## EDITOR'S PREFACE

Since its publication in 1962, *The Interpreter's Dictionary of the Bible* has established itself as an indispensable reference work. Year after year it has been purchased and used by pastors, priests, rabbis, students, teachers of religion, and, indeed, by persons in many walks of life who are interested in understanding the Bible in its cultural and historical setting.

### *The Need for a Supplement*

During these years, however, scholarly work in all areas of biblical knowledge has moved forward. The publishers of IDB, recognizing the need for keeping the work as nearly up-to-date as possible, decided in 1973 to prepare a supplementary volume that would make necessary additions to articles in areas where new knowledge had been gained and that would present new articles on topics not treated in the original four volumes.

Every effort has been made to preserve the positive values of the project as it was originally planned. The Supplement is directed to the same diverse audience, and consequently the articles range from those of wide general interest to those that are rather technical in nature and will be of major interest to persons who are able to use the ancient languages. The editors have sought to stimulate the interpretation of the Bible through articles on exegesis and hermeneutics and an extended series on the history of interpretation. At the same time they have sought to promote greater understanding of the ancient languages and the history of the transmission of the text.

In recent years there have been many changes in the way the belief structures that are reflected in the Bible are understood. The presuppositions and conclusions of biblical theology have been questioned in the light of a deeper understanding of the Bible, as has our under-

standing of the relationship of history and revelation. Contemporary discussions of Christology, the wisdom movement, and the role of sacrifice in the OT are also included in the Supplement, to mention only a few areas.

A primary area in which knowledge has increased is archaeology, including the new discipline of underwater archaeology. The supplement contains an article on methods and techniques and a number of articles on specific sites. There is also a major article, SITES, ANCIENT, IDENTIFICATION OF, a complex issue where new data may lead to the modification of long-accepted views.

Inscriptions and written manuscripts in a variety of languages have continued to come to light, and as newly discovered texts are published, scholarly research becomes possible in wider circles. There continues to be great interest in the Dead Sea Scrolls, and intensive study of the Gnostic documents from Nag Hammadi in Egypt has cast new light on the origins and development of Gnosticism. This latter collection of writings had only begun to be available to the scholarly world when IDB was published.

### *The Contributors*

In order to present such a large and varied amount of information, the editors of the Supplement have called on some 271 writers, resident in many parts of the world. Some had contributed to the original four volumes, but many others are younger scholars who have established themselves in recent years. The original work was broadly based and brought together Jewish and Protestant scholars in a fruitful collaboration. In the Supplement many Roman Catholic writers are to be found. A measure of the progress in ecumenical co-operation may be seen in the fact that it now seems surprising that there

were no Catholics involved in the preparation of the first four volumes. In addition, many more Israeli writers have contributed to the Supplement than to the original work. Many articles have been written by persons at the forefront of their particular area of research. Others have been prepared by scholars with a broad command of the discipline and wide knowledge beyond their fields.

### *The Nature of the Supplement*

The format is the same as that of IDB, so that the set now consists of five volumes, rather than four. The editors have continued to use the Revised Standard Version as the basis for all citations of scripture, although renderings of more recent translations have been taken into account. The general style of language is the same. Authors and editors have endeavored to achieve a clear, forceful, and contemporary English style, especially where the difficulty of the content makes readability even more desirable. Often this has involved hard decisions as to where technical language ends and jargon begins.

A particularly valuable feature of the original is the presence of a large number of photographs. The Supplement contains eight pages of color photographs, particularly related to the articles on art. Color maps provide cartographic information not found in the first four volumes. In addition, there are a number of black-and-white maps, sketch maps of sites, and a wide selection of black-and-white photographs.

In the bibliographies to the articles, titles of works that have been translated from foreign languages are given in English. The date of publication, however, is that of the original work. If a number of years elapsed before the translation was published, this date is given in brackets, e.g. [ET 1975].

One measure of the Bible's impact on culture is its ability to speak to changing concerns of society. Accordingly, articles deal with the role of Blacks in antiquity, the status of women, attitudes toward various aspects of human sexuality, and the relation of the Bible to modern science. Secular disciplines have been drawn on for new insights from linguistics and an-

thropology in an attempt to promote interdisciplinary study and co-operation. Questions of the nature of language and of the way linguistic forms and semantic structures change and evolve are vitally important to the study of any ancient document. And just as the men and women of the Bible can be better understood in the light of their contemporary cultures, so too they can be better understood in the light of cultural anthropology and knowledge of the way all human cultures function.

### *Cross References*

In the Supplement an asterisk appears in front of certain entries. This indicates that the article supplements an article of the same or similar title in the first four volumes. For example, the asterisk at CRUCIFIXION, METHOD OF will take you to the original article on CRUCIFIXION, and the one at DEATH, THEOLOGY OF to DEATH.

Similarly, an asterisk before an article in recent printings of the original four volumes will lead to a new article with the same title or a similar one, or to a dummy entry that refers you to one or more articles in the Supplement. In addition there are numerous cross references in the supplementary articles to the original work, e.g., see PHILIPPI, or to the supplement, e.g., see PHILIPPI[S]. Occasionally a reference to the Supplement takes the form "see supplementary article." Titles of articles found in small capitals in the body of an article may refer to both the original article and the supplementary one.

### *Procedures*

The Editorial Board held its first meeting in the fall of 1973. The first task was to determine the nature and extent of the Supplement within the limits of one volume. Reviews of IDB had pointed out various omissions and occasionally an area where a writer had failed to take into account the full range of scholarly debate. In addition, many users of the encyclopedia had written the publisher and made suggestions. And the editors themselves had particular interests and concerns. We were all mindful of the thorough job that our predecessors, the editors of the first four volumes, had done, and we are grateful for

## EDITOR'S PREFACE

the personal encouragement they gave us as we started to work.

The staff of Abingdon Press gave expert guidance and assistance at every stage. Jean Hager, special projects editor, Jeannie Crawford, editorial assistant for the Supplement, and David Wilson, book design supervisor, deserve particular recognition. Emory Bucke, senior editor of Abingdon Press, provided continuity with the original work, supporting us with encouragement, advice, and a never-failing sense of humor.

A particular source of satisfaction in a work of this sort is being able to draw upon the specialized knowledge and skills of colleagues. Lloyd Bailey, Associate Editor for OT, and Victor Furnish, Associate Editor for NT, brought to the project not only their own experience but the benefits

of their wide contacts in the scholarly world.

### *In Conclusion*

In preparing a work of this nature it is easy to become preoccupied with the details of scholarship and to see that scholarship as an end in itself. But the example of our predecessors and the expressions of appreciation from users of the first four volumes led us to see this supplementary work in a larger light, as an aid to the understanding of the Bible, designed to inspire those who use it and to strengthen and deepen their faith. May the joy of study and the delight which knowledge brings lift our eyes to the One who is in every age his people's constant help.

**\*AARON, AARONIDES.** The Bible reveals two Aarons: one is the brother and partner of Moses, leading Israel out of Egypt and through the wilderness; the other is a priest and the progenitor of an exclusive priestly class, the "sons of Aaron," or the Aaronides. The prophets and the writers of Samuel and Kings know only the first Aaron, while the second Aaron (and the Aaronides) co-exists with the first Aaron in the Pentateuch, Joshua, and Judges. Scholars have consistently demonstrated that the Aaron who sires a priesthood is to be found exclusively in the so-called P source (see DOCUMENTS; PRIESTLY WRITERS[S]). Since scripture attests to two Aarons, and since the two Aarons co-exist only in those composite books in which the work of P is evident, it is essential that we first turn to the prophets and those historical books of the Bible which seem to be free of P's handiwork.

It is striking that in the prophets, Aaron, like Moses, is rarely mentioned. Indeed, only Micah 6:4 mentions Aaron as having, along with Moses and Miriam, led Israel out of Egypt. All that we can deduce from this single reference is the fact that Aaron was known to have been a co-leader with Moses and Miriam, and that this co-leadership did not involve either Aaron's being a priest himself or the father of the Aaronides.

When we turn to the book of Kings, we do not learn even this much. Neither Aaron nor the Aaronides is mentioned.

If, then, we extrapolate from the one verse in Micah, our only source predating the promulgation of the Pentateuch (ca. 445/ca. 397 B.C.; see CANON OF THE OT §2; CANON OF THE OT[S] §§1, 4a), we may give credence to those Pentateuchal texts which picture Aaron as the co-leader with Moses in Egypt and in the wilderness. A similar credence may be given to equivalent texts in Joshua (21:19), I Samuel (12:6, 8), and Psalms (77:20 [H 21]; 105:26).

**1. Aaron as brother of Moses and as co-leader.** Aaron emerges as a co-leader with Moses when Moses is reluctant to speak because he was "slow of speech and of tongue" (Exod. 4:10). From then on, Aaron not only serves as Moses' spokesman, but plays an active role in his own right (4:27-31; 7:9-10, 19; 8:5-7, 16-17; 9:27-28; 10:3-6).

His partnership with Moses is summed up in Exod. 11:10: "Moses and Aaron did all these wonders before Pharaoh; and the Lord hardened Pharaoh's heart."

Following the exodus from Egypt, however, the role of Aaron as Moses' partner diminishes. To be sure, Aaron experiences along with Moses the hostility of the Israelites in the wilderness (Exod. 16:1-3). So, too, it is Aaron whom Moses assigns to tell the people that Yahweh will provide them with food (Exod. 16:9-12). Aaron, like Moses, Nadab, Abihu, and the seventy elders, sees the God of Israel, but is not stricken (24:9-11). Similarly, Aaron, no less than Moses, angers Yahweh by striking the rock (Num. 20:1-13). He is alongside Moses when the spies return with their report (Num. 13:25-29). Indeed, Yahweh commands Aaron, no less than Moses, to communicate to the people Yahweh's curse on the generation of the wilderness (Num. 14:26-38). As punishment, Aaron, along with Moses, is denied the right to lead the people into the Promised Land (Num. 20:12). Yet, aside from these instances, Aaron's role is diminished, giving way to Joshua as the emergent leader. In Exod. 33:7-11 Joshua is Moses' understudy and looks after the tent of meeting; and in Exod. 17:8-16 Joshua leads the people in battle while Aaron and Hur merely hold up Moses' hands. Aaron ascends the mountain with Moses but must stand at a distance with Nadab and Abihu as Moses alone speaks with Yahweh (Exod. 24:1-2). Even more corrosive of Aaron's leadership was his building of the golden calf, which angered Yahweh and Moses (Exod. 32:1-35), and his joining with his sister Miriam in stirring discontent with Moses' leadership—an act of disloyalty which so provoked Yahweh that he struck them both with leprosy for seven days (Num. 12:1-16).

According to Num. 20:22-24, 29, Aaron died on Mount Hor, outside the Promised Land, because he had rebelled against the command of Yahweh. According to Deuteronomy, however, Aaron died either on Mount Hor (Deut. 32:50) or at Moserah (Deut. 10:6).

Aaron figures in Deuteronomy only as the builder of the golden calf, who so roused Yahweh to anger that only the prayerful intercession of Moses spared him (9:20). Otherwise we have only the brief notice of his death.

**2. Aaron as progenitor of an exclusive priestly class.** A radically different Aaron, however, appears alongside Aaron the co-leader of Moses in the Pentateuch and in Joshua. This Aaron, though still the brother of Moses, is pre-eminently a priest and the progenitor of a priestly family, "the sons of Aaron." It is to this priestly Aaron that much of Exodus (25-31; 35-40), all of Leviticus, and most of Numbers (1-10:25; 15-19; 25-35) are dedicated. Indeed, anyone who reads without interruption the books of Exodus, Leviticus, and Numbers will be struck by the overwhelming focus on Aaron, his sons, the cultus, and the tabernacle. Although Yahweh reveals his will and his teaching through Moses, it is Aaron and the Aaronides who are his prime concern, and the objects of his loving care. Moses pales before Aaron. See, however, LEVITICUS[S] §2.

Thus, whereas Moses was to transmit none of his authority to his sons, Aaron was to transmit his authority to his sons, and his sons only. Whereas God might from time to time speak to Moses face to face, the rules mandating the hegemony of Aaron and his sons over the cultus were proclaimed by Yahweh himself as eternal laws, unto all generations. Whereas Moses was here today, but gone tomorrow, the Aaronides are to enjoy their exclusive prerogatives of priests forever.

Aaron's authority and prestige—as well as that of his sons—are strongly underwritten. It is Yahweh himself who commands Moses, on Sinai, to establish a priestly system under Aaron's exclusive control (Exod. 28:1-2). Aaron and his sons alone are to offer the sacrifices (Num. 18:1-7); and they are to bless the people (Num. 6:22-27). When Korah and his fellow Levites challenge Aaron's supremacy, Yahweh buries Korah and the other rebels alive, and lashes out against Korah's sympathizers with fire and plague which only the firepans of Aaron can halt (Num. 16:1-50 [H 16:1-17:15]). The Levites are to function as Aaron's servants and under penalty of death are prohibited from burning sacrifices on the altar (Num. 18:2-7).

Aaron and his sons are charged with distinguishing between the holy and the profane and with teaching the children of Israel all the statutes which the Lord spoke to them by the hand of Moses (Lev. 10:10-11)—in contrast to Deuteronomy, where the entire tribe of Levi is charged with this authority (Deut. 17:8-11; 18:1-5; 33:10); and in contrast to Ezekiel (44:15-24) where the "sons of Zadok" are to do the distinguishing and the teaching.

Aaron's pre-eminence as the grand expiator is highlighted when Yahweh commands Moses that Aaron alone is to enter the holy of holies on the Day of Atonement (*see* ATONEMENT, DAY OF[S]) to make expiation for the entire people (Lev. 16:1-34). This procedure is to be followed, year in and year out, by Aaron during his lifetime and by his legitimate successor as an everlasting statute (Lev. 16:32-34).

Great care is taken to make certain that Aaron's authority will not be interred with his bones. Yahweh commands Moses and Aaron to ascend the mountain with Eleazar, Aaron's son, and strip Aaron of his garments and put them on Eleazar. Only then is Aaron "gathered to his people" (Num. 20:22-29). Most importantly, Moses turns over the mantle of his leadership to Joshua in the presence of Eleazar and bids Joshua to heed Eleazar the priest—"at his word they shall go out, and at his word they shall come in" (Num. 27:12-23).

The Aaronide texts of the Pentateuch reveal a stage in the religion of Israel that contrasts sharply with other stages. Thus, the tent of meeting of Exod. 33:7-11 bears only a nominal resemblance to the tent of meeting/tabernacle of the Aaronide texts. The former, unlike the latter, is a simple tent without altars or other cultic appurtenances, and the caretaker of the tent is Joshua, not Aaron. Indeed, this tent is set aside for God's revelations to Moses, face to face (Exod. 33:11). Likewise, the cultus envisaged in Exodus

(20:24-26) provides for an altar wherever Yahweh causes his name to be mentioned, but makes no provision that this altar be set up either in the tent of meeting or in the tabernacle. No priestly class is endowed with exclusive altar prerogatives, nor is Aaron linked to such an altar in any way. Indeed, Aaron does not participate in the sacrifices following the theophany, even though Moses does (Exod. 24:1-8).

If, then, we set the two Aarons alongside each other, and if we compare the systems with which each is associated, we are struck by their incongruence. Aaron as co-leader never serves in a priestly role, even when Moses on one occasion builds an altar and dashes blood upon it (Exod. 24:3-8). The only cultic act ascribed to this Aaron—the building of the golden calf (Exod. 32)—scarcely commended him for an eternal priesthood! And as for the system which functions alongside this Aaron, it is one which makes no provision for a differentiated priesthood, or an elaborate cultus, or a resplendent tabernacle.

By contrast, the second Aaron is pre-eminently *the* priest, and he functions within a system which is pre-eminently cultic and which focuses on the expiatory role of the altar and the priesthood. It is a system in which the simple tent of meeting where Yahweh spoke to Moses face to face has been transformed into a magnificent tabernacle which Moses is unable to enter (Exod. 40:34-35). It is a system in which not only the three festivals—Passover, Pentecost, and Tabernacles—have become the occasion for massive sacrifices (Lev. 23:4-21, 33-43; Num. 28:16-31; 29:12-40), but each day there is to be a continual offering morning and evening (Num. 28:1-8). It is a system which even operates with a ritual calendar uniquely its own. Unlike Exod. 23:14-17 and Deut. 16:1-17, where no festival has a specified calendar date, and where numbered months are not used, it has fixed dates for Passover and for Tabernacles—not to speak of the first day and tenth day of the seventh month (Lev. 23:23-32; Num. 29:1-11)—and adheres meticulously to a calendar of numbered months. A sacred calendar so radically different from that attested to in the non-Aaronide levels of Exodus and Numbers and in Deuteronomy is a matter of no little significance. Indeed, could a more firm foundation for hegemony in Israel be envisaged than a calendar that bound the people, day in and day out, to the horns of the altar and to the priests who burnt the offerings to Yahweh upon it?

The Aaronide system is thus unique. Yet it is this "new creation" and none of the other systems that was functioning when the books of Chronicles and Ezra were published and when Ben Sirach penned his Ecclesiasticus. Indeed, the author of Chronicles so takes for granted that Yahweh revealed Aaronidism in the wilderness that he does not hesitate to rewrite the history of the monarchical period in such a way that its leitmotiv is the Aaronide priesthood, ministering at the altar in Jerusalem. No less striking is the testimony of Ben Sirach (*ca.* 280 or 180 B.C.). He describes the Aaronide system as a functioning reality which arouses within him exultant joy (Ecclus. 50:1-21).

He not only glorifies Aaron even more than Moses (45:1-22), but he also affirms that Aaron is to have authority over the commandments, statutes, and judgments, and to teach the testimonies and the Law (45:17). And, finally, there is the Samaritan schism (ca. 350 B.C.). So firmly established was Aaronidism that when the Samaritans broke away they took Aaronidism along with them. See SAMARITANS; SAMARITANS[S].

So effective, in fact, was the Aaronide system that it flourished until the eve of the Hasmonean Revolt, when the legitimate high priest, Onias III (ca. 180 B.C.), was ousted by his brother Jason, who bought the office from Antiochus. Although the priestly system was revived following the successful revolt, it no longer enjoyed the hegemony of years gone by. Simon the Hasmonean was elevated to the high priesthood by a great synagogue (I Macc. 14:41), even though he was not of the Aaron, Eleazar, Phineas, Zadok line, and a revolutionary scholar class, the Pharisees, arrogated to themselves the authority over the Law and over the Aaronides (see PHARISEES[S]). So long as the temple stood, the sons of Aaron continued to enjoy their exclusive right to offer the sacrifices, but once the second temple was destroyed by the Romans, the Aaronides faded out except for such vestigial honors as having the right to be called first for the reading of the Torah, to bless the congregation on the holidays, and to receive the five shekels on the occasion of the redemption of the first-born son.

Since the triumph of Aaronidism is thus more than amply attested, we are confronted with the problem of how so remarkable a system could have emerged. Unfortunately, the Bible, our only source, is not explicit. All that we can do is to point out that sometime after 445 B.C. (or 397 B.C.) the finalized Pentateuch with its focus on Aaron and the Aaronides became operative and the Aaronides were flourishing, whereas by contrast, as late as Malachi (ca. 450 B.C.) neither Aaron as priest or Aaronides as priesthood is anywhere attested to, not even in Ezekiel. We must, therefore, conclude that the Aaronides come to power with the finalized Pentateuch and, as such, are their own creation (see, however, ZADOK THE PRIEST[S]). The problem of how the Aaronides coalesced into a class; how they canonized the Pentateuch and promulgated it as the immutable revelation of Moses; and how they convinced the restored community to adopt the Pentateuch as the final and ultimate revelation so that they no longer looked to prophets as the articulators of Yahweh's will, we know not.

Yet we may guardedly speculate on the basis of the Aaronide data in the Pentateuch and on the basis of the operational Aaronidism described by Ben Sirach that a class of priests, denominating themselves the sons of Aaron, emerged to solve a series of problems: (1) the failure of Deuteronomy to serve as a viable blueprint for the restored community; (2) the failure to eliminate prophecy despite the cacophony of prophetic voices urging mutually exclusive plans of action; (3) the need to work out a *modus vivendi* with the Persian rulers that would, in return for Aaronide hegemony, assure them the loyalty of the restored

community in a way that neither prophets nor Davidic kings possibly could. And since the historical record leaves no doubt that after a certain date, whether 445 or 397 B.C., the canonized Pentateuch was accepted by Jews everywhere; that the Aaronide priests were exercising hegemony over the Law and the cultus; that scions of David were neither sitting on the throne nor aspiring to it; and that the voice of the prophet was no longer heard in the land; we must conclude that our ignorance of the how, the why, and the when of the triumph of the Aaronides and the canonization of the Pentateuch cannot erase the fact that the Aaronides did indeed do what they did and their stunning success attests that they did it remarkably well.

\***ABBA.** J. Jeremias, in his essay "Abba," first published in 1966 and subsequently included in *The Prayers of Jesus*, SBT, 2nd ser., VI (1967), 11-65, concludes that there is no evidence of "my Father" having been used as a personal address to God in early Palestinian Judaism. He argues further that the primitive church's use of the simple "Abba!" (Gal. 4:6; Rom. 8:15b-16) in addressing God goes back to Jesus himself, is representative of Jesus' own unique personal piety, and constitutes a central element of his faith in God. Jeremias holds, moreover, that Jesus' private teaching to his disciples included the instruction to address God in this intimate way, especially in prayer. For briefer presentations of Jeremias' views: *The Central Message of the NT* (1965), pp. 9-30, and *NT Theology: The Proclamation of Jesus* (1971), pp. 61-68.

W. R. FARMER

**ABBREVIATIONS, HEBREW TEXTS.** Abbreviations (abbr.) originated in the desire to conserve space, especially in the use of common words, or in marginal notations (which often were subsequently transferred to the text). When not recognized, they were often subsequently falsely rewritten or misvocalized. Thus numerous textual difficulties have entered the MT.

**1. Nonbiblical examples.** Simple abbr. are known in Akkad., e.g., *ku* for *kusarikku*, "ram." In a more complex example, Marduk is called 'IM.KU.GAR. RA, an anagram (of Sumerograms) which provides a sentence description of the god's characteristics. This latter type is well attested in *Enuma elish* VII.

Examples in alphabetic script come from Ugarit and Phoenicia. In the names *b Plšb l* and בִּישְׁבִּל the *b/ב* is an abbr. for *ben*, "son of." In the Lachish inscriptions, *ב* is an abbr. for *בִּקֶּץ*, a weight. The Elephantine papyri often have *ש* for שקל (*shekel*) and *ב* for בית ("house"). Aramaic endorsements on cuneiform contracts include שַׂרְרַת-אִשְׁתָּר for Šarrat-Ištar and אַרְבֵּלְטָר for 'Arbel-Šarrat. In the DSS (CD

XV.1) אל is an abbr. for אלהים (Elohim) and אדני (Adonay). In coins of John Hyrcanus I and II and Alexander Jannaeus חב is an abbr. for חברה ("community") and היה for היהודים ("the Jews").

2. The MT: method. We may be alerted to a possible abbr. by difficulties of grammar, formulation, or syntax, but authentication must be based upon sound comparative method, sane contextual judgment, and intrinsic probability. Of special importance are variants between the MT and the ancient versions or between parallel or synonymous passages. Although such variants provide material for sound comparative judgment, it is not always possible to decide whether the abbr. is original or merely has been assumed by a translator or copyist. In such cases, intrinsic probability is the only evaluative guide.

3. The MT: classification and examples. a. MT vs. the versions. i. Omission of plural termination. MT I Sam. 28:9 ידעני ("wizard") is likely an abbr. for ידענים (so LXX, Syr., Vulg.; cf. vs. 3; Lev. 19:31; 20:6). An alternative explanation would be error through haplography. See also II Sam. 22:44 = Ps. 18:44 עמי/עמי ("my people"/"people")—cf. עמים in the versions.

ii. Abbr. of the divine name. The assumption that י and ה are abbr. for יהוה (YHWH) explains MT Lev. 6:17 [H 10] מאשי ("my offering by fire")—cf. the versions and vs. 18 [H 11] מאשי י (יהוה) ("from the Lord's offering by fire"); MT Jer. 6:11 עברי אנכי—cf. LXX החטיי; MT Jonah 1:9 חטתי—cf. LXX אני י; MT Jer. 25:33 ביום ההוא עבר י אנכי ("on that day")—cf. LXX 32:33 ביום ה ("on the day of the Lord"); MT Prov. 24:7 פיהו—cf. LXX ה פ.

iii. Similarity of initial letter(s). Hence LXX assumes (עקב) for MT (ישראל) ("Israel") on eleven occasions and ישראל six times for MT יעקב. Note MT Jer. 32:26 אל ירמיהו ("to Jeremiah")—cf. LXX אלי ("to me"); 33:7 ישראל—cf. LXX ירושלים; MT Judg. 1:16 העם—cf. LXX העמלקי; MT Isa. 53:8—cf. LXX למוה, note the parallelism.

b. Parallel or synonymous MT passages. i. Omission of plural termination. See I Sam. 28:9 (§ai above).

ii. Abbr. of the divine name. Note Ezra 1:3 יהי אלהיו עמי ("may his God be with him")—cf. II Chr. 36:23 יהוה אלהיו עמו ("the Lord his God be with him!"); Josh. 22:16 יהוה עדה—cf. 22:18 עדה ישראל.

iii. Similarity of initial letter(s). ליחיה שמרים ("watching kept to the Lord") in Exod. 12:42b is difficult, but a parallel is restored if the original was ליל שמרים ("a night of watching") as in vs. 42a. ביום in Lev. 14:57 may be a mistaken expansion of בי (בין) as suggested by 10:10, 11:47, and the versions. Note also II Sam. 24:13 (שבע שנים)—cf. I Chr. 21:12 (שלוש שנים); Jer. 39:5 (וישמע)—cf. 52:8 (אחרי המלך); Isa. 37:9 (וישמע)—cf. II Kings 19:9 (וישב).

c. Abbr. suggested by MT error or difficulty.

i. Omission of termination. I Kings 19:11 has the masc. חזק ("strong"), possibly a shortened form of the fem. necessary for agreement with רוח ("wind"). In Prov. 3:18 מאשר may represent a masc. plural.

ii. The divine name. The object denoted by לי ("to me") in Exod. 4:25 is obscure. May it be an

abbr. for ליהוה? In Num. 16:11 the context requires that Moses say, "against me (עלי) and Aaron" (cf. vs. 3), which likely has been expanded erroneously into the present "against the Lord (על יהוה) and Aaron."

iii. Initial letters. Neither Jehoshaphat nor Ahaz was king of Israel, and thus מלך ישראל in II Chr. 21:2 and 28:19 is an error for יהודה.

d. Abbr. which are notriks and/or glosses. i. Notrikon is a rabbinic term for an anagram or acronym. They may be suggested by the versions: 85 (שמיני והמשה) in MT I Sam. 22:18—cf. 305 (שלש מאה וחמשה) in LXX; an original שם was read by the former as an abbr., but by the latter as a notrikon. By parallel MT passages: Jer. 7:4 המה ["these"] stands for המקום הזה ["this place"] as is clear from vs. 3; cf. II Chr. 8:11. And by difficulties in the MT: we expect the name Achish son of Maoch [אכיש בן-מעוך] in Ps. 34:1, based upon I Sam. 21:13-15 [H 14-16]; 27:2; the notrikon אכש has been misunderstood as an abbr. for Abimelech [אבימלך] based upon 21:1 [H 2]. See WORD-PLAY IN THE OT[S] §1b.

ii. Glosses, once marginal or supralinear, are compact lexical, grammatical, and theological notations. Hence in Ps. 61:7 [H 8] the problematic מן (RSV "bid") may have been a marginal notrikon for מלא נון (i.e., the letter nun, in the following verb, is unexpectedly preserved). In Job 34:36 the superfluous אבי may have been a marginal rebuttal in notrikon of vs. 35 ("Job speaks without knowledge"): איוב בדעה ידבר ("Job does speak with knowledge!"). See INTERPRETATION, HISTORY OF[S] §A1b, c.

e. Abbr. suggested by Masoretic features. i. QERE-KETHIBH. In I Sam. 20:38 החצי ("the arrow") may be an abbr. for the plural found in the marginal qere.

ii. Maqqeph. When it has neither grammatical nor syntactical function, it may indicate an abbr. (so Perles). In II Kings 2:14 אף-הוא may indicate איפה הוא ("Where is He?"), parallel to איפה יהוה ("Where is the Lord?").

iii. Paseq. In addition to II Kings 2:14 (above), see I Sam. 9:12 לפניך מהר ("... just ahead of you. Make haste"), possibly indicating הרמה לפניכם ("The Seer is just ahead of you").

\*ACCO. From 1950 onward excavations were undertaken by the Israel Department of Antiquities, and from 1973 on, by Haifa University and the Department of Antiquities, headed by Dothan and Lindner.

As attested by archaeological remains, Acco (Tel el-Fukhkar, now called Tel Acco) was founded in the Middle Bronze Age (MB II), probably as early as the nineteenth century B.C. It immediately became one of the greatest coastal cities of the Levant, covering over forty-five acres. Surrounded

by an immense earth wall, the city towered above the estuary of the Belus River, which provided a large outer and inner anchorage. Far-flung maritime and commercial connections during the Late Bronze Age are illustrated by the contents of tombs just N of the gates: a scarab and seal of Amen-ophis III (1412-1375 B.C.), as well as a Mitanni cylinder seal. Other finds included a gold diadem of Mycenaean inspiration; Mycenaean pottery; and, most remarkable for the archaeological student, a few Late Minoan IIIB sherds. Pottery of the twelfth to eleventh centuries proves that after the devastations by the Sea Peoples (see PHILISTINES), Acco retained its significance. This is also shown by the inability of the tribe of Asher to take Acco or any other maritime city (Judg. 1:31). Except for a short period at the time of David, Acco and Tyre were in possession of the coastal strip until the Assyrian conquest. Hundreds of seals, scarabs, and a few bullae show that Acco, under Assyrian and Babylonian suzerainty, recovered many of its connections overseas.

By the fourth century B.C., a colony of Athenian merchants lived in Acco. The city continued to expand rapidly at the beginning of the Hellenistic age after Tyre had been destroyed by Alexander the Great. In the third century B.C., Acco (now called Ptolemais after Ptolemy II of Egypt, who had seized it in 281 B.C.) had grown to at least twice its former size, stretching W to the coastline. In the Hellenistic age a new harbor was built, and the site became the chief arsenal between Egypt and Syria. Probably as a result of the wars between these two powers over Phoenicia, Acco ceased to be occupied. New city walls were built in the second century B.C., apparently enclosing the peninsula at the tip of the bay and leaving the tell outside.

After the Arab conquest (A.D. 636), Acco dwindled in size. During Crusader times, particularly in the thirteenth century, it regained magnificence, size, and splendor, since it became the major port of entry into the Holy Land.

\***ACHOR.** In the Iron Age the Valley of Achor probably designated that desert region some three miles W of the Dead Sea, known today as the Buqe'ah (little valley). It is bounded on the N by the Wadi Dabr-Mukellik system and on the S by the Wadi en-Nar.

The key to this identification is the list of place names and landmarks running from Jerusalem (Jebus) to the Jordan River, delineating the boundary line between the tribal claims of Benjamin to the N and Judah to the S. The southern boundary of Benjamin is defined moving downhill, W to E (Josh. 18:16-19), passing from Jebus to En-rogel in the Kidron Valley, En-shemesh ('En Hōd), Geliloth, the Stone of Bohan (Hajar el-'Eṣba'), Beth-arabah (following Josh. 15:6), and Beth-hoglah (by 'Ain Hājla). The northern

boundary of Judah is defined moving uphill, E to W (Josh. 15:6-8). These two lists are virtually identical except for one critical difference: the insertion between "Gilgal" (read Geliloth) and the Stone of Bohan in Josh. 15:7 that the boundary of Judah "goes up to Debir (a site on the Wadi Dabr?) from the Valley of Achor." If Wolff were correct in locating Achor N of Jericho near the Wadi en-Nu'eima (surely in Benjaminitic territory), it would be most surprising to find the Valley of Achor used as a geographical referent in the description of the boundary line of Judah but not of Benjamin.

When Hosea, in an eschatological motif concerning a second Exodus-Conquest, refers to the Valley of Achor as the "door of hope" (Hos. 2:14-15 [H 16-17]), he may be making an ironic reference to this wilderness area, which served as an important but troublesome thoroughfare leading from Moab to Jerusalem in the Iron Age.

It takes about six hours to ride on horseback from Jerusalem down the Kidron Valley into the Buqe'ah, along the Wadi Dabr to Khirbet Qumran, up to Hājla Ford, and across the Jordan River. Before the Roman road was built along the Wadi Qelt from Jerusalem to Jericho, this was the main route between Judah and Moab.

The three rectangular compounds which form a N-S line of paramilitary settlements in the Buqe'ah may be mentioned in the list of six "cities" included in the desert province of Judah (Josh. 15:61-62). Only the southernmost, En-gedi (Tell ej-Jurn), can be identified with certainty. Archaeological evidence from the founding levels of these sites indicates that the desert province list could not have been compiled before the latter half of the seventh century B.C.

It was probably during the expansionist policies of King Josiah that frontiersmen and their families, never numbering more than one hundred settlers at most, established these permanent forts and farms in the Buqe'ah, an important link between Jerusalem and newly founded oasis settlements on the western shore of the Dead Sea. The soldier-farmers were able to maintain their paramilitary posts by building terrace dams and sluice gates for harnessing the flood waters which coursed down from the Judean Mountains to the W. In addition to the cultivation of wheat and barley, there is also archaeological evidence that they raised sheep and possibly goats. Two *lam-melekh* (belonging to the king) stamped handles discovered at Samrah suggest wine imports from the hill country.

When Jerusalem fell to the Babylonians under King Nebuchadrezzar, the Buqe'ah was once again abandoned to become the camping grounds of seasonal pastoralists, the hiding place of fugitives, and the haunt of brigands.

\***ACHZIB (IN GALILEE)**. Surveys and excavations were made by Prausnitz in 1958, 1960, and 1963-64 on behalf of the University of Rome and the Israel Department of Antiquities. Surrounded like an island by bays and river beds, Achzib was fortified by an earthen rampart in the Middle Bronze Age (MB II), near the end of the nineteenth century B.C. From the end of the eleventh century to the sixth century, the city prospered greatly and spread E to the mainland to which it has been linked ever since.

Two cemeteries of Achzib were excavated in continuation of work undertaken in 1941-42 by the Palestine Department of Antiquities. A new cemetery, situated beneath the walls of the city, was discovered and revealed well-built megalithic cists. One cist tomb contained the skeleton of a warrior and, apparently, his wife. The male had a bronze ritual double axe and a lance, as well as an iron dagger with bronze rivets and a copper bowl. The female's garment was closed by a fibula. The finds date the cists to the eleventh century and indicate that some of the tombs belonged to Sea Peoples other than the PHILISTINES.

Excavations in the E cemetery, er-Ras, and the S cemetery, Minat ez-Zib, made it possible to distinguish four different types of Iron Age burials:

(1) Inhumations of individuals in cists or in elongated pits, sometimes walled, as was common along the Palestinian coast at the end of the Late Bronze Age.

(2) Cremation-urn burials similar to those found in Neo-Hittite cemeteries in Syria.

(3) Rock-cut family tombs consisting of a shaft leading into the burial chamber with benches alongside three walls. The entrance was carefully sealed by a door slab. This type of burial is akin to the Israelite graves of the Iron Age.

(4) Rock-cut family tombs, shaft and chamber, with a *bemah* built above and into the ceiling of the chamber. On the *bemah* were found a table altar for offerings, stands, and libation vessels. This indicates traditional Canaanite practices.

The rock-cut family tombs were found to contain four hundred or more skeletons, which apparently belonged to the great families of Achzib. The tombs are believed to have been used for generations from the tenth century to the eighth century B.C., when the elite of Achzib, like that of Tyre, fled overseas before the city was captured by the Assyrians in 701. See *TOMB[S]*.

**ACROSTIC.** See *MNEMONIC DEVICES[S]* §1.

**ACTS, GENRE.** Since the canonical book of Acts was written as a sequel to the Gospel of Luke (see *LUKE, GOSPEL OF* §2; *ACTS OF THE APOSTLES* §8 and supplementary articles), the question of the literary genre of Acts is bound up closely with the question of the gospel genre (see *GOSPEL, GENRE[S]*). The classification of Luke as more "biographical" and Acts as more "historical" is not fully satisfactory. The general caveat against such classifications expressed by Overbeck, K. L. Schmidt, and others (see *bibliog.*) still holds, especially with regard to the gospels. The primitive literature

of Christianity was the product of eschatologically oriented communities which, for sociological and ideological reasons, did not aspire to the forms of worldly literature.

1. **Cadbury's view.** There are no recently recovered texts which throw much additional light on the genre of Acts, and Cadbury's summary of the data and the issues remains the most balanced and helpful (see *bibliog.*). Like Overbeck and Schmidt, Cadbury cautioned against fitting the gospels and Acts into formal literary categories, even though like them he regarded Luke, of all the evangelists, as coming closest to literary ambitions, especially in Acts (see *ACTS OF THE APOSTLES* §10b). Cadbury remained committed to seeking a genre for Luke's work as a whole, but he did not find it. He concluded that, in spite of Luke's attempt to give literary form and structure to essentially preliterate materials, the separate histories and forms of the traditional units he employed are still apparent: "[Luke's] efforts at literary form only bring into sharper outline the incurably unliterary character of his materials." In Cadbury's view, therefore, Luke's work as a whole has no full analogy in the literary types of his day, even though comparisons can be drawn between them and certain aspects of Luke-Acts.

2. **The recent discussion.** When comparisons are made between the parts of Luke's work and other literary works, differences as well as similarities become apparent. This has been demonstrated by several recent investigators. For example, Luke gave attention to the typical function accorded by Hellenistic writers to speeches set within a narrative (Plümacher). But the missionary speeches he composed for Acts were constructed according to his own theological intention (Conzelmann; cf. Beardslee) and did not follow the model of profane historiography. Moreover, whereas profane writers of the Hellenistic period imitated classical Greek literature, the missionary speeches in Acts imitated the LXX (Plümacher).

The narrative materials in Acts have been compared with Hellenistic romances (Pokorný), and such a comparison is especially important because of the prominence of the travel motif in Luke's work (see *LITERATURE, EARLY CHRISTIAN[S]* §7). But here again significant differences in Acts must be recognized. While Acts places Paul in the classic romance setting, notes numerous narrow escapes, and gives an extended account of the shipwreck (Beardslee), it does not dwell on scenes portraying high adventure, and it lacks such staples of the typical Hellenistic romance as the recognition scene and the erotic motif (Conzelmann, Pokorný). Cadbury noted the dramatic quality of Luke's work, and more recently Haenchen has shown that the dramatic episode is characteristic of Acts (telling history in stories). Plümacher has compared this with numerous instances of episodic style in Hellenistic historiography (e.g., Livy, Curtius Rufus).

It is still debated whether any single genre classification for Acts or (Cadbury's desideratum) Luke-Acts is possible. Conzelmann prefers to describe Acts by the general term "historical monograph" (with examples in Greek and Roman as well as

in Jewish literature, e.g., I, II, III Maccabees). For Luke-Acts as a whole, Talbert has suggested a comparison with those lives of the philosophers which were followed by lists, and sometimes by accounts of members of the school (e.g., Diogenes Laertius). However, Conzelmann is probably right (like Cadbury before him) in concluding that broad, general comparisons of genre are relatively inconsequential, and that those literary similarities which are apparent are with parts rather than with the whole.

**\*ACTS OF THE APOSTLES. I. The theology of Acts.** In 1950 Vielhauer published what was destined to become the programmatic statement for a new wave of Lukan studies. Taken by itself it might fairly well be classed under Cadbury's statement of intention, "description not argument." But Vielhauer's was not the only, or even the first, attempt at a fresh assessment of Luke-Acts. The clouds of what van Unnik would later call "a storm center in contemporary scholarship" had been gathering even before 1950.

**a. Käsemann, Bultmann, Cullmann.** New perspectives on Acts first appeared in print in the November, 1948 issue of *Theologische Literaturzeitung* in a book review by Käsemann, where the subject of apostleship in Acts was treated in some detail. The preceding summer Käsemann had lectured on Acts 1-20 in Mainz; his notes were used by Haenchen as he reworked the first draft (1946) of his commentary on Acts. In his *TLZ* review Käsemann labeled as Lukan the view that an apostle can proclaim "historically verified truth" only because he has witnessed the actual events, and he referred at the same time to the "early catholic concept of the church in Acts, with its theory of tradition and succession." Although the notes of Käsemann's 1948 lectures are not available, his comments in the review can be augmented from the conclusion of an address delivered in 1949, "Ministry and Community in the NT." After noting that the NT lacked those terms for ministerial office which would imply official domination and subjection to it, he analyzed Paul's use of *charisma* as the concept of ministry, and concluded by contrasting the views in Acts with those held by Paul: In Acts, the concept of *charisma* is gone, and Paul himself is portrayed as upholding the "principle of tradition

and legitimate succession." In Acts, the only valid witness is one who was a companion of the historical Jesus from the first (1:21; 10:39) and could thus guarantee the gospel tradition. Käsemann offered several examples from Acts of apostolic authority (e.g., the laying on of hands by Peter in Samaria, and the consequent receipt of the Spirit, 8:14-17) and concluded that the beneficiary of this portrayal is a church having to assert its legitimacy against heresy. It does this by claiming that its position rests on continuity with the original apostolate; outside the church there is no possession of the Spirit and no salvation. In Acts, Käsemann held, a "theology of glory" is in the process of replacing Paul's "theology of the cross."

Coincidentally, the same issue of *TLZ* which contained Käsemann's comments on apostleship in Acts carried a brief paragraph reporting the discovery of some MSS near the Dead Sea (later to figure significantly in the discussion of earliest Christianity, including Acts; see *DEAD SEA SCROLLS*[S] §§7, 8, 9), a lead article by Schlink reporting the First Assembly of the World Council of Churches, and Bultmann's review of Cullmann's *Christ and Time*. The title of Schlink's article, "The Church in God's Redemptive Plan," implied just the kind of redemptive-historical view of the church which Harbsmeier would later find in Luke-Acts and reject (see §1c below). Bultmann's review began by epitomizing Cullmann's position in a phrase which later furnished Conzelmann the title for a book on Luke: "Christ as the middle of time." Moreover, Käsemann's theological charge against Luke was in accord with Bultmann's assertion that Cullmann's concept of salvation history was a "wisdom" for the "mature" that "stands beyond the 'foolishness' of the 'word of the cross' which is the real ground of faith." Bultmann's claim was that, in earliest Christian faith, Christ was regarded as the end and goal of history (and of salvation history), not its center. The association of Cullmann's views with Luke and Bultmann's with Paul and John made Luke-Acts the field of conflict between the two theological forces.

**b. Vielhauer** broke away from the earlier preoccupation with Luke as a historian, by emphasizing the importance of an analysis of the theology in the speeches attributed to Paul in Acts. He thereby posed the question of whether there is a specifically Lukan theology.

Taking his start from Dibelius' study of the Areopagus sermon (Acts 17:22-31: "a Hellenistic speech about the true knowledge of God which becomes a Christian speech only at its conclusion"), Vielhauer went on to offer evidence of a "natural theology" proclaimed by Luke's "Paul." Luke's affinities with the later apologists and his distance from the real Paul were emphasized. The decisive difference between Acts and Paul, according to Vielhauer, is the understanding of the Crucifixion. Paul regarded Christ's death as a judgment on all humanity and also as reconciliation: with Christ's death and resurrection came the turn of the ages, the eschaton. The believer is "in Christ," belongs to the new world, and is thereby a "new creation." Salvation is wholly realized in the Cross

of Christ, and is received by believers as they participate in Christ's body. In Acts, on the other hand, Jesus' crucifixion is viewed as "an error of justice and a sin of the Jews," and no saving significance is ascribed to the Cross. Vielhauer claimed that this is why Acts is silent about the reality of being "in Christ" and has removed eschatology from the center of faith to be a "section on the last things" (Dibelius).

Although, like Paul (and unlike the earliest believers), Luke held that the new age had broken in (Acts 2:16-35; cf. Luke 16:16), he differed from Paul in his belief that the decisive act of salvation would occur only at the *PAROUSIA* (Acts 3:19 ff.). Thus, Vielhauer emphasized the importance in Luke-Acts of a temporal dualism which is resolved only by means of a "continuous redemptive historical process." Luke relates the old and new aeons in his "redemptive historical pattern of promise and fulfillment," and this Lukan theology of history combines the OT belief in God's action on the historical plane with the Hellenistic idea of the kinship between the human race and God. Vielhauer's provocative conclusion was that Luke "no longer stands within earliest Christianity, but in the nascent early catholic church. His concept of history and his view of earliest Christianity are the same as theirs."

*c. The discussion since Vielhauer.* An almost immediate response to Vielhauer's essay came from Harbsmeier, who insisted that Christianity must always make a canonical choice between Luke and Paul, and that it should be a choice for Paul and thereby *against* illegitimate (Lukan) claims of authority by the church hierarchy. Wilder expressed some reserve toward this sort of thinking, noting that in America (as in Greek Orthodoxy) "the category of justification by faith is not emphasized as a hermeneutical key to the NT canon." But Harbsmeier's principle has been reaffirmed, though differently directed, by Kümmel. If the concept of a canon is to be retained (see CANON, NT; CANON, NT[S] §§1-3) at the same time that contradictions within it are recognized, then the "center" of the NT must be defined. In Kümmel's view, this center is to be found by appeal to those chronologically nearest Christianity's origin—Jesus, Paul, and John. Because, he believes, these three are in agreement in a theology of salvation history, Luke's position has been legitimated. Wilckens has also defended the legitimacy of Luke's theology. After analyzing the historical setting of the early discussion (see §1a above), he concluded that Käsemann's criticism of Luke's salvation history merely echoed what dialectical theology had said about liberalism in the 1920s. It is the existentially interpreted Paul, Wilckens contends, not the historical Paul, "who is so sharply set against Luke as the great but dangerous corruptor of the Pauline gospel."

Conzelmann, Haenchen, and others have objected to the imprecise use of such terms as "early catholicism" (*Frühkatholizismus*) which have often been used to describe Lukan theology: certain definite marks of early catholicism (the church, its offices and sacraments as an institution of salvation; the institutionalizing of the Spirit;

apostolic succession) are almost completely lacking. Dahl, Borgen, and Jervell have argued that the differences between Luke and Paul have been overdrawn, and Wilckens has questioned whether, in any case, the one should be compared to the other. The lack of Jesus tradition in Paul (and Hellenistic Christianity) sets him apart from the gospels and shows us "two different realms of tradition." According to Wilckens, neither Luke nor Paul could have built on the theology of the other.

**2. The historicity of Acts.** Implicit in Dibelius' move from a source-critical understanding of the composition of Acts (by joining extended sources) to a more form-critically oriented view (in which the traditional materials existed in smaller separate units) was a reduction of confidence in the historical reliability of the Acts account (see Haenchen). Nor are the difficulties in defending Acts' historicity due simply to form-critical assumptions (see Hurd). Burchard and Löning hold that some historical information on Paul's Christian beginnings was available to Luke—a minimal assumption, since our primary sources (Paul's letters) establish that he had been a persecutor and was a convert—that Paul also knew of traditions about himself (Gal. 1:13-14, 23-24—"you/they heard"—cf. I Cor. 15:9; Phil. 3:6), that Luke had some tradition about Paul in fixed form (e.g., Acts 9:1-19a), and further that he had traditions on matters other than just Paul's beginnings as a Christian (Burchard, e.g., holding that the speeches by Peter and Paul, Acts 10 and 17, while thoroughly Lukan, were formed on the basis of traditions). Yet despite a critical attitude toward Haenchen's general rejection of historical reliability in Acts (see esp. Burchard's circumspect and sensible discussion of the existence, accessibility, and use of historical traditions in Acts), their conclusions put them much closer to Haenchen than to the anxious English (see Gasque and Marshall). While it is true that J. B. Lightfoot and William Ramsey showed Acts to be generally accurate in geographical and political matters (Gasque), it is not persuasive to compare Acts and Judith in this respect. Nor is it convincing, without taking into account that one writer lived centuries after the time setting of his story while the other lived during the conditions referred to, to conclude that one (i.e., Luke) was "careful to get the background right" and therefore "may be expected to tell a reliable story as well" (Marshall). Even if we grant that the author of Acts may have known his setting well and was careful to get it right, we have not thereby established a "reliable story"; correct local color cannot guarantee over-all historical reliability. The evidence so far adduced for the historical reliability of Acts is not persuasive, but the discussion of the matter continues.

**3. Portrayal of Paul.** Löning's detailed analysis shows a pre-Lukan genre shift in the tradition of Paul's conversion: from a novelistic, incredible event to a legend showing divine intervention to protect the worshiping community from persecution (cf. protection of the temple, II Macc. 3). This means, in Paul's case, that the emphasis is moved from the sanctity of the holy place to a

missionary interest in converting the persecutor, an example of gracious election. Luke then moved the emphasis from divine power and gracious election to the "Damascus road experience." Paul saw the error of his ways when he recognized that Jesus was the Messiah, and at the same time he received his call to mission. Thereby Luke makes Paul the embodiment of what is, from the Christian point of view, the continuity of promise and fulfillment. This is what was at issue in the confrontation of the Jewish and the Christian hope. The prominence given promise and fulfillment in Luke's thought (by Burchard as well as Löning) is a return to Kümmel and Schubert and a repudiation of a threefold salvation history as Luke's organizing principle. Luke does not have Paul defending himself in Acts. Divinely commissioned, Paul needs no defense. His speeches are rather polemic against challenges to the legitimacy of the church, wherein Christianity's claim to the promises of Israel is asserted. Luke's concern was the legitimacy of the church at the close of the first century, and he made Paul the advocate of that concern.

W. C. ROBINSON, JR.

**ADAM, APOCALYPSE OF.** A Gnostic secret revelation preserved in Coptic and containing a prediction of future salvation history revealed to Adam. The Apocalypse of Adam is the concluding work in a collection of apocalypses (see APOCALYPSE, GENRE[S]) in Codex V from the Coptic Gnostic

library of NAG HAMMADI, designated as V, 5:64,1-85,32. Until it was first described by Doresse in 1958, the work was completely unknown. The fourth-century heresiologist Epiphanius speaks of "apocalypses of Adam" in use among the adherents of a Gnostic sect called the "Gnostikoi" (*Panarion* XXVI.viii.1), but it is not possible to identify the Coptic work with any of them. A host of pseudographic works under the names of Adam and his son Seth circulated in antiquity among both Jews and Christians, but these works are generally not Gnostic in content. Many of them are preserved in Armenian (see ADAM, BOOKS OF). Like other documents in the Nag Hammadi library, the ApocAd shares a number of features, such as the names of angelic beings, with other Gnostic writings. Most notably, the Gnostic Gospel of the Egyptians apparently presupposes a version of the same mythical narrative.

1. **Origin.** Of the origin of the work, very little can be said. Like most Gnostic literature surviving in Coptic, it was undoubtedly first written in Greek. The extant copy may be dated in the middle of the fourth century, but the original work is perhaps much older. On the basis of its contents, some scholars speak of a first- or second-century date. The place of writing is unknown, and the author has chosen to conceal his identity behind that of Adam, or of Seth. The title, which appears at both beginning and end, may or may not be original. There is also an *incipit* that serves as a subtitle: "The revelation (apocalypse) which Adam taught his son Seth in the seven hundredth year."

2. **Contents.** The apocalyptic character of the narrative is established by a series of literary devices in addition to the use of the word "apocalypse" and the assertion at the end that "this is the hidden gnosis (knowledge) of Adam which he gave to Seth." The reference to the "seven hundredth year," which is the length of Adam's life after the birth of Seth according to the LXX version of Gen. 5:4, implies that the book is a deathbed "testament" of Adam to his son. The bulk of what Adam reveals, he learned in a dream vision in which three heavenly men instructed him. And the message itself, transmitted by Seth to his Gnostic descendants, is described as not written in a book but delivered by angelic beings from its hiding place "on a high mountain, upon a rock of truth." The basis for the narrative is the Genesis story, but unlike many Gnostic retellings of it, the ApocAd never actually cites Genesis and seems indeed to depend on midrashic legend. A series of abrupt transitions and minor inconsistencies suggests that the book had undergone revisions before its translation into Coptic.

Adam first briefly recapitulates to his son the story of the Fall of himself and Eve and its consequences. The Gnostic theology of the work is immediately evident both in the prominence of the theme of the transmission and loss of gnosis and in the sharp distinction between the creator-god, "the ruler of the aeons and the powers," and the God of truth (see GNOSTICISM[S] §4). Because of the jealousy of the creator-god, Adam lives in ignorance, serving his maker "in fear and slavery," until

the heavenly visitors reveal to him the future course of history, which forms the revelation proper in the narrative.

Adam then prophesies the repeated attempts of the creator-god to destroy the descendants of Seth, the Gnostics, by wiping out mankind, first by flood (the Noah story), then by fire (the Sodom and Gomorrah story). At each stage the Gnostics are to be saved by the intervention of angels, and will be placed on the earth again to provide continuity for the seed of Seth and to thwart the evil creator. The third stage in this apocalyptic schematization of history, familiar in Jewish apocalypses, is the coming of a heavenly savior figure, called the "Illuminator of Gnosis," who is to "redeem their souls from the day of death. The whole creation, which came from the dead earth will be under the authority of death; but those who reflect in their hearts on the gnosis of the eternal god will not perish, for they have received spirit, not from this kingdom alone, but from one of the eternal angels." In anger and rage "the powers and their ruler" will attempt to persecute the Illuminator but can harm only his human flesh. Eventually the Gnostics will prevail, and the other peoples will repent of their service to the creator-god.

At the point of the Illuminator's entrance into the story there is a remarkable syncretistic passage in which the powers speculate about the origin of this figure whom they do not know. Thirteen explanations are recounted as the apparently erroneous opinions of thirteen "kingdoms." These are written in a schematized poetic style and draw upon a wide variety of myths, known and unknown. The following example is typical:

The third kingdom says of him  
that he came from a virgin womb.  
He was cast out of his city, he and his mother;  
he was brought to a desert place.  
He was nourished there.  
He received glory and power.  
And thus he came to the water.

To these explanations the document contrasts the view of "the generation without a king," a common self-designation of Gnostics: the Illuminator comes from the alien world of God with knowledge of him.

**3. Importance.** The significance of the ApocAd lies, not only in the fact that it is an original work of Sethian Gnostics, but also in the possibility that it is a non-Christian document with a full-blown Gnostic redeemer myth, perhaps reflecting the transition between Jewish apocalyptic thought, infused with a dualism from outside Jewish circles, and the Christian Gnosticism of the second-century sects. It is possible to read the prediction of the Illuminator as a veiled reference to Jesus Christ as redeemer, but the fact that the whole work shows no clear dependence on any NT passage or idea has led many of its interpreters to view it as evidence for non-Christian Gnosticism, and thus as an early product of Gnosticism, though not necessarily chronologically pre-Christian. Its dependence on Jewish traditions highlights the essential Jewish element in the origins of Gnosticism.

Finally, references to baptism in the closing pages suggest an origin in Jewish baptist circles, but the practice of baptism has given way to a spiritualized concept of baptism as the reception of gnosis. Numerous details in the work can be paralleled in both Mandaean and Manichean literature. See MANDAEISM[S]; MANICHEISM.

G. MACRAE

**\*AGING, ATTITUDES TOWARD.** In most, if not all, small-scale societies, age is a vital principle of social organization, and it may even surpass biological kinship in structural importance. This is perhaps because it is every bit as inevitable as kinship, but rather less questionable. The process of aging is seen as a corollary of life itself, and its inevitability and predictability fit it for the structural role it plays. That is perhaps why death, of all the life-cycle crises, usually calls for the greatest social comment, with the possible exception of puberty, and even this is often interpreted ritually as the death of childhood. Birth starts the process of aging, and in an age-structured society a series of rites of passage from birth onward divide life into stages, marking entry into each stage by a ritual that may be as informal as the giving of a new name, or as formal as an elaborate initiation (usually at puberty or adulthood) or ceremony (as for marriage). These stages are frequently correlated with a division of labor, giving the process of aging a prime economic function. When age is institutionalized into an age-set system, the whole society may be regarded in a sense as being in a permanent rite of passage. It is also noteworthy that in certain cases children are given a role which is considered vital to the survival of the society, so that every age level calls for respect, be it the level of childhood, youth, adulthood, or old age. These two factors, the allocation of vital role and the respect due because of that role, do much to lessen the friction that almost invariably builds up between adjacent generations as the younger generation challenges the position, wealth, and power of the older, simply by the process of itself growing older.

The division of labor according to age reveals the basis for some of the attitudes toward the aged. The division is not made exclusively on the grounds of physical or mental ability, though these are certainly major considerations. Plainly, whether the economy is that of hunting, gathering, herding, or cultivation, the major economic tasks can only be performed by adults. It is also easily understandable that the increased span of experience of the aged, which may be translated into wisdom, should be utilized in allocating them a specific role when they are no longer physically able to participate actively in the daily subsistence economy. But we do such societies a serious injustice if we rele-

gate their utilitarian, structural approach to age to the mundane. Of equal importance is the area of spirit. Spirit is power, but unlike physical power, cannot be as readily controlled or utilized. Where is such power located? Plainly not in the physical, material world around us; it is invisible, intangible, but nonetheless real. Some see the breath of life in the wind, or in the flowing water, but always it is an unknown, and the greatest unknown of all is death. Here then, beyond death, may be the locus of spirit and spiritual power. It is because of this belief that so much importance is often placed on the ancestors or even the more recently departed (who may be considered to be more easily accessible). It is also for this reason that, in the structural utilization of the process of aging, such central and vital roles as are associated with spirit are allocated to the very young or the very old, for the very young have just come from that vast source of power, and the very old are on the verge of entering it, and are consequently seen as being closer and more accessible to the ancestors. It is those in the middle, the youths and adults, who are furthest removed from "spirit power." Their compensation and their sources of respect are their primarily economic and political roles.

In small-scale societies it is recognized that while one is born "pure," close to the source of spiritual power, the process of living contaminates and the process of aging removes one further and further from that source. But children, as a result of their physical and intellectual immaturity, are unable to wield this power to the advantage of society. They can, however, be made use of in rituals where spirit must be invoked. Thus among the Mbuti hunters of the African rain forest, it is only the young children who can light the propitiatory fires and alert the supreme spirit (the forest itself?) to the fact that its "children" are setting off to hunt, asking for its forgiveness for this act of violence. This even gives the young children a measure of social control, for such is the strength of the belief of the Mbuti that they will not set out on the hunt if the fire is not lit, as without the blessing of the forest the hunt will either be fruitless or disastrous.

As children move further away from the source of spirit at puberty, they assume a different, less spiritual and more political role. It is not until they enter old age and again approach that ultimate unknown that they are once more associated with spirit and engage again in what is essentially a religious role. They are beyond childbearing, their physical strength and senses no longer fit them for the strenuous and demanding economic role of adulthood, but as much as they are likely to resent being pushed into old age by the oncoming generation, they have the satisfaction of knowing that they will, by their very age, be moving into a position of power derived from their proximity to spirit. There may well be an intermediate step that overlaps, when their intellect is still undimmed and they are able to draw on their years of experience and act as counselors. But already anything they say is tinged with spirit and is respected for that reason rather than because

of a mere accumulation of experience. The spiritually powerful elder is indeed a powerful social force, but his is only one of several vital roles and he can never become a despot; he needs the others as much as they need him. The strength of the structure lies in its built-in system of checks and balances, spiritual power frequently being balanced against material power. And whereas the child is primarily used as a ritual instrument, the elder is able to combine both belief and practice, spirit and ritual, to communicate with the beyond, and to invoke its spirit power to the aid of society.

However, the respect that in such societies is almost universally accorded the old is not always one of reverence, for power may be as easily abused as used for the social good. And the power that comes with growing old may produce either good or evil. Hence the ready association of the aged with witchcraft and sorcery (which terms I use to connote the unconscious and conscious manipulation of spiritual power for nonsocial or antisocial ends, respectively).

Age then, and the process of aging, is given good utilitarian usage in small-scale societies, and one of its most important structural functions was, and is, to link man with spirit, to provide limited access to the ultimate source of power.

**\*AGRICULTURE. 1. Intensive hunting and food-collecting (Epi-Paleolithic).** Toward the end of the Paleolithic period in Palestine (ca. 9000 B.C.) hunters and gatherers established one of the earliest villages in the Near East—'Ain Mallaha in the Upper Jordan Valley. There are no signs that these villagers had begun to domesticate animals or cultivate plants. Apparently they were able to exploit enough wild game and cereals in one region to warrant an investment in permanent housing and storage facilities. Ninety per cent of their meat came from hunting gazelles, cervids, and pigs. In the spring they harvested rich stands of wild wheat (emmer) and barley.

Unlike domestic cereals, these wild types have a brittle rachis, which shatters when the ears ripen and disperses the grain. The harvesting season is thus as short as a week when hot dry winds blow in from the desert. However, the harvest time could be extended to a month if the reapers worked up from the Jordan Valley to the surrounding hills, where wild cereals matured later. In the Neolithic period and after, this problem disappeared, because the tough rachis of domesticated cereals must be separated by threshing. Propagation of these cereals depends upon sowing by humans.

**2. Incipient agriculture and husbandry (Prepottery Neolithic).** About 7000 B.C. (Prepottery

Neolithic B in Palestine) permanent agricultural villages sprang up in many parts of the Near East. Prehistoric farmers raised sheep and goats and grew domesticated varieties of wheat and barley. But Natufian settlements such as 'Ain Mallaha and even later Prepottery Neolithic A JERICHO should caution us against taking this "Neolithic Revolution" too literally. The earliest Neolithic inhabitants of Jericho, who built the defense wall and tower(s) around their ten-acre oasis settlement, still relied primarily on hunting rather than herding for their meat. In the next phase at Jericho (PPNB) hunting gazelle and other game was still important but was being replaced by a greater reliance on the large caprines (certainly goats and possibly sheep) for meat. Some of these goats were probably domesticated, although they would have differed little in appearance from their wild counterparts. An unusually high percentage of young goats found slaughtered at Beidha indicates unmistakably that Neolithic people brought these animals under their control.

The earliest plants cultivated in Palestine were the cereals: wheat and barley. Perhaps limited cultivation had begun as early as PPNA Jericho, where six grains of hulled two-row barley (*H. distichum*) and two grains of emmer (*T. dicoccum*) were found. But the sample is too small for grand inferences. In PPNB the plant record is more helpful. In addition to a greater abundance of emmer and barley, einkorn (*T. monococcum*), which has no wild progenitor in Palestine, appeared at Jericho. Farmers at Beidha were growing hulled barley—their main crop—and emmer. These plants were not far removed morphologically from their wild ancestors. Wild pistachio nuts, caloric and rich in protein, were significant in the diet of the Beidha villagers.

Wild lentils do not grow in the Jordan Valley, yet at both Jericho and Beidha these legumes appeared along with the earliest cultivated cereals. Other pulses—peas, horse beans, and possibly chickpeas—were discovered in the same context. If rotated, the cereals and legumes might have prevented soil exhaustion. These complementary cultivars dominated Palestinian agriculture for the next 4,000 years.

**3. Established grain farming and pastoralism (Pottery Neolithic and Chalcolithic).** Archaeologically the sixth millennium in Palestine has left few remains. This period was probably a pastoral interlude during which the herdsmen left only elusive evidence of their seasonal occupation.

Domestication seems well under way by the time pottery first appears in the fifth millennium. In the Upper Jordan Valley at Munhata (stratum 2), settlement resumed after a hiatus. Although the flocks were still dominated by large caprines, smaller goats and sheep (typical of the Chalcolithic period) began to appear. Swine (at Munhata) and cattle (at ha-Goshrim) were added to the domesticated stock of the Neolithic farmers. The faunal and botanical remains from Pottery Neolithic Jericho were meager but sufficient to show that for the first time sheep and goats had replaced gazelle as the primary source of meat, and

that wheat (emmer and einkorn) as well as barley continued to be grown.

By the fourth millennium large caprines had practically disappeared from the flocks; most of the sheep and goats approximated modern species in size. (Animals are dwarfed by domestication.) For the first time wool rather than mutton prompted much of the sheep husbandry.

Most of the agricultural villages of the late Chalcolithic were located in the semiarid zone (e.g., near Beer-sheba and at Teleilat Ghassul). Barley (followed by wheat) was the most widely cultivated cereal in this zone, probably because of its resistance to aridity. Lentils were also grown. The mixed economy of cereal and legume cultivation and sheep-goat pastoralism gave a certain flexibility during the lean years.

The settlers near Tel Aviv and in the Wadi Gazzeh relied less on sheep and goats than on hogs and cattle. Perhaps the widespread appearance of oxen in the late Chalcolithic signals the introduction of the plow in Palestine. About this time in Mesopotamia (Warka IV) reliefs depict an ox pulling the scratch-plow, or ard. Of the animals controlled by man up to this time, oxen alone had the strength and endurance for pulling the plow.

Long after cereals and legumes had been established, olive and date cultivation began in Palestine. Today wild olives do not grow in the Jordan Valley; it is too dry. The olives found at Ghassul were probably from domesticated trees, hand-irrigated from nearby springs. Wild dates grow along the SE fringes of the Dead Sea, but their fruits are small and unpalatable. Probably the large date stones discovered at Ghassul came from domesticated trees in the vicinity.

**4. Mediterranean economy (Early Bronze Age—Iron Age).** Shortly after 3000 B.C. the sedentary population of Palestine increased considerably. For the first time the major valleys and foothills of the Mediterranean zone were being cultivated. Much of the population lived in walled settlements, frequently more than twenty-five acres in size, and accommodating 1,000-1,500 inhabitants. To support these larger concentrations of people with their growing number of craftsmen, bureaucrats, and religious functionaries, extensive tracts of land had to be cultivated. With the growth of more complex societies in the EB Age, the stability of these settlements depended more on the successful cultivation of the soils around them.

With the development of horticulture in the Early Bronze Age, the economy of Palestine acquired its distinctively Mediterranean character, which it retains to this day. Pomegranates, dates, and olives were grown, and grapes were cultivated for the first time.

By EB II potters in Syria and Palestine had developed a narrow-neck pitcher which could be sealed with a clay stopper. Its tapered base would have made "nesting" aboard ship possible. A type of "Abydos" ware, these vessels reached Egypt as early as the Proto-Dynastic period. The Syro-Palestinian potters had obviously designed these vessels to transport liquid commodities, probably wine and olive oil.

Only five fruit trees were domesticated, the ones that were easiest to propagate. Grapes, figs, and pomegranates were first domesticated by cuttings; olives, by basal knobs; dates, by transplanted offshoots. Fruit trees, such as apple, pear, and cherry, required grafting for their domestication, a technique not known until much later.

In the third millennium agriculture had the classical Mediterranean components: grain farming, horticulture, and sheep-goat pastoralism. The potential for an integrated agrarian economy, with each zone specializing in the products best adapted to it, was present for the first time. Whether such a scheme was realized during and after the Bronze Age is difficult to demonstrate until seeds, charcoal, and pollen samples have been systematically, rather than fortuitously, collected from sites in the various zones.

Although information is scanty, it seems that the second-first millennia B.C. registered no new additions to the plant and animal record. However, some technological innovations did occur which extended Mediterranean-type field crops and horticulture into the mountains and deserts.

**5. Mountain agriculture (Iron Age).** About 1200 B.C. there was a striking increase in the number of settlements straddling the highland ridge from Hebron to Shechem. Most of these were small hilltop villages, five acres or less, without fortifications.

Once the forests were decimated by man, the remaining soil cover was quickly stripped away by nature (see FOREST[S]). That population pressure had something to do with this deforestation seems clear (Josh. 17:17-18).

In order to make the denuded hills suitable for dry farming, the inhabitants transformed the slopes into a staircase of terraces. These were best suited to vine, olive, and nut cultivation. But the earliest terrace-farmers at Ai and Khirbet Raddana grew cereals. This inefficient use of terraces suggests an attempt by the highlanders (probably "Israelites" during the period of the Judges) to maintain a subsistence cereal agriculture free from the Canaanite and Philistine spheres, where the primary "bread baskets" were located. By the time of the united monarchy, much of this cereal-producing area had been brought under Israelite control. Once again, the geopolitical conditions resulted in the integration of agriculture throughout the region. During Iron Age II terracing was further extended to areas with modest amounts of bottom land; there the slopes could be planted with trees and vines, and the valleys sown with cereals.

The transformation of the hill country was a gradual one, culminating in the Roman-Byzantine period, when the population was greatest and as much as fifty per cent of the region evidenced terrace agriculture.

**6. Desert farming (Iron Age).** Farmers must have confronted two basic problems when they attempted to make the desert bloom: where to find suitable soils—deep, permeable, and salt-free, and how to increase the water yield, three- or four-fold, to grow cereals and legumes. To cope with these problems desert farmers laid out a parallel

series of stone walls laterally across tributary wadis whose floors nature had already covered with alluvium. The rectangular terraces between the stone walls formed fields that were planted during the rainy season when floodwaters and hillside runoff had collected in the wadi basin. Terrace dams retarded the velocity of the floods, spread the flow over a large surface, and allowed time for ponding in the fields behind the dams. In this way enough water was harnessed to grow wheat, barley, and other field crops. Usually a heavy stone wall, or "fence," encircled the fields and sometimes the farmer's house.

There is no conclusive evidence that desert farming was practiced before the Iron Age. The earliest farms were developed at Ramat Matred (late tenth-early ninth century B.C.) in the Negeb. The technological know-how was kept alive until the end of Iron II, when desert farmers were growing crops in the Judean Desert (the Buq'ah Valley, see ACHOR[S]) and in the Negeb (Mishor ha-Ruah). During Nabatean-Roman-Byzantine times desert farming in the Negeb flourished as never before.

**\*AHIJAH THE PROPHET.** An Israelite and scion of the priestly dynasty of Shiloh, he served as a rallying point for the Israelite interests opposed to the Judah-oriented united monarchy of David and Solomon. On the basis of this underlying opposition and an ideology that inveighed against alleged syncretism on Solomon's part, Ahijah symbolically kindled the spark of revolution in a meeting with JEROBOAM, son of Nebat, one of Solomon's officers in charge of forced labor. Ahijah tore Jeroboam's garment (or perhaps his own, since the text is not clear) into twelve parts, corresponding to the tribes, and gave Jeroboam ten; only two tribes, Benjamin and Judah, would remain with the Davidic dynasty (I Kings 11:26-40). (See HEM[S].) It is likely that Ahijah's faction expected Jeroboam to restore Shiloh and the decentralized political life charac-

teristic of the days before the united monarchy. Though he established two royal sanctuaries, at BETHEL and DAN, Jeroboam was essentially a centralizer, and, according to some, no less a syncretist than Solomon. In actuality, the golden calves may represent a reversion to an older Israelite tradition, rather than the adoption of foreign cultic forms (see CALF, GOLDEN; CALF, GOLDEN[S]). Jeroboam's policies created such tensions with Ahijah's old guard that when Jeroboam's son, Abijah, became ill, the king sent his wife to Ahijah to learn the prince's fate instead of going himself. Ahijah predicted the death of the prince and the end of Jeroboam's short-lived dynasty.

The "prophecy of Ahijah the Shilonite," very likely identical with I Kings 11:26 ff., is cited in II Chr. 9:29 as a source for the history of Solomon.

\*AI. 1. Biblical data. See AI §1.

2. Location and excavation. Several sites E of Bethel have been proposed: Khirbet Hai, a small unfortified ruin SE of Mukhmas; Khirbet Khudriya, ca. 1¼ miles E of et-Tell; et-Tell; and, identifying Ai with Beth-aven, Khirbet Haiyan in the S edge of modern Deir Dibwan has been proposed.

Excavations at Haiyan in 1964 and 1969 and at Khudriya in 1966 and 1968 yielded no evidence earlier than the late Hellenistic period, and a surface survey of Khirbet Hai in 1966 discovered nothing earlier than the Byzantine period. Of the sites proposed, therefore, et-Tell with its Iron Age I village remains the only viable location.

Garstang conducted a series of soundings in 1928. The results of his work were negligible and never published. He did mention later the discovery of a Late Bronze Cypriot sherd, but it has never been published.

Marquet-Krause headed three major campaigns during 1933-35 and established that the site was occupied only in the Early Bronze Age and Iron Age I. The absence of LB evidence occasioned the questions regarding the conquest discussed in §5 below. The Joint Expedition to Ai led by the writer from 1964 to 1972 included excavations at Khudriya and Haiyan. In general, the conclusions of Marquet-Krause were sustained, although major revisions in phasing, chronology, and the cultures of the people represented must be made. The following chart reflects the conclusions of the writer:

Stratum	Description	Period	Chronology
Pre-Urban	Unwalled village	EB IB	ca. 3100-3000 B.C.
Urban C	First walled city; built by newcomers from Syria	EB IC	ca. 3000-2860 B.C.

Stratum	Description	Period	Chronology
Urban B	Second city; Urban C walls widened	EB II	ca. 2860-2700 B.C.
Urban A	Third city; Egyptian influence	EB IIIA	ca. 2700-2550 B.C.
Urban A'	Fourth city; Khirbet Kerak influence	EB IIIB	ca. 2550-2350 B.C.
Cobbled Street	Unwalled agricultural village	Iron Age IA	ca. 1220-1125 B.C.
Silo Granary	Same village, remodeled and expanded	Iron Age IB	ca. 1125-1050 B.C.

3. The EB city. People with origins traceable to N Syria and Anatolia seized the initial EB IB village settlement and transformed it into the well-planned urban C city. A temple and royal quarter complex was constructed at site D, and houses averaging about 13x29½ feet in size were built over the scanty remains of the village huts. The economy was supported by farming, sheep herding, and trade. This phase was the most formative in the history of the EB city and was probably the age of greatest achievement and power.

Internal conflict in Canaan apparently led to the overthrow of urban C and a new regime at the beginning of EB II. Emphasis was upon strengthening of defenses and functional modifying of houses. A general lack of initiative was apparently exploited by aggressive Second-Dynasty rulers of Egypt whose artifacts are found in the ruins of the urban B city.

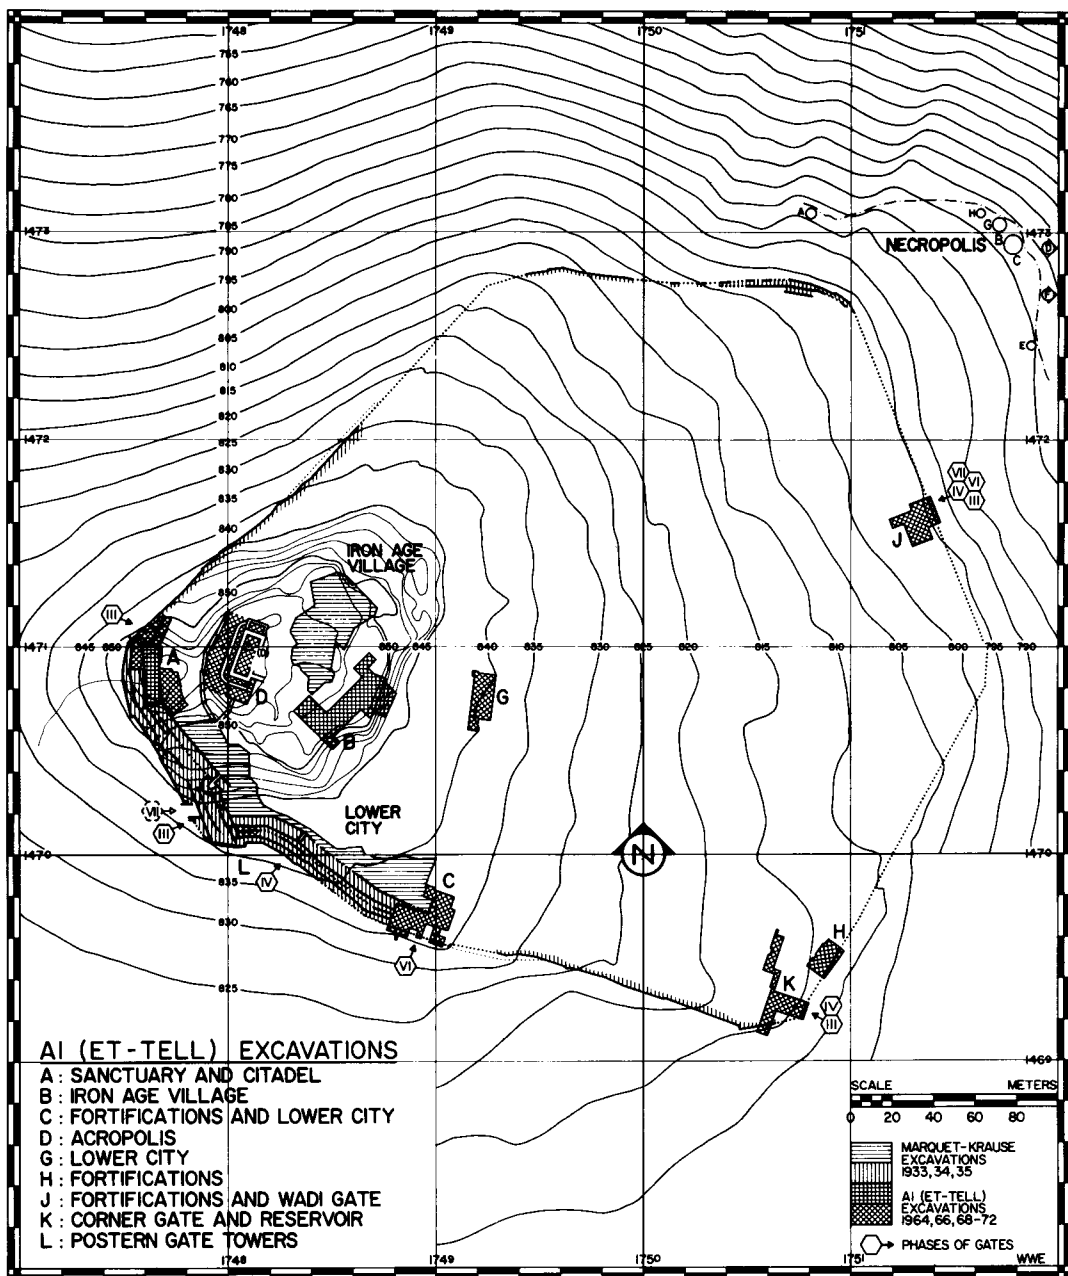

Destruction by earthquake or a determined enemy led to a new era in EB IIIA. An Egyptianized temple at site D was prominent in the rebuilt city, and a unique stone-lined reservoir with a capacity of over 63,000 cubic feet was constructed at site K. This evidence of outside influence was concentrated in public buildings and installations, suggesting an Egyptian-oriented local regime.

An Egyptian outpost at Ai would have guarded a major point of entry to the hill country from the E against newcomers in the N who had settled at Khirbet Kerak and Beth-shan. The urban A city fell to Khirbet Kerak-oriented aggressors at the end of EB IIIA.

The new ruler seems to have converted the temple at site D into a citadel-like residence, and sanctuary A was established in a remodeled domestic house. A long period lacking in new developments ensued until the urban A' city was sacked and burned ca. 2350 B.C., and the site was left in ruins.

Nomadic infiltrators in the period now usually designated EB IV have been credited with the final destruction of Ai, but there is evidence suggesting that aggressive pharaohs of the Fifth Dynasty may have destroyed the city.

4. The Iron Age I village. At least 1100 years elapsed between the destruction and abandonment

1. Plan of the Ai (et-Tell) excavations

of the last EB city and the arrival of newcomers (ca. 1220 B.C.) whose village covered only one tenth of the EB city mound.

The initial settlement was characterized by cobbled streets and a pier technique of house construction reflecting a high degree of prior development elsewhere. That the settlers came from a background of hill-country farming is evident from terracing on the E slope of the tell, a water supply utilizing rock-cut cisterns in individual houses, and tools used to process cereals.

An interruption of village life occurred ca. 1125

B.C. Numerous silo granaries were built over the cobblestone streets and in open places near houses, apparently by new population elements. One granary is shown in Fig. A2. Large round silo granaries were built in the corners of the ruined EB temple building at site D.

During the cobbled street phase, large jars were used for storage of grain, oil, and other foods and continued in use during the second phase. The introduction of dry silo structures in phase II brought a sudden transition in the method of storing grain and indicates an infusion of people

Courtesy J. A. Callaway

2. Phase I Iron Age village cobbled street partially blocked by a Phase II silo granary

who brought the custom with them. The manner in which the streets, court areas, and temple enclosure were converted by the newcomers into *ad hoc* granaries and shelter type living quarters suggests that they lacked the orderliness and experience in village life of their predecessors.

5. **The problem of the conquest of Ai.** Reconstruction of the capture of Ai by Joshua (Josh. 8:1-29) is difficult because the chronology of the village phases cannot be reconciled with prevailing views of the conquest. The older view of a 1400 b.c. conquest based upon I Kings 6:1, espoused by Garstang, is unsupported by the evidence, as is Albright's date of ca. 1250-1230 b.c. Because there is LB destruction of nearby Bethel, Albright ascribed the conquest related in Josh. 8 to Bethel instead of Ai and conjectured that later tradition had confused the accounts by attributing the event to Ai. This view is weakened by the LXX omission of a reference to men of Bethel participating in the defense of Ai in Josh. 8:17. A fragmentary Qumran text of Josh. 8:3-18 is also a shortened version like that of the LXX. The mention of Bethel may be secondary rather than the reverse. Noth held that Josh. 8 is legendary and etiological and therefore unhistorical. Marquet-Krause, and recently de Vaux, subscribed to this view also.

We seem to be left with the options of discounting the essential historicity of the events associated with Ai or of modifying the reconstruction of the conquest. The latter seems preferable for three reasons.

First, Josh. 7-10 relates the village of Ai rather technically to the geography of the region and to neighboring sites. Ai was small (Josh. 7:3), even smaller than Gibeon (Josh. 10:2), and this description could have originated only in Iron Age I. At any time after 1050 b.c., the obvious ruin of Ai was larger than Gibeon, covering 27½ acres.

Second, the association of the Israelites with Gibeon (el-Jib) as related in Josh. 9:17 and 10:6 would have occurred in Iron Age I when there was a village on the site with pillar type houses like those at Ai, instead of a time in the LB period when there is no evidence of a city or village apart from one tomb, no. 10 A-B.

Third, the two phases at Ai suggest that the

cobbled street village people, called Israelites by Albright, came from a hill-country agricultural background and would not appear to be recent immigrants from either the Egyptian delta or the desert. However, the people of the silo granary phase could have come from this background. The capture of Ai, therefore, could have occurred ca. 1125 b.c. and given rise to the embellished account that we now have in Josh. 7-8.

J. A. CALLAWAY

**ALALAKH TEXTS** ă lä läh' [Akkad. *a-la-la-ab*; possibly Hurrian, etymology unknown; cf. Egyp. 'irrh]. A group of 466 Akkad. texts, giving information on the language, literature, culture, and religious life of the city of Alalakh in the seventeenth and fifteenth centuries b.c. Alalakh was the "special possession" (*sikultu*) of the god Addu (Hadad) to whom, with the goddess Ishtar (Hepat), sacrifices were offered.

1. **Location.** The site (Tell 'Atsānah) is in Turkey, near the pass leading from Antioch to Aleppo, by the Orontes River.

2. **Excavations.** Woolley, seeking to demonstrate the connection between E Mediterranean and Mesopotamian civilizations, excavated the site in 1937-39 and 1946-49. He uncovered seventeen strata dating from ca. 3100 b.c. (level XVI) to ca. 1200 b.c. (I). Early levels suggest comparisons with Palestine or with Nineveh and Ur (XIV). The primary occupation occurred in level VII (ca. 1720-1650 ["low" CHRONOLOGY]) when King Iarim-Lim built a fine palace with frescoed walls and strong defenses. One hundred and seventy-one tablets in the Old Babylonian script were found; half were contracts and half were ration lists.

The palace and town were rebuilt in level IV (ca. 1550-1473). From this period come 295 texts: letters, legal cases, marriage contracts, and many census lists. There were at least five scribes and a population of three thousand.

3. **History.** Prior to the discovery of these texts (hereafter AT) little was known of Syria in the mid-second millennium b.c. Abba'el (or Abban), a son of Hammurabi of Iamhad (Aleppo), obtained the town from a brother (ca. 1720) in exchange for Irrid near Carchemish. This new ownership is confirmed in one of the earliest treaty-texts so far known (AT I), which summarizes the his-

torical situation and lists stipulations, witnesses, and curses on any transgressor. This genre was used by the Mesopotamians, Hittites, and Hebrews for two millennia (see COVENANT; COVENANT, MOSAIC[S]). Exchanges or sales of towns or villages were common (AT 52-58), and this may indicate that the arrangements which Solomon entered into with Hiram (I Kings 9:11) were similar.

Abba'el's grandson Ammitaku left the city to a son in a will witnessed by senior state officials and the royal scribe (AT 6). He may have done this in order to avoid public rivalry among his sons, as David did (I Kings 1:17-36). Despite this, another son, Irkabtum, soon took over the throne and made peace with the troublesome, seminomadic HABIRO who were raiding in the neighborhood (AT 58; 161; 183). The city was probably destroyed by the Hittite Mursilis I who also captured Aleppo and Babylon.

After an unexplained interval (levels VI-V) the subsequent history can be read on the statue of Idrimi, inscribed with a speech recounting his adventures (ca. 1490). As the youngest son of Ilmilimma I of Aleppo, Idrimi went into exile after a popular revolt. After some time he crossed the desert with his maternal relations to Canaan (*kina'nim*) and joined other refugees from Syria to live among the Habiru. Seven years later he mounted an expedition by ship and regained the district of Mukish and its capital (Alalakh), where he was acclaimed king. There he built a new palace and temple with the spoils he won as he extended his kingdom. This has obvious parallels with parts of Genesis and especially with the Davidic narrative. David too fled to his mother's relatives in Moab (I Sam. 22:3) and, like Idrimi, consulted the divine will before his return (II Sam. 2:1-4; cf. 5:1-3).

An extract from a larger treaty tablet shows that Idrimi strengthened his position by making parity treaties with adjacent city-states, which included the right of extradition of fugitives (AT 3). The action of Shimei in I Kings 2:39-42 implies a similar agreement between Solomon and Achish of Gath, perhaps made in the light of David's own exile there (I Sam. 27:2-7). Other texts show that the elders of a city were responsible for seizing such persons (AT 2) and returning them (AT 101). After a period under Hittite control (III), Alalakh was destroyed by the "Sea Peoples" (see PHILISTINES §1) and thereafter ceased to be significant.

**4. Social conditions.** These texts supplement the information to be gained from the MARI texts and the Akkad. texts from UGARIT.

**a. Administration.** The king in both periods ruled as an autocrat, sitting as judge in any case brought before him. Many cases relate to the status of a citizen and of his land (AT 8; 79). By advancing loans and paying off his subjects' debts, the king soon won control of many individuals or families. They were forced to "dwell in the house of the king" to work off their debt (AT 18-27; 32), a phrase which may illumine Ps. 23:6. Slaves, recruited from prisoners of war as well as defaulting debtors, played an important role in the palace and were given as gifts between kings (AT 224).

The average cost was 25 silver shekels or 5½ talents of copper, with the female worth double, compared with ca. 40 shekels at Ugarit and 30 in Israel. Some contracts include a clause preventing a slave's release under any royal proclamation of general amnesty (AT 65). Such practices should have been adequate warning to the later Israelites seeking a similar form of monarchy (I Sam. 8).

**b. Classes.** Many census and name lists show that the population was Semitic and Hurrian. Under the king were the higher officials, mostly chariot-owners, whose status was as much a result of their position as of their privileged class. Very few, if any, bear undoubtedly Indo-Aryan names. Their position could be inherited and carry religious obligations (AT 15). Below them were freedmen (Akkad. *šuzubu*, Hurrian *ehele*) while the majority of the population were semifree "rural retainers" (listed as "Haneans" or *hupšu* [comparable with the Heb. *שֶׁבִיט*, Deut. 15:12-18]) who, as royal tenants, could also own private property. All these classes included craftsmen of various professions. Names also found in the OT include: Abinahmi (Abinoam), Ayabi (Job), Minuhham (Menahem), and Sisura (Sisera).

**c. Customs.** In marriage contracts (AT 91-94) we learn that the bridegroom "asked" his future father-in-law for the bride (cf. Gen. 29:18) and that betrothal gifts were customary (AT 17). Some state that if a wife failed to give birth to a son within seven years her husband could remarry (cf. Gen. 29:18-21). The position of "first-born son" was granted only to the first wife's son, rather than to the son of a concubine (cf. Gen. 21:10) (see FIRST-BORN[S]). Clothes were given as "additional payments" in some transactions (cf. II Kings 5:5-27).

**ALEXANDRIUM.** See HERODIAN FORTRESSES[S].

\***ALPHABET.** Recent advances in our understanding of the origin and early diffusion of the alphabet have come less often from newly discovered inscriptions than from improvements in epigraphic method (see ALPHABET §E). In particular, the development of the forms of the letters throughout the history of their use is becoming better known. As a result, the trained epigraphist can often identify the date and provenance of an inscription on the sole basis of the forms of the letters. It is now possible to trace the early history of the alphabet, observing with an increasing degree of understanding its emergence as a semipictographic system of signs in very ancient times, its gradual systematization in

the Late Bronze Age, its differentiation into the various national scripts of the Iron Age, and finally its adoption by the Greeks and modification for use in writing non-Semitic languages.

1. **The old Canaanite alphabet.** The origin of the alphabet remains imperfectly understood and in dispute (see ALPHABET §D). A few archaic inscriptions of unusual appearance suggest that the earliest history of alphabetic writing may have been quite complicated. Experimental alphabets may have flourished briefly and died out. Yet the main line of descent can be traced from at least the end of the Middle Bronze Age to the early Phoenician script of the Iron Age and beyond. The so-called Proto-Sinaitic inscriptions, though still incompletely understood, certainly belong to the direct ancestry of the alphabet, as does LB material from such Canaanite city-states as Lachish, Megiddo, Hazor, and Beth-shemesh, as well as numerous lesser localities. In general, recent discoveries have confirmed the description by Cross of the main lines of alphabetic development in that period (see ALPHABET §B). The early predominance of vertical writing gave way in the Late Bronze Age to a preference for horizontal lines written in either direction. The transition to an exclusively right-to-left writing system was complete before the emergence early in the Iron Age of the Northwest Semitic national scripts, none of which was written vertically or from left to right. This development is suggestive for the early history of the South Semitic scripts, which, since they continued to employ columnar and multidirectional writing, must have descended from a parent tradition which had diverged from the northern line of alphabetic development before the demise of vertical writing. On the basis of this and other evidence, the origin of the Proto-Arabic script may be dated to about 1400 B.C.

2. **The national scripts of the Iron Age.** The decline of the Canaanite city-state system at the end of the Late Bronze Age prepared the way for larger, national communities (see CANAANITES §4; HABIRU; HABIRU[S] §2). Accompanying this development was the differentiation of the old Canaanite alphabet into a variety of national script traditions. Canaanite culture survived with least interruption in the new Sidonian state ruled by Tyre, and the early Phoenician script is best understood as a direct continuation of the old Canaanite alphabet. Not long after the traditional date of the refounding of Tyre in the twelfth century, the Phoenician alphabet had begun to acquire the distinctive features which would distinguish it from the older system. In particular, the forms of the letters were becoming fixed in what were to be their traditional stances, and the direction of right to left was beginning to dominate.

Among the first to develop a distinctive national script were the Israelites. Formal features of the Hebrew script suggest that it may have diverged from the main Canaanite-Phoenician line as early as the tenth century, i.e., roughly contemporary with the unification of monarchic Israel. Subsequently, the national script of Israel developed independently until its displacement by the Aramaic script as the imperial hand of the Persian period.

The old tradition then became dormant for centuries, until it was revived amid the new nationalism of the Maccabean era as the archaizing Paleo-Hebrew script. See INSCRIPTIONS, SEMITIC[S] §2a.

Aramaic inscriptions from the ninth century B.C. exhibit distinctive formal features indicating that by that time the Aramaic script had diverged as another independent tradition. Again we note a correspondence to an important rise of national spirit, in this case accompanying the consolidation of the Aramean states under BEN-HADAD I of Damascus and his successors. See INSCRIPTIONS, SEMITIC[S] §3d; ARAMAIC; ARAMAIC[S] §E.

Evidence for the appropriation of the alphabet by the Transjordanian states has accumulated rapidly in recent years. In these instances, we ought to think not of branches of the old Canaanite alphabet itself, but of sub-branches of the Hebrew and Aramaic traditions. The Moabite and Edomite scripts remain incompletely understood. At least the former, as is clear from the famous Mesha stele (see MOABITE STONE), began its history within the Hebrew tradition; but both Moabite and Edomite exhibit traits divergent from Hebrew in later inscriptions, possibly under the influence of the internationalized Aramaic script. In happy contrast, the Ammonite national script is now broadly understood. The ninth-century Ammonite hand was still formally indistinguishable from contemporary Aramaic, but a distinctively Ammonite script emerged sometime in the middle of the eighth century, a period of material prosperity and considerable political autonomy (see AMMON[S]). This script later went the way of the Hebrew and was displaced by the common Aramaic hand of the Persian Empire. See INSCRIPTIONS, SEMITIC[S] §3c.

3. **The transmission to Greece.** Phoenician inscriptions have been recovered from maritime sites in Anatolia, Italy (Ischia), Malta, North Africa, and Spain, dating to the eighth century, and from Cyprus and Sardinia, dating to the ninth century or even earlier. Recent research confirms that the forms of the earliest Greek letters resemble most closely the corresponding Phoenician forms of the late ninth and early eighth centuries (see ALPHABET §A2). Thus the date of the borrowing of the alphabet must be assigned to this period. Nevertheless, certain archaic features in the early Greek scripts suggest some prehistory of experimentation with the Phoenician alphabet. Not only are individual, archaic letter-forms found, but there was no fixed direction of writing, and certain letter-forms regularly occurred in stances differing from those of the corresponding Phoenician forms of the ninth and eighth centuries. These data point to a prehistory of Greek experimentation with the alphabet, beginning perhaps as early as the end of the twelfth century, when the convention of writing from right to left was not yet firmly established in Phoenicia and when individual letter forms frequently occurred out of stance.

For further information, see, in addition to the bibliography cited below, WRITING AND WRITING MATERIALS §§A4, 5.

\*ALTAR, OT. See BEER-SHEBA[S]; ARAD[S].

\*ALTAR, NT. The word "altar" in English versions of the NT represents three Greek words:

1. βωμός. Probably cognate with Greek βῆμα, "platform." This is the regular classical Greek word for "altar." It is used normally of a pagan altar, and this is its usual, but not invariable, meaning in the LXX. It occurs in the one place in the NT where a pagan altar is expressly mentioned—the Athenian altar inscribed "to an unknown god" (Acts 17:23), which supplied the text for Paul's AREOPAGUS address. While an altar bearing this precise inscription (with the singular "unknown god") is not otherwise attested, we have the statement of Pausanias (*Description of Greece*, I.i.4) that in Athens there are "altars of gods called unknown" [βωμοὶ θεῶν ὀνομαζομένων ἀγνώστων]. This may be compared with his account (V.xiv.8) of "an altar to unknown gods" [ἀγνώστων θεῶν βωμός] beside the great altar of Zeus at Olympia. Philostratus (*Life of Apollonius*, VI.iii.5) says that in Athens there are erected "altars of unknown divinities" [ἀγνώστων δαιμόνων βωμοί], and it is probably the same kind of installation that Diogenes Laërtius has in mind when he mentions (*Lives of Philosophers*, I.cx) the "anonymous altars" [βωμοὶ ἀνώνυμοι] which were to be seen throughout Attica in his day (second-third century A.D.). The one surviving altar inscription of this kind is a defective one from the temple of Demeter in Pergamum (ca. 2nd century A.D.), which is most probably to be restored "to unknown gods" [θεοῖς ἀγνώστοις].

2. θυμιατήριον, place for incense [θυμίαμα]. This word appears once in the NT—in Heb. 9:4, where KJV and other older English versions render it "censer," because that is the sense which it bears in its three LXX occurrences (II Chr. 26:19; Ezek. 8:11; IV Macc. 7:11). When a censer is mentioned elsewhere in the NT, the Greek word is λιβανωτός (Rev. 8:3, 5). Theodotus and Symmachus use θυμιατήριον at Exod. 30:1 with the meaning "incense altar." So in Heb. 9:4 "altar of incense" is the more probable rendering (ASV, RSV, NEB, etc.), because the writer is enumerating pieces of furniture in the wilderness tabernacle. If he means "censer," it is doubly strange: first, because no emphasis is laid on one golden censer in the Pentateuchal description of

the tabernacle, and second, because he then makes no reference to the incense altar, which was one of the principal pieces of furniture in the tabernacle. True, Heb. 9:4 assigns it to the holy of holies (so also I Kings 6:22; II Bar. 6:7), not to the holy place (as is implied in the Pentateuchal description). But even if it stood on the outer side of the curtain separating these two compartments, the incense altar played a significant part on the Day of Atonement, the one occasion in the year when the holy of holies was entered (Lev. 16:12, 13; cf. Exod. 30:10).

3. θυσιαστήριον, place of sacrifice [θυσία]. This is the word regularly used in the LXX to denote Israelite altars; it was free from the pagan associations of βωμός. In the NT it is the commonest word for "altar" and designates several different types of altar.

a) OT altars: that on which Abraham offered up Isaac (Jas. 2:21); the altar of burnt offering in Solomon's temple (Matt. 23:35; Luke 11:51); the altars of Yahweh which were demolished during the Baal apostasy under Ahab (Rom. 11:3).

b) The altar of burnt offering in Herod's temple: the place where gifts are offered (Matt. 5:23, 24); by which men swear light oaths (Matt. 23:18, 19, 20); at which only Levitical priests minister (Heb. 7:13), receiving the sacrificial flesh as their perquisite (I Cor. 9:13) and so becoming "partners in the altar" (I Cor. 10:18).

c) The incense altar in Herod's temple: where Zechariah, father of John the Baptist, was officiating as a member of the priestly division of Abijah when Gabriel announced to him the birth of his son (Luke 1:11).

d) The incense altar in the heavenly sanctuary: beneath which the souls of the martyrs await their vindication (Rev. 6:9); at which the prayers of the saints, mixed with incense, are presented on a golden censer by an angel to God (Rev. 8:3,4; cf. Tob. 12:15); and from which fire is then thrown on the earth, probably in response to the martyrs' prayer for vengeance on their persecutors (Rev. 8:5).

e) A Christian altar in Heb. 13:10: "We have an altar from which those who serve the tent (i.e. the Jewish sanctuary) have no right to eat." The significance of this altar is disputed, but the context helps us to understand it. The recipients of this letter (probably a household church of Jewish Christians) were reproached by their former co-religionists because they had no visible altar or sacrificial ritual. "We have an altar," is the reply, and a more adequate one than the altar of burnt offering in the Jewish sanctuary. Earlier in the letter the sacrifice of Jesus has been portrayed in terms of the sin offering on the Day of Atonement: his offering, by contrast with that earlier one, is permanently efficacious. There was no literal altar in his case; the term "altar" is used here by metonymy for his self-oblation and the benefits which it secures to believers. The flesh of the animal presented as a sin offering on the Day of Atonement was not eaten by the worshippers; it was incinerated "outside the camp" (Heb. 13:11). The fact that Jesus suffered death outside the gate of Jerusalem is taken to symbolize his rejection from

the "camp" of the old religion. But he is permanently available for the spiritual food or sustenance of his people. (Some controversy about "food" is implied in vs. 9.) Whether or not the Eucharist is referred to is doubtful: elsewhere the writer to the Hebrews seems deliberately to avoid mentioning the Eucharist even when the opportunity to introduce it is wide open (e.g. in Heb. 7:1-10 the one feature in the Melchizedek narrative of Gen. 14:18-20 which he passes over in silence is Melchizedek's bringing bread and wine to Abraham). See also HEBREWS, LETTER TO THE[S].

F. F. BRUCE

**\*AMMON, AMMONITES.** Numerous recent discoveries have provided additional information with regard to the Ammonite culture, history, and language.

1. **Name.** In 1961 a fragment of an inscription of ca. 600 B.C. was found at the Amman Theater, of which the second line reads *bn 'm[n]*. The name is spelled in the same way as the name of the Ammonites in the Hebrew Bible. This same spelling occurs three times in the inscription from Tell Sirān (ca. 600 B.C.).

2. **The early Ammonite state.** A Late Bronze Age temple at Amman seems to indicate that some kind of sedentary people lived there before the twelfth century B.C. This temple, first discovered in 1955, was excavated in 1966. Hundreds of imported objects point to a sophisticated civilization with international relations. Hence, it is probable that some form of an Ammonite state existed during the Late Bronze Age, from 1600-1200 B.C. In fact, the discovery of Middle Bronze Age tombs at Naur and Amman makes it possible to assume that a sedentary population existed from 1800-1600 B.C. in the area which the historical Ammonites later occupied. See EDOM[S].

3. **Beginning of Ammonite expansion.** The megalithic border fortresses, of which nineteen are so far known to have shielded Amman, have generally been dated to the Iron Age on the basis of ceramic surface finds. Recently, two of these structures have been excavated. Rujm el-Malfuf, to everyone's surprise, has proved to be of Roman origin. On the other hand Khirbet al-Hajjar must have been built first during the twelfth and eleventh centuries B.C. Later it was abandoned, but was rebuilt in the seventh and sixth centuries B.C. Only further excavations will provide a clear picture of the development of the defensive system of the Ammonite state.

4. **Israelite conquest of Amman.** When David conquered RABBAH, the crown of the Ammonite king fell into his hands. Containing a precious stone, it seems to have been of such an extraordinary value that David used it as his own crown (II Sam. 12:30; I Chr. 20:2). It is therefore of interest that nine stone statues found in and around Amman, all dated to the Iron Age, represent males

wearing a headgear that resembles the Egyptian *atef*-crown, perhaps similar to the one captured by King David.

5. **Kings.** Thanks to the new Tell Sirān inscription it is now possible to present an almost complete list of the Ammonite kings from Bod'el to Baalis (Jer. 40:14): Bod'el; 'Ammi-nadab I, ca. 667, known from the records of Ashurbanipal's first campaign; his son, ca. 650, whose name is not yet attested (Cross suggests that his name according to the practice of papponymy may have been Bod'el, or Hiṣṣal-'el); 'Ammi-nadab II, ca. 635; Hiṣṣal-'el (II?), his son, perhaps by 620; by 600 B.C., 'Ammi-nadab III; probably followed by Baalis, ca. 580.

6. **Culture.** The typical Ammonite pottery known until 1968 almost exclusively from tombs discovered at and near Amman has now come to light in large amounts during the excavations of Tell Heshbān (see HESHBON[S]). This pottery is indigenous to Transjordan and attests to a high cultural level.

An Iron Age tomb discovered in June 1966 on Jebel el-Qusur, Amman, has produced four anthropoid sarcophagi (see BETH-SHAN Fig. 38), and parts of a fifth one. It is possible that they were used by foreigners, descendants of the Sea Peoples (see PHILISTINES; PHILISTINES[S]) who may have served the Ammonite kings as mercenaries.

There is still very little known of the Ammonite religion. However, the name of the chief Ammonite god, known from the Bible as Milcom, has come to light in the Amman Citadel Inscription (spelled [m]lkm) and also on two Ammonite seals.

The discovery of several Ammonite inscriptions and ostraca has given us a much clearer picture of the Ammonite language and the use of writing among the Ammonite population. See INSCRIPTIONS, SEMITIC[S] §3c; ALPHABET[S] §2.

S. H. HORN

**\*AMORITES.** 1. **Amorites and Amurru.** The term "Amorite," in the older Akkadian form, "Amurru," is first attested in cuneiform sources from Mesopotamia dating to the latter half of the third millennium B.C. "Amurru" is used in these sources to designate both a group of Northwest Semitic-speaking people (described as stock raisers and as

somewhat barbaric) and also the territory occupied by them. In the earliest sources the territory of Amurru is located in the Syrian steppe, W of the Middle Euphrates. (Akkad. *amurru* means "west.")

The label "Amorite" ("Amurrite") apparently derives from a self-designation, perhaps by one of the "tribes" of that area—note that Amurru is the name of a Hanaean "clan" in the MARI texts—which came to represent the whole people and the western territory generally. This designation is continued by Ammi-šaduqa of Babylon, who sums up the local population as "Akkadians and Amorites." At Mari, however, the people are summarized as "Akkadians and Hanaeans."

In Egyptian and cuneiform sources from the fourteenth and thirteenth centuries Amurru is a territory and a kingdom in central Syria, extending from the Mediterranean coast to the vicinity of the Orontes River. For a period Amurru was the northernmost Egyptian administrative district in Syria, bordering on Canaan to the S. Subsequently Amurru became a Hittite dependency and is known from its exchanges with the kingdom of UGARIT to the N as well as from Hittite sources (see HITTITES; HITTITES[S]). In the earlier Mari texts (eighteenth century) Amurru is a territory somewhere in central Syria, with several kings.

**2. OT usage.** The OT uses "Amorite" only as an ethnic label and does not mention the Syrian kingdom of Amurru, which came to an end ca. 1200 B.C. The Amorites are listed as one of the ethnic groups already in Palestine and Transjordan at the time following the Exodus. In a general sense the basic population of the whole area could be called Amorite (e.g., Gen. 15:16; Deut. 1:7; Josh. 10:5; 24:15; II Sam. 21:2), thereby apparently using a self-designation in an expanded sense, analogous to the Mesopotamian sources. (In a similar way, the term "Canaanite" can be used to designate the whole pre-Israelite population of the area W of the Jordan; see CANAANITES §2.) This wider use of Amorite is especially characteristic of the E and D traditions (see DOCUMENTS), but it is not limited to them. In the various lists of pre-Israelite population groups, the Amorites, together with the Canaanites and the Hittites, are very prominent. In the "standard" list there are seven great and mighty "nations": Hittites, Gergashites, Amorites, Canaanites, Perizzites, Hivites, and Jebusites (e.g., Deut. 7:1).

More specifically, Amorites are associated with Transjordan and with Sihon, king of the Amorites, and Og, king of the territory of Bashan, with its chief cities of Ashtaroth and Edrei. According to later tradition these are "the two kings of the Amorites" (e.g., Deut. 3:8; Josh 2:10) who opposed the Israelites after the Exodus. Og, who is also celebrated in tradition as the last of the legendary giant REPHAIM and the possessor of a famous iron bedstead (Deut. 3:11), seems, however, to be only secondarily associated with the Amorites. The history of Sihon reflects an ancient tradition identifying the Amorites—and the king of the Amorites, Sihon—as a major ethnic group in the Transjordanian area subsequently claimed or occupied by some of the Israelites. Sihon is honored in the

old song cited in Num. 21:27-30. See HESHBON; HESHBON[S].

One of the primary characteristics of the Amorites as seen by Israelite tradition was that they went after other gods, after idols, and were accordingly associated with iniquity (e.g., Gen. 15:16; Josh. 24:15; Judg. 6:10; cf. Lev. 18:28; 20:22-23). For that reason God drove them out of the land.

**3. The Amorites in Palestine and Transjordan.** The antiquity of the Amorite occupation of the territory later occupied by Israel is a difficult question. The Egyptian execration texts attest to a group of princes in Palestine and Transjordan by ca. 1900 B.C. whose personal names are consistent in language and type with Amorite names of the same general period in Mesopotamia. However, for this period it is difficult to separate Amorite from (Proto-)Canaanite on linguistic grounds. Given the complex ethnic character of Syria-Palestine in general, terms may vary greatly regarding referents; note the long lists in the OT (e.g., Gen. 10:15-18), as well as the short lists (e.g., Exod. 23:28). This factor and the absence of written materials make it hard to correlate archaeological discoveries with specific ethnic groups. The Taanach tablets indicate an ethnic picture not hinted at by the archaeological remains; see TAANACH[S]. See also HURRIANS[S].

The evidence from personal names in Akkadian and Egyptian texts of the early second millennium indicates a modest dialectal differentiation into coastal-southern and inland linguistic areas, a differentiation that correlates to some extent with the archaeological evidence. The archaeologists themselves associate the coming of the Amorites with the new archaeological picture at the end of Early Bronze III, ca. 2300 B.C., or the beginning of Middle Bronze II (MB I), ca. 1900 B.C., although the discontinuities may have been over-emphasized. It is, moreover, now questioned that the Amorites can be described as nomads, which further complicates the task of correlation. The complex ethnic picture reflected in the literary sources (mostly later) and the patterns of population shifting in the area suggest that precise correlations should not be pressed at this time. The antiquity of the Amorites in Palestine and Transjordan is unclear, but Amorite elements must have been there at least by 1900 B.C., when they are clearly present in central and northern Syria, and perhaps were there much earlier.

\*AMOS. No fundamental changes have occurred recently in the scholarly consensus regarding the date and historical setting of the primary group of his oracles, or their main ethical and religious content. Recent discussion has focused upon the

question of the cultic and literary origins of the traditions upon which the book draws, and the related question concerning the extent of Amos' association with the official Israelite cult. Decisions regarding the origin of the disputed parts of the book, notably the oracles against Tyre, Edom, and Judah (1:9-12; 2:4-5), the doxologies (4:13; 5:8-9; 9:5-6), and the closing promise of salvation (9:8b-15), have tended to hinge upon the answers given to these questions.

**1. Liturgical forms in the book.** Amos 1:3-2:16 may reflect a ritual of cursing directed against the enemies of Israel. Such rituals were conducted in ancient Egypt, using brief curses, proclaimed in a series according to a geographical pattern similar to the one found in Amos. The enemy nations round about are cursed first, and then the individual enemies within Egypt itself. The series in Amos proclaims impending divine judgment upon neighboring states, and then upon Israel itself (though here it is the nation as a whole). The geographical pattern breaks down, however, if the oracles against Tyre and Edom (1:9-12) are removed as secondary additions, as many scholars have done. The Judah oracle (2:4-5) is also widely deemed to be late, because of its vague, Deuteronomic language (as contrasted with the historical concreteness of the other oracles in the series) and its difference in form (along with the oracles on Tyre and Edom) from the remaining four. However, the formal unity of the entire pericope, 1:3-2:16, may be defended as the carefully articulated alternation of two related but slightly differing forms, in the pattern A, A, B, B, A, A, B, B<sup>1</sup>. The concluding oracle against Israel is an expanded version of type B. An equally coherent pattern remains if the Judah oracle, whose authenticity is most doubtful, is removed. In this case the Israel oracle can be taken as applying to all Israel and not merely to the northern kingdom. Many critics believe that Amos himself used the name Israel in reference to the whole people of God, and that the separate references to Judah in the book are the result of the reapplication of his oracles to the kingdom of Judah after the fall of the northern Israelite kingdom in 721 B.C.

The historical allusions in the oracles against the nations have been scrutinized repeatedly, but the scanty information they provide makes it impossible to know whether they refer to events reported in the extant historical records, which are themselves highly fragmentary, or to otherwise unknown events. In the case of the oracles against Philistia (Gaza), Tyre, and Edom (1:6-12), we are not even told who are the victims of the crimes which are denounced. If the Egyptian cursing ritual was the ultimate model, then the Israelite ritual which Amos imitated would have dealt largely with crimes against Israel. But this would not mean that Amos himself referred only to crimes against Israel. There is a universality in his perspective that suggests otherwise.

Amos 4:6-11 (or 4:4-13) has been regarded by some as an adaptation of a ritual of cursing or, by others, of a liturgy from the supposed covenant-renewal ceremony of Israel (see COVENANT, MOSAIC [S]). Still others discern the pattern of a covenant

lawsuit here, or in the larger complex, 3:1-4:13. (See LAW IN THE OT[S] §13.) These interpretations are not mutually exclusive, since curses have a prominent place in covenantal texts in the OT (e.g., Deut. 28 and Lev. 26) and in the formally related vassal treaties of the Hittites and Assyrians. Whether or not 4:4-13 reflects actual cultic practice, this passage and the oracles of Amos generally share the terminology of malediction standardized in a variety of liturgical and quasi-liturgical settings in the ancient world.

The doxologies (4:13; 5:8-9; 9:5-6) are widely believed to be derived from a hymn used in Israelite worship, but some scholars attribute to Amos their incorporation into the book, while others credit it to a redactor. On the grounds of the novel conclusion that II Kings 23:16-18 deals with Amos' denunciation of Bethel (cf. 4:4; 5:5-6; 9:1), Wolff theorizes that the doxologies were added to the book of Amos at the time of King Josiah's reform (621 B.C.), as part of a liturgical act of justification for the Judean king's destruction of the sanctuary of Bethel, the principal shrine of the northern Israelite kingdom. In any case, the doxologies do serve as climaxes to the three oracles in 4:4-13; 5:1-9; and 9:1-6, and these oracles form a logical series. Together they assert that instead of the comforting encounter with God which the Israelites have expected routinely in their rituals, there will actually be a nonroutine, disastrous encounter with God, ending in national destruction.

**2. Amos' vocation.** A few scholars have argued that Amos was actually a cultic prophet and that his oracles were proclaimed in a ritual setting. According to this theory the oracle of salvation which concludes the book (9:8b-15) is a word of Amos, uttered in the liturgy as the divine promise which balances the oracles of judgment, which were supposedly used in an earlier part of the ritual. However, most critics reject this theory and hold that 9:8b-15 is largely or wholly a postexilic addition reflecting religious aspirations of Jews in a later generation. Furthermore, they deny that the pre-exilic rituals of Israel were so rich in prophetic proclamation as the advocates of the former theory suppose. Surely the condemnations of the Israelite rituals themselves which are contained in the oracles of Amos and his prophetic contemporaries strongly suggest the opposite (cf., e.g., Amos 3:13-15; 4:4-5; 5:4-6, 21-27; Hos. 4:4-19; 5:1-2; 8:11-14; Isa. 1:10-15).

Explicit evidence concerning Amos' vocational associations is confined to the disputed statement in 7:14-15. Although many scholars continue to translate the verbless Hebrew clause in vs. 14 in the present tense ("I *am* no prophet . . . , but Yahweh called me. . . ."), and interpret the line as a denial by Amos of any association with the professional prophets of Israel, a growing number prefer the past tense ("I *was* no prophet . . . , but Yahweh called me. . . ."), and take the statement as an assertion of divine authority for his mission, rather than a denial of his role as a prophet.

**3. Amos and wisdom.** There are terms and literary forms in the book which are characteristic of, or at least common in, the wisdom traditions of the OT. These suggest to some scholars that

Amos' perspective was shaped by these traditions rather than, or in addition to, those of the cult (covenantal or otherwise). Among the features which are thought to show wisdom influence are the use of a series of rhetorical questions in 3:3-6; the repeated use of a numerical sequence of the type  $x/x+1$  in 1:3-2:6; the presence of woe oracles in 5:18; 6:1, 4; the use of the formal admonition (as contrasted with the unconditional prophetic oracle of doom) in 4:4-5; 5:4-6, 14-15; the doxologies (4:13; 5:8-9; 9:5-6); and several individual terms and references that are distinctive in Amos, among the prophets. See WISDOM IN THE OT[S].

As in the case of the alleged cultic affinities of the book, it is debated whether these other features are distinctive of the wisdom tradition, or even at home in it. However, some of the evidence does appear to show that Amos' language and his forms of utterance were partly shaped by the special interests and habits of either the professional wise men or the elders of the Israelite clans. Unfortunately, too little is known about either for us to pinpoint the source of this influence upon Amos.

4. **The message of Amos.** Recent research tends to confirm the opinion that the forms and substance of Amos' message were deeply rooted in the religious traditions of Yahwism and were not merely the unprecedented innovations of a creative mind. Thus he can be seen more clearly than before as the representative of a dynamic community of faith which spanned the generations of Israel. And yet Amos' great originality, which is manifest above all in the unique configuration of his oracles, must be emphasized. Whatever traditional forms he may have used he invested with new meaning and power.

**AMPHICTYONY** ἄμ φικ' τῆ ε̅ νῆ [Gr. ἀμφικτυονία from ἀμφικτύονες, var. of ἀμφικτίονες, "dwellers around"]. In Greece, the name for a specific form of league organized around a temple for its protection and maintenance. Certain scholars apply this term to a supposedly analogous organization of early Israel.

1. **The Pylaean-Delphic amphictyony.** A consideration of the hypothetical Israelite amphictyony must start from a brief outline of its alleged Greek counterparts. Among those, the Pylaean-Delphic amphictyony was the most important. It started as a league of a few small tribes on both sides of the vital Thermopylae Pass for protecting their security and exploiting in common the traffic through the pass. Delegates from member tribes met every autumn in the shrine of Demeter at Anthella, near the southern end of the "Gates" (*pylai*); hence *pylaia* for the assemblies, and *pylagorai* (or *pylagoroi*) for the delegates. The members of the amphictyony pledged, in case of war, not to cut off water from each other and not to destroy one another's towns. Ca. 600 B.C., the powerful Thesalians, followed by Euboea and Boeotia, joined the amphictyony. The expanded league now counted twelve member "peoples" (*ethné*). The temple of Delphi was later placed under the protectorate and administration of the amphictyony, and members pledged sacred war against any state that would encroach on the domain of the temple. The amphictyonic council now met four times a year: twice at Anthella, twice at Delphi. Beside the *pylagorai*, who decided all legal questions relating to the amphictyony, there was established a board of *hieromnēmones* for administering the finances and construction works of the temple.

Very little is known of other Greek amphictyonies: around the temple of Poseidon at Calauria (with seven members); around the temple of Poseidon at Onchestus (number of members unknown); around the temple of Apollo at Delos (membership open to all states of Ionian origin). Outside the Greek world, the closest parallel is provided by the league of Etruscan cities, which always counted twelve members, though their names vary in different transmissions. Their representatives went every spring to a festival at a temple of Voltumna and elected the supreme priest of the league.

2. **Noth's thesis.** Occasional comparisons between the twelve tribes of Israel and Greek or Italian leagues with the same number of members were

made since mid-nineteenth century, but it was Noth who first presented a systematic exposition of the hypothesis of an Israelite amphictyony. His thesis can be summarized as follows. The six tribes of the "Leah group" were the first to settle in Canaan. They established the "first amphictyony," under the name Israel, with the amphictyonic center just W of Shechem. The tribe of Benjamin arrived somewhat later, and the tribes of the house of Joseph came last, at the time of Pharaoh Mer-ne-Ptah, from the confines of the Egyptian Delta and the area of Kadesh. The remaining tribes had dwelt in Canaan along with the "Leah group," but could not join the amphictyony because its membership could only be doubled from six to twelve. The arrival of the Joseph tribes provided the missing two units, so that each tribe could maintain the amphictyonic shrine for one month of each year. It was only then that Yahweh, brought by the Joseph tribes and represented by the ark, became the common deity of the amphictyony. After the destruction of Shechem by Abimelech, the ark was transferred to Shiloh. The amphictyony celebrated common festivals. The member tribes were represented by their *n'si'im*, who corresponded to the Delphic *hieromnēmones*. There was an amphictyonic law (the Book of the Covenant or parts thereof), and there were amphictyonic wars (e.g., against Gibeah of Benjamin, Judg. 19-21). When Judah temporarily seceded after Saul's death, Hebron with its Abrahamic shrine at Mamre became the center of a six-member amphictyony composed of Judah, Simeon, Caleb, Othniel, Jerahmeel, and Cain. This "greater Judahite" amphictyony was perhaps even older than the twelve-tribe one. David transferred the ark to Jerusalem so that this neutral city could become the center of the restored Israelite amphictyony, which had by then evolved into a national monarchy.

3. **Objections to the thesis.** The principal objection to the thesis is its purely speculative character. Nowhere in the books of Judges and Samuel is there a reference to such an organization. Judg. 1 emphasizes that each tribe conquered its territory by its own efforts. Tales about the premonarchic period stress the absence of any common authority and extol the feats of individual clan chieftains, freebooters, single tribes, or, in rare cases, *ad hoc* coalitions of two or more tribes. No central shrine comparable to Delphi existed in Palestine. Sanctuaries were numerous and strictly local. Nowhere in the book of Judges is it said that Shechem played a central religious role for all or most of the tribes of Israel; nor is there a word in the whole OT that the ark was ever stationed at, or near, SHECHEM (see JOSHUA, BOOK OF[S] §5d). The ark is not mentioned anywhere in Judges, except Judg. 20:27, which places it at Bethel; but the verse is an obvious interpolation. According to another view (Albright), the central sanctuary remained at Shiloh from the conquest of Canaan to the eve of the royal period. However, the statements that Shiloh was the place where Joshua set up the tabernacle and allotted the land to the tribes (Josh. 18:1, 8-10; 19:51; 21:1-8; 22:9, 12) all belong to the postexilic Priestly Code (see PRIESTLY WRITERS[S]). Judg. 21:19-21 speaks of a yearly

feast of Yahweh at Shiloh, but since only "the daughters of Shiloh" are said to have performed ritual dances in its vineyards, it must have been a local affair. In I Sam. 3:3; 4:3-4 the ark is stationed in the temple (*hēkāl*) of Shiloh, but nothing is said of intertribal assemblies there, and Eli is described only as the priest of the temple, not as the incumbent of "the chief magistracy of Israel." When the Philistines returned the ark to the Israelites, it remained for "some twenty years" forgotten in a private house at Kiriath-jearim (I Sam. 7:1-2), and somehow the unification of Israel under Saul proceeded at that very time without this alleged symbol of amphictyonic unity. The *n'si'im*, supposedly the administrators of the central shrine, are never mentioned in the historical books of the OT.

There is no trace of evidence of a six-tribe amphictyony at the time of the Egyptian rule in Palestine. Noth deduced the figure six, to which he attached much importance, from the patriarchal tale of Jacob's children by Leah; but the actual figure is seven—six sons and one daughter, derived from the popular motif of the seven planetary deities, six of them male and one (Venus) female. The case for the six-tribe "Greater Judahite amphictyony" is no stronger. The "Abrahamic shrine at Mamre" is not mentioned at all in the stories of David's enthronement at Hebron, first over Judah (II Sam. 2:1-4), later over Israel (5:1-5). The figure twelve, derived from the number of months in a year, was fixed as the number of Jacob's sons, but it plays no role in historical narratives which speak of "all Israel," "Israel and Judah," or "all tribes of Israel" (I Sam. 10:20; II Sam. 5:1; 15:10) without specifying their number. The Song of Deborah (Judg. 5) lists ten tribes, with Simeon, Levi, Judah, and Gad missing altogether. A classical presentation of the twelve-tribe scheme is found in the utopian vision in Ezek. 48, written long after the breakup of the tribal order. In it, the twelve tribes occupy equal shares of the land of Israel, seven N of the holy temple district, five S of it, with the *nāsi'*, the priests, and the Levites installed in the holy district itself. This vision was taken over by the authors of the Priestly Code. They retrojected it into the remote past of the desert wandering, replacing the temple by a half-scale, movable tabernacle, the N-S sequence of the tribal portions by a circular camp with the tabernacle in its center, and Ezekiel's single *nāsi'* by twelve tribal *n'si'im*.

But even the imaginary desert congregation of the Priestly Code bears no resemblance to the Delphic amphictyony. In Delphi, an elected representative council of the *pylagorai* regularly met in set places and decided questions of common concern by a majority of votes; a similarly elected board of *hieromnēmones* controlled the finances and property of the temple. In Etruria, delegates of allied cities elected the chief priest of the league. In the Priestly Code, the congregation is a rigid theocracy under the strict personal rule of Moses whose orders come from Yahweh and are obeyed without discussion. The *n'si'im*, far from being the elected representatives of their tribes to a govern-

ing council, are Moses' appointees, responsible for the implementation of his decrees (Num. 1:2-17).

4. Near Eastern parallels. It is futile to seek confirmation of the twelve-tribe system in other genealogical charts of the Priestly Code which contain twelve members: Gen. 22:20-24; 25:12-17; and 36:9-19, if Amalek is not counted. These groupings are artificial and only reflect the Priestly compiler's predilection for duodecimal classification. It has been asserted that an amphictyony, similar to that of Delphi, existed in Sumer. At the time of the Third Dynasty of Ur, city governors had to deliver periodic contributions for the temple of Nippur. Most cities supplied the temple for one month, some for two to four months, sometimes three towns combined for a monthly tribute. The rotation was not on an annual basis (every year another group of cities was assigned), and no difference was made between cities of Sumer proper and newly conquered Hurrian and Elamite cities. To speak of an amphictyony in the authoritarian, hypercentralized Ur III Empire contradicts the basic meaning of the term, and to postulate on the ground of the quoted facts a "prehistoric Sumerian amphictyony" is unwarranted.

There are, however, much closer Near Eastern analogues to the premonarchic Israelite tribal order. Tribal associations, or confederations, are characteristic of nomadic tribes, both in their original conditions and in the process of their becoming sedentary. The MARI texts, which shed much light on nomadic tribes of N Mesopotamia, tell, e.g., of a "confederation (*ummätum*, cf. Heb. *'ummä*) of all the 'fathers' (sheiks) of Ḫana," and of a confederation of three tribal kingdoms: Ubrabüm, Amnänüm, and Rabbüm. The former two tribes, along with two more, Yaḫrurüm and Yariḫüm, were collectively known as "sons of Yamina" (Benjaminites). They were linked to each other by a common way of life and a consciousness of kinship; intertribal alliances were expressed in terms of brotherhood. Tribes easily moved from one confederation to another: we hear, e.g., of "Benjaminite Ḫaneans." Treaties between Benjaminite chieftains and kings of city-states were accompanied by sacrifices, and could be concluded in a temple of one of the cities involved, but nothing points to the existence of a common shrine. The same pattern of tribal areas and intertribal confederations was later followed by Arameans, Chaldeans, and Arabs.

5. Conclusion. A loose confederation of an unstable number of tribes is all that emerges from the biblical traditions about premonarchic Israel. The balance of evidence favors the conclusion made by de Vaux: "The proposed rapprochement between the grouping of the tribes of Israel and the Greek amphictyonies is not justified."

A. F. RAINEY

ANATHOTH. 2. One of the "chiefs of the people" who joined Nehemiah in setting their seal to the covenant which the Judean community made with God (Neh. 10:19 [H 20]).

\*ANDREW, ACTS OF. See APOCRYPHA, NT[S].

ANDROGYNÝ ān drōj' i nī [Gr., from ἀνῆρ, ἀνδρός, "man" and γυνή, "woman"]. A belief in sexual ambivalence or change of sex in gods, mythical heroes, or human beings. Vestigial reminiscences of it can be discerned in the OT.

1. Sexual attributes. Since the earliest times, mankind has been fascinated by the male-female dichotomy. Masculinity and femininity were regarded as primordial essences. Each sex had its own set of characteristics and virtues, to be kept strictly apart. In the Near East, the standard emblem of masculinity was the bow (both as a weapon and as a symbol of male potency); of femininity, the spindle. Normally, each sex avoided the attributes of the opposite sex. It was feared that wearing a woman's attire by a man would contaminate him with feminine weakness, while the use of a man's garb and arms by a woman was considered presumptuous. But precisely because transvestism was not approved in everyday life, it could be practiced—as this was true for many other taboos—in special circumstances, such as religious ceremonies and marriage. On the other hand, somatic hermaphroditism, psychological transsexualism, and rare cases of apparent sex change at puberty, were no doubt observed in real life. But more than from such observations, the idea of androgyny arose from the inclination of human fantasy to create imaginary composite beings.

2. In Mesopotamia. Opposite sexual characteristics were combined in the image of the goddess Ishtar. On the one hand, she was the quintessence of voluptuous, seductive femininity (but, significantly, she had no children); on the other hand, she was a war-goddess, depicted with a bow and quivers, who led armies into battles, scattered and destroyed the enemy. Her planet, Dilbat (Venus), was "female as the evening star, male as the morning star." In pre-Sargonic Mari, a temple was built to Ishtar-NITA, "the male Ishtar." In a

hymn of Naná (a manifestation of Ishtar), the goddess declares: "I am a hierodule in Uruk, I have heavy breasts in Daduni, I have a beard in Babylon, still I am Naná." In Assyria, Ishtar was represented "with a beard like Aššur." Conversely, her consort Dumuzi (Heb. Tammuz) shows vestiges of femininity. In his hymns, he is addressed as Damu, but elsewhere Damu appears as a goddess.

"It is within thy power, Ishtar, to change men into women and women into men," says an Old Babylonian invocation. The Hittites asked Ishtar of Nineveh to take away from the enemies their masculinity, prowess, and arms, and instead to "place in their hands the spindle and mirror of a woman" and to "dress them as women."

A ritual "change of sex" was achieved by change of clothing. The Old Babylonian expression formerly read as *SALzi-ik-rum*, literally "a woman who is a man," is now properly to be read as *SALse-ek-rum*, "harem woman," and thus is not relevant here. Conversely, Ishtar's sacred personnel included singers and dancers called *kurgarrú* and *assinnu* (also *kulu'u*), of whom the Erra epic says that "Ishtar has changed them from men into women to teach the people piety." The Descent of Ishtar epic states that the *kurgarrú* were neither male nor female; they may have been eunuchs. The two categories performed dances "girt with the vestments of the goddess Narudu." It follows from certain contexts that they also served as male prostitutes.

**3. In Syria.** In Canaanite lands, Ishtar was paralleled by two almost identical goddesses, Astarte and Anath. They were hunters, warriors, and redoubtable killers, but at the same time full of beauty and charm. The strange epithet of the Carthaginian goddess, *Tnt pn B'l* is perhaps best translated "Tinnit with the face of Baal," i.e., with a bearded face. Astarte was depicted in Egypt with a shield and a spear, and a mythological text speaks of "Anath, the goddess, the victorious, a woman acting as a man, clad as a male and girt as a female." In the second century A.D., the sacred personnel of Atargatis (whom Lucian equated with Hera) included the self-castrated *galli* who wore women's dresses and did feminine work. Lucian's *De Dea Syra* may be late, but the rites described in it are extremely archaic.

**4. In Cyprus and Greece.** In Amathus, an ancient non-Greek city of Cyprus, a bearded androgynous Aphrodite was worshiped by men dressed as women and women dressed as men. The same ritual was observed in Argos at the festival of Hybristica. In several areas of Greece, the bridegroom wore a feminine dress; or the bride was dressed as a man, or wore a beard; or the newly wed exchanged their clothes and consummated the marriage in the presence of an androgynous divine image, or an ithyphallic statue in feminine garb. This strange custom, no doubt, aimed at assuring a perfect union of the sexes, so that they "become one flesh." Strong motifs of androgyny existed in the myth and cult of Dionysus. The god was visualized as an effeminate youth with quasi-feminine attire and hairdo. It was said that in his childhood he was raised as a girl. He was called *arsenothelys*, "male-

female," and *pseudanór*, "sham man." The ritual of Dionysus Pseudanór was performed by *mimal-lones*, girls who imitated men. The heroes Leucippus, Iphis, and Caeneus were born as girls and were changed into men. The Theban soothsayer Tiresias was transformed into a woman and became a celebrated harlot, but after seven years he returned to his original sex. This myth reflects the Near Eastern institution of male prostitutes in feminine attire.

**5. In the OT.** Only traces of beliefs and practices of androgyny survive in the OT. The dirge for the deceased kings of Judah as cited in Jer. 22:18: "Alas my brother and alas sister! Alas lord and alas his majesty!" (author's trans.) perhaps goes back to the posthumous deification of Canaanite kings and their assimilation to the lamented god Adonis who, like Dumuzi and Dionysus, may have been imagined as sexually ambivalent. The persuasion that a man can lose his virility and become womanlike underlies David's curse (II Sam. 3:29) that the house of Joab, beside other afflictions, may never be without one "who holds the spindle." The prohibition of Deut. 22:5, "A woman shall not wear anything that pertains to a man, nor shall a man put on a woman's garment; for whoever does these things is an abomination to the Lord your God," must be understood, as W. Robertson Smith saw long ago, in the sense that "this is not a mere rule of conventional property but is directed against those simulated changes of sex which occur in Canaanite and Syrian heathenism."

**6. In Talmud and Midrash.** The Talmud uses the Greek loanword מַרְדְּרָאִיּוֹת in the physiological meaning "hermaphrodite" (so as not to use a term composed of two names of heathen deities). The only allusion to the motif is found in the midrash Berēshith Rabbá 8:1, in which the words of Gen. 1:27, "male and female he created them," are understood as the creation of a single individual, and Rabbi Jeremiah b. Elazar (second century A.D.) is quoted as explaining that this meant an *androgynos*. It is questionable whether this idea goes back to any ancient traditions (according to Babylonian beliefs, the first human beings created by the gods were already divided into males and females). Perhaps the opinion of Rabbi Jeremiah is an echo of Plato's parable in the Symposium about an early race of androgynous human beings whom Zeus sliced in two and so separated the sexes.

**ANTIPATRIS**. See APHEK[S].

\***APHEK (IN THE SHARON)**. Archaeological work by the Palestine (1934-36) and Israel (1958, 1961) Departments of Antiquities at Ras el-'Ain has proven the occupation of the site in the Early Bronze Age, i.e., the first half of the third millennium B.C. After the site had apparently been deserted for over five hundred years, a city grew up covering an area of about thirty acres. It is probably the Aphek of the Egyptian execration texts, whose prince, Yanakilu, has a West Semitic (Amorite) name. Archaeological evidence continues to the Early Iron Age, thus reaffirming the identification of the site (questioned by some scholars) with the Aphek of the Philistines. Renamed Antipatris by Herod in honor of his father, it is mentioned in Acts 23:31: "The soldiers . . . took Paul and brought him by night to Antipatris."

Since 1972 an archaeological expedition by Tel Aviv University and the Baptist Theological Seminary of New Orleans, led by Kochavi and Kelm, has been conducted at Aphek. The main areas of excavation turned out to be outside the limits of the city of Bible times. Finds from tombs and pits include both LB and Iron Age pottery, such as Mycenaean, imported Cypriote, Philistine, and Samaria wares. Fragments of trilingual tablets inscribed in Sumerian, Babylonian, and Canaanite were discovered in what has been described as a "library-study" of the final LB Age town. The fragments were part of a revolving prism which, the excavators believe, served as a dictionary.

**APOCALYPSE, GENRE. 1. Genres in the postexilic period.** While the influence of conventional forms never disappeared in ancient Jewish and Christian literature, later writers utilizing the genre of the apocalypse exercised considerable freedom in adapting it to their purposes, often fusing it with other genres. Since this resulted in wide diversity in expression, definitions must be flexible. Rather than describing an ideal type, therefore, it is preferable to sketch the typical features of the work originally designated "apocalypse" in antiquity, the book of Revelation, and then to consider which other compositions of the same era show sufficient similarity to justify extension of the term to them as well.

**2. The apocalypse genre in the book of Revelation. a. Structure and typical features.** These are expressed succinctly in Rev. 1:1-2: (1) a revelation is given by God, (2) through a mediator (here Jesus Christ or an angel), (3) to a seer concerning (4) future events. This basic structure is amplified through a number of recurring features. In 1:9-20 and *passim*, the revelation occurs in a vision in which the seer is allowed to peer into the heavens (cf. 4:1) to witness happenings which are determinative for future events on earth. The phrase "in the Spirit" (1:10; 4:2) indicates an ecstatic state. In 1:17-20 the Lord addresses the seer directly; elsewhere, the interpretation of the vision is conveyed by an angelic interpreter (1:1; 17:1-18; 22:6). In 21:9-22:5, the angel becomes a guide through heavenly places as the vision is transformed into a rapture. As for the seer, his response is one of awe (1:17; cf. 22:8), commonly followed by a word of comfort or admonition from the Lord or the angel (1:17; 22:9). Finally, though the vision can be expressed either as cosmic drama or in the form of elaborate symbolism, it always has bearing on "what is and what is to take place hereafter" (1:19; cf. 1:1; 4:1).

**b. Setting and function.** 1:9 gives the general setting of this genre ("I, John, . . . who share with you in Jesus the tribulation and the kingdom and the patient endurance"), and 1:19 indicates that the primary function is to disclose to the elect the secret of "what is and what is to take place," thereby serving to comfort the oppressed and encourage them to remain faithful to their beliefs. See also REVELATION, BOOK OF and supplementary article.

**3. Other apocalypses.** Many variations of these features are found in other apocalypses. Even Revelation suggests some of the possible variations. The apocalypse may comprise a single vision (1:9-20) or a collection of visions (the final form of the book); it may incorporate various other genres (examples in Revelation are the epistle and the hymn; in other apocalypses we commonly find the historical résumé, the prayer, and the testament); not only is there latitude for either "direct" description of heavenly events or symbolic description, but the disclosure can occur in a vision or in rapture (or in other books in a dream). Yet within this latitude enough conformity to the features of Revelation is found in some other compositions from the period 200 B.C.-A.D. 200 to

justify extension of the term "apocalypse" to them as well.

**a. Daniel 7-12** is a collection of apocalypses. The first, ch. 7, is a dream (or vision) referring to successive world kingdoms. The seer responds in alarm (vs. 15); the meaning of the vision, supplied by an angelic interpreter (vss. 16-27), concerns the imminent destruction of the oppressors and the granting of the kingdom to the saints. Similarly, Dan. 8: revelation, 1-14; mediator, 15-26; seer, 17-18, 27; future events, 19, 26; and Dan. 10-12: revelation, 10:5-11:1; seer, 10:8-10, 15-17; mediator, 11:2-12:4; future events, 10:14.

**b. I Enoch** contains an apocalypse in chs. 14-15. Seen in sleep, and called a vision, it is actually a rapture producing a direct description of heavenly things, especially the divine throne. It is not mediated by an angelic guide, but the seer responds with the usual dread (14:13-14). Its aim is to explain the corruption which will continue on the earth until the consummation.

**c. IV Ezra** gathers together a number of apocalypses. One type is found in chs. 11-12 (ch. 13 is very similar). In the form of a dream, it develops the zoomorphic symbolism of Dan. 7. The seer responds with perplexity and fear (12:3-4). There is no mediation of the interpretation, which is given directly by the Most High. The whole unit deals with imminent events of salvation and judgment. A related type is found in 9:26-10:59.

**d. II Baruch 53-74** describes a vision seen in sleep. The seer responds in fear and awakes (54), and in answer to his prayer, an angel comes to explain (54-74) that the vision concerns the twelve ages of the world climaxing in woes, conflict, victory of the Messiah, and the reign of Peace.

**e. Variations.** In the majority of examples above, the apocalypse develops a historical résumé (using the technique of *vaticinia ex eventu*) which lends credibility to the seer's vision of the eschaton. That another emphasis is possible is indicated by I Enoch 14-15, where the major concern is with heavenly realities. This leads to the special apocalypse of the rapture elaborated in I Enoch 17-36, III Baruch, and II Enoch. In the last of these, two heavenly beings appear to the seer in sleep. They take him to the heavens, lead him from one level to the next, and show their respective secrets until finally he gazes at the Lord's face. Then he falls prone in fear (22:4). The rapture relates to "all that is and was and all that is now, and all that will be till judgement-day" (39:2).

**f. Setting and function.** Most of the apocalypses mentioned above seem to stem from settings of persecution within which they reveal to the faithful a vision of reversal and glorification (e.g., Dan. 12:1). This is made possible by concentration on heavenly realities, whether given in the form of symbols or in purported direct description. Earth's woes are seen as the shadows of a passing epoch. Though it is likely that ecstatic experience played a part in the apocalypses, there is also evidence of studied application of conventional devices.

Test. Levi 2-7 shows that the apocalypse genre could also be used to serve other functions. After an introduction in testamental form, a visionary rap-

ture is described which serves to legitimate the Hasmonean royal priesthood.

**4. Antecedents of the genre.** (See also APOCALYPTICISM[S] §3; ZECHARIAH, BOOK OF[S] §2.) A strong argument can be made in favor of designating the night visions of Zechariah as early apocalypses (though the fourth vision has peculiarities of its own). In them the seer is granted a vision, which is explained by an angelic interpreter who relates it to imminent events. There is a functional difference, however, which sets the Zechariah visions apart from most of the later apocalypses; they serve less to comfort the oppressed than to legitimate the hierocratic structures of the Zadokites (in this respect, the function approximates that of Test. Levi 2-7). Functionally, certain visionary units in Third Isaiah betray closer affinities to the later apocalypses (e.g., 59:15b-20) than do the apocalypses of Zechariah.

Though in terms of the typical features found in Revelation it is difficult to designate the visions of Ezekiel as apocalypses, individual motifs from his visions had profound influence on the development of the genre. And behind Ezekiel the line of influence can be traced to the visions of Jeremiah (e.g., 1:11-16), Isaiah (e.g., 6:1-13), Amos (7:1-9; 8:1-3), Michaiah ben Imlah (I Kings 22:19-23), and perhaps even to an ancient Canaanite genre reflected in *krt's* vision of 'el (CTA 14[1K]); cf., also, the *aqht* legend. Another line of influence can be traced to dream accounts, especially those found in Genesis. A full investigation of antecedents should perhaps order these diverse visionary materials under the major rubric vision reports, under which such specific genres as *call vision*, *salvation vision*, *judgment vision*, *apocalypse*, and *revelation discourse* (a favorite genre in Gnostic writings) could be described and contrasted.

\***APOCALYPTICISM.** A system of thought produced by visionary movements; builds upon a specific eschatological perspective in generating a symbolic universe opposed to that of the dominant society. This symbolic universe serves to establish the identity of the visionary community in relation to rival groups and to the deity, and to resolve contradictions between religious hopes and the experience of alienation (see §3c below) by according ultimate meaning solely to the cosmic realm, from which imminent deliverance is awaited.

1. NT usage. "Apocalyptic" and related terms are derived from the Greek (ἀποκαλύπτειν [to reveal] and ἀποκάλυψις [revelation]). This terminology entered the realm of biblical scholarship by the extension to other writings of the word ἀποκάλυψις from the book of Revelation. But this extension invited confusion from the start by virtue of its arbitrariness, as connections were made first on the basis of various literary features, then on the basis of diverse doctrines or concepts. In Rev. 1:1 ἀποκάλυψις is used by the writer to designate this book, that is, to designate its literary genre. In vs. 1-2 the bare essentials of the genre are described; it involves a revelation of future events disclosed through the agency of an angel by God to his human servant, who bore witness "to all that he saw." The significance of this use of ἀποκάλυψις applies in the first instance to the definition of the literary genre apocalypse, rather than to the definition of the phenomenon of apocalypticism. The book of Revelation will help to clarify the latter, not by analysis of literary genre, but by a study of its position in the history of the socioreligious phenomenon of apocalyptic movements.

Apart from the use of ἀποκάλυψις as a literary designation in Rev. 1:1, this root (including its verbal forms) is used in the NT primarily in connection with the divine disclosure of saving plans which hitherto had been hidden. Such revelation draws attention to the saving significance of the events of Jesus' life (Matt. 16:17; Eph. 3:1-5) and looks forward to the consummation of those events in the PAROUSIA (Luke 17:30; Rom. 2:5; II Thess. 1:7; I Pet. 4:13). Paul emphasizes that he received this gospel not by consulting with the apostles, but through a "revelation" (Gal. 1:11-17).

The NT usage thus establishes this root's primary meaning as involving the unveiling of divine plans as salvation history unfolds, but it does not clarify the distinction between apocalyptic and eschatology, nor does it address the problem of OT and intertestamental antecedents. Such questions require a broadening of the inquiry into other linguistic horizons. The NT speaks of a series of events which inaugurated a new aeon, events belonging to a cosmic drama of salvation that is dependent upon no human powers or agents. This places the NT within an ancient stream of tradition which incorporates the perspective of apocalyptic eschatology.

2. Definitions. The technique of using formal lists (including everything from religious concepts to literary and psychological characteristics) in defining apocalypticism seems inadequate both in the analysis of individual compositions and in the attempt to establish the limits of the "apocalyptic corpus." Are we to include only apocalypses? This would exclude the bulk of the material in some of the works generally considered apocalyptic, such as DANIEL, I ENOCH, the Testament of Moses and the TESTAMENTS OF THE TWELVE PATRIARCHS. Then

are we to include all works which incorporate apocalyptic eschatology? To do so empties the term of specific meaning by broadening it to embrace nearly all the postexilic writings of the Jewish canon, the NT, the APOSTOLIC FATHERS, and many of the rabbinic treatises. It seems advisable to replace the formal cognitive definition with a system that identifies three distinct levels which, while interrelated, betray individual peculiarities which should not be blurred. Moreover, the symbolic universe of an individual apocalyptic movement is not handed down to it ready-made by an authoritative antecedent tradition, but is formed within a specific historical-sociological matrix, and therefore this system of definitions must be characterized by flexibility. We are defining not a static system, but a phenomenon characterized by movement on several levels.

a. *Apocalypse*. This term designates a literary genre which is one of the favored media used by apocalyptic writers to communicate their messages. It is by no means the exclusive, or even the dominant, genre in most apocalyptic writings, but is found alongside many others, including the testament, the salvation-judgment oracle, and the PARABLE. The socioreligious phenomenon of apocalypticism, therefore, must not be uncritically identified with the literary form of the apocalypse (see APOCALYPSE, GENRE[S]).

b. *Apocalyptic eschatology*. The connections between the prophetic literature of the first temple period and the so-called apocalyptic writings are too numerous to be denied. Nevertheless, the obvious instances of not only sapiential material, but of materials deriving from Greek, Hellenistic, and various Eastern sources disallow the identification of apocalypticism as a simple rectilinear development out of prophecy. Prophecy is *one* current (even if the central one) alongside others. Moreover, the presence of scattered apocalyptic notions in works dominated by another perspective must be accounted for without carelessly gathering virtually all Jewish and Christian religious writings under the category of apocalypticism. These considerations call for a distinction between apocalyptic ESCHATOLOGY and the more restricted phenomenon of apocalypticism.

Apocalyptic eschatology, then, is neither a genre, nor a socioreligious movement, nor a system of thought, but rather a religious perspective, a way of viewing divine plans in relation to mundane realities. It is a perspective which is the exclusive property of no single religious or political party or group, though in certain periods it may be more characteristic of members of one party, sect, or social class than of others. Nor does it designate an absolute posture which an individual or a group either adopts exclusively or rejects completely, but it is a perspective which individuals or groups can embrace in varying degrees at different times, even as the modern person or community can vacillate between religious, superstitious, and scientific perspectives. Thus it is not surprising to find the perspective of apocalyptic eschatology in works as divergent as the sectarian writings of Qumran (see DEAD SEA SCROLLS[S]) and the rabbinical commentaries.

In its view toward the future as the context of divine saving and judging activity, apocalyptic eschatology can be seen as a continuation of prophetic eschatology. The difference involves the degree to which divine plans and acts are interpreted as being effected within the structures of mundane reality and through the agency of human persons. In prophetic eschatology the tendency was toward integration, that is, the recognition of divine action within events and persons of the political and historical realm (e.g., Isa. 7). As historical and sociological conditions made it increasingly difficult to identify contemporary individuals and structures with divine agents and end-time realities, as the elect increasingly were deprived of power within social and religious institutions, and as the vision of ancient myth began to offer world-weary individuals a means of resolving the tension between brilliant hopes and bleak realities, the perspective of prophetic eschatology yielded to that of apocalyptic eschatology. Gradually God's final saving acts came to be conceived of not as the fulfillment of promises within political structures and historical events, but as deliverance out of the present order into a new transformed order: "For behold, I create new heavens and a new earth; and the former things shall not be remembered or come into mind" (Isa. 65:17).

While apocalypticism cannot be identified with the perspective of apocalyptic eschatology, a relationship does exist: apocalypticism is latent in apocalyptic eschatology, and can grow out of the perspective it provides. Historical and social conditions may lead a group to elevate that perspective to an ideology which resolves contradictions between hopes and historical realities and provides the group with an identity in relation to other social and political groups and to the deity. When this happens, we witness the birth of an apocalyptic movement.

**c. Apocalypticism.** Apocalypticism refers to the symbolic universe in which an apocalyptic movement codifies its identity and interpretation of reality. This symbolic universe crystallizes around the perspective of apocalyptic eschatology which the movement adopts. Since the symbolic universes generated by different apocalyptic movements will differ from one another as a result of conditions surrounding the organic growth of the individual symbol systems, it is not possible to give one formal cognitive definition of apocalypticism. Indeed, since the typical apocalyptic universe develops as a protest of the apocalyptic community against the dominant society, it is concerned less with systemic consistency than with the demands of the immediate crisis, especially those of defining identity within a hostile world, and of sustaining hope for deliverance. While certain popular themes, traditions, and genres recur in apocalyptic compositions widely separated by time, other elements tend to be unique to individual works. The latter are drawn from broadly diverse quarters, including biblical traditions, ancient Canaanite myth, Zoroastrianism, neo-Babylonian astronomy, Greek myth, Hellenistic historiography, Jewish and foreign wisdom, and perhaps from "whatever the

author happened to have heard yesterday." The result is often a collection of concepts and motifs which is highly eclectic in nature and characterized by the esoteric, the bizarre, and the arcane.

In the critical investigation of compositions to discern whether they betray an origin within an apocalyptic movement, the critic is aided by the fact that all ancient apocalyptic movements are characterized by (a) a particular type of social setting, and (b) a related group response. The *social setting* common to all ancient apocalyptic movements can be designated the group experience of alienation. This is the disintegration of the life-sustaining socioreligious structures and their supporting myths. The viability of life itself is called into question. Alienation can be the result of actual physical destruction of institutional structures, or it can arise as a community finds itself excluded from the dominant society and its symbolic universe, due either to choice or to ostracism. The result is a cultural vacuum which threatens life with chaos, a condition graphically described in Isa. 24, both in relation to the social fabric of society (vss. 1-13) and to the cosmic structure of reality (vss. 17-23). The strain becomes intolerable as members of the community are disenfranchised from institutional structures and reduced to powerlessness. Their existence becomes marginal, their orientation confused (cf. Isa. 66:5).

This social setting of apocalyptic movements leads to the second feature common to them, the *response* of the community to alienation. If the life of a community is to be sustained, a new symbolic universe must replace that which was dominant in the social system responsible for the experience of alienation. What makes the response of a particular group apocalyptic is its recourse to apocalyptic eschatology as the perspective from within which it constructs an alternative universe of meaning. Apocalyptic eschatology allows a community to maintain a sense of identity and a vision of its ultimate vindication in the face of social structures and historical events which deny both that identity and the plausibility of the vision. From this point of view it becomes possible to claim that true identity is derived, not from the structures and institutions of the society, but from a vision of what God is doing on the cosmic level to effect deliverance and salvation: "For behold, the Lord will come in fire, and his chariots like the stormwind, to render his anger in fury, and his rebuke with flames of fire" (Isa. 66:15). The significance and power of mundane structures are reduced to nothingness. "The kingdom of the world has become the kingdom of our Lord and of his Christ, and he shall reign for ever and ever" (Rev. 11:15). The creation of a new symbolic universe thus begins by denial of the ultimate significance of this world's structures and by a retreat into a vision of the "higher" reality and of what that reality implies for the future.

The different apocalyptic movements tend to fall into one of two basic types vis-à-vis the dominant social system. One type is composed of marginal persons within a nation who feel alienated from the symbol system of the dominant society and respond by giving expression to their

group identity and vision of the future by constructing an apocalyptic symbolic universe. Such was the type found among the followers of Second Isaiah in the period after 520 B.C. In other cases an apocalyptic movement can consist of a broad cross section of a nation protesting against a symbolic universe which has been imposed upon them by a foreign power. Such was the case in the early stages of the Maccabean struggle against the Seleucids (Dan. 7-12).

A further set of distinctions must be made with regard to the function of apocalyptic works. While apocalyptic movements always generate their symbolic universes in opposition to the symbolic universe of the dominant society, the form of that opposition varies, depending upon the status of those involved, the intensity of the conflict, and the goals envisioned by the leaders. In early stages opposition is often channeled into social protest aimed at reform of the dominant society, in which case we can speak of an *alternative symbolic universe*. Oppression and disenfranchisement can lead to one of three responses: (1) the community can withdraw and establish a new society based upon a *symbolic utopian universe*; (2) it can yield in the face of opposition and go underground, leading to a subsociety expressing its identity in a *symbolic subuniverse*; (3) in the face of persecution, it may choose to reply with violence, becoming a revolutionary community constructing a *symbolic counter-universe*. These categories are of course ideal, and while examples can be suggested (e.g., Qumran, the early *hasidim*, the Zealots), usually a combination of goals will be found; for example, the members of the apocalyptic community at Qumran could withdraw, but then devise detailed plans for the day when God would lead them back to destroy and supplant the socioreligious system of the Hasmoneans.

A strict, inductive approach to the study of apocalypticism may seem to rule out any description of the typical features of the diverse apocalyptic symbolic universes. Strictly speaking, this is true. Nevertheless, they do develop from a shared matrix (alienation) and perspective (apocalyptic eschatology). Hence, many different apocalyptic universes share a common core. Typically, the group experience of alienation and the political function of the resulting symbolic universe leads to a sharp distinction between the elect and the wicked (I Enoch 5:6-7). Denigration of mundane structures in favor of the vision of what God is doing on the cosmic level to effect deliverance of the elect leads to a heaven/earth dichotomy: "Rejoice then, O heaven and you that dwell therein! But woe to you, O earth and sea, for the devil has come down to you" (Rev. 12:12). Events on earth are mere shadows of the decisive cosmic events (Dan. 10:12-21). Within a perspective from which heavenly realities alone are ascribed enduring validity, time is divided between the era before the inbreaking of the cosmic reality, and the aeon which follows: "the Most High has made not one Age, but two" (IV Ezra 7:50). Since the former era, that is, all previous history, is seen as a totality, it can be conceptualized schematically in various ways: as divided into periods (e.g., the

four-kingdom notion), as degenerating into greater and greater decay, or as being determined from the beginning and thus amenable to summary in sweeping historical résumés.

The influence of ΜΥTH on many apocalyptic symbol systems was profound, as seen for example in numerous traces of the notion that the end time will be like the time of primeval beginnings (*Endzeit wird Urzeit*). While it is undeniable that the historical orientation of earlier Israelite religion left its imprint on subsequent apocalyptic movements, the cosmic orientation emerging from apocalyptic eschatology and the added influence of myth combined as a powerful incentive toward radical experimentation with temporal and spatial categories within the various apocalyptic symbolic universes. Thus it is unsatisfactory to emphasize only the focus on the future. Rather, the past (whether captured in the résumés, in various schemata, or in the pseudonymous use of ancient heroes), the present (whether conceptualized in terms of cosmic woes, deadly dualistic struggles, or universal disintegration), and the future (whether perceived as reversion to the events of *Urzeit*, as the death of the old and the birth of a new order, or as the intervention of Israel's God "on that day") are all caught up in a cosmic context which opens up new dimensions of meaning. These dimensions (largely excluded by the closed system of the dominant society) include a new eternal (e.g., messianic) kingdom (see MESSIAH, JEWISH[S]), unlimited prosperity and glory, the transcendence of death, and transformation into new forms of existence (Dan. 12:3). (See FUTURE LIFE IN INTER-TESTAMENTAL LITERATURE[S]; IMMORTALITY[S]; RESURRECTION.) Moreover, the partial suspension of spatial and temporal categories enabled the apocalyptic communities to celebrate proleptically these new possibilities in their communal life. The close bond between the apocalyptic literature of Qumran and that community's life of celebration serves as a reminder of the living character of the symbolic universes of apocalypticism. While such experimentation led to significant modifications in the earlier historical orientation of Hebrew prophecy, it did not reach the level of abstraction upon which the mundane concepts of space and time are abandoned entirely. Where the latter occurs we no longer speak of the symbolic universe of apocalypticism, but of Gnosticism (see GNOSTICISM [S]).

**3. Historical-sociological sketch of apocalypticism.** Whereas it is impossible to devise one list which includes all the important characteristics of apocalypticism, the preceding general picture suggests that a certain continuity characterizes the core of the major apocalyptic movements. The primary line of continuity is represented by the perspective of apocalyptic eschatology, which can be traced from the sixth century B.C. on. In periods of calm this eschatological perspective co-exists alongside other perspectives (e.g., pragmatic, scientific, etc.). In periods of alienation it is seized upon by groups which feel their life is marginal and confused, and which find its ideology useful in their efforts to reconstruct a universe of meaning. The result is the emergence of apocalypticism.

Either through eradication or through conversion back into the dominant system such movements dissipate in time, with the result that the perspective of apocalyptic eschatology is drawn back into the society, where it reassumes its position as a potentiality awaiting new crises, new polarizations, and new births of apocalyptic subuniverses. The importance of historical and sociological factors in this process of movement from potential to apocalyptic birth becomes apparent in the following tentative sketch.

*a. Ancient myth and the rise of prophetic eschatology.* Because apocalypticism in its many forms draws so heavily upon concepts and motifs of ancient myth, its roots must be traced to the great cosmogonic myths of the second millennium B.C. (see MYTH, MYTHOLOGY §A). But the attenuated form in which such concepts and motifs reached the apocalyptic movements cannot be understood apart from the intervening history of the Israelite tribal league, prophetism, and the royal cult. In that history, mythopoeic materials were recast, leading to the emergence of a perspective in many respects unique to the ancient world, that of prophetic eschatology (e.g., Isa. 29:5-7). Prophetic eschatology was born of the alienation experienced by a mixed group of tribes in the early Iron Age who experienced the collapse of a mythopoeic symbolic universe. The perspective which then emerged was subsequently hammered into shape within the ideological tensions between royal cult and prophetic and priestly circles in the period of the monarchy.

*b. Transition to apocalyptic eschatology.* The transformation of prophetic eschatology into apocalyptic eschatology was the gradual result of community crisis and national disintegration, circumstances which led prophets like Jeremiah and Ezekiel to envision redemption increasingly on a cosmic level through the use of motifs drawn from myth (Jer. 4:23-28; Ezek. 47). The full force of the alienation resulting from the disintegration of the pre-exilic social system and its supporting symbolic universe was experienced by Second Isaiah, in whose writings we witness an early, vivid expression of apocalyptic eschatology (*passim*). The bold application of myth (e.g., 51:9-11) led to a full description of the cosmic drama of salvation and introduced the heaven/earth and the past aeon/future aeon dichotomies (43:18-19) which became central to later apocalyptic subuniverses. Nevertheless, the integration of the cosmic vision into historical realities was kept alive by Second Isaiah's optimistic sense of nationhood (45:1-7).

*c. Birth of the first apocalyptic movements.* By introducing daring modifications into the symbolic universe of their antecedent traditions, Ezekiel and Second Isaiah both were able to bequeath to their followers programs of restoration written from perspectives quite advanced along the continuum from prophetic to apocalyptic eschatology (Ezek. 40-48 and Isa. 60-62). In the period of restoration following the return from exile, the two groups embracing these reform programs developed into rival parties. See PRESENCE OF GOD, CULTIC[S] esp. §5.

The Ezekiel program was adopted by the group

under Zadokite leadership which returned from exile in the years following the Edict of Cyrus (538). After their return, the alienation caused by the catastrophic disintegration of nation and cult in 587 was exacerbated by hostility and economic hardship in Palestine. The situation was conducive to an apocalyptic movement, which in fact arose when the prophets Haggai and Zechariah seized upon the apocalyptic eschatology in Ezekiel's restoration program and transformed it into an apocalyptic symbolic universe (Hag. 2:6-9; Zech. 1-6), which functioned as a counteruniverse to that of the Persian overlords. It envisioned a magnificent intervention of Yahweh and the establishment of a messianic kingdom under a Davidide (see COVENANT, DAVIDIC[S]) and a Zadokite high priest (see ZADOK THE PRIEST[S] §2), events pictured vividly by Zechariah in the earliest apocalypses. This particular apocalyptic movement was short-lived, apparently being extirpated by the Persians, who removed its revolutionary leaders and co-operated with its more pragmatic members in constructing a hierocratic program in which the perspective of apocalyptic eschatology was abandoned in favor of a pragmatic social system enjoying Persian support (see AARON, AARONIDES[S]; PRIESTLY WRITERS[S] §4). From this pragmatic standpoint the apocalypses of Zechariah were re-edited and given a new function as propaganda for the hierarchy and its Zadokite leaders.

The second apocalyptic movement arising in the early postexilic period was not so easily assimilated into the dominant social system. From the early years of the return its adherents resisted the restoration efforts of the Zadokite group in the name of an even loftier vision of cosmic intervention and deliverance. For them the alienation arising from the Babylonian destruction and the chaotic conditions of the land was not resolved through collaboration with the Persians, but was increasingly aggravated by the oppression to which they were subjected by the Zadokite leaders (Isa. 66:1-5). Oppression was followed by excommunication, and thus the symbolic universe which these visionaries built around the apocalyptic eschatology of Second Isaiah broke increasingly with the restraints of the historical realm. The situation of "truth . . . fallen in the public squares" (Isa. 59:14) was addressed not with efforts to reform the social system, but with a THEOPHANY of Yahweh coming "like a rushing stream" to "repay, wrath to his adversaries, requital to his enemies" (59:18b-19). These bleak conditions and the sectarian response of the visionaries set in motion a powerful apocalyptic movement which increased in intensity in the last years of the sixth century and through most of the fifth century as well (cf. Zech. 12 and 14).

The latter apocalyptic movement persisted because the sociohistorical realm and its dominant social system continued to create feelings of alienation; it was a defiled realm in which they could not participate. Thus the apocalypticism of their symbolic universe was predicated upon the disintegration of the present order and the creation of a new cosmic order of blessedness for the elect. Responsibility to the political order which was a

central characteristic of prophetic eschatology was abandoned in favor of a new supermundane universe of meaning. The result was the bipartite division of reality along several axes: past history as the epoch of evil/the coming epoch as glorious salvation; the enemy as wicked/the elect as righteous; the earthly order as decay/the heavenly order as life.

The writings which seem related to this apocalyptic movement (Isa. 34-35; 24-27; 56-66; Malachi; Zech. 9-14; Joel [?]) span the period from the Exile to the latter half of the fifth century. There seem to be no apocalyptic writings from the fourth century. The reason for this resides in the Chronicler's work. Ezra came to restore order in the Jewish community "according to the law of your God, which is in your hand" (Ezra 7:14). The spirit of the program of reform which he based on the law of Moses seems to be continued in the Chronicler's history. It was a latitudinarian work, integrating into one social system diverse elements which in the previous century and a half had become disenfranchised: Levites and prophets, for example, are brought back into the system, together with their archaic traditions (e.g., holy war). Though details are lacking, it seems that Ezra introduced a period of reconciliation in which the subuniverse of the second apocalyptic movement of the sixth-fifth centuries was absorbed into the symbol system of the dominant hierocracy. See CHRONICLES, I AND II and supplementary article; EZRA AND NEHEMIAH[S].

*d. Apocalypticism in the second century B.C.* In the second century B.C. we find the Jewish community engulfed by shattering events of a magnitude matched previously only by the Babylonian decimation of the sixth century. Political intrigue, military destruction, and the imposition of the symbolic universe of HELLENISM created an overwhelming sense of alienation which called into question the viability of the dominant social and religious structures. Circles like the early HASIDIM, who had preserved a strong eschatological perspective, responded to this situation in the manner of the earlier apocalyptic movements. The struggles of this earth were only shadows of battles occurring between the princes of heaven, and the outcome was certain to favor the elect (Dan. 10:10-21).

Resistance to the Seleucids (see SELEUCUS) was first unified under a broadly popular apocalyptic movement. But the military successes of the MACCABEES led to division, as some groups translated their energy into political reconstruction from a pragmatic standpoint which did not exclude cooperation with foreign powers like the Romans, whereas other groups withdrew further into the symbolic universe of apocalypticism. The sectarian writings from Qumran give us a vivid example of one group which responded by withdrawal and the creation of an elaborate symbolic utopian universe, which actually became the basis of a new social system. The writings of the period, including some of the PSEUDEPIGRAPHA, are replete with hints of other apocalyptic movements. But much detailed analysis is necessary before the rival symbolic universes of the period come into focus.

*e. Apocalypticism in the first centuries A.D.* The

perspective of apocalyptic eschatology was carried into the first centuries A.D. by the PHARISEES, the ESSENES, and various other sectarian groups. It was the point of view from which JOHN THE BAPTIST preached REPENTANCE and Jesus announced the KINGDOM OF GOD. Because the NT writings reflect sources of influence as diverse as biblical prophecy, Jewish apocalypticism, Gnosticism, and Hellenism, it is impossible to give a single answer to the relation of its various parts to prophetic and apocalyptic eschatology. These perspectives stand in tension here as they did in all periods of biblical tradition (e.g., the juxtaposition of present reality and future kingdom in Jesus' preaching), and again the perspective of apocalyptic eschatology bore with it the possibility of apocalypticism (cf. Mark 13 and II Thess. 2:1-12). In new periods of alienation, certain Christian and Jewish communities responded to crises like the destruction of the temple and Roman persecution by seizing the perspective of apocalyptic eschatology and building new apocalyptic movements. The most noteworthy example of NT apocalypticism is the book of Revelation (see REVELATION, BOOK OF and supplementary article).

**4. Theological significance.** The prophets subjected all institutions and structures to their vision of a cosmic order of justice toward which all history was striving. In maintaining a field of tension between vision and mundane reality, they fought against the alternative religious postures: (1) abdication of social and political responsibility through escape into the timeless security of mythic reality; (2) reification of existing institutions and structures into a system accorded external validity. This tension threatened to dissolve during certain periods of biblical history: the early monarchy, the Exile, and various apocalyptic movements.

In an age witnessing the recrudescence of apocalypticism, how can ancient apocalypticism be evaluated? How can that evaluation be related to contemporary apocalyptic systems such as dispensationalism? Genuine apocalypticism arose within a setting of alienation, and was never a theological program self-consciously constructed in security and repose. Apocalyptic movements generated their alternative symbolic universes in periods within which the community of faith could be maintained only by retreat from the system of an oppressive society. Where such movements did not degenerate into sectarian dogmatism, the retreat was tactical, followed by re-entry and reapplication of the prophetic perspective to the social order. Historical studies, especially of the medieval period, also bear witness to pseudoapocalyptic movements which do not generate alternative universes of meaning in response to alienation, but which take the symbolic universe of an earlier movement and exploit it programmatically, often for nationalistic, racist, or dogmatic purposes. This phenomenon does not represent genuine apocalypticism, but is blind imitation bereft of the pain and struggle of attempting to relate faith to the experience of a disintegrating social and cosmic universe.

Myths of salvation are abundant in contemporary society, ranging from reification of political, economic, social, and psychological systems, to escap-

ism into mythic consciousness, whether of Eastern or Judeo-Christian inspiration. Critical theology must subject all myths to evaluation from a prophetic point of view. Vis-à-vis contemporary dispensationalist movements, the question must be posed which was asked of ancient movements: Do they arise from the struggle to relate the dynamic of prophetic religion to contemporary social and political realities in a creative, compassionate and redemptive manner, or do they mechanically lift an ancient apocalyptic system out of its original setting and apply it programmatically in service of a lust for heroism, deification, and self-aggrandizement and in expression of a contemptuous death wish for the mass of humanity and the entire created order?

Biblical theology must deal with the riddles of ancient apocalypticism, such as its sectarian myopia and its disparagement of mundane realities, but it must always do so from within specific apocalyptic movements and with utmost care to grasp the concrete circumstances which gave rise to the symbolic universe in question. Contemporary theology must deal with the riddles of modern apocalypticism by distinguishing between the universe of meaning born of the horrors of the concentration camp or the persistent oppression of a totalitarian system, and the programmatic exploitation of an earlier apocalyptic universe. The often unpopular tasks of both disciplines will be carried out most responsibly in concert, with biblical theologians offering the perspective of the millennia, and the contemporary theologian transforming antiquarian concerns into life and death issues. See also *ESCHATOLOGY OF THE OT*; *ESCHATOLOGY OF THE NT* and supplementary article; *ZECHARIAH, BOOK OF*[S].

\***APOCRYPHA, NT. 1. New material.** The Gnostic library of NAG HAMMADI has afforded a rich source of new material for evaluation. This library is not, however, the only source of new material. The PROTEVANGELIUM OF JAMES is contained in the Bodmer Papyrus V, the apocryphal Third Letter to the Corinthians in Bodmer Papyrus X; fragments of the Acts of Andrew have been found in papyri in Oxford and Utrecht and a fragment of the Acts of Paul in the Bodmer collection. See *ANDREW, ACTS OF*; *PAUL, ACTS OF*.

**2. The term "apocrypha."** The new Gnostic material shows that Gnostic writers often represented their teaching as secret doctrine to be kept confidential. Since the word "apocrypha" refers properly to esoteric writings, it is appropriately applied to these particular works. One document bears the title Apocryphon of John, while the

Jung Codex Letter of James twice speaks of secret writings (p. 1.10,30-31). Apocryjn and the Books of Jeu (see *PISTIS SOPHIA*) contain stern warnings against divulging their contents to any unauthorized person. Since the Gnostic literature was judged heretical, the term naturally acquired the pejorative sense of "false" or "spurious." This does not apply, however, to all the works classed as apocrypha, some of which are comparatively "orthodox," even if they may appear rather eccentric.

The term is thus employed in several different, though related, senses: (a) in its original sense of "hidden" or "secret," particularly with reference to Gnostic documents; (b) as a description of books which were not accepted into the canon, although they might be accorded a limited recognition as suitable for private use (cf. the MURATORIAN FRAGMENT on Hermas); (c) as deriving from its application to Gnostic works the pejorative sense of "false" or "spurious." It should be emphasized that the OT Apocrypha (see *APOCRYPHA* §2) are in quite another category. Deriving from the intertestamental period and included in the LXX, the OT Apocrypha are accepted by some branches of the church. This has never been the case with the NT Apocrypha, apart from the sects which gave them birth.

**3. Delimitation of the material.** Early collections sometimes included the APOSTOLIC FATHERS among the apocrypha, but it is now recognized that these do not belong here. There still remains, however, the problem of framing a definition sufficiently comprehensive to include all the relevant material yet at the same time to exclude what does not belong in this category. The Nag Hammadi library, for instance, includes a defective translation of part of Plato's *Republic*, the collection of ethical aphorisms already known as the Sentences of Sextus, and parts of the Corpus Hermeticum (see *HERMETIC LITERATURE*[S]), none of which should be considered as NT Apocrypha. The same applies on a wider survey to the Christian Sibyllines (see *SIBYLLINE ORACLES*) and the ODES OF SOLOMON.

The most obvious solution would be to include those works which by their character or titles seem intended to be counterparts or rivals of the canonical books. However, the titles are often no clear indication of the contents. None of the Nag Hammadi "gospels" is a gospel in the canonical sense, for they provide no account of the life and ministry of Jesus, or of his death and resurrection (see *GOSPEL, GENRE*[S]). Only the Gospel of Thomas contains "sayings" of Jesus, and here sayings familiar from the canonical tradition are combined with other material of a different character. The Gospel of Truth is rather a meditation on the theme of the gospel as "good news," the Gospel of Philip a rambling didactic and hortatory discourse, and the Gospel of the Egyptians a Gnostic text presenting a system akin to that of Apocryjn but with elements derived from magic. Many of the other Gnostic "gospels" take the form of conversations between the risen Jesus and his disciples in the period between the Resurrection and the Ascension, which the Gnostics extended from forty days to eighteen months. Here we have an "orthodox" parallel in the *EPISTLE OF THE*

APOSTLES and a Gnostic in the Apocryphon of James, neither of which bears the title of gospel. See THOMAS, GOSPEL OF[S]; TRUTH, GOSPEL OF[S]; PHILIP, GOSPEL OF[S].

The situation is generally simpler with the apocryphal Acts (see ACTS, GENRE[S]), most of which were fairly obviously designed to fill in the gaps and provide "information" about the apostles, but the problem arises again with the apocalypses. Some of these follow the pattern of some works of Jewish apocalyptic by providing surveys of history under the guise of prophecy (e.g., the APOCALYPSE OF ADAM), others describe an ascent through the heavens (the Nag Hammadi ApocPaul), while a more common type of the "ordinary" apocryphal apocalypse presents a revelation of the terrors of hell (APOCALYPSE OF PETER, APOCALYPSE OF PAUL; but cf. the GOSPEL OF BARTHOLOMEW). Here again the title of a document may be no clue to its contents: works with the title "Apocalypse" or "Revelation" may be cosmological and soteriological rather than apocalyptic or eschatological, while apocalyptic material appears in works with other labels. See APOCALYPSE, GENRE[S].

Schneemelcher includes among the NT Apoc. noncanonical materials which, according to form-critical criteria, can be said to have developed forms and types present already in the NT, or which have taken over pre-Christian literary forms and types into the service of the gospel, or which have used literary fiction in the service of propaganda to produce a "tendency literature" in support of the views of a particular group.

Such a definition may be open to objection, but it is at least serviceable. It does, however, raise the question of the extent to which the Nag Hammadi library should be included with the apocrypha. It has already been noted that some texts definitely do not belong in this context, and there may be others. The problem is complicated by the fact that, for example, Eugnostos the Blessed (claimed by several scholars to be non-Christian) has been Christianized in the Sophia of Jesus Christ into the form of a Gnostic gospel. The solution may be either to include the whole library, with such exceptions as those already noted, in a separate category as "Gnostic apocrypha," distinct from the apocrypha proper; or to include with the apocrypha those documents which present a resemblance in type and form, and classify the rest apart as "tendency literature."

**4. Duplication of titles.** Earlier studies, when only the Nag Hammadi titles were known, frequently raised the question whether a document might be one quoted by the early Fathers. Publication of the text soon showed that it was not: GTh has no relation to the Infancy Gospel of Thomas, nor GPh to the work cited by Epiphanius; GEgypt is not the GOSPEL ACCORDING TO THE EGYPTIANS known to Clement of Alexandria, while ApocPaul is almost completely different from the apocalypse already known. In addition, there are in the same codex (Codex V) two quite different Apocalypses of James. We must avoid the natural but dangerous assumption that identity of title means the same book. A similar warning should perhaps be given against hasty ascriptions of

authorship. When little more than fragments are available, it is dangerous to assume that the work is the one mentioned by the Fathers as written by Valentinus or Heracleon, and on the strength of this to ascribe other works to the same author. In the nature of the case, any such ascription can be no more than a possibility.

**5. Redaction of Gnostic texts.** Reference has already been made to the relation between Eug and SJC, perhaps not yet finally settled. There is also the question of possible connections between ApocAd and GEgypt, while we now have four copies of ApocryJn from two different recensions. Other works, like the Gospel of Mary, appear to be composite, with Christian elements superimposed on originally non-Christian material. Study and analysis of such questions, as the Nag Hammadi library becomes more fully available, may have much to teach us about the processes of development and elaboration within the Gnostic literature. Here again, however, a word of warning is in place: the current trend is to regard the Gnostic as primary, the Christianization as secondary. But if a text was *de-Christianized*, how could the Christian original be *proved* original?

**6. Classification of the material.** Reverting to the apocrypha proper, it is now possible to introduce some refinement of classification into the study of the apocryphal gospels. Reference should be made in the first place to the AGRAPHA, sayings of Jesus not recorded in the canonical gospels but preserved elsewhere in the NT, in the writings of early Fathers, or in other sources. Rigorous criticism has reduced the number regarded as possibly authentic to a handful, but some of them are still interesting in themselves. GTh is a collection of sayings, including some known from the canonical gospels and incorporating all those found in the famous OXYRHYNCHUS SAYINGS. Secondly there are some early gospel fragments (POx. 840, PEgerton 2), and others which may be from gospels although the extant remains are not enough for any final judgment (POx. 1224, PCair. 10 735, the Fayyum Fragment). The Jewish-Christian gospels present special problems, since three different titles have been handed down by the Fathers and it is not clear whether all refer to the same work, or two, or three. Finally there are the Gnostic gospels and related works. Authentic early material about Jesus may be preserved at most in a few of the Agrapha and in the early gospel fragments, with the possible addition of the GOSPEL ACCORDING TO THE HEBREWS. With regard to other material—the infancy gospels, the apocryphal Acts, and the apocalypses—there is but little to add. Where they were not written to serve a tendentious purpose, they are clearly the products of imagination, designed to supply edifying information, in accordance with the tastes of the time, to make good what appeared to be deficiencies in the canonical literature.

Not the least part of the significance of this literature is that it provides a standard of comparison and shows how NT types and forms, motifs and concepts, were developed and elaborated in the centuries following the NT period. See also GNOSTICISM, GNOSTICISM[S]; LITERATURE, EARLY CHRISTIAN[S].

**Bibliography.** The work of M. R. James (see APOCRYPHA, NT, bibliog.) is still a convenient collection of the more important texts, but includes little in the way of introduction and of course nothing about subsequent discoveries. Both these deficiencies are made good by E. Hennecke and W. Schneemelcher, *NT Apocrypha*, I (1959; rev. ed., 1968); II (1964). See also W. Foerster, *Gnosis*, I (1969); II (1971); R. Haardt, *Gnosis: Character and Testimony* (1967), although the English trans. is not always satisfactory; D. M. Scholer, *Nag Hammadi Bibliography 1948-1969* (1971), with supplements in *NovT*, (1971 ff.).

**APOPHTHEGM.** See SAYINGS OF JESUS, FORM OF[S] §5.

\***APOSTOLIC FATHERS.** (See bibliog. for all references to modern authors.) Recent attempts to restrict this term to a more homogeneous group of writings include: (1) Fischer and Altaner: non-canonical early literature continuing the tradition of the apostles and Paul (thus, only I CLEMENT, letters of IGNATIUS and POLYCARP, and Quadratus); (2) Grant (1964): early noncanonical authors of a practical (rather than theological or cultural) and traditional orientation writing for Christians (thus excluding apologies of DIOGNETUS and Quadratus). Strict attention to questions of literary form also encourage reclassification within more coherent larger groupings such as personal and community letters (I Clement, Ignatius, Polycarp); epistolary treatises, addresses, and martyrdoms (BARNABAS, II CLEMENT, Martyrdom of Polycarp [see POLYCARP, MARTYRDOM OF]); extended treatises (PAPIAS); community manuals (DIDACHE); apocalypses (HERMAS); apologies (Diognetus, Quadratus).

Study of early Christian literature has been spurred by such discoveries as the DEAD SEA SCROLLS and NAG HAMMADI MSS, and frequently has focused on questions such as the relation to Judaism and "Jewish Christianity" (esp. Barnabas, Didache, Hermas; also I Clement), or the conflicts of emerging "orthodoxy" with "heterodox" tendencies such as Gnosticism (esp. Barnabas, II Clement, Ignatius, Polycarp). Attention has focused on problems of sources (oral and written) and composition—e.g., "two ways" material in Barnabas, Didache, Hermas; use of "testimonia" collections behind Barnabas and I Clement; identification and use of "scripture" in Barnabas, I Clement, Didache, Ignatius; Jewish homiletic material in I Clement; a hymnic confession behind II Clement; gospel materials in Didache, Ignatius, Papias; interpolations in Ignatius; literary evolution of Barnabas, Didache, Hermas; integrity of Diognetus and of

Polycarp's letter. Christian liturgical and institutional developments (esp. in I Clement, Didache, Ignatius) also receive continued attention along with conceptual issues such as eschatology and Christology/angelology (esp. in I Clement, Hermas), and moral/ethical attitudes. A healthy concern has developed for understanding these writings in their own right, rather than primarily as supports for earlier (NT) or later (orthodox) forms of Christianity.

1. **Barnabas, "Epistle" of.** Attempts to identify the source materials and stages of development behind this "catholic epistle" (so Clement of Alexandria) continue, with reference not only to the much discussed "two ways" materials but also to collections of scriptural testimonies and other midrashic and apocalyptic sources or traditions. The author may represent an early Christian school tradition employing respected exegetical and ethical approaches of that time (early second century). The epistle's strong Jewish connections and anti-cultic (not anti-Jewish) attitudes are noteworthy, while its proposed baptismal catechesis setting (see, e.g., Barnard) remains open to dispute. Debate over the epistle's precise place of origin continues: Syria (Prigent), Asia Minor (Wengst), and the Alexandrian region (Barnard, Kraft) all receive support.

2. **I Clement, Epistle of.** This writing is known already to Hegesippus (in Euseb. Hist. IV.xxii.1) and Irenaeus (Her. III.iii.2[3]). Its author may have made use of collections of Jewish scriptural texts arranged topically (testimonia in a loose sense). The exact nature of the problem addressed is disputed—was theological "heresy" being opposed as well as (or rather than) ecclesiastical insubordination? And if so, what sort of heresy? Bauer suggests Gnostic opponents. Beyschlag's claim that I Clement faithfully represents the "nascent catholicism" of a generation earlier is open to dispute; Knoch's argument that eschatology plays no vital role, but is accepted as part of the author's received tradition, has found more favorable reception.

3. **II Clement.** There has been relatively little recent study of this writing. Donfried describes it as a hortatory address (rather than homily) that originated from Corinth in the early second century, based on an earlier hymnic confession. Grant (1965) argues for Roman origin of this "appeal." II Clement may reflect a mildly Gnostic setting, which it opposes by means of futuristic eschatology and ethical exhortation.

4. **Didache.** The presence of various stages of development behind the present form is widely acknowledged. Continued attention has been lavished on the "two ways" material shared with Barnabas (also Hermas), especially in relation to the "two spirits" doctrine of the Dead Sea Scrolls. The case for dependence on a Jewish two ways tradition has been strengthened and Christian developments have been traced with greater precision (see, e.g., Giet, Layton). Audet's attempt to date the bulk of the Didache before 70 (similarly Giet) has received mixed reactions, although his identification of Syria as the place of origin finds many

supporters (e.g., Giet; Kraft thinks Egypt more likely).

5. **Diognetus, "Letter" to.** The date and authorship of this apology remain disputed, although there is some tendency toward a second rather than third-century date. Andriessen argues that this is the lost apology of Quadratus (see §10 below), while Marrou attributes it to Pantaenus later in the second century. The last two chapters probably derive from a work (perhaps by Hippolytus) different from the preceding material.

6. **Hermas, Shepherd of.** In form, this is an apocalypse (see APOCALYPSE, GENRE[S]), but its ethical-hortatory content regarding REPENTANCE is not typical of other Jewish and Christian apocalypses. The widespread circulation of Hermas during the second through seventh centuries in Egypt continues to be attested by discoveries of Greek and Coptic papyrus and parchment fragments (see Whittaker, Treu) which, together with the Athos (not Athens) codex and Sinaiticus, supply a Greek text for all but the last eight sections (107-114= Sim. IX.30-X.4; Whittaker's ed. has replaced the older tripartite division with sequential section numbers). Early Christian attitudes to Hermas vary from referring to it as "scripture" or very useful (e.g., Irenaeus, Origen, Athanasius; see also the MURATORIAN FRAGMENT) to its caustic condemnation as a "shepherd of adulterers" by Montanist Tertullian (*Modesty* 10; but see his pre-Montanist use in *Prayer* 16). Recent studies have tended to focus on such issues as the stages of development behind the preserved form of Hermas (e.g., Giet, Snyder), and the relation of Hermas to Jewish (e.g., Qumran), Jewish-Christian (see, e.g., Daniélou), and emerging "orthodox" Christian attitudes and practices.

7. **Ignatius, Epistles of.** The question of the relationship between the three recensions of Ignatian letters has received close attention, especially from Brown and Weijenborg. Indeed, the latter argues that the short and middle recensions derive from the fourth-century "long recension," but reviewers have not found his evidence persuasive. Attention also has been given to Ignatius' ecclesiastical and theological outlook and setting, especially in relation to early second-century concepts of "heresy."

8. **Papias.** Schoedel dates Papias' lost *Expositions of the Dominical Logia* around 110 (under TRAJAN; see Euseb. Hist. III.xxxvi.2), while Grant (in his revision of Goodspeed) opts for ca. 120. Earlier attempts to see this as a work that interpreted Jewish scriptural testimonies or prophecies of Christ have not met wide acceptance, although the precise form and nature of the "dominical logia," as well as Papias' interpretation, remain problematic.

9. **Polycarp, Epistle of and Martyrdom of.** Harrison's hypothesis that the extant letter of Polycarp actually contains an earlier (chs. 13-14) and a later (chs. 1-12, ca. 135) letter is adopted in Fischer's edition (see also Quasten, Altaner) but rejected by Schoedel, who dates the entire work to the time of Trajan. The date of Polycarp's death remains disputed. Eusebius placed it ca. 166/67, but the "appendix" (regarded as an addition by many) to the Martyrdom has been used to argue for ca. 155/56; Schoedel opts for 155-60, while even a date as

late as 177 has been proposed. Six Greek MSS of the Martyrdom are known, plus quotations and paraphrases in Eusebius and elsewhere, a Latin version, and various derivative materials in Armenian, Syriac, and Coptic.

10. **Quadratus, Apology of.** A fragment from a defense of Christianity addressed to HADRIAN (117-38) is preserved by Euseb. Hist. IV.iii. It refers to the survival "to our own day" of some persons who had been healed or raised by "the savior" when he was on earth. See also §5 above.

See LITERATURE, EARLY CHRISTIAN[S].

**Bibliography.** In general, see the relevant sections in *Elenchus Bibliographicus (Biblica)*, *NT Abstracts*, and *Bibliographica Patristica*, ed. W. Schneemelcher (1956 ff.).

Text editions, discoveries, tools: The single most comprehensive older ed. (lacking *Didache*) remains that of O. Gebhart, A. von Harnack, T. Zahn, *Patrum apostolicorum opera* (1875-78). New minor critical eds. (with Fr. trans. and commentary) are appearing in the series *Sources chrétiennes*: X, Ignatius, Polycarp, Martyrdom of Polycarp, ed. P.-T. Camelot (4th ed., 1969); XXXIII, Diognetus, ed. H. I. Marrou (2nd ed., 1965); LIII, Hermas, ed. R. Joly (2nd ed., 1968); CLXVII, I Clement, ed. A. Jaubert (1971); CLXXII, Barnabas, ed. R. A. Kraft (text) and P. Prigent (1971). *Die apostolischen Väter*, ed. J. A. Fischer, I (1956), contains new eds. (with Ger. trans.) of I Clement, Ignatius, Polycarp, and Quadratus. M. Whittaker's major ed. of Hermas, GCS, XLVIII has been reissued with corrections and additions (2nd ed., 1967; add now the fifth-century papyrus fragment of Mand. IV, V, ed. K. Treu, "Ein neuer Hermas-Papyrus," *Vigiliae Christianae*, XXIV [1970], 34-39), and J.-P. Audet's ed. of *Didache, La Didachè* (1958; with extensive commentary and notes) remains standard. A new concordance, ed. H. Kraft, *Clavis Patrum Apostolicorum* (1963), includes variant readings and semantic contexts (does not cover Martyrdom of Polycarp, Diognetus, Quadratus). Vocabulary of the Apostolic Fathers (including Diognetus but not Quadratus) is covered by the Bauer-Arndt-Gingrich *Greek-English Lexicon of the NT and other Early Christian Literature* (4th ed., 1952) and by G. W. H. Lampe, ed., *A Patristic Greek Lexicon* (1961).

English translations, commentaries, introductions: *The Apostolic Fathers: A New Translation and Commentary*, ed. R. M. Grant: I, *Introduction* by Grant (1964); II, *I and II Clement* by Grant and H. H. Graham (1965); III, *Barnabas and Didache* by R. A. Kraft (1965); IV, *Ignatius of Antioch* by Grant (1966); V, *Polycarp, Martyrdom of Polycarp, Fragments of Papias* by W. R. Schoedel (1967); VI, *The Shepherd of Hermas* by G. F. Snyder (1968). M. Staniforth, *Early Christian Writings: The Apostolic Fathers* (1968, trans. only, lacking Hermas, Papias, Quadratus); Altaner, *Patrology* (5th ed., 1958; 6th Ger. ed., rev. A. Stuiber, 1966).

\***ARAD.** An important city in the eastern Negeb, situated on the main road to Edom. "The Canaanite, the king of Arad, who dwelt in the Negeb" withstood the assault of the Israelite tribes (Num. 21:1; 33:40), defeating them at neighboring Hormah (Num. 14:44-45; Deut. 1:44). However there is the divergent tradition of the defeat of the king of Arad at Hormah in a second Israelite assault (Num. 21:2-3). Both cities are mentioned in the list of the defeated Canaanite kings (Josh. 12:14). According to Judg. 1:16 the Negeb near Arad was settled by Kenites related to the family of Moses. Pharaoh Shishak, in his list of conquered cities (ca. 920 B.C.), mentions the following names: *hqrn. 'rd. rbt. 'rd. nbt. yrhm.* (nos. 107-12), i.e., the fortresses Arad the Great and Arad of the House of *Yrhm* (=Jerahmeel? cf. I Sam. 27:10; 30:29). The last biblical reference to Arad lists the city in the Negeb district of Judah (Josh. 15:21, corrupted to עדר, Eder). Eusebius (Onom. 14:2) still knew a village called Arad, twenty Roman miles from Hebron and four from Malaatha (Moleatha), distances which fit exactly modern Tell 'Arad, situated ca. twenty miles ENE from Beer-sheba.

In excavations carried out during 1962-67, two different settlements were discovered at the site: (a) a large city of the third millennium B.C. and (b) a fortress of the Israelite and later periods.

1. **The Early Bronze Age city.** A large fortified city existed at the place during EB II (ca. 2900-2700 B.C.) preceded by an open settlement of the Late Chalcolithic period. The city was divided into quarters and the houses were built according to a fixed architectural concept, a distinct "broad house" with an entrance at one of the longer sides. Finds included a clay model of one of the houses, a cult stele apparently depicting the Mesopotamian grain god Dumuzi, vessels imported from Egypt, and an abundance of local pottery known hitherto mainly from Egyptian First-Dynasty tombs (Abydos ware), which gives evidence of intense trade with Egypt. After a last unfortified level, the city was destroyed and deserted before the end of EB II, i.e., not later than 2700 B.C.

2. **The Iron Age fortress.** A new settlement was founded on the SE ridge of the ancient city during the twelfth/eleventh century B.C. It was a small open village and in its center was a paved temenos with a crescent shaped *bamah* and a square altar. We may suppose that the venerated Kenite family, the descendants of HOBAB (Judg. 1:16 LXXA; cf. 4:11), served at this high place. On its place a temple was erected in the days of David or Solomon, which then became part of a strongly fortified royal citadel about sixty yards square. The citadel served as the royal military and administrative center of the border area until the end of the first temple. During that period it was destroyed and burnt six times (the first time evidently by Shishak), but always was quickly rebuilt (strata XI-VI). Later fortresses in the Persian, Hellenistic, Roman, and early Arab periods stood on the same site.

3. **The temple.** See TEMPLES, SEMITIC[S] §2a; for the ground plan of the temple see TEMPLE OF SOLOMON[S] Fig. T7.

4. **The ostraca.** About two hundred inscribed potsherds (ostraca) were found, half in Aramaic (ca. 400 B.C.) and the rest in Hebrew. The Aramaic ostraca are mainly dockets of the Persian garrison, containing lists of names, troops, and quantities of various commodities. The Hebrew ostraca derive from different Iron Age strata (a fact which increases their palaeographic importance), and most are letters and dockets from the royal archives. Letters from Eliashib son of Eshyahu, commander of the last two citadels (strata VII-VI), mention the Kittim (*ktym*), probably mercenaries of Aegean stock in the service of Judah. The end of both strata may be dated by the ostraca. Stratum VII was destroyed in 609 B.C. by the Egyptians. One ostrakon contains an inventory by an Egyptian scribe in Hieratic; another is a letter by the king of Judah (probably Jehoahaz) mentioning his ascendance to the throne and calling for urgent preparations, mentioning the king of Egypt. Stratum VI was destroyed in 595 B.C. by the Edomites; a date formula (*bšlšt*: "in the third [year]") apparently refers to the third year of Zedekiah, and a letter from the same period contains an urgent order to dispatch reinforcements to Ramah of the Negeb (Josh. 19:8; I Sam. 30:27) against a threatening Edomite attack.

5. **The identification.** The excavations and the appearance of the name Arad in two Hebrew ostraca strengthen the identification of Tell 'Arad with the Israelite city. But the absence of remains of the Middle and Late Bronze Ages contradicts the biblical traditions regarding the Canaanite city. No LB sites have been discovered in the eastern Negeb, and the only two MB sites with typical Hyksos ramparts are at Tel Malḥata (Tell el-Milh) and at Tel Masos (Khirbet Meshāsh) eight to ten miles SW from Tell 'Arad. Two solutions have been suggested: a) In the Canaanite period no city of Arad existed, but this was the name of the whole region, the Negeb of Arad. b) Canaanite Arad was located at Tel Malḥata, and Hormah at Tel Masos. This suggestion is strengthened by the double appearance of Arad in the Shishak list. We may assume that "Arad of the House of Yrhm" is the city which was settled by Jerahmeelite families (Tel Malḥata); "Great Arad" is then the citadel at Tell 'Arad, founded by David or Solomon on the site of the Kenite high place.

\***ARAMAIC.** The Arameans at first wrote, not in their own language, but in Canaanite dialects, and our earliest Aramaic inscriptions come from the ninth century.

The revised classification scheme for the Aramaic dialects, accepted by many scholars in recent years, is used here with some modifications.

- A. Early Aramaic
    - 1. Old Aramaic
    - 2. Official (Royal) Aramaic
  - B. Middle Aramaic
    - 1. Continuation of Official Aramaic
    - 2. Western Aramaic
    - 3. Eastern Aramaic
  - C. Late Aramaic
    - 1. Western Aramaic
    - 2. Eastern Aramaic
  - D. Modern Aramaic
    - 1. Western Aramaic
    - 2. Eastern Aramaic
  - E. Aramaic script
  - F. Aramaic influence on other Semitic languages
- Bibliography

**A. EARLY ARAMAIC.** The various types of Aramaic from the early ninth century through the late fourth century B.C.

1. **Old Aramaic.** The language of the Aramaic inscriptions from Syria and Palestine from the early ninth century to the late eighth. Aramaic scribes adopted the Phoenician alphabet and scribal techniques, but a clearly definable Aramaic script with both monumental and cursive forms emerged (*see* ALPHABET[S] §2). The gradual introduction of the *matres lectionis* was a contribution of the Aramaic scribes. The Zakir inscription (ca. 800) used language reminiscent of biblical Hebrew; the Sefire inscriptions (ca. 740) have added to our knowledge of Aramaic and contain many idioms shared with biblical Hebrew. Inscribed sherds were found at Tel Dan, Hazor, and Ein Gev in the northern Galilee. Three inscriptions from Zinjirli (Sam'al; *see* YA'UDI[S]) are written in an archaic Aramaic dialect with Western traits (*see* INSCRIPTIONS, SEMITIC[S] §3d). In Old Aramaic the Proto-Semitic consonants are graphically expressed in the following manner: \*d=ז (זנה, "this"); \*t=ש (שולש, "three"); \*z=צ (חץ, "arrow"), as in Canaanite, but \*d=ק (ארק, "land").

2. **Official (Royal) Aramaic.** By the second half of the ninth century there is mention of an "Aramaic letter" by an Assyrian official; references to Aramaic documents and Aramaic scribes increase as Assyria conquered the Aramaic states to the W and absorbed their populations (*see* ARAMEANS). Aramaic and Assyrian scribes are de-

picted together on reliefs and wall paintings from the time of Tiglath-pileser III onward. The Aramaic used by the tribes within Assyria became the lingua franca of the Assyrian empire (see ARAMAIC §2). The spread of this dialect to Syria is attested at Zinjirli by Bir Rakkib (Bar Rekub) and by the Nerab inscriptions. A salient linguistic feature of this dialect is the dissimilation of emphatics: *kys'* for *qys'* (summer) and *kil* for *qil* (to kill).

The Neo-Babylonian Empire (625-539) succeeded Assyria and expanded its holdings. The role of Aramaic, the spoken language in Babylonia at this time, grew, and Aramaic scribes using Eastern Aramaic replaced those using the Assyrian dialect. With the Persian conquests under Cyrus and Cambyses, the Achaemenian empire reached from India to Egypt, encompassing Bactria, Sogdiana, and Choresmia (in present-day Soviet Union) and Asia Minor. Aramaic became the language of the Persian chanceries and served to unite the far-flung empire. Although the majority of the documents are in a relatively uniform Official Aramaic, some documents such as the *AHIKAR* proverbs (in which the dissimilation of emphatics is prominent) and the Hermopolis papyri use the Assyrian/North Syrian dialect. Elements of a literary Aramaic emerge in these texts. From Israel and Jordan there are an increasing number of ostraca, e.g., from ca. 350 the as-yet-unpublished Wadi Daliyeh papyri (see SAMARIA PAPYRI[S]); from Iraq there are dockets on Neo-Babylonian tablets; from Iran, dockets, graffiti, inscribed mortars and seals; from Turkey, inscriptions and bullae; and from North Arabia, inscriptions. The documents preserved in the Aramaic portion of Ezra (4:8-6:18; 7:12-26) are written in Official Aramaic (but the orthography has been modernized). They mirror the language and phraseology of official letters and decrees. In its early stages Official Aramaic borrowed from both the Assyrian and Babylonian dialects of Akkadian and in turn influenced them; in the Persian period many Iranian loanwords and phrases in the fields of administration, communications, dress, crafts, artisanry, and religion entered Aramaic.

In Official Aramaic we can trace the gradual transitions to normal Aramaic phonology:  $\text{d}=\text{ע}$  (ארע, "land");  $\text{d}=\text{ד}$  (רנה, "this");  $\text{t}=\text{ת}$  (תלת, "three");  $\text{z}=\text{ז}$  (חטיא, "arrows"). Cf. Jer. 10:11, where both spellings for earth ארקא and ארעא are found. Some ELEPHANTINE PAPYRI display the same scribal confusion.

**B. MIDDLE ARAMAIC.** With the breakup of the Achaemenian Empire because of Alexander's conquests, Official Aramaic was replaced as the lingua franca by Greek and was gradually succeeded by local dialects of Aramaic. Nevertheless, the unifying effects of Official Aramaic remained important. This period is reckoned from 300 B.C. to A.D. 200, when Western and Eastern clearly emerged.

**1. Continuation of Official Aramaic.** A type of Official Aramaic became a standard dialect and could be read and understood throughout the former Persian Empire. Official decrees and documents were drawn up in this dialect, since legal

documents are usually conservative in language and phraseology.

**a. Standard Literary Aramaic** continued the basic linguistic forms (primarily Eastern) of the earlier period and maintained in its vocabulary many Akkadian and Iranian elements, with local (Western) dialect features inevitably making themselves felt. The Aramaic portions of Daniel fit well into this dialect, containing tales recorded at an earlier date and reworked around 168 B.C. The Aramaic texts found in the Qumran caves are also written in Standard Literary Aramaic, with Tobit and the Dream of Nabonidus being perhaps the earliest, followed by Enoch and Melchizedek material, then by the Genesis Apocryphon, the Testament of Levi, and the Targ. of Job. It is only by extrapolation from the later Palestinian dialects that some Western features can be detected in these texts.

The Targs., Onkelos for the Pentateuch and Jonathan for the Prophets, were written in Palestine in this same dialect. The cultivation of these texts in the Babylonian academies led to the later introduction of some particularly Eastern forms and vocalizations. Two other texts written in this dialect are the *Meghillath Ta'anith* (Fasts Scroll) and the later *Meghillath Antiyochoch* (the Scroll of the Hasmoneans).

**b. Legal documents.** The language of deeds and legal formulas is conservative; the formulas quoted in the MISHNA and in both TALMUDS have been recognized as a continuation of those known from the previous period. The Aramaic documents found in the Bar Kochba caves (see BAR KOCHBA [S]) date from the period A.D. 65-135 and reflect this tendency.

**c. Epigraphic material.** Aramaic maintained its importance as a means of public communication alongside Greek in many peripheral areas of the ancient Near East. Because of the perishability of most materials, it is primarily inscriptions on stone that have survived, but recent finds include papyri, ostraca, etc.

**i. Nabatean.** The NABATEANS used a form of Official Aramaic as their written dialect. Discoveries include dedicatory, religious, and burial inscriptions, ostraca, coins, and papyri. The legal documents in Nabatean found in the Bar Kochba cave at Nahal Hever and the sepulchral inscriptions from El-Hejra share the legal tradition noted above. Nabatean texts have been found at Halutsa, Avdat and Nitzanah in the Negeb as well as at Petra, Bozrah, etc. There is Arabic influence on the vocabulary and syntax of Nabatean.

**ii. Palmyrene.** Ancient TADMOR, Hellenistic Palmyra, and its environs in the Syrian desert have produced a great many texts—primarily dedicatory, funerary and religious—in Palmyrene (from ca. 50 B.C.—A.D. 250). A fragment of papyrus in Palmyrene was found at Dura-Europos. The language is a development of Official Aramaic; in later texts some Eastern forms are found. There are some traces of Arabic influence, since part of the population was Arabic-speaking. Palmyrene texts have been found in N Arabia, in Europe, and in the Merv oasis in Central Asia, witnessing the spread of Palmyrene merchants and mercenaries.

**iii. Other material.** Inscriptions in Aramaic have

been found in Afghanistan, Georgia, Soviet Armenia, and Turkey; some papyri have been found in Egypt, and a large group of ostraca have been found at Nisa in Turkmenistan from the Parthian period.

**d. Aramaic ideograms in the Middle Iranian dialects.** An important result of the use of Aramaic in the chanceries of the Persian Empire was the adoption of Aramaic script for the Iranian languages. Both Middle Persian (Pahlavi) and Parthian inscriptions use Aramaic ideograms for many nouns, verbal roots, and particles; in Book Pahlavi great confusion because of scribal error has developed. In Sogdian fewer ideograms were used, but continuity can be traced through the eighth century A.D. Such ideograms, especially in the Pahlavi text *Frahang i Pahlavik*, remain a source for Official Aramaic.

**2. Western Aramaic.** During the Middle Aramaic period, the first indisputable traces of Western Aramaic are discernible, especially in the growing number of inscriptions from the Jerusalem area. These consist of tomb inscriptions (e.g., Jason's tomb; the Ussiah tomb plaque, the Giv'at ha-Mivtar cave inscription in Paleo-Hebrew script; see JERUSALEM[S] §6); sarcophagi lids (e.g., from Bethphage), ossuaries, weights, and other items. From the NT such phrases as *talitha cumi*; *marana tha*; *epiphatha*; *eloi, eloi, lama sabachthani*; and *rabbouni* are easily recognizable as Aramaic. The same may be said for various personal names recorded therein and for such place names in the immediate vicinity of Jerusalem as AKELDAMA, GOLGOTHA, GETHSEMANE, and BETHSDA. The dialect spoken by Jesus and his disciples was Galilean, and was clearly distinguishable from that spoken in Jerusalem (cf. Matt. 26:73), but the Aramaic words quoted in the NT cannot be identified as to dialect. Josephus also recorded Aramaic words, but referred to them as "Hebrew" (in all likelihood an ethnic rather than a linguistic description); he claims to have written the first draft of his *Wars* in Aramaic.

The BAR KOCHBA letters (A.D. 132-35) are a source for the colloquial Aramaic of Judah. In both the Hebrew and Aramaic letters Greek loan-words are found.

**3. Eastern Aramaic.** There are no extended texts for this period, but two finds, separated by time and place, are important. The first is an incantation text from Uruk in S Mesopotamia written in cuneiform syllabic writing from the second century B.C.; beside Eastern Aramaic vocabulary, it already witnesses the ending *-ē* as the masculine determined plural. From Northern Iraq of the Parthian period (second century A.D.) a large number of inscriptions and graffiti have been found at Asshur and Hatra. These have features of Eastern Aramaic. The same is true for the inscriptions from the Elymais in Iran.

**C. LATE ARAMAIC.** In this period (A.D. 200-900) which reached beyond the Arab conquest in both the W and the E, the dialect distinctions are clear. For the present our documentation for Western Aramaic is limited to the three Palestinian literary dialects—Jewish (Galilean) Aramaic, Christian Palestinian Aramaic, and Samaritan Aramaic,

and to epigraphic material from Palestine. Syriac, Jewish Babylonian Aramaic, and Mandaic are usually considered the components of Eastern Aramaic. This scheme is followed here, but with the caveat that for reasons of vocabulary, morphology, and geography, Syriac may be seen as occupying a median position in this scheme. Some common features of Western and Eastern Aramaic should be noted here: (i) the prefix *he-* of the causative and passive-reflexive has been fully replaced by *'aleph*, e.g., *'ašlēm* for *hašlēm*; (ii) a new conjugation *'ittaph'al* (a passive of the causative) has developed; (iii) enclitic *d* replaces the relative pronoun *dī*; (iv) the passive participle *qētil* is employed in certain verbs with active meaning; (v) there is a reordering of the tenses. The major differences between Eastern and Western Aramaic are: (i) *ē-* is used as the determined masculine plural; (ii) *l* or *n* is used as the prefix of the third-person imperfect instead of *y*; (iii) the determinative loses its force in Eastern Aramaic and replaces on the whole the absolute forms; (iv) the passive participle plus *l* with suffixes often serves to express the perfect in the Eastern; (v) the word order of Eastern Aramaic is looser than that of Western Aramaic; (vi) in Western Aramaic the infinitive of all verbal forms have a *mem* prefix.

**1. Western Aramaic.** The three known dialects of Western Aramaic share many distinctive features of vocabulary, morphology, and syntax. Although distinct scripts were used, the dialects were mutually comprehensible. Because of the widespread use of Greek in Syria, no records of the Aramaic used there have reached us.

**a. Jewish Aramaic.** This is the language of the Palestinian TALMUD (as best known from the Leiden MS and Genizah texts), the Palestinian Midrashim (Genesis Rabbah and Leviticus Rabbah as preserved in the better MSS and Genizah texts), and the Palestinian Targs. (see TARGUM[S]). The latter group includes the Neofiti targ. text, the Yerushalmi "Fragment Targs.," and the Genizah fragments published by Kahle and others, and the Targ. to the *K'thubhim*. Pseudo-Jonathan, representing a mixed-text type, must be used with caution for Western Aramaic studies. Written materials include: funeral inscriptions from Joppa (second-third centuries), Beth-shearim (third-fourth centuries), and Zoar on the Dead Sea (fifth century), synagogue inscriptions from Eshtemoa, Susya, the Hebron area, Beth Guvrin, En-gedi, Jericho, Naarah, Maon, Beth-shan, Hamath Gader, Hamat Tiberias, Capernaum, Umm el-'Amad and sites on the Golan Heights, etc. These range from the third to the sixth century. The language of these inscriptions is similar to that of the texts noted above. Interesting details as to the loss of laryngeals in the speech of certain parts of Galilee, as noted in the Talmud, is confirmed in the inscriptions from Beth-shan and Umm el-'Amad. Deeds and documents in this dialect from as late as the eleventh century have been found in the Cairo Genizah.

**b. Christian Palestinian Aramaic** was used in Judea, in all likelihood by Jews converted to Christianity. It is written in a type of Syriac script and

contains morphological and vocabulary traits that point to Mishnaic Hebrew influence. See HEBREW LANGUAGE[S] §2b; ARAMAIC §3c.

c. *Samaritan Aramaic* was used by the SAMARITANS settled in the Shechem area and in the central highlands. A reliable reading tradition has been preserved. The laryngeals were lost in antiquity and have also been confused in writing; both *beth* and *waw* were pronounced "v" and are also confused in writing. The vocabulary has preserved many items not found in the other dialects. See ARAMAIC §3b.

2. *Eastern Aramaic*. Religious and cultural differences mark the literature of the three dialects that are representative of Eastern Aramaic; they are also written in different scripts. They are the remnants of a dialect group that once encompassed a good part of the Near East.

a. *Syriac*. The best documented of all the Aramaic dialects, with stable orthography, standardized vocalizations (see below), a large literature encompassing many genres of prose and poetry, and schools of native grammarians and lexicographers. From the early centuries of our era, we have only some inscriptions on stone, in caves, or on mosaics, primarily from Edessa, which was to emerge as one of the main cultural centers of Syriac-speaking Christianity. From the pagan period very little, beyond the works of Bar Daisan and the story of AHIKAR, has reached us. A Syriac slave-sale document drawn up at Edessa (A.D. 243) was found at Dura-Europos. This shows clearly that Syriac was by this time fully developed as a written language. With the translation of the OT (the Peshitta; see SYRIAC VERSIONS[S]) and the NT and the spread of Christianity among Aramaic speakers, Syriac became an important vehicle of literature and culture. Philosophical and scientific works and literature were translated from Greek in the West and from Middle Persian in the East. The literature that has reached us is, on the whole, religious in nature, but there are also some chronicles and historical works. A Western and an Eastern dialect emerged with distinct but related scripts and slightly divergent vocalization systems and pronunciation. Greek loanwords abound in the West, while Iranian ones occur in large numbers in the East. Syriac was the means of preaching Christianity in Persia, Turkestan, India, and China to the E, and was used for communication with S Arabia (the Christians of Najran in the sixth century), Egypt, and Ethiopia. There was a Gnostic literature in Syriac of which very little besides "The Hymn of the Pearl" has reached us. Syriac was spoken by MANI; his apostles in the third century used Syriac to spread his gospel. Syriac words were borrowed by various languages, especially in the ecclesiastical field. The script was used for various Middle Iranian languages, e.g., Christian Sogdian. Syriac continued to be used for literary purposes until the fifteenth century, and remains in use as the liturgical language in the various Syrian churches in the Near East and in their Western diasporas.

Although Syriac is classified as an Eastern dialect and does partake on the whole of the traits typical of those dialects, nevertheless in its earlier stages, especially in the inscriptions and the early gospel

translations, it exhibits morphologic traits—the use of *y* prefix in the third-person imperfect, determination, sentence structure—that align it with the West. It is clear that early Syriac inherited from Standard Literary Aramaic a stable orthography which was only slightly modified in time, and that literary Syriac was a compromise between various dialects based on the one spoken in Edessa.

b. *Jewish Babylonian Aramaic* is represented primarily by the language of the Babylonian Talmud. This source is not monolithic, for the language of the tractates Nedarim, Nazir, Me'ilah, Kerithoth, and Tamid represent an earlier stage, and some MSS and Genizah texts show variant morphologic and lexicographic forms. Aramaic incantation bowls in Jewish and pagan scripts, and the writings of Anan, the Karaite leader, and of the Gaonim (heads of the academies in Babylon) are written in related dialects. Documentation extends from the third through the eleventh century until Aramaic was replaced by Arabic.

This dialect is marked by the weakening of the laryngeals; the frequent dropping of final consonants *l*, *b*, *d*, *m*, *n*, *r*, and the frequent replacement of *l* by *n*, e.g., *nhm* (*lhm*), "bread," *nqt* (*lqt*), "he took"; the development of new forms in the morphology of the pronouns, the verb and the infinitive, e.g., (pael) *kattōbē* as compared to biblical Aramaic/Official Aramaic *kattābā*; ('aphel) *'aktōbē-haktābā*.

Jewish Babylonian Aramaic is replete with Akkadian loanwords, many already known from earlier dialects of Aramaic, but others, from the agricultural sphere, occur here for the first time. There are also many Iranian loanwords, some from an earlier period, others clearly from the Parthian and Sassanian periods. These are shared with Eastern Syriac and Mandaic.

c. *Mandaic*. The language of the Mandaeans, a non-Christian, Gnostic sect whose origins remain unclear, and whose remnants now dwell in S Iraq and Iran (see ARAMAIC §4b; MANDAEISM[S]). The earliest datable material in Mandaic are amulets on lead from the fourth century A.D. and clay incantation bowls (ca. sixth-seventh century). The two major literary works—the *Ginza Rba* and the *Draša dYahya* are probably from the same period, as is the Mandaic prayer book, but later copyists have left an impress of the Islamic period. Because of its composite nature, it is difficult to date much of Mandaic literature. A form of "colloquial modern" Mandaic has persisted to our times, although most Mandaeans speak Arabic or Farsi.

Mandaic is very close to Jewish Babylonian Aramaic. It has also lost the laryngeals and shares many of the morphologic innovations of Jewish Babylonian Aramaic. Certain features that go back to the Akkadian substrate are more prominent in Mandaic—the dissimilation of emphatics, e.g., *kušta* for *qušta*; dissimilation of gemination, e.g., *manda* for *madda*'. The *matres lectionis* ' , ' , *h*, *w*, *y* are widely used; this has been of great use in establishing the vocalization of Babylonian Aramaic. A possible archaic orthographic feature is the spelling *zahbā*, "gold," for usual Aramaic *dahbā*; *'arqā*, "land," for *'ar'ā*, etc. At times the scribes were

hypercorrect in their spelling, e.g., *qaprā* for 'apra, "earth," *zmā* for *dmā*, "blood." Mandaic writers continued the use of various poetic and rhetorical devices known from the ancient Near East. The syntax and vocabulary of Mandaic is similar to Babylonian Aramaic. There are many loanwords from Akkadian, particularly in the field of religion and astrology, and also from Iranian.

**D. MODERN ARAMAIC.** The dialects of Aramaic still spoken by Christians and Jews in the Near East.

**1. Western Aramaic.** A dialect of Western Aramaic is still spoken by Christian villagers in the Anti-Lebanon, particularly in Ma'lūla and Jubb'adin, although these villagers speak Arabic with their Moslem neighbors. The language has undergone considerable change, and has been influenced in both vocabulary and syntax by Arabic, but the Western features are clearly distinguishable.

**2. Eastern Aramaic.** This is usually called Modern Syriac, but it is not a single dialect, and in all likelihood is not derived from classical Syriac. These dialects are spoken by Christians, descendants of the Aramaic speakers of an earlier age, in an area which extends from the Jezira in N Syria through E Turkey (the Lake Van area), Soviet Azerbaijan, N Iraq, and N Iran. Many speakers of these dialects have emigrated to the United States. Similar dialects were spoken by Jews in the mountains of Kurdistan, all of whom have emigrated to Israel. In the nineteenth century, Protestant missionaries developed a literary language using the dialect of Urmia as the base; many devotional and scholastic texts were translated and written in it, and the Bible was also translated into Modern Syriac. This group is called the Assyrians. Father P. Bedjan and others undertook a similar revival for the Catholics of the Mosul area, writing devotional works and biblical histories. This group is called the Chaldeans. Both groups used the Nestorian script. There has been a literary revival among the Assyrians of Iran. The Jews had an extended oral literature consisting of liturgy and tales and a traditional translation of biblical and other texts. They developed a literature using Hebrew script. The Jewish dialects reveal the influence of Hebrew and Jewish Aramaic in their vocabulary. The influence of Turkish, Kurdish, Persian, and Arabic, the contact languages, can be seen in the phonology, vocabulary, and syntax of these dialects. The morphology exhibits traits whose origins can be traced back to the Aramaic dialects spoken in these areas at an earlier date.

**E. ARAMAIC SCRIPT.** The Aramaic script developed from the Phoenician script, and by the late ninth century had its own recognizable form. In turn it was adopted by the Ammonites and Edomites. With the spread of Official Aramaic under the Achaemenian Empire, this script, especially in its cursive form, was widely used. It was called the "Assyrian script" (see ALPHABET; ALPHABET[S]). Although paleographic development can be traced, it showed no regional variations during this period. With the breakup of the Achaemenian Empire, various local script types emerged. Best known is the Hebrew square script, whose development can

now be studied with the aid of the Qumran texts and other finds. In the West there is also the Nabatean script, long since known in monumental form, but now also known on documents (from this cursive writing the Arabic script developed), the Palmyrene script, and the Syriac scripts: Estrangela, Serto, and the Nestorian variety (in which Iranian languages were written by Christians). In the East the Aramaic script was particularly fruitful, since most Asiatic alphabets can be traced back to it. One branch developed into the East Aramaic type from which the scripts of Asshur, Hatra, the Elymais region, the Mandaeans, and the Manicheans developed; the script of the Achaemenian chancery gave rise to the Pahlavi, Parthian, and Sogdian hands, and from the latter came the Uigur, Mongol, Manchu, Kalmuk, and Buriat scripts; still another form gave rise to the Karoshthi and Brahmi script of India, and through them the various scripts used throughout India, Tibet, Southeast Asia, and Indonesia. The Arabic script (cf. *above*) underwent minor modifications for Persian, Turkish, Urdu, and Malay use.

**F. ARAMAIC INFLUENCE ON OTHER SEMITIC LANGUAGES.** Aramaic in the West was, in the early period, under the strong influence of Canaanite language and scribal traditions; in the E there was the Akkadian influence. With the growing power of the Aramaic-speaking kingdoms and tribes, Aramaic in turn became quite important in the West. This may best be seen in biblical Hebrew. In the early biblical books certain words and forms that appear to resemble Aramaic are in reality survivals of an early poetic diction. In certain books an Aramaic word or form is used to give an exotic flavor to dialogue (Isa. 21:11-14), or perhaps to indicate the country of origin of one spoken to (Job, in the Dialogues); in other books one is dealing with northern or Israelite diction which was often closer to Aramaic than that of Judah (Judg. 5; or the Elijah/Elisha narratives), or with Israelite material which has been reworked in the South (parts of Deuteronomy, Proverbs). But real Aramaic influence may be seen in late books such as Ezekiel, the late Psalms, Esther, Song of Songs, Ezra, Nehemiah, the framework story of Job, and Chronicles. Other books—Ecclesiastes and the Hebrew portions of Daniel—may have been translated in whole or part from Aramaic. The growing influence of Aramaic on Hebrew may be traced in Ben Sirach and in some of the Qumran texts. Aramaic influence on the morphology, vocabulary, and syntax of Mishnaic Hebrew has been pointed out in recent studies. It is one of the main reasons for the profound distinction between the two stages of the language, comparable to the influence of Norman French on the development of English.

Aramaic played a role in the demise of Akkadian. A good part of the population of the Neo-Assyrian Empire spoke Aramaic while many of the speakers of Neo-Assyrian were ethnic Arameans. Neo-Babylonian, from the time of Nabopolassar on, was surely only a written language, while Aramaic was the spoken one. The full impact of Aramaic on Akkadian has still to be properly assessed.

Arabic religious terminology absorbed many terms

from Aramaic: *ṣalāt* (prayer), *zakāt* (charity), *raḥmān* (merciful one), *masjid* (mosque), etc., through the influence of both Judaism and Christianity. Words in the commercial and juridical sphere entered through Nabatean mediation. Aramaic served as the substrate language for the spoken Arabic of Palestine, Syria, and Iraq; the rural populations were often tenacious in their attitude toward Aramaic, and it served as the channel by which Hebrew and Canaanite elements in the spheres of agriculture, architecture, and artisanry were passed on to Arabic. Aramaic continues in use in the Jewish liturgy both in the home and the synagogue; it is used in the Syriac churches in Palestine, Lebanon, Syria, Iraq, and Iran.

**Bibliography.** Although some items in the bibliog. to ARAMAIC are outdated, it remains as a whole useful; E. Y. Kutscher, "Aramaic" in *Encyclopaedia Judaica*, III (1971), cols. 259-87, contains important bibliog. material.  
J. GREENFIELD

\***ARCHAEOLOGY.** The present article attempts to update the original essay with particular emphasis on recent trends in the general discipline in relation to the study of the Bible. This survey is largely limited to the historical period after ca. 3000 B.C. and to ancient Palestine, i.e., principally modern Jordan and Israel.

1. Excavations ca. 1955-1975
  - a. Jordan and Israel to 1967
    - i. Jordan
    - ii. Israel
  - b. Since the 1967 war
    - i. Jordan
    - ii. The West Bank
    - iii. Jerusalem
    - iv. Israel
2. Some contributions of recent archaeology
  - a. Chronological periods and subdisciplines
    - i. Prehistory
    - ii. The Early Bronze Age
    - iii. Canaan in the patriarchal age
    - iv. The period of Philistine and Israelite incursions
    - v. The Israelite and Judean monarchies
    - vi. Exile and return
    - vii. The Samaritan era
    - viii. The Roman-Byzantine periods
  - b. Over-all trends in the contribution of archaeology to the study of the Bible.
3. Method: the expanding scope of fieldwork
  - a. Broader chronological, geographical, and cultural horizons
  - b. Recent improvements in methodology
    - i. Excavation
    - ii. Other aspects of fieldwork
    - iii. Volunteers
    - iv. Recording
    - v. Processing of materials and preparation for publication
  - c. New analytical tools
    - i. Refinement of current techniques
    - ii. Newer experimental techniques

4. Theory: changing conceptions of archaeology
    - a. Recent trends in American archaeology
    - b. New approaches to Palestinian archaeology
    - c. The future of "biblical archaeology"
- Bibliography

1. Excavations ca. 1955-1975. The pace of excavation has quickened so greatly that we can note only a few of the more than two hundred sites dug in this period, and even then must restrict ourselves to Jordan and Israel.

a. *Jordan and Israel to 1967.* i. *Jordan.* The principal British excavations were those of Kenyon at Jericho from 1952 to 1958 and in Jerusalem from 1961 to 1967; of Parr, Kirkbride, Bennett, and others at Petra from 1955 on; and of Hennessy at the Damascus Gate from 1964 to 1966 and at Teleilat el-Ghassul in 1967. The French worked under de Vaux at Tell el-Far'ah (TIRZAH) from 1946 to 1960 and at Qumran and 'Ain Feshkha from 1949 to 1956. The Dutch excavated at Tell Deir'alla under Franken from 1960 to 1964. American excavations included those of Wright, Toombs, Campbell, and others at Shechem from 1956 to 1969; of Pritchard at Gibeon from 1956 to 1962; of Lapp at Taanach from 1963 to 1968; of Bull in the Samaritan sanctuary on Gerizim from 1964 to 1968; of Callaway at Ai from 1964 to 1969; and of Lapp at Bāb edh-Dhrā' from 1965 to 1967. Dajani and other Jordanian excavators excavated Late Bronze and Iron Age tombs near Irbid and Amman and began clearance in the Amman Citadel from 1957 on.

ii. *Israel.* The Israeli "school" first came to international prominence with the large and superbly organized excavations of Yadin and others at Hazor from 1955 to 1958. Aharoni also excavated at Ramat Rahel (see BETH-HACCHEREM[S]) from 1954 to 1962, and Yeivin at Tell Sheikh Ahmed el-'Areini (mistakenly called "Gath"; see GATH[S]) from 1956 to 1961. The 1960s saw the flourishing of this school, with large and significant excavations in the caves between Qumran and En-geḏi under Bar-Adon, Aharoni, Avigad, Yadin, and others in 1960-61; at the Lower Pleistocene site of Ubeidiya under Stekelis from 1960 to 1963; of B. Mazar and T. Dothan at En-geḏi from 1962 to 1965; of M. Dothan and others as Ashdod and Tell Mor from 1962 to 1972; of Aharoni and Amiran at Arad from 1962

T. Rosen; joint expedition to el-Hesi

3. Cleaning a grave. Small tools, often dental picks, must be used.

to 1975; of Yadin at Masada from 1963 to 1965; and of Biran at Dan beginning in 1966.

American scholars participated in several Israeli excavations but did not sponsor and direct their own projects until the Gezer excavations were launched in 1964 by Wright. Annual seasons were directed initially by Wright and thereafter by Dever, with Lance and Seger. This was the largest and longest running foreign excavation in Israel and had considerable impact on methodology (see §3b below).

**b. Since the 1967 war.** The brief interruption caused by the 1967 war was soon followed by a burst of archaeological activity on all sides.

**i. Jordan.** British excavations were conducted from 1968 onward at Tawilan and Buseira (see BOZRAH[S]) by Bennett. German scholars investigated the Madeba (MEDEBA) mosaics under Lux from 1964 to 1975 and began excavations at Umm Qeis under Lux and Kruger in 1974. American excavations were undertaken by the newly opened American Center of Oriental Research in Amman, first at Heshbon under Horn, Boraas, Sauer, and Geraty from 1968 to 1975; in Byzantine churches in Transjordan under Van Eldern from 1972 to 1974; and at Tell el-Husn under Boraas beginning in 1975. Hadidi, Zayadine and other Jordanian excavators continued work in the Amman citadel.

**ii. The West Bank.** Although all foreign excavations came to a halt after the war, some

salvage operations continued. American-sponsored work was directed by Dever at the Middle Bronze I and Iron Age sites of Jebel Qa'qir and Khirbet el-Kom (Shaphir?) W of Hebron from 1967 to 1971, and at Shechem in 1972-73. Callaway cleared an early Iron Age village at Radannah from 1969 to 1972. Survey work was also undertaken, notably the Israel Department of Antiquities survey of the Golan, Judea, and Samaria districts, extended later into Gaza and the Sinai. The information derived by Epstein and others from the Golan was especially significant, as this had been virtual *terra incognita* previously. See DOLMENS[S].

**iii. Jerusalem.** In the Old City of Jerusalem, a spate of excavations soon revealed more about the city's history than had been gleaned in a century of work. Paramount was the large-scale clearance of the area around the Western Wall by B. Mazar, commencing in 1967 and bringing to light monumental Herodian and later remains (see TEMPLE OF HEROD[S]). More modest but equally revealing were the soundings of N. Avigad during reconstruction work in the Jewish Quarter from 1968 on. Other projects were the work of Amiran and Eitan in the Citadel (Jaffa Gate) in 1968-69; that of Broshi in the Armenian quarter and elsewhere from 1970 on; of Lux and Kruger under the German Evangelical Church in the Muristan in 1970-71; of Beit-Arieh and Netzer along the Third Wall from 1972 to 1974; and of many Israeli and other archaeologists in Herodian tombs brought to light all around Jerusalem in construction work from 1967 on. See JERUSALEM[S].

**iv. Israel.** New excavations fielded outside Jerusalem in the post-1967 period included principally those of Aharoni at Tell Sheva (Iron Age Beer-sheba) from 1969 to 1975 (see BEER-SHEBA[S]); of A. Mazar at Tell Qasile from 1971 on; of Ussishkin at Lachish from 1972 on; of Kochavi at Ras el-'Ain (Aphék?) from 1972 on (see APHER[S]); of Oren at Tell esh-Sheri'ah (Gath or Ziklag?) from 1972 on; and of M. Dothan at Acco from 1973 on. A number of the older excavations also continued, among them Ashdod, Arad, and Dan.

Among American excavations, Gezer continued through 1974. A number of other American excavations were launched by the W. F. Albright Institute and a consortium of American schools:

4. T. Rosen; joint expedition to el-Hesi

4. The geologist, having sought out field samples on the sites and in the general area, seeks to recover the geological history of the area. Here he works with a microscope in the geology tent.

5. T. Rosen; joint expedition to el-Hesi

5. The flotation tank crew. Second from left is the paleo-ethno botanist. By "floating" soil, seeds and fruit pits are recovered and ancient diets partially reconstructed.

Tell el-Hesi under Worrell and Toombs from 1970 to 1975 (see EGLON[S]); excavations in the synagogues at Khirbet Shema and Meiron under Meyers, Kraabel, and Strange; and a long-running project at Caesarea begun in 1971 by Bull. Other American excavations were those of Weinberg at Tell Anafa from 1968 to 1973; and Van Beek at Tell Jemmeh from 1970 on.

2. **Some contributions of recent archaeology.** So much information has accumulated in the last twenty years that we can only group the more significant contributions according to general areas, with major emphasis upon the illumination of biblical backgrounds.

a. **Chronological periods and subdisciplines.** i. *Prehistory.* The period before the advent of written records (about 3000 B.C.) is sufficiently important that it has usually been considered a separate discipline. Discoveries at Ubeidiya and Hazorea have produced human remains that are perhaps three million years old and rival those of Leakey's Olduvai Gorge materials for the earliest evidence of the emergence of *Homo sapiens* in the Lower Pleistocene Age. The Paleolithic and Neolithic periods in the tenth-fifth millennia B.C. also continue to be illuminated by the finds in the Nahal Oren, the Carmel Caves, the Wadi el-'Amud, and elsewhere. See PREHISTORY IN THE ANCIENT NEAR EAST[S].

ii. *The Early Bronze Age.* This period, Kenyon's "Proto Urban" period, spanning the third millennium B.C., has recently been brought into sharper focus by vast new evidence, especially from Tell el-Far'ah, Jericho, Meser, Arad, Bâb edh-Dhrâ', and Gezer. However, this period predates the beginning of written history in Palestine and the biblical era *per se* and thus falls largely outside the limitations of our survey. See JERICHO[S]; ARAD [S] §1; GEZER[S] §2.

iii. *Canaan in the patriarchal age.* The MB I and II periods (ca. 2200-2000 and 2000-1500 B.C., respectively) have been particularly well illuminated by recent discoveries. The first period is a nonurban interlude between the EB and MB cultures, now designated by Kenyon and others as the "Intermediate EB-MB" or simply the "Intermediate" period. It is characterized in Palestine by a seminomadic material culture which seems to have diffused from Syria and Mesopotamia with the early expansion of the AMORITES. For this

reason Albright, Glueck, de Vaux, and many other scholars considered it to be the period of the biblical patriarchs. However, the conspicuous lack of MB I remains at such patriarchal centers as Shechem and Beer-sheba calls this association into question (see PATRIARCHS §3a; PATRIARCHS[S]; SHECHEM[S]).

The period itself has ceased to be one of Palestine's deepest "Dark Ages" and has emerged as the last phase of the long Early Bronze Age, and thus following a suggestion of Wright's has been called by Dever and Oren the "Early Bronze IV" period. Isolated cemeteries were previously known and others continue to come to light, but the discovery of the first substantial settlements has finally enabled us to draw a fuller picture of this culture. The evidence has come largely from Iktanu, Aroer and elsewhere in Transjordan, Jebel Qa'aqir, Yeruham, and from surface surveys across the Negeb into Sinai. The tendency is now to raise the dates for MB I by about a century, to ca. 2200-2000 B.C., in spite of Albright's attempt to lower them.

The MB II period (ca. 2000-1500 B.C., often divided into MB IIA, B, and C) represents the zenith of power and prosperity in the Canaanite city-states of Syria-Palestine. Massive fortifications have been uncovered at Dan, Hazor, Taanach, Tell el-Far'ah, Shechem, Gezer, Hebron, Ras el-'Ain and elsewhere in Palestine, as well as at Tell Mardikh in Syria. At Shechem, Wright has connected an early open-air shrine (ca. 1800 B.C.) with the biblical traditions concerning patriarchal worship there (Gen. 33:18-20). An eighteenth-seventeenth-century B.C. unwallled village some distance from Beth-shemesh reveals a nonnucleated population, which may provide a suitable setting for the biblical patriarchs if we are to place them later than the MB I period.

Every MB II site excavated thus far shows a massive destruction around 1500 B.C., in many cases followed by a long gap in occupation. The latter part of the period is characterized as the "MB IIC" period, ca. 1650-1550/1500 B.C., especially by American scholars basing themselves on Shechem and Gezer. In general, there is today a tendency in the direction of the "middle chronology" (Hammurabi ± 1792-1750 B.C.), with a consequent raising of dates for the earlier MB phases by as

T. Rosen; joint expedition to el-Hesi  
6. Pottery drawing

T. Rosen; joint expedition to el-Hesi  
7. Survey architect at work in the field, taking levels, drawing, plotting

much as fifty to one hundred years. See CHRONOLOGY, MESOPOTAMIAN[S].

iv. *The period of Philistine and Israelite incursions.* The twilight of Canaanite culture at the end of the LB Age, ca. 1200 B.C., coincides with major movements of peoples, principally the "Sea Peoples" or PHILISTINES and the Israelites. The exotic and heretofore enigmatic material culture of the Philistines has been brilliantly illuminated by the finds at Ashdod (see ASHDOD[S]); the twelfth-eleventh-century occupation levels at Gezer (see GEZER[S] §5); the anthropoid coffins of Egyptian mercenaries at Deir al-Balah (see also ZARETHAN [S]); and especially by the temple at Tell Qasile, with its nearly intact paraphernalia. Destruction levels probably attributable to the incoming Israelites have been found at Dan, Hazor, Bethel, and other sites claimed by the Bible to have been destroyed; while at Shechem and Gezer the continuity of LB-early Iron I cultures further confirms the biblical tradition (see JOSHUA, BOOK OF[S] §5c). However, Jericho, Ai, and Gibeon remain more a problem than ever, as the archaeological evidence does not indicate a destruction, or for that matter any settlement at all, in the period of the Conquest. Israelite occupation following a destruction seems witnessed at Hazor, Bethel, and Lachish; while distinctive settlements first founded in the twelfth century B.C. and representing early

Israelite culture have been found at Raddanah and at Tel Masos, as well as in surveys by Aharoni in Upper Galilee. See CANAAN, CONQUEST AND SETTLEMENT OF[S].

v. *The Israelite and Judean monarchies.* The splendid reign attributed to Solomon has been glimpsed in the nearly identical casemate (or double) walls and city gates with four entryways at Hazor, Megiddo, and Gezer (cf. I Kings 9:15-17); the prototype of these gates has turned up at Ashdod. The era of Jeroboam I and Ahab in the ninth century takes almost equal place, with the discovery of the sanctuary and city gate at Dan (see DAN[S]) and the magnificently engineered water tunnels at Hazor and Megiddo.

The prosperous and generally homogeneous material culture of the monarchical period has been demonstrated in the domestic architecture, in our growing corpus of pottery, and in small finds of all sorts from everyday life. Numerous weights, measures, and silver hordes contribute to our understanding of commerce and trade. Local sanctuaries at Dan, Lachish, Arad, and possibly Beer-sheba (with "horned altars," cf. I Kings 1:50, at Dan and Beer-sheba) reflect the diversity of Israelite religion, despite the centralization of the cult in Jerusalem and the protests of the prophets against syncretism (see TEMPLES, SEMITIC[S] §2). Vast numbers of recently discovered tombs (see TOMB; TOMB[S]) illustrate burial practice and belief. Our fund of epigraphic materials has multiplied several times (see INSCRIPTIONS, SEMITIC[S] §3). Finally, both the Assyrian destructions in the late eighth century and the Babylonian destructions in the early sixth century B.C. have produced eloquent testimony at nearly every site investigated.

vi. *Exile and return.* The postdestruction, Persian, and Hellenistic periods in Palestine still remain insufficiently known, but the first attempts at synthesis can now be made. Light is gradually being shed by the excavations at Anafa, Shiqmona, Tell Megadim, SAMARIA, Shechem, En-gedi, Tell Jemmeh, Ashdod (Tel Mor), Gezer, and in Jeru-

9. Basket found in the Cave of Letters. See Bar Kochba[S]

salem itself. The evidence indicates a slow and painful local recovery, finally swept up in the advance of the classical Hellenistic cultures in the late third century B.C.

vii. *The Samaritan era.* This period has been relatively obscure until recently, but has now been illuminated by domestic levels at Shechem, as well as by the discovery of the dated SAMARIA PAPYRI. The probable Samaritan sanctuary on Mount Gerizim has been located and partially cleared.

viii. *The Roman-Byzantine periods.* Until recently "New Testament archaeology" has been an armchair discipline, dealing largely with classical texts, while the study of Jewish remains of the period has languished. Now, however, a series of discoveries has galvanized attention on the Roman and Byzantine periods. The Herodian era and the first century A.D. are perhaps the best known at present, thanks to the well-dated destruction levels of A.D. 70 being uncovered in Jerusalem, along with the monumental Herodian structures at the Western Wall. The excavation of MASADA, Herodian Jericho, and the HERODIUM have also contributed greatly.

Qumran and its scrolls have been less revolutionary than first expected but no less important (see DEAD SEA SCROLLS and supplementary article). The En-gedi caves and the excavations of Masada have yielded spectacular supplementary evidence of Jewish sects of the period. Many new synagogues have been located and ones already known have been re-excavated, including those at Meiron, Khirbet Shema, Chorazin, CAPERNAUM, Tiberias, Beth-shan, Ma'on, En-gedi, Masada, Samu', and Sussiyeh. The Galilean synagogues, formerly dated to the second-third century A.D., are now thought by some scholars to be mostly fourth- or fifth-century A.D. (see SYNAGOGUE, ARCHITECTURE[S]). Finally, Jewish ceremonial art has been greatly clarified by the increasing evidence of pagan motifs transformed and utilized in these synagogues. See ART, EARLY JEWISH[S].

Early Christian sites are still neglected, but a recent catalogue listed nearly two hundred known Byzantine churches in Palestine. The number is currently being swelled by the more intensive exploration and excavation of Transjordan. Recent discoveries on both banks of the Jordan would include churches at Khirbet Kerak, el-Koursi, Shavei Zion, Beit Sahur, PELLA, and several in the vicinity at Madeba (Medeba) in Transjordan.

Due to the political situation in the Middle East, the exploration of the areas more peripheral to the lands of the Bible has slowed in pace. Nevertheless, Transjordan is rapidly opening up. Parts of the gap in occupation postulated by Glueck between ca. 1900 and 1200 B.C. are slowly being filled. In the Iron Age, the Ammonite and Edomite cultures are emerging in greater clarity through excavations at Amman, Heshbon, Buseira, and elsewhere (see AMMON, AMMONITES[S] §2; HESHON[S]). For the later periods, Petra has thrown great light on the Nabatean civilization. See EDOM[S].

Ancient Syria is less well known, despite its demonstrable archaeological riches, and we still need controlled excavation with modern strati-

graphic methods. Older sites like Ras Shamra (see UGARIT[S]) continue to produce monumental architecture and written documents, but we lack reliable stratigraphic sequences or an adequate knowledge of the material culture as a whole. The same is true for ancient Phoenicia and the Lebanese coast. In Egypt and Iraq (Mesopotamia), foreign excavations have nearly halted, and the national departments of antiquities have not yet developed adequate personnel or resources. Turkey could yield enormous information, but its scientific investigation has hardly commenced, nor is it generally open at the moment to Western scholars.

b. *Over-all trends in the contribution of archaeology to the study of the Bible.* Archaeology in its broadest sense is the only possible source of material evidence for additional illumination of the biblical text. For that reason Albright long ago described an "archaeological revolution" in the twentieth-century study of the Bible, a phrase not at all exaggerated. Albright suggested that the cumulative result of the first generation of exploration and excavation was that the Bible no longer projected from antiquity like a "lone fossil." It can now be seen in its original setting, lost for centuries but increasingly reconstructed in detail through the evidence supplied by archaeology. There is no reason to believe that this revolution is exhausted; on the contrary, it has scarcely begun. With its growing precision in retrieving the empirical data and its increasing sophistication in interpreting it, modern archaeology has the potential for even greater illumination of the Bible.

3. *Method: the expanding scope of fieldwork.*  
a. *Broader chronological, geographical, and cultural horizons.* Recent finds have pushed back our time span in archaeology to three million years ago. For neglected or poorly perceived periods, they have refined chronology and suggested more accurate terminology. More important, they have filled out what was heretofore only a tantalizing outline of the successive material cultures of the ancient Near East. With the gradual extension of excavation into more peripheral areas—from Cyprus to Iran and from the Caucasus to Nubia—the "lands of the Bible" have come to include a vast geographical area. The result is that Near Eastern archaeologists, even those concentrating in the biblical period, are now confronted with a bewildering variety of peoples, places, and events nowhere equaled in the world.

b. *Recent improvements in methodology.* Much of the recent increase in material evidence from the past is due to more sophisticated and precise methods of retrieval, recording, and processing of data. In methodology Near Eastern archaeology has lagged behind until the last two decades but now is in the forefront of developments.

i. *Excavation.* Modern stratigraphic methods popularized by Kenyon at Jericho from 1952 to 1958 (discussed in ARCHAEOLOGY §B) have become standard procedure on nearly all British and American excavations. "Wheeler-Kenyon" technique, or more properly the "bulk/debris layer" method, goes back in principle to Reisner's excavations from 1908 to 1910 at Samaria. The more recent application introduces automatic, three-dimen-

sional analysis and recording, making possible far greater precision in separating debris layers (see TELL[S]). It enables us to associate datable pottery and objects more confidently with architectural remains and thus to define building periods or strata more accurately. These drawn sections then serve as the basis for the publication, relating everything graphically and three-dimensionally for the reader.

American adaptations of British methods were first successfully employed at Shechem by Wright from 1956 on, then later at Taanach, Ai, and elsewhere. The essential modification was the use of detailed, daily ceramic analysis in the Albright tradition to complement the stratigraphic work in the field. Further advances were made in the application of these methods to larger architectural units when they were introduced in Israel on the Gezer excavations in the 1960s. Now such methods are routinely employed on all American excavations, especially in Jordan and in Israel.

Israeli excavators generally use more traditional methods, clearing larger architectural complexes and depending upon quantities of restorable pottery found *in situ* on living surfaces. Whereas British and American excavators with their more minute methods have tended to re-excavate older sites where a minimum of material remains, Israelis prefer virgin sites. Their approach has given us an impressive exposure at a wide range of sites, though details often seem lacking and interpretations remain needlessly controversial. The fieldwork is backed up by an excellent network of technical facilities in museums and laboratories, as well as by modern conservation and reconstruction at the sites. Despite differences in method, both "schools" have produced significant results. Moreover, a consensus is slowly developing on the crucial points, such as the need to utilize sections extensively and to record them for publication.

Whatever method is employed, growing recognition of the potential archaeological evidence available and the recent trend toward multidisciplinary staffs (see §4b below) have resulted in the recovery of data from remains that were formerly overlooked or discarded. This includes floral and faunal remains, industrial wastes, occupational residue on living surfaces, sediments accumulating through natural processes, and the like. Improved excavation methods per se are sufficient to recover some of these remains, but specific techniques may also be employed. As a single example, on modern excavations all debris from living surfaces, plus a routine percentage of other debris (perhaps 20%), may be sieved and then put through flotation equipment designed to ensure near total retrieval of organic materials. Cores of the debris layers may also be taken for pollen analysis (palynology).

ii. *Other aspects of fieldwork.* In prospecting for sites or choosing areas for excavation, proton magnetometers and electrical resistivity surveying sometimes enable large structures such as city walls to be traced underground without actual excavation (though these techniques are less useful in the deep, multilayered mounds of Palestine than elsewhere). Aerial photography and photogrammetric mapping also aid increasingly in

locating new sites and in developing field strategy. In the case of coastal sites, underwater archaeology, a relatively new subdiscipline, will aid in planning the harbor and may also produce additional evidence from shipwrecks or from the bottom of the sea (see SHIPS AND SHIPPING[S]). Finally, surface surveying of large regions before selected sites are excavated has come a long way from the random sherd sampling of the past, and, if sufficiently systematic, may indicate settlement patterns and even the character of individual sites with surprising accuracy. (Again, this technique is more applicable to areas with one-period sites than it is to Palestine.)

iii. *Volunteers.* A new feature of Palestinian archaeology in the 1960s was the replacement of hired native labor by volunteers, usually brought from abroad. Yadin pioneered the use of volunteers on a large scale at Masada in 1963; but the Gezer excavations beginning in 1964 were the first to structure an archaeological project around an academic program designed for students and coupled with fieldwork. In addition to producing a new generation of highly trained professional archaeologists, we have recruited a large and enthusiastic corps of amateurs who are conversant with modern field archaeology and are capable of following the literature critically.

iv. *Recording.* The diary of the field or area supervisors is still basic, but now it is likely to include a daily top plan, detailed locus-by-locus descriptions, frequent sketches of sections and photographs, field readings of pottery, etc. In addition, specialists on the staff (see §v below) will have supplied geological analyses of soil layers, notes on various categories of material remains, and other technical data. Many excavation projects now have their own field manuals, describing in detail the digging and recording methods to be used, ensuring uniformity in the field reports which become the basis for the final publication.

v. *Processing of materials and preparation for publication.* Modern field archaeology amasses more data than can readily be assimilated. The routine processing of materials—i.e., selecting, cataloguing according to types, drawing and describing—is crucial. Two techniques have improved efficiency. One is a matter of practical ingenuity and consists of sectioning the sherd with a thin carborundum-bladed saw and drawing it 1:1. An additional benefit is that this aids with description and photography of ware, temper, manufacturing technique, and firing.

The second process is computer programming, still highly experimental but promising a breakthrough. Coding all classes of archaeological artifacts into computers speeds conventional sorting and cataloguing immensely and at the same time makes possible exhaustive analyses of comparative types which would otherwise be unfeasible. The first attempts to code all excavated materials from a site have already been undertaken, but apart from coins and other easily classified artifacts, there is not yet sufficient agreement on typological criteria to permit full computerization, especially with pottery.

The multidisciplinary approach to archaeology

today has made fieldwork more sophisticated, but also more difficult to work up for publication. It is no longer sufficient to send samples to consultants who will render an opinion. The ideal (not often attained) is to recruit specialists in allied disciplines who collaborate in the project design itself, supervise the excavation and recording of the material, provide on-the-spot and laboratory analyses, and finally incorporate their reports into the over-all synthesis of the history and culture of the site (see §4 below).

The problems which plague fieldwork seem more manageable than those faced in publication. The unfortunate result is that many excavations, even those well organized in the field, never produce a final report.

*c. New analytical tools.* Here we can deal only with additional techniques which are directly applicable to Palestinian archaeology in its present state (see *bibliog. for wider orientation*).

*i. Refinement of current techniques.* Perhaps the most significant breakthrough in the application of science to archaeology is radiocarbon-14 dating. This is not new, having been in use since the early 1950s, but its application in establishing absolute chronology is still debated. The original half-life figure of  $5568 \pm 30$  (the rate of decay of  $C^{14}$  in formerly living organisms) has now been raised by general agreement to  $5730 \pm 40$ , but there are indications that further adjustments may be necessary. These changes would have the effect of raising dates in the ancient Near East by as much as three to five centuries by the time we reach back to the third and fourth millennia B.C. To illustrate the dilemma, in Egypt, for instance, this would wreak havoc with our present system of chronology, which is based on astronomical observations preserved in the literary sources and seems to provide satisfactory international synchronisms. Until greater precision and agreement can be obtained in radiocarbon dates, it may be better to continue to depend upon traditional chronological methods. See CHRONOLOGY, MESOPOTAMIAN[S]; EGYPT, CHRONOLOGY OF[S].

Neutron activation analysis of pottery, in which samples of sherds are irradiated and the gamma-ray spectra are used to measure the elements present, is capable of "finger printing" the clays used in pottery with considerable accuracy. As the corpus of analyzed samples from ancient clay beds grows, this method should be able to trace the manufacture of both local and imported pottery to their source, which would yield valuable information on commerce and trade. Already neutron activation has shown that most of the Late Bronze "bichrome ware" is not Palestinian but Cypriot; and studies under way on the Middle Bronze "Tell el-Yehudiyeh" and other wares may reveal similar surprises.

Less publicized but still useful is petrographic analysis of thin sections of sherds, in which the source of inclusions for tempering clays can often be localized.

*ii. Newer experimental techniques.* There are still newer laboratory techniques, potentially informative but not yet perfected or fully adapted for use on archaeological materials. Among those already

being employed in some branches of archaeology are: potassium argon dating of geological samples; archaeomagnetic analysis of terra cotta and ceramic remains; hydration dating of obsidian implements; spectrographic analysis of metals; and thermoluminescent dating of pottery.

**4. Theory: changing conceptions of archaeology.** Archaeology is more than a set of techniques in digging, recording, and manipulating data. It is an intellectual exercise in penetrating the past. The conceptual models on which this aspect of archaeology is based have undergone sweeping changes in the last decade. The vigorous debate generated by the discussion, particularly in America, is gradually making an impact on excavators working in the Middle East.

*a. Recent trends in American archaeology.* American (or "New World") archaeology has always been oriented more to anthropology than to history, in part because it deals largely with prehistory, i.e., with peoples who have not left written records. Ethnographic data from living primitive societies therefore is utilized alongside studies of the physical remains of extinct societies. The objective is usually not necessarily the history of a site but the elucidation of the cultural process itself. The attempt to understand past cultures in their total relation to their environment, and the effort to show the relevance of such research for humanistic studies in general, have led American archaeologists more recently to collaborate with social scientists, ecologists, and general systems theorists.

The latest innovation in America is the "new archeology" (usually so spelled), which has gone further in rejecting the "idiographic" or historical approach in favor of "nomothetic" or generalizing archaeology. Influenced heavily by scientific method and modern philosophy of science (J. Hempel and others), this school conceives its task as that of "explanation," i.e., of formulating and testing general covering laws which will satisfactorily account for cultural diversity and change.

These and other recent developments point to a concern to frame a general theory of what archaeology is and what it should do, at the same time emphasizing its still unfulfilled potential for understanding human behavior in the larger perspective of the past.

*b. New approaches to Palestinian archaeology.* The changes we have noted in the general conception of archaeology elsewhere have only recently affected American excavations in the Middle East. This is particularly true in Palestine, where American archaeology has traditionally been considered a branch of biblical studies. A typical American project in Jordan in the 1950s and early 1960s would have been digging at a biblical site, supported primarily by theological schools. The staff members were mostly seminary professors or theological students whose orientation was biblical history. Although they would have picked up considerable skills in the use of the traditional tools, stratigraphy and ceramic typology, only the director, if anyone, would have been a professional archaeologist. The objective of such a project was usually to recover a ceramic sequence and an outline of the "political history" (the major destruc-

tions) of the site—an objective which was quite narrow by the criteria outlined above.

As wider objectives were formulated, large multidisciplinary staffs began to be employed at Gezer and other American excavations in Israel in the late 1960s. By the early 1970s most excavation staffs included the traditional personnel, but also various combinations of geologists, geographers, physical and cultural anthropologists, paleo-ethnobotanists and zoologists, experts on the history of technology, professional ceramicists, computer programmers, and many other consultants. The basic orientation toward history, including that of the biblical period, was still dominant, but the presence of so many specialists in other areas inevitably expanded the scope of the project. Furthermore, financial support for such excavations came less from theological circles than from universities, private foundations, and U.S. government agencies, to whom the research had to be justified in terms of broad scholarship and humanistic values.

It must be acknowledged that the "new look" of these projects was sometimes superficial, the result more of pragmatic adaptation than of any revolutionary change in theory. There was often little rigorous examination of the underlying assumptions of the "new archeology," and some of its methods were uncritically applied to the unique stratified mounds of Palestine. Finally, these projects have not yet co-ordinated and published their results, so the alleged superiority of their methodology remains undemonstrated.

Two cautionary notes seem in order. Enthusiasm for newer experimental approaches is no substitute for competence in more traditional, proven methods, such as stratigraphy and ceramic typology, which remain basic in Palestine. Secondly, because we have a long sweep of written history, our essential orientation must be historical, and command of the languages and literatures, including those of the Bible, is fundamental.

*c. The future of "biblical archaeology."* The recent trends we have noted suggest to some scholars that American Palestinian archaeology in the near future may cease to be an adjunct to biblical studies and may become an autonomous discipline alongside the other brands of archaeology. These scholars have even abandoned the term "biblical archaeology" in favor of "Palestinian archaeology." This is not merely a matter of semantics. It represents a different conception of Palestinian archaeology, a determination to establish it as an academic field on its own merit and then to work out a new and more constructive relationship with biblical studies. This position still represents a minority view, but its main arguments may be worth noting. (1) There is a discipline properly called "Palestinian archaeology," or more accurately "Syro-Palestinian archaeology," i.e., a branch of general archaeology which deals with one specific geographical, cultural, and chronological entity. By consensus, this embraces the distinctive land bridge between Egypt and Mesopotamia, with its succession of cultures in the historical periods. (The study of the period before ca. 3500 B.C. belongs properly to Old World prehistory, and the study of later Jewish and Christian

antiquities may better be considered a subdiscipline of Greco-Roman and Byzantine archaeology.) Obviously Palestinian archaeology extends far beyond the time period and the subject matter of the Bible. It is, therefore, a secular discipline whose canons are determined by archaeology and not by the special concerns of biblical scholarship. (2) This secular tradition of archaeology is a viable option. It has a long history in American scholarship, going back to Reisner's Harvard excavations at Samaria from 1908 to 1910, and continuing in the excavations of Chicago, Pennsylvania, and Yale at Megiddo, Beth-shan, and Jerash in the 1920s and 1930s. It has characterized nearly all British work in Palestine and is now dominant in the well-established "Israeli school," which uses the Bible not as a theological statement but as a document of national history. (3) It is granted that a secular approach to archaeology also has its bias, but removing the dialogue from "biblical" to "Palestinian" archaeology defines the issue as one not of faith but of scholarly method, which is appropriate to archaeology as an academic inquiry. (4) These interrelated trends in Palestinian archaeology are rapidly making the field a scholarly discipline in its own right, no longer subservient to biblical studies in America—a development which as we have seen already had taken place elsewhere. The recent declaration of independence is partly a matter of necessity, as Palestinian archaeology outgrows the ability of biblical circles to support it or even to be *au courant* regarding its results. It is also partly out of the conviction that allowing them their separate courses of development may foster the growth of both disciplines.

The real question is not whether Palestinian archaeology can survive, but whether parallel to it something called "biblical archaeology" can persist or can hope to become an academic discipline. As Palestinian archaeology and biblical studies are currently evolving, the only possibilities for "biblical archaeology" would seem to be as an interdisciplinary study. It could be pursued either by archaeologists specializing in the biblical period, or by biblical scholars utilizing selected discoveries of professional archaeologists and seeking to relate these to problems of biblical interpretation.

Two qualifications are necessary. The enterprise we have just described is legitimate and at its best may indeed be academically respectable; but it does not constitute an independent discipline. It can flourish only when both Palestinian archaeology and biblical studies are allowed sufficient integrity to carry out their respective tasks. Secondly, although it may seem a minor consideration, the term "biblical archaeology" should be avoided, at least in academic circles; the use of the word "biblical" as a qualifying adjective suggests a special kind of "holy archaeology." A more accurate and useful name for the interdisciplinary study we have been describing would be "the archaeology of Palestine in the biblical period," or simply "archaeology and the Bible."

\***AREOPAGUS.** Investigations on the Areopagus have clarified the history of the site. The church whose ruins stand on the terrace below the summit of the hill on the N side has been shown to date from the sixteenth century. Evidence for an earlier church is provided by some architectural marbles found on the site and by a cemetery with at least thirty-five graves of early Christian times, the earliest being of the late sixth or seventh century. No foundations of this earlier church have been found. Pre-Christian remains on the terrace consist of a few scraps of house walls and some cisterns of Hellenistic and Roman times. No trace was found of the court of the Areopagus or of any of the pagan sanctuaries ascribed to the area. This led the excavators to conclude that we must look elsewhere on the hill. The present writer believes that the court, the pagan sanctuaries, and also the early Christian church probably lie hidden at the E end of the terrace just described, underneath the mass of rock that has fallen from the upper part of the Areopagus hill. This rock covers a considerable area and is too large to be moved.

A limestone fragment found ca. 220 yards NE

of the hill may have some connection with the Areopagus court. On one smooth, natural rock surface it bears the word "lithos," i.e., "stone," written in Greek characters of Imperial Roman date. A stone which has the word "stone" on it must be special and could perhaps be one of those on which the accused and the accuser stood in the Areopagus court. See also ATHENS[S].

**ARETALOGY** ἄρετᾶλ' ἄρετῆ [ἀρεταλογία, ἀρετῆ virtue + λόγος, report]. Inscriptional evidence shows that the term was used in the period 300 B.C.—A.D. 300 to mean a report or celebration of the marvelous deeds of a deity. The word appears in the LXX in Sirach 36:13 (RSV 36:14) where God is urged to "fill Zion with the celebration of [his] wondrous deeds," and is used similarly in Strabo's *Geography* (XVII.i.17).

The single common purpose of the aretalogies was to praise the miracle-working deity. Scholars disagree, however, on whether they also manifest a common form and style. Some biblical scholars believe that the aretalogy is a biographical, literary genre (see GOSPEL, GENRE[S] §3). Its more-or-less stylized framework, they argue, depicts the miraculous birth of a wise MIRACLE WORKER, his struggles with his opponents, his martyrdom, and his apotheosis. Others contend, more modestly, that the aretalogy simply recounted the miracles of a charismatic figure in order to demonstrate his status as a DIVINE MAN. It is questionable, however, whether the evidence adduced for these hypotheses really supports them. Down into the first century A.D. the term "divine man" (θεῖος ἀνὴρ) was used of men of superior wisdom specially favored by the gods or in special communion with them. Only later in the second and third centuries was a synthesis of this figure with that of the miracle worker attempted. Even Philostratus' *Life of Apollonius of Tyana* follows no strict biographical pattern and leads to no martyrdom.

There are formal similarities between the individual stories of miracles attributed to Jesus in the gospels and those reported of supernaturally endowed men in the late Hellenistic world as well as in rabbinic miracle anecdotes. But the over-all framework of the NT narratives and their underlying aim are distinctive. Therefore, to refer to the "aretalogy" as though it were a fixed literary form (whether the biography of a wonder-working martyr or the report of a divinized miracle worker) is to distort the meaning the term had in antiquity and to obscure important literary and theological distinctions in present-day biblical interpretation. While pagan aretalogies report acts of the deities in the past, biblical writers from the sixth century B.C. down into the first century A.D. celebrate in advance the deeds which God is yet to perform (e.g., Sirach 36:6 ff.; Dan. 4:34-35; 6:26-27).

Merkelbach in *Zeitschrift für Papyrologie und Epigraphik*, X (1973), 45-54.

Aretalogy is treated as a fixed literary form in M. Hadas and M. Smith, *Heroes and Gods: Spiritual Biographies in Antiquity*, Religious Perspectives, XIII (1965) and by H. Koester, "One Jesus and Four Gospels," *HTR*, LXI (1968), 230-36. For a detailed critique of this position and a careful analysis of the texts: D. L. Tiede, *The Charismatic Figure as Miracle Worker*, SBLDS, I (1972); also H. C. Kee, "Aretalogy and Gospel," *JBL*, XCII (1973), 402-22.

H. C. KEE

**ARIOCH.** Commander of King Nebuchadnezzar's bodyguard (Dan. 2:14-15). He was given the responsibility for executing the "wise men" of Babylon, but became the intermediary through whom Daniel was admitted to the king's presence (Dan. 2:24-25).

\***ARK OF NOAH.** Attempts to test archaeologically the historicity of the flood narrative (Gen. 6-8) have been of two kinds. First, evidence of alluvial layers in the remains of Mesopotamian cities has been assessed. It has failed to indicate any single widespread deluge. There is no such evidence at all from Palestine (see FLOOD [GENESIS] §4). Second, it has been claimed that there exist remains of the ark of Noah itself on "Mount Ararat."

According to Gen. 8:4, after the recession of the waters, "the ark came to rest upon the mountains of Ararat." Ararat is the Hebrew form of Urartu, an extensive country which covered parts of modern Turkey, Iran, and the Soviet Union (see ARARAT). The fabulous height of its peaks was clearly known as far away as Palestine. Genesis refers to no specific mountain, but later Christian tradition chose the southernmost of the great peaks of the area, Agri Dag in NE Turkey, as "Mount Ararat." At its foot was built in the Middle Ages the Monastery of St. James, whose monks satisfied pilgrims by showing relics of Noah and his family. The monastery was destroyed in 1840.

In this century a story has been current of a Russian aviator who, before the revolution of 1917, saw Noah's Ark from the air, resting on Mount Ararat, and of a subsequent investigation ordered by the Czar. The truth of no part of this story can be tested, since any records there may have been were destroyed in the revolution. But, partly on the basis of this story, a number of American expeditions have been organized since the 1950s. At a height of some 14,000 feet on the mountain, a large wooden structure has been found. A complete examination has been impossible up to the time of recent reports, since it is largely encased in ice. However, in 1970 the age of small fragments of the wood was estimated by the carbon-14 technique to be not more than 1200 years. It seems likely that monks of the Monastery

of St. James, sparing no effort to provide appropriate relics, may have built something to pass for the ark high up on the mountain. However that may be, nothing found on the latter-day "Mount Ararat" has any relevance to the historicity of the biblical narrative.

Bright, "Has Archaeology Found Evidence of the Flood?" *BA*, V (1942), 55-62; A. Parrot, *The Flood and Noah's Ark* (1955); G. E. Wright, "The Ark Again?" *ASOR*, No. 3 (1970-71); for a full account of the search for the ark by one who believes the biblical account literally to be true, see J. W. Montgomery, *The Quest for Noah's Ark* (1972).

D. JOBLING

\***ARMY.** Knowledge of this subject is limited by three factors: (1) There is a scarcity of extant reliefs and drawings depicting Israelite military affairs. Only tentative conclusions should be drawn from material from other countries in Israel's cultural milieu. (2) Many OT military narratives are found in late literary sources, sometimes hundreds of years removed from the events described. (3) Because of the religious nature of the biblical narratives, military details, such as army organization, supply, and strategy may have been omitted as irrelevant.

1. **A people's army.** Until the rise of the monarchy, Israel's army was a people's force recruited in emergencies by clan or tribal leaders. Sometimes charismatic leaders enlisted warriors from several tribes. Prior to Saul, however, these leaders never commanded the entire tribal confederation (I Sam. 11:1-11). All Israel was involved in a war only once, and this was an internecine conflict, with the other tribes pitted against Benjamin (Judg. 20).

2. **A professional army.** The first truly professional army was organized by Saul, whose reign was a transition from the tribal league to the monarchy (I Sam. 13:2). His army included both native and foreign mercenaries, e.g., the Edomite, Doeg (I Sam. 21:7 [H 8]). The Davidic dynasty maintained a permanent mercenary army until 701, after which it was probably considered too costly. Sometimes these mercenaries are called נערים (RSV "young men"), but the context shows that they were professional soldiers, probably select troops (II Sam. 2:12-17; 16:2). In addition to purely military tasks the professionals served as royal bodyguards. At least one such group was the רצים (runners), whose guardroom was at the entrance to the palace (II Sam. 15:1; I Kings 14:27, 28; II Kings 10:25; 11:4). Perhaps, as is generally held, the kingdom of Israel did not employ a professional army, but it should at least be noted that Ahab used נערים against Ben-hadad of Syria (I Kings 20:15-20).

Pay for professionals, who apparently were not regarded as free men, was sometimes in the form of land grants (I Sam. 8:14) or a share of the booty (I Sam. 30:21-25). Simon Maccabeus made regular payments to mercenaries, probably in money (I Macc. 14:32), and this practice was continued by John Hyrcanus (Jos. War. I.ii.5).

3. **A citizens' militia.** As early as the latter part of David's reign a conscript army existed alongside the professional troops. A stage of this development

is perhaps seen in the account of a census which David ordered Joab to take throughout all the tribes of Israel. As a professional soldier Joab felt it necessary to voice his objection (II Sam. 24:2-9); relationships between mercenaries and militiamen were not always amicable, and friction between these two segments of the army probably explains Joab's murder of Amasa (II Sam. 20:8-10). The militia was called annually for a period of service, and also in emergencies (I Chr. 27:1-22). In peacetime the reserve service was probably spent in the soldier's home district. After Sennacherib's invasion in 701, Judah depended entirely on the conscript militia.

**4. Chariotry.** The commonly held view that the chariot did not become an important part of Hebrew armies until Solomon is probably in error (cf. ARMY §3*d*). That a chariot corps is never mentioned in any of David's campaigns could indicate that chariots were only of minor importance compared to his infantry. After David captured a thousand chariots from Hadadezer, king of Zobah, he reserved a hundred, destroying the remainder (II Sam. 8:4, 5). This is usually interpreted to mean that to David the chariot was unimportant militarily, but it seems more reasonable to conjecture that his chariot corps, although perhaps not large, was already near full strength. Solomon emphasized the chariot and assigned the infantry to a subordinate position. The exact size of his chariot corps is difficult to determine. According to I Kings 4:26 he "had forty thousand stalls of horses for his chariots," but the Chronicler reduces this number to four thousand (II Chr. 9:25). If the former number is correct, his chariot corps was immense, numbering over thirteen thousand. The latter figure is more in harmony with I Kings 10:26-29, which records that Solomon, who purchased horses from Cilicia and chariots from Egypt, had fourteen hundred chariots. If however רכב (here translated "chariot") should mean chariot horse as it sometimes does (II Sam. 8:4), this would further reduce the number to around 475. This calculation is based on reliefs from contemporary countries showing the chariot being drawn by two horses, with a third held in reserve.

A high point in chariotry was reached during the reign of Ahab, who committed two thousand chariots to the battle against the Assyrians at Qarqar. Slightly later, Jehoshaphat of Judah willingly co-operated with Ahab in a campaign against Syria. This suggested the possibility that Ahab's large contribution to the anti-Assyrian coalition might have included chariots from Judah. Although MEGIDDO was one of Solomon's chariot cities (I Kings 9:15-19), the celebrated horse stalls discovered there did not belong to him but to Ahab. Approximately 450 stalls are identifiable, indicating that the location accommodated 150 chariots. Ahab's successors were unable to maintain his level, and when Samaria fell, the enemy captured only fifty chariots. In the late eighth century the Assyrians introduced chariots drawn by four horses, a practice Judah apparently adopted. SENNACHERIB'S reliefs showing scenes from his destruction of LACHISH depict a Judean chariot, which appears essentially like those used by the Assyrians. This evidence

would be more conclusive had these reliefs been carved by Judeans.

**5. Cavalry.** Israelite cavalry made its modest appearance as early as the reign of David, employing mules rather than horses (II Sam. 13:29; 18:9). However, horses were used as mounts for military scouts (II Kings 9:17-19). Development of cavalry is difficult to trace because פָּרָשִׁים (RSV "horsemen") could also refer to members of the chariot corps (I Kings 1:5; 4:26). At the end of the eighth century Judah possessed no mounted soldiers (II Kings 18:23). In the Hasmonean period cavalry was organized by Simon (I Macc. 16:4), and in the first century B.C. Herod the Great also recruited cavalry. The scroll of the WAR OF THE SONS OF LIGHT AND THE SONS OF DARKNESS, probably to be dated in the first half of the first century A.D., envisioned the use of cavalry resembling contemporary Roman army usage. See DEAD SEA SCROLLS §5*c*.

**6. Military organization.** Little is known about the organization of Israelite armies prior to the monarchy. During the days of the people's army, the clan formed the basic unit, and the recruits were probably commanded by their own leaders (I Sam. 17:18; 18:13). In this period מַלְכָּה clearly denoted a subdivision of the tribe and not a unit of one thousand fighting men as it did later. In the predynastic period there seems to have been no pre-established command or military organization. Nor was there an intertribal system for enlisting troops, or anything more than verbal censure for failure to heed the call to arms. It is conceivable that there was intratribal military organization. On some occasions multitribal armies may have been organized into units according to their specialized weaponry (I Chr. 12:24-38). Numerous references to the threefold division of an army for attack bear witness to an elementary organization where two lieutenants served under a charismatic leader such as Gideon (Judg. 7:16). Even after the monarchy was established, Israelite armies often employed a tripartite division in battle (I Sam. 13:2; II Sam. 18:2). During the reign of David there developed a divided command, Joab over the professional army and Amasa over the militia. David and subsequent kings, however, remained head of the military organization. The militia, and presumably the professional army as well, was organized into units of one thousand, one hundred, fifty, and ten soldiers. In the Hasmonean period, Judas Maccabeus similarly divided his army (I Macc. 3:55), as did the Qumran sect. When militiamen were conscripted they were placed under the command of officers who were heads of clans; however, the use of a conscript army made essential a standing corps of professional officers (II Kings 25:19). An important figure was the scribe, who had the responsibility of enlisting recruits and deciding who would be exempt from military service (Deut. 20:5-9; II Kings 25:19). In I Chr. 27:1-15 David is credited with organizing twelve nontribal divisions, each of which was to provide 24,000 soldiers on a monthly rotating basis. Although the early date of such a highly sophisticated militia organization and the accuracy of such a large number of militia are subject to question,

this indicates that the Chronicler was familiar with such a levy.

In the first century A.D., Jewish armies were generally organized according to the Roman model. The Roman Empire maintained twenty-five legions supported by various auxiliary forces. A legion consisted of six thousand men and was divided into ten cohorts, each of which consisted of six centuries. Each century was commanded by a centurion. A cavalry unit was attached to each legion.

\***AROER**. 1. A Transjordanian town on the N rim of the Wadi Mojib (Arnon Gorge; Josh. 13:16), to be identified with Khirbet 'Ara'ir three miles SE of Dhiban (see DIBAN).

Excavations in 1964-66 revealed that the heavy walls visible on the surface belong to an Iron Age fortress, as N. Glueck had already surmised in the 1930s. The area defined by these walls is no less than fifty yards square. The roughly hewn rectangular masonry is laid in the header-stretcher style characteristic of tenth- and ninth-century B.C. Israelite sites. The main structure is a double-walled building of excellent proportions (Walls I-IV and V-VII), possibly the E tower of the city gate.

The published pottery associated with these buildings is from the ninth-eighth century B.C. Some forms are typical of Israelite sites of the period, but most of the pottery is in a local ceramic tradition closer to Deir'alla, particularly in the white-slipped unburnished wares. The main buildings may be attributed to Mesha, who claims on the famous MOABITE STONE of the mid-ninth century B.C. to have fortified Aroer after his defeat of Israel. The lack of any pottery from the sixth century B.C. to the Nabatean period beginning in the early second century B.C. confirms that Aroer was abandoned after the Babylonian destruction (Jer. 48:18-20).

Fills and levels below the Iron Age fortress have produced Late Bronze II through Iron I pottery, ca. thirteenth-tenth centuries B.C., thus providing a context for the biblical account of the conquest by the tribe of Reuben (Josh. 13:15-23), its later restoration by Jephthah the Gileadite (Judg. 11:12-33), and its incorporation into the kingdom of David (II Sam. 24:1-5).

The preliminary reports do not mention any Middle Bronze II strata. Level VIb represents the earliest occupation, just above virgin soil. Together with VIa it spans the Early Bronze IV-Middle Bronze I periods, ca. 2400-2000 B.C. (the excavators' "Intermediate Bronze I-II," ca. 2250-1900 B.C.). No structures are reported, only a few pits. However, clear stratification was present, consisting of layers of ash, bone, and domestic debris, alternating with wind- and water-deposited soil.

The pottery is a "hybrid," mostly in decadent local EB style, but showing some influence from the Syrian "caliciform" repertoire of the last quarter of the third millennium B.C.

The evidence from Aroer VIb-a suggests a fairly long span of semisedentary occupation, perhaps seasonal. Elsewhere in Transjordan many similar sites have been discovered by Glueck. Those which have been excavated also show two phases of occupation, with nearly identical pottery: Ader, C-A; Báb edh-Dhrá', EB IV-MB I; Iktanu, I-II; and Iskander, 3ii-i. The picture is one of a sizable though nonnucleated population. These peoples were probably displaced from central Palestine during the destruction or abandonment of the major urban centers there toward the last quarter of the third millennium B.C. It is striking that this is one of the few periods during the Bronze Age when Transjordan was extensively occupied.

2. A town in S Judah, on the border of the Negeb (I Sam. 30:28; "ADADAH" in Josh. 15:22). It is to be identified with modern Khirbet 'Ar'arah, twelve miles SE of Beer-sheba. In the marginal four- to eight-inch annual rainfall zone, it was apparently the southernmost Judean town that was permanently settled. Soundings by A. Biran in 1975 revealed heavy walls and concentrated pottery of the tenth, ninth, and especially the eighth-seventh centuries B.C.

\***ARPAD** [Heb. and Old Aram. אַרְפַּד, Assyrian *Arpadda* (once *Arpaddu*), medieval Arab. *Arfād*]. A city in northern Syria, now Tell Rif'at, village and mound ca. 19 miles N of Aleppo. It was the capital of the Aramean kingdom of Arpad (since ca. 1000 B.C.), also known to the Assyrians under the tribal name of Bit-Yaḥan and the dynastic name of Bit-Agusi (Old Aram. בִּית אַגוּסִי). See HITTITES[S] and map.

It frequently opposed Assyria in the ninth and eighth centuries, was often allied with Damascus, and in 743 with Urartu (see ARARAT §2). It was conquered and annexed by Tiglath-pileser III in 740, revolted along with Hamath, Simirra, Damascus, and Samaria in 720, but was subdued by Sargon II. These events are referred to in Isa. 10:9; 36:19 (=II Kings 18:34); 37:13 (=II Kings 19:13); Jer. 49:23. The last king of Arpad, Mati'ilu, son of 'Atar-sumki, concluded in 754 a vassal treaty with Ashur-nirari V of Assyria, preserved on an Akkadian tablet from Asshur and, in a different version, on three stelae inscribed in Old Aramaic and found at Sefire. In the latter, Ashur-nirari V appears as *Br-G'yh*, king of *Ktk*. Both versions are very important as parallels to OT treaties, treaty courses, and prophecies of doom.

#### ART, ANCIENT NEAR EASTERN.

1. General characteristics
  2. The distinctions between Egyptian and Mesopotamian art
  3. Developments in Egyptian and Mesopotamian art
  4. The art of Palestine and Syria
- Bibliography

**1. General characteristics.** The characteristics of ancient Near Eastern art are best illustrated by reliefs and paintings. The subject matter was usually taken from the natural world and is man-centered even when depicting the realm of the gods. Abstract designs are only sparingly employed. Symbols and signs exist, but colors are normally not used symbolically.

The reliefs and paintings are characterized by the absence of space, perspective, and environment. Figures and objects are rendered on a single spatial plane parallel to the picture surface. Adherence to the frontal plane is emphasized by the placement of figures on a horizontal ground line, and by rendering the head, hips, and legs in profile, but the eyes and shoulders frontally. While this convention is most commonly identified with Egyptian art, it is characteristic of Near Eastern art in general. Only with rare exception is the entire figure seen frontally.

While in Egyptian art figures overlap (e.g., in groups of soldiers or cattle), the conventional means of overlapping through closely placed concentric lines merely reinforces the single plane quality of the composition. The surface is divided into a series of registers, an organizing principle which accords with this single spatial vision. Scenes occupying deeper space are placed on the register above, so that each register retains the integrity of its spatial plane.

Adherence to a single spatial plane accords with the absence of the indications of perspective which were employed in Western art from the Hellenistic period onward: diminution, convergence, foreshortening, shade-and-shadow, and a real perspective, i.e., the dilution of the hue and the lightening of the value as objects recede into the distance. Figures within a given register vary in size to show status and relationship, rather than to indicate their relative spatial planes. Husbands are taller than wives; fathers are taller than sons; and kings taller than commoners. Individual figures and objects are flattened and reduced to two-dimensional illustrations by the elimination of shading. The masterful Middle Kingdom Bersheh coffin is a rare exception (see §3a).

Environment is also generally not depicted. There are few true landscapes, interior scenes, or architectural backgrounds except where essential for the theme. The artist manages to convey the

environment through the introduction of props such as trees, thrones, etc., but these are merely signs. Behind these objects one sees the ubiquitous flat background. As in Byzantine and early Medieval painting, there are no clouds or sky.

**2. The distinctions between Egyptian and Mesopotamian art.** There are distinct differences between the art of Egypt and Mesopotamia, largely attributable to religious beliefs and practices. Motifs found in Egyptian tombs are reflexes of notions associated with the afterlife. Scenes of mummification, wailing women, the weighing of the heart, and the provision of food and other essentials, find no counterpart in Mesopotamian art. Composite human and animal figures populate the Egyptian pantheon, but are alien to Mesopotamia, where gods are anthropomorphic. Theological conceptions also govern the basically different manners of depicting the relationship of the king to the gods. The pharaohs, who are gods in their own right, walk hand in hand with them. Mesopotamian gods are more awesome and transcendent in spite of their consistent anthropomorphism. Kings, no less than commoners, stand reverently before them in one of two traditional poses: either with clasped hands, or with one hand brought across the chest while the other is raised in front of the face (perhaps to avoid gazing on the deity). In other scenes, a minor god leads the king by the hand into the presence of a major one. While seated Mesopotamian figures normally clasp their hands in a pious gesture, seated Egyptian figures normally place their hands on their knees in a secular pose.

Cylinder seals, characteristic of Mesopotamia, are alien to Egypt, where stamp seals and scarabs predominate. The cylinder seal motifs include combat between lions and bulls or lions and naked heroes, but these are not found on Egyptian seals. While the compositions on the stamp seals are limited to simple elements, those on the cylinder seals are more complex, continuous, and monumental.

Distinct differences occur also in the repertoire of poses, clothing, and hair styles. These differences alone enable the viewer to identify a work as either Egyptian or Mesopotamian.

Stylistically, Egyptian art minimized the use of curved forms and emphasized angularity. The seated figure is a congruent extension of the cubical stone seat which it occupies, and the standing figure is perpendicular to the ground. Mesopotamian art emphasized rounder forms, and there is a greater sense of movement. Egyptian art is generally more expressive; the full range of ages and emotions is rendered. Individual features characterize at least one school of Old Kingdom art; a haggard, worn look is characteristic of most Middle Kingdom rulers; brutal honesty is the hallmark of the representations of Akh-en-Aton; and finally, portraiture reaches its zenith of artistic accomplishment in the Egyptian Late period. In Mesopotamia, an excellent Old Babylonian head, identified as Hammurabi, parallels some of the finer Middle Kingdom portraits, but remains an isolated example.

Stylistic differences are evident also in details. While the eyes of Egyptian figures are decorated

with eye liner (drawn out from the eyebrow and the outer corner of the eye to the center of the temple), the eyebrows of Mesopotamian figures are characteristically rendered as two arcs which converge above the bridge of the nose. Egyptian sculptors, who focused primarily on the human head, rendered the lips with finely raised lines at their outer edges. Though Mesopotamian sculptors of the Ur III period rendered the lips with sensitivity, they omit this stylistic feature.

Another Egyptian stylistic peculiarity is the amalgamation of perspectives when rendering scenes with ponds. While figures in the vicinity are rendered at eye level, the pond is seen from above.

Finally, there are obvious differences in technique: Egyptian standing figures characteristically have back pillars but Mesopotamian figures do not; sunk relief was frequently used in Egyptian art but not in Mesopotamian; wood was an accepted medium for sculpture in Egypt but was not used in Mesopotamia.

**3. Developments in Egyptian and Mesopotamian art. a. Egypt.** The Nar-mer Palette of the First Dynasty (see EGYPT Fig. 10) is the earliest work with characteristic Egyptian motifs and style. The king wears the crown of Upper Egypt on one side of the palette, the crown of Lower Egypt on the other. He wears a chin beard and strikes poses typical of subsequent periods. The art of the Old Kingdom (Third-Eighth Dynasties) is characterized by an interplay of experimentation and maturity. The expanded repertoire includes seated and standing rulers and nobles, group statues, seated scribes, separate portrait heads, and statues of servants at various chores. The tomb reliefs contain ritual scenes and scenes of nobles receiving offerings from their estates. Men normally wear short kilts, while women wear tight-fitting garments that reach almost to the ankles. One school produced idealized heads while the other produced individual features and more naturalistic modeling such as the bust of prince Ankh-haf (see Fig. A10).

10. Bust of Ankh-haf

The art of the Middle Kingdom (Eleventh-Seventeenth Dynasties) betrays a general lack of national self-esteem. The seminudity of Old Kingdom statuary is abandoned, and the figures, wrapping themselves tightly in their cloaks, wear voluminous wigs. The confident, striding figures of Old Kingdom rulers and nobles are replaced by seated, immobile figures, and the serene look of the Old Kingdom god-kings is replaced by the lined faces of worn, harried men. Indeed, the quality of uncertainty and withdrawal is emphasized by the introduction (in the reign of Amenem-het II and Sesostris II) of the block statue, a block of stone from which emerge a head, hands, and feet.

This introspective tendency translated itself into attempts at true portraiture. Royal statues are endowed with individual physical characteristics and reflect personality traits (see Fig. A11). Some statues are harsh, others sad, others introspective. By contrast, private statuary is rarely of outstanding merit. The rigidly posed figures upon their plain block bases display little individuality, vitality, or inspiration.

The Metropolitan Museum of Art, Carnarvon Collection, gift of Edward S. Harkness, 1926

11. Fragment of quartzite head of King Sesostris III, ca. 1850 B.C.

New motifs include the king with his hands placed on his ceremonial apron, a pet dog placed beneath its mistress' chair, and the sphinx, rendered as a lion with the mask of a woman. Substitute art forms which had developed during the First Intermediate period (Ninth-Tenth Dynasties) continue into the Middle Kingdom: the Old Kingdom stone servant statues are replaced by wooden models, and paintings on the interior of large wooden coffins contrast with the reliefs on stone coffins of the Old Kingdom. Painting comes into its own as an independent art form. The painted coffin of Twelfth-Dynasty nobleman Djehuty-nekht

12. Painted panel of the Bersheh coffin

from Bersheh (see Fig. A12) is one of the finest examples.

Middle Kingdom archetypes are evident in the freestanding statues of the New Kingdom (Eighteenth-Twentieth Dynasties) mortuary temple of Hat-shepsut at Deir el-Bahri, but the forms are rounder and less muscular, and the proportions are more elegant. The sculpture of Thut-mose III evidences an even greater tendency toward elegance and delicacy at the expense of vitality. Indeed, elegance is a hallmark of mid-Eighteenth-Dynasty art. Following the conquest of Western Asia by Thut-mose III, Egypt began to import goods and ideas from Western Asia, and a demand arose for luxury items. The concern for elegance reached new heights during the reign of Amen-hotep III.

The art of the early part of the reign of Akhen-Aton represents a radical departure from the elegant and the fashionable. The unusual physiognomy of the king is exaggerated and becomes a "fashionable distortion" (see AKHEN-ATON Figs. 8, 9, 10). He is depicted with large ears, a jutting chin, narrow shoulders, broad hips, and heavy thighs. There is intimate portrayal of the private life of the king and a marked interest in landscape. Toward the end of his reign the harsh realism is softened. In spite of the subsequent return to Amon worship and the aesthetic values of the age of Amen-hotep III, the values of the Amarna Age continue to manifest themselves. They are seen, for example, in a casual pose of the king and queen on the back of Tut-ankh-Amon's golden throne (see Fig. A13).

Disregarding the numerous works which Ramses II re-used, the art of his reign emphasizes monumentality but lacks grandeur and inspiration. The last flowering of New Kingdom art can be seen in the works executed for Ramses III.

While in various periods there was an emerging

The Egyptian Museum, Cairo

13. Seated pharaoh and wife; backrest of the throne of Tut-ankh-Amon

naturalism and incipient portraiture, this tendency reaches its apogee in the Late period which produced such outstanding portraits as the Boston Green head and the Berlin Green head.

Egyptian art of the Hellenistic period manifests obvious Hellenizing features, but the knell was rung for Egyptian art following the Roman conquest. While some mummy portraits of the Roman period are of exceptional quality, they are Western in style and inspiration.

**b. Mesopotamia.** In spite of the lack of local stone, Mesopotamian art of the Early Dynastic period is noted for monumental sculpture. The Mesopotamian repertoire is more limited than the Egyptian. The limbs of statues are rendered as cylindrical forms with minimal modeling and no true attempt at musculature. Only the pectoral muscles of the male figures are rendered prominently.

Wall reliefs, popular in Egypt, are absent. Yet, there are a number of plaques in bold relief employing the register system. The fragmentary victory stele of Eannatum from Telloh (see NET Fig. 15) is a masterpiece; though the forms are simplified, there is a wealth of finely carved surface detail.

The Sumerians were master metalworkers, as evidenced by the large copper relief from Al-Ubaid of the Im-dugud or lion-headed bird and the two back-to-back stags with bodies in profile and frontal heads (see Fig. A14). Among the noteworthy small works in solid cast metal are: a rein ring with a lively onager from Ur; a copper model of a chariot team from Tell Aqrab (see CHARIOT Fig. 23); and the copper offering stand from Tell Aqrab featuring naked wrestlers.

Two harps were recovered from the Royal Cemetery at Ur. Each features the head of a sensitively rendered, bearded bull with inlaid lapis lazuli

The British Museum

14. Copper relief from Tell Al-Ubaid, showing Im-dugud and two stags, ca. 2900-2460 B.C.

eyes and elegantly curved horns (see Ur Fig. 17). Careful observation of fauna is evident not only in the treatment of the bulls' heads, but also in an offering stand from Ur featuring a ram, in the head of a goat from Nippur, in the frog-shaped base of a stand from Kish, and on the inlaid front panel of the sound box on one of the harps from Ur.

Naturalistic scenes were introduced on cylinder seals following the style of the Early Dynastic I period. Scenes of individual combat between lions and bulls, naked heroes and lions, etc., replace the ritual scenes characteristic of the Uruk period. However, the motif of a file of animals, characteristic of the Uruk-Proto-literate period, was reintroduced.

Stylistic developments in the Akkadian period (2334-2154 B.C. ["middle" chronology]) are most evident in the cylinder seals. Individual figures stand out since they are surrounded by more space and since their musculature is painstakingly rendered. There is also an expansion of the repertoire of motifs.

Both the cylinder seals and the celebrated stele of Narām-Sin (2254-2218 B.C.) show concern for landscape (see ASSYRIA AND BABYLONIA Fig. 96). The register system is abandoned and man and beast walk along the undulating contours of a natural setting.

The heightened interest in musculature and precision of detail coalesce to produce the masterful bronze head from Quyunjiq identified as the head of Sargon (see Fig. A15).

In the Neo-Sumerian (Ur III) period (2112-2095 B.C.), there is a resurgence of piety. The standing and seated statues of Gudea depict the king as a benign, humble servant of the gods (see SUMER Fig. 87). The musculature of these figures betrays an Akkadian heritage.

Seals lack the repertoire of the Akkadian period and are primarily limited to presentation scenes in which the interceding goddess is frequently absent.

Statues found in the private homes of the Isin-Larsa period (2017-1763 B.C.) are basically crude. Yet a masterpiece like the statue of the goddess Ningal dates to this period (see Fig. A 16), as does the terra-cotta relief of the winged goddess Lilith with prominent talons. Statues of local rulers, particularly those of Mari, have long, stylized beards and emphasize surface detail (see MARI Figs. 12-14.) Seals of the Isin-Larsa period

are no more varied than those of the Neo-Sumerian period and display a decrease in quality.

The head from the First Dynasty of Babylon, identified as that of HAMMURABI (see Fig. A17), has aspects of true portraiture. In many ways it recalls some of the finest Egyptian Middle Kingdom royal portraits.

Some of the wall paintings from the palace at

The Louvre: Sculptures of the National Museums

17. Diorite head of a bearded prince, ca. 2255-2024 B.C.

Mari date to the age of Hammurabi and provide us with a glimpse of an art form which must have been widespread in Syria and Mesopotamia. The paintings include mythological, cultic, and military scenes in addition to more conventional scenes found on seals. The seals of the First Dynasty of Babylon combine the presentation scene with a number of subsidiary motifs. Toward the end of the dynasty there is a reduction in the number of figures and the inscription is emphasized once again. The period has also yielded several fine stone vessels decorated with animals.

The art of the Kassite period (1600-1100 B.C.) is hybrid, revealing Mesopotamian, Syrian, Aegean, and Egyptian elements. The Kassites introduced a wall relief composed of molded bricks. Several small-scale, painted terra-cotta works are highly successful. The only stonework of the age consists of numerous sculptured boundary stones covered either with symbols of the gods or figures of the kings. See Fig. A18.

The Middle Assyrian period displays features which characterize late Assyrian art. These features are most dramatically illustrated on seals, in which there is an expanded repertoire of motifs. The figures are well carved and are surrounded by ample space, recalling seals of the Akkadian period. Depiction of sequence is evident on the "White Obelisk" of Ashurnasirpal.

The palaces of the kings of the Late Assyrian period were covered with reliefs and paintings rich in detail, designed to overwhelm the visitor with the power of the ruler. Warfare is the most consistent motif: details of the army's march, the attack, the destruction and looting of cities, and the slaughter of the inhabitants. Figure style emphasizes musculature and physical prowess. Even hunting scenes, which show the king at leisure, are

The British Museum

18. Boundary stone of Marduknadinahhe, late 13th-10th century B.C.

designed to portray the power of the king, since his quarry is the mighty lion (see HUNTING Fig. 36). Motion is depicted on reliefs by multiple images of the same object. See ASSYRIA AND BABYLONIA Fig. 102, which shows three consecutive poses of one lion.

The scale of the figures in Neo-Babylonian art is smaller than that of contemporary Assyrian examples, and there is an elegance totally lacking

in Assyrian art. In terms of innovation, the age provides us with figures in true profile, as seen on the boundary stone of Marduk-apla-iddina (714 B.C.). Palaces were decorated with glazed brick and featured volute and palmette capitals with connecting flower designs. Lions appear, but instead of threatening the visitor as they do in Assyrian reliefs, they form friezes, thus harking back to one of the most abiding motifs in the Mesopotamian repertoire. See LION Fig. 31.

4. **The art of Palestine and Syria.** The influence of Egypt and Mesopotamia on the art of Palestine and Syria can be traced from the Early Bronze Age through the close of the Persian period. Carved ivory bulls' heads (EB III) and the recently discovered silver cup from Ain Samiyeh (see Fig. A19) reflect Mesopotamian influence. Ivory inlay strips and silhouettes from an MB II tomb near el-Jisr and incised bone strips with figurative designs from Tell el-Ajjul and Tell Beit Mirsim reflect Egyptian influence, as do the poses of gods on Middle Bronze Age stelae from Ugarit (see UGARIT Fig. 7) and the numerous Middle Bronze Age metal figurines from Byblos. Egyptian influence becomes increasingly prominent through the course of the Late Bronze Age, as evidenced by the sophisticated ivories from Megiddo (see ART Figs. 70, 71), Tell el-Far'ah (see ART Figs. 68-69), and Ugarit (see ART Fig. 67). Mesopotamian influence is reflected in the file of animals decorating an incised ivory from Lachish. Egyptian influence retains its dominant, yet not exclusive, hold on the ivory carvers of the Iron Ages, as evidenced by the ivory hoards from Samaria, Arisan Tash, and Nimrud. Even in the Iron Age, Mesopotamian motifs such as lions, files of animals, and combat scenes between lions and bulls occur. The Persian period has yielded a hoard of bronzes from Ashkelon and an Osiris figure from Gibeon with obvious Egyptian affinities.

Often, more than one foreign influence can be seen in a specific work. For example, a statue from Tell Mardikh combines Egyptian and Mesopotamian features. However, the artisans feel no con-

straint to adhere closely to their sources of inspiration. Enthroned figures hold palm fronds in their left hands as on Egyptian prototypes, but uncharacteristically they also hold cups in their right hands. Unfettered by weighty traditions, Palestinian and Syrian art allowed for greater experimentation. Shoulders are rendered frontally, but are narrower than those of Egyptian figurines. Moreover, Palestinian and Syrian figures are less substantial. This quality is carried over into three-dimensional sculpture, where figures are slight and lack articulation. The three-dimensional qualities are normally restricted to the heads, while the torsos are flat.

The frequently used term "Syro-Palestinian art" is a misnomer. In the Middle Bronze Age, four distinct regional schools have been isolated: Palestine, coastal Syria, the Orontes Valley, and the Upper Euphrates Valley. Further study will probably support the existence of regional differences in subsequent periods as well. The differences include greater interest in one genre or technique, a greater degree of naturalism, and differing sources of foreign influence. Incised bone inlay is characteristic of Palestine and, to a lesser extent, of coastal Syria during the Middle Bronze Age, but it is absent in the Orontes Valley and the Upper Euphrates Valley. While bronze sculpture is prevalent in northern Palestine and coastal Syria, it is absent from inland Syria. Terra-cotta sculpture is characteristic of inland Syria, but is absent from coastal Syria. During the Late Bronze Age, ivory replaced bone, and the technique of incised figurative drawing was almost entirely replaced by relief carving. Ivory carving remains the mainstay of Palestinian and Syrian art in the Iron Age, which is also the period of the great flowering of scarab-shaped seals.

In the MB II period Egyptian features manifest themselves in Palestine and at sites in coastal Syria. A mixture of Egyptian and Mesopotamian elements is evident at several Orontes Valley sites, with the Mesopotamian dominant. Cappadocian affinities are seen in the use of the file of four identical figures on cylinder seals from Alalakh

After the *Israel Exploration Journal*, XXI

19. Frieze on a silver cup from tomb 204a, Ain Samiyeh

and Tell Mardikh, and in the patterning of the body on basins from the latter site.

The opportunities that these foreign parallels provide for dating purposes have not been fully exploited. For example, it is possible to date the Megiddo VIIA plaque (see ART Fig. 70) to the early Ramside period on the basis of similarity with Ramside depiction of horses' legs. The same criteria enable us to date four ivory bars from Megiddo VIIA to the reign of Ramses III. An ivory box from Tell el-Far'ah (see ART Fig. 69) can be securely dated to the reign of Hor-em-heb (1342-1314 B.C.) by comparison of the flounced sleeves with dress on the reliefs from Hor-em-heb's tomb.

It had formerly been assumed that stone sculpture was not characteristic of Bronze Age Palestinian and Syrian art. Only the stone sculpture from Alalakh and a fine stone head of a god from the area of Djaboul were known. Recent excavations necessitate a revision of this view. Stone basins with remarkable carved sides, stelae, and statues have been found at Tell Mardikh. Stone carving of excellent quality and some fine enthroned figures were found in the Late Bronze Age temple at HAZOR. Also of note is the discovery of a fine stone statue of an enthroned king at Tell Sippor.

**ART, EARLY CHRISTIAN.** Stylistically, early Christian art belongs to the ancient Greco-Roman tradition. Its subject matter was drawn from the OT, NT, and Apoc., the church Fathers, Conciliar decrees, and the liturgy.

1. **The periods of early Christian art.** The first definitely Christian monuments date from the early

third century. The second half of the sixth century signals the end of early Christian art and of the unified culture of the Mediterranean world as well. In the third through the sixth centuries there were pagan works of art on as high a level as Christian ones. The term "early Christian" should therefore not be used to designate an epoch (third to sixth centuries), but should be reserved for art with Christian subject matter. Indeed there are also works of art without Christian content which were commissioned by Christians.

There is no theory of pictures or images in the OT or NT. A theory of images is first found in the Apologists and is primarily directed against the heathen rather than being a positive Christian theory. Christian art was created in controversy with paganism and in defiance of the civil prohibition of Christianity during the period from ca. 220 to Constantine's Edict of Toleration in 313.

In the second period, after 313, Christian art was permitted by the state, and encouraged by the Emperor Constantine and the Constantinian imperial house. Constantine himself was the first great sponsor of Christian architecture, and with imperial support Christian artists developed their new styles and forms, primarily in church architecture.

The year 380 is a turning point: Theodosius I recognized Roman Christianity as the state religion (Theodosian Code XVI.i.2). Under Theodosius, Christian art was combined with Roman state art, and the state became a decisive force in the further development of Christian art. Shortly before Theodosius, the church, having gained considerable strength, began under Pope Damasus to express its dogmatic and religious concerns in pictorial art; now the papacy and the Empire were the most powerful patrons of art.

The third period lasted from 380 to the close of the sixth century. In the course of the sixth century, the ancient unified culture collapsed in most of the Mediterranean lands, with the exception of Constantinople. In Italy, France, N of the Alps, in Dalmatia, Illyria, Dacia, Moesia, and Pannonia, in Greece, Asia Minor, and North Africa artistic production decreased, and, in some places, stopped altogether. In the course of the seventh century in Syria, Palestine, and Egypt there arose a new art inspired by Islam. In Spain the Visigothic style was formed. In place of the former unity there now appeared a variety of styles and religious worlds.

2. **The Christian doctrine of images.** The Christian attitude toward images in the first three centuries A.D. was ambivalent, as was that of the Jews (see ART, EARLY JEWISH[S]). For Jews and Christians the prohibition of images in Exod. 20:4 was normative, but in late antiquity, both Jews and Christians evaded this prohibition.

Despite Exod. 20:4, even the OT mentions images: Num. 21:8-9 (the bronze serpent); Exod. 25:18-20 (two golden cherubim on the ark of the covenant); Exod. 37:7-9; Num. 7:89; I Sam. 4:4; I Kings 6:23-28; 8:6-7. The cherubim could be given a non-religious interpretation (Tert. Marcion II.xxii) and were thus legitimized. But pagan images of gods were rejected by both Jews and Christians (Ps.

135:15; Acts 19:26). Although pagan statues of gods were the principal object of Christian derision (Origen, *Against Celsus* VII.xxxvi, lxii; VIII.xxxv, xxxviii, xli), Christian art also introduced representations of God. But, unlike the pagans, the Christians did not venerate these representations. The idolatrous element in representations was heretical, but the representations themselves were not. In all events, the church Fathers were of differing opinions on this subject.

On the grounds that worship and veneration belong not to the image, but only to God the Father himself, the Synod of Elvira in 303 (Canon 36: Mansi II.xi) forbade paintings in churches: *picturas in ecclesia esse non debere, ne quod colitur et adoratur in parietibus depingatur* (there should be no pictures in churches, lest that which is worshiped and adored be depicted on the walls). The fact that, in the course of early Christianity, images nevertheless came to be worshiped, rests finally on a Platonic conception formulated by Basil the Great: "The honor given to the image [the icon] passes over to that which it represents [the prototype]" (ἡ τῆς εἰκότος τιμὴ ἐπιτὸ πρωτότυπον διαβαίνει: PG XXXII, 149C).

In the first phase of the development of Christian art many writers recommended images that conveyed religious meaning on more than one level. Such were the signet images proposed by Clement of Alexandria (*The Instructor* III.xi). He recommended the following motifs: dove, fish, ship, lyre, anchor. When Clement wrote, these motifs had as yet no generally acknowledged Christian content, but were religiously neutral.

According to Ladner, it is the idea of the Incarnation which legitimated Christian art. He bases his opinion on Iren. Her. V.xvi.2 and speaks of an "incarnational conception" of the art of early Christianity.

From the time of Theodosius (d. 395) the advocates of Christian images increased in number, yet voices opposing images (e.g., Epiphanius) continued to be heard as late as the ninth century. Characteristic is the testimony of St. Nilus (d. 430), who counseled the Eparch Olympiodorus to depict scenes from the Bible on church walls instead of hunting scenes in order to enable the uneducated to learn holy history (PG LXXIX 578D-579A). And ca. 400 St. Paulinus of Nola described a complete program for the painting of a church (Epistles 32). From the fifth century onward, the catechetical function of pictures increased.

From the texts of the church Fathers we can draw only limited conclusions about visual art, since they do not describe what is usually portrayed in the catacombs and on sarcophagi. From them we learn more about the legitimization of art and the construction of Christian monumental architecture.

**3. The pre-Constantinian period. a. Architecture.** The catacombs were created by the Roman Christians of the third century to provide for the burial of the Christian masses. The straight subterranean passageways in soft tufa offered ample burial space in the walls. If more space was needed, the floor of the passageways was simply dug deeper, so that

more wall space was obtained; or parallel and transverse passageways were dug. Individual wall graves (*loculi*) were closed with a tile or marble plaque on which was inscribed the name of the deceased. Larger grave chambers (*cubicula*) served as family crypts. Most have three *arcosolia*; a very few are decoratively painted. The earliest datable Christian inscriptions are from St. Callistus (ca. 220/30).

Of pre-Constantinian architecture, almost nothing remains. Christians gathered for worship in private houses (house churches), called *domus Dei*, *domus ecclesiae*, οἶκός τοῦ θεοῦ, *dominicum*, or *κυριακόν* from which come the words *Kirche*, *kerk*, *kirk*, church. Ἐκκλησία (the congregation of the faithful) is only later (fourth/fifth century) used for the church *building*. House churches are presupposed in Acts 2:42; 20:7-9; and actually mentioned in Rom. 16:5; I Cor. 16:19; Col. 4:15. Some buildings are called ἐκκλησία (Tert. *On Idolatry* vii; Lactantius, *Deaths of the Persecuted* xv; Euseb. Hist. VIII.1.5; VII.xxx.18). In Dura-Europos a house church dating from 232 is extant. It consists of an inner court with two inserted columns, around which are grouped six rooms. A stairway leads to the upper story. One room is painted with Christian pictures and a narrow side of the room has a rectangular basin, over which arches a *ciborium* on two pillars (see Fig. A20). The interpretation of the basin as a baptismal font is not certain.

Other buildings are known to us from written

20. The baptistery, the house church at Dura-Europos

sources. There appear to have been buildings which were built expressly as assembly rooms for Christian worship (cf. Apostolic Constitutions II.lvii.3).

*b. Graphic and plastic art.* Christian art seems to have developed almost simultaneously in the E and W of the ROMAN EMPIRE. Rome is the only center of such activity whose art has survived; that of other centers such as Alexandria is unknown.

Remarkably, almost identical Christian themes appear in the East in a house church, and in the West in catacombs and on sarcophagi. The house church of Dura-Europos has the following scenes: the Samaritan woman at the well, the healing of the paralytic, the shepherd (*kriophoros*), the women at the empty tomb of Christ, Christ walking on the water, the fall of Adam and Eve, David and Goliath (see Pls. XXXIIIb, XXXVIIb). In Asia Minor, the Jonah story was represented on small statuettes. In the Roman catacombs, the following rooms date from the earliest time: (1) the so-called sacrament chapels in St. Callistus, with the Jonah story, the meal of bread and fish, the fisherman, funeral feast, Moses' miracle of water from the rock, baptism, the healing of the lame man, Christ and the Samaritan woman, the raising of Lazarus, Abraham and Isaac praying before the sacrifice; (2) the Cappella Greca in the Priscilla Catacomb, with the three young men in the fiery furnace, Moses' miracle of water from the rock, funeral feast, Noah's ark, *kriophoros*, Isaiah and Mary with child (Isa. 7:14), Abraham's sacrifice; (3) the double chamber XY in Lucina.

The earliest indisputably Christian sarcophagi in Rome are the tub sarcophagus (*ληνός*) of Sta. Maria Antiqua (ca. 270), the sarcophagus of Velletri (see Fig. A21), and the sarcophagus of the Via Lungara. The following scenes and figures appear: the Jonah story, baptism, female *orans* (praying figure), philosopher with scroll (reading scene), *kriophoros*, the fisherman, Daniel in the lions' den, Noah in the ark, the Fall, the multiplication of loaves.

The female *orans*, the reading scene, the *kriophoros*, and the fisherman appear on pagan and Christian monuments. They are religiously neutral. The female *orans* means "piety toward God or the

gods" (*pietas*); the reading scene illustrates the deceased's striving after virtue through popular philosophy. The shepherd symbolizes, according to Klausner, the human virtue of goodness or friendliness (*humanitas*, φιλανθρωπία). The interpretation of these motifs remains open to discussion; it depends on the accompanying scenes. If no unequivocally Christian scenes are present (e.g., on the sarcophagus of the Via Salaria, or the sarcophagus from La Gayolle), a Christian interpretation can be neither proved nor excluded.

Christian motifs come from both OT and NT, but OT scenes predominate. Jonah and Daniel typify salvation from peril, although it is not certain whether peril of the soul or the peril of death is meant. The Jonah story illustrates the idea of the Resurrection, for which it is certainly the most typical Christian paradigm. Along with salvation paradigms appear scenes of conversion to the Christian faith. A baptism scene was proof that one was a Christian. In addition, some of the earliest scenes are of Christ's miracles.

These four categories of pictures—religiously neutral pictures, salvation paradigms, proof of Christian faith, and Christ as miracle worker—are not limited to use as funeral art.

Christian scenes apparently come into use on sarcophagi later than they did in catacombs. From ca. 270 onward, the repertory of Christian themes expands to include such themes as the raising of Lazarus, the Sermon on the Mount, and additional miracles of Christ.

Not until Constantinian times are there whole groups of sarcophagi of similar pattern and with the same choice of scenes. This is because Christianity was until then a suppressed religion, and sarcophagus workshops could not undertake mass production. Every pre-Constantinian sarcophagus is a unique product.

**4. The Constantinian period.** By far the largest number of monuments extant from this period are in Rome. Other centers of Christian artistic activity are S Gaul (Arles, Marseille), Tarragona in N Spain, Cimitile and Aquileia in Italy, Constantinople, Asia Minor, northern Syria, and Palestine (Jerusalem). We know of no Christian works from

21. Figures from the sarcophagus at Velletri

Antioch or Alexandria which can be dated with certainty before 380. In North Africa, Syria (Antioch-Kaoussié), and Asia Minor several Christian buildings from this period have survived.

**a. Architecture.** The Christian basilica arose at the height of late Roman pagan architecture. It borrowed its form, except for the transept, from the Roman secular basilica. The Christian basilica was used as a church for assemblies and Christian worship. The apse (*presbyterium*) opposite the entrance was reserved as the place where the officiants performed their rites; the nave was for the congregation. In North Africa the nave was often used for the service, the aisles for the congregation. The transept is a Christian invention (Lateran: low wings; St. Peter's: continuous transept). It was reserved for the use of the clergy, as a place of prayer, and as a place for various liturgical acts (e.g., baptism).

The Emperor Constantine played a decisive role in the rise of Christian church architecture. In Rome he built the Lateran Basilica (313-ca. 320); St. Peter's over the tomb of the apostle Peter (324; see ROME, CHRISTIAN MONUMENTS[S] §2), Sts. Marcellinus and Peter (312-320) and St. Sebastian; in Jerusalem the Church of the Holy Sepulchre over the tomb of Christ (see HOLY SEPULCHRE, CHURCH OF THE[S]); in Bethlehem the Church of the Nativity over the Grotto of the Nativity; in Constantinople the Church of the Holy Apostles.

In Aquileia (ca. 313), Parenzo, and Trier (ca. 325) arose so-called double basilicas, two rectangular three-aisled buildings standing parallel to each other from 65 to 130 feet apart.

A special type of building is represented by the three-aisled basilicas with exedra opposite the entrance: Sts. Marcellinus and Peter, St. Lawrence Outside the Walls, St. Sebastian, St. Agnes Outside the Walls (338-350) in Rome. They are all near catacombs, but are not directly connected to them. To the basilica of Sts. Marcellinus and Peter was added later the mausoleum of the Empress Helena; to the basilica of St. Agnes the mausoleum of Constantina, a daughter of Constantine.

The most important Christian circular building is the rotunda over the tomb of Christ. In the history of architecture it was the first building with an inner circle of supporting columns and ambulatory. E of the rotunda, the so-called Anastasis, stood a five-aisled basilica.

As early as the time of Constantine there arose, along with the Christian basilica and circular building, the free-standing baptistery (Lateran). But such baptisteries become widespread only after the time of Theodosius. (See Pl. XLb.)

The transeptal basilica was not the only form for Christian churches. Also widespread were the three-aisled basilicas without transept and longitudinal rooms with a single nave (Gaul, Germany).

**b. Graphic art.** i. *Churches.* Little is known of the decoration of churches from 313 to 380. The apse of St. Peter's seems to have been decorated ca. 360/70 with the picture of the giving of the Law. The mosaic decoration of the mausoleum of Sta. Constanza (ca. 350; see Pl. XXXV b) is a fully developed program. In the cupola, twelve OT and

twelve NT scenes are represented, and in the ambulatory apses there are two pictures of Christ enthroned. In the floor mosaics of the S church of Aquileia (ca. 320) are represented the Jonah story, cupids fishing, personified seasons, decorative busts, *kriophoros* with Syrinx and various animals (Pl. XLa). Of considerable importance is the mosaic-decorated cupola of the mausoleum (?) of Centelles in N Spain, ca. 360, where a hunting frieze, the Fall, Daniel in the lions' den, the Jonah cycle, Noah's ark, the raising of Lazarus, the three young men in the fiery furnace, and the four seasons are depicted.

ii. *Catacombs.* The most important catacomb paintings of the fourth century are in Sts. Marcellinus and Peter, Praetextatus, Domitilla, and Callistus in Rome. The most common scenes are the raising of Lazarus, the multiplication of loaves, the Jonah story, Moses' miracle of water from the rock, the wedding at Cana, the adoration of the Magi, female and male *orantes* (praying figures), *kriophori*, Daniel in the lions' den, funeral feast, reading scene, Daniel condemning the two elders, the Fall, Christ teaching before the apostles, the seasons, the young men in the fiery furnace, shepherds, healing the blind or the lame, the personification of the sun, Tobias with the fish, and Job. In the new catacomb on the Via Latina in Rome, many OT scenes are depicted: Noah's drunkenness, Isaac blessing Jacob, the Samson cycle, the assumption of Elijah, Abraham's hospitality to the strangers, Jacob blessing Ephraim and Manasseh, the passage through the Red Sea, Rahab lowering Joshua's spies from the wall, and Jacob's Ladder. In the catacomb on the Via Latina some chambers, decorated with mythological figures, are most likely burial places of non-Christians.

**c. Plastic art (sarcophagi).** With the imperial toleration of Christianity, the making of sarcophagi increased rapidly. There was mass production of both single-zoned and double-zoned frieze sarcophagi, and the tub sarcophagus disappeared. A new type is the columnar sarcophagus (Junius Bassus, ca. 359). Pagan themes gradually receded but never entirely disappeared. New themes of sarcophagus sculpture were: the arrest of Paul, miracle scenes, resurrection scenes, the birth of Christ, Jesus before Pilate, assignment of work to Adam and Eve after the Fall, entry into Jerusalem, raising the dry bones (Ezek. 37), prediction of Peter's denial, Pilate washing his hands, the giving of the Law to Moses, and the giving of the keys to Peter.

In the Roman East very little Christian graphic and plastic art has survived from the time between 313 and 380. Perhaps the royal sarcophagus in Istanbul belongs to this period (ca. 360/70). Two angels are holding the *chrismon* ("Christ-monogram"; i.e., Chi-Rho), and two apostles flank the cross. The painted tomb in Nicomedia, with two peacocks flanking a *chrismon*, could date from before 380. From the late Constantinian period onward, the chi-rho monogram (Lactantius, *Deaths of the Persecuted* xlv; Eusebius, *Life of Constantine* I.xxviii-xxx) was depicted and occasionally the cross as well. Frequent depiction of the cross began in the second half of the fourth century.

5. *The Theodosian period.* The third phase of early Christian art is the richest in monuments. This is the period of the full development of Christian art and its spread throughout the Roman Empire. Again, Rome has the most monuments, but in Italy there are three other centers as well: Naples, Milan, and Ravenna. Other important centers are S Gaul, Thessalonica, Constantinople, Ephesus, Cilicia, N Syria, Armenia, central Egypt, and North Africa. Each of these regions had its own distinct building forms. The leaders were Constantinople in the East and Rome and Ravenna in the West. Constantinopolitan art influenced all the Mediterranean provinces to some degree.

a. *Architecture.* Unlike the West, the East favored buildings with galleries above the aisles (three- and five-aisled, Thessalonica), the domed cross (Ephesus), the three-aisled transept (Menas Basilica), the triconch choir (Bethlehem), the tetraconch building with ambulatory (Seleucia Pieria; also St. Lawrence in Milan), pillar basilicas with piers (Syria), and finally the domed double-shell building (Hagia Sophia in Istanbul).

In the East and in North Africa both hewn stone technique and tile or brick technique (Constantinople) are used; in the West, the latter predominates.

In the East, the polygonal apses are usually flanked by so-called *pastophoria* (*prothesis* and *diakonikon*), i.e., side-rooms for liturgical use. Eastern architecture demonstrates a much greater richness of forms than does Western. The high point of Eastern architecture is Istanbul's Hagia Sophia (532-37), spatially the greatest creation of antiquity. Beginning in the fifth century, Eastern architecture also developed a new ornamental style, finely dentellated acanthus, wind-blown capitals; from the sixth century on, folded capitals and two-zoned capitals with animal protomas.

In the West the archivolt basilica predominated with or without transept. Baptistries underwent an especially monumental development in Italy, where they were often octagonal or domed with semicircular and rectangular niches.

b. *Graphic art.* In the Roman West, catacomb painting decreased sharply after ca. 400. In the East, only a few small mausoleums are painted (Niš, Pécs, Thessalonica, el Bagawat), but there was a great increase in the number of large mosaics in churches (first known example: Paulinus of Nola, *Epistles* 32). Baptistries, too, are decorated with mosaics (Naples, S. Giovanni in Fonte), and so were imperial mausoleums (Milan, S. Aquilino; Ravenna, the so-called Mausoleum of Galla Placidia, Pl. XXXVIIa). Sta. Maria Maggiore in Rome, ca. 432, is the oldest extant church fully decorated with mosaics (Pl. XXXVib). NT scenes decorated the triumphal arch; OT scenes (to be understood as pointing to Christ and the pre-existing church) adorn the nave. The nave of S. Apollinare Nuovo in Ravenna (sixth century) has NT scenes and processions of saints before Christ and the Mother of God. A theophany (Christ and the twelve apostles; Christ with saints and the founder; Christ with angels; transfiguration of Christ) is usually depicted in the dome of the apse. The triumphal arch is decorated with scenes from

the NT (Rome, Sta. Maria Maggiore) and the Apocalypse (Ravenna, S. Michele in Affricisco; Rome, SS. Cosma e Damiano). A picture of Christ is sometimes on the W entrance wall. In Parenzo (sixth century) the earliest picture of the Mother of God that has been preserved is found in the apse.

In the East, along with narrative cycles, aniconic decorations were popular (Thessalonica, Paraskevi; Istanbul, Hagia Sophia).

In the fifth and sixth centuries, especially in the East and in the Aegean, numerous churches were decorated with floor mosaics, usually with ornamental patterns (Bethlehem), but sometimes also with OT scenes (Misis-Mopsuestia) or with motifs that are not specifically religious (et-Tabgha). In Palestine the same forms of decoration appear in churches and synagogues (sixth century).

In the East, from the sixth century on, Byzantine icons (Sinai) are extant which were probably produced in Constantinople.

In both East and West book illuminators illustrated the OT (Quedlinburg Itala, ca. 400; Vienna Genesis, sixth century) and the NT (Sinope Fragment, Rossano Codex, both sixth century).

c. *Plastic art.* Roman production of sarcophagi increased ca. 370. There arose new "series" with depictions of the passage through the Red Sea, and columnar sarcophagi with Passion scenes and the giving of the Law. Roman sarcophagus production came to an end in the early fifth century, but in Gaul sarcophagus workshops still existed in the fifth and, in isolated cases, in the sixth century. The first sarcophagi with biblical scenes from the Greek East date from ca. 400; iconographically these are not fundamentally different from the work done in Rome. Other individual pieces date from the fifth and sixth centuries. Most of the Eastern sarcophagi known to us today are adorned with the *chrismon* or the cross.

From the late fourth century on, liturgical furniture such as ambos, chancel screens, and altars were exported from Constantinople (Proconnesian marble) to the entire Mediterranean world. In addition, such decorative pieces as capitals, columns, pedestals, and entablatures for church buildings were exported from Proconnesian workshops. These exports served as models for local production in Palestine, Syria, and North Africa.

Under Constantinopolitan influence, a rich local sarcophagus production began in Ravenna ca. 400 and lasted into the sixth century (columnar sarcophagi).

The ambos and chancel screens from Proconnesian workshops, like the Eastern sarcophagi, were usually adorned with crosses, but various scenes appear as well.

From 400 onward artists began to decorate wooden doors (Milan, S. Ambrogio; Rome, Sta. Sabina). In the East, these doors (Sinai; Sitt Barbara in Cairo) are predominantly but not exclusively ornamental; in the West, by contrast, they are rich in OT and NT scenes (Sta. Sabina).

From the time of Theodosius on, ivory was often used for liturgical objects. The Lipsanoteca of Brescia (ca. 380) is decorated with OT and NT scenes. Numerous pyxides for relics and diptychs

from the fifth and sixth centuries are extant. The masterpiece of ivory carving is the episcopal throne of Maximian of Ravenna (sixth century). Bindings of books for liturgical use were adorned with ivory plaques. Relics were often kept in silver or simple metal caskets decorated with crosses, single figures, medallions with busts, or scenes from the OT and NT. Silverware for liturgical use (spoons, sieves, chalices, patens, censers, candlesticks, oil lamps, candelabra) has been preserved, particularly from the sixth century. *See also* Fig. A22.

Finally, Christian themes were depicted on ceramic objects such as clay lamps, vessels, dishes, and oil flasks.

**d. Iconography.** The third century gave us images from funerary art (*see* §3b above). From the late fourth, the fifth, and the sixth centuries there remain more images from a nonfunerary context. This situation reflects the accidental nature of the process by which ancient art objects survived. Questions of the origin of individual types of images are therefore insoluble.

In the third century individual images seem to have predominated; the earliest cycle is preserved in the four-phase Jonah story (sarcophagi, catacombs). Juxtaposed OT and NT scenes appear from the Constantinian frieze sarcophagi onward. In mixed OT-NT cycles, typology and salvation history play the leading role (Bassus sarcophagus, Sta. Constanza cupola, Sta. Maria Maggiore).

The British Museum

22. Ivory panels from an early Christian casket showing scenes from the Passion, ca. A.D. 400

Christ is seen in the third century as a Cynic philosopher with unkempt hair and beard, and in the time of Constantine as a fair Attis-like youth with curly hair (cf. Ps. 45:2; II Esdras 2:42-43). The time of Theodosius portrayed a dignified royal Christ with beard and with long hair falling over his shoulders. This Christ-type remained normative for the following centuries. From the time of Theodosius on, imperial attributes are transferred to Christ (purple and gold raiment, gemmed throne, scepter), and Christian scenes are portrayed with the devices of Roman imperial art.

Whereas in the time of Constantine the main sarcophagal themes were the youth of Christ and his miracles, in the second half of the fourth century they were the themes of Christ's passion. After 380, motifs from Revelation appear: the empty throne, the Lamb on the throne, the seven lampstands, and symbols of the apostles.

This development is observable only in Rome, but certain phases of the Roman development had parallels in the East.

1. **Art and Jewish law.** Recent archaeological discoveries have occasioned no little surprise among scholars who had assumed that a rigid iconoclasm was normative for rabbinic Judaism during the early Christian period. In reality, no uniform, unchanging attitude toward images has prevailed throughout Jewish history. Rather, divergent positions toward and varying interpretations of the permissibility of images have been expressed by religious authorities in every age. First-century Palestinian Jewry, for example, frequently cited the anti-iconic proscription of the second commandment and objected violently to the contemplated placement of a statue of the Roman emperor Caius (Caligula) within the Jerusalem temple (Jos. Antiq. XVIII.viii.2; Wars II.x.1). In third-century Babylonia, however, no such objection seems to have been raised against the statue of a king in the synagogue of Nehardea, where the prominent talmudic sages worshiped (T.B. 'A.Z. 43b; R.H: 24b).

During the third and early fourth centuries A.D., when church Fathers unanimously rejected and forbade images in churches, Rabbi Johanan voiced no disapproval to paintings on synagogue walls; neither did Rabbi Abun censure his contemporaries who used figural mosaic decoration on synagogue floors in Palestine (J.T. 'A.Z. III.3). It should be noted that dogmatic strictures against images by religious leaders may not necessarily be in consonance with the prevailing practices. Moreover, they sometimes merely express personal philosophic commitments rather than reflect institutional policies.

2. **The synagogue of Dura-Europos.** Without doubt the most exciting and revolutionary discovery of early Jewish art is the series of paintings on the walls of this synagogue in Syria. Their excavation has already called into question the accepted historiography of that period. In particular, they have demanded critical re-evaluation of the supposed "normative rabbinic Judaism," which historians of Judaism have theorized had existed at that time. They have also reopened an older debate—whether indeed the origins of Christian art may be rooted in an antecedent, but now lost, Jewish art. See Pls. XXXIIIa; XXXVIa; XXXVIII a.

The synagogue paintings are dated by inscriptions to A.D. 244-45 and owe their preservation to

Roman military operations. Since the synagogue complex stood close to the western city gate, it was filled with earth as part of the fortifications to protect the city's wall against Sasanian siege operations in A.D. 256.

The four sides of the synagogue's walls were completely covered with five horizontal bands of painting. The lowest and uppermost bands were decorative. The three middle bands contain about fifty-eight biblical episodes in about twenty-eight preserved panels (roughly 60 per cent of the original decorations). All the horizontal bands converge on and are interrupted by the Torah shrine on the western wall, above which are two large panels, flanked in turn by two vertical wing panels on each side. The paintings at Dura are not frescoes, but executed in tempera with the paint applied to the plaster by the *al secco* method. They were probably made by local artists of modest ability familiar with the pictorial idioms of the area. Their style is ultimately dependent on the hybrid traditions of the Hellenized Orient that existed on the western edge of Parthia. They do not seem to be an example of Roman provincial art. What Greco-Roman features they share with Roman imperial art are perhaps more due to the pre-existing hybrid style of the region than to direct borrowing. Little agreement exists among scholars as to the sequence of the synagogue paintings—whether they are to be read clockwise or counterclockwise, radiating toward or away from the Torah shrine, from the lower to the upper register, or vice versa. Neither does agreement exist as to the identification of all the individual panels, although they deal with such well-known biblical personages as Abraham, Isaac, Jacob, Moses, Aaron, Samuel, Elijah, Ezekiel, David, Solomon, Mordecai, and Esther. Moreover, scholars have noted details in many scenes that can only be understood by recourse to the vast contemporary haggadic and midrashic literature. See TALMUD §3; JUDAISM, EARLY RABBINIC[S] §2.

a. **Meaning of painted cycle.** Most studies on the Dura paintings have focused on interpreting the meaning of the entire cycle. Basically scholars have taken one of three positions: (1) no unifying idea can be discerned; (2) a single governing theme exists; (3) several diverse religious messages underlie the cycle of paintings.

Although differing widely in their interpretation of the paintings, scholars, with the exception of Goodenough, have generally agreed that any explanation of the paintings must be rooted in contemporary rabbinic Judaism. Goodenough maintains that the paintings can only be understood in terms of a mystic Hellenistic Judaism. "Normative rabbinic Judaism," according to Goodenough, was at best a minor sect—the religion of an intellectual minority who compiled the Talmuds. Rabbis, Goodenough asserts, with their anti-iconic and anti-mystical attitudes, would have been utterly shocked by the Dura synagogue's artistic representations and would have rejected them. Rabbinic literature is, therefore, an unreliable guide to unravel what Goodenough termed the "interpretation" of symbols—the articulate, objective explanation or meaning of symbols which usually

changes in each culture—or the “value” of symbols—the emotional, subjective response to a “live” symbol, which remains essentially the same in differing cultures. When Judaism took over “live” symbols from the Greco-Roman world, the “interpretation” of the symbols changed, while their “value” remained relatively the same. Thus the masses, Goodenough believes, who worshiped in synagogues such as Dura, with “live” pagan symbols, were divorced from rabbinic jurisdiction and influence and subscribed to a popular “mystical” Judaism whose chief literary remains can best be discovered in the writings of the Hellenistic Jewish philosopher PHILO.

I have recently proposed that the Dura synagogue program reflects a regional expression of rabbinic Judaism that is unrecoverable from existing texts. Rabbinic Judaism had substituted prayers within synagogues for sacrifices at the Jerusalem temple. It had elevated the scholar-rabbi and done away with priestly intermediaries. It offered eternal life through personal salvation of the soul and bodily resurrection, rather than promising fertility of the land. Its authority was based on a revealed, twofold law—the written and the oral—in preference to the Pentateuch, the authoritative text of the priestly Judaism whose center was the temple. See PHARISEES[S].

The oral law, unlike the Bible, contains no connected historical narrative or biography. Biblical verses and stories, drawn from different biblical books and frequently embroidered with *haggadoth*, are simply used as proof texts to illumine non-biblical concepts. This mode of employing the Bible with haggadic additions, and without regard to the original biblical sequence, is the very method used in the Dura paintings. The second band of murals, for instance, used such biblical stories as the history and miracles of the ark as proofs to demonstrate non-biblical ideas—the continued function of the synagogue ark and its power to bring salvation. The congregation recounted through song—in an actual liturgical ark procession—what is depicted on the synagogue wall. The Dura paintings appear to represent an adaptation of a late pagan practice—the use of Greek mythological stories without regard to their original narrative sequence—as proofs for an entirely new liturgical-theological context. Moreover, the Dura murals may be the earliest forerunners of the great programmatic painting cycles, based on the Bible, which appear about two hundred years later in Christian art.

**b. Relation to Christian art.** Scholars are convinced that the origins of Christian art (see ART, EARLY CHRISTIAN[S] §1) are rooted in an antecedent Jewish art. They base their theories on the premise that illustrated Jewish MSS served as possible guides for the Dura artists. This hypothesis is questionable since no such MSS have been found, and the earliest illustrated Jewish MSS date only from the late ninth century A.D. Attempts to link iconographic elements in Dura scenes with later Byzantine and Jewish art have not been convincing. Recent investigations have revealed that many haggadic motifs appear not only in the Dura synagogue paintings, but also in the illuminations of

Christian OT MSS, such as the sixth-century Vienna Genesis, the seventh-century Ashburnham Pentateuch, and the eleventh- and twelfth-century Byzantine Octateuchs. All these MSS are assumed to be based on lost earlier models. The fact that haggadic motifs, such as the serpent walking upright in the Garden of Eden, Noah's raven feeding on a human carcass, and God himself intervening in Abraham's sacrifice, are found in these MSS has led scholars to posit an ancient Jewish illustrated MS tradition, which served the Christian MSS as models. This theory is inconclusive, since our knowledge of early Christian illustrated biblical MSS is very limited. Moreover, since the church Fathers incorporated many haggadic passages in their writings and sermons, these may have inspired the Christian haggadic illustrations.

The Dura paintings are the earliest Jewish biblical scenes we possess; no similar Jewish cycle has yet been unearthed. The so-called “Judgment of Solomon” fresco from first-century Pompeii may not be biblical at all and may have nothing to do with Judaism; the recently found third-century Roman marble plate depicting King David dancing is probably a modern forgery.

**3. Synagogue mosaics.** The continuation of the tradition established at Dura can be observed in mosaic pavements from the fourth century and later which are found in various synagogues in Palestine and one in North Africa. See Pls. XXXIV a; XXXVa; Fig. A23.

The fifth-century mosaic pavement from Hammam Lif (Naro), Tunisia, has a series of symbolic representations whose meaning is uncertain (parts of the pavement are in the Brooklyn Museum). A cantharus with fountain is flanked by peacocks and palm trees; vine trellises enclose a lion, birds, and baskets of fruit. Above the Latin inscription of Juliana, the donor, are two large fish and two ducks. In Palestine a well-defined program of decoration developed from the fourth century on. The synagogue mosaic pavements usually contain three main elements: (1) A biblical scene, frequently dealing with a theme of salvation, such as at Jerash (Gerasa), Transjordan, where a fifth-century mosaic floor features the animals of Noah's ark. At Naaran ('Ain Duq) near Jericho, the sixth-century synagogue floor has the story of Daniel and the lions, and the Beth Alpha mosaic depicts Abraham's sacrifice of Isaac. (2) A zodiacal circle which encloses the sun-god Helios riding his chariot and has four female seasons of the year in the corners, as in the synagogues of Hammath-Tiberias, Isfiya, Naaran, and Beth Alpha. (3) A representation of the Torah ark-chest, flanked by two seven-branched lampstands and such ceremonial objects as the shophar, lulab (sprigs), ethrog (citrus fruit), and so-called “snuff shovel.” Torah curtains are sometimes suspended from the Torah ark, as at Hammath-Tiberias and BETH-SHAN. The stylistic quality of the mosaics varies considerably, depending on the ability of the artists employed and the wealth of the Jewish community. Some of the mosaics, like those at Jerash and Hammath-Tiberias, compare favorably with the mosaic work of provincial Byzantine artists; others have a rustic quality—the products

of gifted folk artists, such as Marianos and his son Aninas, who proudly signed their work at Beth Alpha.

Just as Helios and his chariot echo pagan cosmological models, so King David, in the recently excavated Gaza synagogue mosaic, dated A.D. 508-9, reveals an adaptation from a model of a classical Orpheus taming the wild beasts. Artists may have employed standard motifs from no longer extant workshop pattern books and interchangeably used the same motifs in Christian, Jewish, and pagan mosaics, as can be seen in the sixth-century synagogue mosaic from Maon (Nirim) which closely resembles the church mosaic of 562 from Shellal in the Gaza region.

See also SYNAGOGUE, ARCHITECTURE[S].

4. **Catacomb art.** Of the six known Jewish catacombs in Rome, the catacomb of Vigna Randanini on Via Appia and that of Villa Torlonia on Via Nomentana are significant for Jewish art. None of the Roman Jewish catacombs are dated, but the red-green linear style which is also used in contemporary pagan and Christian catacombs points to the mid-third and the fourth centuries. On walls and vaults of cubicles we find, enclosed within an ornamental framework, such common pagan figures and motifs as Victory crowning a young man, Fortuna with a horn of plenty, naked putti, pheasants, and garlands. Interspersed with these pagan symbols are such typical Jewish symbols as the MENORAH, Torah ark, lulab, ethrog, and shophar. The name of Eudoxios, a Jewish painter, was found in the Via Appia catacomb. Whether the important Via Latina catacomb in Rome, with its forty-one OT images, was inspired by rabbinic

exegesis or earlier Jewish art is still an open question.

About fourteen Jewish gold-leaf glasses, whose precise function is unknown, have been found in catacombs. Most come from Rome and date from the fourth century. They depict the Torah ark in the center, usually open to reveal the Torah scrolls within, flanked by two lampstands, shophar, lulab, ethrog, birds, and lions.

A parallel development to the Jewish catacombs in the West are the catacombs in the East, at Beth-shearim, Galilee. No direct artistic relationship or influence can be established. This significant catacomb complex dates from the late second century to the fourth and has buried within it some important people as the patriarch Judah I. Geometric and vegetative ornamentation is painted, incised, or sculpted in low relief on the walls, along with such Jewish symbols as the menorah and Torah ark, as well as figures of gladiators, horsemen, and ships. Catacomb Number 20 contained over one hundred sarcophagi. Their decoration includes a bearded human face, lions attacking a gazelle, eagles, and rosettes. Some marble sarcophagi even have figures from Greek mythology, such as Leda and the swan.

\***ASHDOD.** A major city near the Palestinian coast (see ASHDOD). Tell Ashdod, located ca. 21½ miles from the Mediterranean coast, is generally recognized as the site of ancient Ashdod, which is best known as a city of the Philistine pentapolis, although it was distinctively Philistine for little more than 175 years (ca. 1175-1000 B.C.). The site has been excavated in recent years by Moshe Dothan in a series of eight campaigns (1962, 1963, 1965, and annually in the years 1968-72). During the same general period, the three ancient ports near Ashdod, Ashdod-Yam (i.e., Ashdod-by-the-Sea), Tel Mor (Arab. Tell Kheidar), and Mišpe Yonah (Arab. Nebi Yunis), have also been the subject of archaeological exploration. Only the highest part of the tell, the so-called acropolis, which is seventeen acres in size, was continuously occupied from the Bronze to the Byzantine Ages; various expansions of the site, S, W, and E, which reached their greatest extent in the Iron Age, covered between fifty and eighty acres.

1. **Bronze Age.** Ashdod was founded in the Middle Bronze period (MB IIA); the earliest city gate (similar to the east gate at SHECHEM) is dated somewhat later (MB IIC), ca. 1550, and associated with Egyptian activity in Syria-Palestine. Ashdod's principal second-millennium port, Tel Mor, was founded only a little later. Some Early Bronze Age (EB II) artifacts were found near bedrock, but these do not reflect any permanent settlement.

The commercial nature of the life of Ashdod in the Late Bronze Age is clear: pottery from the Mycenaean-Cypriote sphere, notably Cypriote monochrome ware, is found, along with Palestinian bichrome ware. Ugaritic texts suggest that Ashdod was a center for processing, or at least shipping, textiles.

In the period around 1250-1200, Ashdod, like so many Syro-Palestinian and Anatolian sites, was overrun, possibly by the Sea Peoples (see PHILISTINES §1). The destruction was not complete, however, and the unified cultural assemblage which followed spread itself over both ashes and unharmed Late Bronze Age structures. This transitional stratum may also belong to the Sea Peoples.

2. **Iron Age.** The Philistine occupation (i.e., a level characterized by certain distinctively Palestinian ceramics which show Aegean influence) followed shortly; its beginnings may be dated around 1175. The population of Ashdod increased greatly during Iron I, and new settlements were established in the areas S, W, and (briefly) E of the acropolis; the southern extension (or "lower city") was the

most important and long-lived of these growth movements, lasting until the end of the seventh or the beginning of the sixth century. The Iron I expansion made Ashdod one of the largest cities in Palestine. Along with this growth came the need for new fortifications, and around the beginning of the eleventh century the upper city was fortified with walls that lasted about a century. The cultural horizons of Iron I Ashdod were not exclusively Philistine; Cypriote-Mycenaean wares were found (see PHILISTINES §3d), along with East Mediterranean-style gold discs and cylinder- and stamp-seals (see SEALS AND SCARABS).

The most striking finds of Philistine material culture were a small clay figurine and some seals. The figurine represents a goddess, the bottom half of whose body has been merged into the throne on which she sits, thus forming an offering table. It is Mycenaean in conception and Philistine in decoration (see Fig. A24). The three seals bear signs similar to the Cypro-Minoan script which may represent the Philistine language (see PHILISTINES[S]); two also show animals engraved in an Aegean mode.

Ashdod was destroyed early in the tenth century

From the collections of the Israel Department of Antiquities in the Israel Museum, Jerusalem

24. The "mother goddess table"

and remained unfortified, though not uninhabited, for a short period of time. Philistine pottery is not common after this destruction, though there are signs of its lingering influence, notably in an ornamental incense burner of Philistine shape and Canaanite decoration. The return of Ashdod to the common Palestinian heritage of material culture is signaled by its Iron II gate and gate tower which are similar to those of Gezer, Megiddo (see MEGIDDO §3d), and Hazor, and different from those of Iron I Ashdod. Four Iron II destruction layers have been recognized, and the excavator has linked these with four known attacks on the city: those of Uzziah (before 750), Sargon II (in 712), Psam-

From the collections of the Israel Department of Antiquities in the Israel Museum, Jerusalem

25. Incense burner with figures of musicians, found at Ashdod

metichos (seventh century), and Nebuchadrezzar (at the beginning of the sixth century).

The inscriptional material from Iron II Ashdod is meager but interesting. Three small fragments of a Sargon II victory stele confirm the association of that monarch with a destruction layer. A broken Hebrew sherd, probably from the eighth century, proves that Ashdod belonged to the linguistic continuum which included Phoenicia, Israel, and their neighbors.

See also POTTERY[S].

3. **Later history.** Ashdod remained a provincial capital throughout the Persian period. An ostracism in fifth-century Aramaic script is the only significant inscriptional find. Since Ashdod plays such a colorful role in Hasmonean history, it is difficult to say who was directly responsible for its final Maccabean leveling, but the best candidate is John Hyrcanus (after 114 B.C.). In the Roman period, Ashdod (Gr. Azotos Mesogeios) declined in importance and by the sixth century of our era, it had been eclipsed by its daughter, Ashdod-Yam (Gr. Azotos Páralios). Ashdod (Arab. Isdūd) remained a good-sized village until A.D. 1948, when, during the Israel War of Independence, the Arabic-speaking population abandoned the site.

\*ASS. I. As a riding animal. "King Shapur said to (Rabbi) Samuel: 'Ye maintain that the Messiah will come upon an ass: I will rather send him a white horse of mine'" (T.B. Sanh. 98a). This talmudic anecdote reflects Rabbi Samuel's understanding of a tradition that kings and prophets rode asses. When Mohammed began his voyage to Jerusalem and his ascent to heaven, Gabriel presented him with Burāq, "a white animal half-mule, half-donkey, with wings on its sides, with which it propelled its feet." It was said that Mohammed's predecessors, Abraham, Moses, and Jesus, rode the same animal. Brockelmann speaks of a number of "prophets" and other leaders who were given the epithet "donkey-riders."

Our first evidence for donkey-riding as a royal tradition comes from a Sumerian text. In "Gilgamesh and Agga" (*ANET* [2nd ed.], pp. 44-47), the assembly of Uruk answers Gilgamesh: "O ye who are raised with the sons of the king; O ye who press the donkey's thigh (i.e., who ride donkeys) . . ." That children of urban dynasts of such an early period (ca. 2500 B.C.) rode donkeys should not be surprising, since the horse was

apparently untamed before 2100. The famous royal tombs of Ur (ca. 2600) contain the remains of onagers hitched to the royal chariot. Gudea, the *ensi* (governor) of Lagash, who saw himself in a dream as a "donkey" (cf. Gen. 16:12), harnessed asses to the divine chariot (ca. 2100).

At around 1765 B.C., Baḥdi-Lim, a high official in Mari's palace, writes to remind his king of his (cultic?) duties and to request his return home. He adds: "May my Lord honor his kingship. You may be the king of the Haneans, but you are also the king of the Akkadians. May my Lord not ride horses; (instead) let him ride either a chariot or *kūdanū*-mules so that he would honor his kingship" (ARM VI:76:19-25). In this letter, the contrast is made between horses and *kūdanū*-mules; between Akkadians and Haneans. During the Old Babylonian period, the term "Akkadian" was applied to city-dwellers. The "Haneans," on the other hand, were members of tribal groups whose nomadic practices had become limited in scope and duration by Mari's rulers. Baḥdi-Lim was therefore urging his king to behave as would an urban ruler, heir to a Sumerian tradition.

Ugarit has produced no text that would document the existence of royal donkey-riding. However, its mythological texts, which probably reflect human behavior, record that donkeys were bearers of journeying deities.

Feigin has collected cuneiform omens of the first millennium B.C. which, he maintains, paralleled the prophecy of Zech. 9:9. They show that Babylonian diviners connected the appearance of one riding a donkey with events of importance to cities and kings. Some scholars reject the rendering "humble" (Zech. 9:9). Lipiński revocalizes the Hebrew עֵיִר and translates "praise him who rides an ass." Köhler has "triumphant and riding on an ass."

The Bible confirms that nobility rode donkeys and mules (Judg. 5:10; 10:4; 12:14). Saul's grandson rode a donkey (II Sam. 19:26). Solomon traveled to be anointed upon his father's mule (I Kings 1:38). The two following speculations draw their inspirations from this tradition.

a) Although Gen. 47:17 states that the patriarchs possessed horses, there are no references to their use as riding animals. Our sources are unanimous in referring to the donkey as the preferred beast of burden (Gen. 22:3, 5; 42:26-27; 43:18, 24; 44:3, 13; 45:23). Women usually rode camels (Gen. 24:61; 31:17, 34). It has been observed that the Genesis account predicted royal descendants for the Hebrew ancestors. Viewed in this light, the frequent reference to donkeys is to be construed less as evidence for "donkey-caravanning" (Albright) than as yet one more link to a continuing tradition of royal donkey-riding.

b) The entrance of Jesus into Jerusalem is a conscious effort to claim power rather than an act of humility, in fulfillment of Zechariah's prophecy. This episode cannot be divorced from the one which directly follows. If riding a donkey was the method by which Jesus chose to proceed into Jerusalem and by which he intended to accentuate his desire to be taken as a royal figure, his act of cleansing the temple was very likely meant to un-

derscore his claim of priestly, if not prophetic, authority (cf. Pss. Sol. 17:32-33 [30]; Mark 11:16). Taken as a whole, the two acts offered proof that Jesus indeed was the Messiah.

2. In Israel's religious tradition. ARM II:37 is a letter sent around 1765 by Ibal-El, a Mari diplomat, to his king, Zimri-Lim: "The message of Ibal-Addu has reached me from Ashlakka, so I went to Ashlakka. They brought to me a puppy-[dog] and a goat in order to sacrifice a donkey-foal between the Haneans and the land of Idamaras. But I did fear my lord! [So] I would not allow [the use of] a puppy and a goat. Instead, I [myself] sacrificed a donkey-foal, the young of a she-ass and [thus] established conciliation between the Haneans and the land of Idamaras."

The W Semitic idiom *hayaram qatālum*, "to sacrifice a donkey-foal," occurs four more times in the Mari archives. All the attestations refer to a covenant-making procedure which initiated a peace agreement between a king of urban centers and leaders of nomadic groups. This Mari idiom has led scholars to assess the Shechem tradition (Gen. 34). Albright believes that Shechem's inhabitants "carried on the tradition of an early Amorite tribal confederacy," since their principal deity was called 'Baal-berith,' literally 'Lord of the Treaty (Covenant),' and since they traced their origins back to Hamor, literally 'Ass.'

Held has shown that the expression *hayarum mār atānim*, "donkey-foal of a she-ass," of the Mari letter, is a hendiadys, exactly equivalent to עֵיִר בֶּן עֵיִר of Zech. 9:9. The latter is formed from the synonymously paralleled pair of words עֵיִר ("colt") = בֶּן-אִתָּוֹן ("young of a she-ass"), as in Gen. 49:11.

Still to be assessed is the unusual law of Exod. 13:13 (and 34:20): "Every first-born male ass you may redeem with a kid or lamb, but if you do not redeem it, you must break its neck" (NEB). The ass is the only unclean animal about whom a procedure for redemption is specifically outlined.

\*ASSYRIA AND BABYLONIA. 1. **New methodologies and trends.** Assyriology is the study of the history, languages, and literature of ancient Assyria and Babylonia (Assyrian was the earliest dialect of the Akkadian language to be deciphered). In a wider sense, Assyriology has become the study of all civilizations which used cuneiform scripts. Progress in Assyriological studies is measured not only by the increase in the amount of evidence, but also by the insight into the old evidence which new methodologies allow. Since there have been

no new archival discoveries recently, current research deals primarily with problems of analysis and re-evaluation.

In field work today, there are several new methods for locating materials. These include portable X-ray machines, ground radar, and cesium magnetometers which detect variations in magnetism caused by objects as far as twenty feet beneath the surface. Aerial photography has also become a scientific method for locating sites and determining their dimensions.

Organic materials have been dated by carbon-14 techniques since the late 1940s, but recent correlations of these dates with tree-ring dating from bristle-cone pine trees have reduced the margin of error to around a century. Extremely ancient materials (40,000 years or more) can be dated by potassium-argon techniques; e.g., the use of potassium-argon dating has placed artifacts and other remains of early man in East Africa to at least 2,000,000 years ago.

Until recently, inorganic material such as fired clay could not be scientifically dated; however, the development of thermoluminescence now enables archaeologists to date such materials. Energy stored in inorganic matter is stimulated by heat and released as light, which can then be carefully measured. Two major laboratories using these new dating techniques have been established: one in Oxford, England, and the other in Philadelphia at the Museum of Applied Science Center for Archaeology (MASCA).

Computers are employed primarily as storage and retrieval systems for linguistic research and information on archaeological sites. For example, by using computers, University of Pennsylvania researchers have been able to reconstruct the Akhenaton temple, using the original stones both as clues and as building materials.

Psychohistory, an emerging interdisciplinary technique, is beginning to establish itself in Assyriology. This application of psychological and psychoanalytic theories to historical analysis promises to yield interesting results.

The integration of Assyriology with other disciplines is advancing rapidly; collaborative efforts have already yielded a considerable number of works. Biblical studies and Assyriology are moving from previous conflict toward greater co-operation, which should enrich both fields.

**2. History. a. Old Assyrian period** (ca. 1900-1650 [middle chronology]). The Assyrians first asserted themselves as an independent power upon the collapse of the Third Dynasty of Ur (ca. 2000). Their rulers used Akkadian names to assert direct succession from Sargon's dynasty at Akkad (ca. 2300).

The Cappadocian Tablets found at Kanish (modern Kültepe) show that the Assyrians were engaged in sophisticated trading operations in Anatolia (modern Turkey) during the nineteenth century. Some three thousand of the more than fifteen thousand texts have been published. Recent studies have shown that Assyria's penetration into Anatolia was commercial rather than military and that the Assyrians at Asshur were importing tin for the production of bronze rather than lead for

the extraction of silver. Trade was organized by a number of large kinship-based groups called "houses" or "firms," and the Old Assyrian economic structure was comparable to the medieval Italian city-state. However, no definitive study of the trading firms exists as yet, and it is not clear that Kanish was typical of the entire area.

The period of Shamshi-Adad I (1813-1781) that followed has often been described as the "first Assyrian Empire," but the relationship of Shamshi-Adad I with the Assyrians at Asshur in the eighteenth century remains uncertain. He ruled from Shubat-Enlil, not Asshur, and the petty kingdom that survived his death was not a true empire. The texts indicate that his kingdom disintegrated rapidly as his sons lost their assigned cities to Zimri-Lim of MARĪ and HAMMURABI of Babylon. A major work is needed to trace the development and cultural continuity of the Old Assyrian period to Assyria's military thrust beginning in the tenth century.

**b. Middle Assyrian period** (ca. 1360-1075). Most of the evidence on the Middle Assyrian period comes from excavations at Asshur, Billa, Fekhariyeh, Kar-Tukulti-Ninurta, Nineveh, and Tell er-Rimah. For over three centuries after Shamshi-Adad I, Assyria remained weak, a vassal first to Babylonia and then to MITANNI. But in the early fourteenth century when Mitanni strength began to wane because of increased pressure from the HITTITES, Assyria under Asshur-uballit I (1364-1329) began to move toward independence. The Assyrian kings began to use more monarchical titles such as "Mighty King," "King of the World/Universe," and "King of Assyria," and these became standard until the fall of the Neo-Assyrian Empire (end of seventh century).

Assyria's three great kings of the thirteenth century, Adad-nirari I (1306-1274), Shalmaneser I (1273-1244), and Tukulti-Ninurta I (1243-1207) restored the Asshur temple. A recent study which deals with the history of the temple and of the ceremonies and personnel connected with the cult concluded that Babylonia influenced Assyrian religion in the Middle Assyrian period. The Marduk statue was held in high esteem during its exile in Assyria and Ninlil was introduced as the spouse of Asshur. The popularity of Marduk in Assyria antedated Asshur-uballit's reign by only a few years. However, the cultural impact of Babylonia on Assyria during this period has not yet been fully assessed.

Neither Babylonia nor Assyria asserted hegemony over the other until the reign of Tukulti-Ninurta I in the thirteenth century. During his reign Assyrian strength reached its apogee. His list of victories was exceeded only by his list of new royal titles. The greatest of his exploits was the conquest of Babylonia and victory over Kashtiliashu IV (1235). Royal inscriptions and the famous epic which bears his name celebrate this feat. But Tukulti-Ninurta overextended his resources—Assyria could hold her gains only a few years. It was not until the final years of the Kassite dynasty that Assyria again intruded into Babylonian territory.

**c. Neo-Assyrian period** (930-612). After Tiglath-pileser I (1114-1076) re-established Assyria's mili-

tary strength in the E and N and laid the foundation for growth in the W, Assyrian power waned once more until the late tenth century. The first Neo-Assyrian kings, Asshur-dan II (934-912) and Adad-nirari II (911-891), began the countless military campaigns in which the king, to do honor to the god Asshur, personally commanded the army and dedicated captives to Asshur. The Arameans between the Tigris and Euphrates were completely subjugated. Shalmaneser III (858-824) inherited a kingdom on the ascent, but when he attempted to consolidate Assyrian control across the Euphrates he encountered strong opposition. The encounter at Qarqar (853) provides biblical scholars with the

first direct link between Assyria and Israel (see AHAB 1). The last confrontation (841) provides the only contemporary pictorial representation of an Israelite mentioned in the Bible (JEHU on the Black Obelisk). (See also ARMY[S] §4.) Assyrian scribes have provided the base from which the chronology in the OT has been established.

Both Babylon and the West felt the impact of the Assyrian army during the reign of Adad-nirari III (810-783). The stele found at Tell er-Rimah in 1967 (see JOASH, KING OF ISRAEL[S]) refers to tribute received from Joash (Jehoash) of Israel. The correlation between Assyrian and Babylonian sources and the OT appear below.

ANCIENT NEAR EASTERN SYNCHRONISMS WITH THE OLD TESTAMENT

King	Regnal year	Event/Monarch	Julian Year B.C.	Source
Shalmaneser III	6th	Qarqar/Ahab	853	Annal
Shalmaneser III	18th	Tribute/Jehu	841	Annal
Adad-nirari III	1st	Tribute/Joash (Jehoash)	806	Rimah stele
Tiglath-pileser III	3rd	Tribute/Azariah	742	Annal
Tiglath-pileser III	8th (?)	Tribute/Menahem	738?	Annal
Tiglath-pileser III	Unknown	Tribute/Pekah	744-727	Annal
Tiglath-pileser III	Unknown	Tribute/Ahaz	744-727	Annal
Tiglath-pileser III	Unknown	Hoshea	744-727	Annal
Shalmaneser V	5th	Fall of Samaria	722	Chronicle
Sargon II	1st	Fall of Samaria (claimed)	721	Annal
Sennacherib	3rd	Hezekiah	701	Annal
Esarhaddon	Unknown	Tribute/Manasseh	680-669	Annal
Ashurbanipal	Unknown	Tribute/Manasseh	668-627	Annal

Nebuchadrezzar II	7th	Siege of Jerusalem	Kislev/598	Chronicle
Nebuchadrezzar II	7th	Fall of Jerusalem	Adar/597	Chronicle

After a period of domestic strife, TIGLATH-PILESER III (744-727) inaugurated a century of imperial rule. He "seized the hands of Bel (Marduk)" in Babylon and became the first Assyrian since Tukulti-Ninurta I (1235) to claim the title "King of Babylon." Much later sources—Babylonian King List A, OT (II Kings 15:19; I Chr. 5:26), and Josephus—refer to him as Pulu (Pul). Tiglath-pileser also revived the technique of wholesale relocation of populations in order to break down national loyalties, a policy continued by his successor, SHALMANESER V (726-722), who captured Samaria, capital of Israel's northern state, and exiled its inhabitants in 722. SARGON II (721-705) has traditionally been credited with this feat, but re-evaluation of the evidence indicates that his scribes altered the historical record. Sargon founded the last royal house of Assyria, called Sargonid after him. Stelae, found as far W as Ashdod and as far E as Godin Tepe in Iran, indicate that he was the most militarily active of the Neo-Assyrian rulers.

With the accession of SENNACHERIB (704-681), the traditional annual march of the Assyrian army was discontinued. Less than half of his twenty-four-year reign was spent on campaign duty. Although he is best known for his siege of Jerusalem in the time of Hezekiah (II Kings 18:13-19:37; Isa. 36-37) and the destruction of the city of Babylon, the true spirit of his age seems to be

one of cultural pursuits. Esarhaddon (680-669) atoned for his father's act of sacrilege by restoring the city of Babylon and rebuilding the temple of Marduk (Esagila). The early years of Ashurbanipal's reign (668-627) marked the height of Assyrian culture. But the war which began in 652 between the king and his brother in Babylon extracted a high price from the participants and undermined the political and cultural structure of Assyria; Ashurbanipal's victory was an empty one. Within a short period, the weakened army was unable to protect the Assyrian heartland from the rising Medes. The last forty years of Assyrian history are somewhat obscure, but Assyria was no longer the aggressive force she had been.

NABOPOLASSAR seized the Babylonian throne in 625 and founded the new Chaldean or Neo-Babylonian dynasty. The old Assyrian capitals fell, Asshur in 614 and Nineveh in 612. Confusion still persists in the order and names of the Assyrian monarchs following Ashurbanipal. There was a brief effort to revive the failing empire from the city of HARAN, but when the Egyptian reconnaissance action was thwarted by the Babylonians at Carchemish (605), Assyrian hopes for a return to imperial grandeur were shattered.

*d. Old Babylonian period* (ca. 1850-1600). Hamurabi's archives remain the chief source for the social history of the period, and the Mari corres-

pondence the best, though indirect, source on the political history. Although the volumes from Mari contain no mention of Egypt, there is evidence linking Mari with the West. Place names have become more firmly established through itinerary lists, e.g., Ekallátum has been identified with modern Haikal and is now placed N of Asshur.

Recent works have shown that, during this time, private ownership of land became accepted and new marriage and family customs emerged. In addition, Akkadian replaced Sumerian as the literary language, new syllabaries appeared, personal name styles changed, and national epics were created.

**e. Middle Babylonian period** (ca. 1600-1160). Following Hammurabi's reign, several non-Semitic royal houses rose to power in the Mesopotamian area. The MITANNI kingdom was directed by a small ruling class, whose Indo-European names identify them as coming from the E. The kingdom over which they ruled was composed of a Hurrian population, and the two together formed a symbiotic relationship. See HURRIANS; HURRIANS[S].

To the S, the Kassites ruled Babylon for more than half a millennium (Babylonian King List A). (See CUSH[S].) However, serious problems exist at both ends of their dynastic rule and have left Kassite chronology in an unsettled state. The Kassite kings bore strange names (e.g., Burnaburiash, Kadashman-Enlil, Kurigalzu) and referred to Babylonia as Kar-Duniash. In the fifteenth century under Kurigalzu I they built a new administrative capital, Dûr Kurigalzu (modern 'Aqarquf), about fifteen miles W of modern Baghdad. The Kassite rulers of Babylon apparently had several border clashes with the Assyrians as well as some contact with Egypt. Evidence from the Amarna Age (fourteenth century) provides a clear picture of both Assyria and Babylonia (see TELL EL-AMARNA §2; TELL EL-AMARNA[S]). During this time, Babylonian strength increased with the intermarriage of its royal house with those of Egypt, Hatti, and Assyria; Babylonia was now ready to participate in power politics.

The political history of Babylonia between the middle of the fourteenth century and the middle of the twelfth (i.e., between Burnaburiash II and Enlil-nadin-âhi) is not known, except in relation to Assyria. The lack of border shifting in this period indicates a stable balance of power, with neither Babylonia nor Assyria enjoying more than temporary success. Although Assyria overran Babylonia in 1235 B.C., her success was shortlived, as Assyrian military strength disintegrated. The question of Babylonian influence on Assyria during the late second millennium needs further analysis. Elamite invaders ended the Kassite dynasty in the mid-twelfth century.

There seems little dispute that the Kassites preserved Babylonian culture. Re-evaluation of evidence has destroyed the traditional picture of the Kassite era as a "dark age." The great scribal families of late Babylonian times traced their ancestry to the Kassite period; Kassite scribes edited many of the classics in the cuneiform libraries; and regnal-year dating came into vogue. Nebuchadrezzar

I (1123-1102) of the Second Isin Dynasty later restored the lost Babylonian prestige, by retrieving the Marduk statue and elevating the god to the supreme position within the Babylonian pantheon.

**f. Neo-Babylonian period** (625-539). Not until the tenth century did Assyria dispel the Aramean threat to Mesopotamia. From then until the late seventh century Assyria dominated the Tigris and Euphrates region. The Neo-Babylonian or Chaldean period began with the reign of Nabopolassar (625-605); allying himself with the Medes, he ultimately conquered NINEVEH (612) and eliminated the Assyrian Empire. Seven years later, the Babylonian crown prince NEBUCHADREZZAR II (604-562) consolidated their success in the battle of Carchemish (605).

NABONIDUS (555-539) was the last Babylonian monarch. His attempt to supplant Marduk with the moon-god Sin led to his fall and that of the city itself. Dissatisfied priests of Marduk apparently aided CYRUS of Persia in his conquest of Babylon (539); the imperial capital was reduced to an administrative center in the Achaemenid Empire. When Seleucia-Ctesiphon was founded in the Hellenistic period, Babylon's importance decreased even further. The Parthian sack of Babylon in the second century B.C. left behind only ruins and memories.

**ASTROLOGY.** The art of foretelling the future by charting and studying the relative positions of the moon, sun, stars, and planets. In the sense of reading omens from celestial phenomena (see DIVINATION[S]), astrology originated in Babylon and went hand in hand with the development of precise mathematical astronomy (see SCIENCE §B2). Under the Assyrians, astronomical omens were systematically sought and regularly reported to the reigning monarch. The horoscope, however, appeared only in the Hellenistic period, after the invention of the zodiac, attested at the earliest around 700 B.C.

From Babylon the astrological arts spread into Egypt, and survived in Arabic culture of late antiquity. It is important to realize that the numbers of astrological texts, almost all of which derive from Hellenistic and Roman times, are very small relative to the extant astronomical records of the time.

Astrology at its core is a religious phenomenon. At the same time, its practice and theory relate to the growth of Western science. The early history is quite obscure. Its roots embrace the notion that heaven and earth were linked together and that astral bodies were gods. A Sumerian literary text mentions a dream in which King Gudea saw a woman (a goddess) studying a tablet on which the starry heaven was depicted. This is interpreted as meaning that Gudea is to build a temple: "the pure star (which determines) the building of the temple she has announced to you" (Falkenstein, p. 65). Similarly, a Canaanite goddess was associated with the astrological arts. *Pgt*, sister of Aqhat, is said to be one who "knows the courses of the stars" (*ANET*, p. 153).

Astral omens, known from the beginning of the second millennium, were grouped in "series." The most important text, *Enūma Anu Enlil*, ca. 1000 B.C., links celestial events to future occurrences on earth: "If an eclipse occurs in the month of Siwan on the fourteenth day, and the (moon) god in his darkening darkens at the east side above and brightens on the west side below, a north wind gets up in the first night watch and abates (?) in the middle night watch, the (moon) god . . . will give therein a decision for Ur and the king of Ur: the king of Ur will see famine, the dead will be numerous" (Saggs, pp. 455-56). Much more elaborate are the reports sent by astrologers to the Assyrian kings, ca. 700 B.C. Some seventy tablets in the library of Ashurbanipal treat the moon, sun, stars, and planets, along with meteorological phenomena. The continuity with earlier omen series is obvious: "When Mars is visible in Tammuz, the bed of warriors will be wide. When Mercury stands in the north, there will be corpses, there will be an invasion of the King of Akkad against a foreign land" (Thompson, 231).

When the basic interest shifts to the individual and the circumstances surrounding his birth, the horoscope as the modern world understands it appears. The earliest example can be dated to April 29, 410 B.C., although a more primitive form is known from Hurro-Hittite culture. A text from 263 B.C. reads: "(In the) year 48 (of the Seleucid era, month) Adar, night of the twenty-third (?), the child was born. At that time the sun was in 13:30° Aries, the moon in 10° Aquarius, Jupiter at the beginning of Leo, Venus with the sun, Mercury with the sun, Saturn in Cancer, Mars at the end of Cancer. . . . He will be lacking in wealth. . . . His food will not satisfy his hunger" (Sachs, p. 57).

In Egypt, astrological texts date only from the Seleucid period and are clearly of the Babylonian type. The zodiac appeared ca. 250 B.C., and in general was a mixture of Greek imagery and Babylonian originals. The six known Greek horoscopes are later, dating from the reign of Augustus.

Overall, Egyptian astronomical data seem to be connected with time divisions and the calendar, important for regulating religious observances, and lack the mathematical base so important to the late Babylonian texts. Thus, horoscopic applications appear to be a late, indigenous development in Mesopotamia, and were not due to Greek influence. Horoscopic astrology was exported to Hellenistic Egypt and lived on well into Roman times. The zodiacal signs even appear in synagogue mosaics of late antiquity. See *SYNAGOGUE* Fig. 100.

To judge from the OT, astrology was never assimilated into Israelite culture. It was recognized as Babylonian and was ridiculed (Isa. 47:13; cf. Dan. 2:27; 4:7 [H 4]; 5:7, 11). Prohibited as early as Deut. 4:19, it aroused hostility that continued well into Roman times, and even intensified. The Jews were praised for refusing to take up astral arts (Sib. Or. 218-30); Abraham was said to have studied the stars for an omen and realized his folly (Jub. 12:16-18); astrology was a monstrous sin let loose in the world by primordial giants (1 Enoch 8:3). Two biblical passages which deal with diviners and soothsayers (Lev. 19:26; Deut. 18:10) were interpreted by the rabbis as having to do with astrologers (Sanh. 65b-66a). In the NT, astrology was felt to be a foreign element, associated with the three wise men from the east (Matt. 2).

Yet one can wonder to what extent astrological beliefs were a part of the earlier popular milieu. Certainly the climate was favorable. Use of a solar-lunar calendar in Israel necessitated fairly precise astronomical data (see *CALENDAR* §§1, 2). In accord with this are the references to the fixed orders of stars (Amos 5:8; Job 9:9; 38:31-32) and to the movements of celestial bodies (Pss. 19:5-6; 104:19; Job 31:26; Eccl. 1:5, cf. Eccl. 43:1-12; 1 Enoch 72-82). Besides such elementary astronomy, astral religion—widespread in the ancient Near East—survived into Israelite times. Traces adhere to place names, such as Beth-shemesh (shrine of the sun) or Beth-yerah (shrine of the moon). Later prophetic invective shows the extent to which astral worship was really a part of everyday Israelite religion. It is linked to Hoshea (II Kings 17:16), Manasseh (II Kings 21:3, 5), and probably Ahaz (II Kings 23:12). Josiah purged the land (II Kings 23:4, 5, 11-12), but solar-lunar worship was still a problem for Jeremiah and Ezekiel (Jer. 8:2; 19:13; Ezek. 8:16, cf. Job 31:26-28). Archaeological remains tend to support the OT picture. A terra-cotta bull from ninth-century Hazor carries a solar emblem on its forehead; an incised star found on a temple wall at Megiddo is matched by another inscribed on a potsherd in Israelite Gibeon; a votive altar from Gezer shows a lion along with a star symbol. The picture, then, is of a rather widespread, indigenous astral religion, undoubtedly supported at times by the monarchs, especially during the period of Assyrian domination. Nevertheless, its popularity was probably confined to the masses.

Yet with all this hospitable milieu, the available evidence suggests that the Israelites did not develop a system of astrology. Joel 2:30-31 [H 3:3-4]

possibly refers to astronomical omens, but more likely the verses involve traditional metaphorical language associated with the notion of Yahweh's coming in judgment (see Joel 2:10; 3:15; Zeph. 1:14-15; Isa. 13:10; Amos 8:9). Jer. 10:2 may imply that astrology was practiced in Israel, but this is not a necessary conclusion. Finally, Josh. 19:12c-13b could be interpreted as an incantation prayer uttered in the context of astrological speculation. It seems probable that if astrology were practiced in early Israel, it remained at a primitive level and never achieved the official standing given it in Mesopotamia.

\***ATHENS.** The discovery of the Royal Stoa in 1970 helps to clarify the topography of the Agora. The Basileios or Royal Stoa was a famous building often mentioned in ancient literature. It was the seat of the king archon, one of the principal magistrates of ancient Athens with jurisdiction over religious matters. Preliminary hearings for certain trials were sometimes held here, the most famous being that of Socrates. The Areopagus court occasionally met here, and some scholars think that the apostle Paul was arraigned here rather than on the AREOPAGUS itself. The stoa was very small, with only eight columns across its façade. A bench ran along the back and end walls. At either end of the façade a small projecting wing was added later for the display of inscribed stelai. Directly in front of the stoa is a large, smooth, flat stone, evidently the famous stone on which the archons stood to take their oath of office. The identification of the stoa is assured by its position, first on the right as one entered the Agora coming from the gates (Pausanias I.iii.1), by its relationship with the Stoa of

Zeus directly S, and by the numerous herms and their bases found in the area, some inscribed as dedications by the king archon. This venerable building was originally built about the middle of the sixth century B.C. and remained in use throughout classical antiquity.

See Fig. A26.

\***ATONEMENT IN THE OT** [כִּפּוּר, *kippēr*].

1. Etymology
2. Ritual *kippēr*
  - a. *Kippēr* as "purge"
  - b. *Kippēr* as "cover"
  - c. *Kippēr* as "ransom/substitute"
  - d. *Kippēr* as "expiate"
  - e. Ritual atonement without *kippēr*
3. Nonritual *kippēr*
  - a. For sin
  - b. For the land
  - c. By intercession

1. Etymology. "Atone" or "expiate" is the customary translation for *kippēr*, but in most cases this is incorrect. In biblical poetry, its parallel synonym is usually *māhā* ("wipe"—RSV "blot out"—Jer. 18:23) or *hēsir* ("remove," Isa. 27:9), suggesting that *kippēr* means "purge." Ritual texts also support this meaning since they regularly couple *kippēr* with *tiḥar* ("purify"—RSV "pronounce . . . clean") and *hiṭṭē* ("decontaminate"—RSV, "cleanse"—Lev. 14:48, 52, 53). However, other poetic passages will use in parallel *kissā* ("to cover"; Neh. 4:5 [H 3:37]), giving the contrary notion that *kippēr* connotes smearing on a new substance rather than effacing an existent one. Philologists have been divided on the etymology, since evidence from Semitic cognates can be cited in support of both, mainly from Arabic ("cover") and Akkadian ("wipe"). However, both meanings may go back to a common notion: "rub." Since a substance may either be "rubbed on" or "rubbed off," the derived meanings "wipe" and "cover" may be complementary and not contradictory. This is shown especially in Akkadian, where both usages are attested in medical/magical texts and where "the step between 'rubbing off' and 'rubbing on' is so short we cannot distinguish between cleaning and treatment" (Landsberger).

2. Ritual *kippēr*. a. *Kippēr* as "purge." In Israel the meaning "rub off" predominates in ritual texts, whereas "cover" probably never occurs. This is best illustrated by the blood of the *ḥaṭṭā'th*, the purgation offering (see SACRIFICES AND OFFERINGS, OT[S] §2ai). Its use is restricted to the sanctuary: it is never used on a person. (The rites for the healed leper and the consecration of the priest call for a *ḥaṭṭā'th*, but the blood with

American School of Classical Studies, Athens

26. The Agora, Athens, 2nd century A.D.

which they are daubed comes from other animal sacrifices.) This means that a person never is the object of the *kippēr* rite but only the beneficiary. The purpose of the *hattā'th* blood is not to purge the worshiper of alleged sin, as heretofore assumed, but to purge that to which it is applied, i.e., the sanctuary and its sanctums. By placing the blood upon the altar horns or bringing it inside the sanctuary (e.g., Lev. 16:14-19), the priest thereby purges the most-sacred areas on behalf of the person[s] who caused them to be contaminated, either by physical impurity (Lev. 12-15) or by inadvertent misdemeanor against God (Lev. 4). Presumptuous sins and impurities, however, cannot be purged by the offender's own *hattā'th* (Num. 15:30-31), but must await the annual rite of purgation for the sanctuary and the nation. *Kippēr* undergoes further qualification in the context of the sacrificial system, and it can be shown that expiatory sacrifices deal only with offenses committed against the Deity; they do not redress wrongs against human beings. See ATONEMENT, DAY OF[S] §§1, 2.

The net result of these deductions from the function of sacrificial *kippēr* is that we can reconstruct the heretofore missing priestly doctrine of THEODICY. It presumes that sin is a miasma that, wherever committed, is attracted magnet-

like to the sanctuary. There it adheres and amasses until God will no longer abide in the sanctuary. Hence, it is forever incumbent upon Israel, through the indispensable medium of its priesthood, to purge the sanctuary regularly of its impurities, or else God will abandon it and the people to their doom. Thus, evil is never unheeded by God, even when the individual evildoer is not immediately punished, but it accumulates in the sanctuary until the point of no return is reached; the sum of individual sin leads inexorably to the destruction of the community.

This priestly theology of *kippēr* is easily traceable to pre-Israelite analogues, for the ancient Near East shared a common obsession with temple purification. In outward form, biblical religion here comes close to its antecedents. In content, however, the gap is never wider, for it bears all the hallmarks of Israel's monotheistic revolution. Thus the *kippēr* rite is not inherently efficacious. Since persons are never the direct object of *kippēr* (see above), the rite is not a device to counter the effects of magic or to cure disease. Moreover, God's forgiveness is always phrased as a passive, *w'nislah*, "that [he] may be (RSV "shall be") forgiven" (Lev. 4:20, 26, 31, 35; 5:10, 13, 16, 18; Num. 15:25-26, 28); it is not the automatic consequence of the priestly rite. Above all, the pagan was ob-

essed by the fear that demonic intruders would drive the deity out of his earthly abode; thus purifications are magical defense weapons. Israel, to the contrary, demythologized and devitalized cosmic evil. Only the physical and moral impurity of persons can pollute the sanctuary; they alone can drive God out.

**b. Kippēr as "cover."** Does *kippēr* in the sense of "rub on" occur in the Israelite cult? It might, if it could be shown that blood was an apotropaic as well as a cathartic. There are two possible instances. The first is the paschal blood upon the doorposts. Indeed, the term *pesah* itself probably means "protection" (cf. Exod. 12:27 with Isa. 31:5), and the rite is paralleled in Babylonian rituals (e.g., Namburbi) where blood and other apotropaics are smeared on doors and keyholes that the "evil [plague] shall not enter the house." However, the root *kippēr* is not used in the texts on the paschal observance, and its sacrifice is not a *hattā'th*. The second possible instance is the blood-and-oil rite for the purified leper (Lev. 14) and consecrated priest (Exod. 29) and the double blood rite for the purged altar (Lev. 16:18, 20), where the term *kippēr* indeed occurs. A possibly related instance is the use of incense to stop a plague (Num. 16:46-47 [H 17:11-12]), but the precise meaning of *kippēr* is not certain.

The agents of ritual *kippēr*, exclusive of the *hattā'th* blood, not yet discussed are: the scapegoat (Lev. 16:10, 21-22), the heifer whose neck is broken (Deut. 21:1-9), the money for the military census (Exod. 30:16), the Levites (Num. 8:19), the human deaths in cases of idolatry (Num. 25:1-15) and homicide (Num. 35:32-33), and, finally, the blood of sacrifices other than the *hattā'th*.

**c. Kippēr as "ransom/substitute."** It has been noticed in Mesopotamian magic that "the dirt called *kupirtu* or *takpirtu* is absorbed by a medium, mostly dough, which is thrown away, buried or carried away" (Landsberger). This leads to the phenomenon of the "ransom/substitute," the substance to which the evil is transferred and thereupon eliminated. This notion of the *kippēr* carrier is clearly represented in the Bible in the cases of the scapegoat (see AZAZEL) and the heifer whose neck is broken, as shown by extrabiblical parallels. Though such evidence is not available for the remaining cases, the ransom principle is nonetheless operative. The common denominator of all these cases is their avowed goal: to siphon off the wrath of God from the entire community. This *kippēr* must be sharply distinguished from that of the sanctuary. In the latter case, the impurities are purged to keep them from causing the indwelling God to leave. However, in the present case, *kippēr* has the immediate goal of preventing the divine anger from incinerating innocent and guilty alike. Furthermore, in the case of the census money (Exod. 30:16), *l'khappēr 'al naphšō-thēkhem* is related to *kōpher naphšō* (Exod. 30:12); the same combination is again found in the homicide law (Num. 35:31-33). The verb *kippēr* is thus a denominative from *kōpher*, whose meaning is undisputed, i.e., ransom (Exod. 21:30). Therefore, there exists a strong possibility that all texts

which assign to *kippēr* the function of averting God's wrath have *kōpher* in mind: innocent life spared by substituting for it the guilty parties or their ransom/substitute (already noted by Ibn Ezra for the Levites of Num. 8:19). Thus, the above-mentioned cases are elucidated as follows: though no substitute is allowed for a deliberate murderer, the accidental homicide is ransomed by the natural death of the high priest. Similarly, the census money ransoms each counted soldier, and the Levite guards replace the Israelites when one of the latter encroaches upon the sanctums (Num. 1:53; 8:19; 18:22-23). See ENCROACHMENT[S].

Finally, the remaining occurrence of the phrase "to ransom (*kpr*) your lives" occurs in Lev. 17:11, where the blood of the *š'lamim* sacrifice must be offered on the altar to ransom the life of the offerer for slaughtering the animal for food. See SACRIFICES AND OFFERINGS, OT[S] §3b.

**d. Kippēr as "expiate."** The final stage in the evolution of the root *kippēr* yields the abstract, figurative notion "expiate." Having begun as an action which eliminates dangerous impurity by absorbing it through direct contact (rubbing off) or indirectly (as a ransom/substitute), it eventuates into the process of expiation in general. Thus, the *kippēr* role of all other sacrifices whose blood is not daubed on the altar's horns like the *hattā'th* but is dashed on its sides is to expiate sin. This is one of the functions of the *'ōlā* (Lev. 1:4) and the *minhā* (Lev. 14:20), and the sole function of the *'āšām* (Lev. 5:16, 18; 6:7 [H 5:26]). As for the *kappōreth* (RSV "mercy seat"; NEB "cover") placed over the tabernacle ark (Exod. 25:17-22), being a feminine abstract noun from *kippēr*, it probably means "that which expiates." And since it also designates the place where Moses "would hear the voice addressing him" (Num. 7:89), it is the source of expiation, par excellence.

**e. Ritual atonement without kippēr.** Whenever a sacrifice concludes the purification ritual for physical impurity, it is always a *hattā'th*, and its purpose is to *kippēr* or purge the contaminated sanctuary. In this context the term "atonement" is meaningless, for the impure individual has done nothing sinful. For his own person, all he needs is to be cleansed, and for this the rite of ablution suffices. Indeed, it is striking that when prophet or psalmist resorts to a ritualistic metaphor in his call for moral purification, he never uses the term *kippēr*, but he uses one which signifies lustration with water (e.g., Isa. 1:16; Ezek. 36:23; Zech. 13:1; Ps. 51:2, 7 [H 4, 9]).

It is well-established that the nonritual texts of the Bible demand repentance as the proper atonement for moral wrongdoing (see §3 below; REPENTANCE IN THE OT[S]); it is not widely known, however, that the indispensability of repentance is stipulated by the ritual texts as well. To begin with, the possibility of sacrificial atonement is explicitly denied to the individual who brazenly violates God's law (Num. 15: 30-31). This, however, does not mean, as many scholars propose, that sacrificial atonement is possible only for involuntary wrongdoers. To cite but one exception, the *'āšām* offering is prescribed for pre-

meditated crime (Lev. 6:1-7 [H 5:20-27]; Num. 5:5-8). A more correct assertion would be that the priestly system prohibits sacrificial atonement to the unrepentant sinner, to the one who "acts defiantly (RSV "with a high hand"), . . . it is the Lord he reviles" (Num. 15:30). Furthermore, it is precisely when the sin is deliberate, not accidental, that another penitential requirement is added, namely, that the contrition must be openly declared; it must be supplemented by confession (*w<sup>h</sup>ithwaddā*, Lev. 5:5; Num. 5:7; cf. Lev. 16:21; 26:40). Indeed, the prophetic insistence that repentance is not an end in itself but must lead to rectification of the wrongdoing (e.g., Isa. 1:13-17; 58:6-12; Mic. 6:6-8) is only the articulation of a basic postulate of the sacrificial system.

3. Nonritual *kipper*. a. For sin. Outside the sanctuary, *kipper* undergoes a vast change that is at once made apparent by its new grammatical syntax. Whereas in ritual the subject of *kipper* is invariably a priest and the direct object is a contaminated thing, in the nonritual literature usually the subject is the Deity and the direct object is a sin (e.g., Jer. 18:23; Ezek. 16:63 [RSV "forgive"]; Ps. 78:38). Actually, this represents no rupture with ritual *kipper*; on the contrary, it gives voice to its implicit meaning. As for the object, though the cult concentrates mainly on the purging of sanctuary impurity, it too recognizes that its source is human sin. The subject implies even less change: though the priest performs the rituals, it is only due to the grace of God that the ritual is efficacious. Thus, nonritual exhortations, requiring no priestly mediation, uncompromisingly turn to God, the sole dispenser of expiation. True, there are a few *kipper* passages with man as subject (e.g., II Sam. 21:3; Isa. 47:11), but all these exceptions are explicable by the substitutionary *kipper*; i.e., man is required to provide the necessary ransom. The enigmatic '*khapp<sup>r</sup>ā pānāw* (Gen. 32:20 [H 21]; RSV "I may appease him") may be similarly interpreted, but the unique object "face" may go back to the Akkadian cognate, *kuppuru panē*, "wipe the face," hence "wipe [the anger from] the face" (Prov. 16:14). If rituals stipulate repentance as a precondition for atonement, moral exhortation will place a greater value upon repentance—and its vehicle prayer—than upon ritual and sacrifice (e.g., Lev. 26:40-42; Deut. 4:29; I Kings 8:28-30, 33, 35, 47-48; Pss. 51:17 [H 19]; 141:2).

In recent years it has been increasingly maintained that early Israel knew no forgiveness of sin because *kipper* and *sālah*, "forgive," are mainly found in postexilic texts, and because the pre-exilic literature speaks exclusively of *w<sup>n</sup>ihām 'al hārā'd* ("to repent of the threatened evil," Exod. 32:14) and '*abhar l'*, implying that "God overlooks mild sins but does not obliterate them" (Koch). At once, a methodological objection should be raised against the arbitrary assignment of all cultic passages (where *kipper* would chiefly occur) and all consolatory prophetic passages (where *sālah* would predominate) to the postexilic period. Moreover, this view suffers from a more serious fault: it blurs the distinction between two stages in the process of divine pardoning common to all the

biblical sources. The first, involving the above-mentioned idioms, never occurs when God is contemplating punishment, but only when he has actually decided upon it. The consequence is that, before the guilty can implore God for forgiveness, they must prevail on him to revoke his decree. This is evident in the story of Moses' intercession for Israel on the occasion of their sin with the golden calf (Exod. 32-34). His initial plea (32:11-13) accomplishes the first stage: God renounced the punishment he had declared he would bring upon his people (32:14). Moses, however, is not content with the cancellation of the divine decree. After slaying many, presumably the most guilty, he presses for the complete obliteration of Israel's sin (32:30-32). This God does not grant (32:33-34), but, when he reveals to Moses that his mercy can supersede his justice (34:6-7a) whenever he desires (33:19b), an opening is provided Moses whereby he can explicitly ask for forgiveness (*sālah*, 34:9).

That the renunciation of punishment must be distinguished from forgiveness of sin is also clear from another instance of prophetic intercession (Amos 7:1-8; 8:1-2). Amos wants forgiveness (7:2); God only concedes the cancellation of punishment (7:3, 6). Even this he will not do more than twice (7:8), and, finally, Israel's sins drive him to declare, "the end has come" (8:2). With Amos as with Moses, the language is crucial: God concedes partially to the prophet's plea; he suspends punishment but does not grant the complete remission of sin.

Finally, it should be noted that the idiom *nāsā hēt' / 'āwōn / peša'* can have the meaning "remove sin," implying forgiveness. Moreover, it is used synonymously with *māhā* and *kipper* (note the occurrence of all three in Moses' plea, Exod. 32:30-32), *he<sup>e</sup>bhir 'āwōn* (Job 7:21), and *sālah* itself (Num. 14:18-19). So many early sources illustrate this usage (e.g., Exod. 34:7; I Sam. 15:25; Hos. 14:2 [H 3]; Mic. 7:18) that it cannot be denied that the consciousness and absolution of sin were moral realities in all periods of Israel's history.

b. For the land. The holiness of the sanctuary is complemented in the Priestly source by the notion of the holiness of the land of Israel. Correspondingly, the land too is capable of defilement (e.g., Lev. 18:25, 28, for sexual immorality; Num. 35:33-34, for murder; cf. also Ezek. 36:17; Deut. 21:23), and just as the sanctuary needs *kipper*, so does the land (expressly, Num. 35:33). Furthermore, the implications are likewise identical: defilement of the land will result in the destruction of Israel just as it did for the previous inhabitants (Lev. 18:28; 20:22), because God can no longer abide in it (Sifre Num. 161). Here, however, the parallels end; there is no ceremony by which the land is purged, and *kipper*, therefore, is not used ritually but refers to general moral expiation. Atonement for the land becomes a more important concept in postbiblical times (e.g., Deut. 32:43 [LXX] and Jub. 6:22, where it is sacrificial!). The Dead Sea sectarians believed that their consecrated life was an atonement not just for themselves but for the entire land (IQS 8.6, 10; 9.4).

c. *By intercession.* Another postulate of the biblical doctrine of atonement is that God will spare the community by virtue of the merit of the just people in it, e.g., Abraham's intervention on behalf of Sodom and Gomorrah (Gen. 18:16-33). However, intercession is chiefly the vocation of the prophet. The psalmist eulogizes Moses for interceding on behalf of the worshipers of the golden calf (see Exod. 32:11 ff.) in these words: "He said he would destroy them—had not Moses, his chosen one, stood in the breach before him" (Ps. 106:23). To intercede at the risk of one's life is to "stand in the breach."

It has been thought that Ezekiel refutes this doctrine of the atonement by the righteous, because he says repeatedly and forcefully that the righteous will not save their generation, but that each person will be judged according to his sins (Ezek. 18). This is not the case. Ezekiel, a priest as well as a prophet, is enlarging upon a corollary of the priestly doctrine of the temple (see §2a above). The reason why God abandons his sanctuary is that the level of impurity rises to a point beyond toleration. After this point, God will neither seek man's repentance nor allow the prophet to intercede for him: the decree of doom becomes irrevocable. This postulate is found beyond the confines of the Priestly source; it informs all biblical teaching on evil, e.g., the hardening of Pharaoh's heart (Exod. 7:3, 14; etc.), Isaiah's harsh commission (Isa. 6:10), and the prohibition placed on the prophet to intercede (Jer. 15:1-2). This Jeremiah passage illuminates Ezekiel's message as well; both prophets experienced the destruction of Judah, and both had taught that their generation was doomed. However, Ezekiel never abandoned his belief in the efficacy of prophetic intercession, as demonstrated by his wistful comment on the psalmist's allusion to Moses' self-sacrifice: "I sought a man who would plug up the wall and stand in the breach before me on behalf of the land, that I should not destroy it; but I found none" (22:30).

The concept of atonement developed among the Dead Sea sectarians took a unique turn. Without the temple, they were forced to concentrate on nonsacrificial expiation (e.g., IQS 9.4-5), and they developed a lofty spiritual doctrine which taught that purity of thought and deed were necessary preconditions of all ritual acts, and that the virtuous life of the individual effects atonement for others. However, the circle of the latter was restricted to members of the sect (perhaps also the like-minded, IQS 5.5-7), and the rest of Israel was uniformly excluded. This insularity is not surprising in view of the teaching of Jeremiah and Ezekiel. Like these prophets, the sect also felt that universal doom was at hand, from which the righteous would save only themselves. This helps to explain the sectarians' insistence that their atonement also extended to the land (see §3b above): it was in need of atonement so that the righteous survivors of the impending cataclysm could settle on it immediately (IQSa 1.3).

The atoning power of the righteous reaches out not only horizontally to the community but vertically to posterity. This principle undergirds all of

God's covenants with Israel: with the patriarchs for offspring and soil (Gen. 15; 17:1-8; 22:17-18; 25:23; 35:9-12; Exod. 32:13), with Phineas for a priestly line (Num. 25:12-13), and with David for a royal dynasty (II Sam. 7:12-16).

In the wisdom literature the suffering of the righteous is rationalized into a theological postulate: suffering is a test whereby God enables the righteous to merit an even greater reward (e.g., Ps. 66:9-12; Job 5:17-26; 36:8-10). This idea also informs the narratives of the wilderness (Exod. 16:4; Deut. 8:2, 16) and of the patriarchs (e.g., Gen. 22:1, 16-18). A logical extension of this theodicy is that suffering can serve as an atonement for society. However, it is not an explicit OT doctrine, because nowhere do the innocent suffer for the sake of the guilty. It may be adumbrated by the final Servant poems (Isa. 52:13-53:12), but its unfolding is realized in later times.

\***ATONEMENT, DAY OF.** The Day of Atonement (*yôm hakkippurim*) was the annual "day of purgation" for the temple and the people. This follows from the facts that its sacrifices are of one type, the *hattā'th* ("purgation offering"; see SACRIFICES AND OFFERINGS, OT[S] §2a; cf. *hattā'th hakkippurim* [RSV "sin offering of atonement"], Exod. 30:10; Num. 29:11), and that the three *hattā'th* animals are offered in behalf of the priesthood (Lev. 16:6, 11) and the people (16:5, 15).

According to the rabbis: "All the goats make atonement for the pollution of the temple and its sanctums. . . . For pollution that befalls the temple and its sanctums through wantonness, atonement is made by the goat whose blood is spilled within [the shrine] and by the Day of Atonement; for all other transgressions specified in the Torah—minor or grave, wanton or inadvertent, conscious or unconscious, through commission or omission . . . the scapegoat makes atonement" (M. Shebu. 1.4-7). The Mishna shows that the function of the slain *hattā'th* was to purge the temple of its pollution, and the function of the live *hattā'th*, the one dispatched to AZAZEL (Lev. 16:26), was to purge the people of their sins. This distinction is corroborated by the biblical text, which expressly de-

clares that the slain bull and goat purge the shrine of the (physical) pollution, **טִמְאוֹת**, of the Israelites and their brazen sins, **פְּשָׁעֵיהֶם** (Lev. 16:16; cf. 16:19), and the scapegoat carries off their iniquities, **עֲוֹנוֹתָם** (16:22).

1. **Purging the temple.** The purgation of the sanctuary rests on two complementary postulates: (a) The brazen defier of God's commandments is ineligible for sacrificial expiation (Num. 15:30-31), but the temple must be purged of his sins and impurities, and (b) since brazen sins possess the power not only to pollute the outer altar but to penetrate into the shrine, reaching even the holy ark, the entire temple complex must be purged on the Day of Atonement. See ATONEMENT IN THE OT[S] §2a.

Temple purifications dominate the cultic landscape of the Near East. Impurity was feared because of its demonic power. It threatened the gods themselves and especially their temples. Protector gods were erected before the entrances of temples and palaces (*šēdu* and *lamassu* in Mesopotamia and lion gargoyles in Egypt), and elaborate rituals were employed to rid these buildings of demons and prevent their return (e.g., *ANET* [2nd ed.], pp. 6-7, Egyptian; 346, Hittite; 333-34, esp. line 381; 334-38, esp. text C, lines 14-16, Mesopotamian). The antiquity and ubiquity of the Azazel rite are striking. Purgation and elimination rites go together in the ancient world. Exorcism of impurity is not enough; its power must be removed. This was accomplished in one of three ways: curse, destruction, or banishment. The last was often used; evil was banished to its place of origin (e.g., netherworld, wilderness) or to some place where either its malefic powers could work in the interest of the sender (e.g., enemy territory) or where it could do no harm at all (e.g., mountains, wilderness). Thus the scapegoat was sent to the wilderness, which was considered inhabited by the satyr-demon Azazel. In these cases, there is an integral connection between the actual purging (by aspersions, smearing, or incense) and the transfer of the released impurity onto a decapitated ram and its banishment via the river (e.g., *ANET*, pp. 333, lines 345-61; cf. Deut. 21:1-9). See SHALAH[S].

2. **Purging the people.** The purgation-expulsion nexus essential to pagan magic survived in Israel's cult, but its meaning underwent a revolution. As scholars have noted, the purgation and Azazel rites on the Day of Atonement are distinct: the slain *ḥattā'th* purges the tabernacle, but the live *ḥattā'th* carries off the people's sins. The reasons are clear: Israel, the holy people (Lev. 11:44; 19:2; 20:26), needs the same purification as the holy place, so that "they shall not pollute their camp in whose midst I dwell" (Num. 5:3b; see LEVITICUS[S] §1e). Moreover, the monotheistic dynamic is at work here: since the world of demons is nonexistent, the only source of rebellion against God is in the heart of man, and it is there that cathartic renewal must periodically take place.

Ordinarily, the hand-laying and confession must be performed by the offerer himself, but presumptuous, rebellious sin (**עֲשָׂוֹן**) bars its perpetu-

ators from the sanctuary, and they must be represented by the high priest. The latter's officiation, however, is not inherently efficacious. The people, though excluded from the rites, must submit to fasting and other acts of self-denial (Lev. 16:29; 23:27-32; Num. 29:7). Thus repentance purges man as the *ḥattā'th* blood does the sanctuary. This ethical achievement is unmatched in the ancient world. True, the Babylonian new year calls for a ritual of humiliation for the king, followed by his prayer of confession. But in contrast to Israel's high priest, whose confessional specifies where he and his people have failed, the Babylonian king appears arrogant and self-righteous.

Finally, atonement by sacrifice is efficacious only for sins against God. The Mishna again has captured the ethical import: "For the sins between man and God, the Day of Atonement effects atonement; but for the sins between man and his fellow, the Day of Atonement will effect atonement only if he has appeased his fellows" (M. Yom. 8.9). That this spiritual principle is not an innovation of the rabbis, but constitutes this legacy from biblical times, is shown by its explicit presence in the **עֲשָׂוֹן** offering, where restitution to man must precede sacrificial expiation from God (Lev. 6:1-7 [H 5:20 ff.]).

3. **The emergence of the day.** The Day of Atonement itself may not be as old as its ceremonial. For example, in distinction from all other festival prescriptions which give the date before the ritual (e.g., Lev. 23), here alone the date is not specified until the end (Lev. 16:29). Moreover, it is part of an appendix (16:29-34) which uses a different technical terminology than the main text—e.g., **מִקְדָּשׁ** **הַקֹּדֶשׁ**, vs. 33 (RSV "sanctuary"), for the adytum. Evidence also points to the conclusion that originally this day was an emergency rite for purging the sanctuary (e.g., 16:1-2). However, it seems likely that it was fixed as a regular purgation ritual for the temple and nation on the tenth of Tishri—the seventh month—in pre-exilic times. The requirement that the people fast and abstain from work—contained in the appendix—may have been added later, especially since Nehemiah institutes a fast on the twenty-fourth of Tishri without even mentioning the Day of Atonement (Neh. 8-9). Nevertheless, it is possible that Nehemiah omitted the Day of Atonement from his instructions, since its observance is the concern of the temple and its priests and not the people; furthermore the writing, signing, and affirmation of the pact (Neh. 9:38 [H 10:1]) would have been inappropriate on the Day of Atonement.

In conclusion: an ancient ritual for the occasional purging of the sanctuary was restructured by Israel to include the purging of the nation's sins, which then was fixed as an annual observance on the tenth of Tishri.

**AUTHORITY, BIBLICAL.** See SCRIPTURE, AUTHORITY OF[S].

\***AUTHORIZED VERSIONS.** There are various kinds and degrees of authorization, e.g., by individual denominations, by church associations, by ecclesiastics or rulers who have authority to speak for such bodies; authorization to make or revise a translation; authorization for general use such as ecumenical or private reading, study, and devotions; or authorization for official liturgical usage.

Although there is no record of the authorization of the KJV (usually designated in Britain the "Authorized Version" or "AV"), the words "Appointed to be read in Churches" could hardly have been printed on the title page without good authority. The relevant Order in Council possibly was destroyed by fire at Whitehall in 1618 (?). A resolution of Canterbury Convocation in 1899 settled any doubts about the legality of its revision, the ERV.

The RSV (1946, 1952) is a revision of the ASV, authorized by the International Council of Religious Education, in which the educational boards of forty Protestant denominations of the U.S. and Canada were associated. Publication of the RSV was authorized in 1951 by the newly formed National Council of the Churches of Christ (NCCC). Its Division of Christian Education (DCE), successor to the ICRE, holds the copyright. The RSV Apocrypha was made at the request of the General Convention of the Protestant Episcopal Church. In 1965-66 the RSV Catholic edition was published, prepared by the Catholic Biblical Association (CBA) of Great Britain, the U.S. edition carrying both a British and a U.S. imprimatur. The national episcopal conferences of Great Britain and the U.S. authorized it for liturgical use, and their actions were confirmed by the Apostolic See. In 1965 Richard Cardinal Cushing gave the imprimatur to the Oxford Annotated Bible with the Apocrypha, the first time an English translation of the Bible received both Protestant and Catholic approval for general use. Approval of the original edition of the RSV was also given by the Roman Catholic bishops of Kenya and Tanzania.

The RSV Common (Ecumenical) Bible, 1973, with an arrangement of the deuterocanonical and other apocryphal books which recognizes the variant Protestant, Catholic, and Orthodox views of the canon, was approved by the DCE of the NCCC, not to pre-empt the title, but in recognition of our common biblical heritage. It is the hope of the DCE that this may establish a pattern for other ecumenical editions. The edition was endorsed by Cardinal Koeng, Archbishop of Vienna, as President of the World Catholic Federation for the Biblical Apostolate, by the Greek Orthodox Archbishop Athenagoras II of Thyateira and all Great Britain and Exarch of the Ecumenical Patriarchate of Constantinople, by the Rev. Gerald E. Knoff, Associate General Secretary for Christian Education of the NCCC, by the Greek Orthodox Archbishop

Iakovos of North and South America, and by many others.

A revision of the Challoner-Rheims New Testament (1749-63) under the patronage of the Episcopal Committee for the Confraternity of Christian Doctrine (CCD) was published in 1941. After the promulgation of the encyclical *Divino Afflante Spiritu* by Pope Pius XII in 1943, the CCD requested the CBA of America to prepare a translation from the original languages. With the collaboration of four Protestant biblical scholars, the New American Bible appeared in 1970. In 1966 the Jerusalem Bible, an English edition of *La Bible de Jérusalem* (1956 in one vol.), was published in Great Britain, bearing the imprimatur of John Cardinal Heenan of Westminster; it is among the versions approved for church use by the Anglican and Episcopal churches.

In 1947 a Joint Committee on the New Translation of the Bible was formed in Great Britain (see VERSIONS, ENGLISH[S] §1). It appointed the three panels of biblical scholars and a literary panel, which produced the NEB. The NT was published in 1961 and the complete Bible with the Apocrypha in 1970. In 1965 the Church of England officially authorized the NEB NT along with the RSV as permissible alternatives for the epistles and gospels at Holy Communion, where hitherto the AV had been prescribed. It is assumed this covers the RSV CB. The Church of England authorized the NEB NT for use in church services in 1966 and the OT and Apoc. in 1971.

The NT (2nd ed.) of Today's English Version (TEV), sponsored and published by the American Bible Society, was granted the imprimatur by Cardinal Cushing (3rd ed. granted imprimatur by the Archbishop of Hartford). The General Convention of the Protestant Episcopal Church has authorized for church use the KJV, ERV, ASV, RSV, RSV CB, JB, NAB, and TEV NT.

The story of authorized versions and authorization involves ecumenical co-operation between the Secretariat for Promoting Christian Unity and the United Bible Societies; it involves ecumenism in devotional materials; and it involves Protestants, Catholics, and Orthodox.

It has been suggested that because of the special relationship of the Jewish Publication Society to contemporary Judaism, the New Jewish Version might well be characterized as an authorized version.

\***AZMAVETH.** For etymology see DEITIES, UNDERWORLD §2bii.

\***BAAL (DEITY)**. See MOT[S]; NEW YEAR[S] §1d; UGARIT[S] §§2, 4; ZAPHON, MOUNT[S].

\***BAPTISM**. Together with SACRIFICES, water rituals are among the most widespread features of religion. The essence and function of NT baptism, as well as the problems of how it is to be properly understood and administered, are summed up in the statement "baptism . . . saves" (I Pet. 3:21; cf. Mark 16:16; Tit. 3:5; see SALVATION §5). How is the baptism that was practiced in the early church related to the purification and initiation rites of the NT environment, to the death and resurrection of Jesus Christ, and to the ethics, organization, and mission of the Christian community?

1. **The history of baptism.** Polemical NT references to diverse "washings" (see BATHING) and interpretations of baptism are found in I Cor. 1:13-17; 10:2; Rom. 6:1-4; Luke 11:38-41; Matt. 3:11; 28:19; Heb. 6:2; 9:13-22; John 1:19-34, esp. vs. 25; 3:5-8, 22-26; 4:1-3; Acts 18:24-19:6.

a. **Religious morphology.** Ritual use of blood, fire, or water is widespread. These elements serve to consecrate things, animals, and persons. Forms of the rituals are sprinkling or pouring water on a person or object, washing, drinking, and immersing in or passing through water. In extremely dry regions the application of drops of water has highest significance. At other places springs, rivers (such as the Nile, Euphrates, Ganges, JORDAN), fountains, lakes, the sea, or specifically prepared WATER FOR IMPURITY contribute to salvation. The

contact with water signifies a specific relationship to nature, history, a special community or a deity. Water ceremonies contain all features of mimetic magic. By the grace of the deity invoked, through the knowledge and administration of the ministrant, and according to the faith of those initiated, the water rites bring into effect what they symbolize, and they demonstrate what they effect. Mythical tales or songs, legends narrating the origin of the ceremony, cultic formulas, and casuistic prescriptions guard the mystery performed. Among the various significations of Near Eastern water rituals, three may have influenced early Christian baptism.

(1) Baptism is an act of purification by which trespassers against hygienic, moral, and social taboos are restored or initiated to full membership in the community and to the service of the deity.

(2) Baptism is birth out of chaos, or LIFE out of DEATH. It conveys, strengthens, or saves life by mediating wondrous participation in the life (and death) of a deity. This can be achieved and revealed by a sprinkling of drops of water (semen of a god), or by lifting out of the water (womb of a goddess).

(3) Baptism is a transition (rite of passage) from one power sphere into another. By a ritual which sometimes includes extreme dangers and rigorous tests, events such as birth, name-giving, attainment of puberty, marriage, recovered health, warfare, victory, and death are shown to be more than mere natural, secular, incidental occurrences. The ritual reveals that they stem from, and lead into, a supratemporal realm. Swallowed up by the superior order, the temporal is sacralized, made bearable, and glorified.

Beginning in the third century B.C. several Oriental mystery religions began to penetrate the Greco-Roman domain (see GREEK RELIGION AND PHILOSOPHY §§4, 5). In their quest for salvation the mystery communities selected or combined the elements of purification, rebirth, and deification. Their forms of initiation ranged from bloody baths to solely oral communication of secret truth. While the mystery originally consisted of the life and death of the deity itself, the emphasis eventually shifted toward personally experienced conversion. In Greek, the name of the saving ceremony was "mystery," "symbol," "tradition," "consecration," "perfection," "seal," or "enlightenment," but never "baptism." Occasionally, vicarious initiation was permitted.

From ca. A.D. 90, the church's liturgical and doctrinal descriptions of Christian baptism increasingly used formulas and vocabulary derived from the mysteries. But it cannot be proven that the meaning of the activity of JOHN THE BAPTIST (esp. Mark 1:4-8; Matt. 3:1-11; Luke 3:1-16; John 1:19-27) or of the Pauline, Deutero-Pauline, and Johannine utterances on baptism and rebirth (e.g., I Cor. 12:13; 15:29; John 3:5; Tit. 3:5) were determined by them.

b. **The OT and Judaism.** Explicit and implicit NT references to Jewish temple, synagogue, and house rituals connected with water call for a sketch of the prototypes of NT baptism in the OT, intertestamental and later Jewish literature.

i. Water is employed for purification and con-

secration of the priest (Exod. 29:4; 40:32; Lev. 16:4), the (priestly!) people (Exod. 19:6, 10, 14, 22; Ezek. 16:4, 9), and of individuals who have become unclean (Lev. 12-15, etc.). The water for impurity was mixed with dust and ashes (Num. 5:17-28; 19:9, 13; cf. II Kings 5:10-14). While the OT temple ceremonies are connected with the history of God and his people, they do not have the character of sacramental representation or actualization. Prophetic promises and eschatological hopes oppose or surpass the priestly practices by referring to God: *he* will cause healing and purifying water to bubble; *he* will pour it out or sprinkle with it (Isa. 1:16-18; 44:3-4; Ezek. 36:25-29; 47:1-12; Zech. 13:1; Ps. 51:7-12; cf. Isa. 52:15 [KJV]). The "clean water" to be employed by God is identified in Ezek. 36; Ps. 51 (cf. Zech. 12:10; Joel 2:28-29 [H 3:1-2]) with "a new SPIRIT," the "spirit of God," or the "HOLY SPIRIT." The NT utterances on "baptism with the (Holy) Spirit" (I Cor. 12:13; Mark 1:8; Matt. 3:11; Luke 3:16; John 1:33; Acts 1:5; 11:16; cf. John 3:5-8; 4:14; 7:37-39; 19:34; 20:22; Acts 1:5; 2:16-21, 33; 10:45; Tit. 3:5) allude to these expectations: God's promise is carried out through Jesus the Messiah. However, neither in the OT nor in the NT does purification by clean water abolish or supersede sanctification by sacrifice.

ii. Water is the symbol and instrument of death when reference is made to the DEEP, the sea, or the FLOOD. It represents life when DEW, rain, springs, or RIVERS are mentioned. In both cases the element is subjected to God's power (Ps. 74:13-15; Job 38:8-11; Gen. 1:2-2:3; 2:4-14). The creation and prehistory of all mankind, Israel's special history including its destiny to be the mediator of a covenant with the Gentiles, and the experience of the infant Moses and of Jonah all reflect in various ways salvation, despite, or through, water. Unlike second-century and later Christian liturgies and literature, the NT is reticent in referring to such stories. Only the passing through the Sea of Reeds and Noah's salvation "through water" are called "types" of baptism (I Cor. 10:2, 11; I Pet. 3:19-21). No connection is made between John's baptism and the crossing of the Jordan (Josh. 3). It is not the power inherent in water, but the coming, presence, and action of God and his Anointed which procure liberation from slavery and sin.

iii. Heterodox Jewish groups listened to the prophetic voices declaring "to obey is better than sacrifice" (I Sam. 15:22) and criticized a mechanical understanding of sacrificial cultus. In opposition to wicked priests in Jerusalem, baptismal movements originated and flourished in the Jordan valley between 200 B.C. and A.D. 300. Best known among them are the Qumran community (=the Essenes?), Josephus' teacher Bannus, John the Baptist, the Ebionites, the Elchasaites, and the Mandaeanes (see MANDAISM[S]). Non-Jewish, especially Persian and Gnosticizing ideas, and finally, fully developed GNOSTICISM increasingly influenced these groups. Water appeared to them cleaner than blood—a symbol more directly related to the purification of the heart. Though several baptismal groups shared ethical, eschatological, and apocalyptic traits with the PHARISEES, the orthodox rabbinate considered

them heretics (see HERESY). Among the (Christian) Ebionites, baptism was the sacrament of forgiveness, because it quenched the fires of the idol-makers, of the sacrifices, and of God's wrath (Pseudo Clement Recognitions I, 36-39, 48; VI, 6-9; Homilies III, 19-20; XI, 21-24). Only the Mandaeanes surpassed them in their enthusiastic descriptions of the effect of baptism. For most other groups, baptism was not a sacrament; it did not in and of itself save, convey the spirit, or wash away sins (Sib. Or. IV, 162-69; VIII, 315-16; IQS 3.4-12; Philo, *On Husbandry* 162, etc.; Jos. Antiq. XVIII.v.2). The dispute "over purifying" (John 3:25) and the emphasis placed in I John 5:6-8 on Jesus Christ's coming "by water and blood," not with water alone, may reflect tensions existing among baptismal doctrines of salvation. For all concerned, however, baptism signaled a way of life and meant admission to a closely knit community.

iv. The same is true of PROSELYTE baptism (see BAPTISM §1a), an official ritual with legal character established for Gentiles who, after a period of preparation, joined the Jewish faith and people. This baptism is certainly attested by the end of the first century A.D. If it existed as early as John the Baptist's public activity (ca. A.D. 28) and was known to him, then John's baptism of Jews (John 1:31; Acts 13:24) was an affront to Jewish self-consciousness. More likely, proselyte baptism spread only after the success of the Christian mission. Eventually, effects similar to those attributed by Gentiles to mystery cults were ascribed to proselyte baptism by rabbinic teachers. But the legal character remained paramount.

c. *Greek terminology.* The verb used in the NT for the act of baptizing (βαπτίζω) was well known in the literature of the period. It denoted an intensive or repeated immersion and had in most cases a metaphorical sense. A person was "baptized" with wine, sleep, or debts; also "with misery" (Isa. 21:4 LXX). Those NT passages that call the death of Jesus Christ "a baptism to be baptized with," and the pouring-out of the Spirit a "baptizing with Spirit" (Luke 12:50; Mark 10:38-39; see §1b above for references on Spirit baptism) were self-explanatory to Greek readers, without reference to the ritual performed by John the Baptist or the church. However, three times in the LXX (IV [RSV:II] Kings 5:14; Jth. 12:7; Eccus. 34:25) a ceremonial act of washing is denoted by the verb, and the NT builds upon these rare precedents.

The noun βάπτισμα, unlike its cognates βαπτισμός and βάπτισις, has not yet been found in pre-NT literature. Most likely the NT authors, or the traditions upon which they depended, used the uncommon term in order to distinguish the church's baptism from Greek mysteries and Jewish purifications (see, e.g., I Pet. 3:21 and Heb. 6:2).

d. *Descriptions and forms in the NT.* Speculation that the early church knew of no baptism for converted Jews or Gentiles has not proved tenable. The reconstructed sources of the Synoptic gospels, Q, and UR-MARKUS (see SYNOPTIC PROBLEM), as well as Paul and the diverse traditions gathered by Luke in Acts, demonstrate that baptism was practiced from the earliest days of Christianity. It must be acknowledged, however, that baptism is

mentioned rather infrequently in the NT. This suggests that it did not have originally that key position in the doctrine of salvation which it later acquired when church and sacraments began to overshadow the centrality of Christ's cross and resurrection. Some scholars dispute this conclusion on the following grounds: (1) that all NT passages which speak of washing, sealing, baptism with the Spirit, circumcision of Christ, enlightenment, rebirth, blessing of children, and anointment are baptismal texts; (2) that whatever the NT says of Jesus Christ, his cross, his resurrection, justification, the Spirit, or sanctification is by implication ascribed to baptism, which then assumes the role of mediation to the mediator; (3) that every time water is mentioned, especially in the Fourth Gospel, an allusion to baptism or an interpretation of its effect is present in the text; (4) that FORM CRITICISM (of the NT) and the study of cultic traditions can uncover a large number of NT verses, sentences, pericopes or books (e.g., Rom. 10:9-10; Col. 1:12 [or 15]-20; Ephesians and I Peter as wholes) containing baptismal formulas, confessions, hymns, sermons, or exhortations (see LITURGICAL MATERIALS, NT[S]). However, it is safer to rely only on those NT texts that speak explicitly of "baptism" and "baptizing" in the sense of a ritual act.

The forms of baptism have probably been manifold from the start. Immersion is suggested by the literal and metaphorical meaning of the Greek verb, the formula, baptize "into" the Jordan (Mark 1:9, Gr.), the reference to "much water" (John 3:23), and the mention of "descending" and "ascending" (Acts 8:38; Mark 1:9-10; Matt. 3:13-16; Luke 3:21-22). But it is unlikely that in Jerusalem, Samaria, Damascus, Philippi, Corinth, Rome, or Asia Minor enough water was always available for a full bath. The use of the formula "buried . . . with [Christ] by [or in] baptism" (Rom. 6:4; Col. 2:12) does not describe the form but the meaning of the rite, because Christ was not buried in water. On the other hand, the sprinkling of our hearts and the washing of our bodies "with pure water" (Heb. 10:22) contains an allegorical interpretation of an OT ritual, not a prescription for the modality of baptism. The DIDACHE (7:1-4; ca. A.D. 75) grants freedom to use cold or warm, also poured-out water whenever running water is not available. What is indispensable, however, at the administration of baptism, is some clear reference to its special cause and purpose. This may be either to Jesus Christ, or to the Father, Son, and Holy Spirit. The NT speaks of baptism "into," "upon," or "in the name of." Though reference to God's "name" can mean authorization (e.g., of healing, Acts 3:6) or appropriation (Isa. 43:1; Jas. 2:7), in baptismal texts it does not mean a transfer into the possession of the Lord, an insertion into salvation history, a magical transformation, or a mystical unification with the deity. It is rather—in analogy to the Hebrew formula *qārā beshem* (calling on the name [of the Lord]: Gen. 4:26; 12:8; 13:4, etc.)—a proclamation and invocation (cf. Acts 4:12, 17-20; 2:21). Thereby the action performed is distinguished from seemingly similar Jewish or pagan rituals.

2. The baptism texts of the NT. In the NT the meaning, nature, and effect of baptism are neither discussed (except in John 3:25) nor defined (except in I Pet. 3:21). But baptism is preached in narrative, confessional, and hortatory forms that reveal both the diversity and the unity of faith.

a. *John's baptism.* (See BAPTISM §1b.) The Synoptic gospels present John as a man who "preached baptism" (cf. Acts 10:37). At the "beginning of the gospel of Jesus Christ" (Mark 1:1), the "Baptist's" baptism has found an honorable place in all canonical gospels. In referring especially to Second Isaiah and apocalyptic hopes, John announced the imminent arrival of "Him who comes" to establish by judgment the kingship of God on earth. John's baptism is far from providing an asbestos suit against the threatening torrents of fire; nobody can flee from the wrath to come (Matt. 3:7; Luke 3:7). The "way of righteousness" which must be "prepared" (Matt. 3:3; 21:32) consists of people who "justify God," i.e., who confess that God is right even in his judgment (Luke 7:29; cf. Rom. 3:4). In baptism people confess their sins, hoping that God may perhaps grant them forgiveness. In Matthew's account the words "for the forgiveness of sins" are absent after the mention of repentance (Matt. 3:2; contrast Mark 1:4), but occur in the report of the Last Supper. Thus, Matthew emphasizes as much as the Fourth Gospel that the blood of Christ (Matt. 26:28), viz. the "Lamb of God" (John 1:29), takes away sin. While all synoptic descriptions of the Baptist's disciples show that a life of prayer and fasting belonged to repentance and baptism, Luke places a special accent on the new conduct of those baptized (3:10-14). Josephus (Antiq. XVIII.v.2) suppresses John's announcement of the coming Messiah; thus the Baptist becomes a superior moralist. The opposite view is offered in the Fourth Gospel; there the Baptist speaks only of the coming Messiah, and baptism "with water" offers merely the occasion for the revelation of the Messiah to Israel (1:31).

The messianic hope, the expectation of judgment by fire, the reference to a purifying spirit, the formation of a community of penitents representing the rest of Israel, the absence of a sacramentalistic understanding of the water rite, and ascetic living are among the elements which indicate an indirect rather than immediate connection between John the Baptist and the Qumran community (see DEAD SEA SCROLLS §5b; DEAD SEA SCROLLS[S] §8). But the refusal of the Baptist to receive honors as a (priestly) Messiah, the absence of legalistic traits, and the reference to the Spirit which will be poured out by the Messiah, distinguish his message from the Qumran doctrine about two (or three) messianic figures, two basic and conflicting spirits, daily baptism, and a rigorous monastic discipline. For the evangelists, the Baptist and his baptism were a preparation for the Messiah and for baptism in the name of Jesus. They were not a halfway house between OT and NT.

b. *The baptism of Jesus.* (See BAPTISM §1c.) In narrating Jesus' baptism, the gospels emphasize different things. In John 1:19-34; 3:22-4:3, the revelation of Jesus' identity as the Anointed One and the Lamb receives the emphasis; Jesus' baptism

by John is presupposed but not mentioned. Luke (3:21-22) mentions Jesus' baptism in passing, together with his prayer. These two gospels probably combat an overestimation (proto-Ebionite or proto-Gnosticizing?) of baptism in water (cf. I John 5:6-8). In Matthew (3:13-17) a sharp dialogue between the Baptist and Jesus explains why the water rite is "fitting"; it is the first step on the way to the Cross. Being tempted by the devil is a necessary consequence of Jesus' baptism, according to the Synoptic gospels; God tests and chastizes those whom he loves. The Father, the coming Messiah (or Son), and the Spirit mentioned in the Baptist's preaching became manifest in connection with Jesus' baptism. The shorter and the longer post-Easter baptismal formulas, "in the name of Jesus Christ" and "in the name of the Father and of the Son and of the Holy Spirit" (Acts 2:38; Matt. 28:19), include an implicit reference to Jesus' baptism by John, and in I John 5:6-8 the baptism of Jesus and that performed by the church are described by the same words.

Writers in the early church, Luther, and modern form-critical experts agree in considering Jesus' baptism as the institution of the church's baptism (cf. the LORD'S SUPPER §5). Jesus' descent into the water served to publicize his identity and mission, to establish his solidarity with sinners and to manifest the freedom in which he chose obedience, that is, the way to suffering and death. The declaration of the heavenly voice and the descent of the Spirit (Mark 1:9-11; Matt. 3:13-17; Luke 3:21-22) correspond to the "justification" of the crucified one by his resurrection (cf. I Tim. 3:16). Thus Jesus' baptism can be called his ordination and Christian baptism is in substance the ordination of each Christian.

**c. Baptism in Acts.** In the form of narrative theology Luke presents a collection of examples illustrating the meaning and function of baptism in the early church. Presuppositions of the administration of the rite are the following: the proclamation of and faith in Jesus the Messiah, the presence and manifestation of the Spirit, the gift of repentance and forgiveness, and the gathering and confirmation of one world-wide people of God. By baptism the church acknowledges the fact that God adds members to its body. Throughout Acts opposing views and practices are faced: a learned Alexandrian Jew who was in need of "more accurate" instruction from the Bible than John the Baptist had given when he announced the "coming" Messiah (18:24-28); disciples of the Baptist who did not know of the Spirit and had not realized that implicitly the Baptist had preached the coming Jesus and had baptized in his name (19:1-6); Samaritans who believed in Jesus and were baptized in his name but had not received the Spirit (8:12-17); a Samaritan magician (SIMON MAGUS, since the second century hailed or condemned as the father of Gnosticism) who considered the laying on of hands a (sacramental) means by which the Spirit was communicated (8:9-10, 18-24); and above all, Jewish Christians, including Peter and Philip, who needed special persuasion to prevent them from hindering the admission of Gentiles to baptism (8:36; 10:1-11:18).

According to Luke, the church learns step by step and from place to place what baptism is. The Spirit is a free gift of God which now precedes, now follows, the performance of the rite. A person who asks for and accepts baptism joins in the missionary proclamation of the name of Jesus Christ, expects or acknowledges the manifest power of the Spirit, seizes the chance to repent of his sins, begs with Jewish and Gentile fellow beggars for forgiveness, and rejoices in their company. While the mention of the baptism of "households" neither proves nor disproves infant baptism, the missionary and confessional setting of the baptism stories in Acts speaks against Origen's belief that this form of baptism reaches back to the age of the apostles.

**d. Baptism in the Pauline and Deutero-Pauline letters.** Unlike the Baptist of the Synoptic gospels and Acts, but in agreement with the image of John presented in the Fourth Gospel, Paul does not "preach baptism." Rather, he proclaims Jesus Christ as the Lord, crucified and risen for the justification of sinners. Most of the Pauline statements on grace and justification, and also those on communion (i.e., on dying, rising, and living with Christ), contain no mention of baptism (Gal. 2:15-21; II Cor. 4-5; Rom. 1-5; 9-10). Despite certain terminological parallels, the contents of Paul's sparse references to baptism cannot compete with the promises made by mystery religions concerning unity with a deity and a guaranteed transition from mortality into new or eternal life.

In the Pauline letters intimations regarding baptism occur only in ethical contexts. Decisive elements of the life and conduct in faith are structured after the model of baptism. I Cor. 1:13-17; 10:1-13; Gal. 3:26-28; Rom. 6:1-23; Col. 2:6-15; and Eph. 4:1-6 speak of the unity of the congregation as opposed to personality cult and party strife; oppose an inflated security which builds on baptism with the Spirit and with water (I Cor. 10:2); and witness to the equal dignity of all persons in Christ, to the old Adam's condemnation and the exclusion of immoral libertinism, to liberation from cultic and ascetic legalism, and to the high calling of all Christians as expressed by their confession. According to Gal. 3:27 baptism means taking up an office—much as a high priest or a Roman official took up an official function by donning a robe. The reference to the "confession" of Timothy may contain an appeal to his baptism (I Tim. 6:12). In each case, Christians are reminded of their baptism because it is a first step on a road still to be followed, an ordination, not a "mystery" that effects and guarantees righteousness. The one mystery, wisdom, and tradition, which the apostle serves and to which he bears testimony, is Jesus Christ, i.e., his sacrifice which is accepted by God. It is the gift of the Spirit rather than baptism that evokes that faith which corresponds to God's faithfulness.

According to Paul, neither death nor resurrection with Christ occur in baptism, but we are *buried* with Christ through baptism (Rom. 6:4; Col. 2:12). The striking description of baptism as a burial seems to offer less than the mystery religions, but it reveals that in baptism God's judgment is accepted (cf. Luke 7:29); i.e., in baptism

the sinner accepts execution with Christ on the cross. Baptism is, at the same time, the confession of one's hope and confidence in resurrection with Christ—hope for the resurrection on the last day as well as the confident anticipation of it in the present work of the Spirit. Paul attributes the believer's incorporation into Christ's body and the sealing for the final liberation to the Spirit's baptism and sealing (e.g., I Cor. 12:13; II Cor. 1:22; 5:5) not to the water rite. The "washing of regeneration and renewal of the Holy Spirit" through which God "saved us" (Tit. 3:5) is most likely the shedding of Christ's blood and the work of the Spirit. Similarly in John 3:3-8; 4:14; 7:37-39; 20:22, the promised water out of which one is reborn and which provides eternal life is identified only with the Spirit.

No satisfactory interpretation of I Cor. 15:29 has yet been found. In analogy to Rom. 6:1-4 this text may refer to those who with Christ have died to sin.

Col. 2:11 (cf. Eph. 2:11-16) describes Christ's death on the cross as the one, mysterious, and perfect CIRCUMCISION (of the human race), which defies representations, re-enactments, or competition by any ritual. Because the context combats a worship which extols cultic practices at the expense of faith and love, a replacement of (Jewish) circumcision by baptism cannot be intended.

**e. Baptism in Hebrews and in the Johannine literature.** From ca. A.D. 250 the exclusion of a second repentance in Heb. 6:4; 10:26; 12:17 was understood as a prohibition of a repetition of baptism. The fierce persecution of Anabaptists in the sixteenth century resulted from this interpretation of texts that do not even mention baptism. See also §§1bi, 2b, d above.

**f. Baptism in I Peter.** In the framework of an exhortation to bear fearless testimony to Christ in a hostile, pagan environment, I Pet. 3:21 offers a definition of baptism. "Baptism . . . now saves you, not as a removal of the filth of the flesh, but as a prayer to God for a good conscience through the resurrection of Jesus Christ" (author's trans.). The polemic strikes out against a confusion of baptism with mystery cults and, perhaps, Jewish purifications as well. Baptism is neither just an external bath nor the mysterious death of the sinner. It "saves" the way faith, confession of Christ, and prayer do—not as a magic work but as a sign of liberation and gratitude. Redemption and healing are something else; they are effected by the blood and the wounds of Christ (I Pet. 1:18-19; 2:24). Just as confession of sin (Mark 1:5; Matt. 3:6; Luke 7:29) and prayer (Luke 3:21) belonged to baptism and were its very substance, so in the spurious ending of Mark (16:16), faith and baptism are linked together. According to I Pet. 3:18-22, a confident public prayer directed to God in the name of the risen Lord corresponds to Christ's death and resurrection and with Noah's public testimony to salvation. Here baptism is explained as a petition for purification of the conscience by forgiveness and a pledge of faithful witness to God. I Pet. 3:21 offers a summary of the NT teaching on baptism and a criterion for the understanding and administration of the rite which as

much as the Lord's Supper forever connects the congregation of Christians with the history, worship, and mission of the people of Israel.

**BAR KOCHBA** bār kōk'bā. The leader of the Second Revolt against Rome (A.D. 132-135). Until the discovery of his letters, even his exact name was unknown to scholars. The name "Bar Kochba" (son of the star), indicating a messianic belief, has been preserved only by the church Fathers (Euseb. Hist. 4:6, 2). In Jewish sources he is called Bar (or Ben) Koziba, which may be interpreted as alluding to the word *kāzāv*, a lie. (Sanh. 93b; B.K. 97b; J.T. Ta'an. 4:8, 68d). In his personal letters discovered in the Judean Desert caves he is called "Simeon bar/ben Kosiba (h)," and it has now been confirmed that the name Simeon which appears on coins from the time of the revolt, together with the addition of the title *nasi* (head of government) of Israel, refers to Bar Kochba himself.

1. **The man and the leader.** Both the Christian and the Jewish sources mention that he was an aggressive, powerful, and even cruel man, who enjoyed wide support among the people and the rabbis. Many looked upon him as the Messiah of Israel. Talmudic sources record R. Akiba as having said of Bar Kochba, "This is the King Messiah" (J.T. Ta'an. 4:8; Lam. R.2:2). One well-known haggadah relates that Bar Kochba's men were initiated by having one of their fingers cut off. He was also known for his self-confidence. It is clear that some of these descriptions came from his opponents and those who were disappointed over the failure of the revolt. Some saw him as a Messiah who had failed them, while others saw him as a courageous military hero. The haggadah

relates how even Hadrian admired his bravery and leadership powers: "Bar Koziba was slain and his head taken to Hadrian. 'Who killed him?' asked Hadrian. A Samaritan said: 'I killed him.' 'Bring his body to me,' he ordered. He went and found a snake encircling its neck, so he exclaimed: 'If his God had not slain him, who could have overcome him?'" (J.T. Ta'an. 4:68, 74). Christian sources tell how Bar Kochba dealt harshly with Christian Jews who did not take part in the battle against Rome.

The title *nasi* of Israel found on the coins gives us no information about Bar Kochba's administrative powers, methods of organization, or the subdivision of those territories freed from the Romans.

The discovery of documents from this period in the Judean Desert caves (see §4b below) threw much light upon the questions relating to Bar Kochba's character, and also upon the socio-economic situation in Palestine during this period. See also MANUSCRIPTS FROM THE JUDEAN DESERT[S] §6.

**2. The historical events prior to the outbreak of the revolt.** The rise of Hadrian to power in A.D. 117 brought an atmosphere of calm to the Eastern Roman Empire, for the provinces were permitted to develop according to their national desires (see HADRIAN[S]). As part of his plan to bring civilization to the East, Hadrian promised the Jews that Jerusalem would be returned to them, and this in turn would allow them to rebuild the temple. But as time progressed Hadrian went back on his word and decided instead to develop Jerusalem as a pagan town for reasons that may either have been purely political or were connected to his firm desire to revitalize the Hellenistic world which he so greatly admired. In frustration and disappointment, the Jewish population began to prepare for war against Rome. Secretly they built fortifications and hoarded large amounts of weapons. Dio Cassius tells how the Jews would purposely damage the weapons given to them by the Romans for mending, so that they would not be acceptable and would therefore be abandoned to the Jews. In this way they accumulated weapons without arousing the suspicion of the Emperor. After Hadrian left Palestine (A.D. 128-132) the tension grew, and the Romans were forced to bring in another legion (VIth Ferrata) and to strengthen the Xth legion with auxiliary troops from neighboring countries. When he left the East the rebellion broke out in full force and, as Dio Cassius tells us, was simultaneously accompanied by the uprisings of Jews in the eastern Diaspora. It also appears that non-Jews took part in the battle, including some of the Samaritans who previously had treated the Jews badly.

Some historians claim that, as in the days of the Great Revolt (A.D. 66-73), so now too, local rulers and even "messiahs" gained power during the initial stages of the battles, but with the continuation of the revolt the messianic image of Simeon bar Kochba rose above all others, and he was proclaimed leader. Others, however, accept the historical sources which claim that Bar Kochba stood at the head of the rebellion from the be-

ginning. His preparations for this included the establishment of fortifications, the preparation of approach roads, the accumulation of arms, and the training of men. Messengers were also sent to encourage the Jewish communities of the Diaspora to send monetary contributions and volunteers to fight. Unlike the First Revolt, there are no signs of internal conflicts among the people, and it seems that it was this united front that allowed the rebels to put up such a fierce and stubborn fight against the Romans.

**3. The revolt.** The revolt began with great momentum in A.D. 132. Military service was made compulsory. Bar Kochba gained control over all Judah, including Jerusalem, and also over large sections of the rest of the country. Independent government was established in the regained territory, and Hebrew coins were minted, dated in the year of "*geulat* (the Redemption) of Israel," "*herut* (the freedom) of Israel" or "*herut* Jerusalem." Lands that had belonged to Caesar now passed into the hands of the Jewish government and were leased on Bar Kochba's behalf. Among the documents found in the Judean Desert caves that pertained to the lease of land are some that have been dated to the first year of the revolt. The Jewish authorities appear to have organized themselves with incredible speed.

The second stage of the war began with the arrival of Publius Marcellus, the governor of Syria, in command of the legions stationed there and auxiliary troops from Egypt and Arabia. The Jews had the upper hand even against such formidable forces, and the XXII Legion (Diotrajana) that came from Egypt was totally destroyed, never to be mentioned again. During this stage the rebels extended their borders to the coast.

The third, decisive, stage began with the arrival of Julius Severus, the governor of Britain, together with his troops and other legions from the area around the Danube. Twelve Roman legions took part in this stage of the war—some in their entirety and others represented only by certain detachments. In addition, many auxiliary troops were sent to back them up. The legions that fought included the Xth, VIth, XXIInd (mentioned above), the IIIrd (Cyrenaica), the IVth (Scythica), the IInd (Trajana), the Vth (Macedonica), and the XIth Legion (Claudia).

During the early stages of the battle Galilee was taken from the Jews, and the full force of the war, with all its destructiveness, moved to the Judean Hills. Slowly but surely the Jews were forced into their last stronghold, Bether, SW of Jerusalem, commanding a strategic position at the edge of a mountain range.

The war lasted three and a half years and ended with the fall of Bether in A.D. 135, after a long siege. According to Jewish tradition, Bether was captured on the ninth of Av, the same day that both the first and second temples were destroyed. Although the revolt officially ended with the conquest of Bether and the death of Bar Kochba, the last of the rebels fled to the caves of the Judean Desert, where they continued their desperate struggle against the Romans until they too were eventually destroyed.

Dio Cassius has recorded that when addressing the Roman Senate, Hadrian did not begin with the usual phrase: "I and my army are well," a sure sign that for the Romans too this was a fierce and difficult war. Dio Cassius writes of 50 fortresses and 985 villages that were destroyed in Judah, while 580,000 people were killed. Even if these numbers are somewhat exaggerated, they still impress upon us the extent of the damage in Judah.

4. **Archaeological discoveries.** *a. Coins.* Until the 1950s the thousands of Bar Kochba coins that were uncovered provided archaeologists with the sole proof of the existence of the Second Revolt. All these coins, whether silver or copper, were struck upon originally Roman coins, and on some of them Roman heads and letters can still be seen beneath the Hebrew lettering. Chronologically the coins may be grouped into 3 types by their inscriptions: (1) "Year One of the Redemption of Israel"; (2) "Year Two of the Freedom of Israel"; (3) "The Freedom of Jerusalem" or merely "Jerusalem." It is uncertain whether this latter type was struck in Year Three, or at the beginning of the revolt. One of the letters from the Judean Desert caves, dated "The Third Year of the Freedom of Jerusalem," may possibly be proof that the rebels held Jerusalem until the third year of the revolt. Many of the coins are stamped with Bar Kochba's first name, Simeon, sometimes accompanied by his title "*nasi* of Israel." Others also bear the name "Elazar the Priest," while the symbols on the coins signify the messianic nature of the revolt and the longing for the return of a Jewish government, particularly in Jerusalem. These symbols include the façade of the temple, palm branch and citron, an oil-libation jug, a bunch of grapes, a palm tree, a vine leaf, and a holy instrument from the temple.

*b. The Bar Kochba documents.* At the end of 1951 some Bedouin offered to sell to an antique dealer in Jerusalem a few pieces of papyrus with Hebrew and Greek lettering. The source of these papyri was the Wadi Murabba'at in the Judean Desert about 11 miles S of Qumran. During the course of 1952 similar papyri were bought from the Bedouin, among them a letter which opened with the words "From Simeon ben Kosiba to Joshua ben Galgula and the men of the fort, Shalom!" Here for the first time the true name of Bar Kosiba was revealed, and the riddle concerning his various names was solved. It appears that his admirers such as R. Akiba called him Bar Kochba, while his opponents, particularly after his failure, changed his name to Bar Koziba.

As a result of these discoveries Israeli archaeological expeditions were organized in 1953 and 1955 to survey the caves in Nahal Hever, but returned with nothing of particular interest. In 1960/61 another expedition set out to survey a row of caves in Nahal Hever, Nahal Ze'elim, and Nahal Mishmar. In the caves of Nahal Hever dozens of documents and other finds from the Bar Kochba period were discovered. Above Nahal Hever the remains of two Roman camps were found, proving that even after the fall of Bether the Romans continued to pursue the Jewish rebels now

hiding out in the Judean Desert. See also MANUSCRIPTS FROM THE JUDEAN DESERT[S] §§2a, b, 6.

*c. Caves in Nahal Ze'elim.* Here too articles from the time of Bar Kochba were uncovered, including the skeletons of men, women, and children, weapons (arrows), parts of phylacteries, and papyri written in Aramaic and Greek.

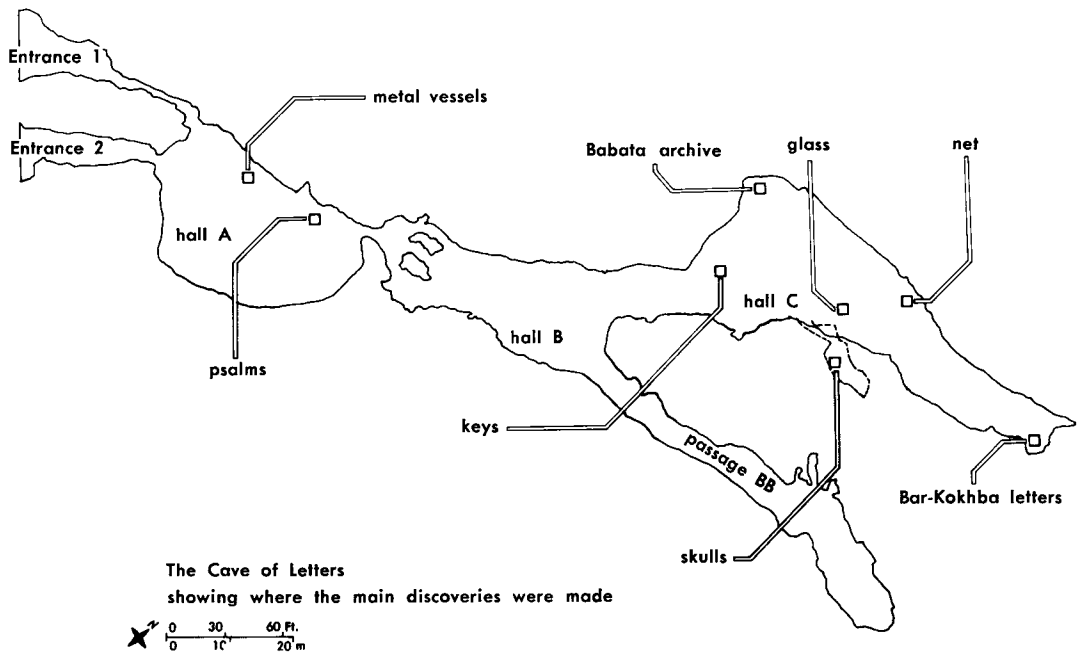

*d. The caves of Nahal Hever—the Cave of Horrors.* The name is derived from the fact that forty skeletons were found there. In addition, coins from the time of the revolt were discovered, as well as pottery, glassware, tools, and some ostraca and papyri written in Hebrew.

*e. The caves of Nahal Hever—the Cave of the Letters.* This cave was excavated under the supervision of Yadin in 1960-61 and is particularly famous for the rich treasure of documents belonging to the Bar Kochba period. Also discovered there was bronze ware obviously taken from the Romans as booty. The human figures or images on these vessels were totally or partially defaced, thus permitting the Jews to use the ware. Glass, wooden vessels, and many household utensils were discovered, and even cloth had remained in good condition as a result of the dry climate (see Fig. B1). Several groups of documents were also found in this cave:

*i. The archives of Babata.* The largest collection of documents found here constituted the archives of Babata, daughter of Simeon son of Menahem. There are thirty-five documents covering the years A.D. 93-132, written in Nabatean, Aramaic, or Greek. They deal with the events in the day-to-day life of Babata and her family, and thus throw light on the socioeconomic situation in Judah and the province of Arabia at this period.

*ii. The archives of the inhabitants of En-gedi.* This is a group of six documents written mainly in Hebrew with only a few in Aramaic. Some are dated "On the 28th of Marheshvan the Third Year of Simeon ben Kosiba *nasi* of Israel" and were actually written in En-gedi. All these documents deal with administrative matters concerning various land transactions between the official administrators of Bar Kochba in En-gedi and private individuals. Through them we learn much about the organization of government in Israel during this period and now know, for example, that the lands of En-gedi were leased by Jonathan Ben *Mhnyim*, the administrator of Simeon ben Kosiba, *nasi* of Israel.

*f. The Bar Kochba letters.* These consist of fifteen documents in Hebrew, Aramaic, and Greek; fourteen were written on papyrus and one on a wooden board. The two Greek letters were written by Bar Kochba's officials. They are all in the first person, although they were clearly written by different scribes. Most of the letters begin, "Simeon bar Kosiba to Jonathan bar Ba'ayan and Masabala bar Simeon . . ." These two men were military commanders at En-gedi. The letters deal mainly with matters concerning the supply of grain, salt, *lulab* (palm branch), *ethrog* (citron), *hadas* (myrtles), and *arava* (willow). It appears from one of the Hebrew letters that the supply situation in Bar Kochba's army was bad and that his many requests were not fulfilled by the com-

The Cave of Letters  
showing where the main discoveries were made

After Y. Yadin, *Bar-Kokhba*

1. The Cave of Letters, showing finds from the 1960 excavation

manders of this front: "From Simeon bar Kochba to the men of En-gedi, to Masabala and Jonathan bar Ba'ayan, peace! In comfort you sit, eat and drink from the property of the House of Israel, and care nothing for your brothers" (see INSCRIPTIONS, SEMITIC[S] Fig. 1). In a few letters Bar Kochba even demands the arrest of some inhabitants of En-gedi for not having fulfilled his orders.

From a document written in Greek we learn that non-Jews also served in Bar Kochba's army. This agrees with Dio Cassius, who wrote that other nations aided the Jews in their wars against Rome. A letter which is addressed to Jonathan bar Ba'ayan and Masabala informs the commanders that a man named Agrippas will be sent to them to collect the palm branches and citrons and to take them to the "camp of the Jews." Even in time of war these orthodox Jews still went out of their way to fulfill all the laws and customs of their religion (see MANUSCRIPTS FROM THE JUDEAN DESERT[S] §6). The letters also tell us that the men called each other "brother."

*g. Sites connected with the revolt.* i. *Bether* is today the Arab village *Bittir*. The hill upon which the fortress was built was naturally defensible, as it rises about 2,300 feet above sea level, is bounded on the NE and W by a deep canyon and on the S by a moat about 16 feet deep, 50 feet wide, and about 262 feet long. The fortified core spread out over 25 acres of land, but few remains can be seen on the surface today, and the site has not yet been excavated. The wall has semicircular towers. Its remains show that parts of it were built in a hurry. From aerial photographs taken of the area one can pick out a Roman wall ("circumvallatio") surrounding Bether, and Roman mili-

tary camps established during the siege. The wall has a circumference of about 13,000 feet. The assault ramp that the Romans constructed to cross the moat is also clearly visible.

We learn from an inscription found near Bether that it was the Vth and the XIth Legions that camped there against the Jewish rebels.

ii. *Herodium*. See HERODIUM[S].

iii. *Qumran*. It was destroyed after the First Revolt, but finds at the site prove that even these ruins were inhabited by Bar Kochba's rebels. Many coins from this period were discovered here.

*Bibliography.* For detailed bibliography see Y. Yadin, *Bar-Kokhba* (1971). Y. YADIN

\***BARNABAS, EPISTLE OF.** See APOSTOLIC FATHERS [S] §1.

**BASILIDES.** See GnosticISM §2d; GnosticISM[S] §4c.

\***BASTARD.** There is no clear evidence that scripture possesses any strict equivalent to this technical term.

1. *New Testament.* νόθοσ (Heb. 12:8), rendered bastard in KJV and illegitimate child in RSV, is used in contrast to the word for son. The general sense of the word is baseborn, spurious; it was used in Athenian law to designate the child of a citizen father and an alien mother, and in papyrus records to indicate half-breed animals. The latter senses of the term (or something like them) may have been intended by the author of Hebrews, especially if, as recent research has suggested, he was addressing the Samaritan community. The author's line of argument in the passage would be roughly the following: although the Samaritans are heirs to the promise made to Abraham (cf. Heb.

6: 13-20), to receive that promise they must accept suffering; if they fail to do so, they are only proving the correctness of Judahite anti-Samaritan propaganda, which insists that they are half-breeds. The Hebrew term *mamzēr* was used in the Mishnaic-Talmudic period to designate, among other things, the offspring of a Judahite mixed marriage. It is specifically said to include the offspring of unions between members of the ten tribes and the heathen nations (J.T. Yeb. 16b), and Cutheans (the Judahite term for Samaritans) are listed with *mamzērīm* in various Talmudic dicta (e.g., in J.T. Yeb. 68a).

2. **Old Testament.** מַמְזֵר [*mamzēr*] (Deut. 23:2 [H 23:3] and Zech. 9:6; bastard both times in KJV; so for the first in RSV, mongrel people for the second) is a term of uncertain meaning in biblical Hebrew. In the Mishnaic-Talmudic period, it meant the offspring of a forbidden union; one major tradition specified the offspring of a union punishable, according to Pentateuchal law, by death (lit. "cutting off," whence Jerome's translation of *mamzēr* as *separator*). Virtually all modern scholars, wisely refraining from too precise definition, accept some form of the Mishnaic-Talmudic understanding of the term. The rabbinic discussions of *mamzēr* are not characterized by consistency, and it is evident that the rabbis had no clear-cut traditions regarding the term (see T.B. Yeb. 49a, 44a-45a, 14a, 16a-b, 37b, 66a, 68a, 69b, 78b; T.B. Ḥor. 13a; T.B. Kid. 69a, 71a). In fact, it is possible that the term does not refer to blood descent at all. In the rabbinic discussions, attention is focused on a presumed semantic field or general area of meaning (irregular descent) and on the context of the Deuteronomistic usage. Most rabbinic attempts to specify the meaning of *mamzēr* rely on exegeses of Deut. 22:30 [H 23:1], which in turn depend on attempts to harmonize that prohibition with the rest of the Pentateuchal incest laws. Now, it seems likely that a similar procedure was used to determine the presumed semantic field of *mamzēr* in prerabbinic times. Deut. 23:3 [H 23:4] refers to Ammonites and Moabites, cultural entities supposed in the Genesis narratives to be products of an incestuous union between Lot and his daughters (Gen. 19:30-38). Prerabbinic readings of the passage may well have assumed that the text of Deut. 23:2-3 [H 23:3-4] was arranged from the greater to the lesser, that is, that the prohibition of Ammonites and Moabites was only a special case of the *mamzēr* prohibition, and thus what was wrong with Ammon and Moab was wrong with *mamzērīm* in general.

Even if it is correct to reject the traditional association of biblical *mamzēr* with irregularity of descent, it is not easy to deduce the original sense of the term. The rabbis offer a clue by way of indirection: Deut. 23:1 [H 23:2] is almost never associated with Deut. 23:2 [H 23:3] in their debates (cf., however, T.B. Yeb. 75b). The parallelism of the verses may suggest, however, that they do belong together and that *mamzēr* originally designated a person with physically defective sex organs. In fact, the contrast of the two verses may suggest that Deut. 23:1 [H 23:2] refers to mutilated

men unable to beget children and 23:2 [H 23:3] to those who, though mutilated, still could be fathers. The exact constitution of this group is hard to specify, but the threat of non-viral venereal and venerally transmitted diseases, some readily transmissible at birth, may be relevant.

The term is used in Zech. 9:6, but that entire oracle (vss. 1-8) is obscure and contributes little to the elucidation of the problem. It may refer to the reign of a half-breed king in Ashdod (cf. Neh. 13:23 ff. and possibly Josh. 11:22).

3. **Jesus as *mamzēr*.** One of the standard Jewish anti-Christian polemics of the Middle Ages, the *Toledot Ješu*, regards Jesus as a *mamzēr*. Cognate traditions specify that he was the son of a Roman soldier named Panthera, whose foreign origin made Jesus the child of a mixed marriage and thus a *mamzēr*. This tradition has roots in late antiquity. It first appears in Origen's *Contra Celsum* 1.32, in a passage containing information provided by Celsus' Jewish informant. The story is alluded to several times in the Mishnaic-Talmudic materials (T.B. Yeb. 49a-b; possibly T.B. Yom. 66d and T.B. Kallah 51a). The story was never dominant in Jewish polemic and is interesting only as a demonstration of how seriously Jews took the gospel narratives of Jesus' irregular birth.

\***BEARD.** See HAIR[S].

**BEBAI.** One of the "chiefs of the people" who joined Nehemiah in setting their seal to the covenant which the Judean people made with God (Neh. 10:15 [H 16]).

\***BEEROTH.** This town could hardly have been in the N part of Benjamin's official territory since other clans, viz., Zuph, the Archites, and the Japhletites (from E to W) were there from very early times; Zuph must have included modern el-Bīreh since Ramah (Ramath-zophim) belonged to it (I Sam. 1:1, 19; 7:17; 9:5). The original Gibeonite territory must be sought in the S part of Benjamin where three of the four cities are positively identified: Gibeon, Chephirah, and Kiriath-jearim. The ancient name has been preserved at Khirbet el-Biyār, a Roman-Byzantine ruin beside the wadi between Beit Ḥannīnā and Nebī Samwīl, but the Gibeonite Beeroth was probably located on the ridge above at Khirbet el-Burj. Euseb. Onom. 48:9-10 means that the turnoff to Beeroth was seven miles from Jerusalem on the road to Nicopolis.

\***BEER-SHEBA.** 1. **The site.** Tel Beer-sheba (Arab. Tell es-Sa ba') is situated ca. four miles E of the modern city of Beer-sheba. Excavations which began in 1969 have uncovered a well-planned city of the period of the united monarchy, apparently the ad-

ministrative center of the Negeb. The city was built upon an artificial rampart, approximately nineteen or twenty feet high, affording both better security and an imposing view of the entire region. Although the city was quite small, no more than three acres, its defenses were of unusual strength. Two successive walls have been excavated, both of sun-dried brick with stone foundations. The earlier is a massive solid wall reinforced by a glacis; at the foot of the slope there was a deeply cut fosse. This wall, which existed throughout the tenth century (strata VI-V), was destroyed early in the ninth century and replaced by a casemate built upon the foundation of the solid wall. It was surrounded by a new and higher glacis resting on limestone revetments. The casemate existed almost two hundred years (strata III-II) and was destroyed in the eighth century.

2. **The city.** Beer-sheba was a well-planned city from the time of its inception. The salient feature was a street encircling the city, always equidistant from the casemate, with rows of buildings on either side. The architecture is consistently the typical "four-room house," with one broad and three long rooms divided by a row of pillars. On the SE side of the tell, two superimposed gates were discovered, belonging to the two successive walls, each containing a broad gateway flanked on either side by two gate rooms. Immediately to the right of the gate a complex of large, identical buildings was discovered, each with three long halls divided by two rows of pillars, with shelves in-between. Their contents clearly show that they

were storehouses of the royal city, and strongly strengthen recent suggestions that the "Megiddo stables" were storehouses as well. The water system has been discovered in the NE section of the city, but has not been excavated. See MEGIDDO[S].

The Israelite city lasted only about 250 years and virtually came to an end when it was destroyed, probably by Sennacherib in 701. In the seventh century (stratum I) a retaining wall was built against the remains of the ruined casemate, but no floor levels or evidences of construction have been found. During the Persian, Hellenistic, and Roman periods the tell was the site of fortresses.

3. **The altar.** References by Amos (5:5; 8:14) led the excavators to assume the existence of a significant cult place in the city. But in view of Hezekiah's efforts at centralization of worship (II Kings 18:22), a cult site at Beer-sheba would probably have been destroyed. During excavation of the storehouse walls, there appeared, in a restored section of the walls, some smoothed ashlar blocks of calcareous sandstone. When removed and re-assembled they were revealed to be a large horned altar (Exod. 27:2; 38:2; Amos 3:14; I Kings 1:50; 2:28). See ALTAR §2; Fig. B2.

4. **The temples.** Opposite the gate was a unique building with basements extending to bedrock and all previous strata completely absent. This suggests that this was the site of a temple which had been totally destroyed in the cultic reform of Hezekiah. The memory that the site was sacred may account for the construction of a Hellenistic temple nearby (third and second centuries B.C.).

2. Horned altar of burnt offerings from Beer-sheba, found in the 1973 season

5. The well. In front of the city gate there is a well which has already been excavated to more than sixty-five feet. Archaeologists suggest the intriguing possibility that this is the well of the patriarchal tradition. See PATRIARCHS[S] §1d.

Excavation at Tel Beer-sheba continues.

\***BELOVED DISCIPLE.** This unnamed disciple of Jesus who figures prominently in chs. 13-21 of the GOSPEL OF JOHN is identified as the author of the gospel in 21:20-24. These verses, as well as the rest of ch. 21, are almost certainly secondary in their present context, if not the product of a later hand. Other possible references to this same figure occur in 18:15 and 19:35. While 19:35-36 has been regarded as a redactional gloss, it may be a note from the evangelist referring to the authority standing behind his tradition. The other passages in which the beloved disciple figures are more integral to the gospel.

The numerous efforts to identify the beloved disciple with some historical figure began with the tradition of the early church, according to which he was John the son of Zebedee. Quite apart from the fact that no such explicit identification is made in the gospel, that tradition presents difficulties. It cannot be traced into the early part of the second century; none of the synoptic episodes involving John the son of Zebedee are found in John; and none of the specific incidents involving the beloved disciple are found in the Synoptics. Since no other identification of the beloved disciple with a single historical figure has gained wide acceptance, it has been maintained that he represents no historical personage at all, but is a purely symbolic figure. Clearly he is an idealized figure. For example, in his rivalry with Peter he seems always to have the edge. But just this depiction suggests that he was a person of some importance for the Johannine churches. Probably he was a historical figure, even though the gospel accounts of him may be largely legendary. Certainly 19:35 and 21:24 presume his actual existence. If his historicity is denied, such passages must be construed as the product either of ignorance or of intentional fabrication, and neither of these alternatives is satisfactory.

\***BEN-HADAD.** At the heart of the "Ben-hadad controversy" has been the translation and meaning of the inscription on a votive stele found near Aleppo (see BEN-HADAD Fig. 28). It was dedicated

to the Phoenician god Melqart (Milqart or Melcarth) by a certain Ben-hadad of Damascus.

H. Winckler and E. Meyer, followed by Albright, maintained that there were only two kings of Aram by the name of Ben-hadad. Scholars have recently proposed as many as four, each with different contemporaries from those Albright proposed. See DAMASCUS.

Using new photographs of the stele in various lightings, Cross has proposed the following reading: "The Stele which Bir-hadad, son of 'Ezer ('Iqr) the Damascene, son of the king of Aram, set up to his lord Milqart to whom he made a vow and who heard his voice." On paleographical grounds, Cross dates the stele to the mid-ninth century B.C.; he then proposes the following chronology for the Damascus kings: Ben-hadad I (son of Ṭābramān, ca. 885-870; Ben-hadad II (Hadad-'idr, ca. 870-842); Ben-hadad III (son of 'Iqr, ca. 845-842—possibly co-regent?); Hazael ("son of nobody," ca. 841-806); and Ben-hadad IV (Mar'i, ca. 806-?).

If this dating is accurate, it identifies Ben-hadad II with the Adad-'idri (Hadad-'ezer) of the Assyrian annals and makes him a contemporary of King Ahab of Israel.

\***BENJAMIN, BENJAMINITES.** 1. The name. Benjamin properly means "son of the South, Southerner," and seems to be a secondary formation. The gentilic forms, such as בן (ה) ימיני or בן איש ימיני (son of a man of Yamin), singular, or בני ימיני (sons of Yamin), plural, indicate an original tribal designation בני ימין (not attested). Such an analysis is supported by forms such as איש ימיני, "Yamini man, Benjaminite" (II Sam. 20:1), and ארץ ימיני, "Yamini land, land of Benjamin" (I Sam. 9:4). The name of the eponymous ancestor, Benjamin, would then be a secondary formation from an original group name, leading to the plural form בני ימין, "Benjaminites."

2. **Benjaminites and the Mari texts.** The discovery in the MARI texts of a tribal confederation known as DUMU.(MEŠ)-ya-mi-na (and variants), "son(s) of the South, Southerners," whose members played an important role in the early second millennium, raised new questions. (The name of another confederation, the DUMU. [MEŠ]-si-im-a-al, "son[s] of the North, Northerners," removed any doubt about the interpretation of the name.) Initially this confederation's name was interpreted as West Semitic, viz., Benē-yamina or Bin/Banū-yamina, which is virtually identical with Benjamin. Some scholars saw a relationship in name only—"Southerners" being a tribal designation that could develop independently—while others, buttressed by the many parallels between Mari society and early Israel, saw the Israelite group as historically de-

rived from the Mari confederation of the eighteenth century B.C. Further support for the derivation has been found in the Mari clan (?) name, Yariḥ (ū), associated at times with clans of the DUMU.MEŠ-yamina, which has been identified with the name of the Benjaminite city Jericho. (See, however, JERICHO[S] §1.) Also, of the three well-attested clans of the DUMU.MEŠ-yamina—individuals within the confederation were identified by their clan or town—*Ub/prab/p(iy)u* has been connected with RAPHA, Benjamin's fifth clan or "son"; *Yaḥurru/Yaḥruru*—probably to be identified with later *Ya'ur(r)i*—has been connected with the name of Judah's first-born "son," ER, and *Aw/mnanu* has been connected with the name of Judah's second-born "son," ONAN. But these identifications are only possibilities at best.

It now seems clear that the Mari scribes interpreted the confederation's name as either *Mār(ū)-yamina*—reading the logogram as Akkadian, not as West Semitic—or merely Yaminites, which lessens the parallel. It is still possible that there was a relationship in more than name between the "Southerners" of Mari and Israel, but it cannot now be proven.

\***BESTIALITY. 1. In the Bible.** The practice of bestiality is implicitly rejected in the biblical account of the creation of Eve (Gen. 2:18-24), according to which the futile search for a fitting partner for man from among the animals, wild beasts, and birds necessitated God's creation of woman. The explicit prohibition against the copulation of human beings with any animal appears in the Covenant Code (Exod. 22:19 [H 18]), the Holiness Code (Lev. 18:23; 20:15-16) and the Deuteronomic ban (Deut. 27:21). Biblical legislation considers such unnatural couplings to be capital crimes, in which both the human being and animal are put to death. Bestiality is listed, together with incest and sodomy, among those crimes which pollute the land, causing the expulsion of its inhabitants.

2. **In the ancient Near East.** Aside from the biblical law corpora the only other ancient Near Eastern legal literature which deals with bestiality is that of the Hittites. The Hittite Laws distinguish between forbidden and permitted forms of bestiality. Sexual relations between a man and a cow, sheep, pig, or dog were categorized as *ḥurkel* and punishable by death (§§187, 188, 199—*ANET* [2nd ed.], pp. 196-97). The Hittite term *ḥurkel*, which also designates incestuous offenses, is interpreted generally as "abomination; detestable act" (cf. Heb. *tô'ēbhā*). Hoffner, however, cogently argues for the more restrictive meaning of "forbidden sexual combination" (cf. Heb. *tebhēl*). Both the human and animal offenders were executed unless spared by the king. From the Hittite

Instructions it is clear that the spared offender would nevertheless be subject to banishment. The execution of the animal alone is specified only when the act was initiated by a sexually aroused animal, in which case the human is absolved from blame. There is no indication, however, that the animal was ever spared in cases where the human offender was put to death. Sexual relations between a man and a horse or a mule were deemed permissible, entailing no punishment (§200A). The act, however, seems to have rendered the man defiled like one who had coupled with forbidden animals since both were not allowed to appear in the presence of the king. The impurity of bestiality also polluted the town of the offender so that after his death or banishment, purification rituals were performed to ensure the well-being of the community. Other Hittite rituals indicate that at a later period (fourteenth and thirteenth centuries) the human offender need not be killed or banished. By the performance of rituals in which the animal is sent forth from the town laden with the impurity of the act, the human offender could remain in his town without incurring divine wrath.

Mesopotamian references to bestiality are found in scholastic and literary texts. According to the dream omens from Susa, a man's dream of sexual relations with a bull or wild beast is interpreted as a propitious sign that his house will prosper. However, according to the omen series *shumma ālu*, the sexual advances of a dog or pig upon a woman bode ill for the land. Mesopotamian literary texts ascribe acts of bestiality to the goddess Ishtar-Inanna. The Sumerian hymn *Ninegala* refers to Inanna's copulation with horses. This motif is also reflected in the sixth tablet of the *Gilgamesh Epic* where the spurned goddess Ishtar is depicted as the wanton lover of a bird, lion, and stallion (lines 48-56; *ANET* [2nd ed.], p. 84). The assertion that the *Gilgamesh Epic* also refers to Enkidu's practice of bestiality before his encounter with the courtesan (tablet one) is only an assumption without explicit textual support.

Like the Mesopotamian literary references, Canaanite references to bestiality are limited to the mythological plane. The only attestations to this practice in Ugaritic literature are found in the Baal and Anath cycle describing Baal's copulation with a heifer and his fathering of a bull-calf. Such mythological references cannot be viewed as corroborating evidence for the biblical indictment against such Canaanite practice (Lev. 18:27), since mythology is not a direct reflection of human behavior. In myth, gods act at times in a manner considered criminal or immoral in human society. Furthermore, ancient conceptions of deities often blur distinctions between human and animal forms, and animals often appear in religious literature as poetic metaphors for gods. Thus the Egyptian text which describes the rape of Anath by Seth in the form of a sacred ram cannot be considered evidence for the Egyptian practice of bestiality.

3. **In the Greco-Roman period.** Both Christian and Jewish sources paint a dark picture of pagan morality in the Greco-Roman world. Paul's description of pagan sexual depravity (Rom. 1:24-27)

may allude to bestiality. Explicit reference is found in the Mishnaic prohibition against placing animals in inns kept by the heathen since they are suspected of intercourse with them ('A.Z. 2.1). It seems, however, that the only classic reference to the actual practice of bestiality is found in Herodotus (II.46), who, in relating that a woman from the Mendesian province had public intercourse with a he-goat, described the affair as "a monstrous thing." Other references in classic literature mention bestiality only in myths, fables, and romances. Zeus approached Leda as a swan and Persephone as a snake. Pasiphaë, wife of Minos of Crete, is said to have coupled with a bull, giving birth to Minotaur. Love scenes with animals were also represented in Greek theater, as in the pantomimus of *Pasiphaë* and Lucian's *Lucius or the Ass*. These references, however, do not attest to the common practice of bestiality among the Greeks or Romans.

**BETH-EDEN.** See EDEN[S].

**BETHEL-SHAREZER** bēth'el shār š'zēr [בית-אל שר-אזר, "May (the god) Bethel preserve the king!"]. A proper name, according to NEB Zech. 7:2. It would thus reflect a name-type common in Akkadian: (divine name) *-šar-ušur*, e.g., NERGAL-SHAREZER (Jer. 39:3), "May (the god) Nergal protect the king!" (see BETHEL [DEITY]). Other translations understand Bethel to be a place name: "[the people of] Bethel sent Sharezer . . ." (RSV), in which case SHAREZER would be a shortened (or familiar) name (i.e., with the god name dropped), as in II Kings 19:37.

\***BETH-HACCHEREM.** The site (in the abbreviated form כרם[קסמ]=vineyard) is included in the Bethlehem district in a list of cities preserved in the LXX (Josh. 15:59). Jer. 6:1 mentions it as a stronghold S of Jerusalem. In the postexilic period it was a district capital. According to the Mishna (Midoth 3:4), the stones of the altar were brought from the Valley of Beth-haccherem. In IQapGen. (22.13-14) the King's Valley near Jerusalem is identified with the Valley of Beth Karma (בית כרמא), the Aramaic form of Beth-haccherem). In 3Q15 Beth-haccherem is mentioned among the hiding places of treasures between "the great Naḥal" and the Pillar of Absalom near Jerusalem.

The sources define its location on a high point S of Jerusalem and in its immediate vicinity. This does not fit the commonly accepted identification with 'Ein Karem, located at a low spot W of Jerusalem. A much better suggestion is the identification with Tel Ramat Rahel, situated on a hill between Jerusalem and Bethlehem. Five seasons

of excavations there were carried out (1954, 1959-62) by a joint Israeli-Italian expedition.

Occupation commenced in the late ninth or eighth century B.C. (stratum VB) when a royal fortress was built, surrounded by private dwellings. This was probably the "House of the Vineyard" from which the name of the settlement stems. In the following level (stratum VA) one of the last kings of Judah erected an imposing palace surrounded by a lower citadel covering about five acres. Special finds included a seal impression of "Eliakim, steward of Yokhin (=Jehoiachin)." It seems probable that the palace was built by his father Jehoiakim, since it fits admirably the description in Jer. 22:13-19.

In the next settlement (stratum IVB) many seal impressions from the Persian period were found, which fits well the status of a district capital. In addition to numerous seal impressions inscribed "Yehud" (Judah) and "Jerusalem," others were stamped with the names Yehoezer and Ahzai, who were governors (and high priests?) during the fourth century B.C. After the destruction of this citadel an unwalled settlement (stratum IVA) took its place until the end of the second temple period. Later, buildings of the Xth Roman Legion were erected on the hill (stratum III), replaced in the fifth century A.D. by a church and monastery (stratum II). This is evidently the "Kathisma" church (mentioned in Byzantine sources) on the traditional resting place of Mary on her way to Bethlehem. The last occupation phase (stratum I) belongs to the early Arab period (seventh century).

\***BETHLEHEM.** Minor excavations by the Franciscan Fathers in the grottoes beneath the basilica have produced evidence of Iron Age and first-century A.D. occupation, while E of the church of St. Joseph excavation has produced several deposits of Iron Age pottery. Perhaps most important has been the isolation, in 1969, of the Iron Age tell. The limits of the Iron Age occupation, while not entirely clear, appear to be on the flat surface and the slopes immediately beneath the basilica and to the E. The work was carried out by the Israel Archaeological Society.

Bethlehem appears to have been a major area of occupation from the Paleolithic period. The most recent survey is that of Stockton in 1964.

**Bibliography.** R. P. B. Bagatti, "Bethléem," *RB*, LXXII (1965), 270-72; S. Gutman and A. Berman, "Bethléem," *RB*, LXXXVII (1970), 583-85; E. Stockton, "The Stone Age of Bethlehem," *SBFLA*, XVII (1967), 129-48. J. B. HENNESSY

\***BETH-SHAN. I. The tell.** Publications forty years after the excavations (1921-33) at Tell el-Husn, biblical Beth-shan, have elucidated important de-

tails concerning the site. Archaeological finds from the tell and from the Northern (so-called Philistine) Cemetery show that the coffin burials belong to mercenaries and dignitaries, including some Aegean or Sea Peoples in the service of Egypt (see BETH-SHAN Fig. 38; PHILISTINES). The pottery associated with the coffin burials can be related to the Iron I Age (level VI, which was subdivided into early and later). The early level VI was reckoned to have begun with the campaign of Ramses III into Palestine (1176 B.C.). Late level VI was considered the age of the Canaanite kings, including the time of Sea Peoples, at Beth-shan, Taanach, Megiddo, and Dor (Josh. 17:11-12). Level V was also divided into an upper and lower. Ceramic and historical research suggest that the transition from the Canaanite city (lower V) to the Israelite city (upper V) came after Shishak I (the last quarter of the tenth century B.C.). Upper level V continues to the end of the eighth century, the time of the Assyrian conquest, when biblical Beth-shan ceases to exist as an important city.

2. **The outskirts.** Widespread Chalcolithic settlements contemporary with basal levels XVIII-XVI of the tell have been discovered near the water sources of Beth-shan. On the strength of carbon-14 examinations these settlements are to be dated to the middle of the fourth millennium B.C.

Burials from the early sixth century B.C. add much-needed information about Beth-shan during the late Iron Age and the Persian period. These burials were found by Zori of the Department of Antiquities in 1951 inside rock-cut tombs to the E of the tell. They may possibly be related to a place of worship on top of the abandoned biblical city.

The Roman theater, which was cleared in 1961-63 by the Landscaping Commission of the Israeli Government, was erected in the time of Emperor Severus to seat eight thousand spectators. Julian the Apostate enlarged it about A.D. 360, but it went out of use in the middle of the fifth century.

Numerous fine mosaic floors of villas and monasteries attest to the prosperity of Christian Beth-shan in the fifth and sixth centuries.

In the Beth-shan area four synagogues were excavated by the Israel Department of Antiquities. Outstanding for its mosaic floor is the Judeo-Samaritan synagogue just outside Beth-shan's Byzantine city wall and adjacent to the Monastery of Holy Mary. The synagogue stood for two hundred years, but was burned down by the Byzantines after the Persian invasion, ca. 624. The mosaic floor depicted a complete Torah shrine flanked by Jewish ritual vessels, fruits, and the seven-branched candelabra (see ART, EARLY JEWISH [S] §3 and Fig. A23). In a neighboring room a Samaritan inscription which was set into the floor mentions a rural court which met there. Of great historical interest is another synagogue cleared in 1974 at Farwana just S of Beth-shan. The mosaic floor of the narthex contained the largest Hebrew inscription ever found on a mosaic, containing 29 lines, about 365 words. The inscription states halachic laws pertaining to the sabbatical year and the laws of tithing as they apply to those border areas "occupied by the returned exiles from Baby-

lonia," which included the Beth-shan district. The site, Farwana, is believed to be the Byzantine 'Ρωβ (Rehov). The synagogue was in use during the fifth to seventh centuries and is believed to have collapsed after an earthquake. The mosaic inscriptions are partly known from the Jerusalem Talmud.

\***BIBLICAL CRITICISM, OT.** During the first half of the twentieth century, the problem in biblical criticism was whether a rational textual examination such as was carried out in the areas of secular literature and history was compatible with the divine authority accorded the biblical text. The results obtained through methods called historical-critical (or philological) were such that universities in general and a great majority of the churches recognized their value. The Roman Catholic Church granted biblical criticism official status in the encyclical *Divino Afflante Spiritu* (1943). Such critical efforts illuminated the meaning of words, figures of speech, and entire books in the attempt to discover the true thought of the text and thus to resolve scholarly and confessional conflicts of interpretation. Surprisingly, however, the success of these methods did not lead to unanimously accepted conclusions.

A fundamentalist current, which still persists in diverse forms, attempts a direct encounter with God and his Word by viewing the text as an absolute *prout sonat* (exactly as it reads) without raising scholarly questions about literary genres or the history of the text and its composition.

The tentative results of biblical criticism have led to the publication of a series of nonconfessional theologies of the OT. Procksch initiated this trend, but it was the work of Eichrodt that was truly epoch-making. Like that of van Imschoot, his presentation remained rather systematic; those of Jacob and Vriezen are more thematic (see BIBLICAL THEOLOGY[S] §2). It is, however, the work of von Rad which paid the closest attention to historical analysis. Laurin has edited a collection of criticisms and summaries of each of these authors. Grelot and Knight preferred to deal with the OT in the light of the Christian affirmation, and indeed one may ask whether a Bible which ends with the OT provides full knowledge of a God who reveals himself in history. This issue underscores the importance of new research on the date of the closing of the canon (Sanders).

The *Theologisches Wörterbuch zum AT* follows its NT counterpart. It is a study of selected biblical terms and the evolution of their meaning from the prebiblical milieu through the time of the LXX and of the texts from Qumran. This publication has made it possible to update older typological studies by carefully avoiding any imposition of Christian notions onto the OT, a tendency for which Vischer has been criticized.

Understood in this way, the above research did not question the methods of biblical criticism. The development of the new social sciences, however, has proven more challenging, bringing their efforts to bear on language, society, and even the processes of understanding.

#### 1. The challenge to previous biblical criticism.

a) Archaeology, without eliminating the value and necessity of literary criticism, nevertheless challenged its primacy. Biblical texts can no longer be considered as primitive forerunners of Greek culture. Rather, they must be placed in the context of the great cultures of the ancient Near East, in which WRITING had appeared at the beginning of the third millennium (Mesopotamia, Egypt, the Aegean) and which had a "classical" literature as early as the first half of the second millennium (Babylonia, Egypt, and the Hittites). Rather than developing in isolation, many of the institutions which might have been regarded as unique to Israelite civilization were thus shown to be common to the ancient Near East in the second millennium. Three major currents of OT criticism have sprung from these discoveries. One school, represented especially by Jewish authors (e.g., Kaufmann), accepted as belonging to the Mosaic age a goodly portion of the legislation which Wellhausen had attributed to the Exile or to the postexilic period. Such an early date did not necessarily include a denial of the distinctions among the DOCUMENTS J, E, D, and P. A second current, following the lead of Albright, maintains that, even while accepting the results of literary criticism and a progressive development of the Mosaic laws, the chronological sequence of the events given in the Bible retains great historical value. Finally, a third group, represented initially by Noth, remains skeptical about establishing contacts between biblical history and archaeology. De Vaux has proposed a synthesizing middle way. This has not achieved a scholarly consensus (cf. the response of Thompson).

b) Sociological analysis has proved to be a necessary supplement to research on the history of Israel. Indeed, many biblical texts cannot be understood apart from an analysis of the social situation in which they arose. See ISRAEL, SOCIAL AND ECONOMIC DEVELOPMENT[S].

It is possible to analyze the social structure in terms of Marxist outlines of the class struggle (cf. the notion of *'am ha'areš* advanced by Amusin). Attention is then focused on the polemic of pre-exilic prophets against the abuse of power and monopolies. Such analysis may also focus on legal texts to see if they are expressions of the ascendancy of the property owner, of a royal administration, or of a theocratic priestly power.

A more generalized sociological analysis would seek to detect the over-all structures of the society in which the people of the Bible lived. E.g., it

might point out that the privileged position of men over women as found in the OT is a literary reflex of a patriarchal society. It might also study the modes of ownership and the commercial system (studies in *JESHO*). However, data with regard to ancient Palestine remain meager (cf. Baron's history).

Finally, sociological analysis may bear on the evolution of individual juridical cases, and thus show that the Torah cannot be understood as a static collection of regulations but rather reflects dynamic adaptations to new circumstances. In this case, sociological analysis complements antecedent literary analysis.

c) Since social interaction presupposes language and gives shape to speech forms, social structures and linguistic structures parallel one another (as Levy-Strauss in particular has shown for primitive societies). Structuralism first developed in linguistics, where it created a new vocabulary which literary criticism could not ignore. Rather than stressing evolution and history, structural research stresses the synchronic approach to the study of a linguistic system of phonemes, morphemes, and syntagmas. The text itself, as it stands, provides the point of departure. Greimas and Gütgemann thus study the *semas*, or elements which make up the narrative, without reference to the author or the life situation.

It was in this manner that Leach studied Genesis as myth and that Lack studied the symbolism of the book of Isaiah (see also R. Barthes *et al.*). Here again, methods and analyses may differ. Lack states: "The ultimate aim of criticism is no longer to recover the intention of the author or to clarify a work through the study of its author or its milieu. . . . The functions of the imagination are governed by anthropological structures, . . . there is reason to ask whether the development of certain parts of the book of Isaiah did not proceed by following the patterns of human imagination" rather than through a historical development "that traced the object or event that is described." Others ascribe more importance to the historical process, the diachronic approach, by stressing the subsequent use of the biblical text as it grew through the redactional process in the course of Israel's history. They maintain that the patterns of the human imagination, even when they are concretely expressed in the structures and hymns of the Psalter, never account for the details of the text and provide only an initial approach to understanding it.

d) Research on the imaginative or poetic schemas (Lack, Alonso-Schökel), and on the *semas* which constitute a narrative, issues in a type of psychology. No longer is the mentality of the author at issue, but the deeper movements, which, beyond his consciousness and will, are at the source of his "statements." Understanding the Bible is viewed as dependent more on the subconscious than on the conscious reflection of the author or the reader. The name of Freud is attached to this kind of depth psychology and Freud himself produced such a study in his *Moses and Monotheism*. Others are more interested in the archetypes which underlie redaction of the texts that

can be considered as myths or legends. Finally, the prophetic phenomenon can be analyzed both from a sociological and from a psychoanalytic point of view. Since not only in the Bible but also in other religions, the prophet, ecstatic or not, speaks in the name of the divine Absolute, that very notion is at stake if aspects of it spring from the unconscious. Alongside the analyses which Marx, Nietzsche, and Freud made of the notion of God, and which constitute a "hermeneutic of contestation" (Ricoeur), there is also room for philosophical analysis.

e) Philosophical problems have once again been introduced into biblical criticism. Criticism has sought to discover the meaning of texts. But what is meaning? Is it merely the relationship which exists among the elements of a discourse or does it necessarily refer to the historical life situations of the speaker or writer and of the reader or hearer? Hence the discussion of "the articulation of meaning" (Ladrière), the "parameters" of hermeneutics (Lapointe).

A second important question also arises. What is the relationship between spoken discourse and written discourse? Is writing only the fixing of the exchange of language among people, or is it programmatic, not only as an affirmation of reality, but an invitation to action? This is a fundamental question in the interpretation of juridical narratives and texts.

Does the written text possess an objectivity which can be discovered by the human mind? Or must we renounce any effort to find anything objective in history, human beings having become enclosed in their subjectivity and the historical process having brought us to the point where every text from the past is thereafter dead? Many hold the latter view. They speak of "doing history" and not of recreating historical events and personages. Nevertheless, Dilthey and Gadamer have made a major contribution which is of interest to biblical scholars because of its analysis of the subjective and objective data which have conditioned both the redaction and the reading of the text. Although every person and every text is historically conditioned, it is nevertheless possible to find some truth in spite of these contingencies. The work of Whitehead has also dealt with this problem.

Two great metaphysical problems remain, which concern the ministry more than they concern biblical exegesis. Can a book which depends upon culture or upon the culture of the time in which it was written contain eternal truth? Is it possible for us who live in time and contingency to comprehend the absolute God, who moves the world and gives it intelligibility? Criticism, for its part, may contribute to a solution of the problem by proper use of the comparative method, which, without detracting from the Bible's originality, situates it in the midst of the cultures and the human problems which it tries to express. It is along these lines that work continues on the primeval history in Genesis (Lambert and Millard), on the historical literary genres (Moscato), on prophecy (Moran, Ramlot), and especially on wisdom (Schmid).

## 2. The possibility of a positive biblical criticism.

In spite of the chaos occasioned by previous studies which often prove contradictory (e.g., the extent of our knowledge about Moses), and despite the negativism asserted by certain methods with regard to the results of biblical criticism, it still appears possible to turn to anthropological research and thereby avoid what has been called historicism. Such historicism has given up all hope of finding in the Bible the revelatory message which Christians and Jews, and to a certain degree even Moslems, had found. Cazelles has tried to organize these methods in the third part of his *Écriture, Parole et Esprit* by dealing with the methodological "exigencies" and the "possibilities" of biblical criticism. The path has been traced with greater detail and precision by Richter. The problem is no longer to place "theology" in opposition to "criticism" but to pursue methodologically the critical operations which disengage the content from the forms in which it is expressed.

From the start, science presupposes textual criticism, whose function is not only to examine all the MS witnesses but also to explain their differences in terms of the social, historical, and psychological conditions which influenced the work of the scribes and their procedures. See TEXTUAL CRITICISM, OT[S].

Once the text can be viewed as established and intelligible, the literary-critical work proposed by Richter may begin. First it must be emphasized that the "literary units" are not easily perceptible to the modern reader, who is not a part of the literary world that produced the text. This point is frequently a source of misunderstanding between biblical scholars and structuralist literary critics. There is debate over the implications of doublets, repetitions, or contradictions in the narrative, and modifications in the lexemes. Some find harmony and fine writing where others discover incompatibilities and contradictions. Only by a thorough acquaintance with the vocabulary of the time and with the nuances and morphology of Hebrew syntax at different periods can the specialist discern those stylistic details which are indeed indicative of composite texts.

Once the basic unit has been established, its form must be determined. Such an analysis is of the greatest importance in order to avoid reading an ancient text with our own categories drawn from an altogether different civilization (see FORM CRITICISM; FORM CRITICISM[S]). Once the genre has been determined, the scope of criticism must be broadened. By comparing similar texts, it is possible to discern those elements which they have in common. Accordingly, we come to find the major literary categories in which biblical authors expressed themselves. Formerly it was customary to speak of such categories as laws, history, lyric poetry, but this classification was far too broad and did not correspond to the thought structures and to the social life of the time.

A literary genre is a function of a social relationship. Just as the structures of a society are given linguistic expression, and this expression evolves along with the structures, so the literary

genres of a society depend on the functions of a group which makes use of them. The *Sitz im Leben* conditions both the communication of thought and the social life of the group. With the notion of literary genre we thus enter into the area of relationships between literature and real life, that is, the area of history. As is well known, a literary genre evolves and may lose or modify one element or another in its structure. E.g., the historical prologue in treaties of the second millennium practically disappears in the first, and the prophetic visions of an Amos are transformed into apocalyptic visions at the end of the prophetic period.

Following such a study of genres and their implications, Richter believes we can move to the study of traditions and of tradition history, while recognizing that each text does not necessarily imply the existence of a tradition (*see* TRADITION CRITICISM[S]). An anomaly in the use of a genre in a text may indicate that an extraneous element has been incorporated into the text at the time of its fixation in writing. When we are concerned with the evolution of the literary genre, it is sufficient to rely on literary data, but when we try to disengage a tradition present in a text, some nonliterary considerations are necessary, such as those drawn from geography, sociology, and general history.

The development of a legal tradition is the easiest example to grasp. With the limited means available to nineteenth-century criticism, it was possible to discern the four documents on the basis of laws relative to the sanctuary, to the clergy, and to tithes. But the evolution of a tradition (and consequently the fixing of its origin) or the additions to a text (for example, a ritual in Leviticus; cf. Koch and Elliger) cannot be objectively specified except by recourse to the social transformations which Israel underwent. On this basis it can be determined whether a law concerning the sabbath is Mosaic or whether it reflects the problems of postexilic theocracy.

**3. The significance of history.** Not all biblical texts are historical in the above sense, but all have a historical "coefficient," even if it is only the date of composition (or adaptation). Failure to grasp this could well falsify their interpretation; historical research is an extremely delicate task.

a) First there is the history of spectacular events, such as the fall of Jerusalem and of David's royal house. The importance of dating a text before or after the Exile has long been accepted. It is not so much a matter of knowing whether Jerusalem fell in 587 or in 586 (although even this can facilitate criticism, e.g., in the book of Jeremiah), but of knowing whether a text still presupposes a monarchic ideology.

Recent research has concentrated on the events surrounding the fall of Samaria. It seems that the fall of the kingdom of Israel, which represents the tradition of ten or eleven out of the twelve tribes, was a major event in the development of Israel's faith. The redaction of four prophetic books (Amos, Hosea, Micah, and Isaiah), some of the redactions of the Law (the Elohist text and Deuteronomy), and even redactions of the books called

historical and of collections of Proverbs may well have been influenced by this major crisis. The events are numerous and critics also have at their disposal abundant extrabiblical material. This is a field of work which is developing and which allows us to discuss more precisely politics, biblical religion, and the interplay among the various parties.

b) The prophets and the authors of the Writings were not interested in events except in relation to their reverberations in the life of the people. In addition to the history of the events there must be research on the history of institutions (de Vaux) and, through them, of the social structures of Israel. Why does Deuteronomy grant a special status to judges, priest-Levites, and prophets in relation to the monarchy? Why does the Torah of Ezekiel retain only the priest and the *nāšî'*, who replaces the king of Israel? What elements of the Priestly code have survived in the texts? What is the position of the sages (*h<sup>a</sup>khāmim*) before and after the Exile? What is the *'am-ha'areš* and its relation to the court or to the sages? Does the study of the functions exercised by these public figures shed any new light on the early patristic notions of TYPOLOGY?

c) Finally, there is a third stage in historical research, which depends on the first two but is even more difficult: the investigation of the problems raised by various modes of thought in Israel. It is extremely important to distinguish between that in the Bible which springs from a transitory mentality and that which looks beyond the particular mentalities to the constants in the life of the people of God. The redaction of the Bible resulted from a dynamism which situated this book between the mentality termed "mythopoeic" (Frankfort, Jacobsen, and Irwin) and the Greco-Latin world, based on reason and law. If the redaction of the family histories of Genesis took place in a society in which dynastic legitimacy is a decisive factor in the salvation of the people, they cannot be perceived as they would be if the redaction took place in a postexilic society where the family problems of an Ezra or a Tobit have become essentially problems of fidelity to the faith of Abraham and of providing an education in this faith for an Israel which no longer enjoys political independence.

**4. The history of the text.** Thanks to the analysis of its literary formation, this is a primary factor in biblical criticism. Biblical criticism does not aim at identifying primitive texts by considering as secondary whatever has been added. The "secondary" is not really secondary; it constitutes the manner in which a prior stage of the biblical text has been preserved in new situations that have called forth a new stage in biblical revelation. It is the book in its completed state which can answer questions about the God of the universe, questions raised by the reader's expectations with regard to the biblical text. It is striking that what is new in the Bible does not suppress the old, even when its various redactions dissolve contradictions in terms. The beginnings of biblical criticism were disconcerting because they brought out the harshness of the text. Better knowledge of history and of the laws of language allows us

to uncover the deeper meaning of the text and to rediscover all the human dimensions of the Bible. This book is composed of books written over a period of more than a millennium, in the midst of cultural transformations and the succession of empires. Each culture and empire influenced the destinies of this small people, which finally expanded into the universal church, at least for those who see in the new the fulfillment of the old. The Bible witnesses to an experience of fidelity in the midst of successive crises.

\***BIBLICAL CRITICISM, NT. 1. Text of the NT.** For a discussion of the methodological problems see **TEXTUAL CRITICISM, NT[S]**, and for recent developments in the establishing of an actual critical text of the NT see **TEXT, NT[S]**.

**2. Literary criticism.** For nearly a century **LITERARY CRITICISM** was employed primarily in the attempt to uncover the literary relationships among the Synoptic gospels. Recently, NT criticism has begun to raise broad literary questions concerning the NT writings. Pre-eminent among these is the question of literary genre (see §2a below). In this

and other respects the literary criticism of the NT has been influenced by techniques employed in the study of other kinds of literature (see **LITERATURE, BIBLE AS[S]**). Moreover, continuing efforts toward identification of poetic and especially hymnic fragments have opened up new perspectives on the cultic and confessional aspects of early Christian faith and life (see **LITURGICAL MATERIALS, NT[S]**).

Among those engaged in literary criticism of the NT, there is a wide difference of opinion concerning the relationship of that enterprise to historical criticism. For some, literary analysis and interpretation can be carried on only in conjunction with historical criticism, which seeks to recover the life-situation, in its social, political, economic, and cultural dimensions, in which the writing was produced. Only then, it is maintained, can the intention of the author be discerned and a valid interpretation be achieved (Hirsch). Others, influenced by structuralism, assert that historical development cannot be traced in literature, that the deep structure in the mind of the author, which, consciously or unconsciously, shaped his writing, may be discovered by a method which examines the work with a view simultaneously to literary paradigms and to the sequential development of the plot or narrative. Analyses carried out along structuralist lines run the danger of highly subjective, generalized interpretive results, and the antihistorical bias implied in this approach runs counter to the NT emphasis on the incarnational, once-for-all quality of revelation.

**a. The gospel as a genre.** The genre question involves the study of the NT against the background of other literature—pagan and Jewish, Hellenistic and rabbinic, sophisticated and unpretentious. While it has been raised with respect to various literary types (see **ACTS, GENRE[S]**; **APOCALYPSE, GENRE[S]**) it has been debated most of all with relation to the NT gospels (see **GOSPEL, GENRE[S]**). The later development of the gospel tradition both in its narrative and sayings aspects is also being given more attention, due in part to newly discovered writings (see §3 below) that belong to what is loosely called the NT **APOCRYPHA**. The study of this literature has raised anew the issue of the NT canon: Which of the variety of viewpoints contained in the NT and the noncanonical Christian literature of the first several centuries have theological validity for the church? The effective extension of the literature of the early church has theological implications for the subject of Christian origins. See **LITERATURE, EARLY CHRISTIAN[S]**.

**b. Letters.** A lively interest has also been shown in the structural and formal characteristics of the NT (especially Pauline) letters, and the relation of these to other types of ancient letters (see **LETTER[S]**). Special attention has also been given to allegedly Gnostic and "early catholic" elements in the Pauline letters, as well as to certain false Christologies which are seen by some to have set the Pauline Spirit-led community of grace over against the more rigid doctrinal structures of Paul's alleged opponents. While some attempts to identify Paul's opponents or the false Christologies are more ingenious than convincing, the availability of

previously unknown Gnostic documents from the second and third centuries brings some control over the reconstruction of the evolution of GNOSTICISM and the assessment of its probable relation to Pauline thought. See PAUL THE APOSTLE[S] §1b, d.

c. *The evangelists as authors and theologians.* The older form-critical view of the gospel writers as editors has been largely and rightly discredited in favor of a recognition of the creative ways in which each of them has adapted and shaped his material to meet the special needs of his own community (see REDACTION CRITICISM, NT[S]; supplementary articles on each of the gospels and the book of Acts). The Q document (see Q and Q[S]) has also been given special analysis, theologially and in terms of its community setting, although some have questioned not only the existence of this hypothetical source for the gospels, but also the priority of Mark (see SYNOPTIC PROBLEM[S]). The "two-source hypothesis" prevails nevertheless and has served as a basis for the literary, form-critical, and theological analyses of the Synoptic gospels.

3. *New sources from the NT period.* Over the years since their discovery it has become increasingly apparent that the DEAD SEA SCROLLS will require the rewriting of the history of Palestinian Judaism in the post-Maccabean period. These sources provide many details about the interpretation of scripture, the range and types of biblical text then in use, the nature of the eschatological expectations, and the diversity of redemptive figures awaited by Jews in that epoch.

The Coptic Gnostic Library found in Egypt at NAG HAMMADI has provided other important new sources. These are valuable for documenting the range and development of Gnosticism, which became a parasite upon and a threat to the early church. Still unanswered is the question about the origins of Gnosticism; that Gnosticism was a pathological growth on a Christianity whose expectations of an imminent eschaton had been frustrated is called into question by the presence in these new documents of elements which seem to have roots in neither Judaism nor earliest Christianity.

Finally, excavation at several Palestinian sites—especially in Galilee (see CAPERNAUM[S]), Samaria (see GERIZIM, MOUNT[S]), in the Decapolis (see PELLA OF THE DECAPOLIS[S]) and at Caesarea (see CAESAREA[S])—is requiring a basic reconsideration of the extent of penetration of Hellenistic culture into these regions by the NT period. The use of Greek inscriptions and Hellenistic symbols and decorative modes in synagogues there, as well as the many Hellenistic artifacts discovered at Palestinian sites from the early imperial times (see ART, EARLY JEWISH[S] esp. §§1, 4), show that Galilee was by no means the backwash of pure Jewishness that has often been pictured (see HELLENISM[S] §2). The discovery of a letter by the supernationalist Bar Kochba (see BAR KOCHBA[S] §4b), written in Greek, offers dramatic evidence of the impact of Hellenistic culture on the most ardent defenders of Jewish separateness.

4. *The history of primitive Christianity.* a. *Diversity within early Christianity.* The newly discovered documents and archaeological remains require a reconsideration of the classic scholarly

reconstructions of the Greco-Roman world in the NT period, and hence of the cultural and conceptual influences which helped to shape early Christianity. Rabbinic scholars have cautioned against reading the post-A.D. 70 conditions back into the prior period: after the triumph of the predominantly Pharisaic point of view, following the destruction of the temple and the stamping out of the revolutionary nationalist movement, the traditions preserved by the rabbis largely reflect their own point of view, and are therefore a precarious base for reconstructing the religious situation in Palestine in the time of Jesus (see PHARISEES [S]). Similarly, the pro-Pauline bias of much nineteenth-century Protestant critical scholarship led to an unduly unified and one-sided picture of early Christianity. And the drive to discover unity lying behind the diversities of the NT, as symbolized by the popularity of the concept of *kerygma* in the middle decades of the present century, has rightly given way to a recognition of the local, and in some instances, fundamental differences in outlook that characterized the early church virtually from the outset. The very fact that the later writings of the NT, especially Acts and the Pastorals, are seeking to impose a unity or to depict one as operative since the days of the apostles—in spite of evident sharp divergences of viewpoints—implies that the concept of common authority was being fostered in the attempt to bring theological and organizational unity into a thoroughly diverse situation. "Early catholicism" may be anathema to a modern devotee of the Pauline Spirit-led, law-free gospel, but it was likely a practical necessity if the ancient church was to survive. As it moved into a new era of visibility and of cultural and geographical penetration, it could not survive hostility from Jewish opponents and from the secular authorities without some functional unity as a common front against its enemies.

The praise of and regulations for itinerant, charismatic leaders of the church in Mark and Q are a far cry from the appeals for unity and order or for recognition of established authorities that are represented in Acts and Ephesians.

b. *Christology.* The question of the origin of the SON OF MAN concept has remained unresolved. Discovery of portions of the book of Enoch (see ENOCH, BOOK OF; ENOCH, BOOK OF[S]) at Qumran raised hopes that at least fragments of that section known as the Similitudes would be found, thus demonstrating the pre-Christian, Palestinian origin of the Son of man concept. But since parts of all sections of the Ethiopic Enoch literature have been found there except the Similitudes, there is only negative evidence, and that is not decisive. Sections of the TESTAMENTS OF THE TWELVE PATRIARCHS and the book of Jubilees (see JUBILEES, BOOK OF) have been recovered from Qumran, so that their origin or at least use within sectarian Judaism in the time of Jesus is now confirmed, and thus their christological views may be presupposed for the early understanding of Jesus' eschatological-redemptive role. See CHRISTOLOGY IN THE NT[S].

c. *The historical Jesus question.* The failure to achieve clear results in the so-called new quest of the historical Jesus has resulted in a scaling down

of critical expectations. While there are those who think that by the principle of discontinuity (whatever cannot be attributed to his Jewish contemporaries or assigned to the early church may be assumed to go back to Jesus himself) the authenticity of some of the sayings material can be established, much of the recent work on the gospels is concerned rather with seeking to trace the tradition's development: from oral or earlier written forms (such as miracle cycles), through the stages of combination to the present diverse forms of the gospels as we have them. The continuum is the dynamic of the tradition; the variables are the aims and needs of the communities in whose interests the gospels were composed.

While the principle of discontinuity seeks to justify itself on the ground of objectivity, its result is to detach Jesus from his historical context by making him less of a Jew than we have any evidence to suspect that he was. Recent studies, such as that by Hengel (*see bibliog.*), have shown how much more diverse Judaism was in the time of Jesus than the handbooks on the Jews in NT times have indicated. The diversity and vitality of sectarian Judaism in the period offers new possibilities for viewing Jesus and the early Christians as they identified with and distanced themselves from various aspects of the Jewish tradition in their time.

In this connection, increasing attention is being given to the social setting of early Christianity, to the differences in the shaping of the early Christian ethical, narrative, cultic, and organizational traditions. FORM CRITICISM has made an enduring contribution to NT interpretation by its focus on the forms in which oral tradition is transmitted and the stages by which it is fixed in written form. Perhaps NT criticism will now come around to fulfilling the other half of the task set by the form critics: analyzing the dynamics of the societies, primitive and relatively sophisticated, in which the traditions were preserved and adapted. *See ETHOS OF EARLY CHRISTIANITY*[S] esp. §2; *JUDAISM, EARLY RABBINIC*[S]; *JUDAISM, HELLENISTIC*[S].

**Bibliography.** W. G. Kümmel, *The NT: The History of the Investigation of its Problems* (2nd ed., 1970), traces the historical development of NT criticism; and his *Introduction to the NT* (17th ed., 1975) provides extensive bibliog. on specific subjects. See also the bibliographies for articles which have been cross-referenced.

\***BIBLICAL THEOLOGY.** In the years since the original edition of this dictionary no subject has undergone greater convulsions or suffered greater changes in its status than biblical theology. When the articles by Stendahl and Betz in that edition were being written, biblical theology stood at its highest point of prestige and influence. Many expected that it would be an immensely reintegrat-

ing factor in the total theological enterprise; and in ecumenical study it was supposed that biblical theology could overcome the divisions between the churches, divisions caused by the nonbiblical elements in the tradition of each. There was indeed doubt and disagreement about the way in which biblical theology might be carried on, and this is evident in these articles themselves; but they betray no awareness of the massive criticisms that were soon to fall upon the entire subject as it then stood. For, by the time these articles were published, the tide was already turning; as Childs puts it (p. 87): "The Biblical Theology movement underwent a period of slow dissolution beginning in the late fifties. The breakdown resulted from pressure from inside and outside the movement that brought it to a virtual end as a major force in American theology in the early sixties."

However, we must also distinguish between two senses of the term "biblical theology." In the first sense, as quoted above, it designates a movement, a movement which for a time held considerable sway in theological thinking and in the life of the churches. But it is possible, and even necessary, to think not of a movement but rather of the wealth of individual studies that were produced, such as theologies of the OT and NT and depth studies of particular strata and concepts. The two senses cannot be strictly separated, but some such rough distinction seems necessary: (a) in some languages, such as German, the term "biblical theology" was used in the latter sense rather than the former, and this has caused some terminological misunderstandings; (b) the collapse which in the end overtook the movement of biblical theology did not in the same way affect all the work done in a host of individual studies; (c) just because these individual studies often differed from, or even questioned, the emphases which were characteristic of biblical theology as a movement, the resulting tensions may have been a factor in bringing about that collapse.

This article will look first at biblical theology as a movement in the postwar era and consider its decline; it will then go on to look at the individual studies and themes which were associated with it, and to consider some recent developments.

- Bibliography

1. **Biblical theology as a movement.** *a. Characteristics.* The rise, the character, and the eventual decline of the biblical theology movement on the American scene has been vividly and accurately described by Childs in his first four chapters. He exaggerates, however, the degree to which the movement was distinctively American: in Great Britain and on the Continent the same broad tendencies existed, although the setting was different. The movement can be well seen in the organized study programs of the international ecumenical movement. The term "biblical theology" was not one invented afterward, or one used against the movement by its critics; it was so called by its practitioners at the time, at least in the English-speaking world.

Common to the entire movement was a strong reaction against the way in which the Bible had been studied under the "liberal" theology, with its dry historical exegesis, its analytic tendency and dependence on source criticism, its tendency to understand biblical material in terms drawn from the environing culture, its evolutionism, its complacently universal theological positions, and its lack of theological concern and existential fervor. Thus the positive position of the biblical theology movement included the following characteristic features:

i. An opposition to the influence of philosophy and philosophical theology. Biblical thought was constantly contrasted with philosophical modes of thinking.

ii. An opposition to what was understood to be the systematizing tendency of dogmatic theology. Biblical thought, it was said, was a living organism which could not be reduced to a system.

iii. A contrast between Hebrew and Greek thought. The Bible was animated by the distinctively Hebrew way of thinking, which had been distorted in much later theology through its adoption of Greek categories.

iv. An emphasis on the unity of the Bible, and in particular the belonging together of OT and NT. It was essential that the NT be interpreted in the Hebrew categories deriving from the OT, and not in the Greek categories of its own environment.

v. An approach to biblical language in which word studies were much emphasized. It was hoped to see the outlines of Hebrew thought reflected in the words of the Hebrew language, while Greek words also, when they came to be used in Christian writing, were thought to take on Hebraic content and to mirror the Jewish-Christian thought patterns.

vi. An emphasis on the distinctiveness of the Bible as against its environment. This was correlative with the unity of the Bible: as the Bible was seen to be an essential unity, so its complete distinctiveness in comparison with other cultures and their religions became clear. Such similarities and parallels as existed were only isolated and partial phenomena. When seen as wholes, the Bible (whether in OT or NT) and its environing cultures were almost totally different.

vii. An emphasis on revelation in history, which fits in with and embodies all of the above. Revela-

tion through history was thought to be characteristic of Hebrew thought, unknown to the Greeks and to the extrabiblical world, common to the entire Bible and the basis of its inner unity, unintelligible to philosophy, and poorly appreciated by dogmatics.

viii. The interpenetration of biblical study and theological concern. As the work of the biblical scholar was to be informed at all stages by a theological consciousness, so the work of theology was to be informed by a biblical consciousness. This biblical-theological concern should have an existential care for the life of the churches and should express itself naturally in an interest in preaching.

*b. Assessment.* It is thus proper to see the biblical theology movement (in the period, say, 1945-60) as the biblical companion and parallel to the neo-orthodox movement in general theology. This does not mean that the biblical theologians shared the precise opinions of the neo-orthodox dogmatists; for the most part the overlap was only partial. Biblical theologians in general did not have the massive understanding of theological and philosophical problems found in a man like Barth, nor did they share his deep concern for the whole tradition of theology. Nevertheless, their work, though carried out with different materials and on another level, represented a pressure in the same general direction as neo-orthodox theology.

Biblical theology in this sense was the intellectual side of a more general religious reaction. Its strength and its (temporary) success came from a grassroots reaction against the liberal theology and its use of the Bible; but this converged with factors that belonged to the occupational specialization of biblical scholars and ministers. Thus the suspicion of philosophy, though formally shared with Barth, came also in part from a certain Philistinism, compounded at a higher level with the wish of the technical biblical scholar to control his own material without interference from other disciplines. The hostility to Greek thought arose in part from ignorance of it: biblical theology made little deep analysis of Greek thought and worked mostly with cheap stereotypes of it. The suspicion of system and of systematic theology was on one side a typical pietistic reaction; on the other it was an amusing illusion, for opposition to system, far from being a mark of difference from dogmatic theology, was a mark of convergence with it, since dogmatists were saying the same thing. There was a practical side also to the word-study method in biblical language, for it seemed to provide a way in which Hebrew and Greek words could be used in sermons and arguments by ministers and theologians whose ability to handle actual texts in these languages was exiguous. Some other supporting factors were not in fact religious: for instance, the opposition to evolutionism and the emphasis on seeing cultures and religions as wholes had been operative in social studies for some time.

*c. Decline.* The causes of the decline of the movement in this form are complex; some of them will be mentioned in the following sections. In many of its aims biblical theology seemed in the

end to have failed. Both philosophical theology and the history of religions, which the movement had sought to make peripheral, emerged stronger than they had been before. The authority and relevance of scripture (*see* SCRIPTURE, AUTHORITY OF[S]) came under more radical attack than before, and the younger generation seemed unmoved by the typical biblical theology arguments. The end of the biblical theology movement seemed to leave many with the opinion that the Bible was just not very important, and a feeling of apathy about biblical study was widely observed. This was worse than things had been under the liberal theology. Paradoxically, it was liberalism that had handed to biblical theology much of its necessary equipment: knowledge of languages, thorough commentaries, historical analysis, an apparatus for understanding the environment of the Bible. It seemed doubtful whether biblical theology would leave so solid a legacy to the next stage of study.

**2. Theologies of the OT and the NT.** The actual theologies of OT and NT took a line somewhat different from that of the biblical theology movement as outlined above. In a very general sense they might lead in the same direction but they did not press the same arguments and methods so hard. The opposition to philosophy, to system, to Greek thought, might come in occasionally, but was not the stuff of which an entire theology of OT or NT could be built. OT theologies often professed an aim of building a connection with the NT and thus saying something about the unity of the Bible, but in fact this did not occupy the main effort of any of them; and most NT theologies paid even less attention to the OT.

Among the theologies written, those which most expressed the ethos of the biblical theology movement were those of Knight for OT and of Richardson for NT, and neither of these counted among the strongest of the theologies. Of those published, some took up a position of more straightforward historical (Jeremias) or phenomenological (Eichrodt, Jacob) character, which fitted ill with the prevailing anti-objectivist and commitment-oriented mood of the movement. Von Rad's theology denied that there was one single theology of the OT and maintained that it contained a number of quite different theologies. These massive works, many of which displayed scholarly grasp and comprehension much superior to the thinking of the biblical theology movement in the more general sense, fitted only in part with its ethos; this discrepancy was a factor in its decline.

**3. Bultmann.** Although he belonged to an older theological generation, Bultmann had much effect on biblical theology during our period. It is clear that he did not fit with the pattern of the biblical theology movement. Only certain elements of his thinking—e.g., his antiliberal position, his existential fervor, his avoidance of system and dislike of objectivization—were congenial to it; in other respects the movement could hardly claim his adherence. Bultmann was deeply anchored in the history-of-religions approach; his exegesis remained finely analytic; his view of the importance of the OT, though not as negative as has sometimes been alleged, was distinctly cool, and thus

neither Hebrew thought nor the unity of the Bible was important to him. Nor was revelation in history, in the sense dear to the biblical theology movement, essential to his thought. To him the "historical" events of the biblical story, being miraculous, were largely myth, and the true emphasis lay on the historical "existence" of the believer. Biblical theologians mostly agreed that some kind of reinterpretation of the Bible was necessary in order to communicate with modern man, but not many accepted Bultmann's full demythologization program or his confidence in Heidegger's philosophy as the vehicle for the understanding of the gospel. Thus, though Bultmann had always been mentioned in connection with biblical theology, as the impact of his thinking became clearer it created increasing difficulties for the latter in its current form, and many biblical theologians became strong opponents of his position. In ecumenical study the voice of the Bultmannians had at first not been much heard, but after 1960 their increasing influence in that quarter tended to break down the dominance of biblical theology.

**4. Stendahl.** We can now better understand Stendahl's article in the first edition of this dictionary, which achieved just renown. Biblical theology, as he conceived it, had two great stages. The first was a descriptive task: to carry out an objective, historical description of the theology which lay within the Bible itself. The second was a hermeneutic task, through which a "translation" of the biblical thoughts into the modern situation was to be attempted. It was essential to keep the two apart, to distinguish between "what it meant" and "what it means." Again, the descriptive task and the work of systematic theology were clearly distinct operations. The Bible, as the "original," cannot act creatively upon the theologian unless its meaning in its own setting is strictly held apart from later problems and later interpretations.

Stendahl's article was thus quite unrepresentative of what was then generally going on under the name of biblical theology: it was a program of what he would have liked to have been done, rather than a statement of what was being done. The high value attached to objectivity in description, the strict separation between description and systematic theology, and the critical attitude toward dumping Semitic or Hebrew categories in the lap of the twentieth century—all these were quite the reverse of the positions then generally esteemed as biblical theology. It is not so clear, however, that the article was deliberately *intended* as an attack on the contemporary movement: there is little sign of this in the wording, and many aspects of that movement—the unity of the Bible, revelation in history, the importance of using only biblical categories—are still represented within it. Only with hindsight may we suppose that it "struck a blow at the very heart of the movement, as it was originally conceived" (Childs, p. 79, cf. p. 26).

Thus, paradoxically, in our original edition the flavor of biblical theology as it then was is exhibited less by Stendahl than by Betz (*see* BIBLICAL THEOLOGY, HISTORY OF, esp. §5).

**5. Language and semantics.** The status of bib-

lical theology was deeply affected by criticism of its use of linguistic evidence. Barr's critique of the use of Hebrew and Greek words (1961-62) was not an attack on biblical theology in itself; he maintained that biblical theology had encouraged the misuse of linguistic evidence, but not that it necessarily depended on such misuse. It was possible that the positions criticized might have been supported on other grounds, even if the linguistic arguments used in their favor were faulty. But the question remained: would they ever have been believed, if the linguistic arguments had not been there? As we see it now, the situation was something like this: biblical theology had a point of view, but did it have a *method*, a scientific method of its own in handling the detailed facts of the Bible, a method which would be as characteristic of it as source analysis had been characteristic of the liberal approach and which would produce equally stable results? Its word studies and linguistic arguments were the nearest that the biblical theology movement came to possessing a scientific method of its own; and with the sudden sharp loss of this method the power and viability of biblical theology were greatly reduced.

The critique certainly had great effect. The production of word studies abruptly dropped. Though new theological dictionaries have been started (two in the OT field), these, far from reiterating the philosophy on which the Kittel *TWNT* was based, have made clear this determination to avoid misuses of linguistic evidence. The Kittel dictionary has continued to its completion, but few will now use it with the same expectations in mind that were common, and were encouraged, before 1961. Attempts to defend the dictionary by saying that the critique affected only some of the weaker articles cannot be accepted; on the contrary, it aimed squarely at the basic philosophy of the work and drew illustrations from many parts. There would have been no difficulty in extending it to cover later and major articles, except insofar as the later articles had themselves come to ignore the express philosophy of the work. It was with this philosophy that the biblical theology movement largely aligned itself. Not all Kittel's articles themselves took the position typical of biblical theology, as the term has been used here; but it was in biblical theology, as here described, that the work came to be idolized. On the other hand, the critique of the dictionary was a limited one, restricted to its semantic principles and procedures. Far from being an excessively severe attack, it left unsaid many of the criticisms which on quite other grounds deserved to be made, such as distortion of the evidence from later Judaism and apocalyptic.

Nevertheless, elements of that older general conception of language, which was picked up and used by biblical theology, continue to exist and will doubtless be slow to disappear. But the general situation in the understanding of language has rapidly altered. In Germany, which was the center of the more "idealistic" approach to language against which Barr's *Semantics* was directed, and where modern developments like structuralism had been relatively unknown, there has been since

1960 a vivid upsurge of interest in modern general linguistics. This is making a great impact on discussion, but the effect falls more on form criticism and the study of literature than on biblical theology. In French culture, structuralism both in language study and in the study of literature, religion, and society is much more strongly established. Again, still newer approaches to language have come into view, and the effects of Chomsky's ideas on biblical study have still to be explored. Chomsky's thought might bring us back to a relation between language structures and mental structures, but it would do so in a form which would have been useless to the older biblical theology, for it might suggest that the differences between languages belonged to surface structure, while in deep structure they were alike, and it would find ridiculous the supposition that Hebrew and Greek are polar opposites in structure. It would give no linguistic reason why biblical thinking should be radically different from any other kind of thinking.

**6. Hermeneutics and presuppositions.** An emphasis on hermeneutics was not strange to the biblical theology movement; in contrast to the approach under liberal theology, it had insisted that the Bible should be interpreted for today, and not simply explained with a dry historical statement about the past. Conversely, however, it thought that modern theology must not work simply with the ideas and categories of modern man, but must submit itself to those of the Bible and of Hebrew thought. As Bultmann came to be more fully understood, and as the impact of his successors continued, in America especially through the work of Robinson, it slowly became clear that the discussion must lead into fresh areas and could not be handled with the concepts familiar in current biblical theology. The philosophical basis of the discussion, derived from Heidegger and dreadful in its incoherence in English, though supposedly intended to assist in the understanding of the Bible, had rather the effect of driving Bible and theology apart (cf. Childs, pp. 80-81). At its religious roots the biblical theology movement had believed that the language of the Bible, if freed from certain dogmatic, Hellenic, philosophical, and historicist fetters, could speak clearly to the average person, or at least the average church member. The esoteric language and frenetic air of the hermeneutical discussion displayed that many minds were no longer attuned to the basic concerns and convictions of biblical theology.

Moreover, the hermeneutical discussion affected ideas of the authority of scripture. If the Bible as interpreted by one method meant something different from the Bible as interpreted by another method, could the Bible really be authoritative, and was it not the hermeneutical method that had final authority? How far could a biblical theology, even if true for the texts themselves, be decisive for the final interpretation of them? And if there was a difference between "what it meant" and "what it means," how could modern questions be settled by insisting on ancient concepts such as Hebrew thought or revelation in history, unless

all biblical ideas were to be forced without alteration upon modern man?

It was especially over the matter of presuppositions in interpretation that biblical theology tied itself in knots. In its zeal against a purely historical reading of the Bible and against the supposed illusion of objectivity, it mostly insisted that objectivity and neutrality were impossible and that all interpretation involved presuppositions. Here was a deep inconsistency. If the presuppositions come from the Bible itself, i.e., from the study of the text, then they must be visible to, or verifiable by, any competent person studying the text. If they are derived from some prior position, logically anterior to the study of the Bible, then clearly biblical theology is not an independent discipline but is one subject to architectonic presuppositions derived from some other discipline, let us say from neo-orthodox dogmatic theology or from Heideggerian existentialism. Either horn of the dilemma was equally uncomfortable for biblical theology. An escape could be had through Stendahl's position, namely that biblical theology was an objective work of historical description, but this was unwelcome to most of those in the movement, and was destructive of other principles which it maintained.

**7. Von Rad.** The most important and fruitful single theology to appear in the late 50s and early 60s was von Rad's of the OT. The earlier stage of OT theology, best exemplified by Eichrodt, had sought, as against the analytic approach of historical exegesis and comparative religious study, to bring together a synthetic picture of the "world of faith" of the OT. Von Rad repudiated this method. He was concerned, not with the "world of faith," but with that to which Israel itself had witnessed, its "kerygma" or "confession." The content of this had always been the acts of God, and not Israel's own world of faith. There was no unified OT theology; on the contrary, there was a multiplicity of different traditions, and, for each of these, one had to ask what its essential kerygma was. Von Rad's work therefore separated out the different groups of traditions, distinguishing particularly the historical and the prophetic. The whole is preceded by a history of Yahwistic faith and followed by a section on hermeneutical problems, and especially on the "actualizing" or "re-presentation" of older traditions by later ones; this last works out into a typological principle of exegesis, which according to von Rad is essential for the connecting of OT and NT.

Of the various OT theologies, this is the one which had the greatest influence in stimulating fresh thought and research throughout the world of theology. Its richness is such that no full discussion can be attempted here. Its strength lay, perhaps, in its text-relatedness: it worked theologically with the various currents of tradition, just as these are read by the exegete. It thus came closer to exegesis than did the more systematic and structural kind of OT theology. It agreed with general opinion in laying heavy emphasis on history: Israel's confession was to events in history, and the OT was above all a book of history. But there was a marked difference of emphasis from

the "God who acts" type of theology, made influential in the English-speaking world by Wright and others. Von Rad's emphasis was much more on the Israelite tradition, the growth and change in the tradition in which the OT expressed its confession; this corresponded to a literary and tradition-historical approach to texts. An approach like Wright's was more interested in the bare fact that God had acted in history, and its scholarly correlate was archaeology and the cultural history of the ancient world, rather than literary analysis; exegetically it was not very productive.

Nevertheless, von Rad's work, with its emphasis on the historical nature of the basic Israelite confession, fitted in a general sense with the sentiments of the biblical theology movement. If Eichrodt's OT theology had a certain rationalistic air about it, von Rad's style was more romantic; its expressions are often poetical and cloudy, and its definitions and distinctions often seem artificial.

**8. Revelation in history** (see REVELATION IN HISTORY[S]). This theme, basic to the biblical theology movement, fell under criticism from several directions after about 1960. Already in 1951 Minear had rightly discerned that history as a category had distinct advantages when used negatively, but that positively it was much less helpful. Among difficulties raised in later discussion we may mention: criticism of equivocation in a position like that of Wright (Gilkey); difficulties with the two histories, one critical and one confessional, in the work of von Rad (Hesse); the argument that the OT material is not generated out of an antecedent "history," but is rather a cumulative story into which later events are fitted (Barr); arguments that revelation through history, far from being unique to Israel, was common ground with its environment (Albrektson). By the late 1960s the formula "revelation in history" had clearly lost its magic and even those who tried to defend the position typical of biblical theology, like Wright, had greatly changed their emphasis.

**9. The unity and distinctiveness of the Bible; its "center."** From about 1960 on, less emphasis has been laid on the unity of the Bible; in different ways, Bultmann and von Rad were influences in favor of a greater recognition of diversity. An important shift was that from form criticism to redaction criticism. Early form criticism had sought to uncover the primitive kerygma, which could be supposed to have been unitary; but redaction criticism studied the differences between final units, like different gospels, which had used the same material. The insistence on the unity of the Bible, which had been directed so much against the liberal theology, could not deal with this newer development. Cullmann, for instance, had identified a view of time and salvation history as the basis for the unity of the NT; but Conzelmann argued that this view was peculiar to Luke and in contrast with Matthew and Mark. Examples like this brought into the limelight something that had always been known in critical scholarship: the relations of tension and polemic between one biblical writer and another. These were a vital clue used by scholars; was not the diversity of the Bible a more interesting and significant thing than

its unity? At least it is premature to look for unity until the diversities have been fully explored. Käsemann typifies this trend: "The NT as we have it is a fragmentary collection of documents from the earliest period, while the bulk of the material has vanished for ever. By and large there is no internal coherence. The tensions everywhere evident amount at times to contradictions."

Similarly, the near-absolute distinctiveness once asserted of the Bible tended to pass into a more relative distinctiveness. The interest of many OT scholars in archaeology, Ugaritic, and Canaanite relations gradually led them to de-emphasize the separateness of Israel. The covenant functioned in the older biblical theology as a main symbol of the unity of the Bible and the separateness of its people from the envining culture; but later more interest was given to the Near Eastern setting and origins of the covenant concept, so that it came imperceptibly to function as a symbol of exactly the opposite relation. Bultmann and his school had always emphasized the Hellenistic origins of the NT, and we find a positive interest in Gnosticism as an integral element within the NT, and, again, the view that Christianity was a syncretistic religion from the beginning. For those holding such views, the absolute contrast of Hebrew and Greek thought could have no theological value. A recent theology like Pannenberg's finds certain common elements between the two and ascribes positive theological value to the part played by Hellenism in the Jewish-Christian tradition.

After von Rad no new OT theologies appeared for a decade or so, and one could wonder whether he had brought the series to an end; but now it has begun again with the contributions of Fohrer and Zimmerli. One major question is the identification of a "center" which can be held to have been the kernel of OT theology and round which such a book can be organized. Von Rad thought that the OT, unlike the NT, had no such center. But Smend argues that the search for a valid center was too easily given up and, following lines of Wellhausen's thinking, would orientate a theology upon the formula "Yahweh the God of Israel, Israel the people of Yahweh." Fohrer takes two points which form the focuses of an ellipse: the lordship of God, and community between God and man. Zimmerli's theology is built around the name of God, and especially the formula "I am that I am," with its implication of the freedom of God to do as he wills. Thus it seems likely that scholars will continue to operate with some idea of a center for theologies of OT or NT. Even where they accept a plurality of theologies and viewpoints within the Bible they mostly still find some principle of unity that gives coherence to their work. Von Rad found such a principle in the way in which Israel was able "to incorporate and absorb the experience of any one of its members into the design of the great history-picture of Israel"; and Käsemann also, after emphasizing diversity in the NT, can end up with the Lordship of Christ, "the revelation of Christ in its progress and varied interpretation," as a "real clue."

**10. OT and NT.** One mode of conjunction between the Testaments that was much discussed for a time was **TYPOLOGY**. The attempt to use typology as an exegetical principle in modern times depended on the primacy of revelation in history: typology, if it was to be used responsibly, must be of historical events and not of peripheral scenery, casual objects, or particular words. The subject was pursued in two main traditions, an English (Lampe and Woollcombe) and a German (von Rad). Von Rad thought that the same ability to reactualize traditions in a new situation, which for him was central to the OT, applied also to the relation between OT and NT. But this typological approach was criticized by Eichrodt, Pannenberg, and others, and today there seems to be much less interest in it. Barr has argued that (a) the typological exegesis of the OT within the NT was an element in the situation of that time, which cannot necessarily be appropriated by us in our time; (b) within the NT itself it is not possible to separate out a typology, based uniquely on historical events, from all sorts of other relations, including allegory.

A perspective from within the NT is offered by Hahn. For the men of the NT the OT remains as the given expression of the will of God; but the NT's attitude to the OT is a critical one. "The OT is for them no longer the way to salvation; rather it points forward to the final events of salvation and from there alone receives a light which is indispensable for the right understanding of the OT."

**11. The late OT period and postbiblical Judaism.** One of the great weaknesses in much biblical theology has been its inability to do justice to the postexilic period within the OT and the Judaism which grew out of the OT. OT theologies tend to represent the late period as a degeneration and to accord it little positive value. Yet this is both the period in which the final shape of the OT was reached and also the time during which it was historically transmitted to the NT. The facts of the "intertestamental" period are known and are studied, but means of giving them full theological recognition have as yet been lacking. The fault may lie with the concepts upon which the OT theologies have been built: for instance, the late OT period displays an increased concentration upon the Law and a reduced sense of revelation through history; historiography on Hebrew soil becomes rarer and the historical sense becomes attenuated. Within the categories of most OT theologies this can count only as a deterioration, and notably so with von Rad. His theology, predicated largely upon the Deuteronomic theology of history, cannot give positive value to later developments; and his typology, as a linkage of interpretations of historical events running between OT and NT, simply oversteps the intervening Judaism as if it did not exist for theology. Similarly, theologies which value the structural similarity of OT faith and NT faith may, and often do, ignore the function of the Jewish tradition of interpretation which lies between the two.

Some writers have begun to pay great attention to apocalyptic as the mental world within which

Christianity was born (so Pannenberg). But, as Koch points out, this cannot be realized as long as OT theologies themselves neglect the late period and leave its developments, including apocalyptic, on the margin. Von Rad strongly insists on separating apocalyptic from prophecy and connecting it with the wisdom tradition. This rather esoteric and improbable judgment is a consequence of the general conceptual design of the von Rad theology. Attention is directed almost solely to the canonical books of the two Testaments and to the finding of a center of gravity within OT and NT. Materials like apocalyptic which lie on the edge of the canon are thus almost necessarily distorted; and the historical tradition of religion and interpretation, which was the factual means of transmission of ideas from the OT into the NT period, is neglected.

If this position is to be repaired, we have to consider the paradoxical view that a theology of the Bible, i.e., of the canonical books, will not be possible without the inclusion of a theology of the noncanonical books and the intertestamental tradition generally. The biblical theology movement, for all its idolization of Hebrew thought as the background for the NT, never gave proper attention to Judaism as it really was (often substantially Hellenized!), and for this reason its treatment of Hebrew thought was abstract and un-historical.

**12. The history of religion.** The biblical theology movement began with the intention, among other things, of producing "theologies" of OT and NT instead of the historical approach to the religions of the two which had been prevalent; and for a time this seemed to have taken place. Few books on the religion of Israel were written. But in NT studies more interest in the Hellenistic religious background continued, in the Bultmannian tradition in Germany and in work like that of Dodd in English. On the OT side, the study of Hebrew religion revived. Several works were written by authors who had also written an OT theology (Eichrodt, Vriezen, Fohrer), and another (Ringgren) makes it clear that at least some kinds of OT theology could not easily be distinguished from a study of Israelite religion. Even von Rad's theology included within itself a "history of Yahwistic faith," and a critic like Hesse argued that, in spite of von Rad's drastic contrast between his own theology and the religion of the Israelites, his work was in fact an elucidation of the history of Israelite religion. Thus, of all the "theological" research done in our period, a great deal can stand without change as valid history-of-religions material and is valid as theology only if it is valid on this other plane. The whole drastic effort to set up a theological approach to the Bible which would be sharply distinct from a study of biblical religion has been shown not only to have been a failure but to have been unnecessary and misguided in the first place. The future may well require a new direction of research which will amalgamate both these interests.

History of religions implies not only the history of Jewish and Christian religion but the relations of these with the surrounding world of religion.

For all the distinctiveness of the Bible as a finished product, it can be seen in its beginnings to have emerged from the world of Near Eastern religions and to have received important stimuli from that world at later stages. It is increasingly seen that the significance of the Bible is not damaged if the effect of these stimuli is admitted and given positive valuation.

But this means that the opposition between revelation and religion—an opposition which was one of the main functions of the word "revelation"—is of doubtful value. It seems impossible within the biblical material to separate what is revelation from what is the religion of the biblical writers and the particular currents of tradition from which they came. Curiously, "revelation" was valued in the first place because it seemed to make room for a more biblical kind of theology; in the end it is biblical study itself that is cramped by the domination of this concept and would be freer without it.

**13. Biblical theology and the canon of scripture.** A rather different program for future biblical theology is set out by Childs. The canon is the context within which and from which biblical theology can rightly work. The older biblical theology having collapsed, this is a basis on which a new one can be constructed. The older movement, according to Childs, underestimated the importance of the canon; it "accepted uncritically the liberal hermeneutic presupposition that one came to the Biblical text from a vantage point outside the text" (p. 102). Thus the context of the canon is the normative and factual context for interpretation within the church. There are indeed other contexts within which one can work, e.g., the context of modern historical scholarship; the context of the canon is not a better one or a higher one, but simply a different one. The task of biblical theology is therefore to interpret the material as part of canonical scripture; the emphasis thus lies not on the historical reconstruction of earlier stages, or of what "lay behind" the text, but on the text as it stands in its final canonical form.

Childs' proposals fit well with the modern interest in canon as a feature of scripture; they also fit with the emphasis in modern linguistic and literary theory on the form of the final text as the essential material to be interpreted. It remains to be seen, however, whether this emphasis on canon can prove itself, and whether it can in fact lead to any "biblical theology" in a sense meaningfully connected with what has been previously done under that name. Contrary to Childs' position, this article has rather emphasized the fluidity of the lines marked by canonical and noncanonical, biblical and environmental, theological and religious. The universe of meaning, within which the language of the biblical books operated, was never one circumscribed by the canon of scripture, which did not then exist. An exegesis which would work strictly within the confines of the canon is certainly a possibility that could be added to other forms of exegesis, but it is doubtful how it could be the basic theological form of exegesis. And Childs' argument in favor of the final text, while an important consideration for the interpretation

of individual books, like Genesis, or even the Pentateuch, or Matthew, does not thereby validate an extension to the point where the canon of the entire Scripture would define it as if it was a single text. Again, in spite of the decline of the older biblical theology, we have seen that particular enterprises like the writing of theologies of OT and NT have continued to prosper; it is not clear therefore that that kind of enterprise needs to be replaced by the kind of biblical theology that Childs has in mind, nor that his kind of biblical theology could perform these functions.

**14. Conclusion.** The biblical theology movement, as it was, now belongs to the past history of biblical studies; as we now see it, it was far too much determined by its negativity toward the liberal position. The most useful survival of elements of the movement may lie in the world of Roman Catholic theology; in that different setting its emphases may be more needed, may be understood in a less absolute sense, and may work more wholesomely and less frenetically than they did in Protestantism.

At least in some circles, the term "biblical theology" implied a certain claim to authority, a certain assumption to an unarguable normative status. But biblical theology has never in fact found itself able to exercise final authority or to work in isolation. All that it does differs only in level from various kinds of historical, linguistic, and religious study; and on the other hand, insofar as it seeks to exercise a truly theological function, its work is linked with logical, philosophical, and systematic-theological judgments also. It will do its best service and understand its own function best if it is aware that it is only one part in the total functioning unity of religious and theological study.

**BLACKS, EARLY CHRISTIANITY AND.** Biblical commentators of the first centuries after Christ frequently employed an "Ethiopian" symbolism in their statements of the catholic character and mission of Christianity. Among these writers the Greco-Roman image of the Ethiopian (as the Hebrew "Cushite" was known in the classical world) was a significant factor in the formation of a black-white imagery and in interpretations of the spiritual meaning of biblical Cushites. For an understanding of these developments the lineaments of the biblical and classical images of blacks, especially common elements, are a *sine qua non*.

**1. Biblical and classical images of blacks.** The OT mentions a CUSH around the Tigris and Euphrates valleys (Gen. 2:13), but in the majority of OT texts Cush was an independent country below Egypt extending S from Syene (Ezek. 29:10, cf. Ezek. 30:4, 8-9; Isa. 11:11; 20:3). The blackness of the inhabitants was proverbial (Jer. 13:23; see Isa. 18:2 for their height). OT Cushites had great wealth (Job 28:19; Isa. 45:14), were remote (Ezek. 29:10; Esth. 1:1; 8:9), dwelling at the ends of the earth (cf. Ps. 72:8-9). They were "a people dreaded near and far, a nation strong and proud" (Isa. 18:2 NEB; cf. II Chr. 14:9-13), rulers of Egypt under Tirhakah (Isa. 37:9; II Kings 19:9), and at times mercenaries in Egypt (Jer. 46:9; II Chr. 12:3). Like other nations they were to be subject to God's judgment (Isa. 20; Ezek. 30:1-5; Zeph. 2:12). Their conversion was prefigured (Isa. 18:7; Zeph. 3:10; Ps. 68:31), and they were among those who acknowledged Zion as spiritual mother (Ps. 87:4).

Classical literature and later historical events preserved much of the Hebrew image of the Cushites, at times a successful and triumphant people. Greco-Roman accounts, however, added new elements to the Hebrew picture and gave rise to fresh perspectives relating to blacks. For the Greeks and Romans, Ethiopians, "burnt-faced men," were primarily dark-skinned peoples S of Egypt, and Cushites were so identified in Greek and Latin translations of the Bible. The term Ethiopians embraced

American School of Classical Studies, Athens

3. Head of a Negro, from the Roman cemetery in Athens

a variety of peoples, including the so-called true or pure Negro, a type with less pronounced Negroid characteristics, sometimes called Nilotic, and various mixed black-white types. Though their numbers, slave or free, cannot be precisely estimated, black, woolly-haired, thick-lipped Negroes and blacks of less pronounced Negroid features were far from rare sights in the predominantly white classical world, especially in Egypt, and were popular subjects for artists of all periods. Mentioned by Homer, Hesiod, and Xenophanes, Ethiopians—their country, physical traits, customs, military capability—became increasingly familiar from Herodotus onward. Their position was not affected by the existence, or memory, of vast numbers of black slaves, because by far the majority of slaves were white, not black (see SLAVERY IN THE NT[S] §2). Classical “anthropologists” attributed the physical differences of all men—black and white alike—to natural environment; social differences, to both the natural and social environment. Pale Scythians and Ethiopians burnt by the sun were frequently contrasted as anthropological and geographical extremes unlike the Greeks. The color of the Ethiopian’s skin, the blackest of all men, was a mere geographical accident and resulted in no special racial theory about white superiority or black inferiority. The un-Mediterranean blackness of the Ethiopian was obviously different; its significance, however, was only skin-deep. Excellence, not color, was important, whether on the battlefield or in the amphitheater. A black person could have a soul as “white” as the whitest of whites. A Scythian-Ethiopian antithesis appeared in Menander’s rejection of a common Hellenic criterion—birth—for determining a person’s worth. It makes no difference, according to Menander, whether one is as physically different from a Greek as the Ethiopian

or Scythian; it is individual merit, rather than blood, by which men should be evaluated.

2. Early Christian “Ethiopian” symbolism. Early exegetes realized that they could explicate their message more convincingly and scriptural references more effectively if they used a pattern of thought and a language familiar to their readers. Paul, for example, in his pronouncement on oneness in Christ (Col. 3:11) echoed traditional attacks upon distinctions between Greeks and barbarians and was perhaps adapting Menander’s statement on the inconsequence of race. In this instance Paul used only “Scythian,” but later, Origen reverted to the usual Scythian-Ethiopian formula, and enlarged it by the addition of other peoples. According to Origen, one may be born among the Hebrews, Greeks, Ethiopians, Scythians, or Taurians, yet God created them all equal and alike. By adopting a formula deeply rooted in Greco-Roman thought Origen left no doubt as to the meaning and comprehensiveness of his language.

The Greek proverb about washing an Ethiopian white and the Aesopian fable of the Ethiopian who was vigorously scrubbed and washed to no avail provided a meaningful imagery for the expression of a view that skin color was to be no more significant in the Christian than it had been in the classical view of man. Christ came into the world, according to Gregory of Nyssa, to make blacks white, and in the kingdom of heaven Ethiopians become white. The ETHIOPIAN EUNUCH, prepared for baptism by the reading of the prophet, prefigured the peoples of the Gentiles, changed his skin (Jerome, *Epistulae* CVIII.11 [CSEL]), and provided, in the opinion of St. Jerome, an answer to Jeremiah’s question, “Can the Ethiopian change his skin or the leopard his spots?” (Jer. 13:23).

a. Origen on the Song of Songs. Origen’s com-

mentary on the Song of Songs is the source of a later "Ethiopian exegesis" (see *bibliog.*). The superficial meaning of the bride's words, "I am black and beautiful" (1:5 LXX), according to Origen is that the bride is black in complexion but, lacking neither natural beauty nor an inward beauty acquired by practice, she should not be reproached. Statements of preference as to physical beauty were not uncommon in classical literature. Persians, said Sextus Empiricus, prefer the whitest and the most hook-nosed, and Ethiopians, the blackest and the most flat-nosed. In the predominantly white Greco-Roman world there were also those who described Ethiopians as beautiful and stated their preference for blacks. Origen's observations on "black and beautiful" were similar to that classical view which rejected the ethnocentric yardstick of a majority, as expressed, for example, by Sextus Empiricus, and considered blacks naturally beautiful. Further, Origen's imagery of an "inward beauty" resembled that of a third-century A.D. epitaph, found in Egypt, contrasting the black skin of a humble slave darkened by the rays of the sun and his soul blooming with white flowers.

The bride's words, Origen explains, also have a mystical meaning. Representing the church gathered from among the Gentiles, the bride is replying to the daughters of an earthly Jerusalem who vilify her because of her ignoble birth. Though not descended from famous men, the bride has, she says, a beauty deriving from the Image and Word of God. This is similar to the position of the Sophist Antiphon (fifth century B.C.). Arguing that "we are all by nature born the same in every way, both barbarians and Greeks," he had attacked the practice of revering those born of noble fathers and of failing to honor those not descended from noble houses.

The mystery of the church coming out of the Gentiles and calling itself black and beautiful, Origen points out, is foreshadowed elsewhere in the Scriptures. The marriage of Moses to the Ethiopian woman is interpreted as a symbolic union of the spiritual law (Moses) and the church (the Ethiopian woman) gathered together from among the Gentiles. Origen recalls the suffering of Aaron and Miriam when they spoke against Moses, and he emphasizes that God never praised Moses, in spite of all his other great achievements, so highly as when he married the Ethiopian woman, whom he described as a "black Ethiopian." This phrase, as used by a person born in Egypt in the second or third century A.D., meant clearly an African and in most instances a Negro. Another adumbration of this mystery of the church was the visit of the Queen of Sheba to Solomon. In fulfillment of her type, the queen who came from the S, Ethiopia, the church comes from the Gentiles to hear the wisdom of the true Solomon, and true peace-lover, Jesus Christ. By saying that the queen came from the ends of the earth, and that she was called the queen of the S because Ethiopia lies in the southern regions, in the farthest place, Origen evoked Homer's Ethiopians, the most distant of peoples. In the same context, by citing Josephus, mentioning Meroe, and saying that the queen ruled not only over Ethiopia but also over Egypt, Origen

reminded his readers of many familiar classical references to Ethiopians.

Additional passages were cited by Origen in support of his view that scriptural Ethiopians represented the church gathered from among the Gentiles: (1) a line from a hymn of praise, "Ethiopia shall stretch out her hand first to God" (Ps. 67:31 LXX, as cited by Origen [RSV 68:31]); (2) Zephaniah's prophecy that "from beyond the rivers of Ethiopia . . . they shall offer sacrifices to me" (Zeph. 3:10 LXX, as cited by Origen); and (3) the account of the Ethiopian eunuch Ebed-melech, who when he rescued Jeremiah from the pit (Jer. 38:7-13), by faith in the resurrection of Christ, drew Christ from the pit. All three references emphasized the precedence of Ethiopia, the people of the Gentiles, in approaching God. An Ethiopian "priority," however, with respect to the divine was not at all a new concept in the Greco-Roman world. In fact, "blameless" favorites of the gods as early as Homer, Ethiopians continued to be depicted as pious and just throughout classical literature. And as late as the first century B.C. Diodorus Siculus emphasized that Ethiopians were the first taught to honor the gods and enjoyed divine favor because of their well-known piety.

The classical image of outer blackness and inner whiteness appears in modified form in Origen's commentary on another verse from the Song of Songs: "Look not upon me, because I am dark, because the sun has looked down upon me" (1:6 LXX, as cited by Origen). Recalling the classical environment theory, Origen contrasts the natural blackness of Ethiopians, caused by the sun, with the blackness of the soul, which, unlike the Ethiopian's color appearing at birth, is acquired through neglect. In the tradition of the Ethiopian-Scythian antithesis, he notes that the visible sun darkens those to whom it comes close but does not burn those who are distant. The spiritual Sun of Justice, however, illuminates and brightens the upright in heart but looks askance at and blackens those who disobey him. A similar symbolism, emphasizing "Ethiopian beauty," is found elsewhere in Origen: "We ask in what way is she black and in what way fair without whiteness. She has repented of her sins; conversion has bestowed beauty upon her and she is sung as 'beautiful' . . . if you repent, your soul will be 'black' because of your former sins, but because of your penitence your soul will have something of what I may call an Ethiopian beauty." Origen's contribution to the language of spiritual blackness and whiteness is clear, but equally apparent is the similarity of his imagery to classical themes of black-white contrasts.

*b. "Ethiopian" symbolism in other writers.* An "Ethiopian" symbolism in the spirit of Origen's is used by other early Christian writers. In Alexandria, Origen had seen many Ethiopians, whose presence was a daily reminder of black countries to the S and may have influenced his choice of an "Ethiopian" symbolism. Similarly, Augustine's black-white imagery may have reflected a first-hand acquaintance with blacks in northwestern Africa. Augustine stated that under the name "Ethiopia" all nations were signified, a part representing the whole. "And" says Augustine, "properly by black

men (for Ethiopians are black). Those are called to the faith who were before black, just they, so that it may be said to them 'Ye were sometimes darkness but now are ye light in the Lord.' [Eph. 5:8]. They are indeed called black but let them not remain black, for out of these is made the Church to whom it is said: 'who is she that cometh up having been made white?' [Song of S. 8:5 LXX]. For what has been made out of the black maiden but what is said in 'I am black and beautiful?' (*Enarrationes in Psalmos LXXIII.16 [Corpus Christianorum, Series Latina]*). Augustine also declared that the catholic church was not to be limited to a particular region of the earth but would extend throughout the entire universe, reaching even the Ethiopians, the remotest and blackest of men. Much more than a mere literary device to explain Christianity, this "Ethiopian" symbolism was deeply rooted in the experience of early Christians in Africa.

The application of such an imagery to a North African black is vividly attested by a correspondence between Ferrandus, deacon of the church of Carthage from 520 to 547, and Fulgentius, Bishop of Ruspe (i.e., southern Tunisia), concerning the spiritual welfare of a black catechumen, Ethiopian in color, not yet whitened by the shining grace of Christ, from the most distant parts of a barbarous region where men are darkened by the dry heat of the fiery sun (Fulgentius, *Epistulae XI-XII [PL]*). The language of this correspondence, like Augustine's expression of faith in the spread of Christianity among the most distant Ethiopians, provides dramatic evidence of a North African effort to make Augustine's vision—"Aethiopia credet Deo"—a reality.

The meeting of Philip and the Ethiopian eunuch, the only NT reference to an Ethiopian (Acts 8:26-40), figures prominently in early commentaries. The high official of the Candace, the queen of Ethiopia, was said to have been the first Gentile to receive from Philip the mystery of the divine word, and to have returned to preach the gospel in his native land. It is not certain whether the episode was a straightforward record of actual events, suggested by hints in the OT, or included to illustrate the fulfillment of the promise of bearing witness "to the end of the earth" (Acts 1:8). Opinions vary as to whether the Ethiopian or the centurion Cornelius was the first Gentile Christian. It is clear, however, that for a reader of Acts, "Ethiopian" (ἄνθρωπος Αἰθίοψ, Acts 8:27), as the eunuch was described, meant a black man, and doubtlessly a Negro from S of Egypt.

Readers of the first centuries after Christ would not have failed to associate the Ethiopian and the Candace of Acts with the campaigns of Augustus' general, Gaius Petronius, in Egypt in 24 and 22 B.C., the Ethiopian queen's encounter with Roman soldiers, and the treaty in which Augustus granted the Candace everything her ambassadors requested. The *Monumentum Ancyranum*, copies of which were set up in some, if not all, of the provinces, was also a constant reminder of Augustus' activity in Ethiopia. As late as the sixth century A.D., Philip's baptism of the eunuch was the subject of verses in which the Christian poet Arator emphasized the

salient components of an imagery seen first in Origen's commentary on the Song of Songs—the symbolic marriage of Moses to the Ethiopian woman, the eternal bride, the church, which came, like the dark and beautiful maiden, from the burnt regions of Ethiopia. The eunuch was still for Arator, as for the reader of Acts, a black man, and he continued to be a dramatic symbol of Christianity's catholic mission, as he had been for the African Origen.

**\*BLOOD.** In the OT, blood has religious significance, that is, it is especially related to the divine, in two ways. (1) In accord with widespread belief, blood when shed had uncanny power. It called down vengeance which was assured by God. (2) It had a central role in ritual. In sacrifices it was set apart and applied to sacred objects, symbols of the divine presence and power. The explanation given is that it has power to atone because it is life and therefore stands in close relation to the living God. At the first Passover the blood of the lamb warded off death. In covenant ceremonial it seems to have symbolized sharing.

The NT applies the second group of concepts to the blood of Christ shed in the Passion. Christ's blood makes final, perfect atonement and so makes a pure, holy people of the new covenant. The NT goes beyond Hebrew thought in its emphasis on the redeeming power of this blood and in its insistence that it must be drunk, shared in a realistic way.

1. **Ordinary meanings of the word.** Most commonly it is used in the primary, concrete sense: the blood of men and animals. It can be a metaphor, e.g., "the blood of grapes" (Gen. 49:11; Eccles. 39:26), or a description of a color (II Kings 3:22). Joined in the phrase "flesh and blood" it connotes frail human nature (Eccles. 14:18; Matt. 16:17; I Cor. 15:50). It can also stand for bloodshed (in the OT usually in the plural, *dāmiim*) or for the guilt of murder in the formula of condemnation: "his blood is on his head" (Josh. 2:19; I Kings 2:32; Ezek. 33:4).

2. **Religious connotations in the OT. a. Yahweh the avenger of blood.** Quite generally the shedding of human blood has been regarded as a crime of particular significance, not merely because it destroys life, but because blood itself is uncanny. Of itself it arouses mysterious powers which demand compensation, blood for blood. So also in Israel (Num. 35:32-34), but there it was not the unreasoning furies attached to blood in itself (cf. Aeschylus, *Oresteia*) who protected blood. Because

Yahweh is the God of life and the guardian of the innocent (Gen. 9:4; Ps. 9:13), it is he who brings the shedder of blood to justice.

*b. Use in ritual.* The developed code for priests (Lev. 1-7) demands various dispositions as an intrinsic part of the sacrificial rituals. In the burnt offering (1:5 ff.), the peace offering (3:2 ff.), and the guilt offering (7:2), it was splashed against the sides of the altar. In the sin offering the priest was required to dip his finger in the blood, sprinkle some before the sanctuary veil seven times, and then anoint the altar horns (Lev. 4:5-7). The rest of the blood was poured out at the base of the altar.

In addition to these uses intrinsic to the sacrificial rite, the blood of the offerings was used to purify and sanctify. When consecrating the high priest, the officiant rubbed blood on the right ear, thumb, and toe of the priest and sprinkled him with blood and oil from the altar. This made him and his vestments holy (Exod. 29:19-21; Lev. 8:22-30), set them apart (see HOLINESS §§A2e, 3e). A similar ceremony cleanses and atones for leprosy (Lev. 14:12-18). Anointing the altar with blood is a cleansing (literally, "removing of sin") and an atoning which creates or renews its holiness (Exod. 29:12-14, 36b-37; Lev. 8:15). See SACRIFICES AND OFFERINGS, OT[S] §§1f; 2a; 3b.

The accounts of the Exodus and of the theophany at Sinai are marked by rites in which blood plays a part. The blood of the paschal lamb identifies the dwellings of the Israelites so that the destruction visited on Egypt passes them by (Exod. 12:7, 13, 21-22). At Sinai the people affirm their allegiance to Yahweh by acclamation, and a part of the blood of the sacrifices is sprinkled on the altar and part, "the blood of the covenant," on the people (Exod. 24:6-8; cf. Ps. 50:5; Zech. 9:11).

*c. Meaning assigned to blood.* Lev. 17:11 is explicit about atonement: blood atones "by reason of the life." In fact, blood is life (Gen. 9:4; Lev. 17:14; Deut. 12:23) and life is characteristic of God (cf. Hos. 1:10 [MT 2:1]). Being so near the divine, blood is holy and efficacious. It removes sin and consecrates (Exod. 29:36b-37). Note that blood thus effects purification solely by application to the person or thing needing it. Blood is not given to God as atonement. Indeed, God is never the direct object of the verb "atone" as though the sacrificial offering must somehow affect him.

All these ideas are part of a system which sought to normalize and unify sacrificial practice. Because this system emphasized the expiatory role of sacrifice in general (e.g., Lev. 1:4 attaches expiation even to the burnt offering), the connection between the power of expiation and the divine element of life in the blood is practically a general theory of sacrifice. When one used blood properly in sacrifice, he dealt with something which was close to God and so, presumably, pleasing to him, and which sanctified whatever it touched. The expression of such explicit ideas about the meaning and power of blood is, of course, rather late and sophisticated—the sacrificial code belongs to P. However, it has its roots in feelings which are

old and widespread in Israel. Blood was to be respected (cf. I Sam. 14:33; Deut. 12:24; both pre-P).

Even apart from the question of the antiquity of the belief that life is in the blood, this meaning of blood is normative for the OT in the form in which it has come to us. Thus the paschal blood on the Israelite doors seems originally to have been a signal, based on apotropaic magic, warning away the destroyer because he already had his portion. In the actual context of the over-all OT attitude toward blood and rite, it must be seen as marking off the chosen people, signifying their holiness in the basic sense of separation for the divine. So also the "blood of the covenant" (Exod. 24:8). Its origins must be connected with the universal conviction that the ritual sharing of blood creates a quasi-familial relationship. However, there is an inevitable shift in meaning toward the purification and consecration proper to sacrifice from the more primitive idea of blood brotherhood. Indeed, the solemn but festive atmosphere implied by the peace offerings in Exodus is a striking example of the special view of blood sacrifice in Israel. The ancients knew analogous blood covenant rites (Aeschylus, *Septem contra Thebas* 42-48; Xenophon, *Anabasis* II.ii.9), but they were dark ceremonies of cursing, because blood belonged to the dear gods of the underworld. In Israel it was life because it belonged to Yahweh.

The peculiar rite for purifying the leprous is a special case. No doubt something of the mystery of blood was felt, but in fact the rite is carefully separated from the properly religious, sacrificial purification. It is a relic of the widespread ancient practices for frightening away disease demons, and like them it is concerned to multiply efficacious agents. Unlike the blood of sacrifice, the blood needs to be augmented. It is merely one part of the paraphernalia along with the water, the red cloth, and the rest.

*d. Background of the OT interpretation of blood.* That there were so many different usages from different sources points to the antiquity and wide diffusion of a conviction that blood had a cardinal role in efficacious sacrifice. Further, the developing systematization of these usages increased the emphasis on blood. The conviction of its importance grew rather than diminished as theological reflection developed.

The data of comparative religion must be used with care, avoiding easy but inaccurate commonplaces such as the universality of beliefs about blood as life or the nature of the food of the gods. In fact, it is striking that the civilizations of the ancient world from which Israel drew its sacrificial practices show no sign of a belief in the importance of blood as such in sacrifice, much less of an idea that blood is life.

The other claim, that blood is a special divine food, even conflicts with the evidence for ancient concepts outside Israel. Sacrifices were widely considered the food of the gods. However, in one form coming from both Egypt and Mesopotamia this was expressed by making the offering a regular meal, in which blood had no special part (cf. the Israelite imitation of the usage, the shew-

bread). In another form in Greece, part of the meat and especially the fat belonged to the gods; the blood belonged to men and ghosts.

Ideas about blood as divine food, then, were superstitions and were firmly rejected by the central tradition (Ps. 50:13). So far was the idea from having any real force that Ezek. 44:7 can speak of fat and blood as divine food. Ezekiel is so secure in the spiritualization of sacrifice (contrast 43:25-26 with the related text, Exod. 29:36b-37) that he can use the food metaphor without any fear of misunderstanding.

In general, rite precedes interpretation. Usages were instituted first; then the principle, such as that blood is life or blood is divine food, was formulated. The visual impact of the manipulation of the sacrificial blood must have been strong, and it was this which stimulated the desire for an explanation, not the explanation which sought expression in a rite.

Given this fact, we may look for attested ideas about blood or reactions to it which could have been at hand to satisfy the urge to explain. Now, while blood may not always be *identified* with life and tied to the divine, clearly blood is often *associated* with life. Menstrual blood links it with life's origins, and losing blood means losing life. But equally, blood arouses aversion and has power to frighten. In the OT the story of the "bridegroom of blood" (Exod. 4:24-26) probably expresses most vividly this tie between blood and the irrational, the uncanny. It appears too in the widespread belief shared by Israel that blood by its own force summoned a venging power (Gen. 4:10) and must be requited to exorcise pollution (Num. 35:33). Blood is so powerful in a negative sense that even when bloodshed was justified in the wars of a hero it left its mark. David was marked in this way and consequently he could not build the temple (I Chr. 22:8; 28:3). It is not, then, an accident that the Nile was turned into blood (Exod. 7:14-24) and that this plague of blood became a sign of apocalyptic troubles (Rev. 8:9; 16:3-4). Blood can mean terror (cf. Joel 2:30-31 [MT 3:3-4]; Rev. 6:12).

Blood thus has more than one powerful connotation, and its relation to life need not have been seized upon to explain its religious symbolism. In the ancient Middle East, blood had its role in fearsome rites associated with death, and in Greece, which shared ritual practices with the Levant, blood was proper only to sacrifices to the underworld powers, to rites of cursing and death. There may be traces of this attitude in Israel. The blood of the Passover, as we have seen, may have been a sign that the dread destroyer—in Exod. 12:23 he is separate from Yahweh—had his due from the household. And Ps. 16:4 $\alpha$ , which may be translated: "Those who pursue another god multiply their pains," probably refers to idolatrous blood rites, i.e., those rejected in 4 $\alpha$  $\beta$ , to a god of disease and death.

But these are all traditions of settled peoples, and Israel had another strong tradition, the nomadic. Among the nomads of Asia the tradition of blood as a sign of brotherhood seems to have been particularly strong, and it kept this signifi-

cance in religious ritual. Calling attention to the blood in rites emphasized a connection between blood and the forming of relationships. This is not yet a generalization equating blood to life, but at least it is a positive symbol, not a frightening one. The step from the idea of family to that of life is not a long one.

This tradition was combined with the ritual borrowed from Canaan, which stressed the role of sacrifice in forging unity between the community and the divine. Without forcing any change in the rubrics, this combination would put the ritual action in a new light and induce new attitudes. It offered the basis for differentiating the borrowed rites, something Israel did readily: witness the historicization of the seasonal agricultural festivals of Canaan, turning them into celebrations of single past events. It would draw attention to the use of blood and give it a meaning which set the rite apart from the Canaanite rite, where blood as such was not significant in sacrifice and where its symbolism was negative, tied to war and death. Combine all this with the fact that the God of Israel was pre-eminently the living God, and the possibilities of development were great. Sacrifice meant unity. So did blood. The blood of sacrifice could become the symbol of unity with divine life so that it was capable of expiating, purifying, and so bringing man into the divine sphere of life and holiness.

**3. Religious connotations in the NT. a. Application of OT concepts.** According to the NT, the blood of Christ offered in the Passion achieves once and for all the whole aim of rites prescribed by the Law: purity and unity (covenant: Heb. 9:14-22; 13:12, 20). This appears already in the Markan form of the eucharistic words (Mark 14:24): the blood which institutes the new covenant is "poured out for many." This recalls Isa. 53:10-13 which, especially in the LXX form, emphasizes that remission comes because the Servant bears the sins of the many, as Matt. 26:28 makes explicit. The blood of Christ, then, does not simply establish a covenant; it does this by remitting sins.

Further texts use the OT terms of expiation and sanctification in developing the significance of the blood. According to Rom. 3:24-25 expiation has been made by the blood so that redemption from sin has finally been effected. A new gift of God accomplishes what the blood of sacrifices had been designed to do (cf. the formulation of Rom 3:25 with Lev. 17:11, and see Rom. 3:20 and 5:9). I John 1:7 adopts the Greek verb for cleanse, καθαρίζειν, used in sacrificial contexts in the LXX for the Hebrew words meaning "atone" and "remove sin," to say that the blood of Christ cleanses from sin.

The Epistle to the Hebrews is explicitly concerned with the continuity and the contrast between old and new. The two have the common aim of purification and access to God, but it is only the new that effects what the old symbolized (cf. 9:22; 10:4, 19-22). This new reality is accomplished because the blood of Christ cleanses the conscience from dead works for the service of the living God (9:13-14). This is precisely the goal of the atoning blood of the OT—restoration and increase of

life. By its cleansing effect, the blood of Christ's sacrifice creates a truly holy people (10:29; 9:14; 13:12) and produces the eternal covenant (13:20).

**b. New developments.** The NT extends the limits of this covenant achieved by Christ's blood. It has broken the barriers so that all humankind may be united in God (Eph. 2:13). Indeed, through it all heaven and earth are reconciled (Col. 1:20).

The NT, then, emphasizes that the blood of Christ redeems. The idea is not characteristic of the OT. There, blood has its effect entirely from being applied to the object of purification (see §1c above). But the NT as early as Rom. 3:24-25 says that the blood redeems, that is, pays a debt. In Romans the idea is coupled with atonement. It stands by itself, apart from any other sacrificial concepts, in Eph. 1:7 and Rev. 5:9. The metaphor is carried to the full in I Pet. 1:18-19 where the blood is explicitly the ransom price.

Finally, the NT insists that the blood of Christ is actual drink. It is efficacious where the blood of the old sacrifices was only a sign, but to share in its power one must partake of it (John 6:53-56; cf. I Cor. 11:27). Such sacramental realism has gone far beyond Hebrew thought. See ATONEMENT §C6.

D. J. MCCARTHY

\***BODY. 1. In the LXX and the gospels.** The distinction between true self and flesh, or body, so natural for Greek and modern thought, is absent from the OT, where the physical body is not abstracted from the living reality and where human beings are defined in terms of their relationship to God, their creator. In the LXX the term σῶμα appears as a translation for (a) corpses, human or animal; (b) living physical bodies; (c) slaves, and (d) occasionally as a synonym for the self. The same general usage is found in the gospels, except for the innovative saying of Jesus, "This is my body" (Mark 14:22). Since neither σῶμα nor its Aramaic equivalent were used in connection with the making of an offering, the word here probably denotes the whole self of Jesus given for his disciples.

**2. In the Pauline letters.** Paul's use of σῶμα is so varied and original that it has been variously appraised. The several ways in which he uses the term can be understood best when one takes into consideration the historical context of his dealing with specific issues and with specific Christian congregations.

**a. I Corinthians.** Paul uses σῶμα in I Thessalonians, Galatians, and Philemon in a nontechnical sense, to mean the physical totality of a person. But then the same word suddenly appears in I Cor. 6:12-20 to designate that aspect of one's personhood through which one may relate to other persons and to God. This new use of the term

by Paul was evidently prompted by a Gnostic slogan which must have run something like, "Food is to the stomach as fornication is to the body" (cf. I Cor. 6:12-13). In rebuttal Paul insists that the relation God establishes with the Christian's σῶμα precludes becoming "one body" with a prostitute. Σῶμα here means the whole person entering into both spiritual and sexual relations. The combination is extraordinary in a Hellenistic environment which downgraded the body, and there is a mystical exclusivity in Paul's usage which is profound and unique. The argument is climaxed by the unusual claim that the σῶμα is the temple of the Holy Spirit (6:19-20).

In the context of marriage this idea manifests itself in an egalitarian rule of conjugal obligation (I Cor. 7:4) whereby σῶμα denotes the basis of sexual relations. This sets the framework for interpreting I Cor. 7:34: the unmarried seeks "to be holy in body and spirit" by devotion to church work, but this does not imply the married achieve lesser holiness because of sexual relations. The fault in 7:32-35 relates to worldly distractions, not marital relations. See MARRIAGE IN THE NT[S].

In I Cor. 10:16-17 sacramental participation establishes a bond of "one body" between believers, excluding Gnostic participation in pagan meals and prostitution. I Cor. 11:17-34 deals with disorderly celebrations of the Lord's Supper caused by Gnostic disrespect. Paul insists upon the validity of the formula, "This is my body," and argues that the presence of Christ in the sacrament establishes a sphere of divine law which wreaks vengeance on violators. To eat "without discerning the body" (11:29) is to disregard the personal presence of the Lord whose sovereign grace and power claim the believers' lives totally and exclusively.

The most widely debated reference to σῶμα is I Cor. 12:12-13 where Paul inserts the realistic claim, "so it is with Christ" into a traditional metaphor of the body politic. To break from metaphor into realism and to identify a person with the σῶμα of the community were unparalleled in the Hellenistic world. Paul may have patterned this concept after the rabbinic idea of the gigantic body of ADAM which contained the souls of all mankind. The elaboration of the concept in 12:14-30 stresses mutual submission and interdependence, ideas directly opposed to Gnostic individualism.

I Cor. 15 answers a scornful question about the resurrection body (15:35) raised by Gnostics who assumed they had already transcended bodily existence. Paul accepts the premise that "flesh and blood cannot inherit the kingdom of God" (15:50), but he develops an unparalleled distinction between flesh and σῶμα, creating in the process the expression "spiritual body" (15:44). Though he is not following Hebraic terminology—the term "resurrection of the body" being unknown in ancient Judaism—Paul expresses a common thought that God alone provides the continuity between this life and the next (15:38-44). Such continuity includes the provision of a σῶμα, spiritually transformed but still bearing a distinctive personality and relational possibilities.

**b. The later letters.** In the later letters Paul's employment of *σῶμα* as a relation term recedes in favor of more traditional usage (II Cor. 4:10; 5:10; 10:10; 12:2-3). The adoption of a Gnostic idea in II Cor. 5:6-8, where the *σῶμα* is the prison of the true inner person, indicates a shift in argumentative strategy. The complex use of *σῶμα* in Romans also indicates sustained controversy. Only in Rom. 12:4-5 is it used in the technical sense of the basis of unity and relationship, but even here the realistic identification of the church with Christ is avoided. Otherwise *σῶμα* in Romans depicts the basis of selfhood in the old aeon (1:24; 4:19) and the new (Rom. 8:11, 23; 12:1). In Rom. 7:24; 8:10-11 Paul uses *σῶμα* where one would expect *σάρξ* ("flesh," cf. Rom. 7:25; 8:9, 12-13) because the former expresses the whole person more adequately. Elsewhere in Romans several unique combinations bear polemical implications: the "body of sin" (author's trans.) in 6:6 appears to correct the Gnostic idea of baptism as destruction of the material body; "body of death" in 7:24 appears in a slightly altered citation of a Gnostic lamentation about the deadly curse of a material body; "mortal body" in 6:12 (NEB; "mortal bodies," 8:11 RSV) counters enthusiastic claims to possess immortal life, while "dead body" (author's trans.) in 8:10 is correlated in a baptismal context with the phrase "because of sin" to avoid the Gnostic assumption that doom is due to materiality.

**3. Other NT writings.** Intensive debate and development of Pauline doctrine is reflected in later writings. By citing an enthusiastic hymn celebrating Christ as the head of the *σῶμα* of the universe and by adding the phrase "[of] the church," the author of Colossians counters the tendency to expand the "body of Christ" concept into universal triumphalism (1:18; cf. Eph. 1:23). The body of Christ is still only the church (Col. 1:24; Eph. 5:23), but its growth through the mission to the Gentiles will one day permeate the cosmos (Col. 2:19; Eph. 1:23; 3:8-10). In an adaptation of the Hellenistic concept of shadow versus reality, Col. 2:17 designates the "body of Christ" (author's trans.) as the reality toward which the universe is moving. This reality is not attained through ascetic rules for the body (Col. 2:23) but through the reconciliation effected in the crucifixion of Christ's "body of flesh" (Col. 1:22; 2:11; Eph. 2:15-16; cf. Heb. 10:10; I Pet. 2:24). The church becomes the "body" of the reconciled, bound together in mutual love (Eph. 4:4, 12, 16; Col. 3:15). The parallel between sexual and spiritual relations in the *σῶμα* is maintained as the supreme "mystery" (Eph. 5:28-33). The powerful sense of somatic solidarity is conveyed by a new term, *σύσσωμος*—"co-bodied," or belonging to the same body (Eph. 3:6; RSV "members of the same body"). A similarly affirmative view of bodily relations is found in Heb. 13:3.

\***BOLDNESS.** Of the various words in the NT which refer to boldness or confidence, *παρρησία* is the most important theologically. In the LXX (where no special Hebrew word lies behind the concept) it is the gift of God to his people (Lev. 26:13) and is ascribed to the divine wisdom (Prov. 1:20-21). It is used in the LXX also in the sense of "freedom" or "free and joyful standing before God" (Job 27:9-10; 22:23-27; cf. Wisd. Sol. 5.1-2).

In secular Greek, *παρρησία* is used with reference to the free citizen of a city-state who could say anything publicly in the assembly. Aliens and slaves did not have this right. In the private sphere it represents freedom of friends who are unafraid to speak the whole truth to one another, even if this demands censure. In the NT period the word loses its original political associations and becomes simply the moral freedom to speak the truth (as one sees it) publicly. As such, it was one of the highest ideals of the Cynic philosophers. See CYNICS[S].

In the NT *παρρησία* and *παρρησιάζομαι* are used most in John, Acts, and the Pauline letters, but also in Hebrews and I John as well as in Mark 8:32. In the Pauline texts it combines the elements of courage and plainness of speech and is closely linked with the fearless proclamation of the gospel which characterized Paul and the entire early Christian community (cf. I Thess. 2:2; II Cor. 3:12; Phil. 1:20). In Acts it is a characteristic term for the missionary witness of the apostles, which again combines fearlessness and plainness in speaking (2:29; 4:13, 31; 9:27-28; 13:46; 14:3; 18:26; 19:8; 26:26). Indeed, Acts ends with Paul in Rome, "preaching the kingdom of God and teaching about the Lord Jesus Christ quite openly [lit. with all freedom of speech] and unhindered" (28:31).

In John *παρρησία* is used to indicate the revelatory nature of the words and deeds of Jesus, the openness of his sonship and messiahship (cf. 18:20). In I John it represents that free relationship with God which believers will experience in the day of judgment (2:28; 4:17) and which, in fact, is already realized in prayer (3:21; 5:14). Hebrews combines uses of the word for both the freedom of direct access to God, made possible by the sacrifice of Christ, and the open confession of faith in the midst of opposition. The use of *παρρησία* in I John and Hebrews paves the way for its use by the early Fathers.

*Πεποιθῆσις* is used six times in the NT, always by Paul, meaning "trust" or "confidence." It can be trust in God (Eph. 3:12) or in men (II Cor. 1:15). Paul has self-confidence in his calling as an

apostle (10:2), a confidence which comes through Christ (3:4). See also COURAGE §4 and COURAGE[S].

\***BOW.** See RAINBOW[S].

\***BOZRAH (IN EDMO).** Excavations by the British School of Archaeology in Jerusalem commenced in 1971 and have continued each season since then.

The site covers some nineteen acres and is surrounded by a wall up to about thirteen feet in width. The wall is built entirely of dry stone, and part of it appears to be of casemate construction. The plaster surface on the slopes of the mound appears to be associated with the town wall.

The natural defenses of the site are well illustrated in the original article. The only reasonable access to the site is at the southern end, where the excavations have laid bare evidence of a massive system of fortifications. Immediately inside this, on the highest point of the settlement, remains of several monumental and important buildings are coming to light. It is not yet possible to determine whether these are administrative palaces or temple structures.

By the end of the 1972 season, three main phases of occupation had been isolated. The major period appears to belong to the eighth century B.C. Houses and public buildings are easily distinguished by

the widespread use of both floor and wall plaster; there is evidence of several stages of rebuilding. Some of the pottery of this period, including a very fine polychrome ware, appears to be new in the Palestinian and Jordanian ceramic sequence.

Probably the town depended for its water on internal catchment and storage. The nearest fresh water source at present is situated approximately 1¼ miles from the site. There is evidence of a postern gate in the eastern wall of the city giving access to more monumental buildings on the slope beneath the acropolis.

Beneath the plastered floor and wall occupation there is evidence, in some trenches, of earlier occupations: a mud brick phase and, below that, flimsy constructions of dry-stone walling. It is not yet possible to give a final verdict on the date of these earlier occupations. The evidence suggests at present that it is unlikely to have been before the ninth century B.C.

The latest period of occupation, marked by a widespread use of fine ashlar masonry, could possibly be of the Assyrian period, and the plans of some of the buildings bear strong resemblances to those of Assyrian open-court buildings. Here, however, the excavators have been less fortunate, since most of the evidence has been removed by later stone robbing.

\***BURIAL.** See TOMB[S].

\***CAESAREA.** Caesarea Maritima lies destroyed under broad sand dunes. Literature about the city is plentiful, but its archaeological history is meager. Recent excavations, however, have enhanced our knowledge of the ancient city.

1. **The harbor area.** From the air the outline of the destroyed and submerged harbor can be seen extending a quarter of a mile out from shore. Limestone blocks fifty feet long and eighteen feet wide, mentioned by Josephus (Antiq. XV.ix.6) as part of the breakwater, have been found. In a wide semicircle around the harbor front some of the remains of the Roman city are visible: two aqueducts, an amphitheater, a hippodrome, and a theater. The high aqueduct conducted pure water from the limestone foothills through a rock-hewn tunnel 2½ feet wide by 3 feet high by 6 miles long and then on arches for another 6 miles to the city. The amphitheater, which has an arena larger than that of the Colosseum in Rome, was the probable site of the death of AGRIPPA I, also known as Herod Agrippa (Jos. Antiq. XIX.viii.2; Acts 12:21-23). The hippodrome, founded in the second century A.D., is more than a quarter of a mile long and one hundred yards wide. It is one of the larger hippodromes of the Roman world and seated over 30,000 people while the theater, located on the coast, seated 4,500 people.

On the sea front a long series of recently uncovered vaulted warehouses each ninety feet long give indication of the size of the port which Josephus in one place (War I.xxi.5) says was larger than Piraeus (but see Antiq. XV.ix.6). Beneath the city HEROD the Great built an extensive sewer system which, according to Josephus (Antiq. XV.ix.6), was cleaned out by the surge of the sea. One of these sewers, 10½ feet in height, has been found and is serving as one means of determining the plan of the buried city.

2. **Other finds.** Ten years after the death of Herod, Caesarea came under direct Roman rule (A.D. 6) and, apart from the reign of Agrippa I (A.D. 37-44), remained under that rule for over six hundred years. During this period it was the administrative and military center of Palestine. The residence of the procurators was there, and a lithic inscription referring to Pontius PILATE has been

found. Public buildings including a forum, baths, columnated streets, and tetrapylons were built. Near the harbor a temple to Augustus and Roma contained two colossal statues. A white marble foot from one of these, three feet long, has been found. A second temple to Tyche-ASTARTE is pictured on coins from Caesarea, and a large marble Tyche figure has recently been recovered. A third-century Mithraeum (see Fig. C1), the first found in Palestine, was discovered in 1973.

George Whipple

1. The interior of the Mithraeum, showing the altar stone on the floor in the center

The population of Caesarea was always mixed. In addition to pagan temples, a Jewish synagogue and many Jewish tombstones from the Roman and Byzantine periods have been recovered. Samaritan lamps are frequently found, and two Christian churches and many Christian inscriptions from the Byzantine period are known.

By the Byzantine period the city was walled and had been substantially rebuilt. A large hexastyle public archive with mosaic inscriptions from Rom. 13:3 and industrial installations from this period have now been excavated. Caesarea flourished until it was captured by the Persians in A.D. 614 and destroyed by the Arabs in A.D. 639. Debris left from the Arab destruction has been found over the entire Byzantine city.

\*CAIN AND ABEL. This narrative has lent itself to a wide range of interpretations, depending on varying assumptions as to the intention of the biblical author. Was that intention literal or symbolic (allegorical)? Or, would even a literal intention have assured the preservation of the narrative, were it not for the power of its symbolism?

Assuming a symbolic or didactic value, what is the basic lesson intended by the narrative? Is it, for example, an anthropological speculation on the conflict between two ways of life—the pastoral and the agricultural? Against this modern and widely held interpretation are the following considerations:

a) The witness of history in the early Near East is that clashes between communities resting on different economic bases were not between pastoral and agricultural peoples, but rather between sedentary, urban-agricultural societies on the one hand and less “civilized” hill peoples or steppe nomads on the other. (Even the urban-agricultural economies included substantial elements of wealth in the form of livestock.)

b) To root the story in such a conflict is to impute to the biblical author the assumption that the Deity favored either the pastoral way of life over the agricultural or vegetable offerings over animal sacrifice, in which case one is left with the anomaly that God tolerates the annihilation of the favored shepherd at the hands of the aggressor agriculturalist, who, in turn, is apparently driven to nomadism—with the result that both ways of life are destroyed. That the husbandman turned nomad-outcast then becomes the city-founder culture hero (Gen. 4:17) is an incongruity hardly eased by such an interpretation.

c) If source analysis is to be credited (*see* DOCUMENTS; SOURCE CRITICISM, OT[S]), the author of the Cain and Abel narrative (J) views Cain as propagator and representative of all mankind, not of a single branch. The P genealogy of antediluvians in Gen. 5 descends from Adam through Seth and his son Enosh and does not include Cain. The J genealogy in ch. 4 descends through Cain to the three sons of Lamech and knows no Seth. Hence 4:25-26a must be viewed as an editor's attempt to bridge the gap between the two differing genealogies.

Other problematical features in this narrative may offer clues as to its genre and to its basic motif. If, other than Cain and his parents, there was no society, what is the meaning of banishment? Who is the candidate (“whoever finds me,” Gen. 4:14) who may feel free to kill Cain? And, assuming other men to exist, why should they desire Cain's death?

Unless J is to be written off as inept both as thinker and artist, the Cain and Abel episode must be seen as the culmination of the Eden story in chs. 2 and 3, a single composition, allegory or fable, articulating J's anthropology and theology. Since the characters are symbolic and prototypical, the tale is timeless; the conventions of life, however, are those of ancient Israel.

Two brothers are rivals for the favor of a divine monarch. The one offers the finest gift

he can make; the other's gift is of middling quality. When the king makes known his displeasure with the latter, he also informs him that he is free to make amends and achieve restoration to favor; he warns him, however, that freedom of will makes him vulnerable to the demonic temptation of wrongdoing. The admonition is all too prophetic: the offender who began with niggardliness to this master now moves from petulance to murder. In the murderer's response to the question as to his brother's whereabouts, the author provides an exquisite insight into the psychology of the immoralist: he is one who rejects responsibility for his fellow.

Elsewhere in the Bible crimes against one's neighbor are pictured as polluting the earth upon which one lives and from which one draws sustenance. Here the decreed punishment is the earth's rejection of the killer who has forced upon her a diet of human blood. As in 3:17-19 (by the same hand) the penalty is a debarring from the soil's natural fertility; it will not even respond to cultivation. The result (as in 3:18) is a forced reversion from the life of the settled farmer to that of ranging wide to gather wild grains and fruits. (The expression *nā' wānādh*, “fugitive and wanderer” [4:12], has overtones of neither fugitivism nor nomadism; it is a hendiadys denoting one who is endlessly on the move.) The condemned one's response is that the decree is equivalent to a death sentence. In the context of ancient Israel's regulation governing homicide, the obligation of kinsmen to exact vengeance (cf. also vs. 24) is the deterrent which protects members of a society; the outcast is deprived of this protection. Being “hidden” from God (vs. 14) is common to court imagery, an expression for the denial of God's favor and protection. Yet, because Cain, in this account of J's, is the sole remaining progeny of the first couple, the Deity preserves him (and through him the human race) by taking him under his own protection, imprinting upon him an apotropaic mark, a warning to all and sundry that God himself will exact sevenfold vengeance for harm done to Cain.

A synopsis of the events in Eden is required to put the Cain and Abel denouement in proper perspective. In chs. 2 and 3, J addresses himself to the perplexing problem of how a Deity who is both just and benevolent could have destined human beings for death, the ultimate evil. The mythos he formulates envisions two alternative worlds: (1) the Age of Innocence (Eden), in which there is no death, where human beings live forever in the persons of the first couple, archetypes of the species, with no needs unfulfilled, and ignorant of sexuality, the instrument of procreation; and (2) the Age of Experience, featuring knowledge, sexuality, procreation—and death. Death is necessary because the limitations of space preclude the coexistence of procreation and deathlessness. It was by human choice that death came into the world—death and time and history with all their evils. For without the possibility of evil, without the *problemata* which are the stuff of history, there is no history. The choice of first man and woman in tasting the fruit of experience

eventuated in the birth of Cain and Abel, in the possibility of history. And the first event in history is man's murder of his brother; Cain here represents all mankind, and all are members of one family. History is atrocity, not because human beings are ignorant, but because they have freedom of will and, despite instruction and admonition, exercise it in defiance of their Creator.

\***CALAH. 1. Location.** Calah, today's Nimrud, is located on the E bank of the Tigris five miles N of its junction with the Zab. The Tigris once ran at the base of the walls on the W side, but has slowly moved westward to its present position about two miles away.

**2. History of excavations.** Between 1845 and 1851 Layard carried out a series of excavations. He discovered the Northwest Palace of Ashurnasirpal II and uncovered innumerable sculptures, reliefs, and small objects which are now in the British Museum. In 1949 the British School of Archaeology in Iraq began fourteen successful seasons of excavation which ended in 1963.

**3. History of Calah.** Although excavations have shown that Calah was inhabited as early as 2500 B.C., the city does not appear in historical accounts until ca. 1250 B.C. when it was founded as a town by Shalmaneser I of Assyria. Ashurnasirpal II (884-859 B.C.) enlarged Calah and made it his capital. He and his successors ruled Assyria from Calah until the late eighth century, when the capital was transferred to Khorsabad and soon after to NINEVEH. Ashurnasirpal set himself an ambitious plan for his new city. In five years he had completed most of the circuit wall, nearly five miles of solid mud-brick. This outer city wall enclosed an area of nine hundred acres. A stele commemorates the completion of the palace in the fifth year of his reign and mentions the feast given for the 63,000 citizens of Calah, including 47,000 workmen transported from conquered parts of the Empire. To help feed the expanded population, Ashurnasirpal built a canal which brought the fresh waters of the Greater Zab a distance of six miles to irrigate land and exotic ornamental gardens near the city. The canal is easily traceable over much of its course today and the Negub, the rock-cut tunnel which carried the water through a large conglomerate bluff, can be seen opposite the modern village of Quwair. Ashurnasirpal also built the temple of Ninurta, god of war and patron of Calah, and began work on the ziggurat adjoining the temple. The ziggurat, standing at a present height of over 141 feet, was completed by Ashurnasirpal's son Shalmaneser III (859-824 B.C.).

Nimrud (Calah's later and present name) continued as a provincial capital after its abandonment as capital of the Empire. It was destroyed during the Median invasions in 614-612 B.C. There were a few survivors who lingered, but the city was deserted by the time that Xenophon and his troops passed by in 401 B.C.

**4. Major buildings.** The temple of Ninurta, completed in the eighteenth year of Ashurnasirpal's reign, stood at the foot of the ziggurat in the NW corner of the citadel. Layard discovered the principal sanctuary and a subsidiary one, the latter decorated with reliefs of magical figures. In the storage magazines of the temple many valuable small objects were found in the debris, dropped by the looters when the city was sacked—small testimonials from what must have been the richest temple in the city.

The Northwest Palace was divided into two main sectors; the *babanu* (derived from Akkad. *babu*, "gate") around the outer courtyard where business was transacted and the public had access, and the *bitanu* (derived from Akkad. *bitu*, "house") around the inner courtyard with its reception rooms and residential quarters reserved for the private life of the king and his family. The two sectors were connected by the largest and most important room in the palace—the throne room. This plan, without precedent in the Middle-Assyrian period, became standard for Late Assyrian palaces. The S façade, now restored, is decorated with reliefs cut in the local gypsum (or "Mosul marble") depicting tribute-bearers. Two doorways flanked by winged bulls and lions lead into the throne room. The throne was placed before a relief showing the king twice, standing on either side of the "Sacred Tree" between winged genii who anoint him. On the S wall of the room ran double sculptured bands showing the king hunting lions and bulls and also engaging in warfare.

In the SE corner of the citadel were located the Nabu temple and the Burnt Palace. These are ascribed to the period of Adad-nirari III (808-782 B.C.). The Nabu temple, dedicated to the god of writing and his consort Tashmetum, has twin sanctuaries: stone-paved rectangular rooms with raised platforms for the statues of the deities. The shrines were surrounded by chambers housing the business and domestic activities of the temple.

To the N of the Nabu temple, a road passes through the original gate where the citadel wall is 122 feet thick and still stands to a height of 43 feet, and proceeds through the outer city to the arsenal built by Shalmaneser III in the southeasternmost corner of the city. This arsenal (Akkad. *ekal-masharti*) housed barracks, storage rooms, workshops, and a royal palace. Although the plan has similarities with the Northwest Palace, such as the throne room used as a division between the two sectors, the *ekal-masharti* is much more military in character. There is an extra throne dais in the great courtyard to facilitate the king's review of his troops. Among the important finds made in the arsenal was the throne base of Shalmaneser III and many of the ivories for which Calah is renowned: plaques, figurines, inlays for furniture, and pieces of furniture.

\***CALF, GOLDEN.** A bull image, probably made of wood and overlaid with gold, which was worshiped in the wilderness and later in the northern kingdom of Israel. The image may have represented the god Yahweh or, like the ark and cherubim in the Jerusalem temple, an enthronement seat or pedestal for Yahweh.

Scholars disagree on the origin and function of the calf image. Eissfeldt suggests that the bull—and the ark—were genuine Israelite cultic symbols prior to the return of the Israelites to Canaan; while Bailey argues that the bull image represented the Mesopotamian moon-god Sin, whose cult survived the patriarchal age as an acceptable form of Israelite religion. This contention, if correct, would render unnecessary the opinions that the calf was only a pedestal and did not interfere with exclusive Yahweh worship.

There are two different yet similar accounts of the introduction of the calf cult in Israel. The first, in Exod. 32, relates that the people became impatient during Moses' prolonged absence on Mount Sinai and demanded that Aaron make a god to lead them. This does not prove (as has been suggested) that the Israelites merely wanted a divine desert guide. The sequel indicates that fertility rites, which would be quite inappropriate in the case of a desert guide, were associated with the new cult. Having collected golden ornaments from the people, Aaron shaped them into the form of a bull, which was then proclaimed to be a representation of the god who had brought Israel out of Egypt.

Subsequently, Aaron built an altar and proclaimed "a festival unto Yahweh." The festival degenerated into a cultic orgy. Yahweh's wrath was aroused against the "stiff-necked" people, and he proposed to Moses that they be destroyed and replaced as God's chosen people by Moses' own clan, presumably the Levites who did not participate in the cultic ceremonies. Moses' supplication saved the people from wholesale destruction, but it was not enough to prevent the punishment of those who were prominently associated with the new cult.

On descending from the mountain, Moses pulverized the calf image, and mixing the powder with water, submitted the people to the "bitter water" ordeal normally reserved for a woman suspected of adultery (cf. Num. 5:11-28). A plague subsequently sent by Yahweh (Exod. 32:35) was, it may be assumed, Yahweh's way of weeding out the guilty from the innocent. See ORDEAL, JUDICIAL[S].

Another account, however, depicts Moses as ordering the Levites to kill even their closest relatives if they were involved in the worship of the calf. Some three thousand Israelites were thus put to death (Exod. 32:28). The Levites were henceforth consecrated as Yahweh's servants.

The role of Aaron in this episode is thoroughly condemned—not only in Exod. 32, where Moses places the entire blame on Aaron's shoulders, but also in Deut. 9:20, where we are told that Yahweh would have slain Aaron except for Moses' intercession.

Most scholars agree that there is a connection

between the story of the golden calf made by Aaron and the account, in I Kings 12:26-33, of the two golden calves made by JEROBOAM and set up at the sanctuaries of Bethel and Dan. There are so many similarities between the two accounts that the dependence of one upon the other can hardly be doubted. In the formation of the calf cult, the building of the altar, the offering of the sacrifices, the role of the Levites, the description of the new cult as the sin par excellence, and the resultant divine displeasure leading to national disaster, the two accounts are remarkably similar in tendency, language, and style. Hence, conservative scholars assume that Jeroboam revived an ancient cult harking back to Aaron, whom he took as his model in all his cultic activities, even going so far as to name his two sons, Nadab and Abijah (=Abijahu=Abihu), after Aaron's eldest sons.

Most critics regard Exod. 32 as a thinly veiled attack on Jeroboam and his calf cult. The plural form "your gods" in both versions (Exod. 32:4; I Kings 12:28) lends support to this theory. Whatever the original story of the golden calf in the wilderness may have been (and one may concede that Jeroboam did not invent a new cult but restored an ancient one), its present form appears to denigrate Jeroboam who is, to all intents and purposes, identical with Aaron and to denounce the bull cult in the northern kingdom. In this account, Aaron is no saintly high priest serving as Moses' closest collaborator and spokesman, but is one who causes Israel to sin and is actually marked for death by Yahweh (Deut. 9:20). The detailed description of the violent reaction of Moses and the Levites was calculated to counteract the establishment of the calf cult at Bethel, where the priesthood traced its descent from Aaron (Judg. 20:26-28) and at Dan, which was served by a Levitical priesthood claiming Mosaic origin (cf. Judg. 17:7-18:31).

It appears, therefore, that Exod. 32 represents the attitude of the Zadokite priests of Jerusalem, who evidently did not identify with the Aaronite priesthood until after the Exile. In view of the prestige attached to Bethel and Dan, Jeroboam's separatist religious policy was as dangerous to the recently built Jerusalem temple as was his political separatism to the Davidic dynasty. The calf cult threatened to undermine the primacy of Solomon's temple and its newly risen priesthood. Whoever was associated with it was therefore a mortal enemy deserving the ultimate penalty. See ZADOK THE PRIEST[S].

It was only in the postexilic era that the Zadokite priesthood, anxious to be recognized as the sole legitimate priesthood (cf. Ezek. 44:15-31), endowed itself with Aaronite descent (I Chr. 6:3-15 [H 5:29-41]) as part of the fulfillment of the prophetic dream of unification of the northern and southern tribes. The elevation of Aaron in so many Pentateuchal passages and the partial mitigation of his culpability (e.g., Exod. 32:4, MT "they said" instead of "he said" as required by the context) evidently derives from the need to present Aaron, now considered the progenitor of the entire priesthood, in a more favorable light. See AARON, AARONIDES[S].

In postbiblical times the entire episode became

highly embarrassing and a source of much anxiety. It was probably to avoid exploitation by Alexandrian anti-Semites, who asserted that the Jews worshiped an ass in the temple (cf. Jos. Apion II.vii.10; Tacitus, *Histories* V.iii-iv), that Josephus omitted the golden calf story in his account of Moses' descent from Mount Sinai. Accordingly, the Israelites, dejected by anxiety because of Moses' prolonged absence, rejoiced when he came down at last and showed them the tablets of the law (Jos. Antiq. III.v.7-8; vi.1).

There was also some concern about Aaron's role in making the calf. Philo, who did not entirely suppress the narrative, nevertheless kept Aaron out of it (*Moses* II.161-74, 271). The rabbis likewise did their best to exonerate Aaron in view of his idealization (or that of his priestly successors) in biblical and rabbinic literature (e.g., M. AB. 1.12; ARN, ed. Schechter, *Version A*, 12; *Version B*, 24, pp. 24b-26a). In the final form of the Torah, Aaron is Moses' most trusted lieutenant. The rabbinic apology maintained that since he had been chosen to become high priest, it followed that he had not been really guilty of willful idolatry. He had been forced to make the calf by threats to his life, which he would have willingly sacrificed but for his wish to spare the people an additional burden of guilt. He tried to make the people change their mind by demanding the surrender of their precious ornaments and by procrastinating as long as possible. While he reluctantly gave his consent to the proceedings, the actual production of the calf was the work of two foreign-born magicians. In the Middle Ages, Saadia Gaon and Judah Halevi maintained that Aaron's sole purpose in yielding had been to entrap the idolators and rid the community of them.

In Christian polemic literature, the sin of the golden calf was the original source of the crime of the crucifixion and of Israel's general sinfulness and stiff-necked refusal to acknowledge Jesus (cf. Stephen's speech in Acts 7:41-53). The church Fathers frequently denounced the Jews for having worshiped the golden calf. The Jews had thus revealed their impatience and ingratitude as well as their foolish, immoral, stubborn, unrepentant, unbelieving, and murderous character. They had thereby nullified the Sinaitic covenant which had in fact never come into effect. Furthermore, by this act the Jews had abandoned God who, in turn, had repudiated them. The crime of the golden calf could never be erased and the Jews were therefore eternally damned; unless of course, they entered into the bosom of the church. In Augustine's interpretation, the powder of the calf's head, cast into water and given to the people to drink, represented a sacrament, so that the worshipers of the devil-calf became the body of the devil (*Expositions on the Book of Psalms* 62:5; 74:13). This may well have been the origin of the medieval identification of the Jew with the devil.

The rabbinic reaction to such attacks was ambivalent and seemingly inconsistent. On the one hand, there was full admission of the gravity of the sin of the golden calf. Thus, Israel was compared to "a shameless bride who plays the harlot within her bridal canopy" (T.B. Shab. 88b; Git.

36b). There were no mitigating factors. The rabbis conceded that all the calamities that had ever befallen Israel originated with the golden calf, which had been the worst calamity of all.

On the other hand, national pride and the need to maintain morale during centuries of humiliation and persecution necessitated a resolute defense of Israel vis-à-vis the church. The concessions were meant strictly for internal consumption. Toward the outside world the rabbis assumed a militant, uncompromising attitude. Far from forsaking Israel, God had forgiven their sin and continued to love them as his chosen people. In any case, only a small minority had been involved in the calf cult, and they were not even genuine Israelites but members of the Egyptian "mixed multitude" who had joined the Israelites at the Exodus (cf. Exod. 12:38).

Other lines of defense stressed that the covenantal relationship with God had not yet come into effect when the golden calf was made. Israel was therefore in a state of precovenantal innocence. Moreover, God himself was to blame for Israel's sin, and Moses rebuked the Almighty for having brought them to Egypt, where they learned idolatry, and for bestowing upon them excessive amounts of gold and silver which they used for making idols. Akiba, the foremost exponent of rabbinic Judaism, even made God himself admit that he rather than Israel was responsible for the golden calf, and that he would therefore cleanse Israel of this sin.

This daring line of defense—hardly to be taken literally—was not meant to be theologically tenable or to provide any consistent interpretation of the golden calf story. It was rather meant as a counterattack and as a morale booster in times of great physical distress and mental anguish. Preaching to synagogue audiences, the rabbis succeeded in renewing hope and restoring self-respect by assuring them of God's continued love which would culminate in Israel's restoration.

\***CALNEH (CALNO)** [כַּלְנֵה Amos 6:2; כַּלְנֵה Isa. 10:9; LXX Καλανη; Assyr. *Kullani*, *Kullania*, or *Kulnia*]. Capital city of the N Syrian kingdom of Patinu or Unqi (see HITTITES[S] §2 and map); it also appears in Assyrian records as Kinalia, Kinalua, Kunalia, Kunulua, and <Ku>nulia. Of the two names, *Kullani* was the Semitic name of the city (attested in Thut-mose III's list and Alalakh tablets), and *Kinalia* its Neo-Hittite name, perhaps derived from a Hittite divine name. Conquered by Tiglath-pileser III in 738 B.C., it became the center

of the Assyrian province of Kullani. It is identifiable with the large mound of Tell Ta'ayinat in the 'Amūq Plain. Excavations revealed a royal palace complex, including a temple (ca. 800), a palace of the Assyrian governor, and several Neo-Hittite and Assyrian works of art. The temple presents architectural parallels to the TEMPLE OF SOLOMON. As for the alleged Calneh in Shinar, Gen. 10:10, read *w<sup>a</sup>kullānd*, "all of them."

1. **Introduction.** The Israelites knew that they had not always dwelt in the land of Canaan, but had occupied it at a particular point in history, when Yahweh began to fulfill the promises which he had made to the patriarchs Abraham, Isaac, and Jacob. Since the life of Israel in the land had from the beginning been under constant threat (except for the brief time of security under David and Solomon), it is understandable that the people clung to the promise and its fulfillment. It is no accident that the traditions of the occupation of the land occupy a particularly prominent place in the historical picture of the OT. See PROMISES TO THE PATRIARCHS[S].

2. **The name "Canaan."** (See CANAANITES §1.)

3. **The land of Canaan.** a. *As a geographic and political unit.* i. *In cuneiform texts.* One of the Mari letters reports on "Canaanite bandits" (<sup>14</sup>*hab-bātum* u <sup>14</sup>*Kinaḥnūm*) and so provides indirect evidence from the eighteenth century B.C. for the name Canaan. In Alalakh and Ugarit Canaanites appear in name lists as foreigners, because their place of origin is noted. Thus in the fifteenth-thirteenth centuries B.C. these cities, unlike Amriya, the present-day Enfe ten miles SW of Tripoli in Lebanon, did not belong to Canaan (Smith).

In the fourteenth century B.C., according to the

Amarna letters, Canaan was an Egyptian province ruled by Egyptian governors and local princes. In the thirteenth century the situation was essentially the same. After 1285 Ramses II made Canaan the base for a military campaign against Syria, and he arranged to meet the Hittite king, who wanted to visit Egypt, in Canaan, "in his land." See HITTITES §4; HITTITES[S].

ii. *In Egyptian texts.* The first mention of Canaan is from the time of Amen-hotep II (second half of the fourteenth century), who conducted a campaign in Asia in the seventh year of his reign and deported "Canaanites" (*Kn<sup>n</sup>i.w*) (*ANET* [2nd ed.], p. 246). The boundary between Egypt and Canaan passed near the fortress of Sile (Egyp. *T'rw*), not far from modern el-Qantara on the Suez Canal (*ANET*, pp. 254b, 478). The description of the "foreigners of the land *p<sup>i</sup> Kn<sup>n</sup>* (the Canaan)" begins with the mention of the "Ways of Horus" (Sile), followed by stations on the road to Palestine. In most passages, however, [*p<sup>i</sup>*] *Kn<sup>n</sup>* is a city, apparently the capital of the province of the same name. According to the contexts in which it is mentioned in connection with the campaign of Sethos I in the first regnal year, it was the city of Gaza.

iii. *In Phoenician texts.* There are no occurrences of the name Canaan in Phoenician texts prior to the Hellenistic period. In the mythological genealogies, Χνᾶ, the eponymous ancestor of Canaan, is mentioned among the cultural heroes, with the information that he was the first to bear the name Φοίνικος, "Phoenician" (Philo Byblius, FHG 790 F 2:39; first or second century A.D.). The grammarian Herodianus (second century A.D.) and Stephan of Byzantium (fifth century A.D.?) also state that Phoenicia was formerly called Χνᾶ. The city of Berytus (modern Beirut) was known in the second century B.C. in Phoenician as *L'dk' š b-Kn'n*, "Laodicea in Canaan." See PHOENICIA.

iv. *In the OT.* The oldest occurrence of the term is in Judg. 5:19 (twelfth century B.C.?), where we learn that the Israelites fought at Taanach against a coalition of "the kings of Canaan." It seems that this expression reflects LB usage, and therefore designates the petty princes from the former Egyptian province of Canaan. The later author of Judg. 4:2, 23-24 derived from this the title "king of Canaan" for Jabin of Hazor, who was introduced into the story as a secondary element (cf. Josh. 11:1-15 and §4b below).

In the J history, Canaan as a designation for the land is found only where J adopted material from the genealogical traditions for the framework of the primordial history (Gen. 9:25-27; 10:15-19). In this context the use of Canaan and Canaanite is not uniform and is hard to explain historically. In the narrative parts of his work J speaks consistently of "the Canaanite" (כְּנַעֲנִי, collective singular). They are the inhabitants of the land at the time of the patriarchs (Gen. 12:6; 13:7, "the Canaanites and the Perizzites"; 24:3, 37; 34:30 [as in 13:7]; 38:2) and of the Conquest (Num. 14:43, 45; 21:1, 3; cf. Judg. 1:4 [as in Gen. 13:7]; 1:5 [secondary]). The fact that J used only the term Canaanite and did not call the land Canaan, but used the formula, "At that time the Ca-

naanites were in the land" (Gen. 12:6; cf. 13:7), shows the extent to which J was removed in time and by national identity from the previous inhabitants, whose occupation of the land was now conceived as a mere passing episode. A similar attitude can be seen in the statements about the incomplete conquest of the land by the Israelites (Judg. 1:27-33) and in the Deuteronomic literature.

An even greater distancing from the historical reality is seen in a list of the autochthonous inhabitants of Palestine, the oldest form of which is preserved in Deut. 7:1. This list regards the Canaanites as only one group among others that were living in the land.

In contrast to the other sources, the Priestly document speaks consistently of the "land of Canaan" (ארץ כנען), except for the genealogy in Gen. 10:6, which has "Canaan." In this way it revived the LB terminology. For P, Canaan is the land that was promised to the patriarchs (Gen. 17:8; Exod. 6:4) and in which they lived for a time (Gen. 13:12; 16:3; 31:18; 37:1); it is the goal of the Israelite tribes that left Egypt (Num. 13:2, 17). The following cities are mentioned: Shechem (Gen. 33:18), Shiloh (Josh. 22:9—if this is P), Luz (Bethel, Gen. 35:6), Kiriath-arba (Hebron, Gen. 23:2), with the cave of Machpelah (Gen. 23:19). On the other hand, the cities of the plain (כנרת) S of the Dead Sea (Gen. 13:12) and the land of Seir (Gen. 36:6) lie outside Canaan. The additions to P specify the Jordan as the eastern boundary of Canaan, thereby excluding Transjordan (Num. 35:14). The most detailed description of the extent of Canaan is in Num. 34:2b, 3b-12. This description does not correspond to the boundaries after 1000 B.C., but it does to those of the Egyptian territory in Asia, according to the peace treaty between Egypt and the Hittites in the thirteenth century (omitting Amurru, but including Upe; the S boundary is probably more recent). See also HURRIANS[S] §3.

The Joseph story uses, even in the parts that are not P, the concept "land of Canaan" for the homeland of Jacob and his sons (Gen. 42:5 and *passim*), and this suggests to some scholars that none of the material of the story is from J or E. The history of the transmission of Gen. 50 makes it difficult to specify the extent of the "land of Canaan" (vs. 5). The grave of Jacob, to which the text refers, was probably located at Shechem; P says it was at Mamre in the "land of Canaan" (vs. 13). Vs. 10a may contain another tradition, which located the grave of Jacob across the Jordan at the "threshing floor of Atad," and therefore does not mention Canaan. Only in the etiological explanation of the place name "Abel-Mizraim" in vs. 10b-11, in the style of J, are the "inhabitants of the land, the Canaanites," mentioned as witnesses of the great ceremony of mourning, something that does not fit the location E of the Jordan.

**b. The political structure of Canaan.** i. *In the Bronze Age.* The division of Canaan into many small units, each centering around a city ("city-states"), which is characteristic of the political organization of the land before the Israelite con-

quest, is documented in cuneiform and Egyptian texts from the beginning of the second millennium on. The earliest sources, the Egyptian execration texts of the Twelfth Dynasty, give the names of rulers, evidence of the existence of monarchical government. The basic form of this political structure survived the conquest of Palestine by pharaohs of the Eighteenth Dynasty and the setting up of Egyptian provinces. The local political realities were largely preserved, because the Egyptians interfered in the inner affairs of the city-state only when their own interests were involved. The rulers were generally regarded by their subjects as "kings," but the dynastic succession had to have the approval of the pharaoh, who probably understood this in terms of installing a royal official as "mayor," as in Egypt.

The city rulers were responsible for paying tribute regularly, maintaining military control over their territory, and, in emergencies, for supplying troops. Certain changes took place when various cities became the property of the pharaoh (Gaza and Jaffa under Thut-mose III, Simyra and Kumidi under Ramses II, and Ascalon in the period of the Ramesides) or property of the Egyptian gods, that is, temple property. On the whole, the system of indirect rule functioned well as long as Egypt was strong enough to be sure of the loyalty of the city rulers. It was, however, not a real *pax aegyptiaca*. In periods of weakness, as the Amarna letters show, the Egyptian authorities were helpless to settle the fights among the city-states. See TELL EL-AMARNA §2b; TELL EL-AMARNA [S].

The economy of the city-states was based on farming and commerce. This distinguishes them from the third political element in the land, the so-called nomads (Egyp. *Sšw*; Akkad. *Sūtū*), who are prominent in the LB texts. They were found especially in areas which the city-states did not or could not effectively control, e.g., the forested mountains. They were organized in tribes under leaders (Egyp. *wr.w*, "great men"), and their main economic activity was the raising of sheep and goats. In the texts they mainly appear in the role of robbers who make the highways unsafe, harassing the city rulers and at times even the Egyptian army; on the other hand, they served both parties as mercenaries. In reality, as anthropological and sociological studies show, the cities and the "nomads" probably had close economic relationships, and perhaps even intermarried. They were in fact interdependent, although this did not rule out occasional clashes or robberies. See NOMADISM[S]; HABIRU[S].

ii. *In the Early Iron Age.* Toward the end of the second millennium there appeared alongside the LB city-states and the territorial states which originated from them a new entity, peoples whose solidarity was not primarily the result of their living in the same territory, but rather the result of kinship ties. ARAM is mentioned for the first time under Amen-hotep III (fourteenth century), and again in the third year of Mer-ne-Ptah. MOAB is first mentioned prior to the fifth year of Ramses II (1285 B.C.), Israel in the fifth year of Mer-ne-Ptah (1219), EDOM in his eighth year

(1216), and the PHILISTINES in the eighth year of Ramses III (first quarter of the twelfth century).

After the end of Egyptian sovereignty in Palestine, the Philistines, who had been settled there as colonists by Ramses III, quickly established city-states on the LB model, but continued to be aware, for some time, of their origins as a single people, even sharing some common institutions. In the same period the Arameans, Ammonites, Moabites, Edomites, and Israelites transformed their tribal leagues into national states ruled by kings. This took place in part in territories on the edge of or entirely outside of the area where the LB city-states had flourished. According to papyrus Anastasi VI (*ANET*, p. 259) the Edomites belonged to the *Sšw*, as did the Moabites, if the Balu'ah stele (*ANEP*, no. 488) is a Moabite monument. The other peoples should probably be seen as belonging to the same milieu. In Syria and Palestine the transition from the second to the first millennium B.C. was thus marked by changes in political structures that correspond to the change from permanent nomadism to settlement and the rise of national states. This does not mean that the city-states immediately and totally disappeared, but political leadership passed from them to the national states.

4. **The OT traditions of conquest and settlement.** a. *The textual problem.* There are three blocks of material in the OT that recount the conquest and settlement of the Promised Land: (1) Num. 13-14; 21:1-3, 21-32; 22-24; 32; (2) Josh. 1-24; and (3) Judg. 1:1-2:5. To these may be added isolated passages like Deut. 2:26-37; 3:1-20; Judg. 17-21, and, in the widest sense, the traditions of the patriarchs and the judges. The events are depicted in differing ways in the texts. See ISRAEL, HISTORY OF §3.

i. In Numbers-Joshua the account of the Exodus leads directly into the occupation of the land. Israel, although divided into tribes, acts as a unit under unified leadership. After an unsuccessful attempt to invade Canaan from the Negeb (Num. 14:39-45), and the conquest and division of the territory E of the Jordan under the leadership of Moses, Israel crosses the Jordan under Moses' successor, Joshua. From a base camp at Gilgal near Jericho, Joshua leads a series of campaigns against cities and coalitions of Canaanite kings, and conquers large sections of the land W of the Jordan, or, according to some texts, all of it. The cities are destroyed, and their inhabitants exterminated, unless they conclude treaties with the Israelites (Gibeon, Josh. 9). The land is divided among the tribes, who, after having taken part in the great assembly at Shechem (Josh. 24), settle in the territory assigned to them.

ii. By contrast, in Judg. 1:1-2:5 it is the individual tribes who take the actions, not the nation as a whole. Nothing is said about Joshua or any other national leader, and for this reason in the editorial process the unit is placed after Joshua's death (1:1). Another striking feature is that the tribes still have to conquer their assigned territories W of the Jordan, when, according to the book of Joshua, this had already been done. This contradiction and the repetition of Josh. 24:28-31 in

Judg. 2:6-9, which indicates a seam, demonstrate that Judg. 1:1-2:5 is an insertion which interrupts the continuity from the book of Joshua to the book of Judges, and which should be investigated on its own terms. See JUDGES, BOOK OF §C1; JUDGES, BOOK OF[S] §1.

The question of the relationships between the material in (i) and (ii) can be answered in various ways. The redactor who interpolated Judg. 1:1-2:5 believed that one followed the other; the land has been conquered and now the tribes occupy it (cf. Josh. 24:28). This view would be more logical if, with Wright, we could ascribe to Joshua a "sweeping conquest" which captured from the Canaanites a number of key strategic positions and so made it easier for the tribes to complete the final occupation of their territory. The position of Alt and Noth is, however, more probably the correct one: that the problem is not historical, but literary, involving the history of tradition. They assumed that at the beginning of Israel's history there were the tribes (cf. the stories from the days of the judges), and that national unity was achieved comparatively late. In that case, stories about what individual tribes did (as in Judg. 1:1-2:5) must belong to an earlier stage of tradition history than those that show the whole nation in action (as in Numbers and in Josh. 1-12). Also, according to Alt and Noth, we must distinguish even in Josh. 1-12 between the old traditions and the work of an editor who collected them around 900 B.C. He had already constructed the continuous narrative of the Conquest in which the main participants were Joshua and all Israel. (The Deuteronomistic editor only carried this further with additions, especially description of the territories assigned to the tribes.) See JOSHUA, BOOK OF §§B-C; DEUTERONOMISTIC HISTORY[S].

The old traditions are separate accounts such as etiologies (Josh. 2-9; 10:16-27; see ETIOLOGY[S]) and accounts of battles (10:1-15; 11:1-15) which always have a specific locale in the territory of one of the tribes. The geographical framework and the localizing of Joshua's base camp at Gilgal reveal that the etiological sagas (except Josh. 10:16-27, which is Judean) are Benjaminite traditions that were preserved at the sanctuary in Gilgal, as was the war story in Josh. 10:1-15, while Josh. 11:1-15 is probably a Naphtalite tradition (Hazor is in Naphtali; Josh. 19:36). The original locus of the Ephramite Joshua is, according to Alt, Josh. 10:1-15, and according to Noth probably Josh. 17:14-18. It was then the "collector" of the stories who raised him to the status of leader of the armies of all Israel. Alt and Noth traced the origin of the etiological sagas back to the need of the people to explain striking contemporary geographical or social conditions in terms of determinative events of the past, especially the earliest period of the settlement in the land. An example is the huge tell at Ai (Josh 8:1-29). The war stories, on the other hand, go back to clashes with Canaanites at the time of the Israelite settlement or expansion.

The explanation of most of the narratives in Josh. 2-9 as etiologies has come under heavy criticism. According to Albright, it is not possible to

determine on the basis of the form of a story whether or not it can claim historicity, since "all ancient literary composition had to conform to fixed patterns of oral delivery and formal styles of writing." Bright and Childs stress the secondary nature of the etiological elements in the conquest narratives. Any solution of the problems raised by Alt and Noth would then be possible only on the basis of external evidence.

**b. The archaeological and literary problem.** Attempts have been made to find this external evidence in the Amarna Letters and their reports of troubles caused by the 'apiru (HABIRU) in Canaan in the fourteenth century. The Yashuya who is mentioned in EA 256:18 has even been identified with Joshua. It is not possible, however, to establish a positive identification of the 'apiru with the biblical Hebrews (עַבְרִיִּים), and the attempt to identify Yashuya with the Hebrew יהושע runs counter to the rules of phonetics. The mention of Israel in the reign of Mer-ne-Ptah (see §3bii above) has also been used to establish the date of the Exodus and the Conquest, but it is still not clear whether the biblical Israel is identical with that mentioned in the Mer-ne-Ptah stele. See ISRAEL, HISTORY OF §2.

For this reason the archaeological excavations in Palestine since the end of World War I take on increased significance (see ARCHAEOLOGY §E; ARCHAEOLOGY[S] §1). They have shown that in the thirteenth and twelfth centuries B.C. a large number of LB cities were destroyed in major conflagrations, and that the subsequent occupations of these sites in the Iron Age I differ from the earlier culture in architecture and material culture. These observations led to the general conclusion that here was external evidence for the essential correctness of the OT accounts of the Conquest (Albright; see also ARCHAEOLOGY §D). Almost immediately, however, difficulties arose in the application of the archaeological data to individual sites (see ARCHAEOLOGY[S] §2aiv; JOSHUA, BOOK OF[S] §5c). At JERICHO (Tell es-Sultan; Josh. 2; 6) the LB IIB level had been destroyed by erosion, assuming that there had been such a layer. At Ai (et-Tell near Deir Dibwan; Josh. 7-8) and ARAD (Tell 'Arad; Judg. 1:16) there were gaps in the occupation between EB and Iron I. Also at GIBEON (el-Jib; Josh. 9) and HESHBON (Hesban; Num. 21:21-31) there was no occupation layer from LB IIB. The various attempts to explain the contradictions between the conquest stories and the results of the excavations have not been convincing. The contradictions are lessened, however, when the stories are interpreted as etiologies designed to explain the presence of major ruined sites or pockets of Canaanite population in the territory settled by the Israelite tribes.

The case seems to be different with BETHEL (Beitin; Judg. 1:22-26), HAZOR (Tell el-Qedah; Josh. 11:1-15), and LACHISH (Tell ed-Duweir; Josh. 10:31-32), which were destroyed at the end of the LB age and occupied again in Iron I. It was easy to find a correlation between the results of excavations and the accounts of the Conquest, but it has still not been conclusively demonstrated that those who destroyed the LB cities are identical with the

Iron Age settlers (probably Israelites). The destruction might have been caused by Israelites, or perhaps by Egyptians, Canaanites (cf. the Amarna Letters for the situation in the fourteenth century), the Sea Peoples, or even natural catastrophes. This means that the archaeological evidence is not sufficient to demonstrate the conquest of Canaan by the Israelites, and that the question still depends on the evaluation of the literary character of the texts. Judg. 1:22-26 may be based on authentic traditions. Josh. 10:31-32 and 11:1-15, however, are a part of the expansion of the Benjaminite traditions in the book of Joshua, and extended Joshua's campaigns to cover the entire land. The author of Josh. 11:1-15 built on the certainly historical figure of King Jabin of Hazor (cf. Judg. 4:2, 23-24; see also §3aiv above), who had played a major role in the early history of Naphtali. Such quotations as Num. 21:14b-15 (from "the Book of the Wars of the Lord"); 21:17b-18a; and Josh. 10:12b-13 (from "the Book of Jashar") lead us to surmise that there were once epics of war or conquest in poetic form, which were closer to the actual events than the prose accounts. The few, poorly preserved fragments, however, give little indication of the contents of those epics.

**5. Historical synthesis.** §§1-4 have presented materials and analyses that deal with the problem of the Israelite settlement of Canaan from various points of view. It should be clear that a history of that process, in the sense of a chronological presentation, cannot be written. This section presents a hypothesis designed to make the settlement basically comprehensible, in terms of the contributions of the documentary and the archaeological sources.

**a. The contribution of the historical documents.** Both the documentary evidence (Egyptian city lists, Amarna Letters) and results of investigation into the history of the settlement of Canaan show that in the LB the cities of Palestine were concentrated in the plains, especially the coastal plain, the Valley of Jezreel, and parts of the Jordan Valley, while in the mountainous areas there were only a few cities, which depended on farming small plains or well-watered valleys, or which controlled important commercial routes. Of particular historical significance were two rows of cities running from E to W across the land. One was in the Valley of Jezreel and the other at the latitude of Jerusalem. They can be identified in the LB sources and also in the list of cities claimed by the Israelites but not conquered by them (Judg. 1:21, 27-35). They marked off the Palestinian highlands into three natural divisions: Galilee, Central Palestine (the Mountains of Ephraim), and Judah. Josh. 15-19 describes the basic territory of the Israelite tribes as lying in the mountains along these natural lines of division, and thus outside of the LB (Canaanite) areas of settlement and in the area where, according to Egyptian texts of the second millennium, the "nomads" (see §3bi above) were to be found.

**b. The contribution of archaeology.** Archaeology cannot give direct "confirmation" of the various OT conquest narratives, but it can show that the

settlement of the Israelites in Canaan coincided with the transition in culture from LB to the Iron Age, when the previous city-based culture was absorbed or displaced by a new rural culture. In Palestine this process is most evident in the colonizing of the mountainous regions in Iron I, when numerous villages were begun on virgin soil or on the abandoned ruins of earlier periods. Some thoroughly excavated sites enable us to describe the process more precisely. The LB city of Hazor (stratum XIII, thirteenth century; see HAZOR[S] §2a) was totally destroyed by fire. Stratum XII (twelfth century, the first Iron Age stratum), which covers only a part of the area of the old city, is characterized by the foundations of huts or tents, with primitive fire pits and storage pits. Stratum XI (eleventh century) contains the remains of an unfortified settlement, and stratum X the first Iron Age city (tenth century, attributable to Solomon; cf. I Kings 9:15).

The situation is similar at Tell Deir'alla, E of Jordan. In LB IIB there was an unfortified sanctuary here that was destroyed in a fire caused by an earthquake. Foundations of huts and storage pits in the succeeding stratum give evidence of the efforts made by the survivors to eke out an existence among the ruins. This phase was also destroyed by fire, which was perhaps caused by seminomads, who soon thereafter settled down in the ruins, dug many storage pits, and built ovens for refining metal. Their material culture was that of Iron I.

Both examples show relatively similar processes at work: the settlement of nomads on existing city ruins and the growth of Iron Age villages out of these camps. We may surmise that elsewhere similar events took place.

**c. Conquest and settlement.** The assumption that the Israelites belonged to nomadic groups of the second millennium (Egyp. *ššw*) can be supported by the OT, where there are indications that the Israelites were aware of this origin. Even a relatively late text like the "credo" in Deut. 26:5-10 speaks of the "father" (probably Israel-Jacob) who was a "nomad about to perish" (RSV "a wandering Aramean"). In Israel the Rechabite sect, centuries after the settlement in Canaan, returned to a quasi-nomadic way of life that they regarded as having been theirs originally and as being well-pleasing to God (Jer. 35:1-11). (See, however, RECHABITES[S].) And, finally, all layers of tradition in the Genesis accounts of the patriarchs portray Abraham, Isaac, and Jacob as wandering shepherds, with no settled abode in the territory of the Canaanite city-states. Their movements can be understood as the movement to new pastures (Gen. 12:8-9; 13:3[J]; 20:1[E]; 37:12-17). They are accompanied by their families (12:10-20; 13:1; 18:6, 9-15[J] 20:1-18[E]); they live in tents outside the cities (13:18; 18:1; 26:25[J]; 33:19[E]; cf. ch. 32 [J]E); they have extensive flocks and herds (13:2, 7-9; 26:14[J]; 27:9[E]; 47:1); and at times they quarrel with the settled population over water rights (21:25-33[E]; 26:20[J]). Episodes such as Gen. 34 indicate that the stories of the patriarchs were originally accounts of the settlement in the land, even though this attempt at peaceful co-

existence failed. In the other stories almost nothing can be seen of antagonism between the two groups. Instead, there are many and varied relationships that apparently were mutually advantageous. In the present state of the texts the original character of these stories is obscured because of the combining of the patriarchal tradition with the exodus tradition, by which the sojourn of the patriarchs in Canaan became a temporary stage.

Thus the patriarchal stories can be regarded as paradigms for the migrations into Canaan of the nomads from whom the Israelite tribes developed. (The dominance of the exodus tradition, which is probably to be related to the Moses group that merged into the tribes, is a result of the strongly religious emphasis which was at work during the formation of Israel.) The seminomadic proto-Israelites could settle in the Palestinian mountains (see §5a above), for the most part peacefully and undisturbed. From time to time they conquered an isolated mountain city (Bethel, Judg. 1:22-26; Hebron and Debir, Josh. 15:13-19, cf. Judg. 1:10-15; Laish/Dan, Judg. 18; and probably Shechem, cf. Gen. 34:27); with others they merged peacefully (Gibeon, Judg. 9), or even absorbed them into the tribal kinship structures (Shechem and Tirzah, Num. 26:29-34). The plains remained out of reach as areas for settlement. The repeated reference to Canaanite "chariots of iron" (Josh. 17:16, 18; Judg. 1:19; 4:3, 13) and a tradition like that reflected in Judg. 5 are indications that, while the people of the plains did not resist seasonal migrations to find pasture, they did vigorously oppose militarily any attempts of the nomads to settle down and any Israelite attempts at expansion. In spite of occasional successes the tribes could never decisively overcome this opposition prior to the time of David and Solomon.

In spite of this fact, the military experiences became the dominant feature of the Israelite view of history and largely displaced the remembrances of the peaceful proceedings. This is understandable in psychological terms, since events that are out of the ordinary make a greater impression on the memory than the unspectacular events of everyday life. As a result it was unavoidable that when the originally limited exodus tradition was interpreted in terms of all Israel, this should lead to the portrayal of an invasion by a nation of twelve tribes that had escaped from Egypt. The existing local conquest traditions were incorporated into and subordinated to this picture, and in this way Moses and the Ephraimite "hero" Joshua came to have their role as leaders of the unified tribes in the occupation of the land on both sides of the Jordan.

M. WEIPPERT

**CANNEH** kân' ē [כַּנְה, LXX Χαννα]. A place mentioned in Ezek. 27:23, often considered a variant of CALNEH. However, assimilation of *l* to the following *n* is not very probable; to judge from the LXX Χαλκωνη, the name was pronounced with a vowel between *l* and *n* (as in Assyrian *Kullani*). It is more plausible to identify Canneh with the city of Kannu', listed with other place names which suggest a location in the eastern part of N Mesopotamia, on the great trade route from Assyria to Syria via the Habur Triangle and Haran.

\***CANON OF THE OT.** Samaritans, Jews, and Christians are the direct heirs of Mosaic Yahwism; each group accepts as divinely sanctioned a selection of the religious writings which developed under the aegis of their common parent. Samaritans regard as canonical the Torah (Pentateuch); Jews and Protestant Christians, the Hebrew Bible; and Catholic and Orthodox Christians, slightly different forms of the OT of the late patristic church. The development of the materials included in these canons largely took place before the religions assumed their distinctive forms in late antiquity. The earliest stages of the processes of editing and

appraisal that lay behind canonization are the most crucial and will be the chief concern of the present article.

1. The material of the exilic canon
    - a. The oldest writings
    - b. The early monarchic period
    - c. The late monarchic period
  2. The exilic canon
    - a. The Qumran evidence
    - b. The prophetic literature
  3. Postexilic literature
    - a. The Chronicler
    - b. The Book of Truth
    - c. The Megilloth and Daniel
  4. The origins of the modern canons
    - a. The Torah
    - b. Activity in the late second temple period and after
    - c. Final remarks
- Bibliography

For a survey of terms relating to canon and a discussion of the contents of the canons, see **CANON OF THE OT** intro. and §8; for Hebrew Bible quotations in the NT, see §6; for theological beliefs relating to canon, see §9.

1. **The material of the exilic canon.** While little of the writing in the Bible is explicitly dated, a sizable portion of it provides historical and linguistic evidence which can be correlated with dated, extrabiblical materials. These correlations provide the basis for the advances that have been made in recent years in literary-historical study of the text.

a. **The oldest writings.** Recent research has shown that the oldest parts of the biblical text are poetic. A list of the principal old poems and their approximate dates follows: Exod. 15, Judg. 5, and Ps. 29 (twelfth century B.C.); Gen. 49, Deut. 33, and the poetic portions of Num. 23-24 (eleventh century B.C.); I Sam. 2, II Sam. 1, II Sam. 22 (=Ps. 18), II Sam. 23:1-7, and Ps. 2 (tenth century B.C.); and Deut. 32, and Pss. 68, 72, and 77 (ninth century B.C.).

Certain legal traditions also derive from the oldest strata of biblical writing. Among these are the Decalogue (which has, however, undergone some later systemization) and the Covenant Code (Exod. 21-23). The antiquity of the latter is best demonstrated by examination of parallel passages in Deuteronomy, in which various laws have been reshaped to render them not only comprehensible, but also serviceable to a later age (cf. Exod. 21: 2 ff. and Deut. 15:12 ff.). The Ritual Code of Exod. 34 is probably also a composition of the earlier periods of Yahwism.

These two groups constitute the bulk of the materials which can be assigned in more or less their present form to the earliest period. There are other archaic materials, but these are often embedded in narratives or other types of writing designed to meet later needs and interests. Disentangling and identifying the earlier items remains a risky undertaking. The best approach is to fix the date of the finished product in the light of its responses to circumstances in the life of the people. It is this principle that makes so attractive the

recent suggestion (by Mendenhall), that the Covenant Code was drawn up by Samuel to serve as a guide for Saul's monarchy. This observation takes account of the fact that literature of a semi-technical nature would only be set down and circulated in response to a concrete situation. Non-technical literature, especially poetry, is bound to be treated in a different way, since poetry combines form and content in such an integrated fashion that it cannot easily be altered without affecting its essential character. Hence it is less susceptible than other forms of writing to periodic modernization.

**b. The early monarchic period.** The first part of the monarchic period coincided with an era of great prosperity all over the Near East, and just as we have many written records of the achievements of petty Oriental despots, so we should expect to find some records of the Judahite and Israelite monarchies. The traditional analysis of the Pentateuchal sources, the Yahwist (J) and the Elohist (E), is probably correct in recognizing that we do have those records, enmeshed with other, later and earlier materials, in the Torah. It has often been suggested that a common source (called G, for Ground) lies behind both J and E, but it is in the nature of the case impossible to be sure about such a hypothesis. G might have been in either verse or prose; if the former, then either a full-scale epic or a series of short narrative poems.

The YAHWIST (J) source is a prose narrative epic of Israelite history, which unifies and interweaves patriarchal stories with narratives of the Exodus, conquest, and settlement. The Mosaic covenant is deftly balanced with the Abrahamic covenant. The king is seen as both the descendant of Abraham, and thus heir and assign of the promises made to Abraham, and as the administrator of the Mosaic covenant.

The Elohist (E) source covered generally the same sweep of events as J, though with different theological interests. Some of these are: a special interest in prophecy, recognition of the name Yahweh as of Mosaic origin (for the earlier period, both E and the Priestly writer use the general term Elohim), and a decided lack of interest in Jerusalem and the Davidides. The over-all concerns of E have been partially obscured by their intermeshing with J and cannot be stated with certainty.

AMOS and HOSEA represent a new phase in the development of the Yahwist traditions. They presented a call for a complete re-evaluation of the current state of affairs in terms of the original Yahwist tradition.

ISAIAH also began to prophesy around this time. He shared the basic attitudes of Amos and Hosea, but since he lived in a less vulnerable society, with a more stable monarchic tradition, he looked for continuity alongside reform, while Amos and Hosea were forced by the circumstances they confronted to insist that a complete break with the present was the only course of action that could lead to survival.

**c. The late monarchic period.** The principal literary outcome of the fall of the northern kingdom was the work of the Deuteronomistic school.

This probably began in the reign of Hezekiah, or less likely, in that of Manasseh, as an effort to codify distinctive Yahwist traditions which had been preserved in the North. The testimony of the Chronicler about the extent and nature of Hezekiah's reforms (II Chr. 29-32) has too often been dismissed or underestimated. The compilation of Deuteronomy would fit in well not only with Hezekiah's religious activity but also with his literary interests (cf. Prov. 25:1). Furthermore, we know that he was deeply concerned about the fate of the North, and doubtless it was he who devised the policy of religious-political intervention there which Josiah carried out a century later with greater success. See DEUTERONOMIC HISTORY[S] §3.

Contemporary with the writing of the Deuteronomistic history was the preparation of the so-called Priestly document of the PENTATEUCH (P), the most problematic of the major sources. The bulk of P is semitechnical literature, which treats paradigmatic schemata like the clean and unclean and their application in the world. The question "Was P an independent narrative source?" has been answered in the affirmative by Engnell, who regards P as the base of the Tetrateuch, the narrative which he supposes to have been added to the Deuteronomistic history in order to create the Pentateuch and the Former Prophets. This solution, however, is problematic because the Tetrateuch cannot stand as an independent unit. The story of the settlement cannot end in Transjordan; indeed, the promise to the patriarchs does not include Transjordan at all. The Promised Land starts at the W bank of the Jordan, at the point reached only in the opening pages of Joshua. It seems better to return to a more or less traditional view of P, that its ending is now either buried in Joshua (from which, however, it cannot be extracted) or lost. On the face of it, the latter solution recommends itself, simply because Joshua in its present form is much more Deuteronomistic than Priestly.

The position of P in the range of Pentateuchal sources is curious because it is both the oldest and youngest of them. It preserves, for example, the authentic account of the revelation of the divine name Yahweh (Exod. 6); in addition, some of P's cultic material is demonstrably ancient. That P is not older than J and the monarchy is seen in the strong bond between the patriarchs-sojourn-Exodus pattern on the one hand and that of wanderings-conquest-settlement on the other. This is the official line of all sources from the tenth century on. Further, P treats an exceptionally elaborate cultic system in a well-developed conceptual framework, the relationship of which to Mosaic Yahwism is at best tenuous. There is, however, no evidence that P is postexilic and precious little that it is exilic, as Kaufmann has shown. See PRIESTLY WRITERS[S].

**2. The exilic canon.** The bulk of the first two parts of the Bible, the Torah (Instruction) and the Nebi'im (Prophets), was in existence by 587 B.C. The material was given its finished form in the half century after that date. The Deuteronomistic history was combined with something very like the so-called Tetrateuch to form the "primary history"

(PH) of Israel. At the same time, several prophetic books were edited to serve as a supplement to PH: First Isaiah, Jeremiah, Ezekiel, and a collection of minor prophets: Amos, Hosea, Micah, Nahum, Zephaniah, Habakkuk, and Obadiah. The exilic edition of First Isaiah combined materials derived from the eighth-century prophet of Judah (particularly chs. 1-12 and 28-33) and from later periods down to the Exile itself (including notably 13-14, 24-27).

The primary history and its supplement, the first edition of the prophetic corpus (PC1), were given official publication and some kind of canonization, probably in Babylonia, around 550 B.C. The two works were not accorded the same status, however, because PH was fixed at that time, never to be revised in any significant way, while the prophetic corpus was expanded and revised at least once, the work being put in final form around 500. Included in the expanded edition were Second and Third Isaiah, some more minor prophets, including Joel and Jonah (the dates of which remain uncertain), and certainly the last three prophets, Haggai, First Zechariah (i.e., 1-8), and Malachi. The suggested date for PH accords well with the plainest fact we know about it: the latest date in the narrative is around 561 (II Kings 25:27-30). Since that date does not refer to any distinctively dramatic event, it cannot be argued that it was specifically chosen by the final editor to conclude the work. The event was chosen simply because it was the most recent event worth relating in the history of Judah. The date for the prophetic corpus is rather less obvious, but certainly plausible.

*a. The Qumran evidence.* Is there any external evidence to support the hypothesis of the exilic canonization of the primary history and publication of the first edition of the prophetic corpus? It is unreasonable to suppose that any declaration of canonization would be preserved, since canonization is a function of a social structure which is more transient than the canon it creates. Nonetheless, there is some evidence from Qumran of the propagation of a formal text.

Since the hundreds of Qumran biblical scrolls will not be published completely for some time to come, any conclusions drawn from preliminary publications must remain tentative. Some facts are clear, however. The various hands of the Qumran documents come from a period when the Jewish script was undergoing many changes. Thanks to this fact, the relative chronology of the hands and thus of the MSS can be established. Further, due to archaeological research at Khirbet Qumran, a settlement not far from the caves, this relative chronology can be associated with the Palestinian pottery sequence and with the Palestinian coin sequence. Thus, the Qumran MSS can be dated accurately.

One of the Qumran biblical texts is particularly important because it belongs to the small group of MSS which antedate the foundation of the settlement itself, having been brought by the fugitives from Jerusalem who settled in the desert. This manuscript is called 4QSam<sup>b</sup> (i.e., the second Samuel MS found in cave 4) and is dated

conservatively to 275 B.C. It shows, unlike the other early MSS, completely uniform spelling. This is not the result of a happy accident, but of assiduous work. This labor can hardly be dissociated from some official action, and this action must pass under the rubric of canonization. The official look of the spelling is especially prominent when seen in the light of its probable model, Aramaic court spelling of the fifth century.

This MS is hardly irrefutable evidence of canonization in the mid-sixth century; but it does provide a strongly persuasive argument in the direction of our hypothesis, since it shows that by around 300 B.C., the literary history of the Former Prophets (and thus necessarily of the Pentateuch) is over and the textual history has begun.

The 4QSam<sup>b</sup> MS and other materials from Qumran show clearly the existence of text traditions which are distinct from the Masoretic Text received today as the Hebrew Bible. Only three can be distinguished: the Palestinian text type (which survives in the Samaritan Pentateuch), the Egyptian text type (which survives in parts of the Old Greek Version), and a third which should probably be associated with Babylonia (which survives in the MT). See TEXT, HEBREW, HISTORY OF[S].

This circle of three traditions suggests that the common parent MS, though it must be removed some distance in time from the traditions, cannot be far removed. In fact, although there is no supertypology of MS development which could tell us how long it takes variant traditions to arise, the possibility of a fifth- or sixth-century original agrees well with the available evidence. Further, since we have several early third-century MSS which reflect at least two text types, the original cannot be later than the fourth century.

*b. The prophetic literature.* The surviving corpus of prophetic poems and speeches cannot be the whole or even a substantial part of the prophetic materials available in the classical period; it is a carefully considered selection made on ideological grounds. An important feature of the corpus is the exclusion of most explanations of the political background of the poems. Surely they could not long remain comprehensible without some such orientation. It seems that the poetry of the prophets supplements the primary history. Is there any evidence for this within the primary history? The constant emphasis there on Moses as prophet and on the role of the charismatic prophets is hardly susceptible of another understanding. The exact relationship between the two is more difficult to define, since the overlapping sections of PH and PC1 (cf. Jer. 52 and II Kings 24:18-25:30; and Isa. 36-39 and II Kings 18:13-20:19) suggest that the two works were in some sense distinct.

The reason for the creation of PC1 is suggested by the material itself. There was nothing in recent Judahite history to encourage the exiles. The editor of PC1 recognized that consolation would come not from writing history, but from prophecy. The material of PH prepared the ground for the belief that the prophets who were right about the Exile would be right about the return; it also

provided explicit information about the return in Lev. 26:40-45 and Deut. 29:22-30:10. The editor of PCl went further than the editor of PH could have; he went from prose to verse. He began by either preparing or taking over an edition of Isaiah, designed to show the extraordinary resemblances between the eighth- and sixth-century situations of Palestine. He then added the two great prophets of the very period he had to explain, Jeremiah and Ezekiel, and some minor prophets.

PCl aimed at establishing the credibility of the pre-exilic prophets by showing that they had correctly analyzed the history of Israel and Judah in the context of power politics; when they saw the hand of God in all that happened, they rightly predicted the outcome. Hence their prophecies dealing with events yet to come (the editor implicitly asserts) can be relied on as well, and decisions and actions in conformity with them should be made.

The expansion of the prophetic corpus around 520-500 B.C. centered on two parts of it: the beginning and the end. The prophecies of Deutero-Isaiah were added to the Isaiah book and the later minor prophets—probably Joel and Jonah and surely Haggai, First Zechariah, and Malachi—to the end of the collection. The revision of the corpus can be dated to the period described in Haggai and First Zechariah (1-8), the period of the rebuilding of the temple and the attempted revival of the monarchy. The work of Second Zechariah (9-14) cannot be dated precisely; it probably belongs to the final edition of the corpus.

**3. Postexilic literature.** *a. The Chronicler.* The core narrative of the Chronicler's history is contemporary with the final edition of the prophetic corpus, that is, it comes from the period between 520 and 500. It is an independent Palestinian work designed to enhance the claims of the Davidic dynasty and of the second temple. It presents the claims of the Davidide Zerubbabel, the Zadokide Jeshua, and the second temple in terms of the prior claims of the corresponding ancestral figures, David, Zadok, and the first temple. The work included not only the bulk of Chronicles but also most of Ezra 1-6. (Ezra 4:6-24 and parts of chs. 5 and 6 are from the fifth century.) The genealogies which open Chronicles were probably not included in the core work, except perhaps for that of the Davidic line in ch. 3, which may originally have followed the account of David's coronation.

The final version of this history is the work of an editor around 425 B.C. He shared with the first editor an interest in Judah and Jerusalem, and in the priesthood and the temple, though he avoided the subject of the monarchy. There is thus a radical shift of emphasis, clearly reflecting the activity of EZRA AND NEHEMIAH. The most striking evidence for the distinction between two major layers of Chronicles is provided by the contrast between the model of Israelite greatness used in the core narrative (the monarchy) and that of Ezra and Nehemiah themselves (the community of the steppe wanderings). Why Chronicles was adapted to the changed situation of the fifth-

century Judahite community by little more than the addition of the memoirs of Ezra and Nehemiah and of the genealogies, and not by a complete rewriting, is unknown. The editor of Chronicles certainly approved of the establishment of a Judahite commonwealth within the Persian Empire. See CHRONICLES, I AND II[S].

*b. The Book of Truth.* The first books of the Writings—Job, the Psalter, and Proverbs—are difficult to date. The book of Job reflects a non-Judahite orthographic tradition and may derive from the northern kingdom or a community with similar linguistic background. It was written in the seventh or sixth century.

Only a few psalms demand an exilic date. Some psalms, like 29, 68, and 72, undoubtedly belong to the earliest period of Israelite hymnody, the twelfth-tenth centuries. None shows the influence of the Persian, Greek, or Roman periods. The majority probably belong to the ninth-sixth centuries and were used in the cult of the first temple. If the traditional co-ordination of the Yahwist and Elohist Psalters with Northern and Southern cultic traditions is correct, then they are pre-exilic. The five-book format of the Psalter shows the influence of the Pentateuch configuration, which belongs to the fifth century. Qumran MS 11QPp<sup>a</sup>, which contains some of the canonical psalms (numbered between 100 and 150) in a widely variant order, shows that the final arrangement of the work was either quite late or subject to considerable variation.

The book of Proverbs was composed around a core collection compiled in the time of Hezekiah; the date and even the nature of its various expansions are not clear. There is nothing in the book that demands a postexilic date, though such can hardly be excluded.

*c. The Megilloth and Daniel.* Of the Five Megilloth, only Lamentations can be clearly dated; it must belong to the period it describes, not only because the poet pictures himself as intimately involved in the events surrounding the siege of Jerusalem, but also because the poems reflect absolute despair, with no hope for a return. Its canonization was probably the result of its status as a Jeremianic pseudepigraph.

Pseudepigraphy is probably also responsible for the legitimization of Ecclesiastes and the Song of Songs. The Hebrew Song is a mixture of classical and archaic forms. Its final editing probably took place in the sixth century. See PSEUDONYMOUS WRITING[S].

The Qumran MSS of Ecclesiastes date from 150 B.C. and suggest that the book was not only known but important at that time, since its content can scarcely be accommodated to an Essene world view. Recent work which has linked the book with Phoenician sources deserves some consideration. The marked tendencies of Ecclesiastes toward speculative thought and the distinctive way this thought was expressed do suggest that the writer was a contemporary of the great Greek and Anatolian philosophers, rather than a latter-day, uncomprehending imitator of them.

RUTH probably owes its canonization to the Davidic genealogy which concludes it. The He-

brew style of the book is closely related to that of J and E, and it may therefore be dated in the ninth or eighth century. This date corresponds well to the Davidic association of the book, which can be explained only with difficulty in the post-exilic period.

ESTHER comes from the Persian period. It is a historical romance about the court of Ahasuerus (Xerxes I) of the fifth century; it was written down no later than the fourth century. It is the only book of the Hebrew Bible not represented at Qumran, though that in itself is no indication of its date. Since the Essenes did not observe Purim in their festal calendar, it is likely that they did not accept Esther as edifying, let alone canonical.

According to scholarly consensus, the book of DANIEL received its final form in 165 B.C. or thereabouts, although parts of it, especially the stories, go back to earlier times. A source comparable to the materials used in composing the biblical book has been uncovered at Qumran—the so-called Nabonidus fragment, which correctly attributes a madness story similar to the one in Dan. 4 to Nabonidus, rather than Nebuchadrezzar.

4. The origins of the modern canons. The Torah

Indeed, the most obvious agent of the transformation of *torah* (correctly, "instruction," not "law"; see TORAH[S]) into *dāth* (a Persian loanword in Hebrew and Aramaic, meaning "law") is Ezra himself, who had the law (*dāth*) of the Most High God in his hand according to no less an authority than the Persian emperor.

The objective of Ezra and Nehemiah was to strengthen a community which lived as a minority group in an environment that was alternately hostile and seductive; strengthening the community necessarily meant clarifying its ethos. The Torah of Moses, reconceived as a legal instrument, was the chosen means. The instrument was flexible if only because of its size. The authority of Moses which, according to the Deuteronomic history, transcended that of kings, could be invoked only for the Pentateuch. At this time Genesis was probably regarded as a Mosaic composition, his prologue to his own life story. The death of Moses dictated the border between law and non-law, i.e., interpretation and commentary. Thus did Ezra carve out of the primary history a new authority for his nonmonarchic society. The rest of the primary history was subsidiary, though useful: the Former and Latter Prophets, the Psalms

interpretation by an exegete who was himself regarded as inspired. This tactic proved more durable and universal because most Judahites accepted the ancient texts (whose authority could be traced back to the sixth century and was thus unimpeachable), while interpretations could vary and be the object of legitimate discussion. The pseudepigraphic material was never as popular as the old writing and only by accident or dissimulation was it accepted into the canon. Daniel is in fact the only genuine pseudepigraph in the Hebrew Bible.

The Qumran findings have produced so much new information about the finalization of the Jewish and the Catholic Christian canons, that no final assessment of the picture is possible. The traditional reconstruction of these two as the descendants of Palestinian and Alexandrian canons is clearly no longer acceptable, as Sundberg has demonstrated. The validity of this reconstruction should have been suspect before Qumran, if only because there are no complete Jewish MSS of the LXX in existence and thus none which are organized according to the supposed Alexandrian canon. There are only fragments of pre-Christian date, which provide no clear information about the order of the books.

In reaction to the Qumran data, Sundberg has proposed a striking resolution of the problem of the origin of the two canons. Although it errs in that it seems to demand explicit definition from periods which are too obscure to yield up such information, it is well worth considering. Sundberg contends that there was only one canon in all of Judaism before the destruction of the second temple, i.e., the primary history and its prophetic supplement. This canon was enlarged on two occasions. The first was the result of a series of rabbinic disputations associated with the Academy at Jamnia (Jabneel), usually dated around A.D. 90. At this time, the Writings in the Hebrew Bible were defined. Sundberg believes that the early Christian community separated itself entirely from Judaism after the events of A.D. 70; indeed it was those events which stimulated the final redaction of much if not all the NT. Thus at the time of the separation, the canon of scripture consisted only of the Pentateuch, the Prophets, and an undefined group of writings. This group of writings remained undefined in the church for several centuries; during this time, the alarming gap between the Christian and Jewish Bibles was noted by Christians, who attempted to shuffle the contents of the Christian OT around to make the two match. The results are evident in most Catholic editions of the Bible; e.g., the pseudepigraphic letter of Baruch follows Jeremiah, a position which reflects the belief of the church Fathers that when the Jewish canonical list mentions Jeremiah, it also means the supposed work of his secretary. It was the result of this great shuffling operation that was more or less canonized as the Catholic and Orthodox OT in the century following the conversion of Constantine. This remains the basic canon of the Roman Catholic Church (which excluded I and II Esdras in the early Renaissance) and of

the Greek Orthodox Church (which included these same books at the same time) and of its heirs.

The difficulties with Sundberg's position are manifold. Most importantly, the rabbinic debates at Jamnia do not reveal uncertainty about all the Writings, but only about Ecclesiastes and the Song of Songs. The debates about Esther and the Torah section of Ezekiel are later and largely academic. The major decisions to exclude literature more recent than Daniel were clearly made during the first centuries B.C. and A.D. The Christian canon was probably fluid in the way that Sundberg suggests, but chiefly because the varieties of thought excluded from the Jewish canon, messianic and apocalyptic, were so important to the early church.

Sundberg's hypothesis also fails to deal with the simple truth that most, if not all, of the Writings in the Hebrew Bible were in existence at the time of Ezra, except Daniel and possibly Ecclesiastes and Esther, while most of the material which is included in the Catholic and Orthodox canon but not in the Hebrew Bible is much later than Ezra. The exact formulation of a solution to this problem would have to take into account not only all the biblical data, but also additional historical information and cannot be attempted here.

*c. Final remarks.* The position of the prophetic writings in the Catholic Christian (LXX) canon suggests that the promise-fulfillment relationship between the two testaments was regarded as of crucial import, a regard paralleled by the Matthean use of OT quotations. The very fact that neither the LXX nor the MT correctly reflects the historical development of the canon suggests the importance of the *arrangement* of biblical materials. Both confirm the overwhelming priority of the Torah.

The different canons reflect the needs and interests of the religious communities at various stages in their histories. The first canon was created in the sixth century B.C. as a structural base for a crippled society. It was sharpened and focused by Ezra to serve a specific legal and judicial function—to integrate and sustain a community that had territory but no independent authority. The earlier canon, PH and its supplement, had been purely ideological in character, designed to hold together people who had nothing but memories and hopes. Prophecy and its stepchild apocalyptic were crucial in the formation of the later second temple period writings which were largely abandoned as a result of the disastrous experience of the First Jewish Revolt. The radical thought of the last years of the second temple period was cut back in line with strategies similar to those used by Ezra for similar purposes. Hence the elimination of the luxuriant growth of the speculation cast in apocalyptic-messianic tones which brought about the community's disaster and which later reappears in less dangerous forms in Jewish mysticism and Gnosticism.

The Christian situation was rather different. Messianism was the dominant theme, and so the focus was on prophecy and apocalyptic. For proph-

ecy, history was the vital framework—thus I and II Maccabees and the gospels and Acts. Speculation went hand in hand with apocalyptic thought because visions and revelations must be transmuted into knowledge for survival; the two remain uneasily balanced until the rise of late patristic metaphysics.

Bibliography

1. **The hypothesis of a core NT canon by the end of the second century.** The application of secular historiography to biblical studies destroyed the viability of the tradition that the NT canon had been formed by the disciple John about the end of the first century, since it became evident that some NT books had not yet been written by that time. Westcott was the first to postulate the existence of a NT canon by the end of the second century. He believed this was demonstrated by the Canon Muratori in the West and the Peshitta in the East (both then dated *ca.* A.D. 170; see **CANON OF THE NT** §D6; **VERSIONS, ANCIENT** §4b), together with the usage of Irenaeus, Clement of Alexandria, and Tertullian representing the churches of Asia Minor, Alexandria, and North Africa, respectively. Soon thereafter and independently, Bleek's hypothesis of a core NT by the end of the second

century was published. Bleek found witnesses to this core NT in Irenaeus, representing Gaul and (perhaps) Asia Minor; Clement of Alexandria, representing the Alexandrian church; Tertullian, representing proconsular Africa; the Peshitta, representing Syria; and the Old Latin list of Canon Muratori, representing Rome. These unanimously accepted the four gospels, Acts, thirteen epistles of Paul, I John, and I Peter. Bleek's core NT was more critical than Westcott's because he named only those books for which there was unanimous acceptance among these five witnesses. Bleek was also more forthright in acknowledging the value placed on noncanonical writings by Irenaeus, Clement of Alexandria, and Tertullian. These included Barnabas, Apocalypse of Peter, I Clement, and the Shepherd of Hermas. The criteria of canonicity, however, were the same for Westcott and Bleek. These were, first and foremost, citation with authority like that of the OT, sometimes indicated by introductory quotation formulas that included "the scripture" (ἡ γραφή or "it has been written" (γέγραπται); apostolicity; inspiration (though not clearly stated by Bleek); and inclusion in the five witnesses.

2. **The demise of the hypothesis.** The hypothesis that a core NT existed by the end of the second century was somewhat weakened as soon as it was shown that the Peshitta originated only in the fifth century and was therefore no witness to a second-century NT canon. At the same time, however, the old hypothesis was retained by arguing that Canon Muratori was an official publication of the Roman canon for the whole church, published by the Bishop of Rome or at his direction.

Nevertheless, evidence for a second-century core canon continues to be called into question. Clement of Alexandria has been dropped from the list of witnesses because of his wide use of noncanonical Christian writings which cannot be differentiated from his use of canonical writings; and it has been shown that Irenaeus and Tertullian also made use of writings other than those within the NT canon.

Moreover, it has become evident that the church received a much wider body of religious writings from Judaism than what it eventually canonized as "Old Testament" (see **CANON OF THE OT; CANON OF THE OT[S]**). Since the church received no OT canon from Judaism, the quotation of Christian writings with authority like the OT in the early church did not indicate that these Christian writings were canonical. Thus, what has been the basic criterion for all modern histories of the NT canon has proved erroneous. Similarly, more careful studies of quotation formulas in the NT and early Christian literature have shown that formulas containing "the scripture" or "it has been written" have no canonical connotation since they are used indiscriminately of noncanonical, heretical, and non-Christian writings as well.

Finally, the Roman provenance and late second-century date of the Muratorian Fragment have been questioned. An Eastern provenance and an early fourth-century date are more probable (see **MURATORIAN FRAGMENT[S]** §3). Thus, the evidence on which the hypothesis of a core NT by the end of

the second century was postulated has eroded away.

3. A revised history of the NT canon. In spite of this erosion of evidence, the hypothesis of a second-century core canon has prevailed for over a century with only minor alterations. It is now imperative, however, to attempt to develop an alternative hypothesis, and with it, to write a revised history of the NT canon. In this revised history the development of the canon may be seen as consisting of three stages: the rise of Christian writings to the status of scripture, the conscious collection of Christian writings into closed subcollections, and the formation and standardization of NT lists—canonization proper.

4. The rise of Christian writings to the status of scripture. It is no longer satisfactory to use the terms "scripture" and "canon" synonymously. The church received "scriptures," that is, religious writings that were in some sense regarded as authoritative, from Judaism; but the church did not receive a canon, i.e., a closed collection of scripture to which nothing could be added, nothing subtracted. The DEAD SEA SCROLLS as well as the literature of earliest Christianity show what kind of materials were regarded within the Judaism of the period as somehow authoritative: a closed collection of the Law, a closed collection of the Prophets, an undefined group including the later defined collection called the Writings, books later called Apocrypha and Pseudepigrapha, and others known to us only by name. Neither in the sectarian writings from Qumran nor in early Christianity was any distinction made between those books later in the Jewish canon and those not included. It is evident that the religious writings of the church received from Judaism did not come directly from Qumran but more probably from the common usage in Judaism at that time. Melito of Sardis (ca. 170) is the first Christian writer to take notice of the existence of a Jewish canon, and no significant effect of that canon is felt until Origen (253), even though the Jewish canon was closed ca. A.D. 90. This would seem to confirm the view that the church received scriptures from Judaism but not a canon. Therefore, when Christian writings were given authority like that of the OT, these were indeed being regarded as scriptural, but not yet as canonical.

Not until ca. A.D. 90 is there evidence (Josephus, II Esdras) for a theory of scripture or canonization within Judaism; at this time the doctrine was promulgated that only the writings from Moses to Ezra were inspired. It is reasonable to suppose that the earlier, apparently open-ended attitude toward scripture in Judaism is what passed over into the early church, along with the Jewish scriptures themselves. The early church felt itself endowed with the same inspiration that inspired Moses and the prophets (e.g., Acts 2:16-21; 15:28; I Cor. 2:4), and this sense of inspiration in word and deed carried over to their writings since they knew no limiting or restricting doctrine. Thus, Paul could commend his written instructions to Corinth by saying, "And I think that I have the Spirit of God" (I Cor. 7:40b). By the end of the first century the writer of I Clement thinks of Paul as

having written with true inspiration (47:1-3), and also refers to his own work as "written through the Holy Spirit" (63:2).

The belief in the continuing inspiration of the Spirit endured in the church into the third century and beyond. In the first centuries no other criterion than inspiration, poured out freely upon the church, was required for a Christian writing to be regarded as scripture (Iren. Her. III.xxi.3-4). These writings were cited with authority like that of the OT, and it is only on this basis that we can understand how such works as I Clement, the Shepherd of Hermas, and Polycarp's letters, which did not fit the later criteria of canonicity, attained the status of scripture. The rise of Christian writings to this status is synonymous with the circulation and popularity of these writings in the church.

a. *The gospels.* All the evidence indicates that the words of Jesus were authoritative in the church from the first, and this makes it the more remarkable that such scanty attention is paid to the words or works of Jesus in the earliest Christian writings. Paul's letters, the later epistles, Hebrews, Revelation, and even Acts have little to report about them. In view of the presumed imminence of the eschaton and the immediately available guidance of the risen Lord through inspiration (cf. Gal. 1:11-12), the wonder is that gospels came to be written at all. PAPIAS (ca. A.D. 130), the first person actually to name a written gospel, illustrates the point. Even though he defends Mark's gospel (Euseb. Hist. III.xxxix.15-16) and had himself appended a collection of Jesus tradition to his "Interpretation of the Oracles of the Lord" (Euseb. Hist. III.xxxix.2-3), his own clear preference was for the oral tradition concerning Jesus, and the glimpses that Eusebius provides of Papias' Jesus tradition give no hint of his dependence on Mark. Neither do the more frequent citations of Jesus in the APOSTOLIC FATHERS, largely "synoptic" in character, show much dependence on our written gospels. Here, again, oral Jesus tradition is suggested. It would appear that from a very early time there was such a strong preference for the oral tradition about Jesus that this passed, together with the translation of that tradition, into Greek.

It is doubtful whether very large portions of the Jesus tradition would have been translated orally from Aramaic into Greek. It may be possible that the earliest use of written gospels in the church was as instruction books for those who would tell the Jesus tradition orally in Greek. The curious mixture of Matthean and Lukan characteristics in the gospel-like material in the Apostolic Fathers is explicable within the context of such oral transmission.

In the following decades, even though evidence for the existence of written gospels is clearer and the citations of gospel materials are more abundant, there is no attempt to identify the citations with a written gospel. The materials are cited tacitly as oral tradition, and a significant amount of material not contained in our four gospels is also used, with like authority. Not surprisingly, new gospels continued to be written, and their authors, like the gospel writers before them, used such gospel material as came into their hands. Thus, Tatian (ca.

175) used our four gospels in his Diatessaron just as the authors of Matthew and Luke had used Mark. The Gospel According to the Hebrews and the Gospel According to the Egyptians also apparently represented what may be called "normative Christianity" of their time. Others (e.g., the Gospels of Peter, of Thomas, of Truth, of Philip) were related in varying degrees to the form of Christianity that came to be known as Gnostic, and that flourished in North Africa during the second century.

Justin Martyr, who moved from Palestine to Rome, founded a school there, and was martyred ca. 165, marks an important transition in the use of gospel materials. Justin is the first Christian writer known to have appealed to written gospels, to have used them as scripture, and to have accorded them authority like that accorded to the OT. He called the gospels "memoirs" written by the "apostles and those who followed them," and remarked that in them the sayings of Christ are preserved (Apol. I, 39; *Dialogue with Trypho* 103). These memoirs were also called gospels, and on Sundays they were read together with the prophets (Apol. I, 66-67). It is probable that Justin knew our four gospels, but his citations from noncanonical materials show that he was acquainted with a wider gospel tradition.

**b. The Pauline letters.** Although a century passed between the writing of Mark's gospel and its first authoritative use, the letters of Paul achieved authoritative status more quickly. Before the end of the first century I Clement refers to Paul's correspondence with Corinth as written with "true inspiration" (46:3), in this respect similar to the OT (cf. 13:1; 16:2). This means that Paul's correspondence with Corinth was known in Rome before the close of the first century. Early in the second century, Ignatius, writing to Ephesus, says that Paul mentioned the Ephesians in every letter (12:2). "Every letter" does seem to imply more than I Corinthians and Ephesians, in which the Ephesians are named, but we do not know how many of Paul's letters Ignatius had in hand. (I Thessalonians, I Corinthians, Romans, Colossians and Ephesians—perhaps also II Thessalonians—appear to be reflected in the Ignatian letters.) Polycarp (ca. 155) shows a knowledge of Romans, Galatians, Philemon, Ephesians, and perhaps Colossians, while he actually quotes I Corinthians and alludes to Philippians and probably II Thessalonians. Like Ignatius, the writer of II Peter refers to "all of Paul's letters." Such statements tend to give credence to the early publication of the Pauline correspondence.

If the early collections of Paul's letters were complete, as some argue, it is difficult to understand the varied and incomplete listings of his letters at the end of the second and the beginning of the third centuries. Irenaeus, while quoting frequently from Paul's letters, nowhere lists them. Tertullian (ca. 220) lists Paul's letters as Corinthians, Galatians, Philippians, Thessalonians, Ephesians, Romans (Marcion IV.v), but then discusses them in Marcion's order: Galatians, I, II Corinthians, Romans, I, II Thessalonians, Ephesians, Colossians, Philippians, Philemon. And, while he accuses

Marcion of tampering with even the number of Paul's letters (Marcion V.i, apparently referring to Marcion's noninclusion of the Pastorals), he does not correct this error in his own list. Origen, having quoted I Cor. 2:6-8, proceeds to list Paul's letters as Ephesians, Colossians, Thessalonians, Philippians and Romans; but Corinthians and Galatians go unmentioned (*Against Celsus* III.xix-xx). These circumstances do not reflect a settled list of Paul's collected letters, but suggest rather that the earlier references to "all" Paul's letters probably meant only those possessed by that writer. Marcion was probably the first to publish Paul's ten letters (ca. 150), but animosity toward him by the orthodox prevented his innovation from being generally utilized.

**c. The Pastoral epistles.** Polycarp may have known I and II Timothy, though some believe the evidence alleged for this is due instead to common tradition. Otherwise there is no sign of their use until the last quarter of the second century. Tatian is reported to have rejected some of Paul's letters but to have accepted Titus (Jerome, *On Titus*, Preface), while Athenagoras appears to allude to I Tim. 2:1-2 in his *Apology* (xxxvii). Irenaeus is the first to have used the Pastorals extensively, and thereafter they are frequently quoted as the writings of Paul. It is unlikely, however, that they were included in the third-century MS of Paul's letters now known as the Chester Beatty Papyrus (P<sup>40</sup>). See also PASTORAL LETTERS, THE.

**d. The Catholic epistles.** I Peter and I John gained relatively early recognition. Eusebius says that Papias quoted I John and I Peter (Hist. III.xxxix.17), that ancient elders used I Peter in their writings (III.iii.1), and that Polycarp used testimonies from I Peter in his letter to the Philippians (IV.xiv.9). Traces of I Peter have also been noticed in Basilides (ca. 125) and Theodotus (ca. 160), a disciple of Valentinus.

Irenaeus has a single quotation from I Peter (Her. IV.ix.2), and Tertullian (*Scorpiae* xii) and Clement of Alexandria (Miscellanies III.xi; IV.xx, etc.) attribute it to the apostle. Thus soon after A.D. 200 I Peter is known and cited as a work of Peter. Similarly, I and II John come into more frequent use toward the end of the second century. Irenaeus cites from the two as though they were one letter, ascribing them to the apostle (Her. III.xvi.5, 8), and Clement of Alexandria cites I John frequently, calling it John's larger epistle (Misc. II.xv.66). There is no mention of III John in the second century.

Jude is first used in II Peter where it is utilized for most of ch. 2. Clement of Alexandria quotes it by name (*The Tutor* III.viii), as does Origen. It is mentioned by Tertullian. Origen is the first to mention II Peter and then only once, saying that it is of doubtful authenticity (*Commentaries on John* V, 3).

**e. Other writings of the NT.** Revelation may possibly have been known to Hermas, who parallels its imagery for church and enemy as a woman and the beast. Papias is said to have known it, but Justin is the first to name the work (Dial. 81).

Irenaeus also names and cites it as the work of John (e.g., *Her.* V.xxvi.1; xxx.3).

Hebrews is used already in I Clement, and it is possible that it was known by Hermas. Papias' term, "the eternal high priest," probably came from Hebrews. According to Eusebius, Irenaeus quoted from it (*Hist.* V.xxvi), but, according to Stephanus Gobarus (sixth century, in Photius cod. 232), he rejected Pauline authorship, as had Gaius of Rome (ca. 200). Origen encouraged the acceptance of Hebrews as Paul's, but concluded that only God knows who really wrote it (*Euseb. Hist.* VI.xxv.13-14).

It was not possible to accept Luke and question Acts, and from Irenaeus on, the latter was attributed to the follower of an apostle who had also produced an accepted gospel.

**f. Noncanonical writings as scripture.** A number of other Christian writings not included in the NT canon when it was formed were used at the close of the second and at the beginning of the third centuries in ways indistinguishable from the (eventually) canonical writings already mentioned. Irenaeus used I Clement, the Shepherd of Hermas, Papias, Polycarp, and Ignatius; Tertullian, before he became a Montanist, used the Shepherd; Clement of Alexandria used the Gospel According to the Hebrews, the Gospel According to the Egyptians, Barnabas, I Clement, the Apocalypse of Peter, the Preaching of Peter, the Shepherd, the Traditions of Matthew, and the Didache. Origen, always said to be more guarded than Clement in his usage, used the Gospel of Peter, the Gospel According to the Hebrews, the Preaching of Peter, the Acts of Pilate, the Didache, the Clementine Recognitions, I Clement, Ignatius, Barnabas, the Shepherd, and the Acts of Paul (though his attitude toward the last two may have cooled in his later writings). He did reject gospels according to the Egyptians, according to the Twelve, of Thomas, Basilides, and Matthias. Five of Clement's nine and Origen's eleven extracanonical books are common to them. There is no distinguishable difference in the usage of these books and the later-named canonical ones (cf. *Iren. Her.* III.xxi.3-4).

**5. Closed collections of Christian scripture.** This stage in the process of canonization overlapped the later period of the first stage.

**a. The fourfold gospel.** The earliest closed collection was the fourfold gospel. Justin had held that the memoirs/gospels contained what Jesus Christ had enjoined upon the apostles, and Irenaeus further developed this doctrine. Employing fanciful quadrifid numerology, Irenaeus held that the gospels must be four in number, no more, no fewer. His argument was directed against the Gnostics and their GOSPEL OF TRUTH, and he appears also to have been defending Luke because of the Marcionite use of that gospel. It was Irenaeus' fourfold gospel doctrine that passed to Clement of Alexandria, Tertullian, and Origen, even though these latter did not completely integrate it into their usage.

**b. The Pauline corpus.** While Marcion published ten letters of Paul, it is probable that the Pastorals were unknown to him. Later additions to the Marcionite scriptures show that his collection was

not closed. We have seen how the Pastorals came easily to be accepted as Paul's in the third quarter of the second century. It was Hebrews that became the critical issue in defining the extent of the Pauline corpus in the third century. Its rigorist teaching caused the book to come under attack in the West at the same time that the Shepherd, with its doctrine of forgiveness of one sin after baptism, was enjoying great popularity. In this connection the issue of apostolic authorship was raised. This controversy and the final closing of the Pauline corpus including Hebrews, beginning about the end of the second century, did not reach its conclusion in the West until the last part of the fourth century.

**c. The Catholic collection.** As distinguished from most of Paul's letters which were addressed to churches, the rest of the letters in the NT came to be regarded as encyclical and intended for the whole church. Apollonius (ca. 197) is the first author known to use the term, saying that the Montanist Themiso dared to compose a "catholic epistle" in imitation of the apostle (*Euseb. Hist.* V.xviii.5). Writers of the Alexandrian school applied the term to I John and I Peter in the first half of the third century (*Euseb. Hist.* VII.xxv.7-10; Origen, *Comm. on John* V, 3). In the fourth century Eusebius used the term "catholic" to designate the seven non-Pauline letters included in the NT, noting that most of them were disputed (*Hist.* II.xxiii; III.xxv.1-3). II, III John, II Peter, James, and Jude gained general acceptance along with I Peter and I John only in the fourth century.

**6. The period of canonicity.** With the fourth century the church experienced a resurgence of interest in its books. Eusebius marks the beginning of this renewed interest as he notes the Christian writings to which the church Fathers refer, and as he draws up his list of the emerging NT. Like Origen, he divides the books into "acknowledged" and "disputed," and further divides the latter into those he accepts and those he rejects. In his summary in *Hist.* III.xxv., Eusebius lists as acknowledged books the four gospels, Acts, the letters of Paul, I Peter, I John, and "if it seems desirable," Revelation. Disputed books, "known to most," include James, Jude, II Peter, and II, III John. "Not genuine" books are the Acts of Paul, the Shepherd, Revelation of Peter, Epistle of Barnabas, Teaching of the Twelve Apostles, and "if this view prevail," Revelation. He notes that the Gospel According to the Hebrews is sometimes included with these and identifies such gospels as those of Peter, Thomas, and Matthias, and such acts as those of Andrew and John as heretical books. The Revelation of Peter and the Epistle of Barnabas, while among the rejected books here, are called disputed in VI.xiv.1. Thus, while Eusebius was especially interested in the formation of a NT list, he himself was equivocal about some books.

Following Eusebius many other Christian writers offered canonical lists (see MURATORIAN FRAGMENT[S] §3). Some have suggested that the pressure of persecution forced the church to determine the exact contents of its NT, so that Christians could

know what books they could give up and what books must be preserved at all costs. This, however, seems unlikely since any surrender, even of medical books, could entail the accusation of being a lapsist (Augustine, *Contra Cresconium* III, 30). It is more likely that the stimulus came from Constantine's request for fifty copies of the Christian Bible to be prepared by Eusebius for the churches of Constantinople. Eusebius, whose own NT list was compiled before Constantine's request, does not tell us what books he included in the Bibles he prepared. But their publication must have appeared as a canonizing authority that few Fathers were willing to leave to Eusebius alone. The list of Athanasius, bishop of Alexandria, set forth in his Easter letter of 367, was the first to include just the twenty-seven books finally accepted in the church.

Toward the end of the fourth century a significant portion of the Eastern church used a twenty-two book NT, omitting Revelation, II, III John, II Peter, and Jude. In Syria, Tatian's Diatessaron was read instead of the fourfold gospel. About A.D. 400 the Apostolic Constitutions listed all of our twenty-seven books except Revelation but added I and II Clement. This canon was ratified at the Quinisextine Council at Constantinople in 692. In the West a council at Hippo (393) adopted a NT list like ours except for its separation of Hebrews from Paul's letters. In 397 a synod at Carthage issued a similar NT list but provided that martyrdoms could be read on the anniversary of the martyrdom. The Carthaginian council (419) repeated the enactment but shifted Hebrews into the Pauline collection.

**CANONICAL CRITICISM.** See HERMENEUTICS[S].

\***CAPERNAUM** [Καφαρναούμ in P45 and P0xy 847 and in Eusebius' *Onomasticon* (Klosterman, 174.25), but Καπερναούμ in W and the later traditions.] The village of Jesus (e.g., Matt. 4:13); "Cepharṯōmē" (Κεφαρῳῆ) or "Capernaum" (Καφαρναούμ) in Josephus (Life LXXII; War III.x.8), identified today with Tell Ḥum. Jewish

sources mention "Kefar Nahūm" [כפר נחום] (Midrash Rabbah Koheleth VII.20) or "Kefar Tanhūm, Kefar Tanhūmim" [כפר תנחום, תנחומים] (Midrash Rabbah Shir. III.18; J.T. Ter. 11.7).

Recent archaeological research has greatly added to our understanding of the city and its extant remains.

1. **The city.** Archaeological survey indicates that in the first century A.D. the unwalled town stretched at least 500 yards E to W along the lake shore, while northward it extended only 250 yards. This translates to a population of one thousand at most.

2. **The houses.** In the first century B.C. extensive building occurred. Blocks of one-storied apartments or *insulae* were built in squares about 80 x 80 feet, separated from one another by streets. Within each insula the individual dwelling has rooms opening onto a central unroofed courtyard, which is provided with grinding stones, outdoor ovens, and stairways leading to the flat roofs. Fishhooks found beneath the floors in insula I suggest that this was indeed a small fishing village. See FISHERMEN[S].

3. **The synagogue.** After the first half of the fourth century A.D. the synagogue was built, entirely covering one block of houses. Thus, its platform was as high as the roofs, so that the structure itself loomed above the *insulae*.

The worshipping congregation faced S toward Jerusalem. New evidence suggests that two *aedicularae*, or small shrines, perhaps one for the ark and one for the seven-branched candlestick or MENORAH, flanked the central entrance, as in the Sardis synagogue.

Beneath the floor of the synagogue and occasionally embedded in the mortar of the pavement were several thousand bronze coins. These date to the middle of the fifth century at the latest.

4. **The octagon.** It is now known that this is a church also finished by the mid-fifth century A.D. Its apse (with baptistery) is on the E side. It was probably built as a memorial church dedicated to the apostle PETER.

5. **The "house church" and the "house of St. Peter."** Beneath the octagon is a rectangular structure identified as a Christian "house church" or *domus ecclesiae*. The excavators propose that it was built in the mid-fourth century A.D. to preserve the house of Peter, which had itself been in use as a house church since the first century. An enclosure wall forming a rectangle some 90 x 90 feet was erected above an insula first built in the first century B.C. A single dwelling of the insula (Peter's house) was isolated in the center of the rectangle and remodeled to form the house church. The interior plaster was painted, and graffiti in the plaster are in Greek, Aramaic, Syriac, and Latin, attesting to the importance of the city to Christian pilgrims in the fourth century.

\***CARMEL, MOUNT.** In the annals of Shalmaneser III for 841 B.C., Mount Carmel appears as "the mountain of Ba'li-ra'si (KUR-e KURBa'-li-ra'-si) which is a promontory of the sea over against the land of Tyre." The Assyrian king camped there and received the tribute of JEHU of Israel. The identity of Ba'li-ra'si with Mount Carmel, made certain by a version of the annals published in 1951, is important on three accounts: it testifies to the sacred character of Mount Carmel, dedicated to the "Baal of the Promontory" (cf. I Kings 18:17-46); it confirms that Mount Carmel was the border between Tyre and Israel; and it proves that an Assyrian army crossed Israelite territory as early as 841—an event which must be put in relation with Jehu's seizure of power at that same time. See SHALMAN[S].

**CARTOGRAPHY OF PALESTINE.** Cartography is the science and art of map making. Primarily because of its importance as the Holy Land, Palestine occupies a prominent place in the history of cartography and today is one of the most meticulously mapped regions in the world.

1. **Ancient maps of Palestine** (2500 B.C.—A.D. 400). Map making in the ancient Near East reflected both cosmological speculations and practical needs. The former were met by maps that embodied contemporary concepts of the physical world; practical concerns were reflected in maps that recorded what travelers observed. Either need could, upon occasion, find expression in linear projections such as appear in the Egyptian Book of the Dead and caravaneers' itineraries; these were not, however, maps in the proper sense, since they indicated only stopping places on a road. Probably just as early are true maps, ones that show on a plane the locations of places on or near the earth's surface.

The Egyptians may have made sketch maps of Palestine during the Old Kingdom, and it is quite likely that maps were in use during the Eighteenth Dynasty (1570-1300 B.C.), when Palestine was a part of Egypt's empire. The impetus for Egyptian cartography was practical: generals, messengers, and merchants needed to know how to get from one place to another efficiently. In addition to crude two-dimensional maps there also must have been itineraries, some of which may have indicated the distance from one place to the next. Mapping probably played much the same role in the other empires that subsequently had an interest in Palestine. Relatively few maps from these great nations have survived, and none of those extant include details of Palestinian geography.

The Hebrews seem to have had no special in-

terest in maps of their country. A few passages in the OT allude to or suggest the possibility of the making of sketch maps. Joshua, the Yahwist relates, sent investigators "up and down the land, writing a description of it with a view to their inheritances" (Josh. 18:4); that description was, in customary fashion, structured around towns (Josh. 18:9; cf. the Priestly materials in 18:10-21:42). The account of the location of Eden (Gen. 2:10-14, Yahwist account) may imply the existence of something like a world map around the tenth century B.C. The story of David's census (II Sam. 24:1-9; cf. I Chr. 21:1-6) suggests the utilization of a map of Israel for governmental purposes.

Around the sixth century B.C. the Priestly circle in Judah may have experienced a surge of cosmological interest that created a climate of thought in which cosmological map making not only would have been possible but perhaps would have been encouraged. The prophecies of Ezekiel later in the same century indicate familiarity with surveyors' techniques (Ezek. 40-42, 47-48), and Ezek. 4:1-2 seems to allude to the prophet's making of a sketch map. From this time on, as first Greek and then Hellenistic and Roman influences were felt, the Hebrews were undoubtedly acquainted in a matter-of-fact way with both cosmological and practical cartography. No extant Hebrew maps, however, antedate the Middle Ages.

It is probable that Palestine was cursorily mapped by surveyors accompanying Alexander the Great when the conqueror passed through the country in 332 B.C. Need for maps existed during the Ptolemaic, Seleucid, and Roman occupations of Palestine, but nothing is known about the form maps may have had. The earliest surviving cartographic records of Palestine are those of the famous geographer Ptolemy of Alexandria, who compiled data (often imprecise) on the latitude and longitude of a number of towns of the region around the middle of the second century A.D. In the early fourth century EUSEBIUS OF CAESAREA prepared an onomasticon, or gazetteer, in which hundreds of Palestinian places were identified and the mileage from one place to another along the Roman roads was given. Unfortunately none of the surviving manuscripts of this important work contains a map.

2. **Maps of Palestine in the Middle Ages and Renaissance** (A.D. 400-1700). In the eastern Roman empire Eusebius' scholarly efforts were utilized in a number of later maps, the most famous of which is a magnificent representation in mosaic paving in a church at Madeba (ancient MEDEBA) dating from the second half of the sixth century. (See Fig. C2.) With the coming of Islam in the seventh century Greek culture diminished but did not disappear. The Islamic geographers themselves contributed little to the cartography of Palestine.

In the West the knowledge of the cartography of Ptolemy and Eusebius alike was largely forgotten for nearly a thousand years. Palestine itself, however, remained of interest to Europeans because of its association with the Bible and Christianity. From the fourth century onward there was an endless flow of pilgrims from Europe to the Holy Land. These travelers generally relied on itineraries

H. T. Frank

2. The Madaba mosaic map, showing Jerusalem and environs

that listed way stops rather than on true maps. The Crusades and subsequent occupation of Palestine by Europeans brought the need for improved maps. One such map, based on firsthand knowledge, has survived in a twelfth-century manuscript in Florence. The majority of maps that the Crusaders transmitted were, however, little more than late, garbled versions of the Eusebian tradition, which had remained alive in the Byzantine empire during the intervening centuries. Maps in this format continued to be used widely in Europe for several hundred years.

In the fifteenth century there was a rediscovery in the West of classical works on geography, including those of Ptolemy. Consequently there appears an influx of Ptolemaic elements on many maps, sometimes combined with details from the previous map tradition. Because no new topographical surveying had been carried out, Palestinian maps show continued deterioration in precision throughout most of the sixteenth and seventeenth centuries. As if to try to compensate for this deficiency, late Medieval and Renaissance map makers resorted to decorative embellishments that included portraits of biblical personages, scenes of salvific events, views of cities, and even heraldic motifs—all drawn from imagination. Jerusalem was the focus of interest in Palestine. Many plans and bird's-eye views of the city were produced, often highly stylized. In this age of geographical

exploration world maps were particularly popular; these depicted, in keeping with the thoroughgoing Christian orientation of Western civilization at that time, Jerusalem at the center of the world. Maps of this period stand in the cosmological tradition of cartography and contain little accurate information about Palestine.

**3. The modern mapping of Palestine** (A.D. 1700 to the present). During the eighteenth century a transformation began that eventually led to scientifically accurate maps of Palestine. In 1714, H. Reland published a map based on a fresh study of ancient records. New mechanical devices made relatively accurate surveying possible, with the result that d'Anville's 1732 map of Palestine shows relationships that are fairly precise. By the mid-nineteenth century there were maps that approximated the actual geographical features of the country.

When the era of surface exploration of Palestine began early in the nineteenth century, the locations of hundreds of places mentioned in the Bible and in other ancient documents were still unknown. Edward Robinson identified some sites during his visits to Palestine in 1838 and 1852, and for a hundred years thereafter scholars probed the highways and byways of the region. The pages of the *Zeitschrift des Deutschen Palästina-Vereins*, *Palestine Exploration Fund Quarterly Statement* (later *Palestine Exploration Quarterly*), *Journal of the Palestine Oriental Society*, *Bulletin of the American Schools of Oriental Research*, and other pioneering journals contain many proposals for the identification of ancient sites. Among the leading scholars concerned with site-identification were H. Vincent, W. F. Albright, G. Dalman, A. Alt, F.-M. Abel, and N. Glueck.

The first thorough, professional topographical survey of Palestine was carried out by C. R. Conder and H. H. Kitchener in 1872-77 under the auspices of the Palestine Exploration Fund and published in twenty-six large sheets at the generous scale of 1:63,360, with ten accompanying volumes of text. In this work thousands of modern place names in Palestine were recorded for the first time. During the British Mandate, a survey of Palestine was published in a set of minutely detailed and scientifically precise maps at 1:10,000. In 1959 the United States Army Map Service issued a 1:50,000 set of maps of Israel and Jordan based on a new photogrammetric survey. In 1965 Israel published a 1:100,000 set of maps in Hebrew.

The governmental maps generally do not attempt to incorporate the identifications of ancient sites made by scholars. That task has been performed by several biblical geographies and atlases, including *The Historical Geography of the Holy Land* by G. A. Smith (25th ed., 1931), *The Westminster Historical Atlas to the Bible* by G. E. Wright and F. V. Filson (rev. ed., 1956), *Atlas of the Bible* by L. H. Grollenberg (Eng. ed., 1956), *Oxford Bible Atlas* by H. G. May (2nd ed., 1974), and *The Geography of the Bible* (rev. ed., 1974) and *Geographical Companion to the Bible* (1963), both by D. Baly. These works, especially the more recent ones, are not limited to topography and place-identifications but present in cartographic

form other kinds of information as well, such as political divisions, demography, climatology, geology, agriculture, and commerce.

\***CENCHREAE.** Buildings on two promontories enclosing the harbor have been investigated. On the SW are warehouses probably dating from the early first century A.D., an apsidal building with marble pavement, and a Christian basilican church of the fourth century A.D. In the apsidal building were found panels of *opus sectile*, with pieces of colored glass mounted in plaster, which represent abstract designs, portraits, and descriptive scenes. On the NE promontory is a massive brick building, dating probably from the second century A.D. For details see the articles by R. L. Scranton and E. S. Ramage in *Hesperia*, XXXIII (1964), 134-45; XXXVI (1967), 124-86. See also CORINTH.

C. L. THOMPSON

\***CHAOS.** Chaos is a state of utter confusion, totally lacking in organization or predictability. It is the antithesis of cosmos.

1. **The concept in ancient Near Eastern myth.** Natural, political, and conceptual order depend on pattern and on change. Threats to them are imaged either as unyielding, undifferentiated mass, not amenable to change; or as dissipated, undifferentiated energy, not amenable to patterning. The Sumerian story of Ninurta and Asag is a useful paradigm of the relationship between the two images. Though told in terms of drought, wind, storm, flood, and agricultural fertility, it can as well describe disease, political tyranny, mental disorder, and related forms. Ninurta, the storm, shatters Asag, the (nether-world) mountain. The result is that the waters of the mountain are released in a destructive flood. Ninurta heaps up stones to control the flood and dedicates the now fertile earth-mound to his mother, Ninmah. A living order emerges from the combat between the two extremes.

We may call "resistant-mass chaos" that which characteristically swallows or consumes; it must be smashed open; its separated parts then sustain order. It suspends order by withholding water (Sumerian Asag) or the sun (Egyptian Apophis), by preventing fertility and growth (Hittite Hahhimas). Or it may prevent the orderly succession from father to son and from dead king to legitimate heir (Hittite Kumarbi, Greek Kronos).

We may call "dissipated-energy chaos" that which characteristically expands and must be contained. Its force, once harnessed, effects order. It disrupts

by flooding, by breeding monsters (Akkadian Tiamat), by cutting off communication between vital parts of the cosmos (Hittite Ullikummi), by forever expanding (Greek Titans), by obliterating boundaries (Egyptian Seth). Creation, by contrast, is portrayed as the establishment of free yet regulated movement; time brings fulfillment as it brings death; water flows rather than floods; the sun sets and rises; sons become fathers as they engender sons.

Characteristics of chaos tend to correlate negatively with those of cosmos, so that change goes in the direction of a more comprehensive view that accommodates what had come to be experienced as irreconcilable oppositions. The effectiveness of the god is most convincingly expressed when he subsumes the powers of the monster by legitimizing its characteristic activity: Marduk, gigantic and breathing fire, assumes Tiamat's powers. As the storm, he opens her; as the sun, he contains her. As god, he releases and regulates the powers of life and growth. Vritra says to Indra "Thou art now what I was before." The dying god conquers death by making it godly (Osiris).

2. **The chaos tradition in the Bible.** The proper frame of reference for discussion of chaos is the drama of creation, in which cosmos is the outcome of a heroic battle between the creator and the opposing monster (see MYTH §A1a, 4; COSMOGONY §§A2d, D2b; for discussion of Gen. 1, see CREATION; DEEP, THE). The prevailing biblical view does not locate opposition to God in natural processes, but within history and the human community. God subsumes what had earlier been conceived as the powers of chaos (see §b below). Therefore we cannot depend solely upon ancient mythic structure for the significance of direct reference or veiled allusion in the Bible to the primordial enemy of earlier tradition. On the other hand, that structure may direct the biblical poet to choices of expression in describing God's acts of creation. The chaos tradition survives in two ways: reference to known monsters may serve metaphorically to characterize historical enemies (Ezek. chs. 29, 32), or poetically to express God's sovereignty (Ps. 74:14). Images associated with the two monster-types may express the creative nature of God's activity at significant junctures in sacred history, such as the Exodus, Sinai, the "Conquest," the Exile, the Restoration, the Advent, the Apocalypse (see WAR, IDEAS OF §4; WATER).

a. **The battle myth in the Bible.** Intrabiblical and comparative Ugaritic evidence suggests that independent personality was attributed to Rahab, Leviathan, the Serpent (נחש), the Dragon (תנין), Yam (Sea), the Deep (תהום), Mot (Death), Ereš (Earth, see Wakeman, *bibliog.*), and Behemoth.

RAHAB is the proper name of a mythological beast associated with the sea. It is found only in Israelite tradition, and is in some passages identified with Egypt (Ps. 87:4; Isa. 30:7). He is hewn (Isa. 51:9), crushed (Ps. 89:10 [H 11]), smitten (Job 26:12), his followers subdued (Job 9:13). His fate is less ambiguous than that of the others since it is more closely tied to the historical moment of Israel's creation in the exodus from Egypt (Isa. 51:9; Ps. 89:10 [H 11]). Verbal derivatives of the name

parallel to the root נגש (Isa. 14:4, reading מרהבה with LXX, Syr., Targ., IQIs<sup>a</sup>; Isa. 3:5), suggest an association with the idea of oppression.

LEVIATHAN is a serpent (Isa. 27:1); Yahweh has crushed his heads and given him for food to the creatures of the wilderness (Ps. 74:14). Other passages suggest that Yahweh can draw him out with a hook and nose rope (Job 41:1-2). He is roused to battle (Job 3:8) and is Yahweh's plaything (Ps. 104:26).

DRAGON (תנין) is a generic term for the mythological monster. He is characterized as a devourer (Jer. 51:34) and associated with darkness (Ps. 44:19, NEB [H 20]).

The SERPENT in Amos 9:3 is a sea monster who bites at the command of God.

Yam (SEA) is broken (Ps. 74:13), his back is trampled upon (Job 9:8), he is muzzled (Job 26:13, reading *sām yām*), guarded (Job 7:12), cursed (Job 3:8), rebuked (Ps. 68:30 [H 31]), the object of Yahweh's indignation (Hab. 3:8). When God is the subject of the root גער ("rebuke"), the object of rebuke is paralyzed. In the NT the corresponding word is ἐπιτιμᾶω, which describes Jesus' command of the sea and wind (Matt. 8:26) and of unclean demons (Luke 4:35).

Yam presents difficulties because it is also the ordinary word for sea. Mythological connotation clings to it when it is the object of the verb בקע, "to break open," usually, of a body. With the possible exception of Ps. 74:15, the verb בקע used with a watery object always alludes to the account of crossing the Reed Sea. The corporeal connotation is appropriate to the sea insofar as it is regarded as a monster. The sea's being dried up translates the mythical action of killing the tyrant, to be distinguished from setting a bound on the sea as an act of cosmic ordering (cf. Prov. 8:29). The sea's covering something, usually at the behest of God, is likewise a translation of the mythical monster's swallowing (cf. Ps. 69:15 [H 16]). God's drying up the sea makes sense only if its continued existence is regarded as inimical: cf. "I saw a new heaven and a new earth; . . . and the sea was no more" (Rev. 21:1).

Though תהום (Tehom, "Deep," "Abyss") may be related etymologically to TIAMAT, it is nowhere personified in the Bible. However, inconsistencies in the word's gender, both in its form and in its agreement with verbs and adjectives, seem to indicate that the idea was in the process of being depersonalized. Vestiges of personality cling to expressions in which the word in the singular has indications of feminine gender or definiteness. This includes all cases of תהום רבה (see May, *biibliog.*); תהום רבצה in Gen. 49:25; Deut. 33:13; and Ezek. 26:19, 31:15 (accusative particle). The differentiation of תהום from the sea (Exod. 15:8) gives it the autonomy of the dragon (Ezek. 32:2), the god who sits in the heart of the seas (Ezek. 28:2).

Ereṣ (Earth) swallows (Exod. 15:12), shakes (רעש, see Childs, *biibliog.*), trembles in fear of God (Ps. 114:7), melts in submission (Ps. 46:6 [H 7]), is trampled upon (Mic. 1:3). The difficulties are similar to those for Yam: besides being the ordinary word for earth or land, ארץ is often a

synonym for the underworld, though without any implication of opposition to God.

MOR (Death) is personified in the Bible (e.g., Jer. 9:21 [H 20]), but appears only once in the OT as the Enemy: "[The Lord] will swallow up death for ever" (Isa. 25:8; cf. I Cor. 15:54; Hos. 13:14). Like Yam, he is finally defeated at the end of time when "Death and Hades were thrown into the lake of fire" (Rev. 20:14).

One may recognize behind the poetic description of "the beast" BEHEMOTH in Job a familiar figure in the ancient Near East (Asag, Vritra, etc.), the first being which emerged from the undifferentiated water, whose tyrannical reign is symbolized by drought. His relation to Leviathan is like that of Apsu (rather than Kingu) to Tiamat (see Enoch 60:7-8; II Esd. 6:49-50).

**b. The "monstrousness" of God.** God employs the monster to exercise his powers in the service of order: Aaron's rod turns into a dragon (תנין, Exod. 7:12) to swallow the Egyptian powers, to spoil their water, to split open rocks that release good water; the earth swallows Pharaoh (Exod. 15:12) or the dragon's river (Rev. 12:16); the biting serpent is sent to patrol the bottom of the sea (Amos 9:3); Leviathan and Behemoth demonstrate to Job that what is beyond his understanding is nonetheless within God's control. God subsumes the powers of the monster, exercising them for good as he brings darkness (Ezek. 32:7) and a consuming fire (Isa. 66:15; cf. Luke 12:49) upon his enemies; he makes the earth tremble (Nah. 1:5); he brings the sea up over the Babylonians (Jer. 51:42), Tehom over Tyre (Ezek. 26:19).

**c. The negative correlation of images associated with cosmos and chaos in the Bible.** Imagery associated with God and monster tends to polarize them as opposites. The sea monster is more evident in the Bible than the earth monster, perhaps because God's victory at the Reed Sea at the beginning of Israel's history is symbolically so central. Accordingly, God is referred to as a rock thirty-three times, the resistant body that saves from the encroaching flood of enemies within and without (e.g., Ps. 18). Of the two poles (kingship and covenant) between which biblical conceptual life swings, the imagery associated with this myth attaches to the first. It tends to revive at the junctures in Israel's history that bring it closest to the ancient hierarchical pattern, such as the establishment of the kingdom (ZION TRADITION, Davidic psalms), the hope of its restoration after the exile (the new exodus as described in Second Isaiah) and its fulfillment at the end of time (apocalyptic visions), especially when the great dragon, "that ancient serpent, who is the Devil and Satan" is vanquished (Rev. 20:2-3).

On the other hand, the giving of the Law is a creative event of equal importance to the life of Israel with the granting of the land, and is so marked by the earth-splitting theophany at Sinai (Exod. 19:16-17). The prophets who, like Moses (cf. Deut. 18:15), smite the rock (cf. Exod. 17:6; Jer. 23:29), see that it is not the nations as political reality that threaten Israel's life but the old ideology of the sacred state. Belief in the inviolability of the land undermines the true strength of Israel

as a legal community under God. The Lord who speaks to Elijah (I Kings 19:11) breaks the rocks in pieces. Amos hears the Lord call for justice to "roll down like waters, and righteousness like an ever-flowing stream" (5:24). Isaiah sees God working through Assyria who will "rise over all its channels . . . sweep on into Judah . . . overflow and pass on" (8:7-8). The rock may be a foundation stone or a "rock of stumbling" (8:14). Jeremiah calls God "the fountain of living waters" (2:13; 17:13; cf. Zech. 14:4-8); and for Ezekiel "the sound of his coming was like the sound of many waters" (43:2; cf. 47:1-12). Christ is an earth-smasher. As he yielded up his spirit, "the earth shook, and the rocks were split; the tombs also were opened, and many bodies of the saints who had fallen asleep were raised" (Matt. 27:51b-52). Christ is the source of living water (John 4:10; Rev. 22:17); baptism into Christ (Rom. 6:3) overcomes death.

The identification of the DEVIL and SATAN with the seven-headed dragon in the Apocalypse (Rev. 12:9) reconciles archaic and biblical conceptualizations. "The Adversary" (*šātān*), who as an agent of God appears originally in legal contexts (Zech. 3; Job 1-2), comes increasingly to take on the role of the Enemy as chaos is increasingly identified with breach of covenant. The new covenant, written on the heart, entails a spiritual Enemy, who is associated with death and darkness as he prevents people from realizing their relationship with God.

**CHENOBOSKION.** See NAG HAMMADI[S].

**CHIASMUS** *kī āz'mās*. A rhetorical term designating a reversal of the order of words in two otherwise parallel clauses, as in the literal translation of Prov. 3:10, "Then filled will be your barns with grain, and with new wine your vats will be bursting."

Biblical writers used chiasmus extensively to lend variety and charm to their parallel structures. On micro and macro levels chiasmus has been shown to be a basic element in the formal structure of biblical literature, so that critics can use it to determine the reading of a difficult text, the meaning or grammatical function of a word, or the limits of extensive pericopes, such as the flood story (Gen. 6-9) or the binding of Isaac (Gen. 22:1-19).

Simple chiasmus consisting of four members in an a.b.b'a' sequence is frequent, as in Jer. 6:25, literally:

Go not forth into the field,  
on the road do not walk.

Less frequent is the more developed a.b.c.c'.b'a' pattern, as in Prov. 3:10, cited above.

Now receiving greater attention are the a.b.b.a and a.b.c.c.b.a sequences, in which the writer employs the same words or roots in both parts of the unit.

The sound of battle in the land (אָרִי),	a
and of great destruction (שָׁבַר)	b
Alas, has been cut down and destroyed (יִשְׁבַּר)	b
the hammer of all the earth (אָרִי)!	a
(Jer. 50:22-23; author's trans.)	

Make the heart of this people fat,	a
and their ears heavy,	b
and shut their eyes;	c
lest they see with their eyes,	c
and hear with their ears,	b
and understand with their hearts. (Isa. 6:10)	a

\***CHILMAD.** A place mentioned in Ezek. 27:23 (to be read כַּלְמָדָר, *kal-madār* lost by haplography with the following רַכְלֵתָךְ, *rakleṯāq*). It is to be identified with Kulmadara, one of the principal cities of the N Syrian kingdom of Unqi, annexed to Assyria in 738 B.C. (see HITTITES[S] §2). Perhaps it is to be located at the very large mound of Tell Jindaris, classical Gindaros, if one assumes that the Hurrian element *kulma* ("fertile place?") was later replaced by Aram. *gin-*, "garden."

**CHREIA** *krā'ō* [χρεία, "need"]. Defined by ancient Greek rhetoricians as a concise, pointed account of something said or done by a particular person, and so named because it provided guidance for conduct, *the* most needful thing. Chreiai concerning Jesus were especially useful to early Christian preachers, although the term itself does not appear with its technical meaning in the NT.

1. **Characteristics.** The chreia was so designed as to be easily committed to memory. Once memorized it constituted a well-structured text that could be quoted, paraphrased, illustrated, and expounded upon at will. Chreiai were never attributed to mythological figures, and only rarely was the same chreia attributed to more than one person. When used critically along with other historical evidence, a chreia may afford valuable supplementary or confirmatory data concerning some characteristic dispositional attitude or exemplary act of its subject.

Typical are the following: "One day when

Antisthenes was censured for keeping company with evil men, the reply he made was, 'Well, Physicians are in attendance on their patients without getting the fever themselves'" (Diogenes Laertius VI.1.6). "When someone inquired [of Anaxogoras], 'Have you no concern in your native land?' 'Gently,' he replied, 'I am greatly concerned with my fatherland,' and pointed to the sky" (Diogenes Laertius II.iii.7). Some chreiai are more developed and involve dialogue, as for example those quoted by Xenophon in his *Memorabilia* III.xiii.

**2. Chreiai in the Synoptic gospels.** Most chreiai attributed to Jesus in the gospels have undergone literary expansion, sometimes in ways prescribed by the rhetoricians. Thus the point of Jesus' response to Peter in Matt. 18:21-22 is illustrated by the following parable. And the principle in the chreia of the widow's mite in Luke 21:1-3 is brought out in the *aitia* or "reason" in Luke 21:4. But often the expansions are glosses which must be bracketed in order to appreciate the rhetorical force of the original form. An example is one evangelist's explanation that the widow's two "mites" amounted to a (Roman) *quadrans* (Mark 12:42).

**Bibliography.** For further discussion and literature see W. R. Farmer, "Notes on a Literary and Form-Critical Analysis of Some of the Synoptic Material Peculiar to Luke," *NTS*, VIII (1962), 301-16. See also H. A. Fischel, "Studies in Cynicism and the Ancient Near East: The Transformation of a Chreia," *Religions in Antiquity*, ed J. Neusner (1968), pp. 372-411, which traces transformation of Cynic chreia forms in rabbinic literature.

W. R. FARMER

\*CHRIST. See CHRISTOLOGY IN THE NT[S].

\*CHRISTOLOGY IN THE NT. To confess Jesus of Nazareth as the Christ is to declare that he is the basis of faith; Christology is the development and presentation of the meaning of that basis. Thus Christology is fundamentally a response to a call to faith—a response which describes that call by reference to the basis on which it was issued. The response in turn becomes a new call to faith. It is possible to distinguish between the response and the new call, but not to separate them. The major emphasis of Christology is to be found in its nature as response.

The response could be evoked by an encounter with Jesus of Nazareth, but this of course was possible only prior to Good Friday. After that the response was evoked by the encounter with the Jesus Christ who is experienced as present in the proclamation, i.e., by encounter with the kerygma.

Since the NT books were not written until after Easter, a Christology which proposes to be "New Testament" Christology in the strict sense can deal only with the response to the kerygma. It is possible, however, by means of LITERARY CRITICISM to determine pre-NT traditions with considerable certainty, and they too can be incorporated into our presentation. The opinions of scholars differ as to the age of these traditions. It is relatively certain, however, that at least the traditions of the so-called Logia source (Q) show no influence of

the events of the Crucifixion and Easter. From this fact we may infer that in their substance, even though not always in their wording, they come from the pre-Easter period.

To a certain extent the differences in form of the christological expressions can be explained in the following way. The *Christ kerygma* first appeared after Good Friday. It proclaims that Christ has come (Gal. 4:4), that he has died for our sins, and that he has risen (I Cor. 15:3-4). No mention is made of the what and how of his existence. All the NT writings were affected by this Christ kerygma, and until the middle of the second century it continued to be the dominant kerygma in the church. The gospels, however, are an exception; they are oriented to the *Jesus kerygma*. Jesus is indeed proclaimed in this kerygma too, but he himself appears there as the one who proclaims and who is at work. The purpose of the Jesus kerygma is not to present a historically accurate account of Jesus' words and deeds and to hand them on with historical fidelity. It is, rather, to proclaim anew Jesus' words and deeds (precisely as *his* words and deeds) to each subsequent generation. As time passed, it was possible to preserve the content only by varying the language.

The "explicit" Christology of the Jesus kerygma is generally contrasted with the "implicit" Christology of Jesus' own preaching. This distinction is unfortunate because it obscures the fact that the Jesus traditions have come down to us as kerygma, not as historical reports. It would be better to make a distinction between a Christology that is enacted (Jesus kerygma) and a Christology that is reflected upon (Christ kerygma). Between these two there are many forms that contain elements of both. Thus the Jesus of Nazareth who speaks and acts is furnished with titles and designations of honor (Matt. 11:2; Mark 1:24; Luke 7:19, and *passim*); he is represented in his activity as a DIVINE MAN (Mark 6:45-51); or he is portrayed mythologically (John). Here we may speak of the *Jesus Christ kerygma*.

The following discussion is arranged according to the various forms of kerygma, but it must be noted that these frequently overlap, and it is not always possible to maintain strict distinctions.

1. The Jesus kerygma
  2. The Christ kerygma
    - a. Before and contemporary with Paul
    - b. Paul
    - c. After Paul
      - i. The Deutero-Pauline writings
      - ii. The other writings
  3. The Jesus Christ kerygma
    - a. Further formations and collections
    - b. The Synoptic gospels
    - c. The Gospel of John
  4. Conclusion
- Bibliography

1. **The Jesus kerygma.** The Jesus kerygma is found in the NT exclusively in the context of the Jesus Christ kerygma of the Synoptic gospels, but it can be reconstructed by means of literary criticism. Since there are no absolutely sure criteria

for determining the age of the individual traditions, some uncertainty remains. We may begin with the material which was revised by Q and with various small units of discourse and narrative in the Synoptics. It is important, first, to determine the distinctive form and content of the Jesus kerygma. On this basis the later developments can be made comprehensible (see §3 below).

All the traditions were formulated by believers. With the exception of Matt. 18:6, however, it is never stated that people believe in Jesus; rather, in the receipt and transmission of Jesus' words and deeds it is always made clear that people believe *him*, i.e., that they have submitted to his claims and that they now are speaking as those who have been influenced by him. We can ask what the historical Jesus said and did and how he understood himself and his mission. As the history of research in this area shows, however, the conclusions are far from unanimous (see JESUS CHRIST; TEACHING OF JESUS; TEACHING OF JESUS[S]). But since Christology is by nature a *response*, those conclusions are irrelevant. In the "repetition" of the preaching of Jesus and in the presentation of his activity, those who have encountered him give expression to their experiences with Jesus. In so doing they present him as the one who has appeared to them, the one who has prompted and initiated these experiences in them. Anyone who does not discern this characteristic feature of the material will always have difficulty understanding it. Thus we do not have any direct knowledge of what the historical Jesus said, but only of the way in which those who encountered him have understood what they heard from Jesus.

Jesus' words and deeds are set forth as a saving event by people who have experienced salvation in this event. Precisely here, as soteriology, Christology is enacted for us. Reflection about the one who is behind these words and deeds is found only occasionally, and then in rudimentary form. Speaking broadly, the relationship of those who are involved appears "as the reverent reserve of respectful followers before the Holy One who lives in their midst, but who in his innermost essence remains alien to them" (M. Dibelius). On the one hand, Jesus' "person" appears to be entirely human: he is hungry (Mark 11:12), eats and drinks (Matt. 11:19), is presented consistently as a teacher, and is addressed as a rabbi (Mark 11:21). But on the other hand, these human traits are repeatedly transcended: Jesus sees through the thoughts of his adversaries (Mark 2:8); he does not teach as the scribes do, but with authority (Mark 1:22; Matt. 7:29); and by his conduct he gives the impression that he is a prophet (Mark 6:15).

The key to the christological understanding of the Jesus kerygma may very well be offered by Mark 1:15: "The time is fulfilled, and the kingdom of God is at hand; repent, and believe in the gospel." In substance (though not in its formulation) this message goes back to a very early date. Scholars frequently ask whether βασιλεία means "kingdom" (thus emphasizing a state of affairs) or "rule," and whether it is to be thought of as

present or as future. See KINGDOM OF GOD §3; KINGDOM OF GOD[S] §§2, 3.

The conception comes from late Jewish apocalyptic. The images employed there are confusing in their multiplicity and cannot be fitted into a unified system (see APOCALYPTICISM[S]). The dominant idea is that of the futurity of the kingdom of God, conceived of as a state of affairs. It is the new aeon which, through earthly confusion and cosmic catastrophes, will dissolve the old aeon. The kingdom will begin with the judgment which, according to various apocalyptic systems, will be carried out by the SON OF MAN. Occasionally in competition with this is the idea of a (political) MESSIAH (from the house of David) who will set Israel free. The end time is preceded by various signs, the first of which are occasionally seen as already present or are to appear in the immediate future.

Once the background of this conception has been seen, it becomes clear that Jesus would never have been understood as an apocalyptic teacher who sought to provide information about the coming kingdom. Jesus' hearers were only too well acquainted with detailed teachings about the future. Further, we cannot tell which of the various apocalyptic systems Jesus would have opted for. It is characteristic of the Jesus kerygma that apocalyptic details are sharply reduced. It is really only the framework that remains, and questions about the coming state of affairs are rejected; it will be entirely different from the way anyone can imagine here on earth (Mark 12:25). Moreover, Jesus was not understood as an apocalyptic teacher who (like many before and after him, and like the sect of Qumran in his own time) supposed that there was still a period of time before the coming of the kingdom, even though a very brief one. Jesus' hearers understood him to mean that there was no more time. This distinctive mark of Jesus' expectation of the imminent end becomes clear when he is compared with JOHN THE BAPTIST. For John, repentance is a precondition for admittance into the kingdom, which is coming soon. For Jesus, the inbreaking of the βασιλεία is God's inbreaking in order to rule, with which come, simultaneously, the possibility and the necessity of REPENTANCE. God's rule is present in the sense that now "eschatological existence" can be lived, and that it therefore must be lived.

This eschatological existence in God's presence takes away every possibility of setting one's relationship to God in order by oneself, for this possibility is no longer needed. Those who, like the Pharisee, wish to do good works are keeping God at a distance; they emphasize the distance and thus refuse to accept God's presence. Those who, like the tax collector, confess themselves to be sinners, acknowledge the nearness of God and experience salvation (Luke 18:9 ff.). We simply cannot do anything more for the kingdom; we can only receive it as a child (Mark 10:13-16). In the kingdom, of course, there is something to do. But it is not simply a doing of the Law, even when it is casuistically intensified (Mark 7:1-23). It is the doing of the will of God in all its radical demands (the antitheses of the Sermon on the Mount, Matt.

5:21-45). Where this will prevail no one can ask any longer who the neighbor is, because each one from then on always is a neighbor (Luke 10:29-37). This total submission to the will of God is rightly understood, however, only when it is understood as grace and thus as salvation. The kingdom of God belongs to the Poor (Luke 6:20); tax collectors and sinners enjoy the fellowship at the eschatological table (Mark 2:15-17); and any care about tomorrow can be left confidently until tomorrow (Matt. 6:24-34). This can be done all the more readily since the fear of judgment is removed: where anyone today has surrendered to Jesus, that one is already experiencing the (intrinsically) future acknowledgment by the Son of man (Luke 12:8; Mark 8:38).

Of course those who have encountered Jesus are aware that his call and deeds are capable of two different interpretations. Demands for a sign are rejected (Mark 8:11-12). John the Baptist's inquiry about who Jesus is shows that even the "miracles" of Jesus cannot be *proved* to be eschatological deeds. Moreover, John's question is not answered with a reference to Jesus, but with a reference to his "functions"; and then salvation is promised to the person who does not take offense at the one who is performing these functions (Matt. 11:2-6). The person who does not take offense experiences even now the presence of the kingdom of God (Matt. 12:28; Luke 11:20); however, he or she experiences this presence in the unpretentious word which is "only" a seed (Mark 4:3-9). Even the PARABLES are not intended to impart information about the coming kingdom of God (though later they were so understood). We must pay attention to their function. They are told because in them people have experienced how they have been incorporated into the kingdom of God by selling everything in order to acquire a field or a pearl (Matt. 13:44-46). And people who see themselves in this way need do nothing more for the coming of God's kingdom, since it now works of its own accord, automatically (Mark 4:26 ff.).

The inability of the people of Jesus' time to abandon the outline of their apocalyptic conceptions is connected with their (and Jesus') view of the world. Later on, these conceptions were further expanded (Mark 13), but even in the time of Jesus they served to prevent any misunderstanding of the presence of the kingdom of God as a particular state of affairs. Conversion was not a once-for-all event, but every day it was possible and necessary to experience it anew. Even though Jesus' presence was understood as a *καιρός* which does away with our time, there still remains for our time the constant petition, "Thy kingdom come" (Matt. 6:10).

As long as Jesus was announcing the imminence of the kingdom of God and was bringing it in by what he did, people could form ideas as to who he was, but they were not obliged to do so. It was sufficient to let him start them out on the way to the kingdom of God. Of course a problem arose when Jesus was not present, and when he was no longer present. These two conditions must be kept distinct. It is incontestable that the knowledge of Jesus and his activity was widely dis-

seminated (Mark 1:28), even though Jesus' sending out of the TWELVE on a mission is not as such historical (Mark 6:7-13). This knowledge was reported because of a concern, but since radical rejection also expresses concern, even the effort to eliminate Jesus has to be understood as such an expression. Those who sent Jesus to the cross understood him very well; only among the Romans was there a misunderstanding in political terms. But where the knowledge of Jesus was reported because of a positive concern, the Jesus kerygma arose. This must have happened a great deal, for traditional material is abundant in the Synoptics, and it was not collected in Jerusalem but, more likely, in Galilee. Even the influence of the events that had taken place in Jerusalem was at first very limited (Q has no passion narrative and no Easter kerygma). But how can the kerygma, detached from the presence of Jesus, continue to be oriented to him? By this time at the very latest, there had to be reflection upon the person of Jesus, and thus arose the Jesus Christ kerygma (see §3 below).

The crucifixion of Jesus posed essentially the same problem, particularly for his closest followers who had come with him to Jerusalem. They faced the problem in its sharpest form: did not the Cross prove that the experiences which people had had with Jesus were simply delusions?

**2. The Christ kerygma. a. Before and contemporary with Paul.** Where people stood directly or indirectly under the impact of the execution of Jesus, it obviously was impossible to proclaim the Jesus kerygma any longer. Any direct connection with the past was cut off. Nevertheless, very soon after Good Friday a circle of concerned people found themselves together again. The historical events which brought this about can be reconstructed only with great difficulty (see RESURRECTION IN THE NT and supplementary article). It is certain, however, that—probably prompted by visions (I Cor. 15:5 ff.)—the conviction quickly prevailed: Jesus is alive! Then subsequently: He is exalted to God's presence! And finally: He is risen from the dead! This surprising experience was so unprecedented that it became the point of departure of all reflection and supplanted the earthly Jesus. The Christ kerygma arose.

A double movement, backward and forward, may be noted here. On the one hand, the Christ kerygma gives a new description of Jesus. Yet this did not involve statements *about* Jesus' history; it presupposed, rather, an orientation *to* it: to Jesus' cross, to the fact of his having lived. This is the christological aspect in the narrower sense. On the other hand, however, the Christ kerygma involved statements of function. This is expressed in particular in the many *ὑπέρ* statements: what happened in the past happened "for us." The "titles" of Jesus must also be understood in this way. For example, there was no intention of saying that Jesus was demonstrably and recognizably "the Messiah," but rather that he must be understood in connection with the functions of the Messiah. Conceptions known from late Judaism and apocalypticism were not uncritically transferred to Jesus. On the contrary, the functions which are encountered in Jesus determine what are to be regarded

as messianic functions. It now no longer makes sense to await a Messiah, unless this would mean awaiting Jesus the Messiah who has been exalted to God's presence, is present in the Spirit, and is soon coming again. (On the wholly parallel expectation of Jesus the Son of man, see §3a below.)

Here, then, the unprecedented self-understanding of the primitive community (as over against its Jewish environment) becomes clear; its understanding of itself was christologically based. This found its decisive expression in the attitude toward the Law. While Paul was the first to formulate the thought that Christ is the end of the Law (Rom. 10:4), the essence of this idea was present quite early. The aim of the Jesus kerygma is incorporated into this understanding: the way into the kingdom (for Paul, righteousness [δικαιοσύνη]) is not found by doing something; instead, the kingdom which is present makes it possible (and demands) that now the will of God be done. Thus, Christology becomes theology; it is not the other way around.

In the Jewish Christian community at the beginning this had not yet become explicit, though it had in the Hellenistic community in Jerusalem, where there were numerous Jews from the Diaspora (see DISPERSION). It was against them that the attack of the Jewish authorities was first directed, leading to the martyrdom of STEPHEN (Acts 7:8 ff.), to the expulsion of the HELLENISTS from the city, and thus to the opening of the mission (Acts 8:1 ff.). The Jewish Christians remained relatively unmolested, even though they were under suspicion. Nevertheless, they held (at least in essence) the same christological view as the Hellenists. This is shown by the agreement reached later at the Apostolic Council (Gal. 2:1 ff.) and by the continuing threat to the Jerusalem church by the Jews (Gal. 2:4, 11 ff.), until the martyrdom of James the son of Zebedee (Acts 12:1-2) (see JAMES 1).

The relative separation of the two communities then produced a certain differentiation in Christologies, even though the boundaries between them are often fluid. (In I Cor. 11:23-25 and 15:3-5, we have Jewish Christian statements, but they are formulated in Hellenistic terms.)

The Hellenistic development can be traced particularly in Paul, whose understanding of the Cross is of Jewish Christian origin. Jesus' death was interpreted with the help of conceptions already at hand: as an expiatory (Rom. 3:25; I Cor. 15:3), covenantal (I Cor. 11:25; Mark 14:24), vicarious (II Cor. 5:14), or paschal sacrifice (I Cor. 5:7). The functional character of the christological expressions is again evident, even though the "way to the past" is opened. The OT was adduced to support the understanding of the saving significance of the Cross ("in accordance with the scriptures," I Cor. 15:3) and also the understanding of Jesus' career (the passion narrative). By means of an inversion there later arose the schema of promise and fulfillment. This, however, is misunderstood when it is taken in the modern sense as *Heilsgeschichte*, because only the fulfillment shows what can be regarded as promise. Christology, therefore, is the key to the correct understanding of the OT (II Cor. 3:14-16).

With this Judaism was confronted by a new scandal. The Law declares that anyone who is hanged on a tree is accursed (Gal. 3:13; Deut. 21:22-23). Therefore, the Jew must reject as a scandal the preaching of the Cross as a saving event (I Cor. 1:23).

From such statements a feature which runs throughout most of the NT becomes comprehensible: the members of the community live in this world as aliens (I Pet. 1:1), yet claim to be already the community of the end time by virtue of their having been granted the Spirit. This claim is christologically grounded, but because only the Cross is visible, the community's new being is still not demonstrable.

**b. Paul.** Paul's Christology is actually nothing other than the unfolding of his Damascus experience against the background of his activity as a persecutor. Paul did not come to grief on the Law and did not think it impossible to keep the Law, although he is often so interpreted. He himself had kept it without reproach (Phil. 3:6), even including the casuistry of the Pharisees (Gal. 1:14); and as a Christian he is still unaware of any transgressions (I Cor. 4:4). The Law declares the will of God, and therefore it is, with its commandments, holy, just, and good (Rom. 7:12). But to Paul the Jew the assertion of the Jewish Christians that one could not attain salvation by observing the Law, and hence did not need to attain it in this way, must have appeared blasphemous. Further, because God has in Christ already bestowed salvation, we may not assert our will in order to attain it; for what the Jew wants is, in the eyes of the Christians, blasphemy against God. If the Christians were right, then, paradoxically, the very person who by the most nearly perfect fulfillment of the Law sought to gain the highest praise apparently was proved to be the greatest sinner.

The Damascus experience overpowered the persecutor. It is significant to note how Paul describes that experience in Gal. 1:16. The one whom he encountered is identified as the Son, and it is in or through the Son that God meets him. This order (Son, God) is important christologically. It is reversed in the presentation only because immediately thereafter it is the function that is crucial. Through his Son, God calls the persecutor to preach the Gospel among the Gentiles. The experience is universal: the vision of Jesus (I Cor. 9:1) is a vision of the Lord who is the Son of God, and thus one is confronted by God. Further, it is not only the Jewish way of the Law that is superseded, but also the Jewish restriction of salvation to Israel.

FAITH has taken the place of the way of the Law. The concept of faith, to be sure, must be understood accurately. Faith is not a human achievement, but a trusting surrender to the call that is heard (Rom. 10:17). Thus faith is always faith *in* something, namely, in the ground and content of the summons, which in some way is always oriented to Jesus. Paul develops this orientation in a multiplicity of christological concepts, images, and metaphors, which often stand side by side, unharmonized, and therefore neither can nor may be fitted into a system. Any systematizing would take

place outside of faith and would be a neutral way of looking at the matter; it would necessarily indicate tensions that go so far as to become contradictions. Therefore faith can never be an intellectual recognition of otherwise incomprehensible "objects of faith," from which one could, in a second step, draw further (more or less felicitous) consequences for conduct. (Such a *sacrificium intellectus*, incidentally, would itself be a work!) Faith is, rather, allowing oneself to be called into a movement. When Paul, caught up in this movement, looks back, he can express in various ways the things that stimulated his faith. But then he is not speaking about faith or about objects of faith from a detached position, but is confessing the basis for his faith *within* the movement of faith.

To this extent every christological utterance is complete. It can be varied, can repeat formulations that were coined before Paul or were contemporary with him, can appropriate conceptions of the people whom Paul was addressing in his epistles, or can even be developed through Paul's own mental labors. Nevertheless every individual expression *wholly* expresses the basis of faith. It is a fundamental misunderstanding to think that we are obliged to arrive at the whole by putting together the individual expressions. The so-called minimal Christology that "Jesus is Lord" (κύριος Ἰησοῦς, I Cor. 12:3) is a christologically complete utterance to the extent that it can indeed be asked how one could more precisely describe this fact of Jesus' lordship by means of other titles and conceptions; but it is not necessary to ask this. To be sure, it must be asked (and in the movement of faith it is always asked) how the lordship of Jesus becomes concrete in the existence of the believer in each new context. The believer indeed does the will of the Lord who moves him. Obedience is therefore nothing other than faith. Obedient conduct keeps the way open to the future, and therefore the one who moves the believer not only stands behind him, but at the same time stands in front of him. The futurity of the final salvation is fully maintained, but not the way it is in Judaism. We do not set out on the way to God by our own efforts; instead, the encounter with God (which is always still to be expected) has already happened and is happening now, in the movement of faith.

The gospel says that faith is possible now and can never be a "work," because in the proclaimed word the Lord is present in the Spirit. The believer actually has the Spirit already, even though in this transient world it is only as an earnest (II Cor. 1:22; 5:5) or as a first fruit (Rom. 8:23) (*see* FIRST FRUITS, NT[S]). Gift and obligation (or, more precisely, gift and the fulfillment of obligation) are not to be separated, because they are two sides of the one faith. If one side is lacking, the whole is lacking. Where the gift that is offered in the gospel is not accepted, everything that is done is a human work. This was the position of Paul the persecutor; the apostle later had to emphasize this in opposition to all Judaizing tendencies. This accent is dominant in Galatians, Phil. 3, and Rom. 1-8. Where deeds are absent, the gift is rejected or (more frequently) is not correctly recognized.

Paul had to set this forth in opposition to Gnosticizing and enthusiastic tendencies (e.g., his stress on the message of salvation as the "word of the cross," I Cor. 1:18 ff.). When the situation demands, Paul can even venture one-sidedly exaggerated formulations, as when he asserts to the Galatians that the Law is not from God at all (Gal. 3:19-22); to the Romans he writes precisely the opposite (Rom. 7:12). These apparent contradictions are connected with the fact that the deficiencies of faith (ὑστερήματα τῆς πίστεως, I Thess. 3:10) lie in different places from case to case. Where there is uncertainty about conduct Paul does not argue legalistically (or even casuistically), but christologically. Where people trust in their own deeds (even to the extent of appropriating the practice of circumcision in Galatia), Paul also argues christologically.

While Paul's Christology cannot be systematized, in order to provide an overview it may be helpful to distinguish its titles from the cosmic and historical aspects of his Christology. The boundaries between these remain fluid, and the crucial matter is always the working out of the "gift."

i. The titles must always be understood as distinguishing functions. This cannot always be recognized in the title CHRIST, because for Paul this has already become a name. Most of all, formulas referring to the Cross and Resurrection are associated with this title (I Cor. 15:3-4). Paul, however, did not understand these as two saving events of equal importance; the Resurrection was not understood as a cancellation of Christ's death. That would lead to a *theologia gloriae*. It is precisely against this that Paul must wage a polemic with explicit and exclusive emphasis on the Cross (I Cor. 1:18-2:5) or on the death of Christ (II Cor. 4:10). But the apostle can also refer to the Resurrection alone. Because the Corinthians are no longer in their sins, they must also be certain of the resurrection of Christ (I Cor. 15:17). The relationship of Cross and Resurrection in Paul can be defined thus: The Resurrection makes it possible to interpret the Cross as saving event. Anyone who looks at the Cross sees it through the Resurrection, otherwise it remains a "stumbling block" (σκάνδαλον, I Cor. 1:23). Anyone who looks only at the Resurrection overlooks the fact that it is the crucified one who is risen; such a person is an "enemy of the cross of Christ" (Phil. 3:18).

The functional character is much more clearly presented in the title LORD (κύριος). As the one exalted to lordship, Jesus (Christ) is present with his community (Phil. 2:6-11; Rom. 14:9). The source of the Kyrios title is still disputed. Since the LXX translated God's name (יהוה) with κύριος, it has long been assumed that the designation of Jesus as Kyrios was meant to assign to him the OT attributes of God. But this is improbable, since this translation is first demonstrable in Christian texts of the LXX. Therefore, this title could be either an appropriation of a designation for God from Syria and Asia Minor or a translation from the Aramaic (cf. the primitive Christian acclamation formula, *maranatha* [our Lord, come], I Cor. 16:22; Rev. 22:20). In any case Paul, too, is familiar with the Kyrios title used as

an acclamation: Christians call on the Kyrios Jesus Christ (I Cor. 1:2; cf. Rom. 10:13). (Prayer, however, except perhaps in II Cor. 12:8, is always addressed to God.) As Kyrios, Jesus is the permanent mediator of the relationship with God, even in the future in which the coming of the Kyrios is expected (I Thess. 4:15). Yet a comparison with II Cor. 5:10, where Paul expects that we will appear before the judgment seat of Christ, shows that a neat delimitation of the functions related to the titles is simply not possible.

The title Son, or SON OF GOD, exhibits still another aspect. It is used primarily when the subject is the mission which, understood as saving event, leads believers into the status of sonship (Gal. 4:4-7; Rom. 8:3). The idea of the sending of the Son implies pre-existence, and actually the incarnation as well. Of course the latter does not appear in Paul in the narrower sense of John 1:14, for saying that God sent his own Son "in the likeness of sinful flesh" (Rom. 8:3) is not an affirmation about the career of the earthly Jesus, who is understood as the incarnate one. In Paul's thought, it is not a continuous career of the earthly Jesus that is understood as the saving event, but the sending of the Son as such. The same thing is said of this sending that is said of the Cross. Pauline Christology is misunderstood when the two "saving points" are put in historical succession, for then an alternative would emerge: did the sending of the Son bring salvation, or did that not happen until his crucifixion? It is perilous to add together utterances which have emerged in one direction in time (backward), and then to use them in the reverse direction.

ii. The *cosmic aspect* of Pauline Christology comes into view particularly with the title "Son." The general intent is to express the other-worldly character of the saving activity, and thus the *extranos* of faith. Jesus' person and fate do not have their significance in the perceivable character of an occurrence within this world. Here they appear as *οκάνδαλον* and folly. This is presented so as to say that Jesus' person and fate do not have their origin in this occurrence within the world. Faith comes from beyond, and the Beyond towers far above this world. Jesus had no worldly origin even though he was born of a woman (Gal. 4:4). A person who is blinded by the god of this aeon does not see the glory of Christ, who is the express image of God (II Cor. 4:4) and who can even be described as the mediator of creation (I Cor. 8:6).

Paul never identified the Son with the Father, not even in Rom. 9:5. The exegesis of the verse is disputed, but even so the context shows that there is no intention of expressing an equality of nature in the sense of later metaphysics. The road to the description of Christ as God leads "backward" by way of the Fathers, and if one wishes to work with the speculative christological categories of the early church, it is necessary, with reference to Paul, to speak unequivocally of a subordination of the Son to the Father (I Cor. 15:27-28). But it is anachronistic to introduce this question into Pauline Christology. Although Christ's obedience is indeed discussed, no speculation about relationships is implied, only the nature of the encounter with

God (and hence of the revelation). Because the Son is God's activity in relation to the world, one meets God in him—and only in him.

The sending took place "when the time had fully come." The presentation can make use of myth, as when the Cross is described in various ways as a sacrifice (also in judicial categories; see §2a above), and also when the coming of the Son is understood as saving activity (Rom. 8:3). In the Christ hymn which Paul appropriated in Phil. 2:6-11, the career of Christ is portrayed in the course followed by the mythical bearer of salvation. The pre-existent one becomes man and is obedient even to the most extreme consequence, death itself. In the exaltation God gives to him, the bearer of the name Jesus, the name that is above every name. The apostle's interest in this myth is shown in his addition ("even death on a cross") to the earlier version as he received it. He is not interested in metaphysical or cosmic speculations, but in the fixed historical point. It is not proper here to suggest that Paul had a historical acquaintance with a path of suffering which the earthly Jesus followed from his birth to the cross; instead, the myth is used to express in concrete terms precisely what is not capable of being observed by the senses. The Son obediently takes upon himself the condescension and the cross, and because of his obedience God exalts him to be the Kyrios, and thus the one who opens the way of salvation. Elsewhere Paul expresses this with various forms of *παράδιδόναι*: the "handing-over" is fundamental for salvation (cf. Rom. 4:25 [RSV "put to death"], and also I Cor. 11:23 [RSV "delivered"], and *passim*).

iii. The *historical aspect*, which frequently overlaps with the cosmic (or turns into it), is likewise sketched in retrospect, in order then to make a statement with a forward thrust (starting with Christ). To put it generally, Paul places Scripture, both "persons" and circumstances within it, in the service of Christology. Thus, Abraham is used primarily as an apology for faith over against works. Christ is described as the seed of Abraham (Gal. 3:16), because Paul wants to show that in Abraham's case faith was all that mattered (Gal. 3:6-9) and that God justifies the ungodly (Rom. 4:1-8). It is a misinterpretation to find Paul here taking up affirmatively the history of God's dealing with Israel as "salvation history." The apostle explicitly rejects any continuity of such salvation history (Rom. 9:6 ff.) and, with the aid of a device well known in rabbinical exegesis (singular/plural), cancels out the entire "history" between Abraham and Christ (Gal. 3:16). The substantive point of departure for the christological argument is that faith has come with Christ (Gal. 3:23 ff.). This assertion would be convincing for anyone who accepts the Scripture as the authority, because it can be shown that even with Abraham everything hinges on faith. (Arguments which use a similar retrospective orientation to scripture occur in Gal. 4:21 ff.; I Cor. 10:1 ff.; II Cor. 3:4 ff.)

The use of the figure of Adam (whom Paul, of course, regarded as a "historical person") is not uniform. Rom. 5:12-19 exhibits a juridical pattern of thought: sin is guilt and has its origin in

Adam's disobedience. Here, however, Paul does not try to find a cause (the devil, Adam's creatureliness, etc.) which lies behind (or in) Adam and which could excuse him. The sin of people today (here lies the point of departure for reflection!) is just as inexcusable as Adam's was, and its cause is likewise disobedience. Correspondingly, the saving work of Christ is characterized as obedience, which offers the possibility of escaping the power of sin. In I Cor. 15 there is an entirely different orientation. The truth of the hope of resurrection is supposed to be christologically based on the figure of Adam. Now anthropology comes into play (though Paul does not take it up again later in Romans because in the context of his train of thought there it is unusable). It is written that the first man Adam became a living being (*ψυχή*, vs. 45; cf. Gen. 2:7) and received an earthly body (vs. 47). Because "flesh and blood" cannot enter into the final consummation (vs. 50) this body is mortal. But Christ, the "last Adam," became a life-giving spirit (*πνεῦμα*, vs. 45); he is the "second man . . . from heaven" (vs. 47). But as such, he is also the future of humankind, for in him all will be made alive (vs. 22). As they now bear the image of Adam, so in the resurrection they will bear the image of the heavenly man (vs. 49), which Christ already bears.

Thus the Christology of Paul is rightly understood only when it is understood strictly within the movement of faith. It expresses the basis of the call that has been issued, repeats it, and thus leads to theology. Hope also is founded on this faith. The ground of faith is at the same time its goal. Here, too, Christology leads to theology (I Cor. 15:28).

c. *After Paul.* The portrayal of Christology in the post-Pauline writings confronts a methodological difficulty which is already present in incipient form in Paul, but now becomes much more evident. A host of specific formulations and christological statements are taken over but are not always assimilated. Moreover, it is frequently unclear how these materials are to be exegeted. Are they to be interpreted in the old context, or does that context now play only a subordinate role, or perhaps no role at all? Assured conclusions are seldom possible. Since no detailed exegetical arguments can be worked out here, some of the clearer and more important points must suffice.

i. *The Deutero-Pauline writings.* The author of II Thessalonians emphasizes, in opposition to Gnostic heresies with perfectionist tendencies (2:1-2), the futurity of salvation (2:3-4). Correspondingly, Jesus' function as judge of the world (cf. II Cor. 5:10) is broadly sketched in apocalyptic fashion (1:7-12). The readers are called to obtain hereafter the "glory of our Lord Jesus Christ" (2:14), but it is nowhere noted that ethical action as Christ's gift is already possible. Faith thus becomes a knowledge of the judgment which makes action necessary. Action itself, however, is not christologically grounded, but is more or less legalistically oriented to the example of the life of the apostle (3:7-10) and to the instructions that have been handed down (2:15; 3:4). It is difficult to maintain,

with the passing of time, that salvation is already a reality.

The same thing is shown in somewhat different fashion by the Pastoral epistles, whose ethic can be characterized as explicitly "bourgeois." However, it still is not an eschatological ethic; the proclamation is described as "sound doctrine" (I Tim. 1:10; II Tim. 4:3; Tit. 1:9, and *passim*) and a rationalist strain is unmistakable. Here for the first time the title Savior (*σωτήρ*, found in Paul only in Phil. 3:20) occurs frequently, and the concept *ἐπιφάνεια* (manifestation, appearance) is used. These are combined in II Tim. 1:10, which refers to Jesus' earthly appearing, and in I Tim. 6:14 in reference to the *PAROUSIA*. The title Savior was widely used in the emperor cult, but it probably was not taken over directly from that source, since the emperor cult itself had integrated this concept with a common way of describing deity. In a certain sense, then, we can speak of parallel developments: both the veneration of Christ and the veneration of the emperor tend toward the attribution of predicates of deity. This led to the question as to where the Savior actually is to be found; and since the assertions were mutually exclusive, Christology could set in motion the persecution of the church by the state.

In the Pastoral epistles the title Savior is used for God and for Christ (cf., among other passages, II Tim. 1:10 and Tit. 2:10). The consequence is that Christ can be forthrightly called God (Tit. 2:13). In the NT this is done very hesitantly (see §2b above; cf. John 20:28), but for IGNATIUS it was already self-evident.

The Christology of Colossians is apologetically constructed in opposition to a heresy which understands the angelic powers as guardians of the world order, to which even Christians are to be subject (2:8). By the adoption and, at the same time, the development of the ideas of the heretics, the saving work of Christ is now understood as a victory over even the cosmic forces (2:16-17; 3:15). Christ is creator and redeemer of the world (1:15-20); in him lie all the treasures of wisdom and knowledge (2:3); in him dwells the entire fullness of the Godhead (2:9), and also of the "body," the church (1:18), which now is understood as the renewed creation (2:20 ff.; 3:9-11).

This latter feature is further developed in Ephesians, where Christology is emphatically related to ecclesiology. By the use of Gnostic-mythological conceptions, Christ is portrayed as the cosmic *Anthropos* (2:14 ff.) who unites what is earthly and what is heavenly (1:10). Therefore he is our peace (2:14), and, as ruler of the cosmos, head of the community (1:22-23). Christ is made manifest on earth in this community (2:10) by virtue of the fact that it experiences this peace, that in its charismata it manifests a unity (4:16), and that as the Gentile Christian community it forms, with the Jewish Christians, the *Una Sancta* (2:11 ff.).

ii. *The other writings.* The Christ kerygma is developed from various points of view and by the stressing of various aspects. This may be illustrated by three examples.

Hebrews is usually assessed in terms of its dis-

tinctive Christology. This Christology is in fact unique in the NT. Much more interesting in this "word of exhortation" (13:22), however, is the characterization of the reader's failure to develop the christological beginnings as culpable, intellectual sloth. The readers have simply stagnated at an early form of the doctrine that has been handed down to them (5:2, 11-14). Because they have not striven to go beyond these beginnings, the author describes their sinning as willful, and says that it cannot be atoned for by a second sacrifice (10:26). The readers can really escape from sin only if they do not simply repeat what they have heard about Christ at the beginning, but advance to perfect knowledge (6:1 ff.). Thus, the effort for more comprehensive insight into the ground of faith should enable them, as the new people of God, to be on their way in concrete realization of life (ch. 12) in a manner corresponding to the old covenant (ch. 11). Thus the author, oriented to Jesus' sacrificial death, pictures the saving work of Christ as comprehensively as possible. He is the high priest (3:1; 4:14), who through his self-sacrifice has entered into the Holy Place (9:11-14) and thereby has prepared the way for his people to follow (10:19 ff.). He has become like man (2:14-18), but without falling into sin (4:15), and he is now therefore able to help those who live in the midst of temptation (2:18).

Since the high priest by virtue of his own blood has entered into the sanctuary, the Christology of Hebrews cannot include the idea of Christ's resurrection. Such a handling of the tradition in the last decade of the first century is certainly exemplary; it shows how reflectively and cautiously the author worked. (A comparable example from an earlier time is the Christ hymn in Phil. 2:6-11, which likewise does not mention the resurrection of Christ, because exaltation results from the obedience of the one who came down.) Christ has passed through the heavens, has entered into the Holy Place, and sits on the throne of God (8:1; 12:2). When the readers come to him, they will allow their conduct to be determined by him (10:22-25). One can say that in Hebrews, Christology is deliberately placed in the service of the practical life.

In principle this is also the concern of I Peter, only the author does not achieve his intention so clearly. He intends to offer comfort to churches under persecution by pointing to the baptism that has been performed. Pauline themes are adopted, though of course modified. That Christ died for our sins is indeed repeated in traditional terms (1:19; 3:18), but his death is not a salvation event which marks the present as a new time. Jesus' passion is rather an example of the way that Christians are to suffer (2:21 ff.; 4:1). Salvation is a present reality only insofar as hope now exists (3:15) as a living hope in the salvation event of the resurrection of Christ (1:3). The Parousia, which is regarded as imminent, provides strong motivation for action (4:7-11).

The Revelation to John also was written for churches undergoing severe persecution (2:3, 9-10; 7:14; 13:7). The author, wishing to encourage the readers to be steadfast and patient, appropriated

various materials from late Jewish apocalyptic, even following the lines of its conceptions, as he painted in vivid colors the rewards for remaining steadfast (2:10; 7:13-17; 14:3; 22:14). The apocalyptic schema, of course, is then stoutly supported in christological terms. The certainty of hope is grounded in the death of Christ, the slain Lamb (5:6, 9; 13:8), whose blood redeems and purifies (7:14). The Lamb that has been sacrificed is alive (2:8) and holds the keys of hell and of death (1:18). Those who overcome will attain the glorious final salvation (21:7).

3. **The Jesus Christ kerygma.** The Jesus kerygma, separated from the personal presence of Jesus, tends now to provide a more precise characterization of the one who performed the functions, or to work out with stronger emphasis the functions themselves, in order to show that both the person of Jesus and his functions transcend what is earthly. To a large extent, contemporary scholarship agrees that this tendency was generally present. On the other hand, scholars have so far not succeeded in determining precisely in which circles these further developments emerged, in what places this happened, and how the further developments then influenced each other. Here, therefore, we can only point to certain typical forms.

a. **Further formations and collections.** The transition from the Jesus kerygma to the Jesus Christ kerygma is most clearly discerned in connection with the idea of the SON OF MAN. If Jesus was experienced as the one in whom the coming Son of man was already pronouncing judgment here on earth (Luke 12:8; Mark 8:38), then it was natural to understand Jesus himself as the one who was already present as the Son of man, and the returning Jesus was awaited as the coming Son of man. Significantly, the Son of man title is never used in addressing Jesus. This designation appears only on the lips of Jesus himself, and the impression is given that he is speaking of a figure who is to be distinguished from himself. Nevertheless, the group of sayings which set forth the present activity of Jesus shows clearly that he is the one to whom the title refers. For example, the Son of man has power on earth to forgive sins (Mark 2:10), he is Lord of the sabbath (Mark 2:28), he has no place to lay his head (Matt. 8:20). Parallel to this (or later), a group of sayings portray Jesus' way to suffering, death, and resurrection as the way of the Son of man (Mark 8:31; 9:9, 12, 31; 10:33, 45). In both these groups the traditionally apocalyptic conceptions are eliminated. Only the name, Son of man, is taken over and combined with the earthly activity of Jesus. In the latter group precisely the opposite occurs: the name of Jesus has been drawn into the apocalyptic expectation of the Son of man (Mark 13; Matt. 24; Luke 21). The still later development tends to make "Son of man" (like "Christ") almost a proper name, for when Jesus asks the disciples what people are saying about the identity of the Son of man (Matt. 16:13; Mark 8:27 has a different version), the answer would indeed already be included in the question, if "Son of man" had still been understood as a predicate of exaltation.

Jesus is also characterized as the SON OF GOD.

This, too, is done in various ways. The story of the Transfiguration (Mark 9:2-8) is intended to show that Jesus is recognized only when he is seen "transfigured." God made this vision possible in exceptional cases during Jesus' lifetime; faith is therefore always God's work (cf. Matt. 16:17). But faith hears the voice of God's Son in the unpretentious words of Jesus (Mark 9:7). Consequently Jesus can be recognized as Son of God even at the beginning of his activity and at the beginning of his life. In the baptismal story (Mark 1:9-11) God's "adoption formula" is pronounced over Jesus (Ps. 2:7). Elsewhere it is uttered over the king, affirming that this person, as God's Son, is acting in God's name. In Hellenistic circles the same idea is expressed in terms of the miraculous birth, which was familiar in connection with the birth of famous men in that culture. Jesus was begotten by the Spirit, or he was born of a virgin (Matt. 1:18-25; Luke 1:26-38). The two ideas are not originally identical, but they frequently overlap.

It would be incorrect to pose the question as to when Jesus became God's Son: in pre-existence (Gal. 4:4), at the time of his birth (Matthew, Luke), at the time of his baptism (Mark), or at the time of his resurrection (Rom. 1:4). All christological expressions about divine sonship are formulated in retrospect and originally stood in isolation from each other. To this extent they all say the same thing about Jesus (even though with the help of various conceptions). None of the expressions is to be understood objectively, in either a historical or a biological sense, because then they would contradict each other. The difficulty arises in placing the individual kerygmas in sequence. If this sequence is produced, as it is in the gospels, some adjustments must be made. This is clear, for example, in Matt. 1:16 where the evangelist must redirect the genealogy (which was originally handed down as a separate tradition) to Mary, though it makes sense only if Joseph was the father of Jesus.

A connection with the christological use of Davidic sonship is at least suggested in the genealogies (Matt. 1:6; Luke 3:31), but it can be more clearly recognized where the divine adoption formula for the king is appropriated for the service of Christology (Mark 1:11). Descent from David is closely connected with the idea of the Messiah, for in apocalyptic the expectation of the Messiah is to a large extent politically oriented and thus bound up with the anticipation of salvation for the nation of Israel. Although each title by and in itself is complete and comprehensible as a christological utterance, the ideas which are bound up with the titles now and again have differing accents. Therefore, difficulties emerge when the titles coalesce. This has become true not only in modern times, in the attempt to incorporate all the titles into dogmatics at once; indeed, this problem was sensed in a very early time (Mark 12:35-37).

Jesus' deeds of healing, particularly the exorcisms, which were certainly historical, were originally understood as an inbreaking of the kingdom of God (Matt. 12:28; Luke 11:20). This interpretation was not inevitable, however, and it was only possible

in a direct sharing of the experience. Later on, the miraculous was more forcefully presented, not in order to give a sensational portrayal to the event, but in the service of Christology, to show that the power of Jesus is boundless. Power goes forth from him (Mark 5:30); one must and can have confidence in him as the mighty one (Mark 2:5; Matt. 8:10). Where this confidence is lacking, as in his home town, no miracles can take place (Mark 6:5-6). The stories of the feeding of the multitudes show that Jesus' gifts transcend all measure (Mark 6:44; 8:9), and the so-called nature miracles show that he is Lord over all powers (Mark 4:37-41; 6:45-51).

Even the figure of John the Baptist is employed for christological utterances. The primitive church lived at first in competition with a community of John's followers (Mark 2:18; Luke 11:1). John the Baptist did not understand himself as the forerunner of Jesus, but the church's interpretation of his appearance in these terms and its identification of him with Elijah gave Jesus an eschatological characterization (Matt. 11:10, 14; 17:10-13).

Further, the OT in general was brought into the service of Christology, as Jesus' deeds were represented in OT terms (Matt. 11:5). What was expected to occur only at the end has already come to pass in advance, through Jesus. Specific passages of scripture were found, which Matthew later employed christologically, in a fashion peculiar to him (see §3b).

The PASSION NARRATIVE is heavily saturated with OT texts and allusions (Mark 14:18, 61; 15:5, 23, 24, 34, and *passim*). Here we are probably dealing with the earliest presentation of a continuous section from the life of Jesus, compiled to a large extent from individual traditions. The Cross is not understood as salvation event as it was by Paul and earlier believers (see §2a, b). Indeed, in the whole of the synoptic material there are only two traditions which set forth Jesus' death as an atoning sacrifice or as a substitutionary sacrifice: Mark 10:45; 14:24. The passion narrative portrays, instead, Jesus' way, using OT language to confess the way of Jesus' suffering, such an enigma to human minds, as God's way and hence the way of salvation. Thus the community expresses understanding of DISCIPLESHIP christologically, for the Son of man takes the way of suffering. When the community now takes upon itself the way of suffering and risks its life for Jesus' sake, it is traveling on his way (cf. Mark 8:34 ff. with Mark 8:31-33). Precisely these last-named traditions (together with Mark 14-16) show that the Gospel of Mark is a passion narrative with an extended introduction.

**b. The Synoptic gospels.** REDACTION CRITICISM has taught us that the Synoptists were guided in the structuring of their works by different theological conceptions. In this connection the crucial christological perspectives may be accentuated. (See the original and supplementary articles on each gospel.)

Mark is shaped by the dialectic between hiddenness and disclosure. This is particularly evident in the motif of the messianic secret (see SECRET, MESSIANIC): demons are forbidden to make Jesus' messiahship known (1:34; 3:12); healings that have

taken place may not be disclosed (1:44; 5:43; 7:36); even the disciples are not allowed to say who Jesus is (8:30; 9:9). Although they experience Jesus' power (6:30 ff.) and confess his messiahship (8:29), they are again and again shown to be devoid of understanding (6:52; 8:16 ff.; 9:32). The parables, which are basically quite clear, are described as dark sayings (4:11-12); and in this case it is again the disciples for whom the enigmas of the parables are solved (4:33). Hence, Mark has appropriately been called the "book of the secret epiphanies." Christian existence in the tension between faith and unbelief (9:24) is christologically grounded in the way of Jesus.

In Matthew Jesus is the authoritative teacher, whose teaching is summarized primarily in five blocks of discourses (5-7; 10; 13; 18; 23-25). But this teacher has authority because he is Israel's Messiah. His genealogy shows that he is the son of David and of Abraham (1:1). His persecution as a child corresponds to the threat to the child Moses (ch. 2). The course of his life and his deeds prove him to be the one who fulfills the announcements, understood as predictions, in Holy Scripture (cf. the stereotyped formula quotations in 1:22-23; 2:5-6, 15, 17-18, 23; 3:3; 4:14-16; 8:17; 12:17 ff.; 13:35; 21:4-5; 26:56; 27:9-10). After his resurrection all power in heaven and on earth is given to this Messiah of Israel (28:18). He himself has taken the way of righteousness (3:15), and as his historical disciples have followed him on this way, so too all who come later are to become his disciples (28:19). Matthew's Christology is a portrayal of the Lord of these disciples.

For Luke the church lives now under the leadership of the Spirit which was poured out at Pentecost (Acts 2; cf. 4:8; 6:3; and *passim*). Thereby it stands in continuity with the earthly Jesus, who during his lifetime was the sole bearer of the Spirit (Luke 4:16 ff.). Thus Luke can picture the time of Jesus as a past which (as the center of world history) was free from Satan (4:13; 22:3). Since Satan will finally be deprived of his power following Jesus' Parousia (which is not pinpointed as to time), Luke views the time of Jesus as eschatological—what is expected of the future was then already present. Thus the time of Jesus provides a foundation for hope, and the correct understanding of this time can lend certainty to faith (1:4).

**c. The Gospel of John.** The Fourth Gospel offers a comprehensive view of myth and history. When Jesus is described as the only way, truth, and life (14:6), typically Gnostic ideas are undoubtedly being appropriated. Although scholars still disagree about the precise religio-historical background of this gospel, the lack of consensus does not preclude our understanding its Christology. Jesus frequently says that he is imparting what he has seen and heard from the Father (3:11; 8:26, 40), yet the content of what was seen or heard is never told. Gnostic cosmology and anthropology are not component parts of a teaching which had to be accepted by faith, but rather the faith is oriented exclusively toward Jesus. The Gnostic background thus becomes a mere means of expressing the thought that Jesus' word is from the beyond and thus is an authoritative word; the

Gnostic dualism is transformed in the Gospel of John into a dualism of decision. Believers are not yet taken out of the world (17:15), as in GNOSTICISM. However, they are no longer shaped and determined by this world if they remain true in the faith, which must continually be grasped anew (14:21), and if they fulfill the "new" commandment of Jesus, the sole content of which is love (13:34-35; 15:12). The new commandment is the eschatological commandment, because it is grounded in Jesus' love (13:15). This love of Jesus determines his course, from the time of his coming to the time when he surrenders his life (15:13).

There is a certain affinity with the ideas of the Christ hymn in Phil. 2:6-11. Here we are dealing with the Christ kerygma, and the modifications which the Gospel of John makes on that conception demonstrate why this gospel is to be included in the Jesus Christ kerygma. Pre-existence Christology is combined with incarnation Christology (1:14), and thereby the earthly life of Jesus, even as it unfolds in full view, takes on meaning. This is in contrast to Phil. 2:6-11. Into the essentially Gnostic schema of the descent of the redeemer and his return to the heavenly world, this evangelist incorporates many traditions (to be sure, modified and often independent) about the earthly Jesus. The one who came "in the flesh" came to his own possession, for it was through him that the world was created. But because he came as a human being, he was not recognized and not accepted by the world (1:10-11). Nevertheless, for those who are born of God (1:13; cf. 3:3), his glory ( $\delta\delta\zeta\alpha$ ) again and again becomes visible (2:11). If Mark can be called the book of the secret epiphanies, in the Gospel of John the same dialectic is present, only in reverse form. The messianic secret (Mark) is intended to emphasize that the character of the revelation was not demonstrable and not at one's disposal; this gospel emphasizes that it was *in the flesh*, that is, in what is in itself not demonstrable, that glory became manifest. This can be expressed in various ways: Jesus is the true vine (15:1), the good shepherd (10:11, 14), the door (10:7, 9), the bread of life (6:35, 48, 51), the light of the world (8:12), the resurrection and the life (11:25). Since in Jesus salvation has come from the world beyond into this world and is present in it, believers experience final salvation as present by having faith in Jesus; judgment has already taken place, and they have passed from death to life (3:18-19, 36; 5:24; 11:25-26).

This can also be grounded in the fact that the Father has given all things into the hands of his Son (3:35). The relationship of the Son to the Father is not conceptualized to the extent it becomes a theme in this gospel, any more than it is in the other NT writings. Although it is said that Father and Son are one (10:30), the content of this utterance must be determined in accord with its intent. From the Father's point of view, it is said that he has "sent" the Son (e.g., 5:36; 7:29), that he has given all things into his hands, and that he is therefore greater than the Son (14:28). Here Jesus' origin, relationship, and authority are being expressed. When people confront Jesus, they are always dealing with the Father (8:16), and they

see the Father (14:7); accordingly, Thomas can address the resurrected one quite directly as "my Lord and my God" (20:28).

The constant emphasis on Jesus' glory (δόξα) in the Gospel of John very early brought into question the idea of the Incarnation (1:14). This led to a docetic Gnosis which involved unjustifiable appeals to the gospel by Christian Gnostic groups. A Johannine school countered this tendency, on the one hand by revising the gospel in a so-called ecclesiastical redaction (Bultmann; see JOHN, GOSPEL OF [S] §1), and on the other hand, by writing the Johannine epistles (see JOHN, LETTERS OF and supplementary article). They opposed heretics who were denying the actual incarnation of the pre-existent Logos (I John 4:2-3; cf. 2:22). In consequence of this kind of thinking, the Cross is bound to lose its significance (I John 1:7; 2:1-2; 4:10), and the Lord's Supper (though not baptism) presumably is rejected (I John 5:6). Anyone who disputes the Incarnation is a deceiver and antichrist (II John 7). Against this, it is emphasized that the life which has appeared (Christ) could be seen, heard, and felt (I John 1:1 ff.), and that the Cross signifies atonement for the whole world (I John 2:2).

**4. Conclusion.** The development of Christology within the NT is characterized by a great richness, as in each period new concepts and ideas which were familiar in the surrounding culture were appropriated. This enrichment, however, contained within it the danger that formulations which were no longer understood were simply dragged along. Thus the apparent wealth could become false riches, for now a tendency began to develop in which the functional character of Christology was more and more neglected in favor of a strong emphasis on doctrine. For instance, in place of the originally dialectical tension of belief and unbelief in the gospels of Mark and John, there appeared the juxtaposition of faith and little faith (Matthew) or of faith and false faith (the Johannine epistles). Again, the Pastoral epistles speak of "sound doctrine," and in Jas. 2:14-26 the Pauline understanding of faith (which for the apostle always includes obedience) is abandoned in favor of a doctrine to which works must be added before there is justification.

This tendency continued with intensified force in post-NT times and led, particularly in the Greek church, to passionate christological controversies, especially about the relationship of the Son to the Father and to the Spirit. These have continued, though not always with the same intensity, throughout the entire history of the church and of dogma down to the present time.

Contemporary theology needs to remain oriented to the beginnings by setting forth Christology in functional terms as kerygma. This must be done so that modern people understand the kerygma, and in fulfillment of their faith they must be able to repeat it confessionally in their own words, as circumstances demand. This will be possible only if the kerygma is formulated in the language of our time. The Christology of the NT enables us to have this freedom; even the NT kerygma was never formulated other than in the language and

with the aid of conceptions which were modern then and which could be understood and also repeated as familiar and well-known ideas. Remaining true to the kerygma that is oriented to Jesus does not mean repeating the old ideas, but communicating the same attitude with the help of our own language and ideas.

To put it pointedly: people may dispute the suitability, appropriateness, and comprehensibility of doctrinal formulations. Yet such disputes make sense only if thereby the christological kerygma becomes a help for others, and we are ready ourselves to suffer for it. For we can confess Jesus as Lord only when we understand what we mean and make it understandable for others. Indeed, we truly confess Jesus as Lord only if we are ready to risk our necks for this confession.

\***CHRONICLES, I AND II. 1. The question of unity: I-II Chronicles, Ezra, Nehemiah.** While the view that I-II Chronicles and Ezra-Nehemiah are two separate works is still held, most modern critical scholarship has assumed that there is a single "author," "the Chronicler." This latter view is presented in various forms, ranging from a unified view of the work, in which little is attributed to later modification, to much more analytical positions, maintaining the existence of two "Chroniclers" or the presence of substantial additions (in particular, I Chr. 1-9 or large parts of these chapters; I Chr. 23-27; and the Nehemiah "memoirs" [see EZRA AND NEHEMIAH §3e]). The generally held view is that the Nehemiah memoirs constitute a separate source, already in existence and used without alteration or with only minimal adaptation by the Chronicler. Some recent linguistic, stylistic, and theological analyses of the whole work have not taken sufficient account of this. Yet, linguistic and stylistic aspects of the arguments concerning unity are hardly conclusive. Sufficient account has not been taken either of the problems of discussing such usage in a work which depends so heavily upon its sources (see §3), or of the textual problems (see below).

Arguments from the overlap of the two works (II Chr. 36:22-23 and Ezra 1:1-3a) are inconclusive. A single work, once divided, might be provided with a linking section to draw attention to the sequel; or, it may have been felt proper to

provide a more propitious ending to I-II Chronicles than the description of the Exile. Two separate works (by the same author writing at different times or by two separate authors) might equally be provided with a link designed to point the reader to where further information could be found. More difficult questions arise in regard to the relationship of the single work or of the two works to the formation of the canon. The assumption that Ezra-Nehemiah was "canonized" first because it provided new matter, and that I-II Chronicles was later added (following Ezra-Nehemiah as the last book of the canon, as in some Hebrew MSS) is without adequate foundation. The argument for this canonical order from the reference in Luke 11:51 to murders from Abel to Zechariah depends on the (unproved) assumption that the Zechariah is the one mentioned in II Chr. 24:20-21; but even this does not demand the supposition that Chronicles stood last, for the name of Zechariah may simply represent the last named victim in the narrative books. When order of books becomes apparent in codices, Palestinian tradition places Chronicles first and Ezra-Nehemiah last among the Writings, while Babylonian tradition places Ezra-Nehemiah and Chronicles last. These two positions may reflect different views of the significance of the work. The placing of Chronicles first provides a not unfitting introduction to the Psalter (which follows immediately), in view of the former's substantial concern with David's organization of Levitical singers, and a canon closing with Ezra-Nehemiah would correspond to Josephus' definition of the canonical period as ending with the age of Artaxerxes.

The existence of part of the material in Greek (Esdras α; KJV, I Esdras), covering the section from Josiah (II Chr. 35) to Ezra's reading of the law (without Nehemiah), raises many problems. Whatever its precise textual relationship to the Hebrew and to the other Greek forms of the material, at the very least it demonstrates another way in which literary matter could be arranged. Moreover, the fact that 4QSam<sup>a</sup> is closer to Chronicles than is MT Samuel casts doubt on the assumption that we can say precisely what form of text the Chronicler used. The whole textual situation remains complex.

**2. Date.** It has been maintained that the first form of the Chronicler's work was produced in the early postexilic period. If one author is postulated, the date proposed must be later than the latest event mentioned. This will depend on the chronology of Ezra and Nehemiah and on such matters as the evaluation of lists of high priests (esp. in Neh. 12) which may show generations down to a particular moment. But such evidence is inconclusive. If the late date for Ezra is assumed (398 B.C.), then a date around 350 B.C. is possible. There do not appear to be any allusions to the fall of the Persian Empire (331) and to Greek rule, but this too is uncertain. The history of Judah during the period from 400 to 200 B.C. is too little known to be of substantial use in dating documents.

**3. Sources and their use.** The Chronicler used a variety of sources, though at many points the

detail of his handling of them remains debatable, partly because of the textual uncertainties already noted, partly because no single explanation covers the omissions, rearrangements, and modifications. While there have been many endeavors in recent years to prove the antiquity and historical value of material not paralleled in Samuel and Kings, it remains probable that this material was of relatively late date and likely to reflect post-exilic conditions rather than those of earlier times. More important is the recognition (see §4) that even if an older and valuable historical document has been used, the real import of the material lies not in the historical information which may be extracted, but in the manner and purpose of its use. To describe the Chronicler's work as midrash—the term used in II Chr. 13:22 (RSV "story"); 24:27 (RSV "commentary"), apparently to describe a source—is convenient, but a fully satisfactory definition of this term is yet to be established (see MIDRASH[S]). Recognition of the homiletic quality of the work and of the degree to which its author was endeavoring to make clear to his contemporaries the significance of the well-known traditions of the past underlines the degree to which the older material was regarded as authoritative and helps to explain some of the reorderings and modifications introduced.

**4. Theological outlook and mode of presentation.** The Chronicler's interest in cultic matters and his emphasis upon obedience to the stipulations of TORAH suggest an affinity with the PRIESTLY WRITERS, but a marked dependence upon the Deuteronomic history (e.g., emphasis upon God's grace and judgment) suggests an alternative alignment. Clearly, neither connection is entirely adequate in assessing what must be regarded as a presentation in its own right. The comprehensiveness and range of the Chronicler's work are greater than either P or D, and he appears to synthesize their ideas, which at some points were sharply differentiated. See CANON OF THE OT[S] §3a.

The stylizing of narratives, observable in the elaborate structures of the two other great works, is here even plainer. The tracing of ultimate origins in the prefatory genealogies reaches a climax in the themes of exile and restoration in I Chr. 9. The intent is to show to the restored community the basis for its existence. The high point of the reigns of David and Solomon is set in contrast with the disaster of Saul (I Chr. 10-II Chr. 9). The complex patterns into which the narratives of the kings are woven, so that no two are quite alike even if the underlying emphasis on faith and apostasy remains constant, provide an introduction to the moment of postexilic restoration (II Chr. 10-36). Renewal of the community and its temple is depicted as the counterpart to the age of David and Solomon (Ezra 1-6). In the larger sweep of presentation, belief in an overruling order is evident, giving coherence to what at times has seemed merely an atomistic view of history.

The theology of the Chronicler is not explicitly expressed, and so it is not surprising that it has been assessed in various ways. Like the Priestly writers, the Chronicler lays no obvious weight on

the Exodus, though many allusions indicate his awareness of it. Rather, like the Deuteronomic writers, he centers upon the age of David and Solomon, reading everything else in the light of that ideal. But his reading is not narrowly political, as is seen from the fact that the theme of restoration of the monarchy finds no place in his thought. The significance of David and Solomon lies in the temple, its worship, and its organization; its sequel is the restoration after the Exile (Ezra 1-6) and the work of Ezra. The relating of the Chronicler's purpose to the problems created by the Samaritan "schism" is ill-founded, not least because of the chronological uncertainties (see SAMARITANS; SAMARITANS[S] §1). But, seeing that as only one expression of religious tension, we may postulate other divisive movements and see in the Chronicler a concern for unity, for orthodoxy, for the true temple and its worship. While aware of the problems of faith and obedience posed by life under the domination of the Persians, and conscious of his people's repeated failures as witnessed by tradition, he nonetheless has confidence in divine power and favor without setting out hopes for the future in precise terms. If apocalyptic may be understood as in some degree a protest against a too complacent establishment (see APOCALYPTICISM[S]), the Chronicler may be seen as an establishment theologian acutely aware of the need for regeneration from within. The two are not so far apart as is sometimes supposed.

To make extravagant claims for the Chronicler as theologian is unsatisfactory. But it is proper to detect in his strongly homiletic exposition of already familiar narratives, in his repetition of central themes in a variety of forms, and in his over-all patterned presentation, one who by clarifying the issues for his own day may be properly claimed as one of the great maintainers of the tradition. He is one of the more articulate of those unnamed writers who kept the community conscious of the immediacy and relevance of ancient belief and practice.

**Bibliography.** A comprehensive bibliog. for Chronicles, Ezra, and Nehemiah, ed. by H. Kent Richards, is to be published by the Biblical Institute Press, Rome.

**CHRONOLOGY, EGYPTIAN.** See EGYPT, CHRONOLOGY OF[S].

**CHRONOLOGY, MESOPOTAMIAN (METHOD).** Writing, and thus, by definition, the historical period, began in ancient Mesopotamia about 3000 B.C., but it is not until about 2500 B.C. that there are sufficient records to permit a coherent history. Since the cuneiform cultures never developed a uniform system of dating, one of the primary prerequisites to understanding them is the construction of a coherent chronology. Generally, each regime employed its own system, so it is necessary first to recover these individual systems, then to fit them together and to date the whole in terms of years B.C.

Unfortunately, the newly developed methods of scientific dating are of little help in this process. Radiocarbon, the most useful here, has a built-in margin of error of several decades, and most major problems within this area can be dated more closely than this by historical and archaeological methods. In addition, there appears to be a fundamental flaw in the original theory. It was supposed that a constant level of cosmic-ray activity acted on a relatively fixed amount of atmospheric carbon dioxide to maintain a stable amount of radiocarbon in the environment; and so a fixed percentage of the carbon content of any living thing would, at its death, be radioactive. Since radiocarbon decays at a known rate into regular carbon, age could be determined by carefully measuring the percentage of radiocarbon yet remaining. Recent research indicates, however, that there have been fluctuations either in the levels of atmospheric carbon dioxide or, more likely, of cosmic radiation, which have produced variations in radiocarbon levels. As a result, specimens whose age can be fixed beyond doubt historically have produced radiocarbon dates centuries outside the allowable margin for error.

1. Fourteenth to second century B.C.
  2. Twenty-fifth to fourteenth century B.C. and the date of Hammurabi
- Bibliography

1. **Fourteenth to second century B.C.** The basic chronological structure for Mesopotamia from the fourteenth through the mid-seventh century is derived from Assyrian records. The Assyrians dated by means of eponyms (*limmu*) and preserved lists thereof. These lists survive for the period 911-649 B.C. The Assyrian king list has been reconstructed completely with regnal years from Enlil-nasir II (1430-1425 B.C.) through ASHURBANIPAL (668-627 B.C.) and appears generally to be quite accurate. The anchor point for this portion of the system is a solar eclipse, recorded in the eponym lists, which occurred in the month of Simanu during the eponymy of Bur-sagale in the reign of Ashur-dan III. It has been dated astronomically to June 15, 763 B.C. In addition, much chronological information can be gleaned from royal annals, building inscriptions, and business records. Assyrian documentation generally fails during the latter portion of the seventh century B.C., and both the order and relationships of the last kings are uncertain.

Babylonian chronology during this period bristles with problems. King List A originally listed the kings of Babylonia from the First Dynasty of Babylon to some time in the sixth century B.C., but it is damaged in several places. There are other fragmentary king lists, synchronistic king lists from Assyria, and chronicle texts which can be used to restore some, but not all, of the gaps.

Beginning with Burna-buriash II in the mid-fourteenth century B.C., there is a reasonably cohesive block of about four hundred years which includes the later portion of the Kassite Dynasty, the Second Isin Dynasty, and ends during the dark days of the mid-tenth century, at which point most records fail. The precise length of this period cannot be determined since Tukulti-Ninurta I's name does not appear in King List A, and it is not clear whether the seven years he ruled are omitted or are included under the name of a local prince. There might also have been an interregnum or, more likely, an overlap between the last Kassite king and the first of the Second Isin kings. The paucity of documentation following the Second Isin Dynasty may hide more problems. This floating block must be anchored primarily by synchronisms with Assyria furnished by the chronicles and the Assyrian royal annals. The Kassites prior to Tukulti-Ninurta's conquest can be moved forward or backward over a twenty-two-year period, those after him over a thirteen-year period, and the remaining kings over a ten-year period.

The mid-tenth to mid-eighth centuries were a turbulent time marked by weak kings whose sequence can be determined, but whose lengths of reign are unknown. There was an interregnum of unknown length around 800 B.C.

From Nabonassar (747-734 B.C.) onward, Mesopotamian chronology can be established with little margin for error. The Ptolemaic Canon, a classical compilation, lists the kings of Babylonia from Nabonassar through Alexander IV (316-307 B.C.) with their dates according to the Nabonassar Era (Year 1=747 B.C.). Dated astronomical observations in Ptolemy's *Almagest* provide absolute dates. King List A covers the same period through Kandalanu

(647-627 B.C.), and the Babylonian chronicle series provides a historical outline with dates. Assyrian annals and correspondence offer supplementary information.

The outline for the Neo-Babylonian Dynasty, which replaced the Assyrian Empire in 609, is provided by the Ptolemaic Canon and the chronicle series. The chronicles cover fairly well the revolt against Assyria, the early years of the dynasty, and its last years prior to the Persian conquest, but there are few historical texts from its middle years.

The canon provides the basic list of Persian kings, supplemented by the classical historians and dated business texts. The canon omits the short-lived usurpers and rebel kings, but these can be allotted to the revolts against DARIUS I during 522-521 B.C. and against XERXES during 482 B.C., on the basis of Darius' Behistun inscription and changes in Xerxes' titulary.

Alexander the Great conquered the Persian Empire and assumed the kingship of Babylonia in 330 B.C. The canon breaks off after Alexander IV and follows the Hellenistic kings of Egypt, but a recently published cuneiform king list continues with the Seleucid Dynasty down through ANTIOCHUS IV (175-164 B.C.), giving their dates according to the Seleucid Era (Year 1=311 B.C.), refining the chronology already derived from classical authors. The dating under Alexander the Great is confused because the scribes sometimes counted from his accession in Macedon in 336, sometimes from his coronation in Babylon in 330 B.C.

About the mid-second century B.C. the Parthians permanently wrested control of Mesopotamia from the Seleucids and introduced a new era, the Parthian (Year 1=247 B.C.), a firm synchronism being established by a tablet from Babylon bearing the dual dates, Year 144 Parthian Era, Year 208 Seleucid Era.

While the dates of individual events within the above system may be uncertain, the over-all scheme is accurate within one or two years back to 1180 B.C. and within twenty years back to 1400 B.C.

2. **Twenty-fifth to fourteenth century B.C. and the date of Hammurabi.** Moving back into the fifteenth century B.C., one encounters a dark age, perhaps one to two hundred years long, in which nearly all documentation throughout Mesopotamia fails. The material preceding this time forms a cohesive block nearly eight hundred years long, which can be pushed forward or backward depending on the chronological scheme used. Efforts to fix this block usually concentrate on dating the First Dynasty of Babylon and HAMMURABI, its most powerful king.

These efforts must be accommodated to the following generally accepted historical outline. Hammurabi managed by the end of his reign to assemble an empire which comprised nearly all of Mesopotamia, including Assyria. Among his rivals were Shamshi-Adad I of Assyria, Yarim-Lim I of Aleppo, and Zimri-Lim of MARI. During the eighth year of Ammi-saduqa, Hammurabi's fourth successor, a record was made of a series of sightings of the planet Venus, and it survives in late,

mistake-ridden copies. Finally, 155 years after Hammurabi's death, the Hittite Mursilis I raided Babylon and overthrew Samsuditana, last king of the First Dynasty. Meanwhile, Alalakh, a dependency of Aleppo, was destroyed about 1640 B.C., to judge from archaeological remains (see ALALAKH TEXTS[S]). The number and sequence of the kings of Alalakh and Aleppo are uncertain. The Hittite Suppiluliumas I can be placed about 1380 B.C. by Egyptian synchronisms, but the interval between him and Mursilis is subject to varying estimates. There is no Hittite king list. At some point during this period the Kassites entered Babylonia and the Kassite Dynasty replaced the fallen First Dynasty, but the length of their tenure and how much they may have overlapped with the First Dynasty is debated. In southern Babylonia the Sealand Dynasty ruled, a contemporary with the later First Dynasty and the early Kassite Dynasty. Also during this period the Indo-European MITANNI formed in northern Mesopotamia an empire which dominated Assyria and rivaled the HITTITES, but it is known only from its peripheral contacts, and no coherent chronology of it is possible at this time. One of its dependencies, the small Hurrian town of NUZI, flourished about 1500-1350 B.C., based on a synchronism with Mitanni and thence with Egypt. The Amarna correspondence provides synchronisms between the Pharaoh AKH-EN-ATON, the Kassite Burna-buriash II, and Asshur-uballit I (1363-1328 B.C.) of Assyria.

Both the Assyrian king list and King List A cover this obscure period, but both are damaged, and even what remains cannot always be taken at face value. King List A originally listed, in order, the First Dynasty, now almost totally missing, then the Sealand Dynasty, given a total of 368 years, then the Kassite Dynasty, the earlier portion of which is badly damaged, with a total of 576 years. The Assyrian king list preserves the canonical list of kings from Shamshi-Adad I, no. 39, onward through this period, but kings nos. 42-47 are said to have reigned *tuppishu*, a term of unclear meaning; their regnal years are not given, and the regnal years for kings nos. 65-66 are broken away in all copies. There is reason to believe that some kings who ruled directly following Ishme-Dagan I, no. 40, were omitted from the canonical list. A later king would sometimes give the length of time between his own reign and that of a predecessor, but these figures yield ambiguous and contradictory results and do not strongly favor one chronology over the others.

Most efforts to date the First Dynasty take into account the Venus sightings of Ammi-saduqa. Since the planet Venus repeats its movements in a complicated cycle every 275, 64, or 56 years, these sightings can fit a number of years between 2000 and 1500 B.C. A number of factors, e.g., the synchronism between Shamshi-Adad I and Hammurabi, render awkward alternatives outside this period. Of the three alternatives presently given most attention, the high chronology yields First Dynasty dates of 1950-1651 B.C.; the middle, 1894-1595 B.C.; and the low, 1830-1531 B.C. Following are brief sketches of the arguments and implications associated with these three different schemes.

According to the high chronology, the Kassite Dynasty lasted in Babylonia for 576 years; and thus if it fell about 1155 B.C., it began about 1730. The high chronology places this during the reign of Ammi-ditana (1739-1703, high chronology), when the power of the First Dynasty was waning; if the middle chronology is used, then this would fall during the reign of Samsu-iluna (1749-1712, middle chronology). While there was some contact with the Kassites in his eighth year, he nonetheless remained active in the Diyala and Habur areas and suppressed a widespread revolt in the S. As Kassites are nowhere mentioned in any of this, it is supposed that they were not yet established in Babylonia. The Sealand Dynasty, which ruled in southern Babylonia, cannot have been founded prior to the reign of Samsu-iluna, and it was overthrown by Ulam-buriash, probably the thirteenth Kassite king, who cannot have reigned after 1400 B.C. If its 368-year lifespan is credited, then this pushes Samsu-iluna back to high chronology dates; the middle does not allow a sufficient interval. While there is no Hittite king list, there are lists of offerings made by the kings to revered ancestors, and from these a total of nine generations have been reconstructed between Mursilis I and Suppiluliumas I. With the latter placed about 1380 B.C., and allowing thirty years per generation, this yields a date of about 1650 B.C. for Mursilis and thus for the fall of the First Dynasty. There is a similar situation at Alalakh and Aleppo, where a total of six generations are reconstructed between the fall of Alalakh about 1640 and Yarim-Lim I, who is thus dated about 1820, acceptable to the high chronology dates for Hammurabi, 1848-1806 B.C. Alalakh is assumed, consequently, to have been destroyed by the Hittites about the same time as Babylon.

Adherents of the middle chronology accept 576 years as the duration of the Kassite Dynasty, and assume the reference to Kassites in Samsu-iluna's eighth year to mark its beginning. To lower the dates of the First Dynasty any further makes it necessary either to reduce the length of the Kassite Dynasty or to assume that it was around during the reign of Hammurabi, both considered undesirable here. According to two texts, sometimes considered apocryphal, Agum II, probably the tenth Kassite king, recovered the statue of the god Marduk which had been missing from Babylon for twenty-four years following the Hittite raid. This would place the Kassites in residence at Babylon by 1570, middle chronology. The 368-year lifespan for the Sealand Dynasty is considered exaggerated, especially because of the very long reigns given its first two kings. As for Assyria, forty years are allotted for kings nos. 65-66, whose regnal years are missing, and fifty years for the confusion following Ishme-Dagan I. The 106 years provided by the high chronology is considered excessively long. There is a certain Zukrashi contemporary with the last kings of Alalakh who may be the same Zukrashi who, according to Hittite accounts, fought for Aleppo against Hattusilis I, grandfather of Mursilis. If so, then Hattusilis may have destroyed Alalakh (ca. 1640 B.C.) and the raid

on Babylon by Mursilis would have come a generation later, about 1595.

The observations recorded in the Venus tablets fit the low chronology slightly better than either the high or middle chronologies, and its supporters stress this. The Assyrian king list also fits well if the reigns of the six *tupkishu* kings following Ishme-Dagan I in the list are reckoned as zero, and the alternate line of successors, listed in a noncanonical list fragment, is ignored. This permits dates of 1748-1716 B.C. for Shamshi-Adad I, which fits well with the low chronology dates for Hammurabi, 1728-1686, and allows a not unreasonable twenty-two years for Assyrian kings numbers 65-66. A king list compiled by the Hellenistic historian Berossos can be interpreted, with emendations, to yield low chronology dates. The 576 years attributed to the Kassite Dynasty is considered too long and is subjected to a variety of Procrustean reductions. And the sequence of kings of the allied dynasties of Alalakh and Aleppo can be reconstructed to form a block lasting from about 1740 to 1640 B.C., placing Yarim-Lim I within the vicinity of Hammurabi's low chronology dates.

It should be apparent that there is a great amount of data which must be considered in dating the First Dynasty. None of it is decisive, and much of it can be accommodated to all three solutions. Even the Venus sightings, which are commonly used to provide some structure for the problem, are so replete with errors that they could easily be ignored if there were any good evidence which would make it desirable. On the whole, the middle chronology seems the most popular, with the low receiving the next greatest amount of attention.

Babylonian affairs as far back as the accession of SARGON of Akkad can be tied relatively securely to the First Dynasty. The basic framework is derived from the Sumerian king list and the shorter king lists for Isin and Larsa, supplemented by lists of year names and subject to emendation from literary tradition and incidental references in correspondence and business texts.

About 2350 B.C. Sargon of Akkad founded the Akkadian Empire. The Sumerian king list gives for his dynasty 181 years, then 91 years during which the Gutti barbarians from the mountains dominated the land, then 6 years for Utu-hegal of Uruk, 108 years for the Ur III Dynasty, and 203 years for the First Dynasty of Isin. The compilers of the Sumerian king list supposed that the entire land was subject to a single dynasty at any one time, and so dynasties which were contemporaries and rivals are listed as successors to one another. Strong historical traditions indicate that it was actually the Gutti who overthrew the Akkadian Dynasty, and their assault apparently began under Shar-kali-sharri, Sargon's fourth successor. The Uruk Dynasty, otherwise unattested, is ignored for chronological purposes. Utu-hegal is credited with expelling the Gutti, but his regime was shortly replaced by the Ur III Dynasty, slightly before 2100 B.C. The Ur Empire developed a sophisticated bureaucracy and is, consequently, well documented. The Empire, assaulted by nomadic Amorite invaders, began to crumble during the reign of

Ibbi-Sin, the last Ur III king (*see* AMORITES; AMORITES[S]). City after city quit using the imperial dating system and declared independence under local dynasts; the most prominent were at Isin, Larsa, and Babylon. King lists, lists of year names, and references to wars and alliances establish the necessary synchronisms. It was Hammurabi who finally outmaneuvered all the other contestants and drew nearly all of Mesopotamia into the Old Babylonian Empire. The major uncertainty in the preceding schema is the length of the interval between the end of the Akkadian Dynasty and the beginning of the Ur III Dynasty; the Gutian domination is poorly documented; its duration given in the Sumerian king list cannot be confirmed elsewhere; and the extent of its overlap with the last Akkadian kings is unclear.

Little can be said for Assyria prior to Shamshi-Adad I; the kings preceding him have left few texts and the king lists do not preserve their regnal years.

It is not possible to establish a coherent chronology for the period prior to Sargon of Akkad. At Lagash a line of seven kings can be traced back to Ur-Nanshe, who must have reigned about 2550 B.C. Other isolated kings of various cities are known from brief inscriptions. The Sumerian king list is of little help; a number of the earlier kings therein are given fabulous reigns thousands of years long, and the order of the dynasties is not trustworthy.

R. D. TINDEL

\***CHRONOLOGY, OT.** The scientific mind constantly searches for new understanding; hence no system is exempt from modification. Nevertheless, the article on CHRONOLOGY OF THE OT retains its essential validity. Intensive and wide-ranging discussion during the intervening period has been motivated by a response to three particular responsibilities: (1) assessing textual data from the Bible as historical evidence; (2) incorporating evaluated data into a meaningful and comprehensive structure; (3) employing new information derived from extrabiblical texts, which itself needs to be evaluated for meaning, reliability, and applicability, as a control for the interpretation of information provided by Scripture. Significant discussion has centered chiefly in the following five areas of concern.

1. The Stenring-Larsson "secret system"
  2. The premonarchic period
  3. The divided kingdom
  4. Tishri or Nisan new year, 609-587/86
  5. The date of Ezra
- Bibliography

**1. The Stenring-Larsson "secret system."** Although quite prepared to entertain the hypothesis of sporadic alterations in the figures found in individual texts, along with the possibility of schematic numeration in specific documents or sections, OT scholars have been understandably incredulous regarding the ambitious effort of two Swedish writers, Knut Stenring and Gerhard Larsson, to correlate the entire range of biblical events from the Creation to the return from exile with an esoteric schematization theoretically devised by Hebrew scribes following the Canopus decree of 238 B.C. Influenced by his researches in Cabalistic mysticism, Stenring argued that these scribes corrected the biblical text wherever it suited their schematization, picking dates from three rival calendars, an ancient lunar calendar of 354 days, a solar calendar of 365 days, and the Canopus intercalated calendar of 366 days. Larsson, a mathematician with recognized scientific standing, has endeavored to corroborate this scheme on the basis of statistical probability.

The striking weakness of the Stenring-Larsson presentation has been its failure to apply historical and literary-critical standards to the biblical texts, or to correlate them with extrabiblical data. Larsson reveals a lack of comprehension for the theoretical basis of Stenring's scheme in arguing that certain points of correspondence with historical actuality support the schematization; if the Bible's chronology is systematically schematic, it cannot be historical except by coincidence. In matter of fact, the Stenring-Larsson dates are often widely at variance with dates attested as historical upon accepted criteria. One is justified in questioning how aimless arbitrariness can be avoided in reconstructing what was theoretically an arbitrary and "secret" picking of dates from the three calendars. Larsson's argument from statistics, awesome perhaps to the nonmathematician and intended as reassurance that Stenring has in fact hit upon the right combination, may point to elements of schematization in particular passages but leaves in serious doubt the validity of the comprehensive system.

**2. The premonarchic period.** Having observed this radical misconception of schematic possibilities, the biblical scholar is reminded to acknowledge ideological schematization where it in fact existed. Now more clearly than before we are in a position to assess the chronological systematization of the P writer in Genesis-Exodus (see CHRONOLOGY OF THE OT §1b). The work of Jaubert and others on the Qumran and biblical calendars (see *bibliog. for CALENDAR*), while falling short of absolute proof, suggests an element of ideology in P's dates in the patriarchal history, leaving less justification than ever for using P's figures as a basis for historical reconstruction.

The ongoing criticism of the DEUTERONOMIC

HISTORY (DH) has shown that, except where it draws from annalistic or similar documentary sources, it too falls back upon a schematic chronology, though lacking perhaps the ideological bias of P. The implications of this observation have not been fully drawn out. Inasmuch as "forty" is a clearly schematic figure in the DH sections of Judges, one must seriously question whether it ought to be applied literally to the reigns of David and Solomon, or to the wilderness-wandering period (see CHRONOLOGY OF THE OT §2). Recent advances in the analysis of Pentateuchal traditions have made scholars wary of attempting to reconstruct the events of this remote era on the basis of schematic chronologies and itineraries. A date ca. 1290/1280 for the Exodus remains only an approximate possibility; a fifteenth-century date is more impossible than ever.

Noth has proposed an attractive hypothesis regarding the disparate figures in Judges-Kings, using this to support his influential theory of Deuteronomistic redaction. According to Noth, the Deuteronomistic figure of 480 years from the Exodus to Solomon's fourth year (1 Kings 6:1), while patently schematic, is intended as the total of all the figures actually found in DH's sources or devised by himself, but does not include the twenty years of 1 Sam. 7:2 (because these were understood to be included in the forty years of Judg. 13:1) or three figures subsequently added to DH's text, viz., Samson's twenty years in Judg. 15:20; 16:31, and Eli's forty years of 1 Sam. 4:18. Though 1 Sam. 13:1, which provides an incomplete and confused figure for Saul, is not attested in the best LXX witnesses, Noth retains the MT's two years on the argument that DH would not have left Saul out of his chronological scheme. This produces a 481-year total. It is better to omit Saul's figure and produce a 480-year figure for the total upon the assumption that DH may have been counting Solomon's years by postdating, allowing the additional accession year to be counted in his total (see Table 1).

**3. The divided kingdom.** Thiele's chronology, tenaciously defended by himself and supported by a growing number of scholars, continues to represent the most probable reconstruction.

It is not as though there has been nothing to criticize in Thiele's work. He has been too ready to accept the historicity of specific passages and has seemed almost dogmatically committed to the MT in preference to the LXX. The two current leading rivals to Thiele's chronology are those of W. F. Albright and J. Begrich, along with modifications of each. While adherents of these two theories criticize Thiele for arguing from too many assumptions, each theory depends to a greater or lesser degree on assumptions having less objective support than those of Thiele. That is, Albright and Begrich have been willing to posit numerous errors in the biblical text as an explanation for its chronological incongruities, but seldom with any clear rationale. Wherever no pattern, tendency, or schematization can be seen, corrections on the assumption of error remain arbitrary.

Thiele has proceeded on the basis of two very

reasonable assumptions of his own: (1) the annals of the parallel Israelite kingdoms were based on historical facts, aimed at accuracy, and were guided by internally consistent principles; (2) the biblical text was carefully preserved except in rare cases of accident or tendential interference. From these assumptions he has developed a hypothesis that allows a whole array of biblical figures to be brought into a pattern of complete internal harmony, while permitting the full correlation of extrabiblical data. An intricate pattern of reigns and synchronisms, figured by different methods and based on varying ways of counting the beginning of years, sometimes involving co-regencies or rival rules (explained in CHRONOLOGY OF THE OT §3), becomes self-supporting evidence for the correctness of Thiele's assumptions.

It goes without saying that details remain open to new interpretation, especially where evidence from Near Eastern texts is forthcoming regarding synchronisms between Mesopotamian and Israelite rulers. Very recently Thiele's dates for the accession of two northern Israelite rulers, Joash and Pekahiah, have come under challenge, though in neither case with unambiguous implications. See JOASH[S].

A formidable threat to Thiele's chronology has come as a result of recent advances in Septuagintal criticism. Specialists have discovered that large portions of Codex Vaticanus (LXX<sup>B</sup>) in Kings, including the section from I Kings 22 onward, represent not the ancient LXX but a recension (called *Kaige* from one of its peculiar readings) closely approaching the MT. In the sections mentioned, LXX<sup>B</sup> is a less reliable witness to what the earliest Greek and its Hebrew *Vorlage* contained than the next-earliest recension, the Proto-Lucianic (LXX<sup>L</sup>; see SEPTUAGINT §4c). Observing that Thiele was unaware that LXX<sup>B</sup> from I Kings 22 onward is not a witness independent of the MT, and that he fails to reckon seriously with the pluses in the LXX at I Kings 16:28 and II Kings 1:18, Shenkel has argued that LXX<sup>L</sup> represents the earliest Greek reading, with a superior *Vorlage* wherever its figures differ from those of the MT, the MT being a late normalization to an ideological schematization.

Since the issues in this debate are too complex to be analyzed in a short summation, the reader will best be served by a synoptic presentation of the variant chronological schemes developed in the MT, LXX<sup>B</sup>, and LXX<sup>L</sup>, respectively (Table 2). Apparent inconsistencies in the MT must be viewed in the light of the possibilities discussed in CHRONOLOGY OF THE OT §3, which, once understood, show that the MT does follow a clear and consistent scheme. LXX<sup>B</sup> likewise has a rudimentary scheme: it attempts to explicate Omri's synchronism with Asa's thirty-first year by giving Zimri seven years instead of days, making Asa's forty-one years end in Omri's eleventh and adjusting all foregoing figures accordingly, then giving Ahab's accession a synchronism with Jehoshaphat's second year. The *Kaige* recension intrudes after I Kings 16, throwing complete confusion into this scheme, which subsequent scribes have vainly striven to amend. As Shenkel argues, LXX<sup>L</sup> has

preserved a more consistent and original scheme. Whereas LXX<sup>B</sup> apparently allows two years to the rivalry between Tibni and Omri, LXX<sup>L</sup> gives it nine years, after which Omri rules alone for another twelve. Since Ahab follows Jehoshaphat, Ahaziah's accession comes seven years later in Jehoshaphat's reign than in the MT or LXX<sup>B</sup>. The accession of Jehoram of Israel in the second year of the other Jehoram's reign presupposes the latter's accession in Ahaziah of Israel's second year; that LXX<sup>L</sup> instead reads Jehoram of Israel's fifth year in agreement with MT, coming too late in the narrative development, indicates the breakdown of the Proto-Lucianic scheme. Whether this is due to the failure of a revisionist working arbitrarily on an original chronology reflected in the MT, or to the secondary intrusion of normalizing to the MT, is the question in dispute.

Shenkel makes much of the fact that II Kings 1:17-18 dates Jehoram of Israel's accession after Jehoshaphat's death, but prior to the report of Elijah's departure in II Kings 2, as though to underscore the impossibility of the Judahite king of whom Elisha, Elijah's successor, speaks in II Kings 3:14 actually being the Jehoshaphat of the MT. LXX<sup>L</sup> is consistent in omitting the duplicate Jehoram synchronism that follows the report of Elijah's departure (II Kings 3:1). Shenkel argues that LXX<sup>L</sup> displays the original figures and order, explaining that a pious redactor added the name "Jehoshaphat" in ch. 3 (MT and LXX<sup>B</sup>), as another scribe added "Ahaziah" in LXX<sup>L</sup>. Jehoshaphat was named because neither of his next two successors would have been deemed worthy of Elisha's praise spoken in 3:14. Having made this identification, the MT/LXX<sup>B</sup> redactor was obliged to carry out the elaborate adjustment that now appears in the MT figures from Asa to Ahaziah.

Although Thiele has himself offered a serious rebuttal to this thesis, the most effective counter-argument has come from a Septuagintal specialist, Gooding. The essential thing to consider is that LXX<sup>L</sup> is as likely to have changed figures and rearranged the text as the MT. Surely the MT's strange synchronism for Omri's accession in Asa's thirty-first year (explained by Thiele as dating from Omri's victory over Tibni, while his total reign is counted from his victory over Zimri) offers sufficient motivation for a Proto-Lucianic (and putatively LXX<sup>B</sup>) reworking. The crucial evidence, as Gooding sees it, is found in I Kings 16:28 +, where both Septuagintal recensions contain summarizing and adaptive emendations, showing that the Jehoshaphat summary has been brought forward from its original place following the notice of Ahab's death.

Both Thiele and Shenkel have erred in treating II Kings 3, along with I Kings 22, as historical. Both treatments are weak with respect to literary and redaction criticism. It is too early to know whether recent investigations into the Deuteronomistic regal formulas may have a bearing on the chronological problem.

4. Tishri or Nisan new year, 609-587/86. The date for the destruction of Jerusalem still depends on a choice between a Tishri and a Nisan new year for Judah's kings in its final period (see NEW

YEAR[S]). Though opinions continue to vary, the argument offered in CHRONOLOGY OF THE OT §3d, represents the greatest convergence of probabilities.

5. The date of Ezra. Some have proposed to emend Ezra 7:7 to read "thirty-seventh," according to which the date would be 428. Recent study has made it seem likely, however, that Nehemiah actually antedated Ezra by several decades, hence the Artaxerxes of this text is probably the second of that name; his seventh year is 397.

A better understanding of the Elephantine "Passover Papyrus" of 419 B.C. removes an obstacle toward dating Ezra's promulgation of the Law in the reign of Artaxerxes II. The record of the work of Nehemiah and Ezra respectively is best understood on the assumption of that order. The emendation to "thirty-seventh" in Ezra 7:7 is arbitrary. Cross's renewed plea for a 458 date, leaving unresolved the old objections, interpolates two extra high priests before Ezra without solid evidence and posits a controversial early date for Chronicles. See CHRONICLES, I AND II; EZRA AND NEHEMIAH[S].

**Bibliography.** Many titles listed in CHRONOLOGY OF THE OT (bibliog.) retain their usefulness. On the shortcomings of J. Finegan, *Handbook of Biblical Chronology* (1964), see S. J. De Vries' review in *JBL*, LXXXIV (1965), 76-79.

K. Stenring, *The Enclosed Garden* (1966), is intended as a provisional publication; G. Larsson's major argument is in *The Secret System* (1973). A sympathetic but devastating review by J. Meysing appears in *RQ*, VI (1967), 229-51.

On Deuteronomistic chronology, see M. Noth, *Überlieferungsgeschichtliche Studien* (2nd ed., 1957), pp. 18-27, strongly supported by W. Vollborn, "Die Chronologie des Richterbuches," *Festschrift Friedrich Baumgärtel* (1959), pp. 192-96; W. R. Wifall, Jr., "The Chronology of the Divided Monarchy of Israel," *ZAW*, LXXX (1968), 319-37, attributes to the Deuteronomist a schematic system for the divided kingdom period.

E. R. Thiele, *The Mysterious Numbers of the Hebrew*

*Kings* (rev. ed., 1965), is an elaborate restatement of the original ed., with minor modifications in dates. Discussions by E. R. Thiele on special problems appear in *AUSS*, I (1963), 121-38; II (1964), 120-36; *VT*, XVI (1966), 83-107. On the Joash synchronism, see S. Page, "A Stela of Adad-Nirari III . . . from Tell al-Rimah," *Iraq*, XXX (1968), 139-53, and "Joash and Samaria in a New Stela . . ." *VT*, XIX (1969), 483-84; A. Jepsen, "Ein Neuer Fixpunkt für die Chronologie der Israelitischen Könige?" *VT*, XX (1970), 359-61, arguing for Begrich's chronology; A. Cody, "A New Inscription from Tell al-Rimah . . .," *CBQ*, XXXII (1970), 325-40, arguing for a co-regency with Jehoahaz. On Menahem-Pekahiah, cf. L. D. Levine, "Menahem and Tiglath-Pileser: A New Synchronism," *BASOR*, 206 (1972), 40-42.

J. D. Shenkel, *Chronology and Recensional Development in the Greek Text of Kings* (1968), was in some ways anticipated by J. M. Miller, "Another Look at the Chronology of the Early Divided Monarchy," *JBL*, LXXXVI (1967), 276-88. D. W. Gooding's review of Shenkel appears in *JTS*, XXI (1970), 118-31; cf. also E. R. Thiele, "Coregencies and Overlapping Reigns Among the Hebrew Kings," *JBL*, XCIII (1974), 174-200; H. Weippert, "Die 'deuteronomistischen' Beurteilungen der Könige von Israel und Juda und das Problem der Redaktion der Königsbücher," *Bibl.*, LIII (1972), 301-39.

Important discussions of the late kingship are: G. Schedl, "Nochmals das Jahr des Zerstörung Jerusalems," *ZAW*, LXXIV (1962), 209-13, and "Textkritische Bemerkungen," *VT*, XII (1962), 88-119; V. Pavlovsky and E. Vogt, "Die Jahre der Könige von Juda und Israel," *Bibl.*, XLV (1964), 321-47; S. Horn, "The Babylonian Chronicle and the Ancient Calendar of . . . Judah," *AUSS*, V (1967), 12-27. Definitive is A. Malamat, "The Last Kings of Judah and the Fall of Jerusalem," *IEJ*, XVIII (1968), 137-56.

On the Passover letter, cf. K. Galling, "Bagoas und Esra," *Studien zur Geschichte Israels im persischen Zeitalter* (1964), pp. 149-84; J. A. Emerton, "Did Ezra go to Jerusalem in 428 B.C.?" *JTS*, XVI (1966), 1-19, against 428; F. M. Cross, "A Reconstruction of the Judean Restoration," *JBL*, XCIV (1975), 4-18.

**CHRONOLOGY, PAULINE.** The secular world took little notice of earliest Christianity. The church for its part was wrapped in its own affairs and, except for selected events susceptible of apocalyptic interpretation, paid no attention to political affairs. Thus the task of reconstructing the chronology of Paul's career is frustrating and uncertain. The standard approach is (a) to relate Acts to world history, and (b) to relate Paul's letters to Acts (see CHRONOLOGY OF THE NT §B). Since no significant new evidence has appeared, the continuing discussion has mainly concerned the proper balance to give to the numerous bits of evidence that have been known for several generations.

There are, however, two distinctions which are gaining increased attention. The first is that between Acts and Paul's letters (see PAUL THE APOSTLE[S] §1c). The standard approach gives each an equal voice and seeks to resolve the discrepancies between the two. More and more, however, it is being realized that these two types of sources provide information on two different levels, and that the "primary" material (the letters) must first be sifted for all the information it contains before the "secondary" evidence (Acts) is examined.

The second distinction is between absolute chronology, i.e., the dating of events by some external calendar, and relative chronology, in which events are arranged in relationship to one another. Clearly, to gain the former is to gain the latter. But the latter may be established by lines of argument different from those required by the former. Further, it is relative chronology that the interpreter of Paul's letters needs. For example, whether Paul wrote I Thessalonians before or after II

Thessalonians is far more important than the actual date of either.

These two distinctions mean that the first goal of Pauline chronology is to recover the original sequence of the letters. Over the years a number of suggestions have been made about the relative order of selected letters, either apart from or in spite of the usual interpretation of Acts. It is interesting to notice that these suggestions, where they overlap, are almost completely consistent. Thus they may be added together to form a single sequence:

- II Thessalonians
- I Thessalonians
- Previous Letter to Corinth (see I Cor. 5:9)
- I Corinthians
- Severe Letter to Corinth (see II Cor. 2:3; 7:8)
- Philippians
- II Corinthians 1-9
- Galatians
- Romans
- Colossians, Philemon (and Ephesians, if genuine)

The only substantial disagreement concerns II Cor. 10-13. Some identify it with the Severe Letter to Corinth; others place it at some point after II Cor. 1-9. See also CORINTHIANS, SECOND LETTER TO THE [S].

This outline provides a framework for other events. In Galatians Paul speaks of two previous visits to Jerusalem ("after three years," 1:18; "after fourteen years," 2:1). The first visit clearly preceded all the letters. The second visit probably inaugurated the collection (2:10; see OFFERING FOR

THE SAINTS[S]), first announced in the Previous Letter. This visit therefore follows I Thessalonians. Rom. 15:25-32 shows that Paul was about to make a final visit to Jerusalem to deliver the collection before leaving for Rome on his way to Spain. A third visit therefore follows Romans. The later letters provide no further information beyond the fact that Paul was in prison and hoped to see at least the Colossians once more (Philem. 22). The traditions in Acts about Paul's arrest and imprisonment are to be connected most probably with this third visit to Jerusalem. The result is the following:

Conversion

First Jerusalem visit

Missionary work from Syria to Achaia

Second Jerusalem visit (collection inaugurated)

Collection journey to revisit churches

Third Jerusalem visit (collection delivered)

Imprisonment and execution

Absolute dates are, of course, desirable but uncertain. The collection was probably made in response to the famine about A.D. 46 (see CHRONOLOGY OF THE NT §B1b). II Thessalonians seems to relate to CALIGULA's attempt to erect his statue in the temple at Jerusalem in A.D. 40 (see THESSALONIANS, SECOND LETTER TO THE[S]).

\* **CITIES, GRECO-ROMAN.** Traditionally the center of human activity in the ancient world, the city in NT times had come to illustrate the distinctive results of the spread of Roman rule over the varied peoples who constituted the Empire. Each city continued to exhibit the basic signs of its origin and history in its ethnic composition and cultural tradition, and local languages often survived alongside Latin and Greek. Many of the cities, especially in the eastern lands of the Empire, were older than Rome, and had once been independent city-states. Roman rule had brought the benefits of Roman administration, with its principles of law and public order. Improved communications and widened commercial opportunities brought new prosperity to the cities, and the new conditions of Roman rule served to make the cities conscious of the link with Rome and of membership in the Empire. Yet the mark of the typical Greco-Roman city continued to be the diversity of its human element, and Roman policy permitted each city to continue to think of itself as an individual entity. The study of the Greco-Roman city thus becomes the assessment of the interaction of Roman rule and of the different local conditions which produced special social and administrative problems.

1. **Archaeological evidence.** Excavation at such cities as CAESAREA, ANTIOCH, SARDIS, EPHESUS, and CORINTH has furnished evidence for the physical structure and urban history of different kinds of cities and has illustrated the concern of the Roman

Scala

3. Shops in the Via dell'Abbondanza, Pompeii

authorities for improved city planning and public services.

2. **Types of urban communities.** Depending upon their previous history, size, importance, and location, the cities were granted different types of administrative status, viz., Roman colony, colony of Roman veterans, provincial metropolis, municipality, or "free city." There might be different degrees of local self-government, as well as direct administration by resident Roman officials. The Romans, in taking over the eastern provinces, interfered as little as possible with local usages, while in the western provinces, the cities, being of more recent origins than those in the east, tended to imitate Rome. A basic principle of Roman administration was the care taken to maintain the privileged status of the Roman citizens. The high degree of illiteracy accentuated the gulf between the ruling classes and the disadvantaged elements of the urban centers, who were unable to read and write their native languages, whether Latin, Greek, or one of the indigenous tongues.

3. **Social and economic conditions.** The typical Greco-Roman city exhibited a wide spectrum of status and tradition among its people. The conditions of city life emphasized the differences between Roman and non-Roman, Greek and non-Greek, free man, freedman, and slave, differences which were highly visible in terms of speech, dress, status, and social and economic opportunity, or lack of opportunity. The typical city contained a small upper class of landowners, merchants, and manufacturers and a much more numerous population of artisans, slaves, day laborers, and the chronically unemployed or unemployable. Many of those in the lower strata led a marginal existence, with little prospect of improvement. Scholars recently have studied the condition and the activities of minorities such as Jews and Christians and of the groups of the socially, economically, and politically underprivileged and disadvantaged. With this ever-present substratum of discontent, alienation, and opposition to the ruling power, there was continual need for police surveillance.

4. **Religious conditions.** The variety in the population was matched by the variety of cults and religious practices. While the official religion of

Scala

## 4. Inside of a workshop—relief, second century A.D.

Rome and the worship of the emperor claimed obligatory allegiance, their observance was in effect an expression of loyalty to the Roman state and of membership in the community of the Empire. Personal religion was found elsewhere, and the typical city offered opportunities for missionaries of various cults and for traveling holy men and philosophers. It was a responsibility of the local authorities to take note of visitors of this type and to see that public order was not disturbed.

5. **The city as national and religious symbol.** In a world made up of cities, Rome stood as the symbol of national history and Roman success and was the center of the official public religion. In comparable fashion, Jerusalem was a symbol for the Jews. As the Christian community developed, it conceived of itself as a special kind of "city"—that is, a community existing on earth among other kinds of communities, but at the same time possessing a heavenly "city," the New Jerusalem, envisaged as an ideal counterpart of the earthly cities of the time. The importance of true and full citizenship in the earthly cities reinforced the Christians' belief in their own citizenship in a community of a different kind. See JEWS, NT ATTITUDES TOWARD[S]; PHILIPPI and PHILIPPI[S]; ROME, CITY OF; ROME, CHRISTIAN MONUMENTS[S]; ROME, EARLY CHRISTIAN ATTITUDES TOWARD[S]; THESSALONICA and THESSALONICA[S]; SLAVERY IN THE NT[S].

\***CLEMENT, EPISTLES OF.** See APOSTOLIC FATHERS [S] §§2, 3.

\***CLOUD. 1. Types.** In the OT the most common word for sky cover is 'ānān (אָנָן), which is used in prose and poetry alike. In many cases the singular clearly designates a composite type of cloud. It was found at very low altitudes, could easily dissolve, and was usually dark. In general the 'ānān would seem to correspond to the modern categories of *stratus* or *nimbo-stratus*.

The typical rain cloud was called 'ābh (עָב). The word occurs almost exclusively in poetical contexts. From a modern point of view 'ābh is a term with a rather broad semantic scope. Usually it appears to designate thick rain clouds of the cumulus type: *strato-cumulus*, *cumulo-nimbus*, and *cumulus* may all have been meant.

The word š'hāqīm (שְׁחֻקִים) is often used in poetical parallelism with "heaven," but for several reasons it cannot be a synonym of this. In spite of their great altitude, these clouds could bring rain (Job 36:28; cf. Isa. 45:8). They formed a more or less firm structure with a smooth surface (Job 37:18; Prov. 8:28). Because the root š'hq means "to pulverize" and the very same word šahaq denotes a layer of dust in Isa. 40:15, it would seem likely that, notwithstanding its firmness, this type of cloud made a powdery impression. All these data taken together suggest that š'hāqīm may be equated with *cirro-stratus* or less stable *alto-stratus*.

n'si'im (נִשְׂיָיִם) is a poetical word for towering rain clouds which God "lifts" from under the horizon. Probably the modern equivalent would be *cumulus* or *cumulo-nimbus*.

Usually the word 'rāphel (עֲרִפֶל) is interpreted as "darkness, gloom, murky cloud," but the Ugaritic cognate ḡrpl clearly suggests something like "fog": "Remove, O Sun, the fog from the mountains" (*Ugaritica* V, RS 24.251:19). The same meaning fits all OT passages involved.

It is doubtful whether the Hebrew word 'ēdh (עֶדָה) in Gen. 2:6 and Job 36:27 has anything to do with vapor or mist.

2. **Vesture of the divine.** Everywhere in the ancient Near East the presence of the divine was thought to manifest itself by an awe-inspiring splendor which had to be screened off in order to protect mortal man from its radiance. In the OT, clouds cover Yahweh when he reveals himself (Ps. 18:11 [H 12]; 97:2), especially on Mount Sinai (Exod. 19:16 ff.; 24:15 ff., etc.), and during the Exodus. According to the sources J and E (see DOCUMENTS; YAHWIST[S]; ELOHIST[S] §7b) God guided his people through the desert in the visible form of a PILLAR OF FIRE AND OF CLOUD. Babylonians and Assyrians used to carry the emblems of their gods on a standard (*imittu*). This word is etymologically related to the Hebrew word for "pillar" (עִמּוּד, 'ammūdh). Placed on a chariot, these divine emblems went before the Assyrian armies (*ālikūt*

*mabri*, "forerunners"). Since graven images were forbidden in Israelite religion, it is understandable that in this case the presence of the divine guide was indicated by a pillar of cloud.

In the final, eschatological THEOPHANY clouds again will play their protecting role. This conception may be found already in the OT (Isa. 4:5; Dan. 7:13), but it was fully developed only later in postbiblical Judaism. When Jesus manifests his divine glory, clouds overshadow him (Matt. 17:5; Mark 9:7; Luke 9:34; Acts 1:9), as will be the case when the Son of man reappears (Matt. 24:30; Mark 13:26; Luke 21:27; Rev. 1:7).

**3. The Lord of the Clouds.** In the Canaanite texts of Ugarit it is the weather-god Baal who commands the clouds (CTA 5:V.6-11; 10:II.32-33). One of his stock epithets is *rkb 'rpt*, "Rider on the Clouds." In the OT God is likewise depicted as riding on the clouds (Deut. 33:26; Isa. 19:1; Ps. 68:33-34 [H 34-35]; 104:3). It is uncertain, however, whether *rkb b'rbwt* in Ps. 68:4 [H 5] may be equated with Ugar. *rkb 'rpt* (so RSV). It could be a willful distortion of the pagan epithet. The purported etymological relationship between Ugar./Heb. 'nn, "cloud," and Ugar. 'nn, "servant" (of Baal and other gods), does not exist (AOAT, XVI, 129-30).

**4. Divination.** The Israelites regarded the clouds and their formation in deep awe of Yahweh's creative power (Jer. 10:13; 51:16; Job 35:5; 36:26-37:24). The agriculture of Canaan was totally dependent on rainfall. Therefore rain clouds were intently observed (I Kings 18:44; Eccl. 11:4; Luke 12:54). It seems that the Canaanites, like the Babylonians, inferred even more than the Israelites from the appearance and the course of clouds. This might explain why a derivative verb 'nn II became a designation of soothsaying in Hebrew.

\***CNIDUS.** The plan of late Hellenistic, Roman, and Byzantine Cnidus is rapidly being filled out by new excavations begun in 1967. A low and narrow isthmus (where prehistoric Cycladic idols have been found) joins the main body of the Cnidian peninsula to a high point of land sheltering in its lee on either side of the isthmus two fine harbors. The larger harbor on the S must have been the commercial harbor where west- or north-bound ships such as PAUL's (Acts 27:7) could wait for unfavorable weather to abate before continuing their journey beyond the windy cape. On the banks of the harbors were moorings; warehouses for the wine, vinegar, pottery, and medicines produced in the city; market places; small theaters; and a temple of DIONYSUS. On the heights to the

E was the sanctuary of Demeter where a statue of the seated goddess and a damaged but beautiful head of a young woman were found. The head might represent the daughter of Demeter, but it has also been taken for an image of Aphrodite. On the highest terrace to the W overlooking both harbors was a round temple which has been identified as the landscaped shrine of Aphrodite Euploia (the Aphrodite of Good Sailing). Praxiteles' frequently copied nude statue of the goddess may have stood here (Pliny, *Natural History* 36.20).

During the Christian period when Cnidus became the seat of a bishop, several churches were constructed. The site of the temple of Dionysus by the commercial harbor became the center of a late fifth-century basilica complex. In the area of the temple of Aphrodite Euploia were found three terra-cotta flasks molded with representations of the Virgin and Child, the Foolish Virgin, and a saint holding the gospels.

D. BOYD

\***COLOSSIANS, LETTER TO THE.** This letter, purportedly from Paul and Timothy to the church at Colossae, is noted for its Christology (esp. 1:15-20) articulated in refutation of certain opponents (esp. 2:6-23).

**1. Authorship.** The authorship of Colossians (and, consequently, place and date of writing) continues to be disputed. Contributing to this debate are such factors as the peculiar vocabulary, the piling up of words and phrases in a kind of liturgical style, the curious relation to EPHESIANS, and the characteristic theology (e.g., Christ and the church, baptism, creation, reconciliation, and the powers). The pivotal issue in these and other problems is the extent and significance of difference from the acknowledged Pauline epistles.

**2. Occasion and purpose.** Until recently, debate on the occasion and purpose of Colossians has proceeded within approximately the same perimeters as it has for the last century (see *bibliog.*).

**a. The opponents.** Most scholars hold that the opponents were divergent members of the Colossian church, to some degree affected by pagan ideas prevalent at the time. A few locate the opponents outside the church. Opinions also differ on whether Gnostic perspectives are a significant part of the teachings this writer opposes. The disagreement stems from differing views of GNOSTICISM itself: Was it a distinct religious movement or simply a widely held world view? Degrees of affinity to Essenism also are generally observed. See ESSENES §4; ESSENES[S] §§2c, 3; DEAD SEA SCROLLS §§5, 6; DEAD SEA SCROLLS[S] §9.

**b. Mystery initiation.** Since mystery initiation was first identified as a component of the error at Colossae, most interpreters have concurred, though

some few have disagreed. Recent restudy of the data (see *bibliog.*) suggests that there is no sufficient basis for holding that the Colossian Christians submitted to mystery initiation (see MYSTERY §§3, 4; GREEK RELIGION AND PHILOSOPHY §§4, 5). Early in this century it was erroneously postulated that in Col. 2:18 ἐμβατεύειν ("taking his stand on") was a technical term for initiation, because it appears in inscriptions found at the sanctuary of the Clarian Apollo. In fact the word was commonly used simply for entering, with a variety of nuances in different contexts.

**c. Angel worship.** Almost universally scholarship has assumed that the opponents worshiped angels (2:18). Recent study (see *bibliog.*) reopens the possibility seen by Luther and a few others that the opponents witnessed the angels at worship or worshiped with the angels in their visions (Heb. 12:22 ff.; Rev. 4; II Cor. 12; see ANGEL §C; VISION). This view has significant impact on one's understanding of the Christology of the opponents.

**d. Christology.** If the opponents did not worship angels or venerate the cosmic powers, then some characterizations of their false teaching frequently offered by commentators must be questioned, e.g., that Christ was subsumed in and under a cosmic hierarchy, that the powers completed the saving work of Christ, that the principalities had to be placated to make one's way to Christ, or that these spiritual forces somehow assisted one's access to Christ. In fact Colossians offers no clear evidence for any of this and nowhere directly describes the Christology of the opponents. The letter apparently does quote the opponents (2:21), but only their ascetic rules—and presumably the recipients knew as much about the asceticism of the opponents as about their Christology. Thus one is led to ask whether Christology was a prime theological issue among the opponents at Colossae after all. It is possible that some other factor in their teaching is responsible for the christological theme in Colossians, or that the writer develops this theme for his own special purpose. If so, attention must be shifted from the epistolary occasion *per se* to the purpose of the letter. See also CHRISTOLOGY IN THE NT[S] §2c.

**e. Alternative hypotheses.** A hypothesis worth exploring is that the purpose of Colossians is to assure the recipients of their spiritual well-being in the face of the ascetic, visionary practices championed by the opponents. On this hypothesis it is the writer, not the opponents, who gave these matters of piety a christological setting. Other hypotheses will probably be framed as the debate on the occasion and purpose of Colossians continues.

F. O. FRANCIS

**CONFIDENCE.** See BOLDNESS; BOLDNESS[S]; FAITH, FAITHFULNESS IN THE NT[S].

**CONFLATE READINGS (OT).** The combination of two or more variant readings in the Hebrew text and in the ancient versions of the OT. Conflate readings are also found in the NT, in the Qumran writings, in the biblical quotations in the Apocrypha and rabbinic literature, and possibly in other literatures of the ancient Near East. The phenomenon is also designated by the terms: alternative or double readings, and doublets.

1. Importance for the history of the Hebrew Bible text
  2. Two main causes of conflate readings
  3. Evidence from the Dead Sea Scrolls
  4. Discernment of conflate readings
  5. Impact of the transmission process
  6. Classification of conflate readings in the MT
  7. Original combination readings
  8. Conflate readings and tradition combinations
- Bibliography

**1. Importance for the history of the Hebrew Bible text.** Conflate readings present tangible evidence for the existence and transmission in antiquity of divergent textual traditions of Scripture. Some conflate readings must be considered to have originated in the formative period of OT literature, possibly as oral traditions, before the crystallization of definite textual formulations, and certainly before the emergence of a *TEXTUS RECEPTUS* of either the Hebrew original or the versions. Their preservation resulted from a variety of scribal motivations and processes. They illustrate, to a degree, the flexibility of textual formulations in the early stages of the transmission of biblical literature since they represent parallel or alternative textual traditions. They thus relate to the *Urtext* versus *Vulgärtext* controversy, i.e., to the problem of whether the relative uniformity of the major textual witnesses should be interpreted as reflecting faithfully one original text form or exemplar, or whether it resulted from a progressive selection and weeding out of variant readings, which culminated in the establishment of one officially recognized text form. See TEXT, HEBREW, HISTORY OF[S] §1.

**2. Two main causes of conflate readings. a. Intentional preservation of alternative readings.** Whenever this could not be achieved by assigning the variants to parallels of the same subject matter, such as in the Former Prophets and Chronicles, or in two versions of one and the same psalm (II Sam. 22 and Ps. 18), conflation was employed. Doublets thus illustrate the scribes' reverence for transmitted alternative readings which were invested with a measure of sacred authority.

**b. Insertion of interlinear or marginal notations into the text base.** Conflate readings thus give evidence to the fact that the OT text was subjected

to processes of deliberate redaction, and at the same time was exposed to the textual hazards which perforce affect a given corpus of literature in the course of MS transmission.

3. Evidence from the Dead Sea Scrolls. (See DEAD SEA SCROLLS; DEAD SEA SCROLLS[S].) *a. Marginal notations.* Against the MT of Isa. 36:11, דבר-נא אל-עבדיך ארמית, which is supported by the versions, IQIs<sup>a</sup> exhibits the doublet עם דבר-נא ארמית. The alternative marginal reading עם-נא may be reflected in ἡμᾶς of two Greek *minuscules*. The intrusion of the marginal variant into the text base most probably resulted from the lack of a system of differentiated critical symbols. Thus, the copyist was unable to decide whether the notation originally was intended to supply a word mistakenly omitted at a previous stage of copying, or as an alternative reading for עבדיך.

*b. Interlinear notations.* Conflate readings which ensued from the interpolation of an interlinear notation in the text base may be observed in the following instances: (i) In Isa. 41:20 the MT employs a string of four verbs: ויראו וידעו וישומו וישכילו. The text base of IQIs<sup>a</sup> has as the third verb in the row ויבינו, which appears to represent an alternative reading from a different *Vorlage* (Hebrew original), yet mirrored in the Syr. ἔνεσθησαν. ונתבינו, and probably also in the Gr. ἐνεσθησαν. ונתבינו was then recorded in IQIs<sup>a</sup> as a superscription, possibly by a second hand, and subsequently was disqualified by its enclosure within deletion dots. Hypothetically, this situation could have led a later copyist, who disregarded or failed to interpret correctly the deletion symbols, to consider the interlinear וישומו as a restored omission rather than as a variant of ויבינו, and therefore to include it in the text base. This would have resulted in the conflate string of verbs: למען יראו וידעו וישומו ויבינו וישכילו. (ii) Such a process presumably underlies the doublet in Isa. 44:9, ועדיהם ה'מה בל יראו, marked redundant by the dots, appears to be the truncated notation of a variant reading preserved in the text base of IQIs<sup>a</sup>, which later was interlinearly (mis) corrected to conform with the MT: המה

ועדיהם בל יראו

4. Discernment of conflate readings. *a. Comparison of multiple witnesses.* The recognition of a doublet in the MT or in a version usually arises from a comparison of two or more witnesses to the text. A simple or short reading in one indicates that an expanded reading in the other may constitute a doublet, if the assumedly redundant component is but a reiteration of what already is expressed in the other textual component. Conflation can be most readily established when each component of the doublet has been preserved individually in the textual witnesses collated. In the Hebrew text this can be illustrated by the following examples: (i) In Jer. 52:34, דבר יום ביומו עד, יום מותו כל ימי חייו, Gr. renders only the first and the second members of the triplet, while the Hebrew parallel in II Kings 25:30 records only the first and the third: דבר יום ביומו כל ימי חייו. (ii) In Judg. 19:9, [הנה חנות היום] . . . הנה נא רעה היום לערוב, one Greek translation, Gr.<sup>B</sup>, reflects only the bracketed, and Gr.<sup>A</sup> the unbracketed, reading.

one Greek translation, Gr.<sup>B</sup>, reflects only the bracketed, and Gr.<sup>A</sup> the unbracketed, reading.

*b. Juxtaposition.* We may assume that both in the MT of I Kings 21:8 (not found in Gr.<sup>B</sup> and OL): אל הזקנים ואל ההרים [אשר בעירו] הישבים את נבות and of 21:11: אשר הישבים בעירו, the alternative readings אשר הישבים and אשר בעירו were conflated, probably by transfer of marginal notations into the text base.

*c. Different syntactical positions.* In some doublets the variants were not recorded adjacent to one another but rather in different positions in the syntactical structure, as, e.g., חריה and שריה in Isa. 34:12. In yet other instances, the conflated alternative readings represent nuances in the understanding of a passage or essentially diverging interpretations which may reflect varying connotations of a word or a word cluster, or different linguistic strata (see §6*ji* and *ii* below).

5. Impact of the transmission process. Conflation will increase commensurate with the prolongation of the transmission chain and the proliferation of text traditions and MSS which serve as bases for new copies and for translations.

*a. Version doublets which reflect conflate readings in the Vorlage.* A doublet in a version may faithfully reflect a conflate reading which was already present in the Hebrew *Vorlage*, e.g., Joel 3:1 [H 4:1] בימים ההמה ובעת ההיא which Gr. renders ἐν ταῖς ἡμέραις ἐκείναις καὶ ἐν τῷ καιρῷ ἐκείνῳ. Of special interest are doublets in a version which appear to be related to or derived from an extant extra-Masoretic *Vorlage*: The eight-line Greek rendition of Deut. 32:43 results from the conflation of four sets of doublets. The individual variants of each line on the one hand reflect the MT and on the other, at least in part, alternative readings found in a Qumran fragment or mirrored in the Samar. and in the Targ. (cf. also §4*aii* above).

*b. Conflation by the transmitter.* A doublet may be evidence of the transmitter's recalling and combining parallel expressions, or his collating different traditions: (i) In II Sam. 20:19, אכני ישראל, Gr. conflates the rendition of שלמי by ἐγὼ εἶμι εἰρηναῖκός with ἔθετο, reflecting a reading derived from שים, which interchanges with שלם in several other instances (cf. I Sam. 2:20: שים with Gr.: ἀποτείσαι=4QSam.: ישלם). (ii) Similarly, Deut. 32:19, וירא יהוה זינאץ, 4QPhyl. ויקנא, Gr.: καὶ ἐξήλωσεν καὶ παρεξύθη.

*c. Conflation of different interpretations.* A doublet may arise from the combination of different interpretations of a common text base: (i) Jer. 4:29, בעבים, and Gr.: εἰς τὰ σπήλαια καὶ εἰς τὰ ἄλση, one rendition taking the Hebrew to mean "cave" (cf. I Kings 7:46=II Chr. 4:17), and one to mean "thicket." (ii) II Sam. 12:30, ויקח את עשרת מלכּם, Gr.: καὶ ἔλαβεν τὸν στέφανον Μελαχὸλ (=מלכּם) τοῦ βασιλέως (מלכּם) αὐτῶν.

*d. Conflation of independent renditions.* Two independent original renditions may be conflated by a copyist in a translation doublet, as, e.g., Judg. 20:15, איש בחור, Gr.<sup>B</sup>: ἄνδρες ἐκλεκτοί, Gr.<sup>A</sup>: +νεανίσκοι. Such confluations are especially numerous in revisions of the original Greek translation, such as Lucian.

6. **Classification of conflate readings in the MT.** In the following arrangement, a system of progressive linguistic complexity and textual comprehensiveness has been adopted. Attention is given to the position of the alternative readings in the structure of the sentence or the passage. (For a more detailed classification, consult S. Talmon, *Textus*, I, 144-84.)

**a. Hybrid readings.** Conflation of two possible synonymous readings, sometimes of the QEREKETHIBH type, in one word. These may be ascribed to a late stage in the standardization of the text. (i) II Kings 15:16, ההרותיה, combining determination by means of the definite article, as in Gr., with determination by means of a pronomial suffix, as in the Targ. (ii) Josh. 7:21, האהלי (cf. Gr. and Targ.). (iii) Isa. 51:9, החצנת+המחצנת=המחצנת (see I. L. Seeligmann, *VTSup*, I, 109).

**b. Juxtaposed grammatical alternatives.** (i) Jer. 4:12, רוח מלא conflates רוח מלא [מאמה], which takes רוח as a masculine noun, with מלאה (transposed letters and missing in Gr.), which takes it as a feminine noun (cf. Job. 1:19). (ii) Zech. 6:12-13, ובנה את היכל, יהיה [והוא יבנה את היכל יהוה]. The second reading, with the alternative imperfect יבנה for the perfect ובנה, is not extant in Gr.

**c. Graphic interchanges.** (i) II Chr. 28:26, [ויחר דרכיו ויכל דרכיו]. The MT doublet resulting from an interchange of דבר and דרך is reflected in the versions but differs from the standard analogistic terminology (cf. I Chr. 29:29; II Chr. 9:29 and 12:15). (ii) Ps. 45:7 [H 8] אלהים אלהיך. The doublet, reflected in the versions, probably conflates alternative readings resulting from confusion of the *mēm* and the *kaph*. See TEXT, OT §D2a.

**d. Spelling variants.** (i) Jer. 9:16: . . . ותבואינה [ותבואנה]. The second reading is not rendered by Gr. and probably should be considered a marginal variant. (ii) Ps. 45:8 [H 9]: מן . . . מני. The recognition of the conflation makes textual emendation unnecessary.

**e. Juxtaposed synonymous readings.** (i) Josh. 13:17: בעל מעון וביה בעל מעון conflates בעל מעון (Num. 32:38; Ezek. 25:9; I Chr. 5:8) with בית מעון (Jer. 48:23). This case, however, may be an example of the break-up of stereotyped phrases. (ii) Jer. 41:3: [את גדליהו] אשור היו אתו. Gr. (48:3) and the parallel in II Kings 25:25 (MT, Gr.) do not present the bracketed alternative.

**f. Juxtaposed synonymous phrases.** (i) The first stich of Lev. 14:31 is an alternative reading of the last stich of vs. 30, which is lacking in Gr. and Syr. (see KJV). (ii) I Sam. 14:25 and 26 may be conflated alternatives.

**g. Variant syntactical arrangement of words and phrases.** In Ps. 10:9, two variants which differed in sentence structure were conflated with the verb preceding or succeeding the noun (cf. II Sam. 17:28; I Sam. 9:13<sup>b</sup>; I Kings 10:28<sup>b</sup> [=II Chr. 1:16]). In most of these cases, one of the variants was not rendered by one or the other ancient version. In many instances of doublets, the conflated variants are distinguished by differences in word order coupled with the substitution of synonyms.

**h. Complex doublets.** These arise when variants of several syntactical components that exemplify

diverse textual phenomena are conflated in one verse. Such conflate readings seem to underlie, e.g., the overloaded text of II Kings 5:18; 11:13 (cf. II Chr. 23:12, MT and Gr.); 22:5 (cf. II Chr. 34:10).

**i. Conflation of different traditions.** At times the conflated variants represent different versions of one tradition. (Such instances, however, could have resulted from the insertion of a secondary gloss into the text, rather than from a combination of pristine variant readings.) (i) I Sam. 22:6: [ברמה] וישב בגבעה תחת האשל presumably conflates two local traditions. (ii) II Sam. 15:24. Inserted into the tradition which reports Zadok the priest to have been in charge of the ark at David's flight before Absalom is a second version which appears to have mentioned another prominent priest, Abiathar (ויעל אביתר) in that context.

**j. Conflation of reading with gloss.** In individual cases it is difficult to decide whether a doublet arose from the conflation of two variants or from the combination of a reading with a gloss. In the following instances, the second possibility is the more probable, since we seem to be concerned with a Hebrew equivalent (bracketed) placed next to a loanword, or with the combination of an archaic word with a better known synonym: (i) Ezra 5:8 and 6:4, [אבן] גלל. Akkadian *galalu* equals Hebrew אבן="stone" (*CAD*, V, 11). (ii) Judg. 9:30: זבל [שרן] העיר. Here זבל could well be the Canaanite equivalent of the Hebrew שר="prince," "ruler," and not a personal name. זבל is known in this connotation from Ugaritic literature as a title of Baal, and also as a component of the biblical theophoric name איזבל.

7. **Original combination readings.** The conflate readings discussed in §6i, which may represent different accounts of one and the same episode, point to an aspect of this textual phenomenon which requires special attention. Scholars tend to characterize as conflate, i.e., expanded, any text which is known also in a short or pristine form in a version or MS. Even where such evidence is altogether missing, they often emend a supposedly secondary conflate reading to simplify it on the basis of meter, or even mere impressionistic stylistic considerations. This appreciation of conflate readings has its repercussions in much of biblical textual studies and exegesis. Since the discovery of the Hebrew fragments of Jeremiah from Qumran Cave IV, it has played an important role in the formulation of the theory which holds that these fragments, like Gr., which is about one eighth shorter than the MT, represent a shorter Hebrew text of the book which had been less "contaminated" by conflation than the MT. This theory is forcefully argued by Cross and his school, especially by Janzen. While the theory as such is well founded, a caveat should be sounded against the tendency to view a fuller text by definition as redundant, and routinely to judge double expressions as conflate readings. The apparent conflate text sometimes—indeed often—appears to represent an original reading, i.e., a formulation which should be ascribed to the author rather than to a reviser, redactor, or copyist, while the shorter, seemingly simple reading may have re-

sulted from a reductionist predisposition of later generations. "Doubling," like reiteration, is not solely a textual phenomenon but also evidences a basic stylistic mood of biblical literature.

a. *In a literary source.* An apparent conflate reading may in fact echo a literary source in which the two components were already coupled, and which the author to whom the conflation is mistakenly attributed consciously takes up: In Jer. 29:23, וְעַד הַיּוֹדֵעַ וְעַד הַיּוֹדֵעַ, Gr.: καὶ ἐγὼ μάρτυς, does not render הַיּוֹדֵעַ, probably to be read הַיּוֹדֵעַ, nor the immediately following copula. The resulting suggestion (see Janzen, *HTR*, LVII, 439) has been that the MT conflates here the variant expressions for "witness," i.e., הַיּוֹדֵעַ and עַד. However, the suspected doublet probably echoes a similar phrase in Lev. 5:1, וְהוּא עַד אִם רָאָה אִם יָדַע, where the combination עַד-יָדַע is reflected in the versions and we have no reason to doubt its originality. The assumed dependence of Jer. 29:23 on Lev. 5:1 suggests that the shorter reading in Gr. evidences a reductionist tendency of the translator who, like modern scholars, erroneously suspected the MT to contain a conflate reading.

b. *As a stylistic device.* At times, what appears on the surface to be a doublet caused by textual hazards or the conflation of synonymous variants, in fact may mirror a stylistic device by which an author consciously and intentionally combined expressions which he used alternatively in a given context. The literary unit in question can vary from a fairly short pericope to an extensive block of materials, and the combination reading can be used at the beginning, in the middle, or at the end of the unit. Such transition or summary combinations constitute tangible evidence of the interconnection of the history of the Bible text and biblical stylistics. (i) The MT reading in Deut. 12:5, לְשׂוֹם אֵם שָׂמוֹ שֵׁם לְשִׁבְנוֹ, could readily be taken as an early conflate reading which is retained by all versions. However, further analysis makes it probable that the author introduced by prolepsis the two alternative verbs that he was to employ from this point on in reference to the sanctuary as the abode of God. In vs. 12:11, the term שָׁבַן is used, whereas in vs. 12:21 שׂוֹם is employed. In later passages in Deuteronomy, the two verbs serve alternatively (cf. 14:23; 16:2, 6, 11 and 26:2 with vs. 14:24). (ii) In Jer. 44:3, לֵלְכָה לְקַטֵּר לְעֵבֶד לְאֱלֹהִים אֲחֵרִים, the author may have intentionally combined the phrase לְאֱלֹהִים אֲחֵרִים, which he uses eight times before the occurrence in the double expression, with לְקַטֵּר, which is subsequently employed in the same context nine times more in ch. 44, but appears only infrequently in the first part of the book. (iii) At the end of the Gibeonites episode, Josh. 9:27, וַיִּתְּנֵם לַעֲרֹה . . . יוֹתֵם וּלְמִזְבֵּחַ יְהוָה combines two significant terms which are employed alternatively in what are taken to be two parallel strands in the narrative (cf. vs. 21 with vs. 22-23).

8. *Conflate readings and tradition combinations.* In the last example, the analysis of what externally may be considered a conflate reading bears directly on basic and more comprehensive issues of biblical research. The apparent doublet here combines traditions which are ascribed to two

distinguishable sources of biblical historiography. While conflate readings usually are discussed within the framework of LOWER CRITICISM, the proper context for the analysis of combined narrative traditions is the field of HIGHER CRITICISM (see also SOURCE CRITICISM, OT[S]). The conflux of textual and literary aspects of doubling or conflation which emerges from the foregoing discussion points up the overall importance of these phenomena for biblical research.

\***CONSCIENCE.** 1. *In the Corinthian letters.* The earliest references to conscience in the NT are in connection with a controversy in the Corinthian church. A Gnostic faction held that the conscience of the weak should be strengthened in such a manner as to free them to eat meat which had been sacrificed to pagan idols (I Cor. 8). Their opponents held that one should refrain from eating such meat out of regard for the conscience of those Gentile Christians who were still bothered by the idea that eating it would mean communion with demonic forces (I Cor. 10:23 ff.). For these people "conscience" meant the uncontrollable, painful

knowledge that a deed was wrong. The Gnostics, however, seem to have identified conscience with the spirit-self which must be forcibly educated for one to be saved. These radicals had embarked on a campaign of ridicule and enticement, forcing those caught by the conscience lag to violate their conscience until they were free.

Paul's discussion of these issues results in a new doctrine of autonomy. Even if the "weak" are theologically wrong in fearing the idols and restricting the goodness of meat, they should be encouraged to avoid pangs of conscience. Their "weakness" consisted not in a lack of will power, but in a lagging assimilation of the knowledge (I Cor. 8:1, 7) that the idols were powerless (I Cor. 8:4-6). To act against conscience, even though it be misguided because of prior conditioning (I Cor. 8:7), was to risk the loss of integrity and the destruction of conscience, the guardian of that integrity (I Cor. 8:7, 11, 12). To educate the conscience requires a gradual, indirect approach of exercising freedom while avoiding pangs (I Cor. 10:23-29). This may require temporary abnegation of freedom on the part of the "strong" to encourage the "weak" to avoid anything that would cause pangs of conscience. Paul's concern in I Cor. 10:29b-30 is that freedom not be defamed by provoking others to violate conscience and is a repudiation of the Gnostic campaign. This does not imply a permanent disavowal of freedom, because his own strategy was to free the "weak" to eat meat "to the glory of God" (I Cor. 10:31).

This doctrine provides the possibility for a community to live in mutual respect and integrity with differing conscience structures. Its premises are the recognition of the spontaneously negative function of conscience and the grounding of its authority in personal integrity rather than in divine agencies; only then can it retain autonomy even when wrong, while continuing to grow as moral perspective enlarges.

In later Corinthian correspondence "conscience" is used in an increasingly Gnostic fashion, as an agency of knowledge and judgment (II Cor. 4:2; 5:11). Paul probably wanted to facilitate debate and win the congregation back from the lures of the traveling missionaries (II Cor. 11:4-15). In II Cor. 1:12 Paul reverts to the more typical Hellenistic-Jewish usage (cf. I Cor. 4:4). Here conscience is an independent witness to Paul's integrity, although its erring, finite quality contrasts with eschatological certitude.

**2. In Romans.** In Rom. 13:5 submission to the state is recommended in order to avoid arousing conscience pangs. Since one knows ahead of time that disrespectful actions would arouse such pain, one can act to avoid it. Conscience here retains its basic significance as the "conscience pang" rather than the agency of conscience. In Rom. 2:15 and 9:1, however, it is the autonomous agency which marks transgressions against an internalized code. In the latter instance, Paul for the first time explicitly relates conscience to Christ and the Holy Spirit, claiming full harmony with revelation. This does not imply that conscience is controlled by the Spirit or witnesses for the Spirit. As an independent witness it simply points in this instance

in the same direction as revelation; Paul is playing down its normally erring character in order to strengthen his argument.

**3. In Hebrews.** The Epistle to the Hebrews stresses the role of conscience as the painful knowledge of guilt which must be overcome by redemption. The legalistic cult is powerless to deal with the burden (9:9; 10:2), but the atoning work of Christ is capable of setting conscience free (9:14; 10:22). The evangelical substance of Hebrews' approach is manifest in the expression "purify your conscience from dead works to serve the living God" (9:14); the definition of these terms in 6:1 and the argument in ch. 9 indicate that "dead works" are the self-justifying acts of legalism whose burden grace overcomes. Although the concept of conscience is integrated into the salvation process, the results are not pictured in complacent terms: that the author and his colleagues "are sure" they have a "clear conscience" in 13:18 is not a claim of final certainty but a basis for requesting prayer in a problematic situation.

**4. Elsewhere in the NT.** I Peter 3:21 portrays the erasure of guilty conscience through BAPTISM, which places the believer under the lordship of Christ. The difficult term *ἐπερώτημα* is therefore best rendered as in the RSV: baptism is "an appeal to God for a clear conscience." The conscience thus cleansed by grace is to be kept intact by "gentleness and reverence" toward the authorities even during persecution, lest a conscience-pricking spirit of rebellion confuse the cause for which the church is suffering (3:14-16). The same counsel is offered in 2:19, though the word "conscience" (KJV) bears here the sense of "the shared knowledge" of God which informs the church of the meaning of its persecution.

A moralistic domestication of conscience is visible in Acts 23:1; 24:16; and II Tim. 1:3. That these references imply conformity to a code can be seen in I Tim. 1:5 and in the counterexamples of the heretics referred to in I Tim. 4:2 and Tit. 1:15, whose libertinism allegedly revealed an anesthetized conscience. By correlating conscience directly with faith, understood in a dogmatic sense (I Tim. 1:19; 3:9), these materials eliminate the possibility of respecting alternative conscience structures. The process of coercing the conscience begins here to make its way through Christian history.

**COPTIC LANGUAGE.** The last direct descendant of the ancient Egyptian spoken by the pharaohs; it is the final stage of a language whose history can be traced in written records for more than four thousand years.

Long before the Christian era, Coptic was spoken by the native Egyptian population, and eventually

further S along the Sudanese Nile. It did not receive a standard notation, however, until about A.D. 200, when the Bible began to be translated. The surviving literature is almost exclusively Christian in content. Coptic was written in a mixed alphabet of Greek and demotic (ultimately hieroglyphic) characters. It contained a high proportion of naturalized Greek vocabulary along with inherited Egyptian stock; its grammar, however, was virtually independent of Greek.

As a literary medium Coptic survived until the fourteenth century, but as a truly living language, not much beyond the Arab conquest of Egypt (A.D. 641). A few speakers were still reported as late as the seventeenth century; thereafter Coptic totally died out, having been replaced for all secular purposes by Arabic. The Egyptian Monophysite church today sings some short passages of the liturgy in Coptic. The Gospel may also be recited in Coptic, but must be followed by the Arabic version since Coptic is no longer understood. The liturgical pronunciations are undoubtedly modern, being heavily influenced by Arabic and Modern Greek. Patriotic attempts to revive Coptic as a spoken language, begun in the late nineteenth century by Claudius (Ikladios) Labib, Eryan Muftah, and others, have borne little fruit, although encouraged by the church. Less than two hundred persons from the educated classes of Cairo and Alexandria have now learned to converse in modern (revived) Coptic, Bohairic dialect. But Coptic has not re-emerged as a medium of literature, and shows no signs of doing so.

"Coptic" is a modern word, the Europeanized form of Arabic *qubṭī*, which in turn comes from Greek αἰγύπτιος, "E-gypt-ian." But the ancient Copts called themselves Νῆϥῆϥῆϥ ἄν-ρᾶμ-ἄν-κᾶ'μῆ, "people of the Black Land," that is, Egyptians; and their language, τᾶντ-ῤῥᾶμ-ἄν-κᾶ'μῆ, "the characteristic of the people of the Black Land." Coptic (called simply the language of the Egyptians, οἱ κατοικοῦντες Αἴγυπτον) is mentioned in Acts 2:10 as one of the languages spoken after Pentecost. Coptic is not the language of the so-called Coptic Church of Ethiopia.

1. **Proto-Coptic; adoption of the alphabet.** Coptic directly descends from Late Egyptian as spoken in the sixteenth century B.C. After being adopted as the official administrative language of Egypt (since the New Kingdom, 1570 B.C.) Late Egyptian remained a conservatively written and increasingly

artificial mode of expression, while the spoken idiom continued to develop and drift away from it. The demotic language, attested from 715 B.C.-A.D. 470, was an equally artificial, "literary" medium, being a later offshoot of Late Egyptian. Thus in the centuries preceding the invention of the Coptic alphabet, everyday spoken Egyptian no longer had a corresponding written form.

In 332 B.C. Alexander of Macedon conquered Egypt and established a Greek-speaking administration (see EGYPT §2*h*); Egyptian was thus forever doomed to remain the secondary language of the country. Many Egyptians learned Greek, especially among the middle and lower classes of the Delta; also a few Greeks learned spoken Egyptian. From the mid-third century B.C. comes the earliest surviving transcription of spoken Egyptian (or Proto-Coptic) words in the infinitely superior Greek alphabet: a Greek-Coptic glossary (Papyrus Heidelberg 414), written by a Greek. We should not imagine this was the first of such attempts, but further documentation is scarce. In the second century A.D. we find imperfectly transcribed horoscopes, magical spells, and mummy labels (in "Old Coptic").

The invention of an adequate alphabet and normative spelling system, as well as the formulation of a normative grammar and style, must be credited to the church. No doubt it formed part of a missionary program for the Egyptian countryside, organized in the episcopal reigns of Demetrius of Alexandria (A.D. 189-232) and his successors.

For propagandists of the new religion the advantages of substituting simple alphabetic transcription in place of the complicated and imperfect Egyptian scripts was obvious. Literacy would no longer be the exclusive possession of the conservative elite; the gospel could be read not only to, but by, the people; the language of the church would be the spoken idiom of daily life. Furthermore, in the struggle with heretics recourse could be made to a fixed, authoritative scripture that could be read and understood by all.

The date of the Coptic Bible, the earliest piece of Coptic literature, is uncertain. It must precede the conversion of St. Anthony (ca. A.D. 270), who entered the faith after hearing Matthew read in Coptic in a village church. Our earliest biblical MS perhaps dates from the same century. The monastic *Rule* of Pachomius (ca. 321) requires entering monks to read the scriptures in Coptic.

Because Egyptian Christianity maintained its intellectual center in Alexandria until the sixth century, almost all the original theological literature of Egypt was composed in Greek rather than Coptic. After the Arab conquest Arabic began to be used. Thus Coptic literature consists almost entirely of translations from Greek.

2. **Dialects.** Coptic was not a single language but a group of dialects each descended from a much older dialect of Egyptian. At least seven have substantial literary attestation (see Table 1).

Because the place where most Coptic MSS were copied, or even discovered, is now unknown, the centers of some dialects are not certain. However, their relative positions can be scientifically reconstructed: those that share the greatest number of

Name	Center
Bohairic	Western Delta and Nitria (Wadi en-Natrun)
Fayyumic	Arsinoite Nome (Fayyum Oasis)
Sahidic (Sa'idic)	Memphis (Cairo) to Heracle- opolis (Helwan); possibly Thebes (Luxor)
Oxyrhynchite	around Oxyrhynchus (Behnasah)
Subachmimic	around Lycopolis (Assyut) ?
Achmimic	Panopolis (Akhmim)—Thebes (Luxor)—Syene (Asswan) ?
Dialect P	Thebes (Luxor)

distinguishing characteristics (isoglosses) must have existed side by side; those that share the least must have been farthest apart, etc. Other kinds of evidence then tentatively indicate where the absolute boundaries were: the historical geography of the country; nonliterary documents (graffiti, etc.) found *in situ*; modern pronunciation of Arabic place names based on older Coptic names; medieval reports; etc.

The evidence is partly self-contradictory. The relative position of Sahidic should be next to Bohairic, Fayyumic, and Oxyrhynchite, the three with which it has the most in common. But the dialect of a fourth-century papyrus codex (Papyrus Bodmer 6, "Dialect P"), when compared with non-literary documents from Thebes, now suggests that the early dialect of Thebes was a form of Sahidic.

**a. Principal dialects.** i. *Sahidic* is the most important. By the fourth century A.D. Sahidic had spread to become the common "literary" language of the Nile Valley, and began to be written in a standardized spelling and style ("Standard Sahidic") such as minor dialects never attained. Sahidic's success as a national dialect depended upon the many features it shared with the local dialects and the small number unique to itself—a neutrality that facilitated comprehension and imitation. Speakers of other dialects learned Sahidic with greater or lesser correctness, depending upon their education. Many MSS contain Sahidic forms mixed unpredictably with those of a minor dialect; this probably resulted from dialectal bilingualism of the writers and from their imperfect schooling in Standard Sahidic. Among such mixed MSS are the "Sahidic" codices of the Gnostic library of Nag Hammadi (see NAG HAMMADI[S]), probably written by speakers of other dialects trying to imitate Standard Sahidic (with spellings that are often Sahidic; and syntax, diction, and vocabulary that are not).

The entire Bible (LXX and NT) was eventually translated into Sahidic. The earliest version dates from before A.D. 270. The MSS attest more than one Sahidic translation of certain books, now ap-

parently conflated in the transmission. There was repeated revision against the Greek.

Most original Coptic literature (Pachomius, Shenute, etc.) was composed in Sahidic. It was the chief and official language of monasticism and nondualist Christianity. Also many nonliterary texts survive (from the early Arab period).

ii. *Bohairic* succeeded Sahidic as the ecclesiastical dialect about the eleventh century; Coptic was then a dead or dying language. Earlier, Bohairic was a dialect—probably a minor one—of the Western Delta and Nitria. The standardized, classical biblical version is almost exclusively attested in late MSS (textual critics often have to resort to thirteenth-century copies). This version is sometimes said to date from the fourth century, on the supposition that the early biblical MSS in Fayyumic were translated from it (*but see* §bi below).

The center of Bohairic literature and our principal source of nonliturgical texts in modern times is the library of the Monastery of St. Macarius in Nitria, patriarchal residence from the sixth to the eleventh centuries. After its destruction in A.D. 817 the library was reconstructed over a period of centuries, partly by translating Sahidic literature into Bohairic (the biblical version excepted). Apart from five non-Standard texts, the earliest surviving MS dates from A.D. 830.

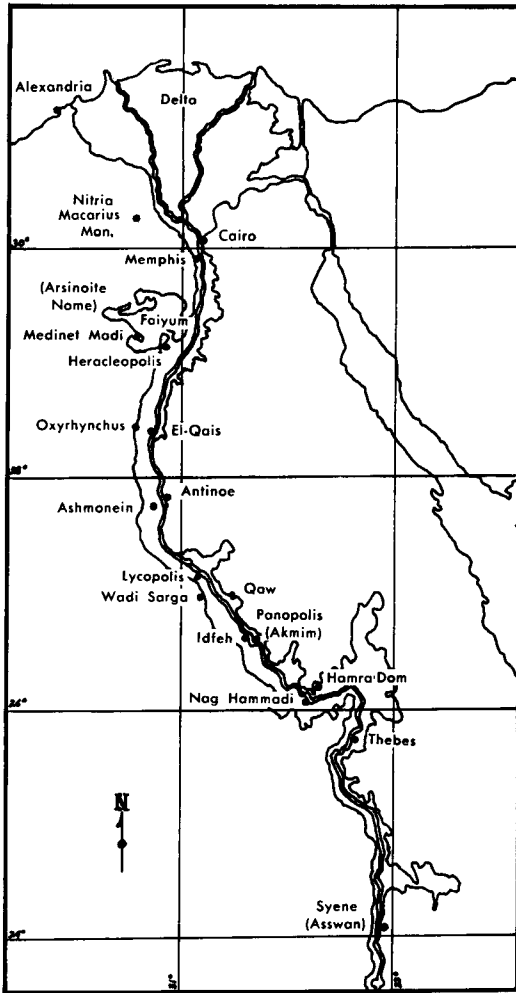

**b. Minor dialects.** These are attested by very early MSS and, except for Fayyumic, died out as literary languages by the seventh century, presumably being replaced by Sahidic. Many of the biblical texts are translated from early Sahidic (and possibly Bohairic) versions, not directly from the Greek. This does not necessarily diminish their ultimate value as witnesses to the Greek text. Bohairic began as a minor dialect.

i. *Fayyumic* is richly attested by fragmentary literary and nonliterary texts (fourth-eleventh centuries). The entire Bible may have been translated, certain books from Sahidic, others possibly from Bohairic. But the status of the texts that coincide with the Bohairic version is uncertain; it is possible that parts of the classical Bohairic Bible were actually transposed from an early Fayyumic version at a date that is hard to determine.

ii. *Achmimic* MSS date from as early as the third century and not later than the fifth. Only a few biblical books were translated, probably all from Sahidic. Some Subachmimic texts also exhibit influence of this dialect. Although graffiti at Akhmim and nonliterary texts at Thebes show Achmimic traits, the center of diffusion remains uncertain.

iii. *Subachmimic*, the most important minor dialect, was peculiarly associated with Gnosticism. It spread considerably, rivaling Sahidic as a dialectally neutral, literary language. The center of diffusion is uncertain; the dialect was never standardized. Subachmimic is attested only in the fourth-fifth centuries. Its early demise as a literary language undoubtedly resulted from an intimate connection with religious movements suppressed about the time of the last known texts. The literature is almost entirely dualist or heretical: (a) Manichean texts (approximately four thousand

Coptic Dialect Locations

pages), now partly lost (see MANICHEISM); (b) Acts of Paul (see PAUL, ACTS OF); (c) John (translated from Sahidic), a text favored by Gnostics; (d) a letter on the Melitian schism; (e) Nag Hammadi codices CG I (GTr, OnRes, etc.), X, and part of XI; fragments of (f) apocryphal acts (Gnostic?); (g) the Gnostic OnOrgWld, also found (in impure Sahidic) at Nag Hammadi (CG II 5, XIII 2\*); (h) an anti-Manichean tract; (i) Hebrews. Other Nag Hammadi texts (Apocryjn, GTh, OnOrgWld, etc.) are translations into impure Sahidic by native speakers of Subachmimic.

The places where Subachmimic MSS have been discovered indicate its wide diffusion: Medinet Madi, El-Qais, Ashmonein, Antinoe, Hamra Dom (opposite Nag Hammadi); nonliterary evidence comes from Qaw, Ashmonein, and Idfeh. See map.

iv. *Oxyrhynchite* is the least known dialect (the first important text was published in 1974). The MSS, dating from the third-sixth centuries, come from not only Oxyrhynchus but also Wadi Sarga near Assyut. Thus Oxyrhynchite must have co-existed with Subachmimic and Sahidic during the

fourth and fifth centuries, and its influence can be looked for in impure MSS of those dialects. A type showing Fayyumic or Bohairic influence is also known. The entire NT and at least part of the OT seem to have been translated.

v. *Dialect P* ("Theban"), see §2 3rd paragraph.

3. **Sounds and notation.** The dialects varied slightly in the number and type of phonemes they distinguished. Sahidic for example had twenty-four phonemes (seventeen consonantal, seven vocalic). These were notated by the twenty-four Greek letters, using classical rather than Koine values, and seven new letters based upon demotic signs. Of these letters eight represented no particular sound of their own:  $\xi$   $x$   $\dagger$   $\phi$   $\ominus$   $\dagger$  were merely notations of  $\kappa$ ,  $\kappa_2$ ,  $\pi$ , etc. (see Table 2) and appeared only in certain words, mostly Greek;  $\Gamma$ ,  $\Delta$ ,  $Z$ , used for the traditional spelling of Greek words, had the sounds of  $\kappa$ ,  $\tau$ ,  $c$ . The glottal stop ['] (Hebrew 'aleph  $\aleph$ ) was notated in Sahidic by doubling the preceding vowel,  $\tau\text{OOT}\tau$ , *to'tf*. The vowels  $\bar{o}$  ( $\text{OY}$ ) and  $\bar{e}$  probably had consonantal counterparts  $w$ ,  $y$ ,  $\bar{o}$  (like  $w$ ) was notated either by  $\text{OY}$  or  $\Upsilon$ , according to complicated spelling rules; similarly  $\bar{e}$  (like  $y$ ) = either  $\text{EI}$  or  $\text{I}$ .

Many Coptic syllables contained no vowel. In such syllables one of the consonants functioned "vocally" to form the resonant peak of the syllable: cf. English *government*— $g\bar{u}'v\bar{r}n\text{-}m\bar{a}nt$ , or Coptic  $\text{MNTPMN}\bar{Z}\text{HT}$ —*mnt-rm-n-hāt'*. In Coptic MSS individual words were not separated by blank spaces, and so to facilitate the division of such strings of consonant letters into syllables, a stroke (or dot) was written above any "vocalic" consonant or its entire syllable:  $\text{MNTPMN}\bar{Z}\text{HT}$  = *mānt-rām-ān-hāt'*. Thus every written syllable contained either a vowel letter or a supralinear mark. Bohairic and Achmimic each had an additional letter ( $\beta$  and  $\rho$ ); dialect P, attested by a single MS, was notated in a unique mixture of demotic and Greek characters.

4. **Grammar.** Although the Egyptian verbal system originally resembled Semitic with its triconsonantal roots, such a system no longer operates in Coptic. The infinitive is conjugated by placing before it two elements, namely: (1) a base indicating the tense, to which is suffixed (2) the subject (pronoun or noun)—e.g., *a-f-sōtām*, "he listened" (*a* = past tense base, *f* = "he," *sōtām* = "listen"). Thus the base, rather than the infinitive, is inflected in conjugation.

The repertory of tenses includes a simple future ("he is going to listen") and a modal one ("he might listen" or "he shall listen!"); past progressive and past nonprogressive are formally distinct ("he was listening" versus "he listened" or "has listened"). Likewise, progressive present and aoristic present ("I am listening" versus "I listen" [as a matter of habit, ability, etc.]). Not only tenses, but also several kinds of clause subordination, are indicated by bases: "*when* he had listened" (*ntere-f-sōtām*); "*until* he listens" (*shant-f-sōtām*); etc.

There are four sentence patterns, distinguished by which set of pronouns is used in them, by the parts of speech that may appear as predicate, the

Table 2  
THE COPTIC ALPHABET (SAHIDIC)

(a) Greek letters	Approximate pronunciation in the Sahidic dialect, third century A.D.	Transliteration
Α	ō ("box")	a
Β	between <i>b</i> and <i>v</i>	b
Γ	exactly like Κ	g
Δ	exactly like Τ	d
Ε	ě ("set")	e
Ζ	exactly like C	z
Η	ā ("cape")	ē
Ι	ē ("seek"), ĭ ("hit"), y ("yes")	{i ei
Θ		
Κ	unaspirated k, almost g ("smoky")	k
Ξ	exactly like ΚC ("smoke sale")	ks
Χ	Κ followed by h ("smoke hard!")	kh
Λ	l	l
Μ	m	m
Ν	n	n
Ο	ä ("caught")	o
Π	unaspirated p, almost b ("sappy")	p
Υ	= ΠC	ps
Φ	Π followed by h ("slap hard")	ph
Ρ	Π (tip-tongue trill)	r
Σ	s	s
Τ	unaspirated t, almost d ("smutty")	t
Θ	Τ followed by h ("hit hard!")	th

ϣ	sh ("shoe")	š
ϥ	between p and f	f
ϧ	h	h
Ϩ	j ("posture")	j
ϩ	ky ("vacuum")	c or ċ
ϩ	= ΤΙ ("smutty")	ti

After W. Worrell, *Coptic Sounds* (1934)

form of negation, word order, etc. They may be illustrated as follows. (a) A-prophet + this = "he is a prophet"; a-prophet + this + Moses = "Moses is a prophet." (b) *Present tense base* + he + listen (or: in the garden, etc.) = "he is listening" ("he is in the garden," etc.). (c) *Past tense base* + he + listen = "he listened." (d) [Limited to a few archaic verbs] be-big + he = "he is big" (suffixation of the subject is anomalous). In pattern (b), direct objects are marked by a prefix *n-*; in (c), alternatively they may be suffixed to the infinitive, which then undergoes vowel reduction. There is no in-progress passive form; such passives are paraphrased with a generic third person plural (they-are-building it = "it is being built"). But there is a statal passive (the "qualitative"), a verb form that differs from the infinitive in vowel pattern and sometimes by the presence of a characteristic ending; it is used in pattern (b)—e.g., *infinitive* kōt, "build," *qualitative* kēt, "(be) built": t-i-kōt n-ou-ēi, "I am building a house," but Ø-f-kēt kalōs, "it is well built."

Any of these four sentence types can be con-

verted to (1) a participial clause ("[he] being a prophet"), (2) preterit time ("he was a prophet"), or (3) a relative clause ("[he] who was a prophet") by prefixing the appropriate particle (*e-*, *ne-*, *ete-*, etc.)—e.g., a-f-kōt, "he (has) built . . ." but e-a-f-kōt, "(he) having built . . ." Negation of sentence patterns (a), (b), (d) is effected by adding the particles *ən-* . . . *an* (cf. French *ne . . . pas*) or simply . . . *an*; of pattern (c), by substituting a corresponding negative tense base (*əmp-f-kōt*, "he did not build"), or in the case of clause subordination by inserting *-təm-* before the verb.

Special patterns and forms make it possible to distinguish unambiguously "he is a prophet" from "it is he who is a prophet"; or, "I built it upon a hill" from "it is upon a hill that I built it." Such precisely nuanced constructions are a very common and natural feature of literary Coptic and lend it a clarity and precision resembling that of French.

There are definite, indefinite, and zero articles; grammatical gender and number (masc. and fem.

singulars, common plural) are vested in them. The genitive relationship is marked by the particle *n*- ("belonging to"). There are no adjectives like those of Indo-European languages; the adjective relationship is expressed in several other ways—e.g., by inserting the particle *n*- ("being-in-the-class-of") between two nouns: an-idol + *n*- + Ø-wood = "a wooden idol."

Vergote, *Grammaire copte* (in progress; 1973 ff.), the most up to date. Informative but grammatically unsatisfactory: W. Till, *Koptische Grammatik, Saïdischer Dialekt* (2nd ed., 1961); G. Steindorff, *Lehrbuch der koptischen Grammatik* (1951); J. M. Plumley, *Introductory Coptic Grammar* (1948).

Literature: J. Leipoldt, "Geschichte der koptischen Literatur," in C. Brockelmann, ed., *Geschichte der christlichen Literaturen des Orients* (1907), pp. 131-82; Mallon-Malinine (*ibid.*), pp. 304-94; T. Orlandi, *Elementi di lingua e letteratura copta* (1970).

Dialects: W. H. Worrell, *Coptic Sounds* (1934), fundamental; P. Kahle, Jr., *Bala'izah*, 2 vols. (1954), full documentation; J. Vergote, "Les dialectes dans le domaine égyptien," *Chronique d'Égypte*, XXXVI (1961), 237-49, and *Grammaire copte* (1973), Ia, fundamental; H. J. Polotsky, *OLZ* (1969), cols. 453-54; P. Nagel, "Der frühkoptische Dialekt von Theben," *Koptologische Studien in der DDR* (1965), pp. 30-49, and "Die Bedeutung der Nag Hammadi-Texte für die koptische Dialektgeschichte," *Von Nag Hammadi bis Zypern*, Berliner Byzantinistische Arbeiten, XLIII (1972), 16-27. The complicated classification proposed by R. Kasser, "Les dialectes coptes," *BIFAO*, LXXIII (1973), 71-99, has not won general acceptance. W. Till, *Koptische Dialektgrammatik* (2nd ed., 1961) is very elementary. There are special grammars for the various dialects (*see Comprehensive Bibliographies above*); note esp. P. Nagel, "Untersuchungen zur Grammatik des Subachmimischen Dialekts" (diss., Halle, 1964); H. Quecke, "II Dialekt" [Oxyrhynchite], in T. Orlandi, *Papyri della Università degli Studi di Milano (P. Mil. Copti)*, V (1974), 87-108, German.

Dictionaries: W. E. Crum, *A Coptic Dictionary* (1939), the standard work; W. Spiegelberg, *Koptisches Handwörterbuch* (1921), still very useful; J. Černý, *Coptic Etymological Dictionary* (1975); Wilmet-Lefort, *Concordance* (*see below*), can be profitably used as a dictionary. Dictionaries of Greek words used in Coptic (H.-F. Weiss, *Zeitschrift für ägyptische Sprache*, XCVI [1969], 79-80) and of the Gnostic texts (B. Layton and

T. O. Lambdin, in the same journal, XCVIII [1972], 156) are in preparation.

Concordance: M. Wilmet and L.-Th. Lefort, *Concordance du NT Sahidique*, CSCO Subsidia, 5 vols. (1957-64).

Word frequency: B. Metzger, *Lists of Words Occurring Frequently in the Coptic NT, Sahidic Dialect* (1961).

Edition of biblical texts: [G. Horner], *The Coptic Version of the NT in . . . Sahidic*, 7 vols. (1911-24 [repr. 1969]), in part now superseded by other editions; H. Thompson, *The Coptic Version of the Acts of the Apostles and the Pauline Epistles in the Sahidic Dialect* (1932), appendix has important collation of John; H. Quecke, *Das Markusevangelium Saïdisch* (1972); F. Hintze and H.-M. Schenke, *Die Berliner Handschrift der sahidischen Apostelgeschichte*, TU, CIX (1970); [G. Horner], *The Coptic Version of the NT in . . . Bohairic*, 4 vols. (1898-1905 [repr. 1969]); A. Ciasca and (for vol. III) G. Balestri, *Sacrorum Bibliorum fragmenta copto-sahidica Musei Borgiani*, 3 vols. (1885-1904). There are no complete critical editions; the scholar must collect and weigh all the scattered evidence for him/herself, using the checklists published by A. Vaschalde in *RB*, XXVIII-XXXI (1919-22), Sahidic; *Le Muséeon*, XLIII (1930), and XLV (1932), Bohairic; *Le Muséeon*, XLVI (1933), Fayyumic and Achmimic; supplemented by W. Till, *BJRL*, XLII (1959), 220-40. Much of the textual evidence, including important early MSS, remains unedited. The complete OT is not yet known in any dialect. P. Kahle (*ibid.*), pp. 269-74, gives a list of early MSS.

Textual affinities of the biblical versions: G. Mink, "Die koptischen Versionen des NT," in K. Aland, ed., *Die alten Übersetzungen des NT . . .*, ANT, V (1972), 160-299, surveys older works, none of which is satisfactory.

Ancient translation technique, Greek into Coptic: A. Jousen, *Die koptischen Versionen der Apostelgeschichte*, BBB, XXXIV (1969); G. Mink (*ibid.*); P. Nagel, "Die Einwirkung des Griechischen auf die Entstehung der koptischen Literatur," F. Altheim and R. Stiehl, eds., *Christentum am Roten Meer*, I (1971), pp. 327-55.

The Coptic evidence has been neither fully nor accurately quoted in critical editions of the Greek Bible; its value as a witness to the pre-Constantinian text should be obvious.

Modern Coptic: Pisenti Rizkallah, *Hanouelle enjô emberî* (1969), poems. The report, still often repeated, that Coptic somehow "survived" into the twentieth century at the village of Zenia Bahri near Luxor is dubious. The speakers in question are now reported to have been taught crude Bohairic by an enthusiast of the language revival movement. B. LAYTON

\*CORINTH. Recent study has stressed the Roman qualities of the community that Paul visited on the narrow Greek isthmus between extensions of the Aegean and Adriatic seas. When Corinth was refounded in 44 B.C., the Roman colonists may have chosen to locate the city center, or forum, on a site different from the place of the agora in the earlier Greek city. After the re-establishment, the datable inscriptions are predominantly in Latin rather than in Greek until the third decade of the second century A.D.

N of the forum two sets of primarily Roman remains have been excavated. In a gymnasium complex are two stoas which intersect at nearly right angles and a domed building. Of particular religious interest is a structure thought to be an

American School of Classical Studies, Athens  
5. The dining room at Lerna

underground bathing establishment started before the destruction of Corinth (146 B.C.) and repaired sumptuously with marble and frescoes during the early life of the Roman colony. With the partial collapse of the building in the late fourth century A.D., this apparently became a cult center, for people floated into the water basins enormous numbers of lamps, some inscribed with Jewish and Christian formulas. Further E, massive brick ruins belong to a Roman bath with marble paving and some mosaic decoration. Among the important rooms are a "cold-room" with recessed semicircular plunge baths at both ends and a "hot-room" whose floor was constructed to allow steam to circulate underneath.

S of the Roman forum, high on the sloping hill of Acrocorinth, a sanctuary of Demeter has been found, which lies on a terrace above the ancient road. Dating from the seventh and sixth centuries B.C., it has classical and Hellenistic phases that feature dining rooms lined with couches and places for washing and cooking. These are located on both sides of a staircase leading up the hill to a cultic area. Above the stairs bedrock was cut into tiers apparently to form theaters for religious spectacles in an area that was elaborately rebuilt during Roman times.

Northward on the E side of the Corinthian isthmus lies the important sanctuary of Poseidon, where the contests known as the Isthmian games were conducted for many years after their traditional founding in the early sixth century B.C. (see FESTIVALS, GRECO-ROMAN[S]). While Corinth remained in ruins (146-44 B.C.), the games were probably held elsewhere, but inscriptions confirm that Corinth regained control of them at the beginning of the first century A.D., when presumably their site became once again the Isthmian sanctuary. In the early Roman period men's athletic games were supplemented by contests in poetry and women's athletics. Games form the background when Paul mentions (I Cor. 9:24-27) that runners compete "in a stadium" and practice self-control to "gain a perishable wreath." A stone head carved with a victory crown of pine twigs has been found in the sanctuary. Structures at Isthmia in the later first century A.D. included a stadium, a temple of Poseidon dating from the fifth century B.C., a sanctuary of the legendary founder of the sanctuary—Melikertes-Palaimon—a theater, and cultic caves.

Considerable evidence illuminates the subject of pagan cultic meals at Corinth (see I Cor. 8; 10). Dining rooms with religious meanings were in use during the early Roman period in the Lerna-Asclepieum complex N of the forum of Corinth. In these dining rooms couches for reclining at meals were built along the walls. Bolsters were modeled to support the reclining diner's left elbow, while his right hand was free for eating. Tables stood near the couches, and a square block at the center of the dining room apparently supported a brazier for cooking. Facilities for dining have been discovered in originally natural caves in the Isthmian sanctuary not far from the temple of Poseidon and at the upper edge of the circle of seats in the theater. These caves were enlarged and divided into irregularly shaped chambers lined with dining couches used in the fifth and fourth centuries B.C. Cooking was done in forecourts, from which food was carried into the dining rooms. In the sanctuary of Demeter on Acrocorinth, more regularly square dining rooms like those in the Asclepieum continued in use from the sixth century to the second century B.C., although the practice of ritual meals may have been revived on the site during the Roman period. In the Greek epoch, worshipers would present animals, usually pigs, to be sacrificed, perform ritual cleansing, and then enjoy a dinner of fresh pork. Perhaps meals included as participants poorer devotees of Demeter who could afford as gifts only small clay figurines or brightly painted miniature pottery.

Corinth's later importance as the seat of the bishop of Achaia made it then as now a destination of pilgrims. At the harbor of Lechaeon N of Corinth, where the sea was said to have washed up the drowned martyr Leonidas and his seven women companions, an enormous basilican church was built. Not long afterward (A.D. 551) it was destroyed in an earthquake. Another church of the fifth century has been found, dedicated to Kodratos, a Corinthian martyr (d. A.D. 258). Remains of a sixth-century church have been found near the archaic temple of Apollo above the forum. See also CENCHREAE and CENCHREAE[S].

1. **Milieu.** In Paul's time Corinth was a relatively young city, having been refounded as a Roman colony in 44 B.C. (see CORINTH; CORINTH[S]). Interpreters of Paul's Corinthian correspondence have often exploited the alleged fame of Corinth as capital of vice, most of all of prostitution. Conzelmann, however, has shown that Corinth was not a center of sacred prostitution for Aphrodite even in classical times. Corinth's reputation was the result of propaganda disseminated from Athens, its major competitor in trade. The morals of Corinthians were no worse than those of any other Mediterranean city population in NT times. As in other cities the social, cultural, and religious mix was wide-ranging, and included Jews.

2. **Origins of the congregation.** Paul makes only general remarks about the founding of the congregation, so our knowledge is based mostly on Acts 18, according to which Paul came through Athens to Corinth in the winter of 49/50 and stayed there into the early summer of 51. He earned his own living there, collaborating with two Jewish refugees from Rome who were to become prominent members of the young church, AQUILA AND PRISCILLA (Acts 18:2, 18, 26; I Cor. 16:19). They later followed Paul to Ephesus, where they gained influence on a young Jewish Christian from Alexandria, Apollos, who according to Acts 19:1 and I Cor. 3:5-9 then came to Corinth, made converts of his own, and greatly influenced the young congregation. He stayed there only for a short time, probably returning to Ephesus (16:12). Apollos most surely had his own style and theology, but I Cor. 3 shows that Paul could see nothing in the work of Apollos which would contradict his own principles and ideas. On the contrary, Paul regarded him as a fellow worker (3:5-9; cf. 16:12). The names of other prominent Christians in Corinth are mentioned in 1:11, 14, 16; 16:15, and the Corinthians may have been partly organized into "house churches" (see 1:11, 16; 16:15). But certainly there was a common worship service at least every Sunday (16:2 identical with the one described in detail in ch. 14 and with the evening Eucharist in ch. 11). As in other Pauline congregations an extensive spiritual life and a communal contribution was encouraged for all members.

3. **Unity.** Attempts to reconstruct Paul's earlier letter to the Corinthians (mentioned in 5:9) from material in I Corinthians have not succeeded. The integrity of I Corinthians is not above question,

however: 10:1-22 (23) does not fit easily with its context, especially not with ch. 8, and the relationship of 5:10-13 to 6:9-10 is also difficult. But more than any other Pauline letter, the structural arrangement of I Corinthians has been influenced by the apostle's concern to answer directly issues that the readers have raised. This is sufficient to explain the lack of system and consistency. Part of the reason why Paul's answers and tone vary in different parts of the letter is probably the different status of the questions responded to (Hurd): some react to direct information and requests from the Corinthians, others are based on hearsay. The former tend to be answered more calmly, the latter more emotionally.

4. **Date.** Recent research has shown that Paul's letters may be dated earlier than previously held. I Corinthians probably was written from Ephesus in 53 or 54 in response to an inquiring letter from the Corinthians to Paul and a visit of people of Chloe's (household?) to Paul. Especially from Chloe's people Paul heard about divisiveness and factions in Corinth.

5. **Situation.** *a. Question of parties.* The question about the parties in Corinth and their place in early Christianity is still the most prominent problem in the discussion of the Corinthian correspondence. The names mentioned in 1:12 have not proven helpful in defining the contending groups, and there are no traces of real parties, only particular trends. In 1:12 Paul sharpens the issue reported by Chloe's people (1:11). He intimates that, by identifying themselves with particular leaders, the Corinthians are demonstrating their failure to define their collective identity.

*b. Emergence of differences.* The kerygmatic basis on which Paul founded the Corinthian congregation is still commonly agreed upon in Corinth (see esp. 15:1-5[8]; similarly, 11:23-25). But Paul, during his missionary stay, had encouraged a lively spiritual life (cf. also the description of the beginning in Galatia, Gal. 3:3). This had expressed itself in charismatic demonstrations (11:17; esp. ch. 14), the structural implications of which the Corinthians had to experiment with after Paul's departure. Meanwhile, Paul probably made his own further explorations in the still rather uncharted realm of experience which faith in Jesus called for and provided for.

Historians of early Christianity have often overlooked the fact that I, II Corinthians are not only our most extensive, but actually—and by accident—the only extant, continuous record of the development of a community of Jesus-believers during the first three centuries. Much of what happened in Corinth must have been ordinary in the growth of any charismatic community, extraordinary in our eyes only because we are deprived of the records of the early history of other similar communities. Paul did not give his congregations a blueprint of faith and life, but with them explored the possibilities and ranges of a living message and a living faith. Problems could not always be foreseen, and there was inevitably some learning by experience. His letters make it clear that Paul taught his congregations from the beginning that both kerygma and Scripture serve

as guides, but only through constant interpretation and reinterpretation. And that is what the Corinthians did.

One of the most obvious problems of collective identity was that of the degree of homogeneity within the Corinthian church itself. This was also closely related to the question of how the community was to be distinguished from the world.

*c. Previous exchange.* In the lost correspondence between Paul and the Corinthians (see 5:9 and 7:1) the problems of homogeneity and distinction were put as ethical questions, and I Corinthians in part still discusses them in that way. But the visit of Chloe's people had made Paul aware that at the base of the difficulties was an unresolved problem of communal self-understanding and its active functional expression in worship and organization. The preface and thanksgiving (1:1-9) reveal that Paul wants to discuss with the Corinthians the proper assessment of spiritual life.

*d. Trends of enthusiasm.* Paul refers back to his initial work in Corinth in 1:14-17 and especially in 2:1-5, and beginning in 2:6 he suggests that the proclamation of the Cross does not preclude the teaching of wisdom. It is understandable that the Corinthians, on the basis of Paul's closeness to the Jewish wisdom tradition (see WISDOM IN THE NT[S] §3c), would have drawn certain ideological and sociological conclusions from what he wrote about wisdom. The separation from the world of folly and the differentiation between teacher and students characteristic of wisdom teaching easily led in Corinth toward the adoption of an internal elitist structure and a dualistic notion of reality. The virus of Gnosticism, latent almost everywhere, was certainly more prominent in places like Corinth, where various cultural forces intersected. But the Hellenistic Jewish wisdom movement to which Paul had been exposed had already developed symptoms of the Gnostic fever, and the proclamation of the Jesus-drama could easily become a crystallizing factor for the emergence of a Gnostic consciousness, too. Its presence in the Corinthian congregation is evident. The emphatic use of the term "gnosis" (8:1-3) is the most immediate indicator, but there is also the interpretation of the spiritual experience as encouragement to communicate publicly with the angels (through speaking in TONGUES, ch. 14). This enthusiasm made these Christians claim freedom from death and from the restraints of corporeal bondage. Thus, the position criticized by Paul in ch. 15 is not the denial of the resurrection of Jesus, or even the denial of the Resurrection altogether; it is, rather, the denial of the future resurrection of the body (cf. the discussion of freedom in chs. 5-9, esp. in ch. 6). The body of Christ, a notion dear to Paul also, was interpreted by the Corinthians as the new heavenly reality (chs. 10-12). Although Paul himself thought very highly of baptism and the Eucharist, he did not regard the sacraments as magical conveyances leading immediately beyond history, where neither temptation nor responsibility exist, only the fruition of immortality (see IMMORTALITY[S]). Nevertheless, in a syncretistic age this was perhaps an understandable interpretation of the Easter

faith. The kerygmatic formula of the institution of the Eucharist (11:23 ff.) as well as various biblical exodus stories had served as the basis for an interpretation of the spiritual reality of sacramental life in Corinth which foreshadowed the later understanding of the sacrament as a medicine of immortality. The Corinthians tried to convert their congregation from an inconsistent mystery religion into a consistent one.

In his response, Paul uses critical expressions like "pretend" (author's trans.; Gr. δοκέω, 3:18; 8:2; 10:12), "boast" (1:29, 31; 4:7; esp. 5:6) and "puffed up" (φυσίω, 4:6; elsewhere in RSV "arrogant," 4:18, 19; 5:2; 8:1; or "boastful," 13:4). These are more than ethical metaphors. They, as well as the description of the pride of Paul's fellow believers in Corinth (4:6-21), literally (but critically) circumscribe the sense of transworldly elevation the Corinthians tended to gain from their enthusiasm. Because for them the degree of spiritual knowledge indicated the state of advancement in salvation, the Corinthians tried to differentiate between those more and those less advanced (especially with respect to the gift of speaking in tongues, ch. 14). This was not necessarily a reason for division, but this push upward could be seen by some as too fast and too far, and by others as too slow and too much hindered by the inferior believers. Thus there was discord between the strong and the weak (chs. 8-10). There is also an intimation (chs. 4, 9) that these enthusiasts had criticized Paul for not being sufficiently free and advanced, perhaps also for his holding them back.

*6. Paul's response. a. Collective identity.* In I Corinthians Paul tries to make the readers see that collective identity is their problem and that their fondness for religious fulfillment (even among the weak) in preference to the upbuilding of the community breaks the spiritual body asunder. The underlying theme here is the body of Christ, which Paul interprets corporately as the community of believers where, since Easter, the crucified Christ is alive. Paul can even identify the Christ and the body (12:12) as the Corinthians seem to have done. But instead of pursuing further the speculative intricacies of that mythical concept he slips suddenly to a more metaphorical treatment (12:14 ff.). Here the discussion is reminiscent of the political philosophy of the Stoics, who thought of society as an organism. Paul thus puts the body of Christ into everyday life, even giving a political aspect to the community of those who believe in Jesus.

*b. Gifts.* Paul radically democratizes the concepts of the body of Christ and of SPIRITUAL GIFTS. The Corinthians knew that spiritual gifts were the expression of life of the body of Christ. But Paul makes them see that all members have gifts and that all gifts are equal in rank and spiritual power. He also seems to have been the first to speak of spiritual gifts as gifts of grace (in 12:4 χάρισματα [RSV "gifts"] instead of πνευματικά [RSV "spiritual gifts"] in vs. 1), another attempt at diffusing the elitism of the enthusiasts, with their introspective concentration on the spiritual self. The main Pauline contribution to a reassessment of the

spiritual experience of the Corinthians is the emphasis on love (ch. 8, but esp. ch. 13). Not union with the deity, but the upbuilding of the community (serving one another in mutual understanding and respect) is the gift beyond all gifts.

**c. Revelation and its mediation.** Paul pursues his egalitarian interpretation of the Christ event as early as chs. 1-4, not only by emphasizing the self-humiliation of God in Christ, but also by depicting it as putting human pride to shame. He presents first himself and then (in ch. 3) Apollos also as ministering to the Corinthians. He dwells on the low social state of the Corinthian Christians (not as a requirement but as a symptom). He brackets his allusion to previous teaching of wisdom to the perfect (2:6-16) by critical references to the lowliness and foolishness of his work in Corinth (2:1-5) and by a sudden attack on the lack of spiritual achievement among the Corinthians (3:1-4). The point is that the very spiritual pride of the Corinthian enthusiasts betrays their continued worldliness. Paul argues that the democratization of wisdom teaching and spiritual experience is a sign of perfection, because it is the only way of reflecting the character of God's mysterious revelation in the cross of Jesus. Therefore the true apostle is not a superman but is exposed to weakness and humiliation in the ministry to the people (ch. 4).

**d. Ethical responsibility.** As regards the discussion of incest, the use of pagan courts for the settling of disputes among Christians, and traffic with prostitutes, Paul stresses the mutual and corporate responsibility. He even includes himself as a participant in the corporate experience (e.g., 5:4). There is no distinction between "inner" spiritual matters and other, "external," bodily matters. Everyone in the community of believers is a body and is constituted as such by the body of Christ.

Paul more than the Corinthians was influenced in his thoughts and actions by the expectation of the imminent PAROUSIA, as seen in his advice in ch. 7. However, Paul indicates that such an expectation does not require fleeing the world but, rather, facing historical conditions. Thus he suggests the unmarried state as being preferable, but he advises marriage in order to avoid fornication, and he counsels that mixed marriages be continued. He sees no harm in the practice of some who live together as couples without a sexual relationship, but he cannot ascribe to it much special spiritual value and suggests that the pair marry if the strain gets too strong (see MARRIAGE IN THE NT[S] §§1, 2; ETHICS IN THE NT[S] §3dii). Since for Paul the Parousia implies radical change he advises against any social change now. Given the imminence of the Parousia one can possess things as though one did not have them. This very drastic eschatological prefix to the social advice in ch. 7 has on the whole been overlooked in Christian ethics (and its criticism). It should not be translated directly into a general dialectic either.

**e. Role of women.** Paul agrees with the Corinthian enthusiasts that corporate worship includes the right of women to participate, even as

prophets. It is noteworthy that in ch. 11 Paul realizes that he has no solid argument for the veiling of women in the worship service. In his opinion, not even the idea of divinely ordained male superiority makes his argument strong enough, so he finally gives up arguing. The renewed discussion of the role of women in 14:33b-36, now demanding silence from women, is a second-century interpolation. The MSS show confusion, the passage does not really fit the context, and the position taken is not supported anywhere in Paul's authentic letters. See WOMAN IN THE NT[S] §2.

**f. Worship.** In discussing the LORD'S SUPPER Paul presupposes a communion meal prior to the Eucharist. But he deplores the fact that the meal had fallen into disrespect, allowing the social distinctions to show. He suggests, therefore, that the meal which was no longer truly communal be abolished, and that the Lord's Supper be celebrated after each had eaten at home. In this way the character of the Eucharist as the communal proclamation of Christ's death and the corporate anticipation of his return would again be clearly visible. In line with this notion of corporate worship and the emphasis on communal love, the open character of the Christian service is emphasized in ch. 14; here the outsider's understanding is the criterion for proper worship (vss. 16, 23-25). It is only natural that for Paul even the Resurrection is a collective phenomenon (ch. 15). Finally, he extends his plea for improved collective identity to the matter of the OFFERING FOR THE SAINTS (ch. 16). The interest in further and closer contact is pursued, and the strengthening of ties within the congregation and with the congregations in Asia is emphasized. At the close a portion of the eucharistic liturgy is quoted and this, coupled with the actual reading of the letter in the congregation, enables Paul's own active participation in its communal celebration. Thus, instead of communicating doctrinal information, this letter, in close touch with the actual dialogue in Corinth, tries to establish a correcting trend.

D. GEORGI

#### \*CORINTHIANS, SECOND LETTER TO THE.

**1. Unity.** The integrity of II Corinthians has been more successfully challenged than that of I Corinthians. The canonical second epistle appears to many to be a collection of fragments.

**a. 6:14-7:1** contains non-Pauline language and seems to interrupt the context. Its views are similar to those held by the Qumran sect (see Fitzmeyer; DEAD SEA SCROLLS; DEAD SEA SCROLLS[S]), and its

relationship to Christian faith is only superficial. The passage is probably non-Pauline, interpolated when the fragments of authentic Pauline letters were put together at a later date.

**b. Other discrepancies.** 2:14-7:4 (excluding 6:14-7:1) interrupts a discourse which opens in 2:1-13 and continues in 7:5 ff., and whose tone, style, and argument are rather different. The relationship between chs. 7 and 8 is also problematic; ch. 7 does nothing to prepare for the collection for the Jerusalem church, which dominates ch. 8, and ch. 8 does not pick up the reconciliation theme of ch. 7. Moreover, in ch. 7 Titus seems to have just returned from Corinth, but in ch. 8 he is on the brink of leaving for Corinth, taking ch. 8 with him (8:6, 16-24). Next, ch. 9 takes up the issue of the collection as if it had not been discussed previously, and seems to be addressed to people in the province of Achaia, not merely to the Corinthians (as had ch. 8); the delegation of ch. 8 (see 8:16-24) seems already to have departed (see 9:3-5). Finally, chs. 10-13 do not connect well with any of the previous sections. First, the sudden change in tone and style sets them completely apart. The discussion is harsh, whereas in 1:1-2:13; 7:5-16; and ch. 8 (ch. 9 does not pertain to the Corinthian problems) the opposition seems to have been already overcome. Second, the topic is different, and chs. 10-13 do not provide a suitable completion of the plea for the collection for Jerusalem (ch. 8).

**c. Sequence.** The following order explains best the various discrepancies noted above, as well as the particular events reflected in II Corinthians.

Letter A 2:14-7:4 (excepting 6:14-7:1 as non-Pauline)

Letter B chs. 10-13, most probably the letter mentioned in 2:4 and 7:8 (where only the emotional circumstances of the drafting are hinted at; no summary is given)

Letter C 1:1-2:13; 7:5-16

Letter D ch. 8

Letter E ch. 9

**d. Genres.** The five fragments of II Corinthians represent as many different genres. A is close to the political speech; B is modeled after the philosophical apology (Betz), showing strong forensic elements and the use of the genre of the fool's speech of the Hellenistic mime in 11:1-12:18; C follows the genre of ordinary correspondence; D is a letter of recommendation with an elaborate preface; E is a homiletical tract.

**2. A reconstruction of probable events.** After dispatching what is our I Corinthians, and after Timothy's visit (announced in I Cor. 4:17 and 16:10), Paul decided to modify his earlier plans (I Cor. 16:3-9) and sent Titus to Corinth in order to speed up the collection for Jerusalem. This was done, apparently with the collaboration of the Corinthians (II Cor. 8:5, 10; 9:2; 12:18). After that visit events occurred in Corinth which made Paul change his plans completely. Christian missionaries of Jewish origin (11:22), who were also apostles (11:5, 13; 12:11), arrived in Corinth (3:1; 11:4) and took the Pauline congregation as the operational base for their activity. They exploited the

admiration they seem to have found, and sowed new doubts in the hearts of the Corinthians about Paul's competence and authority.

Paul responded with Letter A, which tries to persuade the Corinthians to remain on his side. This attempt, however, was unsuccessful, so Paul decided to visit Corinth in person. The visit proved to be even more of a disaster (2:1 ff.; 7:5 ff.; 12:14; 13:1). The opposition in Corinth was at its peak, and one particular member of the congregation attacked Paul ruthlessly (2:5; 7:12). After leaving Corinth, Paul sent Letter B, in which he took the Corinthians to task (and through them the outside agitators). Titus was sent to Corinth again (2:12-13; 7:5-7), but before he returned Paul was arrested and remained in jail for several months (see 1:8-11). The Philippian correspondence was most probably written during this period (see PHILIPPIANS, LETTER TO THE §D and supplementary article §1). After his release from prison Paul hastened first to Troas, then to Macedonia, in order to meet Titus as soon as possible (2:12-13). The meeting took place in Macedonia, where Paul learned that the situation in Corinth was much improved (7:5-16). Just two things still needed clarification: the degree of punishment for the person who had offended Paul and the reason for Paul's failure to visit Corinth both on his way to, and then again on his return from, Macedonia (see 1:16). To respond to these two questions Paul wrote Letter C (see 1:17-2:4; 2:5-11).

Subsequently, Paul found Titus willing to resume the collection for Jerusalem in Corinth, and Titus was sent there, along with two other delegates and Letter D. After their departure Paul decided to send an extra letter, this one to Christians in the entire province of Achaia (Letter E). Finally, Paul himself visited Corinth again, and stayed there for several months (hinted at in Acts 20:2-3).

**3. Dates.** Absolute dates are not easily determined (see CHRONOLOGY, PAULINE[S]), but the events and correspondence outlined above could admit of the following dating.

54 Letter A written from Ephesus (summer); a visit by Paul to Corinth; Letter B written, also from Ephesus

54/5 Paul in prison in Ephesus (winter)

55 Paul in Troas and Macedonia (spring); Letter C written (late spring or early summer); Letters D and E written concerning the collection (summer or early fall); Paul visits Corinth again (late fall)

**4. Opponents.** The apostles that Paul attacked in II Corinthians had evidently been influenced by the ideology and method of Hellenistic Jewish propaganda, and now centered their message on Jesus ("another Jesus" in 11:4). Note the emphasis on the name "Jesus" in 4:10-14 and the attack on knowing Christ according to the flesh in 5:16. They were legitimate Christian missionaries, as their titles proved (11:5, 13, 23), but they retained their Hellenistic Jewish tradition (11:22; ch. 3), which was, as the Jewish apologists show, a very inclusive one. Their tradition from Moses to Jesus was seen as a storehouse of the Spirit, and the overwhelming spiritual power with which

these missionaries preached allegedly proved the superiority of the religion they propagated.

In ch. 3 Paul tries to break this positive relationship between the Spirit and the tradition. His opponents seem to have regarded allegorical exegesis as the key to the treasures of the Spirit stored in the tradition; that is what they understood by turning "to the Lord" (Lord= Spirit, 3:16-17). Allegorical exegesis itself demanded skill, but it might also have afforded transcendental experiences. In any case, ecstasy and other extraordinary and miraculous achievements were seen as necessary to the competence of these missionaries (12:1-12). In this they resembled many similar "divine men" on the contemporary scene (see DIVINE MAN[S]), especially those missionaries who sought to prove the spiritual superiority of their particular religions. Naturally, the older the religion the better, because the greater number of "divine men" in its tradition could be claimed as evidence of its greater power. So for Paul's opponents in Corinth the preservation of close ties with the Jewish tradition and ancient figures like Solomon, Elijah, and—most of all—Moses, was essential. They were also keenly interested in the Jesus tradition, because it provided the major link between themselves and the spiritual power figures of the past. Paul charges these current itinerant missionaries with having "a different spirit" (11:4), and what they allege as a faithful imitation of the example of Jesus, Moses, etc., as miracle workers, Paul attacks as bragging and self-recommendation. For their part, the opponents find it easy to denounce Paul's own claims as mere self-recommendations, because objective testimony to the presence of the authenticating power of the Spirit in Paul seems lacking.

The opponents, presumably interested in the public acknowledgment and recording of their accomplishments, requested and used letters of recommendation (3:1). These gave them continuous proof of their spiritual status in the missionary competition and helped them gain followers. As Paul intimates, most of all in ch. 10, the competition was not only with missionaries of other religions, but also and first of all with fellow Christian missionaries. This certainly involved the need for continuous objective demonstration of one's competence, and it also cast the audience in the role of judges who would give public acknowledgment through remuneration and recommendation. Paul's refusal to accept letters of recommendation (3:1-3) or remuneration (11:7-15; 12:13-18) from the Corinthians could be taken as a sign of his incompetence, or as an insult to his audience.

5. Paul's response. *a. Letter A (2:14-7:4, excepting 6:14-7:1)*. The Corinthian enthusiasts could be attracted to the intruding apostles because the high value that these apostles put on spiritual demonstrations and accomplishments appealed to their interest in objective spiritual experiences. But Paul notices that differences exist between the invaders and the trend-setters in the congregation, and he gets at the root of it in Letter A. He tries to drive a wedge between them by pointing out that if the Corinthians would remain true to their

dualistic (Gnosticizing) premises and their interest in the transcendental character of revelation, they would stay with Paul. For this reason he stresses the antithesis between letter (tradition) and Spirit, the old and the new (3:6-18; 5:17), darkness and light (4:4-16); he also emphasizes the role of Christ as the revealer (3:18 and 4:4, 6; 5:18-21) and presents a rather dualistic anthropology (4:7-18; 5:1-10). He does not even shy away from a description of Satan which anticipates Marcion (see Gnosticism[S] §4a), "the god of this world" (4:4, all the more striking since the description of Satan's activity is here made parallel to that of Moses in 3:13). But Paul is careful to point out how this relates to the dialectic of the Cross and Resurrection, and how it calls for humility and responsibility in both the messengers and their audience. In this way he takes up again the points he made in I Corinthians, but with a new approach.

*b. Letter B (chs. 10-13)*. Pushed into a corner, Paul reacts in an almost autobiographical fashion. He stresses even more than in the previous letter that life-style and theology reflect each other. His refraining from the display of power is not cowardice, but God's sovereignty working through him (ch. 10). In the fool's speech of chs. 11-12 Paul opens himself up to ridicule, but he emphasizes that to ridicule him would be to ridicule Christ, because Paul in his weakness imitates Christ. As a fool in Christ, and only as such, he conveys his power. At the end of Letter B Paul warns that another visit by him could turn judgmental, but he still hopes for reconciliation and further constructive work.

*c. Letter C (1:1-2:13; 7:5-16)*. Because Titus has returned with good news (7:5-7, 13-16) Paul first treats the issue of continuous consolation. Next he deals with the major grudge the Corinthians hold against him: the change of travel plans. This did not imply a change of intentions, but was an affirmation of God's constancy and meant to spare the Corinthians another painful, if not destructive, experience. Paul then admonishes the Corinthians not to overcompensate for their previous opposition by crushing the one who had offended Paul, but rather to accept him again into fellowship (2:5-11; again in 7:8-12).

*d. Letter D (ch. 8)*. This is a letter of recommendation for Titus and two other delegates who are to make renewed efforts to take a collection in Corinth. Paul reminds the Corinthians of similar efforts by the Macedonians and of the spiritual gifts they themselves had received.

*e. Letter E (ch. 9)*. To the Christians in Achaia Paul describes the collection as a response to blessings received, as a demonstration of their wisdom and justification, and as a display of universal fellowship in the concrete celebration of thanksgiving.

\*CORINTHIANS, THIRD LETTER TO THE. See APOCRYPHA, NT[S] §1.

\*CORRUPTION, MOUNT OF [הר המשוהית]. A mistaken translation of the name for one spur of the Mount of Olives, where Solomon built shrines to foreign deities (II Kings 23:13; cf. I Kings 11:7), properly translated "the mountain of the Destroyer," referring to a deity worshiped there. See OLIVES, MOUNT OF §2.

1. **Identity of the Destroyer.** "The Destroyer" is a mythological figure found widely in the extant literature (Exod. 12:23; possibly also Jer. 51:25; Isa. 54:16; Prov. 18:9 [reading נשחית כשחית as "Lord Destroyer"]; Wisd. Sol. 18:25; I Cor. 10:10; Deut. Rabbah 3:11). The Destroyer may have been identified with Molech, the god of the Ammonites, and Chemosh, the god of Moab, since their sanctuaries existed on his mountain throughout the monarchical period. They were regarded as West-Semitic manifestations of the Assyro-Babylonian god of death and the netherworld, Nergal. The identification, Chemosh=Molech=Nergal, all of them underworld deities, is seen from a number of considerations: (a) Both Chemosh (II Kings 3:27) and Molech (II Kings 23:10; Jer. 32:35; Lev. 18:21; 20:1-5) were worshiped by the burnt sacrifice of children. One of the Sumerian titles of Nergal was (*Ē*)-*gir*-*kù*, "pure (or sacred) oven (or stove)," and one of his Akkadian titles was *Sharrapu*, "he who burns (others)." These suggest that Nergal also received human sacrifice. (b) In Judg. 11:24 Jephthah, in addressing Ammonites, calls Chemosh "your god," suggesting the identity of Chemosh with Molech. (c) Directly W of the S end of the Mount of Olives is the valley of Hinnom, a place where Molech was worshiped (II Kings 23:10; Jer. 32:35; cf. II Chr. 28:3; 33:6; Jer. 7:31-32; 19:2, 6; Josh. 15:8; 18:16); the name of this site became the name for the underworld in Hebrew, Greek, and Arabic. (d) According to the Koran (Sura 43: 74-77), the ruling spirit in hell was called *Mālik*, a name etymologically identical with Molech. (e) The Assyrian god list VAT 10173 gives the identification "Malik is Nergal," while the list K. 4349 identifies Nergal with many other deities including *Ka-am-muš*, i.e., Chemosh. Thus the identification Chemosh=Molech=Nergal seems established. That this deity can be called the Destroyer is seen from the large mass of material about Nergal from Mesopotamian sources.

2. **Character of the Destroyer.** The character of Nergal is both benevolent and malevolent. Hymns to Nergal represent him as one whose counsel and insight are sought by other gods; he is "gracious," "compassionate," "full of forgiveness." He can be invoked to exorcise malevolent spirits. More characteristically, however, Nergal is the god of death and the underworld; he is a mighty warrior, a furious demon, a sword, a hero among the gods, who is manifest as the raging stormtide, the great bull, the lion clothed in terror, the bringer of

disease and pestilence. Nergal is the "Lord, who goes around by night, to whom locked doors open by themselves." Repeatedly Nergal is invoked in curses to bring misery, pestilence, calamity, defeat, disease, death. He is the fearful god of the netherworld, "the dreadful land," "the great city" to which all the dead must ultimately go. Such an awesome, terror-inspiring deity can quite naturally be called the Destroyer.

3. **The mount in the OT.** The cult of Chemosh-Molech-Nergal may have been imported to the Mount of Olives during the time of David. II Sam. 15:32 may be translated to say that this is where "he customarily worshiped gods." In accord with general Semitic custom, David perhaps felt it appropriate to reverence the gods of Moab and Ammon in advance of launching campaigns of conquest against them. The rationale for this practice was that, since the national gods were conceived as protectors and rulers of the nation who appointed earthly rulers to administer affairs in their names, an intended conqueror could hope for success in conquering a land only if he first befriended the deity of the land. When Solomon built shrines on the Mount of Olives to Chemosh and Molech (I Kings 11:7), he was not then importing a new cult but was only providing a permanent sanctuary for these gods much as he did for Yahweh on the temple mount.

Once the cult had been established on the mountain, the mythic matrix appropriate to the worship of Nergal saturated the popular mind so that even Josiah's violent purge of worship on the Mount of Olives (II Kings 23:13) was quite ineffectual as an effort to remove elements of the netherworld cult. For example, the strange vision of Zech. 14: 1-4, in which the Mount of Olives is split asunder and a great cleft appears between the two halves of the mountain, may reflect elements in the Nergal mythology. Zechariah's cleft in the mountain was meant to represent an exit from the netherworld for the resurrection of the dead. This interpretation is seen in a mural from the synagogue at Dura-Europos (see ART, EARLY JEWISH[S] §2), which combines Ezekiel's vision of the valley of dry bones (Ezek. 37) with the cleft in the mountain motif. Fragmentary bodies appear to be proceeding from the cleft in the mountain to be assembled and revived. See Fig. C6.

4. **The mount in the NT.** The god Nergal was, in the Yahwistic tradition, demoted to the rank of demon and became the Destroyer, perhaps the one who went about on the night of Passover

6. Ezekiel's vision, from the Dura-Europos paintings

to slay the first-born of the Egyptians (Exod. 12: 23). Thus it is appropriate that Jesus on the night of his arrest—Passover evening, according to Mark—should retire to the Mount of Olives, the mountain sacred to the god of death, to become reconciled to death (Mark 14:26-42).

The gospels (Mark 13; Matt. 24) record that on the Mount of Olives Jesus pronounced the doom of the city of Jerusalem. This act reflects an ancient tradition of denouncing the city from the mount (cf. Ezek. 11:23; Jos. War II.xiii.5; Antiq. XX.viii.6). Possibly this tradition reflects the old cult of the netherworld god: one may, while standing on the mountain, consign the city to the powers of the god of devastation.

Finally it should be noted that Jesus ascended into heaven from Bethany, a village on the E slope of the Mount of Olives (Luke 24:50-51; Acts 1: 9-12), a motif possibly intended to proclaim Jesus' victory over the powers of death that were thought to inhabit the mountain.

\***COTTON.** The only unequivocal reference to cotton in the Bible is Esth. 1:6. Its use suggests the rare exotic grandeur of King Ahasuerus' palace, since cotton fabric was not widely used in the ancient Near East. In fact, Esth. 1:6 contains one of the few literary references to the use of cotton in that region before the Christian era.

The RSV has translated the word חוּרִי, "white [cloth]," in Isa. 19:9 as "white cotton," assuming the existence of a cotton industry in Egypt. That translation appears open to question on the basis of what is presently known about the history of cotton.

Wild cotton is indigenous to semiarid regions of the tropics and subtropics. At a very early date, the cotton plant was introduced to the Indus Valley from whence knowledge of its practical uses spread slowly throughout Asia. The prehistoric site of Mohenjo-Daro (ca. 3250-2750 B.C.) has yielded samples of early cotton fabric, and continued use in the historical period is well attested. It is frequently mentioned in the "Laws of Manu" (ca. 800 B.C.).

Harsh climatic conditions apparently inhibited northwestern migration of the cotton industry. Nevertheless, the annals of King Sennacherib of Assyria (705-681) document his attempt to introduce cotton to Nineveh. The cotton plants, for which there was apparently no Akkadian name, were described as "trees bearing wool," which "they plucked and wove as garments." Sennacherib's experiment seems to have had no lasting result. There is no further literary or archaeological evidence for the use of cotton in the Near East until the Persian period.

Herodotus (fifth century B.C.) mentions the wool of trees in describing two rare linen corselets presented as gifts by the Egyptian King Amasis

(569-525). The corselets were embroidered with gold thread and cotton. Whether the garments were from India or Nubia, the description implies that cotton was a rare commodity. A cotton industry was attested by Theophrastus in Bahrein on the Persian Gulf and in Arabia by the beginning of the third century B.C. The earliest evidence for cotton cloth in Africa is provided by charred fabrics found at Karnog in Nubia, dating from the Roman period. Evidence for the use of cotton in Egypt proper is post-Christian, and hence too late to satisfy the RSV reading of Isa. 19:9.

**COUNCIL, HEAVENLY.** The concept of a council or an assembly of divine beings sitting together with Yahweh, discussing and making decisions concerning affairs of heaven and earth, is clearly presented in the language and imagery of the OT. The concept is represented by *sôdh* (סוּד) in Jer. 23:18; Ps. 89:7 [H 8]; Job 15:8 and 29:4 (RSV "friendship"). It appears in the word 'êdhâ (עֵדָה) in Ps. 82:1. The Divine Assembly or Heavenly Council is also referred to by the term אֱלֹהִים בְּנֵי, "the sons of the Gods," or "the divine beings," in Ps. 29:1, and by the synonymous designation בְּנֵי הָאֱלֹהִים in Job 1:6 and 2:1. The Heavenly Council is also referred to by implication in Gen. 1:26 and 11:7, as well as in Exod. 15:11. See SONS OF GOD; HOSTS, HOST OF HEAVEN.

Another designation is *q'dhōsim* (קְדוּשִׁים), the Holy Ones) appearing simply or in combination as קהל קדושים, עדה קדושים, סוּד קדושים, all meaning "The Assembly of the Holy Ones" (Prov. 9:10; 30:3; Ps. 89:5, 7 [H 6, 8]; Job 5:1; 15:15). As over against this concept of the Heavenly Council, there is the antithesis of "the Assembly of the Shades of the Dead," or the Council of the Netherworld, which is found in the words קהל רפאים of Prov. 21:16. See DEITIES, UNDERWORLD[S].

This concept of a heavenly assembly is rooted in the oldest traditions of the Near East. It appears most dramatically in the Mesopotamian and Hellenic concepts of the universe as a state, a projection of earthly political experience onto the ideal plane of eternity (Jacobsen). The state in Sumer and Babylonia consisted of the entire society governed by an assembly of the most powerful individuals. By extrapolation, the Mesopotamian conceived of the whole universe as being governed by an assembly of the immortals who were manifest in those natural forces whose power inspired the Mesopotamian with awe, and whom he therefore viewed as his "gods."

Mesopotamian literature describes the assembly as the highest authority in the universe. Here the momentous decisions regarding the course of all things and the fates of all beings were made and confirmed. Before that stage was reached, however, proposals were discussed, perhaps even heatedly, by gods who were for or against them. In the

early period the leader of the assembly was the god of heaven, Anu.

The concept of the gods in council, with a king of the gods at their head, is clearly presented in the literature of ancient Greece. The gods of Olympus, gathered in council with Zeus presiding and commanding obedience, is a scene which appears frequently in the Homeric writings (e.g., *Iliad*, VIII,1-40 and XX,1-30).

Closer to the biblical milieu are the writings of UGARIT, reflecting the religious ideas of Canaan. There the council of the gods is portrayed, with "El, the Father of Years," reigning as king (see EL, DEITY[S]). The council of the gods in session appears most clearly in the BAAL epic.

The Ugaritic term for the assembly of the Gods is 'dt ilm (UT 128:II:7, 11), identical with its Hebrew cognate 'dt El of Ps. 82:1. A second, synonymous term used in the Ugaritic epics is p̄r ilm (UT 2:17, 34; 51:III:13-14).

The Heavenly Council appears, therefore, to have been a common concept in the ancient Near East, with almost identical structure and function in the views of the earliest Mesopotamian society, in early Canaan, in Homeric Greece, and in biblical Israel.

The prophet Jeremiah (23:18, 22) speaks of the false prophets as not having the word of Yahweh, since they have not stood in his council (סוד). It is not certain from this passage, as some claim, that the true prophets did receive their inspiration and knowledge from the council of Yahweh. See I Kings 22:19-23.

The idea of a Heavenly Council appears numerous times in the literature of the Dead Sea Scrolls. There the terms עדה and סוד, both in reference to the community of the faithful as well as to the Heavenly Council, figure prominently in their apocalyptic declarations.

There is a distinct difference between the biblical treatment accorded this concept and that of contemporary sources. Whereas other sources assume a polytheistic council with each member an autonomous manifestation of a force in nature, the biblical literature, consistent with its tendency to eliminate "pagan" concepts, reduces the "gods" to mere servants of Yahweh. At most, the concept of the Heavenly Council is a literary fiction to dramatize Yahweh's thought, using the analogy of a human king surrounded by his courtiers.

**\*COURAGE. 1. Courage in Greek philosophy.** A prominent virtue among the Greeks, courage was distinguished from fearlessness (which is sometimes the result of nature or even ignorance); in some cases, a healthy fear of moral evil is to be valued. Plato (*Republic* IV.vii) insists that the guardians of the city, who must possess this virtue above all others, should acquire it by learning the difference between those things which ought to be feared and those which ought not to be feared. Aristotle (*Nicomachean Ethics* III.vi-viii)

sees courage as the mean between rashness and cowardice and isolates five types of spurious courage. True courage is closely allied with temperance. Just as the temperate man is one who forgoes certain pleasures for the sake of achieving a greater good, so the courageous man is one who endures pain or hardship, or overcomes his fears, in order to achieve his aim. Courage was linked with wisdom (or prudence), justice, and temperance (cf. *Wisd. Sol.* 8:7) to form the four cardinal or basic virtues, to which the church Fathers added the three theological virtues of faith, hope, and love.

**2. Courage in the NT.** No NT writer uses the characteristic Greek word for courage (ἀνδρεία). Moreover, none of the synonyms are present in any of the NT catalogues of virtues, and none of them are ever used in any specifically theological sense. Perhaps this is due to the fact that the concept of courage in secular Greek was so often connected with war and the military hero, or because the popular idea of courage allowed no place for humility or dependence on God. Be that as it may, the ideal of courage is certainly exemplified by the life of Jesus and the bold witness of his apostles (see BOLDNESS; BOLDNESS[S]). Thus steadfastness in the face of persecution and temptation is a cardinal Christian virtue (*Rom.* 5:3-4; *I Pet.* 2:19-21; *Heb.* 12:2), and some are called to give their lives for the sake of the testimony of Jesus and the Word of God (*Rev.* 7:14; 20:4). According to *Rev.* 21:8, "the cowardly" (δραίλοι) are among those excluded from the new Jerusalem.

**1. The promise of a dynasty and the choice of Zion.** The divine promise to establish a dynasty for David is found for the first time in Nathan's oracle in II Sam. 7, following the account of the transfer of the ark to Jerusalem (ch. 6). The juxtaposition of these two chapters is to indicate that it was David's devotion to the Lord and his abode that brought about the promise of eternal grace for David. Furthermore, from ch. 7 we learn that David not only provided for the transfer of the ark, but also wanted to build "a house of cedar" for it (vs. 2). The Lord appreciated this wish (cf. I Kings 8:17-18) and as a token of gratitude promised to build "a house," i.e., a dynasty, for David while declining the offer to have a temple built for himself.

A similar juxtaposition is encountered in Ps.

132. We read about the oath of David that he will not rest until he has found a dwelling place for the Lord (vss. 2-5). This is followed by an oath of the Lord to establish the throne of David forever (vss. 11-18). The promise to David is modeled after the "royal grant" which was generally bestowed upon the servant who proved his loyalty and devotion to his master. The grant to David was, then, a response to his devotion: "O, Lord, count in David's favor his great self-denial" (vs. 1, NJV; cf. II Chr. 6:42, NEB).

There is indeed a strong connection between the founding of the Davidic dynasty and the establishment of an eternal seat for God and his ark in Zion. That the Davidic dynasty cannot be separated from Zion may be deduced from Ps. 132, where we read: "The Lord swore to David . . . 'One of the sons of your body I will set on your throne. . . . Their sons also forever shall sit upon your throne.' For the Lord has chosen Zion; he has desired it for his habitation" (vss. 11-13). The establishment of the dynasty is then motivated here by the choice of Zion as the Lord's abode.

2. The covenant and its terminology. The word ברית, "covenant," is not mentioned in Nathan's oracle, although it is implied there in the word חסד (II Sam. 7:15), "grace," which is synonymous with ברית (see §3 below). A covenant sworn to David is, however, explicitly attested in various poetic sources. Thus, we find in the so-called "David's last words": "He has made with me an everlasting covenant (ברית עולם)" (II Sam. 23:5); in Ps. 89:3 [H 4]: "I have made a covenant with my chosen one, I have sworn to David my servant"; and in Jer. 33:20-21: "If you can break my covenant with the day and . . . night . . . then also my covenant with David my servant may be broken." In Ps. 132 the word "covenant" is missing; however, the oath mentioned there has undoubtedly no less power than ברית (ברית and שבועה or אמה actually constitute a hendiadys; cf. also Ps. 89:19-37 [H 20-38]; II Chr. 7:18; 21:7).

Although some of these sources are quite late, especially Jer. 33 and Chronicles, we have no right to dispute the antiquity of the concept involved, i.e., a sworn obligation by God to preserve David's dynasty. II Sam. 23:1-7 is certainly old, and Ps. 89, although later than II Sam. 7, was also crystallized during the monarchy.

As indicated above, the term for God's pledge for the Davidic dynasty in II Sam. 7 is חסד, "grace" (vs. 15), but one finds there also the terms שובה, "favor" (vs. 28 and compare I Sam. 25:30) and דבר, "word" (vss. 25, 28). All these terms denote "covenant" in the Bible as well as in Akkadian (see below) and Aramaic sources (עדיא ושבתא, cf. TWAT, I, 786-87). Ps. 89 uses for the Davidic covenant besides ברית and חסד the word אמונה, "faithfulness." The latter, which means literally "firmness," connotes covenant in Hebrew as well as in Akkadian (TWAT). Moreover, אמונה and חסד are the key terms for the Davidic covenant in Ps. 89. They occur SEVEN times in this psalm—a significant number—and in fact are rooted in the image of "enduring grace" (author's trans.) which prevails in II Sam. 7:15-16. The endurance of the Davidic dynasty comes also to expression in Isaiah's

prophecy. Ahaz, who is afraid of his enemies who want to overthrow the Davidic government, is addressed by Isaiah with the words: אִם לֹא תִאֱמִינֵנוּ כִּי לֹא תִאֱמָנוּ "If you will not believe, you surely will not endure" (7:9).

The Davidic covenant represents a gracious promise by God which is not subject to any condition (see §5 below) and therefore fits the terms "grace" and "favor," in contrast to the Sinaitic covenant, which mainly involves obligations of the people and therefore is defined as ברית and never as חסד (see COVENANT; COVENANT, MOSAIC[§]). The Davidic covenant is also called הברית והחסד (I Kings 8:23), which should be understood as "gracious covenant." The same expression serves as a definition of the Abrahamic covenant, which, like that made with David, represents the gracious promise of the gift of the land (cf. Deut. 7:12 [RSV "covenant and steadfast love"]).

3. Davidic and Abrahamic covenant—an analogous typology. The covenant with David constitutes a pledge given by God to establish David's dynasty forever and is typologically similar to the covenant with Abraham, which is an oath by God to give his children the land of Canaan forever. Both covenants are diametrically opposed to the Mosaic covenant, in which the people pledge loyalty to God. The Abrahamic and Davidic covenants are then a promissory type, while the Mosaic covenant is an obligatory type. The promises of God in the Abrahamic and Davidic covenants are given unconditionally, and this is especially prominent in the David covenant. The unconditionality of the gift is explicitly stated: "I will establish his royal throne forever. I will be his father and he shall be my son. When he does wrong I will punish him as any father might and not spare the rod, but my grace will never be withdrawn from him" (II Sam. 7:13-15, author's trans.). By the same token, the covenant with the patriarchs is considered as valid forever (עד עולם). Even when Israel sins and is being severely punished, God intervenes to help, because he "will not break his covenant" (Lev. 26:43-45). See PROMISES TO THE PATRIARCHS[§].

Like the royal grants in the ancient Near East, the covenants with Abraham and David are gifts bestowed upon individuals who distinguished themselves by serving their masters loyally. Abraham is promised the land because he obeyed God and followed his mandate (Gen. 26:5, cf. 15:6-7; 22:16-18), and similarly David was given the grace expressed in a dynasty, because he served God with truth, righteousness, and loyalty (I Kings 3:6; 9:4-5; 11:4, 6; 14:8; 15:3). The terminology employed in this context is very close to that used in the Assyrian grants. In the grant of Ashurbanipal to his servant we read: "Baltaya . . . who was devoted (lit., whose heart was whole) to his lord, served me with faithfulness, walked in perfection in my palace . . . and kept the charge (išsur maṣṣarti) of my kingship . . . I considered his good relations with me and decreed a gift for him" (Postgate, No. 9:11 ff.). Identical formulations are to be found in connection with the promises to Abraham and David. With regard to Abraham it is said that he "kept my charge," וישמר משמרת

(Gen. 26:5); walked before God (24:40; 48:15); and was expected to "be blameless" (17:1). David's loyalty to God is couched in phrases which are even closer to the Assyrian grant terminology: "he walked before God in truth, loyalty, and uprightness of heart" (I Kings 3:6); walked after God "with all his heart" (I Kings 14:8), etc.

"Land" and "house" (=dynasty), the subjects of the Abrahamic and Davidic covenants, are the most prominent gifts of the suzerain in the Hittite and Syro-Palestine realms; the Hittite grants, like the grant of land to Abraham and the grant of "house" to David, are unconditional. The Hittite king says to his vassal: "After you, your son and grandson will possess it, nobody will take it away from them; if one of your descendants sins, the king will prosecute him, . . . but nobody will take away either *his house or his land* in order to give it to a descendant of somebody else" (*KBo IV, 10, obv. 8-14*).

A Hittite grant typologically similar to the grant of dynasty to David is to be found in the decree of Ḫattusilis concerning Mittannamuwa, his chief scribe:

"Mittannamuwa was a man of grace (*kaniššanza UKÜ-aš*) to my father . . . and my brother Muwatali was [kindly] disposed to him, promoted him (*kanešta . . . parā hūitijāt*) and gave Him Hattuša. My grace (*aššul*) was also shown to him . . . I committed myself for (*šēr memijahhat*) the sons of Mittannamuwa . . . and you will keep (*paḫḫašadumat*) . . . and so shall the sons of my Sun and the grandsons of my Sun keep. And as my Sun, Ḫattusili, and Puduhepa, the great queen, were kindly disposed (*kanešta*) towards the sons of Mittannamuwa so shall be my sons and grandsons. . . . And they shall not abandon the grace (*aššulan anda lē dalijanzi*) of my Sun. The grace and their positions shall not be removed" (*ueḫ*). (Goetze, *Ḫattušiliš*, pp. 40 ff.)

Like Hebrew חסד/בונה/חסד, Akkadian *tābtu/damiqtu*, and Aramaic כנשתא, Hittite *aššul* and *kannesuḫar* connote kindness and covenantal relationship. As in the case of David, so in the Hittite grant the promise is to be "kept" (שמר) with the future generations of the devoted servant, i.e., "the man of grace" (cf. חסדיך in Ps. 89:19 [H 20]). The most striking parallel to the promise of David is the last sentence: "The grace and their positions shall not be removed." (*Anda daliija* equals Akkadian *ezēbu*=Hebrew עזב which is often employed in connection with חסד/אמת or חסד, while *ueḫ*—"turn away" (remove)—equals Hebrew סור which appears in II Sam. 7 in a phrase similar to that of the Hittite grant למנוג לא יסור ממנו, "and my grace shall not turn away from him" (vs. 15).

Similar imagery is to be found in the Assyrian grants, for example in a passage of the document quoted above:

"I am Aššurbanipal . . . who does good (*ēpiš tābti*) . . . who always responds graciously to the officials who serve him and returns kindness (*gimilli dumqi*) to the officials who serve him and returns kindness (*gimilli dumqi*) to the reverent (*pāliḫi*) who keeps his royal command (*nāšir amāt šarrūtišu*) . . . PN a man of kindness and favor (*bēl tābti bēl dēqti*), who from the succession to the exercise of kingship served wholeheartedly his master, I took thought of

his kindness and decreed his gift. . . . Any future prince from among the kings my sons . . . do good and kindness (*tābtu damiqtu ēpuš*) to them and their seed. They are friends and allies (*bēl tābti bēl dēqti*) of the king their master." (Postgate, No. 9, pp. 27 ff.)

Like the Assyrian king who, prompted by the kindness of his servant, promises "good and kindness" (*tābtu damiqtu*) to his descendants, so does Yahweh to the offspring of David and Abraham; he keeps his covenant and grace (חברית והחסד) to the coming generations of his loyal servants (I Kings 8:23). Furthermore, as the official of Asurbanipal is called: *bēl tābti bēl damiqtu*, "friend and ally" (lit., "man of kindness and favor"), so are Abraham and David "the lovers" and "friends of God."

The promise to David is given in perpetuity (עד עולם, II Sam. 7:16) and the covenant is called eternal (ברית עולם, II Sam. 23:5), concepts familiar to us from the grants and gifts in the ancient Near East. The same applies to the covenant with Abraham.

In the light of the evidence adduced it seems that both covenant traditions were crystallized at the same time, the Davidic covenant being concerned with dynasty, while the Abrahamic covenant concerns the land. The extent of the land as described in the covenant with Abraham in Gen. 15:18-21 also points to Davidic times. The delineation of borders constitutes an important part of the documents of grants in the ancient Near East.

4. **Father-son imagery.** The father-son imagery, as reflected in the promise to David in II Sam. 7:14 and in its counterpart in Ps. 89:26-27 [H 27-28], also belongs to the legal conventions of grants and investiture. Thus we read in the treaty between the Hittite sovereign Šuppiluliuma and his vassal Šattiwazza (for the reading of this name, see Zaccagnini, *OrAnt*, XIII [1974], 25 ff.): "[The great King] grasped me with his hand and said: 'When I conquer the land of Mitanni I shall not reject you, *I shall make you my son*. I will stand by [to help you in war] and will make you sit on the throne of your father . . . the word which comes out of his mouth will not turn back'" (E. Weidner, pp. 40 ff., 29-30).

The three motifs attested here—sonship, grasping the hand, and validity of the promise—are to be found in the traditions about the covenant with David. The image of David as God's son is found in II Sam. 7:14 and Ps. 89:26-27 [H 27-28] (compare Ps. 2:7). Grasping the hand of God, which ensures victory, is found in Ps. 89:21-25 [H 22-26], and is to be compared to the proclamation of the Hittite King Ḫattusilis I, that the goddess of Arinna "put him in her bosom, grasped his hand and ran in battle before him" (*KBo X, 1, vss. 13-14*). The validity of the promise, which is expressed in the words of the sovereign that his word will not be turned back, is found in Ps. 132:11: "The Lord swore to David a sure oath from which he will not turn back."

The phrase "I will be his father and he shall be my son" is an adoption formula (cf. Greengus on *verba solemnia* in connection with marriage and

adoption), and actually serves as the judicial basis for the gift of the eternal dynasty. This comes to clear expression in Ps. 2:7-8 where we read, "He said to me: 'You are my son, today I have begotten you. Ask of me, and I will make the nations your heritage, and the ends of the earth your possession.'" The notion of sonship is further developed in Ps. 89, where David's rights as first-born (vs. 27 [H 28]) appear in connection with his domination "on the sea" and "on the rivers" (vs. 25 [H 26]).

As is well known, the eldest son in the ancient Near East had a privileged position in the family and was entitled to a double share in the inheritance of the paternal estate (see FIRST-BORN §1; FIRST-BORN[S]). The selection of David as the first-born enhances then his rights of rule and dominion.

In Mesopotamia kings called themselves "sons" of gods and goddesses, and here too the divine descent had a figurative meaning: its purpose was to give full legitimization to the dynasty and its extensive rule. Thus, we read about the "birth" of King Šulgi which actually is his coronation: "Enlil the mighty shepherd, made the young man appear, the son . . . Šulgi . . . and gave him the rule over the land . . . he tied the sceptre at his side, the shepherd of all the lands . . . he lifted up his head towards the heaven" (CT 36, 26:15-27; cf. Sjöberg). Similarly we read in an oracle by the god Adad to the King of Mari: "Am I not Adad . . . him I raised between my legs. . . . I am the master of throne, land and city. . . . I will give him throne upon throne, house upon house, city upon city, the land from east to west" (Lods).

The father-son metaphor in connection with David is even more clearly expressed in the phrase which follows the adoption formula, i.e., "When he does wrong, I will punish him with the rod of men and with the afflictions of humans" (II Sam. 7:14, author's trans.). This may be now better understood in the light of familial documents from Nuzi. In the so-called *tuppi šimti* (testaments) documents from Nuzi we often find in connection with the provisions about obedience to the adoptive father phrases like: "If PN<sub>1</sub> (the adopted child) fails to show respect for PN<sub>2</sub> (the adoptive father), then just as a man treats his son so far shall PN<sub>2</sub> treat PN<sub>1</sub>," (for references see Weinfeld). The idea of disciplining sons in these documents goes together with the provision about perpetual inheritance, similar to II Sam. 7:14-15. We read in a will from Nuzi (note that ברית *is* rendered by the LXX as *diatheke*, i.e., "will"):

All my lands . . . to my wife Zilipkiashe have been given . . . and Zilipkiashe shall be made parent of the sons . . . whoever among my sons will not obey Zilipkiashe, Zilipkiashe shall put him in the house of detention . . . and they will be put in fetters, but their right shall not be annulled . . . and Zilipkiashe shall not give away anything to strangers. (AASOR, X, No. 20 [1930])

The father-son imagery has been ascribed in later Judaism to the Messiah (see below, the passage

from the Dead Sea Scrolls) and from there passed to the NT (Heb. 1:5; Mark 1:11).

5. **The conditioning of the covenant.** The promise for David, which originally was unconditional, was reinterpreted in a later stage of Israelite history. The destruction of Jerusalem and the disruption of the dynasty seemed to refute the claim for the eternity of the Davidic line, and therefore a reinterpretation of the covenant was necessary. This was done by putting in a condition: The covenant will persist only if the donee keeps his loyalty for the donor. It was the redactor of the book of Kings who put the promise of David under this condition: "If your descendants take care to walk faithfully in my sight with all their heart and with all their soul, you shall never lack a successor on the throne of Israel" (NEB, I Kings 2:4; cf. 8:25; 9:4-5). Similarly this condition has been introduced in Ps. 132:12, in contrast to Ps. 89:30-31 and II Sam. 7:14-15.

Adding a condition to the promise is characteristic also of the book of Chronicles. In I Chr. 28:6-7 the author refers to the promise of eternal dynasty and the father-son image of II Sam. 7 but adds, "if only he steadfastly obeys my commandments and my laws" (NEB). In the parallel to II Sam. 7 itself, the Chronicler omits the clause about sin and punishment, since this is what makes the promise unconditional (I Chr. 17:10-14).

In spite of the limitation imposed upon the promise by the condition, the promise itself continued to be regarded as eternally valid, as may be learned from messianic belief in the second temple period.

6. **The messianic interpretation.** The belief in a King-Savior who will appear in the future and will bring bliss to the nation was prevalent in the ancient Near East, especially in Egypt and Mesopotamia, and even reached Rome (cf. the fourth *Eclogue* of Vergil). However, the association of this idea with David is clearly the outcome of the concept of the Davidic covenant. This comes especially to expression in the prophecies of Isaiah (9:6-7 [H 5-6]; 11:1-5; cf. also 16:5); Micah (5:2-5a [H 1-4a]); Jeremiah (23:5-6; cf. 33:15-16, 21); and Ezekiel (34:23; 37:24-25). Isaiah (11:1, 10) and Jeremiah (23:5; 33:15) use the metaphors "stump" (גִּזְעַת), "root" (שֵׁרֶשֶׁת), or "branch" (צֶמַח) springing out of David to reflect the idea of a legitimate heir. This may be deduced from the fact that the term צֶמַח צְדִיק (RSV "righteous Branch") in Jer. 23:5 (cf. 33:15 and also Isa. 4:2; Zech. 6:12) ascribed to the future king is known to us from the Phoenician royal inscriptions (*KAI* 43:11), where it denotes the legitimate crown prince. Another metaphor which symbolizes the continuity of the dynasty is "the lamp of David" (cf. I Kings 11:36; 15:4; II Kings 8:19; the term נֵר may have been interpreted also as yoke=dominion) since it occurs in Ps. 132:17 paired with the idea of a sprout. The prophets, especially Isaiah, endowed the concept of the Davidic dynasty with a spiritual message and universal ideology. The future scion of Jesse will rule not by an "iron rod" (Ps. 2:9; cf. 110:2) but by the rod of his mouth and with the spirit of his lips (Isa. 11:4). As a consequence of this rule, enmity will

be liquidated not only among humans but also among the beasts (vss. 6 ff.). The new King will be the symbol of "justice and righteousness" in the universal sense (1:2-5) and he "shall be set up as a signal to the people; the nations shall rally to it" (11:10 NEB). The idea of David as the establisher of "justice and righteousness" was also adopted by the editor of the book of Kings (Weinfeld, *Deuteronomy*, pp. 153-54).

At the period of the second temple, the hope for renewal of the Davidic kingdom became more and more utopian and gradually became associated with a new era (see MESSIAH, JEWISH; MESSIAH, JEWISH[S]). Thus, for example, in a MIDRASH from the Dead Sea Scrolls on II Sam. 7 we read: "I shall be to him as a father and he will be to me as a son" that is: the shoot of David who will arise with the Interpreter of the Law . . . in the latter days as it is written, 'And I shall rise up the tabernacle of David that is fallen'" (*DJD*, V, Qumran Cave IV, p. 53:11-12).

The hope for the re-establishment of the Davidic dynasty pervaded the Jewish liturgy and is linked to the restoration of Jerusalem. In the prayer of the Eighteen Benedictions we find the benediction of "the shoot of David" following the one of restoration of Jerusalem. (In some circles, especially among Palestinians, both were combined in the same benediction.)

\*COVENANT, MOSAIC. The covenant which Yahweh made with Israel through Moses at Sinai (Horeb). This is the third of the covenants made by God, which together frame the Pentateuch in its present and final form; the first is with Noah and all living creatures (Gen. 9:8-17); the second

with Abraham and his descendants (Gen. 15; 17). The Mosaic covenant is the culmination in which the relationship between Yahweh and Israel is formalized. Neither the term "Mosaic covenant" nor the designation "Sinai covenant," also commonly employed, is found in the biblical literature itself, but some such term is useful for distinguishing this covenant from the others, and from the covenant with David and his heirs. See COVENANT, DAVIDIC[S].

- Bibliography

1. **Covenant as symbol and tradition. a. Forensic aspect.** To speak of a "covenant with God" is to use figurative or metaphorical language. It is to describe a relationship with God by analogy with a particular kind of formal relationship between persons. Given the extensive use of covenants and pacts of all sorts throughout the ancient world, there is no reason to suppose that the thought of a covenant with deity was unique to Israel. That it occurred elsewhere is shown by a plaque from Arslan Tash in upper Syria, ascribed to the seventh century B.C., which seeks to ward off demons who might try to enter a dwelling: "The Eternal One has made a covenant (*kr̄t 'lt*, cf. Deut. 29:12, 14 [H 11, 13]) with us, Asherah has made [a pact] with us" (trans. Cross and Saley).

**b. Scope.** Because there is more than one type of covenant between human parties, and because covenant itself represents a complex relationship, the metaphor is capable of extensive and varied application as a religious symbol. It is only because the metaphor is so widely used and so fully developed in the biblical literature that it is really possible to ask what particular models lay behind it, what religious perceptions it expressed, and under what circumstances it developed. Not only is there a series of divine covenants, but these symbolize many aspects of the relationship between God and the community, including both its establishment and its rupture, and strike the balance in several different ways between divine commitment and human obligation.

**c. Epic and cultic context.** In its scope the covenant metaphor is not unlike a number of others, such as marriage (and its reciprocal, divorce), to which it is closely related. Yet, in the Mosaic covenant tradition in particular, it has an aspect which these other metaphors lack, for it has a place both in the epic as an event which happened at a particular moment in the past, and in the cultus as a formula for maintaining and renewing the fundamental relationship with God which it describes and symbolizes.

2. **Résumé of Mosaic covenant in the Pentateuch.** As the tradition now stands, the solemn moment in which this covenant was concluded is recounted in Exod. 19:3-24:14. God declares the terms of covenant, first directly to the people (Exod. 20:2-17, the Decalogue) and then—because they are

terrified—through Moses (20:22-26; 21:1-23:19), concluding with a section which anticipates the Conquest (23:20-33). The covenant is then concluded by a complex of ritual acts, including a declaration of acceptance and obedience by the people (24:1-14).

Subsequently Yahweh makes a covenant with Israel again in Exod. 34:10-28, following the episode of the golden calf and Moses' intercession. The terms of covenant preserved here are not identical with those of Exod. 19-24, and the procedure is also somewhat different; in particular, Yahweh refers this time to the future conquest rather than the past deliverance, and there is no response by the people. Terms of covenant are given several times again without reference to previous formulations, at greatest length in Lev. 17-26 (the Holiness Code), which ends with solemn promises and warnings, the latter qualified by a concluding assurance that even in exile God will remember his covenant with the patriarchs if the people repent and return to him. The account of the sojourn at Sinai continues until Num. 10:11; this extensive block of material (Exod. 19:1-Num. 10:10), with its almost overwhelming piling up of traditions of all sorts, follows from the conviction that all of Israel's fundamental laws and religious institutions were consequent to this act of covenant.

At the conclusion of the Pentateuch, Moses, before his death (Deut. 34), recalls this covenant moment again, and exhorts Israel to obedience. Terms of covenant are set out once again (notably in Deut. 5, cf. Exod. 20; and Deut. 12-26), followed here also by solemn promises and warnings (Deut. 27; 28; 29), the latter again qualified by the assurance that a return to obedience will bring restoration to the land even from exile (Deut. 30:1-10; cf. 4:27-31).

**3. Covenant and treaty.** It can be seen even from this brief summary that the Pentateuchal traditions relating to the Mosaic covenant are both extensive and complex, a witness to its importance and to a long history of reflection upon its meaning. The task of tracing the history of the tradition has long occupied scholars, and a large part of the problem has been to understand the root of what was clearly a complex metaphor. The recognition that international suzerainty treaties were an analogous covenant form (see COVENANT §§A, C3a) has placed the matter on a new footing and largely shaped the course of subsequent discussion. Further investigations of the international treaties (see §4) and the biblical literature (see §5) have undertaken to test and elaborate the two sides of the analogy.

The view that covenant as a theological concept appeared only late in Israel has again found its defenders. One line of investigation has sought to establish that the theological use of ברית does not appear before the Deuteronomistic tradition, building upon the argument that ברית meant originally "obligation (assumed or imposed)" and not a relationship such as the translation "covenant" suggests. The lexical argument is judged to be weakest, however, precisely at the point where it insists upon an absolute distinction be-

tween obligation and relationship. The attempt to demonstrate that all earlier references to covenant are Deuteronomistic or Deuteronomistic is generally regarded as a tour de force. The line of argument is not entirely new, and carried more conviction when it could still be assumed that a covenant with deity was unique to Israel and was too subtle and developed a conception for the early period.

**4. International treaty.** Further research has sought to refine and supplement where possible the classic juristic analysis by Victor Korošec, on which the initial comparison with Mosaic covenant was based, and to extend it to other than Hittite treaties. These still constitute the bulk of the available evidence, however, and Korošec's work has required remarkably little modification in the light of further study and the publication of additional treaty texts and fragments.

**a. Formal elements.** The number of exemplars and the quite regular structure have made it possible to extract something like a prototypical form for the Hittite treaties (fourteenth-thirteenth centuries B.C.), even though each was drafted for a real political situation. Many of the texts are quite fragmentary, and not all are official documents of record (one of the treaties with the Kassiteans, for example, is almost certainly a preliminary draft). For Korošec's analysis (six formal elements), see COVENANT §A. It is now generally agreed that the provision for "the deposit and public reading" of the treaty, which Korošec himself noted was lacking more often than not, should not be included. It is to be regarded, like the oath of the vassal, as a part of the procedure which only occasionally finds its way into the written text of the formal document. While it is agreed that the "historical prologue" was a typical element, there has been considerable debate over possible instances of its omission; these are few, if one grants, as one probably must, that the element could range from an extensive account which reached back several generations to a quite simple reminder that the vassal had the suzerain to thank for his investiture. Attempts to distinguish additional formal elements, such as a "statement of substance" or "general clause" concerning the future relations of the parties, or a "description of the land" detailing the accepted boundaries of the vassal's territory, have pointed more to matters of content than formal structure.

A comparable analysis of other groupings of treaties by region and period is more difficult, for the texts are fewer, are unevenly distributed, and show greater variation. A "historical prologue" seems not to have been typical, although the very fragmentary treaty of Ashurbanipal with Qedar, recently published, evidently included one. While Hittite treaties regularly stated both blessings and curses in a brief formula, the later treaties evidently contained only curses. While this is not entirely certain, because some texts are broken, emphasis certainly lay on the curses, which were extensive and detailed, sometimes dramatically enacted. The later treaties also show occasional merging of formal elements; thus the curses may be combined with the "list of divine witnesses" by linking

curses appropriate to each deity with the invocation of the name, or with the "stipulations" by invoking a curse after each stipulation, in either case giving even greater prominence to curse.

Other differences appear as well, but it can be seen from these that the contrast is not merely formal. It follows rather from a difference in the way the treaty relationship itself was conceived. Treaties which included blessings and an account of the sovereign's benefactions did not rest solely upon submission to superior force and terror of divine retribution.

**b. Reduction to essential elements.** A different line of investigation has sought to discover which elements the ancients themselves would have regarded as the minimum essential to a treaty, and by this means to test further the extent of the difference between Hittite treaties and those of the first millennium, and to provide a minimal criterion for recognizing treaty form in the OT.

The starting point is the premise that those who drafted the documents would not have failed to include all the elements they believed essential to a valid and binding treaty. The constant elements are said to be three: the "stipulations," the "list of divine witnesses," and the "curses." These are readily inferred from the later treaties. For the Hittite treaties, however, other considerations must be invoked; thus the element "blessings and curses" is reduced to "curses" on the ground that only the curses were really operative (while this could be challenged, certainly curses alone were sufficient to make a treaty binding). The conclusion that there was a long and widespread use of the same essential treaty form rests upon this further reduction toward strictly indispensable elements. That there was some continuity is not to be denied, and would be expected, given the international use of the genre and its essential character as an expanded promissory oath. The typical forms are nevertheless quite different, and this must be the basis for any assessment of the jural concepts which lay behind them.

While these elements are common to treaties, they are not peculiar to them; they are found also in Babylonian *kudurru* texts (boundary stones) and documents of grant. The formal distinction lies in content and function, which must always be considered.

The OT contains no formal text of a covenant, political or religious (however, see COVENANT §C3a; also §5d below), although there are texts which reflect a covenant formula. For the many references to covenant and narratives of covenant making, it has been more helpful to identify the technical terminology of treaty and the legal terms by which one referred to treaty and treaty relationship. It has been shown, for example, that the expression "peace and friendship" is used only where a treaty of friendship is involved (cf. Deut. 23:6 [H 7]; RSV "peace" or "prosperity"), and that "to make friendship" means to make a treaty (cf. II Sam. 2:6; RSV "do good"). Such terms have been taken up as theological vocabulary in the OT.

**c. Reciprocity.** Parity treaties detailed reciprocal obligations (see COVENANT §C1b); suzerainty

treaties did not. Even so, the latter were not entirely unilateral. In exchange for his oath of loyalty, the vassal received legitimation (often explicitly mentioned) and protection, and indeed all the benefactions claimed by the suzerain in the "historical prologue" imply an obligation for the future as well. Particularly striking are those instances where the greater power bound itself by curse or oath: a vassal's right to dynastic succession sanctioned by a curse (treaty of Tudhaliyas IV with Ulmi-Tešub; some see here however a merging of the genres of treaty and royal grant); the possibility allowed that a Hittite could "transgress the oath" (treaty of Suppiluliumas with Aziras); a suzerain's reference to an exchange of oaths with a vassal (letter of Shamshi-Adad to Kuwari; cf. Deut. 26:17-19).

**d. Human witnesses.** The witnesses to treaties sometimes included human persons, of interest in view of Josh. 24:22 and other biblical texts. In some cases they evidently served to attest the authenticity of a copy made to replace a lost original. The publication of a series of treaties between the Hittites and the Kashkaeans which regularly name human persons as well as gods as witnesses has raised again the question whether they may sometimes have served in other capacities, perhaps as witnesses to the formal preparation of the text.

**e. Process for breach of treaty.** There is evidence, gathered from royal correspondence and such texts as the Tukulti-Ninurta epic, to indicate that a suzerain's proceedings against a rebellious vassal were as carefully ordered as the treaty which established the relationship. The suzerain established the justice of his case before the gods and sent formal notice to his vassal. The literary form employed was evidently a recapitulation of the relevant sections of the treaty, the broken stipulations now cast as accusations, and it was concluded either by solemn admonitions and a brief statement of proper conduct, or by an ultimatum which was virtually a declaration of war. War, if it came, was apparently viewed as the ultimate legal process by which the gods gave decision in the case.

**5. History of the tradition. a. Premonarchic period.** The correspondences with suzerainty treaty suggested the hypothesis that smaller kinship groups were united in a larger social and religious (perhaps better, cultic) sodality ("Israel") through a common vassalage to Yahweh (see COVENANT §C3a, b). The assumption of military obligations which this implies is now further supported by the finding that covenant making and summons to holy war employed common symbols. See WAR, HOLY[S].

The new sodality has been described as a sacral league, a social structure which had already been proposed on other grounds, and which provides a suitable model (on the present state of the question, see AMPHICTYONY[S]). Other forms of sodality may be explored, but it is hardly possible to return to the assumption that blood ties alone provided the social bond (see KINSHIP AND FAMILY [S] §8). It is not necessary to suppose that the new sodality was formed all at once, or that the model

was taken over directly from the international political sphere.

The ground for such a development may already have existed in patriarchal society, where covenants in which the deity took the initiative were already a living social and cultic form, associated with the "god of the father" (see PATRIARCHS[S] §2b). It is likely that these were not originally free of obligation to the deity, and that the unilateral and unconditional character they have in the present epic tradition (see COVENANT §C2) is the result of an assimilation to the pattern of the Davidic covenant. See COVENANT, DAVIDIC[S] §3.

The constitution of the new sodality will have been considerably more complex than either political treaty or patriarchal covenant envisaged, and there is no simple answer to the question, Who was made vassal to Yahweh by covenant? The league model suggests tribes (or clans), and this is implied as well by the ancient poem of Judg. 5, the story of Judg. 19-21, and elsewhere. The series of three treaties which Mursilis II made at one time with peoples in one region is a somewhat analogous situation (Friedrich). If blessings and curses were once addressed to tribes, however, the custom has been forgotten. Covenant stipulations regulating the relations between tribes, if they once existed, must have been lost when the tribes ceased to function as social units. It is persons and households whose relations are regulated by the covenant traditions which have survived, and Josh. 24 suggests a covenant accepted by households (vs. 15). In Deuteronomy, however, and in the Sinai account as it now stands, it is the people (or its leaders) who accept the terms of covenant, and the blessings and curses (cf. Lev. 26; Deut. 28) also have in view the community as a whole.

**b. The epic tradition** (JE) gives a representation of Mosaic covenant from the period of the monarchy which is important in its own right and for the earlier tradition it incorporates (see YAHWIST[S]; ELOHIST[S]). The covenant is one which Yahweh initiates, following gracious acts which obligate the people; it involves stipulations binding upon the people, giving first place to the claim of exclusive loyalty (Exod. 20:3-17); it is freely accepted by a declaration of obedience (24:3, 7); and it makes continuing relationship and future benefaction conditional upon faithfulness (19:3b-8, attribution disputed, but probably ancient liturgical materials transmitted by E). This recalls at once the relation of suzerain to vassal, and the covenant can be recognized even in this narrative form as belonging to the same general type.

The formal structure of Exod. 19-24 has been thought to reflect the covenant formulary of an earlier cultic setting (see EXODUS, Book of §3). Attempts to correlate this more precisely with treaty form have been only partially successful. For the historical prologue one must begin earlier, perhaps at Exod. 1; for the blessings and curses one must continue to Lev. 26, which lies outside the epic strata (in the Holiness Code) even though it has been shown to contain older material (so also the list in Deut. 28).

In the epic as a whole the Mosaic covenant has been subordinated to the patriarchal covenant.

This is particularly clear in the Yahwist, which is the more fully preserved. It is the promise to Abraham (Gen. 12:1-3) and subsequent covenant with him (Gen. 15, perhaps partly E) which introduce the leading themes to which the epic repeatedly returns, and which it may originally have carried through to the Conquest. The Mosaic covenant undergoes no comparable development. The inference has been drawn, no doubt correctly, that the Yahwist made no more of it than it was obliged to, and included it only because it was already part of the existing tradition.

In this the Yahwist certainly reflects the Jerusalem royal theology (see YAHWIST[S]), which placed greater emphasis on the covenant with David, and which could claim the covenant with Abraham—at least in the form represented by the epic tradition—as a model and precedent. See COVENANT, DAVIDIC[S].

Although Sinai is connected with the Exodus in both epic strata, and therefore by inference in the older (poetic?) epic on which both have drawn, there are indications that it originally intruded; moreover, it is lacking in credal formulations which recite the saving acts of God (see CREDO, ANCIENT ISRAELITE[S]). The elements of an earlier covenant ritual may have been separated and recombined.

**c. Prophets.** Covenant form is most fully represented in the lawsuit genre, which has been shown to resemble the proceedings of a suzerain against a rebellious vassal (see §4e above). It may be inferred that the covenant and treaty forms which underlay them shared a common structure and conception. The appeal to heaven and earth (Isa. 1:2, somewhat differently Jer. 2:12; Mic. 6:1-2) recalls their role as covenant witnesses in Deuteronomy (see §d below) and provides a further link with treaty form.

It is possible to support this conclusion to some degree from the judgment speech, which is structurally simpler but more frequent than the covenant lawsuit. The prophetic announcements of judgment have been compared with the curse lists of Deut. 28, Lev. 26, and the treaties. Even allowing that descriptions of gods acting to hurt or destroy will inevitably show some similarity, there is often a remarkable correspondence in imagery, sometimes even in wording, even in the earliest prophetic material. There is also a correspondence in function, since the judgment speech, like the covenant lawsuit, makes a charge of misconduct the basis of the announced judgment.

As early as Hos. 6:7 and 8:1 there are explicit charges that Israel has scorned the covenant. If I Kings 19:10, 14 is to be credited, the same accusation had been made earlier by a northern predecessor. Hos. 8:1-3 is particularly important, for it appeals (vs. 1) to a covenant with stipulations (תּוֹרָה) which could be broken and transgressed. The people's claim to "know" God (vs. 2) is almost certainly to be understood as a claim that they acknowledge his legitimate authority as overlord. The word "to know" (יָדַע) is used occasionally in this legal sense to refer to mutual recognition on the part of suzerain and vassal, and has its equivalent in the treaties, although Hittite distinguishes this use by a reflexive particle.

The reciprocal usage appears, for example, in Amos 3:2, where Yahweh says of Israel, "You only have I know"; compare the phrase "I [the Su]n will know only you, Alaksandus" in a treaty of Muwattallis (Friedrich). The charge that Israel has abandoned "good" (Hos. 8:3) no doubt reflects the legal usage of *טובה, טובה* as "friendship, good relations," employed when a treaty relationship is involved (see §4b above).

**d. Deuteronomic tradition.** Mosaic covenant is the leading theme of Deuteronomy. Its characteristic sequence of exhortation, commandments, blessing, and curse—found in individual sections and in the arrangement of the book as a whole—as well as its emphasis upon exclusive loyalty to Yahweh, the emphatic manner in which it urges gratitude as a basis for obedience, and the priority it gives to election over commandment, had all been noted before its likeness to treaty had been observed. See DEUTERONOMY §5.

Recent studies have shown that its language is full of the vocabulary of treaty and diplomacy, and that its curses are remarkably similar—in some cases virtually identical—to those found in treaties. While some of the same curses appear also in contexts which have nothing to do with treaty, the correspondence in form and content extends also to function: conditional curses follow stipulations, and thus provide sanctions for sworn obligations.

Deuteronomic tradition has clearly in view that Israel's obligations to Yahweh are analogous to those of a sworn vassal. Its welfare is conditional; indeed, loyalty and obedience are the conditions for realizing the gracious covenant sworn to the patriarchs (Deut. 7:12; cf. 8:18). In the later introduction to the book (1:1-4:40; see DEUTERONOMIC HISTORY, THE[S] §§1, 3), the balance has shifted, and the oath to the fathers is unconditional; it becomes eventually a ground for hope even in exile (4:31).

In the framework of the book the witnesses to the covenant are "heaven and earth" (4:26; 30:19; 31:28; cf. 32:1). These are frequently listed among the old gods—gods of theogony but not of cult—as witnesses to the treaties. The presence of such an element (found also in the prophets; see §c above), functional in treaty but surely vestigial here, is one of several indications of more or less conscious adaptation of treaty form, as opposed to an independent development which chanced along similar lines. It has, in fact, been argued that the central section of the book (the second discourse) was intended to be the text of a Yahweh treaty, and the same has been claimed for the book as a whole.

Some have attributed this treaty likeness to contact with the Neo-Assyrian Empire, to which both Israel and Judah were in vassalage as early as the third quarter of the eighth century. The length of the curse section (28:15-68; contrast the blessings, 28:1-14) and many of the curses do in fact resemble treaties of the eighth-seventh centuries rather than earlier ones. This may, however, only show that the analogy with treaty was still open to influence from contemporary practice. The Deuteronomic understanding of covenant gives the

impression of baroque elaboration rather than innovation. The use of historical reminiscence as a basis for appeals to love, loyalty, and gratitude, and of blessings as well as curses, corresponds to the typical form of earlier treaties but seems to be quite different from the usual Assyrian practice (see §4a above). If those scholars are correct who have on other grounds explained the characteristic structure of the book as a derivation from liturgies of covenant renewal, the basis of the analogy must lie further back in the earlier cultus.

**e. The Priestly work.** The question of the nature and extent of Mosaic covenant traditions in the Priestly stratum is bound up with the question whether this stratum ever existed by itself as an independent document (see PRIESTLY WRITERS[S] §§1-2). The place of this covenant in the final structure of the Pentateuch is nevertheless clear: it is one of three covenants which serve to divide history into four ages (Adam, Noah, Abraham, Moses). Each succeeding covenant narrows in scope as it gains in importance. The blessing of Creation (Gen. 1:22, 28) is repeated with each of the covenants, e.g., with the Mosaic in Lev. 26:9. The sabbath, instituted at Creation (Gen. 2:1-3), becomes the sign of the Mosaic covenant (Exod. 31:13-17; cf. the P expansion of the sabbath commandment, Exod. 20:11). Each covenant continues to be valid, but the Mosaic is God's ultimate self-disclosure, revealing his name and his laws, and establishing his cultus. As a mark of its special importance P employs the term *עדות* (see COVENANT §B1) for the Mosaic covenant, choosing—as it often does—an archaic word to use as a technical term, and reserves the term *ברית*, with few exceptions, for all others. See LAW IN THE OT[S] §16.

COVENANT, NEW. See NEW COVENANT[S].

COVENANT LAWSUIT. See LAW IN THE OT[S].

**CREDO, ANCIENT ISRAELITE.** A credo is a summary statement of belief encompassing the irreducible minimum sustaining a common faith. It is necessarily confessional in nature and thus is designed to be reinforced by behavior that expresses strong conviction. The attempt to isolate such confessional statements in the OT has been made along form-literary, traditio-historical, and theological lines, often with ambiguous or conflicting results.

Some scholars have set forth such ancient credos as the basic form for the development of theological motifs and as the foundation of extensive literary complexes. Others have denied the presence of such ancient credos, arguing rather that those which have been set forth are only late summaries of developed OT faith. Yet a third group has sought to present a synthesis utilizing the insights of the two opposing groups.

1. **The brief historical credo.** The idea that special summaries of history and faith may provide the foundation for the literary development of parts of the OT was investigated by Jirku in 1917. He set forth the idea that a recurring pattern of "didactic expositions" (*lehrhaften Darstellungen*) may be discerned throughout the OT. These "expositions" vary in length, in sequence, and even in the number of specific points they present, but they always deal with the principal events from the call of Abraham to the entrance into Canaan, and they do so with a repeated formulaic style. Jirku believed this pattern to have been set prior to David's time, and though he never referred to the "didactic expositions" as credos, his emphasis on their use at the cultic assembly and his proposal that they became the basis of the growth of the Tetrateuch make his work foundational to the research by von Rad and Noth.

a. **Gerhard von Rad.** In 1938 von Rad published his theory of the brief historical credo which effectively determined both the definition of the term credo and the direction of scholarly debate concerning the concept. Von Rad was unwilling to eliminate the source documents, as Jirku had done, but like Jirku, he proposed a growth of the OT from a relatively fixed basic form.

Decrying the standstill reached in Hexateuchal studies by source and form analysis, von Rad pro-

posed a new approach: since the essential concern of the HEXATEUCH is Israel's belief, why not begin with what might logically be assumed to be the irreducible minimum of that belief and then consider the whole in the light of its most fundamental form? One could call this fundamental form a "credo," von Rad held; it would be a confessional summation of the essential points of the salvation history, never subject to change in basic content from the earliest times, variable only in its external form.

Settling upon Deut. 26:5b-9 as the best and probably the earliest example of the brief historical credo, and adducing such parallel examples as Deut. 6:20-24 and Josh. 24:2b-13, von Rad proposed (a) a confession limited essentially to four great themes: the patriarchs, the oppression in Egypt, the Exodus, and the march to and entry of the Promised Land; (b) a confession formally drawn in elevated and compact language for public recitation; (c) a confession frequently reflected, though often in free variation, in the language of Israel's cultic worship; (d) a confession summarizing traditions associated with Kadesh, not Sinai, and related to the celebration of the Feast of Weeks at Gilgal, the site of Joshua's apportioning of the Promised Land.

Von Rad referred to the brief historical credo as a literary type (*Gattung*), but his form-literary study rapidly became a traditio-historical study. A striking feature of this credo was its total lack of reference, in even its freer and fragmentary refractions, to the momentous events at Sinai. Von Rad concluded that the tradition associated with Sinai existed independently, in complete separation from the schema represented by the credo. This tradition too had a cultic locus and a cultic occasion: Shechem and the Feast of Booths. But it was not woven into the canonical pattern represented by the brief historical credo until the time of the Yahwist. This fusion of two separate bodies of tradition, probably never attempted before, was no doubt unpopular. Indeed it appears to have received wide acceptance for the first time no earlier than the Exile.

Thus was the Hexateuch, for all its complex combination of originally separate traditions, shaped primarily by preoccupation with the theme of land settlement, itself given ancient summary in the short historical credo. See YAHWIST[S] § 3.

b. **Martin Noth.** Von Rad's isolation of the short historical credo became both a foundation and a point of departure for Noth's influential traditio-historical study of the Pentateuch. Noth accepted without reservation both the presence of such a literary type and also the view of formative influence upon the Pentateuch. He similarly embraced von Rad's view that the Sinai tradition, despite its own obvious antiquity, was independent of the credo until late.

The differences between the positions of Noth and von Rad are in the main differences of refinement. Noth went on to conclude that there were five separate themes which served as nuclei in the formulation of the Pentateuch. These themes (primary and basic, exodus from Egypt; subsequently, entry into Canaan, promise to the patriarchs, and

guidance in the wilderness; last and latest, the revelation at Sinai) are themselves no more than refinements of the general themes isolated by von Rad, brought into sharper focus and fuller exposition. He rejected von Rad's view of the creative role of the Yahwist in uniting the traditions, holding rather that both the Sinai tradition and the patriarchal traditions were united in the common foundation (*Grundlage*) of both J and E (see YAHWIST[S] § 2). He similarly discounted other details of von Rad's original exposition, e.g., the primary association of the credo with the sanctuary at Gilgal.

These revisions are of small consequence for the theory of the short historical credo. The major result was a wider dissemination and acceptance of the theory. Indeed, Noth reinforced the credibility of the view that the credo formed the nucleus of the Tetrateuch (or Pentateuch, or Hexateuch) by his persuasive emphasis on the cultic context of each successive repetition of the credo.

2. **A credo without Sinai?** While the views of von Rad and Noth have proved stimulating, and while they have been adopted with little revision by some OT scholars, wider acceptance has been related primarily to the credo as a literary type, and to the constituent themes of such a credo. Critical reaction has been directed first of all against the separation of the credo from the Sinai tradition. Very few scholars have been able to allow this separation, not only because it does such violence to the order and emphasis of the OT text, but also because of the obvious antiquity (admitted even by von Rad and Noth) and recurrent influence of the Sinai tradition. Another objection is that the Sinai tradition, as a tradition of encounter, is different in nature from the traditions of the saving history, and therefore need not be mentioned in a credo which was part of a cultic celebration of the saving history.

That the Exodus and Sinai traditions represent events in sequence has been supported by comparative study of covenant and treaty formularies in the OT and in the state literature of the Hittite empire. A common ancient Near Eastern association of acts of protection and beneficence (history) with covenantal expectation (law) has been proposed (see COVENANT § A; COVENANT, MOSAIC[S]). If such a pattern can be maintained—and it has received wide acceptance and exposition—the theory that the Sinai tradition was late in becoming a part of the credo becomes still less tenable. Caution must be exercised, however, in use of the ancient Near Eastern treaty documents. Assyrian legal literature in particular has brought the more detailed outline of an ancient Near Eastern covenant or treaty formulary into question.

3. **Ancient credo or late summary?** Criticism of the von Rad-Noth theory has raised, in the main, two questions: (a) Can such a credo really be shown to be ancient? and (b) Did a credo, as such, ever have any place in ancient Israelite cultic life?

A crucial point in von Rad's discovery and exposition of the short historical credo is the antiquity of Deut. 26:5b-9. Despite an admission that this passage displays some Deuteronomistic language,

von Rad considered it at least earlier than the Yahwist. This assertion has been subjected to a stringent criticism by a careful comparison of Deut. 26:5-9 with the vocabulary generally regarded as Deuteronomistic. These studies have prompted the view that Deut. 26:5-9 and similar passages cited by von Rad are at best a thorough Deuteronomistic reworking of traditions (e.g., vss. 5 and 10a) or, more likely, a free composition of the Deuteronomistic period. See DEUTERONOMY §§ 3, 7 and DEUTERONOMY[S]; DEUTERONOMIC HISTORY, THE[S] esp. § 2.

More serious still is the objection that von Rad and Noth have not in fact demonstrated the presence of the credo as a literary type. The credo passages have instead been regarded as historical summaries designed for liturgical use; or catechetical sequences; or historical prologues to covenantal ceremony; or formula prayers for set occasions; or informal theological collections affirming the general perimeters of Israel's faith. Though such approaches may seem at first merely to be calling the credos by another name, they tend to deny them any role in the formation of OT literature, and thus to place serious limits on their importance. The acceptance of any such position thus undercuts completely the von Rad-Noth theory.

4. **Credo and the OT.** Surprisingly little attention has been given to the credo itself as a widespread OT literary type. There can be little doubt that statements of essential belief are a necessary part of the religion of an articulate people. That ancient Israel should *not* have such statements would be occasion for surprise. What is important therefore is the isolation of the vocabulary, the forms, and the recurring essential points of such statements. Only then will any consideration of the influence of the confessions upon OT literary growth become more than suggestive speculation. Underlying the form-literary considerations with which von Rad began are important questions of cultic rhetoric—the basic words and phrases of priest and prophet, of wise man and poet, of the literati of the cult, and even of the layman in whose behalf so much of the cultic literature was formed in the first place. Once these building blocks of cultic expression are better known, both the credos and the theology underlying them can be more clearly isolated.

That there was "credo" in ancient Israel now seems assured. Too detailed an assertion of its exact contents and too close an association of the credo with one cultic occasion or one particular locale must be avoided. Credo as a literary type must be allowed both considerable flexibility and broad comprehensiveness. The given form of the credo at any point in Israelite history must be regarded as determined more by the needs of the occasion and the persons involved than by a fixed outline. The credo might be as short as a single word or phrase ("Yahweh" or "Yahweh is King") or as long as the summaries of Joshua 24 or Psalms 78 or 105. By nature, the credo was always in some sense historical, but its historicity was always theological.

**\*CRUCIFIXION, METHOD OF.** Recent archaeological evidence from Israel has thrown dramatic new light on methods of crucifixion in antiquity. The first skeletal remains of a crucifixion were unearthed from a first century A.D. Tomb found at Giv'at ha-Mivtar in Jerusalem. The tomb lies about 1½ miles N of the "Second Wall" of Roman Jerusalem.

**1. The material evidence.** The victim was 5 feet, 5¾ inches tall, male, between twenty-four and twenty-eight years old, and of slight build. His build perhaps implies membership in an aristocratic family that may have participated in the "Census Revolt" of A.D. 6. Both heel bones had been pierced by one iron nail, the arm bones were scratched, and the lower legs had been broken. Death was therefore caused by crucifixion.

The subject had been buried in the family tomb

and later reburied in an ossuary (see OSSUARIES). The ossuary also contained the bones of a child three to four years old with no marks of violence or disease.

Two names appear on the ossuary. The first is "John" (יהוחנן) and the second "John son of hzqwl" (יהוחנן בר חזקול). The last word is unreadable as it stands, but may be read as a hypocorism or a corruption of the name Ezekiel (יהזקאל). It may also be read "the one hanged with knees apart," reading "hzqwl" (חזקול) or "h'qwl" (הקול). Thus the name of the victim was certainly "John," and his son (?) was perhaps named "John, son of the hanged."

The 4½-inch nail was still piercing the heel bones in the ossuary. Fragments of a 5⁄8- to ¾-inch acacia or pistacia wood plaque were found between the nail head and the heels. The point of the nail was bent ¾-inch and had bits of Olivewood attached. See Fig. C7. Furthermore, the right radius (forearm) exhibited damage in the form of a scratch on fresh bone probably caused by the arm nails.

**2. Methods of crucifixion.** The evidence is subject to three interpretations, any one of which alters the traditional view of Jesus' crucifixion:

a) In the first interpretation, the feet were first nailed together parallel onto the vertical Olivewood beam of the cross with a single nail. The legs were adjacent, the right knee extending past the left. Finally the arms were extended and nailed to the crossbar through the forearm between the radius and ulna.

The executioners probably added a "sedecula" or "sedecula," a small crossbar to bear the weight of the victim so as to prolong agony by preventing collapse. Because of his twisted posture probably only one buttock could rest upon it.

The lower leg bones reveal evidence of violent removal from the cross. The left leg had been severed by a single blow while the bones of the right leg had been splintered, probably by the same blow. Perhaps this was the *coup de grâce* and the method of removal from the cross.

b) In the second interpretation, the nail was

8. Two possible methods of crucifixion

driven through the plaque, the heels, and then an olivewood board, then deliberately bent over to hold the feet together. The victim was then hoisted into the air upside down and his legs looped over the top of the cross. His arms may then have been nailed to a lower crossbar forming a sort of "cross of Lorraine." The verb *קָלַע* (= "hanged with knees apart"?) on the ossuary may suggest this.

c) Finally it is possible to interpret these data as evidence for upright crucifixion, arms nailed to the cross, and feet attached to each other but not to the cross. If the victim was not provided with the *sedicula*, death would be fairly swift.

J. F. STRANGE

\***CUSH.** Cush is used as a personal name in the title of Psalm 7. Elsewhere it is a geographical term.

Modern translations render the Hebrew *כּוּשׁ* unevenly. In a few passages it is transcribed "Cush," but in most cases it is translated "Ethiopia," misleading many contemporary readers to identify it with modern Abyssinia, which is officially named Ethiopia. The error is due to a change in the meaning of the term Ethiopia: the ancient Greeks

used *αἰθιοψ* to designate any southern land inhabited by people with "burnt-faces."

The word *כּוּשׁ* is most frequently used to designate the Nubian kingdom which was situated along the Nile S of Egypt. The N boundary of Cush fluctuated from period to period, but much of the time it bordered Upper Egypt just S of the Second Cataract at Semna. During the height of its political power its capital was located at Napata, near the Fourth Cataract, but after the famous Twenty-fifth Dynasty it was moved S to Meroë, about halfway between the Fifth Cataract and Khartum.

Cush is first mentioned in Egyptian texts from the Middle Kingdom (2000-1800 B.C.) as an enemy which the pharaohs fought hard to subjugate. During periods of pharaonic weakness, it broke away, but was reconquered and administered in the New Kingdom (1550-1085) by "the King's Son of Cush," an office of enormous prestige. During the weak Twenty-first Dynasty, Cush became independent and began its greatest period of power, culminating in Pi-an-ankhi's conquest of Egypt. Subsequently, Pi-an-ankhi's successors ruled all of Egypt as the Twenty-fifth Dynasty (716-656 B.C.). One of the last Nubian pharaohs, TIRHAKAH, is mentioned in II Kings 19:9 (cf. Isa. 37:9). Awareness of the political structure of the Twenty-fifth Dynasty undoubtedly contributed to the ready juxtaposition of Egypt and Cush in biblical texts (Ps. 68:31 [H 32]; Isa. 20:3-5; Ezek. 30:4, 9; Nah. 3:9).

The inhabitants of Cush were called *Nḥsy* by the Egyptians. In Exod. 6:25 the grandson of

Aaron is named Phinehas, which means "the Nhsy (man)."

Once the Nubian kingdom of Cush ceased to be a familiar participant in events of the biblical world, the term Cush was used to designate a broader, remote geographical area S of Egypt, including the E coast of Africa. Cultural, linguistic, and ethnic kinship between South Arabia and the opposite coast of Africa accounts for the presence of Cush in the genealogy of Sheba and Dedan (Gen. 10:7).

The Yahwist used Cush to designate both the land (Gen. 2:13) and the eponymous ancestor (Gen. 10:8) of the Kassites. These invaders were first mentioned by Samsu-iluna, Hammurabi's immediate successor. At that time they were held back from Babylon and settled along the upper Euphrates river valley in the area of Mari. After the Hittite king, Mursilis I, made his famous raid on Babylon (ca. 1530 B.C. [low chronology]) and destroyed the city, the Kassites occupied and rebuilt it. They remained in power there until the Elamite king Shutrak-Nahhunte sacked Babylon and brought an end to the Kassite dynasty (ca. 1151 B.C.). At the lowest estimate, which is given above, the Kassites ruled Babylon for nearly four hundred years.

In addition to Nubian and Kassite Cush, scholars speculate about the possibility of other districts with the same name. Although they have generally rejected any extensive South Arabian Cush, many retain the name for a district in Midian. Midian is located on the NE shore of the Gulf of Aqabah and was the home of Moses' wife Zipporah (Exod. 2:16-21). In Num. 12:1, however, it is reported that Moses was married to a "Cushite" woman. Many scholars assume that both texts refer to the same woman. They support such a view on the basis of Hab. 3:7, which speaks of the "tents of Cushan" in parallelism with "the curtain of Midian."

The possibility of yet another Cushite center was proposed fifty years ago by Albright. He suggested that Pharaoh Shishak established a colony of Nubians at Gerar, and that they were responsible for the attack on Asa which is mentioned in II Chr. 14:9-15. Such a colony might also be involved in the Chronicler's notice of the "anger of the Philistines and of the Arabs who lived near the Cushites" (II Chr. 21:16 NEB).

O. WINTERMUTE

**CYNICS** سین'یکس. Members of a sect of philosophers that originated in the fourth century B.C. and flourished in the ROMAN EMPIRE. Some ancient observers held that Cynicism was a way of life rather than a philosophy (Diogenes Laertius, *Lives of Eminent Philosophers* VI.103) and that its character should be studied from the practice of

its heroes rather than from their writings (Julian, *Oration* VI.189-90). Its history and teaching are closely related to Stoicism. See also GREEK RELIGION AND PHILOSOPHY §8b, c; STOICS.

It is not clear whether Antisthenes or his successor Diogenes was the founder of the sect. Nevertheless, Diogenes was the first to call himself κύων, "dog," thus alluding to his own independent life-style, and the name was adopted by those who emulated him. Amid discontent with the artificiality of life in Athens and despair of the customs and institutions of society, Antisthenes asserted as his basic principle the independence of the wise man. The lines of Cynic thought and the stress on individualism became more pronounced with Diogenes, who soon after his death became a legendary figure, the subject of countless anecdotes. His successor Crates gave further form to a specifically Cynic attitude toward the world. The Cynics concentrated entirely on ethics and eschewed the scientific study of logic and physics. Their goal was to live in accordance with virtue, which they held to be sufficient to happiness. The wise man, holding virtue as the only thing of value and vice as the only thing to be rejected, regarded everything else as insignificant. Governed only by reason, the sage will live naturally (κατὰ φύσιν). Stressing that this practical wisdom could be taught, and, once attained, could not be lost, they felt no need to explain what "nature" was, nor why it is good to live κατὰ φύσιν. In practice, it seems as if, for them, the man who makes his own decisions about his life is the truly wise man. He is restrained by nothing, and in his re-evaluation of everything external to himself can be said to change the coinage of convention and popular opinion (Diogenes Laertius, *Lives* VI.20, 56, 71). The Cynic therefore strives for self-sufficiency (αὐτάρκεια), which allows him to be satisfied with the simplest diet and personal furnishings consisting of a short cloak, a wallet, and a staff. It may justify his begging for a living from whomever he pleases, thus being under obligation to no one. Because of his true freedom (ἐλευθερία), no hardships (περιστάσεις) really affect him, and he can furthermore exhibit his rejection of the claims of society by repudiating the state, marriage, and the accepted sexual mores. As one who has attained such freedom, the Cynic strives to convert men by bringing them to their senses. He does so by means of bold speech (παρρησία) in which he contrasts the vices of deluded mankind with the virtues which characterize the wise man. Such an austere outlook could justify the harsh demeanor and gross conduct with which Cynics came to be identified, but with Crates, who was milder in mien than Diogenes, a more moderate strain was introduced into the sect.

Zeno, the founder of Stoicism, was a disciple of Crates. He accepted the Cynic principle that virtue is the only good, but he and his successors, especially Chrysippus, constructed a system of thought that differed markedly from Cynicism. Although retaining the profound distinction between things virtuous and vicious, they introduced a class of things which are indifferent, but among which can be distinguished some things which

are natural and to be preferred, some which are unnatural, and to be rejected, and some which are truly indifferent. By nature they meant the law of the physical universe which governs all things and may also be called universal reason, destiny, providence, or Zeus, in harmony with which man should live. This scheme admitted of men, those popularly held to be philosophers, who were advancing to wisdom, but had not attained the ideal. The elaboration of this system required a knowledge of logic and physics, thus making it more theoretical and speculative than Cynicism while retaining its strict moralism.

In the third century Cynicism had notable representatives in Bion, Menippus, Menedemus, Cercidas, and Teles, who were creative on the literary level, developing the diatribe and giving special forms to parody and satire. Operating on the level of popular moral instruction, Cynicism was gradually absorbed into Stoicism. Since Cynicism had no clearly stated theoretical base that could be transmitted from generation to generation and no succession, in the strict sense of the term, it is difficult to identify specific Cynic sources or philosophers in the second and first centuries B.C. Cynicism emerges again with renewed vitality in the first century A.D., and does so because of the renewed attention it received from the Stoics.

The Stoicism of Panaetius and Posidonius, which had first come to Rome in the second century B.C., was liberal and speculative, and appealed to the nobility of the Scipionic circle. By the first century B.C., however, the Stoics turned to the masses with a practical, nontechnical philosophy aimed at reforming individuals. They did not return to the unscientific stance of the Cynics, but their insistence on the practical utility of philosophy resulted in lessening the importance of logic and physics, which nevertheless still provided the basis for their ethical theory. As their interest became more practical, Stoics tended increasingly to see the ideal in earlier Cynicism. Whereas Cynicism in Greece had been a manner of life in which one gave expression to his self-understanding and to his perception of the world, in Rome it became a norm for action. Thus in the first century A.D., the Cynic heroes, especially Heracles and Diogenes, appear in the Stoicized views of the ideal Cynic presented as models to be followed by Musonius Rufus, Epictetus, and Dio Chrysostom. Men also now appear who take up the life of Diogenes and call themselves Cynics. Seneca the Stoic provides us with information about Demetrius, whom he admired highly, the first Cynic in the Roman Empire about whom we know. Demetrius was followed in increasing numbers by others who ventured forth to correct mankind, not always with the noblest of motives, as Lucian of Samosata and other satirists make clear.

The Cynics of the first two centuries have frequently been viewed as radical Stoics whose garb and rationale differed from that of other Stoics in degree rather than in kind. There were differences in matters of class and style; the Cynics, representing the "philosophy of the proletariat," directed their attention to the masses, while the Stoics tended to confine themselves to lecture halls

and the salons of the wealthy. But these distinctions were not absolute, for we know of Stoic street preachers, although they seem to have been more numerous in the first century B.C. There were, however, more fundamental differences between the two which are obscured if Cynicism is approached solely through the syncretistic descriptions of the Stoic moralists. Epictetus, and especially Dio Chrysostom, do preserve Cynic traditions of great value for understanding Cynicism, but they must be seen in the context of other Cynic traditions in such authors as Plutarch, Lucian, Maximus of Tyre, and, above all, with the writings of the Cynics themselves. There are extant a few papyrus remains of Cynic writings as well as a body of Cynic letters dating from the Augustan age under the names of Antisthenes, Diogenes, Crates, and non-Cynic philosophers such as Heraclitus and Socrates, and Anacharsis. These letters appear to have been written as propaganda pieces, and are a prime source for our understanding of Cynicism.

The Cynics held to the profound distinction between the wise and foolish, and confidently assumed that the ideal could be realized as it had been by the ancients. The Stoics, on the other hand, defined the ideal in such a way that its attainability was only an abstract possibility. The ideal sage, Seneca says, may appear like the phoenix, only once in five hundred years (*Moral Epistle XLII.1*). The Stoic philosopher is only a *proficiens* who is making progress to the ideal. Cynic individualism and confidence are also expressed in their attitude toward religion. Stoicism had made a *rapprochement* with popular piety, and its doctrine of the cosmic sympathy provided a conceptual framework for much of popular demonology, divination, dreams, magic, and astrology. Using current religious language, the Stoic expressed his concern to find his proper station in the cosmic scheme of things. For their part, the earliest Cynics scorned the popular cult, and in this they were generally followed by their successors. The high point of their opposition was reached in the systematic polemic of Oenomaus of Gadara in the second century A.D. The Cynic rejects all supra-individual points of view. He shows no interest in providence, but stresses his own free will and his own accomplishment without recourse to any physical or logical theory. His interest is solely in ethics.

Considerable diversity characterized Cynics in the Roman Empire. Serious Cynics differed from the many charlatans who also took the name, but even genuine Cynics differed among themselves. The milder form introduced by Crates and strengthened by Bion continued to find representatives who were more humane in their view of the human condition. Their perception influenced their views on how they should live, whether they should beg for their livelihood and from whom, whether they should marry or not, whether they should have disciples or not, all matters on which they disagreed among themselves. Despite Lucian's depiction of him, Peregrinus demonstrates that a Cynic could even be of a mystical bent, even though he seems to have been an exception. What remains basic to all Cynics, however, is their insistence on

the individual's ability to free himself from the yearning for fame, riches, and pleasure that shackles mankind. In stressing the power of the will they demonstrate their confidence that the good can be attained by noble men.

There are many similarities between early Christianity and Cynic philosophy. Epictetus (*Discourses* III.22) describes the ideal Cynic as a messenger (ἄγγελος) sent by God as his herald (κῆρυξ) to convert men and oversee (ἐπισκοπεῖν) them. The hardships suffered by the Cynic recall those of Paul (e.g., II Cor. 6:9-10), who also makes a modified use of the Cynic description of self-sufficiency (Phil. 4:11). As do the Cynics, so Paul too uses athletic imagery to describe his labors (e.g., I Cor. 9:24 ff.). Christian preaching is also described as BOLDNESS of speech (παρρησία, cf. I Thess. 2:2), and the diatribal style, replete with lists of virtues and vices, is adopted by Paul and James (e.g., Rom. 1:16 ff.; Jas. 2:14 ff.). These similarities and points of contact do not mean that Cynics and Christians understood the terms that they used in the same way. But they do illustrate how Hellenistic philosophy contributed to a congenial climate for the transmission of early Christianity. See also FORM CRITICISM, NT[S]; LISTS, ETHICAL and supplementary article; PARENESIS[S].

**CYPROS.** See HERODIAN FORTRESSES[S] §5.

\***CYPRUS.** Human occupation is attested in the Neolithic period at several sites in the northern, central, and southern regions of the island. A pottery culture dated by carbon-14 tests to ca. 5800 B.C. marks the earliest settlement at Khirokitia near the southern coast. At Dhali-Agridhi, on the S bank of the Yalias River near the village of Dhali, occupation dated to 5340 ± 465 has been found. The next occupation at this site is a pottery culture dated to 4465 ± 310. Neolithic pottery has also been found at Khirokitia, at Trouli in the N, and at Philia-Drakos in the W-central region.

Faunal remains lead to the hypothesis that the people practiced a mixed economy. They were herding sheep and goats and breeding pigs, and at the same time they hunted wild boar, two species of deer, and wild asses. Harvesting was also taking place, as indicated by the glossy sheen on some flint implements. These people were semisedentary herders who also hunted and harvested domesticated or wild plants. It was a community not restricted to one economic activity but was rather generalized in its adaptation to its environment.

The Neolithic communities came to an end about 3000, followed by Chalcolithic settlements. This period is represented ceramically by a red-on-white ware. Although there are some similarities between the Cypriote styles and those of Thessaly in the W and Ras Shamra-UGARIT in the E, the Chal-

colithic culture is essentially a development from the Neolithic, there being no evidence of serious influence from outside the island at this time.

During the Early Cypriote period (ca. 2300-2000), the island was thickly settled, and numerous occupied sites have been located. Of particular interest are the sites in the vicinity of Morphou Bay. The pottery found in this area has close affinities with Anatolian pottery of the end of Early Bronze II. This lends support to the hypothesis that settlers came to Cyprus from Anatolia following the disaster that marked the end of the EB II period there. Many of the sites of the period are near sources of copper ore. There is evidence of commercial relations with Near Eastern countries and even in a limited way with Minoan Crete.

By the end of the Early Cypriote period marked changes in Cypriote culture may be noted as a result of commercial contacts with neighboring peoples. This pattern continued in the Middle Cypriote period (ca. 2000-1600), when Cyprus played an important role in the affairs of the Near East. At the same time, Middle Cypriote is to be seen largely as a transition period. The center of importance shifted from the N to the S with the development of important harbor towns such as Enkomi and Kition.

The Late Cypriote period (1600-1050) is marked by extensive trade with the Near East and Mycenae. By ca. 1200 the island was undergoing colonization by Achaeans settlers, and within a century it became almost completely Hellenized. Although this colonization seems to have been peaceful, it caused radical cultural change. At Kition two Mycenaean temples have been excavated. Two altars were found, one for burnt sacrifices and one for bloodless sacrifices. Enkomi has produced a considerable number of furnaces, hearths, slags, and other industrial wastes that are clearly related to the extraction of copper from its ores. Moreover, the proximity of these industrial activities to temples, as well as the presence of votive slags at Athienou, about three miles S of the Yalias River, suggest a relationship between religion and copper production.

The history of Cyprus in the Cypro-Geometric period (1050-700) is dominated by the city of SALAMIS. The end of this period is marked by the beginning of Assyrian domination.

The Cypro-Archaic period (700-475) is largely a continuation of the previous period, with Mycenaean culture prevailing while the island was first under Assyrian and later under Egyptian and Persian domination. At Salamis, seventh-century tombs provide evidence of the sacrificial burial of chariots and horses, an Oriental and Mycenaean custom mentioned by Homer. At Idalion (modern Dhali) recent excavations have revealed domestic architecture combining apsidal and rectangular styles in the same building, hitherto unknown in Cyprus.

It is now clear that the massive stone defense wall at Idalion, formerly dated to the Roman period, was begun early in the Cypro-Classical period (475-325). Idalion was attacked by the Persians and the Kitions (under a Phoenician dynasty) ca. 475-450. It is therefore likely that this fifth-

century defense system was erected as a response to the rising ambitions of the Kition.

Cyprus became a part of the Hellenistic empire under the Ptolemies at the end of the fourth century. During the Hellenistic period (325-50), Cypriote culture became thoroughly Hellenistic. At the same time it is clear that a Phoenician legacy remained in such areas as Idalion and Kition. A Greek ostrakon from Idalion lists four gates, two of which bear Phoenician names: Gate of the Ark of the Armies, and Gate of the Pack-bags.

The extensive Roman ruins at Salamis include a gymnasium, a theater, and an amphitheater. Salamis remained the largest center in Cyprus during the Roman period, even though PAPHOS had become the capital. Roman ruins in the form of temples, public buildings, and rock-cut tombs may be found in abundance across the island. Most

spectacular are the well-preserved, high-quality mosaic floors of a third-century A.D. Roman villa at Paphos. The building had more than seventy rooms arranged around an atrium with a peristyle and including bedrooms, bathrooms, kitchens, and workshops.

\***DAN (CITY).** The identification made by Robinson (Tell el-Qadi) in 1838 has been substantiated by excavations carried out since 1966. Located where the road from Tyre to Damascus crosses the main N-S road, Dan was already an important city in the Early Bronze period (third millennium B.C.). The massive earthen ramparts, similar to those at other sites connected with the Hyksos, belong to the Middle Bronze period (MB IIB). On the inner southern slope a number of jar burials (MB IIC) were found. On the eastern side of the mound, beneath the rampart, a tomb with four burials and some thirty vessels (MB IIA-MB IIB) was excavated. From the archaeological evidence we conclude that the large city with its massive earth ramparts represents the city (Laish) mentioned in the Egyptian execration texts and the Mari inscriptions. From the latter we learn that tin was exported to Laish from Mari. Dan-Laish is mentioned also in the Thut-mose III lists.

Occupational levels of the Late Bronze Age were also found. From the LB II period a rich tomb built of rough basalt was excavated on the inner slope of the rampart. Remains of forty-five skeletons of men, women, and children were found in complete disarray. The gifts accompanying the burials include imported Mycenaean and Cypriote ware, an oil lamp, bowls, arrowheads, and swords made of bronze. Ivory cosmetic boxes and gold and silver jewelry were also found.

There is as yet insufficient evidence for the date of the conquest of Laish by the tribe of Dan, but it may have taken place in the first half of the twelfth century B.C. The community prospered, and among items of the next two centuries was a considerable amount of pottery vessels, as well as a clay crucible with bronze sediment. On the southern slope of the mound a city gate and walls of the Israelite period were excavated, while a high place was uncovered in the N. The high place underwent a number of changes, with monumental steps added in the ninth-eighth centuries B.C. S of the steps an Israelite horned altar

was found in the 1974 season. The security of the site was assured by a twelve-foot-thick city wall and a large gate. A unique feature of the city gate is an ashlar stone structure with ornamental column capitals; it probably served as a throne for the king when he "sat at the gate." A bench along the gate was possibly used by the "elders." From the eighth century B.C. a sherd with Hebrew letters "belonging to Amotz" was found near a storeroom containing some three hundred juglets. Another inscription, "belonging to Ba'al-pelet," was discovered in the last Iron Age stratum of the Phoenician period. The site continued to be occupied in the Persian, Hellenistic, Roman, and Byzantine periods.

\***DANIEL.** Better understanding of the Greek forms of the OT has been occasioned by the analysis of MSS found at Qumran and elsewhere. Barthélemy has shown that the Greek fragments of the minor prophets from Wadi Khabra (Naḥal Ḥever) represent a recension of the Old Greek (LXX). This recension was produced on the basis of Hebrew MSS circulating in Palestine during the first century B.C. and the early part of the first Christian century. Its translation technique is the same as the one employed in so-called "Theodotion" (generally assigned to the second century A.D.); hence, Proto-Theodotion is the common designation of this recension. It is also called the *καίτε* recension because *καίτε* is invariably used to render *אין*. Barthélemy identifies Proto-Theodotion with Jonathan ben 'Uzziel, disciple of Hillel, and argues that the work was produced in Palestine between A.D. 30 and 50; others prefer a first-century B.C. dating. Research on the *καίτε* recension of the minor prophets, parts of Samuel-Kings, and Exodus has prompted a new look at problems of the Greek forms of Daniel. See GREEK VERSIONS, MINOR[S].

1. NT citations of Daniel. Two Greek forms of Daniel are extant: Old Greek (LXX), and what it now seems best to call Theodotion-Daniel. The LXX of Daniel, extant in only the Chisian MS, Papyrus 967, and the Syrohexaplar, was translated in Alexandria ca. 100 B.C. and was soon replaced by Theodotion-Daniel in the LXX MSS. The place and date of Theodotion-Daniel are not as certain. But as regards "Theodotion" in the other parts of the OT, some bits of information are at hand. Irenaeus (died ca. A.D. 202) refers to the man Theodotion as an Ephesian (*Adversus Haereses* III.xxi.1), and his own use of the "Theodotion" recension clearly contradicts Epiphanius' statement

(*De Mensuris et Ponderibus* 17) which places the translator in Commodus' reign, ca. A.D. 180. Montgomery dates Theod. to the early second century A.D., noting that such a late date cannot account for the citation by the NT, especially in Hebrews and Revelation, of many phrases from Theodotion-Daniel. To resolve this difficulty Montgomery and others postulated an Ur-Theodotion, perhaps a Hellenistic oral Targum (see THEODOTION; GREEK VERSIONS, MINOR[S]). This postulated Ur-Theodotion must not be confused with Proto-Theodotion (see above). J. Gwynn's hypothesis in the *Dictionary of Christian Biography* (1887) has been the most imaginative with regard to an Ur-Theodotion behind the second-century A.D. "Theodotion." He argues that side by side with the LXX of Daniel there was current among the Jews from pre-Christian times another Greek form of the book. It was the latter form that was known to the Greek translator of the apocryphal (deuterocanonical) book of Baruch, the NT authors, and the early Fathers Clement and Hermas. This form supplied the foundation for the supposedly historical Theodotion. Ziegler, however, in his splendid critical edition of Daniel notes that Theodotion-Daniel may have nothing in common with "Theodotion." Following this lead, Schmitt concludes that Theodotion-Daniel is not in the same textual tradition as Proto-Theodotion or "Theodotion." Thus, the identification of Theodotion-Daniel with Proto-Theodotion (καίτε) should no longer be maintained. A fresh approach is proposed here. Just as the LXX is not a homogeneous Alexandrian translation but differs from book to book in quality and style, it appears best to view Proto-Theodotion as only one form of Greek literary activity in the first century B.C. (Proto-Lucian being another). Theodotion-Daniel is still another type, from Palestine or Asia Minor during pre-Christian times. Perhaps it is a fresh translation with an eye on the LXX Daniel rather than a recension like the other Greek forms. Though "Theodotion-Daniel" may be a misnomer, it seems advisable to keep the title to avoid even further confusion. Moreover, there is no serious reason to question that Theodotion-Daniel, extant in nearly all the Greek MSS, is essentially what existed in the first century B.C. It is Theodotion-Daniel that appears in Greek Baruch, the NT citations, and the Apostolic Fathers mentioned above.

2. The "Additions to Daniel." It has generally been held that the Greek version which contains the apocryphal, or deuterocanonical, "Additions to Daniel" (Greek 3:25-90 and the stories of Susanna, and Bel and the Dragon) represents a canon accepted only by Jews in Egypt (where the LXX was translated). Since Theodotion-Daniel was produced in Asia Minor or Palestine, and if both the LXX and Theodotion-Daniel contained the Additions (there is no cogent reason to believe that either did not), then the ancient canonical status of the longer Greek form of Daniel needs to be re-evaluated. It would appear less than accurate to speak of the Additions as sacred only in Egyptian Jewish circles while in fact the fourteen-chapter Theodotion-Daniel was published and

undoubtedly received as a holy book by many Jews in Palestine or Asia Minor.

3. Unity of the book. Most scholars have adopted one of two positions regarding the unity of Daniel: (a) One author of Maccabean times, reworking older materials, wrote in Hebrew and Aramaic all six midrashic stories (chs. 1-6) and the four apocalypses (chs. 7-12); so, e.g., Rowley and Frost (see DANIEL). (b) Two or more authors (third and second centuries B.C.) and possibly a redactor/compiler produced the book; so, e.g., Montgomery, Delcor, and particularly Ginsberg. A middle ground, however, may be suggested. Although there were many Daniel stories in Hebrew and Aramaic circulating in Palestine during the second century B.C. and later (e.g., the Aramaic Prayer of Nabonidus and three Aramaic pseudo-Daniel fragments from Qumran Cave IV), only the ones in the MT form of Daniel were declared canonical by the Pharisees who fixed the Jewish canon. The so-called Additions to Daniel, though written in Hebrew or Aramaic as is generally agreed, were not included in that canon; the reason for the exclusion is not known. Presumably, however, the Additions were canonical in some Jewish circles in Egypt, Palestine, and Asia Minor during the first century B.C. No critical scholar today would defend unity of authorship for the longer literary tradition found in the LXX and Theodotion-Daniel. It is proposed here that the case for the unity of the MT form is also less than overwhelming, whereas the case for multiple, like-minded authors is attractive and persuasive (position b). Nevertheless, the book in its short (MT) as well as its long (Greek) form has an over-all literary unity centering on the person of Daniel and a unified theological purpose, viz., to inculcate fidelity and courage in the persecuted and disheartened Jews of Maccabean times (the basic position of a). This hypothesis attempts a consistent explanation of enormously complex issues (the two languages of MT Daniel, the "Additions" preserved only in Greek, the different genres, the unity of outlook, the view of history, etc.), while acknowledging that a more precise verdict is not possible from the evidence currently available. See also SEPTUAGINT, esp. §§1, 3b; SEPTUAGINT[S].

\***DAVID, CITY OF.** The name given to the fortified city of the Jebusites after its capture by David (see **JEBUS**). The Jebusites successfully withstood the earlier stages of the Israelite infiltration (Josh. 15:63); but when David was elected king by both the northern and southern tribes, it was essential that he capture the city in order to unite his two kingdoms by the vital highway along the central hilly backbone of the country. Once captured, it was a suitable place for his personal capital, since it was not part of the patrimony of any tribal group.

The earliest stages of Jerusalem lie on the southern ends of the two ridges that run S from the present Old City. Vincent long ago suggested that the original Jebusite city was situated on the eastern of the two ridges, bounded on the E by the **KIDRON** and on the W by the **TYROPOEON** Valley, since the only permanent water supply lay in the Kidron Valley. Excavation has now proved this to be correct. It was not, however, until the 1961-67 excavations that the boundaries of the original city were established. For the topography, see **JERUSALEM** §2.

The early excavators believed that the ancient wall running along the eastern crest of the eastern ridge was that of the Jebusite town, repaired by David. This identification was clearly unsatisfactory. It was essential to the Jebusites to have access in time of war to the spring **GIHON** in the valley. Connected with the spring are a number of rock-cut channels, the most famous and latest of which is the **SILOAM** tunnel. The earliest, explored by Warren in 1867, consists of a tunnel to the foot of a fifty-two-foot shaft, from the head of which a sloping tunnel led to steps to the surface. It is very probable that it was by this route David's forces gained access to the city (II Sam. 5:6-8). This tunnel and shaft system, however, comes to the surface some seventy-nine feet outside the line of the walls on the summit. These walls therefore did not guard access to the spring, nor could the shaft and tunnels have provided

2. The original wall, Jebusite in origin and reused by David. To the right it disappears beneath a later town wall.

a means of access to the attacking Israelites. The 1961-67 excavations in fact showed the walls to be postexilic and Maccabean.

The 1961-67 main trench down the eastern slope of the eastern ridge (Fig. D1) eventually reached the early wall some 164 feet down the slope to the E (Fig. D2). This wall, dated in origin to the eighteenth century B.C., was therefore the wall of the Jebusite town. A succession of repairs showed that it was in use until the eighth century B.C., and one of these repairs was probably the work of David referred to in I Chr. 11:8. The position of the wall is strategically sound. It could not be built to enclose the spring, since it would then be commanded by the steep slope across the valley, but it was sufficiently close to prohibit access by an enemy to the spring.

This section was the only portion of the wall exposed during the excavations. The rest of the plan shown on Fig. D3 can be inferred with considerable probability. The exposed section at its northern end turns W and disappears beneath its eighth-century successor. On the plan, A XXIV

3. Plan of Jebusite and Davidic Jerusalem.

is outside it, P inside and H outside, so the oblique course up the hill is certain, as is the line crossing the summit of the ridge. On the W side, sites M, N, and K are outside the early town. Site K is particularly important, since excavations were carried right up to the scarp that bounds the level area of the summit; the only traces of Iron Age occupation were sherds in cracks in the rock. The rest of the line to the S is inferred as following this scarp.

The Davidic city and that of the preceding Jebusites therefore consisted of two parts: the summit of the ridge, not much more than 328 feet wide, and the steeply sloping flank of the Kidron Valley. About the thirteenth century B.C. the latter area had been converted into terraces, supported by a complicated series of retaining walls and stone fills.

There is little textual evidence concerning Jerusalem in the period of David. He repaired the

walls and MILLO (II Sam. 5:9), and built a "house" there, with the help of materials and technicians from Hiram, King of Tyre (II Sam. 5:11). He did not build the permanent home for the ark of the covenant as he had planned (I Chr. 22:8; 28:3). The other monument of David that one might expect to find is his tomb (I Kings 2:10).

It is not surprising that David did little to aggrandize Jerusalem, since most of his reign was concerned with foreign conquests. Repairs to the Jebusite E wall probably contain elements of his work, though they cannot be precisely identified. The Millo, or "filling," is probably to be identified with the massive stone fillings of the terraces on the eastern slope, to which repairs on a considerable scale were made in the tenth century B.C. Of his palace, nothing has been found, and the location of his tomb is quite uncertain; the identification of a structure on the western ridge as the tomb of David has no factual foundation.

The lack of evidence concerning the original city of David is due to two factors. The half of the town on the flank of the Kidron was dependent on the supporting Jebusite terraces. These terraces were frequently repaired during the Jebusite and Israelite periods. But the Babylonian destruction of 587 B.C. left them in complete disarray, with the result that the houses that they supported and much of the substructure were washed down the steep slope in a formless tumble of stones. Almost nothing of Jerusalem of the period of David or the monarchy therefore survives in this part of the Davidic city. The disappearance of the city on the summit of the ridge was equally complete, but for a different reason. Almost everywhere that excavations have been carried out on the summit, it has been found that the rock has been extensively quarried. A large area of quarrying was exposed in excavations carried out by R. Weill in 1913-14. The quarrying here, and probably in most other areas, belongs to the Hadrianic building of Aelia Capitolina (ca. A.D. 135), when the area of earliest Jerusalem was left outside the walls. Some quarrying had taken place when Herod the Great rebuilt the temple in the late first century B.C.

Among the structures destroyed by quarrying at the S end of the ridge were two tunnel-like cuttings, which Weill identified as the royal tombs. Of this there is absolutely no evidence. They are quite unlike any known tombs of the period. They were subsequently used as cisterns; and this may have been their original use, though the plan is not that of normal cisterns.

The city of David was thus on the eastern of the two ridges running S from the present Old City. Under Solomon, the temple was built on a great platform ca. 762 feet to the N of the original N wall, and the intervening area on the summit of the ridge was included in the city. During the period of the monarchy, there was an extension of the city to the N on the eastern slopes and some expansion to the W across the Tyropoeon Valley, the extent and plan of which is still the subject of argument. Postexilic Jerusalem shrank back onto the summit of the eastern

ridge. It is reasonably certain that it was only in the Maccabean and Herodian periods that the summit of the western ridge was included within the city. The present traditional location there of Mount Zion, in II Sam. 5:7 equated with the city of David, is due to Josephus, who regarded the whole of the Jerusalem of his time as the city of David, and selected the highest point as the site of the "castle" (φρούριον) of David (War V.iv.1).

\***DAY OF THE LORD.** A poetic expression used by the prophets of Israel to describe certain momentous events. It seems to have been reserved primarily for explaining either the memory or the anticipation of war between nations. In that kind of event, the prophetic writers could clearly discern the presence of Yahweh in his ongoing activity of judgment or rescue.

1. **Origin of the tradition.** Mowinckel contended that the day of Yahweh should be understood primarily within the history of Israel's cultic, or worship, life, especially in the rituals of the annual New Year's celebration (*see* NEW YEAR[S]). In keeping with the patterns of ancient Near Eastern myth and ritual, the day of Yahweh was originally the event of the enthronement of Yahweh, a time of deliverance from distress and the realization of peace. Celebrated in ritual, year after year, it was the time when the reality of God's kingdom and his victory over chaos were reaffirmed for succeeding generations.

Von Rad, on the other hand, held that the origin is to be found in Israel's historical traditions of holy war. Originally, the day of Yahweh was strictly an event of war, an event involving the appearance of Yahweh to annihilate his enemies. Amos 5:18-20, where the concept first appears, is not an appropriate place to begin studying this tradition; rather, study should begin with portrayals that are broad and unequivocal, such as Isaiah 13 and 34; Ezekiel 7; and Joel 2. In these texts, von Rad found a stereotyped and consistent pattern of sacril war, characterized by (1) the call to warriors to assemble for the levy of Yahweh, (2) the sanctification of the army, (3) panic among the enemy, (4) changes in the natural order, and (5) the total destruction of the enemy (*see* WAR, HOLY[S]).

While the approaches of Mowinckel and von Rad seem contradictory, Cross has suggested that in fact they may complement one another. While von Rad focused his study primarily on the cult in the time of the tribal league (*see* AMPHICTYONY[S]), Mowinckel focused on the cult in the later era of the monarchy, when the themes of holy war, conquest, and kingship became united in myth and ritual patterns.

Two other suggestions concerning the origin of the tradition have been made in recent years: Fensham has suggested that covenant traditions and the event of the execution of treaty curses stand behind the tradition; Weiss suggested that theophany descriptions provide the proper context.

2. **Prophetic use of the tradition.** In the pro-

phetic literature there are eighteen texts in which specific references to the day of Yahweh appear. Seven anticipate future historical or cosmic events: Amos 5:18-20; Isa. 2:12-17; 34:1-17; 61:1-3; 63:1-6; Mal. 3:13-4:6 [H 3:13-24]; and Zech. 14:1-21. In six other texts the writers use the declaration "near is the day of Yahweh!" to convey a sense of urgency and the conviction that the anticipated event may come very soon: Zeph. 1:1-2:3; Ezek. 7:1-27; 30:1-9; Obad. 1-21; Isa. 13:1-22; and Joel 1-3 [H 1-4]. But in all these texts, it is still difficult to know precisely what kind of event the prophet actually had in mind.

There are, however, five other texts in which the concept appears. In each of these, an author has described and interpreted a past event. In Lam. 1, 2 and Ezek. 13:1-9, writers used the concept as they looked back on the fall of Jerusalem in 587. The author of Lam. 1:12 depicts the woman Zion as she looks back and declares:

Look and see  
if there is any sorrow like my sorrow  
which was brought upon me,  
which the Lord inflicted  
on the day of his fierce anger.

In a similar manner, the author of Jer. 46:2-12 reflected on the fall of an Egyptian army to the Babylonians at Carchemish in 605 and declared that this was a day of the Lord for proud Egypt. And quite certainly, the author of Isa. 22:1-14 was also reflecting on the events of the devastation of Judah and Jerusalem's narrow escape during Sennacherib's campaign in 701. Consistent with the focus on past events in the rest of that text, vs. 5 should certainly read: "For the Lord God of hosts has (had) a day of tumult and trampling and confusion."

These five texts provide a clear perspective for understanding the use of the day of Yahweh expression by the classical prophets. Because these texts describe several different past events, we can justifiably speak of various days of Yahweh throughout Israel's history. Amos announced the fall of northern Israel, convinced that the corrupt actions of the country could bring no other result (5:18-20). When Samaria and northern Israel fell in 721, those events were certainly recognized by later prophets as the fulfillment of the words of Amos; the day of Yahweh had come for northern Israel. Isaiah used the tradition to warn Judah (2:12-17) in a similar way and apparently lived to speak of the catastrophe in retrospect (22:1-14). In the years before the fall of Jerusalem, Zephaniah (1:1-2:3) and Ezekiel (7:1-27) again employed the tradition to give new and urgent warnings to Judah. The day of Yahweh concept was thus used with considerable freedom to interpret various momentous events—past, future, or imminent.

At the end of the era of the Exile, the restoration of Judah was understood to be directly dependent upon the destruction of Babylon. It is more than coincidence that the day of Yahweh concept is united with the term נקם "vindication" (not "vengeance") in three texts from this era (Isa. 34:8; 61:2; 63:4; cf. Jer. 46:10). This term can express the dual activity of a just and good king

who rescues the upright while at the same time bringing punishment for those guilty of arrogance and violence. See VENGEANCE[S].

The day of Yahweh tradition probably had this dual character from its very origin; the prophets could emphasize aspects of judgment or rescue as they understood the realities of their own time. They were controlled in their use of the concept by their convictions about Yahweh as the ruler of all nations who has steadfast love for the upright (see LOVE IN THE OT §3) but who does not allow arrogance and violence among nations to continue forever.

3. **The apocalyptic influence.** In the late post-exilic era, portrayals of the day of Yahweh tend to become more and more cataclysmic and universal in character under the influence of apocalyptic thought (see APOCALYPTICISM; APOCALYPTICISM [S]). But even in these late prophetic portrayals (Joel 1-4; Zech. 14:1-21; and Mal. 3:13-4:6 [H 3:13-24]), God's presence is still anticipated in the tumult of world events. When the tradition is examined in intertestamental and early Christian writings, it is important to remember that the classical prophets used this concept not to speak of the end of the world for all mankind but rather to describe a sequence of momentous events within history. That background may in fact provide important insights for understanding the various ways in which the concept is employed in later eras. See also DAY OF JUDGMENT; DAY OF CHRIST.

1. **Archaeological evidence.** The archaeological evidence concerning the Qumran site and the agricultural annex at 'Ain Feshkha are discussed fully by de Vaux in his 1959 Schweich Lectures, published in French in 1961 and reissued in a revised English translation in 1973. Among the many discoveries helping to determine the chronology of the Qumran settlement, the dated coins in particular provide valuable pointers to the period during which the buildings were inhabited.

The earliest relevant phase of occupation is marked by eleven Seleucid coins, three of which

can be dated precisely to three consecutive years (132-130 B.C.) of the reign of Antiochus VII. The rule of John Hyrcanus I (134-104 B.C.) and that of Aristobulus I (104-103 B.C.) are attested by a single coin each. By contrast, 143 of the coins were minted by Alexander Jannaeus (103-76 B.C.), one by Alexandra Salome and Hyrcanus II (76-67 B.C.), five by Hyrcanus II (63-40 B.C.), four by Antigonus Mattathias (40-37 B.C.) and ten by Herod the Great (37-4 B.C.). The ethnarchy of Archelaus (4 B.C.-A.D. 6) is attested by sixteen coins, the administration by Roman prefects (A.D. 6-41) and procurators (A.D. 44-66) by ninety-one, and the reign of Agrippa I (A.D. 41-44) by seventy-eight coins. Ninety-four bronze coins represent the First Jewish War, the majority of them dating to the second year of the revolt (A.D. 67-68), a few to the third year, and none to the fourth.

A few further coins testify to the conversion of the Qumran buildings into a Roman military post, and others attest the reoccupation of the ruins by the Jewish revolutionaries of the Second War under the leadership of Simeon ben Kosiba (A.D. 132-35). See BAR KOCHBA[S].

The numismatic evidence therefore yields solid backing to the thesis that the Qumran settlement was founded in the second half of the second century B.C. and remained occupied, possibly without interruption, until the war of A.D. 66-70 but more probably until A.D. 68. Such a firmly established archaeological context enables us to fix a reliable chronological framework for the dating of the scrolls possessed by the ancient inhabitants of Qumran, and for the identification of the events alluded to in those scrolls.

2. **Editions of texts.** At the time of the completion of the article DEAD SEA SCROLLS, the MSS of Cave I had appeared in definitive editions. Since then, three additional volumes of the series *Discoveries in the Judean Desert (DJD)* and a separate edition of the Targ. of Job have substantially enriched our information regarding the literature of the Dead Sea sect.

*DJD* III (1962) contains all the fragments discovered in Caves II, III, and V-X, the so-called "Minor Caves." In addition to a large number of small biblical and nonbiblical remains, this volume includes some minute fragments of the Hebrew Ecclesiasticus and Jubilees from Cave II. There are also several tiny scraps found in Caves V and VI (more are to follow from Cave IV) of the Zadokite Fragments or Damascus Rule (CDC), thus demonstrating the antiquity of the document preserved in two medieval MSS in the Cairo Genizah, and *mezuzoth* and *tephillin* or phylacteries from Caves V and VIII. A phylactery complete with capsule was published by Yadin in 1969.

The two most important texts appearing in this volume are the Aramaic New Jerusalem from Cave V, and the Copper Scroll from Cave III, both edited by Milik.

The New Jerusalem document (the fragments from Cave V are completed with the help of parallels from Cave IV) is inspired by Ezek. 40-48 and may be compared to Rev. 21. The author is a visionary who observes an angelic surveyor measuring the avenues, streets, houses, staircases,

rooms, windows, etc. of the heavenly city. When the more extensive texts from Cave IV are published, a much fuller insight will be gained into Jewish eschatological speculation in regard to the religious capital of Israel in the world to come.

The Copper Scroll, a nonreligious composition embossed on sheets of copper in a Hebrew akin to the language of the Mishna, lists in cryptic style sixty-four hiding places where gold, silver, aromatics, and scrolls are said to have been concealed. Accepted literally, the quantity of precious metal mentioned in the scroll amounts to nearly one hundred tons. Some scholars are prepared to believe in the reality of the treasure and identify it either as the fortune accumulated by the Essene sect (Dupont-Sommer), or as the wealth of the temple of Jerusalem removed from the holy city shortly before the siege by the Romans (Rabin, Allegro). The editor (Milik), by contrast, advances the theory that it is a fictional account of hidden treasure.

It should perhaps also be noted that a few minuscule and insignificant Greek fragments from Cave VII have been blown up by the papyrologist O'Callahan into a sensational discovery of NT writings (Mark, Acts, Romans, I Timothy, James, II Peter). This argument has been repudiated as a flight of fancy by the editors of the fragments (Baillet, Benoit) and by other leading scholars in the Qumran field and Greek papyrology (Vermes, Fitzmyer, Roberts, etc.).

*DJD IV* (1965) contains the *editio princeps* of the Psalms Scroll from Cave XI. The MS, assigned by its editor J. A. Sanders to the second century B.C., preserves fully or in part forty-one canonical psalms (beginning with Ps. 101), the poem known as II Sam. 23:1-7, four apocryphal psalms previously available in Greek, Latin, and Syriac translations, three completely new ones, and a curious prose composition listing the number of various types of poetic works attributed to David to a sum totaling 4,050. The canonical psalms do not follow the traditional order. There are also variant readings, but few have meaningful relevance to textual criticism.

*DJD V* (1968) yields the first collection of fragments from Cave IV. Published by Allegro, the contents are mostly exegetical observations concerning individual books of the Bible (Genesis, Exodus, Isaiah, Hosea, Micah, Nahum, Zephaniah, Psalms), or selected extracts (florilegium, testimonia). The Nahum Commentary and a quotation from the Psalms of Joshua are of great historical significance and will be touched on below (§3).

Among the miscellaneous compositions are two fragmentary horoscopes, written from left to right in a childish cipher, and using letters chosen from various Hebrew scripts and from the Greek alphabet. The spiritual destinies of three individuals are described there as reflected by their share in light and darkness. It is interesting to remark that certain physical characteristics, such as shortness, fatness, and irregularity of features, are associated with wickedness, whereas their opposites denote virtue. An Aramaic horoscope, edited separately by Starcky, appears to be that of the royal Messiah.

The Targ. of Job from Cave XI (1971) offers

an Aramaic rendering, neither fully literal nor properly paraphrastic, of substantial sections of the book of Job between Job 17:14 and 42:11. The existence of written Targs., in particular a Targ. of Job, in the days of R. Gamaliel (first half of the first century A.D.) is alluded to in J.T. Shab. 15c and T.B. Shab. 115a. The Qumran MS is attributed by its editors, van der Ploeg and van der Woude, to ca. 100 B.C. Their opinion that it may be identical with the Targ. rejected by Gamaliel I, and that its language is by and large the Aramaic spoken by Jesus, is, however, purely conjectural. The latest linguistic study of the document (by Muraoka) argues that this Targ. originated, not in Palestine, but in Mesopotamia between 250 and 150 B.C.

**3. Preliminary publications.** Among the provisionally edited texts, two deserve particular mention: the Melchizedek Document and the Temple Scroll.

The Melchizedek composition takes the form of a midrash (*see* MIDRASH[S] §3) in which Isa. 61:1 is interpreted in the light of Lev. 25:13 and Deut. 15:2. The proclamation of liberty to the captives at the end of days is understood as part of the general restoration of property in the jubilee year or universal remission of debts. The heavenly deliverer is Melchizedek, identified with the archangel Michael and leader of the sons of heaven. Designated as a "god" (אלהים), he is portrayed as presiding over the final judgment and as condemning his demonic counterpart, the Prince of Darkness, or Belial (called also Melkiresha), together with his armies. The eschatological act of liberation is expected to occur in the last Jubilee, and on the Day of Atonement. The MS sheds valuable light on the figure of Melchizedek in Heb. 7, and on the development of the concept of the heavenly Messiah in the NT and early Christianity. *See also* MELCHIZEDEK[S].

The as yet unpublished Temple Scroll is the largest of all the Qumran MSS, measuring over twenty-eight feet in length and containing sixty-six columns. It was acquired in the summer of 1967 by Yadin. A preliminary description of the contents of the MS and two small extracts have since been issued by this scholar.

The document consists of four sections. The first deals with ritual cleanness and uncleanness, the second with the festivals, the third with the building of the temple, and the fourth with the king and the army of Israel. As a source of specific laws and customs, it promises to be invaluable.

The two short passages so far released are both of considerable significance. In col. 57.17-19 we are told that even the king was subject to the rule of monogamous marriage: "He shall not take another wife in addition to her, for she shall be with him all the days of her life." Col. 64.6-13 preserves a statute according to which an Israelite guilty of treason or some similar crime against the Jewish state is to die by "hanging on the tree," i.e., in the light of the Nahum Commentary and parallel sources, most probably by crucifixion: "If a man slanders his people and delivers his people to a foreign nation and does evil to his people, you shall hang him on a tree and he shall die."

4. **Bible, Apoc., and Pseudep.** The eleven Qumran caves have revealed scrolls and fragments belonging to all the books of the Hebrew Scriptures except Esther, antedating by over a millennium the oldest Masoretic codices. Perhaps the most crucial feature of the biblical Dead Sea Scrolls from the point of view of Jewish history is that they represent not one but several recensional traditions. Some MSS testify to the "received text" of the later Masoretes; others echo for the first time the Hebrew underlying the Greek translations of the Bible; still others correspond to the Samaritan version. Before Qumran, it was commonly assumed that the canon of the Hebrew OT was established at Jamnia (JABNEEL) by the rabbis assembled there at the end of the first century A.D. The scrolls now show that Gamaliel II and his colleagues had to determine, not only the precise number of books to be kept on the register of sacred writings, but also which single type of recension of the text should count from then on as canonical.

Clearly, they preferred the tradition which we designate as (Proto-)Masoretic. But this simply means that, when religious authority proceeded to unify the plurality of competing textual or recensional traditions, it decided to consecrate one of the existing varieties more or less *in toto*, instead of creating, as modern biblical scholars often do, a new mosaic version with the help of what seems the best readings found in the diverse sources, readings imagined to approximate most closely the hypothetical *Urtext* of the Bible.

In brief, Qumran has disclosed that, even in the field of the transmission of the text of Scripture, plurality preceded unity. Subject to confirmation by the long-awaited release of the biblical material from Cave IV by Cross and Skehan, this new insight might lead to a veritable breakthrough, not only in textual criticism, but also in Jewish intellectual and religious history.

With the discovery of apocryphal and pseudographic texts written in Hebrew and Aramaic and belonging to the period of the second temple, these writings are no longer to be seen as secondary phenomena in the literary history of Judaism, surviving only in Christian translations. They are evidence of Palestinian Jewry's own rich creativity during the co-existence of many religious parties in the pre-Destruction era. After Jamnia, the several streams of inspiration were reduced to a unity, this change being necessitated by the conditions in which Judaism was reorganized after the cataclysm of the first war against Rome, and by the way the religious leadership responded to the needs of that period of crisis in the last decade of the first and the first half of the second century A.D. The publication of the Aramaic Books of Enoch of Qumran Cave IV by Milik (and a new edition of the Ethiopic text by Knibb) is eagerly awaited. There is no sign in the pre-A.D. 70 Qumran MSS of the Book of the Similitudes of Enoch (i.e., chs. 37-72 of the Ethiopic version) with its famous references to the "Son of Man," about whom NT scholars have speculated so much. And even if Milik's dating of the relevant chapters to the third century A.D. is taken with a pinch of salt, it is doubtful, to say the least, that the "Son of Man"

section existed before the destruction of the temple of Jerusalem. In that case, the historical interpretation of the corresponding gospel passages will have to be reconsidered quite independently of the Enoch evidence.

5. **Historical theories.** The emergence of new material and the general shift in scholarly opinion invite and even necessitate a full statement of the historical problems raised by the Dead Sea Scrolls.

In the early days of Qumran research, the dating of the history of the sect—i.e., the conflict between the Teacher of Righteousness and the Wicked Priest and the arrival of the Kittim—oscillated between the time of Antiochus Epiphanes and the age of the Crusades. During the period from 1960 to 1975, however, the extreme views have lost much ground. Protagonists of the medieval theory have been reduced to S. Zeitlin and his uninfluential circle. J. L. Teicher's Christian hypothesis has left no noticeable mark on scholarship, nor has Y. Baer's more recent restatement of the thesis endowed it with any greater verisimilitude. More significantly, no fresh attempt has been made at identifying the Kittim of the scrolls with the Seleucids. Today, experts are practically unanimous in recognizing the Kittim as Romans, and in placing the chief characters of the scrolls between the epoch of the early Maccabees (Jonathan and Simon) on the one hand, and the war of A.D. 66-70, on the other.

Within these outer boundaries, three theories with minor variations may be considered defensible.

(a) The Maccabean thesis situates the conflict between the Teacher of Righteousness and the Wicked Priest under the rule of Jonathan and/or Simon Maccabeus.

(b) The Hasmonean theory centers on the reign of Alexander Janneus or his sons Aristobulus II and Hyrcanus II.

(c) The Zealot reconstruction moves the majority of events alluded to in the MSS within the period of the First Jewish War.

The Zealot theory, for which the late Cecil Roth and G. R. Driver are jointly responsible, stands only a limited chance of being found correct. The Zealot chronological framework is ill-suited to the Qumran data, as it requires all the main events to be squeezed into the last few years of the existence of Qumran, whereas archaeology and literary allusions postulate prolonged occupation of the site and a lengthy internal history of the sect. Moreover, the lay character of the Zealot movement is in contradiction with the distinctly priestly features of the founding fathers of the community. It is therefore not surprising that no other scholars of repute have supported Roth and Driver by subscribing to this theory. See ZEALOT[S].

The Alexander Janneus thesis was once advanced by de Vaux, van der Ploeg, Delcor, Barthélemy, and others (and embraced also by Betz in IDB), but from 1960 to 1975 won no new adherents. The same may also be said of the Hyrcanus II/Aristobulus II theory championed by Dupont-Sommer, despite his renewed attempt to capitalize on the mention in the Nahum Commentary of two opponents of the sect, Ephraim and Manassch, inter-

preted as the two sons of Alexander Janneus, Hyrcanus and Aristobulus.

Today the most influential and widely held theory is that which dates the history of the sect to the Maccabean era. Propounded, in chronological order, by Vermes, Milik, Cross, Winter, de Vaux, G. Jeremias, Hengel, Stegemann, and Murphy-O'Connor, its main advantage, compared with the other hypotheses, is that it accommodates without difficulty two crucial data: it can account for the establishment of the Qumran settlement some time after 140 B.C., i.e., under the reign of Simon Maccabeus, and for those literary allusions in the scrolls which associate the origin of the sect with the rise of the Hasidim at the time of Antiochus Epiphanes and the career of the Teacher of Righteousness, the founder of the community, with the initial phase of the movement's history. All the other hypotheses date his ministry to the first century A.D. or later, and thus leave a large gap at the commencement of their chronological sequence. The following figure among the more prominent hints pointing to the Maccabean theory.

The "age of wrath" (CDC 1.5) which coincided with the birth of the original nucleus of the community is best suited to the epoch of the Hellenistic crisis under Antiochus Epiphanes. The "plant root" which God "caused to spring . . . to inherit His land" (CDC 1.7-8) denotes the appearance of the Hasidim, who, as representatives of traditional Judaism, were opposed to Greek culture. The Teacher of Righteousness appeared on the scene twenty years later (CDC 1.10-11), at a time when, in our hypothesis, the war against the Seleucids had ended. The office of high priest was vacant (since the death of Alcimus in 159 B.C.), and Palestine was effectively controlled by Jonathan Maccabeus, a priest first considered good by the members of the sect, but who later betrayed God "for the sake of riches" (1QpHab. 8.9-11), no doubt when he accepted the pontifical title from the Syrian Alexander Balas in 152 B.C. With his brother Simon, the other "instrument of violence" (4QTest. 25), he fortified Jerusalem and the cities of Judea, spreading wickedness and impurity.

Jonathan was opposed by the Teacher of Righteousness, but the latter's critical stand was soon suppressed, and he was forced to retire to "the house of his exile," possibly to Qumran, where the Wicked Priest visited him when he and his followers were celebrating the Day of Atonement according to their own peculiar calendar (1QpHab. 11.4-8). Owing to the obscurity of the account, it is impossible to decide whether the purpose of this visitation was simply to humiliate the Teacher of Righteousness, or whether it intended to eliminate him and his influence altogether. Whatever the case, the Wicked Priest incurred guilt through this act in the eyes of the sectaries, and they judged that it was as a punishment for this crime that God delivered him to the enemies (1QpHab. 9.9-12), who took "vengeance on his body of flesh" (1QpHab. 9.2). The only Maccabean dynast to whom this description properly applies is Jonathan, who was captured by the Seleucid general Tryphon, the "chief of the kings of Greece" (CDC 8.11), and executed in 142 B.C.

The death of the Wicked Priest does not constitute the historical horizon of the Qumran writers. It extends, according to the Nahum Commentary, from Antiochus (no doubt Epiphanes), through Demetrius (probably Demetrius III, a contemporary of Alexander Janneus), to the coming of "the commanders of the Kittim" (4QpNah 1.2-3). Before their arrival, Israel was ruled by "the last priests of Jerusalem," whom the sectarian writer charges with having amassed "money and wealth by plundering the peoples," and who were to receive their just desserts from the Kittim (1QpHab 9.4-7). This description aptly portrays the last Hasmoneans, especially Alexander Janneus, the "furious young lion" (4QpNah 1.5), who is reproached with "hanging men alive on the tree" (4QpNah 1.7) as an act of revenge. According to Josephus, these Jewish opponents of Janneus were the Pharisees, eight hundred of whom he accused of treason in that they invited Demetrius III to invade Judea, and whom he crucified.

The Kittim, represented in the biblical commentaries of Qumran merely as God's instruments in bringing down the Hasmoneans and not as the enemies of the community, are the Romans of Pompey, who deprived the priestly rulers of Jerusalem of their wealth and of their autonomous political power.

The sect's attitude toward Rome in the years following these events is reflected in the War Rule. This MS reveals that the sons of Light were expected to remain in "exile" during the dominion of Belial (1QM 1.2), i.e., during the rule of the Romans and their Jewish allies; but, after the final forty-year-long war had been launched, Jerusalem would be reoccupied, the pure temple service restored (1QM 2.1-6), the king of the Kittim defeated (1QM 15.2-3), and the reign of light and truth inaugurated.

A variety of historical characters have been suggested for the role of the Teacher of Righteousness. Among them, in chronological sequence, are the murdered high priest Onias III; Mattathias, the father of the Maccabee brothers; Yose ben Yoezer, a priest executed in 162 B.C.; Judas Maccabeus; the Pharisee Eleazar, an opponent of John Hyrcanus I; Judas the Essene, at the time of Aristobulus I; Onias the Righteous, a charismatic person stoned to death in 65 B.C.; Jesus; and Menahem, son of Judas the Galilean, a Zealot murdered in Jerusalem in A.D. 66. See TEACHER OF RIGHTEOUSNESS[S].

Primarily because of the scarcity of concrete detail in the scrolls, but also because of a lack of information concerning anti-Maccabean activities in the accounts of the stories of Jonathan and Simon, which were written and transmitted exclusively by their sympathizers and partisans, none of these identifications is convincing. Indeed, the only sound conclusion at this moment of Qumran research is that the Teacher of Righteousness is still anonymous. We know that he was a priest (pPs.37 3.15), that he went into exile as a result of the persecution initiated by the Wicked Priest, Jonathan (1QpHab 11.6); but the date and the manner of his death, violent or peaceful, still remain open. We learn, however, from the Habbakuk Commentary that in the faith of his followers he occupied a

unique position: "*The righteous shall live by his faith* [Hab. 2:4]. Interpreted, this concerns all who observe the Law in the House of Judah [the sect], whom God will deliver from the House of Judgment because of their suffering and because of their faith in the Teacher of Righteousness" (1QpHab. 8.1.3).

Concerning the identity of the Qumran community itself, the large majority of scholars follow Dupont-Sommer and Sukenik, with or without reservations, and recognize it as the sect of the Essenes. Minority views exercising little impact on present-day academic thinking suggest, as the people of the scrolls, the Pharisees (C. Rabin), the Sadducees (R. North), the Jewish-Christians (Teicher, Baer), and the medieval Karaites (Zeitlin, Hoenig).

**6. Organization of the community.** Study of the various codes, namely the Manual of Discipline or Community Rule (IQS), the Zadokite Fragments or Damascus Rule (CDC), the Scroll of the War of the Sons of Light and the Sons of Darkness or War Rule (IQM), and the Rule of the Congregation or Messianic Rule (IQSa), enables us to reconstruct the organization, governments, and life of the sect. To do this successfully, however, we have to bear in mind that the "town communities" (CDC 12.19) differed by necessity from the "camps" (CDC 12.22-23) or desert settlements, and that the various legal accounts are bound to reflect customs of successive periods.

The community of Qumran claimed, as sects generally do, to represent the genuine traditions of the religious body from which it had separated. Its members formed the true Israel and were divided like their historical model into clergy (priests and Levites) and laity (Israel). They maintained also the symbolic divisions into twelve tribes, as well as into the smaller units of thousands, hundreds, fifties, and tens.

As was generally the case in postexilic Judaism, supreme authority lay in the hands of the priests. It was they, the "sons of Zadok" or "sons of Aaron," who had the final word in matters of doctrine, justice, and property (IQS 5.2; 9.7). They nevertheless governed the sect, not entirely on their own, but through the Council of the Community, consisting of themselves, the Levites, and the lay leaders of Israel (cf. IQSa 1.22-2.3).

The smallest unit was the group of ten. It was expected to include a priest-president to pronounce the blessing over the meals (IQS 6.2-5; CDC 13.2-3), and to perform such legal functions as were reserved to members of his class, e.g., the administration of the leprosy laws (CDC 13.4-7). The management of the community's affairs was entrusted to the guardian or overseer, who dealt with admissions, instruction, and decision making, and with determining the right conduct of every member of his unit. He was also in charge of practical matters and communal finance (IQS 6.14-23; CDC 13.7-16).

The sect as a whole was also governed by a priest-president-general and by a guardian of all the camps (CDC 14.6-12). In addition to these, the Damascus Rule mentions ten judges (CDC 10.4-10). The organization of the sect was also

to have, at least in the ultimate phase of the eschatological age, a supreme lay leader, the *nasi* or prince who was, no doubt, to be identical with the royal Messiah (IQM 5.1). There was a compulsory retirement age set at fifty for the guardian of all the camps, and at sixty for other office holders (CDC 14.7, 9; 10.6-10). Association with the community began in the form of a ceremony called the "entry into the Covenant," i.e., an undertaking on oath that the person would obey all the laws of Moses according to the interpretation of the sect's priestly hierarchy (IQS 1.16-2.16; 5.1-13). Advancement in the group with a view to being admitted to the Council of the Community required two years of special training, at the end of each year of which there was a test. The final examination decided whether the candidate was to be declared a full member with the right actively to participate in all communal matters, including voting at meetings and in the common ownership of property (IQS 6.13-23).

The way to the council was barred by any deliberate transgression of the law of Moses. A member of the council found guilty of an act of disobedience, committed willfully or through negligence, was expelled and no further contact with him was tolerated (IQS 8.20-24). Minor offenses were punished with a penance entailing a reduction of the food ration, and could last from ten days to two years (IQS 6.24-7.25).

Judging from the differences in the regulations, it would appear that covenant members living in towns and villages followed the stringent rules of the sect, but were exempt from common ownership of property. They were allowed to trade with nonmembers, even with Gentiles (CDC 13.14-16; 12.9-11). A communal chest was maintained through regular contributions (two days' wages per month) and served to finance charitable activities such as support for widows, orphans, the sick, etc. (CDC 14.12-16).

The members of the council, by contrast, practiced a kind of communism: property and earnings were handed over to the financial administrator (IQS 6.19-20), who in turn provided everyone with his needs. This compulsory scheme, characteristic of the Essenes, may be compared to its optional counterpart, mentioned in the Acts of the Apostles (2:44-45; 4:32-5:2), or to the use of a common purse administered by Judas in the life of the society formed by Jesus and his apostles (John 12:6; 13:29).

The question of the marital state of the sectaries is complex. The Damascus Rule (CDC 7.6-7) and the Messianic Rule (IQSa 1.4) speak of married members and children. The War Rule does likewise, but stipulates that during the eschatological war no woman or child may enter the camp of the sons of Light (IQM 7.3-4). On the other hand, the Community Rule is silent in regard to women, and the main Qumran cemetery has yielded only male skeletons. It should be added, however, that only a small number of tombs have been opened, and that the secondary cemeteries held the remains of women and children. Assuming that the Qumran sect belonged to the Essene movement, and recalling that Josephus mentions unmarried and

married Essenes, it is reasonable to conclude that the Dead Sea community also counted both varieties among its members, though the married sectaries probably outnumbered their celibate brethren.

All the members of the sect attended an annual general assembly at the Feast of the Renewal of the Covenant, when new candidates were sworn in and the ranking of the sectaries was reviewed (cf. IQS 1-3; esp. 2.19-22). The council held a nightly study and prayer meeting (IQS 6.7). Some of the assemblies were accompanied by a solemn meal, at which bread and wine were blessed by the presiding priest (IQS 6.4-5; IQSa 2:17-21).

The Community Rule mentions also a kind of "Court of Inquiry" (IQS 6.24) designed to try offenders against the community regulations. A detailed penal code determines the punishment attached to the various transgressions, from that of speaking out of turn in public, which incurred ten-days' penance, to a deliberate breach of the Mosaic law, demanding irrevocable expulsion (IQS 6.24-7.25). The Damascus Rule refers to a tribunal of ten judges—four priests and six Israelites (CDC 10.4-10)—and specifies also the rules applying to witnesses (CDC 9.16-10.3). Among the penalties we find the death sentence. This was to be inflicted on any sectary who had willingly participated in a capital case before a Gentile court (CDC 9.1) or had preached "apostasy under the dominion of the spirits of Belial" (CDC 12.2-3).

The publication of the Temple Scroll will yield a considerable amount of additional information concerning the organization, laws, and customs of the sect.

**7. Doctrine and religious practices.** The members of the Qumran sect professed to belong to a "new covenant" (IQpHab. 2.3; CDC 8.21, 35) based on the message of Moses and the prophets but understood in the light of the preaching of the Teacher of Righteousness and the authoritative exegesis given by the sons of Zadok, the priestly hierarchy of the community. For their special interpretation of Scripture, both legal and prophetic, see INTERPRETATION, HISTORY OF[S] §B1.

In biblical thinking, the notion of covenant and that of chosen people are inseparable: Israelite birth is synonymous with election. By contrast, when an adult Jew joined the Qumran sect, he had—like the Gentile proselyte in mainstream Judaism—a personal and active part in the process of becoming one of God's chosen. This particular situation awakened in him an awareness of human frailty and of the all-pervading reality of divine grace, sentiments that are expressed again and again in the Qumran hymns. Another of the specific themes in these poems is the recognition in salvation of a double divine gift: the revealed knowledge of what is right and good, and the God-given power enabling the sectary to embrace truth and practice justice. Knowledge and grace were believed to lead the elect toward the way of holiness, to illuminate for them the secrets of heaven, and to allow them to contemplate even the most sacred of all visions, that of the *Merkabah*, the Chariot-Throne of God: "The Cherubim bless the image of the Throne-Chariot above the firmament, and they praise the [majesty] of the fiery firmament beneath the seat

of his glory. And between the turning wheels, angels of holiness come and go, as it were a fiery vision of the most holy spirits; and about them [flow] seeming rivulets of fire, like gleaming bronze, a radiance of many gorgeous colours, of marvellous pigments magnificently mingled. The spirits of the living God move perpetually with the glory of the wonderful Chariot" (Angelic Liturgy, frag. 2).

The principal aim of the Qumran sectaries was to lead a life of continuous worship in which the sons of Light on earth joined their voices to those of the celestial choirs of the angels. Cultic acts were to be performed in the correct manner, and at the divinely prescribed moments, in conformity with the unchangeable laws of time itself governing day and night, the weeks, the months, the four seasons, and the years.

The daily prayer was to be offered at the onset of light and of darkness, i.e., at dawn and dusk. Time was measured according to a solar calendar following "the laws of the great light of heaven" (IQH 12.5); and the year was thus divided into fifty-two weeks and each season into thirteen weeks, i.e., into three months of thirty days, with an additional day linking one season to another. The result was absolute regularity: seasons and years always started on the same day of the week. Moreover, since according to the Bible the sun and the moon were created on the fourth day—a Wednesday—every New Year in the Qumran reckoning began on Wednesday. Passover, the fifteenth day of the first month, was also invariably a Wednesday. Similarly, the Day of Atonement, the tenth day of the seventh month, was always a Friday. The festivals of the Dead Sea community were in consequence celebrated on days which for other Jews were ordinary working days. This explains how the Wicked Priest could visit the Teacher of Righteousness at his place of refuge on the sect's Day of Atonement (IQpHab. 11.6-8).

As the community adhered to all the precepts of the law of Moses, the sectaries observed all the biblical feasts, but they ascribed a very special importance to the Feast of Weeks, or Pentecost. In traditional Judaism this day marks the anniversary of the revelation of the Law on Sinai; for the sect, it became the yearly occasion for the Renewal of the Covenant, the liturgy of which is described at the beginning of the Community Rule (IQS 1-3) and in an as yet unpublished section of the Damascus Rule.

The laws of cleanness and uncleanness played a significant part in the life of the community, and the ordinances concerning purification by water are clearly set out in the Damascus Rule (CDC 10.10-13), the War Rule (IQM 14.2-3), and in the Community Rule (IQS 3.4-5; 5.13). The latter passages deal with purification by means of a ritual bath in connection with entry into the covenant. In mainstream Judaism, a similar rite was administered to proselytes. In Christianity, baptism became the act of initiation par excellence.

For the sectaries, the temple of Jerusalem, singled out by Jewish law as the sole place of sacrificial worship, was a place of abomination; its precincts were considered polluted, its priests wicked, and the liturgical calendar prevailing there unlawful.

The sect therefore spiritualized its own worship until the time when the sacrificial cult, properly performed, could be restored, an event expected to take place after the reoccupation of Jerusalem by the community, in the seventh year of the eschatological war (1QM 2.5-6).

The sacred meal of the sect (1QS 6.4-5) was no doubt a substitute for the sacrificial meals of the temple. It would be celebrated again in the final age as an eschatological banquet attended by the priestly Messiah and the Messiah of Israel. The former, by virtue of his priesthood, was to have precedence over the latter (1QSa 2.17-22).

**8. Eschatology and messianism.** Following established Jewish patterns, the Qumran sect believed that the final triumph of justice and the establishment of the reign of God would be preceded by a period of wars and tribulations. Moreover, when the community represented the ultimate victory of the forces of good as brought about through the mediation of a Messiah, it often combined the Davidic idea with the images of a new exodus and a new Moses. The scrolls exhibit all these features, and produce an extraordinary synthesis.

According to the Damascus Rule, the messianic age was to begin approximately forty years after the death of the Teacher of Righteousness (CDC 20.13-15): the War Rule describes the fight against the armies of Darkness as also lasting forty years (1QM 2.6). If the various chronological data of these two scrolls are combined, they add up to the traditional 490 years from the first fall of Jerusalem until the triumph of the Messiah prophesied by Jeremiah (25:11; 29:10) and expounded by Daniel (9:24): 390 years from Nebuchadrezzar to the emergence of the precursors of the sect (CDC 1.5-6); 20 years of "groping in the darkness" until the manifestation of the Teacher of Righteousness (CDC 1.9-11); 40 years of his ministry and the immediate pre-messianic age (CDC 20.13-15); and the 40 years of the messianic war. Altogether 70 "weeks of years," or 70 times 7 years.

Before the final division of the world into armies of Light and Darkness on the eve of the new age, the sect envisaged a large-scale conversion of Jews to the community (1QSa 1.1), but after this last opportunity for repentance, no one would be able to change sides (CDC 4.11). The elect would be under the command of the Prince of Light (Michael or Melchizedek), and the rest of wicked mankind, Jews as well as Gentiles, would form the host of Darkness led by the Angel of Darkness (Belial, Melkiresha). But at the end of the forty-year struggle, "the great hand of God" would cause justice to overcome wickedness; and the Kittim and all their allies on earth, as well as Belial and his satanic forces, would be defeated forever (1QM 18.1-3).

The sect inserted into this traditional framework an idiosyncratic messianic doctrine. They expected the arrival of a Prophet, and of the two Messiahs of Aaron and Israel (1QS 9.11). The same trio is reflected in the Testimonia or Messianic Anthology, citing Deut. 18:18 ("I will raise up for them a prophet"); Num. 24:17 ("A star shall come out of Jacob, and a scepter shall rise out of Israel," i.e., the royal Messiah); and Deut. 33:8-11, the

blessing of Levi (the priestly Messiah). The latter two figures appear in other Qumran texts also. The Messianic Rule refers to the Priest and the Messiah of Israel (1QSa 2.11-21); the florilegium (1.11) juxtaposes the "Branch of David" (royal Messiah) and the "Interpreter of the Law" (priestly Messiah); and a similar group of two appears in the Damascus Rule designated as the "Prince of all the Congregation" and the "Interpreter of the Law" (CDC 7.18-21).

The roles of these two Messiahs are easy to define. The lay Messiah was to defeat the Gentiles and usher in God's kingdom. He was to be inferior to the priests ("as they teach him, so shall he judge" [4QpIsa 8-10.23]), and in particular to the priestly Messiah (1QSa 2.20). The Messiah of Aaron is represented as the high priest of the final age, whose task it would be to expound the ultimate meaning of Scripture and to conduct the battle liturgy during the messianic war.

The function of the Prophet is less clear because his activity is nowhere defined. If we can rely on Deut. 18:18-19, he was to be a second Moses, a prophetic Messiah. However, if Mal. 4:5 is chosen as the Prophet's prototype, then we have a forerunner of the Messiah, a traditional element of Jewish expectation inherited also by early Christianity, where John the Baptist is described as Elijah redivivus.

To assess the true significance of Qumran messianism, it is to be remembered that in nonsectarian Judaism and Christianity the Messiah is a single individual invested with various—royal, prophetic, and priestly—features. The Dead Sea sectaries are distinguished by their refusal to amalgamate the separate streams of biblical tradition and by their consequent production of an unparalleled messianic trinity.

The recent publication of the Melchizedek Document suggests that it was also possible to conceive of a final salvation without the intervention of a human Messiah. In this writing, it is the work of an angelic Prince. It is symbolized, furthermore, not only as a war between good and evil, but essentially as a universal judgment pronounced on the eschatological Day of Atonement.

Finally, whereas there is ample evidence that the sect imagined the postmessianic age in the form of a new Jerusalem, there is no definite indication of any central belief in bodily resurrection, the cornerstone of the Pharisaic and Christian faiths. Consequently, nothing sure is known at the present time of the community's attitude to the destiny after death of the saints of past ages.

**9. The scrolls and the NT.** Comparison between the two bodies of literature is not only reasonable but indispensable: they date to roughly the same era and derive from the same milieu. Scholars almost without exception agree that the writings of both religious movements are in some way linked, though they differ concerning the extent and nature of the connection. At one extreme we find the theory, first propounded by Teicher and more recently restated by Baer, according to which the scrolls are Christian documents, the community is the Judeo-Christian church, and the Teacher of Righteousness is Jesus. An intermediate position

holds that the community and the church are in a straight evolutionary line, i.e., that Christianity is an offshoot of Essenism, and Jesus a successor of the Teacher of Righteousness. Its chief spokesman, Dupont-Sommer, argues that Qumran confirms Renan's judgment that "Christianity is an Essenism which has largely succeeded." But the average academic view considers the Dead Sea sect and Christianity as two separate branches of the same tree and accounts for the similarities by descent from the common stock of first-century Judaism.

The identification of the scrolls as Judeo-Christian documents has so little substance that it can safely be discarded. Essene parentage of Christianity, on the other hand, still remains a distinct possibility. Yet the emphasis laid on the punctilious observance of the Mosaic law at Qumran contrasts so strongly with the peripheral importance given to it in the NT that a linear descent of the former to the latter seems unlikely. Therefore, the most sensible way to tackle the question of interrelationship is to start with the theory of two independent developments and subsequently to ask whether *all* the common features can be satisfactorily explained in this manner.

*a. Major areas of contact.* i. *Eschatological expectation* (see §8 above). The authors of the NT were convinced that they were witnessing the final act of the last age. Similarly, the Dead Sea literature is permeated with the idea that the *eschaton* had already begun, that the Teacher of Righteousness had ushered in the ultimate age, and that in the events taking place before their own eyes the members of the sect could detect the realization of biblical prophecies. As the consummation of time was more and more delayed, hope and perseverance became essential virtues in both communities (cf. 1QpHab. 7.9-14; II Pet. 3:3-10).

ii. *The claims to be the true Israel.* Each group believed in its own absolute and exclusive election (see §7 above). Each group was certain that it was the legitimate heir to all the divine promises made to the historical Israel and that it, and it alone, was the participant in a new covenant. The Qumran community describes itself as "that tried wall, that precious cornerstone, whose foundations shall neither rock, nor sway in their place" (1QS 8.7-8). The same metaphor, and a similar use of Isa. 28:16, are prominent in the NT (cf. esp. Rom. 9:32-33; I Cor. 3:10-13; Eph. 2:20; I Pet. 2:6). But the most notable evidence of the conviction of these minority bodies that they truly represented the "chosen people" appears in the symbolical division of their communities into twelve tribes (see §6 above). The Qumran sect was led by twelve tribal chiefs (1QSa 1.27-2.1), and the supreme council of the sect consisted of twelve laymen and three priests (1QS 8.1). Likewise, the twelve apostles of Jesus are promised that they will "sit on twelve thrones, judging the twelve tribes of Israel" (Matt. 19:28; Luke 22:30), and the church to which James wrote his letter is defined as "the twelve tribes in the Dispersion" (Jas. 1:1).

iii. *Attitude to the Bible* (see INTERPRETATION, HISTORY OF[S] §§B, C). The prophetic character of the Hebrew Scriptures had acquired paramount importance both for the church and for the com-

munity. The two were convinced that the words of the prophets announcing the final realities referred to the history and beliefs of their own group. Such an approach to the OT was conducive to a growing employment of biblical apologetics: the predestined character of the sect or church was proved by the conformity of its history to prophetic prediction. There was of course a certain variation in style in the presentation of these arguments. The scrolls, since they are addressed to initiates, can proceed with less emphasis and even elliptically. The NT, by contrast, directs its message to outsiders as well, and has in consequence to spell out every detail of its argumentation. Another point of obvious difference is that the early church represents Jesus as the subject of prophecies, the person in whom they are realized, while the Teacher of Righteousness at Qumran is the final interpreter, the man "to whom God made known all the mysteries of the words of his servants the Prophets" (1QpHab 7.4-5).

iv. *The significance of the Jerusalem temple.* According to biblical tradition, the sanctuary was the chosen dwelling place of the divine Presence and sacrificial worship there was the kernel of the religion of Israel. But for the Dead Sea sectaries, the temple had lost its holiness because of the wickedness of the priesthood, and they substituted for it the Council of the Community under the leadership of the sons of Zadok, their supreme institution. Atonement was to be made through the spiritual sacrifice of prayer and suffering (1QS 8.3-4; 9.4-5; 4QFlor. 1.6-7). (See §7 above.) By comparison, the behavior of Jesus and the apostles, including that of Paul when he was in Jerusalem, appears to have been conventional. They prayed in the temple and in general participated in the cult. At the same time, on the level of doctrine and belief Paul insists, like the sect, that the Christian community has replaced the old sanctuary and offerings (Eph. 2:19-22; Rom. 12:1).

One important dissimilarity nevertheless distinguishes the two theologies. At Qumran, withdrawal from the Jerusalem temple was intended as a temporary measure lasting as long as the rule of the wicked priesthood. It was expected that in the seventh year of the eschatological war sacrificial worship would be restored (1QM 2.3-6). Such is not the case in the vision of the NT book of Revelation. There is to be no material place of worship at all.

v. *Organization.* The close relationship, philological and real, of the מִבְּקָר (overseer/guardian) and the ἐπίσκοπος (bishop) has been noticed and emphasized since the publication of the Damascus Rule in 1910, but the reappearance of מִבְּקָר in the Qumran Community Rule lends the question renewed importance.

vi. *The economic system.* The use of the common purse and partial adoption of common ownership of property is also an obvious point of similarity (see §6 above). The Essenes of the classical accounts, and the full initiates of the scrolls, were required to hand over to the authorities their properties and earnings. This practice was so unusual both within and without the boundaries of Jewry that the Essene rejection of money became

one of the distinctive marks of the sect. The NT nowhere imposes a similar rule: though the Fourth Gospel, at least, implies that Jesus and the apostolic community attached to him drew from a common purse held, as at Qumran, by one of their number (John 13:29; cf. 12:6). More importantly, the description of the original Jerusalem church in Acts strongly suggests that Christian property owners felt morally obliged to sell their belongings and consign the profits thus acquired to the apostles (Acts 2:44-45; 5:1).

vii. *Celibacy*. The Essenes, according to the Greek and Latin sources, rejected marriage, but literary and archaeological evidence at Qumran is contradictory (see §6 above). Be this as it may, the War Rule explicitly envisages the total separation of men and women during the last thirty-three years of the eschatological war (1QM 7.3-4; cf. 2.6). The NT does not condemn marriage, but holds celibacy or withdrawal from marital ties to be preferable (Matt. 19:10-12; Luke 14:26; 18:29; I Cor. 7:1, 7-8, 32-34). One of the reasons given is practical: family bonds must be severed by those who wish to accompany Jesus on his journeys (Luke) or to devote themselves fully to "the affairs of the Lord," i.e., the church (I Cor. 7:32-34). The second is the eschatological requirement that the chosen few, endowed with understanding, should make themselves "eunuchs for the sake of the kingdom of heaven" (Matt. 19:12). The third is a reason of convenience: the unmarried will have less trouble and worry than the married during the "impending distress" of the final upheaval (I Cor. 7:26-31; cf. Matt. 24:19). On the personal level, Paul explicitly declares himself to be wifeless (I Cor. 7:8; cf. 9:5), and the gospels give the impression that Jesus also was unmarried. Celibacy, or even a lengthy separation of the sexes, is alien to the Jewish way of life. Eliezer ben Hyrcanus, at the end of the first century A.D., went so far as to compare abstinence from procreation to murder (T.B. Yeb. 63b). This therefore could be a domain of some importance in the study of Qumran influence on Christianity.

viii. *The significance of Pentecost*. It is generally agreed that on this festival day the sect celebrated the annual renewal of the covenant, enrolled new aspirants, and admitted the initiated to full membership at the end of the two-year training period (see §6 above). Acts 2 also dates the first massive public entry into the new Christian sect to the same feast, on which occasion Peter's sermon was followed by the repentance and baptism of "about three thousand souls" (Acts 2:41).

b. *Conclusions*. In regard to the first of these major areas of contact between Qumran and the NT, it is undeniable that eschatological ferment was active throughout Palestine in the first century A.D. But neither the general picture of Jewish society at that time as depicted by Josephus, nor rabbinic traditions traceable with some probability to the period prior to A.D. 70, would indicate that Palestinian Jewry as such was affected by this fever to the level of intensity attested in the scrolls and the NT. On the other hand, an all-pervading eschatological expectation is more naturally found in fringe movements or sects than in the more

sedate religious mainstream. It is reasonable to infer that the community and the primitive church belonged to the same socioreligious stratum of Palestinian Jewry. But we would not be justified in seeking to associate them more specifically than this.

General sectarian principles may also explain the claim made by the community and the church to be the true Israel, and their respective convictions that they were fulfilling prophecies. As these claims were of course necessarily contradictory, their separate arguments could have been influenced by controversy. There is, nonetheless, no evidence of any such confrontation in either corpus, and in the circumstances, speculation on the potential effects of polemics remains without foundation.

The temple problem is more complex. For the Qumran sect, which was dominated by priests, the sanctuary and the cult were of greater importance than for the group of unsophisticated Galileans who formed the nucleus of Christianity. This could account for the basic difference between the two doctrines, as to whether the replacement for the temple was to be temporary or permanent. Yet the resemblance of Paul's theology to that of Qumran on this point is too pronounced to be merely accidental, and it is legitimate to surmise that Paul was acquainted, directly or indirectly, with Qumran symbolism and that he adapted it in formulating his own teaching on spiritual worship. The same comment may apply to the genesis of Paul's thought on the "Israel of God" (Gal. 6:16); in shaping his own doctrine, he imitated, but simultaneously contradicted, the sectarian claims of the scrolls.

The most probable Qumran influence on the NT is associated with organization and religious practice. For the last four decades of the second temple the two communities co-existed. But Christianity during that time was no more than a nascent body, whereas the Qumran sect was a well-established institution. It would have been only sensible if, in the fields of administration and finance, the inexperienced organizers of the church had looked around for inspiration and had observed existing patterns with a view to taking them over and modifying them.

The issue of celibacy or discontinuation of marital life is less simple. The practical argument of the NT in favor of the single state, that an itinerant preacher or his follower needs freedom and mobility, is not applicable to Qumran, or (if they are different) to the Essenes of Josephus and Philo; there we are dealing largely with sedentary communities. On the other hand, the eschatological emphasis manifest in I Corinthians and the War Rule suggests once again that the scrolls may have had a direct or an indirect effect on Paul's thought. To evaluate the possibility of a Qumran influence in this respect on Jesus, we must first examine the community's justification of sexual abstinence during the eschatological era. It surely cannot lie in the misogynic tirades of Philo and Josephus, that women are selfish, jealous, skillful in seduction, licentious, and untrustworthy, and that marriage is harmful to common life and

leads to discord. In fact, the only explicit reference in the scrolls to the separation of the sexes appears in a context of ritual purity (IQM 7.3-6). A ritual motivation of this sort is quite out of place in the case of Jesus, a Galilean charismatic who attached little if any importance to levitical cleanliness and uncleanness. The renunciation of marriage imputed to him falls within the pattern of prophetic celibacy attested in Philo and rabbinic literature (*Life of Moses* 2.68-69; Siphre on Num. 12:1 §99).

One significant conclusion emerges from these considerations. If the scrolls exerted any influence on the NT, they will have done so not by influencing Jesus himself, to whom the bulk of Qumran doctrines would have been alien if not repugnant, but by influencing Paul, John, and other leaders of the new church. Their use, that is to say, will consist negatively in showing what Jesus was not, rather than what he was, and positively, in throwing light on the Christianity of the apostolic age.

**\*DEATH, THEOLOGY OF.** A biblical understanding of death involves four presuppositions about life. (a) Psychological: the human person is a center of vitality (*nepheš*) which includes every part and element (*see* SOUL); death is the breakup of that center of vitality. (b) Sociological: human life is membership in a community; death is loss of full, functioning membership in the community. (c) Theological: life is relational; it concerns membership in a community which has a covenant with God. Life is honoring and enjoying that covenant (*see* COVENANT §§B, C, E; COVENANT, MOSAIC[S]); death is the loss of that relation. (d) Historical: life is understood in social, secular, political, and communal terms; death is inability to participate in such decision-demanding relations.

#### 1. Presuppositions in a biblical understanding.

In the context of those presuppositions, the term "death" is variously employed in the Bible. (a) Biologically, as the end of historical life. It is a natural part of life and is not particularly feared. It is enough to die in the context of one's family and community where one will be honored and remembered. One does not die in isolation but as a member of a community (Gen. 25:8; 35:29; 49:29; Deut. 32:50; Judg. 2:10; I Kings 2:10). (b) Mythologically, as a power, agent, or principle. Israel's environment sustained a mythology which presented

Death (MOT) as an active personal agent in combat with Yahweh. While Israel was not committed to such dualism, it used such language to speak about the struggle for the establishment of Yahweh's rule in historical affairs. (c) Symbolically, as the loss of rich, joyous existence as willed by God. Thus "life" refers to total well-being, and death is the loss of total well-being.

2. **Death in a covenant context.** Undoubtedly, in the circumstance of death Israel was tempted to assign to it fears and uncertainties like other peoples did, and to cope with it in terms of the resources and presuppositions of neighboring cultures and religions (cf. Deut. 26:14; Lev. 19:27-28; 20:6). However, Israel's normative posture can only be understood in terms of the covenant faith, which sharply contrasted with neighboring practices and beliefs. That faith affirmed that Israel's well-being was to be found in obedient relation to Yahweh. And when that relation was violated, trouble came: communal reverse or personal discomfort or misery (cf. Lev. 26; Deut. 28; I Kings 8:35-53; Job 5:17-27). Thus for Israel maintenance of covenant and not physical longevity is the optimum good, i.e., "life." "Life" sometimes means historical survival, but it also means the benefits and well-being of covenant: "See, I have set before you this day life and good, death and evil . . . that I have set before you life and death, blessing and curse; therefore choose life, that you and your descendants may live" (Deut. 30:15, 19). Conversely "death" can mean the end of historical existence, but it also means disruption of covenant. Israel's faith was able to define death in this way because of the assumptions of wholistic psychology and communal sociology indicated above.

3. **Acceptance of death as the end of life.** Israel fully accepted the physical termination of existence as a natural event, not to be feared. It perceived it as "sleep with one's fathers" (I Kings 2:10; 11:43; 15:8). Such a phrase reflects little interest in what happens to the dead person. While there was no doubt a popular understanding of the place of the dead (see DEAD, ABODE OF THE; SHADES), Israel's theology has no interest in it. Death at the end of long life is simply a given. Whether the covenantal relation with Yahweh endured beyond this crisis was not a concern of Israel's unreflective acceptance of death. It is the rule of Yahweh and not life or death in a historical sense that finally matters.

4. **Death and the rule of Yahweh.** In Gen. 2-3, death is presented not as a natural event but as a sentence assigned by Yahweh to those who violate his covenant. The text makes clear (a) that death is caused by human disobedience; (b) death is not natural; and (c) at least theoretically, there might have been historical existence without death. This text is highly reflective and peculiar in the OT. It is later pursued by IV Ezra (7:62-131) and Paul (Rom. 5:12-21). In general, however, Israel is not interested in such speculative questions and the text stands alone in the OT in that regard. And even in Romans, Paul is not interested in the origin of death.

However, the concerns of Gen. 2-3 reflect a tradition concerning RETRIBUTION. This perspective,

present both in Israel's historiography (Deuteronomist; Chronicler) and in its wisdom literature (see WISDOM IN THE OT[S]), interprets human experience in terms of actions and consequences. Thus death is interpreted as retribution for human choices which violate either Yahweh's covenant (in the historiography) or his created order (in wisdom) (Prov. 14:27; 15:24). The mythic expressions of Gen. 2-3 are derived from and strongly support this much broader tradition. However, in Gen. 2-3, the clearly announced sentence of death is not immediately executed. Similarly in II Sam. 12, David might expect death, but it does not come to him.

Yahweh's will toward life in covenant was more powerful than the sentence or reality of death, and his graciousness and freedom (Exod. 3:14; 33:19; 34:6) assure the power of life in a context which indicates death. See GRACE IN THE OT[S].

"Why will you die, O house of Israel? For I have no pleasure in the death of any one, says the Lord God; so turn, and live" (Ezek. 18:31-32). It is this affirmation that governs prayers which seek his intervention in the face of death (Ps. 13:3 [H 4]).

It is the same affirmation which provides grist for Job's mighty protest, and which enables Paul to assert in lyrical fashion that God's will for life is stronger than every threatening alternative (Rom. 8:38-39; cf. Rom. 6:5, 23; I Cor. 15:54-56; Phil. 3:8-11).

5. **God's triumph and apocalyptic imagery.** Israel expressed this confident affirmation not only in its more reflective idiom but also in its boldest poetry of myth. In so doing, it employed the same language and images as its neighbors and presented death as an active agent, an alternative power which challenges Yahweh's will for life and strongly opposes him (cf. Isa. 28:15, 18). However, unlike Canaanite neighbors, Israel's normative faith did not regard this conflict as a periodic struggle to be entered into repeatedly. Rather, in Israel it is peculiarly affirmed that Yahweh is in charge of Mot. Death is still an active agent, who acts on orders from Yahweh (Hos. 13:14). Ultimately Mot is presented as not only subjected to Yahweh, but finally defeated and without power to threaten (I Cor. 15:54).

There is little doubt that Israel's understanding of death changed as time passed. The early mood of serenity gave way to vigorous and undisciplined conflict imagery. It is unlikely that the emergence of new affirmations can be explained by the intrusion of new cultural influences, either Persian or Greek. It is much more plausible that the discouraging events of the exilic and postexilic periods, when the durability and efficacy of covenant seemed much in question, drove Israel back to its earliest faith. In the earliest exodus formulations, influenced by borrowed mythic language, Israel already had the resources for speaking in radical terms about the clash between Yahweh's will for life and the forces of chaos, exile, alienation, and death (Exod. 15:4-12). The later times called for use of this language again. The times were too desperate to use the language of serenity, and so Israel's vigorous faith in the rule of Yahweh re-

ceived expression in the language of conflict and victory. See APOCALYPTICISM[S].

Israel's late reflections continued to be organized around the fundamental conviction that Yahweh's will for an enduring covenant with his people (=life) would prevail. Several images were useful:

(a) Resurrection as God's overcoming of death. In early poetry, Israel had affirmed Yahweh's rule over life and death: "See now that I, even I, am he, and there is no god beside me; I kill and I make alive; I wound and I heal" (Deut. 32:39; cf. I Sam. 2:6). The theme of restoration for Israel is expressed in Hos. 6:2 and Ezek. 37. But only in the late texts of Isa. 26:19 and Dan. 12:2 is the image of rescue from the tomb utilized, though in the NT it is an accepted expression. A right understanding of resurrection requires reading it as an expression in apocalyptic imagery of God's sure rule. Resurrection has not to do with a miracle in a vacuum, but is one of a variety of images which express the undoubted affirmation that Yahweh's will for life is stronger than death. Resurrection includes nuances of (1) gathering the scattered (as in exile and return: Ezek. 11:16-17; 12:15; 20:23; 22:15; 37:21; Jer. 23:3; 29:14); (2) the restoration of a king and his re-enthronement; and (3) the fresh ratification of covenant which gives life.

(b) "The coming of the new age." The age-old rule of forces of oppression and chaos will be ended and God's covenantal reign will right all wrongs (Luke 7:22). The early church perceived in Jesus the coming of that age, though it waited for its full establishment in God's good time.

(c) The final judgment. Judgment, already expressed in Israel's oldest ceremonies (cf. Deut. 27-28), has been radicalized as ultimate judgment (cf. Matt. 25:31-46). Those who have been faithful and obedient will receive life (=covenant), and the unfaithful and disobedient will receive death (=no covenant). What has come to be called "final judgment" is in fact the covenant reckoning which Israel has faced since the beginnings at Sinai (Exod. 23:20-33).

All three images are clearly subject to perversion when removed from the context of covenant: (a) resurrection becomes a grave-emptying operation when not seen as restoration to covenantal life; (b) the coming of the new age has been perverted into spatial imagery as flight from earth to heaven when old age/new age (=out of covenant/in covenant) has been misunderstood; and (c) the last judgment has been turned into an ultimate senseless terror when not related to the blessings and curses of covenant.

**6. Death and faithful life of submission and triumph.** The NT views death in the same images used by ancient Israel with two significant additional factors. First, apocalyptic imagery is now much more widely used. Second, the death of Jesus has produced a new dimension in interpretation (see DEATH OF CHRIST). His death is a willing act of obedience (John 10:17-18; Phil. 2:7-8) which yields the NT's scandalous view of death: in weakness is strength, in death is life, in humiliation is exaltation. Thus a positive value is assigned to death. Now death is not only natural termination,

but it is the space in which departure from the old age and entrance into the new age is experienced. Jesus, by placing himself at the disposal of the enemies of the rule of God, has triumphed and inaugurated a new age in which the power of life is supreme (Col. 2:13; Rev. 5:9-12; 12:10-11; 17:14).

This meaning of death became a characteristic way of speaking about the Christian life: (a) it is the language used for baptism as entrance into the new life (Rom. 6:4-7); (b) it is the language of discipleship which means the decision to abandon the status of the old age and the willingness to risk the new age and its demands (Luke 9:23-24).

The NT affirmation agrees with the OT conviction of God's rule over death. But now it is affirmed that death, understood sometimes symbolically and sometimes biologically, is the character and condition of faithfulness to Jesus Christ. What had been perceived as the manifestation of evil, or at least the termination of good, is now presented as a revelation of graciousness.

Death is the undoing of the old world and the entry to new life with Christ, i.e., in covenant with God. In lyrical fashion Paul can assert: "For me to live is Christ, and to die is gain. If it is to be life in the flesh, that means fruitful labor for me. Yet which I shall choose I cannot tell. I am hard pressed between the two. My desire is to depart and be with Christ, for that is far better. But to remain in the flesh is more necessary on your account" (Phil. 1:21-24; cf. Rom. 6:1-11; Gal. 2:19-21).

**7. Conclusion: death and trust.** With very different emphases, the OT and the NT share a central conviction: certainty about God's rule, permitting the faithful to perceive death with confidence and without anxiety. The world has been claimed for God's life-giving promises (John 16:13). Contemporary fear of death centers on fear of unbearable isolation. Biblical faith affirms that persons are never beyond the caring community of Yahweh. It is acceptance of the promises of God that permits the faithful to accept self as a historical creature, to accept death as the limit and end of life, to affirm that "you are dust and to dust you shall return."

W. BRUEGEMANN

\***DEBIR (CITY)**. The largest and most important Canaanite city S of Hebron. It was one of the cities of the ANAKIM (Josh. 11:21) and was formerly known as Kiriath-sepher (Josh. 15:15; Judg. 1:11). In detailed accounts, the Bible attributes its conquest to OTHNIEL (Josh. 15:15-19; Judg. 1:11-15), and in other passages to JOSHUA SON OF NUN (Josh. 10:38-39; 12:13). It was one of the LEVITICAL CITIES (Josh. 21:15; I Chr. 6:58 [H 6:43]) and was mentioned with other cities in the southernmost hill country of Judah (Josh. 15:48-51).

The biblical references to Debir require an important Late Bronze and Iron Age site in the hill country of S Judea. The identification with Tell Beit Mirsim in the Shepheleh, proposed by Albright, was generally accepted, but recent archaeological research shows that Khirbet Rabud, proposed originally by Galling, suits the purpose better. It is about 7½ miles SW of Hebron at an altitude of ca. 2200 feet. For its water supply, it is dependent on rock-cut cisterns; the only other sources are two wells found about 1¼ miles N of the site. They provide a perfect background for Achsah's demand for the upper and the lower springs (Josh. 15:15-19; Judg. 1:11-15). Other identified sites of the same district, Jattir, Socho, Anab, Eshtemoh, and Anim (Josh. 15:48-50), are situated nearby, and the whole district is separated from adjacent districts by the watershed demarcation line.

Khirbet Rabud was occupied sporadically during the fourth and the third millennia B.C. The first walled city was built during the LB and covered fifteen acres. An Israelite Period I settlement upon LB debris well fits the conquest narrative. Remains from the tenth century represent the Levitical city. A city wall about thirteen feet wide, surrounding an area of twelve acres, was erected during the ninth century. The city was destroyed by Sennacherib in 701 but rebuilt immediately thereafter. An extramural suburb (established during the seventh century) was destroyed with the rest of the town by Nebuchadrezzar. Only scant remains from later periods have been found.

M. KOCHAVI

\***DEDAN** [דדן, pl. דדנים, LXX Δαδαν, Δαιδαν, old South Arab. דדן, Neo-Babylonian *Dadanu*]. Ancient name of the el-'Ula oasis in Hijaz, an important station on the "frankincense road" from Yemen to Palestine and Syria, colonized by the Mineans. Dedan first appears in the OT in prophetic passages from the sixth century. In 556 B.C. Nabonidus conquered Dadanu along with five other oases of Hijaz and settled there Babylonian subjects from both Akkad (Babylonia) and Hatti (Syria-Palestine). The Arabs of the sixth century B.C. referred to Syria as "Ashur" (Old South Arab. pl. אשור; cf. Gr. *Syria* < *Assyria* and Late Egypt. 'Išwr = Syria); hence the triple division of Dedan (Gen. 25:3) into Asshurim (new settlers from Syria-Palestine), Letushim ("metal-workers," an inferior cast), and Leummim ("nations," the full-fledged native tribesmen). It is supposed that among Nabonidus' settlers were numerous Jews, whose arrival marked the beginning of Judaism in that part of Arabia.

**DEITIES, UNDERWORLD.** In the religions of the ancient Near East the underworld is the destination of the deceased, and, like the heavens, is peopled and ruled by gods. These fall into a number of different categories whose functions are not always clear and which often overlap. Indeed, the boundaries of the category "underworld deities" are themselves often blurred.

The OT preserves occasional references to the cult of underworld deities, and speaks in traditional terms of phenomena associated with death and the underworld which are attested elsewhere as part of such cults. The precise intention of these terms is often not specifiable, but they can be placed on a historical continuum which goes back to polytheistic mythologies of the underworld and which extends down to passages in the NT.

1. In the ancient Near East. Since the dead were buried beneath the surface of the earth, their post-mortem existence was necessarily in a subterranean realm (see DEAD, ABODE OF THE). The powers associated with death, including war, famine, and disease, were, as deities or demons, often thought to reside in the same region. But, although the earth receives the dead, it also gives birth to the vegetation that sustains life, and indeed may be conceived of as the womb of all living things. Hence the underworld is sometimes viewed as the home of the beneficent powers of fertility and healing (see FERTILITY CULTS). By association, the dead may exercise inimical or beneficent powers toward the living, so that the cult of the dead and the cult of underworld deities is sometimes indistinguishable.

Ancient Near Eastern mythology also depicts certain deities as having a transient relationship with the underworld. The sun-deity passes through the underworld from W to E between setting and rising each night. Other deities visit the under-

world in association with a seasonal cycle (e.g., a planet's period of invisibility), or as messengers from one realm to the other (see COSMOGONY). To a greater or lesser extent the underworld is opposed to, and organized on the analogy of, the celestial pantheon under a king or queen and consort, with an ambassador, gate-keeper, etc.

**a. Egypt.** The most distinctive and elaborate view of the underworld and its occupants is found in Egypt. The central deity is OSIRIS, who has revived after death and become ruler of the underworld. The newly dead are brought before Osiris to be judged, their hearts are weighed against justice in a balance, and the results are recorded. Osiris then pronounces final judgment and vindicates the just. The unjust are devoured by a monster who sits beside the scale (see Fig. D4). Osiris is also a vegetation deity, and it is the hope of the deceased to be identified with Osiris as the corn that grows anew from the dormant seed. See EGYPT §3a.

All the inhabitants of the underworld welcome the arrival of Re, the sun-god, each evening, for he brings them new life. He journeys through the twelve-gated regions of the underworld, which are described in detail, as are the various creatures he encounters. In this context it is the hope of the deceased to travel with Re in his boat, and so to reach the eastern horizon, for the sunrise is the daily demonstration of Re's power to overcome death, and by accompanying him the deceased can participate in the dawn of new life.

**b. Mesopotamia.** The Mesopotamian underworld is populated with several classes of gods. Its government is in the hands of a queen, Ereshkigal. Of various consorts mentioned Nergal seems to prevail. He is the bringer of death and pestilence (see CORRUPTION, MOUNT OF[S]). Ereshkigal's son,

vizier, and messenger is Namtar, "Fate," the speedy and unwelcome messenger of death. In a vision of the underworld he is seen holding a man by the hair with one hand and grasping a sword in the other. We are also informed of a gate-keeper and a boatman of the underworld river (itself deified).

There are "killed" or "bound" gods, ancestors of the high gods An and Enlil, who have been banished to the underworld for acts of hubris. The most prominent of these is Enmesharra, who, on the occasion of the founding of a temple (an encroachment on the underworld), is invoked as lord of the underworld and is placated.

Other categories of underworld gods include vegetation deities and a select number of deified kings (e.g., Gilgamesh and Lugalbanda). Various myths deal with the movement of deities into and out of the underworld, e.g., Nergal and Ereshkigal (ANET [2nd ed.], pp. 103-4), and the Descent of Inanna/Ishtar (ANET [2nd ed.], pp. 52-57). It appears that a deity may be released from the underworld on provision of a substitute. Underworld deities are assigned a special cult in connection with deceased monarchs. See ASSYRIA AND BABYLONIA §G.

**c. Asia Minor.** More consistently than in Sumerian and Akkadian, Hittite sources make a systematic distinction between the "upper gods" or "gods of the sky" and the "lower gods" or "gods of the earth" (underworld). The ruler of the latter is Lelwani, who appears as both male and female—the latter perhaps under Babylonian influence (see ANDROGYNY[S] §2). A New Year festival is celebrated in her honor. The sun in its journey through the underworld is an independent "sun of the earth," who partakes totally of the nature of the underworld, being all evil and darkness, and is the very opposite of the celestial sun-deity. The Hittite underworld too knew a group of deposed

4. Anubis weighs the heart of the deceased against "maat." Waiting beneath the balance is the composite devourer Thoth. A scribe records the results of the judgment as Horus presents the deceased before the shrine of Osiris. From the papyrus of Hu-nefer.

deities, the "former/primeval gods," who were once involved in the cosmogony, and remain guardians of the copper knife used to sever heaven and earth. There is a group of goddesses of fate, who seem to operate from a base in the underworld. The king regularly "became god" at death, but apparently only spent a short time in the underworld before ascending to the celestial sphere.

**d. Syria-Palestine.** In the preserved Ugaritic literature (see UGARIT §4; UGARIT[S]) the underworld deity who overshadows all others is Mot, "Death." He is designated "son of El" and "beloved of El," suggesting that he is ultimately dependent on El, and thus incorporated within the total cosmic order (see EL, DEITY[S]). According to the main BAAL myth Mot dwells in a city, sits on a throne, and chews up visitors like lambs. He can stretch his jaws from heaven to "earth," and even consumes Baal, the lord of life and fertility. Baal's sister, Anath, avenges Baal by annihilating Mot (cf. his annihilation in text CTA 23=UT 52). In the sequel first Baal, then Mot, reappears. They contend in a "life and death" struggle, which is finally settled by the intervention of Shapsh, the sun-goddess, who apparently assigns each to his own realm. Underworld deities are apparently the main subject of CTA 23. Born to El, they are insatiable, are assigned to the wilderness, but also are invoked and offered food and drink.

RESHEPH is widely attested, very popular, and evidently performed a variety of functions, including those of an underworld deity. CHEMOSH, the state god of Moab, attested also at Ugarit, is equated with Nergal, and may also therefore have an underworld role. Rapi, "Healer," may be a chthonic deity, if the *rpum* in general are the deified dead (see REPHAIM[S] §2). In Ugaritic narrative literature the dead are buried in "holes of the gods of the earth," and the son of the deceased has the responsibility of caring for his father's ghost and erecting a stele for his family's ancestral god. See PILLAR[S] §1.

**2. In ancient Israel.** It is the testimony of the OT that from time to time many Israelites accepted the reality of, and participated in the cult of, deities other than Yahweh. In view of the anti-thetic relation of Mot and Baal in Ugaritic myth, it would be surprising if Israelites who found Baal so irresistible did not also acknowledge his counterpart, Mot. Certainly Israelite literature, in its dependence on Canaanite models, made use of expressions with strong mythological associations when speaking of the underworld. In general, it is probably safe to say that such expressions were understood differently at different times and by different people—that is, sometimes as mythical realities, sometimes as purely poetic figures. In their present setting the latter understanding generally prevails. However, it is not always clear whether a given expression is the creation of an Israelite poet, a survival of specifically Canaanite mythology, or a more universal conception. In any case its significance is finally determined by the way it relates to the OT's view of Yahweh.

**a. In the cult.** The one underworld deity whose cult is explicitly attested in ancient Israel is Chemosh. It was introduced into Jerusalem by

Solomon, according to I Kings 11:7, 33, and eradicated by Josiah, according to II Kings 23:13. For implicit testimony to the cult of underworld deities see the personal names in §b below.

Evidence for a hero cult in ancient Israel is lacking. The OT witnesses to necromancy (I Sam. 28), recording that the consulted dead could be called אֱלֹהִים, "god(s)" (I Sam. 28:13 and probably Isa. 8:19; see NEB and note parallelism; see also FAMILIAR SPIRIT[S]). There are isolated references to food offerings for the dead (Ps. 106:28; Deut. 26:14), but the same texts express disapproval of them. While there was probably in early Israel some form of ancestor cult based on the family and its land (burial ground), it was the tendency of developing Yahwism to diminish its importance to the point where the dead are powerless SHADES. See REPHAIM §1.

**b. In the literature.** i. *Earth/Underworld* (אָרֶץ). The concept of the "earth" as the divine mother of life and also the consumer of the dead lies behind such passages as Job 1:21 (cf. Eccles. 40:1). In Gen. 4:10-12 the ground "opened its mouth" to receive the blood of the slain Abel. The voice of the blood then cries from the ground, which will now no longer yield its produce to the killer. In Num. 16:32-33 "the earth opened its mouth and swallowed them up. . . . So they . . . went down alive into Sheol; and the earth closed over them." If the NEB is correct at Isa. 26:19, the earth will give (a second) birth to the dead—clearly a secondary adaptation of this mythology.

ii. *Mot and Sheol.* Both appear as divine names in personal names: Sheol in Methushael ("Man of [the god] Sheol"), Gen. 4:18; Mot (in the stressed form, *Maueth*) in Azmaveth ("Mot is strong"), II Sam. 23:31; and Hazarmaveth ("Enclosure of Mot"), Gen. 10:26. The strength of Death (Mot) is already proverbial at Ugarit (CTA 53=UT 54: 11-13), and is taken up in Song of S. 8:6 (cf. Eccles. 7:26). Male and female respectively, Mot and Sheol are frequently personified in language strongly reminiscent of underworld deities (see esp. Isa. 5:14). Death is portrayed as a burglar (Jer. 9:21) and shepherd (Ps. 49:14 [H 15]), Sheol as the lady of a mansion rousing her staff to greet the newly deceased (Isa. 14:9). National or personal enemies can be portrayed as allies of Mot and Sheol (Isa. 28:15, 18; cf. Wisd. Sol. 1:16), or likened to them in simile (Hab. 2:5; Prov. 1:12) or metaphor (Ps. 5:9 [H 10]).

In Job 18:13 there is a reference to the first-born of Mot consuming the limbs of the wicked—perhaps recalling some now unidentifiable denizen of the underworld. The following verse either contains a title of Mot ("King of Terrors") or refers to his servants ("terrors") bringing the dead to their king (cf. NEB). See MOT (DEITY) [S].

iii. *Shalah.* The name in Gen. 5 corresponding to Methushael in Gen. 4 (see §ii above) is Methuselah ("Man of Shalah"). Shalah appears in Job 33:18 and 36:12 as the underworld river (NEB), and as such may have been a Canaanite deity. See SHALAH[S].

iv. *Resheph.* Resheph appears with *debher* (pestilence) as two escorts of Yahweh in Hab. 3:5. If *b'ne resheph* (sons of Resheph) in Job 5:7 does

not mean "sparks," it might refer to mythological progeny of Resheph flying up from the underworld as diseases (cf. NEB). The use of *debher* and *qetebh* (destruction) in Ps. 91:6 is in a similar tradition. See RESHEPH.

v. *Yahweh and underworld deities*. Certain passages have been thought to depict the underworld as outside Yahweh's sphere of influence, though without admitting a rival power. Thus the underworld does not acknowledge Yahweh (Ps. 30:9 [H 10]; Isa. 38:18); Yahweh does not exercise his power there, does not remember the dead; nor do they acknowledge him (Ps. 88:5, 10-12 [H 6, 11-13]; cf. Pss. 6:5 [H 6]; 115:17).

On the other hand, as lord of life Yahweh also controls the limits of life. It is accepted that "the Lord kills and brings to life; he brings down to Sheol and raises up" (I Sam. 2:6; cf. Ps. 104:28-29). Thus when death is desired by his faithful servants, it is to Yahweh that they appeal for it (Num. 11:15; I Kings 19:4). The mythological language of Num. 16:32-33 (see §i above) is taken literally and seen as a special creative act of Yahweh (vs. 30). Sheol is not beyond his reach (Amos 9:2) or presence (Ps. 139:8). Finally, Yahweh will treat Mot to some of his own medicine (Isa. 25:8). See DEATH, THEOLOGY OF[S] §4.

3. In the NT. As in contemporary Judaism so in the NT the mythology of the old underworld gods reappears in a new symbol complex. The enemy of God and man is called variously the DEVIL, SATAN, the (great) DRAGON, the ancient SERPENT (Rev. 12:9; 20:2), BELIAL (II Cor. 6:15; cf. the parallelism with Mot and Sheol in II Sam. 22:5-6 and Ps. 18:5-6, RSV "perdition"), ABADDON (Job 28:22), APOLLYON, "the angel of the bottomless pit" who is "king" over apocalyptic locusts (Rev. 9:11), and whose hosts elsewhere are the demons, serpents, and scorpions (Luke 10:17-19). In the latter passage these forces are subjected to Jesus and the seventy with whom he has shared his authority. The devil has the power of death (Heb. 2:14) and behaves like Mot (I Pet. 5:8); but in the end there is victory over death in resurrection through Christ (I Cor. 15:54-57, adapting Isa. 25:8 and Hos. 13:14). In the eschatology of Revelation Death and Hades (Mot and Sheol) are given power to kill in a quarter of the earth (6:8), but finally give up the dead, are judged, and suffer the second death (20:13-14). See DEATH, THEOLOGY OF[S] §6.

For the sanctuaries of underworld deities, see SITES, SACRED[S].

S. B. PARKER

\***DEMONS IN THE NT.** Hellenistic and Jewish views about demons are reflected in the NT, especially in the Synoptic gospels and Paul. In general, heaven was occupied by God and the angels, and the air by demons and the spirits of heroes, while men occupied the earth (EUSEBIUS, *Praep. Evang.* IV.5, 141cd; Eph. 2:2). Many kinds of demons are described, varying in their powers, their habits, and in the means by which they might be controlled (*Papyri Graecae Magicae* IV.2700 ff.). The lower demons were thicker in substance and more dangerous (Test. Sol. 20:12-17). They were often thought of as possessing bodies (*Papyri Graecae Magicae* XII.141), having physical needs (*Life of Apollonius of Tyana* VI.27), and requiring a home (Aelian, *On the Characteristics of Animals* XI, 32; Luke 11:24-26).

Demons, excluding Satan, are referred to in the Synoptic gospels nearly ninety times. The usual expression is simply "demon" (δαίμόνιον), which is used about eleven times each in Matthew and Mark and some twenty-three times in Luke (e.g., Matt. 9:33; Mark 1:34; Luke 4:35). "Unclean spirit" (πνεῦμα ἀκάθαρτον) is found twice in Matthew, eleven times in Mark and six times in Luke (e.g., Matt. 10:1; Mark 3:30; Luke 8:29). Other descriptions include "spirit," πνεῦμα (Mark 9:17), "evil spirit," πνεῦμα πονηρός (Luke 7:21), and "demon," δαίμων (Matt. 8:31). The ruler of the demons is Beelzebul (e.g., Matt. 12:24) or Satan (e.g., Mark 3:23). The demonology of Luke-Acts is more detailed and vivid than in the rest of the NT (e.g., Luke 8:2; 13:16; 22:3; Acts 16:16-18).

The Pauline emphasis is upon evil cosmic powers rather than demons causing illness through possession. They are described as "powers," ἐξουσίαι (Rom. 8:38), "rulers," ἀρχαί (I Cor. 2:8), "thrones," θρόνοι (Col. 1:16) and "lords," κυριότητες (Eph. 1:21; RSV "dominion"). Both Jewish apocalyptic and pagan astrology seem to have contributed to these beliefs. Christ has deprived these forces of their power (Col. 2:15, 20).

**DEUTERONOMIC HISTORY, THE.** The name given by scholars to a supposed unitary historical work contained within the Hebrew Bible and consisting of Deuteronomy and the books of the Former Prophets. The multi-faceted material of the history (henceforth DH) is held together by a theological commentary; the whole seeks to explain with ample illustrations how history works. DH was at least originally designed to shore up both the Judahite monarchy and the Mosaic tradition under the covenant rubric (see COVENANT, MOSAIC [S]); it sought to appeal both to those who were loyal to the Davidic line and to those who longed for a return of the Mosaic era.

The DH hypothesis has been most strikingly formulated in recent years by Martin Noth. He contends that DH was the labor of a single theologian, the Deuteronomist (Dtr), who wrote after the fall of Jerusalem and sought to explain the events of 722 and 586 B.C. According to Noth, DH aims at demonstrating that these events were the direct consequence of Israel's unrepentant following after strange gods and almost complete failure to obey divine demands and counsels.

A more cautious formulation would recognize DH as one part of the great primary history (henceforth PH) of Israel, extending from Genesis through Kings. This work was completed shortly after the fall of Jerusalem and canonized ca. 550 (see PENTATEUCH §A4b). The unit called DH by modern scholars was originally prepared as a programmatic justification of JOSIAH's reform; it was later slightly rewritten and extended by the exilic compiler of the primary history (henceforth PHEd). In one sense, then, DH is a meaningful unit, since we have most of its contents, largely in original form. Nonetheless, since it has been incorporated into another work, we must be cautious in trying to specify its scope and shape. Fortunately, the radical social upheaval that characterized the first half of the sixth century brought with it such great moral changes that we are able to distinguish late monarchic from exilic material with comparative ease, and thus, in large part, DH from PH. In the last analysis, however, it must be admitted that DH is not a given part of the Hebrew Bible as we have it; this caution must be kept in mind throughout. DH is closely related to the original form of DEUTERONOMY and the editors of both had similar concerns.

1. Structure
  2. Problems
  3. Basic approach
  4. DH and the prophets
  5. Summary
- Bibliography

1. **Structure.** DH has five major sections. In the first, the editor (henceforth DHEd) provides the original book of Deuteronomy with an introduction (Deut. 1-3 belong to DH; 4:1-40, to the exilic

PHEd) and various epilogues (27, 29-34; the associations of these chapters cannot be stated precisely). There may well have been more editorial work; it is, however, likely that Josiah's Deuteronomy cannot be rediscovered by critical techniques. This part of DH deals with the nature of Israel's relationship to Yahweh, consistently emphasizing a program of one God, one people, one cult. Part two of the work, the book of Joshua, narrates the conquest of Canaan, the fulfillment of the greatest of the covenantal promises of Yahweh; the ordination of exodus and conquest themes, already apparent in Judg. 5, finds its fullest expression here. The third part of DH (Judges-I Sam. 7) describes the difficulties of premonarchic Israel and traces the origins of the monarchy. This is one of the two sections of the work that most evidently reflect DHEd's distinctive theology; in fact, the entire framework of Judges was probably constructed by him. Part four details the rise of monarchic government and its greatest glories (I Sam. 7-I Kings 8). The concluding section (I Kings 9-II Kings 23:25) reviews the progressive decline of the "divided" monarchy. Like the third, it was heavily colored by DHEd, who probably composed the standardized opening and closing lines in the description of each monarch. The editor's hand is most obvious in the ideological evaluation of the consequences which each king's actions had for the nation. Again and again, the editor tells us that because Israel did not do that which was right in the eyes of Yahweh, trouble came. In sections other than three and five, the editor simply incorporated older material in pristine form, or with only minor alterations, usually insertions.

2. **Problems.** The substantial unity of the narrative that runs from Deuteronomy through II Kings can scarcely be questioned. Several basic problems arise in considering what to make of this fact: where does this story line start and stop, and where does the narrative come from? The problem of the unit's exact beginning is most difficult and comes down to a question that is almost as old as the documentary hypothesis itself: does the Tetrateuch (an independent work consisting of Genesis through Numbers) exist (see YAHWIST[S] §3)? Noth and Engnell are the most important of the many modern scholars who insist that it does. It seems, however, that to call the break between Numbers and Deuteronomy a major one is to leave the story of the first part of the Pentateuch unfinished (a few verses about the death of Moses at the end of Deuteronomy will not do). Although it might be contended that Deuteronomy would be similarly suspended if such a break were insisted upon, this is not likely; it seems rather that Deuteronomy presupposes an earlier work on which it is dependent. That is, its author assumed that everyone knew the stories up to the settlement in the land; he backtracks only to the most recent high point, the making of the covenant, the first giving of the Torah. The classic view, that Deuteronomy presupposes JE, remains defensible (see PENTATEUCH §A2c, 4b). Another possibility is that the land theology of Deuteronomy is offered in order to obviate the need for the divine grant of the land

to the patriarchs (see PROMISES TO THE PATRIARCHS [S] and CANON OF THE OT[S]).

The end of DH poses a simpler problem. Noth dates the work to the time of the last date contained in it, i.e., ca. 561. This approach ignores the shape of the narrative in the last part of Kings, which clearly reaches a climax in II Kings 23:25, the exaltation of Josiah. What follows that point is the embarrassed follow-up: Josiah's death at Megiddo and the subsequent chaos that continued until the release of Jehoiachin from bondage, an event that provided a soberly hopeful conclusion. This follow-up is the work of an exilic redactor (PHEd); what precedes it is the work of DHEd. The shape of the narrative in Kings was determined in advance by the story that was coming, the story of the best king of all (cf. I Kings 13:1-3). Only Josiah fulfills the promise of David's early career, a promise of piety and empire.

The incongruity of these ideals of imperialism and religiosity leads us to the third basic question: What was the origin of DH? The court of King Josiah would seem to be the most likely setting for its composition. This explanation accounts not only for the role played by political-theological thought in the world view of DHEd, but also for the influence of the wisdom tradition, most visible in I Kings 3:4-15. DH presents simple answers to two great questions: Why did Samaria fall? and Why is Josiah carrying out these alarming reforms? The answer to the first is, because of the sin of Jeroboam (I Kings 13:34); the answer to the second is, because he is the long-awaited scion of the house of David and seeks to return to its ideals. That is, Josiah is taking drastic measures to eliminate apostasies like those which led to the fall of Samaria and which, according to the prophets, threaten the survival of Judah and Jerusalem. The next question—How does Josiah know what to do?—becomes equally simple in DHEd's economy of salvation. Josiah knows that he must obey the stipulations of the covenant, to which he is completely subject. If he fails to obey the covenant, the sanctions attached to it will be imposed, and the nation will be destroyed; if he is obedient, then the nation will prosper, and all the blessings will follow. Here we see another, even more cogent reason for dating the work of DHEd to the years before 587: Deuteronomic theology became essentially untenable afterward. The most obvious testimony to this fact is offered in II Kings 23:26: "Still the Lord did not turn from the fierceness of his great wrath, by which his anger was kindled against Judah, because of all the provocation with which Manasseh had provoked him." This is a forced attempt to explain why Josiah failed. The Chronicler offers another, which is even less appealing (II Chr. 35:20-22). We cannot discuss here the more compelling testimony to the human inadequacy of Deuteronomic theology but it is not far to seek: it is to be found in the words of Ezekiel (18; 33:10-20), Jeremiah (31:27-34), and Second Isaiah (Isa. 52:13-53:12). (Job may belong with these, or it may be a similar reaction to the destruction of the northern kingdom.)

3. **Basic approach.** Deuteronomy is thought by most scholars to have a northern orientation. It

seems likely that it was the work of a group of northern Levitic priests who fled to Judah after 722. If the work is to be dated in the early seventh century, we may suppose that they were alarmed at the speed with which Manasseh (687-642) was undoing the reforms which had been instituted by Hezekiah (715-687) in response to the utterances of Micah and Isaiah, and which had thus far averted the fall of the South. However, the abundant testimony of the Chronicler to the efficacy of those reforms (II Chr. 29-32) makes a date under Hezekiah seem more likely.

The Israelite bias of the work is most evident in the anti-monarchic polemic (Deut. 17:14-20); its immediate Judahite origin, in the concessions to Jerusalem as a worship center (12:1-14). The same tension between North and South is evident in DH, and the two works apparently belong to the same tradition. DHEd's writing, like that of the editor of Deuteronomy, is devoted to a handful of basic ideas, which are developed in an elaborate style and repeated in extended perorations. The most important of these are the graciousness of Yahweh's covenant, the evils of idolatry and a noncentralized cult, and the inevitability of punishment and reward. The primary covenant is the one made by Moses (see COVENANT, MOSAIC[S]). The Abrahamic, Joshuanic, and Davidic covenants (see COVENANT, DAVIDIC[S]) are always secondary to it. Thus, the king is always thought of as subordinate to the covenant; in this respect, DHEd's theology contrasts with the more ambiguous views of JE and early monarchic poetry (Ps. 89:35-46). If DHEd accepted the promise of the land to the fathers, he regarded it only as a simple promise, to be fulfilled once, and therefore largely devoid of content after the Conquest. His hopes are pinned exclusively to the Josianic reforms and the adherence to the Mosaic covenant they imply. PHEd, on the other hand, sees a great, irrevocable guarantee-type promise in the patriarchal narratives (e.g., in Deut. 4:31); this promise is in fact a crucial part of his approach to the dilemma of the exiles, an approach that must mediate between present existence and the promise of the future. To be sure, DHEd is aware of the possibility of covenantal sanctions so violent that only a remnant would be left after their application. The thought of such punishment is urgent even in Deuteronomy; the "us" and "today" of Moses' sermons reflect the somber mood that was the unavoidable consequence of the events of 722. Such usages do not refer so much to cultic re-enactment as to the lives of men who were becoming increasingly aware of the dangers of Judah's position, men of a pivotal generation who were being asked to believe that Josiah was able to meet the challenge of a crisis fraught with risk and opportunity.

One of the most important of Deuteronomy's "anachronisms" is the treatment of Moses as the supreme prophet. Major attention is devoted to the charismatic ninth- and eighth-century prophets in DH, most obviously in the Elijah and Elisha cycles. The importance of prophetic thought in DH is also shown by the use of prediction-and-fulfillment schemata (II Sam. 7:12-13 and I Kings 8:20;

I Kings 11:30-31 and 12:15-16; I Kings 14:7 ff. and 15:27-28; I Kings 16:1-4 and 16:9-14). DHed's comments on the climactic moment of his history, the fall of Samaria (II Kings 17:7-18, 21-23; vss. 19-20 are exilic insertions), focus on the warnings Yahweh gave through his servants the prophets. A similar conception played a crucial part in the theology of the exilic compiler of the first edition of the prophetic corpus, who believed that the prophets who were proved right about the fall will be proved right about the return. This understanding of prophetic activity stimulated the preparation of the first full edition of the prophetic corpus, around the time of the final edition of the primary history (i.e., ca. 550), to which it served as a supplement. Further developments in the Deuteronomistic figure of Moses, particularly his elevation from the status of God's messenger (Yahweh speaks in Exod. 20:1) to that of divinely authorized lawgiver (Moses speaks in his own name in Deut. 5:1; the only other prophet who does so is Elijah in I Kings 17:1), may reflect monarchic ideology. (The semidivine, autonomous status of MOSES is important in late postexilic thought.)

Another of Deuteronomy's anachronisms is a theology in which the name of God functions as the primary epiphanic reality. According to this scheme, Yahweh himself does not dwell on earth; rather, he causes his name to dwell (lit., pitch a tent) there. Yahweh's name is the bearer of his presence and dwells on earth in the sanctuary dedicated to him. Canaanite mythological terms formed the matrix for such ideas, but in Israel the conceptual frame was specialized to guard the aniconic understanding of Yahweh, whereby he remained, though present, invisible to his faithful. This may reflect the situation of the northern cultus after the division of the monarchy, at least in the eyes of those opposed to the shrines at Dan and Bethel.

The major differences between Deuteronomy and DH are the result of variant subject matter and theological considerations. The Deuteronomistic emphasis on the election of Israel by Yahweh disappears in DH because the notion is relevant only to Israel's precovenantal beginnings. After the covenant, matters had been put on a different footing. Yahweh's gracious choice was no longer a key factor once it was formalized (see ELECTION §4a). In Deuteronomy, the land is a primary factor in the survival of Yahweh's people, and salvation is inextricably tied up with it; this theme has faded into the background in DHed's thinking, perhaps because the notion of the inalienability of property (prominent in the story of Naboth's vineyard) had been so thoroughly diluted that it was no longer even comprehensible. Recent work contending that Deuteronomy and DH have been demythologized and secularized has tended to exaggerate minor points of disagreement with other Pentateuchal sources, while ignoring larger perspectives.

**4. DH and the prophets.** Writing like that of DH appears in the prose material of the book of Jeremiah (in the two complex sections, Jer. 26-29, 34-45). The material comes in all likelihood from Jeremiah's secretary BARUCH, probably in part be-

cause he was himself a Deuteronomist who sought to reconcile the more realistic theology of Jeremiah with his own; and in part simply because, like all ancient historians, he tells his tale in his own manner. The emphasis on oration and repetition links his work to Deuteronomy and DH. The difference between the theologies of Baruch and Jeremiah need not be exaggerated; both are concerned with the same phenomena, patterns of covenantal behavior. The difference between the DH historians and the pre-exilic prophets is not that of cultus and ethics. Nor do they differ in the depth or range of their historical grasp, since both deal with the whole sweep of Israel's experience and understand her present predicament in the light of her origins and obligations. The difference is rather that the historian is systematic in recounting the story from the earliest days until the present, whereas the prophet is more interested in the two end points of the spectrum, and juxtaposes them directly.

The links that connect Deuteronomy and DH to Hosea are both stylistic and ideological; in these works, the northern abhorrence of idolatry and syncretism dominates. The material of Hosea and even of Deuteronomy may have been edited in part under Hezekiah (cf. Prov. 25:1). Unlike both Deuteronomy and Hosea, however, DH lays no distinctive emphasis on the moral quality of the individual's relation to God.

**5. Summary.** DH as we have it is, then, the work of three editors or editorial circles. The first, the editor of Deuteronomy, wrote in the late eighth or early seventh century and was probably a refugee from the North, not directly attached to the political institutions of Jerusalem. The next two were Jerusalemite, however: the editor of the Josianic History (DHed), and the editor of the post-Josianic addenda and of the exilic inserts in the "Tetrateuch" (PHed). The first of these three wrote in the aftermath of the northern destruction; the second, in the days when it seemed that the South might escape the fate of the North; and the third in the days when it was clear that Yahweh had prosecuted his lawsuit (see LAW IN THE OT[S]) with his people and found them wanting, but not utterly beyond future redemption.

- Bibliography

1. **Literary genre of the book.** The Pentateuch as a unit is a story, beginning with Creation and concluding with the death of Moses. Within this framework, Deuteronomy is presented as the story of Moses' last days. The narrative elements, however, are sparse: parts of Deut. 1:3-5; 4:41-43; 5:1; 27:1, 9, 11; 29:2 [H 1]; 31:1, 7, 9-10, 14-16, 22-25, 30; 32:44-46, 48; 33:2, 7, 8, 12, 13, 18, 20, 22, 23, 24; 34:1-12. Except for 4:41-43, some verses in ch. 31, and ch. 34, all the narrative references merely note that Moses spoke the words or speeches which follow. Thus, later and rather superficially, a cloak of narration was thrown around the book. Another comprehensive form competes with the narration: the book is a kind of archive, an orderly collection of speeches organized around a system of four titles: 1:1; 4:44; 29:1 [H 28:69]; 33:1.

It is debatable whether 29:1 [H 28:69] was originally a title for chs. 29-32 or only for chs. 29-30. The passages concerning Moses' death (32:48-52; 34) and possibly also ch. 27 are not included in this system of headings. Otherwise, however, the system organizes the entire book, dividing it into four "Mosaic texts": 1-4, a speech by Moses (דברים); 5-28, the law or the teachings of Moses (תורה); 29-32, the ritual text of covenant-making in Moab (דברי הברית); 33, the blessing of Moses (ברכה). The first three texts (except ch. 32) are presented in typical Deuteronomic prose; the fourth is poetic. The "law of Moses" (5-28) consists of statutes and ordinances (5:1-11:32, historical legitimization of the law, and presentation of the main commandment to worship only Yahweh; 12:1-26:16, corpus of the laws) and a text of blessings and curses (ch. 28). From the important transitional passage between the two parts (26:17-19) it becomes clear that Deut. 5-28 is to be understood as the textual basis of a contract between Yahweh and the people of Israel (cf. §7 below). Thus, Deut. 29-32 contains passages and notes concerning individual incidents from the context of the ritual concluding of this contract.

2. **Language of the book and milieu of the authors.** Von Rad has called attention to the parenthetic character of Deuteronomic language and concluded that Deuteronomy had to have come from the preachings of rural Levites (see DEUTERONOMY). Deuteronomic prose has since been more thoroughly examined. It is a highly rhetorical, artistic prose. Hebrew syntax, usually characterized by a co-ordinating style, has been developed into large structures which subordinate and overlap

sentences. A kind of prose meter and numerous assonances give a sense of ceremony. Repetitions and systems of key words help structure the texts. Their rationality and their relation to wisdom are visible in the many phrases and clauses that express motivation. The main points of Deuteronomic theology are couched in cliché-like formulas that continually reappear. These formulas often come from a wide assortment of earlier Israelite texts, familiarity with which was probably presupposed. Stylized references to them were supposed to bring their entirety into the present for the reader or listener. That this might be the language of sermon outlines or summaries of the restorative propaganda of rural Levites is only one possibility among many, and not even the most probable one. Rather, the language of Deuteronomy shows many ties with the language of the court and with wisdom language, which were most widely known among higher officials (see JOSEPH STORY[S] §3; ESTHER, BOOK OF[S] §§2-3). In addition, there are legal texts, primarily in the Neo-Assyrian area, which are written in a highly rhetorical style, comparable not only in form but also in content to Deuteronomic language. Such legal texts were intended to be read in solemn public ceremonies and to make a lasting impression on the listeners. Thus we must wonder whether many texts in the book of Deuteronomy were not exactly that which they now appear to be: legal and liturgical texts which were to be read before large assemblies of Israel and which were exactly fixed in all their details. In some parts of the book, e.g., chs. 1-4, this language was probably further used for literary purposes. So, judging by the language, the origin of Deuteronomy was more likely in Jerusalem than in the country.

We are even able to indicate pre-stages of Deuteronomic formulaic language. More detailed analyses have shown that many of the so-called "Deuteronomic" additions and expansions in Genesis through Numbers do not represent (as earlier scholars often assumed) late dependence on the language and theology of the book of Deuteronomy. Rather, texts like Exod. 13:3-16 or Exod. 32:7-14 and many small "glosses" anticipate Deuteronomy. They are "pre-Deuteronomic" or—better yet—"early Deuteronomic." It is at least possible to connect these texts to the level of editing in which J and E were joined (see DOCUMENTS). This leads us into a relationship between literary and theological effort, and most probably to Jerusalem in the time of HEZEKIAH (ca. 715-687 B.C.). Hence, Deuteronomic theology and language were developed in the editing of older works of the history of Israel. Thus, at least one edition of Deuteronomic law would have to be attributed to the same theologians and writers. The priest Hilkiah and the secretary Shaphan played important roles in the discovery of the law under King JOSIAH (II Kings 22:3-10). Later the prophet Jeremiah was closely connected to the descendants of Shaphan, including Gedaliah, and there is some reason to assume that the Shaphan family had something to do with the preservation and the "Deuteronomic" edition of Jeremiah's words (see

JEREMIAH THE PROPHET §D7). Thus, the Deuteronomistic style of writing and thinking appears to be closely related to people of the ruling class in Jerusalem.

**3. Critical literary analysis.** Since von Rad wrote his article (*see* DEUTERONOMY), interest in the literary analysis of the book has increased vastly. However, no one theory has won wide acceptance. This is especially true for the laws in Deut. 12-26. A critical literary theory cannot be developed without presupposing a solid evaluation of the individual criteria of differentiation or apart from clear ideas concerning the book's origin. Yet there is no agreement even on these preliminary questions. In Deuteronomy Moses sometimes speaks to Israel in the singular and sometimes in the plural. Is this a criterion for the relative age of individual passages? However, even if it were, could not the authors of later passages (e.g., Deut. 4:1-40) have thought that the inconsistency of number was typical of Deuteronomistic language and imitated it consciously? The typical theological key words of Deuteronomy are not evenly distributed throughout the book. Should it therefore be assumed that texts with different backgrounds have been put together, so that one may begin to identify them by means of language statistics? In Deut. 12-26 various types of laws may be differentiated: APODICTIC, casuistic, and laws containing certain formulas (e.g., "So you shall purge the evil from the midst of you"). Beginning with formal criteria, would it be possible to identify collections of laws that were originally separate from each other but possess a unity of form? Should a relatively low number of literary editing processes be assumed, or a long and complicated process of expansion and commentary? It is important to decide to what extent one should expect logical consistency from a book like Deuteronomy. These and many other uncertainties in the method of analysis are undoubtedly responsible for the large number of critical literary theories.

Still, it must be recognized that many new observations of lasting value have been made during recent years, and there is a slowly growing consensus in some matters. It is assumed more and more often that there are large post-Josian expansions and revisions, not only in the chapters which provide a framework (1-4 and 30 ff.), but also in the central parts. Here the analysis of Deuteronomy becomes entwined with that of the Deuteronomistic history (*see* DEUTERONOMISTIC HISTORY, THE[S]). If the first edition of that history was pre-exilic and culminated with Josiah, and then there was one or more exilic editions, each of them should have left traces in the book of Deuteronomy, with which it began. Chs. 1-3 and much of chs. 29-32 could belong to the pre-exilic edition. Some of chs. 28-29 could be claimed for a first exilic edition. However, it has also been suggested that the entire system of laws dealing with officials as it now stands in chs. 16-18 should be attributed to this latter edition, as a sort of constitutional outline that is critical of the king. It is comparable in several ways to the texts critical of the king in I Samuel (*see* SAMUEL, I AND II; contrast supplementary article §3a). Deut. 4,

much of Deut. 7-9, and much of Deut. 30 could be late exilic. Further, it may be asked whether presenting the law as Moses' words would have made sense apart from a surrounding historical narrative. If not, the historical flashbacks in chs. 5 and 9 ff. would not have been possible before the earliest edition of the Deuteronomistic history, and only a relatively small part of Deuteronomy, often very hypothetical and not yet shaped as Moses' words, would be left for Josiah's book of the law. Earlier stages of Deuteronomy would be even more hypothetical.

**4. Two basic texts for Deuteronomy.** The laws in Deuteronomy presuppose the "Book of the Covenant" (or a collection of laws related to it; *see* COVENANT, BOOK OF THE; EXODUS, BOOK OF §1b). The whole book presupposes the ancient sources of the Pentateuch, and in its later parts the stories in the books of Joshua-II Kings, as well as other legal texts no longer available to us. However, two shorter texts were probably especially important: the "cultic Decalogue" (the best known version of which is Exod. 34:10-26), and the Decalogue itself, of which one edition is quoted in Deut. 5:6-21 (*see* TEN COMMANDMENTS; TEN COMMANDMENTS[S]). For the "cultic Decalogue," the second most important text after Exod. 34 is Exod. 23:13-33. The "cultic Decalogue" is basic to the stipulations in Deut. 16, and hence probably to all centralization laws. In the parenthetic ch. 7, the older level of text which was not yet influenced by the language of the Decalogue comes from the "cultic Decalogue." Its influence also appears in Deut. 12:2-3, 29-31; 14:21; 26:1-11. It appears possible that this "cultic Decalogue" constituted the earliest form of the Deuteronomistic law. In any case, the Decalogue was not understood as the most basic formulation of God's will until a later phase in the development of Deuteronomy, but then it did decisively mold Deuteronomy. Some of the most frequent stereotyped phrases of Deuteronomistic language come from the beginning of the Decalogue. Deut. 4:15-20; 6:10-15; 7:8-11; 8:7-20 consist of paraphrases as commentary on the first commandment. A whole series of laws (Deut. 13:1-5 [H 2-6], 6-11 [H 7-12], 12-18 [H 13-19]; 17:2-7; 19:11-13, 16-19; 21:1-9, 18-21; 22:13-21, 22, 23-27; 24:7) contains individual cases for almost all the commandments. Several characteristics separate these laws from other laws; the primary one is the formula: "So shall you purge the evil from the midst of you." Finally, in the narrative chs. 5 and 9 ff. and in the heading 29:1 [H 28:69], the explicit theory was developed that at the covenant ratification on Mount Horeb Yahweh revealed only the Decalogue to Israel. He communicated the remaining laws to Moses alone, and Moses proclaimed them to Israel only shortly before his death in the land of Moab. Also, in light of Deut. 18:16-18, that which the prophets later told Israel as the word of Yahweh was intended to be viewed only as an additional commentary on the Decalogue. Therefore, it is logical that the Decalogue should be literally quoted in Deut. 5:6-21. However, this edition of the text is probably a later one, since it stresses the sabbath commandment, which is otherwise insignificant in Deuteronomy.

5. **The centralization of the cult.** The greatest innovation that Deuteronomy produced was the demand to centralize the cult at the place which Yahweh chose. The historical circumstances of the centralization laws have always been controversial (Deut. 26:1-11 should be added to von Rad's list of "explicit" passages; see DEUTERONOMY §4). Usually they have been related to Josiah's reforms. The biblical report of a first centralization under Hezekiah was formerly believed historically inaccurate. However, the excavation of a shrine to Yahweh at Tell 'Arad appears to have shed new light on the question (see TEMPLES, SEMITIC[S] §2a). After the destruction of stratum VIII, which can be related to the time of Hezekiah, the temple was rebuilt in stratum VII, but without an altar for burnt offerings. After another destruction at the time of Josiah, the temple was not rebuilt in stratum VI. Thus, we can differentiate between an abolition of sacrifices outside Jerusalem under Hezekiah and a destruction of the sanctuaries themselves under Josiah. In that case, the essence of the Deuteronomic laws of centralization should be attributed to Hezekiah rather than Josiah. If Josiah based his more radical measures on Deuteronomy, it was most likely on those laws that demanded the complete destruction of the pre-Israelite sanctuaries.

6. **The covenant of King Josiah, 621 B.C.** II Kings 22-23 contains a text which was probably composed during Josiah's lifetime and may therefore be considered reliable (II Kings 22:3-20; 23:1-3, 21-23). From it we may conclude that a "Book of the Torah," the existence of which was previously known in itself, was rediscovered in the temple. In a solemn covenant ceremony, Josiah and the people bound themselves to obey the provisions of this text. This document is probably identical with an early edition of Deut. 5-28. Thus by this time at the latest, Deuteronomy became a "covenant charter." At least from 621 B.C. on, the covenant between Yahweh and Israel was periodically renewed in the cult. According to Deut. 31:10-13, the covenant was renewed every seventh year at the Feast of Tabernacles. From the record in II Kings 22-23, it is also possible that before 621 Deuteronomy was an official document and not, for example, a private literary creation. However, it is difficult to determine whether Deuteronomy served as a "covenant" document before 621. There are some signs that there was already an older covenant tradition between Israel and Yahweh. The usual designation of the Decalogue in Deuteronomy is "the Covenant" (הברית). Hosea seems to have known of a covenant related to the Decalogue. If the report in II Kings 11:17 is authentic, there was in Jerusalem a ritual related to the assumption of the throne by the king, in which a covenant was made between Yahweh, the king, and the people, and which re-established "the people of Yahweh." However, not until the time of the Assyrian domination, and only in Deuteronomy, did there develop the comprehensive theological systemization and stylization of the faith of Israel which we call "covenant theology."

7. **Covenant theology in Deuteronomy.** OT covenant theology cannot be understood without con-

sidering the influence of the ancient Oriental system of treaties. This was proven by Mendenhall's discovery of the similarity between Hittite vassal treaties and some texts of the OT (see COVENANT §C). Until recently the problem has been that the truly comparable OT texts are all very late, so that a direct influence from the Hittites would have been impossible (see COVENANT, MOSAIC[S]). The structure of the Decalogue is explicable without the vassal treaty (see TEN COMMANDMENTS[S] §3). Even the basic structure of Deut. 5-28 (history and parenthesis, laws, blessings and curses) does not have to be explained by it. This becomes even clearer when one considers that the key text in Deut. 26:17-19, which interpreted Deut. 5-28 as a treaty document, imitated the legal structure of treaties between equals, not of vassal treaties, although the difference between Yahweh and Israel is clearly elaborated. The form of Hittite vassal treaties cannot be recognized with certainty in material prior to some of the late Deuteronomic texts: Deut. 4; 28-29; and Josh. 23. In the meantime, the missing link which explains the late assumption of the form of the vassal treaties has appeared. A fragment of a vassal treaty with a historical prologue between Ashurbanipal and the tribe of Qedar proves that this form of treaty was still in use in Neo-Assyrian times. However, the development of OT covenant theology did not depend on this formula but, in general, on the great significance which the taking of oaths and making of treaties had in the Neo-Assyrian Empire. They were a characteristic of the culture, and we even have evidence that the idea of covenant was transferred to the relationship between the king, the people, and a god. According to a clay tablet in the British Museum, a contract was made between the god Ashur, the king Esarhaddon, and the people of Assyria, mediated by the goddess Ishtar at a date unfortunately no longer known. That the authors of Deuteronomy were influenced in their covenant theology by Assyrian patterns of thought and institutions is adequately proven by the many terminological parallels and the direct dependence of Deut. 28:28-33 on an Assyrian treaty. (Weinfeld has prepared the best overview of this.) We have here the phenomenon of a reorganization of the old traditions of Israel with the help of a system which came from the dominant enemy culture. Probably only in this way could the old traditions be given the attractiveness needed to bring about a religious renewal and have fostered a new will toward national independence.

8. **Restructuring of covenant theology in the later texts of Deuteronomy.** After the fall of Judah, covenant theology with its relentless contractual logic could only serve to prove that Israel, not Yahweh, was responsible for the catastrophe. This is clear, for example, in Deut. 29:22-28 [Heb. 21-27], which is a late text (cf. I Kings 9:8-10). This logic could not produce hope for the future. However, in exile Israel found new hope. Therefore, the old covenant theology had to be restructured, even where the old concepts and patterns of presentation were kept. The texts in Deuteronomy concerning this all appear to have been developed in dialogue with other theological efforts in the

closing years of the Exile. The shift in emphasis from the Sinai covenant to the one with Abraham (pure promise instead of a contract) may be found on the one hand in the Priestly writings of the Pentateuch, and on the other in Deut. 4, 7, and 9 (see COVENANT, DAVIDIC[S]). In addition, connections may be found from Deut. 4 to Second Isaiah, from Deut. 7 to Ezekiel, and from Deut. 30 to Jeremiah. Thus, the Pauline argument with the theology of law is actually anticipated in Deuteronomy itself.

**DISCIPLESHIP. 1. Jesus. a. Survey.** Jesus probably gathered around himself a group of TWELVE as representatives of the eschatological Israel. Beyond this he certainly had other disciples (Mark 2:14; John 1:35-50; cf. Mark 5:18 ff.; John 10:17 ff.; Luke 9:57 ff.), distinguished from a yet wider circle of sympathizers. Discipleship as such seems to have been a special obligation rather than a general condition for acceptance of the KINGDOM OF GOD (cf. Mark 5:18-20; 10:17-22; the women who served Jesus, but were not disciples; Zacchaeus, etc.). Thus, within the larger circle of Jesus' adherents and sympathizers there was a smaller circle of disciples who shared Jesus' poverty and nomadic life (Luke 9:57-58), and for this reason renounced (until the coming of the kingdom of God?) the exercise of their occupations, the enjoyment of their family lives, etc. Since the term "disciple" rarely appears in the genuine SAYINGS OF JESUS (e.g., Luke 14:25-26, 33 is Lukan redaction), we cannot know precisely how the word was used by Jesus himself.

**b. Roots of discipleship.** JOHN THE BAPTIST presumably had a circle of disciples to which Jesus himself may have belonged and from which some of Jesus' disciples also perhaps came (John 1:36). This immediate background may have been more significant for Jesus than the example of the rabbi with his pupils, because Jesus was not himself an ordained rabbi and did not conduct an ordinary school. Moreover, the rabbinical *talmid* was learning (למד) the Torah exclusively. There are also other important differences between Jesus'

disciples and the rabbinical pupils: rabbis and their pupils did not normally lead a nomadic life; Jesus' disciples were called by him alone and did not strive for status as pupils; ordination was not the goal of their education; discipleship does not appear to have been something temporary, and it implied the renunciation of one's occupation and of family life. Not the Law, but the person of Jesus was the crucial point of reference.

It has been suggested that discipleship derived from the messianic prophets of the Zealots, whom the people followed into the wilderness or to the Jordan, but with Jesus it was always individual men (never women) who were called to follow him (the closest parallel is the calling of Elisha in I Kings 19:19 ff.). Jesus' call to follow him cannot be understood from the environment, but must be derived from the specific form of his message.

**c. The meaning of discipleship.** Discipleship is best understood as special service in the proclamation of the kingdom of God (cf. Mark 1:17; Luke 9:60). The disciples share in this ministry of Jesus' and adopt his manner of life. The question then is the same for Jesus and his disciples; namely, how this manner of life is related to the proclamation of the kingdom of God. Since Jesus participated in feasts, associated with women, detached himself from John the Baptist, and was accused of gluttony (Luke 7:34), he could not have issued a call to asceticism in the usual sense. Rather, the kingdom of God is totally new and different in comparison with the world and makes a total claim upon the one who proclaims it (Matt. 10:34-37; 13:44-46; Luke 9:60, 62). Not only is its arrival as unlimited love concretized and personified in the unconditional concern which Jesus (and his disciples) showed for the poor and dispossessed, but, in addition, its alien character is made specific in the "homelessness" of Jesus and his disciples.

**2. The post-Easter communities. a. Survey.** In the NT the term "disciple" appears outside the gospels only in Acts, where, as a designation for Christians, "disciples" is an ecclesiastical term. In the gospels (the tradition as well as in the redaction) Jesus is almost always pictured in the company of his disciples. They play a significant role in some of the special forms (*Gattungen*) of the tradition: for example, in instructions and in didactic or conflict sayings in which Jesus defends their conduct. This raises the question to what extent the community which transmitted these traditions found itself represented and portrayed in them. The development of the idea of "following" (ἀκολουθεῖω) in the post-Easter period exhibits a similar tendency. Although "following after Jesus" does not come into universal use as a metaphor for "being a Christian," the Fourth Evangelist is acquainted with the possibility of following the Exalted One, and the Apocalypse speaks of following the heavenly Lamb (14:4). Significant new formulations of sayings with ἀκολουθεῖω appear both in the community traditions and in the redaction of the Synoptic gospels, but in the epistles a theological use of the word is lacking. This leads to the thesis that in limited areas of the Christian communities

"following" became a figurative concept, a code word for Christian existence, and hence increasingly lost its concreteness. For both terms, "discipleship" and "following," the connection with Jesus remained determinative.

**b. The early churches.** The designation of Christians as "disciples" in Acts corresponds to Lukan usage. It is difficult to disentangle the sources, so it cannot be determined whether Hellenistic Christians identified themselves as "disciples of Jesus" or were perhaps so identified by others, in distinction from the eschatological self-understanding of the Jerusalem community. The traditions of the LOGIA source (see Q; Q[S]) reflect a radical understanding of following and discipleship. Behind this source probably stand prophetic emissaries of the coming SON OF MAN, who, in following after him, adopt his poverty and homelessness (Luke 9:57 ff.). One can discover by reading the missionary discourse in Q (Luke 10:2-12) how this was concretely manifested. Their later successors are the wandering ascetics of the Syrian church.

**c. Mark.** This evangelist consciously places the role of the disciples in the service of his over-all theological concept. The disciples' lack of understanding (4:13, 40; 6:52; 7:18; 8:14-21), the idea of following into suffering, together with the disciples' protest against the suffering (8:31-34; 9:30-37; 10:32-45), and special instructions to the disciples were deliberately composed by the evangelist. There is no consensus among scholars as to the interpretation of these developments (see MARK, GOSPEL OF; SECRET, MESSIANIC and supplementary articles), so the question remains open whether in Mark the disciples fail to understand Jesus because there was no understanding before Easter, or because without the cross and discipleship in suffering there was no comprehension of the glory of the SON OF GOD (cf. the confession at the foot of the cross in Mark 15:39).

**d. Matthew.** Only Matthew has the verb μαθητεύω ("to be a disciple") along with the noun "disciple." Thus, in 28:16-20 he shows what it is to be a Christian: discipleship in obedience to the commandments of the earthly Jesus. For this evangelist, "disciple" is an ecclesiological term, and in speaking of Jesus' disciples he indicates what the state of the church actually is (of little faith) and what it ought to be (achieving understanding through Jesus' teaching, and sharing in Jesus' power and glory). The disciples' boat is the ship of the church (8:23-27); Peter, walking on the water, is the prototype of the believer (14:28-31); and Christians are the disciples of the one teacher, Christ (23:10). This is not simply a matter of abolishing the distance from Christ; on the contrary, only reorientation toward the teaching of the earthly Jesus can protect them from the pneumatics and wolves in sheep's clothing (7:15-23). Therefore, even more clearly than Mark, and in a manner different from that of Luke, Matthew usually understood the term "disciples" to mean the twelve disciples. This was not because the Christians of the present were not disciples of Jesus; rather it was intended to make clear that the only true discipleship was discipleship of the earthly Jesus, as was the case with the Twelve

(see TWELVE, THE). For a different view, see DISCIPLE §2.

**e. Luke.** Luke explicitly differentiates between the Twelve (the apostles) and the rest of the disciples (6:13; Acts 6:2), a more numerous group (Luke 19:37). The differentiation between the mass of disciples (the Christians, Acts 11:26) and the Twelve corresponds to the structure of ministry in the church, which is headed first by the Twelve, and then by the elders installed by those commissioned (Acts 14:23). This differentiation is not found in Matthew. While for Luke the most important thing about the twelve apostles is their authority and their status as eyewitnesses, he uses the concept of "disciple" to make clear the radical nature of Jesus' own teaching concerning the renunciation of possessions, bearing the cross, and following Jesus (Luke 14:25-33). In Luke's day, however, the radical demands of that first period could no longer be applied without modification (Luke 22:35-38).

**f. John.** In John disciples "follow" the light of the world (8:12) and the Exalted One (12:26; 21:19, 22). Discipleship is identical with being a Christian—with believing (2:11), abiding in the word (8:31), practicing brotherly love (13:35; 15:8 ff.). The concept of disciple is important for John, as are all modes of thought generally which express the priority of the vertical relationship ([Father-]Son-disciples) to the horizontal relationship within the community (cf. the reduction of the whole of ethics to the brotherly love that is commanded from above). Thus the discourse in 15:1 ff. about the vine best shows what discipleship is: to abide in the vine, which is the life and the strength of any fruit. In John, too, "disciple" is an ecclesiological term, or it appears in place of ecclesiological terms. There are no allusions, as there are in Luke, to any ranks among the disciples or to a structure of office. Only two disciples are singled out: PETER, the first to enter the empty tomb (20:4 ff.) and the one to whom the leadership of the church is entrusted (21:15 ff.); and the BELOVED DISCIPLE behind whom, perhaps, the ancestor and patron of the Johannine circle is concealed.

**g. Summary.** After Jesus' death there was a tendency, expressed in various ways, to identify discipleship with being a Christian in a general sense. The radical character, concreteness, and eschatological reference of discipleship often tended to be lost, and, on the positive side, there was a tendency toward spiritualizing (John) and adaptation of Jesus' intention to the situation of the present (Luke). One of the earliest to react against this development, which continued throughout the history of the church, was IGNATIUS, for whom one had to be a martyr to qualify as a disciple of Jesus.

**DISCIPLINE, DIVINE.** In prophetic interpretation Israel's history could be viewed as a series of disciplinary acts by which Yahweh, the God of the covenant, sought to create a faithful and obedient people. This idea is reflected also in the thought of Paul, who regarded the experience of Israel prior to Christ as a disciplinary preparation under the Law for the redemption accomplished by God in Christ (Gal. 3:23-26).

The metaphor of God as disciplinarian, which is derived from the parent-child relationship, combines the conviction that God loves his people and seeks their ultimate well-being with the belief that he demands obedience to his righteous will as the condition of human fulfillment. In this respect it is more adequate than other biblical symbols of God's relation to man, e.g., that of judge.

Divine discipline presupposes Israel's inadequacy, which consists more in sinfulness (apostasy, injustice, hardness of heart) than in ignorance. At the same time discipline presupposes the capacity of the recipient to learn, to repent, to reform. The divine discipline may take the form of prophetic instruction and reproof or experiences of deprivation and suffering. However, the latter require prophetic interpretation if they are to be morally edifying; therefore, the prophetic word always accompanies, or anticipates, the chastening event.

**1. The vocabulary of divine discipline.** The two Hebrew verbs that express the idea of discipline are יָסַר (instruct, correct, chastise), with its derivative noun מִסֵּר, and יָכַח (rebuke, judge, chastise, punish), with its noun תּוֹכַחָה. Both may be predicated of men as well as God and are used in a wide range of settings, from the family and school to the law court. They overlap considerably in meaning, although יָסַר always presupposes an educational purpose, while יָכַח may mean merely punishment (e.g., II Kings 19:4).

In a comprehensive study of יָסַר and מִסֵּר Sanders classifies the passages where God is the subject as follows: (a) Israel is disciplined by suffering (e.g., Hos. 5:2; 10:10; Jer. 5:3); (b) Israel is disciplined by verbal instruction or warning (e.g., Jer. 7:28; 17:23); (c) an individual is disciplined by suffering (e.g., Jer. 10:24; Ps. 6:1 [H 2]); and (d) an individual is disciplined by verbal instruction or warning (e.g., Isa. 8:11; Job 33:16). These terms are never used in the OT of divine discipline of a foreign nation (see, however, the discussion of Isa. 53:5 in §5 below).

יָכַח is predicated of God as follows: (a) divine chastening, without explicit educational purpose, of Israel (all or part, Hos. 5:9; Ezek. 5:15); of foreign nations (II Kings 19:4; I Chr. 16:21); and of individuals (Prov. 30:6; Ps. 39:11 [H 12]); (b) divine discipline, with an express purpose of edu-

cation, of individuals (Prov. 3:12; Job 5:17); (c) judicial judgments by God, where the specific content of the decision is not stated, with respect to Israel (Isa. 1:18; Mic. 6:2); to individuals (Job 13:10; 16:21); and to the nations (Isa. 2:4; Mic. 4:3); and (d) cases where it is unclear whether corrective chastening or simple punishment is intended, of Israel (Hab. 1:12), of the nations (Ps. 94:10), and of individuals (Gen. 31:42; Ps. 6:1 [H 2]).

Thus chastisement can be either for instruction (Prov. 6:23) or in wrath (Ezek. 25:17). He who rejects ordinary reproof can expect "severe discipline," which may kill (Prov. 15:10). In prophetic texts the point is made that Israel has failed to learn or to reform as a result of God's chastening, and therefore can expect harsher treatment in the future (Zeph. 3:2-8; Jer. 2:30-37). According to Jer. 31:18, Ephraim (i.e., the northern Israelite kingdom) had learned his lesson by the fall and exile of the nation (721 B.C.) and was ready finally to be brought back to God.

**2. Divine discipline in prophetic and liturgical texts.** Explicit use of the language of parental discipline (יָסַר, מִסֵּר) to interpret the activity of God toward Israel appears first in Hosea (5:2; 7:12, 15; 10:10). It is used most frequently in the book of Jeremiah (2:19, 30; 5:3; 6:8; 7:28), which stands in direct continuity with the Hosean tradition. However, the idea had appeared already in Amos 4, couched in somewhat different terms.

Amos 4:6-13 rehearses a series of afflictions laid upon Israel by God in order to induce the nation to repent, but after each affliction Israel remained unrepentant. Therefore, God was going to bring a much worse calamity, comparable to the destruction of Sodom and Gomorrah (4:11-12; the exact meaning of vs. 12 is uncertain).

This text is regarded by some scholars as an adaptation of a liturgical tradition, perhaps from the ritual of the Jerusalem temple. Similar interpretations of Israel's history are to be found in Ps. 78; 81; 106; I Kings 8; and Lev. 26:3-13. All these texts have liturgical associations, although none may be dated with confidence before Amos 4. It seems more likely that the prophetic interpretation of historical events has been taken up by the postexilic historians and priests and made a regular feature of Jewish worship.

Other psalms rehearse the saving events of Israel's history (e.g., Ps. 44 and 105), but Ps. 78 and 106 are distinctive in viewing this history as a series of providential disciplines meant to overcome the people's perpetual faithlessness, ingratitude, and hypocrisy. Like Amos 4, these psalms regard the divine discipline as having no enduring effect. Ps. 78 concludes its somber recital with the rejection and destruction of the northern kingdom ("Joseph . . . Ephraim," vs. 67) as the people of God, and the choice of Judah as the sole bearer of the covenant tradition (vss. 68 ff.). This confidence in Judah was misplaced, according to Ps. 106, which chronicles its destruction and exile (vss. 40 ff.). Nevertheless, the psalmist confesses his confidence in the enduring love of God for his people and pleads with him for a new act of salvation following this most severe of all acts of divine discipline.

**3. Divine discipline of the Davidic king.** It is possible that the prophetic interpretation of Israel's history was influenced by the idea of kingship that was developed in Jerusalemite circles during and after the reigns of David and Solomon. Since the king was regarded as the representative of the nation before God, it was natural for the two sets of ideas to develop side by side.

It was believed that God had made a covenant with David, establishing his line as a permanent dynasty. The statement of this conviction in II Sam. 7 is a perfect example of the notion of divine discipline as a manifestation of parental love. "I will be his father, and he shall be my son. When he commits iniquity, I will chasten (חָנַן) him . . . , but I will not take my steadfast love from him, as I took it from Saul" (7:14-15). The probable need for corrective punishment is acknowledged, but the possibility of a radical break in the relationship is ruled out. (Note how the Chronicler omitted the reference to sin and chastisement when he quoted this passage, I Chr. 17:13-14. His idealized view of David required the omission. Compare the royal protestation of guiltlessness in Ps. 18:20-24 [H 21-25]).

The Davidic king as the son of God was a standard part of Judean ideology (cf. Pss. 2:7; 89:26-27 [H 27-28]), as was the notion that he could be chastened by God but not cast off (Ps. 89:32-37 [H 33-38]; and in general cf. the other royal psalms, Pss. 18, 20, 21, 45, 72, 101, 110, 144). This notion corresponds to the conviction which the people of Israel held with respect to their own covenantal relation to God, according to the picture of popular piety drawn by the prophets. The possibility that the covenant with the dynasty might be brought to an end is suggested only once in the royalist literature, namely in Ps. 132:11-12, where the endurance of the line is made conditional upon practicing the righteousness and justice demanded of a godly ruler (Ps. 72; II Sam. 23:1-7). Elsewhere the Davidic sonship to God is regarded as everlasting. The parent-child metaphor is thus made absolute and allowed to displace contractual (or adoptive) ideas of the God-king relation. In this view royal affliction, however severe, could only be interpreted as disciplinary chastening and not as radical punishment or rejection (cf. Ps. 89:38-52 [H 39-53]).

**4. Parental discipline in the theology of Hosea.** It is in the book of HOSEA that the idea of divine discipline receives its fullest development. Unlike AMOS, who brought the account of God's disciplinary efforts to a close with the announcement of national destruction (Amos 9:8b-15 is not part of the prophet's own message), Hosea plumbed more deeply the depths of divine love and proclaimed a renewal of covenant between God and his people after the destruction of the Israelite monarchy and its established cult.

Hosea's message of divine discipline is to be found not only in those passages that use the specific vocabulary of discipline but in the book as a whole. Hosea understood the relation of God to Israel as that of father and son (11:1-11) or husband and wife (1:2-3:5). The nation's experience from the time of its founding was like the educa-

tion of a child by his parent, out of love (11:1-3). Unfortunately, the child rejected the lesson, together with the teacher-parent (cf. 7:15). Therefore, a sterner chastening was required (5:2, 9; 7:12; 10:10; the specific language of discipline is used in these passages). Israel would be exiled and its idolatrous institutions of state and religion would be abandoned. This event is symbolized as a second "Egyptian captivity" (11:5; 8:13; 9:3, 6).

However, this disaster was not a mere punishment ending with the death of the people. It was also a new opportunity to discover the true nature of sonship and to abandon the false gods of kingship (8:4-10), foreign alliance (7:8-11; 12:1 [H 2]; 5:13-14), ritualism (6:1-6; 7:14-16; 9:4-6), and Baalism (2:5-8 [H 7-10]; 4:15-19; 7:16; 8:5, etc.). Israel had misconstrued the gift of land and the culture that it made possible, interpreting them as objects to be exploited in terms of the Canaanite fertility cult. Only by having land, monarchy, and sacrificial system stripped away could Israel be made aware of the proper religious and ethical basis of its existence under God. Hosea represented this disciplinary chastening as a second wilderness era (2:14 [H 16]) or, under the figure of an adulterous wife, as a period of moral probation prior to the restoration of her conjugal privileges (3:1-5). The motive of God's action was love (3:1; 11:8-9), a love that transcended all human limitations or moral conditions, but which still demanded that those who were loved show moral rectitude, the necessary condition of their human fulfillment.

This disciplinary action would lead to a new exodus and covenant and a resettlement of the land (2:14-23 [H 16-25]; 3:5; 11:10-11; 14:4-7), as well as the resumption of the public worship of God, purged now of idolatry (14:2).

Hosea presents the most concise and consistent interpretation of Israel's history as a unified story of divine love and discipline. Most of the elements in his message are present, however, in the other prophetic books, although they are often couched in different terms. All the pre-exilic prophets agreed that any genuine renewal of faithfulness and justice would require the dismantling of the existing economic, political, and cultic institutions. Not all spoke in equal detail about the future prospects of the people after the fall of the nation. However, each book, in its final form, reflects the fundamental convictions that are exhibited so powerfully in the metaphors of Hosea.

**5. The divine discipline of the Servant in Isaiah 53:5.** Second ISAIAH goes beyond the other prophets in interpreting Israel's fall, exile, and subsequent experience among the nations not only as punishment and opportunity for renewal, but also as the means of bringing wholeness to others (53:5). The speakers here are the alien kings (52:15 ff.) who have persecuted the servant people and rejected their message about God and his relation to the created world and man. But the prophet believes that Israel's patient proclamation of this faith will eventually produce a saving result for her despisers, namely bring them to acknowledge the truth of her message and the validity of her service (cf. 42:1-7; 49:1-13; 50:4-9). Although it has appeared as though she suffered merely because of her own

sin, her chastisement was intended finally as the necessary cost of her mediatorial example. By accepting this suffering she brings the nations into a right (righteous) relationship with God (53:11). This is her righteous service. By it she will help to bring all flesh to see the glory of God (40:5) and to rejoice in his gracious love (55:1-13). (Contrast the view of the editor of Jeremiah in Jer. 30:11 and 46:28.)

A further insight into the redemptive possibility of suffering is proposed by the writer of Hebrews (ch. 12). He viewed disciplinary suffering at the hand of God as a regular ingredient of Christian life and witness and as a participation in the triumph of the crucified and risen Christ. He makes use here of a number of OT quotations and allusions in this interpretation of divine discipline (cf. I Cor. 11:32; II Cor. 6:9; Tit. 2:12). *See also* REPENTANCE IN THE OT[S]; RETRIBUTION[S].

**DISCOURSE, DIRECT AND INDIRECT. 1. "Discourse"** has several technical meanings: (a) One is quotation, both direct and indirect (hereafter DQ, IQ). (b) A second, in recent linguistic and psycholinguistic studies, refers to patterned sequencing of information in and beyond the sentence—"connected discourse" (*see* DISCOURSE STRUCTURE[S] §2). (c) A third, sociolinguistic "discourse analysis," involves the social rules for language use, e.g., sequencing of turns at talking in conversation. Quotation is frequent in the Scriptures, as in everyday life; much of what people say makes reference to or reports what has already been said or thought.

**2. Kinds of quotation.** The kinds of quotation in connected discourse differ in formal detail, but each language provides lexical and grammatical devices for quoting, and each society has rules for their use in interactions. Direct quotation and indirect quotation express most explicitly the actual words of the original speaker. More implicitly, words of saying (or thinking) refer to factors in the over-all act of speaking itself, whether reporting actual speech or representing inner thoughts. Most implicitly, some action words may include speech as a culturally expected part of some sequence of actions.

**a. Direct quotation** purports to give the exact words of a speaker, so his grammatical forms remain largely intact. Nevertheless, the texture of the original can be reshaped at the discretion of the quoter, drastically coloring the resultant meaning. For example, "He shrieked, 'Get out of here!'" does not have the same pragmatic meaning as "He laughed and said, 'Get out of here!'"

**b. Indirect quotation** differs from DQ in grammatical and lexical form—sequence of tenses, pronominal reference, locational reference—mainly because it takes the point of view of the quoter rather than the orientation of the original speaker. Some languages have no IQ. Others, including

Greek, can switch in midstream from IQ to DQ. In some languages DQ and IQ are often grammatically ambiguous.

**c. Metalinguage** is another quotation device. Many citations are realized implicitly in the words a language uses for referring to the act of speaking—its metalinguage. In English, "They dismissed him," refers to what was accomplished by a speech act such as, "You may go now." Frequently, however, what is implicit in one language may, in another, most naturally be explicit DQ or IQ, or be implicit in another way; for example, English "They dismissed him," could be Cashinawa (Peru) "They said, 'Go out!'" or "They caused him to go out." The content is similar; the devices for expressing the citation are different.

A quotation, whether DQ, IQ, or metalinguage, can be *reported* speech or *represented* speech. In the latter the inner thoughts, attitudes, and opinions, or mental states and processes, or stream of consciousness may be represented as DQ or IQ, or as words of thinking, feeling, etc.; again, English "He decided to go," could be Cashinawa "He said (to himself), 'I intend to go.'"

The biblical languages are rich in words referring to both reported and represented speech. Their lexical equivalents in other languages may share some features of meaning, but they will often entail culturally specific differences in expectation and understanding; English "command" is closest to Cashinawa *yunu*, "to suggest—on the part of the headman," but for a headman to command anyone is to behave inappropriately by Cashinawa values.

**d. Reference to actions** or a sequence of actions which, within a particular culture, entail speaking as an integral part are perhaps the most implicit kind of citation. "To gather together," for example, may first require a call to come together. Whether or not speaking is implied in the meaning of words depends on the cultural place of speech in particular situations and sequences of actions.

Combinations of any of these kinds of quotation, in most languages, can be used to refer to the same speech event.

**3. Sequential structuring** applies to a total discourse, whether an embedded quotation or a quotation together with its textual matrix, and shapes it into a coherent whole on these three dimensions: (a) reference, (b) attention or prominence, and (c) pragmatic effect or modality.

**a. Reference** includes devices to realize four linguistic functions: (1) Topicalization: What is being talked about? What is being said about it? Cashinawa has affixes to mark the topic in quotations and in their matrices; other devices include word order and dialogue paragraphing. (2) Delimitation: How detailed or how general is the quotation to be? (*See* §2 *above*.) Should something be left implicit or made explicit? (3) Identification of participants or events: How do you trace a participant through the vagaries of such grammatical structures as quote within quote within quote? Is this the same speaking event as that previously mentioned? (4) Information structure: Is this information assumed to be already known or new to the audience?

*b. Attention* has to do with whether or not a particular bit of information—a participant, an event, a description—is to have some kind of prominence in a particular segment of speech, from word and phrase to paragraph and total discourse. Information can be highlighted, backgrounded, or neutral. Quotations can be such a structural segment and can provide devices for highlighting or backgrounding information within the matrix text. Language devices can give prominence to participants, events, form, content, genre, style, etc. of a quotation.

*c. Pragmatic effect* affects quotation in terms of such features as the mode and intent of a quoted sentence (statement, question, command). The modal quality of a quotation may be modified pragmatically in terms of such factors as degree (insist, demand), certainty (really, doubtfully), speaker's responsibility and attitude toward what is said (hearsay, eyewitness, lying).

*4. Appropriateness* in quotation has to do with the social, interactional rules for language use; it is often implied in metalanguage meanings. Cultural judgments of effectiveness and rightness are tied to social meaning, to the speech expectations associated with specific cultural situations (testimony at a trial); with participants, their roles and status (terms of address—honorifics are universal); with their purposes (prophecy, exhortation) and tone (fearful, sincere); with the style level (formal, informal) and genre (riddles, letters, parables, sermons), etc.

*5. Translating quotations*—as well as nonquoted material—has as its goals accuracy of exegesis in the source language and naturalness in the target language, naturalness of form (grammatical and generic structures), of content (referential and social meaning), and of style (sentence length, levels of usage, frequencies, etc.). Thus translation is a function of the language-specific kinds of quotation and sequencing systems, and culture-specific expectations on which appropriateness is judged.

**DISCOURSE STRUCTURE.** Communication through language, whether spoken or written, is a structured event; discourse structure is the way in which words, phrases, clauses, sentences, and whole compositions are joined to achieve a given purpose.

1. Universal features of discourse

- a. Markers for beginning and end
- b. Markers for internal transition
- c. Temporal relations
- d. Spatial relations
- e. Logical relations
- f. Successive references to the same objects, events, or qualities
- g. Foregrounding and backgrounding
- h. Author involvement

2. Factors involved in a discourse event

- a. Source (sender)
- b. Receiver
- c. Channel
- d. Form of the message
- e. Code
- f. Topic
- g. Context

Bibliography

**1. Universal features of discourse.** In a language that a person knows well, it is easy to distinguish between a well-constructed discourse and a badly constructed one, though he may not be able to give precise reasons for his intuitive judgments. A well-constructed discourse in any language must respect certain constraints, which give structure to the discourse. These constraints may be called universals of discourse. There are at least eight of them, and they fall into four categories. Some have to do with the discourse as a whole (§§a, b); a second category has to do primarily with events (§§c-e); a third grouping relates primarily to the objects within the discourse (§§f, g); and a final category relates to the attitude and viewpoint of the author (§h). Although these features of discourse are called universals, this does not mean that all languages make use of the same devices to express these universals. Moreover, a given device within a single language generally serves more than one function. Language is highly complex and flexible, and the essential differences between languages do not consist of what can be said, but of the manner in which things are permitted to be said.

*a. Markers for beginning and end.* The markers themselves often indicate the nature of the contents. In English a story that begins "Once upon a time" indicates that it is not true; and the reader will not at all be surprised if it ends, "And they lived happily ever after."

Similarly, the biblical languages have a multiplicity of patterns for the opening and closing of discourse, some of which are problematic to present-day readers because their structure seems unnatural. One such formula is "and it came to pass," which often leaves the reader with the question, "What came in order to pass by?" Luke is particularly fond of this phrase; he sometimes uses it to introduce or to conclude a narrative, or even to mark the climax or transition in a narrative. When translated into other languages it may be rendered in a number of different ways, depending on its function in the context and on the way that the receptor language marks that particular function. For example, "and it came to pass on another sabbath" (Luke 6:1) is used to introduce a narrative, and is translated simply "on a sabbath" by the RSV; while "and it came to pass, that as soon as the days of his ministration were accomplished" (Luke 1:23 KJV), which indicates the conclusion of a section in a narrative, appears as "and when his time of service was ended."

Occasionally, certain discourse units are characterized by a particular formulaic pattern at the beginning and the conclusion. Jesus' parables of

the kingdom sometimes begin, "The kingdom of God (or heaven) is like . . ." But even this apparently clear and lucid statement may lead to a misunderstanding of the comparison intended in the parable. The meaning intended is, "It is the same with the kingdom of God (or heaven) as it is with . . ." So then, in Matt. 22:2 the kingdom of heaven is not like a king, but like the situation depicted in the wedding feast, and the parable may be introduced, "When God establishes his rule, the situation will be like that of a king who prepared a wedding feast for his son." See also Matt. 13:24, 45; 18:23; 20:1; 25:1.

**b. Markers for internal transition.** Some transitional expressions frequently used in English are, "On the other hand, however"; "The next day"; "Then suddenly"; and, "Not only that, but." Job 1:13-22 is an example of a text artistically woven together through the use of transitionals. Four times "and I alone have escaped to tell you" serves as the climax for one scene and the marker for the beginning of the new scene. In vs. 16-18 the transition to the next scene is indicated by "while he was yet speaking," which is replaced in vs. 20 with "then Job arose." The narrative has a double climax (the words of Job in vs. 21, followed by the comment of the narrator in vs. 22); in vs. 21 the transition to the climax is marked by "and he said," while in the next verse "in all this" serves the same function. Although I Kings is a separate book from II Samuel, it actually begins with a transitional marker, "Now King David was old," assuming King David of I, II Samuel as old information. Judges also begins with a transitional, which links the narrative with that begun in Joshua: "After the death of Joshua." On the other hand, Job opens as new information: "There was a man in the land of Uz, whose name was Job."

One of the most frequent errors made by translators is that of translating the Hebrew *wāw* and the Greek *kai* as "and" in their every occurrence. *Wāw*, when used as a transitional marker, may have many different meanings (e.g., "when," "so," "then," "thus," "although," etc.), and the translator should respect the meaning in the context rather than attempt verbal consistency throughout. In Mark 1 the RSV begins twenty-six sentences with either "and" or "and immediately," which gives the impression that the narrative may have been written for children. Another pitfall is the Semitic idiom "and behold," which is often used merely as an intensifier. The verb "he arose" (Heb. *qūm*) often simply is an auxiliary to the main verb. In the Gospel of John *oun* ("therefore," "then," "thus," "so") occurs more than two hundred times, often serving as a transition marker, but rarely needing to be rendered by any specific word in the receptor language.

**c. Temporal relations.** Temporal relations may be indicated (1) by temporal conjunctions (e.g., "after," "while," "when"), (2) temporal phrases (e.g., "the next day," "the following year"), (3) relative verb tenses (e.g., the future perfect and the past perfect), (4) sequence of tenses (e.g., "He said he did it" as opposed to "He said he was going to do it"), and (5) order of events, based on the assumption that unless otherwise indicated

the linguistic order represents the historical order as well.

Note the problem of the sequence of tenses in John 4:45 (italics added): "So when he *came* to Galilee, the Galileans *welcomed* him, *having seen* all that he *had done* in Jerusalem at the feast, for they too *had gone* to the feast." The time of "came" precedes "welcomed," while "having seen" and "had done" precede in time both "came" and "welcomed," but "had gone" is chronologically prior to all events recorded, though appearing in final position in the sentence. For some receptor languages it may be necessary to restructure this verse somewhat as follows: "The people in Galilee had gone to the Passover feast in Jerusalem, and they saw everything that Jesus had done during the feast. So, when Jesus arrived in Galilee, the people there welcomed him." See also Mark 6:14-29 and John 1:32-33.

**d. Spatial relations.** The primary markers of spatial relations are three: (1) prepositions (e.g., "in," "at," "on," "under"), (2) expressions of distance (e.g., "a foot high," "three miles wide," "three days' journey"), and (3) verbs which imply direction or motion. Spatial relations may not appear to be problematic, but difficulties often arise. Sometimes the order of description may not be natural to the reader (e.g., the description of the size and shape of the altar in Ezek. 43:13-17; see also Jer. 52:21-23). On other occasions the writer of the biblical text shared with his readers information not known by present-day readers. The story of the rape of Tamar (II Sam. 13:1-22) presupposes certain basic information about the shape and construction of the room where the event took place. It would be helpful to know this, but it is not given, because the original readers knew these details. Occasionally a spatial relation is defined in an idiomatic way that is unusual to the reader. Such an expression is "a sabbath day's journey away" (Acts 1:12), which appears as "about half a mile away" in the TEV, and as "about a kilometer away" in a number of translations that use the metric system.

In a number of languages difficulties arise when verbs of motion are used, because the concepts of "going" and "coming" frequently require subtle shifts in verb usage, depending either on the real or assumed position of the narrator, or on some shift in focus. The gospel writers may say "Jesus went *up* to Jerusalem," because in the NT, as in the OT, going or coming "*up*" is the normal way of speaking of a journey to the holy city. However, in some languages one must first ask, "Is the writer assumed to be in or away from Jerusalem at the time of narration?" Only then may the decision between "went" and "came" be made in the receptor language.

**e. Logical relations.** Logical relations may be marked (1) by special kinds of "logical conjunctions" such as "moreover," "therefore," or "nevertheless"; (2) by conjunctions which introduce dependent clauses (e.g., "if," "because," "although"); (3) by the use of verbal forms such as participles, which indicate dependency; and (4) by lexical units (e.g., "that is why he behaved that way"; "he concluded").

A logical relation that is clear in the source language may not always be clear in the receptor language, unless the form is completely restructured. For example, a literal translation of the last part of John 5:13 ("for Jesus had withdrawn, as there was a crowd in the place") makes a misunderstanding possible. This could intimate that Jesus left because of the crowd. NEB avoids this ambiguity by translating "the place was crowded and Jesus had slipped away," making clear that the presence of the crowd made it possible for Jesus to slip away. A literal translation of a verse as John 5:16 ("And this was why the Jews persecuted Jesus, because he did this on the sabbath") is awkward in many languages, including English. "And this was why" is actually redundant information and may be omitted. For some languages it may even be necessary to place the cause or reason before the result, so one must translate, "Because Jesus did this on the sabbath, the Jews began to persecute him." Cf. John 5:18.

*f. Successive references to the same objects, events, or qualities.* This may be done in at least the following ways: (1) by the use of pronominal references (e.g., "he," "she," "it"); (2) by the use of references that point back (e.g., "this," "that"); or (3) by the use of synonyms (e.g., "Mary . . . his wife . . . that woman").

Pronominal ambiguities are abundant in many translations. Occasionally the receptor language requires a pronoun where the biblical text has a noun, but more often the problem is that the biblical text uses a pronoun where it is more natural to use a noun in the receptor language. In the Markan account of the healing of the epileptic boy (9:14-29) Jesus is referred to by a pronoun at least nine times before being mentioned by name in vs. 23; whereas in many languages it would be more natural to mention him by name first and then follow with pronominal references. Note also the problems in a passage like John 12:39b-41:

For Isaiah again said,

"He has blinded their eyes and  
hardened their heart,  
lest they should see with their eyes  
and perceive with their heart,  
and turn for me to heal them."

Isaiah said this because he saw his glory and spoke of him.

In vs. 38 the Lord (God) was mentioned in a scripture quotation, but there is no marker to indicate that he is now being referred to by the pronouns *he* and *me* of vs. 40 (except for the quotation marks); and, although Jesus is mentioned in the larger context, there is no grammatical marker to suggest that *his* and *him* of vs. 41 refer back to Jesus, while *he* of the same verse is a reference to Isaiah.

*g. Foregrounding and backgrounding.* In any account not all the participants and events are of equal importance. In a number of languages the matter of who or what is in focus is as basic as the question, "Who did what, where, and when?" So then, the translation of an apparently simple sentence like Acts 12:13 ("And when he [Peter] knocked at the door of the gateway, a maid

named Rhoda came to answer") may become quite complex, if it is necessary to know the event or person in focus—whether Peter, the maid, the act of knocking, the act of coming to answer, or the name of the maid.

The matter of focus is handled in a number of different ways: by the position of a lexical item in the discourse; by the shift from active to passive (or vice versa); by the use of intensifiers (e.g., "I myself" as opposed to "I"); by the use of particles; by the use of a separate lexical item for the subject in languages such as Greek and Hebrew which include the subject in the verb form; by unusual word, clause, or sentence order; by repetition; by ellipsis; by "flashbacks," etc. However, a construction indicating emphasis or focus in one language may operate precisely the opposite way in another language. According to the Hebrew mind the use of parallelism in poetry not only added to the poetic beauty, but it added stress as well. But in some languages the use of this type of parallelism is regarded as unnecessarily repetitious, and so has the opposite effect.

*h. Author involvement.* The author's involvement may be indicated in one of two ways: (1) autobiographical (whether real or unreal), through the use of first person pronominal forms; or (2) judgmental, as in Job 1:22 ("In all this Job did not sin or charge God with wrong").

A noted example of the author's involvement through the use of first person pronominal forms is found in the so-called "we-sections" in Acts, where the writer suddenly shifts from the third to the first person in his narrative (16:10-17; 20:5-15; 21:1-18; 27:1-28:16). Some scholars question whether Luke was actually present during these events, or whether he simply used the "we" forms to add vividness to his account. But in any case, the author evidently intends for his readers to assume that he was present, and so the first person form should be maintained in translation.

Even though the prophetic books represent a long history of editorial work, the use of the first person form for the prophet is an essential feature of some books (e.g., Ezekiel; Dan. 7-12). In lengthy, disconnected passages where there are a large number of unmarked participants there occasionally appears a prophetic oracle or prayer in the first person; in such passages it is good to set this off by a section heading and maintain the first person form for vividness. However, especially in narrative sections, some languages may more naturally shift to the third person, where the Hebrew has the first, or from the third person to the first, depending on the context. Changes in either direction should always be made on translational grounds, either for the sake of making sense or of marking participants, and never for dogmatic reasons, as, for example, with translations which shift into the first person "I" for the beloved disciple of John 21.

The Gospel of John is notorious for the way in which the author shifts from the speaker's words to his own comments without indicating this shift for the reader (e.g., 3:14-21). In such cases the translator must follow the exegesis which he be-

lieves is best and open and close the quotations accordingly.

**2. Factors involved in a discourse event.** The structure of a given discourse is determined not only by the constraints imposed on it by the nature of language itself (that is, by the universals of discourse), but by certain other factors operative in all communication events. Every discourse is tied to a specific historical and cultural context, and so there are certain nonlinguistic factors which must be taken into consideration when attempting to understand the structure and meaning of any discourse. These may be termed "nontextual" or extralinguistic factors, as opposed to the "textual" or linguistic features termed universals of discourse, and there are at least seven.

**a. Source (sender).** In every communication event it is helpful to know such details as the age, sex, nationality, educational background, motives, and attitude of the person who is the source of the discourse. And, where books have a long history of editorial reworking, it is useful to know all the information possible about the person or persons involved at the various stages of revision, especially about the final editor or editors, for this information also gives clues to understanding the structure of the discourse. *See REDACTION CRITICISM, OT[S]; REDACTION CRITICISM, NT[S].*

To understand a writer's purpose it is necessary to understand the manner in which he used the sources available to him, that is, the way in which he structured his writing. The structure of the Gospel of Matthew is not the same as that of Mark, for example, but the structure of each book gives important clues to the intention of the author, and consequently, to a "picture" of the author himself. Through a careful study of the book's structure valuable insights may be gleaned about the author that will help in the interpretation of his writing.

**b. Receiver.** It is just as valuable to have information about the recipients of a message as it is to have information about the source. We possess certain general information about the intended recipients of the biblical writings—the OT books were directed to the Jewish community of faith, while the NT books were written for the Christian community. But it is important to have more specific knowledge about the recipients of each individual writing. For example, the psalms date from different situations and periods in Israel's history; and the prophetic books in their present form represent a long history of editorial work, in the course of which time oracles dating from later periods have been included. Jesus' parables were spoken to one audience during his ministry, but they appear in different settings in the various gospels, because the audience has changed. The persons to whom James addressed his words about "faith and works" are not the same people to whom Paul wrote about the relation between "faith and works"; and, indeed, the "works" which James demands of his readers are not the same as those "works" which Paul so ardently opposes.

**c. Channel.** The channel or medium of communication may be of various types (e.g., radio, television, books, newspapers, etc.), but here we

are concerned solely with a written medium, that is, with the scriptures. Several problems emerge. In certain cultures the concept of sacred literature is foreign, and people learn primarily through the practice of ritual, not by being instructed through the use of a written medium. Other problems arise because the scriptures are now appearing in different formats, such as cartoon-style adaptations; while still other problems relate to the production of selections and portions in which a passage is removed from its setting and linked with a group of other passages, either on thematic or other grounds. Care must be taken not to skew the focus and intent of the original author, or else the altered channels may result in a distortion of the message.

**d. Form of the message.** The form of the message is a vital factor in any communication event; but a given form in one language setting may not carry the same emotive impact that it does in another linguistic and cultural context. Traditionally translators have attempted to reproduce the Hebrew poetic form wherever it occurs in the Hebrew text, without asking whether or not that particular form is appropriate for the subject matter in the receptor language. In the OT, poetry was used to express prophetic messages of warning or doom, as well as instruction and philosophical reflection; but for the contemporary English-speaking community these same forms would be inappropriate for this subject matter, and in most situations would receive a negative reaction. On the other hand, the poetic form is still considered appropriate for themes of love and of mourning for a comrade lost in some tragedy, as well as for hymns and songs of private and public worship.

Another form that needs some attention is the LETTER form of the NT. The Pauline correspondence, e.g., follows the letter form of the first century; but the letter openings and closings in particular do not awaken for the contemporary reader the same emotions that these same forms would have aroused for first-century readers. Attention must be given to the fact that the letter is a total discourse unit, and that meaning (especially the emotive impact conveyed in the letter opening) has priority over form.

The Bible also contains forms not found in some other cultural settings. One of these is apocalyptic literature, as represented by Daniel 7–12 and by the book of Revelation (*see APOCALYPSE, GENRE[S]; APOCALYPTICISM and APOCALYPTICISM[S]*). Consideration must be given to ways in which the contemporary reader can realize the purpose and intent of the apocalyptic form and avoid the extremes of faulty interpretation.

The gospels (*see GOSPEL, GENRE[S]*) have frequently been misunderstood because they have some of the formal features of a biography, and so have been interpreted in this light. The Hebrew tradition of expressing religious truths through the medium of the narrative form, especially when combined with their freedom in weaving together various strands of tradition, has been a source of concern for the careful and devout reader, who assumes that he is reading an account such as he might find in a history textbook.

**e. Code.** The code used in the Bible is in the form of Hebrew and Greek, and, in a few places, Aramaic. These languages, like all other languages, have unique features which may be disturbing to the person who is not familiar with their structure and idiomatic expressions. Long and complex sentences are frequent, both in the OT and in the NT. Examples could be multiplied, but note Ezek. 34:7-10a, which takes sixteen lines in the RSV, 18:5-9, eighteen lines, and Rom. 1:1-7, which extends through twenty lines. Since Hebrew prefers direct discourse to indirect discourse (see DISCOURSE, DIRECT AND INDIRECT[S]), the result is often a series of quotations within quotations, as in Jer. 7:1-4. This is particularly disturbing in languages which mark direct and indirect discourse in ways different from Hebrew. Rhetorical questions are misleading in languages which do not use them, but sometimes also even in languages as English, where they are used. For this reason, they sometimes are better translated as statements. (Compare "For to what angel did God ever say . . . ?" (RSV) with "Nor did God say to any angel . . ." (TEV) in Heb. 1:5). Biblical languages sometimes use constructions in which words linked by "and" are not really in a co-ordinate and balanced relation as the construction implies, but rather are essentially one thought. For example, "wicked and sinners" (KJV) of Gen. 13:13 means "wicked sinners," while "spirit and life" (RSV) of John 6:63 would be better rendered as "(God's) life-giving Spirit." NT Greek frequently uses nouns where verbs, or noun-verb constructions, are more appropriate in the receptor language (e.g., Mark 1:4, "a baptism of repentance for the forgiveness of sins"). Biblical idiomatic expressions may sometimes be confusing or completely misinterpreted when a literal translation is given (e.g., "horn of my salvation," Ps. 18:2; "Do not lift up your horn," Ps. 75:4; "make a horn to sprout," Ps. 132:17). Occasionally mixed figures are used, and need to be restructured entirely, as TEV has done in Jer. 48:11. Although all language codes are different from one another, whatever can be said in one language can also be said in another language, if the unique features of each language code are respected.

**f. Topic.** The topic of a discourse is important, since at the discourse level form and content are closely related. Certain subject matter may be well suited for one form, while quite unsuited for another. The apocalyptic form is a much more dynamic way to depict the demonic forces that threaten God's people than is the form of a philosophical essay. And the problem of the suffering of the righteous comes through more dramatically in the dialogue form selected for the book of Job than it would in an alternative form.

One of the aspects of topic in biblical literature that is confusing to the modern reader is the matter of sudden shifts without any overt markers to indicate the new subject matter. A hymn in the praise of wisdom suddenly interrupts the dialogues in the book of Job (ch. 28), and there is no grammatical marker to indicate the shift; and Psalm 19 deals with two distinct topics (vss. 1-6 and 7-14). Though the change of subjects is not so shaking as in Job, this is, nevertheless, helpful

information for the modern reader to have, since the reading matter that he is accustomed to in daily life does not follow this pattern. Some passages in the gospels sound extremely strange, because Jesus suddenly changes from one subject to another for no apparent reason. If the Bible is to make much sense to today's reader, then thought must be given to the preparation of appropriate formats and of reader helps, as is being attempted in some of the modern translations.

**g. Context.** Every event is conditioned by the particular historical and cultural context in which it occurs; but the presuppositions of the reader are also conditioned by his contextual setting, and problems arise when the cultural presuppositions of the original context and of the reader are not the same. A reader who is not familiar with the OT account of Moses may well assume, on the basis of John 3:14, that Moses actually picked up a live snake with his bare hands! In the traditional translations of Gen. 1:2 the reader misses completely the picture in the mind of the writer, because "the waters" are mentioned as old information, without any indication of the relation between the water and the earth—whether the water is on it, under it, or surrounding it. This was information known and shared by the writer and his intended readers, but the world view of the modern reader makes it impossible for him to picture in his mind what was clear to the writer and the reader in the original context. In Jer. 23:23 the Lord sounds as if he is declaring himself to be a God who is far removed from the affairs of men ("Am I a God at hand, says the Lord, and not a God afar off?"), though the reader is helped some by reading the following verse. The meaning is that God is no insignificant deity, tied to a local sanctuary, but a God high in the heavens, who can look down and see all that takes place. The integrity of the original cultural context must never be compromised, but attention should be given to making the original setting clear for the modern reader, for whom the biblical setting may be quite foreign.

\***DIVINATION.** The art of determining the purposes, will, or attitudes of the gods. Whereas revelation means divine self-disclosure to men, the diviner always takes the initiative in discovering the import of divine communication (see REVELATION). The practice presupposes that the gods, or the god in a monotheistic religion, provide signs which, if

interpreted properly, divulge something of divine intentions.

In general, divinatory methods in the ancient Near East may be divided into two categories. In the one, a diviner manipulates objects such as oil, water, or lots so as to derive the omens. In the other, he observes phenomena such as animal entrails or dreams that take place without any action on his part and interprets them as divine communication. Both methods involve the belief that man has certain power to influence his life. Omens consequently are warnings of impending disaster or indicate a choice between fortune and misfortune. It is not a question of inflexible destiny, but rather of an opportunity to engage in proper action so as to avoid calamity or remove conditions offensive to the gods.

Though diviners practiced their art in all areas of the ancient Near East, most of the extant literary remains derive from Mesopotamia of the second and first millennia. There are extensive texts, but owing to complex historical developments, technical vocabulary, regional preferences, and diverse techniques, we still do not know precisely how the diviner determined his verdict. Judging from the sheer numbers of omen collections, however, it must have involved sophisticated training and lengthy search for appropriate matching of phenomena with traditional interpretation. Later literary references have drastically simplified the procedures when they simply report that a king inquired of the gods through divination and received an answer. Aside from these references, we possess collections of omnia typically consisting of a series of statements positing various associations between events: "If there is seen in a house the dead owner of the house, his son will die" (Saggs, p. 321). For oneiromancy (see DREAM): "If a man in a dream eats a raven (*arbu*), income (*irbu*) will come in. . . . If a man in his dream ascends to heaven, his days will be short. If he descends to the netherworld: his days will be long" (Oppenheim, *Dreams*, pp. 241, 267). In addition to these compendia, actual records of hepatoscopy, the most important means of divination for Babylonian and Assyrian kings, have survived. These texts typically enumerate the omens observed, record the verdict (favorable or unfavorable) and the subject of inquiry, sometimes cast in the form of questions put to the gods by the monarch. "Given: a liver part, a two-fold path, the left path lying upon the right path. The enemy will furiously vent his weapons over the weapons of the princes. . . . Five unfavorable signs here. Favorable do not appear. It is unfavorable. . . . Will he go, will he with warriors, troops of Ashurbanipal, wage armed conflict . . . fight with them? Not good" (Klauber, pp. 103-5).

Certain segments of Israelite society prohibited divination, or at least severely criticized its deficiencies (Deut. 18:14; Ezek. 13:4-7; 22:28). Yet the practices seem to have been diverse and rather more widespread than many earlier scholars would have admitted. The allusions in the OT are well known (see DIVINATION). In addition to lecomancy (divination by means of liquid in a cup; Gen. 44:5), belomancy (divination by means of

arrows; Hos. 4:12), and oneiromancy (I Sam. 28:6; Gen. 37:5-11; 41:1-36), one hears of divining by observing the action of animals (I Sam. 6:7-12) or budding plants (Num. 17:1-11). The recent discovery of clay liver models at Hazor now makes it impossible to rule out hepatoscopy in Israel as well (cf. Ezek. 21:21-22). We know also of the chance oracle, corresponding to the Babylonian *egirru* and Greek κληδών, from I Sam. 14:8-10, where Jonathan takes a remark by the Philistine guard as an omen (אִוֶּה) that Yahweh has guaranteed victory for the Israelites (cf. Gen. 24:14; I Kings 20:33). The practice of necromancy is reflected in I Sam. 28. There, King Saul, wishing for some omen of the outcome of an impending battle, consults a medium (בַּעֲלַת אֹבִי, lit. mistress of the pit), who calls up from earth the departed spirit of Samuel. The word אֹבִי means the divining pit from which spirits are summoned, but sometimes the necromancer (I Sam. 28:3, 9; Lev. 19:31), or the spirit itself (Isa. 29:4). It apparently has its background in Hurro-Hittite culture, and is cognate with Hittite *a-a-bi*, the pit from which the spirits rise. Similarly, Hebrew תַּרְפִּים, some sort of object used in the mantic arts (Zech. 10:2; Hos. 3:4), now appears to be cognate with Hittite *tarpiš*, a spirit which on some occasions was thought to be benevolent, and on others malevolent. See TERAPHIM.

The best attested, and apparently officially sanctioned, technique of divination was אֲרִיִּם וְחֻמִּים, the sacred lots cast by priests in Israel. (See URIM AND THUMMIN.) The *locus classicus* for this institution is Num. 27:21, where the priest Eleazar is authorized to inquire of God by the practice of Urim in a sanctuary. Ordeals by which a priest would determine guilt or innocence are surely related divinatory practices (Num. 5:14-30). See JEALOUSY, ORDEAL OF.

Prophets, too, practiced divination. Mic. 3:6-7 castigates the prophets of the eighth century for abusing their office. Because they speak comfort when their bellies are full and malevolence when hungry, they shall become confused: "It shall be night to you, without vision (חִוּוֹן), and darkness to you, without divination (קֶסֶם)." Earlier texts portray a seer, or a "man of God," as the one to whom a man could go to "inquire of God" (רָשָׁא אֶת־אֱלֹהִים) or to seek an oracle of Yahweh. Similar expressions apply to Egyptian divination (Isa. 19:3) and necromancy in Israel (I Sam. 28:7). One would inquire about sickness (I Kings 14) or military crisis (II Kings 3), or a lost animal (I Sam. 9), and the like. The intent was for the seer to reveal the future or to deliver the decision of the deity in a specified situation. The practice may still be reflected in Ezek. 14 and 20. However, in Jer. 21:2; 37:3, 6, the phrase "inquire of Yahweh" already has come to mean intercessory prayer in times of distress. Similarly, Ezek. 14 and 20 have something to do with petition for relief in the despair of the exile; cf. Ezek. 36:37. After Ezekiel's time, we hear nothing more of prophetic divination in this form.

The only hint of the procedure followed appears in II Kings 3:15, where music and a suggestion of ecstatic experience accompany the prophet's answer. Seeing a vision was apparently involved as

well. Vision (וִיזוּן) and divination (קִסּוּם) belong together in Mic. 3:6. Just as the necromancer "sees" the spirit of Samuel (I Sam. 28:13), so Elisha in response to an inquiry says "The Lord has shown me (הִרְאִינִי) that he [the king] shall certainly die" (II Kings 8:10). In a similar situation of prophetic inquiry, Micaiah ben Imlah responds with a full report of vision (I Kings 22:17-23).

It is no accident that something of this world of prophetic divination adheres to later reports of visions. Though many clearly function simply as prophetic announcement, their inner logic recalls the presuppositions of the diviners. Amos "sees" a supramundane scene of destruction and immediately responds as though it were an omen, a portent of a future event in the mundane realm (Amos 7:1-6; cf. Ezek. 9:1-9). The vision of Amos 8:1-2, though mainly carrying a direct word from God, develops from a rather fortuitous linkage with a visionary object and predicts a future state of affairs (קִיץ, a summer fruit, suggested קֶץ, the "end" of Israel). In visions, what is seen by the prophet often is a sign for the future, just as in Mesopotamian omen series what is observed about animal behavior or dreams is interpreted by the diviner as a warning of something yet to materialize in the lives of men. Of course, visions were understood in Israel as the word of a free and transcendent Yahweh. This meant that the appropriate human response was worship and petition, not prophylactic ritual as in Babylon.

**DIVINE MAN.** The term θεῖος ἀνὴρ originated in the Hellenistic world as a designation for a truly wise man, whose wisdom manifested a perception of and a harmony with ultimate reality. Both historical (e.g., Socrates) and mythological (e.g., Apollo) figures were accorded this status, and in the third and fourth centuries A.D. Iamblichus, Diogenes Laertius, and Porphyry portray Pythagoras as the model divine man. How accurately these late traditions represent an earlier divine man conception cannot be determined.

At the beginning of our era, and largely in Egypt, attempts were made to demonstrate the divinity of kings (e.g., Augustus, Alexander) and

wise men by attributing to them prescience or miracles. At the same time, among the educated classes, the divine man was regarded as a paragon of virtue and wisdom. Lucian of Samosata (second century A.D.) satirizes attempts to blend these two traditions (e.g., *Lover of Lies; Alexander the False Prophet*) and draws on popular MIRACLE STORIES for evidence of what he regards as the ridiculous claims made on behalf of such charlatans.

In Hellenistic Judaism, and above all in the works of PHILO, OT worthies such as Moses, Enoch, Melchizedek, and Elijah came to be viewed as belonging to a special category of humankind. Thus, for instance, Moses (called ἄνθρωπος θεοῦ, a "man of God," in the LXX [e.g., Deut. 33:1]), is honored by Philo (*Life of Moses*) as a paradigm of obedience and having special access to the divine will. His being taken up to God at his death is regarded as a resolution of soul and body into pure mind; but the biblical accounts of Moses' miracles are explained either rationally or allegorically by Philo and are not integrated into Moses' divine man role.

Some scholars (Hadas, Smith) have held that the gospels present Jesus according to the divine man model. Others have argued that a divine man Christology was championed by certain opponents of Mark (Weeden) or Paul (Georgi). Yet firm documentation of the concept in Christian or pagan literature of the first century A.D. is lacking, and in the Gospel of Mark (see MARK, GOSPEL OF §9b) Jesus' miracles are valued, in accord with Jewish apocalyptic views, as signs of the inbreaking kingdom.

\***DIVINERS' OAK** [מְלוּךְ סַעֲוֹנִים, 'ēlōn m'ōn'nim]. There is some uncertainty with regard to the species of tree involved. Some scholars favor the translation OAK, but others prefer TEREBINTH. The newer Hebrew dictionaries cautiously assign the meaning "mighty tree" to Heb. 'ēlā, 'ēlōn, and 'allōn. However, texts like Isa. 2:13; 6:13; 44:14; Ezek. 27:6; Hos. 4:13; Amos 2:9; Zech. 11:2 prove beyond doubt that at least 'ēlā and 'allōn must be specific tree names. It is fairly certain that 'allōn, like its Akkad. cognate allānu, is the oak. The hardness of its wood is alluded to in Amos 2:9. According to reliable ancient traditions 'ēlā (pl. 'elim, Isa. 1:29; 57:5; 61:3) is the terebinth. It is much more difficult to establish the meaning of 'ēlōn.

The 'ēlōn m'ōn'nim of Judg. 9:37 was situated in the vicinity of Shechem. This tree should be distinguished from the oak that stood in Shechem. The latter is meant in Judg. 9:6, where we have to read 'allōn with LXX, and in Josh. 24:26 (cf. 24:25) where it is called 'allā. The conspicuous

tree outside Shechem, however, was an 'ēlā according to Gen. 35:4. This would seem to indicate that 'ēlōn and 'ēlā were very much alike. Josephus' statement that the 'ēlōn near Hebron (Gen. 13:18, etc.) was a very old terebinth (War IV.ix.7) points in the same direction. Apparently both 'ēlā and 'ēlōn were members of the pistachio family. The very old and isolated tree called 'ēlōn could be the *Pistacia atlantica*, var. *latifolia*, which sometimes attains a height of fifty to sixty-five feet. The lower tree or shrub called 'ēlā may be the *Pistacia terebinthus* L., var. *palaestina*, which does not rise above twenty-three feet. The latter is an important associate of oaks in the maquis on hills (cf. Hos. 4:13; the same combination occurs in an Assyrian text: 4R 56, III.37=KAR 239, II. 13).

Gen. 12:6 mentions an 'ēlōn mōrē near Shechem (cf. Deut. 11:30). Because it is hardly believable that this would be a third well-known tree in the same area, 'ēlōn mōrē or "the Teacher's Terebinth" might be a later, less offensive Israelite name for the 'ēlōn m'ōn'ānim, "the Diviners' Terebinth." Hab. 2:18-19 suggests that an idol could be called a "teacher" by its worshipers. (On speaking idols, see the parallels collected by J. Cerny, *BIFAO*, XXX (1931), 491 ff.; O. Kaiser, *ZRGG*, X (1958), 193 ff.)

Holy stones and trees (see ASHERAH §3) were often found together in ancient Canaanite and pre-Israelite places of worship (e.g., Exod. 34:13; Deut. 7:5; 12:2-3; Josh. 24:26). According to the Canaanites of Ugarit, stones and trees were able to murmur messages (*CTA* 3:C.19-20; *PRU*, II, 1:Rev.7, 12-13). Similarly, the Greeks, consulting the oracle of Dodona, heard their fortune told in the rustling of leaves and branches. Thus it may well be that the diviners of Canaan obtained oracles through their holy stones and trees. In Mic. 5:12-14 [H 11-13] the diviners, the holy stones, and the Asherim are mentioned in the same breath.

It is possible that, at an early stage of Israelite religion, DIVINATION by means of rustling trees was not regarded as pagan. David got the signal to attack the Philistines from the sound of footfalls in the tops of *bākhā*-shrubs (II Sam. 5:24). It may be significant that this shrub is another member of the pistachio family (*Pistacia lentiscus* L.).

J. C. DE MOOR

\***DIVORCE.** The officially recognized dissolution of a marriage. It is this element of official recognition by the society which, in some societies, distinguishes divorce from casual separation.

**I. Initiative.** In OT law, the initiative in instituting divorce proceedings lay entirely with the husband (Deut. 24:1-4). There is no hint of a

divorce being initiated by a wife. This is in keeping with the double standard which characterized Israel as well as most of its contemporaries in the Mediterranean region.

The ELEPHANTINE PAPYRI, reflecting various foreign influences in a later period (sixth century B.C.), do seem to permit a wife to initiate a divorce. But in the reports of the teachings of Jesus in the Synoptic gospels (Matt. 19:9; Mark 10:11-12; Luke 16:18), only Mark mentions the possible initiative of a wife; this provision probably reflects a foreign influence. As for Paul, he seems to consider, in the Gentile context, that divorce would be legally available to a wife (I Cor. 7:10-11), but that a Christian wife should not divorce a non-Christian husband (or vice versa); though RSV translates χωρίζω in vs. 10 as "separate" and ἀφίημι in vs. 11 as "divorce," the distinction cannot be pressed, since both terms are used in the papyri to refer to divorce.

**2. Grounds.** The only legal passage in the OT which refers to grounds for divorce (Deut. 24:1-4) is extremely vague: "if then she finds no favor in his eyes because he has found some indecency in her, . . ." This, as is well known, gave rise to a prolonged debate between rabbinic schools of thought in later generations. One school interpreted this condition so broadly as to include incompetent cooking; the opposite school understood "indecency" to refer only to infidelity. The term ערוה means literally "nudity," and is often used to refer to a shameful uncovering of the genitals, especially the female genitals; it is therefore used by extension to refer to sexual intercourse, especially in contexts where illegitimate intercourse is meant (Lev. 18:7-19; also Gen. 9:22-23), as in incest or homosexuality. However, the legal texts uniformly prescribe the death penalty for voluntary infidelity, whether of wife or fiancée (Lev. 20:10; Deut. 22:22-24); divorce is not mentioned in these contexts. A fiancée raped under circumstances where she could not obtain help was judged to be innocent (Deut. 22:25-27), but it is not said what her fiancé could or should do about it. Similarly, if a man at the time of the consummation of his marriage accused his bride of not being a virgin, her parents were bound to provide the proof of her virginity in the form of a blood-stained cloth. If they were able to do this, the husband was fined one hundred shekels, whipped, and forbidden to divorce his wife forever. However, if the parents were unable to furnish proof of their daughter's virginity, she was to be stoned (Deut. 22:13-21). In the case of a husband's suspicion of adultery without proof or witnesses, the wife underwent a trial by ordeal (Num. 5:11-31; see ORDEAL, JUDICIAL[S] §3). The consequences for a wife found guilty were pain, swelling of the body, an unspecified ailment of the thigh, and execration by the people; whether or not this brought about death or entailed the death penalty is not specified. In other words, it is not at all clear under what circumstances a wife or fiancée could be unfaithful and yet incur only divorce.

However, the accounts of actual cases seem to indicate a much greater degree of flexibility in

practice than the law suggests. In the case of David's adultery, the consequences were that the first child he had from Bathsheba died (II Sam. 12:11-18); it is also said that the subsequent sordid history of the offenses of David's sons was linked to David's sin; in other words, there were penalties short of death, and these were inflicted directly by divine intervention, not by society. Likewise, Hosea took the option of initially divorcing his unfaithful wife (if we understand Hos. 2:2*b* as a statement, as in RSV, rather than as a question, as in NEB), though he later forgave her and took her back. It may be thought, however, that his conduct was atypical, as the conduct of the prophets often was, precisely to the extent that it was intended as a jolting object lesson to Israel; so that we may not rest too strongly on Hosea as an example of normal conduct.

Undoubtedly, in earlier times, adultery on the part of the husband was not cause for divorce by the wife, because it was considered that the person offended by a man's adultery was not his wife, but the husband of his partner in adultery. It must not be thought, however, that a man could commit adultery with impunity or with general approval. Later writers especially urged husbands to be faithful to their wives as such, not just to avoid the revenge of a cuckolded husband.

There were two situations in which a man could never divorce his wife: the case when she was exonerated of his charge of nonvirginity (Deut. 22:13-19) and the case when he was forced to marry her after raping her (Deut. 22:28-29).

In the later years of the OT period it became increasingly frowned upon to divorce one's first wife (Mal. 2:14-16); this attitude continued into NT times, so that in spite of the rabbinic debate, by the first century A.D. divorce was generally instituted only for infidelity (Matt. 1:19). This is reflected in the Matthean version of Jesus' words on the subject (Matt. 5:31-32; 19:1-9), but not in the versions in the other Synoptics (Mark 10:1-12; Luke 16:18), possibly because they were written for Gentiles whose standards of reference were different. Paul (Rom. 7:1-3) says that in Jewish law a woman had no option to divorce, but says nothing about the husband's option. In the other extended passage about marriage and divorce (I Cor. 7), he says that neither partner, if a Christian, should initiate divorce; but that the Christian partner in a mixed marriage could not prevent the non-Christian from doing so.

**3. Procedures.** The only relevant passage again is the legal one (Deut. 24:1, quoted in Matt. 5:31; 19:7; Mark 10:4). The rule was that the husband must give his wife a document which spelled out the fact that she was divorced and hence free of any claims he might have upon her. Another passage (Hos. 2:2*b*) gives a formula which may have been used in such a document. This paper was, of course, an advantage to the wife, since she now had proof of her freedom.

**4. Remarriage.** The law said (Deut. 24:2-4; cf. Jer. 3:1) that a woman properly divorced was free to marry another man. However, if her second husband died or divorced her, she was not free to remarry her first husband. Two cases might be

cited as counterexamples, but in fact they are not. Though Saul had given his daughter Michal, David's wife, to another man (I Sam. 25:44), David never divorced her, and so was legally justified in taking her back (II Sam. 3:13-16). Hosea, though he had divorced his wife, could take her back because she had not formally married another man in the meantime.

**4. Conclusion.** It is generally agreed that divorce was never frequent among the Hebrews. Since the family unit was so important, its stability was most carefully defended, and the fidelity of both husband and wife was highly valued (Prov. 6:20-35). In other words, the realities of interpersonal relationships and of concrete social pressures went a long way to mitigate the apparent permissiveness of the law. See also SEX, SEXUAL BEHAVIOR[S].

\***DOLMENS.** The name is derived from two Old Breton (French) words: *dol*=table, *men*=stone. Originally applied to man-built structures of which the simplest form resembles a massive stone table consisting of two heavy, unworked blocks with a third placed horizontally across them (a simple trilithon), the term was subsequently applied to more complicated structures.

In the nineteenth century, travelers and explorers in the Holy Land were struck by the many "rude stone monuments" they encountered, and it was natural that they should describe them by the word with which they were familiar. This does not necessarily imply that there is a direct connection between the dolmens of Europe and those of the Near East or elsewhere, although such a hypothesis cannot be ruled out.

**1. Diffusion.** Dolmens are found throughout widespread regions of the Near East, especially on the high plateau lands which lie E of the Jordan Rift and between it and the desert. These and other forms of megalithic tombs are likewise known from other parts of the world, including North Africa, South Russia (Caucasus), and Europe. Relatively few are known from W Palestine, mostly in the N. The majority of those recorded are located in northern Moab, Gilead, Bashan, and the Golan, where hundreds and thousands of dolmens of various shapes and sizes are concentrated in what are known as dolmen fields. Throughout the ages these imposing piles of stone have attracted attention and aroused curiosity. Many were disturbed in antiquity by would-be treasure hunters; in many instances they were re-used as tombs in later periods. Dolmens are a prominent feature of the landscape, so that succeeding generations living in their vicinity cannot but have been aware of their existence. Thus it may well be that the biblical references (Deut. 2:10-11, 20-21) to various tribes of half-legendary tall people,

collectively referred to as ANAKIM or REPHAIM (Heb. "giants"), reflect a folklore which grew out of the desire to explain the huge megalithic structures. It is interesting to note a similar tendency in modern times: many dolmen fields and other megalithic remains are known today as *qubur bani Isra'il* (Arab. "the tombs of the Children of Israel").

**2. Structure and size.** Eleven different types of dolmens have been distinguished, with many intermediate or hybrid forms. Regardless of size, the chamber is usually rectangular in plan—sometimes square or trapezoidal. The dolmen is built in dry-stone technique of large blocks of unworked stone, each of which has been carefully selected in accordance with its function in wall or roof. The orthostatic wall stones are placed side by side, varying in size according to the dimensions of the chamber. This is usually closed at one end by a single transverse block, the entrance being at the opposite narrow end, sometimes preceded by a short approach corridor. Some dolmens are closed at both ends, entry being by means of a narrow passage which runs below the tumulus (cairn) and opens into one of the long walls. In some closed dolmens in Transjordan, entry was effected through "porthole" apertures cut in one of the short sides. In most dolmens the floors are paved and the roofs constructed of one or more heavy slabs placed horizontally, either directly upon the wall blocks or on the uppermost wall course laid above them. The roof stones are placed either side by side or rest partially one upon the other. Sometimes they rise in step-like tiers so that the roof, forming a corbeled ceiling within, towers about the whole structure (Fig. D5). Dolmens were built of the natural rock which lies strewn over the surface. Their position was determined by the facility with which the heavy stones could be moved, taking into account the natural contours of the terrain, rather than, as has been suggested, by considerations such as their proximity to water or orientation toward the sun's rays at specific times of the day or seasons of the year.

The chamber of a medium-sized dolmen is some 11½ feet long, 5 feet wide, and 5 feet high; but many are considerably larger, having a total length of 24½ feet and more, other measurements

being in proportion. There are also many small trilithons (open at both ends) built of two basic wall stones and a single heavy roof block. This type of structure is usually set up on the surface with no more than a hint of a surrounding tumulus or encircling outer wall.

The dolmen is frequently surrounded and partially hidden by a tumulus built of piled-up stones, having an outer ringwall of larger stones laid in distinct courses. The size of the tumulus is usually determined by the size of the dolmen and in most cases it is considerably larger. A tumulus may be 65 feet in diameter and built to a height of some 6½ feet above the surrounding terrain. Most have a flattish surface above, which reaches to the top of the dolmen roof and is often partly visible. Sometimes an additional, nonfunctional capstone is added to the dolmen, doubtless to mark the position of the structure below. The tumulus was intended not only to cover and screen the dolmen, but also to stabilize the heavy pile which was frequently set on a slope.

**3. Function and date.** For many decades opinions of scholars were divided regarding the function of the dolmen, but today it is generally accepted that it served as a tomb. Since there are no remains of associated houses in the vicinity of the dolmen fields, the indications are that the dolmens were built by pastoral nomads who roamed the steppe lands between the desert and the sown areas, each tribe erecting a specific type of dolmen in accordance with age-old custom. There was far greater controversy regarding the date of the dolmens: Albright, followed by Glueck, considered that they were preceramic in date, while Stekelis and others were of the opinion that they should be dated to the latter half of the fourth millennium B.C. Until recently relatively few structures had been excavated, yielding for the most part inconclusive evidence. During the last few years excavations in some thirty dolmens situated in six different sites in the Golan have brought to light datable funeral gifts which had originally been placed on the paved floor within. The assemblages, which were found together with disarticulated bones indicating secondary burial, include pottery vessels, weapons, and personal ornaments (many of the latter being of copper) dating to Middle Bronze I (also known as the Intermediate EB-MB period). Since this is the earliest material found in these dolmens, it can be deduced that they were built in this period, during the last quarter of the third and the very beginning of the second millennia B.C. It is, however, possible that some may have been built by related tribal groups a little earlier. But it is significant that no older material has been found in the excavated structures. A re-examination of the reports of artifacts found during the past hundred years or so in dolmens which were cleared in a less scientific manner has revealed material which can be similarly dated.

It was during the MB I period that the major walled towns in W Palestine were destroyed by seminomadic tribes who only gradually became sedentary. These tribes are known chiefly from the shaft tombs which they laboriously cut into

the rock below ground, these being of different shapes and sizes, indicating differences in tribal customs. The extensive effort required suggests that great importance was attached to the final burial place. In many of them no complete skeletons were found, there being, rather, scattered bones from a secondary burial, round which a few pots had been placed together with weapons and personal ornaments, many of them made of copper. The similarity of the burial practices in the dolmens and the shaft tombs is striking, and both date to the same period. It would thus appear that there is a connection between them. In both, secondary burial is found, this being common among nomadic groups; both are characterized by comparatively few grave goods, and these often include metal objects with a high percentage of copper, indicating that they were the work of people well-versed in metallurgy. The essential difference between them was determined by the nature of the terrain where they were situated. In the areas which extend E and especially NE of the Jordan, which are characterized by the ubiquitous basalt whose volcanic hardness makes it difficult to work, the traditional form was the dolmen. Further W, where softer rock is found, the shaft tomb below ground took the place of the megalithic structure. At the same time it should be noted that the existence of dolmens built of limestone both E and W of the Jordan (e.g., in Galilee) indicates that age-old traditions died hard and were only gradually superseded.

For another type of dolmen see DOLMEN, Fig. 35; see also TOMBS].

C. EPSTEIN

**\*DOMINION OVER CREATION.** In the OT, the idea of human dominion over the creation appears in Gen. 1:26-28; 9:1-7; and Ps. 8:6-8 [H 7-9]. This idea, especially as expressed in Gen. 1:28, has recently become controversial in the debate over ecology. Some suggest that the biblical text encourages a sense of human detachment from, and superiority to, nature; this sense has entered the consciousness of the West and become the cause of uncontrolled technological advance whose baleful consequences we now see (White). Others reply that this is a false understanding of a biblical text which plainly sets dominion in the context of universal harmony and goodness, in which the human vocation is care and responsibility for

nature. This controversy provides an appropriate framework for interpretation of the texts. What is meant by dominion, and is it lost in the FALL?

Gen. 1:26-28 uses two words for human dominion: *רָרָה* for the relationship to animate beings (reading in vs. 26, with the Syriac, "wild beasts" for "earth," to restore the animal list of which vs. 28 gives a truncated version) and *כָּבַשׁ* for the relationship to the earth. *רָרָה* in the OT most often refers to the rule of a monarch. *כָּבַשׁ* means "subdue, bring into bondage," with strong connotations of force, and often refers to the conquest of lands in war. Vocabulary, therefore, suggests humanity's rule to be in general that of a monarch, and specifically coercive. This agrees with the understanding of the IMAGE OF GOD accepted by many, that its conceptual background is the ancient Near Eastern belief that the monarch is the representative of the ruling deity. Furthermore, the link between dominion and "filling the earth" suggests that humanity's rule grows and develops in history. In summary, Gen. 1:26-28 enjoins humanity to impose its kingly rule more and more widely.

Thus understood, this text is at odds with its context. The large picture of harmony, completeness, and goodness agrees poorly with subjugation. In particular, the implied injunction to vegetarianism in vs. 29 sets an unexpected and stringent limit to human dominion. If we move into the separate creation account of ch. 2 we find stress on human oneness with the earth (vs. 7) and responsibility for its keeping (vs. 15). Gen. 1:26-28 has on other grounds, including stylistic, been regarded as an addition to the six-day creation, presumably replacing a briefer account of the creation of people. It is plausible to see the dominion formulations as serving to link the story of the creation of humans with its context, by ascribing rule over the animals created on the fifth and sixth days. As we now have it, Gen. 1 presents a dialectical tension between dominion over nature and harmony with it.

Gen. 9:1-7, stemming like 1:26-30 from the P source (see DOCUMENTS; PRIESTLY WRITERS[S]), is closely related to it; but the divine injunctions after the Flood are different. Dominion is not mentioned in Gen. 9:1-7; instead people inspire "fear" and "dread" in animals (vs. 2). Does this suggest that the primal "dominion" has been replaced by a less harmonious relationship between humanity and nature? Probably not. *רָרָה* and *כָּבַשׁ*, as noted above, are not appropriate words to express harmony, and in any case their omission from Gen. 9:1-7 is probably due to textual error, since the emendation *וַרְרָה* in vs. 7 is widely accepted (e.g., JB and NEB). Genesis therefore does not imply that human dominion, any more than the divine image, was lost in the Fall.

Ps. 8:6-8 [H 7-9] agrees closely with Gen. 1 in its view of dominion. Royal ideology is very clear ("crown," vs. 5 [H 6]; "put under one's feet"). The extent of human dominion is even wider in the psalm, covering "all things." But the suggestion of triumphant subjugation of nature is absent. The psalm does not use *רָרָה* or *כָּבַשׁ*, but the more general word for ruling, *טָשַׁל*. It speaks of a single event of enthronement, rather than the giving of

an ongoing injunction to rule. And it maintains a dialectic between divine and human rule, between human greatness and smallness, similar to the tension between Gen. 1:26-28 and its context.

The NT alludes only rarely to the OT theme of dominion over creation and almost always implies that it is lost or lacking in the present. Two minor exceptions are Rom. 1:23—idolatry is doubly foolish when practiced by those to whom everything has been subjected—and Jas. 3:7-8—those who can control everything else cannot control themselves. Most allusions are christological. Ps. 8:6b [H 7b], "Thou hast put all things under his feet," is referred to in I Cor. 15:27; Eph. 1:22; Phil. 3:21; and I Pet. 3:22. Early Christians linked these words with Ps. 110:1 to express Christ's victory over the cosmic powers of evil (see ANGEL; DOMINION; POWER §5b; PRINCIPALITY). Some have linked the power (ἐξουσία) of the Son of man in the Synoptic gospels with the "son of man" in Ps. 8:4 [H 5]. But this link is tenuous, since "son of man" in Ps. 8 is a figure of weakness, and nowhere do the gospels explicitly relate Jesus' power over nature to the dominion theme of the OT.

Two NT passages are important. Rom. 8:20 speaks of the "subjection" of creation to futility, and it is most tempting to see this as a combination of Gen. 1:28 and 3:17: subjection to humanity became, through the Fall, subjection to futility. Paul goes on to declare that this subjection will be reversed through human salvation in Christ. Heb. 2:5-9 quotes a large section of Ps. 8 (curiously omitting vs. 6a [H 7a]) and argues that, since present human experience does not bear out what the psalm says about dominion, it must seek its fulfillment elsewhere, and is, in fact, fulfilled in the victory of Christ.

Early interpretation of the OT texts did not see in them a charter for technological advance, but held that dominion was one of the gifts lost to humanity through the Fall. Many Christian interpreters drew on Greek philosophy and much preferred the theism of the Stoics, with its harmony

between gods, people, and nature, to the view of the Epicureans that these entities are at enmity and that human "progress" is a successful overcoming of restrictions placed upon humanity by malevolent gods. Only much later, in medieval and modern times, has the link been regularly made between Gen. 1:28 and human progress.

The dominion formulations in Gen. 1:26-28 might in isolation be interpreted as allowing unrestricted human use, even abuse, of the earth and its creatures. But in the immediate context this rule is part of a universal divine hierarchy and harmony, people being charged with peaceful coexistence with, and responsibility for, nature. Gen. 1 and Ps. 8 in their present form present a dialectical tension between humanity's supreme dignity over and radical oneness with the rest of creation. The fate of the created world depends on humanity's situation before God, a theme further pursued especially in Gen. 3:17-19 and Rom. 8:19-23.

\***ECCLESIASTES.** 1. **Critical positions.** The present consensus is that the book is the product of an urbane Jewish sage living in Jerusalem between 350 and 250 B.C., writing in Hebrew. He was well acquainted with the cosmopolitan currents of the Hellenistic world, but was essentially located in his own Jewish culture. That his work has received modest editorial alteration is also generally assumed, though the extent of that activity remains debated.

2. **Literary structure.** Analysis of the formal structure of the book remains a vexing problem. Careful attempts to detect some inner unity have been made from both literary and form-critical approaches (see FORM CRITICISM, OT and FORM CRITICISM, OT[S]). Though the issue remains unsettled and the form-critical approach shows signs of bearing fruit, all efforts to show a logical sequence have attained only partial success. Within smaller units logical sequences do obtain, but taken as a whole, the book does not seem susceptible of such formal analysis. There does seem to be, however, an inner unity to the book which can be discerned from the thought or mood of the author.

3. **Problems of interpretation.** One of the major problems is the book's deviation from the main-streams of OT faith and religion. Though there is no single theology of the OT, two features permeate the diverse strands of the biblical outlook: (a) God was active in history, indeed history was the primary medium of the disclosure of his will and purpose, and (b) there was a divinely given law, conformity to which resulted in the blessings of God for the community and also for the individual. In a later period this second affirmation was understood by some to apply not only to a revealed law but also to an understanding of the orders of the world which could be learned by human experience. This approach shifted the locus of the requisite norms, but did not alter the fundamental truth that certain forms of behavior did cause certain results. Koheleth, as the writer of Ecclesiastes is known, forthrightly denies the validity of such explanations.

The writer stands squarely within the wisdom tradition, employing the methodology of empirical

observation, rational analysis, and reflection upon available phenomena. Things must be so to be true. But his observations, analyses, and reflections led him to conclusions diametrically opposed to the official religion. For instance, he categorically denies that the regularity observed in nature should lead one to trust the God/Providence behind that regularity (1:5-9; 11:3-8). Nor does any meaning appear in the historical process (1:4, 10-11; 4:13-16; 6:10-12; 9:13-15); the events of history are ephemeral and soon forgotten. It simply is not true that the good are rewarded and sinners punished (7:15; 8:10-11, 14; 9:1-3). If nature, history, and law are of no avail, what then of wisdom?

Koheleth was a sage. Would not, then, wisdom avail when other legitimations of society proved lacking? Not so! To be sure, wisdom was better than folly (2:13), but in the final analysis, even wisdom is only proximate (2:14-16; 7:23-25; 8:16-17; 9:1-6) and can provide no ultimate meaning to life. Other sources of meaning are suggested: pleasure (2:1-8), companionship (4:9-12), one's own work (5:18-20); yet finally each of these is nothing but vanity and a striving after wind. Some things are better than others; the wise and prudent man chooses the better, but in the long run, it really doesn't make any difference. Everything is transitory, everything adds up to zero. In sum, Koheleth hated life (2:17; 4:2-3; 6:3-6), but he did not counsel suicide. Why?

The one thing to which Koheleth could hold on was life itself. Many passages which are sometimes considered "pious" interpolations seem to indicate that he recognized that though life might not in the long run be much, it was our only possession, so it should be lived fully (2:24-26; 5:18-20; 8:15; 9:4-10; 11:7; 12:1-8). Some of these passages may be editorial additions, and many of them temper the admonition to enjoy life with the reminder that such enjoyment is temporary, but taken together they indicate that Koheleth, lacking a philosophy of life, could still teach a philosophy for living. This philosophy was not resigned hedonism; its basis was theological and existential. God existed, and man existed, and the purpose of religion is to bring these two existences into some meaningful relationship.

The religious teachings of his day were too superficial for so consistent a thinker as Koheleth. Wisdom and righteousness did not necessarily lead to a good end. Caprice and chance (see esp. 2:14; 3:19; 9:2, 3, 11) affected human lives just as much as obedience to the law or attention to the counsels of the wise. God was not present in history; he simply did not care. He had become the omnipotent determinative power, the great amoral Personality. The ideological world of Koheleth had become too small for the larger questions he was forced to ask. He could only conclude that all was enigma and mystery (3:11). Consequently, Koheleth must be seen as a skeptic and even a pessimist. The fact of death overrides all proximate values (2:15-16; 3:19-22; 6:12; 9:2-6, 11-12; 12:7). Wealth, wisdom, pleasure, and progeny are all swept away by the immutable fact of death, which renders all human strivings, acquisitions, and even dreams empty and vacuous.

4. **Estimate of the book.** How then do we interpret the over-all message of Koheleth within the context of the biblical tradition? One solution has been to suggest that he represents a completely aberrant, individualistic point of view. If this is so, we may read him with interest, but need not weary ourselves overmuch with attempting to relate his thinking to the biblical tradition as a whole. Others, both ancient and modern, have proposed that the real value of the book is that it teaches the emptiness of life without a firm faith in God. In this sense, it is almost a "messianic prophecy," calling men to the Redeemer who will lift them beyond the seeming antinomies of existence. Another modern interpretation is that Koheleth represents the bankruptcy of humanistic, secular wisdom, and calls the wisdom movement back to genuine Yahwism, which is its source. Either or both these points of view may possess truth; but, it seems possible to approach the enduring value of the book from a different perspective. All too often "religious" people tend to overlook the painful discrepancies between their faith and the facts of life. Koheleth reminds us all that religious affirmations which cannot be looked at squarely, with honesty and integrity, will not finally sustain us in the vicissitudes of life. He raises with vigor and precision the very questions which must be asked. One need not share his answers, stemming from his lack of an answer, but beliefs which avoid his questions are revealed again and again as shallow, if not false.

Even for those who do not share either Koheleth's views or those he contradicts, the book remains a source of wonder and delight. The hauntingly beautiful phrases, the cynical and ironical deflating of beliefs too easily held, and the heartfelt sorrow for a world gone sour continue to stimulate and irritate all who look beneath the surface. *See also WISDOM IN THE ANCIENT NEAR EAST*[S]; *WISDOM IN THE OT*[S].

\***ECCLESIASTICUS.** Study of the text of Ecclesiasticus has entered a new phase in recent years with added discoveries of Hebrew fragments, with critical editions of the Greek and Latin texts, and with the first publication of a Hebrew concordance.

1. **Hebrew fragments.** Of these, the most important are those recovered at MASADA in 1964, containing portions of 39:27-44:17 from a scroll

written in the early first century B.C., thus about a hundred years after the composition of the book. These fragments give impressive testimony to the general faithfulness and integrity of the grandson's (Greek I) translation and to the basic authenticity of the medieval Hebrew copies recovered earlier in MSS A to E from Cairo. At the same time they help to illustrate the many accidents of transmission and instances of deliberate paraphrase into a later and more colloquial form of Hebrew that have infected all later copies, including the archetypes for all existing translations. (*See MANUSCRIPTS FROM THE JUDEAN DESERT* §§2c, 4.) This is true to an even higher degree of the text of 51:13-20, 30 found in the early first century A.D. Psalter MS from Khirbet Qumran (11QP<sup>a</sup>). This is from the alphabet-acrostic poem with which Ecclesiasticus ends; its first half is preserved in the Qumran MS in a sound and dependable text. By contrast, the Hebrew text of this poem in Cairo MS B is in especially poor condition and is rather generally viewed as having been partially retranslated from the Syriac some time after A.D. 800. Also from Khirbet Qumran is a fragment that furnishes the ends of lines from 6:20-31 in a copy from the late first century B.C. (*see Baillet*). This MS was written, like that from Masada and the Cairo MSS B and E, in a stichometric arrangement with two cola, or half-lines, of Hebrew verse making up each line in the copy. In 1958 and 1960 a few additional leaves of the medieval MSS B and C were identified at Cambridge by J. Schirrmann (*see Di Lella*). While these several sources do little to fill the lacunae in the Hebrew text as previously known, they do permit critical scrutiny of that text and its versions to proceed with greater assurance and clearer perspectives.

2. **Greek and other versions.** Control of the Greek evidence has been amplified and enhanced by Ziegler's critical edition, which supplies both Greek I and its later reworking (Greek II) in a carefully established text with extensive collations. Convergent evidence of early recensional activity on the Greek rendering of the OT books of the Hebrew canon has come to light with the progress of publication of DSS fragments in both languages (*see DEAD SEA SCROLLS*[S] §2; *GREEK VERSIONS, MINOR*[S]). This confirms the dating of the secondary materials of Greek II of Ecclesiasticus, with Kearns, to about 70-60 B.C. The Old Latin text as it appears in the Vulgate has also been critically edited of late; but in this direction there is no doubt much to be gleaned from the broader collations of the *Vetus latina* project at Beuron, still awaiting publication. There is perhaps less to be hoped for from further critical work on the Syriac of this book. An edition combining full running texts of the Hebrew (basically from I. Lévi), the Greek (Ziegler's), the Latin (from the Benedictine Vulgate), and the Syriac (from P. Lagarde) has been published by Vattioni. While this is a useful working instrument, its Hebrew and Greek readings need careful verification before they can be accepted as definitive.

3. **Exegetical and translation problems.** The improved textual evidence for the acrostic poem in 51:13-30 has led Sanders, in publishing 11QP<sup>a</sup>, to

a reappraisal of this composition. He finds it highly erotic in tone; and not for that reason, but because of its appearance in a "Davidic" compilation, he denies that Ben Sirach is its author. In the first of these evaluations a number of writers concur. It is possible, however, to see the poem as much less perfervid in its imagery than this view would have it; and the links with the authentic work of Ben Sirach are quite substantial (see Skehan). The many problems surrounding the text of Ecclesiasticus have led translators to opt for divergent approaches to the book. Thus while RSV, NEB, and the JB reflect the Greek of the grandson's translation, with the added material from Greek II in the footnotes, the NAB and the Italian translation by Duesberg and Fransen work out from the Hebrew wherever possible and use the versional evidence primarily as an aid to reconstructing or supplementing that basic text.

**EDEN** ʿdān [עֲדָן]. Three separate Aramean entities appear under this name in the OT.

1. In Ezek. 27:23, Eden, one of the trading partners of Tyre, is generally recognized to represent Bit-adini of Neo-Assyrian records. Formed ca. 1000 B.C. by an Aramean tribe, but retaining the use of Hittite hieroglyphs, the state of Bit-adini was located on both sides of the great bend of the Euphrates and controlled its crossings. Its capital was Til-Barsib (Tell Aḥmar); for its extent and the major towns, see HITTITES[S] and the map. It was conquered and annexed to Assyria by Shalmaneser III between 857 and 855. A plausible conjecture emends ארץ בני-עֲדָן, "land of the sons of his people," the location of PETHOR (Num. 22:5; RSV "the land of Amaw") to ארץ בני-עֲדָן, "land of the Adini tribe." See BETH-EDEN.

**Bibliography.** DPaR (1920), pp. 25-26; R. Dussaud, *Topographique histoire de la Syrie* (1927), pp. 462-64; F. Thureau-Dangin and M. Dunand, *Til-Barsib*, 2 vols. (1936); W. F. Albright, "The Home of Balaam," *JAOS*, XXXV (1915), 386-90.

2. In Amos 1:5, "the scepter-bearer of Beth-eden" (בֵּית-עֲדָן) in the oracle against Damascus clearly

designates the king of that state. Beth-eden cannot refer here to the remote Euphratean Bit-adini (above), which does not fit into an utterance about Damascus and, moreover, ceased to be a state more than a hundred years before Amos' prophecy. Note that Ezek. 28:13-16; 31:3-18 placed "Eden, the garden of God" in the Lebanon, i.e., on the western border of Damascus (cf. the Wadi Brisa inscription of Nebuchadnezzar II: "the Lebanon, the [Cedar] Mountain, the luxurious forest of Mar-duk"); local medieval traditions regarded the Anti-Lebanon, N of Damascus, as the site of the Garden of Eden.

**Bibliography.** A. Malamet, "Amos 1:5 in the Light of the Til Barsip Inscriptions," *BASOR*, 129 (Feb. 1953), 25-26, a different interpretation from the one proposed above; *ANET* (2nd ed.), p. 307 (Wadi Brisa inscription); G. Le Strange, *Palestine Under the Moslems* (1890), pp. 252-53, 259.

3. In Isa. 37:12 (=II Kings 19:12), "the people of Eden who are in Tel-assar" (see TEL-ASSAR[S]) correspond to Bit-adini, a branch of the Aramean tribe of Bit-Dakkuri in Babylonia. According to the Aramaic ostraca from Assur, ʾllyl, Ululai (the Babylonian name of Shalmaneser V) drove away prisoners from בֵּית עֲדָן (Bit-adini). A letter from the time of Sargon II speaks of Bit-adini in Babylonia. Sennacherib lists Bit-adini among the participants of the Babylonian-Elamite coalition which opposed him at Ḥalule in 691 B.C.

\***EDOM.** The original entry on Edom, while remaining substantially correct, needs modification in the light of recent biblical scholarship and field archaeology. It is not at all sure that the southern boundary of Edom was the scarp of the Neqb esh-Shtar; nor can the W or E boundaries be given with any accuracy in the absence of positive geographical features (such as the Wadi el-Ḥesa to the N). By Neo-Assyrian times, Edom's southern territorial limits must have extended as far as the N shore of the Gulf of Aqabah to include Ezion-geber (Tell el-Kheleifeh).

Literal interpretation of Gen. 36:31-39 would suggest that there were kings in Edom, thereby implying a settled, powerful kingdom between the thirteenth and eleventh centuries B.C. It might be more accurate, however, to regard them as tribal chieftains, particularly since the various kings mentioned in this passage are not referred to in later historical or prophetic writings. Also, apart from a reference to Edom and Seir (which many scholars consider to be synonymous) by Pharaohs Mer-ne-Ptah and Ramses III, there is nothing in New Kingdom period (ca. 1570-1075) records to suggest that Edom had any substantial status as a kingdom, or indeed that it was a kingdom.

Although biblical passages referring to the Exodus (Num. 20:14-21; Deut. 2:29) suggest that by ca. 1250 Edom was a state with which to reckon, it is significant that there is mention neither of a specific king nor of a city in Edom. Furthermore, recent

archaeological research has shown not only that there is no evidence prior to the end of the ninth century B.C. or the beginning of the eighth for capital cities, but also that there is none for any sedentary occupation in the thirteenth-eleventh centuries. Ezion-geber may have been a later Solomonic creation.

It has been suggested that much of Edom's importance at this time was a result of her mining activities in the Wadi el-Arabah and the Negeb, perhaps in association with the Kenites and Kennizites, the traditional smiths with whom the Edomites (Gen. 36:11, 42) had close ties.

Recent excavations have demonstrated that it was the Egyptian pharaohs from Seti I (1302-1290) to Ramses III (1195-1164) who controlled the copper mines in the Negeb, perhaps with Kennizite, Kenite, and Edomite labor. The mines in this area were not exploited in Solomonic times, and this has brought into question the dating and interpretation of period I of EZION-GEBER. The idea of its being a Solomonic smelting center for the mines at Timna' has been rejected by the excavator (see TELL EL-KHELEIFEH[S]). It was, however, a center for finished objects to be transported by sea or overland (I Kings 9:26; 10:11, 22). The prosperity of Edom lay not in her control of the mines but of the caravan routes from India and South Arabia to Egypt. For this reason, Israel and Judah at various times campaigned against Edom and hence the see-saw of Edom's political fortunes.

Recent archaeological researches have necessitated some revision of previously accepted statements. According to II Kings 14:7, King Amaziah of Judah achieved a partial conquest of Edom as far S as Sela. The site of Sela has been identified as Umm el-Biyara, the rock massif overlooking Petra from the W. Excavations there, however, have proved an occupation in the mid-seventh century, at least one hundred years too late for Amaziah. A more suitable candidate for Sela is a village still bearing that name. See SELA (OF EDMOM)[S].

Another identification frequently made is that of TEMAN with Tawilan, a modern village near Elji on the eastern outskirts of Petra. Excavations have uncovered a large, unfortified, prosperous, agricultural settlement of the Iron Age II period, but nothing to indicate its being the southern capital of Edom. De Vaux concludes that nowhere in the Bible is the word Teman used to designate a town. Rather, according to the etymology of the word, it applied to southern Edom, a sense which was perhaps kept in Ezek. 25:13. In other texts Teman had become a poetic designation for all of Edom. It is useless therefore to seek a specific site with which it may be identified.

Amos 1:12, when compared with 2:2, suggests that Bozrah is a town in Teman (part of the state of Edom), thus balancing Kerioth as a town in Moab.

Excavations NW of present-day Buseira have uncovered a large fortified town, which, in all probability, is to be identified with biblical BOZRAH. The absence of tangible evidence here for a settled kingdom in the mid-thirteenth century B.C. is worthy of note. The ancient site was a highly fortified city, with a casemate type city wall, en-

compassing an area of ca. nineteen acres (see BOZRAH IN EDMOM[S]). Typical Iron Age II houses of the eighth and seventh centuries B.C. surrounded the acropolis or citadel. Buildings on the acropolis had been destroyed by fire and completely sacked, likely during the campaigns of Nebuchadrezzar. There is evidence of later Persian occupation and use of the site in Roman times. The archaeology of Edom accords much more happily with the later books of the Bible, reinforced by the Assyrian Annals, than it does with the earlier biblical books.

\***EGLON (CITY).** 1. Tell 'Aitûn? With the location of DEBIR at Khirbet Rabud in the hill country, Noth's suggestion to place Eglon at Tell 'Aitûn (Tel 'Eton), WSW of Lachish, becomes a serious possibility. This would give a more logical geographic sequence for Josh. 10:34-36, since Tell 'Aitûn is on the natural route from Lachish to Hebron. Tell 'Aitûn had Late Bronze as well as Iron Age occupation. Elliger was unaware of this when he proposed to identify Eglon with the slightly smaller Tell Beit Mirsim (Tel Mirsham).

A. F. RAINEY

2. Tell el-Hesi? The site was first excavated in 1890 by Petrie, who, on the basis of Arabic town names, identified the site as Lachish (see SITES, ANCIENT[S]). By relating the changing forms of pottery to the stratigraphy of the site, he laid the foundations of modern archaeology. In 1891-92 Bliss removed a third of the acropolis area, exposing eight cities with three subcities. When Tell ed-Duweir became equated with LACHISH, Hesi went nameless until W. F. Albright suggested that it was Eglon.

Since 1970 an interdisciplinary team has been investigating the thirty-seven-acre tell with its seven-acre acropolis. The four seasons (1970, '71, '73, '75) have concentrated on the acropolis, on a wall system at the base of the acropolis, and on a survey and probing of the larger tell.

On the acropolis five distinct phases have been identified. The first three are: recent military trenching activities from Turkish, Egyptian, and Israeli times; a phase of Moslem burials of which over four hundred complete or nearly complete burials have been removed for study; and an earlier Arab phase of poor remains, almost totally decimated by the burials. Phase 4 is Hellenistic, with three subphases. The two earlier subphases

each had a substantial building, one of stone and one of mud-brick, and the earliest also had a fine associated drain and cistern. Phase 5, the Persian period, had four subphases, which promise to make an important contribution to this little-known period. The later three subphases are built around similar mud-brick wall lines and represent an early agricultural use period, a rebuilding period, and a late period of pit digging. The earliest Persian period is a major building phase when those at Hesi dug down through and removed earlier materials to found their own buildings on a strange pier system which Petrie called a "long range of chambers." This activity may be related to the Persian fortunes in Egypt.

The wall system at the southern base of the acropolis involves a double rebuilding of an earlier wall, most likely from the Persian period. The earliest wall had bonded to its interior face a series of piers on top of which was a mud-brick capping, forming a platform for additional living area or erosion control. The final rebuilt wall was forty feet wide, creating a formidable defensive system. Earlier walls have been identified but not excavated.

The survey and probes have indicated a gap in occupation in the Middle Bronze period (see *ARCHAEOLOGY* §F). The Early Bronze period is well represented by at least three phases in the lower city. After abandonment toward the end of the EB period, Hesi was refounded in the Late Bronze period on the acropolis, where it continued until Hellenistic times. This pattern is similar to that of other sites in southern Palestine where large EB populations also disappeared. Whether this was due to historical or environmental factors is a question which can only be answered by further investigation.

Little epigraphic material has been found and the identification of the site is still uncertain. Wright suggested that Hesi formed part of a defensive ring around Lachish, and Hesi does have many things in common with Tell ed-Duweir. However, especially in the Persian period, it shows affinities with Tell Jemmeh and Tell el-Far'ah (South), both of which were large grain storage areas. The lack of Philistine sherds raises questions about the control of the city during the period of the united kingdom of Israel.

\***EGYPT, CHRONOLOGY OF.** The chronological scheme of Egyptian dynasties is an ancient device which was worked out by Manetho, an Egyptian priest, in the third century B.C. His thirty-one dynasties, spanning the time from the unification of Egypt (ca. 3000 B.C.) under Menes to its conquest by Alexander the Great (332 B.C.), are used by modern historians as a convenience and are utilized

to form named periods which correspond with eras of flowering and decadence.

**1. Determining dates.** Like other peoples of antiquity, the Egyptians did not have a way of expressing dates in absolute terms but ordinarily dated official documents by the regnal year and the day of the season. The Egyptian year had three seasons, each with four months of thirty days. The 360 days were supplemented by five epagomenal days, which were regarded as birth-days of various deities.

A period of some 1,460 years, known as the Sothic cycle, was sometimes used to date historical references. This period was related to the heliacal rising of the Dog Star, Sirius, the Greek Sothis (Egyp. "Sopdet"). The divergence of one fourth of a day between the civil calendar of 365 days and the astronomical calendar meant that New Year's Day worked its way through the calendar, with an advance of one day every four years, so that in 1,460 years the calendar New Year again coincided with the rising of Sothis at dawn. The occurrences of Sothic dates enable astronomers to calculate absolute dates in terms of our modern calendar, so that we have a few astronomically fixed dates in Egyptian history.

In practical matters, such as agriculture, the Egyptians relied on the regularity of the Nile inundation, which afforded a seasonal calendar and provided the basis for naming the three seasons in agricultural terms.

**2. The sources.** Primary documents are numerous and diverse, but the most explicit and informative among them are lists of kings or of events which distinguished a regnal year in a sort of annal. They contain many errors, discrepancies, and variants, and give the names of a number of kings whose existence is not corroborated by monuments contemporary with them. The earliest of these lists is the Palermo Stone, which dates from the Fifth Dynasty. This monument, in the Palermo Museum, is incomplete, but another fragment of it is preserved in the Cairo Museum. An important hieratic list, the Turin Papyrus, comes from the reign of Ramses II (thirteenth century B.C.). Unfortunately, the papyrus was seriously damaged between the time of its acquisition and its study by Egyptologists. Restored as much as possible by competent papyrologists, the Turin Papyrus remains one of the basic works of Egyptian chronology in the Egyptian language.

Other valuable king lists have been found carved in stone on the walls of temples or tombs. Gardiner regarded as the most important of these the record found in the temple of Seti I at Abydos. Here Seti and his son, Ramses II, are shown venerating seventy-six of their royal predecessors, who are represented by cartouches bearing their names. The Sakkarah king list comes from a Memphite tomb dating to the reign of Ramses II. In the temple of Karnak there is a list from the time of Thutmose III; it names kings not found in other lists, but as the order is incorrect, the usefulness of this record is limited.

The king lists exhibit certain peculiarities as to what was given or what was omitted. None of

these lists gives the names of the Hyksos rulers (Fifteenth-Sixteenth Dynasties); they also omit the "heretic" Akh-en-Aton and his three immediate successors.

The chronicle of Manetho, from a much later time, exists only in excerpted form in still later works, such as Josephus (first century A.D.), Africanus (third century A.D.), Eusebius (fourth century A.D.), and Syncellus (ca. A.D. 800).

Chronicles, or annals, of individual kings, such as those of Thut-mose III in the temple of Karnak, not only provide information of historical interest but also help establish chronology. Any dated document or incidental record of date such as those written on dockets of storehouse jars may prove useful. They can, for instance, substantiate a date late in the reign of a king for whom the highest regnal year is in doubt. An imperfectly written or poorly preserved specimen of a date may be the basis for extended debate among chronologists.

Egyptian chronology receives some assistance from synchronisms, correspondences, or cross references from historical materials from other countries of the ancient world. The Amarna Letters, international treaties or agreements, and other records of diplomatic relations, business transactions, or military engagements supply chronological data which are useful in correlating events in various regions.

Although archaeology has often been the means of recovering dated monuments, archaeological finds aside from written records have not been as useful for the historic period in Egypt as they have been for other areas of the Near East. Due to the abundance of written remains from Egypt, pottery chronology, stratigraphy, and the newer techniques of the physical sciences give way to the more precise dates provided by the ancient documents.

Sothic dates are calculated from the writings of Censorinus, who recorded that a Sothic cycle began in A.D. 139. This would mean that previous cycles began in 1317 B.C. and in 2773 B.C. Hieroglyphic records refer to Sothic dates during the reign of Thut-mose III, and in year 9 of Amen-hotep I. A papyrus document from the Faiyum mentions a Sothic date in year 7 of Senusret III.

**3. Chronological problems.** Discrepancies, omissions, and other shortcomings in the king lists and other remains result in many difficulties for the chronologist. As one would expect, the data for the most stable periods are the most numerous, complete, and reliable, but for even the Eighteenth Dynasty there remain some widely argued issues (e.g., a possible co-regency between Amen-hotep III and Akh-en-Aton).

Times of instability or disintegration, commonly called "intermediate" periods, are obscure, records are confused, and documentation is inadequate. In spite of these problems, they have been the subject of intensive investigation. The Second Intermediate Period, comprising the Thirteenth-Sixteenth Dynasties, has been thoroughly studied by von Beckerath. More recently attention has been devoted to what is now called the Third Intermediate Period, the Twenty-first through Twenty-

fifth Dynasties. Among those who have concerned themselves with this research have been Kitchen and Wente (particularly the Twenty-first Dynasty). Also significant is H. E. Winlock's *The Rise and Fall of the Middle Kingdom at Thebes*, which covers part of the First Intermediate Period and the entire Second Intermediate Period.

Generally, the more distant the time, the more imprecise and inaccurate are the dates. Dates after 690 B.C. and certain Middle Kingdom dates based on Sothic references (see §1 above) may be accurate to within one year. Before about 2200 B.C. the margin of error is roughly  $\pm$  fifty years and the date for the beginning of the dynastic period (First Dynasty) still shows wide variation among historians.

**4. Egyptian chronology and Bible history.** Egyptian kings characteristically bore five titles and five names, of which the last two were most commonly used in official records. It is unfortunate for historians that biblical authors seldom referred to the Egyptian ruler by name, but simply spoke of him as "the king of Egypt" or as "Pharaoh." (The term pharaoh, meaning "Great House," was originally applied to the palace and later was transferred to the ruler, much as Sublime Porte in Turkey.) The few exceptions to this general rule occur in the later years of Israel's existence, during the divided kingdom.

The first Egyptian king mentioned by name in the Bible is SHISHAK (Sheshonk I) of the Twenty-second or Libyan Dynasty, who invaded Judah in the fifth year of Rehoboam (I Kings 14:25). This event can be dated to 926 B.C.

Another reference is to "Tirhakah king of Ethiopia" (II Kings 19:9; Isa. 37:9), who must be Taharka of the Twenty-fifth (Kushite or Ethiopian) Dynasty, although there seems to be problems of synchronism here.

A third Egyptian king named in the Bible is Neco of the Twenty-sixth (Saite) Dynasty, who came to help the Assyrians fight the Babylonians. King Josiah of Judah went out to oppose the Egyptian but was killed at Megiddo (cf. II Kings 23:29 ff.; II Chr. 35:20-24). Supported by documents from Mesopotamia, the date of this event can be fixed at 609 B.C.

The Egyptian king who was father-in-law to Solomon and who captured Gezer and presented it as dowry to his daughter (I Kings 9:16) cannot be identified with certainty, but must have been a king of the Twenty-first Dynasty.

The problem of the kings of the Oppression and the Exodus is far too vexing and complicated a matter for discussion here. There is great latitude in the dating of the Israelite exodus from Egypt, but the event must have fallen in the Eighteenth or Nineteenth Dynasty. See EXODUS, BOOK OF §2; EXODUS, THE[S].

The ruler of Egypt at the time of Abram's descent into that land (Gen. 12:10-20) cannot be identified either, but this is usually assigned to the time of the Middle Kingdom, although not to any specific king.

A reference to Egyptian chronology appears in Num. 13:22, "Hebron was built seven years before Zoan in Egypt," but this does not lead to a

definite date, as the time of the founding of Zoan is not known.

Israel's close relationship with Egypt covered a number of centuries and led eventually to a sense of dependence upon Egypt during the later years of the Jewish monarchy. However, the chronological notices are few, so there is comparatively little Egyptian support for a definitive biblical chronology.

A. F. RAINEY

\*EL. One of several words for "God" found in biblical Hebrew (see GOD, NAMES OF §CI). The word is common to all the Semitic languages except Ethiopic, yet, despite numerous attempts, no satisfactory etymology has been suggested. It is probably a primitive noun like 'im, "mother" or šim, "name." In addition to its general appellative meaning "God," El is also used as the proper name for a specific deity.

1. **Outside the Bible.** This dual usage is not a late development. It is already attested in our earliest Semitic sources, the Old Akkadian personal names from Pre-Sargonic cuneiform texts (before 2350 B.C.). The appellative usage is common in these names, but they also contain numerous examples of the undeclined stem *il-* in constructions where the form can be explained syntactically only as a divine name. A similar usage probably continues in the later Sargonic (2350-2150 B.C.) and Amorite names (the majority from the eighteenth century B.C.), but the evidence for El as a proper name is more ambiguous here than in the earlier period. El also occurs as a divine name in Old South Arabic, but it is the Ugaritic texts (see UGARIT §4; UGARIT[S] §4) which provide the most reliable evidence for this usage. While the appellative use is attested, it is comparatively rare. The normal use at Ugarit is as the proper name.

a. **Old Akkadian El.** The evidence does not permit one to say much about the character of the Old Akkadian El. He was a high but gracious god, interested in man's welfare and particularly active in the giving of children. Whether he was the head of the pantheon in the Pre-Sargonic period is uncertain; he was not in the Sargonic period.

b. **Ugaritic El.** Any attempted characterization of El based on the Amorite or South Arabic evidence would be just as inadequate as the preceding characterization of the Old Akkadian El. Only the Ugaritic sources permit a relatively full portrait of the deity. Nevertheless, the continuity of the name and of the epithets attributed to him suggest a close resemblance between the Ugaritic El and the El or El of these other language groups. There can be even less doubt that the picture of El given in the Ugaritic texts corresponds in most essentials to the conception of that deity throughout the Canaanite cultural sphere, even if the linguistic classification of Ugaritic remains unsettled.

i. *As benign.* The Ugaritic evidence agrees with the Old Akkadian material in presenting El as basically favorable toward humanity. Two of his most common epithets stress this benevolent aspect of his character: *lḥn il dpid*, "the Kind One, El the Compassionate One." And like the Old Akkadian El, Ugaritic El is active in human childbirth. He is called *ab adm*, "father of mankind," and *bny bnwt*, "creator of all creatures," and both Keret and Daniel (see UGARIT §4) finally acquire heirs only through El's intervention.

ii. *As supreme.* The Ugaritic pantheon lists, as well as the literary compositions, make El the head of the pantheon. A certain *ilīb* precedes him in the pantheon lists, but this obscure deity, perhaps the divine (dead) ancestor, is not a major god of the cult. Some of the mythic texts give more

prominence to BAAL than to El, but even in them Baal clearly reigns by the consent of El as Sanchuniathon, the ancient Phoenician religious historian, also states. When the divine assembly (see COUNCIL, HEAVENLY[S]), presided over by El, surrenders Baal to Prince Sea, Baal is unable to contest the decision, and Baal's later desire for a palace cannot be fulfilled without first receiving the permission of El. Moreover, even Baal's enemies, though they may at times challenge it, recognize El's authority. The mere threat of El's intervention is enough to force Mot (see MOT[S]) into seeking a reconciliation with Baal.

iii. *As warrior.* Mot's reaction is understandable. El had literally hacked his way to the head of the pantheon in the bloody cosmogonic battles recorded in Sanchuniathon and in Hittite texts contemporary with Ugarit. If no longer dominant, El's martial virtues were still to be respected.

iv. *As patriarch.* El's continuing role is as patriarch, however, not as warrior. The gods may be referred to en masse as the family or assembly of El's sons (*dr bn il* or *mphrt bn il*). El is called *ab bn il*, "father of the gods," and his chief consort, ASHERAH is designated *qnyt ilm*, "creatress of the gods." As the progenitor of such a large clan, El is portrayed as quite ancient, yet still animated by the prodigious sexual appetite that created the divine assembly. He is *mlk 'lm*, "eternal king," *ab šnm*, "father of years," and possessed of a gray beard, but he also plays the lead in the sacred marriage text (Shahar and Shalim) where he makes love to two thoroughly aroused goddesses. Moreover, when Asherah comes to lobby for Baal's palace, El offers her food or sex, and his excitement over her arrival indicates clearly El's preference. Another text speaks of Asherah's interest in Baal, but such dalliance on her part, far from proving El's alleged impotence, points rather to Asherah's own strong sexuality and may suggest El had neglected her for younger goddesses.

Nevertheless, despite his lustiness and an occasional drunken spree, El's wisdom befits his age. He is the patriarch whose wise decree brings a life of good fortune. Though a number of texts refer to him as king, El's kingship is most often sketched with features resembling an OT patriarch or judge. He normally lives in a tent, not a palace, and his rule takes the form of judicial decrees to be executed by other members of the divine council. It is a rather primitive kingship, comparable at best to that of Saul.

v. *El's abode.* The location of El's tent sanctuary remains a subject of dispute. The Ugaritic texts customarily place it at the "springs of the two rivers, midst the sources of the two deeps" (*mbk nhrm qrb apq thmtm*). Presumably this site had a mountain setting, since El is elsewhere located "in the midst of the mountain" (*tk hršn*), "in the midst of Mount Ks" (*gr ks*), and he presides over the divine assembly on Mount Ll (*gr ll*, some scholars emend the text to read *gr il*, "mountain of El," but justification for this emendation is lacking). Nevertheless, the constant mention of the aquatic nature of El's abode compared to the relative scarcity of references to his mountain suggests the place was more impressive as a water

source than as a mountain. A location of the site at Khirbet Afqa in the Lebanon fits the Ugaritic evidence quite well. There, nestled in a majestic mountain setting, the Nahr Ibrahim emerges from a cavern to plunge into a deep and verdant gorge, while a scant 7½ miles away, on the other side of the mountain, a similar spring feeds the lake, Birket el Yammūneh, "The Little Sea."

An alternative location on the N Syrian coast in the Amanus Range is also possible, though it has less to commend it. The absence of unambiguous Ugaritic references to Mount Amanus (*hmn*) as El's mountain is a major problem. The contrast with the frequent references to Baal and his Mount Zaphon (see ZAPHON, MOUNT[S]) cannot be ignored. Moreover, one cannot compensate for this lack by a premature appeal to Hurrian evidence. Hurrian (see HURRIANS §1) is still too little understood to add much clarity to the question. *in hmn* may mean "to (the divine mountain) Haman," but it does not connect El to the mountain. *il pbnhwn hmn* is syntactically obscure, and even if one accepts the highly uncertain translation "El the One of the Mountain Haman," the question remains whether this refers to the Canaanite El or simply gives evidence of syncretism between El and a native Hurrian deity of the Amanus. Finally, the much later biblical texts, shaped as they are by a different tradition and subject to consequent distortion, can only be cited as secondary evidence. Though Ezekiel uses the expression *yrkty špwn* in a vague way to refer to the region N of the Amanus (38:6, 15; 39:2, "the uttermost parts of the north"), this is hardly its primary meaning, and his usage should not be invoked to locate the "mount of assembly" of Isa. 14:13-15 in the Amanus. The Isaiah passage still retains the primary mythological context of the expression, and the polarity with *yrkty bwr*, "the depths of the Pit" (vs. 15), requires that *yrkty špwn* be translated, "the heights of Zaphon" (RSV "the far north"), analogously to *yrkty lbnwn*, "the heights of Lebanon" (II Kings 19:23; Isa. 37:24).

2. *Biblical usage.* The word 'el occurs 238 times in the OT, appearing in both early and late texts. Many of its occurrences are clustered in the Psalms (77) and Job (55), though Genesis (18), Second Isaiah (15), and Deuteronomy (13) also use it frequently. The plural 'ēlm is rare (Exod. 15:11; Pss. 29:1; 89:6 [H 7]), and the feminine 'elat, though well known in the cognate languages, does not appear in the Bible.

a. *As an appellative.* The normal biblical usage of 'el is as a simple appellative. It is a synonym of the more common noun Elohim, "God," and it may take the article (Deut. 7:9; 10:17) or the first singular pronominal suffix (Exod. 15:2; Isa. 44:17), just as Elohim does. The latter construction is used to stress the personal attachment between an individual or group and their god, but when used as a vocative, even the form without suffix often carries the same connotation (Pss. 16:1; 17:6, etc.).

As an appellative 'el may either refer to God or to one of the pagan gods. The idolater says "my god" to the idol he has made (Isa. 44:17). Note

also the expressions "other god" (אל אחר, Exod. 34:14); "strange god" (אל זר, Ps. 44:20 [H 21]); "foreign god" (אל נכר, Deut. 32:12; Ps. 81:9 [H 10]), and "a no god" (לֹא־אל, Deut. 32:21). The plural is used of the pagan gods in a question originally at home in polytheism, "Who is like thee . . . among the gods?" (Exod. 15:11), and similar statements of Yahweh's incomparability using the singular 'el are numerous (Deut. 3:24; II Sam. 22:32; Mic. 7:18). The term also appears in passages which stress the radical difference between God and man (Num. 23:19; Isa. 31:3).

Whether 'el appears in the idiom לֹא־אֵל, "in the power of" (Gen. 31:29; Deut. 28:32) remains uncertain. Despite its clear meaning, the precise semantic analysis of this idiom is obscure, and אֵל in this expression may derive from a completely different word.

**b. As a proper name.** In addition to the appellative usage, El occasionally appears in the Bible as the equivalent of a proper name. Apart from the divine names constructed with El in the patriarchal narratives (see GOD, NAMES OF §C2), the clearest example is the altar name El-Elohe-Israel, "El is the God of Israel" (Gen. 33:20), but there may be other occurrences which reflect a conscious identification of El and Yahweh. Josh. 22:22's solemn heaping up of divine elements should perhaps be read as a creedal affirmation: "Yahweh is El of the Gods! Yahweh is El of the Gods! He knows, and let Israel itself know." A similar interpretation has been suggested for Ps. 95:3: "For Yahweh is the Great El, the Great King over all the gods." The use of אֵל in the Balaam oracles, the Psalms, and Job in parallel with other designations such as Elyon also suggests a proper name rather than an appellative.

**c. Yahweh and El.** Though this use of El undoubtedly stems from a Canaanite background, Yahweh and El have been thoroughly merged. When used as a proper name, El never designates a deity clearly distinct from Yahweh. Even in the relatively few passages which show a strong influence of Canaanite mythology the El=Yahweh equation seems to be assumed.

In Ezek. 28:2 the ruler of Tyre exalts himself as though he were El, and both his vaunted wisdom and the characterization of his abode as "the seat of the gods, in the heart of the seas," recall features of the El mythology. Ezekiel may have been aware of this background, but if so, he obscures it by interchanging El and Elohim, thereby reducing El to a simple appellative, "yet you are but a man, and no god."

Isa. 14:13 mentions the "stars of El." From the context these are clearly the highest stars. Like the parallel Akkadian expression "the heavens of Anu" (see ASSYRIA AND BABYLONIA §G), this idiom is dependent on El's status as head of the pantheon. The etymology of El has no bearing on the meaning, and the same must be said for the related expressions "cedars of El" (=tallest cedars, Ps. 80:10 [H 11]) and "mountains of El" (=highest mountains, Ps. 36:6 [H 7]). These last two expressions are simply inherited phrases, coined in the world of Canaanite mythology, but carried over into biblical usage with little thought to their

origin. The "stars of El" still occurs in a strongly mythological passage, but the mythology is mixed, and there is little doubt Isaiah identified El and Elyon with Yahweh.

The "assembly of El" (עֵרַת אֵל, Ps. 82:1) also comes from a Canaanite background, as does the expression "sons of El" (בְּנֵי אֱלֹהִים, Pss. 29:1; 89:6 [H 7]). The plural form is to be explained either as a misunderstood form with enclitic -m or as a plural of majesty (see SONS OF GOD). But again, if these expressions betray their Canaanite origin, they are still defused by El's complete identification with Yahweh. Moreover, the biblical tradition so thoroughly strips independent personality from the "sons of El" that one may speak of their demotion to mere servant status; Ps. 82:6-7 even proclaims their impending death.

Yahweh's debt to El's Canaanite past is more extensive than these few overtly mythological expressions indicate, however. Though Yahweh did not maintain El's reputation for sexual prowess, most of the other features of the Canaanite god are passed on to Yahweh, quite often in epithets that still contain the word El. Yahweh's benevolence toward man is expressed in the epithet אֱלֹהֵי רַחֲמִים וְחַנּוּן, "a God merciful and gracious" (Exod. 34:6; Ps. 86:15); אֵל אֱלֹהֵי הַרוּחַת יִבְרֵי-בָשָׂר, "O God, the God of the spirits of all flesh" (Num. 16:22), underlines his role as creator; אֵל גָּדוֹל וְנוֹרָא, "great and terrible God" (Deut. 7:21), stresses Yahweh's majestic standing; אֵל גִּבּוֹר, "mighty God" (Isa. 10:21), designates Yahweh as a mighty warrior. His great age is suggested by the epithets אֵל עוֹלָם, "Everlasting God" (Gen. 21:33), and מֶלֶךְ עוֹלָם וָעֶד, "king for ever and ever" (Ps. 10:16). One should also note Ps. 90:1-4 and Daniel's vision of the "ancient of days" (Dan. 7:9-14). The latter reads like a description of gray-haired El. Finally, Yahweh's wisdom is registered in the epithet אֵל דַּעַת, "a God of knowledge" (I Sam. 2:3).

Some of the other epithets formed with El have a less obvious connection to the Canaanite god. אֵל אֱמוּנָה, "God of faithfulness" (Deut. 32:4; cf. 7:9) and אֵל אֱמֶת, "faithful God" (Ps. 31:5 [H 6]) could derive from El's suggested connections to covenant; אֵל גְּמוּלוֹת, "God of recompense" (Jer. 51:56), אֵל נִקְמוֹת, "God of vengeance" (Ps. 94:1), and אֵל-צְדִיק, "victorious (RSV "righteous") God" (Isa. 45:21), could go back to El the warrior; and הָאֵל הַקְּדוֹשׁ, "Holy God" (Isa. 5:16) might also stem from El. The epithet אֵל חַי, "living God" (Josh. 3:10), however, is more likely derived from a dying and rising god like Baal, and אֵל כְּבוֹד, "God of glory" (Ps. 29:3), is adapted along with the whole psalm from Baal theology. אֵל קַנָּא, "jealous God" (Exod. 20:5), may not go back to a Canaanite origin at all. Yahweh's fierce jealousy which tolerates no rival is unparalleled in the religious literature of the ancient Near East. "Forgiving God" (אֵל נִשְׂא, Ps. 99:8) also seems to be a distinctive Israelite creation.

Moreover, a number of the El names in the patriarchal narratives may not stem from the Canaanite El. El Shaddai may be a distinct Amorite deity, and El Elyon may simply be an Israelite creation. Two distinct gods, El and Elyon, mentioned separately in Sanchuniathon and as a pair

in an eighth-century B.C. Aramaic inscription, have been compounded in an effort to exalt Yahweh by identifying him not only with El, but also with an older god whose very name means "Most High."

The Israelite identification of Yahweh with El took place without the bitter conflict which characterized the confrontation of Yahweh and Baal. Yahweh also absorbed many of Baal's features, but did so through a terrible religious struggle extending over several centuries. The difference in the two cases probably lies in the Israelite perception of the essential identity of El and Yahweh. Though Yahweh does not inherit all the features of the Canaanite El, and while Yahweh's nature has become more complex due to his usurpation of all the divine functions, he may still be perceived as a development of El. Indeed, the very name Yahweh may have originated as a cultic epithet for El (Cross).

\***ELATH; ELOTH.** A village near the modern city of Aqabah, on the N shore of the Gulf of Aqabah (Aelanic Gulf). The early Hebrew tribes encamped there (Deut. 2:8). Uzziah (Azariah) captured Elath and rebuilt it (II Kings 14:22; II Chr. 26:1-2), and later the king of Edom captured it from Judah (II Kings 16:6). In Nabatean and Roman times Elath was known as Ailah; architectural remains of a Christian church have been discovered there. See TELL EL-KHELEIFEH[S]; EZION-GEBER; EZION-GEBER[S]. E. K. VOGEL

\***ELECTION, NT.** "Election" is the equivalent of Gr. ἐκλογή, cf. the adj. ἐκλεκτός, "chosen," from the verb ἐκλέγομαι "choose," "select."

1. **Jesus.** The designation "my elect one," which in the OT Yahweh gives to David (Ps. 89:3) and to his servant (Isa. 42:1), is similarly given to Jesus on the Mount of Transfiguration in Luke 9:35 [ἐκλελεγμένος] and ironically echoed by the "rulers" at his crucifixion: "Let him save himself, if he is the Christ of God, his Chosen One [ἐκλεκτός]" (Luke 23:35). In John 1:34 some authorities read "Elect [ἐκλεκτός] of God" for "Son of God." In I Pet. 2:4, 6 Jesus is identified with the "chosen" [ἐκλεκτός] cornerstone of Isa. 28:16 (LXX). Whether the designation of the Son of Man as "Mine Elect One" in the Similitudes of Enoch (I Enoch 45:3, etc.) influenced the NT usage is very doubtful. As applied to Jesus, the designation is synonymous with the more common "my beloved," spoken of him by the heavenly voice at his baptism and transfiguration (Mark 1:11; 9:7).

2. **The eschatological remnant.** In the eschatological sense, the elect are those chosen to survive the troubles of the end time (cf. Isa. 4:3, "recorded for life"). In Jesus' eschatological discourse the days of trouble are shortened by God "for the sake of the elect, whom he chose" (Mark 13:20, 22, 27; Matt. 24:22, 24, 31). The troublous time gives encouragement to false prophets whose persuasive words, with supporting signs, are calculated (if such a thing were possible) to seduce even the elect; nevertheless, they maintain their loyalty and are gathered by the angels to "stand before the Son of man" (Luke 21:36).

A similar reference is appended to the parable of the importunate widow in Luke 18:7, 8. If even an unjust judge can be badgered into seeing justice done to a widow, much more will God see that speedy justice is done to his elect, "who cry to him day and night."

The proverb in Matt. 22:14, "Many are called, but few are chosen [ἐκλεκτοί]," implies a close connection between election and perseverance. One might compare the mystery adage quoted by Plato, "The wand-bearers are many but the initiates are few" (*Phaedo* 69c), or two Gnosticizing sayings from GTh: "There are many around the opening but no one in the well" (No. 74, ascribed to the Ophite *Heavenly Dialogue* by Celsus, according to Origen, *Against Celsus*, viii.16) and "Many stand outside at the door, but it is only the single ones who enter the bridal chamber" (No. 75). But the saying in Matt. 22:14 is tantamount to that in Mark 13:13; Matt. 10:22; 24:13: "He who endures to the end will be saved" (cf. Luke 21:19).

In Rev. 17:14 the associates of the Lamb in his victorious progress are "called and chosen [ἐκλεκτοί] and faithful"; the three terms are practically synonymous. But if their calling and election are divine acts, their faithfulness is their own responsibility (cf. Rev. 2:10b, "Be faithful unto death, and I will give you the crown of life"). So, in II Pet. 1:10, those who have been called and chosen presumably by God are exhorted to "confirm" their "call and election [ἐκλογή]" in order to ensure full and free admission to the eternal kingdom.

3. **The church.** The Christian community is referred to comprehensively in the NT as "God's elect [ἐκλεκτοί]" (Tit. 1:1); they are destined to "obtain salvation in Christ Jesus with its eternal glory" (II Tim. 2:10). To them is applied the language of election used of Israel in the OT (e.g. Isa. 45:4; cf. Acts 13:17). The church is "a chosen race [γένος ἐκλεκτόν], a royal priesthood, a holy nation, God's own people [λαός εις περιποίησιν]" (I Pet. 2:9; cf. Isa. 43:20, 21; Exod. 19:4-6). To the same effect Tit. 2:14 (echoing Exod. 19:5) says that Jesus "gave himself for us to . . . purify for himself a people of his own [λαός περιούσιος] who are zealous for good deeds" (cf. Eph. 2:10).

The sovereignty of God's election appears in his choosing people of little account by worldly standards to be the recipients of his grace and agents of his service (I Cor. 1:26-30; cf. Jas. 2:5).

There is a distinctive depth in Paul's treatment of the subject. The election of the people of God is bound up with their union with Christ and has in view their conformity to his character. Paul's

teaching is summarized in Eph. 1:4, where the new people of God (comprising Jewish and Gentile believers) have been chosen [ἐκλέγομαι] in Christ before the world's foundation to be "holy and blameless before him." In Rom. 8:29 Paul affirms that God has predestined [προώρισεν] his people "whom he foreknew [προέγνω] . . . to be conformed to the image of his Son."

We may compare the description of Christian readers in I Pet. 1:2 as "chosen and destined [ἐκλεκτοίς . . . κατὰ πρόγνωσιν] by God the Father and sanctified by the Spirit for obedience to Jesus Christ"—the purpose of this divine act being that the chosen people should be holy, like the God who chose them (I Pet. 1:15, 16, quoting the refrain of the OT law of holiness, Lev. 11:44, 45, etc.).

That this purpose is to be fulfilled now, not only at the end time, appears from Paul's ability to discern in the present conduct of his Thessalonian converts the evidence of their election: "We know, brethren beloved by God, that he has chosen [ἐκλογή] you; . . . And you became imitators of us and of the Lord" (I Thess. 1:4-6; cf. II Thess. 2:13). In Col. 3:12 it is because they are "God's chosen ones [ἐκλεκτοί], holy and beloved," that Christians are to cultivate qualities worthy of him: "compassion, kindness, lowliness, meekness, and patience." If the initiative in the fostering of such qualities rests with divine grace, personal responsibility plays a necessary part: those from whose lives they are absent are not elect but reprobate (I Cor. 6:9, 10; II Cor. 13:5).

The minority of Israelites who, in Paul's day, shared his faith in Jesus constituted "a remnant, chosen by grace"—"the elect" [ἐκλογή] who by faith attained the righteousness before God which the others vainly sought (Rom. 11:5-7). The existence of this "remnant" guaranteed the eventual restoration of the whole community. The election of some means the salvation of others, not their perdition. For Paul, the status of the church of the new age as God's elect people does not abrogate the election of Israel. Even in their refusal to acknowledge Jesus as the Christ, they remain "as regards election [ἐκλογή] . . . beloved for the sake of their forefathers. For the gifts and the call of God are irrevocable" (Rom. 11:28-29). That this is not the logical conclusion of Paul's argument in Rom. 9-11 is conceded by him when he calls it a "mystery," a new revelation of God's hidden purpose (Rom. 11:25).

**4. The apostles.** The Twelve are said to have been chosen by Jesus from the wider number of his disciples (Luke 6:13). In John 6:70 Jesus himself claims to have chosen them, but later Judas' treachery disqualifies him from the "chosen" band (John 13:18). The deeper significance of Jesus' choice of them is unfolded in his upper room discourse: "You did not choose me, but I chose you. . . . I chose you out of the world" (John 15:16, 19).

After the Resurrection, those whom Jesus had already "chosen" (Acts 1:2) selected two suitable men to replace Judas and prayed the risen Lord to show by means of the lot which of the two he had "chosen" to fill the vacancy. "The lot fell on

Matthias; and he was enrolled with the eleven apostles" (Acts 1:23-26).

Later in Acts, Paul is described by the risen Lord as "a chosen instrument [σκεῦος ἐκλογῆς] of mine to carry my name before the Gentiles and kings and the sons of Israel" (9:15); compare Paul's own claim that God had set him apart (ἀφορίσας) before his birth to proclaim his Son "among the Gentiles" (Gal. 1:15-16; cf. Rom. 1:1).

At the Council of Jerusalem, Peter reminds the apostles and elders how God "made choice [ἔξελέξατο]" among them that by his mouth "the Gentiles should hear the word of the gospel and believe" (Acts 15:7).

**5. Special instances.** Rufus is called "eminent [ἐκλεκτός, KJV "chosen"] in the Lord" (Rom. 16:13). If the word had the sense which applies to all Christians, there would be no point in using it here of one individual; perhaps the adjective "choice" would be appropriate.

The "elect lady" [ἐκλεκτὴ κυρία] of II John 1 is a local congregation, her "children" being its members. The "children" of her "elect sister" (vs. 13) are the members of the church in the place where the writer was staying.

\***ELOHIST.** The anonymous author or compiler of one of the four principal narrative sources of the PENTATEUCH. The term is derived from a Hebrew word for God, Elohim (אֱלֹהִים), the use of which is characteristic of the source, especially prior to the revelation of the name Yahweh in Exod. 3:14-15. Both source and compiler are designated by the siglum E. See SOURCE CRITICISM, OT[S]; DOCUMENTS.

**1. Independent character.** In the early years of Pentateuchal criticism E was not separated from the Priestly source (P) because both used Elohim to refer to God prior to the time of Moses (see PRIESTLY WRITERS[S]). When the P material had been isolated on other grounds, E stood alone as an independent source in the classical documentary hypothesis. See BIBLICAL CRITICISM; BIBLICAL CRITICISM, HISTORY OF.

Some scholars have questioned the independence of E within the old Pentateuchal tradition (J and E). (See YAHWIST[S].) It has been suggested that E represents a new edition of J, or consists of parallel, independent traditions which have been interpolated into J, or is a redaction of J based on variants of J materials which emerged over the years (Volz; Rudolph; Mowinckel). Others suggest

that in the epic tradition we have to do, not with the interweaving of literary strands, but with the preliterary growth of diverse traditions (Engnell). Still others do not deny E's independence, but consider it to be so fragmentary that little can be learned concerning its character (Noth).

Most scholars, however, view E as an independent source which is sufficiently intact to merit full characterization. The primary evidence is as follows:

**a. Doublets.** The same narrative materials in different versions occur throughout the non-Priestly portions of the Pentateuch; e.g., the expulsion of Hagar (Gen. 16; 21); Sarah's being placed in jeopardy (Gen. 12; 20); the introduction of the name Yahweh (Gen. 4:26; Exod. 3:13-15).

To postulate a new edition of J is not satisfactory, for that leaves unexplained why the older versions, often with highly divergent elements, were retained along with the new ones. Nor is the supplementary hypothesis likely, for this assumes the addition of new materials rather than the same materials in a new version. Moreover, to understand E as an independent development of J traditions fails to consider seriously enough either the extent of the differences between J and E or the likely priority of much of the E material.

**b. Compositeness.** Many texts are composite. It needs to be considered in each instance whether this is due to a preliterary or a literary convergence. Firm decisions for the latter can be made only if there is evidence of unity (at the level of language and point of view) in the larger context of the tradition to which parts of a composite text may be related. The evidence suggests that literary convergence is common (see §§1c, 7 below).

Sufficient explanation for two literary strata is provided by the division between North and South. A form of the tradition would have continued in northern circles both before and after the division of the kingdom. Given the dynamics of the relationship between the kingdoms, J, with its special southern interests, would hardly have been acceptable to northerners (see §§2, 4 below).

**c. Unity.** It should not be assumed that the E materials, when isolated from their present contexts, form a fully unified narrative. This has led to a hypercritical dissection of the materials. The JE redactor appears to have used his sources in such a way that neither J nor E is complete (see §5 below).

With this precaution in mind, it is possible to say that evidences exist of unity among the E materials. Beginning with the doublets, other traditions can then be isolated that bear the same or similar characteristics. Peculiarities of language and perspective begin to emerge.

Distinctive vocabulary items include, besides Elohim, the use of Horeb (instead of Sinai), Amorites (instead of Canaanites), and Jethro (instead of Hobab). Stylistically, careful attention is given to linking the various accounts to earlier or later narratives, as with Joseph's bones (Gen. 50: 25; Exod. 13:19; Josh. 24:32), or in the Jacob story (Gen. 28:20-22; 31:13; 35:1-3). E has a fondness for dialogue and detail (Gen. 20; 40-42),

and anticipates D with a merging of narrative and paranesis (Exod. 20:18-20; Gen. 45:5-15).

Unity is especially evident in recurring themes (e.g., the fear of God; prophecy) and a distinct theological perspective (see §7 below).

**2. Tradition history.** Much of the material within the major sources did not originate with the compilers who gave them their decisive form. The compilers were working with traditions which had been passed down for generations. It was primarily at cultic centers during the period of the judges that these traditions began to be shaped in such a way as to bring into being the basic form and content of the later Pentateuch. Early Israelite confessions of faith (e.g., Deut. 26:5-9) provided the pattern: patriarchs; Egyptian sojourn; Exodus and wilderness wanderings; occupation of the land. See CREDO, ANCIENT ISRAELITE[S].

The narrative which emerged is called G (*Grundlage*). Originating ca. 1100 B.C. in oral form, it was decisively shaped by leaders within the boundaries of the later northern kingdom, and thus was fundamentally a northern product. See PENTATEUCH §A2.

Because J and E have essentially the same structure, it has been suggested that both used G as the basis for their work. It is probable, however, that E, being northern (see §4 below), would have had the greatest continuity with G. With J, more changes would have been introduced in order to conform the traditions more closely to southern perspectives. This would help explain why E commonly represents an earlier stage in the history of tradition than J.

Other sources utilized by E are occasionally identifiable: old poetic pieces (Exod. 15:21; Num. 21:14-15, 17-18, 27-30; 23:7-10, 18-24), the Decalogue and Book of the Covenant (Exod. 20-23), and perhaps the Song and Blessing of Moses (Deut. 32-33).

**3. Date.** It has been suggested that E completed his work in the wake of the secession of the North under Jeroboam. The northern kingdom would have needed its own edition of the epic tradition to rival J in the South, just as it needed a new cultic center. However, G would have constituted just such an edition. The North, given its conservative tendencies, would have held tenaciously to the *traditional* shape in the face of "modernizing" trends in the South. A later date for E must be envisioned.

The classical hypothesis proposed an eighth-century dating, while recent scholarship has suggested the ninth century. The latter seems more probable.

The understanding of prophecy in E (the Mosaic model) is more mature than the earlier charismatic movement, but is not as developed as that of classical prophetism. The problem of idolatry assumes a shape that implies the cult established by Jeroboam (Exod. 32; I Kings 12), but it has not reached a stage where the end of Israel is clearly in view. The strong affirmation of charismatic and democratic leadership suggests that the principle of such leadership was endangered (Exod. 18; Num. 11-12); this may imply a struggle against dynastic forms of kingship and institutionalized prophetism (I Kings 22). Politically and

militarily, there is no indication of internal or external threats to security (Num. 23:21).

**4. Provenance and scope.** The delineation of E's provenance must proceed chiefly from a determination of those traditions with which E has the greatest affinity. Matters which reflect regional interests in more specific ways may supplement such a comparative study of traditions. The evidence suggests an origin in the North, perhaps among prophetic circles.

**a. Joshua.** It has long been common to trace the Pentateuchal sources into Joshua. Recent scholarship has moved away from such a course, setting the Former Prophets (Joshua, Judges, I and II Samuel, I and II Kings) within the DEUTERONOMIC HISTORY (Noth). Yet the sources of the Deuteronomist remain unclear, and new attempts to identify the Pentateuchal sources among them have emerged (Mowinckel).

It is probable that G contained traditions regarding the occupation of the land. Given the relationship between G and E (see §2 above), the latter may also have included such a narrative (embedded in Josh. 1-12; 24). This would account for the connections between Num. 25:1-5 and Josh. 2:1, and provide for greater continuity with the land promise (Gen. 15:13-16) and the settlement of some of the tribes in Transjordan (Num. 32). Yet, except for ch. 24, literary contacts between E and Joshua are relatively infrequent.

Thus, while we can speak of the probability of Pentateuchal sources among those used by the Deuteronomist in Joshua, successive redactions have made a literary solution highly problematic. See JOSHUA, BOOK OF[S].

From a broader traditio-historical perspective, however, there are significant affinities between E and these portions of Joshua. The traditions are in large part of Benjaminite origin and almost always related to the northern sanctuaries of Gilgal (Amos 5:5; Hos. 12:11) or Shechem. The Ephraimite Joshua has functions parallel to those of E's Mosaic model (Josh. 8:30-35; 10; 24). (See §7 below.) Moreover, the "all Israel" orientation, the concern for total conquest conceived within a concern to avoid the dangers of apostasy, the emphasis upon obedience, all presented in a hortatory fashion, connect these chapters with the E tradition.

**b. Judges-Kings.** The Pentateuchal sources are almost certainly not to be traced into Judges, Samuel, and Kings. There are, however, traditio-historical affinities between E and parts of Judges (6:7-10; 8:22-23; 9:7-15), the antimonarchic source in I Samuel (chs. 7; 8; 10:17-27; 12; 15; cf. 1:1-4:1a\*; 13:7-15; 16:1-13; 28), and the Elijah-Elisha narratives (I Kings 17 ff.). (The symbol \* indicates that the assignment to a source is problematic in whole or part.) Emphases in these chapters suggest that they originally emanated from northern circles: charismatic/prophetic leadership with antimonarchic tendencies (cf. Samuel); obedience to God in the face of dangers from Canaanite religion; idealization of persons and events; and the general congruence with tribal league emphases. See JUDGES, BOOK OF[S]; SAMUEL, I AND II[S]; KINGS, I AND II[S].

**c. Hosea and Deuteronomy.** While it has been

common to assert Hosea's literary dependence upon E, nothing more can be claimed than commitment to the same traditions. This is most evident in the prophetic conception of the Mosaic office (12:13 [H 14]), emphasis upon covenantal obedience, and an antimonarchic stance.

While much work remains to be done on the antecedents of the Deuteronomistic tradition, numerous ties with E suggest a common northern provenance: the Sinaitic covenant; the Mosaic office; key theological emphases; the antimonarchic perspective; and a religious interpretation of history that merges narrative and parenesis.

**d. Regional interests.** Aspects of E which reflect northern ties are most evident in narratives where J and E are parallel. Thus, Reuben is the leader of Joseph's brothers, not Judah (Gen. 37). In the Abraham cycle attention is focused on Beer-sheba (cf. Amos 5:5; 8:14), not on Hebron. Northern cultic centers and burial places such as Bethel and Shechem predominate, as do the roles given Joseph and Joshua.

**5. Subsequent redaction.** The fall of the North in 721 B.C. inevitably had its effect upon northern traditions. Northerners fleeing S would have brought traditions such as E with them. Under HEZEKIAH attempts at a religious and political reunification of Israel and Judah surfaced (II Chr. 30), perhaps accompanied by a merger of literary traditions. The JE redaction was the result. See REDACTION CRITICISM, OT[S].

It has usually been assumed, chiefly from the placement and volume of J material, that the JE redactor used J as the basic source, adding E largely for enrichment. Yet caution is in order here, for the original scope of the E tradition is unknown. Moreover, because the redactor has often interwoven J and E so closely, it is sometimes impossible to determine the source upon which he is primarily dependent.

It is possible that there were redactions of E prior to JE. This is suggested by passages which have a Deuteronomistic cast (e.g., Exod. 13:3-16; 23:20-33; 34:11-16). Though these may belong to the Deuteronomist or even to the JE redactor, the possibility of an earlier redaction needs serious consideration.

**6. Structure and scope.** Structurally, the narrative centers on the covenant at Sinai (Exod. 19-24\*). The preceding narratives are idealized and preparatory, focusing especially on Joseph and Moses. The calf episode is virtually a "fall" story (Exod. 32-34\*), with subsequent narratives sketching Israel's struggles with sin and obedience, issuing finally in paradigmatic covenant renewal (Josh. 24). See COVENANT §3; COVENANT, MOSAIC[S] §5b.

The following delineation of E is tentative in its detail; much work remains to be done.

**a. Preparation.** i. *Abraham*: Gen. 15:1-4\*, 5-6, 13-16; 20:1-17; 21:1\*, 6, 8-34; 22:1-19. ii. *Jacob*: 25:25-27\*, 29-34; 27:1-45\*; 28:11-12, 17-18, 20-22; 29:1, 15-23, 25-28a, 30; 30:1-8\*, 13\*, 17-20a, 22-40\*; 31:2, 4-16, 19-42, 43-55\*; 32:1-2, 13b-21\*; 33:5-11\*, 18\*, 19-20; 35:1-5, 6b-8, 14, 16-20. iii. *Joseph*: 37:3-4\*, 5-11, 13b-20\*, 22-24, 28-36\*; 39:1-6\*; 40:1-23; 41:1-33, 34-56\*; 42:1-12\*, 13-26, 29-37; 45:2-3, 5b-27; 46:1b-5a; 48:1-2, 7-9a, 10b-12, 15-16, 20-22; 50:15-26.

iv. *Egyptian sojourn*: Exod. 1:11-12\*, 15-22; 2:1-10; 3:1, 4b, 6, 9-15, 19-22; 4:10-16\*, 17-18, 20b-23, 27-28, 29-31\*; 5:1-2, 3-5\*, 9-14\*, 22-23\*; 6:1\*; 7:15b-17\*, 20b, 23; 9:22-35\*; 10:12-15\*, 20-23, 27; 11:1-3; 12: 35-36. v. *Exodus and wilderness wanderings*: 13:17-19; 14:5-7\*, 10-12\*, 15-16\*, 19-20\*, 31\*; 15:20-21, 25b-26; 17:3-6, 8-16; 18:1-27.

b. *Covenant*. 19:2b-8, 9-19\*; 20:1-26; 21:1-23-19; 23:20-33\*; 24:1-15a, 18b; 31:18b.

c. *Sin and its consequences*. i. *Golden calf*: 32:1-35; 33:2-3\*, 4-11, 12-23\*; 34:1-5\*, 6-9, 11-31\*. ii. *Wilderness wanderings*: Num. 11:1-3, 11-12, 14-17, 24-30; 12:1-15; 13: 17b-20\*, 22-24\*, 26b-31\*; 14:3-4\*, 8-9\*, 11-25\*, 39-45\*; 20:1b, 14-18, 21; 21:4-9, 11b-20\*, 21-32; 22:2-3a, 8-21\*, 36-41\*; 23:1-26, 27-30\*; 25:1-5\*. iii. *Occupation of the land*: 32:1-42\*; Deut. 31:14-15, 23, 16-22\*; 32:1-44; 33:1-29; 34:5-6, 10-12\*; Josh. 1-12\*; iv. *Covenant renewal*: 24:1-33\*.

7. **Theology**. The theology of E is decidedly northern in its emphases, and has been shaped in decisive ways by the idolatrous situation to which it was addressed.

The most pervasive theological issues, which give striking importance to the human factor, are: (a) God's word and deed are mediated chiefly through charismatic leaders; (b) God's gift of salvation is conditioned by Israel's continued obedience.

a. **God and human agency**. God's activity, while occasionally mediated by heavenly messengers (Gen. 22:11; 32:1; Exod. 23:20), is primarily accomplished through human agency. Human actions are necessary vehicles for divine activity, even if not well-intentioned or so recognized (Gen. 50:20; Exod. 2:10).

Though any Israelite could function as the vehicle of the divine word and deed (Exod. 1:20-21; 19:6), it is primarily the prophetic or charismatic leader who is so considered. Figures such as Abraham and Joseph stand out (Gen. 20:17; 41:38), but Moses is the leader par excellence (Exod. 11:3; Num. 12:3-8; Deut. 34:10-12). Yet E manifests considerable interest in the decentralization of his office (Exod. 18:21-23; 32:29; Num. 11:24-30; cf. Deut. 17-18). This may be a reaction against centralizing tendencies and realities in both North and South.

It is not man, however, who is to be worshiped for such accomplishments (Gen. 50:19); it is God's continuing, though unobtrusive, activity which is to be confessed (45:5-8).

b. **God and human response**. E centers his narrative around FAITH (FEAR) and OBEDIENCE. He begins with Abraham. God's promise stands at the beginning of the account (Gen. 15:5), accompanied by Abraham's response of faith (15:6). This constitutes a paradigm for all that follows. Israel is elected in Abraham, receives the same promise, and is called upon to make the same response.

The climax of E's narrative is the establishment of the covenant at Sinai (Exod. 19-24\*), where a spiritual bond between God and Israel is established (3:12; 19:4-6). Within this relationship the gracious gift of the commandments points the way for a truly human life. While indicating how covenant faithfulness may be expressed, they also

guard against that which would injure Israel's life with God and in the world.

An obedient people receive the benefits of the covenant (Gen. 22:16-18; Exod. 23:23-33\*), but judgment for a disobedient people is inevitable (Exod. 32:9-10, 30-34; 33:5; cf. Gen. 15:14, 16). Thus the promises of God are not unconditional; they must be seen within the framework of the Sinai covenant (Exod. 19:5; 23:21-22; 32:33). The promise cannot be permanently embodied in any particular national or institutional expression. Therefore, while the promise motif is carried throughout the narrative, it is tied to a worshipping community, and only concessively to a land or a nation. See PROMISES TO THE PATRIARCHS[S].

Given E's perception of a breakdown in this relationship in his day, he has an overriding concern with sin and judgment, with repentance and forgiveness. It is raised in the first major E narrative (Gen. 20) and is pursued in the stories of Jacob and Joseph (35:1-4; 42:21-22; 50:15-17). It reappears in warnings connected with the making of the covenant (Exod. 20:5, 20) and is given special attention in connection with the golden calf apostasy and its aftermath (32:7-10, 14, 30-34; 33:4-6; 34:7-9; Num. 14:11-20; 21:4-9; Josh. 24:19-20).

The fundamental effect of this concern is to show the utter seriousness of disobedience. Accompanying this, however, is a picture of the incredible patience of God (Num. 14:19-22). Through the intercessory prayer of the prophet (Gen. 20:17; Exod. 32; 34; Num. 12; 14), God again and again responds with forgiveness and healing (see GRACE IN THE OT[S]). Even punishment is used as a means to the restoration of relationship (see the response in Exod. 33:4-6). Yet E seems to suggest (e.g., Num. 14:20-23) that there may be a limit to God's patience. See DISCIPLINE, DIVINE[S].

This gives a sense of urgency to E's call for faith and obedience. To this end the patriarchs serve as models of the obedient response, as their faith, like Israel's, is put to the test (Gen. 22:1; 42:15-16; Exod. 15:25; 20:20). Abraham's "fear of God" expresses itself largely in personal relationships (e.g., Gen. 22:12); Jacob's in matters relating to worship (e.g., 35:1-4); and Joseph's in matters relating to administration, including tribal relationships (42:18). This emphasis is continued in Exodus (1:17, 21; 4:31; 14:31; 18:21).

The definition of acceptable worship is of special interest to E. He makes frequent allusion to cultic practice, both to condemn and commend. The calf incident provides a special focus for condemnation, given the similar situation in the North (Exod. 20:4-5, 23; 32; cf. I Kings 12). Other practices are similarly castigated (Exod. 20:24-26; 23:24-33\*; 34:11-16\*). Still other aspects of worship are commended: acts of purification, vows, tithes, sacrifices, covenant ceremonies (Gen. 28:20-22; 35:2-4; Exod. 18:12; 19:10-23\*). This concern accounts for the emphasis upon awe in the presence of God (Gen. 28:17; Exod. 3:6; 20:18), restraint in the use of anthropomorphic language when speaking of God, and emphasis upon dreams, visions, cloud pillars, and heavenly messengers (Gen. 20:3; 46:2; Num. 12:5). The point is not so much that God

is distant; rather, it is that Israel must use greater care in her approach to God—a necessary emphasis in the face of Canaanite influence.

It is this factor which also explains E's unusual interest in the form of God (Num. 12:8; Exod. 24:9-11; 33:17-23\*). This may have been occasioned by the calves erected by Jeroboam and emerging understandings of the possibility of divine representation.

The message to the people of Israel is clear: they are to put away all idolatrous practices and renew their covenant vows. Joshua 24, which perhaps constitutes a conclusion to E's narrative, is not simply a reminder of past ceremony, but a call to renewed commitment, so that Israel might truly experience the gift of God's salvation.

version of the word order (Gen. 18:22). Thus emended, the MT avoids what would have been an anthropomorphic, irreverent, or idolatrous expressions in relation to God. One of these cases is directly related, not to God, but to Moses (Num. 12:12).

**2. Ambiguity of the Masoretic lists.** At first sight these lists appear invaluable for the textual critic. However, closer examination reveals a number of problems. The lists do not always agree in the number of emendations, nor in the order in which they are presented, nor in the actual passages listed, nor in the proposed "original reading" when this is given. Slight differences occur in the titles of the lists. Some MSS carry the title *תיקוני סופרים* or *תיקוני סופרים* or *תיקוני עזרא* (Others carry the heading *כנויי סופרים* (*Kinnuye Sopherim*, "Euphemisms of the Scribes"), and indicate that the text was never emended (*לא שתיקנו אותם*); rather, the scribes were supplying what they considered would have been written had Scripture not expressed itself euphemistically. Such discrepancies and differences in interpretation should warn textual critics that the lists of eighteen "scribal emendations" may not be a simple statement of fact.

**3. Earlier sources for these lists.** Ambiguity and apparent contradiction in the Masoretic lists reflect a difference of opinion already present in the earlier sources. The *Kinnuyim* interpretation is present in the Mek. of R. Ishmael (*ca.* A.D. 90-130) on Exod. 15:7, which lists eleven passages, and in the Sifre on Num. 10:35, which lists eight passages. The *tiqqunim* interpretation is present in Shemoth Rabbah XIII.1 and XXX.15; in Tanh. Yelamedenu §16, and in other rabbinic works dependent on the earlier Midrashim. In these too, there is great variety in the number of passages given.

**4. Genuine scribal emendations?** If it can be established that some of the eighteen passages usually listed are indeed the emended forms of originally blasphemous or disrespectful expressions, then it follows that there really was emendatory initiative on the part of the scribes. But it would be naive to equate this initiative with the official lists of medieval times and with these lists only.

In the case of two of the passages mentioned in both rabbinic and Masoretic lists, I Sam. 3:13 and Job 7:20, a number of factors help to establish that the MT form must have been emended at an early stage in its textual history for theological motives. First, the reading of the LXX coincides with the "original reading" proposed in the lists of scribal emendations. Moreover, a study of the immediate context of each passage reveals: (a) that while the MT does not involve any irreverent or theologically incorrect statement, neither does it conform to normal Hebrew idiom or modes of expression, (b) that the reading of the LXX best suits the context and does give rise to what might be considered as irreverent statements relating to God, and (c) that the emendation of the original text to the MT form required very little surgery.

The case of Zech. 2:8 [H 12] is not as clear-cut as the preceding two. Yet, the fact that the reading of a minor section of the Greek textual witnesses (Quinta, Codex W, and certain citations of Justin) coincides with the "original reading" of Masoretic

#### \*EMENDATIONS OF THE SCRIBES [תיקוני סופרים, *Tiqqune Sopherim*].

**1. The usual explanation.** A list of eighteen passages in the MT which have undergone emendation for theological motives. The more recent and fuller lists may be found in the MASORA to certain MSS, while traces of earlier and less complete lists may be found in rabbinic writings. Apart from certain differences in some of the Masoretic lists, the eighteen emendations are: Gen. 18:22; Num. 11:15; 12:12; I Sam. 3:13; II Sam. 16:12; 20:1; I Kings 12:16; II Chr. 10:16; Jer. 2:11; Ezek. 8:17; Hos. 4:7; Hab. 1:12; Zech. 2:8 [H 12]; Mal. 1:12; Ps. 106:20; Job 7:20; 32:3; Lam. 3:20. The emendation in each case is minimal. It may have been the omission or alteration of one or more consonants (*עליך* emended to *עלי* in Job 7:20; *אלהים* emended to *להם* in I Sam. 3:13; *אמם* emended to *אמם* in Ezek. 8:17). It may have consisted of the inversion of consonants (*אלהיך* emended to *אהליך* in I Kings 12:16; II Chr. 10:16; cf. II Sam. 20:1) or the in-

lists could throw more light on both the nature and the antiquity of scribal emendation.

Since the bulk of the Greek tradition contains the "emended" reading for Zech. 2:8 [H 12], this would carry the phenomenon back into the third and second centuries B.C. It could then be linked with the mentality of the author of Chronicles, and with the tendencies of the Old LXX and Targumim, where there was a conscious effort to eliminate the anthropomorphisms and gross expressions of an earlier mentality. That the phenomenon of scribal emendation was by no means completed at the time of the LXX is shown by the fact that the *Vorlage* for I Sam. 3:13 and Job 7:20, and for a minor section of textual witnesses for Zech. 2:8 [H 12], was still "unemended." These variations in the Greek textual tradition are important, for they help to pinpoint within a definite historical context, and in an objective fashion, the activity of the scribes. They are also independent, to a large extent, of rabbinic traditions.

**5. Transmission of *tiqqūnim* traditions.** To emend the biblical text was a delicate matter. It required great prudence, especially when one takes into consideration the minute rules and regulations to which scribes and copyists were expected to conform (see TEXT, OT §A3a). This would have been particularly true in the first century A.D., in view of the official promulgation of the freshly standardized text (see TEXT, HEBREW, HISTORY OF[S]). It was probably within such a climate that the formula *Kinnuye Sopherim* (see §2 above) was used to interpret the *tiqqūnim* phenomenon. Since scribal emendation could not be spoken of openly in certain circles, it was inevitable that, in the course of time, the procedure would be open to different kinds of contamination. Closer examination of the official lists reveals that many, if not most of them, are not genuine emendations. In most cases (apart from I Sam. 3:13; Zech. 2:8 [H 12]; and Job 7:20) the MT and its context present no serious difficulty. Furthermore, the proposed alternative "original reading" does not have significant textual support from the versions, and it is usually possible to unravel from the Midrashim and rabbinic commentaries ways in which imaginative interpretation created so-called *tiqqūnim*. Given the variety of "emendations" in the official lists, and the complexity of rabbinic sources, it is not possible to know at what stage each false *tiqqūn* came to be. But this infiltration nevertheless began at an early age, since even the earliest lists contain a number of false "emendations."

**6. Value of these lists for textual criticism.** The apparently comprehensive Masoretic lists of eighteen scribal emendations must not be accepted as a simple statement of fact. But neither must they be rejected as wholly untrustworthy. They preserve reminiscences of an emendatory initiative of scribes of an earlier age—an initiative more widespread than the impression given by these lists, and concerning which later traditions were to remain prudently vague. The real value of these *tiqqūnim* traditions lies more in the phenomenon to which they draw attention than in the accuracy of their lists. A parallel phenomenon in the history of LXX substantiates this conclusion. Shemoth Rabbah V.5

contains mention of "eighteen passages which the sages changed for King Ptolemy." Of these passages, which can be easily and objectively checked, only six are in fact genuine emendations of the MT in the LXX. Consequently, recognition of the existence of some genuine emendations within the official lists provides a springboard for investigation into "unofficial emendations" not listed under the heading *Tiqqune Sopherim*, but which surely qualify for this title. For example, the MT of II Sam. 12:9, 14 and of I Kings 9:8 may be considered as emended in order to preserve respect for God. The MT of II Sam. 5:8 may be considered as emended out of respect for David. The MT of I Sam. 2:22 and 14:14 could also be considered as emended in a pejorative sense, in order to lessen the "good" name of less desirable people. Meanwhile, the "unauthentic emendations" remain interesting illustrations of Midrashic interpretation.

**ENCROACHMENT.** In the OT, encroachment is attested in both the secular and the sacred realm. The former is expressed by the term תַּסְבֵּי גְבוּל, literally, "moves a boundary" (RSV "landmark"). Its prohibition is found once in a law code (Deut. 19:14). However, since it contains no penalty, it must be understood as a moral injunction. That it could not be enforced in the courts is confirmed by its inclusion among the curses (Deut. 27:17), i.e., surreptitious crimes generally undetectable by man and hence punishable only by God.

Encroachment is also forbidden in wisdom literature (Prov. 22:28; 23:10; Job 24:2). That Deuteronomy was informed by wisdom teaching and not the reverse is suggested by its ubiquitousness in the legal and sapiential instructions of the ancient Near East, much of which antedate the Deuteronomistic literature.

From the Middle Assyrian Laws it is clear that the apprehended encroacher upon property is subject to severe penalties, including fines, mutilations, beatings, and forced labor (tablet B, §§8-9, 20; cf. *ANET* [2nd ed.], pp. 185-86). However, the boundary stones (*kudurru*) found in Babylonia (beginning with the Kassite period) make it likely that encroachers were rarely apprehended. These stones, engraved with the symbols of the protector gods and inscribed with curses (see LANDMARK Fig. 12), indicate that the property owner was dependent upon the fear of the divine and not of the courts to prevent any tampering with his land. That the gods were thought to punish encroachers is evident from the belief that this crime was a cause of severe illness (e.g., *Shurpu* II, 45-46; cf. III, 53-54). Indeed, in the Hittite Code, the apprehended encroacher not only must indemnify his

victimized neighbor with part of his own land, but must pacify either the storm-god or sun-god with a fixed sacrifice (§§168-69, *ANET*, p. 195). In Egypt, the "Instruction of Amen-em-ope't" implies that the encroacher upon property is subject to divine jurisdiction (ch. 6, *ANET*, p. 422). The Greeks likewise invoke "Zeus the Protector of Boundaries" in cases of encroachment (Plato, *Laws* 842E).

The second realm of encroachment—upon sacred property—finds its most detailed description in the Hittite "Instructions For Temple Officials" (*ANET*, pp. 207-10). This text lists types of encroachment by those most capable of it, the temple staff (I, 46-66; II, 12-58) or the farmers and herdsmen employed on the temple fields (IV, 1 ff.). Encroachment is committed by keeping, eating, using, selling, gifting, delaying, or exchanging the temple's animals, fields, or grain; by expropriating, altering, or wearing the temple's implements or garments; or by changing the time fixed for rites. Women, children, and servants, even of the priests, as well as all foreigners, are considered encroachers if they enter the sacred precincts, whereas important Hittite men are granted access provided they are accompanied by a priestly appointed guard (II, 9-12).

In Israel, encroachment upon sanctums must be distinguished by the criteria of literary genre and historical development. The narratives record the lethal power of the ark. Uzzah's touching the ark (II Sam. 6:6-7) and the Beth-shemeshites' viewing it (I Sam. 6:19), both unpremeditated acts, are punished by God with death. P's earliest traditions on the wilderness period also reflect this belief: the Kohathites will be struck down for accidentally touching covered sanctums (Num. 4:15) or viewing uncovered ones (Num. 4:20). However, P's laws indicate a change by positing inadvertance (*š'gāgd*) as a mitigating factor in all forms of trespass (*ma'al*) upon sanctums (Lev. 5:14-16). Moreover, P further reduces the contagious power of the sanctums. Though it still prohibits nonpriests (and disqualified priests) from entering the shrine, it does not penalize them for making contact with the sacrificial altar which stands in the open court. This concession can be ascertained from the use of the verbs קרב/גש, which are to be rendered not as "approach" but "encroach" (e.g., Exod. 28:43; 30:20; Lev. 21:23; Num. 1:51; 3:10). Thus only one who usurps the priestly monopoly to officiate at the altar is subject to divine sanctions, but not if he only touches the altar, even deliberately. This leads to the corollary deduction that the formula כל-הנגע בל-הקרב . . . must be rendered "whatever (not whoever) touches . . . is sanctified" (cf. Exod. 29:37; 30:29); i.e., only objects that contact the sanctums absorb their holiness, but not persons. The specific reasons for P's reduction of sanctum contagion may lie in P's refusal to grant altar asylum to fugitives from justice (cf. I Kings 1:50-53; 2:28-34), and P therefore devised in its place the institution of city asylum (Num. 35:9-28).

P's notion of encroachment finds its most significant articulation in its formula חזר הקרב יומת חקרב (Num. 1:51; 3:10, 38; 18:7), which should be ren-

dered "the unauthorized encroacher shall be slain." The context of the formula invariably is the elaboration of the guarding duties of the priestly and Levitic cordons in and around the tabernacle. Num. 18 in particular specifies the hierarchy of responsibility in the shared custody of the tabernacle. The priests are responsible for the encroachment of disqualified priests at the altar and within the shrine (Num. 18:1, 7a; cf. 3:10). Both priests and Levites guard the sanctums against possible encroachment by the Levites (Num. 18:3, 5a). When, however, the sanctums are in transit, the Kohathite Levites who carry them by shoulder (Num. 4:15-20; 7:9) must protect them from Israelite encroachment (Num. 4:18-19). Finally, the Levite cordon stationed outside the tabernacle guards against possible incursions by Israelites (Num. 18:3, 22-23). The gradations of responsibility are in accordance with the physical realities—the actual distribution of the sacrificial guards.

The most significant aspect of this formula is its penalty. Whereas God alone punishes for cultic sins (*yāmūth* [*qal*]), in the case of encroachment upon sanctums, death is imposed by man (*yūmath* [*hophal*]). The graded scale of tabernacle responsibility (*above*) clarifies this alleged exception: the wrath of God kindled by the Israelite encroacher does not vent itself on the people but vents itself on the negligent Levite guards. The latter, therefore, are empowered to kill the encroacher; he is their potential murderer, and they slay him in self-defense. Indeed, according to P, it is the Levites' mortal risk in guarding the tabernacle that entitles them to the largesse of the tithes as their reward (Num. 18:21, 31). Such ransoming of Israelites by Levites is not an instance of vicarious atonement, i.e., the innocent suffer for the sake of the wicked. The formula implies the reverse: encroaching Israelites are ransomed only by the guilty Levites, i.e., the negligent Levite guards. Whereas the doctrine of collective responsibility is the cornerstone of P's theology, a concession is made within the sanctuary to limit its destructiveness to the clergy alone. Thus Num. 18 is a fitting appendix to the Korahite rebellion (chs. 16-17). In the wake of the rebellion, God inflicts a plague upon the entire camp (Num. 16:46-50 [H 17:11-15]). The people panic; henceforth, they will have nothing to do with the tabernacle (17:13 [H 28]). Num. 18 is both the remedy and consolation. Thereafter, the sacrificial guards will bear the responsibility for lay encroachment. The doctrine of collective responsibility is compromised for Israel's sake so that it may again worship at the sanctuary without fear.

\***ENOCH, BOOK OF.** Alternately: I ENOCH; ETHIOPIC ENOCH. A collection of pseudepigraphic writings composed in the third to first centuries B.C. under the names of ENOCH, son of Jared, and Noah (see PSEUDONYMOUS WRITING[S]). The collection is extant in its entirety only in an Ethiopic translation of a Greek translation of Aramaic originals. The discovery of fragmentary

Aramaic MSS of Enoch among the DEAD SEA SCROLLS, as well as the renewed discussion of apocalyptic, make the re-evaluation and reinterpretation of these materials both necessary and possible.

1. **Qumran MSS.** The following MSS have been identified and dated.

4Q	chs. 1-5	6-36	72-82	83-90	91-105	106-7

[ ] indicate MS is mutilated at beginning or end of section						

2. **Contents:** *a. Introduction (chs. 1-5).* The presence of these chapters in early Qumran MSS indicates that originally they introduced a shorter writing: either chs. 1-19 or 1-36.

*b. The Book of the Watchers (chs. 6-36).* Chs. 6-11 conflate two traditions about the origin and judgment of sin. The first, a narrative expansion of Gen. 6:1-4, depicts the rebellion of the angel *Semihazah* and his hosts. Their intercourse with women produces a race of half-breed giants, whose devastation of the earth and the human race triggers divine judgment. The pathos evident in the lengthy, angelic plea in behalf of mankind and the world (9:4-11), as well as the lengthy description of the judgment and the *eschaton* which follows it (10:11-11:2), strongly suggest that we have here not an etiology of sin in general, but an apocalyptic allegory which describes the demonic origin of the mighty of the author's own time and announces their impending destruction. A date at least well back into the third century B.C. is required by the evidence of the second-century MSS (4QHen<sup>ab</sup>) in which this tradition has been combined with others and prefaced by the introduction.

The *Semihazah* story has been expanded by a tradition in which the angelic rebellion consists in the revelation of heavenly secrets to mankind. Detailed similarities to Greek traditions about Prometheus are evident. The angelic chief here is Azazel or *Asa'el* (cf. 6:7). He is identified with the AZAZEL of Lev. 16, and motifs from this chapter have informed Enoch 10 (especially vss. 4-8).

Chs. 12-16, Enoch's ascent to heaven and commission, stress that the irregular intercourse between spirit and flesh was bound to result in disaster, viz., the demonic presence on earth, and underscore the certainty of the judgment.

Enoch's journey to the ends of the earth (chs. 17-19) culminates in a vision of the angels' place of punishment. An evident subscription in 19:3 indicates the end of an earlier work. In chs. 20-32, a second journey tradition repeats material in chs. 17-19 and expands it with information of eschatological interest (22; 24:4-27:5). Chs. 33-36 are a compression of the astronomical material in chs. 72-82.

*c. The Book of Parables (chs. 37-71).* This modern title is somewhat deceptive, since Enoch's transmission of revelation in the form of a "parable" is mentioned also in 1:2; 93:1, 3 (all attested in Aram. MSS). The theme of the whole of chs. 37-71 is the coming judgment, which is anticipated and described in a series of heavenly scenes. Interspersed among these are brief references to the revelation of heavenly (astronomical) secrets, descriptions of journeys to the places of punishment for men and angels, and narrative material about Noah and the Flood. Thus, the types of material in chs. 37-71 closely parallel those in chs. 1-36.

Peculiar to the eschatology of this book is the SON OF MAN or "Elect One," a mysterious, angel-like figure (46:1) who champions the cause of the righteous and executes the final judgment. He is introduced in a scene closely related to Dan. 7:9-10, 13 (46:1-3; 47:3) and is "named" in a scene that is dependent on the call of Second Isaiah's Servant (ch. 48; cf. Isa. 49:1-8). His titles are drawn from Dan. 7:13, Isa. 42:1 (cf. Enoch 49:4), and perhaps Isa. 53:11 (cf. Enoch 38:2). The principal judgment scene (Enoch 62-63) has a close parallel in Wisd. Sol. 5, and both are variations of a traditional expansion of Isa. 52-53, in which the exalted one executes judgment on his former persecutors. Enoch identifies this figure with Daniel's "one like a son of man," there the exalted, angelic patron of righteous Israel, and attributes to him the execution of judgment against "the kings and the mighty"—the persecutors of the righteous.

*d. The Book of the Heavenly Luminaries (chs. 72-82).* Enoch's special connection with astronomical instruction is widespread and very old (cf. Jub. 4:17; IQapGen 19:25; Euseb. *Preparatio Evangelica* IX.xvii.8-9). In chs. 72-82, the angel Uriel reveals to Enoch the movement of the heavenly bodies according to a 364-day calendar. This latter fact would have made the book of great interest to the Qumran community. The book is preserved alone in four MSS ranging from 200 B.C. to the turn of the era, in a much fuller form than in the Ethiopic book.

*e. The Dream Visions (chs. 83-90).* The second dream vision is a typical historical apocalypse which describes events down to the present crisis, which will be resolved by an imminent judgment that will inaugurate the *eschaton*. Like several of its sister apocalypses (Dan. 10-12; Assumption of Moses; Jub. 23:17 ff.), it dates from the time of Antiochus Epiphanes (see ANTIOCHUS §4).

*f. A book of exhortations and woes (chs. 92-105).* 4QHen<sup>e</sup> indicates the following order for this section: 91:1-10, 18-19; 92:1-5; 93:1-10; 91:11-17; 93:11-14 (in a much fuller form); 94:1 ff. 4QHen<sup>e</sup> contains ch. 105, previously thought to be a Christian interpolation. The reprise of themes from 92:1 in ch. 105 suggests that these chapters delimit a separate book of Enoch that circulated independently (as indicated by the Chester Beatty papyrus of this section). The book reflects a time of bitter antagonism in which the rich and the mighty ("the sinners") are oppressing the poor ("the righteous"). The theme of a coming judgment which will resolve this problem is carried in three forms which are the warp and weft of the book: *woes*

that enumerate the sinners' deeds as the basis for their judgment; *exhortations* for the righteous to stand fast in view of the coming judgment; *descriptions* of the judgment and the events connected with it. The verbs used in the exhortations ("Have faith!" "Hope!" "Fear not!") indicate that the author is responding to a crisis in faith triggered by the disparity between faith and experience. The climax of the book (102:4-104:8) is a disputation on the problem of evil (see FUTURE LIFE IN INTERTESTAMENTAL LITERATURE[S] §2).

**g. The birth of Noah (chs. 106-107).** In this conclusion to the Enochic corpus, the miraculous birth of Noah is interpreted as a portent of salvation, in reality the salvation promised throughout the book. The Genesis Apocryphon of Qumran (see DEAD SEA SCROLLS §5e) recounts the same story, there told by Noah's father, LAMECH. His suspicion of his wife, detailed in that version, is paralleled by the same motif in the story of Melchizedek's birth at the end of II Enoch.

**h. The Book of the Giants.** This cycle of tales about the fallen angels and their progeny, hitherto known only from Manichean writings, has survived in at least six Aramaic copies among the DSS. While analysis must await more complete publication, it is evident that the Ethiopic corpus represents only part of a wider Enochic-Noachic tradition.

**3. Apocalyptic.** (See APOCALYPSE[S]; APOCALYPTICISM[S].) The Enochic corpus is a series of revelations of eschatological and cosmological secrets. Common to the eschatological material is a situation of persecution or oppression, the promised remedy of which is an imminent divine judgment which is the subject of the revelation. Presumed throughout, but emphasized in varying degrees, are two levels of reality: the mythical and the historical. The earliest strata in chs. 6 ff. deal primarily with the mythical. They attribute the presence of evil to angelic rebellion and focus on the judgment of these angels. In chs. 85-90, this rebellion is one episode in primordial history, but it has its counterparts in the wicked deeds of the postexilic angelic shepherds. Over against and related to this angelic level, the deeds of human history are recited. Judgment will be dispensed to all the principals: human and angelic. The parables pay primary attention to "the kings and the mighty," the historical foes of the author and his people, but they do so primarily in the mythical context of the final judgment. They also devote considerable space to the angelic rebels. Chs. 92-105 focus almost exclusively on the level of history and human deeds, although reference is made to the angelic mediation that will trigger the judgment. In all these writings, final judgment is executed by God or his heavenly agent(s), and this involves an end to history and the beginning of a new and final era or situation described in heavenly or mythical superlatives.

Within their present literary setting, cosmological revelations must be interpreted with reference to this eschatology. Descriptions of the places of judgment, the resting places of the righteous, and the new Jerusalem provide a locative reference and reassurance to the temporalized announcements of

the judgment. The temporal and spacial dimensions flow together in the parables, where the seer is witness to the judgment and the events leading up to it. The geographical details in 17:1-18:5 and 28:1-32:2 may have the literary function of documenting Enoch's trip to places of eschatological interest. Nonetheless, behind these literary purposes, there was a much broader interest in cosmological and "scientific" matters, the revelatory contexts and aspects of which must still be investigated in the light of catalogues of revealed (and non-revealed) things in other apocalyptic and in wisdom literature.

**4. Provenance.** Essential to most of Enoch is a distinction between the righteous and the sinners, which at times suggests a genuine sectarianism (see APOCALYPTICISM[S] §3d). Least typical in this respect are the older materials in chs. 6-16, where the primary antithesis is between beleaguered humanity as a whole and the semidivine giants and their fathers. The distinction does appear in 10:14, 17, however, and the introduction to the section (chs. 1-5) is a salvation-judgment oracle, announcing vindication for "the elect" and "the righteous" and punishment for "the sinners." The animal apocalypse contrasts the awakened *hasidim* with the deaf and blind Hellenizers (90:6-7) (see HASIDEANS). The Apocalypse of Weeks (93:1-10; 91:11-17), a traditional piece utilized in chs. 92-105, depicts the foundation of the hasidic community as an eschatological event (93:9-10), and we are not far removed from the viewpoint of Qumran sectarianism (cf. CD 1.3-12). The rest of chs. 92-105 are probably contemporaneous with the early years of the Qumran community (± 100 B.C.) and speak against a common foe, the Hasmonean rulers and their friends. Moreover, the religious and theological concerns expressed in 98:9-99:10 and the inclusion of this section in Qumran MSS suggest a point of origin within the orbit of the ESSENE community. But typical features of Qumran sectarian documents are missing: clear references to a community and the use of the term "the elect"; a pronounced dualism; references to the priestly or temple connections and abuses of the opponents.

The parables were unknown at Qumran, if we may judge from the MSS. However, the hypothesis of a Christian origin seems highly unlikely in view of a total lack of christological references in the son of man passages. Occasional historical references (56:5-7; 67:8-13) suggest a date around the turn of the era. The frequent use of "the elect" as a designation for the righteous, and the occurrence of expressions like "the congregation of the righteous" (38:1; cf. 53:6; 62:8) may reflect a genuine sectarianism.

The Enochic corpus arose and was reworked and transmitted in circles that can be identified only partly with known Jewish groups. As such it witnesses to the complexity of sectarian and quasi-sectarian Judaism in this era. See also PSEUDEPIGRAPHIA; PSEUDEPIGRAPHIA[S].

**\*EPHESIANS, LETTER TO THE. 1. Authorship.**

This question hangs with that of the letter to the COLOSSIANS, for which Pauline authorship is less generally accepted today than in the beginning and middle of this century. If Colossians, but not Ephesians, was written by Paul, the imitation would in some respects be more "Pauline" than the authentic letter. Thus, an increasing number of scholars tend to think that Paul was the author of neither of these letters—or of both of them.

The style of Ephesians is peculiar, with long chains of loosely appended prepositional phrases, subordinate clauses, etc. But in some respects Colossians departs even more from the style of the undisputed letters; cf., e.g., the paucity of causal and adversative conjunctions. Themes like the Holy Spirit, grace and works, and Israel and the Gentiles are more prominent in Ephesians than in Colossians, and in Ephesians a "cosmic Christology" has been more thoroughly integrated with Paul's idea of the church as one body with many interdependent members (Eph. 4:7-16, 25; 5:30; contrast Col. 1:15-17; 2:10, 19).

Ephesians resembles a mosaic, but the pieces are not all taken from the letters of Paul. OT allusions, quotations, and interpretations presuppose earlier usage (Eph. 2:13-22; 4:8-10; 5:28-33; 6:14-17, etc.). Statements like Eph. 1:20-23, that Christ is enthroned above all cosmic powers, and Eph. 2:5-7, that Christians have been made alive and enthroned with him, are likely to be derived from early hymns. In I Cor. 15:25-28 and Rom. 6 Paul qualifies this type of realized eschatology. Traditional warnings against fellowship with evildoers are reproduced in Eph. 5:5-13, but without the clarifying interpretation added in I Cor. 5:9-12. A common topic, that ignorance of God causes moral decay, is used in a much more conventional way in Eph. 4:17-20 than in Rom. 1:18-31. Similarities with I Peter and other writings confirm that Ephesians draws upon the phraseology, patterns, and themes of early Christian worship and teaching.

The author's familiarity with Colossians does not fully explain the combination of verbal similarities and differences. The two letters are likely to have originated in the same linguistic environment. Two main options deserve consideration: (a) Different assistants of the imprisoned apostle wrote three letters: to PHILEMON, to the Colossians, and our Ephesians, possibly destined for HIERA-

POLIS and LAODICEA. (b) Colossians and, somewhat later, Ephesians were both written by members of a "Pauline school" which continued to exist after the death of the apostle, perhaps in Ephesus. The first theory operates with the fewest unknown factors. The second accounts better for the absence of any specific epistolary situation and what seems to be a post-Pauline perspective in Ephesians (cf. esp. Eph. 2:20; 3:2-11; 4:11-14).

Remarkable analogies to Ephesians can be found both in the devotional language of Palestinian Judaism and in the more philosophical terminology of PHILO. The author himself was probably a Jew, younger than Paul, though converted to a Pauline form of Christianity. Some, but not many, persons of this type are known to us (cf. Col. 4:10-11).

**2. Composition and scope.** In spite of its lack of specific statements, Ephesians is not a theological tractate or a meditation upon the theme Christ and the church. It belongs to a type of Greek letters—genuine and spurious—which substitute for a public speech rather than for private conversation. The epistolary purpose is to overcome separation and establish contact between sender and recipients, or even to mediate the apostle's presence to Gentile Christians who are separated from him in time rather than in space.

The opening praise of God strikes a congratulatory note (Eph. 1:3-14; cf. I Pet. 1:3-12; II Chr. 2:11-12). The benediction, assertions of thanksgiving and intercession, and a doxology form the framework for a panegyric that recounts the implications of God's call, the working of his power, the privileges bestowed upon former Gentiles, and the special grace given to Paul (Eph. 1:3-3:21). In the second part of the letter the recipients are urged to live up to their calling and are reminded of what they have been taught (4:1-6:20). Little or no new information is communicated. There is no argumentation in the style of forensic speeches or popular diatribe. The content of the letter is recollection and EXHORTATION, anamnesis and PARENESIS, rather than theology and ethic.

The theory that Ephesians presupposes a coherent, Gnostic redeemer myth has not proved tenable. But the author does use the lofty language of esoteric knowledge and cosmic religion to celebrate redemption in Christ. He represents Paul as the mediator of revealed wisdom and the church as the body of Christ, in whom Israel and the Gentiles have been made one, and in whom the "re-capitulation" of the universe has begun. The "great mystery" of Christ's sacred marriage with the church serves as the basis for injunctions to mutual subordination in conjugal love (Eph. 5:21-33). The author does not combat deceiving "winds of doctrine" (cf. Eph. 4:14). He rises above them by demonstrating the superiority of what is given in Christ, as proclaimed by Paul, in order that all members of the church may grow in common faith, love, and knowledge.

**3. Problem of interpretation.** Ephesians has been seen as the mature fruit of Paul's thought, as the beginning of its distortion, or as an inspired reinterpretation. The Pauline paradox of wisdom and foolishness, power and weakness, is no longer ex-

PLICIT, but it is implicit, insofar as wisdom, glory, riches, and unity are ascribed to Christians who lacked any unified organization and who had little influence in a world where it was in no way manifest that all powers had been made subject to Christ. But terms like "the church," "the saints," or "Israel," which Paul uses to refer to identifiable social realities, have become more vague and abstract. One might say that Ephesians is utopian, whereas Paul is paradoxical.

One line of development leads from Paul via Ephesians to second-century Gnostics, to whom "the church" (ἐκκλησία) was a spiritual and heavenly entity. Another development leads to Irenaeus and other antiheretical fathers, to whom the unity of the catholic church is guaranteed by apostolic tradition and episcopal succession. Later church history amply demonstrates how much the interpretation of Ephesians depends upon the context in which the letter is read and upon the presuppositions of its readers.

\***EPHESUS.** Recent excavation, conservation, and restoration at Ephesus have added tremendously to the appearance of the ancient city. The atmosphere of the city and the various aspects of ancient life which can be observed here now make Ephesus the rival of ATHENS, POMPEII, ROME, and OSTIA.

1. **The altar and temple of Artemis.** One of the most important results of the recent excavations has been the discovery of the great altar of the Artemision. The rectangular altar precinct stood before the W façade of the Archaic temple, on axis and parallel to it. In the excavator's reconstruction the altar comprised a large sacrificial stone table approached by a rampway. During the late Archaic period a low wall was thrown around three sides of the table, including the side facing the temple, leaving open only the fourth side toward the sea

on the W. The courtyard so formed was approximately fifty feet deep and one hundred feet broad, broader than the similar but later Altar of Zeus at PERGAMUM. In late Classical times the enclosure on the same foundations consisted of a base sculptured with reliefs above which stood a series of Ionic columns.

In hopes of solving the long-standing controversy over the ground plans and reconstructions of the early and later temples, the Artemision itself has received more attention. Suggestions have been made for restoring the original Archaic Artemision with double rows of columns on the four sides of a structure divided into forehall, large central area, and reserved rear chamber. The later Classical temple remained essentially the same except for some enlargement and modification, including the addition of a third row of eight columns on the W which served to advance the façade of the temple; by this means an epiphany of the goddess through doors in the pediment of the temple's roof could be seen more easily over the walls of the altar's court. The central unroofed area was entered down a flight of stairs from the front porch of the temple. In this central area stood a small shrine for the cult image of ARTEMIS Ephesia, a stiff, pillar-like figure wearing a corselet of eggs and a long, fitted skirt worked with various animal figures. The suggested reconstruction makes the Artemision very similar to the temple of Apollo at Didyma near MILETUS, which did in fact have the same architect, Paionios of Ephesus (Vitruvius, *On Architecture* VII, Preface [16]).

After being destroyed by the Goths in A.D. 263 the temple of Artemis may have been partially repaired, but with the advance of Christianity the temple gradually became no more than a quarry for materials reused in Late Antique, Medieval, and Turkish constructions in Selçuk (Church of St. John) and Istanbul (Hagia Sophia).

2. **Civic agora.** The ceremonial center of the city established by ALEXANDER'S general Lysimachus was the shrine of Hera Boulaia on the saddle between Mounts Pion and Koresos. In this shrine a sacred hearth representing the well-being of the city was kept constantly burning. Here also was the assembly hall for the city councilors (*bouleuterion*), offices for the duty officials (*prytaneion*), and a large three-aisled hall (*basilica*) for transaction of business and legal proceedings as well as for the display of the laws and public announcements. Numerous portrait heads from commemorative statues set up here have been found; several, including one of AUGUSTUS, had been mutilated by zealous Christians who hacked crosses into the foreheads of the portraits (Fig. E1). Within the great square below the basilica stood a small temple built in the late first century B.C. and demolished in the time of Theodosius. A black stone head of AMMON and the rattle from a sistrum indicate that the temple may have been dedicated to the Egyptian gods, while a large portrait head of Antony discovered in the area suggests that Antony and Cleopatra commissioned its construction.

3. **Baths of Scholastikia.** During the rule of Theodosius at the end of the fourth century, ma-

terial was robbed from the sanctuary of Hera Boulaia and surrounding buildings by a Christian woman named Scholastikia, in order to renovate a large bath at the intersection of the "Street of the Kouretes" and the "Marble Road" in central Ephesus. Two statues of Ephesian Artemis (one carved from translucent Parian marble and bearing traces of gilding) were found carefully buried beside the robbed buildings. It would seem that certain persons objected to burning the images into lime for mortar, because they at least did not believe Paul's dictum that "gods made with hands are not gods" (Acts 19:26). The Baths of Scho-

lastikia included almost every facility for bodily comfort: eating places, dressing rooms, hot and cold baths, massage and anointing chambers, a lavatory, and even a large *paidiskeion* (brothel) decorated with mosaics and frescoes.

4. **Residences.** On the S side of the so-called Street of the Kouretes running between the civic agora and the lower, commercial agora, a number of well-preserved houses crowded together on a series of ascending terraces have been excavated. These upper-middle-class residences had a multistoried appearance not unlike certain apartment buildings in Rome and Ostia. The apartment block is fronted by a colonnade sheltering stores and taverns. Passageways between the shops lead from the street up to the entrances of individual living quarters. Each section usually centers around a small open colonnaded courtyard from which subsidiary rooms are entered. The standard of living varied from section to section, but generally the apartments seem to have been fairly comfortable. At least two had heated bathrooms; several boasted colored marble wall revetments and floor mosaics, as well as glass, ivory, bronze, and marble adornments; such amenities as running water and wall frescoes were common. The construction and refurbishing of these apartments continued from the first into the seventh century A.D.

5. **Churches and mosques.** The major Christian shrines at Ephesus symbolically link the ancient world with late medieval and modern times. The Church of St. John, the study of which is now being continued with excavation and restoration, stands close by the Sultan Isa Bey Camii (Mosque of Sultan Jesus I of the Aydimoglu dynasty) erected in A.D. 1375. In 1955 a cave-like chapel on Mount Koressos above the city to the S was discovered, and graffiti here attest for the first time in Ephesus the invocation of PAUL as a saint. The controversial last home of the Virgin (Meryem Ana or Panaya Kapulu, S of Ephesus) was visited by Pope Paul in 1967. The Church of Mary in Ephesus proper was built inside a Roman structure which has been recognized as the stock exchange for the bankers of ancient Ephesus. The Third Ecumenical Council held in this church in A.D. 431 established a secure cult position for the Virgin as the divine Mother of God; she thereby completely usurped the status of Artemis, "Mother of the Gods."

D. BOYD

**EPICTETUS** ἐπ ἰκ τῆ'τύς. Greek philosopher born ca. A.D. 50 in HIERAPOLIS in Phrygia. As a young slave he was taken to Rome, where he came under the influence of the Stoic philosopher Musonius Rufus. Later he was set free. At an indeterminate time he was banished by DOMITIAN and took up residence in NICOPOLIS in southern Epirus, where he lived to the end of his life, attracting students to a school in which he gave instruction in philosophy. His reputation spread far and wide during his lifetime, and he was highly regarded by pagans and Christians in late antiquity. He died ca. 125.

Epictetus himself wrote nothing. His teaching was preserved in two works by his disciple Arrian, the historian of Alexander the Great. The *Discourses* or *Diatribes*, originally in eight books of which four and some fragments are extant, are Arrian's account of Epictetus' instruction. They are important examples of the diatribe. Epictetus' adaptation of the diatribe style has more in common with the style of an earlier period than with that of his contemporaries. The *Manual* or *Encheiridion* consists of a collection of Epictetus' philosophical sayings which Arrian regarded as most useful to urge the soul to virtue.

Epictetus' philosophy is Stoic (see STOICS) with a strong Cynic coloring (see CYNICS[S]). This is most clear in his idealization of the Cynic (*Discourses* III.xxii), in his attitude toward scientific learning, and in his stress on ethics. In his philosophical system logic and physics are subservient to ethics. One must study Stoic logic in order to examine the decisions of one's will, but only those logical principles are necessary which enable one to get rid of fear, grief, passion, and so to attain freedom. The philosopher's lecture room is a hospital for sick souls in which the listeners become aware of their own weakness (*Discourses* III.xxiii.30; II.xi.1), a consciousness of which enables them to see what the work that leads to virtue is. A person experiences a conversion (ἐπιστροφή) when he comes to his senses and realizes the state he is in. He then questions, in each instance, whether his external impressions are in accordance with nature. Moral progress can only be made when one has turned to one's own moral choice (προαίρεσις) and strives to perfect it and make it harmonize with nature. Our moral choice consists in limiting our desires to things in our power, and is the basis of ethics. Only things within our power have to do with virtue. Such things as possessions, health, and family and social relationships appear to be goods, but are really indifferent.

One is free only when living in accordance with one's moral choice. This shows the desire to be of one mind with God and in fellowship with him. The philosopher is God's witness, scout (κατάσκοπος), and messenger, sent by God to show people that they have gone astray and to instruct them in the true meaning of the good (*Discourses* I.xxix.46-49; III.xxii.23-24; IV.viii.30-32). This

is a task undertaken only with the conviction that it is God's will. Then one can with confidence assume one's assigned place in the ordered universe. By acceding to the divine will freedom is not forfeited; rather, it is found when one aligns oneself with God.

Epictetus' religious language has led to the suspicion of interdependence between him and the NT. Furthermore, the NT attests the existence of Christians in Hierapolis, ROME, and Nicopolis, the three cities where he was active, and Epictetus does speak of Christians, calling them Jews and Galileans (*Discourses* II.ix.19-21; IV.vii.6). Nevertheless, Epictetus' piety is basically that of Stoic pantheism; there is no evidence that he actually came in contact with Christians; and his comments on them are not favorable. There are, however, parallels between him and the NT: various elements of the diatribe style are found in both: both use lists of virtues and vices and *Haustafeln* (see LISTS, ETHICAL §2b; LISTS, ETHICAL[S] §2b), and they both describe the messenger sent by God to convert mankind in similar terms. Rather than showing direct dependence on each other, these similarities reflect the Christian appropriation of the language and literary devices of the ethical philosophers of the period, of whom Epictetus is a major representative.

A. J. MALHERBE

\***ESCHATOLOGY OF THE NT.** "Eschatology" literally means the doctrine of the end or of the "last things." The term was first used by scholars of the nineteenth century as an alternative title for that section of theology which spoke about the doctrines of the physical death of individuals, the intermediate state of the soul, and the promised resurrection of the dead at the end of the world. Thus it is basically a term in systematic theology.

The NT texts do not focus primarily on the question of individualized eschatology, the death of a person, and the state after death. Instead they speak about the end of the world and of history. An investigation of the adjective "eschatological" (ἔσχατος) underlines this aspect: Christians wait for the coming of the last day, which will be announced by the last trumpet (I Cor. 15:52). Eschatological plagues will precede this final day (Rev. 15:1; 21:9); then the last enemy, death, will be overcome (I Cor. 15:26), and the resurrection of the dead, the last judgment, and final salvation will take place (John 6:39-40, 44, 54; 11:24; 12:48; I Pet. 1:5). In the NT perspective this final end time had already been inaugurated by the coming of Jesus Christ (Heb. 1:2; I Pet. 1:20). Therefore, the time of the Christians is the last time. They

have received the eschatological gift of the Spirit (Acts 2:17; see HOLY SPIRIT §3e) and experience the eschatological tribulations (II Tim. 3:1; Jas. 5:3; I John 2:18; Jude 18; II Pet. 3:3). Scholars agree, therefore, that according to the NT the eschatological events are in some sense present and in some sense future. But after acknowledging the tension between the "already" and the "not yet" the scholarly consensus rapidly dissolves. Since the tension between the present and future is interpreted in very different ways, the term "eschatology" has been qualified with adjectives such as consistent, imminent, apocalyptic, thoroughgoing, futuristic, proleptic, realized, in the process of realization, inaugurated, or fulfilled, that indicate how the concept is understood (see §3 below).

Since the end of the nineteenth century, exegetes have more and more recognized that eschatological language is not a peripheral element of the NT, but is central for understanding Jesus as well as the theological perspective of the early Christian community. The history-of-religions school has pointed out the pervasive influence which Jewish APOCALYPTICISM had upon early Christian theology. NT eschatology is expressed in apocalyptic-cosmological concepts and images: the last tribulations, the great last day of the Lord, the PAROUSIA, the coming of the MESSIAH, the Last Judgment, the RESURRECTION of the dead, the future bliss and happiness. As in apocalypticism, eschatological salvation for the individual has as its condition a new heaven and earth, a new creation and paradise. Like apocalyptic language, eschatological imagery in the NT impresses us as strange and fantastic: stars fall from heaven, fire destroys the earth, the SON OF MAN comes on the clouds of heaven, or the works of the righteous are found recorded in heavenly books. Schweitzer therefore distinguished between *apocalypticism*, which binds Jesus to the concepts of his own time, and *eschatology*, which expresses the true meaning of these apocalyptic concepts and makes the message of Jesus valid for all times. This distinction between apocalypticism and eschatology has become normative for most serious theological inquiry, so that "apocalyptic" is often used in a pejorative sense. "Eschatology" is then used with reference to things eternal, and the real content of eschatology is strictly differentiated from the varying ideas and images of apocalypticism. The concept of eschatology, thus detemporalized, may be cast in existential terms. For example, in Bultmann's opinion the meaning of Jesus' eschatological message is that persons *now* stand under the necessity of decision. The real understanding of human existence and eschatology means that every hour is the "last hour."

Recent scholarly discussion, however, has pointed out that it is impossible to divorce apocalyptic language from its eschatological content. Against the pervasive reductionistic treatment of eschatological language, Doty stresses that this figurative and evaluative language expresses a visionary wholeness. It unites past experiences and anticipated futures and elicits comprehensions and expectations about the purpose of history and the world as well as of individual existence. NT eschatology is not only

concerned with the future of the individual, but with that of the whole creation, as well as the whole of human history. In the NT eschatological language is apocalyptic language; as such it is cosmological, universal, political, and mythological.

The history-of-religions (*religionsgeschichtlich*) categories upon which scholars once based their reconstruction of primitive Christian history are widely questioned today, and it is therefore inadvisable to base an analysis of NT eschatology upon them. If methodological considerations preclude an investigation of NT eschatology starting with the "historical Jesus" or the different, culturally determined stages of the primitive Christian church, then we must reconstruct the eschatology of the NT literature itself. Such an approach reveals two kinds of eschatological understanding and hope. On the one hand are those writings which stress, often in apocalyptic language and imagery, the *future* aspect of eschatological salvation. This type includes also those writings that reflect on the interim time between the life of Jesus and his parousia. On the other hand are those NT writings which underline the experience and conviction that in Jesus Christ eschatological salvation is already a *present* reality. Yet it has to be emphasized that none of the NT writings stress one eschatological aspect to the total exclusion of the other. The two types of early Christian eschatology appear to have developed independently, but in dialectical tension with one another.

1. Eschatological salvation as future event. *a. Paul.* According to Paul's teaching, the cross and resurrection of Jesus Christ constitute the turning point of the ages. The time is fulfilled (Gal. 4:4), and anyone who is in Christ is "a new creation"; the old has passed away and the new has come (II Cor. 5:17; I Cor. 10:11). On the other hand, Paul also stresses the "not yet" of salvation. We are saved "in this hope" (Rom. 8:24); Christians baptized into the death of Christ will participate in the resurrection only in the future (Rom. 6:1 ff.). As heirs and fellow heirs the Christians will be delivered from the wrath to come (Rom. 5:9-11) and will be glorified with Christ (Rom. 8:17). Paul reminds the Corinthians that the world

is passing away (I Cor. 7:31) and promises the Romans that creation itself will be set free from its bondage to decay (Rom. 8:21). The parousia of Christ will bring about the completion of the cosmic redemption which he inaugurated.

Paul uses apocalyptic imagery in order to maintain the difference between faith and sight. He is convinced that the "day of Christ" (Phil. 1:6, 10; 2:16; cf. I Cor. 4:5; II Cor. 5:10; Rom. 14:4) and the coming salvation are very near (Rom. 13:11 ff.; 2:3 ff.; 14:12) and will take place in his own lifetime. In I Thess. 4:13-18 Paul comforts the Thessalonians who are concerned about those who died before the "day of Christ." He promises that at the Lord's descent from heaven at the last day the dead will arise first, and together with those who are alive they will be "caught up . . . in the clouds to meet the Lord in the air" (vs. 17). In I Cor. 15 the imagery is somewhat different. Paul is still convinced that not all will have died at the day of the Lord (15:51). Both those who have fallen asleep and those still alive will attain the life of the resurrection only through a change into a celestial and spiritual body. Paul does not conceive of resurrection and new life in individualistic but in universal-cosmic terms. At the Parousia, when the end comes, after Christ has destroyed every authority and power, including even the last enemy, death, he will deliver the kingdom to God the Father (15:24-26). In Phil. 1:23-24 (and perhaps also in II Cor. 5:1 ff.) Paul associates his being "with Christ" with his own death. This text cannot be used as evidence that Paul changed his apocalyptic eschatological expectations, since in II Cor. 4:14 as well as in Phil. 3:11 Paul also expresses the hope for the future resurrection. (For a different view see PAUL THE APOSTLE[S] §2a, b.) Paul is confident that God's power will overcome the present evil forces exercising their dominion over people (cf. Rom. 5-7). For the righteous, the last day will be a day of salvation (Rom. 13:11-12) and glorification (Phil. 3:21; Rom. 8:18, 21; II Cor. 4:17); for the principalities and powers now ruling this world it will be a day of destruction.

God's power which transcends the present age and stands over and against the powers of this age is nevertheless already operative in the life of the Christians. They have already received his Spirit, and, as representatives of the new age, it is the ground of their hope (Rom. 8:11). Paul insists, however, that even while Christians are oriented toward the coming age and called thereby to freedom, they remain in this world and in danger of falling prey to its powers. Here Christian existence is understood in an apocalyptic context; eschatological and apocalyptic thought are intertwined. See PAUL THE APOSTLE §B10.

**b. The synoptic tradition.** i. *The Logia source.* In Q Jesus is the eschatological messenger and bringer of salvation. As eschatological prophet he casts out evil spirits (Luke 11:14-22; 17:20; Matt. 12:22-29; Mark 3:22-27), announces the coming of the KINGDOM OF GOD and inaugurates its establishment on earth (Luke 7:19-23; Matt. 11:2-6). Since Jesus is the eschatological messenger, each person's destiny is determined by the response that each makes

to him. Thus the parenthetic tone of the source is rooted in its eschatological outlook. The demands of eschatological DISCIPLESHIP are given in absolute terms: to follow Jesus means to give up one's home and to hate one's family (Luke 9:57; 14:25 ff.), to undergo tribulations and persecutions (Luke 12:2-12). Those who remain faithful will be vindicated on the last day. The time during which one may enter the New Age is brief (Luke 13:25-28) and God's judgment is imminent. Jesus teaches the disciples not only to pray for the coming of God's kingdom but also to pray that they will not have to live through the eschatological tribulations (Luke 11:1-4). The eschatological parables insist that since the coming of the Son of man cannot be predicted, one ought always to be prepared for the Parousia; the eschatological day comes suddenly but certainly (Luke 13:20-21). For Q, eschatological salvation means the reversal of the present conditions: the poor will inherit the kingdom (Luke 6:20-21); the persecuted disciples of Jesus will later rejoice (Luke 6:22-23) and take their rightful place in the kingdom, participating in judgment (Luke 22:29-30).

In summary, while Q reflects the expectation that the end is imminent, it also evidences the conviction that Jesus' ministry has already inaugurated eschatological salvation. This conviction forms the basis for the eschatological PARENESIS. Eschatological warning and promise are expressed in apocalyptic language and imagery.

ii. *Mark.* According to this gospel, the eschatological kingdom of God has drawn near in the work and life of Jesus (1:14-15). The kingdom is present, but hidden (4:26-29, 30-32) and will soon come in power (9:1). Since the kingdom does not at present manifest itself in power and glory, it is comprehensible only to those to whom its mystery is entrusted. There is a growing consensus among scholars that Markan redaction is discernible in 13:1-4, 28-37. Here the evangelist interprets the apocalyptic tradition, and thus reveals most clearly his own eschatological outlook. The tradition itself describes the tribulations of the interim before the eschaton (vss. 5b-23) and announces the parousia of the Son of man (vss. 24-27). Wars, earthquakes, famines, and persecutions are only the beginnings of the "birth-pangs" of the coming age. Only after the final tribulation will the end come, and that will mean the destruction of the cosmos and the vindication of the elect.

In the last section of the discourse, Mark spells out his own eschatological understanding. Vss. 28-31 answer the question of the disciples expressed in vs. 4: When will the end come? Mark stresses that the destruction of the Jerusalem temple is a sign that the kingdom is very near, to be expected within the lifespan of this generation (vss. 29-30). Nevertheless no one, not even Jesus, knows the exact day or hour. Vss. 33-37 draw the consequences for the behavior of the disciples: like the doorkeeper in the parable, the disciples must constantly watch, because the master will come suddenly (vss. 33, 35, 37).

Mark understands the time and fate of Christians during the interim to be analogous to that of

Jesus. The time for the proclamation of the gospel (13:10; 4:14) inevitably provokes persecutions and sufferings for the community. Those who have heard and accepted the message must now take up their cross and follow Jesus on his way to death (8:34-38). In this faithless and corrupt age the temptation is to be ashamed of Jesus and his words (8:38).

In order to strengthen the faith and endurance of this community Mark stresses both that the time of the end is very near and that everyone must remain watchful, because the Lord will come suddenly. The emphasis on the nearness and suddenness of the eschatological end thus serves parenthetical purposes. See MARK, GOSPEL OF §9d; MARK, GOSPEL OF[S] §4iii, *bv*, *c*.

iii. *Luke*. Conzelmann's interpretation of Lukan eschatology has been widely influential. In his view, Luke's eschatology represents not only a historicizing of the traditional eschatology but also a division of salvation history into periods. By distinguishing three periods in this history Luke replaces the traditional apocalyptic pattern of an imminent end of the age and points out the function of the church in God's plan. The evangelist interprets the apparent delay of the Parousia positively insofar as he characterizes the present time as the age of the world-wide mission of the church. Conzelmann maintains that the Little Apocalypse of Luke 21 reflects a tendency to distinguish between historical events and cosmic, supernatural events of the end time. Thus, while marking off distinct periods of salvation history to emphasize the historical events, Luke can at the same time emphasize the apocalyptic events by intensifying their apocalyptic features.

Conzelmann's view of salvation history and eschatology in Luke have been challenged, however. Critics maintain that Luke shows the same eschatological urgency as his sources and that he does not relegate eschatological matters to some distant future. Luke does not detemporalize early Christian eschatology but retains an urgent eschatological tension insofar as he connects the past ministry of Jesus, the missionary efforts of the community, and the future coming of the kingdom. This evangelist, like Mark, understands himself as living in the "last days" (Acts 2:17 ff.). He is convinced of the imminence of the end, but denies that it would come immediately (cf. Luke 19:11; 10:9, 11; 21:31-32). Luke expressly denies that one can assume a delay of the Parousia: God will not long delay but will vindicate his elect "speedily" (18:1-8). The disciples, therefore, have always to "be ready; for the Son of man is coming at an unexpected hour" (12:40; cf. vss. 41-46). See LUKE GOSPEL OF[S].

iv. *Matthew* adopts and intensifies the urgent expectancy and apocalyptic language of his sources. He places Jesus in the history of the church and expressly links eschatology with ecclesiology. Like Paul, he distinguishes between the kingdom of the Son and the kingdom of the Father. Matthew stresses the lowliness of Jesus and the hopes for his future appearance in glory. Even when he speaks of the kingdom as having come (with a saying derived from Q, 12:28), he retains the future nature of the judgment (12:27, 36-37),

characterizes the present as a time of decision (12:30), and clearly distinguishes between this time and the future aeon (12:32).

Matthew links the eschatological expectation and the ethical parenthesis. He alone gives a detailed description of the final judgment (25:31 ff.; 13:36 ff.; 7:21 ff.), which is inevitable and makes all persons accountable for their deeds (16:27). The interpretation of the parable of the "weeds among the wheat" (13:24-30, 36 ff.) points out that the church is not the assembly of the elect but a mixed group which is also subject to judgment. The Son of man will judge all according to one single standard—namely whether or not God's will was done (22:11-14; 16:27). Since the Parousia and the last judgment will come suddenly (24:43), Christians must watch and be ready (24:42, 44; 25:13). Matthew therefore concludes his apocalyptic discourse with the parables of the faithful and wicked servants (24:45-51), the wise and foolish maidens (25:1-13), and the talents (25:14-30), all of which demonstrate what faithfulness, zeal, and readiness mean. On the one hand, Matthew warns his readers not to rely on the delay of the eschatological coming of the Lord; he characterizes the words of the wicked servant, "my master is delayed" [χρονίζει μου ὁ κύριος] as an illusion (24:48). On the other hand, he criticizes the foolish young women for counting on the immediate arrival of the bridegroom and praises the wise ones for taking into account that their master would be away a long time. Matthew concludes the whole section with a portrait of the judgment of the world. All are judged by whether or not they have shown love to those who were in need. Eschatology and parenthesis are clearly intertwined. See MATTHEW, GOSPEL OF §7; MATTHEW, GOSPEL OF[S] §3.

c. *The book of Revelation*. Here the conviction that Christ in heaven has assumed dominion over the world is combined with the expectation that he will soon manifest his dominion on earth. All the visions of Revelation stand under the sign of this imminent expectation. The eschatological end means the destruction of the antidivine powers, the judgment of the dead, and the vindication of the suffering of Christians.

By the use of apocalyptic materials and the application of traditional eschatological schemata, Revelation describes the present as the "short time" before the end. Although the parousia of Christ and the end are imminent, a certain time must elapse before they occur. Whereas in Mark the task for this interim is the proclamation of the gospel, in Revelation the duration of the "short time" depends upon the Christians' martyrdom (6:9-11). The task of Christians in the interim is to go into captivity or to death (13:10). Just as the victory of the Lamb in death was the prerequisite for his heavenly reign, so also the victory of the Christians in death is the prerequisite of the establishment of God's kingship on earth. Final salvation presupposes a new heaven and a new earth; after death, Hades and all antidivine forces are destroyed. See REVELATION, BOOK OF §E; REVELATION, BOOK OF[S] §2.

2. *Eschatological salvation as present*. Alongside

a temporal-futuristic eschatological expectation, the NT exhibits a strain of *realized* eschatology. This springs from the conviction that certain aspects of the future salvation are already experienced by Christians within present historical and worldly conditions. The expression "realized eschatology" does not imply a complete realization of eschatological salvation, since all Christian eschatologies, even those of the Gnostics, have both present and future aspects. But while futuristic eschatology understands the "already" of salvation in christological rather than anthropological terms, realized eschatology stresses the "already" of salvation as experienced by true Christians in the present.

**a. Enthusiastic eschatology.** It is no longer possible to ascribe futuristic eschatology to apocalypticism and realized eschatology to Gnosticism, since both strains of eschatology are found in the literature of Qumran (see DEAD SEA SCROLLS[S]). Kuhn has pointed out that the THANKSGIVING PSALMS use elements of the paradise tradition in order to conceptualize eschatological salvation as present reality. Here salvation manifests itself in the possession of the Spirit of God, in the experience of eschatological knowledge and joy, in the forgiveness of sins and in the cessation of sorrow. Five specific eschatological events were experienced by the Qumran community as present reality: resurrection, communion with angels, deliverance from the final power of death, a new community, and proleptic eschatological transference to heaven. This realized eschatology is rooted in the self-understanding of the community as being the eschatological temple and the dwelling place of God and the angels.

Traces of an early Christian self-understanding as rooted in the present experience of eschatological salvation are found in most of the NT writings. Research pertaining to Paul's "opponents" and to those of Mark, Luke, Matthew, the Pastoral epistles, and Revelation has uncovered remnants of such an early Christian enthusiasm. II Tim. 2:17b-18 contains the remark that there are Christians who hold that the resurrection has already occurred. In Paul's lifetime the same eschatological conviction probably existed in the Corinthian community, where enthusiasts believed that they were already rich and already kings (I Cor. 4:8). Since they believed that they possessed all that was hoped for, they denied the necessity of a future resurrection of the dead (15:12). If Jesus was exalted, so were his followers who have received the eschatological gift of the Spirit and who were thus able to speak in the tongues of angels (cf. 13:1). A similar eschatological enthusiasm has been suggested for the opponents alluded to in I and II Thessalonians and Philippian. Thus, it becomes increasingly apparent that Paul as well as other NT authors (e.g., those of Luke, Matthew, Mark, Pastorals, I John, and Revelation) developed their futuristic eschatology in dialogue and controversy with a realized eschatological perspective. Basic theological consequences of enthusiastic forms of realized eschatology are the detemporalizing, the spiritualizing, and the individualizing of eschatological hope in order to maintain its present reality. Such a realized eschatology is clearly expressed in

the Deutero-Pauline tradition and in the Fourth Gospel.

**b. Colossians and Ephesians.** The most significant change in the Deutero-Pauline literature is the alteration of the Pauline future tenses into past tenses: Christians have been buried in baptism with Christ but have also been raised with him through faith (Col. 2:12). Eph. 2:5-6 maintains: "[God] made us alive together with Christ . . . and raised us up with him, and made us sit with him in the heavenly places." Even though elements of a temporal perspective are still found (e.g., Col. 1:21, 22-23; 3:3; Eph. 2:7), spatial concepts predominate.

In COLOSSIANS Christ is Lord of the cosmos, since he has overcome the cosmic powers and reconciled the world to himself (1:15-20; 2:9-15). By appropriating this event through BAPTISM (2:12; cf. 2:20 and 3:3), believers are emancipated from the cosmic powers and transferred to the kingdom of Christ (1:13). This redemption means forgiveness of sins (1:14; 2:13). Salvation has become available through the gospel, which has revealed the hidden mystery of God (1:26; 4:3). The content of the mystery is nothing other than God's plan of salvation (1:25 ff.). The gospel has not only revealed this mystery, but has also proclaimed "the hope laid up for you in heaven" (1:5). Salvation is present in the church, the body of Christ, yet the church has still to show that it is the real body of Christ by holding fast to him in suffering (1:24), in mutual instruction (3:16), in thanksgivings and songs (1:12; 2:7; 4:2), and in the ministry of love (3:14). Thus in Colossians the paradox of "already present" and "still future" salvation is maintained for the sake of *parenesis*. The statement of the new condition, "if then you have been raised with Christ," is followed by the imperative, "set your mind on the things that are above" (3:1-4).

EPHESIANS further develops this eschatological conception. In addition to the alteration of tenses (2:4-7), there is the notion that salvation is present in the church. Ephesians combines the mythical conception of the body of Christ with that of the "redeemed redeemer." Christ is head of the cosmos and head of the church in which Jews and Gentiles have become one. However, for the sake of ethical admonitions, Ephesians also maintains the tension between the "already" and "not yet." Although believers have been raised with Christ and enthroned in heavenly places, they must still put off their "old nature which belongs to [their] former manner of life" (4:22). They are freed from the cosmological powers, but they still have to fight against them (6:10 ff.). As in Colossians there is a warning that present salvation can be lost. The *parenesis* maintains that Christians are "heavenly beings" and as such must live in accordance with what they already are in Christ Jesus.

**c. The Fourth Gospel.** This evangelist views eschatological salvation as realized in the present. Believers already possess eternal life and no longer come under judgment (5:24). It is debated whether the so-called future, apocalyptic statements (5:28; 6:27; 12:25; 14:2-3; 17:24) are a genuine element of the evangelist's theology or whether they are added by an ecclesiastical redactor (Bultmann).

Even if these statements did originally belong to the gospel text, they are outnumbered, and the basic mood of the gospel reflects realized eschatology. This evangelist believes that the work of salvation is complete in Jesus Christ who is the "savior of the world" (4:42) and is its judge (3:1-21; 5:22-24). The judgment does not happen as a dramatic cosmic event but takes place in Jesus' word and the response of faith to it.

Those who believe in Jesus are no longer "of the world," even though they are still in the world (17:11, 14, 16). They have already gone through judgment, have left death behind them (8:51; 11:25), and have eternal life (3:36). According to the Fourth Gospel, the "already" of eschatological salvation is a present reality not only in Jesus Christ but also in the life of Christians.

Like Paul, John uses "this world" [ὁ κόσμος οὗτος] in order to characterize the radical opposition of the cosmos to God and Jesus. Yet the evangelist never contrasts "this world" with the "future age," the world to come. Here the time element was eliminated. The essence of "this world" is darkness, falsehood, death, and bondage. The "ruler of this world" is the devil (12:31; 14:30; 16:11), and bondage to him is synonymous with bondage to sin and death. In distinction and opposition to "this world" Jesus is the light, the truth, the freedom, the life, and the resurrection.

The cosmological dualism in John is not absolute, since this world is the creation of God (1:3) and the object of his love (3:16). The cosmological dualism of apocalypticism has become a "dualism of decision" (Bultmann). Before the light came into the world the whole world was in darkness and death. But by sending his Son into the world, God asked people to decide for the light and against the darkness. Whether one belongs to the light or to the darkness is determined not by fate or by nature, but by one's decision for Jesus and against "this world." Such a decision is the transition into eschatological existence. Salvation, which took place once in the life of Jesus, continually takes place anew from above. Believers have nothing more to expect from the future than what they already have: life, glory, peace, love, and community.

The "not yet" of Christian salvation is maintained in the Farewell Discourses (chs. 13-17). The disciples are still in the world and still exposed to it. They are separated from their Lord and experience sorrow, trouble, persecution, and rejection. The farewell of Jesus means that he has gone in advance to prepare places in heaven for his own. In the time between Jesus' departure and his parousia the PARACLETE will represent him among the disciples.

The Fourth Gospel uses apocalyptic-eschatological language (e.g., judgment, the coming of the Lord, eternal life) in order to announce eschatological salvation as a present reality. This salvation is thus radically individualized and detemporalized. See JOHN, GOSPEL OF §D; JOHN, GOSPEL OF[S] §4.

**3. Eschatological expectations of the "historical Jesus."** The oldest synoptic traditions ascribe two different eschatological perspectives to Jesus. Some texts indicate that Jesus shared the hopes of Jewish apocalypticism and expected the end of the world,

the coming of the Son of man on the clouds of heaven, and the establishment of the kingdom of God in the very near future (e.g., Mark 9:1; 13:30; Matt. 10:23). Other texts indicate that in the person and ministry of Jesus the time of salvation has already come and the kingdom of God is already a reality (e.g., Luke 11:20; 17:20-21; Matt. 11:12). Exegetes have dealt with these two opposite eschatological Jesus traditions in four different ways.

*a. "Thoroughgoing eschatology."* The expressions of imminent expectation and apocalyptic eschatology have been accepted as authentic words of the historical Jesus, whereas statements of realized eschatology have been explained away as expressions of the post-Easter church. This position contains two theological problems: First, if Jesus expected the end of the world and the coming of the kingdom in the lifetime of his hearers, then history has proven him wrong. Thus, the main theological problem of the early church must have been the "delay of the parousia." The author of I Clement addresses the problem (23:3-5), and so does the author of II Peter, who argues that "with the Lord one day is as a thousand years, and a thousand years as one day" (3:3-9). Exegetes have therefore proposed that the various dogmatic rationalizations and expressions of eschatological expectation were attempts to come to terms with the "delay of the end" (Werner, Grässer).

Second, if Jesus expected the imminent end of the world, then he was not only mistaken, but he ceases to be relevant for us. Weiss raised the crucial question of the relationship between the apocalyptic Jesus and our contemporary situation, maintaining that we have to rely on our own theological understanding and not on that of the historical Jesus, since the resurrected Lord is now guiding his community. Bultmann agrees with Weiss that Jesus' preaching is controlled by his imminent expectation. There can be no doubt that Jesus, like his contemporaries, expected a tremendous eschatological upheaval in the immediate future. Jesus' expectation implies for us that the eschatological time has come in the here and now. Through Jesus we are confronted by the immediacy of God and challenged to decision; the nearness of the kingdom confronts us with the ultimate "either-or." What is important is not the accuracy of Jesus' eschatological expectations but the validity of his understanding of life and human existence.

*b. "Apocalyptic eschatology."* Another exegetical position recognizes the apocalyptic-eschatological elements in the oldest synoptic traditions. Christian apocalyptic theology did not originate with Jesus, but in the post-Easter enthusiasm of the primitive church. Jesus began with the same burning eschatological expectation as JOHN THE BAPTIST, but Jesus was speaking of the coming of the kingdom in a different sense from that of John and contemporary Judaism. Jesus' preaching does not distinguish between the God who is near and the God who is far away; he preaches the forgiving, helping, and comforting God. Thus, REPENTANCE is not oriented toward God's wrath and judgment but toward his grace. Jesus' eschatology understands all life as lived before God. It is not the

message of the historical Jesus, but rather the Christian kerygma that has an apocalyptic context. Apocalypticism is the "mother of all Christian theology" (Käsemann). The primitive church applies the title "Son of man" to Jesus and preaches him as the exalted one, the coming judge who will inaugurate the last day and final salvation.

c. **"Realized eschatology."** A third position is that Jesus taught that the kingdom and eschatological salvation were realized in his own ministry, that he did not understand the kingdom of God as an event or an era, but as an order "beyond space and time." Dodd, the chief proponent of this position, de-eschatologizes Jesus' message in that he considers Jesus' eschatological imagery as only symbolizing the "moral universe" or the "eternal realities." Similarly, Wilder speaks of Jesus' references to the eschatological kingdom as "stylistic" or "symbolic" of ineffable realities intended to dramatize his message. Perrin maintains that the kingdom is not a stenonym, but a tensive symbol, whose meaning cannot be reduced to any literal interpretation. "Kingdom of God" is not a sign which refers to only one identifiable event in a certain time, but a symbol which cannot be exhausted in any one event which all persons experience in their own time.

d. **"Inaugurated eschatology."** The fourth position is that the presence of the kingdom is evoked and anticipated in Jesus' ministry, but that its consummation remains in the future. Only then will the eschatological salvation present in and through the life of Jesus be manifested universally or cosmically. In the ministry of Jesus the decisive battle has been won, but the war will continue until the final victory is achieved and Jesus returns as judge of the world.

Some students of Bultmann also speak of a dialectical tension between present and future elements in Jesus' eschatological teaching (present/future, hungry/satisfied, lost/found), but they understand the tension existentially rather than temporally. All scholars who maintain the "both-and" position are, however, hard pressed to formulate the theological focal point of the "already" and "not yet" (Moltmann).

All four of the positions identified attempt to come to terms with both future and present aspects of the eschatological statements in the oldest synoptic traditions. All four tend to de-emphasize apocalyptic elements and to explain the eschatological message of Jesus in existentialist or spiritual terms. As a result, the cosmic-universal and social-political dimensions of the apocalyptic world view are eliminated from Jesus' message and from early Christian theology. Moreover, the whole discussion demonstrates that exegetical results depend largely on the systematic presuppositions and interests with which scholars approach the texts. The search for the eschatological outlook of Jesus confronts the same methodological difficulties which have doomed as a futile exercise both the "old" and the "new quest" for the historical Jesus. It no longer appears to be possible to "distill" the eschatology of the historical Jesus from its NT interpretation.

E. SCHÜSSLER FIORENZA

\*ESSENES. 1. Sources. PHILO JUDEUS describes the Essenes as an outstanding example of a free and virtuous life. The best and most explicit report on the Essenes, however, is given by Flavius Josephus (see JOSEPHUS, FLAVIUS) who claims that in his

youth he had been a member of the three Jewish religious groups. Important for its geographical references is a brief description of the Essenes by Pliny the Elder (see also Dion of Prusa, ca. A.D. 80-120, preserved by Synesius of Cyrene). The report by Hippolytus is an expansion of Josephus, *The Jewish War* (II.viii). All later references to the Essenes are dependent on either Josephus or Pliny.

**2. History. a. Date.** Josephus first mentions the Essenes in the time of the Maccabean high priest Jonathan (152-143 B.C.) and says that they enjoyed the favor of Herod the Great, but suffered martyrdom at the hands of the Romans. This means that the Essenes must have existed from the middle of the second century B.C. until A.D. 68.

**b. Location.** According to Josephus there were Essenes in all the cities, while Philo says they lived as farmers and craftsmen in the villages of Palestine. According to Pliny, however, they used to dwell by the shore of the Dead Sea, near the city of En-gedi. This location, together with the evidence from the DEAD SEA SCROLLS and also the excavations at the ancient site of Qumran, leads to the conclusion that the Essenes must be identified with the members of the Qumran sect. They had a kind of monastic center in the desert settlement of Qumran and groups and camps in other parts of Palestine.

**c. Organization.** Josephus classifies the Essenes—like the Pharisees and Sadducees—in a Hellenizing fashion as a *αἱρεσις*, "religious party," thereby comparing them with Greek philosophical schools (*φιλοσοφία*). In addition, he uses the term *τάγμα*, "unit, order." Both terms are reminiscent of the Hebrew word *serekh*, "order" (cf. MANUAL OF DISCIPLINE[S], *Serekh Hayyahadh*). But the Qumran people understood themselves as a "community" (*edah*) and as a "union" (*yahadh*); they claimed to be the holy remnant of Israel and the nucleus of God's people at the end of the times. This idea is expressed in the hierarchical order in which priests and elders had a higher rank than the laity and the novitiates. There is much emphasis on obedience to supervisors and elders and on discipline at the sessions of the council. The sectarian aspect, not mentioned by either Philo or Josephus, is important also: the withdrawal from the mainstream of culture under the guidance of priests (in the middle of the second century B.C.); the life in the desert; and the critical position toward the religiously dominant Sadducees and Pharisees and the Jerusalem temple, which led to a spiritualized understanding of the sacrificial worship and of the temple.

**3. Eschatological existence.** Philo and Josephus described the community in Hellenistic terms, placing the exterior phenomena in the foreground; the true apocalyptic motivation of the Essene way of life becomes apparent only through the Qumran texts. According to Philo, to love God, virtue, and one's fellow man were the guiding principles of Essene life; similarly, Josephus speaks of reverence for God and justice toward man, whereby one should harm nobody, should hate the unjust, and should support the struggle of the righteous. This is reminiscent of the main rules, mentioned in the beginning of the Manual of Discipline: to seek

God and to do what is good and right before him, to love all the children of Light, and to hate all the children of Darkness. This attitude toward their fellow man is founded on a strong belief in divine election, which Josephus explains with the term *εἰμαρμένη*. However, he omits the dualistic structure of the Essene world view: the teaching about the two spirits of Truth and Error and about the realms of Light and Darkness with their rulers Michael and Belial (IQS 3:13-4:26), probably because one cannot compare it with the dualism of Plato. A Stoic rendering is given by Philo.

**a. Piety.** Concrete expressions of Essene piety are the prayer toward the rising sun, the prayer of the priest at the beginning and end of the meal, the strict observance of the sabbath, and especially the remarkable practices of ritual purity: the daily ritual bath, the linen garments, the sacredness of the refectory, the holy meal prepared by priests, the prescriptions for cleanliness, the ritual separation of the four classes, and the long period of probation for the novitiates. Economic relations with the outside world were avoided, and even in desperate situations, an Essene tried to keep himself undefiled, by rejecting food or help from other people. According to Josephus, the Essenes believed in the immortality of the soul, which after the death of the body will be rewarded by being brought to a beautiful place or punished by being thrown into Hades.

**b. Ethics.** Essene ethics are highly praised by both Philo and Josephus, but are incorrectly explained. The remarkable common life is rightly emphasized and considered by Philo a guarantee of genuine freedom. This common life was realized by the sacrifice of private property and a central administration of all goods, by common work, prayer, consultation, and communal meals. There was also a strong emphasis on chastity or celibacy. Josephus explains it in Stoic terms by relating it to the avoidance of lust and to the ideal of ascetic self-control. Philo relates it to a critical attitude toward women, who by their selfishness and immodest demands of their husbands prevent men from true fellowship with each other. The common ownership of property was then the result of Essene love of the simple life and served as a defense against avarice. This philosophical and psychological analysis of the Essene way of life is incorrect. Their practice of holiness must be attributed to eschatological hopes and to strict obedience of the OT law. The Essenes believed that God's coming was at hand. Therefore, it was necessary to establish a well-prepared, sacred people with clean bodies and pure hearts. The rules for preparing Israel's encounter with the holy God at Mount Sinai (Exod. 19:1 ff.), for the priests when serving in the temple (Ezek. 44:9-31), and for Israel's camp during a holy war (Deut. 23:10-15) shaped the eschatological existence of the Essenes in a decisive way. Together with the expectancy of the final judgment, these rules could lead to celibacy, to the rejection of private property, and to the observance of sacred meals. Philo and Josephus mention the study of the scriptures by the Essenes. But the fundamental importance

of exegesis and fulfillment of the Law, which was reinforced by the strong eschatological hope (IQS 8:14-15), is not evident in their reports. Moreover, Philo has obscured the preparation for holy war by his emphasis on the Essene love of peace. See also DEAD SEA SCROLLS §6; DEAD SEA SCROLLS[S] §§5, 6, 7.

\***ESTHER, BOOK OF.** The OT book which describes the Jews' deliverance from persecution in the Persian Empire by Esther and Mordecai, an occasion which became the basis for the institution of the feast of Purim. Both the names Esther (אֶסְתֵּר; Akkad. *Ishtar*; cf. Pers. *stara*, star) and Mordecai (מֹרְדֵכַי; Akkad. *Marduk*) have as prototypes the names of Babylonian deities. Esther is also called Hadassah (Heb. "Myrtle") in Esth. 2:7, which seems to be regarded as her Jewish name.

1. **Contents.** Angered by Queen Vashti's refusal to display her beauty, the Persian King Ahasuerus (Xerxes) had her banished. Esther, a young Jewish girl who was under the guardianship of her relative Mordecai, was selected to become queen. Mordecai, who had instructed Esther not to reveal her Jewish identity, uncovered a plot to assassinate the king and, through Esther, had him informed. The plot was foiled and Mordecai's part recorded, but he was not then rewarded. He later incurred the hatred of the new vizier, Haman, by refusing to prostrate himself before him as everyone was commanded to do. Haman sought permission from the king to destroy not only Mordecai, but all of a people scattered throughout the empire who had different laws and did not keep the king's law, implying that this would fill the royal coffers as well. Permission was granted, and after Haman had determined the date for the pogrom by casting the lots (*pur*), royal edicts were sent throughout the empire. Mordecai had Esther appear before the king unsummoned; she did so and was warmly received. Being told that any request she made

would be granted, she invited the king and Haman to a banquet she was preparing for that evening. When the king again extended his offer, she invited them to a second banquet the next day. Haman boasted to his wife and companions of his grandeur, but concluded by saying that it all turned to gall when he encountered an unrepentant Mordecai in the palace gate. Advised to strike at once, he built a huge gallows and returned that night to the palace for permission to hang Mordecai on it. Meanwhile, the king, unable to sleep, had the royal journal read to him, and was reminded that Mordecai had earlier saved his life but had never been rewarded. The king sought the advice of Haman, who suggested that the one whom the king wished to reward be given highest royal honors. "Do so to Mordecai the Jew who sits at the king's gate" (6:10), ordered Ahasuerus. And Haman did. Crestfallen he returned home, only to be summoned to the second banquet. There Esther revealed her Jewish identity and Haman's plot. Haman made an inept appeal to Esther for his life, but was hanged by the enraged king on the gallows which he had built for Mordecai. Mordecai was then given Haman's estate and office, and new edicts were sent out permitting the Jews to defend themselves. On the thirteenth day of Adar—and on the fourteenth also for the Jews of Susa—they successfully did so. It was then determined that the deliverance was to be celebrated each year with a feast called Purim. And so "Mordecai the Jew was next in rank to King Ahasuerus, and he was great among the Jews and popular with the multitude of his brethren, for he sought the welfare of his people and spoke peace to all his people" (10:3).

2. **Literary analysis.** The book of Esther now appears as the festal legend for the Jewish feast of Purim, the origins of which are obscure (see PURIM §2). However, the links with this feast within the narrative are tenuous. With the exception of the notice in Esth. 3:7, they are found only in the ninth chapter, which is much more discursive and prosaic than the body of the book. It appears that an existing tale of Esther and Mordecai was taken over to provide a basis for the celebration of a festival already popular among the Jewish communities of the eastern Diaspora (see DISPERSION §3; EXILE §3). The festival was quite possibly of pagan origin. A natural conclusion for the tale is found in ch. 8, in which Haman's position and property are given to Mordecai and the pogrom is thwarted. This tale is in essence one of conflict between courtiers, in which officials battle for position and power. The emphasis is on action and story development. The tale is well constructed, with a whole series of seemingly chance happenings and ironies that hold the reader's attention and that entertain. The characters are rather stereotyped and two-dimensional; action, rather than personal motivation or feeling, is stressed. The rapid narrative pace is broken only when the author lovingly dwells for a time on the personages and trappings of the royal court (1:3-9, 13-14; 2:12-14, etc.), in what seems to be an attempt to provide his story with an appearance of historicity.

Critical analysis of this tale has found three separate parts that may originally have been unrelated. There is first the short and independent tale of Queen Vashti (Esth. 1), which serves as an introduction to the Persian court and provides the occasion for the entrance of Esther into the royal harem. The second tells of the adventures of a lovely young Jewish girl who rises to become the favorite of the king and delivers her people from persecution. The third, interwoven with the second, is a tale of conflict between two courtiers. The second and third are so intertwined that, in spite of the presence of some seams and seeming doublets (*see esp. ch. 2*), they cannot be separated with any certainty. However, it is to be noted that some early lines of tradition placed more emphasis on the role of Mordecai (*see "Mordecai's day" in II Macc. 15:36; the exclamation "let Mordecai be blessed" in T.B. Meg. 7b; as well as the mention of Mordecai, but not Esther, in Esth. 10*), while others seemed to underscore the part taken by Esther (*see esp. Add. Esth. 15:1-16*). Yet, in the tale as now constructed the two figures are too closely bound in purpose and situation to be separated (Esth. 2:7, 10-11, 19-22; 4:1-17).

This tale of court conflict and intrigue is most likely a product of the late Persian Diaspora. Later, probably in the early Hellenistic period, the tale was taken up by some of these Jewish communities and utilized as a foundation for the popular festival of Purim—a festival not mentioned in the Torah, thus historicizing it and providing a legitimate basis for its observance. This was done through the insertion of the notice in Esth. 3:7 about Haman's casting lots (*pur*) to determine the most propitious day for his intended pogrom, reference to which is not found again until Esth. 9:23-28. The emphasis moves in ch. 9 from the conflict between courtiers to the broader themes of the Jews' overcoming the destruction that threatened them and the fixing of the dates and forms for the celebration of Purim. It is possible that several hands are to be seen in Esth. 9, as attempts were made to reconcile different dates and practices in the celebration of Purim among the scattered Jewish communities.

Several further additions made in the later Hellenistic period are found inserted in the LXX, but not in the MT (*see ESTHER, APOCRYPHAL*).

**3. Theology and purpose.** At every level in its development the tale of Esther and Mordecai clearly has entertainment as an essential purpose. This is true of the short tale of Vashti in the first chapter and of the book as a whole, as attested by the book's reception at its annual reading at Purim down through the years. The fast-paced action, the exotic setting, the intrigue, scheming, and suspense, the sudden reversals and delightful ironies, the happy ending: all are the ingredients of popular storytelling. Both the tale of Vashti and the tale of Esther and Mordecai reflect a type of literature about courtiers that was quite popular in the ancient Near East and early Judaism, as witnessed by the popularity of the JOSEPH STORY, the tales in Dan. 1-6, and the extrabiblical tale of Ahikar (cf. Tob. 1:21-22; 14:10; *see AHIKAR and AHIKAR, BOOK OF*). The inner workings of

the royal court, where the lines of authority were ill-defined, and where great power and wealth were to be won if one had the wits to master the situation, have always fascinated readers. And Gaster has suggested that the tale of Vashti is a harem story satirically showing how the willfulness of one pretty woman compelled the king and highest officials of the realm to marshal all the instruments of government to assure male supremacy in the home.

While providing entertainment, the court tale of Esther and Mordecai also presents a distinctive theological understanding and presupposes a particular style of life for Diaspora Judaism. It has often been noted that there are no references to God or to specific Jewish religious practices as these are developed in the Torah. An awareness of a divine purpose is evidenced in Esth. 4:14 ("For if you keep silence at such a time as this, relief and deliverance will rise for the Jews from another quarter. . . . And who knows whether you have not come to the kingdom for such a time as this?"), and some understanding of providence is presupposed in the work (cf. Jos. Antiq. XI.vi.11). But events seem to work themselves out on the human plane, and there is no sudden and miraculous divine intervention into the course of human history. Moreover, the Jewishness of Esther and Mordecai did not prevent them from living full and effective lives in interaction with their pagan environment. Esther is the Persian queen and Mordecai a royal courtier. There is no concern for the difficult legal problems that arose as later Jewish circles pondered the situation of these two Jews so highly placed in the royal court and harem (contrast Dan. 1:8-16; the book of Judith; and later developments of Esther in the LXX, Josephus, and the Midrash). Their success and the deliverance of their people are dependent, not on their keeping customs and practices distinctive to Judaism, but on their effective action in the slippery and dangerous confines of the royal court. The central conflict itself is as much a result of the courtier's characteristic concern over rank and authority (3:1-5) as it is a result of the Jewishness of Mordecai (3:4b; cf. Dan. 1; 3; 6) and the fact that Haman is an Agagite (3:10).

This absence of particular Jewish customs and legal practices and of clear reference to the deity and to divine intervention in human affairs has led to the suggestion that this tale was formed under wisdom influence which flourished in the royal courts (*see WISDOM §1a, b, c; WISDOM IN THE ANE[S] and WISDOM IN THE OT[S]*). This has been strengthened by the observation that there are affinities between the tale of Esther and Mordecai and the Joseph narrative of Genesis, both in over-all narrative form and development and in linguistic usage and idiom. In essence, this tale affirms to the Jew of the Diaspora that it is possible to live a rich and creative life in the pagan environment and to participate fully in that world. As Esth. 10:3 suggests (cf. also Jer. 29:1-7; the Joseph narrative in Genesis; the figure of Nehemiah), the Diaspora Jew could serve both king and people at the same time and even reach the heights of authority as well.

This latter characteristic of the tale was radically overturned when it was brought into conjunction with the feast of Purim, which placed emphasis on the conflict between Jew and pagan and on the joy at the defeat of the latter. Survival of the Jews under persecution became the central concern at this level in the development of the book (ch. 9), and the line between Jew and pagan was more sharply drawn. A tension appears in the book, perhaps revealed most strikingly in the almost absurd figure of the malleable and foolish king who first permits the destruction of many of his subjects and then must destroy great numbers of others to spare the first. Esther now becomes less an example of effective and creative interaction between the Jew and the foreign world and more a symbol of hope in the face of persecution, although the vindictive quality that in part accompanies this change has disturbed many.

Even in its incorporation into the festivities associated with Purim the book remained free from any direct reference to God. This may reflect a concern to avoid any unintentional abuse of the divine name in the unrestrained celebration and feasting that is essential to the festival. Additions in the LXX and developments in later Jewish tradition supply what many seemed to find lacking in the book: clear reference to the deity, to divine purpose and operation in human history, and to Jewish practice and piety.

\***ETHICS IN THE NT.** It is not proper to speak of the NT ethic because, in spite of all the lines of convergence and the constant elements, it is necessary to treat the various writings and authors separately and to inquire into their ethical motifs and criteria and the way these are applied. Our concern here is not so much with an ethos that is lived or with descriptive ethics (see ETHOS OF EARLY CHRISTIANITY[S]), but rather with normative ethics, that is, with the presentation of the underlying reasons, motivations, orientations, and contents of earliest Christian ethics.

1. **Jesus and the Synoptic gospels. a. Eschatology and ethics** belong indissolubly together in the TEACHING OF JESUS. The preaching of the KINGDOM OF GOD forms the fundamental presupposition and basis of Jesus' ethics, regardless of how his eschatology is defined. Even if eschatology and ethics are regarded as two distinct entities relatively isolated from each other, or if no direct connection is seen between the two complexes, some suggestions must be made as to how the two are related. Both the future and the present components of the kingdom of God are to be taken into account here. Crisis parables like that in Luke 12:58-59 demonstrate the necessity of proper conduct in the last hour. The so-called admission sayings, which make entrance into the kingdom of God dependent on particular conditions (Matt. 18:3 and similar passages), or the threats of judgment, according to which people must give an account of themselves at the end (Matt. 5:22; 7:1; Mark 12:40), show the eschatological orientation of Jesus' ethic. Above all, the promises of reward (Mark 10:21; Matt. 5:46; 6:19-20) belong to the series of eschatological motifs, and thus special emphasis is given to the idea of the individual's obligation to serve (Luke 17:7-10). The kingdom of God, however, is not simply an event yet to come which serves to motivate people to right conduct. Rather, according to Matt. 13:44-46, it is also a discovery, already joyously affirmed, which brings them to a decision. Because God's mercy has already been bestowed on men and women, they are called upon to show mercy (Matt. 18:23-35; cf. also Matt. 5:44-45; Luke 7:41-50; 15:1-32). Therefore, the ethic of Jesus is not intended simply as a preparation for the eschaton; it arises out of the mercy of God which is already experienced in Jesus. This means that the interpretation of the ethic of Jesus as a so-called "interim ethic" is inappropriate. Jesus is not a prophet of the decline and end of the world, and the decisive motive and profoundest reason for Jesus' demands are not to be found in the im-

minent end of the world or in fear of the end. They are to be found in the God who brings salvation near in Jesus, and in the will of God which Jesus proclaims with authority.

This does not mean that we may isolate the content of the demands of Jesus and regard it as unaffected by eschatology. Indeed, the tradition contains a natural ethic, the contents of which are in tension with the eschatology, e.g., the almost rationalistic appeal to reason and experience which stems from the wisdom literature (cf. Matt. 6:19 ff.). But this is only one argument among many. Sound human reason may question the abiding value of earthly treasures, or it may provide insight into the senselessness of anxiety, but it can hardly draw the inference that we should lay up "treasures in heaven" or achieve freedom from anxiety. The wisdom tradition, therefore, with its prudence and good sense about life, is repeatedly shattered by eschatology (cf. Matt. 10:26). See WISDOM IN THE NT[S].

**b. Repentance and discipleship.** The appropriate response to the coming kingdom of God is first of all REPENTANCE (μετάνοια; cf. Mark 1:15, which is to be regarded as a secondary but apposite résumé). It requires a wholehearted turning toward God, not a legalistic zeal for penance or an obedience to the Torah. God comes to us without reservations or preconditions, and we must respond to him in the same way; he wants nothing halfhearted or partial, but wants total and undivided obedience (cf. Matt. 6:24 and *passim*). In this one respect Jesus' ethic can be interpreted as an "ethic of attitude," emphasizing that he is not concerned with peripheral details, but with the center of our being. The pure heart (Matt. 5:8) is the undivided heart. However, it would be incorrect to set this in antithesis to works and deeds, because Jesus is also concerned with obedience shown in our actions (Luke 6:43 ff.; Matt. 21:28 ff.).

Because the coming of the kingdom is inseparable from the person of Jesus, repentance is manifested in DISCIPLESHIP. There is no analogy here to the schools in Judaism for, in contrast to the rabbis, Jesus associated with sinners, prostitutes, and tax collectors, and in his teaching discipleship was not merely a transitional stage that led to becoming a teacher. Moreover, the learned atmosphere of the house of instruction is lacking, as is a fixed place for teaching. Following Jesus, as a relationship with his person and his cause, does not mean imitating him; nor does it always imply an outward companionship with Jesus (thus Mark 1:16-20; 2:14), but rather a readiness to accept the consequences (cf. Matt. 8:19-22) and a commissioning for, initiation into, and inclusion in the mission of Jesus (Mark 6:7-13; Matt. 9:37-38; Luke 9:60b).

**c. The Law.** While in postbiblical Judaism the Law had come more and more to be the crucial element in life and for salvation, and had acquired ever-increasing independence and absoluteness, Jesus' attitude toward it was consistently free. Because the idea of the Law was stressed in a variety of ways in the early church, it is difficult to distinguish Jesus' own view. Yet it can

be said with some certainty that he neither rejected the Law nor fully accepted it, but combined acceptance with criticism. It is evident first of all that for Jesus God's commandments in the Decalogue were the point of departure and of orientation for his own demands (cf. Mark 10:17-22), even though in Matt. 5:18-19 this is sharpened by strict, law-observing Jewish Christianity. Clearly discernible also is a radicalizing of the Law's demand for obedience: not only murder but even anger, not only adultery but even a lustful look, not only perjury but even an oath is evil (Matt. 5:21-26, 27-30, 33-37). Along with the quotation of the Law and its intensification, it is contrasted to tradition (cf. Mark 7:9-13), and in this at least the criticism of tradition goes back to Jesus himself, as the conflicts over the sabbath confirm (Mark 2:23-28; 3:1-6).

Jesus' sovereign freedom, however, goes further and touches not only the interpretation and practice of the Law, but the Law itself. This is evident first in the fact that one passage of scripture is played off against another (Mark 10:2-9). But Jesus, without any support from the Scripture, also violated and annulled both the law of retaliation attested in the Law (Matt. 5:38) and the cultic and ceremonial commandments (Mark 7:15). It was not as though the will of God cannot be discovered in the Law, or that Jesus understood his mission as clarification of a misunderstanding concerning the Law. Rather, he rejected the identification of the Law and God's will and the return to the letter of the Law. For him, the criterion by which even the Law must be measured is the commandment to love both God and neighbor.

**d. The Great Commandment.** It is disputed whether the summary of the Law in the dual commandment of love (Mark 12:28-34; Luke 10:25-28) goes back to Jesus himself. It is certain that the interpretation in Matthew (22:40), according to which "all the law and the prophets" depend on the two commandments, is the result of redaction (cf. also the insertion of the GOLDEN RULE in Matt. 7:12 and of Hos. 6:6 in Matt. 9:13 and 12:7), as is the apologetic and rational version of the tradition in Mark 12:28-34. Further, in Hellenistic Judaism there were already attempts to advance beyond the splintering of moral demands and to interpret love as the summation of obedience to the Torah (cf. Test. Iss. 5:2; 7:6; Philo, *On the Special Laws* II, 63; cf. also T.B. Jebam 49a). In the end these attempts were destined not to succeed, and they never were phrased as a combination of Deut. 6:4-5 and Lev. 19:18. In substance, however, the placing of the commandment of love in a pre-eminent position is entirely in harmony with Jesus' own intention (cf. also Mark 3:4; Matt. 23:23).

For Jesus, love is first of all love for one's neighbor. In the OT the meaning of "neighbor" was restricted to the people of Israel and the foreigners who dwelt in the land, and in Judaism in the time of Jesus the discussion on this point was not settled (Jewish documentation for the universal application of the term can be demon-

strated only from the second century A.D. onward). But Jesus' parable of the good Samaritan (Luke 10:29-37) reveals the unlimited scope of the obligation to love (cf. Luke 10:25-28). Against the background of the irreconcilable hatred between Jews and Samaritans, the choice of a Samaritan here is an indication that love dares to transcend prejudices, conventions, and national and religious limitations, and is able to discern in everyone the person who is commanded to show sympathy for others, and to provide concrete assistance (cf. also Matt. 25:31 ff.).

Removal of the limitations on who is one's neighbor is climaxed by the inclusion of one's enemy (Matt. 5:44). This universalizing of love not only makes it clear that love is not a "preference" (Kierkegaard) or a love based on reciprocity (Matt. 5:46-47); it also transcends the identification (possible in the context of love of neighbor) of the object of love with family, circle of friends, or homeland.

The co-ordination of love of God and love of neighbor should not be understood, however, as meaning that they are identical. This cannot be claimed even on the basis of Matt. 25:31-46. Obedience to God certainly cannot be practiced without regard to one's neighbor; it is to be substantiated and made concrete in the encounter with the neighbor. The original intention of the parable probably was that the king represents God, and so God is identified precisely with "the least of these my brethren." But God is not wholly represented by concern for others, and he does not appear only in hidden form in the figure of the neighbor in distress; he also will appear in the future, no longer hidden, as Judge of the world. Conversely, however, love of neighbor is so little directed toward God in its practice, that those who do good works are not at all aware that they have done them to God. Thus, the two are to be distinguished but not separated. Even Matthew, who, in contrast to Mark, says explicitly that the "second" commandment is "like" the first (Matt. 22:39), does not say that the two are the same.

*e. Specific teachings.* For Jesus all structures and institutions of the world are provisional (cf. Mark 12:25), but he did not conclude that we should therefore sabotage them or withdraw from them, or that we should try to stabilize and sanction them. In case of conflict one must be willing to abandon all (cf. Matt. 10:37-38; Luke 14:26), but this did not lead Jesus to show contempt for the world. It was not wholly without reason that he was criticized as a glutton and a winebibber (Matt. 11:19). Jesus certainly opposed divorce, referring back to his belief about creation, but this is not the same as a defense of the *status quo*. This is evident in the conflicts over the sabbath and in his sharing meals with tax collectors and sinners, a practice offensive to many around him (Mark 2:15). He neither saw his distinctive task as that of reforming society (cf. Luke 12:13-14) nor did he simply preach an inwardness and a piety of the heart (cf. also the healings). It is hardly possible then to apply to Jesus' words the Lutheran distinction between a

spiritual and a worldly kingdom, or between person and office. From the outset this distinction between private and public spheres blunts the point of many radical sayings of Jesus. It is also impossible to distill from Jesus' words a two-level ethic or to interpret them as enunciating impossible demands meant only to prompt repentance. Rather, they seek to clarify, by examples, the meaning of radical obedience.

*i. Relations between men and women.* In his teachings and his practice Jesus clearly dissociated himself from the general religious and social discrimination against women. His summons was addressed to men and women alike (cf. the parables drawn from the world of women's work). Altogether untypically, moreover, women are found in his entourage (Luke 8:1-3; vs. 3 is a case of Lukan stylizing and generalizing; cf. also Mark 15:40-41; Matt. 20:20); they are healed by Jesus (Matt. 8:14-15; 9:18-26), or are held up as examples of true faith (e.g., Matt. 15:28).

Marital union is something provisional and temporary (Mark 12:25); indeed, some refrain from marriage for the sake of the kingdom of God (Matt. 19:12 is to be understood in this way and not as meaning self-castration or incapacity for marriage), but such celibacy does not arise out of ascetic and dualistic motives or for the sake of gaining merit, and it is not a binding rule. For example, Peter was married and remained so (I Cor. 9:5). Even less did the eschatological relativizing of marriage lead Jesus to denounce sexuality and marriage. Rather, he recognized them as in harmony with the creative will of God and sought to guard against divorce (Mark 10:2-9). Here Jesus distinguished his own position from the easy practice of divorce, particularly of the followers of Hillel, but also from the harsher view of the school of Shammai, which allowed divorce in the case of unchastity (cf. the secondary softening of the rule pertaining to this in Matt. 5:32 and 19:9). Jesus offered protection to women, who at that time were under a serious disadvantage with respect to the Law. He also sharply condemned adultery (Matt. 5:27 ff.). See also WOMAN IN THE NT[S] §3; MARRIAGE IN THE NT[S] §2.

*ii. Possessions.* In harmony with the apocalyptic woes (cf. I Enoch 94:7-8; 96:4-8), the gospels also contain woes for the rich and promises for the poor (Luke 6:20, 24), but above all clear warnings against the danger of riches. It is true that Jesus hardly demanded in general terms a renunciation of possessions (cf. Mark 1:29; 2:14 ff.), but in individual cases he called upon people to sell (Mark 10:17-22) or to abandon everything (cf. Mark 10:28). It is impossible to serve God and mammon simultaneously (Matt. 6:24). Warnings are frequently given against collecting earthly treasures (Matt. 6:19-21; Luke 12:13-21; 16:19-31). Possessions are to be used for the benefit of the poor and of those who have fallen among robbers (cf. Mark 10:21; Luke 10:35; cf. 16:9; 19:8).

*iii. The state.* In spite of the fact that those who followed Jesus were already governed by a power other than that of the state (cf. Mark 10:42-45), Jesus did not oppose the Roman state in the spirit of the ZEALOT revolutionaries. While

the Zealots consistently refused to pay the imperial tax, because they regarded it as an infringement upon God's sovereignty, Jesus regarded it as the emperor's rightful due (Mark 12:13-17). Indeed, without being asked he added to the saying, "Render to Caesar the things that are Caesar's," the further admonition, "and to God the things that are God's." Thereby the admonition about obeying God is given priority above any other. Jesus' saying occupies a middle position between the two extremes of rebellion on the one hand and glorification or unconditional and uncritical affirmation of the emperor (cf. also Luke 13:32; 22:25, and similar passages) on the other; but vs. 17 is directed essentially against the Zealots. Even though Jesus did not belong to the Zealots' liberation movement, his message must have held a certain attraction for its members (cf. Luke 6:15, among others). But in spite of some points of contact, there can be no doubt about the distance between his movement and that of the Zealots. His exhortation to love one's enemies and to renounce violence, his table fellowship with the tax collectors, and many of his individual sayings (cf. Matt. 26:52) are irreconcilable with the Zealots' use of violence.

See also TEACHING OF JESUS[S] §3d; ROME, EARLY CHRISTIAN ATTITUDES TOWARD[S] §1.

2. **The earliest church.** It is not easy to achieve any certainty about the pre-Pauline communities, yet the Cross and the Easter event, as well as the experience of the Spirit and the expectation of the imminent end, must be regarded as the common presupposition of any post-Easter ethic. Along with the voice of prophecy (see PROPHECY IN THE EARLY CHURCH[S]), the words of Jesus were regarded as the supreme norm and guideline for Christian conduct. Even though the Logia source as a whole hardly goes back to the earliest church and though the sayings of the Lord were not collected exclusively for parenetic purposes, it is still true that PARENESIS was a central component of Q (see Q; Q[S]; SAYINGS OF JESUS, FORM OF[S]). Particularly evident is the parenetic reshaping of texts that were originally otherwise oriented, but it is difficult precisely to localize and date the reshaping. Further, even before the time of Paul more than one attitude can be observed, particularly on the question of the validity of the Law. Thus the Hellenists who are criticized in Matt. 5:19 appear to have adopted a freer attitude toward the Law. The so-called communism of the early church also probably goes back to the circle of the Hellenists, though this practice as portrayed in the summary statements in Acts 2:42-47 and 4:32-37 is hardly historical; it is, rather, a generalization of individual cases of renunciation of possessions, like that of Barnabas as presented by Luke (Acts 4:36-37). But since Barnabas was probably one of the Hellenists expelled from Jerusalem (cf. Acts 11:29-30), this shows that in Stephen's circle there was not only freedom of the spirit but also freedom to renounce possessions. Very early the problem was posed as to the limits of what was tolerable in a Christian community (cf. Acts 5:1-6). It appears that even before Paul certain schemata and the contents of

ancient ethical teachings, such as the catalogues of virtues and vices (see LISTS, ETHICAL; LISTS, ETHICAL[S]), had been appropriated and integrated into missionary preaching (cf. Gal. 5:19-24; I Thess. 4:2-8). Parts of the parenetic chs. of Paul's epistles in particular are to be regarded as belonging to the ethical tradition, even though we can hardly posit a primitive Christian moral catechism.

3. **Paul. a. Basis and motivation.** Paul frequently divided his letters into two parts, thus stressing that God's saving action in Jesus Christ is the basis and ground of action for the Christian. The relation of the indicative, in the word of salvation, and the imperative, in the moral demand, is not that of ideal and actuality, or of theory and practice, but a substantively necessary paradox which is rooted ultimately in the eschatological dialectic. The immediate juxtaposition in I Cor. 5:7 and Gal. 5:25 shows how far from inconsistent Paul is here. Christ is the one by whom the Christian lives (cf. Gal. 2:20) and he ultimately gives charismatic dimension to all that the Christian does (cf. I Cor. 12:11 and *passim*). Therefore, the conduct corresponding to the imperative cannot be understood as completing or realizing something only potentially given, nor can the gift of the indicative be separated from the Giver.

The content of the indicative cannot be found by isolating individual elements and classifying the entire Pauline ethic as "pneuma ethic," "sacramental ethic," "telos ethic," or such. Rather, the various motivations belong together. The most we can say is that God's eschatological saving action in Jesus Christ is the all-inclusive basis of the Pauline ethic. The Christian is both set free by Christ and taken into Christ's service, and so the Christian life is determined by Christ (II Cor. 5:14-15; I Cor. 3:21-23). This means that the ethical dimension is not something secondary, but already is implied in the relationship with Christ. This is confirmed by, e.g., the use of Pauline *Kyrios* title (cf. Rom. 14:8-9; 16:18, and *passim*), the parenetic introductory formulas (II Cor. 10:1; Rom. 15:30 and *passim*), and the pattern of conciliation and conformity (Rom. 15:2-3, 7).

If baptism makes the Christ event real for believers (cf. Rom. 6) by releasing them from the power of sin and making them partakers in Christ's destiny, it is also a part of the basis of Christology. And since Paul's doctrine of the Spirit is also related to Christology (cf. II Cor. 3:17; Rom. 8:9), the charismatic activity of the Spirit is another ground for ethics for the Christian. By the miraculous power of the Spirit Christians are enabled to live a new life, and the entire Christian life is to be regarded as the "fruit of the Spirit" (Rom. 8; Gal. 5). The idea of a "gift" (charisma) which belongs with the gift of the Spirit stresses yet more pointedly the bestowal of individual gifts and responsibilities (I Cor. 7:7; 12:7, 11). If Christology ultimately sets the context even for eschatology (cf. the idea of "being with the Lord" as the central element of the Pauline expectation), the motif of future salvation, which is central for ethics, can also be cited here (Rom. 13:11-14; I Thess. 5:1-11); in any case,

even in Paul, ethics is not a compensation for a receding eschatology, but is a consequence of a lively and vital eschatology.

**b. The new obedience.** The transformation of human nature (Rom. 12:2) as renewal of the whole person and the overcoming of the divided condition of the self described in Rom. 7 are in harmony with the wholeness and unity of God's demand and of human obedience (cf. the striking change in number in Gal. 5:19, 22 ["works," "fruit"]). But that transformation and renewal are both manifested in specific demands and deeds. Various facts related to the particular situation play a role, especially in I Corinthians. Yet even the usual character of Pauline parenesis, with its individual admonitions, which for the most part are strung together loosely and without order, indicates that a pure situation ethic does not suffice. Not all of the admonitions are tailored to fit specific, individual cases (cf. the catalogues of virtues and vices, or I Thess. 4:1 ff.), and Paul is often looking beyond the moment and the individual congregation (cf. I Cor. 4:17; 7:17; and other similar passages). This does not detract from the concrete character of the apostolic admonitions. These do not contradict the bestowal of the Spirit and the personal character of obedience. Nor are they merely solutions designed for an emergency or a transitional situation, because they are also addressed to those who both know and practice what is required (I Thess. 4:1, 10). This only underscores the fact that Christians continue to be people under threat of attack (Gal. 4:9; 5:17; I Cor. 10:1-13). Freedom from the Law as a way of salvation (Rom. 6:14; 7:1-6; Gal. 2:19) and freedom "from all men" (I Cor. 9:19; cf. 3:21-23) do not mean a dispensation from "keeping the commandments of God" (I Cor. 7:19), which Paul does not distinguish from the apostolic instructions (I Thess. 4:1-2). In spite of the significance of self-examination (I Cor. 11:28; Gal. 6:4), reason (Rom. 12:1; Phil. 1:10), and the judgment of conscience (I Cor. 8:10), the Christian cannot unequivocally and definitively judge him/herself (I Cor. 4:1 ff.); nor can we absolutize our own style and pattern of life or make it a matter of purely private concern. To be sure, there is a diversity in ethical decisions (cf. I Cor. 6:1 ff. and chs. 8-10), but Paul strongly insists on seeking together for the will of God and striving to do it (cf. Rom. 15:5-6; Phil. 2:2 and *passim*).

**c. Material criteria.** In spite of the knowledge of an ethical norm, even on the part of non-Christians (cf. Rom. 2:14-15; 13:3; I Cor. 5:1); in spite of a congruence between the Pauline ethos and that of antiquity (this is presupposed, e.g., in I Thess. 4:12; I Cor. 10:32); and in spite of the unequivocal acceptance of ethical norms and content from the environment (cf. Phil. 4:8), we still cannot speak of a simple identity between the Pauline ethic and that of the surrounding environment.

It is possible to cite several different factors which are responsible for the content of the Pauline ethic. Among these is the OT belief about creation (cf. I Cor. 10:26; Rom. 14:20 and the references to "nature" in Rom. 1:26; I Cor.

11:14), to which eschatology forms a certain corrective (e.g., in the estimate of marriage; see §dii below). Other OT demands are found primarily in parenthetic proverbial material (cf. Rom. 12:16, 17, 19, 20), and these are in part quoted explicitly (cf. Rom. 12:19, and further I Cor. 6:16; II Cor. 8:15; 9:9). In this process, to be sure, various implicit modifications are made. I Cor. 9 shows that a word of the Lord (vs. 14) is an authority that stands above the OT (vss. 8-9).

A clearly delineated saying of the Lord is acknowledged in I Cor. 7:10-11 as a superior authority. In addition to the relatively few sayings of the Lord (cf. I Cor. 7:25) which Paul quotes, one can also count some points of agreement which are not noted as such (Rom. 12:14, 17; 13:8-10, etc.). However, it is not the concrete example of the earthly Jesus, but the imitation of Christ (μίμησις τοῦ Χριστοῦ) that is of crucial significance for Paul (cf. I Cor. 11:1; I Thess. 1:6; Rom. 15:2-3, 7): conformity to and harmony with the Christ event.

From this it follows that Paul, like Jesus, places great emphasis on the commandment to love, which not by accident can also be called "the law of Christ" (Gal. 6:2; cf. Rom. 14:15 also with 15:5). Love means being free from oneself and being available to others, and this is the quintessence and center of all the individual demands (Rom. 13:8-10; Gal. 5:14). This central position of love is also repeatedly exhibited in the individual admonitions, e.g., in the discussion of the right relationship of the strong to the weak in Rome and Corinth (Rom. 14-15; I Cor. 8-10). Love as the motivating and guiding force is demonstrated not only within the confines of the community, but also in interpersonal relationships: in the relationship of master and slave (cf. Philem. 16, "in the flesh and in the Lord"), in marriage (I Cor. 7:4), in love for one's enemies, and in refraining from taking revenge (Rom. 12:17-21). Although Paul knows all about the hidden character of love (I Cor. 13:3), it does not continue to be hidden, and he is thoroughly familiar with its signs (I Cor. 13:4 ff.).

**d. Concrete admonitions.** i. *The individual.* The idea of community and solidarity in the OT and Jewish tradition, although it takes seriously the individual's responsibility, still does not admit an ethic that is oriented primarily to the individual. For this reason also the Greek concept of virtue is absent from Paul's ethic (in Phil. 4:8-9, ἀρετή is used in an utterly non-Greek way). The term "body," which is central for Pauline anthropology and ethics (see BODY[S] §2), does not have reference to a relationship to oneself, but signifies primarily a person in his or her capacity for interpersonal relationship and communication (I Cor. 6:12-20). Of course Paul is familiar with the struggle against the real self to achieve self-discipline and self-mastery (I Cor. 9:25), or inner freedom and independence from needs (Phil. 4:11-13). The socioethical dimension of Paul's ethic is dominant, however, though one must not set up false alternatives here (cf. Gal. 5:22-23). Paul's position respecting labor and property is

typical. On the one hand he practices manual labor (cf. I Cor. 4:12), which he does not idealize, in order not to be a burden to anyone (I Thess. 2:9) and to avoid being confused with the materialistic behavior of popular Christian or syncretistic propagandists (cf. II Cor. 12:14; I Thess. 2:5); on the other hand he sets labor within the context of brotherly love (I Thess. 4:9-12; cf. later, Eph. 4:28). He uses the intrinsic transcendence of everything earthly as a basis for inner freedom, even with respect to possessions (I Cor. 7:30; cf. Phil. 4:11-12), but he also urges commonality with respect to earthly goods (Gal. 6:6; cf. also the matter of the collection, particularly in II Cor. 8-9).

ii. *Relations between men and women.* Since all values that belong to this world are overcome in Christ (Gal. 3:28), man and woman have the same rank before God (see WOMAN IN THE NT[S] §2). This overcoming of the inferiority of woman also has practical consequences, evident from women's sharing in the work of the community (cf. Rom. 16:1, 3, and *passim*) and their prophetic preaching (I Cor. 11:5). I Cor. 11:2-16 is a difficult passage. There Paul uses a number of rather inconclusive arguments, apparently to counter an emancipation of Corinthian women that shows signs of enthusiasm. In so doing, particularly in vss. 7-8 (as distinguished from vss. 11-12), he is clearly on a level beneath that of Gal. 3:28, even though we may note that here, as always, Paul talks about freedom as freedom for service.

Paul's undeniable reservations about marriage are not based on a depreciation of sexuality or of the human body. He places a high value on celibacy, which according to I Cor. 7:25-31 makes possible an undivided commitment to the Lord in the age that is coming to an end, and which as a *charisma* (I Cor. 7:7) affords a special possibility for service to others, but he clearly warns against the dangers of sexual asceticism (I Cor. 7:2). Marriage is bodily communion also, in which the body of either marriage partner is at the disposal of the other (I Cor. 7:3-4), an arrangement that is to be suspended only upon agreement and only for a limited time (I Cor. 7:5). Another feature of marriage is its indissolubility; hence Paul rejects divorce, borrowing a saying of the Lord (I Cor. 7:10-12).

iii. *Slavery.* While the slave in antiquity was usually regarded as a piece of property (*res*), and therefore is counted in enumerations of possessions, along with money, real estate, and the like (see SLAVERY IN THE NT[S] §§1-3), Paul relativized slavery and made it outdated by the idea of brotherhood. He did not preach the emancipation of slaves, but neither did he interpret slavery as a divinely ordained institution. For him the main thing was, during the short time yet remaining, to demonstrate obedience in the "state" in which the call of the Lord had been received (I Cor. 7:17-24). Even the master is a slave of Christ, and the slave a freedman of Christ (I Cor. 7:22), and this not only has consequences within the community (observance of the Lord's Supper together, the fraternal kiss, etc.), but it also affects the institution of slavery itself. Thus, Paul desires

forgiveness of the runaway slave ONESIMUS, who according to Roman law had to expect severe physical punishment, branding, and even worse (Philem. 12 and 17). His request that the slave be relinquished indicates that for him it is not a matter of unassailable rights and property.

iv. *The state.* Rom. 13:1-7, which is often over-emphasized and for which the content was supplied in large measure from traditional material, was probably prompted neither by Zealot nor revolutionary tendencies in Rome nor by apologetic intentions. Instead, it is a part of two parenthetic chs. in which Paul is urging the fundamental principle that his readers should take seriously their earthly obligations in everyday life, regardless of their provisional character (Rom. 13:11-14). The earthly authorities, who are put in their positions by God, are not to be undermined but respected. Obedience is not to be confused with an uncritical spirit of submissiveness, particularly since Paul himself had come into conflict with political authorities (cf. II Cor. 11:23-25, 32-33). Paul mentions only indirectly that the state's rationale and function is to protect and promote the good. This involves the maintenance of law and justice, thus making possible a well-ordered community life, and the warding off of evil, i.e., by the exercise of judicial and punitive power (Rom. 13:3-4). Because Christian obedience does not result from compulsion or fear, but from freedom and insight (cf. vs. 5), Christians fulfill even such prosaic obligations as the payment of taxes (vs. 7). Even the renunciation of judicial decisions by the state (I Cor. 6:1-6) is no disqualification of the state's aim to maintain law and order; it is a manifestation of love, which does not renounce justice, but voluntarily renounces its own rights.

4. *The Deutero-Pauline letters. a. Colossians and Ephesians.* In Colossians and Ephesians also the indicative provides the foundation for the imperative, and this pattern is reflected in the structure of the epistles, cf. Col. 3:3, 5; Eph. 4:32; 5:2. The theme has, however, a different accent, insofar as a modification of eschatology and Christology is to be observed: in the foreground now stands the dominion which Christ has already achieved over the powers. In specific opposition to a heresy that regarded the world as demonic and placed a taboo on Christians' dealing with the world (cf. Col. 2:16-19) it is emphasized that the strength of the powers has been broken by Christ and that he is the head of all powers (Col. 2:10, 15; cf. Eph. 1:21). From this Christology arises the demand for obedience to this Lord in all areas of human life (Col. 3:17). In details there are various points of contact with Paul: the establishment of the new life through baptism (Col. 3:1-3), the old and the new nature (Col. 3:9-10), the idea of charisma (Eph. 4:7), the significance of reason (Col. 1:9-10; Eph. 5:17), references to the OT (Eph. 4:25-26; 5:31-32; 6:2-3), love as the decisive criterion (Col. 3:14), and rejection of asceticism (Col. 2:16-17). But there are also obvious differences: the plural "works" (Eph. 2:10), the strong connection of ethics with the church (Eph. 4:1 ff.; cf. also 2:14-22), and the emergence of new forms such as that of the HAUSTAFEL.

The injunctions of the *Haustafel* (probably taken over from Hellenistic Judaism; see LISTS, ETHICAL[S] §2) correspond in part to what was conventional at that time, e.g., that wives should be subject to their husbands. Of course a critical sifting and reshaping also took place, and there are also specifically Christian injunctions which make it evident that the structures and relationships of the world are understood as the place and opportunity for love; precisely in this the lordship of the *Kyrios* is made manifest. The idea of analogy, which was already potentially present in the motifs of the *Haustafel*, is given new expression in this process, particularly in Ephesians; thus, marriage between man and woman is analogous to the relationship of Christ and the church (Eph. 5:25; cf. 5:2; 6:5, 7). For Christians the *Kyrios* Christ is a prototype and a point of reference in social structures also.

**b. The Pastoral epistles.** The atmosphere is much more prosaic, moralistic, formal, and bourgeois in the Pastoral epistles, which are striving for a consolidation of the church on the foundation of the apostolic tradition. In the dispute with a Judaizing Gnosis, which, e.g., forbade marriage (I Tim. 4:3), they have the merit of having held soberly to mundane obligations in the face of the speculative and the ascetic. Moreover, it is not forgotten that ethics is grounded in soteriology (Tit. 2:11-14). Yet the correction of enthusiasm is provided not by eschatology, but by the idea of holding office; the Spirit is not primarily a gift and the sign of the dawning eschaton, but is closely bound up with church offices (II Tim. 1:6-7). Nothing more is said of the multiplicity of gifts. The content and criteria of the ethical teaching accord, in general, with the ideals of Hellenistic morality (cf. especially the admonition to a respectable and pious manner of life [εὐσεβεία]). But the doctrine of creation (cf. I Tim. 4:3-4) and respect for the natural orders is also present, and the ethic of the family (I Tim. 3:4-5; 2:15) and the interweaving of ethic and church order are predominant motifs (cf. I Tim. 3:2, 8-13).

In the specific injunctions as well we find clear differences from Paul: characteristic for the relationship of husband and wife is I Tim. 2:8-15 (corresponding to the secondary passage in I Cor. 14:34-35; see WOMAN IN THE NT[S] §2a), in which the sole guilt for the fall is ascribed to the woman, and rules from civil life apply now also in the service of worship. It speaks only of the love of the wife for her husband and children (Tit. 2:4), no more of the love of the husband for his wife. New and detailed rules are given for the care of widows (I Tim. 5:3-16), who at that time were under grave disadvantages. In the admonitions regarding slaves (I Tim. 6:1-2; Tit. 2:9-10) the absence of any admonitions to the masters is striking. The appeal to pray for kings and all those in authority (I Tim. 2:2), which also appears here for the first time, harks back to Jewish customs.

**5. The Catholic epistles. a. I Peter.** The coordination of kerygma and parenesis in I Peter corresponds to the dialectic of indicative and imperative in Paul; even though the motivation

usually follows rather than precedes, the basis for the ethic is that salvation is both present and future. In some cases christological statements in the form of a confession or a hymn (cf. 1:17-21; 3:17-20) and references to baptism predominate (1:22-23; cf. 1:2, 3; other motivations in 1:15-16; 5:5). In other cases, eschatology is the chief motivating force (4:7-8; 1:13). According to the superscription of the *Haustafel* here, Christians are aliens and exiles, who in the provisional situation of this world fulfill their earthly obligations in civil life and in the home (2:11 ff.). A considerable role is played, insofar as content is concerned, by the OT (cf. 1:15-16; 3:5-6 and *passim*), of which the author regards the church to be the heir (cf. 2:9-10). Of course, in some cases the Christian reinterpretation of OT texts is involved (e.g., the reshaping of Prov. 24:21 in 2:17, and the eschatological interpretation in 3:10-12 of vss. from the Psalms which were originally understood as a practical rule of prudence). Still more important is the analogy to the suffering Christ (cf. esp. 2:21-25 but also 3:9; 4:1). In I Peter, Christ is ascribed an exemplary significance, although the idea here of following in the "steps" of Jesus (2:21) must be distinguished from the idea of copying or imitating him. In the persecution that is beginning the author also insists upon the missionary and apologetic motive of regard for the opinion of non-Christians (cf. 2:12; 3:16; 4:14-15). In 3:1-2 the Christian manner of life is even credited with what the word was unable to do: the "winning" of non-Christians, which of course is not to be confused with mere conformity, but rather includes a break with earlier practices (cf. 4:2-4).

The author's primary concern is with brotherly love (1:22; 2:17; 4:8) and good works (1:17; 2:12). The *Haustafel* here (2:13 ff.) has some peculiarities when compared with those in Colossians and Ephesians. For instance, in 2:13-17, where the underlying tradition is similar to that of Rom. 13, some peculiar emphases are inescapable: obedience is to be offered to "creatures" (RSV "every human institution"); there is no parallel to Rom. 13:1b-2; freedom is the basis and mode of obedience (vs. 16). The admonition to the women (3:1-6) lacks any special Christian coloration, except for the comment about missionary responsibility in mixed marriages (vss. 1b-2) and the exhortation not to be terrified (vs. 6). The warning against outward adornment (3:5) has many parallels (cf. I Tim. 2:9; Isa. 3:18-24, and others). The exhortation to the men (3:7), on the other hand, is less traditional, and is aimed at consideration and understanding; a lack of consideration and love for others also burdens and disrupts the relationship with God (vs. 7b). In 2:18-25 the slaves are admonished, and, particularly in the case of harsh and unjust treatment by unreasonable masters, are referred to the example of the innocent sufferings of Jesus.

**b. James.** The epistle of James is a hortatory and didactic writing with a primarily ethical orientation. In terms of form criticism, it belongs to the category of parenesis, and it lists admonitions and warnings without any discernible continuity.

It draws from a broad parenetic stream of tradition which is fed by various elements of ethics from antiquity. The author wages a polemic against justification by faith alone and makes works once again a factor in salvation (2:14-26). Certainly, Christians are recipients (1:17), but faith is not understood as the root and basis of works or, as in Gal. 5:6, of love. Instead, it is seen as a purely theoretical and intellectual persuasion that something is true (2:19; a different position is reflected in the passages 1:3, 6; 2:1, that stem from the tradition). This perhaps points back to a degenerate Paulinism. The author, however, is not so much concerned with a new doctrine of justification or a different concept of faith as with the realization of a practical and concrete obedience. His warning against the separation of hearing and doing (1:22-25; cf. also Matt. 7:24-27) shows no recognition of the problematical aspect of doing, whether in terms of the priority of hearing the message of salvation (cf. Luke 10:42) or in terms of the blind alley of the way of the law (Paul). Like Jesus, the author touches upon eschatological motivation (5:1 ff.), but this stands alongside the awareness of the transitoriness of human nature without any reconciliation of the two (4:13-17).

The author regards the OT Law in its ethical parts as obligatory and views these as comprising the whole and perfect Law (2:8-13). By ethicizing the cultic ideas (1:26-27) and by not observing the ceremonial law he levels an indirect criticism of the Law, in which he is evidently thinking primarily of social obligation (in addition to 1:27, cf. also 2:15-16 and the sharp criticism of wealth in 5:1-6; 2:1-7). Other central points in his parenthesis concern the exclusiveness and unequivocal character of obedience (1:7-8; 3:10-12), the polemic against sins of the tongue (3:1-9), and self-assurance (4:13-17).

**6. The Johannine literature.** The unmistakable reduction of ethical issues in the Johannine writings (especially in the Fourth Gospel) also signifies a concentration and integration of ethics into the whole of theology. Nowhere else is ethics so exclusively grounded in God's eschatological saving act in Christ; this is in harmony with the exclusivity and absoluteness of the revelation given in Christ and the salvation that is bestowed in him. The Christian life bears fruit only by abiding in him (John 15:1-11, where also the dialectic of indicative and imperative is reflected). Christology is the dominant theme not only of the indicative, but also of the imperative, to the extent that the basic stance of the Christian is his relationship with Christ. This can be expressed by hearing, abiding, knowing, etc., but also by keeping the word and the commandments (8:51; 14:15; 15:10). This also implies an orientation to the example of Jesus' conduct: "For I have given you an example, that you also should do as I have done to you" (13:15); the reference here is to the lowly, humbling, loving act of foot-washing, not to a cultic act. In I John, Jesus' exemplary function is elucidated in other concepts also (3:3, 7, 16), and in 2:6 the idea of such correspondence with his conduct is stated in a fundamental way: we are to "walk in the same way in which he walked."

The keeping of the commandments and the obligation that arises therefrom (cf. John 13:34; 15:12) is usually described in terms of love for one's brethren. Thereby Jesus' radical removal of limitations is reversed, though the basis and meaning of this reversal are not altogether clear. Nevertheless, for John, too, love is the loftiest quality. Indeed, it is unique, and even here it is not an emotion or affection. It is, in a comprehensive sense, living for others, even to the point of laying down one's life (I John 3:16). Since there is no middle position between love and hatred, hatred can be equated with murder (I John 3:15), and love can be the basis for recognition of the sphere of salvation and life (John 13:35; I John 3:14). Dualistic expressions declare all "flesh" and everything worldly to be vain, irrelevant, and of no avail (John 6:63, etc.) and warn against any love of the world (I John 2:15-17), but in spite of this according to I John love also is to prove itself precisely in the needs of everyday life (I John 3:17-18).

**7. The book of Revelation.** The entire book of Revelation is permeated with apocalyptic eschatology and an intense expectation of the imminent end (cf. 1:1, 3; 22:20). Of crucial importance is the connection of this expectation with the present Christ, whom the community already has encountered as Savior and Lord, whose love is constant (1:5b), and whose victory is already hailed proleptically in hymns (11:15-18; 12:10-11, and *passim*). This also determines the ethic of the book, particularly in the seven letters (chs. 2-3). Promises and threats of judgment are by far the most prominent elements (though on the other hand there are reminders of what the community has already received, 3:3). The seer is concerned primarily with repentance (2:5, 16, 21-22, and *passim*), which is manifested in works (2:5, 19, and *passim*) and in total and undivided commitment (3:15-16). Hardly ever is a position taken on concrete ethical questions, though in ch. 18 an undertone of social criticism may be detected.

At the center of the ethical considerations stands the impending conflict with Rome and its cult of the emperor (cf. 2:13; 6:9-11; 17:6; 20:4). In ch. 13 the seer sketches the fantastic picture of a demonic monster which symbolizes the Roman state. With its seven heads and ten horns it is the earthly image of the dragon (=the devil; cf. 13:1 with 12:3), and thus the embodiment of satanic power on earth. But it is also a devilish caricature of Christ (cf. 13:3, 12 with 2:8; 5:6; 13:2 with 3:21). This means that the Roman state demands what belongs to God (cf. 13:4), and as such is of the devil. It is satanic, because it is a totalitarian state. By means of propaganda and "signs" a second beast (13:11-17) promotes the veneration of the first beast as divine, and thus provides for an ideology, for metaphysics, and for symbolism appropriate to the state. It provides also for state policy, in that it subjects to economic boycott (13:17) or puts to death (13:13) those who reject the state cult. The attitude of Christians toward such a perverted and deified state can only be disobedience, endurance, and passive

resistance (13:10). See also ROME, EARLY CHRISTIAN ATTITUDES TOWARD[S] §6.

**ETHOS OF EARLY CHRISTIANITY.** In the world of classical and Hellenistic Greek, ἦθος (only I Cor. 15:33 [proverbial] in NT, but cf. I Clem. 1:2; 21:7 and ἔθος) refers to "character" or "habitual way of life." To the Stoic, for example, it denotes that which is the source of behavior.

1. **Definition.** In its modern use the term has a somewhat fluid status in cultural anthropology. Early descriptions of ethos as national or cultural "character" were impressionistic, an unwarranted extension of individual habits and dispositions to entire groups or races. More recent and fruitful is the use of ethos to describe the perceived emotional quality or force of cultural acts and the motivation behind them, or to describe the

relationship among a range of values within a given culture or social unit.

All theories of culture which refer to ethos seek to distinguish it from an ethic, which is a body of principles on the basis of which moral actions can be taken and recommended. Ethos differs from an ethic by involving not only moral but also cultural and communal values. Unlike an ethic, an ethos cannot be reduced to a set of principles for behavior, since the reasons for actions may be implicit rather than explicit. An ethic tells the member of a group what he or she is to do. The ethos of the group reinforces that by also saying who and where one is.

This leads to a more specific working definition of ethos as the tone and style of a group's (or culture's) entire range of values, the quality of its life. It exists in close connection with a more external element, the way the universe is perceived or what is sometimes called "world view." A people's world view is a perception of actuality in its many dimensions: personal, social, and natural. The relationship of ethos to world view is the relationship of the moral, aesthetic, and evaluative aspects of a culture to the cognitive and experiential aspects.

Religious groups, like other social and cultural units, live in the interconnection between ethos and world view. Some interpreters will regard the metaphysics of a religious system as basic, and others will emphasize its ethics, but a religion is never either of these in isolation. It is a response to a perceived reality of the sort which stresses that the nature of reality as a given carries implicit obligation. The religious community is persuaded that the fulfillment of obligations is itself a way of sustaining and enhancing that which is real. The "ought" is firmly grounded in the "is."

Such a view is not peculiar to religious groups but is characteristic of the mutuality of the concepts "ethos" and "world view," regardless of the setting to which they are applied. As a bundle of values comprehending an entire tone or mood of life, ethos does not merely respond to the world view with which it is associated. It also at the same time underwrites and thus guarantees that world view, enhancing the "reality" of that which is considered real. In similar fashion, a world view can so thoroughly penetrate the ethos of those who subscribe to it that the ethos itself embodies the world view and renders the heightened sense of reality operative in the ordinary here and now. Each, in effect, borrows authority from the other while lending authority to the other.

Between ethos and world view, co-ordinating them and encouraging their mutual influence, stand *symbols*. These may be simple objects or more complex rituals and myths. Such symbols comprehend both the meaning of reality and the quality of life considered appropriate to it. Sacred symbols thus provide the mechanism by which a religious community will relate ontology and cosmology to aesthetics and morality. When these symbols become arranged in a more or less comprehensive whole we may speak of a "religious system."

2. **Problems of formation.** The idea of an ethos of early Christianity entails certain difficulties beyond the obvious ones stemming from the number and particular interests of historical sources and questions of their reliability. Christianity arose out of the relatively coherent and comprehensive ethos of Judaism, but immediately called much of that heritage into question. As a result, three characteristics mark the emerging Christian sensibility.

First, the question of social identity became a central issue requiring clarification; the new experience demanded a new social expression. Second, materials for constructing a new world view and ethos came, in part, from the more variegated world of HELLENISM. As a result, the development of a more or less unified Christian world view and ethos required several generations, during which pluralism was a notable fact. Third, although Christianity early began to separate itself from Judaism, it never completely severed the symbolic ties to that cultural and religious world, as is evident from early Christianity's insistence that it was the "new" Israel. While such symbolism is not wholly antithetical to a Hellenistic environment, as the earlier prosperity of Judaism in such a context makes clear (see JUDAISM, HELLENISTIC[S]), the maintenance of elements of an older ethos alongside those of a new setting creates tensions. Only when these are resolved or significantly reduced may we begin to speak of something approaching a single, characteristically Christian ethos. In the earliest stages the picture is fragmented and diverse.

3. **Ethos and form criticism.** It seems apparent from this description that the study of the ethos of a group which is in rapid transition, and of multiple groups which are only loosely related to one another organizationally, will need to identify as far as possible both the internal and external elements that shape the group and help it achieve self understanding. Much of what happened along these lines in the first centuries of Christianity has been lost from view, but hints remain in both the form and the substance of its literature. That such is the case has long been recognized by FORM CRITICISM and its newer offspring, REDACTION CRITICISM.

Nevertheless, form criticism shows signs of atrophy at the point where a crucial question, that of the social function of forms, literary types, and finished literary works, arises (see BIBLICAL CRITICISM, NT[S] §4c). At the beginning of the form critical method, Gunkel, for example, regarded the setting (*Sitz im Leben*) of a discrete "form" as its wider cultural and social setting, one which enabled the group to use the form for its own purposes. The setting thereby provided a new meaning or interpretation for an older tradition. On this understanding the form is very nearly equivalent to "symbol" as that term is used above. Setting and form represent multiple realities, external and internal, social as well as literary. This understanding has been obscured in more recent form-critical work. The problem is already evident in the earliest stages of NT form criticism represented by Dibelius, who narrowed

the idea of setting to the cultic. Within that area he paid particular attention to the sermon. After Dibelius there was little further exploration of the sociological dimensions of the Christian use of oral and literary traditions. As a result, social functions came to be regarded somewhat parochially as cultic function, while *Sitz im Leben* was gradually construed as "historical context." The question of the setting of a tradition came to be regarded as an invitation to choose among indistinct historical alternatives such as the ministry of Jesus, Jewish Christianity, Hellenistic Christianity, Hellenistic-Jewish Christianity, etc.

It has also been noted that form criticism is reductionistic in another sense as well. It too easily assumes a single correlation between the setting and one particular literary type (*Gattung*). Even a socially restricted and specific setting such as cult will provide a home for numerous literary types (e.g., sermon, hymn, prayer, etc.), so that the true nature of the setting cannot be understood without attention to the mutual relationship of these components. Much the same may be said for a larger literary effort which orchestrates various specific forms and thereby becomes itself a "setting." If a gospel, for example, is to be seen as a cultural and social item as well as a literary category, the traditional forms that are its components will appear to function as symbols inside a more or less comprehensive system. Such comprehensiveness may be difficult to suggest for some NT texts. It is more likely to be evident in groups of texts or groups of symbols used across the boundaries of several texts. The closer we come to being able to speak of such symbolic unity or affiliation, the closer we come to being able to speak of an ethos.

4. **The symbolic world of early Christianity.** To uncover the ethos of various groups within earliest Christianity requires identifying and analyzing a wide variety of literary forms, terms, myths, rituals, and objects which can serve as symbols. What is required is that the device chosen be able to compress in a single nexus that which is experienced and that which is regarded as a style of life appropriate to the experience. Two examples, one from Paul and one from John, will provide an illustration using quite different kinds of symbols. The latter case also exemplifies the often implicit nature of ethos where a world view is dominant.

a. **The ethos of Pauline Christianity.** The statement that the "ought" of an ethos is firmly grounded in an "is" sounds similar to the common exegetical observation that Pauline ethics is constructed on an "indicative-imperative" scheme. In Gal. 5:25 Paul urges, "If we live by the Spirit, let us also walk by the Spirit." To Paul it seems evident that the life of the Christian is constituted by the gift of a new reality which he refers to as Spirit (e.g., Rom. 5:5; 8:16; Gal. 3:2). That the term has a symbolic status is suggested by the variety of particular expressions Paul can use in referring to the same phenomenon. In addition to the "Spirit of God" (Rom. 8:9), we find the "spirit of faith" (II Cor. 4:13), the "Spirit of his Son" (Gal. 4:6), and the "Spirit of Christ" (Rom. 8:9), all of which are related to the "Spirit

of holiness" (Rom. 1:4) conceived as the source of life in a new age.

Paul's use of this term to contrast the realms of FLESH and SPIRIT (Gal. 5:16 ff.; Rom. 8:5) suggests the true force of the indicative-imperative scheme. The Spirit negotiates the relationship between the actual world which exists for the Christian and the obligations grounded in that world. This world is ruled by Christ as Lord, the sovereign of a realm to which the Christian belongs.

What values does such a realm of existence certify? Which values will underwrite and make visible its reality, which will suggest its nature as a world inhabited by real people? Among many suggestions in the letters two are particularly arresting for the combined light they shed on one aspect of the ethos of Pauline Christianity.

The first of these is freedom, frequently described as freedom from the law. The law cannot be subscribed to innocently, for it belongs to an old order of existence and is antithetical to the new realm (Gal. 3:23-29). But freedom means more than the relegation of law to a day now past, to a kingdom ruled by sin. It also means the emancipation of the Christian *from* that whole realm. For this reason, on an issue such as whether or not Christians may eat meat sacrificed to idols (I Cor. 8:4-6) Paul stresses that they are free not just from law but from an entire world that is now rendered meaningless.

At the same time Paul's treatment of this issue shows the weight he assigns to a quite different value which seems no less securely tied to that world view from which the idea of freedom is derived. Although the Corinthians may eat such meat, they ought also to consider one another and "take care lest this liberty . . . somehow become a stumbling block to the weak" (I Cor. 8:9). If a brother wounds another's conscience on this matter he sins (8:12) and so forsakes the very world which his freedom was supposed to reflect and underwrite.

The role of the Spirit in Paul's letters suggests how this apparent conflict of values is to be seen as deriving from a single view of reality. In fact, the relationship between the values further specifies that reality: The "world" which is real for the new person in Christ is a communal world, not merely an individualistic one. This is made clear when Paul invokes the symbol of Spirit within the context of the image of the body of Christ (I Cor. 12). Just as the Spirit behind the many individual gifts is one, so the body of many members is a single body of Christ. In I Cor. 6:7 we find a similar sentiment cast in a different image. Christians could well afford to forego the strife of litigation among themselves, suffering wrong instead. The power for individuals of the new reality stored in the image of the Spirit is modified by the social nature of that reality, indicated by the close association of Spirit and "body" (as in I Cor. 6:12-20).

Thus it is not surprising to find that Paul can interpret his own indicative-imperative scheme by urging the Galatians to "bear one another's burdens," suggesting that to do so fulfills the law

of Christ (Gal. 6:2). On this matter, at least, the ethos of Pauline Christianity includes something more than just the notion that a Christian's individual ethical behavior based on his freedom from the law is what constitutes the new life. The Pauline ethos also values the community and expresses a conviction that this new life has a coercively social and communal orientation. Paul's indicative and imperative are not one-dimensional statements of gift and obligation. They reflect the complexity which is characteristic of world views and natural for an ethos as the expression of an entire style of life. For that reason the symbol of Spirit must itself be of sufficient scope to connect the multiple strands between indicative and imperative, between world view and ethos.

It is common to say of Paul's imperatives that they do not recommend a course of action toward the indicative, as if this indicative were a goal to be achieved. This is particularly true if we think of the imperatives as individual moral obligations. It appears, however, that the imperative contains a fuller range of obligations, *some of which have goals within the ethos itself*. Such is the nature of admonitions about the common life of Christians. Whether Paul himself conceived of this as a long-range goal may be questioned, since part of his world view seems to involve an imminent eschatology. But adjustments in that picture of reality as experienced by subsequent generations served to underscore the vitality of communal concerns within the developing ethos of the church. This is signaled by symbolic shifts in the period after Paul. The role of some symbols, such as the Spirit, diminishes. Others are transformed, as is the case with the body of Christ. Still others, like the *Haustafeln* (see LISTS, ETHICAL §§1-4; LISTS, ETHICAL[S] §2), make their initial appearance.

This can happen because Paul strikes not a single note but a chord. Some of the individual notes within it recur in subsequent generations while others disappear. The resulting difference in harmonies is nevertheless not wholly discontinuous with the Pauline period, when some of those whom he addresses in his letters (especially in I Corinthians) understood the Spirit in a way which did not sound right to him.

*b. John's Gospel and John's world.* John's Gospel offers a quite different study in early Christian perception of social identity. Unlike the Pauline letters, this document does not take us inside the community's discussion of the values appropriate to the Christian life, but focuses instead on the origin of a community as a distinction between the world and the circle of those who believe in Jesus. That distinction is drawn so clearly and stressed so persistently that it becomes constitutive of the new identity of believers.

Jesus as the descending and ascending Savior is the symbolic means by which this new world is articulated. Of heavenly origin, he comes to "his own," but they do not receive him (1:11). The matter of his origin outside of this world is repeatedly stressed, not in order to indulge speculation about his nature but in order to display the curious fate of this other-worldly savior. He is not comprehended, but finally rejected. Even

Nicodemus, who regards Jesus as having "come from God" (3:2) and is willing to approach him as a teacher, cannot receive his "testimony" (3:11) and will never know of the "heavenly things." What these might be is not as important for the author as the barrier which proves insurmountable for Nicodemus. This is underscored by the adamant hostility of the "Jews" who do not accept what even Nicodemus saw, that Jesus is from God (9:16), and yet do not know where he comes from (vs. 29).

Obviously, some do "comprehend," so that it can be said of those "who received him, who believed in his name" (1:12) that they "beheld his glory" (vs. 14). The fate of one of these, the blind man whom Jesus heals (ch. 9), is instructive. Because he persists in saying that the one who healed him comes from God, he is cut off from the Jewish community (9:34) in accordance with the decision of the Pharisees that "if any one should confess him to be Christ, he was to be put out of the synagogue" (vs. 22).

It is apparently this experience of the expulsion of Christians from the synagogue (cf. also 12:42; 16:2) which necessitates a new sense of identity and occasions the gospel which supplies it (see JOHN, GOSPEL OF[S] §2). That the ethos of such a group should be essentially negative, in the sense that its identity is achieved through contrast with the disbelieving world, is not surprising. But just as there is a motif of the descent of the Savior, so is there one of his ascent, with which the second half of the gospel is primarily concerned. While the community cannot immediately follow Jesus in his departure, it is assured internal unity and fellowship with him, and is promised the "Counselor . . . the Spirit of truth" (14:16-17). Furthermore, what is said about this figure and about the believers themselves links, through the symbol of the other-worldly Savior, an ethos with an appropriately stark yet consoling sense of reality. Like Jesus, the Spirit of truth is one "the world cannot receive, because it neither sees him nor knows him" (14:17), a characteristic which, finally, can be applied to the community itself: "If you were of the world, the world would love its own; but because you are not of the world . . . the world hates you" (15:19).

Believing in Jesus translates the believer from one social world into another. This happened historically, apparently, when believers were excluded from the synagogue. The historical event continues to exist as symbolic fact through the role played by the gospel, which uses this trauma as a platform to provide a new social identity for the believers. That identity is not revealed in nuance and detail. John presents less the taxonomy of the Christian community than its general anatomy. But the gospel itself, as literary form, plays a decisive role in the projection of the new identity. As an aggregate literary form it becomes the "setting" in which various older traditions take on new life and meaning. More than that, the gospel recapitulates in the life of the community the actual experience of Jesus and functions for its members as its hero functions in the story it tells. Even the literary structure of the

gospel, with its enigmatic discourses, repetition, and *double-entendre* is a reflection of the nature of the new reality which has emerged from the older story. Thus the ambiguity of and about Jesus which progressively leads to his rejection, his death, and his ascent is paralleled by the ambiguity of belief on the part of those whose first limited understanding, frequently misunderstanding, leads to gradual initiation into the truth of Jesus and finally produces their alienation from this world which has been hostile to him and to them. He has made them his own by calling them out of this world.

**c. Conclusions.** The contrast between these two examples is instructive. The Pauline ethos appears confident, linked as it is with a world viewed as having been freed from the inevitability of an evil age. Such "heroic" posture accords with missionary zeal, rapid growth, and, perhaps, a certain looseness of organization, all of which seem on other evidence to be part of a Pauline pattern within early Christianity. The Johannine picture reveals a community somewhat more static or at least more stable, certainly less robust and probably less well adapted to a missionary milieu. John's images tend toward sustenance and intensification rather than toward growth by extension. Comprehensive analyses of ethos and world view in these and other early texts may confirm or modify the suggestions sketched here, but certainly such analyses should broaden understanding of the social setting and social significance of early Christianity.

**ETIOLOGY** ē tē ōl' ə jē. Properly, the study of causes (Gr. αἰτία, cause); the term commonly used to designate stories which are designed to explain how some existing phenomenon in nature, custom, or institution came into being by recounting a past event which is taken to be the effective cause of that phenomenon.

**1. Classification and OT examples.** Many different schemes of classifying the various types of etiological stories have been proposed, but since, in biblical studies, the analysis of Gunkel has been and remains, with some modifications, the most influential, a brief outline of his classification is in order.

Gunkel took as his starting point the position that etiological stories are answers to questions; men look at things and ask why. He proceeds to classify etiological types in terms of the kinds of questions which he assumes to lie behind the answers embodied in the narratives. He concludes that there are four basic types: (1) ethnological etiologies, which give reasons for relations among tribal groups; (2) etymological etiologies, which explain the names of persons or places; (3) ceremonial or cultic etiologies, which account for the origin of religious rites and customs; and (4) geological etiologies, which explain the origin of a particular locality or geological formation. Stories explaining other natural phenomena, e.g., the origin and meaning of the rainbow (Gen. 9:12-17), should also be included in this category. Finally, Gunkel observed that in some stories various types are combined, resulting in a mixed form. Gunkel's typology remains dominant in biblical studies (see *LEGEND* §§2, 3).

Examples illustrating these types abound. The subservient lot of the Canaanites and the incorporation of the Philistines into the Israelite empire is explained in the story of Ham, Shem, and Japheth in Gen. 9:20-27; the conflict between Israel and Edom is explained by Gen. 25:23; the child's question about the meaning of certain details of the Passover ceremony (Exod. 12:26; 13:14) lies behind the immediately preceding narratives (Exod. 12:21-25; 13:11-13); a peculiar rock formation is accounted for by the act of Lot's wife (Gen. 19:26); and so on. Etymological notes, often philologically erroneous (e.g., the derivation of Moses from Heb. *māsā*, Exod. 2:10) are especially numerous, particularly in the earlier literary strata. The following list is illustrative but by no means exhaustive. Personal names: woman, Gen. 2:23; Eve, Gen. 3:20; Cain, Gen. 4:1; Ishmael, Gen. 16:11; Abraham, Gen. 17:5; Isaac, Gen. 17:19; Esau, Gen. 25:25, 30; Jacob, Gen. 25:26. Place names: Babel, Gen. 11:9; Beer-lahai-roi, Gen. 16:14; Zoar, Gen. 19:22; Beer-sheba, Gen. 21:31; Marah, Exod. 15:23.

**2. Etiologies and general OT interpretation.** Recognition of the nature and function of etiological stories was an important step in tracing the preliterary stage of early Israelite tradition. Serious questions have been raised, however, as to the propriety of utilizing the etiological motif as the

primary key for interpreting all materials which contain an etiological element. Put simply, should all narratives which contain an etiological theme, or from which an etiological theme may be deduced, be interpreted primarily as accounts designed to supply an answer to the question stated or implied? Are there other factors which are more important than the etiology that must be utilized by the interpreter? The issue may be put this way: In a narrative which contains an etiology, to what extent is the etiology itself central; to what extent has it simply been tacked on as a secondary element; or, to what extent has an earlier etiology been radically modified for a totally new and different purpose? The answers may result in widely divergent interpretations of biblical material.

A classic case study is the story of Jacob's wrestling with the angel (Gen. 32:22-32). Four different etiological themes have been isolated in this account: (1) explanation of a peculiar cultic dance at a particular shrine (vss. 25, 31); (2) explanation of a place name (vs. 30); (3) explanation of a dietary regulation (vs. 32); and (4) explanation of Jacob's new name, Israel (vs. 28). It is probable that all four existed in the preliterary stage of the material, but the interpreter must attempt to assess their respective weights in evaluating the present form of the narrative. In this instance there seems little doubt that the giving of the new name is primary.

In this example, etiologies are clearly present, and the problem is to determine which etiology is dominant. Another narrative, the judgments pronounced against the serpent, the woman, and the man (Gen. 3:14-19), raises another kind of problem. No doubt ancient etiologies are employed, answering questions about why snakes crawl on their bellies, why women have pain in childbirth, and why there is so much difficulty in bringing forth produce from the earth. The intention of the present form of the narrative, however, would be seriously misconstrued if attention were centered on these original etiological themes. The author has utilized them for an altogether different theological purpose. Etiology is secondary.

**3. Etiologies and historical narrative.** A somewhat different issue arises in interpreting historical narratives which contain etiological references. For example, does the story of Joshua's execution of the five kings and their burial in a cave at Makedah evolve from an attempt to explain the great stones at the mouth of a well-known geographical locale, or is there a genuine historical tradition behind the account (Josh. 10:16-27)? This issue has been debated with respect to the historical reliability of the narratives of the era of the settlement (conquest) of Canaan. Some scholars have concluded that if a story possesses an etiological element, it is, in most instances, a methodological error to attempt to recover historical data from the narrative. The etiological theme has been formative of the tradition, and one errs in attempting to go beyond the obvious etiological interest in evaluating the material. Thus, such stories in Josh. 1-12 as the heap of stones at the Jordan (4:1-24); the place names Gilgal (5:8-9) and Achor (7:1-26);

the destruction of Ai (8:1-29); the social status of the Gibeonites (9:3-27) are etiological tales and cannot be utilized in reconstructing the history of Israel. Other scholars have sharply dissented from this view (see JOSHUA §D1). Their contention is that presence of an etiological motif does not necessarily mean that the etiological purpose has given rise to the narrative. Rather, it is maintained that in many instances the etiological reference is a secondary element and that the historicity of the account must be determined on other grounds. This view admits that some stories are indeed primarily etiological, but insists that etiology has not been the primary factor in shaping an entire historical tradition, i.e., the settlement (conquest) of Canaan.

While it remains true that each individual narrative must be evaluated separately with respect to the primacy of the etiological intent, recent detailed studies of etiological narrative indicate that, on the whole, the latter view outlined above rests on more solid foundations. The prevailing opinion is that in most instances etiological themes are not decisive as criteria for historical evaluation. The historicity of a narrative, thus, is not to be decided simply upon the presence or absence of etiological elements. Other criteria are more significant.

Some writers have extended the definition of etiology considerably beyond the limits defined by Gunkel and commonly employed. For instance, the whole of Exod. 1-15 has been described as a cultic etiology of the Passover (see PASSOVER §3). I and II Samuel have been characterized as an etiology of the Davidic dynasty (see SAMUEL, I AND II §C1a, 5); I and II Chronicles as an etiology of the structure of the postexilic Jewish community (see CHRONICLES, I AND II §3); and the whole of the Deuteronomistic history as an etiology of Josiah's reform or the destruction of the Judean state (see KINGS, I AND II §C6, 7). As interpretive devices such perspectives are illuminating, but they probably stretch the term etiology so far as to render it methodologically unmanageable. It would seem more appropriate to define such purposes as legitimations rather than etiologies. Legitimation denotes the sanctioning of a broader socioreligious complex than is present in a proper etiological story.

**4. Etiology and the NT.** Thus far etiology has been discussed within the OT context and primarily in connection with the earlier strata of the OT. This was done because etiologies occur much more frequently in the beginning periods of a people's tradition since it is precisely at that time that the broad foundations are laid. Nevertheless, etiological references, both within the more formal definition and in the broader usage referred to in the preceding paragraph, are to be found in the NT.

The first set of examples is found in the birth narratives. Luke tells of the naming of John (1:13) and of Jesus (1:31). The giving of the name is often found in etiological stories, but in neither instance does Luke explain the meaning of the name, nor does the name seem to shape the accompanying narrative. Matt. 1:21 explains the name

Jesus, "for he will save his people from their sins" (the Heb. or Aram. root means "to save"), but the narrative betrays no etiological influence.

The Markan account of the appointing of the disciples (3:13-19) contains two name changes; Simon is surnamed Peter (vs. 16), and James and John are surnamed Boanerges, that is, "sons of thunder" (vs. 17; see BOANERGES). Here there is no apparent interest in etymology as such and certainly this etiological reference has had no effect on the form of its narrative. Matt. 10:2 and Luke 6:14 also mention that Simon is called Peter, but like Mark, give no reason for the change. Both omit the surnaming of the sons of Zebedee.

Finally, John 1:42 says that Simon will be called Cephas, and it is noted that Cephas means Peter. Again no reason is given for the change of name and it is not possible to discern any effect of the etymological note on the narrative. Indeed in all of the narratives it is probable that we do not have examples of etiology proper at all. It has been suggested that a theological purpose, showing that in giving the new names Jesus was displaying his sovereign ability to create something new underlies the surnaming narratives, but this seems to go beyond the intention of the texts.

Matt. 16:13-20, Peter's confession at Caesarea Philippi, requires a separate examination. Here Jesus confers upon Simon the new name, and it is probable that a twofold etiology is implicit. The supposed etymology of Peter is explicitly given. He is Peter (*petros*) for he is to be the rock (*petra*) upon which the church will be built. The word-play is clearer in Palestinian Aramaic, which uses the same word, *Kepha*, for both the proper name and the common noun. It is probably the intention of the story to denote a shift in Peter's character and to provide dominical authority for his supremacy in the early Christian community. Indeed, this latter interest may well account for the insertion of vss. 17-19, which are lacking in the parallel accounts in Mark 8:27-30 and Luke 9:18-22. However, the historicity of the account is hardly to be decided simply by its obvious etiological nature.

Another change of name is noted in Acts 4:36-37, where the generosity of a certain Joseph led the apostles to give him the new name Barnabas, "Son of encouragement." It is to be doubted if this etiological reference played any considerable role in the narrative in which it is found (Acts 4:32-37). Both Matt. 27:3-10 and Acts 1:16-20 utilize etiology in narratives of Judas' death. They vary in details but agree that his burial place came to be called the "Field of Blood." The existence of such a place may well have supplied some details in the shaping of the narratives, but it is difficult to conclude that it exercised a primary influence. All the NT examples cited contain formal elements of etiological material, whether etymological or geographical. With the possible exception of Matt. 16:17-19, however, it does not appear that the etiological reference played any significant role in shaping the narrative in which it is embedded.

**5. The gospels as extended etiologies.** Quite a different claim has been made for the influences of cultic etiology on NT narratives, particularly in

the gospels. It is assumed that the Christ portrayed is not the historical Jesus but the Christ of the faith and cult of the Christian community. For example, the narrative in John 13:2-11 is an etiology explaining cultic foot washing; the stories of Jesus' baptism (Matt. 3:13-17; Mark 1:9-11; Luke 3:21-22; John 1:31-34) are etiologies for Christian baptism; the accounts of the Last Supper are etiologies for the Lord's Supper, etc. In its most extreme form this position suggests that as a whole the gospels may be viewed as expanded cult legends in which etiology is the dominant though not the exclusive factor (see MYTH IN THE NT §§3, 4).

Such a position seems subject to the same reservation mentioned with respect to the role of etiology in shaping the settlement (conquest) narratives discussed above. It is probable that some details in the present form of the narratives do reflect cultic practices and that these practices have resulted in a reshaping of the tradition itself. The tradition gave rise to the cult, which in turn reacted back upon the detailed formulation of the tradition. To be sure, the historicity of the tradition itself must be the object of careful scrutiny, but its historicity is not to be decided solely upon the criterion of cultic etiology.

**6. Summary.** Etiological stories provide considerable information about the early Israelite world view and some insight into the formation of the present form of certain biblical accounts. Recognition of etiological motifs may assist in interpreting particular narratives, but caution should be exercised in assuming that the presence of an etiology explains the function of the entire narrative of which it is a part. Both the possibility of genuine historical tradition to which an etiology has been secondarily added and awareness of the present function of the narrative in the larger literary complex must be given as much attention by the interpreter as analysis of the etiology itself.

J. F. PRIEST

**EUSEBIUS OF CAESAREA** ū sē'bī əs [Εὐσέβιος]; **EUSEBIUS PAMPHILI** pām'fil-i [ὁ τοῦ Παμφίλου]. Early fourth-century bishop of CAESAREA on the coast of Palestine; historian, biblical scholar, and theologian; the "Father of Church History." He wrote a history of early Christianity covering the first three centuries; compiled a unified chronology of general ancient Near Eastern, Greek, and Roman history; and wrote other works on biblical geography, gospel parallels, interpretation of scripture, apologetics, and contemporary theological issues.

**1. Life.** Born ca. A.D. 260, possibly in Caesarea

itself, where it is known he spent his later life. He developed his massive scholarship in the libraries of Bishop Alexander at Jerusalem and the presbyter Pamphilus in Caesarea. Eusebius is often identified simply as Eusebius Pamphili, "Pamphilus' Eusebius." The two engaged in text-critical work on biblical manuscripts, both being admirers of Origen's methods. When the great persecution began under Diocletian in 303, Pamphilus was eventually martyred, but Eusebius escaped. After the emperor Constantine declared a pro-Christian policy and triumphed at the battle of the Milvian bridge in 312, Eusebius became one of the chief spokesmen for the new vision of a Christian world empire. He had personal access to Constantine and at times acted as his agent.

Eusebius was made bishop of Caesarea ca. 313. At the Council of Nicaea in 325, which officially affirmed the full divinity of Christ, he subscribed to the conciliar decision, though with hesitation. His behavior in the years immediately afterward was typical of the majority of moderate theologians in the East at that time. He did not adopt the views of Arius, whom the council had condemned, but he feared that the conciliar decree undercut the real distinctions between the three persons of the Trinity, and he therefore participated in attempts to undo the work of the council.

He survived Constantine and died around A.D. 339 or 340, regarded by all as the greatest Christian scholar of his time.

**2. Eusebius as historian.** Eusebius had a well-developed philosophy of history. He believed in an Origenistic doctrine of pre-existence of souls. He argued for human free will against classical Greek fatalism and contemporary astrology and Gnosticism. He affirmed a divine providence that controlled the affairs of emperors and kings. He rejected the idea of a future millennial kingdom of Christ on earth (cf. *Iren. Her. V. xxxiii.3*; see also MILLENNIUM §2) in favor of a more Platonic concept of immortal life in some supercosmic realm. The end of this world he placed several centuries, or at least several generations, in the future. In what we might call an "expanded eschatology" he spread out the biblical events of the last days over hundreds of years. He believed for example that the Pax Romana begun under the emperor Augustus was the predicted eschatological kingdom of peace (*Isa. 2:1-4*; *Mic. 4:1-4*), and that the emperor Constantine and his descendants were "the saints of the Most High" (*Dan. 7:18*), who were to rule Rome, the fourth kingdom (*Dan. 2:31-45*), until the end. Then the world would be destroyed and the last judgment held.

Eusebius' *Church History* was the first full-length, continuous narrative history written by a Christian; it is therefore one of the four or five seminal works in the history of Western historiography. It recounts the history of Christianity from the time of Jesus to Eusebius' own day, and is a mine of information on the period of the NT and early church. He "picked from the flowered meadows" of early church history, as he says (*Euseb. Hist. I.1.4*), a host of long and short quotations from ancient writers, which he included verbatim in his *Church History*. Eusebius cites such sources as

Hegesippus, PAPIAS, Quadratus, the Legend of ABGAR, and Clement of Alexandria's lost work, the *Hypotyposes*. There are almost 250 passages in all, of which nearly half are preserved in Eusebius' work alone, and would otherwise have been completely lost. Eusebius also preserves traditions about such things as the early history of the church at Jerusalem, earliest Syriac Christianity, the Ebionites, and individuals such as Pontius Pilate, the evangelists Matthew and Mark, James the brother of the Lord, Simon Magus, Valentinus, and Marcion. Some information comes from still-extant sources like Justin and Irenaeus, but a good deal is preserved today only in Eusebius' text. Certain of the earlier traditions contain some legendary or improbable material, but they still may be used, with the aid of modern critical methods, to help in reconstructing early Christian history. Eusebius further records information about the development of the NT canon: which books were used by the earliest orthodox writers, which were read publicly in orthodox churches, and which were disputed (see, for example, Euseb. Hist. II.xxiii.24-25, III.iii, III.xvi, III.xxiv.2, III.xxiv.17-18, III.xxv). See CANON OF THE NT §D4.

Another work by Eusebius, the *Chronicle*, endeavored to lay out a scientific, comparative chronology for ancient Near Eastern, Greek, Roman, and biblical history (the latter, with good critical sense, attempted only from the time of Abraham). It contains material which was of value in our own modern period for reconstructing the history of the ancient Near East, and also some valuable dates and other information for Greek and Roman history. Other historical works were the *Martyrs of Palestine* and a eulogistic imperial biography, the *Life of Constantine*.

3. **Other works.** Eusebius' *Onomasticon* was a work on biblical place names, giving geographical locations of some six hundred towns, historical sites, districts, mountains, and rivers, and connecting them with contemporary Roman place names. (see CARTOGRAPHY OF PALESTINE[S] §1). The *Eusebian Canons*, still printed in standard critical texts of the NT, were invented by Eusebius as a means of indicating parallel passages in the gospels (see HARMONY OF THE GOSPELS). In *Against Hierocles* Eusebius argued (on the Christian side) as to whether Jesus or Apollonius of Tyana was the true DIVINE MAN. Other works survive, in which we can see Eusebius' exegesis of scripture, his arguments in defense of Christianity against both pagans and Jews, and his position in the fourth-century trinitarian controversy.

**Bibliography.** Texts and translations: *Die Kirchengeschichte*, GCS, IX, 3 vols., Gr. and Lat., ed. E. Schwartz and T. Mommsen (1903-1909); *The Ecclesiastical History*, LCL, 2 vols., Gr. and Eng., trans. K. Lake and J. E. L. Oulton (1926-32); *The Ecclesiastical History and the Martyrs of Palestine*, 2 vols, trans. H. J. Lawlor and J. E. L. Oulton (1927-28)—the second vol. contains historical notes, including a discussion by Eusebius on NT canon, pp. 100-104; *Die Chronik: aus dem armenischen übersetzt*, ed. and trans. J. Karst (1911); *Die Chronik des Hieronymus*, ed. R. Helm (1956); *Das Onomastikon der biblischen Ortsnamen*, ed. E. Klostermann (1904); *Against Hierocles*, Gr. and Eng., in Vol.

II of Philostratus, *Life of Apollonius of Tyana*, LCL, trans. F. C. Conybeare (1912).

**EXEGESIS** ěk sɔ jɛ' səs. The process by which one comes to understand a text. The same methods of exegesis are applicable to the Bible as to any other document. Each of the many special methods and tools of research (e.g., TEXTUAL CRITICISM, SOURCE CRITICISM, lexicography) has been developed to facilitate the process of understanding the text. In addition, exegesis is fundamental to other tasks, such as historical reconstruction of the history of Israel and the early church, theological appropriation of biblical faith and religion, or preaching. Exegesis is both a science and an art. As a science, it proceeds according to acknowledged principles and controls; as an art, its "rules" are transcended by the creative insight and interpretation of the exegete.

- Bibliography

1. **Terminology.** The definition of exegesis stated above is narrower than that found throughout the history of exegesis. Exegesis transliterates a Greek term, ἐξήγησις, meaning the process of bringing out—hence, bringing out the meaning. The noun is not used in the NT; but in Luke 24:35; John 1:18; Acts 10:8; 15:12, 14; 21:19 the verb ἐξηγήσομαι occurs, meaning "recount, tell, or make known." The other NT term for interpretation, ἡρμηνεύω, generally introduces an explanation of a Semitic name (e.g., Matt. 1:23). In the OT, both the noun *peshar* and the verb *pāthar* are used, especially for interpreting dreams and visions (e.g., Gen. 41:8, 12; *p'shār* in Dan. 2:4), that is, making clear what is obscure or symbolic. *Peshar* became a technical term

for that type of exegesis emphasized at QUMRAN, in which the meaning of the text was identified as some aspect of the community's own experience or expectation. *Pesher* was used also by the rabbis, but without the sectarian focus. In rabbinic Judaism, the key term was MIDRASH (from *dārash*, to search out). In II Chr. 13:22 midrash means story, but in II Chr. 24:27 it means commentary. Though originally oral, rabbinic exegesis was later written down; the resultant commentaries are known as the midrashim. Many rabbinic methods of exegesis appear also in the NT. See INTERPRETATION, HISTORY OF[S] §C1b.

When exegesis is distinguished from exposition, the former refers to the process of ascertaining the original meaning, and the latter, to meaning for today. The distinction, though useful, should not be pressed. Traditionally, the principles of exegesis and interpretation are called HERMENEUTICS.

Although exegesis is a discipline in its own right, there is also a tacit exegesis. For example, when Christian lectionaries offer a set of passages for a given Sunday, the selection itself expresses an unstated exegesis of the texts. Furthermore, translation also involves exegesis. Important exegeses of the Hebrew Bible are embodied in the LXX (see SEPTUAGINT) and in the TARGUMS. Both translations are of special importance for understanding how the Hebrew Bible was being interpreted by various Jewish communities in NT times.

2. **The necessity of critical exegesis.** Exegesis is unnecessary where there is understanding, except to test it. Although one can say that an intuitive exegesis is present wherever a text is understood, even a letter from a friend begins to require exegesis as soon as the meaning is not understood ("What did she mean by that?"), or as soon as the assumed meaning becomes problematical ("But before, you said . . ."). In other words, exegesis is necessary whenever the meaning of a text is not self-evident.

a. **Why the Bible requires exegesis.** Biblical writings become problematical, and so require exegesis, for a variety of reasons. First, the text itself may lack clarity, perhaps because of the vicissitudes of its transmission (e.g., words may have been left out, or the text may incorporate several writings), or because the writer did not express himself clearly to begin with. Second, there is a gap between the text and today's reader—linguistic, cultural, ethnic, or socioeconomic. The ideas and idioms of ancient Semites in semiagricultural Palestine are foreign to modern urbanites in a technological culture. None of us has ever seen an ΕΠΗΘΟΝ, or participated in animal sacrifice. Third, in the course of centuries, we have forgotten what the text was supposed to be and do, tending to read it as the private theology of creative individuals. E.g., recently we have come to see that some of the Psalms were really part of a script for rituals. Fourth, the reader may discover that an assumed, inherited understanding is not the only possibility, perhaps because contrary understandings have been discovered, or because someone is using the text to support a claim which another cannot accept. Each of these factors can induce the reader to ask, "But what does the text really mean?" At

that point, the necessity of exegesis becomes evident.

b. **The critical and historical orientation of exegesis.** Exegesis is a process by which one enables the text's own meaning to come forth in its own terms. Exegesis (leading out) is often contrasted with eisegesis (reading meaning into the text); the aim of exegesis is to give the text its own voice. Given the cultural distance between the biblical text and the reader, the exegete learns to expect the unexpected, to encounter ways of thinking which appear strange and difficult. Recognition of this strangeness is fundamental to fruitful exegesis if we are to be kept from assuming that the meaning of the text is already self-evident, and from attempting to support a preconceived notion about it. The more sound and sensitive the exegetical process, the more accurately the reader can "hear" the text.

Exegesis must be critical so that the appropriateness of one's understanding can be assessed. Criticism means comparison and judgment based on publicly accessible evidence and principles. Critical exegesis makes no appeal to private knowledge, belief, or inspiration which must be accepted before the text can be understood rightly. Exegetes working with the same texts, relying on the same methods, and adducing the same data reach differing conclusions only because they weigh the evidence differently and have varying sensibilities and insights.

Given the fact that the biblical texts are rooted in the history of Israel and the early church, it is also necessary for critical exegesis to be historically oriented. Exegesis seeks to locate meaning in the text's original setting. The distinction between what the text meant and what it means is fundamental, even though it should not be pressed. Nor can the original meaning be permitted to prohibit subsequently discerned meanings, since all significant texts come to mean more than the original writers intended. Nonetheless, by understanding the text historically, we have criteria for evaluating the appropriateness of what is subsequently believed to be its meaning. For example, the seventh commandment (Exod. 20:14) is commonly interpreted as prohibiting a wide range of illicit sexual activities. But the historical meaning of the Hebrew text quite clearly understands adultery as violations of sexual taboos by married persons only, not as "fornication" generally. So the historical meaning becomes a standard for evaluating subsequent interpretations of the text. Once we embark on the quest of historical meaning, we often find that there is more than one such meaning, for the simple reason that the present text itself has a history behind it. Thus in the case of the seventh commandment, it is likely that it meant one thing as an independent prohibition, another as part of the Ten Commandments, and still another when the Ten Commandments were placed in their present literary context. See REDACTION CRITICISM, OT[S].

One cannot even read a Bible, whether in translation or a printed edition of the Hebrew or Greek text, which does not depend upon the results of historical-critical work. Even readers who

know only the KJV depend on the historical-critical work of its translators and textual critics. Modern translations of all sorts rest even more clearly on the broad range of historical-critical exegesis and the disciplines which it has spawned, such as historical grammar and philology, lexicography, studies of Hebrew meter, and the like. Historical-critical work is both necessary and unavoidable.

3. **The limits of critical exegesis.** Despite two centuries of increasingly intense and sophisticated work, biblical exegesis has reached no permanent conclusions, nor are such to be expected. It is evident that significant limitations are built into the process.

i. The text is more than an "object." The common understanding of "objectivity" applies primarily to the process of explaining the text as an object by means of various critical methods. The exegete takes nothing for granted, but persists in asking why the text says this and not that, why it says it at all, and how this particular way of saying it is related to other ways of saying similar things at the time. In principle, there are historical answers (explanations) for all such questions, though in many cases lack of evidence frustrates a solution. Discovering which questions can and which cannot be answered is an important aspect of exegesis.

But a text is also more than an analyzable object; biblical texts are also expressions of beliefs, values, rituals, and world views of particular persons in communities of faith. Explanation is not yet understanding. One can describe the ideas and account for their use, but this is not the same as grasping their content.

Understanding involves rethinking the subject matter of the text on the basis of what one has come to learn about it as an object of inquiry, and on the basis of one's preunderstanding of the subject matter. "Preunderstanding" is that level of perception of the subject matter—whether ethical principles, theological beliefs, or other content—which one brings to the text. In the process of rethinking the subject matter in conjunction with what one has come to know about the text, one enters into "conversation" with the text in order to understand its content. In this process one's own preunderstanding may be enriched, corrected, or confirmed. It is not necessary to agree with the text in order to understand it, any more than it is necessary to agree with a person in order to understand him or her. In fact, increased understanding may lead either to greater agreement or disagreement. On this level of the exegetical process, "objectivity" does not mean detachment or disinterest, but does mean openness to the text and to the possibility of being corrected by it. One reason why exegesis is never completed is that our preunderstanding is not static. It is not only the historicity of the text that puts limits to understanding, but the historicity of the exegete as well; both are conditioned by history. Some exeges are better than others, not simply because some exegetes are more knowledgeable, but also because some are more attuned to the subject matter. There are no "final" answers in exegesis,

but there are varying degrees of perceptive understanding.

ii. Given the nature of biblical literature (see §4a below), it becomes evident that recovery of the original meaning is a far more complex enterprise and its results far more tenuous than commonly expected. Many texts (e.g., Genesis, Isaiah, Matthew, John) contain several "original" meanings because each of their component parts, whether literary sources or stages of composition and editing, has its own meaning (see REDACTION CRITICISM[S]; TRADITION CRITICISM, OT[S]). In principle, historical exegesis can recover the meaning at each stage in the development of the text in relation to its historical context. In most cases, however, that context must itself be inferred from the emphases of the stratum in view. The test of such work is finally the degree to which the results illumine the text.

iii. Within the foregoing limitations, exegesis can ascertain the theological beliefs of the texts and their antecedents, oral or written; but exegesis itself cannot answer the question of the truth of those beliefs. Exegesis can answer the question, What did the text mean by saying that God brought Israel out of Egypt, or that he raised Jesus from the dead? But it cannot establish the truth of those beliefs, nor can the truth of one passage be established by exegeting another. Before the rise of historical-critical exegesis (and where it is still resisted), the exegete did (does) indeed establish the truth of religious beliefs by quoting and exegeting the Bible. But such a procedure is possible only when there is prior commitment to the view that whatever the Bible says is true because it is the Bible that says it. Historical criticism neither requires this view nor precludes it, nor can exegesis itself establish it. One's decision with regard to the truth of the Bible, whether an *a priori* view or a decision evoked by what exegesis exposes, is grounded in one's over-all theological stance. See §5a below.

iv. Some hold that it is possible to exegete a text—in the sense of ascertaining and understanding the original meanings—without posing the question of current meaning, and thus relegate that issue to a separate step or to theologians or preachers. Others regard it as part of their exegetical task to bring out the meaning for today (see HERMENEUTICS[S] §3). In the latter case, the sensibilities and commitments of the exegete as a person are explicitly involved. Even in the former case, however, it is seldom possible to exegete a theological text without tacitly involving one's sense of what is of abiding importance. Moreover, since the text exists at all because it was preserved and canonized in order to address the community, something of the ongoing import of the text must be disclosed if one is to be faithful to its intent.

It would be unfortunate if one were to conclude that the limitations enumerated above outweigh the possibilities, and so revert to a direct reliance on "what the text means to me" apart from exegesis. The quest for personal meaning is continually enriched by attending to the questions posed by the exegetical process, even if they can-

not always be answered satisfactorily. More important, if those responsible for public interpretation of Scripture, especially in church and synagogue, short-cut exegesis in order to focus on personal meanings, they cheat their people out of the Bible. Actually, because exegesis is an ongoing process, it remains a major mode of personal and corporate growth in perception and understanding. To declare exegesis bankrupt because it does not produce personal wholeness is like declaring psychology bankrupt because people are still frustrated.

**4. The exegetical process.** Critical exegesis involves a stance toward the text in which the reader is aware of those principles and preconceptions which inform his or her reading; all who read the Bible become critical exegetes when they raise their assumptions about the text to the level of consciousness. Furthermore, the process and the results of exegesis are guided by the interpreter's own experience, history, and social context. Oppressed minorities, for example, have always gained understanding and strength through the interpretation of apocalyptic texts such as Daniel and Revelation. Individuality and experience are not to be left aside in the exegetical process, but rather the reverse: what one is capable of understanding will be limited but also deepened by personal and social experience. It is difficult to comprehend many of the Psalms which cry against impending death, or Eccl. 12:1-8 which describes it, unless one has viewed death at close quarters. Those who have experienced "the absence of God" will understand the book of Job in ways not available to those who have not.

**a. Text and method.** The methods and procedures of exegesis must be adjusted to the nature of the text. One does not approach legal contracts in the same way as poetry, nor all kinds of poetry in precisely the same way. Similarly, it is important to appreciate the character and the diversity of biblical texts in order to ask the appropriate questions and use the proper methods to answer them.

**i. It is the text which must be understood, not a person.** All biblical literature is the result of compiling and editing; relatively few biblical books now stand as the literary expressions of a single author's creativity. Moreover, the identity of all the compilers and editors as well as that of most of the authors remains unknown. Some books are compilations of diverse materials, and some books are purposely pseudonymous (see PSEUDONYMOUS WRITING[S]). Consequently, the exegete focuses attention on the text, not an elusive author or compiler or editor behind the text.

**ii. The function of the text in the community needs to be determined.** It is extremely unlikely that any of the biblical literature was produced for a general public, as are novels or histories today; it was produced in and for communities of faith. Since biblical literature was written across a span of some ten centuries, it reflects an exceedingly rich range of functions in worship, exhortation, or instruction. Since in a compiled text, each of the parts may have functioned differently before its inclusion, the exegete must be sensitive to the ways in which the compiling

and editing have themselves affected the function of the materials used. For example, Phil 2:6-11 is probably an early Christian hymn, originally sung or chanted in worship. Paul, however, quotes it in order to undergird moral exhortation. The exegete is obliged to understand both settings and both functions.

**iii. Texts may be multilayered.** Many biblical texts are themselves exegetical because they interpret older traditions in a variety of ways, ranging from simple appropriation to self-conscious reinterpretation. For example, if Matthew used Mark, then Matthew is at least tacitly exegeting Mark. Moreover, Mark itself took up older cycles of traditions and interpreted them. Furthermore, each item in the cycle received a new nuance by being joined with others in the cycle. Thus, a given passage in Matthew is the result of an interpretive process which reaches back several decades. More explicit interpretation of earlier texts can be seen in the Chronicler's use of the book of Kings and in the exegesis of the OT in the NT. The more fully one is able to trace the layers of material in the text, the more complex becomes the exegetical process, and the richer the results. See INTERPRETATION, HISTORY OF[S] §§A, C.

Exegetical work moves backward as well as forward. It moves backward by beginning with the text as it has come to be, and ascertains the stages of its history and the elements that came into it at each step. Then one can begin with the earliest stratum and move forward toward the text as it now stands. The decisive thing, however, is that one no longer reads the text in a "flat" way, but perceives its depth and textures resulting from the process of its emergence.

The exegetical process is complex and cannot be reduced to a single question or a single method. Rather, the process must be guided by a number of factors, including the particularities of the text, the goals of the interpreter, and the exegete's own individuality, as well as the context within which one reads and unfolds the text. Nevertheless, the process has a certain logic in which all the individual steps are related to one another. The results of each step may correct and not simply supplement the results of others.

**b. The process itself.** The process of exegesis requires establishing a working text and preparing a translation (see TEXTUAL CRITICISM, OT[S]; TEXTUAL CRITICISM, NT[S]). Recent advances in linguistics, semantics, and communication theory have increased our understanding of both the science and art of translating, and have underlined the necessity of disciplined work if translating is to be on the same level as other areas of biblical study (see DISCOURSE STRUCTURE[S]; DISCOURSE, DIRECT AND INDIRECT[S]; SEMANTICS[S]; VERSIONS, ENGLISH[S]). Exegetes who do not read the original biblical languages can recognize some of the more serious text critical problems through the footnotes in modern translations, the more extensive notes in such tools as a harmony of the gospels, and from commentaries. Textual criticism attempts, not to spell out the meaning of the text, but simply to determine which words actually stood in it.

Given a translation, the exegesis of any passage must then grasp the structure of the book or larger unit, e.g., the Deuteronomistic history (Deuteronomy through II Kings) or Luke-Acts. One looks for clues which indicate major transitions so that the larger blocks or units begin to emerge. Once these are in view, one can take the next step of learning how each of the larger units is built up; e.g., one may recognize the different narrative patterns in the gospels or the process of an argument in an epistle. In this way, the exegete can discover how a particular passage is related to the whole—whether it is the climax of a unit, its turning point, conclusion, or introductory element. Learning the structure of a book is the fundamental way of ascertaining how the final editor or author intended the reader to understand the material.

It is not always clear what the over-all structure is, however, or what conclusions should be drawn from recognizing it. Nonetheless, critics are beginning to see the compositional techniques more clearly (see MNEMONIC DEVICES[S]). Some books are composed by chiasmic principles (a. b. b'. a') (see CHIASMUS[S]); others by themes; some by the line of a plot. Sometimes analysis of the structure uncovers evidence of compilation, though structure and sources do not always coincide. In any case, one must apply source and redaction criticism: when, where, and by whom was the book written, and what message was conveyed by the selection and arrangement of the material? Detailed analysis of the structure will begin to reveal the shorter elements inherited by the final writer or editor. Here the form-critical questions become crucial: what is the genre of the whole and the parts, what are their sociological backgrounds, and what purposes did they serve in their contexts? (see FORM CRITICISM; FORM CRITICISM[S]). For example, Matt. 5:17-20 is composed of discrete sentences, each of which is a distinct form, suggesting diverse original settings and functions.

Thus, one wants to discover, not only the place of the unit within its literary framework, but also its location in the history of traditions and in its environment. It must be determined whether individual units were created by the final editor to bring coherence to the inherited material, or whether individual traditions had been structured previously.

One should be careful about making value judgments concerning the content of the text on the basis of authorship, age of oral tradition, or editorial activity. Critics of the late nineteenth and early twentieth centuries often assumed that additions, e.g., to the prophetic books, were less valuable than the original words of the prophets; likewise some form critics seem to assume that older oral traditions are more important than the work of compilers and editors. Neither of these assumptions is valid. The purpose of determining authorship and recognizing different traditions is simply to discern the different voices in the text and its tradition. The relative importance of the stages in the text's development depends on the question in view. But one should not lose sight of the shape and content of the final form of the

text—including all additions—in the search for its component parts.

Once the structure and its history have begun to emerge, the exegete raises questions concerning historical, sociological, and religious background. Historical questions concern not only the date of the material but also political and other forces which shaped human experience. What, for example, was the impact of the Babylonian exile on the writers of that time and their audiences? The temple was lost; the holy city destroyed; the chosen people uprooted from the Promised Land. The literary works and traditions emerging from the Exile both reflect and respond to these crises of faith and religion. Moreover, some texts reflect worship in the temple, and begin to take on flesh and blood when that environment with its ritual and sense of sacred time and place are reconstructed. The gospels and the letters of Paul come alive when set against first-century Judaism and the culture of the Roman world, and when viewed in the context of early church struggles; the Pastoral epistles reflect the emerging institutional structures of the young Christian church.

When the unit under consideration has been placed in its matrix, then the exegete turns attention to the individual elements (sentences) and words within it. Technical vocabulary may appear, e.g., "covenant," "kingdom of God," "righteousness," "eternal life." The etymology of a word and the usage of its cognates in related languages can tell us much about its history, but only the contexts in which it is used can define its meaning. The context is fundamental, and can be investigated by the use of a proper concordance. A significant word should be compared with other biblical and nonbiblical occurrences, especially within works of the same author or within a given historical period or tradition, e.g., the use of "the law" in the letters of Paul, or Hosea's particular use of "knowledge of God." Note should be taken of formulas (e.g., the greetings in epistles or the various stereotyped expressions in prophetic speeches), of the lines and strophes in poetry, of the syntax and content of each sentence. Every important word in every line of the text under consideration will be examined. But important as word studies are, the exegete's attention must be focused upon units of thought, sentences and paragraphs. Individual words seldom convey meaning apart from sentences, so syntax must be analyzed in order to avoid being atomistic and paragraphs in order to avoid lifting expressions out of context. In the case of Hebrew poetry, the exegete must be aware of the principles of parallelism, in which the unit of thought is almost always at least two lines.

Involvement with the text must have in view not only the ancient world but the modern as well, including particular audiences and purposes within both worlds. Thereby exegesis inevitably entails a measure of theological reflection. This may include what has been called "content criticism" (*Sachkritik*). The question, "How adequately has the message (or the story, or the argument) been presented?" should be pursued with reference to both the original matrix and today's. This may

involve weighing Paul's words against what he says elsewhere, or evaluating various elements or stages of the gospel tradition against one another. Here the exegete will need to be particularly conscious of the assumptions and criteria on which such evaluations are based. When one goes beyond the ancient meaning of the text and begins to evaluate it for theological understanding today, exegesis releases the Bible to become an anvil upon which contemporary theology is hammered out.

Exegesis is enriched by examination of the history of interpretation, which begins in the literature itself, as form and redaction criticism have shown (see INTERPRETATION, HISTORY OF[S] §§A, C). It is self-deception to assume that the contemporary exegete can vault over twenty centuries of interpretation and confront the text directly. The history of interpretation can present possibilities for meaning which had not occurred to the interpreter, and it can make the exegete aware of his or her own preunderstanding.

5. **The impact of exegesis** cannot be controlled in advance, and often not predicted, since the meaning of the text is a matter of repeated discovery. It is useful to consider this with regard to three closely interrelated areas.

a. **Historical understanding.** Two aspects of historical understanding of the Bible must be distinguished. One concentrates on recovering and reconstructing past events, such as the conquest of Canaan (Josh. 1-12; Judg. 1-2) or the council at Jerusalem (Acts 15; Gal. 2), as accurately as possible. In pursuit of this aim, one uses the texts as sources of information about the past. To be sure, most biblical narratives were designed, not to be historical accounts in the modern sense, but to articulate a particular understanding of events. Yet the original intent of the text does not preclude using the text for other ends. In fact, some of the most valuable historical sources are precisely those which had no intent whatever of providing accurate information. Poetry, songs, legends, and theological statements may well provide primary evidence for the historian who is trained to use them sensitively. Conversely, those reports which were intended to provide the original readers with a definitive account inevitably reflect the perspectives and concerns of the times, and were sometimes written from a clearly discernible partisan standpoint (e.g., the Deuteronomistic historical work or Acts). Every text is a primary source for some aspect of historical reconstruction, whether it reports an event or is itself an event in the history of understanding. The second aspect of historical understanding of the Bible, then, is the history of beliefs, assumptions, values, rites, or social conditions. Because these two aspects are intertwined in the texts themselves, they must be distinguished even if they cannot be neatly separated.

In the task of reconstructing past events like the conquest of Canaan, exegesis is fundamental, for without it the historian does not understand the sources or know how to use them properly. The impact of exegesis, however, differs from case to case. Sometimes the accumulated evidence, includ-

ing nonbiblical data from archaeology or contemporary accounts, indicates that the biblical narrative, while written from a particular theological viewpoint, also reports events accurately, if not fully. Sometimes, however, it becomes apparent that the biblical account is historically inaccurate, even if one may grant the religious truth conveyed by writing it that way. This phenomenon can emerge from the exegesis of two conflicting biblical accounts (e.g., the understanding of the conquest of Canaan in Judg. 1 and 2 conflicts with that in Josh. 1-12, or the account of the Jerusalem council in Acts 15 conflicts with that of Gal. 2—assuming that both refer to the same meeting). Whether the discrepancies are real or only apparent is precisely what must be determined case by case. The historical inaccuracy of a particular account can also emerge from internal considerations of a single account; commonly, historians have regarded accounts of the miraculous as historically inaccurate. In any case, the texts must be exegeted before the historian can use them to reconstruct what happened.

The more precise and sensitive the exegesis of biblical narratives has become, the more difficult it has become to use them as straightforward historical evidence. This is especially clear in the case of the gospels and Acts. The tension between John and the Synoptics, evident all along, is not to be explained by saying that John is "the theologian." All the gospels are theologically shaped, and differences lie in the kind of theology, not in the amount. Moreover, form and redaction criticism have shown that the order of the material in the Synoptics results from editing and compiling traditions and texts; the particular contexts of Jesus' words and deeds are not known. Likewise, we do not know the historical sequence of Israel's tribal heroes, because the present order of the stories in the book of Judges is the work of an editor. In either case, it is important not to confuse knowing that we do not know the correct sequence and context, and knowing that the present sequence is wrong.

The distinction between reconstructing what probably happened and exegeting the reports of what happened is fundamental to all historical work. Before the development of historical criticism in general and of BIBLICAL CRITICISM in particular, it could be assumed that the two tasks coincided—that exegesis of the narrative discloses what happened. This may no longer be assumed; in some cases what actually happened may be quite different from any biblical account of it. For example, although we have four accounts of the trial of Jesus, what actually took place may have been quite different; after all, none of the disciples was there. In the case of the Exodus, many historians are persuaded that only a few of the tribes were in Egypt, and that the present account reflects the fact that later all twelve tribes understood themselves to have been there, so that the experience of some provided the founding event for all (see CANAAN, CONQUEST AND SETTLEMENT OF[S]). When the portrayal of an event and the reconstruction of it differ, the result is not merely negative, as if historical reconstruction controverted or cor-

rected the biblical account. The result is also positive, for now one understands the account in a new way, and the particular theological understanding of the event comes into sharper relief.

It is now clear why the second aspect of historical understanding—that having to do with biblical theology—is profoundly affected by historical exegesis. The historian of the religious faith of Israel or early Christianity does not, of course, limit himself or herself to biblical texts, but relies also on nonbiblical texts and on non-literary evidence as well—temples, cult practices and objects, etc. The same is true of the social historian of Israel and early Christianity. In either case, the faith and praxis of the biblical communities are understood in relation to their antecedents and contemporaries. When the theological ideas and motifs, whether assumed or expressed, are exegeted and understood historically, three other things are understood. (1) There are many theological standpoints in the Bible, some of which are logically in tension with others (*see* HERMENEUTICS[S] §5). (2) Some of these tensions result from the fact that theological ideas were grounded in particular historical situations and hence changed in the course of the ten centuries during which the Bible was being written. Historical-critical exegesis has destroyed the impact of old arguments against the Bible because there were “contradictions” in it. Diversity and tension are to be expected. (3) Many theological ideas in the Bible are found also in its several environments; at almost no point can one identify a theological idea which is wholly peculiar to the Bible.

Frequently, what is distinctive about the theologies in the Bible is the way they give nuance to, restate, or challenge prevailing ideas of the time, inside and outside the communities for which the literature was written. Sensitive exegesis exposes the concrete ways in which such forms of interaction occurred. Well-known examples are the biblical accounts of Creation, the polemic against idolatry (which uses the vocabulary of Canaanite cults), or Paul’s dialectical appropriation of and rejection of the theological tendencies among the Corinthians. The impact of exegesis on the effort to trace the historical development of the theologies in the Bible is a deepened and sharpened understanding of both their similarity with and divergence from their environments.

**b. Theological appropriation.** The impact of exegesis on theological appropriation depends on the role of Scripture in a particular religious tradition and on the importance of theology in it. Judaism, being concerned primarily with TORAH (instruction), has never had a creed in the Christian sense nor emphasized theological doctrines. For Protestants and Catholics, however, the growth of biblical criticism since the Enlightenment has required a fundamental reconsideration of the relation between the Bible and doctrine. *See* BIBLICAL CRITICISM, HISTORY OF; INTERPRETATION, HISTORY OF[S] §§H, I.

First, it has caused a reassessment of what Christians call the “Old Testament.” The OT is not a Christian book, nor does understanding and

appropriating it require reading it through the lens of the NT. Christian and Jewish scholars use the same methods, adduce the same evidence, and may reach the same general conclusions. The differences in their results are determined, not necessarily by their being Jewish or Christian, but by the diversity of the individuals and of the schools of thought to which they belong. Nonetheless, with some notable exceptions, Christians have steadfastly insisted that the Bible of the synagogue must be retained as part of Christian scripture—a place granted to the scriptures of no other religion.

Precisely how the synagogue Bible and the distinctly Christian canon cohere into one Bible has been a theological problem almost from the start, and several ways of holding them together have been developed, including naming the larger part “Old Testament.” Among them are prophecy (or, promise) and fulfillment; law and gospel; Christ as latent in the Old, manifest in the New; and the more recent liberal Protestant view of “progressive revelation.” While each has something to commend it, none comports easily with the results of critical exegesis. The OT is more than prophecy; it includes “gospel” (proclamation of grace) as well as law—indeed, the law itself is understood as a sign of grace (*see* TORAH[S]). Critical exegesis cannot show that Christ is latent throughout the OT, apart from allegory; nor does the NT itself teach progressive revelation. Developing a theological understanding of the place of the OT which does not violate the integrity of the synagogue Bible or Christian theology remains high on the agenda of Christian theology.

Second, whereas the older Christian orthodoxy held that the Bible was the basis of a coherent system of doctrine, critical exegesis has shown that the Bible includes not only a long development but a rich pluralism, and that both Testaments contain internal critiques. For example, one may regard the wisdom theology of the OT as a critique of the theocratic covenant theology of the prophets and the Deuteronomistic history; and, even within the wisdom tradition, Job protests against the wisdom theology of suffering. In the NT, the Johannine emphasis on the presence of salvation, as well as the interpretation of the return of Christ as the Spirit-Paraclete, provides an alternative to the theology of Matthew, Hebrews, Revelation, and to some extent Paul as well. Critical exegesis has made it impossible to speak of the theology of the OT or of the NT. Attempts to ascertain a single overarching theme, such as “salvation history,” or a particular understanding of human existence, do not do justice to the whole range of biblical material; they only express particular viewpoints in modern theology. Critical exegesis, then, makes some form of content criticism necessary (*above* §4b). The Christian theologian must, on nonexegetical grounds, determine what theological understanding is most adequate. Then the degree to which the truth of Christian faith is expressed in a particular text or by a given writer must be ascertained by critical evaluation. All biblical texts are equally canonical, but not all are equally profound.

Critical exegesis not only poses the problem of theological pluralism but suggests a way of dealing with it. It discloses how the various biblical theologies were occasioned by particular circumstances. This means that the logical tension between writers and books is itself relativized, for no given text was ever designed to say everything that the writer/editor deemed true or important. Moreover, by canonizing diverse theologies the church affirmed a range of possibilities within which diversity could flourish. To affirm that the Bible is the norm of faith and life is to affirm that the Christian community is subject to a diversified norm, and thereby to preclude the tyranny of a homogeneous sacred book. By staying in dialogue with such a canon, Christian systematic theology is constantly renewed. See BIBLICAL THEOLOGY[S].

Third, critical exegesis affects the understanding of the authority of the Bible (see SCRIPTURE, AUTHORITY OF[S]). Since the Enlightenment, it has become increasingly prevalent to distinguish the Word of God from the words of the Bible, and to regard the Word of God as the religious meaning (and the occurrence of meaning) which emerges through the text. On this basis, the exegete, who analyzes the text and factors it into its component strata in order to relate them to their respective contexts, is not dissecting the Word of God but is trying to understand as precisely as possible the text through which religious meaning (Word of God) occurs. "Word of God" is now seen as a religious confession that through this text one has been grasped by a decisive meaning. The authority of the Bible has not been destroyed by critical exegesis but it has been recast. Many regard critical exegesis as the means by which the authority of the Bible has been released from misplaced expectations in order to exercise a more proper role.

*c. Exegesis and preaching.* Wherever the Bible is regarded as canon and not merely a source book for early theological ideas, critical exegesis is fundamental to preaching. The overview of the exegetical process sketched above should indicate the variety of ways by which the preacher can ascertain the biblical message. All the critical methods and tools are justified only to the extent to which they provide access to the meaning of the text. Competence in critical exegesis is as fundamental to the vocation of the preacher as any other skill. See HERMENEUTICS[S].

The more one perceives the historical character of the text through each of its stages of development into its present form, the more possibilities emerge for preaching. Nowhere is this clearer than in the Synoptics. For example, once we see that a given parable has taken on different meanings in each of its contexts—Jesus, the stage of oral transmission, Mark, Matthew, Luke—the possibilities for preaching are multiplied, because a sermon can emerge from each of them. In principle, one could preach five sermons, each developed from a different setting of the same parable. Likewise one could preach from a given OT text and also from its use in the New. Or one could preach a series of sermons on the Exodus, each from a different text where this event is reinterpreted.

Indeed, preaching from the Bible extends the interpretive process which the biblical texts themselves represent.

The degree of exegetical thoroughness which a given sermon requires depends on whether the sermon is developed from a particular metaphor, a narrative, a theological motif, or a parenthetic passage. Moreover, the impact of exegesis on such preaching depends to a great extent on the imagination with which the preacher does the exegesis and on the extent to which one discerns situations today which are analogous to those in which the text (and its strata) emerged in the first place.

Perhaps most important, exegesis becomes fruitful for preaching when one engages in it steadily and with whole books in view. Simply "looking up" a passage in commentaries is not exegesis. Sustained study of the text builds a cumulative understanding which will manifest itself in the depth of perception and range of appropriation. Above all, the preacher must be grasped by the import of the text; otherwise one simply gossips about what others have heard through it.

\***EXHORTATION IN THE NT.** The Greek verb παρακαλέω can mean (a) to summon to one's side for help (e.g., Acts 28:20; Luke 8:41; II Cor. 12:8); (b) to exhort (e.g., Acts 16:40; Heb. 3:13), implore or request (e.g., II Cor. 12:18; Mark 1:40); (c) to comfort (e.g., II Cor. 1:4); and (d) to conciliate (e.g., Acts 16:39). In the NT *a* is the most frequent meaning, while in the LXX *c* predominates.

The verb often introduces parts of Paul's letters (e.g., Rom. 12:1-2), perhaps following a Hellenistic epistolary convention (see also LETTER[S] §4). Bjerkefjord argues that the Pauline passages do not stress the apostle's authority and are not hortatory in nature.

The meaning of the verb in the NT, however, requires a consideration of the history of the tradition as well as of the origin of the epistolary formula. (a) The churches are exhorted in reference to a tradition (I Thess. 4:1-2) which from the beginning contained both doctrinal and ethical teachings (Rom. 6:17; 16:17). (b) Exhortation is regularly associated with the prophetic witness (I Cor. 14:31; Acts 15:31) and the presentation of the gospel (Acts 2:40). (c) Because the frequent admonitions to exhort and establish one another in the faith (Acts 16:40; Heb. 3:13; II Cor. 10:1) have definite ethical implications (I Thess. 2:11-12), the verb seems to be expressing a strong, personal appeal, i.e., an exhortation. The authority of the appeal does not rest in the authority of the apostles, however, and in this respect Bjerkelund's study is helpful. The authority and basis of the appeal is Jesus himself; exhortation is a strong personal plea to accept Jesus' call to faith and to a Christian life, i.e., to discipleship (II Cor. 5:20; I Thess. 2:3-4).

**\*EXODUS, THE.** All the information on the exodus of Israel from Egypt, as well as on their settlement and oppression in that land, comes from the Bible alone. Certain data on the history and geography of Egypt and the peninsula of Sinai can testify to the special circumstances which existed at the time of the event and served as a background for it, but they contain no testimony, either direct or indirect, concerning the event itself. The information in the Bible is found mostly in the narratives of the Pentateuch, where its character is distinctly legendary. Nevertheless, there is no reason to doubt the historical reality of the event itself.

#### Bibliography

1. **The religious significance of the Exodus.** According to the Bible (Exod. 1:1-7; Deut. 10:22) the family of Jacob became a people even before the Oppression began. There is a kernel of truth in the assumption that Israel took form as a national group even before the Exodus, but the exodus from Egypt marks the first appearance of the people Israel in the historical arena. The Bible, however,

does not perceive the event merely as a national-historical matter, but first and foremost as an event having religious significance. It was not an ordinary occurrence which could be explained as the result of previous events. God himself is the one who caused it to happen and had a specific intention in doing so. While the Bible puts a teleological interpretation on all historical events connected with Israel, in the case of the Exodus there is something more—Yahweh has demonstrated clearly how he caused the event, thus showing to the whole world that he is the one standing behind it.

The historical-realistic aspects of the event (political conditions, form of the Oppression, and the route of the journey) are thus restricted to a minimum. In their place an atmosphere of legend prevails in nearly the whole of the narrative: popular imagination (also accompanied by a measure of wit and irony), miraculous deeds, and the feeling of the unlimited power of God, for whom the war against the Egyptians becomes somewhat like a game. The plagues which Yahweh sends against Pharaoh and his kingdom are depicted as punishments and also as signs and miracles. They are punishments because God executes vengeance on the heathen nation, its king, and its magicians; they are signs and miracles because he makes known in advance the coming of each plague and also its cessation, and thus reveals that all the plagues are the work of his sovereign will. Some of the miraculous deeds are only signs, e.g., Aaron's rod turning into a serpent (Exod. 7:9-12). However, it is not impossible that in all this there is some kernel of historical reality, even if covered with a thick layer of vibrant imagination and miracle stories, by means of which religious meditation seeks for itself poetic, intuitive expression.

Since the Exodus is perceived in the Bible as a divine event, it serves as one of the most significant symbols of the biblical faith. One of the axioms of this faith is that Yahweh, and not any other deity, brought Israel out from Egypt: "I . . . who brought you out of the land of Egypt, out of the house of bondage" (Exod. 20:2; Deut. 5:6). The significance of these words is that the deity who brought Israel out of Egypt was the one who now spoke to them and laid on them obligations and commandments (see COVENANT, MOSAIC[S]). The memory of the Exodus is embedded in the injunction to celebrate the festivals and in many day-by-day commandments, not only in the particular phraseology of D (Deut. 10:19; 15:15; 16:3, 12; 24:22, etc.), but also in the language of the other sources (Exod. 13:8, 14; 22:21 [H 20]; 23:15; Lev. 23:43, etc.).

2. **The historical framework.** One approach to determining at which time and in which reign the Exodus occurred is to try to account for the fact that, according to the biblical tradition, there was no trace of an Egyptian presence in the land of Canaan when the tribes of Israel conquered it. If we accept this testimony we might search for a period of decline in Egyptian power in Canaan. However, it must be remembered that even in periods of great Egyptian power on the Asian front, control in conquered areas was not direct and ad-

ministrative in character, but was exercised through local rulers who became vassals of the pharaoh. (See CANAAN, CONQUEST AND SETTLEMENT OF[S] §3b.) Furthermore, the mountain regions of Canaan, which until the beginning of the monarchy were the effective limit of conquest and settlement by the tribes of Israel, were in fact situated on the edges of the area under the supervision of the Egyptians, whose influence was recognized more especially along the principal highways in the coastal area and in the valleys. It is characteristic that almost all the Canaanite cities which are mentioned in the Egyptian sources, even cities located in the interior of the country, such as Jerusalem and Shechem, are according to the testimony of the Bible itself among those which were not conquered by Israel in the period of the settlement. Consequently, we cannot exclude the possibility that the beginning of the settlement and the exodus which preceded it took place during the reign of a strong pharaoh.

The determination of the date of the Exodus is contingent on a prior decision concerning several questions. What is the time of the conquest of Canaan? Was it accomplished, at least in essence, in one onslaught, or was it the result of an extended process, so that it could be accompanied by quiet settlement? (See CANAAN, CONQUEST AND SETTLEMENT OF[S].) Did the tribes enter the land as a unit, or in two main waves? Where and at which point or points did the entrance occur? What is the significance of the archaeological findings in this matter and how do they agree with the biblical testimony? The main evidence for determining the date is as follows.

*a. The store-cities.* According to Exod. 1:11 the Israelites built for the pharaoh the "store-cities," Pithom and Raamses (RAMESES). The name Pithom is undoubtedly derived from *pr-Itm*, meaning "house (temple) of Atum" (the sun god). As is made clear from the inscriptions, this was the name of Tell el-Maskhutah in the eastern part of the Delta at the end of the fertile belt of Wadi Tumilat (see, however, PITHOM). Tell el-Maskhuta is identified with Theku, the capital city of the eighth district of Lower Egypt, and is the biblical Succoth. It is probable that the temple of Atum was located in the center of the city, and in accordance with the custom of the Ramesside period of calling places by the name of the principal temple found in them and not by their older names, the name Pithom was applied as an epithet of this city. In Tell el-Maskhuta was found a large granite statue of Ramses II; and from the excavations which were carried on at the site it became clear that the city had a quadrilateral form, with heavy walls. Inside it were found right-angled compartments which served as places of storage. This was, therefore, a "store-city" (or "city of storage places") intended to serve as a supply base for the armies of Ramses II when leaving for the E and also as a protection for the eastern frontier.

The site of Rameses is in dispute. From the testimony of the papyri the city of Tanis (the biblical ZOAN), which is in the vicinity of the NE corner of the Delta, and whose remains are found today near the village of San el-Hagar at the S shore of Lake Menzaleh, was called *Pr-R'mssw*,

"House of Ramses." If Zoan existed before the time of Ramses II, it was he at least who rebuilt and adorned it to the extent that he was considered as its second founder. If Ramses II is the one who erected it originally, then "House of Ramses" is its older name which in the time of the Twenty-first Dynasty was changed to Zoan (Gardiner made a similar suggestion). If Zoan was not built until the time of the Twenty-first Dynasty (as perhaps may be concluded from the excavations carried out at the site by J. Yoyotte from 1965 to 1969), then apparently it was built upon the site of the "House of Ramses" which had stood there formerly. Some say, therefore, that the biblical Rameses is surely Tanis-Zoan, but this identification is fraught with difficulties. Zoan is situated N of Tell el-Maskhutah, but from the statement that in their exit from Egypt the Israelites journeyed from Rameses to Succoth (Exod. 12:37), it is clear that the site of Rameses was to the W of Succoth. Also, Zoan was not a store-city. Alt advanced the hypothesis that the city of Rameses extended from Zoan to Qantir, about twelve miles S of San el-Hagar, and thus encompassed a large area (like the capital city of Amen-hotep IV at Tell el-Amarna, which extended over twelve miles from W to E and about nine miles from N to S), but even this is not sufficient to remove the difficulties. Moreover, it is probable that many of the places in the Delta which were built by Ramses II bore his name. It would appear, therefore, that those who say that the biblical Rameses is to be looked for in one of the tells W of Tell el-Maskhutah are correct. Perhaps Petrie was right when he identified Rameses with Tell er-Retaba, about nine miles W of Tell el-Maskhutah. Although the identification of this latter place with Succoth and Pithom is nearly certain, some have made a distinction between Pithom and Succoth and argue that Tell er-Retaba is Pithom (Gardiner and Albright); but they had to assume that Rameses is Zoan (see PITHOM; RAMESES, CITY).

In any case, these witnesses may lead to the conclusion that the pharaoh in whose time Israel was oppressed in Egypt was Ramses II. And if so, then the Exodus also took place in his reign or in that of his successor (see, however, below).

*b. Mention of Israel in the Egyptian sources.* It may be that in lists from the time of Thut-mose III and Ramses II mention is made of a place in Canaan by the name of Jacob-El and perhaps also Joseph-El. And some scholars say that the name Asher also appears in Egyptian lists. But these data are either doubtful or are not sufficient to produce substantial conclusions. The only real evidence of this kind is the mention of Israel on the victory stele of Mer-ne-Ptah, the only mention of the name Israel in any of the Egyptian sources (see MER-NE-PTAH Fig. 40). It portrays in ornate style the defeat of the king's enemies in the fifth year of his reign: "The Hittite land is pacified, Canaan is taken captive . . . Ashkelon is plundered, Gezer is seized upon, Yanoam is reduced to nothing, The people Israel is destroyed, it has no offspring; The Horite land has become like a widow for Egypt."

The date on the inscription is from the year 1230 or 1229 B.C., and this is a solid point of

control, proving that Israel was already in Canaan. That Israel is marked with the determinative of "foreign people" and not "foreign land" does not weaken at all the validity of the evidence, since it is possible that the borders of Israel's settlement were still shifting, and since the tribal confederation of Israel was located in the mountain regions and did not have control over the central walled cities which dominated the inhabited area of these "lands" and cities mentioned alongside Israel in this inscription. It is far-fetched to assume, as various scholars have done, that the inscription refers to an Israel still wandering in the wilderness, or to Israelite tribes that did not go down to Egypt, or even to an Israel which was seized just as it was coming out of Egypt.

The view (based on Exod. 2:23) that the pharaoh of the Exodus arose only after the death of the pharaoh of the Oppression is by no means proven, since the biblical witness at this point is built on ancient traditions overlaid with fantasy and legendary distortion. It is thus not impossible that the Exodus occurred in the time of Ramses II himself. This is the hypothesis of Albright, who fixes the Exodus (in his opinion—of the Leah tribes only, under the leadership of Moses) at approximately 1290 B.C., at the beginning of the reign of Ramses II, when this king was absorbed in his building enterprises (while the conquest of Canaan would have taken place in the second half of the same century).

Since, however, the biblical evidence is in legendary story form and not annalistic, it is equally possible that the Oppression began earlier. Ramses II was the most outstanding and well-known king of the Nineteenth Dynasty (his reign was also the longest—sixty-seven years); therefore it is possible that he cast his shadow over the biblical perspective. The Oppression may therefore have begun earlier, ca. 1350 B.C., with the rise to power of the Nineteenth Dynasty whose most outstanding king was Ramses II; it is even likely that the beginning of the Oppression was connected with the change of dynasties. But the king in whose time the conquest of Canaan occurred was of necessity Ramses II, because he preceded Merneptah, in whose fifth year Israel is mentioned as a living entity. It cannot have been an earlier pharaoh, since Lachish and Bethel were still Canaanite during at least part of Ramses' reign. In the burned Canaanite stratum at Lachish a scarab of Ramses II was found, and there are a number of indications that Bethel, too, was destroyed close to the end of his reign. So if the Conquest occurred in the time of Ramses II, then the Exodus should have taken place some decades earlier.

At the same time, not to be excluded from consideration is the possibility that the Exodus took place in the time of the weakness and decline of the Eighteenth Dynasty, or during the transition to the Nineteenth Dynasty, about 1350 B.C. In this case, "the pharaoh of the Oppression" would be the kings of the Eighteenth Dynasty, who were known as great builders. The entrance of the Hebrew tribes into Egypt may have occurred with the coming of

the Hyksos, while the rise of the Eighteenth Dynasty (ca. 1580 B.C.) marked the change in status and the beginning of the Oppression. As to the statement about Pithom and Raamses in Exod. 1:11, there is the possibility that it is a mere anachronism from the time of the literary crystallization of the biblical narrative in this part of the Pentateuch. The narrative uses geographical terms, not as they were current at the time of the event, but as they were widely recognized at the time of the narrator, or were still remembered from the immediately preceding period. If the place name Rameses lasted until the end of the Twentieth Dynasty (i.e., until the beginning of the eleventh century), then it is not far removed from the end of the period of the Judges, when some ancient biblical traditions were already taking shape. Such anachronisms are fairly frequent in the Pentateuchal narratives.

*c. The Transjordanian kingdoms.* According to the biblical tradition, Moab and Ammon were settled in their territories before Israel reached Canaan. According to J (see DOCUMENTS), Israel was forced to go around these territories because they had been refused permission to cross them (Num. 20:14-21; 21:11-13; cf. Judg. 11:17-18). According to D they passed through them in peace after having been authorized to do so (Deut. 2:2-13, 29). From the viewpoint of historical reality the two descriptions are of equal cogency. A group of nomads could make its way either by going around settled territories or by crossing them if permitted to do so and if it actually restricted itself to "the King's Highway" without deviating "to the right or to the left" (Deut. 2:27). Therefore, we cannot know which of these two traditions corresponds to historical reality. It appears that the viewpoint of D lies also at the base of the tradition of P, which in its list of encampments (Num. 33:41-49) puts together the route of passage through the territories of Edom and Moab. In this priestly list there is no evidence, in spite of the claims of some scholars, of a first wave of Israelite penetration, which is supposed to have preceded the settlement of Edom and Moab. The Bible also records that the Ammonites settled in their territory prior to the entrance of Israel into the land of Canaan (Num. 21:24; Deut. 2:19-21).

The survey which N. Glueck carried out in areas of Transjordan showed that within the limits of these kingdoms there is no sign of permanent settlements before the thirteenth century B.C. This indicates that the settlement of Israel also did not occur earlier than that, and hence that the Exodus could not have taken place before the Nineteenth Dynasty (see, however, AMMON, AMMONITES [S]; EDMON[S]; MOAB[S]; RABBAH[S]). Perhaps it is even possible to conclude that the settlement of Israel took place only a short time after Moab settled in its land. This conclusion holds if "the first (RSV "former") king of Moab" (Num. 21:26) is interpreted in the sense of "the first king to rule over the Moabites" and not "the earliest king who ruled in Moab before this time." If Sihon fought against the first king of the Moabites, and afterward Israel came and fought against this same Sihon, then the settlement of both Moab and

Israel in their respective territories took place within the course of one generation. In any case it is probable that there was no long interval between these two events.

**d. Chronological data.** In the Bible there are certain chronological data relating to the Exodus, but there are also grave questions as to their validity. In a Priestly chapter heading it is said that the construction of Solomon's temple, which began in the fourth year of his reign (about 970 B.C.), took place 480 years after the Israelites came out of Egypt (I Kings 6:1). If this number were realistic, the Exodus would have taken place about 1450 B.C., that is, in the time of Thutmose III, but this is unlikely. It is probable that the number 480 is merely forty years multiplied by twelve, forty years from the biblical perspective being reckoned as one generation. This, therefore, is a typological combination which has no historical significance (see NUMBER §5). Moreover, we are not entitled to suppose that from the Exodus to the beginning of the construction of the temple twelve "real" generations elapsed, for the number twelve is itself typological. In addition it is hard to believe that in the time of Solomon records of generations of priests could be found and that such records could reach back to the dimly remembered times of the Exodus.

Likewise typological is the mention of four generations, which according to biblical tradition elapsed from the time when Jacob and his household went down to Egypt until Israel went out from there (Exod. 1:2; 6:14-20). Thus from the historical point of view nothing whatever is to be learned from this tradition. This number is already found in the story of the covenant in which God assures Abraham, "And they shall come back here in the fourth generation" (Gen. 15:16). It is probable that in the patriarchal stories one generation was considered not as forty years, but as a hundred years, since the life spans of the patriarchs were considered to be longer than those of ordinary men; this would explain why it says in the same passage that the oppression in Egypt will last four hundred years (Gen. 15:13). In a manner characteristic of P, the round number of four hundred years receives a more exact form of 430 years (Exod. 12:40). (Similarly, the round number of 600,000, which the earlier sources recognize as the number of those leaving Egypt [Num. 11:21; Exod. 12:37, "about 600,000"] receives in P a more precise form of 603,550 [Exod. 38:26; Num. 1:46; 2:32].) Nevertheless, the more precise number does not establish historical credibility. To be sure, Albright claimed that if we subtract 430 years from the era of Tanis-Zoan, which began about 1750 B.C., we reach approximately the time when the exodus from Egypt occurred. But this is an inappropriate mixing of categories, in which numbers based on an epic-narrative tradition are combined with a chronological system which belongs to another culture.

Likewise the number put into the mouth of Jephthah, that until his time Israel had been able to dwell three hundred years in the areas N of the Arnon (Judg. 11:26), is certainly typological and rounded off, and cannot be the basis for computing the beginning of the settlement of

Israel in Transjordan or the date of their exit from Egypt.

**3. The route of the journey.** The information on the route followed by the fugitives from Egypt, like that on the Exodus itself, comes only from the Bible. However, it is possible, to some extent, to supplement this information with data connected with the terrain of the area and the natural pathways that cut across the peninsula of Sinai. The biblical information is not uniform, but varies according to the sources which make up the Pentateuch. Furthermore, the description put together in each of the sources does not necessarily constitute a complete picture. J and E have been preserved in fragmentary form; the description in D is deficient in some details; the descriptions in P are vague and it is impossible to pinpoint many of the locations. Accordingly, it is not surprising that scholars have proposed conflicting routes.

**a. The southern route** (Wright, Grollenberg, May *et al.*). In leaving Egypt, Israel turned directly S-SE toward Jebel Musa, on the road which led to the copper and turquoise mines among the mountains in the S part of the peninsula of Sinai (see EXODUS, ROUTE OF §2). The chief support of this route is the identification of Mount Sinai with Jebel Musa, which has been accepted in Christian tradition since the Byzantine period. But this tradition has no connection with the biblical period and even less with the time of the Exodus (see SINAI, MOUNT). Moreover, according to the biblical tradition itself, Israel intended at first to reach Canaan, and only after they were already at Mount Sinai (or Horeb) and after they had sent out the spies was it decreed that they should wander in the wilderness (Num. 13-14; Deut. 1:19-28, 34-40). A group intending to reach Canaan would have no reason for turning toward the S of the peninsula.

**b. The northern route** (Eissfeldt, and in essence accepted by Noth and others). The route of the fugitives turned N, crossed the coastal road, and entered the belt of dry land separating Lake Sirbonis from the Mediterranean Sea. Among the arguments for this are the identification of BALZEPHON (Exod. 14:2, 9; Num. 33:7) with the place called Mohammediyeh, a small hill at the western corner of Lake Sirbonis, or with Ras Kasrun, a place about twenty-five miles to the E; likewise the identification of MIGDOL (mentioned in the same passages) with Tell el-Her, along the road extending from Kantara, about twelve miles to the NE. Another argument is based on the supposition that "the sea" which was divided before Israel was only a lake, and if the lake was called *Yam Suph* (literally "Sea of Reeds," sometimes translated as "Red Sea"), then it was only later that this name came to be transferred to the great sea at the S of the peninsula of Sinai (as a matter of fact, in the narrative of P as it is woven into Exod. 14:1-15, the sea which was divided before Israel is not called "Sea of Reeds" but simply "the sea").

But this theory also will not stand close examination. No lake could account for the name *Yam Suph* (Sea of Reeds) being transferred to the Red Sea unless that lake was originally con-

nected to that sea. And even though the sea which was divided is called in P simply "the sea," nevertheless in addition to this P mentions *Yam Suph* as one of the stopping places which were encountered on the route of Israel after the miracle of the crossing (Num. 33:8-11). Apparently "the sea" at which according to P the miracle was experienced by Israel was in the vicinity of the modern Lake Timsah, near the E end of the Wadi Tumilat. Counting against the northern theory is also the fact that there is no natural route connecting Lake Sirbonis with, for example, Kadesh, which is one of the important stopping places along the line of Israel's journey. Furthermore, nearly impassible sand dunes to the S of the coastal road cut it off from the interior of Sinai. The identifications of Baal-zephon and Migdol mentioned above are little more than conjectures.

**c. Routes in Sinai.** The two theories just discussed also do not take into account the decisive fact that biblical testimony is not at all uniform, but varies according to the sources, each one of which has its own particular conception of the route. In different circles and in different times this great historic event was portrayed in different geographical terms. Each narrative was based on an actual geographical possibility, but each contains a measure of anachronistic projection. Thus we are not able to describe the exact route over which the fugitives actually passed; we can only trace how Israel conceived of this route after they had settled in the land of Canaan and their ancient traditions had been put into literary form. At that time the geographical understanding of the journey was no longer connected with one particular route, and the differing conceptions were already influenced by the conditions which existed at various periods of the monarchy.

Also, the above theories, especially the northern theory, do not take sufficient account of the natural trails that have cut across the peninsula of Sinai from ancient times to the present. Only these trails were suitable for the passage either of nomads or of an army with iron chariots, and upon a combination of them the route of Israel must be based. The names of the trails were determined, as a rule, according to the destination, and therefore it was possible for one route to be called by two names; for anyone who travels in the reverse direction, the beginning has become the end, and therefore the name of that road is changed.

Three trails cut across the breadth of the peninsula of Sinai (see Map 1); (1) The coastal road beginning at the fortress of Sila (Zilu? Sile?) near the E arm of the Nile and extending beyond Gaza and Megiddo. Perhaps for one traveling on this road from Palestine in a SW direction it would be called "the way to Egypt" (see Isa. 10:24 [RSV "as the Egyptians did"], 26; Jer. 2:18 in Heb. and KJV). (2) The central road going off from Lake Timsah, passing by Kadesh ('Ain el-Qudeirat), extending to Beer-sheba, then going up to Hebron and Shechem. It is probable that this road is the one called in Exod. 13:17 "the way of the land of Philistines" and that the reference is to "the land of the Philistines" of the Negeb, mentioned in the patriarchal narratives, on the border of which

Beer-sheba was thought to be situated (Gen. 21:32-34; 26:23-33). In the opposite direction this same road was called "the way to Shur" (Gen. 16:7), that is, the road that goes down to the chain of fortresses on the border of Egypt (cf. Gen. 25:18; Exod. 15:22; I Sam. 15:7 27:8). (3) The southern road extends from Suez to Elath and is identical with Darb el-Hajj, the route of the pilgrims to Mecca. It is probable that for one traveling E this route was called in the Bible "the way of the wilderness" (Exod. 13:18).

In addition, there are three lengthy trails running diagonally across Sinai. They are subsidiary to "the way of the wilderness," and two of them join at Kadesh. These are: (4) a road going up from the way of the wilderness and ending at Kadesh. It is called "the way to the hill country of the Amorites" (Deut. 1:19) because at Kadesh began the dominion of the Amorite hill country (Deut. 1:6-7, 20). (5) A road going down from Kadesh to the end of the gulf of Elath (Gulf of Aqaba), and called "the way to the Red Sea" (or Sea of Reeds) (Num. 14:25; 21:4; Deut. 1:40; 2:1). (6) The road that extends N to the end of the Dead Sea, called "the way to the Arabah" (Deut. 2:3, 8 [RSV "Arabah road"]), since it ends in "the Arabah" (with the definite article), the biblical designation for the Jordan Valley (Deut. 1:7; Josh. 18:18; II Sam. 4:7; II Kings 25:4 and *passim*). See Map 1.

Map 1. Routes in Sinai

**d. Varying sources.** In order to understand the distinct conceptions of the route in the various sources, it is fitting to point out that E and D agree, since the latter depends on the former, that is, the narrative portions of D (Deut. 1:9-3:29;

9:8-10:11) are based upon the narrative of E alone. And the E narrative, preserved in fragmented form, is brought to partial completion by what is related in D.

i. According to E, after Israel crossed the Sea of Reeds and went up "the way of the wilderness" (Exod. 13:18; and fragments of E in ch. 14) they reached Mount Horeb, in the vicinity of which were found also the stopping places of Massah-Meribah and Rephidim (Exod. 17:2-13). The route beyond Horeb is summed up by D, which says that from there Israel traveled along "the way to the hill country of the Amorites" and reached Kadesh-barnea (Deut. 1:19). From Kadesh-barnea the spies were sent out, and there it was decreed that Israel should wander in the wilderness until the whole generation of those who came out of Egypt had died (Num. 13-14, with interruptions; Deut. 1:20-39).

From Kadesh-barnea they journeyed on "the way to the Sea of Reeds" (Num. 14:25; Deut. 1:40; 2:1); and from there they kept marching around "the hill country of Seir many days" (Deut. 2:1). After the completion of their period of wandering, they turned N (Deut. 2:3) on "the road to the Arabah," which runs N from Elath and Ezion-geber, and crossed the territory of the people of Esau living in Seir (Deut. 2:4, 6, 8, 29). After that they went around Moab on the E side (Deut. 2:8), but at Ar they entered the territory of Moab so that they could reach the land of Sihon the Amorite (Deut. 2:18, 24). Finally the lands of Sihon, king of the Amorites (Deut. 2:26-37), and Og, king of Bashan (Num. 21:33-35; Deut. 3:1-3), fell before them. See Map 2.

Map 2. The exodus route according to ED

ii. According to J, after crossing the Sea of Reeds, Israel went on to the wilderness of Shur, and the first stopping places they found were Marah and Elim (Exod. 15:22-25a, 27). After that they reached Mount Sinai, and perhaps also according to J this was on "the way of the wilderness." Their journey from Mount Sinai is described in Num. 10:29-36. The narrative of J concerning the spies is preserved in fragments only (Num. 14:3β-4, 8-9, 11-24), and they do not indicate the place from which the spies were sent out.

From Kadesh Israel attempted to cross the territory of Edom, but permission was denied them (Num. 20:14-21); therefore, they went down "the way to the Sea of Reeds" in order "to go around the land of Edom" (Num. 21:4; the words "and they set out from Mount Hor" are from the Priestly editing). They next went around Moab on the E and did not enter its territory (Num. 21:11β; cf. Judg. 11:18). After more stops they reached the top of Pisgah, which looks down on the valley of the Jordan (Num. 21:20). Then they conquered the country of Sihon, king of Heshbon (Num. 21:21-32; cf. Judg. 11:19-22), and finally the clans of Manasseh (Machir, Jair, and Nobah), went on to conquer the land N of the Jabbok (Num. 32:39-42). See Map 3.

Map 3. The exodus route according to J

iii. The testimony of P is twofold: narratives and editorial verses in Exodus and Numbers, and the list in Num. 33:1-49, which enumerates no less than forty stopping places. None of the places which the list mentions between the Sea of Reeds and Ezion-geber (Num. 33:11-35) can be located with certainty, but the itinerary possibly agrees in

essence with Darb el-Hajj (see §c (3) above). The distance between Ezion-geber and Kadesh is conceived as though it was covered in one short march without any stop in between (Num. 33:36). The natural trail connecting these two places is the road which in the opposite direction was called "the way to the Sea of Reeds" (see §c (5) above).

After Kadesh Israel crossed the territories of Edom and Moab (Num. 33:37-47). Certain signs indicate that P's route in this section is the principal ancient road which extended from Kadesh eastward, crossed the valley of El-Arabah S of the Dead Sea, entered the territory of Edom, and continued from there to Moab. After that P refers clearly to the principal road that extended along the heights of Transjordan ("the King's Highway") and passed through the territory of Moab and "the tableland" (Deut. 3:10; 4:43), which is N of the Arnon. The last stopping place was by the Jordan opposite Jericho, where the Israelite camp stretched "from Beth-jeshimoth as far as Abel-shittim" (Num. 33:48-49). See Map 4.

Map 4. The exodus route according to P

iv. Certain aspects of the route are similar in each account, and in all of them Kadesh is a turning point—although the character of its role changes from source to source. On the question of the course of the journey, at least to the border of Edom, the conception of J is not very far from that of ED. But these two conceptions are at variance with respect to timing. Both conceptions postulate that from Kadesh (-barnea) Israel attempted to enter Canaan; but according to ED this occurred at the beginning of the period of the wanderings, and Israel had its penalty im-

posed there; according to J this occurred at the end of the period of the wanderings, and from there Israel was forced to go around Edom.

P's view differs to a considerable degree from the other two, but with respect to the question of timing it is close to J. Kadesh, which marks the beginning of Israel's penetration of the land of Canaan, also marks the end of the wanderings.

M. HARAN

\***EXODUS, BOOK OF.** The book of Exodus has attracted a considerable degree of attention in the past two decades because of the centrality of its message for the faith of Israel and the special complexity of its historical problems. While some important new material has come to light from archaeology, the most intensively examined area has been the history of the traditions contained in the book in the period of oral transmission prior to their incorporation into the main literary sources. It is most helpful therefore to proceed from a survey of research into the composition of the book to an examination of the structure of its main component themes, and to use this to assess its historical background and theological significance.

1. **Literary composition.** The basic literary sources of the book of Exodus are widely recognized as the three main documentary strands, J, E, and P (see *PENTATEUCH* §§3, 5). Both Eissfeldt and Fohrer have re-affirmed their conviction that a further extended source, called L by Eissfeldt and N by Fohrer, is also to be found here, although this view has not been followed by most other scholars. The material ascribed to this source is otherwise largely regarded as belonging to J. Besides these three, or four, main source documents most scholars also recognize the presence of material which has been introduced by editors of the Deuteronomistic school, although the extent of this material is variously estimated (see *DEUTERONOMIC HISTORY*[S]). A marked feature of recent literary criticism has been a tendency to assign much more of the book to this source. This is notable in the analysis by Zenger, who traces two main Deuteronomistic revisions of the earlier J and E material, one pre-exilic and one postexilic. A

more radical attempt to overthrow the accepted results of literary analysis has been proposed by Fuss, who regards chs. 3-17 as composed from two main sources: an original (JE) narrative and an extensive editing and supplementation of this by a Deuteronomistic redactor. Of the two analyses, that by Zenger remains more convincing.

Of considerable importance for an understanding of the revelation and covenant-making at Sinai, which forms the second half of the book, has been the question of the source to which the Decalogue (20:2-17) and the Book of the Covenant (20:22-23:19) should be ascribed. Eissfeldt, Beyerlin, and Newman regard both law collections as having been incorporated into the early E document, but Noth and Zenger have argued that, while both law collections are of an early date, their incorporation into the book of Exodus is the work of Deuteronomistic editors, almost certainly after the Exile.

**2. Component traditions.** The method of tradition-historical analysis has increasingly dominated over the purely literary-critical study of the history of the book. Its aim is to study the formation of the narrative traditions in the stage of oral transmission, before their incorporation into the major written sources. In Exodus the first main block of such traditions is to be found in chs. 1-15 and centers on four main events: the call of Moses, a series of plagues on the Egyptians, a celebration of the feast of Passover, and the deliverance from Egyptian pursuit at the Sea of Reeds. The finished narrative is made up from J, E, and P sources. Fohrer has attempted a fresh literary analysis to include recognition of his source N, and has strongly opposed the view, advocated earlier by Pedersen and Noth, that the controlling theme is the celebration of Passover, so that the whole may have originated as a development of the Passover liturgy. Fohrer contends that there is no clear evidence that the Passover had a central position in the earliest sources; nor can it be claimed that the plague narrative has been developed out of features associated with the celebration of Passover. Herrmann has examined chs. 1-15 to determine the historical setting in which the events took place.

The second main narrative section, chs. 16-18, concerns a period spent in the wilderness (resumed in the book of Numbers after the interval created by the story of God's revelation at Mount Sinai). The picture of life in the wilderness centers upon two main themes: Israel's rebellion against God, and God's providential provision of food and water. The wilderness stories have been examined by Fritz, who looks at each in its probable original setting. He argues that originally they did not belong to a narrative describing a journey from Egypt to Canaan, but drew upon memories of seminomadic life in the desert region S of Judah, where Israel's ancestors had lived before their settlement in the land. The chronological scheme and itinerary were therefore secondary developments in the editing of stories which originated over a more extended period of time. Coats is concerned with the theological implications of the tradition of Israel's rebellion, showing how it developed from a theme with a primarily political motive to one more directly religious and spiritual,

concerning the nature of human sin and ingratitude.

The story of the theophany on Mount Sinai, which occupies the remainder of the book (chs. 19-40), is integrally connected with the making of a covenant and the disclosure of the laws which govern it. It readily divides into separate sections dealing with different aspects of God's revelation, and it is evident that an original brief narrative account has been expanded later by the inclusion of many instructions and regulations. Those which deal with the making of a tabernacle (chs. 25-28) and the installation of its priesthood (chs. 29-31) are drawn from the P source, and the account of how these were carried out (chs. 35-40) derives largely from a supplement to this (P<sup>a</sup>). However, underlying such instructions there were undoubtedly older traditions, and the study of the tabernacle by Görg endeavors to trace an old nucleus in the instructions for building it. Similarly the study by Walkenhorst looks at the traditions concerning the cultic ceremonies for the installation of the Aaronide priests, and seeks to trace an early core in them.

Much discussion has centered upon the structure, scope, and significance of the earliest (JE) account of God's revelation at Sinai. Three issues stand out as of most importance. The first is whether the earliest account of the Sinai event described the making of a covenant between Yahweh and Israel, or simply an appearance of Yahweh in a theophany. The latter view is strongly contended for by Peritt. The second issue is whether the earliest Sinai narrative included the Decalogue of 20:2-17. Several scholars (Noth, Zenger, Gerstenberger) have come to deny this (see CREDO, ANCIENT ISRAELITE[S] §§1, 2). A third issue is whether, accepting that the earliest Sinai narrative included the Decalogue and described what took place as the making of a covenant, this was adapted from the form of ancient Near Eastern vassal treaties, as Mendenhall has argued (see COVENANT §C3a; COVENANT, MOSAIC[S]). The whole discussion evidences wide disagreements and has given rise to an extensive literature.

**3. Historical background.** Discussion has revolved around the part played by MOSES in the events described and varying estimates of the significance of evidence from Egyptian documentary sources relating to the period. The problem concerning the work of Moses arises out of the reconstructions put forward by von Rad and Noth of the way in which the separate stories were connected into a sequential history, and from the evident fact that the later tradition, the more the work of Moses is emphasized. Hence, by reduction to the original nucleus, it appears that we can know very little about the part originally played by Moses in the events described. On the other hand, Beegle maintains a positive and conservative stance in claiming that we can recognize behind each of the main events the impact of the figure of Moses. A middle position has been proposed by Herrmann.

Concerning Egyptological material, two points are significant. The first is whether we should expect to find references to people and events which

are directly identifiable with those described by the OT. This not only concerns whether Egyptian sources are likely to have recorded Israel's departure, but also whether we should expect to be able to identify the pharaoh under whom Joseph rose to greatness (one of the Hyksos kings or Akhenaton?). Against Vergote, Herrmann argues that the JOSEPH STORY shows many elements of folklore which leave little confidence that it offers the real reason why Israelites went down to Egypt and became slaves. Rather the reason must be found in the general search by Israel's Aramaean ancestors for lands in which to settle. Furthermore, we must recognize that the employment of these ancestors for state building projects and their subsequent escape were on a small scale. It is only in later religious and theological developments that they became of major importance. Hence it is unlikely that contemporary Egyptian annals made any record of what took place. What we can find in the Egyptian material, and in many circumstantial details in the book of Exodus, is a basic framework of historical knowledge into which the OT tradition fits very convincingly, without direct corroboration being possible.

A particular problem relates to the often accepted identification of the Hebrews of the OT with the *'apiru* in Egyptian sources, who are referred to as *habiru* in several Mesopotamian sources. Herrmann argues that such an identification cannot be sustained. The Egyptian *'apiru* were evidently people of a particular social class or status, who were drawn upon to provide groups of slave workers (see HABIRU; HABIRU[S]). In the OT, however, the term "Hebrew" has a genealogical and racial significance, and indicates a person who was descended from an eponymous ancestor Eber (Gen. 10:21). There would not therefore appear to be any sure ground for making an identification of two groups of people who are in one sphere a social class and in the other a clan and kin group.

In spite of such limitations imposed by the nature of the evidence offered by Egyptian material, Herrmann argues that Israel's ancestors were involved in the building projects of Ramses II, and escaped from this slavery to migrate northward into Canaan, where they were able to link up with other Aramean tribes, and eventually to establish themselves as Israel. The God to whom they ascribed this deliverance was Yahweh, who became the God of all Israel.

4. **Theological significance.** The exodus from Egypt provides a focus for the OT, and has influenced its entire understanding of God. He had brought Israel, his people, "out of Egypt." Thus the recollection of this event established a basic understanding of the nature and purpose of Israel's God, which could be used to interpret other events and situations. The use of this "exodus pattern" is very marked in the prophecies of Isaiah 40-55 relating to the forthcoming release of exiles from Babylon in the sixth century B.C.

Aside from the significance of the exodus pattern, the book of Exodus moves into the forefront of theological discussion because of the centrality of the idea of covenant. In the structure, growth, and

interpretation of God's revelation at Sinai are to be found a long history of reflection on, and theological elaboration of, the relationship between Yahweh and Israel. Questions have emerged concerning the meaning of the term "covenant" itself (examined by Kutsch) and concerning the relationship of covenant to law and to particular collections of laws, especially the Decalogue. This raises major issues concerning the connections between law and grace (see GRACE IN THE OT[S] §§1, 2). Certainly the connection between the laws of Sinai and the deliverance of the Exodus show that neither the book of Exodus in particular nor the Pentateuch as a whole can be interpreted as law in a thoroughgoing legalistic sense.

It is a reflection of this central theological interest of Exodus that Childs has sought to introduce a new theological dimension to the task of exposition. By examining the history of both Jewish and Christian interpretations of the book, and by seeking to view it in the light of its position in the entire canon, Childs seeks to uncover the theological significance which the book as a whole possesses today.

R. E. CLEMENTS

\***EXORCISM IN THE NT.** Exorcism is the expulsion of demons from persons or places. It is prominent in the ministry of Jesus when he heals the Capernaum demoniac (Mark 1:21-28; Luke 4:31-37), the Gerasene madman (Mark 5:1-20; Luke 8:26-39; Matt. 8:28-34), the Syrophenician's daughter (Mark 7:24-30; Matt. 15:21-28), and the

epileptic boy (Mark 9:14-29; Luke 9:37-43; Matt. 17:14-21). It is difficult to distinguish sharply between exorcisms and other healings, since some of the latter may exhibit features of exorcism, e.g., Luke 4:38-39; 13:10-17; Mark 7:32-37. Exorcism is referred to in the summaries of Jesus' healing (e.g., Mark 1:34; 3:10-11; Luke 7:21; Acts 10:38), was entrusted to his disciples (e.g., Mark 6:7; Luke 9:1), and became part of the Christian mission (Matt. 7:22; Mark 16:17; Luke 10:17; Acts 5:16; 8:7; 16:16-18; 19:11-17). There is however no specific reference to exorcism in the NT outside the Synoptic gospels and Acts.

**1. Exorcism in the pagan and Jewish world.** Exorcism originated, as did astrology (see *ASTROLOGY*[S]), in ancient Mesopotamia and became widespread in Egypt during the Ptolemaic period (ca. third century B.C.). Although rare in ancient and classical Greece, exorcism became a central feature of Hellenistic magic, which was common to the Greco-Roman world and well developed before the birth of Jesus.

Accounts of individual exorcisms are rare in the pre-Christian period. One of the earliest is found on an inscription from the time of RAMSES II 1290-1224 B.C.). In TÖBT the hero is protected by magical means against the attack of the demon Asmodaues, and JOSEPHUS describes the exorcism of Saul (Antiq. VI.viii.2) and one performed by Eleazar, a Jewish exorcist, with the aid of Solomon's ring (Antiq. VIII.ii.5). Such stories are more common during the early Christian centuries, the most familiar being those recounted by Lucian of Samosata (born ca. A.D. 120) and Philostratus (born ca. A.D. 170). Lucian describes the exorcisms of "the Syrian from Palestine" (*Lover of Lies* 16), and in the *Life of Apollonius of Tyana*, Philostratus describes five exorcisms performed by the sage (II, 4; III, 38; IV, 10, 20, 25) which have similarities to those by Jesus. Exorcism was often carried out by the Jewish rabbis and is common in Christian apocrypha and hagiography. Although the most important Greek magical papyri come from the third and fourth centuries A.D., they contain material which is much older and may be used with caution to understand, both by contrast and similarity, the gospel accounts.

**2. Interpretation of the exorcisms of Jesus.** The main problem is whether the deeds of Jesus should be seen in the light of eschatology or of magic.

**a. The eschatological interpretation.** In Jewish eschatological belief, particularly during the intertestamental period, the final triumph of God is considered to be dispossessing and excluding the evil powers. The advent of Messiah is accompanied by the overthrow of demons. This background is highly relevant to the interpretation of the exorcisms offered by the Synoptics. Mark 1:21-28 illustrates the authority of Jesus before whom the unclean spirits flee. Satan's kingdom "is coming to an end" (Mark 3:26), the strong man's house is plundered (Mark 3:27), and John the Baptist's question about "he who is to come" is answered by reference to the exorcisms as part of a general messianic activity (Luke 7:20-23). The granting of the powers of exorcism to the disciples is placed in the same context as the coming kingdom (Luke

9:1-2), and in their success Jesus sees the overthrow of Satan (Luke 10:17-18). Jesus answers his critics by saying, "If it is by the finger of God that I cast out demons, then the kingdom of God has come upon you" (Luke 11:20; cf. Matt. 12:28), and the comment about the feats of the Jewish exorcists (Luke 11:19-20; cf. Matt. 12:27-28) indicates that the deeds of Jesus are not outwardly different from those of others, their meaning being available only to faith.

**b. The magical interpretation.** Almost every reference to exorcism in pre-Christian and first-century literature is associated with magic. (The Jewish apocalypses offer no exception, since they deal almost entirely with the general overthrow of demons and not with the expulsion of those causing sickness in individuals.) Parallels between the exorcisms of Jesus and those of the pagan magicians are found in the magical papyri. These include (1) use of the formula "I know who you are" (Mark 1:24; cf. *Papyri Graecae Magicae* VIII.13, "I know you, Hermes, who you are and whence you come"); (2) the expression "I adjure you by God" (Mark 5:7; cf. *Papyri Graecae Magicae* XXXVI.189-190, "I adjure you by the great name Ablanatha"); (3) the importance of making the demon speak to disclose his name (Mark 5:9); and (4) the need to prevent the discovery and use of the exorcist's name by the demon (hence, perhaps, the commands in the gospels to the demons to be silent). Magical contexts include words such as  $\phi\iota\mu\omega$  ("Be still!" Mark 4:39),  $\sigma\tau\epsilon\nu\acute{\alpha}\zeta\omega$  ("he sighed," Mark 7:34),  $\acute{\epsilon}\mu\beta\rho\iota\mu\acute{\alpha}\sigma\omicron\mu\alpha\iota$  ("sternly charged," Mark 1:43),  $\lambda\acute{\upsilon}\omega$  ("released," Mark 7:35), and several others, but are lacking for other significant words such as  $\acute{\epsilon}\pi\iota\tau\iota\mu\acute{\alpha}\omega$  ("rebuked," Mark 9:25, etc.). Weight is given to the magical context by the fact that the name of Jesus was added at a very early stage to the repertoire of the professional exorcist (Mark 9:38; Acts 19:13). The name of Jesus occurs in exorcisms in *Papyri Graecae Magicae* IV.3019 and 1228-29 and probably is to be read on a leaden cursing tablet giving fever to an enemy, which comes from the first or second century. It would be a serious mistake to think that the magical tradition is mere hocus-pocus. Magic, including power over evil spirits, was thought of as a gracious revelation of the gods, given through figures such as Zoroaster and Solomon for the salvation of men. Although its commercial use brought it into disrepute with the educated classes, its significance for the ordinary people of the time should not be underestimated.

**3. Conclusions.** Neither the magical nor the eschatological interpretation can be excluded. It seems most likely that Jesus made restrained use of methods typical of magical exorcism but thought of them in relation to his own role in the bringing of the kingdom. He thus extended the general, eschatological expulsion of demons to cases of immediate, individual suffering. As the stories circulated, the magical aspects were emphasized, particularly in Mark and Luke-Acts. The danger that this might swamp the broader theological perspective may have led later writers (Matthew and John) to reduce or even omit the exorcisms. - Bibliography

1. **Composition.** The prophet Ezekiel was among those taken into Babylonian exile with King Jehoiachin. Wiseman's *Chronicle of Chaldaean Kings* shows that the first conquest of Jerusalem occurred on the second of Adar in the seventh year of Nebuchadrezzar (March 16, 597 B.C., according to Parker-Dubberstein). An administrative document from Babylon (*ANET* [2nd ed.], p. 308) verifies the fact that Jehoiachin was recognized as king even during his captivity (II Kings 25:27-30), which in turn explains Ezekiel's use of the year of Jehoiachin's reign for the numerous dates which he gives.

When examined closely, the book of Ezekiel appears to have a dual nature. First, it has a clear over-all composition: the prophecies of calamity (1-24), the commentary on the foreign nations (25-32), and the prophecies of salvation (34-38, introduced in 33). Similar to the construction of Isa. 1-35, Jer. 1-51 (according to the LXX), and Zephaniah, the structure of Ezekiel reveals the final editor's intent: the preaching of judgment upon Israel is followed by the pronouncement of judgment upon the foreign nations, and then by the proclamation of salvation for Israel. Even the

fifty units that comprise the book are so clearly defined that they create no problem. These units are introduced either by a specific date calculated to the day (this occurs twelve times, thirteen including 3:16) or by the formula: "And the word of the Lord came to me." There are only two instances where this proclamation is not found: one in ch. 19, which probably comprised the conclusion of ch. 17 before ch. 18 was inserted, and the other in the vision, 37:1-14, whose content marks it as an extraneous passage.

On the other hand, this clear structure is in contrast to the fact that these individual passages reveal a long history of revision. An example is 1:15-21, which transforms into a carriage with wheels the image of four supernatural beings carrying God's throne. Other examples are the repetition in ch. 10 of a slightly modified form of the vision of God in ch. 1 and the confusing similarity of the prophecy in 12:1 ff. to the reported fate of Zedekiah in II Kings 25:4-7. In various instances the words of the prophet have undergone radical revision by those who transmitted the text. We may label them the "School of Ezekiel."

Furthermore, there are clear indications that independent groupings at one time existed. The six sections that deal with Egypt and are introduced by dates once formed a collection of Egyptian oracles (chs. 29-32). The undated section, 30:1-19, the content of which separates it from the other elements, has been inserted to obtain the number SEVEN. The same is true of the three oracles about Tyre in 26:1-28:19, which are tied together by the refrain in 26:21; 27:36b; and 28:19b.

The tendency toward rounding out to the number seven is evident again in the incorporation of all the statements on the foreign nations. In the structure of chs. 25-32, seven political powers are addressed (Ammon, Moab, Edom, Philistia, Tyre, Sidon, and Egypt). The unexpectedly general oracle about Sidon (28:20-23) has been added to obtain the number seven. However, it is noteworthy that the verses that conclude these oracles about the nations are found in 28:24-26 after only six nations have been addressed, and not at the end of ch. 32 as would be expected. The passage dealing with Egypt clearly is a closely knit construction, which was incorporated as a whole without revision. A probable reason for this arrangement is the concern with the sequence of dates, which extend in the Egyptian oracles (tenth-twelfth year of Jehoiachin) beyond the date of the Tyre collection (eleventh year).

Ch. 29:17-20 (21), dated in the twenty-seventh year, does not fit into the sequence of dates in the Egyptian oracles. These verses are also unique in that they connect the political conditions in Egypt with those in Tyre. This joining the fates of two foreign nations is not found anywhere else in Ezek. 25-32. In addition, these verses are unique because they contain a revised statement of the earlier pronouncement about Tyre. The promised booty from Tyre (26:1-28:19) is to be replaced by booty from Egypt, because Nebuchadrezzar's battle against Tyre did not bring the expected success. This updated oracle, formulated fifteen years after the

original one, did not lead to a change in the tone of the older text. This shows how firmly the wording of the prophets was entrenched and, subsequently, how little others dared to tamper with it. Thus we have a strong indication of the authenticity of the prophetic texts and simultaneously of the accuracy of the dates given. These dates therefore become reliable sources of information. At the same time, these verses establish how keenly Ezekiel, whose prophecy often appears to be rigidly constructed, is aware of the freedom of his God to change history, as the earlier prophets had proclaimed. See HERMENEUTICS [S] §5.

There is little that we can say with certainty about the genesis of chs. 1-24. A desire to arrange the dates in 1:1-2 (3:16); 8:1; 20:1; 24:1; 26:1; 33:21; and 48:1 chronologically is readily apparent. On chs. 29-32, see above.

A second report of the call of the prophet to be a "watchman" (33:1-9) begins the section 33-48. A similar reference to the prophet in this capacity is to be found in 3:17-21, subsequent to the initial report on his call in 1:1-3:15. There is an obvious break at the end of ch. 39. General statements summing up God's treatment of Israel (39:23-29) have been added to the Gog pericope. These verses are somewhat reminiscent of the summary in 28:24-26. The concluding vision of the new temple, the temple services, and new temple regulations (chs. 40-48) forms traditional elements into a unified whole. This section contains much post-Ezekiel material. It is impossible to delve any further into the chronology of the postexilic material, as has been recently attempted anew with the proposal of a Deutero-Ezekiel (Garscha).

**2. Form and tradition history.** The beginning of the call vision (1:1-3:15) brings to mind Isaiah's call (ch. 6), where he meets Yahweh enthroned in majesty in the temple. The continuation, in which the prophet is given the scroll to eat and is summoned not to fear, reminds the reader of Jeremiah's call (Jer. 1). With regard to the tradition behind Ezek. 2:8-3:3, we find that the metaphors and images in the confessions of Jeremiah (15:16) and in the Psalms (19:10 [H 11]; 119:103) become a dramatically experienced reality for Ezekiel, who physically eats God's word. The fact that the prophet receives the word of God in the form of a scroll indicates that he was already familiar with prophetic material in written form. However, the original context of the vision of Yahweh's glory in the plain (3:22-27) remains unclear. The prophet's second vision (chs. 8-11) has been enhanced by the addition of chs. 10-11. It is constructed according to a dual scheme. Ch. 8 reports on the abominations the prophet sees in the temple, and in turn lays the foundation for the judgment brought down on Jerusalem by the "executioners" in chs. 9-10. The enormity of the sin is depicted through the symbolic use of the number four, which also occurs many other times in Ezekiel. See NUMBER §5.

Comparatively more closely knit is the vision of the valley of dry bones (ch. 37). An image which the prophet has heard in the cry of the people—"Our bones are dried up" (37:11)—be-

comes a fully developed scene. In the raising up of the dry bones to become living men, we can see an act of creation similar to that of Gen. 2:7.

Finally, we see a special form of old Zion tradition (chs. 40-48), where the prophet views the perfect proportions of the newly built temple that is free from all contact with the profane and unclean—the palace district and memorial stelae of deceased members of the royal family (43:7-9). However, it is striking that the name Zion does not appear at all in Ezekiel.

The means through which Ezekiel is to proclaim Yahweh's words are worthy of note. In most instances the prophet limits himself to quoting God's directions. The actual carrying out of the directions is seldom reported (12:1 ff.; 24:15 ff.). Ch. 4:1-3 relates that the prophet is to inaugurate the siege of Jerusalem, utilizing a brick which portrays the plan of the city. By eating a sparse ration of unclean food, Ezekiel is to symbolize the starvation of the besieged city (4:9-17). In the act of cutting and destroying his hair, he is to symbolize the destruction of the city's besieged population (5:1-4); a verse used symbolically in Isaiah (7:20) thus becomes a dramatic reality in Ezekiel's act. By leaving his house with the usual provisions for exile, Ezekiel portrays the deportation of the surviving population of Jerusalem (21:23 ff.). And, finally, Ezekiel's uncontrolled mourning over the sudden death of his wife becomes symbolic of the imminent mourning of the people at the fall of Jerusalem (24:15-24). Other prophecies announce the realities of exile—lying powerless (4:4-8), the trembling fear of the inhabitants of the land (12:17-20), and the wailing in the face of impending news of calamity (21:8-13).

The prophet uses images that occasionally assume a strongly allegorical character. The statement about useless vines in ch. 15 mirrors the situation of Jerusalem between 597 and 587; the images of the unfaithful wife (ch. 16) and the two unfaithful wives (ch. 23) become the means for unfolding a broad historical theology. The tendencies of Hosea (9:10; 13:5-8), Isaiah (1:21-26), and Jeremiah (2:23; 3:6-14) are continued here in powerful fashion. The proximity of chs. 16 and 23 illustrates clearly how traditions that were formerly separated begin to be fused in Ezekiel. Ch. 16 speaks of Jerusalem, which Yahweh raises as a foundling abandoned by its parents and then takes in marriage; the previous Canaanite history of the city is vividly depicted (16:3) and is used as an explanation of Jerusalem's depravity (cf. Isa. 1:21-26 for a similar focus upon the Zion tradition). However, in ch. 23 the origins of both women are traced back to Egypt, where Israel's past remains clouded. (The Israel-Egypt tradition in Hosea establishes this quite clearly.) The image-free, historical-theological text of ch. 20 proceeds along the lines of the Egypt-Exodus tradition, for in it (vss. 1-31) we see the obstinacy of Israel from her beginnings portrayed in unexcelled sharpness. Thus the streams of tradition still separated in Isaiah and Hosea flow together in Ezekiel.

Zedekiah's breach of trust with Nebuchadrezzar is described in an allegory (ch. 17). Ch. 19 joins

the allegorical form with that of a lamentation for the dead, a form which is frequently used in Proverbs. This is true, for example, in the description of Tyre as an elaborate ship (ch. 28), in the representation of Pharaoh as a crocodile (29:3-5; 32:2-8) or as a cedar in Lebanon (ch. 31). In all of these cases we can clearly see the uniqueness of Ezekiel's language. While Hosea and Jeremiah constantly vary a wealth of metaphors in kaleidoscopic fashion, Ezekiel remains with one thematic image and often carries it out in all its variations to its logical extreme. Such thematic descriptions can be found apart from the allegories. Examples of this are in ch. 6, which treats the theme of the "mountains of Israel" (judgment over the idolatry in the high places); ch. 7, "the end has come" (related historically and traditionally to Amos 8:2); ch. 13, "prophets"; ch. 21, the "sword" in three different ways; 24:3-14, the metaphor of Jerusalem's fate as a kettle on the fire; and ch. 34, the "shepherds of Israel."

We should also consider the form of the so-called "word of proof" which characterizes so much of Ezekiel. Prophetic statements about future acts of Yahweh often conclude with the formula, "You will know that I am the Lord." The purpose behind this is a definite one: to lead to the concrete realization that Yahweh acts in judgment and salvation, and that Israel might recognize in these actions the God who is revealing himself to her. Fully expressed in this is the aim of prophecy: a true acknowledgment of God, which according to Hebrew usage of "know" is simultaneously a clear perception of God. See KNOWLEDGE §1b.

3. **Ezekiel's personality.** Firsthand reports about the character and life of the priestly prophet Ezekiel are scarce (see EZEKIEL §A). What we know of him is for the most part intertwined in his message. Many characteristics seem to be signs of sickness, so that it has been felt necessary to analyze him by psychological methods (Broome). Such characteristics include his loss of the power of speech (3:15, 26-27; 24:27; 33:21-22), his lying bound (3:25; 4:4-8), his trembling at Yahweh's commands (12:18), and his somberness at the death of his wife (24:15-18). Even the renowned psychiatrist-philosopher Karl Jaspers believed that Ezekiel suffered from schizophrenia. No doubt exists that we are dealing here with an unusually sensitive person. The cases referred to above, where metaphorical language was transformed into a dramatically experienced reality, bear this out. The capability of visionary experience as well as the symbolic and strongly articulated expressiveness of his prophecy point in the same direction. But other elements can unmistakably be ascribed to a language that is richly stylized and pervaded by divine influence. In these and other characteristics the personal life of the prophet is hidden behind his message, which is his only concern.

4. **Message.** The coming fall of Jerusalem dominates the first phrase of Ezekiel's proclamation. The fact that the only section of the book which is not depicted as the word of God contains the report of the fall of the city by a survivor (33:21) underscores the importance of this event.

The message of God's judgment, and above all

the execution of that judgment, achieves its most concrete formulation in Ezekiel's oracles. For this reason he can be labeled the definitive theologian among the prophets of judgment. Whereas Hosea, Jeremiah, and Isaiah (1:21-26) contrasted the wickedness of contemporary Jerusalem with a better past, Ezekiel portrays the entire history of Jerusalem and of Israel as one of continuous rebellion and sin against Yahweh. Ezekiel approaches the symbol of the vine, which Israel customarily used to refer to her nobility (Ps. 80), only from the perspective of wood for the fire. The pronouncement of judgment in 20:23-26 is made even more harsh by the fact that Yahweh had already decided to scatter his people among the nations at the time they were in the wilderness. In an otherwise unheard-of pronouncement, Ezekiel says that Yahweh had afflicted his people with "statutes that were not good and ordinances by which they could not have life" (vs. 25), e.g., the command to sacrifice the first-born. In similar predestined severity, Ezekiel speaks of the inevitable fall into sin of Israel and Jerusalem, the "bloody city" (ch. 22), both of which no longer should expect salvation. "And I will set my face against them; though they escape from the fire [597 B.C.], the fire [587 B.C.] shall yet consume them; and you will know that I am the Lord, when I set my face against them. And I will make the land desolate, because they have acted faithlessly, says the Lord God" (15:7-8).

However, the event of 587 signifies the turning point in Ezekiel's prophecy. The pronouncements of judgment against the neighboring nations, which likely are to be dated between 588-586, mark this turning point in the view of those who edited the book (see §1 above). The change is most clearly expressed in the vision of the dry bones (ch. 37). Yahweh's action is not to be understood as healing and raising up a people who in itself still possesses something of a possibility for and right to life. It is the resurrection from a justly imposed death, and the creator of life alone can make it possible. In all this the meaning is not individual resurrection but, as an exegesis of the vision (37:11-14) clearly shows, a restoration of the community to their homeland. This act of being led back is also portrayed in 20:32-44, which was added to 20:1-31 after 587. In the "wilderness of the peoples," which is typologically contrasted with the "wilderness of the land of Egypt" and should therefore not be given a geographical location, Yahweh separates the nations (the model for Matt. 25:31-41) and leads his purified people to his holy mountain where he will be worshiped properly. The concept of a new exodus has been created, which will, in very different language, dominate the thought of Deutero-Isaiah. The prospect of a new, pure temple service will be developed in the complex vision of chs. 40-48. Other prophecies treat the inner renewal of the nation (36:25-32), the end of the misery of being a divided kingdom, and the new, just leadership of a new David (34; 37:24-28). Whether the Gog pericope (chs. 38-39), which depicts a final threat from the enemy from "the north" after the return to the land of Israel, stems from Ezekiel remains controversial; unful-

filled prophecies of Jer. 4-6 and Isa. 10 may be referred to in 38:17 and 39:8. This prophecy of final liberation points the way to the postprophetic apocalypses. See APOCALYPTICISM; APOCALYPTICISM[S].

In ch. 18 (cf. 33:1-20; 3:17-21) we have a general teaching on just recompense to the individual (see EZEKIEL §E2d). This text has to be understood in terms of the situation after 587. A series of quotations from Ezekiel's neighbors (18:2, 25, 29; 33:10, 17, 20) shows how the danger of resignation, whether out of godlessness or piety, can begin to spread. Ezekiel confronts the resignation by listing a series of concrete commands which are perhaps modeled on the temple entrance liturgy prescribed for those who desire entrance to its "life" and "blessing" (cf. Pss. 15; 24:3-6). The present generation is not to let itself be deterred from the way of obedience and the promised life by fatalistically looking back to the wickedness of the nation's early history or to an individually sinful past. The purpose of the warnings is, not the coming to terms with a new teaching of individual recompense, but the hearing of a call to repentance. This fact is emphasized by the statement that God desires not the death of the guilty one but rather repentance and life (18:23, 31, 32; 33:11).

\***EZION-GEBER.** According to the Bible, Ezion-geber was located near Eloth (ELATH), on the N shore of the Gulf of Aqabah. It was a station on the route of the Exodus (Num. 33:35-36; Deut. 2:8). Solomon had a fleet constructed there (I Kings 9:26-28; II Chr. 8:17), and Jehoshaphat's ships were wrecked there (I Kings 22:48). See TELL EL-KHELEIFEH[S]. E. K. VOGEL

\***EZRA AND NEHEMIAH (BOOKS AND MEN).** The books of Ezra and Nehemiah are our main source of information for the crucial period of the return from the Babylonian exile. This was the formative time of transition between the biblical age of the first temple, which came to an end in 586 B.C., and the emerging second Jewish commonwealth. The fragmentary picture which emerges from these books can be supplemented for the first part of the period by bits of information and impressions gathered from the books of the three postexilic prophets HAGGAI, ZECHARIAH (chs. 1-8), and MALACHI, as well as from several psalms (e.g., Pss. 85; 126; 137; etc.). Some genealogical lists found in Chronicles (see

GENEALOGY §§5c-7) extend beyond the events recorded in Ezra and Nehemiah, and the book of ESTHER conveys an impression of life in the Persian Diaspora.

The men of that period highly esteemed the traditions of Israel's past, trying to utilize them as the material base for forging the life of the reborn Jewish society. Their endeavors to shape the Jewish consciousness of their contemporaries linked up, in some measure, with the efforts of king JOSIAH (cf. I Esd. 1:1-55), whose short-lived cultic and social reforms had been aimed at safeguarding the religious and political identity of his people. However, although predominantly characterized by the attempt to preserve tradition, the age is not devoid of genuine creativity in the fields of literature, religious thought, and cultic organization. Ezra's and Nehemiah's actions and decrees may be seen as the beginning of an on-going reinterpretation of tradition in its application to changing circumstances, e.g., in the introduction of the public reading of the Law (Neh. 8), public confession (Ezra 9-10; Neh. 9), the enforcement of the observance of the sabbath (Neh. 13:15-21), or the form in which the Succoth festival is observed (Neh. 8:13-18) and the statutes against intermarriage are applied (Neh. 13:23-28). Here are the beginnings of the exegetical and hermeneutical techniques of the midrash halachah later fully developed and applied by the sages to the interpretation of biblical, legal literature. See INTERPRETATION, HISTORY OF[S] §§D, F.

1. Authorship and place in the canon. *a. Authorship.* Early Jewish tradition considered Ezra and Nehemiah as one work written, together with (most of) Chronicles, by Ezra but completed by Nehemiah (T.B. B.B. 15a; cf. Sanh. 93b). However, this ascription may have resulted from the prominence accorded to Ezra by the early Jewish sages, who considered him a second Moses. Ezra and Nehemiah are reckoned as one work in the traditional count of twenty-four books which make up the canon in the Jewish-Masoretic tradition (see *Diqduqe ha-Te'amim* XXVIII, and the Masoretic summary notation at the end of Nehemiah). The unity seems to be implied by the author of Ecclesiasticus, who refers to Nehemiah

in his praise of famous men (49:13) but makes no mention of Ezra. No clues have come forth so far from the published Qumran material. From the one fragment of Ezra no conclusions can be drawn with regard to the book of Nehemiah. Nor can any judgment be made on the grounds of the summary at the end of the book of Nehemiah (13:30-31; contra Myers). Also the LXX tradition as exhibited in the ancient uncials presents Ezra-Nehemiah as one work. The same pertains to the earliest Christian roster of the OT books given by Melito of Sardis (second century).

However, Origen (third century) already knew the two books as First and Second Ezra. So did Jerome (fourth century), who introduced the division into the Vulg., from which it was adopted into a Hebrew MS dated 1448 and thereafter in most printed editions. This division may well be original, as indicated by the fact that while the book of Ezra bears no superscription, Nehemiah's book is introduced by the caption: "The narrative of Nehemiah son of Hacaliah" (NEB). In some Masoretic MSS the marginal notation *ספר נחמיה* is found (*Biblia Hebraica*), but it cannot be considered original. Luther, too, refers to the book of Nehemiah as a separate entity. If indeed Ezra and Nehemiah at one time were two separate works written by different authors, this could help in explaining the duplication of some events and literary units in both, such as the list of returning exiles (Ezra 2=Neh. 7), and the intermingling of constituent components when the two entities were combined, e.g., the placing of Ezra material in Neh. 8-9.

There is reason to assume that the book of Nehemiah actually was composed before the book of Ezra took form. This must be taken into account in the comparison of these books with Chronicles, and in the repeated ascription of their authorship to the Chronicler.

**b. Place in the canon.** Historically and chronologically, Ezra and Nehemiah are a sequel to Chronicles, since they open with the report of Cyrus' decree (Ezra 1:1-3a) with which Chronicles ends (II Chr. 36:22-23). However, according to the Talmudic passage mentioned above, Ezra-Nehemiah directly precedes Chronicles in the canonical order. This order is maintained in most Ashkenazi MSS and printed editions. But in the Masoretic treatise *Adath Deborim* (thirteenth century), in some predominantly Spanish MSS, and most importantly in the famous Aleppo Codex (tenth century), which Maimonides considered most accurate, Chronicles opens the collection of the Hagiographa while Ezra-Nehemiah are put at its close (see Ginsburg, pp. 6-8). This is most probably the original arrangement. It may be surmised that the transfer of Chronicles to the end of the Hebrew Bible resulted from its being considered, as Jerome termed it, "the chronicle of the whole sacred history."

The repetition of Cyrus' decree at the close of II Chronicles (36:22-23) may well represent an attempt to provide an optimistic ending for the OT canon (Talmudic order), or it can be viewed as a signpost to call to the reader's attention the onetime proper chronological order: Chronicles,

Ezra-Nehemiah. It can hardly be adduced as proof for the often voiced assumption that "Ezra was intended from the start as an integral part of Chronicles" (Myers), or that these books were penned by the same author (Torrey, A. Kapelrud) whom A. von Hoonacker identified as Ezra. The latter view was accepted by Albright and many of his students (Cross, Freedman). Nehemiah's memoirs are held to be characteristically different from the writings of the Chronicler and secondarily appended to the Chronicles-Ezra block (Cross), though composed earlier. This theory now seems to have won the upper hand over the previously widespread assumption that the Chronicler was also the author of the books of Ezra-Nehemiah (see CHRONICLES §5; Japhet), together designated "the chronistic historiography." The latter proposal had encountered weighty objections based on differences of style, literary techniques, and general outlook between Chronicles on the one hand and Ezra-Nehemiah on the other. The challenge came from W. de Wette, E. König, M. H. Segal, and others, and recently has been systematically presented by Japhet, who concludes that linguistic and stylistic differences and oppositions prove that the books could not have been written or compiled by the same author and that they were probably separated by a certain period of time. Acknowledging the persuasive evidence marshalled by Japhet, Cross attempted to account for the stylistic, linguistic, and conceptual differences as well as the similarities between Chronicles, Ezra, and Nehemiah by positing three successive editions of the expanding chronistic history: "Chronicles I composed in support of Zerubbabel shortly after 520 B.C., Chronicles 2 written after Ezra's mission in 458 B.C., and Chronicles 3 edited about 400 B.C. or shortly after." Both Japhet's and Cross's position require further detailed investigation.

**c. Extracanonical Ezra literature.** See ESDRAS, BOOK OF.

**2. The historical framework.** In their present arrangement, the books of Ezra-Nehemiah span approximately a century, from 538 B.C., shortly after the accession of the Persian emperor CYRUS the Great (550-530) to the throne in Babylon, to about 420, the beginning of the reign of Darius II Nothus (423-404).

**a. Persian history.** From a Jewish vantage point, this period in Persian history can be subdivided into two major blocks: (1) From the proclamation of King Cyrus in 538, which made possible the return to Zion, to the completion of the rebuilt temple in Jerusalem in 515, early in the reign of DARIUS I Hystaspes. Included in this time span are the reign of Cambyses II, who conquered Egypt in 525, and the short-lived attempt of the rebellious Gaumata to capture the Persian throne in 522 (see PERSIA §D3a). The names of these kings are not mentioned in our sources, which, however, may well contain references to events which occurred in their time. (2) The second block of events is set in the days of ARTAXERXES I Longimanus (464-424), with possibly one short reference to Darius II in Neh. 12:22 which, however, has also been taken to refer to Darius I.

Events pertaining to the period between 516 and 458, i.e., the better part of the reign of Darius I and the whole of the reign of XERXES (485-465), are not reported, except for the mention in Ezra 4:6 of Ahasuerus, who is taken to be Xerxes.

**b. Jewish history.** From the viewpoint of internal Jewish history, the books of Ezra and Nehemiah cover three major periods which are identified by the personalities who stood at the head of the people in those times: (1) The age of SHESHBAZZAR, a prince of Judah and governor of the province, and ZERUBBABEL, the Davidide who headed the first (or the second) wave of returnees and also became governor at a time when Joshua (Joshua) officiated as high priest (Ezra 2:2 = Neh. 7:7; Neh. 12:1; etc.; see JESHUA 5) and the prophets Haggai and Zechariah were active. (2) The time of Ezra the scribe, an Aaronide (Ezra 7:1-4) who led a group of returning exiles in the seventh year of King Artaxerxes (Ezra 7:7), whose identification is open to discussion (see *Sci* below), when Jehochanan the son of ELIASHIB and grandson of Joshua was priest (see JEHOCHANAN 4). (3) The days of Nehemiah, from the twentieth year of King Artaxerxes (Neh. 1:1; 2:1). Nehemiah served two terms as governor, with an intervening visit to the court to report to the king (Neh. 13:6). At that time, one Eliashib (Neh. 3:1; 13:4), and probably also his son JOIADA and grandson Johanan (Neh. 12:22-23; Ezra 10:6; cf. I Esd. 9:1), also called Jonathan (Neh. 12:10-11; see JOHANAN 9; JONATHAN 12), served as high priests.

**c. Historical problems.** The reports on the activities of the main dramatis personae in the case of Sheshbazzar and Zerubbabel, as well as in that of Ezra and Nehemiah, do not give a clear picture of the chronological relationships, nor do they provide a sure definition of the spheres of competence of the contemporaneous leaders. The resulting uncertainties have provoked an ongoing debate.

**i. The relation of Sheshbazzar and Zerubbabel.** The problems concerning the relationship between Sheshbazzar and Zerubbabel arise from the absence of a clear chronology in Ezra 2-4, the paucity of information on the former, and the fact that what is reported about Sheshbazzar is also reported about Zerubbabel. Both are of royal descent, both are presented as governors of the province of Judah: Sheshbazzar in Ezra 5:14 and Zerubbabel throughout the book of Haggai. Sheshbazzar, whose ancestry is not given, is designated "the prince of Judah" in Ezra 1:8. His name has been explained by Albright as a corruption of Sin-abuṣur, of which the Hebrew SHENAZZAR mentioned in David's genealogy (I Chr. 3:18) would be an alternate form. Sheshbazzar (=Shenazzar) thus is identified as a Davidide, a son (or grandson) of the exiled King Jehoiachin and an uncle of Zerubbabel (I Chr. 3:19). Zerubbabel was considered a descendant of the royal house (Zech. 3:8), was invested with messianic glory (Hag. 2:23), and was regarded as the divinely appointed head of his people (Haggai; Zechariah; Ezra 2-5 *passim*; Neh. 12:1, 47). In the genealogical list (I Chr. 3:19) his father's name is given as Pedaiah,

whereas in the books of Ezra (3:2, 8; 5:2), Nehemiah (12:1), and Haggai (1:1, 12, 14; 2:2; 23) he is invariably presented as a descendant of SHEALTIEL, who is Sheshbazzar's elder brother (or uncle) according to I Chr. 3:17. This causes some difficulties in the identification of Zerubbabel which cannot be solved by the assumption that Pedaiah begot a son by the widow of his deceased, childless elder brother Shealtiel (on levirate marriage, see MARRIAGE §1g), or by the conjecture that our sources refer to two men (possibly related) called Zerubbabel, a fairly common name in Babylon as shown by inscriptions from the time of Darius. According to Ezra 2:2 (=Neh. 7:7) and Neh. 12:1, Zerubbabel headed the major wave of returning exiles. However, our sources are ambiguous with respect to whether this event occurred in the reign of Cyrus or in that of one of his successors, probably Darius I, as the books of Haggai and Zechariah and Ezra 4-5 seem to imply. Sheshbazzar likewise is connected, in an official capacity, with the first contingent of returnees who were inspired by Cyrus' edict. He received, on behalf of the Jewish community, the restored holy vessels of the temple from the Persians' treasurer (Ezra 1:7-8). However, the verb *העלה* (vs. 11) does not permit a clear-cut decision as to whether he himself "took them all up to Jerusalem" (NEB; cf. LXX: τὰ πάντα ἀναβαίνοντα μετὰ Σασσαβασαρ) as explicitly stated in Ezra 5:15-16, or whether he only "caused" them to be taken there "when the exiles were brought back (העלה) from Babylon" (1:11, NEB; the second verb was not translated in the LXX). Scholars get around these uncertainties by presuming two initial waves of return, one in 538 led by Sheshbazzar, the other several years later, led by Zerubbabel after Sheshbazzar's assumed death, probably after 530 B.C., i.e., after the reign of Cyrus.

A more vexing problem is that our sources variously accredit either Sheshbazzar or Zerubbabel with laying the foundation of the temple, which would presuppose that Sheshbazzar, too, made the trek back to Jerusalem. Against this, we find no reference whatsoever to the participation of Sheshbazzar in the ensuing building operations, which are unanimously ascribed to Zerubbabel and Joshua the priest (Ezra 3-5, Haggai and Zechariah, *passim*; cf. I Esd. 6:2; Eccles. 49:11-12), though without connecting them with the completion of the temple (Ezra 6:14-15). The discrepancy with regard to the laying of the foundations can hardly be resolved by the explanation (Galling) that Zerubbabel renewed, under Darius, operations which were begun by Sheshbazzar but had been discontinued because of the hostile intervention of the local population (Ezra 3:3) in the reign of Cyrus or later under Cambyses. But the reference there concerns only the resumption of sacrifices on the altar and makes no mention of the temple. H. Graetz proposed that Sheshbazzar and Zerubbabel are two names of the same person. Both names are mentioned in the genealogical list in I Chr. 3:18-19, if Shenazzar can be identified with Sheshbazzar. It should be noted that the name Zerubbabel turns up throughout the Hebrew passages

of Ezra (1-5) and in the books of Haggai and Zechariah, which do not once refer to Sheshbazzar. Sheshbazzar is mentioned in the Hebrew passage Ezra 1:7-11 with reference to the temple vessels which he brought, or sent, to Jerusalem, but information about his participation in the laying of the temple foundations comes solely from the Aramaic source Ezra 5:1-6:18, in a quotation from a letter written by the foreign governor Tattenai to Darius (Ezra 5:16; cf. I Esd. 6:20) whose historical accuracy is not above doubt. If this bit of evidence is discounted, one can conclude that if Sheshbazzar preceded Zerubbabel as "prince of Judah," and governor of the province (Ezra 5:14), he lived there only a short time, and that he had no hand in the attempt to rebuild the temple, which was wholly Zerubbabel's endeavor. This would go far toward explaining the absence of any reference in Ezra 1-6 and other contemporaneous biblical sources to any connection of Sheshbazzar with Joshua the high priest, who is always mentioned in association with, or possibly in opposition to, Zerubbabel (Zech. 3-4).

ii. *The relation of Ezra and Nehemiah.* Even more perplexing is the relationship between Ezra and Nehemiah. According to the biblical sources, both were active in the time of Artaxerxes. In following the biblical presentation of events, this king must be identified as Artaxerxes I Longimanus. The date of Ezra's coming to Jerusalem in the seventh year of the king's rule then would be 458 B.C. Nehemiah's arrival in the king's twentieth year would fall in the year 445/44 (E. Bertheau); and his return to Persia, after a term of twelve years as governor, in the thirty-second year of Artaxerxes I (Neh. 13:6) would have occurred in 433, followed by a second term of office of undetermined duration beginning in 432. However, doubt has been cast on the identification of Artaxerxes as Artaxerxes I in reference to Ezra, or else on the date given for Ezra's arrival in Jerusalem, since they seem to clash with the information given about Nehemiah, which can be substantiated from external sources. A letter written in 407 B.C. by the Jewish garrison in Elephantine is addressed "to Delaiah and Shelemaiah the sons of Sanballat the Governor of Samaria." Nehemiah's archenemy, who by that time appears to have been replaced by his sons due to his advanced age. The same source refers to Jochanan the grandson of Eliashib, who was high priest in Jerusalem in Nehemiah's days. Thus one can reasonably be assured that Nehemiah's patron was Artaxerxes I (Bright). Therefore the biblical dates concerning Nehemiah are constants to which the items concerning Ezra must be adjusted. The absence of any reference to Nehemiah in the Ezra material is surprising. In the Nehemiah memoirs only one definite mention of "Ezra the scribe" is found (Neh. 12:36), and this may well be a later insertion (Myers). Since their functions are not coordinated, they presumably were not active in the same period. Therefore, it has been proposed to identify the Artaxerxes of the Ezra narrative (Ezra 7:1 ff.) with Artaxerxes II (403-359) or even Artaxerxes III (358-338). The latter position has not found many adherents, but many

hold that Ezra's arrival in Jerusalem should be dated in 396 B.C. However, the above considerations do not constitute valid objections to the contemporaneity of Ezra with Nehemiah, as presupposed by the biblical sources. By the same token one would have to conclude that Haggai and Zechariah, who both began their prophetic careers in Jerusalem in 520, should be chronologically separated, since one does not mention the other. Equally unconvincing is the argument that the turbulent early years of Artaxerxes I were not a propitious time for a mission like the one Ezra undertook. We have nothing to substantiate this objection. Also, the fact that Ezra deferred the reading of the Law for thirteen years, until the arrival of Nehemiah (Neh. 8:1-8; see §4b below), or that his reform measures seemingly had only a temporary effect, afford no tangible evidence for dating Ezra after Nehemiah (see Vernes, pp. 572-91; A. von Hoonacker). It is likewise precarious to date Ezra in the reign of Artaxerxes II or Artaxerxes III by presenting him as the author of the book of Chronicles, which was not composed before 400 or even 350 B.C. This argument runs in a vicious circle, since it depends on a series of disputed assumptions (see §1b above). Not much is gained by Albright's modified view, based on an emendation of Ezra 7:7, that Ezra arrived on the scene in the thirty-seventh year of Artaxerxes I, assuming that the number thirty dropped out of the text. (Wellhausen previously had suggested that the text might have read originally "the twenty-seventh year.") This assumption, which ties in with Pavlovsky's suggestion that Ezra accompanied Nehemiah on his second mission in 428/27, has no textual warrant (Freedman). A variation on W. Rudolph's proposal, previously put forward by Kesters and Bertholet, is that Ezra's mission came between the two ministries of Nehemiah, i.e., that it should be dated in 433 B.C.

Such tenuous argumentation does not warrant a reordering of the biblical presentation of events and certainly cannot justify the profound skepticism voiced by Torrey, partly following Bellangé, Vernes, and Kesters, over the historicity of the Return, or even the existence of Ezra, or the dates given in the books of Ezra and Nehemiah.

With only a very few exceptions (see EZRA AND NEHEMIAH §§3, 4), scholars have abandoned this radical view, and returned to the more "conservative" dating of Ezra to 397 (Stinespring). Today, a more optimistic appreciation of the basic validity of the biblical presentation seems to be gaining ground. In defending the biblical sequence of Ezra and Nehemiah, Kaufmann and M. H. Segal base themselves almost exclusively on literary considerations, although the Elephantine material is not ignored. Recently, this school has derived support from newly discovered archaeological material. The Wadi Daliyeh Samaritan Papyri help better to date SANBALLAT the Horonite and his descendants (see SAMARIA PAPYRI[S]). A silver bowl dated not later than 400 B.C., inscribed "Qaynu son of Gašm king of Qedar" (see Rabinowicz), helps in fixing the time of Gashum, the adversary of Nehemiah and an ally of Sanballat (Neh. 2:19; 6:1-6) in the second half of the fifth century, if

indeed his identification with the father of Qaynu is certain (*see* Cross). Most recently, Avigad has brought to light a collection of bullae, confidently dated by him in the sixth century B.C., some of which refer to members of Zerubbabel's immediate family who were connected with other Jewish governors who followed him. These latest finds reaffirm the historicity and the accuracy of the numerous  $\gamma(\text{ו})\eta$  (*see* Albright, *JPOS*; Avigad, *IEJ*) and especially the  $\alpha\text{ו}\eta\text{ב}$  stamps found at Ramat Rahel and other early postexilic sites, the reading of which had been mistakenly questioned.

It appears that the new archaeological evidence, fragmentary and partial as it is, when taken in its totality provides new perspectives to the old problem of the accuracy and historicity of the information contained in the books of Ezra and Nehemiah. The hypercritical attitude which has reigned supreme since the middle of the nineteenth century is losing ground, and the traditional view that Ezra preceded Nehemiah in the days of Artaxerxes I is steadily gaining credibility. However, this new school, in contrast to the fundamentalist conception, reaffirms the necessity of viewing critically the literary materials of which these books are composed, arriving at its historical and chronological conclusions by a process of re-evaluating and reordering the individual components.

3. **Literary problems.** There is practically unanimous agreement that the books of Ezra and Nehemiah are a compilation of diverse sources and documents. This circumstance, probably more than any other, may account for the discontinuous presentation of historical events over more than a century. There is the major gap of about sixty years between ch. 6 and ch. 7 in Ezra, i.e., between the end of Zerubbabel's days and the return of Ezra. Moreover, some chronological difficulties are eased if one assumes discontinuities within the principal sections as, e.g., between chs. 2 and 3, and between the components of ch. 3 (*see* §4a below). The composite character of the Ezra-Nehemiah complex as a whole manifests itself in Ezra 1-6 in the interweaving of a Hebrew with an Aramaic historiographical account. All the material from Ezra 7 to the end of Nehemiah is in Hebrew. However, neither the Hebrew nor the Aramaic material displays stylistic or linguistic features sufficiently distinct to allow for a more precise dating within the over-all chronological limits established on grounds of historical considerations.

a. **Constituent literary units.** In addition to the Sheshbazzar-Zerubbabel section (Ezra 1:1-6:18 or 22, hereafter designated S-Z), there are two large blocks of material. One may be designated the Ezra memoirs (EM) and the other the memoirs of Nehemiah (NM). Both are written in part in an autobiographical, and in part in a narrative-descriptive, style. All three blocks display a similarity in structure and in the type of literary units of which they are composed.

i. **Documents.** S-Z contains the Aramaic edict of Cyrus (Ezra 6:3-5), and its Hebrew variant (1:2-4). The authenticity of both versions was defended

by Bickerman, who explained the differences in tone and subject matter as arising from the different audiences to which they were addressed. The matter-of-fact Aramaic document presumably was to be delivered in writing to the royal officials in Persia and Palestine. The Hebrew version was intended to make the king's proclamation known to the Jews in the Diaspora and probably was made public orally by announcers or town criers (1:1b). Of the same type is the letter given to Ezra by Artaxerxes (EM), also preserved in Aramaic (7:12-26), and authentic. No such material is found in NM.

ii. **Letters.** In S-Z and in EM the epistolary literature is represented by exchanges of letters in Aramaic between officials in Palestine and the Persian court. These include the letter that Rehum and Shimshai sent to Artaxerxes and the latter's reply, which were wrongly placed in Ezra 4:8-22 (*see* §4a below), and an exchange of messages between Tattenai and Darius (5:7-17; 6:6-12), in which the Cyrus Aramaic memorandum is quoted (6:3-5). All these are characterized by a common epistolary style. At least some of these documents must have come from the Persian state archives by ways which can no longer be ascertained. There are also Hebrew messages and notes in NM sent by Sanballat to Nehemiah and vice versa (Neh. 6:2-9).

iii. **Lists.** These are found in all three blocks. They are written invariably in Hebrew and, like the items mentioned in (ii) above, may stem from temple archives and/or from the Jewish governors' files.

1) Inventories of the temple vessels (a) handed to Sheshbazzar by the King's treasurer (Ezra 1:9-11) and (b) brought back by Ezra (8:26-27).

2) Rosters of returnees: (a) those who came back under Zerubbabel (2:1-70 and Neh. 7:7-72a) and (b) family heads who returned with Ezra (Ezra 8:1-14).

3) Lists pertaining to the repatriated community: (a) men who had married foreign wives (10:18-44); (b) the builders of the city wall (Neh. 3:1-32); (c) residents of Jerusalem (11:3-24); (d) resettled inhabitants of the cities of Judah and Benjamin (11:25-36); and (e) a comprehensive list of priests and Levites from the time of Zerubbabel to Nehemiah (12:1-26).

4) Roll of signatories to Nehemiah's covenant (9:38-10:27 [H 10:1-28]).

5) Text of the covenant in which are enumerated the obligations undertaken by the returnees (10:28-39 [H 29-40]).

iv. **Prayers.** These are (1) ascribed to Ezra (Ezra 9:6-15); (2) offered by the whole congregation, the Levites, or possibly by Ezra (Neh. 9:6-37); and (3) Nehemiah's prayer (1:5-11); cf. Dan. 9:4-19.

v. **Others.** To the above may be added the descriptions of the reading of the Law (Neh. 7:73b [H 72b]-8:18), of the ceremony of the dedication of the city walls (12:27-43), and possibly of the observation of the Passover (Ezra 6:19-22a).

b. **Literary devices indicating structural components.** The complexity of the sources indicates

that the present arrangement of Ezra-Nehemiah is the result of an intricate and probably multi-phase process of literary structuring. Like the redactors of other biblical books, the arranger of Ezra-Nehemiah did not inform his readers of the considerations which guided him in his work or the techniques which he used. However, some stylistic and textual phenomena help in delimiting some components and disclose traces of the process of literary compilation.

i. *Closing invocations.* Nehemiah's memoirs conspicuously display the formula "remember to my good" (NEB) or "to my credit" (Myers), by which God's benevolence is invoked at the completion of a specific action or matter of concern. In all these instances, the formula marks the end of a textual unit (5:19; 6:14; 13:14, 22, 29) or of the book as a whole (13:31, *see* §4c *below*).

ii. *Summary notations.* Also of importance are the condensed summaries at the end of a given unit. These notations recapitulate the contents, and thus also delineate the extent of a preceding textual unit. The catchphrases catalogue major issues touched upon in the unit and thus help in identifying it.

1) The simplest form of such a notation is the summary found in Neh. 12:26, which digests the roster of priests and Levites presented in 12:10-25 (cf. also 12:47 in reference to 12:44-46).

2) A more distinct example of a concluding formula is Ezra 4:4-5b $\alpha$ , which defines 3:1-4:3 as a unit by directly referring to obstructions placed by local groups before the returnees in their efforts to rebuild the temple in the days of Cyrus (cf. 4:4 with 3:3). The last part of 4:5—"until the reign of Darius king of Persia"—serves as a prolepsis of events to be related in 5:1 ff.

3) Of a similar character is the notation in 6:13-14, which gives the gist of events related in detail in the pericope 5:1-6:12, which also is set apart from the Hebrew narrative in 1:1-4:5 by being written in Aramaic.

4) Of even greater interest is the tersely phrased catalogue of Nehemiah's reforms at the end of the book (13:29b-31), which reflects exclusively issues previously mentioned in chs. 10-13. There is a conspicuous absence of any reference to events in Nehemiah's career related in earlier chapters (1-7) or to the cultic institution of reading the Law described in the Ezra insertion (chs. 8-9). Thus chs. 10-13 are shown by the summary to be a separate entity (*see* §4c *below*). The summary notation records only cultic reforms and therefore does not reflect, as could be expected, the contents of the diverse lists. It can further be ascertained that the pericope which describes Nehemiah's actions during his second term of office, i.e., 13:4-28, which displays interim subscripts for each of its subunits (13:13, 22, 29), is not reflected at all in the final summary notation.

iii. *Repetitive resumptions.* These seem to mark the insertion of a self-contained unit into a given context. This technique is characterized by the partial repetition after the insert of the verse which closed the preceding part of the comprehensive unit, generally with some textual variation.

1) Ezra 4:6-24 is thus recognized as an inter-

polation by the resumption of the last words of the summary notation 4:4-5, in Aramaic in 4:24b.

2) Ezra 6:22b resumes in Hebrew the Aramaic reference to the rejoicing over the completion of the temple in vs. 16b and thus shows the Passover pericope (vss. 19-22a) to be a distinct unit (vss. 17-18 must be discussed separately).

3) Again, the similarity of Ezra 2:1b with 2:70 suggests that the list of returnees (2:2-67 or 69) was originally a separate entity (cf. Neh. 7:7-70 or 72 [H 69 or 71]), and that in the narrative sequence Ezra 2:1 is continued directly in 3:1.

4) Similarly, the reference in Neh. 11:1 to the ballot under the supervision of the leaders of the people to designate recruits for settlement in Jerusalem clearly harks back to 7:4-5, where those leaders are referred to and the motivation for the ballot is spelled out. The complex 7:5b-10:39 [H 40], which for other reasons must be considered a separate entity, thus is also set apart structurally.

Some of these textual remarks most probably concern features in the basic components that were combined in the present books of Ezra and Nehemiah. Others obviously pertain to the process of compilation and structuring. In any case, they can serve as important guideposts in the attempt to re-arrange the constituent units so as to achieve a better picture of the sequence of events in the period reviewed in Ezra and Nehemiah.

4. *Historical reconstruction.* For lack of unequivocal objective criteria, any attempt to reconstruct the historical sequence of events must remain subjective and hypothetical. Some measure of control and corroboration can be attained, however, not only by considering one type of analytical tool, such as the literary techniques identified above, but also by combining the variety of approaches taken by different scholars. Thus, one should take into account internally specified dates, foremost in the Ezra narratives, as suggested by Gelin, internal issues and developments throughout the century described in the books (Pavlovsky), and the results of historical and archaeological investigations (for a survey of diverse systems, *see* Myers).

a. *The era of Sheshbazzar and Zerubbabel.*

Ezra 1:1-4	The decree of Cyrus (cf. 538 6:3-5; II Chr. 36:22-23).
1:5-11	Sheshbazzar returns (with?) the holy vessels.
2:1-67	List of returning exiles before under Zerubbabel and 530 (?) Jeshua at an undefined date in the reign of Cyrus.
[2:68-69]	To follow 3:6.
2:70	Settling the cities.
3:1-3	Soon after, on the first of the seventh month of an unspecified year, the altar is reconstructed and sacrifices reinstated, but no attempt is made to build the temple for fear of the local population.
3:4-6	The Sukkoth festival is

observed. From this point on, the biblical text tacitly assumes the regular offering of sacrifices and the observance of the festivals, although the temple foundations were not yet laid (3:6*b*). Building activities are interrupted for several years, probably throughout the reign of Cambyses.

[2:68-69] Some family heads contribute to the building of the temple. Delete "when they came [to build (sic!)] the house of the Lord which is in Jerusalem" (vs. 68), which is missing in the parallel Neh. 7:71 [H 70]. The remark was inspired by the similar phrase in 3:8 and the general tenor of 1:1-4 and Hag. 1:2-6 and facilitates the anchoring of the passage in its present context after 2:67.

Renewal of activities, but no reference to the reign of Darius or to the initiatives of the prophets Haggai and Zechariah (Hag. 1:1 ff.; cf. Ezra 5:1).

3:7 Phoenician craftsmen are employed to prepare building materials. The idealized presentation reflects the influence of passages describing the building of Solomon's temple (I Kings 5:1 ff. [H 15 ff.]; cf. II Chr. 2:1 ff. [H 1:18 ff.]; II Kings 22:3 ff. = II Chr. 34:8 ff.). A more realistic report is given in Hag. 1:8.

3:8-9 In the second month (or possibly sixth, if we emend י"ב to ו"ב; cf. Hag. 1:15: "twenty-fourth day of the . . . sixth month") of the second year of preparations for building the temple, which is identical with the second year of Darius, Zerubbabel and Jeshua appoint Levites as supervisors of actual building operations (cf. 5:2; Hag. 1:14-15), invoking Cyrus' decree.
