel would have. The pots were formed by hand, on a slow or fast wheel, or in a mold. The firing of the vessel in the kiln could be at a high or low temperature, with or without reduction or stacking. The pots may have been decorated by incision or puncturing, slip, paint, or glaze. They may have been burnished before or incised after firing. See POTTERY §1.

Nearly all these features are of potential chronological significance (see POTTERY §2). Pottery makers from one era of a town's history may have used different clay beds than their predecessors, used different inclusions, preferred incision to painted decoration, or fired their kilns higher. Some features offer rather precise chronological indications. For instance, pattern burnishing was in vogue only a few brief periods of Palestine's history, and overfiring of pots was common in the later Late Bronze Age (ca. 1300-1200 B.C.) and the Early Hellenistic period (ca. 330-200 B.C.). While these characteristics offer some chronological data, the same clay beds, potters' wheels, and painted traditions often lasted for centuries. The only feature of ceramic vessels that undergoes a continuous process of change is shape. Bases may become more pointed, rounded, flattened, or elongated. Handles may shift their point of attachment, change their manner of attachment, or develop from round to oval or flat. Most often rims are the best chronological indicators. Possible rim shapes are almost infinite, and a particular rim shape tends to develop persistently and rapidly.

Some shapes tend to change much more rapidly than others. While some forms seem to persist for centuries with little or no change, other types disappear after flourishing for only a few years

or decades. A few simple types tend to persist or recur century after century. Lamps, for example, change very slowly over a period of 2500 years (see LAMP Fig. 8). Some exotic shapes have a very short life and can be immediately identified and closely dated. The evolutionary trend of ancient pottery is commonly downward. Finely made examples of a new and pleasing shape appear. Soon there is a decline in quality: the shape may sag or bulge; the elaborate decoration may disappear. The poorer form may be typical until a new shape takes its place.

Sir Flinders Petrie excavated the first TELL in the Holy Land in 1890 and recognized the chronological value of sherds in stratigraphical excavation. Stratigraphical excavation involves careful separation of each layer of dirt as it is removed, recording where the artifacts are found in each layer (see ARCHAEOLOGY §B2a; ARCHAEOLOGY[S] §3bi). By noting the stratigraphical relationship of potsherds, Petrie was able to develop a relative chronology of pottery types. When he related certain wares to similar wares found in datable Egyptian tombs, he had a peg for determining absolute chronology for Palestine. All stratigraphical excavation since then has contributed to the development of a typological corpus of Palestinian pottery, relatively by means of stratigraphical digging, absolutely by means of inscriptional material or foreign imports.

The knowledge of pottery chronology grew in the first decades of the twentieth century as leading excavators such as Petrie, L. H. Vincent, and C. S. Fisher shared their field observations (see ARCHAEOLOGY §E for a summary of excavation in Palestine). The publication of normative ceramic groups issued from Albright's excavation at Tell Beit Mirsim. In the final reports of that excavation, published between 1932 and 1943, Albright was able to provide a fairly complete picture of the changes in pottery shapes from the late third millennium down to the early sixth century B.C. (see POTTERY Fig. 65). Pottery chronology for the periods preceding Tell Beit Mirsim was systematized by Wright in 1937.

Since World War II Albright's framework has been considerably expanded. Kenyon's excavations at JERICHO and the ongoing excavations at Bab edh-Dhra' on the SE shore of the Dead Sea throw considerable light on the pottery of the Neolithic, Chalcolithic, and Early Bronze Ages. When the major excavations at SHECHEM, TAANACH, HAZOR, and GEZER, as well as a host of smaller excavations (see ARCHAEOLOGY[S] §1), are fully published, the pottery of the Middle and Late Bronze Ages, Iron I, and Iron II, will be better known. Tell Beit Mirsim's history ended with the fall of the southern kingdom, about 587 B.C., and there the stratigraphical presentation of pottery ended until the publication of a corpus of Late Hellenistic and Early Roman pottery (200 B.C.-A.D. 70) by Lapp in 1961. The gap in knowledge of ceramics in the period between 587 and 200 B.C. is being filled in by the excavations at GIBEAH, Shechem, Taanach, Tell el-Hesi (see EGLON[S] §2), Wadi Daliyeh (see SAMARIA PAPYRI[S]), and En-gedi. Stratigraphically important pottery from

the Late Roman and Byzantine periods has been published from HESHBON, and, as the results of the excavations at such sites as Araq el-Emir and CAESAREA become known, corpora of pottery of later Palestinian history should appear.

**2. Some significant characteristics of Palestinian pottery.** (See POTTERY §2, Fig. 63; Vol. K-Q Pls. XIX-XXII.)

**a. Neolithic (ca. 8000-4300 B.C.).** Pottery first appears toward the end of this period. Simple, primitive, handmade. Usual forms: saucers and bowls with splaying or gently curving walls; globular jars with flat bases, high necks contracting inward, and plain rims; small lug, ledge, or knob handles on jars and bowls. Coarse ware: many grits, much straw for cohesion, soft and crumbly resulting from firing at low temperature. Finer ware: better fired, cleaner clay, attractive finish—smoothed over, cream-colored slip with finely burnished red slip over parts forming a design usually of chevrons or triangles.

**b. Chalcolithic (ca. 4300-3200 B.C.).** The transition from Neolithic to Chalcolithic is still uncertain, but Yarmukian and Jericho Pottery Neolithic B cultures appeared at the end of the fifth millennium and into the fourth. Better fired, thinner, less straw, forms more advanced. Jar rims have concave interior. Dark red slip common, sometimes burnished. Incised herring-bone design. Ghasulian culture widespread in Late Chalcolithic. Ware is hard, thin, and well-fired. Some vessels of elaborate form; characteristic are "churns" (see Vol. K-Q Pl. XXII) and "cornets." Decoration includes applied bands and dark painted designs.

**c. Early Bronze (ca. 3200-2050 B.C.).** Handmade until late in the period. Typical are ledge handles, high loop handles on juglets, vertical pierced lug handles on jars and juglets, flat bases, shallow bowls. Characteristic EB I finishes: red-burnished slip, "grain wash," "line-group" painting. In EB II metallic ware and "Abydos" jugs appear. Khirbet Kerak ware (see Vol. K-Q Pl. XXII) appears in EB III. EB IV-MB I is an intermediate period, closer in many respects to the Early Bronze Age. "Teapots" are common.

**d. Middle Bronze (ca. 2050-1550 B.C.).** Caliciform jar and bowl lamps with four pinched spouts in MB I. In MB II, wheel-made, homogeneous, pleasing forms. Carinated bowls often continuously burnished over rich dark or cream slip, sometimes with trumpet foot. Piriform and cylindrical juglets sometimes with double handles, button bases. Elongated dipper juglets. Graceful large jar and bowl forms. Richer burnishing and elaborate forms in MB IIA and B with some deterioration in MB IIC.

**e. Late Bronze (ca. 1550-1200 B.C.).** LB I: Bichrome painted ware—friezes of birds, fish, and geometric designs (see ART §2d, Figs. 72-74; Vol. K-Q Pl. XX). LB II: imported pottery from Mycenae (stirrup jars, piriform jugs, pyxides) and Cyprus ("bilbils," "milk bowls"); local imitations and some very poor wares. Astarte molded plaques (cf. POTTERY §5; Vol. K-Q Pl. XXIIIb).

**f. Iron I (ca. 1200-918 B.C.).** Philistine pottery: red and black geometric designs and swans on craters and beer mugs (see PHILISTINES Fig. 50;

ART §2d, Fig. 75; Vol. K-Q Pl. XXf). Local forms: large jars with collared rims, vertically burnished juglets with trefoil mouths, black-burnished juglets, chalices, bowls with chordal hand burnishing. Imported Cypro-Phoenician juglets.

**g. Iron II (ca. 918-587 B.C.).** Standardization of ware through mass production, varying sizes of wheel-burnished bowls, red and black burnished oil juglets, vertically burnished elongated juglets, cups, pitchers, cooking pots, decanters. "Snowman" figurines. See POTTERY §§3, 5; Vol. K-Q Pl. XXI.

**h. Exilic-Persian (ca. 587-332 B.C.).** Elongated bottles, sausage jars with sharp shoulders and bases tapering to a point, "basket" handle jars with stump bases, flat, wide-rimmed lamps. Chalky orange ware, ware with greenish cast, impressed chevron designs.

**i. Hellenistic (ca. 332-63 B.C.).** Imported black-glazed pottery, especially small bowls and plates; imitated locally by painting or wash, then without painting and with deterioration in form. Rhodian jars with inscribed handles imported. Closed lamps: wheel-made, small, folded, and in the second century—molded. Bottles: globular and fusiform unguentaria.

**j. Roman (63 B.C.—A.D. 324).** *Terra sigillata* (red-glazed bowls and plates with rouletting on interior and rim) imported. Thin and delicate Nabatean ware with elaborate painted floral designs in Transjordan and the Negev. (See NABATEANS for a history of these people.) Locally made globular juglets, small bowls, flasks with twisted handles, Herodian bow-spouted lamps; ribbed ware. In first and second centuries A.D. molded lamps with elaborate designs and figures were imported from Italy and imitated in Palestine. See LAMP Fig. 8, no. 8; the identification in IDB is in error; it is Roman.

**k. Byzantine (A.D. 324-630).** Ribbing quite pronounced on jars and cooking pots. Jugs and bowls with incised lines—straight and wavy combed patterns; long-necked juglets with angular handles. Late Byzantine: slashes and nicks on shoulders of juglets; single wavy lines on bowls. Slipper, high-bowl, and candlestick lamps. See MENORAH[S].

**3. New methods in pottery study.** Descriptions of clay and ware have become more standardized in recent years in an attempt to make the descriptions more objective. The Munsell Soil Color Charts are now commonly used in order to describe accurately the hue, lightness value, and chroma of a sherd—both its surfaces and its core. Such data can now be analyzed by a computer, and this has been done by some excavators.

Various scientific tests are undertaken to determine the composition of clays and fired wares. In petrographic analysis thin sections of potsherds are studied to determine the mineral content of a ware. In spectographic analysis the composition of clays is investigated. Chemical analysis aids in the identification of clay constituents. Kiln tests try to re-enact the methods of ancient pottery firing. These studies make it possible to trace the source of clay beds, discover ancient cultural ties and trade routes, and to learn what people of the past considered the best clay for their purposes. Studies have been undertaken to consider possible chrono-

logical implications of clay density and to discover whether a particular type of clay was considered best for a certain kind of vessel. See ARCHAEOLOGY §C6.

A method known as thermoluminescence has been developed to determine the date pottery was fired and thus the time a vessel was in use. As carbon 14 measures the amount of carbon in organic material, thermoluminescence measures the change heat has made in texture and the amount of degradation which has taken place in ceramic material. If such a method were perfected it could be correlated with the archaeologist's knowledge of pottery forms and types for chronological purposes. As yet the tests are not foolproof, and as with carbon 14, a knowledge of pottery form can refine thermoluminescence dates. See ARCHAEOLOGY [S] §3c; CHRONOLOGY, MESOPOTAMIAN (METHOD) [S]. See also ASHDOD[S].

\***POVERTY.** See POOR[S].

#### \***PREHISTORY IN THE ANCIENT NEAR EAST.**

This summary discussion is organized under headings which show the chronological order of the major features of human development in the Near East prior to written history.

**1. Paleolithic food collectors.** Man's history as a toolmaker is now known to extend back over two million years. For more than 99.5 per cent of this time, man and his antecedents survived by hunting and collecting wild resources. Virtually all the evidence of the earliest phases of tool manufacture is presently confined to Africa, with the earliest evidence from Europe suggesting an arrival of toolmaking hominids there by about one million years ago. While this implies that such creatures were present in the Near East before that time, no substantiating evidence is yet at hand.

**a. The earliest sites in the Near East.** Our earliest evidence of a toolmaking hominid in the Near East comes from the site of Ubeidiya, a short distance S of the Sea of Galilee. Here primitive pebble

chopper tools and crude hand axes have been found associated with the bones of hippopotamuses, crocodiles, and various animals now extinct, in geological deposits whose age is estimated at about 600,000 years. Fragmentary hominid remains from the site suggest the presence of *Homo erectus* ("Pithecanthropus") as the toolmaker. The hand axes are deeply flaked pointed pebbles, characteristic of the early stages of manufacture of this type of tool in other areas of the Old World, and thus seem to fit the early Middle Pleistocene date assigned to the deposits. The site is an archaeological curiosity, in that the geological layers have been tilted into vertical positions and even overturned by the active geological forces at this extremity of the Great Rift system.

Another very early site, dating somewhat later in the Middle Pleistocene, is Latamne, near the Orontes River in NW Syria. Here a heavy concentration of hand axes and other stone tools of somewhat more refined manufacturing technique than those of Ubeidiya has been discovered. Unfortunately, animal bones were not well preserved at the site, so that specific activities other than stone-tool manufacture are difficult to interpret. The presence of large stone blocks may be evidence of windbreaks or other crude structures.

Surface finds of hand axes occur throughout the Near East, but mostly in the Levant and Egypt, and suggest the presence of man (presumably in the form of *Homo erectus*) through the whole of the Middle Pleistocene. On the basis of the kinds of animals butchered at Ubeidiya we can conclude that these hominids occasionally engaged in cooperative hunts involving at least several adult males, although most of their subsistence was probably derived from plant foods and smaller animals.

**b. The appearance of modern man.** A major problem in Paleolithic studies throughout the Old World concerns the appearance of anatomically modern *Homo sapiens*, as distinct from earlier Neanderthal forms. The circumstances under which modern man appeared in the Near East, as well as in the rest of the Old World, are still relatively little understood. Throughout the Near East hominid fossils dating to the earlier part of the Late Pleistocene (i.e., earlier than about forty thousand years ago) are either quite similar to Neanderthal man, as known elsewhere, or differ significantly from modern man in their possession of features suggesting Neanderthal affinities. Sites yielding Near Eastern Neanderthals include Shanidar in N Iraq, and Amud, Zuttiyeh, and Tabun in Palestine. All are cave or rock-shelter deposits. The site of Skhul, a shallow shelter in the Wadi el-MUGHARAH only a few hundred meters from Tabun, has yielded the remains of perhaps eleven individuals which share features of both Neanderthal and modern man. While the cultural remains found with all of these fossils in the Levant are generally similar, recent evidence from Tabun suggests that the Skhul hominids are significantly later in time than the Tabun Neanderthal. Another site which is important in this regard is the cave of Qafzeh, near Nazareth in Palestine. Here excavations in the 1930s and the 1960s yielded

the remains of over a dozen individuals of anatomically modern man in association with an industry resembling that from the other Levantine fossil-man sites. It is hoped that future dating of this site relative to Tabun and Skhul will help to resolve the question of whether modern man and Neanderthal man were contemporaries in the Near East in the middle Late Pleistocene, or whether a chronological ordering exists suggesting the development of modern man from a Neanderthal ancestor. The stone-tool industries associated with these fossil men are generally termed "Middle Paleolithic" (or "Mousterian") to contrast them with those of the earlier Lower Paleolithic hand-axe industries. They show a complex use of manufactured flakes of stone in the fabrication of many specialized implements, some of which suggest the hafting of stone to spear shafts or handles. Other evidence of the increasing complexity of human culture is seen in the deliberate burials of the Neanderthals, occasionally accompanied by foreign objects (most frequently animal bones) which have been interpreted as grave offerings to accompany the deceased in a future existence. If this interpretation is correct, the concept of an after-life dates back at least as far as the Late Pleistocene world of Neanderthal man.

**c. The intensive collectors of the terminal Pleistocene.** By the end of the Late Pleistocene (coincident with the final retreat of the great continental and alpine glaciers ten thousand years ago), man's activities in the Near East reflect a more intensive utilization of wild resources than previously. This intensive exploitation can be seen in the development of new items in the technology such as sickles for the harvesting of tough-stemmed plants and milling stones for grinding seeds or nuts, and by the presence of food remains not previously represented in significant quantities, such as snails. Although the use of sickles and milling stones appears first in the Upper Nile Valley at about 10,000 B.C., this kind of activity seems not to have persisted there, and is best known from several sites in Palestine assigned to the Natufian culture (named after the site of Shukbah in the Wadi Natuf, NW of Jerusalem). Several Natufian sites, including El Wad in the Wadi el-Mugharah between Skhul and Tabun, Ein Mallaha N of the Sea of Galilee, and the basal levels at Jericho (see JERICHO[S] §2), suggest the presence of at least semipermanent communities characterized by substantial architecture. Each of these sites is postulated to have been in the immediate vicinity of abundant resources of plant and animal food at 8000-9000 B.C. Perhaps these resources were sufficient, given the development of a system of storage (e.g., for wild grains), for the development of permanent settlements. Such settlements outside Palestine are suggested by the impressive deposits at Mureybit on the Euphrates and perhaps by the lower levels of Ganj Dareh in the Kermanshah region of Iran, both of which appear to date to the ninth millennium B.C.

**2. The early food producers.** How and under what circumstances human beings began to cultivate plants and raise animals has been a major focus of research since the pioneering work of

Braidwood at Jarmo shortly after World War II. The earliest known example of domestication anywhere is the dog from the Late Pleistocene site of Palegawra in N Iraq, dating to approximately 10,000 B.C. Based upon the evidence of disproportionately high quantities of the bones of young animals, it is now believed that domestic sheep were present at the site of Zawi Chemi Shanidar in the same area by the first half of the ninth millennium B.C. At all other sites showing evidence of early food production, however, goats either predominate (as at Ali Kosh in the Deh Luran plain of SW Iran), or are the exclusive domesticated herbivore (as at Beidha near Petra in SW Jordan). Throughout the Near East early sites of food producers show heavy reliance on domesticated grains (wheat and barley) as well as a continuing dependence on wild resources.

*a. The Levant and Anatolia.* The classification of sites of early food producers in this area is largely based on the sequence in the early levels of Jericho, where two sequent aceramic cultures were described: Prepottery Neolithic A (PPNA) and B (PPNB). PPNA, as known only from Jericho and the Nahal Oren site on Mount Carmel, is characterized by relatively large circular house structures, a lithic industry suggesting Natufian antecedents, and possible early phases of domestication of wheat and barley. Radiocarbon determinations suggest that the PPNA levels span most of the eighth millennium B.C. In contrast to PPNA, PPNB culture (late eighth to early seventh millennium B.C.) is known from over half-a-dozen sites in Palestine and adjacent areas. It is characterized by well-established domestication of wheat and barley, domestic goats, rectangular-roomed architecture incorporating lime or gypsum plaster, and a curious mortuary complex involving the removal and treatment of selected skulls (see JERICHO Fig. 15). It appears that the PPNB culture represents the first widespread pattern of successful food production in the Levant, with sites now known from virtually all areas of Palestine. Patterns of contact between the PPNB settlements of the Levant and contemporary peoples in Anatolia are indicated by Turkish obsidian in the PPNB sites and, perhaps, by the use of plastered floors and subfloor structures at Çanyönü Tepesi near Diyarbakir, and the retention of human skulls in rooms with plastered floors in the aceramic levels at Hacilar in SW Anatolia. These widespread similarities suggest a rapid and unified spread of early food production through the W portion of the Near East at the close of the eighth millennium B.C.

*b. The Zagros foothills of Mesopotamia.* The earliest stages of food production in this area are represented by Zawi Chemi Shanidar and Karim Shahir in the N and by Ganj Dareh and the Bus Mordeh phase at the Ali Kosh site in the S. Of these, only Ali Kosh has been completely reported. In this eastern area it appears that fully efficient food production was not effective until after 7000 B.C. Such sites as Jarmo in N Iraq, and the Ali Kosh phase at Ali Kosh in SW Iran are good examples of early food-producing villages in this region. This complex of food production relies on

both sheep and goats, and in some instances domestic pigs, as well as wheat, barley, and perhaps a somewhat wider range of other cultigens. There seem to be fewer unifying features between the early villages in these eastern areas than in the W. Several sites in both E and W have yielded small, highly stylized female figurines which may be evidence of a shared ideology, but evidence for this remains sketchy. On the basis of limited architectural exposures in the E it appears that ritual activity at this time was probably based in the household, while in the W there is more evidence for communal centralization of religion.

**3. The late food producers and the appearance of complex societies.** During the last half of the seventh millennium B.C., well established farming communities are found from central Anatolia to the Levant and around the Taurus-Zagros arc along the margins of the Mesopotamian plain. It is during this period that ceramics first appear (aside from occasional, probably accidentally fired clay containers at some earlier sites), and by 6000 B.C. pottery occurs wherever villages are found. The most impressive settlement described for this period is Çatal Hüyük, on the Konya plain of S central Anatolia. The site consists of a tell covering an area of some thirty-two acres, a sizable portion of which was probably under continual occupation. The architecture, consisting of contiguous rectangular-roomed structures of mud brick, incorporates numerous rooms apparently used for ritual purposes and decorated with painted murals, low-relief sculpture in clay, and frequently with the reconstructed craniums and horn cores of large bulls, as well as the jaws and skulls of sheep, goats, and pigs. The number of these "shrines" (as they are termed by the excavator, Mellaart) in relation to domestic structures suggests a lineage-based ritual structure, or perhaps small cross-lineage ritual societies. The factors which brought and held together a community of this size in this period have yet to be explained. By the early sixth millennium, the cultural traditions which were to lead to complex societies and ultimately civilization are fully in evidence along the eastern edges of the Mesopotamian plain. By the late sixth millennium B.C. such sites as Tel Es-Sawwan on the Tigris near Baghdad show the beginnings of irrigation agriculture and complex architectural features suggesting an early central temple structure, two basic elements in later Mesopotamian civilizations. Ultimately, a concentration on sheep and fish as sources of protein, and salt-resistant barley as the basic crop for irrigation agriculture, allowed man to take full advantage of the rich potential of the S Mesopotamian plain to achieve urban settlements and literate civilization in that area.

In contrast, the promise of the early settlements in the Palestinian area was never realized in terms of an independent development of civilization. The cultural antecedents of the cities of the biblical period remain little understood, largely because of the concentration of archaeological interest in earlier and later periods and the physical difficulties of exposing significant areas of the deepest levels of the more important sites. The picture at present suggests small agricultural settlements in

favorable areas, with greater concentration on pastoralism in marginal regions, as was the case at the beginning of recorded history. The early importance of Palestine with regard to economic and cultural exchange between the Near East and Egypt is evident in the fourth-millennium sites near BEER-SHEBA in the N Negeb, which have yielded ivory objects similar to those of predynastic Egypt, in association with copper implements of probable local manufacture, but indicating a diffusion of metallurgic techniques from the N. There can be little doubt that the growth of such strategically located historical cities as Gezer, Bethshan, and Megiddo owed much to these prehistoric patterns of trade as well as to the long agricultural heritage of the Levant. *See also* AGRICULTURE[S].

**\*PRESENCE OF GOD, CULTIC.** How Yahweh, the God of Israel, is present constitutes a major concern to both ancient Israel and the early church. There is no clear or single resolution of the question, but only a variety of explorations of it. Israel's struggle can be articulated in concerns which are in tension but which must be held together. The central polarity concerns the freedom of Yahweh and his accessibility. It was of primary importance to have regular, reliable access to the HOLY ONE around which the community gathers and focuses. It is the responsibility of cult to regularize such access through holy times (Deut. 16:16-17), holy actions (Exod. 16:32-33), and holy words (*see* WORSHIP IN THE OT; WORSHIP IN NT TIMES, JEWISH), so that approach to the Holy God is done without inordinate anxiety (*see* HOLINESS §A2d). At the same time, Yahweh had shown himself to be free and sovereign, captured in no cultic theory or practice, but abroad in the land according to his inscrutable purposes.

This polarity runs throughout the history of Israel. Yahweh is the utterly free one who goes to and fro as he chooses (II Sam. 7:6), and yet who faithfully accompanies his people (Exod. 33:14; Isa. 43:2) and answers them when they call (Exod. 2:24-3:10). So Israel knows that its life is characterized by his presence (Exod. 33:16), but also it has experienced his absence (Ps. 22:1 [H 2]; Isa. 49:14).

This polarity is evident in two crises which Israel sought to resolve in favor of accessibility. In the first, David proposed a "house" for Yahweh which would end his freedom, and therefore end Israel's precariousness, but Yahweh prohibited it (II Sam. 7:1-7). The second, the dedication of the temple, gives us the central text on cultic presence (I Kings 8). The statement of his accessibility is expressed in the early poem of 8:12-13 which situates Yahweh securely in the "house": "The Lord . . . has said that he would dwell in thick darkness. I have built thee an exalted house, a

place for thee to dwell in for ever." But subtle protest is expressed in vs. 9 (the ark is empty), and formal protest in vs. 27 which denies that Yahweh is contained in the cult place: "But will God indeed dwell on the earth? Behold, heaven and the highest heaven cannot contain thee; how much less this house which I have built!" The resolution in vss. 28-30 as "name" theology indicates the delicacy of the issue (*see* NAME §B4e). He is the Holy One, unapproachable in his awesomeness, but he is also in our midst, sustaining and defending. It is this bold affirmation, "The Holy One in our midst" (cf. Hos. 11:9; Isa. 12:6), which cultic arrangements seek to express and protect. The concern is twofold: (a) that Yahweh not abandon Israel, and (b) that his presence not destroy Israel or cause Yahweh to lose his sovereign freedom.

1. **The coming God.** Yahweh is experienced and described as the one who comes, unexpectedly and irresistibly, and when he comes, the situation is decisively changed. The coming God dwells in remoteness, parallel to other high gods in Israel's religious environment, who dwell in numinal mystery in some remote mountain. *See* MOUNT, MOUNTAIN[S]; ZION TRADITION[S].

For Israel the theophany at Sinai is the paradigm of his coming (Exod. 19), and that narrative report is undoubtedly stylized as a cultic rubric (*see* THEOPHANY IN THE OT[S]). The language describing his presence is dominated by verbs: he comes, he comes down, he appears. There is no doubt that the language appeals to (a) traditions of a storm god who appears in the upheaval of the storm, and (b) traditions of a war god who comes as an invader or conqueror to establish his rule and to crush resisters.

These overwhelming experiences stand at the beginning of Israel's sense of Yahweh's presence. They witness to the primitive experience of holiness intruding in the people's life (Exod. 3:1-6; Josh. 5:13-15) and are concerned, not with the manner of his being present, but with the sense of Yahweh's unquestioned freedom, power, and sovereignty. For Israel, religious experience meant coming to terms with that freedom and sovereignty which may be termed "precultic."

2. **The God who leads.** Yahweh is not regarded as attached to a place but is committed to persons and community. He is not located in space but is a presence in dialogue with, but also in tension with, his partner in dialogue. He comes to individuals unexpectedly even as he did to the nation at Sinai, but the events are less public (Judg. 6:11-18).

Israel is reticent in commenting upon the ways God is with his partners. Visual elements are

minimized so that the meeting involves essentially speaking or hearing. Thus even in the overwhelming encounters of Moses (Exod. 3:1-6) and Joshua (Josh. 5:15), the encounter moves immediately to speech. There is no interest in any form of appearance. They were content to hear; this was the way in which they experienced God's presence. And when he speaks he may issue commands (Gen. 12:1-3) or give assurances (Gen. 15:1), but both are in the context of his promise that he will be with his people. This issue is succinctly stated in Exod. 33:14-16:

Yahweh to Moses: My presence will go with you, and I will give you rest.

Moses to Yahweh: If thy presence will not go with me, do not carry us up from here. . . . Is it not in thy going with us, so that we are distinct . . . from all other people that are upon the face of the earth?

Israel is a pilgrim people, and Yahweh moves with her (cf. Num. 10:35-36, on the ark as his form of movement).

This conviction constituted for Israel a foundation of faith as well as a central problem. Exod. 33:17-23 indicates the problem: when the assurance of God's presence is given, Israel through Moses wants to know the manner of that presence. The narrative concludes with Yahweh's assertion of his freedom and his refusal to disclose what they want to know: "You shall see my back; but my face shall not be seen" (Exod. 33:23). His assurance is also a warning. He will be present to Israel, but he will not put himself at her disposal. God would be known by Israel, but he would not be seen, for to be seen limits his freedom and subdues the mystery which must be preserved (cf. Exod. 6:3).

Israel's peculiar way through history is with this "Yes-No" of God. The entire period of sojourn in the wilderness is under his leadership which sustains, but that same leadership always leaves her precariously dependent.

His presence is sometimes reported in the form of an angel (Exod. 14:19), or in relation to the ark (Num. 10:35-36), or as a pillar of cloud or fire (Num. 14:14): "Thou, O Lord, art in the midst of this people; for thou, O Lord, art seen face to face, and thy cloud stands over them and thou goest before them, in a pillar of cloud by day and in a pillar of fire by night." This verse is evidence of the problem, because the narrator wants to speak of "face-to-face" presence but must settle for another image. Clearly the linguistic expression of Israel is problematical and ambiguous because her experience of God is problematical and ambiguous. Israel always had to speak about one who was fully present, but whose presence might be withdrawn at any time.

In quite another form his leading, sustaining presence is articulated in the formula "I am with you; I will be with you." It is a bald statement without evidence, without religious explanation or implementation. He is there, as promise on the way to fulfillment (Gen. 39:2-3, 23), as the one who supports in trials (Isa. 43:2), as the eternal "Yes" which all the dangers and threats of his-

torical existence cannot overcome. This simple assurance becomes the bedrock of Israel's confidence and trust (Ps. 23:4; cf. Gen. 26:3, 24; 28:15; 31:3; Deut. 31:6).

But even here, Israel has not given expression to a notion of cultic presence. In her more primitive memory, he is a God known in situations of distress and danger as the guarantor who came where his people were.

**3. The abiding God.** Religion presses toward organization and regularization. No community, including Israel, could live with the raw, intruding holiness of Yahweh as the coming God nor with the quiet, invisible assurance of his leadership. Therefore Israel evolved a complex cultic apparatus to respond to the question "How is Yahweh present?" As the coming God may be peculiarly linked to the primitive beginnings of Israel in Exodus and Sinai, and as the leading, accompanying God is especially appropriate to the sojourn period of precarious dependence, the articulation of the abiding God is pertinent to the period of the monarchs who sought to bring Israel's various traditions of cult into a coherent pattern. A great political establishment relies on overarching religious symbols with a powerful sense of transcendence, but it cannot tolerate the unpredictable freedom of a coming God who tends to act for the disestablishment of every arrangement. Thus there was an effort to honor Yahweh's majestic sovereignty, but at the same time to conceptualize his presence as amenable to the regime of the period. Such efforts included several features.

a) The utilization of old ark traditions (II Sam. 6). The ark apparently had been a seat for the journeying king-god from very early days. Now he is seated on his throne in the Jerusalem temple (I Kings 8), guest and patron of the regime.

b) The old tent-of-meeting tradition (*see* TENT) was an effort to speak about Yahweh's meeting with rather than dwelling in Israel, but this tradition seems to have evolved into a tradition of the TABERNACLE, which moves closer to affirming that Yahweh is actually there, not simply that he meets there with his people.

c) The GLORY of Yahweh, a symbol of his unapproachability, perhaps derived from solar worship, tended to become a cultic property so that Yahweh in his glory was located in the shrine (Exod. 40:34-38; Isa. 6:3).

d) Aware that such presence tends crudely to deny Yahweh his freedom, the tradition of Deuteronomy (reflected in I Kings 8) articulated a "theology of name" which suggested that, while the temple is a place of his special attention, he is not fully committed to it, and therefore his freedom and power are not domesticated for the royal-urban regime which controls the shrine.

e) The Solomonic temple is based upon Canaanite-Phoenician models and therefore upon non-Israelite theology, which lacked the tension of which we have spoken. Clearly the God who abides in the dark holy of holies is not one who any longer acts in history, not one who sojourns with his people, not one who exercises transcendence over his realm, either as assurance or as judgment. The temple is Israel's supreme attempt to maintain

the delicate balance of presence to Israel and freedom from Israel. A high theology of cultic presence suggests that Yahweh sits as a royal ruler on his throne. The emphasis is on his enduring presence, lending stability and legitimacy both to the cult and to the regime which sustains it. Alternatively he is said to sojourn there; i.e., to regard it as his field of action from which he moves about as he chooses. This theology which speaks of tabernacling or tenting (cf. Rev. 21:3) affirms God's presence, but seeks to safeguard the divine freedom. It acknowledges the precariousness of his presence and faces the real possibility of his absence.

Israel's temple and all her expressions of Yahweh's cultic presence are bold efforts to address an insoluble problem. There is no way that Yahweh's holy freedom can be fully honored and yet the certainty of his presence be maintained. Israel's impressions and images ran the gamut from *full presence*, which denied his freedom, to *full freedom*, which made his presence quite uncertain.

The royal-priestly-urban establishment in Jerusalem fostered a notion of cultic presence which promised too much and destroyed the tension of freedom and accessibility. It received expression in the hymnody of Zion: "There is a river whose streams make glad the city of God, the holy habitation of the Most High. God is in the midst of her, she shall not be moved" (Ps. 46:4-5 [H 5-6]; cf. 48:1-3, 8 [H 2-4, 9]). This same royal-priestly theology evoked popular ideology which presumed upon Yahweh: "They lean upon the Lord and say, 'Is not the Lord in the midst of us? No evil shall come upon us'" (Mic. 3:11); "Do not trust in these deceptive words: 'This is the temple of the Lord, the temple of the Lord, the temple of the Lord'" (Jer. 7:4).

Against such popular religion fed by establishment propaganda, prophetic protest rejected a tension-free notion of cultic presence. The prophets reasserted the freedom of Yahweh at the expense of his accessibility. They reasserted that he will be found, not in the domesticated regularity of the shrine, but in the ragged discontinuity of history.

Neither popular royal-priestly religion nor prophetic protest could settle the issue. Israel's cult sought simply to give visible, institutional expression to the tension. The one who causes his face to shine (Num. 6:24-26; Ps. 27:1) and who plants and builds also tears down and plucks up (Jer. 1:10). The affirmation is Israel's fundamental problem and her central conviction.

**4. The God who hides himself.** Israel discovered that the one who shows himself is the one who also hides himself. The Psalms give expression to a repeated experience in Israel's life—that prayers go unanswered; covenant seems voided; and life is reduced to an unrelieved monologue without response.

It was the EXILE that led Israel most deeply to an awareness of God's overwhelming absence. Ezekiel had expressed it powerfully in the image of the departure of the glory of God (10:18-19; 11:22-23). The abiding one can only abide, and royal theology counted on that. But the coming one can leave. And he leaves Israel and its cultic arrangements

because his holiness presumes a holy people, committed to his purposes. So as early as Isa. 1:12-15 Yahweh declared: "I cannot endure. . . . My soul hates. . . . I am weary. . . . I will hide my eyes. . . . I will not listen."

The eloquent poetry of Lamentations is replete with expressions of helplessness and despair because of his absence (1:2, 3, 7, 21). And the poetry ends with the recognition of the full weight of the problem: "Restore us to thyself, O Lord, that we may be restored! Renew our days as of old! Or hast thou utterly rejected us? Art thou exceedingly angry with us?" (Lam. 5:21-22). The silence of God is a central theme of the poem of Job, probably also from the Exile. Job cries and demands and insists, but there is no answer. And when there is no answer, the cult is abandoned; life is ended, and hope is gone.

**5. Resolutions of the issue.** Israel was aware of the complexity of the issue and of a plurality of possible answers.

a) Looking to the end of the Exile, Ezekiel and Second Isaiah together keep the tension alive. Ezekiel affirms the powerful, reliable presence of Yahweh in the temple (43:1-5; 44:4); and, the most powerful establishment form, he describes Jerusalem in 48:35 as the place of the presence: "And the name of the city henceforth shall be, The Lord is there." The tension has been overcome, and both God and people have found a place of safety beyond the disruptions of history.

Second Isaiah announces the promises to Abraham (54:1-4), Noah (54:9-10), and David (55:1-5) as promises now being actualized just when God seemed hidden. But the overpowering presence of Yahweh at the end of the Exile is not in cult; it is in the transformation of historical experience which shatters every presupposition and makes all things new (Isa. 43:18-19). Whereas the God of Ezekiel is one of abiding presence, Second Isaiah is concerned with the God of upheaval and disruption.

b) The Psalms comment upon God's presence. Hymns celebrate his coming to transform (especially the enthronement hymns, 47, 93, 96-99); laments discern his absence and then move to thanksgiving because of new assurances of his abiding concern.

c) Two developments after the Exile provided Israel and the early church with resources for the problem of God's presence. Scribalism (see SCRIBE §3; PHARISEES[S]) affirmed his presence in the TORAH, in reflection on its demands, in recitation of its memories. The people gathered around the reading and hearing of Torah as a way of being in his presence (Neh. 8:1-8). APOCALYPTICISM reverted to a primitive theology of the war-storm God who comes to transform the world. Scribalism called God's people to reflective listening and acting. Apocalypticism called for waiting and preparation. Both drove Israel to obedience, and it was in her obedience, joyous and confident, waiting and hopeful, that Israel knew herself to be a people in covenant with this one who is accessible, yet free. See TORAH[S].

The issue of presence is problematical when the temple is destroyed. In such a situation, there was

a stress on the remoteness of God and perhaps disdain for the temple (Isa. 66:1-2), or a fresh vision of the re-establishment of Zion and the temple as the center of the world and the locus of pilgrimage for all peoples (Isa. 2:2-6; 25:6-12). The latter suggests the old tradition of the abode of God in the numinous mountain. But alongside such a notion is a countertheme with an ethical stress, that God dwells with the needy and weak and that his earthly place is where he is attentive to prayer (Isa. 65:6-8). Thus the polarity of mythical-ethical becomes yet another expression of the freedom/accessibility theme.

**6. NT utilization of themes.** The theme of cultic presence is transformed in the NT, and the focus is upon the meaning of Jesus for the church.

a) He will come again; thus the ancient theme of the coming God (Mark 13:14-37; John 14:18; I Cor. 15:22-28; Rev. 22:20).

b) He is the leading one who calls and sends his church (Mark 6:7-13; Luke 10:1-12; Matt. 28:16-19).

c) He is the abiding one who promises presence among his people (Matt. 28:20; John 15:7-11).

d) He is the absent one who leaves his people (John 14:18-19; Luke 24:51).

But consistently the focus is upon the Lord-Servant relation, or communion which is not seriously interested in cultic forms. Presumably this is because the early church utilized the forms already affirmed by Israel. Its fresh articulations were in other areas.

Older ideas about cultic presence were adapted and subordinated to the confession that "Jesus is Lord." Nowhere is this more evident than in Jesus' cleansing of the temple (Matt. 21:12-13; John 2:13-19), by which he establishes his rule over cultic practice and purges it of presumption upon the presence of God (cf. Mark 13:2; 14:58; 15:29). In the Fourth Gospel, it is clear that the destroyed cultic place is displaced by Jesus: "He spoke of the temple of his body" (2:21). The theme of cultic presence is transformed so that an orientation to place is now set aside by the presence of the living Lord. "Presence" now means being in fellowship with him, expressed especially in the Eucharist (cf. Luke 24:35).

Fellowship in his church is the way in which his body, the temple, is acknowledged. Now, cultic presence has become participation in the fellowship of believers. He is with them and accessible; but he is with them as sovereign and therefore free from them if he so chooses. The relation of the church to Jesus is wholly consistent with Israel's relation to Yahweh. Both are in promise of the time when the problem of accessibility and freedom will be fully resolved, and his lordship will be completely in their presence.

It is in the LORD'S SUPPER that the early church made its characteristic affirmation about divine presence. In this activity he was remembered for his historical presence among them and was anticipated in his promise that he would come again. In the meanwhile the church is his body and the temple where he dwells. Clearly the early church perceived his continuing power and transforming work in the communion and witness of his followers. But he is not confined to the cult he authorizes,

even that of the church. "Spiritual worship" means to be transformed by the renewal of one's mind (Rom. 12:1-2).

**7. Conclusion.** The problem of cultic presence is acute because he is "the Holy One . . . in the midst" of his people, and there is tension between the two parts of the affirmation. Each period expressed his presence in a characteristic way: (a) the primitive period of origins (Exodus-Sinai): the powerful, coming one; (b) the period of wandering: the leading, nourishing one; (c) the royal period: the abiding one; (d) the Exile: the hidden one. But it must be affirmed that in every period and circumstance, he is always coming and abiding, always leading and hidden, because he will be with his people but free from them. It is the destiny of his people to live with the promise and the precariousness of his free coming and going. The issue is unresolved. It is nowhere better stated than by Jeremiah, when the present is being dismantled and the future is both opening and threatening: "Am I a God at hand, says the Lord, and not a God afar off? Can a man hide himself in secret places so that I cannot see him? says the Lord. Do I not fill heaven and earth?" (Jer. 23:23-24).

W. BRUEGGEMANN

**PRIESTLY WRITERS.** There are differing views on the origin and development of the Priestly source in the OT (henceforth P), but few remaining disagreements of consequence as to its boundaries, except for some material in the book of Joshua (mainly in chs. 13-22), whose source-critical status has been heatedly debated as part of the HEXATEUCH question (see PENTATEUCH §A5). Analyses of the Pentateuch and Joshua on the basis

of source criticism are readily available in a number of recent introductions to OT literature, in critical commentaries, and in specific studies of P (*see bibliog.*).

In Genesis, the major contributions of P to the primeval history (chs. 1-11) are versions of the creation story (1:1-2:4a), and of the FLOOD epic (in chs. 6, 7, 8). P also concerned itself with covenants, presenting its versions of the covenant with Noah after the Flood (Gen. 9:1-17, 28) and of the covenant with Abram (ch. 17). Along the way, the Priestly writers inserted genealogies, and otherwise showed a distinct interest in the continuity of Abraham's family line (Gen. 21:2b-5; 25:7-17 [minus vs. 11b]; 27:46-28:9; 35:9-13, 22b-29; 46:6-27). *See* GENESIS §B1e, 2d, 3c.

In Exodus, the Priestly writers, in addition to providing the customary genealogical data, amplified earlier sources and added themes of their own, especially as regards the wilderness TABERNACLE. Thus Exod. 6:2-7:13 represents a Priestly version of Yahweh's charge to Moses in Egypt, and introduces AARON as a major participant in the encounter with Pharaoh. Exod. 11:9-12:20; 12:28, 40-51 present a Priestly code on the Passover festival, superimposed on the earlier sources (*see* PASSOVER). In Exod. 16:1-3, 6-27, 32-36, the earlier versions of the Exodus saga are circumscribed by P, which accentuates the role of Aaron, and links the manna account to the observance of the sabbath. Finally, Exod. 24:15b-31:17 and 35-40 introduce several strata of Priestly traditions on the initiation of the Yahwistic cult in the days of Moses, in the context of the tabernacle project. *See* EXODUS, BOOK OF §3.

The contents of Leviticus derive entirely from Priestly sources, notwithstanding considerable internal stratification (*see below*, and LEVITICUS §1).

Numbers preserves a small core of early narrative and ancient Hebrew poetry, around which Priestly writers built an elaborate fabric of codes, rituals, and narratives, primarily on the theme of the Sinai experience. *See* NUMBERS, BOOK OF[S] §4.

Vink suggests relating Josh. 8:30-35 to the Priestly school in some way. Generally, Josh. 13-22 take their cue from themes prominent in Numbers, especially the apportionment of the land of Canaan to the Israelite tribes, under priestly direction. Both Vink and Haran have called attention to the importance of Josh. 18:1-10, a passage which has the tent of meeting (אֹהֶל מוֹעֵד) situated at Shiloh during the period of Joshua, thus bridging a gap in the Priestly historiography from the pre-Conquest days of Moses to the time of David when the ark was brought to Jerusalem. *See* JOSHUA, BOOK OF §B1; JOSHUA, BOOK OF[S] §1; DEUTERONOMIC HISTORY, THE[S].

1. **The origin and development of P.** It is clear that all the texts assigned to P were not composed in the same period. Definitive conclusions as to the origin of the various sections would require evidence presently unavailable, particularly on the history of the priesthood and the Levites, and on the administration of the public cult (*see* PRIESTS [S]). With this caveat, the following observations are relevant:

a) The attempt by Y. Kaufmann to realign the chronology of the sources in the order: J, E, P, D is questionable in many respects (*see* DOCUMENTS). He rejects the idea that Lev. 17, the introduction to the Holiness Code (henceforth H; *see* LEVITICUS §3e), was predicated on D's doctrine of a central temple (*see* DEUTERONOMY §4; PENTATEUCH §A4). Rather he claims that Lev. 17 was a response to an earlier set of circumstances, i.e., the religious climate of the period of Israelite settlement, when the issue was the status of sacred stones and altars in the open field. In such terms, Lev. 17 was stating the requirement that sacrifices be offered on a properly consecrated Yahwistic altar. Kaufmann goes on to draw a contrast between the perceptions of D, which speaks of pilgrimages to a central cult site (מִקְדָּשׁ), and the impermanence clearly evident in H and P, which refer not to a chosen, permanent site, but rather to a portable sanctuary. A corollary to this view is Kaufmann's contention that H and P describe the Passover festival as a clan-oriented celebration, whereas in D the festivals, including Passover, emerge as public celebrations of a national character. It is also relevant for him that Lev. 17 makes no allowance for the "profane" slaughter of animals in order to facilitate meat consumption in local communities which, in view of Deuteronomic legislation on centralization (12:15-16, 20-25), would be without benefit of a sacrificial altar. If, as usually alleged, H is predicated on D's cultic program, how is it that Lev. 17:2-4 appears to stipulate that all slaughter must be sacrificial?

This analysis must be re-examined along the lines now suggested by Haran. P's perceptions of an impermanent environment may be reasonably accounted for as a projection into the past, as has usually been maintained. It does not necessarily follow, however, that this projection was fabricated, without historical basis, in the postexilic, Persian period. Nor does it follow that the Priestly projection was intended to legitimize the postexilic cult of Jerusalem or to serve as a program for it. Accepting P as a projection into the past may just as well be interpreted to mean that many of its codes and narratives were intended to lend sanction to the cult of Jerusalem before the Exile. This would explain the antiquity which P attributes to the cult, with its attendant regimen of duties and rites, as an institutional complex ordained in detail at the outset of Israelite history, in the Mosaic period. In so doing, the Priestly writers composed what they thought was a plausible portrayal of the pre-Conquest period, at times employing ancient materials to accomplish this effect. By and large, they drew on traditions of the earliest period of settlement, which refer to sacred stones (cf. Judg. 13:19). Pilgrimages undoubtedly represented to them

a subsequent stage after the Israelite settlement. Kaufmann noticed the reliance of Lev. 17 and other early sections of P on premonarchic traditions, but he took this factor too literally. As noted by Haran, mere usage of the term חג (RSV "feast") to characterize the Passover and other festivals (cf. Exod. 12:14; Lev. 23:34, 39, 41) implies an awareness of the pilgrimage as an aspect of festival celebrations, because that is what חג connotes.

The early perceptions in H and P do mean, not that sacred stones and the worship of wilderness deities, called שְׁעִירִים, presented a real issue for the Priestly writers, but only that such portrayals lent realism to their account. Similarly, the matter of "profane" slaughter should be seen in perspective. The Priestly writer, in seeking to portray an era before there were stockyards in or near permanent settlements, provided for the consumption of animals or fowl taken in the hunt (Lev. 17:13 ff.). Thus, one does find in H a possible echo of Deut. 12:15, which compares the consumption of domesticated animals profanely slaughtered to the consumption of objects of the hunt. It is also questionable whether, in Lev. 17:2-4, the verb שָׁחַט connotes "slaughter" of all types. It may be used in a technical sense to connote only ritual slaughter (cf. Exod. 12:21; Lev. 1:5; etc.), and thus these verses would mean that all *sacrificial* slaughter must take place on the sanctuary altar, in precise agreement with D.

b) Once we accept the over-all dependence of H and P on D and on other earlier sources (allowing of course for instances where the Priestly writers reached back to early, independent materials unaffected by D), the critical question becomes the determination of the date and origin of Deuteronomy itself (see DEUTERONOMY; DEUTERONOMY[S]; DEUTERONOMIC HISTORY, THE[S]). If what is original to D is Josianic (621 B.C.), then the argument for dating P in the postexilic period would be strengthened (see JOSIAH). However, there is growing evidence for dating essential D in the late eighth century B.C., and for considering it a north Israelite creation, transmitted to Judea during the reign of HEZEKIAH, sometime before 686 B.C. Hezekiah's awareness of D's doctrine might explain his attempt to remove the *bāmôt* ("high places"), for the Judeans would have interpreted D's central sanctuary as Jerusalem and not some unnamed place in the northern kingdom (II Kings 18:1-8; II Chr. 29-31).

Such an origin for essential D has recently been argued, with new evidence, by Ginsberg. He has demonstrated that Hosea, whose prophecies antedate the fall of Samaria (722 B.C.), had influence on the diction of essential D. On the other hand, there is a striking absence of Isaianic influence on essential D. This would hardly be conceivable if it were a product of late seventh-century Judea, since Isaiah's ministry, ending ca. 700 B.C., was well known there. As though to clinch the argument, Ginsberg has identified Isaianic influence precisely in those secondary passages in D which are clearly the work of a Judean of Josiah's day, or thereafter. This proposed chronology would point to a *terminus a quo* for the earliest components of H and P in the age of Hezekiah, or thereabouts.

2. **The completion of P.** It is not yet clear just how late certain sections of P are. Linguistic criteria have been applied to this question with interesting but inconclusive results. Hurvitz has presented arguments for the pre-exilic dating of P. He notes, for instance, that P uses the word שָׁשׁ to designate "fine linen" (a word attested in early biblical usage) but never כִּוִץ (cf. Gr. *bussos*), the term used by the Chronicler. He further notes certain late usages, common to Chronicles and Ezra-Nehemiah, which are absent from P. These include הִתְיַחַשׁ, "to be enrolled by genealogy" (contrast forms of the verb נָקַד for the same sense in P). Similarly, Chronicles employs the *hithpa'el* הִתְיַחַשׁ, "to volunteer, offer generously," whereas P uses forms of the *qal*, נָתַן but never the *hithpa'el*. This is, of course, merely oblique evidence, documenting the absence from P of late usage which one might expect if it were a product of the period of the Chronicler.

Ginsberg has noted a stylistic similarity between P's narratives and the Aramaic Bauer-Meissner papyrus, dated 515 B.C.: the frequent repetition of a phrase from a preceding clause, in a slightly modified form with more detail added. Ginsberg admits that this stylistic feature is also attested elsewhere, e.g., in Deut. 16:9. Another bit of evidence has been noted by Vink: in Num. 34:25 we find the patronymic נַרְיָן. This has been identified as a Persian name and is not likely to have been in use before the Achaemenid period.

Aramaisms have been considered evidence for dating P to the Persian period (when ARAMAIC was widely used). Thus, the term מִשְׁחָה (measure, measurement) in Lev. 7:35 (cf. לְמִשְׁחָה in Num. 18:8) occurs in the Aramaic papyri from ELEPHANTINE (Kraeling 4:12; 9:11; 12:28), dated to the fifth century B.C. According to S. Kaufman, this word is native to Aramaic, despite its occurrence in Akkadian as *miših̄tu*. Another possible indication of a Persian environment is the mustering of the Israelite camp according to the unit known as דִּגְל (Num. 2, etc.), usually rendered "standard." This was also the unit of organization in the Jewish military colony at Elephantine, and Porten considers this feature distinctively Persian. Such a conclusion is further suggested by the occurrence, in a Persian-period Aramaic ostracón from Arad, of the personal name *ldgl 'bdhy*, "of the unit of 'Abdihai." See NUMBERS, BOOK OF[S] §4bi.

In conclusion, we must allow for the likelihood that certain sections of P derive from the Persian period. Perhaps the possibilities may be narrowed down through a study of literary development within P, pointing to relatively early, intermediate, and late strata within that source.

3. **The literary development of P. a. H and the Priestly Passover ritual (Exod. 11:9-12:20, 28, 40-51).** H and the Passover ritual may rightly be considered the earliest sections of the Priestly tradition, although the customary assignment of Lev. 26:3-46 to H must be questioned. This section conveys a reaction to the destruction of temple and land, and a yearning for restoration (vs. 13). It speaks of the departure of Yahweh's presence (vss. 9, 11-12, 24), and a renewed interest in the cove-

nant with the patriarchs (vss. 42, 45). This suggests that Lev. 26:3-46 was composed soon after the destruction of Judea.

The Passover ritual in Exod. 11:9-12:20, 28, 40-51, although put into final form by a Priestly writer, goes back to early records (Noth). It projects the performance of a Yahwistic ritual into Egypt, prior to Sinai, elsewhere the consistent starting point for the cult of Yahweh in the Priestly source. The disposition of the sacrifice is distinctive in three respects: the זֶבֶח (slain offering) was not to be boiled in pots, as usual, but roasted over the fire, an early practice rescinded by D (Deut. 16:7); no altar was used; and the victim was not sectioned but roasted whole.

**b. Primary Priestly codification.** What constitutes the next identifiable stratum in P? It is reasonable to posit that the actual cult served as the basis for the Priestly narrative. This implies that the process of codification antedated the narrative movement, and that the next stratum is to be sought in codes rather than in the mythic narratives. In the category of primary codes may be included the following sections: Lev. 1-7; 11-16 (minus 16:1-2, an introduction linking the rite of ch. 16 with an event); 27; Num. 5:11-31; 6; 15:37-41; 19; and perhaps the codified materials in 30:2-17 and 35:9-34 (incorporated into a relatively late account on the apportionment of the land).

The above sections generated secondary restatements within P, most of which occur in Numbers. Thus Num. 5:1-10 reflects Lev. 5 and 12-15. Num. 9:1-14 is a reflex of the ancient material in Exod. 11-12. Num. 15:1-36 reflects Lev. 1-7, especially 4; and Num. 18 is largely dependent on Lev. 1-7, as well as 27. Finally, the catalogue of prescribed sacrifices in Num. 28:1-30:1 represents a development subsequent to Lev. 23. To carry the stratification one step further, it is likely that Exod. 29:38-46 is a secondary restatement of Num. 28:1-8, the praxis prescribed for the תָּמִיד (daily offering).

There is a chronological overlapping of code and narrative in P. Some of the secondary codes post-date the primary Priestly narratives, whereas narrative creativity was stimulated, in the first instance, by the codification of cultic practice. Clear stratification in the narrative sections of P is difficult to trace. A basic question is the place of the tabernacle traditions. They relate to a primary concern of P, the origin of the cult of Yahweh in the days of Moses, and one would expect to find early statements on this subject. It appears, nevertheless, that this area accounts for some of the latest sections of P, especially in Num. 1-4. A degree of internal stratification is discernible, nonetheless. The tabernacle project prescribed in Exod. 25-28, 30-31 is restated as a *fait accompli* in Exod. 35-40, with some additions. Lev. 8-9 produced a secondary response in Exod. 29:1-37, relevant to the investiture of the priests. Num. 7 is, for the most part, formulated in a manner close to original temple records, and Num. 8:5-26 is the primary text on the role of the Levites, serving as a basis for further discussion of their role.

The special problem of the half-shekel head tax (Exod. 30:11-16) has been studied by Speiser and Liver. Liver attempts to dissociate this section

from Neh. 10:32-33 [H 33-34], and from references to an annual temple tax in Chronicles (II Chr. 24:4-14), insisting on its early provenance. A related problem is the possible connection between the voluntary offering for the tabernacle (Exod. 25:1-2) and the נִדְבָה (voluntary offering) given by the Jews in Babylonia to the Jerusalem temple (Ezra 1:4, etc.). The entire question of temple funding and administration must be studied further for additional data for the dating of P.

**4. Notions distinctive to P.** Driver has provided a concise summary of the features of P, to which the following observations may be appended.

a) The problems and uncertainty elsewhere evident in statements on the human-divine relationship are muted in P's narratives. Perceptions of good and evil, of divine justice and retribution, are clear. Even the handling of the theme of the hardening of Pharaoh's heart (Exod. 7:3-4, 22, etc.), classically seen as a major theological problem, is a matter of cause and effect. As noted by Childs, in his recent commentary, P is unambiguous in rationalizing the hardening of Pharaoh's heart. It is for the purpose of guaranteeing that he will not harken, thus allowing for more plagues and signs, eventually leading up to the recognition of Yahweh's supremacy at the crossing of the sea. Though such an outlook may leave the reader with problems of an ethical or theological nature, the Priestly writer makes no apology for it, and presents it without complication. See THEODICY[S].

b) The Priestly narratives serve to rationalize cultic practice. We see this clearly in the primeval history, where God rests on the sabbath (Gen. 2:1-3; cf. Exod. 20:8-11). The Noachic covenant emphasizes the central importance of blood as the life force, a notion basic to the cultic legislation of H (cf. the formulation in Lev. 17:10-14, esp. vs. 14, with Gen. 9:1-6, esp. vs. 4). Similarly, the Priestly version of the Abrahamic covenant (Gen. 17:1-27) emphasizes the rite of circumcision, a requirement for participation in the Yahwistic cult, epitomized in the Passover ritual (Exod. 12:44, 48, etc.).

In addition to stressing the importance of the cult per se, the Priestly narratives conveyed to the contemporary audience as well as to subsequent readers that adherence to the sabbath and to the rite of circumcision, as well as general obedience to the Priestly regimen of ritual duties, were indispensable to their collective existence and to the fulfillment of their destiny under the covenant. This message undoubtedly held poignant meaning for the Judean exiles and for those who returned. It is during the periods of exile and restoration that we encounter prophetic statements on the importance of the sabbath (Isa. 56:2, 6; 58:13, 66:23; Jer. 17:21-27), and concerning other ritual duties, including fasting (Isa. 65:4-5; 66:3, 17; Hag. 2:10-11; Zech. 7:1-7; 8:18-19; Mal. 3:1-12). It is Ezekiel who refers to the ancient Gentiles as "the uncircumcised" (Ezek. 32:17-32), and who prohibited their presence in the temple in explicit terms (Ezek. 44:7; cf. Isa. 52:1).

What started out as a projection, intended to confirm the temple cult as integral, became, as circumstances changed, a future-oriented theology

in which ritual gave expression to group identity and meaning to collective existence.

5. **Summary.** The principal unanswered question regarding both the origin and meaning of P is a sociohistorical one. What were the societal conditions obtaining at various periods of Israelite and later Jewish history (pre-exilic, exilic, and post-exilic) which can account for the central concerns manifest in P? Source-critical analysis, the relation of P to other biblical traditions, the tracing of literary strata within P itself, and the evidence of language—all these methods can lead us only to the threshold of historical conclusions. Further study is required in the history of the priesthood and the Levites and the means of temple administration. Certain critical junctures of Israelite and Jewish history must be isolated and their circumstances examined for clues to cultic and religious problems. Because so much attention has been given to the postexilic period in the study of P, on the *a priori* assumption that its content must somehow refer to the restored Jerusalem temple, it is now time to probe pre-exilic history, especially the period of Josiah.

\***PRIESTS.** The comments which follow are intended as a supplement to PRIESTS AND LEVITES and will focus on terminology and on the administrative functions of the Israelite and Jewish priesthood.

A complete history of the Israelite priesthood cannot yet be written, primarily because the precise date of the Priestly source (henceforth P) remains elusive (see PRIESTLY WRITERS[S]). In line with the view that, in large part, P reflects the cultic practice of the pre-exilic period, evidence from P may, within careful limits, be utilized for studying the pre-exilic priesthood, along with the evidence of the historical books, the early narrative sources J and E (see DOCUMENTS; YAHWIST[S]; ELOHIST[S]), and the Psalter and prophetic writings. There is, thus, a considerable body of material which informs us of the functions of the priests while remaining less clear on their detailed history and origin.

The postexilic periods are also problematical, but here the possibilities for reconstructing the history of the priesthood seem to be more promising than for earlier times. Cross has attempted to establish the succession of the high priesthood from the destruction of the temple (587 B.C.) to 320 B.C., the beginning of the Hellenistic domination of Palestine. Using the principle of papyonymy, whereby high priests would have occasionally been named for their grandfathers, Cross was able to bridge gaps in the succession, especially during the fifth century B.C. He used newly found Aramaic papyri from Daliyah, dated to the fourth century B.C., which provide data on the synchronous chronology of the Sanballatids in Samaria (see SAMARIA PAPYRI[S]). He also found corollary indications from Greek versions of Ezra, from Josephus, and from contemporary epigraphy, and ventured to suggest a fixed date for Ezra's mission (458 B.C.) and a *Sitz im Leben* for certain sections of Ezra, Nehemiah, and Chronicles. See EZRA AND NEHEMIAH[S].

1. Terminology
  2. The position and administrative functions of the priesthood
  3. The position of the priesthood in the post-exilic period
- Bibliography

1. **Terminology.** The normal biblical term for "priest" is כהן, pl. כהנים, a term also attested in Ugaritic, Phoenician-Punic, and in several dialects of Aramaic. Arabic *kāhin*, "seer, soothsayer," clearly reflects older usage but represents a specialized connotation, not the basic meaning of the word. As a West Semitic term of wide distribution, *kōhēn* would logically designate all types of priests, and not necessarily Israelite and/or Yahwistic priests. Thus, Melchizedek, a Canaanite priest, is so designated (Gen. 14:18), as is an Egyptian priest

(Gen. 41:45), Jethro, a Midianite (Exod. 18:1), and the priests of Dagon (I Sam. 5:5).

There is no feminine of כהן in biblical Hebrew. The term כהן בת merely designates a woman of a priestly family (Lev. 21:9; 22:12-13; etc.), just as does Mishnaic כוהנת.

A less frequent term, כמר (priest), has cognates in Phoenician-Punic, several Aramaic dialects, and some varieties of Akkadian. It is used for Baal priests (Zeph. 1:4) and for those priests considered idolatrous or Baalistic by the biblical writers. Thus, II Kings 23:5 uses this term to designate the priests who officiated at "high places," and who were dismissed by Josiah. Hos. 10:5 uses the same term for the royally appointed priests who served the cult of the bull calves in Samaria.

The term קרש, fem. קרשה, is also relevant, by contrast with כהן. In Ugaritic, the masc. pl. *qdšm* is a term for "priests," occurring alongside *khn*. We have no way of ascertaining what if any institutional differentiation was intended between these two terms. Akkadian attests the fem. *qadištu*, a term often employed to designate temple priestesses, although having other connotations, including "harlot," which are not directly connected to the cultic establishment. See WOMAN IN THE ANE [S] §5.

In biblical sources, there is only one possible case where כרשה might mean "harlot" and be synonymous with זונה, "prostitute," and that is in the Tamar episode (Gen. 38:21-22; cf. vs. 15). Job 36:14 may represent a correspondingly unique instance of similar noncultic usage for masc. קרש, meaning simply "male prostitute." Elsewhere in the OT there is always a clear, cultic connection, at least by force of immediate context. It is likely, therefore, that קרש and קרשה primarily designate priestly personnel, and the fact that such were thought to engage in orgiastic activities, either in connection with their official functions or independently of them, does not account for their titles.

Terminology also sheds light on the hierarchy, at least for the late Judean monarchy and thereafter. II Kings 19:2 mentions "senior" priests (זקני הכהנים). In II Kings 25:18 (parallel in Jer. 52:24), the designation for the chief priest is כהן הראש, and the second in charge is כהן המשנה. The former term enters the official and administrative vocabulary at the time of the Babylonian conquest of Judea, whereas just prior to that time, the writer of II Kings still uses the traditional term כהן גרול, "High Priest" (II Kings 23:4). This term is used in the Holiness Code (Lev. 21:10) as well as elsewhere in Kings (II Kings 12:11; 22:4, 8), and, of course, in exilic and postexilic sources (Hag. 1:1, 12; Zech. 3:1, 8; and in Ezra-Nehemiah-Chronicles). In comparative terms, note Elephantine Aramaic *khn' rb' = hakköhēn haggād'hōl*. Ugaritic attests the term *rb khnm*, "chief of the priests," and points to the fact that the office of a chief priest goes far back into Near Eastern antiquity.

The fact that the term for high priest in pre-exilic non-P sources is also כהן גרול strengthens the view that we have in the Holiness Code a reflection of pre-exilic institutions. Furthermore, the construction title + הראש (or המשנה) occurs with

increasing frequency in the postexilic literature and is characteristic of the Chronicler (cf. Ezra 7:5; I Chr. 16:5; II Chr. 19:11). It is probable, therefore, that the high priesthood did not represent a late development in Israelite or Jewish religion, as some have claimed.

The term הכהן המשיח, "the anointed priest," i.e., the high priest (Lev. 4:3, 5), was undoubtedly coined by the Priestly author in order to convey his doctrine that only the high priest was to receive "anointing oil," a doctrine basic to the Holiness Code (Lev. 21:10; and cf. 8:12). It has no attestations outside these limited sections of Leviticus.

The noun כהנה, "priestship," usually refers to the priestly office (Exod. 29:9; Num. 16:10), but in one relatively early source, I Sam. 2:36, it seems to connote the priestly order or a group of priests (cf. Neh. 13:29, and possibly Ezra 2:62=Neh. 7:64). This connotation is prominent in postbiblical Hebrew (cf. M. Hag. 2:27; Yom. 1.5, 7; etc.), although the more abstract sense also survives. Denominative of כהן is the *Pi'el* (*kihhen*), "to serve as a priest" (Exod. 29:1; 30:30; Ezek. 44:13).

2. **The position and administrative functions of the priesthood.** From the historical books of the OT, essentially Judges through Kings, it becomes evident that the chief priest of a major temple or cult site served in the capacity of a royal official; he was accountable to the king for the handling of temple funds, and was in charge of temple operations. He was assisted by a second in rank and perhaps consulted with a council of senior priests (II Kings 19:2; 23:4; 25:18; Jer. 52:24). The chief priest may be referred to simply as "the priest" (Deut. 17:12; 20:2; 26:4, and frequently in Samuel and Kings), or as the כהן of a named temple (I Sam. 14:3; Amos 7:10). In many such instances it is clear from context that reference is to the priest in charge.

It is also clear that in the premonarchic period priests were appointed by leaders of tribes and clans and served at their pleasure. This is epitomized in the account of the Danite migration, where we are told that a priest previously invested as priest for a family was persuaded to become "priest to a tribe" (Judg. 18:19). Similarly, David had a resident priest, Abiathar, even before becoming king, mostly for oracular assistance when he was leader of a paramilitary band (I Sam. 22:20-23; 23:6-12).

As a royal official, the chief priest and his associates were expected to remain loyal to their sovereign. Amaziah, the priest in charge of the royal temple at Bethel, reports to Jeroboam II on Amos' allegedly seditious activities there, and has him expelled, probably on the king's orders (Amos 7:10-17). The loyalty required of the priesthood in situations of political conflict is dramatized in the account of the massacre of the priests at Nob who gave aid and comfort to David, then considered the king's enemy (I Sam. 22:1-19). It is worthy of note that David rewarded Abiathar, one of the Nob priests, by appointing him to his staff, but Solomon later dismissed him and placed him under house arrest for his role in Adonijah's abortive bid for the royal succession (I Kings 1:7; 2:27-35). The normally hereditary character of the

priestly office was subject to a more decisive factor, the authority of the king. Note that Abiathar's son had already been installed as a priest before his father was dismissed (I Kings 1:42). But by appointing ZADOK as chief priest, David initiated a high-priestly dynasty which continued until Macca-bean times.

Glimpses into the administrative functioning of the Israelite priesthood are afforded by two parallel accounts in II Kings (chs. 12 and 22). In II Kings 12, the more detailed of the two accounts, we read that Jehoash instructed the chief priest Jehoiada to use donations and other deposits for repairing the temple. When the chief priest failed to act on these instructions, the king intervened and commanded the royal scribe to have the silver melted into ingots, and to use those funds to pay the temple craftsmen. The high priest and his associates were thus subject to the will of the king, who could circumvent priestly channels and determine just how the temple funds were to be disbursed, even suspending manufacture of cultic vessels.

From II Kings 12:5 [H 6] it may be deduced that certain priests actively solicited various types of contributions to the temple from their contacts (RSV "acquaintance"). According to II Kings 16, Ahaz had a new altar fashioned after a Damascene model. He installed it in the Jerusalem temple and gave the chief priest explicit instructions as to its use.

The realities reflected in the royal chronicles are mirrored in the Priestly version of the history of the Israelite cult. It was Gray who most clearly discussed the traditions concerning the priesthood of Moses, who invested the first Israelite priests (Lev. 8-9; Exod. 29:1-37; etc.). The technical term *mille' yadh*, literally, "to fill the hand," cognate to Akkadian *mullû qātē*, denotes investiture (e.g., Lev. 8:33; Ezek. 43:26). Thus, Micah "invests" one of his own sons as a priest in his family chapel, but later appoints a more professional practitioner (Judg. 17:5, 12), and it is said of Jeroboam that he invested priests from whatever family origin, at Bethel and elsewhere in the northern kingdom (I Kings 13:33). In the Priestly traditions Moses, as the leader of the people, is thus acting *in loco regis*, one might say. This undoubtedly represents a projection of later notions of the position of the priesthood under the monarchy back into the early period of Israelite history, a projection typical of P. See PRIESTLY WRITERS[S] §1.

As regards the administrative role of the priesthood, Lev. 27 reflects historical realities. "The priest" administers votive funds and assesses the value of different forms of property and goods. He determines the ability of persons to remit standard equivalents established by the cultic administration. In a similar way, "the priest" determines the ability of persons to afford certain obligatory sacrifices, which could be reduced in cases of need (Lev. 5:1-13; 12:8; 14:21-22; etc.).

Among the administrative duties of the priesthood was the handling of tithes and their allocation (see SACRIFICES AND OFFERINGS, OT[S]; TITHE). A further indication of the fiscal role of the priesthood is the adoption of a special standard of

weights and measures. In the Priestly sources, and only there, we encounter the term שקל-הקדש "sanctuary weight." Remittances to the temple were to be imputed according to that standard (Lev. 5:15; 27:3, 25). There can be little doubt that this is an ancient custom, perhaps even harking back to the administration of the premonarchic cult centers such as Shiloh. It is worthy of note that nowhere in the OT do we find a term for "royal weight," even though there are references to the royal treasury (I Kings 14:26; 15:18; etc.) alongside the temple treasury. All we have is a term for negotiable silver, "according to the rates current among the merchants" (Gen. 23:16). It is at least possible, therefore, that under the monarchy, and in the postexilic periods as well, an ancient standard was preserved, i.e., "sanctuary weight."

Ezekiel, whose plans for the restored Jerusalem contain many features representative of the Jerusalem temple cult during the late Judean monarchy, specifies that the shekel shall contain twenty gerahs (Ezek. 45:12), the same as "the sanctuary weight" according to the Priestly codes (Lev. 27:25; and cf. Exod. 30:13).

The terminology of II Kings 12 and 22 holds even further implications for the administrative role of the priesthood. Hebrew *hizzēq bedheq*, literally: "to fasten the breach," i.e., to effect "repairs" (II Kings 12:5 [H 6]; 22:5), carries the extended sense of "inspection, maintenance," as is evidenced by the cognate Akkadian formula *batqa šabātu* which can refer to all sorts of functions associated with maintenance, caretaking, etc. It was during such an inspection that the high priest Hilkiah discovered the TORAH document in the time of JOSIAH (II Kings 22:4-8). In Tam. 1.3, we have the requirement of the daily inspection of the temple by two groups of priests, who each morning circled the temple to ascertain that all was in order. It is likely that similar tasks were performed by priests in the Solomonic temple and at other cult sites in the pre-exilic period.

3. The position of the priesthood in the post-exilic period. One may assume that earlier functions of the priesthood continued to apply in the restored temple of Jerusalem. The high priest gained in power as the dominance of the Davidide kings diminished under Persian imperial domination. Smith has observed that in the vision of Zech. 6:9-15 we have evidence of friction and unresolved issues between the high priest and king over their respective jurisdictions. By depositing two crowns in the temple as a memorial, the peaceful co-existence of the two authorities was to be symbolized. The king is clearly viewed by the prophet as builder of the temple and as temporal ruler (Zech. 6:12-13); and the high priest, although reassured, does not have his authority as clearly delimited as does the king. The mere fact, however, that the king and the high priest are repeatedly addressed together, as co-leaders of the people in the literature of the restoration period, is significant (Hag. 1:1, 12, 14; 2:2; Zech. 3-4). This undoubtedly indicates that in this period the high priest was not merely a royal appointee or the descendant of one, but a leader of intrinsic authority, autonomous, and directly responsible to the

people, in his own right. This development set the stage for the hierocracy which was to follow. See AARON, AARONIDES[S].

## \*PROMISES TO THE PATRIARCHS.

1. Recent research
  2. The nature and structure of the promises
  3. The separate promises
  4. The theological significance of the promises
  5. Subsequent history of the promises
- Bibliography

1. **Recent research.** Study of the promises to the patriarchs began with Alt's investigation of them as phenomena of the patriarchal period. Among his concerns was a more precise identification of the individual promises. In the work of von Rad, Noth, Zimmerli, and Wolff, however, emphasis was placed on their earliest documentary form, that is, their significance for J or for the development of the PENTATEUCH (see YAHWIST[S]; ELOHIST[S]; PRIESTLY WRITERS[S]). Von Rad distinguished between promises of land, posterity, and blessing on the one hand, and the promise of a new relationship to God on the other. Wolff isolated the characteristic features of the promise of blessing,

while Maag contrasted the promise of the land with the promise of new territory in which to live or to pasture herds and flocks, and stressed the distinctive nature of the promise of God's presence. Westermann stressed the difference between the promise of a son and that of posterity; and Seebass distinguished the general promise of the land from the specific promise of the Bethel district. Lohfink saw the promise of the land as an oath, and Koch found in the Ugaritic texts parallels to the promise of a son.

The dates suggested for the promises vary greatly. Maag regarded Gen. 12:1-3, generally considered the work of J, as belonging to the pre-Israelite patriarchal period. But Hoftijzer and van Seters place J around the time of the Exile (see PATRIARCHS[S]). Gradually, however, scholars have come to explain each of the promises in terms of a specific background, and to ask if it fits what is known of the patriarchal period and thus could belong there, or if it must be explained as having originated during the written stages of the tradition. See TRADITION, ORAL[S].

2. **The nature and structure of the promises. a. Characteristics.** The promises to the patriarchs are the most frequent motif in Gen. 12-50. References to them are frequent in other books, especially Deuteronomy, and are found as late as Nehemiah.

These promises are a part of the total complex of OT oracles of blessing, but are different from the others in not having been delivered by a cultic or other type of mediator; they are depicted as having been given directly by God to the patriarchs. This means that some of them may have actually originated in the patriarchal period, because a distinctive feature of the religion of the fathers is the lack of any sort of mediator between God and man (see HEBREW RELIGION §A; PATRIARCHS[S] §2b). It is, however, possible that they were colored by later oracles and literary forms. In Gen. 15:1-6 there are echos of oracles of blessing and signs of prophetic speech forms; in ch. 17, P has constructed a promise using the later covenant formula, which promises that Abraham's posterity will include nations and kings.

A further hallmark of the promises to the patriarchs is that they are unconditional. What God proclaims does not depend on the fulfillment of any conditions. (Gen. 22:16-18 therefore apparently contains a late interpretation.) See COVENANT, DAVIDIC[S] §3.

b. **Relation to the narrative framework.** Formerly the promises were considered to be merely one of the motifs of the patriarchal narratives (Galling, von Rad, Zimmerli); for Noth they constitute the theme of these narratives. But Hoftijzer has raised the question of whether the promises are an essential or secondary component of the individual narratives. He concluded that the former is the case only in Gen. 15 and 17. Westermann and Lohfink distinguished between accounts such as chs. 15 and 17 that were built around the promises, and others such as chs. 16 and 18, in which the promise is an integral part. In all other cases the promises are in some way or other inserted into the narrative or added to it at the beginning or end: (1) a specific scene in the account: 13:14-17;

(2) a secondary addition: 22:15-18; 28:3-4; 28:13-15; 35:9-13; 46:3-4; (3) a brief added word of promise: 16:10; 21:13; (4) the opening of a cycle of stories: 12:1-3; 26:2-5; (5) a reference to a previous promise: 18:17-19; 24:7; 32:10-13; 48:3-4.

This indicates that the promise motif was originally a part of only a few of the patriarchal narratives, and that it generally belongs to the stage of their convergence and further development.

**c. Analysis of the promises.** The accounts can be arranged according to literary-critical criteria, in order to trace a development from the earliest to the latest literary sources (Galling). This arrangement, however, is not satisfactory, because the transmission of the various promises is too complicated. Or, they can be arranged on the basis of their importance. Von Rad and Lohfink regard the promise of the land as the most important, while Wolff holds it is the promise of blessing. Others ask, Which God makes the promise? Alt felt they were all made by the "God of the Fathers," but Eissfeldt proposes the Canaanite El.

Two of the most significant criteria for dating are: (1) Is the fulfillment to be soon, or in the distant future? The former is more likely to be a genuine patriarchal expectation. (2) Does the fulfillment point to a way of life similar to, or different from, that of the patriarchal period? The promise to give Israel a territory that was under cultivation (Canaan) may already indicate a settled way of life (see, however, NOMADISM[S]). The promise of increased posterity, using such similes as "like the stars of the sky," may reflect knowledge of the size of the nation Israel. The promise "I will be your God," found only in P, presupposes the new relation that was only established much later at Sinai. By contrast, in the promises of a son and of divine aid ("I will be with you") the promise and the fulfillment are close together in time, and it is thus more likely that they date from the age of the patriarchs.

A more important factor is whether a passage contains a single promise or several. Seldom is one found alone, and there is a great variety of combinations. The following occur alone: a son, 18:1-16; the land, 12:7; 15:7-21; 24:7; God's presence, 31:3. The promise of numerous posterity and of blessing are found only in combination with other promises: (1) son and posterity: 15:1-6; 16:7-12; 21:12-13, 17-18; (2) land and posterity: 13:14-17; 35:11-13; 48:3-4; (3) land, posterity, and blessing: 26:4-5; 28:3-4; 28:13-14; (4) posterity and blessing: 12:1-3; 18:18-19; 22:15-18; (5) posterity, blessing, and God's presence: 26:24-25; (6) posterity and God's presence: 46:3-4; (7) God's presence, blessing, and land: 26:2-3; (8) posterity, God's presence, blessing, and land: 26:2-6; 28:13-15. Ch. 17 contains all the promises, except that, instead of the promise of God's presence, we find his promise that he will be their God—the covenant promise.

This survey shows that the most frequent promise in Gen. 12-50 is that of posterity, with that of the land a distant second. The promise of a son is found only in the Abraham stories, and that of God's presence only in the Jacob-Esau stories. The promises usually occur in groups of two, three, or

more, with the greatest concentration occurring in P. Such a concentration is a sure sign of late origin.

**3. The separate promises. a. Promise of a son** (15:2-4; 16:11; 17:15, 16, 19, 21; 18:10, 14; [21:3]). This is quite independent of the promise of posterity. In ch. 18 it is the central feature of the story, a promise made to a childless person in order to solve the problem he faced. The promise of a son is found elsewhere in the OT (Judg. 13:2-5; I Sam. 1; II Kings 4:8-17) and in the NT (Luke 1, 2). It occurs in Ugaritic texts (Keret and Aqhat: see ANET) in the same sequence of motifs: the plight of being childless, promise of a son, birth of a son. In Gen. 12-50 the promise of a son is confined to the Abraham stories, where it dominates the accounts.

A messenger from God may announce the birth of a child (Gen. 16:11; 18:10, 14; Judg. 13:2-5; II Kings 4:16; Isa. 7:14). The announcement to Hagar (Gen. 16:11) is in three parts, as are those in Isa. 7:14 and Luke 1:31. They preserve an old form for the announcement of a birth: announcement of pregnancy and of the birth, and telling what the child's name is to be. Such announcements are made to the mother. A late form of the promise can be seen in Gen. 15:1-6, where it is closely connected with the promise of posterity, and in 17:15-21, where, in addition, the covenant promise states that Isaac will be preferred above Ishmael.

The birth of a son is recounted in 21:1-3, a short time after it had been promised. It is highly probable that the promise of a son belongs to the oldest strand of the patriarchal stories.

**b. Promise of God's presence** (Gen. 26:3, 24; 28:15 [20]; 31:3; 46:3; [48:15, 21; 50:24]). This promise is found only in chs. 26-50. In 26:3, 24 it is made to Isaac, and elsewhere to Jacob. Just as the promise of a son is the dominant motif in chs. 12-25, this promise is dominant in chs. 26-50. Maag was the first to draw attention to this promise, seeing it as loosely connected with the wanderings of the patriarchs. In each instance, God promises to be with them on a journey. It is given as part of the command to move (46:1-3), or to remain (26:1-3), or to return (31:3). This indicates that the promise goes back to the patriarchal period. It should be observed, however, that this promise is not restricted to descriptions of that period, but is found throughout the OT. Preuss investigated the approximately one hundred passages and noted that the oldest texts deal with a situation before or during a migration. He concluded that it is in the patriarchal narratives that the expression had its earliest significance.

**c. Promise of the land. i. Promise of a new home and new pasture.** Such a promise was probably older than that of the land, the latter being a consequence of transition to a settled life. The former belonged to the migratory life, and Maag felt he could discern it even in Gen. 12:1-3, which contains the command to break camp and instruction about where to go. Maag distinguished between the promise of new pasture, which for nomads meant escape from the threat of starvation, and the promise of land already under culti-

vation, which belongs to a later stage. In the patriarchal stories, however, there is no account of transhumance, and a promise implying it can only be surmised from 12:1-3 (see, however, NOMADISM[S] §2). It is clear that the two promises are quite different and that the promise of new pasture corresponds more closely with the nomadic life of the patriarchs.

ii. *Promise of a land under cultivation* (12:7; 13:14-15; 13:17; 15:7-21; 17:8; 24:7; 26:3, 4; 28:4, 13; 35:12; 48:4; 50:24; outside of Gen. 12-50: Exod. 13:5, 11; 32:13; 33:1; Num. 11:12; 14:16, 23; 32:11; Deut. 1:8, 35; 4:31; 6:10, 18, 23, and thirteen other passages). As can be seen from Gen. 15:7-21 and 13:14-17, the emphasis lies on the promise made to Abraham. The promise that Jacob would gain possession of the land is seen as a renewal of the promise to Abraham (Gen. 26:3, 4; 28:4; 35:12; 50:24). The story in Gen. 15:7-21 concerns only the promise of the land; in fact, the story developed out of the promise. Apart from P, this promise usually is found in a story or a scene; it is found in a promise speech only in late texts.

The language varies so little that we can assume a fixed form, utilizing the verb נתן (give). The promise is probably the basis for an accepted formula for the legal transfer of land (cf. Gen. 48:22). Such an adaptation is suggested by 13:14-17. In the formula "to your descendants I will give this land" Abraham received a promise that would be fulfilled only for his descendants, and so this presupposes a period later than those of the patriarchs. This promise probably was formulated when possession of the land was a life-and-death matter for the tribes that had settled in Canaan. At the end of the patriarchal stories (50:24) it is stated that the promise to Abraham, Isaac, and Jacob refers to the gift of the land of Canaan to the Israelites who leave Egypt. Here the promise functions to tie the history of Israel to the patriarchal narratives. See GENESIS[S] §A3.

In twenty-one passages in Deuteronomy the promise of the land is formulated as an oath and has the function of legitimizing the occupation of the land by the tribes.

d. *Promise of posterity* (12:1-3; 13:16; 15:5; 16:10; 17:2, 5, 6, 16, 20; 18:18; 22:17, 18; 26:2-5, 24-25; 28:3, 14; 32:12 [H 13]; 35:11; 46:3; [47:27]; 48:4, 16, 19; outside of Gen. 12-50: [Exod. 1]; Exod. 32:10; Num. 14:12; Deut. 1:10, 11; 6:3; 13:17 [H 18]; 15:6; Isa. 51:2; Neh. 9:23).

i. *Promise of a son and posterity*. The combination of these two promises is found, like the promise of a son, only in the Abraham cycle. That they were originally separate can be seen in 16:10-12 (cf. 21:12-13, 17-18). Their interrelationship is made completely clear in 15:4-5, where the opening of a new scene in vs. 5 shows that the writer was aware of the independence of the two promises. The sequence also shows that the writer regarded the promise of posterity too numerous to count as an intensification of the promise of a son. It is this intensification that was significant for Israel in the Promised Land, as is shown by the late echo in Isa. 51:2.

ii. *The language and form of the promise*. Of all the promises this one most often had a fixed form

and is found exactly or almost word-for-word the same in many passages. Characteristic also is the poetic comparison with the stars of the sky (Gen. 15:5; 22:17; 26:4; Exod. 32:13; Deut. 1:10; 10:22; 28:62; Neh. 9:23), the sand by the sea (Gen. 22:17; 32:12 [H 13]; Isa. 10:22; 48:19), and the dust of the earth (Gen. 13:16; 28:14). A variant form of the promise indicates the transition of the family to the nation, "I will make of you a great nation" (12:2; 17:20; 18:18; 21:13, 18; 46:3; Exod. 32:10; Num. 14:12). In the introduction to the patriarchal narrative this promise is applied in a general way to the future greatness of Israel. This greatness is stressed even more in P. Abraham will be the ancestor of nations (17:16), of a "company of nations" (28:3; 35:11; 48:4), and the "father of a multitude of nations" (17:5). Kings will be his descendants (17:6, 16, 20; 35:11). It is clear that all this refers to (and presupposes) the future greatness of the nation Israel; such promises could hardly have originated in the age of the patriarchs.

iii. *The origin of the promise of posterity*. In many passages it is combined with the promise of blessing (12:2; 17:16, 20; 22:17; 26:4; 26:24; 28:3; 32:12 [H 13]; 35:9-11; 48:3-4 [16]; Isa. 51:2). Most of these passages are probably of late origin, but the same combination is found in the blessing that Jacob pronounces on Ephraim and Manasseh (48:16). Here, in a blessing bestowed by a human being, the numerical increase of posterity is depicted as the unfolding of the blessing. There are also other indications that the origin of this promise is in the bestowal of a blessing. Most of the fixed terminology of the promise of blessing occurs also in blessings. This is seen especially in the blessing of a marriage (Gen. 24:60) and in the Legend of King Keret (ANET [2nd ed.], KRT B [ii]). This origin explains a distinctive feature of the promise of posterity. The desire for many descendants cannot be fulfilled in one event, like the birth of a son, but must extend over generations of steady growth.

e. *Promise of blessing*. i. *The distinctive nature of the promise*. An independent pronouncement of blessing has been preserved only in Gen. 12:1-3. Here all the other promises are subordinated to that of blessing, while in all other passages the promise of blessing is made specific in, or is more fully developed by, the promise of posterity. Gen. 12:1-3 is a literary formulation of J intended to serve as introduction to the stories of the patriarchs and also as transition from the primeval history to that of the patriarchs. In this way J created a formula of far-reaching significance, by making an originally nonhistorical blessing into a historical concept (Wolff; Westermann). While this formulation cannot be earlier than J, the basic blessing may well be from the time of the patriarchs.

ii. *Expansion of the promise*. In Gen. 12:1-3 we find, in addition to the promise of many descendants (vs. 2a) and future greatness (2b), two expansions. Vs. 3a has close parallels in Gen. 27:29 ("Cursed be every one who curses you, and blessed be every one who blesses you!") and in Num. 24:9. So, then, this expansion also is derived from blessings such as human beings bestow. The trans-

formation into a promise is secondary. J took the statement and, in the introduction to the patriarchal history, applied it to Israel. Israel's friends are God's friends, and her enemies are his.

The second expansion, "All the families on earth will pray to be blessed (*niph'al*) as you are blessed" (Gen. 12:3b [NEB; contrast KJV]), occurs frequently (*niph'al*: 18:18; 28:14; *hithpa'el*: 22:18; 26:4). It is also found in a blessing bestowed by a human, Jacob (48:20 *pi'el*), and in the praise of the king, "May men bless themselves by him, all nations call him blessed" (Ps. 72:17b, *hithpa'el*). These two passages made the meaning of the sentence clear. The blessings wished for or promised to the person are to work out for him or her so that these blessings will find an echo over long periods of time and throughout vast areas.

**f. The covenant promise** ("I will be your God"). In the patriarchal histories it is found only in P (Gen. 17:7-8), and is characterized as a covenant (ברית). Elsewhere in P it occurs in Lev. 11:45; 22:33; 25:38; 26:45; Num. 15:41; see also Exod. 29:45; and Ezek. 34:24. In all these passages Israel is the recipient of the promise. In Deut. 29:10-13 it occurs as promise to the patriarchs and is characterized again as ברית. It also occurs as a part of the covenant formula, which also says "and you will be my people." By citing this promise in the middle of ch. 17, P builds a connection between patriarchal history and that of the nation. Israel's existence rests on this promise. Israel lives because God promised Abraham that he would be his God. Although in ch. 17 the basic meaning of the "covenant" is a binding commitment, vs. 7 expands the concept in the direction of the ceremonial conclusion of a covenant which will remain in force forever between God and Abraham's descendants. The binding assurance produces an abiding relationship, the covenant.

**4. The theological significance of the promises.** It can be seen that while the promises to the patriarchs have various features in common, each of them was originally independent and must be investigated separately. This means that all generalizing conclusions about the promises are problematic. The history of their transmission stretches from the patriarchal period to the postexilic period, and we cannot say that as a group they are either early or late.

We can say with confidence that three of them have their origin in the age of the patriarchs: the promise of a son; the promise of God's presence as the people move on; and the promise of new pastures and a new place to live (this promise is assumed from hints in 12:1-3; see §3c above). The others function to tie the patriarchs to the history of the nation and arose only after Israel was settled in the land. In part, they were reworked out of older materials and expressed as promises.

The theological meaning of each group must be determined separately. The significance of the first group lies in the fact that they are a component of patriarchal religion as it existed before any contact with the history or religion of Israel. They are witnesses to the earliest connection between what God says (the promise) and what he does (the fulfillment). When the people later were

rescued or protected they saw this as the fulfillment of what God had said, and thus we can understand why the patriarchal traditions became a basic part of Israel's traditions.

For the second group, the significance lies in their nature as conscious theological reflection. This is seen clearly at an early stage in Gen. 12:1-3, and at a later stage in Gen. 17. These promises were formulated after Israel's encounter with Yahweh as the God who saves, as he is presented in the Exodus tradition. The promises thus have the function of connecting God's ancient word with what he has more recently done for his people. They give the assurance that God stands by his word, and that he can be trusted for the future.

**5. Subsequent history of the promises.** The promises to the patriarchs had an amazingly long history. In the prophetic books they are not found outside of Jeremiah, Ezekiel, and Second Isaiah; in Psalms they are seldom referred to. In all passages outside Gen. 12-50 where the promises are mentioned they are related, not to the patriarchs, but to Israel. Those that were fulfilled in the time of the patriarchs are no longer important. For this reason we must reckon with a subsequent history of the promises within Gen. 12-50 in the form of insertions and supplements. For example, when in Gen. 22:15-18 a reason is twice added to a promise (vss. 16, 18), presenting the promise as a reward for Abraham's obedience, we may see in this the concern of a later age, for which Abraham's obedience served as a living example.

**\*PROPHECY IN ANCIENT ISRAEL.**

1. The role of prophecy
  2. The prophet as a person
  3. The audience
  4. Fundamental concerns
- Bibliography

1. **The role of prophecy.** Israelite prophecy served a definite function in the life of a larger whole, contributing to a dynamic process. It complemented two other major aspects of Israelite culture: priestly tradition and wisdom. Each of these eventually became crystallized in one of the three major divisions of the Hebrew canon (see CANON OF THE OT §§2-4). The different aspects were by no means always isolated, but could be combined in a single person's life and often in single utterances. A prophetic utterance could (and usually did) include elements more characteristic of priesthood or wisdom. In fact, the combination of functions is older than their separation since societal development has generally been in the direction of increasing specialization. Speculations regarding an originally pure form, to which elements of other traditions have been added secondarily, run contrary to data from the history of religion. Prophecy is distinct but not separate from the rest of Israelite existence. See WISDOM IN THE OT[S].

Prophecy shares with priestly tradition a heavy emphasis on divine revelation, expressed stylistically by Yahweh's speaking in the first person. It differs from priestly word in that the priest presents above all the traditions of the sacred past which are believed to have general significance for Israelite life, while the prophet responds basically to particular situations. Since the priestly tradition is foundational, it forms the framework within which the prophet operates; in this sense, the content of the priest's word stands normally above the prophet's. (In Jewish tradition, the Pentateuch is more sacred than the prophetic corpus.) The general applicability of priestly speech implies that it does not require for itself constantly new revelation; it relies on a message received earlier by a mediator of revelation, who may be called a prophet or more than a prophet (especially, Moses). See PRIESTS[S]; PRIESTLY WRITERS[S].

While the symbol of divine speech is strongly represented in prophecy, it is by no means the exclusive form employed. Often Yahweh is spoken about in the third person—as in wisdom or lay style—sometimes in rapid alternation with first-person speech by Yahweh. It is possible (although by no means certain) that the third-person form reflects the tradition of the relatively rational diviner as distinguished from the possessed shaman. In some prophetic books the content presented in the form of nondivine speech is relatively similar to that of wisdom literature. In any case, Israelite faith did not bypass human reasoning.

Prophets could speak unasked, but often they responded to the declaration of a problem by

presenting an answer. Problems might be expressed in individual and collective laments, confronting deity with the present tension-filled situation. To these a mechanical or inspired oracle could give a response. Many biblical prophecies allude, or directly refer to, actual or imagined complaints set before Yahweh (e.g., Isa. 49:14). Since complaints typically include an accusation directed against divine action or inaction, the responses defend Yahweh (Mic. 6:3). The employment of judicial form in these instances is not at all unusual, for in Israel, as in neighboring countries, such style pervaded life in general, including private conflict, warfare, ritual, and prognostication; also, controversies of any kind are presented thus (e.g., Isa. 41:1, 21; 44:8). In some cases the prophet presented the complaint on behalf of the people. Habakkuk, who does so, is a seer relatively close to wisdom or to the human side of the cult; if he were simply a wise man he might have to leave the question open, but as a prophet he obtains a word from Yahweh (2:1-3).

As already pointed out, the heart of prophecy lies in divine revelation in response to actual situations. Since Israelite (like much of) religion is strongly dynamic in outlook, an important aspect of such speech involves the disclosure of the future. "Future" means the tendency of events, the direction in which they move. A major reason for ancient DIVINATION is to discover the tendency, so that unfavorable actions may be avoided. In Israelite narration, a clear example is given in I Sam. 23:12-13; when the oracle says "yes" to David's question, "Will the men of Keilah surrender me [to Saul]?" David simply leaves the city of Keilah. The understanding that an announcement is subject to revocation—perhaps precisely as a result of the announcement—underlies the story of Jonah; that is a feature of the genre. Of course, there may be some immutable promises (such as are based on a divine decision regarding mankind, Israel, or David's dynasty), providing a framework for the recipient's orientation.

To say that prophecy deals with the future is roughly true, but is in some ways both too broad and too narrow a characterization. Legal literature and wisdom deal with a hypothetical future in the sense of declaring the consequences of certain types of action; precisely for that reason, prophets can interpret particular occasions in terms of such directional structure. Otherwise, reality would lose coherence and significance—a possibility raised in skeptical wisdom. On the other hand, oracles are not limited to declarations concerning coming events. Already quite commonly in primitive societies and in the ancient Near East (e.g., ANET, pp. 26, 394-96, 497-98), diviners and shamans had as major tasks the identification of causes of present evil and of an appropriate remedy, the detection of lost objects (cf. I Sam. 9:20), and the transmission of a god's or spirit's will for an occasion. These involve the "future" only in a very broad sense—that of an assessment of, or a reaction to, events. See PROPHET, PROPHETISM §D.

2. **The prophet as a person.** The insight of the prophet was expected to come as a gift. This could

mean a dream or a vision (especially in the case of a "seer"); sometimes as a part of, or instead of, such an experience one could receive a message aurally (e.g., Amos 7:7-9; Isa. 40:6). Then the prophet can report the content. Some oracles outside of Israel are described as being delivered while the person is possessed by a "spirit," so that the latter speaks directly to the audience—bypassing, in form at least, the ego of the prophet. Whether such a situation is implied by numerous Israelite oracles, we simply do not know. In some manner, however, the prophet transcends normal self-assertive consciousness and participates in a highly receptive state.

The call to prophesy was experienced typically as an overwhelming external force. At the very least, that is the way recipients spoke about it; numerous parallels from various parts of the world show that as a rule the prophet indeed bowed to a consciously unsought experience. This was often done quite reluctantly, since hardship was entailed in being directly exposed to the will of invisible powers and inadequacy was felt and expressed, both in Israel and elsewhere. A call, or report of a call, was not peculiar to the prophetic task, but it was especially relevant for this the most sacred and perhaps most important role in society.

The prophet's person is of extreme importance and receives considerable attention in the relevant literature. Not only the initial election, but also subsequent commissions are reported in autobiographical style. Such commissions include symbolic actions, carried out literally or in imagination (especially by Hosea, Isaiah, Jeremiah, Ezekiel, Zechariah); those that are literally executed can also be reported by others (e.g., I Kings 22:11). Stories stress the power of the divine word and the conflicts encountered (above all for Elijah, Elisha, Amos, Isaiah, Jeremiah). Neither first-person nor third-person narratives have a strictly biographical purpose, since they legitimize the message and give it dramatic form; but they presuppose the significance of the agent, who is not merely a mechanical tool. Just like a "wise" person, a prophet can be either male or female (Exod. 15:20; Judg. 4:4; Isa. 8:3; II Kings 22:14; Ezek. 13:17; Neh. 6:14).

It was inevitable that prophets would differ with each other. A contrary oracle could lead one to doubt one's own revelation, but disobedience to the orders received could be fatal (I Kings 13; cf. Jer. 28). Divergences in message were usually explained in terms of a charge that opponents failed to receive a divine word because they were morally or spiritually corrupt—presenting their own imagination (Jer. 23:16, 26; in a drunken state: Isa. 28:7), yielding to popularity or material reward (Mic. 3:5; cf. Jer. 23:17 and Ezek. 13:10) or, on the other hand, to impulses toward blasphemy or misanthropy (I Kings 22:18; Jer. 26:11; cf. Jonah), or following Baal instead of Yahweh (Deut. 13:2-3; Jer. 2:8). It was also possible to claim that Yahweh deliberately misled someone for purposes of punishment (I Kings 22:19-23; cf. Ezek. 20:25 and *Iliad* II, 1-34). In hindsight an oracle could be verified, if it was fulfilled (I Kings 22:28; Jer. 28:9). Yet it was difficult to prove a forecast false (despite

Deut. 18:22), since changed conditions might legitimately bring about a different course of events; indeed, a number of unfulfilled prophecies are left standing in biblical tradition, are slightly adjusted, or are held delayed (e.g., Hag. 2:20-23; Zech. 6:11—among those not expressly withdrawn). See PROPHETS, FALSE[S].

Because of their close relation to deity, the prophets' words were considered highly powerful and thus able to affect the future as well as to describe it. In fact, it is often difficult to tell the precise boundary line between determining and announcing (see WORD, THE §2). Persons believed to be near God were called upon to engage in intercession to remove or ward off evil, but such prayer was not necessarily successful and could be forestalled or forbidden by deity (Amos 7:8; Jer. 7:16; 11:14). See REPENTANCE IN THE OT[S].

3. **The audience.** Prophets operated under a wide range of circumstances. Individuals could turn to them for concrete problems (I Sam. 9:6-9; implied in I Kings 14:2). Kings and military leaders of Israel, as of neighboring countries, inquired of them before and during warfare (e.g., I Sam. 23:2-4; II Kings 3:11). However, such consultation was apparently not routine (see, e.g., I Kings 22:5); often, for political decisions, reliance was placed instead on the advice of a "wise" man (II Sam. 16:23; cf. Isa. 19:11)—a fact which could lead to rivalry between the two professions (Isa. 29:14-15; cf. Mari Texts A 15). Not infrequently, a direction for warfare or politics was presented unasked (I Kings 20:28, 39-42; Isa. 7:3-4; as in MARI, etc.). In relation to the community at large, a prophetic word came in response to a collective fast during a calamity (Jer. 36:6; cf. Isa. 58:1-9), or it could bring about such a fast by a word of judgment (Jonah 3:3-9).

One can ask whether prophets participated in regular cultic ceremonies. As private persons, and especially as representatives of God, undoubtedly they did. Ancient ritual was loose enough in organization to provide opportunity for various kinds of persons to speak to any audience willing to listen; in fact, there was expectation and hope for special divine revelations. Perhaps some prophecies, such as those of Amos, were delivered at festivals. The psalms contain a number of oracular expressions which are general in application, addressed to the "wicked" (Pss. 50:16; 75:4 [H 75:5]) or to those who trust in Yahweh (Ps. 91). Such general oracles belong to the sphere of the liturgist or cultic singer (as specified in the titles of Pss. 50, etc., containing such words). These are close to, but not identical with, prophetic words dealing with specific solutions. In addition, a number of divine declarations are quoted in psalms, as in other types of literature (e.g., in Pss. 2; 60; 68; 87; 89). See PROPHET, PROPHETISM §B3.

Although prophets were no match for the king in terms of brute force, in Israelite theory they stood above the king on behalf of Yahweh. As told in biblical narratives, an oracle normally announced the next king (Saul, David, Jeroboam I, Jehu; cf. *ANET*, pp. 289, 446-49) and the end of a royal dynasty or "house" (I Sam. 13:14; 15:28; I Kings 14:7-14). Prophets possessed and exercised the right

to criticize a king, who was the chief judicial officer and thus not subject to any other form of prosecution. As elsewhere in the Near East, a divine word could authorize or forbid the building of a temple (II Sam. 7).

Regularly, Israelite prophets condemned the leaders of the country, individually or collectively. Priests were charged with failing to mediate and follow divine instruction and being eager to receive expiatory sacrifices and other remuneration (Hos. 4:6-8; Mic. 3:11; Zeph. 3:4). Prophets were accused of violating the norms of their profession (see §2 above). The "heads," "princes," or members of government, were criticized for ignoring basic morality, accepting bribes, disinterest in the lot of the weak, and exploitation (Amos 6:1-6; Hos. 5:10; 7:3; Isa. 1:23; 3:14; Mic. 3:1-3, 9-11). For most of such transgressions there was no humanly executed penalty in the system of Israelite society.

Other groups attacked are merchants, for cheating and insensitive rapacity (Amos 8:4-6; Hos. 12:7-8 [H 12:8-9]; Mic. 6:10-12), and city women, for selfish or haughty luxury (Amos 4:1; Isa. 3:16-17). Sometimes there occur laments over pervasive immorality, in a style that was apparently standardized (cf. Ps. 53:3 [H 53:4]; in Egypt, *ANET*, pp. 406, 443-45). Quite frequently accusations are couched in general expressions for "evil," "wickedness," "falsehood," "iniquity," "rebellion," etc. The list of specific sins castigated is largely the same as that which appears in legal and wisdom literature: worship of gods other than Yahweh, idolatry, sacred prostitution (Hos. 4:14), sabbath violation, disrespect to parents (Mic. 7:6), murder, adultery, theft, falsehood, disloyalty to associates (Jer. 9:4 [H 9:3]), covetousness (i.e., aggrandizement: Mic. 2:2), drunkenness, interest on loans (Ezek. 22:12), and incest (Amos 2:7), in addition to others already mentioned. See *LAW IN THE OT*[S] §13.

Of special concern to prophets is the placing of trust in military or other human operations (e.g., Hos. 10:13; Isa. 30:15-17; 31:1; Jer. 17:5). Both idolatry and oppression are seen as instances of misdirected trust (Isa. 30:12; 42:17; Hab. 2:18). The downfall of foreign nations is sometimes grounded in their prideful self-confidence (Isa. 10:12-16; Jer. 50:31; Obad. 3). As a rule, the nation opposed is held guilty more specifically of international "oppression" (Isa. 14:4), i.e., of destructive activity toward Israel or others (Amos 1:3-2:3; Nah. 3:1; Obad. 10-14; Jer. 51:25, 49). For the Israelite audience, the thrust of oracles against enemy countries is to create or support confidence in Yahweh; in fact, the difference between critical and promising words lies largely in the situation of the hearers in terms of whether they inflict or need rescue from oppression or other forms of evil.

4. **Fundamental concerns.** It would be an error to think that the prophets dealt only with finite and superficial concerns. It is true that primitive divination gives fairly narrow answers to concrete problems; Israelite prophecies, too, were generally quite practical in their point. Yet there are two ways, somewhat interrelated, in which prophetic words went beyond a limited application. First of all, the highly symbolic nature of their expression points to a deeply emotional confrontation with

reality. Israelite prophets did not present much precise information to their hearers; however, their words possessed great personal and religious power, which made them resound over centuries and millennia. Second, they declare fundamental trends in existence. Israelite prophets saw deep divergencies and clashes in life. These tensions, some of them said, would be overcome in an ultimate resolution, to arrive soon. It is often difficult to determine how literally they understood the coming of perfect reality; yet the very vagueness in this regard shows how Israelites, like other human beings, lived not just by pragmatic considerations, but in terms of a basic orientation. See *PROPHET, PROPHETISM* §D6-7.

The great Israelite prophets believed that human existence was in severe trouble. Their word, if accepted, leads toward self-transcendence with acknowledgment of guilt. If a "turning" (or "returning") takes place, one might express one's hope for graciousness, without presumption, by use of the phrase "who knows" (II Sam. 12:22; Jonah 3:9; cf. similarly "perhaps" in Zeph. 2:3; Exod. 32:30). A number of major voices declared that only after a downfall would reconstitution be possible. (These included—at least part of the time—Hosea, Isaiah, Jeremiah, Ezekiel: see *REMNANT; REMNANT*[S]; *DISCIPLINE, DIVINE*[S].) Since the envisioned fulfillment is in line with the divine will seen in the "origin" of human and national reality, various prophets drew upon the protological elements of their tradition for the shape in which they present an eschatological resolution: a new exodus, a new covenant, a new Zion, or a new creation. In these forms a state of perfection is announced (Jer. 31:31-34; etc.; see *NEW COVENANT, THE*[S]). When Israelites lost control of political power, classical prophecy ended; the emphasis shifted from guilt over social evil toward the confident perseverance inculcated by apocalyptic with an announcement of a new world. See *APOCALYPTICISM; APOCALYPTICISM*[S].

The orientation toward an ultimate fulfillment is shared with a number of movements which belong roughly to the same historical period, arising in social situations basically similar to each other. Societies in the Near East and in neighboring areas from India to Greece were reaching a level of complexity which permitted considerable specialization, extensive contemplation, and the high degree of self-consciousness presupposed by acknowledgment of guilt, as well as the social stratification and warlike subjugation which became the object of criticism. Traditional priestly rituals of an impersonal sort became widely questioned; the use of writing enhanced the impact of unusual "great" prophets in Israel as well as of mystics in India (as it supported the dominions opposed). While there are important differences between mysticism and major Hebrew prophecy, they share an orientation toward transcending finite (and especially destructive) self-projections of an individual or of a nation. Representatives of the more extreme points of view necessarily remained a minority in a continuing society, which largely required moderate approaches.

#### \*PROPHECY IN THE ANCIENT NEAR EAST.

Various materials from the ancient Near East—inspired messages transmitted from a deity, predictions, eschatological or apocalyptic texts, and social criticism—have all been called "prophetic." Although many of these materials are mentioned below, the focus is on the prophet as an inspired speaker, under divine constraint or commission, who publicly announces an immediate revelation. The speaker may or may not be associated with the cult.

1. Egypt
2. Anatolia
3. Canaan
4. Syria

5. Mesopotamia
    - a. Akkadian "prophecies"
    - b. The Uruk oracle
    - c. Prophecy in the Mari texts
    - d. Prophecy in the Neo-Assyrian period
- Bibliography

1. **Egypt.** Based upon the Greek rendering of the title of a class of Egyptian priests, modern scholars often speak of priestly "prophets." The Egyptian title means merely "servant of God." The Greek rendering apparently derived from the fact that these priests had a primary role in formulating questions put to divine oracles and in expounding the divine response. Thus they are not prophets in the sense defined above.

The term "prophecy" is also used to describe a type of Egyptian literature. For example, the composition known as "The Prophecy of Neferti" purports to contain predictions made in the Fourth Dynasty of a future great king, Ameny, whereas the text is generally regarded as a literary fiction composed in the reign of Amen-em-het I of the Twelfth Dynasty. The "predictions," moreover, are not presented as divine revelation. Another composition, "The Admonitions of Ipuwer" (or "The Admonitions of an Egyptian Sage/of a Prophet"), has been called "'prophetic' in a biblical sense" because of the critique that it contains of the past and present administration in Egypt. But the critique is not based on divine revelation.

2. **Anatolia.** The "Plague Prayers of Mursilis," which date from the latter part of the fourteenth century B.C., refer to various means by which the king hoped to learn the reason for the plague which was killing off the people. One of the means was through an inspired speaker: "Let a prophet (literally, man of the god) declare it," or "Let a prophet rise and declare it." This means of revelation was distinguished from omens and dreams. Some kind of inspired speaking was therefore known in Anatolia, though there is no further information about the circumstances and no further direct evidence for such activity in the early periods. A number of revelatory dreams are known, particularly in connection with King Hattusilis (early thirteenth century B.C.), but the dreams do not contain any specific commissioning of the recipient to convey the message to another party.

3. **Canaan.** The Bible refers to prophets of Baal and of Asherah (I Kings 18:19), though very little is said about these prophets. Since the same term is used for them as for Israelite prophets, viz., *nābhi*, the Israelite writers saw some similarity. The Baal prophets are not associated with spoken oracles, but are described as supported by the crown and as engaging in ritual dance and self-wounding. Presumably their wild behavior formed a comparison with the ecstatic, "mad" aspect of Israelite prophecy. See PROPHET §B2.

Canaanite sources themselves do not yield any references to prophets. The texts from Ugarit that have been connected with prophecy (in the wide sense) either refer to technical divination or are so unclear that no conclusions can be drawn. What little additional knowledge we have comes from an Egyptian text, a report on "The Journey of Wen-Amon to Phoenicia." Wen-Amon, who visited

Byblos in the first half of the eleventh century B.C., reports that, while the local prince was presenting offerings to his gods, one of his young men became possessed and delivered an oracle authenticating Wen-Amon as a messenger sent by the god Amon and demanding respect for the god and his servant.

4. **Syria.** One of the few texts from Syria, the stele of Zakir, king of Hamath and Lu'ash in central Syria during the early eighth century B.C., reports prophetic activity. While under siege, Zakir relates that "I lifted up my hands to Baal-Sha[may]n and Baal-Shamay[n] answered me [and spoke] to me by means of visionaries (*hzy*) and . . . (*ddn*). Baal-Shamayn [said] to me, 'Fear not, for I have made [you kin]g [and I will st]ay with you and rescue you.'" Although it does not say how the speakers received the message, the text seems to represent prophecy in response to prayer. One of the Aramaic terms used is the analogue of the Hebrew word *hōzeh*, which occurs in reference to some of the prophets in Israel. See PROPHET §B1.

5. **Mesopotamia.** As is the case with the Egyptian texts, a variety of materials from Mesopotamia have been labeled prophetic from one point of view or another.

a. **Akkadian "prophecies."** Some texts have been called prophecies because they contain predictions of coming events, although these predictions at least in part are written after the fact. In form some of the texts resemble the apodoses of omen texts; in some instances the protases are even preserved: "if a meteorite flashes . . . (protasis) Elam will lie waste; its sanctuaries will be destroyed . . . (apodosis)" (Biggs, pp. 122-25; see also METEORITES[S]). There are differences from standard omen texts, nevertheless, and the content may be classified as more like apocalyptic literature, in the sense that there is a general description of future events (see APOCALYPTICISM; APOCALYPTICISM[S]). One of these texts has turned out to be a speech by the god Marduk which tells the god's history and refers to future conditions of political and natural prosperity. Another is a speech by the deified king, Shulgi, who conveys a divine revelation. The text purports to foretell a period of trouble to be followed by a period of order and cultic reconstruction. Both these texts contain in part predictions after the events (twelfth century B.C.) and statements about future prosperity and order, somewhat after the fashion of apocalypticism rather than prophecy.

b. **The Uruk oracle.** This text dates from the nineteenth century B.C. and is somewhat unusual; unfortunately it is not fully preserved. A deity visits a man in an unspecified fashion and converses with him concerning Uruk and the establishment of a faithful ruler. The meaning of the message is contained in a damaged portion of the tablet and is therefore unclear. The man considered it important enough, however, to report to the king. The text may be an example of inspired speaking, but much of the desired information is lacking.

c. **Prophecy in the Mari texts.** The mixed cultural milieu of the Mari texts (see MARI; MARI[S])

has many ties with the Hebrew patriarchs and with early Israel. One of the most striking ties is the increasing evidence in the Mari texts (eighteenth century B.C.) for prophetic activity. The geographical range of the activity extends at least from Mari as far west as Aleppo.

i. **Speakers with titles.** The title *āpilu/āpiltu* is found with both men and women. It occurs only in the Mari texts and, apparently, in learned lexical lists. The title was presumably understood by the Mari scribes as an Akkadian designation, "answerer." One indication of the official status of these persons is an administrative text listing distributions from the royal stores to various persons—agricultural, commercial, and ship workers—including a certain *āpilu*, who receives a garment. The "answerers" are often described as related to a specific deity, such as Addu (Hadad), Lord of Halab (Aleppo); Shamash (of Sippar); Diritum; and Dagan (Dagon) of Tuttul. At times the "answerers" seem to operate as a group.

Another title is *assinnu*. At a later time this title becomes well known; it refers to a member of the cultic staff of the goddess Ishtar, associated especially with singing. Also, the *assinnu* may have been a eunuch. At Mari the *assinnu* is connected with Annunitum, a form of Ishtar.

The third title is *muhḫū/muhḫūtu*, "ecstatic," found with both men and women. The title is known from other Akkadian texts of this period, but not in connection with oracular speaking. The form cannot be separated from the later title, *mahḫū/mahḫūtu*, "ecstatic," which, perhaps by accident of discovery, is not specifically associated with oracular speaking. It is clear from both the older and the later texts that the "ecstatic" had an official role in the cult. A Mari text describing the cult of Ishtar (who is not specifically involved in any of the Mari prophecies) says, following reference to cult singers, "If during the monthly festival the 'ecstatic' has come (!) (but) he is not [ . . . ] to become ecstatic . . . (mention of a cage)." At the end the text says, "the watered-down beer (?) and the four . . . utensils that have been properly placed, they shall hold for the needs of the 'ecstatics'" (RA, XXXV [1938], 1-13). A text from Ugarit, dating toward the middle of the second millennium B.C., says that "my brothers bathe with their own blood, like *mahḫū* (pl.)," which is reminiscent of the activities of the Baal prophets in I Kings 18. See PROPHET §B2.

Another possible title, *\*qabbātu*, which would mean "(female) speaker," is probably to be understood as a personal name.

ii. **Speakers without titles.** Many of the persons who transmit messages from a deity are not given any special designation. It seems clear that these persons, some of whom are well known, were of private or lay status.

iii. **The setting of the oracles.** It is fortunate that the letters about prophetic activity often indicate something of the circumstances of the message. On occasion the oracle seems to be a response to a previous inquiry, as when a female "ecstatic" says, "O Zimri-Lim, do not go on a

campaign. Stay in Mari and I will continue to answer" (ARM X:50).

The oracle may also be in response to a sacrificial offering. One royal correspondent reported to the king that "(when) I offered a sacrifice to the god Dagan for the life of my lord, the 'answerer' of Dagan of Tuttul got up and spoke as follows, saying, 'O Babylon, . . . (an oracle against Babylon)'" (ARM XIII:23). Although this seems to be a favorable response to the offering, on another occasion the king is informed that his sacrifice has arrived and has been presented, cheering the whole country, but "the (male) 'ecstatic' got up before Dagan and spoke as follows, 'I (Dagan) am not given pure water to drink. Write to your lord so that he may give me pure water to drink'" (A.455, see Huffmon, pp. 211-12).

A number of oracles were delivered in the temple, but without any specific indication of a cultic impetus. In one report a certain Shelibum, an *assinu*, "in the temple of the goddess Anunitum, on the third day, . . . became ecstatic. 'Thus says Anunitum, "O Zimri-Lim, . . . (warning and assurance)'" (ARM X:7). In another report the temple administrator supplied information that "in the temple of Anunitum of the inner city, Ahatum, the young woman of the man Dagan-malik, became ecstatic and spoke as follows, saying, 'O Zimri-Lim, even if you despise me I will make sweet noises over you'" (ARM X:8). The temple administrator seems to have had some jurisdiction over such activity in the temple (cf. Jer. 29:26).

Revelation by dream, especially associated with private persons, tends either to take place in the temple or to involve a dream visit to a temple. Dream revelations have many parallels in Mesopotamian literature.

Some oracles seem to have a profane setting, even though they may concern cultic affairs, in that the speaker seeks out the king's representative in order to transmit a message for the king. For example, the governor of Terqa writes that "the (male) 'ecstatic' of Dagan came and spoke a word [to me] as follows, saying, 'The god sent me. Hurry, write to the ki[ng] that they dedicate (?) the funerary offerings to the spirit of Yahdun-Lim'" (ARM III:40).

iv. *The content of the oracles.* As illustrated above, the oracles may be either favorable or unfavorable to the king, the recipient of the overwhelming majority of the oracles (because perhaps of the nature of the evidence). The speaker identifies with the deity, speaking in the first person. Use is often made of the messenger form, "thus says the god so-and-so," and there are also references to being "sent" by the deity.

Most of the oracles are oracles of assurance, relating to the varied circumstances of the king. When the god expresses anger against the king's enemy, the king himself is indirectly assured. A variation on assurance is an oracle warning the king, e.g., about a coming revolt. Some oracles contain explicit complaints; e.g., note the "pure water" mentioned above. There may even be a veiled threat, as when the deity says "that which I have given I can take away" (A.1121, see Huffmon, pp. 204-5). Similar to these are the gentle reminders:

"Send [to] me quickly at Sippar, [fo]r (your) life, the throne intended for my splendid residence as well as your daughter whom I [Shamash] had requested of you" (A.4260, see Huffmon, pp. 206-7).

Not all of the oracles are directed to the king. One is a warning oracle for the citizens of Terqa. A young man had a dream in which he "saw" as follows: "[The god (said)], 'Do not rebuild (pl.) this temple. (If) you (pl.) rebuild it, I will make it fall into the river'" (ARM XIII:112).

v. *The acceptability of the oracles.* That these oracles represent a departure from proper practice in an outpost of Mesopotamian culture is indicated by the activity in response to them by the king's officials. They often acquire a lock of the HAIR and a snip of the HEM of the speaker and send them on together with their report, presumably for some kind of technical divination. Also, the king is frequently advised to check the message by means of the usual technical divination practice. Sometimes the reliability of the speaker was tested before reporting to the king.

d. *Prophecy in the Neo-Assyrian period.* In the seventh century, during the reigns of Esarhaddon and Ashurbanipal, there seems to have been an unusual degree of interest in a variety of types of communication with the divine world. In this period at least, Assyrian culture, which was somewhat provincial and which had a strong Aramean element, seems to have been receptive to prophetic oracular speakers.

i. *Speakers with titles.* None of the titles used for oracular speakers in the Mari texts recur in connection with such activity in the Neo-Assyrian period. The most common title, *raggimu/raggintu*, "proclaimer, announcer," borne by both men and women, does occur in texts from the latter half of the second millennium, but not in association with oracles. There are various indications that the "proclaimer" had a cultic role, although the evidence is not decisive. It is clear that the "proclaimer" might play a role in the substitute-king ritual.

Another title, *šabrú/šabrātu*, apparently "revealer," is equated with *raggimu* in one lexical text. This title occurs primarily in texts of Ashurbanipal. Again, there are indications that the "revealer" had a cultic role.

A third title, *šēlūtu*, "(female) votary," is used to identify one of the speakers in a long collection of oracles for Esarhaddon as a "votary of the king." Some dedicatory contracts make it clear that the "votary of the king" is someone dedicated by the king to the service of a deity. The nature of that service, however, is not known.

ii. *Speakers without titles.* Some collections identify the oracles as "from the mouth of so-and-so from such-and-such a city." The absence of a title in connection with these persons allows for the possibility that they had no official position that involved giving oracles. Unlike the situation in the Mari texts, however, there is no further information about these speakers and their status. They may have had some official position that was not mentioned. The speakers are both men and women in roughly equal proportion regardless of status.

iii. *The setting of the oracles.* The texts often point to some of the circumstances of the oracle. That the oracle may be in response to an inquiry, for example, is indicated by an oracle that seems to begin by quoting a question put to Ishtar: "How does she answer the disloyal ones? The word of Ishtar of Arbela, the word of the Queen of Heaven and Earth. 'I will look about and keep on listening, and I will search out the disloyal ones. I will put [them ?] into the hands of my king' (Langdon, pl. II).

Another oracle includes in itself a summary of the occasion, viz., crisis, complaint, divine reassurance, deposit of the written oracle, and presentation of the written oracle to the king to the accompaniment of ritual acts: "Now these rebels have incited against you, they have made you come out, they have surrounded you. You (Esarhaddon) opened your mouth. Now I, Asshur, have heard your distress cry. From the gate of heaven I soar down (?). I will surely overthrow (them); I will surely have fire consume them. You can stand securely among them. From your presence I removed (them). I made them go up to the mountain (s). I rain (ed) down hot stones upon them. I slaughtered your enemies. I filled the river with their blood. Let them see, let them praise me, for I am Asshur, lord of the gods. This is the (oracle of) well-being which is (placed ?) before the (divine) statue. This is the sworn tablet of Asshur. It comes in before the king upon a. . . . They sprinkle special oil, they make sacrifices, the incense burns, (and) they read out (the tablet) before the king" (Strong, pp. 637-39). Ashurbanipal's annals report a similar sequence (Streck, pp. 112-19).

Another oracle, not fully preserved, seems to have a treaty ceremony as its setting: "The word of Ishtar of Arbela to Esarhaddon, king of Assyria. The gods my fathers . . . (break) . . . You (Esarhaddon)/she (Ishtar) gave them water from a special jar to drink. You/she filled a beaker . . . with water from the special jar and gave (it) to them. 'You (pl.) say in your heart: "Ishtar is . . ." Should you (pl.) go to your cities and your districts, eat food and forget these oaths. (then) when you drink from this water you will remember me and keep this sworn agreement which I (Ishtar) made concerning (your obligations to) Esarhaddon'" (Strong, pp. 639-41).

Two letters to Esarhaddon that mention the substitute-king ritual refer to activities of a female "proclaimer" in connection with the rites, but whether the activities were by design or by special (divine) initiative is unclear.

iv. *The content of the oracles.* The Neo-Assyrian oracles mostly represent direct address by a deity through the speaker, though they lack an explicit reference to commissioning. The oracles may begin with a divine self-description such as "I am Ishtar of Arbela." The vast majority of the oracles express assurance to the king (or to the queen mother) in regard to domestic or external trouble, and feature phrases such as "fear not." The kind of criticism that is made of the king seems restricted to modest scolding for such behavior as failure to pay attention to the deity's former utterance. Perhaps this is why the oracles seem to

be more readily accepted than those in the Mari texts.

Most of the identifiable oracles derive from Ishtar of Arbela, from whom there apparently were special expectations of divine communication.

v. *Oracle collections.* Most of the oracles are preserved in collections, arranged with reference to the deity involved or, in the Ishtar collections, listed by the individual speaker. One speaker is even represented by two oracles, one in each of two collections. Although these oracles, as with the Mari activity, were delivered orally, at least some were written down almost immediately. There is evidence also for the transmission of oracle collections.

**Bibliography.** Most of the texts discussed can be found in trans. in J. B. Pritchard, ed., *Ancient Near Eastern Texts* (3rd. ed., with Supplement; 1969), often in rev. form. See also S. Herrmann, "Prophetie in Israel und Ägypten," *VTSup*, IX (1963), 47-65, Egypt; A. L. Oppenheim, *The Interpretation of Dreams in the Ancient Near East*, (1956), pp. 179-255, Anatolia and general; J. \***PROPHECY IN THE EARLY CHURCH.** Since prophecy was rooted in Israel's experience of the revelation of God's mind to his people through divinely chosen individuals (see HOLY SPIRIT §1), the early church understood it as a gift received at God's pleasure and for his purposes. It was not at one's own disposal.

1. *Antecedents to Christian prophecy.* Although some Jewish sources assert that prophecy had ceased in Judaism, others witness to its continuation. There were, however, certain modifications of the classical forms of OT prophecy.

In the later writings of the OT and in intertestamental literature prophecy manifests an increasing affinity with wisdom. For example, wisdom is said to reside in the "holy prophet" (Wisd. Sol. 11:1, meaning Moses; cf. 7:27), and Daniel the wise man is regarded as a prophet (4QFlor 2.3). This development is especially pronounced in apocalyptic writings, a genre that is perhaps to be viewed as the child of both prophecy and wisdom. The apocalyptic seers combine, within the context of a revelation of final and cosmic dimension, the prophetic vision and word of knowledge with the wise discernment of its meaning. As forerunners of Christian prophecy such apocalyptic writers are best represented in the book of Daniel and in the

Qumran scrolls. See APOCALYPSE, GENRE[S]; APOCALYPTICISM[S].

Prophecy and wisdom manifest a growing affinity because of, among other factors, the increasing association or the identification of both with Israel's Scriptures. From this standpoint prophecy can be understood not only as a word or vision or discernment from God, but also as the inspired exposition and application to the current scene of earlier prophecies (e.g., Dan. 9:2; IQpHab). In rabbinic tradition also the prophets were the earliest expositors of the law. But it is Daniel and the wise teachers of Qumran, the *maskilim*, who are the direct predecessors of the Pauline pneumatics (see SPIRITUAL GIFTS[S]) and, in important respects, of Jesus as well.

According to Matthew (1:20) and Luke (1:30-31, 67; 2:25-26, 36) a number of prophecies, by men and by angels, heralded the birth of Jesus. The testimony of JOHN THE BAPTIST, who was recognized as a prophet, signaled the beginning of Jesus' ministry (Matt. 11:9; 14:5; Mark 1:7-8; John 1:29-34).

2. **Jesus as prophet.** Jesus is identified in the gospels as a prophet, usually because of his miraculous powers, but also in connection with his crucifixion (Luke 13:33-34), his discernment (Luke 7:39; John 4:19), and his teaching in the synagogue (Luke 4:24). This teaching, which in the custom of the day included the exposition of scripture, was characterized by authority (ἐξουσία, Mark 1:22) and wisdom (σοφία, Mark 6:2). Since such exposition was recognized to be within the prophet's role, it may have contributed to the conviction that Jesus was a prophet.

3. **Early Christian prophecy.** This follows the model given by Jesus, and one of the tests of its genuineness is its witness to Jesus (I Cor. 12:3; Rev. 19:10). Prophecy appears as a gift from the exalted Lord and reflects the forms of prophetic utterance that characterized his earthly ministry—predictive oracle (Acts 11:27-28), inspired teaching and discernment (Rom. 12:6), and exposition of scripture. The "faithful sayings" of the Pastoral epistles (e.g., I Tim. 1:15, πιστὸς ὁ λόγος) may represent the teaching of a circle of prophets; "the Lord says" (λέγει κύριος) quotations of the OT very probably do (e.g., II Cor. 6:14-18). The latter contain within them a commentary-elaboration and application of the passage to the current situation. OT expositions like that in I Cor. 2:6-16, which appears to be the work of the pneumatics, follow a pattern well-known in Judaism, a pattern that is used also by Jesus (Matt. 21:33-44; Mark 12:1-11; Luke 20:9-17). In this area there appears to be a certain overlapping of the gifts of prophecy and of teaching.

Prophecy appears in the church as both the occasional utterance of various members of the community and the activity of some who are recognized to "have prophecy" (I Cor. 13:2) as a continuing ministry. Apparently only the latter are given the title "prophet" or, in the Pauline literature, the broader designation "pneumatic" (I Cor. 14:37; RSV "spiritual"). They may conduct their ministry in one congregation or throughout a region (Acts 15:22, 32; Did. 11:3 ff.), singly or

more often in groups (Acts 11:27; 13:1; cf. John 21:24; Rev. 22:9). Their message is to be "tested" by other prophets and only then to be received as the word of the Lord (I Cor. 14:29; I Thess. 5:19 ff.; I John 4:1; contrast Did. 11:7). The "testing" is not only to distinguish the Spirit's word from the speaker's natural impulses but also to identify and exclude false prophecy.

4. **False prophecy.** False prophets appear, implicitly or explicitly, in virtually all strata of the NT and in other early Christian literature. They emerge as opponents of Christ's true apostles and prophets (cf. Matt. 7:15; Mark 13:22; Acts 13:6; Did. 11:5 ff.; Herm. Mand. 11:7). They have a different spirit, marked by the proclamation of a different Jesus and a different gospel (II Cor. 11:4, 13 ff.; Gal. 1:6). They convey a teaching of demons (I Tim. 4:1; cf. Jas. 3:15), characterized by greed (Phil. 3:19; Rom. 16:18), by asceticism or sexual licentiousness (II Tim. 3:6; Jude 7-8; Rev. 2:20), and by a disparagement of Jesus (I Cor. 12:3; II Pet. 2:1-3; I John 4:1-3).

Because of the presence of false prophecy and the uncertainties involved in discerning it, the gift of prophecy itself, in spite of occasional revivals, gradually fell into disuse and in some measure into disrepute.

**PROPHECY, FALSE.** The canonical prophets often found themselves in conflict with other prophets who proclaimed messages fundamentally different from their own. In their view these opposition prophets, both male and female, were guilty of idolatry, immorality, or self-delusion. Jeremiah's accusations are particularly harsh: some prophets are drunken, adulterous, greedy liars. They have not stood in God's council or received a divine call (see COUNCIL, HEAVENLY[S]). Consequently, they prophesy lies and lying dreams, encouraging the sins of Israel. Despite this extreme language, the MT does not label these objects of prophetic scorn "false prophets." The LXX takes that step, using *pseudoprophètes* ten times (Jer. 6:13; 26[LXX 33]:7, 8, 11, 16; 27[LXX 34]:9; 28[LXX 35]:1; 29[LXX 36]:1, 8; Zech. 13:2).

Contradictory prophetic messages derive from the nature of prophecy itself. The twofold task—reception and articulation of the divine word—intro-

duced various possibilities for conflict. Either the authenticity of the revelatory experience could be denied, or the prophet's interpretation of the divine word in terms of his own faith could be challenged. Diverse traditions within Israel produced their champions, and interpretations of divine activity differed from time to time depending upon sacral traditions deemed normative.

Opposing prophetic words may indeed derive from Yahweh, according to canonical testimony. Sometimes contradictory messages are described as divine testing. At other times they approach the demonic, divine purpose being achieved regardless of the effect upon those who are deceived. Noteworthy examples of divine causality in regard to prophetic conflict appear in I Kings 13 and 22:1-40. Ezekiel states the matter boldly: "And if the prophet be deceived and speak a word, I, the Lord, have deceived that prophet" (14:9).

The presence of contradictory prophetic words, whether arising from the nature of prophecy or attributed to divine causality in a monistic universe, forced a decision upon those who heard both messages. Which word is authentic? The struggle to resolve this issue produced criteria for distinguishing bogus words from authentic ones. One set of criteria concentrated on the quality of the message: does it come true? (Deuteronomy); does it offer false hope? (Jeremiah); was it mediated through dreams or visions? (Jeremiah); is it given in service of Yahweh rather than Baal? (Deuteronomy). Another set focused on the prophet: has he stood in the divine council? (Jeremiah); has he been called by God? (Jeremiah); does he behave in an exemplary fashion? (Jeremiah). In time a different sort of criterion arose: did the prophet live during the period from Moses to Ezra? A similar one, the chronological, functioned in early Christian literature as well (Did. 11:3-12). Though useful, these criteria ultimately failed to distinguish authentic prophecy from its opposite. Several factors exacerbated the struggle among prophets: a desire for popularity and success (Jonah), royal wishes, tradition, and individualism. Small wonder prophecy fell into disrepute (Zech. 13:2-6) and was relegated to the remote past or anticipated future.

Modern scholars have made significant progress toward understanding "false prophecy." The criterion of fulfillment is inadequate (Hempel), leaving us with a pneumatic one (Quell) that stresses immediacy of the revelatory experience (Kraus) and a correct interpretation of the historical moment (Buber, Osswald; see HERMENEUTICS[S] §§5-6). Although prophets appeal to a number of credentials, in the last resort their call and simple affirmation suffice (Blank). "False prophets" are cultic functionaries, and Deuteronomy is a product of their work (von Rad). Still, fluidity prevails, for a true prophet can become false and vice versa (Harms).

Recent studies have opened up entirely new ways of looking at "false prophets." Disputes recorded in prophetic literature have yielded insights into the theology of so-called false prophets (van der Woude, Crenshaw), and quotations have il-

luminated their thought, leading to a positive assessment of opposition prophets (Crenshaw). A neutral reading of prophetic argumentation has suggested that the opponents of Isaiah and Jeremiah were engaged in the interpretation of (1) their call and (2) Israel's Torah, Mosaic or Davidic (Sanders), See TORAH[S].

\***PROVERBS, BOOK OF.** A collection of "wisdom literature" composed perhaps from the tenth to the fifth or fourth century B.C. The variety of the material it contains has made it the center of recent discussion about the nature and history of Israel's wisdom tradition (see WISDOM IN THE OT [S]). While some sections show the influence of non-Israelite didactic literature mediated through scribal education and the international relations of the royal court, much of the book seems to have been written to meet the intellectual demands of a wider circle of readers. The book reflects developments within the religion and theology of Israel which culminated in the elevation of "wisdom" into a theological concept of major importance.

**I. Literary forms.** Recent discussion has mainly concentrated on those forms likely to provide clues about the origin of Israelite wisdom literature and the milieu in which the various parts of the book were composed. The most evident formal distinction is that between the short, mainly one-line (i.e., single-verse) sayings which comprise the bulk of the book and the longer, connected poems, especially those in chs. 1-9. The view that the longer form developed from the shorter and marks an advance in literary skill has been abandoned. The longer wisdom poem has a long prehistory in the literatures of Egypt and Mesopotamia, where it lay ready at hand as a model for Hebrew authors. Many of the shorter sayings are masterpieces of compression, manifesting as great a degree of literary maturity as the longer poems. Length can therefore no longer be regarded as a criterion for dating the various parts of the book. It is also generally agreed that Proverbs is in no sense a collection of popular sayings. Although popular

material may sometimes have been utilized, the literary and poetical forms in the book are quite different from those of popular sayings which occur in the narrative and prophetic books.

Among the shorter sayings the most evident formal distinction is that between the "sentence" or statement (*Aussagewort*) and the "admonition" or precept (*Mahnwort*). The statement points to a fact drawn from experience and extracts from this no explicit conclusion or moral, e.g., 14:10:

The heart knows its own bitterness,  
and no stranger shares its joy.

Such statements are frequently open to more than one interpretation. Although it may be possible to draw practical advice from them, their purpose is to stimulate further thought.

The admonition, on the other hand, offers clear-cut, practical advice and is expressed in the imperative mood, e.g., 14:7:

Leave the presence of a fool,  
for there you do not meet words of knowledge.

Although it is not always possible to distinguish between the functions of these two types of saying, it is reasonable to seek the origin of the latter in some kind of educational setting, and it is commonly held that its imperative form points to the influence of the Egyptian type of wisdom book known as the "Instruction," which was essentially educational literature. Recently, however, it has been argued that it originated in a native Israelite "clan wisdom" (see §2c).

Whatever may be the origin of the shorter admonitions, the existence of Egyptian influence on the longer poems of chs. 1-9 can hardly be doubted, since their resemblance to the Egyptian instruction literature extends to many details of style and vocabulary, and also of thought (see §3a).

**2. Milieu.** There is no general agreement concerning the circles in which the book of Proverbs was composed. Four theories merit discussion.

**a. The court.** From the time of David onward, learned scribes or secretaries were employed at the royal court in Jerusalem. The ascription of literary wisdom to Solomon (I Kings 4:29-34 [H 5:9-14]), the attribution of all or part of the book to him (Prov. 1:1; 10:1; 25:1), and the mention of the literary or editorial activity of the "men of Hezekiah" (25:1) all testify to a tradition of a connection between the court and the book of Proverbs which can hardly be entirely without foundation, although the use of Solomon's name does not prove that he himself composed any part of it. The fact that there was a concentration of educated men at court makes court authorship of some parts of the book a possibility, although there is no uncontroversial, direct evidence of this in the book itself. The difficult word *העתיקו* (RSV "copied") in 25:1 cannot be shown to refer to authorship; nor can it be demonstrated that the "wise" or clever men of 22:17; 24:23 are to be identified with these court scribes. The headings of 30:1; 31:1 clearly rule out Israelite court authorship for those sections of the book.

**b. Schools.** The theory that Israelite schools were the milieu in which Proverbs was written is not a simple alternative to court authorship, since such schools might well have had a close connection with the court. It has been argued that it was through such schools that Egyptian influence on Proverbs was mediated. In fact there is not a single unambiguous reference in the OT to the existence of a formal system of education. Nevertheless, it has been argued on the analogy of the well-documented educational systems of Egypt and Mesopotamia that the establishment under David and Solomon of an organized state with international contacts must necessarily have entailed the adoption of similar educational institutions, and that Proverbs is mainly textbook literature written for the training of scribes. The existence of schools in ancient Israel can neither be proved nor disproved; but it should be remembered that Israel even at the height of its power under the united monarchy was never really comparable to the great empires. The supply of scribes needed for the business of the court and for other purposes may have been adequately assured by the training of boys by their own fathers within a relatively small number of hereditary scribal families, as was the case with other professions. Such scribal families could well have been familiar with foreign wisdom literature. Such domestic education, however, would have been a very different thing from the institutional school.

**c. Clan wisdom.** It has recently been argued that the admonitions in Proverbs are ultimately derived from a premonarchical institution in which the heads or "fathers" of individual clans formulated ethical rules to be observed by the members of the clan. However, the existence of such an institution has yet to be proved, and the evidence so far offered for it is precarious.

**d. An educated class.** Most recently there has been an increasing tendency to take a broader view of the context within which Proverbs was composed. It is now recognized that the book is not purely educational in character, and also that there was an educated class in Israel whose interests some parts of the book may have been especially written to serve. Such people were seeking intellectual stimulation and entertainment rather than education in any narrow sense. While some parts of Proverbs undoubtedly bear the marks of the textbook, there is a substantial amount of material which could have been fully appreciated only by an adult, mature readership.

**3. Standpoint and purpose.** The composition of the book represents a continuing tradition, but one which underwent considerable modification in the course of time. Its authors were not immune from the religious developments which took place in Israel as a whole. The form of the book and the absence of explicit reference to Israel's history and religious traditions make the task of identifying earlier and later material an exceptionally difficult one. But it is perhaps possible to trace very broadly three stages of development.

a) Whatever may be the extent of the contribution made by a premonarchical Israelite "wisdom," foreign wisdom literature, especially that of

Egypt, exercised considerable influence on the early stages of the composition of the book. This is particularly noticeable in the section dependent on the Egyptian *Wisdom of Amen-em-opet* and in the long poems or "discourses" which form a substantial part of chs. 1-9. See PROVERBS, BOOK OF 88.

Egyptian wisdom was not irreligious, but it was more concerned with the overarching order of the universe—*maat*—than with the cult of particular gods. The ideal was conformity to this divine order, which would confer "life" in the sense of well-being and prosperity. This point of view is reflected in the earlier material in Proverbs, although there is no equivalent here to the Egyptian *maat*. Wherever a supernatural power is mentioned it is Yahweh, who is regarded as the observer and supreme arbiter of human destiny. The other aspects of Yahweh's character which loom so large in the rest of the OT are, however, noticeably absent. It is assumed that it is within man's own power to adjust his conduct successfully to the demands of the world in which he lives, although in both literatures the limits of this freedom are also recognized (cf. Prov. 16:1-7, 9, 33).

b) This confidence in man's ability to solve his own problems expresses an attitude to life very different from that of traditional Yahwism with its insistence on the total commitment of Israel as a people to the will of Yahweh. The second stage in the development of Israelite wisdom was an attempt to reconcile the two traditions through the recognition that Yahweh himself is the source of true wisdom: hence there can be no contradiction between truths learned through human experience and Yahweh's commands revealed through priest or prophet. Phrases like "the fear of the Lord," which were broad enough to embrace all aspects of moral and religious conduct, played an important part in this synthesis: thus the statement in 13:14 that

The teaching of the wise is a fountain of life,  
that one may avoid the snares of death

is, as it were, glossed in 14:27, which asserts that

The fear of the Lord is a fountain of life,  
that one may avoid the snares of death.

9:10 is even more explicit:

The fear of the Lord is the beginning of wisdom,  
and the knowledge of the Holy One is insight.

This bringing together of traditional wisdom and the Yahwistic tradition led to some modification of the pragmatic and to some extent morally neutral character of the former. This can be seen, for example, in the way in which certain words characteristic of wisdom teaching have acquired new meanings which reflect Yahweh's condemnation of self-confidence and self-interest, which had previously been regarded as virtues. Thus *חָכְמָה*, which in most passages (e.g., 5:2) is regarded as a desirable quality (translated in RSV by "discretion" or "prudence"), clearly has a bad sense in 12:2 (RSV "evil device"), where Yahweh condemns the man who is given to such self-interested and self-cen-

tered calculations. Through such evidence it is possible to conclude that Proverbs gradually received a new theological orientation despite the fact that its characteristic wisdom forms remained unchanged. This process is easiest to detect in chs. 1-9, but undoubtedly affected chs. 10-29 as well.

c) A further theological development is to be found in chs. 1-9, especially in 8:22-31. In these chapters "wisdom" is frequently personified as a woman. Originally this personification, perhaps partly modeled on the Egyptian *maat*, was probably simply a literary device to dramatize the importance of the father's instruction to his son. In 8:22-31, however, wisdom is represented as a being closely associated with Yahweh himself, created before the world and present when that act of creation was performed; and as subsequently (vs. 31)

rejoicing in his inhabited world  
and delighting in the sons of men.

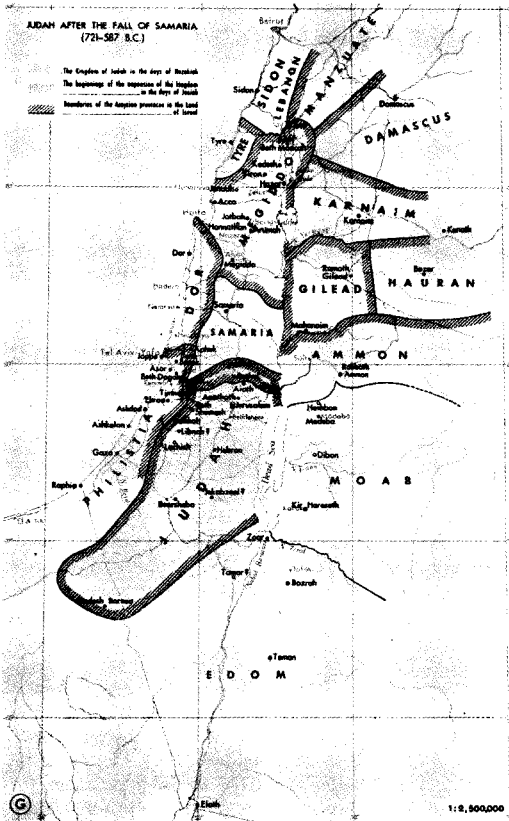

This new theological insight provided the basis for an entire theology of creation which put human skill and endeavor in their proper place: on the one hand, man's intelligence and his enterprise are recognized as God-given and so legitimate; on the other, their subordination to God in his service provides a framework within which all human activity must operate. With this insight the wisdom tradition ceased to be anthropocentric and found its proper place in the theological world of Judaism.

1. **The categories of the Psalms and their origin in worship.** Gunkel perceived that the Psalms did not originate as literary works, but arose in worship; they were spoken or sung in various ways and on various occasions of worship and were transmitted orally before they acquired written form in small collections (see *PSALMS, BOOK OF* §A2). Gunkel assumed that they were used in a number of quite different worship situations, but his pupil Mowinckel equated worship almost entirely with the major feasts (cult=festival cult) and tried to demonstrate that the vast majority of the Psalms belonged to the Throne Ascension Festival, which was analogous to the Babylonian New Year's Festival (*Psalmstudien II*, 1921-24; see *NEW YEAR(S)*). In a later work, *The Psalms in Israel's Worship* (1951 [ET 1962]), Mowinckel modified his position and came closer to Gunkel's view.

There is still disagreement as to how closely Israel's psalms were related to the cult of neighboring civilizations, especially to the fertility cult (which was concentrated in cyclical annual festivals) and to the cult of sacred kingship. The extreme position, advocated by the Scandinavian and British "Myth and Ritual School" (especially Engnell and Hooke), that the OT psalms were all or almost all derived from a common Near Eastern cultic ideology, is no longer widely held. It cannot be denied that the cultic practices of Israel's neighbors had considerable influence on Israelite worship, as can be seen in the cult as practiced in Jerusalem. Nevertheless, we must assume that Israelite worship, as reflected in the Psalms, was closely related to the life of the local people in all its variety. This is shown by the prominent role which Israel's history plays in the Psalms (in this respect they are distinctly different from the psalms in other ancient Near Eastern nations); by the presence in the narrative and historical books of components that make up the Psalms (e.g., the shout of praise, the vow, the brief lament, the petition); and by the distinction between the psalms of lament and praise of the individual and those of the community. The experiences of the individual's personal life are different from those of the nation, and therefore each has its own language. As a result, Israel's worship came to include procedures concerned with the individual as well as with the entire nation.

a. **Psalms of lament.** In contrast to a lament for the dead, which looks backward, the lament in the Psalms is voiced in order to alter a threatening situation, and looks forward. The laments by the people (approximately 10 in number) and by the individual (approximately 50) comprise a major

**\*PSALMS, BOOK OF.**

1. The categories of the Psalms and their origin in worship

part of the Psalter. Laments by the people: Pss. 44; (60); 74; 79; 80; 83; 89; (90); Lam. 1-5 (esp. ch. 5); Isa. 63-64; Jer. 14-15; Hab. 1; the motif of this category is found in many other passages. Laments by the individual: Pss. 3-17 (except 8, 9, 15); 22-28 (except 24); 35-43 (except 37; 40A); 51-64 (except 60); 140-143; ten scattered psalms; Lam. 3; the laments of Jeremiah; the laments of Job.

Laments are connected to a specific cause, a threat to the people or an individual. A fast is proclaimed (I Kings 21:9, 12; Jer. 36:9), and all the people, including women and children, are summoned (Joel 2:16; Jonah 3:5). The community is sanctified (Joel 1:14) and enjoined to continence, the wearing of sackcloth, and expressions of humility, pleading, and weeping before Yahweh (Judg. 20:23, 26; Jer. 14:12). After the Exile, lamentation was replaced by public confession (Ezra 9).

From I Sam. 1:9-18 and Isa. 38:1-8 we can only guess at the form of worship in which the individual lament was used, and we have no further information. A part of the procedure is God's answer, which indicates that God has heard the lament. This "oracle of salvation" is mentioned in Lam. 3:57: "Thou didst come near when I called on thee; thou didst say, 'Do not fear!'" (cf. II Chr. 20:14-15). This oracle of salvation is not included in the lament itself, but it is often indicated by the sudden change in what the one making the lament says (Pss. 22:19-24 [H 20-25]; 28:4-7; 6:7-9 [H 8-10]). God's answer is seen more clearly in the lament by the people (Pss. 60:6-9 [H 8-11]; 85:8 [H 9]; Isa. 33:10-13; Jer. 4:1-2). God gives a negative answer in Amos 7:8; 8:2; Jer. 14:10; 15:1-4. In the laments by the people the answer is often given by a prophet, and in the individual laments, by a priest.

The psalm of lament has a regular structure, but it never becomes stereotyped. The major parts are address to God, lament, confession of confidence, petition, and vow of praise. God is addressed by name only, in contrast to the Babylonian psalms, where a large number of divine attributes are mentioned. Often the address is followed directly by an introductory cry for help. The lament is in three parts: (1) lament over one's personal suffering (in first person singular or plural); (2) complaint about the foes; and (3) complaint against God, especially with the questions "why?" and "how long?" This threefold division corresponds to the belief that mankind was created in these three relationships. These divisions are expressed in a variety of ways. The first person plural lament can be expanded into an impressive description of the threat to the nation, as in Lam. 5. The complaint against the foes is expanded in one part of the lament of the individual to a description of the foes, or of the godless. The complaint against God found its greatest expression in the book of Job.

The lament leads to the petition, the most regular part of the psalm of lament. The transitive petition, which asks for something specific ("give us . . .") can be distinguished from the intransitive petition, which does not request some favor but pleads for deliverance from danger. This

second type of petition is in two parts: (1) the request for God to be attentive ("Come!" "Rise up!" "Hear!" "Turn to us!") and (2) the subsequent request for God to intervene ("Help us!" "Deliver me!"). Various motifs may be combined with the petition in order to move God to intervene. They may refer to God (Ps. 79:9), to the foes (79:10), or to the one making the prayer. One of those motifs is the confession of sin, and where confession is especially stressed we may speak of a "psalm of confession" (Pss. 6; 32; 38; 51; 102; 130; 143). Instead of a confession, however, the insistence on one's innocence may provide the motif (Pss. 5; 7; 26). Schmidt assumes that there was a whole collection of prayers of those who were unjustly accused.

In the individual lament the confession of confidence usually comes between the lament and the petition. The one praying balances the lament by an expression of trust in God (Pss. 3:3 [H 4]; 13:5 [H 6]; 13:14 [H 15]; 52:8 [H 10]; 71:14), and often also the assurance of being heard (Ps. 31:3-5 [H 4-6]; Lam. 3:25-30). The psalms of lament never end with lament but always move on in some way to express the confidence that God will send help. In many psalms the expression of confidence is already contained in the initial address to God (Ps. 80:1-2a).

In the lament by the people there is often a reminder of God's earlier saving deeds instead of the confession of confidence (Ps. 80, in the metaphor of the vine; Pss. 44:1-8 [H 2-9]; 74:12-17; 85:1-3 [H 2-4]; Isa. 63, 64). It is here that the historical traditions of Israel are expressed most clearly in the Psalms.

Many of the individual laments conclude with a vow to praise God (Pss. 13:6 [H 7]; 22:22 [H 23]), but this is seldom the case in laments by the people. The vow is often followed by praise of God (13:6 [H 7]; 22:23-31 [H 24-32]), the same form that begins the individual psalm of praise (cf. 13:6 and 30:1). The vow to praise expresses the process, found in many religions, by which the one who cries out enters a permanent relationship with God (50:15).

The structure of the individual lament is shown clearly by a comparison of the short Ps. 13 with the long Ps. 22; for all their differences they have the same structure. Through the centuries this structure underwent many changes, producing various mixed forms, for example, mixtures of parts of individual laments with laments by the people. Certain parts gained prominence (e.g., the description of the foes); others disappeared, including the accusations against God. The petition came to overshadow the lament, and the confession of confidence developed into independent psalms (e.g., 23; 123). The first person singular lament became the lament of human mortality (Pss. 39; 49; 90). Conscious reflection and wisdom motifs came to be combined with lament. See PSALMS, BOOK OF §B2e.

*b. Psalms of praise.* In the OT praise is the most frequent expression of a positive relationship to God. The OT has many lexemes for praise (הלל, ירה, ברך, גדל, רומם, and others), whose meaning is difficult to express in modern languages.

They include semantic components such as adoration, awe, and thanks, which later were expressed in separate lexemes. To praise God is really to affirm him, to acknowledge him in his work and in his being. The OT psalms of praise, which are both prayers and songs, take two forms, declarative (תרה) and descriptive (תהלה), commonly called "psalms of thanksgiving" and "hymns." The verb *הרה* is usually translated as "give thanks," but its basic meaning is "praise." In the OT it is never used of one human being "thanking" another. Our word "thank" is included in the meaning, but does not fully express it. Declarative praise (תרה) is the recounting in praise of God's saving acts for his people and for individuals. Descriptive praise (תהלה) is the praise of God in his being and his activity as a whole. See PSALMS, BOOK OF §B2c-d.

i. *Declarative praise by the people* is found in the Psalter only in Pss. 124; 129; 66:8-12, and isolated motifs. Miriam's song in Exod. 15:21 is probably the oldest such song in the OT. It consists only of an exhortation to sing and a two-sentence report of what God had done. The context of Exod. 14-15 shows that declarative praise is the immediate reaction to what God does. After the Conquest, its place was taken by the song of victory (Judg. 5, the song of Deborah; Judg. 16:23-24, the Philistine song of victory; and a late imitation, Jth. 16). In the Psalter we encounter it only in isolated motifs (118:15-16; 18; 68; 149). The motif of God's epiphany is a part of the song of victory (Judg. 5:4-5; Pss. 18:7-15 [H 8-16]; 68:7-8 [H 8-9]). The epiphany is found in other contexts in Pss. 50:2-4; 77:16-19 [H 17-20]; 97:2-5; 114; Deut. 33:2-3; Mic. 1:3-4; Nah. 1:3b-5; Hab. 3:3-15. God's coming down is depicted in mythopoetic images reminiscent of Egyptian and Babylonian psalms. But in the OT the mythical action is replaced by Yahweh's shaking heaven and earth as he comes to the aid of his people. See THE EPIPHANY IN THE OT[S].

ii. *Declarative praise (or thanks) by the individual* (Pss. 9; 18; 22:22-31 [H 23-32]; 31B; 32; 34; 40A; 66B; 92; (107); 116; 138; Jonah 2; Lam. 3:52-57; Eccclus. 51; Pss. Sol. 15:1-6; 16:1-15; Odes Sol. 25; 29; the THANKSGIVING PSALMS from Qumran). Declarative praise (Ps. 66:16-19) is connected with the presenting of a sacrifice (or vow) of praise (66:13-15). In Hebrew both are called *הרה*. Pss. 22:26 [H 27] and 116:13 allude to an accompanying sacrificial meal. The occasion is the fulfillment of a vow made in a time of great danger (116:14). Similar practices are known in other religions. The one who has been rescued recounts to a circle of hearers what God has done for him, and they are often exhorted to join in the expressions of praise (Pss. 30:4 [H 5]; 34:3 [H 4]). This might be the origin of the imperative call to praise. Praise was gradually separated from sacrifice. Its permanent significance is shown by the liturgy in Ps. 107, in which four such psalms of praise are woven into a hymn of praise of the community. Some psalms of this category contain wisdom motifs combined with praise. The further movement away from sacrifice is seen in the apocryphal psalms and IQH, where instruction and reflection are the dominant features.

The structure of this category is remarkably constant. The vow to praise from the end of the lament reappears at the beginning of the psalm of praise as an introduction (Ps. 34:1 [H 2]). This is often followed by an introductory summary (116:1). The main part tells what God has done and includes a looking back to the time of need and a recounting of the rescue ("I cried to him"; "he heard"; "he drew me out"). The danger is often described as being bound or being near to death, and rescue as deliverance from death (Barth). At the end, declarative praise often passes into descriptive praise, as the one who is recounting his rescue broadens his view to include the whole of God's activity (Jonah 2:9 [H 10]; Pss. 18:30 [H 31]; 22:28 [H 29]; 118:5, 8). The life that has been bestowed anew derives its meaning from the praise of God (Pss. 40:3-5 [H 4-6]; 92:15 [H 16]; 118:17).

iii. *Descriptive praise (hymn)* (Pss. 8:19A; 29; 33; (47); 57:7-11 [H 8-12]; 65; 66; 89:5-18 [H 6-19]; 93-99 [except 94]; 100; 103; 104; (107); 111; 113; 117; 134-136; 139; 145-150). See also the doxologies closing groups of Psalms (41:13 [H 14]; 72:18-19; 89:52 [H 53]; 106:48; 150), and in Micah and Amos; Isa. 6:3; 12; Jer. 10:6-16; and isolated statements in various psalms of other categories. Outside the Psalter the category is most fully developed in Second Isaiah and in Job, and it is encountered again in Chronicles, in psalms of the Apocrypha, IQH, and in the NT, especially in Luke 1-2 and in Revelation.

Descriptive praise is not restricted to a single cultic occasion. It can be sung on any occasion on which the community wants to honor God—the great festivals, the offering of various sacrifices, and on occasions in the temple or in the family, such as Passover or sabbath. The books of Chronicles indicate the great significance of praise for the postexilic community, and the book of Tobit shows how the pious Jew of the Diaspora took part in worship which utilized the words of the psalms of praise.

The structure of psalms of this category is seen most clearly in Ps. 113. It is introduced by an imperative call to praise, a characteristic of the category and a feature that distinguishes it from the Babylonian hymns. The imperative (vs. 1) is carried forward by jussives (vss. 2-3). The main body of the psalm praises God's majesty (4-5) and his goodness (6b-9). Between these two affirmations ("who is seated on high, who looks far down," 5b-6a) there is a tension which can be developed in various ways, and consequently the structure is not so fixed as in other categories. Ps. 33 is an example of how the themes are developed. God's majesty is depicted as that of the Creator (vss. 6-9) and the Lord of history (vss. 10-12). His goodness is seen in his helping his people (vss. 13-19a) and his mercy toward all creation (19b). The structure of Ps. 136, among others, is similar.

Prominent in this category are groups of psalms which indicate several different occasions of worship. Praise is a component of most liturgical psalms (see §c below), especially the festival psalms (24; 118; 93-99). One group can be designated as "creation Psalms" (8; 19A; 104; 139; 148; see

Albertz). In a psalm like 139 we can observe an abandonment of the worship context and a movement to religious reflection, as in Ps. 19, where the praise of the Creator is combined with praise of the Torah (cf. also Ps. 119). In Ecclus. 39 praise of the Creator has become contemplation of nature. Praise of the Lord of history develops into history psalms, as can be seen in the contrast of Ps. 33:10-12 with 136:10-22 and Ps. 78 with 105.

**c. Liturgical psalms.** To this category only those psalms should be assigned which give clear indication that they were used on cultic occasions. It is futile to try to construct a festival liturgy out of a combination of separate psalms. Various liturgical procedures are hinted at in the psalms, but the psalms are not liturgies, and the Psalter is not the agenda for a festival.

i. In Ps. 66, an individual psalm of praise is combined with the "sacrifice" by means of praise, which is expressed in vss. 13-15. In the same context a sacrificial meal is mentioned in Pss. 22:26 [H 27] and 116:13. In Ps. 118 the sacrifice is in connection with a procession, which marches through the gates of the temple while the choir sings antiphonally. In stately procession, the worshipers move around the altar, carrying branches in their hands (vs. 27). From the temple the priests pronounce a blessing on the procession. Ps. 107 is a composite of four songs of praise for deliverance, combined for use in worship. It begins with a general call to give praise (vs. 1) and ends with praise that describes God's work (vss. 33-43).

ii. *The songs of pilgrimage* (only Ps. 122; allusions to pilgrimage in Ps. 132:7; Isa. 2:3 [=Mic. 4:2]; Isa. 30:29; Jer. 31:6; Gen. 35:3) move between the beginning of the journey and the arrival at the sanctuary. Pss. 120-134 have the superscription "Song of Pilgrimage," but in the strict sense it applies only to Ps. 122. Traveling to the sanctuary was counted as a part of the act of worship. Ps. 122:1-2 tells of starting out and arriving at the temple; vss. 6-9 hail the city of Jerusalem by wishing blessings on her.

iii. *The songs of Zion* (Pss. 46; 48; 76; 84; 87; 132) have much in common with the pilgrimage songs. Here the originally mythical motif of the mountain of the gods in the north is joined with the choice of Zion as the mountain of God, with temple and holy city, and the protection of the city of God from the attacks of the enemy is joined with the battle of the nations outside the gates of the city. God's victory is celebrated in a procession (Ps. 48:12-14 [H 13-15]). These "Zion traditions" go back to pre-Israelite, Canaanite cultic tradition about Jerusalem. Ps. 76 looks forward to a future victory of God in his judgment of the nations.

iv. *Psalms of blessing.* As the worshipers leave the sanctuary, a blessing is bestowed on them; this is one of the most important parts of Israelite worship. In Ps. 118 the priests respond to the request of the worshipers (vs. 25) with the words, "Blessed be he who enters in the name of the Lord! We bless you from the house of the Lord" (vs. 26). The conclusion of Ps. 129 and Ps. 134:3 are similar. The goal of the procession in Ps. 24 is to receive a blessing (vs. 5). The whole of Ps.

67 is a psalm of blessing, in which the congregation receives the blessing in response to its request (cf. Ps. 115:9-15). In the collection Pss. 120-134 more is said about blessing than is usual in the Psalter, because the goal of a pilgrimage is to receive a blessing. By contrast, in Pss. 91 and 121 (cf. Job 5:19-26) the blessing is bestowed on an individual. The priest addresses the petitioner, and, in response to the confession of trust (Pss. 91:2; 121:2), bestows the blessing.

v. Ps. 24:7-10 apparently reflects a *procession* in which the ark is carried into the temple. In antiphonal form, entrance is demanded for the "King of glory." Some scholars hold that Ps. 132 is also part of a procession with the ark, and that the description in Josh. 3-4 of the crossing of the Jordan reflects such a procession.

vi. Those who ask what are the conditions for entry into the temple are given *instruction* in Ps. 15 and Isa. 33:14-16 (cf. the instruction in Mic. 6:6-8). This type of instruction has extensive affinities in the history of religions, and similar phenomena are common. A distinctive development is found in the Egyptian Book of the Dead, with its instruction for entering the land of the dead.

**d. Royal psalms** (Pss. 2; 18; 20; 21; 45; 72; (89); 101; 110; (132); 144:A). All the surviving royal psalms refer to historical kings of Israel and Judah. They were admitted to the postexilic Psalter because they were applied to the expected future king. This interpretation has its roots in the royal psalms themselves, where the honor and glory ascribed to the king far surpass the reality of the kingdoms of Israel and Judah. He sits at God's right hand (110:1) and is addressed as "God" (45:6 [H 7]). Such exaltation of the king stems from the language of the ancient Near Eastern sacral kingship (see KING, KINGSHIP §2). Ps. 89 is based on the Nathan oracle (II Sam. 7), and Ps. 45, a thoroughly secular song, was designated as the wedding hymn of the king. Petitions and thanksgiving on the king's behalf are prominent in Pss. 20; 21; 72; 132. The royal psalms are too diverse, however, to form a category. See PSALMS, BOOK OF §B2b.

**e. Psalms of Yahweh's kingship** (throne ascension psalms: Pss. 47; 93; 95-99). These psalms led Mowinckel to assume the existence of a festival for the ascension of Yahweh to the throne, analogous to the Babylonian New Year's Festival. This thesis was widely accepted, and other scholars proposed variations of it. Weiser advanced the idea of a "Covenant Festival" and H.-J. Kraus a "Covenant Renewal Festival" and a "Royal Zion Festival." More recently reservations have been expressed by Kraus, Westermann, and others. It is clear that these psalms were used in worship, perhaps at festivals, and that they honor God as king (see KING, GOD AS[S]). They are, however, not a separate category, but are descriptive praise of God (hymns). Only Ps. 47 depicts God's assumption of royal power, in imitation of the ceremony of an early king. Pss. 96:13 and 98:9 proclaim God as judge of the world. As hymns they do not have any form in common, and only the shout "Yahweh is (has become) king!" is shared by them all. (On the translation of this expression, see Michel.)

By borrowing the practices of the coronation of an earthly king, the congregation celebrates in these psalms the awaited future kingship of God over all the world. These psalms are significant background for the NT concept KINGDOM OF GOD.

**f. Wisdom or didactic psalms.** In the Psalter wisdom sayings are found isolated (127:1-2, 3-5; 133) or as the conclusion of a psalm (111:10) or as parts of a psalm (37:5, 8, 16, 22, 27). This shows that in later times psalm traditions and the wisdom traditions converged. Identity of content is seen in the contrast of the ungodly and the pious. Ps. 37 is a wisdom poem with this theme, as is Ps. 1, placed as prologue to the Psalter. The contrast in Pss. 112 and 128 is similar. For the declaration of the blessedness of the godly, as in Proverbs, see Pss. 34:8 [H 9]; 40:4 [H 5]; 41:1-2 [H 2-3]; 84:12 [H 13]; 119:1-3.

The sufferings of the pious caused by the success of the ungodly lead to reflections that resemble wisdom material (Pss. 39; 49; 73). The starting point of Ps. 73 is the consideration of the happiness of the ungodly. The mood changes with the realization that the wicked will be destroyed, but the one offering the prayer can rely on God's help, even to the point of death. In this context the lament by the individual evolves into a lament over human mortality in Pss. 39; 49; 90 (cf. Job 7; 9-10; 14).

Reflective thought that resembles wisdom literature is also found in psalms of praise, especially Ps. 34, where the one who is describing his deliverance begins to urge his hearers to fear God. Compare also Ps. 92:9-15 [H 10-16] and the conclusions of Pss. 107; 111. How such reflections were combined with praise of God can be seen with striking clarity in Ps. 139. In the postcanonical psalms, wisdom language becomes more prominent (Eccus. 39; 42; Pss. Sol. 3). See PSALMS, BOOK OF §B3; WISDOM IN THE ANE[S]; WISDOM IN THE OT [S].

**2. Psalms in the ancient Near East.** In many religions the two basic forms of calling out to God, praise and thanksgiving at one pole, and lament and petition at the other, have taken form in spiritual songs similar to the Psalms. This is especially true of the Mesopotamian psalm literature (see Widengren, Falkenstein, and von Soden). In the Akkadian psalms the same major motifs of praise of God, lament, petition, and vow of praise appear. There is close correspondence even in the use of figurative language, such as the description of foes as dangerous wild beasts and their threats as the setting of traps and snares. In both cultures the concluding vow of praise is similar, often word-for-word the same.

There are, however, significant differences. In the Babylonian psalms, lament is merged with praise, so that a psalm of lament may be introduced with wide-ranging praise of God. In Israel the two modes remained distinct. A piling up of attributes of God in the psalm introduction is typical of Akkadian psalms, but in Israel this is virtually unknown, as is the combining of a psalm of lament with the swearing of an oath, found in many groups of Akkadian psalms.

Egyptian psalms are even further removed from

those of the OT, but even here there are frequent affinities in the praise of God. The most striking is the similarity of Ps. 104 to Akh-en-aton's hymn to Aton (ANET [2nd ed.], pp. 369-71).

Ugaritic influence on the psalms of the OT has been particularly stressed by Dahood (see POETRY, HEBREW[S]; cf. Donner). Many scholars hold that Ps. 29 was originally a Canaanite psalm, and Canaanite motifs may be found in Pss. 19:1-6 [H 2-7]; 68; 82; 93-99. There are also many correspondences in grammar and in poetic form, as, for example, the threefold parallelism in Ps. 93.

**3. Poetic form of the Psalms.** See PSALMS, BOOK OF §B1; POETRY, HEBREW[S].

**4. The significance of the Psalms.** The relation of men and women to God clearly is expressed in the form of dialogue throughout the OT. For this reason the human response to what God says and does serves to provide cohesiveness to the religion of Israel. The polarity of lament and praise encompasses the whole of human existence in its dependence on God, both in the life of the community and in that of the individual. The swing of the pendulum from lament to praise is more sudden and more thorough than is usually the case with the alternation between petition and thanksgiving in our prayers.

Israel's response to God in lament and praise was expressed as a cry from the depths, and pleading, as clinging to God, as praise voiced by the one rescued, as comprehensive praise of the majesty and the goodness of God, and as such it accompanied the individual as well as the nation through the centuries, changing, yet remaining fundamentally the same. The great significance of the Psalms for the life of the nation is seen in Second Isaiah, and for the life of the individual in Job. In both writings the language and the motifs of the Psalms are a major constituent. It is seen also in the continuing history of psalm writing in the postcanonical literature, especially in IQH, in Luke 1-2, and in Revelation. It is seen also in the way that the Psalms have lived on in Jewish and Christian worship down to the present.

\***PSEUDEPIGRAPHA** [ψευδεπίγραφα, with false superscription, Gr.]. Jewish writings of the second temple period resembling the Apoc. in general character, yet not included in the Bible, Apoc., or rabbinic literature. The use of the term "Pseudepigrapha," however unfortunate in the confusion it engenders, has become firmly entrenched. It seems likely to remain current, although the inherent unclarity about the scope or range of literature denoted by it also seems likely to persist.

1. **New directions in the study of the Pseudep.** There has been a growing recognition of the intrinsic interest and importance of this literature. Scholarly work has centered chiefly on the investigation of the textual traditions, the establishment of critical editions, and translations. Attempts have been made to apply methods of form and redaction criticism as developed in biblical studies, and also structural principles, to the study of the books, although there is a growing awareness of inherent characteristics of the Pseudep. which differentiate them from biblical writings.

2. **The scope of the Pseudep. and the individual books.** Advance in the study of the books themselves has been uneven, with those represented among the DEAD SEA SCROLLS receiving most attention. The range of works actively being considered by scholars has increased. In addition to the works noted below, see the separate articles on: ENOCH, BOOK OF; ENOCH, BOOK OF [S]; TESTAMENTS OF THE TWELVE PATRIARCHS, THE, and supplementary article; MACCABEES, BOOKS OF [S]; JUBILEES, BOOK OF; ARISTEAS; ODES OF SOLOMON[S]; PSALMS OF SOLOMON.

a) The Syriac Apocalypse of Baruch (see BARUCH, APOCALYPSE OF). Chief issues remain the question of sources and the dependence on LAB and II Esdras (see ESDRAS, BOOK OF §3). The concept of history of the Baruch and Ezra Apocalypses has been fruitfully studied.

b) The Greek Apocalypse of Baruch. A new edition of the Greek text has appeared, and there has been some preliminary interest in the Slavonic version. Recent studies have limited the extent of Christian revision, and try to define the function of the book as a response to certain issues of theodicy. Its lack of eschatological tension is noteworthy.

c) The Apocalypse of Abraham (see ABRAHAM, APOCALYPSE OF), extant only in Church Slavonic, is composed of two parts. It relates Abraham's discovery of God (chs. 1-14) and his vision of the heavens, of the divine throne, and of human history (chs. 15-32). Like II Esdras and Syriac Baruch there is a concern for theodicy. In many features of the vision experience, it forms a link between the apocalypses and the Merkabah mystical books, which claim to record visions concerning a heavenly chariot, and are generally dated to the fourth and fifth centuries A.D. A Christian interpolation of unusual character occurs in ch. 29.

d) The Slavonic Apocalypse of Enoch. The

origins of the book remain problematical. It seems to reflect sectarian sacrificial practice and Zoroastrian cosmogony. The Melchizedek traditions should be regarded as Jewish. See MELCHIZEDEK[S].

e) The Greek Apocalypses of Esdras and Sedrach are now regarded as at least marginally related to the Pseudep. and are included in some collections.

f) The Testament (or Assumption) of Moses is now viewed as a first-century A.D. revision of a work from the period of the Maccabean revolt.

g) The Testament of Abraham (see ABRAHAM, TESTAMENT OF) is now recognized as a Jewish work, although it may contain some traces of Christian revision. It relates Abraham's heavenly travels before his death and his conflict with Death in the attempt to retain his soul. It is extant in two recensions, of which the longer seems more original. With it are associated, in the Arabic, Ethiopic, and Coptic versions, the less certainly Jewish Testaments of Isaac and Jacob.

h) The Testament of Job. Recent studies reflect a certain aporia as to the possible circles of origin. Two new editions have appeared, and the relationship with the Abrahamic traditions has been stressed. An Aramaic origin, proposed earlier, seems unlikely.

i) The Testament of Solomon, which is Christian in its present form, remains marginal to the Jewish pseudepigraphic testaments.

j) The SIBYLLINE ORACLES. The place within Egyptian Judaism as well as their common points with the political oracles of the Hellenistic world are to be stressed.

k) The Story of Joseph and Asenath is extant in a Greek version which may be the original. Probably written in Egypt, perhaps as a missionary document, it tells of the conversion and marriage of Asenath to Joseph. It has been proposed that the book originated in Jewish mysteries in Egypt.

l) The Paralipomena of Jeremiah has been re-edited in Greek, and its relationship to Syriac Baruch and to the Coptic Jeremiah Apocryphon has been examined.

m) The Martyrdom of Isaiah. No new evidence has come forward either to prove or disprove the independent existence of this book. The idea that it was produced by the Qumran sect and refers to the TEACHER OF RIGHTEOUSNESS has been revived in a more extreme form.

n) The Lives of the Prophets deals with each of the chief prophets of the Bible in a brief fashion, occasionally incorporating traditions additional to those relating to his tribal origins, birthplace, and mode of death and burial. The work reflects ancient traditions (cf. II Chr. 24:19; Ethio. Enoch 89:51-53; Jub. 1:12; 4QpHos<sup>b</sup> 2:4-6; Luke 11:51) and seems to be of Jewish origin. The textual history and transmission are complex, and the book has undergone a number of recensions, some clearly Christian. Various forms of the Lives were popular in Christian hagiographic literature. It shows, on occasion, intimate knowledge of the geography of the land of Israel.

o) The Life of Adam and Eve. The Greek version of this work has been intensively studied with the utilization of many more MSS than were employed in previous editions. There are also Latin

and Slavonic versions, as well as a recently published Georgian text and an unpublished Armenian version. The relationship of these texts to each other remains uncertain, in spite of recent studies. Interest in the Adam literature has increased as a result of the renewed research into Gnosticism and the Cairo Coptic codices (see ADAM, APOCALYPSE OF[S]). Identification of the circles in which this literature originated and its original language and function is uncertain. Adam traditions were significant in medieval Christian culture, and numerous Adam works exist in Syriac, Arabic, Ethiopic, Georgian, Armenian, and other tongues.

p) Pseudo-Phocylides. A collection of gnomic verses attributed to the sixth-century B.C. Milesian Phocylides, generally recognized as having numerous points of contact with biblical literature. It is attributed to Jewish or Judaizing authorship.

q) The body of apocryphal psalms has increased to include a group of five psalms found in certain Syriac MSS of the Psalter. Some of these, together with other apocryphal compositions, were included in 11QPs<sup>a</sup>. This corpus may be further expanded by inclusion of certain pseudo-Davidic poems found in LAB.

r) *Liber Antiquitatum Biblicarum*, falsely attributed to Philo in some MSS, is a paraphrase of biblical history from the Creation down to a point corresponding to the beginning of II Kings. The original language was Hebrew, and the book utilized a non-Masoretic biblical text, certainly of (Proto-) Lucianic type in Joshua-I Samuel. A new Latin edition has been announced, and fragments of a medieval Hebrew translation, preserved in the Chronicle of Jerahmeel, have been published. Since LAB was a source for Syr. Bar. and II Esdras, a first century A.D. date, at the latest, is indicated.

s) The History of Zosimus remains largely unstudied.

t) The Ladder of Jacob is preserved in two Slavonic recensions. The oldest of these contains no Christian elements and is a narrative of Jacob's vision at Luz, of the ladder, of his prayer for its interpretation which is given as an eschatological vision. Sec. 5 appears to refer to the Romans. The prayer has certain characteristics in common with the Apocalypse of Abraham.

u) The Questions Addressed by the Queen and the Answers Given by Solomon is a supplement to the biblical stories of Solomon and the Queen of Sheba. The work contains no clearly Christian elements and may well be of Jewish origin. It is preserved in Armenian, apparently a translation from Syriac, dated by some to the seventh or eighth century. Such riddle literature was known to Josephus (Antiq. VIII.v.3), and medieval works of similar character exist. This writing adds another dimension to the preserved wisdom traditions associated with Solomon.

v) There is a large body of quotations from lost works preserved in patristic and other ancient and medieval sources. The chief information on such fragments was published many years ago, but it can be augmented from time to time as new publications appear. None of the fragmentary works from Qumran as yet coincide with fragments

preserved in patristic sources. Finally, it seems unlikely that the Coptic Elijah Apocalypse is of Jewish authorship, although it contains much of interest. The fourth and seventh Epistles of Heraclitus are no longer considered Jewish.

3. Pseudep. and Qumran. (See also DEAD SEA SCROLLS and supplementary article.) The relationship between the scrolls from Qumran and the Pseudep. is complex. First, when they exist, the Qumran MSS are most important for the study of books which were already known before the Judean desert find. The best examples of this published so far are the MSS of the Testament of Levi and of the book of Enoch. The literary history of these works has been rewritten as a result.

It is difficult to determine whether nonbiblical works from Qumran, unknown from elsewhere, can be considered part of the collection of Pseudep. A number of these works are certainly analogous to the Pseudep. in general character and literary type. Such writings as IQ16, the Book of Giants, IQGen Apoc, 4Qpseudo-Ezekiel, and others should, on such grounds, be included in the collection. It may seriously be questioned, however, whether the works of peculiar sectarian character, the *Peshar* commentaries, the Manual of Discipline, etc. will come to be regarded as Pseudep. They have a distinct stamp of their own. In any case, this matter will be determined both by scholarly practice and by tradition of transmission. A final conclusion cannot be expected to emerge before the full publication of the Cave IV MSS. Meanwhile, the study of the Qumran scrolls is extraordinarily important and enlightening for students of the Pseudep.

**PSEUDONYMOUS WRITING** sū dōn'ī mūs. A text is pseudonymous when the author is deliberately identified by a name other than his own. In contrast to our culture, where the assumed name is often freely invented (e.g., Mark Twain), pseudonymous writings in the Bible and other ancient literatures borrow the name of a well-known person of the past; thus, pseudonymous writing is also pseudepigraphic. For modern consciousness, publishing your work under someone else's name can be explained only by an intent to forge or by pathological transformation of the ego (insanity, trance). Neither interpretation adequately explains the pseudonymous writings of antiquity.

1. **Primary and secondary pseudonymity.** In both the OT and NT there are a number of books

which, at the time they were written, were deliberately ascribed to someone other than the author. Deuteronomy (the first book in the Bible which is definitely pseudonymous) is attributed to MOSES, Ecclesiastes to a king of Jerusalem, DANIEL to a man from the time of the Exile, the PASTORAL LETTERS to Paul, and II Peter to Jesus' disciple. Pseudonymity is even more common in the APOCRYPHA (I Baruch; Epistle of Jeremy; Wisdom of Solomon), in the PSEUDEPIGRAPHA, and in many Gnostic writings (see NAG HAMMADI[S]). In these cases one may speak of "primary" pseudonymity.

"Secondary" pseudonymity appears where originally anonymous writings are later attributed to well-known biblical figures, as the Pentateuch is attributed to Moses, the Psalms to David, Lamentations to Jeremiah, the first gospel to Matthew, and the Letter to the Hebrews to Paul. In some cases it is unclear whether the pseudonymity is primary or secondary (Malachi, the Gospel of Mark).

2. **Cultural explanations of the phenomenon.** While some exegetes transfer modern categories to biblical times and assume deliberate forgery in pseudonymous writings, others attempt to find possible explanations which fit a culture which does not yet know the concept of intellectual property. Four such explanations are:

a) Pseudonymity could be recognized by the reader of that time; it is a stylistic device, not a strict statement of authorship (Rowley).

b) Since the epoch of canonical revelation was viewed as closed, new religious works had to borrow canonical names (Osswald, Balz).

c) A mystical feeling unites the anonymous author of a later time with the pious people of an earlier age, who are now in heaven, inspiring the later author (Speyer), or giving the author an understanding of himself as an "extended personality" of an earlier man of God (Russell). For the NT era the connection may be ascribed to the continuing effects of the Holy Spirit (Aland). In this interpretation the psychological category of "authenticity of experience" usually becomes the criterion for differentiating between legitimate and illegitimate pseudonymity.

d) A long period of oral tradition precedes the pseudonymous writings; therefore, when they are written down, the supposed initiator of the tradition is given (Oesterley).

These explanations are so far inadequate, as they do not take into account the circumstances surrounding the origin of writings in cultures without a literary market, and therefore without copyright or a corresponding ethical criterion of authenticity. More adequate explanations would be:

a) Written works of the ancient Near East are typically anonymous (cf. the historical books of the OT). In more developed situations colophons are usual, which name those persons responsible for the submitted version of the text (as in Babylon and Ugarit), although the question remains open how much they copied and how much they themselves formulated. Only in Greece (beginning in the sixth century B.C.?) did there develop a

literary market that encouraged a distinct consciousness of authorship in those who wrote for that market.

b) Only inscriptions or certain kinds of books (Mesopotamian law books, Egyptian wisdom literature, OT prophets) named the author; however, since those writers did not shrink from plagiarizing older texts (even in Egyptian royal inscriptions), they are as much collectors as authors. There is no fundamental difference between this practice and the listing of names in colophons.

c) It is also taken for granted in books bearing authentic names that the author will reformulate the words of a person in the story and so use him as a pseudonymous vehicle for his own thought (cf. the Platonic Socrates or the Johannine Jesus).

**3. Oral and written tradition.** In biblical times, oral and written tradition were not fundamentally distinguished, but stood in a reciprocal relationship (see TRADITION, ORAL[S]). The following points are significant for religious tradition:

a) The attribution of anonymously circulating traditions to famous figures of the past. Thus, sayings of the tribes are attributed to Jacob (Gen. 49) or Moses (Deut. 33); psalms are put in the context of historical situations (Exod. 15; I Sam. 12); and wisdom sayings are attributed to respected rabbis (Pirke Aboth), or to Jesus. Since there is no intention of claiming a false author, such attribution is not pseudonymous. Even for trained historians it is often difficult to ascertain whether the statement of authorship is accurate or not (e.g., Exod. 15:21, Miriam; Judg. 5, Deborah).

b) Writings ascribed to God, angels, or Christ. The people of antiquity were convinced that ethereal beings also write, that there are books in heaven which chosen people see and copy, or write down at the dictation of an angel. Authorized words of the gods are different from oracles and magical sayings; they are transferred by inspiration to certain people to be passed down orally or in writing. The Decalogue belongs to this category (Exod. 34:1); but also in the superscription "the Word of Yahweh," most of the books of the prophets name God himself as the author and the prophet as mediator. In the same way, in the NT the exalted *Kyrios* is identified as the author (Revelation to John; cf. the Didache). Outside the Bible there are many theonymous writings (Avesta, Hermetic books, Koran). For the majority of such cases it would have been presumptuous to indicate a human rather than a divine author.

Even writings attributed to God or Christ were not considered unchangeable. As tradition criticism shows, commands or prophecies formulated by God are again and again reformulated by editors in the course of time (see TRADITION CRITICISM, OT[S]). This is done in good conscience, probably as a holy duty.

That writers deliberately presented a purely human word as divine cannot be proved with certainty in either the ancient Near East or the Bible (only Herodotus assumes this for some—by no means all—Greek oracles).

c) Legitimizing association of traditions.

Mowinckel explains the editorial expansion of the prophetic books as the work of schools which considered themselves true to the master prophet, so that even after his death they prophesied in his name and sometimes fixed those prophecies in writing. There was an analogous situation in the Greek schools of philosophy, where the ideal of imitation of the master led to pseudo-Socratic and pseudo-Platonic writings. Apocalyptic literature may have been written in synagogues that bore the names of earlier figures (cf. the Elijah Synagogue in ancient Rome). Could something similar hold true for the Deutero-Pauline letters or the letters of Peter?

It is probable that consciousness of an association with an ancient personage arises even when that personage never actually lived. Above all, this can be assumed for apocalyptic literature, in which a long period of growth may be recognized, and in which the process of tradition is never definitively concluded (e.g., Enoch literature; Aramaic, then Hebrew Daniel, finally apocryphal additions; Sibyllines). See APOCALYPTICISM[S].

Famous names are capable of attracting entire genres of literature. Therefore, all divine law comes from Moses (even the oral Torah of the rabbis), all wisdom from Solomon, and every church regulation from the apostles.

No matter whether the existence of prophetic schools is assumed or not, a consciousness that association with a tradition confers legitimacy (a concept that is foreign to us today) may be presupposed; otherwise the amount of pseudonymous writing in the Bible and in the ancient Near East would be inexplicable. In many cases the authors to whom the writings are ascribed are considered as alive in heaven and therefore still effective in the present. To this extent attribution of authorship to men of God is similar to ascribing it to God, Christ, or angels. Since what is involved is not the conscious use of an inaccurate name, the designation "pseudonymous" should be used only with reservations.

**4. Pseudepigraphy and pseudonymity.** Since not much light has yet been shed on the relationships of oral and written tradition in ancient literature outside the Bible, we must be careful in making judgments about whether a pseudepigraphic document was consciously forged. Only in the writings of the Hellenistic diaspora (Aristeas, Pseudo-Phocylides) should such forgery be taken into consideration. In the Christian area, consciousness of the possibility of pseudonymous writings probably arose only with the formation of the canon in the second century.

Matthew	Luke
7:1-5, 16-21, 24-27	6:37-38, 41-49
8:5-10, 13	7:1-10
11:2-19	7:18-35
[8:19-22]	9:57-60
[9:37-38; 10:7-16]	10:2-12
11:21-23	10:13-15
11:25-26	10:21-22
12:22-30	11:14-23
12:43-45	11:24-26
[12:38-42]	11:29-32
23:4, 23-25, 29-36	11:39-52
23:37-39	13:34-35
24:26-27, 37-39, 40-41	17:23-27, 34-35
25:14-30	19:11-27

The bracketed passages differ in order, but Matthew may be responsible for these inversions.

Within the Matthean discourses, too, the common sequence is broken by editorial rearrangement (e.g., 7:12, cf. Luke 6:31; 10:16, cf. Luke 10:3) and by a number of insertions not referred to in the list above. When compared with Luke, this series of passages sometimes shows the same order in both gospels (Taylor); e.g.,

Matthew	Luke
6:9-13	11:2-4
6:20-21	12:33-34
6:22-23	11:34-35
6:25-33	12:22-31
7:7-11	11:9-13
7:13-14	13:23-24
7:22-23	13:26-27
8:11-12	13:28-29

It is generally held that the original order of Q is preserved more faithfully in Luke.

The common order is hardly conceivable as a result of Luke's dependence upon Matthew, not only in view of the absence in Luke of typically Matthean characteristics, but also because of Matthew's conflations with Mark and the placement of the sayings in different Markan contexts. On the other hand, the evidence of order is unduly neglected by those who suggest that several traditions or groups of sayings, instead of a single document, formed the basis of the double tradition in Matthew and Luke.

**2. The contents of Q.** Although the variety of reconstructions is frequently cited as an objection to the Q hypothesis, there is a consensus regarding the double tradition passages. In the order of Luke these are: 3:7-9, 16-17; 4:2-13; 6:20-23, 27-49; 7:1-10, 18-35; 9:57-60; 10:2-16, 21-24; 11:2-4, 9-26, 29-35, 39-44, 46-52; 12:2-12, 22-31, 33-34, 39-40, 42-46, 51-56, 58-59; 13:18-21, 24-30, 34-35; 14:16-23, 26-27, 34-35; 15:4-7; 16:13, 16-18; 17:1, 3-4, 6, 23-24, 26-27, 30, 33, 34-35, 37; 19:12-27; 22:18-30.

Some scholars have reservations about Luke 7:29-30; 14:16-23; 19:12-27, because of the verbal dissimilarities in the Matthean parallels. It is more doubtful whether texts peculiar to Luke (e.g., 6:24-26; 9:61-62) or Matthew (e.g., 10:23) can be assigned to Q. In these instances the editorial activity of the evangelists deserves careful examination. Some overlappings with Mark cannot be denied (Luke 3:16; 11:15-18; 13:18-19; 14:34-35; cf. the doublets 10:4, 5, 7a, 10, 11a; 10:16; 11:33, 43; 12:2, 9, 11-12; 14:27; 17:33; 19:26; and, with a

\***Q.** According to the two-document hypothesis (see **SYNOPTIC PROBLEM**; **SYNOPTIC PROBLEM[S]**), Matthew and Luke borrowed from the Gospel of Mark the Markan material which they have in common, while the non-Markan material they have in common is from a second source, the hypothetical Logia or sayings source, Q. Some who hold to the priority of Mark defend alternative solutions: the influence of oral tradition (Jeremias, Wrege) or Luke's direct dependence upon Matthew (Farrer). On the other hand, in the "Primitive Gospel" theory the hypothetical common source is a real gospel, including both the Markan and the non-Markan material.

**1. The existence of Q.** The Q hypothesis was developed in connection with the hypothesis of the priority of Mark (C. H. Weisse, 1838). Three observations gave rise to the assumption of a second common source beside Mark: the verbal agreements of the double tradition texts (non-Markan material common to Matthew and Luke), the presence of doublets (i.e., the same saying in a Markan form and in a "Q" form), and the common order in Matthew and Luke.

The phenomenon of order deserves special consideration. The double tradition passages are in a different Markan context in Matthew and Luke, with the exception of the first two sections—the preaching of John the Baptist and the temptation (Mark 1:7-8, 12-13). In Luke the material is presented together with peculiar texts in the three insertions between Mark 3:19/4:1 (Luke 6:20-7:35), Mark 9:40/10:13 (Luke 9:51-18:14), and Mark 10/11 (Luke 19:1-17; see also 22:28-30). In Matthew the situation is quite different. There the evangelist combines the parallel Q traditions not only with Mark 1:7-8 and 12-13 but also with Mark 3:22-29; 4:30-32; 6:7-11; 8:11-12; 12:38-39, and assembles the sayings in the great discourse complexes of Matt. 5-7, 10, (11-12), 13, 18 and 23, 24-25. Still, in both Matthew and Luke a common order can be seen in the following sections:

Matthew	Luke
3:7-12	3:7-9, 16-17
4:2-11	4:2-13
5:3-6, 11-12, 39-42, 45-48	6:20-23, 27-30, 32-36

doublet in Matthew, 11:29b; 13:30; 16:18), but an origin in Q is not demonstrated by the presence of minor agreements between Matthew and Luke against Mark in Luke 3:1-6; 3:21-22; 4:1-2; 6:12-16; 10:25-28, and some other passages of the triple tradition.

The overlapping of double and triple tradition sayings may be due to the common dependence of Mark and Q on oral tradition. The hypothesis of a literary relationship between Mark and Q is hardly acceptable, either in the form put forward by Wellhausen (Q depends on Mark) or in the form proposed by more recent writers: Mark borrowed from Q or from a recension or revision of Q (Brown; see SYNOPTIC PROBLEM[S] §1a).

The reconstruction of the original Q text is an easy task for those sections where the wording in Matthew and Luke is almost identical: Luke 3:7b-9; 7:22-23, 24b-28; 10:13-15, 21-22, 24-25; 13:34-35. In other instances the verbal disagreements are so important that attempts at reconstruction necessarily involve differing opinions. However, this difficulty should not lead us to doubt the existence of a written "Q" source. The difficulty stems from the editorial intervention of the evangelists, and the problem is therefore to give a fair description of what they have done.

3. **The literary genre.** The "gospel" genre as it is known from Mark and the other gospels (see GOSPEL, GENRE[S]) cannot be applied to Q because there is no PASSION NARRATIVE in Q, and the narrative portions are almost exclusively introductions to sayings material. Thus, the two miracles in Luke 7:1-10 and 11:14 serve more as a setting for the words of Jesus than as a proper story. Manson has described Q as a collection of parenetical sayings made by the primitive church, and different from the "kerygma" of the gospel compositions. Analogies have been drawn to the OT prophetic books, wisdom collections, Jewish hagadah (especially Pirke Aboth), and the Didache. The Gospel of Thomas, a collection of 114 sayings ascribed to Jesus, with no other introduction than "Jesus said," has been proposed as a closer analogy. According to Robinson, the literary genre of Q, before its incorporation in the Gospels of Matthew and Luke, was that of λόγοι σοφῶν (sayings of wise men) as preserved in the Gospel of Thomas. This is, however, a Gnostic composition which borrows from the canonical gospels, and its literary genre is most probably of a later origin. The Q source may represent a primitive Christian genre *sui generis*. Since it is not a mere "collection of sayings" (*Logienquelle*), Schürmann prefers to call it a "discourse source" (*Redequelle*).

4. **The redaction and the theology of Q.** Because of the hypothetical character of the reconstruction, together with the possibility of successive redactions of Q, it is difficult to establish criteria for the study of the redaction and its separation from tradition. The selection of the materials and the composition and structure of the source can be examined, and the Q passages can be compared with Mark for overlappings. Although the conclusions of recent REDACTION CRITICISM are diverse, there is at least a general trend to concentrate on the christological implications. There is likewise

much divergence about Q's place of origin: (1) a Palestinian community of Christians in lively confrontation with the Jews; (2) a Hellenistic milieu which continued the preaching of Jesus by announcing the eschatological judgment; (3) a missionary community.

F. NEIRYNCK

\***QERE-KETHIBH (QK).** The most important notes in the *MASORA parva* (see TEXT, OT §A4a). A word (*kethibh*, "that which is written") in MSS and printed editions of the Hebrew Bible is often marked by a small circle above, which refers to another word in the margin which must be "read" (*qere*) in its stead. The traditional Jewish pronunciation (*qeri-kethibh*) arose through a faulty reading of the nonvocalized consonantal word קרי. The *yōdh* in this *scriptio plena* was taken as the *mater lectionis* of *hireq*, on analogy of the *yōdh* of the expression כתיב, whereas the word should be read with a *šērē* (Aramaic imperative or passive participle). Logically, the order of the phrase should read *kethibh-qere*, "what is written and what is read."

The QK notes were designed to ensure, whether for synagogal reading or for sacred study, that the consonantal TEXTUS RECEPTUS be transmitted unaltered, and that the traditional enunciation be preserved. They form part of the oldest and most important teachings of the Masoretic scribes. At first they were handed down orally, and not written in the margin of the MSS, as is shown by the examples of *qere perpetuum*, which were rarely indicated in the MSS or printed editions. Later, the bulk of the notes that bear the title *qere-kethibh* were written in the margin of the MSS by the Masoretic scribes, at the same time as the earliest texts of the qualitative *Masora parva* appeared. Subsequently, a certain number were incorporated in the lists of the *Masora magna*, the

quantitative character of which marks the ultimate form of the work of conservation effected by the scribes and Masoretes. However, the question may legitimately be asked, What was the most ancient form of the *qere-kethibh*?

    - d. Modern theories
- Bibliography.

1. **Qere perpetuum.** The earliest instance where a word in the biblical text was not read, but another was pronounced in its stead, is that of the TETRAGRAMMATON (YHWH). The prohibition of pronouncing "The Name," and the obligation of substituting in perpetuity a term that expresses the divine majesty, are explicitly recognized in the Babylonian Talmud (Pes. 50a): "Said the Holy One, blessed be He: not as I am written, am I read. I am written יי' (*yōdh-hē*), i.e., the Tetragrammaton), but I am read ד'א (*'āleph-dāleth*, i.e., Adonai)." The antiquity of this prohibition is evident from the fact that the Hebrew Tetragrammaton was not translated in the most ancient recensions of the LXX, where it appears only in Hebrew script. Later it was rendered into Greek by κύριος (Lord), which conveys the sense of the Hebrew Adonai. In the Greek text, at the beginning, the same procedure was followed as in the Hebrew, namely, the equivalent of the divine name was first abbreviated, through reverence, into the form κς, then, in later texts and under Christian influence, it came to be written out fully. In the same way, the Babylonian Targ. on the Pentateuch (Targ. Onkelos) systematically renders the Tetragrammaton into Aramaic by the abbreviation יי' (the arithmetic equivalent of which—26—is the same as that of the Tetragrammaton fully written in its Hebrew form). See WORDPLAY IN THE OT[S] §1; ABBREVIATIONS, HEBREW TEXTS[S] §2.

This ancient prohibition of pronouncing the divine name persisted orally until the introduction of the Hebrew vocalic system, where the vowels written under the Tetragrammaton are those of the substitute word Adonai. Its antiquity clearly

shows that it originated in the oldest Jewish oral traditions that accompanied the transmission (*masora*) of the sacred text from the beginning. In contrast to the *qere perpetuum*, substituted orally for the Tetragrammaton, the Masoretic tradition, as a precautionary measure, indicated in the margin of later MSS, in the form of a statistical note (ק"ל = 134), the number of times in the text where God is explicitly designated by the title אֱלֹהִים (cf. Gen. 18:3 and *passim*). In this way, they sought to forestall any change in the form of the sacred text that might be made by an overhasty scribe. Apart from the Tetragrammaton, there are some other instances of *qere perpetuum* in the Pentateuch, e.g., הוּא הוּא (*hū'*), read as הִיא (*hī'*), Gen. 3:12 and *passim*. These were noted sporadically in the margins of the MSS, but without any definite system as regards the form of their transmission. Thus, in MS B 19a from Leningrad, used as the basic text for the third edition of Kittel's *Biblia Hebraica* (BHK) and for the *Biblia Hebraica Stuttgartensia* (BHS), this *qere perpetuum* is indicated only in the margin of Lev. 6:18 and 22. The *Masora parva* (MP) of the same MS, however, in the case of הוּא הוּא in Gen. 14:2 and Lev. 11:39, scrupulously inserted the statistical note: יא כה' בתור' , i.e., "eleven instances in the Torah where הוּא is expressly written with a *yōdh*." From this example it may be inferred that the differences discernible in the transmission of these marginal notes are not due to divergences between schools, nor to the relative antiquity of the variants, but simply to lack of system in handing down both the notes and the archetypes on which the codices were based. Proof of this is found in the *qere perpetuum* נֶעְרָה—nowhere noted in the margin of the book of Genesis (24:14 and *passim*) in the Leningrad MS, whereas it is regularly indicated in the margin of Deuteronomy (22:15 and *passim*) in the same MS. From the above examples we can deduce the basic *raison d'être* of the QK formulas. They served, first, to guarantee the written form of the text, as it had been received at a particular period. Second, they ensured correct reading of the text, according to the traditional principles developed in the schools of the first scribe-grammarians, who were also the first exegetes. However, this stage where, thanks to the QK, reading of the consonantal text had been standardized, was preceded by at least one type of scribal tradition involving a more drastic form of activity, the *tiqqune sopherim*.

2. **Tiqqune Sopherim.** The Masoretic tradition has preserved a list of eighteen of the most ancient scribal corrections, with the note: וְאֵל מְלִין תְּקַן עֶזְרָא, "Ezra corrected eighteen words [of the Bible]" (*Ochlah*, no. 108), or again: וְאֵל מְלִין כְּנוּיֵי סוּפְרִים, "Eighteen words are euphemisms due to the Scribes" (*Diqduqe ha-Te'amim*, no. 57), or, in more general and more usual form: וְאֵל מְלִין תְּקוּנֵי סוּפְרִים, "Eighteen words have been emended by the Scribes" (see EMENDATIONS OF THE SCRIBES[S]). Geiger and Barthélemy have proved that in eighteen instances recorded by tradition, the scribes, otherwise so scrupulous, have corrected the sacred text. This took place at a period when Pharisaic influence had not yet declared the sacred text

quantitative, and bears the precise title  $\text{י מלין דקריין ולא כתיבן}$  (ten words which are to be read . . .). In the final form of these lists, there is no reference to Ruth 2:11, but the following examples are added: בני, "sons of" (Judg. 20:13); כן, "therefore," "because" (II Sam. 18:20); צבאות, "of hosts" (II Kings 19:31); בניו, "his sons" (II Kings 19:37).

*d. Kethibhan we-la' Qeriyyan.* The "words written in the text, but cancelled in reading" are enumerated as follows by the Talmud: נא, "now" (II Kings 5:18); זאת (demonstrative pronoun, Deut. 6:25); ידרך, "he shall bend" (Jer. 51:3); חמש, "five" (Ezek. 48:16); אם, "if" (Ruth 3:12). Comparison with the other recensions found in *Massekhet Sopherim* VI, 9, and in quantitative form in *Ochlah*, no. 98 and *Massorah Gedolah*, no. 2752, shows that the Masoretic tradition has maintained the title  $\text{ח כתיב ולא קרי}$ , "eight words written, but cancelled in reading," by suppressing the case of Deut. 6:25 (the only one relating to the Torah) and adding the following אם in II Sam. 13:33 and 15:21; את in Jer. 38:16 (substituting for Deut. 6:25) and אם in Jer. 39:12. These differences between the traditions of the Talmud and those of the Masora should not be taken too literally, as if they represented opposing schools. R. Isaac, in the Talmud, presents a general exposition of scribal methodology and does not claim to be exhaustive. The case is different for the latter lists, first in *Massekhet Sopherim*, and subsequently in Masoretic works such as the *Diqduqe ha-Ṭe'amim* or the *Massorah Magna*. It is important to bear in mind that R. Isaac, who belonged to the third generation of Talmudic masters (*Amora'im*), taught at Babylon toward the close of the third century A.D., whereas the rules in *Massekhet Sopherim* concerning the Bible were compiled anonymously only about the eighth century, and summarized in the tenth by Aaron ben Asher in his *Diqduqe ha-Ṭe'amim*.

**4. Other Talmudic statements.** The Masora cites a considerable number of QK; authors who have endeavored to reckon up the exact number vary considerably in their estimates. That the practice of QK, the antiquity of which has already been shown, was very widespread is seen in the numerous examples quoted by the Mishna, the Talmud, and the oldest Midrashim (Men. 89b; Bereshit Rabbah XXXIV, etc.). Systematic and carefully argued lists are found for the first time in *Massekhet Sopherim* VII, etc. Eventually these lists would be methodically revised in Masoretic treatises such as the *Ochlah*, so as to ensure their transmission in the statistical form that we know today (cf. nos. 112-13; 119-20). Ch. VIII of *Massekhet Sopherim*, while detailing the systematic variants between the Psalter text of Ps. 18 and the version found in II Sam. 22, offers by implication a possible solution to the problem of the origin of the marginal variants. This solution has been taken up by Sperber and integrated into one of the most interesting theories on this question (cf. §8eiii below).

**5. Symbols, terminology, and form of the QK.**

*a)* It is easy to understand how the terms *qere* and *kethibh* originated. We have already seen the

use of the Aramaic formula in plural form, as employed by R. Isaac in T.B. Ned. 37b: קריין ולא כתיבן. The same terminology is taken up again in *Massekhet Sopherim* VI, 4 by the anonymous author who compiled the first lists of QK: שלשה לא כתובים בלמ"ד אל"ף וקרואים לו, "three instances of *lō'* [viz., Exod. 21:8; Lev. 11:21 and 25:30] are written *lamedh-āleph*, but read as *lamedh-wāw (lō')*." This terminology is related to another usage of the Talmudic masters. For example, in T.B. Ber. 64a and *passim*, R. Eleazar, in the name of R. Ḥanina, declares: "The wise men increase peace in this world, as it is said (Isa. 54:13): 'All thy children (*bānāyikh*) are taught by God and their peace is great,' אל תקרי בניהם—do not read *bānāyikh* (thy children), but *bōnāyikh* (thy builders, i.e., the scholars)." Hence the formula אל תקרי . . . אל (or תקרי, Aramaic form), "do not read . . . but," means "change the traditional Masoretic reading for homiletical purposes." The expression, then, originated in a learned, homiletic play on words, of which the Talmud and the Midrash give numerous and frequent examples. From this original connotation of an oral correction of homiletic character, the phrase gradually came to be used to denote the requirements of oral standardization, systematic or sporadic, which would eventually be laid down definitively by the Masoretic tradition.

*b)* The QK formulas, in their permanent form, were hardly ever noted in the margins. The most ancient indication of the existence of an oral variant was the presence of a sign or symbol in the margin. Many examples are to be found in the oldest and most celebrated MSS (Petropolitanus B 3 and B 19a from Leningrad, C from Cairo, etc.). This sign, thick and elongated in character— $\text{‡}$ —has been likened to an archaic, final  $\text{‡}$  (*nún*), though this does not explain its origin. From the oldest MSS, however, we know that, between the tenth and eleventh centuries, the scribes had already forgotten its meaning. In fact, both this sign and the QK, in the form known today, are noted in the margin in the following cases: Ezek. 40 *in toto* in Petropolitanus (see Fig. Q1); Jer. 2:33; 3:2, 4, 7 in the Qaraite MS of the Prophets from Cairo; and Job 39:30 in MS B 19a from Leningrad.

*c)* A number of stages preceded the final, marginal form of the *qere* that was ultimately adopted unanimously by the scribes. In rare cases—those of very ancient and worn MSS with supralinear Palestinian vocalization—what is noted in the margin is not the whole word, as is done now, but only the particular letter in its proposed corrected form. In the oldest MSS with supralinear Babylonian, or with Tiberian vocalization, rather than the sign  $\text{‡}$  one finds the letter  $\text{‡}$ , abbreviation for קרי, above which is written the new letter proposed by the marginal reading. E.g., in MS L, at Lev. 13:20, הוי (*hū'*) is noted in the margin by  $\text{‡}$ , to warn the reader to read הוי (*hi'*). Similarly, in the margin of the same MS, another abbreviated form of QK is found in abundance in Ezek. 40, for example vs. 25, where the word  $\text{‡}$  has the note  $\text{‡}$  in the margin. See Fig. Q1.

1. A page from Codex Petropolitanus, displaying archaic and more recent qere notations

d) In their normal form, the QK of good Masoretic MSS are written out in full in the margin, e.g., הַיָּצִא of Gen. 8:17 has the marginal annotation הַיָּצִא. When the Masoretes fixed the traditional enunciation of the sacred text, they pointed the word in the consonantal text with the vowels of the word to be read orally. This is the case with the preceding example, where, in-

stead of הַיָּצִא we are to read the surprising הַיָּצִא, a form which occurs nowhere else in the Bible. Editors of the Hebrew Bible since Bomberg have felt obligated to follow this model in their editions. However, recent editors, such as C. D. Ginsburg and A. S. Hartom, have tried to facilitate the reader's task by printing the kethibh without any vowels, and then vocalizing the proposed word (qere) in the margin.

e) Besides these classic forms of QK, there are other marginal notes which, in fact, have the same function. For instance, at Ezra 4:11, ארתחששת is annotated in MS L with קר לא א יתיר, "āleph superfluous (not rendered audibly) in reading," while other MSS have ארתחששת, written without 'āleph, as is found a few verses earlier at Ezra 4:7. Also in MS L, in connection with אֶתְלָהּ (Gen. 9:21; 12:8; 13:3; 35:21; cf. *Massorah Gedolah*, no. 83), there occurs three times the Masoretic note ה כה, "four times written fully with a hē," and only once, at Gen. 13:3, the qere ק for אהלו. It is not difficult to see that this qere is a needless repetition of the note of the MP, and points to two recensions of the same Masoretic teaching (cf. also *Massorah Gedolah*, nos. 598, 2917, etc.).

f) In sum, then, the qere tradition has been transmitted in various ways. Some MSS offer a simple reminder without explicit annotation (the above-mentioned archaic sign). Others have an explicit marginal note. Others again qualify their marginal corrections with the words יתיר, "superfluous," שלם or מלא, "plene," and חסיר, "defective." In some cases the Masoretes have also used the qualifications סבירין, "conjectures," and מושגתין, "erroneous," in the case of doubtful or difficult readings. Since no explicit rule was ever promulgated with regard to the QK formulas, scholars differ notably in the number they find in the margins of the MSS. Levita numbered 848, Cappellus found 1,548 in the Bomberg Bible and 1,566 in that of Plantin. Gordis found 1,350, and the recent edition of the *Masora parva* of the BHS reckons 1,272, excluding the qere *perpetuum*. No estimate can be considered final if we bear in mind the minimal figure given by Levita, and the much larger number proposed by Ginsburg (in *The Massorah*, under letter *kaph*, nos. 488 ff.).

6. Purpose of the QK. Systematic study of the qere tends to show that they concern basically three kinds of corrections. The following general classification by Gordis may be accepted.

a. *Guide against blasphemy*: cases where the Tetragrammaton is not pronounced, and the word "Lord" or "God" is substituted in reading.

b. *Guide against obscenity*: cases where the text has a word which might sound too coarse when read in the synagogue, and the reader is enjoined to substitute a euphemism.

c. *Guide against erroneous reading*. With regard to this extensive class—which may be further divided into nine subsections—it must be borne in mind that discrepancies of this kind between the kethibh and the qere, when traced to their sources, are not simply a means of preserving MS variants. They may also be closely linked with the ultimate goal of Masoretic activity: textual standardization, specifically between passages transmitted in parallel recensions, as Sperber has shown (see §8diii below; see also TEXT, HEBREW, HISTORY OF[S] §2). These notes, then, directed as they were to the standardization of the sacred text, were introduced at the same time as vocalization was inserted into the text. As guideposts for the reader, they warn against faulty enunciation in consequence of: (1)

difference in the division of words; (2) pronunciation of the archaic diphthong *ay*; (3) other archaic forms; (4) phonetic variants in the light of the new philological system just elaborated by the Tiberian school; (5) fluctuation in the morphology of nouns; (6) fluctuation in the morphology of verbs; (7) variations in agreement; (8) variations in the use of particles; (9) other nonclassifiable Masoretic options.

7. The seven classes of QK according to Elias Levita. In the first section of the second table of his celebrated *Massoret ha-Massoret*, Levita divided the QK, on the basis of external resemblances, into "seven classes, corresponding to the seven kinds of fruit for which the Holy Land was famed (Deut. 8:8)."

a) Letters of words which are read from the margin, but not written in the text, and vice versa. This affects principally the letters *yōdh*, *hē*, *wāw*, and 'āleph, occurring at the beginning, end, or middle of a word.

b) Letters which are interchanged in the qere and the kethibh. This, too, occurs principally with the letters *yōdh*, *hē*, *wāw*, and 'āleph.

c) Transpositions of letters: In the text, the letter is placed later in the word than it should be, while the marginal reading restores it to its correct, earlier position.

d) When two words are in sequence and the first has taken a letter which belongs to the second. This happens only with the preformative letter *hē*, erroneously placed at the end of the first word instead of at the beginning of the second. Accordingly, the Masoretes pointed it in the text with the vowel *pathah* (a), while in the marginal reading it is made the definite article of the next word.

e) Entire words written in the text, but not read, as well as words read from the margin but not found in the text.

f) Expressions written as one word in the text, but read in the margin as two, and vice versa.

g) The substitution of euphemisms for ill-sounding phrases (see §6b above).

8. Theories on the supposed origin of the qere-kethibh. a. *Source of the theories*. In general, theories that have arisen since the Middle Ages and place the origin of the QK at the time of Ezra have their source in a celebrated passage of classical Jewish literature (J.T. Ta'an. IV.2; *Abot de-Rabbi Natan B XLVI*; *Sifre Deut.* 356; *Massekhet Sopherim VI.4*): "R. Shime'on b. Laqish said: 'three scrolls of the Law were found in the Temple court (עזרה) . . . In one they found written מעון, and in the other two was written מונוה אלהי קדם (Deut. 33:27); they adopted the two and discarded the one. In the one they found written וישלח את זאמוטי (Exod. 24:5), and in the two was written וישלח את נערי; they adopted the two and discarded the one. In the one they found written הוה written eleven times, and in the two היה was written eleven times; they adopted the two and discarded the one.'" This passage was a source of confusion because of the similarity between the words עזרה ('azarah), "the Temple court," and עזרא, "Ezra [the scribe]." For it was to Ezra and to the teachers of his time that tradition ascribed not

only the collecting of the canonical books of the Bible, but also the invention of vocalic signs in the text and of signs for cantillation. The text we have just quoted, however, simply speaks of the presence, in the buildings of the temple court, of texts which were used periodically to standardize the Sacred Scriptures; there is no reference, even implied, to Ezra the scribe.

**b. Early Jewish opinions.** Both the Fathers of the church and the Jewish medieval writers held that the compilation of the QK was the work of Ezra and his colleagues. However, these authors already differed as to the fundamental norms that necessitated these marginal variants. David Qimḥi (ca. 1160?-1235?), in his introduction to the Former Prophets, traces the origin of the QK to the Babylonian exile and its detrimental effect on sacred MSS, in consequence of which many variants made their appearance in the texts. The *qere* is thus a variant encountered and preserved by Ezra and his successors.

Abrabanel (b. Lisbon 1437, d. Venice 1508), in the introduction to his commentary on the book of Jeremiah, refutes the opinion of his predecessors: "For how can I believe with my heart, and speak with my lips, that Ezra the scribe found the book of the Law of God and the books of his holy Prophets in a disordered state, due to deletions and mistakes? Is not that scroll of the Law illegal in which one letter is omitted?" He proposes that a *qere* is Ezra's observation about or correction of an unusual form in the text, a form which goes back to the biblical author.

**c. The synthesis of Elias Levita and the first indications of the Masoretic origin of the QK.** For Qimḥi, the QK originated in the misfortunes undergone by the Sacred Writings during the Babylonian exile. This view was followed by the Buxtorfs, Matthew Hiller, and J. G. Carpzov, and underlay the thinking of those schools which saw in the QK the result of divergences between the ancient MSS. In opposition to this was another school, first represented by the opinion of Abrabanel, which viewed the QK as the product of an effort to suppress erroneous readings. Elias Levita took into account both theories. Though he acknowledged that Ezra was the initiator of the work of scribal criticism, he endeavored, however imperfectly, to seek the reasons for the QK in the process of standardization of the consonantal text, a process which would attain its apogee after the completion of the Talmud, thanks to the philological work of the Masoretic schools at Tiberias. It is to Levita's critical analysis that we owe the first attempt to date the schools of Masoretic vocalization.

**d. Modern theories.** J. G. Eichhorn, H. F. W. Gesenius, W. M. L. de Wette, A. Dillmann, J. Koenig, and Z. Frankel upheld the view that the QK originated in the variants between the most ancient MSS. On the other hand, in support of the view that the QK were the result of critical work on erroneous readings, we have, first, J. Morinus and R. Simon, and later, H. Strack, C. D. Ginsburg, and J. Wellhausen. In favor of Levita's synthesis of the two theories, we have Cappellus, and later, J. Derenbourg. In our own day, three authors have re-examined the problem.

i. Orlinsky, on the basis of his study of the LXX, attempts to reformulate the problem of the origin of the QK. The Masoretes, he holds, "were neither correctors nor selectors; i.e., they did not deal with the Hebrew text of the Bible subjectively, *ad hoc*, deciding each reading within its own context." As Levita, by implication, had already done, he assigns to the same time period the invention of vocalic signs and the establishment of the QK. "The chronology," he continues, "is certain enough: neither the Babylonian nor the Palestinian Talmud makes any mention at all of either of these two phenomena, or contains any reference to their technical terminology; and St. Jerome, who evinced an especial interest in the Hebrew text . . . knows nothing about vowel symbols or the QK system." Referring to the above-quoted text on the three scrolls of the Law in the temple court, Orlinsky claims that the Masoretes first selected the three best MSS available to them. Where the three MSS had no variant readings, no difficulty was experienced in vocalizing the text. Where, however, the MSS differed, the Masoretes accepted the reading of the majority and vocalized it, and the reading became the *qere*.

ii. In one of the longest and best studies devoted to the problem (*The Biblical Text in the Making*), Gordis adduces evidence for the division of the QK into several groups, belonging to different periods, and so, for the first time since Levita, offers an attempt at dating to resolve the problem. The most ancient group was meant to guide the reader by supplying *matres lectionis*, and by removing readings which seemed blasphemous or unbecoming. The second and more recent group consists of variants bearing on one word or on a group of words. This second group includes the greater part of the QK, and its acceptance—as with Orlinsky—would be due to the adoption, toward the end of the period of the second temple, of readings resulting from the collation of the three MSS mentioned in rabbinic tradition. For this second group, however, Gordis proposes a theory closely related to the theory of textual variants. An obvious objection presents itself: Why were there never more than two variants? In the case where the three MSS presented three varying readings, the final reading would have been chosen on the basis of the context and of those philological rules which were already being used for the insertion into the consonantal text of the new vocalization.

iii. One last author has dealt more amply with the problem, and, together with the two preceding scholars, has furnished material for a new in-depth analysis of this question. Sperber has set in clear light the composite nature of much of the Hebrew Bible, resulting from two ancient recensions. The scribes, seeking to standardize the MT, preserved variants from both recensions by means of the QK. This work of standardization, Sperber believes, began very early; the first indications of it are found in the statement of R. Isaac in T.B. Ned. 37b (cf. §3 above).

**\*RABBAH. 1. Bronze Age occupation.** Though the recovery of flint implements from the hills surrounding Jebel el-Kal'ah (the citadel hill of the ancient Ammonite capital) indicates a prehistoric habitation of the area from Paleolithic to Chalcolithic times, sedentary occupation is not attested until the Early Bronze Age (*ca.* 2900-2300 B.C.). While archaeological investigation of Jebel el-Kal'ah has turned up unstratified pottery from most of the major ceramic horizons of Early Bronze, Middle Bronze, and Late Bronze Ages, none so far has been found associated with clearly defined occupation levels, except for MB IIB. N of the Hellenistic-Roman wall in the citadel area has been uncovered what seems to be a section of an MB IIB Hyksos-type glacis with associated walls, suggesting a rather heavily fortified settlement from this period (*ca.* 1750-1550 B.C.). Four tomb groups from the surrounding area have produced pottery, scarabs, and cylinder seals dating from the whole span of MB II B-C (1750-1550). All the evidence suggests a rather significant occupation on and around the site of Rabbah, particularly during MB II. The few LB sherds recovered from unstratified contexts on the citadel point to a continuing occupation during the LB period, an occupation which perhaps should be associated with the so-called LB temple discovered on the edge of the Amman airport in 1955 and most extensively excavated in 1966. Though its function as a temple has been disputed, both its form and content agree better with a cultic than a military or domestic interpretation. However, during the period before its abandonment in the early thirteenth century B.C., certain architectural changes removed the building's presumed cultic feature so that at the end it could well have been only a lookout tower or dwelling, though overwhelming support for this is not present. That, as recently proposed, the temple may have been built to serve as a tribal league shrine for the early Ammonite and/or related tribes is very problematical in the absence of any historical references to such a confederation in this period.

**2. The Iron Age city.** Small-scale excavations carried out sporadically since 1957, under the auspices of the Department of Antiquities of the Hashemite

kingdom of Jordan, have produced the first stratified remains of Rabbah from the Iron I and Iron II periods (*ca.* 1200-580 B.C.). Especially noteworthy was the uncovering of phases of the tenth-ninth-century Iron Age defense wall. The first rebuilding of this wall dates to the early tenth century B.C., and perhaps can be associated with the reconstruction of Rabbah after its capture by David *ca.* 980 B.C. The pottery recovered from this stratum shows a basic Palestinian orientation, as one might expect on the basis of the biblical historical account. A portion of a fine plaster-floored building dating from the eighth century B.C. was the most significant architectural find belonging to the first phase of the Iron II period. It gave evidence of having been destroyed by fire, perhaps as a result of one of the Assyrian incursions against the capital. The final phase of Iron II (seventh-sixth centuries) was illustrated by a few walls too fragmentary for discerning their relation to house or building plans. For recently discovered Ammonite inscriptions, see *INSCRIPTIONS, SEMITIC[S] §3c; AMMON, AMMONITES[S] §5.*

Among the more impressive discoveries dating from the Iron II period are a number of fine examples of native sculpture art, including several full representations of what would appear to be kings of Ammon (*see AMMON, AMMONITES[S] §4*). It has been suggested that they were part of a royal shrine or treasury. Augmenting the sculpture collection is the recent discovery of four female double-faced heads, found outside their original architectural context, built into a Hellenistic drain. Based upon parallels with Egyptian multiple-headed Hathor capitals, it would seem that these heads initially served as ornamentation on capitals supporting the roof of an important public building dating from the end of the seventh century B.C.

**\*RABBAH (OF JUDAH).** Aharoni proposes to identify this town with Khirbet Hamideh (which he called Khirbet Bir el-Hilū), two miles W of Bāb el-Wād beside the road to Laṭrūn. Josh. 15:60 indicates that Rabbah and Kiriath-baal (-jeirim) were the W and E anchor points respectively in a narrow district comprising the corridor from the plain to Jerusalem. Besides the Rubutu of the el-Amarna letters, other references to this town are No. 105, *r-b-t*, in Thut-mose III's topographical list, and No. 13, *r-b-t*, in Shishak's list.

**Bibliography.** Y. Aharoni, "Rubute and Ginti-kirmil," *VT*, XIX (1969), 137-45. A. F. RAINEY

**\*RACHEL'S TOMB.** The oldest tradition concerning the location of Rachel's tomb placed it near

Kiriath-jearim (Deir al-'Azar), ca. eight miles W of the Old City of Jerusalem. Two other places also claim connection with the tomb, Bethlehem and Ramah.

The earliest attestation for Ramah (er-Ram, five miles N of Jerusalem) is uncertain; some LXX readings of Jer. 38:15 [H 31:15], quoted in Matt. 2:18, are a remote possibility; Midrash Gen. Rabbah 82:5 (perhaps fourth century, and parallels) is another, if the passage plays on 'prty (N of Jerusalem!) and *šwpy'm* (both I Sam. 1:1). The connection with Ramah is based on Jer. 31:15 with the translation "A voice is heard in Ramah, lamentation and bitter weeping. Rachel is weeping for her children." It enjoys wide acceptance today, but it is wrong. (1) Burials, graves, or the like do not figure in the text. (2) This location conflicts with Gen. 35:19-20; 48:7; and I Sam. 10:2. (3) It presupposes a change of vocalization (*b'rāmā* into *bārāmā*), not required otherwise. (4) It disregards the great similarity of its text with Jer. 3:21. In the light of (3) and (4), Jer. 31:15 is to be translated "A voice is heard on a height." Elevations are places for crying and mourning (Jer. 3:21; Judg. 11:37).

The location of the tomb near Bethlehem rests on the identification of Ephrath (ah) with Bethlehem: "Rachel . . . was buried on the road to Ephrath (that is, Bethlehem)" (Gen. 35:19; similarly 48:7). Though early, this location must also be rejected because the identifying clause is generally and for good reasons taken as an erroneous gloss.

The most probable location is in the vicinity of Kiriath-jearim, based on "Rachel's tomb in the territory of Benjamin at Zelzah" (I Sam. 10:2). (1) It is compatible with the information in Genesis, without the gloss. (2) Kiriath-jearim is one of three towns, another being Bethlehem, whose populations related themselves to Ephrath (ah) (I Chr. 2:50-51; cf. Ps. 132:6, which has a poetic substitution, "Jaar"). (3) The town was at the "border (RSV "territory") of Benjamin" of the probable pre-Davidic extent of the tribal area. (4) For Zelzah (*šelsāh*), the precise though unknown location, the LXX has five different renderings. While three agree with the Hebrew in various ways, two point to the neighborhood of Kiriath-jearim (Tsevat, pp. 112-13). (5) The part of the LXX that agrees with the Hebrew (and has so far not been related onomastically to Kiriath-jearim) suggests the emendation *Ze/iloh* (*šē/iloah*) for Zelzah. *Ze/iloh* is very close to the name *silona* used for Kiriath-jearim by the seventh-century pilgrim Theodosius. Thus this location is consistent with all extant information (excluding the gloss of Genesis), and shows that the divergent LXX renderings in reality converge on one place and its immediate vicinity.

The gloss of Genesis, "(that is, Bethlehem)," reflects the situation of a later time when, possibly, the area of Ephrath (ah) did not extend as far as Kiriath-jearim any more, and when the patriarchs were no longer connected exclusively with the tribes of their genealogies (Gen. 29; 30) but had become mothers of the whole nation. At that time the tomb of the "mother" of Joseph and

Benjamin could be shown anywhere in the land of Israel, Judean Bethlehem not excepted.

\*RAINBOW. BOW AND ARROW and RAINBOW (the Hebrew and Greek terms being the same, except for use of ῥοις instead of τόξον in Rev. 4:3; 10:1) omitted reference to sexual symbolism. Both bow and arrow are potent masculine symbols, as the quiver is understandably a feminine symbol. Job, harking back to the days of his youthful vigor, says:

My root spread out to the waters,  
with the dew all night on my branches,  
my glory fresh with me,  
and my bow ever new in my hand (Job 29:19-20).

Failure to apprehend the sexual symbolism of the bow has been a cause of confusion in the renderings of Gen. 49:22-25, from ancient versions to the modern. The characterization of Joseph as a "wild colt" (ABi and NAB) or a "wild ass" (NJV) seems more likely than the traditional "fruitful bough." The male ass is notorious for sexual power, but the possible sexual implications of the bow symbolism appear to have been missed:

Yet each one's bow stayed rigid,  
and their arms were unsteady (Gen. 49:24, ABi).

But each one's bow remained stiff,  
as their arms were unsteady (NAB).

The suggestion of phallic symbolism is plainer in NJV:

Yet his bow stayed taut,  
And his arms were made firm.

The possessive pronominal suffix, "his," certainly refers to Joseph, rather than to his assailants.

Ps. 127:4-5 likens sons sired in a man's youth to arrows in a warrior's quiver. Elsewhere (Ecclus. 26:12) the arrow figures the phallus and the quiver the vulva in the complaint about the "headstrong" daughter who, like the thirsty wayfarer who will drink any water, will "squat before any post and open her quiver to the arrow."

Both the quiver (full of arrows) and the tensile bow are symbols of virility in Mesopotamian literature. An incantation for male potency petitions, "May the [qu]iver not become e[mpt]y, may the bow not be slack" and in the accompanying ritual are instructions for making of model bows to be used in the rites (R. D. Biggs, *ŠA.ZI.GA, Ancient Mesopotamian Potency Incantations* [1967], p. 37, No. 18, lines 3-4). In a curse sanctioning a treaty we have the imprecation: "As for the men, may the Mistress of Women take away their bow." The Hittites, wishing to destroy the prowess of their enemies, prayed to Ishtar of Nineveh: "Take from

[their] men masculinity, prowess, robust health, swords (?), battle axes, bows, arrows, and dagger[s]! And bring them to Hatti! Place in their hand the spindle and mirror of a woman! Dress them as women! The removal of a warrior's bow or other weapon was thus more than mere disarmament; it was also a humiliation and ceremonial emasculation, making the warrior a woman.

Some interpreters find bow symbolism in the phallic imagery of lines 37, 40, 43-44, 46-47 of the Ugaritic *hieros gamos* text 23 [52]. F. M. Cross, e.g. (*Canaanite Myth and Hebrew Legend*, p. 23), rendered line 37 thus:

il. ḥt. nḥt                    El bends his bowstave,  
il. ymn. mṯ ydh            He drew his mighty shaft.

The noun ḥt (=Akkad. *ḥattu*, "scepter, staff, stick, branch") is alleged to mean "bowstave" here while the verb *nḥt*, "descend," is given the sense "bend [a bow]" on the basis of II Sam. 22:35 (=Ps. 18:34 [H 35]), an obscure and probably corrupt passage which none of the ancient versions understood to refer to the bending of a bow. Many interpreters, including the present writer, have taken ḥt in the established sense of "rod" or "staff" and the verb *nḥt* also in the usual sense "be low," thus making the divine member a drooping rod rather than a taut bow. In any case, whether the *yd*, "hand" (i.e., *membrum virile*) of El is represented as a staff or a bow, or as drooping or taut, the passage is concerned with male potency or the lack of it.

In the Ugaritic epic of Aqhat a crucial episode involves the masculine symbolism of the bow (Hillers) and a conflict with the Virgin Anath, goddess of love and war, who covets the bow of the young hero and tries to get it from him with offers of silver and gold, immortality, and perhaps love (*ANET* [2nd ed.], p. 151). The brash young hero spurns all offers and (apparently) suggests that the goddess as a female has no business with a bow. The goddess is incensed and begins a series of actions which culminate in the assassination of Aqhat in order to get his bow.

The bow in the clouds as a reminder of the covenant (Gen. 9:12-13) takes on new significance with the appreciation of possible sexual symbolism. As a sign that God's wrath had ceased, it was explained (Nachmanides on Gen. 9:12) that the end of the bow pointed downward, as the warrior lowers his bow in declaring peace. It is at the same time a sign that the divine glory and potency persists. Ezekiel's vision of the gleaming loins of the anthropoid rider of the marvelous vehicle evoked comparison with the rainbow (Ezek. 1:26-28). Whether the attention to the loins (Ezek. 1:27) is connected with the figure of the bow is moot. The rabbis generally disapproved of bowing down at the sight of the rainbow, which might appear to be worship of rain, but there is a blessing to be recited on seeing it (T.B. Ber. 59a).

\***RAMOTH-GILEAD.** An important administrative center and fortress E of the Sea of Galilee, located in the E part of the territory of Gad.

**1. History.** Ramoth-gilead was one of the three cities of refuge located E of the Jordan (Deut. 4:43; Josh. 20:8). It was assigned to the sons of Merari, of the tribe of Levi (Josh. 21:38; I Chr. 6:80). Solomon made the city the administrative center of his sixth province, which included Bashan and upper Gilead, and contained sixty fortified towns, "with gate-bars of bronze" (I Kings 4:13 NEB). Before the death of Solomon in 922 B.C., Rezon established the independence of the Aramean kingdom of Damascus from Israel (I Kings 11:23-25), and Ramoth-gilead, located on the constantly shifting border between the two kingdoms, was caught in their struggles over the next two hundred years.

**2. Location.** The precise location of Ramoth-gilead has not been established with certainty. In the *Onomasticon* the site is placed fifteen miles W of Philadelphia (Amman). But both the references to the united kingdom's administrative centers and the descriptions of the conflicts with Aram demand a site farther N. At least three sites have been rivals for identification as Ramoth-gilead: Ramtha, Tell el-Husn, and Tell er-Ramith. Surface surveys failed to produce ceramic evidence supporting the claim of either Tell el-Husn or Ramtha, but, while not conclusive, the material from excavations at Tell er-Ramith supports Nelson Glueck's early identification of that site as Ramoth-gilead. The continuity of the name also supports the identification, as does the geographical location. It is a tell seventy miles S of Damascus on the Wadi Shomer, in the middle of a rich valley fifteen miles E of Irbid. Most important of all is the occupational history of the site as determined by ceramic and architectural evidence. The ceramic groups contain Iron Age pottery from Israel and from Syria. The stratigraphic evidence for the construction and destruction of the defenses and buildings on Ramith was precise. All the evidence conforms to the history of Ramoth-gilead as presented in the OT from the time of Solomon to the destructive campaign of Tiglath-pileser III in 733 B.C. The lack of evidence for the occupation of Ramith from the period before Solomon provides a problem in interpretation. However, this lack supports the critical view of R. de Vaux and others that the institution of refuge cities is not related to tribal organization and does not antedate the reign of Solomon.

\***RECHABITES** [בית רכבים, probably house of (chariot) riders; LXX αἰκὸς Ἀρχαβίων]. A group of metallurgists or smiths whose peculiar life-style was derived from their occupational pattern.

The Rechabites are typically described as a puritanical, clan-like association which lived in a nomadic setting and proscribed wine-drinking,

house-building, and vineyard husbandry as a religiously based protest against the prevalent way of life in the cities of the divided monarchy. This interpretation views them as extreme examples of the ideal toward which the prophets tended and maintains that both operated out of an ideology in which anti-urbanism was the negative pole of a position which had a nomadic ideal as its positive pole.

Recent studies have challenged both the importance of a nomadic ideal in Israel and the assumption that the Rechabites' regulations derived from nomadism and sought to raise the nomadic life to the level of religious principle. A group such as the Rechabites have been purported to be has no social parallel in the ancient Near East. An often-cited Nabatean group, mentioned by Diodorus of Sicily (XIX.xciv.2-4) is not a genuine parallel, owing to historical distance, the disparate function of the two disciplines, and the general cautions applicable in the use of sources concerning the NABATEANS.

Since the Rechabites of Jeremiah's day looked upon J(eh)onadab-ben-Rechab as their "father," II Kings 10:15-17 was regarded as the account of the origin of their sect. This passage, however, gives no indication that J(eh)onadab represented a nomadic ideal or that he lived a nomadic existence. Evidence for the social location of J(eh)onadab is perhaps found in his name, which combines the theophoric element J(eh)o with the root *n-d-b*. The noun *nādhīb* denotes a member of the ruling nobility. All names in the OT containing the root *n-d-b* belong to members of this class (Exod. 6:23; I Sam. 31:2; I Kings 4:14; 14:20; I Chr. 3:18), and there is no reason to consider J(eh)onadab an exception.

In considering the second element in the name (ben-Rechab), one cannot say whether *ben* implies a father-son relationship or a descendant of Rechab (possibly the one mentioned in II Sam. 4:2 ff.) or whether, like the Akkadian *māru* and *aplu*, it indicates membership in an occupational group or guild. The guild head was called "father"; apprentices were called "sons." In Ugaritic texts, there is a specialty group in royal service called *ḥrṣ-mrkbt*, "chariot-makers" or "wainwrights" (UT 114:8; 308:6; 1024:24; 1039:13), and the designation ben-Rechab might indicate that J(eh)onadab belonged to a similar occupational group. A cognate of ben-Rechab appears on an Aramaic seal impression from Zenjirli-Samal, belonging to *br rkb* (Bar-Rakkab), son of Panammu II (733-727 B.C.). The principal god of Bar-Rakkab was Rakkab-El, and it is generally agreed that Rakkab-El means "Charioteer of El," whose symbol on the Kilamu Orthostat and elsewhere is a chariot yoke (=Rakkab) and a winged disc (=El). This deity is related to the [d] *Bé'-li-ra-kab-bi* (ša URUSa-ma-alla), "Lord of the Chariot," of cuneiform sources. Such parallels, as well as the employment of hypocorisms in the OT, suggest that *bn rkb* may be equivalent to *br rkb* (?) and thus mean "son of the charioteer of El (or God)." It is perhaps significant that the alliance mentioned in II Kings 10 is made in Jehu's chariot, possibly presupposing prior association of the men in the royal chariotry,

J(eh)onadab being either chariot maker and/or chariot driver. See YA'UD[Š].

Probably the most that can be said is that J(eh)onadab was a supporter of Yahwism in the face of the threat of Baalism under the Omrides. It is fanciful to assert that he was a naïve man of the wilderness, or to assume that there existed a group of "Proto-Rechabites" who were ready to follow the lead of a champion of the nomadic ideal.

Seeing the Rechabites in Jer. 35 as defenders of a nomadic ideal depends upon the assumption that abstention from intoxicants is a distinctive trait of nomadic society, that tent-dwelling necessarily indicates nomadism, and that refraining from agriculture implies nomadism. It is questionable whether these cultural traits should be interpreted as exclusive indicators of nomadism, and it has been suggested that the Rechabites were craftsmen, probably a guild of metalworkers involved in the manufacture of chariots and weaponry, among other things.

The smith commanded technical lore which was jealously guarded and handed down from generation to generation. Thus metallurgists in antiquity formed endogamous lines with long genealogies, a fact accounting for the lengthy existence of the Rechabites. The smith moved from one location to another in search of ore and/or fuel, thus precluding establishment of a fixed domicile and agriculture. The teetotalism of the Rechabites is not a distinctive trait of nomadism and can just as well be seen as another measure for guarding trade secrets.

Jeremiah's praise of the Rechabites is not a positive valuation of their discipline's content, but rather of their obedience to a command. Thus Jer. 35 does not support a nomadic ideal on the part of Jeremiah or the other prophets.

The supposition that the Rechabites were a guild of craftsmen is further supported by genealogies in I Chr. 2 and 4. A genealogy reconstructed by combining references from these chs. lists the sons of various clans (or guild members) in such a way that clansman "X" becomes the father of place "Y," e.g., 4:12 may be translated: "Eshton begot Beth-rapha and Paseah, and Tehinnah the father of Ir-nahash. These are the men of Rechab." Ir-nahash can mean "City of Copper" or "City of Smiths" and is identified with Khirbet Nahas in the northern Arabah. Ch. 4 includes references to other groups of craftsmen (4:14, 21, 23). In I Chr. 2:55 the Rechabites are associated with the Kenites: "These are the Kenites [or smiths] who came from Hammath, the father of the house of Rechab." This reference is significant in that the house of Rechab is again connected with a site and Kenites, who appear to have made their livelihood as metal craftsmen and may have introduced metalurgy to the Israelites. It has been suggested that the Kenites were a group of ironsmiths who migrated from the Hittite Empire after its destruction.

In rabbinic literature there are references to the Rechabites which allow the inference that they continued to exist during the second common-

wealth, but whether they continued to exercise their craft during the period of the second temple and later is subject to doubt.

The Rechabites became associated in Jewish legends and rabbinic literature with the lost tribes of Israel, said to have been taken by God to a safe and paradise-like refuge until they could return and claim the land of Palestine. The Christian apocalypse of Zosimus portrays the blessed inhabitants of an island as descendants of the Rechabites. Their ascetic practices follow the commandments given in Jer. 35: they wear no clothing, they eat only the fruit provided for them or the manna which drops from the sky at specific times of the year, drink only the water from a special stream, and have intercourse only once in their lives, following which the woman bears two children, one of whom remains forever chaste.

**\*RECONCILIATION.** The act of establishing friendship and peace by removing enmity, and the resulting state of oneness. Since in the NT relationship to God primarily is involved, reconciliation, which comes through Christ's cross, is closely related to "at-one-ment" (cf. Rom. 5:11 KJV). (See ATONEMENT; DEATH OF CHRIST; FORGIVENESS; MEDIATOR esp. §C3d.) The whole of biblical theology may be drawn in as background.

"The NT doctrine of reconciliation" has, in the last century, become a catchword under which all soteriology has been subsumed (cf. SALVATION §5b). From A. Ritschl's *Rechtfertigung und Versöhnung* (1870) to the Presbyterian Confession of 1967 it has been used especially of interpersonal, racial, social, and political relationships. Yet the term itself is rare in the Bible (sixteen times in RSV, only once in the OT). It seems to originate in Hellenistic Christianity. Only the Pauline corpus contains the theme, and Paul did not stress reconciliation as much as earlier traditions and his later disciples did.

**1. Backgrounds.** Reconciliation has to do with personal relationships. The Philistines feared David would betray them to "reconcile (*hithpael* הִתְפַּאֵל, make pleasing; LXX διαλλάσσω) himself" to Saul (I Sam. 29:4). Moses "would have reconciled" two quarreling Israelites (*sunhllaxsen* αὐτοὺς εἰς

εἰρήνην, Acts 7:26). A wife separated from her husband should "remain single or else be reconciled (*καταλλαγῆτω*)" to him (I Cor. 7:11). Jesus enjoined readiness to reconciliation: "If . . . at the altar . . . [you] remember that your brother has something against you, . . . first be reconciled to your brother" (*διαλλάγηθι*, Matt. 5:23-24; cf. 6:12—the forgiven disciple must forgive when seeking God's forgiveness—even when the grievance is on the other person's part).

In the OT, cult, law, and prayer are means for reconciling God and people, or person with person, in light of understandings of COVENANT and SIN, especially after the Exile (see RECONCILIATION §1). Even so, reconciliation is not an OT term. It begins to appear in II MACCABEES, ca. 100 B.C. (it is hoped and prayed God will be "reconciled" to his people [1:5; 5:20; 7:33; 8:29]), in Josephus (*Antiq.* VI.vii.4, Samuel entreated "God to be reconciled to Saul"), and the rabbis (*Str-B*, III, 519-20).

In the Greek world, terms from ἀλλάσσω were common for the reconciliation of one person with another, but rare in religion (exception: Sophocles, *Ajax* 744, the chorus hopes Ajax might be "reconciled to the gods from anger").

**2. In the Pauline letters.** Reconciliation terms occur a dozen times, mostly in passages shaped by hymnic, liturgical, and doxological traditions from the Hellenistic community (Käsemann).

a) Pre-Pauline tradition can be seen in (1) the "Christ hymn" of Col. 1:15-20, which concludes, "through him [Christ] to reconcile [ἀποκαταλλάξει, the double compound verb unattested prior to its three NT occurrences] to himself [God] all things, whether on earth or in heaven, making peace." The hymn proclaims Christ the cosmocrat or who unites what had been separated within the All. The vision is of cosmic peace, like that in Vergil's Fourth Eclogue of the *Pax Romana*. (2) In the hymnic, christological insert in Eph. 2:14-18, based on Isa. 57:19, about "preaching peace," vs. 15b-16 speak of Christ's work "making peace" between Jew and Gentile, that he "might reconcile (ἀποκατάλλαξῃ) us both to God in one body through the cross, thereby bringing the hostility to an end." Here alone is Christ, not God, the subject of "reconcile." (3) Rom. 11:15, if rejection of the Jews "means the reconciliation of the world, what will their acceptance mean but life from the dead?" The abrupt phrase *καταλλαγῆ κόσμου* seems a formula, akin to (4) II Cor. 5:19-21, "in Christ God was reconciling (*καταλλάσσων*) the world to himself, not counting their trespasses against them [cf. Rom. 3:25b, another pre-Pauline fragment], and entrusting to us the message of reconciliation (τὸν λόγον τῆς καταλλαγῆς). . . . Be reconciled to God (*καταλλάγητε*)." Vs. 21 then provides the vicarious, christological base with references, unusual for Paul, to Jesus' sinlessness and to believers as "the righteousness of God." Examples (1) and (2) deal with reconciliation *within* the cosmos, (3) and (4) reconciliation *of* the cosmos with God. (1) is cosmological, (2) ecclesiological, (3) and (4) more anthropological, as is (5) Rom. 5:10-11, "If while we were enemies we were reconciled (*κατηλλάγημεν*) to God by the death of his Son, much more, now that we are reconciled

(καταλλαγέντες), shall we be saved . . . through . . . Christ, through whom we have now received our reconciliation (καταλλαγὴν; KJV "atonement")." Only a community which has experienced God's transforming power in Christ, eschatologically realized, can say such things.

b) Paul uses such material to emphasize the justification of "the ungodly" (Rom. 4:5) as the justification of God's "enemies" (5:9-10), but he is aware of dangers from such enthusiast language: individual Christians may see themselves as beyond sin, already fully saved, without need to give themselves in the service of others. Hence Paul welcomes identification with the pre-Pauline theme of "righteousness" (II Cor. 5:21) which he developed as "justification" (see *RIGHTEOUSNESS IN THE NT* and supplementary article). "Righteousness" means we are at "peace with God" (Rom. 5:1) "without our doing anything"; reconciliation, that God ended enmity "before any effort of man" (Rom. 5:10) (Bultmann). Paul also welcomes the parnetic implications of the imperative "Be reconciled," i.e., live as reconciled persons. He balances "realized eschatology" ("now reconciled") with future hope, and stresses the anthropological rather than the cosmological: II Cor. 5:18, "God . . . reconciled (καταλλάξαντος) us," interprets 5:19, "God was reconciling the world." Stressed above all is "the ministry of reconciliation" given in Christ (5:18, parallel to the "ministry of righteousness," II Cor. 3:9, author's trans.).

c) The Deutero-Pauline epistles take a similar line. What Christ "has now reconciled (ἀποκατήλαξεν) . . . by his death" (Col. 1:22) is designated, not as—in the hymn—"all things," but as "you, who were once estranged and hostile in mind" (1:21), i.e., the Colossians who have believed the gospel Paul preached (1:23). Further, "the body" of Christ, the church, is to be the missionary force extending Christ's lordship in the world (1:21 ff.; cf. Schweizer). Similarly, Eph. 2:15-16 sees the church as the place of reconciliation. Here we may add Heb. 2:15, Christ's death was to "deliver (ἀπαλλάξῃ, NEB "liberate")" those in bondage to death and the devil.

d) An alternative to the traditio-historical view offered above is suggested by Goppelt: Paul himself first designated Christ's work as reconciliation, against a Jewish background (II Maccabees, Josephus, rabbis) and in light of the historical Jesus who taught and practiced love even for enemies and who "died for all" (II Cor. 5:14). But a locus for language about God "reconciling" the world does not seem to be demonstrable here, as in Hellenistic (-Jewish?) Christianity.

3. Conclusion. Reconciliation, then, is one soteriological concept among many in the Pauline school: God, through Christ's cross, reconciles hostile humans who are to receive the proffered reconciliation/expiation/new-life situation. They are to respond by proclaiming the message of reconciliation about Christ crucified, for God "has enlisted us in this service of reconciliation" (II Cor. 5:18 NEB). From God's side the work of reconciliation is complete; the task of setting it forth in the world goes on. Occasionally in the NT there are hints about reconciliation between

persons or parties (Eph. 2:16; cf. Matt. 5:24; I Cor. 7:11), but even in these places the arena is the believing community, and in Eph. 2 reconciliation is primarily "to God through the cross." There are also hints about reconciliation as cosmic harmony, but in Colossians this is interpreted as reconciliation of estranged people to God through missionary proclamation (1:20 ff.). It remained for later theology to expand the theme into a comprehensive doctrine, rich in potential but not without dangers.

J. REUMANN

**REDACTION CRITICISM, OT.** A special branch of OT research devoted to the study of the way older elements of tradition were compiled, edited, and re-edited to produce the final form of the text. It is related to *LITERARY CRITICISM* and *SOURCE CRITICISM* in its concern to distinguish between older source materials and to separate them from editorial modifications introduced by later hands. It is related to *TRADITION CRITICISM* in its concern to show how each stage of redaction gives a new shape to the traditions it preserves. Ordinarily the term "redaction" is used to refer to the work of a later writer who deliberately selects, combines, and arranges already existing materials to create a new literary entity. From the way in which the material is ordered, as well as from discernible editorial links and interpretive comments, we can form an opinion as to the circumstances under which the redaction may have taken place and the special concerns that may have motivated the redactors. The terms "redaction" and "editing" are often used interchangeably, and it is perhaps unwise to press a distinction between them. Nevertheless, a redaction may employ materials that have previously been edited, often for purposes different from those to which the redactor now puts them. The term must therefore be broad enough to include the idea of "re-editing" as well as "editing."

1. Origins of the discipline
  2. Examples of redaction critical problems
  3. Priorities for redaction criticism
- Bibliography

1. **Origins of the discipline.** A clear statement of the view that certain OT books may have been formed by a process of compiling, ordering, and editing can be found as early as the sixteenth century. The Roman Catholic scholar Andreas

Masius used such language to describe the formation of Joshua, Judges, and Kings, in his commentary on Joshua published in 1574 (and promptly placed on the Index). It is instructive that he uses the Latin verb from which "redaction" is derived, in a sense conformable to modern critical understanding of the process. Striking also is the fact that he is willing to conjecture that Ezra, or a person of comparable piety and erudition, may have carried out the work.

Evidence of the sort that led Masius to this conclusion is abundant in the OT, and it had been duly noted long before his time. Even the great rabbis of the eleventh and twelfth centuries, such as Rashi and Ibn Ezra, perceived with remarkable clarity that certain anachronisms in the Torah betrayed the viewpoint of an author who lived long after the events he recorded.

Use of evidence from the text itself to determine the origins and dating of biblical material began to be championed in the seventeenth and eighteenth centuries by persons as diverse as Hobbes, Spinoza, Simon, and Selmer. In their work the characteristic views of the Enlightenment and rationalism began to prevail. Common human reason, freed from the claims of ecclesiastical tradition and authority, was the appropriate instrument for discerning what could be known about the origins and development of the text, based on its own indications. See BIBLICAL CRITICISM §§1-3; BIBLICAL CRITICISM, HISTORY OF §1.

While this movement uncovered many of the phenomena underlying redaction criticism, it was not until the nineteenth century that terms such as "redactor" and "redaction" (often abbreviated "R") became commonplace in critical biblical scholarship. Pentateuchal analysis particularly demanded a distinction between the "fragments" or "DOCUMENTS" and the redactional framework in which they had been preserved.

Against the background of traditional views about the authorship and origins of various parts of the Bible, it is understandable that nineteenth-century scholarship developed special enthusiasm for recovering the work of the "original authors." For this and other reasons rooted in the temper of the times, any material that could be identified as secondary, or redactional, tended to be regarded as less valuable. At worst, it was scorned as an unworthy or tendentious distortion of the original. Redaction criticism was therefore most often undertaken in the interest of liberating earlier material from its later redactional trappings.

Deeper understanding, which also had its beginnings in the nineteenth century, eventually led in the twentieth century to a vastly different evaluation of the work of the redactors. Recognition that a wealth of oral tradition underlay much OT material began to alter conceptions of "authorship" (see TRADITION, ORAL[S]). In the case of the PENTATEUCH, for instance, it became clear that the earliest discernible "document" (J) was itself the product of a kind of "redaction," or selective compilation and ordering of material which already had a long history of oral transmission (see YAHWIST[S] §§2-3). Even the Priestly stratum, long regarded as the latest of the Pentateuchal sources,

came to be seen as a crystallization of ancient oral tradition. See PRIESTLY WRITERS[S] §1.

Such insights opened the way for an integrated analysis of the entire process by which tradition moved through various stages in oral and written forms until it issued in the present state of the text. One might still make value judgments about the relative merits of various levels of tradition, on aesthetic or intellectual or religious grounds, but judgments of this kind were no longer regarded as inherent in the analysis itself. Attention could now be turned away from the question of whether a given redaction had obscured its source materials. As a new literary achievement, a new stage in the history of tradition, it could be described and evaluated in terms appropriate to its own character and design.

Redaction criticism remains useful as a tool for discerning the earlier materials with which the redactor may have worked. But it is also a constructive tool for assessing the special new shape of the tradition as it leaves the redactor's hand. One must take into account, not only such editorial biases and tendencies as we can discern, but also the inner character of the new constellation of traditions achieved by the redactor. Every combination of earlier traditions, whether written or oral, achieves a life of its own which can never be wholly circumscribed by the special intentions of those who combined them. Within the new literary entity achieved by a redactor, one must attempt to discern the way in which the received traditions modify and condition each other when perceived in the intended unity.

**2. Examples of redaction critical problems.** Several instances of redaction can be readily identified by the ordinary reader, working only with the text in translation. Perhaps the clearest examples occur in the books of Judges and I and II Kings. Judg. 2:11-19 leaves no doubt in the reader's mind that the author of these words is reviewing the entire period of the Judges from the perspective of a time long after it was over. He shows that he is not so much interested in recording the history of the period as he is in giving his readers a theological or religious explanation of why the history unfolded as it did. Before a single episode of the story is narrated, we are told in advance why Israel was ravaged and oppressed by its enemies. Every such instance was the result of an outbreak of "the anger of the Lord" (vs. 14), because "the people of Israel did what was evil in the sight of the Lord and served the Baals" (vs. 11). Every instance of successful resistance to, and victory over, the enemy occurred because "the Lord raised up judges, who saved them out of the power of those who plundered them" (vs. 16), in response to their cries of distress (vs. 18). Periods of security and well-being were granted to Israel during the lifetime of each judge (vs. 18), but with the death of the judge, Israel quickly relapsed into idolatry (vss. 17, 19). This produced a new outburst of divine anger, and the cycle of oppression and deliverance began again.

The redactor is now ready to illustrate his point by retelling a series of ancient stories about the times when deliverers arose among the people and

won great victories. In each case the episode is introduced by a brief statement of the theological reason for the oppression (3:7, 12; 4:1; 6:1; 10:6; 13:1; note the exception in 3:31), usually including notice of Israel's cry for deliverance (3:9, 15; 4:3; 6:6; 10:10). Twice there is an explicit statement that the Lord raised up the deliverer (3:9, 15). The stories themselves are clearly derived from much earlier traditions that were originally told and preserved for reasons quite different from that of illustrating the redactor's overarching interpretation of the entire period.

As clear as this editorial scheme appears to be, the work of redaction criticism in the book of Judges has only begun when such observations have been made. Many questions about the editorial process confront us in the text, some of which can probably never be answered conclusively in the light of available evidence. Leaving aside the question of how the material in Judg. 1 (and perhaps also 2:1-5) may have come to be included in its present place, the redaction critic is confronted by an abrupt change—both in editorial policy and in content—in Judg. 17-21 (note the editorial comments in 17:6; 18:1; 19:1; 21:25). Can these chapters be seen as having served the purposes of the redactor whose hand is disclosed in Judg. 2:11-19? If so, how is the change to be accounted for? If not, how is the redactional process to be viewed by which chs. 17-21 were included in their present place?

Even within the more-or-less unified section 2:6-16:31, the redaction critic notices material that may well not have been included by the redactor of 2:11-19. It is widely assumed, for instance, that the Samson stories of Judg. 13-16 were not part of the collection of deliverer stories from which this redactor worked. This points toward the possibility of two or more redactions, by people who were concerned to augment and extend essentially the same theological program (see 13:1). Apparent elaborations such as those in 2:20-23 (cf. 2:1-5); 6:7-10; and 10:10-16 could perhaps also be accounted for in this way.

In another direction, questions must be raised about the form and content of the source material employed by the redactor of 2:11-19. Did he have at his disposal a "book of deliverers" previously edited in a unified way? Was it already furnished with a chronological apparatus? Were the duplicated traditions of Judg. 4 and 5 present to the redactor in this form? Was the material dealing with figures not characterized as deliverers (see chs. 9; 10:1-5; 12:8-15) already fused together with the deliverer stories? Were the several episodes already furnished with interpretive introductions, as divergences between the program of 2:11-19 and the several introductory formulas might suggest?

In the light of such questions, the redactional history of the book of Judges is seen to be much more complex than the editorial comment of 2:11-19 and the arrangement of chs. 3-16 initially indicate. Further attempts at clarification demand, not only careful consideration of the history of the traditions underlying Judges, but also renewed attention to details in the text of the sort isolated

and analyzed by the older literary critics. See

JUDGES, BOOK OF §D and supplementary article.

In some respects the redactional history of I and II Kings is both more clearly attested and more complex than that of Judges. The redactors inform us that the basic historical sequence as well as much of the substance of their work are derived from scrolls that were at their disposal. Underlying the account of Solomon's reign was the "book of the acts of Solomon" (see I Kings 11:41). "The Book of the Chronicles of the Kings of Israel" (I Kings 14:19) and "the Book of the Chronicles of the Kings of Judah" (I Kings 14:29) are cited as source materials. These citations compel us to envision the work of redaction, in this instance at least, as a scholarly literary undertaking of rather astonishing magnitude. The diverse kinds of information abstracted from these sources have been forged into a new unity and given an overarching theological coherence quite different from their original purpose. Moreover, the redactors have woven into this historical sequence a large body of material of a strikingly different sort: story after story involving prophetic figures who often stand in unqualified opposition to this or that monarch (see I Kings 11:29-39; 13:1-32; 14:1-18; 17-19; 20:13-16; 21; 22:1-40; II Kings 1-9; 13:14-21; 19; 20). Some of this prophetic material is preserved by the redactors in forms that clearly betray a much earlier time than their own. One must therefore ask whether scrolls containing such material did not exist independently before the redactors, alongside the royal scrolls explicitly cited. In any case, the redactors must be credited with having preserved and fused two streams of tradition from widely different communities in the life of Israel. See KINGS, I AND II §C; KINGS, I AND II[S] §§2-3.

The magnitude of this achievement was largely overlooked when scholars first isolated the evidence for redaction and identified it with the ideology of the Deuteronomic reformation in the days of King Josiah. Emphasis was placed on the hopelessly simplistic theology of the redactors, which reduced four hundred years of history to a series of illustrations of mechanically operating religious principles. Such an assessment underestimates not only the passionate exigencies of the religious crisis in the last days of the Judahite monarchy, but also the remarkable fidelity of the redactors to their source materials. Heavy-handed as the interpretation is at many points, ancient material is often preserved in ways that both challenge and enrich the redactors' own points of view. Thus the redaction is to be evaluated, not only in terms of the special interpretations of the redactors, but also in terms of the full implications of their achievement viewed as a new literary whole.

Through their activity, two enormously significant themes in OT tradition are brought into fruitful conversation. The first is the theme of God's covenant claim upon Israel, demanding radical obedience to God's clearly expressed will as a matter of life or death. In the course of time, this reached special focus in the traditions of Moses, Exodus, and Sinai, with central emphasis upon a

discrete body of divine statutes delivered through Moses. See COVENANT; COVENANT, MOSAIC[S].

The second is the theme of God's irrevocable commitment to Israel, fundamentally unmerited. In the course of time this theme reached peculiar focus in the traditions of the election of David and Zion. The dynasty was understood to be grounded upon God's irrevocable promise to establish through David an everlasting kingdom, whose authority was intended to extend to all peoples in paradise-like peace. The temple on Zion was conceived as God's eternal dwelling place, the sign of his commitment to dwell forever in the midst of his people. See COVENANT, DAVIDIC[S]; ZION TRADITION[S].

The redactors of Kings have achieved an account of the history of Israel and Judah in which each of these themes intrudes upon the other. Irrevocable command and irrevocable grace confront each other, with the result that each is decisively modified. The older judgment that legalism ultimately dominates in the work of these redactors no longer stands unchallenged. The ideal picture of David with which the redactors operate, mirrored in good King Josiah, as well as their inordinate concern for true worship in the Jerusalem temple, betray an enormous positive investment in the traditions of David and Zion. Even though they affirm that the inner character of the David promise and the Zion promise were always conditioned upon radical obedience to Mosaic Torah (see I Kings 9:1-9), the redactors never surrender their confidence in God's fidelity to these promises. In various ways the redactors prepare Israel to distinguish between God's purpose in choosing David and the wholly justified act of bringing the Davidic dynasty under divine judgment, to distinguish between God's commitment to dwell forever in Zion and the wholly justified act of destroying the temple of Solomon. It is unlikely that the Davidic hope and the Zion hope could have survived without this achievement by the redactors of Kings.

It seems increasingly certain that this massive work was not achieved in a single burst of redactional activity. The question is still lively as to whether an early stage of the redaction was not already completed before the Exile, perhaps during the reign of Josiah himself, even though the process obviously extended into the exilic period. II Kings 17:24-41 (perhaps reflecting the Samaritan schism?) raises the question of postexilic elaborations of the text. It must be stressed that attempts to evaluate the over-all achievement of the redaction, such as the one sketched out above, must remain subject to serious challenge and modification.

The general theological viewpoint of the dominant redactional material in Joshua, as well as in Judges and Kings, has long been recognized as "Deuteronomic." Detailed congruence in language and style leaves no doubt that a profound relationship exists between DEUTERONOMY and the present redactions of these historical works. The most ambitious hypothesis based on these observations envisions a deliberate redactional effort to integrate Deuteronomy, Joshua, Judges, I and II Samuel, and I and II Kings into a single "Deuteronomic

historical complex." On this view, the opening chapters of Deuteronomy are understood as a redactional introduction, not to Deuteronomy alone, but to the entire complex (see DEUTERONOMIC HISTORY [S]). Similarly, the books of Genesis, Exodus, Leviticus, and Numbers are viewed as a "Priestly historical complex" which reached its completed form through a work of Priestly redaction (see CANON OF THE OT[S] §1c). I and II Chronicles, Ezra, and Nehemiah, by similar reasoning, constitute the "Chronicle's historical complex" which underwent its decisive redaction perhaps as much as two hundred years after the reforms of Ezra and Nehemiah.

**3. Priorities for redaction criticism.** Useful as these and other theoretical constructions have proven to be, they will serve redaction criticism best as challenges to re-examine the evidence with appropriate reserve and with openness to new possibilities. Given the complexity of redaction history, it is to be expected that modification and perhaps alternative theoretical constructions will be required to account better for the phenomena of the text.

Often the text supplies us with little more than a strong suspicion that a given composite unit may have resulted from a deliberate redaction of previously disparate material. In such cases the redaction critic must test this possibility against other ways of accounting for the state of the text, such as confluences in the oral tradition, or unsystematic omissions, alterations, and elaborations that occurred in the transmission of the text. The reformulation, testing, and refining of criteria remains an important frontier for the discipline.

Both historians of tradition and redaction critics will be well served by renewed attention to the astonishingly assiduous and ingenious work of the great literary critics of the nineteenth and early twentieth centuries. Their analyses must be accounted for—if no longer on purely literary-critical grounds, then in other ways that are responsive to the same evidence. Redaction is still best understood as a literary undertaking, and redaction criticism is therefore peculiarly dependent upon solid literary-critical methods.

Obviously it is possible that combinations and elaborations of diverse traditional materials occurred without the intervention of a literary redactor. Solid attempts at redaction criticism may serve to confirm this, in a given instance, rather than to disprove it. In other instances, however, stages of reordering and reinterpretation may be uncovered that can only be understood as deliberate pieces of redaction. In either case, redaction criticism provides an indispensable tool for assessing the total process by which the biblical text achieved its present form.

**REDACTION CRITICISM, NT.** A method of studying the NT that concentrates on the way the principal author of a work has adapted ("redacted") earlier materials to his own theological ends. Also called redaction history, from the German *Redaktionsgeschichte* (literally, [a study of] the history of redaction), and composition criticism (*Kompositionsgeschichte*).

1. **What is redaction?** Redaction is the conscious reworking of older materials in such a way as to meet new needs. It is editing that does not simply compile or retouch but creatively transforms.

The term applies most obviously to the work of each **EVANGELIST** in producing the **GOSPELS**. As long as the evangelists were regarded as eyewitnesses of the events they recorded, their authorship was assumed to be minimal, though the many differences among the four canonical gospels were not easily accounted for in this way. When the apostolic authorship of the gospels was no longer maintained and their dependence on earlier sources was recognized, the opportunity arose to focus on the way those sources were edited. But in fact the source criticism of the Synoptic gospels (see **SYNOPTIC PROBLEM**; **SYNOPTIC PROBLEM(S)**) tended for a long while to treat those sources in a way that emphasized their historical accuracy, to assume that they were so regarded by the evangelists, and so to minimize the latter's contribution, held to be little more than "scissors-and-paste" editing.

The emergence of **FORM CRITICISM** revealed that between the historical Jesus and any written documents such as our gospels or their sources there stands a long and complex period of oral tradition that reflects for each individual story or saying a historical context, a life setting (*Sitz im Leben*), of its own, not necessarily like the *Sitz im Leben* of Jesus.

Redaction criticism, in turn, is based on the recognition that the production of the gospels, and probably of their written sources as well, represents a third life setting, distinct from that of Jesus and the intermediate period of unwritten tradition, and that consequently the activity of the authors who produced these documents demands investigation. Both in their rewriting of earlier works and in their interpretation of the still fluid tradition they may display imagination and innovative freedom, while at the same time paying considerable respect to the material they start with.

2. **The method at work.** When we possess a document which an author has used as source, the task of redaction criticism is simplest; we are able as it were to look over his shoulder as he rewrites, and the only question is why he adapts it as he does. The more precisely, then, we can reconstruct the text lying before the author as he worked, the more confidently we can understand his redaction. But often such a written text either is not accessible to us or never existed, so that we cannot perceive the hand of the author by working forward from an earlier document; rather, we must go backward from his finished work, using as far as possible the insights of form criticism. Thus, if the author of Matthew has used Mark as a principal source, his detailed handling of the Markan material will be quite clear; on the other hand,

since we have reason to believe that the author of Mark began only with more or less independent traditions whose pre-Markan form is not directly knowable, his adaptation of them will be harder to identify and must emerge cumulatively as we work through his gospel, noting recurring phrases, themes, and emphases that appear to have been added by him to the tradition. But in either case the separation of redaction from source or tradition is an essential step toward perceiving the author's meaning.

The redaction critic, then, pays closest attention to what distinguishes the work before him from the earlier material on which it is based. He observes how that material has been arranged or rearranged, how a new setting for a traditional unit gives it new meaning, in what ways the author both emphasizes ideas not originally prominent and inserts new themes, how he comments on the older material in editorial asides and transitional passages, and so forth. In ways such as these the particular interests of the author are allowed to stand out and to be seen as functions of his own historical situation, illuminating how his *Sitz im Leben* has changed from that of the earlier source or tradition. If more attention is given to the distinctiveness of the work than to its total content, this is done only so as to set in sharper focus the way the author intends the older content to be understood. Redaction criticism is no substitute for comprehensive **EXEGESIS** but contributes importantly to it.

3. **The Synoptic gospels and Acts.** While it is true that the first three gospels in the NT canon are interrelated in a very close way, so that they can be grouped together as the Synoptic gospels and their more or less common body of material known as the synoptic tradition, this fact has tended to obscure the many subtle differences among the three gospels and even some more obvious ones. Redaction criticism, which from the beginning has chiefly applied itself to these gospels, has served to correct this shortcoming. Each of the evangelists is seen as a distinctive author and a theologian in his own right, as formerly only the Fourth Evangelist was viewed.

On the broadest scale this means that the overall literary form or genre of each of the three gospels is distinctive. Although we usually refer to all three as versions of the *gospel* (i.e., the good news), it is to Mark that this term best applies, as its use in the opening verse and throughout the work indicates. Neither Matthew nor Luke would deny that his own work too is a presentation of the good news and so, according to later usage, a gospel; but the format and purpose of their respective books are more aptly described in other terms. Matthew is not so much a theological proclamation, like Mark, as a manual of belief and action for a particular Christian community; and Luke comes closest of all the evangelists to producing a history, if we understand that term in a theological, not a factual, sense. See **GOSPEL, GENRE**, [S].

The detailed redaction criticism of the Synoptic gospels (see *bibliog.*) has tended to rely heavily on the widely accepted solution of the synoptic

problem, the so-called two-document hypothesis, according to which Matthew and Luke have independently used both Mark and the hypothetical source Q (see Q and Q[S]). Although this solution has been challenged from time to time, the success of redaction critics in explicating the Synoptics by means of it lends it considerable support. Mark too, whose sources on this theory are not available to us, has been illuminated by comparison with the later gospels dependent on it. In short, the theological movement from one document to another sheds light on both. Even Q, uncertain as are its exact content and text, can be better understood by examining what Matthew and Luke have done with it. See SYNOPSIS PROBLEM[S].

On the other hand, redaction criticism of the Synoptics does not rest solely on a source-critical solution of the synoptic problem, for whatever their literary relationships, it may be presumed that each of the three gospels is also directly dependent on tradition. As we saw in §2, it is possible to examine the redaction not only of sources but also of tradition, i.e., to perceive what was accomplished by the fixing of a tradition in written form and its combination with other traditions. The redaction-critical treatment of Mark, whose sources are unknown, has flourished no less than that of Matthew and Luke. And because the method can thus be applied when only one document is involved, it has begun to deal also with Acts, unique among first-century Christian writings. This is possible not because Acts was probably written by the author of Luke—though that undoubtedly suggested the possibility—but because it appears to be dependent on its own body of traditions. The fact that those traditions are otherwise almost unknown to us—except as their *Sitz im Leben* may correspond to that of the epistles or the pregospel traditions—makes their redaction-critical investigation more difficult but not impossible. See also ACTS OF THE APOSTLES and supplementary article; articles on the gospels of MARK, MATTHEW, LUKE.

**4. The Fourth Gospel.** Because of its considerable differences from the Synoptics, the Gospel of John has always been assumed to be the work of a theologically creative author, but as long as he was held to be either an eyewitness of the events he describes or dependent on one or more of the other gospels, there was no way of adequately accounting for the independence of his gospel. Once it is recognized that he did not use the Synoptics as sources, although sharing a good deal of traditional material with them and possibly having some acquaintance with one or more of them, the possibility of exploring his relation to no longer extant materials by means of redaction criticism is raised. Analysis of his interpretation of a unique oral tradition, especially as it appears in the discourses of Jesus, has been limited by the relative lack of form-critical treatment of that material. But in the case of the gospel's narrative material the evangelist is in a situation analogous to that of Mark, except that John is increasingly believed to have begun with a far more fixed body of narratives: the so-called Signs Source (SQ) and

an account of the Passion (see JOHN, GOSPEL OF [S] §1; SIGN IN THE NT[S] §4).

Considerable attention has been given to the movement from SQ to present gospel as that movement sheds light in particular on John's Christology and on his understanding of Jesus' miracles ("signs"). In the former connection, the strong possibility that the evangelist has adapted a christological hymn in producing the gospel's prologue (1:1-18) has opened the way to redaction-critical study of that passage. Along with such detailed examination of the text, the broader questions of the gospel's genre, historical setting, and relation to first-century Jewish and Christian thought have been reopened.

**5. The epistles.** The various letters in the NT are primarily *ad hoc* writings, produced more or less spontaneously in response to specific situations (see LETTER §4, LETTER[S]). To that extent they do not immediately suggest themselves for redaction-critical analysis as it focuses on the reworking of older material. But at least the earliest letters (those of PAUL) were produced at the same time as the traditions behind the gospels and Acts were developing and can be expected at points to reflect a similar tradition. It is widely held that Paul occasionally uses even relatively fixed traditional material in the course of his correspondence (e.g., the christological hymn in Phil. 2:6-11), so that his redaction of it can be explored. The growing field of form-critical investigation of the epistles (see FORM CRITICISM, NT[S]) will undoubtedly yield other traditional data for the redaction critic. When more than one letter from an author (Paul, "John") exists, in which similar theological material is variously handled, or when successors have reused his ideas, further possibilities are presented for a kind of redaction criticism.

Stein, "What is Redaktionsgeschichte?" *JBL*, LXXXVIII (1969), 45-56, and "The Proper Methodology for Ascertaining a Markan Redaction History," *NouvT*, XIII (1971), 181-98; see also introductions in works by Marxsen and Bornkamm cited below. J. Rohde, *Rediscovering the Teaching of the Evangelists*, NTL (1966), discusses the method and its background (pp. 1-46), then summarizes many Ger. examples of its application to the Synoptic gospels and acts.

Two scholars anticipated the rise of redaction criticism: K. L. Schmidt, *Der Rahmen der Geschichte Jesu* (1919); R. H. Lightfoot, *History and Interpretation in the Gospels* (1934), and *The Gospel Message of St. Mark* (1950).

Of the innumerable examples of redaction-critical work on the NT, esp. journal articles, only a representative selection can be listed. J. M. Robinson, *The Problem of History in Mark*, SBT, XXI (1957); W. Marxsen, *Mark the Evangelist* (1956 [ET 1969]), also extends the studies to include Matthew and Luke; H. Conzelmann, *The Theology of St. Luke* (2nd ed., 1957 [ET 1960]); Günther Bornkamm et al., *Tradition and Interpretation in Matthew* (1960); C. E. Carlston, *The Parables of the Triple Tradition* (1975); R. A. Edwards, "An Approach to a Theology of Q," *JR*, LI (1971), 247-69; J. T. Lienhard, "Acts 6:1-6: A Redactional View," *CBQ*, XXXVII (1975), 228-36.

\*REFINING. See TELL EL-KHELEIFEH[S].

\*REMNANT. The remnant is a key motif in eschatology and the hope for the future. Hebrew, Aramaic, and Greek terms reveal a variety of remnant ideas, and the theme is also present in words that belong to a larger semantic range.

1. Terminology in the OT. Derivatives of six Heb. roots, which are employed over 540 times, express the OT remnant theme.

a. Derivatives of שָׁאַר. This root (266 Heb. usages, 10 in Aram.) is attested also in cognate languages. Verbal forms in Heb. denote "to remain" (*qal*), "to be left over, remain (over, behind)" (*niph'al*), and "to leave (over, behind), have left" (*hiph'il*). The nouns שְׁאֵרִית and שְׁאֵרִית denote "remnant, remainder, rest, residue." Basically the various forms designate the part which is left over (Gen. 7:23; Isa. 11:11; Dan. 10:8) or remains (Exod. 10:5; Isa. 4:3; 17:6) after the removal of a small part, half, or the larger balance. שְׁאֵרִית, "remnant," may even designate the whole without the loss of any part (Gen. 45:7). שְׁאֵר is Isaiah's favorite word of his remnant theology with twelve of twenty-six usages in the OT (10:19-21; 11:11, 16). At times derivatives of the root שָׁאַר express the insignificance (Deut. 3:11), smallness (Deut. 4:27; Jer. 8:3), and meaninglessness or total loss of the remnant (Gen. 47:18; Exod. 8:31), but normally an intense, future-directed aspect is present, which underlines the inherent potentiality of renewal of the remnant, no matter what its size.

b. Derivatives of פָּלַט. This Heb. root (80 usages) also appears in a number of cognate Semitic languages. Heb. derivatives of the root appear in verbal forms with the meanings "to escape, get away" (*qal*), "to deliver, bring to safety" (*pi'el*, *hiph'il*), and as nouns פָּלִיט (*pālīt* and *pālēt*), "escapee, fugitive," and פְּלִיטָה (often parallel to nouns of the root שָׁאַר), "escape, deliverance" (Gen. 45:7; II Sam. 15:14). With human entities, forms of פָּלַט refer mostly to an "escaped remnant" (Gen. 32:8 [H 9]; Judg. 21:17; Isa. 4:2-3). Sometimes the purely negative aspect of decimation or total loss comes to expression (Amos 9:1; Jer. 42:17), but usually Israel's "escaped remnant" experienced deliverance from a divinely caused threat to life and continual existence (Isa. 37:31-32=II Kings 19:30-31; Ezek. 6:8-10). Some of God's people will escape Yahweh's final judgment (Isa. 4:2; Joel 2:32), from which even the believing Gentile can be delivered (Isa. 66:19).

c. Derivatives of מָלַט. This root (89 usages), which developed from מָלַט, appears only in verbal forms and denotes "to escape, get oneself to safety, make for safety" (*niph'al*) and "to deliver, save, let escape" (*pi'el*). Some contexts indicate that it is impossible to escape to safety (Isa. 20:6), and so total destruction results (Judg. 3:29; Jer. 32:3-4). However in most contexts the escape was successful (Gen. 19:17-22; Jer. 51:6) and life was saved (I Kings 1:12; Jer. 51:45). In the end time, Yahweh will save those who have escaped (Isa. 49:24-25) and who call upon his name (Joel 2:32), all those whose names are written in the book of life (Dan. 12:1; cf. Isa. 4:2-3).

d. Derivatives of יָחַר. At least 110 usages of 248 forms of derivatives of this root (attested in cognate languages) contain the remnant idea. They contain the meanings "to be left over, remain over" (*niph'al*), "to leave over (behind), have remaining, have left" (*hiph'il*) in verbal forms, and in nominal forms "remainder, rest, remnant." Various forms denote either a small part (Judg. 8:10; II Sam. 8:4), one half (Exod. 28:10; Isa. 44:19), or the larger balance (Lev. 14:18; II Chr. 31:10; Judg. 7:6; I Sam. 15:15). The phrase "the rest of the people" (שְׁאֵר הָעָם=יָחַר הָעָם, Neh. 10:28 [H 29]; 11:1, and שְׁאֵרֵי יְהוּדָה, Hag. 1:12; Neh. 7:72 [H 71]) refers to the remnant in Jerusalem and a victorious future remnant (Zeph. 2:9; Zech. 14:2). The "remainder" possesses the full potentiality of future existence for clan (Gen. 44:20), dynasty (Judg. 9:5), or the faithful (I Kings 19:10, 14) and consists of a new whole in which resides the seed for regeneration and continued, abundant life.

e. שָׁרִיד and אַחֲרִית. The Heb. noun שָׁרִיד (28 usages) describes the "survivor" from military disaster (Josh. 10:20; Deut. 3:3).

Finally, the Heb. noun אַחֲרִית has clearly the meaning "remnant" in Num. 24:20 (RSV "in the end"); Amos 4:2; 9:1; and Ezek. 23:25 and possibly in Jer. 31:17.

2. Terminology in the NT. Substantival usages of the adjective λοιπός designate "the rest" (Luke 24:9; Rom. 1:13) and can be employed in a critical sense to denote those who hardened their hearts (Luke 8:10), disbelieve (Mark 16:13), act insincerely (Gal. 2:13), and refuse to repent (Rev. 9:20). In Acts 15:17 (=Amos 9:12 from LXX) the term κατάλοιποι denotes the "remnant"; in Rom. 11:3 (=I Kings 19:10), ὑπολείπω refers to the one who alone "is left (remaining)"; and in Rom. 9:27 (=Isa. 10:22 from LXX) the noun ὑπόλειμμα designates the "remnant." The noun λείμμα denotes "remnant" in Rom. 11:5. See §4ciii below.

3. The origin of the remnant idea. a. In the ancient Near East. The remnant idea is present in Sumerian, Akkadian, Hittite, Ugaritic, and Egyptian cultures in a large variety of genres, such as myth, legend, epic, prophecy, prayer, hymn, letter, and annal. It appears with such human entities as individual, family, clan, tribe, army, nation, and mankind as a whole. The large variety of mortal threats in the natural, social, and political spheres emphasizes the common denominator of the respective remnant notions, namely man's existential concern to preserve life when endangered by mortal threats. A remnant means life and continued exist-

ence through innate potentialities of renewal and restoration.

The remnant concept finds its first explicit expression in stories of a universal flood. The Sumerian and Babylonian flood traditions testify that in a small surviving remnant all future for mankind resides. See FLOOD (GENESIS) §3.

**b. In the OT.** The earliest explicit reference is in the flood story: "Only Noah was left, and those that were with him in the ark" (Gen. 7:23). Other early traditions in Genesis speak of mortal threats to life by means of fire (18:17-33; 19:16-24), family feud (32:8-12), and famine (Joseph cycle, 43:1-8). Whereas the earliest biblical traditions place the remnant idea in the midst of mortal threats and thus testify to the origin of the concept in the concern to preserve life, they also put the concept from its beginning into a theological framework with a strong salvation-historical emphasis. The OT has an overarching correlation between the salvation of a remnant and the nucleus of the true people of God, where the initiative of God succeeds in spite of all threats, obstacles, and fears. The remnant theme is an essential part of biblical hope and eschatology. See HOPE IN THE OT[S].

**4. History of the remnant idea. a. In the OT.** See REMNANT.

**b. In late Judaism.** The Qumran covenanters believed that they were "the remnant of thy people [Israel]" (IQM 14.8-9) spared by God's mercy as the only true remnant (CD 2.11; IQH 6.8; IQM 14.9) when Israel came to an end (CD 3.13; cf. IQM 13.8). They were now the sole bearers of the covenant promises (IQM 14.9; CD 1.4) and were alone the "new covenant community" (CD 6.19; 19.33-34). God spared them because they kept the divine "commandments" (CD 3.12), even the "whole torah" (4QFlor 2.2). They alone will "fill the earth with their seed" (CD 2.12). Those who fall away from them "shall have no remnant or survivor" (CD 2.6-7; cf. 19.10; IQS 5.13; IQH 6.32), sharing the fate of the "sons of darkness" (IQM 1.6; 4.2; 14.5; IQS 4.14; IQpHab 9.7; cf. IQM 2.11; 11.15).

Apocryphal Jewish apocalypses reveal a distinct remnant theology (see REMNANT). In rabbinic thought the remnant idea recedes, and all Israel has part in the future world (M. Sanh. 10.1).

**c. In the NT.** i. *John the Baptist.* The cry of judgment and repentance by John the Baptist led to the gathering of a faithful, penitent remnant (Matt. 3:1-12). Yet, his preaching was universalistic and his invitation for baptism was addressed to all who would "bear fruit that befits repentance" (Matt. 3:8).

ii. *Jesus.* The message of Jesus, salvation for all who repent and believe in the gospel (Mark 1:15), was never intended to create a remnant that was exclusive and narrow. Although Jesus' call was universalist, he was conscious that his work was for "the lost sheep" (Matt. 10:6) and that only "few" (Matt. 7:14) would accept the invitation. Those "few" made up of the "poor" (πτωχοί, Matt. 11:5) and "little ones" (μικροί, Matt. 10:42) were the "chosen" (ἐκλεκτοί, Matt. 22:14), who must be considered a remnant of faith. Nowhere in the gospels is the designation "remnant" employed for

this new community. The ones who remained outside the group are polemically designated as the "others" (ἄλλοι) who act wickedly (Matt. 22:6; Luke 8:10). Contrariwise, those who have accepted Jesus Christ are the remnant of faith. The angelic reapers will carry out a process of sifting at the end of time (Matt. 13:24-30).

iii. *Paul.* Paul addresses himself explicitly to the question of the remnant in Rom. 9-11. By citing OT passages (Isa. 10:22-23; 1:9=Rom. 9:27-29) the apostle teaches that only a remnant of the Israel of the "flesh" (Rom. 9:8; 11:13-24) is saved and that believing Gentiles are grafted into the new community of faith. This "remnant" (λείμμα, Rom. 11:5) is a present reality made up of both Jews and Gentiles (Rom. 9:24), the "elect" (Rom. 11:7) who are "chosen by grace" (Rom. 11:5). As such, the remnant is the Israel of the promise (Rom. 9:8), the true spiritual Israel of faith.

iv. *Revelation.* In the NT apocalypse the adjective λοιπός applies to the remnant in the church of Thyatira who hold fast to love, faith, and service (Rev. 2:24). The church in Sardis is virtually dead, but "what remains" is to be strengthened (Rev. 3:2), because there are "a few names" who have unsoiled garments (vs. 4). Rev. 11:13 speaks of the remnant which survived the earthquake and glorified God. Finally, the dragon makes war against the "rest" of the woman's offspring "who keep the commandments of God and bear testimony to Jesus" (Rev. 12:17). This last faithful remnant withstands the fiercest persecution by the lamb-like beast (Rev. 13:11-18) and is saved by the rider on the horse, while the others are slain in the apocalyptic battle (Rev. 19:21). Victory belongs to the last faithful remnant.

\***REPENTANCE IN THE OT.** In the religion of ancient Israel, in distinction to its neighbors, rituals were not inherently efficacious. This point is underscored by the sacrificial formula of forgiveness; the required ritual is carried out by the priest, but its desired end, forgiveness, is granted solely by God: "The priest shall make atonement for him for his sin, and he shall be forgiven" (Lev. 4:26, and *passim*). Moreover, contrition and

confession are indispensable elements of all rituals of forgiveness, whether they are expiatory sacrifices (Lev. 5:5-6) or litanies for fasting (Joel 2:12-14; I Sam. 7:5-9).

Indeed, man's involvement, both in conscience and deed, is a *sine qua non* for securing divine forgiveness. It is not enough to hope and pray for pardon; man must humble himself, acknowledge his wrong, and resolve to depart from sin (e.g., David, II Sam. 12:13 ff.; Ahab, I Kings 21:27-29). The Psalms provide ample evidence that penitence and confession must be integral components of all prayers for forgiveness (Pss. 32:5; 38:18 [H 19]; 41:4 [H 5]; Lam. 3:40-42). The many synonyms for contrition testify to its primacy in the human effort to restore the desired relationship with God; e.g., seek the Lord (II Sam. 12:16; 21:1); search for him (Amos 5:4); humble oneself before him (Lev. 26:41); and direct the heart to him (I Sam. 7:3). The rituals of penitence, such as weeping, fasting, rending clothes, and donning sackcloth and ashes, are unqualifiedly condemned by the prophets if the heart is not involved (Isa. 1:10 ff.; 29:13; Hos. 7:14; Joel 2:12-13).

At the same time, inner contrition must be followed by outward acts; remorse must be translated into deeds. Two substages are involved in this process: first, the negative one of ceasing to do evil (Isa. 33:15; Ps. 15), and then the positive, active step of doing good (Isa. 1:17; Jer. 26:13; Amos 5:14-15). Again, the language used to describe man's active role in the process testifies to its centrality; e.g., incline the heart to the Lord (Josh. 24:23); make oneself a new heart (Ezek. 18:31); circumcise the heart (Jer. 4:4); wash the heart (Jer. 4:14); and break one's fallow ground (Hos. 10:12). However, all these expressions are subsumed and encapsulated by one verb which dominates the penitential literature of the Bible, נָשׁוּב, "turn, return." This root combines in itself both requisites of repentance: to turn from evil and to turn to good. The motion of turning implies that sin is not an eradicable stain but a straying from the right path, and that by the effort of turning, a power God has given all men, the sinner can redirect his destiny.

That the term for repentance is not a prophetic innovation but goes back to Israel's ancient traditions is clear from the fact that Amos, the first writing prophet, uses it without bothering to explain it (Amos 4:6-11). Moreover, the concept of repentance (though not the term נָשׁוּב) is also assumed in the early narratives about Pharaoh (Exod. 7:3-4; 10:1; 11:10) and the sons of Eli (I Sam. 2:25); these accounts say that God deliberately blocks their repentance. Finally, the motif of repentance occurs in the tales of the early heroes: David (II Sam. 12:13-14; 24:10-14), Ahab (I Kings 21:27-29), and Josiah (II Kings 22:18-20).

Nonetheless it must be noted that the repentance of these early narratives is not the same as that taught by the prophets. First, repentance in the narratives is ineffectual. At best it mitigates retribution (e.g., David) or postpones it (Ahab, Josiah). And on occasion it is of no avail (e.g., to Moses himself; Deut. 3:23-26). Repentance, it is true, is found in the admonitions of P and D (see Docu-

MENTS; Lev. 26:40-42; Deut. 4:29-31; 30:1-10), but here, contrary to the prophets, repentance can only terminate the punishment but cannot prevent its onset. The limited scope of repentance in these stories can best be appraised by contrasting it with the success of the people of Nineveh in averting their doom (Jonah 3:1-10).

Secondly, wherever repentance occurs in the early narratives, it is a human virtue. God does not call upon man to repent or upon his prophet to rouse him to repentance. The role of Moses is to intercede for Israel so that God will annul his evil decree (e.g., Exod. 32:11-13, 31-34; 34:9; Num. 12:11-13; 14:13-19; Deut. 9:16-29), but not once is he expected to bring his people to repentance so that they might merit divine forgiveness. Other intercessors are also recorded in the early narratives, e.g., Abraham (Gen. 18:23-33), Samuel (I Sam. 7:5-9; 12:19-25), Elijah (I Kings 17:17-23), Elisha (II Kings 4:33; 6:15-20), and Job (Job 42:7-9). These righteous leaders, just like Moses, turn to God to ask for pardon but not to man to urge repentance.

It is against this backdrop that the innovation of the Priestly legislation can be measured (see PRIESTLY WRITERS[S]). Repentance is operative in sacrificial expiation, as indicated by the terms הִתְוַדָּה, "confess" (Lev. 5:5; Num. 5:7) and אָשׁוּם, "feel guilt" (see SACRIFICES AND OFFERINGS, OT[S] §2b). However, the term נָשׁוּב, meaning "repent," never appears in P. Neither does it appear in the Tetrateuch and early narratives. In this literature, נָשׁוּב does occur in four passages but in the opposite sense (apostasy), turn away from the Lord (Num. 14:43 [JE]; 32:15 [JEP]; Josh. 22:16, 18, 23, 29 [P]; I Sam. 15:11). This is as expected, since in the early sources, though Israel is guilty of apostasy, it is never expected to repent.

נָשׁוּב as "repent" exhibits the following distribution pattern: twenty-three times in the eighth-century prophets, Amos, Hosea, and Isaiah; fifty times in Jeremiah and Ezekiel; and twenty-eight times in nine postexilic books. Conversely, the use of אָשׁוּם, "feel guilt," which approximates the notion "repent," is only found in the Priestly Code. Thus it may be concluded that P derived its penitential terminology at a time when נָשׁוּב had not become the standard idiom for repentance. However, under the influence of the prophets, especially Jeremiah and Ezekiel, the root נָשׁוּב overwhelmed all of its competitors. That the Priestly doctrine of repentance is pre-exilic is supported by an additional consideration. Though the power of repentance in P is such that it can reduce a deliberate sin to an unintentional one, P insists that for the complete annulment of sin sacrificial expiation (כִּפּוּר) is mandatory. It does not know the prophetic teaching that repentance suffices in itself to nullify sin.

The prophets differ among themselves on the function of repentance, especially in their eschatological prophecies. Isaiah, for example, withdraws the offer of repentance at an early point in his career (cf. 1:16-20 with 6:9-13). He insists that only the few survivors of God's purge will be allowed to engage in a program of repentance that will qualify them for the new Zion (e.g., 32:1-8, 15-17; 33:5-6). Indeed, he even gives his first-born

a name that carries the message: "[Only] A Remnant Will Repent" (Isa. 7:3n.; see REMNANT; REMNANT[S]). In the teaching of Jeremiah, on the other hand, the call to repent is never abandoned. When Jeremiah despairs of men's capability of self-renewal, he postulates that God will provide a "new heart" which will overcome sin and merit eternal forgiveness (31:33; Deut. 30:6; Ezek. 36:26-27). See NEW COVENANT[S] §§1, 2.

J. MILGROM

**\*REPENTANCE IN THE NT.** The English word "repentance," which means primarily regret, remorse, or sorrow regarding an action, attitude, or thought, has been used in the NT to translate the Greek noun μετάνοια, and the verb "repent" to translate μετανοέω. In the LXX the verb, and its synonym μεταμέλομαι, translated primarily the Hebrew term חָנַן, which meant to be sorry in the sense of ruing one's prior decisions or deeds (Jer. 8:6; see REPENTANCE IN THE OT[S]). Generally speaking, in the Greco-Roman world μετάνοια meant a "change of mind" (Plato, *Euthydemus* 279C; Prov. 14:15, LXX), though that frequently implied dissatisfaction with one's previous decision and therefore "regret" (Matt. 27:3). However, in Jewish intertestamental literature, μετανοέω became synonymous with ἐπιστρέφω, a Greek term used to translate the Hebrew שׁוּב, which meant a "turning (or returning) to God," i.e., conversion in the religious and moral sense of the word (Test. Zeb. 9:7). Among the Jews such a turning or returning to God was often accompanied by some public act, such as fasting (Test. Simeon 3:4; Test. Reuben 1:9; Sanhedrin 25b; Luke 19:8; Acts 26:20). With this development in Judaism it comes as no surprise that the NT term μετανοέω was translated *poenitentiam agite* (do penance, Acts 2:38, Wycliffe) in the Vulg.

**1. The message of Jesus and John the Baptist.** The Jewish understanding of repentance as a turning from sin to God paved the way for the basic proclamation of Jesus in the gospels: "the kingdom of God is at hand; repent" (Mark 1:15; cf. Matt. 4:17). The early church understood the call to repentance as an imperative to "turn and become like children" (Matt. 18:3). Parables such as that of the prodigal son illustrated this "turning back" to the Father. While the eschatological saying which accompanied the call for repentance stressed the urgency of the matter (for the Lord would come as a thief in the night: Matt. 24:42-44; Luke 12:39-40; cf. I Thess. 5:4; Rev. 3:3), the over-all function of Jesus' ministry was to allow time (the delay motif) for repentance to occur (Luke 13:6-9). Jesus' sharpest threats were reserved for those who counted on that delay for their own purposes, or who failed to repent when offered the delay (Matt. 11:20-24; 12:38-42; 24:48-51; 25:1-13; Luke 10:13-15;

11:29-32). See TEACHING OF JESUS §4; TEACHING OF JESUS[S] §3a, b.

JOHN THE BAPTIST also preached a call to repentance before the coming kingdom (Matt. 3:2), but in addition he offered a baptism of repentance for forgiveness of sins (Matt. 3:11; Mark 1:4; Luke 3:3; Acts 13:24; 19:4) which would lead to acts of righteousness (Luke 3:8; Matt. 3:8). The connection between human repentance and divine forgiveness had already been made in intertestamental Judaism (Prayer Man. 7; Test. Gad 7:5), but a "baptism of repentance for the forgiveness of sins" had no prototype. The lustrations of the Qumran community (see DEAD SEA SCROLLS §5b; DEAD SEA SCROLLS[S] §7) did entail a repentance and a cleansing (1QS 3.4, 9; 4.21; 5.13-14), but the washing was neither a baptism nor an eschatological act. Whatever its origin, the anarthrous (lack of definite article in the Greek) nature of the phrase in the NT and its continued usage in the early church (Acts 2:38; Barn. 11:1; Herm. Man. IV.3.1) indicate its confessional importance for the first Christians.

**2. Repentance and conversion.** As in contemporary Hellenism and Hellenistic Judaism, the term "turn" was used to describe the shift of religious loyalty or philosophical insight (Epictetus, *Discourses* I.iv.18; Test. Iss. 6:3), so in early Christianity the term for conversion to the new religion was ἐπιστρέφω. In I Thess. 1:9 Paul used conversion language to describe how the Thessalonians "turned to God," and he feared the Galatians might "turn back" to their former conviction (Gal. 4:9; cf. 1:6). Paul's use of the word "repentance" was not conversionary but signified a change of attitude (II Cor. 7:9-10) or a moral change (II Cor. 12:21; Rom. 2:4). In Acts we find the same "turning" terminology to describe conversion (9:35; 11:21; 14:15; 15:3, 19; 26:18), except that now μετανοέω has been added as a synonym ("repent and turn to God," 3:19; 26:20). The language of repentance gradually displaced the language of turning, both in Hellenism and Christianity (Poimandres I, 28; ApocryJn II 9, 20-22; 13, 23-14, 2). Within the NT itself repentance began to shift from a radical turning to God in face of the end time to a remorse over one's pagan ways and an adoption of the Christian gospel (II Pet. 3:9). It was in this context of conversion that the baptism of repentance became so important (Acts 2:38).

**3. Church renewal and personal recommitment.** The author of the book of Revelation (see REVELATION, BOOK OF) shared the early church's idea of repentance as conversion from pagan ways to the Christian faith (9:20-21; 16:9-11), but he also understood it as the reaffirmation of faith. So in the letters to the seven churches he appealed for repentance, i.e., the renewal of Christian commitment (2:5, 16, 21-22; 3:3, 19). The author of II Timothy had a similar concern for wayward persons in the congregation (2:25), though the context is more that of schism than of apathy (see PASTORAL EPISTLES).

The authors of the gospel of John, the letters of John (see JOHN, GOSPEL OF; JOHN, LETTERS OF), and Hebrews (see HEBREWS, LETTER TO THE) saw in Jesus Christ the ultimate manifestation of the

heavenly truth. Because repentance (conversion) was the acceptance of ultimate truth, falling away from the faith could only occur to those who did not or could not appropriate it. Thus, the author of I John believed that persons who left the faith had never been a part of it (2:19). And the author of Hebrews declared that for such there was no further possibility of repentance (6:4-6; cf. 12:17).

Postapostolic writers continued to call for repentance from apathy much as the prophets had exhorted Israel (I Clem. 7). But repentance became primarily the return of errorists to the unity of the church (Ign. Phila. 3:2), described theologically by Ignatius as unity with God (Ign. Phila. 8:1; Ign. Smyr. 9:1). Apparently some teachers or leaders interpreted Heb. 6:4-6 in a legal sense rather than a philosophical one, so that they decried the laxity of a "second repentance" (Herm. Mand. IV.3.1). Writing in a pastoral way, the author of the Shepherd of Hermas (see HERMAS, SHEPHERD OF) agreed with their intent that conversion should be complete, but he also insisted on God's mercy if the Christian failed (Herm. Mand. IV.3.5).

\***REPHAIM.** While the basic understanding of the two usages of the term in the OT has not changed since 1962 (see **REPHAIM**), the Ugaritic evidence has been much discussed, particularly since the publication of new texts in *Ugaritica V*. Recent attempts at synthesis entail different explanations of the origins of and the relation between the two Hebrew usages.

1. **The Ugaritic evidence.** At the end of the major BAAL myth, the sun-goddess Shapsh is described as ruling over the *rpum* and consorting with the dead. On the occasion of Keret's marriage, El blesses him with the promise that he will be great "among the *rpum* of the earth/underworld, in the assembly of the gathering of Ditana"—the latter an old tribal name. The so-called "Rephaim texts" (see **REPHAIM** 1) still have many obscure features. An individual divine name of the same root has been identified in personal names, and in the title of Danel: "Man of Rapi'." This deity is the main subject of a recently published text (Gordon 602) in which he is called "everlasting king"; on the obverse he drinks at a banquet with certain high gods; on the reverse is a prayer that his power may be in Ugarit forever—here he is addressed as "Rapi' of the earth/underworld."

2. **Recent interpretations.** There are two alterna-

tive views. According to one, the Ugaritic *rpum* refers to the dead, deified in some sense (cf. the parallelism: "*rpum* . . . divine ones"), and possessing healing and quickening powers. Their name is taken as a present participle: "Healers." Thus it is among his dead ancestors that Keret will be reckoned to be great, and it is over the dead that Shapsh exercises authority during her nocturnal journey through the underworld. The "Rephaim texts" have been interpreted as dealing with Danel's invocation of his dead ancestors. The primary use of the Hebrew term would then be also in reference to the dead, though they are deprived of their special powers. The ethnic use would be a secondary application to those now among the dead who were believed to have once lived in the land as a race of giants. Ugarit also knew a deity with the cognate name Rapi', "Healer," who may originally have had nothing to do with the dead, but may have come to be regarded as the head of the *rpum*. He was Danel's patron, as El was Keret's. See DEITIES, UNDERWORLD[S] §1d.

According to the other view, the *rpum* represent both a mythological and a social group. The former ("divine ones") were headed by the god Rapi', and were patrons of the latter, an aristocratic warrior guild headed by the king (Keret or Danel in legend), and dedicated to the service of the former. Both OT usages would derive from this situation at Ugarit: the reference to the specialized guild would be the source of the ethnic sense; application of the term to the guild's deceased members would have been generalized to apply to all the dead. In one development of this view the name is interpreted as a stative: "healthy, whole." The mythological *rpum* are taken to be the pantheon in general, and Rapi' is identified with EL. The "Rephaim texts" and two of the newer texts are read as mythological accounts of a banquet (*mryz*) corresponding to a feast celebrated by the guild.

**RESURRECTION IN INTERTESTAMENTAL LITERATURE.** See FUTURE LIFE IN INTERTESTAMENTAL LITERATURE[S].

\***RESURRECTION IN THE NT.** The primary reference of resurrection in the NT (ἀνάστασις; once only ἐγερσις, Matt. 27:53) is to the action of God in raising Jesus from the dead to life and enthroning him at his right hand. Only once in the NT is Jesus said to have raised himself (John 2:19, cf. 10:17-18); elsewhere it is always God's act. But resurrection as such is inadequate to convey the fullness of Easter faith that infuses the NT writings. It is not raising to life as a resuscitation, but a raising of Jesus from the underworld of the dead to a position of sovereignty by the defeat of death to make life available and to exercise judgment at the end. Prior to faith in the Risen One

is the experience of the crucified Jesus as the Living One (a title in Rev. 1:18 and perhaps Luke 24:5; cf. the prologue to the GOSPEL OF THOMAS) in which the latter is understood in the sense of the Exalted or Glorified One.

1. **The resurrection tradition in the gospels.** The gospels contain a variety of traditions and theological reflections which were derived from the one common affirmation that Jesus' disciples had encountered him in such a way that they were convinced that he was the living LORD, commissioning them to continued service.

a. **The empty tomb.** It is generally recognized that Mark 16:1-8 is the full account this gospel originally had of the resurrection story (see MARK, GOSPEL OF §10, and MARK, GOSPEL OF[S]). For Mark the discovery of the empty tomb by the women is the form by which the Resurrection is proclaimed. The meaning of the tomb is interpreted to the women and Mark's readers in the words, "He has risen, he is not here" and the promise of reunion in Galilee (vss. 6-7).

A tradition reported in John's gospel and interpolated into some MSS of Luke tells that Peter visited the tomb to convince himself of the women's story, but that he remained uncertain (Luke 24:12). In John it is the BELOVED DISCIPLE, the companion of Peter at the tomb, who is brought to belief (John 20:2-9). Tradition analysis has not yet resulted in common agreement as to whether we have in this story an early Easter testimony or a later development of the kerygma.

b. **The appearances.** The concept of resurrection from the dead is an interpretative statement explaining in Jewish apocalyptic and anthropological categories the basic Easter event, viz., the appearances of Jesus to his disciples. Resurrection is a reflective interpretation of encounters with the Living One which had the power to convince, to generate a new community, to establish an authorized leadership, and to commit to mission. The key word is *ὡφθη*, which is probably to be translated in an active sense, "he (Christ) appeared" or "he showed himself."

For Matthew and his community the significance of the Resurrection was the authentication by the enthroned Messiah of the church's role in making disciples, baptizing converts, and giving guidance in the way of discipleship (Matt. 28:18-20). To Mark it confirmed the way of the SON OF MAN in humiliation and exaltation, which is the true way for each disciple. Luke recognized the risen Jesus as the sovereign Lord who is the source of repentance, forgiveness, and final redemption, and for John resurrection found expression in the offer of forgiveness of sins and the interpretation of the truth of Christ through the Spirit (John 16:13-15; 20:23).

c. **The *pregospel* tradition.** Behind the traditions presented in the gospels are hints of an earlier witness to an appearance of the risen Jesus to Peter and the disciples in Galilee (Luke 22:31-32; 24:34, perhaps 5:1-10; Mark 16:7; cf. I Cor. 15:5 and John 21), but nowhere in the NT is there any story of that formative experience. Many interpreters believe that the oldest report of the Easter appearances made no distinction between the resurrection of Jesus and his elevation to share the rule

with the Father. Cf. Mark 14:25, 62; Luke 23:43; John 12:32; 7:39; 12:16; 13:31; Acts 2:32-33; 3:13; 5:30-31; Rom. 8:34; Eph. 1:19 ff.; Phil. 2:8-9; Col. 3:1; Heb. 1:3; 8:1; I Pet. 1:21. Raising already carries the idea of elevation, but exaltation conveys more graphically the affirmation of the lordship of Jesus. The earliest form of the Easter event may have been the experience of Peter and his brethren in coming to faith, "seeing" that Jesus was not a martyred prophet but in very fact Lord and Christ enthroned in glory. The mystery of that conviction is the mystery of faith.

2. **The Pauline tradition.** It is generally agreed that in I Cor. 15:3-5 Paul has used an early creedal or catechetical formulation, perhaps dating back to the Damascus community ca. A.D. 40. The list of witnesses—perhaps a combination of two groupings—contains a series of statements each introduced by *ὡφθη*, followed by the names of witnesses, six in all if we include those Paul added to the traditional statement (vss. 6-8). The emphasis falls upon the direct experience of seeing as also in I Cor. 9:1 or in the equivalent phrase "reveal" (*ἀποκαλύπτω*) in Gal. 1:16. Probably the traditional form is a legitimation formula basing the community and the authority of its leaders on an appearance of the risen Christ. It is certain that Paul's references to his own vision of the Lord, the only primary testimony we have from an eyewitness, are presented as the credentials of his apostleship.

For Paul, the eschatological act of God in raising Jesus from the dead gives assurance of the believer's future transformation into a new existence as a complete and restored person or, in Paul's own term, a body-spiritual (*σῶμα πνευματικόν*) (I Cor. 15:42-50, 51-57; II Cor. 5:1-5; Phil. 3:21). See BODY §B2d; BODY[S]; IMMORTALITY; IMMORTALITY[S]; FUTURE LIFE IN INTERTESTAMENTAL LITERATURE[S] §3.

3. **Derivative meanings.** The raising of Jesus is not the fundamental datum of Christianity; more accurately it is that the *living* and *sovereign* Lord is identified with Jesus of Nazareth. The concept of resurrection recalls the historical personage and ministry; exaltation declares the heavenly power and glory of the same person.

Each of the gospels and Paul's own word interpret the Resurrection as a call to preach the gospel to everyone. Jesus had risen in the world and not out of it, and this meant the continuation of his program of action. The events of Good Friday and Easter were determinative for this preaching, but so was Jesus' own announcement of the nearness of God's rule and his teaching about discipleship that went with it. See Matt. 28:16-20; John 20:19-23; 21; Acts 10:40-42; I Cor. 9:1; Gal. 1:15-16; II Cor. 4:6.

In Paul's understanding, the fact that God raised Jesus from the dead became the model for the new life of the believer now and the promise of the ultimate outcome of redemption. Thus he began the disassociation of Resurrection from its unity with the final events of PAROUSIA and Judgment and made it interpretative also of the basic nature of Christian living from start to finish.

**RESURRECTION, THE TREATISE ON.** A brief, didactic letter written by a Christian-Gnostic teacher to his pupil Rheginos in response to the latter's questions concerning the resurrection of individual believers. Found at NAG HAMMADI and known also as "The Epistle to Rheginos," this letter is of singular importance for illuminating the type of heretical teaching combated in II Tim. 2:18, "that the resurrection is past already."

**1. Nature of the document.** The text, which is generally well-preserved, is one of five writings in Codex I (the Jung Codex). It is written in the Subachmic dialect of the COPTIC LANGUAGE, but the original text was composed in Greek. The same scribe who copied the text of OnRes was responsible for the first two writings of Codex XI.

The title, like those of twenty-one other tractates from Nag Hammadi, appears only at the end of the document and describes in part its literary genre. This title was probably formulated out of the allusion to Rheginos's questions "concerning the resurrection" (*etbe tanastasis*) in 44:6 and the teacher's offer "to discuss (*mareplogos*) the matter" in 44:11-12; thus, *plogos etbe tanastasis*, "The Treatise/Discourse on the Resurrection." In fact, it is a letter whose structure reflects that of epistolary literature of the first centuries A.D. Opinion differs, however, over whether OnRes has a general address and is highly conventional in tone; or whether it is more personal in nature, even though lacking a *praescriptio* naming sender and receiver (cf. Ptolemy's *Letter to Flora*).

**2. Major themes. a. Individual resurrection.** Although resurrection of the individual is not philosophically demonstrable and seems to be fantasy, it is, because of Christ's resurrection, an assured reality for the elect (46:3-47:10; 48:3-38). Appropriating some of the phrases of Pauline mysticism, the author tells Rheginos: "We suffered with him (Christ), and we arose with him, and we went to heaven with him" (45:24-28; cf. Rom. 8:17 and Eph. 2:5-6). Although some have found here a mystical union of the believer with Christ rooted in baptismal experience (cf. Rom. 6:3-11), the author's emphasis is not sacramental but is rather on the need for the elect through "knowledge" (*γνώσις*) and "faith" (*πίστις*) to identify with and experience proleptically Christ's own death, resurrection, and ascension (44:27-29; 46:14-19). This may be a case of "over-realized eschatology" built tendentiously on such Pauline

teachings as Col. 1:13-14 and Eph. 2:4-6.

**b. The spiritual body.** The resurrection of the elect will entail, immediately at death, the ascension to heaven of a spiritual body constituted of inward, invisible "members" covered with a new, spiritual "flesh" (47:4-8; 47:38-48:3). The usual Gnostic belief (e.g., in II ApocJas 59:9-14; Apoc-Paul 20:22-23; 21:17-20; Iren. Her. I.xxv.4) in the ascent and ultimate reabsorption into the spiritual godhead of the bare "spirit-self" is not present here. Instead, in a manner remarkably like that of Paul (cf. I Cor. 15:35-38), the author posits a radical discontinuity of form between the earthly and the resurrection bodies, but continuity of identification (e.g., Moses and Elijah are introduced from Mark's transfiguration story as proofs of the Resurrection, 48:3-11).

**c. Resurrection life.** The believer should live in the present as though his resurrection had already occurred (49:16-36). The cessation of life on this earth (the "not yet" of eschatological hope) is inevitable; but having participated in the resurrection and ascension of Christ (the "already" of eschatology), the believer ought to live as one already dead and thus already raised (49:24-36). Doing so involves continual "practice" (*ἀσκεῖν*) in freeing oneself from the "divisions," the "bonds," and the inimical "Element" who rules this life and world (49:11-16, 29-35). Such a view differs from Paul's eschatological reservation, the "not yet" of Christ's PAROUSIA (I Cor. 15:51-55; II Thess. 2; see PAUL THE APOSTLE §10).

**3. Authorship, provenance, date.** The first editors of OnRes argued that it was written by the Gnostic teacher Valentinus (see GnosticisM §2c; GnosticisM[S] §4b), following his composition of the Gospel of Truth and his break with the church at Rome, i.e., between 140-45 and ca. 165. Most scholars acknowledge that it contains the fragment of a Valentinian cosmogonic hymn (46:35-47:1), uses Valentinian symbolism (48:34-49:5), and shows familiarity with Valentinian aeon speculation (45:11-13). But a majority reject Valentinus himself as the author. Because of a developed sense of a scriptural "canon," the affinities of the letter's arguments with second-century debates about resurrection, and the similarity of its secondary usage of Gnostic motifs to the practices of some of the Alexandrian Fathers, most now hold OnRes was written late in the second century by an anonymous Christian-Gnostic teacher who was familiar with Valentinian teaching.

Schenke, "Auferstehungsglaube und Gnosis," *ZNW*, LIX (1968), 123-26, denies the letter's Valentinian provenance; W. C. van Unnik, "The Newly Discovered 'Epistle to Rheginos'

on the Resurrection, I and II," *Journal of Ecclesiastical History*, XV (1964), 141-52, 153-67. M. L. PEEL

**RETRIBUTION.** In English usage, the term continues to carry the reciprocal sense of its Latin antecedent, *retribuere* (to give again, to give as due). Broader than VENGEANCE, which refers only to punishment inflicted in return for a specific injury, retribution means the repayment of someone according to that person's just merits or deserts. In religious literature, the term usually refers to the rewards and punishments meted out to persons by God—especially to the dead who are resurrected on the judgment day (sometimes called the day of retribution).

**1. Terminology.** For all of its importance in theological discussion, the English term "retribution" has no exact biblical equivalent. KJV never employs it, and RSV uses it only twice (Rom. 11:9; Heb. 2:2). Yet the conviction to which the term points—e.g., that God rewards the righteous and punishes the wicked—must surely be regarded as one of the most fundamental motifs of Scripture. Where that motif is present in the OT, such verbs as שָׁכַר, "hire"; the *piel* of שָׁלַם, "reward, requite"; גָּמַל, "recompense"; נָקַם, "avenge"; or their derived nouns may occur. Similarly, the terms μισθός, "wages, reward"; ἀποδίδωμι and ἀνταποδίδωμι, "repay, recompense"; ἐκδικέω, "avenge"; and their related forms may occur in NT discussions. However, a study of terminology is not the best way to approach a biblical theme such as this. Key passages dealing with the image of God as judge, the relation of sin to misfortune, and eternal reward and punishment often contain none of the terms mentioned above. A more satisfactory approach is to examine treatments of the idea of retribution in their larger biblical contexts and, without creating an artificial synthesis, to attempt to relate these discussions to one another.

**2. The evolution of biblical notions of retribution.** The classic OT embodiment of the ancient Near Eastern principle of retribution is the so-called *lex talionis* (Exod. 21:23-25; cf. Lev. 24:19-20; Deut. 19:21). According to this "law of retaliation," a willfully injured party can claim the right to exact from the offender "life for life, eye for eye, tooth for tooth." See CRIMES AND PUNISHMENTS §A2; LEX TALIONIS[S].

**a. Retribution in civil law.** Although a broad principle of retribution underlies the OT laws of injuries (e.g., Deut. 25:11-12), Israel's tradition of civil law in fact has seldom demanded literal in-kind retaliation against offenders. The literature is rich with laws providing for the punishment of crimes, including capital punishment; however, by insisting on strict tests of intentionality and providing monetary substitutes for "life," "eye," etc. (cf. Mekilta at Exod. 21:23-24), rabbinic interpreters acknowledged the inadequacy of a rigid and exact application of the law of retaliation to the task of regulating interpersonal affairs. Jesus also denied its validity in moral behavior by opposing to it an ethic of radical nonviolence (Matt. 5:38-42). Paul echoes this rejection of the *lex talionis* in his admonition, "Repay no one evil for evil" (Rom. 12:17). When understood in its strictest sense as

recompense in kind, retribution seems to biblical writers to be a prerogative more of God than of man (Rom. 12:19-21; cf. Heb. 10:30; Deut. 32:35).

**b. Divine retribution.** i. OT. The older Pentateuchal narrative sources drew upon the theme of retribution in accounting for specific episodes in the history of Yahweh's dealing with his creation generally (e.g., the punishment of Adam, Eve, and the serpent, Gen. 3:14-19; cf. 4:11-12; 6:5-7; 11:6-9), and with Israel in particular (e.g., Korah's rebellion and consequent punishment, Num. 16; cf. 11:31-35; 12:1-16; 21:4-9). However, it remained for the eighth-century B.C. prophets Amos, Hosea, Isaiah, and Micah to identify the idea of retribution almost solely with the activity of God, and to elevate the principle of divine retribution into a thoroughgoing basis for historical understanding. Amos' frequent indictment-threat sequences assert that the historical disasters which afflict the covenant people are in fact Yahweh's retributive acts (e.g., Amos 2:4-5; cf. 4:1-3; 6:4-7; Isa. 28:14-22; Mic. 3:9-12). Under the influence of the preaching of the prophets, the school of theologians who produced the Deuteronomic writings (see DEUTERONOMY; DEUTERONOMY[S]); also DEUTERONOMIC HISTORY, THE[S]) expanded the concept of divine retribution in two ways. First, they greatly amplified the contingent nature of divine rewards and punishments within the covenant relationship, characteristically employing conditional formulations in their sustained exhortations: "If you obey the voice of the Lord your God, being careful to do all his commandments . . . , all these blessings shall come upon you and overtake you" (Deut. 28:1-2). Second, by undertaking to reinterpret Israel's experience from its beginning as a legal relationship enforced by specified sanctions, they and the author of the CHRONICLES after them established the retributive scheme as the normative OT way of looking at Israel's history.

The effect of God's retributive justice on individuals rather than the nation as a whole is the concern of the OT wisdom literature (see WISDOM IN THE OT[S]). From very early times peasant and king alike had sought the counsel of the sage on how best to attain blessing and avoid God's anger. Much of the book of Proverbs is given over to contrasting the destinies of the godly and the ungodly (see PROVERBS, BOOK OF §12). Loss of wealth, progeny, even life itself, lie in store for the wicked; the righteous can hope for the opposite fate (13:21; cf. 15:24). Such suffering as good men do experience can be put down as evidence of Yahweh's favor. "My son, do not despise the Lord's discipline or be weary of his reproof, for the Lord reproves him whom he loves, as a father the son in whom he delights" (3:11-12). The same theme is carried on in the PSALMS, particularly in the seventeen wisdom-based "Psalms of the Two Ways" (e.g., Pss. 1; 37; 73), and in the deuterocanonical wisdom book of ECCLESIASTICUS. In each of these collections, the retribution which falls on transgressors is often seen as the consequence inherent in the evil deed, and therefore inevitably to be expected. "Behold, the wicked man conceives evil," writes a psalmist. "He makes a pit, digging it out, and falls into the hole which he has made" (Ps.

7:14-15 [H 15-16]; cf. Prov. 26:27; Eccus. 27:25-26). This insight has led some scholars to assert that OT writers regarded retribution as the automatic result of "fate-producing deeds" rather than a direct act of God (Koch).

The last major OT refinement in the notion of divine retribution answers the objection of those who, particularly in times of oppression, failed to see any reward for the righteous in the events taking place around them. As if in answer to the psalmist's question, "O Lord, . . . how long shall the wicked exult?" (Ps. 94:3), the apocalyptic writers of the late OT period posit for the first time a judgment day at the end of the age. On that day of retribution, all resurrected persons will be judged according to their records in the heavenly book, and some will be sent "to everlasting life, and some to shame and everlasting contempt" (Dan. 12:2). See APOCALYPTICISM; APOCALYPTICISM[S]; IMMORTALITY[S]; FUTURE LIFE IN INTERTESTAMENTAL LITERATURE[S].

ii. NT. The idea of divine retribution is mediated to early Christianity principally in its eschatological form. Jesus frequently asserts that those who love their enemies and do good will receive God's forgiveness and reward at the end—with the clear expectation that the opposite is also true (Luke 6:35-38; cf. Matt. 18:35). In such gospel passages as Matt. 25, the Son of man is the eschatological judge who sends the unrighteous "into eternal punishment, but the righteous into eternal life" (vs. 46). The concept permeates the thought of Paul, the catholic epistles, and the Epistle to the Hebrews. Although Paul does not dwell in detail on the picture of the judgment day, he exhibits the faith that, at the end of time, God will "render to every man according to his works" (Rom. 2:6; cf. 13:12; 14:10-12; I Cor. 15:32; II Cor. 5:10). As for the book of Revelation (see REVELATION, BOOK OF and supplementary article), it seeks to inculcate confidence in God's final act of reward and punishment. "Behold, I am coming soon, bringing my recompense, to repay every one for what he has done" (Rev. 22:12).

3. The biblical context of divine retribution. Contemporary believers and theologians generally find the concept of divine retribution repugnant, at least in its most explicit biblical versions. Inconsistently and unsystematically expressed though it is, however, the motif is deeply rooted in OT and NT and cannot be explained away. The theme stands as a constant reminder of the seriousness with which the biblical writers understood God's hatred of evil and injustice and his will to overcome them. However, the Bible also records dissent to the image of God the requiter. This critique, although no more consistent and systematic than the retribution scheme itself, forms a broad theological context within which the notion of divine retribution can be seen.

The Pentateuchal writers J and E (see DOCUMENTS; YAHWIST[S]; ELOHIST[S]) understand the operative principle in history to be, not the *lex talionis*, but rather a divine plan of national and human salvation. Beginning with the unconditional promise to Abram (Gen. 12:1-3), they trace the journey of the chosen people toward a renewed

state of unbroken relationship with God in a new Eden, the Promised Land. In various ways the prophetic writers, too, encompass the theme of divine retribution within this larger vision, stressing God's redemptive purpose (see DISCIPLINE, DIVINE [S]). Later writers, particularly Deutero- and Trito-Isaiah (Isa. 40-55; 56-66), see the possibility of a relationship between God and humanity that transcends reward and punishment, and which they describe in the figures of "new heavens and a new earth" (Isa. 65:17) and "a new covenant" (Jer. 31:31; see GRACE IN THE OT[S]). On empirical, existential grounds Job rejects the retribitional scheme advanced by his "friends," and goes so far as to accuse God of inexplicably slaying both the wicked and the righteous (Job 9:22-24; cf. Eccl. 8:14). Yet, in the last analysis, Job discovers that the reality of God's unfailing presence supersedes all questions arising from the apparent failure of his absolute justice and righteousness. See JOB, BOOK OF §11 and supplementary article §5.

Challenges to the theme of retribution from the side of God's redemptive purpose also run through the gospels and the teachings of Paul. In the parable of the prodigal son (Luke 15:11-32), Jesus shows that God's will to redeem far outweighs his need to pay exact recompense for sins (cf. Matt. 20:1-16; Luke 18:9-14). John's gospel in particular reveals the tension between the retribitional scheme and the theme of God's larger saving purpose. John affirms the tradition that the Son of man will judge the dead at the general resurrection (John 5:25-29), and he asserts the impossibility of salvation outside of belief in the Christ (3:18). Yet in the same context, his gospel affirms, "God sent the Son into the world, not to condemn the world, but that the world might be saved through him" (3:17).

Although Paul is deeply committed to the absolute demands of God's righteousness (cf. I Cor. 6:9), like other Jewish writers of his time he sees that a strictly conceived retribitional theology would provide no grounds for hope (cf. IV Ezra 7:119). All have sinned and fallen short of the glory of God, and therefore all are justified by his grace only as a gift and not because of merit (Rom. 3:23-24). In fact, the apostle goes well beyond the retribitional scheme to speak of a judgment which destroys evil works but spares the doers of those deeds (I Cor. 3:15). In his several affirmations that the entire universe can look forward to the day of redemption (e.g., Rom. 8:21), Paul articulates a divine plan of universal salvation which is the larger context within which his teachings regarding divine retribution should be placed. "Then comes the end," he writes, "when he delivers the kingdom to God the Father after destroying every rule and every authority and power. . . . When all things are subjected to him, then the Son himself will also be subjected to him who put all things under him, that God may be everything to every one" (I Cor. 15:24, 28).

Only the apocalyptic books of the Bible appear to admit no exception to the conviction that God's purpose for his creation cannot be completed until his retributive justice has run its full course, and all evil forces and persons have been extir-

rated. But even in this literature it seems arguable, in the book of Daniel at least, that the primary purpose of the author(s) is not to revel in the bloodshed and misery of those condemned to everlasting contempt, but rather to show that God's purpose will be vindicated precisely at that moment when the principalities and powers of this world confess him "God of gods and Lord of kings" (Dan. 2:47; cf. Phil. 2:9-11).

**4. Summary: retribution within redemption.** The retributive approach to understanding God's way of dealing with evil in the world, though frequently adopted by biblical writers, is also qualified and perhaps finally overcome within the Bible itself. The often-expressed faith that God's redemptive purpose is greater than the literal requirements of his justice is neither a denial of the seriousness of God's opposition to evil in every form, nor failure to recognize the moral relationship of human deeds to their consequences. But it is a powerful countermotif to the notion that God is bound to exact payment in kind from sinners. In their confrontation with God's holiness and mercy, biblical figures repeatedly discover, not only their own unworthiness and culpability, but also his determination to redeem and restore them.

**Bibliography.** K. Koch, "Gibt es ein Vergeltungsdogma im AT?" *ZThK*, LII (1955), 1-42, argues that biblical writers understood retribution to consist of the automatic consequences of "fate-producing deeds," rather than of any direct divine activity. This article, critical response to it, and other relevant essays have been collected by Koch in his *Um das Prinzip der Vergeltung in Religion und Recht des AT* (1972). See also J. G. Gammie, "The Theology of Retribution in the Book of Deuteronomy," *CBQ*, XXXII (1970), 1-12, which also lists other participants in the debate. Relevant dictionary articles on retribution include: G. Lanczkowski, F. Horst et al., "Vergeltung," *RGG*, VI (3rd ed., 1962), cols. 1341-55; H. Preisker and E. Würthwein, "μισθός κτλ," *TDNT*, IV (1967), 695-728. Recent longer studies include: J. P. Martin, *The Last Judgment in Protestant Theology from Orthodoxy to Riitschl* (1963), which documents the increasing unacceptability of retribution ideology to dogmatic theology; L. Morris, *The Biblical Doctrine of Judgment* (1960), largely a semantic study written from a conservative standpoint. See also W. S. Towner, "Retributional Theology in the Apocalyptic Setting," *USQR*, XXVI (1971), 203-14; B. S. Jackson, "The Problem of Exod. XXI 22-5 (*Ius talionis*)," *VT*, XXIII (1973), 273-304.

**\*REVELATION, BOOK OF.** The variety of proposals and solutions that continue to be offered by scholarly research on Revelation substantiates the judgment that few primitive Christian writings have received so much attention and yet have remained so elusive.

The current progress in understanding Revelation moves in a way parallel to that of other NT writings. Just as in the study of the Synoptic gospels, the emphasis on source criticism and FORM CRITICISM has been replaced by stress on REDACTION CRITICISM. The source theories of the last century gave way to a scholarly consensus that Revelation is the theological work of one author. Whereas the different source hypotheses assumed that Revelation is a more-or-less mechanical compilation of sources,

recent studies have established the unity of the book by analyzing its style and language, and by showing its careful composition and its compelling theological conception. For example, since linguistic analyses show that the seven letters form an integral part of the book, Revelation as a whole can no longer be seen as a Jewish writing to which minor Christian corrections have been added. Instead it must be evaluated as an authentic Christian work addressed to the situation and problems of the Christian communities in Asia Minor. Recent studies of its Christology have amply demonstrated its genuinely Christian outlook. But the author did not develop his Christian vision of reality in abstract theological sentences. Instead he used the language of symbol and myth.

**1. Literary composition.** In form Revelation is a literary creation in which a vision or myth has been set within an epistolary framework. The author has arranged the visions and auditions according to a definite plan, in which the number seven has a key role.

a) Although Revelation contains diverse images and visions, its over-all organization reveals careful composition and startling coherence. The repetition of stereotyped formulas and the archaizing, Hebraizing style of the book are a primary means for achieving this effect. Further features of composition are: cross references (e.g., the characterizations of Christ in the inaugural vision all recur in chs. 2-3, and all the promises to the victor in chs. 2-3 are repeated in chs. 21-22); pre-announcements (e.g., the announcement of the final judgment in 14:6-10 refers to chs. 17-20); contrasts (e.g., the great harlot in ch. 17 is a contrasting image to the woman in ch. 12 as well as to the bride of the Lamb in ch. 19). A basic device is simple repetition. One vision is set after another, linked together by a common stock of images and symbols, the repetition of which gives unity to the whole and creates a cumulative effect (e.g., the color "white" occurs throughout the book). Whereas in Daniel each vision has its own set of symbols, in Revelation they are distributed over the whole book.

The use of numbers and numerical structures (e.g., seven churches, seven stars, seven candelabra, seven messages, seven seals, trumpets, and bowls; two book visions, two witnesses, two beasts, etc.) is another means chosen by the author to achieve an interwoven texture and unitary composition. This interweaving of the visions in a numerical way has the effect of combining a cyclic sense of repetition with a continuing forward movement. This forward thrust of the narrative is interrupted by interludes (e.g., eschatological announcements, visions, or hymns) which proclaim the final salvation. By repeatedly breaking through the successive visions of cosmological plagues and historical struggles, the author is able to show the final sense of all these struggles and sufferings in the present. This double pattern of forward-moving narrative and anticipatory depiction in the interludes is a structural expression of the tension between the present reality and the hope for the future.

b) Since the author does not employ discursive, logical patterns but speaks in the language of

symbol and myth, his images are "open ended" and cannot be nailed down to one single, definite interpretation. The difficulty of interpretation, moreover, is greatly increased because the author did not freely create his materials. Instead he used traditional materials, especially from the OT, Jewish apocalypticism, pagan and Jewish mythologies, and early Christian traditions. To express his own theological vision he reworked them into a new and unique composition. Revelation therefore appears on the one hand as an artificial construction of materials derived from traditions which are heterogeneous in origin and theology, and on the other hand as an artistic mosaic of poetic conciseness. The author does not quote his materials verbatim or copy them, but reworks them to present his own message, as can be clearly seen from his use of the OT. It is therefore very difficult to separate tradition from redaction and to give the imagery of Revelation a definite and clear meaning. This multivalent character of the imagery and the visions makes it necessary to interpret each symbol and image of Revelation in the context of the theological perspective and meaning of the whole book.

2. **Theological perspective.** One of the most significant features distinguishing Revelation from Jewish apocalyptic literature is that it is not pseudonymous (see PSEUDONYMOUS WRITING[S]). The author does not take a fictitious standpoint in the past in order to present surveys of world history in the form of predictions. What he writes is not esoteric knowledge but an unsealed, open, and clear theological message and exhortation, related not to the past but to the present and to the immediate future. Revelation therefore gives neither an interpretation of history nor an interpretation of the OT but a prophetic interpretation of the situation of the Christian community in the time before the end.

a) Although Revelation is full of eschatological language, scholars have nevertheless considered history rather than eschatology as the main theme and formal structural principle of the book. The different historical interpretations of Revelation maintain that it describes the sequence of real events that will take place in the course of the history of the church or in the final times before the end of the world. The historical-theological interpretations, on the other hand, seek to show that enduring, valid truth concerning history, especially salvation history, is revealed in the visions of the book. These interpretations have also presupposed that the author's concern with history has determined the structure of Revelation. The proponents of the historical interpretation seek to trace in the sequence of images a continuous or dialectic line of history. Previous attempts to explain the sequence of the visions by a linear or cyclic understanding of time have not succeeded in presenting a convincing interpretation, however. The central apocalyptic section creates special difficulties for these interpretations. The author mixes elements of past, present, and future, just as he mixes his verb tenses. Revelation therefore does not appear to be structured according to a

temporal, historical sequence. Instead, its contents seem to be ordered thematically.

The main concern of the author is not the course of history but the particular power struggle between the divine and antidivine forces which are represented on earth by the Christian community and the ROMAN EMPIRE. In contrast to Jewish apocalypticism, Revelation attempts to give meaning to the suffering of the Christian communities, not by reference to the divine plan of history, but by an understanding of the present from the horizon of the future. The imminent expectation of the author is not based, as in Jewish apocalypticism, on the belief that the world is growing old and reaching its end. It is based on the understanding that the Christian community is the "sign" that through the death and resurrection of Jesus Christ the reign of the satanic powers on earth is limited. In Revelation the focal point of the "already" and "not yet" is not history but the KINGDOM OF GOD and the rule of Christ. The main theological symbol of Revelation therefore is the throne.

b) The apocalyptic question, who is Lord over the world, is central for the theology of Revelation and is formulated here in mythological categories. Whereas Paul understood the question in terms of the alternative between the lordship of Christ and that of the cosmic powers, the author of Revelation interprets this alternative in political terms. The question, God or Satan, is now posed as the question of the kingship of God and Christ or the dominion of the Roman Caesar and the goddess Roma. This cosmic-mythological and political alternative is reflected in the lives of the Christians who represent the kingdom of God on earth (1:6; 5:10), but are still in danger of losing their right to participate in the eschatological kingdom by becoming followers of the beast. Those rejecting the beast and its cult are excluded from the economic and social life of the earth (13:15) and have to accept captivity and death (13:10). Revelation demands unfaltering resistance to the Roman imperial cult, because to give divine honors to the emperor would mean to ratify his claim of dominion over all people.

The author of Revelation appears to formulate his theology in opposition to an enthusiastic, Gnosticizing position which advocated accommodation to the syncretistic Roman religion and its cultic practices. Since loyalty to the Roman civil religion did not necessarily involve creedal statements, but mainly required participation in certain cultic acts and ceremonies, enthusiastic theology made it possible to conform to the imperial cult without giving up faith in the one true God and Jesus Christ. It was an attractive solution for Christians in Asia Minor, since it allowed Christian citizens to participate actively in the social, commercial, and political life of their society. This theology, probably represented by the Nicolaitans, had many followers in the Christian communities of Asia Minor, precisely because it advocated such a policy of accommodation. In this polemic context the theology of Revelation took shape.

The author gives an alternative theological interpretation of the situation of the Christian com-

munity in Roman society. His sharp rejection of the Nicolaitans in the seven letters and his total rejection of the imperial cult in the main part of the book are interrelated. The letters and the apocalyptic part of the book polemicize against the same theology and address the same situation. The author of Revelation can advocate such a sharp rejection of the Roman Empire and its cult because he is convinced that the power and dominion of God and Christ will prevail over the antidivine forces. His prophetic interpretation of the situation presupposes that a victory of God and Christ in this power struggle is at hand, and that God's kingship will soon be exercised on earth as it is now in heaven.

The author describes in three steps how the dominion of God and Christ extends over the world. It is established first in heaven; then it extends to the earth; and finally it destroys the underworld. Through his death and enthronement in heaven, Christ receives the kingship (ch. 5), whereas Satan is thrown down to earth (ch. 12). The representatives of Christ and Satan are therefore pitted against each other on earth in the end time. With the parousia of Christ the second step is taken (19:11-20:6): Christ and the victorious Christians assume the kingship on earth; the two beasts are imprisoned; and Satan is thrown into the abyss. Finally, Satan, death, and Hades are destroyed (20:7-15) in the last judgment, and a new heaven and earth appear (21:1-22:5). Then the victorious Christians will serve God and Christ on their thrones, and they will exercise their kingship forever.

\***REVELATION IN HISTORY.** The formula "revelation in history" rose to prominence largely in reaction against the biblical interpretation of the "liberal" period in theology. It had then been common to depict a process whereby biblical man moved from a more "physical," "natural," and "tribal" view of God to conceptions increasingly more spiritual, elevated, ethical, and universal. Even if degenerations also occurred, the positive side of biblical religion lay in this progress to higher forms.

Against this the later biblical theology (see BIBLICAL THEOLOGY[S] §8) reacted strongly. The core of the Bible, it argued, was not a process of discovery or an advance toward higher concep-

tions; it was not an increasingly spiritual religion, but a revelation, through which God had made himself known to man. The medium through which he did so was not ideas or conceptions, however lofty, but historical acts, earthly, time-bound, and contingent. The Bible was not the document of man's religion in its progressive refinement: rather, revelation came to man from without; it was different from his religion and cut across its lines and patterns.

The argument thus directed against liberal theology was used also against old-fashioned conservative theology: the revelation of God was not in statements or propositions, whether those of the Bible or of traditional theological documents, but in acts of history. The Bible witnessed to these acts and was in this sense a book of history, but its narratives were not intended as exact and objective history. Rather, they were theologically informed history, and it was wrong to make faith depend on their historical accuracy.

1. **Problems about revelation in history.** As a reaction against the older liberal and conservative positions, the emphasis on revelation in history was right and proper. Positively, on the other hand, it was much less helpful. The formula "revelation in history" has proved to be a highly ambiguous one.

*a. Ambiguity about the nature of the revelatory events.* Are these events which seem to involve transcendent causation, like the raising of someone from the dead? May they equally be events that follow normal patterns of historical causation, like the campaigns of Nebuchadrezzar? And what about non-events, events that are solemnly related by the Bible but probably never took place at all, like the Flood? Again, what of events that, if they took place at all, took place in a form so far different from the biblical narrative of the incident as to be scarcely recognizable, such as the capture of Jericho by Joshua (or indeed, on some theories, the entire story of the conquest of Canaan)?

Again, does an event, in order to be revelatory, have to be an "outward" event and in that sense historical, or can it also be a mental event, perhaps the perception of problems by a teacher or writer in a particular way in his own historical situation, and thus a perception that starts a new train of thought and a new direction in biblical tradition? But if events of this latter kind are admitted, does this not mean that "revelation" is not absolutely different from normal processes of cultural or literary development?

*b. Ambiguity about the sense of "history."* Is the character of the revelatory event accessible to critical historical investigation in the same way as any

other historical event? If it is not, then in what sense is it history? If it is, then can critical investigation confirm that the event was revelatory in the sense of being different from any other event? If critical investigation cannot determine this, then it means that the event, as seen by critical history, is a quite normal event, and that the revelation aspect is hidden from historical study. If this is so, is it not disingenuous to claim that the revelation is "in" history? Again, since it is agreed that the Bible must be read with the methods of historical criticism, did the revelation occur in the story as the Bible tells it or in the history reconstructed by critical study which we believe to have been the actual history?

**c. Ambiguity about the relation between revelation and history.** Is history itself equivalent to revelation? Or is revelation a special historical process clearly different from the remainder of history? Is it a series of momentary vertical irruptions into history? Does it infiltrate into all history, or only into those segments of history which are described or interpreted in the Bible? And why should revelation in history stop at the end of the biblical canon—and indeed in the middle of it, since (to judge from most works on the subject) remarkably little revelation in history took place between the Babylonian exile and the coming of Jesus?

One unclarity has been particularly damaging: many writers, while emphasizing that revelation took place in history, effectively said no more than that ancient Israel and the early church *thought in terms of* a historical revelation. There is all the difference in the world between a claim to revelation in history and an observation about the thought patterns of ancient Israel. The latter, even if correctly so stated, might be no more than a striking feature of the thought or religion of the time, and is quite different from an actual affirmation of revelation in history. The more scholars have emphasized the biblical thought patterns, the more they have left themselves open to the supposition that these thought patterns, rather than the claimed revelatory events, were the true foundation for biblical theology.

**d. Difficulties in the relation between revelation and the biblical text itself.** Does everything in the Bible derive from, or point to, revelation, or is this true only of certain elements within the Bible? Are there elements which, far from being revelatory, are only evidence of the religious traditions of the time? But, if so, is it possible for scholarship to treat its material on two quite separate levels? Does not all of the Bible then require interpretation as the religion of the Israelites, of Paul, of John? If historical events are revelatory only as interpreted within the perspective of biblical faith, is it not the religion of Israel that provided the basis for this interpretation? But, since the term "revelation" has been largely used in express opposition to religion, does this not deprive the term itself of its *raison d'être*?

Again, the Bible seems to include substantial bodies of material which do not emphasize a revelation in history: e.g., in the OT, the wisdom literature, and much of the Psalms. More serious

still, there are difficulties even with central and favorite texts like the story of the Exodus. The text does not depict a divine act, which is the basis of all knowledge of God; rather, it represents God as communicating freely with men before, during, and after the events. Only God's previous communication with Moses made the exodus event intelligible or even possible. The conversation at the burning bush, far from being an "interpretation" of the divine acts, is a precondition of those acts. It seems impossible to consider the events as a separate and prior source from which the form of the entire biblical text necessarily derived.

**2. Cullmann.** In the postwar period his *Christ and Time* provided a very powerful advocacy of a salvation history (*Heilsgeschichte*) approach. The early Christian conception of time, he argued, was that of a straight line, formed by the joining together of decisive moments (this he took to be the sense of *καίρος*). Contrary to Greek views, eternity was not something different from time, nor a negation of time; rather, it was identical with the totality of time. The effect was to separate out from the totality of history the special period of revelation; this in turn lent authority to the Bible as the witness deriving from that time. Cullmann met severe criticism for his general exegetical and theological position (Bultmann, Conzelmann) and also for his linguistic arguments (Barr). His later *Salvation in History* seeks to restate the same position, but uses a rather different set of arguments.

**3. Bultmann.** Bultmann's position was far different. To him also the term "history" was of great importance. He was critical of mere "historicism" and had some other points in common with those who emphasized revelation in history; but on the whole his views led in another direction. The great "event" of Jesus is in a sense a historical event, but in a more important sense it is an eschatological event, and this means a proleptic anticipation of the end of history, which thus takes the believer "out of" history. The emphasis thus falls rather on the "historicity" of human existence, which is given and confirmed by the event of faith. Thus while revelation is a significant term, it is less important that it should be "in history"; rather, it must be here and now, and have an effect that takes one out of history. Many of the events narrated in the Bible are miraculous and thus mythical; such narrations may indeed serve as a vehicle of revelation, but this does not mean that the events are a locus of revelation in history. Moreover, though Bultmann is not so completely negative toward the OT as has been supposed, he does make it clear that "to the Christian faith the OT is no longer revelation" and thus "to us the history of Israel is not history of revelation." When the locus of revelation is thus restricted to the NT, the meaningfulness of any emphasis upon revelation in history is reduced.

**4. Wright.** Wright's position was typical of those in the English-speaking world that were based on the OT. He laid a heavy emphasis on revelation in history, contrasting this drastically with the environing religions, in which history had little or no role. The viewpoint, however, was more

associated with archaeology than with exegesis of the OT text, and the events were more emphasized than the transmission of tradition. But what was the character of these events? The terminology of the "God who acts" was taken over from the realism of the biblical narrative, but the scholar himself looked on the events in a quite immanent and naturalistic way. The events were thus emptied of all the precise features (dividing of the sea, wall of water, etc.) which alone gave special content to the terminology of "God who acts," and the acts of God became only an abstraction. Wright was thus open to the charge of equivocation, pressed especially by Gilkey. Wright's later thought moved away from the supposed events to characteristic Israelite mental patterns, such as the covenant idea; it seemed as if the whole emphasis on "God who acts" had never been meant at face value. The actual narrative form of the text had little impact upon Wright's thinking.

5. **Von Rad.** Von Rad's theology also takes salvation history as a central category. By contrast with a man like Wright, the association is with literary analysis, form criticism, and tradition-history, and the approach is exegetically fertile. The stress is laid on the specific *kerygma* of the various strata within texts. Israel's "confession" was to historical events, and the mainstream of its traditions consisted in the kerygmatic reinterpretation of the tradition of these events. The OT is thus in principle a book of history. But von Rad is well aware of a difference between history as the OT tells it and history as critical scholars perceive it. There are "two histories" in question, and it is with the history as "confessed" by the OT that OT theology has to deal. But in what sense is it revelation in history if the confession is not to events as they took place? Von Rad replies that, though the two histories are different, the difference should not be exaggerated, and the history as confessed has its roots and basis in the actual history, though it is not identical with it.

His definitions of what constituted the salvation history seem artificial; they fit with the Deuteronomic point of view, rather than (say) with that of P. Von Rad strikingly fails to identify this history with all the history related in the OT. It does not include the story of David; and the entire late OT tradition, because of changes in the views of history and of law, does not count as salvation history either. Thus his work, in spite of the stimulus it afforded, left an enormous range of problems open.

6. **Pannenberg.** The systematic theologian Pannenberg, working within the heritage of von Rad, put forward proposals intended to obviate some of these difficulties. He abandoned the idea of "two histories," one of them known to critical investigation and the other the subject of "confession." If revelation is in history, it must be in a history accessible to critical study—though Pannenberg interprets this in a wide sense. Moreover, revelation, because it was revelation of God himself, could not be partial and therefore could not be commensurate with less than the totality of history; it thus took place at the end of history. Here he takes up apocalyptic—an aspect which fitted rather

badly into the von Rad theology—and makes it central to his theological scheme. Pannenberg's position, though restating a view of revelation in history, contains many innovations as against earlier views and must be judged to be only partly in continuity with them.

7. **Albrektson.** It has generally been assumed that the view of history as the milieu of divine activity was distinctive to Israel and lacking from its environment. Ancient religions, with the sole exception of that of Israel, were built not upon history but upon nature, or upon a cyclic view of time. These beliefs rest on no close and competent analysis of the facts of ancient religion; rather, they are a transcript of outdated philosophical views coming from the mid-nineteenth century before good sources for ancient religion were available. G. E. Wright, indeed, built much upon the studies of the Frankforts and Jacobsen, but they connected Mesopotamian religion with society and social organization rather than with nature. Albrektson's recent work, in spite of any corrections in emphasis that may be needed, shows that the entire picture of ancient religion assumed in much theology is false: "The OT idea of historical events as divine revelation must be counted among the similarities, not among the distinctive traits; it is part of the common theology of the ancient Near East."

If we extend this into a later period, we must recognize that theology has been equally misguided in minimizing the sense for history among the Greeks. Within the total construct "history" only some elements can be ascribed to the OT; others come primarily from Greek sources. Moreover, the OT in its later stages fixed the canonical history in a past time and bequeathed little historiographical stimulus to a later age; in Hellenistic times it was where Jewish life came into contact with the Greek world that it was historically creative.

8. **A possible alternative.** The character of the OT is story rather than history: over large portions its form is narrative, though there also are large areas which are not narrative at all. This narrative spirals back and forward across what we would call history, sometimes coming closer to it and sometimes going far away from it. The story is cumulative: each stage provides material that is essential for what follows. This happens on different levels. In one way it happens in the reading of the text as a text, with its sequence from the beginning onward; it also happens, in another way reconstructed by critical study and not visible on the surface of the text, in the actual growth of the tradition. The sequence is not a development in an evolutionary sense, since it does not necessarily rise to ever higher forms; but it is a cumulative story in which new elements are made meaningful through that which has gone before, while tensions in the existing tradition lead to changes and the formation of new tradition. Each stage of tradition has an influence on the religion of the following stage, and it is through the religion that the older tradition is mediated to later stages.

The term "revelation," as it has come to function within theology, does not fit with the structure of communication through cumulative tradition

within the Bible. In theology, revelation indicates the basic possibility of communication from God to man, but in the Bible this is assumed rather than stated; it does not constitute a problem, for it is assumed from the beginning of the story that God freely communicates with man. All that is said or done thereafter is *further* communication and not a primal initiation of communication. Further, as we have seen, though in theology revelation is sharply distinguished from religion, within biblical study this distinction cannot be usefully made.

It may be expected therefore that the clear thematic guide, which revelation in history appeared for a time to furnish for biblical theology, will in the future be cut across by many other considerations, and that the formula in itself will cease to be either clear or useful. Historically, however, it will be seen to have played an important part in biblical study over several decades.

\***RIDDLE.** A saying that both puzzles the hearers and communicates to them. Riddles can only arise where language is ambiguous, for they employ common vocabulary to dispense privileged information to those worthy of receiving it. In antiquity riddles tread on perimeters of myth and divination, particularly in rites of passage. Often constituting a judgment situation, they generate anxiety on the part of riddler and opponent. Tests of worthiness more than intelligence, riddles endeavor to drain opponents of strength (I Kings 10:1-5).

The form of riddles includes interrogative and statement, poetry and prose. When couched in poetic language, they employ the full repertoire of ancient rhetoric—parallelism, strophic arrangement, paronomasia (see WORDPLAY IN THE OT[S]), onomatopoeia, description, personification, narrative debate, and so forth. A special prose category is the "neck riddle," in which the hero must pose a riddle that cannot be solved, or unravel one given him on penalty of death should he fail (cf. contest literature and controversy dialogues).

The content of riddles ranges widely, but sex and religion stand out above all other topics. Once the mythical and demonic background gives way, riddles come to function as teaching devices and entertainment. Their place in life includes initiation ceremonies, courtship and marriage, political

contests between kings or courtiers (I Esd. 3:1-4:47), ritual questions in catechetical form, banquets, and schools.

In Israel *hidhā*, "riddle" (= *m<sup>o</sup>lišā* and *māshāl*) serves as an umbrella term, referring to enigmatic proverbs and allegories, impossible questions, contest literature, question and answer dialogue, and embryonic catechisms. A bond between numerical proverb and riddle is probable. Still, differences suggest caution. These include the attitude toward paradox, the nature of the solution, and the specificity of the answer. While allegory and parable/simile use ciphers, they differ from the riddle in that they do not attempt to mislead.

The classical riddle in the OT occurs in the Samson narrative (Judg. 14), itself a "neck riddle." Actually three riddles lie concealed within the story, each resplendent with *double entendre* and ornate poetic clothing. Samson's riddle ("Out of the eater came something to eat. Out of the strong came something sweet") probably antedates its context. The Philistines respond with a riddle whose answer is love ("What is sweeter than honey? What is stronger than a lion?"), and Samson retaliates with an allusion to cohabitation ("If you had not plowed with my heifer, you would not have found out my riddle"). The attempt to explain Samson's riddle as one of consonance is entirely unnecessary and depends on a questionable Ugaritic and Arabic parallel and an assumption that *dbsh* has replaced a hypothetical, rare Hebrew word for honey, 'ary.

Attempts to discover riddles in Pss. 19 and 49 have produced interesting results. In both instances the riddle form has been altered, but can be restored with minimal textual disturbance. Two possible riddles in Ps. 19 describe the sun as a bridegroom making a journey to the ends of the earth and allude to mute divine messengers, day and night. Similarly Ps. 49 may preserve two riddles. The first asks how man and beast are alike, providing the misleading answer that they are both stupid. The real solution, however, is that both die. The second picks up the theme of death's sovereignty and asserts victory over it, presumably for the wise person who solves the "neck riddle." Even the pessimistic Sayings of Agur (Prov. 30:1-4) may conceal an ancient riddle reminiscent of the first one in Ps. 49.

Riddles in disintegrated form may lurk beneath the biblical text in far more places than has so far been ascertained. The suggestion in Num. 12:8 that normal prophetic utterance was in riddles and the legend about Solomon's riddling (I Kings 10:1-5; II Chr. 9:1-4) support such an assumption. For example, does the proverb cited in Eccl. 9:4 ("A living dog is better than a dead lion") conceal a riddle that justifies remarriage by a woman who, once the wife of an important citizen, now joins herself to a nobody? Many ciphers within the OT can easily be transformed into riddle; the crucial question is whether or not they ever existed in riddle form. While a final decision cannot be made at present, the following texts may conceal disintegrated riddles: Prov. 5:1-6, 15-23; 6:23-24; 16:15; 20:27; 23:27, 29-35; 25:2-3; 27:20; 30:15-33; Song of

S. 4:12. Perhaps, too, the enigmatic revelations to Moses (Exod. 3:13-15) and Manoah (Judg. 13:17-19) were once riddles seeking to determine worthiness.

\***RIGHTEOUSNESS IN THE NT.** Recent discussion of terms pertaining to "righteousness" focuses essentially on the Pauline material.

1. Käsemann's thesis, prompted by Schlatter, is that it is philologically impermissible and theologically fatal to absolutize the meaning of "righteousness of God" as a divine gift. Käsemann especially criticizes the trend in interpretation since Bultmann and warns against isolating the gift from its giver, thus allowing it to be subject to human disposal. This, he believes, tends improperly to set both ecclesiology and anthropology above Christology, and fails to recognize that "the indissoluble connection between power and gift" represents a "fundamental phenomenon" of Pauline theology. Even though Paul regards God's righteousness primarily as a gift, still the traditional meaning of "a power which brings salvation to pass" continues to play a major role, and it modifies the motif of gift in such a way that a distinction must be made between the justification that is vouchsafed to the individual on the one hand, and, on the other, the power, asserted in it, of the divine righteousness as the claim to lordship over creation. God's righteousness is therefore to be defined as "the rightful power with which God makes his cause to triumph in a world which has fallen away from him and which yet, as his creation, is his inviolable possession."

While Käsemann strives to avoid suggesting that the two aspects of gift and power are mutually exclusive, his followers have largely neglected the character of gift. Müller explicitly eliminates the motif of "the effect of a judicial decision" from the concept and defines it one-sidedly as eschatologically making God's rightful power real in the world. Stuhlmacher fully absolutizes the concept of power, seeing in God's righteousness a "judicial and creative process that concerns the world," "God's governance that spans the eons," which is personified in Christ and is manifested as "the creator's liberating right to his creation."

This position appeals first of all to the religio-historical roots of the idea of righteousness. Käsemann interprets "righteousness of God" as a fixed Jewish formula, particularly significant in Qumran literature, but to be traced back all the way to Deut. 33:21. Stuhlmacher regards it as a technical

term and attempts to demonstrate that it is a basic theme in apocalyptic, "the creator's demonstration of power that establishes justice." The continuing function of the formula in earliest Christianity is said to be evident in Matt. 6:33 and Jas. 1:20, as is Paul's familiarity with this tradition in Rom. 3:5, 25. It is conceded that Paul does not appropriate it unaltered, yet because of the analogous usages in Qumran literature, neither the righteousness of God as present fact nor the *sola gratia* can be regarded as peculiar to Paul; what Paul did was to expand the motif of covenant-faithfulness into that of faithfulness to the creation (Müller), or to provide a "christological orientation," understood as a "radicalization and universalization of the promise in the doctrine of the justification of the ungodly" (Käsemann).

The strongest exegetical support for this interpretation is provided by those passages which, in Käsemann's view, treat the righteousness of God "not primarily as a gift, but as power" (II Cor. 3:9; Rom. 10:3; 6:13 ff.), employ it as a designation for Christ (I Cor. 1:30), use it as a synonym for "God's glory" (Rom. 3:21 ff.), and, like Rom. 3:5—which Käsemann describes as a key passage—treat of God's covenant faithfulness. Such an interpretation claims to offer the theological advantage of joining the gift to the divine Giver and of overcoming the old alternatives of imputed and effectual righteousness and of justification and sanctification. Only thus, it is said, can we avoid an individualistic narrowing of the concept and give due regard to the worldwide import of God's righteousness.

2. **The question of the religio-historical background.** The view that "the righteousness of God" is a Jewish formula has been contested on the grounds that the documentation is sparse (Lohse). Thyen accepts only the evidence of Deut. 33:21; IQS 10:25; 11:12; IQM 4.6; Test. Dan. 6:10. In addition, Bultmann has noted that there is a breadth of meaning impossible for technical terminology. Against Stuhlmacher's soteriological interpretation of Deut. 33:31, Thyen sees here the sense of the "righteousness of God as punishing judge." Independent of the controversy, Becker had already shown that, while God's righteousness appears in the Qumran materials as the "sphere of salvation," it also appears there as a gift (so also Kertelge), and Lohse finds that throughout the literature of postbiblical Judaism the concept has the sense of a genitive of origin. Finally, it is impossible to speak of an influence of a formal concept of power in Matthew, because there "righteousness" (δικαιοσύνη) is always used in an ethical sense (Strecker).

The question of the relevance of Jewish documentation for the understanding of Paul is also raised by recent fundamental reflections on linguistics (e.g., Barr). The history of concepts does not unfold according to evident necessity. Whenever a concept is used, previous semantic contents are open to modification. That is to say, the origin of the concept "righteousness of God" does not automatically determine its function in a new context; the priority of the synchronic interpretation

over the diachronic must be unconditionally maintained (Klein).

Rom. 3:25-26 offers striking proof of the way Paul adapted and changed the term "righteousness of God." In the fragment of Jewish-Christian tradition which underlies vs. 25, δικαιοσύνη θεοῦ is clearly to be read as a subjective genitive, meaning God's redemptive faithfulness in forgiving sins. But after the formulation of vs. 26a, deliberately parallel to that of vs. 25b, Paul's own interpretation appears in vs. 26b, whereby it is clear how far for him the tradition is at the same time acceptable and in need of revision. Paul's essential concern is not to universalize the particularist motif of covenant-faithfulness into that of faithfulness to the creation (contra Käsemann, Müller, Stuhlmacher). The material from the tradition does not even sound the covenant theme, at least explicitly. Moreover, the category of "faithfulness to the creation" is far from adequate for an apostle who understands the Christ event precisely as the bringing about of a new creation (Kertelge). Käsemann's thesis that Paul's correction is motivated by his dissatisfaction with the catchword of the forgiveness of past guilt is not wrong, but too limited. Rather, Paul (with some support from earlier confessional formulations, Rom. 4:25; I Cor. 6:11) goes beyond the traditional expression, because he wishes to transpose its concept of God's righteousness as the definition of God's nature ("that he himself is righteous," εἰς τὸ εἶναι αὐτὸν δίκαιον) into a definition of God's way of working ("that he justifies him who has faith in Jesus," καὶ δικαιοῦντα τὸν ἐκ πίστεως Ἰησοῦ). His interest is obviously focused on anthropology. The specifically Pauline tendency is shown by the transposition of substantives into verbs (Conzelmann). That the noun "righteousness" is used with reference to human beings is clear from the fact that Paul describes it as "the righteousness of God through faith" (Rom. 3:22; cf. Phil. 3:9 and the parallelism of Rom. 10:4 and 10:6), thus the result of God's justifying action.

3. **Romans 3:5**, the only passage in which Paul himself speaks of God's righteousness using a subjective genitive, is not really the "key passage" for Käsemann's thesis. Instead, it is a further argument against it. Käsemann sees a parallel between the phrase in 3:5 and "the faithfulness of God" (πίστις τοῦ θεοῦ) in vs. 3. But this is misleading, because it disregards the connection between verb and substantive which is constitutive for the immediate context. In keeping with the setting of a trial, God's righteousness results from his having been justified (note the passive, δικαιωθῆναι, in vs. 4). God's righteousness is therefore the judgment, wrested from his human adversaries in the judicial process (κρίνεσθαι) which they have plotted. It means neither the judicial *justitia distributiva* (contra Bultmann, Bornkamm, Kertelge) nor the divine faithfulness to the covenant which will prevail in accordance with the apocalyptic expectations (contra Käsemann). It has rather an unequivocally forensic structure stating an essential characteristic of a relationship. It is true that in the context of Pauline usage this passage forms an

exception. The irregularity, however, is due to the fact that, rather than God, humans pronounce judgment and are the "source" of the righteousness (Klein); it is not due to the fact that righteousness denotes a relationship established by the pronouncement of the judgment.

4. **Other passages** to which Käsemann has appealed also need to be reviewed.

i. **Rom. 6:13-23**. Whatever the precise meaning of "righteousness" here (commentators differ), in vs. 16 the accent is clearly placed, by means of the contrast ("death"), on the lot one is assigned—thus on the idea of gift. Moreover, Paul does not speak here of "the righteousness of God" but in nonspecific terms of "righteousness."

ii. **II Cor. 3:9**. Contrary to Käsemann's view, "righteousness" here should not be interpreted with reference to IQH 6.19 but in light of "condemnation" (κατάκρισις), the concept with which it is contrasted. Thus, righteousness is here the gift of divine acquittal.

iii. **Rom. 10:3**. It is not the catchword "submission," but the contrast with "righteousness of their own" that determines the meaning of righteousness here. The latter is not a power but the product of human conduct, blasphemous self-confirmation.

iv. **I Cor. 1:30 and II Cor. 5:21**. These by no means document a "sphere of radiance" of righteousness conceived in terms of Jewish thought (Käsemann); rather, the parallelism with "sanctification" and "redemption" (I Cor. 1:30), like that of II Cor. 5:21b with vs. 19 ("not counting . . . trespasses"), shows that the gift of salvation is meant.

5. **Conclusion**. The consistent association of the substantive "righteousness of God" with the verb "justify" and the adjective "righteous" (cf. Rom. 1:17; 3:22-31; Gal. 3:11 with vs. 21) is important. Stuhlmacher's neglect of this is a serious error in method (Lohse), and conversely, Ziesler's differentiation between a forensically determined verb and an ethically determined substantive/adjective does not at all do justice to that association. Where a differentiation is made between the "fact" of justification and the "possibility" of moral renewal (Watson), provision is made anew for human autonomy, and the Pauline unity of justification and sanctification is shattered.

Käsemann's deepest concern is to ensure this unity and thus to emphasize the motif of the divine claim to dominion over the world as the center of Pauline theology. His concern is threatened, however, when the cosmological and anthropological dimensions are explained conceptually with the motifs of power and gift, or are set in opposition to each other. If we recognize that the righteousness of God is for Paul a relational concept which, in the genitive of origin, identifies the initiator and continuing Lord of this relationship and understands it as a miracle—as a new orientation of existence that is established by grace—then the gift is consistently regarded as power. It is no longer necessary to cast sideward glances at those dimensions which lie beyond anthropology, because it is certain that the divine action of justification does not occur except in the

context of faith, and that God conquers the world by pacifying those who rebel against him.

\***ROMANS, LETTER TO THE.** Recent discussions of Romans have focused on certain problems of LITERARY CRITICISM, the structure of the letter, and its purpose (see *bibliog.*).

1. **Literary criticism.** a. *Glosses.* According to Bultmann's analysis, many verses are suspect. (i) 2:1 because of a break in context, which Schmithals believes is perhaps a marginal note by Paul to explain the sudden change of theme in vs. 3. But is there anything unclear about the transition? (ii) 2:16 because of the apocalyptic reference. Käsemann holds that this is indispensable. But in context it merely demonstrates the present application of the Law even among the Gentiles. Schmithals believes that vs. 16 has been separated from vs. 13 by a copier. But is such a misleading correction by a copier plausible? (iii) 6:17b because it breaks up an antithesis and uses non-Pauline terminology. Käsemann says that vs. 16b could not be continued without 17b. But 16b formulates the basic alternative, while 17a and 18 show the actual situation of the readers. (iv) 7:25b and 8:1 because of the psychological shift from the conflict previously described and because of a break in the train of thought. Käsemann agrees. (v) 10:17 because of a tendency toward generalization that does not fit the context. Käsemann be-

lieves that it is a christologically more precise variation of vs. 15. (vi) 13:5 because of a logical tension with vs. 6. Käsemann points out that this argument is circular. In addition, Schmithals excludes 5:6-7 on the basis of contextual analysis.

b. **Chapter 16.** Donfried does not find the arguments for the Ephesian note hypothesis convincing. According to him the textual evidence that Romans originally ended with 15:33 is too weak, considering the placement of the doxology in P<sup>40</sup>. He suggests that the polemic of 16:17-20 is a concluding summary of ch. 14, that the people greeted as Paul's personal acquaintances are Jewish Christians who have returned to their homes in Rome after the revoking of the edict of CLAUDIUS, and that his acquaintance with them makes it possible for Paul to begin work in a previously unknown congregation. However, the evidence of P<sup>40</sup> can only be neutralized by the desperate postulate of an archetype whose author had to omit 16:1-23 for lack of space (Schmithals); 16:17-20 has an anti-heretical character because it does not admonish peace between two groups in the church as does ch. 14, but rather separation from the pseudo-Christians; and the hypothesis of the returning exiles is inadequate, because Romans addresses the congregation as a whole as Gentile Christians (1:5-6, 13-15; 11:13; 15:15 ff.). On the other hand, 15:33 marks an ending just as clearly as does 16:20b; the final greeting missing there may have been included in 16:21-23, which competes with 16:16b and is misplaced after 16:20b—therefore difficult to explain (with McDonald) as a postscript. It is hardly conceivable that a letter addressed, like Romans, to a whole congregation would include such a list of greetings to individuals. This would be more appropriate in a letter to a prominent address in Ephesus (the household of ONESIPHOROS?), if the whole congregation is included and the warning against heresy applies to them all (Schmithals). The Ephesian destination of 16:1-20 can therefore hardly be disputed, whether this letter was sent to its recipients together with a copy of Romans (Manson), or whether it was first joined with Romans in the course of publishing the earliest Pauline corpus (Schmithals).

c. **Integrity.** Schmithals argues that we must reckon with two different letters, "Romans A" (1:1-4:25; 5:12-11:36; 15:8-13) and "Roman B" (12:1-21; 13:8-10; 14:1-15:4a, 7, 5-6; 15:14-32; 16:21-23; 15:33). He holds further, that 5:2-11 and 13:11-14 are Pauline, yet not originally part of the Roman correspondence; that 13:1-7 is traditional Jewish material added by an editor; and that 15:4b and perhaps 5:1 are attributable to an editor. Romans A and B are said to differ as to situation and theme: in A Paul has been hindered in his planned visit to Rome (1:13) and has no plans to visit Spain, whereas in B this visit is clearly seen as a step on the way to Spain; A deals with the universality of justification by faith, while B is concerned exclusively with peace between the strong and the weak; A attempts to win over the Romans to the Pauline gospel (1:15), while B treats them as a Pauline congregation. But just as it is methodologically precarious to resolve by literary criticism the undeniable tension between the

earlier and later parts of the letter, so, on this hypothesis, the function of 5:1 and 12:1-2 as significant transitional markers would not be taken into account.

**2. Structure. a. Compositional unity.** Romans has no equal among the authentic letters of Paul for uniformity of composition. Leading the way among the numerous proposals for dividing Romans (overview in Zeller) is Bultmann's insight that chs. 1-8 successively treat the universal necessity of God's righteousness ( $\delta\iota\kappa\alpha\iota\omicron\sigma\upsilon\eta\ \theta\epsilon\omicron\upsilon$ ) (1:18-3:20), its christological manifestation as justification by faith (3:21-4:25), and its anthropological effect (5:1-8:39). This conception of God's righteousness is by no means lacking in 6:1 ff. (contrary to Luz's opinion); nor can it be reduced to a secondary theme in chs. 9-11 (Dinkler); rather, it provides the normative interpretation of the history of Israel and the basis of the concrete PARENESIS in 12:1-15:13 (Käsemann).

**b. Arrangement.** The compositional unity corresponds to the precise arrangement. Sections with a transitional function hold the entire work together: 3:9-20 sums up 1:18-3:8; 5:1 restates 3:21-31 and lays the basis for chs. 5-8; ch. 8 is a pneumatological variation of chs. 5-7; 12:1-2 is a transition from indicative to imperative; 13:11-14 concludes the general parenthesis and leads to the special appeals to different groups. Moreover, calculated stylistic effects accentuate the conclusion of larger sections: e.g., a rhythmic Christ-formula, 4:25; the hymn-like passage, 8:38-39; the doxological praise, 11:33-36. There is also a purposeful use of traditional materials at key theological points: christological formulas, 1:3-4 and 4:25; a liturgical fragment, 3:25; the combination of a faith-formula and a confession, 10:9. Even though it may be extreme to conceive broad segments of Romans as a commentary on faith formulas which Paul has taken over (Conzelmann), nevertheless the consistent orientation of the argument to the church's credo is clear.

**c. Themes.** Most of the letter takes up themes of earlier Pauline epistles (especially of Galatians, Philippians, I and II Corinthians) (Bornkamm). Examples are: justification (cf. Gal. 3-4; Phil. 3; II Cor. 3); natural revelation (cf. I Cor. 1:21); Abraham (cf. Gal. 3-4); Adam and Christ (cf. I Cor. 15:22, 45 ff.); freedom of the children of God (cf. Gal. 4:4 ff.); the church as the body of Christ (cf. I Cor. 12); the strong and the weak (cf. I Cor. 8-10). It is not a question of simple restatement in Romans. Many themes reappear in modified form (e.g., in Rom. 5:12 Adam's fate is no longer, as in I Cor. 15:45 ff., a physical one, but rather one to be understood as a result of sin), and most themes are taken out of specific controversies, raised to a generalized level, and integrated into the leitmotif of God's righteousness. This fundamental characteristic makes Romans unique among Paul's writings, and allows it to be seen, to a considerable extent, as a résumé of Pauline theology. Its uniqueness marks it as a "letter-essay" in form (Donfried) and points to the historical puzzle of Romans.

**3. Purpose.** The peculiar literary structure of

Romans makes it extremely difficult to see the relation between content and purpose. The question is not only why Paul writes to Rome at all, but why he writes the way he does. The question is not resolved by the supposition, based on a variation of the older circular letter thesis, that Paul is not only directing his words to the Romans, but that he has "all the Christian churches in mind" (Donfried).

**a. The traditional view** of the letter traces it back to Paul's interest in winning the support of the congregation for his Spanish mission, establishing himself in Rome for this purpose, and protecting his mission from possible Jewish or Jewish-Christian disparagement. But against this are the following: (i) plans to visit Spain are only casually mentioned (15:24, 28); (ii) the anti-Judaistic passages are few (only 3:8; 6:1, 15 are unequivocal); (iii) Paul's most dangerous opponents were not Judaizers but Gnostics; and, above all (iv), the indication in 1:5-6, 15 that Paul's main intention is to preach the gospel to the Romans, an intention already given impetus by this letter (15:15-16).

**b. Alternative views.** The same objections (see §3a) apply to explanations based on events in Paul's life (Suggs, Bornkamm, Jervell, Wilckens). Paul's past history with his congregations and his impending visit to Jerusalem partially explain what he writes, as well as his choice and arrangement of themes—which almost give the letter the appearance of a last will and testament. But they do not explain his reason for writing. The reason is not that Paul was seeking to acquire support from the Romans in the expected conflicts in Jerusalem. How could such an alliance have been established so quickly? Or how could the plea for intercession (15:30) as a "political, diplomatic act of the Church" (Wilckens) be a key to the whole letter?

Some suggest that Paul is intervening in a dispute within the Roman congregation itself—by deciding against a Gentile-Christian (Donfried) or Jewish-Christian group, or by trying to reconcile two groups (Minear). But the Gentile-Christian origin of the community contradicts such an interpretation; the conflict dealt with in chs. 14-15 cannot be identified with such a contrast; and chs. 1-13 are in no sense a prelude to chs. 14-15.

**c. Another solution.** Any adequate resolution of the problem must begin with an often neglected difficulty. Although Paul wants to carry the gospel to Rome and does so with this letter, he is aware of his principle of "nonintervention" (15:20; cf. II Cor. 10:15), which constrains him from promulgating it where a congregation already exists. Both points have to be taken into account. His intention to preach the gospel is not directed toward "unconquered territory" in the world capital (Käsemann), nor can it be relegated to the past (Zeller), or reduced to an intention merely to visit (Wilckens). Even if the principle of nonintervention has motivated Paul's previous hesitation about visiting Rome (Bornkamm), this does not diminish its implicit validity, which is rooted in Paul's conviction that the "foundation"

of a community (15:20b)—the realization of Christ's gospel as a force for establishing a church (I Cor. 3:11)—can be laid only once (I Cor. 3:10). This fact creates a special relationship between the congregation and the apostle who is entrusted with the gospel (cf. I Cor. 3:10-15 with 4:15). It has been concluded from this (Klein) that in the course of turning his missionary work toward the West, Paul would have sought to evangelize Rome because of its lack of a "foundation." It may be misleading to describe its shortcomings as a lack of *apostolicity*. But it is clear that on Paul's definition, no consolidated congregation yet existed in Rome, i.e., no congregation solidly bound to the one true gospel (Gal. 1:6 ff.). This view corresponds to known historical data. Related to this is the unique absence of a co-writer and the unusual appearance of the gospel motif in the salutation (1:1-7), as well as the surprising absence of the "church" (ἐκκλησία) concept in the letter. Schmithals also believes Paul wanted to proclaim his gospel in Rome and thus establish Christianity there as a *church* (ἐκκλησία), but he ascribes this to the fact that the Roman Christians, formerly "God-fearers," remained susceptible to Jewish influences. Thus he does not consider "Romans A" a summary of the Pauline gospel, but its application to the equality of Jew and Gentile. But one must ask whether this concrete anthropological issue is not in fact fundamental for the Pauline message of justification, and conversely, whether the assessment of 7:17-8:39 as a dogmatic section independent of the theme is correct. In any case, recent debate shows that Romans can be adequately interpreted only by seriously viewing it as an occasional letter in the form of an essay that goes beyond the occasion, by investigating the circumstances that make such a literary genre necessary, and by reflecting appropriately on the fact that on this occasion Paul places the theme of God's righteousness at the center of the discussion.

\***ROME, CHRISTIAN MONUMENTS. 1. The early Christian catacombs.** Until the end of the second century Christians were buried in pagan cemeteries, but as the Roman church became more organized and gave more attention to the cult of the martyrs, Christian cemeteries came into being, especially after the accession of Callistus in A.D. 217. The cemetery of Domitilla is dated to the second half of the second century and its decoration to the end of the century. The *Memoria Apostolorum* (St. Sebastian), of comparable date, is centered around three family tombs, and the two-galleried cemetery of Praetextatus dates from the second half of the third century. Callistus has two important centers, the area of Lucina (A.D. 190-200) and the crypt of the popes (from the late second to the early third century). The first pope to be buried outside the Vatican was Zephyrinus near the area of Callistus in 217. Callistus himself was buried in the cemetery of Calepodius in 222.

The newly discovered catacomb of the Via Dino Campagni has a mixture of pagan and Christian elements, and in the catacomb of the Aurelii (first half of the third century) Gnostic cosmogonic themes are present along with Christian figures, including the city's oldest representation of the cross. This mixture of subjects indicates the co-existence of orthodox and heretical Christian views before the Constantinian era. There are several Jewish catacombs which, however, do not predate the Christian catacombs. See also ART, EARLY CHRISTIAN[S] §§3a, b, 4bii.

**2. Vatican excavations.** Explorations beneath the main altar of St. Peter's (1939-50, 1953-57) uncovered an ancient cemetery along the Via Cornelia running from the Tiber to the Vatican Hill under the nave of the present basilica. Both St. Peter's and its Constantinian predecessor are centered over an open area among some pagan mausoleums on the Roman road. In a wall of this area is a niche with two small columns supporting a cover that protected it from rain. The edifice is dated from the wall in which it rests to ca. A.D. 150; between 150 and 320 some twenty-six inhumations were made in the immediate area. Since this monument, thought to be the trophy of Gaius from ca. 190 mentioned in Eusebius (*Hist. II.xxv.7*), determined the architectural evolution of the later buildings, it appears that when the Basilica of Constantine was built in the fourth century, the church had no doubt that this was Peter's grave. No bones were found in the cavity beneath the niche, although human remains were found nearby. It is usually said, therefore, that the site of the apostle's tomb has been demonstrated to be here, rather than specifically found here. See also PETER §11; PETER[S] §6.

**3. Early Roman churches. a. Pre-Constantinian.** These were close to the wall of Servius Tullius

with a few exceptions, e.g., St. Marcellus on the Corso. Most were in poor and populous parts of the city. Excavations beneath churches such as John and Paul, Pudentiana, Caecilia, Chrysogonus, etc., have shown that houses of the late second and early third centuries were transformed into places of Christian meeting and worship. The complex beneath John and Paul was a series of private houses dating from the beginning of the third century and was used as a burial site until the sixth century. The house under Caecilia shows Christian use from the beginning of the third century, while that under Pudentiana dates from *ca.* 129, and its remodeling from *ca.* 387. Beneath the church of S. Martino ai Monti Christian paintings have been

found dating to the period of the Severi (*ca.* 195-235). Evidence of Christian meeting places has been found, too, under and in the environs of the churches of St. Clement and St. Prisca. At these sites excavators have also uncovered Mithraic temples (*see* GREEK RELIGION AND PHILOSOPHY §4*d*) dating from the time of TRAJAN. *See* Fig. R1.

*b. Constantinian.* In the period between Constantine and Charlemagne, Rome was transformed from the capital of the Empire into a Christian city. Churches were built by Constantine in the area outside the Aurelian walls in honor of the martyrs. Resistance to Constantine was strong at Rome, and this appears to be the reason why his church buildings are at the periphery of the city,

J. M. Ward

1. The Mithraeum, San Clemente, Rome

and why the cathedral itself was built just at the walls. These buildings were mainly on imperial property and financed with imperial monies. The following are the principal churches built by Constantine in the fourth century: the Basilica Constantiniana begun shortly after 312 on imperial property which formerly belonged to the Laterani; nearby, the Basilica Sessoriana of the Holy Cross in Jerusalem; the basilica of St. Peter, or the Basilica Vaticana, whose atrium and precinct were laid out around 333; a small martyrrium above the pagan cemetery on the Ostian Way where St. Paul was buried; the Basilica Apostolorum (St. Sebastian) on the Appian Way over a third-century martyrrium in which the relics of Peter and Paul were kept during the persecution of Decius; a funeral basilica dedicated to St. Lawrence at the base of the Verano hill; on the Via Labicana a basilica in honor of Sts. Peter and Marcellinus. Joined to this last was a mausoleum which Constantine built for himself and in which his mother Helena was buried. Constantine's daughter, Constantina, built a funeral basilica on the Via Nomentana near the basilica of St. Agnes. See also ART, EARLY CHRISTIAN[S] §§3a, 4a.

#### 4. Christian remains in the Forum and Palatine.

**a. Sta. Maria Antiqua.** This church occupies a situation on the S side of the Forum between the W escarpment of the Palatine and the library of Augustus. A Roman building was transformed into a church at the beginning of the sixth century, and in the second half of the century an apse and ambulacri were created. Almost the entire church was frescoed; its layers date from Popes Zacharias (741-752), Stephen (752-757), and Paul I (757-767). A chapel to the left of the apse has the famous fresco of the Crucifixion painted shortly after 741, showing Christ clothed and in a style reminiscent of that of refugees from Iconoclasm. In the left aisle is a sarcophagus from the middle of the third century showing the JONAH cycle of the stages of Christian initiation. The appellation "antiqua" may come from the church's having possessed the city's oldest icon of the Virgin Mary (now in Sta. Maria Nova).

**b. The altar of victory.** On the wall opposite the entrance to the *curia* stood the statue of Victory brought by Augustus to Rome. To this the senators paid their respects upon entering the chamber. It was removed by Gratian in 382, but after his death an attempt was made by the pagan aristocracy led by Symmachus to have it replaced, a last effort of a dying paganism. The attempt failed because of the pressure which St. Ambrose of Milan brought on Valentinian II.

**c. Graffito of the Palatine.** In 1857 a series of graffiti were discovered in the *domus Gelotiana* or Paedagogium of the Palatine. One of these, dated to the time of the Severi, represents the Crucifixion seen from behind. Christ is clothed in the robe of a slave and has a donkey's head. Below and to the left is the figure of a young man in prayer with his right hand raised in the gesture of *jactare basia* toward the cross, and the inscription: Alexamenos worships his god. The pagan belief that Christians worshiped an ass is referred to by Tertullian (Apol. xvi), and Minucius Felix (ix.3; xxviii.7).

R. L. FOLEY

#### ROME, EARLY CHRISTIAN ATTITUDES TOWARD. 1. Palestinian Christianity.

Christians were affected by the various Jewish attitudes toward foreign powers. Zealots advocated open rebellion as the means of establishing God's kingdom in history (see ZEALOT; ZEALOT[S]). Others, hoping for Rome's destruction by the Messiah (Pss. Sol. 17:39), taught that the pious should wait in resignation and in obedience to the law until God raised up this king. Still others believed that deliverance from Rome could be found only beyond history in the great apocalyptic upheaval. But there were also Jews, especially in the Diaspora (see DISPERSION), who expressed loyalty to Rome, not merely out of political opportunism, but out of a theologically grounded realism which believed that even pagan empires were ordained of God. Many first-century Jews offered sacrifices and prayers for Rome's welfare in Jerusalem's temple (AB. 3:2; Jos. War II.x.4; cf. Jer. 29:7; Ecclus. 4:27 [Heb.]; Prov. 8:15; 24:21; Philo, *On the Embassy to Gaius* (236, 280, 305). Yet Jewish loyalty to the Empire always depended on Rome's religious toleration of Judaism.

The condemnation and CRUCIFIXION of Jesus by the Roman prefect could hardly endear imperial authority to early Christianity. The belief that God had vindicated Christ on Easter implied that the apocalyptic reversal had already begun and that Christ's earthly judges would encounter him as their heavenly judge. Some Christian groups even concluded that "the kingdoms of the world" and "their glory" belonged to the devil (Luke 4:5-6 [Q]). Therefore, they expected that these kingdoms would be destroyed by the one who resisted the temptation to establish an earthly kingdom.

In general, the early Christians did not join the struggle of the Zealots; they had come to understand that the KINGDOM of GOD could no more be established through violence than could the resurrection of Jesus have been accomplished by human co-operation and piety. But neither did they side with the quietists and withdraw into the desert to wait. On the contrary, they went to Jerusalem, shared in the general stability which Rome's presence ensured, and in accord with a word of Jesus, rendered "to Caesar the things which are Caesar's"—namely, taxes (Mark 12:17). This saying does not declare the Empire to be a divine institution but merely states that Christians are obliged to

honor certain of the emperor's claims. The second part of the saying goes beyond the original question of Mark 12:14, and therefore contains its climax: "(render) to God the things that are God's." The contrast between Caesar and God in this saying desacralizes the Empire and relativizes its claims without declaring it to be demonic. The church can be politically loyal because the kingdom of God is not of this world and because the Messiah is not a political revolutionist or social reformer. All important is understanding oneself as the property of God and surrendering to his claims (cf. Luke 13:1-3). Such obedience will result in the right attitude toward Caesar.

When the flames of Zealot fanaticism engulfed the nation in a messianic war against Rome (Jos. War VI.v.4) some segments of Palestinian Christianity were probably swept along by the religious hysteria and by the assertion of Christian prophets that they represented the presence of Jesus (Mark 13:6). The tradition behind Luke 22:35-36 distinguishes two periods, one calling for armed resistance in the present opposed to one which had enjoined powerlessness upon Jesus' followers in the past. This saying, which contradicts traditions like Matt. 5:39-42, would at the very least facilitate Christian participation in the war against Rome. The desecration and destruction of the Jerusalem temple by the Romans was viewed by some Christians as an apocalyptic manifestation of the power of Satan immediately before the End, present in the person and actions of the Roman general Titus (Mark 13:14; cf. Jos. War VI.vi.1.). But others interpreted this disaster as divine judgment for Israel's disobedience toward its prophets and the Messiah who had taught them to love their enemies (Matt. 23:37-38; 5:44). Palestinian Christians around A.D. 70 felt "hated by all" (Mark 13:13), by the Romans for whom they were Jews, and by Jews because faith in the Messiah Jesus prompted most of them to reject participation in the war against Rome (Euseb. Hist. III.v.2-3).

2. **Paul.** The most important text for understanding the attitude toward Rome of early Hellenistic Christianity is Rom. 13:1-7. Even though Paul himself had suffered at the hands of Roman officials (II Cor. 11:25) and knew that Caesar's representatives had brought Jesus to the cross, he wrote of the necessity of submission to NERO and the imperial authorities. Here he stood in the tradition of loyalty as advocated in HELLENISTIC JUDAISM, used concepts from the Roman bureaucracy, and based his exhortation upon the belief that the political authorities are part of God's order within this world. Hence he can say that there is no authority except from God, that the authorities are instituted by God (Rom. 13:1), and that they function as *diakonoi* and *leitourgoi* of God "for your good" (13:4, 6). The "good" here is not eschatological salvation but the benefit of earthly security and well-being. The exhortation to submit to imperial powers is placed within the context of the Christian's service in the world (12:1-2). Such service is qualified by the apocalyptic view that this old aeon, and with it the Empire, passes away (13:11-12), and it is performed in response to the command to love one's neighbor,

including the enemy (12:19-21). Hence governmental structures and demands cannot be absolutized. Paul himself, for instance, did not submit to the order given for his arrest by the ethnarch ARETAS, but rather fled the city (II Cor. 11:32-33). He did not delineate the limits of Christian obedience in Rom. 13 because he was not addressing a situation where the state made demands contrary to the Christian conscience.

While Paul himself viewed the imperial power primarily as God's order within the world which passes away, the pseudonymous letter of II Thesalonians (2:3-10) assigned an apocalyptic role to a particular Caesar and his empire (cf. Dan. 9:24-26). He functions as the force which for a while "restrains" the counter-Messiah. But Caesar and his empire will disappear with the parousia of "the lawless one" who "is already at work" and who is described in terms of a self-deifying ruler (II Thess. 2:3-4, 7, 9; cf. Dan. 11:31, 36-37).

3. **I Peter.** The exhortation to submit to imperial authorities is also contained in I Pet. 2:13, but with persecution in view (4:12, 14, 16). Contrary to the RSV, 2:13 should be translated "be subject to every human creature," be it emperor, governor, or pagan neighbor. Hence, "Honor all men. . . . Honor the emperor" (2:17). I Peter speaks of the emperor as fellow creature, not as representative of a divine ordinance. Civic duties and submission to Caesar are only one instance of the general duties which believers have toward their fellow human beings. Alongside the admonition of 2:13-17 is an apocalyptic interpretation of the persecution of Christians within the Empire as satanic action. The call is not for rebellion, but for spiritual resistance (5:8-9; cf. Eph. 6:10 ff.) in the form of faith and hope (1:3-9) and the willingness to share in Christ's suffering (4:13). The author of I Peter still hoped that the exemplary moral conduct of Christians might eliminate further persecutions, or at least counteract pagan defamations. Like IGNATIUS and I Clement (see CLEMENT, EPISTLES OF), he was aware of persecutions and martyrdoms inflicted by the state since Nero's time. But since these writers sought to avoid confrontation with the state, they did not denounce the injustices of the authorities.

4. **Other epistles.** An exhortation for prayer on behalf of emperors and magistrates is embedded within the general exhortation to pray "for all men" in I Tim. 2:1, yet other writers make it clear that Christians do not pray for the emperor's conversion but for his well-being and the peace of the Empire (I Clem. 60:4-61:2; Polyc. Phil. 12:3). Readiness for suffering and persecution did not preclude praying for earthly peace, because martyrdom was not to be sought out. Explicit warnings against recklessly provoking Roman authorities and seeking martyrdom (typical of certain Montanists) are found in the Martyrdom of Polycarp (1:2). The antecedents to these warnings lie in the synoptic command "to flee" in the face of persecution (Matt. 10:23; Mark 13:14).

5. **Luke-Acts.** Although the author of Luke-Acts was aware of Paul's martyrdom, he hoped for toleration by the Empire, whose representatives must testify to the political innocence of Jesus and

Paul. Difficulties which Christians experienced were usually attributed to Jews and to Roman officials who failed to perform their duty. Luke wished that the Roman government would become cognizant of its incompetence to judge Christians in religious matters (Acts 18:12-17). He not only stressed Paul's pride in his Roman citizenship (e.g., Acts 22:25), his loyalty toward Caesar (25:8), and the social importance of many believers (10:1; 13:1; 17:12, etc.), but he also told of Roman officers rescuing Paul on various occasions (Acts 21:32 ff., etc.). Luke's reference to the ASIARCHS as friends of Paul (19:31) may indicate he was unaware that, as representatives of the emperor cult, they posed a threat to the churches of Asia in his own time. Or else he may be appealing to the time when the emperor cult had not yet become a threat to the church. In the past, Luke would be suggesting, Asiarchs could even be friends and, in the person of the town clerk, defend Christians before a mob, demanding proper legal procedure for them (19:34-41). Luke hoped that Empire and church could co-exist because the latter was loyal and the former could be just. But he also knew that "through many tribulations we must enter the kingdom of God" (14:22), and that in case of conflict between church and state, the normative principle remained: "We must obey God rather than men" (5:29). Above all, he believed that "the times of the Gentiles" will come to an end with Christ's PAROUSIA (Luke 21:24 ff.). In the meantime, Rome cannot hinder the word of God, even as Jerusalem could not destroy Jesus. See also LUKE, GOSPEL OF §2; ACTS OF THE APOSTLES §9, and supplementary articles.

6. **The book of Revelation.** The apocalyptic prophet John saw Rome exclusively in terms of its imperial cult. Instead of loyalty toward Rome, praying for, submitting to, and honoring the emperor, the Apocalypse calls for endurance in faith, for suffering, and for fleeing into the wilderness (13:10; 14:12; 12:6, 14). But Rome, the beast and great harlot (Rev. 13; 17), will fall (18:2), and God will avenge the blood of his servants. The judgment, however, remains strictly the action of God, and no call is issued for believers to take vengeance against Rome. The apocalyptic tradition of hatred against Rome remained alive during the second century ([Christian] SYBLLINE ORACLES Book VIII), especially among Montanists and in modified form also in early catholic churches (cf. HERMAS Vision IV; Similtude I). It did not, however, constitute the dominant attitude of second-century Christianity or determine the further development of the church's relation to the Empire (cf. Just. Apol. I, xii; Melito in Euseb. Hist. IV.xxvi.5-11). See also REVELATION, BOOK OF §E4 and REVELATION, BOOK OF[S]; ETHICS IN THE NT[S] §§1eiii, 3div, 5a, 7.

\***RUTH, BOOK OF. 1. Form.** The most distinctive feature of the book of Ruth is its literary genre. It is a short story or *novella*, one of very few in the OT. While its content deals in general with historical matters, it is form rather than content which is of decisive influence, for the historical information is clearly subordinated to and employed for the sake of the desire to entertain. This is most evident in the story's plot, which is developed so as to maximize the element of suspense. Because the historical facts about David's ancestry must have been generally known, the suspense involved is not the kind achieved by the concealing of information, but rather the subtler sort in which what everyone already knows is delicately hinted at and patiently traced through all its complexities.

The analysis of the book's structure demonstrates the focus on subtle suspense. The decisive point about the ancestry of David is not mentioned until the fade-out ending (4:17) after the climax. The four scenes (1:6-18, the road to Bethlehem; 2:1-17, the field of Boaz; 3:6-15, the threshing floor of Boaz; and 4:1-12, the gate of Bethlehem) are held tightly together, not only by a series of brief transitions (1:1-5, introduction; 1:19-22; 2:18-23; 3:1-5; and 3:16-18, interludes; and 4:13-17 conclusion), but also by a series of carefully staged, potential wrong endings and signposts of dramatic irony. When Naomi so effectively insists that her daughters-in-law return to Moab (1:11-15), when the existence of the nearer kinsman is revealed (3:12-13), and when he indeed agrees to serve as redeemer (4:4), a lump rises in one's throat at the thought that the entire plot will collapse. And yet all along delicate hints point to the successful achievement of the desired outcome. When Naomi raises the question of levirate marriage (1:11; see LEVIRATE LAW), when Ruth "happens" to glean in the field of Boaz (2:3), when Boaz prays for a recompense for Ruth's fidelity (2:12), when the word "redeemer" (RSV "nearest kin") is mentioned by Naomi (2:20), and when the neighbors pray the Lord's blessing on the house of Boaz (4:11-12), the knowing reader smiles at the way the outcome is being subtly foreshadowed.

2. **Theology.** Although depicting the complexities of ordinary human existence, the story is by no means a secular one. Any writing which traces the way God's purposes are worked out in human affairs deals with God's providence, but instead of straightforward affirmation, the writer chooses the most indirect ways imaginable. He even speaks of "chance" in 2:3—the exact opposite of what he is actually affirming, namely, total divine causality. This perspective is evident in the statements of the narrator himself (1:6; 4:13) and in the words of his characters (1:13; 1:20-21; 2:20; 4:14). The stress on absolute causality becomes even more apparent when it is noted that every prayer in the book finds an answer in the course of the plot (1:8-9; 2:12; 2:19-20; 3:10; 4:11-12; 4:14). Here is an affirmation of causality which doesn't miss a chance!

The subtlety of these points is clear evidence that the author understands God's control of human events to be not only complete, but also, by its very nature, hidden. The theology which the book affirms is one of hidden but absolute causality.

**3. Purpose and date.** In what historical context is an affirmation of Yahweh's hidden causality understandable? The succession history of David (II Sam. 9-20) and the JOSEPH STORY (Gen. 37-50) are the writings most closely akin to the book of Ruth in both theology and style. The three works are united by the over-all theme of the God who is totally and continuously, though in an unperceived way, in control of all human events. Even more impressive is the manner in which the three authors employ the same short-story techniques of potential wrong endings, subtle signposts, and even answered prayers. In each case the same "profane" and "humanistic" presentation of "nothing but the facts" is utilized to express an amazingly profound theological conviction.

The succession history and the Joseph story are products of the Solomonic era. As holy war, charismatic leaders, and local shrines in which Yahweh's presence had been so close and easily discernible began to vanish in the new era of the empire, with its mercenary army, established dynasty, and royally controlled temple, the question was bound to arise: Where is Yahweh now? (See YAHWIST[S] §§2-3; PRESENCE OF GOD, CULTIC[S] §3.) The literature of the Solomonic enlightenment returned the penetrating answer which is the message of the book of Ruth: He is everywhere—but totally hidden in purely human coincidences and schemes, such as a young girl's accidental steps and an old woman's risky plan.

**4. Other factors bearing on the date.** Inasmuch as the era of the Solomonic enlightenment covered a span from the mid-tenth century to perhaps the mid-eighth century, it is desirable to fix upon hard evidence to pinpoint a date. Unfortunately, the net result of recent study of the book of Ruth has been to weaken the force of all the criteria previously used. Linguistic evidence now leads to the conclusion that late idioms do not occur, but many archaic forms do. Legal customs can no longer be

seen as pointing to any particular time. Although they are related to somewhat different situations, the same legal principles underlie both the redemption of Elimelech's property by Boaz and the levirate law of Deut. 25:5-10. It has also been almost universally accepted that the laws about gleaning, though preserved in late material (Deut. 24:19; Lev. 19:9-10; 23:22), reflect old practices of the tribal league which this later legislation sought to restore. The whole idea of a postexilic date reflecting a *Tendenz* opposing the hostility to foreign wives in Ezra-Nehemiah (see RUTH §3) is best given up as unfounded. In view of the antiquity of many psalms and proverbs, Ruth's place in the canon of the Writings (see CANON OF THE OT §4) cannot be seen as indicative of a late date. In the light of our knowledge of the Deuteronomistic historian's use of old source material, the bare reference to "the judges" in 1:1 scarcely suggests a dependence on the completed DEUTERONOMIC HISTORY. On the other hand, the genealogy in 4:18-22 does seem to reflect dependence on both P (see PRIESTLY WRITERS[S]) and Chronicles. However, this merely argues for what was already obvious, that the genealogy is a secondary appendix to the original story, whose ending came in 4:17b. Thus all the old "evidence" has shown itself to be quite indecisive. The only new argument is that of Gerleman, who contends that a story of a Moabite background for David must antedate the "transfigured" picture of David in the days of the Chronicler and even the era of the royal psalms. Accordingly, perhaps all that can be said is that such evidence as does exist points to a date in the monarchic period, and more likely the earlier part of it.

\***SABBATH.** The seventh day of the seven-day week, distinguished from the other six days throughout Israelite and Jewish history by special observance. The noun is probably derived from the verb שָׁבַת, "to cease, come to an end, finish," and the most fundamental form of observance has been the cessation of certain types of work (e.g., Exod. 34:21; 20:8-11; Amos 8:5; Jer. 17:19-27; Neh. 13:15-22; Jub. 50:9; I Macc. 2:31-41; M. Shab. 7.1-2).

The NT records many disputes between Jesus and the Pharisees over proper sabbath-keeping (see PHARISEES[S]). On sabbaths Jesus' disciples plucked ears of grain without being in mortal danger, and Jesus continually healed people who were not mortally ill. These acts violated Pharisaic norms. In the Synoptic and Johannine traditions Jesus often called attention to the exceptions to sabbath-keeping which the Pharisees themselves allowed. For example, the sabbath could be "broken" by priests making sabbath or Passover offerings (cf. Matt. 12:5), people in mortal danger (such as David—Mark 2:25-26), people aiding others in mortal danger (cf. Mark 3:4), people aiding animals (cf. Matt. 12:11; Luke 13:15; 14:5), and people circumcising a child on the eighth day (cf. John 7:22). The Pharisees also believed that God did not cease work on the sabbath. He continued to give life and to judge the dead (cf. John 5:17). Having noted such exceptions Jesus often went on to apply a traditional form of rabbinic logic: If you allow work in such lesser matters, how much more ought you to allow my work in these greater matters (Matt. 12:5-6, 11-12; Luke 13:15-16; John 7:22-23). Jesus apparently saw his healings as fulfillments of the redemptive purpose of the law. Despite the traditional form of the argument, Jesus' evaluation of the "lesser" and the "greater" seemed to be based on an altogether untraditional assertion of personal authority, which provoked the Pharisees' anger.

Early Gentile Christianity understood traditional sabbath observance to be part of the law which had been annulled in Christ. See LORD'S DAY §2.

1. **Origin.** There is no consensus on the origin of the sabbath or of the seven-day week. However,

the hypothesis found in SABBATH and WEEK is among the least likely to be correct and has few supporters. It is based on a supposed early Semitic pentecontad calendar, for which there is no generally accepted evidence.

A calendar has three natural units: the day (24 hours); the synodic (or lunar) month (the time between consecutive conjunctions of earth, sun, and moon—on the average, 29 days, 12 hours, 44 minutes, 2.78 seconds); and the tropical year (the time between two crossings of the sun at the vernal equinox—365 days, 5 hours, 48 minutes, 46 seconds). Many ancient societies felt the need for an additional unit of time intermediate between the day and the lunar month. In a general way Mesopotamian societies divided the lunar month into halves separated by the fifteenth day, the day of the full moon (*šabattu* or *šapattu*). Greece divided the month into three decades related to phases of the moon (increase, culmination, and decrease). In Rome an eight-day cycle (*nundinae*) ran independently of lunar phases and the calendar month. The eighth day was a market day on which agricultural work ceased. The trading colonies of Assyria (ca. 1950-1800 B.C.) had a five- (or six-?) day unit of time (*hamuštu*), which was used frequently in loan contracts.

In addition to such units of time, ancient Near Eastern texts commonly speak of a seven-day, non-calendrical period of time. For example, Gudea of Lagash celebrates the building of the temple E-Ninnu with a seven-day feast. In the Gilgamesh Epic, Gilgamesh laments Enkidu's death for seven days; Utnapishtim completes his ship on the seventh day; the flood wind blows for six days and subsides on the seventh; and, after resting atop Mount Nisir for six days, on the seventh Utnapishtim sends forth the dove, swallow, and raven. In the Baal and Anath cycle fire purges the house for six days and dies out on the seventh, its work having been concluded. In the Legend of King Keret six days of marching culminate in a seventh-day attack, and six days of tarrying culminate in a seventh-day victory. In the Tale of Aqhat, Danel offers oblation for seven days, and on the seventh Baal intercedes for him. Thus, "seven days" functioned as a literary and cultic symbol for a fullness in time, and the events of the seventh day were often explicitly climactic. Perhaps the key to understanding this symbol lies in the Sumerian-Akkadian lexical equation "7=*kiš-šatu*" (the whole, totality). See SEVEN, SEVENTH, SEVENTY.

What then can one say about the origins of the seven-day week and sabbath? Was the sabbath related to the Mesopotamian *šapattu* (day of the full moon), and was the seven-day week, like the Greek decade, linked to phases of the moon? Or was the seven-day week, culminating in cessation from agricultural work, a market-day cycle like the Roman *nundinae*? Or did Israel convert a literary and cultic symbol—the seven-day period as significantly complete time—into a formal calendrical unit? See also WEEK[S].

The appearance of the new moon marks the first day of a lunar month. The full moon usually occurs on the fourteenth or fifteenth day, and the

dark of the moon follows on the twenty-eighth or twenty-ninth. Thus, seven-day intervals such as the first, eighth, fifteenth, twenty-second, and twenty-ninth of the month or the first, seventh, fourteenth, twenty-first, and twenty-eighth of the month can be correlated with lunar phases. However, if the sabbath originated as a seven-day interval fixed by the appearance of the new moon, it could not have recurred every seventh day. A "lunar" sabbath would have been recycled each month, because a lunar month is not evenly divisible by seven days. Yet the oldest biblical traditions suggest that the sabbath did occur every seven days (Exod. 23:12; 34:21). Thus, the sabbath was ordinarily out of phase with the moon.

This difficulty with a lunar hypothesis has led many scholars to limit the search for a cultural parallel to days of cessation from work recurring at intervals unrelated to the moon. Some believe that the best parallel is the market day—which recurred at intervals of four, five, six, or eight days in many cultures, including Rome's. Although a market-day cycle apparently existed nowhere else in the ancient Near East, the custom could have developed independently in Israel, just as it has in many cultures. On market day farmers rest from their fields and engage in bartering, trading, games, and convocations. Of course those who trade must work by bearing goods, and therein lies a serious difficulty with the hypothesis. A number of biblical passages deplore or forbid trade on the sabbath (Amos 8:5; Jer. 17:19-27; Neh. 13:15-22). Nonetheless, it is possible that the sabbath originated as a market day, but that powerful groups subsequently theologized its observance in such a way as to discourage or forbid the very activity which had given rise to it.

Another hypothesis focuses on the power of the symbol "seven days" in Akkadian, Ugaritic, and Hebrew literature. Just as the symbol figured in the Mesopotamian flood epic, so it did in the Hebrew (Gen. 7:4; 8:10-12). Just as Gilgamesh lamented seven days, so did Joseph, Job's friends, and the people of Jabesh-gilead (Gen. 50:10; Job 2:12-13; I Sam. 31:13). Just as Keret's seven-day encampment culminated in victory, so did Joshua's and Ahab's (Josh. 6:1-21; I Kings 20:26-30). Just as seven-day feasts were celebrated in Mesopotamia, so they were in Israel (the Feasts of Unleavened Bread and Booths and wedding festivals—Exod. 23:15; Deut. 16:13-15; Judg. 14:10-18). "Seven days" was a powerful symbol of significantly complete time. It is possible that the symbol somehow conditioned Israel's choice of an intermediate unit of time and its designation of the seventh day as climactic and holy. (The verb שָׁבַת can mean "to come to an end, finish.") Yet this hypothesis, too, must share the weakness of conjecture.

**2. History.** Greater agreement exists on the historical development of the sabbath institution than on its origin. However, here too attempts at a systematic exposition are vexed by disagreements on the date and authenticity of crucial OT texts and on the extent to which later texts may preserve ancient traditions. The following reconstruction must be considered tentative.

Premonarchic Israel observed the seventh day by cessation of work rather than by cultic celebration (Exod. 34:21). The oldest recorded rationale for such observance is "that your ox and your ass may have rest, and the son of your bondmaid, and the alien, may be refreshed" (Exod. 23:12). Although the legal traditions from this period reflect the situation of an agricultural society, it is possible that the basic commandment—"Six days you shall work, but on the seventh day you shall cease" (author's trans.)—originated earlier in seminomadic society. Flocks do require care every day; however, contemporary Moslem nomads are able on Fridays to bring their work to an end and to observe a half-day of rest. Whether or not the sabbath had a pre-agricultural history, the oldest form of the fourth commandment—"Remember the sabbath day" (Exod. 20:8a)—demonstrates the centrality of seventh-day observance to the covenant life of premonarchic Israel.

During the monarchy the royal and priestly cult gradually attracted the seventh day to itself, and cultic celebration became an additional feature of sabbath observance (II Kings 11:4-12; 16:18; Lev. 19:30; Num. 28:9-10). Accordingly the rationale for sabbath observance came to be linked with the Priestly creation traditions (Exod. 20:11; 31:17; cf. Gen. 2:2-3). The prophets and others who venerated the Sinai covenant tradition did not particularly welcome the cultic development (Hos. 2:11 [H 13]; Isa. 1:13); and the Deuteronomic tradition of the Decalogue, far from grounding the fourth commandment in Creation, grounded it in the prologue of the Sinai covenant (Deut. 5:15; cf. 5:6 and Exod. 20:2). For Jeremiah the proper sabbath observance continued to be cessation of work. If this covenant stipulation were disobeyed, Judah would cease to exist (17:19-27). Jeremiah emphasized the sabbath tradition as a bulwark against self-destructive assimilation to the alien culture and cult.

Ezekiel, the priest-prophet of the Exile, shared both the prophetic view that sabbath-breaking would bring on Judah's destruction (22:8, 15) and the Priestly view that cultic activity was a primary feature of sabbath-keeping which would be restored after the Exile (45:17; 46:1-5). For Ezekiel the sabbath was not so much the focus of a covenantal stipulation as it was a distinctive mark given to Israel as a sign of its sanctity (20:12). Throughout the Exile the sabbath remained a symbol of Israel's distinctive culture.

In the postexilic period the followers of Second Isaiah re-emphasized the association between sabbath-keeping and covenant (Isa. 58:13-14; 56:4, 6). Their universalism found expression in the affirmation that even foreigners and eunuchs who kept sabbath could be members of Yahweh's community (56:1-8). However, some eighty-five years later Nehemiah found sabbath-keeping in Jerusalem shockingly lax. He forbade trading on the sabbath (Neh. 13:15-22), and the citizens pledged both to refrain from trade on the sabbath and to support the sabbath offerings (10:31-33 [H 32-34]). Thus were reaffirmed both aspects of priestly sabbath-keeping—cessation of work and cultic offerings.

In the five hundred years between Nehemiah and the destruction of the second temple in A.D. 70, sabbath observance became an ever more important bulwark of Jewish identity against alien, imperial cultures. A considerable elaboration and refinement of the previously uncomplicated sabbath legislation began to occur, and serious differences in interpretation became characteristic of the various parties and sects. For details on this process, see also SABBATH §2; SABBATICAL YEAR[S].

\***SABBATICAL YEAR.** The sabbatical year, like its counterpart the weekly sabbath, was a uniquely Israelite institution. Despite repeated claims that the sabbatical reckoning had its origin in the calendars of ancient Babylonia, no parallel to it has been found. This institution appears to be derived from the Israelite's concept of time as having been created by God, who gave six years (days) of it to man, but retained the seventh for himself. God is seen as the owner of the land during the seventh year, when time is, so to speak, suspended. The human owner is not allowed to plow or harvest his fields, for this would give him a claim to the produce that in fact belonged to God and must be shared with other humans. Since the slave and owner have the same rights to the land, the Hebrew slave was to have a chance of regaining his freedom. Morgenstern (see SABBATICAL YEAR) posits that the sabbatical year originated in the northern kingdom, whose population consisted of peasants. However, such utopian legislation is unlikely among a people living from agriculture. An analysis of the sources suggests that both the yearly and weekly sabbaths probably go back to the earliest stage of Israelite history, if not to Moses himself. The legislation makes sense among wandering tribes who were fearful of the impending change to a sedentary way of life. See also SABBATH[S]; WEEK[S].

Exod. 23:10-11 offers the first, and evidently the oldest, practice of the sabbatical year. The two sabbatical institutions appear to serve as a bridge between the social commandments to protect the poor and stranger (vss. 1-9) and the commandments pertaining to the cult, such as the ritual of the pilgrim festivals (vss. 14-17).

Related to the social aspects of sabbatical legislation is the provision (Exod. 21:1-11; Deut. 15:12-18) that the Hebrew bondsman or maid is to be freed in the seventh year. Ancient as well as modern exegesis differs as to whether freedom was to be granted after seven years of servitude or at the sabbatical year. The former meaning seems to be implied in Isa. 61:1-3 and in Jer. 34:8-22. The

Book of the Covenant contains the concept, if not the wording, that the sabbatical year was to be the time of freedom (Exod. 21:1-11).

The Holiness Code (at Lev. 25:1-7) stresses the cultic aspects of the sabbatical year. The Lord, not the poor, becomes the owner of the land, symbolized by its fallowness; what grows of itself should be shared by the landlord with the slaves, strangers, and animals. The radical social legislation ordained in Exod. 21:1-11; 23:10-11, is relegated in Lev. 25:8-55 to the JUBILEE, which is to be solemnly proclaimed at the end of the seventh sabbatical year.

Deut. 15:1-18 appears nearer to the views recorded in the Book of the Covenant than to those of the Holiness Code. The Deuteronomist (15:1-11) radically extends the social legislation by ordaining that in the seventh year the creditors release the debtors from obligations. The passage could be interpreted as meaning that this release was either a suspension of payment or an absolute cancellation. But ancient exegesis (Josephus, the rabbis) is unanimous that it meant the latter. If so, lending money could never be a business transaction in Israel, but only an offer of assistance to the needy. The sabbatical year laws appear to be the most radical social legislation prior to the twentieth century.

Contrary to the view expressed since Wellhausen, biblical passages suggest the actual observance of the sabbatical year during the pre-exilic period. The tithing cycles (Deut. 14:28; 26:12) divided the sabbatical cycle into two three-year periods plus the sabbatical year, which presupposed the existence of the year of release. The same is true of Deut. 31:10, which prescribes the reading of Scripture at the end of the sabbatical year. Lev. 26:34, 43 (cited in II Chr. 36:21) accounts for the Babylonian exile as retribution for backsliding in the observance of sabbatical legislation. The prophecies of a seventy-year exile (Isa. 23:15 referring to Tyre; Jer. 25:12; 29:10; Zech. 1:12; Dan. 9:2) take for granted the existence of sabbatical cycles. Nehemiah's pledge to let the land stay fallow and to remit all debts in the sabbatical year (Neh. 10:31) is a renewal rather than an innovation of sabbatical observance. But although the existence of sabbatical institutions during the period of the monarchy need not be doubted, the precise calendar and mode of observance remain open questions.

I Macc. 6:49, 53-54 records that Judas Maccabeus was forced to yield the fortress of Beth-zur to the Syrians on account of a famine which occurred during a sabbatical year. This reference furnishes not only the earliest dated sabbatical year but also offers the first direct testimony that sabbatical observance influenced military and political events. Josephus excuses John Hyrcanus' failure to avenge the murder of his father on account of the sabbatical season (Antiq. XIII.viii.1). It also facilitated Herod's capture of Jerusalem (Antiq. XIV.xvi.2). King Agrippa, presumably Agrippa I, recited from Deuteronomy during the Festival of Booths of a year beginning a new sabbatical cycle (M. Soṭ. 7.8). Finally, a contemporary Aramaic papyrus, dated in the second year of Nero, records that the note of indebtedness was written during a sabbatical

year (*DJD* II, 101). The Julian dates of these sabbatical years, which ran from Tishri to Elul 29, are as follows: 163/162 B.C. (capture of Beth-zur); 135/134 B.C. (murder of Simon); 37/36 B.C. (Herod's capture of Jerusalem); A.D. 41/42 (Agrippa I's recitation of Scripture); 55/56 (Nero's second year). These and other attested dates permit us to construct a calendar of sabbatical cycles from post-exilic times to the fifth Christian century, at least.

The Mishna (*Shebi'ith*, "seventh [year]") and the Tosefta give details of sabbatical legislation. In the Babylonian Talmud, the commentary on the Mishna is scattered throughout various tractates, i.e., there is no specific tractate *Shebi'ith*. These talmudic texts deal almost exclusively with agricultural aspects, and only marginally with the cancellation of indebtedness. The Mishna extends the prohibition of plowing or planting to the Pentecost preceding Tishri 1 of the sabbatical year (1.1) and postpones permission to work the fields to the end of the Festival of Booths. We may conclude from the Tosefta (1.1) that these extensions were abolished at the end of the first Christian century. Rabbinic tradition assumes that strict sabbatical legislation was limited to Judea and other regions under direct Jewish jurisdiction in postexilic times; only leniently applied to the regions which were Jewish under the former Davidic empire; while foreign lands were entirely exempt from sabbatical laws. This meant that produce from abroad could be imported during the sabbatical year, frequently averting famine. In view of these difficulties, the observance of the sabbatical laws exemplifies the characteristic piety of the Jewish people, who viewed the commandment not as a burden but a joy. Perhaps under Roman or Herodian pressure, Hillel is said to have instituted the *prozbul*, which suspended the cancellation of debts at the end of the sabbatical year (M. Sheb. 10.3). But the documents of Bar Kochba suggest either that no such abrogation was recognized by the rebel authorities or that it did not extend to rentals. The contracts of renting lands signed by the rebel leader contained a stipulation that was valid only to the end of presabbatical year (*DJD* II, 121-32). The occupying powers, under Alexander the Great and Julius Caesar, exempted Judea from tribute during the seventh year. The sabbatical year remained a living institution in Palestine until the period of the Crusades.

The economic sacrifices involved were so large that texts frequently associated rewards and retribution with the observance or violations of this commandment (Lev. 25:21; Deut. 15:10; Jer. 34:12-22). But it was only with the book of Daniel that national and cosmic significance was ascribed to the sabbatical year. Daniel studied the secret number mentioned in Jer. 25:11-12; 29:10, the seventy years of exile. Dan. 9:24-27 suggests that this period referred in fact to seventy sabbatical cycles or 490 years, the time from the fall of Jerusalem until the messianic age.

Vs. 25 divides the 70 sabbatical cycles into 7 plus 62, with a remainder of 1 [(7 × 7) + (62 × 7) + (1 × 7) = (70 × 7) = 490]. According to this interpretation the persecution (apparently of An-

tiochus IV) would occur in the seventieth sabbatical cycle.

Daniel's sabbatical messianism became the mysterious text, whose key was sought by ancient exegetes, which would yield the timing of the messianic age. Enoch 93 presents an apocalypse based on the seven sabbatical ages, to which 91:12-17 adds three more, making a total of ten sabbatical ages. Jub. 1:27-29 presumes that at creation God divided time into sabbatical and jubilee cycles. The births of Adam, Noah, Abraham, and other patriarchs were timed to coincide with the sabbatical division epochs (4Q181, fragments 1-2). Qumran writers also projected the future reigns of the Kings of Wickedness and Righteousness in light of a sabbatical calendar, envisioning the last year of the cycle to be the beginning of the messianic age (11QMelch 3.2). In the rabbinic tradition, too, the prayer for the redemption of Israel in the Eighteen Blessings is said to have been placed seventh to show the link with the redeeming features of the seventh year (T.B. Meg. 17b). Although the Jew could expect the coming of the Messiah at any time, certain periods were more propitious than others. The cyclic nature of redemption is illustrated in the rabbinic statement: "During the month of Nisan they were redeemed and in the month of Nisan they will be redeemed again" (T.B. R.H. 11a). Passover of the sabbatical year thus became the period when the redeemer's coming was expected most.

Politically, on account of the messianic stirrings, the sabbatical year was a restless time. John's ministry (A.D. 28-29), the Egyptian Messiah (A.D. 55-56), and the Bar Kochba uprising (A.D. 132-133) occurred in years which had been dedicated to the Lord as his sabbath. It is possible that the sabbatical date was only accidental, but in light of the apocalyptic writings which link the two, it is probable that John timed his ministry to synchronize with the season when the land belonged to the Lord, the Hebrew slaves were to be set free, and all indebtedness cancelled.

**1. Introduction. a. Origins.** Researchers in primitive and comparative religion distinguish four possible purposes behind the institution of sacrifices: (1) to provide food for the god (Eichrodt); (2) to assimilate the life force of the sacrificial animal (James); (3) to effect union with the deity (Smith); (4) a gift to induce the aid of the deity (Taylor). The first three purposes are not to be found in the Bible. True, the first one is still ensonced in some sacrificial idioms, e.g., "my table" (Ezek. 44:16); "the food of his God" (Lev. 21:22; cf. vs. 17); "my food, . . . my pleasant odor" (Num. 28:2; author's trans. throughout). The original aim of the sacred furniture of the tabernacle/temple (the table for the bread of presence, the candelabrum, and the incense altar) probably was to provide food, light, and pleasant aroma for the divine residence. Even the sacrificial procedure betrays this anthropomorphic background; e.g., God must receive his share of the sacrifice before man (cf. I Sam. 2:29). Nonetheless, these words and mores are only fossilized vestiges from a dim past, which show no signs of life in the Bible. The second purpose is found in animistic religions but not in ancient Israel. Even its derivative—the animal dies on the altar instead of the offerer (Médebielle, cols. 48-81)—can find no support in Scripture. Lev. 17:11, which usually has been so interpreted, is subject to another interpretation (see §3b below). The same is true for the third purpose: the verses allegedly proving that the *š'lāmim* creates a mystic union between God and the offerer should be interpreted in a totally different way (Gray; see §3 below).

Only the fourth purpose remains valid for Israel: a gift to God to induce his aid. Support derives from sacrificial terms connoting a gift (e.g., קָרְבָּן, מִנְחָה, נִדְבָה, מִשְׁאָה, and perhaps אִשָּׁה, 'iššē) and from unequivocal attestations of the text—e.g., "Offer to God a thanksgiving offering and pay your vows to the Most High; . . . I will deliver you, and you shall glorify me" (Ps. 50:14-15). This motivation, to secure divine aid, can be subdivided: (1) external aid to secure fertility or victory, i.e., for blessing; and (2) internal aid, to ward off or forgive sin and impurity, i.e., for expiation. Thus the 'ōlā is a gift to God to obtain his blessing or for expiation (see §2c below). The *š'lāmim* also reveals this two-function gift, since its blood ransoms the life of the slaughterer, and its fat gives thanks to the Deity for the meat (see §3 below).

**b. Principal laws.** Most of the details of the priestly sacrificial system are found in Lev. 1-16 (see LEVITICUS[S]). The sacrifices are enumerated

in chs. 1-7 in two overlapping series. The first series (chs. 1-5) is addressed to the offerer (cf. 1:1-2) and is ordered according to his perspective: voluntary offerings ('ōlā, minḥā š'lāmim) and mandatory offerings (ḥattā'th, 'āšām). The second series (chs. 6-7) is addressed to the priests (6:9 [H 2]), emphasizing their duties (e.g., 6:10-11 [H 3-4]) and privileges (6:26 [H 19]), and listing the sacrifices according to their sanctity: 'ōlā, minḥā, ḥattā'th, 'āšām, which are most-sacred, i.e., consumed on the altar or by the priest, followed by the *š'lāmim*, which is less sacred, i.e., consumed by the laity. Thereupon follow the sacrificial rites that set the pattern for the cultic service: the consecration of the priests (ch. 8) and of the tabernacle (ch. 9). Individuals bearing severe impurities are required to bring a purgation offering (ḥattā'th, see §2a below): the parturient woman (ch. 12), the leper (ch. 14) and the gonorrhoeic (ch. 15). The sacrificial corpus closes with the ritual for the Day of Atonement, ch. 16 (see ATONEMENT, DAY OF[S]). Miscellaneous sacrificial rites are: holy days (Lev. 23; Num. 28-29), the ordination of the Levites (Num. 8:5-22), the suspected adulteress (Num. 5:12 ff.; see ORDEAL, JUDICIAL[S]), and the NAZIRITE (Num. 6). For the schedule and materials of the offerings, see SACRIFICES AND OFFERINGS, OT §§A2bii, D.

**c. Graded holiness of the sanctuary.** According to the P Code, the layman participates alongside the priest in the preliminary stages of the sacrifice at "the entrance to the Tent of Meeting," i.e., in the forecourt between the entrance and the altar. The court is accessible to the laity because it is less sacred than are the tabernacle and its appurtenances, which are ranked as most-sacred (Exod. 30:26-29; 40:9-11), and hence are off limits to the laity. The lesser sanctity of the court is evidenced by the Day of Atonement ritual. The purificatory blood is applied within the tent and to the outer altar, but not one drop is sprinkled on the court or its curtains. In theory, therefore, the entire court is open to laymen, and the circumambulation of the altar by worshipers during the Feast of Booths (M. Suk. 4.5) indicates that in the second temple this was also the practice—perhaps in the first temple, too (cf. Ps. 26:6).

Though the cult furniture is most-sacred and barred to the laity, its holiness is not contagious to persons as the following evidence demonstrates: (1) The formula "everything which touches is sanctified" (Exod. 29:37; 30:26-29; Lev. 6:18 [RSV "whoever"], 27 [H 11, 20]) applies only to objects, not humans. (2) The most-sacred curtains of the tabernacle are handled by Levites, though they have the status of laymen (Num. 4:24-26). (3) Though the inadvertent trespasser (*m'l*) upon the sanctums must make momentary sacrificial amends (see §2b below), he does not have to undergo a desanctification ritual. (4) The formula "everything which touches is sanctified" (Exod. 30:29) lies between the prescription to anoint the cultic objects (vs. 26-28) and the priests (vs. 30), indicating that the priestly clothing is not contagious. True, the Kohathite Levites are expressly warned not to touch or even view the sanctums while they are dismantled (Num. 4:15,

17-20). However, that passage probably stems from an older Priestly source in which the sanctums possess lethally contagious power, just as they do in the nonpriestly narratives (e.g., I Sam. 6:19; II Sam. 6:6-8). Thus the Priestly Code shows inner development, an attempt to eliminate the contagious power of the sanctums.

The book of Ezekiel, on the other hand, is governed by older taboos. Its sanctums are contagious to persons as well as to objects. This postulate underlies the radical departure of Ezekiel's blueprints of the future temple from its Solomonic predecessor. The inner court, containing the altar, is entirely off limits to the laity. Even the chief of state (*nāsi'*) can enter only as far as the gateway and is barred from the court itself (Ezek. 46:1-3). The priests are forbidden to bring most-sacred meat into the outer court (46:20) or to enter it wearing their priestly clothing (44:19) lest "they sanctify the people." Thus Ezekiel requires two courts instead of the one of the tabernacle/temple: the outer to accommodate the laity, and the inner to conceal the contagious sanctums.

**d. Priests and laymen.** Throughout the ancient Near East, the temple was usually regarded as the private preserve of the priests. Only the Hittites permitted laymen access to the sacred precincts, and then only under priestly escort (*ANET* [2nd ed.], p. 208). In general, the laymen could glimpse the images of the gods only on festival days, when they were paraded in religious processions. It was forbidden to show ritual instructions to nonpriests. In this respect, Israel was radically different. The tabernacle/temple—at least its forecourt—was accessible to the laity (see §1c above). More significantly, the sacrificial laws were incorporated into the Pentateuch as "a heritage of the congregation of Jacob" (Deut. 33:4). As the editorial headings indicate (Lev. 1:2; 4:2; 7:38; 12:2; 15:2; 16:29-31; etc.), these laws were made available to the people at large. The only clear exceptions are the instructions concerning the inebriated priest (10:8) and leprosy (chs. 13-14), but even these fall under the fundamental definition of the priest's job: "to make a distinction between sacred and profane, between clean and unclean, and to teach the Israelites all the decrees" (Lev. 10:10-11 NEB).

**e. Role of the layman.** The offerer participated in the following rituals involving his animal: laying of the hands, *t'nuḥphā* (see WAVE OFFERING [S]), slaughter, skinning, dissecting, and washing. All these acts are performed in the forecourt. The rituals reserved for the priests are: *t'nuḥphā* (jointly with the offerer), blood manipulation, arrangement of the wood and sacrifice on the altar, and incineration. The division follows this rule: anything to do with the altar is the exclusive domain of the priest. This rule is clearly evident in the *'ōlā* procedure (Lev. 1): the anonymous subject is always the offerer, but when the action switches to the priest he is mentioned by name. In the case of the *'ōlā* bird, however, the offerer is omitted from the procedure (1:14-17), because there is no place for lay participation. Even the "slaughter" is performed by pinching off the head at the altar, an act of necessity done by the priest.

The purpose of the laying of hands (יד יטב ט)

has yet to be clarified. Perhaps there are two discrete acts, with two hands and with one. The former might be a transference rite, transferring the performer's authority (Num. 27:18 [LXX], 23) or impurity (Lev. 16:21; 24:14) to the animal/person, whereas the latter, used exclusively with sacrifices (e.g., Lev. 1:4; 3:2, 8, 13; 4:4, 24, 29, 33), could be an identification rite, identifying both the owner of the sacrifice and its type. Laying hands on a sacrifice seems to be unique to Israel, since elsewhere this rite is only of the former category, an exorcism of demonic evil and its transference to a surrogate (e.g., Mastiggas, the Hittite sorceress I, line 18; III, line 50, *ANET*, pp. 350-51). The rabbis claim that the laying of hands is always accompanied by a confession (Tosef. Men. X.12), but this is unlikely, since the confession generally preceded the actual bringing of the animal to the sanctuary (e.g., Lev. 5:5-6). Apparently every sacrificial animal required that hands be laid on it except the *'āšām* (omitted in Lev. 7:1-7) since it, alone among the sacrifices, is commutable to currency (see §2b below).

That ritual slaughter could be performed by anyone, not just the priest (as claimed by Philo, *On the Special Laws*, I, 199; cf. Lev. Rabbah 22.7), is shown by the alternation of subjects in Lev. 1 (above; cf. also I Sam. 1:25 [LXX and 4QSam]; Jos. Antiq. III.ix.1-4). The priests customarily slaughtered their personal sacrifices (Lev. 9:8, 12; 16:11) and the public sacrifices (Lev. 9:15, 18; II Chr. 29:24), occasionally assisted by the Levites (Ezra 6:20; II Chr. 30:17; 35:6, 11; cf. Ezek. 44:11). Most-sacred cattle were slaughtered "before the Lord" (e.g., Lev. 1:5), i.e., anywhere in the forecourt, whereas most-sacred sheep and goats were slaughtered "on the north side of the altar" (Lev. 1:11; cf. 4:4, 15, with 4:24, 29, 33). Certain texts indicate that slaughtering also took place on the altar itself (Gen. 22:9; Exod. 20:24), but here private altars are meant, not that of the tabernacle/temple.

The *t'nuḥphā* (RSV "wave offering") was performed by the priest but, on occasion, in partnership with the offerer (e.g., Exod. 29:24; Lev. 8:27). It is a dedicatory rite for less sacred offerings, which remain the property of the owner up to the time he brings them to the sanctuary, in which case the *t'nuḥphā* enacts the transfer of the offering from the owner to the Deity. It is also ordained for most-sacred offerings whose ingredients or procedure vary from the norm and is intended to focus the attention of the Deity to the offering's purpose. In the case of the *š'lamīm* it is incumbent upon the offerer to hand the breast and fat to the officiating priest, the former for *t'nuḥphā*, and the latter for incineration on the altar (Lev. 7:30-31).

**f. Role of the priest.** The priest's principal functions are the manipulation of the blood and the incineration of the sacrifice, both performed on the altar. The centrality of the blood in the sacrificial ritual is evidenced by the rule that the priestly portions of the sacrifice are assigned to one who manipulates the blood (Lev. 6:26 [H 19]; 7:7). The verbs *hiṭṭē* and *kippēr* underscore its importance (Lev. 6:26 [H 19]; 7:7; 16:16-18; 17:11;

Ezek. 43:26). The rabbis concur on its centrality (M. Zeb. 5.1.4), as emphasized by their rule: "There is no expiation without blood" (T.B. Yom. 5a; Sifra, Nedaba 4.9; cf. Jub. 6:2). The blood of the 'ōlā, 'āsām, and š'lamīm is dashed on all sides of the altar (Lev. 1:5; 3:2; 7:2), whereas the blood of the ḥattā'th is daubed on the horns of the outer altar if the sacrifice is brought by a tribal chief or commoner (4:25, 30, 34); if it is brought by the high priest or community, it is sprinkled seven times before the veil and daubed on the horns of the inner altar (4:6-7, 17-18). The blood of the 'ōlā bird is drained against the side of the outer altar (1:15), and that of the ḥattā'th bird is partially sprinkled on the side of the altar (5:9). The remainder of the blood is always drained at the base of the altar. For the special significance of the ḥattā'th blood, see §2a below.

The incineration on the altar is designated by הקטיר, to distinguish it from normal burning, שרף. The latter implies elimination, riddance, whereas the function of altar incineration is to provide "sweet savor to the Lord" (e.g., Lev. 1:9; 3:5). The 'ōlā is incinerated in its entirety (1:9), except for its skin, which becomes the emolument for the officiating priest (7:8). Of the remaining sacrifices, only their fat is incinerated (3:9-10; 4:26, 31, 35; 7:3-4). Sacrificial portions may not be eaten prior to the incineration of the altar portions, since God is given his share before man. For example, the breast is given to the officiant (Moses) only after the incineration of the fat and thigh (8:28-29). This rule is confirmed by the condemnation of Eli's sons: "Why then treat with scorn my sacrifices by fattening yourselves upon the choicest parts of every offering ahead of me?" (1 Sam. 2:29 LXX).

The eating of the sacrificial meat is governed by special rules. The most-sacred offerings, the ḥattā'th and 'āsām, must be eaten by the priests within the sacred precincts before the following morning. The š'lamīm, being less sacred, may be eaten over a two-day period by anyone who is neither impure nor in an impure place. The thank offering (תודה) and paschal offering (פסח), as š'lamīm types, must be eaten before morning (Exod. 12:10; Lev. 7:11-15; cf. §3 below). The rabbis claim that priests' eating of the sacrifices is an integral part of the expiation process (Sifra, Shemini 2.4), which they derive from this verse: "He has given it to you to remove the guilt of the community and to make expiation for them before the Lord" (Lev. 10:17). However, this interpretation is unlikely, since expiation is not the function of all sacrifices (see §3 below), and the verse is best rendered with A. Ehrlich: "He has given it to you [as a reward] for removing the guilt of the community by making expiation for them before the Lord." In this respect, the Levites are similar to the priests, for they too receive a reward, i.e., the tithe, for replacing the Israelites in the sanctuary, thereby bearing their guilt (Num. 18:22-23; Milgrom, *Studies*, pp. 22-25).

2. **Expiatory sacrifices.** The expiatory sacrifices are the ḥattā'th and the 'āsām, at times the 'ōlā and minḥā, and, in one case, the š'lamīm. Ex-

piation is expressed by the verb *kippēr* (RSV "make atonement"; Lev. 1:4; 4:31; 5:16; 14:20; 17:11), but its meaning is not the same for every sacrifice (see ATONEMENT IN THE OT[S]). The original meaning is probably preserved in the ḥattā'th. See LEVITICUS §1, for §§2a-d, 3 below.

a. **Ḥattā'th** (חטאת). The name of the sacrifice is derived from the *piel* (*hitte'*), which is synonymous with *tihar*, "purify" (e.g., Ezek. 43:23-26) and *kippēr*, "purge" (Ezek. 43:20, 26). The ḥattā'th, therefore, is to be rendered "purgation offering." Its purpose, however, is not to purge the offerer but the sanctuary. That the ḥattā'th blood functions only as a ritual detergent for purging the sanctuary is demonstrated by the following: (1) The ḥattā'th blood is never used on a person. The rites for the healed leper (Lev. 14) and the priests' consecration (Exod. 29; Lev. 8) do call for a ḥattā'th and a blood daubing, but the blood is taken from a different sacrifice. (2) The vexing problem of the prepositions that follow *kippēr* can now be resolved. In the Priestly writings, when the object is nonhuman, *kippēr* takes a direct object or the prepositions 'al or b'. The direct object is that which is purged, and the prepositional object is that "on" or "in" which purgation takes place. However, when the object is a person, a preposition must follow, for *kippēr* can never have a personal direct object. The preposition is usually 'al, rarely b'adh, both meaning "on behalf of, for." They signify agency, i.e., the person has the purgation done by an agent who, in P, is always the priest. Thus the priest purges the sanctuary by means of the ḥattā'th on behalf of the person (or group) who has polluted it either by physical impurity (e.g., Lev. 12-15) or inadvertent offense to God (e.g., Lev. 4). Unrepented impurities, however, cannot be purged by the offender's ḥattā'th (cf. Num. 15:27-31) but must await the annual purgation of the sanctuary and nation on the Day of Atonement.

i. **Theory.** The ḥattā'th presumes that impurity is a dynamic (but not demonic) force that attacks the sanctuary. This is Israel's transformation of the universal belief that impurity is a demonic force that attacks both men and gods, the latter in their sanctuaries. Whereas pagans must constantly purify their sanctuaries against unrelenting demonic invasions, Israel recognizes only one source of evil—man. He alone can pollute the sanctuary by his physical and moral impurity and thereby drive out God from his midst. This assumption of dynamic, real impurity is confirmed by the biblical texts. Molech worship is forbidden because it pollutes the sanctuary (Lev. 20:3). The gonorrheic and menstruant are commended to purify themselves "lest they die through their impurity by polluting my tabernacle which is among them" (Lev. 15:31). The corpse-contaminated person who "does not purify himself pollutes the Lord's tabernacle" (Num. 19:13). The rabbis claim that these impure persons are not liable unless they have entered the sanctuary or eaten sacred food (cf. Sifra, Hoba 12.10). However, their premise is nowhere expressed in the text.

ii. **Theology.** This view of the ḥattā'th also

discloses the priestly doctrine of THEODICY. Since the *hattā'th* blood removes the impurities of the sanctuary through absorption, it contaminates any object it is spilled upon or touches (Lev. 6:27 [H 20]). Hence the laws of impurities prevail in the cleansing of objects contacted by the *hattā'th*: earthenware is broken (cf. 6:28a [H 21a] with 11:33, 35; 15:12a), and metalware is scoured (cf. 6:28b [H 21b] with Num. 31:22-23). Again, because the *hattā'th* cleanses by absorbing impurity, it contaminates those who handle it. Thus whoever burns the *hattā'th* after it has purged the sanctuary (e.g., 16:16) must submit to ablutions (16:28). Similarly, he who prepares or uses the ashes of the red heifer (called *hattā'th*, Num. 19:9), e.g., by burning it (Num. 19:8), gathering its ashes (19:10), or applying it (19:21), is thereby rendered impure and requires purification. The rabbis regarded the effect of these ashes as a paradox: they purify the contaminated and contaminate the pure (Tanh. Hukkot 4:26; cf. M. Par. 4.4). However, this view of the *hattā'th* resolves the paradox. The ashes of the red heifer are no different than any other *hattā'th*: they absorb the impurities of the object upon which they are sprinkled, and, conversely, they transmit impurity to the one who prepares or administers them. The principle that purificatory materials become the carriers of the very impurity they remove is also found in the Hittite Code §44 (ANET, p. 191). See also ATONEMENT IN THE OT[S] §2a.

The polaric nature of the *hattā'th* as a most-sacred yet impurity-bearing sacrifice, i.e., a carrier of the impurity it absorbs, also explains the peculiarity that, on occasion, the *hattā'th* flesh is burned outside the camp (e.g., Lev. 4:11-12, 21) instead of being eaten by the officiating priest (6:26 [H 19]), as expressed in the law: "No *hattā'th* may be eaten from which any blood is brought into the tent of meeting for purgation within the sanctuary; it shall be consumed by fire" (6:30 [H 23]; cf. 10:17-18). As will be shown below, the impurities inside the sanctuary represent Israel's gravest sins. Since they are especially malefic, the *hattā'th* to which they are transferred is lethal and inedible. It must be destroyed by fire; and, so that it will not work havoc on its surroundings, it is burned outside the camp. Of course, the one who is charged with burning it must purify himself before he returns (16:28).

The purging of the sanctuary takes place in three stages: (1) When an individual commits an inadvertency or contracts a severe impurity, the *hattā'th* blood is daubed on the horns of the outer altar (e.g., Lev. 4:25; 9:9; 14:19). (2) When the entire community (even through its anointed priest: 4:3) commits an inadvertency, the blood is brought inside the shrine where it is sprinkled before the veil and daubed on the horns of the inner altar (Lev. 4:5-7, 16-18). (3) For presumptuous sins, of the individual or the group, the blood is brought inside the adytum where it is sprinkled before and upon the ark, followed by the ritual of the previous two stages in reverse order. Only one postulate explains these data: the greater the offender and the graver the offense, the more the resultant impurity penetrates into

the sanctuary. Inadvertences of the individual pollute the outer altar; inadvertences of the group pollute the shrine; but presumptuous sins penetrate into the adytum and only the rites of the Day of Atonement can purge them. That the Day of Atonement is concerned with presumptuous sins is indicated by the unique occurrence of *peša'* (RSV "transgressions"; Lev. 16:16, 21), a term borrowed by P from political terminology denoting rebellion (e.g., II Kings 3:5; Ezek. 20:38). The congruence of the impurity stages and the blood placements can be clarified by the following sketch:

iii. *Laws.* The *hattā'th* laws are based on the assumption that the inadvertent offender becomes aware of his act and feels remorse for it. Awareness and remorse are predicated by the verb  $\text{אָשָׁם}$  (*'āšam*). Consequently, the protasis of the *hattā'th* laws must be rendered: "When he feels guilty (RSV "is guilty") or is informed by his wrongdoing, he shall bring . . ." (Lev. 4:22-23, 27-28). Repentance is thus a precondition for the *hattā'th*. Moreover, only the inadvertent violation of prohibitive commandments is subject to this sacrifice (Lev. 4:2, 13, 22, 27), not the neglect or omission of performative commandments. This is so because impurity can result only from a violation, not an act of omission.

The *hattā'th* for inadvertences are graded according to the socioeconomic position of the offender: a bull for the high priest and community, a he-goat for the tribal chieftain, and a female of the flock for the commoner. The cases of the high priest and community form one law: the inadvertence of the high priest causing the people to err (Lev. 4:2-21; cf. T.B. Hor. 7a, 13a). This follows textually from (1) the absence of the conclusion "and he shall expiate . . . , be forgiven" in vs. 11 (cf. vs. 20b); (2) the similar procedure for both (emphasized in vs. 20a); (3) the communal *hattā'th*, elsewhere a he-goat (Lev. 9:3, 15; 16:5; Num. 15:24), only here is a bull, since the high priest is among the offenders, and only a bull can expiate for his inadvertences (Lev. 4:3; 9:2 [RSV "calf"]; 16:11). A variant in the procedure for communal inadvertences is found in Num. 15:22-26, i.e., an 'ōlā bull and a *hattā'th* he-goat. The discrepancy is probably due to two extant techniques of purging the sanctuary. Ezekiel fuses them in his altar consecration (43:18-27).

Not all the ritually impure bring the *hattā'th*, only those whose impurity lasts a minimum of one week. The gonorrhoeic brings a bird, and the leper brings a female sheep or, if poor, a bird. Whoever brings a bird (turtledove or pigeon) brings another of the same kind as an 'ōlā to provide an adequate gift to the altar (Ibn Ezra on Lev. 5:7). The *hattā'th* for impurity, no differently than

for inadvertences, purges sanctuary pollution (T.B. Ker. 26a). Contamination by a corpse does not require a *hattā'th*, since it is of lesser impurity than the leper or gonorrhoeic (M. Kel. 1.1-4). Instead, the person contaminated by the corpse is sprinkled with the purificatory waters containing the ashes of a red heifer on the third and seventh day (Num. 19). Ezekiel, however, holds that a priest contaminated by a corpse must undergo purification for a second week and sacrifice a *hattā'th*.

In a sacrificial series, the *hattā'th* is always the first to be offered (Lev. 5:8; cf. M. Naz. 6:7; M. Zeb. 10.12; Tosef. Par. I.1). True, the *'ōlā* is often found first but only in prescriptive lists; in descriptive lists, the priority goes to the *hattā'th*. The two kinds of lists can be illustrated by the following example: the Nazirite who fulfills his vow is commanded, "And he shall present" (Num. 6:14); in this list the *'ōlā* appears first. But in the execution of the ritual: "the priest shall offer" (vs. 16), the *hattā'th* is listed first. The priority of the *hattā'th* is clear from its function: the altar need be purged before it is fit for sacrificial gifts to the Lord.

iv. *Scaled hattā'th*. An appendix to the *hattā'th* laws (Lev. 5:1-13) gives four marginal cases where the *hattā'th* is scaled, not according to the social position of the offender, but according to his economic status. The commoner who cannot afford a female of the flock is given the option of offering two birds (turtledoves or pigeons) or a tenth of an ephah of flour. This pericope constitutes a new law and is not a continuation of the previous passage on the commoner's *hattā'th* (4:27 ff.) because: (1) The opening phrase **וְהָיָה** (5:1) usually begins a new law. (2) The text expressly states that the sacrifice is for "one of these" offenses of 5:1-4 (5:13; cf. vs. 5). (3) The prerequisite for the *hattā'th*, inadvertency in connection with a prohibitive commandment, is missing, as a closer examination of the four cases reveals. In the first case (5:1) a witness refuses to testify in spite of an imprecation to do so, and in the fourth case (5:4) a person violates an oath he has forgotten. The second and third cases (5:2-3) deal with a person who forgets he is impure, but his offense is not clear. The rabbis hold that his offense consists of making contact with sanctums during his impurity, but this is nowhere stated. The theory of a real, dynamic impurity affords a simpler explanation: amnesia caused the prolongation of his impurity. According to P, he who deliberately delays his required purification will be punished by God (e.g., Lev. 17:16; Num. 19:13, 20; cf. M. 'Er. 10.15; Jos. Antiq. III.xi.3). However, since Lev. 5:2-3 deals with one who forgot he was impure, the prolongation of his impurity was not deliberate and is expiable by a *hattā'th*.

b. *'Āšām* (אָשָׂם). The main *'āšām* cases are cited in Lev. 5:14 ff. and its sacrificial procedure in Lev. 7:1-7. The root אָשָׂם has four cultic meanings: as a noun, "reparation" (e.g., Lev. 5:6) and "reparation offering" (RSV "guilt offering"); and as a verb, "incur liability" to someone (e.g., 5:19); and, if it has no personal object, "to feel guilty"

(e.g., 5:5, 17; 6:4 [5:23]). The meaning "reparation offering" can be added from the unique accompanying verbs *hēšībh*, "restore" (RSV "make restitution"; Num. 5:7-8; 18:9; I Sam. 6:3-4, 17), and *šillēm*, "repay" (RSV "restore"; Lev. 6:5 [H 5:24]), implying indemnities, as well as from the fact that the *'āšām* is the only sacrifice that is commutable into currency (Lev. 5:15, 18; 6:6 [H 5:25]).

The first *'āšām* case (5:14-16) deals with inadvertent trespass (*ma'al*) upon sanctums. The trespasser must restore the value of the desecrated sanctums, pay a one-fifth fine, and bring a ram or its monetary equivalent as a reparation offering. The sanctums subject to this law are not clarified, but from Hittite documents (e.g., *ANET*, p. 208) and tannaitic sources (M. Me'il. 3.7-8; 4.1; 5.1; 6.6; Sifra, Hoba 20.3-5) it is clear that all sanctums are included, animate and inanimate alike. Further clarification of the *'āšām* is gained from a comparison with the redemption of sanctums described in Lev. 27. Both the desecration and redemption of sanctums require a one-fifth penalty, but in Lev. 27 it is a surcharge for legitimate desanctification (redemption), whereas in Lev. 5 it is a penalty for illegitimate desanctification (desecration), which also requires a reparation offering to God. Additional cases in which desecration of sanctums is expiated by the *'āšām* are: (1) the contaminated Nazirite (Num. 6:1-12), who must make reparation for his desecrated hair and vow; (2) Jeremiah's haggadic MIDRASH (2:3), calling for divine retribution upon the nations who have desecrated the sanctum of Israel; and (3) Ezra's legal midrash (10:19), whereby those who have intermarried with foreigners must make reparation for their desecration of Israel's holy seed.

The *'āšām* case of Lev. 5:17-19 deals with suspected trespass on sanctums. He who suffers in body or conscience without knowing the cause suspects that he is being punished by God for trespassing on his sanctums. In this respect, ancient Israel is no different from its environment, where unconscious sanctum trespass was identified as a prime cause for divine retribution (e.g., *ANET*, pp. 34-36, 391-92). Lev. 5:17-19, then, is a continuation of vs. 14-16—the first case dealing with known trespass, the second with suspected trespass (cf. M. Ker. 5.2-8; T.B. Ker. 22b; Sifra, Hoba 12.1). In the ancient Near East, leprosy was frequently attributed to sanctum trespass, and it may explain why an *'āšām* is included in the sacrificial ritual for the healed leper (Lev. 14:10-32).

The third case (Lev. 6:1-7 [H 5:20-26]) concerns the defrauding of man, compounded by a false oath to God. It presumes that the false oath follows all the previously enumerated crimes, i.e., that the fraudulent act was followed by a lying oath (cf. M. B.M. 1.4, 7; Sifra, Hoba 13.8; 23; Philo, *On the Special Laws*, I, 255; IV, 31-32). This case states that, if the offender repents of his deed (אָשָׂם) before he is apprehended, he need only restore the value of the property to the owner, add a one-fifth fine, and bring a reparation offering to God. A parallel law in Num. 5:6-8

adds two more stipulations: (1) if the owner dies without heirs, the total reparation belongs to the sanctuary; and (2) the defrauder must articulate his repentance in a confession. The latter stipulation points to a basic postulate of the Priestly Code: voluntary confession reduces deliberate sins to inadvertences, thereby rendering them eligible for sacrificial expiation (cf. Sifra, Aharei 2.4, 6).

c. **'Olā (עלה) in expiation.** That the 'olā (RSV "whole offering," Lev. 1) expiates (*kpr*, RSV "make atonement") is expressly stated in its prescription (Lev. 1:4), in certain rituals (Lev. 9:7; 14:20), and in nonpriestly sources (Job 1:5; 42:8; cf. *UT* 9.1). Since it is entirely consumed on the altar (the skin excepted, Lev. 7:8) it is called 'olā or *kātil*, i.e., "holocaust" (RSV "burnt offering"; Deut. 33:10; I Sam. 7:9; *UT* 1015.14, and *KAI* 69.3, 5, 7, 9; 74.5). The 'olā has thus far been evidenced in Greece, Anatolia, and Canaan, but not in Egypt or Mesopotamia.

The offenses expiated by the 'olā are not cited in the Bible, but it is reasonable to assume that since the *ḥaṭṭā'th* and 'āšām expiate for the limited sins of the pollution and desecration of sanctums, the 'olā expiates for the remaining, much broader scope of sins, such as the neglect of the performative commandments (cf. Tosef. Men. X.12; Lev. Rabbah 7:2). The 'olā serves other functions, e.g., petition (I Sam. 13:12) and thanksgiving (Lev. 22:17-19; Num. 15:1-16). The 'olā, then, is all-encompassing; it answers to all the emotional needs of the worshiper.

The development of the expiatory sacrifices is seen in three stages: (1) Originally, the 'olā was the sole expiatory sacrifice. The earliest sources do not mention the *ḥaṭṭā'th* and 'āšām, but they tell of the expiatory 'olā on behalf of the individual (Job 1:5; 42:8) and community (Judg. 20:26; II Sam. 24:25). The rabbis express a similar view: Originally "the open altars (*bamoth*) were permitted, and only the 'olā was offered" (Tosef. Zeb. XIII.1). (2) In contrast to open altars, sanctuary residences of the deity required purification and protection from pollution and desecration, giving rise to the *ḥaṭṭā'th* and 'āšām, respectively. (3) That all public sacrifices are limited to male animals—the requirement for the 'olā—probably means that originally the 'olā was the only public sacrifice, and when other sacrifices were added to the cultic calendar, they were made to conform to the 'olā.

d. **Minhā (מנחה).** Since the *minhā* (RSV "tribute offering") is a cereal offering in P, it is likely that it served as a cheap 'olā for those who could not afford an animal (T.B. Men. 104b; Lev. Rabbah 1:5; 8:4). In Mesopotamia too, the cereal offering was a concession to the poor: "they approach you, the widow, with an *upuntu* (inexpensive flour), and the rich with a sheep" (*KAR* 25, II, 29). The procedure for the *minhā* (Lev. 2) was probably inserted between the procedures for the 'olā (ch. 1) and the *š'lamim* (ch. 3; 3:1 is a subsection of 1:2; cf. 1:3), because the *minhā* became the regular accompaniment to the 'olā (e.g., Lev. 14:20; Num. 28-29), and especially because it was the 'olā of the indigent, serving the same wide-ranging functions, including ex-

piation (T.B. Men. 110a; Philo, *On the Special Laws*, I, 271; cf. *KAR*, 25, II, 19).

3. **Š'lamim (שלמים).** In P, the *š'lamim* offering is often coupled with or replaced by the noun *zēbhāh* (זֶבַח). In Ugaritic, Punic, and rabbinic Hebrew, the root *zbh* can refer to all blood sacrifices, but this is not the case in the Bible, except possibly II Chr. 7:12. It is reserved for those sacrifices whose flesh is eaten, e.g., feasts at altars (I Sam. 2:13), the yearly *zēbhāh* (I Sam. 1:21), the family *zēbhāh* (I Sam. 20:29). The root *zbh* itself means "slaughter" (for food). In P, *zēbhāh* often occurs in construct with other sacrifices, e.g., *zēbhāh pesah* (paschal offering), *zēbhāh tōdhā* (thank offering), and *zēbhāh š'lamim* (which because of its frequency is occasionally abbreviated to *zēbhāh* or *š'lamim*).

a. **Etymology.** *š'lamim* is plural formation. The singular is found once in the Bible (Amos 5:22) but frequently in Ugaritic (*UT* 1:4; 3:17, 52, etc.). The following etymologies have been suggested: (1) *šālmōm* (peace), since "it effects peace between the altar, the priests, and the offerer," i.e., those who share in the offering (Tosef. Zeb. XI.1). Support is adduced from the early sources which hold that this sacrifice was eaten "before the Lord" (e.g., Deut. 27:7; I Sam. 2:13-16) as a shared meal (e.g., Gen. 31:54). W. R. Smith further held that the *š'lamim* effected a mystic union between the deity and offerer, a meaning which, however, the Bible seems to reject (Judg. 6:18-21; 13:16; Ps. 50:12-13). Moreover, as Ehrlich pointed out, the sacrifice is eaten "before (*liphnē*) the Lord," not "with" him. (2) The Akkadian cognates *salimu*, "covenant," or (3) *šulmānu*, "gift" (Levine) have been proposed as well as a derivative from (4) *šālēm*, "whole, sound," i.e., the offerer gives thanks for his well-being (Tosef. Zeb. XI.1; Sifra, Nedaba 16.2; Philo, *On the Special Laws*, I, 212), and (5) *šillēm*, "repay," i.e., the sacrifice repays God for his blessings (Rashbam on Lev. 3:1; cf. Prov. 7:14). (6) The LXX provides three translations, two corresponding to (1) and (4) above, and σωτήριος, "save, preserve." However, all these etymologies remain conjectural. The rendering "offering of well-being" is tentatively adopted here.

Originally, the *š'lamim* was eaten close by the altar (I Sam. 2:13; 9:24; cf. Ezek. 46:24), reflexes of which are found in the Nazirite's "boiled shoulder" and "fire under the *š'lamim*" (Num. 6:18-19) and in the special room in the second temple where the Nazirites cooked their *š'lamim* (M. Middot 2.5).

The absence of birds from the eligible *š'lamim* animals bespeaks its antiquity. In the wilderness period all birds were considered game; their blood was not dashed on the altar but buried (cf. Lev. 17:13-14). This rule continued to prevail in Canaan, even after birds were entered into the sacrificial lists of the 'olā and *ḥaṭṭā'th*.

b. **Lev. 17:11.** That the (*zēbhāh*) *š'lamim* is not expiatory is evidenced by its avoidance of the verb *kippēr*. There are three ostensible exceptions: (1) Ezek. 45:15, 17, where, however, *kippēr* may refer to the 'olā and *ḥaṭṭā'th* in the list and not to the *š'lamim*. (2) I Sam. 3:14, where, however,

the term *zebhaḥ ūminhā* is a synecdoche referring to all the sacrifices (for *minhā* as a blood offering, cf. I Sam. 2:17, 29). (3) Lev. 17:11, which translates as follows: "For the life of flesh is the blood and I have assigned it to you upon the altar to ransom (*kḥpr*) your lives, for it is the blood as life that ransoms (*kḥpr*)" (see ATONEMENT IN THE OT[S] §2c). It can be demonstrated that the context of this verse is concerned exclusively with the *š'lamim*: (1) Vss. 10-14 form a bipartite law, the second referring to game for the table "that may be eaten" (vs. 13), the first to edible domesticated species (cf. 17:3). (2) The same chapter rules that domesticated, pure animals must be sacrificed at the authorized altar before they may be eaten (vss. 3-5). (3) The prohibition against eating blood (repeated five times in vss. 10-14) implies that the blood is ingested while eating meat. This prohibition occurs elsewhere only in connection with eating meat (Deut. 12:15-16, 23-25; 15:23). Thus Lev. 17:11 refers to the *š'lamim*, the only sacrifice eaten by the offerer. Yet this nonexpiatory sacrifice bears in this context a strictly expiatory (*kḥpr*) function. This paradox is resolved by 17:3-4: if one does not slaughter his animal at the altar, "bloodguilt shall be imputed to that man; he has shed blood." The animal slayer is a murderer unless he offers its blood on the altar to ransom his life (vs. 11).

This doctrine is related to the Priestly account of Creation, whereby man was meant to be a vegetarian (Gen. 1:29). Beginning with Noah, God concedes to man's carnivorous desires, provided he abstains from ingesting the blood (Gen. 9:3-4). Thus all men are enjoined to avoid the lifeblood of the animal by draining it and thereby returning it to its Creator (Gen. 9:3-4; Lev. 17:13-14). Israel, as part of its discipline to achieve holiness (cf. Lev. 19:2; 20:26), must observe an additional safeguard: the blood of sacrificial animals must be drained on the authorized altar, thereby ransoming the life of the one who slays the animal (Lev. 17:11).

**c. Other functions.** The motivations for bringing the *š'lamim* as a special sacrifice are adduced in Lev. 7:11-16, i.e., thanksgiving (*tôdhā*), fulfillment of a vow (*nedher*; RSV "votive"), or freewill offering (*n'dhābhā*; cf. Philo, *On the Special Laws*, I, 224; so also among the Greeks, cf. Plato, *Laws*, 909-10). The common denominator to all these motivations is rejoicing: "You shall sacrifice these *š'lamim* and eat them, rejoicing before the Lord your God" (Deut. 27:7). According to the rabbis, the *tôdhā* offering is not subsumed under the *š'lamim* (M. Zeb. 5:6-7; cf. I Macc. 4:54-56). Its discreteness has a scriptural basis (Lev. 19:5-7, cf. 22:29; Jer. 17:26; II Chr. 29:31-33; 33:16). Moreover, it is coupled with a bread offering and eaten on the same day (Lev. 7:11-16), whereas the *nedher* and *n'dhābhā* are unaccompanied by a bread offering and eaten over a two-day period (cf. Lev. 19:5-6). Also the *nedher* or *n'dhābhā* may be brought as an 'ôlā as well as a *š'lamim* (Num. 15:3, 8; Ezek. 46:2, 12), but apparently not the *tôdhā* (cf. II Chr. 29:31).

Other less sacred altar offerings are the *pesah* (see PASSOVER), the *b'khôr* (see FIRST-BORN[S]),

and the animal tithe (see TITHE). Non-altar sacrifices include the *ma'aser* (see TITHE), *bikkûrim* and *rē'sith* (see FIRST FRUITS, OT[S]), *hērem* (see DEVOTED) and *heqdš* (see SANCTIFICATION[S]). For the sacrificial schedule and procedure, and for the conditions of purity of the officiant and offerer, see SACRIFICES AND OFFERINGS, OT §§A2b, C, E.

**4. The people's evaluation.** The sacrifices filled a wide range of spiritual and emotional needs. True, the prophets jeered at their ineffectiveness in refining ethical behavior. But this cannot negate the clear evidence that the masses participated in the sacrificial services from inner initiative, reverence, and love; "I will go to the altar of God, to God my exceeding joy" (Ps. 43:4). "Blessed is he whom thou dost choose and bring near, to dwell in thy courts! We shall be satisfied with the goodness of thy house, thy holy temple!" (Ps. 65:4). "My soul longs, yea, faints for the courts of the Lord. . . . For a day in thy courts is better than a thousand elsewhere" (Ps. 84:2, 10).

The attachment of the masses to the sacrifices did not diminish during the days of the second temple, as indicated by the praise which Ben Sirach lavishes upon his high priest Simeon (Ecclus. 50:1-21; see AARON, AARONIDES[S]). The many prayers recorded in the rabbinic literature for the reconstruction of the temple (Mishna Aboth and Aboth de Rabbi Nathan, end of ch. 5; Mishna Pesahim, end of Jerusalem version; Gen. Rabbah 13:2, etc.), plus the plethora of laws and entire tractsates on the sacrifices, testify that even when the conviction began to take hold that the synagogue had transcended the temple, there were many who maintained that without the sacrificial service Israel's spiritual life would remain impaired.

\***SAMARIA.** In recent years the site of Samaria has been the subject of two excavations, one by the Department of Antiquities of Jordan during 1965, the other a season in 1968 by the British School of Archaeology in Jerusalem.

The 1965 excavations were primarily concerned with the improvement of tourist facilities at the site—the reopening of the theater and a new pathway from the Streets of the Columns to the main monuments on the Acropolis. This necessitated the re-excavation of many of the trenches of earlier expeditions, but at the same time the opportunity was taken to excavate new control trenches which have produced important stratigraphic evidence.

The Hellenistic rampart was based on the rubble foundations of an earlier Iron Age II wall, since the foundation trench immediately beneath the Hellenistic rampart produced only sherds of Iron II. Fragments of earlier Iron II walls and parts of a new Hellenistic tower were also uncovered.

The destruction of the latter can be linked either with the retreat of Ptolemy I (Soter) in 312 B.C., or with Demetrius Polioretus in 296 B.C. Within the theater six separate staircases ranging through a flight of fourteen steps were uncovered.

The excavations in the area of the colonnade confirmed the results of the earlier expeditions, with the initial foundation of the road and shop system dating to the second century A.D. The area appears to have remained commercially important during the early Byzantine period. Its destruction may be associated with either the revolt of the Samaritans under Justinian in A.D. 529 or the earthquake of A.D. 551. After a brief period of abandonment, the area appears to have been walled and terraced for cultivation.

The 1968 excavations were designed to establish the sequence and geographical limits of the domestic quarters of the Iron Age, Hellenistic, and Roman settlements (which, at present, remain a complete blank in our knowledge of this important town).

Five trenches were opened N and NW; four of them immediately below the summit and citadel area. All were within the supposed limits of the town walls of the successive occupations. The four trenches above the 448-yard line all reached bedrock at an average depth of 25 to 26 feet.

A major feature of these trenches was an overburden of about 10 to 12 feet completely lacking in constructions of any kind and appearing to represent a deliberate fill or throw-out—part of a single operation possibly associated with work on the nearby citadel area. The pottery from the overburden in all four trenches was consistent and suggests that the operation took place late in the first or early in the second century A.D. The overburden sealed the shaft of a rock-cut water system, which had remained in use until well into the first century A.D. The system neck had been built up to keep pace with accumulating soil and silt washes which lay directly under the overburden. No buildings appear to have been associated with the final use of the system, but it had obviously remained a source of water for some time after the domestic desertion of the immediately surrounding area. Beneath the wash lines in all four trenches, there was evidence of widespread and thorough robbing of earlier walls; the pottery and coins of the robber trenches suggest Herod I. These trenches were cut through a series of poor house floors and destruction levels of the late Hellenistic period. Unfortunately, the finds were too scanty to give a precise date. The pottery suggests a date late in the first or early in the second century B.C., while the latest coins (Akko Ptolemais) of the second century B.C. tempt one to suggest that this final occupation was that brought to an end by John Hyrcanus and his sons in 107 B.C. An alternative suggestion and, perhaps more likely, is that the final desertion of the area was due to Pompey (63 B.C.), and that the evidence for the destruction of Samaria by Hyrcanus lies in the deep wash and destruction lines beneath these late house floors.

By far the greater part of the remaining deposit in the upper trenches belongs to the Hellenistic period. A surprising feature of the 1968 excava-

tions was the complete lack of Iron Age deposits. In all four trenches which reached bedrock, the only remains earlier than Hellenistic were in two small pits cut into bedrock and containing pottery of the Persian period. This suggests that the western city wall of the Iron Age settlement lay between this area and the citadel with a concentration of settlement to the E and S of the hill nearer to the water supply.

**SAMARIA PAPYRI.** The Samaria Papyri are a collection of extremely fragmentary Aramaic documents that were acquired in 1962-64. Discovered primarily by the Ta'amireh Bedouin, they shed important light on the fourth century B.C., one of the least known eras in Palestinian history.

Because of references in the papyri to Artaxerxes II (404-359) and Darius III (335-330), it has been possible to place these documents in the period between 375 and 335 B.C., a dating corroborated by the coins discovered by archaeologists, all of them dating shortly before Alexander's invasion in 332 B.C. According to the Bedouin, the MSS were discovered in a cave of the Wadi Daliyeh, 490 yards above the river Jordan, and about 9 miles N of ancient Jericho. The discovery of a few additional fragments during the course of two archaeological expeditions in 1963 and 1964 confirmed that this cave was indeed the site where the documents had rested. The cache seems to consist of some twenty documents, all of a legal or administrative nature. In the cave were discovered approximately two hundred skeletons of people who were quite affluent, judging from the papyri themselves and the exquisite seal rings, jewelry, and other artifacts that were recovered. Presumably all the inhabitants of the cave were killed at the same time. The excavator conjectured that a fire had been set outside, and it suffocated the men, women, and children.

This evidence of a massacre of upper-class people and frequent references in the papyri to Samaria and its governors have led scholars to co-ordinate these finds with various references in ancient historians, particularly Josephus. According to this reconstruction, the city of Samaria was at first favorable toward Alexander, but later burned Andromachus, his prefect over Syria, while Alexander himself was occupied with his Egyptian campaign. Alexander returned to Samaria and destroyed it, but the leaders, hearing of his approach, fled to the cave where the Macedonian soldiers eventually discovered them and annihilated them. Samaria was then resettled by Alexander with Macedonians who were responsible for the erection of its Hellenistic towers. The remnants of the Samaritan community moved on to Shechem and established it as their new capital, thus accounting for the sudden and rapid reconstruction of that city noted in the recent excavations.

Because of the paucity of information from the time preceding Alexander's invasion, the Samaria

Papyri assume an importance beyond first expectations. They are prized by palaeographers for helping to establish a set of absolute dates for fourth-century Aramaic cursive script and this, in turn, has confirmed the third-century dating of the earliest Qumran documents. See ALPHABET §1c; ALPHABET[S] §2.

The papyri have also been useful in reconstructing the lists of Samaritan governors (see SANBALLAT[S]) and in restoring names to our records of Jerusalem high priests, lost up to now by ancient haplography. They have tended to confirm some of the controversial data presented by Josephus, although not without exposing certain confusions he perpetrated concerning the period between the fifth and fourth centuries. His account of a marriage between Manasseh, brother of the Jerusalem high priest Jaddua III, and Nicaso, daughter of Sanballat III, can now be considered plausible, even probable. That such a relationship could exist between Judah and Samaria in the fourth century has tended to confirm the hypothesis of a late date, at the end of the second or the beginning of the first century B.C., for the definitive split between the two communities. See also SAMARITANS §B; SAMARITANS[S].

**1. Character of SP.** SP may be described as a full text. That is, its distinctive readings are usually fuller or longer than the corresponding passages of MT. This characteristic is reflected in such features as the addition of particles and prepositions for clarification, smoother or otherwise distinctive grammatical constructions, and the addition of words for explication or harmonization. The most striking feature is the occurrence of expansions (sometimes several paragraphs in length) based on parallel passages. The orthography is characterized by full use of the internal *matres* (consonantal vowel indicators), in contrast to the more restrictive orthography of the Masoretic tradition (see HEBREW LANGUAGE §4). Readings of a distinctively sectarian nature are of a type consistent with the general character of the text.

**a. Expansions and pleonasm.** There are approximately thirty-four instances in which SP includes

significant expansions designed to accommodate parallel or synoptic readings from other parts of the Pentateuchal narrative. These are sometimes of considerable length, but may include only a line or two of additional material. They serve the purpose of reconstructing conversations or recording events which are alluded to elsewhere in the narrative. The following are examples of this characteristic. (1) Following Gen. 30:36, an addition paralleling Gen. 31:11-13. The latter passage refers to a previous event in which the angel of God was said to have visited Jacob; the addition—lacking in MT—records this event. (2) Additions to the story of the contest with Pharaoh, following or within Exod. 7:18; 8:4 [H 7:29]; 8:5 [H 1], 23 [H 19]; 9:5, 19; 10:2; 11:3. The narrative is filled out by the repetition of speeches given by God to Moses for Pharaoh—indicating that they were delivered as commanded (so the additions to 7:18; 8:4 [H 7:29], 23 [H 19]; 9:5, 19), or that the delivery corresponded to the speech as given by God (so the additions to 10:2; 11:3). In one instance, a message given by God to Moses for Aaron is repeated verbatim in the text (addition to 8:5 [H 1]). (3) Additions to the Decalogue in Exodus, following 20:17, within 20:19; and following 20:21. The first of these additions is discussed below under sectarian readings (see §1*b* below). The addition within Exod. 20:19 is based on Deut. 5:24-27, and includes the response of the people to Moses which was alleged to have been offered at Sinai (see Deut. 5:24). Similarly, the addition to Exod. 20:21 is based on Deut. 5:28-31, interrupted by an addition paralleling Deut. 18:18-22, and includes the response which God allegedly made on that occasion (see Deut. 5:28; 18:17). (4) Additions to Numbers paralleling Deut. 1-3. The address of Moses in Deut. 1-3 contains references to previous events and to speeches supposedly given on previous occasions. These are not contained in the earlier narrative of MT, but are so noted in expansions in the Samaritan text (Deut. 1:6-8 preceding Num. 10:11; Deut. 1:20-23 preceding Num. 13:1; Deut. 1:27-33 following Num. 13:33; Deut. 1:42 preceding Num. 14:41; Deut. 2:2-6 following Num. 20:13*b*; Deut. 2:9 following Num. 21:11; Deut. 2:17-19 following Num. 21:12; Deut. 2:24-29, 31 following Num. 21:20 and included in 21:21-23; Deut. 3:21-22 following Num. 27:23; Deut. 3:24-28 following Num. 20:13). Similarly, the narrative in Deuteronomy has been filled out by the addition of parallel materials from Numbers (so Deut. 2:8, based on Num. 20:17-18; Deut. 10:6-7, based on Num. 33:31-38*a*). Parallel or synoptic readings in the Samaritan text consistently result in longer texts. An exception is Deut. 34:2-3, where the text has been reduced by the use of materials from Gen. 15:18, in place of the longer text preserved in the Masoretic tradition (the same reading is found in Gen. 10:19 of SP).

In addition to expansions based on parallel materials, the Samaritan text exhibits a pleonastic tendency, with additions for clarification and explication. These include such additions as subjects, appositives, prepositions, and particles, and sometimes the repetition of words and phrases which render the texts somewhat redundant.

*b. Sectarian readings.* Several distinctive readings in SP support the theological position of Samaritanism on the priority of Mount Gerizim/Shechem as the chosen place of Israelite worship. These are frequently referred to by scholars as egregious tamperings with the biblical text, but they are less blatant than might first appear, given the character of the textual tradition (expansionist and harmonizing) in which they are preserved. Included in the expansions to the Decalogue, as noted above, is an addition following Exod. 20:17 (also following Deut. 5:18) based on Deut. 27:2-3*a*, 4-7, and 11:30 of the Samaritan text. These passages underscore the command of God to build an altar on Mount Gerizim (SP reads "Gerizim" rather than "Ebal" in Deut. 27:4) by making this part of the Ten Commandments. The Samaritan text of Deut. 11:30 reads "beside the oak of More' in front of Shechem" (MT—"beside the terebinths of Moreh"). This latter reading may be understood as an explicating pleonasm. The reading "Gerizim" rather than "Ebal" in Deut. 27:4 is probably a sectarian alteration, although it may be argued that the Samaritans chose an alternate, ancient nonsectarian (or presectarian) reading. The sectarian apologetic was, however, clearly served by the inclusion of Deut. 27:2-3*a*, 4-7; 11:30 in the Decalogue, a pericope which was otherwise expanded by the use of materials from Deut. 5:24-27, 28-31, and 18:18-22. Some scholars have regarded the inclusion of Deut. 18:18-22 in the Decalogue as a sectarian reading based on the eschatology of the sect (allegedly, the belief in a Mosaic eschatological prophet). The addition may be understood, however, as an expansionist harmonization based on Deut. 18:16.

In addition to the readings in the expanded Decalogue, sectarian claims are supported in twenty-one instances in Deuteronomy in which worship is commanded at the particular site of God's choice. The MT reads, "the place which the Lord your God will choose (*yibhhar*)" (e.g., 12:5). The Samaritan text omits the *yod* prefix of the verb, rendering it as a perfect (*bāhar*), "the place which the Lord thy God has chosen." The place already chosen was, according to the Samaritans, Shechem/Gerizim—which they identify as Bethel of the patriarchal narrative, as well as Salem (Gen. 14) and Moriah (Gen. 22). Although this reading is more subtle than the expanded Decalogue passages, it may actually have involved a more overt tampering with the biblical text.

There are also readings in SP which either reflect emphases in Samaritan theology, or which have been used by the Samaritans in the development of their doctrines. These include "unto *your* dust you shall return," in Gen. 3:19 (a textual basis for resurrection); "the *day* of vengeance and recompense," in Deut. 32:35, also attested in LXX (a textual basis for the day of judgment); "there shall not rise again in Israel a prophet like Moses," in Deut. 34:10 (a textual basis on the unique superiority of Moses as God's prophet); and distinctive readings in several legal texts through which Samaritan halachic observances have come to differ from Jewish practice.

*c. Other characteristics.* In SP the preposition 'al frequently appears where MT has 'el, and there

are also other interchanges of laryngals. The third-person singular pronouns are given the appropriate gender in SP, in agreement with the *qere* of MT (but not the consonantal text). The syndetic use of *wāw* is preferred in SP, in contrast to the more archaic asyndetic constructions in the Pentateuch of MT (the LXX frequently agrees with SP in this characteristic). The *hiph'il* stem of the verb is frequently preferred to the *qal*; there is a tendency to disregard collective forms in favor of plurals, or to combine collective forms with plural verbs; there is a diminished frequency of the absolute infinitive for the imperative and adverbial qualifications; the apocopated forms of *lamed he* verbs are sometimes rejected in favor of longer forms; frequent use is made of the *imperfectum consecitivum*, or pseudo-cohortative, with the addition of the *he* to the imperative as well as the imperfect; and the syntax of SP usually represents agreement in gender and number between verbs and nouns, or verbs and other verbs, in instances in which MT displays discrepancies.

**d. Orthography and script.** Samaritan Pentateuchal MSS in general show a preference for the *plene* or full orthography. The internal *matres lectionis* *yōdh* and *wāw* are used extensively, and the *'āleph* is also sometimes employed as an internal *mater*. By comparison, the orthography of the Pentateuch of the MT is more restrictive and less consistent. It was assumed for some time that this orthographic tradition was a product of the Middle Ages (Gesenius). On the other hand, it has been suggested that the Samaritan orthography was related to an ancient textual tradition (Kahle). The discovery of biblical texts from Qumran with full orthography (including Pentateuchal texts agreeing in other respects with SP) indicates that the Samaritan orthography is indeed ancient: it reflects the full orthography of Hebrew writing during the Hasmonean period.

The script which has been employed by the Samaritans in Pentateuchal MSS exhibits a general uniformity, with only minor modifications and developments from medieval to modern times. The evolution of this script may be traced to an earlier time, however, by the use of Samaritan inscriptions of the Byzantine and Roman periods. A comparison of the archetypal forms of the Samaritan letters with the late history of Paleo-Hebrew writing indicates that the Samaritan script began to diverge from Paleo-Hebrew as it was used among Jews at a comparatively late date (late Hasmonean and early Roman times). This necessitates a re-evaluation of the popular opinion that the Samaritan script developed from Paleo-Hebrew writing at the time of Ezra. The Samaritans, who claimed to be the ethnic and spiritual descendants of old Israel continued to use and develop the Paleo-Hebrew script. See ALPHABET; ALPHABET[S]; INSCRIPTIONS, SEMITIC[S] §2a.

**e. Comparison with MT and LXX.** Approximately six thousand instances of SP variations from MT have been noted based on the edition of SP published in the London Polyglot. Most of the variations are, however, orthographic, and figures vary according to the manuscript on which the collation is based. There are about nineteen hundred in-

stances in which SP agrees with LXX against MT. Some of these are significant textual variants, but many are slight, such as the syndetic use of the *wāw* in about two hundred cases in SP and LXX against MT asyndetic construction. SP differs from both MT and LXX in the ages of the antediluvians given in Gen. 5:19-20 (Jared); 5:25-27 (Methuselah); 5:28, 30-31 (Lamech); and in the ages of the line of Shem given in Gen. 11:10-26. On the whole, however, SP is in greater agreement with MT than with LXX. It has been noted that textually SP bears a relationship to the Pentateuch of the MT which is similar to the relationship of Chronicles to Samuel-Kings. See SEPTUAGINT[S] §1c; TEXTUAL CRITICISM, OT[S].

**2. Assessments of importance. a. Early history.** SP did not come to the attention of Western scholars until 1616, when the learned traveler Pietro della Valle secured a copy in Damascus. The initial enthusiasm for this text is indicated in the fact that it was published in the Paris (1645) and London (1657) Polyglots. Unfortunately, the discussion of its merits was less than critical, and many who spoke for or against it did so out of doctrinal considerations. Protestant scholars at that time were intent on defending the value and authority of the MT. Morinus, a Roman Catholic, noted that SP sometimes agreed with the LXX and the Vulg. A complete reading of SP would have revealed a stronger agreement with MT, but once the discussion centered on textual agreements of SP with LXX, it had a tendency to remain there. Consequently, the Protestant scholars S. de Muis and J. Hottinger sought to demonstrate that SP was a faulty revision of MT, and even claimed that it contained mistakes of copyists derived from misreadings of the square Jewish script. On the whole little was accomplished in SP research during the seventeenth and eighteenth centuries, with attention focused on variant readings rather than on the character of the text as a whole.

**b. From Gesenius to Kahle.** In 1815 Gesenius published what was to become a classic study on SP, *De pentateuchi samaritani origine*. For the first time, the Samaritan text was examined in its totality. Out of this, Gesenius classified Samaritan readings into eight categories: (1) emendations of a grammatical nature, (2) glosses in the text, (3) conjectural emendations, (4) corrections based upon parallel passages, (5) expansions based upon parallel passages, (6) adjustments of chronologies, (7) Samaritan forms of words (including the unusual behavior of laryngals, and (8) sectarian readings based upon the theology and worship of the Samaritans. Although Gesenius maintained that the greater number of Samaritan variants were due to corruptions, corrections, and interpolations of a late date, his research led him to conclude that SP might have some limited text-critical value, inasmuch as it appeared to be derived from Jewish codices which differed from those upon which the texts of both LXX and MT were based. He also noted that the origin of the Samaritan text went back to the pre-Christian era and that there were some similarities between the text traditions of LXX and SP. The major thrust of his work, however, was toward a negative evaluation of SP, and

the refutation of scholars who had made uncritical judgments on the text. Consequently, the question of the value of SP ceased to be a live issue for some time. About forty years later, however, Geiger took issue with Gesenius, noting that rabbinic traditions point to the existence of variant textual traditions which were rejected in the stabilization of the biblical text, and suggesting that the Samaritan text was the survival of an ancient textual tradition, rather than a late and corrupt development of a Jewish text. So too, the work of Paul de Lagarde, in the late nineteenth century, led to a greater appreciation of both the LXX and SP as witnesses to the early state of the Hebrew text prior to its stabilization. Most of the research which followed upon de Lagarde's work tended to concentrate on the original form of LXX, resulting in the classification of Greek manuscripts into families and the establishment of criteria in reconstructing the Proto-LXX. SP remained, however, a problem; for, while it agreed in some respects with LXX, it was closer to MT and presented its own deviations from the received Hebrew text. This problem was attacked early in the nineteenth century by Paul Kahle, who took his lead from Geiger rather than Gesenius, and who attempted to move beyond de Lagarde. Kahle suggested that SP is a witness to an ancient popular or "vulgar" textual tradition which survived independently of the rabbinic revision which led to MT. He found attestations of comparable vulgar texts in citations in the NT, in Philo, in rabbinic and pseudepigraphic literature, and in texts from the Cairo Genizah. Kahle explained the similarities of SP to LXX by suggesting that the earliest Greek translations were based upon popular texts like that preserved in SP, and explained the greater agreement of SP to MT by the suggestion that the Samaritan text was revised at some time to bring it into general agreement with the received Jewish text.

**c. Recent assessments.** The discovery of the Proto-Samaritan textual tradition in biblical fragments at Qumran indicates that Kahle was certainly correct in at least one respect: the text preserved in SP does represent an ancient, pre-Masoretic textual tradition. Several attempts have been made to clarify the relationship of Proto-SP to Proto-LXX and Proto-MT. Of these, the position of Kahle (official/vulgar texts) has been followed by some (notably, Greenberg). The development of the theory of local texts (principally by Cross and his students) has, however, provided a fresh context in which to view Proto-SP. Accordingly, SP may be seen as bearing witness to an ancient Palestinian textual tradition (known also from nonsectarian, Proto-SP fragments at Qumran). The LXX may be seen as bearing witness to a textual tradition (Proto-LXX) which branched off from the Palestinian tradition at an early time to undergo its own development (the Egyptian local text). This would explain certain similarities between LXX and SP (in the common origin of the two local traditions) as well as dissimilarities (the result of independent development of the traditions). MT represents a different textual family, at least for the Pentateuch, which Cross has suggested

emanated from a Babylonian tradition. This tradition shows no influence of the local traits which marked the development of the Palestinian text (additions of explication and clarification) in the Pentateuch, and must have developed in isolation from it. In the stabilization of the biblical text in the Jewish community, the shorter, more austere (orthographically as well as textually) tradition was chosen for the received Pentateuchal text (*see* TEXT, HEBREW, HISTORY OF[S]). The Samaritan community, however, retained a fuller text derived from the old, local Palestinian tradition. But the agreement of SP with MT would suggest that at some time the Samaritan text underwent editorial work utilizing the Babylonian local tradition (Proto-MT). The activity must have occurred prior to the theological breach between Samaritans and Jews (*see* SAMARITANS §B; SAMARITANS[S]). Also the promulgation of the distinctively sectarian redaction of SP (based on the Proto-SP text) appears to have occurred rather late in the history of Jewish-Samaritan relations, most likely in the late Hasmonean/early Roman periods—judging from the textual, orthographic, and paleographic evidence.

**Bibliography.** Printed editions: Early studies were based on the della Valle text published in the Paris and London Polyglots. *See* G. M. LeJay, *Biblica* (1629-45); B. Walton and E. Castell, *Biblia sacra polyglotta*, vol. VI, Pts. IV, V (1957). *See also* B. Blayney, *Pentateuchus Hebraeo-Samaritanus* (1790); J. H. Petermann and K. Vollers, *Pentateuchus Samaritanus* (1872-91). The standard critical edition is A. F. von Gall, *Der Hebräische Pentateuch der Samaritaner* (1918 [1966]). The oldest portion of the Abisha scroll, the most revered of Samaritan texts, has been published by F. Pérez Castro, *Sefer Abiša* (1959). Printed editions prepared by modern Samaritan scholars include A. Sadaqa, *h<sup>m</sup>iššāh hūmšē tōrah, nōsah šāmri (šōmrōni)*, in Samaritan script (1959), and A. Sadaqa and R. Sadaqa, *h<sup>m</sup>iššāh hūmšē tōrah, nōsah yehūdī, nōsah šōmrōni*, SP and MT in parallel columns, in the Jewish script (1962).

\***SAMARITANS.** Research on the history, literature, and religion of the Samaritans has advanced considerably in the last decade. Studies on the early history of the sect have profited from recent archaeological discoveries, and investigations of Samaritan literary and religious traditions have been abetted by publications of texts and translations. Also, Samaritan traditions have been examined in relation to the expanded knowledge of the religious complex of Judaism in late antiquity, including sectarianism in general and Christian origins in particular.

1. **Early history and sectarian origins.** A clearer evaluation of Josephus' account of early Samaritan history (and especially of the building of the Samaritan temple) has become possible due to archaeological discoveries relating to the Samaritans, SHECHEM, and Mount Gerizim (see GEREZIM, MOUNT[S]), specifically: the Aramaic papyri from Wadi Daliyeh (see SAMARIA PAPYRI[S]); the excavations of Tell Balata; and the excavations at Tell er-Râs. The papyri from Wadi Daliyeh provide important data relating to the Samaritan uprising against the Macedonians (fourth century B.C.) as well as evidence of the existence of a grandson of Sanballat the Horonite, who bore the same name. This Sanballat (II) was neither the contemporary of Nehemiah, known from the Bible, nor the contemporary of Alexander the Great, known from Josephus' account of the building of the Samaritan temple. He was most likely the grandfather of the latter. The excavations at Tell Balata indicate that the city of Shechem was rebuilt in the early Hellenistic period (evidently by the disenfranchised Yahwists of Samaria) after having been virtually abandoned during the Persian period. The excavations of the Hadrianic temple at Tell er-Râs on Mount Gerizim have uncovered the foundations of an earlier temple of the Hellenistic period. This is most likely the temple which served the cultic needs of the Samaritan community from the time of Alexander the Great to its destruction in the time of John Hyrcanus (following Josephus). Considered together, these data indicate that Josephus was correct in his contention that the Samaritans built their shrine in the early Hellenistic period. This was a major step in the life of that community, leading to its eventual estrangement from Judaism and its traditions. It now seems virtually certain that this important move was not made earlier, in the Persian period (which had been conjectured from a conflation of Josephus' account with Neh. 13:28). Recent research on the SAMARITAN PENTATEUCH indicates that it may have undergone sectarian redaction in late Hasmonean period, roughly contemporaneous with the destruction of the Samaritan temple, ca. 128 B.C., by John Hyrcanus. It seems unwise to view the separation of Samaritanism from Judaism as a schism which occurred at a particular point in time. The separation between the two was certainly complete, however, by the time of John Hyrcanus.

2. **Literature and religion.** A clearer understanding of Samaritan Hebrew and Aramaic has emerged from recent Samaritan linguistic studies, especially from the research of Ben-Hayyim of the Hebrew University, but also from scholars pursuing some

lines of inquiry opened by Kahle. In the field of Samaritan literature, the publication of the catalogue of the Gaster MSS of the John Rylands Library by Robertson has been a major contribution. Also, the publication of new texts and translations of the *Memar Marqah* and a major Samaritan chronicle tradition by Bowman of Leeds University have been important additions to the corpus of Samaritan literature available for scholars. In addition to these texts, a significant number of Samaritan liturgical works and religious treatises have been edited and translated as dissertations by Leeds University scholars. In the field of Samaritan religious studies, Macdonald's *Theology of the Samaritans* should serve as a major reference work. Although Samaritan religious thought has displayed a general uniformity from late medieval to modern times, it is evident that its earlier religious history was more complex, and that the various Samaritan religious traditions reflect a diversity of religious opinion which had once existed within the community. An attempt to identify distinct traditions by reference to a priestly orthodoxy and lay, heterodox sectarian movements (especially Dosithean) has been made by Bowman and Crown. Similarly, Kippenberg has applied the *traditions-geschichtliche* methodology (see TRADITION CRITICISM[S]) to the study of early Samaritan traditions, an approach which should prove extremely helpful for the critical use of Samaritan traditions in the study of Judaism in late antiquity. In the latter regard, Samaritan traditions have recently been examined in studies on Jewish apocryphal literature and the NT (notably, the Gospel of John).

\*SAMUEL, I AND II. In the English Bible the ninth and tenth books; in the Hebrew Bible, where they count as one book, the eighth.

1. Title
2. Text
  - a. I Chronicles and Psalms
  - b. Judean Desert Hebrew texts
  - c. LXX
3. Composition
  - a. Four current hypotheses
  - b. A hypothesis proposed
4. The leading idea and the essence of Samuel Bibliography

1. **Title.** The name [book of] Samuel is attested in a tannaitic source (second or early third century, quoted in an undated amoraic text) and a little later by Origen (first half of the third century, as quoted by Eusebius; see Sweete; Schulz). The former is found in T.B. Baba Batra 14b, giving the order of the "prophetic" books as Joshua, Judges, Samuel, Kings. I Chr. 29:29 contains a statement that the first and last Chronicles of King David are "written in the Chronicles of Samuel the seer, and in the Chronicles of Nathan the prophet, and in the Chronicles of Gad the seer." Since the last two works are not extant books, the first cannot be presumed to be one either (namely, our book of Samuel); in other words, I Chr. 29 is not the earliest witness to the name [book of] Samuel. In the LXX, Samuel goes together with Kings as (τῶν) βασιλειῶν (βιβλος) or similarly, i.e., "[Book of the] Kingdoms/Reigns," again first attested by Origen. Jerome uses both names, "Samuel" and (*Liber Regum/Regnorum*, "The Book of Kings/Kingdoms" (together with our Book of Kings). The Peshitta editions call it "The Book of the Prophet Samuel."

The position of Samuel in the Hebrew Bible, at least since tannaitic times, is between Judges and Kings. The LXX, Peshitta, and Vulg. MSS overwhelmingly place Ruth between Judges and Samuel (hence the order in the English Bible), but there are also other orders.

The question as to which arrangement is authentic, that of the Hebrew (and English) Bible (two books, Samuel and Kings) or that of the Greek Bible (one long book, Reigns), loses part of its possible interest to students who are impressed by Noth's opinion that the books Deuteronomy-Kings originally formed one unit (see §3ai; see also DEUTERONOMIC HISTORY, THE[S] §§1-2). As to the mutually independent existence, original or eventual, of Samuel and Kings, different points of division exist or have been proposed: after II Sam. 24 (the common division), after I Kings 2:12 (according to the Lucian group of the LXX), after I Kings 2 (the preference of many modern scholars). The division of Samuel into two books is mentioned first by Origen in a commentary on the LXX ("Reigns 1, 2, [3, 4]"). The Masoretes do not mention it. In the colophon to II Samuel, they give the number of verses "of the Book of Samuel," i.e., of one unified book. The split was introduced into the Hebrew Bible under the influence of the LXX and the Vulg. in a Spanish MS of 1448 (see Ginsburg). It spread with the printed rabbinic Bibles (Venice) from 1517 on, again under the influence of the translations. In a similar fashion, Kings, Ezra [-Nehemiah], and Chronicles were divided.

2. **Text.** Although Samuel has the reputation that its text is among the worst of the OT books, this is not evident to the ordinary reader. Whereas innumerable textual difficulties, commonly traced to corruptions and expansions, often frustrate the simple understanding of Ezekiel and some other books, the reader of Samuel advances through chapter after chapter without being arrested by significant difficulties traceable to deterioration of text. This is not to deny that Samuel has its share of obstacles to understanding because of textual corruption. A sampling may comprise II Sam. 1:18-27; 23:1-7 (both poetry); 5:8; 23:8 (both prose). But the generalizing condemnation of the Received Text (TR; see TEXTUS RECEPTUS [S]) is probably occasioned by the existence of a relatively great variety of different text forms rather than by its obscurity.

The following main groups of text are available for comparison with the TR.

a. **I Chronicles and Psalms:** (i) A list of major parallels between Samuel and I Chronicles: I Sam. 31=I Chr. 10:1-12; II Sam. 3:2-5=I Chr. 3:1-3; II Sam. 5:1-10=I Chr. 11:1-9; II Sam. 5:11-25=I Chr. 14:1-16; II Sam. 6:2-11=I Chr. 13:6-14; II Sam. 6:12-19=I Chr. 15:25-16:3; II Sam. 7=I Chr. 17; II Sam. 8=I Chr. 18; II Sam. 10:1-11:1=I Chr. 19:1-20:1; II Sam. 12:30-31=I Chr. 20:2-3; II Sam. 21:18-22=I Chr. 20:4-8; II Sam. 23:8-9, 11-39=I Chr. 11:11-40; II Sam. 24:1-4, 8-9=I Chr. 21:1-5; II Sam. 24:10-25=I Chr. 21:8-26. (ii) II Sam. 22=Ps. 18.

b. **Judean Desert Hebrew texts.** The following passages, many quite fragmentary, have been pub-

lished; they are from the later part of the Second Commonwealth period: I Sam. 1:22-2:6, 16-25 (Cross, *BASOR*, 132 [1953], 15-26, 4QSam<sup>a</sup>); 16:1-11; 19:10-17; 21:5-10; 23:9-17 (Cross, *JBL*, LXXIV [1955], 147-72, 4QSam<sup>b</sup>; inconsequential fragments in *DJD*, I [1955], 64-65). In the *Textual Notes on the NEB* (St. Anthony's Guild, 1970, pp. 342-51), additional, unpublished Judean Desert material (4QSam<sup>c</sup>) has selectively been incorporated. See DEAD SEA SCROLLS; DEAD SEA SCROLLS[S].

c. LXX. Within the LXX three groups are commonly recognized (see SEPTUAGINT; SEPTUAGINT[S]; VERSIONS, ANCIENT §2a; TEXT, OT §C). (i) The Vaticanus group. Its chief representative is MS B (the letter symbols are those of the Cambridge editions). To it belong primarily B, y, a<sub>2</sub> and in various ways most LXX MSS. This group underwent a notable change in II Sam. 11:2 (or 10:1) – I Kings 2:11 toward a literal rendition of a Hebrew text (Proto-TR?), to the point of disregarding canons of Greek style; its outstanding example is καίγε, a combination translating και, "also" (καίγε does not exist in common Greek). Often dubbed the *Kaige* group, it is not limited to Samuel, and the sixth column of the Hexapla (Theodotion) is connected with it (see GREEK VERSIONS, MINOR [S] §§1-2) (ii) The (Proto-)Lucianic group. ("Lucianic" serves here as a conventional appellation comparable to "Septuaginta," Seventy [Translators].) It is represented by MSS b, o, c<sub>a</sub>, e<sub>a</sub>, and it shows relations of varied nature to the Hebrew text of Chronicles, (some?) Judean Desert fragments, and the *Antiquities* of Josephus. (iii) The Alexandrian group, represented by MSS A, c, x. It is said to be the LXX of Origen (the fifth column of the Hexapla).

The discussion about these groupings, the relation of the groups to non-LXX witnesses, and related questions is very much in flux (see Kraft). The present survey would be inadequate, however, were it not followed by a few observations—facts and principles. The principles are not new to philology, but they are submitted here because they have not always been accorded due consideration. See TEXTUAL CRITICISM, OT[S].

(i) Studies on the LXX of Samuel are always squarely based on Lagarde's *Urseptuaginta* theory as opposed to Kahle's so-called Targum theory (see GREEK VERSIONS, MINOR[S] §1c; TEXT, OT §C1a). Today, Kahle is not widely followed. But the problem of OT quotations (not from Samuel) in the NT, a basic element of Kahle's theory, is only ignored, not solved. (ii) The number of witnesses to a reading or type of reading has no bearing on the value of the testimony. (iii) In OT textual criticism the age of a witness ordinarily has no bearing on the value of the testimony. (iv) In OT study, textual criticism is practiced by and large from the vantage point of the Hebrew text, the TR. This means that authors of commentaries and other scholarly works read the Hebrew until they come to a difficult or suspect passage. Then they consult the versions in the hope of finding a better reading or to substantiate their suspicion of a corruption. It is then only natural that the sum total of preferred versional readings obtained this way tends to

impress the exegete with the superiority of a given version to the Hebrew text. Had he proceeded contrariwise, taking that version as his basic text and consulting the Hebrew whenever he experienced a difficulty in his chosen text, he might well have had the contrary impression and extolled the Hebrew Bible. (v) Scholars are sometimes inclined to view difficult or multiple readings as problems to be recognized and decided, wherever possible, primarily by rules of textual criticism (e.g., haplography, homoeoteleuton, and their remedies; see TEXT, OT §D; TEXTUAL CRITICISM, OT[S] §4). Now these rules are nothing but standardized genetic explanations accounting for one reading, which one would emend or reject in favor of another reading. Assuming deteriorations and explaining them should be secondary, however, to maintaining extant texts and explaining their difficulties and conflicts in terms of literary, historical, or similar considerations. One example: The question in I Sam. 14:37 ff. is whether a sin has been committed by Saul or his son on the one hand or by the people on the other hand. The TR of vs. 41 translates approximately: "Saul said to the Lord, 'O God of Israel, let there be a clear oracle.'" The LXX has: "Saul said, O Lord God of Israel, why have you not answered your servant today? If the guilt is mine or my son Jonathan's, O Lord God of Israel, let there be *urim*; but if the guilt is your people Israel's, let there be *thummim*." Both readings make sense and both can be supported by known oracular models. The request of the TR is of the kind encountered in Assyro-Babylonian omen prayers; that of the LXX corresponds to Hittite practice. Which reading, if any, is to be preferred is to be decided by the history of religion or the history of tradition; techniques of textual criticism are to be employed where the readings yield poor sense or nonsense.

3. **Composition.** Samuel stands in the sequence of the narrative books, consisting of the Pentateuch and the Former Prophets. It is therefore no surprise that some scholars approach the question of its composition in a manner similar to their approach to the books of Genesis through Judges (see DOCUMENTS). Most critics, however, do not apply to Samuel the methods they apply to the higher criticism of the Pentateuch, but this majority is internally diversified. McKenzie said in 1971 that it was his impression "that literary criticism on Samuel is about as far advanced as the criticism of the Pentateuch was when de Wette [1780-1849] wrote."

a. **Four current hypotheses.** i. The books of Samuel are a braid of two or three strands, into which a few individual short threads have been woven in random fashion (see SAMUEL, I AND II §C1b, 2). This hypothesis was fully developed first by Budde, then by Eissfeldt. Budde holds that Samuel is made up of two parallel components (J and E), continuing the components of the HEXATEUCH (Heptateuch), which were intertwined in a first redactional process (R<sup>JE</sup>). The resulting narrative was then shortened in the redactional operation, that of the Deuteronomist(s) (R<sup>D</sup>), but later its original length was partly restored. Eissfeldt recognizes three basic constituents (in his reconstruc-

tion, redactors play a relatively minor role). In I Samuel the narrative lines of the constituents, for the most part, run parallel, as it were, whereas in II Samuel the consecutive order prevails. When he first proposed his view, Eissfeldt assigned the constituents plain numbers, implying thereby nothing more than their assumed chronological order ("I" is the earliest constituent, and so forth). In his introduction to the OT he relates these constituents to those he proposes for the Hexateuch (I=L, II=J, III=E), thus moving toward the position of Budde. The following is a slightly condensed summary of his analysis of 1931. (A verse listed in two components is either divided between them or cannot definitely be assigned to either.)

(I) I Sam. 4:1-10, 15-16, 21; 5:2-5; 6:1-2, 5-12, 14-15, 18-21; 7:1-2; 10:21-27; 11:1-15; 13:1-4, 6-7, 16-22; 14:1-52; 16:18, 21; 18:5-9, 20-29; 19:8, 11-17; 21:2-10; 22:1-2, 6-23; 23:1-13; 25:2-44; 26; 27:1-7; 29:1-2, 4-8, 10-11; 30; 31; II Sam. 1:1-2, 5-10, 13-16; 2; 3; 4:1-3, 5-12; 5; 6; 8. (II) I Sam. 1:3; 2:12-17, 22-25, 27-36; 3:2; 4:1-14, 16-22; 5:1, 6-12; 6:2-4, 24:1-9, 16-20; 9; 10:1-16; 11:6; 13:3-5, 7-15; 17:1-31, 40-58; 18:1-4, 17-19, 30; 20:1-42; 21:1-10; 22:1-2, 6-23; 23:14, 19-28; 24; 27:1-4, 8-12; 28:1-2; 29:3-5, 9-10; II Sam. 1:1-4, 11-12, 17-27; 4:4; 21:1-14; 9; 24:1-9, 15-16, 19-25; 10; 11; 12:15-31; 13; 14:1-24, 28-33; 15:7-15, 17-26, 29, 31-37; 16:1-20, 23; 17:1-26; 18; 19; 20:1-2, 4-26; [I Kings 1; 2:13-31, 34-43, 46]. (III) I Sam. 1; 2:1-11, 18-21, 26; 3; 7:2-17; 8; 10:17-21; 12; 15; 16; 17:1-11, 32-54; 18:10-16; 19:1-7, 9-10, 18-24; 20:1; 21:11-16; 22:3-5; 23:14-18; 25:1; 28:3-25; II Sam. 7; 24:10-14, 17-18, 21, 25; 12:1-15; 14:25-27; 15:1-6, 16, 23, 27-28, 30; 16:21-22; 17:27-29; 20:3; [I Kings 2:1-12, 31-33, 44-45]. (II Sam. 21:15-23:39 does not belong to any of these components.)

The number of critics who follow Budde or Eissfeldt or hold similar positions is relatively small; the probable reason is the difference between the Pentateuch and Samuel. According to the corresponding Pentateuchal hypothesis, the constituents (or "documents" or "sources") of the Tetrateuch/Pentateuch/Hexateuch are identified by five criteria: different divine names, differences of lexicon and grammar, different religious and ethical outlooks, duplication of substance, contradictions (*see* SOURCE CRITICISM, OT[S]). In Samuel their number and usability are reduced. The first does not exist, and the second and third are doubtful or blurred. Duplication and contradiction occur. For example, twice or three times David is introduced to Saul (I Sam. 16:14-23; 17:31-33; 17:55-58); twice David has the opportunity to kill Saul but he spares his life, and the two talk about it (24:3-22 [H 4-23]; 26:5-25); twice David flees to Achish king of Gath (21:10-15 [H 11-16]; 27:1-3); twice Goliath is killed and by different men (17; 19:5; 21:9 [H 10]), as against II Sam. 21:19). But this collection is made up of quite motley items and is too scanty for a foundation of a hypothesis about the composition of the book. Weiser and Fohrer add that the postulated constituents of Samuel are devoid of a distinct and distinguishing character, and that the parts of each

constituent cannot be combined to form consecutive narratives.

ii. Gressmann rejects hypothesis (i) because its concept of a literary constituent is too general. Its authors postulate constituents, but it is not possible to distinguish in Samuel two or three trains of narratives that relate largely the same sequels of happenings or circumstances, each one in its own peculiar way. Only elements that lend themselves to such ordering deserve the name literary "sources" that can be integrated into a hypothesis like the one proposed by Budde or Eissfeldt. Gressmann's answer to the problem of the literary prehistory of Samuel is that the book represents one narrative stock, expanded by isolated duplications and accretions, many of which derive from widely deviating MS variants. He also reckons with a Deuteronomistic redaction to which he ascribes several pieces in a manner distantly reminiscent of Noth.

iii. Noth deals with Samuel in his study of the Deuteronomistic history (DH) which runs from Deuteronomy through Kings. Its composers used literary material of various provenance and worked it into one narrative by selection, concatenation, and addition of connecting links and summaries. These men were authors of a history, not redactors; prior to them there existed no history of Israel in its land. But Samuel, unlike Judges or Kings, contains only a few such additions, the visible mark of the activity of the Deuteronomists. They are: I Sam. 7:2-8:22; 10:7-21 $\alpha\alpha$ ; 12:1-13:1; II Sam. 2:10 $\alpha$ , 11; 5:4-5; 7:1 $b$ , 7 $a$ , 11 $a$ , 12 $b$ , 13 $a$ , 22-24; 8:1 $\alpha\alpha$ , 14 $b$ . When allowance is made for glosses, we should say that the Deuteronomists took everything else from their sources.

Noth's opinion on the composition of Samuel is part of his comprehensive hypothesis and cannot, therefore, be fully evaluated here. The following refers only to a specific issue in Samuel. I Sam. 7-12, which Noth, following Wellhausen, assigns to DH, has virtually nothing in common with the DH passages of Judges and Kings as these are commonly identified, either in language, manner of literary presentation, contents, or structural function. But Noth has an additional criterion: from Deuteronomy through Kings the Deuteronomists have set up markers to emphasize caesuras in the flow of history, usually in the form of speeches that summarize the preceding periods and culminate in exhortations. To his mind, I Sam. 12 is such a speech, and having confirmed it as such by its literary form, content, and place, he uses it as a means to confirm as Deuteronomistic those parts of chs. 7-10 that, in his opinion, resemble it in historical outlook. This is to say that here Noth recognizes literary constituents of composite texts by their function and philosophy, criteria which later he rejected for the analysis of the Pentateuch (*see bibliog.*). True, he builds on Wellhausen, who had assigned those sections to DH, but Wellhausen himself argues largely from the historical and religious outlook of the sections. The governing principle of Noth's critical analysis is, directly or indirectly, the philosophy of the purported constituents of the literature so analyzed.

iv. Weiser and, similarly, Fohrer hold that the basic elements of Samuel are single stories. Yet the stories reached the author, not in their first stage, individually and disjointly, but in distinct collections or groupings which bore their own individual stamps. The main collections, the constituents (following Weiser), are: (1) the story of the ark (I Sam. 4-6; II Sam. 6); (2) the rise of Saul (I Sam. 9:1-10:16; 11; 13-14); (3) the rise of David (I Sam. 16:14-II Sam. 5:12); (4) the story of the dynastic succession (II Sam. 9-20; I Kings 1-2). The difference between the constituents of Budde and Eissfeldt (§i above) and those of Weiser and Fohrer is this: Budde's constituents are narratives which cover extended spans of time in most cases and tell approximately the same happenings (II Sam. 9-20 is the exception). Weiser's constituents, likewise narratives, tell about shorter segments of time; each one is concerned with one historical theme which it does not share with the others, and all are arranged in the book not in quasi-parallel fashion but successively. The constituents, themselves collections, represent the second stage of literary development; during this stage they existed independently. In a third stage they were arranged chronologically and formed one consecutive narrative from Eli to the death of David. A fourth stage saw the infusion of the narrative with prophetic ideas. The fifth stage is marked by a modicum of Deuteronomic editing. The process was completed by adding sundry pieces, among them poems. A fair number of scholars follow the general approach of Weiser and Fohrer.

The assumption of independent collections of stories at a certain stage of the development of the book is the distinctive feature of this hypothesis. The assumption is neither probable nor improbable, which is to say, it has no scientific value. In its support two arguments have been put forth: (1) The stories that make up each hypothetical collection have a special style and point of view in common. (2) There are portions or apparent fragments in the book which seem to be there to supply what is missing in the collections. These arguments, however, carry no conviction. First, every good story has a character all its own, but several such stories from similar milieus about similar themes tend to have similar characteristics. For example, stories about the wanderings of an outlaw and his men are typically different in style, thrust, and bias from stories about competition and intrigue at a royal court; and it would occur to no one, much less can it be demonstrated, that the stories acquired these features when they were integrated in the collections. Second, by definition, a supplement supplies what is missing, and in the development of a document there is no preferred stage for filling gaps.

Except for a Deuteronomic edition, no edition or revision, prophetic or other, is recognizable. Its nature is not sufficiently defined, and its traces are not specified or identified. Hardly any effort has been made to show a connection between the prophetic edition and any historical prophetic activity, or between other editions and other historical phenomena. As to post-Deuteronomic addi-

tions, this is not an unlikely assumption, but the additions cannot be identified.

The hypothesis has another shortcoming: the difficulty of determining the extents and meanings of the collections. The question is basic, but the answers are, for the most part, unsettled. This is even the case with what is considered the most easily identifiable collection, the stories about the controversies at David's court in II Samuel. First, its extent—does it begin with ch. 9 or 11 (or 13), and end with ch. 20 or I Kings 2? One question only can be selected here, and its answers will be limited to one pair of alternatives: Does the collection begin with ch. 9 or 11? The answer depends on the answer to another question: What is the governing idea and the intent of the cycle of stories (the collection)—the vicissitudes of establishing the succession to David's throne, the legitimization of Solomon, the sin and punishment of David in a measure-for-measure fashion? Is it pro-David or anti-David, southern or northern, monarchic or amphictyonic, composed by an insider or an outsider? (For each of these and the above pairs of questions, pairs of opposite answers have been proposed.) If the theme is succession narrative, chs. 9 and 10 may perhaps be seen as an introduction, though with difficulty; if it is sin and punishment, they cannot. There is no need to continue in this vein. If fundamental uncertainties loom so large about this particularly well-written collection, then material for constructing a hypothesis such as Weiser's cannot be said to be contained in Samuel.

*b. A hypothesis proposed.* The position on the composition of Samuel put forth in this article is distantly related to the position of Weiser and Fohrer. Samuel was composed from individual narratives—the bulk of the material—and some lists and (semi-) official records, as well as a few poems. Deuteronomic editing is recognizable in I Sam. 4:18b; 13:1; II Sam. 2:10a, 11; 5:4-5 (see Bentzen). This position is not only tentative but also minimal. Regarding the literary prehistory of Samuel, it allows for pregrouping of narratives but recognizes no valid criteria for postulating it. And it would leave to further investigation the determination of the extent of each primary component, its prehistory, and its bonds with adjacent or nearby components (see TRADITION CRITICISM, OT[S]; REDACTION CRITICISM, OT[S]). On this hypothesis the book of Samuel originated in the act (or at the moment, whenever it occurred) by which (or at which time) material was assembled and brought to the present stage of integration in narration, as well as in character, purpose, and idea.

4. *The leading idea and the essence of Samuel.* Samuel is part of the history that stretches from the creation of the world to the Babylonian exile (see CANON OF THE OT[S] §1c). Many of the individual stories of this history can exist as independent narratives, but the totality of the composition is sustained and in turn sustains its parts by the idea of God who obligates, man who is obligated (first all mankind, then chiefly the Israelites and all Israel), their mutual nearness and remoteness, and the changing forms of the obligation. In recounting the events, the book

describes one of the most severe crises in biblical history, the crisis of the relation of God and Israel, the people's failure in its obligation, and the transformation and reformulation of the obligation. From the time of Abraham's exodus from Chaldean Ur to the end of the period of the "Judges," Israel "followed the Lord," who led them in a pillar of cloud and by his Word which he revealed to his servants, men who had no more power or permanence than the pillar of cloud. In that period Israel was certainly not always virtuous, but it always returned to God, and the mutual relationship was re-established (see JUDGES, Book of[S] §1b). But with the growing pressure of the Philistines, Israel found that the existing religio-political order of divine leadership fell short of the new exigency, and it demanded a political order of greater substance and stability, a secular, that is, self-sufficient, independent monarchy (see KING §3). Some modern scholars say that the difference between the political organization under the Judges and under the incipient monarchy was insignificant, but Scripture does not see it this way; in the biblical view the difference was one of a paramount principle, and the change of order placed in jeopardy the religious and national identity of Israel. See GOVERNMENT, ISRAELITE[S].

The book tells of the strain in the relationship between God and Israel that sprang up at that juncture, but its story contains more than is explicitly reported in I Sam. 8:4-12:25. The following points merit mention. (i) What gives the story its classical dimension is its perspective. The crisis is not a fleeting, one-time situation; from its breaking out in the time of Samuel and Saul to the end of the kingdom of Judah the crisis fluctuated between acute and dormant stages but it never went away. (ii) The crisis between God and Israel is reflected in the relation between prophet and king (see PROPHET §C4). Also in this respect the book marks the beginning of a development (Samuel and Saul, Nathan [Gad] and David) which continued to the fall of Jerusalem (Jeremiah and Zedekiah). (iii) The biblical judgment of the crisis is clear from the outset: In demanding a king, Israel rejects (מָעַץ, despises) God (I Sam. 8:7; 10:19). The Bible never takes this statement back; quite the contrary, it is preserved and reflected in the prophets: turning for help to national or foreign power is rejection of God (Isa. 8:6).

Another evaluation of the monarchy is also recorded in the OT and it too dates back to the foundation of the monarchy: the institution of kingship is good, it is a gift of God to his people (I Sam. 10:24-27; 11:14-15; and elsewhere). God shows grace to the king, so the book continues, and makes a ברית (covenant/commitment) with/to him (II Sam. 7:8-9, 11; 23:5; and elsewhere). Also this conception can be traced on to the prophets (Isa. 55:3). See COVENANT, DAVIDIC[S].

Both judgments are found in close proximity in Samuel (e.g., I Sam. 10:17-27). Critics have responded to this fact with hypotheses that separate the judgments and locate them in different literary constituents of the pericope or pericopes; their presupposition is a one-to-one scheme: one con-

stituent—one judgment. This presupposition, which is made as if it did not require justification, ought to be rejected. The problem is to be resolved differently; the literary tension between the two views of the monarchy corresponds to a similar tension in the historical reality. The reality is attested in numerous passages in different books; taken together they express similarly conflicting positions about the monarchy current in Israel, but the passages cannot meaningfully (in terms of the totality of their contexts) be sorted out and traced to different assumed sources according to praise or denunciation which they have for the monarchy and its organs. How complicated the problem is on the literary level a synopsis of interpretations of the Deuteronomistic contribution shows. There is far-reaching scholarly agreement about the Deuteronomistic minimum in Samuel, but it co-exists with scholarly disagreement as to whether the Deuteronomists are for or against the monarchy. The historical reality cannot have been less complicated, and the pros and cons of a question of such gravity must have been fought over bitterly for a long time. The literary crystallization, in Samuel, of this reality with its conflicts leads to the fundamental question: Is the monarchy a scion unrelated to the Israelite stock? And if it is, what is the prospect of a successful graft? The book of Samuel raised the question and made it a theme for many other biblical books.

The reason that these issues are expressed in Samuel with such vigor is that they first arose, with vigor and urgency, in the period reported there. Seen this way, Samuel is a history of the first order. Furthermore, it is likely that the book contains some of the earliest expressions concerning these issues, expressions that may go back to a period which is close to the narrated time. But it is almost as likely that late voices, originating centuries after the narrated time, are also recorded in Samuel. Their authors were probably neither able nor motivated to tell the story of the relatively distant past without reflecting in their writings on the later developments and their results. The early elements and the late elements are not always identifiable, but their combination gives the book a depth which adds to its significance among the books of the OT.

\***SANBALLAT.** The discovery of the fourth-century SAMARIA PAPYRI and a re-evaluation of information previously known from Jos. Antiq. (XI.vii.7-viii.6) and Quintus Curtius' *History of Alexander* permit the reconstruction of a line of governors named after or descended from the Sanballat who clashed sharply with Nehemiah over the rebuilding of the walls of Jerusalem. See SANBALLAT.

Nehemiah's Sanballat may have been the first of the line since he is identified by a gentilic, the Horonite (that is, from Beth-horon), rather

than by a patronymic or father's name (Neh. 13:28). He was in office by 445 B.C. when Nehemiah arrived in Jerusalem and seems to have been replaced by his son Delaiah no later than 410, as we learn from a letter in the ELEPHANTINE PAPYRI (Cowley 30.29). Another papyrus reports that Delaiah and Bagoi (=Bagoas), governors of Samaria and Judah respectively, authorized the Jews to petition the satrap Arsames about rebuilding the Jewish temple at Elephantine (Cowley 32; ANET [2nd. ed.], p. 492).

Evidence for additional Sanballats comes from a sealing attached to Samaria Papyrus #5, mentioning a Y<sup>e</sup>ša'yāhū, son of Sanballat, governor of Samaria, and from Papyrus #14, which refers to Yēšū<sup>ac</sup>, son of Sanballat, and a certain Hanan the prefect. A third papyrus, #8, which can be precisely dated to March 4, 354 B.C., helps to locate this Hanan[ia]h by its reading, "before Hananiah, governor of Samaria." Because none of these papyri can be dated earlier than 375 B.C., the Sanballat to whom they refer is not identical with the one known from the Bible; hence he must be called Sanballat II.

Building on references in Josephus, it is possible now to identify a third Sanballat, appointed by Darius III (335-330), who gave his daughter Nicaso in marriage to Manasseh, the brother of the high priest Jaddua in Jerusalem. Sanballat III received Manasseh when he was expelled from the priesthood by the elders of Jerusalem, offered him the high priesthood over the Samaritans, and built for him a temple on Mount Gerizim by the permission, first, of Darius III, and later of Alexander himself. After Darius III lost to Alexander, contrary to Sanballat's expectations, Sanballat offered eight thousand Samaritan troops to Alexander to assist with the siege of Tyre, but he died after Alexander had besieged Tyre for seven months and Gaza for two.

Thus Delaiah, son of Sanballat I, was succeeded by Sanballat II, mentioned in the Samaria Papyrus. Sanballat II was followed successively by his two sons Y<sup>e</sup>ša'yāhū (=Yēšū<sup>ac</sup>) and Hananiah (=Hanan), the latter being in office in 354. The last of this line known to us is Sanballat III, attested so far only in Josephus. The following line of Sanballatids, therefore, can be reconstructed: Sanballat I, born about 485; Delaiah, his son, born about 460; Sanballat II, son of Delaiah, born about 435; Yēšū<sup>ac</sup> (spelling of name somewhat uncertain), son of Sanballat II, born about 410; Hananiah (Hanan), son of Sanballat II and brother of Yēšū<sup>ac</sup> also born about 410; Sanballat III, son of Hananiah, born about 385.

The discovery of a second and third Sanballat and the principle of papponomy in this family (that is, the naming of a man after his grandfather) have led to several suggested additions, indicated by brackets, in the following list of Jerusalem high priests: Jozadak (taken into exile); Jeshua (cf. Haggai-Zechariah); Joiakim (Neh. 12:10, 12, 26); [Eliashib I]; [Johanan I] (contemporary of Ezra); Eliashib II (contemporary of Nehemiah); Joiada I (Neh. 12:10-11, 22; 13:28); Johanan II (Cowley 30.18); Jaddua (caritative for Joiada) II; [Johanan III]; [Jaddua III].

The marriage between Nicaso, daughter of Sanballat III, and Manasseh, brother of Jaddua III, is similar to but not identical with the marriage of a son of Joiada I and a daughter of Sanballat I (Neh. 13:28). Not only was the high priest's relative in one case a brother and in the other a son, but the expulsion was handled quite differently; Manasseh was given an ultimatum by the elders of Jerusalem to get a divorce or to resign the priesthood, whereas Nehemiah himself chased the married couple out of the city. The intermarriage between a priest of Jerusalem and a governor's daughter from Samaria in the late fourth century supports the notion that the total breach between Judah and Samaria came much later than formerly thought, perhaps late in the second or early in the first century B.C. See SAMARITANS; SAMARITANS[S].

While vindicated in general, Josephus seems to have been confused by the repetitious names in the high priestly and Sanballatid lines. Manasseh, who married Sanballat III's daughter Nicaso, was the brother of Jaddua III, the high priest. Josephus incorrectly identified Jaddua III with Jaddua II, just as he coalesced Sanballat I and Sanballat III. Since Jaddua II became high priest in the time of Darius II (423-404), thus no later than 404, it is not likely that he would still be serving as high priest in the 330s, nor is he likely to have had a brother of marriageable age, as the Josephus account would have it. Josephus also identifies Bagoas, the Persian governor of Judah, who imposed tribute on the Jews after Johanan I had killed his own brother Jesus in the temple, with Bagoas, the notorious eunuch and general who served under Artaxerxes III (358-338). Some identify the Bagoas who imposed tribute as a general of Artaxerxes II.

\***SANCTIFICATION.** Sanctification means the transition from the realm of the profane to that of the holy. It is invariably expressed by the root שִׁקַּף in all its conjugations. There is sanctification of time, space, persons, and things.

1. **Of time.** Certain time is inherently holy because it was sanctified by God, e.g., the SABBATH (Gen. 2:3), the festivals (Lev. 23:4 ff.; Neh. 8:9-11), the JUBILEE (Lev. 25:12). Israel is enjoined to sanctify these holy periods by adhering to the special rules which govern them.

2. **Of space.** The land of Canaan is the Lord's land, and therefore holy (Exod. 15:13; Isa. 11:9). This is the premise of the Holiness Source, which states that offenses against God pollute the land (cf. Lev. 18:27-28), and hence all its inhabitants, including the resident alien, must observe God's prohibitions (Lev. 17:8-12; 18:26; 20:2; 24:16). All other land is impure (Josh. 22:19; Amos 7:17), except where a THEOPHANY has occurred (Exod. 3:5; Josh. 5:15).

The doctrine that Jerusalem is the holy city

par excellence has its origins in the First Isaiah, who proclaims Jerusalem as the divine residence (Isa. 8:18; 18:7; 30:29; see ZION TRADITION[S]). Its future inhabitants will *eo ipso* be sanctified (Isa. 4:3). Jeremiah predicts that the future Jerusalem will extend beyond its former limits, and will be "holy to the Lord" despite the inclusion of burial ground (31:37-39). Since recent excavations in the old Jewish quarter have unearthed a city wall dating to the time of Hezekiah or Manasseh, and excavations in the nearby TYROPEON VALLEY have divulged empty tombs of approximately the same period (see JERUSALEM[S] §1), it seems safe to conclude that Jerusalem had expanded to three or four times its former size. It was by then conceived of as a holy city, for its dead were apparently disinterred and removed beyond its new walls (the kings excepted, Ezek. 43:7b-9; cf. AB. R. Nathan, B. 39). By the time of the Exile it received the appellation "the holy city" (Isa. 48:2; 52:1).

**3. Of persons.** Certain persons become holy when they undergo consecration. Priests are holy, according to P, because they received the most-sacred oil of anointment (Exod. 30:30-32; 40:13 ff.) in conjunction with a sacrificial service. The high priest Aaron's head is doused (יצק) with the oil before the service, and his sons are sprinkled (נד) with the oil after the service (Exod. 29:7, 21; Lev. 8:12, 30).

In the person of the NAZIRITE, the layman attains quasi-priestly status, for he is "holy to the Lord" (Num. 6:8; cf. Philo, *On the Special Laws*, I, 249). Indeed, by his taboos, the Nazirite approximates the higher sanctity of the high priest, since he may not contaminate himself by contact with the dead, even of his immediate family (Num. 6:7; cf. Lev. 21:11), and, like the high priest, the head is the focus of his sanctity (Num. 6:11b; cf. Exod. 29:7). Since, however, the Nazirite period (in P) is only for a fixed term, the parallel to sanctified land (see below) is more instructive: both terms are limited, the land reverting to its owner at the Jubilee (Num. 6:13; cf. Lev. 27:21). Both periods can be terminated earlier, the Nazirite's by contamination (Num. 6:9-12) and the land's by redemption (Lev. 27:16-19). In such cases a penalty is exacted: the Nazirite pays a reparation offering (מזב) to the sanctuary (see SACRIFICES AND OFFERINGS, OT[S] §2b), and the land owner pays a one-fifth surcharge to the sanctuary.

All Pentateuchal sources (see DOCUMENTS) agree that the people Israel is enjoined to holiness. In JE, all that is involved is refraining from flesh torn by a beast (Exod. 22:31 [H 30]), whereas in P, Israel's sanctification can be achieved through a comprehensive behavior pattern which embraces fine points of ethics as well as ritual (e.g., Lev. 19). D, however, mentions Israel's sanctification only in connection with ritual prohibitions (idolatry, Deut. 7:5-6; certain mourning rites, 14:1-2; and forbidden foods, 14:3-21). Jeremiah uses Israel's sanctity to weave a haggadic MIDRASH to condemn their enemies (2:3), whereas Ezra fashions a halachic midrash to condemn intermarriages (9:2). The term "consecrate" is also used of a prophet (Jer. 1:5), but its use is metaphorical.

**4. Of objects. a. The sanctuary.** The tabernacle, its sanctums, and the priestly clothing are sanctified with the anointment oil (Exod. 30:25-29; 40:9-11; Lev. 8:10 ff.). If the polluted altar needs be resanctified, the blood of the purgation offering (חטאת) is sprinkled upon it seven times (Lev. 16:19). The tabernacle sanctums, being "most-sacred," sanctify other objects upon contact (Exod. 29:37; 30:29), but they are not contagious to persons. This also holds true for the most-sacred offerings: the מנחה and the חטאת (Lev. 6:18, 27 [H 11, 20]), and probably the משם and עליה. Ezekiel, however, affirms that the sanctums—including the priestly clothing—are contagious even to persons (44:19; 46:20). The temple of Solomon was probably consecrated upon its completion, though the verb קדש is used only in connection with the extension of the sanctity of the altar into the court in order to accommodate the overwhelming number of offerings (I Kings 8:64=II Chr. 7:7).

**b. The sacred gifts.** The objects which become sanctuary property by virtue of sanctification can be categorized as follows: (i) Objects whose sanctity is inherent, i.e., first-born males of female animals and human beings (Exod. 13:2, 12 ff.; Lev. 27:26; see FIRST-BORN[S]), first-ripe fruits (e.g., Neh. 10:36 [H 37]) and first-processed fruits (Num. 15:20; 18:12; see FIRST FRUITS, OT[S]), and the fourth-year yield of fruit trees (Lev. 19:24). (ii) Objects whose sanctification is required, i.e., tithes of crops and pure animals (Lev. 27:30-33; Deut. 26:13). (iii) Objects whose sanctification is voluntary, partially listed in Lev. 27: votive dedications of persons (rather, their fixed value; vs. 1-8) and animals (vs. 9-13), dedications (תקדיש) of houses (vs. 14 ff.) and fields (vs. 16-25), and proscriptions (חרם) of persons, animals, and property (vs. 28 ff.). The underlying postulate is that, if the object is permissible as an offering on the altar, it is irredeemable; if it is not permissible, it is redeemable, except for חרם (something to be "utterly destroyed"), which may never be redeemed. The sanctifications recorded in Lev. 27 are the result of individual initiative, but more likely the sanctuary received most of them as spoils of war (e.g., Num. 31). Historical sources also attest that captured vessels were dedicated to the temple (II Sam. 8:10 ff.; I Kings 7:51, 15:15; I Chr. 26:27-28), including precious weapons (II Sam. 8:7; I Kings 14:26 ff.; II Kings 11:10).

**5. Inception.** When did the sanctification of an object take effect? It took effect not when it was brought to the sanctuary, as might be expected, but when a declaration of dedication was made. This is the only possible deduction from the dedication (חרם) of Jericho (Josh. 6:17-19) and the story of the dedicated silver (Judg. 17:3). Also the wording of the following sacred gifts indicates that they were sanctified before they were brought to the sanctuary: first-ripe/processed fruits (Num. 18:12-13), tithes (Lev. 27:30-33), and most-sacred offerings (Lev. 6:25 [H 18]; 7:1 ff.). The tannaitic dictum: "Oral dedication is equivalent to transfer" (M. Kid. 1.6; Tosef. Kid. 1.9) prevails in the Bible as well. Within the sanctuary, sanctification could take place by means of the התנוסה. See WAVE OFFERING[S].

6. **Purification as sanctification.** The ablutions prescribed before a theophany effect sanctification, e.g., Exod. 19:10 ff.; Num. 11:8; Josh. 3:5; 7:13 ff. In these cases, the ablutions take place the day before God appears, except for the theophany at Sinai, whose uniqueness requires two days of prior sanctification. The Priestly Code always enjoins severely contaminated persons to undergo ablutions the day before they appear in the sanctuary with their required offerings (the gonorrhoeic, Lev. 15:13 ff.; the leper, Lev. 14:9 ff.; etc.). However, P never designates this process by the root שָׁקַף, which it reserves exclusively for the sanctification of objects and persons (see above). The historical and prophetic books attest that solemn gatherings and fasts are also designated by שָׁקַף (e.g., II Kings 10:20; Joel 1:14; 2:15-17), as is the call to war (e.g., Jer. 6:4, "prepare"; Joel 3:9 [H 4:9]; Mic. 3:5, "declare"), originating in the sanctity of the war camp so that God would abide within (cf. Deut. 23:10-14 [H 11-15]).

\***SANCTUARY.** See SITES, SACRED[S].

\***SANHEDRIN.** From the Greek συνέδριον, literally "council," but the Jewish Hellenistic and rabbinic accounts differ as to its nature. (1) In Hellenistic sources it appears as a supreme political and judicial council, presided over by the king (according to Josephus) or by the high priest in the period of the procurators (according to the NT). (2) The rabbinic sources speak of two sanhedrins, both consisting of religious scholars: (a) the Great Sanhedrin of seventy-one members, which met in the Hall of Gazit ("hewn stones") in the temple; and (b) the small sanhedrins of twenty-three members each, which met in the various cities (Mishna and Tosefta).

1. **Various theories.** The divergence in the usage of "sanhedrin" has given rise to three types of solutions:

a) One group of scholars believes that there was only one sanhedrin and that it was in Jerusalem. Some of them accept only the Hellenistic sources, while others rely only on rabbinic materials. The argument of the former is that the Mishna's description is anachronistic, describing the sanhedrin of the temple era in terms of the situation after its destruction. But these scholars overlook the fact that all the functions ascribed to the sanhedrin in the Mishna, such as judging the tribes, the false prophet, the high priest, etc. (M. Sanh. 1.5), had no relevance after the destruction of the temple. In fact, the avowed aim of the tannaim was to preserve the tradition, so that it not be forgotten because of the changes after the destruction (M. R. H. 4.3).

b) The second group regard the Great Sanhedrin

of the rabbinic sources as a joint meeting of the three small sanhedrins, which were situated in various parts of the temple mount, each consisting of twenty-three members. Together with the president (*māsi'*) and the vice-president (*'ābh bēth dīn*), they constituted seventy-one members. This theory founders on the fact that it is based on a Baraita in the Babylonian Talmud (Sanh. 88b), whereas the Palestinian sources (whose traditions concerning Palestinian events are of course more reliable) assign only three members to each of the courts (*battē dīn*) which met on the temple mount (J.T. Sanh. I.7; Tosef. Hag. II.9; Tosef. Sanh. VII.1). Besides, there is no evidence that the three bodies ever held joint meetings.

c) The third group regard both the Hellenistic and tannaitic sources as authentic. They do not contradict each other, since each refers to a different institution, one to a political authority and the other to a religious one. This approach is no doubt the correct one, since the term συνέδριον applies to various types of councils. In Greek historical writings the term describes a council of federated states, or of chiefs of allied armies, or of a board of trade; in Hellenistic Egypt it designated a council of high officials; and in papyri, a council of a private association. There is no reason, therefore, why in Jerusalem the term "sanhedrin" could not have been applied to both the highest governmental council and to the supreme religious body.

In general, it may be argued that, since the sanhedrins in the Hellenistic sources were presided over by the head of the state, whether king or high priest, they could not have dealt with halachic questions as would a religious sanhedrin. Not only the Herodians, but some of the high priests were not versed in interpreting the Scriptures (M. Yoma 1.6). Josephus boasts that, when he was a boy of fourteen, the chief priests used to come to him constantly "for precise information on some particular in our ordinances" (Jos. Life 2.8). More than that, many, if not most, of them, were Sadducees who rejected the HALACHAH altogether. It is inconceivable, therefore, that they presided over halachic discussions.

2. **The sources.** A closer look at the context in which the terms *synedrion* (Gr.) and *sanhedrin* (Heb.) occur will confirm that there were two types.

a) The first time the term *synedrion* is mentioned in Jewish historical sources is in connection with the Roman general Gabinius. Josephus reports that in the year 57 B.C. he divided the country into five regional synods (συνόδοι; Jos. War I.viii.5) or *synedria* (συνέδρια; Antiq. XIV.v.4). As the Romans did not customarily interfere in the religious life of conquered peoples, it may be assumed that the reference is not to religious bodies, but to political councils or financial agencies charged with the collection of taxes. All trials by a *synedrion* which Josephus relates deal with political cases. Hyrcanus, as ethnarch, presided over the *synedrion* which tried Herod for political murder (Antiq. XIV.ix.4-5). Herod, as king, had a *synedrion* condemn Hyrcanus for plotting against him (Antiq. XV.vi.2), though elsewhere Josephus reports that he did so without benefit of a *synedrion*. The ver-

sions are easily reconcilable if the *synedrion* was Herod's royal council. Herod's sons, charged with rebellion against their father, were tried before a *synedrion* consisting of Roman officials (Antiq. XVI.xi.1-3) or, according to another version, by Herod's "own relatives and the provincial governors" (Jos. War L.xxvii.1).

It would seem on the surface that the condemnation of James, the brother of Jesus, by a *synedrion* was for religious reasons. But then why was it precisely those "who were strict in observance of the law" (Antiq. XX.ix.1) who protested most vigorously against the judgment? The claim that he was condemned for practicing the Pharisaic view is farfetched, since most people followed Pharisaic religious practice. We must conclude that the condemnation was due to a flimsy political reason, namely, that he preached the imminent coming of the Messiah, who was to redeem the people from Roman oppression.

At first sight it would appear as if the *synedrion* which Agrippa II convened to permit the Levitical singers to wear priestly garments (Jos. Antiq. XX.ix.6) was a religious and Pharisaic one, especially since this body's judgment accords with Pharisaic principles (T.B. 'Arak. 2a-b). Actually, matters pertaining to temple procedure were not in the hands of either sanhedrin, but in those of the priestly court (*bêth dîn shel kōhānīm*). Toward the end of the temple era, this court came under the influence of the Pharisaic outlook, as evidenced by the report of the Megillath Ta'anith. This would explain their pro-Pharisaic decision. It is likely that Josephus used the term *synedrion* here merely for convenience' sake. As evidence that this was a *bêth dîn shel kōhānīm* may be cited the fact that Agrippa II had no political authority in Jerusalem; his appointment was solely as curator of the temple (Jos. Antiq. XX.ix.7).

b) As for the *synedrion* mentioned in the NT accounts, scholars are divided on whether it was a political or religious one. Our argument is that it was political.

The accusation for which Pilate crucified Jesus was inscribed on the cross: "The King of the Jews" (Mark 15:26; Matt. 27:37; Luke 23:38). The high priest's concern was similarly political: "If we let him go on thus, every one will believe in him, and the Romans will come and destroy both our holy place and our nation" (John 11:48).

Various arguments have been put forth to show that Jesus violated religious rules for which a religious sanhedrin would impose capital punishment:

i. He deserved death for prophesying the destruction of the temple. But such prophesies were made, not only by the prophets Jeremiah (7:14), Micah (3:12), and Ezekiel (24:21), but also by R. Johanan ben Zakkai (T.B. Yom. 39b) and R. Zadok (T.B. Git. 56a) toward the end of the second temple. In general such prophecy is nothing but the application of Scripture (Lev. 26:31).

ii. Another religious reason claimed for Jesus' death penalty is the various violations of the Torah attributed to him or to his disciples (Mark 7:2-5; Matt. 15:2; Luke 11:38; Mark 3:1-6; Matt. 12:9-14; Luke 6:6-11; Matt. 12:1-2; Mark 2:23-24; etc.). But

none of these acts call for any kind of punishment. At any rate, it has been argued well that the antinomian passages in the NT were written with a missionary intention in Antioch, Alexandria, and Rome.

iii. Talmudic haggadah has also been cited as evidence. T.B. Sanh. 43a relates:

It was taught: On the eve of Passover Yesu [the Nazarene] was hanged. For forty days before the execution took place, a herald went forth and cried, "He is going forth to be stoned because he has practiced sorcery and deceived and led astray Israel. Any one who knoweth aught in his favor, let him come and plead in his behalf." But since nothing was brought forward in his favor, he was hanged on the eve of Passover.

This haggadah bears the mark of the postschismic period, when it would have been invented to justify the separation of the Jews from the Christians. That this tradition is not genuine is proved by the fact that Jesus was said to be a contemporary of Joshua ben Perahya (ca. 80 B.C.), and that his punishment was by hanging. According to some versions, he is called Ben Stada (T.B. Shab. 104b; Tosef. Sanh. X.2), while in another haggadah, his name was Ben Pandera (J.T. 'A.Z. 2.2), or Pantera (Tosef. Hullin II.22). Elsewhere it is said that he was stoned for being a deceiver (Tosef. Sanh. X.11; J.T. Sanh. 7.16; T.B. Sanh. 67a).

Besides, to "deceive" or to "lead astray" (*mēsith*), the term used in the haggadah, is a technical term that refers specifically to idolatry, of which Jesus was not accused. The title "Son of God," which he may have assumed, is elsewhere applied not only to all Israel (Exod. 4:22) and to righteous people (Wisd. Sol. 2:13, 16, 18, etc.), but also especially to the Messiah (Ps. 2:7), on which basis Jesus claimed the title for himself (Mark 14:61-62). Nor is the claim of messiahship a punishable crime in Judaism. A hundred years after Jesus, R. Akiba hailed BAR KOCHBA as "King Messiah" (J.T. Ta'an. 4.2). See TRIAL OF JESUS[S] §3d (4).

The claim that the Jews forced Pilate to crucify Jesus because "it is not lawful for us to put any man to death" (John 18:31) is no doubt the result of polemic necessity in the Roman Empire, rather than a historical record. We have a number of instances which contradict this claim (see TRIAL OF JESUS[S] §1). A sanhedrin condemned Stephen for blasphemy, by stoning (Acts 6:12; 7:58). James, the brother of Jesus, was condemned to stoning by a sanhedrin. The Jews even had the right to execute a Gentile who trespassed on the second enclosure of the temple (Jos. Antiq. XV.xi.5; cf. War V.v.2). The Mishna, too, records R. Zadok's eyewitness account of the execution of the adulterous daughter of a priest (M. Sanh. 7.2). In sum, sanhedrin in Hellenistic sources (Josephus and NT) refers to a political body.

c) On the other hand, the Mishna's list of the Great Sanhedrin's functions cannot be said to include a single case that applied to the sanhedrins in the postdestruction era, in Jamnia (Jabneel), Usha, Tiberias, etc. It could judge a tribe, a false prophet, or the high priest; send forth (the people) to a battle waged of free choice; extend the boundaries of the city (Jerusalem), and of the courts

of the temple; set up sanhedrins for the several tribes; proclaim a city apostate (M. Sanh. 1.5). Other functions were the administration of Water of Ordeals (M. Sot. 1.4; See ORDEAL, JUDICIAL[S]) and the breaking of the heifer's neck (M. Sot. 9.1). It also examined the genealogy of the priests (M. Middot 5.4). The Tosefta adds four more activities: to burn the red heifer, to declare an elder rebellious, to set up a king or to set up a high priest (Tosef. Sanh. III.4). Several of these acts have been substantiated by I and II Maccabees. Thus the description of the Great Sanhedrin's activities in rabbinic literature is historically correct. While its political functions go back to early days, those of a religious nature are applicable to the Roman period.

The only prerogative ascribed by the rabbis to the Great Sanhedrin which was also practiced by the sanhedrins in the postdestruction era was the authority to fix the halachah for all Israel (Tosef. Hag. II.9; Tosef. Sanh. VII.1). However, we have the record of two instances where questions of halachah were submitted for final decision to the sages in the Hall of Gazit (M. Pe'ah 2.6; M. 'Eduyot 7.4) in the temple.

3. **Sanhedrin, bēth dīn, and kenishta.** It is generally assumed that these terms are different names for the same body. An analysis of the texts in which they appear will show that they are not synonymous, though a sanhedrin may occasionally act as a *bēth dīn* (court).

a) That the small sanhedrins (of twenty-three) were not permanent courts is suggested by the fact that each contained only one ordained scholar (*Muphlā*) without whose consent no halachic decision was valid (T.B. Sanh. 17b; M. Hor. 1.4). It would seem strange for a permanent court of this size to contain only one jurist. Further, another member, the counselor (*Yō'ēs*), is designated by the Greek βουλευτής, "member of the city council" (T.B. Sanh. 86b-87a; J.T. Sanh. 2.3; Sifre Deut. 152). Hence, these sanhedrins were city councils, acting only incidentally as courts.

Concomitantly, the Great Sanhedrin was the national council, the supreme political body, with judicial competence limited to a few rare cases. But the late Hasmonean princes, along with the Herodians and Roman procurators, refused to share political hegemony. However, they granted the PHARISEES full religious authority, leading to the separation of the Great Sanhedrin into a political and a religious one. It is chiefly this latter sanhedrin which is described in the rabbinic literature, along with a few of the prerogatives of the national council of early Hasmonean days.

A *bēth dīn*, on the other hand, was a court of justice. Such were the bodies of "seven individuals in each city to adjudicate petty disputes" (Jos. War II.xx.5) and the courts of three which dealt with cases of property, theft, personal injury, etc. (M. Sanh. I.1-3).

b) The *kenishta* (כנישתא) is identified with a sanhedrin only once, in the *scholium* (ca. A.D. tenth century) to Meg. Ta'an. 10. This identification is part of a late fiction which scholars have almost universally accepted as fact. It is safer to assume that the term *kenishta* here retains its usual mean-

ing, as in כנישתא, "the House of the Keneset," namely, the Pharisaic party. This corresponds to the Greek οἶκος, "House [of the Hellenistic associations]." Meg. Ta'an. therefore discusses the legitimization of the Pharisaic party in the days of Simeon ben Shetah.

4. **An antecedent for the religious sanhedrin.** The exclusively religious sanhedrin was not a *creatio ex nihilo*. The citations in the name of the "men of the Great Synagogue," who flourished in the pre-Maccabean era (M. AB. 1.1-2), are exclusively religious (T.B. Ber. 33a). In contrast to the high priests, who represented the government and the cult, they headed a movement for private piety and study. Thus they were the forerunners, not only of the Pharisees, but also of the Great Sanhedrin in the temple. See SYNAGOGUE, THE GREAT[S].

5. **The origin of the term "sanhedrin" in Judaism.** Those who trace its origin to Herod's *synedrion* overlook the earlier reference to it in connection with Gabinius (57 B.C.). Others who see it as an imitation of the Athenian Areopagos (also called a *synedrion*) or the Greek *synedria* (councils or courts) neglect the chronological problems and the absence of direct cultural contact.

More likely, the term came from Hellenized Egypt, where it signified a council of high officials who occasionally acted as a court. Judah in the third century B.C. was subject to the Ptolemaic dynasty, and religious and social contacts continued for centuries thereafter. Thus the LXX uses the term *synedrion* (Prov. 15:22; 22:10) in the sense of deliberative assembly and court of justice.

\***SARDIS.** Excavations since 1958 and attendant research into the sources have added extensively to knowledge of Sardis.

1. **Acropolis.** Two series of pre-Hellenistic walls have been uncovered: on the N side are segments of two concentric terracing walls of evenly trimmed ashlar blocks; on the S are walls of irregular limestone and sandstone blocks (cf. Arrian, *Anabasis of Alexander* I.xvii.3-6, a triple-fortification wall seen by Alexander in ca. 334 B.C.).

2. **Temple of Artemis.** Excavation has produced no evidence of the Archaic temple but shows the area in use from ca. 600 B.C. The temple is a two-cella dipteral structure oriented to the E. The remains are largely Roman. At the W end is a freestanding altar first built during the sixth-fifth centuries B.C.

3. **Churches.** On the E bank of the Pactolus are remains of a Middle Byzantine church (Church E) of a five-dome type known in Serbia, Bulgaria, Greece, and Calabria but otherwise unknown in

Constantinople and Asia Minor. The exterior was embellished with decorative brickwork, the interior with mosaics, frescoes, and stained glass.

Church E was built over a large, fourth-century basilica (EA) having two aisles and an apse. There is evidence that an entire city quarter was transformed into a Christian complex. The period of construction as indicated by coins was mid-fourth to early fifth century.

**4. Cemeteries and tombs.** An extensive burial area has been excavated around Churches E and EA, which was in use until ca. 1400. The shallow graves were lined with tiles or stone slabs and were poor in burial accouterments.

Two chamber tombs having frescoes depicting garlands, Christogram, peacocks, and bread basket (generally accepted symbols of the Eucharist) which date to the fifth and sixth centuries have been excavated. The paintings from one, the "Peacock Tomb," are in the Archaeological Museum, Manisa.

The largest of the Lydian tumuli, believed to be that of Alyattes, has a chamber of carefully fitted limestone masonry. Further W a mound, second in size, is believed to be that of Gyges. An attempt to locate the chamber failed, but the circular wall at the base of a smaller, inner mound was discovered. The wall is of limestone blocks, many of which have drafted borders similar to those of the walls on the S side of the acropolis; the top course has a rounded bolster.

**5. The Lydian sectors.** The Lydian city was an irregular agglomeration (cf. Herodotus V.101, 499 B.C.) with an extension southward along a sacred road to the Artemis precinct. Buildings were of mud brick, many with thatched roofs. Some were brightly decorated with painted tiles and in some cases the roof tiles were painted red and white to form diamond patterns. The industrial and commercial center was enclosed by an irregular stone wall abutted by single room houses or shops (designated HoB in site plans). Further S on the E bank of the Pactolus (designated PN) are Lydian units attached in complexes forming court-like spaces. In this sector are remains of an Archaic altar to Cybele and sacral precinct. S and W of the altar conclusive evidence has been found for gold-refining processes, cupellation, and cementation, dating ca. 600-547 B.C.

**6. Gymnasium and synagogue.** The gymnasium (N of the modern highway) is supported on artificial terracing created after an earthquake destroyed the Hellenistic city in A.D. 17. Symmetrical to the E-W axis the gymnasium had a palaestra on the E and large baths of "Imperial" type on the W. The central unit, comprised of a pair of double-apsed halls flanking a rectangular room, was completed ca. 166 when a base bonded into the podium was inscribed in honor of Lucius Verus. The eastern section centered around a monumental marble court, which has been restored to the top of the second story. A dedicatory inscription to Caracalla, Geta, and Julia Domna dates the façade to 211. An ornate gate leads W into a barrel-vaulted hall with pool and fountains; to the E is a screen colonnade opening into the palaestra.

An integral part of the complex is a large basilican building on the S side of the palaestra, oriented E-W, which was used as a synagogue from ca. A.D. 200 to 616. Partly restored by the Harvard-Cornell expedition, the building comprises three parts: the entrance porch, which fronted on a colonnaded road, a peristyle forecourt having a central krater-fountain, a long main hall ending in an apse. On the N wall of the forecourt above a marble dado is a restored sample of wall decoration belonging to a fifth- or sixth-century redecoration: short pilasters support arcades with a pattern of doves and kraters against a recessed background filled with red mortar. At the E end of the main hall are two small shrines, one Doric and the other Corinthian in style. The hall was divided into seven bays by six pairs of piers; at the W end is an apse lined by three marble benches. The ritual furnishings include a massive marble table supported by eagles in relief and flanked by two pairs of back-to-back lions. Among the finds was a large stone menorah. The floors of both the forecourt and hall were covered with geometric mosaics of the fourth century A.D. On the apse floor is a mosaic showing a water-filled urn from which twine two vines. Above is a dedicatory inscription within a wreath. On either side were peacocks. The walls were revetted with polychrome marble in a framework of Corinthian pilasters. Inscriptions, most in Greek dedicating aspects of the building, attest the status of members of the congregation: many are "citizens of Sardis," nine are city councilors, one a former procurator, and one a count. See Fig S1.

Along the S side of the building runs a row of shops (ca. A.D. 400-600) which opened onto the main E-W colonnaded avenue. One has a marble tank with crosses on it, fed by water pipes. Inscriptions, carved menorahs and crosses, and other finds indicate that both Christians and Jews traded in the shops.

**SAYINGS OF JESUS, FORM OF.** The various forms of the sayings of Jesus correspond to forms familiar from the OT and from the intertestamental literature, above all from the prophetic and wisdom writings. The juxtaposition of independent sayings in larger compositions and in brief scenes also follows from these writings.

Any classification of the sayings must take into consideration formal criteria as well as criteria based on content. It is not enough to try to identify pure forms, for often forms that are quite old have been modified or expanded.

**1. Wisdom sayings.** Large portions of the sayings are reminiscent of the various forms found in wisdom literature. Many of them give the impression of being proverbs, even if they do not all have parallels in the extant Jewish literature (see WISDOM IN THE NT[S] §§1*b*, 3*a*). One group formulates observations from experience in pronouncements immediately obvious to every hearer (Matt. 6:24; Luke 16:13). The hearer can only agree with what has been said, and is then expected to draw new conclusions from it. The rhetorical question is a variant of the pronouncement which forces the hearer much more directly to take a stand (Mark 4:21). Whereas in wisdom literature formulated experience is frequently clothed in the form of a beatitude, of the beatitudes in the Jesus tradition only Luke 11:28 is of this type. Admonitions in the imperative summon the hearer, as in the wisdom literature, to wise behavior and right action (Luke 6:31; Matt. 7:12). Such admonitions often result directly from a proverbially formulated pronouncement but may also occur in eschatological contexts. Finally, conditional sentences also belong in this category (Matt. 6:22-23; Luke 11:34-36). They assert a relationship between an act and its consequence which always holds good in the field of experience. See also LITERATURE, EARLY CHRISTIAN[S] §5.

**2. Prophetic and apocalyptic sayings.** These have essentially the same sentence structure as the wisdom sayings, but the content is different.

BEATITUDES and woes, both familiar from the apocalyptic tradition, also occur in the sayings of Jesus. In both traditions they have been brought together in small groups (beatitudes, Luke 6:20-23; Matt. 5:3 ff.; woes, Luke 11:37-52; Matt. 23:13 ff.). The clauses which form the second part of the sayings give the reason for blessedness or woe; the exclamations have eschatological significance. In Luke 10:13-15; Matt. 11:21-23 we have a parallel to the OT form of the oracles against foreign nations, and the series of woes in Luke 11:37-52 concluding with the announcement of judgment reminds one of Isa. 5:8-24. Related to the beatitudes are the general descriptions of wholeness which fulfill ancient expectations (Luke 7:22-23; Matt. 11:4-6). Sentences formulated according to the law of retaliation, although similar to casuistic law, really correspond to the conditional sentences of the wisdom sayings. Here a relationship is established between one's activity on earth and one's reward or punishment at the final judgment (Luke 12:8-9; Matt. 10:32-33). The announcement of judgment in the form of a threat is especially typical of Q (see Q and Q[S]). As Luke 11:49 shows, Jewish prophecies have most likely been taken up here. Extended announcements of judgment occur at the end of the SERMON ON THE MOUNT and its parallel, the Sermon on the Plain in Luke; evidently such judgments already occurred in the document underlying both in Q. They usually appear in the form of parables (see PARABLE;

PARABLE[S]). Apocalypses (see APOCALYPSE, GENRE [S]) are found in the Markan and in the Q tradition (Mark 13; Luke 17:22-37; Matt. 24:26 ff.) and also in Paul (I Thess. 4:15-17), probably as sayings of the Lord.

**3. Laws and community rules.** The antitheses in the Sermon on the Mount place commands that have been handed down from the OT along with their Jewish interpretation in contrast to their abrogation or expansion by Jesus. Legal statements are formulated in apodictic as well as in casuistic form, and are regarded as binding on the community. Similar material can also be found in the conflict stories where Jesus opposes a Jewish halachah by giving a new one. There are also sayings in which Jesus replaces the Jewish religious practice with new religious rules (Matt. 6:1-18). Early Christian missionary practices are reflected in the accounts of the commissioning of the disciples, where instructions are given for how the missionaries are to be equipped, how they are to conduct themselves, and how they are to proclaim their message (Mark 6:7-13; Luke 10:2-16). The beginnings of discipline within the community can be seen in the new interpretation of Luke 17:3-4 in Matt. 18:15-17, to which close parallels both in content and in form occur in IQS 6.1 and CD 9.2-4. A large portion of this material can be attributed to the community which handed on the sayings. Where Paul explicitly quotes sayings of the Lord in I Corinthians, he develops instructions from them concerning behavior in the community.

**4. Christological sayings.** Sayings in the first person belong in this category. Words which in the tradition spoke about the SON OF MAN in the third person could be transformed into the first person (Matt. 10:32-33; Luke 12:8-9). Other sayings speak about the purpose of Jesus' coming (Mark 2:17), of his peculiar relationship to the Father (Matt. 11:25-27; Luke 10:21-22) or of his approaching suffering and resurrection (Mark 8:31). Evidently the Christology of the early community is here formulated as utterances of Jesus himself. See also CHRISTOLOGY OF THE NT[S] esp. §3a.

**5. Parables.** See PARABLE; PARABLE[S].

**6. Scenes.** Some of the sayings are placed in brief scenes, where a question, either from Jesus' disciples or his opponents, or the conduct of Jesus or of his disciples, occasions a question which the saying of Jesus then answers. This corresponds to the "apophthegm" form familiar from Greek literature; the classification of such material as "pronouncement story" expresses more emphatically the fact that Jesus is here portrayed more as a preacher than as a teacher. The introductory scene can also be a miracle story (see MIRACLE STORIES, NT[S]). A subcategory is that of the conflict story, where discussion centers about the correct interpretation of an OT command after the manner of rabbinic teaching sessions.

**7. Collections.** Sometimes several sayings are juxtaposed in larger compositions, partly according to formal and partly according to material aspects, e.g., a small collection of parables similar in content (Luke 15). Material of similar content but containing different forms has been put together in the early Christian apocalypses (Mark 13; Matt.

24; Luke 21) and in Luke 7:18-35; Matt. 11:2-19 with the three pericopes concerning John the Baptist. Similar collections are also found in compositions such as the discourse in Q, which lies behind the Sermon on the Mount in Matthew and the Sermon on the Plain in Luke, and in the collections of sayings found in the APOSTOLIC FATHERS. The GTh (see THOMAS, GOSPEL OF[S]) presents one saying after another, introduced by the stereotyped, "Jesus said," and only occasionally expanded into an apophthegm. Q shows how soon biographical interest arose, even though the sayings predominate. By connecting the Q tradition with the Markan tradition, Matthew produced summaries of the sayings tradition in longer discourses.

**8. Transmission.** FORM CRITICISM offers no specific criteria for determining the authenticity of a saying; such criteria result only from a combination of observations concerning form, language, and content. Although form criticism has demonstrated that it was not larger compositions, but small units, rarely consisting of more than two or three sentences, that stood at the beginning of the tradition, these small units are only excerpts from the more comprehensive preaching of Jesus. They may either be fundamental principles formulated by Jesus himself or compressed summaries of his preaching formulated by the first transmitters.

The proclamation of Jesus was handed on by the primitive community, because for certain groups salvation was connected with what the pre-Easter Jesus had said. This type of early Christian theology must be distinguished from the type represented by Paul, where the question of salvation centered on the events of Jesus' death and resurrection. Here the sayings of Jesus are used only in PARENESIS. But the interests of those who transmitted Jesus' words cannot be defined as only parenetic or catechetical. In Q and GTh, Jesus is the one whose teaching signifies salvation. Theology here stands in continuity with the teaching of the pre-Easter Jesus by handing on his words; it does not involve that discontinuity with the pre-Easter Jesus which was produced by the interpretation of his death and resurrection.

**SCIENCE AND THE BIBLE.** During the millennium in which the written Bible was produced, SCIENCE was limited and fragmentary; it originated outside of Israel, largely in Babylonia, Egypt, and (later) Greece. As a result the Bible reflects the perspectives of a pre-scientific age. Since the time of Copernicus and Galileo, what we know as modern science has been slowly changing our entire view of ourselves and the universe. The contrast between the world view of the Bible and that of science has in the past resulted in much stress and conflict. Science, however, has in the last half century changed greatly, both in its view

of itself and in its understanding of the world it investigates. At the same time, our understanding of the Bible has also greatly changed, in terms of the complexity of the history of its production, and of the cultural context within which its witness was borne. The conflicts and tensions of the past are being replaced by a new perspective, in which the aspects of reality which each illuminates may be seen to be complementary and mutually enriching. These aspects are discussed here under the following:

1. The universe and man
  2. Mystery and transcendence
  3. Cosmology and creation
    - a. Creation out of nothing
    - b. Primordial chaos
    - c. Creation by process
  4. Biological evolution
  5. Miracle
- Bibliography

**1. The universe and man.** The universe known to those who wrote the Bible was a compact and well-arranged home for man. At its center was the earth, with its abundant resources for all human needs. Above the earth moved the sun, moon, and stars, and beneath it were mysterious forces shrouded in darkness (*see* EARTH; HEAVEN). It had been created only some four thousand years ago, or not much more than a hundred life spans of an individual.

The progress of science has changed all this. First, the earth was removed from the center and given the same status as the other planets around the sun. Then the sun was removed from the center and became only one of a hundred billion other stars making up our galaxy, the Milky Way. Finally, the Milky Way was seen to be just one of billions of similar galaxies in an expanding universe of unimaginable vastness extending out to billions of light-years. The contrast between this universe and that of the Bible seems stark and irreconcilable. Where could the God of the Bible and the creature, man, created in his image find a place in such a universe?

Cosmology and astrophysics have in the last few decades been leading to some new and unexpected thoughts about the universe. For one thing, the contingency and mutability of the universe have emerged as essential elements of it. Everything in the universe, and the universe itself, has a history. Everything is born, has its own pilgrimage through time, and dies. Even space and time and the laws of physics describing behavior in space and time have a beginning and an end. The history of stars from birth to death has become a commonplace. Histories of atoms from hydrogen to uranium and beyond are now being intensively investigated, and the history of galaxies is beginning to be studied. Nothing in nature has permanence any more. The universe as a whole and everything in it appears to be radically contingent on forces beyond itself.

In a chapter in a recent book devoted to Copernicus, Wheeler raised speculations about the universe as a home for man. If the universe had been much smaller than it is, and had it con-

tained correspondingly less matter, it would not have had a sufficient life span to have produced man anywhere within it. Before life could be possible, carbon, nitrogen, oxygen, and phosphorus atoms had to evolve in quantity, and that required several billion years. Once they were available, several more billion years were needed for life to begin and then evolve up to man. So the universe, if it was to produce mankind, had to last at least about eight billion years. But in order to last that long, the universe, according to Einstein's general theory of relativity, had to be about that many billion light-years in size. This can lead to the speculation that man, after all, may be the real reason why the universe is as big as it is. Wheeler raised a second point. Three fundamental constants, the velocity of light, the quantum of angular momentum, and the electric charge on the electron, have precise values in our universe which are independent of each other. The product of the first two divided by the square of the third is a pure number whose value is slightly over 137. If this number had a smaller or a larger value of say 130 or 145, a star like the sun would not be possible, and under those circumstances it does not seem that life could have developed anywhere within the universe. Could it be that God chose the values of these three fundamental constants at the outset when he first created the universe in order eventually to have the opportunity of creating man? Such questions are admittedly highly speculative, but they do suggest that the universe may not be as alien to man as was believed just a short time ago.

**2. Mystery and transcendence.** Until recently, science looked upon its mission as one of clearing up and dispelling one long-established mystery after another. The secrets of nature were believed to lie just below the surface of things. It was felt that when science finished its task, the world would be laid bare and revealed as completely intelligible and nonmysterious. The Bible, on the other hand, is permeated with a profound sense of the mystery of existence. Here again modern science is strongly reviving a sense of mystery, but now it is not the mystery of a problem to be solved, but rather the mysterious quality of the known. The quest for the secret of matter has led into unsuspected depths where strangely beautiful patterns and symmetries emerge. Every particle of matter has a mirror image of itself in a particle of antimatter. Particles and antiparticles are materialized out of radiation, and when they come back together are annihilated. Neutrons and protons seem to be made on an unbreakable "trinity" of very odd particles called "quarks." They do not exist by themselves; but apart from quarks in combinations of three, matter itself cannot exist.

Science is in the process of discovering that mystery is not so much a puzzle to be cleared up as an essential quality of reality by which what is known presents itself to us as strange, amazing, and yet fascinating. Even more compelling is the encounter with mystery in the macrocosm in the death of stars. The final stage of stars approximately the size of our sun is a "white dwarf." In this stage the star is compressed to a density of several

million tons per cubic inch, is about the size of the earth, and behaves physically like a single superatom. Stars somewhat larger than the sun have such strong gravity that their final collapse takes them through the white-dwarf stage into that of a "neutron star" or "pulsar" with a diameter of only ten to thirty miles and a density of billions of tons per cubic inch. The state of matter in them is like that inside the nucleus of an atom, and they rotate extremely rapidly and possess unimaginably powerful magnetic fields. Still more massive stars cannot even stop at this stage. They must collapse through it to such a high density that not even light can escape from their powerful gravity. At this stage, what had been a star becomes an unobservable "black hole." Thereafter nothing can be known about what goes on inside it; the laws of physics discovered here on earth are cancelled and no longer apply. It now

seems that the entire universe was born in a black hole and may well end in one. A black hole is by all odds the most mysterious phenomenon in the universe, and its mystery is ineradicable in principle. In the category of mystery, the scientific and biblical perspectives are again beginning to complement and reinforce each other.

Another way in which science has seemed to conflict with the Bible in the past has been in its apparent denial of any reality transcendent to the natural order. By definition, science is the study of nature. In the fulfillment of its mission, it has staunchly resisted all supernatural explanations. The basic faith for science has been that ultimately all objects and events in space and time would be explained in terms of other objects and events in space and time. A corollary of this faith has been the conviction that the success of science would remove any need of appeal to a transcendent order

NASA

2. The sphere of the earth as photographed from the Apollo 17 spacecraft—from the Mediterranean Sea to the Antarctica south polar ice cap. The Arabian Peninsula can be seen at the NE edge of Africa; the Asian mainland is on the horizon toward the NE.

for such explanations, and that even if such an order existed, it would not affect anything happening in nature. In contrast to this conviction of science, the Bible manifests a lively conviction in the reality of a world transcendent to the natural order, of the heavenly as opposed to the earthly, of the reality of an invisible and unseen world. Moreover this transcendent order is living and active, and powerfully affects events taking place in the natural order. It is, in the NT, the domain of dark and demonic powers capable of destroying man (e.g., Eph. 6:10-16). But most important, it is the domain of the holy and transcendent God whose creative energy and power is immanently at work in nature toward the achievement of his purpose for it.

In this respect also, however, science has been changing greatly in the last few decades. There are numerous and growing hints of a reality transcendent to the natural order. The most complete and accurate theory achieved in physics to date is quantum mechanics. The impressive achievements of this theory all require that particles and atoms be represented by waves which, however, are not waves in our space but probability waves in a shadow realm called "configuration space." The deeper the quest for the secret of matter is pushed, the more it seems to be leading beyond space and time into other dimensions where the ground of existence in space and time is to be found. Physicists studying the properties of our four-dimensional space-time universe do so by "embedding" it in larger spaces of up to ten dimensions. Others work out the mathematics of "white holes," through which matter disappearing from our universe under gravitational collapse into black holes emerges through a narrow passage into some other universe with perhaps different dimensions and properties from ours. Thus some areas of modern science involve an unobservable reality transcendent to our three-dimensional universe, a reality in which our universe is immersed and with which it is in intimate contact at every point.

The contrast between discovery and revelation will always mark the relationship between science and the Bible. It is, however, significant that a growing segment of modern science believes, like the Bible, that a transcendent order of reality does exist. This means that the great revelatory insights of the Bible may again come to illuminate the nature of that part of reality to which science is inexorably being led, but which it finds itself unable to explore.

**3. Cosmology and creation.** The Bible has no single doctrine of creation. In one view, creation does not refer to the origin of things, but refers to a continuous process in which God is always creating "from beginning to end." This "process" creativity is expressed in many biblical passages (cf. Deut. 4:32-39; 26:5-10; Ezek. 16:1-14), and this mode of creation is inherent in the recognition of the God of Israel as the God of history.

In another biblical strand, God creates by bringing order out of CHAOS. This is the case with the two creation stories in Genesis. In the earlier (Gen. 2:4b-23), the account may originally have begun with a story similar to the myth in which

the earth was formed out of the remains of the dragon Rahab, but in the Bible all that remains of that myth are references in other biblical authors (Job 9:13; Ps. 89:10; Isa. 51:9). In the later P account, the primordial chaos is water (Gen. 1:2). In either case, passages in the Bible indicate that chaos continues to lurk in the outlying regions, always ready to return and inundate the creative achievement of God. At a much later stage, the idea of *creatio ex nihilo*, creation out of nothing, arose in order to emphasize that everything which exists in the created order owes its existence to God, and that nothing can exist and participate in being apart from God (Rom. 4:17; Heb. 11:3). For a complete discussion of these several strands in the biblical idea of creation, see COSMOGONY and CREATION.

The current scientific account of creation includes all three of these biblical concepts, as may be seen in the following outline in reverse order:

**a. Creation out of nothing.** A mounting mass of evidence is leading to the conclusion that the present vast universe of galaxies and stars, along with space, time, and matter, was born around ten to twelve billion years ago. In this view of its history, the whole universe would appear to have been born in a black hole, and if so what it contained at birth must, in principle, remain forever hidden and unknown. Such an event can truly be described as a "creation out of nothing." The universe at this point, however, was rapidly expanding as from an immense primordial explosion, and in a very short time it passed out of the black-hole stage and emerged as a visible universe.

**b. Primordial chaos.** A few hours after the beginning of the universe, the expanding space had become filled with a mixture of hydrogen and helium gases formed by nuclear condensation of the neutrons and protons which emerged from the black hole. The temperature was extremely high, and as a result space was also filled with intense light, making the whole universe one vast fireball. For over a billion years, the expanding and cooling mixture of hydrogen and helium was all that existed and so constituted a true "primordial chaos." The immense variety of things now represented in the universe had to take form out of it step by step, in a process of ever-increasing complexity.

**c. Creation by process.** The expanding hydrogen and helium cooled and slowly segregated under gravity into large masses which became our present galaxies, and which the expansion of the universe has carried farther and farther apart ever since. After a few billion more years, smaller masses of hydrogen and helium within each protogalaxy underwent gravitational collapse and became stars. In the hot interiors of the larger stars, heavier atoms from carbon to iron were formed. When these stars exploded, even heavier atoms up to uranium and beyond were formed and then mixed with the surrounding hydrogen and helium. Out of such a mixture, our sun and planets were produced in another gravitational collapse 4.6 billion years ago. In the earth's early oceans, life began and was then carried forward in an amazing process all the way to man.

It is evident from this brief synopsis that, although the size, time span, and details are totally different from those in the world views which prevailed when the Bible was written, all the biblical insights into the nature of God's creative activity are applicable to our present understanding, and that understanding is compatible with the creator God revealed in the Bible. The majesty and religious purity of Genesis 1 stand in sharp contrast to the Babylonian sources from which it was drawn during the Exile. The proper use of the Bible today is not to attempt to make twentieth-century A.D. cosmology conform with sixth-century B.C. Babylonian cosmology, but rather to perform the same interpretive and revelatory function on the former which the Priestly authors performed on the latter.

**4. Biological evolution.** The history of life on earth began 4.6 billion years ago when the sun and planets were formed. The composition of the earth's early atmosphere in conjunction with energetic radiation from the sun was essential for producing the molecules necessary for life. Also essential was liquid water made possible by the precise location of the earth's orbit around the sun. During the first billion years of the earth's history, such molecules combined into long spiral filaments called "nucleic acids" capable of storing information in a very ingenious but simple coding scheme. The code directed the sequence of letters in a twenty-letter alphabet of amino acids to form words of specific spelling called "proteins." By 3.2 billion years ago, this "language of life" had been perfected and elaborated to the point of producing complex organisms similar to modern bacteria.

By 2.5 billion years ago, an auxiliary system, chlorophyll, had evolved which could manufacture nucleic acids and amino acids from sunlight and carbon dioxide, with oxygen as the waste product. Another very similar auxiliary system, cytochromes, also evolved which could manufacture the same components by reacting sugar with oxygen. By 1.9 billion years ago, these systems had become incorporated into many species of organisms like modern algae. By .6 billion years ago, the earth had acquired sufficient oxygen in its atmosphere to shield its surface from lethal ultraviolet radiation from the sun, and life was able to rise to the surface of the sea and, eventually, begin to cover land areas. Visible creatures made up of millions of cells evolved. By .3 billion years ago, the seas swarmed with a wide variety of creatures, and the land was covered with verdure, together with a diversity of insects and oxygen-breathing animals. A major ecological crisis came seventy million years ago, in which many species of marine animals and land reptiles, including the giant dinosaurs, became extinct. There followed a rapid evolution of mammals and of grasses and flowering trees and shrubs. The history of this exciting development culminated just a few million years ago in the evolution of an erect species of primates with ever-enlarging brains, which finally led some forty thousand years ago to the achievement of modern man, when homo sapiens replaced the Neanderthals.

Energetic radiation, chemicals, temperature, and other agents can cause changes in the elaborate codes carried in nucleic acid. The modified code directs changed sequences of amino acids in proteins which may lead to detectable changes in the organism called "mutations." A large population of any species exhibits a number of mutant forms which appear with varying frequencies. In an ever-changing environment, the genetic character of the population will slowly drift, as some mutations are favored and others suppressed. This process is called "natural selection." Selective pressures exerted on mutation patterns of populations in an ever-changing environment led, over long periods of time, to the evolution of species. This is the scientific theory of evolution.

Science can provide increasingly lucid explanations of how the molecular structure of life has operated in evolutionary development, but it cannot account for the particular course which evolution has taken. The reason for this is the statistical character of scientific laws governing the course of events in time. At every moment in the evolution of life, valid alternatives governed by probabilities are open. Science can specify and predict the probability of each alternative, but it has no way of knowing which alternative will be taken in any particular instance. Indeed, the introduction of probability in the formulation of a scientific law constitutes an explicit renunciation of any causal explanation for the alternatives governed by it.

From a strictly scientific standpoint, the history of life on earth, like all other history, could just as well have followed many other paths than the one it took. A number of these would not have led to any notable achievements, and some would seem regressive by our standards. The nature of science and of probability prohibits any evaluative judgments in purely scientific terms among possible courses for the evolution of life. Yet the one course which evolution actually took constitutes an immense creative achievement, an achievement which suggests the patient working out of a transcendent purpose through the hidden operation of an immanent creative energy working through the chances and accidents of history. This is the biblical perspective on the evolution of life and of man.

**5. Miracle.** Historically one of the sharpest lines of division between science and the Bible has been over miracles. This controversy has been sustained by the tacit agreement of both parties that the essence of MIRACLE is the intervention in, and violation of, a law of nature as formulated in science. A careful examination of the concept of miracle in the Bible does not, however, support this assumption. Briefly stated, a miracle in the Bible is an extraordinary event which, for the believer, is clear and certain evidence of the presence and action of God in all events. Whether or not it violates a scientific law is irrelevant. Nevertheless, the majority of the miracles in the Bible, when evaluated in their historical context, do not violate any law of science as such laws are presently understood.

As noted in the preceding section, scientific laws which govern the course of events in time are

probabilistic in character. They do not predict what must happen, but only the probability that one of several alternatives will occur (e.g., the probability of rain in weather forecasting). Moreover events in history (as opposed to controlled conditions in scientific laboratories) are made up of the accidental coming together of elements having no causal relationship with each other (e.g., a sudden fog hides an escaping ship). It is true that most of the time the most probable is what actually happens, and accidents are either avoided or are not crucial. Then history follows the smooth course it is expected to follow, and God's activity in it is not evident. But the great creative turning points in history are formed when several extremely improbable happenings accidentally combine with other improbable happenings to produce some great achievement. In the Bible such an event is a miracle. Many miracles of this character were crucial in the evolution of life and of man. For those, however, who acknowledge no source of truth or understanding beyond science, the same event is not a miracle. For them it must remain an extremely odd and unpredictable occurrence without meaning or explanation. Science has no operational means of probing behind probability and accident. For the believer, however, such a turning-point event decisively reveals the presence and action of God, either in redemption or judgment, in the shaping of all history. It is only through biblical faith that the event can be recognized and responded to as a purposeful action of God and, therefore, as a miracle. The categories of faith and miracle are inextricably and necessarily bound together.

**SCRIPTURE, AUTHORITY OF.** The question of the authority of Scripture underlies many of the problems within modern biblical study, even where it is not expressly mentioned. Most interpreters stand within some tradition in which it has been understood for centuries that the Bible is studied not just for its antiquarian interest, nor for the aesthetic beauty of its imagery, nor as the opinions that this person or that happened to hold, but because it has and should have some commanding influence over what is to be believed, said, and done. In other words, the Bible is worthy to be called Holy Scripture because it conveys, mirrors,

or reflects something authentic or valid about God and his works. Even those who seek to practice an exegesis that is theologically neutral will often tend to find in the Bible some indication of a principle or a process which they believe to be dominant in human existence or supremely important for it; and, in any case, they find it hard to free themselves entirely from the influence of the long tradition which has interpreted the Bible as a book having authority. But the term "authority" and the term "Scripture" both direct us toward the theological and religious use of the Bible, rather than the strictly scientific study of it.

1. The terminology
    - a. Inspiration
    - b. Word of God
    - c. Authority
  2. Sources of the Bible's authority
    - a. Its character as the classical literature of the people of God

    - c. Its theology
    - d. Cumulative tradition
  3. Problems about the authority of Scripture
    - a. The canon
    - b. The "center"
    - c. Applicability and relevance
- Bibliography

1. **The terminology. a. Inspiration.** This is a classical term in theology, but in modern times it has come to be used mainly in conservative circles, both Protestant and Roman Catholic. The word lays emphasis on the origin of Scripture: it suggests that Scripture in some way comes from God. The question then is, How? In what way is it intelligible to us today to affirm that the Bible, a human book, of known historical origins, came from God? The historical-critical exegete explains the Bible through its derivation from the thought of the writers and the tradition behind them, the thought of ancient Israel and of the leaders of the early church; and he does not find any element which in principle is not so explicable. Thus, even if the Bible is thought of as "coming from" God, it does not seem to make any decisive difference to exegesis.

Among conservatives inspiration has commonly been linked with ideas of inerrancy and infallibility. Because the Bible comes from God, it is supposed, there cannot be any error in it, whether theological or historical. At the present time there are signs of a fresh interest in the idea of inspiration in a form which would be dissociated from these conservative suggestions. It is felt that, in spite of the human character and derivation of the Bible, there must be some sense in which it is meaningful to say that it comes from God; but this would have to be so framed as to accept the historical inaccuracies and even contradictions of the Bible. Indeed, inspiration might have to be so thought of as to admit even theological imperfection.

**b. Word of God.** In some modern theology, and especially in the current which is best repre-

sented by Karl Barth, the term "Word of God" has been much more prominent than the term "inspiration." Barth emphasized the Word of God but did not identify it with the Bible. The primary form of the Word of God was Christ himself; the secondary was Scripture; and the tertiary was the preaching of Christ by the church on the basis of the scriptural witness. The Bible is thus not revelation, but is human witness to revelation. Yet it is a necessary witness to revelation, and because of this it has authority. It is the given criterion for what is to be said in the preaching of the church. If Scripture on one side is entirely the word of man, on another side it is entirely the Word of God.

This scheme, for all its fine balance, has received less attention in recent years. Though theologically impressive, it has seemed to offer little help in solving actual interpretative problems within biblical scholarship; also, the focus of study has moved from the difference between divine and human to the difference between ancient and modern, between biblical times and our own.

**c. Authority.** This is the term that has been most generally used in modern discussions of the status of the Bible in church and theology. It is a term that defines relations, in particular, the relation between the Bible and ourselves, implying that the Bible is something binding upon us, something to which we have to submit ourselves. It is also used to define the relation between the Bible and other documents or sources of knowledge which might influence us in a similar way. It implies that these other sources are important and proper, but that the Bible has a higher order of authority than they.

The term "authority" is thus flexible. It can be used of the Bible without absolutizing it, without implying that it has some kind of perfection. It can take the Bible just as it is. Whatever the matter of its origin, and whether it contains historical inaccuracies or not—even whether it contains theological errors or not—it can still be ranged in terms of authority as against all other factors that might influence the faith and life of the church.

In the last years, nevertheless, there has been some difficulty about the idea of authority also. In earlier centuries it seemed obvious that religion involved authority and that it worked through an authority which was imposed upon people and had to be simply accepted by them. Modern trends of thought resist this. Not only is general opinion critical of claims to authority, but even theology itself is no longer necessarily, or ordinarily, an authority structure.

Moreover, the idea of the authority of Scripture has been associated with the search for one overarching principle which might justify and support that authority in all the diverse applications of Scripture. In contrast with this, some recent thought has tried to distinguish between the various *functions* of Scripture, suggesting that the Bible had no single form of authority but that its influence and importance varied from one to another of its functions.

2. Sources of the Bible's authority. If the Bible

has some sort of special status, then this is not simply because it is the Bible. It is usual to point to something, other than just the Bible itself, as the ground upon which this status rests. Different views of the authority of Scripture rest upon different views of this basis.

**a. Its character as the classical literature of the people of God.** The Bible may be thought of as the classical literature of the people of God in ancient times, the Israelites of the OT and the early Christian community. This people, like other societies, has a kind of foundation myth or story, which has been inherited by subsequent generations of the same community, and which is solemnly read and expounded when the people come together. This myth informs the minds of the members of the community, providing them with pictures, types, and categories through which they organize their experience. Though the community has added later tradition and experience, this later tradition has itself acknowledged the Bible as its own authority. Thus Christian or Jewish experience quite factually means experience within a tradition for which the Bible has always been the basic literary paradigm. The effectiveness of the Bible as the basic literary paradigm is not dependent on whether the stories contained in it are historically true. The Bible contains materials, like the stories of Job or of Jonah or the parables of the NT, which are more or less fictional in character.

Most scholars hold that this, even if part of the truth, is not the whole truth. Many of the main theological issues concerning the Bible do not find expression at all in a purely literary approach to its authority.

**b. Its relation to the events which it narrates and from which it derives.** A much more prevalent and influential view has based the authority of Scripture on the events that lie behind it, the history that it narrates. Revelation is in historical events (*see REVELATION IN HISTORY[S]*), and it is upon these events that faith is based. Scripture is not itself revelation, but is a supreme witness to certain events, which it interprets theologically. Purely descriptively, it is said, this is a characteristic feature of the Bible. In comparison with other sacred and religious books, it is distinctively a work concerned with history. If the Bible has authority, then, it is not because of its intrinsic character as an inspired book, but because of the events which it narrates and from which it derives.

This view has the advantage that it can allow that the biblical reports of events are imperfect. There were indeed events, and these events are the media of revelation; but the events were not exactly as they are depicted in the Bible. This distinction between the real events and the biblical depictions of them has seemed to be an advantage. The biblical reporting of events is never mere objective reporting; rather, it is testimony in faith, a record of events as seen through the screen of that faith which these same events generated. That differing accounts of the same event should arise is natural: these depend on different faith interpretations, but all are alike valid testimonies to the events.

A position of this kind has been the dominant one in mid-twentieth-century biblical theology (see BIBLICAL THEOLOGY[S]), but it suffers from several weaknesses. First, there is much obscurity about the nature of the "events" which lie behind Scripture and to which a revelational function is ascribed. Are they accessible to historical investigation or not? Are they special events which break the chain of normal historical causation, or are they events on a normal historical level which nevertheless somehow bear the imprint of a divine hand in a way in which other historical events do not? Again, some of the "events" registered in the Bible were not events at all (Noah's flood, Jonah's voyage in the belly of the whale); or, if they took place at all, the actuality was so far removed from the biblical depiction as to mean that this depiction was not a fair representation of this event (e.g., the Israelite capture of Jericho).

Thus, secondly, the emphasis on the events has often in effect been an emphasis on the history-centered way of thinking characteristic of the Bible; in other words, it has been an emphasis on a feature of the *religion* of the Bible, rather than on events as factual occurrences. The scheme of revelation in history, event and interpretation, took its departure from the realistic idiom of the "mighty acts of God." God is depicted as speaking in normal human sentences, sending thunder, fire, and plagues, submerging the world in water, and dividing the sea so that its water stands up like a wall. But the emphasis passed quickly from these acts to the mental structure of Israel's response, and the resultant picture of a revelation through history has had no close fit with the biblical depiction from which it started and from which it drew its theological and emotional values.

Thirdly, the argument from events does not satisfactorily demonstrate the authority of Scripture, of this group of books in particular. It might equally well lead to some kind of creed, a list of major events with an interpretation attached. To those who in any case believed passionately in the authority of Scripture it seemed easy enough to say that it has authority because of the events that lie behind it. But to the modern person, to whom it is really doubtful in what sense, if any, the Bible has authority, this argument does not work. Starting from the events, he does not necessarily arrive at the authority of this mixed collection of books. For not all that is in the Bible can reasonably be classed as reportage or interpretation of events. It includes all kinds of information—historical, geographical, cosmological, social, anthropological, legal, and religious. And certain sections—notably the wisdom literature of the OT and many psalms—do not have narrative form and do not concern themselves with the interpretation of past events.

*c. Its theology.* It is probable that most views of scriptural authority have really depended on another basis, which has not been articulated clearly: it is the theology of Scripture that gives it authority. It was at one time unfashionable to speak of Scripture as containing theology, but this feeling has now largely passed away, and many detailed

studies are evidence of the sense among scholars that the Bible contains theology, although its theology takes forms different from those of most later theological writing. A current of theological development, conflict, and reconstruction forms the center of intellectual history within Scripture. To say then that Scripture has authority means that the theology within Scripture is normative for the theology of later times. Theology has continued after scriptural times and will always continue, but it can be wholesome for the church only insofar as it seeks to relate itself to, or to accept as a criterion, the theology of Scripture itself.

This position, however, has two weak points: the existence of theological differences within Scripture and the existence of theological continuity between Scripture and postscriptural theology. How then can a clear difference between scriptural and other theology be maintained?

*d. Cumulative tradition.* The Bible is not so much history as it is history-like. Much of it has narrative character, and this narrative spirals back and forth across the line of history. Sometimes it is nearer to history, sometimes farther from it. The relation to history is thus important but cannot be made into the absolute mark of biblical style and the source of its authority. The story is cumulative; we do not begin with a great revelatory event, from which a definitive set of interpretations are then drawn. Rather, we begin with small events, the tradition of which generates a religious and theological framework within which later events may be understood. It is often unclear to us whether the "events" narrated are external historical events or rather the symbols of intellectual crises within the tradition. At any one stage the tradition has within it a model for the understanding of God, which model forms the basis for conflicts and discussions which in turn lead on to another stage. Christian faith, like Jewish faith, is faith structured upon such a basic model. This model was worked out in Scripture; Scripture contains not only the finished product but elements of the stages through which the tradition passed. The fixation of tradition in the form of Scripture altered the character of the tradition. Tradition ran on into postbiblical times (which actually overlapped with Scripture) but increasingly became a tradition that interpreted an already existing Scripture. Thus the existence of a "Holy Scripture" is something built into the structure of Jewish and Christian faith and tradition; it played its part in the events of the origin of Christianity and in the relating and interpreting of these events. The existence of this model in a fixed, written source enables us today to look critically at our own tradition in the light of that earlier source; it also provides a means by which we, looking at the present and future, can orient ourselves in relation to our problems.

But must modern theology be "biblical" in its form? If Scripture is built into the structure of tradition and religion, then theology, if it understands itself as an explication of faith, must at some point meet with the Bible and express its own relation to it. But whether theology takes a more

or a less scriptural form and style is a question decided not by external authority, but by theology itself in its expression of that relation.

### 3. Problems about the authority of Scripture.

**a. The canon.** The fact of the canon of Scripture is often felt to be irrational: Why should some books be included and others not? Is there any clear difference of value between those books which lie within our Bible and those which do not? In brief, one would have to say that the canon is something inherited from a particular time in the past when canon formation was an active process. The reasons why this or that book was received or rejected are imperfectly known, and if they were known it is doubtful whether they could be reconciled with the findings of modern exegesis. It is certainly not possible to draw absolute distinctions of value between books that have become canonical and others which have not. Where such distinctions can be made, one can point to similar distinctions within the canonical literature itself. Thus one may doubt if there is much difference between Ecclesiastes and Ecclesiasticus, but there is a big difference between either of them and Deuteronomy or Isaiah. The distinction is a relative one, but that does not mean it is unimportant. There is a real historical and theological distinction between books that came close to the same tradition from which the canonical Scripture came, such as Ecclesiasticus or Wisdom, and books that came from a substantially differing current of tradition, such as some Gnostic documents. See CANON OF THE OT §9 and supplementary article; CANON OF THE NT §§B, C and supplementary article.

**b. The "center."** Interpreters of Scripture seldom find themselves able to take all of it as one piece. Certain elements seem to be peripheral for many purposes while others are central. But it is hard to find a definition of the "center" which will satisfy everyone. For the OT a good example is the formula "Yahweh the God of Israel, Israel the people of Yahweh" (R. Smend, after Wellhausen). Some, by contrast, and notably von Rad, have denied that any such center is to be found. After a period in which the "unity of the Bible" was stressed (see BIBLICAL THEOLOGY[S]), there came a tendency to admit severe theological conflicts within Scripture. Yet most theologies of OT and NT continue to work with some idea of a center.

The identification of such a center means the granting of priority to certain parts of Scripture or certain themes within it. Sometimes such priorities are spoken of as a "canon within the canon." This is unfortunate, since "canon" suggests something public, fixed, and permanent. Instead, the priorities are individual to various currents of exegesis; they are (or should be) fluid and liable to change. It is unlikely that interpretation can work without such priorities, in spite of their tentative and impermanent character. They are valid because they derive from a characteristic of the scriptural material itself, which is not homogeneous but has points of greater and lesser explicitness and clarity. The less explicit areas may be survivals from earlier stages of the

tradition or background rather than central material for its current movement. But even that which is peripheral has importance for the picture as a whole, and that which has in the past been taken as peripheral may become much more central than was expected.

**c. Applicability and relevance.** To many the authority of Scripture now seems less important than its relevance. Cultural conditions have changed since biblical times, and how can biblical thoughts, whether authoritative or not, decide what we should do or think under our very different cultural and social conditions? The range of applicability of the Bible has in fact been suffering reduction over a long period. At one time it was thought to have authority even in matters of natural science, but this is no longer believed. This process has been a gain, in that it has concentrated attention on the function of Scripture as a theological and religious document. But will even this be lost, if it is felt that Scripture, though truly theological in character, cannot speak relevantly to us today?

Only one brief suggestion can be offered here. Scripture is an ancient book and cannot be made into anything else. The task of interpretation is not to drag the texts out of their original situation and "apply" them to the modern world. Rather, Scripture, as a work of the past and so understood, feeds and illuminates the understanding of modern men and women in their situation. It does not usually apply directly to the modern situation, but within the church and the situation of faith it builds and enriches the faith in which people are able to see their own situation more clearly and to judge their actions more rightly. On the other hand, it is wrong to absolutize the differences between biblical society and modern society, as if no bridge could be built between them. Cultures are not completely closed entities—biblical culture in particular was not—and the ability to receive and absorb from other cultures is a mark of modern culture in particular.

\*SCYTHIANS [Σκυθῆαι]. The name given by Greeks to tribes ruling southern Russia after the eighth century B.C., and by extension applied to all similar inhabitants of the Russian steppe. Iranian by language and origin, the Scythians were horse nomads in central Asia who, pressured by tribes further east, invaded southern Russia. Among the

earliest peoples to master the art of riding (as opposed to using chariots), they drove out or subjugated the earlier inhabitants, the Cimmerians (see GOMER §1). Forced southward, the Cimmerians entered the Near East through Urartu (see ARARAT §1) during the reign of the Assyrian King Sargon II (722-705 B.C.), but were driven into Asia Minor, where they destroyed the kingdom of Phrygia.

The Scythians (Akkad. *Ašguzai*, *Iškuzai*) first appear in Assyrian records under Esarhaddon (681-670 B.C.), led by their king, Ishpaka. Another of their chiefs, Bartatua, concluded a treaty with Esarhaddon and asked for one of his daughters in marriage. During the final years of the Assyrian Empire, they extended their hegemony over much of northern Mesopotamia E of the Halys river as far as Media, and according to Herodotus (I.104, 106; IV.1; VII.20) ruled almost all of this area for twenty-eight years, raiding the surrounding countries. Herodotus (I.105) records a raid to the borders of Egypt, where they were bought off by Pharaoh Psammetichus (presumably I, 663-609 B.C.). On their return they are said to have destroyed the temple of the "Heavenly Aphrodite" at ASHKELON.

The part played by the Scythians as Assyrian allies in the years leading up to the fall of Nineveh (612 B.C.) and the chronology of their movements is much debated, and no scholarly consensus has yet been achieved. This uncertainty makes it difficult to assess their precise influence on the OT. The Scythian raid into Palestine has been cited as the occasion for the book of ZEPHANIAH and the so-called "foe from the north" oracles in JEREMIAH (see §B1). The identification is based in part on the assumption of a massive Scythian presence in Palestine—an assumption founded on a misinterpretation of Herodotus, who portrays the Palestinian raid as secondary to the main Scythian activity in the N. The Hellenistic name of BETHSHAN (see §4), Scythopolis, can no longer be used as evidence of permanent Scythian settlement in Palestine. Thus the influence of the Scythians on these passages was apparently less direct than allowed by older scholarship.

The Scythians are referred to as ASHKENAZ in Gen. 10:3; I Chr. 1:6; and Jer. 51:27, where they are associated with peoples of Asia Minor and northern Mesopotamia. After their period of domination, they were pushed back into southern Russia by the Medes, where they were the ruling power until the third century B.C., after which they were gradually conquered by the Sarmatians, another nomadic Indo-Iranian people.

Almost all that is known of the Scythians' life and beliefs is derived from references in ancient literature, notably Book IV of Herodotus' *History* and the Pseudo-Hippocratic *De Aeris, Aquis, Locis*. As nomads, the Scythians had no permanent settlements and, with one notable exception, left no permanent monuments. In their movements the men rode on horseback, while the women and children were carried in tent-like covered wagons. Little is known of their religion, except the names of some members of their pantheon and that they

apparently believed in a life after death not too different from that on earth. This last is deduced from the extensive burial mounds erected over the tombs of their kings, the excavation of which has provided us with our other great source of information about the Scythians. The Scythian rulers were embalmed and buried together with their horses, concubines, and retainers, and a considerable number of personal ornaments and effects, often in gold. These ornaments were spectacularly decorated in the so-called "animal style" and are the Scythians' chief surviving cultural legacy. The origin and affinities of this style are disputed, but it does show a relationship with some ancient Near Eastern and Iranian art.

Despite the skill displayed in their art, the Scythians were regarded by other peoples as the epitome of barbarism, and their name became proverbial for extreme savagery. In this sense they are mentioned in the Apocrypha and Pseudepigrapha (II Macc. 4:47; III Macc. 7:5; IV Macc. 10:7) as well as the NT (Col. 3:11), where Paul teaches that the Christian dispensation is for all men, including the Scythians.

\***SEA, MOLTEN.** The largest of the bronze objects standing in the courtyard of Solomon's temple. There are no clear archaeological parallels. Parrot, however, has compared it with a huge basin, made of limestone, that was found in Cyprus. Four imitation handles carved in relief near the edge of the basin encircle representations of bulls, a motif which figures prominently in the biblical description of the Sea.

**SEA PEOPLES.** See PHILISTINES; PHILISTINES[S].

\***SECRET, MESSIANIC.** A major theme in the Gospel of Mark, first identified by Wrede, who pointed out Jesus' frequent commands to secrecy in the gospel: the commands to demons to be silent about his messianic status (1:25, 34; 3:12); the prohibitions against speaking of the miracles (1:43-45; 5:43; 7:36; 8:26); the commands to the disciples to be silent about Peter's confession (8:30) and the transfiguration (9:9). In addition

to these specific commands to secrecy there are general attempts by Jesus to remain incognito (7:24; 9:30-31), and in the account of the healing of the blind man at Jericho "many" command him to secrecy (10:48).

1. **Wrede's thesis.** Wrede attempted to explain the secrecy theme in Mark by arguing that Jesus had not claimed messiahship during his lifetime and that messianic status was first attributed to him after his death by the early Christians. As they came to believe in Jesus as the Messiah, the early Christians created traditions about him which showed him being accepted as Messiah during his lifetime. Such traditions are to be found in the Gospel of Mark, and so far as it presents this understanding of Jesus as Messiah the gospel is the first chapter of a history of Christian doctrine: it depicts Jesus according to an understanding of his person reached by theological reflection in the early Christian communities. But, Wrede held, such an understanding of Jesus and his ministry would necessarily stand in tension with actual historical reminiscence of that ministry as having been nonmessianic. Thus, the idea of the messianic secret developed in the early Christian communities as a literary device for resolving this tension. Jesus was depicted as exhibiting during his lifetime the qualities which Christian piety had come to attribute to him, but as commanding secrecy about them until after his death and resurrection. In this way the Christian scribes were able to develop their essentially dogmatic traditions of Jesus as the Messiah-Son of God, and to reconcile them with the non-messianic traditions concerning his actual life and death.

2. **Discussion since Wrede.** Wrede's thesis was propounded at a time when the Gospel of Mark was considered essentially a historical chronicle of the ministry of Jesus, and it proved to be a bombshell in the scholarly discussion. But support for the thesis grew, especially after 1919 when FORM CRITICISM undermined the older historicizing view of the gospel (see MARK, GOSPEL OF[S] §1). As it gathered support, however, the thesis underwent significant modification. The monolithic character of Wrede's hypothesis was given up, and so was the attempt to make the one hypothesis explain all the elements in the gospel to which Wrede called attention. Moreover, it came to be recognized that the most important elements were those connected with the messianic status of Jesus; not the general commands to silence, but the specific commands to secrecy about his person. It was recognized, further, that this christological element in the messianic secret was a theme developed by the evangelist, rather than by anonymous scribes in the pre-Markan tradition. But before 1950 scholars lacked the methodological resources to investigate a literary concern of the evangelist himself, so further progress was difficult. After 1950 this situation changed as REDACTION CRITICISM developed and provided the methodological basis for such an investigation. Subsequently, the discussion has moved to firmer ground.

A current understanding of the messianic secret would be that it is a theme pursued by the evan-

gelist Mark, not in order to introduce a christological motif into the tradition, but rather to correct one already present. Mark inherited a tradition in which Jesus was depicted as a wonder-working Son of God, and he is concerned to supplement this christological understanding by interpreting Jesus also as the Son of man who must necessarily suffer.

Such an understanding would distinguish between commands to secrecy already present in the tradition and their purpose, and commands introduced redactionally by the evangelist and their purpose. So, for example, 1:25 would be understood as traditional, a typical element in an EXORCISM story, while 1:34; 3:12; 8:30; 9:9 would all be seen as redactional and as serving a Markan redactional purpose. To these latter 14:62 would be added. There Jesus formally discloses the messianic secret by means of his formula-like acceptance of the titles "Christ" (=Messiah) and "Son of the Blessed" (i.e., of God): "I am." (Compare 13:6 where RSV, "I am he!" translates the same formula-like phrase translated "I am" at 14:62.)

The redactional commands, therefore, are to be understood as a literary device whereby the evangelist emphasizes that the titles are not to be used unless they can be properly interpreted. This meaning is taught by the use of Son of man in 8:27-10:45, and only after this can the titles be properly used, as they are in 14:61 (ironically by the high priest) and 15:39 (by the centurion symbolizing the Gentile mission). These two are the only instances in the gospel of a public testimonial or confessional use of Christ/Messiah or Son of God which is not followed by a command to secrecy (as at 1:34; 3:12; 8:30; 9:9 [secrecy concerning the Transfiguration testimony; the Baptismal testimony, 1:11, is not public but private—only Jesus hears the voice]) or by an interpretation using Son of man (8:31; 9:31; 10:32-34 all interpret the confession of 8:29). The apparent exception, 5:7, is not testimony or confession but recognition, a traditional element in exorcism stories. 14:61 and 15:39 both come after the true meaning of the titles has been established: the former provides the occasion for the formal disclosure of the secret; the latter symbolizes the Gentile acceptance of "the gospel of Jesus Christ, the Son of God" (1:1).

**SEDHEQ (GOD)** sē'dēk [שֶׁדֶק, "propriety" or "justice"]. Šedheq was worshiped by western Semites as the personification of cosmic order, that which vindicated the innocent and brought the guilty to punishment. The root *šdq* appears as a theophoric element in personal names throughout the Semitic world. The deity was prominent in the pre-Judean cult of Jerusalem and in the development of biblical religion came to be merged into the person of Yahweh. In the Bible, *šedheq* and *mišōr* (justice and right) often appear together (Isa. 11:4; 45:19; Pss. 9:8; 45:7; 58:1 [H 2]; 98:9), corresponding to the divine pair *šdq* and *mšr* in the Ugaritic texts and to Suduk and Misor in Sanchuniathon's account of Phoenician religion preserved by Philo of Byblos.

Šedheq and Mishor correspond to Kittu and Mesharu in the Babylonian solar cult. These deities are attendants of Shamash, the sun god, and are described as "seated before Shamash," or "the minister of his right hand." That Kittu ("justice," from Akkad. *kānu*) is to be equated with Šedheq is confirmed by the name of King Ammisaduqa of the First Dynasty of Babylon. One of the king lists renders this West Semitic name into Akkadian as Kim-tum-kit-tum ("the Kinsman is Kittu").

It is quite likely that Šedheq of Jerusalem was likewise associated with the sun, and that even in biblical religion this association did not die out (note the expression *šemeš š'dhāqā*, "sun of righteousness," in Mal. 4:2). The association of Šedheq with Canaanite Jerusalem is demonstrated by the royal names Melchizedek ("My King is Šedheq," Gen. 14:18) and Adonizedek ("My Lord is Šedheq," Josh. 10:1). The name of Zadok, whom Solomon appointed as his chief priest (I Kings 2:35), is linked to the cult of Šedheq. The displacement of the old priesthood of Yahweh by the line of Šadhoq no doubt resulted in the merging of some of the indigenous cultic traditions of Jerusalem into Yahwism. The persistence into Judean times of the influence of Šedheq is shown by Isaiah's reference to Jerusalem as "the city of Šedheq" (Isa. 1:26; cf. vs. 21), and Jeremiah's description of the city as "the habitation of Šedheq" (31:23).

Deutero-Isaiah uses Šedheq as a synonym for Yahweh (Isa. 51:1; 61:3). It is likely that, even before the Babylonian exile, Šedheq had come to be regarded as a hypostasis of Yahweh, a divine entity in its own right but basically a manifestation or personification of a quality or component part of the superior divinity. Šedheq seems to have been venerated as the "right hand" of Yahweh (Isa. 41:10; cf. Ps. 48:10 [H 11]). Šedheq as attendant upon Yahweh is also known: Ps. 85:13 [H 14] states that Šedheq "will go before him, and make his footsteps a way," while 85:11 relates that Šedheq "will look down from the sky." Šedheq as a heavenly being appears in the Dead Sea Scrolls (IQM, col. 17, lines 6-8: "Šedheq will rejoice in the heavenly heights"), and in the Jewish mystical tradition Šedheq becomes a term for the Shekinah, the feminine aspect of Deity that executes judgment.

The idea of Šedheq as the right hand of Yahweh

caused him to be linked to the figure of the Messiah, the King who sits at Yahweh's right hand. He is called the *šemaḥ šedheq* or *šemaḥ š'dhāqā* ("the Shoot of Šedheq"; cf. Jer. 23:5). The Priestly Messiah is called the *mōrē šedheq* ("the Teacher," or "Rain, of Sedeq"). Behind these titles is the ancient concept that the king embodies the principle of cosmic order, and will vindicate the innocent and punish the guilty.

Because Šedheq is the personification of divine justice, the name is applied to the planet Jupiter (T.B. Shab. 156a, b; 'Er. 56a, b). In late Babylonian times, the god Marduk, associated with the sun and the planet Jupiter, was the patron of justice. Hence Jewish astrology, derived from Babylonian traditions, calls the planet Jupiter "Šedheq," and the "star of the Messiah."

**\*SELA (OF EDOM).** The biblical and postbiblical evidence favors an identification with es-Sela', 2½ miles NW of Bozrah (Buseira). The identification with Petra dates back to the LXX (e.g., II Kings 14:7; Obad. 3; cf. also Judg. 1:36), which influenced Eusebius (Euseb. Onom. 142:7-8; 144:7-9). Eusebius also admits that the Syrians called Petra "Rekem." Josephus knows only Rekeme (Jos. Antiq. IV.vii.1); corrupt variant Arkē (Jos Antiq. IV.iv.7; cf. Euseb. Onom. 36:13-14, who gives Arkem), which he derives from Rekem, the name of a Midianite ruler (Num. 31:8; Josh. 13:21). Rabbinic literature knows it by the name R'qam d'ḥagrā (Targ. Gen. 14:7; 20:1, etc.), "Rekam of the Hagra (=Limes)," or R'qam Gē'ā, "Rekam of Geia" (Targ. Num. 34:4, etc.) but also reflects the belief that the place was identical with Kadesh-Barnea. The Nabateans themselves called Petra by the name Raqmu (written *raqmw*) as demonstrated conclusively by a new memorial inscription found near the mouth of the Wadi Musa.

Mazar, "Sela'," *Encyclopaedia Biblica* (Hebrew), V (1968), cols. 1050-51.

A. F. RAINEY

**SEMANTICS.** The study of the ways in which linguistic messages, both oral (utterances) and written (texts), convey meanings from their sources (speakers or writers) to their receptors (hearers or readers). It is part of the larger study of semiotics, which is concerned with the functioning of all signaling and symbolic systems, whether human, animal, or mechanical. More specifically, semantics deals with those aspects of meaning which derive

from the internal structure of language, and leaves to other disciplines (history, anthropology, psychology, etc.) the task of discovering the way in which pragmatic, extralinguistic factors contribute to the total meaning of a message.

Semantics in this sense is a recent phenomenon, though speculation on language and meaning is very ancient. The Hebrews thought of words as creative, dynamic forces, bringing into being their referents and constituting an essential part of their being. Plato believed that the relationship of "names" to their referents was natural, intrinsic, and necessary. Such a view, of course, could arise only in a totally monolingual universe of thought. One of the earliest empirical observations arising from the diversity of human languages was that, apart from a tiny part of any language's vocabulary, the relationship between form and meaning is purely arbitrary and conventional. This is a crucial property of language, which contributes greatly to its flexibility and open-endedness. Later both sophists and rhetoricians made useful studies of stylistic devices and their impact. Thinkers in the Middle Ages, the Renaissance, and the Enlightenment, though they gave much thought to language, did not advance semantics.

Progress was impossible, in fact, until a clear distinction was made between *reference* (the use of a word to refer to something) and *denotation* (the abstract representation of the "meaning" of a word). Reference, like mental image, is highly specific, concrete, and idiosyncratic; it is not accessible to systematic study in linguistic terms. Denotation, on the other hand, is related to concept: it is abstract, general, and common to all speakers of a language. When I refer to a specific house, or when I conjure up a mental image of a house, it is highly particularized. But the denotation of *house* (in its ordinary sense) is "building used for human habitation." This precisely defines the domain of all particular houses; it specifies what an object must be in order to be a house, and how we can recognize a house when we see one, but it ignores all the details that distinguish one house from another. Denotation is thus quite accessible to rigorous linguistic analysis; we can work at specifying as parsimoniously as possible the necessary and sufficient conceptual conditions for the appropriate use of a word.

1. **Semantics and etymology.** In the nineteenth century, progress was made as historical and comparative linguistics began to provide for the first time reliable reconstructions of the development through time of linguistic *forms*, so that studies of the development through time of their *meanings* could be based on a solid foundation. Scholars were able to trace with considerable accuracy a number of conceptual paths which the senses of words tend to follow throughout their history. This finally put etymology on a more scientific basis.

a. **Etymology and exegesis.** The result of historical-semantic studies for biblical studies (and for the exegesis of texts in general) is largely negative. It underlines certain empirical facts about language. (1) Semantic change is a universal process, so that virtually all words in all languages change their meanings through time. (2) Though it is possible in retrospect to describe the semantic evolution of words, it is not possible to predict or to control this evolution. (3) Because languages evolve continuously, it is impossible to fix a "time of origin" for a given language or for its vocabulary, except in the relatively rare case of words for whose origin we have documentation; thus, the notion of an "original" meaning is a chimera. (4) Therefore, what a word meant at some past moment, even the moment when it first entered the language, is not determinative of its meaning at a later moment; resemblance between earlier and later meanings of words is a matter to be empirically discovered, not assumed at the outset. (5) Therefore again, it is not legitimate to say that the "original" meaning of a word is its "real" meaning; the "real" meaning of a word must be inferred from its usage in messages of a contemporary period.

It is clear that this negative finding is of importance for biblical studies, since some scholars still work today as if "original" meanings of Greek and Hebrew words have a privileged position in exegesis. But given the above facts, this is an illusion.

b. **The use of cognates.** Though far less work has been done on shifts of meaning which occur when words pass from one language to another (loanwords) or on the independent evolution of cognate words in related languages, enough has been done to show that the comparison of cognates is also a highly erratic and unreliable guide to meaning. It can be used only with great caution; where it is not possible, as with a *hapax*, to control the results by reference to contemporary texts

in the same language, it must be admitted that reconstructions are purely speculative. No service is rendered to responsible exegesis by exaggerating the reliability of available evidence.

2. **Synchronic semantic analysis.** In this century, semantics is for most scholars a synchronic study of how linguistic messages convey meanings. Contributions to this study come from linguistics, cultural anthropology, information theory, formal logic, and linguistic philosophy. Differences in focus and terminology will be minimized in this article by taking linguistics as the basic approach.

a. **Words with several meanings.** It has become evident that each word in every language typically has not one but several meanings or senses. This insight is a real advance over the naive earlier view that each word had "a" meaning, but that "the" meaning of some words was very broad and required multiple or complex definitions. At first, efforts continued to be made to preserve a sense of unity among these several meanings by discovering a core or common meaning of which specific senses were extensions. But, though conceptual links can in fact often be established between such senses, it has become increasingly evident that not all senses of a given form could be so related; today, the emphasis is on the discreteness of senses. It is this fact that gives point to critiques in recent decades of that approach to biblical lexicography that sees all of the "wealth of meaning" of certain important words in each of their occurrences. It seems to be a fact of the way people use language that in all but exceptional cases (puns and poetry, for instance), any word has in each of its occurrences one and only one of its several discrete senses.

i. **Polysemy and concordant (literal) translation.** It is the fact that words have several senses that makes concordant translation such a futile exercise, not only because it results in highly bizarre usage in the receptor language, but also because it cannot achieve fidelity to the original. This approach is based on two erroneous assumptions: that each word has a meaning, and that the meaning of a word has a single precise equivalent meaning in a word of the receptor language.

ii. **Polysemy and homonymy.** Attempts have been made to differentiate between polysemy (multiple meanings of the "same" word) and homonymy (meanings of "different" words accidentally sharing the same form). The usual understanding of what makes different specimens of a form the "same" word or "different" words is based on history: thus, *corn*<sub>1</sub>, "grain," and *corn*<sub>2</sub>, "specific types of grain: maize" are the "same" because they are etymologically related, whereas *corn*<sub>3</sub>, "horny node on the toe" is a homonym because it is etymologically unrelated. But these attempts are futile, because historical approaches are not adequate to the task of determining contemporary meanings. On the one hand, people in general are ignorant of the history of their language, so all they can relate are contemporary concepts; on the other hand, it turns out that the different senses of a polysemous form can be just as different as the senses of homonyms, while the senses of homonyms can converge under a popular impression that they are related. Thus,

for the understanding of messages, the distinction between polysemous words and homonyms becomes moot.

iii. **Functional value of discreteness.** It is important for purely functional reasons that the senses of a form (whether polysemous or homonymous) be sufficiently different to avoid ambiguity in communication. If senses were conceptually very close, communication would break down in a confusion of misunderstood messages. To use an analogy, there are a number of towns in the United States called Dayton, but they are unambiguously distinguished by being in different states; if there were two Daytons five miles apart, confusion would be total.

iv. **The use of context.** The mechanisms used by receptors to select the right sense for each word all involve the use of context at a number of levels. There is first the immediate *linguistic* context within the message itself. This involves both grammar (as when a verb has different senses when it is transitive and intransitive, or when a preposition has different senses when followed by different cases) and lexical context (as when *hand* has different meanings in "hand of bananas," "hand of bridge," and "minute hand"). A given sense is either compatible or incompatible with the context. Second, there is, in the case of extended messages and corpuses of messages from the same source, a broader context, in which we must consider the *usage* of the source; here we can assume a high degree of consistency within analogous linguistic contexts (though this must not be allowed to lead to concordant exegesis). Third, there is the specific *situational* context in which the message is formulated and understood. Thus, the sentence "He watered the stock" has different meanings when used on a ranch, in a corporation board room, and in a kitchen. Finally, there is the broader situational context of place, historical period, society, language, and culture. From the last three types of context, one can often infer information about the source's attitudes, beliefs, and intentions, and about the relationships between him and his receptors. In actual communication, all types of context are used simultaneously by receptors to understand messages and to select for each form one meaning only. In other words, true ambiguity (as distinguished from vagueness) is rare. When it does occur, it results either from failure of the source to specify context sufficiently, or from failure of the receptor to operate in the same context as the source. But even here, the subjective experience of ambiguity (in which the receptor consciously is led to ask "Do you mean A or B?") is infrequent; more often, a receptor will clearly understand a single meaning, but one different from the intended one.

In terms of information theory, the sense to be selected is the one which is most predictable from context; or, to put it another way, the one which adds least information to the context. Thus, in "He threw the ball to his sister," one understands *ball* as "spherical toy," not "dance," because "dance" would introduce too much extraneous information, whereas "spherical toy" is just what one would expect a boy to throw to his sister.

The implications of this for exegesis are clear:

to understand a word in a passage, one determines first what are its potential senses; then one uses all available contextual clues to select the one that fits the context. All others are irrelevant.

v. *Exceptions.* Exceptions to this rule do occur, especially in puns and poetry, where for special reasons people intentionally exploit two or more meanings of a form. But such cases are striking precisely because they are scarce; and they are almost invariably marked in some way by context as intentional ambiguities.

In the case of ancient documents, we do encounter irreducible ambiguities. But from what we know of the way people use language, it is sounder to assume that the ambiguity results from our ignorance of some part of the original context than from the intention of the authors.

vi. *Central and peripheral senses.* Attempts are sometimes made to distinguish between "central" and "peripheral" (or "extended" or "secondary") senses. This contrast suggests that among the senses of a form, there is one that may in some sense be most important. This is true in some cases, but not always. Nor has the contrast always been understood in the same way. We have already seen that the "etymological" meaning cannot be taken to be "central," since not all etymological meanings are even in current use. Others have understood "central" as meaning the sense from which it is easiest to trace the others by a chain of conceptual links; but it is not always possible to find such links. Probably the best use of this concept is to define as "central" the sense which is least marked; that is, the sense which is spontaneously thought of when the word is given without any context. Thus, "table" for most native speakers of English evokes the notion of a piece of furniture with a flat top; contexts must be added to lead hearers to the other senses. Once again, the effort to show how senses may be derived from each other may be interesting, but it is of no help in understanding messages.

vii. *Literal and figurative meanings.* The trouble with the distinction between literal and figurative senses is that it is easier to discern intuitively that we are dealing with a figure than to specify what makes it a figure. The ancient rhetoricians provided an analysis of types of figures, whether based on association of ideas (metonyms, synecdoches) or on similarities (similes, metaphors), which has scarcely been improved on in our day. The difficulty is that many extended meanings which are not today perceived as figures clearly originated as figures. They have apparently lost their freshness and hence their impact, and are felt as extended "literal" senses rather than as figures. It may be the case that a sense remains figurative as long as people still think actively of the primary sense on which the figure is based, but loses its figurative quality when it becomes so mundane as to stand on its own. It has also been pointed out that many figures are based on supplementary components of meaning, that is, components not central to the primary meaning of a word. But this is equally true of many "dead" figures, and is by no means true of all still live figures.

One thing is clear, however; when we are dealing with a dead figure, appeal to the literal sense is

not helpful to understanding messages. With figurative as with other senses, either a sense is present or it is not. If the literal sense is not the one intended in a given passage, then it is simply not present. Mention of it only confuses the issue of understanding. A good example is provided by Greek *σάρξ*, of which the unmarked sense was "soft tissue of a living thing." In this sense, and in no other, the English equivalent is "flesh," which has the same unmarked meaning. But when *σάρξ* is used to mean "race" (Rom. 9:2), or when it means "human nature" (Rom. 8:3), it should not be translated "flesh," nor should a note giving the "literal" meaning be appended, since it would only confuse the ordinary reader.

To summarize: if the senses of a single form are so different as to be readily distinguished by use of the context, then the resolution of ambiguity is not the central problem of semantics, especially insofar as semantics aims to help a reader understand a text.

b. *Related senses of different forms.* A far more important issue is the study of closely related senses of different forms, since these are in fact often quite close, and thus do give rise in the mind of the source to choice, and in the mind of the receptor to understanding the reason for the choice. It must be said here that we are concerned with sets of similar senses, not similar words; we can deal with only one sense per form, since the other senses by definition do not belong to the same set (recall the different Dayton's in different states). Thus, *chair*, *stool*, and *bench* all have senses specifiable as "manufactured object used for sitting," and these senses constitute, along with a number of others, a set which is so defined. But each of these words also has senses which do not belong to this set: *chair* as "faculty position," *stool* as "feces," *bench* as "judiciary," etc.

Types of conceptual relationships between the senses of such a set include synonymy and similarity (overlap), inclusion (including the multi-layered inclusion called taxonomy), antonymy, and polarity.

i. *Synonymy and similarity.* Synonymy and similarity are discussed together because there is no sharp cut-off point between them. Synonymy is no more than a high degree of similarity, such that certain terms can substitute for each other in certain contexts with no change in meaning. The more different contexts a pair of terms can be used in interchangeably, the more nearly they are synonymous; but absolute synonymy, which would involve interchangeability in all contexts, seems not to exist. A more rigorous approach to the specification of degrees of similarity of meaning is to analyze senses in terms of semantic components. That is, by decomposing senses into more elementary concepts, one can see which components are shared by a pair of senses and which distinguish them. For example, let us analyze the unmarked sense of *nail*, *screw*, and *bolt*. The components they all share, and which make them a set, are "metal fastener" and "head wider than shaft." The components which distinguish them can best be shown in a matrix:

	<i>nail</i>	<i>screw</i>	<i>bolt</i>
shaft shape:	straight	tapered	straight
shaft			
surface:	smooth	threaded	threaded
tip:	pointed	pointed	blunt
grips by:	friction in hole	threads in hole	threads in nut

It will be noted that there is a certain amount of redundancy here, in that more components are specified than are absolutely necessary. This is often the case in ordinary language; it gives rise to a range of possible definitions of the necessary and sufficient sort.

To take a biblical example, various views have been held of the relationship between the meanings of ἀγαπάω and φιλέω in contexts where both subject and object are persons (either human or divine). In such contexts, in which both verbs appear often, they both have components of affection, concern, appreciation, and so on; in other words, in the context God/human—God/human, they are almost synonymous. Closer examination shows in addition that φιλέω is always used of a love which is based on a pre-existing relationship and is motivated by that relationship; ἀγαπάω is not so specified. But because ἀγαπάω is a more general term which need not be motivated by an existing relationship, it is uniquely appropriate to express the love of God for sinners who are still alienated from him. It is only after such sinners have been justified that φιλέω can be used of God's love for them. In other words, wherever an existing relationship is involved, either verb can be used, as in John 21:15-17, with no difference in meaning. But where a relationship is absent, only ἀγαπάω can be used.

ii. *Inclusion.* Consideration of ἀγαπάω and φιλέω leads naturally to the relationship of inclusion. In this relationship, one sense completely includes the other. Another way of saying the same thing is to say that one sense is more specific, the other more generic. The more generic senses are defined by the fewest components, while more specific senses require more components to define their greater specificity. Incidentally, this relationship may obtain between different senses of a single form as well as between senses of different forms. Often, a single generic sense includes a set of more specific senses, which share all of the generic components but which are distinguished by their specific components. In such cases, we have a taxonomy. For instance, under the term "bolt" mentioned above, one may distinguish stove bolts, carriage bolts, machine bolts, and so on. Similarly, the unmarked sense of "walk" can be made more specific in the senses of "stroll," "march," "shuffle," and so forth. In general, it is possible to substitute a generic sense for a specific one (with loss of the components of specificity); but it is not possible to substitute a specific sense for a generic one in any context where the specific components would be inappropriate (see the discussion of ἀγαπάω and φιλέω above).

As an illustration of inclusion between senses of the same term, we may use *animal*, which in ordinary language has at least three senses: *animal*<sub>1</sub>,

the most generic, in contrast with vegetable and mineral; *animal*<sub>2</sub>, one type of *animal*<sub>1</sub>, in contrast with man, which is another type of *animal*<sub>1</sub>; *animal*<sub>3</sub> (roughly synonymous with scientific *mammal*), a type of *animal*<sub>2</sub>, in contrast with other types of *animal*<sub>2</sub>, such as birds, fish, and so forth. It will be noted that ordinary language taxonomies, in contrast with scientific ones which elaborate and correct them, have fewer levels, and display at times gaps, overlappings, and ambiguities.

iii. *Antonymy.* Antonymy exists between senses of two terms when they share all components except one, for which they have opposite values. For example, *mother* and *father* share the components "kin," "lineal," and "first ascending generation," but are opposites on the sex component. *Father* and *son* share "kin," "lineal," and "male," but are opposite on the generation component.

iv. *Polar oppositions.* Polar opposites can be viewed as a special case of antonymy, in which the set comprises only two senses, there is only one crucial component to define the set, and the two senses have opposite values on the one component. Thus, *good* and *bad* are the only terms in their set, which is defined by the component "general evaluation"; they are respectively at the positive and negative poles on that dimension. The fact that such senses occur only in pairs can be illustrated by the pairs *big-little*, *large-small*: though the first terms of each pair are synonymous, and also the second terms of each pair, they do not interchange in the polar relationship.

3. *Structural meanings.* So far we have been considering the meanings of terms and sets of terms. But words do not convey meaning in isolation; they are normally constituent parts of phrases, clauses, sentences, and whole messages, and the ways in which these are constructed are as important as the words in carrying meaning.

The rules which control these constructions are highly complex and variable. They include the rules of syntax (which for the most part operate within sentence boundaries), rules for the smooth flow of information, rules for connecting up successive references to the same bit of reality throughout a whole message, rules of transition, and so on. Once again, as with individual words, there is no simple one-to-one relationship between a feature of structure and a feature of meaning; the links are in fact extremely complex and subtle.

To illustrate the importance of such structural meaning, it suffices to note the very different meanings of "Bill hit Jim" and "Jim hit Bill," and of "Bill went for a walk after eating" and "After he went for a walk, Bill ate."

a. *Surface structure and deep structure.* It is tempting to think of syntactic structure as conveying meaning directly. Thus, grammarians long defined the syntactic relation "subject of the verb" as if it were synonymous with the semantic relation "actor of the event." A quick glance at the realities, however, dispels such a notion; in "Jim was hit by Bill," *Jim* is the subject, and *Bill* a kind of complement; but the semantic relations are identical with those in "Bill hit Jim." Of course, what signals the difference is the use of a different verbal form, the passive. But consider the set of sentences

(1) "Bill broke the window with a stone"; (2) "The stone broke the window"; (3) "The window broke." In the first instance, with all the roles (actor, victim, instrument) explicit, the actor is indeed the subject. But in the second sentence, making *stone* the subject hardly makes it an actor in the semantic sense: it cannot have intentions and self-propulsion, but must be moved by someone (here left implicit). In the third sentence, it would be absurd to consider *window* an actor. In these cases, the inherent meanings of the words override the apparent significance of the syntactic relation, and no one is fooled into visualizing either a stone or a window as taking an active role in the active verb *broke*. In other words, there are wide discrepancies between the surface appearances and the deep meaning; linguists formalize these discrepancies by talking about surface structure and deep structure. Though many linguists still consider the deep structure to be a part of the syntax, a growing number consider it more economical and intuitively more correct to see it as being strictly semantic.

*b. Parts of speech and semantic categories.* Besides the differences between deep (semantic) structure roles (actor, victim, etc.) and the surface structure syntactic functions (subject, object, etc.), there is in all languages another important type of discrepancy: that between grammatical parts of speech and the semantic nature of the denotata. Traditional grammar ignored this kind of discrepancy also, defining the parts of speech in semantic terms. Nouns, for instance, were often defined as names of persons, places, and things. Nouns which did not fit this definition (*freedom, redness, redemption, etc.*) were lumped in a residual category called "abstract nouns." Once linguists began to see the differences between deep and surface structures, however, a number of them applied this difference to individual terms. They then defined the parts of speech strictly in terms of their potential syntactic functions, and applied semantic definitions to strictly semantic categories of units. Thus, nouns are words which can be potentially subjects and objects of verbs, among other things. It is *objects* (O's—in some recent work called entities) which are persons, animals, inanimate things, etc. Similarly, verb is a strictly syntactic term, while *events* (E's) are defined semantically as actions, processes, etc. This is very useful, as it permits us to recognize as syntactic verbs units which have nothing to do with actions (*be, have*), and which in traditional grammar constituted just as awkward a residual class as abstract nouns. Now it becomes possible to notice that a number of the old abstract nouns (*redemption, baptism, sin, etc.*) are in fact semantically events (many of them in fact derived from verbs) which are syntactically nouns in order to permit the construction of various types of complex surface structures. A third category of semantic units are the *abstracts* (A's—concepts of quality or quantity abstracted from the objects and events in which they inhere). Most of the "abstract nouns" of traditional grammar which are not events are semantically abstracts (*free-dom, red-ness, etc.*). Indo-European languages typically

have parts of speech called adjectives and adverbs which often express these abstracts; they do not in the least change their semantic nature when they are nominalized.

One of the side benefits of the important insight into the difference between nouns, verbs, adjectives, and so forth on the one hand, and the O, E, and A categories on the other, is that we can be liberated from the danger of reifying units which happen to be expressed by "abstract nouns." We can discern, under their superficial noun-ness, their deep nature as E's or A's.

A second bonus, especially precious in translation, is that the translator is liberated from the burden of finding nouns to translate nouns, verbs for verbs, and so on. He recognizes that while the O, E, and A categories are universal, the parts of speech each language makes available for their surface expression are highly variable, both in number and in their specific potential for encoding the categories. Thus, the translator who works in a language where "abstract nouns" do not exist, or are stylistically awkward, is perfectly free to translate a Greek abstract noun by the appropriate verb or other part of speech in another language.

*c. Semantic relations.* The O's, E's, and A's do not occur in isolation, any more than nouns and verbs do in surface structure; they are linked by a great number of semantic relations (R's). A number of relations may link objects and events (actor, victim, product, beneficiary, instrument, etc.); these can be usefully labeled roles (some linguists call them cases, but this is too easily confused with a surface phenomenon of the same name). There are also R's that express relations between two O's (location, part-whole, possession, kinship, etc.). Finally, there are R's that obtain between two or more E's (time R's, such as simultaneous and sequential; logical R's such as cause-effect, conditions, and many others). The surface devices used by different languages to encode the different types of R's are extremely varied: word order, affixes, particles, other lexical devices, and many others. The lack of the same device in a receptor language as is found in a source language need not discourage the translator: he needs first to discover exactly what kind of R he is dealing with, and then to find what device the receptor language uses to encode that kind of R.

The same kinds of R's which obtain within clauses and sentences can often structure (in part) whole messages; that is, they can relate not only single units but large clusters of units in a successive hierarchy of units all the way up to the whole message.

*d. Transformations.* Though the relationships between deep and surface structures are complex, they are not chaotic. Linguists call the rules which formalize the links from deep structure to surface structure (and which can be understood as directions for making appropriate surface structures to match deep structures) *transformations*. Typical transformations which are used in English include the passive transformation: "Bill hit Jim" → "Jim was hit by Bill"; various kinds of highlighting transformations, e.g., "It was Bill who hit Jim";

nominalizations that permit embedding one construction in another, e.g., "Bill's hitting Jim," "The fact that Bill hit Jim," and so on.

Two facts must be pointed out concerning transformations. The first is that any two languages, even if they are closely related, need not have exactly the same kinds of transformations, in terms of surface structure effects. For example, many languages lack a passive transformation. The second is that even when two languages have the "same" transformation, it by no means follows that it is used in the same way, either semantically or stylistically. Thus, English, French, Koine Greek, and Modern Arabic all have passives; but no two of them use passives in the same way. It is thus an error to translate automatically; one must determine the significance of the form in the source text, and translate that.

*e. Kernels.* One way of thinking of deep structures is to visualize them in terms of very simple, very explicit, elementary sentence-types called kernels. English, for instance, has about eight basic kernel types: "John ran"; "John hit Bill"; "John gave Bill an orange"; "John is sick"; "John is in the house"; "John is a boy"; "John is the boy"; and "John has a hat." It will be noted that each encodes in the form of a predication one set of relations between units: three are R's between O's and E's, three are R's between O's (location, identity, "possession"), one is descriptive, and one is classificatory. By the application of various transformations, alone or in combination, all the multitude of surface structures of English can be generated from these types of kernels.

A highly significant fact, especially for translation, is that languages which differ in all possible dimensions when it comes to surface structure are relatively similar when it comes to kernels. The implication for translation is that if one can discover in the source text the kernels underlying the surface structure, one is in a much better position to translate both accurately and idiomatically.

**4. Connotation.** Messages by no means convey only conceptual information; they also typically convey information about the feelings and the attitudes of the source, and the feelings and attitudes that person wants to evoke in the receptors of the message. This is connotation (some call it emotive meaning). Though approaches to the study of connotation remain almost as impressionistic as their subject matter, it seems to be the case that sources convey connotations by their selection of linguistic forms (words, idioms, styles of speech, etc.) which conventionally bear for native speakers of a language a positive or negative emotive content.

Some forms are so strongly charged that they are taboo: people avoid using forms which refer to things they are very much afraid of, or which disgust them, and they develop veiled ways of referring to them (euphemisms). Other forms, while not so potent as to be taboo, give rise to strong feelings, which may run the whole gamut of human emotions.

In addition to the inherent feelings people have about the referents of terms, connotations may arise from associations with the people who typi-

cally use a given form (as when we identify people we admire or despise by their speech), the circumstances in which they are typically used, and the kinds of messages in which they are usually found.

**5. Explicit and implicit information.** Normally messages are used in communication between persons who share some common background of belief, knowledge, attitude, and so on; in such cases, it is rarely necessary or even desirable for the source to spell out explicitly all that she or he intends the receptor to understand by the message. He selects some of the information he wants to convey and makes it explicit; other information he will leave implicit, trusting the receptor to supply it to complete the message. What must be emphasized is that implicit information is not the same as omitted information: it is information which is crucial to a right understanding of the message, but which is not explicit because the source knows that the receptor already knows it. The difference becomes clear when a second receptor, not privy to the information shared by source and first receptor, tries to understand the message: he will often be puzzled and will fail to understand or will misunderstand, simply because he cannot supply the implicit information.

The significance of this is that in translation it is under certain circumstances legitimate and necessary to make explicit for a second receptor information which was clearly available to the original receptor and without which the message is actually mutilated. The constraints under which the translator must work here are: (1) that the information is truly implicit, not omitted; (2) that it is necessary for understanding; and (3) that it is not so bulky as to distend the message. Implicit information which fails to meet criterion (3) can be supplied in footnotes or in a glossary.

**6. Implications for exegesis and translation.** We have already mentioned a number of implications of this view of semantics for exegesis and translation, so that we can briefly summarize. First, a careful semantic analysis of a text will include the following steps: (1) analysis of the deep structure, in terms of the kernels underlying the surface structure and the semantic nature of the units (O's, E's, A's, R's) with notation of the significance of the transformations used in the original; (2) componential analysis of the senses of terms; and (3) analysis of connotations. Though this is no guarantee of sound exegesis, it is a powerful tool which will help in eliminating some superficially plausible interpretations and in forcing the exegete to face up to all the linguistic evidence.

With respect to translation, this view has led to a theory which reconciles the otherwise irreconcilable aims of translation: idiomaticity and faithfulness. Translation is broken down into three steps: (1) analysis, which corresponds to the thorough exegesis mentioned above; (2) transfer, at the level of kernels and components, into the receptor language; and (3) restructuring, through which the raw materials are made into an appropriate surface structure in the receptor language. In other words, this theory leads to a dynamic equivalent translation, one that conveys to its

receptors the same total meaning and impact as the original text did to its receptors.

\***SEPHARAD.** A country of Israelite exile, mentioned in a very corrupt passage, Obad. 20, which should be emended thus: "The exiles who are in Halah and Gozan shall possess the land of the Canaanites as far as Zarephath; and the exiles who are in Sepharad shall possess the cities of the Negeb." Sepharad is usually identified with Sardis in Lydia (see SEPHARAD), but the historical and geographical context of the prophecy makes it much more probable that it corresponds to Saparda, a territory in Media, conquered by Sargon II in 716 B.C. and turned into an Assyrian province, in which he settled prisoners from Hatti-lands (Syria-Palestine). See also SEPHARVAIM[S].

**Bibliography.** DPaR (1920), pp. 92-93; I. M. Diakonoff, *Istorija Midii* (1956), pp. 208-9, 212-13, 255-56, 260; S. Parpola, *Saparda in Neo-Assyrian Toponyms* (1970), for Assyrian occurrences.

\***SEPHARVAIM.** Hitherto suggested identifications are unacceptable: (1) the Babylonian city of Sippar has never been a political entity and had no king of its own; (2) the alleged URUŠa-ba-ra'-in, conquered by Shalmaneser V in 722 according to the Babylonian Chronicle I:28, is to be read URUŠa-ma-ra'-in=Samaria (cf. II Kings 17:3, 6); (3) Sibraim, according to its only mention (Ezek. 47:16), was located on the border between the territory of Damascus and that of Hamath and thus did not form a separate kingdom. One must look among the Assyrian conquests in the latter part of the eighth century for a state whose name would correspond to ספרויים. Since cases of graphic confusion between the letters ר, ר, and ו are attested in the OT, one should read ספרויים, the people of Sepharad=Saparda in Media, conquered by Sargon II in 716 and again, after a rebellion, in 714 (see SEPHARAD[S]). In Isa. 37:13 (=II Kings 19:13), הנה ספרויים is followed by הנה יענה, but there are no traces of toponyms "Hena" and "Ivvaḥ" anywhere in the Near East; they are due to a dittography in the original phrase איה הנה ספרויים הנה, "where is the perverse King of the Sapardians?" As for the people of Sepharvaim in the anti-Samaritan story II Kings 17:24-41, its author found the already misspelled Sepharvaim and Avvah (Ivvaḥ), as well as Hamath, in the narrative of Hezekiah and Sennacherib, and utilized these names in his attempt to trace back the heathen antecedents of the Samaritans.

#### A. CONTRIBUTION TO OT SCHOLARSHIP.

With the exception of the MT, the LXX is the most important source for the text of the Bible. Its "rival," the Hebrew scrolls from Qumran, important though they are, are fragmentary and of a special nature. In addition, the LXX can yield much information about the translators themselves: the translation techniques employed, the Greek language of their world (especially Egypt), and their cultural and intellectual settings.

1. The Hebrew (Aramaic) *Vorlage* of the LXX.
  - a. *General.* At times the LXX reflects a Hebrew

or Aramaic source (*Vorlage*) different from the MT. Ever since scholars began to recognize this possibility, there have been tendencies toward an extreme acceptance of the LXX, which resulted at times in a negative judgment on the value of the MT. On the other hand, there has also been a tendency to depreciate the LXX by those who viewed the majority of its deviations from the MT as merely results of the translators' techniques. Both trends were partly influenced by the religious prejudices of those accustomed to viewing either MT or the LXX as the sacred text of the synagogue or church.

A more adequate understanding of the LXX as a tool in OT criticism was advanced in the middle of the twentieth century by the finds at Qumran (see DEAD SEA SCROLLS; DEAD SEA SCROLLS[S]). Many of the scrolls contain variants reflected in the LXX (see §1e below). This enhanced the credibility of the LXX as a whole, although much discussion has continued with regard to matters of detail.

**b. Reconstructing the *Vorlage*.** Opinions differ among scholars regarding the reconstruction of the *Vorlage* of the LXX. Criteria have never been outlined systematically; however, aspects of the problem have been discussed especially by Margolis, Ziegler, Goshen-Gottstein, and Barr.

While the rules for reconstruction are in principle identical for all sections of the LXX, in practice they differ because of the translational character of each section. If a book has been rendered with relative consistency, i.e., if Hebrew words are usually reflected by the same Greek translation equivalents, the reconstruction of the Hebrew *Vorlage* is facilitated. But, if a book has been rendered freely, this reconstruction is far more difficult. Most of the books contained in the LXX lie somewhere between these two types. See §B3d below.

When the Greek text differs from the MT, one need not immediately assume that its *Vorlage* was different, for such "deviation" could have resulted from one of many translational factors, such as free translation, tendentious changes, harmonization with parallel passages, and inability to solve a linguistic difficulty in the Hebrew text. The deviation could also have resulted from error in the transmission of the Greek MSS. See TEXTUAL CRITICISM, OT[S].

If the deviation from the MT has not resulted from such translational factors, one might consider the possibility that the Greek is based on a *Vorlage* different from the MT. This can be reconstructed, with various degrees of probability, with the aid of various tools for study. (Foremost among these is Hatch and Redpath, *A Concordance to the Septuagint*, which lists MT equivalents of LXX Greek words.) For example, in Deut. 31:1 the LXX reads, συνετέλεσε Μωυσης λαλῶν (Moses finished speaking) for the MT, וילך משה וידבר (and Moses went and spoke). The concordance informs us that the verb συνετέλεω usually renders the Hebrew verb בלה. Since the LXX deviation cannot easily be attributed to any other factor, it seems likely that it reflects a variant ויכל from which the reading of the MT developed by meta-

thesis (location exchange of consonants): ויכל→ויכל; the opposite assumption seems unlikely. The reconstructed variant is supported by a Hebrew fragment from Qumran, as well as by the similar clause in MT Deut. 32:45 (ויכל משה לדבר).

As a rule, the criteria for recovering possible Hebrew variants underlying the LXX are subjective. However, a few less subjective criteria may be recognized:

(1) If the proposed variant has developed from the MT (or vice versa) by confusion of similar-looking letters, and if the two Hebrew words are remote from one another in meaning, the assumption of a variant is well-based. E.g., in Jer. 23:9, שבור (drunken) is reflected in the LXX as שבור (συντετριμμένος, broken). See also the above-mentioned example from Deut. 31:1.

(2) Some reconstructions are supported by Hebrew evidence, direct or indirect. E.g., in Isa. 36:11 the Greek ὁ ἄνθρωπος reflects the Hebrew האנשים as opposed to the MT העם. That LXX is not an interpretation of MT is suggested by 1QIs<sup>a</sup>, which reads האנשים. In I Sam. 2:20 the Greek reflects ישלם (ἀποστείλας), as does 4QSam<sup>a</sup> (MT ישלם). In I Sam. 2:17 both the LXX and 4QSam<sup>a</sup> lack MT האנשים.

(3) Hebraisms in LXX phrases which deviate from the MT make the assumption of a Hebrew variant probable; e.g., Jer. 38:33 [H 31:33], δίδωσθε δώσω=נתן נתתי, as against נתתי in the MT; Jer. 49:19 [H 42:19], ידע תרעו in MT, but καὶ σὺ γινώσκεις ידע תרעו=ידע תרעו in the LXX (cf. vs. 22).

Very few Greek words can be retroverted with certainty as Hebrew variants. In general one does not know whether the deviation resulted from a Hebrew variant or from, e.g., a free translation. Furthermore, even if the assumption of a variant seems a certainty, it may never have existed in reality: the translator may have misread the Hebrew text. An obvious error, for example, is found in I Sam. 21:7 [H 8], where the LXX calls Doeg ὁ Σύρος, reconstructed as הארמי (the Aramean) as against the MT האדומי (the Edomite), which is found elsewhere in the OT. It cannot be determined, however, whether the *Vorlage* of the Greek actually read הארמי, or whether the translator incorrectly read הארמי as האדומי. In either case it will be said that the LXX reflects a "variant," הארמי, although possibly such a reading never existed in an actual Hebrew text.

Since scholars differ in their approach to reconstructing the *Vorlage* of the LXX, deviations from the MT in the LXX may be retroverted by some scholars as Hebrew variants, while others may regard them as inner-Greek changes. Furthermore, once a deviating translation equivalent is recognized as a variant, the number of possible retroversions seems boundless. Many of them have been collected in the *Biblia Hebraica* (BH), edited by R. Kittel and P. Kahle. BH has rightly been criticized as containing too many uncautious reconstructions of Hebrew variants. However, some improvement may be detected in its fourth edition (BHS). Much more cautious are the reconstructions in the *Hebrew University Bible* (ed. M. Goshen-Gottstein), where every possibility of an

inner-Greek change is carefully weighed against the assumption of an underlying Hebrew variant.

*c. The character of the Vorlage.* Because the Greek translation is believed to have been made in Egypt, its *Vorlage* has generally been described as "Egyptian." This position has been emphasized particularly by scholars who support a theory of "local texts." According to this theory, which originated with Albright and has been further developed by Cross, the textual witnesses of the OT may be divided into textual traditions which originated in either Palestine, Babylon, or Egypt. See TEXT, HEBREW, HISTORY OF[S].

While the theory of local texts cannot be sustained in its present rigid form, the LXX contains some evidence which could be understood in terms of its local background. E.g., the *Vorlage* of the LXX of Jeremiah, which differs recensionally from the MT (see §f below), could have survived only in comparative isolation from the MT.

Scholars often mention a close relationship between the LXX and the Samaritan Pentateuch. Indeed, of the six thousand differences between the MT and the Samar., some nineteen hundred are common to the LXX. However, most of the agreements are in minor points such as omissions/additions of *wāw*, and the real nature of their relationship has yet to be investigated. See SAMARITAN PENTATEUCH §§1e, 2a.

The relationship between the LXX and the Peshitta is also in need of reinvestigation (see SYRIAC VERSIONS[S]). Despite statements to the contrary, there are not many agreements between the two except for Isaiah and a few other books. In Isaiah, however, the Peshitta translator did not rely on the LXX, as has often been assumed, but rather the LXX is based upon the same exegetical traditions which appeared later in written form in the Peshitta and the Targum.

*d. The LXX and textual criticism.* Of all the ancient translations, the LXX reflects the largest number of significant variants. The importance of these assumed variants differs from book to book; e.g., many important variants are reflected in the LXX of I-II Samuel, whose Hebrew text has been poorly transmitted in several parts.

Once a variant reflected in the LXX has been isolated, it is the concern of textual criticism to decide between the MT and LXX readings. Such varying disciplines as the linguistics of biblical Hebrew, vocabulary and style of the unit or book under discussion, biblical exegesis, and literary criticism are useful criteria for decision. Decisions of this kind are necessarily subjective, more so than the decision as to whether or not a given Greek expression reflects a Hebrew variant. See TEXTUAL CRITICISM, OT[S].

For example, אֶת-מֶלֶךְ-מִשָּׁנָה in Jer. 23:33 is very difficult in its context; and אֶתֶם הַמִּשָּׁנָה, reflected in the LXX ὑμεῖς ἐστέ τὸ ἀγγέλου, is preferable. For contextual reasons, too, in Gen. 49:19-20, עֲקֵבָם of the LXX (κατὰ πόδας. Ἀσκη . . .) must be preferred to MT עֲקֵבֵי מֵאֲשֵׁר. The MT text of Judg. 16:13 and I Sam. 14:41 cannot be well understood without restoring erroneously omitted words which are still preserved in the LXX. The vocalization of the MT in Jer. 23:17.

לְמִנְאֲצֵי דְקָר יְהוָה (to those who despise me, the Lord has said), has to be corrected to לְמִנְאֲצֵי דְקָר יְהוָה (to those who despise the word of the Lord), as reflected in the LXX.

Especially noteworthy for their treatment of textual issues are the commentaries of G. A. Cooke on Joshua, J. Wellhausen and S. R. Driver on Samuel, G. A. Cooke and C. H. Cornill on Ezekiel, J. A. Montgomery on Kings and Daniel, and E. Dhorme on Job.

*e. The LXX and the Hebrew scrolls from Qumran.* Some of the Hebrew scrolls from Qumran often coincide with a textual tradition of the LXX. But no scroll has yet been found which coincides in most of its deviations from MT with a single Greek tradition, and no single Greek tradition agrees in most of its deviations from MT with a Hebrew scroll from Qumran.

Close relationships have been recognized between the LXX of Deuteronomy and 4QDeut (Skehan), of Samuel and 4QSam<sup>a</sup> and 4QSam<sup>b</sup> (Cross), and Jeremiah and 4QJer<sup>b</sup> (Cross). The agreements between the LXX of Isaiah and 1QIs<sup>a</sup> as pointed out by Ziegler are not especially significant.

Some scholars describe the relationship between the LXX and some of the above-mentioned Hebrew scrolls as if they belong to one textual family. However, the Hebrew and Greek sources both contain a large number of independent readings, and should therefore be regarded as related, but nevertheless independent, textual traditions.

Cross has drawn attention to the frequent agreement between 4QSam<sup>a,b</sup> and the "Lucianic" tradition in Samuel. According to him, this resulted from the fact that the substratum of the Lucianic tradition contained a revision of the Old Greek translation on the basis of a Hebrew text like 4QSam<sup>a,b</sup>. Barthélemy and Tov regard this substratum as the Old Greek translation of Samuel-Kings, now lost, which often agreed with 4QSam<sup>a,b</sup>. However, the precise relationship between 4QSam<sup>a,b</sup> and the textual traditions of the LXX can be determined only after the complete publication of the texts, when the agreements between the Hebrew and Greek traditions can be analyzed statistically.

*f. The LXX and literary criticism.* More than the other witnesses to the text of the OT, the LXX contributes to its literary criticism. The LXX of Jeremiah is a salient example. It has been suggested by Tov that the LXX reflects a first edition of the book which was expanded in all its literary layers into a second edition, now found in the MT. The differences between the two editions are visible in their respective lengths (the *Vorlage* of the LXX is one eighth shorter than the MT) and text arrangements (the most striking example is the different location of the prophecies against the foreign nations). The Hebrew tradition behind the LXX is now evidenced in 4QJer<sup>b</sup>, both in the matter of length and in the arrangement of the text.

Contributions to literary criticism also come from the LXX's short version of I Sam. 17-18, its different arrangement of chapters in Proverbs

and Psalms, from various differences (omissions, additions, and changes) between the MT and the LXX in Joshua, and from the chronological system of the LXX in I-II Kings. All these texts as well as additional ones were discussed by W. R. Smith.

The contribution of the LXX (as well as of other textual witnesses) to the field of Hebrew stylistics has been discussed by S. Talmon.

2. **Exegesis of the translators.** The LXX reflects both contextual and tendentious exegesis. Both are of interest to OT scholarship, but the latter is more relevant for identifying the nature of the translators and their settings.

a. **Contextual exegesis.** Contextual exegesis reveals itself especially in the choice of unusual translation equivalents, in the connections made between words, and in the adaptation of Hebrew to Greek diction (for example, when idiomatic Hebrew phrases are translated into Greek). E.g., Exod. 6:12, עַרְל שְׂפָתַיִם (of uncircumcised lips), is translated by ἀλογος (speechless). Several deviating translations result from a translator's legitimate exegesis of certain words or phrases. E.g., Gen. 1:1, תָּהוּ וְנָהוּ, is rendered by ἀόρατος καὶ ἀκατασκεύαστος (invisible and shapeless); and in Isa. 9:14 [H 13], כַּסָּה וְאֶגְמוֹן (RSV, palm branch and reed), is rendered by μέγαν καὶ μικρόν (great and small).

b. **Tendentious exegesis.** The LXX contains various types of exegesis not necessitated by the context but inserted extraneously by the translators. Apparently religious motivations, adherence to certain exegetical traditions, and didactic considerations allowed them to translate in a manner often similar to the Targumists (see TARGUMS[S]). The following sections briefly discuss two types of such exegesis:

i. **Theological exegesis.** Theological exegesis may relate to the description of God and his acts, the Messiah, Zion, and the Exile, as well as various religious feelings. It may be expressed through theologically motivated choices of translation equivalents, as well as through additions or omissions of ideas considered offensive. Theological tendencies are apparent throughout the LXX, but they are more frequent in "free" translation sections such as the book of Isaiah. For example, the idea that God brings σωτήριον (salvation, referring particularly to salvation from the Exile) has often been inserted in the LXX. E.g., Isa. 38:11, "I shall not see the Lord, the Lord," has been rendered as, "I shall no more see at all the salvation of God"; 40:5, "[And the glory of the Lord shall be revealed], and all flesh shall see it together," has been rendered as "and all flesh shall see the salvation of God."

Other theological trends reveal themselves in the addition of religious color to secular descriptions, and in anti-anthropomorphic renditions.

ii. **Midrashic renderings.** Some of the freely translated books reflect midrashic elements (some of them are found in extant rabbinic sources) which, by their very nature, add to the plain meaning of Scripture. See MIDRASH; MIDRASH[S].

Several midrashic elements clarify the Pentateuchal laws. To Exod. 22:8 [H 7], "the owner of the house shall come near to God," the translator

added, "and shall swear" (cf. T.B. B.Ḳ. 63b). מִלְאֲחָךְ וְדַמְעָךְ, "your abundance and your juice," in Exod. 22:29 [H 28], has been exegetically rendered as "the first-fruits of your threshing floor and wine-press."

Other midrashic elements are of haggadic nature. Thus, "the tree" in Isa. 65:22 has been explained in the LXX as "the tree of life." In Isa. 1:13, קָרָא מִקְרָא (the calling of the assembly) has been explained as ἡμέραν μεγάλην, i.e., "the great day," one of the appellations of the Day of Atonement in the Talmud. חֲרִבוֹת צְרִיִם (flint knives) in Josh. 5:2 has been translated by μαχαίρας πετρίνας ἐκ πέτρας ἀκροτόμου (stone knives of flinty rock); the second element of this doublet reflects a midrashic translation of the Hebrew phrase based upon Deut. 8:15, צִוּר הַחֲלִמִישׁ (צִ), (ἐκ) πέτρας ἀκροτόμου, and similar phrases.

As a rule, the midrashic deviations of the LXX are not as extensive as those of the Palestinian Targs., but there are some exceptions. Thus the LXX translation of Proverbs is frequently more a Jewish-Hellenistic midrash than a Greek translation.

3. **Linguistic knowledge of the translators.** There is no concrete evidence that the translators possessed either dictionaries or word lists. Thus, when attempting to determine the meaning of a word, they resorted to various sources of information.

a. **Exegetical traditions.** The exegesis reflected in the LXX is often paralleled elsewhere. The translators must therefore have known several exegetical traditions. For example, in Exod. 12:13, 27, מִסָּה has been rendered by σκεπάζειν (to pity), similar to the tradition found in rabbinic sources, Targ. Onkelos, and some Jewish grammarians.

In Gen. 33:19, Josh. 24:32, and Job 42:11, קְשִׁיטָה (a unit of unknown value) has been rendered as "lamb" in the LXX, Targ. Onkelos, and the Vulg. In Genesis Rabbah it has been similarly explained.

b. **Context.** Translators frequently inferred the meaning of an unknown word from the context. Often this procedure was little more than guesswork, and the number of guesses of this kind is larger than is generally thought. This applies especially to rare or unique words. Thus the translator of Isaiah rendered the rare word נִשָּׁף (twilight) three times according to its context, each time differently: 5:11, τὸ ὄψέ (late); 21:4, ψυχῆ (soul); 59:10, μεσονύκτιον (midnight). In the book of Jeremiah, four different verbs which were understandably difficult for the translator have been rendered by the general verb παρασκευάζω (to prepare): 6:4; 12:5; 46:9 [LXX 26:9]; 51:11 [LXX 28:11].

c. **Etymology.** Often the translators were guided by etymological considerations. Thus the word מוֹעֵד in the phrase מוֹעֵד אֹהֶל (tent of meeting) has always been rendered as μαρτύριον (witness) as if it were derived from מוֹעֵד, rather than from עֵד; and עֲרֵבָה (desert plain) has sometimes been rendered as if connected with מְעַרְבַּי (west).

d. **Postbiblical Hebrew.** Most of the translators seem to have been well-acquainted with postbiblical Hebrew, more so than with biblical, and at times their translation equivalents are better understood

against this background. For example, the word ארמון (palace, citadel), occurring frequently in the OT, is rare in later Hebrew. This may account for a variety of guess-translations in the LXX (house, city, land, cave, fundaments, tower, etc.).

At times the translators rendered a certain word according to its meaning in postbiblical Hebrew even though in the OT the word occurred in a different sense. Thus ונפצהי (and I will break), in Jer. 51:20-23 [LXX 28:20-23], has been rendered as και διασκορπισω (and I will scatter) in accordance with the meaning of the verb in later Hebrew. See HEBREW LANGUAGE[S] §2b.

e. *Aramaic*. When the Greek translations were made, Aramaic was the lingua franca of many of the inhabitants of Egypt and Palestine. Within the LXX this becomes evident, e.g., from transliterations reflecting Aramaic rather than Hebrew forms of words: γιωρας (ג'יורא), representing OT ג'ר; πασχα (פסחא) = OT פסח; μαννα (מנא) = OT מן.

At times the translators' knowledge of Aramaic misled them when the meaning of a Hebrew root differed from its Aramaic counterpart. E.g., in Pss. 60:8 [H 10; LXX 59:8] and 108:9 [H 10; LXX 107:9], סיר רחצי (my wash basin) has been rendered as λεβης της ελπιδος μου (basin of my hope) according to the meaning of the root רחץ in Aramaic.

f. *Translation of the Pentateuch*. Translators of the later books were sometimes guided by that of the Pentateuch. Thus the word זועה/זעה (terror) has been rendered in Jer. 34:17 [LXX 41:17] by διασπορα (diaspora) according to the LXX of Deut. 28:25. On four occasions in Jeremiah אהוה (alas) has been translated by ο ων (he who is) following the LXX of Exod. 3:14 (אהיה אשר אהיה), εγω ειμι ο ων.

*Bibliography*. For the general problems discussed, see H. M. Orlinsky, "Current Progress and Problems in LXX Research," in *The Study of the Bible Today and Tomorrow*, ed. H. R. Willoughby (1947), pp. 144-61; P. Katz, "Septuagintal Studies in the Mid-Century," in *The Background of the NT and its Eschatology* (1964), pp. 176-208.

**B. EARLIEST GREEK VERSIONS** ("Old Greek"). Questions concerning the history and significance of the Greek text have received relatively less attention than those concerning the relation of the Greek to its Semitic parent. See TEXT, OT §C; §A above.

**1. Terminology, technology, and text**. Several closely interrelated problems have sometimes interfered with fruitful scholarly discussion of the Greek materials.

a. *The term "Septuagint."* As early as the second century A.D., "Septuagint" was used as an umbrella term for the Christian collection[s] of Jewish scriptures in Greek translation, which were believed to be inspired (see SEPTUAGINT §2) and thus superior to the "later" translations (see GREEK VERSIONS, MINOR[S]). This convenient but potentially misleading use of the term still prevails (e.g., "LXX" is sometimes used for Rahlfs' 1935 edition and its eclectic text; see SEPTUAGINT §9b). Since there is no homogeneity among the various translation units of this collection (see §3d below), it is more accurate to speak of the oldest recoverable Greek form of each section/book (OG = "Old Greek"), which in the Pentateuch is the LXX proper (see ARISTEAS). Discussion must proceed section by section, or book by book, according to identifiable translation units.

b. *Ancient technology and modern OG study*. The possibility of including the entire Jewish Scriptures in a single volume did not exist until the development of the large-scale Codex format in the fourth century. Prior to that, small-scale codices (second-third centuries) and rolls were used, which could hold only one or two major writings (e.g., Numbers-Deuteronomy). Even during the Middle Ages the practice of including the entire Greek OT under one cover was not widespread—only about one percent of the approximately twelve hundred known MSS of portions of OG contain a majority of the OT writings.

c. *Canon, order of contents*. Identification of "canonical" writings (see CANON OF THE OT) must have depended less on comprehensive OT MSS than on traditional lists of canonical literature. (Perhaps repositories for storing the various individual scripture rolls together were used in early times.) The relative imprecision of the early lists, the varying order in the later lists, and the fluidity with which the term "scripture" is applied by certain early authors may to some extent be due to the developing technological situation.

d. *Textual complications*. Technical considerations must also have contributed to the complexity of the text itself. If alternative text types existed in a given locale, it would have been extremely difficult to preserve a homogeneous text type in a section of material requiring multiple scrolls or small codices. The process of copying

the smaller units in order to construct larger codices would tend to encourage the intermixing of materials with diverse textual histories. Relatively mechanical textual confusion of this sort may be reflected in the widespread appearance of "Theodotonic" Daniel texts (see DANIEL[S]), and doubtless helps explain other textual problems in presumably homogeneous OG sections (see §3b-c below, especially Samuel-Kings), including the fact that certain Greek MSS even change their textual affinities within a given book. In addition, all of the usual problems relating to the transmission of texts in antiquity apply as well to the history of OG materials (see TEXT, OT §D; TEXT, NT §A), along with the special problems relating to translated literature (see §3e below) and to Hexaplaric influence. See VERSIONS, ANCIENT §2a.

**2. Working backward toward the earliest accessible stages.** Including commentary MSS, lectionaries, and catenae, over two thousand direct witnesses to the Greek text of Jewish Scriptures are extant, dating from the sixteenth century or earlier. About ninety per cent of the actual OG MSS contain only a single book or a discrete, relatively small section—e.g., the text of Psalms or of Psalms plus Odes is found by itself in more than 750 MSS! By means of TEXTUAL CRITICISM, scholars attempt to reconstruct as accurately as possible the form of the text as it first appeared. One of the first steps in that direction involves a careful comparison of the preserved witnesses, including versions and quotations as well as the aforementioned Greek materials.

**a. Grouping the witnesses by families.** The witnesses frequently show textual relationships among themselves that encourage the construction of textual "family trees" which theoretically provide a route back to MS ancestors no longer extant. Sometimes the lost ancestor of a textual family might even be a conscious revision of the text (e.g., "Lucianic," "Hexaplaric"). Unfortunately, the incomplete nature of the preserved evidence (missing links) and the presence of cross-fertilization between MSS and families (e.g., through conscious "correction" and harmonization) seriously complicates this endeavor. See SEPTUAGINT §4.

**b. Identifying lost archetypes.** Prior to the tenth century A.D. MSS seldom provide explicit information regarding their own transcriber, location, date, or the MS from which they were copied. Occasionally it is possible to assign a given type of handwriting or format or system of notation to a precise locale and/or date, but the earlier the materials the more difficult such identification becomes. Sometimes the text reflected in one of the "daughter versions" made from the Greek or in quotations made by an identifiable author may provide clues to the origin of a MS or to a lost archetype—e.g., a text displaying strong affinities with the Coptic-Sahidic version might have a middle Egyptian provenance, or affinities with quotations in Antioch-related church Fathers often receive the label "Lucianic." Other clues to a family's background are sometimes provided by the use of Origen's Hexaplaric signs within the text (see SEPTUAGINT §4a), or by the appearance of a variety of marginal notations attempting to

identify particular readings (e.g., "from the Samaritikon," "from Aquila," etc.).

**c. Moving behind the archetypes, attested recensions, and unaligned witnesses.** Unfortunately, very little concrete evidence is available for tracing the history and development of Greek scriptural texts in the centuries prior to Origen (ca. A.D. 250) and the so-called Hesychian and Lucianic recensions (ca. 300; see SEPTUAGINT §4). While it is sometimes possible to detect the influence of Origen's Hexapla on later MSS, identification of the supposed "Lucianic" recension (and its background) is still widely debated (see GREEK VERSIONS MINOR[S] §§1c, 4), and there has been little success in isolating a specific "Hesychian" recension. Furthermore, the few preserved MSS and fragments that antedate Origen seem to defy classification by post-Origen criteria. With the exception of materials used to posit a "Proto-Lucianic" textual stream going back at least to Josephus, the earliest witnesses have sometimes been termed "prerecensional" or "mixed texts" (i.e., not aligned with established recensions or families). But such terminology should not be allowed to obscure the probability that conscious revisional activity in Greek texts took place almost from the very beginning, both by way of refinement of style and vocabulary and through attempts to keep the Greek text in close conformity to the (changing) Hebrew/Aramaic textual situation (see TEXT, HEBREW, HISTORY OF[S] §1). Indeed, the traditions about later translation activity (see GREEK VERSIONS, MINOR[S]) support such suspicions. Furthermore, unintentional changes that also create family relationships among MSS were inevitable at every stage of copying. Thus in principle, the pre-Origen situation in OG texts should not be expected to differ from the post-Origen situation; there certainly were MS families and probably also conscious revisional activities of various sorts.

**d. The earliest preserved OG materials.** The growing body of relevant materials that antedate the Second Jewish Revolt (A.D. 135) permits a glimpse of early OG textual developments. Actual Greek fragments include:

Approximate Date	Siglum	Identification
2nd B.C.	801 4 QLXX	Lev <sup>a</sup>
2nd/1st B.C.	957 P. Rylands 458	Deut
	805 7 QLXX	Exod
	804 7 QLXX	Epist. Jer.
1st B.C.	942 P. Fouad 266	Gen
	848 P. Fouad 266	Deut #1
1st B.C./1st A.D.	802 4 QLXX	Lev <sup>b</sup>
	803 4 QLXX	Num
1st A.D.	847 P. Fouad 266	Deut #2
1st/2nd A.D.	814 P. Yale 1	Gen (codex)
Early 2nd A.D.	963 Chester Beatty	Num-Deut (codex)

Extensive quotations and allusions in Greek are also preserved in Philo (ca. A.D. 30), Paul (ca. 50), Josephus (ca. 80), I Clement (ca. 95), and a number of other Christian texts from the early

period. Determination of the exact wording of a quotation often must remain problematical, however, since the original text of the document in which it occurs must itself be reconstructed by careful text-critical methods. Finally, some later non-Greek versions and quotations (especially OL) can also be used, since they are clearly based upon Greek texts of an early date (see LATIN VERSIONS [S]). The general conclusion to be drawn is that considerable textual variety is present at every stage for which sufficient evidence is preserved. Any hopes to reconstruct with precision the original form of each OG translation by a relatively mechanical use of the preserved witnesses seems doomed to falter on the stormy sea of textual variations.

**3. Reconstructing OG origins.** Although ultimately the available evidence is inadequate for the task, there is some value in attempting to indicate fruitful avenues of approach to the problems of OG origins.

**a. Tradition, theory, and data.** First, it is hoped that current discussion can move beyond the heated dispute carried on in the names of Lagarde (one original OG existed from which the textual families, recensions, etc. developed) and Kahle (from independent competing Greek translations, a Christian Greek OT was formed by various selective processes; see SEPTUAGINT §5). The generalized polemic positions are too simple to do justice to the evidence; what may be true for the OG Pentateuch is not necessarily true for OG Judges or Tobit and vice versa. Secondly, the relation between the ARISTEAS legend of Pentateuchal LXX origins and the question of the origin of the other OG sections calls for careful re-examination. The frequent assumption that virtually every OG section was translated in Alexandria, although not at the same early date as the Pentateuch, requires careful evaluation in light of the full range of alternative possibilities (including Palestine itself; see Barthélemy). While more satisfactory criteria are being developed for identifying place of origin and date of Greek translations from Semitic originals, Alexandria should not be allowed to dominate by default.

**b. Sections of Scripture with a relatively narrow textual base.** The extant witnesses to several OG sections attest a relatively small range of textual variation, which suggests that a single OG translation may underlie each (unless evidence of ancient alternative translations has disappeared, as almost happened in Daniel): the Pentateuch (with some special problems in Exodus and Deuteronomy), Joshua, Ruth, Isaiah, Job (later supplemented from Theodotion), Psalms, Proverbs, Koheleth (probably in Aquila's version), Chronicles, I Maccabees. A few other books have a relatively narrow base because they were probably written originally in Greek: II-IV Maccabees, Wisdom of Solomon.

**c. Sections with a problematical textual base.** The extant witnesses to other portions of the Greek OT show such a wide range of divergence that it is difficult to determine whether a single

original OG translation (which later underwent corruption and revision) lies behind them, or whether two or more relatively independent Greek translations of the same section should be posited. Especially noteworthy are Sirach (complex Hebrew and Greek textual situations), Daniel ("Theodotion" versus non-Theodotonic text), Tobit (text preserved by most MSS versus that of Sinaiticus and OL; perhaps a third version in a few witnesses), Judges (majority text versus that of Vaticanus and a few allies), Ode of Habakkuk (Hab. 3; majority text versus "Barberini" version). Samuel-Kings also deserves mention here, with at least two different translation techniques (*kaige* and non-*kaige*) interwoven in the preserved witnesses (see SAMUEL, I AND II[S] §2c). The probable translation block encompassing Jeremiah-Baruch + Ezekiel + Minor Prophets also exhibits some textual problems requiring thorough analysis—possibly extensive recensional activity on a single OG translation produced the situation. Similar textual problems occur also in Ezra-Nehemiah (see OG "I Esdras"), Esther, and Judith.

**d. Classifying translation types and techniques.** More precise features of the respective OG versions in each translation section are sometimes ascertainable with a high degree of probability, if the investigator moves beyond mere eclectic use of preserved textual witnesses to cautious, controlled conjectural restorations. If it can be assumed that (1) the OG translator(s) usually followed specific patterns, and (2) used a Hebrew/Aramaic text roughly similar to (or reconstructable from) available witnesses; and, if significant evidence of such patterns is still embedded in the extant witnesses to the Greek, it is often possible to identify other passages in which the pattern is expected but has now disappeared. The more self-consciously consistent the translator, the easier the task of conjectural reconstruction. Conversely, inconsistent or extremely free translation efforts are less susceptible to this sort of controlled conjecture. The science of identifying translation patterns in this literature is still in its infancy (see Barthélemy, Tov, Wevers, Martin; see also GREEK VERSIONS, MINOR[S]). The following tentative classifications of types of translations, according to the translator's relative skills in representing the Semitic parent language and producing an acceptable Greek version, may provide some impression of the relationship between the identifiable translation blocks in Jewish Greek Scriptures:

1. Literal translation reflecting closely the Semitic text:
  - a. Relatively more focus on parent text:
    - (1) mechanical: Aquila, OG Koheleth (= Aquila);
    - (2) relatively wooden/stilted: "Kaige," Vaticanus text of Judges.
  - b. Relatively more focus on producing acceptable Greek:
    - (1) relatively stilted: Psalms, Jeremiah-Baruch + Ezekiel + Minor Prophets, text A of Judges (-Ruth), Chronicles, Canticles (?), Ezra-Nehemiah (?), Joshua (?), "Theodotonic" Daniel (?);

- (2) more idiomatic Greek: the Pentateuch, Symmachus, Esther (part), "Theodotionic" Job and Daniel texts (?), I Maccabees (?).

2. Free translation less concerned with the parent language/text:

- a. nonparaphrastic free renderings: Isaiah, non-"Theodotionic" Daniel, Barberini Ode of Habakkuk, I Esdras (?);  
b. free paraphrase: Job, Proverbs.

**e. Synthesis of results.** It is not always possible to make absolute distinctions between OG and "later translators" (revisors?), or to distinguish with any confidence between an independent translation (prepared *de novo* from an available Hebrew/Aramaic base text), a recension (conscious large-scale revision of an existing Greek translation), and sporadic revision/interpolation/glossing (conscious spot "correction" of existing Greek texts). There is abundant evidence of various conscious editorial efforts prior to Origen's Hexapla—sometimes bringing a Greek text closer to a known Semitic base, sometimes incorporating (or substituting) material from other known Greek renderings or smoothing apparent problems. Special text-critical criteria are necessary for dealing with translation Greek, especially since the Hebrew/Aramaic materials were also undergoing textual modification over a long period in which Greek translations already were available. The old text-critical "rule" to prefer a "freer" reading to a more literal one is only of limited use. With relatively free OG renderings, the expected revisional tendency would often be toward literalistic correction rather than away from it. But with originally hyperliteral versions, the tendency could be just the opposite. The more general question about whether the development went from relatively free translations toward more literal ones as concepts of inspired text (and canon) became self-conscious is oversimple and not always applicable. Until it can be determined more precisely who made which translations for what purposes (e.g., private use versus public liturgy; see Brock), speculation about unilinear development in translation types and techniques must remain highly tentative. Even with our present state of knowledge, both Aquila (hyperliteral) and Symmachus (much more idiomatic) stand relatively near each other chronologically. The situation might have been similar for the earliest translations.

4. Influence of OG on later developments. In a variety of ways, OG materials have influenced subsequent language and literature, both in Greek and in translation.

**a. On Greek vocabulary and syntax.** The OG translations not only introduced some new words into Greek but also often modified the meanings of extant vocabulary. The extent to which they reflect spoken (Jewish) Greek dialects remains an open question. Sometimes it is impossible to determine whether a preserved Greek writing (or section thereof) was composed in Greek strongly influenced (consciously or unconsciously) by the available translation idiom, or was itself translated from Semitic. Criteria for judging this sort of problem are being developed (see R. A. Martin,

*Syntactical Evidence of Semitic Sources in Greek Documents* [1974]), and should receive a strong assist from contemporary computer technology.

**b. Quotations/allusions drawn from OG.** Knowledge of Jewish Scriptures and scriptural tradition in the Greek-speaking world usually was mediated through OG and related translations. Quotations/allusions not only provide a potentially valuable indication of textual developments (see §2b above), but also often indicate how particular passages were interpreted and applied at various times and places (see EXEGESIS[S]). The "Centre d'Analyse et de Documentation Patristiques" at Strasbourg is building a central file of patristic biblical quotations: see J. Allenbach *et al.*, *Biblia Patristica: Index des citations et allusions bibliques dans la littérature patristique*, I (1975).

**Bibliography.** A period of renewed activity in the study of OG and related materials began in 1968 with the founding of the International Organization for Septuagint and Cognate Studies (IOSCS). Its annual *Bulletin* chronicles current work, and detailed listings of literature published through 1969 appear in *A Classified Bibliography of the LXX*, compiled by S. P. Brock, C. T. Fritsch, and S. Jellicoe (1973).

Text-critical materials, editions, studies: The main center of text-critical activity on OG remains the Göttingen "Septuaginta-Unternehmens"; especially noteworthy among related projects is the continuing work on OL biblical material by the Beuron Institute. The latest Göttingen eds. are IX.2.3=*Maccabaeorum liber II* (1959) and *III* (1960), ed. R. Hanhart; XII.1-2=*Sapientia Salomonis* (1962) and *Sapientia Iesu Filii Sirach* (1965), ed. J. Ziegler; VIII.3=*Esther* (1966), and VIII.1=*Esdrae liber I* (1974), ed. R. Hanhart; and I=*Genesis* (1974), ed. J. Wevers. Corrected reprints of several earlier volumes have also been issued. New MSS and fragments (esp. papyri) continue to appear—see esp. K. Treu, "Christliche Papyri I-IV," *Archiv für Papyrusforschung*, 19-22 (1969-73). Important recent studies of text-critical importance include: D. Barthélemy, *Les Devanciers d'Aquila* (1963); *Proceedings of IOSCS Symposium on Samuel-Kings*, ed. R. A. Kraft, *LXX and Cognate Studies*, II (1972); P. Walters [Katz], *The Text of the LXX: Its Corruptions and Their Emendation*, ed. D. W. Gooding (1973); E. Tov, *The LXX Translation of Jeremiah and Baruch* (1975); J. W. Wevers, *Text History of the Greek Genesis* (1974); D. W. Gooding, *Relics of Ancient Exegesis: A Study of the Miscellanies in 3 Reigns 2* (1975); R. Klein, *Textual Criticism of the OT* (1974). A new ed. of the Letters of Aristeas, by A. Pelletier, has appeared as *Sources Chrétienne*, 89 (1962).

Lexicography, tools, and studies: J. Reider's long awaited *An Index to Aquila* is finally available (ed. N. Turner, 1966), and various efforts to enhance the usefulness of the Hatch-Redpath concordance and its Hebrew-Greek index have appeared: e.g., X. Jacques, *List of LXX Words Sharing Common Elements: Supplement to Concordance or Dictionary* (1972); E. C. Dos Santos, *An Expanded Hebrew Index* (1973).

Plans for a special "LXX Lexicon" are under way through IOSCS auspices: see R. A. Kraft, ed., *Septuagintal Lexicography* (1972), for background work. Specific investigations of vocabulary include S. Daniel, *Recherches sur le vocabulaire du culte dans la Septante* (1966); D. Hill, *Greek Words and Hebrew Meanings* (1967).

General works, collected essays, etc.: Swete's invaluable *Introduction to the OT in Greek* (1900 [2nd ed., 1902]) has been updated by S. Jellicoe, *The LXX and Modern Studies* (1968). On ancient translation

activities, see S. P. Brock, "The Phenomenon of the LXX," *OTS*, XVII (1972), 11-36. Pertinent essay collections include J. Ziegler, *Sylloge: Gesammelte Aufsätze Zur LXX* (1971); J. Schreiner, ed., *Wort, Lied und Gottesspruch* (1972); S. Jellicoe, ed., *Studies in the LXX: . . . Selected Essays* (1974). R. A. KRAFT

**SEPULCHRE.** See HOLY SEPULCHRE, CHURCH OF THE[S].

**\*SERMON ON THE MOUNT.** Under the influence of redaction criticism, discussion of the Sermon on the Mount has emphasized the role it plays in Matthew's theological statement. There have been new insights into the original matrix of some of the sayings. There is also a renewed interest in the relationship between the historical forces that shaped the Sermon on the Mount and those which molded the sectarian Judaism of Qumran prior to A.D. 70 and the rabbinic Judaism of Jamnia in the period immediately following the destruction of Jerusalem (A.D. 70).

1. **The Sermon on the Mount in Matthew's theology.** Matthew's Gospel is a threefold christological statement expounding (a) The Person of Jesus the Messiah (1:1-4:16); (b) The Proclamation of Jesus the Messiah (4:17-16:20); and (c) The Suffering, Death, and Resurrection of Jesus the Messiah (16:21-28:20). (See MATTHEW, GOSPEL OF[S] §2.) The Sermon on the Mount opens (b); it is the initial expression of the Messiah's proclamation. In 4:17 we are told that Jesus began to proclaim, "Repent, for the kingdom of Heaven is at hand." Then he appointed his disciples (4:18-22). In 4:23, the content of the proclamation is summarized: "And he went about all Galilee, teaching in their synagogues and preaching the gospel of the kingdom and healing every disease and every infirmity among the people." Virtually the same words occur at 9:35, and this suggests that the material bracketed by these two summaries should be considered as a single theological statement. The Sermon on the Mount (chs. 5-7) is described, therefore, as the "teaching in their synagogues" which announces "the gospel of the kingdom," while chs. 8 and 9 recount the "healing [of] every disease and every infirmity." Together the teaching and healing constitute "the gospel of the kingdom." The distinction between chs. 5-7 and 8-9 is not rigid, since 8 and 9 do contain material other than miracles (two pericopes on following Jesus, 8:18-22; 9:9-13; one pericope on the newness of the event of his presence, 9:14-17).

That the Sermon on the Mount is viewed by Matthew as the proclamation of the gospel of the kingdom should warn us against too hasty an assumption that we have in it a new law. Jesus is not a counterpart to Moses, giving a new Torah from a new Sinai. Although the motif of a new Moses is present in Matthew, it is not predominant. The parallelism between Moses and Jesus which is sometimes present in this gospel is only one aspect of Matthew's Christology. In Matthew, Jesus the Messiah has "absorbed the Mosaic function" so that, while suggesting the law of a new Moses, the Sermon on the Mount is in fact the "messianic Torah" (Davies).

The key to understanding the theological import which the Sermon on the Mount had for Matthew is that it is a proclamation of the kingdom by the Messiah. As moral teaching, therefore, it is as much a part of the event of grace as are the healing miracles. It represents the demand implied in the offer, the task entailed by the gift. The Beatitudes (5:3-12), which are in form prophetic-apocalyptic utterances (see BEATITUDES §4), strike the note of eschatological proclamation clearly and forcefully; and as the Sermon on the Mount begins with the announcement of the long-awaited coming of God to his people in the Beatitudes, so it ends with the theme of the judgment, presented by means of the wisdom imagery of the two ways and the parable of the two houses (7:13-29), PARABLE being a device characteristic of the wisdom tradition.

Indeed, throughout the Sermon on the Mount there is a mixing of apocalyptic and wisdom forms. The Beatitudes themselves were earlier identified as wisdom forms, but now the consensus is that they are from the apocalyptic tradition. The phenomenon of this mixture shows that sayings were assembled from various contexts and presented by Matthew as part of the eschatological event. Thus, seemingly prudential maxims like "No one can serve two masters" (6:24), or "Judge not, that you be not judged" (7:1), take on a dimension of urgency and religious depth; wisdom sayings become eschatological revelations and call the hearers to make a decision.

The famous "antitheses" (5:21-48) as well as the notoriously difficult saying on the continued validity of the law and its fulfillment (5:17-20), which precedes the antitheses, are to be understood on the same basis. They set forth the eschatological depth of the TORAH, which is more demanding because it belongs to the new age. The difficult ambiguity of the presence of the new age, its appearance "already but not yet," is acknowledged in the phrase "until all is accomplished" (5:18).

In sum, the Sermon on the Mount is for Matthew the messianic Torah proclaimed by Emmanuel, "God with us." This Torah finds its epitome in the GOLDEN RULE (7:12), understood as a summary of all that has gone before and as the fulfillment of the Law and the prophets.

2. **The historical matrix of the Sermon on the Mount.** Given that the Sermon on the Mount is a collection of teachings and not an actual "sermon" of Jesus', one might inquire what historical circumstances in the early church caused such a collection to be made. There are two such influences that warrant consideration, but neither of them alone is sufficient to explain the phenomenon.

The first to be considered is the sectarian Judaism we know from Qumran and the DEAD SEA SCROLLS. In IQM 14.7 (and possibly also 14.3) the phrase "poor in spirit" occurs, indicating the possibility that the longer Matthean version of the first beatitude (Matt. 5:3; Luke 6:20) shows that the folk who formed the Sermon on the Mount understood themselves to be the "religious poor," a special group of the pious, dedicated to the

teaching given to them by their authoritative interpreter of the Law, like the Qumran community and its dedication to the TEACHER OF RIGHTEOUSNESS (see POOR[S] §2). The concurrence of blessing and cursing in Luke's version (Luke 6:20-26) recalls IQS 2.2b-4, 5b-9; and IQS 1.18 ff. suggests that Luke's "sermon" might, like the similar material in IQS, have been part of the rite of admission to the community—in this case, baptism.

It is also significant that only in IQS 1.3-4, 9-10; 9.16, 21-22; 10.20-21 and CD 2.14 ff. is anything like a command to hate one's enemies to be found in ancient Jewish literature. This may be a genuine point of contact between Qumran and the Sermon on the Mount, since such a command is specifically rejected in Matt. 5:43-44. Nevertheless, in IQS and CD the obligation of hostility is generalized to apply to all outsiders, whereas Matthew presumes a strict pattern of reciprocity, "Hate those who hate you." The parallel at this point is loose at best.

These and other similarities between the Sermon on the Mount and the Dead Sea Scrolls, however, establish beyond doubt that the Matthean church and the Qumran sectarians at least shared a common world of thought. Both understood themselves to be true expressions of Jewish religion.

Besides sectarian affinities, the gospel in general and the Sermon on the Mount in particular show the influence of rabbinic Judaism. That the Matthean church practiced a sort of scriptural commentary similar to rabbinic midrash has been established, although even in this regard Qumran influence is conspicuous (see MATTHEW, GOSPEL OF[S] §1). There is, however, in addition, an intriguing similarity to be observed between the structure of the Sermon on the Mount and that of the Mishna as it took shape in the rabbinic school of Jamnia. Davies has argued ingeniously that the Sermon represents a Christian counterpart of the rabbinic codification of the oral law at Jamnia, which formed the basis of the later Mishna. For instance, the three pillars of Judaism as expressed in AB. 1.2 by Simon the Just: "Torah, Temple service, and deeds of loving kindness," might be seen as roughly paralleled in Matt. 5:17-48 (Torah), 6:1-6 (worship), and 6:19-7:12 (deeds of loving kindness). Furthermore, the six antitheses (6:17-48) recall the six Sedarim of the Mishna. Davies wisely characterizes these suggestions as "very tentative" and "merely exploratory"; but, although they probably cannot be shown to pertain beyond reasonable doubt, they do point in the right direction. The Sermon on the Mount was formed in the conversation between the Matthean church and post-Jamnian Judaism, and this process represents a development of an element in the teaching of the historical Jesus. His proclamation of the kingdom included a moral demand as well as a promise. See ETHICS IN THE NT §A; ETHICS IN THE NT[S] §1a.

Other possible formative elements, like the influence of incipient Gnosticism, transforming Jesus into a Gnostic revealer (which some see behind the formation of Q), or the need to counteract Pauline antinomianism, are less probable in a

gospel so patently involved with Jewish "school" activity.

\***SERPENT.** The serpent is widely attested in the history of religions as a symbol used to represent both beneficent and hostile sacred powers. Among the Canaanites, the primeval chaotic power is portrayed as a serpentine figure, Lothan (cf. LEVIATHAN; RAHAB [DRAGON]), but archaeologists have also uncovered Canaanite serpent-entwined goddesses, which clearly represent friendlier powers (Fig. S3), as well as independent serpent figurines (Bodenheimer, pp. 186-87), which may have served as charms or talismans.

Within the Bible, however, the serpent is rarely viewed in a positive manner, although traces of an archaic reverence may be concealed in the persistent traditions about the serpents of Moses (i.e.,

3. Silver-plated bronze cult standard from Hazor. Above, crescent and stylized snake. Two snakes flank figure of the deity. Stylized snake at bottom.

the serpent rod, the bronze serpent, NEHUSHTAN). II Kings 18:4 suggests as much when it informs us that a serpent image attributed to Moses was still part of the Judean cult at the time of Hezekiah, who destroyed it together with other symbols of Canaanite influence: high places, pillars, and Asherah. The wisdom tradition, which directed its concern to the natural features of snakes, contains a few respectful references to their wondrous mode of locomotion (Prov. 30:19) and their reputed wisdom (Matt. 10:16). Elsewhere, however, the poisonous, threatening, negative qualities of snakes are most frequently noted.

The author of Gen. 3 made a significant contribution to the serpent's evil reputation. When his story is read against the background of ancient Near Eastern legend or myth (see Gaster), one recalls the wise, bearded, friendly, talking serpent encountered in the Egyptian tale of The Shipwrecked Sailor or the Akkadian serpent who robbed the hero of a chance for immortality in the Gilgamesh Epic (*ANET* [2nd ed.], pp. 72-99). But the biblical account remains distinct. From all the animals created by God it has singled out the serpent to receive a special curse. Although the focus of the story of Eden is properly the sin of man, the serpent's tale (Gen. 3:1-15) has its own symmetrical form. It begins with the observation that "the serpent was more subtle than any other wild creature" (vs. 1), and it ends when the serpent is cursed "above all wild animals" (vs. 14). The use of the comparative construction in vs. 14 heightens the contrast with the beginning of the story; it does not imply that the other animals were cursed. In vs. 1 the friendly serpent speaks freely with the woman, but in vs. 15 continual enmity is set between them. The story begins with a positive appraisal of the wise serpent, wise enough to know the source of total knowledge, i.e., everything "good and evil." It ends with a negative appraisal of that cursed beast which crawls on its belly and eats dust, the prototype of all of the subdued enemies of God's people (Mic. 7:17, cf. Ps. 72:9). The etiological details in the curse, which explain the strange habits of snakes and the natural aversion that women feel to them, should not obscure the author's intent to show the totally negative consequences of God's curse. In the first verse the author chose the word "subtle" (עָרוּם) to describe the serpent's wisdom in order to create a pun with the word "naked" (עָרוּם), which was used to describe the human couple in 2:25. In ch. 3, the "subtleness" of the serpent subsequently led the man and woman who tended the Garden to discover their own "nakedness." The reader of the story is clearly intended to understand that the serpent is a cursed beast whose wiles lead to no good.

The role of the serpent in the Genesis account provided the starting point for a considerable amount of exegetical expansion. The descriptions of an eschatological age in which enmity between man and snake will no longer prevail, so that even poisonous serpents will be rendered harmless (Isa. 11:8; 62:25), suggest a return to conditions prior to the Fall. The author of the book of Jubilees dealt with the problem of a talking

serpent by assuming that all the animals in Eden spoke a single intelligible language (i.e., Hebrew) until the day that Adam was expelled from the Garden (3:28; 12:26). The postexilic preoccupation with THEODICY, which was resolved in certain circles by making SATAN responsible for all evil, also contributed to the exegesis of Genesis by making the serpent either an agent of Satan or Satan himself (Wisd. Sol. 2:24; Apoc. Sedrach 4; II Enoch 31; Vita Adae 16). That exegetical tradition was so widespread and firmly held by NT times that it was reflected in Rev. 12:9.

The exegetical expansion did not cease with the NT. The story of the Fall was a favorite with the Gnostics, who transformed it so that the God of the OT became an ignorant or evil god who sought to prevent man from gaining wisdom. One group of Gnostics who were known as Ophites (from ὄφις, serpent) claimed the serpent as their patron. The NAG HAMMADI tractate which has been designated "On the Origin of the World" contains a passage which reflects very early (before second century A.D.) exegesis based on the meaning of the name for serpent in Aramaic. In Aramaic the words "Eve," "life," "instructor," and "serpent" all appear to be derived from the same root and may be written with similar consonants. Therefore this text explains that a heavenly Eve, whose name means "life," appeared in the form of the serpent (i.e., instructor) in order to persuade the earthly Eve to eat the fruit and gain its Gnostic wisdom.

**SEVEN.** See SEVEN, SEVENTH, SEVENTY; GENERATION, SEVENTH[S]; EZEKIEL[S] §1.

\***SEX, SEXUAL BEHAVIOR.** Since sex is both a powerful physiological-psychological drive and a crucial aspect of the reproduction of populations, no society leaves the matter unregulated. Some societies take a very positive view of sex and are permissive, while others take a negative view and are restrictive. In general, societies of the Mediterranean area are of the second type. There is also a strong statistical correlation between restrictions on premarital sex, the placing of a high value on virginity in brides, the existence of a double standard, and the existence of prostitution.

The ancient Hebrews, however, do not fit neatly into this scheme; their attitude toward sex is ambivalent. On the one hand, they valued it and celebrated it joyously; on the other, they feared and depreciated it. And while they believed (Gen. 2) that the primordial relation between the sexes was one of complementarity between equals, they in fact practiced a marked double standard.

1. **Fundamental attitudes. a. Ambivalence.** On the one hand, sex is good; it is regarded almost with awe as representing divinely given power, and is celebrated with joy and abandon. On the other hand, it is bad, to be feared and hushed up.

i. *Sex is good.* The assumption that sex for reproduction is good can be seen from the tone of the creation narrative. God creates a heterosexual humankind and commands and blesses the reproductive function (Gen. 1:26-31). In many passages fertility of women is seen as a sign of God's favor and barrenness as a sign of his disfavor (e.g., Gen. 29:31-30:24; I Sam. 1:5-20). As for virile potency, no better indication of its value can be found than in the fact that Abraham required his servant to swear by it ("under my thigh," Gen. 24:2, meaning the genitals). Furthermore, sex does not exist only for reproduction: companionship between spouses is a part of the creation account (Gen. 2:18-25). And at a much later period, there is in all literature no more innocently frank celebration of erotic love than in the Song of Solomon.

This might be compared with the Canaanite cult of fertility and sexuality, centering in the worship of the Baalim and the ASHTAROTH, and characterized by the practice of cult prostitution (see BAAL). Indeed, the Hebrews up to the time of the return from Babylon were often involved in this cult. But it was at all times strongly condemned by the leaders and prophets. The "official" view in the OT is that sex is good because God gave it, but sex mistaken for God is an idolatrous abomination.

ii. *Sex is bad.* That the OT frequently takes a negative view of sex can be seen from the following examples.

First, there is a strong negative feeling associated with nudity. Although nudity was a part of the innocent original estate of man (Gen. 2:25), after the FALL, to be human is to be clothed (Gen. 3:21; cf. Luke 8:27, 35); to be naked is shameful (Gen. 3:7, 10, 21). Priests had to wear shorts under their robes when carrying out their duties on platforms to avoid exposure (Exod. 20:26). To strip another was to attack his human dignity (Isa. 3:17). That this is related to sex can be seen from the explicit references in these verses to the genitals. "To uncover someone's nakedness" is the euphemism often used for the sex act, especially a deviant one (Lev. 18:6 ff.). Thus, the horror of seeing another's genitals can be related, in the case of kin, to the incest taboo; and, in the case of males, to the taboo on homosexuality (Gen. 9:22-27).

Second, we must note the poverty of the biblical languages in terms for genitals and the sex act and the frequent use of euphemisms such as "to know" for the sex act and "thigh" for the male genitals. This is so well-known that it requires no further elaboration here.

Third, there are frequent cautions against a man's spending his energies on sex (Prov. 31:3). More specifically, there are taboos on sexual contact under certain circumstances: during a woman's menstrual period or when she was having a vaginal discharge (Lev. 15:19-30); before or during battle (I Sam. 21:4-5; it was this rule that frustrated David's effort to hide his adultery with Bathsheba,

II Sam. 11:6-13), which explains the exemption of newlywed men from military service (Deut. 24:5); and especially in preparation for religious rituals (Exod. 19:15-16).

b. *Double standard.* The Hebrew double standard can be seen from a number of indications.

Women were subordinated to men, whether their fathers and brothers or their husbands (Num. 30:3-15). Men are shown to be active, taking initiative, and women are (supposed to be) passive. The woman who makes advances is both evil and dangerous (Prov. 6:23-28).

A high value was placed on premarital virginity in women (Gen. 19:8; Song of S. 4:12; Matt. 1:18-25); discovery that a bride was not a virgin was grounds for punishment, whether by stoning (Deut. 22:20-21) or divorce (Matt. 1:18-19). In contrast, the question of male virginity at marriage is not mentioned.

There are sharply divergent standards of fidelity in marriage. The adulterous wife is liable to the death penalty (Num. 5:11-31; Deut. 22:22-27). The unfaithful husband, on the other hand, though he is warned that his conduct is reprehensible and leads to moral perdition (Prov. 2:16-19; 7:26-27), is subject to no legal sanction unless he has violated the rights of some other man in the woman in question and incurred either his revenge or his demand for damages (Prov. 6:27-35). A man has also the right to take additional wives and concubines, and has the recognized right of access, with some restrictions, to slave and captive women (Num. 31:18-19; see SLAVERY IN THE OT §4b) and to prostitutes (Gen. 38:12-19; Josh. 2:1-7); it is even suggested (Prov. 6:26) that it is both cheaper and less dangerous to resort to a prostitute than to commit adultery.

The double standard required that men and women be distinguished in every way: in dress, so that transvestism was an abomination (Deut. 22:5); in economic roles; and in every area of life. It must not be thought, however, that all of the advantages of the double standard accrued to the men. Anthropologists have come to realize that the customary division of roles between the sexes gives to each certain prerogatives, which is to say leverage. There is a mutual dependency, such that men without women are about as helpless as women without men.

c. *The rationale.* What is the source of the ambivalence and the double standard? At the ideological level, the most plausible explanation derives from the Hebrew view of the Fall. In other words, what God created perfect was warped and spoiled by man's—and even more, by woman's—foolish willfulness. What was in the Creation perfect companionship became a hierarchy of dominance and submissiveness (Gen. 3:16), and what was designed to be pure bliss became, on its underside, disruptive and dangerous. Thus the Hebrew view is not like that of the Neoplatonists, who totally despised the body and its functions; it is more like the gingerly caution with which one handles a dangerous explosive.

2. **Restrictions and deviations.** In light of the ambivalent view the Hebrews had of sex, it is not surprising that they hedged it in with a complex

set of rules. We will discuss these in terms of a successive narrowing of the scope of a man's legitimate sexual contacts.

**a. Bestiality and homosexuality** (see BESTIALITY [S]; HOMOSEXUALITY[S]). Throughout the biblical era, it was the uniform conviction of the Hebrews that coitus should be restricted to human heterosexual contacts. This was part of the order of creation (Gen. 1, 2). Contact between persons and animals was known but condemned and subject to the death penalty (Exod. 22:19). The same was true of male homosexuality (Lev. 18:22). In the story of Lot (Gen. 19:5) and in that of the Levite and his concubine (Judg. 19:22-25), it is not clear which motif predominates in the host's refusal to allow the townspeople to abuse his guest sexually, the horror of homosexuality or the sacred duty of hospitality. In each case, the host offered his virgin daughter(s) as a substitute. Lesbianism is not mentioned in the OT, but is condemned with male homosexuality in the NT (Rom. 1:26-27; Gal. 5:19-20); it may have been learned from the Greeks.

**b. Incest.** A taboo on INCEST is a universal trait of human societies. But both the form it takes and the apparent underlying motives vary greatly. Incest taboos should not be confused with rules of exogamy, though they may largely coincide; the former relate to sexual contact, the latter to marriage. In the OT, the list of prohibited women is given in full (Lev. 18:6-18). It includes a man's mother and stepmother, sister and half sister, granddaughter, father's and mother's sisters, father's brother's wife, brother's wife, and son's wife. It is not clear why daughter should be omitted, for the story of Lot and his daughters shows that this was also taboo. Grandmother is not mentioned, possibly because a much older woman would not represent a genuine temptation. What is clear is that the basis of this list is social, not genetic. First cousins are not taboo, though closely related biologically; but a number of wives of kin are taboo, though unrelated biologically. A much more plausible explanation is that in all the specified relationships, sexual contact would be potentially disruptive of extended family relations by creating competition between related men for the same women. It is not an accident that in almost every case, a woman is specified in terms of the man whose rights in her would be violated by an act of incest.

It is intriguing that penalties for incest are apparently left up to God; whereas for many offenses penalties are spelled out, in the case of incest offenders are cursed, the curse including childlessness (Deut. 27:20-23).

Infractions of this taboo are mentioned in the OT. The incest of Lot's daughters was justified by them on grounds of the necessity of keeping the family line alive, but was condemned by the Hebrews. Reuben's incest with his father's concubine (Gen. 35:22) was at the time overlooked by Jacob, but was mentioned at the time of the paternal "blessing" (Gen. 49:4). The case of Abraham's marriage with Sarah, whom he presents as his half sister (Gen. 20:12) may be explained as representing an earlier custom, though it does not conform to any explicit permission. A similar

puzzle is presented by the case of Amnon's incest with his half sister Tamar (II Sam. 13). The problem is not the rape itself, but Tamar's statement (vs. 13) that David could have given Amnon permission to take her legitimately. The brother-sister marriage of Egyptian divine royalty would have been known, but could not have been transferred, at least with the same rationale, to Israel. It may represent a survival of the earlier custom in spite of, or before, the explicit formulation of the law.

**c. Rape.** If a man raped a virgin not already engaged, he paid her father the bride price, whether or not he married her (Exod. 22:16-17). Elsewhere (Deut. 22:28-29), it is said that he had to marry her and could never divorce her. If a man raped an engaged virgin in circumstances where she could not get help, he was stoned, but she was not punished; but if she could have called for help, she too was stoned (Deut. 22:23-27).

**d. Adultery.** Adultery was viewed on the one hand as an offense against the rights of the husband, and on the other as an offense against God (Prov. 6:27-35; Ps. 51:4). It is not clear whether both views were held simultaneously, or whether the former was earlier and the latter a subsequent development. In either instance, the penalty for both adulterers was death (Deut. 22:22).

**e. Prostitution.** Since prostitution was a recognized social institution, it may be anomalous to deal with it under the rubric of deviations. However, there seems to have been a gradual development of the view that it was bad not only for the women involved, but for the men who resorted to them. In the patriarchal period, the only fault that was held against Judah (Gen. 38) was his failure to honor the levirate rule; his use of Tamar as a prostitute passes without comment. But later, consorting with prostitutes is condemned as foolish, dangerous, and wrong (Prov. 29:3; 31:3; 2:16-22).

**f. The "sons of God" and the "daughters of men."** The much-discussed case (Gen. 6:1-4) in which, in antediluvian times, beings called "Sons of God" consorted with "daughters of men" should probably be understood as representing relations between heavenly, divine, angelic beings and human women. This is in keeping with the general use of the phrase "sons of God" (Job 1:6), and no other convincing explanation of the phrase which would make it different in meaning in Genesis has been presented.

**3. Techniques.** Little if anything is said directly about the positions and techniques of the sex act. From passing details in the Song of Solomon, one may infer that the usual position was front-to-front, with the man on top. Erotic caresses were used (Song of S. 2:6 and *passim*). Various body parts of a woman are listed in the Song of Solomon as being erotically stimulating to a man, and body parts of a man which are stimulating to a woman. Scent is an important stimulus, including perfume (Song of S. 1:3, 12-14), and cosmetics are used for the same purpose (Jer. 4:30).

**4. Summary.** In summary, the ancient Hebrews considered sex to be a gift of God, to be used both for procreation and for erotic pleasure. But as a

result of the Fall, it was felt to have become, because of its enormous power, a potentially explosive and disruptive force, destroying the individual, the family, and society; it therefore had to be guarded by a host of restrictions. These restrictions, in association with the polar view of the relations between active men and passive women, and because of woman's special role in bringing about the Fall, brought into being the double standard described above. This was reinforced by the example of many of the other societies with which Israel was acquainted, and by the type of social structure which characterized Israel for most of its history. It would seem that in the intertestamental period, there was both an elaboration and rigidification of the ideological basis for the double standard and an alleviation of its cruder applications. But in the context of such a system, the NT teaching, mild as it may seem to modern readers—or even reactionary to some—came with revolutionary impact. Even though the social inequality of the sexes was not eradicated in NT thought, and in some ways was actually reinforced, the gist of the example of Jesus and of the teachings of Paul was that it was a temporary and pragmatic matter, relative and conditioned by social circumstances; but in terms of the unconditioned rule of God, who in Christ made all things new, there is again a complementarity of equals (Gal. 3:28). See also DIVORCE[S]; MARRIAGE[S].

C. R. TABER

**SHALAH (GOD)** *shā' lāh'*. The (Canaanite?) god Shalah (*šelah*) is not directly attested, but his indirect attestation is manifold. He is the god of watercourses, and, in particular, of the netherworld river which the dead must cross. Crossing seems to be the occasion of their judgment, and Shalah might play an important role in it. Indirect attestations include the following.

(1) The personal name Methuselah (Gen. 5:21-27) translates "man of *šelah*," where *šelah*, in accordance with the pattern of Semitic name formation, occupies the place of a divine name. See NAMES, RELIGIOUS SIGNIFICANCE OF[S] §2a.

(2) Job 33:18 reads: "He keeps back his soul from the Pit, his spirit from [the] *šelah*" (Tsevat); see also 36:12 (RSV "sword") and compare 33:28, which substitutes "the Pit" for "[the] *šelah*" of vs. 18. These passages refer to the underworld; "Pit" is one aspect of it and *šelah* another. Several appellatives and topographical names show that the latter word means "current" (Neh. 3:15; Isa. 8:6; and Song of S. 4:13 [RSV "shoots"] further substantiate this). This is to say that *šelah* corresponds to the River *Ḥubur* of Mesopotamian mythology, over which the dead pass as they enter the underworld. Furthermore, Mesopotamian texts make the crossing the occasion of judgment. In Palestine the idea of judgment at bodies of water is traceable in the bynames of Kadesh: (Me-)meribah, "[water of] contention/litigation" (Num. 20:13; 27:14) and En-mishpat, "spring of judgment" (Gen. 14:7). The rite of Deut. 21:1-9 is probably an act of purification by sacrifice to the

deity who is present in or represented by the brook. Being quite dissimilar to all other biblical rites, it is reinterpreted by the prayer of vs. 8, but the contours of a distorted, non-Yahwistic sacrifice loom behind it.

(3) The Middle Hebrew terms for irrigated and nonirrigated fields are respectively, [*š'dhē*] *bēth hašš'lahin* and [*š'dhē*] *bēth habba'al*. The second is clearly "[field of] Baal's ground," i.e., watered by rain, the gift of Baal. The first is apparently "[field of] the currents' ground," but since the word is quite rare in Middle Hebrew outside this compound, the interpretation "[field of] the *šelah*'s ground" is suggestive (the plural stands for the plurality of irrigation ditches); one kind of field is called after the god of the celestial water, the other after the god of the subterranean water.

(4) The afore-mentioned Methuselah is a member of one of two parallel genealogies, Gen. 5:1-32 and 4:1, 17-22. The corresponding member of the other genealogy is Methushael (4:18). As it stands, the name has no linguistically acceptable meaning. A change of vocalization from *m<sup>e</sup>thūsā'el* to *m<sup>e</sup>thūs'ól*, however, yields "Man of Sheol" (see DEITIES, UNDERWORLD[S] §2bii). This corresponds perfectly to "man of *šelah* (Shalah)" of the other genealogy. Both names designate their bearers as devotees of a god of the netherworld.

M. TSEVAT

\***SHALEM (GOD)** *shā'lēm* [שָׁלֵם, "the stable one"]. The West Semitic deity Shalem or Shulmān is the god whose name is perpetuated in that of the city of Jerusalem, "the foundation of Shalem." In the Assyrian vocabulary K.4339 he is identified with Ninurta, the Assyro-Babylonian deity manifested in the planet Saturn, which was, in the thinking of the ancient Semites, the "stable" planet. The root *šlm* in most of the Semitic languages signifies "perfect, true, faithful, whole, healthy," ideas summarized in the concept of stability. Just as Ninurta in Assyria and Babylonia was looked upon as the founder of a number of cities, and El or Kronos, the Saturn deity of the Canaanites, was deemed the founder of Byblos in Phoenicia (according to Sanchuniathon's account of Phoenician religion preserved by Philo of Byblos), so too was the Saturn deity of Jerusalem regarded as the city's founder. His city, particularly the sacred precinct within it, restrained the waters of chaos beneath, and was considered the center of the earth. See NAVAL OF THE EARTH[S].

In Middle Assyrian lists, the consort of Shalem or Shulmān is called Shulmitu or Shulmanitu, and is defined as "the Ishtar of Jerusalem." Shalem and Shulmanitu probably underlie the "sh'lōmō" and "sh'ulammīth" (Solomon and the Shulamite) of the Song of Songs. The names *sh'lōmō* ("belonging to Shalem") and Absalom ("the Father is Shalem"), bestowed by David upon his sons, highlight David's desire to pay his respects to the god of Jerusalem.

It is likely that in the cult of Jerusalem, 'elyōn ("the most high") was another name for Shalem.

Gen. 14:18-20 indicates that the god of the city was invoked as 'ēl 'elyōn ("God Most High"), maker of heaven and earth (perhaps read, rather, "possessor" or "parent" of heaven and earth). Saturn was the most distant of the planets known to the ancients, and it was quite natural that it be called "the most high." Sanchuniathon names Elioun as the father of the deities Heaven and Earth, from whom El or Kronos (Saturn) was born. Elioun and Saturn thus constitute different generations of gods; in Jerusalem, however, they were probably invoked as the same divinity.

In like manner, while Shahar and Shalem are twin sons of El in Ugaritic myth, in Jerusalem Shalem was another name applied to the great god El or Elyon. This reflects the tendency toward syncretistic monotheism among the ancient Semites, whereby the god of a particular locality was regarded as absorbing other divinities into his person.

Shahar (Dawn) and Shalem in Ugaritic myth are likely the morning and evening stars, the two aspects of the planets Venus or Mercury. (Shahar in Isa. 14:12 is Mercury, since the king of Babylon taunted by the prophet is Nabonidus, who bears the name of the god Nabu, the Assyro-Babylonian Mercury.) Shalem, at Ugarit the evening star, came in the cult of Jerusalem to be one of the names of Saturn because of the widespread association of Saturn with the sun. After sunset (Akkad. *šalām šamši*), the representative of the sun in the nocturnal sky was thought to be the planet Saturn because of the slowness and regularity of its movement. Saturn is repeatedly called "the sun-star" in Assyro-Babylonian astrological literature. It is known that the sun played a prominent role in the cult of Jerusalem far into Judean times. It is likely that in pre-Judean times, the god and founder of the city was venerated during the day as the sun and by night as Saturn, "the stable one, the most high."

**Bibliography.** P. Clemen, *Die Phoenikische Religion nach Philo von Byblos* (1939); C. H. Gordon, *Ugaritic Literature* (1949), pp. 59 ff. (trans. of myth of Shahar and Shalem); J. Gray, "The Desert God 'Aṭtar in the Literature and Religion of Canaan," *JNES*, VIII (1949), 72-83, maintains Shalem is Venus as evening star; M. Jastrow, "Sun and Saturn," *RA*, VII (1910), 163 ff.; H. Lewy, "Origin and Significance of the *Mágen Dáwid*," *ArOr*, XVIII, Pt. 3 (1950), 330-65, maintains Shalem is Saturn.

R. A. ROSENBERG

\***SHALMAN.** Hosea, foretelling the imminent destruction of Israel by the Assyrians, cited a historical precedent (10:14): "All your fortresses shall be destroyed, as Shalman destroyed Beth-arbel on the day of battle." Hosea had in mind the first Assyrian invasion of Israel in 841 B.C., by Shalmaneser III, of whose name "Shalman" is a hypocorism (see CARMEL, MOUNT[S]). Beth-arbel (now Irbid in Jordan) lay near the border; it follows from Hosea's words that it was taken and destroyed and its population massacred by the Assyrians as a grim warning to Israel. King Joram's murder by Jehu, who immediately did homage and paid tribute to Shalmaneser III, must be seen as a

propitiatory measure to stop further Assyrian retaliation.

\***SHAREZER.** See BETHEL-SHAREZER[S].

\***SHECHEM (CITY)** *shēk'əm* or *shākēm'*. The original IDB article covers the biblical data thoroughly; what follows describes archaeological results since 1960.

Excavation ended in 1973 after eighteen years. Twenty-four periods of occupation have been traced on the roughly sixteen-acre tell. Gaps in occupation divide the city's history into five eras:

(a) Two periods of small village settlement within the Chalcolithic Age, falling roughly 3600-3200 B.C. (strata XXIV-XXIII).

(b) The Middle Bronze Age city-state, from about 1900 B.C. to about 1540 B.C., when Egyptians destroyed towns throughout Canaan as they drove out the Hyksos (strata XXII-XV).

(c) The Late Bronze Age city-state, starting about 1450 and extending past the time of the Hebrew conquest to about 1125, when destruction came (Judg. 9) (strata XIV-XI).

(d) After a gap of more than a century, continuous occupation as a city through the time of the northern kingdom, with a major destruction in 724 B.C., and as a village among ruins down to about 475 B.C. (strata X-V).

(e) A flourishing, fortified Hellenistic city from about 330 to 107 B.C. (strata IV-1), relating to the Samaritan temple on Mount GERIZIM high above the city.

Shechem's history is closely related to a succession of sanctuaries mentioned or implied in the OT and attested archaeologically. At the western edge of the city, a walled precinct contained sacred buildings covering a time span of more than six hundred years. Beginning about 1750 the precinct contained courtyard temples made up of small rooms and a plaza surrounding a central court open to the sky, in which a free-standing pillar probably rested on a rock base. About 1650, a massive fortress-temple, with walls seventeen feet thick, replaced the courtyard temples. An altar in front of the fortress-temple sat on a thick layer of fill (note the Beth-millo, house of the filling, in Judg. 9:6), directly over the central court of the series of courtyard temples. The fortress-temple first had a stone pillar standing in the center of its entrance; in a second phase, shaped slabs of rock standing in sockets flanked the entrance. Continuing the sanctuary tradition in this one spot was a less massive one-room temple built on the foundations of the fortress-temple. This structure's two phases cover the period 1450-1125; in front of it, next to an altar above the earlier altar, stood a huge slab of shaped limestone in a stone socket. In short, a sanctuary tradition carried through two major shifts of political allegiance (Hyksos to Egyptian-vassal Canaanites about 1540, Canaanite to Israelite around 1200). Characteristic of the tradition was the sanctity of a specific spot and a

continuing use of standing stones, Hebrew *masseboth* (see *PILLAR*; *PILLAR(S)*). When the archaeological data is compared with passages such as Gen. 12:6; Josh. 24:1-28; and Judg. 9:1-49, a group of constants emerges: sanctuary, famous tree (see *DIVINERS' OAK(S)*), standing stone, and covenant making at Shechem. It is quite likely that all the structures mentioned in Judg. 9:4, 6, and 46 are part of the complex in Shechem's sacred precinct.

Other sanctuaries have been found within the city and nearby. Between the fortress-temple and the great fortification wall at the W perimeter of the city, salvage excavation in 1973 identified a royal "chapel" of three rooms on a single axis, with an altar along the center of the inmost wall; it was contemporary with the fortress-temple and the outermost city wall (1650-1540). Also contemporary was a square sanctuary built around an open central court with a base for a central pillar, located on a low hillock on the flanks of Mount Gerizim, above and just S of Shechem. Contemporary with the 1450-1125 period sanctuary in the sacred precinct was what appears to be another sacred building among the houses near the heart of the city, again with a large, shaped slab of rock lying on its floor.

The existence of these sanctuaries outside the sacred precinct, and in one case outside the city altogether, throws indirect light on the Deuteronomistic traditions of sacred places in the Shechem pass between Mount Gerizim and Mount Ebal (Deut. 11:29-32; 27:1-26; Josh. 8:30-35), as well as on the patriarchal traditions in Gen. 12:6; 33:18-20; and 35:4. See *JOSHUA*, *BOOK OF(S)* §5*d*.

From the Hellenistic period comes one more important sanctuary near Shechem, represented by a solid block of masonry sixty-five feet on a side and thirty-two feet high, poised on Tell er-Râs, 1100 feet above the floor of the valley. Visible from everywhere in the Shechem pass and adjacent plain, including from the mouth of the traditional Jacob's Well (John 4:6; cf. vs. 20), it is almost certainly the base of the altar or even the podium of the Samaritan worship center on Mount Gerizim (see *SAMARITANS*; *SAMARITANS(S)*). The emperor HADRIAN built a temple of Zeus on top of the ruin about A.D. 130.

**Bibliography.** For reports of the excavations season by season, consult *BASOR*, 144 (1956), 9-20; 148 (1957), 11-28; 161 (1961), 11-54; 169 (1963), 1-60; 180 (1965), 7-41; 190 (1968), 2-41; 204 (1971), 2-17; 205 (1972), 20-35; 216 (1974), 31-52. A lucid synthesis (through 1962) is G. E. Wright, *Shechem: The Biography of a Biblical City* (1965); a new ed. covering the entire expedition is in preparation. More popular and synthetic articles include E. F. Campbell, Jr., and J. F. Ross, "The Excavation of Shechem and the Biblical Tradition," *BA*, XXVI (1963), 2-27; R. J. Bull, "The Excavation of Tell er-Ras on Mt. Gerizim," *BA*, XXXI (1968), 58-72; R. G. Boling, "Bronze Age Buildings at the Shechem High Place: ASOR Excavations at Tananir," *BA*, XXXII (1969), 82-103; E. F. Campbell, Jr., and G. E. Wright, "Tribal League Shrines in Amman and Shechem," *BA*, XXXII (1969), 104-16. Full description of the archaeology, stratum by stratum, is given by L. E. Toombs, "The Stratigraphy of Tell Balatah (Ancient Shechem)," *ADAJ* (forthcoming).

E. F. CAMPBELL

**\*SHILOH (CITY).** In the beginning of the eleventh century B.C. Shiloh was Israelite property, but there is no evidence in the OT of when it came to be so, and no information is given of an Israelite conquest of the town.

After the Israelite defeat when the ark was taken by the Philistines as a war trophy (I Sam. 4:1-11), Shiloh disappears from the traditions in I Samuel. When the ark is later returned to Israel it is placed in Kiriath-jearim in Judah, not in Shiloh as might be expected. This has led to the conclusion that Shiloh had been destroyed by the Philistines ca. 1050 B.C., and that it is this destruction that Jeremiah alludes to: "Go now to my place that was in Shiloh, . . . and see what I did to it" (Jer. 7:12; cf. 26:6). However, it seems unlikely that Jeremiah (ca. 600 B.C.) would refer to a destruction that had taken place roughly 450 years earlier. Further, Shiloh seems to have been still in existence at the time of King Jeroboam I (ca. 925 B.C.) (I Kings 11:29; 12:15; 14:2-4), though it cannot be taken for granted that because the prophet Ahijah lived in Shiloh, there was also a sanctuary there. Jer. 41:5, dating from ca. 585 B.C., talks of "men from Shiloh," which could mean that Shiloh was still inhabited then, but it may also be understood as men from that district. In this case, however, the LXX (48:5) reads Σαλημ instead of the normal transcription Σηλω (μ). Shiloh thus seems to have been in existence as a town through most of the monarchic period, though it may have suffered devastation in connection with the fall of the northern kingdom in the year 722 B.C. The passages from Jeremiah may be understood as referring to the sanctuary alone, not to the town proper; Ps. 78:60 only says that God gave up his abode at Shiloh. It may therefore well be that Shiloh was a living town, whereas at a certain time its sanctuary had been destroyed and abandoned.

The Danish excavations at Seilun, carried out in the years 1926 and 1929, were interrupted in 1932 by the sudden death of H. Kjaer, the director. Only preliminary reports appeared. According to these, Seilun had suffered heavy destruction some time during the Iron I period and never recovered completely. Most scholars took this as a proof of the theory that Shiloh had been destroyed in the Philistine war, ca. 1050 B.C.

A closer examination of the finds, combined with a short supplementary excavation carried out in 1963 by the present writer, has necessitated a revision of the earlier conclusions. There is no evidence of a regular destruction in the Iron I period, and ceramics from Iron II are abundant. The first flourishing period of Seilun was Middle Bronze II (ca. 1800-1550), when the town was surrounded by a heavy wall. At the end of this period Seilun seems to have been destroyed like many other Palestinian towns, possibly in connection with the Egyptian campaigns. In Late Bronze I Seilun seems not to have been inhabited, but LB II as well as Iron I are represented, though on a lesser scale. Iron II—mainly the time of the divided monarchy—was a flourishing period, whereas the sudden scarcity of ceramics from Iron III points to a final destruction of Seilun ca. 600 B.C. The town did not come into existence again until

Late Hellenistic or Early Roman days. During the Roman and Byzantine periods it seems to have been a prosperous town, but after the Islamic conquest it lost much in importance. During recent centuries Seilun has no longer been inhabited.

The excavations have shown no traces of a sanctuary on the summit of the mound where one would have expected it. This may be due to the summit having been almost completely denuded, partly by erosion, partly by an artificial leveling right down to the bedrock when the town was rebuilt during the Roman period. The ritual dancing in the vineyards (Judg. 21:19-24) may, however, mean that the sanctuary was outside the town itself.

**\*SHIPS AND SHIPPING.** New discoveries have shed fresh light on ships of the Bronze Age and of the Greek and Roman periods.

**1. The Bronze Age.** Until recently we knew the ships in use in the Mediterranean during the Bronze Age (roughly 2000 to 1200 B.C.) solely through small, often crude, representations on pottery and seals and a few rough clay models. In 1972 there was uncovered at Akrotiri on the Greek island of Thera (Santorini) a painted frieze from about 1500 B.C. that includes a marine scene in which half a dozen ships are carefully drawn in large scale (Fig. S4). The new pictures confirm much that had hitherto been suggested but was not certain: that the sailors of Crete and the

Courtesy L. Casson

4. The Thera frieze

nearby islands used long, slender galleys rounded at both ends and rigged like contemporary Egyptian craft, with a broad square sail stiffened by a boom along the foot (not loose footed, as sails were to be from the close of the Bronze Age on). Even more important, the pictures settle an argument of long standing. On many of the vessels portrayed on seals and ceramics, one end terminates in a lofty post while the other is lower and has a distinctive projection at the water line. The point at issue has been: which is prow and which stern? Most have held that the lower end is the prow, and

that the projection is the earliest example of that naval weapon par excellence, the ram. This theory must now be abandoned once and for all, for the new pictures, although they do not make clear what the projection is, show that it is unquestionably at the stern. It seems to be removable; perhaps it served as a balancing platform attached on ceremonial occasions when the vessels, as in the frieze, carried a heavy concentration of passengers aft.

**2. Merchantmen.** Until World War II our knowledge of the sailing ships which the ancients used for carrying cargo was limited to what could be gleaned from casual references in literature and from representations in painting and sculpture. Few of these showed any detail, and none were to scale. The development of scuba diving after the war and the new field of underwater archaeology to which it gave rise have totally changed the picture. Hundreds of wrecks of ancient sailing vessels have since been located, ranging in date from the seventh century B.C. to the seventh A.D., and in type from small coasting craft to freighters of respectable size. In all cases there are remains of cargo; in many, remains of the ship's equipment; in a precious few, remains of the bottom of the hull, protected from disintegration by the cargo lying over it. As a result, for the first time we know how Greek and Roman sailing craft were constructed.

**a. Construction.** There are fundamentally two ways of building a wooden vessel. One, familiar to us since it has been standard in the West, is to start with a skeleton of keel and frames (ribs) and then fasten to this a skin of planks. The other, favored by most of Asia but also some parts of Europe, reverses the procedure. First a shell of planks is made by pinning each plank to its neighbors, and then a certain number of frames are inserted to stiffen the shell.

Ancient wrecks reveal that the Greek and Roman shipwright consistently used the second method—but with such care that the results more resemble cabinet work than carpentry. He built up a shell of planks, pinning them to each other with close-set mortises and tenons—they are almost always less than ten inches apart, most often two to eight, and sometimes with hardly any space at all between—and to make sure they would never separate, he transixed each with a dowel. Then, into this sturdy shell he inserted a powerful and complete set of frames made fast to the planking by long wooden dowels (treenails). The frames were rarely more than ten inches apart and usually much closer. Hulls so built must have been immensely durable and resistant.

Since the only wood to survive was that protected by an overlay of cargo, in almost all cases merely the bottom of the hull has been preserved (Fig. S5), and only in a very few is there planking or structural material from higher up. For the superstructure we must still depend on ancient pictures (e.g., SHIPS AND SAILING IN THE OT Figs. 48, 51, both standard two-masters of the Roman period). The remains of a small coasting vessel of late date (seventh century A.D.) include parts that

5. Wooden timbers of the Kyrenia ship preserved and reassembled (photo taken from the stern)

permit the reconstruction of the kitchen it carried at deck level aft, a roomy affair with a sizable hearth for preparing hot food; such facilities were far more elaborate than those which Columbus' ships boasted.

**b. Size.** The largest wreck uncovered so far was about 140 feet long. Quite a few were 100 feet or somewhat more. The beam runs between one third and one quarter the length, ratios common in sailing ships of all ages.

**c. Materials.** Most hulls were made of fir, cedar, or pine, woods traditionally favored by shipwrights. But cypress, elm, alder, and other woods have been identified, indicating that builders turned to locally available materials. Oak was commonly used for tenons and dowels, and occasionally for framing.

**d. Equipment.** Anchors are the piece of equipment most often found. The many hundreds that have been recovered enable us to reconstruct in some detail the various types and their development. The simplest anchors were of stone, including certain kinds still in use today. More sophisticated types had a stone or lead stock and wooden shank and arms. According to Acts 27:29-30 Paul's ship dropped four anchors astern and had others ready forward; underwater finds confirm that it was standard practice to carry multiple anchors fore and aft. Anchors were big as well as numerous. The 140-foot ship mentioned above had one with a lead stock 8 feet long that weighed over 1,500 pounds.

6. Divers excavating the Kyrenia ship (photo taken from the stern)

Other items of equipment commonly recovered include lead and bronze rings in various sizes, tools, and vessels from the ship's kitchen.

**e. Cargoes.** The commodities that figured largest in ancient overseas commerce were grain, wine, and olive oil. Since grain was shipped in sacks or bulk, no cargoes of it have survived. Wine and oil, as well as certain other products (dried fish, olives, nuts, pitch), were shipped in amphorae (clay jars generally holding from five to ten gallons); since these are unaffected by sea water, cargoes of amphorae are what the divers most frequently come across. Each city tended to use distinctive types of jars whose features changed over the years, so amphorae have become an invaluable index to the date of a wreck and the ports where it took on cargo.

Divers have also found cargoes of building stone (both rough blocks and finished members such as column drums), roof tiles, lead and copper ingots, and even of works of art such as marble and bronze sculptures.

\***SHISHAK.** On possible relationship to Solomon, see EGYPT, CHRONOLOGY OF[S] §4.

\***SIGN IN THE NT.** The Greek word σημεῖον, meaning "sign," occurs about seventy-five times in the NT, sixteen times together with τέρας (wonder) (see SIGNS AND WONDERS). The term "sign" may refer to a natural event or circumstance (Luke 2:12; II Thess. 3:17), to a miraculous authenticating deed (Mark 8:11; John 2:11), or to an apocalyptic portent (Mark 13:4; Rev. 13:13). The last two NT usages are of more direct theological significance.

1. **Jesus' attitude toward miraculous signs.** In Mark and the Synoptics generally, Jesus rejects the demand for an authenticating "sign from heaven" made by hostile or unbelieving persons (Mark 8:11-13; Matt. 12:38-39; cf. John 2:18), and Jesus' miracles are not presented as signs. This rejection of signs is taken to reflect the attitude of Jesus himself, since the contents of the gospels, as well as the book of Acts, indicate that early Christians were impressed with the miraculous deeds of Jesus and others, seeing in them tokens of God-given power and authority. Quite possibly Jesus viewed his own deeds more as signs of God's inbreaking kingdom than as indications of his own status and authority (Matt. 12:28).

2. **Signs as authenticating miracles in Paul.** Paul never mentions Jesus' miracles but speaks of his own performance of apostolic signs and wonders (II Cor. 12:12; Rom. 15:19). The context of II Corinthians makes two important facts clear: the opponents of Paul had performed such signs (12:11), and the signs in question were understood to be miraculous—"signs and wonders and mighty works" (12:12; cf. Rom. 15:19). Paul himself refused to exult in these manifestations as his op-

ponents apparently did, but placed them under the rubric of foolishness and boasting (12:1, 11). He himself would boast only in weakness (12:9-10), however, as befitted his understanding of Christ. Possibly Paul's opponents in Corinth also placed great store in the miracles of Jesus, whom they viewed as a DIVINE MAN (θεῖος ἀνὴρ), but the evidence is scarcely sufficient to warrant a firm conclusion. Significantly, in referring to miraculous spiritual gifts (I Cor. 12:9-10, 28-30) Paul does not speak of signs, but seems to reserve that term for deeds authenticating an apostle.

3. **Signs in Acts and John.** Jesus' miracles of healing are mentioned in the speeches of Acts (10:38), and he is said to have been attested by miraculous signs (2:22). Moreover, the miracles performed by Moses in Egypt (7:36), as well as those performed in the church, are called signs and wonders (2:43; 5:12; cf. Heb. 2:4). Such references to signs and wonders provide an additional context in which to interpret the data of II Cor. 12, for they give further indication of the role played by signs in the missionary preaching and life of the church.

It is therefore not entirely surprising that in the Gospel of John, Jesus' miracles are regularly called signs. As such they are clearly intended to point to his God-given role and dignity, although the evangelist does not view them naively or uncritically. In this gospel Jesus himself does not characteristically use the word "sign," speaking instead of his works (ἔργα), but he does not refuse to do signs. Here, in sharp contrast with the Synoptics, he takes the initiative in performing them, with the apparent intention of eliciting faith in himself. The signs then provide occasion for Jesus' discourses and discussions with his opponents in which the Johannine theology finds expression (John 5 and 9 esp.).

John's somewhat ambivalent attitude toward signs may result from his appropriation and editing of a collection of stories (a σημεῖα source) designed to persuade the reader of Jesus' divine power and dignity simply by recounting his miracles (see JOHN, GOSPEL OF[S] §2). Such a source corresponds to the situation we find in the book of Acts and with Paul's Corinthian opponents, for in each case authentication by signs plays a role. In this connection, Paul's statement that "Jews demand signs" (I Cor. 1:22) is also noteworthy. If the Johannine signs were drawn from some such traditional source or sources, it is unlikely that the evangelist took over so much of this material only to criticize it. The gospel leaves the unmistakable impression of a powerful and nearly omniscient Jesus, despite a recognition of his humanity (1:14) and the ambiguity of miracles as tokens of divine revelation (12:37). Although the Johannine Jesus takes on some of the traits of the Hellenistic-Jewish divine man, the ultimate background of this understanding of signs is likely the σημεῖα (אִיּוֹת) attributed to Moses in the Exodus tradition, which validate his role as God's messenger.

4. **Signs as eschatological portents.** In Hellenistic as well as Jewish and Christian sources, signs

sometimes appear as portents of the future. This usage is found both in the apocalyptic discourses of the gospels (Mark 13:4, 22) and in the book of Revelation (12:1, 3). The description of apocalyptic wonders in the OT book of Joel (2:30), cited in Acts 2:19, has been supplemented to include a reference to signs. Miraculous or otherwise astonishing apocalyptic signs were expected to signal and usher in the final crisis of God's redemption. Quite possibly the term first entered the Christian tradition in this sense. Such signs were not, however, the sole prerogative of God's emissaries. The final hour was to be marked by the appearance of false Christs and prophets performing signs (Mark 13:22; Rev. 19:20).

The movement from eschatology to Christology, which can be seen in the case of signs, is typical of the transition in early Christianity from an eager expectation of the return of Jesus in apocalyptic glory to a perception of God's glory in or behind his earthly ministry.

\***SINITES** [ethnic שִׁיטִּים, LXX Ἀσενωαῖος, Ugar. *Syn*, ethnic sing. *syny*, pl. *synym*, second-millennium Akkad. *Siyān(n)i*, Neo-Assyr. *Sian(n)nu*, ethnic *šian-aya*]. A northern Canaanite people, listed Gen. 10:17. It has long been recognized that the ethnic should be vocalized *has-siyāni* (instead of *has-sini*) and identified with the N Phoenician city-state of *Siyān(n)u*. Documents unearthed at UGARIT added much to our knowledge of it and established its location at the large mound near the village still called *Siyānū* (see HITTITES[S] map). In the Late Bronze Age, the dual state of *Siyān(n)u-Ushnātu* was under the overlordship of Ugarit, till the Hittite king Mursilis II, ca. 1330 B.C., subordinated it directly to the king of CARCHEMISH, who was the Hittite viceroy for northern Syria. Both cities survived the collapse of Ugarit. In the ninth century, they formed two independent states which participated in the Battle of Qarqar (see AHAB I; SHALMANESER 3). Tiglath-pileser III, in 738, incorporated them into the newly established Assyrian province of Šimīra (see ZEMARITES).

**SITES, ANCIENT, IDENTIFICATION OF.** Modern research in historical geography requires the co-ordination of four major disciplines, philology,

linguistics, geography, and archaeology, each with its own rules of evidence and frames of reference.

**1. Historical source analysis.** Since the goal of historical (as opposed to physical) geography is the understanding of ancient peoples in their environment, a philological analysis of all written sources is mandatory. Geographical annotations occur in the Bible to facilitate the reader's orientation (e.g., Gen. 14:2, 3, 7). Much of Jewish law is predicated upon conditions prevailing "when you come into the land" (Lev. 25:2; Num. 15:2; cf. 34:2; Deut. 12:1, etc.); thus it was necessary to know the nature and extent of the land of Israel, and the rabbinic authors show a lively interest in biblical geography. Christians were also concerned with identifying the scenes of scriptural events. Biblical scholars who lived in the land, such as Origen, Eusebius, Jerome, and Epiphanius, knew the country intimately and had frequent contacts with Jewish scholars and documents. Eusebius' *Onomasticon* was the most important composition to emerge from this age, but many others, including the mosaic map of Medeba, record the Byzantine locations of numerous sites.

During the subsequent periods, the works of Arab geographers are usually superior in value to the pilgrim itineraries because they had direct access to the local populace. One neglected scholar of the fourteenth century A.D. is Eshtori Haparhi, a Jew from Spain who studied the countryside and identified many biblical and talmudic sites. The most lasting contributions were made by E. Robinson, C. Clermont-Ganneau, and others, who combined field work with deep knowledge of, and constant reference to, the written sources.

Today the corpus of available materials as well as geographical research tools (concordances, geographical glossaries, etc.) encompasses not only the Bible but also extrabiblical texts. The postbiblical sources, Jewish, Christian, and Moslem, have lost none of their value; on the contrary, many sites known heretofore only in these late texts are now documented in extrabiblical inscriptions from the second millennium B.C.

The serious historical geographer must be thoroughly equipped to handle at least some of these written sources in the original language. Of special importance is sound philological method, well seasoned with common sense. Texts must be analyzed for their geographical information: place names and topographic features. Biblical texts must be critically evaluated and their literary genre defined; internal evidence such as possible geographical order within lists and narratives must be established. When seeking to locate a particular ancient settlement, all known references to the place from every written source available must be collected and studied in their contexts, preferably in the original. Distinction should be made between explicit and general references. Sociological and geopolitical details may have special significance; e.g., was the settlement a village, was it fortified, did it belong to a known political league or administrative district? Did it play a role in military events? The correct linguistic form of the name

must also be established by means of text criticism and the comparison of epigraphic evidence.

**2. Toponymic investigation.** The linguistic link between the historical records and the landscape is the preservation of numerous ancient names in Arabic form. Eshtori Haparhi was the unheralded pioneer in rediscovering Hebrew and Aramaic names among local toponyms, but in modern times it was Eli Smith, Edward Robinson's traveling companion, who assembled and analyzed this material for the first time. Many factors, mainly psychological and sociological, have complicated the picture. Some ancient names have been transformed into a similar sounding name with an entirely different Arabic meaning; a few have been translated into Arabic. Names resembling the Arabic word for demon (*'ifrit*) have been euphemistically converted to *et-Ṭaiyibeh*, "the favored," or the like. Where some Moslem clan or tribe has supplanted an older place name, the latter may have been transferred to the tomb of a local saint or sheikh. Rocks, water sources, and other prominent topographical features may also inherit some truly ancient name. Where the original name has disappeared, a TELL may come to be named after a nearby village, e.g., Tell Beit Mirsim.

Semitic names frequently survived the imposition of Roman-Byzantine titles; OT Lod (NT Lydda) was called Diospolis but with the Arab conquest the name Ludd/Lod came to the surface from among the Semitic peasantry. But in contrast is the modern village of Sebastiyeh, where the Semitic-speaking Samaritans were ousted and replaced by Greeks and Macedonians, thus paving the way for Herod's new Sebaste (in honor of Augustus) to replace permanently the ancient Shōmerōn (Samaria).

**3. Physical topography.** Modern research in historical geography must reckon with the ecological environment: types of rock and soil, water resources, rainfall, agricultural potentialities, and their effects upon the pattern of human settlement (as well as man's effect on them). Such research may contribute to the elucidation of certain passages in the ancient texts, but the investigator must first define carefully the content of the written source in accordance with sound rules of linguistics and philology before trying to impose a new interpretation in the light of the physical sciences.

**4. Archaeological research.** A century ago, the term archaeology could still be applied to details of *realia* gleaned from ancient texts, e.g., the Bible, the Talmud, etc. Most explorers thought only of visible remains, columns, foundations, carved-out tombs, etc., as archaeological. J. L. Porter and perhaps a very few others realized almost instinctively that the truncated, conical-shaped mounds near most villages bearing biblical names were actually the sites of the really ancient settlements; but they were in the minority. C. R. Conder even argued that these tells, or mounds, were the sites of ancient brick factories. Flinders-Petrie proved in 1890 that Tell el-Hesi contained the stratified remains of ruined cities, always rebuilt on the same site. By the First World War numerous excavations had been conducted. In the 1920s and 1930s a kind of positivism developed in which subjective impres-

sions gained during field excursions were elevated to the authority of objective archaeological facts. Theories based on insufficient evidence were accepted in the textbooks as axiomatic; since World War II many of these have been disproved by more intensive research. Especially has that been true when older proposals conflicted with clear statements in the texts; e.g., the supposition that Debir was not really in the hill country, or that Philistine Gath could be sought in the S. Hastily drawn conclusions, founded on incomplete archaeological findings, have had to be revised in numerous cases. Tell Abū Hureirih (Tel Haror) was formerly pronounced of no significance until meticulous survey revealed an extensive "lower city" with Bronze Age remains; Tell en-Nejileh produced abundant surface pottery from the Iron Age, but excavation showed that no substantial town from the Israelite period ever stood there. The excavator at Deir'alla denied the identification with Succoth on the basis of early results in a very limited digging area; the later discovery of an Aramaic inscription showed that the site was occupied much longer than he had originally supposed.

Excavations have seldom produced epigraphic material confirming the name of a site. In only one case, Tell ʿd-Duweir, was an identification proved by such a find (Lachish, mentioned in an ostrakon); elsewhere, e.g., at Gezer, Gibeon, Bethshan, Arad, and Dibon, the Arabic name was already clear evidence for the name of the ancient site.

Even the presence of stratified remains corresponding to the historical periods of a town is not valid evidence for identification unless the locale and other factors harmonize with the texts. Conversely, the absence of material from some documented period is not conclusive if the other demands of the written records are clearly met. Extensive building activity in one period may have obliterated some previous occupation level(s). The ancient name may have moved from the original tell when its surface became too small to support a town. The present-day village may be some distance away from the biblical site. This fact, often hidden from the nineteenth-century explorers, is discernible by the proper archaeological criteria.

The historical evaluation of archaeological evidence is fraught with pitfalls. Though artifacts discovered during excavation are quite objective in themselves, they are no more so than the clear statement of an ancient text. In both instances the interpretation of the facts, archaeological as well as philological, is bound to be highly subjective, reflecting the personal bias of the individual scholar. Just as many passages are ambiguous, so are the supposed results of excavated areas. Therefore, one must be cautious of accepting historical interpretations based on limited results in a probe or narrow trench.

The connection between particular strata in an excavation and the general historical framework is often determined by the ceramic and other artifactual evidence found *in situ*. Datable inscriptions in stratified contexts are rare, and the pottery chronology, though well defined for broad periods (Bronze Age, Iron Age, Hellenistic, Roman,

etc.), is seldom perfected for periods of less than a century. Especially is this true with regard to the historical periods such as the Israelite monarchy. Furthermore, it is well known that older sherds work their way up in a mound and later sherds work their way down. A valid topological sequence must be based on whole vessels from stratified contexts (not just from tombs). Thus, baulks must be removed to uncover entire rooms or other living contexts in order to permit restoration of broken vessels. For historical research, one must correlate the over-all type of settlement present at a site during specific periods. The picture that emerges may then be compared with the textual evidence.

The real service rendered by an archaeological survey is the establishment of the general character of specific sites. A trained investigating team can discern such typical features as over-all configuration, location, distance from water sources, fortified slopes, etc.

Similar principles govern the study of geographic regions. First, one must determine from the texts what a particular geographic term seems to mean. Classic examples of misused terminology are the alleged difference between Esdraelon and Jezreel (the former is simply the Greek reflex of the latter; both refer to the same valley) and the modern extension of the term Negeb to include all of southern Israel (=Mandated Palestine) down to Elath. Current books on geography, even those designed for use as biblical reference books, fail to observe that the biblical Negeb is basically the E-W zone from Gaza to the Dead Sea (with Beer-sheba as the focal point), what is popularly called today "the northern Negeb." Neither the Middle Bronze Age I settlements made famous by Nelson Glueck nor the Nabatean/Byzantine cities of 'Avdat and Shivta were in the Negeb of Israelite times. In all such cases, the geographer must establish the textual evidence first, and then he can attempt to correlate features of the terrain with historical nomenclature.

**5. Correlation and synthesis.** When seeking to locate a biblical settlement or, conversely, to find a historical identification for an archaeological site, the evidence from all the relevant disciplines must be compared. In rare instances, the facts in one sphere serve to resolve a problem in another, but great caution must be exercised. Any new site identification should be tested by a team of scholars from the various disciplines.

A. F. RAINEY

**SITES, SACRED.** The fact that the biblical account describes both the patriarchs and the followers of Moses as entering a land which was already occupied is an important datum for the consideration of sacred sites. In many cases, the holy places of the previous inhabitants were maintained by the newcomers, who sanctioned their use by describing theophanies of the God of

Israel which occurred there (see THEOPHANY IN THE OT[S] esp. §1*ai*). For example, Gen. 12:6-7 reports that Yahweh appeared to Abraham at the מקום (i.e., [holy] "place") in Shechem. The fact that the מקום was then under Canaanite control is made clear by the notice that "the Canaanites were [then] in the land." This patriarchal story explains why the site was subsequently regarded as sacred by Israel.

The modern reader, who tends to view all space as homogeneous, might wonder why Yahweh would be thought to reveal himself in a Canaanite holy site. In the consciousness of ancient man, however, there was a radical distinction between sacred and profane space. Sacred space was awesome, filled with a terrifying holiness (Gen. 28:17; Exod. 3:5). Places known to possess such qualities had been isolated by successive generations, and it seemed reasonable to worship the God of Israel at them and assume that he was the patron of the holiness attested there. See SANCTIFICATION IN THE OT[S] §2.

The men of Israel shared with the ancient inhabitants of Canaan a general understanding of the type of location which would be most suitable for cultic purposes. That typology is illustrated by the location of pre-Israelite sanctuaries: (1) temples in major urban centers, and (2) numerous sacred places which were more frequently located outside the cities, often in open spaces near sacred trees, by springs, on hills, or in the valleys.

In the major urban centers the temple was conceived of as a house (בית) or a palace (היכל) for the god whose presence was acknowledged by gifts, sacrifices, and other cultic acts. The god was symbolically represented by an icon or sacred symbol, which was housed in the inner *cella* (דביר). (See GRAVEN IMAGE; MOLTEN IMAGE; IDOL.) Architecturally, Israelite temples were quite similar to those of their neighbors (see TEMPLE, JERUSALEM; TEMPLE OF SOLOMON[S]), but the rigid aniconism of Yahwehism prohibited the construction of any divine image. It may be assumed that most of the major cities of Canaan contained pre-Israelite temples. Archaeologists have provided us with evidence for many (see TEMPLES; TEMPLES, SEMITIC[S] §1). Further evidence is supplied by the names of Canaanite cities. Many of the names compounded with *beth* (house of) indicate the presence of a temple, e.g., Bethel (House of El); Beth-shemesh (House of Shamash, i.e., a sun god). Other cities containing a theophorous element in their name provide similar evidence, e.g., Baal-hazor, Ashtaroth.

Evidence for temples of Yahweh in major urban centers has been obscured by a later orthodoxy which insisted that the cult of Yahweh be restricted to a single sanctuary (Deut. 12:5). Nevertheless, traditions about the house of Yahweh at Shiloh have been preserved (I Sam. 1:7, 24; 3:15) as well as notice of Jeroboam's schismatic temple at Bethel, where Amos spoke (Amos 7:13). Amos' condemnation of cultic practices at Gilgal, Beer-sheba (5:5), Dan, and Samaria (8:14) has led to the suggestion that royal sanctuaries were also located in those cities. (Aharoni; see TEMPLES, SEMITIC[S] §2*a*.)

The association of sacred sites with springs, trees, and heights has generally been interpreted as an expression of the nature religions of Canaan. Farmers, who were dependent upon a sufficient amount of annual rain, looked upon the heights where storm clouds gather as most appropriate sites to petition the storm-gods, a situation which the story of Elijah's rain-making on Mount Carmel illustrates (see also MOUNT, MOUNTAIN[S]; CLOUD [S]). Springs and wells are likewise sources of life-giving water, while flourishing trees provide apt and living witness to fertile powers within a sacred area. The worship of chthonic deities, which would be most appropriately conducted in caves or low places, may also be related to the fertility of the land, since fertility depends upon powers which arise from within the earth and are under control of the deities who live there. See DEITIES, UNDERWORLD[S].

Many of the sites accepted as sacred by the people of Israel were also associated with trees, springs, or mountains. At Gen. 12:6 there is mention of the "oak of Moreh" at Shechem, and at Gen. 13:18 the "oaks of Mamre" in Hebron are mentioned (see DIVINERS' OAK[S]). At both sites Abraham is reported to have built an altar to Yahweh. In Gen. 21:33 Abraham is described as planting a tree at Beer-sheba and calling on the name of Yahweh (see also Gen. 23:17; Judg. 4:5). However, the continuous association of sacred groves with the Baal cult subsequently called forth vigorous prophetic denunciations (e.g., Hos. 4:12-13; Jer. 2:20; Ezek. 6:13). The kings who frequented such sacred places were judged disloyal to Yahweh by the editors of the historical books (e.g., II Kings 16:2-4).

It is obvious from Abraham's sacrifice on a mountain in Moriah (Gen. 22:2) or Elijah's sacrifice on Carmel (I Kings 18) that mountains provided appropriate sites for the worship of God. Two mountains maintain their sacred status throughout the history of Israel: Sinai-Horeb, where Yahweh spoke to Moses (Exod. 3:12) and Zion, which was chosen for his holy habitation (Ps. 68:15-16 [H 16-17]; 132:13-14; see also ZION TRADITION[S] §§1*a*, 2, 3; ZAPHON, MOUNT[S]). Other mountains, however, were subjected to prophetic censure because of their continued association with Canaanite cults (Ezek. 18:6, 11, 15; Jer. 3:2, 6; Hos. 4:13). Mountain heights frequently served as the site for a type of Canaanite sanctuary called a "high place" (במה). The name is slightly misleading because the במה could be constructed at any altitude, including a famous "high place" in the valley of HINNOM (Jer. 7:31; see BAMAH; HIGH PLACE).

Sacred springs and wells also played a role in the history of Israel. According to the account in Num. 20, Israel camped at a sacred district named Kadesh (i.e., "holy"). It was there that Moses struck a rock from whence the waters of Meribah flowed. Elsewhere (Gen. 14:7) Kadesh is referred to as En-mishpat (i.e., "the spring of judgment"). In the patriarchal traditions, the well at Beer-sheba (Gen. 21:30-31; 26:31-33) is located in the vicinity of the altar which Isaac built when Yahweh appeared to him there (Gen. 26:23-25). The naming

of Beer-lahai-roi, "well of one who sees," at Gen. 16:14 is explained on the basis of Hagar's encounter with the angel of Yahweh. When David's son Adonijah sought to set himself up as king he first offered sacrifice "by the Serpent's Stone, which is beside En-rogel," a spring in the Valley Kidron (I Kings 1:9). Solomon, however, was anointed by the spring Gihon. Sacred springs do not receive the same intensive prophetic denunciation as sacred groves or mountains. In fact, eschatological prophecies include notice of a sacred spring within the Jerusalem temple itself (Joel 3:18 [H 4:18]; Ezek. 47:1; Zech. 14:8; Rev. 22:1).

In contrast to sacred springs, sacred sites associated with chthonic deities and cults of the dead were unanimously rejected by the biblical editors. The most notorious site was TOPHETH in the Valley of Hinnom, where "the sons of Judah . . . built the high place . . . to burn their sons and their daughters in the fire" (Jer. 7:30-31; cf. 19:5; 32:35). In the light of Ugaritic parallels, Lehmann has reidentified the "fields" (שָׂדֵי מוֹת) of the Kidron Valley at II Kings 23:4 and elsewhere as the "field of Mot," the Canaanite god of death, thereby extending the sacred chthonic area from Hinnom down into the Kidron (see MOT, DEITY[S]). The site is singularly appropriate for a cult of the dead because it has the lowest altitude of any point in the general area and lacked the fertility which the rains of Baal were believed to bestow. See also GEHENNA.

Within a sacred precinct certain areas could be designated as more sacred than others. It was also possible for the sacredness to extend outward from its central altar or sacred object to include much of the surrounding area (see SANCTIFICATION[S] §4a; SACRIFICES AND OFFERINGS, OT[S] §§1c, 2aii). In Exod. 19:12 the whole of Mount Sinai was marked off as sacred. A specialized extension of sanctity is probably to be seen in the establishment of the CITY OF REFUGE. The right of sanctuary for involuntary homicide, traditionally provided only at the altar, was extended to anyone permitted to enter the city.

In addition to local sanctuaries, the OT contains traditions concerning a portable shrine (or TABERNACLE) and various "central sanctuaries" (e.g., SHECHEM, SHILOH) of tribal leagues which preceded the monarchy (see AMPHICTYONY[S]). Both were conceived of by later writers as cultic centers for "all Israel" (Exod. 25:1-8; Josh. 18:1; 8:33). When Solomon built the temple of Yahweh in Jerusalem, he claimed for it the status of central sanctuary (I Kings 8). The influence of this central sanctuary increased under the Davidic dynasty of Judah until it was finally able to support claims that it was the only legitimate sanctuary. The first notice of such claims dates from the reign of Hezekiah (II Kings 18:4, 22). Nearly a century later, Josiah attempted a similar reform (II Kings 23:1-20) supported by Deuteronomy (Deut. 12:5, 11, 18, etc.), which spoke of a single place which God would choose. In the postexilic period the centralization of cult in Jerusalem became the normative biblical view, despite the fact that temples to Yahweh actually existed in Samaria (II Macc. 6:2), Leon-

topolis (Jos. Antiq. XIII.iii.1), and an island in Egypt, Elephantine (see ELEPHANTINE PAPYRI).

\***SLAVERY IN THE OT.** A comparison of Israelite slave laws with those of neighboring countries shows that in Israel there were tendencies to humanize this institution, even though slavery itself was in no way questioned.

This fact can be explained on the basis of Israel's knowledge of the one Creator, the belief in this one God, and the conviction that all humans, including slaves, were made in the image and likeness of God. There are, however, only a few statements which support such a view. The wisdom literature, which assumes a theology of creation, is clearest in this regard. Job confesses: "If I have rejected the cause of my manservant or my maidservant, when they brought a complaint against me; what then shall I do when God rises up? When he makes inquiry, what shall I answer him? Did not he who made me in the womb make him? And did not one fashion us in the womb?" (31:13-15). The writer of Ecclesiastes urges indulgence toward a slave who curses his master: "Do not give heed to all the things that men say, lest you hear your servant cursing you; your heart knows that many times you have yourself cursed others" (Eccl. 7:21-22). We know today that the specific theological concept of man's being made in God's image is not without analogy in other cultures (cf. the Egyptian "Teaching of Merikare," *ANET* [2nd ed.], pp. 414-18). In Gen. 9:6, this concept is used to substantiate the order which God established: "Whoever sheds the blood of man, by man shall his blood be shed; for God made man in his own image." In this context the command of the Book of the Covenant should be mentioned, whereby the killing of a slave must be atoned for (Exod. 21:20). The slave is valued not only as the property of the master, but also as a human being.

The characteristic statements on the humanization of slave treatment stem from another area, Israel's acknowledgment that Yahweh, Israel's God, has led his people out of bondage in Egypt. This thought is expressed most clearly in the Deuteronomistic version of the Ten Commandments: "You shall remember that you were a servant in the land of Egypt, and the Lord your God brought you out thence with a mighty hand and an outstretched arm" (5:15a). This thought is expressed further in the admonition to supply the slave with the means of life in the year of his emancipation, so that he can participate fully in the life of a free man or woman (Deut. 15:13-14). The whole concept of brotherhood in Deuteronomy is to be understood in this framework. This relationship among God's people includes both king (17:15)

Scala

7. Relief with Negro slaves, from the tomb of Hor-em-heb, 18th Dynasty

and slave (15:12). All who have been joined together in this way are descended from the Israel which Yahweh originally freed. Since Yahweh has laid claim to all of them as his slaves (servants), it is unnatural for any one of them to become the slave of another. This concept is formulated within the ordinance of the year of emancipation (Lev. 25:42-43; see JUBILEE, YEAR OF[S]). In this light it is possible to understand the general rule, unusual in ancient Near Eastern law, that a fugitive slave should not be returned to his master (Deut. 23:15-16). The humane rule of the Book of the Covenant, that a slave wounded by his master should be freed (Exod. 21:26-27), can be interpreted only in the light of Israel's recognizing that they were a people whom Yahweh had freed from slavery. This fact is clear in the eschatological perspective of Joel 2:29 [H 3:2], where the pouring out of the Spirit is expanded (possibly in a later addition) to "the manservants and maidservants." "There is neither slave nor free . . . for you are all one in Christ Jesus" (Gal. 3:28-29), Paul would say in the light of the eschatological Christ-event. Something of the revolutionary explosiveness that would later bring the entire institution of slavery into question and finally destroy it was already at work in the development of the OT belief in Yahweh.

**SLAVERY IN THE NT.** Slavery, the legal ownership of one person by another, is a conspicuous feature of the world in which the NT emerges. An examination of the terminology and practices associated with slavery in the Greco-Roman world indicates its importance for understanding the social, literary, and theological history of the early church.

1. Terminology
  2. Procurement, sale, and distribution
  3. Legal status and servile occupations
  4. Manumission
  5. Servile names
  6. Slaves in the early church
  7. Servile imagery in the NT
- Bibliography

**1. Terminology.** The primary term for slave in the literature of the period is δούλος (masc.), δούλη

(fem.), indicating a person who is the property of another person. Legally the slave is distinguished both from the free person (cf. ἐλεύθερος, γνήσιος; L. *ingenuus, liber*) and the freed slave (cf. ἀπελευθερος, ἐξελεύθερος; Lat. *libertus, libertinus*, Acts 6:9).

Additional terms are used to denote slaves, indicating special servile types or functions: (a) ἀνδράποδον (a person taken in war and sold as a slave; cf. ἀνδραποδιστής, "slave-dealer," or "kidnaper," I Tim. 1:10); (b) ἐνδογενής, οἰκογενής (masc. or fem.), οἰκότριψ (home-bred slave); (c) οἰκέτης (masc.), οἰκέτις (fem.) (domestic slave; cf. οἰκετεία, the staff of household slaves, Matt. 24:45); (d) θεράπων (masc.), θεράπινα (fem.) (personal slave; cf. θεραπεία, group of slaves, Luke 12:42); (e) παῖς, παιδάριον ("boy" or "girl" slave) and παιδίσκη (servant girl); (f) οἰκονόμος (slave in charge of household or estate); (g) σῶμα (a "body," female [σῶμα γυναικείου] or male [σῶμα ἀνδρείου]); a term used in servile inventory lists; cf. Rev. 18:13).

**2. Procurement, sale, and distribution.** The slave supply derived from various sources: (a) kidnapping (I Tim. 1:10), (b) debt-enslavement, (c) self-sale (I Clem. 55:2), (d) home-bred slavery (offspring of female slaves; cf. Gal. 4:21-31), and (e) military captivity and enslavement (cf. II Macc. 8:10-11). In the post-Augustan period, Rome turned increasingly toward home-bred slaves to sustain the labor pool. Earlier it had depended heavily on mass enslavements during war, which often produced as many as 30,000 slaves in a single battle.

Slaves were sold at public auction, Eastern slaves (e.g., Greek, Egyptian, Syrian, Judean) generally bringing higher prices than those from the West (e.g., German, Gallic, Sardinian, Britannic). Racially, the majority were Caucasian, though the presence of Negroid slaves is also attested, e.g., in paintings and art objects as well as in names using the cognomen *Afer* (*Afra*) and in the use of the adjective *nigra* (see also BLACKS, EARLY CHRISTIANITY AND[S] §1). The prodigious influx of foreign slaves into Rome inspired Juvenal's quip that "the Syrian Orontes has . . . poured into the Tiber" (*Satire* III, 60).

Population statistics indicate a slave-freedman ratio of one to five throughout the Empire, and probably one to three in Rome, with the number of slaves (male and female) in individual households ranging from 20,000 in the *familia Caesaris* (cf. Phil. 4:22; see CAESAR'S HOUSEHOLD) to a squad of eight among the lower middle class. Extravagant manumissions of slaves in the Republic and subsequent intermarriage produced a Roman society of which five-sixths were either servile or of servile background by the end of the first century. Roman legislation near the beginning of the century had attempted to avoid this by decreeing that no master would be allowed to manumit more than one hundred slaves at the time of his death (*Lex Fufia Caninia*, 2 B.C.).

**3. Legal status and servile occupations.** The slave had few rights before the law. Though entitled to a common-law marriage (*contubernium*), slaves were not allowed legal marriage (*connubium*) and exercised no legal right over their spouses or

children. The slave was denied participation in municipal government and in state religion, but was permitted to join a governmentally licensed "association" (*collegium, corpus, sodalicium, ἑταιρεία*; cf. the Julian Law of Associations, A.D. 7) to meet social and religious needs and frequently to provide burial and commemorative services (*collegium funeraticum*). Immunity from military conscription and from direct taxation were two of the very few benefits the slave enjoyed before the law.

Servile occupations ranged from gang labor on farms and in the mines to seats in the imperial cabinet. Between these extremes lay the vast majority who served in homes as personal maids or servants, or engaged in crafts, or managed houses, estates, inns, and businesses for their masters. Not infrequently slaves owned slaves of their own. Philo observes that many slaves "pursue the occupations of the free" (*Every Good Man is Free* vi.35).

Slaves and freedmen who rose to some historical prominence include Helicon, chief of CALIGULA's household (cf. Philo, *On the Embassy to Gaius* XXVI-XXVII; XXX, 203-6); Publius Terentius Afer (Terence), the black author of Roman comedy (ca. 190-159 B.C.); Phaedrus (15 B.C.-A.D. 50), the fabulist; the Stoic philosopher EPICTETUS (A.D. 55-135); Marcus Antonius FELIX, procurator of Judea, ca. A.D. 52 (cf. Acts 23:24 ff.); and the early Christian author HERMAS (Vis. I.1.1).

**4. Manumission.** Manumission was of two types, "formal" (*iusta*) and "informal" (*minus iusta*). Of the "formal" type, the most common was the manumission *per testamentum* ("by will"), by which the master designated certain slaves to be freed at the time of his death. Massive manumissions during the Julian period, however, led to Roman policy that favored the manumission *per vindictam* ("with a rod"), requiring a slave's eligibility for manumission to be assessed before a magistrate prior to touching him "with the rod" of manumission.

"Informal" manumission was executed either through the writing of a letter (*per epistulam*), by invitation to sit at table with one's master (*per mensam*), by the gathering of friends as witnesses (*inter amicos*), or by a request "in faith" that one's prospective heir release certain slaves at the time of one's death (*fidei commissum*). "Informal" manumission had the advantage of exempting the master from a five per cent manumission tax, but the disadvantage of leaving the freedman without legal proof of his new status.

The manumitted slave or freedman received full civil rights with the opportunity of obtaining full Roman citizenship in time; he was exempted from unwarranted seizure and was at liberty to go where he pleased. At the same time his ties with his former master or patron were sustained through customary obligations (*obsequia, officia*) which required him to work for his patron or perform professional services (*operae*) under certain conditions. See also FREEDMEN, SYNAGOGUE OF THE.

**5. Servile names.** Servile status or background was often apparent in personal names. In the Roman West, Greek names in themselves had a

servile taint, the most common of which were names of prominent Greeks in the past (cf. "Alexander" in Mark 15:21), names of Greek Gods (cf. "Hermes" in Rom. 16:14), and Greek nicknames, e.g., Eutychus ("lucky," Acts 20:9), Epaphroditus ("lovely," Phil. 2:25), Philologus ("talkative," Rom. 16:15), Phoebe ("radiant," Rom. 16:1), Epaphroditus ("praiseworthy," Rom. 16:5), Erastus ("beloved," Rom. 16:23), ONESIMUS ("useful," Col. 4:9), Onesiphorus ("profit-bearing," II Tim. 1:16), Tychicus ("fortunate," Col. 4:7), Tryphaena ("dainty," Rom. 16:12).

Latin servile names include those which indicate national origin, real or assumed, e.g., Persis ("Persian," Rom. 16:12) or Achaicus ("Achaean," i.e., Greek, I Cor. 16:17), as well as nicknames, e.g., Fortunatus ("lucky," I Cor. 16:17), Amplius ("magnificent," Rom. 16:8), Urbanus ("refined," Rom. 16:9), Rufus ("red-headed," Rom. 16:13), and Primus, Secundus, Tertius (Rom. 16:22), and Quartus (Rom. 16:23) ("first," "second," "third," "fourth," in order of birth).

The servile background of a person might be rendered even more visible after manumission. Some followed the custom of adopting a name that incorporated that of their master, along with the letter "L" (*libertus*), indicating their relationship as "patron" and "freedman." For example, a slave named Tiro, manumitted by his master, Marcus Tullius, adopted the freedman's name of M. Tullius L. Tiro.

**6. Slaves in the early church.** The presence of slaves in the early church receives no special notice in the NT except when servile status presents a problem, e.g., in the case of a runaway slave (see PHILEMON, LETTER TO §3; PHILEMON, LETTER TO[S]) or of difficulty between slave and master (Eph. 6:5-9; Col. 3:22-4:1; I Tim. 6:1-2; Tit. 2:9-10; I Pet. 2:18-25; cf. Barn. 19:7; Did. 4:10-11; see LISTS, ETHICAL §3; LISTS, ETHICAL[S] §2ai, iii). Otherwise the presence of slaves in the church is taken for granted.

The attitude of the early church toward slaves echoes in large part the growing egalitarianism voiced by the Stoics and gradually reflected in Roman legislation (cf. Seneca, Moral Epistles XLVII; Justinian, Digest I.v.4). The NT urges the acceptance of the slave as a brother (Philem. 16), recognizing that "in Christ" slave and free are one (I Cor. 12:13; Gal. 3:28; Col. 3:11). Slaves are not to be abused (Eph. 6:9; cf. Did. 4:10; Barn. 19:7), but to be treated with equality and fairness (Col. 4:1).

By the same token, the slave is to perform his duties conscientiously, not fawning (Col. 3:22) or acting in an insubordinate or thieving manner (Tit. 2:9, 10), and not using his "brotherly" relationship with his master as an occasion for disrespect (I Tim. 6:2).

Though maltreatment of slaves is repudiated in the NT, the existence of the institution of slavery itself is not. The only first-century group known to issue a programmatic denunciation of institutionalized slavery by refusing to own slaves and condemning those who do, are the ESSENES (cf. Philo, *Every Good Man is Free* xii.79), and possibly the Therapeutae (Philo, *On the Contemplative Life*

ix.70). At most, individual authors of the NT score aspects of institutional slavery, e.g., the author of Revelation, who decries the inhumanity of the slave trade (18:13) and the author of I Timothy who classifies slave-kidnapers among the "unholy and profane" (1:9-10). According to one theory, Paul urges a master to free his slave for Christian service (see PHILEMON, LETTER TO §3), but beyond this the NT authors simply seem to recognize the desirability of free status and to encourage the slave faced with the opportunity of manumission to take it (I Cor. 7:21). However, in later decades, certain church communities engaged in the practice of financing manumissions (Herm. Sim. I.8; Herm. Mand. VIII.10) and in some instances redeemed slaves at the price of the self-enslavement of some of the members (I Clem. 55:2), though not without criticism from other quarters of the church (Ign. Polyc. 4:3). See also ETHICS IN THE NT[S] §3diii.

7. Servile imagery in the NT. The widespread presence of slaves in Hellenistic culture and the presence of slaves in the early church account in large part for the frequent use of servile imagery in the NT.

(a) In the gospels slaves appear as stock figures, much as they do in plays and essays of the period. The gospel narrative and the parables and teachings of Jesus portray slaves in typical roles and situations, e.g., the slave of a centurion (Luke 7:1-10; Matt. 8:5-13); the slave of a high priest (Matt. 26:51; Mark 14:47; Luke 22:50; John 18:10, 18, 26); slaves who plow, keep sheep, serve at table (Luke 17:7), care for the wardrobe (Luke 15:22), and carry messages for their masters (Matt. 22:3-10; Luke 14:17-24); slaves in charge of estates (Matt. 24:45-51; Luke 12:42-46) or who are provided with investment capital by their masters (Matt. 25:14-30; Luke 19:12-27); conscientious slaves (Luke 12:37-39) and those who are not (Luke 12:41-46; Matt. 24:45-51); slaves of mean character who maltreat the slaves in their charge (Luke 12:45), who refuse to show their fellow slaves the generosity they have known from their master (Matt. 18:23-35), and who alter business records to their own advantage (Luke 16:1-7). In addition, three epigrammatic sayings of Jesus employ servile metaphors: "the slave is not above his master" (Matt. 10:24); "no one can serve two masters" (Matt. 6:24; Luke 16:13); and "whoever would be great among you must be your servant" (Mark 10:43; Matt. 20:26).

(b) In the epistles and Revelation, servile metaphors are also used to describe (1) the status of the sinner; (2) the status of the Christian; and (3) the role of Christ.

(1) The status of the sinner is described in terms that are commonplace in Hellenistic literature, which employs servile imagery to describe an attitude of mind (cf. Philo, *Every Good Man is Free* viii.45 and *Allegorical Interpretation* III. 193; Test. Judah 18:6). Though one may be legally free, one may be attitudinally a slave, e.g., a slave to sin (Rom. 6:6, etc.), to the passions and pleasures (Tit. 3:3), to the "elements" (Gal. 4:3, 9), or to corruption (II Pet. 2:19a). "Whatever over-

comes a man, to that he is enslaved" (II Pet. 2:19b).

(2) The status of the Christian is described with a variety of servile metaphors. On the one hand, the Christian is portrayed as the slave of God (e.g., Rom. 6:22; I Pet. 2:16; Rev. 1:1; Herm. Sim. II.2), the slave of righteousness (Rom. 6:18), or as the slave of Christ (e.g., Rom. 1:1; Eph. 6:6; Phil. 1:1) or the Lord Jesus Christ (Jas. 1:1). On the other, the Christian is depicted as Christ's freedman who has been purchased (ἐξαγοράσθη) by Christ and awarded the status of adopted son (see ADOPTION §2) and heir (see INHERITANCE IN THE NT[S]; cf. Gal. 4:1-7). Again, Paul describes the Christian in eschatological terms, comparing him with the slave who waits in hope for adoption and manumission (see REDEEM §3) of his BODY, just as every created thing longs for the time when it will be set free from its bondage to decay and obtain the LIBERTY of the children of God (Rom. 8:19-25).

(3) The role of Christ is described in servile imagery that expresses a christological paradox common to the gospels and epistles, namely that Christ, though Lord, condescends to the role of a slave (Luke 22:27), coming among men not to be ministered to but to minister and to give his life as the redemption price (λύτρον) for others (Mark 10:45).

The paradox is elaborated in several key passages: (a) in the Johannine portrait of Christ washing the feet of his disciples in the manner of a domestic slave (John 13:1 ff.); (b) in the PARENESIS of I Pet. 2:18-25 which sets Christ forth as a model of endurance for slaves suffering harsh masters; and (c) in the hymn of Phil. 2:6-11, which extols Christ as one who was "in the form of God" but "emptied himself, taking the form of a slave."

\***SON OF MAN.** The question about the Son-of-man figure in Jewish apocalyptic, in the message of Jesus, and in the gospels is still widely and vigorously debated. The following points continue to be most at issue.

1. The scholarly debate
  2. The Son of man in Jewish apocalyptic
    - a. Dan. 7
    - b. II Esd. 13
    - c. The Similitudes of Enoch
  3. The origin of the Christian conception
  4. The use of the title in earliest Christianity
    - a. The Gospel of Mark
    - b. Other NT writers
- Bibliography

1. The scholarly debate. The debate about the figure of the Son of man was reopened by Tödt, who argued that Jesus proclaimed the coming of the Son of man but did not identify himself with this figure, and that earliest Christianity took the step of identifying Jesus as the Son of man. But there are two problems with this view. First, it projects a role for the Son of man which is rather different from the elaborate conception met in the Similitudes of Enoch (see §2c below), and for which there is absolutely no evidence elsewhere in ancient Judaism. Second, it implies the authenticity of some of the apocalyptic Son-of-man sayings, a conclusion for which it is increasingly difficult to argue.

There are also scholarly exponents of the view that Jesus used the title "Son of man" as an enigmatic self-designation, to which he gave his own particular content (Schweizer, Hooker, and Borsch). There are also difficulties with this view, however. It, too, implies the authenticity of many of the Son-of-man sayings, and it assumes the possibility of such a use of the title in colloquial Aramaic at the time of Jesus, a possibility not supported by our current knowledge of that language.

The linguistic possibilities for the use of the title "Son of man" in Aramaic have been carefully discussed by Vermes, who has also provided a full-scale discussion of the figure of the Son of man in ancient Judaism. His findings agree essentially with those summarized below.

2. **The Son of man in Jewish apocalyptic** (see also APOCALYPTICISM §2c). The expression "son of man" is found in three Jewish apocalyptic works, the earliest of which is ch. 7 of the book of Daniel. Conscious use of this chapter is made in II Esdras and the Similitudes of Enoch.

a. **Dan. 7.** It is a characteristic of apocalyptic writers that they constantly use and reinterpret the texts available to them; and in Dan. 7 the author takes up what is apparently an ancient Canaanite mythological text describing the taking of power by a younger god, described as "one like a son of man," from an older god, described as "one that was ancient of days" (Dan. 7:9-10, 13-14). The author is particularly interested in one part of this text:

And behold, with the clouds of heaven  
there came one like a son of man,

And he came to the Ancient of Days  
and was presented before him.  
And to him was given dominion  
and glory and kingdom. (7:13-14)

This description of the taking of power by the younger god is interpreted by the author of Daniel as the giving of glory by God to a symbolic figure, the "one like a son of man," and he further interprets this cryptically designated figure as representing the Maccabean martyrs.

And the kingdom and the dominion  
and the greatness of the kingdoms  
under the whole heaven  
shall be given to the people of the  
saints of the Most High;  
their kingdom shall be an everlasting kingdom,  
and all dominions shall serve and obey them. (7:27)

b. **II Esd. 13.** In II Esdras and the Similitudes of Enoch, the cryptic reference to "one like a son of man" in Dan. 7 is taken up and used in connection with the development of conceptions of apocalyptic redeemer figures. The author of II Esd. 13 conceives of God redeeming his people through a supernatural figure who is, however, man-like in appearance: "After seven days I dreamed a dream in the night; and behold, a wind arose from the sea and stirred up all its waves. And I looked, and behold, this wind made something like the figure of a man come up out of the heart of the sea. And I looked, and behold that man flew with the clouds of heaven; and wherever he turned his face to look, everything under his gaze trembled, and whenever his voice issued from his mouth, all who heard his voice melted as wax melts when it feels the fire," (13:1-4). This description of the redeemer as "something like the figure of a man," and of his movement as flying "with the clouds of heaven," is inspired by Dan. 7:13, just as the description of the supernatural power of his voice is inspired by Isa. 11:4: "He shall smite the earth with the rod of his mouth, and with the breath of his lips he shall slay the wicked." In his account of his vision the author continues in this vein. He refers to the redeemer as "the man who came up out of the sea," and "the same man" (II Esd. 13:5, 12), and to his supernatural powers as "a stream of fire" from his mouth, "a flaming breath" from his lips, and "a storm of sparks" from his tongue (vs. 10). The author builds major aspects of his conception of the redeemer on the two OT texts, Dan. 7:13 and Isa. 11:4.

c. **The Similitudes of Enoch.** The Similitudes represent a large unit now incorporated in the book of Enoch (chs. 37-71), but apparently originally independent of the remainder of the book. The Qumran community, which knows the rest of the book, apparently did not know the Similitudes, because fragments of Enoch 37-71 are conspicuous by their absence from the Qumran caves. We have no clear idea of the date of the Similitudes, but they and the NT texts do appear to be completely independent of one another, and this brings into sharp focus a remarkable parallelism between them. Both have a hero figure they

regard as being with God in the heavens, Enoch and Jesus respectively; both develop the phrase "Son of man" as a designation for these figures; and both develop conceptions of their heroes as about to appear from heaven as apocalyptic redeemers. See ENOCH, BOOK OF §4c; ENOCH, BOOK OF[S] §2c.

The Similitudes take their point of departure from Gen. 5:24. "Enoch walked with God; and he was not, for God took him," which is interpreted as referring to the translation of Enoch.

And it come to pass after this that my spirit was translated

And it ascended into the heavens:

And I saw the holy sons of God. . . .

And they came forth . . . .

And with them the Head of Days, . . . .

And [the angel] came to me . . . and said unto me

"Thou art the Son of Man, who art born unto righteousness." (71:1, 9, 10, 14)

The details of this vision are taken from Gen. 6, Ezek. 1, and Dan. 7; the use of "Son of man" is a development from Dan. 7:13.

This understanding of Enoch being translated to heaven and then identified there as the Son of man of Dan. 7:13 is fundamental to the Similitudes. With this as the starting point, they go on to develop a concept of Enoch as a heavenly redeemer. In this process they use many OT texts, including Dan. 7:13 and Isa. 11:4, two also used in II Esd. 13.

And the Lord of Spirits seated him on the throne of His glory,

And the spirit of righteousness was poured out upon him,

And the word of his mouth slays all the sinners, . . . .

And they shall be downcast of countenance,

And pain shall seize them,

When they see that Son of Man

Sitting on the throne of his glory. (Enoch 62:2, 5)

It should be noted that "Son of man" is only one of several designations for Enoch in the Similitudes; he can also be called "the [Lord's] Anointed" (a reference to Ps. 2:2), "the Elect One," "the Righteous and Elect One," and so on. He is the apocalyptic redeemer expected by the scribes of the Similitudes, and those scribes develop various designations for him, as they use various OT passages to develop their understanding of aspects of his work.

**3. The origin of the Christian conception.** The Similitudes of Enoch begin with the conviction that God had translated Enoch to heaven; earliest Christianity begins with the conviction that, although he had died, Jesus had nonetheless been exalted to the presence of God, that God had "raised him up, having loosed the pangs of death, because it was not possible for him to be held by it" (Acts 2:24). In the NT this conviction is expressed in terms of the resurrection of Jesus, but the idea of the RESURRECTION of an individual while history itself continued—as distinct from that of a general resurrection as part of the eschatological events which would bring history itself to an end—is so new and revolutionary a

concept in ancient Judaism that there must have been considerable preparation for it in early Christian experience and reflection. Ancient Jewish apocalyptic could think of an individual translated to be with God in the heavens, as in the case of the Similitudes of Enoch; and this fact, together with the general parallelism between the Similitudes and the NT, make it most probable that their first experiences of Jesus after his death convinced his followers that God had "raised him up" to be with him in the heavens, having in this way "loosed the pangs of death." From this point the early Christian communities moved in two directions. On the one hand they developed their understanding of the process by means of which Jesus had been "raised up," moving in the direction of empty-tomb narratives, appearances of the Lord as "risen" and appearance stories, and ultimately to the conception of a resurrection and of an ascension as an event separate from the Resurrection, first appearing in Luke-Acts. On the other hand early Christianity moved also in the direction of developing the conviction that Jesus was now in heaven at the right hand of God, and that he would soon return from heaven as apocalyptic redeemer, the Son of man. In other words, the earliest conviction of all was that God had vindicated Jesus by raising him from death to be with him in the heavens. From that point the early Christians moved in one direction to fill out their understanding of how this took place, and in another direction to fill out what was now to be expected since it had taken place. It was in the service of this second objective that the early Christians first applied to Jesus the title "Son of man."

As the early Christian scribes searched the scriptures in an effort to understand how God had vindicated Jesus by raising him from death, they found help particularly in texts from those Psalms which use the Hebrew word *h<sup>a</sup>balim*. The term is employed frequently in connection with the word for death, and it can mean both "pain, pangs" and "lines, cords, bonds." That early Christian scribes wrestled with this word and its ambiguities can be seen from Acts 2:24, quoted above, where "having loosed the pangs of death" uses a verb appropriate to the meaning "cords, bonds," but gives the noun the other meaning.

Early Christian scribes turned particularly to Ps. 18:4, 5 [H 5, 6], "The cords of death encompassed me . . . ; the cords of Sheol entangled me." This they understood as referring to the death of Jesus. But in Ps. 16:6, the same word is used of "lines," not in the bad sense of "bonds," but in the metaphorical sense of "fate, destiny": "The lines have fallen for me in pleasant places. . . . Thou didst not give me up to Sheol." The context here speaks of the overcoming of Sheol (vs. 10), and the early Christian scribes interpreted the passage to mean that God had delivered Jesus from the cords of Sheol, from the pangs of death. In this way, by meditating on Ps. 16:6, 10, Christian scribes reached the conviction expressed in Acts 2:24. But Ps. 16:8-11 can be interpreted as describing in some detail a presence of Jesus with God in heaven, and that the Christian scribes under-

stood it in this way can be seen from Acts 2:25-32, which quotes it at length in such a connection. These interpreters then turned to further texts, especially Ps. 110:1: "The Lord says to my lord: 'Sit at my right hand, till I make your enemies your footstool'"; and Ps. 2:7, "I will tell of the decree of the Lord: He said to me, 'You are my son, today I have begotten you.'" These texts convinced them further that Jesus was exalted as heir to the promises to David. Ps. 110:1, "till I make your enemies your footstool," led the Christian scribes to Ps. 8:6, "Thou hast put all things under his feet"; and Ps. 8:6 led them to Ps. 8:4, "What is man that thou art mindful of him, and the son of man that thou dost care for him?" This exegetical process established the early Christian conviction that Jesus had been exalted to God's right hand as Son of man, and from that point the Christian scribes turned not only to Dan. 7:13 but also to Zech. 12:10, "They [shall] look on him whom they have pierced, they shall mourn." By means of these texts, they developed the expectation that Jesus, exalted to God's right hand as heir to the promises to David and as Son of man, would return "on the clouds of heaven" as Son of man to judge the world and to redeem the faithful.

Given the concept of Jesus returning to earth as Son of man and apocalyptic redeemer, early Christianity then endowed it with a particular form and content in two ways. One way was to employ the ideas and texts traditionally used in this connection in Jewish apocalyptic, and one result of this process is Mark 13:24-27. "But in those days, after that tribulation, the sun will be darkened, and the moon will not give its light [cf. Isa. 13:10], and the stars will be falling from heaven [cf. Isa. 34:4], and the powers in the heavens will be shaken [cf. Hag. 2:6]. And then they will see the Son of man coming. . . . And then he will send out the angels, and gather his elect from the four winds, from the ends of the earth to the ends of heaven [cf. Deut. 30:4]." Another way was to search the Scriptures for analogous judgmental catastrophes, and natural phenomena for suitable metaphors. The Son-of-man sayings in Q are a result of this process: Luke 12:8-9 (=Matt. 10:32-33), emphasizing judgment; Luke 17:24 (=Matt. 24:27), comparison with lightning; Luke 17:26 (=Matt. 24:37), comparison with days of Noah; Luke 12:40 (=Matt. 24:44), unexpectedness of the Son of man's coming; Luke 17:28-30 (cf. Matt. 24:37-41), comparison with Lot; Luke 11:30 (cf. Matt. 12:40), comparison with Jonah.

4. **The use of the title in earliest Christianity.** "Son of man" is much the most-used designation of Jesus in earliest Christianity. After it was developed in connection with the convictions that Jesus was in heaven at God's right hand, and that he was about to come from heaven as apocalyptic redeemer, it came to be used of Jesus in two further contexts: in passion apologetic, and in reflection on the meaning of the earthly ministry of Jesus. In passion apologetic, Christians sought to find a defense for, and positive meaning in, the passion of Jesus as God's Messiah. One way

of doing this was to use the verb "to deliver up, betray" (παράδοῦναι) in connection with the fate of Jesus, a verb deemed particularly appropriate to describe the traditionally unhappy fate of godly men in ancient Judaism. When this verb was used of Jesus, he was spoken of as Son of man, as in the Gethsemane pericope: "The Son of man is betrayed into the hands of sinners" (Mark 14:41). As they celebrated their sacred meal (the LORD'S SUPPER) early Christians both anticipated the coming of Jesus as redeemer and also looked back over his past ministry on earth, especially of course his passion. In this reflection on the earthly ministry of Jesus they developed sayings using the title: "The Son of man . . . came not to be served but to serve, and to give his life as a ransom for many" (Mark 10:45); "The Son of man came to seek and to save the lost" (Luke 19:10); "He who sows the good seed is the Son of man" (Matt. 13:37). The last saying is probably a comparatively late imitation of this early practice, but the first two fit an early eucharistic context.

The Son-of-man title is not carried over into the Pauline or Deutero-Pauline letters. Indeed it is conspicuously absent where we would expect to find it. I Thess. 1:10 speaks of Christian faith in terms of waiting "for his [God's] Son from heaven"; in Q or the gospel traditions one would find Son of man in such a context. The saying found in Mark 10:45 is also found in the Pastorals, but in I Tim. 2:6 it is not the Son of man but "the man Christ Jesus, who gave himself as a ransom for all," and in Tit. 2:13-14 it is "Jesus Christ who gave himself for us."

a. **The Gospel of Mark.** The major development in the use of Son of man of Jesus in the NT comes in the Gospel of Mark (see MARK, GOSPEL OF). One of the evangelist's major purposes is christological: he seeks to combat a false Christology which unduly emphasizes the power and glory of Jesus, and which sees his passion and death only as a prelude to glory; i.e., the passion became an apotheosis. In deliberate contrast to this, Mark develops and emphasizes the theme that a true Christology must see not only the power and glory of the Christ but also the necessity for his suffering. He emphasizes, further, the fact that true Christian DISCIPLESHIP must accept the necessity to follow in the "way" of the Master, through suffering and death to glory. In his gospel the evangelist accepts CHRIST (MESSIAH) and SON OF GOD as proper confessional designations of Jesus (1:1, reading "the Son of God" with RSV; 8:29; 14:61-62), but he constantly interprets them by using Son of man (8:31; 14:62), and he uses Son of man as the vehicle for the expression of his own Christology.

In his references to the Son of man, Mark develops further the three uses of the title we noted as characteristic of earliest Christianity. First, he echoes the apocalyptic use; indeed, he does so with enthusiasm. "When he comes in the glory of his Father," in 8:38, is characteristic of Mark himself, as is "with great power and glory," of 13:26. But he only has to add characteristic touches to the conception of Jesus as Son of man and apoca-

lyptic redeemer, because that christological emphasis was already fully developed in the community or communities for which he wrote. It is otherwise, however, in the case of his second use of Son of man applied to Jesus in passion apologetic, and of his third use of the title in reflection upon his earthly ministry. In these cases the evangelist develops into major christological emphases what were previously only tentative uses of the Son-of-man concept.

From the use of Son of man in passion apologetic, Mark creates the three passion predictions which form the core of the central interpretive section of his gospel, 8:27-10:45. These are 8:31, "The Son of man must suffer many things, and be rejected . . . , and be killed, and after three days rise again"; 9:31, "The Son of man will be delivered (παράδοσις) into the hands of men, and they will kill him; and . . . after three days he will rise"; 10:33-34, "The Son of man will be delivered (παράδοθήσεται) to the chief priests and the scribes, and they will . . . deliver (παράδωσουσιν) him to the Gentiles; and they will . . . kill him; and after three days he will rise." As they stand in the gospel, these sayings have been composed by Mark, and they represent a major development in NT Christology.

From the use of Son of man in reflection upon the earthly ministry of Jesus, Mark takes the ransom saying (10:45) and gives it a major place in the literary structure of his gospel; it is the climax of the central interpretive section, 8:27-10:45. But he also develops a new emphasis: he uses Son of man in sayings which emphasize the proleptic authority of Jesus as Son of man in his earthly ministry. These sayings are 2:10, "The Son of man has authority on earth to forgive sins"; and 2:28, "The Son of man is lord even of the sabbath." In this way Mark establishes the authority of Jesus on earth as already his authority as Son of man.

**b. Other NT writers.** Of all the NT writers, the evangelist Mark made the most significant use of the title "Son of man." Subsequently the title gradually fell into disuse.

The evangelist Matthew is mainly concerned with Jesus as the authoritative revealer of God and his will. Since he believes that this revelation supersedes the revelation to the Jews, he has no particular reason to echo the Markan Christology. He reproduces the Markan emphases, but his restructuring of the outline of Mark's gospel destroys the particular impact of the Markan presentation. Matthew, however, has strong links with early Palestinian Christianity, with its emphasis upon Jesus as apocalyptic Son of man, and he in turn echoes this emphasis; e.g., 10:23; 13:41; 25:31. Matthew is also the first to use PAROUSIA as a technical term for the coming of Jesus as Son of man: 24:27, 37, 39, where the word translated "coming" is always παρουσία. See also MATTHEW, GOSPEL OF[S] §3.

The author of Luke-Acts is concerned to de-emphasize the eschatological hope of early Christianity, and he has therefore no particular interest in the use of Son of man concerning Jesus, with its natural emphasis upon apocalyptic expectation.

He tends to see Jesus particularly in prophetic terms, so he also has no interest in maintaining the emphases Mark developed in his use of Son of man. He seems never to use Son of man except when he is following a source. Perhaps the most interesting reference to Son of man in Luke-Acts is Acts 7:56, where STEPHEN, the proto-martyr, sees "the heavens opened, and the Son of man standing at the right hand of God." This is a reflection of the early Christian conception of Jesus' exaltation as Son of man. See also LUKE, GOSPEL OF §4g and supplementary article.

The evangelist John goes his own way in Christology, as he does in most things. He is concerned to express a Christology in which Jesus is understood as a descending-ascending heavenly redeemer. This has its nearest counterpart in the NT christological hymns (Phil. 2:6-11; Col. 1:15-20; I Pet. 3:18-19, 22; I Tim. 3:16; Eph. 2:14-16), and seems to have been Hellenistic in ultimate derivation. Insofar as he uses Son of man, he tends to do so in the service of this Christology (e.g., John 3:13; 6:62), and this kind of use is peculiar to him among the NT writers. See also JOHN, GOSPEL OF §D1 and supplementary article.

The author of the book of Revelation (see REVELATION, BOOK OF), John of Patmos, uses Dan. 7:13, as does the author of II Esdras, i.e., in the service of his own particular vision. This is how we should understand the references to "one like a son of man," who is "in the midst of the lampstands" in Rev. 1:13, and "seated on the [white] cloud" in 14:14. Very interesting from our point of view is 1:7, "Behold, he is coming with the clouds, and every eye will see him, every one who pierced him; and all tribes of the earth will wail on account of him." This text is evidence for the bringing together of Dan. 7:13 and Zech. 12:10, 11, which was claimed to be a part of the development of the use of Son of man of Jesus in early Christianity (§3 above).

Borsch, *The Son of Man in Myth and History* (1967).

N. PERRIN

\***SONG OF SONGS.** Research on the Song of Songs since 1962 has borne out the main conclusions of Gottwald's balanced article (see SONG OF SONGS). However, there have been some new emphases and new efforts at solving old problems.

**1. Extrabiblical parallels.** While the cultic interpretation (Meek *et al.*) had always utilized

Mesopotamian sources concerning sacred marriage, there was little evidence available about simple love between the sexes. Thus far, only two such texts have been published (by Cooper and Held). Although Kramer has furthered the cultic interpretation, this view is not widely held. It is reasonable to suppose that there was mutual influence between the language of Hebrew love poetry and that of the pagan fertility rites, but there is no evidence that portions of the Song were originally composed for, or modeled upon, these rites.

The most extraordinary parallels are to be derived from Egypt. The work of Hermann is of fundamental importance. He has singled out several topoi of Egyptian love poetry which appear also in the Song: the brother-sister style of address, the expression of the love relationship in terms of uniqueness and the exclusion of others, love under the trees, the beloved's hair as a love charm, etc. The approach is concrete and sensible, not abstract: by way of seeing, hearing (the voice), touching, smelling, and tasting. There is lovesickness, and there are friends (messenger, mother, etc.) of the lovers. Quite striking are the literary fictions by which the beloved is portrayed as a shepherd or a servant (gardener). Like the Song of Songs, the Egyptian poems are dialogues, and the *wafj*, or description of the physical charms of the beloved, is frequently employed. One receives the clear impression that the Egyptian songs and the Song of Songs move in the same atmosphere: gardens, animals, fruits, flowers, perfumes, trees. This is the make-believe language of love. The texts of four substantial collections (Chester Beatty I Papyri, Papyrus Harris 500, Turin Papyrus, Cairo Ostrakon 25218) are available in the translations by Schott and Simpson (partially in Pritchard, *ANET*).

**2. Structure.** The structure of the Song still remains a problem, as one can see from the wide variety of views put forth on this topic. There are two general tendencies (apart from the so-called dramatic theory): the recognition of more or less a half-dozen unitary poems, or the recognition of several disparate poems (thirty-forty), even of a verse in length, which have been collected into a tenuous unity. There is no denying the existence of refrains and repetitions within the eight chapters of the Song. The most striking (cf. Angénieux, Exum) are the refrain of awakening (2:7; 3:5; 8:4), the refrain of movement (2:17; 4:6), the refrain of possession (2:16; 6:3), the refrain of embrace (2:6; 8:3). But as yet there is no compelling argument to show how these refrains and repetitions contribute to the structure of the whole.

**3. Setting.** There has been a trend among recent commentators to ascribe the songs to a wedding celebration, or at least to a betrothal. This view is not new, but it seems to be gaining ground. Thus, Würthwein finds a "clear" reference to marriage in twenty-four of the twenty-nine units which he recognizes in the Song. Rudolph and Krinetzki likewise acknowledge wedding and love songs. It should be emphasized, however, that the only clear reference to marriage is in 3:6-11. Al-

though many sections may have been used in a wedding feast, we have no evidence for the claim that they originated in a wedding feast. Audet distinguished between a preliterate stage (a betrothal song) and the literary stage (when the Jewish sages put the work forth as the "Song of Songs"), but he found both levels at one as far as the meaning is concerned: an exchange of love between the betrothed, equivalent to a mutual promise of fidelity. Würthwein agrees with Audet that the work stems from "the circle of post-exilic sages of Jerusalem." This does not mean that the Song of Songs belongs to wisdom literature; rather, it was the sage who recognized the value of these songs, preserved and published them.

**4. Specific literary features.** As opposed to or, better, in addition to, traditional form-critical analysis (genre, setting, etc.), greater attention is being given to the poetic qualities of the Song of Songs in the light of modern understanding of poetry. Krinetzki's commentary (esp. pp. 42-82) is particularly valuable in this regard. He points out not only the usual parallelism of verses (see POETRY, HEBREW) but even the rhythmic sounds (consonantal and vocalic), alliteration, assonance, the contrast between nominal and verbal sentences, CHIASMUS, and rhetorical figures such as paronomasia, catchwords (uniting two separate units), etc. This is an important contribution to appreciating the work, one that goes beyond the customary attention that had always been given to the extraordinary range of proper names and of animals, plants, etc., that are to be found in the book.

**5. Meaning.** There is a practical consensus (cf. the survey by Würthwein) that the Song of Songs has to do with human love in the literal historical sense, as opposed to the allegorical view still represented in the valuable commentary by Robert-Feuillet-Tournay. However, one may legitimately ask if modern hermeneutical concerns have not moved away from the old literal-allegorical polarization. It would be a bold claim to say that the literal historical sense exhausts the meaning of the Song of Songs. The history of its interpretation in both the Jewish and Christian tradition shows that the communities in which the book was received found other levels of meaning.

R. E. MURPHY

**SOURCE CRITICISM, OT.** The analysis of the features of a literary piece in order to delineate authorship, historical setting, and compositional character. It is especially concerned to determine whether a document is a unity or composite and, if the latter, the nature of the sources used and the stages of composition.

It has been common to identify source criticism and LITERARY CRITICISM. The latter, however, is now considered a more general designation, including source criticism as well as analysis of style and other features.

Source criticism has been applied to all biblical writings; the results to date, however, have varied considerably in precision and certainty. It has demonstrated with some exactness the compositional character of books such as Isaiah and Zechariah, but has achieved less definitive results with other texts, e.g., Jeremiah and Micah. It has greatly illuminated the editorial processes at work in the histories of the Deuteronomist and the Chronicler, while shedding little light on the study of Psalms and Proverbs. It has been especially fruitful in delineating the compositeness of the Pentateuch, but much uncertainty remains regarding the details of this analysis. See BIBLICAL CRITICISM; BIBLICAL CRITICISM, OT[S]; BIBLICAL CRITICISM, HISTORY OF.

**1. Assumptions and guidelines.** Source criticism has sometimes been improperly used, often with unfortunate results. The following matters need careful consideration:

a) It has been suggested that source criticism presupposes a modern conception of literary composition and is thus inappropriately applied to the biblical writings. It has clearly been shown, however, that ancient Semitic texts do contain evidence of such a compositional mode, both within the OT (e.g., Num. 21:14; Josh. 10:13) and outside it (e.g., the Gilgamesh Epic). This is sufficient justification for the use of source criticism. Yet there are differences between ancient and modern modes of composition that need to be kept in mind in source-critical analysis (e.g., literary originality, firmness in logical construction).

b) The theory and practice of the historical-critical method is not bound to an understanding which views history as a closed continuum in which there is no room for divine activity. Source criticism must recognize that the biblical literature emanated from a religious community. The intention of its authors was never merely literary or historical, and due consideration must be given to theological intentions, which inevitably affected literary composition. Moreover, this means that source criticism cannot be an end in itself, but must stand in the service of the explication of the full meaning of the biblical text.

c) Source criticism cannot be distinguished en-

tirely from other methods such as FORM CRITICISM, tradition criticism, and redaction criticism, nor used in isolation from them. The source critic's work must be informed in significant ways by these approaches to the text, as the following examples from Pentateuchal studies show. See PENTATEUCH.

Much of the Pentateuchal material was transmitted orally for generations before being incorporated into written sources (see TRADITION, ORAL and TRADITION, ORAL[S]). At the same time, distinctions within the oral tradition need to be made, e.g., between relatively independent traditions and more firmly fixed collections of material ("oral literature"). The latter must be considered just as legitimate a subject of source-critical analysis as written sources. This applies, for example, to the assumption of a G (*Grundschrift*) source upon which both J and E are dependent. See DOCUMENTS; YAHWIST[S] §2; ELOHIST[S].

Moreover, the tradition did not remain unaltered once it had assumed written form. In response to changing situations in the Israelite community, written forms of the tradition were adapted and supplemented over the centuries by means of oral and written materials, as well as by kerygmatic and haggadic usage of the tradition (see TRADITION CRITICISM, OT[S]). This means that one cannot propose dates for all of the material within a source with the confidence characteristic of earlier scholarship. One can, however, still speak of the time when the source was given its essential shape by an author or creative compiler. Thus, for example, it is in order to speak of an exilic date for the P source, even though many of the traditions originated in previous centuries and other materials were subsequently attracted to it (e.g., Lev. 17-26). See PRIESTLY WRITERS[S].

It also needs to be remembered that breaks in the coherence of a text need not point to the use of already formed sources. A lack of clear continuity in a work may indicate a relatively haphazard growth of the tradition in its preliterary (or redactional) stages. On the other hand, the observed diversity may be ascribed to the interweaving of sources already formed, if there is evidence of unity (at the level of style, vocabulary, and especially viewpoint) throughout the larger context to which the various units may be related. Crucial here is the isolation of characteristics which, by giving literary cohesion and unity of perspective to separated units, produce a distinctive source profile.

Moreover, in contrast to earlier source-critical studies which tended to depreciate secondary elements introduced by editors, there is now increased recognition of the importance of the redactors' art. Their endeavors, far from being merely additive in character, resulted in new wholes with a meaning greater than that of the sum of the parts with which they worked. On the other hand, the results of the redactors ought not be extolled at the expense of their sources. See REDACTION CRITICISM, OT[S].

d) Structural and/or stylistic analysis of the final redaction in itself cannot be used as evidence for the unity of a literary piece. A redactor can create a structure that brings divergent sources into a

functionally unified whole. For example, it is not at all inconsistent to consider the JOSEPH STORY both a literary masterpiece in every way and also an interweaving of different sources.

e) Diversity of style and vocabulary should not necessarily be considered evidence for compositeness; a single author can employ variations. It is important to observe the distribution of such variations. A text is most likely to be composite when instances of diversity are undistributed, i.e., appearing, disappearing, and reappearing as one moves from one unit of material to another. An example of this would be the alternation of the divine names Yahweh and Elohim in the Pentateuch, especially prior to the revelation of the name Yahweh in Exod. 3.

Yet, an analysis based upon such variations cannot be applied mechanically. Such a procedure has commonly led to an overly minute dissection of the text. It needs to be kept in mind that redactors have certainly blurred the distinguishing traits of a source at points (cf. the use of the name Yahweh in Gen. 17:1; 22:14).

f) The strength of source-critical conclusions is relative, depending chiefly upon the variety of types of criteria that can be successfully applied in conjunction with each other (see §2 below). Compositeness may be determined even where sufficient criteria are not available for a precise delineation of sources. In such instances, there will be greater difficulty in achieving scholarly consensus (e.g., Gen. 15; Exod. 19), but isolated instances of difficulty should not prejudice the larger case; source criticism must be pursued and its results evaluated on the basis of the study of the entire literary piece (e.g., the Pentateuch).

g) The use of the method must not be controlled by philosophical or dogmatic preconceptions of historical or religious developments in Israel (e.g., Wellhausen, or fundamentalism). For example, it ought not be assumed that fewer anthropomorphic references to God represent a later or more sophisticated stage in the history of the tradition.

2. **The method outlined.** The source critic begins by determining the natural units into which the text under study falls (e.g., Gen. 11:1-9). One first studies these units in isolation, and then in relationship to one another, watching for:

a) Changes in literary style (cf. the book of DEUTERONOMY with what precedes).

b) Shifts in vocabulary and phrasing (cf. Gen. 1:1-2:4a with what follows).

c) Breaks in continuity and the nature of the connections within and between units (cf. Gen. 6-8).

d) Changes in viewpoint, especially theological perspective (cf. Isa. 1-12 with 40-55). See ISAIAH; ISAIAH[S].

e) Duplications (cf. Gen. 12:10-20 with Gen. 20; Exod. 21:1 ff. with Deut. 15:1 ff.).

f) Logical, thematic, chronological, or factual inconsistencies (cf. Gen. 4:26 with Exod. 6:2-3).

If on the basis of the analysis it is determined that the text is a unity, then the following questions must be considered: authorship, dating, provenance, intended audience, purpose.

If, on the other hand, the analysis suggests a

composite work, then a somewhat more complex task presents itself. One must lay out the results of the initial analysis and seek to determine relationships among the isolated parts. Of special significance here are possible duplications. If present (as in the Pentateuch), they constitute a control grouping. After a full description of these materials, other units of the text are sought out which have the same or similar characteristics. In this way distinctive sources with peculiarities of language and perspective may begin to emerge.

Essentially two aspects of the task then remain. The compositional stages through which the document has gone will need to be determined, from the first combination of sources to the final redaction. Thus, for example, it will need to be determined if the P tradition was originally an independent narrative or simply a new edition of the JE redaction.

Finally, the aforementioned questions of authorship, dating, provenance, intended audience, and purpose must be posed for each of the sources and redactions which have been distinguished.

The end product should consist of as full a description as possible of each of the sources, as well as the nature of each stage of the editorial process.

T. E. FRETHEIM

\***SPIRIT.** 1. **In the OT and Judaism.** Early references in the OT denote God's power manifest in prophecy and mighty deeds (Judg. 13:25; 14:6; 15:14; I Sam. 10:6, 10). The same premise is operative in Gen. 2:7, that the source of life and power is God. The connection of these themes to the root meaning of breeze or breath is not only that the latter is essential to life but also that Yahweh uniquely uses WIND as a tool for his creative and redemptive activity (Gen. 1:2; Exod. 10:13, 19; 14:21; Ezek. 13:13). The connection between spirit and the creative word is visible in Ps. 33:6.

Since spirit is the enlivening element in human beings, it is frequently used to depict particular moods or impulses (I Kings 10:5; 21:5; Josh. 5:1). Hence disposition comes to be described in terms of spirit (Prov. 18:14), without recourse to the alien notion of a divine element intrinsic to humankind.

The OT was conscious of alien (I Kings 22:21-23), perverted (Hos. 4:12; 5:4), and demonic (I

Sam. 16:15-16) spirits which overpower persons. The need to distinguish among prophetic spirits was present long before the NT era. The idea of Yahweh's righteous purposes in history gave the OT statements about his Spirit a distinctively dynamic, moral, yet finally inscrutable quality.

The association of Spirit with the messianic king (Isa. 11:2; 42:1) and the expectation of widespread manifestations of the Spirit in the messianic age (Joel 2:28-29) contributed to the conviction in the intertestamental period that the Spirit would be silent until the new age dawned (cf. I Macc. 4:46; 9:27). New prophetic writings appeared under pseudonyms (see PSEUDONYMOUS WRITING[S]), and ecstatic manifestations were discouraged by the prevailing legalism of postexilic Judaism.

**2. In the gospels and Acts.** According to Luke 4:18 Jesus announced the beginning of the era of the Spirit in the Nazareth sermon. His authority was charismatic rather than legal (Mark 1:22; 6:15; Matt. 21:11, 46; Luke 7:16). In a unique way Jesus associated EXORCISM with Spirit and kingdom (Matt. 12:28). The saying in Mark 13:11 presupposes that the disciples are likewise recipients of the Spirit (cf. Matt. 10:7-8; Luke 9:2; 10:17-20).

Redaction critics (see REDACTION CRITICISM, NT [S]) have noted the reticence of Matthew and Mark to read back into the life of Jesus the spiritual enthusiasm of early Christianity. Most of the references to Spirit are heavily influenced by OT assumptions and deal with aspects of Jesus' life about which direct statements by Jesus himself were unavailable, such as the baptism and the birth stories. The aim of most of the references to Spirit is to affirm Jesus' messianic uniqueness.

Luke and Acts betray a stronger interest in the Spirit as a sign of the age of the church. Jesus is pictured as conveying the Spirit to the church rather than himself being subject to the Spirit (cf. Mark 1:12 with Luke 4:1). The abiding presence of the Spirit in Christ and his community is emphasized (Acts 4:31; 6:3; 11:24), openly manifested in prophecy and triumphant mission (Luke 3:22; Acts 2:3-6; 8:9-24). Luke's emendation of a saying about the "good gifts" of the kingdom (Matt. 7:11) into a promise of the "Holy Spirit" (Luke 11:13) is consistent with the picture of a spirit-filled church in Acts. That those who were baptized had a visible gift of the Spirit is stressed (Acts 2:38-39; 19:2-6), but Acts refrains from a binding of sacramental act to spiritual gift, as this would restrict the freedom of God.

**3. In the Pauline letters.** Paul's letters reflect a dialogue with Hellenistic assumptions about the Spirit as a divine, material substance whose impartation produces transhistorical salvation. This Hellenistic notion surfaced in the mistaken prophecy that the end of the world had come (II Thess. 2:2), rendering normal work and family ethics superfluous. It also appeared in the ecstatic cursing of the historical Jesus by the enthusiasts in Corinth who opposed the ethic of responsible love (I Cor. 12:1-3). Paul countered by associating the ecstatic spirit they had experienced with holiness and its ethical imperatives (I Thess. 1:5-6; 4:8; II Thess. 2:13). In so doing he refrained from authoritarian suppression of ecstatic phenomena, insisting only

that every charismatic manifestation be evaluated (I Thess. 5:19-21). He opposed the Hellenistic tendency to absolutize the spirit while disparaging the soul and body by including all three in a benediction which insists that the unity of one's personhood remains intact until the PAROUSIA (I Thess. 5:23). Here Paul was thinking of the apportionment of the divine Spirit which enters into the possession of the Christian; thus, "your spirit" (cf. Gal. 6:18; Phil. 4:23; Philem. 25). To counter the misunderstanding of such early Christian usage, Paul distinguished between the divine and human spirit (I Cor. 2:11) and insisted in I Cor. 12:1-3 that not every ecstatic manifestation is from God. The criterion "Jesus is Lord" (I Cor. 12:3) is elaborated with reference to loving service to the community (I Cor. 12:4 ff.), and this leads to his instructions about the necessity of expressing spiritual gifts in rationally comprehensible ways (I Cor. 14:13 ff.).

The premise for Paul's doctrine is set forth in II Cor. 3:17, "Now the Lord is the Spirit." This implies that ecstatic experience is not to be regarded as impersonal or amoral; the gift of Spirit establishes moral lordship. Since the gift and the giver are identical, ecstatic experience is ethicized and personalized; implacable compulsion is replaced by free responsibility. The same idea is present where Paul associates the ecstatic experience of faith with the cry, "Abba! Father!" (Gal. 4:6; Rom. 8:13-16). The gift impels an intimate relation with the giver, personalizing the love of God as revealed in Christ. But despite the emphasis on present experience in the Spirit, the eschatological proviso remains intact as a hedge against enthusiastic misunderstandings, with Spirit as the first fruits (Rom. 8:23) or pledge (II Cor. 5:5; 1:22) of the coming fulfillment. See SPIRITUAL GIFTS; SPIRITUAL GIFTS[S].

**4. In the Johannine literature.** In view of the need to "test the spirits" in face of heretical ecstasy, the Johannine tradition develops an incarnational criterion (I John 4:1-2). Since believers and heretics both claim ecstatic experience (I John 3:24; 4:13), the decisive step is to identify the Spirit with God as revealed in Christ. John's gospel carries out this effort by naming the Spirit the "Counselor" (14:26), further defined as the "Spirit of truth" (14:16-17; 15:26; 16:13; see PARACLETE; PARACLETE [S]). His role is to "bear witness" to Christ (15:26), to "bring to your remembrance" all that he taught (14:26), and thus in effect to call forth faith (6:63-64). Since full knowledge includes acknowledgment of the command to love (John 15; I John 4:21-5:4), the ethical consequences of this view of the Spirit resemble those of Paul.

In this literature "spirit" is used anthropologically only with reference to Jesus (John 1:32-33; 11:33; 13:21; 19:30). The relation of the ecstatic, apportioned Spirit to the enlivening spirit in the believer remains unclarified.

**5. Elsewhere in the NT.** In the rest of the NT the use of πνεῦμα is traditional and nonpolemical, with the exception of Hebrews where the apportioned Spirit (2:4; 4:12; 6:4-5) is the "Spirit of grace" (10:29) which this author relates to Christ (9:14). But the traditional Jewish usage is visible

in the references to angels and departed saints as "spirits" (1:14; 12:23), and to God as the "Father of spirits" (12:9).

\***SPIRITUAL GIFTS.** The gifts (χαρίσματα) of the HOLY SPIRIT were regarded by the early church as the fulfillment of prophecies made by John the Baptist (Mark 1:8) and by Jesus (Luke 24:49; Acts 1:4-5; John 7:38-39). As such, they are realities of the age to come (Matt. 12:28), imparted by God (I Cor. 12:28), by the Spirit (I Cor. 12:11), or by the exalted Lord (Acts 2:33; Eph. 4:7-8; cf. I Cor. 12:4-6). They are not the activity of a different Spirit but a different role of the same Spirit who is manifest in the present creation (Gen. 1:2) and in the OT prophets. Thus, they can be described as fulfillments of OT promises (Acts 2:16 ff.; Eph. 4:7-8) and, alternatively, OT acts of the Spirit can be associated with the new-age realities (Rom. 7:14; I Cor. 10:3, RSV n.). Apart from I Pet. 2:5; 4:10 the terms "gifts" (χαρίσματα) and "spiritual gifts" (πνευματικά) are limited in the NT to the Pauline literature, but the endowments expressed by the terms are widely evident throughout early Christianity.

1. **The classification and characteristics of gifts.** Singularly, the gift from the risen Lord is the Holy Spirit (Acts 2:38) or SALVATION (Rom. 6:23). Distributively, different gifts are enumerated in several Pauline passages (Rom. 12:6-8; I Cor. 12:8-10, 28-30; Eph. 4:11) and inferentially detailed in Acts 2:17-18. They are designated variously in each passage, suggesting that they were of no fixed number or kind. However, they are subject to some classification; and "spiritual gifts" (see §5 below), including those of prophecy (see PROPHECY IN THE EARLY CHURCH[S]) and tongues (see TONGUES, GIFT OF[S]), appear to be of particular significance.

The gifts emanate from the exalted Jesus and will, if they are genuine, issue in a confession of him (I Cor. 12:3; I John 4:2; cf. Rev. 19:10). They may be sought by prayer (I Cor. 12:31; Jas. 1:5) and may be imparted in the laying on of hands by gifted persons (Acts 19:6; cf. 13:3; I Tim. 4:14). But they are at the disposal of the sovereign Spirit, who dispenses them as he wills, diversely and for the common good of the church (I Cor. 12:7, 11). Thus, no one gift is imparted to all (I Cor. 12:29-30). And apparently no one person is given all gifts, although certain gifts, e.g., apostleship, may implicitly include others (Acts 5:12; II Cor. 12:12).

2. **Spiritual gifts and baptism.** The "baptism in

Holy Spirit" or equivalent imagery apparently is used only of the initial giving of the Spirit. It is often associated with BAPTISM in water, both in the case of Jesus (Mark 1:9-10) and in the early church (Acts 2:38; 9:17-18; I Cor. 12:13; Gal. 3:27). But it is not necessarily conterminous with the baptismal rite and, at least in Acts, may occur before (Acts 10:44-48; 11:15) or after it (Acts 8:15-18; 19:5-6; perhaps Tit. 3:5-6). In either case it may be accompanied by the laying on of hands and may be the occasion for the impartation of specific gifts; or the gifts may be imparted or manifested only at a subsequent time (Acts 6:3, 6, 8, 10; I Cor. 12:31; 14:1; I Tim. 4:14; II Tim. 1:6). For Paul, baptism in the Spirit incorporates one into the body of Christ (I Cor. 12:13). Baptism means to "have the Spirit" (Rom. 8:9) and is an essential characteristic of all Christians; the possession of certain spiritual gifts means to be a "pneumatic" (I Cor. 14:37; RSV "spiritual") and is characteristic only of a select group of Christians.

3. **The gifts and ministry.** The ministry of the NT church rests solely upon the gifts from the exalted Lord and, thus viewed, is the continuation of the ministry of Jesus: he is the apostle (Heb. 3:1), the prophet (John 7:40; Acts 3:22), the teacher, the miracle worker (Acts 2:22), the healer, the bishop (ἐπίσκοπος, RSV "Guardian," I Pet. 2:25), the mediator of divine wisdom (Mark 6:2; see WISDOM IN THE NT[S] §3a, b) who manifests his powers through his followers (I Cor. 12:8, 28 ff.). The manifestation of gifts does not itself constitute such believers a ministerial class. But some gifted persons appear to have been recognized or appointed from the first as an ordered ministry, i.e., worthy of the community's esteem, submission, and financial support (Luke 10:7; Acts 6:3; 14:23; I Cor. 9:6-14; 16:15-18; Gal. 6:6; I Thess. 5:12). However, ordered ministries are no less charismatically determined and are equally dependent on the constantly recurring miracle of God's grace (Schweizer; see *bibliog.*).

4. **The gifts and the fruit of the Spirit.** Several distinctions between the gifts and the fruit (Gal. 5:22-23) of the Spirit may be noted. The gifts are diverse, the fruit is the same for all; the gifts manifest the work of Christ, the fruit demonstrates the character of Christ.

The fruit and the gifts complement one another: "Make love your aim, and earnestly desire the spiritual gifts" (I Cor. 14:1). The absence of the fruit makes the gifts at best ineffective (I Cor. 13:1 ff.). It may indicate that they also are absent or spurious, the product of human, "fleshly" powers (I Cor. 3:1-4; Jas. 3:13-18) or of a demonic spirit (II Cor. 11). Like the christological confession, the fruit of the Spirit in the charismatic person provides a test of the genuineness of the gift.

5. **Spiritual gifts (πνευματικά).** In Rom. 1:11 a "spiritual" (πνευματικόν) gift (χάρισμα) is to be distinguished from others. Spiritual gifts are identified elsewhere as gifts of inspired speech or discernment (I Cor. 2:13; 12:1 ff.) and appear to be equated with the "higher gifts" that believers are urged to seek (I Cor. 12:31; 14:1). In a word they are prophetic-type gifts (I Cor. 14:37). They bring

to their possessors, the pneumatics, a certain prominence in the worship and teaching of the church (Acts 13:1; 15:32; I Cor. 14; Gal. 6:1; I Thess. 5:19-20; Jas. 3:1; Rev. 1:3) just as gifts, e.g., of oversight, bring corresponding responsibilities in other aspects of the church's life (Acts 14:23; 20:17, 28; Phil. 1:1; I Tim. 3:5; Jas. 5:14; III John 1, 9).

Smalley (1973), pp. 269-77, and "Spiritual Gifts in the Pauline Community," *NTS*, XX (1973-74), 128-44; E. Schweizer, *Church Order in the NT*, SBT, XXXII (1959), 171-210 (§§21-25).

E. E. ELLIS

**STAR OF BETHLEHEM.** The celestial phenomenon that brought the wise men from the East to seek the newborn "king of the Jews" (Matt. 2:2) has not been definitively identified. It has been suggested that it was the planet Venus, but the phases of Venus are too common and well known for that star to have been taken as a harbinger of the Messiah's birth. Likewise the notion that it was a shower of shooting stars or a brilliant meteor does not commend itself, for these events are much too transient. Chinese astronomical records mention the appearance in 12 B.C. of what later came to be called Halley's Comet, but it is extremely unlikely that the "star" was a comet, for the ancients interpreted the latter as omens of disaster.

The Chinese also recorded the appearance of a nova in 5 B.C. This was a stellar explosion or eruption near the star Alpha Aquilae that remained visible to the naked eye for about seventy days. This could have been the "star of Bethlehem," but since a nova is rather unimpressive, it is not likely that one would have been interpreted as a herald of the Messiah. A supernova is a vast explosion in which a star sheds its outer layers and increases in brightness by a factor of about one billion. One was recorded by the Chinese in the constellation Taurus in A.D. 1054 (the Crab Nebula is its result to the present day), and others appeared in 1572 and 1604. There is no record of one, however, in the late first century B.C.

It was the great astronomer Johannes Kepler who suggested in the early seventeenth century that the "star of Bethlehem" may have had something to do with the conjunction of the planets Jupiter and Saturn. A conjunction is said to occur when two or more heavenly bodies occupy the same celestial longitude. Kepler noted that a conjunction of Jupiter with Saturn shortly preceded the appearance of the supernova of 1604, and surmised that something similarly miraculous may have occurred in 7 B.C. when three conjunctions of these two planets took place in the constellation Pisces—on May 29, September 29, and December 4. In 1821 Bishop Muntér of the Lutheran Church of Denmark went a step further and suggested that there was no need for a "miracle," for the thrice repeated conjunction of Jupiter with Saturn in 7 B.C. could itself have been the "star of Bethlehem." This seems quite likely, for a Jewish astrologic tradition connects the ap-

pearance of the Messiah with the conjunction of Jupiter and Saturn that occurs in Pisces. (Conjunctions of these two planets occur roughly every twenty years, but astrology developed the ability to see in them portents of ever-growing significance over the larger cycles of time in which they occurred.) Pisces was regarded as the constellation of the Jews and of the month Adar, immediately preceding the month Nisan when the redemption (Passover) was to occur. Saturn was the planet of the Jews because of its association with Saturday and because it was the "most high," the most distant of the planets known to the ancients and hence a manifestation of the Most High God of the Jews. Jupiter was the planet of royalty, based upon its ancient identification with Marduk, the god of Babylon who ruled a universal empire. Jupiter was thus regarded as the star of the Messiah, and its conjunction with Saturn symbolized the transfer of royal power from the Most High to his messianic king. See SHALEM, God[S].

When the wise men said, in Matt. 2:2, "We have seen his star in the East," the star to which they referred was probably Jupiter. In Hebrew the planet's name is *Sedheq* ("justice" or "vindication"), an epithet applied frequently to the Messiah (see SEDHEQ, God[S]). The OT basis for regarding Jupiter as the messianic star was Isa. 41:2, the first part of which can be translated, "Whom has *Sedheq* stirred up from the east?" Hence the gospel spoke of the wise men as coming from the East for it was there that the messianic star was made manifest. (The phrase "in the East," used in Matt. 2:2 and 2:9, referred to the location of the wise men, not of the star. One Syriac MS, Sinaiticus, in Matt. 2:2 reads instead "from the east," but this is probably a copyist's error influenced by the language of 2:1.)

\***STOICS.** See CYNICS[S]; EPICETUS[S].

**STRUCTURALISM.** See LITERATURE, BIBLE AS[S] §4.

\***SUCCOTH-BENOTH.** In II Kings 17:30 this looks like a divine name (see SUCCOTH-BENOTH), but attempts to identify it with some Babylonian deity are tenuous. The simplest solution is to take the words in their literal meaning: "booths for girls," i.e., quarters for sacred prostitution, which was so widespread in late Babylon that Herodotus (I.199) erroneously thought that each Babylonian woman had to perform this duty once in her life.

M. C. ASTOUR

\***SYNAGOGUE, ARCHITECTURE.** 1. **Dating.** While previous research had tended to date the

major period of synagogue building to the late second century A.D. onward, current scholarship has produced abundant evidence for this activity some time in the third century and at the beginning of the fourth century A.D. Dramatic new discoveries make it possible to follow the development of a variety of synagogue types with great clarity. The remains of more than one hundred synagogues of ancient Palestine have been identified, and there are at least twenty known synagogue sites in the Diaspora. In recent years, the issue of chronology has centered about the synagogue of Capernaum (see CAPERNAUM[S] §3).

Though often a very complicated matter, the archaeological dating of synagogues is a much greater possibility today than ever before. Sealed materials from underneath the synagogue floor at Khirbet Shema have enabled the excavators to argue for a third-century date for the erection of a first synagogue there. A second synagogue was built on the ruins of the first one in the fourth century and was destroyed in an earthquake at the beginning of the fifth century.

The earliest Palestinian synagogues are those discovered at Masada and Herodium, which date to the first century. An early dating (first or second century A.D.) has also been proposed for a building at Chorazin discovered in 1926; however, this proposal has not won broad acceptance. Of the later Palestinian synagogues, Gerasa in Transjordan dates prior to A.D. 530, since a church is erected over its ruins at that time. Gaza is dated by an inscription to A.D. 508-509, and Beth Alpha is dated to the reign of Emperor Justin I, who ruled from 518 to 527.

Therefore, the reality of the situation is that the vast majority of ancient synagogues belong to the late Roman and early Byzantine period. While the art of the synagogue has often been thought to contribute to an understanding of Judaism at the time of Jesus, extreme caution is called for in interpreting material that primarily derives from the period of roughly A.D. 300-600. The very fact that few "early" synagogues have been found in Palestine raises fundamental questions about the very nature of the synagogue in the first centuries A.D.

**2. Types of synagogues.** *a. The basilical synagogue*, often referred to as the "early" or "Galilean" type. Rectangular in plan, it has two rows of columns running lengthwise and a short row running crossways opposite the main entrance, dividing its space into a central nave and two side aisles. The main façade usually consists of three entrances and is always oriented toward Jerusalem. The sanctuary is often flanked by a courtyard or adjoining building such as is found at Capernaum. A gallery often runs along three sides, and while most scholars view it as functioning for women only, at least one scholar has argued convincingly that women were not excluded from participating with men in worship during the Talmudic period. Access to this gallery, in any case, was usually gained from outside. See SYNAGOGUE Figs. 95-98.

The awkward feature in the basilical synagogue is that it requires those who enter it to make a complete about-face in order to worship facing Jerusalem. Hence, it is usually thought that a Torah

shrine was movable in these synagogues and was wheeled out during the services. However, no trace of any such shrine, movable or fixed, has been found in this type of building, with the possible exception of the niche on the wall facing the façade at Arbel (Irbid), if that can be assigned to the early building there.

The floors of these basilical buildings are often paved with ashlar (as at Baram and Capernaum) or sometimes with simple black/gray and white tesserae, though no such mosaic floor has survived intact. Stone benches frequently run along the sides to provide seating.

The origin of this type of building is generally thought to be the typical basilica of the Greco-Roman world mediated to Palestine through Syro-Roman and Nabatean prototypes. Examples from Galilee number around fifteen, with a like number now identified in the Golan Heights. Although few new excavations have been conducted, the general dating ranges for these buildings can be said to be third and fourth century A.D.

*b. The broad-house synagogue.* The appearance of this type is usually thought to coincide with the time when a fixed receptacle for the Torah was adopted. The earliest example comes from the Diasporan site of Dura-Europos in the third century A.D. (see ART, EARLY JEWISH[S] §2). From the S of Palestine came the exciting new synagogue finds at Eshtemoa and Susiya. In both these buildings, the focus of worship is located on the long wall facing Jerusalem, neither of them containing internal columnation. Standing before the entrance of these synagogues, which consists of a monumental, three-portal façade on the short wall, was a pillared porch. In addition, both have a bema, or podium, and an *aediculum*, or Torah shrine, on the long wall. The broad house thus represents another means of resolving the difficulties, posed by the basilica, or worshiping toward Jerusalem; this would explain why the entrance remained on the short wall and not on the long wall opposite the bema as one might expect in a broad house. See SYNAGOGUE Figs. 99D, H.

At Susiya we find fourth-century mosaics, the earliest decorated mosaics thus far preserved. At Caesarea, the earlier of two superimposed synagogues belongs to this type also.

At Khirbet Shema near Meiron, the first broad house in Galilee was uncovered. It differs from the ones in the south by adapting the basilical plan to the broad house. In other words, it has internal columnation oriented E-W, but the bema on the long S wall indicates that the focus of worship was located on the long wall from the beginning. Only black and white tesserae were found there, indicating a simple mosaic floor. Two major entrances were found, the one on the N wall opposite the bema having a menorah incised on the lintel, and the one on the west having an eagle incised on one of the doorjambes. See Fig. 8.

While the origin of this type of building is not certain, the basic Syro-Palestinian temple type—the broad house—could well have influenced it (see TEMPLES, SEMITIC[S]). Palestinian broad-house synagogues are referred to as the "transitional" type, but recent excavations have shown that such

a designation is erroneous because some broad houses antedate the so-called "early" basilica-type synagogues which consist of a broad room with an elaboration in portico.

c. *The apsidal synagogue.* The beginnings of a new type of building can be dated to the fifth century A.D. On the basis of the synagogue at Gerasa, which was rebuilt as a church in A.D. 530, this form continues until the eighth century. It is based on the basilica plan; the novelty is the fact that the apse points in the direction of Jerusalem and does not force the worshiper to do the awkward about-face after entering through the main façade. It very often was built with a court and forecourt. In this type the apse, separated by a screen from the rest of the sanctuary, served as the repository for the Torah shrine and often as a place for storing old scrolls.

Since the Byzantines laid strictures against the building of new synagogues, the ornament of this later type was concentrated within. Hence, most are characterized by lively and colorful mosaics, beautifully carved chancel screens, and elaborate capitals. Parade examples of this type are Gaza, Maon, Beth Alpha, Hammath Gader, etc. See ART, EARLY JEWISH[S] §3.

3. *Outstanding problems.* Given the fact that the current work has been published in such fragmentary fashion, the time has not yet come to speak with certainty on the development of synagogue architecture. In the Diaspora, in addition to Dura, major works are due on SARDIS, Stobi (Yugoslavia), and Ostia (Italy). In Palestine, full reports are not yet available on any of the newly excavated or recently discovered sites. What can be said is that local traditions have apparently a good deal more to do with the development of synagogal plans than was heretofore recognized. Hence, rigid typological arguments tied to a fixed chronology can no longer be accepted at face value. New discoveries will doubtless raise new questions. Nonetheless, a study of synagogue remains, including artistic and architectural features, will continue to provide fresh insights into the religious and aesthetic sensibilities of Jews in antiquity.

\*SYNAGOGUE, THE GREAT [בְּנֵי אֲשֶׁר הָיוּ בְּיָמֵינוּ, variously translated Great Synagogue, Great Assembly, Great Synod, Great Community]. Rabbinic tradition seems to associate it with the period of Ezra and Nehemiah and with the religious assemblage of Neh. 8-10. Because M. AB. 1.2 lists Simon the Just as among the remnants of, or survivors of, the Great Synagogue, the institution was considered to have been dissolved during his lifetime (third century B.C.). Sources disagree as to whether there were 85 or 120 members.

Traditions attribute to this assemblage the establishment of the festival of Purim; the writing (i.e., codification) of Ezekiel, Daniel, Esther, and the twelve minor prophets; the classification of rabbinic tradition into Midrash, halachoth and haggadoth; the determination of biblical characters who have no portion in the "world to come"; the maxims listed in M. AB. 1.1; and many other enactments.

While tradition does not yield much reliable information about this institution, it does project back to it the origin of some of the most essential features and conceptions of Judaism: its prayers, its divisions of the oral Law, its festivals. This process of anachronization, reading back into the distant past the beginnings of contemporary institutions, laws, and beliefs, is typical of rabbinic Judaism and should be understood for what it tells of the later period rather than the earlier one.

Modern scholars disagree on nearly every issue regarding the Great Synagogue. Some reject its historical existence. Others attribute its origin to the assembly mentioned in Neh. 8-10, or to an assembly convened about 198 B.C. to determine whether to give political support to either Antiochus III of Syria or Ptolemy V of Egypt, or to the "large assembly" (συναγωγῆς μεγάλης) mentioned in I Macc. 14:28 ff. Scholars also argue that each of the above was a Great Synagogue

(Assembly), or that one or the other was the only Great Synagogue. Thus the institution has been variously dated in the fifth, fourth, third, and second centuries B.C., and its duration conceived as spanning from three hundred years to one generation. Further, this institution has been seen as identical with, a precursor of, or unrelated to, the *Bêth Din HagGādhōl*, the *γερουσία*, or the Great SANHEDRIN. Its function is considered to have been purely religious or a mixture of religions, secular and political; either view is shaped by notions regarding the composition of the Great Synagogue. Scholars argue that the following groups were represented simultaneously, successively, or exclusively: prophets, priests, sages, scribes, aristocrats, and members of the *Ma'amādōth*, or watches representing all Israel at the sacrifice of the communal offering. Most recently, the Great Synagogue has been tied to Pharisaic Judaism. One view conceives of the assembly in I Macc. 14:28 as a revolutionary one-day gathering at which the Pharisaic leaders and the people rejected the Zadokite-Sadducean priesthood; another sees the institution as a federation of various branches of Pharisaic associations or clubs.

L. M. BARTH

**\*SYNOPTIC PROBLEM.** The two-document hypothesis is undoubtedly the most widely accepted source-critical hypothesis in NT introductions, gospel commentaries, and monographs. It is presupposed in a considerable number of redaction-critical investigations, and, in particular, the recent study of the Matthean as well as the Lukan redaction and theology has shown the practicability of the theory (see REDACTION CRITICISM, NT[S]). Nevertheless, the existence of the hypothetical "Q" source is still contested (see Q[S]), and objections raised against the priority of Mark have tended to call the two-document hypothesis into question and, in some quarters, have led to other theories (oral tradition, gospel fragments, primitive gospel, priority of Matthew).

The recent discussion has concentrated upon three problems: the minor agreements, the argument from order, and the style of Mark.

1. **The minor agreements.** On the hypothesis of the independent editing of Mark by Matthew and Luke the minor agreements of these gospels against Mark (in the triple tradition) are the most serious stumbling block. Occasionally, textual corruption and harmonization can be the cause

of the agreement, but only on a more limited scale than was proposed by Streeter. Because of the great number of these coincidences in content, vocabulary, style, and grammar, the concatenation of agreements in certain sections, and the combination of positive and negative agreements, many authors do not accept accidental coincidence as a satisfactory explanation for the whole of the phenomenon. Without abandoning the priority of Mark, several solutions have been proposed.

(a) Proto-Mark or Deutero-Mark. Matthew and Luke used a Markan text which is slightly different from our Mark, either a Proto-Mark (Boismard) or a Deutero-Mark, due to textual corruption (Glasson: cf. Western text), revision (Brown: cf. Caesarean text), or edition (West: Primitive Luke; Fuchs: Mark already combined with Q).

(b) Luke's subsidiary dependence on Matthew. Luke, who follows Mark as his basic source in the triple tradition, is also acquainted with and influenced by Matthew. According to some authors the double tradition, too, is borrowed from Matthew (Farrer), but others suggest that the minor agreements (in the triple tradition) and the double tradition or Q sections are to be explained differently (Morgenthaler).

(c) Common source. Both Matthew and Luke depend on another source besides Mark: a primitive gospel, Proto-Matthew (Vaganay, Boismard), gospel fragments (Léon-Dufour), or oral tradition (Dahl; Schramm: "tradition variants").

In the two-document hypothesis it is a common assumption that some of the agreements should be assigned to Q (especially the *major* agreements in the sections parallel to Mark 1:7-8, 12-13; 3:22-30; 4:30-32; 6:7-11, and, less convincingly, 12:28-34). The great bulk of minor agreements, however, can be explained by coincident correction and the common tendencies of the independent editors, Matthew and Luke, and are therefore highly significant for the redactional study of the gospels (Neiryck). Only a small number of residual cases are attributed to the influence of oral tradition (Kümmel) or to textual corruption (Schmid; cf. de Solages, McLoughlin).

On the GRIESBACH HYPOTHESIS, with the assumption of some direct literary relationship between Matthew and Luke, the minor agreements are explained by Mark's "own peculiar stylistic preferences" as he conflated the two earlier gospels (Farmer).

2. **The argument from order.** The relative order of sections in Mark is in general supported by both Matthew and Luke; where Matthew diverges from Mark, Mark's order is supported by Luke, and where Luke differs from Mark, Mark's order is supported by Matthew. From this statement of the absence of agreement in order between Matthew and Luke against Mark (in the triple tradition), proponents of the two-document hypothesis draw the conclusion that Mark is the common source, independently edited by Matthew and Luke.

a. **The validity of the argument.** B. C. Butler has contended that there is a logical error in the traditional argument from order. A number of scholars, among them some who continue to

espouse the two-document hypothesis on other grounds (Styler, Fuller), have in fact dismissed the argument as useless. It is allowed that the argument has probative force on the assumption of a common gospel source:

but, it is claimed, once this solution is abandoned the phenomena of order are satisfactorily explained not only on the hypothesis of Markan priority, but also on any other hypothesis which proposes Mark as the middle term:

However, some other observations need to be made.

i. If the relative order of the gospel *episodes* is studied as a specific literary phenomenon, it becomes clear that there are virtually no places where Matthew and Luke agree against Mark. (Sanders, however, also considers individual sentences or phrases where there is agreement in order and regards this as indicative of Luke's dependence on Matthew.)

ii. The description of the evidence as "alternating support" (i.e., when Matthew diverges from Mark, Mark's order is supported by Luke, and when Luke diverges from Mark, Mark's order is supported by Matthew) should be corrected by a more concrete approach. In fact, the basic phenomenon to be reckoned with is the common order between Mark and Matthew and between Mark and Luke. The changes of order are exceptional: in Luke the alterations of the Markan order are limited in number, and in Matthew the transpositions are confined to 4:23-11:1. (In the Griesbach hypothesis, too, the argument from order is based on the so-called "alternating support," explicable only by the deliberate intention of a writer, on this hypothesis, by Mark's decision to remain close to at least one of his sources, Matthew and Luke.)

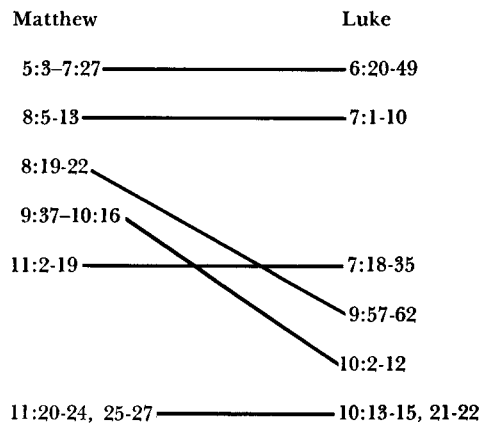

iii. The evidence of the relative order excludes the oral tradition hypothesis and the fragments theory.

iv. The appellation "Lachmann fallacy" (Butler) is misleading, not only because Lachmann's observations (1835) were made within the primitive gospel hypothesis, but also because he did not use the formulation of "Mark's order supported either by one or the other," which originated in the Griesbach hypothesis and was first employed in the Markan hypothesis by Weisse (1838).

v. Lachmann's concern was to determine the reasons which could have influenced the evangelists in altering the sequence of the gospel sections in some *Urgospel*. His argument for the priority of Mark's order is still a valuable one insofar as an acceptable explanation can be given for Matthew's

and Luke's transpositions, and no good reason has been found why Mark would change the order of Matthew or Luke.

b. *Matthew and Mark.* The disagreements in order are found in the first part of Matthew. From 14:1 on, Matthew follows faithfully the Markan sequence (Mark 6:14-16:8): there are only a few omissions (Mark 8:22-26; 12:41-44; 14:51-52), and the alterations of order in Matthew 15:3-6; 19:4-6; and 21:12-13 are merely inversions within the same context; the discourse fragment of Matt. 10:17-22 (cf. Mark 13:9-13), which is sometimes quoted as the only transposition in the gospel, is a redactional duplication (cf. 24:9, 13-14; Mark 13:9-10, 12c-13). The presence of transpositions in the first part of Matthew does not necessarily point to a different tradition (Gaboury: multiple sources in a less advanced state). Matthean editorial concentration is a much more plausible explanation. In the discourses of Matt. 5-7 and 9:37 ff. Matthew combined the double tradition parallels with other Q sections. If we can admit, as most authors do, that the original order of Q is better preserved in Luke, then Matthew not only anticipated these sections but also reversed the order of the Baptist and the mission sections:

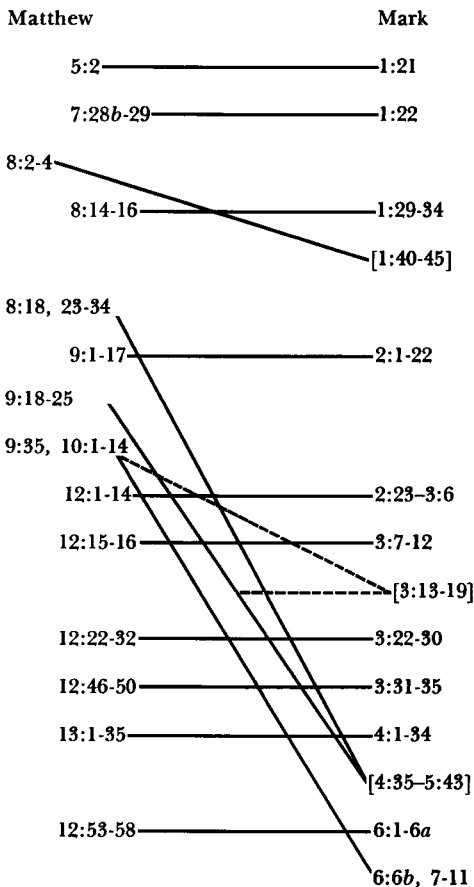

A similar observation is to be made regarding the triple tradition: the transpositions are found in the great complex of 4:23-11:1, from the SERMON ON THE MOUNT to Jesus' answer to John the Baptist. The section opens with a solemn introduction in which Matthew combined several motifs from Mark's "Day at Capernaum" (Mark 1:21-39), and also from other summaries in Mark:

Matthew	Mark
25	3:7-8
5:1a	3:13
2	1:21

The Sermon on the Mount is the only one of the five great discourses in Matthew (5-7; 10; 13; 18; 24-25) for which the occasion is not provided by a rudimentary discourse in Mark (cf. Mark 6:7-11; 4:31-34; 9:33-50; 13). Perhaps the first mention of Jesus' *teaching* in Mark 1:21 explains why Matthew placed the first sermon here and used Mark 1:22 in his description of the reactions of the multitude: Matt. 8:1-17 combines the miracle story which followed the sermon in Q (Luke 7:1-10) with miracle stories from Mark 1. The first place is given to the cleansing of the leper (8:2-4, with the *inclusio* in 9:30b-31; cf. Mark 1:43, 45). The inversion of the order has to do with Matthew's interest in the composition of 8:1-9:34. At the same time Mark 1:40-45 is introduced within the "First Day" of Jesus' ministry, Matthew's replacement of the "Day at Capernaum" in Mark (5:1-8:17):

In the second section of miracles (8:18-9:34) Matthew anticipated Mark 4:35-5:43 and dupli-

cated other miracle stories in 9:27-34. However, the insertion of the Q passage in 8:19-22 clearly shows that the editorial interest is not merely in the miracles of Jesus. The summary of Jesus' ministry is echoed in 10:1, 7-8 and unites the activity of Jesus and the mission of the disciples. Thus, Matthew's editing can be seen in a double anticipation: that of the miracles from Mark 4:35-5:43, and that of the disciples sections from Mark 6:6b-11 (combined with 3:13-19), and from Q (cf. Luke 9:57-10:12). Matt. 8:18-9:34 is the evangelist's own composition around the Markan sequence of 2:1-22. In 12:1 he comes back to Mark 2:23 and from there on follows the order of Mark, with the exception only of the anticipated pericopes.

*c. Luke and Mark.* The situation in Luke is quite different. There is no such rearrangement as we have in Matt. 4:23-11:1. Luke normally follows the order of Mark. It has been argued that Luke, where he borrowed from Mark, *always* follows the Markan order and that the few instances of divergence in the ministry, and the more frequent alterations of order in the PASSION NARRATIVE, are explainable only by the influence of non-Markan sources (Proto-Luke). However, for each transposition a valuable redactional explanation can be adduced, although many exegetes admit a non-Markan tradition behind pericopes such as:

Luke 4:16:30	from Mark 6:1-6a
5:1-11	1:16-20
6:12-16, 17-19	3:13-19, 7-12
7:36-50	14:3-9
8:19-21	3:31-35
(after 8:4-18)	(before 4:1-34)
10:25-28	12:28-34
(cf. 20:39-40)	
22:21-23	14:19-21
22:24-27	10:42-45
22:31-34	14:29-30.

3. *The style of Mark.* The roughness of Mark's style is a well-known argument for the gospel's early dating (see MARK, GOSPEL OF §5; GOSPELS). The evidence of stylistic improvements and christological corrections in Matthew and Luke is impressive, although those who question Mark's priority dismiss it as unconvincing and argue, to the contrary, that there are passages in Mark which suggest that Mark is secondary to Matthew and Luke (Farmer).

The new defense of the Griesbach hypothesis holds that duplicate expressions, of which one element has a parallel in Matthew and the other in Luke, are the result of conflation. According to Boismard and some other exegetes, the sources combined by Mark are not the gospels of Matthew and Luke but Proto-Mark and Proto-Matthew, or other gospel sources. However, a re-examination of the evidence shows that duplicate expressions and other forms of duality form a characteristic feature of Mark's style. The two-step expressions, in which the second statement adds precision to the first, is typical. It points to the originality of

Mark rather than to conflation and combination of sources.

**Bibliography.** Tools for study: K. Aland, *Synopsis of the Four Gospels*, Greek-English ed. of the *Synopsis Quattuor Evangeliorum*, using text of the RSV (1972); W. R. Farmer, *Synopticon* (1969); R. Morgenthaler, *Statistische Synopse* (1971).

Alternatives to the two-document theory: W. R. Farmer, *The Synoptic Problem* (1964), argues for Mark's dependence on Matthew and Luke (see also bibliog. for GRIESBACH HYPOTHESIS[S]); R. H. Fuller, E. P. Sanders, T. R. W. Longstaff, "The Synoptic Problem: After Ten Years," *PSTJ*, XXVIII, 2 (1975), 63-74, assesses Farmer's position and the discussion of it to date, with bibliog.; A. Gaboury, *La structure des évangiles synoptiques*, NovTSup, XXII (1970), proposes multiple sources for Matt. 4-13, but adheres otherwise to a common gospel source; M.-E. Boismard, *Synopse des quatre évangiles en français*, II: *Commentaire* (1972), admits that the final redactions of Matthew and Luke depend on Mark, but also accepts a final redaction of Mark depending upon both Matthew and Luke, i.e., Proto-Luke (cf. F. Neiryck, "Urmarcus redivivus? Examen critique de l'hypothèse des insertions matthéennes dans Marc," in *L'évangile selon Marc*, ed. M. Sabbe, BETL, XXXIV [1974], 103-45).

- Bibliography

1. Versions of the OT. A close examination of the text of the Peshitta, the standard Syriac version, reveals that the Syriac OT underwent a long period of development. This became clear from the early studies of Perles; later Baumstark established that the *Vorlage* can be traced back to the traditions of the Palestinian Targ. (see TARGUMS[S]). More recently, research on patristic and liturgical sources found in previously unknown MSS has opened new avenues for the illumination of the history of the Syriac Pentateuch, and has enabled us to see more of the profile of the Old Syriac (*Vetus Syra*). Other parts of the OT still need similar investigation, but it is already clear that the same archaic layer is present in the Psalter and the prophetic books as well, reflecting the pattern of the ancient Palestinian Targumic traditions.

a. *The Old Syriac Version.* There is no agreement as to whether this version had a Jewish or a Christian origin. It has been suggested that a historically suitable situation for its creation was the conversion to Judaism (ca. A.D. 40) of the royal house of Adiabene, a kingdom situated between the two rivers Zab, E of the Tigris. It then became necessary to make the Scripture available in Syriac, the vernacular of the area. The Bible, beginning with the Pentateuch, was introduced into the kingdom in the middle of the first century (Kahle). This could have been accomplished by adapting the West Aramaic Targ. into the Syriac of Adiabene.

However it is equally possible that the Old Syr. originated with the beginnings of Christianity in Mesopotamia. According to ancient records the gospel reached Adiabene through Jewish Christian emissaries. Against this background the first translation of the Scriptures would have been made, not from the MT nor from the LXX, but from

the ancient Palestinian Targ. Not only did this Syriac version serve as the basis for a revision which produced the Peshitta, but some MSS escaped revision and continued to circulate. One such text became the base for the Palestinian Syriac version of the OT (*see §1d below*) and for an Arabic version.

**b. The Peshitta.** The revised form of the Syriac Bible, the Scripture of Syrian Christianity, is called the "Peshitta," a term meaning "the simple [version]," i.e., easy to understand. It seems that this designation resulted from the contrast with other, more elaborate and scholarly versions equipped with textual-critical apparatus (*see §1e*). Confirmation of this hypothesis can be seen in the fact that this designation does not appear in any Syriac author earlier than the ninth century. The transmission of the version is well attested by extant MSS. The most ancient codex is MS British Museum Add. 14425, containing Genesis, Exodus, Numbers, and Deuteronomy. It was copied in the year 463/64. MS Br. Mus. Add. 14427, containing Leviticus, Numbers, and Deuteronomy with gaps, is of the sixth century, and MS Ambr. B 21 inf., containing the whole OT (*Translatio Syra Pescitto VT*, ed. A. M. Ceriani [1876]) is of the sixth or the seventh century.

The Peshitta was not a new translation but a revision. Internal evidence indicates that it cannot be of one cast, but must have had behind it a history of gradual growth in different epochs. This is suggested not only by variations in style but also by its text, which displays evidence of revision and exposure to Targumic and LXX influences, in varying degree from book to book. Certain books render the *Vorlage* quite literally (Song of Songs); some even servilely (Job); others show more freedom (Psalms and especially Isaiah and the Minor Prophets); some display a surprising paraphrastic freedom (Ruth); others unfold Targumic pattern in textual formation (Pentateuch, Ezekiel, Proverbs), and some have an even fuller degree of paraphrastic renderings derived from the Midrashic and Targumic traditions (Chronicles). Disparate elements appear even in the fabric of the individual books. These phenomena indicate that different parts of the Peshitta go back to different textual bases, and that they originated in different periods.

Since the Peshitta is one of the oldest and most important witnesses, it occupies an important place in textual criticism (*see* TEXTUAL CRITICISM, OT[S]); TEXTUAL CRITICISM, NT[S]). The Isaiah scroll from the caves at the Dead Sea reveals close affinities with the Peshitta and confirms its value as a witness to the text (cf. TEXT, OT §A1). On the other hand, the Greek Bible in all its forms has also left its impact on the Peshitta. The problem of the influence of the LXX is complicated; whether it originally influenced the process of revision or only came on the scene later is not yet clarified. In any case its influence is reflected in the most ancient MSS extant.

The literary and historical problems of the Peshitta are extremely intricate. Its date and the identity of the revisers and translators are unknown. Advocates of a Jewish origin have been

challenged by those who claim Christian provenance. The latter position is probably correct.

There is no critical edition of this version, except for the Song of Songs, Tobit, and IV Esdras (Leiden, 1966), and Canticles and Apocryphal Psalms (Leiden, 1972). Adequate editions exist for the Pentateuch (*Pentateuchus syriace*, ed. W. E. Barnes [1914]) and the Psalter (*The Peshitta Psalter*, ed. W. E. Barnes [1904]). The London edition (*VT syriace*, ed. S. Lee [1823]) is essentially a reprint of the texts of the Paris and Walton polyglots. The Urmia edition (1852) is different in character, since it follows the East Syrian traditions. That of Mosul (1887-91) also depends upon the East Syrian tradition but is limited in value, and that of Beirut (1951) rests on a very narrow MS basis.

**c. The Philoxenian Version.** Syrians are well-known for their ongoing attempts to improve the translations of the Bible. According to the testimony of Moshe of Aggel, Philoxenus, bishop of Mabbug, sponsored a translation of the NT and the Psalter. Ceriani has proposed that the actual work was produced by Polycarp, chorepiscopus of Philoxenus, and this view has much in its favor. Some vestiges of the work have been identified which are of sufficient significance to require careful examination. A scholion in the codex of the Syro-Hexaplar MS Mil. C 313 inf., which quotes from the version of Philoxenus, seems to deserve credence. In MS Br. Mus. Add. 17106 a segment of this version has apparently survived in a fragment of Isaiah (*Isaiae fragmenta syriaca versionis anonymae*, ed. A. M. Ceriani [1868]). The version was based not on the Peshitta but on a more archaic form of the text, and the Greek text used for its revision was not the Alexandrian LXX but the Lucianic. The same type of text appears in the quotations of Isaiah in the Syriac translation of Cyril's *Glaphyra* prepared by Moshe of Aggel not long after Philoxenus.

**d. The Palestinian Syriac Version.** While the versions described above originated in an area where Syriac was spoken, centering around Edessa in Mesopotamia, this version is entirely different. It is written in an idiom with linguistic features that deviate considerably from Syriac and represents a dialect that belongs to the Western Aramaic spoken in Palestine and neighboring regions (*see* ARAMAIC[S] §C1). Its script is also distinctive, representing a rigid and archaic form of the Estrangela, a script that resembles the Hebrew and early Syriac scripts. This version is extant mainly in lectionaries, the most important being a MS found in Cairo, which contains selections from the Pentateuch, Job, and Proverbs (*A Palestinian Syriac Lectionary*, ed. A. S. Lewis [1897]). In the extant material the best represented book is the Psalter, with forty-two psalms complete, plus fragments. This form of the lectionary texts does not preclude the possibility that the pericopes rest on a more ample Syro-Palestinian Bible.

The text of this version, which is quite independent of other Syriac versions, reveals archaic features. Among them the Targumic influence is most conspicuous, but the underlying Greek text

also had many peculiarities. Therefore it is the more regrettable that the historical problems connected with this unique version are shrouded in darkness. The evidence from paleography gives little help. The script used in the palimpsest MS, which is the oldest witness, leads to the ninth century, but the version itself must be older. An Arab author, Ibn Ishaq, used this version about the year 700. The Christians in Palestine, who were provided with oral translation when the Greek Scriptures were read in the worship services, must have soon felt the need for a written version of their own. It is possible that a reference by Jerome to the burial of St. Paula (d. 404) in Bethlehem, "Graeco Latino Syroque sermone psalmos in ordine personabant" (*Epistulae* CVIII. 29), may be the earliest hint of the beginnings of this version. The reference is the more interesting since, in connection with the discussion regarding whether the version originated in Antioch (Burkitt), in Egypt (Marshall), or in Palestine (Lagrange), new discoveries now point to Palestine. These discoveries are an inscription from the sixth or seventh century (Milik) and a letter.

**e. The Syro-Hexaplar Version.** This version has re-emerged very slowly. Until recently little material was available for the first part of the OT, particularly the Pentateuch. Since there were only some individual books extant, most with gaps or even in fragments, and some were completely unknown, the discovery of the Pentateuch in MS Midyat (*The Pentateuch in the Version of the Syro-Hexapla*) is highly significant. This MS belongs to the eleventh or twelfth century. MS Ambr. C 313 inf., which contains Job, the wisdom literature, the Prophets, and other material (*Codex Syro-Hexaplaris Ambrosianus*, ed. A. M. Ceriani [1874]) is of the ninth century. New discoveries, among them a book of Isaiah in MS Jerusalem St. Mark I, written on parchment, have increased the amount of evidence (*The Book of Isaiah*, ed. A. Vööbus [1976]). The history of the version is unfolded in the colophons added to the individual books. The man who undertook to produce this new and scholarly version of the OT was Paul, bishop of Tella de-Mauzelath, in Mesopotamia. Forced to flee the invading Persians, he found a place of refuge in Egypt and devoted his life in exile to this undertaking. It must have been accomplished between the years 615 and 619—in any case before the summer of 619—in a Syrian monastery at the ninth milestone near Alexandria. A team of co-workers assisted Paul, and in a colophon Tuma is mentioned as the most outstanding among them. However, the unity of style through the entire translation can be interpreted in only one way—one man has impressed his stamp upon the entire Syro-Hexaplar.

The importance of the version is due to the fact that it is based on the fifth column of the Hexapla of Origen, the disappearance of which was a great loss. This translation, inspired by scholarly considerations to produce an exact rendering of the LXX column, reproduces the Greek text word by word. Everywhere it displays a painful concern to present the Greek as accurately as possible, indeed, even to mold the Syriac to the

Greek original by imposing an unnatural order of words and by enforcing strange and unnatural grammatical forms, resulting in curious idiosyncrasies in syntax. Because of the strictness of the method of translation, and the care and accuracy exercised, the Syro-Hexaplar is of the greatest value as a means of restoring the lost Hexapla of the LXX (see SEPTUAGINT §4a). The importance of the version is increased by the fact that it is not only an early witness to the text of the Hexapla, but it has also preserved the text-critical sigla of the Hexapla (see VERSIONS, ANCIENT §2a), which have rarely survived in Greek. Their value is enhanced by the margin, which includes numerous variant readings from Aquila, Symmachus, and Theodotus (see SEPTUAGINT §3; GREEK VERSIONS, MINOR[S]), and, in the Psalter, also from the Quinta and the Sexta, both otherwise almost unknown ancient versions. It is surprising that this scholarly version found its way into the precincts of cult and liturgy. The discovery of two new lectionaries preserved in MS Mardin Orth. 47 and 48 provides additional evidence of its use in this way.

**f. The version of Jaqob of Edessa.** A new recension of the OT was produced by Jaqob of Edessa (d. ca. 708), celebrated as one of the greatest Syriac scholars. His work marks the end of the long history of Bible translation among the Syrians. The version has survived only in part. MS Br. Mus. Add. 14429, copied in 719, very soon after the death of Jaqob, is the earliest witness; it contains I and II Samuel and the beginning of Kings. MS Par. Syr. 26 has preserved the Pentateuch; MS Par. Syr. 27 contains Daniel, and MS Vat. Syr. 5, Ezekiel, all with some gaps. From other parts of the Bible there are only fragments (*Daniel sec. ed. LXX interpr.*, ed. G. Bugati [1788]; *Monumenta sacra et profana II*, ed. A. M. Ceriani [1863]; M. Ugolini, *Or Chr.* 2 [1902], 409-20). Jaqob's version was a revision. Working with the Peshitta and the Syro-Hexaplar, he tried to improve the Peshitta on the one hand and on the other to give to the Syro-Hexaplar a shape which would bring it back to a more normal Syriac idiom. Jaqob's undertaking introduces the first systematic work in the Syriac Masora, furnished with marginal glosses regarding pronunciation and variants. It also introduces chapter divisions and summaries of content. This work was produced during the last years of Jaqob's life, when he lived in the monastery of Tell'ada. A colophon helps to establish chronology for the revision of I Samuel and Daniel, which were completed in the year 705. Some other parts originated before, and some after this date.

**g. The Syriac Masora.** This parallels the Jewish practice of supplying vowels for texts written in the consonantal script. The West Syrian Masora is related to the traditions cultivated in the monastery of Qarqaphta, near Ris'aina, by the monk Tubana Santa and the scribe and deacon Saba, a native of Ris'aina. MS Br. Mus. Add. 14428, 14430 and 19135 were copied by him; the second is dated in the year 723/24 and the third in 726, helping to fix the chronology of Saba's life. Almost nothing is known of Tubana, but he was probably older

than Saba, who corrected his textual readings. In contrast to the Greek vowels used in the West Syrian Masora, the East Syrian Masora employed a special system of points. This work has a complicated history. The only codex which contains the OT and NT is preserved in MS Br. Mus. Add. 12138, written in the year 899. This MS, which is furnished with marginalia about the pronunciation and special characteristics of the Nestorian traditions, ascribes the introduction of the system to Joseph Huzzaya. In this connection, tradition has preserved the memory of the work of Ramisho, and of a still-older stratum in the tradition that is connected with the work of Abraham and Johanan in the School of Nisibis. See also TEXT, HEBREW, HISTORY OF[S] §2a.

2. Versions of the NT. a. *The Diatessaron*. In the development of the versions, as well as in the early phase of the history of the NT text, there is no greater name than Tatian (Euseb. Hist. IV. 29.6), a native of the Euphrates Valley who shortly after the middle of the second century composed the *Evangelion da-mehallete*, "the Gospel which is a composite," known to the Greek-speaking Christians as the Diatessaron (literally "through the four [gospels]"). No MS of it has survived; its text is known only through citations. The study of this unique monument of ancient Christian literature is beset with numerous complicated problems which have made it one of the most difficult topics in the field of NT textual criticism. Many have argued that its original language was Greek. Internal evidence, however, has inspired students to regard Syriac as the original language. Two small fragments in Greek, one found in Dura-Europos and the other in Egypt, have strengthened this view, since both bear unmistakable signs of a Syriac original.

The Diatessaron possessed several characteristics which ensured its appeal and its widespread use. It is not a synopsis in the modern sense, but is a composition in which the threads of the narrative are dexterously interwoven into a continuous life of Jesus. This composition was guided by meticulous care to include everything possible; hardly a word was dropped. The composition also included some readings of extracanonical provenance, readings which were precious to the Syrians. The work has literary qualities that give it a peculiar charm. Tatian's hand becomes visible again and again as he smoothed and filed the text into conformity with his fine taste. This scholar, who in his Apology reveals himself as a master of the Greek language, also shows himself a master of the language of his home country. In addition to its intrinsic beauty and its missionary use, national pride was also a factor in the rapid dissemination of the Diatessaron. It was a Syrian gospel, created by a Syrian, and composed in their own tongue. No other Christian community could claim such a gospel text as its own. Also its vigorous interpretation of the Christian faith must have been particularly appealing in the early phase of the development of Syrian Christianity.

Tatian's work continued to serve the spiritual needs of Syrian Christians for several generations. We have clear evidence that in the fourth cen-

tury it was still used in many circles. Ephrem of Edessa (d. 373) wrote a commentary on it, which formerly was available only in Armenian translation, but recently has come to light in a unique Syriac MS. In his diocese of Cyrrhus, Theodoret (d. ca. 460) found more than two hundred copies still in use in the churches and had them destroyed (PG 83,372). The fact that no copy in Syriac has survived indicates what drastic measures were employed to eradicate it.

As to whether Tatian also translated Acts and the letters of Paul, it must be said that it does not seem probable that he would have been satisfied with giving Syrian Christians only the gospel harmony. Historiographic sources leave us in the dark on this question, except for one cryptic remark in Eusebius (Euseb. Hist. IV.xxix.6), who mentions that Tatian dared to paraphrase and to correct certain words of the Apostle. Nevertheless we have evidence in the remains of ancient Syriac literature that an archaic text of the Acts and the Pauline epistles existed and circulated among Syrian Christians. Ephrem the Syrian composed a commentary on this text of the Acts as well as on the epistles, but unfortunately the works in their original form have perished, and only translations in Armenian have saved them from complete destruction. Many features of this text arrest one's attention, because they have the same ring which characterizes Tatian's work on the gospels, and the style echoes an archaic form of the material, which must have circulated in Mesopotamia.

Tatian produced a work of unparalleled significance for the whole of Christianity. The Diatessaron enjoyed such popularity that it spread E and W, far beyond the confines of the Syriac language area. Its success from Armenia to Abyssinia and from Persia to the British Isles indicates the striking influence of this document. It was translated into many languages, and these versions constitute the material for a modern reconstruction of the lost original. From the East we have several Arabic MSS and one in Persian; from the West, MSS in Latin, the Tuscan and Venetian dialects of medieval Italian, Old High German, Middle High German, medieval Dutch, medieval French, and Middle English. That these versions are in many cases adaptations rather than straight translations makes their evaluation difficult. The reconstruction of the Diatessaron would be of great value to textual criticism. Not only does it constitute the beginning of the Syrian textual tradition for the gospels; it was a factor in the transmission of the Greek text itself, for according to all indications Tatian used a form which was current in Rome about the middle of the second century.

b. *The Old Syriac Version*. Initial evidence for the existence of an early Syriac form of the four gospels emerged with the discovery of the Codex Syrus Curetonianus (Syr-Cur) among the MSS from the Syrian monastery of St. Maria Deipara in the Nitrian desert in Egypt. This is MS Br. Mus. Add. 14451, first published in 1858 (*Remains of a Very Ancient Recension of the Four Gospels* [1858]) and later republished by Burkitt. It con-

tains the four gospels in an unusual order: Matthew, Mark, John, Luke. The major MS of the Old Syriac Version, MS Sinai Syr. 30, which became known as the Codex Syrus Sinaiticus (Syr-Sin), a palimpsest codex, was unearthed fifty years later by Mrs. A. Smith in the monastery of St. Catherine on Mount Sinai. Great effort was required to decipher it (*The Old Syriac Gospels*, ed. A. S. Lewis [1910]; *Syrus Sinaiticus*, ed. A. Hjelt [1930]). Both MSS date from the first part of the fifth century, and both have gaps.

The importance of the MSS was not at first understood, and the version was regarded as a library copy that had no part in the history of the gospel text in Syriac. Systematic research has since opened new vistas for the role of this version. New and rich materials have emerged in the patristic sources. Scrutiny of the entire MS tradition has uncovered evidence previously unknown from the gospel MSS and lectionaries.

The Syriac name of the version, *Evangelion da-Mepharreshe*, "the gospel of the separated," contrasts with the "mixed" Diatessaron (above §2a) and tells us that this version is related to Tatian's Diatessaron; moreover, it exhibits archaic characteristics. The relationship of these two text forms, the Diatessaron and the Old Syr., has been the subject of a long controversy. However, new textual evidence leads to the conclusion that the Old Syr. was developed from the harmonistic pattern of the Diatessaron. In the new evidence this pattern has occasionally been preserved far better than in the Old Syr. MSS. Thus the Old Syr. constitutes a synthesis in which the ancient textual material of the Diatessaron has been adapted to the four-gospel form.

The text of the Old Syr. generally sides with the Western witnesses, although some have seen in it a witness to an Antiochian text type. A further characteristic is the surprising flexibility of the text. We find that Syr-Cur frequently has a more archaic form than Syr-Sin, and vice versa. The differences between these two witnesses have created a puzzle. Some have explained it to mean that Syr-Cur is simply a recension of Syr-Sin; others have supposed the existence of two different translations. Examination shows that the Syr-Cur and Syr-Sin were not mutually dependent, and were not two different translations, but represent independent textual traditions of the same version. Each text has lived a life of its own. These phenomena fit in the total textual picture as filled out by newly discovered sources.

Besides its importance as a textual witness, the Old Syr. offers other interesting features. Words and phrases reflect knowledge of Palestinian topography and local customs. There are also specific terms, idioms, and grammatical forms of Palestinian Aramaic provenance, preserved here, but unknown in classical Syriac. In addition, there are features which show that idiomatic Syriac has been preserved. These linguistic elements are present in this material but not in the later versions.

Although the origin of the Old Syr. is not definitely known, the use of the *Evangelion da-Mepharreshe* as an official gospel text under Aitalaha, bishop of Edessa, indicates that it originated

in the third century. The version had a long history in which the archaic features were exposed to adaptation and revision, a process reflected in the earliest sources. The Old Syr. was subjected to a gradual revision, which complicated its transmission. As the new textual materials demonstrate, this version, because of the charm and power of the original Syriac readings, played an important role in the history of the gospel text. Its hybrid forms continued to circulate for centuries, and it became the basis for a number of other Oriental versions of the gospels: the Old Armenian, Old Ethiopic, and Old Arabic. Of the Old Syr. NT only the gospels have survived, but there are traces of other books. A portion of Acts has survived in a commentary by Moshe bar Kepha, but the Pauline letters appear only in citations.

c. *The Peshitta*. The standard version, the Peshitta (on the name, see §1b above), has come down to us in a number of codices that are quite old. MS Par. Syr. 296 (Luke) was written probably in 463/64; MS Br. Mus. Add. 14459 (Matthew and Mark) and MS Br. Mus. Add. 17117 (Matthew and Mark) are both of the fifth century. MS Br. Mus. Add. 14453, which contains all the gospels, is of the fifth or the sixth century. Acts and the letters of Paul survive in MS Br. Mus. Add. 14476 and Add. 14480, which are of the fifth or sixth century. A critical edition exists only for the gospels (*Tetraevangelium sanctum*, ed. P. E. Pusey and H. C. Gwilliam [1901]), in which the text of the gospels has been supplemented by Acts and the epistles, including books which the Peshitta did not contain (see §2d below). The Peshitta was the result of a redaction of the Old Syr. to make it conform to the vulgar Greek text used in the patriarchate of Antioch. In this process, digressions and additions were removed; omitted material restored; and archaic peculiarities retouched, giving the text a wholly new complexion that conformed more or less to the Greek original. However, a considerable amount of the Old Syr. base remains in the new version. Many idiomatic expressions found in the Old Syr., particularly the conjunctive construction instead of the infinitive and the predilection for nominal sentences, have been modified and adapted to the Greek model, but a sense of balance and of faithfulness to the genius of the idiom guided the process of revision and kept it from servility to the Greek text. In this way much of the idiomatic phraseology and even the paraphrastic renderings have been retained. Many older syntactic constructions were retained, but the later development of Syriac is also reflected, resulting in a smooth, readable style.

New evidence on the circumstances of the origin of the Peshitta has emerged. The view that Rabbula, bishop of Edessa (411-35), is its author (Burkitt) must now be discarded. First, this view is definitely refuted by the discovery of remnants of the text which Rabbula himself employed near the end of his life—a type of the Old Syr. Version. Moreover, the Peshitta was adopted by both the Monophysite and Nestorian branches of Syrian Christianity; it is unlikely that they would have accepted a sacred text revised by a man who had mortally insulted the adherents of the Antiochian

party, as Rabbula had. There are also reasons which compel us to place the origin of the version in an earlier period. The canon of the Peshitta does not include II Peter, II and III John, Jude, and the Apocalypse, and so represents the ancient canon used in the patriarchate of Antioch in the fourth century. Furthermore, some remnants of the Peshitta have emerged in MS Br. Mus. Add. 12150, copied in 411 in Edessa. In view of these facts the last decades of the fourth century appear to be the most probable date for the origin of the Peshitta. Further evidence regarding its origin can come only from the version itself. The textual character of the version is uneven. Sometimes it surprises us with early Western readings (particularly in Acts). There is also a lack of consistency in the use of vocabulary, together with varying mannerisms and techniques of revision. All these phenomena suggest that several hands must have been at work, and point to the bilingual centers of Greco-Syrian translation studies as the most likely places for its origin. This agrees with the tradition of the Syrians themselves, according to which the version was produced anonymously.

The critical edition by Gwilliam rests on forty-two MSS of different periods, the oldest of these dating from the fifth century. The results obtained through use of his critical apparatus confront us with the astonishing fact that his edition does not materially differ from that of the first printed edition (*Liber sacrosancti Evangelii*, ed. J. A. Widmanstadt [1555]). This is because the number of variants in the Peshitta is very small. That forty-two MSS agree so closely demonstrates the constancy of its text. The text was obviously copied with great circumspection and carefully handed down from generation to generation.

**d. The Philoxenian Version.** A colophon provides us with the following information regarding the origin of this version: "In the town of Mabbug in the year 819 of Alexander of Macedonia, in the days of holy Mar Philoxenus, confessor, bishop of this town." According to this evidence the version was prepared in 507/8 and sponsored by Philoxenus (or Aksenaya), bishop of Mabbug (Hierapolis), in Euphratesia. According to other sources, it included the OT or parts of it (see §1c above). The text in the colophon does not give the name of the man who actually prepared the version. Moshe of Aggel, who was almost a contemporary of Philoxenus, identifies him as the chorepiscopus Polycarp. Two centuries ago White published the *Sacrorum evangeliorum versio syriace Philoxeniana* I-II (Oxonii, 1778), and thereby started a debate regarding the provenance of this text. Did Polycarp prepare the "Philoxeniana," which was later taken over by Thomas of Harkel (see §2e below) and furnished with a text-critical apparatus, or does the version edited by White really belong to Thomas? If the latter is true, the version of Philoxenus is lost. The problem created by the ambiguity of the colophon has haunted scholars for two centuries. Until 1953 this version existed only in name, but remnants have now finally come into our possession. MS Br. Mus. Add. 14534, a codex of the first quarter of the sixth century, has preserved the commentary

of Philoxenus, who used the recently prepared version as a basis for his exegetical work. Now for the first time we are allowed to see the nature of this version. The remnants reveal that it was not a new translation but a revision. Polycarp's work was intended to bring the text of the Peshitta into conformity with the Greek original. For this purpose he tried to remove all traces of its past, and to expunge from the text any elements not legitimate when measured by Greek textual standards. Not only were variant readings removed, but he extended his revision to particles as well. Even minor matters which had helped to improve the fluency of the Peshitta were changed. His determination to achieve conformity can be seen in those places where in general the Peshitta already agreed with the Greek, and yet efforts were made to attain still greater conformity. So far no MS has been discovered of the gospels, Acts, or those epistles contained in the Peshitta.

With this revision the minor Catholic epistles and the Apocalypse were included in a Syriac Bible for the first time. It has been assumed that those parts of the NT which did not exist in the ancient canon but were added later, namely II Peter, II and III John, and Jude, were first translated for this version, and the same assumption has been made in regard to the Apocalypse. Printed editions of the Peshitta frequently include these books in order to fill out the gap.

**e. The Harclean Version.** This is parallel to the production of the Syro-Hexaplar (see §1e above), since it is a scholarly version. It is well attested by MS evidence. MS Vat. Syr. 268, which once was regarded as the autograph, but which more probably belongs to the seventh century, is the earliest witness. It includes also a text-critical apparatus. Another branch in the tradition has left the apparatus out; its oldest representative appears in MS Laur. I, 40 of the year 757. The MS evidence includes a number of ancient MSS belonging to the seventh and eighth centuries. The only edition available is the first (*Sacrorum evangeliorum versio syriace Philoxeniana*, ed. J. White [1778]; *Actum apostolorum et epistolarum* [1799-1803]). The section on Hebrews was edited later (*The Harclean Version of the Epistle to the Hebrews*, Chap. XI, 28-XIII, 25, ed. R. L. Bensly [1889]). The Apocalypse was discovered recently and published in a facsimile edition (see bibliog.). The discoveries of remnants of the Philoxeniana settle a very old problem, so that the way finally is open for understanding what the colophons in the MS tell about the work of Thomas. Since much of the preparatory work had been done by Polycarp, his version was taken as a base for the comparison with two (some MSS read "three") Greek MSS in preparing a new text. Many features which Polycarp introduced were approved by Thomas, who carried them out with greater consistency and precision. It is strange how little respect this revision shows for Syriac idiom and linguistic taste. It follows the Greek to such an extent that clarity is sacrificed. This version is equipped with a text-critical apparatus using a system of obelus, asterisk, and metobelus in the text; the margin is reserved for variant readings and notes. In Acts

the version is the most important witness to the Western form of the text, second in importance only to that of Codex Bezae itself. For this scholarship we are indebted to the labors of Thomas (Tuma) of Harkel (Heraclea) in Mesopotamia. When masses of refugees were set on the move by the Persian armies, Thomas found safety at the Enaton, a Syrian monastic community near Alexandria. Here in exile with his co-workers he accomplished his project, completing it in the year 616, as we know from the colophon which Thomas added to the text. Like the Syro-Hexaplar (see §1e above), this scholarly version found its way into the liturgy. For this privilege it had to pay a price in alterations and changes that produced a strange, Hellenized text. MS Chester Beatty Syr. 3 includes a colophon, according to which a need was felt to restore the text to its original purity.

*f. The Palestinian Syriac Version.* This has survived only in lectionaries. The oldest of these is MS Vat. Syr. 29 of the year 1029, which has preserved the texts of the gospels (*The Palestinian Syriac Lectionary of the Gospels*, ed. A. S. Lewis, M. D. Gibson [1899]). Lessons from Acts and the epistles were found in a MS in the monastery of St. Catherine of Mount Sinai (*A Palestinian Syriac Lectionary*) and in a palimpsest (*Codex Climaci rescriptus*, ed. A. S. Lewis [1901]). The rest exists only in fragments. Its dialect is Western Aramaic, as is that of the Palestinian Syr. Version of the OT. Of the several Syriac NT versions, this one is closest to the standard Byzantine text. Yet it does not conform completely with this text, but has affinities with the text of Origen and the Old Syr. Version. Regarding its time and place of origin, see §1d above.

\***TAANACH.** 1. **Nonbiblical sources.** Both Thutmose III in 1468 B.C. and Shishak I in 918 B.C. list Taanach as a city captured by their forces. Knudtzon's restoration of "Taanach" (ta-ah-[nu-k]a) in the early fourteenth-century Amarna Letter (248:14) is unlikely on archaeological and paleographic grounds. Eusebius' *Onomasticon* (Klostermann ed., 1914, 100:7-10) indicates that in the third century A.D. θαναάχ (Thaanach) was a "very large village."

2. **Biblical references.** Taanach achieved eminence first in biblical tradition as the site of the battle between Israel, mustered by Deborah and Barak, and the Canaanites, led by Sisera (Judg. 5:19). Though its king was reported taken by Joshua (Josh. 12:21), and the city was assigned to Issachar and Asher, Taanach was later given to Manasseh (Josh. 17:11; I Chr. 7:29), who, however, was not able to occupy it because the Canaanites were too powerful (Judg. 1:27). In time, probably not before the tenth century B.C., "when Israel grew strong, they put the Canaanites to forced labor" (Judg. 1:28) and occupied (ruled) the site. In the same century Taanach seems to have become a Levitical city (Josh. 21:25) as well as the headquarters of Baana, administrator of Solomon's Fifth District, which included all of the Jezreel Plain to just beyond the Jordan River (I Kings 4:12).

3. **First excavation.** The first excavator of Taanach, 1902-4, was Ernst Sellin of Vienna. In three campaigns he extensively trenched the tell. He found no city walls and concluded that the site was defended by a series of forts of which a modest structure with subterranean rooms in the N center of the tell was thought to be the earliest. Albright later interpreted the structure as an Early Bronze funerary chamber similar in construction to Third-Dynasty Egyptian tombs.

In the debris above the upper level of this building Sellin discovered an archive of twelve Akkadian cuneiform tablets. At the S end of a long central trench he uncovered fragments of a cult stand. When restored it stood three feet high, showing four tiers of modeled lions on each side of a windowed façade capped by a basin. On the upper-left side panel, a youth strangles a serpent, and on

the front of the lowest is a tree of life with ibexes on either side. Both tablets and cult stand are now in museums in Istanbul. Sellin identified four major strata of occupation, each with two phases: (1) fifteenth-fourteenth centuries B.C., including the cuneiform archive, its related structure, and the W Building; (2) thirteenth-ninth centuries B.C.; (3) eighth-sixth centuries B.C., when the Solomonic NE Building founded in period 2 and the "incense altar" were destroyed; (4) eleventh-twelfth centuries A.D. marked by an Arab fortress palace.

The Akkadian tablets (including the new TT 950) are either letters to the local king or administrative name lists. Two of the four readable letters (four more are in fragments) are from Amanhatpa, an Egyptian administrator posted in Gaza but probably writing from Megiddo. He requests chariots and men for his garrison, and that prisoners of war be sent to him, as well as tribute. Ahiyami orders a bow, bowstrings, chariot wheels, and a copper javelin. Also, wishing to be married, he seeks a suitable brother-in-law. A third writer is Ehli-Tešub, who promises to repay fifty shekels of silver, asks for wood and myrrh, and advises that a servant girl be sold or married. Though written in Akkadian, the syntax and morphology of these letters have many Semitic features. Five tablets, TT 950 included, are name lists. Letters and lists contain some ninety names. About 60 per cent are Northwest Semitic, and 20 per cent each Indo-Aryan and Hurrian-Anatolian.

4. **Second excavation.** The second expedition was conducted between 1963 and 1968. The results correct and elaborate Sellin's excavation at many points. While the new excavations were limited largely to the SW quadrant of the tell, the general impression from Sellin was confirmed, that in no period was the city occupied wall to wall with buildings as at other important sites. However, the discovery of massive defenses on both the S and W shows, not only that the site was defended by city walls in all major periods, but also that the earliest city dates to EB II-III (ca. 2700-2400 B.C.), both contra Sellin. An EB occupation had already been suggested by Albright on the basis of published pottery.

After a long hiatus, the Middle Bronze Age began with camps (ca. 1700 B.C.) followed by somewhat extensive but poorly constructed domestic and defense architecture. The W Building excavated by Sellin has been redated to ca. 1600 B.C.; it was a patrician dwelling that formed part of a substantial rebuilding of the MB IIC city. Associated with MB IIC was a casemate wall, indicating that this style of city wall construction predated the Israelite monarchy. Selective destruction marked the end of MB IIC. Taanach continues a substantial city into LB I, suffering a major catastrophe at the hands of Thutmose III ca. 1468 B.C. In the modest occupation that followed, an Akkadian cuneiform tablet (TT 950) name list appeared. A date ca. 1450 B.C. is satisfactory for the new tablet as well as the entire archive. Almost 90 per cent of sixty-four MB IIC subfloor and intramural cist burials were children entombed in store jars.

Though most of the limited quantity of Late Helladic pottery dates to the Mycenaean IIIA2 period (fourteenth century) there is no significant occupation between the mid-fifteenth century and the late thirteenth. Substantial houses which date to the twelfth century were completely destroyed ca. 1125 B.C. Where Iron Age defenses were detected on the W, they dated also to the twelfth century. In the N center of the SW quadrant a Canaanite cuneiform tablet (TT 433) turned up in the early twelfth-century destruction of a large building. The two-line inscription registers the receipt of a shipment of grain. A slight eleventh-century occupation is followed by a greater tenth-century presence, destroyed by Shishak ca. 918 B.C. To this period belongs a structure related to the local cult. The heavy ash covering the floors contained 9 iron knife blades, 140 pig astragali, some 80 restorable vessels, 58 loom weights, many querns, rubbing stones, pestles, 3 small stelae, and a figurine mold. In an associated cistern an elaborate cult stand (Fig. T1) emerged not far from where

David Harris

1. Cult stand from Taanach

Sellin found the "incense altar." Standing less than two feet high, the cult stand is built up of four superimposed hollow clay squares topped by a ridged basin. The lion and human faces protruding above animal legs on the corners of the three panels are each accompanied by winged leonine bodies in relief along the side panels. These animals represent demons protecting the deity, symbolized by the stylized winged sun disc between volutes and above an equine in the top panel.

Evidence for later occupation is limited to a tower dating to the ninth century B.C. and some fifth-century B.C. Persian pits plus two rooms. In Late Abassid times (tenth-eleventh centuries A.D.), an elaborate palace was constructed at the highest point of the tell. A cemetery on the S slope over the EB defenses seems to date from the early seventeenth century A.D.

\***TARGUMS.** It is almost universally assumed that Targs., i.e., Aramaic translations of the OT, existed by NT times, and that the Hebrew texts read in the synagogues on the sabbath were orally translated into Aramaic, the vernacular of at least a good part of Palestine. And yet, apart from fragments of the Targ. of Job (11QtgJob; 4QtgJob) and of a single chapter (16) of Leviticus (4QtgLev) from Qumran, the Targ. texts which we now possess were transcribed well after the NT period. The earliest texts may be dated to the seventh century, with the majority much later, even as late as the sixteenth century. As a consequence, scholars have been divided on the advisability of using the Targs. as a witness to early Jewish belief and as sources for an understanding of NT writings. The question at issue was whether the Targs. in general, or any one of them in particular, were basically pre-Christian.

Kahle's publication of portions of the Palestinian Targs. on the Pentateuch (*Masoreten des Westens* II, 1930) aroused new interest, and subsequent research in Jewish MIDRASH led some scholars to regard these Targs. as basically very old, even pre-Christian, even though they contain some later elements. A further impetus was given to Targ. study in 1956 when Díez Macho identified an al-

most complete text of the Palestinian Targ. on the Pentateuch in Codex Neofiti I of the Vatican Library. After some years of preliminary studies, Kahle could write in his second edition of *The Cairo Geniza* (1959, p. 208): "In the Palestinian Targum of the Pentateuch we have in the main material coming down from pre-Christian times which must be studied by everyone who wishes to understand the state of Judaism at the time of the birth of Christianity. And we possess this material in a language of which we can say that it is very similar to that spoken by the earliest Christians. It is material the importance of which can scarcely be exaggerated." This twofold assumption concerning the early date of both the tradition and the language of the Palestinian Targs. of the Pentateuch played a central role in Targ. research from 1963 onward. Both assumptions, however, were called into question toward the end of the decade.

1. A decade of Targ. study. The extent of the research in targumic studies since the publication of IDB in 1962 has been phenomenal. Practically every aspect of targumic study has been treated.

a. *Edition of texts.* (See VERSIONS, ANCIENT §1.) The first volume of the *editio princeps* of Codex Neofiti I appeared in 1968, others following later. The lengthy introductions prefixed to the various volumes treat such questions as the nature of the Targ., its language, its relevance for NT studies. The date of transcription, expressed in the colophon by a Hebrew word intended to be deciphered numerically, is now generally accepted to have been A.D. 1504.

The *editio princeps* of Neofiti is being published in Madrid-Barcelona. Another project currently in progress in Spain is the Madrid Polyglot—*Biblia Polyglotta Matritensia*—which will have new editions of all the Targs., including those on the Pentateuch. The edition of Onkelos will be based on Babylonian MSS. Until recently the Fragment Targ. was known to have been preserved in four MSS: Ebr. Vat. 440, Nuremberg 1, Leipzig 1, and Paris, Bibliothèque Nationale 110 published by Ginsburger in 1899. Two further MSS of the work are now known: 264 of the Sassoon Collection (Lechworth, England) and No. 6684 of the Microfilm Institute of the National Library, Jerusalem (MS belonging to the Gunzburg Collection, Public Li-

brary, Moscow). A study of the nature and character of the Targ. of the Samaritan Pentateuch has been made, and a critical edition is being prepared. New editions of all the Targs. (with the exception of the Palestinian Targ. on the Pentateuch) have been made by Sperber and of some of the Targs. of the Hagiographa by other scholars. There have also been reprints of earlier editions of the Targums: of Onkelos by Berliner, of the Fragment Targ. and Pseudo-Jonathan by Ginsburger, of the Prophets and Hagiographa by De Lagarde. Walton's London Polyglot, containing the Targs. known in the seventeenth century, has also been reprinted. Earlier translations of the Targs. on the Pentateuch and the Five Megilloth have also been reprinted. A new dimension was added by the publication of the extensive fragments of the Qumran Targ. of Job (11QtgJob) in 1971. It may be the same text as that known to Gamaliel I (ca. A.D. 25-50) and used by his grandson Gamaliel II (A.D. 90-110) according to rabbinic sources (Tosef. Shab. XIII.2; T.B. Shab. 115a). It is, by and large, a literal rendering of the Hebrew. In this respect and in the character of its Aramaic it differs from the "rabbinic" Targ. of Job and also from the Palestinian Targ. on the Pentateuch. It is uncertain whether the Qumran fragments of Targ. Lev. ch. 16 (vss. 12-15, 18-21) are from an entire Targ. of this book or merely from a separate ritual text for the Day of Atonement. Though brief, the fragments represent a literal rendering and are seen by some to have an affinity with the Targ. of Onkelos. Why the Qumran community, apparently quite conversant with Hebrew, should need an Aramaic rendering at all has received no satisfactory answer.

b. *Interrelationship of Targs.* Even where they are not verbally identical, there is a close relationship between Neofiti, the Fragment Targ., and Pseudo-Jonathan. It was this fact that led earlier writers to speak of the Palestinian Targ. (rather than Palestinian Targs.) on the Pentateuch. The differences have since been emphasized and exception taken to the designation "Palestinian Targ." As a result, modern writers tend to use the plural, "Targums," rather than the singular. No small amount of attention has been devoted to these similarities and differences, but no generally accepted solution has been put forward as yet. In part, as we shall see, they may be due to a rather fluid tradition variously formulated and preserved. The origin of the Fragment Targ. is still debated. It probably arose as excerpts from a Palestinian Targ. which were intended as a supplement to the more literal rendering of Onkelos or as variants to some other text of the Palestinian Targ. Were the lengthier glosses of Neofiti put together, we would have a further Fragmentary Targ. More recent study has revealed that the Paris MS of the Fragment Targ. represents a different recension from that of the other MSS. Pseudo-Jonathan differs from the other texts of the Palestinian Targ., both in the extent of its extra midrash and in its language (which usually approximates to that of Onkelos). Its exact relation to the latter text remains to be clarified, as do its origins. Although Onkelos became the official text of Babylonian Judaism, it is now generally recognized that it

originated in Palestine. Although generally quite literal, it contains an extensive amount of HAG-GADAH. It can be presumed to have contained still more before being edited in Babylonia.

The Targ. of Chronicles seems to be related to the Palestinian Targs. both in vocabulary and exegetical method. It also appears to be related to Targ. Jonathan on the Prophets. The author may also have used the Palestinian Targ. of the Prophets (only small fragments of which survive) and a Targ. on the Psalms different from the texts now known to us.

*c. Targumic Aramaic.* The problem of the ARAMAIC of the Targs. is part of the larger question of the Aramaic written and spoken in Palestine from the first century B.C. to the sixth century A.D. For the earlier period we have ample evidence in the texts of Qumran, Murabba'at, the letters of BAR KOCHBA, and ossuary inscriptions (see MANUSCRIPTS FROM THE JUDEAN DESERT[S]). The Palestinian Targs. on the Pentateuch (and the greater part of those on the Hagiographa) are written in a form of Aramaic almost identical with that of the Aramaic sections of the Palestinian TALMUD and Midrashim, a dialect generally designated "Galilean." For this reason some authors refer to them as Galilean Targs. The so-called "Babylonian" Targs. are written not in Jewish Babylonian Aramaic but in a language that either is a form of literary Aramaic or is another dialect of Palestinian Aramaic. The Aramaic of all these Targs. differs from that of Qumran and the other early texts just noted. Some scholars wish to class the language of the Palestinian Targs. as "Late Aramaic," i.e., post-A.D. 200. However, a number of Targ. scholars defend an early date for the Aramaic of the Palestinian Targ., regarding the Aramaic of Qumran as a literary rather than a spoken language.

It is recognized that progress in this debate cannot really be made until we have grammars of each of the Palestinian and other Targs. Work is already under way in this field, particularly with regard to the language of Neofiti. Grammars of Neofiti Exodus and Deuteronomy have already been made at the University of Barcelona. The tendency of the Barcelona school is to regard the Aramaic of Neofiti as that of first-century Palestine. Other scholars have reached quite different conclusions, dating it to the third century A.D. and believing that the text of Neofiti represents a rendering from a Greek rather than a Hebrew original. Foster believes that while it may be granted that there was an oral tradition and interpretation of the Scriptures in the synagogues before the Christian era, it was not in the form of Aramaic now found in the Palestinian Targs. The Aramaic of the original paraphrase would have been constantly updated to the conditions of later times, and our present texts would be from a Greek form of the tradition.

On the other hand, after a detailed study of the Aramaic of the Former Prophets (in Targ. Jonathan), A. Tal has reached the conclusion that the language of the Targ. cannot be dated later than A.D. 70. After a study of the language of the Qumran Targ. of Job, S. A. Kaufman concluded that the final forms of Onkelos and Jonathan on

the Prophets date from between A.D. 70 and 135, whereas the Palestinian Targs. must be post-A.D. 135.

*d. Targ. and midrash.* Midrash is the manner in which the Jewish mind approaches Scripture as the word of God which addresses each successive generation. Both the written word and personal experience are involved in it. Midrash seeks to make the message of Scripture relevant, understandable, and acceptable to later generations. It is generally accepted that midrash is already present in the later books of the Hebrew canon and in pre-Christian Jewish books outside this canon, e.g., Wisdom of Solomon. The entire question of the development of pre-Christian Jewish tradition has recently been studied and certain laws governing it isolated. See INTERPRETATION, HISTORY OF[S] §D; MIDRASH[S].

That the midrashic process is present in the Targs., and indeed central to most of them, is clear. A problem that arises in this connection is that much of the midrash found in the Targs. is also attested in other Jewish sources, particularly in rabbinic texts. This gives rise to the question of priority: Do the Targs. depend on the other sources, or vice versa? Or are both tributaries to a common source? The Targs. contain items of HALACHAH which run counter to official decisions found in the MISHNA, and some scholars accept as an axiom that what is anti-Mishnaic is pre-Mishnaic. This is contested by other scholars, who maintain that there was no objection to the presence of antihalachic teaching in private, nonofficial Targs. A detailed study of the interpretation of Scripture in Neofiti and Pseudo-Jonathan has led one specialist to conclude that, while these Targs. contain later elements, their origins go back to the early days of the second temple, and they contain material which served as a source for the Mishna and the halachic Midrashim. The differences between the schools of Hillel and Shammai, in fact, are seen to derive from these two Targs., the former in general following Pseudo-Jonathan, the latter, the Palestinian Targ. (more specifically Neofiti). The central contention of this view, we may note, is similar to that of René Bloch (an earlier specialist in midrash) who believed that the Palestinian Targ. was the articulation joint between the Bible and later midrash.

*e. Targ. and NT.* Scholars are turning increasingly to the Targs. in their efforts to understand the NT writings and to explain the development and formulation of early Christian tradition. In fact, this presumed influence explains much of the interest in the Targs. themselves. Monographs and special essays have been devoted to certain targumic themes related to the NT: the TORAH, the *Mēmra* (*Logos*) of the Lord, the Holy Spirit, the Shekinah (Divine Presence with Israel), the glory of the Lord, the Palestinian manna tradition, the feasts of Passover and Pentecost, the Lamb of God, traditions concerning Abraham, Isaac, Abel, Moses, Jacob's Ladder, Jacob's Well, the well following Israel in the wilderness, etc. Targumic expressions (such as "Father in heaven," merit, good works) have also been studied. The gospels, Acts, and the Pauline and Johannine writings have been

studied in relation to targumic tradition, in particular to the Palestinian Targ. on the Pentateuch. Agreements and divergences in the formulation of basically the same paraphrase have been regarded as constituting a targumic "synoptic problem," which may have a valid contribution to make toward the understanding, and possibly the solution, of its NT counterpart. One reason for the importance attached to the Targs. in NT studies is that they represent liturgical Judaism, and as such stood at the very center of everyday Jewish life. It was probably through them that the interpreted message of the Law and the Prophets was transmitted to the mass of the Jewish people.

*f. Dating the Targs.* No general claim for an early date for the Targs. on the Hagiographa (not used in the liturgy) has been made. Interest has centered rather on the date to be assigned to the Palestinian Targs. on the Pentateuch, particularly on the date of origin of Neofiti. Although Pseudo-Jonathan contains some late references, e.g., mention of the wife and daughter of Mohammed and of the six orders of the Mishna (Gen. 21:21; 26:9), sections of it are regarded as very old and pre-Christian. We have already noted some individual views on the date of the Palestinian Targ. The chief arguments are as follows: (1) the principles underlying the paraphrase are already attested in the OT and pre-Christian Jewish writings; (2) the paraphrase is related to early Jewish non-halachic midrash; (3) some of its halachah are anti-Mishnaic in character (anti-Mishnaic being accepted as pre-Mishnaic); (4) in rabbinic texts from the second century A.D. onward there are Aramaic renderings which coincide with those found in the Palestinian Targs.; (5) some geographical names do not require a date later than the second century A.D.; (6) Greek loanwords are found in the Aramaic, indicating a Hellenistic environment; (7) the Palestinian Targs. have a manifold relationship to the NT.

Apart from these arguments for an early date for the main body of targumic tradition, individual sections of the Targs. can be dated with more or less probability by comparison with Jewish traditions which are themselves datable. And apart from these arguments, the view has been put forward that the main body of Jewish midrashic and interpretative tradition had been formed by A.D. 132. As a result, the following rule of thumb for the date of the Palestinian Targs. has been proposed: Unless there is specific proof to the contrary, the haggadah of the Palestinian Targs. is likely to be tannaitic and to antedate the outbreak of the Second Jewish Revolt in A.D. 132.

*g. Early date of Targs. queried.* The early date assigned to the Palestinian Targs. on the Pentateuch and their relevance for NT studies have not gone unchallenged, especially by students of Qumran Aramaic literature. The chief arguments are the following:

i. *Language.* The Galilean Aramaic of the Palestinian Targs. is not earlier than A.D. 200. The presence of Greek loanwords argues for a later rather than an early date, since such loanwords are absent from Qumran Aramaic but present in later Syriac. If presumed late, the use of targumic

Aramaic would be illegitimate in the consideration of the Aramaic substratum of the gospels.

ii. *Targs. from Qumran.* Both in language and style of translation the pre-Christian Targs. from Qumran differ from those under discussion. If the Qumran Targs. are of the type current in early times, then the other must be presumed late. Furthermore, the term *Mēmra* (written מֵמְרָא, always with a suffix) occurs twice in 11QgJob (col. 28, 9: Job 36:2; col. 33, 8: Job 39:27); in the second instance (and possibly also in the first) in the sense of "word," or "command," not as a surrogate for God, a "buffer" word to avoid mention of the divine name, as in the other Targs.

iii. *Circular reasoning.* Scholars using the Targs. in NT studies have been accused of circular reasoning; i.e., they tend to assign an early date to targumic texts because of the relation they bear to the NT, and then to use these same texts for their studies because they are presumed to be pre-Christian.

iv. *Criteria for dating insufficient.* The proposed criteria (see §f above) for establishing an early date for the Palestinian Targ. have been regarded as insufficient and unconvincing. A caveat has been entered against "parallelomania"; the presence of individual parallels or traditions in the NT and Targs. does not prove that the entire Targ. or even the greater part of it is pre-Christian.

v. *Other objections.* As already noted, strong exception has been taken to the persistent habit of referring to the Palestinian Targ. on the Pentateuch, whereas in reality we have more than one such Targ.: Neofiti, Fragment Targ., etc. The emphasis on the Palestinian Targs. on the Pentateuch to the neglect, or even disparagement, of the other Targs. has also received criticism.

**2. Observations on the nature and utility of Targs.** In a reassessment of the situation it is necessary to examine the value of the objections we have listed above and also to bear in mind the nature of targumic tradition and the differences between targumic studies and other branches of science, such as Qumran studies.

a. *Aramaic of Targs.* That Qumran Aramaic was a literary language in Palestine in NT times and for some time previously is beyond question. It is also to be granted that the Qumran texts contain Aramaic of a transitional type, standing between the Aramaic of Daniel and that of the Targs. and Christian Palestinian Aramaic. What is in no way certain is that Qumran Aramaic represents, or was very similar to, the language then currently spoken in Palestine or in part of it. More than one dialect may have been spoken, and thus there is no convincing reason why we should come down to the third century of our era for the emergence of Galilean Aramaic. Typical forms of Eastern Jewish Aramaic are attested in a document from Dura-Europos dated A.D. 200, and Galilean Aramaic could have emerged just as early, if not earlier. We must also reckon with the possibility, indeed the probability, of an undercurrent of words and grammatical forms from earlier times which are attested only in later writings. The "Late Hebrew" of the Mishna contains a number of words without biblical equivalents which are found in

Ugaritic texts (see HEBREW LANGUAGE[S] §2b). The common use of ית as the sign of the accusative has its equivalent in אית = 'iyat of Old Aramaic. The occurrence of the form ארי, equivalent to the Hebrew כרי, was once restricted to the "Babylonian" Targs.; it has now turned up in Qumran Aramaic. The form corresponding to it in the Palestinian Targs. is ארום, formerly unattested outside them. It now occurs in 11QtgJob as ארו. Forms from the verb הוה in the Murabba'at documents correspond to those found in Onkelos and later Galilean inscriptions, e.g., יהי, להוה. For the former word, Neofiti has the classical orthography יהיה, evidence of its conservative nature. Careful and painstaking research will thus be required before we can speak authoritatively concerning the Aramaic of first-century Palestine. See ARAMAIC; ARAMAIC[S].

To show that Galilean Aramaic existed, or may have existed, in first-century Palestine, is not to prove that the Palestinian Targs. or other texts in Galilean Aramaic are early, since this dialect was also used in later centuries. Neither would proof of the later emergence of the Galilean dialect prove of itself a later origin for the tradition enshrined in the Palestinian Targs., since both the tradition and phraseology could easily have been recast in a later form of the language. Certain scholars believe that this is what really happened.

The Aramaic substratum of the gospels presents a number of problems, as we must reckon with the possibility of both a literary and popular Aramaic background. Written texts would probably have been in literary Aramaic, while oral tradition might have been handed on in the spoken language.

**b. Special importance of Palestinian Targs.** The special interest shown in the Palestinian Targ. on the Pentateuch is due to the special position we know that the Pentateuch had in Jewish life and liturgy, to the paraphrastic nature of these Targs., and to their presumed early date. Onkelos and Jonathan on the Prophets may be important from the philological point of view; but, being more literal than the Palestinian Targs. they may have less to offer on Jewish concepts of the NT period.

**c. Formation of targumic tradition.** Jewish tradition traces the origin of Targs. back to Ezra (T.B. Meg. 3a; J.T. Meg. IV.1; T.B. Ned. 37b; cf. Neh. 8:1-8). It seems reasonably certain that the Torah and the Prophets, read in Hebrew in the synagogues, were translated into Aramaic before the Christian era. The nature of this translation is a question that immediately arises. Was it literal or paraphrastic? To which tradition of interpretation did it belong? Since the synagogue stood in the mainstream of Jewish life, and by NT times seems in the main to have come within the ambit of Pharisaic Judaism, the translation can be presumed to have belonged to this tradition.

A central function of the synagogue service was to teach the Torah of Moses, a concern going back at least to the days of Ezra (Ezra 7:25-26; Neh. 8:1-8; Acts 15:21; Jos. Apion II.18). But explanation of the Torah as God's word and Israel's guide called for an entire interpretative tradition. Apparent contradictions had to be explained, or explained away, through midrash; anthropomorphisms

and expressions offensive to the religious sensibilities of a later generation had to be avoided (see EMINATIONS OF THE SCRIBES[S]); the text had to be made relevant to later generations (see HERMENEUTICS[S] §§3-5). It is extremely likely that the Targs. would draw heavily on such traditions of interpretation.

Rather than postulate the existence of a fixed primitive Palestinian Targ., it seems better to regard the early synagogue Aramaic renderings as expressions of a relatively fixed tradition of interpretation. What evidence we have indicates that the vernacular rendering was given orally. A fixed text is less easily understandable in such a situation. Dependence on a relatively fixed tradition would ensure that the different oral renderings would be basically the same. While differing among themselves, such texts as Neofiti, the Fragment Targ. and sections of Pseudo-Jonathan have basically the same paraphrase, which seems to argue for the existence of a common tradition which was not fixed verbally. An illustration can be seen in the way the Hebrew word מאד of Deut. 6:5 and II Kings 23:25 is understood in the Targs. and Peshitta. All of them understand the word—rendered as δυναμις, ισχυς, in the LXX; RSV, "might"; JB, NEB, "strength"—as "riches" or "abundance," but use different terms to express it: "wealth" (ממון) in Neofiti, Fragment Targ. and Pseudo-Jonathan; "property" (נכסים) in Onkelos and Jonathan; "possessions" (qny) in the Peshitta.

It may well be that interpretive tradition was expressed in Greek as well as in Aramaic in third- or fourth-century Palestine. Jerome (*Quaestiones hebraicae in Genesin* 25:3) gives us a current Jewish rendering of Gen. 25:3 which coincides with that of the Palestinian Targ. Since his paraphrase contains a Greek word, Jerome may have come to know it in Greek.

**d. Date of Palestinian Targ.** If we grant the existence of an early Aramaic paraphrase, can we prove or presume that it has basically been preserved in Neofiti, the Fragment Targ., or Pseudo-Jonathan? The arguments in favor of an early and basically pre-Christian date for the tradition found in these texts have not been invalidated by the objections advanced against them. It can scarcely be an accident that, in rabbinic texts from the third century onward, we have Aramaic renderings of texts of the Pentateuch coinciding with those of the Palestinian Targ. The manifold relationship of the Palestinian Targ. with the NT is still a valid argument for the antiquity of the Targumic tradition. The reasoning at this point may be regarded as convergence of evidence rather than a circular argument. See §1giii above.

Arguments have been advanced in favor of Neofiti as the best representative of the early Palestinian targumic tradition. It is too early to be confident in this assertion.

**e. Targ. and NT.** The value of the Targs. at this point, and in particular of the Palestinian Targ. on the Pentateuch, lies not so much in individual parallels as in the likelihood that we have a body of literature which was central to the life of the Jewish people in NT times, a literature which con-

tains their religious concepts, and which illustrates the manner in which they expressed their traditions. As such it can help us understand the original expression, the development, and final formulation of the NT message. This is not to deny the importance of the other texts for understanding aspects of Jewish life and thought in NT times, nor to suggest that the NT writers knew the OT only through the Targs. We have evidence that both Jesus and the early Christian community went beyond traditional interpretations to the text of the OT itself, interpreting it in the light of new events. This reinterpretation is occasionally referred to as Christian midrash. Thus future research must isolate the differences as well as the relationships between Targs. and the NT.

**3. Conclusion.** Over the centuries, scholars have been attracted to the Targs. because of the importance these were believed to have for a better understanding of the NT. Research has now passed beyond this stage, and Targ. study has become a science in its own right. A number of problems still remain, but the renewed interest and the work currently in progress augur well for the future.

M. McNAMARA

#### TEACHER OF RIGHTEOUSNESS [מורה הצדק]

A phrase used to describe the dominant and guiding personality in the QUMRAN community, the only individual figure who was emphasized. He shaped the history and theology of the community, and his preaching remained normative even for the time after his death.

1. The title "Teacher of Righteousness." The title stems from Joel 2:23 or Hos. 10:12, where, however, מורה and יורה mean, respectively, "rain" ("the early rain for your vindication") and "to

rain" ("and rain salvation"). The teacher's adversary is given the opposite title, "preacher of lies" (מְשִׁיף הַכֹּזֵב), and here too the use of water as an image for teaching is apparent (מְשִׁיף is from the root נָשַׁף, "to cause to sprinkle"); cf. CD 1.14-15, the preacher of lies "sheds upon Israel the water of lies." This passage shows, moreover, that falsehood characterizes the content of the teaching. Therefore, the genitive in the title "Teacher of Righteousness" is also to be taken as objective, referring to the content of the teaching. The alternative, frequently adopted, would be to regard it as qualitative, characterizing the person of the teacher (e.g., "Right-Teacher," as in DEAD SEA SCROLLS §5).

**2. Date.** The texts, which contain few biographical notes about the Teacher of Righteousness, presume he is sufficiently well known to all. Even his death is mentioned only in passing (CD 19.35-20.1). Therefore any attempt to identify him with a person otherwise known or to find him in other than the Qumran texts is doomed to failure. Similarly, attempts to assign the utterances about the teacher to several different persons or to see behind his title an office have failed. A precise placing of the teacher in history is possible, however, with reference to one of his direct opponents. The texts name two such opponents, both of them with cover names: the "preacher of lies" (מְשִׁיף הַכֹּזֵב) and the "priest of wickedness" (הַכֹּהֵן הַרְשָׁע). The latter is evidently the ruling high priest in Jerusalem, since he is also simply called "the priest" (his epithet may be a deliberate distortion of his official title), and since he exercised political power over Israel (1QpHab 8.9-10). Of this priest of wickedness, who personally took action against the teacher (an especially grievous instance occurred on the Day of Atonement, which was celebrated by the community according to its own calendar; 1QpHab 11.4 ff.), it is frequently related that God punished him by letting him fall into the hands of Gentiles who frightfully tortured and killed him (cf. esp. 1QpHab 8.13-9.2; 9.9-12; 4QpPs37 4.8-10). This can only have been Jonathan, who became high priest in 152 B.C. In 143 he was taken prisoner by the Syrians and, after an extended imprisonment, executed. Thus, Jonathan must have been the teacher's opponent between 152 and 143. See also DEAD SEA SCROLLS[S] §5.

**3. The teacher as founder of the community.** Was the teacher the founder of an organized community, or was he simply the first to give to an already existing organization the imprint that was decisive for its later self-understanding? The summary outlines of the history of the Qumran community (particularly CD 1.3-11: the numbers given are symbolic; cf. the allegorical portrayal in IQH 8.4 ff.) show that the divine "planting" had a "root" before the teacher appeared. But without the teacher the pious ones were like "blind men" and "people only feeling their way along." It was the teacher who first led them "on the way of the divine heart." Of crucial importance is 4QpPs37 3.14-16, where the commentary on Ps. 37:23 declares, "The meaning refers to the priest, the Teacher of Righteousness [ . . . ] has set him, that

he might build for him a community of [ . . . ]." Thus the community saw in the teacher, not only the figure that gave it its decisive imprint, but also its founder. Whether this is considered historically accurate depends on how one evaluates the crisis which occurred during the teacher's lifetime, when the community of the "preacher of lies" apparently separated from the teacher's community.

**4. The function of the teacher.** For the Qumran community the teacher was the definitive authority. As the great teacher of the Torah, sent from God, he led the community in accordance with God's will. To what extent the regulations of the community derive from him is unclear. The texts speak of him as the normative interpreter of Scripture (see esp. 1QpHab 7.1 ff.), but not as the lawgiver. To the Teacher of Righteousness "God has made known all the mysteries of the words of his servants the prophets." Here, as in the NT (1 Pet. 1:10-12), the view is held that all the prophetic sayings have reference to the endtime. Only for the teacher has God decoded the mysteries of the prophetic sayings, and in the final judgment deliverance will come to those who actually do the will of God by following the teacher's interpretation of the Law (1QpHab 8.1-3).

**5. The teacher's utterances about himself.** 1QH 2. (1) -19; 2.31- (39); 3. (1) -18; 4.5-5.4 (perhaps only to 4.29a); 5.5-19; 5.20-7.5; 7.6-25; 8.4- (40) in the large Psalm scroll are distinctive in language, form, and content. They radiate great religious vigor, and in them the psalmist stands out from the community to which he brings deliverance. They evidently come from the teacher himself. They all stress the mercy of God, who grants the divinely ordained community the ability to fulfill his will. The righteous and the unrighteous are distinguished by their attitude toward the teacher, to whom God has revealed his will (2:8-11, 13-15, 18-19; 4:23-25, 27-29; 5:9). The community is utterly dependent upon this teacher (7.20-22; 8.22-24), who, even when he is opposed, knows that God will keep him safe (5.22-25; 7.12). When he looks at himself, he is able to speak only of being lost and guilty; but God's great mercy and the abundance of his grace save him from doubt and despair (7:16-18). All of the psalms from the teacher are pervaded by this deep trust in God. Along with thanksgiving for the saying act, this is their central content.

**6. The teacher is not an eschatological figure of salvation.** Immediately upon publication of the Qumran texts, the question arose whether the Teacher of Righteousness was a forerunner of Jesus, indeed, whether Jesus was not merely a pale imitation of the teacher. Some interpreters found in the texts references to the teacher's crucifixion and resurrection, his designation as Messiah, the expectation of his return, belief in the teacher as a saving figure, and even the teacher as a cultic figure. But subsequent study has demonstrated that such theses are untenable. Only one text appears at first to argue that people expected the teacher to return in the end time: "Outside these [prescriptions] they shall accept nothing until that one comes who shall teach righteousness at the end

of time" (CD 6.10-11). Yet a comparison of this passage with others which speak of the expectation of the saving figures of the end time shows that the language here is cast in a sort of formula. In this the appended "at the end of time" is to be connected with the verb "teach," and is meant to distinguish the future teacher from the teacher previously mentioned. The laws of the community will retain their validity until a new teacher appears at the end of time. This expectation of one who will solve all the controversial questions about the Torah is shared by this community with contemporary Judaism. This teacher was frequently identified as the returning Elijah.

**7. Concluding evaluation.** The Teacher of Righteousness is one of the most significant religious figures known to us from the Judaism of late antiquity. He embodies the most radical attempt to achieve salvation in faithful obedience to God. God's demand upon man is total; the grace of God, for which the teacher never wearies of giving thanks, consists in God's having revealed to him the correct interpretation of the Torah, which now makes it possible for the first time actually to keep the Law. The teacher's claim that he, the recipient of the one correct interpretation of the Torah, is the only one who can point the way to salvation, and that salvation or perdition is determined by acceptance or rejection of his teaching, is without parallel in the Judaism of late antiquity.

  - d. Jesus' ethical teachings
4. Problems outstanding
  - a. Jesus' relation to the Zealots and his teaching about the kingdom
  - b. Messianic consciousness

**Bibliography**

**1. Methodology. a. Criteria for determining authentic teachings.** The environment of Jesus was geographically and politically Palestinian, culturally Jewish, and chronologically pre-Pauline. What he did and said was accommodated to those who

shared this environment. Tradition concerning Jesus' words and actions which achieved a stable form at an early date reflects this environment, both conceptually and pictorially. The environment of the evangelists, however, is non-Palestinian, predominantly Gentile, and post-Pauline. What the evangelists wrote was accommodated accordingly. Other NT writings make clear that social and theological forces set in motion by Jesus and his disciples spread outside the original Jewish-Palestinian environment at an early period. This transition is viewed in retrospect in the book of the Acts of the Apostles. It is seen first-hand in the letters of the apostle Paul.

The historian is not limited in some circular fashion to the writings of the NT in the effort to delineate the environment of Jesus. The DEAD SEA SCROLLS as well as other Jewish writings from the intertestamental period, and some rabbinic materials, taken together with the works of JOSEPHUS, and modern archaeological and topographical study provide reliable controls in determining the nature of the religious, social, economic, and political environment of Jesus. When a tradition concerning Jesus comes alive against the background of his environment, it may be presumed to be early. When this tradition would be unintelligible outside Palestine, or unfamiliar in circles primarily oriented to Gentile culture, then the probabilities are increased that such a saying or story is early. Material in the gospels which presupposes the death and resurrection of Jesus, and reflects a situation where he is not only remembered but also worshiped as a transcendent being, represents tradition which originated in some post-Easter Christian community. How one can move with confidence from the general category "early Jesus tradition" to speak in specific terms about Jesus is best understood from a consideration of his parables.

**b. Special significance of the parables.** Within the corpus of the tradition which originated with Jesus, it is his parables form-critically analyzed which afford the key for understanding his teaching and ministry. FORM CRITICISM enables the critic to identify these as belonging to the genre of rabbinic parables, while as a whole presenting theologically distinctive content. Form criticism also enables the critic to distinguish the original form of Jesus' parables from the additions that were made in the early church. See PARABLE; PARABLE[S].

One of the aspects of Jesus' career most firmly established by historical research is the opposition he met from the religious authorities. The centrality of this crisis, considered in relation to the teachings of the parables, makes it possible to reconstruct the probable course of his earthly career. It must be assumed that Jesus' parables, like Paul's letters, were occasioned by particular situations. Thus, parables in which Jesus rebukes the self-righteousness of those who resent God's mercy toward repentant sinners were probably occasioned by Jesus' defense of his eating with tax collectors and sinners. Behind this lay the criticism of the PHARISEES and behind that, Jesus' decision to invite repentant tax collectors and sinners into his table fellowship. This invitation, in turn, would be di-

rectly related to Jesus' initial decision to leave the Judean wilderness and carry his gracious call to REPENTANCE to the more populated areas of the land.

**2. The Palestinian setting of Jesus' ministry and teaching.** Jesus was a Jew who lived in Palestine during the period of Roman occupation. The climax of his ministry came while the procurator of Judea was Pontius Pilate, whose responsibilities included procuring supplies and funds from the local populace to defray the costs of military occupation. Jewish tax collectors were engaged to gather these funds, and PILATE had at his disposal sufficient forces to support the incumbent Jewish regime, to see that taxes were collected, and to police the normal rash of political discontent. It was seldom necessary to call for the help of the Roman provincial governor who resided in Syria, and in whose hands rested ultimate military power.

Key figures in the established world of Jewish piety were the Pharisees who sat in "Moses' seat" (Matt. 23:2) and were recognized by the Romans as interpreters of the Law (HALACHAH), whose influence over the people in the cities and towns of Galilee was their best hope for maintaining social stability in that area. It is important in understanding the life situation of Jesus to realize that though the Pharisees sat in Moses' seat, it was their passive acceptance of Roman rule that assured their standing with the civil authorities.

The Romans found their most direct key to effective control over the Jewish population as a whole through influence within high priestly families in Jerusalem. Because of the strong place of the temple cultus in Jewish law and piety, Rome found it possible, by offering security to the temple authorities, to maintain its control over the nation. Only such Jewish groups as rejected the authority of the incumbent high priestly families were free from some measure of effective co-operation with Rome, and the price required for complete freedom was withdrawal from public life. Only a relatively small percentage of the population was either willing or able to pay this price. This included such groups living in the wilderness of Judea as the Qumran community (see ESSENES; ESSENES[S]), and such paramilitary resistance elements as the Zealots. The Pharisees by way of contrast co-operated with the Jerusalem oligarchy, and thus at least indirectly co-operated with Rome.

The benefits of the Pax Romana were felt not only by the educated and privileged classes, but by the general populace. But these benefits could not be enjoyed by the Jews with as little internal disruption as may have been possible for some other ethnic groups within the Empire. This was because of a peculiar heritage of the Jews, many of whose customs and laws needed to be liberally interpreted wherever and whenever the inevitable need for close contact with Gentiles arose. Alongside the laws governing Jewish life and practice, and inextricably bound up with them in the scriptures of the Jews, were certain promises of God bearing upon the welfare of his covenanted people. These promises were conditional upon obedience to the Law, so the less privileged classes, on the basis of these promises, were always capable of envisioning

a relative improvement in their welfare, if only more effective ways could be found to keep the Law.

Elements of the Jewish populace whose close co-operation was essential to the effectiveness of the Roman occupation and thereby to the prosperity and security of the Jewish people as a whole included those like the Pharisees who sought conscientiously to be observant of the Mosaic law, as well as those who in this respect were more or less lax. Those willing at times to be somewhat lax, especially in their attitude toward the dietary regulations and other Levitical rules for ceremonial cleanliness, were occasionally preferred by persons in authority for some of the more important and lucrative positions in the complex fabric of Roman hegemony over Jewish life. In the parlance of those Jews who were strictly observant of the laws of Moses, these nonobservant compatriots were sometimes referred to derogatively as "tax collectors and sinners." To the degree that they were not observant, these Jews were regarded by observant Jews as having abandoned the covenant. Observant Jews, on the other hand, were dependent upon the guidance and support of legal experts like the scribes and the Pharisees, who could tell them what the Law did and did not require under ever-varying circumstances.

**3. The career of Jesus. a. Jesus and John the Baptist.** Parables of Jesus which dramatically illustrate the folly of postponing repentance (Matt. 22:1-10; Luke 13:6-9) and teach the wisdom of living in ready expectation of God's gracious judgment (Luke 12:35-38) would probably have originated in situations where such expectations had been enlivened and heightened, i.e., in the period of Jesus' active ministry following his baptism into the movement of JOHN THE BAPTIST and his decision to continue to proclaim the imminence of the kingdom following John's arrest and death.

When certain parables of Jesus are interpreted within the context of his gracious call for repentance, they serve like mirrors in which it is possible to delineate the mind of Jesus as he responded to the exigencies and difficulties he encountered. How was one to understand the delay in the coming of the kingdom which John had pronounced to be at hand—especially after John's arrest and execution? And if one were to continue to proclaim the coming of the kingdom, how should this ministry be perceived? Was the work of God to be carried out during an extension of the period of grace before the coming judgment? If so, was it not reasonable to expect that in due season, if there were no fruits of repentance, this period of grace would come to a sudden and just end (Luke 13:6-9)?

As for those who would mistakenly hold back because of their fear that the cost of repentance might be too great, was it not important for their sake to emphasize the joy of the kingdom (Matt. 13:44, 45)? And should not those who were hesitant about setting their house in order be reminded of the inevitability of judgment (Matt. 21:33-41; Luke 20:9-16); the appropriateness of radical action in the face of certain change (Luke 16:1-8a); the folly of not trusting God (Matt. 25:14-30; Luke 19:11-27); and the suddenness and unexpectedness

of God's judgment (Matt. 24:45-51; Luke 12:42-46; 13:1-5)?

Even within this initial period of Jesus' ministry it is possible to delineate development. Presumably Jesus would have understood the lesson the authorities intended by John's execution. "A disciple is not above his teacher" (Matt. 10:24). Jesus' decision to carry on would have been realistic only if he understood that he did so at great risk. While John had been beheaded, a more usual form of execution was CRUCIFIXION. When Jesus said, "Take up [your] cross and follow me" (Matt. 16:24), he made it clear that he had placed himself outside the discipline and protection of the established world of Jewish piety and was calling upon others to do the same. Since this world derived its earthly jurisdiction from Rome, in coming into conflict with the religious authorities Jesus was risking the ultimate wrath of Roman power. To speak in this way was a determined response to a policy of oppression which had been calculated to discourage dangerous rhetoric associated with messianic activity. But Jesus was not intimidated by what the authorities did to John. Jesus continued to preach: "No one can serve two masters. . . . You cannot serve God and mammon" (Matt. 6:24); "Repent, for the kingdom of heaven is at hand" (Matt. 4:17).

In uttering such sayings as, "If any man would come after me, let him deny himself and take up his cross and follow me" (Matt. 16:24) and "Follow me, and leave the dead to bury their own dead" (Matt. 8:22), Jesus took upon himself the full measure of messianic leadership. In such startling statements he challenged others to free themselves from a paralyzing fear of human authorities, even those who sat in Moses' seat and those who represented the emperor. In the former saying, Jesus unobtrusively clarified the all-important question whether he was naïvely calling people into a course of action where the sacrifices being risked might be greater than he himself was prepared to bear. With such words Jesus staved off temptation to abandon hope for the kingdom's coming, once news of John's arrest and imprisonment was followed by confirmation of his death. Even so, such sayings do not carry one to the heart of Jesus' message. They simply show that Jesus gave expression to qualities of leadership that help account for his emergence as a contender for the mantle of John.

Jesus stood in prophetic continuity with John in his commitment to the call for national repentance in the face of the imminent coming of the kingdom (Matt. 11:7b-19). But Jesus differed from John in regard to the basis for admission into the kingdom (Matt. 11:18-19). John came in the way of righteousness according to the Law (Matt. 21:28-32) and his strictures against the moral laxities of the people were uncompromising. The ostensible cause for his death was his denunciation of immorality in high places. While Jesus was not unmindful of the precarious situation of the rich (Matt. 19:23-24; Luke 16:19-31), the misdeeds of the wealthy and powerful did not seem to preoccupy him. He came to save sinners, not to condemn them. As sons of their Father in heaven, they in turn were counseled to love their enemies even as God

loved his (Matt. 5:43-48). They were admonished not to put forgiveness on any calculating basis, but to forgive freely, boldly, unconditionally, from the heart—"Not . . . seven times, but seventy times seven" (Matt. 18:22).

Jesus taught, "There will be more joy in heaven over one sinner who repents than over ninety-nine righteous persons who need no repentance" (Luke 15:7). Therefore, he ate with sinners and celebrated their repentance (Luke 15:1-10). Such practice was difficult to justify by any precedent from Jewish scriptures. This revolutionary behavior offended the sensibilities of authorities whose well-being rested upon communal recognition of their mastery of the intricacies of a life-encompassing religious system. John the Baptist, coming to show the way of righteousness, had followed the normative practice of righteous Jews and had not eaten with sinners. But Jesus did. This marks a profound theological difference between the two (Matt. 11:16-19b).

*b. Jesus and the religious establishment.* The opposition of the scribes and Pharisees to Jesus' practice of eating with tax collectors and sinners created a major crisis. Jesus himself came from a religious background so akin to Pharisaism as to command the respect of the Pharisees, so their anxiety over what he was doing was rooted in a perception that one of their own was endangering their interests. Jesus openly said that he did not come to call the righteous (Matt. 9:1-13), but he himself was known as a righteous man. And, in eating with sinners, he was breaking down the barriers by which many of his righteous contemporaries maintained the strength of the inner group so that they could withstand external pressures to compromise religious scruples in the interests of achieving economic prosperity and a more cosmopolitan society. To abandon this practice of eating with sinners might have brought Jesus favor, but, instead, he struck at an important root of the problem, the self-righteousness of a scrupulous religious establishment. And when these legal authorities, emphasizing minutiae of the Law, neglected justice, mercy, and faith, Jesus caricatured them as "blind guides" (Matt. 23:23-24).

Jesus' table fellowship with tax collectors and sinners was based upon the recognition that God is the Father of all. Indeed, if a man has a hundred sheep and one goes astray, he will leave the ninety-nine and go in search of the one that is lost, and having found it, he will put it on his shoulder and bring it back rejoicing, and call to his friends, "Rejoice with me, for I have found my sheep which was lost" (Luke 15:3-6; cf. Matt. 18:10-14). How much more will our heavenly Father rejoice over the return of a lost son (Luke 15:11-23), and, therefore, how appropriate that we celebrate the repentance of those lost who, once dead in trespasses, are now alive through God's merciful judgment (Luke 15:25-32; 19:1-10).

By such forceful imagery as this, Jesus defended his practice of table fellowship with tax collectors and sinners. Such parables as "the lost son and his elder brother" (Luke 15:11-32), and "the laborers in the vineyard" (Matt. 20:1-15), were first created in response to this crisis in Jesus' ministry. They

were used to defend the gospel of God's unmerited and unconditional acceptance of the repentant sinner. Similarly, the parable of "the great banquet" (Matt. 22:1-10; Luke 14:16-24) serves to remind the righteous that they have no ground for complaint over the eschatological acceptance of sinners, since they themselves have turned their back on the kingdom (cf. Matt. 23:13). Such parables were not intended to alienate the religious authorities, but to forestall their inquisitorial activity among the disciples. Nor is a parable like that of the Pharisee and the tax collector in the temple (Luke 18:9-14) aimed to hurt the Pharisees. That particular Pharisee does not represent all Pharisees, and certainly not the ideal Pharisee. But in order to make his point that goodness can become demonic and destructive when it leads righteous people to isolate themselves from and look down on others, Jesus chose a man from a highly virtuous circle of Jewish society. Such a man, no matter how moral, goes down from the house of God to his own house in a wrong relationship to God. Instead of placing his trust in the mercy of God, like this sinner, he has placed it in his own righteousness and has despised others.

God's love for the sinner shows no lack of love for the righteous. "All that is mine is yours," says the father to his elder son. "It was fitting to make merry and be glad, for this your brother was dead, and is alive; he was lost, and is found" (Luke 15:31-32). In spite of the cogency and charm of this parable, the implications for the righteous could be perceived as grossly unfair. As opposition from the religious establishment stiffened, Jesus formulated woes against the "scribes and Pharisees." These utterances are uncompromising. Either the people of Israel followed those whom Jesus characterized as "blind guides," who held in their hands the keys of the kingdom, but who hypocritically neither entered themselves nor allowed others to enter (Matt. 23:13), or they could follow him. Irony turns to bitter sarcasm in the judgment: "Woe to you, scribes and Pharisees, hypocrites! for you build the tombs of the prophets and adorn the monuments of the righteous, saying, 'If we had lived in the days of our fathers, we would not have taken part with them in shedding the blood of the prophets.' Thus you witness against yourselves, that you are sons of those who murdered the prophets" (Matt. 23:29-31).

By using hard words like these Jesus further alienated himself from the religious authorities, for he was unmasking what many in positions of privilege and power could not bear to have unmasked. Jesus penetrated the façade of goodness behind which those with authority over the people were hiding their lust for power and he likened them to "whitewashed tombs, which outwardly appear beautiful, but within . . . are full of dead men's bones" (Matt. 23:27). After invective like this, the authorities were naturally interested in seeing the activity and influence of Jesus curtailed. Opposition to Jesus within high priestly circles in Jerusalem was assured once Jesus entered the city and cleansed the temple. For by such bold action Jesus made clear that a thirst for righteousness

called for changes not only in the hearts of people, but in the institutions of Zion (Matt. 21:12-13).

After Jesus had alienated the authorities in Galilee and challenged the Roman-supported priesthood in Jerusalem, his death at the hands of the Romans followed almost inevitably as a consequence of the political co-operation that was required in order for Rome to maintain viable control over a key sector on the defensive perimeter of its eastern frontier with the Parthians.

Jesus ran afoul of religious authorities not only when he ate with tax collectors and sinners, but in other matters as well, e.g., the question of Sabbath observance (Matt. 12:1 ff.; Luke 14:5). It is true that he insisted that he came not "to abolish the law and the prophets . . . but to fulfill them" (Matt. 5:17), but at the same time he taught his disciples that unless their righteousness exceeded that of the scribes and Pharisees they would never enter the kingdom of heaven (Matt. 5:20).

While according to the view of his followers Jesus died a righteous man, he did not go to his cross innocent of breaking the Law as that was represented by the mores of the Jewish populace in Galilee, nor was he innocent of disturbing the peace in Jerusalem as that was maintained through Roman order.

When Jesus was pressed to declare himself on the legitimacy of Roman order he asked that the coin be brought to him that was used by Jews to pay taxes to Rome. Noting that this coin bore Caesar's image, he said, "Render therefore to Caesar the things that are Caesar's, and to God the things that are God's." His hearers, having been taught that they bore the image of God, were left in no doubt as to whose authority Jesus believed they should render themselves (Matt. 22:15-22). This essentially religious attitude could hardly be disputed by the Pharisees, but it entailed radical political implications that those in positions of authority could not support without placing their power in jeopardy. It was Jesus' uncompromising obedience to the will of God that caused him difficulty, because it put him in conflict with all human authority which posed as being ultimate, especially human authority which he perceived as clothing itself in religious garb (Matt. 15:1-9). For somewhat different views of Jesus' death see SANHEDRIN[S] §2b; TRIAL OF JESUS [S] §§2, 3.

*c. Difficulties internal to his own fellowship.* There is evidence that even within Jesus' own circle of followers there was uneasiness and frustration. For instance, invidious comparisons arose where disciples experienced different degrees of success and failure. In response, Jesus admonished them to think of their work in relation to that of a sower who scatters the seed indiscriminately. Those who sow in that fashion will neither be elated because of good results, nor discouraged because of poor results (Matt. 13:3-9).

Another problem was the uncertainty which arose as weeks and months passed without the full restoration of God's sovereign rule over Israel. To meet the frustration which this delay produced, Jesus compared the kingdom of heaven with mustard seed and leaven to remind the disciples that

great things come from small beginnings (Matt. 13:31-33), the corollary of which would be that what is impressive and grand can be deceptive (cf. Matt. 24:1-2). Jesus argued repeatedly from everyday examples that it is reasonable to be hopeful and to believe that the inbreaking of God's sovereign love into the lives of the disciples would be followed by the coming of his kingdom. If a judge who is bound by oath to render justice, even though he is dishonest and subject to the influence of important people, will nonetheless hear the cry of a helpless widow who faithfully persists in calling out to him for justice, how much more will our heavenly Father hear the faithful when they cry to him for full vindication. Therefore, do not give up petitioning God: that which God holds for the faithful in promise he will fulfill, and that which he has begun he will complete (cf. Luke 18:1-8; 11:5 ff.; 14:28-32). "Or what man of you, if his son asks him for bread, will give him a stone? Or if he asks for a fish, will give him a serpent? If you then, who are evil, know how to give good gifts to your children, how much more will your Father who is in heaven give good things to those who ask him!" (Matt. 7:9-11). Therefore, pray expectantly and with belief in your hearts: "Thy kingdom come. They will be done, On earth as it is in heaven. Give us this day . . ." (Matt. 6:10).

Again, some of Jesus' disciples apparently expressed their uneasiness over the presence of persons of questionable character within their fellowship, perhaps agreeing with the scribes and Pharisees on this point. Jesus' parable of the wheat and the tares may be interpreted as a response to this uncertainty (Matt. 13:24-30). Here Jesus teaches that God, not man, in due season will separate the just from the unjust. A similar teaching is given in the parable of the dragnet (Matt. 13:47-52).

**d. Jesus' ethical teachings.** Jesus' ethical teachings must have left a deep impression upon his disciples, since these sayings have an important place in the earliest Jesus tradition. Jesus' teaching on love of enemies (Matt. 5:43-48) seems to penetrate to the heart of his message and carries the hearer to the very center of the gospel. The ethical doctrine that we should love our enemies cuts sharply against the grain of human instinct. It has no other ground than the character of God. Because God loves his enemies, we should love our enemies. See also LOVE IN THE NT §2 and LOVE IN THE NT[S] §1.

Other counsels that have a strong claim to being authentic include the teachings on being angry with the brother (Matt. 5:21-24), the appropriateness of radical ethical surgery (Matt. 5:29-30 and 18:8-9), retaliation (Matt. 5:38-42), and on serving two masters (Matt. 6:24). With serious claims to authenticity are such additional sayings as that on doing good works to be seen by others (Matt. 6:2-4, 5-6, 16-18); on laying up treasures (Matt. 6:19-21); on the eye being the lamp of the body (Matt. 6:22-23); on not casting pearls before swine (Matt. 7:6); on being wise as serpents and innocent as doves (Matt. 10:16); on not fearing those who can kill the body but cannot kill the soul (Matt. 10:28-31); on whoever would be greatest

becoming the servant of all (Matt. 20:26b-27); on not presuming in matters of honor (Luke 14:8-10); on inviting as guests the poor and disadvantaged who cannot repay (Luke 14:12b-14a); and on identifying with the disadvantaged and taking responsibility for their welfare even in the absence of ethnic obligation and at the risk of one's own security (Luke 10:30-35). See also ETHICS IN THE NT §A; ETHICS IN THE NT[S] §1.

**4. Problems outstanding.** This approach to the teachings of Jesus can help in dealing with certain special problems that continue to plague historical study.

**a. Jesus' relation to the Zealots and his teaching about the kingdom.** The question of Jesus and the Zealots (see ZEALOT; ZEALOT[S]) cannot be settled by an appeal to problematic details in the gospel narratives. It can be better approached from a form-critical study of Jesus' teachings. The basic problem can be stated in terms of the confluence and conflict of a theology of zeal for God defined in terms of strict obedience to the Law and a theology of obedience to God defined in terms of love of enemies. Adherents of both theologies could unite against injustice and corruption within the established world of Jewish piety—but on quite different grounds. One makes God's jealousy and his consequent opposition to the sinner the normative first cause of theology, while the other makes God's unbounded redeeming, forgiving love for the sinner that primal ground.

Jesus was neither a Zealot nor, as a critic of their opponents, would he have been an open object of Zealot hatred. The Zealot's righteous passion for the sovereign reign of God was something with which Jesus and all Jews could identify. This national passion made the question of God's kingdom the central and popular concern. Jesus adopted the kingdom of God as the basic theme of his discourse as much to juxtapose his theology to that of the Zealots as for any other reason. Jesus' expectation of the kingdom's coming was derived from John the Baptist, but his explication of the kingdom's meaning was original. Whereas most rabbinic parables were used to bring out and make clear something perceived to be present in the text of scripture, Jesus used parables to explicate on his own authority that the kingdom prevailed where God's will prevails. Some of Jesus' parables may also have originated in his pondering the meaning of one or another scriptural text. But most of the parables appear to have been created to clarify his vision of how it is in the kingdom of God. In this way Jesus' prophetic consciousness became the immediate source of his authoritative revelation. This prophetic consciousness was prepared by his study of scripture, but also affected by the exigencies of his historical ministry. God's action in history prophetically interpreted is thus the foundation of Jesus' theology and ethics. What Jesus has to say about the kingdom makes it clear that he was not preoccupied with eschatological speculation but concerned to clarify the essentials of one's true relationship to God and one's right relationship to the neighbor. Why the Zealots (and for that matter the Essenes) are not addressed by

name in Jesus' teaching remains an unresolved question.

**b. Messianic consciousness.** The question of the messianic consciousness of Jesus has been dominated since the late nineteenth century by a preoccupation with Peter's confession at Caesarea Philippi that Jesus is the Christ (Matt. 16:13-23; Mark 8:27-33; Luke 9:18-22). According to nineteenth-century reconstructions, it was at Caesarea Philippi that Jesus' career in Galilee reached its climax, and it was Caesarea Philippi that marked the turning point in Jesus' decision to go to Jerusalem and to his death. But this approach presupposed both the historicity of this event and the possibility of reconstructing the outline of Jesus' life from the chronological framework provided by Mark. On both these counts, form criticism has led to skeptical conclusions while, at the same time, applied to Jesus' teachings, it has opened up the question of messianic consciousness in a new way. For example, the formula repeated in Matthew 5:21-48, "You have heard that it was said to the men of old . . . But I say to you . . .," sets Jesus in a special relationship to God, because what was said "to those of old" was invariably taken from the Jewish scripture. Thus, Jesus stands as a reformer within the established world of Jewish piety, acknowledging the givenness of the Mosaic tradition, but not its finality or perfection. The freedom of Jesus in relationship to scripture in these sayings is as remarkable as it is radical. The hearer is called upon to acknowledge the limitation of the Mosaic revelation if he or she accepts the authority of Jesus. This means that these sayings call for a decision about the person of Jesus.

The words that conclude the SERMON ON THE MOUNT, "the crowds were astonished at his teaching, for he taught them as one who had authority, and not as their scribes" (Matt. 7:28-29), apply to none of Jesus' sayings more appropriately than to those which begin with the arresting formula, "You have heard . . . But I say . . ." Those who accepted his authority were implicitly acknowledging him to have a status at least equal to if not above that of Moses. In this sense messianic claims were inherent in Jesus' teaching and preaching.

Jesus was conscious of the radical implications in his message and the style of its presentation. "Think not that I have come to abolish the law and the prophets; I have come not to abolish them but to fulfil them" (Matt. 5:17). "Do not think that I have come to bring peace on earth; I have not come to bring peace, but a sword" (Matt. 10:34). Jesus thus copes with misconceptions of his purpose and gives shape to his public image as a self-conscious authority on the kingdom of heaven. He was desirous of making clear the radical character of his message, and was also concerned to have others perceive his teaching in continuity with the Law and the Prophets and as the fulfillment of their divine purpose.

**Bibliography.** N. Perrin, *Rediscovering the Teaching of Jesus* (1967), while continuing to assume Markan priority, updates the form-critical results of Bultmann and Dibelius by taking account of subsequent developments, especially progress achieved in parable research; includes annotated bibliographies. G. N. Stanton, *Jesus*

*of Nazareth in NT Preaching*, NTSMS, XXVII (1974), develops a comprehensive argument for the view that the missionary preaching of the earliest Christian communities was characterized not only by a concern for the present and future of Jesus, but also for his past, including his teaching. J. Bowker, *Jesus and the Pharisees* (1973), is valuable for showing the grounds for and consequences of the Pharisees' opposition to Jesus; provides Eng. trans. of the most important Gr., Heb., and Aram. texts. J. Neusner, "The Fellowship (Haburah) in the Second Jewish Commonwealth," *HTR*, LIII (1960), 125-42, illuminates the way in which the concern over the observance or nonobservance of Levitical purity laws and the laws governing the tithing of food affected the social life of some Pharisees during the time of Jesus. For fuller treatment of the issues discussed in the present article, and for some of the historical and literary presuppositions of the approach taken here, see W. R. Farmer, "The Problem of Christian Origins: A Programmatic Essay," *Studies in the History and Text of the NT*, ed. B. L. Daniels and M. J. Suggs, *Studies and Documents*, XXIX (1967), 81-88, "An Historical Essay on the Humanity of Jesus Christ," *Christian History and Interpretation*, ed. W. R. Farmer et al. (1967), pp. 101-26, and "Jesus and the Gospels: A Form-critical and Theological Essay," *Perkins School of Theology Journal*, XXVIII (1975), 1-74, all with citations of other literature.

W. R. FARMER

\***TEL-ASSAR.** In Isa. 37:12 (=II Kings 19:12), "the people of Eden who were in Telassar" are listed among peoples conquered by the predecessors of Sennacherib. *T'la'ššār* is a correct transcription of Assy. *Til-Aššuri*. In 737 B.C., Tiglath-pileser III conquered and annexed to Assyria "Til-Aššuri, which is a fortress of the Babylonians," also called Silhāzi. It was located in Media, apparently not far from Ecbatana, but was inhabited by Babylonians and had a temple of Marduk. Esarhaddon also mentioned *Til-Ašurri* as being in Media. Their settlers belonged to the Babylonian-Aramean tribe of Bit-adini. See EDEN[S] §3.

**Bibliography.** ARAB, I, §§768, 774, 775, 795; II, §§517, 532; E. Kraeling, *Aram and Israel* (1918), pp. 63-64, gives a wrong location; I. M. Diakonoff, *Istorija Midii* (1956), pp. 201, 267. M. C. ASTOUR

**TELL** [Akkad. *tillu*, "ruin-heap"; Arab. *tell*, "artificial hill"; Heb. *תל* (*tel*; final consonants in Heb. cannot be doubled)]. A term used by local Arabic and Hebrew-speaking populations and by Near Eastern archaeologists to describe mounds containing the remains of ancient cities. Equivalent terms are Turkish *hüyük* and *tepe*; contrast Arab. *khirba(t)*, "ruin."

A *tell* results when debris accumulates within city walls (often situated atop a natural hill), thus slowly elevating the ground level. Successive destructions and rebuildings add to the accumulation until the city may be situated atop a deposit more than one hundred feet high. This may help explain the discouraging report of the Israelite spies that the cities of Canaan had "fortifications towering to the sky" (Deut. 1:28 NEB; cf. Num. 13:25-28).

For a representative cross section, see ARCHAEOLOGY Fig. 45; for a photo, see MEGIDDO Figs. 22-25; for the methodologies for discovering the

ancient identity of a tell, *see* SITES, ANCIENT, IDENTIFICATION OF[S].

L. R. BAILEY

\***TELL EL-AMARNA.** 1. **Historical context.** An attempt by Campbell to cast serious doubts on the coregency of Amen-hotep III and Amen-hotep IV has been countered by incisive arguments on the part of Kitchen. The likelihood of a coregency still prevails.

2. **Historical significance of the Amarna Letters** (*see* TELL EL-AMARNA §2b). The main Egyptian administrative center in Canaan was at Gaza with two other district capitals at Šumur (Zemer, home of the Zemarites), N of the Nahr el-Kebîr for the Phoenician coastal region, and at Kumidi (Kâmed el-Lôz) for the Lebanese Beqa' (the "land of Amqî") and the Damascene. The districts were supervised by commissioners (*râbišû*). The city-state rulers, called kings by their own subjects, ranked as "city managers" (*hazânûtu*). They were supported by councils of the oligarchs in each city who managed affairs when no prince was in office.

Two major city-states are known in the hill country (of later Ephraim and Judah), Shechem and Jerusalem. The ruler of the former, Lab'ayu, was supported by Habiru troops (*see* HABIRU, HABIRU[S]) in his attempt to seize control of the major arteries of communication. He made common cause with Milkilu of Gezer and Tagu of Gath-carmel; then he pressured Ba'lu-meher of Gath-padalla to accept his suzerainty over the Sharon Plain. By force he occupied 'Arabu and Burquna (towns in the Valley of Dothan) and he destroyed Shunem (in the Valley of Jezreel). The elders of Taanach ousted Yashdata, their ruler, who found asylum with Biridiya of Megiddo. Megiddo had been rendered more vulnerable since the Egyptian garrison had been withdrawn, so Lab'ayu placed it under virtual siege. An order was finally issued for Lab'ayu's arrest. The local rulers captured him, and Suratû, king of Acco, agreed to send the culprit to Egypt by ship. Instead he accepted a bribe and released Lab'ayu (also Ba'lu-meher) at Hannathon. Lab'ayu was evidently slain by the men of Gina (modern Jenin) while fleeing homeward to Shechem.

Lab'ayu's sons took up the cause, encouraged by Milkilu of Gezer, who had joined Shuwardata (of Gath?) and Tagu in a dispute with 'Abdu-Khepa of Jerusalem. Friction had already occurred between Shuwardata and 'Abdu-Khepa over possession of Qila (Keilah); now the strife centered around Rubutu (Rabbah in Judah) and Beth-NINIB (perhaps Beth-horon?).

To the N, 'Abdi-Ashirta, ruler of Amurru, embarked on a campaign of subversion and conquest among the cities along the coast. He even took over the provincial capital at Šumur and threatened Rib-Addi at Gebal (Byblos). The latter finally persuaded the Egyptians to intervene by force; 'Abdi-Ashirta was arrested and probably released only to be slain by his own countrymen. His sons, particularly Aziru, renewed the program of expansionism and regained control not only of Šumur but eventually of Gebal and other towns on the Phoenician coast. His rise to power and the demise

of poor Rib-Addi (who fled to Beirut, tried to make a deal with Aziru, and was assassinated at Sidon) must have had the tacit support of some Egyptian official(s), probably Tutu at the royal court. Aziru was ordered to Egypt where he spent nearly two years, apparently convincing Pharaoh of his loyalty. Immediately upon his return to Amurru, he betrayed Egypt and became a vassal of the Hittites.

Aziru's activities and/or the troubles with Lab'ayu's sons in the S may have been the occasion for a planned expedition to Canaan. Orders were sent out to the local rulers to prepare provisions and to place their local troops on the alert. Whether the Egyptian army actually marched forth or not is unknown; it is clear, however, that the government of Akh-en-Aton was not neglectful of the province as scholars have often assumed.

**TELL EL-KHELEIFEH.** 1. **Location.** Tell el-Kheleifeh is situated near the center of the N shore of the Gulf of Aqabah, W of the city of Aqabah, Jordan, about 1/3 mile N of the shore line.

2. **Excavation.** Tell el-Kheleifeh was excavated during three seasons, 1938-40, under the direction of Nelson Glueck, for the American Schools of Oriental Research, with the assistance of the Department of Antiquities, Transjordan, the American Philosophical Society, and the Smithsonian Institution. The excavation lacked proper stratification, and dating is therefore difficult.

At the NW corner of the tell was found a large mud brick building with three small square rooms and three long rectangular ones. The excavator theorized that it was a fortified Solomonic copper smelter. In 1965 he modified his views and said that the structure was a storehouse and granary. In its walls were rows of apertures, left by the destruction of wooden beams. On three sides was an open court, protected by a casemate wall. Beyond it was a larger courtyard and a wall surrounding the whole enclosure, with salients, recesses, towers, and a gateway with two pairs of guard rooms. The plan of this fortress is reminiscent of the Iron Age II Assyrian open court style.

Some of the Kheleifeh pottery is like the eighth- and seventh-century B.C. ware found by M. E. L. Mallowan at Nimrud, and by C.-M. Bennett at Umm el-Biyara, Tawilan and Buseira, in Jordan.

A seal was discovered with the letters *lytm* (belonging to Jotam, Yitm ?) engraved over a horned ram. It is enclosed in a copper holder, similar in style to a seventh-century gold one found at Nimrud. The theophoric name Qaus occurs in some seal impressions stamped *Qaus'nl* on jars. Among those who paid tribute to Tiglath-pileser III (745-727 B.C.) was Qaus-malaku of Edom. The prism of Esarhaddon (681-669 B.C.) mentions Qaus-gabri, King of Edom.

3. **Identification.** Whether Tell el-Kheleifeh is the location of either ELATH or EZION-GEBER continues to be debated.

**TEMAN.** See EDOM[S].

\***TEMPLE OF HEROD.** Excavations on a large scale have been taking place around the temple mount since 1968. The extensive finds of buildings and objects have stimulated renewed study of the city, especially of the Herodian period.

The temple mount is bounded by four giant retainer walls designed to hold the huge, paved platform which surrounded the temple building. The area of this platform, one of the largest known temple areas in the ancient and classical world, is about 35 acres. The walls measure on the W 1,595 feet, on the N 1,020 feet, on the E 1,562 feet and on the S 921 feet. See TEMPLE, JERUSALEM Fig. 12.

A paved street ran all along the western wall and continued from the SW corner to the Pool of Siloam, another 1,645 feet. The slabs of the pavement are of local Jerusalem limestone, up to 47x79 inches in size. The street is about 32 feet wide, and on both sides of it there were small structures. This was apparently the central market place of Jerusalem in the Herodian period. Under

the street, at a depth of about 20 feet, ran a water conduit, partly cut into the natural rock. Many channels in the area run into this conduit, which also drains the rain water from the street itself. A large quantity of water was thus directed to the Pool of Siloam, which served as a reservoir. The foundations of the temple mount wall descend in this area to a depth of between 23 and 72 feet below the street level. The height of the wall was more than 98 feet above the street level, and there may have been towers on the corners, reaching even higher.

The retaining part of the walls was smooth, but the upper parts, which surrounded the sacred area, were built with pilasters at regular intervals. These were also the outer walls for the colonnades of the temple mount.

According to the description given by Flavius Josephus there were four gates in the western wall (see TEMPLE, JERUSALEM §C2). The two upper ones, over arches, are now known as Robinson's Arch and Wilson's Arch, and the two at street level are known as Warren's Gate and Barklay's Gate (see TEMPLE, JERUSALEM §C4 and Fig. 34). It was thought previously that Robinson's Arch was one of seven arches forming a bridge across the TYROPOEON VALLEY from the Royal Portico on the temple mount to the upper city in the W. This reconstruction must now be rejected, since no more arches crossing the valley to the W have been discovered. Instead, a series of arches, perpendicular to Robinson's Arch, go from N to S, each one lower than the other. Dozens of stair stones were found in the area, and on one of the lower arches a few stones were still in place. The whole structure seems, therefore, to be a large staircase, over the arches, leading from the street up to the Royal Portico (see Fig. T2). This fits with Josephus' description: "From the fourth gate [southern-most in the west wall] one descends over many stairs to the valley whence one ascends again to the upper city by many more stairs" (Antiq. XV.xi.5).

2. Reconstruction of southern and western walls of temple mount in Herodian times. On W, stairway leading up to gates of Royal Portico; on S, Hulda Gates.

courtyard stood a tower, atop which one of the priests stood on Friday afternoons and blew the trumpet to announce the beginning of the sabbath and the closing of business. A stone with a Hebrew inscription confirming this fact was found in the debris at the SW corner. See Fig. T3.

Inside the temple mount courtyard, along its southern wall stood the magnificent Royal Portico. It was built in a basilical plan, with one central aisle and two side ones divided by rows of columns, 160 in all, that supported the roof. Many architectural remains of this building were found in the excavations, decorated in relief with floral and geometrical designs. Out of many dozens of fragments found, not one had a human or animal figure. Many fragments of columns were also found, the diameter of which can be calculated to be 5 feet, which agrees with Josephus' report that three people were required to encircle them. All stones are local Jerusalem limestone. Some gold-painted fragments found in the debris confirm Josephus' descriptions. The Royal Portico evidently served as a center for business, money changing, etc. Later it might even have housed the SANHEDRIN, the main legal court of Jerusalem. Being on the temple mount and out of the sacred area enhanced civil and economical activities and also the resolution of complaints aroused by this location. It is possible that this is the place where Christ overturned the tables of the money-changers as told in the gospels.

Intensive excavation work was carried out along the entire length of the southern wall, which, during the second temple period, contained the two main entrance gates to the temple mount. This was, therefore, its façade. The strength of this wall is emphasized by the gigantic ashlar in the corners, stones weighing up to seventy tons each.

In this wall were the two Hulda Gates through which pilgrims entered the temple mount (M. Middot 1.3). The pilgrims entered by the eastern gate, passed through an underground passageway under the floor of the Royal Portico, emerged to the courtyard, walked around the temple, and went out through the western gate by means of another underground passageway. Jews who were mourning the death of a relative would reverse the order, entering the western gate and going in the opposite direction. When they passed by the rest of the pilgrims they would be recognized and comforted.

While the remains of the eastern gate are few, the western gate survives almost in its entirety and a new survey of it has recently been conducted in co-operation with the Moslem authorities of the temple mount. This survey shows that almost eighty-five per cent of the gate is originally of the second temple period. Especially interesting are the decorations carved in its domes.

In front of the gates there were large stairways. The western one, of thirty steps, is one of the widest known in any temple (ca. 214 feet). The stairs, descending from N to S, brought the pilgrims to a street 23 feet wide, running all along the southern wall.

On descending the stairs, one came to a platform paved with huge slabs similar to those used in the streets, whose southern edge has not yet been found. By what way one continued from the platform further S is not known. In this area, fragments of inscriptions in Hebrew have been found, testifying to the existence of carved signs in various public buildings nearby.

An interesting discovery is that of tunnels cut in the natural rock under the main stairways (see Fig. T4). In the walls are niches for housing oil lamps, alternating on the right and left. Such tunnels are mentioned in the Mishna as winding passages (*mesibot*) for quick and isolated exit of priests and other people and objects which had become defiled during the ritual in the temple. They would go out to a nearby bathhouse, be purified, and return to their regular chores through the gates.

A little further to the S of the gates large cisterns were found, over which were remains of mosaic floors. These may be connected to various water-supply systems in front of the temple mount that served the large crowds of pilgrims.

Two important discoveries are connected with the fortifications of the city. It is now clear beyond doubt that the city wall was further E of the temple mount wall and did not come out of its SE corner. The entire corner of the latter was thus inside the city walls.

It is also clear that W of the temple mount, on the eastern slope of the western hill where the upper city was located, there are no traces of any wall whatsoever, at either the foot of the hill or higher up the slope. One should remember that Josephus does not mention a wall there, and it must now be considered an invention of various scholars.

5. Southwestern corner of temple mount

Small finds of the second temple period include pottery, coins, bone and bronze objects, stone weights and vessels, and installations made of stone (some for pressing oil, etc.). Commercial activity is well expressed by the finds, as well as social and religious customs known from various literary sources.

**\*TEMPLE OF SOLOMON. 1. The site.** It is still commonly agreed among scholars that the temple of Solomon stood on the middle part of the ridge now occupied by the Haram esh-Sharif (see *TEMPLE, JERUSALEM* Figs. 12-13). More precisely, the site is identified with that of the Moslem shrine known as Qubbet es-Sakhra, the "Dome of the Rock." In recent years, however, archaeological excavations have shed new light on what could have been the S boundary of the Solomonic platform. A straight joint, previously observed by Warren in 1887 in the masonry of the SE corner of the temple platform, points to a clear demarcation between the Herodian and the Persian masonry. According to Kenyon, this joint may represent the SE corner of the original temple precinct.

**2. Basic structure and archaeological parallels.** The archaeological parallels that are most frequently quoted by scholars include the small sanctuary found at Tell Tainat in Syria, the temple of stratum 1B (LB II) at Hazor, and the Iron Age temple of Tell 'Arad. In each case, scholars justify the comparison by stressing the tripartite division of all the structures considered. However, even a superficial look at the ground plans of the three temples reveals how basically different they were from Solomon's temple. The description contained in I Kings 6:1-6 makes it clear that the Solomonic temple conformed to the "long house" type of building, rectangular, with the entrance in one of the short sides (see *TEMPLE, JERUSALEM* Fig. 19), a feature that sets it immediately apart from the Hazor and Arad temples. Its plan included a vestibule of the "broad room" type (entrance in one of its long sides), a nave that was a "long room" with an axial entrance in one of its short sides, and finally an inner sanctuary described in I Kings 6:16-20 as a perfectly square room. See *TEMPLE, JERUSALEM* Fig. 17.

**a. Tell Tainat.** Given the basic structure of the temple, as outlined above, the general plan of the sanctuary at Tell Tainat (see *TEMPLE, JERUSALEM* Fig. 20) may offer the best archaeological parallel. The similarities, however, should not mask differences that are equally obvious. Thus the inner sanctuary at Tell Tainat, unlike that at Jerusalem, was not square. Also, the contention that the Jerusalem inner sanctuary, unlike its counterpart at Tell Tainat, was architecturally distinct from the nave, appears to be baseless, since one can easily show, on the strength of I Kings 6:16-20, that the inner sanctuary was obtained by the mere partitioning of the main room of the temple (Fig. T6).

**b. Tell 'Arad.** Of the Iron Age temple (Fig. T7) excavated at Tell 'Arad (see *TEMPLE, SEMITIC[S]* §2a), Aharoni has said that it preserves the "essential plan of the Jerusalem temple." This claim does not seem to be warranted, although scholars have been impressed by features common to both temples. For example, it has been correctly observed that the sacrificial altar stood in each case in the courtyard of the temples. But the differences in ground plan are no less striking. First, the temple

Scale: 1mm: 1 cubit

6. Ground plan of Solomon's temple

After *The Biblical Archaeologist*, XXXI, by permission of the American Schools of Oriental Research

7. Ground plan of the Arad temple

at Arad had no built-up porch. This clashes with the biblical description of the vestibule. But it is conceivable that the temple might have stood for quite some time without such a structure. If it was an integral part of the temple, one has yet to find an explanation why the measurements in I Kings 6:2 do not include it. A second major difference between the two buildings lies in the basic plan of their main room. In Jerusalem, the nave conformed to the "long room" type of construction, but at Arad the corresponding room was a distinct "broad room," with a rectangular court in front of it. And, finally, the inner sanctuary at Arad is represented only by a niche formed by a recess in the long wall of the nave, whereas in Jerusalem the inner sanctuary was built as an extension of the long walls of the nave.

c. *Hazor*. In the fourteenth-century B.C. temple

found at Hazor, Yadin has urged scholars to see a prototype of Solomon's temple. The tripartite division of the Hazor temple (Fig. T8), with its doorways on a single axis, is an obvious basis for comparison. The entrance hall, like the vestibule, was a broad room. But it was narrower than the front of the temple, in contrast with the Solomonic porch, which occupied the full width of the nave. As to the middle hall, it was almost square and thus can hardly be compared with the main room of Solo-

Y. Yadin

8. Ground plan of the Hazor temple

mon's temple. At Hazor, there was also a rear hall with a niche appended to it. This feature alone accentuates the differences that existed between the two sanctuaries.

3. **The side wing.** The intricate text of I Kings 6:5-10 contains a rather obscure description of two mysterious structures called respectively יצוֹן (JB "annex"; RSV "structure") and צִלְעוֹת (RSV "side chambers"). Scholars usually regard the former structure as a part of the latter. There are difficulties, however, in identifying the יצוֹן with the side wing, properly designated as צִלְעוֹת. First, some of the ancient versions (LXX and Syr.) seem to have imagined the יצוֹן near the roof of the temple, if not on the roof itself. The MT does not bear out this interpretation unless one understands the preposition על in vss. 5 and 10 as meaning "on" or "on top of" instead of "against," which is the translation usually accepted for this passage. Also, a comparison of vss. 5 and 8 shows that the יצוֹן had been built around the nave and the inner sanctuary, but stopped short of the vestibule. But the structure known as צִלְעוֹת had its entrance near the "shoulder" of the temple. The shoulder of a building, as shown by Exod. 27:14, clearly coincides with the segments of its façade on both sides of the doorway. If so, the side wing would have surrounded the whole temple like a horseshoe and would have extended as far as the vestibule. Whether the side wing was part of the original Solomonic structure has been doubted by a few scholars, mainly on literary grounds. If the vestibule itself was a late addition to the temple, the side wing, which encompassed the whole building as far as the vestibule, could also have been added at a late date. See also HAZOR; HAZOR[S].

\***TEMPLES, SEMITIC.** Temples discovered during the last decade constitute a considerable addition to our knowledge.

1. **Canaanite and foreign temples. a. Pre-Israelite.** Four temples of the Middle to Late Bronze Ages have been discovered at HAZOR. The most elaborate and best preserved is the "Orthostat Temple" of area H. Its beginnings are in the seventeenth or sixteenth century B.C. (MB II), and it was several times rebuilt until the destruction of the city during the thirteenth century B.C. (strata 3-1A). Its name derives from smoothly

dressed basalt orthostats (reused from earlier structures), which lined the walls of the outer and inner rooms during the latest phase of the temple (stratum 1A).

On the floor of the latest temple were found incense altars and libation tables, the basalt statue of a seated king, and the broken statue of a deity standing on a bull. On the deity's breast is a four-pointed star surrounded by a circle, which appears also on one of the incense altars. The emblem and the bull are symbols of the storm-god Hadad.

The cella of all four phases was a large "broad room" with a central niche for the main cult object. In the two early phases (strata 3 and 2) the cella was fronted by a small porch with two tower-like side rooms. In the two later phases (strata 1B and 1A) another outer porch was added. At the entrance to the original porch the bases of two freestanding pillars were found, resembling JACHIN AND BOAZ of the Solomonic temple. Striking comparisons to the plan of the temple and its orthostats have been found at ALALAKH in N Syria.

The small "Stelae Temple" was discovered at the foot of the rampart of the lower city (area C). Its two phases belong to the fourteenth-thirteenth centuries B.C. (strata 1B and 1A). Yadin supposes that the shrine was dedicated to the moon-god, because of the crescent pendant on the breast of the seated figure and the emblem on one of the stelae. See TEMPLES §2a.

Another, much larger temple complex was discovered in the SE part of the lower city (area F). It began as a double temple with two inner courtyards in MB II (stratum 3), became a "square temple" similar to those of Amman and Shechem (see below) in LB I (stratum 2), and was finally transformed into an open high place in the fourteenth-thirteenth centuries B.C. (strata 1B and 1A). However, its bad state of preservation leaves these conclusions conjectural.

The fourth temple at Hazor was discovered in the upper city (area A). Its plan is a single "long room," in contrast to the two "broad room" temples of the lower city. Other than votive bowls and pottery beakers, no distinct cult objects were found. Its first phase belongs to MB II. It remained in use only during the sixteenth and fifteenth centuries B.C. and was abandoned during the last two Bronze Age levels, with some cult installations remaining around it. This curious manner of desertion and the date of the temple's final destruction still requires further investigation.

An isolated square building near Amman (Rab-bah of the Ammonites) has raised again the question of the function of a similar structure near Shechem. In the center of each is the base of a round pillar, thought to be an altar. The function of these "square temples" as central tribal league shrines has been suggested by Campbell and Wright, because of their unique architecture and their location outside of the cities. However, the Shechem building has been interpreted by Albright as a villa and that of Amman by Fritz as a tower fortress. Their dates are different: seventeenth-sixteenth century B.C. at Shechem and

fourteenth-thirteenth century B.C. at Amman. No special cult objects have been found in them and the central pillar might well have served a structural purpose.

A temple dated approximately to the period of the desert wanderings has been discovered at the Timna' copper mines in the southern Arabah. It was erected by the Egyptians and dedicated to Hathor, the patron of mining enterprises. Its plan is a small *naos* with a central niche, surrounded by a square courtyard. The votive objects bear cartouches of Sethos I, Ramses II, Mer-ne-Ptah, Sethos II, and Queen Tawosre of the Nineteenth Dynasty, and Ramses III, IV, and V of the Twentieth Dynasty, i.e., from ca. 1300 to ca. 1150 B.C. In its later phase a row of standing stones (*masseboth*) occupied the left side of the courtyard. Decorated "Midianite pottery" led Rothenberg to see in the last phase a Midianite tented shrine. Among the votive objects is a crude male copper figurine and a copper serpent (4½ inches long) with a gilded head.

**b. After the Israelite conquest.** Philistine cult places have been discovered at ASHDOD and Tell Qasile. A small shrine at Ashdod belongs to the twelfth and eleventh centuries B.C. Its plan is fragmentary. Of much interest is a clay figurine of a seated goddess whose lower part is in the form of a couch or offering table (see ASHDOD[S] Fig. 24). Another shrine of the eighth century B.C. was discovered in the lower city. In it were found mainly male figurines, according to Dothan, possibly representing Dagon.

At Tell Qasile the main cult room is a "long room" with two wooden pillars standing on round stone bases (cf. the "two middle pillars" of the Dagon temple at Gaza which were tumbled by Samson: Judg. 16:29).

Pottery and cult objects show the Philistine character of the temple. It belongs to the twelfth-eleventh century B.C. but seems to have remained in use even later. A Hebrew-Phoenician ostrakon found on the tell mentions the "House of Horon": בית חרון; possibly this means that the temple was dedicated to the Canaanite god Horon. See BETH-HORON.

**2. Israelite sanctuaries and temples. a. Pre-exilic.** The only unquestionably Israelite temple discovered by archaeologists is at ARAD. Constructed in the period of the united monarchy as part of a royal border fortress, it was preceded by an open high place, erected during the twelfth-eleventh century B.C. In the vicinity of the high place were many burned animal bones, including the skeleton of a lamb with only the head missing (a "whole burnt offering").

The temple consisted of one main room, the *hekkhāl*, six by twenty cubits. This distinct "broad room" was enlarged in the ninth century by another five feet, which fits exactly the difference between twenty Egyptian common and royal (large) cubits (cf. II Chr. 3:3, "in cubits of the old standard"). To the W of the *hekkhāl* was a raised cella, the holy of holies or *d'bhîr*. Flanking the entrance of the latter were two incense altars, and it contained a small *bamah* and a *massebah*. Flanking the entrance to the main building were two stone

slabs, probably bases of pillars, like JACHIN AND BOAZ in Jerusalem. Near the center of the court was the altar of burnt offering. It was built of earth and unhewn stones (cf. Exod. 20:24-25) and its measurements were five cubits square, three cubits high, like the altar of the tabernacle (Exod. 27:1; cf. II Chr. 6:13). The altar went out of use at the end of the eighth century and the temple was destroyed with the erection of the last Israelite citadel at the end of the seventh century. The two phases of its abolishment probably belong to the days of Hezekiah and Josiah, the two kings who concentrated worship in Jerusalem. Hebrew ostraca found in the temple contain names of priestly families known from the Bible, i.e., Meremoth, Pashhur, and the sons of Korah.

The importance of the temple may stem from its function as a royal border sanctuary, like Dan and Bethel in Israel and Beer-sheba in Judah. The Bible, speaking about cult places outside of Jerusalem, may be referring to such border temples of the kingdom.

For the parallels between the Arad temple and the temple in Jerusalem, see TEMPLE OF SOLOMON [S] §2b; for ground plans of the Arad and Hazor temples, see TEMPLE OF SOLOMON[S] Figs. 7, 8.

For other pre-exilic Israelite temples, see BEER-SHEBA[S] and LACHISH[S].

**b. Postexilic.** Postexilic temples which seem to go back to pre-exilic traditions have been discovered at Lachish and Beer-sheba. All have an E-W orientation and the same basic plan as the Arad temple: a large courtyard leading to a definite "broad room" cella with an inner sanctuary (*adyton*) at its center. The similarity of the Lachish temples to the Israelite temple of Arad, the absence of pagan objects, and the information that Jews still dwelt at Lachish in the postexilic period (Neh. 11:30), all support the assumption that these were Jewish temples.

The Hellenistic temple at Beer-sheba was erected in the third or second century B.C. A wealth of pagan figurines and votive objects shows its cosmopolitan nature.

\*TEN COMMANDMENTS. The English equivalent of the Hebrew expression "ten words" (Exod. 34:28 and Deut. 4:13; 10:4). Since Irenaeus they have been known as the Decalogue. The passages in Deuteronomy say they were written on "two tables

of stone," and consequently the term refers to the commandments found in Deut. 5:7-21, described in vs. 22 as having been written on two tables. Exod. 34:28 might be taken to mean the commandments in Exod. 34:14-26, but the editorial process has created problems in vs. 27-28, and it is not possible to identify a precise list of ten commandments in this text. Traditionally the expression is also applied to the commandments found in Exod. 20:3-17. This text is found in separate documents such as the Nash Papyrus, in phylacteries, and in fragments from Qumran. See DEAD SEA SCROLLS[S] §2.

**1. Text.** All these materials contain variant readings, which resulted from the work of scribes and redactors (see SCRIBE §§1-2; TEXT, OT §A3). This is not surprising, because in the Bible itself there are incomplete texts or summaries of the Decalogue, e.g., Lev. 19:3-4, 11-13; Hosea 4:2; Jer. 7:9; Pss. 15:2-5 [H 3-6]; 24:4. Stamm has listed at least twenty variants between Exod. 20 and Deut. 5. Seven cases involve merely the addition of the conjunction (*wāw*), but in Exod. 20:4 this is of significance, for it changes the meaning of כָּל (graven image) by making it synonymous with תְּמוּנָה (likeness). The following are the most significant variant readings: (a) Deut. 5:10 has "his commandments" (*ketibh*); Exod. 20:6, "my commandments." (b) Deut. 5:12 says "observe the sabbath day," adding "as the Lord your God commanded you"; Exod. 20:8, "Remember the sabbath day," without the additional clause. (c) To the list of those who are not to work on the sabbath, Deut. 5:14-15 adds "your ox, or your ass," and gives a long justification for the commandment. (d) Exod. 20:11 has a different justification for observing the sabbath. (e) To the command to honor one's parents, Deut. 5:16 adds "as the Lord your God commanded you"; it also adds to the promise of long life, "that it may go well with you." (f) Deut. 5:20 speaks of "emptiness" (שׁוּא; RSV "false witness"); Exod. 20:16 speaks of "falseness" (שָׁקֵר; RSV "false witness"). (g) In both passages the last commandment consists of two propositions, but Deut. 5:21b has הַתְּאוּהָ for the second verb instead of חָמַד (both meaning "desire, covet") and inverts the words "wife" and "house."

**2. Composition.** Two elements can be observed in these two parallel passages. First, a series of prohibitions, and second, an editorial element consisting of justifications, enumerations, and a general statement, "I am the Lord your God." If the editorial material is removed, what remains is a series of eleven prohibitions, the last of which seems to be a doublet to the tenth, since Exod. 20:17 repeats the verb חָמַד.

**3. Lists of prohibitions in the ancient Near East.** From the ancient world we have lists analogous to the series of prohibitions in the Decalogue, but they do not consist of ten elements, and they are not in the form of prohibitions.

The best known of these are the lists in ch. 125 of the Egyptian "Book of the Dead" (New Kingdom). Maystre termed them "declarations of innocence." The dead person declared in the first person before the tribunal of Osiris, "I have not stolen . . . etc." Similar lists are found in the stela of Ramses IV at Abydos. The late papyrus of

Jumilhac does not contain declarations but a simple list of forbidden acts (ch. xviii). These lists seem originally to have belonged to sanctuaries in various districts and described prohibited actions.

In Babylonia at the New Year Festival the king made a similar protestation of his innocence. We also have lists of wrongs committed. They are in the third person and were pronounced by the priest-exorcist, as, for example in the series of *Surpu*: "He entered his neighbor's house, had intercourse with his neighbor's wife, shed his neighbor's blood." Some of these lists date from the Old Babylonian period (1800 B.C.), and seem to have been compiled in the Kassite period (sixteenth-twelfth centuries B.C.).

These lists may be compared to stipulations in treaties imposed by a sovereign on a vassal (see COVENANT §C; COVENANT, MOSAIC[S] §4). These treaties are of little help in establishing the list of ten commandments, but may cast light on some editions of the Decalogue.

**4. The different commandments.** There are variations even in the traditional enumerations. Origen and Clement of Alexandria were followed by Augustine and the Catholic and Lutheran churches in distinguishing coveting the neighbor's wife and his house as separate commandments. On the other hand, they place together in one commandment the prohibition of worshipping other Gods and that of making images. The Talmud, however, and Philo, the Eastern churches, and the Reformed Churches separate these two commandments and see the prohibitions of covetousness as constituting only one.

One factor in arriving at a solution is the observation that Exod. 20 contains a number of Deuteronomistic expressions, such as "the Lord your God." The dual form of the last commandment is the result of the Deuteronomistic recension, or of the anomalous situation in which "house" precedes "wife."

**5. The Ten Commandments as contained in the Bible.** On this basis it is possible to establish an original list of "ten words" that can all be explained in the cultural milieu of the second millennium B.C.: (a) prohibition of images (פִּסֵּל) set up to assure the presence of the god in the sanctuary; (b) prohibition of worshipping idols that represent other gods; (c) prohibition of serving them; (d) prohibition of taking unnecessary oaths in the name of Yahweh; (e) prohibition of working on the sabbath; (f) prohibition of committing murder (רִצֵּחַ) under conditions that do not confer the right of asylum; (g) prohibition of sexual violence; (h) prohibition of stealing (according to Alt, kidnapping, but in other lists the prohibition is general); (i) prohibition of accusing a neighbor falsely; (j) prohibition of seizing a neighbor's house (חָמַד dealt originally with an act and not covetousness, cf. Herrmann). This list may have been compiled by Moses and preserved by his Priestly successors. Like the Egyptian lists, it determined the possibility of participating or not participating in cultic activities, as Mowinkel has shown by comparing it with the liturgies used on entering a sanctuary (Pss. 15 and 24). Its originality

consists in its having the form of prohibitions, which reminds us of both the wisdom traditions and the covenant formulas.

Inscribed on tables of stone, this list found a place in Solomon's temple (I Kings 8:9). This explains the importance ascribed to it by Deuteronomy, which was dependent on both wisdom literature and covenant formulas. The Deuteronomic edition of the commandments underscored the direct intervention of "the Lord your God, who brought you out of the land of Egypt." It instilled respect for parents and required observance of the sabbath, and not merely a refraining from work. It gave to *חַוֵּל* the meaning "covet," and listed both violence toward the neighbor's house and toward his wife, placing the latter first. It insisted on the prohibition of images and the demands of monotheism, producing thereby the expanded form of the first part of the text.

The Decalogue became the basis of all Israelite legislation. It was placed at Sinai, prior to the covenant regulations and the conclusion of the covenant (Exod. 20:24-24:12), and thus belongs to the central revelation of the Mosaic religion.

\***TESTAMENTS OF THE TWELVE PATRIARCHS, THE.** The interweaving of Jewish and Christian materials, including sections of unquestionable affinity with the literature from Qumran (see DEAD SEA SCROLLS; DEAD SEA SCROLLS[S]), has prevented any consensus on questions of original language, date, and provenance. Recent scholarship has directed itself particularly to the establishment of reliable texts and to the criticism of textual transmission.

1. **The text.** The work has been preserved in Greek, Armenian, and Slavonic versions, and during the last decade the number of available MSS has steadily grown. M. de Jonge's *editio minor* of the Greek text is based on Cambridge MS Ff. 1.24, thus reversing previous evaluations. This MS and those related to it will occupy a prominent place in the full critical edition. A number of newly discovered Greek witnesses will also be used in that edition. The Armenian MSS (over fifty are now known) have also been further investigated, and their importance for the study of the Greek text evaluated. The Slavonic version seems of less significance.

Study of the MSS of the Testament of Levi from Qumran continues, as well as of 4Q Visions of Amram, a work discovered at Qumran which may be associated with the Aramaic Testament of

Levi. These works form a body of material in which priestly figures play a central role.

2. **Criticism.** The character of the Greek text remains a chief question. Are the Christian passages mere interpolations, or is the present form of the Greek work a Christian edition of older Jewish materials? Some have sought to minimize the extent of Christian interpolation by regarding many passages, previously held to be Christian, as ESSENE in origin. Other critics distinguish a Jewish-Christian interpolator at the earliest level, or a very limited Jewish-Hellenistic *Grundschrift* from late pre-Hasmonean days which reached its present shape by a complex process of expansion, interpolation, etc. The relationship between the Aramaic Testament of Levi and the Greek version has also received preliminary investigation.

**TETRATEUCH.** See CANON OF THE OT[S] §1c.

**\*TEXT, HEBREW, HISTORY OF.** After a period marked by the multiplication of various consonantal text forms, a standardized consonantal Hebrew text of the Bible attained normative status about the end of the first or the beginning of the second century A.D. See TEXT, OT §2.

Then, after another period marked by the proliferation of punctuations (vowels and accents), and of various types of Masora, a system of punctuation and of Masora was perfected toward the end of the ninth or the beginning of the tenth century A.D. From that time it acquired virtually normative authority. See TEXT, OT §§3-6.

1. Standardizing the consonantal text. *a. Early diversity.* Before the discovery of the Qumran MSS, (see DEAD SEA SCROLLS and supplementary article) the only important sources of consonantal variants antedating the time of standardization were the SEPTUAGINT and the SAMARITAN PENTATEUCH. We do have other ancient witnesses to the Hebrew text, viz., the Hexaplaric material (Theodotion, Aquila, Symmachus, the Quinta, and transcriptions of the second column; see GREEK VERSIONS, MINOR[S]), the VULGATE and SYRIAC, the various TARGUMS, rabbinic citations, the Arabic version of Sa'adya, and the variants in medieval biblical MSS. All this material, however, postdates the period of textual standardization; it can offer only variants that somehow survived the standardizing process. Biblical quotations in the Apocrypha and Pseudepigrapha, in the NT, and in Hellenistic Jewish sources are too sparse to be a helpful source of variants, or simply follow the LXX tradition. Finally, the Samaritikon, i.e., the Greek version of the Samaritans, is known only through a few fragments.

With the Samaritan Pentateuch (see TEXTUAL CRITICISM, OT[S] §1b; TEXT, OT §B), we possess a witness in Hebrew to the entire TORAH, which bears direct comparison with the MT. Moreover, its textual tradition is remarkably consistent and was carefully maintained by those to whom it was entrusted. Gesenius, however, proved that virtually all the variants in Samar. could be reduced to eight types of retouches, modifying a basic text preserved intact by the MT.

Because it covers the whole OT, the witness of

the LXX is particularly valuable (see TEXT, OT §C1). Yet because it is a translation, the evidence it affords for its Hebrew *Vorlage* remains ambiguous. It is not surprising, then, that scholars have interpreted the evidence in very different fashions. Wellhausen (1871) drew from the LXX text of Samuel a great number of Hebrew variants, which he considered generally preferable to the MT. On the other hand, Nyberg (1935), basing himself on the text of Hosea, found the LXX full of faulty interpretations, though based on a consonantal *Vorlage* very close to the MT. As often happens, the critical pendulum swung to and fro between the two opinions; but by the time the first Qumran scrolls were discovered (1947), it was Nyberg's view that held the field. Scholars were more and more reluctant to admit that every variant of the LXX was based on a Hebrew *Vorlage* distinct from the MT. Divergencies, they thought, were to be found most often on the level of interpretation.

Following the discovery in Qumran Cave I of the large Isaiah scroll (1QIs<sup>a</sup>), and especially of the thousands of fragments from Cave IV, scholars were faced with an abundance of texts, typologically extremely varied, and covering every book of the Hebrew canon except Esther. Moreover, certain MSS of the same book, through the characteristic variants they contained, seemed to be linked to the textual family of Samar. or of the LXX *Vorlage*. Less frequently, a MS contained a text that was evidently a prototype, more or less direct, of the MT. For fuller description, see TEXT, OT §A1; DEAD SEA SCROLLS and supplementary article.

The most striking aspect of these discoveries, then, was a profusion of Hebrew variants of such consequence that the apparent monolithic structure of the MT suddenly disintegrated. In effect, in the period just before A.D. 68, we have a textual situation both varied and fluid in a Jewish community that was well settled and spiritually integrated.

i. *The theory of local texts.* The first preoccupation of scholars was to try to bring some order into this textual chaos. Drawing on his expert knowledge of the unpublished fragments from Cave IV, Cross proposed a theory of "local texts." For the Pentateuch, he distinguished three text forms, which maintained their separate identity only because they developed in different geographical milieus: (a) a type marked by expansions, both in text and orthography, attested by several Qumran MSS, and by the Samar. as a late collateral witness; (b) the short, relatively pristine text preserved in the MT; (c) the LXX *Vorlage*, already clearly distinct from the earliest Qumran exemplars, yet much closer to the first textual type than to the second. The first type originated in Palestine. The Egyptian origin of the LXX points to Egypt as the locale of the third type. The second type must have been located in an area that was, so to speak, a textual refrigerator, i.e., where evolution was very slow. Only thus can we explain the stability of its sober text and the persistence of its archaic orthography. For Cross, a Babylonian milieu meets these requirements. In

the case of Samuel, too, Cross rediscovers his three text forms, with their distinct places of origin. The 4Q fragments represent the Palestinian text; the *Vorlage* of the ancient LXX stems from Egypt; and the place of origin of the Proto-MT is probably Babylon. For Jeremiah, there are only two text forms, since the Proto-Masoretic and Palestinian combine here. There is, first, a long text, attested at Qumran by 4QJer<sup>a</sup> (end of the third century B.C.) and 4QJer<sup>c</sup> (no earlier than the end of the first century B.C.). Second, there is a short form, represented by the LXX *Vorlage* and by 4QJer<sup>b</sup> (from the Hasmonean period). Cross holds that this form developed in Egypt. In the case of Isaiah, Cross believes that all the seventeen MSS from 1Q and 4Q are congeners of the archetype of the MT. The LXX *Vorlage*, though belonging to a different textual tradition, is closely allied, and shares the expansionist or "full" attributes of the Proto-Masoretic tradition. See SAMARITAN PENTATEUCH[S] §2c; SEPTUAGINT[S] §A1e.

Cross's theory of local texts has been favorably received by some (e.g., Skehan), but sharply criticized by others (e.g., Goshen-Gottstein and Talmon). Cross was convinced that only geographical isolation could explain the facts, viz., the persistence over some centuries of several clearly distinct textual forms, some of which remained remarkably stable while others developed by way of expansions, i.e., harmonizing parallel passages and modernizing grammar and orthography. To this it may be objected that we know practically nothing about the literary vitality—or lack of it—in Babylonian Judaism during the period from Ezra to Hillel. Neither are we any better informed on any alleged literary competence in Hebrew on the part of Egyptian Jews of the same period. Again, while there are solid reasons for holding that the Greek translations of the Pentateuch and Chronicles were made in Egypt from Hebrew texts (which could have been recently imported), it is equally probable that the Greek translation of the Psalter was made in Palestine. As for the Greek version of Samuel and Kings, there is no difficulty in holding that it was brought from Palestine to Alexandria toward the beginning of the second century B.C. The same was true for the translation of Esther about the beginning of the following century. We cannot, therefore, automatically qualify as Egyptian every Hebrew *Vorlage* of a book of the LXX. A further objection is this: how is one to tell if two MSS belong to the same or to different text types? This is more or less a matter of personal judgment. Thus, Cross assigns to the same textual family the MT of Isaiah, the two Isaiah scrolls from 1Q, and the fifteen fragmentary scrolls from 4Q—though he holds that, in the case of the Pentateuch, three types of text are represented at Qumran. Talmon's opinion is exactly the opposite. He holds that, in the Hebrew tradition of the Pentateuch at Qumran, we can observe the same relative textual compactness and the same relative sparseness of variant readings which have already been pointed out in the LXX Pentateuch. On the other hand, he continues, the extant copies of the book of Isaiah

and, above all, the complete IQIs<sup>a</sup> present us with a great richness of variant readings. Besides, even if agreement were reached on this point, it would seem strange that the same Egyptian environment should lead to diametrically opposite results, i.e., a short and primitive text form in the case of Jeremiah, and a full and conflated text—as Cross puts it—for most of the other books of the Bible. Finally, the most weighty objection to the theory of local texts arises from the content of the Qumran library itself. There, in A.D. 68 (when the settlement was destroyed by Vespasian's armies), we have the library of a community that spiritually was closely knit, since, in all probability, it formed the central monastery of the Essenes. Now, side by side in that library, we have the two textual traditions that are consistently divergent, those of Jeremiah; and—what is still more striking—they had co-existed there for nearly two centuries, since the Proto-Masoretic tradition is represented by a MS copied in the Hasmonean period. Realizing this difficulty, Cross supposed that this MS must have been copied in Egypt and only later introduced into Qumran. See also DEAD SEA SCROLLS[S] §4.

ii. *Precanonical fluidity*. The problem must, however, be posed on a broader basis. It is not simply a matter of different text forms, but a matter of a plurality of redactional traditions. Why, in fact, when comparing the Hebrew *Vorlage* of the LXX version of Jeremiah with the Proto-MT, should we imagine that the first must be an abbreviation of the second or, alternatively, the second an expansion of the first? Actually, as Tov points out, the differences between the MT and the LXX in the case of Jeremiah are more striking than would be expected of two text types. First, the two texts diverge broadly in their arrangement of material. Second, both in prose and in poetic sections the MT expansions contain many authentic elements and numerous Deuteronomic additions. It is therefore more accurate to say that the MT and the LXX are witnesses to two distinct, though related, redactional traditions. We must conclude, then, that the two forms of the book of Jeremiah came into being during a precanonical period marked by redactional fluidity. This in no way prevented both of them being used as sacred Scripture at Qumran. This again will occasion no surprise if we recall that—even after the canon was fixed—parallel, though differing, accounts from Kings and Chronicles were read side by side in Pharisaic Judaism.

Furthermore—a point that emerges clearly only in recent studies—we must not impose a post-canonical conception of Scripture on the Qumran community. It appears likely that both their sacred library as a whole and the literary structure of certain of its books were still in a state of openness. This does not mean, however, that all was uncertain, with no distinction between the Word of God and the literary creations of men. The canonization of the Pentateuch was already a thing of the past (see CANON OF THE OT §2 and supplementary article §§1, 4a). The prophetic writings, too, were read as the Word of God (see CANON OF THE OT §3 and supplementary article §2b).

However, they had no more reason for eliminating one of the two recensions of Jeremiah than had the early Christians for eliminating three out of the four versions of the gospel of Jesus Christ.

As regards the Psalms, it was their firm belief that David had composed under inspiration 3,600 psalms and 450 canticles (11QPs<sup>a</sup>, col. 27). J. A. Sanders is probably correct in maintaining that the various Qumran Psalters—whether normal in order and content, or with a special sequence (4QPs<sup>a,b,d</sup>), or including apocryphal psalms (4QPs<sup>f</sup>, 11QPs<sup>a</sup>)—were all read as Holy Scripture. It is surely an anachronism to consider these Psalters as just “library editions,” or as the earliest examples of Jewish prayer books. Rather, there were two types of MSS at Qumran: one in which the collection of 150 psalms was fixed in structure and content; the other in which, so to speak, it continued to put forth new shoots. On the one hand there was a nucleus—the major part of the collection—firmly embedded in all the MSS, which became the object of the community’s *Pesharim* (see DEAD SEA SCROLLS §5a). On the other hand certain MSS presented a collection that was still open-ended. Somewhat the same can be said about the status of the *Kethûbhîm* as a whole (see CANON OF THE OT §4). Together with David’s poems, Solomon’s wisdom writings were certainly used as Scripture, but what were the precise limits of this collection? There is every reason for thinking that the eleven copies of Jubilees and the ten of Enoch were regarded as bearers of divine revelation to a higher degree than Ezra and Chronicles (one copy of each) or Esther (not represented at all). And what of Tobit, with its four Aramaic and one Hebrew MSS? Who can say? The fact that this book was incorporated into the codices of the LXX makes it probable, though not certain, that the Semitic texts were regarded as Scripture at Qumran. Ecclesiasticus, too, was well known at Qumran. Several rabbis of the Talmudic era were to quote it as Scripture. How sacred was this book considered by the community of the new covenant? Whatever the answer, they must surely have considered even more sacred the Rule of the Community, known from fourteen copies (see DEAD SEA SCROLLS §5b). Apropos of this document—and the same can be said of the ten copies of the Damascus Document (see ZADOKITE FRAGMENTS), the seven copies of the *Hodayoth* (see DEAD SEA SCROLLS §5d), and the seven of the War Scroll (see DEAD SEA SCROLLS §5c)—could we not speak of a “reopening” of the canon, analogous to that which took place with the early Christian community? Still, this would be an anachronism in both instances, for we cannot speak formally of a closing of the canon, or even of a canon itself (i.e., a closed list of sacred books) in Judaism prior to the end of the first century A.D.

It would seem, therefore, that the Qumran MSS reflect a list of sacred writings that was still open, i.e., where some books have a well-established and time-honored place, while others—especially from the Apoc. and Pseudep.—were admitted only after their supposed authenticity was accepted by the community. It is altogether likely that certain books remained in a marginal position,

as *antilegomena*. Some would have used them as sacred, while others doubted their authenticity. It was likewise to be expected that certain collections, such as the Psalms of David, would remain open; some added certain poems, others excluded them. In any event, it would be a serious misconception to limit the significance of the Qumran library to the question of the history of the biblical text. Rather, this question is part of a larger problem—that of the prehistory of the canon of sacred Scripture—and its true meaning can be appreciated only in this context.

Viewed in this light, the theory of local texts appears much too narrow. The same physical laws do not apply to liquid lava and to the crystalline rocks which it produces on solidifying. The history of the text begins only when a definite literary structure emerges in solid form. In fact, it can be said that the whole process of crystallizing the OT text involves four successive phases. First comes the assured conviction that a certain book is sacred Scripture. This conviction, in turn, leads with greater or less rapidity to a literary crystallizing of the book into one or more traditions, in which no more deliberate redactional additions are permitted. Once assured from the literary angle, the book will then be transmitted by copyists of varying caliber. In the process the text would undergo corruption to a greater or lesser extent, whether by slips in writing, conjectural emendations, harmonizations, concealed theological corrections (see TEXT, OT §A3; EMENDATIONS OF THE SCRIBES[S]; QERE-KETHIBH[S]), or by modernization in orthography and grammar. Finally, the community which regards the text as sacred would endeavor to counteract this corruption by a fresh attempt at stabilizing the text. In line with the requirements of Hebrew writing, this attempt would proceed by two stages: first, a fixing of the consonantal text, and second, the invention of supplementary signs to ensure correct reading.

*b. Unification of the consonantal text.* i. *Learned preference for archaic text forms.* Just as widely divergent literary traditions of the same book (e.g., Jeremiah) are represented at Qumran, so too, we find there several textual forms of the same literary tradition (e.g., the Pentateuch or Isaiah). Roberts (see TEXT, OT §A1) has pointed out that the principal contribution of the Qumran discoveries to the history of the text does not consist in the great number of readings that diverge from the MT. Rather, as comparison of IQIs<sup>a</sup> with IQIs<sup>b</sup> shows, the major contribution was to show that, alongside popular texts marked by manifold corruptions, there existed some carefully executed MSS. They were restrained and conservative in orthography, and their scribes had scrupulously preserved difficult readings which other MSS had altered or eliminated and incongruities which others had smoothed over. To be sure, the value set at Qumran on a conservative MS such as IQIs<sup>b</sup> was not so high as to necessitate the correction or elimination of IQIs<sup>a</sup>, which was hidden away in the same cave as a treasure of equal value. Yet it is important to remember that IQIs<sup>b</sup> is 100 years (Avigad) or 150 years (Birnbaum) more recent than IQIs<sup>a</sup>. This shows that

at the end of the Herodian period some scribes continued to reproduce an archaic and difficult text (IQIs<sup>b</sup>) in preference to one that was easier, more developed, and replete with *matres lectionis*. See TEXT, OT §4b.

Although IQIs<sup>b</sup> already exhibits those characteristic readings which the MT of Isaiah would reproduce and therefore fits exactly into the pre-Masoretic line of descent, it would not do to call it Proto-Masoretic, since it does not yet have those distinctive features of consonantal script which are the hallmarks of the MT. It is not surprising that scholarly texts of this kind, recent as regards copying but ancient in respect to their prototypes, should be somewhat rare at Qumran. An analogous situation exists for the biblical fragments of the Cairo Genizah. There we have an abundance of copies made with little care, or pretentious in appearance but poor in quality, while exemplars executed with genuine skill and carefulness are a small minority. See TEXT, OT §A5.

ii. *The Proto-MT*. Turning now to the caves of the Second Revolt, those of the Wadi Murabba'at and of Nahal Hever, we find that the only biblical text represented there is one which truly deserves the name Proto-Masoretic (see TEXT, OT §A1b; MANUSCRIPTS FROM THE JUDEAN DESERT[S] §2). It was for this reason that its discovery aroused so little interest in those who published the fragments. They were content to remark briefly, and somewhat disappointedly, "the text and the spelling are identical with the MT." Yet in reality this was one of the most significant contributions made by the discoveries in the desert of Judea. In the year A.D. 68, archaic and carefully executed biblical texts occupied only a small place in the library of the community of the New Covenant. Yet it was a text of this type that ousted all other text forms and became the Holy Scripture of the refugees of Wadi Murabba'at and Nahal Hever. The same text furnished the consonantal basis for the work of the Masoretes 750 years later.

In spite of some persistent peculiarities of script, the fragments from the Second Revolt exhibit those rare orthographic features and accidental changes that unquestionably identify them with the consonantal text attested by the Masoretes. For example, in the Psalms fragment from the Cave of Letters, we have the defective script *ymr* for the imperfect indicative *Hiph'il* of the verb *mwr* (Ps. 15:4)—a form which the *Masora parva* was to deem worthy of preservation by noting its unique character. In the fragments of the scroll of the minor prophets from Murabba'at, we find instances of the first-person singular imperfect *Hiph'il* of the verb *bw'*. Now the final 'aleph is present in Zeph. 3:20 as in the MT, while it is wanting in Mic. 1:15, a point confirmed by the *Masora parva* (see TEXT, OT §4a). With regard to *matres lectionis*, it can be established that these MSS were revised so as to conform to a particular prototype. For instance, in another fragment from Murabba'at, the word *'htnw* in Gen. 34:31 is corrected to *'hwtnw* (as in MT). In turn, the *Masora parva* will note this *scriptio plena* as a *hapax*. So, too, in the scroll of the minor prophets

from the same locality, the corrector adds a *yōdh* at Amos 9:8 to give *hšmyd*, *scriptio plena* of the infinitive absolute *Hiph'il*—once again noted subsequently by the *Masora parva* as a *hapax*. In conclusion, all the scribal corrections in the biblical MSS from the caves of the Second Jewish War serve to bring the text closer to the consonantal *Vorlage* of the MT.

Though they have left us no treatise or marginal glosses explaining their working principles, the men we see in action here are the real Proto-Masoretes, contemporary with Akiba (see TEXT, OT §A3b). Moreover, at this time (the Second Revolt), the successful labor of fixing the consonantal text had already gone beyond the limits of the biblical texts in synagogal usage. The alternation of *scriptio plena* and *scriptio defectiva* in the text of phylacteries had already been clearly determined. The Murabba'at phylactery text illustrates this as follows: *yby'k* (*scriptio plena*) in Exod. 13:5, and *scriptio defectiva* in Exod. 13:11; *twpt* (*scriptio plena*) in Exod. 13:16, contrasted with *scriptio defectiva* in Deut. 6:8; *mzwzwt* (*scriptio plena*) in Deut. 11:20, and *scriptio defectiva* in Deut. 6:9; *ydkh* in Exod. 13:16, and *scriptio defectiva* in Exod. 13:9 and Deut. 6:8. Reading these details of orthography is like having the MT before one's eyes.

iii. *The process of fixing the consonantal text*. The existence of IQIs<sup>b</sup> proves that toward the close of the Herodian era certain qualified scribes were disseminating an archaic text of the kind that would soon be retained by those who finally fixed the consonantal text. So, too, the Greek fragments of the minor prophets found in one of the Nahal Hever caves show that in the first decades of the Christian era certain editors of the Pharisaic tradition were revising the LXX to bring it also into conformity with a text of the type later accepted as the standard consonantal text (see GREEK VERSIONS, MINOR[S]). There is no proof that a parallel work of recension took place in the same milieu for the Hebrew text of the Bible. It is probable, however, that before the Second Revolt a vigorous reaction against the current corruption of the Hebrew text had already commenced in Pharisaic circles. Nonetheless, it was the catastrophe of A.D. 70 that had the most decisive effect on the work of standardizing the text. This was but one of the many measures of conservation and defense that were then adopted to save Judaism.

By "text" should we understand a textual family, or a MS? The answer to this question may be found by comparing IQIs<sup>b</sup> with the biblical fragments or phylacteries of the Second Revolt. IQIs<sup>b</sup> belongs to the same textual family as the consonantal MT, but is not its direct ancestor, for the latter differs in certain textual options and accidental orthographic variants of long standing. On the other hand, the MSS and phylacteries of the Second Revolt, especially in their scribal corrections, show distinctive peculiarities of script—*plena* or *defectiva* of unusual type and other abnormalities—so distinctive that they betray a conscious effort to disseminate the text of a particular MS. Thus textual standardization must

have been effected principally by careful copying of one text chosen as normative. Together with this there surely went the task of correcting existing MSS. A certain number not considered worth correcting must have been consigned to the genizah. For another perspective, see QERE-KETHIBH[S] §8d.

**2. Standardizing punctuation and Masora.** We may be sure that even before the Second Revolt the scribes were not satisfied merely with reproducing a text regarded as normative. They also orally transmitted *šimānim*, i.e., easily remembered catchwords, to denote certain orthographic details of the text. For example, Jehudah ben Bathirah, who taught at Nisibis in Upper Mesopotamia and died ca. A.D. 90, used the *šimān mym* (water) to indicate distinctive features of the text of Num. 29:12-38, which details the sacrifices offered during the eight days of the Feast of Booths. Cf. Sifre Numbers.

**a. The Babylonian school.** It was surely not by chance that the earliest Masorete whose name has come down to us (*above*) lived in Babylonia. If Babylonia followed Palestinian norms for establishing the standard text of the Pentateuch, it maintained somewhat different traditions for the text of the Prophets and the Writings. For these books, and for them alone, there exist traditional lists of variants that distinguish the Babylonian consonantal text from that of Palestine. This is due to the fact that Babylonia very quickly developed a Masoretic activity that was relatively autonomous. Indeed, the Babylonians did not confine their activities to establishing, by their Masora, a standard biblical text. They revised according to the Hebrew the prolix and disordered Palestinian Targums, and, by means of a special Masora, fixed the text of the so-called Targ. of Onkelos; this, too, was read in the liturgy. The interpretative material attached to the MT—the two Masoroth, together with vocalization and accentuation—was transmitted orally for a long time. It was in fact—as in principle it still is today—forbidden to add the least sign to the consonantal text of the Torah scrolls used in synagogue worship. Hence the scribe had to look outside the text for the information necessary to evaluate its authenticity, and so did the reader. This included matters of vocalization, rhythm, and modulation. The first edition of the Masora in Babylon took the form of running commentaries which followed the text word by word without being incorporated into it. Fragments of these commentaries for the Pentateuch and for the Prophets have come to light. It seems unlikely that such commentaries existed for the Writings, which were not read in the sabbath liturgy. The fact that these commentaries cite the opening word of each verse—whereas the synagogue scrolls do not indicate where the verse begins—tends to show that they were designed to help not only the scribe but also the synagogue lector. At all events, it was for purposes of synagogal reading that the *serûgin* were composed; i.e., for each verse, only the first word was written completely, followed by each letter in the rest of the verse that had a disjunctive accent (see MASORETIC ACCENTS). A

restrained MNEMONIC DEVICE of this kind, designed to teach the traditional modulation used in synagogal reading, presupposes that the vocalization of the text has been committed to memory. From the fourth century A.D., Syrian Christians, in order to distinguish words written with the same consonants, began to employ a point above or below a characteristic letter to denote strong or weak vocalization, e.g., to distinguish the first syllable of a *qâtel* from that of a *qetal* (see SYRIAC VERSIONS[S] §1g). This rather primitive system was further developed about the seventh century by the eastern Nestorian Syrians, who invented a system of indicating vowels by points above or below the consonants. In the next century, the western Jacobite Syrians worked out another system, substituting Greek vowels for points. At the same time or a little later, and very probably under Syrian influence, the Jews of Babylon invented a system of vocalization and accentuation composed of letters or parts of letters and of points placed above the consonants. In Palestine the most ancient Masoroth witness to the use of points both above and below, in a way that seems virtually identical with that followed by the ancient Syrians (see HEBREW LANGUAGE §4; TEXT, OT §A4b). The presence of such signs on the liturgical scrolls of the Torah and the *Haphtaroth* (synagogal readings from the Prophets) was forbidden, and yet the need was felt for writing down the authentic vocalization of the biblical text. The solution adopted in Babylon was to copy the biblical books on codices. In them the biblical text could be vocalized and accented, for they were not destined for liturgical use. Certain of these volumes, particularly those containing the Writings, had complementary Masoretic notes written in small characters above certain words, indicating peculiarities of script which might cause trouble to copyists. At the foot of various pages other Masoretic notes supplied statistical information. See MASORA.

**b. The Palestinian school.** At the same time or a little later, a complex and poorly organized system of vocalization developed in Palestine (see TEXT, OT §A4b; HEBREW LANGUAGE §4). In spite of recent intensive studies, the greatest uncertainty still prevails today regarding the relative and absolute dating of the subgroups of this system. Dietrich, with most of the writers who preceded him, held that this system antedated the Tiberian and evolved from a stage in which not all phonemes were differentiated to one in which they were differentiated. Revell, however, holds that the dialect attested by this vocalic system is more advanced than that represented by the Tiberian.

It is certain in any event that this system, like that of Tiberias, is linked to a type of Masora clearly distinct from that which circulated in Babylon. In essence this Masora is composed of extensive lists detailing all the occurrences of a rare phenomenon in the whole Bible or in one of its parts. The collection *Ochlah we Ochlah* codifies the principal data gathered by the Masorettes of Palestine. Frequently this data is not repeated in the Masora of the MSS. Hence the

collection remains indispensable, inasmuch as it furnishes the key to the intentions of those who vocalized the MSS.

*c. Supremacy of the school at Tiberias.* It was at Tiberias that the most complete and exact system of vocalization was established (see TEXT, OT §A4b; HEBREW LANGUAGE §4). Of the material that has survived, the oldest dated biblical MS is the codex of the Prophets from the Karaite synagogue of Cairo. This was copied and provided with vowel points and Masora in 896 by Moshe ben Asher, whose son Aaron later pointed and supplied with Masora the celebrated Aleppo Codex, containing the whole Bible. The great renown of this MS is due to the fact that it was probably the only complete MS of the Bible produced by this Masorete. Maimonides referred to it as the normative form of the MT. See TEXT, OT §A6.

The rediscovery of the Aleppo Codex has made it clear that MS B19a from Leningrad—chosen by Kahle as basic text for the third edition of Kittel's *Biblia Hebraica* (see TEXT, OT §A7c), and retained for the *Biblia Hebraica Stuttgartensia*—cannot be regarded as a pure witness to the tradition of Aaron ben Asher. Noteworthy discrepancies exist between the Masora of this MS and its text. Its vocalization, in the state in which it was in A.D. 1008, is some distance removed from the norms laid down by Aaron ben Asher. The gap was bridged only by later correctors. Nevertheless, it must not be imagined that the Aleppo Codex itself is a perfect example of the tradition of Aaron ben Asher, as codified by Mishael ben 'Uzziel, or again, of the Masoretic tradition formulated in Aaron's *Diqduqê ha-Te'amim*. These discrepancies led Dotan to question the accepted view that Aaron was responsible for the Aleppo Codex. The authentic form of the text of Aaron ben Asher, then, still awaits precise identification.

Perhaps it should be said that there has never existed a complete MS of the Bible that presented an entirely unified Masoretic tradition. The best fruits of the systematic work of the great Tiberian Masoretes are the well-integrated editions of portions of Scripture, e.g., the Cairo Codex of the Prophets, or the British Museum Codex Or 4445 of the Pentateuch. Very likely the Aleppo Codex represents a final, though imperfect, attempt to bring together all these partial undertakings, by providing the whole Bible with a Masora and a consistent vocalic system. It must also be noted that the accepted criteria for distinguishing authentic Ben Asher Masoretic material are not completely reliable. Scholars still argue about the original form of the *Diqduqê ha-Te'amim*. As for the list of agreements and disagreements between ben Asher and ben Naphtali drawn up by Mishael ben 'Uzziel, it is very probable—according to Harkavy, Poznanski, Steinschneider, and Mann—that its author lived in the second half of the twelfth century. It is certain that an earlier list of this kind, now lost, was composed by the Karaite Levi ben al-Hassan ben Ali al-Başrî during the first half of the eleventh century. Furthermore, Mishael ben 'Uzziel specifies on several occasions that the two Masoretes changed

their positions on certain points in the course of their careers. This explains why a particular work of Aaron ben Asher does not correspond in every respect with a list which is, perhaps, not a firsthand work, and which could be based on other writings of the same Aaron. See TEXT, OT §A6.

According to Jacob ben Ephraim, about the beginning of the tenth century the Babylonian tradition governing the correct reading of the biblical text prevailed from the borders of China to the mouth of the Euphrates and down to Yemen, while the Palestinian tradition was much less widespread. However, Jacob's contemporary, who relates his testimony—Abu Yusuf Ya'qûb al-Qirqisâni—states that educated Jews of all areas were at one in holding that only the Palestinian scholars had maintained in its purity the authentic pronunciation of biblical Hebrew.

How are we to define the relation between the Palestinian vocalic system and that of Tiberias? Kahle held that the Palestinian system was obviously more ancient, while Revell concluded that the Tiberian system clearly represented a more pristine state of the language. We may concede that the Palestinian system represents the pronunciation current among Palestinian rabbis of the period. On the other hand, there are good reasons for believing that the Tiberian system was invented by the Masoretes and grammarians of Tiberias.

The authors of the lists of disagreements mention as of equal standing Abu Sa'id Aaron ben Moshe ben Asher, and Abu Imrân Moshe ben David ben Naphtali. The differences that separate these two, though extensive, are slight and hardly ever change the interpretation of the text. We know nothing certain of the religious affiliations of ben Naphtali. As regards the ben Asher family, immediately following the rediscovery of the Aleppo Codex, Ben-Zvi tried to show that they were not Karaites; however, recent discoveries by Allony and Yeivin seem to have weighed the balance decisively in favor of the contrary position. Be this as it may, it is certain that it was the Karaites who drew up the lists of agreements and divergencies between the Masoretes of Tiberias. It is also certain that the majority of Jewish scholars soon acknowledged the superiority of those MSS, prototypes of the MT, of which these Karaites were guardians. The Tiberian MT won acceptance as the most accurate and scholarly edition of the consonantal text that had been fixed about the end of the first century A.D., an edition, moreover, which included the most faithful notation of that traditional pronunciation of the text judged most authentic by the learned Jews of the ninth century.

*d. Survival of other types.* The Tiberian tradition did not entirely supplant its rivals. Yemen has maintained down to the present day the Babylonian vocalic notation, though in reality, under this outward form a Tiberian type of vocalization has gradually crept in. In northern Europe ancient MSS may be encountered which use signs of a Tiberian type to clothe a non-Tiberian phonetic system. Kahle ascribed these MSS to the tradition of ben Naphtali. Morag has

proved that it is actually a case of the persistence of Palestinian phonetic in Tiberian dress.

D. BARTHELEMY

\***TEXT, NT. 1. Sources.** The most recent information about sources is contained in the official list prepared by Aland in 1963, and regularly brought up to date (see *bibliog.*). For every known document this list contains the officially assigned num-

ber, its content, date, material (papyrus, parchment, or paper), number of pages, the number of columns per page, number of lines, its format, and the library where it is preserved. Presently the number of direct witnesses of the Greek text known to us is roughly the following: 86 papyri, 269 uncials, 2,795 minuscules, and 2,207 lectionaries, for a total of 5,357. Actually the true number of witnesses is about 200 less, since some MS fragments preserved in different libraries and designated by different numbers are really a single MS. Of these 5,000-odd witnesses, only 59 contain the whole NT (or once contained it, since some are fragmentary). The major part of the codices contain only a part of the NT, the four gospels, for example.

**a. Papyri.** Among the more important papyri recently published are:

(i) P<sup>72</sup> (Cologny-Geneva, Bodmer Library, Papyri Bodmer VII-VIII) contains the letter of Jude and I and II Peter. It has been dated to the third or fourth century, and was published by M. Testuz in 1959.

(ii) P<sup>75</sup> (Cologny-Geneva, Bodmer Library, Papyri Bodmer XIV-XV) contains much of Luke and John, and was written at the beginning of the third century. Its great importance is in demonstrating the antiquity of the text type contained in Codex Vaticanus B (fourth century). It was published by V. Martin and R. Kasser in 1961.

**b. Uncials.** The tendency of some recent critics to assign a much earlier date to codex D (05) (Bezae) and D<sup>p</sup> (06) (Claramontanus) is noteworthy. The first possibly dates from the fourth century according to E. A. Lowe and H. J. Frede, and the same authors assign the second with certainty to the fifth century.

**2. Printed text of the NT.** Among recent minor critical editions of the NT, *The Greek NT* (1st ed., 1966) is worthy of note. It presents a critical text prepared by a committee of scholars (presently K. Aland, M. Black, C. M. Martini, B. M. Metzger, A. Wikgren) with a critical apparatus of variants selected for their significance for meaning. For each variant all the representative evidence is listed. A commentary on these variants has been prepared by Metzger.

The International Greek NT Project is still at work on the Gospel of Luke. Another project of *editio critica maior* has in the meantime been undertaken by Aland, Duplacy, and Fischer, who are preparing material on the Catholic epistles.

**3. Theory and method.** Developments in research since von Soden concern especially the Western text, the Caesarean text, and the Alexandrian and proto-Alexandrian text.

**a. The Western text.** Von Soden grouped a series of MSS of various origins under his type I (Jerusalem). It soon became clear that it was impossible to study them together, but that it was necessary to distinguish two groups of variants. One group, found especially in codex D (Bezae), was given the name "Western." The other, found in P<sup>45</sup> and many later MSS (in particular in codex Θ [Koridethi]), had a different origin and history, and was given the name "Caesarean."

Studies of the Western text have not as yet succeeded in discovering the precise origin and

development of this text type. B. H. Streeter considered it a local text; Blass suggested that it derived from two different editions of Luke-Acts produced by the original author; J. R. Harris and D. Ploij proposed its derivation (for the gospels) from an ancient gospel harmony, while Epp sought to demonstrate that many of the variants of D in Acts are due to an anti-Judaizing tendency.

Among recent hypotheses it is helpful to recall that of E. Haenchen, who claims to have distinguished several strata in the text of codex D of Acts.

There are, as a matter of fact, many minor variants which seem to be conscious corrections meant to improve the text: e.g., indicating more clearly the subject and object of a clause, expanding the expression, etc. These might be the result of a very ancient revision of the text; they appear also in the gospels, especially in Matthew and Mark, and are documented by Tatian, Justin, Irenaeus, etc.

Other variants appear due to a very diligent reader of the text, who still knew well the situation and traditions of the ancient church. For example, in Acts 3:11 D clarifies that Peter and John leave the temple (understood as the interior part of the sacred precinct) to go to Solomon's gate; in Acts 16:30 D adds the detail that after the earthquake the prisoners who were with Paul and Silas were returned to prison, etc. Haenchen suggests that likewise some "Western noninterpolations" (omissions characteristic of the Western text which Westcott and Hort considered original) belong to this type of variant.

Finally, there are in D (but without support in Syr. or the Fathers) variants which on close examination appear to be either scribal errors or the result of influence of the Latin on the Greek text. Haenchen tends thus to interpret certain expressions characteristic of D which others explain as "Aramaisms." The problem is far from solution.

**b. The Caesarean text.** It was stated above (§3a) that many MSS which von Soden put under group I actually had origins quite different from those of the Western text. The text type evidenced by these readings came, by the 1920s, to be called the Caesarean text.

Already in the nineteenth century W. H. Ferrar had noted the affinity of certain minuscules (13, 69, 124, 346). At the turn of the century K. Lake discovered another group of related MSS (1, 118, 131, 209). After the text of codex Θ (ninth century) became known in 1913, and that of W (fifth century) in 1912 and 1918, Lake and R. P. Blake noted the similarity of text in all these codices. Streeter demonstrated the relation between this text type and that used by Origen and Eusebius, thus tracing its origin to the church of Caesarea in the third century.

After the publication of P<sup>45</sup>, readings subsequently assumed by the Caesarean text were recognized in it. Accordingly, Ayuso proposed a distinction between a "pre-Caesarean" text (found in P<sup>45</sup>, W in Mark 5:31-16:20, family 1, family 13) originating probably in Egypt, and perhaps carried to Caesarea by Origen, and a recensional Caesarean

form (found in 565, 700, as well as Origen and Eusebius).

These studies, carried out so far only on portions of the Gospel of Mark, must be extended and deepened. The existence of a Caesarean text as a text type really distinct from all the others and clearly defined awaits the confirmation of further research.

**c. The Alexandrian and proto-Alexandrian text.** Since von Soden it had become customary to call the text type principally represented by codices Vaticanus B and Sinaiticus the Hesychian recension. Many held that this text type represented the result of a recension at the beginning of the fourth century by Greek scholars in Alexandria, an important center of exegetical activity. But a comparison of B, written toward the mid-fourth century, with P<sup>75</sup>, written around the beginning of the third century, and published in 1961, has shown that, at least for the gospels of Luke and John, nearly all the characteristic readings of B, in particular those considered the result of learned recension, were already present in P<sup>75</sup>, and probably also in the common tradition earlier than P<sup>75</sup> and B. Thus the text at the basis of P<sup>75</sup> and B could be called "proto-Alexandrian," leaving the name "Alexandrian" for the text found in L, T, 33, and others. It is not denied that the proto-Alexandrian text underwent the influence of some recensional setting, such as Alexandria: that is apparent especially in its aversion to long readings, and for whatever gives suspicion of a gloss of the text—an aversion which could have led in some cases to dropping some traditional reading. But on the whole the proto-Alexandrian text claims a very ancient tradition, which, while it is not exempt from errors and some conscious emendations, has been transmitted by scribes with care and respect for the text.

**4. Conclusion.** From what has been said, it should be obvious that textual criticism of the NT cannot yet claim to have achieved a clear and detailed history of the text. That does not mean, however, that the critic should indulge in a certain skepticism and be content with an eclectic method which would choose from here or there the proper reading, without averting to the MSS from which it comes, nor to the textual types to which it could be reduced.

There are some facts of the history of the text which seem beyond dispute. It is clear, for example, that the distinctive readings of the Byzantine text are usually secondary. On the other hand, proto-Alexandrian readings cannot be definitively considered recensional; on the contrary, in many cases they have a solid probability of representing a reading current in the second century. Further, systematic study of the character of the typically Western and Caesarean readings in ternary variants seems to show consistently that the Western reading is usually inferior to the alternative reading, and suspect of emendation, while the Caesarean reading (which really offers a genuine alternative only rarely) often appears to be an attempt to emend the text or at least to reconcile earlier readings. A reading that upon examination of the witnesses can be defined as *not* Western, *not*

Caesarean, not Byzantine (it was in this negative sense that Westcott and Hort spoke of "neutral" readings) usually appears, to internal criticism as well, closer to the original reading than the alternative readings. Even if these criteria do not offer a general solution for all the problems of the text, they are nonetheless to be kept in mind if the goal is a considered reconstruction of the original which takes into account our present knowledge of the history of the textual tradition. See also TEXTUAL CRITICISM, NT[S]; VERSIONS, ANCIENT; LATIN VERSIONS[S].

**Bibliography.** Information on current problems of textual criticism is published regularly by J. Duplacy in "Bulletin de critique textuelle du NT"; from 1962 to 1966 in *Recherches de science religieuse*, then in *Biblica* since 1968. For the earlier years, see J. Duplacy, *Où en est la critique textuelle du NT?* (1959).

**TEXTUAL CRITICISM, OT.** The work of determining the Hebrew or Aramaic biblical text in its earliest attested form; that is, the form best supported by Hebrew MSS and ancient versions as evaluated by proven principles. Textual criticism is sometimes called LOWER CRITICISM, in contrast to higher criticism, which deals with the date, unity, and authorship of the biblical writings.

1. Materials and aids. *a. Hebrew and Aramaic biblical texts.* i. *Pre-Masoretic.* The discovery of ancient MSS in the Judean Desert has changed the picture of OT textual criticism. Fragments of every OT book except Esther have been discovered near Qumran, ranging in date from the third century B.C. to the first century A.D. (see DEAD SEA SCROLLS and supplementary article). Many of these texts support the traditional MT, but some support the LXX, particularly in the books of Samuel and Jeremiah. Thus the validity and antiquity of both these textual traditions have been affirmed. See SEPTUAGINT[S]; TEXT, HEBREW, HISTORY OF[S] §1.

ii. *Masoretic.* The Masoretes (ca. A.D. 500-1200) tried to ensure the correct understanding and transmission of the text by developing systems for writing vowels, by compiling statistics about the occurrence of various phenomena in the text, and by notes on the text. See TEXT, OT §A4; TEXT, HEBREW, HISTORY OF[S] §2; MASORETIC ACCENTS; QERE-KETHIBH[S].

The work of the Masoretes has important implications for textual criticism. (a) The vocalization of the text is usually that implied in the ancient versions, but sometimes the versions imply another vocalization. For example, in Isa. 7:11 the MT vocalization is *sh'ald* (ask) but Targ., Peshitta (the Peshitta Syriac), Vulg., and the Greek translations of Aquila, Symmachus, and Theodotion all imply a vocalization *sh'old* (to Sheol) which fits the context better and is followed by RSV, NEB, and NAB.

(b) Over a thousand times the Masoretes have one reading in the text (the *kethibh*, "written") and another reading in the margin (the *qere*, "to be read"). In effect the *kethibh* and the *qere* give two variant readings, between which the textual critic must choose. See QERE-KETHIBH[S].

(c) The Masoretes also collected a list of eighteen places (called *Tiqqune Sopherim*) where

the scribes were said to have changed the text, mostly to avoid dishonoring God. See EMENDATIONS OF THE SCRIBES[S]; QERE-KETHIBH[S] §2.

(d) Sometimes the scribes wrote letters in peculiar ways to call attention to textual changes or problems. In Judg. 18:30 the scribes inserted a raised *n* to make the name "Manasseh" (*mñsh*) where the original was certainly "Moses" (*mšh*), attested by the LXX and the Vulg., followed by RSV, NEB, and NAB. The scribes evidently thought it demeaning to Moses to write that the idolatrous Jonathan was his grandson.

(e) The Masoretes noted places where material not written was to be added in reading. For example, in Jer. 31:38 the standard MT has "behold the days," but the marginal note indicates that "are coming" is to be added in reading. This addition is in the text of some Hebrew MSS and in LXX, Targ., Peshitta, Vulg., followed by RSV, NEB, and NAB. Conversely, places were noted where material written was not to be read, e.g., in Ezek. 48:16, where the MT has "five five hundred," the Masoretic note indicates that the second "five" is not to be read. LXX, Peshitta, Targ., Vulg., RSV, NAB, and NEB also omit this second "five," which is a dittography. See §4viii below; QERE-KETHIBH[S] §3c.

(f) In 350 cases Masoretic margins have variants called *sebirin*, "conjectures," and in some cases these variants are clearly right, as in I Sam. 12:5 where the standard MT has "and he said, 'He is witness,'" but the *sebir* reads "and they said, 'He is witness.'" This plural reading is supported by the context, some Hebrew MSS, LXX, Targ., Peshitta, Vulg., and is reflected in RSV, NEB, and NAB. See TEXT, OT §A3a(f).

The work of Masoretes in establishing and preserving a standard text was so effective that all medieval Hebrew MSS have essentially the same text. Most of the variants are minor and do not affect the meaning, and most of them can be explained as scribal errors or harmonizations. Some of the earliest Masoretic texts, some with Tiberian and some with Babylonian vowels, have been found in the Genizah, or storeroom, of the Ben-Ezra Synagogue in Old Cairo, Egypt (see TEXT, OT §A5). The oldest of these biblical fragments come from the sixth century A.D.

iii. *Printed texts.* Questions about the validity of some of the references to ancient versions and of many of the proposed emendations in *Biblia Hebraica* (1937) have led to a new edition, *Biblia Hebraica Stuttgartensia* (beginning in 1968). It also is based on Codex Leningradensis (A.D. 1008), but with revised and reduced textual notes. See TEXT, OT §A7c.

The Aleppo Codex, from the first half of the tenth century, was provided with vowels by Aaron ben Moshe ben Asher. Unfortunately, about one fourth of this MS has been destroyed. It is the main basis for the edition of the Hebrew University Bible Project (beginning with a sample of Isaiah in 1965). This edition has references to readings of Hebrew MSS, ancient versions, and quotations in rabbinic literature.

b. *Samaritan Pentateuch.* The Samar. is really the Hebrew text of the Pentateuch written in

Samaritan script. It differs from the MT in about six thousand cases, most of them minor. Since the Samar. agrees with the LXX against the MT in about nineteen hundred places, it appears to be based on a recension similar in many cases to the Hebrew basis for the LXX. See SAMARITAN PENTATEUCH[S].

c. *Translations.* i. *Greek.* Since the translation of the Pentateuch goes back to the third century B.C. (the rest was completed by the second century B.C.), the LXX remains, even after the Qumran discoveries, the earliest complete witness to the OT text. It differs markedly from the MT in Samuel, Job, and especially in Jeremiah, where it is about one eighth shorter. Now some Qumran Hebrew fragments show that there was a Hebrew basis for the LXX in at least some of these large differences from the MT. See SEPTUAGINT[S].

Other ancient Greek translations include those by Aquila (very literal), by Symmachus, and by Theodotion. These translations survive only in quotations and fragments. See GREEK VERSIONS, MINOR[S].

ii. *Aramaic (Targs.).* Targ. Onkelos on the Pentateuch, going back in its present form to the second or third century A.D., is quite literal, except that it modifies anthropomorphisms. Targ. Neofiti and the Jerusalem Targs. of the Pentateuch are more expansionist. Targ. Jonathan covers the Former and Later Prophets and is more paraphrastic than Onkelos. There are later Targs. on the Writings, except for Ezra, Nehemiah, and Daniel. The Samaritans also made translations of the Pentateuch into their Aramaic dialect. See TARGUMS[S].

iii. *Syriac.* The most ancient Syriac translation, perhaps going back to the second century A.D., is called the Peshitta, meaning "simple." It follows the Hebrew quite closely, especially in the Pentateuch. There has also been some influence from the LXX. Later Syriac translations were based on the LXX. Paul of Tella's seventh-century version, the Syro-Hexapla, is important because it preserves Origen's editorial markings used in the Hexapla edition of the LXX. See SYRIAC VERSIONS[S] §1.

iv. *Latin.* The OL translations, beginning in the second century A.D., were based on the LXX. The surviving fragments of these translations differ according to geographical area and MS, but they are important witnesses to the LXX text before the time of the great fourth-century Greek MSS, Vaticanus and Sinaiticus.

Jerome's OT, known as the Vulgate (completed in 405), was supposed to be based on the Hebrew. This is largely true for the historical books, but in the prophets Jerome was much influenced by the OL, LXX, Aq., Symm., and Theod. For the Psalms Jerome made three translations, two from the LXX—the Roman Psalter and the Gallican Psalter (which is found in the Vulg.)—and one from the Hebrew. Therefore the Vulg. usually, but not always, represents the Hebrew text of the later fourth century. See LATIN VERSIONS[S] §2.

v. *Other ancient translations.* The other ancient translations are mostly translations of translations and are only occasionally valuable for textual criticism. See VERSIONS, ANCIENT §§5-11.

**d. Quotations.** Quotations may also witness to the OT text. The limitations are that quotations were often made from memory, not word for word, and that quotations were sometimes adapted to later forms of the biblical text as the quoting document was recopied. Deviations from the MT are found in quotations in the MISHNA, the Talmud, and the Midrashim (early Jewish commentaries; see MIDRASH[S]). Writings of Syriac, Greek, and Latin church Fathers also have quotations from the OT. The quotations of Jerome are especially important because he sometimes refers to the Hebrew text specifically and even transliterates it.

**2. Literary features and textual criticism. a. Parallels.** Some passages have parallels or almost exact duplicates, called deutero-graphs, elsewhere in the OT. Some noteworthy examples are II Sam. 22 and Ps. 18; II Kings 18:13-20:19 and Isa. 36-39; II Kings 24:18-25:21; 25:27-30; and Jer. 52; Ps. 14 and Ps. 53. A parallel can sometimes help to correct a text. For example, in Gen. 10:4, MT "Dodanim" can be corrected to "Rodanim" in the light of the parallel in I Chr. 1:7. Furthermore, at Gen. 10:4, Samar. and LXX (reflected in NEB and NAB) read "Rodanim." ך (r) and ך (d) were easily confused, and the Dodanim have not been identified in extrabiblical sources, whereas the Rodanim are the people of Rhodes. Yet parallels do not always justify complete harmonization, since each text has its own history. Scribes are likely to harmonize, and so disparate parallel texts are more likely to be original than identical ones.

**b. Parallelism in poetry.** Hebrew poetry is marked by parallelism between elements in one line with corresponding elements in the following line. In the MT of Isa. 60:19, the element "by day" in the first line has no corresponding parallel in the second line. A Qumran text (1QIs<sup>a</sup>) supplies the missing parallel, "by night," and it is also attested in LXX, OL, Targ., and followed by RSV, NEB, and NAB. See POETRY, HEBREW §C.

**c. Poetic meter.** Many scholars think that Hebrew poetic meter was based on certain patterns of accented syllables, such as three accents followed by a parallel line with two accents (3+2) or three accents followed by three accents (3+3). On the basis of meter some scholars wish to eliminate "to Cyrus" in Isa. 45:1, claiming that this overburdens the poetic line. But other scholars, using another method of counting accented syllables, find that "to Cyrus" fits the 3+3 meter which is used in the context together with 3+2. Since Hebrew rhythms are varied, meter should be used only to support other evidence in textual criticism, and not as decisive evidence when standing alone. See POETRY, HEBREW §D.

**d. Acrostics.** Some Hebrew poems have their lines beginning with the successive letters of the alphabet. The fact that the acrostic in Nah. 1:2-14 is mutilated and incomplete indicates that some textual corruption has taken place. The verses of Ps. 145 form an alphabetic acrostic, but the standard MT lacks a verse beginning with ך (n). A verse beginning with ך (n) is found in a Qumran Psalms scroll and in the margin of a medieval Hebrew MS (Kennicott 142), and is implied by LXX and Jerome's translation of the

Hebrew (followed by RSV, NEB, and NAB). See MNEMONIC DEVICES[S] §1.

**e. Characteristics of MSS and redactions.** The over-all carefulness or carelessness of a MS has a bearing on assessing the value of an individual reading of that MS. For example, the MT of the books of Samuel has suffered obvious corruption, and this must be taken into account in evaluating MT's readings in these books.

**3. Principles of OT textual criticism. a. Best Hebrew text, usually the MT, is basic.** Most scholars take the MT as a point of departure in textual criticism, because it is a complete, standard text which has been carefully copied. Sometimes the readings of the Qumran Hebrew MSS are shown by the context and by agreement with ancient versions to be superior to the MT, but the Qumran MSS are incomplete, and some were carelessly copied.

**b. Use of ancient versions.** The ancient versions can be used to correct errors in the MT. The age, quality, and relation to the Hebrew must be taken into consideration in weighing the value of the reading of a version. Its general tendency must be determined: whether it is usually accurate or full of errors, whether it is literal or paraphrastic, whether it is brief or expansionist, whether it preserves disharmonious readings or harmonizes. Since the LXX is the oldest translation, since it is in most books fairly literal, and since it is based on a Hebrew original (*Vorlage*), it is the most important version for textual criticism. The Targs. are also old and based on Hebrew, but they are paraphrastic and expansionist. The Peshitta to a greater extent and the Vulg. to a lesser extent are based on Hebrew, but they have both been influenced by the LXX. The Coptic and OL are old, but are based on the LXX and therefore are only indirect witnesses to the Hebrew text. The Arabic of Sa'adya is based on Hebrew of the tenth century A.D.

**c. Reading which explains other readings usually best.** In I Sam. 2:11, MT, Targ., Peshitta, Vulg. (followed by RSV, NEB, and NAB) state "Elkanah returned," and in a patriarchal society it would be understood that his wives went with him. To make this clear Codex Alexandrinus of the LXX says "they returned." Since the speaker in vss. 1-10 is Hannah, Codex Vaticanus of the LXX says "she returned." These latter two different readings seem to be derived from the more original MT reading.

**d. Shorter reading usually best.** The tendency of scribes is to add explanations or material from parallel passages, rather than to condense their material. For example, in Gen. 15:21 the reading of MT, Targs., Peshitta, Vulg. (followed by RSV and NAB) is "and the Girgashites," but LXX and Samar. add "and the Hivites," followed by NEB. The longer reading is probably an assimilation to such passages as Deut. 7:1, where the Hivites are included, and for this reason the shorter reading is probably better.

**e. More difficult reading usually best.** In Gen. 25:18, MT, Targs., and Peshitta read the more difficult plural "they dwelt," followed by RSV, NEB, and NAB. The easier reading, "he dwelt," is found in LXX and Vulg. The MT reading is

more difficult because of the singulars in vs. 17 and in the end of vs. 18, but the plural makes sense because it refers to the sons of Ishmael mentioned in vss. 12-16.

f. *Unassimilated, disharmonious reading usually best.* A scribe will often assimilate to a parallel passage or harmonize with data elsewhere. For example, in II Sam. 22:33, LXX, Peshitta, and Targ. support MT "my strong refuge" (followed by RSV), but the Lucianic LXX and Vulg. support the reading of the parallel Ps. 18:32 [H 33], "who girded me with strength" (followed by NEB and NAB). The MT probably has the correct (unassimilated) reading in the Samuel setting.

g. *Limited use of conjecture.* Many modern scholars accept a limited use of conjectural emendation when neither the Hebrew nor the ancient versions make good sense. Such conjectures should reflect good Hebrew usage and should be forms which could easily give rise by scribal error to the present Hebrew text. In Amos 6:12, MT reads *babb<sup>a</sup>qārīm*, "with oxen," but RSV, NEB, and NAB are based upon a conjectural emendation of the word division and of the vowels: *b<sup>a</sup>bhāqār yām*, "the sea with oxen." This emendation provides "sea" as a parallel to "rock" of the first line of the verse. The resultant collective singular, *bāqār*, "oxen," is usual, whereas the plural of MT is late and rare, only elsewhere in II Chr. 4:3; Neh. 10:36 [H 37]. Some scholars classify conjectural emendations, not under textual criticism, since they are not based on textual evidence, but under literary criticism.

h. *Comparative philology makes some conjecture unnecessary.* In Prov. 14:24, MT has *ʾośrām* usually translated "their riches." The LXX *panourgos*, "clever," makes a better parallelism with the following line, where the corresponding word is "folly." Following the meaning of the LXX, RSV assumes that MT is to be emended to *ʾormāthām*, "their wisdom"; and NAB assumes *ʾormā*, "resourcefulness." But NEB follows the MT without emendation and translates "insight," following the meaning of an Arabic cognate, *ʾathr*. Ugaritic cognates are especially useful because of the nearness of this language to biblical Hebrew in time, place, and linguistic affiliation. Such importations of new meanings for Hebrew roots must be done with restraint and caution.

4. *Scribal errors and their correction.* In the process of copying, scribes made mistakes of omission, addition, and of other changes unintentional and intentional. Some of these can be corrected by better Hebrew MSS or by the ancient versions.

a. *Unintentional errors.* i. *Incorrect word division.* According to the MT, Samar., and Aq., the last word of Gen. 49:19 and the first word of vs. 20 is *ʾaqēbh/mēʾāshēr*, "heel/From Asher." According to LXX, Targs., Peshitta, Vulg. (followed by RSV, NEB, and NAB), these words should be divided *ʾaqēbhām/ʾāshēr*, "their heels/Asher," which makes better sense and is surely correct. See TEXT, OT §D2b.

ii. *Transposition of letters and words (metathesis).* In Ps. 49:11 [H 12] MT, the Hexaplaric Hebrew in Greek letters, Aq., Symm., and Jerome's

translation of the Hebrew read *qirbām*, "their inward thought." On the other hand, LXX, Targ., Peshitta, and Vulg. read *qibhrām*, "their graves," which suits the context better. Evidently some scribe transposed *ḥ* (*b*) and *ṣ* (*r*), resulting in the faulty MT. In II Chr. 3:1, MT has the order *ʾasher hēqin bimqôm dāwīdh*, "which he had appointed in the place of David." But LXX, Peshitta, Vulg. (followed by NEB and NAB) imply another order of words, *bammāqôm ʾasher hēqin dāwīdh*, "in the place which David has appointed," which fits the context better and is probably original.

iii. *Confusion of letters.* The Hebrew letters which scribes most frequently confused are *ḏ* (*d*) and *ṣ* (*r*). For example, in Isa. 33:8, MT, Targ., Peshitta, and Vulg. support the reading *ʾrym*, "cities," but a Qumran MS (IQIs<sup>a</sup>) has *ʾdym*, "witnesses," followed by RSV, NEB, and NAB. The latter reading fits the context better and was suggested by Bernhard Duhm in 1892, long before the discovery of the Qumran MSS. See TEXT, OT §D2a.

iv. *Confusion of words which sound alike.* Hebrew *lō*, "to him," and *lōʾ*, "not," are pronounced alike. In Ps. 100:3, the MT has *lōʾ*, "not," followed by LXX, Peshitta, Symm., and Vulg. (so KJV), while the *qere* reading in the margin of the MT is *lō*, "his," followed by many Hebrew MSS, Aq., and Jerome's translation of the Hebrew (so RSV, NEB, and NAB). The latter fits the context better because it makes a better transition to the following phrase, and this reading is closer in meaning to the similar verses Ps. 95:7 and Isa. 43:1. See TEXT, OT §D2f.

v. *Omission because of homoeoteleuton*, that is, similar ending of successive phrases. In I Sam. 13:15, MT, Peshitta, Targ., Vulg. (so RSV) read "from Gilgal to Gibeah." But after "Gilgal," LXX, Symm., NEB, and NAB insert the reading "and went on his way, but the rest of the people went up after Saul to meet the soldiers. And they came from Gilgal." A scribe, by a slip of the eye, omitted the material between the two occurrences of "from Gilgal" resulting in the present MT. See TEXT, OT §D2e.

vi. *Omission because of homoeoarchton*, that is, similar beginning of successive phrases. In I Sam. 10:1, MT, Peshitta, Targ., Vulg. (so KJV) read, "Is it not that the Lord anointed you to be prince over his heritage?" But after "not," LXX, Vulg. (so RSV, NEB, and NAB) add, "the Lord anointed you to be prince over his people Israel? And you shall reign over the people of the Lord and you shall save them from the hand of their enemies round about. And this shall be the sign to you," and then continue with MT, "that the Lord anointed you to be prince over his heritage." A scribe's eye evidently jumped from one, "the Lord anointed you to be prince over," to another, leaving out what was between.

vii. *Omission because of haplography*, writing once two identical adjacent letters or two similar words or phrases. In Hos. 4:19, MT, Vulg. (so NEB) read *mizzibh<sup>a</sup>hōthām*, "because of their sacrifices." But in LXX, Targ., Peshitta, OL (so RSV and NAB) read *mimmizb<sup>a</sup>hōthām*, "because of their altars," retaining the original double writ-

ing of *m*. (The possibility must be recognized, however, that biblical scribes, like those of the Lachish Letters, may have occasionally deliberately written a single consonant which was intended to be pronounced twice—double duty consonants.) In I Sam. 9:16, MT, Peshitta, and Vulg. read 'ammi, "my people" (third occurrence in verse). But LXX, Targ. (so RSV, NEB, and NAB) read 'oni 'ammi, "the affliction of my people," perhaps retaining the original two similar words. The latter expression occurs also in Exod. 3:7 and II Kings 14:26. Some scholars have argued that, because the expression "I have seen the affliction of my people" is used elsewhere, the unusual "I have seen my people" is more original (see §3f). This case illustrates the difficulty of principles pointing in opposite directions. See TEXT, OT §D2d.

viii. *Addition because of dittography*, writing twice what should be written once. In II Kings 7:13, MT and Targ. read twice, "seeing that those who are left here will fare like the whole multitude of Israel." On the other hand, about forty-five Hebrew MSS, LXX, Peshitta, Vulg. (so RSV and NAB) omit the second occurrence of this clause. See TEXT, OT §D2d.

b. *Intentional changes*. i. *Assimilation to parallel passages*. This was one of the most common reasons for scribal changes. For example, in Lev. 6:6 [H 5:25], MT, the Targs., some later LXX MSS, Peshitta, (so RSV and NAB) read "to the priest." This phrase seems to be an assimilation to Lev. 5:18, and is not found in Samar. or Codex Vaticanus of the LXX (so NEB), and is not quoted in Sifra, the early rabbinic commentary on Leviticus. For a case where some of the versions assimilate to a parallel passage, see §3f above.

ii. *Adding epithets*, or qualities. In Jeremiah the phrase "thus says Yahweh" occurs many times, and in sixty-nine cases the MT contains additional epithets: "of hosts, the God of Israel" (thirty-one times), "of hosts" (nineteen times), "God of Israel" (fourteen times), "the God of Israel" (three times), "the God of hosts" (one time), "Lord" (one time). The LXX contains additional epithets only nineteen times: "God of Israel" (fourteen times), "of hosts" (four times), "God" (one time). For example, 6:6 MT contains the epithet "of hosts," but the LXX lacks it. It is possible that in this verse and in many others, MT has added epithets after "the Lord."

iii. *Adding names of subjects and objects*. In eight cases in Jeremiah (27:6, 8, 20; 28:3, 11, 14; 29:1, 3) MT has the name "Nebuchadnezzar." In all these cases LXX omits the name and in 27:8; 28:3; and 29:1 omits the entire clause. An indication that the name is a later addition in MT is that elsewhere in Jeremiah this name is spelled "Nebuchadrezzar."

iv. *Conflation*, or combination of readings. In the MT of Ezek. 1:20 there are two similar phrases with the same meaning, "wherever the spirit wanted to go." The only difference is that the word for "wherever" in the first phrase is *shām* and in the second phrase *shāmmā*. Some call this a case of dittography, but the phrases are slightly different and not adjacent, and therefore it is possible that a scribe found these two readings and

combined them. Some Hebrew MSS, LXX, Peshitta, (so JB and NAB) omit the second phrase, which may have been added by conflation. See CONFLATE READINGS, OT[S].

v. *Substitution of synonyms*. In I Sam. 20:34, MT, Targ., Peshitta, Vulg. (so RSV and NEB) read *wayyāqom*, "and he rose," while a Qumran fragment (4QSam<sup>b</sup>), LXX (so NAB) read the almost synonymous *wayyipḥaz*, "and he jumped up." Since the second verb is not common, it is probable that MT substituted a more common word. The rare reading more fitly expresses Jonathan's anger, which is mentioned in the context.

vi. *Harmonization*. Sometimes a scribe made a change to create better agreement with some statement in the immediate context or elsewhere in the OT. In Gen. 2:2, MT, Targ. Onkelos, the two Jerusalem Targs., Targ. Neofiti, Vulg. (so RSV and NAB) read "on the seventh day God finished his work." Some scribe evidently thought that this did not harmonize with the following statement that God rested on the seventh day, and therefore he changed the first "seventh" in this verse to "sixth," which is reflected in Samar., LXX, Peshitta, Jub. 2:16 (so NEB). Of course, the reading of MT is not necessarily disharmonious, for MT can be interpreted, "By the seventh day God had finished his work."

vii. *Removal of objectionable expressions*. Some original expressions in the OT were considered objectionable because they were thought to dishonor God. In Job 7:20, MT, Peshitta, Targ., and Vulg. read "to myself" (referring to Job). But LXX (so RSV, NEB, and NAB) reads "to thee" (referring to God). This passage is in the Masoretic list of places where the scribes changed the text (*Tiqqune Sopherim*; see §1aii above). Evidently it was thought demeaning to God's honor to write that a human being was a burden to him, and therefore a scribe changed the pronoun to refer to Job, producing the MT reading.

Some statements were considered objectionable because they were thought to dishonor national leaders. In I Sam. 25:22, MT, Targ., and Vulg. read "to the enemies of David." On the other hand, LXX, Peshitta (so RSV, NEB, and NAB) read "to David." Some scribe, wishing to avoid writing about a possible curse on David, introduced "enemies" as objects of the curse. The LXX and Peshitta reading agrees with the usual formula whereby a speaker wishes a curse on himself if he does not do a certain thing (e.g., I Sam. 20:13).

5. *Conclusions*. Future projects in OT textual criticism should include a fuller assessment of the Qumran material, the preparation of critical editions of the ancient versions, further study of ancient Jewish and Christian quotations of the OT, and the application of the study of various redactions to the determination of the best text.

**TEXTUAL CRITICISM, NT.** Textual criticism of ancient writings, such as those comprising the NT, is understood only partially from descriptions of the primary sources and from the history of the printed text (see *TEXT*, NT §§B, D); a more adequate understanding comes only through a grasp of the text-critical theories and methods that are applied to the sources and are reflected in the printed texts. Both the sources and the printed texts increase in number as time passes; similarly, theories of the text and methodologies employed in analyzing it also continue to develop and are subject to perennial refinement, expansion, and alteration. Sometimes newly discovered sources will have striking effects upon theory and will lead immediately to new methodologies appropriate both to such discoveries and to older materials, but more often methodology lags behind discoveries of primary materials, and—at least in the NT field—methods have yet to catch up in an adequate way to materials known for generations.

  6. Conclusion
- Bibliography

1. **Criteria for choosing among readings.** Text-critical methodology is concerned essentially and primarily with the *criteria* used in the selection of the most likely original reading when, at a given point in the NT text, two or more readings are extant in the MS tradition. Historically, the choice of the "original" reading has been based on one or more of a number of criteria or "canons of criticism," including a reading's support (*a*) by the most MSS, (*b*) by the earliest MSS, (*c*) by the "best" MSS, (*d*) by MSS with the widest geographical distribution, or (*e*) by established groups of MSS of specifiable age, character, and perhaps location; and a reading's conformity (*f*) to the author's style, (*g*) to Koine (as opposed to Attic) Greek, or (*h*) to Semitic forms of expression; or a reading's lack of conformity (*i*) to its context, to parallel passages, or to OT passages, or (*j*) to extrinsic doctrinal views; and whether a reading is (*k*) the shortest reading, (*l*) the "hardest" reading, and (*m*) is not a demonstrable scribal error; and finally (*n*) whether a reading most adequately accounts for the presence of all other readings.

Not all these criteria can be applied at once, nor will all be applicable to each instance of variation; in fact, if they were so applied, they often would conflict and exclude one another.

Ambiguities may abound even when only a few criteria are applied to a given set of variants, for in a gospel passage the "hardest" reading from the scribe's standpoint may also be the least Semitic or be attested only in a late and "inferior" MS, or the shortest reading may be out of harmony with the author's usual style, or the reading of the "best" MSS may show evidence of assimilation to a parallel passage. It is understandable, then, why the matter of text-critical criteria is both a complex and difficult problem of long standing and also a crucial issue methodologically. Naturally, many further questions of text-critical method—often more difficult still—are veiled by the phrases "earliest MSS," "best MSS," "author's style," "hardest reading," and "demonstrable scribal error," to mention only a few. Such prior questions must be settled before the criteria have much utility at all.

**2. Synergism of internal and external evidence.** The criteria listed above fall roughly into two groups or classes: one class emphasizes "external" evidence—the age, quantity, quality, grouping, and distribution of MSS (items *a* through *e* above), while the second class emphasizes "internal" considerations—scribal habits and the literary and ideological peculiarities of the author (items *f* through *n* above). In Hort's classical 1882 formulation of NT text-critical procedures (see TEXT, NT §E5), these two general kinds of criteria co-operated to produce a particular theory of the text: internal evidence separated the "inferior" readings from the "superior" and led to a similar judgment on the inferiority or superiority of the principal groups of MSS, resulting (as chance would have it) in a clear preference for the early, so-called Neutral group or text type, whose chief representatives were codices B and, secondarily,  $\aleph$ , which (as it happened) were the oldest extensive NT MSS known to Westcott and Hort. Hence, for Hort, B assumed "a unique position," for it, along with  $\aleph$ , was superior to all other MSS on the grounds both of internal and external considerations. Once the synergism of internal and external evidence (the best readings→the best group of documents→the best documents) had isolated B and  $\aleph$  as those least mixed MSS that represented the purest NT text type, then an "objective" criterion of an "external" kind (isolation of the best documents, rather than merely the best readings) had been established. This presumably objective and apparently external criterion—the best text type composed of the best MSS—then was utilized by Westcott and Hort, and by perhaps most scholars since, as the divining rod for locating the original vein of the NT text. Critics of this approach have called it the "cult of the best MS."

**3. Polarity of internal and external evidence.** Critical reflection on Westcott and Hort's scheme, particularly on their other major and early textual tradition, the so-called Western text (see TEXT, NT §E5d), disclosed a tension between the external evidence pole and the internal evidence pole of their theory. This was the case because the Western text, as Hort admitted, was both early and widespread in primitive Christianity, perhaps even earlier and more widespread than the Neutral. Hence, to judge B as the best NT MS both

on internal grounds and external (as a text unaffected by corruption in the process of transmission) proved to be a strain on logic; to accredit its readings in almost all cases as virtually identical with the original text simply because they are present in this most excellent MS with presumably the most ancient NT text, and yet reject possibly older readings (in terms of demonstrable evidence) because they happen to occur in a "corrupt" MS like codex D (when judged on internal grounds) pointed to the ambiguity of both the external criteria and the internal criteria. The two emphases, internal and external evidence, may have co-operated in the coronation of B by Westcott and Hort, but they did not with consistency make the case for the dethronement of D that Hort claimed. The internal evidence appeared to involve some ambiguous, certainly subjective, and at times quite arbitrary considerations of "purity" and "corruption," while external evidence seemed to issue in contradictory conclusions in otherwise similar situations. The two kinds of evidence were pushed apart to the extent of assuming a dualistic stance. This emerging polarity displaced Westcott and Hort's felicitous synergism of internal and external evidence and had far-reaching effects on NT textual criticism; in large measure, it is the cause for the uncertainty and confusion in recent and current text-critical theory, as will be evident from what follows.

**4. Eclecticism.** During the twentieth century eclecticism has emerged as the mainstream of NT text-critical method. In an effort to identify the most likely original reading, eclecticism employs in various ways the bevy of criteria surrounding each pole of the internal/external evidence tension. Two schools of thought can be distinguished among the practitioners of the eclectic method.

**a. Moderate eclecticism.** A moderate eclecticism, though sometimes oblivious to the dualistic emphases and to the ambiguities inherent in the criteria attached to each, is currently the dominant text-critical method. This method weighs against one another the relative merits of applicable criteria from the historical-development and documentary side (external evidence) and those from the scribal and stylistic side (internal evidence). E.g., should one reading among several be the hardest reading from the standpoint of scribal habits, comport with the author's ascertained style or vocabulary, and have the support of "excellent" MSS with wide geographical distribution, it would be chosen as the most likely original reading. In another case, if one of two or more readings should share the first two characteristics listed in the preceding example, but should be attested only by a group of late Byzantine MSS (considered inferior by most textual critics), the decision would be more difficult, though not as difficult as when several internal considerations favor a reading supported solely or mainly by Western MSS. Most difficult of all for most moderate eclectics would be those cases where B and  $\aleph$  support different readings. In all cases where some criteria decidedly favor one reading and others decidedly favor another—a not uncommon situation—the ambiguity and mutual exclusiveness of these text-critical criteria

are brought fully into view, and when certain internal criteria side with one another over against certain external criteria, as is so often the case, the polarity and tension described earlier become painfully evident. Consideration of any extended series of variation-units (see, e.g., Metzger's *A Textual Commentary on the Greek New Testament*, 1971) will illustrate the point and show, furthermore, that very often the balance of criteria for and against a given reading is at best an uncertain one and that decisions in these cases will tend to be made according to a predisposition for one or the other of the two dichotomous poles. Either a prepossession as to what are the "best" MSS will assume the decisive role or a predilection for the importance of author's tendencies or scribal probabilities will dominate the decision process. A moderate eclecticism, one that attempts to utilize the whole range of possible text-critical criteria, lives within and tries to live with the internal/external tension, drawing its criteria almost randomly from one pole or the other as they seem appropriate to the set of readings under consideration. It is evident from this state of affairs that definitive principles for NT textual criticism have not been formulated as yet, for on the one hand there is neither consensus on the earliest history of the NT text nor an acceptable reconstruction of that history, while on the other hand there is no set of criteria for selecting the most likely original reading that can be applied uniformly, consistently, and without risk of mutual conflict. This is what makes textual criticism, as currently practiced, an art as well as (or is it rather than?) a science, and, moreover, this is what behooves textual critics to continue their scrutiny and to press their analysis of both poles of the current methodological tension in NT textual criticism.

**b. Thoroughgoing eclecticism.** One way out of the dilemma of internal evidence versus external evidence is to opt for one of them and largely to ignore the other. A school of thought within eclecticism that has become known, justifiably or not, as rigorous or thoroughgoing eclecticism (identified in recent decades primarily with Kilpatrick, see *bibliog.*) emphasizes in a thorough fashion the various internal criteria and de-emphasizes, in a similarly thorough way, the historical-development and documentary criteria (external evidence). This approach, which eschews the notion that any MS or group of MSS is "best" or is "right" as a whole, treats readings—and accepts or rejects them—entirely on their individual and intrinsic merits. Whether a reading is found in an early MS or a late one or whether it is a component of a presumed text type that is ancient or more recent is immaterial, for the stylistic, linguistic, and scribal factors are the decisive determinants of whether any reading is original or secondary. Thus, each reading at any given point in the NT text has an equal opportunity to be recognized as the most likely original text and will be so designated if it stands up to the requisite internal tests of originality. Thoroughgoing eclecticism, then, affirms that decisions on readings—and this means decisions on practically all readings—must precede decisions on the quality

or weight of MSS, precisely the opposite emphasis from Hort's famous dictum: "Knowledge of documents should precede final judgement upon readings."

The rigorous application of internal criteria by the advocates of thoroughgoing eclecticism has been beneficial for NT textual criticism in that (a) older criteria have been exploited extensively and have been refined in the process, (b) some new criteria or fresh applications have come to light and have been tested, and (c) both the obvious strengths and the recognized limitations of internal criteria are open to scrutiny as never before.

**5. Historical-development and documentary emphases.** Judging from the past fifty years or so, most textual critics, while willing to learn from the thoroughgoing eclectics, are reluctant to emphasize internal considerations to the virtual exclusion of external factors. Most, therefore, follow a moderate form of the eclectic method, apparently clinging to the still unfulfilled hope that a definitive reconstruction of the history of the earliest NT text can be formulated and that such a formulation will point to *one* demonstrably superior text type or MS tradition, which then could be given the deciding voice in instances of disputed text. Furthermore, most textual critics reveal a predisposition for the B- $\aleph$  (Hort's "Neutral") text type in this decisive role, despite the lack of a clear rationale for such a view. This predisposition is attested also by the most widely used hand-editions of the Greek NT in the twentieth century, because editions such as those of Nestle-Aland (1898, 1963<sup>2b</sup>), Merk (1933, 1965<sup>a</sup>), Bover (1943, 1968<sup>b</sup>), and the *United Bible Societies' Greek New Testament* (1966, 1968<sup>2</sup>) all have a text relatively close to the NT text of Westcott-Hort and close, therefore, to their best MSS, B and  $\aleph$ . (This same kind of Greek text, incidentally, underlies virtually all recent English translations of the NT; see *VERSIONS, ENGLISH[S].*) Both the longing for such a demonstrably "best" text type or "best" MS and particularly the conviction that a tracing and reconstruction of the history of the earliest NT text would permit the identification of such superior documents have pushed some textual critics toward the external evidence pole of the current text-critical dilemma. No one today, however, relies exclusively on external evidence in making NT text-critical decisions, with the rare exception of a genealogical textual critic (see *bibliog.* under *Textual Analysis*; also cf. *TEXT, NT* §5*d*). Much scholarly effort has been expended, though, on the history of the earliest NT text and on ways to measure MS relationships quantitatively. Both endeavors emphasize external evidence and the historical-development and documentary factors involved in textual decisions.

**a. Reconstruction of the earliest history of the NT text.** Attempts to plot the history of the NT text in its early stages of development usually have gone hand in glove with attempts to classify the NT MSS into groups and to identify early recensions; the goal, naturally, is to trace the lines of development back to the earliest possible stage

and to isolate thereby that primitive form of the text closest to the original. Modern studies of this kind began with J. A. Bengel in 1725 and reached their most notable—though still unsatisfactory—formulations in the work of Westcott and Hort (1881-82) and H. Von Soden (1902-13) (see TEXT, NT §§E3-6). The net result of the past century of scholarship is adherence still to the basic scheme of Westcott-Hort: two early textual streams, with roots traceable to the second century, can be identified, the Alexandrian or Egyptian text type (Hort's "Neutral") and the so-called Western text type. Elaborate attempts have been made to isolate a third early stream, a Caesarean text type, but there is now considerable uncertainty about its reality. In addition, the Byzantine text type, which issued eventually in the *TEXTUS RECEPTUS*, was identified by Westcott and Hort as a late fourth- or early fifth-century coalescence of the Neutral and Western streams, thus removing this text type from the earliest formulative stages of the NT text. Whether further progress, aided perhaps by the striking discoveries of early and extensive NT papyri (such as P<sup>45</sup>, P<sup>46</sup>, P<sup>66</sup>, and P<sup>75</sup>), can be made toward the clarification of the textual situation in the first two centuries of NT textual transmission remains to be seen; that is the crucial period and also the most enigmatic, but to discover its secrets, if only about the formation and interrelationship of the Alexandrian and Western textual streams, would clarify matters immeasurably and add substantially to our understanding of the original text of the NT, and this remains one of the most urgent tasks in the field.

**b. Quantitative measurement of MS relationships.** The attempt to measure and to establish relationships between and among NT MSS has a long history in modern textual criticism, but throughout much of that history measurements have been made on too narrow a base, with inadequate data or controls, or with insufficient exactness, and, not surprisingly, with inconclusive or questionable results. Too often, e.g., MS relationships were calculated from random samplings, or by a mere comparison of the quantity of separate agreements of two or more MSS with an arbitrary standard, or by measuring two or three MSS against one another but without reference to the larger MS tradition. Recently, more adequate methods have issued from proposals by Colwell and Tune (see *bibliog.*). Ideally, of course, a NT MS should be compared with all other NT MSS to determine its place in the MS tradition; though this ideal is still out of reach, Colwell and Tune's method requires that MS relationships must be determined by *direct* and *mutual* comparison of an adequate number and a representative selection of MSS (and not merely by independent comparisons with an external standard) and, furthermore, that the total amount of variation—both agreements and disagreements—among all MSS treated must be calculated if a sound and usable result is to be obtained. Fee's work (see *bibliog.*) exemplifies so far the most extensive use and refinement of this new method of quantitative measurement of NT MS relationships.

The so-called Claremont Profile Method for

grouping NT minuscule MSS (see *bibliog.*) is another recent development in quantitative method; for the present, at least until computers can be utilized extensively in NT textual criticism, it is a sampling method that employs carefully selected test readings to isolate characteristic profiles of readings in various groups of MSS and thereby to distinguish the groups from one another. Since the method is designed for and applicable primarily to Byzantine MSS, it does not rely, as older methods did, on "unique group readings" (which are rare in Byzantine groups) but on "characteristic group readings" that constitute a distinctive group profile. Built upon but also correcting the extensive classification system of Von Soden and incorporating Colwell's methodological insights, the method not only allows for the quick classification of a minuscule MS, but also identifies those subgroups and individual MSS worthy of more detailed study.

Determining NT MS relationships with the aid of computers is most promising under the procedures employed at the Münster Institute for New Testament Textual Research (K. Aland, chairman), where Ott utilizes the computer to classify MSS and to define the relationships among them (see *bibliog.*)

These developments represent only a beginning in the disciplined measurement of MS relationships, but they and similar methods are essential if the thousands of NT MSS are to be sorted and classified and if the resulting groups are to be useful in reconstructing the history of the NT text—tasks still considered by most textual critics to be basic to the recovery of the original NT text.

**6. Conclusion.** NT text-critical methodology faces substantial challenges on each of its fronts. The whole range of criteria for choosing among readings awaits further definition and precision, sophisticated methods for determining MS groupings have developed only recently; and both a definitive history and a definitive theory of the text are lacking. Newly discovered MSS have enriched the already abundant storehouse of NT source materials, but text-critical theory still lags behind. Yet the current, though recent, recognition by textual critics that they face a crisis of theory may itself be a significant step forward in the solution of that crisis.

\***TEXTUS RECEPTUS.** Although this technical term and its English equivalent, "received (accepted) text," are most often used by NT scholars, they are sometimes applied, with resultant ambiguity, to one or more of the following stages in the development of the Hebrew OT text: (1) the standardized consonantal text which replaced multiple textual traditions, perhaps in the first century A.D. (see **TEXT**, **OT** §A2; **TEXT**, **HEBREW**, **HISTORY OF[S]** §1); (2) the text as vocalized by the Tiberian Masoretes of the ben Asher family, completed perhaps in the eighth-ninth centuries A.D. (see **TEXT**, **HEBREW**, **HISTORY OF[S]** §2); (3) the text as edited by Jacob ben Hayyim and printed with rabbinic commentaries by Daniel Bomberg in 1524/5 A.D. (the Second Rabbinic Bible, sometimes called Bombergiana).

L. R. BAILEY

**THANKSGIVING PSALMS.** (1QH). A scroll from Cave I at Wadi Qumran, containing a collection of noncanonical hymns in praise of God (*hodayōth*). See **DEAD SEA SCROLLS** §5d; **PSALMS**, **BOOK OF[S]** §1bii.

**THEODICY** [θεός "god" plus δίκη "justice"]. Perhaps the most difficult question asked by ancient Israel was: Why do the innocent suffer and the wicked prosper (Jer. 12:1)? The question attempts to reconcile evil's existence with a world governed by a benevolent God.

The problem was acute in Israel and Mesopotamia, but less so in Egypt, perhaps because of prevailing belief in a future life and the absence of a concept of justice as one's right rather than a gift. In Egypt, "The Protests of the Eloquent

Peasant" (*ANET* [2nd ed.], pp. 407-10), "The Admonitions of Ipuwer" (pp. 441-44), "A Dispute over Suicide" (pp. 405-7), and "The Instruction of Amen-em-het" (pp. 418-19) wrestle with the problem of unjust suffering. Such literature struggles to understand why social turmoil invades a society ruled by god in the person of Pharaoh. Here, human shoulders bear the blame. Not so in Mesopotamia and Israel, for there one encounters direct attack against the gods. Mesopotamian literature consists of a Sumerian "Job" ("Man and His God," pp. 589-91) and three later texts which directly or indirectly attack the gods: "A Babylonian Theodicy" (pp. 601-04), "I Will Praise the Lord of Wisdom" (pp. 434-37), and "A Pessimistic Dialogue between Master and Servant" (pp. 437-38). Israelite dissent gives birth to Job and Ecclesiastes and haunts various authors, particularly Sirach, Jeremiah, and the poet responsible for Ps. 73. In Israel (and Egypt) a literary genre of debate occurs in texts dealing with divine injustice. The form consists of an initial prohibition formula, "Say not," a direct quotation, and a refutation (usually introduced by *hî*).

In essence the theodicy problem concerns three types of evil: primary (or natural), religious, and moral. Israel probes the first in the Yahwistic narrative (see **YAHWIST[S]**). Moral evil exercises its energies constantly. Religious evil surfaces quite late, specifically in II Esdras. None of these issues receives adequate answer, although many avenues are explored.

A number of texts bear witness to the ubiquity of man's struggle to justify God's ways. Abraham's protestations against the intended destruction of Sodom and Gomorrah (Gen. 18) lay bare the decisive issue: "Shall not the Judge of the whole earth do justice?" (author's trans.). In Exod. 32 Moses rebukes God for his merciless decision to destroy the sinful Israelites who reverted to idolatry. Within prophetic literature numerous popular attacks on God's justice are cited for the sake of refutation; presumably the essential message of these quotations represents authentic responses to the problem of theodicy. Israel's prophets wrestled with a God who appeared to seduce men to their destruction (I Kings 22; Isa. 6) and who, at times, resembled a deceitful brook (Jer. 15:18).

Various solutions are proffered. Human sinfulness was perhaps the most common explanation. Since sin bears within itself the seed of punishment, a dogma of **RETRIBUTION** arises early. It is strengthened by a concept of solidarity, in which a man's descendants can suffer for his sins. Such an understanding pervades the Yahwistic narrative, the **DEUTERONOMIC HISTORY**, and the work of the Chronicler. Job's friends argue from such a position, as do Pss. 37 and 49. Even unwitting sins fall under this theory, which survives despite clear instances of innocent suffering (Abel). But the moral theory is torn from its corporate moorings by Ezekiel, who insists that God judges each generation on its own merits (Ezek. 18).

In cases of execution, men are admonished to give glory to God (Josh. 7:19). Such doxologies of judgment and formulaic expressions as "Righteous art thou, O Lord" (Jer. 12:1) reveal the

necessity of maintaining divine justice despite overwhelming contradictory evidence.

Another solution focuses upon suffering as an instrument of divine pedagogy; this educational or disciplinary theory is advanced by Elihu, Job's younger critic. Suffering teaches essential facts about one's self and God; it leads from second-hand to primary knowledge. Nor is suffering's lesson restricted to the victim of divine wrath or test; the story of innocent suffering offers a model of conduct for others facing difficulty. See DISCIPLINE, DIVINE[S].

A third answer is divine presence, theophany. Such a spiritual response appears in Job 38-41, Hab. 3, and Ps. 73. God's majestic presence gives rise to hymnic praise or profound silence; all previous questions vanish when God manifests himself to the suffering one, who knows that a sinner cannot stand before God. See THEOPHANY IN THE OT[S].

An eschatological response is also found in a number of texts. The messianic age will rectify all injustice. In late, primarily deutero-canonical literature, belief in a FUTURE LIFE provides a powerful answer to the question of theodicy. Still, the agonizing question in II Esdras derives little comfort from a promised IMMORTALITY, for Ezra cannot forget the masses of mankind suffering in perdition. See APOCALYPTICISM §2c; APOCALYPTICISM[S].

Sirach introduces two additional solutions. He argues that one must distinguish appearance from reality. Sirach thus combines metaphysical and psychological arguments, the latter of which appeals to excessive anxiety as punishment for sin. The author of Wisdom of Solomon uses both arguments to buttress his relatively new and foreign idea of immortality.

Still another answer is far more radical. In it God is viewed as unjust. Such a skeptical stance underlies Ecclesiastes, parts of Job, the sayings of Agur (Prov. 30:1-4), and the popular criticisms recorded in several prophetic books. The flippant question "Who knows?" (Eccl. 3:21) scarcely conceals the author's dismay over a world gone awry, an existence *in tormentis*.

Perhaps a final response, the redemptive, should be separated from the aforementioned educational theory. According to the Servant Poems in Second Isaiah, suffering can be vicarious, bringing redemption to sufferer and others alike.

In a sense, one may even speak of a tendency toward antitheodicy in ancient Israel. The insistence upon divine freedom (see PRESENCE OF GOD, CULTIC[S]) and human limitations of knowledge persists in spite of quests for rational solutions. The sage knows pride's folly, the arrogant insistence upon judging God at the bar of reason. Such intuition leads Job to an answer within revelation rather than wisdom.

The COVENANT relationship intensified the problem of theodicy, for Israel knew which God was punishing her. History exacerbates the issue: the fortunes of ancient Israel often did not justify belief in divine providence (Josiah's fate in particular). The consequent crisis of faith spawns a transcending of the ethical principle and a universalization of providence; reasons for such beliefs

are rooted in Israel's creation faith. The Creator of the universe alone can be declared just, for he has both power and will to reward virtue or punish vice. Confronted with the Maker who alone has full knowledge, the questioning soul has one of two resorts: repentance or despair. See SUFFERING AND EVIL.

\***THEOPHANY IN THE OT.** (For the meaning of the term, see THEOPHANY IN THE NT[S]). The OT contains a great variety of accounts of an appearance of God, which are not always clearly distinguishable from visions. Two types may be differentiated: (1) a theophany which is intended generally for individuals and represents for them a special demonstration of favor, and (2) a manifestation of God through the powers of nature which causes alarm among his enemies (theophanies of Yahweh as warrior). Within the first group, it is possible to distinguish between an appearance which serves to legitimate a cult center or person and occurs only once, and one which occurs under prescribed circumstances and can be repeated (theophanies within the cult).

1. **Theophanies as a demonstration of favor.**  
a. **Noncultic legitimations.** The following categories or instances may be noted.

i. In the patriarchal stories appearances of Yahweh are the occasion for an announcement of divine promises, in response to which the person concerned erects an altar (Gen. 12:7; 26:24-25; 28:12-19; 35:1-15). Such appearance stories originally served to legitimate a particular cult center (sanctuary ETIOLOGY[S]) and did so without the element of promise (see PROMISES TO THE PATRIARCHS[S]). The manner of the divine appearance is never portrayed in any detail. It is mentioned only as an introduction to the essential element: God's verbal communication (Gen. 22:1 ff.; 26:1 ff.). See PRESENCE OF GOD, CULTIC[S] §2.

ii. Stories about appearances of divine beings in human form and their reception as guests are generally associated with the appearance of the angel of Yahweh (Judg. 6:11, 18 ff.; 13:2 ff.; note however Gen. 18:1 ff.; cf. 19:1). Quite often the point of such stories is the announcement to a barren woman that she will have a child (cf. also Gen. 16:7 ff.). Only in Judg. 6 (cf. Gen. 16:13-14) is a sanctuary etiology found; it, however, has been recast during its transmission into a story of a divine call at a sacred site—(also recast are Exod.

3:1 ff.; cf. Gen. 28:20-21; and Josh. 5:13-15). Instead of legitimating the sacred site, the theophany now serves to legitimate the person who is the chosen instrument of Yahweh.

iii. Moses (Exod. 3:1 ff.), Samuel (I Sam. 3:10; cf. vs. 21), and Solomon (I Kings 3:5; 9:2) were called and commissioned through appearances of God at a holy place. While Isaiah was in the temple, he saw God as the heavenly king (Isa. 6).

iv. Also serving as legitimations are the accounts of the theophany at Mount Sinai (Exod. 19 ff.), since they describe the establishment of Israel's relationship to God. These accounts are not the source of descriptions of other theophanies but rather have been influenced by them (see §2). According to J, Yahweh descends from the heavens as the awesome destroyer accompanied by volcanic manifestations, permits Moses to draw near, and confers on him the promise to Israel. According to E, God resides on the mountain peak and appears in the midst of a cultic festival accompanied by a thunderstorm. The people in their alarm ask Moses to mediate, and bind themselves to God through a blood rite. In subsequent layers of the tradition, the theophany culminates (through inclusion of the TEN COMMANDMENTS, the cultic Decalogue, and the Book of the Covenant) in the communication of Yahweh's will, reconciliation after apostasy (Exod. 32-34), and the covenantal accord with its obligations. In P the appearance on the mountain top of Yahweh's glory (כבוד) leads to the construction of the sanctuary and the inauguration of the legitimate cult in Israel. See DOCUMENTS.

v. As the God of Sinai, Yahweh accompanies Israel through the wilderness in the form of a pillar of fire and cloud (Exod. 13:21-22; 14:19-20, 24). The God who gives his promise to Abraham is portrayed in J with the characteristics of Yahweh on Sinai: he passes in fire and smoke between the parts of the animals (Gen 15:17-18a). Correspondingly, in P, during Israel's march through the desert Yahweh manifests himself and speaks in the same form—his כבוד—as he did during his revelation at Sinai (Num. 14:10; 16:19).

vi. The account of Elijah at Horeb (I Kings 19) contains strong reminiscence from the Sinai tradition (especially from Exod. 33:18 ff.; 34:5-6). The theophany is filled with anti-Canaanite polemic (storm, fire, and earthquake as mere accompanying manifestations; Yahweh is present only in the audible voice) and legitimates Elijah's new commission.

vii. Normative for the OT are the words: "Man shall not see me and live" (Exod. 33:20; cf. 19:21; Judg. 13:22; etc.). The extraordinary character of all the theophanies is, therefore, set off with special emphasis (Gen. 16:13; Exod. 3:6; 33:22).

viii. In Exod. 33, an advanced stage of development is reflected in the question of how God can be present among a guilty people. Here we find almost all the substantive terms for the manifestation of God: angel (מלאך), face (פנים), glory (כבוד), beauty (שוב), and name (שם). It is all placed in the context of concern for the protection of people from the danger of the Holy One (vss. 2-3: Yahweh's angel will act only benevolently;

vss. 21 ff.: Moses is sheltered by God's hand and may see Yahweh only from the back; in P similarly the cloud protects men from the fiery כבוד). See PRESENCE OF GOD, CULTIC[S] §§2-3.

b. *Theophanies within the cult.* That E describes the Sinai theophany within the framework of a cultic festival (note the sound of the trumpet and the purification rites in Exod. 19:10 ff.) suggests that Israel was familiar with theophanies in the worship service. The following situations may be cited.

i. The tradition of the tent of meeting probably goes back to an ancient oracular practice (Exod. 33:7). Yahweh is depicted as descending to the entrance to the tent in order to commission someone (Exod. 33:7 ff.; Num. 11:24-25; Deut. 31:14-15) or to carry out judgment (Num. 12).

ii. In the festive worship service, the priest utters Yahweh's self-introduction: "I am Yahweh" (Pss. 50:7; 81:10 [H 11]).

iii. Divine verdicts in behalf of refugees seeking sanctuary, or of the innocent accused of crimes, are pronounced in the cult (Pss. 11:4 ff.; 17:15; cf. Job 19:26-27; for the technical term "seeing God" [hād], see Beyerlin).

iv. The custom of burning incense at the sanctuary, the blowing of the trumpet, and the processions of the ark may represent Yahweh's theophany (Weiser, Beyerlin, Müller).

To be distinguished from all of this is the fact that some texts of the *Gattung* (cf. §2 below), especially in postexilic times, found their application in cultic contexts (e.g., Pss. 50 and 97) to which they did not originally belong.

2. *Theophanies of Yahweh as warrior.* a) In the OT we very often hear about a "coming" of Yahweh which produces a reaction of terror. The description follows a fixed pattern: the first part refers to the "going forth" or descent of Yahweh; the second refers to the resultant agitation of nature (mountains quake, and heaven and earth fall into confusion). This pattern is documented in the oldest poetry of Israel (Judg. 5:4-5; cf. Deut. 33:2), and was still in use in post-OT times (Ecclus. 16:18-19; 43:16-17; Jth. 16:15; Wisd. Sol. 5:21-23; Asmp. Moses 10:3-6; IQH 3:32-36). It may encompass one or two verses (Amos 1:2) or extensive compositions (Ps. 18:7-15 [H 8-16]; Hab. 3:3-15; etc.). With the passage of time, both parts were able to establish themselves independently (this is especially true of the first part, in prophetic material: Isa. 30:27-28; Jer. 25:30-31; Ps. 50:2-3; etc.; for the second part, cf., e.g., Ps. 114:3-8; Job 26:5).

b) Such theophanic descriptions are not uniquely Israelite. Sumerian and Akkadian hymns and Hittite and Ugaritic myths describe the storm-god (Ishkur, Teshub, Adad, Baal, and other deities) as a "divine warrior" (Cross, Miller) surrounded by dazzling radiance (Akkad. *melammū*), who rides the storm and travels on cloudy chariots, and who hurls bolts of lightning as arrows. In response the earth quakes; mountains stagger; and the ocean trembles (Jeremias, Lipiński).

c) Such warrior imagery characterizes many of the hymns that describe theophanies in Israel, especially in the period of the monarchy (Pss.

18:7-15 [H 8-16]; Nah. 1:2a, 3b-6; Hab. 3:8-15; Jer. 10:13). Archaic texts speak, however, about Yahweh's coming, his descent, and especially his "going forth" (נִצַּח), technical term for the war of Yahweh; cf. Judg. 4:14; II Sam. 5:24) from his abode, an emphasis which is not found in similar texts in other nations of the ancient Near East. His abode may be heaven, Zion, or Sinai, the last giving the impression of being the most ancient. Yahweh is called in Judg. 5:5 (cf. Ps. 68:8 [H 9]), "the One from Sinai (זֶה סִינַי)." In its early history, therefore, Israel substantially altered the pattern in use among its neighbors, a process which was influenced by the unique Sinai tradition, which had not yet assumed the form it has in Exod. 19 ff. (cf. §1a iv). The differences between the pattern that was influenced by Israelite thought and the one that was more influenced by non-Israelite cultic patterns are clearly recognizable in Hab. 3:3-7.

d) During the process of transmission, the theophany descriptions were influenced by mythical and historical traditions, e.g., the struggle with chaos (Nah. 1:4; Hab. 3:8; Ps. 18:15 [H 16]), the crossing of the Red Sea (Pss. 77:19 [H 20]; 114:3, 5), the Day of the Lord (Hab. 3:10-12; Amos 1:2b; Nah. 1:4b, 5b), and particularly the concept of divine rule (Deut. 33:5; cf. the contexts of Pss. 29; 97; Zech. 9; 14).

e) Essentially the pattern of the theophanic descriptions belongs in the category of hymn. Originally it was part of the hymn of triumph sung upon the successful completion of Yahweh's wars (Judg. 5:4-5; cf. Deut. 33:2-5, 26-29; however, Lipiński judges its most ancient situation to be a ritual prior to the war of Yahweh). In the monarchic period we meet the pattern in hymns which celebrate the defeat of the nations attacking Zion (Ps. 46:6 [H 7]), the protection and blessing of Israel in the wilderness (Ps. 68:7-8 [H 8-9]), the triumph over the waters of chaos at the Red Sea and the Jordan (Pss. 77:16-19 [H 17-20]; 114:3-6), the defeat of Israel's enemies (Nah. 1:2 ff.; Hab. 3:3-15), the deliverance of the king from affliction (Pss. 18:7-15 [H 8-16]; 144:5-6), or, more generally, Yahweh's supremacy as the king of the world (Pss. 29; 99:1; etc.). In postexilic times the theophany representations celebrated Yahweh's power over the gods (Ps. 97:6-7; Jer. 10:10) and over the universe (Amos 9:5; Job 9:5-6; 26:5-6, 11). In prayers the people can supplicate Yahweh to intervene in this way (Ps. 80:1-2 [H 2-3]; Hab. 3:2).

f) Within the older prophetic writings the direction of the pattern was completely changed: Yahweh's coming is now a future event which will bring judgment upon Israel (Mic. 1:2-7; Amos 1:2)! In exilic and postexilic times the prophets often announced the coming of Yahweh as the warrior to free Israel (Isa. 40:10-11; 42:13); to do battle against foreign nations (Isa. 19:1; cf. Zech. 9:14 and 14:3-4); and to fight against the wicked in Israel (Isa. 59:15-19; 66:15-16; Mal. 3:1-5). Finally, in the beginnings of APOCALYPTICISM, the Warrior comes to bring judgment upon the world (Jer. 25:30-31; Isa. 26:21; IQH 3:32 ff.; etc.).

\***THEOPHANY IN THE NT.** The word theophany [Gr. θεοφάνεια] does not itself appear in the NT, where the fundamental affirmation is that God's decisive self-disclosure occurred in Jesus (e.g., John 1:14, 18; Col. 1:15; Heb. 1:1-3; see **CHRISTOLOGY IN THE NT[S]**). Nevertheless, theophanic backgrounds are discernible in certain layers of tradition within the NT.

**1. Meaning and method.** "Theophany" is a compound of the Greek word for God (Θεός) and the verb φαίνω, which means to appear, become visible, make manifest or show oneself (for philological studies, see *bibliog.*). While the word θεοφάνεια and related ones such as ἐπιφάνεια often connote a sudden, unexpected manifestation of divine activity, the primary idea is of "helping intervention," a picture borrowed perhaps from military terminology. The NT uses such language in speaking of the eschatological appearance of Jesus in his earthly ministry (cf. II Tim. 1:9-10; 4:8; Tit. 2:11; 3:4; also Luke 1:79; John 1:5; I John 2:8), and of his future appearance at the Parousia (cf. II Thess. 2:8; I Tim. 6:14; II Tim.

4:1, 8; Tit. 2:13). Other verbs of seeing (e.g., βλέπω, ὀπτάνομαι θεάομαι, θεωρέω, φανερώ, and ὁράω > ὠφθη, a key word in theophanies), as well as verbs of hearing (or of other sense perception) are also used in narratives which may be called theophanic in the strictest sense.

The history of religion school (see *bibliog.*) emphasized the common features of theophany texts. But these scholars tended to neglect points of contrast and distinctiveness, to draw analogies too quickly, and to assume too readily that material had been carried over from one culture to another. Therefore, investigation of theophanies in the literature of classical antiquity as well as in the Bible has been renewed with special concern for a more precise methodology. Recent scholarship has shown that, when theophany texts from various religious traditions are analyzed form-critically, and their religious ideas are subjected to careful comparative study, much can be learned about the meaning of theophany, the structural forms in which a theophany was recounted, and the place of theophany within earliest Christianity, including the NT.

**2. Hellenistic backgrounds.** OT and Jewish sources provide important materials for comparison (see THEOPHANY IN THE OT[S]), but Hellenistic sources must also be considered. From the earliest times, the belief in the everyday reality of divine intervention, the self-disclosure of deities, and the imposition of their will was basic to the Greek understanding of life and the universe (e.g., Homer, *Odyssey* XVII, 483-87). Special importance accrues to divine appearances in human likeness. In Lystra, Paul and Barnabas are held to be Hermes and Zeus as the people cry out: "The gods have come down to us in the likeness of men!" (Acts 14:8 ff.; cf. the appearance of Zeus and Hermes to Philemon and Baucis, Ovid, *Metamorphosis* VIII, 611-724). The resistance of the apostles is characteristic of the tensions expressed in such encounters (cf. Acts 10:26 and 28:6).

The classical example of theophany in the Greek world was the festival celebration at Delphi (and elsewhere) for Apollo, the "Theophania," where his image and those of other deities were paraded about for the worshipers (e.g., Herodotus, *History* I.51; and Philostratus, *Life of Apollonius of Tyana* IV, 31). Representations cast in the form of dreams and visions abound in this literature (e.g., Apuleius, *Metamorphosis* XI). Nevertheless, a conscientious effort was frequently made to distinguish between these and "actual" appearances in a waking state (e.g., the story of the Asclepius supplicant who was visited and cured, not during her sanctuary vigil ["incubation"], but during her journey home; or the lifesaving visit to Simonides of Castor and Pollux; see *bibliog.*). In the Hellenistic period, heroic tradition influenced the theophany concept, and this cultural and religious fusion spawned cults which hailed the deification of past figures (especially rulers), stories of the "translation" of famous persons, and novelistic lives of certain "divine men." See ARETALOGY[S].

**3. Theophany and the NT. a. The Easter appearance traditions.** A number of scholars hold that the earliest church accommodated its teaching

about Jesus (e.g., his birth, career, resurrection) to the model of the DIVINE MAN. In the Hellenistic world, certain famous persons were popularly accorded this status and were revered for their possession of supernatural wisdom and powers (e.g., Moses, Elijah, Romulus, Apollonius, Peregrinus). Thus, the question must be raised whether the Easter appearance stories in the NT have been influenced by stories told about such divine men.

Form-critical analysis of early Christian appearance traditions (Matt. 28:16-20; Luke 24:13-35, 36-49; John 20:14-18; 19-29; 21:1-14; perhaps also Mark 6:45-52; Matt. 14:22-23; John 6:15-21; Gos. Pet. 9(35)-14(60); Gos. Heb. [Jerome, *De viris illustribus* 2]) demonstrates that at the preradical level they share a remarkably similar pattern of motifs and themes: (1) the disciples are bereft of their Lord; (2) Jesus suddenly and unexpectedly comes into their presence and addresses them; (3) their reaction is in part doubt and lack of recognition and/or belief and joy; (4) their eyes of understanding are opened; and (5) he sends them forth.

Hellenistic stories about how divine men died or were translated to another sphere are in some ways parallel with the NT traditions, but such parallels are in fact limited to matters of form, diction, and imagery. If intention and function are considered as well, the traditions about Jesus' appearances stand closer to the anthropomorphic theophanies of the OT (e.g., LXX Gen. 18; Exod. 3-4; Judg. 6 and 13; I Sam. 3; also Tob. 5 and 12; Test. Abraham). The Hellenistic stories served to confirm the apotheosis of the divine men whose death and subsequent reappearance they recounted. The NT appearance stories, however, seem to have been deliberately anchored within the OT theological tradition in order to function as explicit theological statements about the continuing history of God's self-disclosure.

**b. Other traditions.** Similar perhaps in content, but radically different in form, are the "heavenly radiance" theophanies of Acts 7:54-60 and, especially, the accounts in Acts 9, 22, and 26 of Paul's vision on the Damascus Road. Their origin and relationship to the anthropomorphic appearance form must be settled through further research. Theophany motifs have probably also entered into the formulation of the traditions in Matt. 27:51; Acts 8:26-40; 10:1-33; John 12:27-32. Stories about the visitation and declarations of angels, both in canonical and extracanonical sources, represent an appearance type categorically distinct from theophanies, although they can approach the anthropomorphic form (e.g., Heb. 13:2, and perhaps the empty tomb tradition).

#### \*THESSALONIANS, FIRST LETTER TO THE.

Recent study has continued to build on the insights of previous interpreters. Authorship by the apostle Paul is almost universally accepted despite some statistical argument to the contrary (see PAUL THE APOSTLE[S] §1a). Similarly, suggestions that the canonical letter was compiled by an editor from Pauline fragments have attracted scant following. While it is true that Paul's letters were edited into a collection prior to any surviving MS, partition theories for I Thessalonians have seemed arbitrary and are certainly contradictory. Somewhat more weight, however, has been given to the thesis that 2:13-16 is a non-Pauline interpolation. The anti-Jewish polemic is unusual for Paul, and reference to the final expression of God's wrath could well look back to the capture of Jerusalem and the destruction of the temple in A.D. 70. However, structural study (see PAUL THE APOSTLE[S] §1b), makes even this suggestion unlikely. The letter illustrates Paul's fondness for triptychs, i.e., A-B-A patterns (cf. I Cor. 8:9-10 and 12:13-14). Thus 1:2-10 closely parallels 2:13-16 with 2:1-12 as the middle member. So, too, 2:17-20 is parallel to 3:9-13 with 3:1-8 as the central section. Accordingly the similarity of 2:13-16 to 1:2-10 is evidence of genuineness, not imitation.

In general I Thessalonians has the normal structure of a Pauline letter (see LETTER[S] §4): sender(s), recipient(s), greeting (1:1), thanksgiving (1:2-10), body (with renewed thanksgiving, 2:1-16), apostolic visitation (2:17-3:13), PARENESIS (4:1-5:22), blessing (5:23-24), and autograph coda (5:25-28). As a subtype, however, it can be classed with I Corinthians as a "response letter." In both letters Paul devoted the first major section to binding more firmly the ties between himself and his congregation (2:1-3:10; cf. I Cor. 1:10-6:11). Then after a brief transition (3:11-13; cf. I Cor. 6:12-20) he turned to answer specific questions from his congregation (4:1-5:11; cf. I Cor. 7:1-16:12). In I Corinthians Paul tells us that the

questions had arrived by letter (7:1). It is entirely possible that I Thessalonians also was written in response to a letter. The questions concerned sexual morality (4:1-8), brotherly love (4:9-12), the fate of Christians who died before the Lord's coming (4:13-18), and the date of that great event (5:1-11).

A second area in which new progress has been made is historical. There is now some hesitation about using Acts to provide the setting for this letter (see PAUL THE APOSTLE[S] §1c). Traditionally the letter is dated by connecting I Thess. 3:6 (arrival of Timothy) with Acts 18:5 (Paul in Corinth shortly after founding the church in Thessalonica). However, the letter itself implies the passage of several years. Since Paul's original mission the Thessalonian Christians have themselves worked as missionaries in both Macedonia and Achaia (1:7-8). News of their work has spread beyond this region. Paul (apparently as he traveled outside Greece) continually met those who knew of their conversion (1:9). Some time later the Thessalonians were subjected to persecution so severe that Paul feared they might abandon their faith. He had tried repeatedly to revisit them. Since he was "at present" (2:17; "short time" in the RSV is misleading) still absent from them (he was in Athens), he sent Timothy in his stead, and Timothy has now returned with good news. In the course of these events one or more of the Thessalonians have died. This interval may also include the writing of II Thessalonians (see THESSALONIANS, SECOND LETTER TO THE[S]).

For the theory that Paul wrote to combat a group of opponents variously described as "Gnostics," "radicals," or "libertines," see *bibliog.*

#### \*THESSALONIANS, SECOND LETTER TO THE.

An enigmatic letter, most probably written by the apostle Paul, which presents a number of problems to the modern interpreter. It may well be the earliest surviving piece of Christian writing.

The traditional interpretation supports the genuineness of the letter but leaves a number of questions almost completely unanswered. Why should Paul need to write the Thessalonians so soon after writing I Thessalonians? Why are the two letters so different in spirit and content although so similar in outline and phraseology? Why should Paul have to guard against the possibility of letters forged in his name (2:2; 3:17)?

In considerable measure these problems spring not from the letter itself but from the way in which it is usually related to other evidence about Paul. Specifically, the Acts narrative makes it appear that there was not sufficient time for Paul to have written to the Thessalonians prior to I

Thessalonians. However, the abrupt sequence of events in Acts does not form a natural background for I Thessalonians (see THESSALONIANS, FIRST LETTER TO THE[S]) and is awkward for II Thessalonians: those who reject the letter's authenticity do so mainly because it seems so pointless as a sequel to I Thessalonians.

However, a number of interpreters today begin with the letters rather than Acts (see PAUL THE APOSTLE[S] §1c). When the Thessalonian letters themselves are compared, several reasons emerge for choosing II Thessalonians as the earlier. (a) The problem of those who do not work because of their belief in the imminent end of the age sounds new in II Thess. 3:6-12 but old in I Thess. 4:11; 5:14. (b) Thessalonian persecution is an immediate reality in II Thess. 1:6-7. It is both past and present in I Thess. 1:6; 2:14; 3:3-5. Moreover, in the latter, Paul has conceived the idea of revisiting the Thessalonians and has in fact sent Timothy. (c) The gathering of (living) Christians to meet the Lord is the topic of II Thess. 2 (see vs. 1). When I Thess. 4:13-18 speaks of both the living and the dead, the death of Christians seems to be a new problem. (d) The Thessalonians' disillusionment in II Thess. 2:2 appears to stem from the failure of the "Lord Jesus Christ" to appear after a sequence of events which they have invested with apocalyptic significance. Paul countered with his own sequence, as yet in progress. (Some refer belief that the Day was present to Gnostic radicals; see bibliog.) I Thess. 5:1-11, however, is more timeless and less apocalyptic. As in his later letters, Paul speaks of the Day as coming at an indefinite time. (e) The problem of indicating that his dictated letters represented his own presence would presumably concern Paul more at the beginning of his letter-writing career than later (II Thess. 2:2; 3:17).

The identity of the restrainer (II Thess. 2:6-7) remains a problem, for Paul spoke with intentional obscurity. However, CALIGULA's attempt to have his statue erected in the temple in Jerusalem (A.D. 40) comes closer than any other event in the period A.D. 30-70 to fulfilling Daniel 11:31 (the setting up of the abomination in the temple, cf. Mark 13:14), which had been part of Paul's original apocalyptic preaching (II Thess. 2:5).

The resemblances between the two Thessalonian letters which go beyond the common stock of eschatological terms seem mainly concentrated in the structural conventions Paul inherited and developed as a letter writer (see LETTER[S] §4). The sender, addressee, and greeting are stereotyped. Each letter has Paul's customary thanksgiving section (II Thess. 1:3-12; I Thess. 1:2-10), though in each it is renewed (II Thess. 2:13-17; I Thess. 2:13-16), which is unusual. The bodies of the two letters concern different subjects. As with most of Paul's letters the body section is followed by moral instruction (II Thess. 3:1-15; I Thess. 4:1-5:22). Both letters include a number of prayers and blessings which contain similar liturgical phrases. It appears that as Paul's career progressed he became more varied in his letter style.

Thessalonicherbrief*, Erfurter Theologische Studien, XXVII (1972), argues for the letter's pseudonymity. J. C. HURD

\*THESSALONICA. Archaeological investigation has brought to light the Roman forum, with a large, open, paved area at least 70 by 110 yards. To the E

H. G. May

9. The Agora, Thessalonica

it is defined by a double stoa which has Corinthian columns and well-preserved floor mosaics of geometric design. To the S the forum is bounded by a stoa supported by a *cryptoporticus*, which shelters a number of rooms where Christian wall painting was added. The forum buildings are dated to the first or early second century A.D. Later, about the end of the third century, a Roman odeum was built adjoining the E stoa of the forum. Six semicircular rows of seats are preserved, and under them are vaulted lobbies approached from the odeum through monumental doorways.

Farther E the palace of Galerius, who shared in imperial power A.D. 293-311, has been cleared, revealing a large peristyle courtyard and an octagonal building adjoining it. The octagon, with apses on each of the sides, soon became a church, with an associated baptistery.

Other discoveries have come from ancient cemeteries on the outskirts of the city and various construction sites in the center. A recently studied inscription with a Greek translation from the OT (Num. 6:22-27) and Hebrew phrases is said to show the presence of a Samaritan diaspora community in Thessalonica.

\***THOMAS, GOSPEL OF.** A collection of 114 sayings of Jesus discovered in a Coptic version in the years 1945-46 (see NAG HAMMADI[S]) in Upper Egypt, and not to be confused with the infancy gospel of Thomas (see APOCRYPHA, NT[S] §4). In 1897 and 1903 Greek fragments of a similar writing were found at Oxyrhynchus (see OXYRHYNCUS SAYINGS OF JESUS) in Egypt; the Coptic text could therefore be a translation of a Greek original. The MS of the Coptic version probably dates from the fourth century A.D. The Greek original, however, has always been dated about A.D. 140, and there are so far no reasons to modify that conclusion. The contents of the newly discovered Gospel of Thomas are Jewish Christian, Encratic, and Gnostic.

  2. Encratic influences
  3. GTh as a Gnostic gospel
- Bibliography

1. **GTh and Jewish Christianity.** The author of GTh seems to have used a Jewish Christian source. He believes, for instance, that James the Righteous (see JAMES §5), and not Simon Peter, shall be great

among the Christians after the death of Jesus (Logion 12); that the sabbath, and not Sunday, should be observed (Logion 27); and that the PHARISEES have received the keys of knowledge, that is, the oral part of the Jewish Law which makes possible the interpretation and application of the written Law in daily life (Logion 39). Edessa (now Urfa in Turkey) became the permanent center of Syriac, Aramaic-speaking Christianity, and it would not be surprising if GTh originated there. Even if the story of the conversion of King Abgar by the Palestinian Jewish-Christian Addai is a legend (see ABGARUS, EPISTLES OF CHRIST AND), the possibility remains that Addai was a historical figure, and that the foundations of Syriac Christianity were Jewish Christian.

The main issue, however, is whether GTh is independent of our canonical gospels, and if so whether the sayings have any claim to authenticity. This would seem to be the case for about half the sayings that are of synoptic type or similar to the canonical text. This can be illustrated by examination of two familiar parables as they are presented in GTh. In each case it can be seen that this author transmitted an independent tradition.

a. **Logion 65.** The parable of the wicked husbandmen (Matt. 21:33-41; Mark 12:1-9; Luke 20:9-16). The GTh version is as follows:

He said: A good man had a vineyard. He gave it to husbandmen so that they would work it, and he would receive its fruits from them. He sent his servant so that the husbandmen would give him the fruit of the vineyard. They seized his servant, and beat him, a little more and they would have killed him. The servant came and told it to his master. His master said: "Perhaps they did not know him." He sent another servant; the husbandmen beat him as well. Then the owner sent his son. He said: "Perhaps they will respect my son." Since those husbandmen knew that he was the heir of the vineyard, they seized him and killed him. Whoever has ears, let him hear.

Three different people are mentioned here, with the emphasis on the third. This is a device of popular narrative all over the world and is characteristic of Jesus' teaching, e.g., in the parable of the Good Samaritan: a priest, a Levite, a Samaritan. The same is found in Logion 65: "his servant," "another servant," "his son." This pattern distinguishes the parable as it appears in GTh from the Synoptic gospels. Moreover, other features from the Synoptics are absent: the "son" is not called "beloved" (Mark, Luke); "[Come,] let us kill him" (an allusion to the story of Joseph; cf. LXX Gen. 37:20) is omitted; there is no hint of the murder of the prophets (Mark 12:5), of the earlier and later prophets (Matt. 21:35-36), of the crucifixion outside the town (Matthew, Luke), or of the mission among the Gentiles and the rejection of Israel (Matt. 21:41). GTh has, therefore, no allegorical features at all. Rather, the parable describes a scene from daily life, namely, the revolutionary situation in Galilee, where tenants refused to pay their absentee landlord the rent. The point is, not what is said about the son, but what is said about the farmers. Every Jew would

have understood that Jesus was speaking about Israel and its survival, threatened at the time by the adventurous plans of the Zealots (see ZEALOT; ZEALOT[S]). The vineyard was a symbol of Israel (Isa. 5:1). GTh does not presuppose, like all three Synoptics, the LXX version, "he planted a vineyard," or, like Mark, the LXX reading, "set a hedge about it" (Isa. 5:2). Neither of these readings is found in the Hebrew Bible. Thomas speaks also of the "heir of the vineyard," an expression which the NT does not have. In GTh, as in the OT and the rabbinic writings, the idea of INHERITANCE is concrete: the vineyard is the land of Israel, and the heir of the vineyard is the Messiah (see MESSIAH, JEWISH) of Israel, not necessarily the savior of the world.

This author, therefore, remains more faithful to his Jewish Christian source, and he has none of the editorial motifs of the synoptic writers. His understanding of the parable is traceable to an independent tradition which is closer to the Jewish Christian mentality.

**b. Logion 8.** This logion is parallel to Matt. 13:47-50, the parable of the net.

And he said: Man is like a wise fisherman who cast his net into the sea and drew it up from the sea full of small fish; among them he found a large [and] good fish, that wise man. He threw all the small fish back into the sea and chose the large fish without pain. Whoever has ears to hear, let him hear.

In Matt. 13:47-50 the parable has become an allegory of the last judgment, but this is not the case in GTh. Here it is, not a parable of the fishing net, but a parable of the fisherman. He does not fish from a boat with a trawling net (Matthew), but stands in the water near the shore and uses a casting net. Both ways of fishing can still be observed at the Sea of Tiberias, and both could depict a fisherman's daily life in Palestine (see FISHING; FISHERMEN, NT[S]). A Syriac author of the sixth century, Philoxenos of Mabbug, gives a similar description of the fisherman (*Homilies*, I.9):

Then one will see the fisherman cast his net into the sea of the world and fill it with fish, small and great. . . . At that time he will draw his net and bring it up to the shore of the sea, as he set it, and he will choose the good fish and will put them in his vessels, . . . and he will throw away the wicked ones into utter darkness, where there shall be wailing and gnashing of teeth.

Here, as in GTh, an eschatological motif is lacking. As it appears in GTh, the parable merely teaches eternal wisdom, and thus shares the unhistorical, international, and humane characteristics of wisdom literature. According to scholars such as Quispel (see *bibliog.*), this is a strong argument in favor of Thomas' independence, in light of the results of REDACTION CRITICISM and of research into the theology of the evangelists.

**c. Other evidence.** Many other examples of the independence of traditions in GTh could be adduced. For instance, some of the figures of speech it contains are completely new, like the one on fire

in Logion 82: "He who is close to me is close to fire, and he who is far from me is far from the kingdom." Whether or not these sayings are parables, and whether they are contained in the canonical gospels or not, all of them could perhaps be traced back to Jesus himself and may be authentic. In GTh allegorical additions to the parables are rare. Where small additions can be discerned, they merely make explicit what is already implicit in Jesus' proclamation: that one should look neither to the future nor to the past, but should believe in the kingdom of God which is already present here and now in his inspired and wise words. The remarkable feature of these parables in GTh is that they are never understood as eschatological, but rather as admonitions to find the mysterious treasure in Jesus' words or, as Logion 3 puts it, in one's own self.

**2. Encratic influences.** Related as it is to Syriac literature, GTh could also be Encratic, since the main representatives of Encratism are Syriac works which originated in Edessa, e.g., the *Homilies* of Macarius and the *Libri Graduum*. This movement was a Christian approach to the problem of love, sex, and wholeness. According to the Encratites, the male is only half of the human being. Adam has been created as an androgynous being (see ANDROGYNY[S]); but while he slept, Eve was taken out of him, and so he lost his completeness. The fall is therefore the differentiation of sexes. But Christ, the whole person, has come to restore the primitive unity (the main theme of the Gospel of Philip (see PHILIP, GOSPEL OF[S])), also from Nag Hammadi. This view, however, was not exclusively Encratic. In Plato's *Symposium*, Aristophanes tells a myth, according to which man was originally both male and female. Split by the ire of Jove they seek reunion, and this is love. Many others, e.g., Johannes Scotus Erigena, León Ebreo, and Jakob Böhme, adopted similar ideas. Characteristic of all these thinkers was their veneration of Sophia (Wisdom), the female aspect of deity.

GTh exhibits practically the same views. Here, too, the Holy Spirit is a mother, and as the true mother who gives life she is contrasted with the carnal mother who brings death, because whoever is born is bound to die (Logion 101). When Adam lived in the heavenly Paradise he was one, but through the separation of Eve from his side he has become two (Logion 11). But Christ has come to restore by his teaching the original unity and to make man a *monachos*, i.e., a person who is both unmarried and whole. Logion 22 is symptomatic of such Encratic (or Greek; cf. Plato, *Symposium* 191 CD) influence:

Jesus saw children who were being suckled. He said to his disciples: These children who are being suckled are like those who enter the kingdom. They said to him: Therefore, if we become children, will we enter the kingdom? Jesus said to them: When you make the two one, and when you make the inner as the outer, and the outer as the inner, and the above as the below, and when you make the male and the female into a single one, so that the male will not be male and the female not be female, when you make eyes in the place of an eye, and a hand in the place of a

hand, and a foot in the place of a foot, an image in the place of an image, then shall you enter the [kingdom].

Part of this saying is to be found in the Gospel According to the Egyptians (see EGYPTIANS, GOSPEL ACCORDING TO THE), probably written in Alexandria in the second century: "When the two become one . . . and the male with the female [become] neither male nor female" (Clem. Misc. III.xiii.92). One could reasonably suppose that the author of GTh used this GEgypt as a source, here and elsewhere. Thus, Encratic ideas would not have been indigenous in Edessa, but would have been imported from Alexandria, where Jews, like Philo, identified the biblical Adam with the androgynous Anthropos of Plato or the Greek HERMETIC LITERATURE (cf. *Corpus Hermeticum* I.15). Compare Philo, *On the Creation of the World*, 151-52:

For so long as he [Adam] was by himself, as accorded with such solitude, he went on growing like to the world and like God. . . . But when woman too had been made, beholding a figure like his own and a kindred form, he was gladdened by the sight, and approached and greeted her. . . . Love supervenes, brings together, and fits into one the divided halves, as it were, of a single living creature, and sets up in each of them a desire for fellowship with the other with a view to the production of their like.

3. GTh as a Gnostic gospel. It is not necessary to go back to Philo to understand Thomas' views on the androgynous man. Writings closer to Thomas, like those of the Naassenes (cf. Hippolytus, *Elenchos* V.vi.3-xi.1), reinterpreted the myth of the androgynous man as a symbol of the primeval oneness at which Gnostics must aim. The essential doctrine of Gnosticism, particularly well outlined by the Gospel of Truth (see TRUTH, GOSPEL OF[S]), is its knowledge of the "self" realized by the soul putting aside the scatteredness of the senses and being reunited to its other self, the spirit or pneuma. Two other Nag Hammadi tractates (GPh and Exegesis on the Soul) describe this union of soul and spirit as being a sacred wedding (ἱερός γάμος). Therefore, it is also appropriate to look at GTh from a Gnostic point of view.

Gnosticism was mainly the search for one's nature, a nature which had been lost in the fall from the heavenly Paradise into matter. This idea is present in the various types of Gnosticism: (a) Greek, as in Valentinianism (the Gospel of Truth, the Treatise on the Resurrection, the Tripartite Tractate, tractates of Codex I of Nag Hammadi); (b) the more or less Syriacized type (GPh and GTh); (c) the type influenced by the Bible: ExSoul, some tractates of Codex II (The Nature of the Archons, On the Origin of the World), the various versions of the Apocryphon of John (see JOHN, APOCRYPHON OF[S]), the apocalypses of Codex V (the First Apocalypse of James, 2 ApocJas, the Apocalypse of Adam); (d) and the genuinely non-Christian type, like Eugnostos the Blessed, of which the Sophia of Jesus Christ is nothing else but a Christianized version.

Logion 3 of GTh, where biblical wisdom is

being replaced by Greek wisdom, exemplifies this same kind of Gnostic teaching. Based on the well-known Delphic axiom, "Know thyself," this logion teaches one how to recognize one's own ontological "ego":

Jesus said: If they who lead you say to you, Behold, the kingdom is in heaven, then the birds of heaven will precede you. If they say to you, It is in the sea, then the fish will precede you. But the kingdom is within you and it is outside you. When you know yourselves, then shall you be known, and you shall know that you are the children of the living Father. But if you do not know yourselves, then you are in poverty, and you are poverty.

If the soul does not come to know itself anew, it lives in the poverty of ignorance instead of being mystically identified with the Father from whom it has emanated. In spite of the influence here of Paul's "to know" and "to be known" (I Cor. 8:1-3; 13:12b; Gal. 4:8-9; God knows man first in order to be known by him afterward), "Thomas" intends to say that the primeval unity cannot be reached except through self-knowledge, and that oppositions like "the inner and the outer," "the higher and the lower," are then abolished. When the soul refrains from being scattered and puts aside all these dualisms characteristic of an earthly world, it rediscovers its fundamental oneness. This is highly Gnostic (cf. GEgypt and Clem. Misc. III.xiii.92; Hippolytus, *Elenchos* V.vii.13-15 and the Naassene interpretation of the myth of Attis).

The notion of the kingdom of God in GTh also differs essentially from Paul's. No mention is made of a future advent of Christ, and the eschatological kingdom is now being actualized (Logion 113). This is not surprising, because Gnosis and Gnosticism belong to the wisdom tradition rather than to the kind of prophetic religion which forecasts the coming of a savior or redeemer. God's presence within the soul is assured through a divine spark, the πνεύμα, which is called here the "pearl" (Logion 76) or the "leaven" (Logion 96).

In one of the most beautiful poems of the Syriac literature, the "Song of the Pearl" (Acts of Thomas 108-13), the individual soul is the pearl which has been lost in Egypt, the realm of matter. The coming of the young prince from his Parthian kingdom to look after the pearl and to save it is interpreted as the fall of a universal soul into the world. In the end the prince saves himself when he discovers the pearl which is part of himself and carries it back to its homeland.

The discovery of GTh has supplied the missing link between the various Gnostic trends of thought of the second century and the great Gnostic ideology of the third, MANICHEISM. Thomas was a popular figure in Manichean communities, as we already knew from the Acts of Thomas (see THOMAS, ACTS OF) which are pre-Manichean, and from the Psalms of Thomas of the Manichean Psalter. Like GTh, Mani and Manicheism hold the theory of a primeval man who has fallen into the realm of matter. Another common theory shared by GTh, the Acts of Thomas, and Manicheism deals with the five trees of light (Logion 19).

These trees are the spiritual members of the soul which enable it to rediscover its own "self."

Even though GTh lacks the usual Gnostic portrayal of the Archons asking the soul for a key word or preventing it from climbing to heaven, this should not be an argument against the Gnostic character of the gospel. Such portrayals belong to a mythical rather than to a philosophical type of Gnosticism.

\***THRESHOLD.** Two Hebrew words are used to designate "threshold." The more frequent term is *saph*, which is related to Akkad. *sippu*, a word that clearly means "threshold." The meaning of the second term, *miphtān*, has recently been debated. In the first edition of the Koehler-Baumgartner *Lexicon* (1953) the editors followed a suggestion attributed to H. Winkler and defined the word as "podium of idol." More recently Donner has carefully re-examined the word in context and demonstrated that the location and activities associated with *miphtān* strongly suggest "threshold."

The sanctity of thresholds is widely attested. In various cultures, it is the object of a wide range of taboos which prohibit sitting, working, treading

(I Sam. 5:5), or disciplining children upon it. As part of the entrance to a household it may be the scene of ritual acts initiating new relationships with those entering the household (Exod. 21:6; Deut. 15:17) or sacrifices for those returning after an extended absence. The household's relationship to numinous powers may be symbolized by icons or other protective symbols buried beneath the threshold, attached to the threshold, or affixed to the doorway above it (Deut. 6:9). The household's security is preserved by keeping demonic powers from crossing the threshold. This may be done by setting up awesome monsters outside the entrance or attaching apotropaic devices to the door (Exod. 12:7). All these attitudes have been attested among Israel's neighbors.

The Israelite perspective differs somewhat from that of surrounding cultures. Given religious laws that prohibit the making of icons, there was no justification for burying protective deities beneath their thresholds. Consequently there appears to have been no requirement to avoid stepping on them. Where such practices were noted, they were treated as either the strange custom of a foreign people, for which biblical writers provided a likely ETIOLOGY (I Sam. 5:2-5), or as a dangerous affectation of alien manners (Zeph. 1:9). Elsewhere, however, the mention of thresholds sometimes reflects their special significance. Two passages make note of death at a threshold (Judg. 19:27; I Kings 14:17). Within the temple area, the keepers of the threshold are men of considerable importance (II Kings 22:4; 25:18; II Chr. 34:9; cf. Esth. 2:21; 6:2). A shaking threshold is a feature of the theophanies in Isa. 6:4 and Amos 9:1. Ezekiel heard the glory of God speak from the threshold (Ezek. 9:3; cf. 10:18). He also reports that God's holy name was defiled by those who set their threshold adjoining his (43:8), and in 47:1 he describes life-giving waters which flow from beneath the threshold.

\***TOMB.** Recent discoveries have substantially heightened our understanding of Palestinian burial customs and tomb architecture. Chief among the new sites are: Bab edh-Dhra', Dhahr Mirzbaneh, Jebel Qa'aqir, Jerusalem and environs, Qumran, Beth She'arim, Khirbet Shema', and Gush Halav.

While none of these sites individually has revolutionized our understanding, collectively they provide an overview of the kinds of new data available.

Recent advances in archaeological reporting, field techniques, and science, as it relates to the interpretation of archaeological data, also have contributed greatly to our understanding. Moreover, the rapidly developing discipline of ceramic typology enhances the possibility of achieving a highly accurate dating schema. Since most of the older excavation reports have not undergone such critical

scrutiny, the reader is urged to consult the standard works on POTTERY chronology in determining the accuracy of earlier conclusions.

1. **Mode of inhumation.** From earliest times two types of burial procedures were in use: primary and secondary interment. A primary interment is one in which the corpse remains in the original position in which it was buried. A secondary burial is one in which skeletal remains are reburied in a pit or OSSUARY, either within the precincts of the same tomb cave or at a new locus. This custom appears to be widespread in ancient Palestine, especially from the Iron Age onward. By the Roman period secondary burial in wood or stone ossuaries, along with more simple forms of secondary interment, came to dominate at the important necropolises of Beth She'arim and Khirbet Shema'.

2. **Idioms for death and burial.** Since ancient custom and law as well as climate dictated the need for rapid BURIAL, interment in the family tomb was not always possible. Hence there was a need, especially in a nomadic culture, for secondary burial, whereby the deceased could be "gathered to the people" or could "sleep with the fathers." These idioms could indicate burial or reburial in the family tomb (II Sam. 21:12-14) but were broadened to include descent to SHEOL (Gen. 25:8; 35:29; Num. 20:23-28). In this way the biblical writers conveyed the idea of a peaceful death (see DEATH, THEOLOGY OF[S]). Only violent death in battle or by suicide was described in other terms.

These idioms, viewed with the biblical preoccupation for proper burial, give special poignancy to the acute fear of exhumation and nonburial (Jer. 8:1-2; 25:33). Moreover, subterranean tomb chambers doubtless influenced Israelite beliefs about Sheol. It was located beneath the earth (Gen. 37:35), dark (Job 10:21-22), dusty (Job 17:16), and silent (Ps. 94:17).

3. **Tomb types and special features.** Many tomb types as well as burial customs continued in use over a long period of time, albeit in highly modified forms. Conservatism runs deep where death is concerned. Shaft tombs, common in the Early Bronze Age (Proto-Urban phase), reappear in the Middle Bronze Age for single and multiple burial (see Fig. T10:1, 2). In the Early Bronze Age charnel houses at Bab edh-Dhra', S of the Dead Sea, replace shaft tombs in the second burial phase and function as a common burial ground. Recent excavation of DOLMENS has confirmed that they originated in the Middle Bronze Age and were used for secondary burials.

In the Late Bronze Age and especially in the Iron Age, tombs conform to established typological patterns. The introduction of the rectangular bench-type tomb, however, is an innovation which coincides with the coming of the Sea Peoples and Philistines to Palestine (see Fig. T10:6). The elaborate anthropoid sarcophagi used in Philistine burials are notable (see BETH-SHAN Fig. 38). Multiple-chambered tombs continue alongside the shaft type from which they are derived, and are often a converted natural cave or an older tomb re-used. They are usually entered by a stepped entryway or *dromos* (see Fig. T10:3, 3a, 4).

Coincident with these features is the appearance

By permission of J. C. B. Mohr (Paul Siebeck)

10. Various types of tombs

of the repository for the collection of bones. Primary burial would occur on the bench or ledge, and at some later time the skeletal remains would be cleared or reburied in a central repository (depression), communal ossuary, or sometimes in a separate bone chamber. All these features continue in some form or other into the Hellenistic and Roman periods. Excellent examples of this type of arrangement are to be found at the 900 and 500 cemeteries at Tell el-Far'ah (Sharuhin), and Lachish Tombs 106, 213, and 223. Disc-shaped recessed depositories are found in Tomb 1 at Bethshemesh or Tomb 54 at Tell en-Nasbeh. See Fig. T10:5.

Single graves are found in the Iron Age, continuing a popular form of interment. Prime examples come from Lachish, where N-S graves were simple trenches, sometimes with a step in each side, and burials oriented E-W were in the shape of a trench with an undercut chamber along the bottom of one side. The body was always stretched out on its back. While the use of the coffin is not well-attested in the Iron Age, several examples have come to light. See BURIAL Fig. 59.

Familiarity with Iron Age tombs and burial practices greatly facilitates understanding the data from later periods. While in general there came to be a much greater emphasis on external features, the internal arrangement is remarkably similar. The introduction of the individual loculus or *kôkh* (a burial shaft which is cut perpendicularly back into the wall of the tomb chamber) and the "kline" or arcosolium tomb (the roof of the shelf

niche made into an arch) are the most distinctive innovations in Hellenistic tombs and can be associated with both primary and secondary burials. See Figs. T10:13, T11.

The individual receptacle or ossuary for secondary burials became commonplace by late Hellenistic times and continued well into the Roman period. Only scattered evidences of individual wood or stone ossuaries, however, are found after the Bar Kochba period. The dominance of the loculus

arrangement (with ossuaries and/or secondary burials in pits—see Fig. TOM 10:12—repositories and charnel rooms) continued into the Byzantine period, as evidenced at Meiron and Khirbet Shema'. Sarcophagi (for single interments but sometimes used for multiple burials) also are much more prevalent in Hellenistic and Roman times and often are highly decorated.

The vast material uncovered in the Jerusalem area is inadequately reflected in the published literature. The monumental tomb of Jason provides a glimpse into the world of a family of high social standing in the first century of the Hellenistic era. This family may have been involved in naval exploits along the E Mediterranean, judging from the drawings of ships on the porch wall. Corpses were interred in ten loculi (Fig. T12 room A), and there was a charnel room (B) for the final storage of disarticulated remains.

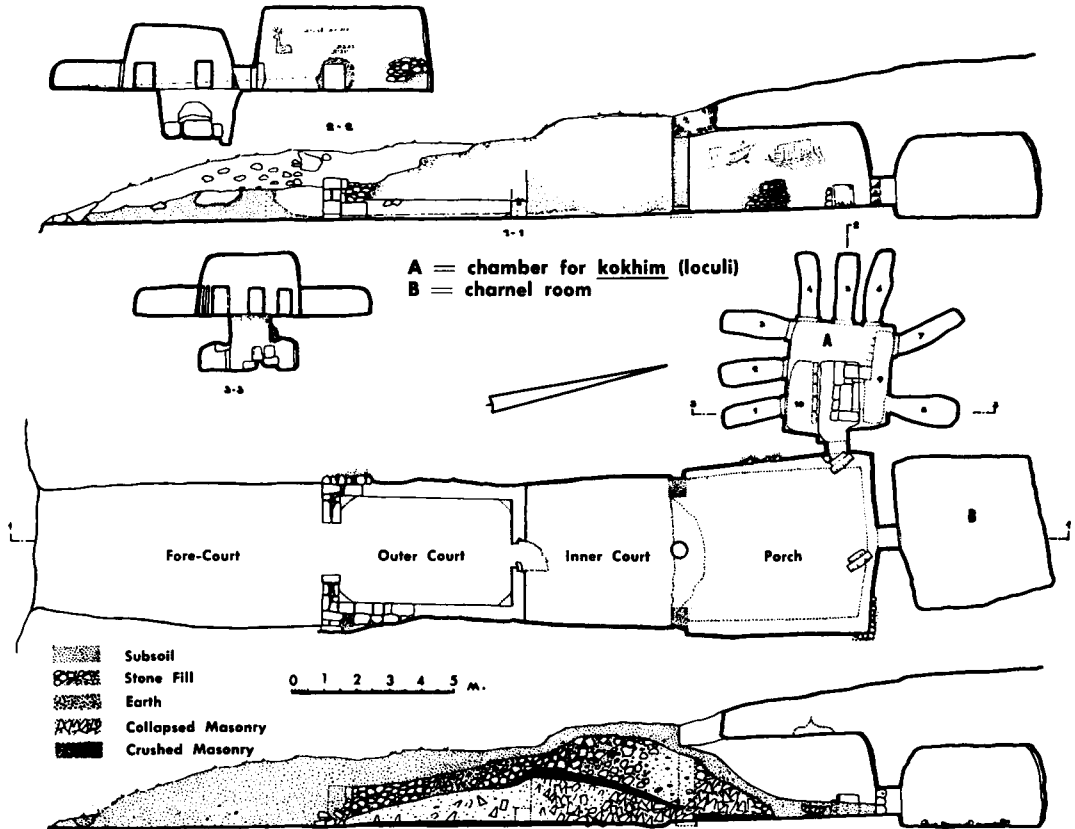

At Qumran the vast majority of burials thus far excavated have been primary inhumations in shaft graves with a recess at the bottom. Since by this time most Palestinian tombs were employing the loculus grave arrangement, the method used by the Qumran community would seem to be a conscious effort at setting themselves apart. Some secondary burials have been noted, possibly reflecting a desire to be reburied in the family cemetery.

The most important necropolis thus far excavated in Roman Palestine is Beth She'arim in W

12. Jason's tomb, Jerusalem

lower Galilee. Here the full variety of methods of interment is to be found, with secondary burial (in a variety of ways) as the dominant form. Tombs include those of Jewish families of the Diaspora as well as the family of Rabbi Judah himself. An extensive collection of inscriptions in Greek, Hebrew, and Aramaic provides data for evaluating the significance of these tombs and burials. The abundant art found on tomb portals, on coffins, and on the walls of catacombs provides an array of material relevant to the study of Oriental art in general and Jewish funerary art in particular. See ART, EARLY JEWISH[S] §4.

Jewish tombs of the second temple period provide the proper setting for considering burial practices alluded to in the NT. Rabbinic sources which discuss details concerning tombs and burial are preserved in the late tractate on mourning, *Semahot*, as well as in a host of other Jewish sources. See MOURNING.

**4. Summary.** The tradition of the family tomb would seem to be the most important factor in the data which pertain to burial and tombs in both OT and NT times. The need to be joined to one's fathers in death is an overriding factor which contributes to the interrelationship between primary and secondary burial. While a doctrine of life after death appeared only at the end of the OT period, during Hellenistic times a variety of such beliefs developed. Whether or not the modes of burial and construction of tombs reflect this variety is a matter for further study. See IMMORTALITY; IMMORTALITY[S]; RESURRECTION; FUTURE LIFE IN INTERTESTAMENTAL LITERATURE[S]; JUDAISM, HELLENISTIC[S].

**TOMB OF JESUS.** See HOLY SEPULCHRE, CHURCH OF THE[S].

**\*TONGUES, GIFT OF.** Speaking in tongues or languages (λαλεῖν γλώσσας), glossolalia, is used in a technical sense in the NT for a gift from the exalted Lord. As such it is found almost exclusively in Acts and in I Corinthians. However, the phenomenon was not uncommon in early Christianity (cf. Mark 16:17; perhaps Rom. 8:26; Iren. Her. V.vi.1; Tert. Marcion V.viii; Origen, *Against Celsus* VII.ix) and has appeared from time to time throughout the history of the church.

**1. Tongues and prophecy.** Tongues are in the class of "spiritual" gifts (πνευματικά) and thus are a "higher gift" that Paul himself manifests and urges other believers to seek zealously (I Cor. 14:1, 18; cf. 12:31). As a gift of inspired speech they have a number of affinities with prophecy and can be regarded as a kind of prophecy. Perhaps experienced earlier by OT prophets (cf. Isa. 28:9 ff.), they are the same phenomenon that is associated or identified with prophecy in Acts (2:17-18; cf. 19:6). Like prophecy and other πνευματικά, tongues can be manifested in an ecstatic or non-ecstatic manner. Like prophecy, they are spoken "in the Spirit" and therefore, when interpreted, mediate the mind of God (I Cor. 14:2; 2:6-16).

Unlike prophecy, tongues are manifested with the speaker's mind (νοῦς) held in abeyance. While they edify a person, they do not instruct the mind or the minds of the hearers. Consequently, as a public manifestation of the HOLY SPIRIT in church, tongues are less desirable than prophecy and are to be restricted or, when no one gifted to interpret is present, to be abstained from (I Cor. 14:5, 13-19, 27-28).

**2. Tongues and language.** As the term presupposes, tongues are meaningful language, of men or of angels, that speak "to God" and that may be "interpreted" (I Cor. 13:1; 14:2, 5). If a human language, they may be understood (Acts 2) and linguistically analyzed. If a heavenly language, they are presumably beyond the scope of the linguist's tools or talents. Tongues are the Spirit's language being mediated to and through the speaker (Acts 2:4, "gave" [ἔδίδου]) and are not to be understood as a miraculous ability to speak via one's own mind in a foreign tongue.

**3. Tongues and ecstasy.** Ecstatic manifestations of the πνευματικά are to be distinguished both in origin and, ultimately, in effect from ecstasies that are emotional, pathological, or demonic in origin. Even when similarities are present, they do not necessarily imply similar stimuli, for what is sometimes a natural or even pathological phenomenon may at other times be an instrument of the Holy Spirit (Lewis). For example, Paul's Damascus vision may be distinguished from a mental illness or an emotional reverie by the effects that it produced.

One must resist the temptation to "psychologize" the manifestations of the Holy Spirit. At the same time one must seek criteria by which the manifestations of the Spirit may be distinguished from similar psychological phenomena. For Paul the criteria are the same for all the spiritual gifts: a christological focus and the fruit of love, the

confessional and ethical norms of a healthy Christian life (I Cor. 12:3; 13:1).

Emotion or ecstasy does not produce a gift of the Spirit. But the presence of the Spirit in power may produce emotion that the unknowledgeable observer may mistake for a psychological aberration (Mark 3:21; Acts 2:13; 26:24). Nevertheless, for tongues no less than for prophecy Paul's rule is valid: "The spirits of prophets are subject to prophets" (I Cor. 14:32). Uncontrolled ecstasy ceases to be responsible Christian ecstasy.

4. **Tongues and baptism in the Holy Spirit.** For Paul tongues are a gift of the Spirit and, like other gifts, they are not imparted to all believers (I Cor. 12:30). In contrast, baptismal imagery is used for the initial coming of the Spirit, which is the characteristic mark of all who are "in Christ" (I Cor. 12:13; cf. Rom. 8:9). In Acts tongues and prophecy often accompany the initial coming of the Spirit (Acts 2:4, 18; 19:6), but this does not always appear to be the case (Acts 8:17; 9:17). The interpretation of the gift of tongues as (the necessary outward sign of) baptism in the Spirit is not justified by the NT evidence. See BAPTISM[S] esp. §2c.

5. A **ministry of tongues** is not explicitly mentioned in the NT but, on the analogy of other spiritual gifts, it may be implied. Like prophecy, the gift of tongues may be manifested by some only on occasion; for others it may be a continuing ministry. When it is accompanied by the gift of interpretation (I Cor. 12:10), it may constitute prophetic teaching and exhortation. More often it may be a ministry of prayer, whether of worship or intercession or praise (I Cor. 14:2, 14-15, 28). Thus viewed and practiced, the gift of tongues also has its place in "building up the body of Christ" (Eph. 4:12).

means law or law code. In early Judaism it had a wide range of connotations, from PENTATEUCH (Torah par excellence) to all divine revelation in biblical and postbiblical literature (in some contexts, it is a designation for Judaism itself).

In the OT, Torah can mean a priestly or prophetic oracle, a divine response to a particular question, a directive sign; it can also mean instruction by a parent or wise person. In Isaiah, it seems to designate the prophet's system of teaching. Generally in prophetic speech, it is used as a synonym for Yahweh's Word or Way. In the broadest sense, it designates the divine will for Israel in the covenant relationship—both specific directive and the entire body of tradition which relates God's gracious acts and anticipates Israel's obedient response.

The entire range of meanings is retained in post-biblical Judaism. Torah includes not only HALACHAH (the rules of conduct: commandments, statutes, and ordinances) but also HAGGADAH (religious teaching in a more general sense). It thus includes the whole of revelation, preserved in writing or orally—all that God has made known of his character, purpose, and expectation. "Talmud Torah" (study of Torah) includes reading a post-biblical MIDRASH or a medieval commentary. "In a word, Torah in one aspect is the vehicle, in another and deeper view it is the whole content of revelation" (Moore). Whether in the Bible or in Judaism, Torah was clearly viewed as a mixture of two equally essential elements: story and stipulation, haggadah and halachah, mythos and ethos, gospel and law.

How and when was this balance misperceived, so that Torah came to be viewed largely and in essence as halachah (or "law")? One point of view places the blame upon the translators of the LXX: too consistently they rendered the word *torah* by the Greek *nomos* instead of varying the translation according to the contextual demand (e.g., as *didache*, *didaskalia*, *dogma*, etc.). In any case, there has been consistent agreement that their rigidity in the use of *nomos* has been misleading, since it conveys only the narrower sense of the word *torah*. But more recent study suggests that they chose precisely the word that they should have chosen. In the Hellenistic world which early Judaism inhabited, *nomos* had at least the same breadth of meaning which *torah* had for Judaism. "*Nomos* in the Pentateuch . . . means divine revelation, considered as a whole, composed of a doctrinal part and of a legislative part" (Pasinaya).

However, there is a general recognition that Judaism, in some aspects and expressions, has tended to stress halachah (and the necessity for obedience) as a condition for survival. This would have been a major lesson of history for those who experienced the exile of the sixth century B.C. One view is that it was the priestly writers and editors of the exilic period who began to equate Torah with law and to use the word interchangeably with statute, commandment, etc. (Östborn). A more recent view would place the narrowing of meaning in the book of DEUTERONOMY, especially in its exilic redaction (Lindars). In any case, it would be a mistake to think that Judaism as a whole con-

\*TORAH [תורה, perhaps from ירה, "to throw"; *hiph'il*, "to point the way" or "to cast lots"; perhaps related to Akkad. *tirtu*, "oracle"]. A word in the Hebrew Bible meaning instruction, guidance, oracle; in Deuteronomy and postexilic literature it also

centrated on halachah to the neglect of haggadah. In Pharisaic-rabbinic Judaism, as in all Jewish denominations, Torah has always retained the meaning of revelation in a general sense. This observation has led to the view that it was in Hellenistic Judaism that Torah came to be understood primarily as law (Dodd). This view cannot be maintained.

It is becoming increasingly clear that sharp distinctions along such lines between Palestinian and Hellenistic Judaism (or between so-called normative and heterodox Judaism) did not exist (see JUDAISM, EARLY RABBINIC[S]; JUDAISM, HELLENISTIC[S]). Early Judaism (i.e., that of the period before A.D. 70, when Jerusalem fell to the Romans) was remarkably diverse, not only in Palestine but also in the Diaspora communities.

An intense struggle took place in Palestine ca. 175-164 B.C. as the result of efforts to accommodate Jewish cult and life to "modernization" (Hellenization). The zeal of the reformers was matched and countered by reactionary forces who feared the loss of Jewish identity. The reaction was marked by a distinct zeal for Torah as a countermeasure to assimilation. Out of this crisis arose such traditionalist adherents as the HASIDIM and ESSENES, who, Hippolytus noted, were characterized by zeal for Torah. The reaction led to a successful armed revolt against the Seleucid domination of Palestine (see I-II MACCABEES; ISRAEL, HISTORY OF §§13-14). Thereafter, the fortunes of such traditionalists waxed and waned under the political and cultural ambitions of the Hasmoneans and Romans.

The destruction of the first temple (sixth century B.C.) had already necessitated the study of the ancient authoritative traditions for answers to the questions of identity and life-style in that destitute situation. While many exiled Judeans assimilated to the dominant Babylonian and Persian culture, others turned to the old stories for reaffirmation of their ancient identity, and drew from them survival power. This quest resulted, not only in a singling out of the Pentateuch for special emphasis (a Torah within the Torah, a status which it has had ever since) and its final shaping, but also in its receiving the enduring designation ספר חיים the "Book of Life." Torah became stable textually and adaptable canonically. It could be taken anywhere (Palestine or the Diaspora) and made relevant to changing contexts by whatever HERMENEUTICS were necessary to make it so. Of secondary authority were other traditions (Prophets and Writings) which were part of Torah in wider sense.

Such Torah zealotry gave rise to the oral Torah (see PHARISEES[S]; MISHNA; TALMUD). When the written Torah no longer seemed relevant to some aspects of the new situation under the challenges of Hellenism, oral traditions were collected and expanded in order to address the question of identity. Emphasis was placed upon recognizable practices in personal and communal life, i.e., upon halachah. An enduring attitude of self-examination and correction arose which sought not only to maintain identity but also to prevent a repetition of past and present catastrophes. The lessons of the past must not go unheeded. No detail of the Torah was so insignificant as to warrant neglect. Out of such

desire for obedience and dedication to righteousness arose what, from another point of view, came to be viewed as the pursuit of righteousness based upon works of the Law (Rom. 9:31-32). However, there is no basis for thinking that the more the Pharisees emphasized halachah the more they neglected haggadah. On the contrary, Torah for them always meant both the story of God's gracious acts in creating and preserving a people for himself (see GRACE IN THE OT[S]) and also God's will for the way that people should shape their lives in the light of those acts.

The wide spectrum of Jewish belief and practice prior to A.D. 70 included groups who were preoccupied with scenarios of how God would act in their own time. Just as he had acted at the Exodus or at other times in the Torah story, perhaps he would act now for a final settlement of the struggle between right and wrong, between the forces of light and the forces of darkness (see APOCALYPTICISM; APOCALYPTICISM[S]). Belief that he could and would do so took precedence for some over the other rightful Jewish concern to reflect God's righteousness in daily life.

Concentration on the traditions of God's free acts to effect righteousness resulted in an apparent emphasis on Torah as precisely that type of story; concentration on the traditions of Israel's proper response to those acts resulted in an emphasis on Torah as precisely a call to response. But Torah itself was always a balance between the two.

In order to understand Paul's attitude toward the "Law" (*nomos*), it is necessary to remember that this term, after all, is used in the LXX to express the full range of meanings which the word *torah* expressed in Hebrew. In some NT passages, and especially in Paul, *nomos* is used in the sense of Torah story as well as Torah stipulations. Paul possibly does not set faith over against works (as is commonly thought), but asks in whose works one should have faith—those of God, or those which humans perform in obedient response to God's works. If the former, argues Paul, then one could recognize in Jesus another climactic work of God (Rom. 10:4). If the latter, then one might fail to recognize the work of God in Christ for what Paul was sure that it was. Thus the early church should be seen as an heir of those denominations in early Judaism which focused on Torah as the story of the free acts of God which he performed in order to establish righteousness on the human scene. Rabbinic Judaism should be seen as an heir of those denominations which focused on Torah as indicative of how one should live in obedient response to those free acts of God. In either case, Torah was the way, the truth, and the life for Israel.

\***TOTEMISM.** Derived from an Ojibwa Indian word which denotes animals and plants associated with a group of blood-related persons who, being of the same totemic group, are prohibited from marriage. The term became generalized in literature and came to denote various traits in the religious and social organization of primitive peoples.

Although no society encompasses all the traits characterized as totemic, one can list the criteria of an ideal totemism. (1) The tribe is divided into limited groups, each having a definite relationship to an animal or plant. (2) Membership in a totemic group is permanent, and is received through inheritance. (3) The group's attitude toward its totem is negatively expressed in terms of fear or danger. (4) One's totem object is surrounded by taboo which may be ritually expressed. (5) The totem is ancestral in some sense, ties its members to one another, and requires exogamy in marriage and sex. (6) The totem is expressed in oral literature, particularly in the form of myths and legends. (7) The totem is represented graphically by designs on objects or on the human body.

1. **Distribution.** Totemism is by no means a universal cultural phenomenon, but it appears to enjoy world-wide distribution. It is found among the Australian aborigines and in Micronesia, Melanesia, and Polynesia. It is widespread in N and S India, throughout Africa, and in the Americas, but appears to be totally lacking among the Eskimos. Regarding totemism among the Semitic peoples, de Vaux dismisses it, explaining that the only evidence that the ancient Arabs practiced totemism comes from the spurious story of St. Nilus. He adds that it is impossible to discern any traces of totemism among the early Israelites.

2. **Variations in practice.** As stated above, ideal totemism is a construct, and in practice totemic behavior varies greatly from place to place. The American Indian totem is more of a label for one's clan, and the animal representing one's totem may be killed and eaten. One may be initiated into a society which has a patron animal, but there may be no consequent marriage restriction. Some of the Bantu peoples of West Africa practice strict clan exogamy and will neither kill nor eat their totem, and yet they often lack any legends attributing their descent from the totem animal. Among some of the peoples of the New Hebrides there are no totemic clans, yet they religiously

avoid killing or eating certain animals with which they are thought to be related.

3. **Theories.** This awareness of the great variations in totemic ways did not come from the writers who elaborated theories of religion such as Frazer, Freud, and Durkheim, but rather comes from field anthropologists who study living behavior of folk societies.

The idea that sacrifice was an effort to establish a communion between the members of the sacrificing group and their God was developed by W. R. Smith. He recognized that the Arabian restrictions on the killing of the camel were similar to the classic idea of totemism, and elaborated conjectural statements based on presuppositions regarding primitive mentality to convince himself that the early Semites were totemic.

Freud drew upon Smith, among others, and reconstructed a view of totemism based mainly on psychoanalytic theory. It rests on the assumption of the universality of the Oedipus complex, in which the sons kill their father, then identify him and his strength with some animal. They later feel guilt for their deed and institute sacrifice for him, and the sacrifice of the animal becomes the totemic symbol. By declaring that the killing of the father substitute, the totem, is forbidden, they undo the evil they have committed.

Smith's allegation that blood sacrifice is the core of ancient cult is true only in a very limited geographical area, and even among the Semites at only a certain period during their long cultural history. There is no reason to assume that blood sacrifice goes back to a totemic observance. The basic fault with Freud's theory is that he attempts to deal historically with nonhistorical data. To speak of origins one must deal with place, time, and order. Freud deals rather with intuitive psychological assumptions.

In Durkheim's thought all life is divided into the profane and the sacred. The totem becomes the object of the sacred attitude, and in so doing society defies itself. Durkheim equates society with God. Not only are the members of society sacred, but also its symbols, the totemic plants and animals, are sacred.

These theorists assume that totemism represents the simplest form of primitive religion, an assumption which is open to argument. Conclusions drawn from totemism can hardly apply to societies where totemism does not or has not existed. Finally, totemism continues to receive some interest in current ethnographic studies. However, the theories of the origins of religion which it generated have been largely discarded in the twentieth century.

4. **Totemism in Scripture.** A careful reading of the Bible indicates that, while there is no totemic society in the biblical record, there are major elements which suggest totemic behavior: food taboos, clan markings, exogamy, animal worship, and animal and plant names.

Lev. 11 offers a list of animals, birds, and insects which are taboo for eating. There is nowhere any suggestion, however, that any one of them is taboo because the Hebrews were descended from them. Rather, certain forms of life were identified with that which was set apart as holy or unholy,

and contact with all that was unholy rendered the people unholy and therefore unfit for cultic relationship with a holy God.

Body markings occur for some purpose of identification, probably in the form of tattoo, e.g., the mark of Cain (Gen. 4:15). Body marks are mentioned in Ezek. 9:4; Zech. 13:6; and Isa. 44:5. In none of these references are the marks related to tribal identity. In Ezek. 9:4 the marks are to identify those who stand against the abominations committed in the prophet's vision. Cutting the flesh or tattooing is forbidden in Lev. 19:28.

Regarding marriage and kinship, it was once assumed that the matriarchate was historically a primitive form of social organization and that evidences of it implied totemism. However, there is no correlation established between totemism and matrilineal descent patterns. Exogamy, or obligatory marriage outside one's own kinship group, is a characteristic of totemic societies, and exogamy is found explicitly in Judg. 12:9. Generally, however, the Hebrews were endogamous and, as in many Moslem Arab families today, cousin marriage was common. See MARRIAGE[S] §1b; KINSHIP AND FAMILY [S] §§4, 5.

The worship of animals appears in Ezekiel's vision (Ezek. 8:7-11), and appears to have been practiced popularly in spite of the second commandment. However, the major role of animals in relation to Hebrew worship was in the sacrificial rituals, and the animal in no case is thought of as representing the ancestor of the people.

The OT contains names of clans, persons, and places which are taken from animals and plants; e.g., among the Israelite clans are the Arodites (ass clan, Num. 26:17), the Tolaites (worm clan, Num. 26:23), the Elonites (oak clan, Num. 26:26) and the Calebites (dog clan, I Sam. 25:3). Only twenty-two OT Hebrew personal names are taken from animals (either clean or unclean), and all are pre-exilic, e.g., Ahiah (vulture), Caleb (dog), Deborah (bee), Jonah (dove), Rachel (ewe), Zibiah (gazelle). The resurgence in the time of Josiah of personal names taken from unclean animals, e.g., Achbor (mouse), Huldah (weasel), Shaphan (rock badger), has suggested to some a revival of totemism. However, the Arabs continue today to give their children such names as Nimir (tiger), Assad (lion), Kalb (dog), and Nakhla (palm tree), and no practice of totemism is involved.

To derive from the above features a historical reconstruction of a totemistic society would require a historical approach, setting out in terms of place and time the necessary features at each period. Such reconstruction is far beyond the reach of the anthropologist and the historian. One must avoid the generalizing that has been done by Smith, Freud, and Durkheim. These generalizations have no basis in an ordered chronological sequence and must be dismissed along with all other speculations about Hebrew totemism.

**TRADITION CRITICISM, OT.** Tradition criticism, also known as tradition history, is a method for analyzing biblical literature in terms of the process by which it moved from stage to stage until it reached its final form. The method is valid for any literature that originated as folk material and was passed down for generations by word of mouth (see TRADITION, ORAL; TRADITION, ORAL[S]). The method assumes that folk tradition can reveal the marks of each generation actively involved in its preservation. It presupposes that a tradition has a history, that the history can be traced in some detail, and that to uncover the history will provide insight into the significance of the material.

1. **The method in general.** As applied to the OT, the method has been focused on two related but distinct questions:

a) The circumstances and manner of transmitting the material. It is important to know whether a text was passed down orally and when or under what circumstances it shifted to written form. Moreover, it is important to know the values, goals, or prejudices of the people involved in the transmission, since those factors would have influenced the shape of a tradition preserved by any particular storyteller or collector. This style of criticism reflects the influence of Nyberg, Engnell, and their colleagues.

b) The characteristic content of the material. Here the methodology can help the investigator deal with at least two distinct subjects. (1) The identity and significance of recurring motifs. A motif is a word or a larger pattern of words, perhaps a concept, a problem that recurs, evoking a mood. It can have its own existence as a stereotyped pattern quite apart from its use in any particular passage. Tradition criticism enables the interpreter to determine the general characteristics as well as the peculiar use of a motif in a given text. An example of this work can be seen in the analysis of the "wise courtier" motif by Humphreys. See JOSEPH STORY, THE[S] §3.

(2) The identity and interpretation of larger units of tradition that may carry unique significance for some community. Such units may appear as stories, speeches, poems, or other forms of communication, bound together by common motifs. Koch shows how this may be done in his investigation of the stories about a threat to the ancestral mother. Or the units may appear as a larger construction of tradition, a "theme." In this case, various stories or poems may appear or reappear. The guiding concern, however, is to determine the pattern of construction that holds all of the stories together. The term "theme" is thus not a synonym for motif. Nor does it connote simply a subject of a

discourse or a summary of the content in a unit of material. Its meaning is best clarified by comparing it with a corresponding term, plot, and seeing the theme as a sequence of motifs, episodes, and even significant words. Noth's work on the exodus theme or the wilderness theme illustrates the relevance of this concern.

One caveat must be noted. The procedure works most effectively with literature that has developed through oral transmission in a folk culture. It cannot work as well for something that was, from its inception, a finished work of literary art. The limitation can be seen in the Joseph story, Gen. 37-50. It seems clear that an author created the story, and that it was subsequently expanded and placed in a larger, redactional context between the patriarchs and the Exodus. To ask about the redactional context is, perhaps, the task of REDACTION CRITICISM, although the question cannot be seen as totally different from that raised by tradition criticism. But when one asks about the tradition history of the Joseph story itself, the limitation is apparent. One can appropriately explore the tradition history of a story (Gen. 39-41) within the larger story. One can also explore the tradition history of various motifs employed by the author, such as the wise courtier motif. But in almost all these cases the subject of the analysis is, not the Joseph story itself with evidence produced for reconstructing earlier stages of the story, but distinct sources or motifs used by the author to construct his own, original story. Thus the method demands a text that went through some stages of oral transmission, or at least it is most productive when that kind of material is analyzed.

The methods for investigating the characteristic content of OT material are dependent on the work of Gunkel, Gressmann, and their colleagues. For Gunkel and Gressmann, no less than for Nyberg and Engnell, a history of a tradition is valuable by virtue of its contribution to an understanding of the final text. But the significance of that text can be seen most clearly when the interpreter identifies the process that produced it, along with the interpretative reshaping which the process effected.

**2. Procedures for applying the method.** In practice the method calls for two distinct stages. The first is an analytic process whose particular steps are dictated by the shape of the texts under examination. The second, built on the foundation provided by the analysis, is a sketch of the history of the tradition.

a) The analysis proceeds by comparison of parallel examples in the tradition field. A good test case is the story about a threat to the ancestral mother (cf. Gen. 12:10-20; 20:1-18; 26:6-11). But others abound: the manna stories, prophetic oracles against the foreign nations, psalms reciting the CREDO traditions, to list but a few. Tradition criticism begins by describing the relationship between the parallels, with a primary concern to determine the significant differences and whether the differences reflect a diachronic relationship. If they do, the next step is to determine how the tradition moved from one stage to another, and what changes occurred as a result of the move.

The process becomes more difficult when the parallels appear as intertwined and even harmonized elements within the structure of a single text. If the text preserves two or more distinct literary sources, each recounting the same subject, the parallels can theoretically be separated. The difficulty increases, however, when the evidence points not so much to a combination of written sources as to a process of growth and change in the tradition before the material became a part of any written document. In that case, parallel written accounts of the tradition cannot be reconstructed. The critic stands under the necessity, moreover, not to be overly hypothetical in reconstructing oral stages. Yet it is just this kind of tradition complex that most readily responds to the procedures of the method.

b) The analytic procedure provides the evidence for the second stage, reconstructing a tradition's history. One can now explore possible causes for changes in the tradition, such as settings in Israel's life that would have promoted the use of the tradition in distinct ways, and the basic intentions or functions that might have been fulfilled in the process. To trace the history of a tradition to the point of its origin is a worthwhile goal only if the effort is based upon evidence provided by the text. The value of the method is greatest when it illumines the final stage in the tradition history.

**3. The method in relationship to other methods.** The critic cannot open his analytic operation with the round of questions provided by tradition criticism; the method presupposes certain results already established by other basic methods of biblical analysis.

TEXTUAL CRITICISM is an obvious starting point, enabling the critic to recover the wording of a text at earlier stages in its transmission. Beyond that stage, the set of questions provided by FORM CRITICISM come into play. Particularly, the presence or absence of structural unity in the text can be determined. Then, one may ask whether the unity results from a single movement to a written form, or from a combination of two or more previously written forms. If the latter is the case, the methods of SOURCE CRITICISM and redaction criticism can be employed. And the results from these procedures are relevant to the general reconstruction of the tradition's history. In the former case, the comparative operation of tradition criticism proves most useful. The important point is that a critic does not have the choice of working with one method to the exclusion of all others. The methods should not be competing, the private preserve of various schools, but should be complementary stages in a single analytic operation.

Tradition criticism is not designed primarily to evaluate the historical accuracy of traditions. It does not seek to determine, for instance, whether the ancestral mother was, in fact, endangered by being committed to a foreign potentate's harem. The concern is to determine why Israel remembered the story as it did, why the story was changed, and what factors may have been reflected in the changes. But the method may produce evidence that will enable the critic to formulate

historical conclusions. A traditio-historical examination of the traditions of the murmuring preserved within the wilderness theme, for example, raises serious questions about the historical accuracy of the tradition that depicts the entire people as rebels during their wilderness life. But the primary goal of the method is not to establish the historicity of the text; it is to recover the various stages in the tradition's history.

4. **Conclusions.** Practitioners of the method have been justly criticized for reconstructions that are too hypothetical to be convincing. Moreover, they can lose sight of the goal of the methodology, i.e., to interpret the final form of the text. Nonetheless, the method has produced significant results, two of which should be noted.

a) The method has opened up a valuable perspective for understanding how Israel viewed its own history. The past for Israel was not static, limited in its impact to the shape of immediately successive events. Nor was it simply an objective datum, to be reconstructed by subsequent historians. On the contrary, history was in some degree subjective, requiring a particular commitment from each succeeding generation. It is significant, then, that each of those observers might have reshaped the tradition in order to bring the weight of the commitment more fully to bear on the contemporary generation. One might say, in fact, that history for Israel was essentially tradition history, a process that makes the crucial events of the past real and vital for the present. Moreover, a crucial event of the past might have formative influence on an emerging event in the present without being immediately related to it. Indeed, it might facilitate participation in an emerging future by enabling participants to shape the present and to understand what the future might be. See YAHWIST[S] §§2-3; ELOHIST[S].

b) This view of history also makes clear the significant focus of Israel's theology. It is in the movement of the tradition, with events gaining new strength by virtue of their influence on new events, that Israel developed her distinctive theology. Moreover, that theology is characteristically moral. It carries God's call for a particular behavior in the future. And Israel explores that call, the significance of that history, in terms of successive reformulations of law. Thus, Israel's view of both history and theology, carried by her preservation of tradition, has a traditio-historical character. The past enables Israel to interpret her present, and it orients her present toward the future. See TORAH[S].

\***TRADITION, ORAL, OT.** The literature of ancient Israel has many features that are comparable to those of present-day oral traditions which can be observed and studied directly. By analogy the oral hypothesis assumes that Israelite literature is related to a Hebrew oral tradition that flourished independent of any written tradition.

1. **Written tradition and oral tradition.** The essential characteristic of the written word is fixation; once an utterance is consigned to writing it usually does not change. Oral tradition has as its essential characteristic multiformity, or repetition with variation: each time a composition is performed, it is recomposed from a set of traditional elements whose make-up and relations continually shift. A particular oral composition is a unique manifestation of elements which the composer adopts from his tradition to suit a particular subject, time, and place. There is no fixed text by which the oral composer might evaluate the accuracy of a given performance. What the composer would regard as the identical composition from one performance to another, the literate observer would regard as a constantly changing one.

Concern about the role of oral tradition has often centered on the issue of its reliability judged in terms of a written or memorized text. This issue arises primarily from the effort to establish the original fixed wording of the canonical documents and the desire to determine the facts about historical events. It is assumed there once did exist a single fixed tradition, This, however, may not be the case.

2. **Types of oral multiformity.** The types of variation found in oral tradition may be seen by comparing multiple versions of the same element of composition, assuming they derive from recomposition rather than literate borrowing or copying. The short utterance that is repeated intact is identified as a formula. There are many line-long formulas in OT poetry, for example: "The cords of death encompassed me" (Ps. 18:4 [H 5]; cf. Ps. 116:3). If a word or words in a formula vary, but the meaning and, in the case of poetry, the prosodic characteristics of the utterance remain the same, the two utterances are said to be formulaic variants of each other; neither is considered older or superior, though on a given occasion one might be more apt than the other. Note the formulaic variants in Ps. 18:4-5 [H 5-6]; II Sam. 22:5-6; Ps. 116:3. In Hebrew the relationship between formulaic variants is consistently the same as between members of poetic parallelism. The poet, utilizing his version of a tradition of groups of synonymous words, could formulate other variants of this line. These he might use either as parallel members in the same performance or as variants in another performance. Thus to express the threat of death, the poet commanded a system of formulaic variants:

The { cords  
snares  
torrents  
waves  
pangs } of { death  
Sheol  
Belial } { assail  
confront  
entangle  
encompass  
lay hold on } mc,

of which still further variations are possible (cf. Ps. 22:12 [H 13], 16 [H 17]). The individual words in these formulaic variants were regarded as synonyms. This is confirmed by formulaic variants whose variant word group is found elsewhere in poetic parallelism (Isa. 37:24; II Kings 19:23; cf. Isa. 44:26), or whose variation consists in reversing such a pair of words (Isa. 2:4; Mic. 4:3).

Formulaic variation in prose also involves the use of synonyms. The expectation that short or especially significant sayings should show the least variation does not always hold.

In you all the families of the earth [האֲרָמָה] shall be blessed (Gen. 12:3 n.).

By your descendants all the nations of the earth [האֲרָצִי] shall bless themselves (Gen. 26:4).

Formulaic variants have been preserved in great numbers in different phases of OT textual transmission: (a) double (conflate) readings (Hos. 7:15); (b) Qumran MS variants (Isa. 51:9; cf. IQIs<sup>a</sup>); (c) alternate Hebrew traditions (Gen. 19:12; cf. MT and Samar.); (d) Qere-kethibh (Jer. 9:22 [H 21]); (e) the versions (Exod. 19:3; cf. MT and LXX).

In other traditions changes in meaning evolve within the framework of formulaic systems; the same was probably true for the Hebrew tradition, even though it is unlikely that this process can be reconstructed from the materials available.

The principle of multiformity applies similarly to units of discourse beyond the single line, and the evidence for variation in longer segments is preserved in much the same way as with formulas. Variant sections several lines long may differ mainly on the basis of variants in wording (cf. Ps. 14 with Ps. 53; Ps. 57:7-11 with Ps. 108:1-6), or they may show a difference in length. The relationship between short and long variants is easy to visualize by comparing Job 38:1-3 and 40:6-7. Both express the same essential idea (cf. also Exod. 20:8-12 with Deut. 5:12-16). Variants like these are often evidenced by divergent textual traditions. Compare Job 21:14-16 and 22:17-18 with the variant reflected by the Greek translation of Job 21:14-16.

It is clear that wording, length, and internal order may each vary (cf. Gen. 1:1-4:26 with I Chr. 1:1; Gen. 49:25-26 with Deut. 33:13-16; II Sam. 24 with I Chr. 21:1-22:1; Jer. 6:12-15 with Jer. 8:10-12). Partly on the basis of such variation of smaller units, progressively longer segments and even whole books may be extant in variants which differ considerably in wording and length. In the same way that single terms produce formulaic variants, names of persons and places and other details may change to yield whole narrative variants. In many instances thematic similarity with variation among stories is obvious (cf. Gen. 12:10-20; 20:1-18; and 26:6-11; Gen. 24:1-67 with

Tob. 5:1-11:19). In most cases the classification of similarities and differences unavoidably involves subjective judgment. See TRADITION CRITICISM, OT[S].

Multiformity refers, not to a plethora of random forms, but to the multiplicity of appearances of a given form. The study of living oral tradition has shown that an oral composer draws on a set of traditional formulas, segments several lines in length, themes, and thematic patterns in order to compose rapidly line after line without the help of writing or memorization. The multiform conventions of OT literature at all levels of discourse are by analogy inferred to be a heritage from oral tradition. It is impossible to say with certainty that any particular phrase is an oral formula, but presumably some OT formulas and formulaic variants are true vestiges of oral tradition. The task of discerning thematic elements and their permutations is shared with form criticism. See FORM CRITICISM, OT[S].

**3. Capacity of oral tradition.** A work that was composed orally may be of virtually any length; the length is not determined by the composer's ability to memorize, nor is it necessarily fixed from performance to performance. There is also no theoretical limit to the aesthetic quality of an orally composed work, although attributes such as unity, complexity, and intensity may be taken as a sign of a tradition's maturity, since they grow with repetition and variation. Moreover, oral tradition is adept at developing intricate word plays, as well as exploiting the assonant features of language in general. The near certainty that Homer was an oral poet nullifies the belief that only what is rhetorically primitive could have been composed orally.

**4. Areas of special significance. a. Textual criticism.** The books of the OT may differ in their relationship to oral tradition, but synonymous variants and related types of variants are attested throughout the OT with sufficient uniformity to indicate that they reflect the process of textual formation and transmission in general, and are not features of the literature of a particular date or type. During the period of the formation of OT literature there seems to have been no great preoccupation with a single original text: the older the evidence of textual transmission of the OT, the greater is the divergence among extant MSS. The precise relationship of oral tradition to the synonymous variants preserved in these MSS has yet to be determined. This problem must be approached by also considering the origin of the same type of variants which pervade the textual evidence of compositions of Sumerian, earlier Akkadian, and Egyptian literature, as well as in medieval vernacular and other literatures. Ultimately they, or their class, go back to the formulaic variation inherent in repeated performances in oral tradition. The oral hypothesis suggests that, rather than reducing and harmonizing such variants, one should retain them side by side, so as to reveal their relation to one another and to their tradition.

**b. Oral prosody.** The rules governing the composition of oral Hebrew verse may be inferred

from the properties of numerous repeated line-long phrases and phrase patterns in written Hebrew verse, if these are taken to be the residue of oral formulaic diction. Since these conventional phrases with their variations contradict principles of strict internal ordering or metrics, the rules appear to have been roughly these: (1) the verse line was not measured in stresses, beats, syllables, or words, but by some nonverbal component of oral performance such as rhythm, musical phrasing, or the poet's feeling of rightness; (2) the meaning of the line was self-contained, so that in oral performance a pause between lines did not disrupt the flow of meaning (absence of enjambment). In oral verse the combination of two or more lines through parallelism or conventional syntactical patterns does not seem to have been governed by predetermined restrictions. The ambiguity of the metrical properties of written Hebrew verse may result from two factors: that prosodic rules were indeterminate at the oral stage, and that poets lost their aural guides as oral performance diminished in significance.

**5. Current limitations.** The oral hypothesis as it applies to biblical literature will remain a hypothesis for the foreseeable future. The study of the oral composition of genres other than narrative poetry is in its infancy. Biblical poetry is of such a nature as to preclude the use of quantitative tools, developed in other fields, to prove that any part of the Bible is a transcription of an oral composition or directly related to such a composition. Although some parts of the OT may have preserved genuinely oral compositions, biblical literature seems for the most part to belong to a transitional stage during which there developed an interplay among oral tradition, MS tradition, and memory. It is precisely this intermediate stage that is at present least understood.

**TRAJAN** trā'jən. Marcus Ulpius Traianus, Roman emperor (A.D. 98-117). The first emperor of provincial origin, Trajan was born in 53 at Italica, near Seville, in S Spain. In October, 97, he was adopted as son and successor by Nerva (96-98); he became emperor early in the following year.

Trajan's reign was celebrated in his own time (Pliny the Younger, *Panegyric*, A.D. 100) and remembered in later times (Dio Cassius, *Roman History* LXVIII, ca. A.D. 215) for its bright contrast to the tyranny of Domitian; and, in fact, his rule seems to have been marked by effective administration of the Empire and relatively modest claims for the position of the emperor. Domitian allowed himself to be flattered as "lord and god"; Trajan styled himself "best of rulers" (*optimus princeps*), a title which appears on his coins from 103 onward. His period was of great importance in the development of Roman and imperial art, the innovative relief on Trajan's Column being particularly influential upon later narrative art, both Roman and Chris-

tian. Perhaps the most noteworthy features of his reign were the conquest of Dacia (modern Rumania) in campaigns of 101-2 and 105-6, extending the Empire's boundaries N of the Danube and bringing Dacian gold into the Roman treasury, and his fleeting victories of 114-17 over the PARTHIANS in the E. The Parthian conquests were abandoned by Hadrian, however, immediately following Trajan's death. The years 115-17 saw also a massive and bloody Jewish uprising which spread from CYRENE to EGYPT, CYPRUS and eastward to MESOPOTAMIA, where the Jews joined a general rebellion in the newly conquered Parthian territory. The revolt was crushed, and one result was the ban of Jews from Cyprus. Trajan died in August, 117, while returning to Rome from the East.

From Trajan's reign comes the earliest non-Christian description of Christianity and the first clear indication of an imperial policy toward the new religion (ca. 112). Pliny the Younger, whom Trajan had appointed special governor (*legatus propraetore consulari potestate*) to the province of Bithynia-Pontus, had encountered accusations against the Christians and conducted investigations. He released those who denied that they were Christians and were willing to pray to the Roman gods, to sacrifice before the statue of the emperor, and to curse Christ. Those who persistently maintained their Christianity he condemned to execution for their obstinacy, if for no other crime. Reporting to Trajan (*Epistles* X.96), Pliny described what he had learned of Christian practice and professed himself uncertain both as to the precise nature of the Christians' crime and as to the appropriate punishment. Trajan's reply (Pliny, *Epistles* X.97) notes that the Empire has no settled procedures for dealing with Christians, but confirms Pliny's actions: Christians are not to be sought out; but if accused and convicted, they must be punished; those who deny that they are Christians are to be pardoned; anonymous accusations are not to be admitted. This response leaves the legal character

The Archaeological Museum, Ankara

13. Trajan in old age

of the crime uncertain, but shows that the Empire had no policy of persecution and that Trajan did not establish one. In effect, the Empire would take action against Christianity only when unable to ignore it.

Christian literature probably or possibly from Trajan's reign includes: IGNATIUS of Antioch, I CLEMENT, DIDACHE, POLYCARP's letter to the Philippians. The gospel and letters of John (see JOHN, GOSPEL OF; JOHN, LETTERS OF and supplementary articles) are often attributed to this period (ca. 98-110), and numerous scholars seek to correlate the Pliny-Trajan correspondence with passages in I Peter (but see PETER, FIRST LETTER OF §5). Despite the prominence of suffering and martyrdom as themes in these writings, they show little or no antagonism to the Empire or its authorities.

Trajan passed into Roman lore as a model emperor. In the fourth century, it was recorded that the senate's highest acclamation for an emperor was: *felicior Augusto, melior Traiano*, "more favored than Augustus, better than Trajan."

\***TRIAL OF JESUS.** Mark 15:26 is the necessary starting point for a discussion of Jesus' trial. The superscription on the cross corresponds to the procedure described in Suetonius, *Domitian* 10 and *Caligula* 32.2, Dio Cassius LIV.iii.7, and Eusebius, *Hist.* V.i.44, while its wording corresponds to Josephus, *Antiq.* XIV.iii.1. Therefore a Roman CRUCIFIXION of Jesus as an alleged claimant to Jewish kingship is an almost firm datum.

1. **The problem of sanhedrin powers.** The supreme Jewish legal authority at the time of Jesus was the Great Sanhedrin or συνέδριον (Mark 14:55—RSV "council") in Jerusalem. Most scholars, including the present writer, do not agree with the theory that there were two such bodies, one political and the other religious. (For the latter view see SANHEDRIN[S].) If this supreme body still possessed under Roman administration full powers to execute offenders, whether religious or otherwise, then the manner of Jesus' death must indicate minimal proceedings (perhaps even none) against him on the Jewish side. If, on the other hand, such full powers were no longer possessed by the sanhedrin, some sort of Jewish legal proceedings against Jesus become a possibility, though their occurrence has not thereby been demonstrated. Certainty on this question is elusive. The evidence is as follows:

(1) Studies of Roman legal procedures support the view that normal policy in the provinces (except in "free cities," of which Jerusalem was not

one) was to keep control of capital punishment in the hands of the Roman authorities.

(2) Tannaitic tradition (J.T. Sanh. 1:1; 7:2; T. B. Sanh. 41a) affirms, with no apparent *Tendenz*, a limitation of Jewish powers which should probably be dated in A.D. 6 (cf. Jos. War II.viii.1).

(3) M. Sanh. 7.2 records the execution by burning of a priest's daughter for adultery, an occurrence which would favor Jewish capital powers except for chronological evidence that this event, like the execution of JAMES (Acts 12:2), occurred during the reign of Agrippa I (A.D. 41-44).

(4) The warning inscription in the temple (Philo, *On the Embassy to Gaius* 307; Jos. War V.v.2; VI.ii.4; *Antiq.* XV.xi.5) envisages Jewish authority to execute Gentile trespassers on the sacred site. Josephus' interpretation of this inscription points to its being a concession and therefore indicates a normal legal situation which, in the case of Jews as well, was more restricted.

(5) The deposition of ANNAS II from the high priesthood following his summary execution of James (Jos. *Antiq.* XX.ix.1) may have been simply because he convened the sanhedrin without permission, but the indignant criticism of those who were "strict in observance of the law" is not then adequately explained. More probably two causes of offense were involved: unjust judicial behavior, to which the Pharisaic group objected, and an unauthorized execution which provoked the incoming procurator.

(6) The case of Jesus ben Ananias (Jos. War VI.v.3) involved a Jewish hearing followed by an interrogation by Albinus. Though there is some uncertainty about whether the offense was a capital one, a limitation of Jewish judicial powers may well be involved.

(7) The renewal of the practice of executing criminals, documented in Meg. Ta'an. 6, suggests an earlier curtailment.

(8) The evidence of John 18:31 can only be assessed within a general evaluation of the range of editorial intervention within Johannine passion material (see PASSION NARRATIVE[S] §2d). Those who favor full Jewish powers incorporate John 18:31 within a promise/fulfillment scheme of the editor's creation (cf. John 18:32); those who decide otherwise point to the existence of historical traces within the theological pattern and dispute the necessary incompatibility of the fulfillment scheme and historicity (cf. the parallel example in John 18:8-9).

(9) The execution of STEPHEN is perhaps the strongest piece of evidence that full Jewish powers remained intact, especially as the suggestion of lynch law is jeopardized by indications of scrupulous legal procedure in Acts 7:57-59. The position is nevertheless confused in that a death lament, withheld normally in the case of a legally executed offender, took place in Stephen's case (Acts 8:2), so the trial may have been brought to a premature end and a hurried execution carried out in defiance of Roman norms.

That there was a Jewish hearing in the case of Jesus is therefore very possible.

2. **The Roman proceedings.** On any showing the final decision about Jesus was taken by Pilate (on

whom, see Philo, *On the Embassy to Gaius* 299-305; Jos. War II.ix.2-4; Antiq. XVIII.ii.2; iii.1-3; iv.1-2; vi.5). As to the details of the hearing before Pilate, little can be said. The charge seems to have been focused on the messianic claim (Mark 15:2), since additional elements presented in Luke alone (23:2: "perverting our nation, and forbidding us to give tribute to Caesar," cf. 23:5) are almost certainly redactional, stemming from Lukan theology and apologetic (see LUKE, GOSPEL OF §§2, 4h). To the messianic question, which provides background for Mark 15:26, Jesus responded with an affirmation qualified only by strategic reserve (on "You say/have said," cf. Matt. 26:25; 26:64, interpreted by 27:40-43; Mark 15:2, in the light of Mark 15:9; Eccl. Rabbah 7:12; Tosef. Kel. I.6). On this all traditions agree. Other features of the traditions are more problematical: the tendency to shift responsibility in the direction of the Jewish leaders has powerfully affected all accounts, not only in the conspicuous cases like Matt. 27:19, 24-25, and the BARABBAS material lacks independent corroboration (Pes. 8.6 is concerned with a wholly distinct problem). It would, however, be incautious to conclude that Pilate was put under no pressure at all.

3. **The Jewish proceedings. a. The balance of the evidence.** Viewed from the perspective of the modern debate about the trial of Jesus, the earliest Christian and Jewish sources are startlingly unanimous in speaking of a Jewish initiative, even though the extent of that initiative varies. Mark 14:55-64 and (following this) Matt. 26:59-66 envisage a full trial. Luke 22:66-71 contains no reference to a defined charge or verdict and is regarded by some scholars as a description of an informal hearing; nevertheless, Luke probably was thinking of a full trial in view of the location (*συνέδριον* can be translated "council chamber") and the reference to testimony (22:71), supported by statements which he made elsewhere (9:22; Acts 13:27-28). John, while only hinting at a hearing before Caiaphas in 18:24, 28, seems to have incorporated trial traditions earlier in 10:24-25, 36 (cf. Luke 22:67-68, 70), a procedure parallel to his retrojection of other passion material in 2:13-22 and 6:51. On the Jewish side, Josephus' text (Antiq. XVIII.iii.3), at a point where no mark of Christian editing is apparent, mentions Jewish charges against Jesus before Pilate, and subsequent tannaitic tradition (e.g., T.B. Sanh. 43a, 107b) mounts a critique of Jesus and of Christianity by exaggerating, rather than by disputing, sanhedrin participation. Tacitus (*Annals* XV.xliv) indeed refers only to Roman action, though his Roman preoccupations and limited interest in the case of Jesus as such restricts any argument from silence here. This unanimous testimony is reinforced by the strong probability that Jesus' proclamation was theologically radical and unacceptable, especially in relation to the Law, but politically innocuous. This would certainly be disputed by those who detect in Jesus a ZEALOT-like tendency (which is open to severe criticism), and could in principle be weakened if his downfall, like that of JOHN THE BAPTIST (Jos. Antiq. XVIII.v.2), resulted from any widespread popular unrest he caused. But since the sayings tradition (e.g., Luke 10:13-15) and the

situation presupposed by many parables attest a pattern of restricted influence, frustration, and failure, this is not likely, and it remains more probable that any legal proceedings against him would relate to what he had said and done rather than to what he had not.

b. **Traditio-historical problems.** Source- and redaction-critical explorations of the Lukan and Johanne accounts suggest the probable presence of non-Markan material in each, as well as a common scheme, according to which a period in the house of the high priest (Luke 22:54; John 18:15: Annas?) was followed by a move elsewhere in the morning for a hearing before Caiaphas (Luke 22:66; John 18:24). When cognizance is taken of Markan editorial work, which has positioned Mark 14:55-65 within Mark 14:54-15:1, a certain awareness of this scheme can also be traced in pre-Markan material. But more important is the linguistic and redactional evidence that parts of Luke 22:63-71 contain an alternative tradition which, especially in the case of Luke 22:63-64, 67-68, 70 (?), appears more primitive than Mark's version. The latter has long been suspected of reflecting post-Easter Christian convictions, and its over-all coherence with characteristically Markan convictions has recently been argued to some effect. But in principle the possibility remains that pre-Markan tradition existed to be molded into this shape. Equally, the fact that Mark's main trial passage is presented as the central element in an interpolation structure by no means demonstrates the total unhistoricity of this or any other trial tradition, as can be deduced from the analogous cases of Mark 3:22-30; 6:14-29; 11:15-19. So while the presence of post-Easter concerns and convictions within all traditions can hardly be disputed, the consequent traditio-historical pattern draws particular attention to the Lukan evidence. It also means that the relationship between the traditions and current legal norms cannot be decided simply by fastening on Mark.

c. **Legal problems.** Explicit suggestions of improper legal procedure enter the Christian traditions only at Matt. 26:59. Neither Markan (cf. the rejection of discordant testimony, Mark 14:56, 59) nor Lukan forms of the tradition aim to make this an issue. The modern debate has seen things differently, frequently containing allegations (or denials) of wholesale illegality, though recently the discussion has narrowed to five major problems:

(1) A trial in the high priest's house, rather than in the Hall of Hewn Stones, diverges from M. Sanh. 11.2. But in fact no tradition suggests that Jesus' trial took place there! Neither Mark 14:55-65 nor Mark 15:1 contains a place-note, and to apply the geographical detail of 14:53 to the former passage ignores the interpolation structure of Mark's narrative. Similarly, Luke 22:66 should probably be taken as indicating a movement (cf. "they led him away") to a new location, the council chamber. John (18:24, 28) agrees.

(2) Nocturnal proceedings would infringe M. Sanh. 4.1. But again the suggestion of a nocturnal trial is an impermissible deduction from the present secondary position of Mark 14:55-65 and clashes with Luke 22:66.

(3) A trial on a festival day (synoptic chronology) or on the eve of a festival (Johannine chronology), and indeed on the eve of a sabbath (Mark 15:42; Matt. 27:57; John 19:31) clashes with M. Sanh. 4.1 and Bez. 5:2. This is the most substantial of all the suggested discrepancies, though even this one may not stand since Jos. Antiq. XVI.vi.2 may indicate a progression in the development of this law, and the distinct possibility that its final form, as in the texts cited, was not in operation at the time of Jesus.

(4) The failure to hold a second session to ratify a verdict of "guilty" clashes with M. Sanh. 4.1. But other Jewish legal material (e.g., Jos. Antiq. XIV.ix.5; XV.vii.5; XVI.vi.2; Tosef. Sanh. X.11) shows no awareness of this rule, which may therefore stem from the developing liberal tendency in later Pharisaism.

(5) The introduction of the category of "blasphemy" (Mark 14:64) as a description of anything Jesus had thus far said, fits ill with Lev. 24:16 and M. Sanh. 7.5. But the term "blasphemy" is mentioned only by Mark and cannot, in view of Mark 2:7, be assumed to be more than a general description of what is theologically horrifying.

Specifically legal objections to the trial traditions turn out, therefore, to be somewhat brittle. Moreover, the appeal to them is the more unsatisfactory in view of (a) the proven discrepancy between Mishnaic laws codified around A.D. 200 and those operating in Jesus' time; (b) uncertainty about whether Sadducean authorities would follow Pharisaic rules (though Jos. Antiq. XVIII.i.4 envisages such acquiescence); (c) the irrelevance of all formal rules if the proceedings were only informal.

**d. The status of the event.** If then the earliest form of the tradition evinces no inherent legal problems, it remains to determine the character of the proceedings—as formal trial or as informal preparatory session—as well as the content and definition of the charge. On all these points opinion is sharply divided. The formality of a trial in the strict sense is favored by explicit Markan and implicit Lukan evidence, with which early Jewish testimony agrees. Against this stands (1) the impression given by the hearing before Pilate that the case was being dealt with *de novo*; (2) the distinct possibility that all Lukan hints of formal procedure are inferences from Mark, who in turn has exaggerated the scale of the event; (3) the difficulty of two trials, one Jewish and one Roman, following consecutively (though see Jos. War VI.v.3); (4) the final penalty of crucifixion, as against a specifically Jewish method of execution. Also, if messiahship was the issue which decided Jesus' case in the Jewish hearing, the fact that a messianic claim was technically inoffensive would also require us to interpret that hearing as informal and preparatory alone. But was messiahship in isolation the issue? Certainly it has been widely favored, and can reasonably be preferred to suggestions which fasten on the temple saying (Mark 14:58) or the words "I am" (Mark 14:62) or the announcement of the Son of man's enthronement (Mark 14:62). But if the Lukan tradition in 22:67-68 is historical—and it coheres exactly with the approach of Jesus in Mark 11:27-33, while at the

same time exhibiting none of the typical tendencies of Christian remodeling—it implies that Jesus was asked about messiahship, but that his answer contained insufficient basis for a charge. It may well be, therefore, that the theological issue of divine Sonship (Luke 22:70) intervened and to some extent interrupted the continuity between the events of Luke 22:67-68 and Mark 15:2. This element of divine Sonship, given prominence by all evangelists (cf. in addition to synoptic evidence, John 19:7), would gain in force if the authenticity of Sonship material elsewhere in the gospels (Matt. 11:27; Mark 12:6; 13:32) should prove defensible, and if Luke 22:70 should, as is very probably the case (though this is disputed), prove to stem from the pre-Lukan form of the tradition along with 22:67-68. If so, and if the hearing was in fact a formal trial, it is necessary to look for a definition of Jesus' offense. In the history of the discussion the range of suggestions put forward has included blasphemer, beguiler, false prophet, and rebellious elder, among others, but among them it is almost impossible to choose with confidence. See also CRIMES AND PUNISHMENTS §E.

\***TRIBE.** An association of the real or assumed descendants of a legendary, mythical, or remote ancestor. The biblical groups known as tribes could be more accurately identified as "clans" (see KINSHIP AND FAMILY[S] §§2, 8). Since such groups are found in the early stages of urban societies as well as in nomadic and agricultural societies, the presence of "tribes" in the Bible is no indication of a nomadic origin of the Israelites. See NOMADISM[S].

A tribe may base its kinship system on a common (eponymous) "ancestor." The questions of whether the ancestor was an actual historical personage and whether the members of the tribe had any plausible historical connection with him are irrelevant to the function of the social symbol that he represents.

Ideologically a tribe seems to be an attempt to transfer the loyalty of kinship ties to a larger social organization. This transference is sometimes motivated by the necessity of forming large economic or political power structures, often as a reaction to a competing structure.

A tribe may be held together by the need to lay claim to and mobilize the defense of territory. Such social coalitions have often been formidable opponents to the ambitions of political empires, but once the opponent is gone, the tribe will often disintegrate as well. For this reason a tribe is weakly bonded socially and thus ephemeral by its very nature. The large number of "tribes" in the biblical texts which come and go may thus not be relevant to larger questions of population and cultural continuity.

It follows that the name, either of a tribe or of a supposed state, has to do only with the particular social organization for which it is attested. The continuity of a name has no necessary correlation with the continuity of any sort of social, cultural, or religious reality.

We have two major bodies of material from which relevant evidence may be gathered.

The first is the extensive body of documents from MARI, in which a "tribe" called Banū-yamina constitutes a formidable force against the Mari centralization of control. The identification of these "sons of the right [bank?]" with primitive "nomads" is now unacceptable. The foundation deposit inscription of Iaḥdun-Lim suggests that the Banū Yamina constituted a resistance movement that arose in reaction to his ephemeral conquest of city-states further upstream along the Euphrates.

As at Mari, the primary function of Israelite tribes seems to have been the organization of a large and strongly bonded (on the specifically religious grounds of the Yahwist covenant) society that could ward off the constant attempts of urban rulers to regain economic and political control of villages. With the establishment of the centralized monopoly of force under David, the older tribal organization had no social functions and withered away. The tribal names seem to have survived for a time as genealogical traditions. See GOVERNMENT, ISRAELITE[S] §§2-3.

**Bibliography.** Mendenhall, G. *The Tenth Generation* (1973), ch. VII, and "The Twelve-Tribe Federation of Ancient Israel," in *Magnalia Dei*, Festschrift in honor of G. E. Wright (1976); E. R. Service, *Primitive Social Organization* (1962); E. Wolf, *Peasants* (1966). These latter two works furnish excellent and much needed insights into the nature and functioning of simple village communities.

G. MENDENHALL

**\*TRIBES, TERRITORIES OF.** The sources pertaining to the tribal territories and the proper manner of their interpretation continue to be subjects of discussion.

The distinction between the tribal boundary system (see §§1-2 below) and the town lists (§3 below) should be retained. Together with auxiliary sources and related lists, these descriptions may be analyzed and assigned to periods that provide a probable historical background. The boundary descriptions are sufficiently realistic to refute the assumption that an original, more restricted core was artificially extended according to some visionary ideal. The borderline between the assumed actual boundaries and the theoretical extensions is arbitrary and based on preconceived historical and literary notions. Furthermore, even if earlier his-

torical-territorial phases may be discerned (which is rarely the case), and assuming that these were altered or edited according to a later situation, this final form is to be regarded as historically valuable in its entirety, in contrast to the opinion which relies only on the parts presumed to be original, and either disqualifies the additions or regards them as secondary modifications.

**1. The boundary system.** The tribal boundary descriptions cover the whole country without interruption. The allotments are contiguous and do not overlap. A controversial instance is the border between Manasseh and the Galilee tribes. Josh. 17:10-11 is to be taken as an enumeration of the peripheral areas of Manasseh along the border that abuts upon Asher and Issachar.

Although it is quite clear that the tribal territories underwent changes, the boundary system is based on one phase in that history. Within that system only ten tribes are explicitly represented. Landless Levi (Josh. 18:7) has been replaced by the division of Joseph into Manasseh and Ephraim, while Simeon and Dan are not part of that descriptive framework.

The form of description varies, ranging from detailed delineations of border features and regions to scant allusive outlines. Considering this diversity of form, the boundary system cannot be restricted only to those tribes whose description is marked by an enumeration of border features, nor can the over-all map be based solely on such border points. Perhaps abbreviated in some instances and amplified in others, the descriptions define the individual territories from within. At times this was done by enumerating various regions at the periphery of the territory, or even by references to neighboring allotments, and at others by describing the border areas in detail. Particular geographical features are sometimes also added. The outer edges of the border regions constitute the boundary lines, which generally are only implied and are rarely defined in detail. Noth's theory of *Grenzfixpunkte* (boundary-fixing points) is thus rendered inapplicable. Instead of points, extended border regions are inferred, and this naturally affects how the map is to be drawn. The results of this method are of particular importance in Transjordan. There the description of the tribal allotments is based on an enumeration of regions only. The territorial units are of different size (some arranged to indicate the N-S extent of the allotments, while others add detail in breadth), or general territorial definitions are explained by an enumeration of minor units, providing internal detail.

E borders in Transjordan are sometimes reconstructed on the basis of some of the territorial centers listed (Josh. 13). Such regional centers, in sequence and marked by the "from . . ." or ". . . to" formula, were erroneously regarded as boundary-fixing points (see TRIBES, TERRITORIES OF §8 and map). Most of N Gilead and the entire Bashan were thus omitted, as well as the E parts of Gad and Reuben. The present method thus will materially alter both the over-all picture and the internal picture.

Auxiliary material is generally instructive and particularly decisive for the N borders of East

the northern, summarized in Josh. 10:41 and 11:2-3, 8. The entire conquest of W Palestine is then recounted in brief in Josh. 11:17 and 12:7. As part of the complete scheme, the conquest of Transjordan is outlined: Deut. 2:36-37; 3:8, 10, 15-17; Josh. 12:1-5; 13:9-13. Thus the peripheral borders of the complete tribal league are obtained. In Transjordan the area reaches from the River Arnon in the S, up to and including Mount Hermon in the N, and eastward to the desert and the upper (S-N) Jabbok, and in the Bashan as far as Salecah. In W Palestine the area defined extends from Kadesh-barnea and Mount Halak in the S to Baal-gad in the valley of Lebanon below Mount Hermon in the N, and to the sea in the W. The N border in W Palestine is further qualified by resorting to the definition of the remaining land, and particularly to the part that was allotted. The remaining land (Josh. 13:2-6) consists of those parts of Canaan in W Palestine which are as yet unpossessed (cf. Judg. 3:1-3), and a distinction is made between the part which is still to be allotted and that part which will remain unallotted. In doing so, the relative position between the allotted territory (the land of Israel) and the land of Canaan, which extends further N, is established. The S portion of the remaining land is defined in Josh. 13:2-3 (plus "in the south" of vs. 4), and the N in 13:4 (without the initial "in the south"). Vss. 5-6 provide further details in the N. Vs. 5 opens with a *Wāw explicativum* ("to wit"; RSV "and") and recounts those northernmost parts that remain unallotted, whereas vs. 6 defines a more southwestern tract which is to be allotted. The border between the allotted and unallotted areas is Baal-gad of Joshua's conquests. The allotted area is further defined as reaching Misrephoth-maim, mentioned in the northern war of conquest, which consequently seems to denote the northern limit. The allotted parts of the remaining land are incorporated in the territories of Judah and Asher.

Thus the land of Israel is measured against the land of Canaan (Num. 34:2-12; cf. Ezek. 47:15-20). The Transjordanian portions conquered, as narrated in Numbers, are regarded as being outside Canaan. Thus the land of Israel is equivalent to the land of Canaan, excluding the unallotted land, and with the addition of Transjordan. All these sources unanimously depict the over-all area of the tribal league and thus define the external borders of the combined tribal allotments. Consequently the N borders of East-Manasseh, Naphtali, and Asher can also be established.

It should be mentioned that Scripture has still another, earlier, account of the conquest and settlement of Transjordan. This is found in Num. 21:24, 32, 33, 35 (cf. Judg. 11:13, 22) and 32:2-3, 33, 34-38, 39, 40, 41-42. Here most of the area is outside Canaan proper, whereas the larger territories of the Transjordanian tribes in Josh. 13 clearly conflict with the borders of Canaan. However, only these larger Transjordanian allotments integrate into the harmonious over-all scheme of the tribal allotments that constitute the boundary system.

The list of conquest lacunae (*see above*) and

the list of Levitical cities provide details regarding the individual tribal allotments. The conquest lacunae (Judg. 1) are drawn up according to the allotments of the boundary system. Therefore, they recount certain aspects of settlement history, as viewed from the completed situation depicted in that system. The document is to be dated, not by possible references to an early situation, but by its comprehensive retrospective view. Judg. 1:31 proves the inclusion of Sidon in the allotment to Asher. The list of Levitical cities (Josh. 21; I Chr. 6) also supplies material for the map of the tribal allotments, but the background depicted seems to indicate a slightly different situation. Shechem is assigned to Ephraim, while Josh. 16 and 17 are unclear in this respect. In Transjordan, Gad's territory is enlarged at the expense of Reuben and East Manasseh, as recorded in Josh. 13.

3. **The town lists.** The town lists are an element separate from the boundary system. However, this does not automatically imply that they differ chronologically and in their essential nature. The lists are not uniform, and the degree of detail varies. In some instances (e.g., the House of Joseph), the lists are practically nonexistent; in Galilee they are diversely integrated into the boundary description; and in Transjordan they are so scant as to contract into a list of regional centers. It must also be noted that the northern areas, particularly in the list of Naphtali, seem deficient. Only the lists of Judah, Benjamin, Simeon, and Dan are detailed. Of these, Simeon and Dan do not belong to the boundary system, since their territories are covered by those of other tribes, and the lists of Judah and Benjamin are the only ones which are not integrated into the boundary descriptions.

Evidence based on present knowledge shows that all the lists of towns by tribes—except those of Judah and Benjamin—fit into the division of the boundary system. The tribal geography envisaged is therefore based on the same framework and should be assigned to the same period. It follows that lists of towns or regional centers were an integral part of the description of the individual allotments. Only the lists of Judah and Benjamin, which conflict with their respective border descriptions, show that they were amplified according to later developments. The dating and inclusion of the lists of Simeon and Dan pose a separate problem.

4. **The historical framework.** The extent of the land as depicted in the boundary system and its auxiliary sources restricts the possible historical background to periods of widest territorial expansion: the united monarchy under David and Solomon, or the times of Uzziah and Jeroboam II. The latter period, however, must be ruled out. The territory of Asher cannot be reconciled with conditions of that period, nor can the border between Judah and its northern neighbors or the intertribal borders in Transjordan. For the period of David and Solomon, on the other hand, sufficient source material is available to indicate that its over-all territorial extent served as a basis for a retrospective schematic description of the Conquest and allotment of the country.

The census of David (II Sam. 24) provides the peripheral outline of the national territory of Israel, including subjugated Canaanite areas, and excluding vassal countries. Here too, it is mainly territories that are enumerated. In N Transjordan an unclear definition baffles all commentators, but judging by Solomon's districts (*see below*), Bashan is probably referred to and definitely included. The area thus obtained tallies with that of the boundary system and the conquest framework. Solomon's administrative districts (II Kings 4), though excluding Judah, fit the framework provided by David's census. It is particularly noteworthy that, wherever this administrative division digresses from the tribal boundaries, the common basis of the two systems and the derivation of the one from the other are evident. Particularly in Transjordan, where major territorial changes resulted from David's wars against the Arameans, there seems to be a close dependence of the tribal areas on the administrative districts.

On the basis of this and other historical material, dating of the diverse geographical lists may be suggested.

The boundary system with its integrated town lists reflects the end of David's and particularly the inception of Solomon's reign. The incorporation of Gezer and the subjugation of Philistia must be added to the testimony of David's census. Solomon's districts belong to the same period. While the one system records the tribal-territorial division, the other describes the administrative organization. However, there is yet a third framework: the tribal-clan register based on genealogical affiliation (Exod. 6:14-25; Num. 3:14-37; etc.). Accordingly, Simeon within Judah, or Dan in Naphtali, may retain their separate identities. All these systems co-exist and are not mutually exclusive.

The boundary system reflects a late development. Simeon and Dan have been eliminated, and an expansion of Ephraim at the expense of Manasseh is recorded. Jerusalem has been incorporated, and the peripheral borders are quite extensive. The list of Levitical cities is more schematic on the one hand—by recording cities from Simeon and Dan in its historical S location—and on the other, it displays an even more advanced territorial development, with Shechem in Ephraim and Gad's territory enlarged at the expense of both its neighbors. A date about one generation later than the boundary system, in the second half of Solomon's reign, before the cession to Tyre of the land of Cabul, is indicated.

Simeon's town list in Josh. 19:2-8 seems to reflect the expansion under David, whereas the related list in I Chr. 4:28-33 is slightly earlier "until David reigned" (4:31). Dan's town list is an expansion of its historical area and seems to reflect Solomon's second district.

Only the lists of Benjamin and Judah reflect a later period. Benjamin seems to be based on the expansion under Abijah (II Chr. 13:19), with one district accidentally missing. Judah's list displays characteristics of Hezekiah's reign, perhaps updated under Josiah; one missing district is preserved in LXX.

5. Summary. The territories of the tribes, as

recorded in the book of Joshua and Judg. 1, are part of a historiographical composition that describes the conquest and allotment of the country according to formalized traditions reflecting the completion of the process. In order to include all twelve tribes, town lists of Simeon and Dan are also recorded, though with appropriate remarks defining their status. The lists of Judah and Benjamin, which constituted the kingdom of Judah, are preserved in later amplified versions. Town lists of Ephraim and Manasseh are missing for no apparent reason. The growth of the Transjordanian territories breached the borders of Canaan; and since all the tribes there are traditionally regarded as being settled outside Canaan, Josh. 22 blurs the status of East Manasseh.

**TRUST.** See BOLDNESS[S]; FAITH, FAITHFULNESS IN THE NT[S].

**TRUTH, GOSPEL OF.** A Gnostic, perhaps Valentinian, work preserved in COPTIC which discourses in meditative and sometimes homiletic fashion on the person of Christ and his redemptive work. It is completely preserved in a translation in the Subachmimic dialect in Codex I (the Jung Codex) from the NAG HAMMADI library; the official designation is I,2:16,31-43,24. Three small but clearly recognizable fragments of a Sahidic version containing parts of six pages are found in the remains of Nag Hammadi Codex XII (XII,2\*:53\*,19-60\*,30). These represent an independent translation from what was undoubtedly a Greek original, and because they exhibit some notable differences not accounted for merely by the process of translation, they suggest that more than one recension of the Greek may have existed. The Coptic texts may be dated to the mid-fourth century. Attempts to date the Greek original hinge on the identification of the work. The Gospel of Truth was the first of the Nag Hammadi writings to be published. Because two leaves of it had been separated from the Jung Codex, the original *editio princeps* and some earlier translations are missing four pages (33-36).

1. Identification. Since the GTr first became

known, a majority of scholars have associated it with the "Gospel of Truth" mentioned by Irenaeus in *Her. III:xi.9*: "But the followers of Valentinus, being utterly rash in putting forward their own compositions, pride themselves on having more gospels than there really are. They have even reached such a point of audacity as to entitle their own rather recent writing 'The Gospel of Truth,' though it has nothing in common with the Gospels of the apostles. Thus among them not even the gospel is lacking in blasphemy. For if the one they put forward is the gospel of truth and yet is quite unlike those handed down to us from the apostles, all who wish can learn, as is shown by the Scriptures themselves, that what has been handed down from the apostles is now not the gospel of truth" (author's trans.).

Insofar as it is decidedly different from the canonical gospels, the GTr fits this description, but the remark of Irenaeus is otherwise very un-specific. The evidence for the title "Gospel of Truth" in the case of the Coptic work is only indirect. Unlike most works in the Nag Hammadi library, and indeed in the Jung Codex, it has no title either at the beginning or at the end. The work begins: "The gospel of truth is a joy for those who have received from the Father of truth the gift of knowing him." In accordance with a widespread ancient custom, the *incipit* may be regarded as incorporating the title of the work, hence the modern designation "Gospel of Truth." The possibility must be borne in mind, however, that our document may not itself be the "Gospel of Truth" but a reflection on it.

At first sight, the GTr seems to fail to meet Irenaeus' description in that it lacks the most distinctive elements of Valentinianism, such as the elaborate structure of the heavenly aeons, the fall of Sophia, the role of the demiurge as distinct from the Father, and other features (see *GNOSTICISM[S]* §4b). Nevertheless, with its sharp distinction between the perfect world of the *pleroma* and the earthly world of deception, its notion of the captivity of the spiritual element of persons in this world, its concentration on the primacy of knowledge as knowledge of self, and other features, the GTr is an unmistakably Gnostic work. Much of its technical language reflects the vocabulary of the second-century Valentinians, and its account of the creation of matter by error (Greek *πλάνη*) seems to reflect a Valentinian myth of the fall of Sophia and the work of the demiurge. Some interpreters have concluded from the absence of highly developed Valentinian myths that the work was an early or transitional composition by Valentinus himself. This would allow it a date in the middle of the second century. Yet because the document seems to rest on a well-developed Valentinian mythology without repeating it, it is safer to conclude simply that it is the work of a member of the Valentinian school. If the document really is the "gospel" mentioned by Irenaeus, it may still be dated in the second half of the second century.

**2. Literary character and contents.** The GTr is in no respect a "gospel" in the sense in which that term is applied to the four canonical gospels.

It is true that it focuses on Jesus and contains a Christology, but it does not narrate anything of the earthly life of Jesus nor record his words. Instead, it uses the term "gospel" (Greek *εὐαγγέλιον*) in the sense of "good news" (once translated literally so into Coptic, 34,35), much in the manner of Pauline usage in *Rom. 1:16*, for example. The parallel with Romans may be carried further, for just as the first part of Paul's great epistle first sets forth the world's need for redemption and then reflects on the meaning of God's redemptive act in Christ, so the GTr embodies this structure, though in a less clear manner. Because its reflections on the redemptive act and the person of Christ are occasionally interrupted by direct exhortation to the readers, some have chosen to classify the work as a homily or sermon. It is in any case perhaps best described as a meditation on the gospel (Grobet). Some early interpreters conjectured a setting for the homily in a baptismal or confirmation rite, basing their view on possible sacramental allusions in the text. Generally speaking, however, this suggestion has not been favorably received.

The almost total lack of systematic arrangement makes it impossible to summarize the contents adequately. Instead, one can only list some of the themes in the order in which they occur in the work. After an introductory statement in which the god of salvation is identified with the knowledge that comes through the Savior, the author then establishes the world's need for redemption by narrating its separation from the Father in terms of ignorance and error. Knowledge is communicated to the ignorant by Jesus in his death and his teaching. Then the death of Jesus is reinterpreted in the development of a sustained metaphor, that of the living book in which the names of the elect are eternally inscribed and which was manifested by Jesus. This passage contains some of the classic statements of Gnostic teaching which are frequent in the GTr: "Those whose name he [the Father] knew in advance were called at the end, so that one who has knowledge is the one whose name the Father has uttered. For he whose name has not been spoken is ignorant. . . . If one has knowledge, he is from above. If he is called he hears, he answers, and he turns to him who is calling him, and ascends to him. And he knows in what manner he is called. Having knowledge, he does the will of the one who called him, he wishes to be pleasing to him, he receives rest. Each one's name comes to him. He who is to have knowledge in this manner knows where he comes from and where he is going" (21,25-22,15; here and elsewhere author's trans.).

After a series of somewhat rambling reflections on the saving act as the transformation of deficiency into wholeness and of ignorance into knowledge, there is a description of the work of the Word as the judgment of the world, followed by further reflections on the Father and his plan to save. There is then a vivid passage, possibly inspired by Homer (*Iliad* XXII, 199-201), which depicts ignorance as living in a nightmare and the coming to gnosis as awakening. After describing many of the typical experiences of nightmares such

as flight, pursuit, fighting, falling, flying, murder, blood, the passage concludes: "When those who are going through all these things wake up, they see nothing, they who were in the midst of all these disturbances, for they are nothing. Such is the way of those who have cast ignorance aside from them like sleep, not esteeming it as anything, nor do they esteem its works as solid things either, but they leave them behind like a dream in the night. The knowledge of the Father they value as the dawn" (29,26-30,6).

In a further set of christological reflections there is a Gnostic exegesis of the parable of the lost sheep based on number symbolism in which Jesus is the shepherd. This is followed by another series of reflections on the relationship of the knower to the Father, the meaning of the redemption in Gnostic language, and another set of metaphors for redemption. There is then a long christological meditation on the Son as the name of the Father, containing the refrain, "The name of the Father is the Son." After a final set of reflections on the saving work of the Son, the meditation ends with a description of the life and destiny of the true Gnostics in union with the Father. "His children are perfect and worthy of his name, for he is the Father: it is children of this kind that he loves" (43,20-24).

**3. Christology and soteriology.** A great part of the author's meditation focuses on the person and work of Christ, who is referred to by a variety of titles, often with a conscious play on their meaning. Although he sometimes mentions Jesus by name, the author has no real interest in either the Jesus of history or the history of Jesus. Instead he moves back and forth between the pre-existent and eternal divine Son in the pleroma of the Father and the Logos who reveals the Father to men. It is only the identity of the two that matters. Jesus is once called Savior, in the context of a wordplay on his mission to save, and only twice called Christ, once in a play on Χριστός, "anointed," in the context of the idea of anointing. The most frequent christological titles, however, are Word or Logos, perhaps inherited from the Fourth Gospel, and Son. The latter, along with the elaborate development of name Christology, emphasizes the close relationship with the Father, so close that it is the Father whom the Logos-Son reveals in himself. The GTr does not call the Son Lord (Κύριος), but it seems to be familiar with this title in its references to the Son as the "proper name" (κύριον ὄνομα) of the Father.

Although the issue has been debated by some interpreters, it is clear that the Christology of the GTr is Docetic, as might be expected of a Gnostic document. The problem is the vagueness of its rare references to the incarnation, compounded by the uncertainty of detecting nuances in a Coptic translation. Nevertheless when the document reinterprets the Crucifixion as Jesus' revelation of the living book in which the names of the elect are inscribed, it seems clearly to dwell on the paradox of only apparent death: "O such great teaching! He draws himself down to death though life eternal clothes him!" (20,27-30).

What is at issue in the saving work of Christ is unmistakable: he enters a world that is characterized, not by sin as alienation from God, but by ignorance of the essentially unknown Father. Christ's work is to reveal the Father and thus dispel ignorance with knowledge: "He gave them the means of knowing the knowledge of the Father and the revelation of his Son" (30,24-26). But despite the emphasis on knowledge of the Father, it is essential to realize that the content of gnosis is primarily knowledge of self: "If one has knowledge, he is from above. . . . He knows where he comes from and where he is going" (22,3-15). The Gnostic knows the Father in the sense that he knows his own divine origin and destiny.

In the GTr the emphasis on self-knowledge as redemption is so dominant that ultimately the work is not really concerned with the person of Christ at all despite its apparent Christocentrism. Christ is of interest only as the vehicle of revelation, revealer of the Father in the sense of revealer of the true nature of himself and every Gnostic. Every Gnostic is a son of the Father, and revelation is ultimately an interior phenomenon within the Gnostic himself.

**4. The NT in the GTr.** Unlike many Gnostic writings, the GTr does not cite or clearly refer to any OT passage, but this limitation may have been dictated by the subject matter. In addition, however, it contains no explicit citation from the NT. Yet a careful comparison shows that the author has borrowed extensively from NT themes and language. There are clear allusions to all the gospels, almost all the Pauline epistles, Hebrews, I John, and Revelation, and probable allusions to other books as well. In almost all cases, the author interprets the NT texts in his own fashion, sometimes completely at cross-purposes with the originals. His use of the parable of the lost sheep (Matt. 18:12-14; Luke 15:4-6), which is remarkably similar to the interpretation which Irenaeus attributes to the Valentinian followers of Marcus (Her. I.xvi.2), furnishes a clear example: "He [the Son] is the shepherd who left behind the ninety-nine sheep which were not lost. He went searching for the one which was lost. He rejoiced when he found it, for 99 is a number that is in the left hand which holds it. But when the one is found, the entire number passes to the right hand. Thus [it is with] him who lacks the one; that is, the entire right which draws what was deficient and takes it from the left-hand side and brings it to the right, and thus the number becomes 100. It is the sign of the one who is in their sound; it is the Father" (31,35-32,17).

The fact that the GTr uses so many of the NT books may, if the work be dated in the middle of the second century, have some significance for the development of the NT canon. In particular, it is significant that the author alludes to both Hebrews and Revelation, for the acceptance of these books was challenged in the West and in the East respectively in the second century, according to the common theories of the development of the canon.

**5. Importance.** The GTr, as has rightly been recognized by the many scholars who have written

on it, may be one of the most important of the Nag Hammadi writings. It is probable that it provides access to an original work of second-century Valentinianism, and one must remain open to the hypothesis that it was written by Valentinus himself. In any event, it is one of the clearest statements of Christian Gnosticism that has survived. It does not lose its force in the maze of mythological speculations for which Irenaeus reproached the followers of Valentinus. Moreover, it expresses the Gnostic experience of salvation in a language intimately related to the traditional language of the NT yet characterized by its own coherent theology. The surviving Gnostic literature, including that of Nag Hammadi, is conspicuously lacking in literary quality. The GTr stands out as an exception; in its own discursive and meditative style, it possesses a certain beauty which is not always obvious, due to the accident of its preservation in a sometimes awkward Coptic translation.

**TWINS. 1. In the OT.** The OT speaks of two sets of twins, both fraternal: Esau and Jacob, sons of Isaac and Rebekah; Zerah and Perez, sons of Tamar and Judah. Ward has identified the following patterns that occur frequently in ancient stories about twins. (a) Dual paternity. That multiple conceptions are the cause of multiple births is a widely held belief. The elder child is usually thought to be fathered by a deity (cf. Herakles and Iphikles, sons of Zeus and Amphitryon). Such a notion is unlikely in the OT. (b) Temperamental differences between twins. "Jacob was a quiet man, dwelling in tents," while "Esau was a skilful hunter, a man of the field" (Gen. 25:27). Typically, this contrast is apparent even before birth. The struggles of the twins in the womb (Gen 25:20-26; 38:27-30) are meant to portend future hostilities between their descendants. (c) Treatment of the mother of the twins. The exceptional nature of the birth often promotes hostility toward the mother, due to fear or jealousy. This motif might explain Judah's decision to neglect Tamar (Gen 38:26). (d) Twins as symbols of fertility. Produced by a fertile mother, twins display an unusual ability to promote abundance. Jacob not only fathers a large family but, by means of magical tricks, enormously increases his and Laban's flocks (Gen 30:25-43). (e) Names of twins. A number of patterns are commonly followed in naming twins. However, none of Ward's typology obtains in the OT. (f) Friend-

ship and hostilities of twins. In this motif, twins are shown to display great affection or great hostility toward each other. Initially at each other's throats, Jacob and Esau reunite in an admirable display of brotherly love (Gen 33:1-17). (g) Divine status of human twins. A thin line separates the divine from the human. Jacob communes with the deity and, exceptionally, even wrestles with him (Gen 32:22-32).

**2. Rabbinic and postrabbinic tradition.** Eve's enigmatic statement upon the birth of Cain (Gen. 4:1) was interpreted to mean: "I have gotten a man through an angel of the Lord." Hence Cain, sometimes considered a twin of Abel, was sired by the semidivine serpent Sama'el. Except for Joseph, every one of Jacob's children was said to be a twin. Rabbis supposed Leah and Rachel to be twins, destined to marry Esau and Jacob. Zebulun, in association with Issachar, was identified with the zodiac's Gemini.

**3. In the ancient Near East.** A number of deities were considered to be twins: Lugalgirra and Meslamta'ea, both of whom were underworld gods; Sin (Moon) and Nergal (Mars). Other traditions thought Shamash (Sun) to be Sin's twin. Ugaritic texts speak of El's twin sons, Shahar (Dawn) and Shalem (Dusk). These two manifestations are also known from Palmyra as Arsu and 'Azizu and from Edessa as Monimus and 'Azizus. The last, as Bailey shows, were replaced in the Christian era by the supposed twins, Jesus and Thomas (the "Twin"). On the human level, omen series list the good and bad effects that the birth of twins will have on Mesopotamian society. Among the Sumerians the following was said: "May you become a household built up by twin sons."

**TYPOLGY.** That form of biblical interpretation which deals with the correspondences between traditions concerning divinely appointed persons, events, and institutions, within the framework of the salvation history.

Renewed interest in typology among biblical interpreters has resulted from a new appreciation of the unity of the Bible and from the work of TRADITION CRITICISM. The latter has shown that there are in fact traditions concerning the acts of God which are analogous to that which had gone before in the biblical history, or which foreshadow that which comes after. The exodus tradition, for example, forms the type for Second Isaiah's understanding of Israel's final redemption (51:10-11; 52:7-12), and the wilderness time serves as a type for Hosea's understanding of God's final relationship with his people (2:14-15). Similarly, the career of Moses foreshadows that of Christ, in Matthew's understanding (cf. the threat to male children, Matt. 2:16-18; the commandments given on the mount, Matt. 5-7), and Paul understood

Christ's crucifixion as analogous to the Passover sacrifice (I Cor. 5:7).

Typology can refer either to the re-employment of traditions or to the fulfillment of prophecy. Where an older tradition is used to express a new act of God, the older is the type that foreshadows the new, the antitype (e.g., the figure of MELCHIZEDEK, Ps. 110, foreshadows that of Christ, in Heb.); where a new situation is analogous to that which has gone before, it is the antitype and fulfillment of the previous situation (e.g., the new covenant in Christ is the antitype of Jer. 31:31-34 and its fulfillment). Where prophecy is fulfilled, the original prophecy is the typological foreshadowing of the fulfillment (e.g., David is the foreshadow of Christ, in whom the promise to David is fulfilled).

Most modern understandings of typological interpretation emphasize the historical nature of types. The biblical traditions are set firmly in the history of Israel and of the church, and only when there are actual correspondences between traditions within that history can typological interpretation legitimately be employed. Types are no longer understood as symbols or pictures of general religious truths, as they were in the seventeenth century, or as allegories, as they were in pre-reformation times. (See INTERPRETATION, HISTORY OF[S].) Consequently, the modern use of the word "typology" is sometimes misleading, conjuring up earlier fanciful interpretations, and it would perhaps be better for scholars to speak of correspondences, analogies, foreshadowing, and fulfillment.

It is also doubtful that individual texts should be interpreted typologically, unless they belong to a larger complex of traditions that have typological significance. For example, some scholars consider Isaac, carrying the wood for his own sacrifice (Gen. 22:6), as a type of Christ, bearing his cross, but such isolation of individual texts borders on allegory, and is, at best, questionable.

Because the NT interprets Jesus Christ as the fulfillment of the major OT traditions (cf. Luke 24:44-45; John 1:45; II Cor. 1:20, etc.), many analogies can be drawn between the testaments. For example, the Deuteronomistic stress on the land as Israel's place of rest is applied to Christ, and the promise of the land becomes a foreshadow of the final rest promised to the Christian in Christ (Heb. 3:7-4:13). The ideal Davidic king in the royal psalms (esp. 2 and 110) foreshadows Jesus the Messiah, just as the suffering of Christ on the cross (Mark 15:24, 29, 23; Luke 23:46, 49; John 19:24, 28-30) is analogous to the pious sufferer in the laments in the Psalter (Pss. 22, 69, 38, 31). Deuteronomy's pictures of Moses as a suffering, prophetic mediator (18:15; 9:9, 18-20; 1:37; 3:23-27; 4:21-22) foreshadow Jesus, the Mosaic prophet of Acts 3 and 4. Indeed, there is a sense in which the entire NT story is analogous to the OT history.

The historical analogy between Israel and the church is clear: for example, both are redeemed out of slavery and made sons of God, with no deserving on their part; both are brought to the table of the Lord and enter into covenant with him; both are given a new life of freedom and set on a pilgrimage toward the promised land,

their place of rest; both are accompanied on their journey by God. The Christian can therefore read the OT as his own story, as that which foreshadows God's act in Jesus Christ.

Type and antitype are seldom identical in the Bible. For example, a new temple, a new land, a new people, a new covenant, a new David, a new exodus, and a new wilderness wandering, are all promised by the prophets in the OT. But all are embodied in the person of Jesus Christ, and that which was foreshadowed takes on unexpected dimensions in its fulfilled reality.

Typological relationships exist in the Bible, not because God acts the same way in every age, and not because the salvation history is cyclical, but because God is faithful to his word. The biblical tradition-history of salvation is characterized by a series of new words spoken by God to his people and manifested in new acts toward them. Yet the old words are never lost. For example, God promises Israel, "I will be with you" (Exod. 3:12), or, in the covenant formula, "I will take you for my people, and I will be your God" (Exod. 6:7). When Israel breaks the covenant, a new word comes, "You are not my people and I am not your God" (Hos. 1:9). Yet the word of God stands forever (Isa. 40:8), and beyond the judgment, God's former word of promise is gathered up and renewed: "My dwelling place shall be with them" (Ezek. 37:27). This new word finds no fulfillment in the OT, but it is brought to reality in the New (Luke 1:68), and Jesus completes and extends the promise given to Israel from the first: "Lo, I am with you always, to the close of the age" (Matt. 28:20). The first promise of God's presence with Israel foreshadows the final promise of Jesus' presence with his disciples, because in the salvation history, God has kept his word (Isa. 55:11; Ezek. 12:28).

It is the witness of the NT, then, that the final interpretation of God's words spoken to Israel is given in Jesus Christ, who is the summation and completion of Israel's history with God.

In addition, Christ also spoke new words, and the church, like Israel, lives between promise and the fulfillment of these new words. In the present, "we see in a mirror dimly" (I Cor. 13:12), and have only the first fruits. The Lord's Supper foreshadows the final messianic banquet; Jesus' works foreshadow the final healing in the Kingdom of God; the love in the church foreshadows the final fellowship of the saints; and the decision about Jesus foreshadows the final judgment. In this way, the NT too can be interpreted in typological fashion, as the first fruits of that which will come. Yet, that which will come will be analogous to that which the church now knows, because God is faithful to his word and will bring it to completion. Typological interpretation of the Scriptures rests on the faithfulness of God, and consequently may often be legitimately employed.

  5. Relationship to the OT
- Bibliography

**1. Excavations.** The excavations have continued until 1973 (thirty-fourth campaign). Unfortunately the port Minet el-Beida, which in Ugaritic times was called Ma'hadu, is now being transformed into a naval base of the Syrian government, so that the future of the excavations both there and on Tell Ras Shamra itself is uncertain.

Thus far only preliminary reports about the excavations have been published. Therefore it is still difficult to get a comprehensive view of the excavated areas and to establish the exact localizations of the finds. In 1973 Robert North made a praiseworthy attempt at reconstructing a horizontal and vertical grid. Soon afterward this was supplemented and, in some respects, corrected by Jacques-Claude Courtois, one of the excavators (see Fig. U1).

At first Schaeffer established only five different levels of occupation, but he modified this in later studies. Today it seems probable that at least fifteen strata must be distinguished, ranging from Roman times to the Pre-Pottery Neolithic period (ca. 6500 B.C.).

The upper strata have not been sufficiently studied to date. It seems certain, however, that the tell was not occupied during the early Iron Age. New finds confirm that the later half of the second millennium B.C. was the time of Ugarit's greatest prosperity. Best known are the three Late Bronze strata, to be dated ca. 1550-1450, 1450-1365, 1365-1180 B.C. respectively. The last of these yielded a large number of written documents as well as some splendid objects of art. The LB ended with the invasion of the so-called Sea People about 1180 B.C. (see PHILISTINES; PHILISTINES[S]). By that time recurrent epidemics, followed by a period of excessive drought, had disrupted the affluent urban civilizations of the Near East.

The excavators claim an occupation lacuna from 1650-1600 (or 1550) B.C., but the archaeological evidence for this is not very convincing. Although it is certainly possible that there was a period of decline about the middle of the second millennium, several arguments may be adduced in favor of an essential continuity of the Ugaritic culture during the Middle and the Late Bronze Ages.

The kingdom was founded at the beginning of the MB I (ca. 2100-1900 B.C.), probably by an Amorite tribe which erected the temple of El (Schaeffer's appellation, "Temple of Dagan," is probably a misnomer).

The date of the beginning of the Early Bronze Age at the site is still a matter of dispute (ca. 3300 B.C. ?), as is the exact number of strata during this period. The Early Bronze ended ca. 2100 in a disastrous conflagration, the cause of which is unknown.

The Chalcolithic period, beginning ca. 5000 B.C., may be roughly divided in two strata. In Neolithic times (ca. 6500-5000 B.C.) there was a dense population at the tell which built solid brick houses on stone foundations. Toward the end of this period a brittle type of pottery was introduced.

**2. New alphabetic texts.** Most tablets from the four palace archives have now been published. Important new religious texts were discovered in private houses in the so-called Aegean quarter E of the royal palace (map, B) and in the city S of the acropolis (map, D-E). They greatly advance our understanding of the Ugaritic language. The smaller the number of available texts, the less one is able to base interpretation on a careful comparison of the contexts in which a term occurs. Thus the translator is often compelled to guess at meanings on the basis of etymological parallels in other Semitic languages. It has become clear that this is a dubious method which produces very uneven results. Therefore it is appropriate to note that studies on Ugaritic subjects tend to fall out of date rather rapidly and should be consulted with caution.

The definitive edition of all the tablets excavated between 1929 and 1939 was published by Andrée Herdner in 1963. The edition brings many new readings as compared to its precursors. Also it contains a number of hitherto unpublished texts.

In 1960 a small tablet was published which received much attention because there seemed to be unmistakable parallels between it and the cult of Dionysus, a cult in which classicists had long suspected the existence of Oriental elements. This tablet might become one of the most convincing proofs for their theory. The line stating that Anath ate the flesh of her lover Baal ("She ate his flesh without a knife; she drank his blood without a cup") strongly recalls the omophagia of the Bacchantes.

As many as 172 new texts from the royal palace appeared in 1965. Next to administrative lists and rosters, there were a number of Ugaritic letters, often translations from Babylonian originals. A very fortunate find was an oven containing about thirty intact tablets which had been put into it for baking. Such a collection of demonstrably contemporary tablets is unique.

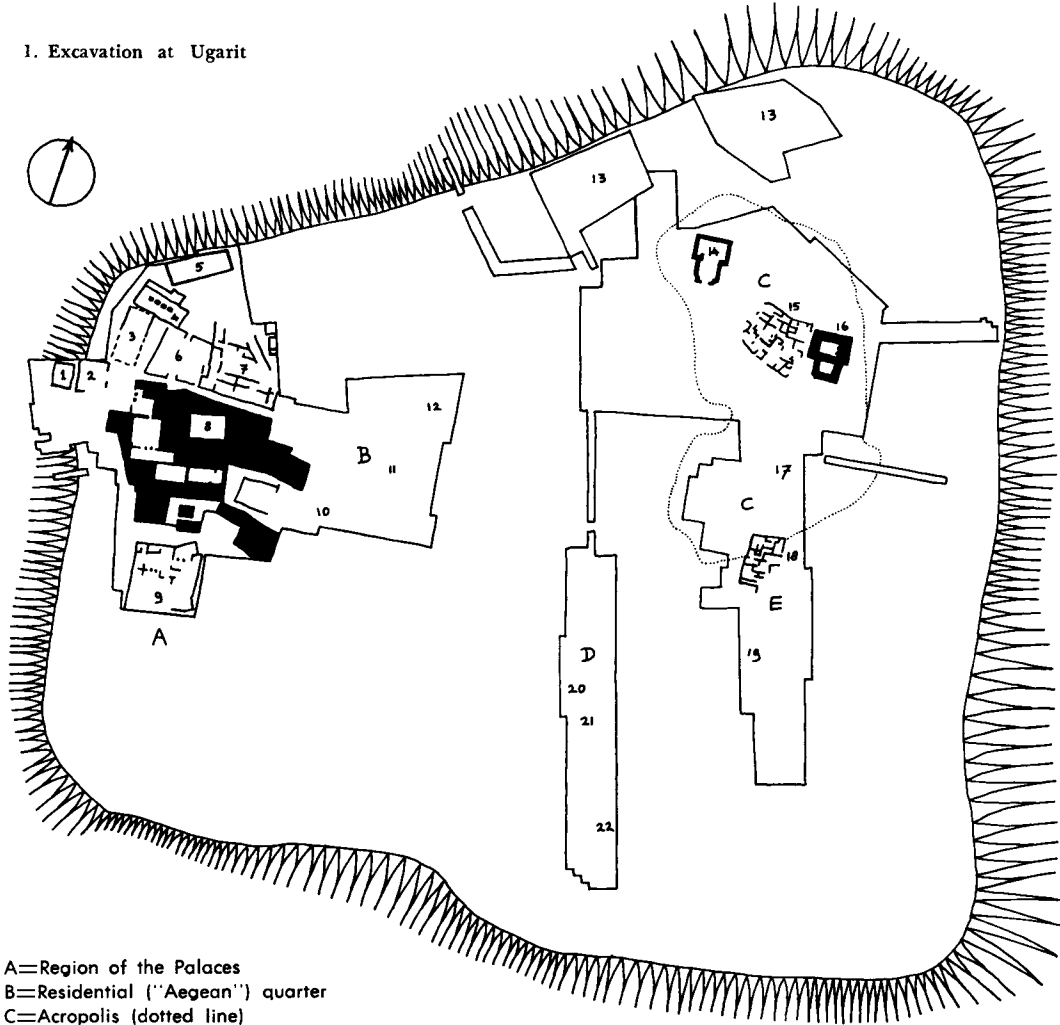

Among the alphabetic texts published in *Ugaritica*, V, was an Ugaritic myth relating how El, the head of the pantheon, once gave a banquet for the younger gods. Toward the end of the feast El got so drunk that he fell in his own feces and had to be carried off. This unedifying scene might indicate that the story dates from comparatively recent times, when the position of El as the supreme god had already been undermined by the popularity of Baal.

Another tablet contains an Ugaritic psalm which was perhaps sung during the New Year festival. On

the reverse the king implores the blessing of Baal (who is called "Savior" here) for the year to come: "May your protection, your guard, your strength, your patronage, your blessing be in the midst of Ugarit during all the days of sun and moon and the happiest of El's years!" The expression "the days of sun and moon" reminds us of Pss. 72:5, 7 and 89:36-37 [H 37-38], whereas the "years of El" may be compared with Ps. 102:24, 27 [H 25, 28]; Job 36:26.

In addition to offering texts and fragments of the already well-known myth of Baal, *Ugaritica*, V,

- 19= Hoard of gold and electrum bowls
- 20= Public square
- 21= House with private library
- 22= Statuettes of El, Asherah & Baal

contains two Ugaritic incantations against snake-bite, a number of Hurrian rituals in alphabetic script, and photographs of a treatise on horse diseases.

In *Ugaritica*, VI, some inscribed clay models of sheep's livers and lungs were published. One of the longer inscriptions, apparently an omen against the plague, runs as follows: "If the town is affected, if Death overpowers a man, the family of that man shall take a goat to read the future."

A small collection of six tablets was procured and published by Loren Fisher. The most interesting of these deals with the cultic society called *mrzḥ*, which continued to play an important role in Canaanite religion until the beginning of the Christian era.

Finally mention should be made of a prayer which was published by Herdner in 1972. It expresses the faith that Baal will rescue Ugarit if an enemy attacks the city:

If a strong one attacks your gate, a warrior your walls, raise your eyes to Baal [praying]: "O Baal, please drive away the strong one from our gate, the warrior from our walls! The bulls for Baal we will consecrate; the vows for Baal we will fulfill; the firstborn for Baal we will consecrate; the *hitpu*-rite for Baal we will fulfill; the tithe for Baal we will pay; to the sanctuary of Baal we will go up, upon the path to the house of Baal we will walk!" Then Baal will hear your prayer. He will drive away the strong one from your gate, the warrior from your walls.

**3. New syllabic texts.** Since 1962 many new tablets written in Babylonian cuneiform have been published. They confirm that the Ugaritic court used Babylonian, the lingua franca of those days, not only for diplomatic correspondence, but also for purely internal affairs such as contracts and administrative lists. Apparently several Ugaritians had received a thorough education in Babylonia. Their private libraries contained literary texts in Sumerian and Babylonian, among them wisdom texts and a fragment of the story of the deluge. Many multilingual vocabularies were executed in Ugarit. Some of these were furnished with an extra column giving the Ugaritic equivalents of the Sumerian and Akkadian words in syllabic signs. This offers a unique possibility for determining the vocalization of certain Ugaritic words.

The impact of Mesopotamian civilization on Ugaritic culture should not be underestimated. Not only do the Sumerian and Babylonian tablets bear testimony to that influence, but also a number of loanwords and borrowed expressions in the Ugaritic language itself. This is not surprising, since letters from Mari prove that as early as the eighteenth century B.C. Ugarit conducted a lively trade with Mesopotamia.

**4. Religion.** New lists of deities enable us to gain a clearer insight into the structure of the Semitic pantheon of Ugarit. More than 250 divine names are attested, but the nucleus of the pantheon was formed by only 28 gods of varying importance. The Ugaritic pantheon may be subdivided into an originally Amorite group of older deities around El, and a younger group supporting Baal. The latter's adoption in the Ugaritic pantheon was

rationalized by the assumption of a marriage with El's daughter Anath. Baal had doubtlessly become the national god of Ugarit toward the end of the Late Bronze Age.

Some very fine bronze statuettes, as well as a decorated drinking mug, published by Schaeffer in 1966, give us a better idea of how the Ugaritians visualized their more important gods. Two of the statuettes depict El and Asherah as aged, stately deities. Both are enveloped in long robes and raise their hands in a gesture of blessing. In his other hand El holds a cup of wine (cf. *CTA* 15:II:16-18). Both El and Baal wear horns on their head (see HORNS OF MOSES[S]). It is possible that one of the statuettes represents El in the form of a bull. Baal is usually depicted as a vigorous young man, swaying a mace (thunder) and a lance (lightning bolt). He is clad in only a loincloth.

The interpretation of the great myth of Baal continues to be a matter of dispute. According to a recent theory, the tablets, if read in the sequence *CTA* 3-1-2-4-5-6, would describe in chronological order the mythological prototypes of the climatologic, agricultural, and cultic events of a normal year at Ugarit. Thus the narrative would be a combination of a nature myth and a cult myth, which should indeed be related to the seasons. It would have played an important role during the Ugaritic New Year festival which was celebrated in autumn (see NEW YEAR; NEW YEAR[S] §1d). Several aspects of this theory, however, remain hypothetical.

**5. Relationship to the OT.** The discoveries of Ras Shamra have taught us that Israelite religion and culture did not develop in the splendid isolation which was the ideal of the Deuteronomist and later generations of Bible writers. It is certain that to some extent the Hebrew concept of God was influenced by Canaanite conceptions about EL and BAAL. Yahweh assumed all the roles which were allotted to different deities in Canaanite religion. It is also true that several cultic institutions were taken over by the Israelites, including perhaps the autumnal New Year festival, which later on became the Feast of Booths. However, in almost every case it is possible to demonstrate that the content of these Canaanite terms and ideas underwent a fundamental change in Israelite thought.

The comparison of Hebrew and Ugaritic literature has led to a better understanding of many OT passages. Words which were corrupted or misunderstood in the course of the long scribal tradition of the MT were recovered with the help of Ugaritic. Grammatical rules which are operative in Ugaritic appear to have also existed in Hebrew. This has resulted in new translations for many difficult verses. The structure of Hebrew poetry closely resembles that of the Ugaritic epics. It has been noted that the poets often use the same poetic devices. See POETRY, HEBREW[S].

Nevertheless, great caution should be observed in using Ugaritic for the elucidation of the text of the Hebrew Bible. Unfortunately the number of superficial comparative studies in this field is far too great, and there is a deplorable tendency to overestimate the indebtedness of the Israelites to the Canaanites.

J. C. DE MOOR

**VALENTINUS.** See GnosticisM §2c; GnosticisM[S] §4b.

\***VENGEANCE.** Recent linguistic studies require a radical reassessment of the previous translations of the Hebrew root  $\text{נָקַם}$  as "vengeance," "revenge," etc., and of the concepts supporting such translations (Mendenhall). Comparison of biblical and prebiblical sources shows that the root is used in nearly identical constructions in both, with meanings quite contrary to and incompatible with the idea of vengeance or revenge, or with the ancient notion of blood feud with which it was formerly assumed that  $\text{נָקַם}$  was associated.

In the Amarna Letters *nqm* is characteristically used in appeals to the legitimate sovereign for "deliverance" or "rescue" from jeopardy at the hands of either rebels or foreign invaders. In any case, what is hoped for is an executive act on the part of the sovereign whereby the sovereignty is secured or vindicated, and faithful subjects are protected or rescued. In cases where the transaction is viewed from the perspective of the interaction between the sovereign and the enemy, a translation such as "defeat" or "punish" may be called for. That is to say, "rescue" of the faithful servant may require "defeat" or "punishment" of the offending party or parties.

Early biblical usage is almost identical, and numerous examples could be cited. For instance, Judg. 11:36 and II Sam. 22:48 are about Yahweh's "deliverance" of his faithful from their enemies and his. Ps. 18:47 certainly refers to Yahweh's "deliverance" and not to "vengeance." Josh. 10:13 is a case of both defensive and punitive vindication, for which Mendenhall suggests, "until he defeated the forces of his enemies," as the proper translation.

Mendenhall argues that all the evidence points to the conclusion that blood vengeance and any similar forms of self-help to obtain redress have been ruled out as socially unacceptable long before the Hebrew settlement in Palestine. Both in Israel and in neighboring societies, power to act for redress or deliverance has been turned over exclusively to the highest authority, and in Israel that is Yahweh alone. Thus in cases of damage or

jeopardy for which normal judicial processes do not exist, one's sole source of appeal is to the sovereign. The action requested or hoped for is not revenge or vengeance but deliverance or redress. Moreover, to act on one's own behalf would be a direct challenge to the sovereign's authority.

There are instances, of course, in which men do just that, but such acts are clearly unacceptable. Thus David cannot accept such an act done on his behalf (II Sam. 4:1-12). In this case the RSV may be correct when it has David's would-be benefactors saying of their murderous deed, "The Lord has avenged my lord the king" (vs. 8), for these are clearly the words and view of "wicked men" and not of David or of the author of II Samuel. The confrontation between David and Saul recorded in I Sam. 24:8-15 (cf. 26:10-25) is particularly instructive. David refuses to slay Saul and says, "May the Lord deliver me from you; but my hand shall not be upon you" (24:12; RSV "May the Lord avenge me upon you"). For David and/or for the author of I Samuel, vindication—defensive or punitive—belongs to Yahweh alone (Deut. 32:35; cf. Rom. 12:19). This is clearly reinforced in the story of David, Nabal, and Abigail, although the root  $\text{נָקַם}$  does not occur there (I Sam. 25, esp. vs. 33). Provision for the delegation of Yahweh's power in specified situations is illustrated in the ancient law code in Exodus, where a mechanism is provided for "punishing" a slave owner who has beaten his slave to death (Exod. 21:20). This is clearly a case of punitive vindication and redress, but not of vengeance.

Of all known occurrences of the root  $\text{נָקַם}$  (both biblical and extrabiblical), in only two places (according to Mendenhall) can it refer to sanctioned vengeance. One of these is a Mari letter with insufficient context for precise determination (Jean). The other is Gen. 4:24. In the Genesis narrative, however, the setting is prior to the Flood, a time for which the biblical writers might have felt that the blood feud was still socially acceptable as a form of redress.

In the time of Jeremiah and Second Isaiah the word  $\text{נָקַם}$  was fairly frequently used, but in the period from David to Jeremiah it occurs only three times: II Kings 9:7; Isa. 1:24; and Mic. 5:15 [H 14]. It is used in Jeremiah in two distinct types of situations, those having to do with internal strife and those involving Yahweh's punitive action against external foes. Examples of the former would be Jer. 20:10-12; 11:20; and 15:15. Jer. 20:10-12 is of particular interest, for it manifests the same sort of contrast found in II Sam. 4:1-12. Jeremiah's enemies plotting an action of self-help say, "Perhaps he will be deceived, then we can overcome him, and take our revenge (*nqm*) on him" (vs. 10). Jeremiah's response is an appeal to Yahweh for deliverance: "Let me see thy deliverance (*nqm*) from them, for to you I have entrusted my case" (vs. 12, Mendenhall's translation). In this particular case the word "vengeance" in Jeremiah's mouth would be particularly inappropriate, for the threat or jeopardy is still future. Also included under the first sort of situation would be cases of punitive vindication such as 9:9 and 5:9, in which Yahweh must act against

the unfaithful people of the nation. Instances of the second sort, punitive vindication against foreign enemies, are 46:10; 50:15; 51:36. Similar instances are found in Ezek. 24:2-14 and 25:15-17.

It is perhaps in Second Isaiah that the root is used in ways which most completely contrast with the notion of vengeance. The "day of vengeance" of Isa. 61:1-4 is rather a day of relief and salvation having nothing to do with punitive action of any sort. Mendenhall suggests that even in the oracles against Edom and Babylon (Isa. 34:8; 63:4; and 47:3), while there is the aspect of punitive action or punishment, the action is not so much hostility against enemies for Israel's sake, but action aimed at giving redress, relief, and comfort to those who have suffered so long. Isa. 35:4 clearly has nothing to do with vengeance but rather with deliverance.

The Greek word ἐκδικέω, the normal translation of the Hebrew נָקַם, occurs some fourteen times in the NT. A typical instance is Luke 18:1-8, where the RSV translation, "vindicate," seems adequate, though Mendenhall suggests "deliver." Rom. 12:19 is a reference to Deut. 32:35 and should not be rendered, "Vengeance is mine," but perhaps, "Vindication is mine," or, "Sovereignty is mine" (Gr. ἐκδίκησις).

**\*VERSIONS, ENGLISH.** The years between 1960 and 1975 were marked by the appearance of a large number of new English versions of the Bible, some of which had been in preparation for two decades or more. All the important ones were new translations, not revisions. This represents a distinctive break with the KJV-RSV tradition. One exception was the New American Standard Version, a revision of the ASV of 1901, sponsored by a private foundation.

Increasing interconfessional co-operation was a natural outgrowth of the common body of scholarship on which the translations drew, and of the abandonment of some time-honored shibboleths. Nevertheless, The Jerusalem Bible was a thoroughly Catholic project, the New Jewish Version thoroughly Jewish, and The New English Bible, The New International Bible, and Today's English Version thoroughly Protestant. Only The New American Bible had active collaboration of Catholic and Protestant scholars. JB and NEB are more British in style and vocabulary, and the others more American.

NEB published the OT Apocrypha as a separate volume, but included it in some editions of the entire Bible, as RSV had done earlier. In NAB and JB these books (known among Catholics as deuterocanonical) appear in their usual places among the books of the OT.

In addition to the bibliography at the end of this article, the reader should consult the prefaces to the various versions, which give valuable information on points which the translators considered significant for an understanding of their work.

- Bibliography

1. **The New English Bible.** The Church of Scotland, at its General Assembly in May, 1946, adopted a resolution "that a translation of the Bible be made in the language of the present day." This initiative found a ready response. Within a few months, delegates from several denominations had met and set in motion the process that culminated in the publication of the NEB in 1970. Other groups promptly joined, making the project fully representative of the non-Roman Catholic Christian bodies in the British Isles.

*a. The purpose of the translation.* This was to be not a revision but a completely new translation. The translators were therefore free to render the original into contemporary English without having to retain any of the language of the earlier versions. Further, they were free to abandon the grammatical constructions of the original languages and avoid Hebraisms (i.e., literal translations of Hebrew idioms) and other un-English expressions. The resultant translation was to be made even more acceptable by printing prose material in paragraph form and poetical passages in verse form, and by employing modern punctuation, including quotation marks.

Three classes of readers were in mind. The first was the large portion of the population with which the church had no communication, and which found traditional versions unintelligible. The second was the younger generation, and the third the "intelligent people who do attend church," but for whom the traditional language of the Bible had lost its impact through too great familiarity.

*b. The organization of the work.* The work was done by three translating panels, one each for NT, OT, and Apoc., and by a literary panel, which read all the material and made suggestions to the translating panels. C. H. Dodd served as convener of the NT panel and as general director of the project. T. H. Robinson was the first convener of the OT panel, and after his death in 1957, Sir Godfrey Driver held this post until completion of the translation, becoming in addition a joint director with Dodd. In 1968 W. D. McHardy, a member of the OT panel and convener of the Apoc. panel, became deputy director.

The joint committee, which held final responsibility for the work, was composed of representatives of the participating churches, roughly in proportion to their membership, representatives of the Bible Societies and of the University Presses of Oxford and Cambridge, and the conveners of the panels. Alwyn T. P. Williams was chairman of the joint committee and convener of the literary panel until his death in 1968.

Members of the panels were chosen for scholarly competence, not as representatives of denominations. An individual member of a translating panel

would produce a draft of a biblical book and circulate it in typescript among the other members of the panel. Then the panel would meet and discuss the draft sentence by sentence. The amended draft was retyped and passed to the literary panel, which scrutinized it to determine if the tone and level of the language were appropriate to that particular type of biblical writing. Some material traveled back and forth between literary panel and translators before agreement was reached, but on points of interpretation the translating panel's decisions were final.

The NT was completed first and was published in 1961. The Apoc. did not receive high priority, and this panel was completely reorganized during the course of the work. But it was completed in time for publication together with the OT and a second edition of the NT in 1970.

**c. Textual basis.** Separate publications deal with the textual basis of the OT and NT translations (see *bibliog.*), but departures from the traditional text are noted in the footnotes in the "Library Editions" of NEB, and to a lesser extent in other editions. In most books of the Bible there were numerous emendations. Some were based on the ancient versions, especially the LXX, some on the DEAD SEA SCROLLS, and some on conjectures as to the "probable reading" of the original. In many instances verses were moved from their traditional place to their hypothetical location at a precanonical stage in the transmission of the text.

**d. Interpretation.** While footnotes call the reader's attention to textual changes, nothing prepares him for the reinterpretation of Hebrew words in terms of derivation from roots preserved in other Semitic languages. Yet this approach led to at least as many departures from traditionally accepted meanings of OT passages as did textual emendation. Some of these derivations are based on Ugaritic, but many more are traced to Arabic roots. A notable example is found in Judg. 1:14 (=Josh. 15:18). In this and other instances, the NEB translators assumed, contrary to the findings of modern linguistics, that cognate words retain identical semantic components in separate languages, when in fact they often are found in totally different semantic domains. See SEMANTICS [S].

Two other methods of interpreting the original involve the reassessment of syntax and the attempt to express more fully the original meaning of terminology. Both of these are illustrated in NEB in Gen. 1:1-4, where vs. 1 becomes a prepositional phrase, and רוח אלהים is translated as "a mighty wind." NJV is similar. An example of the second is seen in Rom. 1:17, where δικαιόσθη θεοῦ is translated "God's way of righting wrong."

**e. English usage.** The language of NEB is at a high level of complexity in both syntax and vocabulary. See, e.g., Heb. 1:1-3. In some instances, too literal a reproduction of the Hebrew DISCOURSE STRUCTURE results in pronouns without clear antecedents, as in Judg. 3:21. There are numerous words that are more familiar in British English than American, and some archaisms, such as "hark." In all prayer, the archaic second person singular pronouns and the accompanying verb

forms were retained. NEB is the only new translation to do this. Dialogue is often natural, but in Gen. 31:35 and elsewhere it is stilted.

In keeping with the original statement of principles, the OT translators reproduced Hebrew poetry as English verse, retaining in most instances the form of the Hebrew poetic line. A startling effect that is not explained in any editions of the NEB is achieved by printing lines of poetry that have four stressed syllables in Hebrew at the first level of indentation, and those with three and two stressed syllables at a second and third level of indentation. The results, e.g., Pss. 8, 19, 30, 37, look like no known form of English poetry.

Taken as a whole, the NEB reflects the main stream of British biblical scholarship in the quarter century after World War II.

**2. The New Jewish Version.** To replace its English translation of 1917, the Jewish Publication Society began work in 1955 on a totally new translation that would be intelligible in diction and would make full use of older commentaries, especially those of medieval Jewish scholars (see INTERPRETATION, HISTORY OF[S] §F). *The Torah* was published in 1962 and was subsequently revised. In 1969 *The Five Megilloth and Jonah* appeared, in 1973 *The Book of Isaiah* and *The Book of Psalms*, and in 1974 *The Book of Jeremiah*.

**a. Organization of the work.** Translation was begun by a committee of seven: three biblical scholars, one representative of each of the three sections of organized religious Jewish life in America—conservative, reform, and orthodox—and the editor of the Jewish Publication Society. In 1966 an additional committee, organized on the same lines, was set up to translate the *Kethubim*, the third division of the Hebrew canon. Harry M. Orlinsky serves as editor-in-chief.

In producing *The Torah*, the editor-in-chief prepared a draft translation, accompanied by pertinent supporting data: the renderings of older versions and modern translations, the comments of notable exegetes, and some justification for any important new renderings. This material was reproduced chapter by chapter and sent to each member of the committee. They sent in their comments, and on the average of once every two weeks the entire committee met for a full day. Most decisions were made by consensus, but if a vote was necessary, a majority of those voting decided the issue.

**b. Textual basis.** *The Torah* has the subtitle, "A New Translation of the Holy Scriptures According to the Masoretic Text." By their strict adherence to MT, the translators have demonstrated that in many places where other scholars have emended because they felt the meaning was not clear, MT yields excellent sense, and that no departure from it is justified. Frequent footnotes in NJV take note of the more significant emendations. The evidence of the major ancient versions is also cited in many passages. Difficulties are acknowledged by notes that say "Heb obscure," "Meaning of Heb uncertain," "Exact force of Heb uncertain," etc.

In a few passages, what other versions accom-

plish by emendation NJV accomplishes by assigning a new meaning to a Hebrew word. For an example, compare Ps. 19:4 [H 5] in the RSV and the NJV.

In most translations, large numbers of problems are solved by changing the Hebrew vowels, while leaving the consonantal text intact. NJV consigns such solutions to footnotes, e.g., Gen. 10:10; Jer. 7:3. In Isaiah, distinctive textual variations in the DEAD SEA SCROLLS are noted. Among modern scholarly translations in English, NJV is the most conservative in its handling of problems of text.

**c. Interpretation.** Footnotes are used not only to identify textual problems, but also to point out the source of the interpretation of specific passages (Ps. 30:8); to explain metaphors (Isa. 37:3) or customs (Isa. 44:5; 51:18); to indicate that a part of a verse has been transposed (Isa. 8:4, 10:16, 18). Notes also give the literal Hebrew expression in instances where a more accurate English term has been placed in the text, e.g., Ps. 7:10, where "conscience" is chosen over the literal "kidneys," and Gen. 14:22, "I swear," literally, "lift up my hand."

More basic to NJV is the procedure discussed in *Notes on the New Translation of the Torah*. Here Orlinsky illustrates the way the committee followed the principle of contextual consistency and translated in such a way as to bring out the meaning of the Hebrew. Depending on context, בית is rendered as "household" and "palace," as well as "house." In Isa. 7:13, however, NJV translated "House of David" even though "dynasty" might be more appropriate.

A basic but difficult word, נצח, is translated "grace" in Isa. 42:6 and "victory" in Isa. 45:8. In Isa. 45:8 שׂוֹעַ is rendered as "triumph" and in 42:1 מִשְׁעַת as "the true way."

**d. English usage.** Because the translators chose natural English equivalents for most words and idioms, NJV reads more smoothly than older translations. Modern forms of personal pronouns and verbs are used throughout, and the vocabulary is, in general, contemporary, although some archaisms remain. "Lest" occurs frequently, as do "lo," "hark," and "of yore."

While striving for clarity, the translators did not simplify unduly. NJV is on a high literary level, appropriate for the reading public for which it was designed.

**3. The Jerusalem Bible.** The great popularity of *La Bible de Jérusalem*, translated by French Dominican scholars (1954-55), prompted similar translations in other European languages, of which this is one. JB bears a complicated relationship to its French counterpart. The introductions and the notes were translated from French; the text of the Bible itself was translated under the direct influence of the French version. Most of the translation was made directly from the original languages. Some portions, however, were originally translated from the French, and the resulting translation was then compared with the Greek or Hebrew original. The English translators followed the textual basis which the French had established, and in most instances they also followed the interpretation found in the French version, although occasional deviation can be noted.

Critics have questioned whether this type of procedure entitles JB to be considered a fresh translation. If JB is judged by the results rather than the procedures that were followed, it is a distinctly new and readable version.

**a. Textual basis.** *La Bible de Jérusalem* was originally published in fully annotated fascicles, which document the care given to the problems of text. In JB, footnotes indicate the conjectural emendations that have been accepted and the evidence of the ancient versions, where they were followed. In the OT, JB departs frequently from MT and relies in many instances on LXX. The NT is more conservative, with, for example, Mark 16:9-20 and John 7:53-8:11 printed in the text. (It is significant that recent editions of RSV have followed this procedure, in contrast to the earlier RSV practice of printing these passages in footnotes.) JB does omit the "three heavenly witnesses" that crept into the Vulgate text of I John 5:7-8. Passages where the Vulg. differs significantly from the Greek are identified in the footnotes. Ecclesiasticus was translated from the Greek text, because "the Church recognizes the canonicity only of the Greek text"; Hebrew variants are consigned to footnotes.

**b. Interpretation.** The footnotes and the extended introductions to the separate books of the Bible inform the reader of the way the translators interpreted the message of the Bible. Their point of view represents sober, modern critical study. It also represents a distinctively Christian position, as shown in the notes to Gen. 3:15; Isa. 7:14; but by no means are all traditionally messianic passages taken to refer to Christ, e.g., Zech. 13:6. In Rom. 1:17 δικαιοσύνη is translated as "justice," following the Vulg. tradition (*iustitia*), but a note explains the word as "the saving justice of God, who fulfils his promise to save by giving salvation as a free gift." All in all, JB presents the biblical message in a way that makes it acceptable to a wide audience.

**c. English usage.** Proper names are spelled according to the RSV tradition and not in the traditional Catholic manner. The divine name is given as "Yahweh." The introduction to the Psalms recognizes that this sounds strange, especially in public worship, and suggests that the reader substitute "the Lord." JB maintains a high literary quality throughout, despite an occasional awkward expression. (Gen. 23:8; 37:22; Matt. 8:27; 9:6; 24:21 have been singled out as examples of unsatisfactory style.) OT passages that are Hebrew poetry are printed as verse in English, and some of them attain a high level of quality as free verse. The diction is contemporary and free of archaisms, and although JB is the work of British scholars it does not sound unduly British.

**4. The New American Bible.** This translation took shape during a period of more than three decades, during which time the Catholic Church was becoming increasingly concerned to make the Bible available in modern languages. Work began in 1936 on a new American translation from the Vulg. In 1943 the encyclical *Divino Aflante Spiritu* enabled the translators to go directly to the original languages, and the decisions of the Second

Vatican Council in the early 1960s made it possible to add Protestant scholars to the committee and make this a truly ecumenical work. The length of time involved, however, resulted in an unevenness of style and interpretation. Some books were revised thoroughly; others were not. Genesis, for example, appeared in trial versions in 1950 and 1952, and was completely redone for final publication of the entire Bible in 1970. It is one of the most successful parts of NAB.

**a. The method of work.** The portions of this version that were published early were known as the Confraternity of Christian Doctrine Version, after the name of the sponsoring body. Translation was done by members of the Catholic Biblical Association. Individual scholars prepared the draft of the book or books assigned to them, and some distinctive features of style or interpretation perhaps are due to this procedure, in spite of the final editing. The OT was prepared by an editorial board of which Louis F. Hartman, C.S.S.R., was chairman. Myles M. Bourke was chairman of the NT committee, and Gerard Sloyan served as English editor.

**b. The textual basis.** The OT translators used their best critical judgment in evaluating the textual data, and in many instances preferred the evidence of the ancient versions, especially LXX, to MT. The DEAD SEA SCROLLS were used extensively, including some scroll material not yet published. Emendations were not identified in footnotes as in most other recent translations, but were collected in an appendix that is found in some, but not all, editions of NAB. The textual changes in Ezekiel alone fill some fifteen pages; those in Sirach (Ecclesiasticus) occupy twelve and a half pages, compared to ten pages on the entire Pentateuch. This indicated the importance of using the Hebrew text of Sirach as a basis for translation. The nature of the changes shows that great care was taken in every instance. The editors felt that there is sufficient agreement on NT text problems, so that no textual notes or appendices were needed.

**c. Interpretation.** In this area the unevenness of NAB is evident, particularly in the introductions; some are scholarly, but others, such as Joshua, are didactic. Distinctively Catholic views are expressed at Isa. 7:14, both in the note and in the text. A note at John 3:5 informs the reader of the interpretation of this verse accepted by the Council of Trent. NAB has been both criticized and praised for not adopting more hypothetical interpretations of Hebrew vocabulary on the basis of Ugaritic cognates. The translators were cautious in this area, generally preferring to accept the traditional meaning of words, especially in the Psalms.

**d. English usage.** The style is modern but formal, with an occasional archaism, although archaic pronouns and verb forms have been entirely eliminated. Some biblicalisms survived. In Josh. 1:8 the people are told to "keep this book of the law on your lips," and in Judg. 4:21 Sisera "perished in death."

As for larger matters of style, it was a basic principle of the translation to employ the same level of usage found in the Hebrew or Greek of each part of the Bible, and not smooth out features

that modern taste finds objectionable, such as Paul's "lapses into anacoluthon." Hebrew poetry was translated as poetry, and large sections of the gospel of John are printed as verse. Taking NAB as a whole, the translators were successful in finding appropriate English equivalents at a formal and solemn level.

**5. Today's English Version.** The American Bible Society commissioned TEV to be a completely modern translation on a level of language that could be readily understood by any reader of English, regardless of the reader's education. This was the first English translation to make consistent use of advances in general linguistics and in secular translation theory. In 1966 the NT was published in paperback as *Good News for Modern Man*. Portions of the OT appeared between 1970 and 1975, at which time the translation was completed for publication in 1976.

**a. Organization of the work.** The draft of the entire NT was prepared by Robert G. Bratcher, a professional translator and translations consultant, and was reviewed by a panel of scholars. A second edition appeared in 1968, a third in 1971, and a fourth in the publication of the entire Bible.

Serious work on the OT began in 1969. Bratcher served as chairman of a committee of six, all of whom had professional experience as translators. Each member prepared a draft of the books the committee had agreed that he was to do; the draft, with extensive notes explaining the translation, was circulated to the committee; and finally the committee would meet and go over the translation in detail. Meetings were for one or two weeks at a time, and in the summers of 1972-73, for up to twelve weeks. Translators were chosen not as representatives of any denominational position, but for assent to the principles of the project and professional experience. Where consensus could not be reached, a majority vote of those present decided the question.

The work of the committee, together with revised explanatory notes, was circulated to persons involved in translations into other languages around the world, in order to solicit their comments and to serve as a guide in their own translations. After a final revision, and review by a committee of the Bible Society board, each book was considered ready for publication. Beginning in 1971, the British and Foreign Bible Society was represented in the committee.

**b. Textual basis.** The NT was based on the Greek text published by the United Bible Societies. The OT committee gave precedence to the readings of MT, but relied on other Hebrew MS evidence where it seemed superior. All instances where there is no Hebrew evidence for a reading that was adopted were indicated in footnotes.

**c. Interpretation.** From the first, TEV was not intended to present innovative interpretations. Its distinctive feature was to be the phrasing of the generally accepted meaning in idiomatic English, avoiding traditional biblical language wherever possible. Rom. 1:17 illustrates this approach to Pauline language, and Luke 15:11-32 illustrates it in narrative material.

The OT committee tried to determine the mean-

ing which the text had when it was accepted as scripture by the ancient Jewish community, and so avoid reading later interpretations into it. Obviously there is a large subjective element in any such decisions. In keeping with their orientation to linguistics and translation theory, the translators accepted comparatively few "new meanings" based on cognates in other Semitic languages and relied more on archaeological and anthropological data.

**d. English usage.** The basic principle underlying the choice of vocabulary, sentence structure, DISCOURSE STRUCTURE, and other features of English style was that the translators should find the "closest natural equivalent" in English. The form of the Greek and Hebrew was not to determine the form of the English. For example, participants in actions or dialogue were identified by either nouns or pronouns in accord with English usage, regardless of how they were identified in the original. Metaphors not readily intelligible to the reader might be turned into similes, replaced by other metaphors, or expressed in nonmetaphorical language.

The treatment of poetry depended on the nature of the material. Prophetic oracles whose content was appropriate to English prose were translated as prose, regardless of their form in Hebrew. If the content of a passage was suitable for poetic treatment in English, every effort was made to make the translation rhythmical and poetic. To this end, lines were restructured so that too much parallelism would not produce monotonous English.

Special care was taken to achieve poetic quality in Job and Song of Songs. In Proverbs, chs. 1-7 and 9 were translated into prose, and ch. 8 into verse. Most of the rest of the book appears as short prose maxims.

While there were no strict limits on vocabulary, the translators avoided words the average reader might find difficult, and sentences were structured for clarity and ease of comprehension. Simplicity and readability were considered more important than literary quality, so that the version could be understood by persons outside the church, as well as by those in the church who are not familiar with biblical language.

**6. The New International Bible.** Conservative Protestants, dissatisfied with existing modern language translations, worked through the New York Bible Society to produce a version whose purpose was "to do for our time what the King James Version did for its day." The translation was to be faithful to the original languages and avoid paraphrasing; to be acceptable to both British and American readers; and to be equally effective for public worship and for private study. A trial version of John appeared in 1970 as "A Contemporary Translation" (ACT), and the complete NT in 1973. Work on the OT is well under way.

**a. Organization of the work.** A committee on Bible translation, composed of fifteen scholars, organized the work of translation and gave its final approval. Actual translation was done in a more decentralized fashion than that of any other recent project, but supervision was tightly controlled.

Twenty teams of five persons each were organized: two co-translators, two translation consultants, and one English stylist. Each team was assigned a specific section of scripture, and their work went to the intermediate editorial committee for OT or NT, respectively. After review at this level, the material went to a general editorial committee, and then to the committee of fifteen. According to the NT, thorough revision was done at each level. A comparison of the two published versions of John, however, indicates that only a few changes were made there, and these were in the direction of greater literalism.

**b. Textual basis.** The translators indicate in footnotes those instances where they did not follow the TEXTUS RECEPTUS (e.g., Matt. 6:13; Rom. 8:28), or where they were uncertain about the text (Matt. 16:2-3). Mark 16:9-20 and John 7:53-8:11 are set off in the text from the surrounding material, and a line of smaller type says that they are omitted by "the most reliable early MSS." Textual notes are not numerous, but these are typical.

**c. Interpretation and English usage.** The version is free from eccentricities of interpretation and style. In all instances "you" is used for both singular and plural, and there are few holdovers from the KJV-RSV tradition of language. The style is dignified and somewhat formal and reflects literary rather than spoken English.

**7. The Living Bible.** This is the most controversial English version of the 1970s and one of the most successful commercially. Essentially the work of one man, Kenneth Taylor, and advertised as a "paraphrase," LB was produced over a period of seventeen years and published a section at a time.

Unable to translate from the original languages, Taylor began to rewrite the NT epistles in modern language, using the ASV of 1901 as his source. As publication of various portions progressed, the ASV was abandoned, and the OT reflects in many passages the use of the LXX as the textual basis.

LB consistently interprets the message of the Bible in messianic terms, with notes which say that the meaning expressed in the text is "implied," or which give a "literal translation" that is often far removed from the text. At Zech. 13:6, however, LB rejects the messianic interpretation and in two footnotes relates the passage to false prophets. Another striking feature is the inclusion of ideas that are not found in that context at all, e.g., Gen. 1:4-5 and Rom. 1:17.

A major reason for the popularity of LB is its readable style, which is often colloquial and even racy (I Sam. 20:30). At other times the style is formal, and occasional archaisms such as "lest" are not hard to find. Even so, long sections of LB can be read privately with ease, and it maintains a high level of interest for the reader.

VERSIONS, LATIN. See LATIN VERSIONS.

**\*VERSIONS, MODERN (NON-ENGLISH).** According to the records of the United Bible Societies, by the end of 1974 the complete Bible had been translated into 257 languages. In addition, one of the Testaments (usually NT) had been translated into another 368 languages, and at least one complete book into an additional 924 languages, making a total of 1,549 different languages and dialects into which part or all of the Bible has been translated so far. It is estimated that this total encompasses well over ninety-seven per cent of the world's population. There still remain, however, over 1,000 mutually unintelligible languages and dialects into which no part of Scripture has ever been translated.

1. **First translations.** These are made for the two to three per cent of the world's population which as yet have no written Scriptures. In many instances these languages have not been reduced to writing, and so the translator must also be a trained linguist who is able to detect all the phonetic peculiarities of the language, in order to provide a faithful orthographic representation of the language. According to the United Bible Societies records, in the fifteen-year period 1960-74 at least one biblical book has been translated for the first time into some 361 languages.

2. **Revisions and new translations.** The most important work of translation is being carried out in the some three hundred projects, involving nearly eighty per cent of the world's population, in languages already reached. These projects may consist of (1) new translations, (2) revisions of existing translations, or (3) the completion of a Testament or the whole Bible where only partial translations exist.

The need for new translations is especially urgent in countries where existing translations were made as much as a hundred years ago by missionaries, whose work is no longer adequate. For example, in Gujarati, a language spoken by over twenty million people in the state of Gujarat, India, the NT was first translated in 1820 by the Serampore missionaries; other translations appeared in 1821, 1853, and 1856, some of which were subsequently revised—all work done by Western missionaries. Only in 1968 did a fresh translation of the NT appear, done by a native Gujarati, and work on the OT is in progress. Revisions also occur where a given version has had such a wide acceptance among Bible readers that they are reluctant to accept a new one. The Almeida Version in Portuguese (completed in the mid-nineteenth century by Dutch missionaries in Batavia, Java, and Danish missionaries in Tranquebar, India) was finally completely revised in Brazil by the Brazil Bible Society in 1958. In Spanish, the Reina-Valera version of 1602 was thoroughly revised in 1960.

It is increasingly recognized that no single translation can adequately meet the needs of a large

Christian community, and so more and more there are a number of different translations into major languages. New translations currently under way increasingly follow the principles of a dynamic equivalence and not of a formal equivalence to the original text. This is motivated primarily by the basic principle that a good translation should not sound like one. As Ronald Knox said, "Any translation is a good one in proportion as you can forget, while reading it, that it is a translation at all." At the same time it is recognized that a translation which may be quite clear, because familiar, to assiduous Bible readers will be quite incomprehensible to others. More and more "common language" translations are being made, which utilize that range of vocabulary and style common to all who speak the language, regardless of social class or of formal degree of schooling. In 1966 a NT in Spanish, *Dios Llega al Hombre*, appeared (at the same time that *Good News for Modern Man* was published in English). Shortly thereafter similar translations appeared in French, German, and Brazilian Portuguese. Work is going on in Thai, Finnish, European Portuguese, Korean, Japanese, Chinese, Swahili, and other languages. By the end of 1974 there were such translations of the NT in twenty-one languages.

3. **Joint translations.** One important aspect of modern translations of the Bible is the increasing degree of co-operation between Catholics and Protestants (and Greek Orthodox, where applicable) in joint translations of the Scriptures. In June 1968 a joint statement, "Guiding Principles for Interconfessional Cooperation in Translating the Bible," was drawn up by the United Bible Societies and the Vatican Secretariat for Promoting Christian Unity. The NT of the French *Traduction œcuménique de la Bible* was published in 1972, and the work is nearly complete on the OT. The joint committee of French-speaking Catholic and Protestant scholars began with Paul's letter to the Romans, on the excellent assumption that if they could succeed in a joint translation of that epistle they could do the rest of the NT. The translation of Romans was officially presented to the French-reading public at the Grand Amphitheatre of the Sorbonne on January 16, 1967, with the following declaration: "The text that divided us should be the text that draws us together." In such cases of joint work two editions of the Bible are published, one with and one without the deuterocanonical (apocryphal) books of the OT. There were some 135 joint projects under way at the end of 1974. A remarkable example of this co-operation was the translation of the NT into the five major languages of the Philippines: Tagalog, Cebuano, Ilokano, Bicol, and Hiligaynon.

New translations and revisions go forward in the main languages of Europe. A complete revision of The Luther Bible was published in 1964, when the OT revision was finally completed (the NT was given official sanction in 1956). The Herder Bible, prepared by a committee of Roman Catholic scholars, appeared in 1965; in 1968 its text was revised with reference to *La Bible de Jérusalem*, and was published with the apparatus of that Bible. *La Bible de Jérusalem* itself, perhaps the

most influential of contemporary major translations, came out in a completely new edition, revised and enlarged, in 1973. This sumptuous volume, complete with introductions, notes, references, tables, appendixes, indexes, and maps, is a model for a study Bible, and its influence may be gauged by the fact that it has been translated into English, Spanish, and German, and that translations in other languages are in progress.

Interconfessional translations are being made in Spain, Italy, and Portugal. In all the Socialist countries of Eastern Europe, except Albania, there are projects under way. These total twenty, of which sixteen are new translations. In Czechoslovakia a new interconfessional translation of the NT into Czech was published in 1974, and the OT is almost finished. In Slovak a new translation of the Bible by Lutheran scholars appeared in 1974. In Hungary a new translation has been made by Protestant scholars, and a revision of the Roman Catholic Bible has appeared. In Bulgaria Roman Catholic, Orthodox, and Protestant scholars have completed a NT, and the whole Bible is to be finished in two or three years. In Poland Protestants and Orthodox co-operated on the "Millennial" Bible, the NT of which was published in 1966 to commemorate the millennium of the Polish State; the Bible is now complete. In the U.S.S.R. no work is at present under way in Russian, but there is activity in other languages. In (Eastern) Armenian (spoken by some three million) a NT was published in 1974 by the Armenian Apostolic Church; a revision of a Roman Catholic translation of the NT and Psalms was published in Latvian, and also in Lithuanian; in Estonia a new Lutheran translation of the Bible is progressing, and an Orthodox new translation of the Bible in Ukrainian is under way. In Yugoslavia, joint committees are working in Croatian, Serbian, and Slovenian. In Romania the latest Bible revision was made by the Orthodox in 1968.

In Japan an entirely new translation of the Bible (the *Kogotai* Version) by Japanese scholars was published in 1955. The *Studium Biblicum Franciscanum* is engaged in translating the whole Bible, and the Japan Bible Society is sponsoring an interconfessional translation.

**4. New readers selections.** One further modern development of Bible translation is the preparation of Scripture selections for new readers, using a style and vocabulary suited to their needs. Adaptations of texts from common language translations are made at three different levels. By the end of 1976 it is planned to have such selections in two hundred languages.

R. G. BRATCHER

word *b'thūld* (בתולה) as used in certain contexts. However, the concept of virginity is not as significant in ancient Israel (or in the ancient Near East generally, including Greece and Rome) as it became in the postbiblical period and in Christian thought in particular.

**1. *b'thūlā* (Akkad. *batultu*; Northwest Semitic *blt*).** This term is attested only in the feminine, and occurs thirty-three times in the singular and seventeen times in the plural.

**a. "Maiden."** It most often denotes a girl who is sexually mature, of marriageable age. The element of chastity may or may not be present (or stressed), depending upon the context. For example, in Lam. 5:11-14, it is used in context with other designations of sex, age, or status: "women . . . maidens; princes . . . elders; young men . . . boys; old men . . . young men." In such a description of the society-wide effects of the destruction of Judah, the category "virgin" would be beside the point. Other contexts in which the age designations "young men" (בחורים) and "maidens" (בתולות) occur together are: Pss. 78:63 (in context with people, heritage, priests, widows); 148:12; Deut. 32:25 (in context with suckling child and gray-haired old man); Isa. 23:4; 62:5; Jer. 31:13; 51:22 (in context with a series of age and profession indicators); Ezek. 9:6; Amos 8:13; Zech. 9:17; Lam. 1:18; 2:21; II Chr. 36:17. The age designation "maiden" is also evident in Jer. 2:32; Lam. 1:4; 2:10. Especially instructive is Joel 1:8, "Lament like a בתולה girded with sackcloth for the בעל of her youth." RSV has mistranslated בתולה as "virgin" (even though she is married!), forcing בעל ("husband") to be rendered "bridegroom."

The construct form בתולה is often applied to cities, nations, or communities, again making it clear that virginity is not the issue. To render בתולה בת-ציון (II Kings 19:21) as "Fair Maiden Zion" is much more accurate than the traditional "virgin daughter of Zion." See ZION, DAUGHTER OF [S].

Finally, the term is applied in the Ugaritic texts to the goddess Anath (paralleled by *glt*=Heb. 'almā, on which see §3 below), in contexts which are quite explicit sexually. Goddess of "love" and war who passionately copulates with her brother BAAL, she is scarcely to be described as "virgin."

**b. "Virgin."** Although the term בתולה basically means "maiden," it is often used in contexts whose intent is to specify virginity. For example, Rebekah (Gen. 24:16) is described as a בתולה "whom no man had known"; Judg. 21:12 speaks of "four hundred young בתולה who have not known man by lying with him," to be contrasted, in the preceding verse, to "a woman [אשה] that has lain with a male." This agrees with Finkelstein's observation based upon Sumerian and Akkadian legal texts: the expression "who has not known a man" is employed when *virgo intacta* (and not *virgo* alone) is explicitly intended, i.e., the term *batultu* denotes "an age distinction . . . and only implicitly, therefore, untouched. She is then more explicitly described as not yet having been deflowered, nor taken in marriage."

Other qualifications of *b'thūld* include: "who is

\***VIRGIN.** Biblical Hebrew uses two expressions to indicate a female who has not had sexual intercourse: (1) "[a girl] who has not known a man" (or, "whom no man has known"), and (2) the

not betrothed" (Exod. 22:16 [H 15]; cf. Deut. 22:23, 28); and "has no husband" (Lev. 21:3).

A transition in meaning from "maiden" to "virgin" (paralleling the semantic histories of Gr. παρθένος and Lat. *virgo*) is suggested in Lev. 21:14 and Ezek. 44:22, where a בתולה is contrasted to a "widow, or one divorced, or a woman who has been defiled, or a harlot"; II Sam. 13:2, where Amnon is tormented because Tamar "was a בתולה, and it seemed impossible to Amnon to do anything to her"; see also Judg. 19:24; I Kings 1:2-4; Esther 2:2, 3, 17, 19. Less clear are Job 31:1; II Sam. 13:18; Ps. 45:14 [H 15].

Since נעורים (often in parallel with זקונים "old age") became the usual word for "youth, maidenhood," the masculine plural ב<sup>ת</sup>חולים came to denote "virginity" (Lev. 21:13; Deut. 22:14, 15, 17, 20; Judg. 11:37, 38). Yet, בתוליהן in Ezek. 23:3 is parallel to נעוריהן ("youth . . . maiden"), and is replaced by the latter in 23:21.

2. **Parthenos** (παρθένος). This word, in classical Greek—like בתולה in the ancient Near East and the Bible—meant primarily "young woman, maiden, girl," one sexually mature. Whether the παρθένος was a virgin or not was a secondary matter, to be determined, if possible, by the context. Indeed, the derived term δ παρθένος denoted "the son of an unmarried woman," and ἡ παρθένος was sometimes used honorifically for the sacred prostitutes of Greek shrines (thus the name Parthenon); cf. "Virgin [blt] Anath," §1a above.

When early Christianity developed the belief of virgin birth for Jesus (see VIRGIN BIRTH; VIRGIN BIRTH[S]), it was natural to point to a possible proof text in Isa. 7:14. The exclusive meaning "virgin" was assumed for παρθένος in the Septuagint, and consequently for the Hebrew term which it translated (עלמה).

3. **עלמה** (*almá*). This word (found four times in the singular and five times in the plural) means simply "young woman, girl, maiden"; the masculine form (found twice in the Bible), עלם, denotes "young man, boy, lad." In Gen. 24, Rebekah is referred to once as עלמה and five times as נערה (maiden) just as David in I Sam. 17 is referred to by the corresponding masculine forms עלם and נער (vs. 55-58; so also Jonathan's attendant in ch. 20). David's chastity would hardly be cited as a factor in his defeat of Goliath! In Prov. 30:19, one of the phenomena that the author found too wonderful to fathom was דרך גבר בעלמה "the way of a man with a maiden," i.e., the way of a male with a female; virginity in the עלמה is hardly what the author had in mind, any more than in the גבר. Similarly, it is noted that Moses' sister was only an עלמה (hardly, "virgin") when she watched over him among the reeds of the Nile (Exod. 2:8).

There are five instances of the plural, עלמות: in Ps. 68:25 [H 26] where the term is used, following "singers" and "musicians," for these "playing timbrels." In Song of Solomon the עלמות who love the hero (1:3), and who with "sixty queens and eighty concubines" do not match the hero's beloved "dove" (6:8, 9), are hardly to be associated with virginity. As put by Irwin, "These alleged 'virgins' are in decidedly bad company"—a comment that is relevant to the *lmt* in the Kition inscription

(KAI 37B) where prostitutes (? *qđst*) and homosexuals (*klbm*, "dogs") constitute the company. In Ps. 46:1 and I Chr. 15:20 the meaning of עלמות is uncertain.

Once the correct meaning of עלמה in Isa. 7:14 is adhered to—and the force of adjective הרה and of the participle ילדה given their natural due—it becomes clear that what the prophet Isaiah is saying to Ahaz is, "Behold, the young woman is with child and is about to give birth to a son. Let her name him Immanuel," i.e., before the baby that the pregnant woman will soon bear has grown significantly (vs. 16) the invaders will themselves be invaded. This is related to what the prophet says in the next chapter (8:1-4). As for the word order and intent of Isa. 7:14, Peters asserted bluntly: "There is a striking resemblance between this verse and Gen. 16:11. Is there any proper ground for translating the tenses differently in the two verses?" Of the newer official translations, only the Jerusalem Bible and New Jewish Version have rendered the entire Isaiah verse correctly.

H. M. ORLINSKY

\***VIRGIN BIRTH.** As applied to the story of Jesus in Matthew and Luke, a more precise term would be "virginal conception," first, to distinguish the idea from the second-century apocryphal tradition that Mary gave *birth* miraculously, without pain and with sexual organs intact (PROTEVANGELIUM OF JAMES 19-20); and second, to make clear that the creedal doctrine, "born of the virgin Mary," may have been more concerned with the reality of the *birth* and hence of the humanity of Jesus than with the manner of his conception, which is at issue here. Some theologians use the term "virgin birth" even though they think that Jesus was or may have been conceived through sexual intercourse; for them the term is a symbol for expressing the divine element in Jesus. It is true that neither Matthew nor Luke was interested in the conception as a biological phenomenon; from the beginning the marvelous conception served as a sign of God's grace and as an idiom for the christological insight that Jesus came into the world as God's Son or the Messiah. Nevertheless, it remains a legitimate question whether the idiom is to be taken literally and whether historically Jesus was conceived without a human father. A general distrust of the miraculous scarcely excuses the modern scholar from a study of the evidence.

In terms of evidence, Isa. 7:14 (see VIRGIN BIRTH) currently has a less important role in the discussion: first it is widely agreed that it refers to a conception in the eighth century B.C. that some-

how continued or supported the Davidic line of kings, rather than to the conception of Jesus; second, even the LXX reading, "Behold, the virgin will conceive and bear a son," does not necessarily envisage a virginal conception, for the future tense may mean that a woman who is now a virgin will conceive; third, granted that in his infancy narrative Matthew himself probably added the "fulfillment citations" (1:22-23; 2:5-6, 15, 17-18, 23) to existing material, the citation of Isa. 7:14 did not create the idea that Jesus was virginally conceived but was used to illustrate it.

Thus, the real biblical evidence for the virginal conception consists of Matt. 1:18-25 and Luke 1:26-38. There are six principal arguments challenging the historical value of this evidence. First, these two infancy narratives are chronologically late compositions (80s or 90s). The earlier strata of Christian tradition (Pauline letters, sermons in Acts, the synoptic accounts of the ministry) betray no knowledge of a virginal conception (see Mark 6:2-3; John 7:41-42). There are even sections of the infancy narratives that have no implication of it, e.g., the genealogies tracing Jesus' descent through Joseph, and Luke 2:1-6, 16, 48. Second, many points within the infancy narratives are of dubious historicity, and we do not have the same quality of witness support for the infancy material that we have for the ministry. Third, despite the weight of Christian tradition accepting the virginal conception as historical (virtually unanimous from A.D. 200), there is evidence of nonacceptance among some second-century Christians. Often such refusal stems from doctrinal or philosophical stances, e.g., a Docetism denying physical birth from a woman. But especially among Jewish Christian groups, it may represent the lack of an affirmative tradition. Fourth, most agree that a full christological evaluation of Jesus as Son of God came only gradually after his death and resurrection. If the virginal conception was historical and Mary knew from the beginning that Jesus had no human father, why was there such a gradual development in Christology? Fifth, can the absence of a human father be reconciled with an appreciation of Jesus' full humanity, as vocalized in Heb. 4:15 and the Council of Chalcedon? Sixth, can divine sonship through virginal conception, which seems to be the idea in Luke 1:35, be reconciled with divinity through pre-existence, as hinted in other NT works (John 1:1; 17:5; Phil. 2:6; Col. 1:15-17; Heb. 1:2, 8)?

Another set of arguments favors historicity. First, there is the long Christian tradition to that effect. Second, the two infancy narratives, which are independent of each other and agree on little else, agree on virginal conception. (For evidence that Luke does envisage a virginal conception and that 1:34-35 is not a later insert, see VIRGIN BIRTH.) This means that the tradition is older than either gospel. Third, it is difficult to explain how the idea arose if not from fact. Many parallels for a virginal conception have been suggested from world religions, from paganism, and from pre-Christian Judaism; but they are not really satisfactory (see VIRGIN BIRTH), and there is little reason to

believe that most of them would have been known or acceptable to early Christians. Fourth, there was an early Jewish suspicion about Jesus' origins. The charge, explicit in later Jewish polemics, that Jesus was illegitimate seems to be foreshadowed in the NT. The reference to Jesus as "son of Mary" (Mark 6:3) has been deemed strange, for generally sons were not called by their mother's name unless paternity was uncertain or unknown. In John 8:41 an objection is addressed to Jesus: "We were not born of fornication"; is the Greek *hēmeis* ("we") emphatic by way of contrast—not us, but you? These innuendoes are uncertain, but it is difficult to think that any Christian invented the story in Matt. 1:18, which casts suspicion on Mary. More likely Matthew faced a story already in circulation. Indeed, the agreement between Matthew and Luke that Mary conceived after being espoused to Joseph but before marital intercourse suggests that Jesus was born unduly early after Joseph and Mary came to live together, a fact that would have given rise among nonbelievers to a charge of illegitimacy. Thus, it is too facile to theorize that virginal conception was invented as a symbol for a developing Christology and that previously everyone took for granted that Jesus was the natural son of Joseph and Mary. Irregularity of conception may have been rumored all along; and the virginal conception may represent not only a development in Christology but also an attempt to explain the irregularity in light of two fixed Christian attitudes, namely, a respect for the image of the blameless, pious parents (Matt. 1:19; Luke 1:35, 42) and an insistence on Jesus' freedom from sin (II Cor. 5:21; I Pet. 2:22; Heb. 4:15; John 8:46)—a freedom which may have been judged irreconcilable with sinful conception. A family tradition about the manner of Jesus' conception may have lent support to the theological solution. While there is no way of proving the existence of such a private tradition, the prominence of Jesus' relatives in the Jerusalem church—e.g., James, the brother of the Lord—should caution us about the extent to which Christians were free, at least up through the 60s, to invent family traditions about Jesus.

Brown, *The Virginal Conception and Bodily Resurrection of Jesus* (1973). B. M. Metzger, *A Textual Commentary on the Greek NT* (1971), pp. 2-7, discusses the various attested texts of Matt. 1:16. R. E. BROWN

**VIRGINITY, TOKENS OF.** According to Deut. 22:13-21, if a husband accused his wife of not having been a virgin at the time of marriage, her parents could establish her innocence by producing her "tokens of virginity." They "spread out the garment" (vs. 17), i.e., the blood-stained cloth on which the marriage had been consummated, and which they had preserved for such an eventuality.

# W

**\*WAR, HOLY.** "Holy war" is a traditional designation of the religious evaluations and motivations permeating the practice and ideology of warfare in ancient Israel. The view articulated by von Rad, that holy war referred to a homogeneous and distinctive institutional and cultic matrix in Israel, is now under question. Recent research emphasizes the relative lateness and schematic shape of much of the biblical evidence, the sporadic incidence of many "typical" features of sacral war, and the widespread occurrence of similar practices and notions among Israel's neighbors (by no means confined to pastoral nomads). At the same time, scholars have traced the central role of military imagery in Israel's conception of God to an early date, and have underscored its importance in bridging and linking themes (such as Creation, kingship, and eschatology), as well as strains of religious tradition (such as covenantal, royal, prophetic, and apocalyptic "theologies").

1. **Conduct of holy war. a. Uniformity of practice.** The traits of holy war delineated by von Rad (see WAR, IDEAS OF §1 *a-d*) have been regarded as normative institutional procedures in biblical contexts, even where only one or even none are directly attested. The appropriateness of this procedure for interpreting holy-war data in terms of ideal types has been thrown into doubt by the high incidence of erratic and contradictory war practices; this strongly indicates that the entire range of traits compiled by von Rad was never normative in Israel.

Steps toward initiating holy war, for example, which von Rad viewed as serial and cumulative, may in fact have been alternative courses followed on different occasions: (1) designation of a spirit-seized person as war leader, or (2) choice of a war leader through negotiations by the initiative of the established communal leaders, or (3) choice of a war leader by consulting the accepted oracles. Even more tellingly, the different accounts of the destruction of war captives and booty, or of their reservation or setting aside for sacred use, show great variations from the schematic formulations of the later Deuteronomic program of *hērem* (see DEVOTED). It is probable that destruction or exemption of specific classes of captives and booty varied according to the specifications of an optional

vow before battle (cf. Num. 21:1-3). That the *hērem* practice was known in Israel's environment is vividly attested by the ninth-century MOABITE STONE. What is in question, therefore, is not the existence but the frequency, scope, and degree of standardization of holy-war practices, as well as their sociopolitical basis and rationale. Deuteronomy formalized and dogmatized a range of war notions and practices that had not existed earlier in any single detectable form or within any certain all-Israelite jurisdiction.

**b. Equation with Bedouin warfare.** A recurrent claim is that holy war derived from pastoral nomadic military organization. To the extent that practices that were religiously taboo at MARI (e.g., failure to mobilize conscripts, unauthorized, private seizure of booty) actually parallel biblical *hērem*, the overlap has been attributed to the fact that both the subjects at Mari and the early Israelites were pastoral nomads. This interpretation overlooks the fact that the Mari sanctions were imposed by sedentary state officials against pastoral nomads.

Moreover, it is far from demonstrated that parallels from Arab sources are distinctive of Bedouin life in contrast to other socioeconomic influences that entered Islam. Sometimes the Islamic *jihad* is equated with biblical holy war, and both with pastoral nomadism. This altogether ignores the fact that *jihad* was, among other things, an attempt to control blood revenge among nomadic converts who did not easily assimilate to the larger Moslem brotherhood. Characteristically, *jihad* was directed either at the conversion of pagans or the subjection of Christians and Jews to poll and land taxes under Moslem rule. Prior to the monarchy, holy war in Israel did not function in an analogous way, and it is doubtful that it did so even during the monarchy.

Contrary to scholarly opinion, features of early Israelite warfare such as ambush, feigned flight, single combat, and ritual destruction of captives or booty are in no way specific to pastoral nomadism. It is indeed noteworthy that the great majority of holy-war parallels cited by scholars such as W. R. Smith, Schwally, von Rad, and Abel are taken either from nonnomadic tribal societies, such as Amerindian and Germanic tribes, or from ancient states such as Egypt, Assyria, Greece, and Rome. At the time of the Moabite sacrificial massacre of the Israelites, Moab was a monarchy with a largely sedentary populace. Weippert has pointed out that practically all the traits of holy war assembled by von Rad are as pointedly expressed in Neo-Assyrian warfare as they are in Israel.

**c. War paradigms in tribes and states.** If holy war was not peculiar to Israel and cannot be explained as a specifically nomadic derivative, what was its social basis and function in Israel? In tribal Israel, holy war was an activity of collaborating tribes unified by a common religion and loosely associated by covenant mechanisms that committed them to periodic pooling of troops in defense of the living space of an egalitarian independence movement. On the other hand, holy war in the time of the monarchy was a function

of the state apparatus which possessed the power to enforce conscription and to declare war at the will of the ruler and his officials.

Between the tribal and state forms of holy war there were formal continuities in practice. Cultic preparations, consultation of oracles, carrying the ark into battle, battle shouts, and the like were apparently observed in both epochs. Also, while a professional officer corps and a standing army developed under the monarchy, the majority of troops in major campaigns were citizens called to arms for the occasion (*see* ARMY[S] §3). Nonetheless, there were critical differences between tribal holy war and state holy war. Tribal wars were guerrilla wars fought with the simplest of make-shift infantry weapons; they were entered upon and prosecuted by intertribal consensus. Under the monarchy wars were open pitched battles in extended campaigns fought with advanced infantry weapons and with chariotry; they were launched by state authorities and fought by drafted and mercenary troops without regard for tribal consensus.

Wars to preserve the Israelite heartland against immediate invaders gave way to wars fought on the perimeters of empire and often in alliance with foreign powers, or to defend against invasion precipitated by the obligations of shifting alliances. The earlier tribal wars had been patently "necessary" to those who fought them; tribes unconvinced of a threat chose not to fight. The state wars were far more equivocal in their contradictory benefits and losses to the people. Citizen soldiers were conscripted into battle by the state apparatus irrespective of their actual commitment and often without regard to communal or regional resistance to particular wars. It is probably accurate to say that Israel's wars under the monarchy never had the massive support of combatants and civilians that typified its earlier tribal wars. This judgment is supported by the considerable popular support given to the prophets, who frequently condemned the foreign wars of the monarchy (*see* §2c below).

2. Ideology of holy war. a. *The divine warrior.* Canaanite religious literature accents the role of the gods EL and BAAL as divine warriors who lead the assembly of the gods as an army in the battle against forces of chaos, thereby stabilizing the natural and human orders. Israelite dependence on this tradition is evident in the imagery of Yahweh as one who fights for and through his people Israel. The major transformation in Israelite appropriation of the divine-warrior imagery is that Yahweh fights less against cosmic chaos and more against oppressive historical powers such as Egypt and the Canaanite city-states. Likewise, the polytheistic assembly of gods fades into a conventional way of speaking of the plenitude of powers at Yahweh's disposal.

The most plausible explanation of the name Yahweh is that it arose from an appositional sentence-title describing El as "he who creates the [divine?] hosts" (*see* GOD, NAMES OF §§B3b, C1). If this be so, Yahweh from the outset was characterized as the divine warrior who absorbed the cosmic-war functions of El, while subordinating them to his sociopolitical career as Israel's de-

liver and defender. Yahweh was "lord of hosts" in the double sense that he commanded both the pleroma of nonhuman powers and the citizen army of Israel in its just fight for liberation from Canaanite, Egyptian, Transjordanian, and Philistine overlords. Through this complex process of ideological differentiation and eclecticism, the theology of holy war arose contemporaneously with the rise of the Israelite people.

b. *Cult, traditions, and holy-war ideology.* Von Rad saw the cult of holy war as closely attached to the AMPHICTYONY and the central sanctuary. Recent research has departed from this perspective in two divergent directions. One line of thought sharply dissociates holy war from the amphictyony until late premonarchic times (Smend). The other line of thought suggests an even more fundamental and generative role for divine-warrior theology than von Rad envisaged (Cross, Miller). The latter view conceives the bifurcated streams of Exodus-settlement and Sinai traditions as alternate elaborations of a hypothetical epic tradition of the divine warrior first expressed in poetry (cf. Exod. 15:1-18, 21). It also suggests that the titular type of patriarchal deity identified by Alt was joined in the earliest expressions of Yahweh as divine warrior. A further implication may be that the divine-warrior imagery was integral to the central covenant-renewal cult of Israel.

In retrospect, it appears that the institutional homogeneity of holy war that von Rad proposed was a misreading of the more standardized mythohistorical language about divine warrior and fighting people. This does not mean that Israel fought no cultically activated wars, but it may mean that great variations in war practices were loosely "covered" by a more uniform and somewhat flamboyant ideology.

c. *Monarchy and holy-war ideology.* The basic outlines of Israel's thought about the divine warrior and his fight on Israel's behalf were well formed before Israel became a state. Early in the monarchy there developed a pronounced struggle over whose sociopolitical praxis correctly embodied the old concepts. Did the divine warrior chiefly operate through the entire Israelite people as a tribally articulated covenant community (*see* COVENANT; COVENANT, MOSAIC[S]), or did he chiefly operate through the office of his representative, the Israelite king, as commander in chief and champion of a just human order (*see* COVENANT, DAVIDIC[S])? Accordingly, forms of popular covenantal theology and forms of elitist Davidic-Zion theology struggled for mastery of the channels of religious persuasion, or were joined in various hybrids. *See* GOVERNMENT, ISRAELITE[S]; PRESENCE OF GOD, CULTIC[S].

The sociopolitical contradictions in wars that could no longer be viewed as simple necessities and undoubted gains, in contrast to the liberating tribal wars, opened deep fissures in the social body. There was growing confusion and dissent over whether the wars conducted under the conditions of political hierarchy and social stratification were in fact "wars of Yahweh." The key issue was not so much whether wars were "defensive" or "aggressive" in the legal sense; it was rather the

deeper question of the constructive or destructive effects of the wars on the internal well-being of Israelite society.

Religious thought about war took a new turn with the appearance of prophets who stood holy war on its head by audaciously declaring that in the wars at hand Yahweh fought not for Israel but against Israel. Originally holy war had posited a direct correlation between an internally just society and its external self-defense. Observing the masses of domestically oppressed Israelites, some prophets argued that the axiomatic correlation between a just society and the right to self-defense and survival had been conclusively shattered. The ideology and rhetoric of holy war, formerly aimed at foreign powers, was now turned against the internal oppressors, i.e., the Israelite ruling class and state apparatus.

**d. Exile, restoration, and holy-war ideology.** With the independent Israelite states shattered, holy war assumed once more a hopeful prospect for those who believed that the Israelite community could be reconstituted in institutional form. A foreign power could serve Yahweh to deliver his people from Babylon, just as a foreign power had earlier served Yahweh in crushing the false political framework that had enslaved his people. Holy-war imagery could assert the prospect of Yahweh as universal divine warrior in supreme command of world history, which could likewise take the form of hope in a revived Davidic monarchy, preserving a society more just than that of the old Israelite and Judean states.

When the prospect of political independence languished, holy war could point to the divine warrior's rule over history as creator and destroyer of empires and as solace for the powerless few who trusted in him. Apocalyptic literature is replete with the language of holy war and, in large measure, the revolts against the Seleucids and against Rome proceeded on the premise that a just Jewish society worthy of independence among the nations could be restored within the framework of ongoing history. See APOCALYPTICISM; APOCALYPTICISM[S].

**e. Jesus, the early church, and holy-war ideology.** The divine warrior and religious warfare appear in early Christianity, in part through the metaphor of religious life as a battle against evil, but even more significantly as the ideology of a decisive divine intervention in impending military conflicts at the end of history.

Jesus focused on microaspects of a just society as concretized in his egalitarian company of followers. His explicit relationship to Jewish revolutionary movements, such as the Zealots (see ZEALOT [S]) is a matter of ongoing debate. Less often examined is the impact of Jesus and the early church on wars and revolts such as the Jewish uprising against Rome in A.D. 66-70. If for himself and his immediate followers Jesus renounced direct participation in war, he asserted war's inevitability and its indispensable role in the coming of the kingdom of God. As long as Christians expected the imminent end of history, they were deeply attentive to the correlation between just or unjust societies and the wars repeatedly fought by the

political systems of which they were an inescapable part. The resolution they foresaw was an impending eruption of an overwhelming and just power that would reconstitute human societies as the single society of the divine warrior through the agency of his triumphant Son.

**\*WAVE OFFERING** [תְּנוּפָה, *t'nuḥá*, elevation offering]. The offerings subject to this ritual are: the breast of the well-being offering (שְׁלָמִים, RSV "peace offering"; Lev. 7:30; 9:21; 10:14-15; Num. 6:20; 18:18), the right hind thigh and fat of the priestly consecration offering (מִלֵּאִים) and its accompanying bread offering (Exod. 29:22-26; Lev. 8:25-29), the metals for the buildings of the tabernacle (Exod. 35:22; 38:24), the אָשָׁם (RSV "guilt") offering, and the oil for the purification of the healed leper (Lev. 14:12, 24), the barley sheaf (עֶמֶר; Lev. 23:11-14), the two wheat loaves (בִּכּוּרִים) together with two lambs of well-being (Lev. 23:17, 20), the meal offering (מִנְחָה) of the suspected adulteress (Num. 5:25), the boiled shoulder of the Nazirite's well-being offering and its accompanying bread offering (Num. 6:20), and the Levites during their ordination (Num. 8:11, 15, 21).

When the object of the *t'nuḥá* is the Deity, the preposition לִפְנֵי, "before," is usually used, implying a ritual within the sanctuary (as opposed to the *t'rūmá* which is always לַיהוָה and never לִפְנֵי יְהוָה). See HEAVE OFFERING[S].

The nature of the ritual is nowhere defined.

The rabbinic rendering "wave offering" (e.g., M. Men. 5.6) has been accepted by nearly all translations, dictionaries, and commentaries. The LXX exhibits total bewilderment. It renders *t'núphá* in the purification ceremonial for the healed leper (Lev. 14) by three words: ἀφόρισμα (vs. 12), ἀφοίρεμα (vs. 21), and ἐπίθεμα (vs. 24). The Targums, on the other hand, consistently translate *t'núphá* and its verbal forms by the root רום, "raise, elevate." This rendering is corroborated by most occurrences of רום in the Bible (e.g., Isa. 10:15; 11:15; 13:2; 19:16), where the rendering "elevate" is clearly superior to "wave." Logical considerations buttress the philosophical evidence. Since the *t'núphá* ritual is frequently carried out with many objects simultaneously (e.g., Exod. 29:22-24; Lev. 8:25-27), a "waving" motion would topple the entire offering, whereas their "elevation" is physically manageable. An elevation rite is indeed attested in the Egyptian cult, revealing many similar characteristics to the *t'núphá*: (1) The Egyptian formula "elevate . . . before the face of the god" is the exact equivalent of the Hebrew formula (Exod. 29:24). (2) As depicted in the relief (Fig. W1), the offering is an aggregate, containing a sampling of all the food placed on the god's table. Correspondingly, all the objects subject to the *t'núphá* in a single ritual must undergo the act together, never separately. (3) Like its Egyptian counterpart, the *t'núphá* offering is placed on the palms of the hands (so explicitly for the Nazirite, Num. 6:19). A final consideration is that the allegedly parallel waving ceremonial from the ancient Near East turns out

to be an exorcistic rite, totally unrelated to the temple cult. Thus philology, typology, and logic reinforce each other in favor of the rendering of *t'núphá* as "elevation offering."

The *t'núphá*-elevation is a rite of dedication governed by two postulates. The first is that any offering which still belongs to the owner when it is brought to the sanctuary requires the dedicatory rite of the *t'núphá* (see SANCTIFICATION IN THE OT[S] §4b). Thus nearly all offerings are exempted from the *t'núphá*, because they are dedicated before they are brought to the sanctuary. The main exception to this rule is the שלמים (RSV "peace offering") whose meat belongs to and is eaten by its owner. For the owner to benefit the clergy with the thigh and breast, he must first dedicate them to the Lord, i.e., subject them to the *t'núphá*. The *t'núphá* requirement for this offering is supported by the facts that it is called the offering of the people of Israel (Exod. 29:28), in contrast to the most-sacred sacrifices, called an offering to Yahweh (e.g., Lev. 10:13-14 [RSV "offerings by fire"]), and that the owner is expressly commanded to bring the dedicatory portions of the *š'lāmim* "on his hands/palms" (Exod. 29:24-25; Lev. 7:29-30; Num. 6:19-20). It also explains other anomalies of the ritual. For example, the anointment oil sprinkled on the priests (Exod. 29:7, 21; Lev. 8:12, 30) does not undergo the *t'núphá* since it is inherently holy (Exod. 30:25, 32), but the oil for purifying the leper is profane and requires the *t'núphá* (Lev. 14:16-17, 27-28) in order to sanctify it.

The second postulate is that the most-sacred offerings (see SACRIFICES AND OFFERINGS IN THE OT[S] §1b) whose composition, procedure, or purpose varies from the norm (i.e., Lev. 1-5) require the additional dedication of the *t'núphá*. Thus three kinds of grain offering are subject to the *t'núphá*: that of the suspected adulteress (Num. 5:25), and of the barley sheaf (Lev. 23:11-14) because they are made of barley and not of wheat, and the two wheat loaves (Lev. 23:17, 20) because they contain leaven; moreover, all three lack the usually required frankincense and oil. The guilt offering (חטאת) brought by the healed leper differs from its genre in that its blood, being essential to the ritual, may not be commuted into silver (cf. Lev. 5:15, 18; 6:6 [H 5:25]), and in that it is the first in the sacrificial ritual (Lev. 14:12, 24) whereas normally it is last (cf. Num. 6:10-12; M. Zeb. 10.5). That the above-mentioned offerings need reinforced dedication is indicated, not only by their abnormal procedure or composition, but, more importantly, by their purpose. The barley sheaf and the wheat loaves undergo the *t'núphá* ritual "that you may find acceptance" (Lev. 23:11), i.e., so that the Lord will grant an abundant harvest. The offering of the suspected adulteress is called "a meal offering of remembrance which recalls wrongdoing" (Num. 5:15), i.e., God is implored to intercede in this case by guaranteeing that the "water of bitterness" (vss. 23-26) will reveal the truth. Finally, on the eighth day the healed leper is daubed with the blood of the guilt offering and the oil so that he will be qualified to enter the sanctuary to complete his sacrificial

\***WEALTH.** See POOR[S].

\***WEEK.** A socially constructed unit of time whose duration is intermediate between the astronomical units of day and lunar month. In various cultures weeks of four, five, six, seven, eight, ten, or fifteen days have been known to exist. Often the length of the week is related to phases of the moon or to market-day cycles.

The seven-day week is probably of Israelite origin. At least no such week is attested prior to Israel's. Scholars disagree as to whether Israel's choice of a seven-day time unit was related to lunar phases, to a convenient market cycle, or to the ancient Near Eastern symbolism of the number SEVEN (wholeness, completeness, totality). Almost certainly the seven-day week did not originate in an "ancient Semitic pentacontad calendar" (see WEEK). No generally accepted evidence for such a calendar exists.

From Israel's earliest days the seven-day cycle culminating in a seventh-day sabbath ran uninterrupted through the months and years (Exod. 34:21; 23:12). Its recurrence was independent of lunar and solar cycles, and it has remained constant in all Israelite and Jewish calendars. Even the sectarian calendar of Jub. 6:29-38, Enoch 72-75, and Qumran, which changed the length of some months and the year, left the seven-day week intact.

By the first century A.D., a seven-day week was widely known throughout the Roman Empire, probably through the influence of the large Jewish Diaspora. Although the early Gentile Christian church rejected the Jewish sabbath, it accepted the seven-day week. See also SABBATH[S] §1; SABBATICAL YEAR[S].

\***WILDERNESS.** The concept is expressed by a variety of terms, but it is not always clear how they differ in meaning (see Schwarzenbach). The most frequently used expression is מִדְּבָר (269 times), rendered ἔρημος in the LXX and NT. The term is also found in cognate languages, e.g., Ugaritic and Aramaic, and as a Northwest Semitic loanword in Akkadian. It is often coupled with or parallel to עֲרֵבָה (59 times), מִשְׁמָחָה/שְׂמֵחָה/יְשִׁימוֹן (116 times), צִיָּה/צִיּוֹן (18 times), and other terms. מִדְּבָר (*midhbār*) and its synonyms refer to arid or semiarid areas which are not suited for permanent settlement but in part can be utilized as pasture lands for small stock (see DESERT; WILDERNESS). The noun probably derives from Aramaic *dbr*, "to bring the flock to the pasture," possibly connected

with Hebrew *rbd-rbš*, which have a similar connotation (Isa. 13:20). *Midhbār* therefore serves in the OT also as a technical term for pasture areas adjoining a semipermanent shepherd encampment—*nāwē*=*nāwūm* in the Mari texts—or permanent semiurban and urban settlements.

In the majority of occurrences, "wilderness" carries negative overtones, referring to parched, inhospitable, and dangerous places. However, in reference to pasture lands it exhibits positive aspects of out-of-the-way locales, sometimes with a luxuriant growth of grass, where romance and love flourish. This results to some degree from the association of *midhbār* with the period of Israel's wandering in the wilderness, between the Exodus and the conquest of Canaan. The wide and diversified employment of wilderness language pertaining to geophysical reality and expressing various concepts affords fruitful insights into fundamental religious and social ideas which were operative in biblical Israel. They were carried over into the Qumran documents and rabbinic literature, and, with some significant conceptual variation, into the NT and early patristic writings.

1. The meanings of "wilderness." a. **The spatial dimension.** Wilderness terminology—מִדְּבָר, מִדְּבָרָה, מִדְּבָרָה, מִדְּבָרָה, מִדְּבָרָה—denotes the true desert, especially in the S of Palestine and in the Sinai Peninsula to the SW. No trees or other vegetation grow in this barren void (Num. 20:5), and no husbanded animals or civilized men live there (Jer. 2:6). Anyone who ventures into this wilderness suffers hunger and thirst (Ps. 107:4-5), and is endangered by marauders and outlaws, fearful beasts of prey, snakes, and scorpions (Deut. 8:15). In the howling wilderness roam unfamiliar and mythical beings, ostriches, satyrs, (Isa. 13:21), and LILITH, the night hag (Isa. 34:14; see DEMON, DEMONOLOGY §A4). The presence of these monsters indicates that such places are still in a state of primeval chaos (Deut. 32:10), or have been punished by the Creator (Zeph. 2:13). The demonic character of wilderness reflects notions which are found in ancient Semitic mythology—Akkadian, Ugaritic, and Arabic—and which have echos in post-OT literature. They reverberate in the ritual of driving out the *šā'ir* (goat or satyr) into the wilderness to AZAZEL. This wilderness is synonymous with utter darkness (Jer. 2:6, 31), a place cut off from life (Lev. 16:22; cf. Isa. 53:8; Ezek. 37:11). In these aspects wilderness-*midhbār* blends with the Sheol-underworld, similar to Sumerian *Edin* and Akkadian *šēru*, which also combine both these connotations. The Mesopotamians, for whom the Arabian desert lay to the W, where the sun sets, identified the wilderness as the area which leads to the nether world. This idea appears to be reflected in scriptures in which *midhbār*, *\*rābhā*, and *\*māmā* contrast with the Garden of Eden, the source of life and abundant growth (Joel 2:3; Isa. 51:3).

b. **The geographical dimension.** To the people of biblical times the division between the wilderness and the sown area was not rigid or permanent. There was a transition from fertile lands through grazing tracts and steppes to the true desert (see FOREST[S]). Moreover, the boundaries can expand

as new lands are brought under cultivation, or contract through the inroads of nomads who succeed in pushing back the agricultural population (Judg. 6-7). The gradual transition from the urban and semipermanent settlements to the W and the E of the Jordan into the wilderness around the Dead Sea shows in the terminology employed in some biblical narratives. Thus, after the battle with Joab's troops, Abner's men retreat from the city of Gibeon (which lies N of Jerusalem) through the "wilderness" (מדבר) to the Arabah and from there cross the Jordan to return to Mahanaim (II Sam. 2:24-29).

The stretches of wilderness closest to the Dead Sea are sometimes appropriately termed *m<sup>o</sup>lēhā*, salty marshes (Jer. 17:6; Job 39:6). While the *m<sup>o</sup>lēhā* and the *y<sup>o</sup>šmōn* are altogether unsuitable for human habitation, the parts of the nonarable wilderness designated *midhbār*, on the perimeters of settlements, are the ideal grazing ground for the flocks, predominantly goats and sheep, of the semisedentary and sedentary-agriculturist population (e.g., I Sam. 17:28; 25:4, 21; II Chr. 26:10). In this context *midhbār*, and to some degree *'rābhā*, are viewed as extensions of specific settlements, such as Beer-sheba (Gen. 21:14), Tekoa (II Chr. 20:20), or Damascus (I Kings 19:15). As a literary image this connotation is found, e.g., in Isa. 27:10, where Israel is likened to "a besieged (read *n<sup>o</sup>šūrā* for *b<sup>o</sup>šūrā*) city, a forsaken and desolate habitation (*nāwē*), a wilderness (*midhbār*) where cattle graze" (author's trans.). The Qumran term *midhbār y<sup>o</sup>rūšalayim* (IQM 1.2-3) derives from this usage.

**c. The historical-temporal dimension.** In a number of its occurrences in biblical literature, *midhbār* serves as a designation of the clearly circumscribed period which followed the Exodus and preceded the conquest of Canaan. During this period Israel encountered God, and these encounters decisively shaped the subsequent appreciation of the wilderness as expressed in biblical imagery and motifs. God's march through the wilderness became a prominent image in early biblical poetry (Deut. 33:2; Judg. 5:4; Hab. 3:3; Ps. 68:7-8 [H 8-9]). The movable tabernacle of the desert period was considered the forerunner of the permanent temple in Jerusalem (II Sam. 7:6).

**d. The socioreligious dimension.** The richness, exactitude, and diversity of the wilderness theme in the OT literature have had a far-reaching effect on modern biblical research. Buttressed by the comparison with pre-Islamic Arab culture, there emerged at the end of the nineteenth century a school of thought which presented the wilderness experience as the basis of Hebrew society and as a pivot of biblical religion. Israel was defined as a typical exponent of desert culture, her God as a desert deity, and the Yahwistic creed as an emanation of nomadism (Nyström). Not only was the wilderness viewed as the actual existential setting of the early Hebrews, but also was presented as the ultimate goal of the biblical *Heilsgeschichte* (Budde, Humbert, Meyer), and as an expression of "The Nomadic Idea and Ideal" of biblical monotheism (Flight). Most recently, one writer termed the OT "The Desert Bible"

(Seale). Supposedly the most prominent promulgators of the desert ideal were the prophets, foremost among them Elijah, Hosea, and Jeremiah, whose ideas were adopted and further developed by Jesus and the early Christians (Flight). It is recognized that after the conquest of Canaan, Israel developed a predominantly agricultural and urban civilization. But some writers hold that the initial Bedouin culture still found expression in biblical mores, especially in the institution of the NAZIRITES, and was kept alive by the anticivilization clan of the Rechabites (cf. RECHAB; RECHABITES).

**e. The "motif" dimension.** The centrality of the wilderness in the ancient Hebrew world of thought was and is questioned by many scholars. The textual basis of the presumed desert idea and ideal is exceedingly thin (Barth). It has been argued that, in the historical experience after the Exodus, in the vicarious re-enactment of the desert theme after the Babylonian exile in Second Isaiah, and again among the Qumran covenanters, the wilderness is never presented as a goal in itself, but rather serves as the setting of an imposing rite of passage prior to Israel's reaching the Promised Land (Talmon). The recurring traditions which record the people's rebellious "murmuring in the wilderness" (Coats, Tunyogi, de Vries) tell of a wayward Israel, unthankful to the God who saved her from the Egyptian bondage and provided for the people's needs in the inhospitable desert (Deut. 32; Ps. 78; Ezek. 20). As far as mention is made of a love relationship between God and the people, it pertains to the historical-temporal dimension of wilderness, the short span of time between the Exodus and the Sinai covenant (Exod. 12-20), the only part of the desert trek predestined in the divine plan (Exod. 3:12, 18; 5:3). The love theme is altogether unconnected with the later wanderings in the desert imposed upon Israel as a consequence of the Exodus generation's lack of trust in God's ability to establish his people securely in the land of Canaan (Num. 13-14). Moreover, biblical traditions do not speak of a mutual relationship between God and the people marked by equal faithfulness on both sides; rather they highlight Israel's infidelity in the face of God's everlasting love and care. Hosea envisages a return to the desert as a new beginning which would lead to Israel's regaining the Promised Land without succumbing again to the lures of Baalism and harlotry (2:14-19 [H 16-21]). Like Miriam at the Red Sea, faithful Israel will then thank God (Hos. 2:15b [H 17b]). Reference to the positive aspect of the desert trek, namely the pre-Sinai period, reverberates in the famous Jeremiah passage which served as the main pillar of the desert ideal (Jer. 2:2-3). But these verses do not describe approvingly Israel's love for God in the desert. A textual-stylistic analysis reveals that this passage, too, extols God's unflinching love for Israel in her youth and her bridal days when he led the people through the wilderness, through a land unsown (Fox).

Nor can the Rechabites be adduced as the preservers of an all-Israelite desert culture from ancient times to Jeremiah's days, i.e., to the fall

of Jerusalem at least. The biblical text simply describes the Rechabites' life-style and in no way presents it as a socioeconomic or religious ideal (see RECHABITES[S]).

**f. The typological dimension.** Notwithstanding the above strictures, traces of a positive appreciation of the wilderness period can be discerned in some strata of OT literature. However, rather than portraying wilderness life and mores as an ideal, these passages reveal the author's criticism of Israel's succumbing to pagan worship and to social corruption under the influence of settled life in Canaan. Viewed in comparison with these rejected realities of societal life, the desert period is retrospectively invested with some values which historically and existentially do not pertain to it. These appreciative aspects of "wilderness" are expressed in images that reflect the conception of the historical desert and the desert period as a place and a time of preparation before the entry into the Promised Land. Israel's renewed history after the Babylonian exile, and the Qumran covenanters' history after their "exile in Damascus," must correspondingly begin with a probationary stay in the desert. However, these new generations have already been punished for their transgression by war, destruction, and exile. Therefore, the new desert experience can be freed from the "sin-and-punishment" theme which characterizes the post-Egypt desert trek, and can become a pure and concentrated expression of the idea of "transition and preparation" (IQS 9.19-20). Unlike the hasty flight from Egyptian bondage, Israel embarks on the trek through the desert upon the return from the Babylonian exile in security and quietude, as a people already purified (Isa. 52:11-12; cf. 51:11). The desert is transformed into a land rich in water and vegetation (Isa. 43:18-19), traversable by straight paths and highways. Chaos again is subdued to become a Garden of Eden (Isa. 51:3). In these latter-day portrayals, it is not the wilderness as such or the nomadic style of life which are conceived as an idea and ideal, but rather their subjugation to cultivation and fertility, and to orderly societal life. It is only by a radical transformation that wilderness can become a prototype for an ideal time. See also TYPOLOGY[S].

**2. Recent research.** Scholars have attempted to explain the different, seemingly contradictory attitudes toward the wilderness in biblical literature as having arisen from the combination of parallel or complementary tradition strands (Noth), or from diachronic developments in the appreciation of the wilderness throughout the biblical period. This latter school holds that the early generations showed no interest in the fate and the deeds of the people, focusing their eyes exclusively on God's actions in rescuing his people (Bach, pp. 15-16). Therefore, there is no meaningful appreciation of the wilderness in relation to biblical religion and the social framework of Israel. This, then, changes completely in the time between the conquest of Canaan and the Babylonian exile. Against the background of the Canaanite pagan cult which infiltrated Israelite religion, the wilderness of the Exodus is retrospectively viewed as

the locale of an ideal communion between God and Israel. With the end of the royalist first-temple period, a realistically negative or pessimistic attitude toward the wilderness takes over. It is seen in Pentateuchal accounts of the desert trek, and is mirrored in the book of Ezekiel (e.g., ch. 20) and the historiographic psalms (e.g., 78, 106, etc.).

This schematic pattern has several weaknesses. There is sufficient textual evidence upon which to base the biblical negation of the wilderness and wilderness life. But the presumed idealistic appreciation rests upon the doubtful exegesis of a few proof-texts assigned to "the middle period." Even scholars who perceive in biblical literature sure traces of an ambivalence toward the wilderness tend to agree that there never existed a tradition which viewed the wilderness altogether positively (Barth, pp. 20-23). The idealization of the desert in modern research appears to have arisen out of theological concepts and a nativist ideology which value the primitive quality of desert life as a joyfully accepted prerequisite for the attainment of spiritual bliss. In the OT world of ideas, the Promised Land lies beyond the fringes of the desert, which is the symbol of chaos and waste. The opposition between the two is conceptualized in the contrast of Jerusalem-Zion versus Sinai (Talmon, "The Biblical Concept of Jerusalem"). Only a postbiblical, predominantly Christian monastic vision conceives of the paradise to come, of celestial Jerusalem, as sprouting from the very confines of the transformed wilderness (de Vaux, p. 14).

\***WIND** [רוח, *rûḥ*]. "Wind" is probably the primary meaning of the word *rûḥ*, as distinct from its secondary meaning, "BREATH," and a third area of meaning, which is commonly rendered as "SPIRIT." The semantic shift from "wind" to "breath of life" (*rûḥ ḥayyim*) to "spirit" is subtle, and in some instances the context does not clearly mark the meaning.

רוח as "wind" appears frequently in the OT, e.g., in Gen. 8:1; Exod. 10:13, 19; and II Kings 3:17 (in parallel to גשם, "rain"). רוח as "direction" (Ezek. 5:10) is a logical derivation from רוח as "wind," and the inhabitants of the ancient Near East identified the winds with the four cardinal points or directions; e.g., the east wind in Gen. 41:6; Exod. 10:13; the west wind in Exod. 10:19; the north wind in Ezek. 1:4; Prov. 25:23; and Song of S. 4:16; and the south wind in Ps. 78:26; Job 37:17; and Song of S. 4:16. The four winds in the sense of the four directions appear in I Chr. 9:24 (RSV "sides"). The Greeks also identified the winds with the four primary directions from which they seemed to blow, personifying them with proper names.

The phrase *rûḥ 'elōhim* has two quite different meanings in the OT. It is usually translated as "the spirit of God," and this is indeed its meaning in many, if not in most instances (e.g., Gen. 41:38; Exod. 31:3; Num. 11:25-29; 24:2). But the phrase can also be translated as "wind of God," and in some biblical verses it must be so understood, e.g., Gen. 1:2. E. Speiser (ABi I) translates the entire clause thus: "and only an awesome wind sweeping over the water." This is very different from JB: "and God's spirit hovered over the water." Not only is the image different, but there are theological and cosmological nuances inherent in the variant translations.

Each word and phrase in the Priestly cosmology (Gen. 1) was carefully chosen to convey a specific concept of divinity and to clarify the relationship between the Creator and the cosmology (Neiman). The cosmology stands opposed to the standard cosmologies of its time (Babylonian, Canaanite, and Greek): they postulate a universe that is poly-potential, the creation of many independent forces that appear as the natural phenomena; the Hebrew cosmologist, on the contrary, insists that there is only one creative force, from whom all phenomena issue forth. Even the pre-existent state of Chaos, *lōhū* and *bōhū* (RSV "without form and void") was motivated by him.

Pre-existent CHAOS was conceived by the Baby-

lonian and Canaanite cosmologist as primeval SEA, raging Yam or TIAMAT. The primeval sea has its own will and moves by its own power as one of the primary forces of creation. But the Hebrew cosmologist explains the existence of a pre-creation chaotic *t'ḥôm*, a depersonified raging chaos (see DEEP, THE), by stating that the agitation which drove the waters was a mighty wind, a wind sent by the Creator.

\***WISDOM IN THE ANCIENT NEAR EAST.** In the OT the term WISDOM was employed to describe the attitude that proper conduct is based on knowledge—that the ability to live successfully can be imparted (see WISDOM IN THE OT[S]). This concept was current throughout the ancient Near East from very early times, although such works have so far been recovered only from the Nile valley and Mesopotamia. The Akkadian words usually rendered "wisdom," however, have a very different connotation from that of Hebrew חכמה, since they refer to skill in magic and ritual. Even the comparable terms in Egyptian lack the OT emphasis on reverence for the deity. Nevertheless, it is convenient to use the expression "wisdom literature" for those texts that deal with related themes in Egypt and Mesopotamia.

The literature falls into two broad categories: works designed to inculcate ethical teachings and useful advice, and those which were concerned with larger issues of life and often questioned traditional beliefs.

**1. Egyptian wisdom literature.** It has been maintained that Egyptian wisdom literature was basically utilitarian and pragmatic, and that only in its later stages did it manifest a religious spirit. This view has been shown to be false, because from the very beginning the Egyptian texts had a religious basis. Cf. WISDOM IN THE OT[S] §2a.

**a. Instructions.** From early times didactic treatises designated as *shōyet* (teaching) were composed by officials for the edification of the young who attended the scribal schools and aspired to positions in government service. They were addressed by a father to his son, a practice which soon became a convention for teacher and pupil respectively. In addition to their use for instruction in the art of reading and writing, they provided models of effective speech and served to inculcate the norms of ethical conduct as well as, in the early period, the rules of court etiquette (see JOSEPH STORY[S] §§2a, 3). The style was that of formal instruction, and aphorisms do not become a feature until the demotic teachings, beginning in the Persian period. This is a characteristic also of Prov. 1-9 and 22:17-

24:34. See PROVERBS, BOOK OF §8; PROVERBS, BOOK OF[S] §2b.

Three such manuals date from the Old Kingdom and are attributed, perhaps pseudonymously, to famous figures. The only one completely preserved is ascribed to Ptah-hotep, a vizier of the Fifth Dynasty, but it was probably written late in the following dynasty (*ANET*, pp. 412-14, *see bibliog.*). Only the conclusion of the second treatise survives, addressed by an unknown vizier to his son Kagemni. Although set at the beginning of the Fourth Dynasty, it too was likely composed in the late Sixth Dynasty. Only the beginning of the third work is known, reconstructed from a number of fragmentary schoolboy exercises. The author claims to be Hardjedef, the son of Cheops of the Fourth Dynasty, but again the composition is possibly from the following dynasty.

During the centuries immediately following the fall of the Old Kingdom, the examples of this genre are all characterized by propagandist tendencies designed to serve political ends. The first purports to be the posthumous work of a Tenth-Dynasty ruler, probably Khety III, for his son and successor Merikare (*ANET*, pp. 414-18). Similarly, after the assassination of Amen-em-het I, the initiator of the Twelfth Dynasty, a document was composed for the new ruler Senwosret I and attributed to the deceased king (*ANET*, pp. 418-19). It was designed to bolster Senwosret's rightful claim to the throne. Although it is introduced as a "teaching," it hardly qualifies as a true instruction. This is also the case with a "teaching" by an unnamed author which was later incorporated into the tomb stela of an official named Sehtepibre. It was in fact a panegyric of the same Senwosret I, accompanied by exhortations to give loyal support to the ruler. Another such work is introduced anonymously as a "teaching which a man made for his son."

In the New Kingdom three didactic manuals were produced which were imbued with the personal piety characteristic of the age (*see EGYPT* §3c). Especially prominent was the concept of the "silent man," by which was meant the self-controlled person as opposed to the passionate or hot-tempered man. Probably from the Eighteenth Dynasty come two compositions: the fragmentary instruction of the scribe Amen-nakhte, and the more complete but carelessly copied work of the temple scribe Ani. Fortunately, the treatise of a minor official named Amen-em-opet is preserved in its entirety (*ANET*, pp. 421-25). This has been recognized by OT scholars as the source of Prov. 22:17-23:14, and its influence may also be seen in Jer. 17:5-8 and Ps. 1. The discovery of new MSS of the text compels a date for the original in the twelfth or thirteenth century, if not earlier.

This type of literature continued to be produced down to a much later time. Among the extensive hieroglyphic inscriptions on the walls of the tomb of Petosiris, high priest of Thoth at Hermopolis in the late fourth century B.C., are some didactic sections which reveal affinities with the OT, especially Ps. 128. Three works in the demotic script deserve mention. The earliest, probably from the sixth century, is a collection of maxims addressed

to his son by 'Onksheshonqy while he was imprisoned for implication in a plot against the pharaoh's life. Slightly later is a lengthy compilation of counsels and aphorisms known as Papyrus Insinger. The beginning of a work of similar content is contained in a papyrus now in the Louvre.

**b. Scribal literature.** One of the most popular texts produced for the training of potential scribes has been called the Satire on the Trades (*ANET*, pp. 432-34). Written by the famous scribe Khety at the beginning of the Twelfth Dynasty, according to later Egyptian tradition, this introduced a new literary genre although it is still entitled a "teaching." In it the various professions are described in derogatory fashion and contrasted with the ideal lot of the scribe. For some reason it was attributed pseudonymously to a very minor official by the name of Dua-Khety. So great was its vogue that a spate of imitations was created during the New Kingdom. Its influence may be seen in Ecclus. 38:24-39:11.

Many anthologies of compositions offering advice and warnings to scribes as well as models for letters, hymns, eulogies, and the like began to appear in the New Kingdom. The Nineteenth-Dynasty Papyrus Anastasi I consists of a long text in the form of a letter usually known as the Scribal Controversy. It is a sarcastic quiz of an apprentice scribe by his teacher, and has been compared with Yahweh's interrogation of Job.

Another class of text devised as an aid to scribes was the "onomasticon," a list of the names of places, occupations, titles, flora and fauna, natural phenomena, and so on. These too were given the title of "teaching," so that this term had a very wide connotation for the Egyptians. Such lists are believed to lie behind the catalogue in Job 38-39 and other passages like Prov. 30:15-16, 18-20, 24-31, and even Gen. 1. They follow the order of the Egyptian lists in contradistinction to the corresponding lists prepared by Mesopotamian scribes.

**c. Pessimistic literature.** Four works produced in the Twelfth Dynasty all express despondency over the chaotic state of the land. Although characteristic of an earlier period, by the Twelfth Dynasty this had become merely a literary convention. The earliest is concerned with Neferti, a lector-priest who supposedly lived during the reign of Snofru in the Fourth Dynasty. His "prophecy" of the beneficent reign of Amen-em-het I, who would restore order to the land, reveals this to be a literary fiction. It is also a piece of political propaganda in support of this ruler who usurped the throne to found the Twelfth Dynasty. Somewhat later a tract appeared in which Khakheperresonbe, a priest of Heliopolis, sought for new modes of expression with which to lament over the state of the land. A long work contains the speeches of a sage named Ipuwer delivered before an unnamed king in which the latter is taken to task for his inept rule, which has resulted in anarchy (*ANET*, pp. 441-44).

To this group belongs the Dispute of a Man with his *bai*, a term rendered inadequately as "soul" (*ANET*, pp. 405-7). Its date may be slightly earlier than that of the other texts—late in the First Intermediate Period. It has been compared with the book of Job, but it does not raise

the problem of theodicy. Rather does it deal with man's dissatisfaction with life and his skepticism over the value of elaborate funerary preparations.

**d. Discourses.** The works belonging to this category may be assigned to the Middle Kingdom. The earliest is "The Tale of the Eloquent Peasant," in which for the first time a plea for social justice is encountered (*ANET*, pp. 407-10). In the course of nine flights of rhetoric a humble peasant complains to the authorities of his mistreatment at the hands of a rapacious minor official. A long but very fragmentary papyrus contains a discourse by a certain Sisobk, who is imprisoned at the court of a prince named Inini. Its mutilated condition precludes any clear understanding of its contents. "The Song of the Harpist," which is found in several versions, is a poetic meditation on the futility of expensive mortuary arrangements and advocates a somewhat hedonistic approach to life (*ANET*, p. 467).

**e. Fables and debates.** Examples of this type of literature in Egypt are very rare. From the Twenty-second Dynasty comes a dispute between the heart and the stomach over their relative importance. A Twentieth-Dynasty papyrus in Turin records three poems in which different trees speak, extolling their virtues. They probably belong to the genre of love songs rather than that of contest fables. A unique allegorical tale from the Nineteenth Dynasty tells of two brothers who personify the abstract qualities of truth and falsehood. Truth is blinded by falsehood but is eventually vindicated. Animal fables first appear in written form in the demotic "Myth of the Sun's Eye." The present text is a Ptolemaic revision of an earlier form which can be shown to date back to the Ramesside period at least. Several other damaged demotic texts contain fables about animals.

**2. Mesopotamian wisdom literature.** Although the amount of extant cuneiform literature that may be subsumed under the heading of wisdom is less than that of Egypt, the number of genres is somewhat greater. In general, the earlier compositions were written in Sumerian and the later in Akkadian. Many of the former may have been composed as early as the beginning of the second millennium.

**a. Instructions.** Like the corresponding Egyptian and OT works, these were conventionally compiled by a "father" for his "son." The earliest is a Sumerian work addressed to the flood hero Ziusudra by his father Shuruppak. Most of it is still unpublished. A translation was made into Akkadian, of which only the opening lines have been preserved. In the "Counsels of Wisdom," a popular Akkadian text, a high court official instructs his son (*ANET*, pp. 426-27). It probably dates from the Kassite period, but may be as early as Old Babylonian. Most famous is that attributed to Ahikar, a royal seal-bearer during the reigns of Sennacherib and Esarhaddon in the seventh century (see *AHIKAR*, *BOOK OF*). Although it has not survived in the original Akkadian, an Aramaic version was discovered in Egypt among the fifth-century ELEPHANTINE PAPYRI. The work became widely diffused in many languages and recensions,

and inspired such OT passages as Prov. 23:13-14 and 27:3.

Other genres were employed by Akkadian writers to transmit ethical teachings. A lengthy hymn to the god Shamash from about the tenth century contains moral precepts which led to its use as a schoolboy text. Slightly later, another work of instruction, the "Advice to a Ruler," was couched in the literary form of an omen collection.

**b. Proverb collections.** Unlike the Egyptians, Mesopotamian scribes drew up anthologies of proverbs, often associated by catchwords (see *MNEMONIC DEVICES*[S]). The earliest were in Sumerian and represent perhaps as many as twenty or more collections. During the following millennium, others were compiled and provided with Akkadian translations. One bilingual example is in Akkadian with a Hittite version. A few fragmentary collections are found solely in Akkadian. See *ANET*, pp. 425-26.

**c. Scribal literature.** Texts which dealt with the scribal schools, their pupils and teachers, were produced in Sumerian, to be followed later by a number of similar bilingual compositions. These were widely copied by schoolboys. As in Egypt, comprehensive lists of names of plants, animals, minerals, cities, countries, etc., were drawn up.

**d. Theodicy literature.** The questioning of divine justice is a theme unknown to Egypt but well attested in Mesopotamia. In a Sumerian work, "Man and His God," a sufferer finds salvation in humble submission to his deity. A long Akkadian poem entitled "I Will Praise the Lord of Wisdom" was popular as a school text (*ANET*, pp. 434-37). Composed between 1500 and 1200, it is a monologue by a nobleman in which the god Marduk is implicitly regarded as the ultimate source of all his woes. The sufferer is healed as the result of Marduk's gracious intervention. A somewhat later poem, the "Babylonian Theodicy," is a dialogue in which two friends debate the problem of the suffering of the righteous (*ANET*, pp. 438-40). As in the previous text, divine justice is declared to be incomprehensible, and deliverance is assured by unquestioning piety. See *THEODICY*[S].

**e. Pessimistic literature.** Only one Akkadian work falls into this category. Usually called the "Dialogue of Pessimism," it is a colloquy between a master and his slave, from the late Kassite period (*ANET*, pp. 437-38). In a satirical vein, various courses of action are proposed and rejected, and finally the only satisfactory solution is said to be death.

**f. Fables and debates.** A genre of texts in Sumerian from the Old Babylonian period consists of verbal contests between two antagonists. These may be animals, plants, seasons, minerals, or implements, all of which are endowed with speech. Each boasts of his own virtues and derides those of his rival, while a deity finally resolves the debate. Seven such texts are extant. Somewhat later are a few similar disputations in Akkadian. Plant and animal fables are much better represented than in Egypt. They are frequently included in proverb collections, and four occur in Ahikar, whereas one is contained in the legend of Etana.

**Bibliography.** Most of the texts referred to are translated in: J. B. Pritchard, ed., *ANET* (2nd ed., 1955); E. I. Gordon, *Sumerian Proverbs* (1959); W. G. Lambert, *Babylonian Wisdom Literature* (1960); E. Bresciani, *Letteratura e poesia dell'antico Egitto* (2nd ed., 1969); W. K. Simpson, ed., *The Literature of Ancient Egypt* (2nd ed., 1973); M. Lichtheim, *Ancient Egyptian Literature*, 2 vols. (1973-76).

R. J. WILLIAMS

\***WISDOM IN THE OT.** An adequate definition of wisdom eludes interpreters of the OT. The many attempts to capture its essence succeed only in underscoring wisdom's enigmatic character. By analogy with Egyptian and Mesopotamian wisdom, scholars describe Israel's wisdom as humanistic, universalistic, eudaemonistic, nonhistorical. Still, differences stand out, rendering such analogy hazardous and prompting Egyptologists to avoid the word "wisdom" in favor of "wisdom literature." At least one authority in Babylonian wisdom has declared the term as applied to Israel a misnomer, because of the vast differences from Mesopotamian cultic wisdom. Though taking its stand upon human inquiry and asking above all about man's well-being, wisdom identifies human good with divine intention. Truths acquired by reason belong to no specific race, but are open to the whole of humanity. Nevertheless, Israel's wisdom functions within the context of a covenanted people and eventually embraces sacral traditions. Man's welfare is indeed the goal of wisdom; prudence, its manner of acting. Such pragmatism arises from a profound religious conviction about the order of the universe. Right behavior constitutes life itself, hence transcends mere eudaemonism. Every proverb or sentence arises within history, and the totality of wisdom literature creates a unique history of its own, both linguistic and ideological. Thus in a real sense wisdom is historical.

Recent definitions, though considerably more precise, fare little better: Wisdom is the art of succeeding in life; practical knowledge of laws governing the world, based on experience; the totality of experience transmitted by a father to his son as a spiritual testament; ability to cope; the right deed or word for the moment; an intellectual tradition. A satisfactory description of wisdom needs to face up to its complexity, for Israel's sages by no means speak with one voice.

Wisdom in the OT constitutes a body of literature, a way of thinking, and a tradition. Reaching back into the earliest stages of Israel's existence, the literature, at first oral, encapsulated lessons derived from experience. In a sense, it represented the legacy of a father to his children, embodying his authority within the extended family. In time, collections of this lore were gathered by those to whom such learning was entrusted, ostensibly for use in instruction. One such group is mentioned

in superscriptions of Proverbs, namely, the "men of Hezekiah."

Each category of wisdom asks its distinctive questions and strives for its own special goals. Family or clan wisdom endeavors to master life, expresses itself in hortatory language, and makes copious use of proverbs. Courtly wisdom seeks to educate a select group of people, prefers secular vocabulary, and employs a didactic method in the pedagogic process. Scribal wisdom, more democratic than courtly, approaches a doctrinaire stance and makes full use of dialogue and admonition. Alternatively, from the perspective of the subject matter rather than of the sociological context, nature wisdom attempts to master reality for the sake of human survival and well-being. To accomplish this goal it draws up onomastica or noun lists and observes natural phenomena as they relate to man and the universe. Juridical and practical wisdom focuses upon human relationships in an ordered society, attempting to enrich life through cumulative experience. Addressing the perplexing issue of theodicy and the relationship between God and man, theological wisdom inquires about the first principle of knowledge and locates it within the religious dimension.

Out of this literature characterized by a particular type of thinking, a special tradition of the wise emerged. The sage acquired self-consciousness over against other approaches to reality, and slowly formulated his own field of discourse. Traditional lore was transmitted from father to son, teacher to student. Its contents ranged from prudential morality to radical questioning of life's meaning. The sage found no issue too trivial for his consideration, whether proper table manners or a fool's body language. Nor did he shy away from the profoundest of all questions, although painfully conscious of limitations imposed upon his knowledge. In time, wisdom honored her greatest king by making him the wise man par excellence. Dame Wisdom, it follows, became Solomon's bride and instructor in the art of living.

- Bibliography

1. **Wisdom as a corpus of literature. a. Identification.** Traditionally wisdom literature comprises Proverbs, Job, Ecclesiastes, Sirach, Wisdom of Solomon, and a few Psalms. Several scholars have recently attempted to enlarge the scope of wisdom literature. Strong wisdom influence, if not actual compilation, is claimed for Gen. 1-11, 37-50; Exod. 34:6-7; Deuteronomy; II Sam. 9-20; I Kings 1-2;

Amos; Isaiah; Habakkuk; Jonah; Daniel; and Esther. Such attempts derive their impetus from a valid intuition: wisdom does not exist in a vacuum. The cumulative effect of such endeavors, however, renders wisdom diffuse beyond recognition. See JOSEPH STORY[S] §3; ESTHER, BOOK OF[S] §3; PROVERBS, BOOK OF[S].

Wisdom influence upon texts other than the acknowledged wisdom corpus can be established only by taking into account several factors: (1) the definition of wisdom as it can be ascertained; (2) stylistic and ideological peculiarities of wisdom literature; (3) attitudes toward wisdom and its representatives; and (4) wisdom's structural development, geographic spread, and ideologic formulation.

Two special problems merit further comment. The first concerns the circular reasoning into which scholars are forced. In short, we begin with an entity that we choose to label "wisdom," and work from it. We then exclude texts that differ essentially from that normative corpus of literature. Everything hinges upon the accuracy of our initial decision. Precisely at this point, comparison with non-Israelite wisdom literature becomes both an asset and a liability. In Israel, wisdom never acquires the cultic or divinatory quality that typifies Mesopotamian wisdom, nor does it have the aristocratic tone of Egyptian wisdom. A second difficulty is that wisdom shares a common vocabulary with prophecy, priestly discourse, and historiography. Certain words are universal, hence cannot be used to establish wisdom influence. Into this category of common linguistic stock fall such words as knowledge and intelligence, good and evil, wisdom and folly, obedience and disobedience. Impoverished indeed is the language of any group without such words. Even when an Israelite is called a wise man or woman, it does not necessarily imply a technical use of the adjective.

The presence of wisdom glosses in prophetic literature is generally acknowledged (Amos 5:13; Hos. 14:9 [H 10]). Does the matter stop there? Evidence of wisdom influence on Amos and Isaiah has been put forth with great vigor. Stylistic arguments include rhetorical questions that appeal to phenomena of nature, admonitions, calls to attention, and summary appraisal. Arguments based on a common vocabulary appeal to such words as counsel, wisdom, upright, council, understanding, father and son, hear, and keep. To these, theological issues are added, such as interest in astronomy, lack of concern for idolatry, a moralistic conception of salvation, Israel's place among the nations, attacks on luxurious living, Yahweh's plan for Israel, possession of the land, and belief in Israel's doom. Amos is thought to have moved within clan wisdom circles, while Isaiah either belonged to and turned his back upon the wisdom of the court or called sages back to their authentic faith. Isaiah thus forces representatives of a revived wisdom under King Hezekiah to recognize that true wisdom is from God, and that man possesses it only as charismatic gift. See ISAIAH[S] §2c.

Such conjectures highlight difficulties in characterizing wisdom's special qualities, whether stylistic, thematic, or theological. They also demonstrate the

poverty of knowledge about clan wisdom over against courtly wisdom. Until some clarity about the distinctives of each kind of wisdom emerges, biblical interpreters need to exercise the same caution in dealing with intrabiblical influence that dominates discussions of extrabiblical parallels. Furthermore, texts such as Isa. 9:2-7 [H 1-6] and 11:1-9 do not necessarily demonstrate wisdom influence, since wisdom normally characterizes royalty.

On the other hand, prophets certainly endeavor to communicate with their audience, often entering into debate with representatives of alternative viewpoints. Use of wisdom vocabulary and ideas comes as no surprise, particularly when the argument moves *ad hominem*. Prophet and sage inevitably come to blows, for each represents a world view wholly alien to the other. Stated crassly, the extremes are revelation and reason. Given this disparity of viewpoint, the claim that Isaiah summons the wise to a true tradition long since abandoned carries little persuasive power.

**b. Literary forms** (see FORM CRITICISM; FORM CRITICISM, OT[S]). The basic unit of wisdom is the proverb, either as a statement or as instruction. Originally a sentence composed of two members in synonymous or antithetic parallelism, the proverb is a work of polished craftsmanship. Such expertise in use of literary devices excludes neither popular origin nor oral transmission. In time one-line proverbs give way to longer units linked together by particles, common letters, introductory words, numbers, themes, and rhetorical features. Pedagogy, too, enlarges the unit by threats and by appeal to motives, reasons, and consequences.

Other constitutive forms, as opposed to ornamental features such as PARONOMASIA, are riddle, fable and allegory, hymn and prayer, disputation, autobiographical narrative, lists, didactic poetry, and narrative. See RIDDLE[S].

Fables have disappeared from biblical wisdom, despite the tradition that Solomon spoke of animals, trees, fish, and the like, and in spite of their presence in Mesopotamian wisdom. Biblical proverbs about natural phenomena use them for didactic ends, as is the case with fables. Dialogue, however, is missing, and the form is quite distinct. Even the Solomon tradition does not necessarily imply fables, but can be understood as the gathering of noun lists. See FABLE.

ALLEGORY resembles fables in content if not form. Two allegories occur in Prov. 5:15-23, which characterizes a wife as a cistern, and in a related text, Eccl. 12:1-6, a profound description of old age. The connection with the allegory in Prov. 5 depends on understanding the unusual word for cistern as a *double-entendre*, which sums up the author's negative warning (remember, your grave awaits) and positive counsel (enjoy the woman you love while in the bloom of youth).

Hymnic passages abound in SIRACH and WISDOM OF SOLOMON, and strongly resemble texts throughout the OT. Unique to wisdom is the hymn about Lady Wisdom, while creation dominates other hymnic motifs. Both themes address themselves explicitly to the problem of THEODICY. A special feature of Sirach's praise of the creator is an understanding of complementary pairs ordained in the

beginning to assure the principle of retribution. When pressed to defend God's justice, Sirach ultimately abandons rational argumentation in favor of a crescendo of hymnic praise.

A didactic element pervades wisdom prayer, even as early as Prov. 30:7-9. It strongly characterizes the pronounced prayer influence within Sirach (22:17-23:6; 36:1-17; 51:1-12) and Wisdom of Solomon (9:1-18; 11:21-12:27), although in the latter the form has no clear delimitation. Here is evidence that the sage has become a worshiper.

Disputation, consisting of mythological introduction, debate, and divine resolution, best characterizes the biblical Job. Elements of lament justify the claim that Job provides a paradigm of an answered lament, but not principally so. The book also consists of a lawsuit against God, including an oath of innocence, but disputation aptly describes its total structure. Parallels within Mesopotamian culture provide the probable prototype of Job; the biblical dress differs radically because of the nature of Israel's God. Imagined discourse, a variant of disputation, appears often in contexts treating the problem of delayed retribution (Wis. Sol. 2:1-20; 5:1-13) and false thinking in general (Prov. 1:11-14, 22-33; 3:28; 5:12-14; and *passim*). Imagined speech stimulates correct thinking and ridicules false reasoning. Its tone is often strident, the victim being consigned to destruction.

Autobiographical narrative, otherwise known as reflection or confession, derives from wisdom's experiential base. Possessing a rich heritage in Egyptian wisdom, it was spoken originally by kings, and later by lesser individuals. Two examples occur in Proverbs (4:3-9; 24:30-34), which may be compared to Ps. 37. The author of Ecclesiastes uses the autobiographical narrative most effectively (Eccl. 1:12-2:26), as do Sirach (33:16-18; 51:13-22) and Wisdom of Solomon (7-9). In the latter text, devotional confession replaces the earlier skepticism of Ecclesiastes.

Evidence for existence of onomastica in Israel is meager. The tradition about Solomon's composition of "three thousand proverbs" and "a thousand and five" songs about trees, beasts, birds, reptiles, and fish (I Kings 4:32-33 [H 5:12-13]) may allude to numerical proverbs and possibly derives from belief that prosperity demonstrates wisdom. Since Solomon was the wealthiest king in Israel, he must have been a sage par excellence. It follows that he coined proverbs and composed songs, as did all great sages of the ancient Near East. On the other hand, certain biblical texts bear striking resemblance to onomastica from Egypt (Job 38-41; Sirach 43; Wis. Sol. 7:17-20; cf. also Sirach 38:24-39:11; Job 28; 36:27-37:13). Much of the information joined together in this fashion, however, does not necessitate a theory of encyclopedic noun lists. Differences between these lists and extrabiblical onomastica require the hypothesis of radical transformation. It can be argued that Solomon's uniqueness as a sage derives from an innovative clothing of lists in poetic dress and use in didactic settings, but no evidence for such form or usage exists.

Didactic narrative (Prov. 7:6-23), problem poetry (Ps. 49), and historical retrospect (Sirach 40-50; Wis. Sol. 10-19), while similar to non-wisdom

texts, have distinctive features justifying their inclusion as wisdom forms.

It is not possible to discover the settings of the various literary forms. With the possible exception of sentence and riddle, the forms probably had a didactic setting. Many proverbs reflect an agrarian economy, although a small number seem more at home in the earliest life of the clan, when law and wisdom go hand in hand. The language of wisdom prayers suggests that the teacher ultimately becomes a worshiper.

Wisdom literature maintains constant tension between optimism and pessimism. In so doing, it remains true to its source—experience—and to its fundamental character—applicability. Each generation tests truths acquired by previous ones, discarding whatever contradicts present experience. Ideally every claim is open to contradiction, but dogma does crystallize in the area of retribution. The result is a crisis evoking dissent literature, in which the weaknesses of optimism are subjected to close scrutiny. The profundity of Job, Ecclesiastes, and Prov. 30:1-4 derives in part from the truth resting behind more optimistic literature (Proverbs). Appropriately, Sirach displays a wedding of the two moods, abiding trust in divine goodness and anxious questioning of that same goodness.

*c. Authorship and date.* The sole instance in which it is possible to date a wisdom text is Sirach, the prologue of which allows us to date that book around 190 B.C. Language is a decisive factor in yet another case. Wisdom of Solomon is intelligible only against a Hellenistic setting, perhaps in the last quarter of the second century B.C. Ecclesiastes employs linguistic characteristics suggesting, if not demanding, a date in the third century. The language and content of Job accord best with a sixth-century date, although older material is certainly used. Proverbs comes from various periods, 1-9 being the latest collection, possibly postexilic. In a sense such literature is timeless, losing little by concealing its date of origin or literary formulation.

**2. Wisdom as a way of thinking. a. Anthropocentricity.** The fundamental premise of wisdom is belief in order. Implicit is a world view of reality as subject to laws established by the Creator, to governing principles discernible by use of reason. Wisdom seeks to understand these rules, to discover the appropriate deed for the moment. Asking, "What is good for man?" the sage seeks to prolong life and to assure its highest quality. Everything is subject to the sage's scrutiny, particularly human and animal behavior. Since conclusions are based on cumulative experience, they can be verified. On the basis of experience, some things are judged better than others. Although stated as advice, within the wisdom circle a saying bears the authority of its spokesman and tradition.

In time the open system hardened, approaching dogma, particularly in the realm of RETRIBUTION. The ensuing struggle led to the recognition of limits imposed upon human knowledge, especially in regard to divine inscrutability. A profound theological conviction undergirded the sage's view of reality. God has constituted the universe so as to reward virtue and punish vice, but such optimism

led to a spiritual crisis when justice gave way to capricious action. The result is despair, or a faith that is held in spite of all contradictory evidence.

This process of theologizing comes about in three stages. The first introduces the fear of God as wisdom's basic principle. Much early wisdom appears secular in mood and content. Its fundamental purpose was to encapsulate precious observations about reality for the benefit of posterity. The subject matter is largely domestic: agrarian interests and natural phenomena abound. Still, this valuable insight into the way things hold together was gained by those who belonged to the people of the Lord, and thus saw themselves as a covenant community. Small wonder they came to express their faith in God and in the course of daily happenings in one and the same breath. Admonitions, motivations, and threats are soon strengthened by appeal to common faith. Such appeal links up with the ancient concept of order bestowed upon the universe by a deity who rewards goodness and punishes evil.

A second stage attempts to deal with the difficult problem of divine presence in the world of human discourse. How can truth emerge from observation of nature and culture? Can revelation take place within ordinary human decisions apart from prophetic oracle, priestly ritual, poetic vision? Representatives of wisdom are convinced that their observations about reality are congruent with ultimate truth held in trust by God alone. They express this conviction in terms of a heavenly figure, Wisdom, who enlightens sages by dwelling in their midst, thereby allowing them to salvage something of the ancient Near Eastern fertility concept, that highly desirable bride more at home in the divine than human sphere.

Sirach represents a third stage marked by the identification of wisdom and TORAH. Once this equation is made, sacred history enters wisdom circles. Sirach introduces us to the sage at worship, singing hymns, and giving voice to prayer. For the author, the actors in the divine-human drama of salvation deserve hymnic praise.

**b. Radicality.** Wisdom thinking combines a radical questioning of the foundations upon which knowledge rests with a conservative attitude toward tradition. Though given to simplification, particularly in distinguishing wisdom from folly, the sage realizes the incompleteness of knowledge. Appreciative of lessons learned from the past, he strives to penetrate beneath surface similarities to essential data of experience. His willingness to discard treasured values in favor of new ones more in harmony with experience comes close to blasphemy, especially where divine justice is under discussion. But even the book whose rejection of wisdom's claim to full knowledge is most radical, Ecclesiastes, summons sages to a fundamental recognition of their limitations.

**c. Humility.** From the outset the wise feel humble in the face of mystery, the hidden quality of human life. They express such humility in numerous ways. Perhaps best known is the assertion that "man proposes but God disposes." The Israelite sage knows the battle belongs to the Lord regardless of human preparation for conflict, and ulti-

mately admits the race is not to the swift, for time and chance play indiscriminately. God and king are even set over against one another as if in competition: "It is the glory of God to conceal things, but the glory of kings to search things out" (Prov. 25:2). Consequently, one must be content with unanswered questions. This inability to penetrate certain mysteries prompts at least two sages to shrug their shoulders with resignation. The mysterious Agur (Prov. 30) comes close to rejecting the possibility of grasping reality, and the author of Ecclesiastes is fond of asking, "Who knows?" in such a way as to dismiss a question as unanswerable. Such humility before ultimate mystery does not mean, however, a diminution of the significance attributed to reason. By the exacting use of reason, man can know much about the nature of things and people. Reason is a gift of God and equips mankind for life, and so refusal to use it wisely constitutes an insult to Creator and creature alike. This is why the fool is considered wicked. His intractable ways and his refusal to learn endanger cosmic order, and must be offset by positive action. Sages, then, create and sustain the fabric of the universe.

**3. Wisdom as a tradition. a. Clan, court, and scribe.** Jer. 18:18 distinguishes three separate types of religious leadership and their essential communicative vehicle. The prophet proclaims a word; the priest dispenses Torah; and the sage gives counsel. The history of each group lies shrouded in mystery. Wisdom's development appears to concentrate upon three distinct periods: clan, court, school. Each generates its own tradition.

Clan wisdom gives birth to a world view and coins a special vocabulary. The father of a clan instructs his children, especially his sons, about mastering life. His counsel is authoritative, backed by a father's authority and an appeal to past experience. Years of observing nature and man teach the sage the predictable character of reality, instilling in him a conviction that the universe is governed by One who desires and maintains order. To communicate the means of ordering life in accord with this cosmic order, the wise man becomes an active teacher. Students receive the benefit of years' experience and acquire their fathers' vocabulary. Slowly technical terms, such as "my son," "instruction," and "fear of the Lord," emerge as wisdom's essence or first principle.

**b. Solomon.** In time, another quite different tradition enters the sage's world. The centrality of monarchy in Israel under David and Solomon and the necessity of good counsel in high places led to a close connection between king and wisdom. David must be content with astute advisors. Solomon, however, acquires a reputation for wisdom superior to that of any other king in the East. Whether traditions about Solomon's wisdom are grounded in actual fact or constitute a "mirage" can scarcely be answered. See §1b.

The widely held view of a Solomonic enlightenment takes seriously the tradition about a king's commitment to learning. Based primarily on analogy with Egyptian court life, it gives credence to the impetus behind such legends as that of Solomon's judgment concerning the infant, his

dreams at Gibeon, and the visit by the Queen of Sheba. Such material provides little support for drawing historical conclusions, particularly since it was customary to honor a ruler by describing him as wise. Furthermore, a positive view of Solomon's connections with wisdom has too often been coupled with an assumption about a movement from a view in which everything was sacred to a kind of humanism under Solomon. No such revolution can be demonstrated; the theory errs in two directions: early Israelite thought was not thoroughly sacral, and Solomon's era was no enlightenment. If anything, it was a time of oppression, a suppressing of human dignity unsurpassed in Israel's history. Even if one were to view the JOSEPH STORY and Succession Narrative as expressions of the self-understanding of wisdom, which in itself is doubtful, the thesis of a Solomonic revolution finds minimal support.

Admittedly, these narratives share certain concerns with the wise. The Joseph story is sparing in reference to divine activity, recognizes an opposition between human intentions and divine economy, and appreciates the nature of humanity. Similarly, the Succession Narrative demonstrates the bad consequence of pride and the significance of a right word. It shows how results follow from acts, and it probes the inner life, especially that of great individuals. Even the Yahwist makes skillful use of themes found in wisdom, particularly the concern for one's name and the folly of inordinate pride. This, however, does not point to a wisdom origin for these literary traditions. Differences far outnumber similarities. Many of the supposed wisdom affinities give expression to fundamental human values. Such themes are present in Priestly Torah, prophetic word, and wise counsel. They prove nothing about dependency upon wisdom thinking.

The attempt to relate the Joseph story to wisdom by distinguishing a story within a story, namely Gen. 39-41, suffers from the same weakness of theories about glosses. The narrative as a whole has many non-wisdom themes; any theory of a wisdom kernel must reckon seriously with the larger setting. Theological interpretations of the Yahwistic narrative in light of biblical proverbs have modern religious value, but derive whatever legitimacy they have from the common life of Israel that gave birth to proverb and story. No theory of wisdom influence is necessary. Often claims of contact strike one as rather forced: the cunning of the serpent, curse upon the land and man, unfortunate results of hot anger, association of righteousness and favor, dishonoring of one's father. Nothing in this listing of supposed wisdom thought demands a sage's hand.

Recent attempts to relate wisdom and history arise from a correct premise that sages care about human history. Courty wisdom, if such there ever was in Israel, aimed at steering the course of political events in a direction that assures well-being for the populace. In such circles the king played a decisive role, and idealized portraits became useful. Still the claim that the Yahwistic narrative serves as an apologetic work for David moves beyond such portraiture. So far no one has

demonstrated that there was in wisdom a belief in a divine plan for history. Once historical data do enter wisdom's domain, emphasis falls on cultic matters, even where David and Solomon are concerned. Cf. YAHWIST[S].

**c. Dame Wisdom.** Traditions about royal wisdom stand over against yet another manifestation of understanding, this time in feminine form. As early as Prov. 8 and Job 28 speculation about wisdom's spokesman on earth gives voice to a tradition about Lady Wisdom. Strongly reminiscent of extrabiblical models, Maat and Ishtar, this striking figure now takes up residence on earth and extends invitations to all who seek life. Unruffled by competition, she meets her potential guests in the hustle of daily activity. In deuterocanonical wisdom literature she chooses to dwell in Israel, at Jerusalem, and assumes the form of Mosaic Torah. As such she becomes an expression of divine personality, poured out upon special individuals, to one of whom (Solomon) she gives herself in marriage.

**d. Creation.** An integral relationship between wisdom and creation exists. The prominence of creation in wisdom literature stems from something more than simple belief in divine ordering. Seldom does creation stand alone. Rather, it functions to buttress belief in divine justice. The Creator of the ends of the earth sees all deeds, good and evil, despite denial by vicious men that God takes note of their doings. Furthermore, he created the universe in such a way that sin is punished, virtue rewarded. Even when such reward or punishment is delayed for one reason or another, the prosperity of wicked men does not refute belief in justice. Consequently, the sage affirms trust in God by participating in a crescendo of hymnic praise.

In time alien traditions were incorporated within wisdom thought. Knowledge acquired by means of reason joined hands with the fruit of revelation. At last "instruction" utilizes examples from Israel's sacred history, paradigms both negative and positive, as well as traditional observations of nature and experience. Israel's wisdom finally parts company with that of her neighbors, and surrenders completely to a concept of an elect people.

**Bibliography.** Comprehensive bibliographies appear in J. L. Crenshaw, ed., *Studies in Ancient Israelite Wisdom* (1975), and "Wisdom," in *OT Form Criticism*, ed. J. H. Hayes (1974), pp. 225-64. 1. Introduction. a. *Overview of use of the word.* In Matt. 12:42; Luke 11:31 (cf. Acts 7:22) the word is used as a secular term to praise the wisdom of Solomon. Jesus' wisdom is extolled in a similar way (Mark 6:2; Luke 2:40, 52). The wisdom of God is referred to in Luke 11:49; Eph. 3:10, and also in doxologies (Rom. 11:33; 16:27; Rev. 7:12). The wisdom of God speaks to the world (Luke 11:49) and sends messengers (Matt. 23:34). The wisdom of the risen Christ is also praised (Rev. 5:12); in him all the treasures of wisdom and knowledge are hidden (Col. 2:3).

The faithful have received wisdom as a gift from the Spirit (Eph. 1:8; Col. 1:9); therefore, they should strive for wisdom (Eph. 5:15; Col. 4:5). There are excellent people of wisdom in the communities (Acts 6:3, 10), and wisdom should be taught in the church (Eph. 3:10; Col. 1:28; cf. Jas. 3:13).

The most important discussion of how divine and earthly wisdom contradict each other occurs in I Cor. 1-2 (with 3:18-19, cf. II Cor. 1:12; see §3*c* below). See also Matt. 11:25; Col. 2:23; Jas. 3:13-18.

Certain stylistic elements are shared with the OT and Judaism, for instance the connection between wisdom and "Spirit," πνεῦμα (Acts 6:3, 10, etc.; cf. Wisd. Sol. 1:5-8; 7:7) or "power," δύναμις (Rev. 5:12; 7:12; cf. Job 12:13). The occurrence of "wisdom" with certain synonyms is also typical: "knowledge," γνώσις (Col. 2:3; cf. Eccl. 1:17) or "insight," σύνεσις (Col. 1:9; cf. Dan. 2:21, LXX; Eph. 1:9; Dan 2:21, Theod.). The combination of "Spirit" and "power" especially shows that wisdom is not something to be known passively, but is an active force.

b. *Influence of OT and Jewish wisdom.* The literary forms and the content of OT and later Jewish wisdom literature appear much more often than does the word "wisdom" itself. These include ethical instructions in the form of aphorisms, which are put together in collections of proverbs (Proverbs; Ecclesiasticus; in the NT, the SERMON ON THE MOUNT [Matt. 5-7]; Rom. 12; Letter of James), short ethical discourses (Jas. 2-3; Heb. 3:12-19; 4:11-13; 6:1-12, etc.), lists of virtues and vices. These latter are sometimes in the tradition of the dualistic development of Jewish wisdom

(Wisdom of Solomon; Philo); and are therefore double lists (Gal. 5:19-23; Col. 3:5-17; see LISTS, ETHICAL §5; LISTS, ETHICAL[S] §1). Certain apologetic discourses concerning the relationship of the one true God to dead idols (I Cor. 8:1-6; I Thess. 1:9-10) may be noted, as well as the allegorical and typological interpretation of scripture (I Cor. 10; Gal. 4:21-31; esp. Hebrews).

c. *Hymn-like passages.* Some of these (e.g., John 1:1 ff.; Col. 1:15 ff.; I Cor. 13) follow the stylistic tradition of Jewish wisdom poetry in which wisdom was personified (cf. Prov. 8; Wisd. Sol. 7:22 ff.; Ecclus. 24; Bar. 3:9 ff.; Job 28). The personifying of "wisdom," "word" (λόγος), "image" (εἰκὼν) developed in connection with the heightening of God's transcendence; occasionally the influence of Hellenistic mythology is recognizable (Ecclus. 24). Identification of wisdom with the law is typical (Ecclus. 24; Bar. 4:1).

d. *The problem of religious backgrounds.* The OT and Jewish influence in NT wisdom is fundamental. However, certain stylistic elements are reminiscent of Greek philosophy (Platonism, Stoicism), e.g., the "diatribe," the short, popular philosophical discourse. But this form had also entered into Jewish literature and penetrated into earliest Christianity from there. There are also some points of contact respecting content, e.g., with the Stoic "natural theology" in Rom. 1-2; such ideas were also transmitted by Hellenistic Judaism.

Many scholars have sought to derive the early Christian hypostases from Gnosticism. Sophia (wisdom) did play an exceedingly important role in the Gnostic soteriological myth, but the development of Gnosticism was later than that of earliest Christianity. The occasional relationship of motifs between the NT and Gnosticism results from their common heritage in Near Eastern and Jewish thought.

e. *Motifs.* "Wisdom" operates conceptually without reference to time and history. This is evident in the concepts of manifestation and hypostasis (σοφία, εἰκὼν, δόξα), and in Paul's antithesis of "letter" (γράμμα) and "Spirit" (πνεῦμα) (Rom. 2:29; 7:6; II Cor. 3:6). While a synthesis between wisdom and the temporal concepts of APOCALYPTICISM could occur (Enoch 42; Wisdom of Solomon), as forms of thought they are fundamentally different.

The basic theological motif of the wisdom tradition is that God is wise (Ecclus. 1:8): wisdom belongs to him (Dan. 2:20-23), befits him alone (Wisd. Sol. 9:9), and all wisdom comes from him (Ecclus. 1:1). Since God gives wisdom (Dan. 2:20), one may ask him for it (II Chr. 1:10). Since only God discloses wisdom, people must find their way to him to obtain it, and it is possible to do so (I Esd. 4:59-60). There are teachers and teachings which convey it; the beginning of wisdom is the fear of the Lord (Prov. 1:7).

There are three types of hypostatized wisdom which reappear in the NT (see §2 below): (a) Concealed wisdom. Only God knows the way to find her (Job 28; Bar. 3:9). (b) Wisdom close at hand (Prov. 8:22 ff.). She was created by God and

helped with the creation of the world. This means that the world is infused with wisdom and can be spiritually illuminated and mastered by people who acquire wisdom. (c) Vanished wisdom. She once appeared in the world, but people rejected her and she retreated into heaven. From there she will someday appear again to a chosen few (Enoch 42).

**2. Significance of wisdom in earliest Christian thought. a. Function of wisdom in the NT.** Because Luther interpreted the NT in the light of Paul's doctrine of justification by faith, he moved the Letter of James, which is explicitly wisdom literature (see JAMES, LETTER OF[S] §§1-2) to the edge of the canon. The question is, What function can wisdom have within the framework of the proclamation of Christ's act of redemption? Both exegetes and systematic theologians must work to find criteria to determine the center of the Scripture. A historical understanding will recognize that Jewish wisdom did not invade the church from outside, but that the first Christians, as Jews, grew up with it, brought it with them into the church, and kept it as their inheritance. The God of the Christian faith is no other than the God of the wisdom of Israel, the one God, the creator. An example of this relationship is the pattern of missionary preaching in I Thess. 1:9-10: the one, true, living God is contrasted to the idols, and the christological kerygma is introduced into this framework. Wisdom thus serves as an element of continuity from the OT and Judaism to earliest Christianity.

**b. Jewish doctrine of the hypostasis of wisdom.** The process in Judaism by which wisdom became a hypostasis had particular importance for the development of Christology in the church. In Christianity faith in one God is connected to faith in one Lord as mediator both of creation and of salvation (I Cor. 8:6). This prevents a dualistic separation of God and the world. The doctrine of hypostasis is basic to the development of the idea of pre-existence; the uniquely Christian element in the idea is its transfer to the historical person of Jesus.

**3. Wisdom material in the NT. a. Jesus and the Synoptic gospels.** The history of "wisdom" in the NT begins with the preaching of Jesus and his wisdom teachings recorded in the Synoptic gospels (e.g., Matt. 6:19-7:23; cf. 7:24-27). It is probable that proverbs from other traditions (e.g., Jewish) entered the Synoptics, but it is certain that Jesus was himself a teacher of wisdom. Were this not the case, the volume of wisdom in the Christian tradition would be inexplicable. Not only is Jesus spoken of in the synoptic traditions as wise (Mark 6:2; cf. Matt. 12:42; Luke 11:31—here, Jesus is "something greater than Solomon," i.e., than his wisdom), but in some places he is also presented as the envoy of wisdom to extol her reputation (cf. Prov. 1:2-7; 8:1-36). He is even ultimately identified (by Matthew) with hypostatized wisdom.

Wisdom motifs are used in the interpretation of Jesus' preaching and his person (Matt. 11:16-19; Luke 7:31-35). Like John the Baptist, Jesus was rejected. The theme of the rejection of wisdom is

bound up with the theme of the outcast and the poor. Wisdom acknowledges her "children," the tax collectors and sinners, who concede her truth. Thus, Jesus is her spokesman. When Matthew wrote the "deeds" of wisdom (11:19) instead of the "children" of wisdom (Luke 7:35), he identified Jesus with wisdom itself (cf. "the deeds of the Christ," Matt. 11:2).

The paradox of being chosen is yet more intense in Matt. 11:25 (Luke 10:21). This notion has a long history (e.g., Isa. 29:14; cf. I Cor. 1:19 below; IQS 11.6), including the motif of the fall of the mighty and the exaltation of the lowly (Ecclus. 10:12-18; Luke 1:51-53; II Cor. 10:1 ff.). This intensification comes from relating the person of Jesus to the SON OF MAN. The same understanding of revelation is assimilated by Paul and expressed in his own way (I Cor. 1:18 ff.; see §3*ci* below). Finally, in Matt. 11:27 Jesus himself is defined as the content of revelation; wisdom proclaims itself. The clearest expression of this is the "I am" sayings in the Gospel of John. Matthew appends a further wisdom saying, wisdom's invitation to find rest for the soul (11:28-30; cf. Ecclus. 51:23-30 and GTh 90).

According to Luke, wisdom issued a threat (11:49-51). When Matthew attributed the threat to Jesus (23:34-36) he once more identified Jesus with wisdom; the speaker is a being beyond history. Do we have here a citation from a Jewish wisdom writing, which is now related to Jesus and his representatives (cf. the dispatch of the servants of wisdom in Prov. 9:3)? This passage shows the synthesis of wisdom and prophecy. The motif of the prophets' destiny of suffering is developed in conjunction with the Deuteronomic view of history (see DEUTERONOMIC HISTORY, THE [S]). The lament over Jerusalem (Matt. 23:37-39; Luke 13:34-35) is also spoken by a being beyond history; hence, Jesus as Wisdom. The motif of the disappearance of rejected wisdom and the prospect of its return is related here to Jesus' death and second coming.

**b. John.** The word "wisdom" is never used in the Gospel or Letters of John. John 1:1-18 praises Jesus as the pre-existent, incarnate Logos (see WORD, THE §5*b*), and, as a hypostasis, Logos is analogous to Sophia (see PHILO JUDEUS §3). The Logos hymn belongs also stylistically to the wisdom tradition; it has been conjectured that it had a pre-Christian origin. In this hymn the Logos is pre-existent and the mediator of creation; it appeared as light and was rejected, but it was accepted by a few of "its own." The new Christian element is that the historical person Jesus is proclaimed as the cosmic Logos. This includes the notion, unacceptable to Judaism, of a real incarnation and not an illusory one. The description of the power of the Logos is now identical with the story of Jesus (as interpreted by John), including his death and resurrection and the sending forth of the Spirit. This is a christological transformation of wisdom: the content of Jesus' message is Jesus himself and his having been sent from the Father ("I am . . .").

**c. Paul.** The word group is concentrated in I Cor. 1-2 (and Colossians, see §4*d* below). The Jewish

style of doxology is recognizable in Rom. 11:33; 16:27 (cf. style of Rev. 5:12; 7:12).

i. *The crisis of "worldly" wisdom in Corinth.* The Corinthians had been boasting of their "knowledge" (I Cor. 8:1-6) and of their consequent freedom (I Cor. 6:12; 10:23). Although they honored the exalted Lord, they neglected the historical act of salvation, the Cross. In opposition to this Paul criticized in a fundamental way all "worldly" wisdom, including the religious wisdom of the Corinthian congregation. His criticism of worldly wisdom was strictly theological; it did not refer to secular knowledge, but rather to the kind of wisdom which tries to control God and salvation, which serves the "glory" of human beings and their boasting before God. Paul did not confront an issue of intelligence and stupidity, but rather the human self-praise of the unbelieving and lost. He proclaimed the word of the Cross as the destruction of this "glorying" (for the Greeks, their wisdom; for the Jews, their demand for signs; both expected revelation to be subjected to their criteria). Thus Paul considers the topic "wisdom" as a christological one. He refers to traditional thought, explicitly to the OT (I Cor. 1:19-20), and to the doctrine of God as creator, who gave the world the possibility of knowing him "in the wisdom of God" (1:21; and honoring him, Rom. 1:21), but whose revelation of wisdom was rejected by the world. God responded to that rejection with the "foolish" wisdom of the revelation through the Cross. The motif of *disappeared* wisdom is basic here (cf. Enoch 42; John 1:1 ff.), but it is significantly transformed by the replacement of the ahistorical mythology with a Christology historically understood. This motif is especially related to Bar. 3, even in style (a series of questions which reveal the absence of wisdom, or its perversion by human beings).

Paul develops a double antithesis: (a) wisdom of God—wisdom of the world; (b) wisdom—foolishness. In contrast to the Jewish tradition, he does not say that wisdom withdrew, but rather that God turned the wisdom of the world into foolishness. Therefore, no claim to have knowledge of God is valid, except through the "word of the cross." Revelation is not only a teaching concerning the true nature of God (as the wisdom tradition understands; Wisd. Sol. 13-15), but it is also God's action to save the world for faith (cf. II Cor. 5:19). Paul has transformed the wisdom motifs by reformulating the notion of the fall of the mighty and the raising up of the lowly in accord with his "theology of the cross." Paul transforms wisdom statements about God's *being*—that God is wise and *makes* one wise—into statements about God's revelation in Christ—Christ is God's wisdom for us (I Cor. 1:30). A comparison with the juxtaposition of wisdom, signs, and kerygma in Q (Matt. 12:38-42; Luke 11:29-32) is especially interesting.

Reliance on the tradition is even clearer in the partially analogous discussions in Rom. 1:18-32. Although Christology is missing there, it does appear in the larger context (Rom. 1:16-17, taken with Rom. 3:19-26): Christ is the revelation of God's righteousness. Here again Paul debates the

fundamental topic of revelation and rejection (cf. esp. Wisdom of Solomon) or, more exactly, perversion of revelation by people who, instead of honoring the creator, honor the creation in images of people and even of animals. The allusions to creation and fall are not made in the style of salvation history (cf. Rom. 5:12-21), but in a timeless style that is oriented to the wisdom tradition. It also had been assumed (in Wisdom of Solomon) that ethical perversion necessarily follows religious perversion. Paul radically sharpened the issues. Wisdom of Solomon endeavored to lead persons from ignorance to knowledge; Paul's presupposition was that the human race is hopelessly caught in its guilt and can only be saved by the revelation of God's righteousness (Rom. 3:21-26).

In Rom. 1:18-32 notions of Greek religious philosophy, especially of Stoic natural theology, may be recognized. But it is also especially clear in this context that Paul was acquainted with these notions as modified by Jewish thought.

I Cor. 2:6-16 is related to the notion of *hidden* wisdom (cf. the key word "secret," vs. 7). It becomes accessible to humans only by a miracle, by the Spirit (of the Lord, vs. 16).

ii. *Wisdom texts in Paul's letters* can be recognized by their style and themes. (Some of them are also present in the debate with proponents of Corinthian enthusiasm.) There is, e.g., the (timeless) typological interpretation of the exodus story in I Cor. 10:1-5, to which there are interesting parallels in Philo.

I Cor. 11:2-16 appropriates concepts of manifestation in Hellenistic-Jewish style. The relationships of God to Christ and of God to human beings are interpreted in the category of archetype and image, i.e., in the sense of ontological relationships. This is a speculative cosmology which is foreign to Paul's thought. It was originally a Platonic view of God, the world, and humanity, and was also absorbed into Judaism (Philo), where it was modified under the influence of Gen. 1:26-27. Here some of Paul's pre-Christian theological training becomes visible, especially in I Cor. 11:7 where Christ is missing in the archetype-image series (contrast vs. 3).

A key passage for Paul's hermeneutics is II Cor. 3:4-18, where serving the old covenant is interpreted as serving death. In spite of the notions of "old" and "new," the old and new covenants are not contrasted with respect to salvation history, but as "letter" and "Spirit," as mortal and immortal "splendor" (δδξα).

The motif of wisdom close at hand lies behind Rom. 10:6-13, which is an argument to support the thesis that Christ is the end of the law (vs. 4). The argument begins with the contrast between the law of Moses and justification by faith. (For the relationship between wisdom and righteousness see esp. the first part of Wisdom of Solomon; for that between wisdom and Law see Ecclus. 24.) Paul rejected christologically the notion of their identity. In this case a continuity of tradition may be seen, as Paul himself pointed out. It begins with Deut. 30:12-14, continues, among other places, in Bar. 3:9-37 (in connection with hidden wisdom), and reappears in II Esd. 4:7-12

(later than Paul). Additional traces may be found in Ps. 107:26; Prov. 30:4, etc. For the format of ascent and descent, cf. also John 1:51; 3:13; Eph. 4:8.

Paul also gave a wisdom-oriented interpretation of scripture in Rom. 7:7-25, where he referred to the story of Paradise and the Fall. But in contrast to Rom. 5:12-21, he did not place Adam and the Adamic wisdom tradition in the pattern of salvation history, but brought them into a direct relationship, by replacing "Adam" with "I," i.e., the unbeliever.

A particularly impressive wisdom text is the praise of love in I Cor. 13. The praise of truth in I Esd. 4:34-40 is a parallel in style and content. Significantly, neither God nor Christ is explicitly mentioned; love appears as an autonomous force. But that is only formally true. For Paul this wisdom discourse is Christian, since for him "love" is a christologically defined concept (Rom. 5:3-11; 8:35-39). This is shown in the eschatological perspective with which the praise of love concludes.

See §1b above for the wisdom format of the PARENESIS in Rom. 12.

**d. Deutero-Pauline letters.** The style of wisdom literature continued, especially in Colossians and Ephesians (Col. 2:3; Eph. 3:10, here in the context of the "revelation schema"). These letters can almost be characterized as Christian wisdom literature. Colossians develops wisdom polemically against a fraudulent "philosophy" (Col. 2:8); Ephesians develops it thematically and meditatively.

In Col. 1:15-20 there is a christological hymn which refers back to the hypostasis "image" (εἰκόν) (cf. Paul himself in II Cor. 4:4). The hymn was probably already extant, since there is some indication that the author of Colossians inserted new material. The original hymn is based on the correspondence between the act of creation and the act of salvation of the "image," as the first-born of creation and the first-born from the dead. The cosmological meaning culminates in the sentence: "He (Christ as the image) is the head of the body" (vs. 18). The word "body" originally meant the cosmos, but the author of Colossians relates the hymn more forcefully to the historical act of salvation, and interprets the body as the church.

**e. Hebrews.** A wisdom-oriented interpretation of scripture (typology) dominates the Letter to the Hebrews (see TYPOLOGY[S]). Its style becomes most visible when compared with Philo, whose exegesis is basically ahistorical. The exegesis in Hebrews does have a temporal dimension, because of its Christology and its christologically defined notion of the new pilgrim people of God, and because of the contrast between the first and the second covenants (8:6-13). The reflections on Melchizedek in ch. 7 are also part of the wisdom tradition, as is the listing of faithful witnesses in ch. 11.

**f. James.** The entire Letter of James is a wisdom document in parenthetic style. Since the name of Christ appears only twice, it has been assumed that this was a Jewish writing. However, in addition to these references there is evidence of the transposition of wisdom into Christian thought

patterns. In any case, the letter documents the extent to which Christianity was able to retain Jewish wisdom.

**WOMAN IN THE ANCIENT NEAR EAST.** Despite geographical and chronological differences there existed a basic uniformity in the status of women and attitudes toward them in the societies of ancient Egypt, Mesopotamia, and Asia Minor. They were all patriarchally structured and, therefore, the woman was under the care and domination of her father before marriage and of her husband after marriage. (The earlier views that the HURRIANS recognized fratriarchy derived from a matriarchal form of family organization, and that the brother-sister marriages of the Eighteenth and Nineteenth Dynasties of Egypt reflected a transition from a matrilineal to a patrilineal succession have recently been challenged.) Nevertheless the well-to-do woman enjoyed a margin of freedom, especially with respect to her legal rights and economic independence.

**1. Her status as wife.** A girl was expected to marry on reaching puberty. Betrothal arrangements were usually made by the father (the mother or oldest brother would act if the father were dead), or the young man might ask for the consent of the bride's father. If the love poems of Egypt and Mesopotamia may be believed, young people had some freedom in making their own choice of a spouse. These poems also provide information about courtship practices. In Egypt the girl's parents were given presents, and in Mesopotamia they were paid "bride money." Contractual agreements were then reached and a marriage feast took place, with the bride entering the house of the bridegroom. The father of the bride gave her a dowry (Akkad. *seriktu*), which passed to her heirs at her death.

Various art forms depict mothers nursing their children and husbands casting fond glances at their wives. These reflect, more clearly than the textual sources, the mutual warmth and love between husband and wife.

The wife was expected to take care of her husband and household, present him with children, preferably sons, and be a good mother. Most women spent their days grinding grain, baking bread, brewing beer, weaving and making clothes for their family. If her husband were a farmer, she would help when needed in the fields. The wife of the wealthy Egyptian was frequently depicted enjoy-

ing outdoor sports with her husband or banquet- ing alongside him and their guests.

By and large, apart from royalty, monogamy was the rule, but a man might take a concubine. Polygamy existed among the Old Assyrian mer- chants, who maintained two households, and was practiced in the Old Babylonian period when the chief wife belonged to a special religious class and was prohibited from normal marital relations. The LEVIRATE marriage was found among the Assyrians, Hittites, and Hurrians of Nuzi.

The centrality of marriage and family is summed up in the advice of Siduri to the tormented Gilga- mesh: "Pay heed to the little one that holds on to thy hand, Let thy spouse delight in thy bosom" (Gilgamesh Epic X.iii.12-13).

In Egypt, Isis, sister and wife of Osiris, typified the ideal wife, faithful to her husband even after death.

**2. Her status as mother.** The woman's main function was the bearing of children. Sterility, al- ways assumed to be her fault (although the prob- lem of male potency is recognized in Mesopotamia and dealt with by numerous rituals and medica- tions), might lead to the taking of a concubine or

to divorce. Children were expected to honor their mother. If she were widowed, her sons were obli- gated to provide her with food and clothing; if they failed to fulfill this obligation they might be disinherited.

**3. Her economic role.** A woman might own property and invest the income derived from it. In the Ur III period women of high rank (queens, princesses, daughters and wives of high officials) played a significant part in buying and receiving animals, especially for temple offerings. Old As- syrian texts reveal striking instances of wives man- aging a home textile industry and hiring trans-

porters to deliver goods while their husbands were in Anatolia.

Most unusual were the transactions of the *naditu* (see §5 below) in the Old Babylonian period. They acted as creditors; they bought, sold, and leased fields and houses; and they hired out slaves at harvest time. Some of them concentrated in a given business activity.

The economic independence of the Babylonian woman continued into Neo-Babylonian times. However, to the N, by the time of the great Assyrian empires, the woman's economic power appears to have vanished, thus correlating with her greater legal disabilities in this region.

Women were employed in the food and textile industries of the palace and temple workshops, sometimes working under female supervisors. Midwifery was an occupation of women throughout the ancient Near East. Professional female mourners are attested in Egypt. The female brewer (sometimes translated "ale wife"), the *sabitu*, prepared and sold beer, and to judge from Hammurabi Code 108, 109, 111, functioned as a creditor. Although the feminine element disappeared from this occupation at the end of the Old Babylonian period, the profession remained under the protection of a goddess. The one instance of a woman physician in the palace of Old Babylonian Larsa also deserves mention.

**4. Her legal status.** Rape was punishable by death when the woman was either married or betrothed, and when the man used force. In all cases the man was guilty and the woman blameless. However, the Hittite laws distinguished between rape in the city and rape in the countryside. In the former case, she also was considered guilty.

Should the husband wish a divorce for no fault of his wife, he usually had to pay a fine. According to Hammurabi Code 142, an abused but guiltless wife could deny her husband conjugal rights, and if a clean record was given her by the city authority she might divorce him. In the case of a long absent husband, a destitute wife, after a stipulated period of time, might enter another man's household.

In the case of adultery, the woman was always considered guilty. Whether she was to be put to death or pardoned was left to the discretion of her husband.

In well-to-do families, a widow was provided for by her children, but widows were often left indigent and their welfare was ideally the concern of the righteous king. In early Mesopotamia the temple provided them with their basic needs in return for labor.

Although the law codes assigned women a subordinate position, the woman of means could own and dispose of property and give testimony in lawsuits.

**5. Her religious role.** Except for the religious functions of royal women (see §6 below) and dream interpretation and divination, women played a minor role in cultic life. Only in the lower echelons of the "clergy" did female singers, dancers, and musicians participate in the cult. Sacred prostitution was practiced in the Sumerian Inanna

temple, especially in connection with the annual sacred marriage ceremony.

4. Stone statue of seated couple, from Nippur

Atypical was the existence of the special classes in the Old Babylonian period: *naditu*, *ugbabbu*, *kulmašitu*, and *qadištu*. Best known is the institution of the cloister (Akkad. *gagû*) with its *naditu* women in Sippar. Generations of families from various cities had their daughters enter a cloister to be initiated on the festival of the god, at which time the "rope of Šamaš" was placed on each girl's arm. She thereby became the "bride" of the god, living a chaste life until her death. Many of them were active in business. Some took pious names expressing special devotion to the god or his wife. Once a year, they remembered the childless dead, thus fulfilling the duty usually assumed by living progeny. Through their devout and consecrated lives these women (centuries later to be misunderstood as prostitutes) contributed to the god's continuing concern for his city.

Women were prominent as prophets (see PROPHECY IN THE ANCIENT NEAR EAST[S]) at MARI and as mediators of oracles in the Neo-Assyrian period. In Mesopotamia and Asia Minor they were considered to be especially gifted in interpreting dreams, but functioned mainly outside official religious life.

Among the practitioners of Hittite purification rituals were the "Old Women" and the "female seer." The "Old Women" may have been organized into guilds. It is not known how they were selected and trained.

6. **Her education.** That women, like most men, were illiterate may be taken for granted. In Babylonia, however, some of them were scribes and therefore had received an education. Most of these scribes belonged to the cloister institution in Sippar.

The Old Akkadian princess Enheduanna, daughter of Sargon, was high priestess of the moon-god Nanna of Ur and the author of many hymns. She is the first known author in world literature and has been described as a "systematic theologian."

There is some evidence that the priestess-wife of King Šulgi of the Ur III dynasty, Šulgi-simti, was also a poet.

7. **Her political status.** Four princesses actually became rulers of Egypt. Best known is Hatshepsut (1504-1483 B.C.) who had magnificent monuments built in honor of Amon. Two other women of this period also achieved renown: Tiy, the commoner wife of Amen-hotep III, and the beautiful Nefertiti, her daughter-in-law. In the latter part of the Old Kingdom period greater equality between king and queen is attested by greater balance in their pictorial representations. See Fig. W2.

The royal princess who bore the title "God's Wife of Amon" remained a virgin for life. With the Ethiopian supremacy this appointment became an instrument of political policy. She served as her father's viceroy at Thebes, possessed great estates, with officials of her own, and had the authority to make offerings.

Ku-Baba, a low-born female tavern keeper, was the founder of the Third Dynasty of Kish, the first and only example in Mesopotamia of a woman gaining sole political power. The wife of the ruler of Lagash managed the Baba temple economy and presumably fulfilled cultic functions there. Sargon created the double office of high priestess (*entu*) of Nanna at Ur and of the god An at Uruk for his daughter Enheduanna (see §6 above) in a successful attempt to unify the Akkadian and Sumerian-speaking populations. For the next five hundred years rulers appointed their daughters high priestesses to Nanna for life. This institution served to unify the country even in times of crisis.

Other queens of Mesopotamia played political and economic roles. Šulgi-simti (probably identical with Abi-simti), mentioned above, was actively involved in business. Richly documented are the many ways in which Šiptu, wife of Zimri-Lim, king of MARI, acted as partner to her husband, coping with both administrative and political matters during his absences. Legendary was the fame of Samsuramat (Gr. Semiramis), the widow of Shamshi-Adad V, who ruled Assyria during her son Adad-narari III's reign. Her name was mentioned alongside her son's on monuments. Zakutu (Aram. Naqi'a), a wife of Sennacherib, may have been responsible for the accession of her son Esarhaddon (680-669 B.C.) to the throne. Adad-guppi (probably Gr. Nitocris), the long-lived mother of Nabonidus, and her devotion to Haran and its gods may account for her son's radical attempt to re-establish ancient rituals and institutions for the moon-god of Haran.

Hittite queens maintained even more indepen-

dent positions than did those of Mesopotamia. Every queen had the title "Tawannannas," derived from the wife of King Labarnas, ancestor of all Hittite kings. They participated alongside their husbands in religious festivals. A special relationship existed between the sun goddess and the queen of Hatti. Outstanding among them was Puduhepa, wife of the great ruler Hattusilis, and daughter of a priest. She played an important role in state affairs, even corresponding with the contemporary queen of Egypt, and had her own seal for official business.

8. **Attitudes toward women.** It is especially the wisdom literature which reveals an ambivalent attitude toward women.

If you are well-to-do and can maintain your household, love your wife in your home. . . . Fill her belly, clothe her back . . . make her happy while you are alive for she is land profitable to her lord. . . . Soothe her heart with what has accrued to you; it means that she will continue to dwell in your house. A vagina is what she gives for her condition; what she asks about is who will make a canal for her. (The Maxims of Ptahhotep)

Certain Sumerian proverbs display a more jaundiced view:

He who does not support either a wife or a child, his nose has not borne a leash. (E. Gordon, *Sumerian Proverbs*, p. 120)

An unseemly wife living in the house is worse than all devils. (Gordon, *Sumerian Proverbs*, p. 468)

For his pleasure—married  
On his thinking it over—divorced (?)  
(Gordon, *Sumerian Proverbs*, p. 265)

The love poems of Egypt and Mesopotamia, as well as the art of the ancient Near East, provide rich sources for expressions of the beauty and charm of women.

**\*WOMAN IN THE OT.** As part of a patriarchal society, woman in the OT both mirrors and challenges that structure. In exploring this thesis, one must acknowledge the complexity and scarcity of historical data, the diversity of genres and their functions, the tensions between conflicting points of view, as well as the dynamic thrust of Hebraic faith.

1. **A patriarchal culture.** The activities which the OT describes are primarily those of males; its language is decidedly masculine; so far as we know, its authors and compilers were men; often its precepts address only men; and its Deity appears predominantly in andromorphic imagery (but cf. GOD, NATURE OF, IN THE OT[S]).

As the basic unit of Israelite society, the family

is called *בית אב* (the house of one's father). This male structure extends to clans and to tribes and survives in male genealogies. In the early period, a father exercised unlimited authority as head of his family. With the transition to settled life and the development of towns, his power diminished somewhat (e.g., Deut. 21:18-21). But that change only shifted power to other male institutions, such as the elders of a city (Deut. 22:16; 25:7-10; Ruth 4:2), or a king (II Sam. 14:4-11; I Kings 3:16-28), or postexilic male assemblies (Ezra 10:1-14).

A given rather than a chosen phenomenon, patriarchy stamped the culture of ancient Israel. Within this man-centered and man-dominated world, woman made her statements.

**2. Woman within patriarchal culture. a. Reflections.** The female child was less desirable in the eyes of her father (and hence of her mother) than was the male child. As she grew, she stayed close to her mother, but her father controlled her life until he relinquished her to another man for marriage. If either of these male authorities permitted her to be mistreated, even abused, she had to submit without recourse (Gen. 19:8; Judg. 11:29-40; 19:1-30; II Sam. 13:1-22). As wife, her duty was to bear (male) children (Gen. 16:1-2). When a husband preceded his wife in death, his brother, or some other male relative, assumed power over her (Gen. 38). Thus from childhood to old age, the Hebrew woman belonged to the men of her family.

This sketch of the subordination of female to male is amplified in the legal corpus. The laws of Israel address only men; in this sense, women were not considered legally responsible. Indeed, one law describes them as the property of men (Exod. 20:17; Deut. 5:21). Their bodies were not their own. A man expected to marry a virgin, while there is no indication that his own virginity had to be intact. A wife who was proved guilty of fornication had violated the honor and power of both her father and her husband. Death by stoning was the penalty (Deut. 22:13-21). Likewise, adultery brought death for a woman and her accomplice, because the guilty couple had violated the exclusive right of a husband (Lev. 20:10). Only a husband (never a wife) might charge infidelity and thereby require his spouse to submit to an ordeal of testing (Num. 5:11-31; *see* ORDEAL, JUDICIAL[S] §2). If a man was found to have forced intercourse upon an unmarried woman, then he had to make a proper payment to her father and marry her. His punishment was simply denial of the right of divorce (Deut. 22:28-29). Divorce itself was never possible on a woman's initiative (Deut. 24:1-4; *see also* DIVORCE[S]; MARRIAGE[S] §6). This double standard applied also to prostitution, which was a licit outlet for the male but a condemned occupation for the female.

A woman could not own property, according to most legal precepts. One exception occurred when a man had no sons. Then his daughters might inherit his estate (Num. 27:1-11), but even this decision was modified to limit the marriage of these daughters "within the family of the tribe of their father" (Num. 36:1-9, vs. 6). Although in

time such laws may have become less rigid, information is scant (cf. Deut. 15:12-17).

Legislation regarding the cult illustrates further the subordination of woman to man. The people whom Moses consecrated at Mount Sinai were all men. They were instructed not to go near a woman, i.e., not to have sex for a limited time (Exod. 19:7-15). In Deut. 16:16 only males were designated to observe religious feasts. The priesthood itself was strictly a male profession. While not excluded altogether from cultic observances (Deut. 12:12; 31:12; cf. Num. 6:2), women were inferior participants, obeying rules formulated by men.

Central in these rules is the concept of ritual purity. All bodily discharges, of males or of females, were unclean; hence, they prevented a person from ritual activities (Lev. 15). But uncleanness was far more a female than a male phenomenon. When a boy was born, the mother was unclean for seven days and needed thirty-three days for purification. If the newborn child was a girl, however, the entire time doubled. At the end of her purification, the mother herself sought atonement through the male priest of the local sanctuary (Lev. 12:1-8). With his discharge of semen, a man was unclean "until the evening"; with her menstrual discharge, a woman was unclean for seven days (Lev. 15:16-24).

Leviticus placed monetary value upon persons who were dedicated to Yahweh. A male between the ages of twenty and sixty was worth fifty shekels; a female in the same category, only thirty. This monetary discrimination held for other age groups as well (Lev. 27:1-7). Furthermore, the phrase which introduces this subject indicates that it was a male (*איש*) who controlled these dedications; he "makes a special vow of persons to the Lord." Num. 30, which concerns the binding nature of particular vows, reinforces the inferior status of woman in cultic matters. Although she had a right to make a vow on her own initiative, her father or her husband might nullify the vow. The exception made here for widowed and divorced women speaks not of their independent status but of their precarious existence in a patriarchal world.

What the law says forcefully, certain narratives (*see above*), certain prophetic passages (e.g., Isa. 3:12; 4:1; Nah. 3:13), and certain sapiential reflections (e.g., Eccl. 7:26-28; Prov. 5:1-8; 6:24; cf. 1:8; 6:20) confirm with varying emphases and intentions. This picture requires modification, however, and that modification comes from within patriarchal culture itself. Not all who lived in it conformed to it or condoned it.

**b. Challenges. i. Exceptions.** Some individual women in ancient Israel survived as people in their own right rather than as creatures subjugated to male structures. MIRIAM and DEBORAH tower high in the premonarchic traditions. Both are called prophets (Exod. 15:20; Judg. 4:4). As a leader of the people, Miriam dared to reproach Moses for his exclusive claim to divine revelation (Num. 12). Not even her resultant punishment lessened her status in later memory (Mic. 6:4). Deborah judged Israel (Judg. 4:4), predicted the outcome of battle (Judg. 4:8-9), and actually participated as a leader in battle. From the monar-

chic period came the prophet HULDAH (II Kings 22:14-20), who authenticated the contents of the scroll found during the reign of Josiah. Not only did her decision effect a religious reformation, but also it inaugurated the idea of sacred scripture. From the postexilic period there is brief mention of the prophet NOADIAH, an opponent of Nehemiah (Neh. 6:14).

A litany of exceptional women might include further the midwives in the Exodus traditions, who refused to take orders from Pharaoh, a male "deity." In addition, female slaves, a mother and daughter, schemed with an Egyptian princess and her maidens to defy the oppressor. All these women acted independently, without any male presence, to bring about liberation (Exod. 1:15-2:10). Forced by the death of her husband to work out her own destiny, RUTH acted independently also. Of a different sort are the wise women of Tekoa (II Sam. 14:1-20) and of Abel (II Sam. 20:14-22). Their status in tradition is other than that of wife or mother. Perhaps such sapiential models contributed to the extraordinary portrayal of wisdom itself as a woman closely associated with Yahweh (Prov. 8).

Several foreign women deserve mention. A full-fledged monarch, the Queen of Sheba, visited Solomon to test his wisdom and to match his wealth (I Kings 10:6-13). Accustomed to rule with absolute power (cf. I Kings 21:1-16), Queen JEZEBEL was both theologian and missionary. Like Elijah, she knew that Yahwism and Baalism were incompatible. If from the viewpoint of Hebrew religion she received the death which she deserved (II Kings 9:30-37), nonetheless she met it with initiative, boldness, and independence. Indeed, adverse judgment is indirect testimony to her great ability, strength, and intellect.

Although the OT condemns harlotry by a double standard which exempts men, it has only praise for RAHAB the harlot. In order to save her own life and the lives of her family, she co-operated with the invading Israelites and thereby earned an illustrious place in the memories of Israel (Josh. 2:1-21; 6:15-25). Faithful to her own people, DELILAH fared less well in Israelite judgment. Yet she resembles a savior figure who traps the enemy (Judg. 16:4-21). Her success was exceeded by Jael the Kenite, who brought Sisera the Canaanite general to a humiliating death (Judg. 5:24-27).

Thus in a culture dominated by men, exceptional women emerged. Alone they did not alter the culture. Yet when joined with evidence which directly challenges patriarchy, these women cease to be mere tokens and become part of a dynamic remnant.

ii. *Counterculture.* The patriarchal culture of Israel knew a counterculture. Perhaps its paradigm was the Yahwist story of creation (Gen. 2-3). Special among the literature of the ancient Near East in focusing upon the creation of woman, this narrative depicts sexuality as occurring simultaneously for male and female (2:23). Moreover, the appearance of woman is the climax of the entire story (cf. Gen. 1:27). While the animals were helpers for "the man," they were inferiors. By contrast, the woman is "a helper fit for him"

(2:18). This phrase connotes the equality of woman with man, an equality that is stressed in various ways. Both man and woman owe their lives solely to Yahweh. When the Lord created woman, the deity first put the man to sleep so that he did not participate at her birth. Woman herself is not the "rib" of man, for that extracted bone required the creative work of Yahweh to become woman. The rib means solidarity and equality. Out of his ecstasy man discovered a partner in woman rather than a creature to dominate.

In Gen. 2 the man remains silent while Yahweh plans his existence. He speaks only in response to the birth of woman. Then he recedes again in the narrative while woman emerges as the strong figure. In conversation with the serpent, she quotes God and adds her interpretation ("neither shall you touch it") to the divine prohibition (Gen. 3:2-3). She contemplates the forbidden fruit physically, aesthetically, and theologically (vs. 6). This primal woman is intelligent, independent, and decisive, fully aware as theologian when she takes the fruit and eats. But her husband does not struggle with the prohibition. Not a decision maker, he follows his wife without question.

The divine judgments describe (they do not prescribe) the disastrous effects of disobedience. Specifically, the rule of man over woman (Gen. 3:16) is a perversion of creation, which stands in need of grace. Thereby the culture of Israel received a formidable critique in the theology of the Yahwist.

In various ways, other theologians made similar critiques. The prophet Hosea envisions a time when Israel will no longer call Yahweh "my master" (בַּעַל), a term denoting the rule of one person over another (cf. Judg. 19:22-24); rather Israel will say "my husband" (יָמִי), a word echoing the harmony of woman and man before their corruption (Hos. 2:16 [H 18]). For this prophet the inferiority of woman is not the will of God (cf. 4:14). Nor is it for Jeremiah. In a poem replete with feminine imagery (31:15-22), Yahweh hears Rachel weeping for her lost children. God comforts her and promises her the divine restoration of Ephraim as an act of motherly compassion. Then, in the finale, Jeremiah himself proclaims the overthrow of patriarchy: "For the Lord has created a new thing on the earth: a woman protects a man" (31:22).

Yet another manifestation of the Yahwist understanding of woman is the Song of Songs. In this erotic poetry there is no tension between female and male, no male dominance, no female subordination, and no stereotyping of either sex. The woman actively seeks the man for love-making (e.g., 3:1-4). She is not hampered by laws of sexual impurity; she is not the property of the man. The poetry does not depict her as either wife or mother. An independent creature, she keeps vineyards (1:6) and she pastures flocks (1:8). The equality and harmony which she enjoys with her lover is expressed in the formula, "My beloved is mine and I am his" (2:16; 6:3). Once she says, "I am my beloved's, and his desire is for me" (7:10 [H 11]). This word "desire" recalls its use in Gen. 3:16 as divine judgment. In the Song of Songs,

that description of sin is transformed into an affirmation of mutuality and delight. Both woman and man stand under grace as equal creatures of God.

**3. Woman in faith and history.** Allowing both for a constant patriarchal structure and for a variety of perspectives throughout Israel's history, one may yet discern a marked theological change between pre-exilic and postexilic understandings of woman (see *bibliog.*). Before the sixth century B.C., a depatriarchalizing principle was prominently at work in Hebrew faith. No doubt the unknown prophet of the Exile shared this vision; he employed female imagery to suggest the unfathomable love of God for a defeated people (Isa. 49:15; cf. 66:13).

Also in the exilic period, Ezekiel moved in a different direction. Reflecting his priestly heritage (1:3), he described sin at times by the category of impurity, and he specified this uncleanness by sexual metaphors demeaning to woman (22:10-11; 36:17). Zechariah, who may also have had priestly connections (Neh. 12:4; Zech. 1:1), continued the process. He identified woman with wickedness, and he saw her removed from the restored land (Zech. 5:7-11). Furthermore, the Priestly laws of the Torah, though they have a long history, received official status in the postexilic period (see *PRIESTLY WRITERS[S]*). By their increased authority, they promoted a cultic understanding of sin, with its adverse consequences for woman (see *above*). A similar attitude appeared in the regulations of Ezra, where concern for racial, ritual, and sexual purity undercut a respect for woman as human being (Ezra 10:2-3, 10-44). Gradually, then, in postexilic thinking an understanding of womanhood became dominant which moved toward misogyny: woman as an impure, subordinate, and inferior human creature.

Nevertheless, that view did not replace altogether the dynamic thrust of OT faith. Though it came to expression in a patriarchal culture, that thrust challenged, corrected, and transcended the culture. Accordingly, OT faith undercuts all man-made structures and ideas to place both woman and man *sub specie aeternitatis*.

See *WOMAN; WOMAN IN THE ANCIENT NEAR EAST [S]*.

\***WOMAN IN THE NT.** Contrary to the position of subordination in which women generally lived in first-century Mediterranean culture, the position

they discovered in the early Christian communities was one of acceptance and, particularly in the earliest decades, equality. Women were seen as equal to men and participated in every level of church activity. In the later NT church, the equality was compromised and stabilized at a point where they still received warm acceptance but were again placed in subordinate roles.

**1. The baptismal formula of equality.** Gal. 3:28, which affirms the equality of women and men, is almost surely a fragment of an early baptismal formula (cf. parallel structures in I Cor. 12:12-13; Col. 3:9-11), and thus is probably evidence for a widespread attitude in at least the early Hellenistic communities: "There is neither Jew nor Greek, there is neither slave nor free, there is neither male nor female; for you are all one in Christ Jesus." To enter the Christian community thus meant to join a society in which male-female roles and valuations based on such roles had been discarded. The community was powerless to alter role valuations in the outside culture, but within the church, behavior patterns and interrelationships were to be based on this affirmation of equality.

**2. The Pauline churches.** The new behavior patterns are clearly visible in Paul's writings, both with respect to his own views and to accepted behavior in his congregations.

**a. Women's roles in the church.** Paul never had to defend the right of women to evangelize or to participate in local church activity. Apparently his churches accepted female as well as male leaders (see Rom. 16:1, 3, 6, 12, 15). In Phil. 4:2-3 he singles out two women church leaders, then at odds with each other, and emphasizes that "they have labored side by side with me in the gospel." There is no suggestion that their labor differs from that of their male colleagues. Priscilla appears to have been at least the equal of her husband Aquila in their joint work as teachers (Acts 18:2, 18, 26; I Cor. 16:19; Rom. 16:3). See also *AQUILA AND PRISCILLA*.

The one time the leadership of women becomes an issue in the authentic Pauline correspondence (see *PAUL THE APOSTLE §A1a*), it is clear that both sides in the dispute agree at least that women can be worship leaders (I Cor. 11:2-16). While the reason Paul insists upon a head covering for women leaders may never be certainly explained, he does not question their right to perform the same liturgical functions as men and concludes that the sexes are now equal in the church ("in the Lord") and before God (vss. 11-12). This affirmation is, however, blatantly contradicted by a passage later in the same letter (I Cor. 14:33b-35), in which women are admonished not even to ask questions during the church services. While some scholars have attempted to smooth out the contradiction, the evidence seems to favor those who regard I Cor. 14:33b-35 as an insertion into the letter by someone later than Paul himself, perhaps by someone from the time of the writing of I Timothy (cf. I Tim. 2:11-12). See also *CORINTHIANS, FIRST LETTER TO THE[S] §6e*.

**b. Role in the family.** The authentic Pauline correspondence deals with the rights and responsibilities of women in the family only in I Cor. 7.

Here Paul asserts that the same rights and responsibilities apply to the woman as to the man. Both are called to be responsible sexual partners and to follow the same procedures with regard to marriage, divorce, and remarriage. He is sensitive to the desires of each sex to be a caring partner within the marriage bond (vss. 32-35), and there is no hint of the subordination which appears in later strata of the NT. See §4b below.

In apparent contradiction, however, to both the baptismal formula and Paul's own explicit attitude and practice is his statement in I Cor. 11:3: "The head of every man is Christ, the head of a woman is her husband, and the head of Christ is God." If the proper metaphorical meaning of "head" (κεφαλή) here is "ruler" or "superior authority," as usually assumed, then Paul indeed has assigned a subordinate rank to woman (cf. also the Deutero-Pauline Eph. 5:22-23). In that case I Cor. 11:3 would be a remnant of Paul's Jewish perspective as yet uncorrected by the baptismal formula of Gal. 3:28, and he would be involved in an irreconcilable self-contradiction. There is, however, another possible interpretation. In ordinary Greek of Paul's day, κεφαλή, when used metaphorically, signifies, not "authority" but, among other possibilities, "source," e.g., the source (origin) of a river. Since a remark in I Cor. 11:12 suggests that Paul in this passage is thinking of Gen. 2, where man is said to be the source of woman, that may also be the point in I Cor. 11:3. Belief in Christ as the agent of creation (e.g., I Cor. 8:6) would explain the associated statement that Christ is man's head (i.e., source). Such an interpretation would make I Cor. 11:3 consistent with all of Paul's other statements and actions.

3. **The church of the gospels.** The gospels portray Jesus dealing with women naturally and unself-consciously, both in the stories about him and in his reported teaching (see WOMAN §11). The general lack of dogmatic concern suggests that, in the churches which transmitted the gospel traditions, the position and prevalence of women within the church was not a problem. Only the story of the Samaritan woman in the Gospel of John registers surprise about Jesus' freedom in relating to women (4:9, 27). While there are no hints of the baptismal formula in the gospel material, three things reflect the same new-found regard of women that is evidenced in the Pauline churches.

a. **The role of the disciple.** The story of Mary and Martha (Luke 10:38-42) does indeed point to a conflict over the issue of the proper place of woman in the church. Martha, busy with cooking, complains that Mary, listening to the teaching of Jesus, is not in her proper role. Jesus, however, rejects Martha's complaint and affirms that Mary is in the right place. Thus the conflict is resolved in favor of the continuing right of women to full discipleship.

b. **Travel companions of Jesus.** Luke 8:1-3 and Mark 15:40-41 contain two different lists of women who are said to have been traveling companions of Jesus and his male disciples. Since these women are not wives of the disciples, a picture emerges of an itinerant traveling entourage of males and

females unmarried to each other—a situation which would have been scandalous to the pious Jew. Whether these lists have their origin in the actual situation of Jesus' ministry (as is inherently possible) or in the story building of the gospel writers (as is supposed by many scholars), they reflect in either case a view of women and men liberated from the strong prohibitions which the pious fear of sexual license had long before created. The tradition also honors some of these women as the first to hear the news of the Resurrection and as the first to see the resurrected Jesus (Mark 16:1-8; Matt. 28:1-10; Luke 24:1-11, 22-24; John 20:11-18).

c. **Acceptance of outcasts.** The attention and acceptance given in the gospel tradition to prostitutes and women with other immoral sexual histories is startling, seen against the backdrop of Jewish piety. The genealogy of Jesus' ancestry in Matt. 1, despite the fact that it is based on male descent, contains the names of four women, apart from Mary, and all of these four were involved in some form of sexual irregularity: Rahab (a prostitute, Josh. 2:1), Tamar (intercourse with her father-in-law, Gen. 38), Ruth (obtains her husband by an act of intercourse, Ruth 3:6-18), and Bathsheba (adulteress, II Sam. 11:2-5). Rahab is also mentioned positively elsewhere in the NT (Heb. 11:31; Jas. 2:25). In Matt. 21:31-32 Jesus asserts that prostitutes will enter the kingdom of God before the Jewish religious leaders, because the former rather than the latter accepted the preaching of John the Baptist. The female sinner who appears at a banquet to minister to Jesus is portrayed as a societal outcast and may have been understood to be a prostitute (Luke 7:36-50). The church obviously did not approve of any form of sexual license (cf. Matt. 5:27-28; I Cor. 6:12-20), but it did not turn away from ministry to those considered immoral by polite society.

d. **Jesus' attitude.** Behind this openness to women must stand the person of Jesus. Unfortunately the task of determining which gospel traditions originate with Jesus himself is so difficult as to be virtually impossible. All that can be said with assurance is that it is difficult to explain the prevalence and equality of women in the earliest church if such attitudes were not initiated by Jesus himself.

4. **The later church.** a. **The Gnostic Christians.** The movement toward liberation and equality for women in the later period seems to have found its main continuation in emerging Christian Gnosticism, although data about that development in the NT are sparse. At some very early point this movement made a significant step not approved by Paul. Although he affirmed the equality of male and female, Paul rejected efforts to deny the sexual distinctions themselves (I Cor. 7:1-5; 11:2-16). The more radical groups, however, attempted to deny sexual difference by denying that which most characterized the distinction, the sexual act itself. The Christians opposed by the author of I Timothy were prohibiting marriage (4:3), and in the later Gospel According to the Egyptians (see EGYPTIANS, GOSPEL ACCORDING TO THE) childbearing was opposed (Clem. Misc. III.ix.64). According to Irenaeus, Saturninus believed that marriage and pro-

creation were from the devil (Iren. Her. I.xxiv.2) and in the apocryphal Acts (e.g., Acts of Thomas 12) sexual intercourse is the worst sin. In the Gospel of Thomas the overcoming of sexual differentiation is portrayed as the goal of humankind in the eschatological era (in itself a Jewish and early Jewish-Christian motif, e.g., Mark 12:25). This view perhaps rests upon a belief in the original androgynous nature of humanity, to which eschatological humanity is to return. See THOMAS, GOSPEL OF[S] §2.

The evidence also suggests that in some circles women continued to exercise church leadership. The author of the book of REVELATION inveighs against a Christian female prophet who is the leader of what he considers a false (and perhaps Gnostic) Christian libertinism (2:20-23). And the second-century Acts of Paul (see PAUL, ACTS OF, a writing which has, however, only a tenuous relationship to known Gnostic ideas) portrays Thecla as a female missionary in men's clothing with, apparently, shorn hair (25:40-43), and Tertullian suggests that she had become a model for women who wanted to teach and baptize (*On Baptism* XVII). The Gnostic endorsement of the original Christian libertarian posture must have proven attractive to women; at least the Christian opponents described in the Pastorals are begrudgingly accorded success in evangelizing women, there called pejoratively "weak women" (II Tim. 3:6-7).

**b. The mainstream church.** The church whose documents are the later canonical NT writings moved in the opposite direction. Appealing to the orders of creation as understood through the Hebrew Scriptures, the church (a) condemned sexual asceticism and the denial of the sexual role within marriage, (b) encouraged the marriage state, (c) refused women participation in the liturgical and political leadership of the church, and (d) concluded that women should be subordinated to men. These views represent in part a return to the cultural mores of the environment, and in part a strong reaction against those claims of Gnostic Christianity which seemed to deny the orders of creation.

The new position is clearly stated in the so-called "household rules" (see LISTS, ETHICAL §§1-4; LISTS, ETHICAL[S] §2), where marriage is assumed to be the normal situation of adults; elders, deacons, and bishops are known (and perhaps encouraged) to be married (cf. Tit. 1:6; I Tim. 3:1, 4, 12); younger widows are to remarry (I Tim. 5:14); child-bearing and child-raising reappear as the function of marriage (contrary to Paul) and, it is implied, as the primary function of women within marriage (I Tim. 2:15; 3:4, 12; 5:14).

Throughout this later literature women are consistently commanded to be submissive to their husbands, that is, to accept a position of complete subordination to the male (Col. 3:18; Eph. 5:22; I Tim. 2:11; Tit. 2:5; I Pet. 3:1, 5). The rules in I Tim. 2:8 ff. are the most stringent of them all, and obviously represent a reaction against emerging Gnosticism. Women are enjoined to silence in the worship, presumably in contrast to the public prayer of men (although it is possible to interpret

vs. 9 as speaking about proper dress of women while they participate in public prayer). Women are also denied the office of teacher, as well as any role which would give them authority over males.

Through these rules, the mainstream church attempted to protect itself against the ascetic extremes of Christian Gnosticism and what it considered the unnatural (i.e., against the created order) equality of woman in church and home. Since these rules must have been directed against fairly widespread practice, it is impossible to judge whether, in Christian congregations at the end of the first century, women were more often accorded equality or admonished to submission. Eventually, however, the rules proved to be as successful as they were fateful for the history of Western civilization.

**WORDPLAY IN THE OT.** Paronomasia is the term employed by ancient Greek commentators when referring to rhetoric devices designed to engage the attention of an audience. The use of paronomasia promoted a certain aura of ambiguity, which was intended to excite curiosity and to invite a search for meanings that were not readily apparent. It is not surprising, therefore, that divine revelations were often couched in paronomastic forms. There were also times when Hebrew wordplays expressed a spirit of playfulness. The term is known in Latin as *adnominatio* and in Arabic as *tajnis*. Medieval Hebraic literature called it *lašôn nôphêl* 'al *lašôn*, literally, "language falling upon language."

To varying extents, Near Eastern literature preserves examples of wordplay. Peeters has collected examples from Egypt and Fishbane from Babylonia.

**1. Visual wordplay** depends on the written word, tends to be intellectual, even esoteric, and is meant for the limited circles of knowledgeable scribes. This category includes the following types.

**a. Gematria.** Since in Hebrew a numerical equivalent existed for every consonant, the "value" of a certain word could be calculated, and the total number is said to provide a meaning that is otherwise hidden. Talmudic rabbis (T.B. Ned. 32a) have posited that the 318 "trained men" who aided Abraham in routing the Eastern coalition (Gen. 14) stood for a *gematria* of his servant Eliezer, since the value of consonants forming that name

adds up to 318. Gad, whose *gematria* is 7, is reckoned seventh in the listing of tribes in Gen. 46, a chapter where the number 7 and its multiples are repeatedly invoked. Furthermore, seven sons are ascribed to him (see also GENERATION, SEVENTH[S]). Some see in the census of Israel in Num. 1:46 (603, 550) a *gematria* for *b'nē Yisrā'el kol rō'sh*, "the children of Israel, each individual."

**b. Notrikon.** Letters of each word are considered, acronymically, as abbreviations for a series of words. Examples often cited are 'yk, "how," in Jer. 3:19, said to stand for 'āmēn] y[hwh] k[i], "Amen, O Lord for"; *hmh* of Jer. 7:4 which is said to be acronymic for h[am]m[āqōm] h[azzē], "this place."

**c. Acrostics.** A poetic form in which successive lines begin with consonants in alphabetical order. Lam. 1-4 and Pss. 111-112 offer excellent examples. A full listing is found in Gottwald.

**d. Atbash.** The first letter of the alphabet ('āleph) is used as substitute for the last (tāw), the second (bēth) for the penultimate (šīn), etc. Two well-known examples are škk (Jer. 25:26; 51:41), which is *atbash* for *bbl* (*Babylon*), and *lb qmy* (Jer. 51:1, RSV n. "Leb-qamai"), which is to be replaced by *kīdym* (Chaldea). In an address to the Society of Biblical Literature (1973), C. H. Gordon suggested that *kbwl* of I Kings 9:13 (RSV "Cabul") be read as *atbash* for *lšpk*, referring to "worthless land."

**e. Anastrophe.** Usual word order is upset in order to emphasize a play on words. Thus in Gen. 6:9, the name of the patriarch Noah is purposely placed at the end of a verbal sentence in order to underscore a relationship with the admired ancestor Enoch (cf. Gen. 5:22, 24). In the clause 'eth hā'lohīm hithhālēkh nō'h, the last three consonants, read backwards, spell the name "Enoch" (*hanōkh*).

**f. Epanastrophe.** In this type of paranomasia, not strictly visual, the final syllable of one word is reproduced in the word that immediately follows, e.g., *w'lir'ōt š'hem b'hēmmā lāhem* (Eccl. 3:18); *paraš rešet l'raglay* (Lam. 1:13; Prov. 25:13). A variation on this genre may lie behind the grammatically troubling first words of Gen. 1:1, *b'rē'šīth bārā'*. Here the first two syllables, composed of three consonants, are repeated in the second word (cf. II Kings 8:12).

**2. Oral wordplay.** The terminology and definitions are adopted from Glück.

**a. Equivocal.** This type of wordplay depends on homonymy, that is, the similarity of sound among varying words, e.g., *kīmē nō'h zō'th lī . . . mē-nō'h 'ōdh 'al-hā'ares*: "For this is like the days of Noah to me . . . the waters of Noah . . . over the earth" (Isa. 54:9); *w'haḥēmār hāyā lāhem laḥōmer*: "And they had . . . bitumen for mortar" (Gen. 11:3). The homonymy that allowed such punning occurred when consonants which were phonemically different in Proto-Semitic fell together in Hebrew—*hereb* [\*hrb] 'al-kašdīm . . . *horeb* [\*hrb] 'el-mēmēhā: "A sword upon the Chaldeans . . . a drought upon her waters" (Jer. 50:35-38; cf. Hag. 1:9-11; Ezek. 33:27).

**b. Metaphonic.** Changes of meaning depend on vowel mutation—*maqēl šāqēdh 'nī rō'é . . . kī*

*šōqēdh 'nī*: "I see a rod of almond-[tree] . . . for I am watching" (Jer. 1:11-12; see also Amos 8:1-2). Metaphonic puns are facilitated by the occurrence of verbal forms in which a change in stem conjugation does not affect the consonantal root but alters, sometimes radically, the nature of the act: "If you are willing and obedient, you shall eat (*tō'khēlū*) the good of the land; But if you refuse and rebel, you shall be devoured (*l'ukk'elū*) by the sword" (Isa. 1:19-20, cf. Isa. 7:9; Gen. 49:19).

**c. Parasonancy.** Possibly the most widely attested type of wordplay, parasonancy involves the use of verbal and nominal roots which differ in one of their three consonants: "And he looked for justice (*mišpāt*), but behold, bloodshed (*mišpāh*); for righteousness (*š'dhāqā*), but behold, a cry (*š'āqā*)!" (Isa. 5:7; see also Judg. 5:15-16; 10:8; Ezek. 5:14; Ps. 28:1). A somewhat more sophisticated parasonant pun is the type in which consonants of one word are found in another word but in a differing order: "He delivers (*y'hallēs*) the afflicted by their affliction, and opens their ears by adversity (*lahas*)" (Job 36:15); "All my enemies shall be ashamed (*yēbhōšū*) and sorely troubled; they shall turn back (*yāšubhū*), and be put to shame (*yēbhōšū*) in a moment" (Ps. 6:10 [H 11]).

**d. Farrago.** Confused, often ungrammatical wording which gains meaning only because of the context (e.g., English "hodge-podge," "helter-skelter," etc.). One characteristic of farrago is that some of the elements involved often display a tendency to rhyme. *Mahēr šālāl ḥās baz* (Isa. 8:1, 3) affords a good example. Each word is understandable, but when they are strung together the result is awkward grammatically; yet it is quite precise in conveying the intention of the speaker. Other examples of farrago may be found in *tōhū wābhōhū* (Gen. 1:2); *'urim w'thummim* (Exod. 28:30); *šeseph qeseph* (Isa. 54:8); the name *Kušan riš'āthayim* (Judg. 3:8), king of Aram Naharayim; *'ūbhen-mešeq bēthi hū' dammešeq 'al'ezzer* (Gen. 15:2).

**e. Assonance.** Words are strung together primarily for oral effect rather than for furthering the meaning of a given phrase. Isa. 24:16-17 is ideally suited to illustrate this type: *wā'ōmar rāzī-lī rāzī-lī' ōy lī bōgh'dhim bāghādhū 'ūbheghedh bōgh'dhim bāghādhū: paḥadh wāphahath wāphāh 'alēkhā yōšēbh hā'ārēs*—"But I say 'I pine away, I pine away. Woe is me! For the treacherous deal treacherously, the treacherous deal very treacherously.' Terror, and the pit, and the snare are upon you, O inhabitants of the earth!" Other examples are found in Isa. 22:5; 29:9; Amos 5:5; Gen. 49:19.

**f. Onomatopoeia.** The use of words imitative of natural sounds: "Then hammered the hooves of his horses, his chargers galloped, galloped away" (Judg. 5:22, NEB)—*middah'rōth dah'rōth 'ab-bīrāw*. Isa. 10:14 affords another example: "And there was none that moved a wing, or opened the mouth, or chirped (*ūphōsē phē ūm'saphsēph*)." In Isa. 28:10, 13, the gibberish of foreign tongues is imitated, if not mocked. See also Isa. 47:2; Song of S. 1:2.

**g. Antanacsis.** The same word, when repeated, sometimes requires different renditions: "I saw the tears of the oppressed, and I saw that there was

no one to comfort them (*'ēn lāhem menahēm*). Strength was on the side of their oppressors, and there was no one to avenge them (*'ēn lāhem menahēm*)" (Eccl. 4:1, NEB). See also Eccl. 10:4 (*tannah/yanni'eh*); Isa. 58:10 (*naphšekhā/nepheš*); Prov. 24:10 (*šārā/šar*); Lam. 2:6 (*mō'dhō/mō'ēdh*).

3. **Extended wordplay.** The attainment of rhetorical felicity was by no means the sole inspiration behind the use of wordplay. The biblical writer knew quite well how to unfold playfulness, sometimes beyond the confines of paragraphs or even chapters. To be noted here are examples of fairly long narratives from Genesis which benefited from paronomastic displays: (1) a play on *'iš* (man) and *'iššā* (woman) explains the origin of woman (Gen. 2:23); (2) a play on *'arūmmim* (naked) and *'arūm* (clever) sets up the serpent as the immediate cause of the Fall (Gen. 2:25 and 3:1); (3) a possibly play on *'ēš* (tree) and *bēn* (son) might explain the use of the rare word *'iššābhōn* (toil, pain) for the birth pangs meted out to the first partaker of the tree of knowledge (Gen. 3:16); (4) a play on *b'khorā* (status of an elder son) and *b'rākhā* (blessing) underscores Jacob's triumphs against his brother Esau (Gen. 27); (5) repeated plays on derivatives of the verbs *rā'd* (to see) and *yārā'* (to fear) are obvious in the narrative in Gen. 22.

A further type of extended paronomasia could be called "leitmotif." Cassuto has pointed out a good example in the biblical account of the Flood. The narrator repeatedly plays on the consonants in the name "Noah": "this one shall bring us relief" (*y'nah'mēnū*; 5:29); "the Lord was sorry" (*wayyināhēm*; 6:6); "but Noah found favor" (*hēn*; 6:8); "the ark came to rest" (*wattānah*; 8:4); "place to set her foot" (*mānō'h* 8:9); "the pleasing odor" (*nihō'h*; 8:21). Leitmotif paronomasia can also be found in the Isaac narratives in which all the biblical attestations of the *qal*-stem of the verb *šāhaq* are embedded.

An appreciation of paronomasia allows scholars to reconstruct or interpret certain OT passages. Miller thinks Gen. 9:6b might originally have read *ki bidmūth 'alōhīm 'āsā 'eth-hā'ādham*—"For in [divine] likeness, did Elohim create man." Such a reconstruction would allow punning on *d'mūth*

(likeness) and *'ādham* (man) as well as *dām* (blood).

The appearance of *'ar* in Ugaritic with a possible translation of "honey" (cognate to Arab. *'ary*) has permitted Porter to suggest that *'ari* (RSV "lion") in the answer to Samson's riddle (Judg. 14:18) is a pun on a word no longer in general use among his contemporaries.

The above typology in no way exhausts the possibilities in biblical paronomasia. Casanowicz has gathered some 502 examples, which show that paronomasia was resorted to most widely by the minor prophets Joel, Habbakuk, Micah, Zephaniah, Nahum, and Hosea, in descending order of frequency. Of the major prophets, only Isaiah (mostly First Isaiah) can be reckoned as an inveterate punster. The Writings that are best stocked with wordplays are Proverbs, Lamentations, and, to a lesser extent, Job. With the exception of Genesis, the historical books seldom indulged in this art.

**YAHWE** yäh' wə [Egyp. *Ya-h-wə*]. A Syrian place name in Egyptian records of the New Kingdom, onomastically identical with the divine name Yahweh.

The list of Asiatic places in Ramses II's temple at 'Amārah West (Nubia) includes six names (nos. 93-98), all of them preceded by *tə šə-šu*, "Bedouin area": *Šə-ṛə-r*, *Rə-bə-n-tu*, *Pi-š-pi-š*, *Šə-mə-tə*, *Ya-h-wə*, *Tu-r-bə-rə* (the last three entries are also preserved in Amen-hotep III's topographic list at Soleb, from which the 'Amārah West list was largely copied). It is generally assumed that *Šə-ṛə-r*=Seir, and thus that all six areas were located in Edom. This was compared with the OT passages in which Yahweh is associated with Edom, Seir, and Paran, and was taken as proof that this divine name was known on the S confines of Palestine ca. 1400 B.C., or even as confirmation of Yahweh's origins in the (hypothetical) Midianite AMPHICTONY. However, the crucial equation *Šə-ṛə-r*=Seir is dubious; it leaves unexplained the reduplication of *r*; Seir is found elsewhere in Egyptian correctly written *Šə-ṛ*. Three of the relevant place names, written *Rə-bə-n-ta*, *Tu-rə + bu-rə*, and *Yi-ha*, appear in a short topographic catalogue (Nos. 70-75 + 111-122 of Ramses III's composite Medinet Habu list), all of whose identifiable entries belong to central Syria. In particular, *Šə-ṛə-r* corresponds to cuneiform *Šehlal* (N Phoenicia), *Rə-bə-n-ta* to cuneiform *Labana* (SE of Kadesh on the Orontes), *Šə-mə-tə* to modern Šamat (N Phoenicia), *Tu-rə-bu-rə* to modern Tarbul (Biqā). *Ya-h-wə*/*Yi-ha* must also be located in the same general region, which contemporaneous Egyptian sources describe as heavily infiltrated by Shasu Bedouin. Whatever the connection between the place name and the divine name, the occurrence of the former in Egyptian records cannot be used as evidence for an early presence of the latter in Edom.

**YAHWIST.** A hypothetical figure who gave a decisive shape to parts of the literature of the PENTATEUCH. The Yahwist is variously regarded as author, editor, redactor, or circle of tradition. The hypothesis continues to receive broad support among critical scholars as the best explanation for the present form of the text. The name "Yahwist" derives from the term *Yahweh*, most often translated "Lord" in English renderings, to refer to the God of Israel, in contrast to other narrative traditions which prefer Elohim, most often translated "God" (see ELOHIST[S] §1). The documentary hypothesis of which the Yahwist is a part was devised primarily by German scholars who transliterated the Hebrew term *Yahweh* as *Jahweh*. Hence the author is referred to as "J" and the material assigned to him as the "J document," or better, the "J tradition." See SOURCE CRITICISM, OT[S]; DOCUMENTS.

**1. Literary presuppositions.** The documentary hypothesis is a scholarly construct seeking to explain how the Pentateuch received its present form through a complex process of editing, redaction, and transmission. It assumes that the transmitting community of faith was actively engaged, not only in preserving the memory of the past, but in discerning its present significance for faith.

The hypothesis stems from the work of the great German literary critics of the nineteenth century, who held that there were four primary identifiable efforts at redaction or adjustment, each of which was made in response to a particular cultural crisis. The earliest of these was the Yahwist, who most decisively and enduringly shaped the tradition as it has been preserved to the present. See BIBLICAL CRITICISM §§1-4; BIBLICAL CRITICISM, HISTORY OF §§1a-b, 2.

Two significant changes have been made in the hypothesis since its articulation in the era of Wellhausen. (1) It was argued that J represented an early and primitive form of religion which was polytheistic and magical and did not express any authentic Israelite faith. Scholarly understanding has so shifted that J is seen as a mature and sophisticated theological formulation, notwithstanding its relatively early dating and its primitive form of expression. (2) The older scholars spoke of "authors" and "redactors," and presented the documentary hypothesis as a rational literary process. The process is now seen as communal and not individualistic; it is to be understood, not in terms of documents, but in terms of traditions which are linked to an ongoing community whose perceptions and understandings are related to their historical experience. Moreover, J can no longer be understood as a mere editor or redactor or transmitter, but must be seen as an active agent

making bold and innovative efforts to present the tradition of Israel in ways pertinent to the pluralism and secularism of the age of monarchy.

2. **Cultural crisis of the tenth century.** Although older critics dated J somewhat later, it is now generally ascribed to the tenth century B.C., either the time of Solomon (962-922) or just after, in response to the crisis of culture and faith evoked by Solomon. Following Noth, it is plausible to assume that before the monarchy Israel already had a well-fixed confessional tradition, G (*Grundschrift*), which contained the major themes and components of the Pentateuch. It is in the context of that stable tradition that J worked. Moreover, tenth-century traditionalists had other independent stories which permitted various interpretations and could be attached to the dominant tradition. In this view the Yahwist had the following literary and traditional elements available for use: (a) The credo articulating Israel's primary articles of faith, e.g., Deut. 26:5-9 (see CREDO, ANCIENT ISRAELITE[S]). (b) A relatively fixed narrative tradition which reflected the movement of the credo, but which was inventive in its use of the norms and themes of the credo; this includes expanded narratives clustering around themes of promise and Exodus. (c) Other traditional materials not yet attached or given a decisive confessional meaning or placement, including old folk tales, cultic etiologies, and tribal memories.

It is now generally held that the royal establishment of David and more especially of Solomon caused a decisive shift in the cultural perceptions and intellectual foundations of Israel. In two generations Israel was abruptly led from a folk culture to an urban-royal culture, from subsistence to affluence, from precariousness to security, from political insignificance to dominance. As its political and economic situation improved, it became intellectually more sophisticated. There was an effort to articulate faith and meaning in more humanistic and less theocentric terms. Historical activity was, perhaps for the first time, understood in terms of human initiative, with new appreciation for human freedom and responsibility. The older ways of speaking about a God who intervened in human affairs became increasingly problematical. The focus of life shifted so that sacred activities were less compelling; and economic planning, diplomatic shrewdness, and military calculation became increasingly important.

In such a milieu, new questions were posed for faith, and at the same time Israel came into possession of new intellectual resources. Solomonic entry into a vigorous internationalism made Israel especially open to influence by the literature and intellectual resources of myth and wisdom. See MYTH; WISDOM; WISDOM IN THE ANCIENT NEAR EAST[S]; WISDOM IN THE OT[S].

The Yahwist, then, was both a faithful traditionalist and a creative theologian. Von Rad has made a strong case that it was J in the tenth century who did the primary shaping of the tradition, whereas Noth has argued that the early *Grundschrift* from the premonarchic period determined the shape. The issue cannot be decided, because we have no certain evidence about the

extent or character of conjectured G. However, it is plausible to assume that Israel's normative confessional statement was well fixed by the tenth century, and J was free to operate only in a context which was by that time normative or canonical.

3. **Theological affirmations.** We may best understand the creativity of J if we formulate the questions he apparently sought to answer, questions of faith evoked by the new cultural situation of Solomon: (a) What does Israelite identity mean in a world of many nations? (b) What is the meaning of monarchy in Israel, since it is a new and not constitutive institution? (c) How does believing Israel relate to the royal-urban myths so central in Solomonic self understanding? (d) How does Israel speak of the lordship of Yahweh in a time of Solomonic dominance and of pluralism?

In coming to an answer about these questions, J used a variety of old narratives which present the patriarchs in situations of deep distress. Because of Yahweh's action or presence, they are repeatedly rescued and blessed. Thus a barren Sarah (Gen. 11:30) is unexpectedly the mother of an heir (18:1-15), and much of the narrative is preoccupied with that desperately yearned for but unlikely blessing. Repeatedly Israel is near death from famine, and because of God's leadership she survives and prospers (12:10-20; 26:1-33). The famine motif becomes the dominant theme in the Joseph narrative. In the Jacob narrative, the issue of precariousness is expressed in the giving of the promise to the younger son (27:18-29)—albeit by deception—whose life is then endangered by his brother. But he emerges prosperous and triumphant (Gen. 33). It is not likely that the Yahwist has imposed this theme on the older sagas. He has discerned in these narratives a common theme of promise in the face of precariousness, which made them a vehicle for faith in the tenth century.

A more problematic issue concerns the conclusion of the work of the Yahwist. While older scholarship thought J extended through the books of Kings, and Hölscher had discerned its ending at I Kings 12, more recent study has been reluctant to identify J materials after Numbers. Von Rad understood J as a scheme of promise-fulfillment in which the patriarchal narratives presented the promise, and the land narratives of Joshua the fulfillment. However, it is far from clear that portions of Joshua can be assigned to J. Mowinkel more recently has found the conclusion of J in Num. 32 and Judg. 1, material related to the conquest. Wolff, by contrast, has discerned the end of J in Num. 25:1-5, short of entry into the land, a suggestion which has considerable dramatic power, for it leaves Israel on the brink of the land of opportunity and temptation, confronted by hard decisions. See DEUTERONOMIC HISTORY, THE[S] §§1, 2; JOSHUA, BOOK OF[S] §1; ELOHIST[S] §4.

The enduring gain of such a perspective, even if the literary questions remain unresolved, is that J can in one form or another be understood in terms of promise and fulfillment. If J includes conquest narratives, the fulfillment is complete. If,

as seems more likely, it does not, then the fulfillment is still uncertain, as is characteristic of the patriarchal stories.

The promise-fulfillment dynamic serves J's purposes of fidelity to tradition, and at the same time provides relevance to the cultural, theological crisis of the tenth century. The Yahwist was able to look back to show that promise is the driving power of the narratives, that the narratives state not only what is but what is to be. J subtly affirmed that the long-standing promises were now being actualized in the Israel of David and Solomon (see PROMISES TO THE PATRIARCHS[S]). (a) The ancient promise of a son and heir (Gen. 18:10) is now gloriously fulfilled in the royal son, Solomon (cf. II Sam. 12:24). (b) The ancient promise of the land (Gen. 12:1; 13:14-15) is now fulfilled in the empire, which controlled the land bridge of the Fertile Crescent (I Kings 4:24). (c) The great name (reputation) long ago promised to these nobodies (Gen. 12:2) is now fulfilled in Solomon (I Kings 1:47; 10:1-10), who became the envy of both his followers and his adversaries. (d) The ancient promise of blessing to other nations by means of Israel (Gen. 12:3) is affirmed. Israel now possesses resources, means, and opportunity to bring a blessing to her neighbors (cf. I Kings 4:20-21), but she also has the capacity to bring a curse (Gen. 12:10-20).

It follows that a proper reading of the old narratives, as they have been presented by J, requires a double reading. The old Israel is remembered as bearer of promise yet to be fulfilled; the new Israel as recipient of a fulfillment far exceeding the prospects of the promise.

Thus J (or perhaps G) linked together unrelated materials of patriarchs and conquest, and in so doing linked old hopes and new realities. In the process, he affirmed to his contemporaries an unpopular view, namely that Israel's present well-being was the result of Yahweh's promise and not a royal achievement. Thus the juxtaposition permits the old materials of promise to reinterpret the present circumstance of well-being.

**4. The prehistory.** The third element of J which warrants special attention is the "prehistory," in Gen. 2-11. The capacity to use such materials reflects the open mood of the Solomonic environment; they are not used, however, simply to preserve old materials or to deal with questions of cosmic origin. Rather, here as elsewhere J addresses questions of Israel's faith, identity, and vocation as they become problematical to his contemporaries. J's creativity is to be discerned by the ways in which these materials are arranged in a sequence of growing disillusionment and degeneration, and the way in which they are brought into tension with the patriarchal narratives. (a) After the initial statement of the gift of life in Gen. 2, four stories (expulsion from the garden [Gen. 3], Cain and Abel [Gen. 4], Noah and the Flood [Gen. 6-9], and the Tower of Babel [Gen. 11:1-9]) are placed in a sequence demonstrating the movement of world history toward hopelessness and death. The narrator creates a context in which the appearance of the people of promise (Abraham-David) is a welcome contrast. (b) The narratives

present the world's history as being under a curse, in contrast to the history of blessing borne by Israel, announced in Gen. 8:22 and 12:3, and actualized in subsequent narratives. Thus the Yahwist affirms to royal Israel that she is to be in world history in a peculiar way. (c) By the eloquent resolution of the Flood in 8:22, J indicates that he is no parochial pleader for Israel. In royal Israel, the history of blessing continues as a counterpoint to the history of curse. But Yahweh's blessing is not conterminous with Israel, for it existed prior to and independent of Israel. (d) While J's prehistory is drawn from ancient Near Eastern mythical material, he ordered it as he did because he discerned in the life of the royal family in Jerusalem specific historical manifestations of mythical themes. (i) Expulsion from the Garden—David's seizure of Bathsheba and murder of Uriah (I Sam. 11-12). (ii) Cain and Abel—Amnon's murder by Absalom (II Sam. 13-14). (iii) Noah and the Flood—Absalom's rebellion against David (II Sam. 15-19). (iv) The Tower and the Scattering—Solomon's ruthless pride and assumption of power (I Kings 1-2). If such a correlation can be sustained, Gen. 2-11 would present the Davidic family as bearer of a curse, while the Abraham story affirms an alternative possibility as bearer of blessing.

**5. Blessing and curse.** Recent scholarship has focused on Gen. 12:1-4a as the key to J's theology. This text is undoubtedly formulated by J and is not borrowed from older material. The divine decree brings together the central issues. (a) It affirms the effective end of the history of curse. No more is heard of degeneracy and rebellion. (b) It announces the beginning of a new history, that a bearer of blessing and promise in the world of nations has been ordained by Yahweh. Thus he boldly asserts an enormous theological meaning for the united monarchy. (c) It presents Israel with a destiny of becoming a blessing, but the subsequent stories indicate that Israel also is tempted to participate in the history of curse. Israel can become part of the history of curse if she so chooses, but it need not be.

Of the other components of the J narrative, special attention should be given to the Joseph narrative, Gen. 37, 39-50 (see JOSEPH STORY[S]). As elsewhere in J, the Joseph narrative testifies to a direction in Israel's history that is not of her own making, but is under the rule of the One who has announced his purposes for well-being and blessing, both within and beyond Israel.

The J narrative makes good use of the old poetic Balaam cycle of Num. 22-24. On Wolff's reading this material is found at the end of the J tradition, but in any case it is crucially placed to articulate a central question about Israel. Balaam, despite royal pressure and his own inner resistance, is unable to bring a curse upon Israel. The narrative reiterates the conviction already announced in Gen. 12:1-3, that Yahweh has promised a blessing to Israel, and that he abides by that promise. He has determined it, and no one can modify it in the least. (In other traditions, the same ringing affirmation, perhaps learned from J, can be seen in Gen. 50:20; Josh. 21:43-45; 23:14.)

6. The Yahwist and Israel's normative faith. J has imposed a distinctive theological reading on the history of Israel, interpreting it in terms of blessing and promise. Since then, this interpretation has been unavoidable, and it has been followed by Israel's major historians and poets. Through this interpretation, J has provided important responses to the Solomonic situation, when Israel experienced a crisis of theological categories.

a) Solomon was tempted to be like others and to secure his own existence (cf. Gen. 11:1-9; and even 12:10-20). J makes subtle protest against any self-understanding in which Israel denied its role as a bearer of blessing. J rejects the syncretism which is content to settle for the ways of the world (the other cultures), which places no credence in the power of promise to direct life, and which makes no investment in blessing in a world seduced by curse.

b) Monarchy constituted a problem in Israel because it was an alien institution without traditional legitimization. J presents it as a way to implement Israel's peculiar identity. In depicting Abraham as a prototype of Israelite kings, J presents the royal establishment as a bearer of blessing in a world organized against blessing. Even in Israel, however, kings do not act this way and are bearers of curse, but J holds out another possibility.

c) The royal-urban myths in Solomon's time invited a royal regime to claim theological absolutism for itself (cf. Gen. 3; 4; 6-9; 11:1-9). J resisted such a temptation; when J speaks of Israel, as he finally does in Gen. 12 ff., he does not utilize ancient Near Eastern myth but instead has recourse to Israel's old traditions. As blessing answers curse, so Israel's communal memory responds to the world's myth. Clearly J defines Israel by old tribal memories which he shows to be relevant even in the new situation.

d) J affirms that the well-being of Israel and the performance of her historic mission are understood, not in terms of royal policy, enlightened though it may be, but in terms of the abiding promises of Yahweh which kings can neither invent nor void. Thus J issues a mighty protest against undue managing of history by the royal regime.

7. Wisdom resources. It is likely that the history-of-traditions approach to the J material, summarized above, has reached its full expression. One direction for future study is the way in which sapiential influences may be discerned in the material. Examples include the various elements in the prehistory which pursue characteristic wisdom themes; the narrative of Gen. 24, the Joseph narrative, and perhaps the blessing-curse issue in Num. 22-24. More important is the firm conviction that God's hidden purposes will come to fruition.

The capacity to take actions and the inevitable need to face their consequences required the royal managers of Israel to discern wisely. It may be that the J introductory narrative addresses that question: "When you eat of it your eyes will be opened, and you will be like God, knowing good and evil" (Gen. 3:5). It was the task and gift of

kings to know "good and evil" (cf. II Sam. 14:17, surely from the same milieu). The Yahwist has clearly honored Israel's old confessional self-identity; but he did it in order to affirm: "Many are the plans in the mind of a man, but it is the purpose of the Lord that will be established" (Prov. 19:21). Or perhaps more subtly he recognized the tension between the inscrutable ways of Yahweh and the drive of monarchy to manage its own affairs: "It is the glory of God to conceal things, but the glory of kings is to search things out" (Prov. 25:2). J makes abundant room for royal "searching out," but he retains as the final reality the concealing activity of God, which ultimately orders Israel's life.

J's effort is based on the presupposition that the old traditions, if properly articulated, could sustain Israel in a time of theological crisis. He believed in the monarchy and affirmed it, but only under a certain reading. To both adherents and adversaries of the monarchy, he put the subtle, burdensome question: What does it mean to live in history with power, but clearly *sola gratia*? He knew that it is hard for a rich man to enter the kingdom, but he affirmed that a royal Israel, with its enormous staying power, can still be a bearer of blessings and a recipient of promises.

**YARMULKE.** See HEAD COVERING[S].

**YA'UDI** yā oo' dī [Zenjirli inscription יאדי; Assyr. KUR *Ia-ū-du/Ia-ū-di/Ia-u-di*; ethn. KUR *Ia-ū-da-a-a*]. יאדי appears in the inscriptions of Zenjirli (ninth-eighth centuries B.C.) as the native appellation of the NW Syrian state alternately called שׂמאל for its capital city (Assyrian Sam'al/Sam'alla/Samalla). The identity of Azriyau of Ya'udi, the leader of resistance to Tiglath-pileser III in northern Syria (738 B.C.) has been the subject of a long controversy. One school of thought regarded this Ya'udi as the Assyrian transcription of יאדי, and identified Azriyau with the nameless usurper whose coup and subsequent defeat by Tiglath-pileser III are described in the Zenjirli inscription of Bar-Rakib. The other school identified Azriyau with UZZIAH (Azariah), king of Judah, denied that יאדי was vocalized Ya'udi, and claimed that *Ia-ū-di/du* in Assyrian sources always designated Judah. In favor of the former assumption, besides considerations of historical and geographical probability, is the comparison of two versions of Sargon II's records referring to his second year (720). The Nimrud

Inscription (*ARAB*, II, §137) calls Sargon "subduer of the land of *Ia-ū-du*, which lies far away; who carried off [the people of] Hamath, whose hands captured Iau-bi'di, their king." The corresponding passage of Prism B (*ARAB*, II, §197) has "The city of Samalla . . . in the city of Hamath, Damascus . . . together with my cavalry . . . in the midst of Hamath set up." Thus Ya'udu equals here Samalla, especially so since Judah was not subdued by the Assyrians in 720 but remained a loyal vassal till 713, and was not invaded till 701.

There is no reason to speak of Ya'udi as of N Judah; the two names are onomastically unrelated, and their similarity in Assyrian transcription is because of the phonetic deficiency of the cuneiform script. Even so, the inscriptions of Zenjirli and its neighborhood, composed in the native (Ya'udic) dialect and in Old Aramaic, shed much light on the social, political, and religious life of the West Semitic world before the Assyrian conquest. See HITTITES[S] and map.

**Bibliography.** Zenjirli texts: *KAI*, Nos. 24, 214-18; J. B. Prichard, ed., *ANET* (3rd ed.), pp. 654-55; S. Parpola, "Sam'al," *Neo-Assyrian Toponyms* (1970), Neo-Assyrian occurrences. On the question of Azriyau of Ya'udi, opinions are divided as follows: For his identity with Uzziah of Judah: H. M. Haydn, "Azariah of Judah and Tiglath-pileser III," *JBL*, XXVIII (1909), 182-99; D. D. Luckenbill, "Azariah of Judah," *AJSL*, XLI (1925), 217-32; E. R. Thiele, "The Chronology of the Kings of Judah and Israel," *JNES*, III (1944), 156-63; H. **\*ZADOK THE PRIEST. I. Origin.** In II Sam. 8:17 David's priests are listed as Zadok son of Ahitub and Ahimelech son of Abiathar (cf. I Chr. 18:16). However, it seems clear from I Sam. 22:20; 23:6; and 30:7 that Ahimelech was actually the father of Abiathar. Furthermore, Ahitub is called the father of Ahijah/Ahimelech in I Sam. 14:3 and 22:9, 11, 20. Accordingly, most scholars have concluded that MT II Sam. 8:17 is out of order and that its original form was something like, "Zadok and Abiathar, son of Ahimelech, son of Ahitub, were priests." Thus Zadok would be left entirely without genealogy. Consequently, Zadok has generally not been thought to be a descendant of Aaron as recorded in I Chr. 6:1-8 [H 5:27-34]; 6:50-53 [H 6:35-38]; and Ezra 7:2-5. Various theories have been proposed as to his origin.

**a. Jerusalem.** The theory that Zadok was originally a Jebusite priest probably has enjoyed the greatest popularity. It considers Zadok to have some connection with Melchizedek and Adonizedek and to have been the priest of 'El 'Elyôn in Jerusalem prior to David's conquest of the city. A variation considers Zadok to be a Jebusite priest who deserted to David at Hebron.

The most elaborate attack on the "Jebusite hypothesis" is by Cross. First, to link Zadok with the tradition of Melchizedek or Adonizedek simply because of the similarity in names is without significance, because *sdq* is a common element in Amorite, Ugaritic, Canaanite, and Hebrew names. Further, there is no evidence in the texts (II Sam. 24:18-25 and I Chr. 21:18-30) that David pitched his tent at the Canaanite shrine of 'El 'Elyôn. Next, David, an orthodox Yahwist, would hardly have invited a pagan priest to serve as one of the chief priests in his realm. Finally, if Zadok really descended from Melchizedek, why didn't the later Zadokites claim him as their ancestor instead of Aaron?

**b. The Aaronite (Hebron) hypothesis.** Cross has proposed taking another look at the genealogies which make Zadok the son of Ahitub (II Sam. 8:17) and the descendant of Aaron (I Chr. 6:1-15 [H 5:27-41]). Since Wellhausen, this information has been considered to have no historical value. Behind Wellhausen's skepticism was his assump-

tion that Ahitub the father of Zadok was the same Ahitub as the grandson of Eli in I Sam. 14:3 and the grandfather of Abiathar in I Sam. 22:20. Accordingly, Wellhausen thought that the text of II Sam. 8:17 (MT *wšdq bn 'hytw w'hymk bn 'bytr khnym*) had been corrupted intentionally and that it originally read: *'bytr bn 'hymk bn 'hytw wšdq khnym*.

There is, however, no textual evidence for Wellhausen's emendation, and it does not seem likely that, if an ancient Zadokite wished to change the text, he would have put Zadok last. Furthermore, Wellhausen's reading gives no patronymic for Zadok but two generations of ancestry to Abiathar. One would expect a single patronymic in each case (cf. II Sam. 8:16).

According to Cross's reconstruction, there is no reason for removing Ahitub as Zadok's father. Also there is no *a priori* reason why there could not be two Ahitubs, one the grandfather of Abiathar and the other the father of Zadok, as the genealogies (e.g., I Sam. 22:20; I Chr. 6:1-8 [H 5:27-34]) indicate. Already on the basis of I Sam. 2:20-36, where according to most interpreters the line of Zadok is presented as a replacement for the line of Eli, Zadok would not be expected to be of the same line as Abiathar.

Cross's reconstruction of II Sam. 8:17 starts with the Syr. text: *šdq bn 'hytw w'bytr bn 'hymk*. At one point in the textual tradition Abimelech stood for Ahimelech (cf. MT I Chr. 18:16), thus: *šdq bn 'hytw w'bytr bn 'bymk*. By haplography *'bytr bn* could have dropped out, resulting in *šdq bn 'hytw w'bymk*. Later, *'bytr* could have been reinserted, but at the wrong place, and filled out by *bn*: *šdq bn 'hytw w'bymk bn 'bytr*. Finally, the MT version would have resulted by adding *w* to *šdq* and changing *w'bymk* to its variant *w'hymk*.

Accepting this reconstruction would mean that Zadok was indeed an Aaronide and it would explain how Abiathar mistakenly became the father of Ahimelech.

If the Aaronides had their center in Hebron, as some scholars believe, then it is possible that Zadok originated there. I Chr. 12:26-28 [H 12:27-29] speaks of Zadok as being over the priests (=Aaronides?) in Hebron. Since David ruled Judah from Hebron (II Sam. 5:5), he could have made contact with Zadok and later brought him to his capital in Jerusalem.

**2. The descendants of Zadok.** The genealogy of I Chr. 6:1-15 [H 5:27-41] (cf. 9:11; Neh. 11:11; Ezra 7:1-5), which begins with Levi and includes Zadok, presents Zadok's descendants as follows (probably to be construed as a list of high priests): Zadok (I), Ahimaaz, Azariah (I), Johanan, Azariah (II), Amariah (II), Ahitub (II), Zadok (II), Shallum, Hilkiah, Azariah (III), Seraiah, Jehozadak.

Because of the apparent discrepancies between this genealogy and the narratives of Kings and Chronicles, many scholars believe that it is an artistic creation of a priestly scribe. If one allows three hundred years (twenty-five years per generation) for the twelve generations between Ahimaaz and Jehozadak and figures back from the de-

struction of Jerusalem in 587 B.C. (when Jehozadak lived, cf. I Chr. 6:15 [H 5:41]), one falls considerably short of 959 B.C., when the temple was begun. This can, however, be explained by assuming that the genealogy represents a list which became stylized in Zadokite circles long before the Chronicler used it. Hence, there would probably be historical gaps in the genealogy. Furthermore, the repetition of Amariah-Ahitub-Zadok, which has likewise caused scholars to doubt the genealogy's reliability, is not without its historical parallels.

It therefore appears likely that the descendants of Zadok controlled the priesthood in Jerusalem from Solomon till the Exile and that I Chr. 6:8-15 [H 5:34-41] presents a reasonably accurate listing of its main members. If the Aaronite ancestry of Zadok is sound, the terminology "sons of Aaron" for priests prior to Solomon (so in P) and "Zadokites" for those after his time (cf. Ezek. 40:46; 43:19; 44:15; 48:11) would be precisely what one would expect.

**ZAPHON, MOUNT** Zä fōn' [זָפוֹן, from נָצַח, to keep watch]. The sacred mountain of the Syrian storm-god Baal-Hadad (see BAAL). It is to be identified with Mount Hazzi of the Hurrian texts, the classical Mount Casius, and the modern Jebel el 'Aqra, a 5,807-foot-high peak located on the Syrian coast opposite the finger of Cyprus, about thirty miles N of ancient UGARIT. The Israelites used the name of this northern mountain as their common noun for north, just as they used the word "sea" to mean west. The older English translations always translated Zaphon as "north." There are four passages where the primary meaning shows through when properly translated.

Zaphon occurs in Ps. 89:12 [H 13] with the names of three other sacred mountains. MT may be amended to read: "Zaphon and Amana you created, Tabor and Hermon shout for joy at your name" (author's trans. throughout).

Isa. 14:13-14 mentions the mountain in an old mythical motif about the revolt and subsequent fall of one of the divine beings: "You said in your heart, 'I will scale the heavens. I will exalt my throne above the stars of El. I will sit enthroned on the mount of assembly, on the heights of Zaphon.'" This passage contains a strangely confused mixture of Canaanite mythology, since it assigns Zaphon, Baal's mountain in the Ugaritic texts, to EL and identifies it with the mount where the divine council met (El's Mount LI in Ugaritic texts). Such confusion seems to reflect Yahwistic appropriation of both El and Baal material.

Dewey Beegle

1. Mount Zaphon

In Ps. 48:1-2 [H 2-3], the far more lofty, majestic, and famous Zaphon is equated with Jerusalem's Mount Zion: "Great is Yahweh, and greatly to be praised. In the city of our God is his holy mountain, The most beautiful peak, the joy of all the earth. Mount Zion is the heights of Zaphon, the city of the great King." Such identification of Zaphon with a different and smaller mountain may be paralleled in Canaanite material where the cult of the original site was transferred to a secondary location, but normally the distinctive name of the smaller mountain is not preserved in those cases. The identification in this text would appear to represent Israelite glorification of Jerusalem, therefore, rather than Canaanite cultic tradition. See ZION TRADITION[S].

Finally, Job 26:7 refers to the mountain in striking, though seldom understood imagery: "He stretches out Zaphon over the void, He hangs the earth upon nothingness." Seen at a distance, high mountains like Zaphon often have their bases shrouded in clouds or obscured by haze, while their tops remain clearly visible. The visual impression made by such a scene is that of a mountain floating in the air, and it is precisely this impression of land hanging unsupported which the poet has captured in these two synonymous lines.

\***ZAREPHATH.** The identification of ancient Zarephath with the modern village of Sarafand, nine miles S of Sidon, was confirmed by a discovery in the village of a stone inscription which contained the phrase [θε]ῶ ἀγ[ιῶ] Σαρεπτην[ῶ]. "to the holy god of Sarepta." The line may be restored on the basis of other extant inscriptions with the same phrase.

In addition to the OT reference in connection with the story of Elijah's visit there (I Kings 17:8-24), and a thirteenth-century B.C. Egyptian letter, the Phoenician town is mentioned in Assyrian texts of Sennacherib, who states that it was one of the cities which submitted to him during the campaign he conducted in 701 B.C. Esarhaddon says that he turned the city over to Ba'li, king of Tyre. Classical writers comment on the wine and

purple dye of Sarepta, and in the Middle Ages travelers frequently stopped there during pilgrimages.

Phoenician and Roman settlements have come to light as the result of excavations undertaken by the University of Pennsylvania Museum, beginning in 1969. A Roman port was uncovered, dating from the first to the sixth centuries A.D. It consisted of a quay with a mooring ring, a water system which ran down to an outlet at the quay after passing through four rock-cut basins, and adjoining sluice gates. The basins apparently were used to filter fresh water to be taken aboard boats moored in the harbor. Public buildings adjoined the quay.

The Phoenician settlement lies about a half-mile N of the Roman port and is situated on a rise overlooking the main harbor used by fishermen today. Excavations to bedrock revealed that the Phoenician settlement, which underlies at least one Roman stratum, was occupied during the Late Bronze Age and much of the Iron Age. Zarephath must have been an important center for the manufacture of Phoenician pottery because a large portion of the excavated area contained a series of over twenty pottery kilns, basins for the levigation of clays, and massive piles of pottery rejects.

A small shrine with an offering table and benches along the side walls, replete with votive objects, was found adjacent to the industrial area. A variety of terra-cotta figurines and a few carved ivory objects were located near the offering table. One of the deities worshiped at Zarephath was the goddess Tanit, whose symbol was recently found on a glass stamp. Sometimes identified with the goddess Astarte, she was worshiped at Carthage in conjunction with ceremonies involving child sacrifice. Fig. Z2.

At Sarafand several tombs have been discovered on a hill overlooking the Phoenician settlement; they contained Phoenician pottery dating to the sixth and fifth centuries B.C. Another burial of the

\*ZARETHAN. Often identified with Tell es-Sa'idiyeh, but alternative identifications include Tell Umm Hamad and a site SW of Tell el-Mekbere. Excavations at the double site of Tell es-Sa'idiyeh by the University of Pennsylvania Museum (1964-67) uncovered a cemetery on the lower mound dating from the thirteenth to the eleventh centuries B.C., and on the upper mound a domestic quarter of the ninth to seventh centuries B.C., and an area with public buildings from the Persian, Hellenistic, and Roman periods.

In the cemetery over forty burials were discovered, many of which contained bronze weapons and vessels, together with Mycenaean pottery. The richest burial, grave 101, was that of a female who wore toggle pins and breastplates of silver and a necklace with beads of carnelian and gold. Several ivory cosmetic objects and seven bronze objects were in the grave (see Fig. Z3).

3. Bronze bowl with smaller bowl, strainer, and juglet as they were found fused together in a tomb at Zarethan

Nearby a burial of a warrior revealed an interment custom hitherto unknown in Palestine; the bones of the deceased had been wrapped in cloth and covered with a protective coating of bitumen. Grave goods with the warrior included several bronze objects, of which the most outstanding was a long bronze sword with a cast-bronze hilt. Many of the other burials contained bronzes and imported pottery and other objects, some from Egypt and Cyprus, but mostly from the Aegean area. The numerous Mycenaean vessels and distinctive burial

practices suggest that the cemetery may contain burials of Sea Peoples. The PHILISTINES, one of the Sea Peoples, were distinguished for their metallurgy. Although it is often assumed that most of their tools and weapons were of iron, this metal is not specifically mentioned in the key OT reference (I Sam. 13:19-22). At the neighboring mound of Deir'alla (Succoth?) Dutch excavators have found evidence of a bronze-smelting industry during the twelfth and eleventh centuries B.C. The biblical statement that Solomon cast bronze vessels for the temple in the plain between Zarethan and Succoth (I Kings 7:46) coincides with the discovery of numerous bronzes at Tell es-Sa'idiyeh and the nearby smelting activities.

In the domestic quarter of the city there were four major Iron Age II levels. In stratum III (eighth century B.C.), one partially excavated building had a white plastered mud-brick platform containing two small depressions. One was filled with ashes which surrounded a tripod incense burner; three other incense burners were found nearby. The platform may have served a cultic purpose. A similar installation was found at ASHDOD. In a later city, stratum II, which was destroyed in the eighth century B.C., rows of houses stood back to back on parallel streets. The plans of the houses were identical, a long front room divided into two parts by a row of pillars, and a small back room for storage. In the latest Iron II level, stratum I, over seventy circular pits and several rectangular mud-brick bins had been cut into the ground for the storage of grain. An Iron Age stairway-tunnel descended to a spring. A mud-brick wall ran down the middle of the stone stairway, and probably was used to support a camouflaged roof.

In the area of the public buildings on the peak of the upper mound, a large square palace or fortress with a central courtyard had been built during the Persian period. A tower on one corner of the building near the edge of the tell provided a lookout with a view of the Jordan Valley for miles around. One of the few objects in the fortress was a small decorated limestone incense burner inscribed with the owner's name, "Belonging to Zaktür." See Fig. 24.

T. L. McCLELLAN

\***ZEALOT.** Term which Jewish resistance fighters used of themselves in their struggle against the Roman occupation. In modern research, this term has been interpreted as the party label of the entire resistance movement of the first century A.D., which began with Judas the Galilean (6 B.C.) and ended with the suicide of the defenders of the fortress Masada (A.D. 74). See MASADA[S].

Recently the Zealots have been discussed from two perspectives.

(1) On the basis of the somewhat unclear report in Josephus (see JOSEPHUS, FLAVIUS), the suggestion has been made that perhaps only one of several resistance groups claimed the name "Zealots." The term would then not apply to a unified front, and the question would be what the special concerns of the individual groups were.

(2) Starting from some traces in the synoptic tradition, an old thesis has been revived, which was first introduced by Reimarus: that Jesus was himself a Zealot, or at least was sympathetic to the political freedom fighters.

1. **The Zealot resistance.** Josephus gives the impression that there were at least five resistance groups:

a. **The so-called Sicarii** (from the Latin *sicarius*, the "Dagger-man," the assassin). They could presumably be traced back to Judas the Galilean, who led the resistance to the census of A.D. 6. After the murder of their leader Menahem at the beginning of the war, this group retreated to the fortress

After J. B. Pritchard, *Expedition*, XI

4. Limestone altar with inscription

of Masada, where their resistance ended in mass suicide (A.D. 74). However, Josephus also uses the term "Sicarii" for those Jewish refugees who fled to Egypt after the end of the war.

**b. The Zealots.** This was a title of honor, probably used by a group which occupied the temple precincts under the leadership of the priest Eleazar.

**c. The followers of the Galilean, John of Gischala.** This group united with the Zealots during the war and exercised a reign of terror in Jerusalem from time to time (Jos. War IV.v.3).

**d. The followers of Simon bar Giora.** They controlled S Judea (Jos. War IV.ix.5, 9) and were called on by the population of Jerusalem to help fight the Zealots (Jos. War IV.ix.11).

**e. The Idumeans.** This group was first affiliated with the Zealots, then partially with John of Gischala, and finally with Simon bar Giora (Jos. War IV.iv.1, ix.5, ix.11; V.vi.1).

**2. Origins.** It must be remembered that Josephus himself witnessed only a small part of the events he reported. Thus, in many cases he probably was following the linguistic usage of his sources. In addition, especially in *The Jewish War*, he writes as an apologist for his people, in whose interest he presented the rebellion against Rome as the work of a few insignificant circles. So it is probable that his pejorative labels "assassin" and "robber" came from his tendency to free the population at large from the accusation of rebellion.

Josephus states that the entire anti-Roman movement goes back to Judas the Galilean (Jos. Antiq. XVIII.1.6). This is confirmed by the few Talmudic and early church references to the resistance against Rome.

Thus the view of Baumbach that the Sicarii were a socially oriented Galilean lay movement and the Zealots a priestly party has no basis in the sources. The assumption by Smith that the Zealots were a special fighting group of the Jewish rural population is also contradicted by the sources.

The most probable assumption remains, therefore, that the Zealots were a relatively unified movement. It is possible that the Sicarii were an especially active group named for their guerrilla tactics. In addition, it is not surprising that rivalries between individual leaders, as well as sociological distinctions led to tensions and feuds in the Zealot camp.

The ideological background of the Zealot movement is most clearly illuminated by examining its founders. When Judea was made a Roman province in 6 B.C., Judas the Galilean and the Pharisee Zadok established the "fourth school of Jewish philosophers" (Jos. War II.viii.1). Josephus—himself a Pharisee—denies a relationship between the Pharisees and the Zealots, but there are many indications that the two groups held similar beliefs. The Zealots distinguished themselves by strict observance of the sabbath commandment (Jos. War II.xxii.8) and rigorous requirements for cleanliness. They demanded circumcision even of heathen. There was a ritual bath and a synagogue in Masada—cultic installations which prove the Pharisaic character of the resistance fighters. Judas the Galilean departed from the Pharisaic way of

thinking by an uncompromising insistence on the first commandment of the Decalogue; no one except God was to be honored as "king" or "lord." Therefore, no foreigner was to rule over Israel. Paying taxes to the emperor, which would mean a recognition of the foreign rule, would be idolatry and defection from Yahweh. People and God would have to work together to bring about the liberation of Israel, and military force would be used against both heathen and Jewish lawbreakers. The models of such "zealousness" for Yahweh were Phinehas and Elijah, as well as the Maccabees. Accordingly, the self-designation "Zealots" might have been a party platform. The willingness to be martyred and the scorn of death, which not even Josephus can deny the Zealots (Jos. War II.ix.3; III.ii.1), can be understood only in the context of this kind of religious motivation. An interpretation of the resistance movement based almost exclusively on socioeconomic conditions (Kreissig) is inadequate. The exploitation in other areas of the Near East was just as bad, but comparable movements did not develop. However, the strong social component cannot be overlooked; when the Zealots conquered Jerusalem in A.D. 66, the first thing they destroyed was the city archives with the records of debt (Jos. War II.xvii.6). Two years later Simon bar Giora proclaimed a general emancipation of Jewish slaves (Jos. War IV.ix.3). So it is understandable that the simple people and the young sided with the resistance fighters.

The most profound reason for the Zealots' persistent willingness to sacrifice was probably their basic eschatological orientation. Josephus does not speak of this, just as he is consistently silent for apologetic reasons about the messianic expectations of his people. But there are signs from which one could well assume that the Zealots were hoping for the appearance of a Messiah and the establishment of his kingdom. Josephus mentions that the Zealots used "prophets" for propaganda purposes (War VI.v.2). He mentions among the main causes of the resistance "an ambiguous oracle that was also found in their sacred writings, how, 'about that time, one from their country should become governor of the habitable earth.' The Jews took this prediction to belong to themselves in particular" (Jos. War VI.v.4). This probably is a reference to Num. 24:17-19. This text is important in the Dead Sea Scrolls (4 QTest 12-13, etc.) and was later applied to Simeon bar Kochba by Rabbi Akiba (J. T. Ta'an 4:7). When Josephus says that Menahem, the son (or grandson) of Judas the Galilean (War II.xvii.9) and Simon bar Giora (War IV.ix.4) laid claim to royalty and acted as if they were kings, this means that they understood themselves to be fulfilling that prophecy.

When the Zealot movement was founded in A.D. 6-7 it could have been a Pharisaic splinter group—the radical left wing of Pharisaism, so to speak. The movement expanded rapidly, especially among the youth (Jos. War II.xii.1, xvi.4, etc.). From caves and other hiding places on the E edge of the Judean mountains they attacked smaller Roman military units and traveling officials, as well as the residences of wealthy Jewish collaborators.

Judas himself seems to have been killed in his attempt at rebellion (Acts 5:37).

In the period from A.D. 8 to the death of Herod Agrippa I (A.D. 44), Josephus does not mention any Zealot activity.

After Judea was reconquered into a Roman province, the "robber nuisance" revived. The procurator Tiberius Alexander (A.D. 46-48) had two sons of Judas the Galilean crucified, probably because they continued their father's rebellion. Under Ventidius Cumanus (A.D. 48-52) there were dangerous episodes, which led to the removal of the procurator. Under his successor Antonius Felix (ca. 52-58) "things grew worse and worse continually; for the country was again filled with robbers and impostors, who deluded the multitude" (Jos. Antiq. XX.viii.4). In his time the guerrilla tactics of the Sicarii seem to have prevailed. Felix had a great number of the "robbers" (i.e., Zealots) crucified (Jos. War II.xiii.2), as did also his successor, Porcius Festus (ca. A.D. 58-63; Jos. War II.xiv.1). During Albinus' rule (62-64), the Zealots seem to have won control over the plains. Under Gessius Florus, who, like Albinus, sought primarily his own enrichment, rebellion broke out (Jos. War II.xiv.2). First the procurator had to surrender Jerusalem; and the temple treasurer, Eleazar, abolished the daily sacrifice to the emperor. Then the fortress of Masada near the Dead Sea was taken in a surprise attack by a group under the leadership of Menahem, a son (or grandson) of Judas the Galilean. Menahem also overcame the last Roman pockets of resistance in Jerusalem. When he had the high priest Ananus murdered, Ananus' son, Eleazar, arranged for the murder of Menahem; only a few of Menahem's followers escaped to Masada (Jos. War II.xvii.9). This broke the united front of the rebels. Shortly thereafter they suffered severe defeats in Galilee, Perea, and Idumea. By contrast, in Jerusalem they were initially successful, until quarrels among themselves forced them to submit to Titus (A.D. 70). The last to fall were the Sicarii, who had fled to Masada (A.D. 74).

## 2. Jesus' relationship to the Zealots. a. *Zealots and the mission of Jesus.*

i. According to Mark 3:18 and Luke 6:15, Simon, one of Jesus' disciples was a Zealot; nothing else is known of him. This fact loses its significance when one considers that Jesus also called to discipleship a tax collector, hence, a collaborator with the occupational power. The LOGIA source collection of Jesus' sayings bears witness to his acceptance of the universally despised tax collectors (Matt. 11:19; Luke 7:34). As disciples of Jesus, tax collectors and Zealots would have to have renounced their old ideals.

Peter's surname, "Bar-Jona," appears only in Matt. 16:17. Occasionally it has been interpreted as "Zealot," but this is unlikely. The upper-middle-class circumstances in which Peter probably lived negate the assumption that he was an "outlaw."

ii. The cleansing of the temple (Mark 11:15-19; cf. Matt. 21:12-17; Luke 19:45-46) has been interpreted as an attempt by Jesus to occupy the temple with an armed band. Of course, the oldest gospel report does not mention this; one would have to

suppose that Mark watered down the affair, as was his tendency. But from our knowledge of similar events which Josephus reported, it is much more likely that Mark exaggerated the extent of Jesus' action. During major disorders the Jewish temple guard or the Roman cohorts, who were stationed in the fortress Antonia at the NW corner of the temple, intervened. Originally the cleansing of the temple was probably an act intended by Jesus to be a prophetic sign against the sacrificial cult.

iii. Individual sayings of Jesus, such as Luke 22:36b, "And let him who has no sword sell his mantle and buy one," have been interpreted as reflecting Zealot thought. This saying, which is supposed to be an instruction for the time after Jesus' death, does not have to be understood as a summons to Zealot activity. It can be understood as a paradoxically formulated allusion to the temptations and persecutions which the disciples will encounter. Also the saying in Matt. 10:34, "Do not think that I have come to bring peace on earth; I have not come to bring peace, but a sword," is not a challenge to armed action, but alludes figuratively to the schisms and conflict which the call to follow Jesus brings (cf. Luke 12:51).

iv. It would seem that the most obvious indication is Jesus' crucifixion. Without doubt, the Romans usually crucified agitators and traitors. The caption over the cross, which called Jesus "the King of the Jews," points to this political dimension. But the fact of the crucifixion does not prove that the charges against Jesus were objectively substantiated. It is equally possible that the Jewish authorities brought the political charges in order to get rid of a man who was intolerable to them for religious reasons—at least that is the way it is presented in the Synoptic gospels.

b. *Was Jesus himself a Zealot?* Unless individual sayings of Jesus or events of his life are taken out of context, it is impossible to regard him as a Zealot.

i. Co-operation between God and human beings to bring about the KINGDOM OF GOD was basic to the Zealot ideology. Jesus also talked about the kingdom of God, but in the parable of the seed growing secretly (Mark 4:26-29) he emphasized that God will bring about his kingdom without human help. The patience of the farmer is an example for faith, which should wait for everything to come from God.

Jesus reinterpreted the conception of the kingdom even more radically. It is no longer something which is to come, but by his deeds it has already begun (Luke 11:20; Matt. 12:28). Jesus' devoting of himself to the rejected, the poor, and the sick helped to bring about the kingdom of God.

ii. The event which led to the formation of the Zealots was the census of A.D. 6. The question to Jesus in Mark 12:14 must undoubtedly be understood against this background: "Is it lawful to pay taxes to Caesar, or not?" Jesus' answer, the authenticity of which cannot be doubted, was: "Render to Caesar the things that are Caesar's, and to God the things that are God's" (vs. 17). This is a clear renunciation of the Zealot tax

evasion, without metaphysically reinterpreting the existing power structures.

iii. The decisive difference between Jesus and the Zealots comes into focus in their relation to their fellow human beings. The Zealots believed that to serve God they had rigorously to exterminate anyone who broke his law, while Jesus required love for one's neighbors, and even for one's enemies (Matt. 5:43-48; Luke 6:27-28, 32-36). This demand was just as unprecedented in late Judaism as it was in primitive Christianity, so that its authenticity cannot be doubted. At another place Jesus formulated the double commandment of love (Mark 12:29-31): "Hear, O Israel: the Lord our God, the Lord is one; and you shall love the Lord your God with all your heart, and with all your soul, and with all your mind, and with all your strength." Every Zealot would have agreed to this point, but would have drawn the conclusion: "Therefore, you should love all those who keep God's law and hate all those who break God's law." But Jesus added to the commandment to love God: "You shall love your neighbor as yourself." If the commandment to love is to be the center and norm of Christian action, then it simply cannot yield a justification for violence against one's fellow human beings. The good Samaritan serves as a prototype for this kind of love of neighbor (Luke 10:30-37). The Samaritan helped the man in need without asking about his nationality, creed, or world view and no Zealot would have approved of that.

The God of Jesus demands so much service to our fellow human beings that for their sake even the sacred order of the Mosaic law is repealed. Jesus broke the sabbath commandment repeatedly (Mark 2:23 ff.; 3:1 ff.), and gave the well-being of people a higher priority than the strict observance of the sabbath (Mark 2:27). He annulled the laws of purification (Mark 7:15), since nothing outside a person can influence one's relationship to God. He negated the permission for divorce, which in those times caused great hardship for the women involved (Mark 10:9). For Jesus, what was important was, not service to ideas or ideals, however great or sacred they might be, but service to the preservation of life (Mark 3:4). With this freedom, not only from rabbinic casuistry, but also from the letter of the OT law, Jesus stood beyond all parties of his time. Neither the Zealots nor the Pharisaic party from which they descended would have tolerated this aspect of Jesus' teaching.

There is no bridging the gap between Jesus' teaching and the ideals of the Zealots. The old and new attempts to interpret Jesus as a revolutionary must be viewed as failures. See also PHARISEES[S.]

\***ZEBUL.** While most English translations consider this word to be a proper name, it could also be the Canaanite word "prince," "ruler," an alternative designation to the word *sar* which immediately follows in Judg. 9:30. See CONFLATE READINGS[S] §6j.

\***ZECHARIAH, BOOK OF. 1. Socioreligious setting. a. Chs. 1-8.** While the international background described for this section requires little modification, new light can be shed on its setting within the postexilic community. Chs. 1-8 took form in several stages within the hierocratic (Zadokite) circles which supplied the impetus for the postexilic restoration (see ZADOK THE PRIESTS[S]). The final stage involved the addition of a chronological framework embracing also the book of HAGGAI. Behind it lie several earlier stages of growth.

Stratum I comprises a series of seven visions or apocalypses centered in architectonic symmetry around the MENORAH, then radiating out to embrace temple cult, ritual community, and finally the entire universe subject to the watchful eyes of Yahweh. The visions are accompanied by prophetic oracles relating especially to the rebuilding of the temple and the diarchy of the two messiahs (see TEMPLE, JERUSALEM §B). The visions and oracles seem to be authentic, having functioned in the activity of Zechariah as a prophetic endorsement of the Zadokite temple program.

Stratum II introduces later additions to the oracles. For example, the original form of the first vision (1:8-15) responds to Haggai's prophecy of an imminent cataclysm introducing the eschaton (Zech. 2:6-9): Jeremiah's seventy years had passed, and yet the earth remained under the firm control of the Persians. The original oracle explicating the vision gives assurance that Yahweh remains zealous on Israel's behalf (1:13-15). But completion of the temple did not inaugurate the eschaton. Zech. 1:16-17 was added to counteract doubt and to defend Zechariah's prophecy (2:10-17 is best interpreted in a similar way).

Zech. 4:6aβ-10a also belongs to stratum II. Here the original vision related the all-seeing Yahweh of the temple to his twin messiahs. Again delay and doubts best explain the awkward addition of these words defending the charismatic authority of ZERUBBABEL against criticism (cf. Isa. 66:1-2).

In Zech. 3 a unit disrupts the symmetry of the original vision cycle. Standing apart from the original seven in form and content, it belongs to stratum II and adds a defense of the legitimacy of Joshua as high priest (clothed in stately rather than soiled clothing), and of the transfer to his office of a prophetic prerogative, the right of access to the Divine Council. See COUNCIL, HEAVENLY[S].

To what extent stratum II stems from Zechariah or from disciples remains an open question. Whereas the time span between strata I and II is not great, in the case of 4:6aβ-10a at least it is difficult to attribute the awkward intersplice (if not the words themselves) to Zechariah. More germane, however, is the observation that, taken together,

strata I and II sketch the literary history of a systematic defense of the Zadokite temple program. Alongside additions, stratum II includes tendential alterations, best illustrated by 6:9-15, where Zerubbabel is denied the crown, which comes to rest solely upon the priest Joshua. This textual alteration documents the transformation of the original Zadokite diarchy into the later priestly heirarchy.

Between the two earliest strata and the final form lie stages offering further interpretation, especially through construction of a framework provided by prophetic words in chs. 7-8 and related materials in 1:2-6.

**b. Chs. 9-14.** Arising in a setting distinct from Zech. 1-8, these chapters preserve oracles produced by circles opposed to the hierocratic program and its Zadokite protagonists. Only after time dimmed the memory of earlier controversies were chs. 9-11 and 12-14 appended to the eleventh minor prophetic book, and a related booklet was added as a twelfth book (MALACHI).

Because reliable historical references are lacking in these chapters, attention must turn to typological considerations. In the case of Zech. 9 and 10, genres, concepts, and prosody resemble Isa. 56-66, suggesting a sixth-century date. As in Second and Third Isaiah, archaic forms and motifs are applied to formulate a vision of divine intervention and radical transformation. For those who espoused these visions, temple builders and Zadokite leaders were not harbingers of the eschaton, but antagonists. In ch. 11 the attack on community leaders is intensified, reflecting conditions in the period of demoralization between 515 and the time of Malachi. Chs. 12-14 go even further in attacking the Jerusalem hierocracy and describing cataclysmic divine acts on behalf of the oppressed. As a whole, therefore, chs. 9-14 preserve a stream of tradition opposed to the hierocratic position seen in Ezek. 40-48, Haggai, Zech. 1-8, and Chronicles. Reflecting the feelings of those who smarted under defeat and oppression and were blindly dedicated to eradicating the Zadokite hierocracy, this section presents a vision of divine intervention and vindication, a vision which generates the main features of a universe rich in apocalyptic symbolism.

**2. Relation to apocalypticism.** Both Zech. 1-8 and 9-14 reflect modifications within prophetism which are characteristic of the period: heightened eschatology, recrudescence of mythic motifs, broadening universalism. A significant difference nevertheless exists.

**a. Chs. 1-8** are the product of the victorious party among the groups that vied for control of the restoration cult. The seven apocalypses of stratum I arose amidst the eschatological excitement of the first years of the reign of Darius I. After the temple was completed, they were expanded and finally embedded in an interpretive framework. The result was a divine decretal authorizing the new hierocracy under the high priest. The visions, now identified with institutional realities, entered the domain of realized eschatology and gave birth to no further apocalypses. The gap between vision and reality had been closed through

identification of divine decree and the hierocratic order. The need was no longer for apocalypses that announced radical transformation, but for legislation to preserve and regulate existing structures.

**b. Chs. 9-14**, on the other hand, stem from visionaries whose dreams were increasingly frustrated by realities. Slight modifications of earlier visions were insufficient. Experiences evoked increasingly desperate visions of judgment, as the gap widened between restoration ideal and experience. Thus while within the hierocratic party the social conditions that produced apocalypticism disappeared, they became more pronounced among the visionaries of Zech. 9-14. The history of the hierocratic party, as it can be reconstructed on the basis of Zech. 1-8, is a path from apocalypticism to a pragmatic position of community control, and, by contrast, the history discernible in Zech. 9-14 is that of an apocalyptic movement of increasing intensity and greater and greater hostility toward existing community structures.

As a result, the contributions of Zech. 1-8 to later apocalypticism are primarily in the area of individual motifs and the genre of apocalypse, whereas the oracles of Zech. 9-14, while also exerting influence on the development of genres that were later utilized in apocalyptic writings, have their primary significance in carrying a living apocalyptic movement out of the early years of Darius I into the fifth century and beyond.

\***ZEPHANIAH, BOOK OF. 1.** The time of Zephaniah. The superscription (1:1) places the prophecies at the time of Josiah, king of Judah (640-609 B.C.).

**a. The Scythian invasion?** Some scholars have tried to connect Zephaniah's utterances with the Scythian invasion mentioned by Herodotus. This is, however, problematic. Herodotus is the only witness to such an invasion. Furthermore, his account is colored by legendary material throughout. It is also unlikely that the invasion could have happened during the reign of Psammetichus I. Consequently the Scythian hypothesis has now been almost universally abandoned (see SCYTHIANS[S]). Another opinion is that the crisis mentioned by the prophet must be connected with a flare-up of Assyrian power in the first years of Josiah's reign. Other scholars have proposed that the prophecies were made during the time of Jehoiaikim (609-598 B.C.). Another opinion is that Zephaniah prophesied in the time of Zedekiah (ca. 590 B.C.).

**b. Possible date from internal evidence.** It is clear that Nineveh was not yet demolished (2:13-15); a strong syncretistic religion was practiced in Jerusalem (1:4-5); the royalty abused the religion of the Lord by wearing foreign clothes (1:8); the Moabites and Ammonites showed contempt for Judah (2:8). From these passages we may deduce that the prophecies were pronounced before the fall of Nineveh (612 B.C.). The adherence to syn-

cretistic religion suggests that the utterances were made before the religious reform of Josiah (ca. 621 B.C.). The rapid decline of Assyrian power after 626 B.C. might point to a date between 640 and 626, preferably in the earlier years of Josiah when he was still a child and when officials and princes were still in charge (1:8).

**c. Historical background.** The Assyrians, who had dominated politics in the ancient Near East since 745 B.C., were rapidly declining, and this was an incentive to other nations to rebel. Ashurbanipal's long war against Elam was successfully concluded in 639. There was also a prolonged war against the Arabs. In Babylon a rebellion flared up after 626 which ultimately led to the destruction of Nineveh. In uncertain times like these rumors could have created an atmosphere for the prophecies of Zephaniah.

**2. Contents. a. Superscription (1:1).**

**b. The coming judgment against Judah (1:2-18).**

**i. Introduction (1:2-6).** The Lord pronounces his judgment against idolatry. His judgment will even affect nature (1:3).

**ii. The day of the Lord (1:7-18).** Zephaniah takes up this theme found in Amos and develops it in an original way. Judgment is pronounced against Judah for the breaking of the covenant. Various scholars have proposed connecting the language of these oracles with holy war imagery. The close links with covenant curses are, however, noteworthy.

**c. Exhortation by the prophet (2:1-3).** There is still time to become humble and to avert the judgment.

**d. Oracles against foreign nations (2:4-15).** Like other prophetic writings, Zephaniah contains oracles against foreign nations. More space is allocated to the destruction of Nineveh than any other (2:13-15), which shows how important Assyria was still considered.

**e. Invective against the leaders of Jerusalem (3:1-5).** In Jerusalem there was no obedience to the commandments of God. In beautiful metaphorical language the princes are likened to roaring lions, the judges to wolves, and the prophets to braggarts and impostors, while the priests do violence to the Law.

**f. Judgment of the nations (3:6-8).** This pericope reiterates the theme of 2:4-15 and shows how the Lord will vent his anger on the nations.

**g. A promise of salvation to the nations and Judah (3:9-13).** The Lord will purify Judah from proud boasters and the high and mighty. Foreign nations will also be purified and will serve the Lord. It is possible that this tendency to universalism was added during postexilic times when such ideas were common.

**h. Song of joy in Zion (3:14-17).** The Lord will again become king in Jerusalem. He is furthermore likened to a soldier-hero who will save the obedient remnant.

**i. Final message of salvation (3:18-20).** The refugees will be brought back to Jerusalem. The lame and those who have gone astray will come back and their misfortune will be turned into praise.

**3. Language, structure, and form.** The language of the book shows close affinity with that of

writings from the end of the seventh century and the beginning of the sixth, e.g., with Nahum, Habakkuk, Joel, Jeremiah, Ezekiel, and Deuteronomy. Certain difficult words, e.g., 'āsōph, 'āsēph (1:2), can now be explained with the help of Ugaritic.

It is also clear from Zephaniah's language that he was influenced by wisdom literature, e.g., his application of the phrase *lāqah mūsār* (3:2, 7). He uses various types of prophetic oracle. The prophetic threat can be subdivided into three types: a threat to individuals, like the invective with threat in 3:1-5; a threat to his own nation, in 1:7-18; and a threat against foreign nations, in 2:4-15. The positive prophetic saying is present in 3:6-20. Formerly, scholars were inclined to regard declarations of salvation as later additions, but this position has now been largely abandoned. Although it is an invective with a threat, 3:1-5 can also be classified under positive prophetic sayings. Another type of positive prophetic saying is the exhortation in 2:1-3.

F. C. FENSHAM

\***ZIKLAG.** The location of this town is disputed. It has been suggested that the biblical name is echoed in Arabic Khirbet Zuheilqah, ten miles ESE of Gaza, but the resemblance is superficial at best and the ruin is evidently Byzantine and later. The identification with Tell el-Khuweilfeh (Tel Halif), ca. fourteen miles N of Beer-sheba, is widely accepted, but the site stands in the midst of Judean territory. Thus it does not suit well the location of a base from which David was reputedly attacking the Negev of Judah! A more likely candidate is Tell el-Mālīḥah (or Muleihah; modern Tel Milḥa), eighteen miles E of Gaza and ten miles S of modern Kiriat-Gat, or else Tell esh-Sherī'ah (Tel Sera'), ca. fifteen miles SE of Gaza. The excavations at this latter site have produced rich evidence of an Egyptian cult center during the Late Bronze Age, a settlement in the Philistine period (Early Iron Age) with a terrific destruction (cf. I Sam. 30:1, 3, 14), and important occupation in the later Iron Age. These finds accord well with

the known history of Ziklag, but epigraphic confirmation of the site's ancient name has yet to be discovered (though Egyptian hieratic ostraca have been found).

A. F. RAINEY

\***ZION, DAUGHTER OF.** A mistranslation of the Hebrew phrase *בת ציון* found in most English versions, with the exception of Moffatt's translation, *The New American Bible*, The New Jewish Version, and Today's English Version (see *VERSIONS, ENGLISH* and supplementary article). This phrase (in order of frequency) appears in Lam. 1:6; 2:1, 4, 8, 10, 13, 18; 4:22; Isa. 1:8; 10:32; 16:1; 37:22 (=II Kings 19:21); 52:2; 62:11; Mic. 1:13; 4:8, 10, 13; Jer. 4:31; 6:2, 23; Zech. 2:10; 9:9; Zeph. 3:14; Ps. 9:14. The usual translation, "the daughter of Zion," can only mean, according to English idiom, that Zion had a daughter. But Zion did not have a daughter; Zion (by personification) was the daughter, though "maiden" would be a better rendering in these cases, since *בת* is often used as a term of affection for any girl or young woman, as when Boaz addressed Ruth (Ruth 2:8) as *בתי*, not meaning "my daughter," but something like "my dear."

As the prophets and poets contemplated the fate of their beloved Zion (or Jerusalem), they personified the holy city as a beautiful young maiden, ravished and wretched, or about to be so; or in the oracles of restoration as a maiden about to experience great joy. Thus they used the phrase *בת ירושלים* or sometimes in parallelism *בת ציון* (Lam. 2:13, 15; Isa. 37:22 [=II Kings 19:21]; Mic. 4:8; Zeph. 3:14; Zech. 9:9). In either case, the first word is in the construct state, and the following genitive is not the usual genitive of possession, but the appositional genitive. The correct translation is, therefore, not "the daughter of Zion" or "the daughter of Jerusalem," but "maiden Zion" or "maiden Jerusalem," with a meaning something like "darling Zion" or "dear Jerusalem." Most of the standard grammars (see *bibliog.*) explain this matter correctly, though the translators with few exceptions have paid no attention, preferring instead the simplistic notion that the construct state must always be followed in translation by the word "of" introducing a possessive genitive.

The idiom is also applied to Judah, and to foreign and hostile cities and countries, sometimes with sarcastic or taunting connotations. Thus we have maiden Judah (Lam. 2:2, 5), maiden Edom (Lam. 4:21, 22), maiden Egypt (Jer. 46:24), maiden Babylon or Chaldea (Isa. 47:1, 5; Jer. 50:42; 51:33; Zech. 2:7; Ps. 137:8), girl Gallim (Isa. 10:30), etc.

Attention should be called to passages that use the word *בתולה*, "virgin," in the same way or prefixed to *בת* (II Kings 19:21; Isa. 37:22; 47:1;

Jer. 14:17; 18:13; 31:4, 21; 46:11; Lam. 1:15; 2:13; Amos 5:2). The proper translations are not "the virgin of Jerusalem" or "the virgin daughter of Zion," but something like "virgin Jerusalem," "the virgin girl Zion" (terms of affection), or "virgin girl Babylon" (sarcastic and ironical; Babylon is really a shameless hussy, or the like).

Another example of the idiom is the phrase *בת עמי*, conventionally translated "the daughter of my people" (Isa. 22:4; Jer. 4:11; 6:26; 8:11, 19, 21, 22; 9:1 [H 8:23]; 9:7 [H 9:6]; 14:17; Lam. 2:11; 3:48; 4:3, 6, 10). The meaning is something like "my beloved people" or "my unfortunate people," with love and sorrow combined. Note also *בת פוצי* (Zeph. 3:10), rendered by RSV as "the daughter of my dispersed ones." A better translation would be "my dear dispersed ones."

Cowley; the Ger. original is somewhat more precise); C. Brockelmann, *Hebräische Syntax* (1956), §§70*d*, 77*a*, *b* (states the case fairly well, but gives a wrong translation); R. J. Williams, *Hebrew Syntax*, §42; W. F. Stinespring, "No Daughter of Zion," *Encounter*, XXVI (1965), 133-41 (full discussion), "The Participle of the Immediate Future and Other Matters," *Translating and Interpreting the OT*, ed. H. T. Frank and W. L. Reed (1970), pp. 67-69, and "Some Remarks on the New English Bible," *Understanding the Sacred Text*, ed. J. Reumann (1972), pp. 88-90. The lexicons of Gesenius-Buhl, Brown-Driver-Briggs, and Koehler-Baumgartner offer little help.

W. F. STINESPRING

**ZION TRADITION.** A complex of motifs used to glorify Zion/Jerusalem as Yahweh's royal city, God's earthly abode from whence he exercises his worldwide rule (Joel 3:16-17 [H 4:16-17]; Zech. 14:8-9; Pss. 48:1-2 [H 2-3]; 76:1-2, 12 [H 2-3, 13]; cf. Matt. 5:35).

1. **The motifs.** Four, or sometimes five, motifs are analyzed as belonging to this complex.

**a. The divine mountain.** The low hill on which Jerusalem was built is regarded as an exceedingly high mountain (Isa. 2:2=Mic. 4:1; Ezek. 40:2; Zech. 14:10; cf. Rev. 21:10) or even identified with Mount Zaphon (Ps. 48:2 [H 3]; ABi), the site of the divine assembly in Israelite thought (Isa. 14:13, translating "in the heights of Zaphon" [*בִּירְכַתִּי צִפּוֹן*] for RSV's "in the far north"). See ZAPHON, MOUNT[S].

**b. The river of paradise.** One of the springs in Jerusalem is seen as a mighty, paradisiacal river, bringing joy to God's city and fertility and healing to his people (Ezek. 47:1-12; Joel 3:18 [H 4:18]; Zech. 13:1; 14:8; Ps. 46:4 [H 5]; cf. Rev. 22:1-2).

**c. The conquest of chaos.** Because Yahweh is in his city, Zion/Jerusalem cannot be shaken by the threatening waters of chaos (Ps. 46:1-5 [H 2-6]; cf. Isa. 17:12-14). See CHAOS[S].

**d. The defeat of the nations.** Yahweh also saves the holy city by his sudden defeat of the foreign kings who had gathered their nations together against Jerusalem; the result is the abolition of war and an era of peace (Isa. 14:32; 17:12-14; 18:1-6; 29:1-8; 31:4-9; Ezek. 38-39; Joel 3:9-21 [H 4:9-21]; Zech. 12:1-9; 14:3, 12-15; Pss. 46:6-11 [H 7-12]; 48:4-8 [H 5-9]; 76:3-9 [H 4-10]).

*e. The pilgrimage of the nations.* Finally, the survivors among the nations acknowledge Yahweh's sovereignty and go on pilgrimage to Jerusalem to worship and pay tribute (Isa. 2:2-4=Mic. 4:1-4; Isa. 18:7; Zech. 14:16-19; Ps. 76:11-12 NAB [H 12-13]).

**2. Sources.** These motifs, which describe past experience, present reality, or future hope, depending on the particular text in which they occur, were originally independent of one another and may be traced to separate sources. The last two motifs appear to be rooted in some historical experience while the first three clearly derive from Canaanite mythology. Although the conception that the gods live on very high mountains is common to much of the ancient Near East, Mount Zaphon is a particular divine mountain sacred to the Canaanite god Baal. Yahweh's victory over the waters of chaos may also be traced back to a Canaanite myth about Baal's victory over prince Yamm, the Sea (*see* BAAL).

The Zion tradition does not preserve a pure Baal mythology, however. The portrayal of the divine dwelling as the source of a paradisiacal river seems to go back to the Canaanite description of El's abode at the "spring of the two rivers, the source of the two seas" (*see* EL; EL[S] §1*b*). This place is presumably located on El's Mount LL, a quite distinct mountain from Baal's Zaphon.

**3. Date.** Such a mixture of El and Baal mythology in the Zion tradition makes it difficult to accept the popular view which attributes the formation of that tradition to the pre-Israelite inhabitants of Jerusalem. Not only is El, the pre-Israelite god of Jerusalem (Gen. 14:18, 22), assigned functions original to Baal, but the holy city itself is given a mythological topography based upon two separate mountains, sacred to two distinct deities. It is doubtful that one can attribute such confusion to the Jebusites who, whatever their ethnic background (*see* JEBUS), appear to have shared in the basically homogeneous culture of Canaan. Moreover, a Canaanite origin for the historical motifs is also problematic. Prior to David, Jerusalem had never been more than a modest city-state with marginal control over neighboring villages and a few nearby city-states (*see* JERUSALEM §3). It possessed neither the political nor the religious importance which the pretensions of world-wide rule explicit in the Zion tradition presuppose.

On the other hand, one can hardly date the formation of this tradition to the exilic or post-exilic periods even if most of the passages containing it could be dated that late. None of the individual motifs fit well in that period. The mythological motifs may more naturally be seen as a theological despoilment of the pagan gods dating from a period when real theological conflict coexisted with a confident, triumphant Yahwism. Moreover, if pre-Davidic Jerusalem lacked the political and religious importance presupposed by the grandiose claims of the Zion tradition, the exilic ruins and postexilic restorations hardly fare better. How could any Israelite in that period possibly regard Jerusalem as important enough to merit a united attack by all the nations of the

world unless this motif had already become a fixed part of the tradition prior to the demise of the city's significance?

The presence in the royal psalms (*see* PSALMS, BOOK OF §B2*b*) of material strikingly similar to both the defeat of the nations and the pilgrimage motifs (Pss. 2:1-3, 10-11; 18:43-45 [H 44-46]; 72:8-11) confirms this judgment, since this related material cannot be wholly disassociated from the Zion tradition, and since the royal psalms undoubtedly date to the period of the monarchy.

The ancient and extremely difficult Psalm 68 appears to contain, at least in germinal form, four of the five motifs: (a) the divine mountain (vss. 15-18 [H 16-19]); (b) the conquest of chaos (vss. 21-23 ABi [H 22-24]); (c) the defeat of the nations (vss. 11-14 [H 12-15]); and (d) the pilgrimage of the nations (vss. 29-31 [H 30-32]). The psalm may be pre-Davidic in part, and certainly some of the impetus for the formation of the Zion tradition should be attributed to the early theological conflict of the settlement period, when the fanatical Yahwistic invaders were forced to give a theological explanation for the pagan deities they encountered. The Israelites' elevation of Yahweh above the Canaanite gods, their identification of him with ELYON, and their claims for Yahweh's world rule are probably premonarchic. Nevertheless, the tradition in its present form presupposes David's imperial conquests. Two concerns fell together as a result of those conquests in which David, as Yahweh's agent, imposed Israelite rule on the surrounding nations, forcing them to recognize and pay tribute to Yahweh, the imperial god (II Sam. 8:1-12). On the one hand, David's conquests gave credibility to the theological claims made for Yahweh; on the other hand, those claims provided a theological rationale to justify and stabilize David's imperial expansion. It was probably to meet both needs, political and theological, that church and state co-operated in formulating the Zion tradition.

It is evident that the origins of the tradition of Yahweh's covenant with David and choice of Jerusalem date to the period of David's reign (*see* COVENANT, DAVIDIC[§]), but the motifs of the Zion tradition fit best there as well. The syncretism involved in attributing the mythological motifs to Jerusalem might point more to Solomon, but it meshes well enough with David's known policy of shoring up the religious authority of his new capital, as seen, for example, in his transfer of the ark (II Sam. 6). This is also the one time in Israel's existence when there would have been a constant stream of foreign vassals to the imperial capital and royal sanctuary (II Sam. 8; I Kings 8:65), which is the historical reality behind the pilgrimage motif. Moreover, since the Davidic-Solomonic era was the period when there was a real concern to maintain an actual empire, the motif of the foreign enemies, often portrayed as rebellious vassals, could very well derive from this age.

**4. Later development.** Following the breakup of the empire, the Zion tradition, bereft of its historical foundation, suffered the same fate as the related tradition of the choice of David. The

ideology was retained as expressing what should be, but because the ideal was not realized, it began to be projected more and more onto the screen of the future. In the process what had once been seen as realizable within human history gradually assumed the transhistorical dimensions of apocalyptic (see APOCALYPTICISM §1b and supplementary article), and this ultimately resulted in the denigration of the earthly Zion (Apocal. Bar. 4:2-7). The present city was no longer considered God's actual dwelling or the real mother of his people (Gal. 4:25-26). Those

honors had been transferred to the heavenly Jerusalem, which would only be revealed at the final judgment (Rev. 21-22).

## ARCHAEOLOGICAL SITES

The following alphabetical list contains each archaeological site shown on the preceding map, plus ancient or modern alternative designations which may be encountered in secondary literature.

## Key to Spellings

*Italic type*: Arabic place name, e.g., 'Abdah  
Roman type: ancient place name, e.g., Eboda  
[Brackets]: modern Hebrew place name (if different from other designations), e.g., ['Avdat]

**CAPITAL LETTERS**: IDB [S] entry (often with phonetic symbols added, e.g., ACCO)

(Parentheses): nearby village by which a site is sometimes identified, e.g., (Abu Ghosh)

/: alternative spellings, e.g., 'Araq el-Emir/'Iraq el-Amir

//: alternative identifications, e.g., T. Aitun//T. el-Hesi

?: possible identification, e.g., T. Kison?

## Abbreviations

T.: Tell (Arabic); Tell (Hebrew) = mound

Kh.: Kirbat (Khirbet) = ruin

H.: Horvat = ruin

The spellings used here are popular ones, although variations will often be encountered in secondary literature, e.g., h/h/ch/kh; e/eh/a/ah; b/bh/v; f/p/ph; k/k/q; s/ts/z/tz; i/e; o/u; al/el; ain/ein/en.

'Abdah: Eboda; ['Avdat]
