3:10-13 Foundations are laid, according to Hag. 2:1, on

the twenty-first of the seventh month. During the ceremony some of older generation express disappointment over the small size of the building (cf. Hag. 2:1-3; Zech. 4:8-10). The prophets encourage the people (Hag. 2:4-9; Zech. 1:1-6, in the eighth month).

4:1-3 Building operations progress and "the adversaries of Judah and Benjamin," presumably Palestinian remnants of the northern kingdom, ask to participate, but are rejected. This occurred on the twenty-fourth of the ninth month, according to Hag. 2:10-19, as interpreted by Rothstein. The intervention has no effect. The prophets continue to encourage the people (Hag. 2:20-24; Zech. 8:1-17). A relevant oracle of Zechariah is dated on the twenty-fourth of the eleventh month (Zech. 1:7 ff., esp. vss. 16-18).

4:4-5 Summary notation concerning interventions from the days of Cyrus (3:3) to the reign of Darius. The passage is a prolepsis of events reported in the Aramaic source 5:3-6:12, and possibly also in the insert 4:6-24.

[4:6-24] Insert with resumptive repetition and based on topical association—accusations against returning exiles (cf. the accusations of Haman against the Jews of Persia in Esth. 3 ff.). 4:6, and equally 4:7-23, should possibly follow 6:18. 4:7-23, however, may perhaps refer to events in the days of Nehemiah.

5:1-2 Aramaic parallel of 3:8-9

5:3-6:13 Intervention in the days of Darius I by Tattenai, the governor of "the province Beyond the River," which included the province of Judah. The extended Aramaic account expands on, and possibly links up with, the short Hebrew summary in 4:4-5*a*. In contrast to the

519 or later

- Hebrew historiographical and the Hebrew prophetic sources, which throughout credit Zerubbabel and Jeshua the high priest with initiating and supervising the building of the temple, the Aramaic report ascribes these actions to Sheshbazzar (5:15-16), without mentioning Zerubbabel and Jeshua. The crucial statement in 5:16 most probably is a quotation from the Persian governor's report to the king and may reflect a standard official version, which also underlies 1:7-11, rather than historical realities. The king reaffirms the permission granted by Cyrus and operations proceed. 6:13 harks back to 5:3.
- 6:14-15 After an unspecified length of time, the temple is completed on the third of Adar in the sixth year of Darius I under the leadership of the Judean elders. Again Zerubbabel and Jeshua are not mentioned. 6:14a echoes 5:1, and 6:15b links up with 4:24b. Thus 4:24b-5:3 and 6:13-15 demarcate the extent of the "Tattenai document." 6:14b is a summary notation which echoes 4:5b-7. Together these verses envelop the Aramaic section. 516
- 6:16-18 This short description of the inauguration ceremony probably should be viewed as an appendix.
- [6:19-22a] The Hebrew report on the observance of the Passover is an independent unit, as indicated by the repetitive resumption of vs. 14-15 in 6:22b which refers to the rejoicing over the completion of the temple. The piece was appended here possibly because of the reference to the rejoicing over the Mazzoth festival (vs. 22a), the suggestive sequence of dates: third Adar (vs. 15) and fourteenth Nisan (vs. 19), and the impact of a tradition in which the rededication of the temple is followed by a Passover (II Chr. 30:13 ff.; 35:1 ff.). The concern about separation from the impurities of the people of the land (Ezra 6:21) seems to suggest that the episode belongs in the Ezra memoirs. By a transfer of this pericope to follow Ezra 10:44 a topical continuity is re-established (cf. 10:18 ff.) as well as a similar sequence of dates: twentieth of the ninth month (10:9), first of the tenth month (10:16), and first of the first month (10:17).
- 4:6 As suggested, the report about an unspecified accusation against the Judeans and Jerusalemites in the days of Xerxes I (for which cf. the book of Esther), probably should be placed after 6:18. The same may apply to the intervention by Bishlam and his confrères (early?) in the reign of Artaxerxes I (i.e., before 458), against an otherwise unknown attempt to fortify Jerusalem, before the arrival of Nehemiah. However, the suggestion to transfer this piece to some place in the Nehemiah memoirs has equal merit. 486-465
- 4:7-23 to the intervention by Bishlam and his confrères (early?) in the reign of Artaxerxes I (i.e., before 458), against an otherwise unknown attempt to fortify Jerusalem, before the arrival of Nehemiah. However, the suggestion to transfer this piece to some place in the Nehemiah memoirs has equal merit. 458
- The consecutive narrative of events in the book of Ezra breaks off with the dedication of the temple in 516 (6:18), or in 515 if the Passover pericope (6:19-22) is retained in its present place, and is resumed in 7:1 with a report on Ezra's return in 458, the seventh year of Artaxerxes I (7:7). There results a gap of some seventy years in the biblical history of the period of the Return which, however, can be bridged to some extent if, as suggested, the Aramaic piece 4:6 (8) - 23 is placed after 6:18 (or 6:22). This gap usually is explained as giving evidence of a deterioration of the returnees' community as a result of steps taken by the Persian government to curb the attempts of the Judeans to achieve political independence that had become apparent in the messianic or quasimessianic glorification of Zerubbabel. Scholars have held that the independence of the province of Judah under a Jewish governor, within the framework of the Persian Empire, effectively came to an end after Zerubbabel, who followed Sheshbazzar, and was renewed only several generations later when Nehemiah was appointed governor in 435 by Artaxerxes I. In the interim Judah was incorporated into the province of Samaria (Rudolph, Myers; see PROVINCIAL SYSTEMS

IN THE ANE[S] Map 2) or had been a part of it from the outset (Alt). Nehemiah's effort to establish, or re-establish, the autonomy of Judah is seen as the root of the measures taken by Sanballat, the Samaritan governor, to forestall such a development. Scholars who raise objections against this theory point out the expression "province of Judah" (Ezra 5:8; cf. 2:1) and Nehemiah's reference to "governors who preceded him" (who cannot be identified with Sheshbazzar or Zerubbabel since he views them rather critically, Neh. 5:15) as proof that Judah indeed was an autonomous province ruled by Jewish governors between the times of Zerubbabel and Nehemiah (Kaufmann; Liver; M. Smith).

The debate remained unresolved for lack of material that would present decisive proof one way or the other. Such proof now is forthcoming in the form of a collection of sixty-five inscribed bullae and two seals, together with several un-inscribed pieces. Although the find is of unknown provenance, Avigad could date it confidently in the late sixth and the early fifth centuries B.C. by epigraphical evidence, terminology characteristic of the period, and identifiable personal names. Of special importance for our present discussion are ten bullae which exhibit the Aramaic designation for the Persian province Judah—יה(ו)ד. Four of these (one fragmentary) further display the personal name חנניה, a shortened, possibly hypocoristic, form of חנני(ה), the name borne by Nehemiah's brother or compatriot (Neh. 1:2; 7:2), the commander of the Jerusalem citadel and the emissary who communicated the Passover edict of Darius II to the Jewish garrison in Elephantine (see Cowley, no. 12, pp. 62-63), and who possibly should be identified with the חנני mentioned in Neh. 1:2. Together with the approximately 350 jar handles and coins bearing the impression יה(ו)ד which were discovered at Ramat Rahel, Tell en-Nasbeh, Jericho, En-gedi, Gezer, Bethany, Moza<sup>o</sup> and in Jerusalem (see Cross, *Eretz Israel*, IX; Avigad, pp. 35 ff.), the new discovery gives irrefutable evidence for the existence of an autonomous province of Judah within the Persian Empire.

Even more important are the two seals in the collection. One inscribed לאלנתן פתום gives the name of yet another governor of the province of Judah, who can be dated, most opportunely, by means of the inscription on the other seal—יהר לשלמית אמת אלנתן. One can hardly go wrong in identifying the owner of the seal, as Avigad was quick to recognize, with Shelomith the daughter of Zerubbabel (I Chr. 3:19), who most probably was the wife (taking אמת as an expression of court etiquette) of her father's successor to the governorship of Judea. This identification suggests that the aforementioned impression יהור חננה, found also on fragments of storage jars at Ramat Rahel (see Aharoni, *IEJ*, VI), refers to Zerubbabel's son, the brother of Shelomith whose name is recorded next to hers (I Chr. 3:19) in the Davidic genealogy and who probably was a tax collector. It further may be presumed that one Baruch, named on eleven additional bullae—לברוך בן שמעי—is the son of Zerubbabel's brother, although this cannot be proved. From all this it

follows that Elnathan governed the province of Judah from about 515 B.C. to the beginning of the fifth century. Into the emerging picture we can now fit several more stamped jar fragments. One group, found at Ramat Rahel, bears the impression יהור/יהועזר/פתום. The other, found on the same site (with one item stemming from Tell en-Nasbeh), bears the legend לאחזי פתום, a hypocoristic form of Ahaziah. Both are dated by Avigad later than the Elnathan seals and therefore belong to two of this governor's successors: Jeho<sup>o</sup>ezer in the first, and Ahazy in the second, quarter of the fifth century B.C. It is probably in his days that Ezra came to Israel.

Here we can again pick up the thread left off at Ezra 6:18 with the dedication of the temple in 515 B.C.

**b. Ezra's leadership.**

**Ezra 7:1-8:36** The preparations for the return of the group led by Ezra to Jerusalem begin on the first of the first month in the seventh year of the reign of Artaxerxes I (7:9). They set out on the twelfth of the same month (8:31) and arrive in Jerusalem on the first of the fifth month (7:8). Ezra's function is that of a "scribe skilled in the law of Moses" officially recognized by the Persian king (7:6). Although of high-priestly stock (7:1-5) he does not officiate in the cult; nor is he the holder of a specific political office. Neither does he carry the title of פתום which probably was held at the time by Ahazy, who is not mentioned in the biblical records. The assumed lacuna after ch. 8 can be filled by the transfer of Neh. 8-9 into the present context.

**Neh. 7:72b-9:37** About two months after the arrival, in the beginning of the seventh month of that same year, the returnees congregate in Jerusalem to hear Ezra read out to them the Law, with Levites serving as interpreters. (The reference to Nehemiah the "governor" in 8:9a must be deleted, having probably been added after the insertion into the Ezra document into the Nehemiah memoirs.) The next day, after the reading of the relevant passages, it is

decided to observe the Sukkoth festival, which is concluded on the twenty-fourth with Ezra's solemn prayer (9:1-37). Into this context fits a short piece in Neh. 13:1-3 which also treats of marriages with foreign women and refers to the reading of the Law "on that day" (13:1a). We propose to insert Neh. 13:1-3 after 9:1. The linkage is indicated by the doubling of "they separated from Israel all who were of foreign descent" (13:3) in 9:2a: "And the Israelites separated themselves from all foreigners."

Ezra 9:1-10:44 The opening words of 9:1 refer to the events related in Neh. 8-9, and the apparent abruptness in the transition from Ezra 8:36 to 9:1 is overcome. Strengthened in their interpretation of Jewish identity by the reading of the Law, the leaders of the returnees approach Ezra in the matter of the marriages of men who are reckoned among the "holy seed" with daughters of the unclean "peoples of the land" (9:1-2). Ezra's prayer leads the people to repent. After Ezra's public fast in the chambers of the high priest, a public meeting is set for the twentieth day of the ninth month to deliberate on the matter, but pouring rain prevents the taking of effective steps. It is therefore decided to appoint a committee to look into the matter. They sit for two months, from the first of the tenth to the first of the first month of the next year. The account is rounded out with a detailed roster of the exiles who agreed to dissolve their marriages (10:18-44).

6:19-22a It would appear that at this juncture the undated report on the observance of the Passover should be inserted (see §4a above). Thus, the Ezra memoirs

would end early in the year 457, after about one year of activity under Ezra's leadership, when Ahzai (?) was governor.

*c. Nehemiah's terms of office.*

Neh. 1:1-7:73a [H 72a]

Twelve years later, in the month of Kislev, i.e., in the ninth month of the twentieth year in the reign of Artaxerxes I, begin "the memoirs (RSV 'words') of Nehemiah the son of Hacaliah" (Neh. 1:1). After having been alerted by a messenger to the plight of Jerusalem, Nehemiah sets out for Jerusalem in the month of Nisan. The narrative proceeds smoothly up to 7:5, i.e., to the mention of Jerusalem being too thinly populated (vs. 4), without any dates being given. It is possible that the misplaced piece Ezra 4:7-23 could find its proper setting somewhere in this part of the memoirs, e.g., after Neh. 5:7 or 5:9.

445

7:6-73a [H 72a]

Here follows the roster of returnees with Zerubabel (cf. Ezra 2:1-70), which serves as the basis of the census taken by Nehemiah to repopulate Jerusalem.

[7:73b (H 72b) - 9:37]

See §4b above.

[9:38-10:39 (H 10:1-40)]

Also, Nehemiah's covenant appears to be out of place. See below after 12:43.

11:1-12:26

11:1-2, which reports the measures taken by Nehemiah to resettle Jerusalem, connects most suitably with 7:73a [H 72a]. All the materials relate directly or indirectly to the building of the city wall, most probably to the time after one half of the wall had already been reconstructed (3:38). It may be assumed that several years were needed for this work, probably the better part of Nehemiah's first term of office.

12:27-43

Thus the dedication or inauguration ceremonies of the completion of the wall took place ca. 435.

9:38-10:39 [H 10:1-40] "Because of all this," i.e., after the necessary security preparations, Nehemiah turns his attention to internal reforms (cf. 5:1-13), especially with regard to the temple cult and the revenues of the temple personnel. A document which records the stipulations (10:28-39 [H 29-40]) is drawn up and signed by the dignitaries (9:38-10:27 [H 10:1-28]).

12:44-47 The document ends with a concluding notation which connects the contemporary reforms in the period from Zerubbabel to Nehemiah with cultic laws and rules established by King David.

13:30-31 These two verses appear to be the onetime summary notation of the over-all covenant unit, which consisted of 9:38-10:39 [H 10:1-40] and 12:44-47. The notation consists of catchphrases which recapture some of the salient points of Nehemiah's reform.

[13:1-3] The short reference to another reading of the Law which results in the separation from all who were "of foreign descent" (vs. 3b) is to be inserted after Neh. 9:1 (see above).

13:4-29 The rest of the chapter and the book is set several years later, after Nehemiah's return to Jerusalem for a second term of office. The earliest this could have happened is the thirty-third year of Artaxerxes (13:6-7), i.e.,

432. In some matters, such as the reordering of tithes and offerings (vss. 10-14) and the reference to mixed marriages (vss. 23-28), the account of Nehemiah's actions in his second term parallels the covenant document (9:38-10:39 [H 10:1-40]; 12:44-47). The pericope closes in vs. 29b with a notation which refers back to the subject matter dealt with in the immediately preceding text unit (vss. 23-27), namely the marriage with non-Judahite women. It is prefaced by a liturgical formula of the type that seems to have been favored by the author of the Nehemiah memoirs (cf. 5:19; 6:14; 13:14, 22, 31) but is not found in the Ezra material.

[13:30-31] The transfer of these verses from their suggested original place after 12:47 (see above) to the present context may have been caused by their summary character, which makes them a suitable ending for Nehemiah's memoirs.

The results of this inquiry can be presented in a chart showing the succession of Davidids, synchronized with the roster of high priests and governors of the province of Judea and a genealogy of Sanballatids (the rulers of the neighboring province of Samaria). The chart is based on the biblical sources (Ezra-Nehemiah, Haggai, Zechariah, and I Chronicles), the information gleaned from the Judean stamps and jar handles from the early Persian period (especially the seals and bullae most recently published by Avigad), the Samaritan Wadi Daliyeh documents analyzed by Cross, and the Elephantine papyri.

Dates	High priests	Davidids	Governors	Sanballatids
538		Sheshbazzar		
-515	Yeshua <sup>c</sup>	Zerubbabel		
515-	Yoyaqim (brother of [Eliashib I])	Hananiah	Elnathan	
ca. 490-	[Yohanan]		Yeho <sup>c</sup> ezer	
ca. 470-	Eliashib II	Shechaniah	Ah <sup>c</sup> zai (Ezra)	
445-420 (?)	Yoyada <sup>c</sup> I	Hattush	Nehemiah	Sanballat I
	Yohanan II	Elyoenay		Delaiah
408	Yaddua <sup>c</sup>	Anani <sup>c</sup>	Bagohi	Sanballat II

This synoptic table can be further extended for several generations after Nehemiah to the end of the Persian period by the addition of four gen-

erations of high priests, three generations of Sanballatids, and one more Judean governor known from coins.

Dates	High priests	Governors	Sanballatids
			Yeshua <sup>c</sup> (?) (brother of)
390	Yohanan III		Hananiah (?)
360	Yaddua <sup>c</sup> II		Sanballat III
330	Onias I	Yehezqia	
300	Simon I		

Notwithstanding the gaps in our information, the available evidence strongly suggests that the province of Judea existed as an autonomous entity within the Persian Empire down to the days of Alexander of Macedonia. See also SANBALLAT[S].

# F

\***FAITH, FAITHFULNESS IN THE OT.** In addition to what the OT says explicitly about persons believing/trusting and disbelieving/distrusting, there are innumerable passages that bear upon the question implicitly. The present article concentrates on those in which the reference is explicit.

1. The Hebrew verb **האמין**
  2. Nonreligious contexts of "believing/trusting"
  3. Religious contexts
  4. Faith and the exodus tradition
  5. Abraham's faith
  6. "Faith" in the oracles of Isaiah
  7. Faithfulness
- Bibliography

1. **The Hebrew verb **האמין**.** Biblical Hebrew lacks a noun equivalent to the English word "faith." A possible exception occurs in Isa. 26:2 (i.e., in the latest stratum of the book): "Open the gates, that the righteous nation which keeps faith may enter in." In the context of vs. 3 ("whose mind is stayed on thee, . . . trusts in thee"), the phrase "keep faith" here refers more likely to believing/trusting in God than to keeping his commandments or the like (i.e., being faithful in a moral sense). (On Hab. 2:4, see §5 below.) Elsewhere, however, it is the *hiph'il* of the verb **אמ** that expresses "faith."

Studies of a few decades ago that sought to interpret **האמין** in terms of the etymology of the root **אמ**, or of the meaning of the *qal* or *niph'al* forms, or of an alleged fundamental meaning lying beneath all the forms, or of general theological considerations, have now been rejected as untenable. For the most part, these studies tended to eliminate the element of believing in favor of that of being steadfast (i.e., identifying the *hiph'il* with the *niph'al*, as in the case of Isa. 7:9, where the prophet's assertion is thereby made into a tautology: "If you do not stand firm you will not be firm"), or to dissolve statements about the inward human act of believing/trusting into mere declarations of the reliability of God (i.e., the interpretation of the verbal form as a declaratory *hiph'il*). Barr's assertion of the view of the older grammarians, that **האמין** is an internal transitive verb denoting the

mental act of being sure about something or someone, is supported by the actual usage of the verb in the OT. It is this usage, determined in literary context, that is decisive for exegesis, and not the hypothetical etymology of the root, or deductive theological reasoning, or a choice among the several possible meanings of *hiph'il* forms generally.

Neither the word **האמין** nor either of the other Hebrew words for trusting (**בטח**, "trust," **חסה**, "seek refuge") implies anything in itself about the moral qualities or worth of the one of whom it is predicated or of the object of belief/trust. A fool may believe (Prov. 14:15), and one may believe a liar (I Sam. 27:12). Believing/trusting does not necessarily involve the ethical commitment of the believer to the object, or the evocation of a deep or lasting emotional response. *True faith in God* entails these things, as the OT affirms, but this is a religious conviction and not a meaning inherent in the word "believe" itself. There is no more hidden theological or ethical significance in the Hebrew word than in the English equivalent. **האמין** means simply to be certain in the mind (Barr).

## 2. Nonreligious contexts of "believing/trusting."

The nonreligious contexts in which **האמין** is employed may be classified under six headings. (a) Where the words of another person are believed to be true or false. Jacob disbelieved his sons' report about Joseph's being alive in Egypt (Gen. 45:26). The Queen of Sheba disbelieved the reports about Solomon's wisdom and glory, until she saw him for herself (I Kings 10:7). Cf. Jer. 12:6; 40:14. (b) Where belief in another's words and trust in him as a person are implied. Achish of Gath believed David's lies and therefore trusted him as an enemy of Israel (I Sam. 27:12). Cf. Prov. 14:15; 26:25. (c) Where trust is placed in another person or thing as being reliable (faithful, righteous). Cf. Mic. 7:5 (anyone); Job 15:31 (vanity); 39:12 (the wild ox); 4:18 and 15:15 (angels). In these particular cases the subject does not, or is warned not to, trust in a particular object, but the negative character of the statement is not inherent in the verb itself (contra Jepsen). The verb means being certain in the mind, but in these instances such certainty is judged by the writer to be lacking or unwarranted. The subject is God in Job 4:18 and 15:15, where it is asserted that God does not trust even his angels, let alone mortal men. (d) Where someone believes that something is (or is not) taking place (Lam. 4:12; Job 15:22; 29:24). These passages (cf. Ps. 27:13; Job 9:16; Exod. 4:5, 31) show that in the OT "believing" is not necessarily directed toward persons—let alone toward God, the transcendent person. (e) In the phrase "have confidence in [one's] life." The meaning of the phrase is to expect to continue to live (Job 24:22; Deut. 28:66). (f) In Job 39:24 the verb is used of the battle horse that cannot "stand still" (RSV), or, better, "be held in" (NEB). Here the meaning of the *hiph'il* does approach that of the *niph'al* (be firm).

3. **Religious contexts.** (a) Believing a prophetic oracle or a report of a revelatory event (Exod. 4:1, 5, 8, 9, 31; 14:31; Isa. 7:9; 28:16; 53:1; Hab. 1:5; Jonah 3:5). (b) Believing in a prophet as a

generally reliable messenger of God (Exod. 19:9; II Kings 17:14; II Chr. 20:20). (c) Believing/trusting in God's promises and his ability to fulfill them (Gen. 15:6; Num. 14:11; 20:12; Deut. 1:32; 9:23; Ps. 78:22, 32). (d) Believing that something involving God is or will be the case (Isa. 43:10; Ps. 27:13; Job 9:16; cf. Exod. 4:5, 31). (e) Believing God's commandments (Ps. 119:66).

4. **Faith and the exodus tradition.** Texts dealing with the exodus tradition are perhaps the most significant for understanding the OT view of faith. The issue is not whether to believe in the existence of God, something that ancient Israelites took for granted, but whether to acknowledge his presence as Savior and Lord, to believe God's chosen mediator and the promises he conveys, and to trust God as continuously willing and able to fulfill these promises and to rule the life of his people. This faith is the foundation of commitment to God and to his demands; indeed, faith in God is not complete if it does not produce such commitment. However, faith and commitment are not synonymous. Believing in God, or trusting him, is not the same thing as obeying him. Faith and faithfulness are intimately related, and they constantly affect each other, but they are distinguishable in OT usage.

When Moses was commissioned by God to return to Egypt to lead the Israelites to freedom and the worship of Yahweh (Exod. 3), he protested that the people would not believe that Yahweh had actually appeared to him and therefore would not follow him out of Egypt (4:1 ff.). He had previously been assured that the God who addressed him was none other than the God of Abraham, Isaac, and Jacob (3:6, 15), thereby placing the present experience in continuity with the previous experiences of Israel. As confirming evidence that God had indeed appeared and given the stated commission, Moses was given the power to work miraculous signs and was assured that Israel would "believe the signs," even if they disbelieved Moses' report (4:2-9). This proved to be the case. "And the people believed; and when they heard (better, "realized") that the Lord had visited the people of Israel and that he had seen their affliction, they bowed their heads and worshiped" (4:31). The greater sign of God's saving presence is that when Moses has led Israel out of Egypt, they are to worship God at the mountain in the wilderness (3:12). There the experience of encounter with God will be repeated. But it will be deepened by the intervening experience of flight from oppression in an idolatrous culture. This flight will be successful only because of the determinate purpose of God, working against enormous opposition from the powers of the world, but it will require a venture of faith on the part of the people.

Here, then, are all the ingredients of the revelatory and redemptive event—the "faith event": memory of the God of the fathers (with all that this implies about religious knowledge, cultic practice, and moral commitment), intense human need, strong leadership by a man of God, worship of God at the beginning and the end, acceptance of a hazardous venture toward freedom (and the con-

comitant responsibility) and toward a largely unknown future. The act of commitment, which includes obedient action, is based upon previous conviction (belief in the God of the fathers), but it serves to deepen and enrich faith—and the understanding of God—at the same time. Thus faith builds upon faith. (Cf. Isa. 43:10: by serving God as witnesses—prophets, teachers, lawgivers—Israel herself comes to know and believe more fully.)

Subsequently, Israel lost confidence in Moses and Yahweh, in the face of massive, visible danger (the Egyptian pursuers), and regretted the decision to flee (Exod. 14:10-12). It is really only after the great deliverance by God at the Sea of Reeds that the people's skepticism gives way to genuine conviction, and they fear the Lord and believe in him and his servant Moses (14:31). Believing in them means both believing the truth of what they have said about the purpose and promise of God and trusting God to fulfill his word.

Exodus 14:14 has often been used to justify a passive or quietistic view of faith ("The Lord will fight for you, and you have only to be still"). But the destruction of the Egyptian soldiers in the sea is only one episode in the story. The faith event taken as a whole demands action by the people; indeed, it involves a radical transformation of their entire way of life.

The people's faith in Yahweh and in Moses proves to be wavering, and in the wilderness wandering that follows the Exodus there are repeated occasions when it must be renewed. The priestly writer even represents Moses as losing faith in God's power, in the episode of the water-producing rock (Num. 20:12). In the Sinai narrative God is cited as saying to Moses, "Lo, I am coming to you in a thick cloud, that the people may hear when I speak with you, and may also believe you for ever" (Exod. 19:9).

But the struggle between faith and unbelief continues throughout the life of the people, as both the writers of the Pentateuch and the psalmists represent the tradition (Num. 14:11; Deut. 1:32; 9:23; Pss. 78:22, 32; 106:12, 24). Pss. 78 and 106 are especially revealing of the OT understanding of faith. In both psalms it is clear that faith in God involves the *memory* of God's previous acts of deliverance, *confidence* in his continuing ability to preserve his people, *obedience* to his commandments (and his appointed leaders), and *avoidance of idolatry*. And it issues in *praise*.

By all accounts of this tradition, faith is not a static condition of life or consciousness but a dynamic activity of the mind, heart, and will; not a virtue perfectly or permanently attained but a commitment to be continually renewed. It is not so much a human achievement as a response to God's grace. And above all it is acknowledgment of his lordship over all other powers, visible and invisible, and reliance upon his will and power to direct, support, and fulfill the life of his people.

5. **Abraham's faith.** At a time when Abraham and his wife Sarah were childless, God appeared to him by night and promised that he would give him a son from whom would spring eventually a great people (Gen. 15:1-5). "And he believed the Lord; and he reckoned it to him as righteousness"

(vs. 6). Believing God here means believing that his promise is true. But it can only be true if God is able to bring it to pass. Therefore, it is equally legitimate to translate the verb here as "trust in" the Lord (Amer. Trans.), or "put faith in" the Lord (NEB, NAB, JB). This faith is not merely faithfulness understood as a moral achievement of Abraham. The statement that Abraham's faith is accounted as righteousness means simply that believing in God's promise is the right thing for Abraham to do. It is what God expected of him in the circumstances. But the virtue all belongs to God. Abraham merely receives the promise, both when it is first made and when it is (initially) fulfilled (Gen. 21:1-3).

The related text, Hab. 2:4, is ambiguous. The MT reads, "He whose soul (self) is not upright is puffed up (RSV and JB n.), but the righteous lives by his אֱמוּנָה (faith or faithfulness)." The noun אֱמוּנָה usually means firmness, faithfulness, steadfastness, and elsewhere never means belief/trust. Yet the contrast here between being puffed up and being faithful suggests that the latter means humble trust.

Gen. 15:6 should be read together with Gen. 22, the story of the offering of Isaac. Although the explicit terms of believing/trusting are not used here, the account is all about faith. God asks Abraham to sacrifice the child of promise, although Isaac had been given him as an extraordinary gift, when he and Sarah were too old to expect a child by ordinary conception. He makes the offering—although he is stopped at the last moment from actually killing the boy—and thus surrenders the gift, returning him to God. When Abraham has shown that he can make this offering, yielding any claim upon the child as his own possession, the child is allowed to live, to carry on the line of Abraham, and to inherit the promise.

Isaac is Abraham's whole life at this point, his name, his fortune, his future, the most precious thing he has—the one thing he really would not want to and could not afford to give up. His own life could easily be sacrificed instead of the boy's. But this is not enough. It is precisely the center of Abraham's world that must be surrendered to God. God must become the center, and Abraham must live in absolute reliance upon God and absolute commitment to his will. Grateful acceptance of the gift freely given and willing surrender of the whole to God's disposition—this is the meaning of Abraham's faith, and, thus, of the faith of his descendants (cf. Rom. 4).

6. "Faith" in the oracles of Isaiah. Twice Isaiah gave oracles of promise to the Judeans of the eighth century B.C. and called for a radical act of faith in response (Isa. 7:9; 28:16). At the time of the Israelite-Aramean invasion of Judah (Isa. 7:1 ff.; II Kings 16:1 ff.) Isaiah gave king Ahaz of Judah an oracle from Yahweh assuring Ahaz that he had nothing to fear from the invaders (7:3-8). Isaiah concluded the oracle with the famous line, which plays on the *hiph'il* and *niph'al* forms of the verb אָמַן, "If you will not believe, surely you shall not be established" (7:9). The parallel to Moses' experience with the Israelites in Egypt is close (Exod. 4:1; 14:31). It is the word brought by the mes-

senger of God that is to be believed, that is, Isaiah's oracle (7:3-8). This involves also believing that Yahweh has truly spoken to the prophet and is able to bring to pass what he promises. Believing the prophet implies trusting in God as the effective Lord of history, who keeps his word, but it means first of all believing the word of the prophet (see §3 a, b above).

Isaiah does not try to tell Ahaz what are the specific implications of this faith for political action—whether he should defend the city of Jerusalem, try to drive out the invaders, or merely wait quietly and let the danger pass. Thus we may not legitimately deduce a general theory of social ethics or political action from Isaiah's oracle.

In Isa. 36-37 (taken from II Kings 18:13-19:37) Isaiah is said to have prophesied divine intervention, by means of a rumor, to save Jerusalem from the Assyrian siege of 701 B.C. and thus vindicate Hezekiah's trust in Yahweh (36:15; 37:10). Another source attributes the actual deliverance to an angelic devastation of the Assyrian army (37:36-38). Cf. II Chr. 20:1-25, where Jehoshaphat merely stands by (20:17; cf. Exod. 14:13-14) and watches, while God causes his enemies to destroy each other (20:22-23). These are late, partly legendary accounts. Jeremiah rejected the reliance on divine miracles to protect Jerusalem as a vain superstition (Jer. 7:16).

Isa. 28:16 seems to make a similar point to that of 7:9. Whoever believes/trusts the prophet's assurance that God is establishing Zion (which represents the religious community of those faithful to Yahweh) and will not let it be wholly destroyed by the powers of the world will be secure (NEB "shall not waver"). Isaiah says nothing about the possible cost of such faith nor the specific political decisions that it might entail. The faithful must always be prepared to suffer for their convictions and to take responsibility for their actions, in the face of constantly changing circumstances.

7. Faithfulness. This is a quality exhibited fully and consistently only by God, to whose faithfulness the OT writers constantly refer (e.g., Pss. 33:4; 100:5; Isa. 61:8). Men, on the other hand, are not to be trusted (Mic. 7:5; Prov. 29:25). God is trusted especially to rescue the oppressed and afflicted from the power of their enemies, whether it is Israelite slaves from Egyptian tyranny (Exod. 3 ff.) or sick and persecuted persons from disease and evildoers. The language of trusting (בָּטַח) and seeking refuge (חָסַה) in a faithful God is used frequently in the Psalms in this latter connection (בָּטַח about thirty times, including Pss. 9:10 [H 11]; 25:2; and חָסַה about twenty-five times, including 7:1 [H 2]; 11:1). The main burden of these psalms is appeal for divine help and praise for receiving it. But another recurrent theme is the assertion that God discriminates between the righteous faithful and the wicked by blessing the one and not the other—in the short or long run (cf., e.g., Pss. 1; 32:10). However, Ps. 73 shows that this faith was not always simplistic or materialistic but could discern the consequences of trust in ultimate religious terms. Cf. Jeremiah's conviction that God would preserve him to do his prophetic work but would not give him a comfortable life or otherwise

alter his outward circumstances (Jer. 15:10-21; 16:1 ff.; and *passim*).

**\*FAITH, FAITHFULNESS IN THE NT.** A relationship to a person (or thing) involving understanding, belief, trust, and obedience, grounded in that person's faithfulness, and often expressed in fidelity and steadfastness. Especially, in the NT, a "response term," presuming the initiative of grace by God, but also, as "faithfulness," a term characterizing God and his servant-son, Jesus; and an ethical expression in the believer's life. The terms occur with frequency and remarkable evenness throughout the NT (see FAITH, FAITHFULNESS §A3, to which should be added derivatives from πισθω, πιστοθησις, "trust in, [have] confidence"; see BOLDNESS[S]).

**1. Overview.** The NT concepts reflect extensive prior development (see FAITH, FAITHFULNESS §§B, C; FAITH, FAITHFULNESS IN THE OT[S]). (1) NT concepts are sometimes pre- or non-Christian (cf. Heb. 11:6; 10:23-25; Jas. 2:18-26). (2) Specifically Christian "Easter faith" stands out as response to the kerygma of the early church about Jesus' death and resurrection (cf. FAITH, FAITHFULNESS §D3). Early Christian preaching was a call to faith in Christ (πιστεύειν εἰς Χριστόν, πίστις Χριστοῦ) who "died for us" and is "raised from the dead," often employing a "pistis formula" (Rom. 10:9b; 5:8; I Cor. 15:3b-5; II Cor. 5:15). From this kerygmatic background come gospel verses like John 20:31 and Mark 1:15. (3) In light of these two influences, a variety of ways can be identified in the NT in which "faith/faithfulness" is understood, some unreflective and others more developed (Paul, John).

Continuing debate concerns (1) the best rendering of πίστις in specific vss.; (2) whether, esp. in Paul, πίστις Ἰησοῦ Χριστοῦ means "faith in Jesus Christ" (objective genitive) or "the faith(fulness) of Jesus" (subjective genitive); and (3) the place of the historical Jesus' own πίστις (reflecting the "new quest"; see BIBLICAL CRITICISM, NT[S] §4c).

**2. Jesus and the synoptic tradition.** *a. The historical Jesus* assumed the faith and trust in God's kingship, power, providence, and justice so characteristic of ancient Israel. This is clear even if isolated vss. like Mark 11:22; Matt. 21:21 may be redactoral: "Have faith in God" (ἔχετε πίστιν

θεοῦ). What Jesus speaks of is above all "prayer faith" (Mark 11:24) and "miracle faith" (Mark 4:40; 5:34, 36; 10:52), which may even be vicariously (2:5), taking seriously the power of God in specific situations here and now.

No new definition of faith is announced. Those who worry over food and clothing are persons of little faith, as in rabbinic usage. People are to believe JOHN THE BAPTIST and his preaching; publicans and harlots did, while priests and scribes did not (Mark 11:31; Matt. 21:32). Jesus' word of forgiveness is occasionally an object of faith (Luke 7:50; Mark 2:5). But when Jesus himself becomes the object of faith, we are more clearly dealing with the assertions of the early church (Matt. 18:6; cf. Mark 9:42; 15:32), post-Easter assertions (Luke 24:25; Mark 16:13, 14, 16, 17). There can also be false belief (Mark 13:21) and unbelief (Mark 6:6; 9:19, 24).

There are boundless possibilities which Jesus' trust and confidence in God open up, for himself and for his circle of followers. He elicits, by his word and presence, faith that can change creation itself (Mark 11:23; Luke 17:6). Jesus' sayings emphasize the power of faith and connect it with healings, often via the formula, ἡ πίστις σου σέσωκέν σε. "Your faith has made you whole/saved you" (author's trans.; Matt. 9:22; Mark 5:34; Luke 8:48). Jesus awakens faith; he summons people to saving faith in God through their concrete encounters with himself. This faith gives certainty to existence, over against doubt or fear; a Christology in embryonic form is present here.

Fuchs, representative of the "new hermeneutic," has contended that Jesus, in his own faith, "was sure of God" (cf. Mark 9:23) and "prayed for his own." At Easter, God "confirmed that the faith of Jesus was a faith which would benefit them," so that now "to believe in Jesus means to believe like Jesus that God grants prayer." According to this view, faith "is the future," as promise; it believes, "as Jesus did, in the victory of love," and confesses "that Jesus occurred 'for us' by following his way" (Achtmeier). Others would prefer to speak of Jesus' "trust" (a more universal and social term than "faith"): Jesus trusted God, and "to trust Jesus is to appropriate him as the index of God" (Keck).

These tendencies, safeguarded as they are in various ways from the dangers inherent in the "old quest," plainly stress Jesus as exemplar of trust and faith—i.e., *fides qua*, rather than *fides quae* ("how Jesus believed," rather than "Jesus as object of faith"). However, at least two questions arise, one of them historical, the other theological: Can we recover sufficient "Jesus material" to tell us "what Jesus was like"? And, did the gospel tradition intend to convey such data?

**b. The synoptic evangelists.** Here firmer conclusions can be drawn.

*i. Mark* reflects at points the kerygmatic use of πιστεύειν as belief in the gospel (1:15), and there are also passages on faith which go back to Jesus, usually with an OT-Jewish ring (see §2a). Mostly, however, Mark regards πίστις as "saving power," the theme of the MIRACLE STORIES.

*ii. Luke* uses πιστεύειν at times in the sense of

"believe the Christian message" (8:12-13; cf. Mark 4:15, 17); ἡ πίστις is used for "the [Christian] faith" (18:8), ἄπιστοι for "unbelievers" (12:46; cf. 24:11; 22:67, contrasting 24:25; 22:32; 17:5). In Q emphasis had been placed on DISCIPLESHIP as faithfulness to Jesus and his message, to be rewarded in the eschaton, and on the faith of Gentiles as a warning to the Jews.

iii. *Matthew* generally preserves the views of faith found in his sources, but his particular achievement was to take a concept already present in the miracle stories, "Your faith has saved you" (Mark 5:34; 10:52), and to use it as a formula of his own (cf. 8:13; 9:29; 15:28) to shape these stories as paradigms showing what πίστις is. The principle, "to you according to your faith," informs 9:27-31 and determines abbreviations in 9:18-26; Mark 5:21-43. As a theme in the story about the centurion's servant (see 8:8-10), it controls both the conclusion (8:13) and introduction (8:5-7): the centurion's initial request shows faith; Jesus tests him, "Am I to come [into a pagan's house] and cure him?" (8:7, NEB n.); faith persists and is rewarded. The same pattern is seen in 15:21-28. Faith is the power which "opens the way for Gentiles to Jesus" (Held).

While Matthew thus takes the concept of πίστις that supplicates and develops it as trust in Jesus' miraculous power, he also combines this concept and "understanding" as a presupposition for faith. "Understanding" and "trust" are a complementary sequence in Matthew, and those of "little faith" (always disciples, in trying situations) "understand" but "doubt" or do not trust (14:31-33; 16:5-12; 28:17—the eleven worshiped and doubted).

iv. *Summary.* For the Synoptics generally, faith includes human faithfulness (Luke 16:10-12), "prayer faith" in God, credence in a prophet (Mark 11:27-33), and obedience (Luke 16:31). Above all it means trust in Jesus and God's power working through him, and belief that he is the Messiah (Mark 8:29; Matt. 16:16; Luke 9:20). πίστις is primarily faith/trust in God's power, active in Jesus, grasping after help from God, with an element of will (Mark 10:51; Matt. 15:28), prayerfully expressed.

3. Paul uses πίστις/πιστεύειν to mean, above all, belief in the Christ kerygma, knowledge, obedience, trust in the Lord Jesus. It comes by hearing with faith the gospel message (Gal. 3:5, ἐξ ἀκοῆς πίστεως; cf. RSV and NEB), by responding with a confession about Christ (ὁμολογεῖν, Rom. 10:9-10), and by the "obedience of faith" (Rom. 1:5, ὑπακοή πίστεως, "the obedience which faith is"). The importance Paul attaches to the human response of "faith" leads him to insert this notion into pre-Pauline formulas (e.g., Rom. 3:25) and to stress it as "justification-faith," i.e., "belief" with reference to God's justifying power in Christ's cross. Christians are "those who believe" (οἱ πιστεύοντες, Rom. 3:22; I Cor. 1:21). The kerygma is an object of faith (I Cor. 15:2, 11, 14, 17), but there is often a combination of *fides quae creditur* and *fides qua creditur* (cf. Rom. 1:8 and I Cor. 2:5). At times πίστις denotes God's faithfulness (Rom. 3:3), God's being true; human "believing" or "trust" is to acknowledge the truth of God. It

can also denote human fidelity or faithfulness, as when Paul quotes a list of "virtues" (Gal. 5:22).

a. *The place and "structure" of faith* in Paul's thought is still debated. Some, following Bultmann, regard it as central, with "obedience" its primary side. Others stress the priority of grace (e.g., Rom. 4:16) and challenge the emphasis on "obedience" at the expense of trust and intellectual acceptance. It has been observed that Paul never makes faith the subject of an imperative ("Believe!") and never speaks of "faith alone" (but cf. Rom. 11:20, RSV; Rom. 3:28, where commentators since Origen have felt the sense demanded it).

Alternatives to balance Bultmann's individualistic and anthropocentric view of πίστις as "the attitude of man in which he receives the gift of 'God's righteousness'" have been proposed. H. Binder insists on faith as an action of God centered in the Cross and Resurrection, so that it becomes a transsubjective faith event originating with God, in the new covenant. Similar are efforts to interpret πίστις [Ἰησοῦ] Χριστοῦ not as "faith [by persons] in [Jesus] Christ" (objective genitive) but as "the faithfulness of Christ" (subjective genitive) who was the incarnate truthfulness of God; Jesus becomes "believer—for us, vicariously," and Rom. 1:17 (ἐκ πίστεως εἰς πίστιν) is rendered, "from God's faithfulness to man's faith embraced in it" (Torrance). Others who translate the genitive as subjective stress far more "Christ's trusteeship" (*fidei commissum*) or the "loyalty" of Christ to the promise to Abraham (Rom. 3:22). Still others can make of Christ a model believer whom we are to imitate. The majority of interpreters, however, continue to read the genitive as objective (for believers' trusting, obedient response to Christ; cf. Phil. 5), even though Bultmann's view is often acknowledged to be one-sided.

b. *Faith and ethics.* Faith determines the existence of believers; it is part of the indicative in the new relation to God, which is the basis for the imperatives. Faith works itself out in the form of love for others (Gal. 5:6; cf. I Thess. 1:3) and, directed to the future, is manifest as hope. When I Cor. 13 (from an earlier source?) presents faith as part of a triad with "hope" and "love," the sense is that of wonder-working faith (13:2; cf. Matt. 17:20). Neither there nor in I Cor. 12:9 (where faith is a charismatic gift some Christians have to work miracles) is the usual Pauline meaning of "justification-faith" present.

4. *The later epistles.* In these, πίστις comes to mean more commonly "the faith which is believed," as in Colossians (1:23; 2:7), a basis for the steadfast life of believers (1:4; 2:5). In Ephesians Paul's "justification-faith" is formally present (2:8; cf. 3:17), but πίστις seems on its way to becoming one virtue among many (6:16, 23); at 4:5, "one Lord, one faith, one baptism" can be taken to refer to Christ's death on the cross as baptism/circumcision for all peoples (cf. Mark 10:38-39; Col. 2:11-15), but more likely it means a church ritual, water baptism. The trend is toward "unity of faith and knowledge" (Eph. 4:13).

The Pastoral epistles, while reflecting usages found in Paul's unquestioned letters, tend to accentuate πίστις objectively as "the common faith"

of the emerging church (Tit. 1:4; I Tim. 4:1, 6; 6:21). This was manifested in God's word, the kerygma, with which Paul, now guarantor of the tradition, was entrusted (ἐπιστειύθη, Tit. 1:3; cf. II Tim. 1:12). The kerygma is to be shared with trustworthy persons (πιστοί, II Tim. 2:2), who must receive "the trustworthy message as taught" (Tit. 1:9, author's trans.). The apostle's mission was to transmit the faith and thus "further the faith" (Tit. 1:1). In these letters "faith" also appears as one virtue among others (II Tim. 3:10; Tit. 2:10, fidelity; I Tim. 1:5, "sincere faith"; Tit. 2:2, "sound in faith," cf. 1:13). At times, "in Christ [ἐν Χριστῷ]" seems to be a synonym for "in [by] faith [ἐν πίστει]" (II Tim. 2:1, 10; 3:12). The five sayings introduced by a "citation-emphasis formula" (πιστός ὁ λόγος [the saying is sure]; I Tim. 1:15; 3:1; 4:9; II Tim. 2:11; Tit. 3:8) reflect the community's conscious faith about salvation, godly living, and church order (Knight).

James can be termed a "Pauline epistle" if it is assumed it was written to counter misuse of Paul's "justification-faith" by pupils who maintained his formula "by faith," but not his gospel (see JAMES, LETTER OF §1e). Instead of Paul's view of πίστις as a total response of belief, trust, and obedience, faith has been understood as mere intellectual assent to doctrines (2:19). That view is a caricature of Paul and also differs from Matthew's πίστις-concept (G. Barth). The author of James (2:14-26) seeks to correct this misunderstanding by carrying it to absurd conclusions; now Pauline πίστις can be understood only as faith and works. The danger is that this daring corrective by James will be taken as the norm.

Hebrews, when not read in the shadow of Paul, exhibits its own view of πίστις, one not specifically Christian (see FAITH, FAITHFULNESS §D6), but rooted in the OT, late Judaism, and Qumran (see DEAD SEA SCROLLS, DEAD SEA SCROLLS[S]) (though lacking the OT's personal relationship—6:1 and 11:6 specify only that "God exists" and "rewards seekers"); Philo often clarifies passages in Hebrews (see FAITH, FAITHFULNESS §A2). In Hebrews faith means chiefly "holding firm" (3:14; 11:1), "keeping faith" (10:37-38=Hab. 2:3-4; 10:39), hence "patient endurance" (10:36-39; 12:1). The pilgrim people press on, just as in the OT (4:1-11; 10:19 ff.; hence the examples in ch. 11), but now with the exalted Christ as leader (12:2). As they do so they need "[bold] confidence" and hope (3:6; 10:35), a "full assurance of faith" and "of hope" (10:22; 6:11). Faith is the integrating component for this people living by God's promises "between the times," en route to a "heavenly calling." The message heard in the community is to produce faith once again (4:2) in God's promises; πίστις has become the virtue suitable to such promises—faithfulness or steadfastness on the part of those who believe; it is "belonging to the community" (Grässer).

**5. The Fourth Gospel.** In the Fourth Gospel the explicit, developed christological faith of the early church is projected back into the life of Jesus in the light of later experiences. In the "signs source" or "gospel" upon which many recent scholars believe this evangelist to have drawn (see JOHN,

GOSPEL OF[S] §2; SIGN IN THE NT[S] §3), faith would have been viewed as the result of Jesus' miracles ("signs"; σημεῖα; 2:11; 4:54; 20:30-31; cf. 6:14); miracles legitimize his messianic status. The emphasis is on the effect of the signs on witnesses: people see (or read, 20:31) that as wonder worker he is Messiah; and so they become believers (4:53; 11:45).

The evangelist himself further develops the idea of faith through signs (6:26; 11:41-42; 14:11), but at the same time criticizes it, notably in 4:48 ("Unless you see signs and wonders you will not believe," inserted into the miracle about the nobleman's son). John also reckons with the hard fact of nonbelief (12:37, 42). Above all, alongside the possibilities of "seeing and believing" (characteristic of the source), "seeing, yet not believing," and "not seeing and therefore not believing" (20:25), he introduces a fourth: "not seeing and yet believing" (20:29). This is the superior form of faith. Moreover, believing can lead to seeing in a deeper way (cf. 11:40; 1:50; and the communal confession of 1:14b, 18). To this extent there are, in John, degrees of faith. But all are based on perceiving Jesus' death as his glorification; his death discloses who he really is in relation to the Father, and that he is the source of salvation and life.

**6. The book of Revelation** issues a call to fidelity and endurance (13:10), to "the faith of Jesus" (14:12, meaning either confession of him as Lord or to his faithfulness as a martyr [1:5], or both). Faithful followers must keep the faith (2:10, 13); the faithless will later be punished (21:8). Faithfulness by Christians is becoming, amid persecution, one of a series of "works" (2:19).

\***FAMILIAR SPIRIT** [אוב; for etymology see final paragraph below]; RSV MEDIUM (but SPIRIT in I Sam. 28:8; GHOST in Isa. 29:4). Has to do with necromancy, a form of DIVINATION. Recent comparative studies have cast fresh light on both the institution and the terminology.

1. **The institution.** The clearest picture afforded by the Bible is in I Sam. 28. Saul, having vainly sought guidance from Yahweh by more conventional means, resolves to get in touch with the dead Samuel. He goes to a necromancer, requesting that she divine for him by an אוב, and bring up Samuel. The woman proceeds to describe what she sees: a divine being (אֱלֹהִים; similarly Isa. 8:19) coming up from the ground in the form of an old man in a cloak—which is enough for Saul to recognize Samuel. Samuel asks why Saul has disturbed him, and Saul tells him his plight, only to hear words of rejection. The emphasis in this literary account is on Saul's fate outside Yahweh's favor and on the true word of the prophet. But the account reflects enough of necromantic practice to be aligned with similar practices attested elsewhere.

An Akkadian text gives instructions for going to a soothsayer's house with food for the spirits of the dead in order to elicit an oracle, and others speak of food offerings being placed in a pit (*apu*). In the twelfth tablet of the Gilgamesh Epic (and its Sumerian original) Gilgamesh opens a hole in the ground, and the spirit of the dead Enkidu emerges to answer questions about existence in the underworld. Hittite ritual texts speak of a sacrificial pit (*a-a-bi*) being opened and gifts lowered into it, including food offerings (designed to lure up chthonic deities) and certain silver objects: a model ladder, suggesting a means for the deity to ascend to the upper world; and a model ear, suggesting the readiness of the waiting mortals to hear a message from below. See DEITIES, UNDERWORLD[S] §2a.

It is uncertain to what extent the sparse biblical picture may be legitimately filled out with details from these other sources. But necromancy was clearly practiced in pre-exilic Israel (I Sam. 28; II Kings 21:6; cf. II Chr. 33:6), and equally clearly condemned, at least from Deuteronomistic times onward (Deut. 18:11; II Kings 21:6; 23:24; Lev. 19:31; 20:6, 27; I Chr. 10:13-14). Cf. also the presumably derogatory references to the "chirping" and "murmuring" of the voice from beyond in Isa. 8:19; 29:4.

2. **The terminology.** אוב occurs with ידעני as a hendiadys eleven times, and without ידעני four times. Both words may refer to the spirits of the dead in every case (so NEB), though in some it is possible that the necromancer is referred to (so

exceptionally NEB in II Kings 23:24). Traditionally ידעני (from ידע, "know") was supposed to allude to the esoteric knowledge of the practitioner (cf. KJV and RSV "wizard"), but it could equally well connote the privileged knowledge possessed by the dead. After all, necromancy is "enquiry of the dead" (Deut. 18:11; Isa. 8:19), who were consulted especially for their knowledge of the future (I Sam. 28).

The etymology of אוב is less transparent. The pit referred to in the Hittite texts is called *a-a-bi*, which may be related to Sumer. *ab*, Akkad. *ap(t)u* (both meaning "hole"), as well as Heb. אוב. (If this is so, the root would be non-Semitic, and may have been borrowed by all these languages.) אוב may still bear this sense in I Sam. 28:7-8. The reference to the spirit that emerges from the pit would then be a transferred sense, and the application to the necromancer a further development. Because of the common institutional setting this etymology seems preferable to older suggestions, despite the philological irregularities.

Gaster, *Myth, Legend and Custom in the OT* (1969), pp. 462-75. S. B. PARKER

\***FAMILY.** See KINSHIP AND FAMILY[S].

\***FEAR OF ISAAC.** An archaic phrase used to designate the God of Isaac by whose name Jacob swore an oath (Gen. 31:53, cf. 31:42). Since the dialect of the patriarchs was not biblical Hebrew, the meaning of the phrase remains somewhat obscure. Scholars who interpreted it on the basis of later biblical phrases such as פחד יהוה, "the fear of Yahweh" (II Chr. 19:7), and פחד אלהים, "the fear of God" (Ps. 36:1 [H 2]), assumed that Isaac was the name for a deity from whence fear proceeded.

Alt has questioned whether the explanation can be based "so straightforwardly on a later meaning of פחד," and has explained the epithet as "an archaic title of the numen whose appearance terrified Isaac and thereby bound him to himself forever" (p. 26). Some scholars have seen "the Fear of Isaac," in that sense, as an allusion to the earlier sacrifice of Isaac in Gen. 22.

Abricht has proposed to translate the phrase as "Kinsman of Isaac," which seems appropriate as a designation for the God of a patriarchal clan. More recently, however, Hillers has seriously challenged this etymology and opted for retaining "Fear of Isaac."

Hillers' translation still leaves open the precise nuance intended by the Hebrew word *paḥad*, "fear." Speiser translated it "the Awesome One of Isaac." Kopf proposed "the Refuge of Isaac," which he supported by a semantic parallel with the Arabic root *fazi'a*, meaning both "to fear" and

"to take refuge." Hillers himself suggests that a better semantic parallel is to be found in Syriac *dehla*, which means both "fear" and "object of worship." Hillers' view is close to that of Becker, who understands that by metonymy the word *paḥad* represents the object of fear (i.e., veneration).

**FESTIVALS, GRECO-ROMAN.** Holy days and festivals dedicated to the gods were prominent features of the organized religious life of the Greek city-states, and by the seventh century B.C. various contests (athletic, musical, oratorical, dramatic) had become part of the religious celebrations. These competitions, originally secular in nature, were thereby placed under the protection and patronage of the gods and given a distinctly religious aspect. Augustus provided new support for the traditional festivals and competitions, and especially in the cities of the eastern provinces these celebrations retained their civic and religious importance.

Two significant changes in the character of the festivals took place under the Empire. First, they were more often dedicated to the emperor than to the gods, and second, the old Greek ideal of pure competition (*ἀγῶνες*) gave way increasingly to the Roman taste for entertainment (*ludi*). Professional competitors itinerated from one city to another, and the games and associated contests tended to be designed more for the spectators than for the participants. The Romans introduced chariot and horse races, boxing, bullfights, and gladiatorial shows. These latter were brought even to the strongly Hellenic cities of Asia Minor when Lucullus sponsored a gladiatorial spectacle at Ephesus (71-70 B.C.) to celebrate a military victory. The public games instituted by Herod in Jerusalem (see Jos. Antiq. XV.viii.1) are typical of the Roman provincial festivals. See GAMES, NT.

**Bibliography.** E. Norman Gardiner's *Greek Athletic Sports and Festivals* (1910) and his more popular *Athletics of the Ancient World* (1930) are still valuable discussions of the public games. L. Robert, *Les gladiateurs dans l'orient grec* (1940) is unsurpassed on this special topic. Irene V. Ringwood (Arnold) has dealt with Greek festivals in her *Agonistic Features of Local Greek Festivals Chiefly from Inscriptional Evidence* (1927), and in a series of articles in *AJA* (1929-60); see also her "Festivals of Ephesus," *AJA*, LXXVI (1972), 17-22. A. C. Bouquet, *Everyday Life in NT Times* (1954), pp. 180-90, is a popular account of amusements and recreations. Oscar Broneer envisions what Paul might have seen of the Isthmian Games during his residence in Corinth, "The Apostle Paul and the Isthmian Games," *BA*, XXV (1962), 2-31; but Victor C. Pfitzner, *Paul and the Agon Motif: Traditional Athletic Imagery in the Pauline Literature* (1967) shows that the apostle's agonistic metaphors do not derive primarily from direct observation, but are related instead to the traditional use of such imagery by the Hellenistic popular philoso-

phers and in Hellenistic Judaism. Similarly, Abraham J. Malherbe, "The Beasts at Ephesus," *JBL*, LXXXVII (1968), 71-80. V. P. FURNISH

\***FIRST FRUITS, OT.** The first issue of all life, whether from the womb (see FIRST-BORN[S]) or the soil, called בכורים (πρωτογέννημα) or ראשית (ἀπαρχή), was considered intrinsically holy. It had to be transferred to the deity, the rightful owner, before human beings were permitted to use the crop. Moreover, its transfer to the deity was considered a prerequisite for the assurance of divine blessing on the remainder of the crop. Both factors, the intrinsic holiness of the first fruit and its pragmatic purpose, are exemplified by the law of the first edible yield of fruit trees: "And in the fourth year all their fruit shall be holy, an offering of praise to the Lord. But in the fifth year you may eat of their fruit, that they may yield more richly for you" (Lev. 19:24-25). Similar is the law of the first fruits of the barley harvest: "You shall bring the first (ראשית) sheaf of your harvest to the priest . . . to gain acceptance for yourselves" (Lev. 23:10-11 NEB). Note also the advice of Wisdom: "Honor the Lord with your substance and with the first fruits (ראשית) of all your produce; then your barns will be filled with plenty, and your vats will be bursting with wine" (Prov. 3:9-10).

The gift of the first fruits is due not only from the first-ripe crops of the soil but also from certain foods processed from these crops, i.e., grain, new wine, new (olive) oil, fruit syrup, leavened food, and bread dough. The Priestly source preserves the terminological distinction between these two kinds: בכורים, "the first-ripe," and ראשית, "the first-processed." Thus, "All the best of the oil, and all the best of the wine and of the grain, the first processed [RSV "fruits"; ראשית] that they give to the Lord, I give to you. The first ripe (בכורים) of all that is in their land, which they give to the Lord, shall be yours" (Num. 18:12-13; cf. Ezek. 44:30). Grain, wine, and oil as well as fruit syrup, leaven, and dough, are clearly processed from plants and are termed ראשית in P (Num. 18:12; Lev. 2:12—cf. II Chr. 31:5; Num. 15:20-21—cf. Ezek. 44:30; also wool in D, Deut. 18:4). עומר ראשית קצירכם, (RSV "the sheaf of the first fruits of your harvest," Lev. 23:10) is not an exception. The term ראשית here is not a technical term for first fruits, but simply the adjective "first." Its use emphasizes that the omer is not to be selected from among the many sheaves of the first-ripe harvest but must be the very first sheaf (Deut. 16:9; cf. Exod. 23:19; 34:26). The use of ראשית as first-processed fruits seemed to have continued at Qumran. Outside of P, ראשית has two other meanings: either it is equivalent to בכורים, "first-ripe" (e.g., Deut. 26:2, 10; Jer. 2:3) or it means "the best" (e.g., I Sam. 2:29b; 15:21; possibly, Exod. 23:19; 34:26, but see above).

On the other hand, בכורים consistently refers to the first-ripe fruit in all the biblical sources (Exod. 23:16, 19; 34:22; Num. 13:20; Neh. 10:36 [H 37]). The term לחם בכורים (Lev. 23:17, 20; II Kings 4:42) means bread made from first-ripe grain, and מנחת בכורים (Lev. 2:14) refers to the *minḥā* offer-

ing made from first-ripe barley. The use of בְּכֹרִים in tannaitic literature is also restricted to first-ripe (unprocessed) fruits (e.g., M. Bik. 3.1).

The most significant festival involving the first of a crop to ripen was that of the first-ripe wheat, which was made to coincide with the Pentecost or Feast of Weeks (Exod. 23:16a; 34:22a; Lev. 23:15-22; Num. 28:26; Deut. 16:9-12). However, it is known from the Temple Scroll (see DEAD SEA SCROLLS[S] §3) that the Qumran sectarians also observed two similar festivals for the new wine and the new oil, set apart by fifty-day intervals. Thus in accordance with the Qumran calendar of twelve months of thirty days each, with one added day at the end of every three months, the omer (the first-ripe barley) was counted on Sunday (month 1, day 26, the first Sunday after the Passover); Pentecost (the first-ripe wheat) was celebrated on Sunday (month 3, day 15); the new wine on Sunday (month 5, day 3); and the new oil on Sunday (month 6, day 22). There is a possibility that the practice of multiple *bikkûrim* festivals goes back to Nehemiah (13:31), for he mentions appointed "times" in connection with the wood offering and the first-ripe fruits.

**FIRST FRUITS, NT** [ἀπαρχή]. The expression occurs eight times in the NT (Rom. 8:23; 11:16; 16:5 ["first converts"]; I Cor. 15:20, 23; 16:15 ["first converts"]; Jas. 1:18; Rev. 14:4).

Paul uses the term in a missionary as well as in an eschatological context. In Rom. 16:5 and I Cor. 16:15 he characterizes the converts of certain provinces as first fruits. They appear to have authority within the community, not only because they were the first to believe in Jesus Christ, but also because they were actively engaged in the service of other Christians. In I Cor. 15:20, 23 the term clearly characterizes the risen Christ as the first in a series of those to be resurrected. Christ is not only the first in a numerical sense but also in a qualitative way. His RESURRECTION is constitutive for the resurrection of the other dead. Moreover, contrary to the enthusiast's belief, Christ is the first and the only one who already participates in the resurrection of the dead. Rom. 8:23 calls the eschatological gift of the Spirit first fruits. The expression is here equivalent to the notion of ἀπαρχών in II Cor. 1:22. Rom. 11:16 contains a double metaphor which stresses that the beginning or the origin is determinative for the whole process and for its outcome. The first metaphor relates the dough as first fruits to the whole lump. Paul develops only the second metaphor, which speaks of roots and branches. Both metaphors stress that if the origin of Israel was holy, then Israel as a whole is holy, despite appearances to the contrary.

Outside of the Pauline literature the term is also used in the sense of first in time and quality. The Christians addressed by the letter of James are described as the first fruits whom God brought forth by the word of truth (1:18). The Christians are the first among God's creatures, as Israel, according to Philo, is the first among the nations. In Rev. 14:4 the expression has retained its cultic overtones familiar from the OT (see FIRST FRUITS, OT[S]). The 144,000 on Mount Zion are not only called first fruits but also qualified as spotless [ἄμωμος], a term also found in the sacrificial cult of Israel. The 144,000 are ransomed as first fruits for God and the Lamb. As God has accepted the Levites in the place of the first-born sons in Israel (Num. 8:14-18) to be a symbol for the holiness of the whole nation, so the 144,000 are a sign that all humankind belongs to God and Jesus Christ. Those who have the name of God and Christ written on their foreheads signify the promise of universal salvation for the whole world.

E. S. FIORENZA

**\*FIRST-BORN. 1. Terminology.** The first-born male of human beings and animals is usually called בכור, less frequently פֶּטֶר רֵחֶם, and, in the case of human beings, occasionally רֵב (Gen. 25:23) and ראשית אֹנוּי (Gen. 49:3). The denominative בכר (*pi'el*) is also found (Deut. 21:16; cf. Keret B.iii.16, *ANET* [2nd ed.], p. 146). The animal "first-born" is always that of the mother. For human beings בכור can be either of the mother or the father, or even a metaphor (e.g., Exod. 4:22); פֶּטֶר רֵחֶם, "the first issue of the womb," refers exclusively to the first-born of the mother; the remaining terms refer only to the first-born of the father. In most instances, the first-born is of the father. The first-born of the mother occurs in three limited instances: (1) to stress the child's sanctity (e.g., Exod. 34:19); (2) to emphasize that he is not his father's first-born (e.g., I Chr. 2:50); and (3) to underscore the mother's status at the time of his birth (Deut. 25:6; cf. Jos. Life 76; Luke 2:7).

**2. The family status of the first-born.** The genealogical lists point up the importance of the first-born male. He is first in the list, even if the genealogical line is given for all the sons (e.g., I Chr. 6:16-29 [H 1-14]). The family line is continued through the first-born, even if other sons are named (e.g., I Chr. 7:1-4); at times, the first-born is the only one named (e.g., Gen. 11:12-13). Daughters, even the first-born (בְּכוֹרָה), are listed at the end (e.g., I Sam. 14:49). More significantly, the status of the first-born is indicated by the formula "father/mother/brother/sister of" (e.g., Gen. 36:22), indicating that he is the base of reference for the rest of the family.

The hegemony of the first-born is reflected in the early narratives (e.g., Gen. 27:1-45; 37:22; cf. 29:32), as in the literature of the ancient Near East (e.g., *Shurpu*, II, 35, 89; IV, 58; VIII, 59; Hymn to Enlil, l. 32—*ANET* [3rd ed.], p. 574; Legend of Naran-Sin, l. 40). More important, it is concretized in his rights of inheritance. In Israel, the law of Deut. 21:15-17 ordains that the first-born should receive double the portion allotted to each

of his brothers (that פִּי שְׁנַיִם means "two portions" of the estate, see LXX, Targ. Onkelos, Targ. Jonathan [ad loc.]; Philo, *On the Special Laws* 11, 130; Jos. Antiq. IV.viii:23; T.B. B.B. 122b-23a). This division also obtained in the ancient Near East (e.g., Middle Assyrian Laws B §1), but other systems are also attested, e.g., one tenth more, the entire inheritance, the same amount. See Nuzi[S] §2.

The polemic wording of Deut. 21:15-17 indicates that in practice fathers discriminated in favor of other sons. Indeed, the right of the father to transfer the birthright is evidenced among Israel's neighbors (e.g., Nuzi: Harvard Semitic Series XIX, 37; Egypt: see Mattha, p. 114; Ugarit: RS 8.145). However, Israel differed in this respect: though a younger brother might gain the birthright (בְּכוֹרָה), he never acquired the title בְּכוֹר (cf. I Chr. 26:10-11, where he is called "chief," רֵאשִׁי; II Chr. 11:22, "chief prince," נָגִיד). The reason for this may be that elsewhere the first-born's status was defined in purely economic terms, but in Israel he held a sacred status (see below). Thus the transfer of the birthright—even without the title—is generally recorded as taking place, not by the whim of the father or intrigue of the brothers, but solely by the intervention of God (e.g., Jacob, Gen. 25:23; Ephraim, Gen. 48:19; David, I Chr. 28:4; Solomon, I Kings 2:15). In the ancient Near East as well, Ashurbanipal, the youngest son, supports his right to the throne because of divine election (Parpola, letter 132).

3. **The sanctity of the first-born.** The laws declaring the sanctity of the first-born consist of a general statement (Exod. 13:1-2; 13:12a; 34:19a; Num. 18:15) and a threefold application: to pure animals, impure animals, and human beings (Exod. 13:12b-13; 34:19b-20; Num. 18:16-18; cf. Exod. 22:29-30 [H 28-29]; Lev. 27:26-27; Deut. 15:19-23). In the case of the pure animal the law codes (see DOCUMENTS) differ: in JE (Exod. 13:12-13; 22:29-30 [H 28-29]; 34:19), the first-born is transferred (תָּן) to the Lord, i.e., sanctified either as an עֵלָה or as the שְׁלָמִים of the priest; P holds that it is the priest's שְׁלָמִים (Num. 18:17), whereas D maintains it is the owner's (Deut. 15:20). The law codes again differ in the case of the impure animal: JE requires that only the ass be ransomed, but P extends the ransom requirement to all impure animals (on this case D is silent). Here, however, the difference may reflect socio-economic changes: in JE's time, the ass may have been the only domestically impure animal (cf. Ibn Ezra on Exod. 13:13). The ransom also varies: in JE it is a sheep; however, P's law of Lev. 27:26-27 stipulates that it is ransomed (פָּדָה) by its worth as evaluated (בְּעֵרֶכֶךְ) by the priest, but if the owner redeems it (גָּאָר), he adds one fifth to its value. Since the value of an ass is greater than a sheep, the change from JE to P is in favor of the sanctuary.

The verbs used in the laws of the human first-born, "קָדַשׁ, תָּן, גָּאָר," as well as the use of פָּדָה, "ransom," clearly indicate that the first-born male is the property of the Deity. This may be a literary reflex of an ancient rule whereby the first-born was expected to care for the burial

and worship of his deceased parents. Traces of ancestor worship are found in Mesopotamia; e.g., the first-born inherits the family gods at Nuzi and cultic objects at Nippur; the *kudurru* curses (see ENCROACHMENT[S]) include lack of a son who will pour a libation after death. Ancestor worship is also attested in Egypt, among pre-Islamic Arabs, and in Israel (e.g., Isa. 8:19; cf. Deut. 26:14). Thus the Bible may be preserving the memory of the first-born bearing a sacred status, and his replacement by the Levites (Num. 3:11-13, 40 ff.; 8:14-18) may reflect the establishment of a professional priestly class. The ransom of the first-born is unspecified in JE, but P sets it at five shekels (Num. 18:16; cf. Lev. 27:6). The theory that the first-born was originally offered as a sacrifice is without support. See FIRST-BORN.

\***FIRST-RIPE.** See FIRST FRUITS, OT[S].

**FISHERMEN (NT).** 1. **Fisher and fishing.** Depending on the kinds of fish and tools used (see FISHING) there are in Greek different designations for fishermen and fishing. The NT uses only the collective term "fishermen" (ἰσθῆται), either literally (Mark 1:16; Matt. 4:18; Luke 5:2) or metaphorically (Mark 1:17; Matt. 4:19). The use of ships for fishing led to the equating of fishermen with sailors (see SHIPS AND SAILING IN THE NT §§1, 3). As was the case with other craftsmen, the social reputation of fishermen was traditionally very low. Because the occupations used similar tools, the Bible employs fishing and hunting or fowling metaphors interchangeably for the ministries of kings, judges, prophets, priests, wise men, and apostles.

Individual fishermen used spear, angle rod,

wicker basket, or casting net. In groups, large drag nets and boats were used. The catch was sorted (small or large; ordinary or delicatessen; clean or unclean), processed (cured, dried, salted), and finally traded and sold (see TRADE AND COMMERCE §4). Places for these activities in Palestine were SIDON, BETH-SAIDA, and MAGDALA. In Jerusalem (see JERUSALEM §§6d, 7b) the fish traded were from Tyre (Neh. 13:16) and other coastal fishing areas, from the Sea of Galilee (see GALILEE §2; GALILEE, SEA OF §3), Lake Huleh, the Jordan River, and perhaps fish ponds. Trade guilds ("partners" in Luke 5:7) of all kinds were subject to strict Roman Imperial legislation. Fishing ventures were underwritten by investment brokers ("tax collectors") who then assessed a tax on the catch. Some rabbis, and perhaps also an occasional Levite or even priest, were fishermen. The economic power and social status of fishermen changed with population growth, urbanization (see CITY §B2h), and greater demand for supplies in NT times. The Galilean fishermen disciples of Jesus were anything but poor at the time of their call (they employed hired hands in Mark 1:20; see JAMES §1; JESUS CHRIST §§B1, E5j, k).

2. **Fish.** The literature of antiquity lists the known kinds of fish and forms of fishing. While the Bible speaks mostly in the generic sense of fish (ἰχθύς), Gen. 1:21 and Matt. 13:47 do refer to a variety of fish and their species. Mythical fish serve various symbolic functions (e.g., LEVIATHAN at the messianic banquet).

Fish was eaten as staple food (Mark 6:38; Matt. 14:17; Luke 9:13; John 6:9 on bread and fish; see also John 21:9; Luke 24:42, and the logion in Matt. 7:10; Luke 11:11; and FOOD §1a). In Jewish communities fish without fins and scales were regarded as unclean (Lev. 11:9-12; see CLEAN AND UNCLEAR §3b). On the sabbath special fish were eaten and fish oil was used. Delicatessen fish were served on special social occasions and exported for similar use elsewhere. Fish broth was used at popular drinking parties, and fish and parts of fish were used in magic and medicine.

3. **Symbolism.** Christian symbols derive their meaning from the symbolism of ancient Near Eastern and Greek cultures, channeled to Christianity in part through Judaism. The NT includes the parable of the fish net (Matt. 13:47-50) and stories of the miraculous fish catch, with (Luke 5:1-11) and without (John 21:1-14) the commission to the disciples to catch human beings. A connection of fish with the Eucharist is especially apparent in the Markan accounts of the feeding of the multitudes (6:30-44; 8:1-10). In the latter half of the second century, fish figures, the angler, and the ΙΧΘΥΣ ACROSTIC (see SYMBOL §3e; FISH §B3c) appear as Christian symbols. Believers are represented as fish "caught" (brought to life, cf. Luke 5:1-11) through baptism, and the apostles—subsequently also bishops and popes—are portrayed as fishers of persons. There is also reference to the gospel as fishing for fish in a sea of sin (or the world) and to the catch as divine judgment in history (as often in the OT) or at the end of history.

\***FLESH IN THE NT.** The Pauline understanding of "flesh" (σάρξ) as evil self-dependency reflects the apostle's conflicts with Judaizers and libertinists.

1. "Flesh" as the object of trust. It has often been claimed that Paul identified "flesh" with the lower, material nature of persons, and that "fleshly" temptations counter one's higher impulses. Although they may strive to dissociate this concept from Hellenistic dualism, those who begin by saying "man is composed of flesh and . . ." stand in the Greek tradition, and this hinders comprehension of the Hebraic usage in the NT. Bultmann was responsible for moving the discussion past this deadlock, suggesting that Paul used σάρξ to depict the natural, earthly realm, which becomes evil only when one places ultimate trust in it. Thus sin originates in the flesh, not because of sensual temptations, but because one seeks salvation in one's own accomplishments. This approach to σάρξ as an object of trust suggests two distinct norms: the spirit and self-love. Since references to σάρξ as an independent, demonic force (e.g., Gal. 5:16-17) are viewed as rhetorical, critics of this approach have noted the connection between flesh and the old aeon. The question of whether Paul adapted his concept from the Gnostic idea of hostile spheres, from the cosmic dualism of Hellenistic Judaism, or from the demonic impurity which Qumran writings ascribe to the flesh may never be satisfactorily resolved, because only imprecise parallels have been found.

2. **Variations in Pauline usage.** The varied situations in the early congregations account in part for the peculiar variations in Pauline usage. The struggle with Judaizers in Galatia evoked Paul's first use of σάρξ as the circumcised flesh, which becomes a demonic source of boastful opposition to the new age (Gal. 6:12-15; 4:21-31). Thus the personal, legalistic, and cosmic connotations arise from Paul's creative response to a theological crisis. This response was conditioned partly by the apocalyptic tradition in which he stood and partly by the necessity of communicating with a Hellenistic audience predisposed to view σάρξ as a polemical term. The enmity of flesh as a power in the old age required a polemic also against libertinism (Gal. 5:13-25), but since Paul's premises were apocalyptic rather than Gnostic, the essential goodness of the creation was not questioned. In later situations a neutral understanding of σάρξ as simply the creaturely sphere (Phil. 1:22, 24), even as a synonym for "body" (I Cor. 6:16; 15:39; II Cor. 7:1 [NEB]), remains possible. The semantic fluctuations can be explained by the rapidly developing controversy with Gnostic radicals (I Cor. 1:26, 29; 3:1, 3; 5:5; 9:11) and with the invading missionaries (II Cor. 5:16; 10:2-3; 11:18; 12:7). The polemical sense of flesh as a demonic power or of the "fleshly" realm as impervious to the spirit is used to advance Paul's argument; but it is avoided

when it might mislead a congregation toward a dangerous kind of Hellenistic dualism.

**3. Romans.** In Romans, the negative connotations of σάρξ as the basis for legalistic self-righteousness are crucial for an understanding of 2:28; 3:20; 4:1; and chs. 9-11. In 1:3-4 and 8:3-4 Paul corrects creedal formulations of the Hellenistic church which employed flesh and spirit as mutually exclusive realms; in 7:14-8:7 he appears to adapt Gnostic materials which conveyed the idea of a deliverance of the inner man from bondage to the material flesh. By defining life "in the flesh" in legalistic terms, Paul shifts the explanation of the human dilemma from materiality to self-righteousness. As Rom. 7:13-25 and 10:1-18 indicate, the dilemma is that in seeking righteousness through legalistic obedience one comes into opposition to God's righteousness. As long as one depends on fleshly accomplishments, salvation through grace is impossible and the will to accomplish the good is thwarted. Σάρξ in this context is neither sensuality nor lack of will power but the actual physical flesh whose circumcision provides a means of self-justification. Similarly, the "mind that is set on the flesh" (8:5-7) becomes a power of the old aeon, whereby the legalist is destroyed through self-righteousness.

**4. Elsewhere in the NT.** The distinctive Pauline usage is rarely reflected in the rest of the NT. While a connection between flesh and circumcision is visible in Col. 2:11 and Eph. 2:11, the distinctive anti-Judaizer thrust is absent; σάρξ denotes not self-righteousness but sensual temptation (Col. 2:13, 18, 23; Eph. 2:3) overcome by Christ (Col. 1:22; 2:11; Eph. 2:15). The trend toward Hellenistic dualism is checked in these two letters by the continued neutral use of flesh (Col. 2:1, 5; 3:22; Eph. 2:11; 6:5; in most of these instances the RSV uses some other word than "flesh" to translate σάρξ). The Hellenistic premise of separate spheres of flesh and spirit surfaces, however, in I Tim. 3:16 and in the Johannine literature. "Flesh" in John 1:13; 3:6; 6:63; 8:15; I John 2:16 designates the human realm inherently incapable of insight into spiritual reality. On apparently similar premises, "flesh" in Heb. 5:7 and 10:20 is the earthly life the great High Priest took up in order to lead his people to salvation. The ascetic interpretation of flesh as the source of sinful lusts, increasingly typical for postbiblical usage, is visible in II Pet. 2:10, 18; Jude 23.

\***FOLLY** [Gr. μωρία, adjective μωρός, verb μωραίνω; and ἀφοροσύνη, adjective ἀφρων]. The background of the NT concept is to be found in the Israelite and Jewish wisdom movement. See Wisdom and supplementary articles.

Matt. 7:26; 25:2, 3, 8; Rom. 2:20 (perhaps 1:22); Eph. 5:17; and I Pet. 2:15 express the idea of folly common to circles that stress experiential wisdom. Folly is understood as a particular form of godlessness: the aggressive denial of God's power, and of the value of the fear of God and of righteousness. Thoughtlessness, lack of restraint, and the immediate submission to the impulses of greed, lust, pride, and comfort are its characteristics. Such folly is usually seen as incorrigible, a dangerous disease (similarly in many Greek and Hellenistic texts). Therefore it is understandable why in Matt. 5:22, "fool" is taken to be the worst curse (cf. Matt. 23:17).

In theological wisdom, the fateful nature and aggressive character of folly caused it to be hypostatized (e.g., Prov. 7 and 9). Subsequently, in Wisd. Sol. 1-5, fools appeared as a class of people metaphysically distinct from the wise (and righteous). Folly in this dualistic view became identical with the world of death. In Hellenistic paganism, there was also the idea of folly as fate.

The dualism of wisdom and foolishness as developed in the Jewish wisdom movement is also clearly behind Paul's dialectic approach to folly, e.g., as that is formulated in the question: "Has not God made foolish the wisdom of the world?" (I Cor. 1:20b). There is still the antithesis of experiential wisdom in I Cor. 1:18, where the divine message is foolishness to those who perish. But in vs. 20b Paul uses the antithesis of wisdom and foolishness in a cosmic sense: God versus this world. Earlier, sapiential thought had played with the difference between the obvious and the real, and in the Wisdom of Solomon, this was used as the description of revelation (an illusory reality is replaced with a true one). Now in I Corinthians, the clear reversal of the obvious by

the real is the vehicle of revelation: through God's revelatory action in Jesus Christ, what appeared to be wise turned out to be foolish, and vice versa.

In I Cor. 1-3 the Christ event is described, paradoxically, as God's "foolishness" which is wiser than worldly wisdom, and this is related to the way that event is proclaimed (e.g., 1:18-2:5); then in I Cor. 4:10 the paradox is extended to include the apostles. In his "fool's speech" in II Cor. 11-12, Paul uses the structure of the ancient mime with its critical irony to elaborate on the role of the apostle as a fool—but as a fool in Christ and like Christ. Paul's practical aim in this passage was to overcome what, in view of the Christ event, he understood to be the major symptom of godless folly—pride or boastfulness.

\***FOREST.** 1. **General description.** *Ya'ar* (normally "forest") means wild, untilled land carrying permanent vegetation, i.e., not open steppe where the grass dies in summer. It included the towering forests of Lebanon, open woodlands, thickets and scattered shrubs, and merged finally into the arid *midhbār* (usually "desert," but better "wasteland"). Together *ya'ar* and *midhbār* formed a continuum of uncultivated land, encountered everywhere beyond the village or town. Both words connote disorder, and consequently terror, for the absence of clearly defined roads and the constant menace of savage beasts frightened the settled farmer.

No absolute distinction was drawn between them. The *ya'ar* of Gilead (II Sam. 18:8) is described as *midhbār* (17:29). Ezekiel classed the two together, promising that wild beasts would be banished, so that men might "dwell securely in the *midhbār* and sleep in the *ya'ar*" (Ezek. 34:25). In Isaiah, in otherwise parallel passages, the forest of Lebanon in 29:17 is replaced by *midhbār* in 32:15. In times of strong government, villagers might take their flocks into the uncultivated countryside, but this was always temporary. *Ya'ar* and *midhbār* provided regions of refuge for "every one who was in distress, and every one who was in debt, and every one who was discontented" (I Sam. 22:2). War caused the *ya'ar* to swallow up the cultivated fields, which reverted to brambles and thorns (Isa. 7:23-25; Hos. 2:12).

2. **Distribution.** *Ya'ar* existed wherever the annual rainfall exceeded eight inches, and true forests were much more widespread than today. Only the driest regions had the naked appearance modern visitors associate with the country. From the Judean highlands the transition eastward to *midhbār* was fairly rapid, but elsewhere the intervening zone of thicket and scrub was wide and indeterminate. Roughly speaking, the greater the rainfall, the denser the forest, but less rainfall does not always mean fewer trees. It means less undergrowth and fewer kinds of trees. Yet the oaks, pines, and terebinths covering much of ancient Palestine protected the soil from erosion as effectively as the stately cedars of Lebanon.

The character of the underlying rock also

affected the forest cover. The rich alluvium of the lowlands carried thick forest, as did the Cenomanian limestone of W Galilee, Carmel, Ephraim, and (less densely) Judah. The less fertile chalky limestone of the Shephelah, the Carmel ridge behind Megiddo, and SW Galilee had oak and fig sycamore (I Kings 10:27). After the trees had been cut down, these latter regions remained covered with almost impenetrable shrubs, for the soil has often a hard crust, called *nari*, which makes it unattractive to the farmer.

By the late Bronze Age much of the lowland had been cleared for farming, although the easily flooded plain of Sharon remained uninhabited forest and marsh up to Roman times. The soft chalky valleys and some of the slopes of the Shechem region had been cleared, for the soil was easier to till than that on the Cenomanian highlands further S. Some clearing had begun on the saddle of Benjamin, between Bethel and Jerusalem. Cypress and pine were still available there for building at Gibeah in the late eleventh century B.C., but three centuries later almond wood was used instead. The highlands N of Beer-sheba were then almost entirely wooded, except for the eastern slopes. Upper Galilee had, throughout the biblical period, the richest forests S of the Lebanon mountains. The basalt plateaus N and SW of the lake were also forested. The soil here is rich, but excessively difficult to plow, and not until the NT period were serious efforts made to clear these areas for agriculture.

The Huleh basin was always marsh, surrounded by rich, though not impassable, forest. S of the Lake of Galilee, the Jordan flowed through an impenetrable jungle of tamarisk, famous for its lions (Jer. 12:5; 50:44; Zech. 11:3), and even recently the haunt of wild boar.

The forests of fertile Bashan were cleared early, though stands perhaps remained in the hills of Geshur and Maacah. The oaks mentioned in the prophetic writings (Isa. 2:13; Ezek. 27:6; Zech. 11:2) belonged to the Jebel Druze, or "mountain of Bashan" (Ps. 68:15 [H 16]); they cannot have been tall, since basalt gives little room for roots to develop.

The Cenomanian limestone of Gilead carried a dense forest similar to that of Ephraim (II Sam. 18:6). The Ammonite hills to the SE probably had terebinth, though immediately beyond lay steppe-land. To the SW the scarplands of the Abarim had a thick cover of oak and pine. The tableland of Moab was sheep country (II Kings 3:4), i.e., open *ya'ar* and steppe, though with woodland on the plateau edge and perhaps the slopes of Jebel Shihan. Further S the heights of Edom carried much oak, juniper, hawthorn, and carob. This forest was confined to the ridge, being limited on the W by open sandstone gorges, and on the E by sudden transition to desert.

3. **Disappearance of the forest.** Forest clearance began about 2500 B.C. and has proceeded ever since. It is false to blame this process on either the Bedouin or supposed biblical attitudes toward nature. The chief enemies of trees have always been increased accessibility and the political security which makes this possible. Settled popula-

tions, once granted access to the forests, always do more harm than nomads. Certainly forest clearance increased with the more general use of iron tools during the Israelite monarchy, but this same period was marked by careful terracing of the agricultural land, which the felling of trees made available.

Major forest clearance, causing serious erosion and silting of river mouths, began with the Greeks and continued under the Romans. But two thousand years later there were still extensive woodlands. The most savage destruction has occurred during the last hundred years, though much reforestation is being done today.

\***FORM CRITICISM, OT.** Form criticism is a means of analyzing the typical features of texts, especially their conventional forms or structures, in order to relate them to their sociological contexts. Thus, form criticism is best understood as a literary-sociological method.

1. **Scope and aims.** Form criticism is one of the tools of EXEGESIS, one of the means of interpreting OT literature within its own frame of reference. It is a procedure, not a theology or an ideology, although it, like any other method, will entail a certain hermeneutic of language and particular assumptions concerning man, the world, knowledge, and perhaps even God. To characterize form criticism as a literary-sociological discipline is to call attention to its special focus on texts in terms of their social context or contexts. But at its best it does not use texts to reconstruct social situations, but rather the reverse: it seeks to understand texts by relating them to whatever recurring human situations or patterns of behavior and thought may have contributed to their shape. The form critic's interest in the history of literature, literary types, and oral traditions is finally for the sake of explaining and unfolding the texts in which they are embedded.

Form criticism is one method of interpretation among others. That is, it is not to be equated with exegesis, nor are all literary disciplines—source criticism, redaction criticism, tradition criticism, etc.—to be viewed as aspects of or operating in the service of form criticism. While form critical study may be carried on independently to resolve particular questions, the exegete will pose the form criti-

cal questions to the text before him in concert with the questions raised by other disciplines.

Above all, form criticism is interested in questions concerning the typical nature of linguistic entities and whatever gave rise to that nature. It is occupied with what is typical in the form or shape of expression as well as its content, with what is usual as well as what is unusual in a particular text. Thus, form criticism is founded on the observation that human language is formed according to typical structures or types of expression, corresponding to typical or recurring human situations or thought processes. The elucidation and analysis of such structures or genres is therefore an indispensable step in understanding individual expressions. For example, the OT hymns share many common elements because they were stamped by the recurring occasion of Israelite worship. And the recognition of the different types of OT narrative will not only give the interpreter insight into the occasions which lie behind the telling of the stories, but also the distinct purposes or intentions articulated through the various types.

What sorts of linguistic entities does the form critic investigate? What is form, and what constitutes it? Ambiguity concerning such fundamental concepts has been implicit in the discipline from the beginning. But clarification and some redefinition have begun to emerge in recent years concerning two points. First, it has been recognized that the term "form" has been applied far too loosely in two senses which must be distinguished from one another. On the one hand, it refers to the structure or pattern or framework of an individual text or a genre. On the other hand, it has been used in reference to genre or type or *Gattung* itself. For the single word "form" most OT form critics now have substituted the terms "structure" and "genre." The former refers to the (often typical) outline or framework of a text. The latter refers to the types of literature or oral expression, such as the hymn, the speech, the wisdom saying, and the like. The two are by no means identical, since genre is constituted not only by structure but also by setting, content, mood, intention, and other factors.

Second, until quite recently it was assumed that the distinctive concern of form criticism was with the expressions which had been formed by the oral stage in the development of biblical literature (see TRADITION, ORAL; TRADITION, ORAL[S]). This often led to the restriction of form criticism to the analysis of very short units. While the recognition and analysis of the preliminary materials must remain an important aspect of the form-critical endeavor, it is only a part of the task. There is a growing awareness that the form-critical questions, i.e., the search for what is typical in the linguistic expressions, can and should be applied to all stages of the literature, including material which did not have an oral prehistory. Thus, the form critic does not look first for the oral material embedded in literature, but at the literature itself. Not only oral tradition, but also literary expression, which is formed according to typical structures, can and must be classified according to genre if it is to be

fully understood. For example, the novel, the news story, the editorial, and the letter are distinct literary genres, as are the apocalypse, various types of "books," and perhaps many other types of OT literature. The form critic no longer assumes either that all OT literature had an oral prehistory or that the method is limited to preliterary materials, but instead investigates all the material form-critically. In fact, it is part of the task, not one of the assumptions, to distinguish between literature and oral tradition.

2. *Sitz im Leben*. Since form criticism intends to relate texts or genres to their sociological contexts, the concept of *Sitz im Leben* ("setting in life" or simply "setting") has been fundamental to the methodology from the outset. Often there is a direct relationship between the form of OT texts and the institutions in which they were employed. Thus the setting was seen to have determined the genre. Often, genres of speech and literature, as well as the short formulas within them, arise and become stereotyped within institutional contexts. For example, hymns and psalms of complaint bear the marks of the services of worship in which they were employed; and laws were formed—at least in part—by the legal process itself.

Throughout the history of the discipline the relationship between genres and settings has been understood in various ways. Gunkel emphasized the analysis of literature itself, to be sure, in relationship to its setting, but many of his successors have tended to assume that every genre must have a setting in a narrow sense, that is, in terms of a particular institutional location. For instance, Mowinckel pushed the form-critical analysis of the Psalms in the direction of what he called a "cult-functional" approach, in which virtually every psalm was viewed in terms of a particular function which it served in Israelite worship. Thus, on the basis of the valid observation that many texts and genres were shaped by institutional life, some scholars have led form criticism in the direction of a sociological determinism, assuming that all formed language was shaped by its setting, viewed in a narrow sense.

In recent years, however, in part because of the application of the form-critical method to literature and not simply to oral tradition, it has been recognized that genres are determined not only by setting understood in terms of particular institutions, but also by setting understood as tradition, the prelinguistic activity of the human mind, by the spirit of an age, by particular literary concerns, and by actual performances or by specific creative occasions. It appears that biblical form criticism must either restrict itself to dealing with only one aspect or one kind of formed language, that which was shaped by institutions, or broaden its understanding of setting. The latter, while more complicated, is preferable. This approach is consistent with the basic assumption of form criticism that texts can be better understood by appeal to external sociocultural and intellectual data, and with the directions of contemporary linguistics and sociology, which emphasize that meanings are determined culturally in a broad sense and transmitted through the structure of expression. Con-

sequently the exegete as form critic will not assume that every genre or structure was formed by a particular institutional setting, but will ask whether or not such is the case, and if not, what kind of sociocultural or intellectual matrix accounts for genre or text. Texts and genres are indeed intrinsically related to their setting, but we are only beginning to recognize the various kinds of settings which determined those materials.

3. *Methods*. It is implicit in the above remarks that form criticism operates inductively, on the basis of the analysis of specific OT texts. That is, it is not assumed that the OT is composed of various hypothetical, ideal genres of literature and speech, but rather the texts are analyzed to determine their place in the history of the transmission of material and their relationship to the sociocultural factors which shaped them. As generally practiced today, OT form-critical analysis can be divided into four steps: the analysis of the structure, the determination of the genre, the elucidation of the setting, and the description of the intention or purpose of the genre and the specific text. The steps are interrelated and interdependent; none is sufficient without the others. However, there is a logic in the sequence as described; the movement from structure to genre to setting to intention corresponds roughly to a movement from description and analysis to classification and reconstruction.

a) The first step in the analysis of the structure of a text is the determination of the unit. A book of the OT usually will consist of a great variety of types of expression, which in many cases are simply juxtaposed. One must ask, What is the appropriate unit for analysis and interpretation? It has long been recognized that the divisions into chapters and verses—and often also into books—seldom correspond to divisions according to sense or genre, so they must be ignored. In the past, the determination of the unit often carried with it the assumption that one had thereby uncovered an original unit of the oral tradition. But that can no longer be taken for granted. Units may represent original elements of oral or written tradition, various stages in compilation or composition, or even chapters or paragraphs of written works. See REDACTION CRITICISM, OT[S]; TRADITION CRITICISM, OT[S].

Units can and should be recognized at various levels, from the smallest to the largest. For example, the entire book of Genesis is a unit in a much larger composition, but the book of Exodus is not a unit. It has been argued that the larger unit to which the book of Genesis belongs must be defined variously as PENTATEUCH, tetrateuch, or HEXATEUCH, depending on the different stages of composition. Or at one level, Isa. 1:2-26 appears to be a unit, but as such it is the systematic composition by a redactor of five originally independent speeches attributed to the prophet.

Seldom are the units designated as such in the OT, but there often are indirect yet clear indications of beginnings and endings. Some such indications are the introductory and concluding formulas for speeches or stories and changes in speaker, addressee, tense, mood, or even subject

matter. Furthermore, once the more or less typical patterns of different genres have been recognized, such outlines can be employed as aids to recognizing units. For example, stories will be structured according to plot. Once the unit has been established, it should then be outlined according to the structure, that is, the formal elements—including formulas—which compose it.

b) The identification of texts according to *genre* (*Gattung* or type) aims at finding the most appropriate and specific category by which the unit is to be understood. It involves analysis, comparison, and classification. The procedure may move from very broad to more precise observations. For example, to identify a segment of material as a prophetic speech is only to begin understanding it generically. Is it a prophecy of punishment or salvation, a woe speech, or an admonition?

Comparison of the unit with other examples of the genre will reveal which elements are constant (the formal elements) and which are variable. For instance, all the OT reports of a call, whether of prophets or of leaders, have many elements in common, but it has been argued that they should be subdivided into two categories depending upon the kind of experience described. And of course every example has its distinctive features. In fact, the comparison with other examples of the genre begins to place in sharp focus the particular elements and concerns of each text.

It will be recognized that some genres are more formalized than others. Seldom do the OT poetic genres follow rigid patterns of meter, but the dirge or *qina* always has a distinctive three-plus-two meter. See POETRY, HEBREW §D.

c) The designation of texts according to genre leads directly to conclusions concerning their *setting*. This step in form-critical analysis has developed from Gunkel's observation that every genre belonged to a distinct side of the life of the people of Israel. Setting in this sense does not refer to the date of the composition of the text; that is the concern of SOURCE CRITICISM as such. Nor does it refer necessarily, as we have seen above, to a particular institutional location in the narrow sense, for example to a specific service of worship or to the functions of a specific office, but rather to whatever sociocultural factors contributed to or determined the shape of the genre and the specific instance of it.

Since we know far less about the society of ancient Israel than we do about our own, such decisive factors in the text's background must be reconstructed or re-enacted. Often the texts contain allusions to the activities of which they were a part, but more often they give only subtle allusions to the side of the communal life to which they belonged. Furthermore, the mood or tone of the genre helps to reveal the setting, as does its intention or purpose.

Seldom can a genre be related simply and directly to a single setting in life. More often than not various factors have shaped it through a long history. Moreover, in many cases texts which originated in one context have been adapted or modified in another. For example, the prophets employed genres from virtually every side of Israel's

life, and laws which may once have been used in the legal process have been embedded in cultic materials.

d) The final step in a form-critical analysis is to determine the *intention* of a genre and of the particular example of it. Just as the conventions of language, literature, and speech arise in particular social contexts, likewise each genre serves a particular intention, function, or purpose. The focus of attention here is not on the intention in the mind of a particular writer or speaker but, as in the case of setting, on the social context. In the consideration of a genre's intention, the audience or hearers are equally as important as the writers and thinkers. Some types of narrative were meant to edify, others to entertain, and others to explain the meaning of present realities by accounting for their origins. Some genres establish the law, either as divine or human regulations, while others were designed to make the law effective by forming in the hearer an attitude of obedience.

It is possible to agree on the structure and even setting of a particular genre, but still disagree about its intention. For example, there is general consensus concerning the main contours of the prophecy of punishment (also called the prophetic judgment speech), but was its intention to activate divine judgment, given the Israelite understanding of the power of the prophetic word to change history, or was it to bring about repentance, and thus avert the doom announced by the prophet? In the determination of such issues many factors in addition to those mentioned above must be considered, including the mood, tone, and literary subtleties of the material. For instance, in Amos 4:4-5 the prophet issues a call to worship, but the irony of the expression reveals that the text does not intend to initiate worship, but rather to criticize it. Thus it is necessary to distinguish between the intention of genres in general and of the particular examples or uses of them.

So the form-critical question concerning intention speaks directly, if not always definitively and decisively, to the central issue of exegesis, namely, what does the text mean to say? This raises the question of the relationship between form and content. Form criticism often has been accused of neglecting the latter for the former. While the allegation may be justified in some instances, in principle it is unfounded. Form criticism has only insisted that the form (seen as both structure and genre) of texts is as fundamental to their interpretation as content. The two are always inter-related, and it must be insisted that mere formed language alone does not constitute a genre. On the one hand, structure and genre will limit—if not determine—content which can be communicated. On the other hand, the content will shape the selection of structure and genre. For example, the dirge is hardly an adequate vehicle for communicating the content and sentiments usually associated with a love song.

4. Gains and implications. Form criticism has made and continues to make significant contributions to the interpretation of the OT. These contributions are perhaps most obvious in the case

of the Psalms, where a previous concern with date and authorship has been supplemented by the interest in classifying the various psalms into hymns, songs of thanksgiving, laments, complaints of the individual and the community, and others. On the basis of this classification the reader begins to hear voices as they were raised in the worship of the temple and on other occasions, and therefore is better able to identify with the literature. And the understanding of the prophetic books has been deepened, primarily by the recognition of the distinct units of speech and narrative which they contain and by the recognition of the major genres of prophetic address. Many OT narratives have been recognized for what they are, not history in the modern sense at all, but folk and family stories, legends with distinct religious purposes, and other types. Perspectives have also been opened up on the wisdom literature, though in this case the question of setting remains quite problematic. All these results have definite implications for the historian of ancient Israel, the historian of Israelite religion, and the biblical theologian.

Above all, form criticism contributes to the task of relating the OT texts to the life of the people who produced them. Primarily as a result of form-critical work, interpreters are no longer satisfied simply to link texts to particular creative individuals—though there were many—but must take account of the decisive contributions of the community of Israel, understood both historically and sociologically. Form criticism thus militates against an individualistic in favor of a communal interpretation of the OT. The life which flows through the OT is not simply that of a genius or two, but of a large company of men and women of faith and without faith; not just prophets, but their disciples and their detractors; not simply historians and novelists, but families and clans and groups which told and heard and retold the stories we find before us.

G. M. TUCKER

\***FORM CRITICISM, NT.** The form-critical study of the NT has recently developed in many ways, including the refinement and proliferation of categories, both within and outside the gospels.

1. **Form criticism of the gospels.** While it is still recognized, with Dibelius, that the gospels are neither histories nor biographies, there is a growing tendency to accept as at least roughly parallel a variety of Hellenistic forms, especially "lives" of the philosophers (see *GOSPEL, GENRE[S]*). Major stress is laid, however, on the smaller units comprising the gospels (form criticism) and on the literary and theological tendencies of the individual writers (see *REDACTION CRITICISM, NT[S]*) rather than on the formal analysis of the gospels as literary wholes.

One important example of greater refinement within the categories used in the synoptic tradition is the "sentence of holy law" (Käsemann). Such sentences, first attested by Paul but clearly antecedent to him (I Cor. 3:17; 14:38) and reflected in various strata of the NT (often in attenuated form, Rom. 2:12; II Cor. 9:6; Rev. 22:18-19; Mark 8:38; Matt. 10:32-33; Mark 4:24; Matt. 5:19) show that eschatological judgment (God's action) may be solemnly pronounced (sometimes by repetition of the same verb) in terms reminiscent of the offense committed (the person's action). Though later forms of these sentences may be gnomic or parenetic, the original intention shows through: Christian prophets, speaking in the name of the risen Lord, combine charismatic activity and law—in the earliest days of the church. The existence of any such fixed forms and the possibility of deducing a prophetic-enthusiastic setting for them have been vigorously disputed (Berger). See *SAYINGS OF JESUS, FORM OF[S]*.

While other similar refinements could be cited, Bultmann's form-critical categories within the

synoptic tradition still predominate. Doty's useful suggestions for the Fourth Gospel (hymnic materials; editorial remarks; descriptive narrative; sayings of Jesus; dialogues; significant narratives; OT allusions and quotations; and theological discourses) have not been widely accepted, though no good alternatives have been offered.

**2. Form criticism outside the gospels.** Greater advances have been made in the analysis of non-gospel NT materials. To be included here are acclamations, doxological statements, confessions, hymns, sermons, and different kinds of parenthetic materials.

The "acclamation" is known primarily from the Pauline corpus (I Cor. 12:3; Rom. 10:9; Phil. 2:11; cf. also Acts 19:28, 34 with Rev. 7:10), but it lies behind materials scattered throughout the NT, both as brief liturgical expressions common to Jewish worship (Amen: I Cor. 14:16; Rev. 1:6; 5:14; 22:20; Eph. 3:21; Phil. 4:20; Hallelujah: Rev. 19:1, 3, 4, 6) and specifically Christian terms and phrases (MARANATHA: I Cor. 16:22; Did. 10:6; LORD [Kyrios]: Rom. 10:9; I Cor. 12:3; Phil. 2:11; "Worthy . . ." [ἄξιός ἐστιν]: Rev. 4:11; 5:9, 12).

Epistolary greetings and doxological materials seem to rest on (partially Hellenized) Jewish practice (Deichgräber; Pss. Sol. 17:3; Enoch 22:14; 36:4; 39:9-13; 81:3; 84:1-3; Tob. 13:18; Prayer Man. 15b; IQH 2.30, 31; 4.5; 5.20; 7.6-7; 10.14-15; 14.23; 16.8; 17.20), modified by the christological and ecclesiastical beliefs of the primitive church ("Thanks be to God": Rom. 7:25; I Cor. 15:57; II Cor. 2:14; 8:16; see also Luke 2:14; Gal. 1:5; Eph. 3:20-21; Did. 9:2-3; I Clem. 38:4). Praises may be offered to God (Rom. 11:33-36; Eph. 3:20-21; I Pet. 5:11; Rev. 7:12; 11:17), to Christ (II Pet. 3:18; Rev. 1:5-6; Mart. Polyc. 21), or to both (Rev. 5:13; 7:10; I Clem. 65:2). Quite advanced stages of liturgical development are sometimes reflected (II Pet. 3:18; I Clem. 61:3; 64; Mart. Polyc. 14:3 and, in a different way, I Tim. 6:15-16; Rev. 7:12). In these instances the influence of the worshiping community on its liturgical forms and literary deposits is clear.

The confessional materials are far more complex. Here too a Jewish base is evident, but the church's growth has influenced both the terms and the concepts used. The differentiation of the one true God from idols (I Thess. 1:9-10) is, as in Judaism, important, its polemic against the "many 'gods' and many 'lords'" of Hellenism (I Cor. 8:5-6) self-evident. And the basic Christian teachings, some of which perhaps formed patterns of catechesis rather than confessional materials as such, show some formal similarity with the usages of Hellenistic Judaism (cf. Rom. 1:3-4; II Tim. 2:8; Heb. 6:1; I Pet. 3:18-22; Ign. Eph. 18:2; Trall. 9:1-2; Smyr. 1:1-2). Essentially, however, Christian confessions are concerned with Jesus and with the saving events of his ministry; that Jesus is the MESSIAH, the CHRIST (cf. Mark 8:27 ff. with John 1:20; see also I John 2:22; 5:1; Acts 9:22; 18:5, 28), or SON OF GOD (Matt. 16:16; John 1:34; I John 4:15; cf. Acts 8:37 [RSV n.] as well as Acts 9:20; Heb. 4:14), or, in Hellenistic terms, that Jesus is Lord (Rom. 10:9; I Cor. 12:3; Phil. 2:11; cf. Acts

11:20 and contrast the pagan creed, "Caesar is Lord" [κύριος καίσαρ] in Mart. Polyc. 8:2) is the fundamental affirmation required of converts. It is possible, though unproven, that confessions in the technical sense began at the junction of Jewish and Hellenistic Christianity with the affirmation that the Messiah is the Lord (Χριστὸς Κύριος; Luke 2:11; cf. Acts 2:36). Other early creedal affirmations connect various christological titles with the Crucifixion and the Resurrection (Acts 2:36; Luke 24:25 ff., 46 [Χριστὸς]; the "passion predictions" in Mark 8:31; 9:31; 10:33-34 [the SON OF MAN]; in Rom. 10:9-10 the Resurrection has become a second item of belief; cf. also I Cor. 15:3-8). That the most primitive Christology connected Jesus with the PAROUSIA and conceived of him as merely "Messiah designate" until that time (J. A. T. Robinson) is highly unlikely. Primitive Christian controversy (I John 2:22; 4:3—note the variant λύει, a conative present?; II John 7; John 17:3; Acts 4:9-12), preaching (II Cor. 4:5; Acts 5:42; 17:3; 18:5; II Tim. 2:8; Heb. 4:14; 10:23), and catechesis (Luke 24:45 ff.; Acts 17:2-3; 18:5, 28; 26:22-23) contributed significantly to the way various early creedal statements were elaborated.

The hymnic element in the NT is particularly important. It is now generally recognized that (a) the use of hymns in Christian worship (Acts 16:25; I Cor. 14:15, 26; Col. 3:16; Eph. 5:19; cf. the formal liturgical setting in Rev. 4, 5 and the examples in Rev. 15:3-4; 19:5, 6-8) antedates all NT documents; and (b) while the origin of specifically christological hymns may well lie on the fringes of early Christianity in Hellenized Jewish-Christian or Gnosticizing circles, deposits of hymnic materials—either fragments or brief hymns as a whole—are reflected in many strata of the canonical as well as the postcanonical literature. The hymns in the birth stories (Luke 1:14-17, 46-55, 68-79; 2:29-32 [35]) may have been composed by the evangelist himself, though they could also reflect pre-Lukan (Baptist? Jewish? Jewish-Christian?) sources (Laurentin). But several passages in the rest of the NT are widely regarded as having originated (in some form) before the composition of the documents in which they are now found. Such passages are characterized by some or all of the following: (a) an introductory demonstrative or relative pronoun, often followed by participial clauses (Eph. 2:14 ff.; Col. 1:15-20; I Tim. 3:16; Heb. 1:3; I Pet. 1:3 ff.); (b) rhythm, brevity, sonorous language, and a spirit of exultation or ardor (Matt. 11:25 ff.; Luke 10:21-22 [Q]; Rev. 11:17-18; Eph. 2:4-7); (c) balanced strophes or clauses (Col. 1:15-20; I Pet. 3:18-19; I Tim. 3:16; Rev. 11:17-18); and (d) a pattern related in some way to the coming, ministry, exaltation, and heavenly enthronement of Jesus (I Pet. 3:18-19; Heb. 1:3; Phil. 2:6-11 [whether in two stanzas—descent/ascent—or three—pre-existence/earthly life/exaltation]) and arranged chronologically; this is probably not true in I Tim. 3:16). Note, however, that: (a) the line between hymns and confessions is impossible to draw; (b) John 1:1-12[13] (18?) is clearly poetic, though many of the above criteria are missing; hence a different, possibly non-Christian, origin must be postulated for the hymn proper; (c) con-

versely, Col. 1:15-20 meets practically all of the above criteria but also has so little specifically Christian content that we must similarly postulate a non-Christian origin for the basic hymn. In sum, we must recognize that both the literary forms and the specific content of some NT hymns rest on various kinds of non-Christian antecedents, although they have been thoroughly Christianized.

Examples of early Christian preaching are rare and of uncertain significance. The sermons of Acts, which may be roughly divided into two types, depending on whether the hearers are Jewish or Gentile (Wilckens), are almost certainly compositions based on models from the worship of the author's own time, though the similarities between Acts 7, 13 and Heb. 11 suggest at least a tradition of sermons about "faithful witnesses and unfaithful people." The structure of some Pauline letters (I Thessalonians, Romans, Galatians; cf. Colossians, Ephesians) may also reflect early sermonic practice.

Parenetic materials of many kinds are found scattered in almost all levels of the NT (see PARENESIS[S]). Some (I Pet. 1:3-5; 2:22-25; 3:18-22; 5:5-9; less probably, Heb. 13:1-17 and the book of James) may well rest on prebaptismal catechetical practice. Others, like the list of vices and virtues (Rom. 1:28-31; Gal. 5:19-23) condemned or commended, reflect no fixed form, but rest on a wide variety of (largely Hellenized, yet predominantly Jewish) antecedents. A probable exception is the master/slave, husband/wife, parent/child triad in the *Haustafeln* (see HAUSTAFEL[S]) in I Pet. 2:13-3:7; Eph. 5:21-6:9; Col. 3:18-4:1. The admonitions to church officers (see esp. the Pastoral epistles) reflect the institutional needs of the developing church, not fixed cultural forms.

Finally, form-critical methods have made possible some separation of tradition and redaction in Acts. See ACTS OF THE APOSTLES[S].

**3. Critique of form criticism.** Reservations about the theory and practice of form criticism have been expressed from its beginnings. The earlier critique tended to agree that the method is "in the strict sense applicable only to the Synoptic gospels" (Fascher) and to object to the form-critical analysis of the gospels on the following grounds, among others: (a) the proposed "forms" were neither so widespread nor so pure as proponents of the study insisted; (b) the relationship between literary form and theological use was oversimplified; (c) an "antisupernaturalistic bias" was more significant than formal analysis in pre-determining form-critical judgments about the authenticity of materials; and (d) the whole notion of a "community product" is *a priori* implausible and incompatible with the unity and power of the concepts lying behind the materials of all categories, which point toward a single creative mind.

Objections (b) and (c) are less common today, as it is generally recognized that liturgical, catechetical, and missionary use do affect the forms by which the tradition is passed on, while (d) is seen to rest on a misunderstanding: "community product" means composed (or modified) so as to serve the interests of a specific community and

reflecting the theological interests of the author's tradition, not "written by a committee."

But more serious objections are added in terms of anthropological and sociological categories, themselves not yet fully worked out. The Parry-Lord study of Yugoslav songs, it is held, shows that (a) oral materials are always modified to suit the interests of both the teller and the audience (a confirmation of a basic form-critical insight), which makes the prehistory and authenticity of particular materials very difficult to judge; (b) there is a fundamental difference between oral and written materials, so that small collections of written materials before the gospels (as posited by many form critics) would have served little purpose (Güttgemanns); and (c) nonliterary (i.e., oral) forms may owe much to the internal habits ("deep structure") of the human psyche, so that we must broaden the cultural and anthropological base of the materials studied (Güttgemanns and a variety of "structuralists"). See TRADITION, ORAL [S]; LITERATURE, BIBLE AS[S] §4a.

While the need for a broader history-of-religions base may be freely granted, it is apparent that "deep structure" is an extraordinarily elusive and questionable concept, and that the materials from the Near East at the beginning of our era must provide most of the form-critical base (Koester). Further, nothing in the Parry-Lord hypothesis renders impossible or even improbable a gradual transition from oral to written forms, while patient literary analysis (redaction criticism) makes it evident that not only Mark (Kuhn, Carlston) and Q (Hoffmann, Lüthmann, Schulz) but perhaps even some of their (written) sources had a prehistory.

**FORTRESSES, HERODIAN.** See HERODIAN FORTRESSES[S].

**\*FRIEND, FRIENDSHIP IN THE NT.** "Friend," "friendship" appear about thirty times in the NT. Half these occurrences are in Luke.

1. **Jewish and Greek models.** Josephus indicates that the Essenes were noted for the way in which they had all things in common and, of all Jewish groups, they had most consistently practiced mutual friendship (War II.viii.2 ff.). The willingness to give up everything for the sake of the other indicates that no other group had so fully, outside of marriage, carried out the Pythagorean mandate of community of goods. Epicurus rejected it because it implied mutual distrust and "without confidence there is no friendship" (Diogenes Laertius X, 11). In spite of this, it was the Epicureans who more than anyone else praised friendship, for "he who is noble makes wisdom and friendship his first concern; of these wisdom is a mortal good, but friendship immortal" (*Vatican Sayings* 78). To Epicurus is attributed the statement: "Friendship dances across the world calling on us to awake and praise our happy life" (*Vatican Sayings* 52), and these words of praise were backed up by his own success in founding a new family in a world where the traditional frameworks of city and family were disappearing.

2. **Jesus as friend.** Jesus is described as a "friend" of sinners and tax collectors (Matt. 11:19; Luke 7:34) because he associates with them. It is indicative of Jesus' association with people who were outsiders (see TEACHING OF JESUS[S] §3b). The disciples, however, can also be called "friends" of Jesus (Luke 12:4). In John 15:13 ff. the three ideas of loving one another as Jesus loved his disciples, laying down one's life for friends, and following that which Jesus has bid his disciples

do are closely related. The disciples will be called "friends" rather than "slaves" (RSV "servants") because they have been informed of all things from God the Father (John 15:15). Jesus not only tells his disciples about union with him, he actually imparts it. The friends here are those who are bound together by *agape*; they are his friends by choice, and the friendship is sealed by his act of laying down his life for them (John 15:16). Through Christ's supreme act of *agape*, they are being incorporated with him into the *agape* of God.

3. **The new Christian model.** The disciples are called "friends" of Jesus but never "friends" of God, even though this traditional Jewish description of Abraham does appear in Jas. 2:23. In Acts pagan dignitaries are once referred to as Paul's friends (19:31), and the term appears again as a general category to describe Christians (Acts 27:3). In III John 15 the writer sends greetings to "friends," apparently using that term instead of "brothers" or "saints." But by and large, the term "brothers" crowds out the term "friend" in early Christian usage, perhaps because of its greater inwardness and warmth. It is only among the Gnostics that the term "friends" seems to be preferred.

The new Christian model is clearest in the letters of Paul where each associate is regarded as a co-laborer sharing a common task; all are equal under the lordship of Christ. A sense of mission and the conviction that each is bound to his brother as a fellow member of the body of Christ pervades the early Christian self-understanding. Indirectly, then, the Stoic model of human relationships is rejected in favor of a model similar to that found in the Greek mystery religions and at Qumran. Friendship is not rejected, but rather deepened: each member of the church shares with the others a common life. The fellow Christian is the brother for whom Christ died (Rom. 14:15).

**FUTURE LIFE IN INTERTESTAMENTAL LITERATURE.** According to different anthropologies and eschatologies, the future life begins during this life, immediately upon death, or after a resurrection.

1. **Presuppositions.** The presuppositions for this complex of beliefs are twofold. (1) Yahweh is a God of justice who rewards the righteous and punishes the wicked. (2) His power to execute this justice transcends even death. As Lord of life and death (Deut. 32:39; I Sam. 2:6), he brings back from the gates of Sheol those who are seriously ill or in grave danger (Ps. 30:1-3 [H 30:2-4]; Hos. 6:1-2; Jonah 2:2-9 [H 2:3-10]), and on rare occasions he has raised the dead (I Kings 17:17-22; II Kings 4:18-37). ENOCH and ELIJAH escaped death when he "took" them to himself (Gen. 5:24; II Kings 2:6-12).

**2. Function: the enactment of God's justice.** The first personal confessions of the belief that Yahweh's justice transcends physical death appear, though not without ambiguity, in the Isaianic apocalypse (Isa. 24-27) and in Ps. 73. When Yahweh comes forth from his place to judge (Isa. 26:20-21), the oppressed righteous will arise from the dust of death (26:19), while their dead overlords will remain in Sheol (26:13-14; see DEAD, ABODE OF THE). The psalmist reflects on the prosperity of the wicked and his own suffering (Ps. 73:2-14), but in spite of these inequities, he affirms divine justice, contrasting the coming destruction of the wicked with the reward that awaits him when his God "receives" him to glory (קָרָא, 73:24; cf. Gen. 5:24; II Kings 2:3).

The problem of affirming God's justice and omnipotence becomes particularly acute during Antiochus Epiphanes' persecution (167 B.C.) (see ANTIOCHUS §4). Not only are the righteous not receiving the just reward for their faithfulness to TORAH, and the wicked the deserved punishment for their apostasy; but, just the contrary, the righteous are being put to death because of their piety, and the apostates are escaping because of their faithlessness—a sheer confounding of all biblical canons of divine justice. The hasidic authors of this time (see HASIDEANS §2) solve the resultant crisis in faith by asserting that God's justice transcends death.

An early tradition, at least from the time of Antiochus, is preserved in Wisd. Sol. 2-5. It conflates the last Servant Song (Isa. 52:13-53:12) with Isaiah's taunt against the king of Babylon (ch. 14), identifying the persecuted leaders of the community with the servant and their persecutor with the king whose demon tries to seize God's throne and is cast down to Sheol. The conflate tradition is read as a postmortem judgment scene in which the Servant, now gloriously exalted to power in the heavenly courtroom, confronts his former persecutor and condemns him.

Dan. 10-12 describes the events culminating in the persecution and announces an imminent judgment (11:45-12:3). Antiochus, who has attempted to storm heaven (11:36; cf. 8:10-11), will be struck down (11:45; cf. 8:25). The righteous Jews who are still alive will be delivered (12:1), and the dead principals of the Hellenistic-hasidic controversy will be raised from Sheol, "the land of dust" (12:2, Goodspeed). The righteous will be vindicated for their faithfulness ("everlasting life") and the apostates punished for their faithlessness ("everlasting contempt"). The hasidic leaders, cast in the role of the Servant (12:3; cf. Isa. 52:13; 53:11), will be elevated to heaven, not to judge (this is Michael's function, Dan. 12:1), but to receive the special honor due their position. They will shine in glory forever. The author of Jub. 23:11-32, a contemporary of "Daniel," also posits an imminent judgment as the solution for the troubles of his time. The spirits of the righteous will have "much joy," and their enemies will be cursed (vss. 30-31).

The theme of the righteous person(s) condemned to death for faithfulness to Torah, but rescued, exalted, and vindicated, is embodied in narrative form in the old tales preserved in Dan.

3 and 6. The same theme (minus the exaltation) occurs in the story of the seven brothers and their mother, which is set in Antiochian times (II Macc. 7). The brothers, condemned in a human court and put to death because of their faithfulness to Torah, will be raised from the dead and thus vindicated by the divine judge. Significantly different from the Daniel stories where the heroes are rescued at the brink of death, here the brothers are rescued and vindicated in spite of and after death. Their mother, cast in the image of Second Isaiah's Mother Zion, awaits the restoration of her sons in the resurrection, when the Creator will re-create and thus redeem his servants.

Quite probably reflecting conditions in Palestine ca. 100 B.C., Enoch 92-105 depicts the oppression of the poor ("the righteous") by the rich ("the sinners"). Chs. 102:4-104:8 constitute a disputation in which the author contests the Deuteronomistic view of divine justice. One's lot in this life is no index of piety. After death the tables will be turned. The righteous will receive the reward denied them in this life, and the sinners, who have prospered in this life, will be punished.

In the texts cited, immortality and its equivalents function as an essential part of the divine adjudication of the inequities of this life. Elsewhere, eternal life and eternal destruction function as the appropriate REWARD and punishment of the righteous and the sinners regardless of whether or not they were rewarded or punished during their lifetimes (Pss. Sol. 3:11-12; 13:11; 14:9-10; 15:12-13; Sib.Or. IV, 176-91; II Esd. 7:32-37; Test. Benj. 10:6-9; LAB 3:10; Test. Abr. 11-13, Recension A [8-11, Rec. B]). As the focus moves away from the narrower contexts of persecution and oppression, the tendency is toward a universal judgment (and resurrection).

This reward and punishment function occurs in the theology of the two ways, which is rooted in the biblical covenant theology, where the blessings and curses are spelled out as "life" and "death" (Deut. 30:15-19; cf. Jer. 21:8). This theology is often carried in a variation of the covenant form: (1) Prologue=Creation; (2) the deeds comprising the two ways and the blessings and curses; (3) an eschatological section=God's visitation of the earth or the annihilation of evil. Examples of this form include: IQS 3:13-4:26; the Testament of Asher (a reworking of Ps. 73, a "Two Way" psalm, and Ps. 74); Wisd. Sol. 1-5; the Mandates of HERMAS; Barn. 18-20. Life and death are here construed, at least in part, as eternal life and eternal destruction (cf. also Pss. Sol. 3, 13, 14, 15). The Testament of Abraham describes the two ways and the gates leading to them (11, Recension A [8-9, Rec. B]).

**3. Time and mode.** The texts differ in their understanding of the time and mode of recompense after death, according to their specific conceptions of what constitutes the person (body, soul, spirit, body and soul, etc.).

In Jub. 23:31, the "spirits" of the righteous will experience much joy (in heaven), while their bones will rest in the earth. According to Enoch 102:4-103:8, the "spirits" or "souls" (the texts disagree) of the righteous (see 102:5 for the anthropological dichotomy) "will come to life" (103:4)

and, evidently, ascend to heaven (cf. 104:1-5), while the souls or spirits of the sinners will burn in Sheol. According to Test. Asher 6:4-6 and Test. Abr. 11-13, Recension A (8-11, Rec. B), the *soul* goes to its eternal destiny at the time of death. For the Wisdom of Solomon, "death" is that power which the wicked summon to themselves while still in this life (1:12, 16), while "immortality" (1:15; 2:23; 3:4) belongs to the righteous. Their souls are in the hand of God, and physical death is in reality the passing of their souls to the fruition of their immortality (3:1-4). A similar view occurs in IV Maccabees (*passim*), which rewrites II Macc. 7, consistently eliminating the references to bodily resurrection and stressing the immortality and incorruptibility of the soul. The heavy influence of Greek thought is evident in the Wisdom of Solomon and IV Maccabees, although for both writings immortality is not an inherent quality of the soul, but a divine reward for righteousness. Greek influence is perhaps also present in the Testament of Asher and the Testament of Abraham (cf. Plato, Republic X.xiii ff.; Phaedo 107D-108C), but this influence is not at all obvious in Palestinian documents such as Jub. 23 and Enoch 102-103. See IMMORTALITY[S].

Resurrection of the body is indicated in Isa. 26:19 and probably in Dan. 12:2 and Enoch 51:1; 61:5. The most explicit references to such a resurrection occur in II Macc. 7:9, 11, 14, 23 (cf. 14:37-46), where the resurrected body is identified with the body tortured and put to death. This identification gives expression to the idea of vindication. The earthly king punishes the brothers' obedience to Torah by destroying their bodies. The cosmic King will vindicate this obedience by restoring their bodies. II Esdras combines two eschatologies. At death the soul departs from the body (7:78, 88) and experiences in a preliminary manner its appropriate reward or punishment (7:79-101). At the end of time, the bodies will be raised and presumably reunited with the souls (7:26-38), and universal judgment will follow.

The early texts witness to a variety of anthropologies, but there seems to be some trend toward bodily resurrection by the early part of the Common Era. However, with the exception of II Macc. 7 and 14 and their own peculiar formulation, the body of the resurrection is conceived of as qualitatively different from the earthly body. This difference functions at times as a constitutive part of apocalyptic conceptions of the qualitative differences between the present sinful or corrupt age and the age to come.

An interest in the intermediate state is rarely evident in the texts, but the references in Dan. 12:2 to "those who sleep" and in Enoch 102-103 to the righteous who "grieve" in Sheol do imply such a concept. While Enoch 22:3 indicates rewards and punishments for the "spirits of the souls" of all mankind immediately upon death, it also posits a resurrection of some of the wicked and presumably of the righteous. Ideas of death and resurrection as the separation and reuniting of body and soul are rare and appear only in late texts (LAB 44:10; II Esd. 7:78).

**4. The Dead Sea Scrolls: realized eschatology.** (See DEAD SEA SCROLLS[S] §8; ESSENES[S] §3.) The eschatological views in the Qumran Scrolls have their own peculiar character and problems of interpretation. Two of the hymns express a highly realized eschatology. Events normally ascribed to the eschatological future are here depicted as present realities: exaltation to the eternal height and access to the angelic assembly (1QH 3.19-22); resurrection from the level of dust and worms to the divine realm and the company of the angels (1QH 11.11-14). When the sectarian enters the community, he passes from death and alienation from God to life, knowledge of God, and communion with the angels. Although a certain tension remains and he still lives in an evil world, he is nevertheless already participating in the eternal life. Whether the Qumranites nourished a belief in a future resurrection is highly doubtful. The sectarian texts normally cited as evidence for such a belief do not bear the weight of this interpretation (1QH 6.29-30, 34; cf. also 4Q ps-Dan. 4Q181 1.3-6 may be an exception). Physical death, the presupposition for such a resurrection, is scarcely mentioned in the scrolls and is evidently of little concern. The reinterpretation of eschatological conceptions and their application to one's entrance into, and existence in, the community indicates that at least the author(s) of these hymns believe that the significant eschatological event has already occurred.

The use of the concept of the two ways in IQS 3.13-4.26 may point in the same direction. The theology of this period (MANUAL OF DISCIPLINE; HERMAS, Mandates; WISDOM OF SOLOMON) stresses the *fact* of reward and punishment, life and death, and, for the most part, is singularly elusive on the question of how and when. Somewhat parallel to the realized eschatology of the hymns, "life," "immortality," and "death" are not only ultimate destinies beyond physical death, but also permeate and characterize one's present life-style and existence (Wisd. Sol. 1:12, 15-16; 2:23; 3:4). The imagery of the "way" is suggestive of this kind of continuity: life/immortality and death in the present continue unbroken through the relatively insignificant event of physical death to their fruition. If we accept the identification of Qumranites with the ESSENES, the attribution of this viewpoint to the scrolls finds support in JOSEPHUS, who describes Essene eschatology in terms of immortality of the soul (War II.viii.11; Antiq. XVIII.1 5).

A view of realized eschatology closely approximating that in the Qumran hymns is expressed in Joseph and Asenath 8:10-11; 15:3-4, and Philo attributes such a view to the Therapeutae (*On the Contemplative Life* xiii).

**5. Other views.** Early tannaitic traditions generally envision a resurrection of the body within the broader context of a universal judgment. Different from most of the texts cited above, and typical of the rabbinic materials, is an explicit dependence on biblical texts, often texts that originally did not refer to a literal resurrection (e.g., Deut. 32:39; I Sam. 2:6). Similar reinter-

pretations occur in the Targums (and in the Greek Bible.)

Josephus' description of Pharisaic belief in resurrection of the body (War II.viii.14; Antiq. XVIII.i.3) accords well with the rabbinic texts and with the post-A.D. 70 apocalypses (the Apocalypse of Baruch [see BARUCH, APOCALYPSE OF] and II ESDRAS). The PSALMS OF SOLOMON, often described as Pharisaic, are vague as to the form of resurrection.

The Sadducees' denial of the resurrection (Jos. War II.viii.14; Antiq. XVIII.i.4; Mark 12:18-23; Acts 23:6-8, etc.) may reflect not only their theological conservatism, but also their high social status, which removed them from the kind of problems that spawned and nourished a hope for recompense after death (cf. Enoch 102:4-104:8 as discussed in §2 above). The silence of many texts with regard to resurrection, immortality, and eternal life must be judged contextually. Do the authors face the situations and deal with the problems that

elsewhere are answered with these hopes for a life to come?

**\*GALATIANS, LETTER TO THE.** The letter written by the apostle Paul (1:1; 6:11-18) and co-senders "to the churches of Galatia" (1:2) is a carefully composed apology in epistolary form. It was prompted by the Galatians' decision to shift their allegiance away from Paul to his opponents (1:6-7). In his defense Paul argues that as Gentile believers in Christ (2:3-5; 3:2-5; 4:8; 5:2-3; 6:12-13) the Galatians have heard the "gospel" (3:2, 5) and received the HOLY SPIRIT (3:2-3, 14; 4:6, 29; 5:5, 16-18, 22, 25; 6:1, 8) and that this is sufficient for their salvation (1:1-5; 3:26-29; 4:6-7, 31; 5:1a, 13a, 25a; 6:8, 15-16). The argument is directed against the theology of Jewish-Christian missionaries opposed to Paul who have nearly won over the Galatians by persuading them that they remain "sinners" (2:15-17, 21) outside of salvation, unless they accept CIRCUMCISION (2:3; 5:2-3, 6; 6:12-13, 15) and TORAH (3:2, 5; 4:9-10, 21; 5:2-4, 18). Galatians constitutes one of the most important theological documents of early Christianity. Basing Christian existence radically upon the gift of the Spirit and "justification by faith" (see JUSTIFICATION §3c; FAITH, FAITHFULNESS, §D4; FAITH, FAITHFULNESS, NT[S]), the letter separates in principle and as far as we know, for the first time, Christianity from Judaism. Many of the points made here reappear, expanded and sometimes modified, in Romans. Historically, Gal. 1-2 is the only extant primary source of information in regard to the earliest period of Christianity.

**1. The anti-Pauline opponents.** The studies by Crownfield and Munck showed that the problem of precisely who Paul's Galatian opponents were had remained unsolved. Was there one type of opponent or two (Lüttger); were they Christian Jews or non-Christian Jews or Gentiles; were they resident Galatians or intruders, and if the latter, where did they come from and why? Crownfield described them as Jewish-Christian syncretists favoring circumcision for a symbolic reason. Munck held them to be not Jews but Gentiles who had recently become circumcised members of a JUDAIZING Christian movement in Galatia, which without connections to Jerusalem had developed as a "heresy" within Paulinism. Schmithals launched the most vigorous

attack against the lingering consensus that the opponents were "Judaizers," that is, Christians who demanded the acceptance of the Jewish Torah, including circumcision, as a condition for salvation. Showing that this consensus does not match with the sources, Schmithals proposed that the opponents be regarded as (Christian or non-Christian) Jewish Gnostics (see GnosticISM §2; GnosticISM [S]), promoters of the ritual of circumcision, but "libertines" in regard to the moral demands of the Torah. Subsequent discussions of Schmithals' thesis led to its modification by Bornkamm, Wegenast, Koester, and Georgi, who assume that the opponents were Jewish-Christian missionaries rooted in a syncretistic brand of Asia Minor Judaism. Bronson tried to connect the Galatian agitators with political pressures in Jerusalem and a nationalistic tendency of the men around James, while Jewett speculated that ZEALOT pressures might have caused Jewish Christians in Judea to organize a campaign to "Judaize" Gentile fellow-Christians and thus to offset the Zealot reprisals. H. D. Betz proposed that II Cor. 6:14-7:1, long recognized as a non-Pauline interpolation, in effect represents an anti-Pauline theology diametrically opposed to Galatians; this theology is Jewish-Christian and close to QUMRAN Judaism (see DEAD SEA SCROLLS §6; DEAD SEA SCROLLS[S]), and could be identical with the theology of Paul's Galatian opponents. For the literature and state of research, see bibliography.

**2. Composition.** Galatians is an "apology" in epistolary form (see LETTER; LETTER[S]). The epistolary "frame" consists of the prescript (1:1-5) and the postscript (6:11-18). The prescript follows the basic pattern of other Pauline letters, with *superscriptio* (1:1-2a: name of the principal sender, his official title, a definition of the title, stating of co-senders); *adscriptio* (1:2b); *salutatio*, expanded by christological and soteriological formulas (1:3-4); doxology, with the concluding "amen" (1:5). The postscript, written by Paul's own hand (6:11), presupposes that the preceding letter was written by an amanuensis. The postscript is intended to authenticate the letter and to sum up finally the points Paul wants to make, thus serving as the *recapitulatio* (*peroratio*) of the "apology."

The body of the letter (1:6-6:10) is composed as a defense speech, with its traditional sections. The introductory *exordium* (1:6-9) at once introduces the "cause" (1:6-7) and Paul's reaction, the reissuing of a previous curse against apostates from the Pauline gospel (1:8-9). Between this conditional curse and a corresponding conditional blessing upon those who remain loyal to Paul (6:16), the defense itself is presented. It has three parts: the *narratio* (1:12-2:14) covers the events preceding and leading up to the present situation; these events are presented with a partisan point of view, so as to support the main line of the defense (1:11-12). The *narratio* ends with the same dilemma now facing the Galatians (2:14b). Next comes the *propositio* (2:15-21), stating the material points to be proved in the main part, the "presentation of proof" or *probatio* (3:1-4:31). The most impor-

tant proof, undeniable evidence, is presented first in the form of an *interrogatio* (3:1-5). Next come proofs from scripture (3:6-4:11), then admonitions and pleas belonging to the theme of "friendship" (see FRIEND, FRIENDSHIP IN THE NT[S]) which was very popular in letters (4:12-20), and concluded by an argument from "allegory" (4:21-31). The third part is an exhortation (*parenesis*, 5:1-6:10; see PARENESIS[S]). Each of the three subsections (5:1a, 13a, 25a) begins with a restatement of the indicative of salvation (3:26-28), the first two being warnings against taking up the yoke of the Torah (5:1-12) and against corruption by the FLESH (5:13-24), the third providing positive advice in the form of gnomic sentences (5:25-6:10).

3. **Function.** The letter represents Paul, who cannot be present in person with the Galatians to deliver his defense (4:18-20); in effect, the letter carries his defense to the Galatians who have to make their final judgment. In addition, in carrying a conditional curse and blessing (1:8-9; 6:16), Galatians functions as a "magical" letter, confronting the addressees once again with the choice between salvation and condemnation; depending on what they will choose, curse or blessing will automatically be activated.

\***GAMES, NT.** See GAMES, NT; FESTIVALS, GRECO-ROMAN[S].

\***GATH.** Excavations at Tell Sheikh Ahmed el-'Areini (sometimes called Tell el-Menshiyeh; now Tel Erani) near 'Arâq el-Menshiyeh proved that the Iron Age settlement was much too small for an important city such as Gath; Philistine ware

was scarcely in evidence. Tell en-Nejjleh (Tel Nagila), a more southerly candidate, was also disproved by excavation; there was no real Iron Age town there at all. Wright's new equation with Tell esh-Sheri'ah (Tel Sera') is too far S; ZIKLAG is a more likely identification for that site. Re-examination of the written sources—biblical, Assyrian, and Byzantine—indicates that Gath was located in the N of Philistia. Tell es-Şâfi (Tel Zafit) is the only reasonable candidate for identification with Gath.

Rappaport, "Gaza and Ascalon in the Persian and Hellenistic Periods in Relation to their Coins," *IEJ*, XX (1970), 75-80; M. Benvenisti, *The Crusaders in the Holy Land* (1970), pp. 189-94.

\***GEHENNA.** The underworld (*Sh'ôl*), the peaceful abode of all the dead according to the literature of the OT (see DEAD, ABODE OF THE), was replaced, in some of the intertestamental literature, by a place of fiery punishment for the wicked (see GEHENNA). Why it then assumed the name of the valley of Hinnom S and W of Jerusalem (gê-hinnôm; LXXB Josh. 18:16, γαιεννα; NT γειεννα; see HINNOM, VALLEY OF THE SON OF) is not entirely clear. The often repeated description of the Valley of Hinnom as a public garbage heap and incinerator, into which "unclean" corpses were thrown, is apparently without archaeological foundation and seems to have originated with David Qimhi's commentary on Ps. 27 (ca. A.D. 1200). Thus it is doubtful that Jesus applied the term "Gehenna" to the underworld merely by analogy.

While the tendency to place eschatological events at well-known places is often attested in Israel's literature, there may be another dimension to the identification of the final place of punishment with the infamous valley against which Jeremiah prophesies. Since an altar often memorializes the appearance of a deity at a given place (see THEOPHANY IN THE OT[S] §1ai), and since it was often viewed as an entrance to the realm of the particular deity to whom it was dedicated (Wainwright), those of chthonian deities were often placed in deep valleys (Lehman; see Isa. 57:5-6; STES, SACRED[S]). Hence human sacrifices were offered to MOLECH in the deep Valley of Hinnom (see also CORRUPTION, MOUNT OF[S]). The belief that there was an entrance to the underworld in this valley is attested even in Talmudic times (T.B. 'Er. 19a). Just as, in Assyrian thought, Nergal's cult city Kutu gave its name to the realm of Nergal beneath it (see ANET [2nd ed.], p. 107, l. 40), the

altars to chthonian deities in Hinnom ultimately resulted in the transfer of the name to the realm beneath.

\***GENEALOGY.** See GENERATION, SEVENTH[S].

\***GENEALOGY (CHRIST).** For details of the two NT genealogies (Matt. 1:1-17; Luke 3:23-38) see the original article; here the concentration will be upon their theological import for the evangelists.

1. **Matthew.** This evangelist does not transmit a factual family tree; for, while Jesus may well have been of Davidic descent, he was not the dauphin of a princely family. Either Matthew has created the genealogy himself, or, more probably, he has added the names of Joseph and Jesus to an existing genealogy of the expected Davidic Messiah, a genealogy which Matthew joined to a pre-Davidic era list resembling those in Ruth 4:18-22 and I Chr. 2:1-15. Since the omissions in the monarchical sections may have arisen through confusions about the Greek names of the kings, a hypothetical pre-Matthean genealogy would more likely have existed in Greek and have been of a popular rather than archival nature. The appearance of priestly names in the postexilic period (e.g., Zadok) may reflect a vague remembrance of the transfer of political power in the fifth century B.C. from the Davidic heirs to the high priests. Matthew calls attention to the pattern of fourteen generations in the genealogy (1:17); he may have found this pattern already in the pre-Davidic and monarchical sections and have realized that the addition of Joseph and Jesus extended the pattern to the postexilic period. For him the numerical pattern reflected the carefulness of God's planning for the Messiah. If Matthew knew that the ancient Hebrew orthography of David's name gave a numerical value of fourteen, his awe at God's planning would have been increased. Thus, the genealogy reflects the same appreciation of God's providence attested in the Matthean "fulfillment citations," so prominent in the infancy narrative.

In the heading of the genealogy the twofold designation of Jesus as "son of David" and "son of Abraham" may be directed to Matthew's composite community. "Son of David" is an assurance to Jewish Christians that God's promise to Israel of a Davidic Messiah has been fulfilled. "Son of Abraham" tells Matthew's Gentile Christians (cf. 8:11; 21:41) that in Jesus as the seed of Abraham all the nations of the world have been blessed, and not only Israel (3:9). If the section 1:18-25 will show how Jesus through Joseph's acknowledgment is the son of David, the section 2:1-12 will show how his birth attracts magi from the East, the ancient land of Abraham. Four women (Tamar, Rahab, Ruth, and the wife of Uriah) have been introduced by Matthew into the genealogy as a

sign of God's planning for the role of Mary in the birth of Jesus. These women have in common: (a) an extraordinary or irregular marital union which was scandalous in the eyes of outsiders but which continued the blessed lineage promised by God; (b) taking the initiative in bringing about God's plan; (c) being popularly regarded as instruments of God's Spirit. For instance, in first-century Jewish piety it was thought that God's Holy Spirit led Tamar to seduce Judah, and that the same Spirit selected the prostitute Rahab even before Israel entered the Promised Land. Besides seeing these women as foreshadowing Mary, Matthew may have been interested in them as non-Israelites (or married to a non-Israelite, as the wife of Uriah). In the genealogy of Israel's Messiah there were already signs of a wider salvation.

2. **Luke.** Matthew gives his genealogy before beginning the story of Jesus, just as Gen. 5 lists Noah's ancestors before the story of Noah (chs. 6-9). Luke relates first Jesus' birth and youth and the inauguration of his ministry before giving a genealogy (3:23-38), even as Exodus tells of Moses' birth and youth and his inaugural call before it lists his Levitical ancestors (Exod. 6:14-25). In Luke and in Exodus the genealogy authenticates the mission; and in Jesus' case, where the genealogy goes back to God, it explains how he is the Son of God, as the heavenly voice has just proclaimed (Luke 3:22). The position of the genealogy suggests that it may have been part of the gospel before Luke prefixed chs. 1-2. Indeed, the phrase "as was supposed" in 3:23 may represent a modification to make the genealogy agree with the motif of virginal conception in 1:26-38.

While Luke has a more plausible number of generations covering the span of time between David and Jesus (forty-two to Matthew's twenty-eight), the names he gives for the monarchical period are of a type common in postexilic Judaism. And the names Luke gives for the postexilic period reflect Levitic descent (e.g., Levi, Mattathias), a curious feature in a Davidic lineage. Moreover, there are suspicious duplicates in the Lukan list (cf. Jesus, Joseph, Heli, Matthat, Levi in 3:23-24; Joseph, Matthatias in 3:24-25; and Jesus [Joshua], Eliezer . . . Matthat, Levi in 3:29). There is little need to harmonize the Matthean and Lukan lists (see GENEALOGY, CHRIST §3) if we realize that the Lukan list has little more claim than Matthew's to be factual. Luke's tracing of Jesus' Davidic descendancy through Nathan (3:31) rather than through Solomon (Matt. 1:6-7) is consonant with Luke's interest in Jesus as a prophet—Nathan the Davidic prince (II Sam. 5:14) was popularly confused with Nathan the Davidic prophet (II Sam. 7:2). The extension of Jesus' ancestors to Adam and thus beyond Hebrew history may reflect the Gentile orientation of Luke's gospel.

R. E. BROWN

**GENERATION, SEVENTH.** The OT has preserved, on occasion, differing versions of the same lineage.

It can be shown, in some cases, that the genealogies were restructured in order to transpose into the seventh slot an individual deemed especially worthy of attention. In light of the enormous attention accorded by the Semites in general, and the Hebrews in particular, to the number SEVEN, it is not surprising that the seventh position in a genealogical tree became particularly favored. To a degree, the fifth position was accorded secondary importance.

Clear examples of the manner in which this convention operated are obtained by comparing the order of Israelite tribes as listed in various books of the OT.

1) Gen. 46 presents Israel, at the time of the journey to Egypt, as a community of seventy males. The number seven and its multiples are frequently invoked. Gad (גַּד), whose descendants numbered precisely seven, is placed in seventh position, very likely because his *gematria* (see WORDPLAY IN THE OT[S] §1) added up to 7 (ג=3, ד=4).

2) The census list preserved in Num. 26:5-51 records Joseph in the favored (seventh) slot. His is the only line which is carried into the seventh generation, that of Zelophehad's daughters, who, according to Num. 27:1-11, elicited from Moses an innovative juridical decision.

3) Num. 13:4-15 lists the *nes'im* sent on a mission into Canaan. It has long been recognized that vs. 10-11 belong before vs. 8 in order to secure the sequence Manasseh-Ephraim (de Vaux). Consequently, seventh place would go to the hero Hosea (Joshua), son of Nun.

The following instances are also noteworthy.

1) There are two listings in Genesis which preserve the names of mankind's antediluvian ancestors: one, of seven "cultural heroes," reflects the development of human institutions (4:17-24); the other, consisting of ten "eponymous ancestors," details the human links between Creation and the Flood (5:3-31). These are paralleled by Mesopotamian concepts (Hallo). Despite minor alterations in spelling, the lists from Genesis were developed from a single source. In each case, the genealogist placed in the seventh position an ancestor who received special notice in the tradition.

S (ethite) tradition (5:3-31)	K (enite) tradition (4:17-24)
I Adam	
II Seth	
III Enosh	(1) Adam
IV Kenan	(2) Cain
V Mahalalel	(3) Enoch
VI Jared	(4) Irad
VII Enoch	(5) Mehujael
VIII Methuselah	(6) Methusael
IX Lamech	(7) Lamech
X Noah	

In K, Lamech is placed in seventh position, likely because he was remembered in the famous "sword-dance" of Gen. 4:23-24 as "avenged seventy-sevenfold" (cf. also 5:31 where he is said to have lived 777 years). In S, however, the seventh slot is given to Enoch because of the description of

his singular fate: "God took him" (5:23-24). The changes in genealogical order thus were minimal; while most of the ancestors were kept to their proper slots, the positions of Enoch and Mahalalel/Mehujael were switched. This not only permitted Enoch to occupy, in S, the favored position, but preserved Mahalalel in the fifth spot, the same as that enjoyed by Mehujael in K.

2) Gen. 11:10-20 lists eponymous ancestors from the postdiluvian period. Eber, after whom the Hebrews (*'ibhri*) were named, is accorded the fourteenth (2x7) position since Creation. In the MT, Abraham is reckoned as seventh from Eber; while in the LXX, he is placed in the twenty-first slot (3x7) since Creation.

3) Gen. 36 lists thirteen Edomite descendants of Esau (vss. 11-14), then fourteen clans issued from him bearing the same names, plus one (vss. 15-18). By inserting the name "Korah" at the secondarily important fifth position of the clan list, the genealogist not only reminded his audience of a notable "villain" (Num. 16) but also pushed AMALEK, Israel's foremost foe, one slot down into the seventh position. Note also that Korah, as the fifth son of Esau (vs. 5), now also occupies slot fourteen (7x2) of the clan list.

4) David's line as preserved in Ruth 4 has Boaz in seventh spot. Since he is the hero of the tale, this is hardly surprising. A proper appreciation of the "seventh-generation" convention indicates that the lineage was specifically tailored for inclusion in Ruth and, therefore, should not be considered as a secondary addition to that narrative. In order to preserve Boaz in the seventh slot, the genealogist must begin his line with Perez and not, as he logically might have, with the more illustrious Judah or Jacob. The mention of Perez in 4:12 thus anticipates the genealogy.

5) I Sam. 9:1-2 preserves the genealogy of Saul: Saul ← Kish ← Abi'el ← Zeror ← Becorath ← Aphiah ← a Benjaminite landowner. To place Saul in the seventh position, the genealogist must begin his line with an individual whose name had been forgotten (RSV "a Benjaminite, a man of wealth"). Most modern translations mistakenly delete either כִּישׁ or זֶרוֹר.

6) In Matthew's delineation of Jesus' ancestry (1:2-16), it is possible that the convention was still operative. In order to obtain fourteen (2x7) ancestors in each of three "ages" (1:17), Matthew (1) begins with Abraham rather than with Adam, Noah, or Shem; (2) omits a few names transmitted by the Chronicler (I Chr. 3:5, 10-16); (3) repeats (counts again) the name of Jechoniah, last of the second "age," in first position of the third "age." Note also that Mary (1:16) is the fifth woman to be mentioned in the lineage.

7) Luke (3:23-38) reckons Jesus as the seventy-seventh (7x11) human descendant of Adam. The following are given prominence: Enoch (seventh), Shelah (fourteenth), Abraham (twenty-first), Admin (twenty-eighth), David (thirty-fifth), Joseph son of Jonam (forty-second), Jesus/Joshua son of Eliezer (forty-ninth=7x7), Shealtiel (fifty-sixth), Mattathias son of Semein (sixty-third), Joseph son of Mattathias (seventieth), Jesus son of Joseph

(seventy-seventh). To be noted: all the occurrences of the names Joseph, Jesus, and Mattathias fall in the seventh spot or its multiples; Enoch, David, and Abraham are similarly honored. By "Mattathias" (sixty-third), Luke may have been reminded of the Hasmonean patriarch whose grandfather was named Simeon (I Macc. 2:1).

M. SASSON

\***GENESIS.** The book of Genesis contains the primeval history (chs. 1-11) and the history of the patriarchs (chs. 12-50). Although the critical search for the sources of Genesis did not emphasize this division (see SOURCE CRITICISM, OT[S]; DOCUMENTS), more recent research has recognized that they are two completely separate complexes of tradition.

**A. PRIMEVAL HISTORY (GEN. 1-11).** 1. **Main types of interpretation.** *a. Traditional interpretation* (until about 1850). This approach viewed the stories as historical reports of the beginnings of the world. The biblical primeval history, on the one hand, was thought to be universally known. Parallels from other religions (Hesiod, Berossos) were explained by the assumption of an original revelation from which they had evolved. On the other hand, Christian dogmatics produced a strong emphasis on the first three chapters (Creation and Fall) and isolated them from the rest of the primeval history. These chapters in particular were interpreted in light of salvation through Jesus Christ. This interpretation was shaken by modern natural science, especially by biology and Darwinism. See SCIENCE AND THE BIBLE[S].

*b. Critical literary interpretation* (dominant, 1860-1920). The historical-critical method approached the biblical primeval history purely as a literary problem. For it, the history consisted of two (or three) great literary works which run through the entire Pentateuch. The content of the history was explained entirely in terms of the time of composition of these works; i.e., it does not provide genuine information about the patriarchal age. It was thought that the attacks of natural science could be avoided by distinguishing between a historical nucleus and the "religious content."

Material from other religions, especially from Mesopotamia, was usually examined only from the perspective of mutual literary dependence (see BIBLICAL CRITICISM, HISTORY OF §2b). Recently, a kind of "salvation-history" approach has been linked to the critical literary interpretation. It is especially interested in the theology of the source writings and views the primeval history entirely from the perspective of the later "salvation history" of Yahweh's dealings with Israel (cf. Delitzsch, von Rad, etc.).

*c. Form- and traditio-critical interpretation* (starting with Gunkel, 1910). In this approach, it was recognized that the primeval stories had a long, usually oral, history before their fixation in writing (see TRADITION, ORAL[S]). Many of the motifs were widespread among early peoples (e.g., creation of a human being out of clay, the story of the Flood; see Frazer, Baumann). Thus, it was helpful to interpret the stories in a universal context. The question of historicity was dismissed as irrelevant to be replaced by the form-critical question of the function of the stories in the community (see Eliade, Maag). See BIBLICAL CRITICISM, HISTORY OF §3; TRADITION CRITICISM, OT[S].

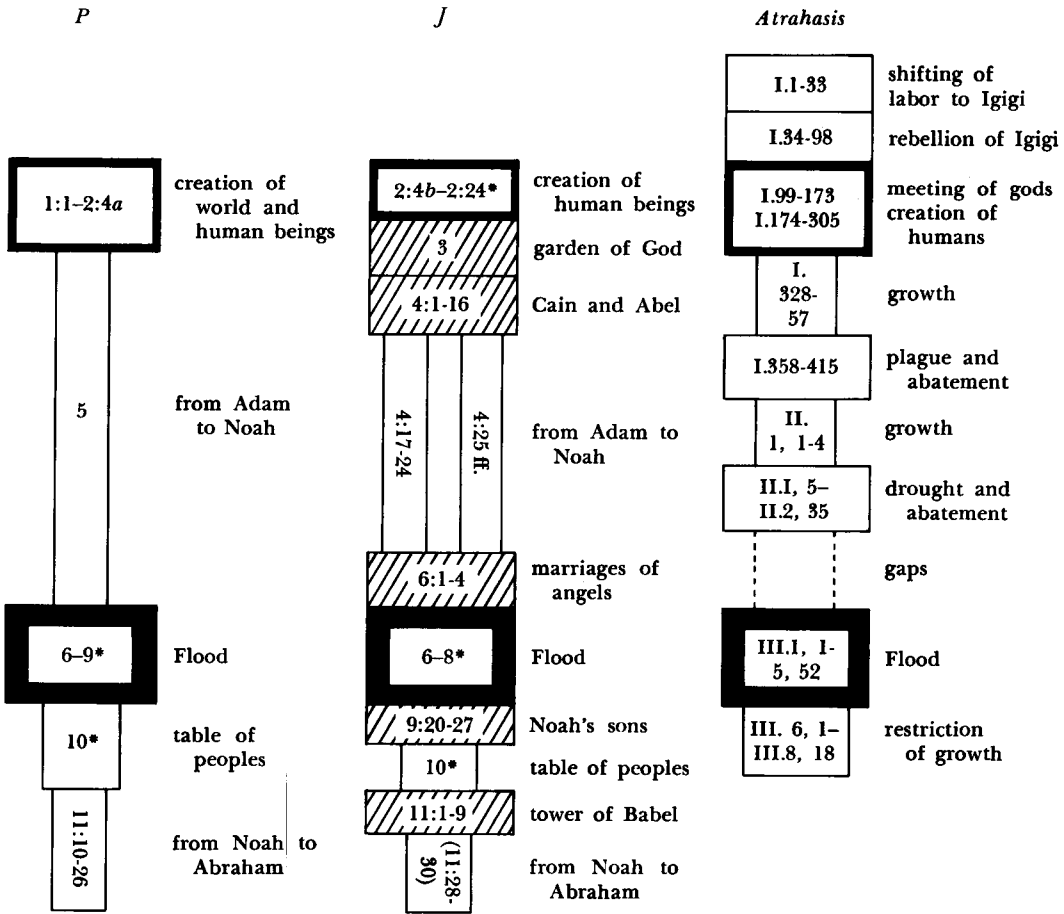

2. **Biblical primeval history in the context of similar stories.** *a. Individuality and unity.* The primeval stories of all cultures are not intended to be historical reports but rather to present those fundamental realities concerning the world and humanity which precede the ethnic, national, political, and social differentiations under which people living in historical time find themselves. Hence, primeval history, which has to do with all people, is fundamentally separate from the history of God in dealings with the one people Israel (Gen. 12 ff.; Exod. 3 ff.). The unity of the former does not consist of a cohesive pattern of development; there is no real progression of plot (contrast von Rad's "sin increasing like a landslide"). On the contrary, that which seems to be narrated in a sequence is only the development of those fundamental realities and should not be understood chronologically. A prominent characteristic of many primeval stories is that they present such realities in a complementary manner; i.e., something positive and negative simultaneously (cf. Pandora's box). According to this model, biblical primeval history and also the Babylonian Atrahasis epic (Gilgamesh Epic) are dominated by the contrast between creation and destruction of the created world by the Flood (see Table 1).

*b. The structure of biblical primeval history.* The account of the YAHWIST (J) and the Priestly writings (P) consist of two components: (i) stories, (ii) genealogies.

i. *Stories.* In both J and P there are two kinds of stories: stories of creation, and stories of guilt and punishment, thus expressing the complementary character of primeval history.

P is the most stylized and therefore has the clearest structure. The two types of story stand opposite each other, connected only by genealogies: the story of the creation of the world and human beings (1:1-2:4a), and the story of the destruction of Creation by the Flood (chs. 6-9). This contrast is also the center of J, which elaborates on the

Table 1

various aspects of being human (ch. 3; 4:2-16; 6:1-4; 9:20-27; 11:1-9). While P only generally states the evil in humanity (6:11-12), J expounds the many ways of going astray. People were hardly created before they tried to increase the possibilities of their lives and overcome their limits, thus offending their Creator. Ch. 3 tells of human misdeeds in the relationship between man and woman; ch. 4 tells of those in the relationship between brothers (a competitive struggle to the death); 9:20-27 tells of an offense within the family; and 11:1-9 of an attempt of people to overcome their limitations. In 6:1-4 a transgression of the border between the human and the divine sphere is intimated. In all cases, the Creator sends the people back within their bounds. He drives them out of his presence (3:24); he limits the length of their lives (6:3); he scatters them throughout the earth (11:8). Meaningless labor (3:18-19) and painful birth (3:16) are traced back to primeval time. No matter how much effort human beings make, as God's creatures they remain within the limits God imposed.

In addition to the creative and limiting action of God, there is a third element: God continues to surround his creatures with his care (2:8-9, 15).

The story of the Flood tells not only of the destruction of humanity but also of the saving of Noah. The stories of guilt and punishment are conspicuously inconsistent (cf. God's gift of clothing in 3:21; the sign of protection for the murderer Cain in 4:15).

ii. *Genealogies*. The genealogies are related to primeval history in two ways. (a) They show the continuing effect of the blessing (i.e., fertility) which the Creator has granted to human persons (1:28; 5:1-3). The blessing ensures that people will spread to the farthest reaches of time (ch. 5; 11:10-26) and space (ch. 10).

(b) Humanity proceeds in the chain of generations; J used the genealogies to present the progress of human culture (4:1, 17-26; 5:29; 10:8-12). However, progress not only eases and improves human life; it also increases its dangers: the working of iron (4:22-24), the processing of wine (5:29; 9:20-27), and the building of cities (11:1-9). Thus the genealogies are also characterized by the ambivalence of the entire primitive history.

c. *Structure of the Atrahasis epic (Gilgamesh Epic)*. The old Babylonian Atrahasis (Utnapishtim) epic (ca. 1700 B.C.) is also characterized by the contrast between the creation of human beings

and a flood, and by the ambivalence of the creation and limitation of humanity. However, the arena of action shifts to the mythological level (action between gods). The Anunnaki, the greater gods, shift the labor of culture to the Igigi, the lesser gods (I. 1-33). The work soon becomes too difficult even for them, and they revolt against the king of the gods, En-lil (I. 34-98). To resolve the conflict, the gods decide to create human beings who will labor for them (I. 174-305). People have hardly taken over the work when they become so numerous and noisy (I. 328-57) that En-lil tries to destroy them with a flood (III. 1, 1-5, 52). The creator, Ea, prevents this from happening. He gives Atrahasis advice as to how he can avert the catastrophes (e.g., I. 364-415) and finally saves him from the flood. The plan of destruction is averted. However, human reproduction and the dangerous dynamics of human civilization are reduced by different kinds of childlessness and by high infant mortality.

**d. Stories of creation.** Except for the Flood, the biblical creation account has the largest number of religio-historical parallels. An overview of all the material shows that the stories of the creation of human beings were once independent from those of the creation of the world. While the former type may be traced back to primitive religions, the latter appear only in the highly developed cultures (e.g., the Babylonian *Enuma elish*). The reports of Creation by J and P fit into this pattern of development. Gen. 2 is a story of human creation; Gen. 1 is a story of the creation of the world, which was added to that of the creation of human beings. Yet even in P the earlier independence of the human creation story may be recognized. The creation of human beings (1:26-30) does not fit into the schema of P, because they are not created by a word. See CREATION §2a.

The distance between the two traditions is also shown in the manner in which God creates. While in ch. 2 God creates like a craftsman, in ch. 1 he calls the world into being by a command (1:3), although P also kept the older conception in many parts of his report (e.g., 1:7). Similarly, in the cosmogony of Memphis (Egypt), creation by a word appears only at the end of a long theological development (see Koch; *ANET* [2nd ed.], pp. 4-6). When P related Gen. 1 to his genealogy (תולדות; RSV "generations"; 2:4) schema, he made covert reference to the "more primitive" conception of creation by birth. Since the authors and those who passed on the biblical traditions purposely left such contrasting conceptions side by side, we may conclude that they wished to imply that none of the conceptions adequately depicted the creation of the world and human beings. The creation remains a mystery.

**3. The uniqueness of the biblical primeval history.** Those who are not aware of the religio-historical background often overestimate the originality of the biblical history. Gen. 1-11 relates that which is true for all people and which was told by many religions. Nevertheless, the formative influence of Yahwism may be recognized in the details. Thus, the notion of creation as the birth of gods was repressed, and with it, the difference

between Creator and created became clearer than it was in Egyptian religion. Mythological material was absorbed only in a muffled form (Gen. 6:1-4; see CREATION §1a), and kingship was not anchored in the primeval time as it was in Sumer. The monotheistic faith in Yahweh precluded any history of the gods, and, because of this, human beings acquired a greater significance. They became genuine partners of God, and the entire drama of primeval history took place between the one God and his creatures. However, the decisive characteristic is that primeval history was added to the beginning of Yahweh's history with Israel. Thus, this particular history was given a universal background. Yahweh, who saved Israel out of Egypt, is the creator of all people and of the entire world. His activity for the one people is the result of his activity for all humanity, and will again at the end involve all people (apocalypticism). For this reason, the biblical primeval history lends itself better than most passages in the Bible to the role of bridge between Christians and non-Christians.

**B. HISTORY OF THE PATRIARCHS (GEN. 12-50).** 1. Main types of interpretation. a) In the traditional understanding, everything which was related about the patriarchs was regarded as historical. In contrast, Wellhausen, a representative of critical literary research, explained patriarchal history as a projection backward in time from the period of the monarchy and assumed that it contained nothing historical. See §A1 above.

b) The mythical interpretation (Winckler, Meyer), trying to explain patriarchal history from the context of Babylonian or Canaanite mythology, saw original figures of gods behind the names of the patriarchs.

c) Some scholars (Ewald, Stade, Guthe, Steuernagel) sought the explanation of the entire patriarchal history in the fact that the names of individuals were also names of tribes, e.g., the names of the sons of Jacob (Gen. 35:23-26). It was the history of the tribes which was actually being told in the stories about their ancestors. In this case birth would mean the origin of a tribe, and marriage would mean the union of two tribes. (Eissfeldt and Kaiser also represented a limited tribal-historical theory in the story of Joseph.)

d) A new direction was begun in the explanation of patriarchal history as individual legends (Gunkel, Gressmann). This gave the oral phase of the tradition a new significance. Alt proceeded further in this direction when he concluded from the special type of patriarchal religion that there was a historically demonstrable religion of the patriarchs before the settlement in the Promised Land. See PATRIARCHS[S] §2b.

e) Interpretation from the perspective of archaeology was especially represented by Albright and his students (Wright, Bright, and Cross). The time, the life style, and the historical background of the patriarchs began to be explored in the context of the second millennium B.C. Archaeological access to patriarchal history is also very important for Cazelles and other French scholars, including de Vaux.

f) Noth (1948, 1966) established the dominance

of the traditio-historical viewpoint (*see* TRADITION CRITICISM, OT[S]). Its concern is the origin, growth, continued formation, and combination of the traditions about the patriarchs. These developed in various places (*Haftpunkte*) and in certain circles (tribes or groups of tribes) until their final written form in Genesis. (Noth presupposes, however, the division of the text into sources.) Many scholars have continued this traditio-historical research (Jepsen, Seebass). Works on parts of the patriarchal history have tried to achieve a connection between the critical literary and the traditio-historical methods (Kilian, Gen. 12-25; Eising, Gen. 25-36; Ruppert, Gen. 37-50).

2. **Preliterary traditions.** Gunkel and Gressmann recognized that the individual stories in the patriarchal history once had an independent life and were passed down independently in oral fashion before becoming a part of a comprehensive written work (*see* TRADITION, ORAL[S]). Usually, they were labeled "legends," but some people thought that they were closely related to fairy tales or myths. However, the patriarchal stories can be clearly distinguished from tales and myths, and further discussion has shown that the label "legend" was too broad and indefinite.

According to recent studies Gen. 12-50 contains three groups of individual traditions: stories, lists (including genealogies and itineraries), and texts of promise (e.g., 12:1-3) which connect the patriarchs with the history of Israel. The material may be divided into stories of families (Westermann) or of holy places, and larger contexts of stories. The genealogies and the itineraries may be divided into primary and secondary forms. The primary ones preserve memories of wanderings or of descent; the secondary ones are literary forms that provide transition. In addition, there are several other forms of oral tradition.

3. **The three parts of the patriarchal history.** In the form in which it has come down to us, patriarchal history consists of three parts which were previously independent: the Joseph story (Gen. 37-50, which differs greatly from Gen. 12-36), the Abraham cycle (Gen. 12-25), and the Jacob-Esau cycle (Gen. 25-36). The organization of the three parts is reflected in their different themes. The Abraham cycle is concerned with the progression from parents to children, the Jacob-Esau cycle with the relationship of two brothers, and the Joseph story with differentiated relationships: the father, the brothers, the brother in the family. The three parts also differ in form. Gen. 12-25 consists primarily of individual stories, 25-36 is dominated by larger groups of stories, and 37-50 is one long story. From a theological point of view, promise is emphasized in 12-25, blessing in 25-36, and peace in 37-50 (שלום as the state of well-being of a community).

a. **Abraham (Gen. 12-25).** Today it is generally assumed that Abraham was an individual who lived at a time which cannot be precisely determined (*see* PATRIARCHS; PATRIARCHS[S]). At first, the Abraham tradition consisted of separate stories, and from them the existing history of Abraham grew in a long, slow process. A certain loose thematic resolution may be found in that the cycle

begins in Gen. 11:30 with Sarah's infertility and almost ends in 21:1-7 with the birth of Sarah's son. These stories tell directly or indirectly of the continuing concern for the next generation. Almost all of them deal with the basic parent-child relationship. The Lot-Sodom complex and the late MIDRASH (as most scholars call it) of the battle of the kings and Melchizedek (Gen. 14) were added later. A special problem is created by the promises and the stories of the promises, of which some belong to the time of Abraham and some could have been added much later (*see* PROMISES TO THE PATRIARCHS[S]). The promise (12:1-3) which introduces the Abraham cycle in J connects the primeval history (1-11) with the patriarchal history (12-50), and at the same time points toward the history of the people of Israel (von Rad, Wolff).

b. **Jacob and Esau (Gen. 25-36).** There are four different groups of texts (according to Gunkel, Gressmann, de Vaux): the stories of Jacob and Esau, of Jacob and Laban, of holy places and theophanies, and of the sons of Jacob. The Jacob and Laban complex has been inserted into the Jacob and Esau complex by use of the themes of flight and return. The stories of holy places and theophanies (28:10-22; 32:1-2; 32:22-32; 35:1-7; 35:9-15[P]) are different from the first two groups in that Jacob alone appears in them. The fourth group presents the sons of Jacob as the fathers of the tribes of Israel (34; 35:23-29; 36). The most important theological concept in chs. 25-36 is that of blessing. In the Jacob-Esau stories, the conflict which dominates the whole cycle grows out of the blessing given by the father (ch. 27). In the Jacob-Laban stories, the conflict grows out of the blessing of wealth in the form of herds. The heart of the Jacob traditions may have come from the time of the patriarchs. The life-style of small, half-nomadic groups is presupposed, as is shown by the fact that only in this part of Genesis is God's presence promised to the wanderer. But *see* NOMADISM[S].

The stories of holy places and theophanies belong in another traditio-historical context (*see* THEOPHANY IN THE OT[S]). The accounts of God's revelations to the patriarchs often indicate the gradual takeover of the Canaanite holy places (*see* SITES, SACRED[S]), while the stories of the sons of Jacob connect patriarchal history with the history of the tribes.

c. **Story of Joseph (Gen. 37-50).** The story is a single, closed framework, and is called a *novella* by many interpreters (e.g., Gunkel, von Rad). This clearly separates it from Gen. 12-25 and 25-36, and scholars are agreed that it developed independently of those passages. However, it is related to the rest of patriarchal history in terms of its sources (J, E, and P) and content. It is a family story which begins with conflict and ends with reconciliation. Thus, it is actually not a "story of guidance" (cf. von Rad, Ruppert, etc.) which tells of God's wonderful guidance toward a good end (*see* JOSEPH STORY[S]). Rather, it is a story of a family whose "well-being" (שלום) is destroyed by the brothers' attempt to commit murder and the subsequent deception of their father, but is restored in the end by God's providence.

The special character of Gen. 37-50, as opposed

to chs. 12-36, is in the encounter of the new people of Israel with the world power, Egypt, and its new, overwhelming possibilities. A connecting motif is the avoidance of famine, which is handled in a manner entirely different from that in which the same motif is treated in 12:12-20.

All the types of interpretation mentioned above (§B1) have been applied to the Joseph story: a backward projection from the time of the monarchy (Wellhausen), the mythical interpretation (reflected in Thomas Mann's *Joseph* novels), the tribal history interpretation (Steuernagel, Kaiser), the historical interpretation (Albright and Wright place it in the Hyksos era [1800-1550 B.C.]; while Procksch and Rowley place it in the Amarna era [fourteenth century B.C.]). Egyptology offers its own interpretation (formerly represented by Yahuda, now by Vergote and especially Redford). Von Rad's attempt to explain the Joseph story as reflecting older Israelite wisdom has been accorded much respect. But recent writers (Crenshaw, Redford, Coats) have viewed the influence of wisdom in Gen. 37-50 more critically.

The question of the literary character of Gen. 37-50 was first posed by form-critical research (Gunkel, 1922; Gressmann, 1923). According to Gressmann, it is a legend of the king; according to Gunkel it is a family story expanded from motifs of legends. Gunkel called it a *novella* and this label was adopted by von Rad. Coats also understood the Joseph story as a *novella*, but he saw chs. 39-41 as an originally independent political legend with a didactic purpose and assumed the influence of wisdom only in this passage.

The majority of scholars have continued to hold the theory that the Joseph story was composed from different literary sources (Simpson, Gunkel, von Rad, Eissfeldt, Cazelles, and especially Ruppert). Rudolph (1933) tried to prove the literary unity of the Joseph story, and some scholars have followed him in this (e.g., Mowinckel, Brueggemann, Coats). Some have recently tried to distinguish several layers of tradition rather than several literary sources (Jepsen, Mowinckel, Redford). The question remains open.

**4. The environment and times of the patriarchs.** Efforts to determine the precise time of the patriarchs have not yet been successful. The suggestions range between 2200 and 1200 B.C. An attempt has been made to relate the nomadic wanderings of the second millennium to the wanderings of the patriarchs. However, the patriarchal stories do not contain any direct traces of such a relationship. See PATRIARCHS[S] §1.

Knowledge of the countries and peoples of the ancient Near East of the second millennium has increased enormously in recent decades, and this has served to illuminate the background of the patriarchal history (for limitations, however, see MARI[S] §8; NUZI[S] §2). Such biblical names as Abraham and Jacob have been found in ancient Near Eastern documents covering a long period of time in the second millennium. This surely shows that the names of the patriarchs refer to individuals, and that they lived before the settlement in the Promised Land. For the religion of the

patriarchs, see PATRIARCHS; PATRIARCHS[S] §2b; for the promises, see PROMISES TO THE PATRIARCHS[S].

R. ALBERTZ

**GENRE.** See ACTS, *GENRE*[S]; APOCALYPSE, *GENRE*[S]; GOSPEL, *GENRE*[S]; LETTER; *LETTER*[S]; LITERATURE, *EARLY CHRISTIAN*[S].

\***GERIZIM, MOUNT.** At the E end of the valley which separates Mount Gerizim from Mount Ebal to the N (see *EBAL, MOUNT*) lie the remains of ancient SHECHEM (Tell Balata), Jacob's Well (Bir Ya'qub), and the village of Balatah, while at its W end is the city of Nablus (ancient Neapolis). Though Mount Ebal is higher, Mount Gerizim has played a more important role in the history of the region, due partly to the fact that at least ten springs flow from the N base of Mount Gerizim, while the S side of Mount Ebal has no source of water except Ain 'Askar on its SE slope. The forested N face of Gerizim and the barren slopes of Ebal are both recent phenomena. Both mountains had trees on them in the Roman period but by the nineteenth century they were denuded.

The most ancient structures on the mountain are the excavated remains of a fifty-five-foot square temple of the sixteenth century B.C. and adjacent remains, also probably a tribal league shrine, of the seventeenth century B.C. Both are located on the low, NE slopes of the mountain above the remains of Shechem.

Josephus (*Antiq.* XI.viii.2, 7; XII.v.5; XIII.ix.1) affirms the existence of the Samaritan temple on Mount Gerizim (see *SAMARITANS* §C1d), declaring that it was built by permission of Darius III and Alexander the Great, modeled after the temple in Jerusalem, but called by different names until its destruction by John Hyrcanus in 128 B.C. The present-day Samaritans revere a flat rock on the highest peak of the mountain as the place where their temple stood, although no ancient remains have been found there. On top of the northernmost peak of Mount Gerizim, at Tell er-Râs, however, a large building complex centered around a half cube, sixty-six feet wide, sixty-six feet long, and thirty feet high, constructed of large unhewn stones, laid without cement and without internal structuring, has been excavated. This structure rests on the bedrock of the mountain in the midst of a 135-foot-wide, rectilinear courtyard built with walls of unhewn stone. The latest pottery taken from the foundation trenches of the walls is from the third century B.C.

The discovery of this monumental structure

dating from the Hellenistic period on Mount Gerizim above Shechem, the chief city of the Samaritans, has led the excavator to call the complex the Samaritan temple and the unhewn stone half cube, the Samaritan altar of sacrifice. The remains of this altar would have been visible to Jesus and the Samaritan woman from Jacob's well (John 4:20), as it is today.

On the S slopes of the mountains a walled town, probably Samaritan Luza, with foundations from the Hellenistic period has been surveyed.

In the second century A.D. HADRIAN built on Mount Gerizim a temple to Zeus Hypsistos with a stairway of over 1500 marble steps leading to it. This temple, depicted on second-century coins minted at Neapolis, has been found at Tell er-Râs, built on top of the remains of the Samaritan temple. Apart from the church built by Zeno in A.D. 485 and the fortification built round it in the sixth century by Justinian, there are no other known ancient structures on the mountain.

\***GEZER.** The earlier article on Gezer contains an adequate description of the site, as well as a summary of the literary sources and of the previous excavations. The present article corrects and supplements it.

1. **The Late Chalcolithic period.** The earliest occupation (stratum XXVI) is on the bedrock and in some of the natural caves. It is extensive but characterized mainly by campsites, hearths, rock-cuttings, and the most elementary domestic installations. It is clear that the village was unfortified. The material culture is closest to that of the Ghassul-BEER-SHEBA sites of the last half of the fourth millennium B.C., particularly in the ceramic (the "cream ware") and lithic industries.

2. **The Early Bronze period.** The first occupation followed that of the Late Chalcolithic after a brief hiatus, re-using some of the structures and showing continuity in certain elements of material culture. The fullest evidence is from Cave I.3A in Field I (stratum XXV), which was first used for a dwelling and then later for storage. In addition to an assemblage of pottery and stone vessels, it contained charred grain which yielded a radiocarbon-14 date of 3045 B.C. ± 180. This would correlate well with the other sites of this horizon, Wright's "EB IB" and Kenyon's "Proto Urban" periods.

The main phase of EB occupation was represented by strata XXIV-XXIII, which extended from the twenty-ninth into the twenty-sixth century B.C. The town was now rather densely built up, and the pottery and other artifacts show a considerable degree of prosperity. Although this period at comparable sites is characterized by massive city walls, it is clear that Gezer remained undefended. Two phases of occupation were discerned, coming

to an end contemporary with most other sites in Palestine about 2500 B.C., in a manner as yet unexplained. The site lay deserted throughout the EB III-IV and MB I periods, ca. 2500-1900 B.C., with only sherds marking the gap ("stratum XXII").

3. **The Middle Bronze II period.** This period (strata XXI-XVIII) represents Gezer's zenith, as one of Palestine's greatest Canaanite city-states. In MB IIA the build-up was gradual and the town was not yet fortified. By MB IIC, however (ca. 1600 B.C.), a massive defense wall (Macalister's "Inner Wall") circled the site, reinforced by a series of stone towers and a plastered glacis (or ramp). The gate on the S side was of the typical three-entry-way type, flanked by two towers of cyclopean masonry more than fifty feet thick. Macalister's "High Place" has been conclusively dated to this period. This unique installation consists of ten enormous standing stones (or masseboth of the OT), some more than ten feet high (see PILLAR[S] Fig. 5). It can no longer be interpreted with Albright and others as a mortuary shrine, but must have been rather an open-air sanctuary.

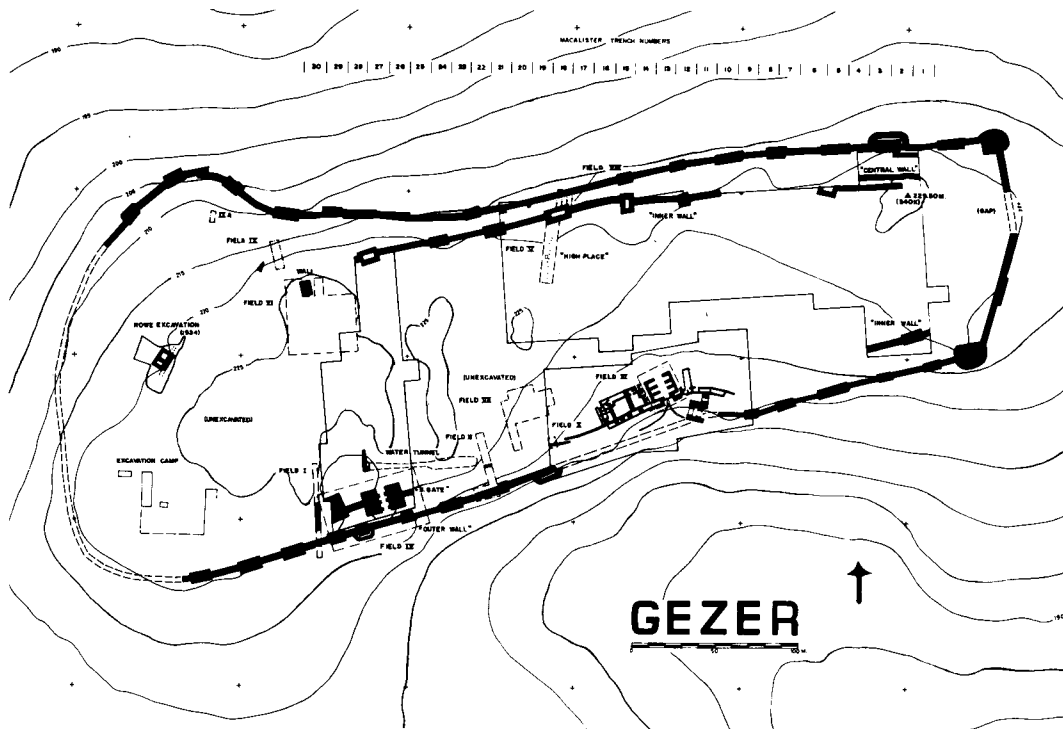

4. **The Late Bronze period.** The long MB period having been brought to a violent end by a destruction possibly attributable to Pharaoh Thutmose III ca. 1479 B.C., Gezer was virtually deserted for most of the LB I period in the fifteenth century B.C. (stratum XVII). A revival accompanied the LB IIA period (stratum XVI, fourteenth century B.C.). This is witnessed independently by ten letters from three different kings of Gezer in the Amarna archives (see TELL EL-AMARNA §2; TELL EL-AMARNA

[S] § 2). The town evidently overflowed its walls, for a new defense system (Macalister's "Outer Wall") was built farther down the slopes, equipped with its own glacis. Domestic levels revealed hints of considerable wealth but were mostly robbed out later. A cave in Field I (I.10A) yielded several dozen well-preserved burials, accompanied by both local and imported pottery and small objects, some of Egyptian derivation. It is possible that the great water shaft and tunnel were constructed during this period, but a date in the Iron Age cannot be ruled out.

A destruction ended the Amarna period, followed by a rather poor domestic occupation during most of the thirteenth century B.C. (stratum XV). A further disturbance toward the end of the century was followed by a period of squatter occupation and deep pitting and trenching operations (stratum XIV). This may be due to a partial gap following the destruction which Pharaoh MER-NE-PTAH claims on the well-known "Israel Stele" ca. 1220 B.C.

5. **The Philistine era.** Strata XIII-XI of the twelfth-eleventh centuries B.C. represent the Philistine era. The period is characterized by the typical painted bichrome pottery, as well as by several fine courtyard houses (see Fig. G2), a public granary, and a series of unique stone wine vats. The period began without major disturbances but was divided internally by several destructions, after which (from the mid-eleventh century B.C. onward) there was a marked decline until the mid-tenth century B.C. (strata X-IX).

6. **The Israelite period.** After a final destruction ending the Philistine period, the earliest Israelite

structures appeared, accompanied by the characteristic hand-burnished pottery. Stratum VIII saw the repair of the "Outer Wall" with a series of ashlar towers being inserted; the addition of a casemate wall near the destroyed city gate; and the construction of a four-entryway gate nearly identical to those known at HAZOR and MEGIDDO (see Fig. G3). This is a striking confirmation of I Kings 9:15-17, which records an Israelite takeover of the site and its refortification following an Egyptian destruction. Stratum VIII appears to have been destroyed by Shishak ca. 918 B.C.

Strata VII-VI mark the Iron II period until the Assyrian destruction in the late eighth century B.C., which is vividly witnessed. Stratum V in turn ended with the Babylonian destruction ca. 587/586 B.C., again well attested. The evidence indicates that after the Solomonic period Gezer was a relatively unimportant city.

**7. The Persian, Hellenistic, and Roman periods.** Strata IV-I represent these periods, in which Gezer enjoyed a revival only briefly during the mid-second century B.C., when it played a rather prominent role in the Maccabean wars. At this period the gate was rebuilt a final time and semi-circular bastions were added to the "Outer Wall." The well-known boundary inscriptions belong to

the Herodian era, when occupation on the site seems to have ceased and the area belonged to a large Roman estate. Many Byzantine and a few later tombs brought its history to a close.

**\*GIBEAH (OF BENJAMIN).** In 1964 the ancient remains on the summit of Tell el-Ful, the likely site of ancient Gibeah of Benjamin, were excavated by Lapp under the aegis of the American School of Oriental Research and Pittsburgh Theological Seminary.

**1. Saul's fortress.** This excavation aimed at uncovering evidence to settle a number of controversies arising from prior excavations. Discussion had centered on a massive rectangular tower which Albright attributed to King Saul and from which he projected the plan for a huge fortress (see GIBEAH 2 and Fig. 27). Others suggested that this was a lone tower or was constructed by a Philistine garrison (I Sam. 13:3, reading "Gibeah" for "Geba"). Some objected that the contours of the mound would not support a fortress with so broad a W-E axis such as Albright projected.

Unfortunately, most of the evidence which might have decided these and other questions with finality no longer existed. Most of the structures contemporary with the tower were subsequently dug out by builders of the Israelite and Hellenistic periods in order to found their structures firmly on bedrock. Lapp, however, did discover a ten-foot portion of a five-foot-wide wall N of the tower. Datable pottery and similarity of construction show that this fragment belongs to the same building complex as the tower. It may well be a portion of the W wall of the projected fortress, for it is of similar width and almost in line with the "fortress" wall running N from the tower. Thus, it is clear that there was more than a single tower here. Nor is it unreasonable to view the complex as a "fortress" of some sort, since the wall fragment is fully five feet wide. The wall, however, is too far N to support Albright's projected plan. The N-S axis was more likely longer than the W-E axis. In addition, the absence of any evidence for an inner wall makes it necessary to abandon the supposition that this was a casemate or double-walled construction during Saul's time.

**2. Occupation.** On the basis of the pottery, the occupation layers are now to be dated as follows:

Pre-fortress period	ca. 1200-1150 B.C.
Fortress period	ca. 1025-950
City with casemate wall	late seventh, early sixth century
Rebuilt city	middle sixth century
Populous Hellenistic town	last two thirds of second century

On this dating it is unlikely that the Philistines constructed the first phase of the fortress, for Gibeah was apparently unoccupied during the height of Philistine power (see PHILISTINES[S]). We may assign its construction to King Saul with as much assurance as is ever possible where documentary evidence is lacking. If a Philistine garrison was at Gibeah, it was either on temporary bivouac or housed in an installation on some point of the mound not yet excavated.

In the late seventh century the city was rebuilt and fortified by a casemate wall (containing chambers, formed by two parallel walls joined by transverse walls). Sections of this were discovered both on the W and the NE. After destruction, presumably by the Babylonians, Gibeah flourished in the sixth century. Its houses spilled outside the fortifying city walls. This was a period when Judah to the S lay in ruins, and the population center moved N (cf. Jer. 40:11-12). Gibeah's final period of occupation, during Maccabean times, was also one of its most populous ages. The relatively small area excavated at Gibeah produced no less than twenty-four storage silos, probably dug at the time of Saul and then reused down into the Hellenistic age.

\***GNOSTICISM.** Usually designates a religious or philosophic movement widespread in the first three centuries A.D. The diverse teachers, groups, and systems described as Gnostic share the conviction that, although mankind exists in ignorance and illusion, one can, through *gnosis*, attain spiritual liberation, that is, recognition of one's own identity with the divine.

1. **The problem of definition.** Irenaeus, bishop of Lyons (ca. 180), described Gnostic groups and teachers that he saw proliferating among his contemporaries: he said of the members of a single sect (Valentinian) that "you can hardly find two or three that agree on anything: they all con-

tradict each other, both in the terminology and substance of their teaching" (Her. I.xi.1). Epiphanius (ca. 375) listed more than sixty Gnostic leaders, most of them unknown except by name; extant sources offer specific characteristics of at least twenty distinct teachers or sects. The second-century evidence reveals a diversity in ethical practice that ranges from ascetic to antinomian and libertarian, in ritual from the mystery religions to Jewish and Christian practice, and in theology from metaphysical philosophy to myth and magical incantations.

What justifies classifying such disparate groups together as Gnostic? For one thing, members of some groups called themselves Gnostics (literally, "those who know"). The Naassenes, for example, claimed that they alone knew "the secrets of the holy way" since, as they said, "they alone knew the deep things" (Hippolytus, *Refutation* V.vi.4). Followers of the teacher Marcellina similarly "call themselves gnostics" on the basis of secret doctrines, as do the Valentinians who claim "to know the deep things of God" and to have "perfect knowledge of God" (Iren. Her. I.xxv.5; I.vi.1; xix.1-xxi.4). Members of the groups that Irenaeus and Hippolytus described considered themselves to be Christians, but claimed to have surpassed the faith they held in common with other believers, which they contrasted with the "higher gift" of gnosis, "knowledge" or "insight."

One received gnosis through a process of initiation. The initiate passed thereby from identification with "the many" who remained ignorant into the circle of "the few" to whom was given "to know the mysteries of God." Some groups (notably certain Valentinians) offered doctrinal instruction to prepare the candidate for the secret ritual of "redemption" which conveyed gnosis. Such secret rituals took diverse forms; even within a single sect practice varied from second baptism to the "bride-chamber" ritual. Others dispensed entirely with ritual, considering the attainment of gnosis itself to be the "redemption."

Gnostic teachers insisted that it was impossible to describe the specific content of gnosis: "Because it is not static, it cannot be explained simply or in one word. So there are as many systems of redemption as there are teachers of these mystical doctrines" (Iren. Her. I.xxi.1). Nevertheless, receiving gnosis characteristically occurred as an act of self-discovery. One Valentinian writer explained that "it is not the bath [baptism] which liberates, but it is *gnosis* of who we were, what we have become; whence we were; into what we have been cast; whither we hasten; whence we are redeemed; what birth is, and what rebirth" (*Excerpts from Theodotus* 78.2).

Receiving gnosis, one learned the secret of one's true identity: that the inner self is unalterably divine. The initiate thereby rejected the view common to Jewish and Christian tradition, that mankind, having been made by God the creator, always remains distinct from the divine nature. Instead the Gnostic learned to recognize himself as a child generated from the true Father and the true Mother; hence his inner nature belonged to that divine harmony. Those "redeemed," then,

were released from the creator's dominion; they might declare independence from his authority as they asserted their newly found identity: "I am a son from the pre-existent Father. . . . I know myself, and I know whence I am" (Iren. Her. I.xxi.5). In certain Valentinian circles, the ritual described as "the mystery (or: sacrament) of marriage" initiated the recipient into union with the divine; one was thus transformed and enabled to anticipate the full realization of the divine nature.

Many Gnostic groups traced the authority for such esoteric traditions to the Savior himself, and specifically to the secret teaching he gave to certain disciples. The Naassenes, for example, said that their tradition came from Jesus through James, his brother, then through Mariamne; the followers of Basilides traced theirs to Matthew; the Valentinians to Paul through his disciple Theudas. Included in these secret traditions were techniques for reading and interpreting "the scriptures," that is, the Hebrew Scriptures and many of the Christian writings, which, in these circles, often included esoteric writings. Such groups considered themselves to be "the spiritual," "the elect," or "those who have transcended," in contrast to the ignorant masses outside their circle.

Certain affinities in structure and religious conception exist, therefore, between different Gnostic sects: the discrimination of an inner circle of "those who know"; secret writings and oral traditions of doctrine, exegesis, and rituals; the concern with knowledge as the primary means of redemption; the characteristic identification of self-knowledge with knowledge of God.

2. **The scope of the discussion.** "Gnosticism" is a modern term. As long as the polemic writings against the Gnostics remained the primary sources for research, Gnosticism generally was considered a Christian heresy. In the eighteenth and nineteenth centuries, with the discovery of some original Gnostic texts, certain scholars suggested that Gnosticism may not have been primarily Christian, but possibly was an independent, even pre-Christian movement. Some, noting affinity between Gnostic sources and a wide range of other religious phenomena, proceeded to redefine Gnosticism in terms of specific doctrines or "attitudes" which, in their view, characterize it. On this basis the HERMETIC LITERATURE has often been classified as a type of Gnostic literature. Similarly, MANICHEISM, the dualistic theology that arose in the third century combining Christian and Iranian religious conceptions, may be regarded as a form of Gnosticism. MANDAEISM, a baptist sect that continues even today, may represent a Gnostic system. Certain movements within Judaism seem to demonstrate striking, if diverse, affinities with Gnostic sources: Scholem cites as examples the Qumran community of the DEAD SEA SCROLLS, PHILO, the Merkabah mysticism (see PSEUDEPIGRAPHIA[S] §2c) of the school of Johanan ben Zakkai, and even the medieval doctrines of the Kabbalah. Certain currents within Islam, such as Sufism, may contain phenomena parallel to Gnosticism. Some scholars see Gnostic influence in certain occult or theosophic traditions, even those

continuing to the present; others see parallels between Gnosticism and some esoteric Buddhist schools.

3. **Sources.** Two types of sources offer information on Gnostic sects and doctrines: the accounts of the church Fathers, written to refute Gnosticism, and original Gnostic works, including many discovered since 1946.

a. **Patristic works against Gnosticism.** Irenaeus' *Against Heresies*, or *Unmasking and Refutation of the False Gnosis*, is the most important of those that are extant. Irenaeus and his predecessor Hegesippus (whose lost work, the *Memoirs*, is often quoted in the *Ecclesiastical History* of EUSEBIUS) relate information gained by discussion with Gnostics, by hearsay, and by reading Gnostic works. Tertullian (d. 220) wrote five books *Against Marcion*, one *Against Valentinus*, the *Prescription of Heresies*, and the *Scorpiace* ("remedy for the scorpion's sting" of Gnosticism). Clement of Alexandria (d. before 215) includes quotations from Valentinus, Basilides, and others in his *Miscellanies* and quotes extensively from Theodotus (*Excerpts from Theodotus*). Hippolytus of Rome (d. 235) used Irenaeus' writings and other sources in his own *Refutation of all Heresies*. The works of Origen (d. 253/254), notably his *Commentary on John*, contain citations especially from Heracleon. Eusebius' *Ecclesiastical History* and the *Panarion* of Epiphanius (d. 403) also offer much useful information.

b. **Original Gnostic texts.** The patristic materials have clear disadvantages as sources for the study of Gnosticism, because their authors are writing specifically to "attack and destroy" what they intend to unmask as "false gnosis." With the discovery of the Askew Codex, acquired by the British Museum in 1785, original Gnostic texts became available for the first time. Since then an extraordinary range of Gnostic texts have been discovered.

The Askew Codex contains four books, including the PISTIS SOPHIA, a third-century text which purports to narrate secret conversations between the risen Jesus and his disciples. The Bruce Codex, which includes the Two Books of Jeu, was discovered in 1769 and published in 1891. The Berlin Codex, discovered in 1896, disclosed several remarkable texts, including a Gospel of Mary, the Sophia of Jesus Christ, and the Secret Book of John (see JOHN, APOCRYPHON OF[S]).

Far more significant than any earlier find was the discovery in 1945-46 of thirteen Coptic codices near Nag Hammadi in Egypt. For a discussion see NAG HAMMADI[S] and other articles cross-referenced there.

4. **Gnostic doctrines.** Irenaeus describes how Gnostic groups proliferate and rival each other's claims: "Since those who are considered more contemporary among them endeavor to describe something new every day, and to invent what no one ever thought of before, it is difficult to describe their opinions" (Iren. Her. I.xxi.5). While members of more conventional Jewish and Christian groups stress their fidelity to archaic tradition, Gnostics (rather like members of artistic circles today) regard innovation as the mark of spiritual

creativity. Yet gnosis always involves a definite understanding of God and the world which is of decisive importance and which may be characterized as follows:

(1) There is an irreconcilable contradiction between the cosmic system of this world and the absolutely transcendent God. That God is often described negatively: the indescribable, unknowable, or nonexistent One; alternatively, the Abyss, Source, or Primal Beginning of all things.

(2) The "I" of the Gnostic, the "spirit," or "inner man" is unalterably divine, and belongs to that divine being which transcends all creation.

(3) The "spiritual" element, however, has become mingled with two distinct lower elements, and bound into the lower order of creation with them: first, with the body, dominated by sensual passions; second, with the soul, the center of psychic functions. The spirit, hidden within soul and body like marrow within two layers of bone and flesh (*Excerpts from Theodotus* 51-61), has been entrapped within these lower elements. The person in whom it is hidden remains unaware of its presence.

(4) Only an emissary from the divine world above—a savior, a redeemer, or a "call"—can release these bonds of confinement. Through gnosis the spiritual spark that lies dormant within the Gnostic is ignited, and the inner spirit is liberated so that one becomes aware of one's own true nature.

A consideration of the views of Marcion, Basilides, and Valentinus will illustrate several ways in which such a schema could be adapted to different religious systems and practices.

**a. Marcion of Pontus**, one of the most distinctive heretics, often classified as a Gnostic, came to Rome ca. 130-44, apparently accepted as a member of the Christian community. His opponent Tertullian says that he became preoccupied with the problem of evil: he came to reject the belief that God the creator is both good and just, that mankind, created good, introduced corruption into the world by an act of willful disobedience. Marcion concluded that the Creator, if just, is neither omnipotent nor good; that Christ's message of his good, loving Father therefore must refer to a God hitherto entirely unknown. Marcion read Paul's contrast of law and gospel as a confirmation of his conclusions: his work *Antitheses* contrasts the just, wrathful creator of the OT with the Good Father of Jesus. Marcion presented his own edited version of "the gospels and the apostle," which he claimed to have shorn of the secondary accretions added by "Judaizing" Christians. Expelled from the Roman church, he founded an institutional church whose members strove to attain perfect adherence to the Father by rejecting the creator and his works, including sexual intercourse, meat eating, and drinking of wine. See MARCION, GOSPEL OF.

Marcion's teaching bears certain clear affinities with Gnostic teaching; for example, his distinction between the Unknown Father and the creator, and his claim of a relationship between the Father and those who attain a "new recognition" of him through Christ. Nevertheless, according to the

sketch of Gnostic doctrine given above, Marcion could not be described as a Gnostic teacher, for he does not consider the inner self to be divine prior to redemption. Furthermore, his teaching lacks the mythological and allegorical elaboration that characterizes many Gnostic teachings; and, unlike many, it leads to specific ascetic practices within an institutional structure.

**b. Valentinus**, the most influential Gnostic teacher of his time, came from Egypt to Rome ca. 140-60. His many writings have been lost, except for a few fragments, although some scholars suggest that GTr (see TRUTH, GOSPEL OF[S] §§1, 5) and OnRes (see RESURRECTION, THE TREATISE ON[S] §3) discovered at Nag Hammadi are his original writings. Tertullian says that Valentinus had expectations of becoming the leader of the Christian community in Rome, but that he subsequently separated from the church and taught independently. His followers include Ptolemaeus, author of the *Letter to Flora*, who also wrote an exegetical commentary on the Johannine prologue; Heracleon, author of the first known commentary on the Johannine gospel (and possibly of the Tripartite Tractate from Nag Hammadi); Florinus, a presbyter and teacher in Rome; Theodotus, excerpts of whose writings are found in the works of Clement of Alexandria; and Marcus, whose ritual practice and doctrine Irenaeus describes.

His followers claimed that Valentinus' teacher was Theudas, a disciple of Paul who, they said, received the apostle's secret teaching. They represented themselves, therefore, as transmitters of "wisdom" (cf. I Cor. 2:6), or as the "elect few" among the larger circle of Christian believers, whom they termed "the many," or the "ecclesiastics." They offered to teach gnosis to those they considered ready for it, and to initiate them into the Gnostic circle by means of secret rituals. While they themselves insisted that their esoteric teaching disclosed the "true meaning" of the Scriptures, Irenaeus attempted to repudiate their claims, declaring instead that their teaching undermined Christian faith and contradicted its basic premises.

Valentinus' own teaching, according to Irenaeus, begins with the doctrine of the primal Dyad, one element of which is called Indescribable, and the other, Silence. From their relationship proceeds the Father and Truth, Logos and Life, Mankind and Ecclesia, and from these proceed the whole fullness of the divine being. Describing the divine being as a harmonious relation of masculine and feminine hypostases, Valentinus relates that the twelfth and youngest of these, Sophia, having separated from her counterpart, Theletos, sets in motion the devolution of the divine being. Thereby a portion of the spiritual being becomes intermingled with the ignorance, fear, confusion, and grief she experiences in her separation from the divine being. The creation of the cosmos then becomes a means of repairing the effect of Sophia's transgression. The savior, sent from the "PLEROMA," transforms her four "passions" into the elements of air, earth, fire, and water. Through the demiurge, himself created by the Savior, and Sophia as the unwitting instrument of cosmic creation, the "seed" of the divine spirit receives a structure, the

"cosmic system," within which it is planted and may grow to maturity (i.e., receive gnosis concerning its divine origin).

Those persons who became aware of the presence of the spirit (*pneuma*) within them were, the Valentinians explained, pneumatic, the elect seed. The rest were classified according to their identification either with matter (as *hylics*) or with the soul (as psychics) by contrast with the spiritual ones (pneumatics). Valentinian teachers differed, apparently, on questions of ecclesiology and eschatology. Most frequently they described how the pneumatic seed, scattered into the cosmos since Sophia's fall, was to be regathered and purified. All material elements of creation were to be annihilated and the psychic elements discarded as the pneumatic seed, reconstituted in Sophia, were restored to the harmony of the divine being. Although Valentinian theology persisted in various Christian communities through the fourth century (as Origen's works and the texts from Nag Hammadi indicate), it is difficult to trace beyond that period.

c. *Basilides*, active in Rome from the time of Hadrian to Antoninus Pius (ca. 115-45), wrote a gospel, twenty-four books of exegesis on the gospel (only fragments of which remain), and hymns and prayers (which have been lost). His followers include Isidore, who declared that gnosis is to be understood not as philosophy but as prophetic insight. Irenaeus and Hippolytus offer sharply contrasting accounts of Basilides' teaching. According to Irenaeus, Basilides described the origin of all things from the God who originated five forces (Nous, Logos, Phronesis, Sophia, and Dynamis). From these were formed angels who created 365 heavens, all ruled by Abraxas, and ranked in descending order. The lowest of these heavens was ruled by the Jewish God who introduced strife into his creation. To rectify this situation, the highest God sent his Nous, that is, Christ, who appeared in spiritual form to liberate those who recognize him from the oppression they suffer from the rule of angelic powers and their chief, the Jewish God.

Hippolytus' account, on the other hand, relates that Basilides taught a monistic doctrine. Like the Valentinian teaching, Basilides' doctrine attempted to account for the dispersal of the divine seed within cosmic creation, and to anticipate its final restoration into its divine source. According to this account, the ineffable God put forth the seed of the world, which contained within it potentially all elements of the future creation. Within this world seed were included three Sonships; the Sonship of light, which ascends immediately to God; the Sonship mingled with darkness, which needs to be purified through the Holy Spirit; and the third Sonship, which needs revelatory teaching to achieve its final purification. The Son of the High God descended with the gospel message to the lower regions ruled by the demiurge, the Great Archon, to reveal the true nature of the sonships and to purify and finally to liberate those who belonged to each, so that all might finally reascend to the place of divine origin.

5. **History of interpretation.** Von Harnack's classic definition of Gnosticism as "the radical Hel-

lenizing of Christianity" was based primarily upon heresiological sources. From these he inferred that Gnostic teachers, attempting to interpret Christian doctrine by means of the terms and concepts of Greek philosophy, became in one sense "the first Christian theologians," yet in another, propagators of false, spurious, hybrid forms of Christianity. Although this definition continues to exert its influence (Leisegang, Wilson), it has been challenged by some scholars who have asked, first, whether Gnosticism is essentially Christian at all, and, second, whether its primary sources are indeed Hellenistic. Some (e.g., Bousset) have concluded that Gnosticism was a pre-Christian movement, an independent religion derived from ancient Iranian tradition, and that such Christian elements as are found are late, superficial additions. Others (e.g., Wilson, Scholem), while agreeing that the antecedents of Gnosticism are pre-Christian, stress the influence of Jewish sources. Certain of the Nag Hammadi texts in particular (such as *The Nature of the Archons*, *The Testimony of Truth*) continuously cite Jewish scriptures with little or no reference to Christian sources. Still other scholars view Gnosticism as a syncretistic movement arising simultaneously—but independently—with Christianity in the first and second centuries A.D.

This whole quest for origins has itself come under attack as a method of research that leads to a potentially infinite regress of ever remoter "origins." Instead, it has been argued, the impetus for the development of Gnosticism must be sought in specific events or experiences: in the shattering of eschatological hope after the fall of Jerusalem in A.D. 70 (Grant); in "the experience of the self," then mythically projected (Quispel); or in a certain "attitude toward existence" (Jonas). Present research is less concerned to construct comprehensive theories than to investigate the remarkably diverse body of Gnostic literature that is becoming available from Nag Hammadi—some of it distinctively Christian, some showing little or no Christian influence, some few writings with a pagan origin, and some (perhaps more than expected) with a Jewish origin. Publication of these materials remains the first priority of scholars of Gnosticism, who generally agree that earlier theories will have to be revised in the light of these newer resources.

\***GOD, NATURE OF, IN THE OT.** As a symbolic mode of disclosure, theological language presents God in relationship to Israel, to humankind, and to the individual. This language belongs to different genres which span centuries of traditions and carry diverse perspectives. It is culturally conditioned speech which draws from a variety of experiences. Thus the OT does not describe God as God. Instead, it appropriates both andromorphic and gynomorphic images to portray a God who relates to human concerns. Though often neglected in OT theology, the female images are especially important for an expanding knowledge of ways in which the divine and the human meet.

1. **Womb imagery.** a. *The root rĥm.* Designating a place of protection and care, the womb (*reĥem*) is a basic metaphor of divine compassion. The metaphor begins with a physical organ unique to the female and extends to psychic levels in the plural noun רחמים (mercies), in the adjectival form רחום (merciful), and in uses of the verb רחם (to show mercy). It moves from the literal to the figurative, from the concrete to the abstract.

b. *The credal formula.* Distinctive in Mosaic faith is the assertion that Yahweh is merciful (רחום) and gracious (Exod. 34:6; cf. 33:19). Used only of the deity, רחום is not language for a father who creates by begetting but for a mother who creates by nourishing in the womb. Often as part of a set phrase, the term occurs in descriptions of God's saving acts in history (Ps. 111:4; Neh. 9:17), and in petitions for deliverance (Ps. 86:15), calls for repentance (Joel 2:13; Jonah 4:2), and proclamations of unmerited forgiveness (Pss. 78:38; 103:8).

c. *Some prophetic contributions.* Hosea employs uteral speech in both negative and positive ways (e.g., 1:6, 7; 2:1, 4, 19, 23 [H 3, 6, 21, 25]). Jeremiah intensifies this language in a poem replete with female imagery (31:15-22). Over against Rachel's lament is the word of Yahweh: "Is Ephraim my dear son? Is he my darling child? For as often as I speak of him, I do remember him still. Therefore my inner parts yearn for him; I will surely have motherly compassion on him (*rahēm* "*rah'mennū*"), says the Lord" (31:20, author's trans.). As Rachel mourns the loss of the fruit of her womb, so God yearns from her own inner parts. While the human mother refuses comfort, the divine mother changes grief into grace (cf. Jer. 12:15; 30:18). This vocabulary of the feminine continues in the final strophe. There Jeremiah calls the nation "virgin" and "daughter." Not only do these epithets replace a masculine one (vs. 20), but also they lead to the revolutionary reversal of sex roles. In the new creation a merciful (*rĥm*) God overturns male dominance: "For the Lord has created a new thing on the earth: a woman protects a man" (31:22b).

Both physical and psychic meanings of womb appear in Isa. 49:15. Juxtaposing Yahweh and a mother, the word hints at the unfathomable depths of transcendent love.

d. **Conclusion.** Uteral imagery is used extensively in the OT. This language functions as a major symbol throughout the history of Israel. In this symbol, divine mercy is analogous to the womb of a mother. As Yahweh's creative activity, maternal compassion signifies the thought, feeling, attitude, and action which results in life and well-being for nations, individuals, and the world (cf. Ps. 145:8, 9). It suggests a natural and spontaneous relationship between the divine and the human, in contrast to one based on adoption, duty, or law. It embodies God's intimate embrace.

Yet this analogy does not restrict the love of God to a female attribute; rather it establishes that semantic value from which a wide range of meanings extend. And among these meanings is paternal love: "As a father pities (*k'rahēm*) his children, so the Lord pities (*riĥam*) those who fear him" (Ps. 103:13). Hence, from its literal base in the uterus, this metaphor expresses the love of female, male (cf. I Kings 3:26 with Gen. 43:30), and deity. Neither definition nor limitation, it contributes a major component to the meaning of mercy.

2. **Related female images.** a. *Womb and breasts.* In addition to the womb itself, other gynomorphic language enhances an understanding of God in relationship. Gen. 49:25 parallels the God of the fathers with the God Shaddai. These epithets balance masculine and feminine symbols. Cross holds that Shaddai had the original meaning of female breasts, a meaning that is preserved here through paronomasia (see WORDPLAY IN THE OT [S]). The God of the breasts gives the blessings of the breasts (*shadayim*; cf. Hos. 9:14). Elsewhere, the deity is both midwife and mother. She takes the infant from the womb and places it safely upon maternal breasts; in turn, she becomes the very one upon whom the child is cast from birth (Ps. 22:9-10 [H 10-11]). Although this poetry stops short of equation, its female imagery corresponds to divine activity (cf. Ps. 131:2).

b. *Travail.* What Ps. 22 suggests, Deut. 32:18 makes explicit: "You were unmindful of the Rock that begot you, and you forgot the God who gave you birth." While the first verb (*yld*) is used for both the bearing of the mother and the begetting of the father (e.g., Prov. 23:22, 25), the second verb (*hyl*) describes only a woman in labor pains (e.g., Isa. 51:2). God is such a woman, bearing Israel in travail. Similarly, Second Isaiah interprets destruction as "the birth pangs of God." Out of divine labor comes a new creation: "Now I will cry out like a woman in travail, I will gasp and pant" (42:14b). In Job 38:29 the gynomorphic metaphor is ironic: "From whose womb did the ice come forth, and who has given birth to the hoarfrost of heaven?" A woman's giving birth is not comparable to the cosmic work of God; yet this human analogy alludes to divine creativity. From the divine womb came the ice and the hoarfrost (cf. Job 38:8).

c. *Comfort.* Proclaiming the unprecedented birth of a new people to Zion, Yahweh identifies with that event: "Shall I bring to the birth and not cause to bring forth? says the Lord; shall I, who

cause to bring forth, shut the womb? says your God" (Isa. 66:9). This poem continues with a joyful description of Jerusalem the consoling mother (vss. 10-11). Then the deity speaks: "As one whom his mother comforts, so I will comfort you; you shall be comforted in Jerusalem" (vs. 13). Whereas this metaphor focuses primarily on the nation as a child being comforted, its second level pertains to the agent of that comfort, God as mother.

**d. Conception.** In Num. 11, when Israel complains of hunger and thirst, an angry Moses reproaches God (cf. II Esd. 1:28-30): "Did I conceive all this people? Did I bring them forth that thou shouldst say to me, 'Carry them in your bosom, as a nurse carries the sucking child, to the land which thou didst swear to give their fathers?'" (11:12). The first two verbs depict a woman becoming pregnant and giving birth. Indirectly, Moses ascribes that activity to God. Moreover, he sees Yahweh providing food for the infant. Although the word for nurse is masculine (*hā'ōmēn*), the imagery surrounding it favors a feminine meaning. Indeed, an alternate pointing reads *hā'immōn*, a hypocorism for 'em, mother (see *bibliog.*).

**3. Conclusion.** All these passages disclose an invaluable vocabulary of female imagery for God. Recovery of this meaning tempers any assertion that Yahweh is a male deity. It expands our understanding of the divine-human relationship, for which both female and male images are appropriated. Yet Israel knows the inadequacy of all analogies to the freedom and transcendence of Yahweh (cf. Num. 23:19; Isa. 40:25; Hos. 11:9b), and OT faith has no final resting place in God the mother, or in God the father. The One to whom these epithets witness goes before Israel in otherness to make all things new: "For my father and my mother have forsaken me, but the Lord will take me up" (Ps. 27:10).

\***GOD, OT VIEW OF.** See PRESENCE OF GOD, CULTIC [S].

\***GOLDEN RULE, THE.** 1. **Background.** The maxim enjoining one to treat others as one would like to be treated, in both the positive and negative form, is, in the Hellenistic world, a product of the Sophistic movement (late fifth century B.C.). It resulted from the Sophists' penchant for encapsulating popular morality in pungent aphorisms. It is, accordingly, an expression of popular morality rather than of philosophic ethics, based on the ancient idea of retribution or reciprocity, a notion

which, in turn, arises out of an understanding of the world of moral action as a balance of obligations. The Golden Rule is related to primitive ideas like blood revenge, which Greek and Hellenistic philosophic ethics quickly transcended in their quest for the good as such. It is clearly inadequate as a guide to conduct unless there is also present a notion of the good to enlighten and control the reciprocity; to give a vivid example, a masochist following the rule naïvely would wreak moral havoc.

The Rule occurs for the first time in Greek literature in Herodotus (III.142; VII.136), who was influenced by the Sophists. From the fourth century B.C. onward it was an essential part of the gnomic popular ethics encountered in the Greek and Latin literature influenced by rhetorical schools, but is absent for the most part in philosophic writings (cf. Aristotle's *Rhetoric* II.vi.19). It does not occur in Jewish literature before the Hellenistic period (Aristeas 207; Tobit 4:15), although it could be seen to be implied in texts like Deut. 15:13. Despite this latter possibility, one must conclude that the Golden Rule is the product of Greek popular morality as formulated by the Sophists, and was taken over from there by Jewish thought in the Hellenistic period. In early Christian literature the Golden Rule was popular, mostly in the negative form.

**2. In the NT. a. Luke.** The Golden Rule occurs in a puzzling context in the Third Gospel as part of an exhortation to love one's enemies (Luke 6:27-36; cf. Matt. 5:38-48). The very attitude of reciprocity which the rule seems to advocate in vs. 31 is condemned in the vss. immediately following (32-34). The Golden Rule would appear to be a rather loose summary of vss. 27-30. It is interpreted, in turn, by vss. 32-34, in such a way as to minimize the element of reciprocity which it entails. Luke, therefore, like Hellenistic philosophic ethics in general, is transcending the relatively naïve popular ethic of the Golden Rule by means of the radical religious ethic of love for enemies. The background of Luke's thought in this regard is the tradition about Jesus and the humanitarian climate of Greco-Roman philosophic culture.

**b. Matthew.** In Matthew the Golden Rule summarizes the teaching of the SERMON ON THE MOUNT that precedes it. Davies suggests that the section of the Sermon from 5:17 to 7:12 was composed as a counterpart to the three pillars of Judaism (AB. 1.2)—Torah, worship, and deeds of loving-kindness. In 5:17-48 we find the Torah of Jesus, in 6:1-16 the true worship, and in 6:19-7:11 deeds of loving-kindness. All this is summarized by the Golden Rule in 7:12, which is called, in turn, the epitome of "the law and the prophets." This statement [οὗτος γάρ ἐστιν ὁ νόμος καὶ οἱ προφῆται] recalls the opening of the section in 5:17-18, and the great twofold commandment in 22:40.

By qualifying the Golden Rule as "the law and the prophets" and linking it with the preceding sermon, Matthew achieves the same correction of the ethic of naïve reciprocity as Luke does. They link the Golden Rule with a clear statement of the content of the good, thus providing an idea

of the good by which reciprocity might be guided and controlled.

\***GOLGOTHA.** See HOLY SEPULCHRE, CHURCH OF THE[S].

\***GOLIATH.** The MT of I Sam. 17:4 gives the height of Goliath as "six cubits and a span," and this is followed by most modern translations. (Cf. NEB "over nine feet in height.") Two LXX MSS, however, read "four cubits and a span," and one reads "five." The reading "four" is supported by the still unpublished Heb. MS 4QSam<sup>a</sup>, and was accepted by NAB, which translates "six and a half feet tall." Many other readings from this scroll are followed by NAB in I Sam., especially where they agree with LXX.

**GOSPEL, GENRE.** "Gospel" was first introduced as a literary term by late first-century Christians, who adopted it as a short title for the Gospel of Mark (see GOSPEL [MESSAGE] §1). The title was transferred to other literary works which had many similar features and so came to designate a group of writings. The modern consensus has been that the canonical gospels are unique in antiquity, not only by reason of their title, but also as a type of literature. Recent developments have put the consensus in doubt and have led to a renewed investigation of the genre issue.

1. **The individuality of the gospels and the problem of genre.** *a. Canonical gospels.* Genre is determined by the interrelation of form, style, and content. Writings grouped together by content may belong to the same genre, but similarity of content alone is not a sufficient criterion. Since dogmatic content was a more important criterion than literary form in the canonizing process (see, e.g., Iren. Her. III), scholars have challenged the opinion that Matthew, Mark, Luke, and John represent the same genre. For example, Matthew has been viewed as a "church manual" because of its concern for ecclesiastical rules. However, the formal divergence of Matthew from known manuals (such as the DIDACHE) is extreme, and Matthew's retrojection of ecclesiastical concerns into speeches by Jesus is probably only a special case of the gospels' general tendency to interpret the ministry of Jesus in terms of postresurrection experience.

*b. Noncanonical "gospels."* In comparison with the remnants of other ancient gospel literature, the canonical four appear to constitute a distinct class. Apart from fragmentary examples (e.g., Gospel of the Ebionites [see EBIONITES, GOSPEL OF] and the Secret Gospel of Mark), other writings to which the title has been applied are clearly not of the same type. The Infancy Gospels belong to the realm of romantic fantasy. The so-called Gnostic gospels (e.g., PISTIS SOPHIA) are a species

of revelation discourse (see APOCRYPHA, NT; APOCRYPHA, NT[S] §3). Even the synoptic-like teaching tradition in the Gospel of Thomas (see THOMAS, GOSPEL OF[S]) is embedded in an identifiable genre ("The Sayings of the Sages") with roots in the Jewish wisdom movement. Such considerations, although they do not settle all issues raised by the differences among the canonical gospels, caution against concluding that they do not belong to the same genre.

*c. The individuality of the evangelists.* Emphasis on the distinctiveness of each gospel is, perhaps, the primary scholarly development requiring re-evaluation of the question of genre. The judgment that the gospels represent a unique genre initially relied on their identification as "folk literature" and the consequent minimizing of the self-awareness of the evangelists as authors. The form-critical observation that the Synoptics largely consist of small, independent units which are frequently brought together by devices characteristic of the process of tradition (such as catchword association) encouraged the view that the gospels were not so much compositions as deposits. Thus, the genre, gospel, was seen to have evolved under the influence of some special feature of the tradition (usually, the kerygma of Cross and Resurrection). From this standpoint, the gospel becomes an expanded cult legend. Still, evidence which points in another direction was recognized: the specific concerns of individual evangelists (e.g., Mark's messianic secret [see SECRET, MESSIANIC], Luke's fondness for dividing history into periods, the literary claims of Luke's prologue, and John's freedom to impose a significant unity on his material). Redaction critics have reassessed the role of the evangelists and no longer regard them as mere collectors, but as writers with imaginative and purposeful control of their sources (see REDACTION CRITICISM, NT[S] §§3, 4). This judgment requires re-examination of the sense in which the gospel can be seen as a new type of "evolved" literature.

2. **Genre identification, gospels, and gospel sources.** The hypothesis of a genre without roots in antecedent literary types presents theoretical problems. Since genre is a sociolinguistic convention through which meaning is conveyed, a genuinely *sui generis* writing is not congruent with its milieu. Both ancient and modern endeavors to define the genre of the gospels recognize that fact. Justin Martyr's references (e.g., Apol. I, 66) to "memoirs (ἀπομνημονεύματα) called Gospels" provided a clue to the character of these writings, whose designation was unintelligible to most people in the mid-second century. Justin probably meant to evoke comparison with the Socratic *Memorabilia* (Ἀπομνημονεύματα) of Xenophon. The analogy does not provide an accurate identification of genre, since in Xenophon's composite work sections of dialogue, anecdotes, and aphorisms comprise an appendage to an introductory rhetorical defense. In light of Xenophon's claims to direct knowledge (e.g., I.iii.1; II.v.1.), Justin may have meant that the gospels were dependable eye-witness memoirs. Even so, this apologetic is appropriate only to such literary types as history and biography.

*a. "Sayings of the Sages."* The modern search

for genre relationships has also extended to the sources of the gospels. The sayings source (see Q; Q[S]) may be an example of the genre "Sayings of the Sages," found in the Gospel of Thomas at a later stage (see §1b above). Since the "Sayings" genre is deficient in narrative elements, it is not directly antecedent to gospels of the canonical type; at the same time, the Christology of Q (for which Jesus functions primarily as the bearer of revealed truth) effectively illustrates the intimate relation of form and content.

**b. Aretalogy.** Because of miracle stories in the gospels, considerable attention has been given to reports of the mighty deeds of gods and wonder workers in antiquity. As may be seen from such material as Oxyrhynchus Papyrus 1381 (apparently an introduction to a record of Asclepius' healing miracles), Lucian of Samosata's exposé, *Alexander, the False Prophet*, and a tradition behind Philostratus' *Life of Apollonius of Tyana*, the purpose of the reports was to accredit divine power to their heroes. In modern practice, accounts of these mighty deeds have been designated aretalogies; a human subject honored in an aretalogy is said to be a DIVINE MAN. Sources of both Mark and John have been plausibly linked with such accounts. The signs source of John and a chain of miracles taken up by Mark appear to have advanced Jesus as a thaumaturgic divine man. While both evangelists sought to subordinate this view of Jesus to a more comprehensive Christology, the aretalogy (in the sense of a record of mighty deeds) has significantly affected the structure of the canonical gospels (but see ARETALOGY[S]).

**c. Aretalogical elements in narrative literature.** The "divine man" ideology was a widespread feature of Greco-Roman culture. Indeed, it was probably sages, rather than wonder workers, who were first described as divine. The moral giant whose status was attested by his teaching and by his adherence to it presents an alternative to the divine man conceived as thaumaturge and authenticated by miraculous deeds. The difference may be seen by comparing Lucian's Peregrinus (the false Cynic) or Demonax with his Alexander. Yet, though these positions were in conflict, they also had much in common. There was a confluence of aretalogical traits associated with divine men from shamans to statesmen: heroic motifs (drawn especially from the Heracles myth), miraculous birth, prodigies at death, divine wisdom, supernatural manifestations. Such traits had a pervasive influence on Greco-Roman narrative types from biography to romance.

**3. The gospel as aretalogical biography. a. Aretalogical biography.** To the average modern reader the gospels present the appearance of biography, and they probably left the same impression on readers in antiquity. The term "memoirs," which commended itself to Justin as a description of the gospels, suggests a type of biographical literature; the Third Evangelist's evaluation of his predecessors pointed in a similar direction (Luke 1:1-4). Scholarly resistance to such classification is in part a reaction against efforts to treat the gospels as modern historical biography even though, as in most ancient biography, the sequences of events in the gospels do not depict the natural un-

folding of their subject's personality. The issue also has been clouded by rigid views of Greco-Roman biographical literature. The skillful chronological narrative of Plutarch's best performance was not standard, but contrasts sharply with the many credulous anecdotal biographies of antiquity, which had an artificial sequence or none at all. The rhetorical origins of ancient biography, especially its indebtedness to the encomium, left it formally flexible and amenable to the introduction of aretalogical features. Philo's *Life of Moses*, Porphyry's *Life of Pythagoras*, and Philostratus' *Life of Apollonius of Tyana* exhibit such features, though none is an aretalogy (see §2b). Among Philostratus' sources was an aretalogy of Apollonius as wonder-working divine man, although Philostratus (I.ii) sought to subordinate thaumaturgy to moral excellence as a criterion of divine power. Eunapius (fourth century) perceptively observed that Philostratus' *Life of Apollonius* might be called "The Visit of God to Mankind" (*Lives of the Philosophers* 454).

**b. The gospel as adapted genre.** If a place can be found for the gospels in the context of ancient biographical literature, that place would appear to be the biography with aretalogical traits. The alleged lack of literary expertise on the part of the evangelists is not a valid objection to this classification; books of any genre may be poorly written. More significant is the question of the relation of the gospel genre to the kerygma of the Cross and Resurrection. The view that the gospel "grew" out of a tradition impelled by the kerygma does not really explain how complex traditions and sources were combined in a form which resembles a life of Jesus. A more natural explanation of that combination is that in the first-century Mediterranean world, accounts of founding prophets, sages, and wonder workers were a cultural requirement, that the aretalogical life was becoming an established convention, and that the gospel is a response to that setting. The thematic dominance of the gospel by the kerygma of the Cross and Resurrection (at least in Mark and John) suggests that the response was not a blind adoption of the available convention but an adaptation of it. The description of Mark as a passion narrative with a long introduction, though inaccurate in terms of form, points to the kerygma's fundamental thematic modification of the genre. The gospel is distinctive as an adaptation of an existing genre, not as a *sui generis* phenomenon. Most of the earliest readers would have taken the gospels as accounts of Jesus' life, even though they might not have acknowledged their reliability, and the elite would have noted a weakness of discrimination and style. Speaking broadly, the gospels would have been taken as biographical; and, in spite of the kerygmatic element, they were probably so intended.

Clayton (1972), pp. 191-204, gives a sober assessment of the gospels in relation to contemporary biography; C. H. Talbert, *Literary Patterns, Theological Themes, and the Genre of Luke-Acts*, SBLMS, XX (1974), regards Luke-Acts as an example of Greco-Roman lives of philosophers; D. L. Tiede, *The Charismatic Figure as Miracle Worker*, SBLDS, I (1972); C. W. Votaw, "The Gospels and Contemporary Biographies," *AJT*, XIX (1915), 45-73, 217-49 (reprinted in *FBBS*, XXVII [1970]), sees the gospels as "popular" biographies. M. J. Suggs

**\*GOVERNMENT, ISRAELITE.** Government in general can be defined as the exercise of continuous sovereign authority over a political unit. Since at least the Bronze Age, governments have operated through the means of war for external security, law for internal security and control over the production and distribution of goods. In the ancient world, continuity of sovereignty usually was expressed in the concept of dynastic succession from father to son. The legitimacy of a regime was based historically on a superiority, if not a monopoly, of force and fear, and ideologically upon the myth of a "divine charter" (i.e., the king had been chosen by a god or a committee of gods to exercise rule). Kingship in all our written sources is presented as the clearest and most important expression of the "will of the gods," except in ancient Israel before the monarchy (cf. *Judg.* 9:8-15). See *KING* §2.

Government can also be defined more broadly as that complex of social institutions, laws, and

customs through which the maintenance of a social order is carried out in a specific social unity. Whatever the social control system, it is inevitably linked to the ideology as well as the technology of the culture. As a result, if one of these three aspects of culture changes, there will inevitably be changes in one or both of the other aspects. Ancient Israel went through at least four major phases characterized by radically differing kinds of social organization and government.

1. Bronze Age governments
  2. Early Israel
  3. The monarchies
  4. The exilic reformation
  5. Postexilic priestly rule
  6. The NT reformation
- Bibliography

1. **Bronze Age governments** (see CANAAN, CONQUEST AND SETTLEMENT OF[S] §3b). **a. City-states.** The typical political unit in Mesopotamia and Syria in prehistoric times was an urban center surrounded by a cluster of villages (see PREHISTORY IN THE ANE and supplementary article). Ideally, the surplus productivity of the villages supported and made possible the specializations of the city: arts and crafts, political administration, scribal activity, and elaborate ritual.

Prior to the emergence of centralized monarchical control, specific Mesopotamian urban complexes were regarded as the "estate" (common Semitic *bēth*, "house") of a deity, administered by a "steward." It is probable that many of the place names in the OT that consist of the word *Beth*-followed by a divine name reflect a similar type of religious and socioeconomic organization. Thus the concept of the divine ownership of available land, so characteristic of early Israel, may not have been a radically new idea; instead, it may have been a re-adaptation of archaic concepts that reach back into prehistoric times.

**b. Empires.** It is probable that the transition from the "temple state" to monarchy was a result of increasing competition between urban complexes in a rapidly rising population during the course of the Early Bronze Age. Since military success had undeniable economic advantages for the urban base of the successful conqueror, in the form of "spoils" (looting) and "tribute" (taxation in kind), it is not surprising that in the Early Bronze Age, city-states had already succeeded in becoming centers of short-lived empires. But since they were based largely on superior military force and judicious allocation of the economic surplus available to the king, large-scale identification of local populations with the central government was not common. In other words, modern "nationalism" likely did not exist.

**c. Suzerainty treaties.** A "divine charter" mythology was the easiest religious ideology for legitimizing the royal monopoly and use of force, short of deifying the king himself. The contrary concept of rule based upon the voluntary consent of the governed may have originated with the biblical tradition (see, however, Jacobsen).

Attempts were made to base political authority

upon voluntary consent in the Late Bronze Age, for which the Hittite suzerainty treaties give us the best evidence. But those treaties were between a "Great King" and his vassals, some of whom seem to have owed their small royal domain to the Great King, i.e., they were puppets. These puppets received no more allegiance from their subjects than they had for the Great King. Such covenants were only attempts to regularize, to make predictable in public life, a temporary coincidence of collective local interests. See COVENANT §C1a; COVENANT, MOSAIC[S].

Since the empires existed only by collecting the surplus productivity of villages in foods and raw materials and did not support the symbiotic relationship between local villages and urban centers, they became parasitic. Under attack by the Sea Peoples (see PHILISTINES §4a; PHILISTINES[S]) at the end of the Late Bronze Age, virtually all of the great empires collapsed into social chaos. Such destruction prepared the way for a new religious ideology, a new concept of society, and an equitable social economy.

2. Early Israel. a. *Sinai and the traditions of wandering.* The nineteenth-century scholarly idea of a nomadic origin of the people of ancient Israel cannot be maintained (see WILDERNESS[S]; RECHABITES[S]; NOMADISM[S]). The "murmurings" traditions may suggest that the little band under Moses was not a people adapted to desert existence. Further, some sort of symbiosis was achieved with the Midianites, into which group Moses had married.

This period marks the beginnings of the specifically biblical religious tradition, and of a systematic rejection of the old Bronze Age religious ideologies and the political institutions that perpetuated them: the royal court and royal temple bureaucracy. The Sinai covenant traditions are the only available source for the unique religious tradition of ancient Israel, although they have been obscured by later attempts (under the monarchy) to harmonize them with the revived and re-adapted tradition of the divine charter (see COVENANT, DAVIDIC[S]). The results of the Exodus-Sinai events included at least the following traits that were never entirely obscured.

i. The rejection of "other gods." This is the only important similarity to the alleged monotheism of AKH-EN-ATON's reform, and the contrasts are enormous. Most gods in the Late Bronze Age were symbols for various social power structures, and Akh-en-Aton merely substituted one symbol for another. Moses and early Israel refused to identify Yahweh with any social power structure.

ii. The necessary cause and effect relationship between grace and gratitude (see GRACE IN THE OT[S]). The LB suzerainty treaties already emphasized this. In situations where the benefactor was in a position of great power and authority, he had a recognized claim to define what he wished to receive. This would not ordinarily be true among equals, except by mutual negotiation: the few ancient parity treaties come under this rubric.

iii. It follows that obligations are stipulated by Yahweh and are accepted by the new community

because of what had already happened—the deliverance from slavery in Egypt. Contrary to some traditional interpretations, all the early obligations under the Sinai covenant are ethical. Ritual traditions have to do only with those customary and mutually understood symbolic acts whereby persons commit themselves to permanent relationships and obligations.

iv. Enforcement of obligations by the social organization was not even contemplated in the earliest sources and narratives; instead, we have a succession of narratives about miracles by which Moses was upheld and his various enemies or challengers punished or annihilated. Although these narratives cannot have been put into their present form before the monarchy, it is likely that they have a historical nucleus: a Moses who had no social coercive power over a tiny band of refugees from Egypt, refugees who merged into the nascent community of the Israel of God.

v. Voluntary servitude to a political authority, Yahweh the King. This introduces the theme of the KINGDOM OF GOD, which is so essential to the entire biblical tradition. Only upon this religious foundation can the existence of ancient Israel be understood either theologically or historically. See KING, GOD AS[S].

vi. Perhaps most important because of its enormous potential for development and adaptation over the centuries was a "sense of history": the affirmation that certain acts have necessary consequences over a long range of time (e.g., to the fourth generation, Deut. 5:9). Such a perspective contains the grounds for social and individual self-criticism, illustrated beautifully in the eleventh-century poem of Deut. 32. This is adumbrated in the blessings and curses formulas of the LB suzerainty treaties, but in a much narrower ideological context.

b. *The twelve-tribe federation.* As a society of village peasants and shepherds (as was also most of the rest of the Eastern Mediterranean world at the time), the Israelite federation had little need for government in the sense of continuous, centralized bureaucracy. Yahweh was King, and his concerns were ethical, not material. Village courts are the largest unit contemplated in the old Covenant Code; conflicts between tribal groups may have called for action by the federation leaders (e.g., Judg. 19), or may have been referred to some local prestigious personality for arbitration (the "judges"), though we have no direct evidence.

The federation made itself manifest only when a specific occasion called it into action, and this is again characteristic of peasant society solidarities. A common cultic symbol (the ark) and priesthood served as a meeting place. When an emergency arose, the call went out to all who were near enough, or sufficiently involved, to render assistance.

The analogy to the amphictyonies of early Greek society seems now clearly to have outlived its usefulness. The contrasts are greater than the similarities, though it seems quite possible that the amphictyonies may actually be a relatively late adaptation of earlier forms of political alliance that could well have been more nearly analogous to the Israelite federation. See AMPHICTYONY[S].

As leader in war, as the supreme court of appeal where injustice had been done, as the ultimate source of economic weal or woe, Yahweh had all the important roles of the old Bronze Age kings, except for presiding over a bureaucracy, and even this was at some time attributed to him in the concept of the "Divine Council."

**c. Polytheism vs. monotheism.** The nature of the early Israelite community was inseparable from the new monotheism that stemmed from the Sinai covenant (*see, however*, MONOTHEISM[S]). The only important contrast between Israelites and non-Israelites was a contrast between the adherents to a monotheist ethical faith, and those who wanted to perpetuate the Bronze Age political institutions (e.g., the war lords of the Canaanite states, or the relatively new military aristocracies of the coastal regions, of which the Philistines are the best known example).

The oldest sources in the OT either state or imply that Israel was the "creation" of Yahweh, or was "found" by Yahweh in the wilderness. The concept of an "elect people" did not exist until half a millennium later (*see* ELECTION §4), and could not have existed until a long experience of community had taken place.

**3. The monarchies.** In the period from 1050 to 950 B.C., the old ideology of the Yahwist federation was discredited by the capture of the ark and the destruction of SHILOH. The demand for a political organization able to cope with the Philistines was irresistible and the chiefdom of Saul was created in imitation of similar chiefdoms of the eastern Mediterranean region. Saul fell as a truly tragic figure who simply could not combine the old Yahwist ideology and society with a centralized monopoly of power. *See* SAMUEL, I AND II[S] §4.

**a. Political and ideological change.** During the regimes of David and Solomon the political government (centered in the old city-state of Jerusalem) became assimilated to Near Eastern traditions in almost every respect. The ideological base was changed from the Sinai covenant to the "divine charter" tradition of the Middle Bronze Age, and old traditions concerning Abraham were invoked as authority (*see* COVENANT, DAVIDIC[S]). It seems probable that an indigenous Jerusalemite prophet (Nathan) was the engineer of this ideological adaptation. The conclusion is strongly reinforced by the fact that he was behind the events that led to the coronation of Solomon (I Kings 2). Solomon's regime reflects many continuities with Bronze Age city-states: the temple (*see, however*, ZION TRADITION[S]); almost certainly the priesthood (*see, however*, ZADOK[S]); the temple sacrificial ritual; and sacrificial prostitutes in the temple.

**b. The prophetic reaction.** Under these circumstances, at the instigation of Yahwist prophets, the northern tribes broke away from Jerusalemite rule, only to experience comparable political regimes of their own. Not long afterward little or nothing was left of the old tribal organization that had posed a threat to the centralized political regimes of both North and South. The old tribes no longer had sociopolitical functions, although some sur-

vived for a time as genealogical traditions. *See* TRIBES[S].

The Yahwist prophets never stopped trying to bring the political regimes under the control of the old Mosaic/Yahwist ethic, but had only slight and temporary success. In the South the result seems to have been a systematic attempt to merge the Mosaic covenant tradition with the "divine charter" tradition, in which the legitimizing function of the latter was made conditional upon faithful adherence to the former. *See* COVENANT, DAVIDIC[S] §5.

Isaiah, in his famous "messianic" prophecies (chs. 9 and 11) had a vision of such a combination, describing an era of peace and well-being that subsequently has been a constant inspiration. Unfortunately, what came instead was Manasseh, probably the worst king Judah ever had. The pre-exilic canonical prophets without exception predicted the destruction, first of dynasties in the North, then the destruction of the state, both North and South. Almost always, however, they tempered their message with a plea for "return," i.e., REPENTANCE, but evidently with increasing pessimism.

**4. The exilic reformation.** After the destruction of state and temple there was little left as a basis for the identity and continuity of the community other than the Mosaic-prophetic tradition. (To be sure, some persons hoped for restoration under a Davidic descendant.) Chastened by experience and deprived of realistic hopes for power, Israel was now able to maintain community with virtually no "governance" other than the complex of common understandings and traditions derived from the remote past. The result was a time of creativity in religious thought unparalleled since Moses: Jeremiah, Ezekiel, Lamentations, Job, the Priestly Code, and Deutero-Isaiah, in approximately that order (although the Priestly Code perhaps should be placed in the early postexilic period).

Thus the community, diverse as it must have been, again demonstrated the possibility of survival without a king (i.e., state), and at the same time experienced and transmitted insights that have been of permanent value to those who came after.

**5. Postexilic priestly rule.** After the return there was evidently a serious division of opinion concerning the wisdom of or necessity for the re-establishment of the Davidic dynasty. A struggle for power now replaced the mature and creative thought of the exilic poets and prophets. There is little in the postexilic prophets that could not have derived from the prophets of Bronze Age Mari, except for the theme of one God's ruling over history and a particular emphasis on ethical demands.

Kingship was discontinued and for half a millennium the expectation of an ideal ruler (Messiah) played a minor role in Judean thought (*see* MESSIAH, JEWISH[S]). For the priestly ruler that succeeded the monarchy, *see* AARON, AARONIDES [S].

**6. The NT reformation.** A small, but rapidly growing new community recognized Jesus of Nazareth as the long-expected Davidic Messiah. Through submission to the high priest and later the Roman

procurator, as well as through his teachings, Jesus made it clear that the kingdom of God had nothing to do with political power structures. (For the antecedents of this idea, see PHARISEES[S]). As at the time of Moses, such power structures were now secularized; or better, they all received divine legitimacy (a status which they had long sought through myth): "The powers that be are ordained of God." But none could be defied as the ultimate source of security and well-being and peace, nor as the power to which members of the "New Israel" must subject their every concept of right and ethic.

What happened in the early Christian movement was a complete merging of the old Mosaic ethical covenant and the "divine charter" (e.g., the title "son of God"). But it could be done only by a complete separation of the latter from its pagan associations (which survived for so many centuries in the old doctrine of the "divine right of kings").

The early Christian community was thus based entirely upon a voluntary commitment to a religious and ethical value system that was completely separated from any possession of, or desire for power, and was best illustrated in the crucifixion of Jesus.

**\*GRACE IN THE OT.** Grace is a characteristic of God in biblical faith. It is closely associated with such categories as "love" and "mercy" (see LOVE IN THE OT §3 and MERCY, MERCIFUL §2a), but "grace" implies God's love to his people when it is undeserved. In contrast to the NT, in which there is a specific Greek word, χάρις (see GRACE §1), the OT offers not specific words so much as a perception expressed in various ways. The OT offers diversity of opinion about whether it is God's grace which prevails or his justice (wherein he deals with his people as they deserve); and it offers diversity, too, as to whether God expresses his grace or his justice to a total community or to persons individually. And all this we must discern not so much from abstract affirmations as from narrative of God's personal interaction with people. Even with all these difficulties of definition, however, the impression one gains of God's grace in the OT is very strong.

1. **The idea of grace in the OT.** The attitude and action of deity toward people are variously understood on a spectrum between two extremes. At one extreme the deity is perceived to give to people automatically what they think they need, regardless of their own conduct. In this view the deity gives to his or her devotees willy-nilly, responding to the people's economic or political or military cravings. This was the assumption of the FERTILITY CULTS (cf. Hos. 2:5 [H 7]; Jer. 2:27). At the other ex-

treme God is perceived to reward and punish persons mathematically according to their conduct. This view is a characteristic, for example, of some of the historical material in Chronicles (see CHRONICLES, I AND II §2a), so that the evil king Manasseh's long life and the good king Josiah's short life are satisfactorily explained (II Chr. 33:10-13; 35:22). But this view of rewards and punishments neither conforms to experience (there is too much unrewarded good and too much unpunished wickedness in the world), nor allows for the personal initiative of God with human beings which the Israelites felt they experienced (it is too impersonally mathematical). The Israelites, then, normally saw God's attitude to be at neither extreme. Certainly their conduct was crucial to God's attitude; nevertheless, his attitude was more loving, more gracious, than their conduct strictly would elicit. This perception of the relation of grace to justice was expressed in classic form in Exod. 34:6-7: "The Lord, the Lord, a God merciful and gracious, slow to anger, and abounding in steadfast love and faithfulness, keeping steadfast love for thousands, forgiving iniquity and transgression and sin, but who will by no means clear the guilty, visiting the iniquity of the fathers upon the children and the children's children, to the third and the fourth generation." Thus we deal first with this expression.

2. **Exod. 34:6-7.** This passage offers a surprising "propositional" theology, without direct reference to historical events such as the Exodus found in other "credos" (cf. Exod. 20:2; Deut. 26:5-9; see HISTORY and SALVATION §2, esp. b); but this proposition was a distillation of Israel's experience in history.

The first phrase states that the Lord is a God who is "merciful" (רחום and "gracious" חנון). These words are applied in the OT only to God and are chosen at least partly for their assonance. The word "gracious" (חנון) exhibits a Semitic root meaning "show favor"; the Hebrew noun (חן) from this root is almost always translated by χάρις in the LXX (see GRACE §1). A person in authority grants favor: a king "shows mercy" to the oppressed (Dan. 4:27 [H 24]); fathers may "grant" daughters as a favor (RSV "graciously," Judg. 21:22). So Yahweh, as protector of the helpless, shows favor to them (Exod. 22:27 [H 26]): חנון here is translated "compassionate." The other word in the pair, "merciful" (רחום), is very close in meaning (see MERCY §§1, 2). Since, however, the related word רחם means "womb," it is at least possible that "merciful" was understood to be a motherly attribute, and "gracious" a fatherly attribute, of God. And not only God: a good man also is gracious (RSV "kind") to the poor (Prov. 14:21).

"Slow to anger" is found in Proverbs as well (16:32); though Yahweh does become angry, it takes him a long time to reach the point of wrath.

"Abounding in steadfast love and faithfulness" repeats in parallelism the ideas of earlier phrases. "Steadfast love" (חסד) (see LOVE IN THE OT §3) moves beyond the context of the simple showing of favor and implies the rights and obligations of the covenant: Yahweh pre-eminently keeps up his end of the bargain with his people. The further

"gracious" phrases in vs. 7 reinforce what has been said, and the "punitive" phrases express in succinct form the tension between God's grace and his justice (see GOD, OT VIEW OF §D3-5).

The phrases of Exod. 34:6-7 are repeated approximately eighteen times in the OT, testifying to the popularity of the expression, particularly in the exilic and postexilic periods. The usage in Jonah 4:2 is particularly noteworthy: here, ironically, the prophet expresses distaste for a God who is more gracious (to the hated Ninevites!) than human views of justice suggest he ought to be.

**3. Testimony to the grace of God in OT material.** The narratives of Genesis offer strong testimony to God's grace. Creation itself implies grace: God is sovereign and brings the world into being by his word, without constraint; no creature earns the right or deserves to be created (see CREATION §2). By the same token the P narrative of the making of a covenant after the flood (Gen. 9:8-17) is evidence of grace: never again will God exert his wrath in a universal flood. And though the story of the Tower of Babel (in which men tried to make a name for themselves, Gen. 11:4) leaves the impression that God's grace is exhausted (vss. 8-9), still the story serves as a backdrop for the narrative of the call to Abraham (whose name God will make great): Abraham will become a blessing to all mankind (Gen. 12:2-3). Rather than abandon humankind to the consequences of its sins, God takes the initiative for a solution.

The struggle between the claims of grace and justice is dramatized in the bargaining between Abraham and God over Sodom: God finally agrees that it would take only ten righteous men in Sodom to stay his punitive hand (Gen. 18:16-33).

Further patriarchal stories emphasize God's grace in spite of man: Isaac is a child of the old age of Abraham and Sarah, so that the covenantal family line is in no sense attributable to human effort (Gen. 18:9-15; 21:1-7). Jacob, though again and again a trickster with his kinsmen (25:26-34; 27:1-46; 30:25-43) and a wrestler with the stranger who stands for God, becomes by God's calling the father of the covenant people (32:22-30 [H 23-31]). Joseph's brothers, though they mean to harm him, are saved by their very deed of selling him into slavery, because God intends it (50:20).

God's rescue of Israel from Egypt and his consequent covenant with her were seen in retrospect to be the act of God's grace par excellence. This conviction is strikingly portrayed in the old poem of Deut. 32 (now dated to the eleventh century):

He [God] found him [Israel] in a desert land,  
and in the howling waste of the wilderness;  
he encircled him, he cared for him,  
he kept him as the apple of his eye (vs. 10).

Other portions of the poem (e.g. vss. 15, 36) reinforce this conviction. The prophets also pick up this theme of the helplessness of Israel when God took up the people in the wilderness: Hos. 9:10 expresses it, and in a striking allegory in Ezek. 16 the prophet depicts Israel as an exposed infant girl whom Yahweh adopted and to whom he was later married when she came of age.

Then the wilderness traditions speak of the manna and quails by which God fed the Israelites even when they were complaining that they had left the full larders of Egypt behind (Exod. 16), and of the water that gushed from the rock, again in spite of complaints (Exod. 17:1-7).

The book of Deuteronomy is particularly insistent that both Yahweh's election of Israel and his giving of the land to her were acts of grace: Israel had no intrinsic value and attractiveness that Yahweh should choose such a people; it is simply that God loves her and keeps his promise to the patriarchs (Deut. 7:6-8). Again, Israel should not assume that it was by her own efforts that she would gain riches in the land; it is Yahweh who gives her wealth (Deut. 8:7-18). And this perception of grace in the giving of land is implied also in the prophets (see Jer. 2:7).

There are other modes by which the Israelites testified to God's grace in the giving of the land. One is by the commandment to "devote" the spoils of the conquest to destruction (e.g. Josh. 6:17, 21; cf. vs. 24; see DEVOTED) so that they may not be taken for personal profit (cf. Deut. 13:17). Another is the legal tradition that the land does not "belong" to Israel at all but to Yahweh; Israel is simply a tenant (Lev. 25:23).

Meditation on other aspects of Israel's life likewise brought evidence of grace. Thus while the election of Israel was an act of grace, the consequent covenant at Sinai brought stipulations which were to be obeyed, so that the stress in this covenant was on God's justice rather than his grace: he rewards the obedient and punishes the disobedient (Deut. 28). (See COVENANT; COVENANT, MOSAIC [S].) But in contrast to the Sinai covenant, the covenant with David was seen to be an act of grace entirely (II Sam. 7:13-15); God is bound to the Davidic line forever, whatever the conduct of a given king may be (see COVENANT, DAVIDIC[S]). Various sacrificial observances likewise were understood to be effective regardless of the spontaneous feeling of the priest or worshiper. The danger in this conviction was of course the temptation to manipulate God's forgiveness, but the positive feature is the chance to recognize God's grace.

While the Deuteronomic historian (see DEUTERONOMIC HISTORY, THE[S]; JUDGES, BOOK OF §D; and KINGS, I AND II §C2) saw the events of Israel's history in the time of the judges and kings purely as the working out of God's justice, others, especially prophets, saw scope for God's grace. Thus Amos, though insisting on God's justice, still prayed that God would stay his punishment (Amos 7:1-6; see AMOS §7). Hosea clearly saw God struggle with his basic love for Israel in spite of her sin (Hos. 11:1-9: "How can I give you up, O Ephraim!" vs. 8). (See HOSEA[S].) Jeremiah heard God speak sadly of great hopes he had had for Israel, spoiled now by her faithlessness (Jer. 3:19-20). And after God's punishment, Jeremiah picked up the note of grace from the event of the first exodus and applied it to a new one for the exiles (31:2-6); indeed God would draw up a fresh covenant in which sin would be nothing but a nightmare from the past (31:31-34; see NEW COVENANT, THE[S] §2).

For these prophets, then, justice and grace were not opposites but were correlative.

Deutero-Isaiah was pre-eminently a prophet of grace (see ISAIAH §B2). It is proclaimed with great clarity in Isa. 55:1-2 ("Come, buy wine and milk without money and without price"), but the total message of this prophet is of the marvelous mercy of God to go to any length to rescue his people (43:3-4), to effect a new exodus (51:9-11) to bring them home again (49:14-18); and because he is who he is, he restrains his anger (48:9).

The psalms offer language that is often even more allusive than some other portions of the OT, but the total impression given is of a God of marvelous grace (e.g., Ps. 103).

If Jonah had complained that God is more merciful than he should be, Job complains that God is more cruel than he should be. In Job the problem of faith is explored in a fresh way, in the experience of a single individual. Job begins by demanding justice from God (Job 7:20; 9:13-20), but he reaches beyond this to a God of grace. He looks for an umpire to vouch for him before God (9:32-33). He imagines himself dead and God groping after him (10:1-12), yearning for what he had created (14:13-17). He dreams of a heavenly witness who will keep his case open before God and finally show him God as he is (19:25-27).

And while the end of the OT period and the intertestamental period saw a resurgence of the doctrine of just rewards and punishments, the conviction of the grace of God had not disappeared. We note Asmp. Moses 12:7: "For not for any virtue or strength of mine, but of His (God's) good pleasure have His compassion and longsuffering fallen to my (Moses') lot."

The strong perception of grace throughout the whole witness of Israel then forms the backdrop to the NT perception.

#### Bibliography

1. A quarter-century of discovery. a. *Qumran and Naḥal Hever*. In 1947 the first biblical MSS were discovered in Cave I at Qumran (see DEAD SEA SCROLLS; DEAD SEA SCROLLS[S]). Five years later, Hebrew MSS of Samuel were discovered in Cave IV at Qumran and a Greek MS of the minor prophets was found at Naḥal Hever. Although 4QSam<sup>a,b,c</sup> have not yet been fully published, they have changed the shape of Hebrew textual history. Now scholars know that the divergent LXX version of Samuel is not simply a free paraphrase of a difficult Hebrew text, but a reliable reflection of a variant Hebrew tradition once at home in Palestine and subsequently lost or suppressed (see SAMUEL, I AND II[S] §2c). Similar evidence now also exists for Jeremiah and other books of the OT (see TEXT, HEBREW, HISTORY OF[S]). The Greek minor prophets scroll proved to be equally significant. Its text was not the standard LXX, but a systematic revision to reflect the Hebrew text. And this Hebrew text, in turn, was not identical with the MT. This revision is called "R" or *Kaige*, because it used the Greek word καίγε to translate Hebrew קָנָה or קָנָה. Further translational features of *Kaige* have been isolated, and related materials have been identified in the majority Greek recension of II Sam. 11:1-I Kings 2:11 and I Kings 22-II Kings (Thackeray's sections βγ and γδ of LXX Reigns) and in the version of Theod. (i.e., cited from the sixth column of Origen's Hexapla) for many LXX books. In addition, *Kaige* was proposed as the text on which the revision of Aquila was based (see §2c below).

b. *Other MSS*. Some Egyptian texts provide similar evidence. Among those receiving attention recently are the fifth/sixth-century Giessen parchment fragments discussed by Tov (1971; published by Glaue and Rahlf's in 1911) and Papyrus Fouad 266 from pre-Christian times (published most fully by Dunand in 1966). Although limited in scope, these texts are further evidence that the development of Greek versions through deliberate revision was a widespread and complex process.

*c. Local texts and successive revisions.* Prior to the Qumran discoveries, biblical scholars were divided on the nature of LXX MSS. The majority followed Lagarde in supposing that a single translation was represented more or less faithfully in all MS copies. A significant minority held, on the contrary, that various translations or partial translations were made independently over the years and that the major divergences within the LXX MS tradition have come from these different translations (so, e.g., Kahle). (See SEPTUAGINT §5.) The versions of Aq. and Symm. were often described as new translations, while Theod.'s version was regarded as a revision of an earlier, presumably independent version. See VERSIONS, ANCIENT §2b; SEPTUAGINT §3.

Just as the various Hebrew traditions known from Qumran can now be explained as relatively independent developments—during the fourth to first centuries B.C. and, according to Cross, in the geographic isolation of Alexandria, Palestine, and Babylon—so the nonaccidental variants within the LXX witnesses can be understood as due almost entirely to deliberate and often successive revisions of a single translation from the Hebrew.

By the end of the second century B.C. at the latest, the Babylonian and Alexandrian Hebrew versions were brought into Palestine, because witnesses to all three text types are found for at least some OT books at Qumran. About the same time, too, some users of the LXX (based upon the Alexandrian Hebrew text) became aware that their Greek text did not correspond exactly to the Hebrew text(s) available to them. Various efforts at revision were begun, some sporadic and some systematic. The process continued in Jewish circles for some two centuries, until the definitive fixing of the MT (see TEXT, HEBREW, HISTORY OF[S] §1). In Christian circles, revisional activity apparently continued for another century or more.

In the Lucianic MSS for Samuel and Kings ( $\text{boc}_2\text{e}_2$ ), Cross has found evidence for an early stratum that represents a revision of the LXX to the Palestinian Hebrew text attested in 4QSam<sup>a, b, c</sup>. While the existence of this early stratum is generally admitted today, some scholars argue that it is nothing more than the LXX for Samuel-Kings (see §§2c, 3 below). The early stratum of  $\text{boc}_2\text{e}_2$  has itself been revised toward the MT tradition, though not in its final form. For Cross, this Proto-MT is a product of the Babylonian Hebrew tradition. The revision to the Proto-MT ("R" or *Kaige*) was systematic and detailed, and its characteristic features can be found in the Theodotionic material generally, as well as in the minor prophets scroll from Naḥal Ḥever. In Samuel-Kings, however, this *Kaige* revision has replaced the LXX in most MSS, though only in Thackeray's  $\beta\gamma$  and  $\gamma\delta$  sections (Shenkel has since shown that  $\beta\gamma$  should begin at II Sam. 10:1 rather than 11:2 as proposed by Thackeray).

The *Kaige*/Theod. revision was itself further revised by Aq. at the end of the first century A.D. to reflect the present MT. Aq.'s revision took over many *Kaige*/Theod. elements, extended them, and introduced further literalistic features. Symm.'s version shares some readings with *Kaige*/Theod.

or with Aq., but the precise nature of his version has not yet been explored. There is limited evidence for further revisional activity on *Kaige* by second-century Theod. The precise contributions of third-century Lucian to the first-century Proto-Lucianic material which he took over are not clear, but genuine revision seems to have been involved. Text-critical interest will be directed less to these figures from the second and third centuries, whose textual changes are to the normative MT, and more to their Proto-Lucianic and *Kaige*/Theodotionic antecedents, since these are the sources of evidence for Palestinian and Proto-MT Hebrew variants.

**2. New scholarly perspectives. a. Characteristics of *Kaige*/Theodotion.** When Barthélemy published the Greek minor prophets scroll, he drew together a number of distinctive features to identify the new *Kaige* recension there and elsewhere. Several had already been noted much earlier for  $\beta\delta$  ( $=\beta\gamma+\gamma\delta$ ) by Thackeray. In addition to the regular introduction of  $\kappa\alpha\acute{\iota}\gamma\epsilon$  to represent Hebrew  $\text{כִּלְכִּל}$ , the most important *Kaige*/Theod. characteristics proposed by Barthélemy are: (1) the use of  $\alpha\acute{\nu}\eta\rho$  rather than Old Greek ( $=\text{OG}$ )  $\xi\kappa\alpha\sigma\tau\omicron\varsigma$  to represent Hebrew  $\text{שִׂי$ , even when the latter is used idiomatically to mean "each"; (2) the tendency to replace  $\acute{\alpha}\pi\omicron$  or  $\acute{\epsilon}\pi\acute{\alpha}\nu\omega$  with  $\acute{\epsilon}\pi\acute{\alpha}\nu\omega\theta\epsilon\upsilon$  or  $\acute{\alpha}\pi\acute{\alpha}\nu\omega\theta\epsilon\upsilon$  for Hebrew  $\text{כָּל־עַם}$ ; (3) the restriction of OG  $\sigma\acute{\alpha}\lambda\pi\iota\gamma\epsilon$  to Hebrew  $\text{הַצִּיָּב}$  and the introduction of  $\kappa\epsilon\rho\alpha\tau\acute{\iota}\nu\eta$  to represent Hebrew  $\text{שׁוֹפֵר}$ ; (4) the elimination of the OG historical present in favor of the aorist for the Hebrew converted imperfect in narration; (5) an emphasis on the atemporal character of Hebrew  $\text{יָיִן}$  by using  $\omicron\upsilon\kappa\ \acute{\epsilon}\sigma\tau\iota\nu$  to translate it, even in the midst of a series of aorist verbs; (6) the introduction of the phrase  $\acute{\epsilon}\gamma\omega\ \epsilon\iota\mu\iota$  as a unit, often as the subject of a finite verb, to represent Hebrew  $\text{אֲנִי}$  in contrast to  $\text{אֲנִי}$ ; and (7) an avoidance of OG  $\epsilon\iota\varsigma\ \acute{\alpha}\pi\acute{\alpha}\nu\tau\eta\sigma\iota\nu$  as the equivalent of Hebrew  $\text{כָּל־אֵלֶּיךָ}$ .

The list has since been extended, e.g., (1)  $\phi\omega\tau\acute{\iota}\zeta\epsilon\iota\nu$  for  $\text{הוֹרֵה}$ , the *Hiph'il* of  $\text{יָרָה}$  (Smith); (2)  $\acute{\epsilon}\nu\ \acute{\omicron}\phi\theta\alpha\lambda\mu\omicron\iota\varsigma$  to translate  $\text{כָּל־עֵינַי}$  when the object is Yahweh (Shenkel; the OG often uses  $\acute{\epsilon}\nu\ \acute{\omicron}\phi\theta\alpha\lambda\mu\omicron\iota\varsigma$  for human objects, but avoids it with Yahweh); (3)  $\theta\upsilon\sigma\iota\acute{\alpha}\zeta\epsilon\iota\nu$  in place of OG  $\theta\upsilon\acute{\epsilon}\iota\nu$  for  $\text{זָבַח}$  (Shenkel); (4)  $\rho\omicron\mu\phi\acute{\alpha}\iota\alpha$  for  $\text{רָחַץ}$ , where OG has  $\mu\acute{\alpha}\chi\alpha\iota\rho\alpha$  or  $\rho\omicron\mu\phi\acute{\alpha}\iota\alpha$ , or other equivalents, and Aq. and Symm. have  $\mu\acute{\alpha}\chi\alpha\iota\rho\alpha$  (O'Connell); (5)  $\nu\acute{\iota}\kappa\omicron\varsigma$  for  $\text{נִצַּח}$  (Grindel); (6) words from the root  $\text{ד}\omega\lambda$ - for forms of Hebrew  $\text{עָרַב}$  (O'Connell); (7) transliterations to translate unknown words ( $\text{Τον}$ ); (8) the tendency to systematize the Greek equivalents of specific Hebrew words or roots, frequently by taking one of several OG renditions and using it regularly.

One example of *Kaige*/Theod. revisional activity may be given. In Exodus the Hebrew verb  $\text{פָּרַע}$  occurs three times. The MT forms and corresponding OG equivalents are  $\text{הוֹמַר פָּרַע/δ\iota\epsilon\sigma\kappa\acute{\epsilon}\delta\alpha\sigma\tau\alpha\iota}$  and  $\text{פָּרַע/כִּי\delta\iota\epsilon\sigma\kappa\acute{\epsilon}\delta\alpha\sigma\epsilon\nu}$  γὰρ αὐτοὺς in 32:25, and  $\text{פָּרַע/δ\iota\alpha\sigma\tau\rho\acute{\epsilon}\phi\epsilon\tau\epsilon}$  in 5:4. The *Kaige*/Theod. revisions are  $\text{δ\iota\epsilon\sigma\kappa\acute{\epsilon}\delta\alpha\sigma\mu\acute{\epsilon}\nu\omicron\varsigma\ \acute{\epsilon}\sigma\tau\iota\nu}$ ,  $\delta\tau\iota\ \delta\iota\epsilon\sigma\kappa\acute{\epsilon}\delta\alpha\sigma\epsilon\nu$  αὐτόν, and  $\text{δ\iota\alpha\sigma\kappa\acute{\epsilon}\delta\acute{\alpha}\zeta\epsilon\tau\epsilon}$ , respectively. The OG correspondence in 32:25,  $\text{δ\iota\alpha\sigma\kappa\acute{\epsilon}\delta\acute{\alpha}\zeta\epsilon\iota\nu}=\text{פָּרַע}$ , has

been extended back to 5:4 (twenty-seven chapters earlier), and other changes have been made to express the Hebrew forms more closely. Aquila, for his part, uses a different, non-OG verb throughout and chooses αὐτός rather than ἔστιν to reflect MT מִיָּה still more literally: ἀποπετάσμενος αὐτός, ὅτι ἀπεπέτασεν αὐτόν, and ἀποπετάξετε, respectively.

**b. Members of the Kaige/Theodotianic group.** Barthélemy identified the following members of the *Kaige/Theod.* group along with the minor prophets scroll: (1) the Greek translations of Lamentations and probably also of the Song of Songs and Ruth, (2) the majority recension for sections βγ and γδ in LXX Reigns, (3) the version of Judges found in MSS irua<sub>2</sub> and Befs<sub>z</sub>, (4) the Theodotianic edition of Daniel, (5) the Theodotianic additions to the LXX of Job and the frequently anonymous additions to the LXX of Jeremiah, (6) the Theodotianic (=sixth) column of Origen's Hexapla generally, though not in the minor prophets or Samuel-Kings, at least, and (7) the Quinta (=seventh) column of the Hexapla for Psalms as well as for the minor prophets. Traces of the revision could also be found in other LXX witnesses. The *Kaige* character of βγ and γδ in Reigns and of the Theodotianic material in Exodus has already received thorough confirmation.

**c. Kaige/Theodotianic relation to other versions.** While Barthélemy saw the basis for the *Kaige* revision in βδ of Samuel-Kings as simply the OG now preserved primarily in MSS boc<sub>2e2</sub>, Cross argued vigorously for the presence of a prior (Proto-Lucianic) revision of the OG toward the Palestinian Hebrew text there, and Tov suggested that the boc<sub>2e2</sub> text had departed somewhat from the OG without having undergone a systematic revision prior to its use by *Kaige/Theod.* Further investigations have brought these positions somewhat closer together, but differences of interpretation remain (see §3 below).

Barthélemy argued cogently that Aq. used the *Kaige/Theod.* revision as the basis for his further revision, adopting such *Kaige* features as καίγε for καὶ and ἀνὴρ for ἄνθρωπος—"each," further systematizing Greek-Hebrew correspondences, making *Kaige* translations even more exactly literal, and introducing further features such as the Greek particle σύν to represent the Hebrew accusative particle נא. O'Connell's analysis of the Theodotianic material in Exodus has provided even stronger support for Aq.'s use of the *Kaige/Theod.* revision as the basis for his own version. The following example illustrates the relationships (Exod. 5:16):

*id.* = same as previous column; *om.* = omission, no form

OG	Theod.	Aquila	MT
καὶ	<i>id.</i>	<i>id.</i>	-י (w <sup>e</sup> -)
ἰδοὺ	<i>id.</i>	<i>id.</i>	הנה- (-hinne)
οἱ	<i>id.</i>	<i>om.</i>	<i>om.</i>
παῖδες	δοῦλοι	<i>id.</i>	-עבד (*bhādhē-)
σου	<i>id.</i>	<i>id.</i>	ך- (-khā)
μεμαστίγωνα	<i>id.</i>	πεπληγμένοι	מכות (mukktm)
<i>om.</i>	καὶ	<i>id.</i>	-י (w <sup>e</sup> -)
<i>om.</i>	ἢ	<i>om.</i>	<i>om.</i>

OG	Theod.	Aquila	MT
ἀδικήσεις	δοῦλοι	<i>id.</i>	נאמ- (-hātā'th)
σὺν	<i>om.</i>	<i>om.</i>	<i>om.</i>
<i>om.</i>	εἰς	<i>om.</i>	<i>om.</i>
τὸν	<i>id.</i>	<i>om.</i>	<i>om.</i>
λαόν	<i>id.</i>	לאו	-עמ ('amme-)
σου	<i>id.</i>	<i>id.</i>	ך- (-khā)

Theod. differs from the OG only in the replacement of παῖδες with δοῦλοι for MT (7) יְבָרַע and in the recasting of the second phrase (Theod. καὶ ἡ ἀμαρτία εἰς τὸν λαόν σου vs. OG ἀδικήσεις σὺν τὸν λαόν σου) enough to represent MT עַמְּךָ נִאֲמַרְתִּי more closely. Aq.'s version agrees with Theod. on δοῦλοι and the general recasting of the second phrase, but omits elements not explicitly supported in the MT (οἱ, ἢ, εἰς τὸν—with change of λαόν to dative case) and replaces the finite verb μεμαστίγωνα with the participle πεπληγμένοι to represent the Hebrew participle מכות.

Barthélemy provided some evidence for a similar dependence of Symm. on the *Kaige/Theod.* revision, rather than on the OG directly, but the question of Symm.'s exact place within recensional history remains unresolved.

Although the so-called Theodotianic edition of Daniel was included within the *Kaige/Theod.* group by Barthélemy, Schmitt's analysis has provided evidence for a distinction between that material and the sixth column of the Hexapla for Daniel. This may point to the existence of two layers within *Kaige/Theod.* See DANIEL[S].

An index to Aq. has appeared (Reider), but its usefulness is somewhat limited. The new insights into Aquila's use of the *Kaige/Theod.* revision as the basis for his own work and the evidence for some dependence of Symm. on the same revision complicate the interpretation of readings cited from two or three of these versions together (both those cited jointly as a single note—α'θ', α'σ'θ', etc.—and those attributed separately to more than one version). Where Aq. or Symm. agrees with Theod., the evidence cannot be used to argue for characteristics of Aq. or Symm., but only for their unwillingness or failure to change what was in the base text. Moreover, variants from the OG in Aq. or Symm. where no corresponding reading from Theod. is preserved do not necessarily reveal characteristics of Aq. or Symm., either. They may simply be survivals from the now lost Theodotianic text. Any discussion of Aq. or Symm. that does not deal constantly with the possibility of influence from Theod. is in danger of inaccuracy. All previous discussions of Aq. must be revised with that in mind. Thus when a reading from Aq. is at variance with his pattern elsewhere, the possibility of a survival from *Kaige/Theod.* must be investigated carefully.

**3. Detailed analyses.** Various further studies have been done on specific questions of LXX textual development (see SEPTUAGINT[S] §A1d-e). Some of these analyses relate to the understanding of the minor Greek versions and may be summarized briefly. Lemke has shown that differences between the narratives of Chronicles and Samuel-Kings are sometimes due to differences in Hebrew text traditions, rather than to deliberate adaptations. Klein discovered that I Esdras frequently reflects

a Hebrew text older than that represented by Hebrew and Greek Ezra. He also found that Greek Chronicles reflects Lucianic  $\text{boc}_2\text{e}_2$  rather than majority LXX *Kaige/Theod.* for II Kings. Harrington uncovered similarities between the Hebrew text used in Pseudo-Philo's *Liber Antiquitatum Biblicarum* and the Palestinian text reflected in Lucianic witnesses and in Josephus. Bodine has studied the B family in Judges as a representative of the *Kaige/Theod.* group. Ulrich has argued that the Lucianic witnesses in Samuel preserve evidence of an early revision to the Palestinian Hebrew text of 4QSam<sup>a</sup> and that this revision is distinct from both MT and OG. There are instances in Thackeray's sections  $\alpha$ ,  $\beta\beta$  (I Sam. 1-II Sam. 9) where the majority recension preserves the OG, an OG not in need of revision, and yet the Lucianic witnesses  $\text{boc}_2\text{e}_2$  preserve revisions toward 4QSam<sup>a</sup> that are not identical with the MT. This supports Cross's view that  $\text{boc}_2\text{e}_2$  agreements with 4QSam<sup>a</sup> where the OG no longer survives are also to be seen as revisional. The evidence for this Proto-Lucianic revisional activity is still fragile, and the existence of a genuine revision can still be disputed. But the presence within Lucian of some revisional activity toward the Palestinian text of Samuel-Kings can no longer be doubted. The recensional nature of the developed Lucianic text has been demonstrated independently by Brock, who has shown that the final form of the text reflects the time and place of the martyr from Antioch.

In the Pentateuch, where a Palestinian Hebrew text distinct from the Proto-MT can also be identified, the possibility of finding a Proto-Lucianic Greek revision has been seriously reduced by Wevers' recent conclusion that no Lucianic recension at all can be identified securely within the textual evidence for Greek Genesis. The only true recension surviving for Genesis, according to Wevers, is that of Origen.

4. **The versions today and tomorrow.** In summary, the following Greek versions of the LXX are now known and their recensional nature at least partially understood: (1) first-century B.C./first-century A.D. Proto-Lucianic revision of the OG, at least in Samuel-Kings, to conform to the Palestinian Hebrew text; (2) early first-century A.D. *Kaige/Theod.* revision of the LXX—of the Proto-Lucianic revision in Samuel-Kings, of an already slightly revised LXX in Exodus, perhaps of a slightly revised LXX elsewhere—to the Proto-MT; (3) late first-century A.D. revision by Aq. of the *Kaige/Theod.* revision to the MT; (4) Symm.'s late second-century A.D. revision of *Kaige/Theod.*—or influenced by *Kaige/Theod.* and perhaps also by Aq.—to the MT; (5) second-century A.D. Theod.'s adoption and apparently limited further revision of *Kaige/Theod.* to the MT; (6) early third-century A.D. Origen's collection of the versions known to him (MT, LXX, Aq., Symm., Theod., and occasionally one to three further versions) into the Hexapla (see VERSIONS, ANCIENT, §2b; SEPTUAGINT §4a); (7) late third-century A.D. Lucian's revision of the Proto-Lucianic material and perhaps other materials to the MT; (8) third-century A.D. Hesychius' recension of Origen's LXX

text (identified by Jellicoe with MS B or Vaticanus); (9) third-century A.D. Eusebius' recension of Origen's LXX text.

Traces of other recensional activity can be found in various witnesses. Further research will focus on these traces, as well as on more detailed investigation of the versions listed above. It is not to be assumed that the material attributed to any version in one biblical book will necessarily share the characteristics of material attributed to that same version elsewhere. The distinctive nature of  $\theta'$  material in Samuel-Kings or the minor prophets in comparison with the *Kaige* text attributed to  $\theta'$  elsewhere is a case in point. The picture of Greek versions will almost certainly grow more complex as scholarly investigations continue, for the period from which they came is now known to have included intense and repeated efforts at control of the Hebrew and Greek OT texts.

O'CONNELL

**GRIESBACH HYPOTHESIS** grēs'bäk. The theory that the Gospel of Mark was written later than Matthew and Luke and in direct dependence upon them. First proposed by J. J. Griesbach in 1783, the hypothesis was subsequently elaborated and defended by him and since the 1960s has been the subject of renewed discussion.

Griesbach, who presumed but did not explicitly argue that Luke had used Matthew, believed that Mark's use of the two earlier gospels had been deliberate and careful enough that his method of following first one, then the other, may be readily observed. Mark has reformulated their

material "in his own way," sometimes omitting and abbreviating, but at other times adding and expanding. Griesbach explicitly rejected Augustine's view that Mark's purpose was to epitomize Matthew, and that Mark in turn had been used by Luke (see **SYNOPTIC PROBLEM** §B1). Rather, Mark's purpose was to compose a gospel appropriate to the needs of his own readers, using materials selected from both Matthew and Luke.

Griesbach regarded his hypothesis as a plausible explanation for three particular characteristics of Mark: its order, its contents, and its alternating conformity to Matthew and Luke. As to order (which is especially emphasized), Mark seems to have followed Luke's narrative at every point where he departed from Matthew's, and then to have returned to Matthew's when leaving Luke's. In a long series of notes to a table of synoptic passages, Griesbach sought to account for each of Mark's moves back and forth and for other particular features of his gospel, including his omissions. To Griesbach, Mark's dependence upon Matthew and Luke seemed to be assured also by its contents, virtually all of which are parallel to materials in Matthew or Luke. Since Mark would have known so many things about Jesus' life and teachings (Griesbach did not question the attribution of the Synoptics to Matthew, Mark, and Luke respectively), his selection of almost the same materials for inclusion in his gospel as are present in the other two could have been due only to Mark's deliberate use of them. And finally, Mark's alternating conformity, now to Matthew, now to Luke, requires the conclusion that Mark "had both seen and compared the works of each simultaneously."

Griesbach's detailed defense of his hypothesis won it many adherents, and it was the prevailing view of German critical scholarship until the mid-nineteenth century, when the two-document hypothesis replaced it (see **SYNOPTIC PROBLEM** §§B 2-3). The modern consensus has recently been challenged, however, by Farmer and others, who have revived certain parts of Griesbach's hypothesis and have directed new attention to his arguments. See **SYNOPTIC PROBLEM**[S].

V. P. FURNISH

\***GUEST ROOM.** In Philem. 22 the phrase translates *ξενία* which, though more commonly a reference to the hospitality shown a guest, could also be used for the place where the guest was housed (cf. Acts 28:23). Hospitality for itinerant apostles and teachers was an important responsibility of early Christian congregations.

V. P. FURNISH

\***HABAKKUK COMMENTARY** (IQpHab). A scroll from Cave I at Wadi Qumran, containing a commentary (*pesher*) on the first two chapters of Habakkuk. On its discovery see DEAD SEA SCROLLS §1. For its meaning and significance see DEAD SEA SCROLLS §5a; DEAD SEA SCROLLS[S] §5 and bibliog.; and especially INTERPRETATION, HISTORY OF[S] §B1ai, biii.

\***HABIRU** or, more correctly, **HAPIRU**. A term applied to certain groups of people in second-millennium records from Cappadocia, Babylonia, Mari, Alalakh, Ḫattusas, Nuzi, Ugarit, several other cities of Syria-Palestine, and Egypt. Despite considerable evidence and discussion of the problem since 1890, no firm solution has been reached on the cardinal questions: (a) etymology and semantics of the term; (b) whether the Hapiru were an ethnic, social, occupational, or legal entity; (c) the relation between the Hapiru and the Hebrews.

1. **Name.** a. *In cuneiform script.* i. *Ideographic writing:* SA.GAZ (variants: SA.GAZ.ZA, SA.GA.AZ, SAG.GAZ, GAZ), which is a Sumerian borrowing of Akkadian *šaggāšu*, “killer, aggressor, violent person.” It was also read *ḫabbātu*; “robber” or “migrant,” sometimes used as an Akkadian synonym of the West Semitic loanword *ḫapiru*. ii. *Phonetic writing:* *ḫa-BI-ru*; fem. (Nuzi) *ḫa-BI-ra-tu*; aberrant spellings: *ḫa’-BI-ru* (Alalakh VII, not certain); *ḫa-AB-BI-ri* (Hittite). The initial *ḫ* could transcribe the West Semitic phonemes *h*, *ḫ*, or *ʕ*; the second syllable could be read, in the orthography of the second millennium, *bi* or *pi*. The ethnic *ḫa-bir-a-a* in two Babylonian letters seemed to point to the pronunciation *ḫabiru*; but we are probably dealing with natives of a Babylonian town whose name is only accidentally similar to the term *ḫa-BI-ru*.

b. *In Egyptian.* The Egyptian transcription is *ʕpr*, pl. *ʕpr.w*. It shows that the initial pharyngeal in *ḫa-BI-ru* corresponded to *ʕ*, although there have been attempts to explain the *p* as an Egyptian rendering of Semitic *b*. But numerous Egyptian transcriptions of foreign names and words always preserve the original *b*, with one exception (*ḫrp* = חרב, “sword”), in which, however, the final position of *b* may have caused its loss of sonance, which

does not apply to the intervocalic position of the labial in *ḫa-BI-ru*.

c. *In Ugaritic.* In parallel lists of towns of the kingdom of UGARIT, written in Akkadian syllabic and in Ugaritic alphabetic scripts, the syllabic URUḪal-bi LÚ.MEŠSAG.GAZ corresponded to alphabetic Ḫlb *ʕrm*. This proved that *ḫa-BI-ru* was read *ḫapiru* and that its West Semitic original was *ʕpiru*. Efforts were made to preserve the connection with the root *ʕBR* (see §d below) by invoking the interchange *b/p* in Semitic, but this phenomenon normally occurs between languages, not within the same language, except in certain specific cases. In Ugaritic, *b* can shift to *p* only by regressive assimilation in contact with an unvoiced consonant. Nor can the form *ʕrm* be blamed on the phonetic influence of Hurrian; were this the case, it would have lost the *ʕayin*. Ugaritic possessed the root *ʕBR*, and there was no reason for Ugaritian scribes to spell one of its derivatives with a *p*.

d. *Etymology.* Two early etymologies, which presupposed the reading *ḫabiru*, derived it from the roots HBR, “to bind, join,” or BR, “to cross, pass,” which made *ḫabiru* the equivalent of, in the former case, חברים, “confederates,” and in the latter, עברים, “Hebrews,” originally “migrants, transients.” The Egyptian and especially the Ugaritic spellings rule out these derivations (see also §5). The root of *ḫapiru/ʕpiru* is now generally recognized as PR, but there is no agreement as to its semantics. One theory sees in PR the West Semitic cognate of Akkadian *epēru*, “to provide with food,” which would explain *ḫapiru* as persons who receive food rations; but the relevant West Semitic root, as shown by Ugaritic, is HPR. Another theory proceeds from the use of *epēru*, the Akkadian cognate of West Semitic *ʕr*, “dust,” in the sense of “territory,” and sees the *ʕpiru* as people of undeveloped, wooded areas; but *epēru* does not have this connotation and simply refers to the land of a town or village. A more plausible etymology derives *ʕpiru* from *ʕr* in its basic meaning “dust”: it would signify “dusty,” people covered with dust from long journeys. In Arabic the corresponding root (*ʕfara*) has also the meaning “to be wicked, ferocious, terrible,” which is close to the semantics of Akkadian *šaggāšu*, the prototype of SA.GAZ, the ideogram for *ḫapiru*; but there is no instance of such meaning of PR in an ancient West Semitic text.

2. **Survey of evidence.** a. *Eighteenth century.* The Hapiru are first mentioned in documents from the eighteenth century (low CHRONOLOGY OF THE OT). The Mari texts attest to their activities in N Mesopotamia. They were engaged in military operations in the service of local kings, or in pillaging on their own, or in alliance with a city. Once they co-operated with a group of revolted *muškēnu* (semifree peasants) who fled into the steppe. They sometimes appeared in large units; we hear of “two thousand Hapiru of the country” as a garrison on the upper Euphrates. A detachment of Hapiru was composed of members of the Amorite tribe of Yamutbal. Some Mari texts use the Akkadian equivalent *ḫabbātu*: a “son of a *ḫabbātu*” was appointed governor of a steppe district; a troop of *ḫabbātu* and Canaanites occupied a town. An Old

Assyrian tablet from Alışar speaks of wealthy Hapiru connected with Assyrian commercial colonies in Cappadocia. Hapiru are attested at Larsa (southern Babylonia) as soldiers who are issued rations.

**b. Seventeenth century.** Tablets from Alalakh, level VII, speak of a *ḥabbātu* chieftain who waged war against a king of Yamḥad. One of his subordinates called himself on his seal "general of *ḥabbātu*," which shows that this term could be used without a pejorative meaning. A date formula of another king of Yamḥad commemorates the conclusion of peace between him and Hapiru troops (ERIN.MEŠ *Ḥa'-pi-ru*, probable reading and interpretation).

**c. Sixteenth century.** A Hittite king concluded a formal treaty with Hapiru, taking them into his army and promising them equal treatment with native royal troops. Three thousand Hapiru soldiers in Hittite service were placed as a garrison against the Hurrians. *Ca.* 1510-1500, a fugitive prince of Aleppo, Idrimi, spent seven years among Hapiru in northern Phoenicia before recovering his ancestral kingdom with their help.

**d. Fifteenth century.** Census lists from Alalakh, level IV, frequently mention "Hapiru who own arms." A "house of Hapiru" consisted of 1,436 men, including eighty charioteers. A Syrian city on the edge of the steppe was transferred by a Mitannian king to a prince who was a Hapiru. Hapiru men and women entered into contracts of voluntary servitude with rich citizens of Nuzi. Other Hapiru at Nuzi were in the service of the government; one commanded a squad of ten soldiers. The occurrence at Nuzi of a "Hapiru scribe" seems to indicate that the Hapiru spoke a language which was distinct from Hurrian and Akkadian. About the same time, Pharaoh Amen-hotep II listed 'Apiru among prisoners taken in Palestine and southern Syria.

**e. Ḥatti and Ugarit.** In the fourteenth century the Hittites reappeared in Syria and renewed their contact with Hapiru. Large groups (presumably prisoners of war) were assigned to Hittite temples, but other Hapiru (presumably allies) possessed their own territory under Hittite sovereignty. The "gods of the Hapiru" were included in Hittite enumerations of gods. A "Hapiru town" existed in Cilicia. Few Hapiru, apparently, were present in the kingdom of Ugarit. We learn from a legal document of *ca.* 1300 that a Hapiru as well as an *ubru* (foreign resident) could be billeted in private houses. A Hapiru was thus under royal protection and was distinguished from a foreign resident. One of the five towns of the kingdom named Ḥalbi was known as "Ḥalbi of the Hapiru ('*prm*)" (see §1c), and was in no way different as to its status and obligations. '*prm*' seem to have served in the Ugaritian navy during the invasion of the Peoples of the Sea (*ca.* 1200; see PHILISTINES[S]).

**f. Amarna letters.** The largest body of evidence comes from the Amarna correspondence (*ca.* 1375-1345; see TELL EL-AMARNA esp. §2b; TELL EL-AMARNA[S]). It shows the Hapiru as a major force in central and southern Syria, Phoenicia, and Palestine. They formed the bulk of the armed forces of the usurper Abdi-Ashirta, the founder of the kingdom of Amurru; but his grandson speaks

instead of Sutu (Bedouin), as though these terms were equivalent. The Egyptian commissioner of southern Syria, Biriawaza, had both Hapiru and Sutu in his army. A city ruler begged the pharaoh to deliver him from the hand of the Hapiru, the *ḥabbātu*, and the Sutu, the mighty enemies. Several local kings or pretenders were allied with Hapiru, who seized towns and territories, and often killed loyal city rulers. A recurring complaint is that the land of the Egyptian king has been taken over by the Hapiru.

**g. Egyptian sources.** Two identical letters (in Akkadian) from a pharaoh of the Amarna period were discovered in Kumidi (Kāmid el-Lōz in southern Lebanon). They instruct the vassal kings of Damascus and a city in the Biqa' to send *ḥapiru aburra* to Egypt so they can be settled in Nubia. *Aburra* seems to be a diptotic genitive of *aburru*, "pasture." The people in question must have been prisoners; cf. the 'Apiru captives of Amen-hotep II (see §1d). Egyptian texts of the New Kingdom mention 'Apiru in Egypt itself, employed as vineyard workers or at hauling stones for construction. The Beth-shan stele of Seti I (1318-1304) speaks about that pharaoh's action against 'Apiru in southern Galilee. The latest mention of 'Apiru in Egypt comes from the middle of the twelfth century, and with it the 'Apiru/Hapiru forever disappear from the historical scene.

**3. Hapiru as foreigners, refugees, or outlaws.** The Hapiru were at first mostly regarded as a people and were often identified with the Hebrews (see §5 below). But in 1924, B. Landsberger and J. Lewy independently proposed to see in *ḥabiru* (as they continued to read it) a nonethnic, generic appellation. For Landsberger, the Habiru (from Canaanite *ḥābēr*, "member of a band") were uprooted individuals of varied origins, without tribal or family ties, who joined in bands which could be hired as soldiers by organized states, or acted on their own. For Lewy, the Habiru were foreign immigrants who were subject to special laws, were segregated from the native population, and found employment as soldiers of a "foreign legion"; hence their name, which derives from West Semitic *'ābir*, "one who had crossed the border"="immigrant foreigner." Both etymologies, as noted in §1d, turned out to be wrong. Most recent definitions of the term *ḥapiru* are variants of the Landsberger-Lewy view: "foreigners who are also enemies," "stateless persons," "soldiers of fortune," "uprooted persons who work for food," "displaced persons," "refugees," "outlaws," "rebels against the lawful ruling power." A separate theory (by W. F. Albright) saw the Hapiru/'Apiru as professional donkey caravaneers, whom lack of business compelled to become bandits or soldiers; but none of the approximately 250 pieces of evidence ever connects them with donkeys or commerce.

There are serious objections to understanding the Hapiru as an underprivileged social or legal category: (a) None of the definitions cited above fits all, or even most, of the contexts. (b) No legal discrimination of foreigners is attested in any state of Mesopotamia or Syria in the second millennium. Documents from Ugarit, in particular, show that

the city contained numerous immigrants from other states who were well integrated into the economic life of the kingdom. To be sure, numerous ancient Near Eastern texts mention fugitives: runaway slaves, embezzlers, insolvent debtors, political refugees; but such persons were either extradited (as stipulated in all state treaties), or else granted asylum and naturalized. (c) At no time were gangs of outlaws of mixed origin a major factor in the Near East. Pillaging raids, destructions of towns, seizure of territories—all these were until recently perennial features in the struggle between the desert and the sown land; but the perpetrators of these acts of violence were organized tribal units (see NOMADISM[S]). (d) If, as is claimed, Near Eastern societies contained large agglomerations of people who had dropped out from normal social life (Mendenhall), it is impossible to explain why the Hapiru are attested for only six hundred years (ca. 1750-1150) and why there is no later mention of them, or of massive bands of outlaws and stateless persons under any other name.

4. **Hapiru as nomadic tribesmen.** In view of the contradictions of the sociolegal view of the Hapiru, de Vaux posed the question whether one should not, after all, consider the Hapiru as one of the West Semitic ethnic elements which roamed the fringes of the desert. Here a reservation must be made: *hapiru* was not an ethnic term; if it were, it would have been written in Ugaritic \**ḥp̄rym*, not \**ḥpm*; nor is it ever spelled \**ḥapirū* or \**ḥapirāya* in Akkadian (the Middle Babylonian ethnic *ḥa-bir-a-a*, as noted in §1a, probably does not belong here). Nevertheless, if one is looking for a social group which would combine all these features: love of war and violence; mobility; predilection for military career; economic status ranging from considerable wealth to extreme poverty; tendency to keep together, often in large units; hospitality; efforts to seize areas and settle in them; possible connection with pastures; possession, at times, of territories under their own jurisdiction; chieftains who are proud to be called *ḥabbātu*; preservation of group identity even inside cultivated land—one cannot but think of nomadic tribes in the fringe areas and inside Syria and Mesopotamia. Granted that the Hapiru were not full-fledged citizens of the country of their sojourn; however, it was not their being strangers that made them Hapiru, but their being Hapiru that made them strangers. Immigrants from civilized countries entered the civic society by joining one of its cells (a town or a corporation); the Hapiru remained members of tribal communities who were resisted if they came as plunderers or conquerors, but tolerated and rewarded if they chose to enter the royal service against other states or tribes. The distinction between sedentary subjects and Hapiru tribesmen was indeed, to an extent, a legal one; yet it was not imposed by the state within a single system of law but was a self-imposed adherence of the Hapiru to their independent system of tribal law. *Ḥapiru* was indeed a designation of a peculiar way of life—like “Bedouin,” and like the earliest meaning of “Arab”—but, like these, it had a *de facto* ethnic connotation. Nomads, in our time as in the second millennium B.C., appear only within the frame-

work of tribes, and these tribes, in a given period, belong to one of the branches of the Semitic family which succeeded each other in this role: Amorites, Arameans, Arabs. The activities of the Hapiru in the Amarna Age are closely comparable to the penetration of Syria by Arabs during the collapse of the Seleucids. It is significant that the six hundred years of Hapiru presence in the Near East start with the end of Amorite invasions and conquests and end with the start of the Aramean expansion. The Hapiru are no longer mentioned after 1200-1150 because by that time their turbulence was spent: like their predecessors and successors, they ended by settling down. If the Hapiru are both associated with and distinguished from the Sutu, the difference probably consisted in the Sutu being Bedouin of the desert, while the name *hapiru* was given to those nomads who had already infiltrated cultivated lands; however, this distinction was not very rigid.

5. **Hapiru and Hebrews.** As shown in §1, the view that *Ḥabiru* was the same word as Heb. *‘ibri*, “Hebrew,” had to be abandoned because of indubitable evidence that the original form of this term was *‘apiru*, which cannot be plausibly explained as a phonetic variant of \**‘abiru*. Nor is it probable (as hypothesized by Albright) that around the turn of the first millennium the pronunciation shifted from *‘apir-* to *‘abir-*, in part under the influence of the root ‘BR, “to cross, to pass,” and then from *‘abir-* to *‘ibr-* by the same mechanism by which an earlier *malik-* became the Canaanite *milk-*, “king.” The latter example is unconvincing because *milk-* is attested (in Amorite names) as early as the Ur III period; *milk-* and *malik-* (the latter used only as a divine name) are parallel formations. A dual transformation, both consonantal and vocalic, of *‘apir-* into *‘ibr-* is difficult to admit. *‘Apiru* and *‘ibri* are in all likelihood etymologically and semantically unrelated. *‘ibri* is a regular ethnic derived from the geographical term *‘ibr-* (>Masoretic *‘ēber*), “land beyond the river.” It is seldom encountered in the OT, was not a normal self-designation of the Israelites, and may have been of a relatively late origin. If it is unwarranted to interpret the Hapiru, wherever one finds them, as Hebrews, it is equally wrong to explain the term “Hebrew” in the OT by the alleged sociolegal meaning of *ḥapiru*. Could there have been, however, a historical connection between the Hapiru and Israel? If the Hapiru, as this is often assumed (§3), were disparate bands composed of outlaws of various ethnic origins, then there was no relation whatever between them and the Israelites who, during their early history in Palestine, displayed all the characteristic features of a normal tribal society of nomadic background in the process of becoming sedentary. If, on the other hand, one accepts the view outlined in §4, then the penetration of the Hapiru into Syria-Palestine of the Amarna Age presents a close analogy to the settlement of Israelite and cognate tribes, as it was still remembered in certain pre-Deuteronomomic passages, and it becomes permissible to assume that this settlement was an episode of the final stage of the Hapiru movement.

**Bibliography.** An excellent survey is provided by J. Bottéro, *Le problème des Habiru* (1954). Similar is M. Greenberg, *The Hab/piru* (1955 [2nd, augmented ed., 1961]). More recent literature is quoted in R. de Vaux, "Le problème des Habiru après quinze années," *JNES*, XXVII (1968), 221-28. The article "Habiru" by J. Bottéro in *RLA*, IV, fasc. 1 (1972), 14-27, contains a full list of documents, a brief supplementary list of studies, and a new discussion of the evidence.

\***HADRACH** [חדרך, Old Aram. חזרך, Assy. *Ḥat(a)-rikka*, *Ḥat(a)rakka*]. A city mentioned with Damascus (Zech. 9:1). Identified with the very large mound of Tell Āfis, ca. twenty-eight miles SW of Aleppo (see HITTITES[S] map); here was discovered an Old Aramaic inscribed stele of Zakir, king of Hamath and L'š (ca. 800 B.C.) which reports the unsuccessful siege of *Hrk* by a coalition of Syrian kings headed by Bar-hadad (BEN-HADAD), king of Aram. Hadrach was the capital of Luḥuti or L'š, allied with Hamath from 854 to 773. After seceding from the then pro-Assyrian Hamath, Hadrach opposed Assyria till it was conquered by Tiglath-pileser III in 738 and turned into an Assyrian province. In 720 it rose against Sargon II, along with Hamath, Arpad, Simirra, Damascus, and Samaria, but the revolt was suppressed the same year (these events are probably hinted at in Zech. 9:1-6).

**HADRIAN** hā'drī ən. Publius Aelius Hadrianus, Roman emperor (A.D. 117-138). Hadrian was born, probably in Rome, on January 24, 76. His family came from Italica in Spain (near Seville), the birthplace of his predecessor TRAJAN (98-117). Left fatherless in 85, he became the ward of Trajan, his father's cousin, and of Acilius Attianus, also from Italica, who played a significant role early in Hadrian's reign. A favorite of Trajan's wife, Plotina, Hadrian was also linked to the emperor through his marriage to Sabina (A.D. 100), Trajan's grand-niece. His career followed a traditional course of civil and military appointments which included service in Trajan's Dacian campaigns (101-102, 105-106), the consulate in 108 and, in 117, at a critical stage in the Parthian wars, command of the important Syrian army while Trajan returned to Rome. When Trajan died en route (August, 117), Hadrian was proclaimed emperor by the troops in Syria and then recognized, somewhat reluctantly, by the Roman senate.

As emperor, Hadrian abandoned Trajan's Parthian conquests and thereafter maintained a policy of peace based on fortified border defenses (e.g., Hadrian's Wall in Britain), a highly disciplined army, and no further imperial expansion. In Rome, his reign opened inauspiciously with the execution of four senators—upon suspicion of treason—by Attianus, now prefect of the PRAETORIAN GUARD.

1. Hadrian

When Hadrian himself reached Rome, in the summer of 118, he removed Attianus from office, blaming him for the executions, and took several measures designed to counteract his own unpopularity. The most spectacular was the remission of 900,000,000 sesterces worth of debts to the state, an act recorded on his coins of 118. Restless, inquisitive (Tertullian later called him *omnium curiositatum explorator*), and perhaps never fully comfortable in the capital, Hadrian spent extended periods away from Rome: 121 to 125; 128 to 132 or 133; briefly in 134 in connection with the Jewish revolt in Judea (see GERASA Fig. 19). His travels enabled him to inspect the army, to attend to provincial affairs in person, and to indulge a penchant for Greek culture which, in childhood, had earned him the nickname "Greekling" (*Graeculus*).

In matters religious, Hadrian's reign was of varying significance. He was himself a devotee of astrology and an initiate of the Eleusinian mysteries (see GREEK RELIGION AND PHILOSOPHY §5). His homosexual affair with Antinoüs, a Bithynian youth, ended unhappily when the boy was drowned in the Nile in 130. Cults of Antinoüs sprang up throughout the Empire in response to Hadrian's grief—and soon became a stock example in Christian polemic against Roman paganism. Toward the Christians, as a surviving rescript shows (Just. I Apol. 68), Hadrian continued Trajan's lenient policy. His legislation against CIRCUMCISION, however, helped to provoke the Jewish revolt under

BAR KOCHBA (132-135). The founding of the Roman colony of Aelia Capitolina at Jerusalem in 130 may also have contributed to Jewish resentment of Rome (contra Euseb. Hist. IV.vi, it was not a punitive reaction to the revolt). In neither case, however, is it clear that Hadrian acted with deliberate intent against the Jews.

Himself a poet of some skill, a musician, and an amateur architect, Hadrian exercised great influence on the culture of the Empire. His preference for the archaic (he is reported to have preferred Ennius to Virgil) set the rhetorical and literary style for his period. He cultivated a repristination of Hellenistic art which verged on the romantic (especially evident in statues of Antinoüs). An avid builder, his architectural achievements include, in Rome, the reconstruction of the Pantheon, the Temple of Venus and Rome, and his own mausoleum (the Castel Sant' Angelo). His architectural masterwork, however, was the personal villa which he created at Tibur (Tivoli), outside of Rome, during the final years of his rule. Among Hadrian's provincial buildings were the Temple of Jupiter Capitolinus erected on the site of the Jewish temple and the Temple of Aphrodite (Venus) built over Jesus' tomb, both in Jerusalem. Under Constantine, the Temple of Aphrodite was removed to make way for the Church of the HOLY SEPULCHRE (Eusebius, *Life of Constantine III*.xxv-xxix).

Complex, enigmatic, always changeable (*semper in omnibus varius* reports the *Historia Augusta*), Hadrian is a difficult figure to assess. His profound philhellenism marks a high point in the melding of Greek culture with Roman power. But he himself was always regarded and remembered with ambivalence. His reign ended (July, 138) under a cloud: two candidates were put to death before he settled the succession on Antoninus Pius. Only with great difficulty was Antoninus able to persuade the senate to vote Hadrian the honor of posthumous deification.

W. S. BABCOCK

\***HAIR.** In the ancient world hair represented one's essence, probably because it endures beyond death; therefore, numerous restrictions and customs clustered about it.

1. **Hair worn long.** a) Heroic figures like Esau, Samson, Absalom, Gilgamesh, and anonymous heroes of ancient art are pictured with long hair, sometimes with seven locks (Samson). See Fig. H2.

The Louvre

2. Bust of head with seven locks. Phoenician, 6th-4th century B.C. from Carthage

b) Kings allowed hair to grow as a sign of potency. Even Queen Hatshepsut in statuary art possessed a stylized beard. Assyrian kings grew long, curly hair with great, square beards.

c) Gods were imagined as possessing long side locks and hair. The bull symbol of Ur's moon-god had a beard, indicating potency.

d) The expression "there shall not one hair of his head fall to the ground" (I Sam. 14:45; cf. II Sam. 14:11; I Kings 1:52) shows the significance of hair to one's well-being.

e) Disheveled hair represented mourning (Lev. 10:6) as well as reckless abandon. Priests' hair was not to be disheveled (Lev. 21:10), while the leper was to let his hair hang loose (Lev. 13:45). A woman accused of infidelity was to have her hair unbound by the priest when she appeared before God to test her innocence (Num. 5:18).

f) Israelites, as a sign of their distinctiveness, were to leave the hair of the temples and beard untrimmed (Lev. 19:27).

g) A NAZIRITE (Num. 6:1-21) was obligated to leave his hair uncut as an act of dedication. Samson's strength derived from his vow; the shaving of his seven locks removed his vow's last vestige; therefore, the Lord "left him" (Judg. 16:20).

h) The statement that "the leaders took the lead in Israel" (Judg. 5:2) may suggest dedication to God by growing hair. The term used, פֶּרַעַ, is cognate to the usual Akkadian word for hair (*peru*) and appears elsewhere in the OT with this connotation (Lev. 10:6; Num. 6:5).

i) Married women and those otherwise set apart were to cover their hair with a veil.

2. **Hair to be cut.** a) Shaving the Levites' bodies was an essential part of purification (Num. 8:5-7). The name Korah means "bald," perhaps indicating tonsure (Num. 16). Priests and physicians of the ancient world often were shaven.

b) Hair was offered as a sacrifice by a Nazirite on completion of his vow or when he inadvertently violated it (Num. 6:9-18), and by the person completing a journey or pilgrimage. Lepers shaved as part of the ritual for restoration (Lev. 14:8, 9).

c) Israelite prophets advised their listeners to cut their hair in mourning for the coming destruction (Isa. 3:24; Jer. 7:29).

d) Priests in Ezekiel's "Temple Ordinances" must not shave their heads or let their hair grow long (44:20). They may only trim their hair and beards, which suggests avoidance of the tonsure, a characteristic of foreign priests (see Lev. 21:5). The prophetic mantle (I Kings 19:19; II Kings 2:8, 13) was hairy (Zech. 13:4), reminiscent of the hairy kilt worn by bald-headed priests of Sumerian times.

e) Ezekiel (5:1-4) cut his hair to symbolize the coming destruction and exile. Prophets may earlier have been marked by tonsure as indicated by Elisha's being called "baldy" (II Kings 2:23), or by the prophet who bandaged his head as a disguise (I Kings 20:35-43). See also VEIL; BEARD.

\***HARAN (PLACE)**. 1. **Historical references.** The eighteenth-century B.C. texts found at MARI refer to Asditakim, king of Haran, and the alliance made between local kings of Zalmaqum and elders of the tribe of Benjamin (see BENJAMIN, BENJAMINITES[S]) in the temple of Sin at Haran. In this same century Haran is referred to as a staging post on an important caravan route between Mesopotamia and the northwest.

The moon-god Sin of Haran was invoked as a guarantor of treaties between the HITTITES and MITANNI, and the town was involved in a three-way struggle between Hatti, Mitanni, and Assyria in the fourteenth century. It was annexed by Assyria under Shalmaneser I (1274-1245 B.C.). Until the sacking of Haran in 610 B.C., the city was the capital of one of the most important provinces in the empire and gradually acquired privileges including the right of exclusion from military levies. Throughout this time the cult and temple of Sin remained important, and restorations of the temple are twice recorded.

The Babylonian ruler NABONIDUS had a deep veneration for Sin and his temple at Haran, and his monumental inscribed slabs record the rebuilding of the temple in the sixth century. Well into the Christian period a pagan cult of the moon-god continued to flourish in the region. The city had strategic importance in these later times also.

2. **Excavations.** The investigations in the 1950s were primarily concerned with the Islamic remains,

and the limited excavations on the large tell in 1959, being restricted to one deep trench, revealed only sketchy traces of its early history. The artifacts show that the town was established by at least the middle of the third millennium, but its origins are probably much earlier. The evidence reflects a well-to-do town with mud-brick houses existing for the following five hundred or so years. But for the entire second and first millennia, a period otherwise so well documented, the evidence is thus far restricted to a few sherds and fragmentary inscriptions. One fragmentary text of Assyrian date refers to the temple. Excavations in the neighborhood at Aşagi Yarımca and Sultantepe have revealed fairly extensive Assyrian towns or cult establishments dedicated to Sin, and this has led to suggestions that the site of ancient Haran might have been located away from the Roman, medieval, and present site. This view seems unnecessary however, for it is clear that most sizable towns of the region would have had subsidiary temples dedicated to this paramount deity. It has been suggested that the ancient temple of Haran lies beneath the Great Mosque where Nabonidus' stelae were found, but the contours of the top of the hill may indicate that the tell became a podium for the temple, which Assurbanipal records he restored on a wide platform with stone foundations, raised high in the center of the city and approached by a stairway. The contemporary town would thus lie below at the sides of the tell, and now be hidden beneath as much as twenty-three feet of Roman and Islamic debris. The stratification in the excavation indicates that this transformation of the early tell could have taken place at any time after the end of the third millennium.

\***HARMONY OF THE GOSPELS.** A four-gospel harmony of the Greek text in current use is K. Aland, ed., *Synopsis Quattuor Evangeliorum* (7th ed., 1971) which includes parallels from apocryphal gospels and patristic sources. These latter are not incorporated in the Greek-English ed., *Synopsis of the Four Gospels* (1972), which adds the RSV text and notes KJV and ERV variants.

**HAUSTAFEL** hous' tā fēl. A technical term for NT passages in which persons are admonished concerning their stations in life. See LISTS, ETHICAL §§1-4; LISTS, ETHICAL[S] §2. D. SCHROEDER

\***HAZARMAVETH.** For etymology see DEITIES, UNDERWORLD[S] §2bii.

\***HAZOR.** Between 1955 and 1958 extensive excavations were conducted at Hazor on behalf of the Hebrew University under the directorship of Y. Yadin. During the four seasons various areas were excavated both on the tell (the upper city) and the rectangular plateau (the lower city) at the foot

of the tell (see HAZOR Fig. 8). The strata of the upper and lower cities were allocated independent numbers. In the summer of 1968 a fifth season was conducted.

Courtesy Y. Yadin

3. Topographical map of Hazor showing excavated areas

1. The lower city. C, D, E, "210," F, H, K, and P were excavated, revealing the following five occupation levels (numbered bottom to top):

Stratum 4: MB IIB period (eighteenth century B.C.)

Stratum 3: MB IIC period (seventeenth-sixteenth centuries B.C.)

Stratum 2: LB I period (sixteenth-fifteenth centuries B.C.)

Stratum 1B: LB IIA (TELL EL-AMARNA period; fourteenth century B.C.)

Stratum 1A: LB IIB period (thirteenth century B.C.; city destroyed by fire at end of thirteenth century).

a. *Area C.* (i) Stratum 4. During this period the lower city's first fortifications and the rampart were constructed. (ii) Stratum 3. The city was destroyed by a great fire. Infant burials in store jars were discovered beneath some of the houses, as in the previous stratum (see MEGIDDO Fig. 28). (iii) Stratum 2. A number of dwellings were unearthed. (iv) Stratum 1B. During this phase the city flourished. On the inner slope of the rampart a small temple was found with a rectangular room containing small stelae and a statue (see TEMPLES §2a; TEMPLES, SEMITIC[S] §1a). Around the temple a number of buildings were uncovered, probably workshops to serve the temple's needs. (v) Stratum 1A. This town rose upon the ruins of the town preceding it, and its structures are similar to, but somewhat poorer than, those of stratum 1B. The

temple from the previous city was reconstructed, and all its components replaced in their original positions.

b. *Area D.* The main finds here included rich tombs from the MB IIB period and attractive dwellings. An important discovery was a shard with two letters in the Proto-Canaanite script of the LB II period.

c. *Area E.* This small area is of special importance for its rich find of pottery of the LB I period. Some of the ceramics, showing Anatolian influence, are of a type never before discovered in Israel.

d. *Area 210.* A 17x17 foot trial dig was conducted to prove that the chronology of the strata was in fact identical in every area, and that the entire enclosure had been inhabited.

e. *Area F.* (i) Stratum 4. Rock-hewn tombs were discovered (all MB IIB), connected by a wide network of tunnels. All have basically the same plan: a deep rectangular shaft, at the bottom of which are a number of entrances (see TOMB[S] §3). (ii) Stratum 3. A large "double temple" with thick walls and rectangular in shape was constructed here (see TEMPLES, SEMITIC[S] §1a). A wide network of channels connected the temple to the earlier tombs, and formed a drainage complex. (iii) Stratum 2. The main building discovered was a square temple, similar to that discovered at Amman in Jordan. (iv) Stratum 1B. An altar made of a large ashlar block was discovered here, around which stood other structures related to this cultic object, as well as many cult vessels (see ALTAR Fig. 21). (v) Stratum 1A. The majority of structures surrounding the altar were reconstructed during this period; many cult objects and vessels were discovered.

f. *Area H.* A series of four temples was discovered, one above the other. All, like the temple in area C, are close to the inner slope of the rampart. (i) Stratum 3. The temple in this stratum has a wide room with a niche in the N side. Two columns in the center of the room supported the roof. The whole area in front of the temple entrance was paved with a fine pebble floor. (ii) Stratum 2. This temple is identical to that of the previous stratum, even though the building is a new structure. A number of small platforms were found, including a rectangular platform or altar in the courtyard. To the E of the latter a large heap of broken cult objects and vessels was unearthed, including a most unusual find—inscribed fragments of clay liver models used by priests (see DIVINATION Fig. 32). (iii) Stratum 1B. The temple now comprises three main parts running from N to S, their doorways on a single axis leading to each chamber in succession. Generally, it is reminiscent of Solomon's temple in Jerusalem (see TEMPLE OF SOLOMON[S] §2c). The lower parts of the walls of the holy of holies and the porch were lined with large, well-dressed basalt slabs (orthostats). A huge lion orthostat was found, which, together with its missing counterpart, stood once at the entrance of the porch. (iv) Stratum 1A. This is virtually the same temple as in 1B with a few additions and changes. In the "holy of holies" a rich find of

cult vessels was uncovered, including a basalt incense altar upon which was engraved the emblem of the storm-god (circle with cross) and a small basalt statue of a man sitting on a chair. See Fig. H4.

© Y. Yadin

4. Implements from the "holy of holies" of a Canaanite temple, 13th century, as found at Hazor. Probably destroyed by Joshua.

*g. Area K.* Here five city gates were unearthed, one above the other. (i) Stratum 4. Little remains of this, which was flanked by a tower on either side. The gate and the wall were built of bricks on a stone foundation. (ii) Stratum 3. In the gate passage were three pairs of pilasters, while two large towers flanked the sides of the gate. Close to the gate the remains of the earliest type of casemate wall known in Israel were unearthed. In front of the gate was a large platform enabling chariots to enter. This in turn was supported by a revetment wall built of huge basalt stones. (iii) Stratum 2. The gate of this phase is identical in plan to that of stratum 3, but is built of large, well-dressed stones. (iv) Stratum 1B. This gate is like that of stratum 2, but includes a number of alterations. The floor of the passage is now built of cobblestones, and in the S some workshops and cult objects including stelae were discovered. The casemate wall gave place to a brick wall, *ca.* ten feet thick. (v) Stratum 1A. This is the same gate as in the previous phase, with minor repairs and additions. The floor was found covered by a thick layer of ashes.

*h. Area P.* A similar set of gates was found here.

2. *The upper city.* The areas excavated in this part of the city included area A in the center of the tell (this is where Garstang conducted his trial dig in 1928); area AB situated close to area A; area B which lies in the W; area G in the E; and area L, which is situated SW of area A. Twenty-one occupational levels were discovered.

*a. Area A.* (i) Strata XXI-XIX may be attributed to the various stages of the EB period. Pottery was the main find in the levels, such as was the case in stratum XVIII (MB I). (ii) Strata XVII-XVI correspond to strata 4 and 3 in the lower city respectively. Remains of a large structure, possibly a palace, and remains of a great wall were uncovered here. The wall is twenty-five feet thick and is built of plastered bricks on a foundation of stone. (iii) Stratum XV corresponds with

stratum 2 in the lower city. Here were unearthed sections of a large palace. Adjacent to it, a rectangular temple was found. Its entrance was built of orthostats. (iv) Stratum XIV corresponds to stratum 1B in the lower city. The main discovery in this phase were the remains of the palace with courtyards and squares paved in pebblestones. Close to the palace was a large reservoir, to which rain water was carried through special channels. (v) Stratum XIII corresponds to stratum 1A in the lower city. Its destruction in the thirteenth century B.C. brought an end to the Canaanite occupation of Hazor. Very few buildings were constructed during this phase, but buildings from the previous stage were added to and reconstructed. (vi) Stratum XII. After a gap, the beginnings of Israelite occupation appear above the ruins of the thirteenth-century B.C. city: stone foundations of huts or tents and storage pits. Stratum XI is as poor as its predecessor. (vii) Stratum X. Hazor was rebuilt as a large city. Signs of its importance can be found in the casemate wall and the big gate which had six chambers (three on each side) and was flanked by a tower on each side. These fortifications may be attributed to King Solomon (*see* I Kings 9:15), since they are similar to those built by Solomon at GEZER and Megiddo (*see* MEGIDDO Figs. 36-37). (viii) Stratum IX. There is a decline in the standard of construction during this stage, which may be ascribed to the period between Solomon and Omri. This city was destroyed by an extensive conflagration. (ix) Stratum VIII. This phase excels in its wealth of public buildings and installations. Dominating the central part of the city was a large building, at the center of which stood two rows of columns. This stratum is assigned to the dynasty of Omri, and was most probably built by Ahab. (x) Stratum VII. The large pillared building was still in use during this stage, but other structures around it were altered. This level was razed to the ground, and its buildings were never reconstructed. (xi) Stratum VI. An area of public structures from an earlier stratum now became an area of living quarters and workshops. This city was probably destroyed in the earthquake which struck Israel during the period of Jeroboam II (Amos 1:1). (xii) Stratum V. During this period most of the houses of the previous level were reconstructed. The city was destroyed by a great fire, which may be attributed to the conquest of Tiglath-pileser III in 732 B.C. (*see* II Kings 15:29). Thus ended the fortified Israelite occupation of Hazor.

Few remains of importance were unearthed in strata IV-I (Assyrian-Hellenistic periods).

*b. Area B.* During the Israelite period a series of citadels occupied most of this area. The remains of the citadels were not removed, and therefore all knowledge of the area before the Israelite period was obtained from trial digs on the E side.

(i) Stratum XII. This was the first Israelite occupation, and as in area A it was a poor and unwallied settlement. Although this type of life style continued in stratum XI, the latter is a far more permanent settlement. Finds of cult vessels around a "high place" seem to point to a cult center. (ii) Stratum X. Solomonic remains include

the casemate wall surrounding the tell. A citadel was built on the W end, but little can be learned about it, since the citadel of stratum VIII was constructed directly above it. (iii) Stratum IX. Very little remains of this level. (iv) Stratum VIII. A massive fortress was unearthed (ca. 69 x 82 feet) with walls almost one foot thick. Two long halls with rows of rooms represent the basement of the citadel. The upper floors, built of bricks, have not been preserved. Buildings close by likely served the administrative staff. Proto-Aeolic capitals were found here. The outer walls of the structures served as a defense wall for the citadel. The fort constructed in the middle of the ninth century B.C. was used in strata VII-VI without significant changes. (v) Stratum V. Anticipating an Assyrian attack, the citadel was strengthened by an "offsets/insets" wall in the S, W, and N. In order to construct this wall a number of existing buildings had to be demolished. Stratum V was destroyed completely by Tiglath-pileser III (732 B.C.). (vi) Stratum IV. After the destruction of the fort, an open, unwalled settlement was established during the eighth-seventh centuries B.C., most probably occupied by Israelite squatters. (See Fig. H5.) (vii) Stratum III. A new citadel was constructed, probably by the Assyrians. Its plan consists of an open inner courtyard surrounded on all sides by halls and rooms. (viii) Stratum II. This layer belongs to the Persian period, during which the fort of stratum III continued to exist, but with many alterations. It may be dated to the fourth century B.C. (ix) Stratum I shows signs of yet another citadel which may be assigned to the Hellenistic period (second century B.C.).

**c. Area G.** The excavations in this section throw more light on the extent of development of the upper city.

i. *The Canaanite period.* The most important discovery of the MB II period was a line of fortifications on the NE corner of the tell. Of special note is the round corner bastion whose external walls sloped to form a stone glacis defended by a deep and narrow moat.

ii. *The Israelite period.* The earlier Solomonic town stretched over only a small part of the tell in comparison to the period of the dynasty of Omri (stratum VIII), when it spread out to encompass most of the area. This fact received further proof during the 1968 season of excavations in area M (NE of area A).

© Y. Yadin

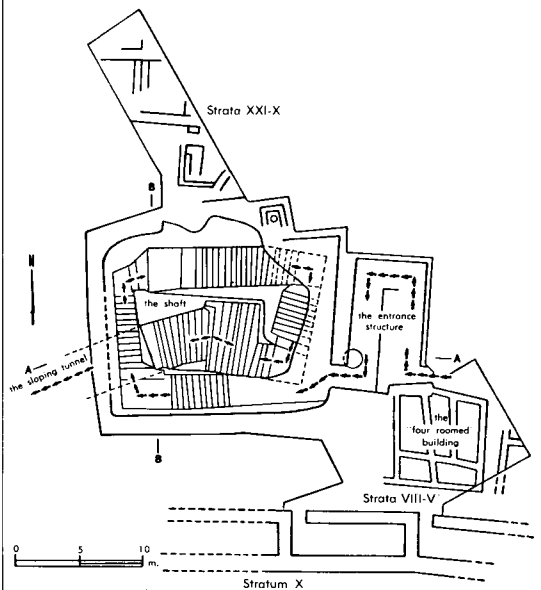

5. Israelite house, Hazor, 8th century B.C.

**d. Area L.** During the fifth season of excavations (1968), an underground water system was unearthed, situated in areas A and B. It consists of three main sections.

i. *The shaft.* The upper section of the shaft cut through the early layers, reaching bedrock. It was revetted by a huge supporting wall built of large, rough stones. The lower section was entirely quarried into the soft natural rock. Along the sides was a rock-cut staircase measuring up to one foot in width. The shaft at Hazor is twice as big as that of Megiddo (see MEGIDDO[S] §2).

ii. *The sloping tunnel.* A tunnel, about thirteen feet wide and high, is the continuation of the flights of stairs. At the end a "pool" with clear water was found. The entire depth of the water system from the peak of the tell is about 131 feet.

iii. *The entrance structure.* To the E of the shaft, a building was discovered through which one could descend from the city to the shaft down two ramps specifically constructed for this purpose. Access from the entrance structures to the shaft was through a monumental gate. See Figs. H6, H7.

Courtesy Y. Yadin

6. The water system and the adjacent buildings and sections, Hazor

Courtesy Y. Yadin

7. Sections of the water system

It was possible to date this gigantic water system to the ninth century B.C. (i.e., dynasty of Omri) based on the similar water system found in Megiddo, the ceramic evidence, and stratigraphic examinations of the area. The system was in use until the final destruction of Hazor by Tiglath-pileser III in 732 B.C. See also ARCHAEOLOGY[S].

Y. YADIN

**HEAD COVERING.** During the biblical period priests and royalty are described as wearing a "turban" (מַצְנֵפֶת or צִנִּיף). No biblical or talmudic source, however, commands the covering of the head when entering a sanctuary, or participating in or performing a religious ceremony.

In Palestine during the biblical and rabbinic periods it was the custom to go bareheaded. When Antiochus Epiphanes forced Jewish young men to "wear the Greek hat" (II Macc. 4:12), Palestinian rabbis resented it as a sign of Hellenization.

It seems likely that it was in Babylonia that Jews developed the custom of covering the head. Rabbis and scholars there, affected by foreign customs, came to regard the practice as a sign of humility before God and of respect for prominent men.

Modern scholars disagree on how the custom spread. There is clear evidence that a head covering was not required in medieval France, but by the twelfth or thirteenth century it seems to have become deeply rooted throughout the rest of the Jewish world.

In modern times, especially in the United States, the issue of covering the head during worship has aroused controversy between traditional Jews and Reform Jews. The majority of Reform Jews in the U.S. pray bareheaded, whereas it is the practice for Orthodox Jews at all times and Conservative Jews during worship to wear either a hat or a skull cap, usually called a *yarmulke*. This word is of Polish origin (*jarmulka*) and has been adapted into Yiddish יארמלעקע; the Hebrew equivalent is כיפה. L. M. BARTH

48:8-21 [RSV "portion"]) and the sacrificial ingredients levied on the people (45:13, 16).

The tannaïtic interpretation that *t'rumā* is a ritual whereby the offering is subjected to a vertical motion (cf. M. Men. 5.6) is responsible for the accepted rendering "heave offering." This rendering, however, is questionable, since in the cultic texts of the Priestly source, the verb *hērīm*, used exclusively with the preposition *min* and with the synonyms *hēsīr* (e.g., Lev. 4:8-10, 31, 35) and *nibhdal* (Num. 16:21, 45 [H 17:10]), never means "raise, lift," but only "set apart, dedicate." Consequently, the noun *t'rumā* can refer only to that which is set apart or dedicated, and hence must be rendered "dedication, contribution." This rendering is confirmed by the Targ. (אִפְרִשׁוּתָא), by the LXX (ἀφοσίρεμα), and by the Akkadian *tarimtu* (an exact cognate) and *rīmūtu* from the root *rāmu* III (Assyrian *riāmu*).

The function of the *t'rumā* is to transfer the object from its owner to the deity. In this respect it is similar to the *t'nūphā* (see WAVE OFFERING [S]), but with this crucial distinction: the *t'nūphā* is performed "before the Lord" (*liphnē Yhwh*), whereas the *t'rumā* is never "before" but always "to the Lord" (*l' Yhwh*). Thus the *t'nūphā* and *t'rumā* comprise two means of dedication to the Lord: the former by a ritual in the sanctuary, and the latter by a dedication without ritual outside the sanctuary, effected either by an oral declaration (e.g., Judg. 17:3) or by a physical act (e.g., Lev. 27:32). This distinction serves to resolve the alleged ambiguities resulting from the same object undergoing both *t'nūphā* and *t'rumā* (e.g., Exod. 29:22-24, 27; 35:24; cf. 38:24), a distinction which can be formulated into this rule: every *t'nūphā* (ritual) is preceded by *t'rumā* (being set apart, designated as an offering).

The thigh of the well-being offering constitutes a special problem: the text which defines it (Lev. 7:32-33) assigns it directly to the officiating priest without the mediation of the *t'nūphā*, whereas three other passages dealing with this thigh require the *t'nūphā* (Lev. 8:26-27; 9:21; 10:15). The first of these passages (Lev. 8:26-27) concerns the thigh of the priestly consecration, which is incinerated on the altar and not given to the officiating priest. This unique disposal of the thigh requires the dedicatory rite of the *t'nūphā*. Textual analysis of the remaining two passages (Lev. 9:21; 10:15) points to the possibility that "and the right thigh" is a later interpolation, whose historical motivation may be reconstructed by comparing Lev. 7:30-33 with I Sam. 2:13-17. Both pericopes share two postulates: (1) the officiating priest is recompensed by a portion of the well-being offering which does not undergo a ritual, and (2) the Deity receives his portion (via the altar) first, ahead of the priest. Such was the practice at Shiloh and, probably, at bamah sanctuaries. At the Jerusalem temple, however, the thigh was subjected to the *t'nūphā* ritual in order to enhance the standardization and pomp befitting the national-royal shrine. Then it was ordained that the thigh should be distributed equitably to the entire priestly staff rather than becoming the due of the officiating priest, in order to prevent contention over its

\***HEAVE OFFERING** [תְּרוּמָה, *t'rumā*]. The sacred gifts called *t'rumā* are: the right hind thighs of the priestly consecration offering, מְלֵאִים, and "well-being" offering, שְׁלָמִים (Exod. 29:27-28, RSV "priest's portion"; Lev. 7:32, 34; 10:14-15; Num. 6:20); the breast of the well-being offering (Exod. 29:27); the materials for the building of the tabernacle (Exod. 25:2-3; 35:5, 21, 24; 36:3, 6 [RSV "offering"]); the census silver (Exod. 30:13-15); the cakes of the thank offering, תּוֹרֶה (Lev. 7:12-14); the first yield of baked bread, ראשית הערסה (Num. 15:19-20; see FIRST FRUITS, OT[S]); the tithe and its tithe (Num. 18:24-29); the portion of the war spoils assigned to the sanctuary (Num. 31:29, 41, 52); sacred gifts in general (Num. 5:9; 18:8) and gifts of lesser sanctity in particular (Lev. 22:12, 15; Num. 18:11-19). Ezekiel adds to this list the land allotted to the priests and Levites (45:1;

ownership. Early in second-temple times, the two traditions, the *ʿrūmā* and the *ʿnūphā*, were harmonized by blending them into a single ritual (perhaps through a Midrash Halachah on Exod. 29:27; cf. Sifra, Tsav 11.11) whereby the thigh was swung vertically and horizontally, as the rabbi's attest was the practice during the last years of the second temple.

\***HEBREW LANGUAGE. 1. Types of Hebrew.** Biblical Hebrew is divisible into dialects, depending on time, place, and category of literature.

**a. Time differences.** For example, Persian loan words, such as *dāth* (דת), "law, custom, religion," and *piṭhgam* (פיתגם), "word, saying," do not appear until the Achaemenian conquest of the Near East in the second half of the sixth century B.C.

**b. Local differences.** Tribal dialects were recognized by the Israelites themselves, who noted that the Ephraimites did not distinguish *š* (ש) from *s* (ס) and accordingly said סבלה instead of שבלה (Judg. 12:6). The northern dialect at Samaria reduced the diphthong *ay* to *ē*, even in closed accented syllables where the Judeans retained the *y*; in the Samaria ostraca, the word for "wine" is written יין instead of MT יין.

**c. Genre differences.** Categories of literature call for their own conventional language. Poetry often preserves archaisms peculiar to itself. Thus the use of *yqtl* verbs to express past time (often in Psalms, e.g., Ps. 78:26, 29, 38, 40, 45, 47, 49, 58, 64, 72) instead of *qtl* or \**wan+yqtl* (ויקטל), continues an early poetic usage typifying the Late Bronze Age poetry from Ugarit. The definite article *ha(n)-* (ה) is an innovation that spread and became normal in Hebrew prose during the Iron Age (after 1200 B.C.), but old or archaizing poetry tends to avoid it (e.g., Ps. 68, where it is used very sparingly). Words like חרוץ, "gold," instead of the normal Hebrew זהב, and זו, instead of אשר, "which" (relative pronoun), are limited to poetry. Listings may be given in accordance with bookkeeping usage, without sentence structure. The thirty-one kings conquered by Joshua are identified by their city-states, each followed by the numeral "one" (Josh. 12:9-24). The total is added at the end. Descriptions of art and architecture (see Exod. 25-40 for the construction and furnishings of the tabernacle, and I Kings 5-7 for the temple) evoke special modes of expression different from narrative prose like the Joseph story or a love poem like Song of Songs. Diplomatic agreements have formulas found nowhere else; thus King Jehoshaphat of Judah agrees to be a military ally of the King of Israel by saying: "I am as you are, my people as your people, my horses as your horses" (I Kings 22:4).

**2. Historical outline of Hebrew. a. Biblical Hebrew.** The Ugaritic tablets, unearthed since 1929, make it abundantly clear that the Hebrew language, including even its poetic structures, was taken over by the Hebrews from the earlier Canaanite population. Indeed in the OT, the language is called not "Hebrew" but "the language of Canaan" (Isa. 19:18). The mainstream of the Hebrew people, according to biblical tradition, was Aramean (Gen. 31:47; Deut. 26:5); they learned Canaanite after migrating to Canaan.

Ancient Hebrew did not come to an end with the latest books of the OT canon in Hellenistic times, but continued to be spoken and written as the native language of many Jews, especially in Palestine. Apocryphal books such as Ecclesiasticus were composed in a natural, classical Hebrew (see ECCLESIASTICUS[S]). The caves at Qumran have yielded parts of the Hebrew originals of a number of apocryphal and pseudepigraphical books. The Qumran compositions were written in language essentially the same as biblical Hebrew, showing that this stage of the language survived in Roman Palestine until at least the dawn of the Christian Era. See DEAD SEA SCROLLS[S] §§2, 3.

**b. Mishnaic Hebrew.** The main representative of postbiblical Hebrew is the MISHNA, compiled in Palestine about A.D. 220. Its style is terse, but the language is that of the common people rather than the elite for whom Ecclesiasticus wrote. Mishnaic Hebrew is not a continuation of the literary OT language, but is rather the development of the colloquial language of OT Palestine. That it was not an artificial creation is shown by its containing words that appear in Ugaritic but not in the OT, e.g., *daq* (little), to designate small cattle (i.e., sheep and goats). Since the rabbis had no access to the long-dead Ugaritic language, the term must have survived in colloquial speech. Similarly, a certain marriage endowment is called מלוה in the Mishna. Though the word is ultimately of Akkadian origin, it had already been borrowed into Canaanite by the Late Bronze Age when it appears as *mlg* in Ugaritic literature.

Uncommon OT usage is often the norm in the Mishna. Thus the usual feminine singular demonstrative pronoun in the OT is זאת (this); occasionally זה or זו appears, and it is זו that serves regularly in the Mishna. In many other ways, the Mishnaic dialect diverges from classical OT Hebrew. The verbal system illustrates this well. In classical OT Hebrew verbs were inflected for aspect (perfective or imperfective), but not for tense. The Mishna uses the perfect (קטל) to express the past, the participle (קוטל) to express the present, and the imperfect (יקטל) or a periphrastic future composed of יקטל+infinitive to express the future. Moreover the Mishna has progressive tenses made by adding participles to finite forms of the verb "to be"; thus הוא היה אומר, "he was saying," usually in the sense of "he used to say."

We also know from recently discovered letters of Bar Kochba (who rebelled against Rome during A.D. 132-35) that Hebrew was still a living language. See BAR KOCHBA[S] §4b; MANUSCRIPTS FROM THE JUDEAN DESERT[S] §2a, b.

**c. Medieval Hebrew.** Down through the centuries,

there were always Jews who could read, write, and speak Hebrew. Some writers (e.g., the author of the medieval Book of Jashar) could successfully imitate biblical style. Others wrote clumsy, artificial Hebrew compositions that in no way reflected living speech, but were intelligible because they employed the morphology and for the most part the vocabulary of the earlier stages of the language. Skillful writers—especially in creative periods such as the Golden Age of Spain and the centuries that immediately followed—could compose elegant prose and poetry that made medieval Hebrew the vehicle of belles-lettres second only to the OT. In this development, Arabic models were particularly important in inspiring metric forms of poetry, rhymed prose, and philosophical and scientific terminology. See INTERPRETATION, HISTORY OF[S] §F.

**d. Modern Hebrew.** Modern Hebrew, the official language of the state of Israel, is a creation of the nineteenth and twentieth centuries, under the influence of Western literary, intellectual, and scientific trends. It is a medium of expression ranging from common speech to the writing of all aspects of prose and poetry on a par with the languages of the world that have never undergone serious interruption. The tendency during the formative period was to draw on any or all of the earlier stages of the language. Contemporary Hebrew is still developing, and has attained qualities that differentiate it even from the Hebrew spoken and written during the era of the British Mandate between the World Wars. As the population comes to consist more and more of those for whom Hebrew is their first language, ancient and medieval usages often become less acceptable and even unintelligible.

**3. Comparative Hebrew linguistics.** Hebrew belongs to the family of Semitic languages, which embraces Akkadian, Arabic, Ethiopic, Syriac-Aramean, etc., as well as the Canaanite dialects. Every Semitic language thus has a bearing on Hebrew linguistics. Obscure or rare Hebrew words and formations have in many cases been clarified through comparative Semitic evidence. For example, אַחַדִּים, the plural of אַחַד, "one," means "pair, set," in Ezek. 37:17. This rarely attested usage, not to be confused with אַחַרִּים, "a few, several," which is common in postbiblical Hebrew, is familiar in Akkadian, where *iltēnūtu*, "pair, set," is the adjectival plural of *iltēn*, "one," and was reflected in Canaanite as early as Ugaritic *aḥdm*, "pair, set."

The linguistically conservative nature of Arabic makes it valuable for comparative studies. Prov. 17:22 states that a happy heart improves the נַהֵג: a word that appears only once in the OT (RSV "medicine"). In Arabic *wjh* is the root of the word for "face"; the common nominal formation of roots beginning with *w-* yields for *wjh* the feminine *jihat*, to which Hebrew נַהֵג corresponds exactly. This gives an appropriate meaning for the Hebrew phrase, "a happy heart improves the countenance."

At every level, the study of Ugaritic is revolutionizing our understanding of the Hebrew language. Illustrations are legion. Hebrew יָשָׁח or יָשַׁח, once thought to be verbal forms, are now known to be nouns meaning "witness," like Ugaritic *yḥb*, as is borne out by the OT contexts in which they

occur (e.g., Prov. 6:19; Ps. 27:12). כּוֹשְׁרוֹת (a *hapax legomenon* in Ps. 68:6 [H 7]; RSV "prosperity") is at last clarified by Ugaritic *ḫrtl*, "the songstress [who gladden joyous occasions such as weddings and births]."

Ugaritic does not normally employ מִן to express "from"; בּ, "in," and ל, "to, for," serve also to express "from." בּ and ל in the sense of "from" have been recognized in Hebrew only since Ugaritic was deciphered in the 1930s. Some examples: בָּאֲדָם (Josh 3:16), "from the city Adam" (Qere: הָעִיר); וַיִּמְצָרְהוּ . . . בְּמֶלֶךְ (II Kings 23:33), "and he stopped him from ruling" (Qere: מְמַלֵּךְ); וּבָא לְצִיּוֹן גּוֹאֵל (Isa. 59:20), "and a redeemer will come from Zion," as interpreted in Rom. 11:26 (ἐκ Σιῶν). See UGARIT; UGARIT[S]; POETRY, HEBREW [S].

**4. Historical orthography.** As late as the Early Iron Age II (900-600 B.C.) the general tendency was to write only consonants (as remained the rule in Phoenician). Not until Early Iron Age III (600-300 B.C.) were long vowels often indicated by *matres lectionis* (=vowel letters). Final vowels were the first to be indicated graphically; they appear in the Moabite Stone of the ninth century B.C. (e.g., בְּנִתִי, I built, versus Phoenician בְּנִת) and in early Hebrew inscriptions such as the Gezer Calendar of the tenth century B.C. (יָרַח, two months—in the construct state) and the Siloam Inscription of the late eighth century B.C. (e.g., כִּי הִיא). In the Lachish Letters of the early sixth century B.C., medial long vowels, as well as final vowels, are sometimes indicated orthographically; thus, הָעִירָה, "to the city." See INSCRIPTIONS, SEMITIC [S] §2a.

Variants within the MT are often no more than alternative spellings; thus לֹא (not) is sometimes written לוֹא with no change in pronunciation or meaning; in the Qumran Scrolls, לוֹא is the normal spelling. The MT normally represents long *u* and *o* by וּ, and long *i* and *e* by י; thus, קוֹם (arise!), קוֹל (voice), שִׁיר (song), רִיק (empty). However, if two long vowels occur in the same word, sometimes only one of them is represented by a vowel letter; e.g., שָׁמְנוּ (they set) but שָׁמְנִי (they set me) in Song of S. 1:6. Long *a* is represented by a vowel letter only at the end of a word: קָם, "he arose," but קָמָה, "she arose."

With the passage of time, starting in the OT itself, there was a tendency to indicate even short *u*, *o*, and *i* with *matres lectionis*; thus postbiblical מִקָּה for OT מִקָּה (word).

**5. History of pronunciation. a. In antiquity.** The keys to the pronunciation of Hebrew in antiquity are many; e.g., transliterations into foreign vocalized systems of writing. Sennacherib's *Annals* spell the name of the city of Ekron (עֶקְרוֹן) thus *am-qar-ru-na*, with *qq* dissimilated to *māq*. This shows that at the time (701 B.C.) words formed like עֶקְרוֹן were still pronounced עֶקְרוֹן; cf. LXX Ἀκκαρώων. Thus, in nouns of the *qattalan* type, the shift from *ā* to *ō* had already taken place by 701 B.C. (actually, we know from Canaanite glosses in the Amarna tablets that it happened before 1400 B.C.), but not the shift from *a* to *i* in closed unaccented syllables. The latter is normal in Masoretic Hebrew; thus Arabic *yaqṭul* appears as יַקְטֵל in He-

brew, and Arabic *majdal* as מגדל (tower, fortress). Yet the change had not taken place in all dialects, as we see from NT Magdal (Mary Magdalene is so called because she came from Magdal). Even Jerome (d. A.D. 420) retains the original *a*. See MAGDALA[S].

The most extensive external source of pre-Christian Hebrew pronunciation is the LXX (second century B.C.). The transliteration of proper names throws light not only on the vowels but also on the consonants. גזא is rendered Γάζα (Gaza), showing that the initial *g* was still pronounced *gh* (retained to this day in the Arabic pronunciation of the town name).

**b. In the MT.** Jews in the Greco-Roman world gradually lost the ability to pronounce Hebrew in accordance with the system of earlier times. For example, Jews could no longer pronounce final *h* as in *rûh*, "spirit, wind" unless it followed an *a*-vowel. Therefore the Masoretes inserted an anaptyctic *a* (furtive patah) because phonetic habits made it possible for the Jews to pronounce רוח (rûah). That this device was artificial can be seen in two feminine singular forms of the perfect of roots with final *h* or *ç*. Corresponding to קָמַחְתָּ is קָמַחְתְּ (thou [fem.] hast heard) with the second patah introduced to avoid the final cluster *-çt* which the Jews could no longer pronounce. Note that the dagesh in the final ח- is retained in spite of the preceding vowel, which would ordinarily spirantize the ח (t) to ח (th). The aim of the Masoretes was to save what they could, even if they had to avoid following through on the normal consequences of their stopgap measures.

The MT follows the Tiberian system of vocalization. Its main rival was the Babylonian or supralinear system, which places more vowel signs above the line than does the Tiberian (see HEBREW LANGUAGE §4). There are phonetic differences between the two systems. In the Babylonian, *e* (segol) falls together with *a* (patah). Thus the suffix *-tem* (as in קָמַחְתְּ) appears as *-tam* in the Babylonian system. Another difference is that, in the Tiberian system, initial *w*- followed by two consonants shifts to *û*-, e.g., וְיִקְרָא; but in the Babylonian system, *w*- under those conditions is followed by *i*, so that the form appears as *wiqaltam*. Similarly, note Babylonian *wil'ôlâm* for Tiberian וְלְעוֹלָם.

**c. Modern pronunciations.** The most familiar pronunciations are the Ashkenazic (perpetuated by the Jews of Germany and East Europe) and the Sephardic (perpetuated by the descendants of the Jews from Spain and Portugal). The official pronunciation in Israel is often called Sephardic, though the Ashkenazic has left many marks on it. Occasionally Ashkenazic pronunciation preserves ancient features. The rendering of every *qameš* as *o* is corroborated by *matres lectionis* in texts from Talmudic Babylonia in which בּוּרִיךְ is spelled עוֹרִיךְ, etc. Official Israeli pronunciation follows the Sephardim in this regard, pronouncing every *qameš* derived from *a*, as *a*.

**\*HEBREW, LETTER TO THE. 1. General.** The structure and theology of the letter have been illuminatingly treated by A. Vanhoye.

H. W. Montefiore has revived and supported with fresh arguments an earlier suggestion that the letter was sent to Corinth. He finds a clue to its context in I Cor. 16:12, where Paul mentions Apollos' inability to visit Corinth just then. Instead of visiting Corinth, Montefiore thinks, Apollos sent from Ephesus this letter which arrived shortly before I Corinthians, when the situation with which Paul deals there had not fully developed. "Those who come from Italy" who send their greetings in Heb. 13:24 are Priscilla and Aquila (cf. Acts 18:2), who were in Ephesus at the time (cf. I Cor. 16:19).

**2. OT and Philonic influence.** The LXX text used by the writer has been studied by K. J. Thomas, who finds about two-thirds of his citations agreeing with the A-recension and about one-third with the B-recension, which indicates that he used a text type earlier than these recensions. J. C. McCullough, pressing his research farther back, finds that the citations from the Pentateuch, Psalms, and Jeremiah show textual affinities respectively with the Origenic, Egyptian, and Q-recensions.

The writer's OT exegesis has been the subject of several monographs (see bibliog.). That the writer was acquainted with Alexandrian Jewish literature, like Wisdom, IV Maccabees, and Philo's works, becomes increasingly probable. His dependence on Philo has been exaggerated, especially when verbal similarities (relatively numerous) received more attention than coincidences in thought (relatively few). A sober reassessment has been made by R. Williamson, who concludes with good reason that the writer's thought is independent of Philonic influence.

**3. Qumran influence.** The literature of the QUMRAN sect has been thought to provide help with the problems of Hebrews. Some have suggested that the letter deals with particular tendencies apparent in the sect, and Yadin has argued that it was actually addressed to former members of the sect, who even after conversion to Christianity retained some of their old beliefs. H. Kosmala proposed that the addressees were Jews holding views very similar to those of the Qumran sectaries and other Essene groups, who had made some progress toward Christianity but stopped short of full commitment. (The main objection to this is that the writer, while certainly urging his readers to press forward, exhorts them to maintain their faith in Christ.)

C. Spicq, who earlier supported the view that the recipients were former Jewish priests, like those of Acts 6:7, later argued further that these converted priests were "Esseno-Christians," including

former members of the Qumran sect, whose ideas, interests, and methods of biblical interpretation were well known to the writer. J. W. Bowman suggested that the addressees were Hellenistic Jewish Christians living near Sychar, where John the Baptist, Jesus, and later Philip had preached. Since Philip's mission (Acts 8:5-25), the center of Christian evangelization had moved north to Antioch, bypassing Samaria; there were thus defects in those Hellenists' understanding of Christianity which the writer undertook to correct.

The new sanctuary in Hebrews, while it is presented in Platonic terminology as situated in the supracelestial sphere, is probably identified with the fellowship of believers, "who share in a heavenly call" (Heb. 3:1-6). This identification appears elsewhere in the NT (cf. I Cor. 3:16; Eph. 2:19-22; I Pet. 2:4-8) and is paralleled in the Qumran literature, where the community is a living sanctuary and its priestly nucleus a holy of holies (IQS 8:5, 6). But in Hebrews there is no distinction between priests and laity within the believing fellowship; all have equal access to God through Christ, their high priest (Heb. 10:19-22). The priesthood of Christ is not related to the Qumran expectation of a Messiah of Aaron; in Hebrews the nonlevitical descent of Christ is emphasized and his priesthood is contrasted with Aaron's, being interpreted in terms of the priesthood of Ps. 110:4, "after the order of Melchizedek" (Heb. 7:11-14). While it is conceivable that the recipients of Hebrews entertained an angelology in which Melchizedek was a herald of the eschaton, as in 11QMelch (see MELCHIZEDEK[S] §2 and bibliog. there), in fact there is no essential affinity between the argument of Hebrews and the portrayal in the Qumran fragment. In Hebrews, Melchizedek, "resembling the Son of God," is a very great man (Heb. 7:3, 4), but it is Jesus, not Melchizedek, who is exalted to the heavenly throne to administer salvation and, eventually, judgment (Heb. 9:11-28).

J. Coppens has cautioned against the tendency to be carried away by real or imagined affinities between Hebrews and the Qumran literature.

4. A new appraisal. G. W. Buchanan treats the letter (except ch. 13) as a homiletical midrash on Ps. 110, addressed to a celibate community of diaspora Jews who had come to live near Mount Zion, called "the heavenly Jerusalem" in Heb. 12:22 because its origin is divine, even if its location is earthly. There they waited for the inheritance which God had promised to Abraham; the "rest" that remained for them (Heb. 4:9-11) was the land of Canaan.

Buchanan sees no reason to identify this community with the Qumran sect; there were several Jewish groups around this time who believed that the current situation demanded an ascetic life, that the temple was polluted by an impious priesthood, and that the time was at hand for the godly remnant to receive the fulfillment of the promises made to their ancestors (cf. Luke 1:54-55, 68-75). The writer exhorts his readers to take courage from the fact that Jesus, by his self-offering, has procured the definitive atonement; not to go back to the place from which they came but to maintain their hope, which would soon be vindicated by the

arrival of the Coming One. By such obedience they would gain the "rest" which the Exodus generation forfeited by disobedience.

5. Conclusion. There are in Hebrews features characteristic of nonconformist Judaism in contrast to what was to become mainstream Judaism, such as the "instruction about ablutions" in Heb. 6:2. The study of the Qumran texts has made us more sensitive to these. But Jewish nonconformity was not confined to Qumran, or indeed to Palestine. The presence of these features in Hebrews can readily be explained if the letter was intended for a Jewish-Christian household church in Rome. As late as the *Apostolic Tradition* of Hippolytus (ca. A.D. 215), Roman Christianity retained a number of Jewish practices (e.g., the purificatory bath on Maundy Thursday for those who were to be baptized on Easter day) which had a rather close affinity to the nonconformist tradition in Judaism. Probably such nonconformist elements were present in early Roman Judaism and in the Jewish foundation of the Roman Church. See also ALTAR, NT[S] §§2, 3; CHRISTOLOGY IN THE NT[S] §2cii.

\***HELLENISM.** The complex of ideals and institutions that came to maturity in fifth-century Athens and has had, in one form or another, a profound effect on the intellectual, artistic, and religious history of the Near East and the Mediterranean world from that day to this. Indeed, when one says "Western," nothing less is being described than the orbit of Hellenism.

The Greek ideal of what constituted the nature and end of human life and the social, political, and moral means to that end already appears in the earliest preserved literary statement of the Hellenes—the Homeric poems—but its most cogent and fully

realized expression is in the life and art of Periclean Athens. The portrait of that time and place has been idealized by its heirs, but even for their non-Hellenic contemporaries the Greek manner of viewing the universe and of living in it was enormously attractive, and what later came to be called Hellenism began to spread, without benefit of either arms or preaching, among the Greeks' neighbors in ITALY, MACEDONIA, and ASIA (Anatolia). The Greeks were not much impressed by the flattering imitation; in their view the gulf between Hellene and BARBARIAN could not be bridged by aping Greek manners or importing Greek intellectuals and soldiers to grace courts and stiffen armies. Whether clad in chiton or even speaking Greek, the Oriental autocrat with his horde of subservient subjects was simply a parody of Hellenism.

1. **The transmission of Hellenism.** It was precisely just one such Hellenized non-Greek, ALEXANDER of Macedon (d. 323 B.C.), who bridged that gulf by his political conquest of the older "barbarian" civilizations of the Near East in Anatolia, Syria, PALESTINE, EGYPT (see §2h), Iraq, Iran, and beyond. For the first time Greeks and Hellenized Macedonians had to rule non-Greeks. At hand were two political institutions that might serve that end, the Macedonian kingship and the Greek polis. The first blended with and was modified by its contact with the traditions of PHARAOH and Shah, the latter of which Alexander himself found particularly attractive, but it was the polis, a purely Greek conception, that in the end served as the chief instrument of a new Near Eastern prosperity and of the diffusion and consolidation of Hellenism.

a. **The polis.** The polis or city-state was an urban social unit composed of free citizens enjoying at least some degree of political and economic autonomy (see CITY §C2a; CITIES, GRECO-ROMAN[S] §2). It was at the same time the locus of those moral and intellectual ideals that lay at the heart of Hellenism: that free people can govern themselves and can both understand and achieve the perfection of the human faculties which constitutes the ultimate end of humanity. To gain those ends the polis had spawned various institutions of governance and social association: a senate composed of the local aristocracy; an assembly where all the citizens could gather and express their political will; elected municipal magistrates to execute the laws of the city and assure its economic and social well-being; theaters, gymnasia, baths, hippodromes, and, in the new post-Alexandrian polis, schools where the ideals of Hellenism could be transmitted to new generations which now included non-Greeks eager to gain entrance to the privilege and prosperity of the Near Eastern poleis.

b. **Hellenism as a literary good.** That the ideals of Hellenism could be sublimated into literary goods that could be publicly taught was one of the most remarkable of the Greek achievements. Hellenism was no longer a matter of birth; if it could be taught, it could be taught to anyone, and thus the way lay open for the formerly despised barbarians of the East to be initiated, through the study of the canonized masters of literary Hellenism and by adopting the externals of the Greek life-style, to membership in the new poleis and, indeed, in the new Hellenic oikoumene that would eventually stretch from Britain to the Indus.

Alexander's reputation as a polis-builder has been exaggerated, but at least one of his foundations, ALEXANDRIA in Egypt, became the center of the newly intellectualized and academicized version of Hellenism that transformed the Near East. From Alexandria, which in sheer size far transcended anything a Periclean Greek would recognize as a polis, came the new texts, commentaries, curricula, handbooks, grammars, and lexica from which generations of Egyptians, Syrians, Jews, Iranians, Romans, and others would learn everything from the rudiments of Greek literacy to the subtle mysteries that lay at the end of the curricular highroad to human wisdom and human perfection: logic, physics, mathematics, and theology.

From the beginning, the Greek vision of the good—and here we are at the heart of Hellenism—was a highly intellectual one (see EDUCATION, NT §2). It was tempered, to be sure, by the concomitant ideal of the human being as a balance of physical and spiritual perfections, but in the end it was the latter that triumphed; in late antiquity the gymnasia, where they were still being built, were the resort of professional athletes. Schools and not gymnasia were the final bearers of the Greek legacy, and it was in the former that the barbarians learned, from the texts of the masters, that people could achieve happiness in this world through the exercise of their purely human faculties and particularly through the exercise of that faculty which set them apart in the

order of creation, the human intellect. From the foundation of the intellect arose the impressive structure of the Greek sciences, the various but strictly subordinated routes to the truth which at their end led to the highest science, theology or the knowledge of God.

For all its rationalism, Hellenism was by no means irreligious; the Greeks worshiped with as much fervor as the non-Greeks, and each polis had its divine patrons and splendid temples in which they were housed in the highly anthropomorphized manner typical of the humanity-centered Hellenes. These gods went back to deep antiquity and were enshrined in the great body of myth that was close to the center of Greek religious sensibilities. They had little resistance, however, to the increasingly profound Hellenic pursuit of rationalism, and in the end the Hellenized intellectual recognized that the traditional gods were little more than symbols of more spiritual beings or even different manifestations of a single divine principle that was spiritual and transcendental but nonetheless comprehensible through the exercise of human reason and without benefit of special revelation or divine illumination. *See GREEK RELIGION AND PHILOSOPHY.*

The issue with this and other postulates of Hellenism was joined by representatives of the indigenous cultures of the Near East as the successors of Alexander in Egypt and Syria covered their domains with a network of newly established *poleis*. The Ptolemies of Egypt (*see* PTOLEMY), descendants of Alexander's Macedonian general who in Egypt reserved their Hellenism for Alexandria and played the pharaoh elsewhere along the Nile, were particularly active city founders in their Palestinian province. Many of the Greek cities along the Mediterranean coast and the cluster of *poleis* in the TRANSJORDAN, the nucleus of the later DECAPOLIS, were raised under their auspices, possibly as a Hellenic anchor against the neighboring Jewish temple state in JUDEA or the Arab kingdom of the NABATEANS, while from ANTIOCH eastward across northern Syria and MESOPOTAMIA the rival Seleucids (*see* SELEUCIA) lay down the foundations of their own *poleis*.

Some of these *poleis* were close to being entirely new foundations, Alexandria and Antioch, for example, while others were simply transformations of older settlements with an appropriate change of name to celebrate a reigning dynast (PHILADELPHIA, Berenice, Ptolemais [*see* ACCO], Seleucia) or some nostalgically remembered town in Macedonia (Pella, Edessa). Many of the *poleis* began life simply as a Greek or Macedonian garrison town (κατοικία), but for the full juridical status of polis what was required was a registered body of citizens (δῆμος) characterized by a certain economic and social status and their assimilation to Hellenism, a city council (βουλή) drawn from the upper class of the δῆμος, the appropriate city magistrates (ἄρχοντες) and the public facilities already described. To this day the remains of those later buildings, temples, theaters, and baths, long colonnaded boulevards leading to or from a central marketplace (ἀγορά), and the magnificent paved roads that connected one polis with another testify

to the taste, skill, and prosperity of these urban creations of the Greeks and their Roman successors in the Near East.

The *poleis* remained the linchpin of the economic and social policies of the Greeks and Romans from their foundation down to the Moslem invasion. They were semiautonomous urban islands floating in a sea of state and crown land which was administered directly by the central governments of the Ptolemies, Seleucids, and Romans. There was little outside interference in the life of the Near Eastern *poleis* until the end of the third century A.D., and even after Diocletian they continued to be governed, provisioned, and adorned largely from the resources of their own citizens. A polis might indeed profit from imperial notice—the fortunes of Shohba, a somewhat obscure town in the Hawran, improved considerably as Philippopolis after the accession of one of its native sons to the Roman purple—but it profited even more from the spirit of its citizens and the wealth of its own enterprises, agricultural and commercial.

Part of the price of this prosperity was paid by those of the inhabitants who by reason of inferior social and economic status could never aspire to be enrolled as members of the δῆμος. In a sense, Hellenism institutionalized class differences, where the poor and disenfranchised peasantry were precisely the native population of the area. The fellahin of Egypt, Palestine, and Syria were aliens in their own land.

**2. Hellenism in Palestine.** The transformation of one older settlement into a polis and its revolutionary effects can be traced in some detail. At the request of some of its more prosperous and already partially Hellenized rulers, in 175 B.C. ANTIOCHUS IV Epiphanes raised the former temple state of JERUSALEM (*see* §8) to the status of polis as Antioch in Judea. The local council, the prototype of the later SANHEDRIN, became its βουλή and a list of enfranchised citizens was drawn up. Antioch's magistrates were its rulers of old, the temple priesthood—Judea remained in fact, if not in judicial theory, very much a temple state whose economics were closely tied to the temple corporation—but, somewhat extraordinarily, its constitution or πολιτεία remained what it had been, the Mosaic law.

**a. Jewish resistance.** There was resistance to this. The temple priesthood with its Hellenic, pagan ways and its Hellenized adherents was not a popular institution, and the creation of the polis, for all its promise of a new Hellenic prosperity, served also to underline growing social and economic differences between the urban wealthy and the poor agricultural peasantry in Judea. (*See* ECCLESIASTICUS §3c.) But events moved too quickly for adjustment. Antiochus scented treason in his new polis—there remained a considerable pro-Ptolemaic faction in Jerusalem—and in 169 or 168 B.C. he cashiered it back to the status of κατοικία. To insure its security he stationed in Jerusalem a garrison of Syrian troops and suspended the Mosaic law, in effect, the practice of Judaism.

If the earlier resistance to polis status was social and economic, the issue was now clearly ideological.

9. Krateros saves Alexander the Great during a lion hunt near Susa; pebble mosaic from Pella, Greece, late 4th century B.C.

So at least it was preached by the **MACCABEES**, who saw the very existence of Judean Judaism threatened by the policies of Antiochus. They spearheaded an insurrection that in the end won for Judea its independence as a kingdom, one of many which arose out of declining Seleucid fortunes in the Near East.

The existence of all of these petty kingdoms was ephemeral. The far more potent Romans were already in the Near East and so the glories of Hasmonean Palestine barely spanned a century. It is an interesting century, nonetheless, in the history of Hellenism, since the petty kingdoms that came into existence between the decline of the Seleucids and their expropriation by the Romans were local phenomena governed by native dynasts, Jews, Syrians, and Arabs, and each in its own way continued to display with pride its progress down the ways of the Greeks. The kingdoms of Edessa and Commagene, the Ituraeans of BAALBEK and Chalcis (see *ITURAEA* §2), the Nabateans of PETRA, and the **HASMONAEANS**, lately the Maccabees, of Judea were all officially and openly philhellene.

**b. The Nabateans.** Apart from the Hasmoneans, the Nabateans provide the clearest example of the extent, though not always of the means, of the early penetration of Hellenism into the culture of the Semites. The Nabateans, originally Bedouin of the North Arabian steppe, found success as traders and middlemen in the growing international trade that was another product of the Hellenic *oikoumene*. Their commercial interests carried the Nabateans all over the Mediterranean, and though they never adopted Greek as their language—Aramaic remained, perhaps, more useful at that point—their coinage, their art, their temple architecture, and even their gods succumbed to the lure of Hellenic assimilation when the Nabatean kings took their place in that fellowship of Hellenized monarchs that the Romans tolerated for a season on the fringes of their expanding Eastern empire.

Petra, the Nabatean capital in the former **EDOM**, with its rich juxtaposition of temples, theaters, and tombs, continues to bear silent testimony to the attractiveness and malleability of what the Greeks had to offer to their Semitic neighbors and subjects in the Near East.

**c. Herod.** **HEROD** ruled in Judea (37-4 B.C.) under similar Roman auspices and exploited an even more classical form of the Greek style. **CAESAREA MARITIMA**, **HEBRON**, and **HERODIUM** all bear traces of his immense and skilled building activities; his temple at Jerusalem could probably have stood with insouciant ease upon the Palatine in Rome or at the foot of the Athenian acropolis (see **TEMPLE, JERUSALEM** §C; **TEMPLE OF HEROD**[S]). Herod the builder and benefactor of Greco-Roman ostentation is well known, but these were not his only interests in the ways of the Greeks and the Romans. An important member of his entourage was Nicolaus of Damascus, the historian and Peripatetic philosopher who was a Hellenized Aramaean from Damascus and who displays in his writings as surely as Herod did in his buildings the continued progress of Hellenic transformation. Whatever his ethnic origins, Nicolaus, like many of his predecessors and innumerable of his successors in the Near East, thought and wrote in Greek for an audience who shared the experience of Hellenic schooling in Rome, Athens, Pergamum, Ephesus, Antioch, and Alexandria.

**3. Hellenism and early Christianity.** And yet for every Herod and Nicolaus there were countless numbers in the new *Imperium Romanum* who remained disenfranchised and unlettered in Greek ways beyond the orbit of Hellenism. Herod's progeny built **TIBERIAS**, **CAESAREA PHILIPPI**, and **Bethsaida-Julias** (see **BETH-SAIDA**) as Greek-style settlements in the northern parts of the Jewish kingdom, but around the Galilean countryside, the appeal and penetration of cultural and political Hellenism was

probably feeble indeed. Jesus appears to have been little affected by it, for example, and it was only after his death, when the nascent Christian community began to include Hellenized Jews (*see HELLENISTS*) among its members, that Christianity had to face the clash of ideals between a profoundly Jewish Christianity represented by the pious and traditionalist JAMES, the brother of the Lord, and the startlingly different perceptions of a PAUL, equally a Pharisee but reared in the Diaspora.

The newly emerging histories of the "church from the circumcision" and the "church from the

Gentiles" are not in the first instance an example of the clash between Hellenism and Judaism, but as the latter drew apart from the "Hebrew" succession in Jerusalem, Hellenic notions of theology, morality, liturgy, art, and architecture all began to assert themselves among Christian intellectuals (*see ART, EARLY CHRISTIAN[S]*). Origen in Egypt and Caesarea, the Cappadocian Fathers in Anatolia, the beginnings of Christian art in the catacombs, and Constantine's buildings in Rome and Palestine were simply the most visible signs of the foundations of a new Christian culture or παιδεία that

drew heavily upon the spiritual and physical legacy of Hellenism.

The third and fourth centuries A.D. ring with the consequences, when Christian ideals, themselves in the process of transformation, confront and are confronted by those of the older, more traditional Hellenism. In the West, pagan intellectuals were more inclined to regard Christianity as a threat to the political foundations of the ROMAN EMPIRE, but the Eastern Hellene was far more concerned with Christianity's apparent challenge to the Hellenic culture; for someone like Libanius (*ca.* A.D. 314-393), the death of Apollo was necessarily the death of Homer, and the sight of Christian mobs razing the temples of the old gods must have appeared an act of cultural parricide. That Apollo was already dead, or at least displaced by other, far less Hellenic perceptions, was revealed in the failure of the Emperor Julian's (*d.* A.D. 363) necromantic attempt at breathing new life into what was by then a very old corpse.

**4. The transformation of Hellenism in the East.** Julian was a religious antiquarian who failed to observe that even before the appearance of Christianity the traditional Hellenism was suffering the pains of erosion. Its contact with Near Eastern religions of great antiquity that promised a higher truth and a more sacral religion than that achieved by human reason alone, when joined with Hellenism's waning confidence in its own powers, sapped the foundations of Greek rationalism and made Hellenism more attentive to other voices from other worlds on high or here below. The MIRACLE WORKERS and Eastern sages took their place with the philosophers, and the GREEK LANGUAGE too had to yield its claim to absolute pre-eminence. Even in Hellenism's most sacred bastion, the Academy at Athens, Plato's successors gave ear to the alien call of theurgy and the Oriental mysteries.

**a. Gnosticism.** Another product of the clash of Hellenism with some other powerful force alien to its own spirit was Gnosticism. Whatever its origin, Gnosticism represented a view of the world which, in its profound pessimism regarding the cosmos and humanity's place in it, was directly and deeply antithetical to the optimism of Hellenism. For the Greeks the cosmos was an intelligently designed and functioning organism which served as the paradigm for mankind's own moral aspirations. The Gnostic, on the other hand, regarded the sensible universe as a place of moral terror whose existence could only be explained by the creative activity of a malign god. The presence of mankind in such a setting was thus the result of a "fall," a lapse in the fullness of spiritual perfection (*πλήρωμα*).

For the genuine Hellenic notion of perfectability through the perfection of one's intellect, the Gnostic substituted the concept of salvation, of rescue from an alien environment by the bestowal of a special knowledge (*γνώσις*). Greek wisdom was a public wisdom approached through a public and rigorous dialectic; *γνώσις* was a hermetic and elitist understanding of sacred texts. What that understanding was, however, when it emerged from beneath the Gnostic *μύθος*, was little more than an elaborate and somewhat imaginative version of Greek meta-

physics. Deprived of its Greek epistemological foundation in a purely human intellection, this baroque metaphysics of the *πλήρωμα* flourished under Christian, Jewish, and Islamic auspices and remains today, under the rubric of "the philosophy of illumination," as the most vital metaphysical force in the world of Islam.

**b. Greco-Oriental art.** Hellenism was transformed in other ways as well. The Greek city-states of the Mediterranean coastal areas flourished, albeit under Christian auspices, until the Moslem invasion and in a form recognizable to their founders a millennium earlier. But out in the hinterland the mix was richer and the transformations far more complex. Parthian and Sassanian art translated the Hellenic prototype into new hybrids which stare from the crypts of Semitic Palmyra and the walls of Parthian Dura-Europos and Indian Gandhara. The Jews of Beth Alpha decorated the floor of their sixth-century Palestinian synagogue with an elaborate zodiac pattern in which traditional Greek mythological figures sit easily next to Abraham and Isaac, all executed in a careful and highly sophisticated folk idiom. (*See* SYNAGOGUE §3a, Fig. 100; ART, EARLY JEWISH[S]; SYNAGOGUE, ARCHITECTURE [S].) In the early eighth century the Moslem Umayyads used Byzantine craftsmen to execute the mosaics of their mosque in Damascus and the results echo some of the finest landscape frescoes of Greco-Roman antiquity. The same is presumably true of their winter palace and bath at Khirbet al-Mafjar near JERICHO, and while the mosaics there are likewise in the finest Hellenic tradition, the preserved sculpture reveals odd, un-Hellenic figures in vaguely Greco-Roman costume; the caliph himself is portrayed in the raiment of the Shah of Iran.

**c. Hellenism and the Eastern mysteries.** The mystery religions of the East had made their first impression on the Greco-Roman world in a crude and unassimilated form that often shocked the religious sensibilities of those accustomed to the more familiar and comfortable niceties of the traditional religion. But soon those same mysteries fell under the power of the Hellenic intellectuals, as Eastern religious goods had for centuries, and a Plutarch (*ca.* A.D. 46-120) could soon produce a perfectly rationalized version of the ISIS-OSIRIS myth, for example. Having once been rationalized, these same Eastern mysteries were then further spiritualized by their competitive contact with Christianity, itself the product of the infiltration of Hellenism into a Semitic religion. *See* GREEK RELIGION AND PHILOSOPHY §§4, 5.

**5. The impact of Hellenism on Christian theology.** Christianity's own testimony to the influence of Hellenism is frequently contradictory. Christian intellectuals educated in Hellenic schools fell eagerly to the task of constructing a Christian theology, that is, to converting the scriptural witness of the gospels into the currency of Hellenic scientific discourse about God. The task may have appeared deceptively easy and inviting at first, and there were many at Alexandria, for example, who were fluent in both idioms, the scriptural and the philosophical. But the incompatibility of the two modes began to appear quickly enough, and Arius' perfectly reasonable—in the Hellenic sense—discus-

sion of the relationship of the Father and the Son in terms of principles was felt by many to violate the sense of the gospels. And it was merely the beginning. Once set in train, the growth of a Christian theology left the believer with little choice but to adhere to a kind of scriptural fundamentalism, with its attendant rejection of the entire scientific and intellectual tradition of the day, or to proceed painfully onward toward converting the God of Abraham, Isaac, and Jacob into the God of the philosophers. The task of passing judgment on the results fell to the ecumenical councils from the fourth to the sixth centuries, and there the debates were increasingly couched in terms which were unknown to the evangelists but were the common currency of the philosophical schools at Athens and Alexandria.

There was little place for Christianity to conceal itself from Hellenism, even when it chose to do so. In Egypt and Syria early Christian pietists fled from the worldly morality of the Hellenic metropolis to the remote fastness of the countryside where they practiced the virtues of scriptural Christianity. Early Christian asceticism, with its emphasis on the training of the will and its ideal of the imitation of Christ, had little to do with Hellenic philosophical ethics. But within a century, particularly in the work of Evagrius of Pontus (d. A.D. 399), the training of the will and the view of virtue as something to be acquired by a continuous practice (*πρᾶξις*) was joined to another notion, that of the illumination of the intellect whereby asceticism became the prelude to the higher stages of "grace." At first these latter were simply a series of insights into one's relationship with God and the world, but it came to term in a true THEOPHANY where God manifests his own essence in the purified and unified intellect of the mystic.

Christian mysticism, particularly after its contact with the disguised Neoplatonism of DIONYSIUS "the Areopagite," drew deeply from later Greek theories of illumination, and the "lights" besought with such fervor by hermits in the Sinai were in fact reflections from distant Alexandria and Athens, where pagan theologians had long since given over the old Aristotelian idea of virtue as an acquired habit in favor of a divine descent from on high. The Hellenes had arrived on the summit of Mount Tabor long before the first Christian mystic struggled onto those heights.

6. **The revival of local cultures.** But Christianity was likewise responsible for the revival of the native cultures of the East that had been submerged by the pervasive Hellenism of an earlier age. The gospels were soon translated from Greek into Coptic and Syriac (see COPTIC LANGUAGE[S]; SYRIAC VERSIONS[S]), and in Egypt the most determined resistance to the Hellenism of Alexandria was to be found among the non-Greek-speaking monks of the desert who pondered the Coptic gospels and lives of the saints while the Christian theologians of Alexandria, Gnostic and orthodox alike, were feeding on the most sophisticated Neoplatonic thought of their day. Origen and Plotinus, the Christian and the pagan theologian,

may have sat at the feet of the same teacher in Alexandria, but both were equally foreign to the monks who were even then beginning to populate the wildernesses of Egypt.

In Syria the choice was less simple. Here too Christianity brought about a revival of the native Aramaic culture, but the new Syriac-speaking-and-writing Christianity of Edessa, though it had its share of Hellene-baiters and semiliterate ascetics, produced new and sensitive literary voices like that of Ephraem the Syrian (d. ca. A.D. 373) and even theologians who looked to Christian but Hellenic Antioch to supply them with the foundations for a new Christian theology in Syriac. Through translation—and it was the first major effort to translate the intellectual goods of Hellenism into the Semitic idiom—Syrian theologians followed every turning in the great christological disputes at Antioch, Alexandria, and Constantinople. Edessa had its own theological school where the students read both the pagan Aristotle and the Christian Theodore of Mopsuestia (d. ca. A.D. 428) in Syriac translation. When its orthodoxy fell under question in the fifth century, the faculty at Edessa migrated to the safer confines of the Sassanian Empire and recommenced its work at Nisibis. Thus was opened to the Sassanians a major passage to the Hellenism of their Romano-Byzantine rivals and neighbors. Not only theology but also Greek science and medicine came to Iraq and Iran through those talented Syrian Christians who centuries later passed their own Hellenic heritage on to the new Moslem masters of the Near East. Aristotle was being read in Baghdad in A.D. 900 only because there were present there Syrian Christians skilled in Greek, Syriac, and Arabic who could instruct these new converts in the gospel of Hellenism.

**HELLENISTIC JUDAISM.** See JUDAISM, HELLENISTIC[S].

\***HEM.** In the ancient Near East, the hem of the garment was closely identified with the person of the wearer. It was regarded as an extension of the owner's personality and authority. One could put a signature to a clay tablet by impressing it with the hem (see Fig. H11). By means of the hem, a person could cast magic spells or perform oracular divination. The hem was cut during rites of

Courtesy the University Museum

11. Fragment of bulla (clay on which the seal impression is stamped), showing hem impression in lieu of a cylinder sealing

exorcism and procedures for divorce, signifying the breaking of close personal bonds. Many idioms reflect the significance of the hem. The "right of the hem" denotes surety which a creditor might demand. A gift of money or the so-called "bride-price" (*terhatu*) was "bound in the hem" (VAB V, 209:20). In order to take a person to court, one "seized the hem" of his garment. A vassal would grasp the hem of his overlord's garment as a sign of submission (ARM VI, no. 26). Nebuchadrezzar II states, "Because I grasp the hem of Marduk (s garment), Marduk, my lord, loves me." Nabonidus described himself as one who "in order not to commit any sin (cultic error), grasps the hem of the gods."

When David encountered Saul near En-gedi, he sliced off the hem of Saul's garment (I Sam. 24:4 [H 5]). By this symbolic action, David declared that Saul had lost the kingship. David regarded the act as more than a mere warning or a dangerous prank (vs. 5 [H 6]), and Saul recognized the significance of the severed hem when he said, "And now, behold, I know that you shall surely be king, and that the kingdom of Israel shall be established in your hand" (vs. 20 [H 21]).

In I Sam. 15, Samuel announced that Yahweh had rejected Saul's kingship (vs. 26). The text is ambiguous regarding the initiator of the action, but the hem of a garment was seized and torn. The RSV understands it to be Samuel's garment; according to the KJV, Samuel seized Saul's hem. Whichever is the case, the symbolism is clear. Samuel might have torn Saul's hem signifying that Saul had been deprived of his authority. Conversely, Saul might have seized Samuel's hem as would a vassal before his overlord.

Other OT passages which may be consulted with regard to the significance of the hem include I Kings 11:29-33; Ezek. 5:1-4; Zech. 8:20-23; Hag. 2:10-19.

According to the gospels (Matt. 9:20=Luke

8:44), a woman touched the hem of Jesus' garment and was healed. Her action may be based on the belief that the power of a person is transferred to clothing (Matt. 14:36=Mark 6:56; Acts 19:12). In analogous fashion, impurity could be transferred through garments (Lev. 15:27; 17:15; Hag. 2:13).

T.B. Ta'an. 23b provides an example in post-biblical Judaism. A certain Hānān was so well-known for his piety that, during periods of drought, the rabbis would send children to seize the hem of his garment and implore him to ask God for rain.

**HERMENEUTICS.** From Greek ἐρμηνεία meaning interpretation, translation, or explanation; the Gr. verb in the biblical period also meant to proclaim or discourse upon a topic. As used today it signifies (1) the principles, rules, and techniques whereby the interpreter of a text attempts to understand it in its original context; (2) the science of discerning how a thought or event in one cultural context may be understood in a different cultural context; and (3) the art of making the transfer.

1. **The communities' book.** The believing communities engage in dialogue with the Bible as canon, out of their own ever-changing contexts, asking two questions: Who are we and what are we to do? The fact that the biblical canon functions in this way issues in three basic observations.

(a) In a lengthy process of canonization the Bible emerged out of the experiences of ancient Israel, early Judaism, and the early church, when they asked those two questions of their own authoritative traditions (see CANON OF THE OT, NT[S]).

(b) It was shaped in and by those communities in their common life, cultic and cultural. (c) Its proper function continues to be that of being in dialogue with the heirs of those same communities as they continue to seek answers to those two questions (identity and life-style, faith and obedience). Essential to that dialogue is hermeneutics, and the hermeneutics most valid is that which can be discerned in the Bible's own history (i.e., canonical hermeneutics; see §§3, 4), through the tools of biblical research.

Canonical hermeneutics has two basic tasks: determining valid modes of seeking the meaning of a biblical text in its own setting, and then determining a valid mode of expression of that meaning in contemporary settings. It addresses the problem of how to bridge the gap between biblical meanings and contemporary cultural categories of thought. For Western Christians this has meant translating biblical meanings into modern, Western philosophical thought patterns.

2. **Recent discussions.** In the nineteenth century Schleiermacher and others based their work in hermeneutics on the common humanity of author and interpreter: the latter could have confidence in an intuitive grasp of what the author intended. Modern categories of understanding were considered fully capable of seizing biblical meanings.

Rudolf Bultmann followed directly in Schleiermacher's wake; but he sought to define more precisely the pre-understanding or presupposition asserted by Schleiermacher. Reacting against what he viewed as simplistic historicism in the early twentieth century, Bultmann stressed an existentialist position informed by the early work of the philosopher Martin Heidegger. Bultmann attempted to discount theological presuppositions by resting his case for pre-understanding solely on technical biblical criticism and the then regnant existentialist philosophy. Criticisms of his work have been lodged principally on two grounds: that he indeed had theological suppositions and that his method was not adequate for the whole Bible, especially not for the OT.

Over against Bultmann was Karl Barth, who worked out a church dogmatic wherein his pre-understandings were an imposing neo-Reformationist dogmatic of the Word of God derivable from the words of the Bible. Whereas Bultmann's work has seemed to many as anthropological, even non-theological, Barth's has seemed to others as mythic and traditionalist. One of Barth's late essays, "The Humanity of God," seemed to stress the human more than the divine and has given rise to attempts to build bridges between Barth and Bultmann. While Barth's theology was Christocentric,

much of his dogmatic theology focused on the OT. This was also the case with Dietrich Bonhoeffer, whose hermeneutic issued in a nonreligious interpretation of biblical faith. A criticism of both Bultmann and Bonhoeffer is that their hermeneutics have led to a kind of humanism. One result of the confluence of the work of Bultmann and Bonhoeffer and the essay cited by Barth was the so-called death-of-God movement.

Students of Bultmann continued to read Heidegger as the latter moved from existentialism to ontology. In that move Heidegger revalued the import of language for humanity's understanding of itself, elevating language from a secondary position to primal authority. Language became the home of human being. The importance of this move for proclamation of the Word, that is, for biblical and theological hermeneutics, was recognized by Ernst Fuchs and Gerhard Ebeling. In their view the Christ event was, indeed is, a language event. James Robinson focused their work into *A New Quest of the Historical Jesus*. This involves not just translation of words from one linguistic idiom (the biblical languages, Greek and Hebrew) to another (modern tongues), but a transculturation of the Word, as perceived in the text, to new words.

Criticism of the "new quest" centered in questioning language as a valid vehicle of biblical revelation. Barth, with others, had been acclaiming history, or time, as the vehicle of revelation (see REVELATION IN HISTORY[S]). Wolfhart Pannenberg then attempted to meet this criticism by focusing on hermeneutics which can read both the Bible and human experience in the world. Sensitive to the criticisms of OT scholars and of Jews toward the Bultmannians and the post-Bultmannians, Pannenberg shifted attention to a theology of world history, in which the historical process was sought in a continuum connecting past and present. Reality could thus be viewed as a unity grounded in the biblical affirmation of the oneness or unity of God. The gap between biblical past and human present is spanned by a view of a continuing history or story of God's unfolding plan not only for the ongoing communities of believers but for the world. Jürgen Moltmann pressed Pannenberg's case into a "theology of hope" wherein the future aspect of universal history was stressed and stated as God's future continually invading the human present. Thus Moltmann recognized the eschatological aspect of biblical thought.

3. **The task today.** The task of biblical hermeneutics today is to seek a mid-point between the hermeneutical task of the historical-critical method, which seeks original biblical meanings, and the hermeneutical task of spanning the gap between those recovered meanings and modern cultural systems of meaning. And that task is called canonical hermeneutics: the means whereby Israel, Judaism, and the church spanned the gaps between inherited faith and new cultural settings.

The canon includes the process whereby early authoritative traditions encountered ancient cultural challenges, were rendered adaptable to those challenges, and thus themselves were formed and re-formed according to the needs of the be-

believing communities. (It was in this process, e.g., that ancient Near Eastern wisdom was adapted into biblical literature.) That process itself is as canonical as the traditions which emerged out of it.

Therefore, the Bible may be read as a paradigm not only of God's truth but of how those who find their identity in it should pursue the integrity of reality in their own later contexts. *Canonical hermeneutics* is the means whereby early believing communities pursued, and later believing communities may yet pursue, the integrity (oneness) of God, both ontological and ethical. It is in this sense that the Bible is, canonically viewed, a monotheizing literature.

Hermeneutics, therefore, is as much concerned with the contexts in which biblical texts were and are read or recited as with the texts themselves. It is in this sense that one must insist that the Bible is not the Word of God. The Word is the point that is made in the conjunction of text and context, whether in antiquity or at any subsequent time. Discernment of context, whether then or now, is thus crucial to biblical interpretation (see §8a below). The greater the knowledge we have of the ancient contexts, the clearer becomes the impact the (words of the) text had; and the greater the discernment of current contexts, the clearer one's choice of hermeneutics for transmitting the point originally made.

**4. The Bible as canon.** It is the nature of canon to be both stable and adaptable. It is stable in the sense that once its structure was set and its contents determined, nothing was to be added to it or subtracted from it (Deut. 4:2; 12:32 [H 13:1]; Rev. 22:18-19). (The OT canon was closed for Judaism sometime near the end of the first century A.D., and the NT canon sometime in the fourth century A.D. See CANON OF THE OT[S] §4b; CANON OF THE NT[S] esp. §6.) But it is also the nature of canon to be adaptable, i.e., it is believed to speak to the communities generation after generation.

Hermeneutics is the mid-point between the Bible's stability and adaptability as canon. In this sense hermeneutics is the art of interpreting the Bible for the ongoing believing communities. It is the means whereby the professional interpreters within those communities demonstrate the Bible's relevance and help the faithful (and the doubting) to hear its message for their time and situation.

But hermeneutics is also the science whereby the trained interpreter attempts to understand a text in terms of its ancient, original contexts; this is the prior task of biblical hermeneutics. The believing communities have always been interested in what Moses or Jesus "really meant" in their time, as well as in the implications for later believers of what they said. The uncritical reader assumes the earlier and later meanings to be the same, with the conviction that the plain meaning discernible in the text "now" was what it meant then. One result of the Enlightenment has been the development of tools and techniques for probing carefully back to the original meanings. This has resulted in what has been called LOWER and HIGHER CRITICISM. See BIBLICAL CRITICISM and sup-

plementary articles; TEXTUAL CRITICISM, OT, NT[S]; TRADITION CRITICISM, OT[S]; REDACTION CRITICISM, OT, NT[S]; FORM CRITICISM, OT, NT[S]; SOURCE CRITICISM, OT[S].

**5. Canonical hermeneutics.** The history of "biblical interpretation" begins early in the history of the formation of the Bible itself (see INTERPRETATION, HISTORY OF[S] §§A, C). The biblical thinkers often cited earlier authoritative traditions in order to validate what they themselves had to say. Most commonly the traditions cited were those which told Israel's epic history; and the most common reason they were recited was (a) to remind Israel who she was and what was expected of her because of that identity, or (b) to remind Israel who God was and what might be expected of him in the covenantal relationship (see TORAH[S]). Where the ancient contexts in which these traditions were recited are available, we are able to discern what the hermeneutics of the biblical author were. The most common hermeneutic rule employed was that of historical analogy or TYPOLOGY, sometimes accompanied by another, the *qal wahomer* argument, or *argumentum a fortiori*.

One obvious example of this is found in Ezek. 33. The shocked and despondent exilic community is quoted as consoling itself over the recently received news that Jerusalem had fallen. Ps. 137 records, in another form, their shock and despair at the same news: they hung their harps upon the trees of the camps where they were interned and refused to sing the old authoritative Torah traditions which reminded them of God's gracious acts in history in creating an Israel for himself. They undoubtedly felt that God had abandoned them and let them down. But others, trying to take heart, cited an old tradition about the call of Abraham: "Abraham was only one man, yet he got possession of the land; but we are many; the land is surely given us to possess" (Ezek. 33:24). Their ancestors had apparently engaged in the same sort of consolation when Samaria fell to the Assyrians in 722 B.C. (Isa. 9:10). Ezekiel here records an excellent example of the hermeneutic rules of typology and *qal wahomer*, but Ezekiel himself disagreed with the argument.

A little later, after it had become clear that Persia was to be the new international power in the Middle East, the Second Isaiah consoled the descendants of those same exiled Jews with exactly the same argument which Ezekiel had rejected: "Look to Abraham your father and to Sarah who bore you; for when he was but one I called him, and I blessed him and made him many. For the Lord will comfort Zion" (Isa. 51:2-3). The argument Ezekiel disputed and the argument the Second Isaiah supported were exactly the same, indeed employing the same hermeneutic rules. The difference was context.

The Second Isaiah lived in the same sort of exiled, dispossessed community as Ezekiel had, but he lived some forty years later, and that made an immense difference. In Ezekiel's time it was still possible to deceive the people into thinking that the fall of Jerusalem had been an insignificant event. In Ezekiel's thinking, it was still necessary for the shock to be absorbed and accepted as part

of God's agenda and purpose. Not until that point had been made and accepted, without any false hopes remaining, could Isaiah's subsequent message of restoration be heard properly.

The argument advanced by Ezekiel's contemporaries, which he disputed, had been advanced a few years earlier by a prophetic colleague of Jeremiah's, Hananiah of Gibeon. He argued, in a fully prophetic manner and apparently on the basis of Israel's legitimate authoritative traditions, that God would bring the deportees back home "within two years" (Jer. 28:2-4). As a member of the same covenant community as Hananiah, Jeremiah much preferred Hananiah's message to his own (28:6-9); but he sharply disputed Hananiah's message in the same terms with which Ezekiel disputed the same sort of message only ten years later.

Eva Osswald, following Martin Buber, has put it succinctly: "The true prophet must be able to distinguish whether a historical hour stands under the wrath or the love of God." The self-same message, based on the same authoritative traditions about what Israel can expect of God (because of what he has done in the past), in the one context was false while in the later was true. In other words, to derive consolation from the Torah story of God's gracious acts, without also deriving the obligations of the covenant relationship, is falsehood. Conversely, the "true" prophets, with the possible exception of Amos, when declaiming their messages of God's challenges and judgments (always based on the Torah story), went on to state how the impending adversity would also have the purpose of purging, refining, disciplining, or healing them (cf. Jer. 30:12-17; Ezek. 36:26-31). *See DISCIPLINE, DIVINE[S]; GRACE IN THE OT[S].*

**6. Hermeneutic modes.** Behind whatever hermeneutic rules the biblical thinkers employed there were two basic modes: the constitutive and the prophetic, and both were valid. Recent scholarship has shown that in the ambiguity existing at the time a prophecy is made, one cannot so easily distinguish a true from a false prophet as one can by hindsight, after reality has taken shape (Jer. 28:9; *see PROPHECY, FALSE[S]*). Both used the prophetic-messenger formulas, both cited the authoritative Torah-story traditions, both had great faith, both came out of the people and identified with them; but they had quite opposing messages because their basic hermeneutic modes were different. The one tended to fead the tradition in a constitutive or supportive way, while the other permitted the tradition to be read in a challenging way.

At those historical moments when Israel was weak and needed reconstituting, the Bible in its canonical shape seems to indicate that the constitutive mode was proper: our father Jacob was a wandering Aramaean (Deut. 26:5); we are lost and wandering like him (in Exile); maybe like him we mark another beginning and not the end of Israel. But if that same mode of rereading the tradition about Jacob, or Abraham, was read at a time when Israel had power, and had somehow confused it with God's power, then Jeremiah and Ezekiel, as well as the other prophets, called it false prophecy. To continue to draw strength from

the tradition would only harden the heart into further irresponsibility. At that historical moment the prophetic mode is indicated: it may be we must wander, once more, like Jacob, long enough to rediscover our true identity.

**7. Theology of canonical hermeneutics.** The debates between the so-called true and so-called false prophets always seem to have reached a crucial theological juncture. The so-called false prophet apparently believed that the God who had freed Israel from Egypt, guided her in the wilderness, and brought her into Canaan was strong enough and faithful enough to keep her there. His theology was one familiar in the Bible: that of emphasizing the grace of God in the midst of human sin. Even if we are not faithful, God is. He will keep us here. The so-called true prophet went a long way with that theology. But he apparently believed that the God who had freed Israel from Egypt, guided her in the wilderness and brought her into Canaan was powerful enough to take her out again and into exile! He recited the same Torah story, but in the prophetic mode.

Not by any means abandoning the doctrine of God's redemptive grace, he instead put it in the larger framework of the doctrine of God the creator. "It is I who by my great power and my outstretched arm have made the earth, with the men and animals that are on the earth, and I give it to whomever it seems right to me. Now I have given all these lands into the hand of Nebuchadnezzar, the king of Babylon, my servant" (Jer. 27:5-6). God still loved his people, and later would restore them handsomely, but some clear demonstration of God's integrity (unity) and freedom to reject as well as to elect was sometimes indicated by the historical moment. The prophetic indictments of the people were not only that they did not act like Israel, or live up to their true identity, but also that they presumed on God. *See PRESENCE OF GOD, CULTIC[S].*

These same hermeneutic modes (as well as the same hermeneutic rules) persist into the NT, where the evidence is mounting that Jesus, as a Jew among Jews in the first third of the first century, interpreted scriptural (OT) traditions in the prophetic mode, stressing the integrity and freedom of God in the coming eschaton (*see §9 below*).

**8. Principles and rules. a. Context.** As already stressed (§5) the interpreter must be able to discern the contemporary context so as to know which message is needed, that of constitutive support or that of prophetic challenge. The challenge may vary in intensity from challenge of life-style to threat to identity (canceling of election), just as the support may vary from the blessed assurance of divine presence to exhortation to believe in God's plans and power in a very evil situation.

**b. Covenant identity.** In either case, the ancient interpreter had the same essential covenantal identity as the people he addressed. Even Amos, who prophesied in the northern kingdom rather than in his homeland of Judah, nonetheless addressed people of the same basic covenantal identity as his own. Whether the biblical interpreter used the constitutive mode or the prophetic mode, he or she did so as a member of the group.

**c. Memory.** A distinctive characteristic of canonical hermeneutics was that of reading or reciting Israel's Torah story *in memory*. To recite the Torah story, in whatever form or in whatever circumstance, was to remember Yahweh's mighty acts in creating the world and Israel. To put God in remembrance of those same mighty acts was to petition or induce him to do the same sort of act again. But the retelling of that epic story of Israel's origins entailed such intensive identification with those in the past who benefitted from God's mighty acts in the story that, in cultic terms, time and space were in that moment of recital transcended. Those recalling or remembering the story understood themselves *actually* to be the slaves freed from Egypt, guided in the desert, and brought into the promised land; that is, the holy story became present reality in them.

When the evangelist recounted the command of Jesus to his disciples to engage in the Eucharist "in remembrance of me," the evangelist fully meant that in the moment of that cultic act, accompanied by some form of recital of the Torah-gospel story, the whole scene of the passion account would be actualized, made present, in the believers so "remembering." The Word or message received, however, will depend directly upon whether one identifies with Jesus, the Romans, the Jews, or with the disciples in actualizing the story (*see* following sections).

**d. Dynamic analogy.** To attempt to make the same points again today one must employ the basic rule of dynamic analogy. If a prophet challenged ancient Israel, or if Jesus challenged his own Jewish, responsible contemporaries, then a prophetic reading of the Bible today should challenge those dynamically equivalent to those challenged in the text: if the priests and prophets of Hosea's day or the Pharisees in Jesus' day, then the church establishment today, since prophets, priests, and Pharisees represented the responsible church leaders and groups of their time. Dynamic analogy also means that one reads the text for oneself and not only for others. It should not be read to identify false prophets and Pharisees with another group or someone else, but with one's own group and with oneself, in order to perceive the right text in the right context. In fact, there would have to be real humility (*see* §g below) on the part of modern Christians to identify with the Pharisees, since we hardly ever measure up to Pharisaic devotion and piety, much less their intense desire to please God. But to read the text as though Jesus were condemning either those Jews in their time or condemning some other group than one's own today is to read the text by static analogy. Put another way, to identify with Joseph, Jeremiah, and Jesus in the biblical accounts, without careful discernment of one's present-day context, is to miss what Joseph, Jeremiah, and Jesus have to say to believers today. Conceivably a new movement (one that feels it needs the strength to aid and to forgive those who had earlier sold them into slavery?) might identify with Joseph; but when that movement has become established, such a reading would only induce self-righteousness. The challenge then needed could come only from

identifying with the brothers. The climactic point of Amos' address recorded in Amos 1:3-3:2 is that whereas autochthonous Israel should have treated the poor and weak and dispossessed in their own land the way Yahweh had treated Israel when they had been dispossessed slaves in Egypt, they were actually treating them the way Pharaoh had dealt with the Hebrew slaves in the Torah (Exodus) story.

**e. Ambiguity of reality.** Dynamic analogy means also that one must breathe the ambiguity of reality into the ancient situation or context. To read Amos as though what he said was "right" because, after all, he ended up being included in the canon, and as if those he addressed were "wrong" in some absolute sense, would be to miss the realism of the Bible as canon. Good, responsible folk in ancient times held another viewpoint on God's promises and expectations and in all sincerity and good faith considered Amos, Jeremiah, and Jesus to have been wrong. "The tradition works . . . not only to illuminate and to identify the Christ, but also to reject and resist the Christ" (J. Barr). We must read biblical texts in terms of the ambiguity of reality which any situation has; this means that we must be able to discern present contexts dynamically, and then read the biblical text in the same dynamic way.

**f. Mirrors for identity.** Most biblical texts must be read, not by looking in them for models for morality, but by looking in them for mirrors for identity. To look for models for morality in the Bible is very nearly a futile task, since a basic emphasis of the canon is on the grace and faithfulness of God and on the sin and faithlessness of Israel as well as of the disciples in the NT. There are hardly any moral models in the Bible as it is canonically shaped, except for a few characters viewed principally through ancient Wisdom thought, e.g. Joseph after he gets to Egypt. Abraham and Sarah lied out of fear for their lives and both snickered at the announcement of Isaac's birth (Gen. 17-18); Jacob was a deceiver and supplanter and yet became Israel (Gen. 27); Moses was a murderer and fugitive from justice and yet became our savior from slavery and our lawgiver (Exod. 2); the disciples forsook Jesus (Matt. 26:56) and denied him (Mark 14:66-71); etc. The point is not that we should be liars, cheats, and murderers in order to be elect; on the contrary, to read the Bible in that way is to moralize statically on the basis of the text.

**g. Theologizing and moralizing.** One must read the Bible theologically before reading it morally. The primary meaning of redemption is that God has caught up human sinfulness into his plans and made it a part of those plans. This theologem pervades the Bible, OT and NT, and so all texts must be understood theologically (in the light of that theologem) before any indication for obedience be drawn from it.

The tendency to moralize first has resulted in dishonest readings of the Bible. Not to accept the clear biblical signal that Abraham feared for his own existence and lied about Sarah is to engage in white-washing the story. Not to accept what the Bible so clearly says about Jacob's devious char-

acter is to concentrate on how bad Esau was to sell his birthright (Heb. 12:16), which is to miss the point of Genesis altogether. But to seek to find the proper place of a passage in full canonical context by theologizing first (God's grace in the midst of human sin; God's free acts in electing "sinners") permits the reader then to ask in a fully canonical sense what the passage might indicate for current programs of obedience or lifestyle, without doing violence to the Bible, and without being misled by a false reading of it.

One should read the Bible not only with honesty but also with humility and humor. Humility means one identifies in the stories and episodes not with Joseph, Jeremiah, and Jesus, but with those who heard their challenging messages and learned from them. Whenever our reading of a biblical passage makes us feel self-righteous, we can be confident we have misread it. Humor means that in reading the biblical texts we take God a little more seriously than usual and ourselves a little less so.

**9. The Bible as paradigm.** If the story of Jesus' sermon at Nazareth (Luke 4:16-30) is read constitutively, that is, if one identifies with Jesus, then almost certainly one will read the passage anti-Semiticly, get angry with the mob for trying to stone Jesus and then wonder, missing the point entirely, how Jesus was able to walk through the midst of them unharmed. But if one identifies with the good, responsible folk of Nazareth who attended the service, listens to Jesus' sermon from their standpoint, hears the terrible offense of it, and gets the feelings which the congregation got because of it, then one may want to lynch Jesus also. The question, What did Jesus say that made them so angry? becomes, What does Jesus say that makes us so angry? He said that when the great herald, or Elijah, would come finally, he would do the same sort of thing he and Elisha did in ancient Israel (I Kings 17; II Kings 5); he would take his blessings, not to our community, but to foreigners, even to our enemies. That is not the sort of message any congregation wants to hear, especially today, whether conservative or liberal. What is the use of being a member of the in-group if, when God intervenes to sort everything out, he takes his blessings to sinners, or outsiders? There is a deep injustice in paying those who work only one hour the same wages as those who have borne the burden and heat of a full day's work. But the Bible is full of the insistence on God's freedom and generosity (Matt. 20:1-15). Such a reading of Luke 4 (or of almost any passage in the Bible) would bring the church today to ask who it really is and what its self-understanding, or essential identity, ought truly to be. To read the Bible in this way is to engage in biblical "memory."

Even a passage like John 14:6, "No one comes to the Father, but by me," can be read either constitutively or prophetically. Reading in the constitutive mode one assumes one to be "by" or "in" Christ. For young, struggling churches who are not at all sure of survival, such a reading can be a correct one and a genuine encouragement not to assimilate or defect. But for established churches which have confused their identity with the dominant culture (so that, e.g., they think, because

of the Puritan heritage, that to be a good Christian is to be a good American, and maybe even vice versa!), to read the verse in that way is to sponsor self-righteousness and pride and to encourage confusion of identity. To read it prophetically would be to hear in it the challenge that indeed the churches are not coming to the Father, and this is precisely because they are not, despite all their confessions and lessons learned by rote, coming "by me." Read in that way, the passage somehow no longer seems to sponsor notions of exclusivity at all, but rather sponsors a further step into understanding what the freedom of God means. Minimally it means that God is not a Christian in the sense that the churches habitually co-opt him to be. "A judge who is the God of all" (Heb. 12:23) read constitutively seems to say, "Our God is the judge of all them" (and the book of Revelation seems to say something like that to persecuted Christians under the Roman heel). But read prophetically the passage challenges all tribal, sectarian, and denominational ideas of God.

**Conclusion.** The Bible itself gives indications of how to make again today the points originally made and then to move on in our contexts to further theological horizons (views of truth). The two basic modes are the constitutive and the prophetic, according to context. The crucial distinction between them is theological: the freedom of God on the one hand, and his generosity and grace on the other; and his apparent bias for the powerless, those who have not yet confused his power with theirs. The Bible, read as a paradigm of the verbs of God's activity, permits us to conjugate in our own contexts the verbs of his continuing activity and how we may pursue, in our time, the integrity of truth, i.e., God's oneness both ontological and ethical.

**HERMETIC LITERATURE** *hûr mêt'ik*. A variety of theosophical writings ascribed to Hermes Trismegistos ("thrice-great"), the Greek title of Thoth, the Egyptian god of wisdom. Composed originally in Greek in Egypt, the Hermetica were translated into Latin, Arabic, and Armenian, and were esteemed in medieval times by Albertus Magnus and Paracelsus.

**1. Types and MSS.** The "vulgar" Hermetica are astrological, magical, and alchemical works preserved in MSS of the thirteenth through the fifteenth centuries. The "learned" Hermetica are religious and philosophical in character. These are preserved in the Greek *Corpus Hermeticum* (CH), the Latin *Asclepius*, the Coptic *NAG HAMMADI Codex VI*, and in extracts in Stobaeus and other writers. The CH is an extensive collection of seventeen tractates composed in the second and third centuries A.D., numbered I–XIV, XVI–XVIII. An early editor had placed extracts from Stobaeus as CH XV. Hermetic works in Nag Hammadi Codex VI are: Authoritative Teaching (not explicitly Hermetic but probably a popular form of it); the Discourse on the Eighth and Ninth (an important new initiation liturgy comparable to CH XIII); the Prayer of Thanksgiving (also found in *Asclepius 41* and the Greek Papyrus Mimaout); and the Apocalypse from *Asclepius* (cf. *Asclepius 21-29*).

**2. Teachings.** The Hermetica show borrowing from both dualistic Platonism and pantheistic Stoicism. The monistic tractates (CH V, VIII, XI, XIV) maintain that the invisible god may be discerned in the Cosmos, especially in the celestial order. The dualistic tractates (CH I, IV, VI, VII, XIII) teach that the world is not the direct creation of the First God. CH IX, X may be called "mixed."

The important tractate CH I, called *Poimandres*, reveals that God gave birth to a Second Mind who made the planets, and also to the *Anthropos* who united with Nature to produce seven androgynous persons from whom came humanity (see *ANDROGYNUS*). Therefore, one's body imprisons one's soul and subjects it to astrological fate.

The Hermetic who is reborn by receiving *nous*, "intelligence," and by suppressing the bodily senses may ascend at death through the seven circles and join the company of the celestial gods. In the Nag Hammadi tractates there is reference to a brotherhood of Hermetic saints who have broken the bonds of fate (On8th9th), as well as references to kissing, and to eating holy and "unbloody" food (PrThank). *ApocAscl* refers to a mystery of *synousia*, "living together."

In spite of Reitzenstein's attempt to suggest that the *Poimandres* is the source of Johannine thought, the *Anthropos* of CH I is not a savior like Christ. Though some of the CH tractates are almost Gnostic, the Hermetica lack the radical dualism of Gnosticism. Creation is not regarded as in itself evil, and the demiurge is not a rebel but the son of the supreme God.

**HERODIAN FORTRESSES.** Herod the Great fortified Judea against invasion from without and insurrection from within. Apart from strengthening cities such as JERUSALEM and Sebaste, he constructed eleven remarkable fortresses, mostly on relatively inaccessible but strategic wilderness mountaintops. Only the Herodium SE of Bethlehem was wholly new (not to be confused with another Herodium at El Hubbeisa in Peraea). Alexandria, Hyrcania, Machaerus, Cypros, and MASADA were built upon Hasmonean foundations. These major citadels in the Jordan Valley could signal to one other at least. Herodium, Cypros, and Machaerus could signal directly to Jerusalem.

The S of Herod's domains, the object of envy of his archrival, Cleopatra VII of Egypt, saw a concentration of smaller fortresses also on ancient foundations. In the wilderness above En-gedi were Carmel (Khirbet Kermel) and Zif (Khirbet Ziph). Oresa (Khirbet Istambul? Khirbet Harissah?) and Adora (Dura) were S of Hebron.

**1. The Alexandria** (Khirbet Sarbata, fifteen miles SE of Shechem) is a vital point on the central Jordan Valley road. Built by Alexander Jannaeus, for whom it is named, it became a refuge for his son, Aristobulus, who in 63 B.C. resisted Pompey there (Jos. War I.vi.5). Six years later his grandson, Alexander, surrendered Alexandria to Gabinius and Marc Antony, who demolished it (War I.viii.4, 5; Antiq. XIV.v.3, 4). Herod rebuilt it in 38 B.C. (War I.xvi.3; Antiq. XIV.xv.4) and gave it a sinister reputation as a place for the incarceration of political enemies. In 30 B.C. Herod visited Octavian at Rhodes, putting his mother-in-law, Alexandra, and his wife, Mariamne, as well as their children, in the Alexandria and giving orders to kill Mariamne should he not return (War I.xxii.4; Antiq. XV.vi.5). The discovery of this secret set in motion events which led to the woman's death. Twenty-three years later when Herod ordered the death of his two sons by Mariamne (Alexander and Aristobulus) they were buried on this brooding height among many of their Hasmonean ancestors (Antiq. XVI.xi.7). While several of the fortresses served as treasuries, it was at the Alexandria that Herod kept much of his vast fortune.

Mishna and Talmud mention Sarbata, where beacons were lit to announce the new moon. The summit contains ruined walls, cisterns, an olive press, and rock-cut tombs. At its base are remains of the Herodian town of Alexandria and its ancient aqueduct.

**2. The Herodium.** At Jebel el-Fureidis, which commanded the desert road from Jerusalem to En-gedi, Herod erected a curious fortress which he named for himself (Jos. War I.xiii.8; Antiq. XIV.xiii.9). The easternmost of twin hills was used to heighten the western summit. Upon this cone-

shaped mount a round castle was constructed (War I.xxi.10), contained within double circular walls 180 feet in diameter. Upon all "wealth was lavished in profusion." Here Herod was buried (War I.xxxiii.9). The Herodium was, says Josephus, "a memorial to himself." See HERODIUM; HERODIUM[S]; for a photo, see TEKOA Fig. 7.

HERODIAN FORTRESSES

3. **Hyrcania** (Khirbet Mird, in the desolate wilderness eleven miles N of Jericho) was built by John Hyrcanus (or perhaps Alexander Jannaeus). Destroyed by Gabinius in 57 B.C. (Jos. War I.viii.5; Antiq. XIV.v.4), it was rebuilt by Herod before 32 B.C. The grimmest of the desert fortresses and that with the most evil reputation, it continued as a state prison where secret executions and burials took place (Antiq. XV.x.4). Here Herod, in his last week of life, had his son Antipater murdered and unceremoniously buried (Antiq. XVII.vii.1).

After the Jewish revolts Hyrcania fell into ruin. In A.D. 492 St. Sabas founded a monastery (*Castellion*) on the site. In 1953 Belgian archaeologists recovered a number of MSS there, mostly from the

fifth to eighth century A.D.: codices including Mark, John, and Acts; portions of the Bible in Aramaic; and fragments of Euripides' *Andromache*.

Mird contains extensive Roman and Byzantine ruins including mosaics and parts of an aqueduct and a bridge.

4. **Machaerus** ("The Sword," Targ. Michvar; Arab. Mukawer and Qasr el-Mishneneq) is E of the Dead Sea thirteen miles SE of Judean Herodium. Built to take advantage of the natural cleft of the Arnon Valley, it effectively guarded Herod's vulnerable frontier with the Nabateans. Its soaring towers (approximately 100 feet high), joined by massive ramparts, enclosed spacious royal apartments magnificently appointed, with high cisterns furnishing an abundance of water. See Jos. War VII.vi.2.

Machaerus' most famous prisoner was John the Baptist, beheaded there by order of Herod Antipas (Matt. 14:1-12; Mark 6:14-29; Luke 9:7-9; Jos. Antiq. XVIII.v.2).

After Jerusalem fell in A.D. 70 the Romans besieged Machaerus; it was taken by a ruse and subsequently destroyed (Jos. War VII.vi.4). Remains of the Roman siege wall and camps as well as portions of the Herodian aqueduct, fortress and town below are still visible. See MACHAERUS.

5. **Cypros** (Tell el-Akabe), named for Herod's mother (Jos. War I.xxi.9), stood 800 feet above the Jericho Plain on the S side of the Wadi Qelt, guarding the road from Jerusalem to Jericho. Building on earlier, probably Ptolemaic foundations, Alexander Jannaeus constructed three forts in the vicinity. One was Docus, on the summit of "the Mount of Temptation," while the other two, Threx and Taurus, flanked the Wadi Qelt. All three were dismantled by Pompey in 64 B.C. Cypros was a reconstruction of Threx. It was, according to Josephus (Antiq. XVI.v.2), "a place notable for its security and most pleasant to stay in." It did not have the sinister history often associated with Herod's wilderness fortresses.

H. T. FRANK

\***HERODIUM.** The name of two fortresses established by Herod the Great, the only ones which he built *de novo*.

1. **Herodium in Peraea.** The date of construction is uncertain, but Josephus indicates that Herod built the first Herodium on a "mountain toward Arabia" prior to building the one by the same name near Bethlehem (Jos. War I.xxi.10). Ruins of a small fortress known as El Hubbleisa, "the little prison," are the likely location. It was constructed close to the foot of Mount Nebo, near an agricultural settlement which Herod called

Livias, in honor of Caesar Augustus' wife. Along with Machaerus, its purpose was to defend Herod's frontier against the Nabateans.

2. **Herodium near Bethlehem.** The Arabic name of this site is *Jebel el-Fureidis*, which means "mountain of small paradise." In the materials from Murabba'at the spelling is "Herodis" for which some scholars maintain Fureidis is an Arabic corruption. Sometimes the location is referred to as "Frank Mountain" from a tradition that a body of Franks held out there for forty years after the Crusader kingdom of Jerusalem fell in A.D. 1187. There is, however, no archaeological evidence to substantiate this.

Construction on the Herodium began in 24/23 B.C., when Herod was fifty years old, and was completed prior to Marcus Agrippa's state visit to Herod's realm in 15 B.C. (Jos. Antiq. XV.9.4). Located on a hill  $3\frac{1}{2}$  miles S of Bethlehem, this palace-fortress was constructed on a conical plan. A very steep glacis provided the base for the outer of two circular walls. From the outer wall protruded three semicircular towers to the S, N, and W. The eastern wall was dominated by a round tower, the ruins of which still stand over 50 feet high. From the valley below, a stairway of 200 marble steps led up to the outer wall.

The building complex, which had a maximum diameter of 262 feet, had three floors above the semiunderground level. All walls except the outer one were covered with stucco, the ground floor level being in polychrome, the upper levels in white. Paintings in both distemper and fresco have been discovered. Well-sculptured columns and capitals in both the Corinthian and Ionic orders were employed. Both marble and mosaic floors have been uncovered.

As is typical of Herodian fortresses, huge subterranean cisterns were constructed to store rain water. To augment the water supply for the Herodium and the small town at its base, a conduit was built from Solomon's pools just S of Jerusalem.

Although Herod is known to have been buried here, his tomb has not been identified.

During the First and Second Jewish Wars Herodium was occupied by Jewish rebels. During the First Revolt the rebels found it in excellent condition, but those who settled there during the Second Revolt dwelt among ruins of the destroyed buildings. It is difficult to discriminate between the evidence left during the two rebel occupations. However, the occupants during the Second Revolt can be credited with construction of new rooms in three of the towers and the conversion of a dining hall into a synagogue.

Some scholars have concluded from letters found at Murabba'at that Simeon bar Kochba, the rebel leader, personally commanded the garrison at Herodium before his retreat to Bether. See BAR KOCHBA[S] §3.

Rooms which best withstood the ravages of two Roman sieges were the baths. They were occupied not only by Jewish rebels but subsequently by a community of Christian monks, whose occupancy lasted until the seventh century A.D. The walls of the baths contain an intriguing mixture of

graffiti written by the first inhabitants, the Jewish rebel soldiers, and the monastic occupants. The monks built a small church in the palace courtyard.

See HERODIUM; HERODIAN FORTRESSES[S] §2.

\***HESHBON. 1. History.** It has been erroneously stated (see HESHBON) that at the time of the Maccabees Heshbon had the right of striking coins. There is no literary or archaeological evidence to support this. The city obtained this privilege only in the third century A.D., from which time only a few coins are known, including one fine specimen discovered during the excavations in 1973.

In Byzantine times Eshub, as Heshbon was called, was the seat of a Christian bishop. During the Islamic period it became the district capital of the Belqa and served in this capacity until the city was abandoned for unknown reasons during the fourteenth or fifteenth century A.D.

2. **Excavations.** Four seasons of excavations at Tell Heshbân (between 1968 and 1974) have not produced any remains antedating the Iron I age. Thus the city of King Sihon must have been located elsewhere. Jalul, the only important site in the vicinity which contains Late Bronze Age pottery, is a good candidate. It is possible that after the conquest of Heshbon by the Israelites a new site, more prominently located, was chosen and given the former name, Heshbon.

Heshbon's Iron I age (twelfth-tenth centuries B.C.) is represented by what seems to have been a fortification wall built of rough, tightly fitting boulders, as well as by a large plastered cistern which contained only Iron I sherds in its water-laid silt.

Pottery of the early Iron II period (ninth-eighth centuries) has come to light in two sites on the mound. One is an open-air water reservoir (so far only partially excavated) at least fifty feet long, forty feet wide, and fifteen feet deep. It probably was one of the pools mentioned in Song of S. 7:4 [H 5].

The late Iron II age (seventh-sixth centuries) is well represented. Part of the ancient defense wall has been discovered, founded on the original bedrock. In the reservoir, filled in during Hellenistic times, Ammonite pottery, known previously only from tombs excavated in and around Amman, was recovered. This fill also contained ostraca from the seventh and sixth centuries B.C. which have enriched our knowledge of the Ammonite dialect and script (see AMMON, AMMONITES[S]; INSCRIPTIONS, SEMITIC[S] §3c).

From the sixth to the third century B.C. Tell Heshbân seems to have been abandoned, but it was

resettled in the second century, probably by the Maccabees. The most extensive remains came from the Roman period. They included an impressive perimeter wall around the acropolis; a tower; a paved flagstone floor; and a wide monumental stairway which gave access to a public building on the acropolis, probably a temple. The temple most likely is depicted on the reverse of coins minted at Esbus in the third century A.D., which show the façade of a four-columned building with a female deity standing between the central columns (see Fig. H12). To the Roman period belong also the earliest rolling-stone tombs of the first century A.D. thus far discovered E of the Jordan River.

12. The Esbus coin, found during the 1973 Hesbon expedition.

The most noteworthy remains from Byzantine times are the foundations of a basilica-type church, erected in part on the foundations of earlier Roman structures. It was probably destroyed during the Persian invasion in A.D. 614.

Structures dated to the Umayyad and Ayyubid/Mamluk times include vaulted rooms surrounding a central plaza on the summit and a well-preserved bathing complex.

\***HIERAPOLIS.** Although Hierapolis had previously been explored and surveyed, regular campaigns of excavation and restoration were begun only in 1957. One of the most important discoveries of the recent excavations has been the recognition of the deadly Plutonium with its entrance to the underworld (see **HIERAPOLIS**). The Plutonium area is located beside and below the temple of the oracular Apollo Archegetes in the center of the city and focuses on a doorway or large niche from which the sound of rushing water and the unpleasant smell of chemicals still come forth.

A second outstanding discovery is a martyrium, possibly that of Philip the apostle, but more likely belonging to PHILIP the evangelist, who is reported to have spent his last days in Hierapolis and been buried there along with his prophetic virgin daughters (Acts 21:8-9; Eusebius, *Hist.* III.xxxi). The martyrium of Philip stood in a dominating position above the city, just outside the walls to the NE, and was approached by a broad flight of steps. Over 180 feet square in plan and bounded on all sides by a series of small chambers (intended perhaps for the accommodation of pilgrims), the martyrium had at its center an octagonal chamber more than sixty feet in diameter, roofed by a lead-plated dome. From this chamber radiated eight chapels and corridors each with twin marble columns in its doorway. The complex was built in the early fifth century.

**HIGHER CRITICISM.** Distinguished from LOWER CRITICISM, whose work it carries forward, by its concern to understand documents in relation to their original historical setting; sometimes understood as virtually equivalent to historical criticism (see **BIBLICAL CRITICISM §5d**). Higher criticism relies more on internal than on external evidence. E.g., in determining whether Peter wrote the epistles, it assesses the intrinsic probability in light of their contents rather than relying on the epistles' own claim to authorship or on external attestation in other texts. The higher critic who concludes that Peter is not the author then proceeds to infer the probable time, place, and occasion of the epistles. The nineteenth- and twentieth-century controversies over biblical criticism have concentrated on the legitimacy of higher criticism because it appeared to threaten the authority of the Bible. See **BIBLICAL CRITICISM, HISTORY OF; BIBLICAL THEOLOGY, HISTORY OF; SCRIPTURE, AUTHORITY OF[S]**.

**HILLEL**. 2. Father of ABDON, one of the Israelite judges (Judg. 12:13, 15). He was from the town of Pirathon in the tribal territory of Ephraim.

\***HITTITES.** An Indo-European people of the second millennium, creators of a strong kingdom in E central Anatolia, which grew into a powerful empire and fell ca. 1200 B.C.; also, their descendants in SE peripheral areas from ca. 1200 to 700 (Neo-Hittites).

1. **The Bronze Age Hittites.** The name *Hatti* originally designated the native, non-Indo-European population of central Anatolia. Speakers of western

Indo-European (*centum*) languages are attested in Anatolia since early in the second millennium. Those who settled in its central part adopted the name *Ḫatti* as the political appellation of their kingdom, but they called their own language Nesite (also known as “cuneiform Hittite” in modern literature). Two other Indo-European languages spoken in Anatolia were Luwian (in the S and SW) and Palaic (in an undetermined northern area). After 1600 the Hittites took over the cuneiform script from northern Syria, as well as the use of Akkadian and Hurrian. About the same time the royal residence was moved from Kussara (as yet unidentified) to Ḫattusas (Boghazköy). The first historical ruler of the Old Kingdom, Ḫattusilis I (ca. 1570-1540, low CHRONOLOGY OF THE OT), began the Hittite drive for the conquest of northern Syria. His successor, Mursilis I, captured Ḫalab (Aleppo) and sacked Babylon (1531). But soon the Hurrian offensive (see MITANNI[S]; HURRIANS; HURRIANS[S]) and a long series of palace revolutions weakened the Hittite state. Ca. 1420 a new, stable dynasty laid the foundations of the New Kingdom. Suppiluliumas I (ca. 1386-1356) restored Hittite supremacy in Anatolia, conquered northern and central Syria, and established a protectorate over Mitanni, thus creating the Hittite Empire. His successors were involved in wars with Egypt, which tried to recover its lost possessions in Syria. The culminating battle took place in 1300 at Kadesh on the Orontes and resulted in an indecisive victory of King Muwatallis over Pharaoh Ramses II. A peace treaty was concluded in 1279 between Ramses II and Ḫattusilis III. The Hittites retained their Syrian dominions, but they could not prevent the conquest of Mitanni by Assyria.

Scala

13. The Lion Gate at Boghazköy

Ca. 1200 the Hittite Empire was overthrown by the invasion of the People of the Sea (see PHILISTINES §1). Ḫattusas was destroyed, never to rise again, and the very memory of the great Anatolian Empire was forgotten till the start of excavations at Boghazköy early in this century. These excavations, which are still going on, have revealed great monuments of architecture, works of art, and an enormous archive of cuneiform tablets of all genres. See Fig H13.

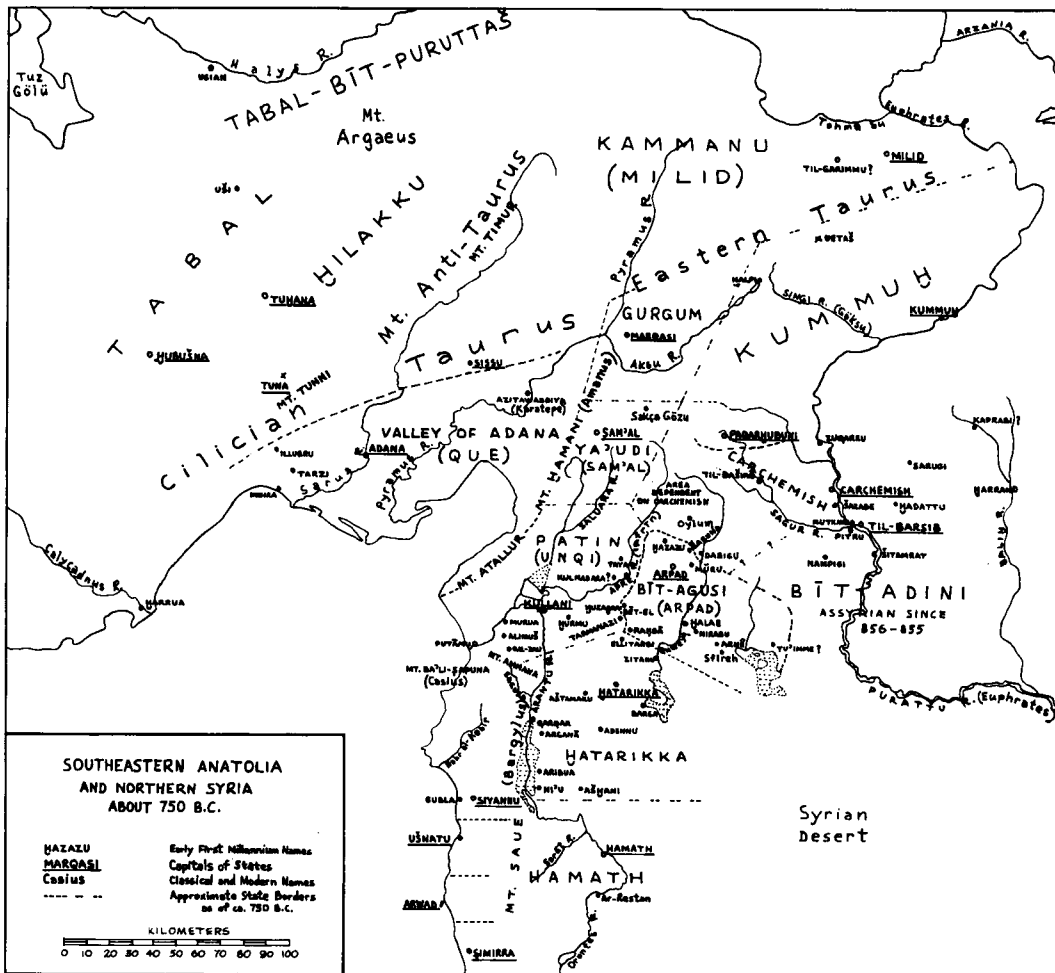

**2. The Neo-Hittites.** Some traditions of the Hittite Empire were preserved for another five hundred years in the Taurus region and in northern Syria. The number of Hittites there was probably increased by an influx of refugees from Anatolia. The cuneiform script and the “cuneiform Hittite” language disappeared, but the Hittite hieroglyphic writing, occasionally used under the Empire, survived and spread to new areas. The language of the Hittite hieroglyphs is very close to Luwian. However, Luwian-speaking elements had been an integral part of the Hittite state, and their descendants were known as Hittites to their Assyrian, Urartian, and Hebrew contemporaries. We shall therefore retain for them the conventional designation “Neo-Hittites” (preferable to “Syo-Hittites,” because they were not limited to Syria). S of the Taurus, they were a minority in a predominantly Semitic environment. The power in most of their states in Syria gradually passed to the Arameans, who initially continued the Neo-Hittite traditions. The Assyrian conquest of Syria put an end to the Neo-Hittite court culture.

In the ninth and eighth centuries, the Neo-Hittite area was divided into several small states, some of which are mentioned in the OT (see map). Bit-adini (see EDEN[S] §1) was annexed by Assyria in 857-855, and the other states between 740 and 708, except the southwestern part of Tabal, which remained autonomous.

The Assyrians called northern Syria *Ḫatti* (Hittite land), and along with their military advance this geographical term extended to the rest of Syria and to Palestine, interchangeably with the older name of the region, *Amurru*, or combined with it in the hendiadys “Ḫatti and Amurru” or “Ḫatti of Amurru.”

**3. The Hittites in the OT.** The Hittite conquests never reached Palestine, and no ethnic Hittite elements ever settled there. In the historical books of the OT, “Hittites” always designate the Neo-Hittites of northern Syria.

When Ezekiel (16:3, 45) said to Jerusalem that “your father was an Amorite, and your mother a Hittite,” he simply followed the geographical terminology of his time which assigned Jerusalem to the land of Ḫatti or “Ḫatti and Amurru.” The same Neo-Babylonian usage underlies the appellation “Hittites” for the population of Canaan in the patriarchal stories of P (Gen. 23:3; 26:34; 27:46). There is no reason to see a genuine survival of imperial Hittite law in the courteous procedure of concluding a deal as described in Gen. 23. As a Syrian people, the Hittites were assigned to the descendants of Canaan in the table of nations, Gen. 10:15, and included in the

standard enumerations of the peoples whose land was promised to Israel (Gen. 15:18-21 and elsewhere).

\***HOLY SEPULCHRE, CHURCH OF THE.** An ecclesiastical complex in the walled Old City of JERUSALEM that comprises the traditional locations of Golgotha (Calvary) and the tomb of Jesus, which according to John 19:41 were located close to one another. The church was constructed by the emperor Constantine in the fourth century (see ART, EARLY CHRISTIAN[S] §4a) and subsequently has undergone numerous alterations, some of them extensive. Although many historical records pertain to the church, the history of this complex could not be written satisfactorily until extensive archaeological explorations were undertaken as a part of restorations begun in 1960 by the Greek Orthodox, the Armenian, and the Roman Catholic churches, the three principal Christian communities that share the edifice.

The Romans often staged crucifixions just outside city walls and beside main roads, where they would be prominently visible. Such a situation appears to be implied in John 19:20 (cf. Heb. 13:12). Excavations conducted in Jerusalem in 1961-68 confirmed that at the time of Jesus' death the areas now occupied by Golgotha and the tomb of Jesus within the Church of the Holy Sepulchre were situated 100-150 yards outside the city wall. This discovery obviates the most serious objection to the authenticity of the traditional location. It is also now known that the place upon which the church was built had formerly been a quarry, into the irregular terrain of which tombs had been cut prior to the expansion of Jerusalem and the construction of the third city wall in A.D. 41, some years after Jesus' passion. Although there is no incontrovertible proof that the Church of the Holy Sepulchre stands on the exact spots where Jesus was crucified and buried, there is strong circumstantial evidence for the essential correctness of the places memorialized in the church. See Fig. H14.

From the *Biblical Archaeologist*, XXX, by permission of the American Schools of Oriental Research

14. Contour map of Jerusalem. Drawing by R. H. Smith based on the topographical map by C. Warren.

The small second-story Golgotha chapel in the church preserves at best relatively little of the original ground on which Jesus was crucified. Glimpses of rock may be seen in the floor and on the ground level below the chapel. Not much is yet known archaeologically about this spot, but test borings near it have shown that the quarry drops off to the E around Golgotha. Golgotha may therefore have been a highly visible pinnacle. Fourth-century masons probably left standing only an irregular part of this knoll. Any original contours that might have given the place its designation of "skull" in Jesus' day no longer exist.

Even less, presumably, remains of the tomb of Jesus, located on the ground level of the church. To form a courtyard, Constantinian masons cut away most of the hillside around the tomb, and subsequently pilgrims and enemies alike hacked away much of the surviving rock that formed the

tomb. Since Constantinian times the tomb has been enclosed by a small mausoleum-like shrine, several times rebuilt. The original form of the tomb may be inferred from the gospels and from the many surviving Jewish tombs of the Roman period in the vicinity of Jerusalem. It can hardly have been so elaborate as the large Hellenistic tombs that still stand in the Kidron Valley. (See *TOMB* Fig. TOM 70.) It had a typically small inner doorway that may have been closed with a millstone-like disk that rolled in a slot (see Fig. TOM 71; cf. Mark 15:46; 16:3-4 and parallels; John 20:1). Inside was perhaps a single chamber with rock-hewn mortuary slabs against the three walls that faced the door and possibly typical burial slots at right angles to the walls of the chamber, although these latter do not figure in the accounts in the gospels. See Fig. H15; GOLGOTHA; JERUSALEM §11; JERUSALEM[S].

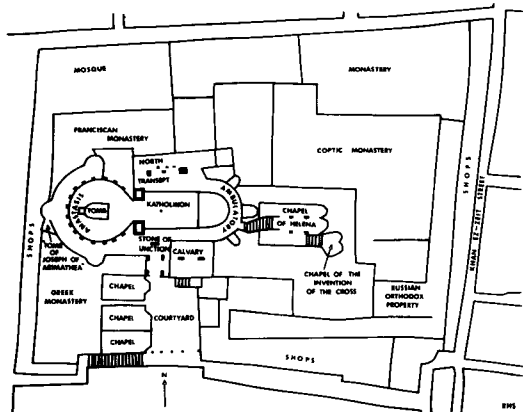

Drawing by R. H. Smith

15. Hypothetical reconstruction of the tomb of Jesus from archaeological evidence of Jewish tombs at Jerusalem during the time of Jesus. At the top is a cross section (through plane B-B) and at the bottom is the plan (through plane A-A). 1: Forecourt. 2: Disk-shaped closing stone in a slot; the arrow indicates the direction of downward slope of the slot, whereby the stone rolls into place by gravity but cannot be rolled back except with the expenditure of much energy. 3: Entrance to the burial chamber. 4: Stone step. 5: Central pit to permit one's standing erect in the chamber. 6: Stone benches in the bedrock on three sides of the chamber. 7: Possible elevation of Jesus' shrouded body. The chamber is taken to be a little more than eleven feet wide and slightly less than six feet in height.

**HOMILY.** See FORM CRITICISM, NT[S].

**\*HOMOSEXUALITY.** The previous article cited the study of D. S. Bailey but took no notice of its arguments and conclusions. Bailey argued that the homosexual interpretation of the sin of Sodom is not found in the OT, the Apocrypha, or the Talmud, but was a reinterpretation developed by Pseudepigraphists, Josephus, and Philo which was then accepted by the church and made the basis of its teaching that those who indulge in homosexual acts bring on themselves and all who tolerate such depravity the vengeance of God. Bailey regarded it as significant that none of the biblical condemnations of homosexual practices (Lev. 18:22; 20:13; Rom. 1:26-27; I Cor. 6:9-10; I Tim. 1:10) mention the Sodom story. The references to the wickedness of Sodom in Jer. 23:14 and Ezek. 16:49-50; Wisd. Sol. 10:8; and Ecclus. 16:8 do not suggest homosexuality. Only in the late NT books, II Peter and Jude, are homosexual practices connected with the sin of Sodom. It is the Palestinian Pseudepigrapha which reflect the development of the sexual and homosexual interpretation of that sin. The references discussed by Bailey include passages from Jubilees (7:20-21; 13:17; 16:5-6; 20:5-6) and the Testaments of the Twelve Patriarchs (Naph. 3:4-5; 4:1; Asher 7:1; Benj. 9:1; Levi 14:6), II Enoch 10:4; 24:2; III Macc. 2:5. Philo of Alexandria expressly associated the sin of Sodom with pederasty, attributing to the verb "know" in Gen. 19:5 homosexual coital connotation (*Questiones et Solutiones in Genesim* iv. 37, and in the treatise *De Abrahamo* (xxvi. 134-136) Philo tells us that the Sodomites in their mad lust violated not only the marriages of their neighbors, "but also men mounted males without respect for the sex nature which the active partner

shares with the passive." The result of this activity was sterility for the aggressors while the passive partners were saddled with the curse of a female disease. Philo's Sodom, according to Bailey (p. 22), reflects not so much the biblical city of the plain as later life on the Mediterranean shores (depicted in lurid detail by Petronius and Juvenal), and similarly with Josephus' references to Sodomite abuses (*Antiq. l.xi.1* [194-195], 3 [200]).

It is striking that rabbinic literature knows little of the homosexual interpretation of the sin of Sodom. The offense of the Sodomites was mainly that they were mean, inhospitable, uncharitable, and unjust (T.B. Sanh. 109a; Er. 49a; Keth. 103a; B.B. 12b, 59a, 168a; AB. 5). The single midrashic reference to homosexual activity (Genesis Rabbah 50.7) by the Sodomites explains that they subjected strangers to sexual assault and robbed them. The Fathers of the church, however, had no doubt that the Sodomites were addicted to pederasty and that this was the ground for the wrath visited on them. The homosexual interpretation has profoundly influenced Western attitudes and legislation, but Bailey argued that the Sodom story has no bearing on the modern problem, that it cannot be held that the divine wrath on Sodom is still determinative for the attitude of church or state toward sexual inversion.

Whatever the influence of Jewish reaction to the homosexual practices encountered in the Diaspora, there can be no question that the understanding of the Pseudepigraphists and the church Fathers was well founded, that the Sodomites' offense, like that of the men of Gibeah (Judg. 19:22), was the demand for carnal knowledge of a neighbor's guests (cf. ABi, I on Gen. 19:5).

The previous article mentioned sacril homosexual prostitution in connection with foreign cults and suggested that this may have been a factor in the strong biblical repudiation of homosexuality. The adjective "foreign" is questionable, since these cults were doubtless long established in Syria-Palestine, and all over the ancient Near East, in pre-Israelite times. The term *qādhēsh*, "holy one" (cf. Deut. 23:17 [H 18]; I Kings 14:24; 15:12; 22:46; II Kings 23:7) rendered "sodomite" by KJV and "male cult prostitute" by RSV, may designate the catamite homosexual, as Jerome assumed in the rendering of Job 36:14 (*inter effeminatos*). The excesses of these hierodules apparently reduced their life expectancy (cf. ABi, XV on Job 36:14). Religious sanction for phenomena associated with homosexuality is better documented in ancient Mesopotamia than in other parts of the Near East. The *assinnu*, *kul'u'u*, and *kurgarrū*, cult functionaries of the love and war goddess Inanna/Ishtar, are mentioned in terms suggestive of homosexuality. Of the *assinnu* and *kurgarrū* we are told (Erra IV. 55) that the goddess "changed them from men to women in order to show the people piety." The technique by which the change was effected may well have been castration. Eunuchs figured prominently in the goddess cults of the Near East, in the worship of Cybele, the Dea Syria, Hecate, Aphrodite of Aphaca, and the Scythian mother goddess. The ancients apparently believed that certain sacred functions could only

be properly performed by one qualified for them by perfect continence, hence many cults required as ministers virgins living in chastity or children who had not attained puberty. The eunuch castrated himself in enthusiasm at the sacred festival of the goddess in order to be perfectly fitted to serve the object of his devotion throughout life. The paradox of the infertile serving a fertility deity need not detain us here. Eunuchs after the transformation dressed distinctively and to some degree acted as women, thus the classical characterizations *in mulieres transformantur* or *emolliuntur in feminas* correspond to the earlier Akkadian "change from a man into a woman" (cf. entry "zikrūtu" 2, in *CAD*, XXI, 117a).

Transvestitism, prohibited by biblical laws (Deut. 22:5), is commonly associated with sexual inversion. In a sacred marriage hymn of Iddin Dagan (cf. D. Reisman, *JCS*, XXV [Oct. 1973], No. 4, 187) the hierodules are described as parading before the goddess, primping and decorated with colored bands, skipping rope, and adorned on the right side of the body with women's dress and the left side with men's. The bilateral combination of male and female clothing suggests either androgyny or sexual ambiversion, or both. Of overt homosexual activity on the part of the hierodules we have no witness, although there is reference to a man having intercourse with an *assinnu* (cf. *CAD*, I, part 2 [A] 431b). The *kulu'u*, a sort of actor-dancer-musician, is called "bedfellow" and "lover" of the goddess, yet it is said of a certain member of the profession, one Ninurta-tukulti-Ashur, "he is a *kulu'u*, not a (he-) man" (*CAD*, VIII, 529a). It is not clear what a *kulu'u* might do for the goddess as lover and bedfellow. For the *assinnu* and *kurgarrū*, *CAD* (A II, 341-42 and VIII, 557) denies that there is any specific evidence that they were homosexual and suggests that the Erra passage may mean simply that Ishtar changed their interest from the male to the female role. See ANDROGYNY[S].

Secular homosexual activity, casual or otherwise, is not well documented for ancient Mesopotamia, but there are occasional hints. We are told that the hero Gilgamesh continually imposed himself with unbridled arrogance on males as well as females, "Gilgamesh leaves not the son to [his] father" (cf. Tablet I [ii] lines 16-17, 22-23, *ANET* [2nd ed.], pp. 73-74), but we are not explicitly informed that the imposition was sexual. The friendship of Gilgamesh and Enkidu has been suspect since Enkidu, created as a match for Gilgamesh, was lured from his animal associates by a sacred prostitute and became Gilgamesh's companion after being rejected by his former associates, the animals. The Mesopotamian legal codes virtually ignore homosexual acts. The Middle Assyrian laws prescribe that a man who spreads a rumor against his neighbor that people have lain with him repeatedly, and is unable to prove it, may be flogged, sentenced to a month's royal corvée, marked (castrated?), and fined a talent of lead (Tablet A #19). If a man is convicted of lying with a neighbor, they shall lie with him and turn him into a eunuch (Tablet A #20; *ANET*, p. 181).

Among the Hittites there was apparently no prohibition of homosexual activity as such, but if a man violated his son, it was an abomination, or a capital crime. The concern in this instance was not the homosexual act, but incest which, like bestiality, was an abomination (cf. *ANET*, pp. 196-97).

From Ugarit we get no information on homosexuality or social attitudes toward it. There is reference in one of the mythological texts to conduct of the divine servant girls which was so disgusting that Baal rose and spat in the midst of the assembly of the gods, but there is no hint as to the nature of the offense, only that it was a banquet or sacrifice (*dbh*) characterized by shame (*btt*) and lewdness (*tdmm*) on the part of the serving wenches (*amht*; 4 [51]. III. 11-22). Since Baal was not noted for delicacy in such matters, we may wonder what manner of misconduct could have so offended him.

Among the ancient Egyptians, pederasty was not approved. The negative confession or protestation of guiltlessness in the 125th chapter of the Book of the Dead, which is one of the few sources of information on Egyptian social law, twice presents the protestation "I have not had sexual relations with a boy" (A 20, B 27, cf. *ANET*, pp. 34-35). The myth of Horus and Seth, however, presents an episode which suggests that homosexual abuse of a defeated foe was practiced occasionally. In the course of their protracted contest, Seth tricked Horus by pretending to seek reconciliation, invited him to his house, sodomized him as he slept, and then claimed dominion on the ground that he had performed doubtful deeds of war against his opponent (cf. J. Gwynn Griffiths, *The Conflict of Horus and Seth* [1960], pp. 41-46). It thus appears that humiliation of a defeated foe or a helpless stranger was practiced in places other than Sodom and Gibeah. In the book of Job there are a couple of passages, 19:22b and 31:31-32 which are suggestive of sexual abuse of the stranger (cf. *ABi* [3rd ed.], XV, 143 and 236-37).

Among other biblical passages open to homosexual interpretation is the story of Joseph and Potiphar. There was rabbinic suspicion that Potiphar's interest in Joseph was sexual (T.B. Sot. 13b). Whether the term *sārīs* applied to Potiphar meant that he was a eunuch (so NEB, Gen. 39:1), impotent, or effeminate, is moot. The behavior of Potiphar's wife is understandable apart from this possible factor.

The friendship of David and Jonathan has provoked suspicion because of the line in David's lament, "Your love to me was wonderful, passing the love of women" (II Sam. 1:26). Whether there was any sexual involvement in the intimacy with Jonathan, David's heterosexual character is well attested and his ample experience with women enhances the tribute to Jonathan's love.

Evidence for female homosexuality in the biblical world is sparse, apart from Sappho of Lesbos and her school. Biblical law forbade a woman to lie with an animal (Lev. 18:23; 20:16), but says nothing about lying with another woman. The attachment of Ruth and Naomi (Ruth 1:16) has been cited by contemporary champions of Lesbian-

ism, but on very slender grounds. Paul's strictures against women who exchanged natural use for that contrary to nature (Rom. 1:26) may include tribadism or other forms of sexual contact between women, since the corresponding charge against men who do "likewise" manifestly refers to homosexual practices. It has been suggested, however, that the female perversion envisaged may have been merely reversal of the succumbent coital position, regarded as natural to the female, for the incumbent ("missionary") position deemed natural by and for the male. It seems likely, despite the ambiguity, that Rom. 1:26 alludes to female homosexual activity parallel to that of males, this being the sole biblical allusion of the sort. Lack of concern about female homosexuality, in contrast to the serious view taken of such activity among males, was doubtless due in large measure to belief in the sanctity of semen. Without understanding of ovulation and the female role in conception, the ancients supposed that the semen supplied the essential material which coagulated with menstrual fluid to produce the embryo or fetus. The woman's part was to serve as a receptacle and incubator in which the semen was planted, like seed in a field. Human semen was regarded as almost a person (*met' oligon anthrōpon*, as Clement of Alexandria put it), and should not be profaned, misused, wasted, or lost whether by *coitus interruptus*, masturbation, homosexual coitus, *fellatio*, or any other "unnatural" or improper means. Rabbinic concern about defilement through accidental and involuntary emission was doubtless related to the notion of the sanctity of semen. This notion has been a major factor in the serious view of male homosexual activity and comparative unconcern for parallel phenomena among females up to the present.

There are other biblical references and terms which have sexual implication and may include homosexual as well as heterosexual offenses. The "dog" of Deut. 23:18 [H 19], whose wages were unacceptable in the house of the Lord, appears to be synonymous with the male cult prostitute proscribed in the previous verse. The term "dogs" (*klbm*) is applied to cult functionaries of an Ashtarte temple in Cyprus (*KAI* 37B, line 10). The suggestion (cf. *BASOR*, 216, 56a) that these "dogs" were cult personnel dressed like dogs does not explain why they should be associated with whores and their revenue excluded from the temple (Deut. 23:18 [H 19]). Whether the "dogs" (*κύνες*) of Rev. 22:15 refer to male prostitutes, holy or profane, is uncertain. In Rev. 21:8 *ἑβδελυμένοις* has been taken to refer to sexual perverts, but there is no proof of this. More provocative is the expression *γενέσεως ἐναλλαγῆ* "change of kind/sex," in Wisd. Sol. 14:26 which RSV renders "sex perversion," JB "sins against nature," and NAB "unnatural lust." It has been argued that this "change" refers merely to the general effects of syncretism, intermarriage, and the like, which obliterated distinctions between Jews and non-Jews, without particular reference to sexual inversion or perversion. The context, however, favors RSV's explicitly sexual and implicitly homosexual interpretation. The *ἐναλλαγῆ* recalls the Akkadian

terminology applied to the change of Ishtar's hierodules from male to female.

Paucity of precise terminology for distinction of different modes of homosexual practice makes it all the more important to preserve differentiations where found. In I Cor. 6:9 the terms *μαλακοί* and *ἀρσενικοῖται* are rendered by KJV as "effeminate" and "abusers of themselves with mankind." Moffatt more precisely rendered "catamites and sodomites," but RSV lumped the two terms together in the first edition as "homosexuals" and in the second edition as "sexual perverts," both translations imprecise and unlikely to find favor in the present climate of concern in this matter.

Claims have been made in recent years that Jesus was a sexual invert. Arguments in support of this view have been—and will in the nature of the case continue to be—too subjective for review in a brief article. Reference is given below to some of the discussions in news media and other literature.

\***HOPE IN THE OT. I. Terminology.** In contrast to the NT, where hope as a theological concept is expressed by the noun *ἐλπίς* and the verb *ἐλπίζειν* (e.g., Rom. 5:3-5), the OT does not have such clearly defined terminology. The nouns *תְּקוּה* and *תְּוַחֲלֵה* and the corresponding verbs *קוּה* and *וַחֲלֵה* are widely used. *קוּה* denotes tense expectation, a looking forward to some event. An element of tension is suggested by the nouns from the same root, *קוּ* and *תְּקוּה*, which mean "cord" or "rope." This element is not found in the verb *וַחֲלֵה*, which merely signifies waiting to see what is to come. Noah waits seven days each time he sends out the doves from the ark in order to assess the changing situation (Gen. 8:10, 12). Other verbs denoting "waiting" can incorporate the idea of hope in certain circumstances, e.g., *שָׁבַר* in Ps. 104:27: "These all look [wait in hope] to thee, to give them their food in due season." *בִּוְרָשׁ*, which may be translated "hope" in Job 17:11, contains an element of desire. The component of futurity in hope is expressed very clearly when *תְּקוּה* is either directly connected with, or given in parallel with, the word *אֲחֵרֵי*, meaning "result, future" (Jer. 29:11; Prov. 23:18; 24:14). The concept of hope includes a good outcome. Similarly, the word

"hope" today not only signifies the subjective process of inner tension with regard to what is hoped for, but also can objectively mean the object of hope toward which this inner tension is directed. Etymologically *כַּבַּט* denotes the idea of being on the lookout for something. The three times it appears in the OT (Isa. 20:5-6 and Zech. 9:5), it is used graphically to mean the military power upon which the various nations believed they could rely. This leads to another aspect of hope in the OT to which the LXX especially points. Of the one hundred places where the Hebrew equivalent of the Greek *ἐλπίζειν* can be determined, not less than forty-seven come under *כַּבַּט*, which is usually translated "trust." This indicates that hope can refer not only to an object, but also to another person.

2. **The concept of hope suggested by OT terminology. a. Wisdom literature.** By psychological observation, it can be affirmed that hope (*תְּוֹחֶלֶת*) is something which promotes life (Prov. 13:12). Good upbringing represents a "hope" (*תְּקוּוּהָ*) for the formation of a young person (19:18). More important are verses which base hope upon righteous behavior: "The desire [*תְּאוּוּהָ*] of the righteous ends only in good; the expectation [*תְּקוּוּהָ*] of the wicked in wrath" (11:23). The truly wise man knows that "the fear of the Lord is the beginning of knowledge" (1:7). Thus it can also be said of this wisdom that, if you find it, you have a future (*אֲחֵרִית*) and your hope (*תְּקוּוּהָ*) will not be cut off (23:18). Fear of the Lord also includes a trust in God which dares to forego retaliation for evil: "Do not say, 'I will repay evil'; wait for [*קוּוּהָ*] the Lord, and he will help you" (20:22).

The book of Job is critical of assertions that human beings may have hope because of just actions. Eliphaz insists that fear of God and integrity always make hope possible. "Is not your fear of God your confidence, and the integrity of your ways your hope [*תְּקוּוּהָ*]? Think now, who that was innocent ever perished? Or where were the upright cut off?" (4:6-7; cf. 8:13; 11:14-18). Job, who scarcely has enough strength to wait in hope, rejects this view. His only "hope" is to be called from life by God (6:8-9). Bitterly he remarks: "He breaks me down on every side, and I am gone, and my hope [*תְּקוּוּהָ*] has he pulled up like a tree" (19:10; cf. 14:19). "But when I looked [*קוּוּהָ*] for good, evil came; and when I waited [*יְוָחֵל*] for light, darkness came" (30:26). The bond between fear of God and hope as a human possibility is entirely destroyed. Only if God himself did the impossible could Job's hope persist: "Oh that you wouldst hide me in Sheol, that thou wouldst conceal me until thy wrath be past. . . . All the days of my service I would wait [wait in hope, *יְוָחֵל*], till my release should come. Thou wouldst call, and I would answer thee; thou wouldst long for the work of thy hands" (14:13-15). The possibility of hope lies only in a new, freely willed gift of the Creator.

A skeptical judgment of human possibility as regards hope can be found in Eccl. 9:4-6. Here death is the power which makes any human hope appear questionable.

b. **The Psalms.** Ps. 119 views Yahweh's word as

the basis for hope. "Remember thy word to thy servant in which thou hast made me hope [*יְוָחֵל*]" (vs. 49; cf. vss. 74, 81, 114, 147). However, most of the time God himself is the object of hope in the Psalms: "I am weary with my crying; my throat is parched. My eyes grow dim with waiting [*יְוָחֵל*] for my God" (69:3 [H 4]). References to hope can be found in the descriptions of individual waiting (62:5 [H 6]; 130:5-6), in the general formula of trust "let none that wait [*קוּוּהָ*] for thee be put to shame" (25:3; cf. vss. 5, 21), and in appeal to others (130:7) or to oneself (42:5 [H 6]; 43:5). They are also present in the song of thanksgiving, sung by the one who has endured suffering and has received help (40:1-2 [H 2-3]).

In Psalm 39 the inescapable reality of death is soberly captured and clarified; there can be no existential hope for man (vss. 5-6 [H 6-7]). The Psalmist asks himself the question: "And now, Lord, for what do I wait [*קוּוּהָ*]?" and then answers, "My hope [*תְּוֹחֶלֶת*] is in thee" (vs. 7 [H 8]). A similar inner tension can be found in Lam. 3, where the one making the prayer states after the fall of Jerusalem: "Gone is my glory, and my expectation from the Lord" (vs. 18), only to confess afterward: "This I call to mind, and therefore I have hope [*יְוָחֵל*]: The steadfast love of the Lord never ceases. . . . 'Therefore I will hope [*יְוָחֵל*] in him.' The Lord is good to those who wait for him [*קוּוּהָ*], to the soul that seeks him" (vss. 21-25; cf. 27, 29).

The question inevitably arises as to why the speakers in the Psalms and Lam. 3 are confident that those who are condemned to death can have hope in Yahweh. To find the answer we must investigate the phenomenon of hope in the OT aside from specific terminology.

3. **Hope in the narrative, prophetic, and apocalyptic writings. a. The narrative writings.** In Job and in the Psalms the validity of hope cannot be established by human means or achievement, but only by Yahweh. The PENTATEUCH exhibits a similar view, especially in two of its sections. First, there is the story of the patriarchs in Gen. 12-50. The YAHWIST (J) has joined a series of accounts showing man's guilt and God's reactions (Gen. 3-11) with the story of the promise to Abraham (Gen. 12:2-3). A nation descending from Abraham and possession of the land of Canaan are the content of God's promise, for which the patriarchs must wait. The PRIESTLY WRITERS (P) tell the story with a different flavor, creating the theological concept of "sojourn in a foreign land," during which time the patriarchs are called by God to wait for the fulfillment of the promise. The episode in which Abraham acquires a grave for Sarah (Gen. 23) presents an impressive act of hope. Patient waiting for possession of the whole country is combined with the certainty that this is the Promised Land; therefore, the dead can be laid to rest here in the period of waiting. Both accounts are governed by the knowledge that it is God's word of promise that provides the actual power for all hope. See PROMISES TO THE PATRIARCHS[S].

The same can be said for the second Pentateuchal section: the exodus from Egypt and the wandering in the desert. Here the nation is under

way, but has not yet reached the Promised Land. It wanders toward its desired goal, facing the constant danger of the temptation to betray its call. Maag correctly perceives that Israel's migrations prior to taking possession of the land have helped to shape all subsequent belief. "God leads to a future which is not just a repetition and confirmation of the present. . . . The goal gives meaning to the wandering and its difficulties; the present decision to trust in God is symbolic of what is to come." Preuss also views the hopeful waiting for the future, which typifies Israel's belief, as based upon the exodus proclamation.

Taking possession of the land of Canaan appears to bring the hope of the patriarchs and of the exodus generation to its fulfillment. The DEUTERONOMIC HISTORY shows, however, how the land is lost again as the result of Israel's disobedience. But the writer lets a hope shine forth in the concluding episode that recounts the raising up of the deported Davidic king (II Kings 25:27-30), a hope based upon the promise to the house of David through the prophet Nathan (II Sam. 7).

**b. The prophets.** Although it might seem as if Amos had for Israel only a stern "no," or at most an "it may be that the Lord, the God of hosts, will be gracious to the remnant of Joseph" (5:15), there is nevertheless in Hosea a hope that the nation will be restored after a new period of judgment in the desert (2:16-23; cf. 11:8-9; see HOSEA [S] §5). In Isaiah hope for a new work which Yahweh will do on Zion (14:32; 28:16-17a) and through the house of David (9:6-7; 11:1-3) can be seen among the sharp pronouncements of judgment (see ISALIAH[S] §2b, e-f). Popular expressions of hope (קוה) are rejected by Jeremiah (14:19-15:1). Yet, at the time of the imminent catastrophe, he buys land in Anathoth and proclaims: "Houses and fields and vineyards shall again be bought in this land" (32:15). In the supplement to the letter which Jeremiah sent to the exiles (probably post-Jeremiah), there is much said about hope: "For I know the plans that I have for you, says the Lord, plans for welfare and not for evil, to give you a future and a hope [מִתְקוֹה וְתִקְוָה] (29:11). To speak of hope and salvation becomes the great commission of Ezekiel after 587, and of the somewhat younger Deutero-Isaiah. Ezekiel turns sharply against the people remaining in the country in 587, because they appeal to Abraham as a figure of hope without changing their lives: "Abraham was only one man, yet he got possession of the land, but we are many; the land is surely given us to possess" (33:24). But to those who sigh, shattered by punishment, "Our bones are dried up, and our hope [תִּקְוָה] is lost; we are clean cut off" (37:11), he proclaims his unprecedented vision of the raising of the dried bones. A more detailed description of the return to the Promised Land becomes the task of Deutero-Isaiah, who can speak of hopeful expectation being fulfilled. "But they who wait [קוה] for the Lord shall renew their strength, they shall mount up with wings like eagles" (40:31; cf. 49:23; 51:5). See DISCIPLINE, DIVINE[S].

**3. Apocalyptic.** Hope becomes the focal point of apocalypticism, nourished by the expectation of

a great crisis soon to befall the whole world, when God will call everyone to judgment. The apocalyptic visions which Daniel sees are pervaded by eschatological impatience for the establishment of a "kingdom which shall never be destroyed" (Dan. 2:44), and which is given to "the holy people of God."

It is easy to understand how such suspenseful expectation has its roots in prophetic proclamation of judgment and new beginning (see APOCALYPTICISM; APOCALYPTICISM[S]; TORAH[S]). Ezek. 38-39 portrays destruction of an enemy from the N "in the latter years," reflecting the belief that Jeremiah's prophecy about the enemy from the N and Isaiah's expectation of the destruction of the Assyrians on Yahweh's mountain were not limited to past fulfillment, and thus could be applied anew. The so-called Isaiah apocalypse (Isa. 24-27) speaks of judgment over all the powers of heaven and earth (24:21-23) and of the invitation to the great feast of nations on the mountain of the Lord (25:6-8). Thus hope was sustained that Yahweh was not allowing his old promises to go unfulfilled.

In all of this we see that the hope of Israel according to the OT does not exist through human works, but exists solely through Yahweh's faithfulness to his promise.

\***HORITES.** See HURRIANS[S] §3.

**HORNS OF MOSES.** Jerome's translation of Exod. 34:29 (in the Vulg.) reads: "When Moses came down from Mount Sinai . . . he did not know that his face was horned (*ignorabat quod cornuta esset facies sua*) because of his conversation with the Lord." Modern scholars have debated the correctness of his translation, often unaware of the explanation which he makes in his commentary on Ezekiel: Moses' face "had been 'glorified' (*glorificata erat*), or as it says in the Hebrew, 'horned'" (*Corpus Christianorum*, SL, LXXV, 557, lines 262-64). Thus he is using the term metaphorically (Mellinkoff), as is often done in the OT (e.g., I Sam. 2:1; Ps. 89:17, 24 [H 18, 25]; I Chr. 25:5) and in accordance with the LXX (θεόδοξασται, "glorified"; so also at Exod. 15:2).

Most modern scholars had suggested that Jerome's translation was in error and that the Hebrew original (*qāran 'ōr pānāw*) means, "the skin of his face shone" (thus RSV and most modern versions). This seems to have been the understanding of the Byzantine artists who, as early as the sixth century, depicted Moses with a halo (Mellinkoff, Figs. 6-7), and most rabbinic texts reflect the same interpretation. Rashi, adhering more closely to the etymological meaning of *qāran*, speaks of light radiating

from Moses' face in horn-shaped beams (cf. Mellinkoff, Fig. 68). This understanding is found in the Great Bible (1539): "the skinne of his face shone in manner of an horne."

Support for the "shining face" interpretation includes the ancient versions (e.g., the LXX read in accordance with II Cor. 3:7-18); the Arabic cognates *qarn* (the first visible part of the rising sun) and *qarina* (eclampsia: medical condition which sometimes includes the perception of blinding light); the *melammu* (Heb. *kābhōdh?*), a radiant aureole which was said to surround Assyro-Babylonian deities and (occasionally) kings; and parallels in other cultures (Suhr). However, this interpretation is uncertain since the verb *qāran* (in the *qal*) occurs only in this one ambiguous context (Exod. 34:29, 30, 35). Its one other occurrence (in the *hiph'il*) clearly means "to display horns": Ps. 69:31 [H 32]. The noun from which it is derived (*qeren*, "horn"), used ca. eighty times in the OT, does not mean "light" (with one possible exception, the problematic Hab. 3:4 [RSV "rays"]), but rather denotes a horn-shaped object or is a metaphor for strength or pride.

A few modern scholars had suggested that Jerome rendered the text properly (preceded by the literalistic Aquila's *κερατώδης ἦν*), since horns or a horned turban are traditional ancient Near Eastern iconographic symbols for divinity (see Fig. H17) or for a deified king (see KING §7c-d; ASSYRIA AND BABYLONIA Fig. 96; MARI Fig. 14). Alexander (who claimed descent from Zeus) is shown on Greek coins with conspicuous horns, whereas only gods had been so depicted previously. This iconographic tradition continued until the time of Jerome and beyond, as shown by the horned gods of the Romans and the Parthians, NT descriptions of a horned devil (Rev. 12:3-9), and the description of Alexander in the Koran as "the two-horned one" (18:82, 85, 93; cf. the commen-

taries of Baidhawi, Zamakhšari, Jalalludin *et al.*), an epithet which was extended to Arab rulers (Freitag). It has also been suggested that Moses wore a ritual mask with horns, a practice attested in the ancient Near East (Jirku). However, such literal interpretations are problematic since deities or kings are depicted with horns growing from the forehead (*mēšah*), not from the face (*pānim*); moreover, the subject of the verb is 'ōr (skin) rather than *pānim*. And thus the meaning of the Hebrew original remains uncertain.

Following Aelfric's Old English translation of *cornuta* as "gehyrned," artists in eleventh-century England began to depict Moses with a horned helmet such as nobility wore (Mellinkoff, Fig. 13), then later with horns projecting directly from his forehead (see Fig. H 18). Jerome's translation is the basis for medieval exegesis of the passage and is reflected in English translations prior to the Geneva Bible (1560) and thereafter in the Douay Version.

**\*HOSEA. 1. The historical setting of Hosea's oracles.**

In addition to the editorial superscription (1:1), the principal clues to the historical background of Hosea's ministry are contained in 5:8-15 and 7:3-7. Alt's interpretation of the former passage has been almost universally accepted by commentators. It is that these lines condemn the kingdoms of Judah and Israel for their military acts against each other in the Syro-Ephraimite crisis of 735 B.C. and its aftermath, and for their international policies vis-à-vis Assyria during this period (cf. II Kings 15:37; 16:5-9; and Isa. 7:1-9). The Judean reprisal against Israel (Hos. 5:8-10) for her part in the invasion of the southern kingdom is in one sense a just punishment of the earlier act, but in another sense is fully culpable. Therefore, Judah will also be punished. Both kingdoms have resorted at various times to dependency upon Assyria as a means of national security, but in so doing have lost sight of the religious and moral dimensions of their corporate life, which have been undermined to the point of social collapse. The outward conquest of the two kingdoms will complete the divine judgment upon them.

Hosea 7:3-7 seems to reflect the dynastic chaos which prevailed in the northern kingdom from the time of Zechariah's murder in 746 B.C. (II Kings 15:8-10) to the reign of Hoshea, which began in 732, after his assassination of Pekah (II Kings 15:30). If this inference is correct, it means that Hosea's ministry extended into the last decade of the kingdom (732-722 B.C.). Whether he lived until Assyria conquered it in 722 is not indicated explicitly in the book, but it is not impossible. Indeed, in the judgment of some scholars it is likely that he did.

In addition to the light which this dating throws upon aspects of Hosea's oracles of judgment, it raises an important possibility for the critical estimate of the promises of renewal in the book (1:10-11; 2:1, 14-23; 11:10-11; and 14:1-8). These are regarded by some critics as postexilic additions to the book, on the ground that such a message of reassurance would have been inappropriate in the time when Hosea was condemning the nation for her moral, cultic, and political crimes, but would have been highly appropriate in a later time, when the remnant of the nation—or of the Judean kingdom which followed it into ruin—was broken and in despair. However, since Hosea may have witnessed the fall of Israel himself, and in any case did observe the last years of its life, it is not unreasonable to take the oracles of salvation as his own last word. It is important to see, however, that these oracles do not contradict the prophet's threat of destruction. They presuppose that the fall of the nation will have occurred.

**2. Hosea's use of historical tradition.** Hosea's proclamation of judgment and subsequent renewal is modeled on the ancient story of the exodus from Egypt, the wandering in the wilderness—where the covenant with Yahweh was made—and the settlement in the land of Palestine. This series of experiences would be repeated, in a sense, in the future. He proclaimed the impending exile of Israel as a return to "Egyptian" captivity (11:5; 7:16; 8:13; 9:3, 6, 17), and the eventual renewal of covenant and restoration of the nation as a second Exodus and settlement (2:14-23; 11:10-11; 14:4-7; cf. 1:11; 3:5). Thus he drew more fully than any other eighth-century prophet upon the historic traditions preserved in the Pentateuch. Furthermore, unlike AMOS, for example, who cited these traditions in order to dispute the popular view of their significance (Amos 3:1-2; 9:7-8a), or to support his condemnation of Israel (Amos 2:9-11), Hosea saw in them the fundamental clue to the way of God with Israel, not only in the past but also in the future. The future would not be merely a repetition of the past, but it would resemble it in certain essential respects. Hosea was thus the first prophet of a new Exodus and the first of the canonical prophets to interpret the whole of Israel's life—past, present, and future—in terms of a single, coherent, historical scheme.

**3. Hosea 1-3.** The romantic interpretation of Hosea's marriage has all but disappeared from current treatments of the book. The impossibility of recovering the history of his marital associations, particularly their interior dimensions, is acknowledged on all sides, and the oracles in chs. 1-3 are treated primarily as prophetic proclamations. Ch. 2 is entirely an allegory of Israel's covenantal history, and not a set of allusions to the prophet's marriage. The woman in ch. 3 may or may not be Gomer, Hosea's wife, but the meaning of the action, which is directly stated in the report, is what really matters. The symbolical names of Hosea's children (ch. 1) convey the substance of his judgment of Israel, but chs. 2 and 3 are each a representation of his full message of the "return to Egypt" and the new Exodus of salvation.

**4. Liturgy and sacrifice.** Criticism of the Israelite

cult is a persistent theme among the pre-exilic prophets, and it is nowhere more evident than in the book of Hosea (2:5-13; 3:1; 4:4-19; 5:1-2, 5-7; 5:15-6:6; 8:11-14; 9:1-5; 10:1-2; 13:1-3). The interpretation of this criticism which dominated OT scholarship prior to about 1950 was that the prophets rejected the ritual of the altar categorically as a corrupting factor in Israel's religion. The dominant view today is that the prophets did not reject the cult per se but only a Baalized cult—and one which was unaccompanied by moral uprightness and the pursuit of justice. This change in interpretation has been accompanied by a growing conviction on the part of many that the pre-exilic cult was much richer in verbal content—including moral exhortation and even prophetic proclamation—than the prescriptions for ritual in the Pentateuch suggest, devoted as they are to the forms of sacrifice, ritual purification, etc.

It is doubtless true, as is often said, that a cultless religion would have been inconceivable to the prophets, since some form of cult is universal in communal religious practice. However, there is a radical quality to the prophetic condemnation of the rituals built around the sacrifice of animals—and the manipulation of their blood—and products of the soil that cannot be denied. According to Hosea this system, along with the kingship which supported it, was an obstacle to faithful obedience and the knowledge of God. And since true reformation was beyond the will or capacity of priesthood, court, or people, only a destruction of the cultic and political institutions by conquest would suffice to make a genuine renewal possible. This destruction would be an act both of divine justice and of divine grace, that is to say a punishment brought about by the moral, political, and social dissolution of the covenant community, and, at the same time, an opportunity for covenant renewal. Hosea—like all the pre-exilic prophets—makes no prescription for the forms of public worship in the future community, but he does suggest, both by the implications of his oracles of doom and by the actual words of the last oracle in the book, that God should be approached in the time of return with an offering of words alone, without material sacrifices (14:2). The MT reads, "We will render the *bulls* of our lips." This is commonly emended to "fruit of our lips," but the Hebrew may be correct. The meaning is that the proper "bulls" to be offered to God in future are merely verbal offerings—prayer and praise. See GRACE IN THE OT[S].

5. **The message of Hosea.** Hosea's prophecy of doom for the kingdom of Israel and its cult was unconditional. He did not offer the possibility of a reprieve in return for repentance. Rather he viewed the destruction of state and cult as the necessary precondition of repentance. Thus, the people's only real hope lay on the far side of calamity. Yet it was a real hope—grounded in the undying love of God for his children (11:8-11; 2:14-23; 1:10-11). By speaking of God's relation to Israel in terms of the most intimate human relations—parent-child and husband-wife—Hosea deepened and enriched the biblical witness of faith and influenced subsequent prophetic tradition profoundly. Perhaps his other

most notable theological contribution is his insight into the personal and social dynamics of behavior—the relationship of action to will and disposition, the pervasive self-destruction worked by the apostate heart, the moral interdependence of all the members of a community, for good or ill, and the need for divine initiative to break the web of corporate self-enslavement. In this, as in his understanding of the judging-saving grace of God, Hosea is unsurpassed among the writers of the OT.

\***HUMILITY IN THE NT.** The terms ταπεινός, πραῦς, and their cognates designate in the NT a kind of humility and gentleness which are part of the gift of the Holy Spirit (Gal. 5:22-23).

1. **Greek concepts of humiliation.** The form of God's servanthood through Jesus, which is seen as worthy of imitation, finds a distinct antecedent in various Greek humiliation traditions about their hero-kings: Heracles, Odysseus, Cyrus, and Alexander. All these kings became exemplary, some as early as the time of Antisthenes (Diogenes Laertius VI.i.4), because of the humiliation they endured. Since this motif was isolated by the CYNICS and STOICS, it is possible that Paul had it in mind when in the Corinthian correspondence he alluded to the suffering role of the apostles. The Corinthians had already entered into their

kingly role, but the apostles were "weak" and in "disrepute" (I Cor. 4:8 ff.). For Paul, establishing his authority over the Corinthians meant abasing himself by denying himself financial support (II Cor. 11:7). Just as in the earlier Greek poetry (e.g., Pindar, Nemean Odes I, 31 ff.) Heracles is portrayed as the figure who embodies *philanthropia* through suffering, as the victim of fate (Sophocles, *Trachiniae*), as slave though king, so Dio Chrysostom (Discourses VIII, 35) depicts his cleaning of the Augean stables as a deliberate humiliation with a moral purpose. Any humiliation according to Cynic values of the first century could have a positive good, particularly if voluntarily accepted (Epictetus III.xxii.54-59, xxvi.31-32). Poor, naked, and alone Heracles may be, but he is still held up as the righteous king. The Cynic portrait of Cyrus also stands alone in stressing the servant motif of his kingship. The Cynic Antisthenes regarded Cyrus as the ideal king who moved through afflictions and humiliations to kingship and turned disadvantages into advantages. The attributes of the ideal Cynic were defenselessness, voluntary suffering, self-abasement, and adaptability. Accordingly, Cynics believed that only the abased king was qualified to rule, e.g., Odysseus, mistreated by his slaves, himself attired in slave's garb, personally humiliated by the taunting Ajax. This contrast between inner tranquillity and external affliction, inner riches and external poverty, was central to Cynic conceptions of power, and was apparently in Paul's mind when he wrote to the Corinthians. For the Cynics the highest model for this behavior was Socrates, for Paul it was Jesus (Phil. 2:3-11). Because the humiliated one can triumph, the attitude of humility becomes a positive virtue.

**2. Humility as a virtue.** The vocabulary of humility was used by such major ethical writers as Aristotle, and as early as the Homeric poems one finds evidence of the value placed on humility by Greek writers. They advocated the golden mean in which persons viewed themselves not as gods but as men, avoiding both the errors of *hubris* as well as the errors of deliberate and paralyzing self-abasement.

The oppression, poverty, and political captivity under which the Jews suffered for the several centuries immediately preceding the rise of Christianity also contributed to the NT understanding of humility. The lowly dove became symbolic of God's people (e.g., II Esdras 5:23 ff.), and, most important, the hope arose that temporary humiliation would lead to eventual vindication after the model of Joseph (Test. Benj. 5:1-5). It was also affirmed that God chooses lowly people and seeks to achieve his highest goals with those who, in meekness and lowliness, retain an upright faith in the fulfillment of his purposes and promises despite all contrary evidence (see MOSES, ASSUMPTION OF). The NT writers, like the Essenes (IQS 5.3-6.25; 8.2), counsel the faithful to live in humility with each other and toward God (e.g., I Pet. 5:5-6); but now humility is thought of especially as an aspect of the lowliness of Jesus (e.g., Phil. 2:3 ff.; II Cor. 10:1).

\***HURRIANS.** A people who first entered Mesopotamia from the NE during the late third millennium and then descended in large numbers in the centuries before 1500 B.C. to produce the powerful state of Mitanni. They are perhaps related to the Horites of the OT. They were an important factor in the spread of Sumero-Akkadian culture, particularly literature and religion, to the W, notably to the Hittites. Their characteristic sociojuridical customs, especially family law, have been seen as the background for a number of features of the patriarchal narratives. See NUZI; NUZI[S]; MARI[S] §8; PATRIARCHS[S] §1; MUSIC[S].

1. **Origin and language.** See HURRIANS.

2. **History and geographical distribution.** Hurrians first appear in Late Akkadian times, ca. 2300 B.C., at Urkish, a kingdom located in the hilly region of Upper Mesopotamia which remained the center of Hurrian civilization throughout their history. In this early period they had already borrowed the cuneiform syllabary and adapted it for writing their own language. All other evidence prior to 2000 B.C. shows the Hurrians confined to the region E of the Tigris and N of the Upper Zab, although a few individuals appear sporadically in Babylonia during the Ur III period.

During the centuries succeeding the fall of Ur III (see SUMER §2c), the Hurrians slowly penetrated into Upper Mesopotamia and northern Syria. Amorites form the vast majority of the population of Mari, the Hurrian influence being minimal. But in the N the Hurrian presence is much stronger: at Chagar Bazar they constitute about one third of the population. As the centuries pass, the Hurrian presence constantly increases and moves southward. The texts from Alalakh level VII (see ALALAKH TEXTS[S]), ca. 1700, show that the Hurrians constitute more than a third of the population. By the time of Alalakh level IV in the fifteenth century, the Hurrians form the vast majority of the population and the society is Hurrianized in every respect. Further S at UGARIT in the fifteenth century the West Semites are in the majority but Hurrian influence is significant. In the eighteenth and seventeenth centuries, however, southern Syria and Palestine show no trace of Hurrian penetration.

In the light of the limited extent of Hurrian penetration into Syria prior to the sixteenth century, there seems little likelihood that they (and especially the Indo-Aryans associated with them in the later Mitanni kingdom) could have played any role in the Hyksos interlude in Egypt.

Almost no written evidence exists from NW Mesopotamia for the seventeenth and sixteenth centuries B.C. When our sources take up again ca. 1500, the Hurrian penetration into Syria has become a flood, and the Hurrian kingdom of Mitanni has united all of Upper Mesopotamia into one

state, controlling territory from the Mediterranean to E of the Tigris. See MITANNI[S].

The Mitanni-Hurrians and their Indo-Aryan aristocracy seem to have introduced the composite bow and the defense for it, a type of scaled armor used on men, horses, and chariots (the Hurrian name of which appears in Egyptian, Akkadian, Hittite, Ugaritic, and Hebrew). These new weapons revolutionized warfare and became decisive in battle from the fifteenth century on.

Although the hegemony of the state of Mitanni was short lived, falling to the Hittite New Kingdom (see HITTITES[S]), the Hurrian immigration continued throughout the Near East. The TELL EL-AMARNA tablets from the fourteenth century reveal their presence in Palestine, but here they represent nothing more than a ruling class, imposed in feudal style on the city-state system. Texts from Palestine show no trace of the Hurrian substratum which now appeared everywhere N of the Bīqā' in central Syria. In fact, the majority of the non-Semitic names in these texts are Indo-Aryan, revealing the presence of the Mitannian military aristocracy, a fact which explains why the Egyptians could call Syria-Palestine, increasingly under the Nineteenth Dynasty, "Huru-land." Cities which we can document as having been ruled by these Mitannian overlords, or having had such elements in their population, were all in Cisjordan and primarily in the N and the coastal region: Jerusalem, Shechem, Taanach, Megiddo, Acco, Achshaph, and in the S Ashkelon and possibly Hebron. The tenuous nature of the Hurrian presence in southern Syria and Palestine renders impossible the hypothesis that the spirantization of the labial, dental, and velar stops in Hebrew and Aramaic could be due to Hurrian influence, apart from the formidable linguistic problems involved. See HURRIANS §2.

**3. The Hurrians and the Horites of the Bible.** The Bible speaks of the "Horites," the Hebrew term *hōri* being the exact equivalent of cuneiform *Ḫurri* (see HORITE). However, its usage presents us with a special problem when we attempt to relate it to the extrabiblical Hurrians. In the OT the Horites are described as the original population of Seir who were displaced by the Edomites (Deut. 2:12, 22; Gen. 36:20-30). Yet, the names of the Horites given in Gen. 36 are all Semitic. This, combined with the fact that we have no evidence in extrabiblical texts for Hurrians in this area, makes it extremely difficult to relate the two groups.

In the areas in Cisjordan where our extrabiblical evidence would suggest that Hurrians be found, the OT locates Hivites: at Shechem (Gen. 34:2), Gibeon (Josh. 9:7; 11:19), the mountains of Lebanon (Judg. 3:3), and below Hermon (Josh. 11:3). (See HIVITE.) In Gen. 36:2 the Hebrew text identifies Zibeon, son of Seir the Horite (Gen. 36:20, 29), as a Hivite and some LXX texts read Horites (MT Hivites) in Gen. 34:2 and Josh. 9:7.

The solution to these apparently conflicting facts is not apparent. Some scholars have simply reversed the roles of Hivites and Horites, hypothesizing that the two very similar names have become confused. This seems at best a desperate solution.

Another attempt accepts the LXX reading of Horites for Hivites in Gen. 34:2 and Josh. 9:7 as correct, thus regarding Hurrians and Hivites as synonymous. The Horites of Gen. 36 would then be an unrelated Semitic tribe with a homophonous name. This hypothesis is preferable to the other, but it is based upon textual variants that may be mistaken readings. Thus, the Greek text of Aquila and Symmachus agrees with the MT in Gen. 34:2 while several MSS of the LXX, the Old Latin, the Syriac, and the Ethiopic agree with the MT at Josh. 9:7. Further, besides the Semitic names of the Shechemites in Gen. 34, they are identified as Canaanites in Gen. 34:30; while the Gibeonites are identified as Amorites in II Sam. 21:2.

The most recent hypothesis attempts a solution by recognizing the problem of the Israelite use of older nomenclature. Having rightfully reserved "Canaan" for Cisjordan, the Israelites applied Huru, i.e., Horites, to southern Transjordan, for which area the received nomenclature had no term. The solution most probably must be sought along the lines of this last suggestion.

**\*HYKSOS.** A term used in Manetho's Hellenistic history *Aegyptiaca* to refer to a dynasty of foreign rulers of Egypt during the second intermediate period. By the Hellenistic period "Hyksos" was understood to mean "shepherd kings" but it actually corresponds to Eyp. *ḫq'w ḫ'swt*, "rulers of foreign lands," and refers primarily to rulers beyond the borders of Egypt. The term has no ethnic or geographic significance. The Turin canon of kings from the thirteenth century B.C. also designates a group of six rulers of Egypt as Hyksos, to be identified with Manetho's fifteenth dynasty (ca. 1670-1562 B.C.).

Josephus' version of the Manethoan tradition presents the rise of the Hyksos to power as the result of a great invasion and their eventual overthrow as an expulsion, and he associates these events with the biblical stories of Joseph and the Exodus. But such traditions of an invasion and

expulsion, drawn primarily from folklore, have little historical value.

There are two basic factors in the Hyksos rise to power in Egypt. On the one hand, in the Middle Bronze Age (MB II, ca. 1900/1800-1550) a rather advanced urban and largely West Semitic culture, often called Amorite (see AMORITES[S]) developed numerous strong kingdoms throughout the Fertile Crescent. At the same time Egypt declined into a state of weakness and disunity at the end of the Middle Kingdom (ca. 1800 B.C.), permitting a considerable penetration of Asiatics into the eastern Delta. Toward the end of the Thirteenth Dynasty (after ca. 1725), disintegration of centralized authority resulted in a proliferation of local rulers in Lower Egypt, many of whom were Asiatic. The ruler of Avaris, a city in the Delta, gained sufficient power to put all Egypt under his control.

There is no evidence either for a mass invasion by Indo-Aryans and HURRIANS or for a military elite using horses and chariots to conquer Egypt. The foreign names in Egypt in this period are West Semitic, and the Hurrian migration into Palestine did not take place in significant numbers before the sixteenth century B.C. Military use of the chariot is not attested before the Late Bronze Age.

For a long time it was thought that the Hyksos capital (Avaris) was located at the later site of Tanis (biblical ZOAN), but recent study has made this view untenable. A more likely location is Tell ed-Dab'a near the village of Qantir. In four sea-

sons of excavation (1966-69) a large city was uncovered (Thirteenth Dynasty) with continuous occupation to the Ramesside period. It is significant that this city represents an extension of MB II culture from Syria-Palestine into Egypt, with only gradual assimilation into Egyptian culture. This seems to confirm the political development outlined above. Small objects bearing the names of Hyksos kings were found, as well as an inscribed building block with the name of the god Seth, a deity specially honored by the Hyksos, who apparently identified him with the Semitic god BAAL.

There is no justification for the notion that the foreign population was expelled with the rise of the Eighteenth Dynasty. The rulers were defeated in a civil war begun by Ka-mose of Thebes and completed by Ah-mose. Places like Tell ed-Dab'a suffered damage and decline, but, to judge from the artifacts, the same Asiatic population continued to reside in the eastern Delta and to be the focal point for diffusion of Semitic cultural influence in Egypt from that time onward.

J. VAN SETERS

**HYRCANIA.** See HERODIAN FORTRESSES[S] §3.

\***IGNATIUS, EPISTLES OF.** See APOSTOLIC FATHERS [S] §7.

\***IMMORTALITY.** Immunity to dissolution or death. In GREEK RELIGION immortality was in the first instance the quality which distinguished divine beings from men. Ascription of immortality to the rational life-principle (soul) in men by Plato and other Greek thinkers thus signified not merely that the self survives death in some form, but that, unlike body, soul is naturally akin to the divine, shares its eternity and incorruptibility (ἀφθαρσία), and is capable of sharing its blessedness. Hence in the NT immortality is used naturally, if very rarely, (a) to characterize God, and (b) to characterize the quality of resurrected human existence as a sharing in the life of God's spirit. Later Christian thinkers grounded the possibility of such existence in an original human immortality, or capacity for immortality, lost through sin but restored in Christ.

1. **Greek philosophy.** While Greek religion always described the gods as immortal and saw this quality as definitive of the divine way of being, the abstract term "immortality" came into current use with Plato. He employed it in the first instance to describe soul (ψυχή) for cosmological purposes as the eternal, self-moving source of orderly motion in the universe. Soul according to Plato is a divine principle mediating between the unchanging, intelligible realm of Ideas (Being) and the changing, sensible realm of visible reality (Becoming), but essentially akin to the former in virtue of its capacity for contemplative knowledge of the Ideas (*Phaedrus* 245C-E; *Timaeus* 30C-D, 34B-35A). In its several forms, soul is thus an eternal life-principle animating the cosmos—without beginning or end, "ingenerate (ἀγένετος) and immortal" (*Phaedrus* 246A).

This cosmological vision brings with it a view of humanity which is also formed in part by Orphic influences. The human being is a rational soul, linked to an inferior, mortal, and passionate soul, and animating or using an earthly body. This association with earthly body, however, represents for the soul a kind of exile, and carries with it the threat of alienation from the celestial life of

contemplation which is proper to an immortal being and which soul must seek to realize. Thus Plato's doctrine of immortality says at least three things. First, it presupposes that body, being intrinsically mortal, is alien to soul, and hence no essential factor in the constitution of human selfhood. Second, it means that soul is unaffected as far as its existence is concerned by the dissolution of the body. Third, it means that soul fulfills its given nature only in the achievement of the divine life of changeless contemplation appropriate to an eternal and intelligent being. The doctrine of immortality thus not only speaks of the survival of soul, but specifies its nature and its ideal state as well.

Prior to its revival in the first century B.C., this Platonist doctrine of immortality underwent severe qualification in philosophical circles. Aristotle, for whom the word "soul" denoted the formative principle of a particular organism, denied that soul is separable from the body which it animates, and so held that it does not pre-exist or survive the organism whose life it is. Immortality he ascribes to "active intellect," the highest phase of soul, which is "separable, impassible, unmixed . . . immortal, and eternal" (*On the Soul* III.v). It seems, however, that this intellect transcends all individual souls and is common to all. Hence there is no individual survival of death. People live the immortal (i.e., divine) life insofar as they identify themselves in and with active intellect, which is "something divine . . . present in" them (*Nicomachean Ethics* X.vii.8).

Among the Hellenistic schools, the EPICUREANS are reported to have held that soul is dissolved in death along with body. The STOICS, for whom the individual soul is a spark of the "fiery spirit" which is the active, formative principle of things, taught that either at death, or at any rate at the end of each cosmic cycle, the soul is resolved into its element. The wise man, however, in the practice of virtue, realizes his oneness with the divine Reason (Fate) which penetrates and governs all things. The basic idea that soul is akin to the divine thus persists.

2. **Hellenistic religion.** The social and cultural conditions of the later Hellenistic era encouraged a new interest in the idea of immortality, occasioned by the increasing isolation of the individual and the pessimistic belief that the earthly life is controlled by alien and even hostile forces—chance, fate, and the stars. In this setting, the promise of immortality signified liberation from fate and from the mechanism of nature so that we may have a divine and celestial life. The mystery cults ministered to this hope, with their promise of immortality to be gained not after death but upon initiation into the cult of the god or goddess. A revived Platonism, critical of determinism and affirming the goodness of the cosmic order, offered an intellectual and moral training as the way to fulfillment of the soul's immortal nature. In GNOSTICISM, however, the stream of pessimistic religion continued and reached a culmination. The soul's immortality was seen to mark it as a displaced member of a transcendent spiritual cosmos alien to this world of error and evil.

3. **The NT.** "Immortality" occurs only three times in the NT. In one of its occurrences, it is used to describe God as the one "who alone has immortality" (I Tim. 6:16). This use follows Greek custom, which makes immortality the attribute par excellence of deity. In I Timothy, however, it is God *alone* to whom immortality properly belongs. What for Plato and others in the Greek tradition was an attribute of a class of beings (including soul) becomes for this Christian writer an attribute which sets the unique God apart from other sorts of beings.

In another passage, however, immortality is used to describe a condition of human existence. In I Cor. 15:53-54 Paul employs the words "immortal" and "incorruptible" to describe the quality of the existence of those who share the resurrection of Christ in the new age. These terms express for Paul the goal of the transition from "psychic" to "spiritual" life, from an earthly to a heavenly humanity. Immortality thus marks the result of a change in the human condition which occurs in, and is dependent on, Christ, the second Adam; and it denotes the quality of a human life whose informing principle is not the power of death and sin, but the power of the HOLY SPIRIT. Immortality, then, signifies human life transformed by participation in the power of divine life; and the Christian hope of RESURRECTION is implicitly presented as the fulfillment of the human desire for final victory over the powers which destroy and deform life.

The contrasts between this idea of immortality and that of the Platonist tradition are clear. What they have in common is the understanding of death, the dissolution of the human self, as the frustration of the human capacity for fellowship with the divine. On the other hand, immortality for Paul is not, as for Plato, a matter of "nature." It belongs to humanity in virtue of a certain relation to God in Christ, not in virtue of what human beings are in and of themselves. Further, the self whose death is feared is not, for Paul, SOUL as distinct from BODY. It is the total human person as animated body. Finally, Paul does not work with a dualism of changelessness and mutability, immaterial and material. His is a dualism of present and future, this age and the age to come. Consequently, immortality for him is a "new thing"—God's transformation through the Spirit of the mode of human existence as a totality.

4. **Early Church Fathers.** In the writings of the so-called APOSTOLIC FATHERS, immortality is used in its Pauline sense to denote the new life which God gives in Christ, considered both as future consummation and as present reality. "Life in immortality" is one of the gifts of God for which Christians wait (I Clem. 35:1-4). Immortality is "[made] known" in Jesus (Did. 10:2). The eucharistic bread for Ignatius is "the medicine of immortality" because it enables men to "live in Jesus Christ" (Ign. Eph. 20:2). Only in the Letter to DIOGNETUS is there allusion to the natural immortality of the soul (6:8); and the context makes it clear that this immortality is not simply to be identified with the salvation for which Christians wait.

In fact, the doctrine that the soul is immortal

in the sense of being ingenerate and incorruptible is rejected by all Christian writers of the second century except the Gnostics. Justin Martyr speaks disapprovingly of those who think that because the soul is immortal in its own right, it needs nothing from God (Dial. i.5). The soul, he says, is not immortal because it is not, like God, ingenerate—uncreated (Dial. iv.2; v). Immortality is the gift of Christ at his second coming, when believers will become "impassible and immortal as God is" (Dial. cxxiv.4).

This denial that soul is uncreated and the understanding of immortality as an eschatological sharing in the divine life did not, however, entail rejection of the commonplaces of late Hellenistic anthropology. The early Fathers seem to presuppose that man is a compound of soul and body, that death is the separation of soul and body, and that soul survives this separation (e.g., Tertullian, *Treatise on the Soul* xiv.1-2). Such survival, however, is a merely natural fact, and not the eschatological immortality which is promised in Christ for soul and body alike.

Thus Tatian, Justin's disciple, denies in his *Address to the Greeks* that soul enjoys immortality in its own right (xiii.1). Immortality consists in knowledge of the truth and communion with the Logos (vii.3), which Adam enjoyed until he sinned and thus became subject to death (cf. Rom. 5:12). This position, however, does not lead Tatian to question the soul's survival of death. Similarly Irenaeus—who generally follows Theophilus of Antioch in teaching that Adam was created immature and thus only *capable* of immortality (see Theophilus, *To Autolytus* II.xxiv, xxvii)—nevertheless asserts that the soul survives the death of the body for "a long series of ages" (Iren. Her. II.xxxiv.2). This prolonged existence, however, is not true immortality; for "being in subjection to God is continuance in immortality, and immortality is the glory of the uncreated One" (Her. IV.xxxviii.3). Moreover, eschatological immortality includes, for Irenaeus as for other Christian writers of this time, body as well as soul.

Underlying these positions is the principle that true immortality—because it is God's and consists, for human beings, in fellowship with God—is essentially a gift of God. The position of the Fathers approaches the Platonist idea that the soul is immortal by nature only to the extent that later writers assert that humanity received the gift of immortality at creation and then lost it through sin. In general, moreover, except perhaps in Origen, the soul's survival of death is carefully distinguished from immortality in the proper sense, which remains an eschatological reality and encompasses body as well as soul. The primary barrier in Christian thought to adoption of a pure Platonism was not, as Cullmann thought, a Pauline or biblical anthropology, but the doctrine that God alone is ingenerate and immortal, and that creaturely beings possess immortality only in relation to, and dependence on, him.

See DEATH; DEATH, THEOLOGY OF[S]; FUTURE LIFE IN INTERTESTAMENTAL LITERATURE[S]; RESURRECTION IN THE NT; RESURRECTION IN THE NT[S].

\***INHERITANCE IN THE NT.** The OT language dealing with inheritance reveals a richly varied content in Israel's history. It moves from legal concerns for property to such theological affirmations as the land of Canaan as Israel's inheritance, Israel as Yahweh's inheritance, and Yahweh as Israel's inheritance (see **INHERITANCE** §§2-5). Further, later Jewish writings can refer to the Law as Israel's inheritance (e.g., Ecclus. 24:23; Enoch 99:14), speak of inheriting life or eternal life (e.g., Pss. Sol. 14:7; Enoch 40:9; cf. Secrets of Enoch 50:2; Apocal. Bar. 44:13), or view the inheritance as mystical unity with God (Philo in *Who Is the Heir of Divine Things?*). The DEAD SEA SCROLLS relate inheritance to the new covenant community of elect persons (cf. IQS 4.23-26; 1QP Hab 2.3), and Enoch relates it to the coming SON OF MAN (71:14-17). Such variety indicates how changing historical contexts may produce multiple understandings. These then are part of the background for NT writers as they deal distinctively with inheritance language in their own varied settings.

In the NT, inheritance terms (κληρονομία, inheritance; κληρονομείν, to inherit; κληρονόμος, heir; συκληρονόμος, joint heir) can move the distance from an earthly concern for property (Luke 12:13) to a heavenly, imperishable inheritance beyond history (I Pet. 1:4; cf. Rev. 21:7; note other uses in I Pet. 3:7, 9), but the coming of Jesus Christ provides the decisive point of reference for NT writers.

1. **The Synoptic gospels and Acts.** All three Synoptics relate the inheritance of eternal life to the story of the rich man (Matt. 19:29; Mark 10:17; Luke 18:18), but Matthew gives "inherit" a distinctly eschatological emphasis by using it only after the story itself in relation to the "new world" and the coming of the Son of man (Matt. 19:28; cf. Dan. 7:13; Enoch 71:14-17). In contexts oriented to the future, Matthew supports this emphasis further with "shall inherit the earth" (Matt. 5:5; cf. Ps. 37:11; Enoch 5:7b) and "inherit the kingdom" (Matt. 25:34; cf. Jas. 2:5; Secrets of Enoch 9:1).

In the allegorized parable of the wicked tenants, all three Synoptics use "heir" and "inheritance" (Matt. 21:38; Mark 12:7; Luke 20:14) with particular christological significance. Early Christians saw Jesus as the Son and heir, and with his death they viewed the inheritance (i.e., the vineyard; cf. Isa. 5) as passing to them. Matthew explicitly sees

the vineyard as God's kingdom (Matt. 21:43), and with the death of God's Son and heir, this inheritance is entrusted to those "producing the fruits of it."

In Acts, Luke denies any relationship of "inheritance" to Abraham (7:5), affirms its historic connection to Canaan (13:19), and finally interprets it as given to "all those who are sanctified" (20:32; i.e., to the church). For Luke, Christ culminates Israel's history and brings an inheritance of life in the church.

2. **Paul.** In his letters Paul never refers to the inheritance of Canaan, but he does relate inheritance language to the promise of Abraham (Gal. 3:18; 4:30; Rom. 4:13-14) and sees that promise fulfilled in Christ. For him, it is those with faith in Christ who are Abraham's true heirs (Gal. 3:29). Through God's justifying deed in his Son, they are (by adoption; cf. Gal. 4:5; Rom. 8:15) God's sons and heirs (Gal. 4:7), "fellow heirs with Christ" (Rom. 8:17). Christ as the offspring of Abraham (Gal. 3:16) is the heir; but as the fulfillment of the promised blessing of Abraham (Gal. 3:14) he also is the inheritance. As heir and inheritance he is both the means to and the essence of the unifying life which believers have in him (cf. Gal. 3:26-29).

However, Paul also can use "inherit" of future events in referring to those who shall not inherit the kingdom (I Cor. 6:9-10; Gal. 5:21; cf. Eph. 5:5) and in affirming (concerning the Resurrection) that "flesh and blood cannot inherit the kingdom of God" (I Cor. 15:50).

3. **Ephesians** speaks of inheritance in the future (1:14, 18; 5:5; cf. Col. 3:24—the RSV's "inheritance" in Col. 1:12 should read "lot"; Tit. 3:7) with the Spirit as present "guarantee" (ἀρραβών). Ephesians sees Christ as the means to an inheritance which ultimately is the unity of all things (cf. 1:9-10). However, in a concern for the church's unity, Ephesians speaks of the Gentiles as "fellow heirs" (3:6) and sees the unity of Jew and Gentile in the church as revealing (cf. 3:4-6) and witnessing to (cf. 3:10) the final inheritance of cosmic unity in Christ.

4. **Hebrews** portrays Christ as the Son and heir of all things (1:2; cf. 6:17; 11:7, 9; in 1:4 the Son "inherited"—RSV "obtained"—a more excellent name). As the high priest and mediator of a new covenant, he is the means to "the promised eternal inheritance" (9:15; cf. Secrets of Enoch 10:6; 55:2; note also "inherit [RSV "obtain"] salvation" in Heb. 1:14 and "inherit the promises" in 6:12). This inheritance is the heavenly city (11:8-10). Hebrews can relate inheritance terms to Abraham (6:15—RSV has "obtained"; 11:8), but his inheritance is not the land of Canaan (Hebrews also reinterprets the conquest; cf. 4:8); it is the city "whose builder and maker is God" (11:10).

A decisive concern in Hebrews is the legal argument that only through the death of the eschatological (cf. 1:2) Son and heir does the inheritance-enacting will or covenant (διαθήκη) take effect (9:16-17). That death is the means to the inheritance of the city.

5. **Conclusion.** What was originally legal language is richly theologized in both OT and NT, but in

the NT Jesus Christ as the Son provides the major focus for inheritance language. (The concept, significantly, is absent from the Gospel and Letters of John.) Whether understood as present or future or both, for NT writers the content of the inheritance relates crucially to Christ.

4. Conclusion  
Bibliography

1. **Introduction.** Semitic epigraphy has been well served in the past decade and a half through the issue of a number of up-to-date manuals, including two textbooks of inscriptions with commentary and illustrations. As a result, today's students have readier access than their predecessors to a wide range of texts from Palestine and adjacent lands.

2. **The value of the inscriptions for biblical study.** *a. Philology.* The most obvious dividends in OT studies have been and will probably continue to be earned at the technical levels of writing, phonology, grammar, and vocabulary. This evidence is enabling the Hebraist and biblical scholar to pierce with growing precision behind not only the vocalized Hebrew text of Masoretic times but the consonantal text of a millennium or so earlier (see *TEXT, OT; MASORETIC ACCENTS; QERE-KETHIBH[S]*). It is now widely accepted that the latter text is our best guide to the language of the original writers, but it should not be assumed that it directly reflects it any more than the vocalized text does. Its formation indeed was closely bound up with a process of standardization in spelling and grammar which began soon after the return from the Exile and which accommodated many older orthographic practices and dialectal forms to the current Hebrew of the postexilic community in Jerusalem. (See *TEXT, HEBREW, HISTORY OF[S]*.) The recovery of these older practices and forms involves internal backward reconstruction using the strict methods of diachronic or historical linguistics, but it also requires an external criterion that gives scope for the comparative method to be brought into play

as well; it is this criterion that the inscriptions, the non-Hebrew no less than the Hebrew, are increasingly supplying.

In the sphere of writing considerable advance can be recorded, and we now have an exceptionally clear picture of the development of the Hebrew script and orthography from their beginnings in the time of the Gezer "calendar" (tenth century B.C.) down to the NT period and beyond. (See *ALPHABET; ALPHABET[S]*. For a table of the Old Hebrew scripts, see *ALPHABET* Table 1; *WRITING AND WRITING MATERIALS* Fig. 34.) The relation of the Hebrew writing system to those of its near neighbors, the Aramaic especially, is also becoming much better understood. Ancillary questions for which inscriptions supply evidence are:

1) How widespread was the ability to write in ancient Israel and Judah? Considerably more widespread than was once thought; it was not simply the prerogative of an elite scribal profession.

2) How long did the Old Hebrew script survive before being superseded by the "square" Aramaic script? Again, much longer than used to be assumed; both scripts seem to have been employed side by side for several centuries for their respective languages, and it was only in the Greek period that the Aramaic script began to be used for writing Hebrew. See *SAMARITAN PENTATEUCH[S]* §1d; §3aii below.

3) Are the Hebrew and related scripts really alphabets? The present writer is one who believes that they are more accurately described as syllabic than alphabetic; each sign stands not for a consonant alone, but for a syllable or, more exactly, a syllable part, consisting frequently of a single consonant but just as frequently of a consonant plus a vowel.

In the spheres of phonology, grammar, and vocabulary, the results of studies in the 1960s and early 1970s are more difficult to evaluate, and there is much controversy over methodology. As examples I cite the rather different work of Beyer and Dahood.

1) In his *Althebräische Grammatik* (1969) Beyer attempts to reconstruct the phonology and grammar of the Hebrew of the biblical period, basing himself on the consonantal text and the Old Hebrew inscriptions. From what I have said above it will be clear that I sympathize with Beyer's aim; the unvocalized Hebrew in which the OT was first written was not at all the same as the vocalized Hebrew of our Masoretic MSS. But Beyer's dismissal of the Tiberian and other vocalization systems as artificial and contrived goes too far, and in supplying the missing vowels in my *Textbook* I have kept rather closer to the model of these systems. They may postdate the biblical pronunciation by many centuries but were, I believe, ordered and natural developments out of it, or at any rate out of the stage it had reached when the consonantal text was formed (see *HEBREW LANGUAGE* §4).

2) Dahood's primary interest lies in the close linguistic and stylistic affinities he finds between the Ugaritic tablets and the OT (see *POETRY, HEBREW[S]*). But he also makes considerable use of the Semitic inscriptions alongside his Ugaritic

sources, particularly of early Phoenician texts like those from Karatepe and Zenjirli. Like Beyer he tends to be too critical of the Masorettes and not critical enough of the consonantal text; he moves from a Ugaritic or epigraphic allusion to a biblical passage without discussing the often very different contexts of each; he lists biblical parallels without distinguishing between those he himself considers most likely and those he thinks just possible, and so on. But in spite of these weaknesses, his basic case is sound, namely that in these early Northwest Semitic sources there is evidence which will illumine many facets of the OT text and the Hebrew language. Moreover, they will show how wrongheaded were many of the postexilic datings and conjectural emendations beloved by a previous generation of biblical critics.

**b. History, religion, and civilization.** Less directly helpful to the student of the Bible, but nonetheless welcome, is the information that can be gleaned from the inscriptions on matters of history, religion, and civilization. By their very nature, epigraphic texts are usually short and sometimes also summary and cryptic. The largest proportion of them in fact is composed of no more than labels or docketts identifying the purpose or place of origin or capacity of an object, or giving the personal name of an owner or manufacturer or user. The private letters are often jejune and of interest to few beyond the first recipients. Legal documents record single cases and do not necessarily tell us much of the systems behind them. Texts on gravestones do not explain in detail beliefs in a life after death that were the common currency of the time. Royal inscriptions are potentially more exciting, but their allusions are rarely sufficient to satisfy our curiosity, and their occasional boastful tone arouses our suspicions about their trustworthiness. Inscriptions mention the names of deities, but do not enlarge on their characteristics or on their positions in specific pantheons. Taken as a whole, the Semitic inscriptions provide only a small portion of the data required for sustained research into the ancient history and society of the region.

**3. Survey of new inscriptions.** This section describes the most important or interesting Semitic inscriptions discovered or published since the late 1950s; it also includes a brief discussion of several inscriptions known before that time of which fresh or fuller interpretations have recently been put forward.

**a. Hebrew.** Dialectally, three divisions can be seen: no. i below representing an archaic southern dialect; nos. ii-iv, the dialect of the northern kingdom; and nos. v-x, the dialect of Judah (see *HEBREW LANGUAGE*[S] §1b). The finds mentioned under xi and xii give valuable evidence of the continuing vitality of Hebrew as a spoken tongue for many centuries after the Exile.

**i. Gezer.** Although it was discovered in 1908, the interpretation of this tiny tenth-century inscription, the earliest in the Old Hebrew script, is still uncertain. It gives a list of months designated according to the agricultural activities that took place in them; they are arranged in a rough chronological order—vintage, sowing, spring pas-

ture, flax pulling, barley harvest, wheat harvest, pruning, summer fruit—but begin rather peculiarly from the farming standpoint in the middle of the soft fruit harvest. The fact that the ancient Hebrew New Year (*but see* NEW YEAR[S]) began in the autumn (Exod. 23:16) probably had something to do with this, but it is doubtful whether the tablet can properly be regarded as a calendar. It can only be made so by taking an ending *w* attached to four of the eight occurrences of the word "month" (*yrh*) as a dual or a suffix to the dual, whereas it is more likely to be an archaic nominative plural construct ending, "months of." This would give more than twelve months, but by allowing overlapping, would accord better with the facts of farming life. In any case, farmers do not need a calendar to remind them when to do their various tasks, and it would only be helpful to nonfarmers to have their months named after such tasks if twelve tasks were chosen. It is surely therefore the sequence of the activities rather than their dates that is significant. Perhaps the inscription was a "blessing" tablet placed in the local sanctuary during some religious ceremony at New Year and left there as a visible prayer to Yahweh (the proper name, Abijah, in the marginal line shows that the scribe was Israelite) to grant favorable seasons in the coming year; cf. Gen. 8:21-22; Deut. 28:8-9; Jer. 5:24; etc.

**ii. The Samaria ostraca.** These ostraca, sixty-three in number, have also been known a long time (since 1910), but there is as yet no agreement about their purpose. They belong to the early eighth century B.C. and record the delivery of wine and oil from certain places near Samaria to the royal palace. Bewildering fluctuations in the formulas make it unlikely that all of the ostraca were, as was formerly thought, official taxation documents. The mention of clan territories on some ostraca would be well explained on this supposition; cf. I Chr. 5:17, which gives information about a census by clans carried out by Jeroboam II, to whose reign many of the texts can in fact be dated. Recently, however, it has been suggested that the recipients were not administrators but courtiers or other high-ranking persons to whom the income from certain estates was allotted as a reward for services to the crown (cf. I Sam. 8:14-15; II Sam. 9:7). Both these interpretations depend on the preposition *l* (prefixed to many of the personal names) having the meaning "[for delivery] to"; but it could just as well mean "[belonging] to," in which case the names are simply those of the local landowners who farmed and prepared the produce. Perhaps the docketts record several different kinds of transaction and were found together only because the merchandise was the same and was therefore stored in the same room.

**iii. Hazor.** Eight very short inscriptions on potsherds were discovered in 1956, four belonging to the ninth century, and four to the eighth. They consist chiefly of proper names with the preposition *l*, which clearly here identifies the owners of the jars. The word *smdr* (a variety of wine) on one inscription occurs in Song of S. 2:13, 15, where it is thought to mean "vine blossom." These texts

are the first Hebrew inscriptions to come from Galilee. See HAZOR[S].

iv. *Nimrud*. Traces of a Hebrew inscription were discovered in 1961. It probably was a plaque dedicating a votive offering, and it contains the first letter of the divine name Yahweh: "May Y[ahweh] shatter (?) . . . after me, from great king [to private citizen, who . . . to] come and deface [this inscription]!" The material used and the careful chiseling of the words witness to a high standard of craftsmanship in Samaria, from which the plaque was doubtless carried away as booty after the crushing of the revolt in 721 B.C. The date of the writing is a little earlier than this.

v. *Siloam Tomb*. The inscription was discovered in 1870 at the entrance to the village of Selwan (Siloam), but was largely undeciphered until a successful restoration in the 1950s. The writing belongs to the same period as the famous Siloam Tunnel inscription (ca. 700 B.C.). It reads: "This is [the tomb of Sheban]jah, who is over the house. There is no silver or gold here, only [his bones] and the bones of his maidservant with him. Cursed be the man who opens this!" Elaborate inscribed tombs from the pre-exilic period are rare in Israel and Judah, no doubt because they could be ill afforded by the bulk of the population, but perhaps also because they offended against the ethos of the Hebrew faith. The fierce oracle in Isa. 22:15-16 against Shebna (whose tomb inscription this may in fact be; cf. the title in vs. 15) lends some credence to the latter opinion.

vi. *Yavneh-yam*. An ostrakon of fourteen lines was discovered in 1960 in the remains of an ancient fortress about a mile S of Yavneh-yam near Jamnia (JABNEEL). The cursive writing is earlier than that of the Lachish letters (beginning of the sixth century) and suggests a date in the second half of the seventh century, probably in the reign of Josiah. The document preserves an appeal from a farm worker to the governor of the district against a sentence imposed by a minor official. The phrase *l'pny sbt* used to specify the time of the offense should possibly be translated "before Sabbath" (cf. Amos 8:5), but may simply mean "before stopping." The minor official is said to have "taken away your servant's garment," a phrase that is repeated so that the governor may be in no doubt about how badly the man felt he had been treated; cf. Exod. 22:25-27, Deut. 24:10-13, according to which confiscation of a garment is the regular distraint in Mosaic law for nonpayment of a debt or obligation by a poor person.

vii. *Wadi Murabba'at*. In 1952 a papyrus palimpsest with the faint remains of two inscriptions, one a private letter, the other a list of names, was discovered in a cave in the Wadi Murabba'at S of Qumran; it was published in 1961. It is the only papyrus text surviving from pre-exilic times (for later finds at the site see §xii below). The excavations reveal an occupation of caves in the vicinity during the latter part of the eighth and the whole of the seventh century B.C., and the papyrus must belong within that period. We can only guess what disaffected group was responsible for it—perhaps a sect of religious loyalists or na-

tionists who fled there during Manasseh's long reign.

viii. *Tell 'Arad*. Excavations begun in 1962 have uncovered a rich treasure of ostraca, from several Iron Age strata (see ARAD[S] §4). One letter begins: "To my lord Eliashib./May Yahweh ask/for your peace!" The greeting is odd; unlike those on the Lachish ostraca, it is paralleled in the Bible (Gen. 43:27; I Sam. 10:4), though not with God as subject. Biblical phrases occurring on other ostraca include: "a homer of wine" (cf. Exod. 16:33) and "two mules' burden" (Judg. 19:10; II Kings 5:17). A jar discovered in the first season is interesting for its short inscription, which may contain a new name of a Hebrew month ("month of *sah*"); this word occurs in Isa. 18:4, where it seems to mean "clear or shimmering heat." This interpretation has, however, recently been challenged.

ix. *Other pre-exilic finds*. Some sixty jar handles, inscribed with names and dating to the late seventh century, were unearthed in the late 1950s at el-Jib, the ancient Gibeon. More recently we have three small tomb inscriptions of the eighth and seventh centuries from Khirbet el-Qom near Hebron and some names on jugs and sherds from Beer-sheba.

The number of Hebrew seals, stamps, and weights has also been considerably increased in the last two decades. One of the most interesting of the new seals contains the inscription, "[Belonging] to Manasseh, son of the king." It probably belonged to a prince or noble of the late Judean period. Another seal is inscribed, "[Belonging] to Azariah [of] the Locust [clan]"; there is a splendid picture of a locust beneath the name. This seal has enabled some names ("partridge," "gadfly," etc.) on the enigmatic Ophel ostrakon, discovered in Jerusalem in 1924, to be interpreted as clan or family crests or emblems rather than as a father's or ancestor's personal name.

Two weights published in the 1960s are much larger than any known hitherto, having the numbers twenty and thirty inscribed on them alongside the characteristic shekel loop sign. They represent, however, respectively sixteen and twenty-four shekels, and seem to confirm a recently advanced theory that Hebrew weights, which traditionally mounted by multiples of four, began at some point in the late monarchy (probably the reign of Josiah) to be marked by their equivalents in the Egyptian system, which was based on the multiple five. An international agreement to standardize trade practices may have lain behind this change.

x. *Khirbet Beit Lei*. Several graffiti were discovered in 1961, scratched on the wall inside a burial cave near Lachish. They include rough drawings of human figures, ships, various geometric designs, and a number of rather strange inscriptions in the Old Hebrew writing. The inscriptions are difficult both to date and to decipher. The first editor (Naveh) placed them in the seventh century, but F. M. Cross and the present writer prefer the sixth century. The longest text, which is the first Hebrew inscription to mention Jerusalem by name, is translated as follows by Naveh: "Yahweh is the God of the whole earth;

© Y. Yadin

I. Bar Kochba's letter to the men of En-gedi

the moun/tains of Judah belong to him, to the God of Jerusalem." Cross's revised rendering is considerably different: "I am Yahweh thy God; I will accept/the cities of Judah, and will redeem Jerusalem." A second inscription, in which Naveh found an allusion to Mount Moriah, is treated by Cross as a prayer for mercy. It is doubtful whether the two texts are funerary inscriptions. As in the case of the Murabba'at papyrus (§vii above), we should probably think of refugees or chance travelers taking shelter in the cave. If the inscriptions belong to the early sixth century, it is tempting to suppose that their writers were fleeing from the advancing Babylonian army; but the sentiments they express would sound just as fitting at the end of that century at the time when the temple was being rebuilt (cf. Isa. 43:3; 52:9; 62:12).

xi. *The Persian period.* If the Khirbet Beit Lei inscriptions are indeed postexilic, they indicate that the older Hebrew writing was not so quickly abandoned in favor of the Aramaic script as used to be thought (see §2a above). Since (if we discount Khirbet Beit Lei) the meager inscribed finds from this period are nearly all Aramaic (see §3d viii below), this opinion is based on the merest scraps of evidence, e.g., that two bullae sealing Aramaic papyri from fourth-century Samaria bear Hebrew legends written in Hebrew characters. Nevertheless, it is likely to be correct. It not only closes meaningfully the gap between the pre-exilic period and the appearance of the Old Hebrew script on Jewish coins of the Hasmonean era, but goes far toward explaining the emergence in the early Christian centuries of a style of writing in the Samaritan community showing many points of contact with the older script. Neither the coin script nor the Samaritan script need now be considered new archaizing creations.

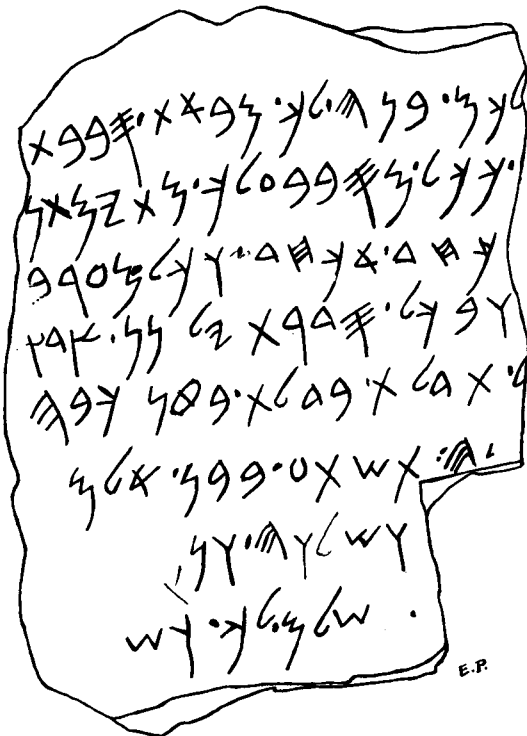

xii. *The Bar Kochba finds.* Hebrew began to be written extensively in the "square" Jewish script of Aramaic origin in the Greek period, as is shown by the biblical and other scrolls from Qumran, and more recently by finds from the Wadi Murabba'at (1950s) and the "Cave of Letters" in Nahal Hever (1960-61), which date to the times of the Jewish revolts against Rome in A.D. 66-73 and 132-

35. These finds also include scrolls, but the bulk comprises smaller items like letters or legal deeds on papyrus, which the freedom fighters composed or took with them during their retreat into the desert. Most of the documents and letters are in Aramaic, but a few, including some of Bar Kochba's, are in Hebrew (see Fig. 11). On the significance of these finds for the history of the period see BAR KOCHBA[S]. Here it is enough to state that the Hebrew letters are written in a late form of the language approximating to that used in the MISHNA; the so-called Copper Scroll from Qumran is in the same dialect. Mishnaic Hebrew was once thought by most scholars to be an artificial academic language created by and used only in learned circles, though a few were of the opinion that it reflected a continuing development of a Hebrew vernacular in Palestine from the Exile into NT times (see HEBREW LANGUAGE[S] §2b). The discovery of these Hebrew letters, documents that can in no way be described as academic, strongly suggests that the latter were right. See further MANUSCRIPTS FROM THE JUDEAN DESERT[S] §§2, 5, 6.

b. *Moabite.* A fragment of a ninth-century stele in the Moabite language, known from the famous Mesha stone to be closely related to Hebrew, though it has some affinities with Aramaic and also some independent features, was discovered at el-Kerak in 1958 and published in 1963. It contains only a few words, one of which is the name "Chemosh-yat," now probably to be restored in Mesha, line 1, as that of the king's father. Chemosh was the national deity of the Moabites (Num. 21:29).

c. *Ammonite.* The most important items are a fragment of a ninth-century stele, discovered in 1961 during excavations at the citadel mound of Amman (see Fig. 12), and a bronze bottle with an inscription of eight lines dating to about 600 B.C., found in 1972 at Tell Sirān. None of the lines on the citadel fragment is complete, and interpretation is very difficult, but the stele seems to have been set up to commemorate the building of a temple to the chief Ammonite deity, Milcom (I Kings 11:5; Jer. 49:3), whose name can be

Courtesy Emile Puech

2. Inscription from the citadel mound of Amman

restored in the first line. The inscription on the bronze bottle, which was probably cultic or dedicatory in purpose, speaks of the building works of a king called 'Ammi-nadab: "May he exult and rejoice/for many days to come/and in years far off!" With the parallelism between "many days" and "far-off years" we may compare Ezek. 12:27. The Ammonite language was, as far as we can tell from these two short pieces, a near-relative of Hebrew, though one scholar (Garbini) has argued for an affinity with North Arabic. See HESHON[S].

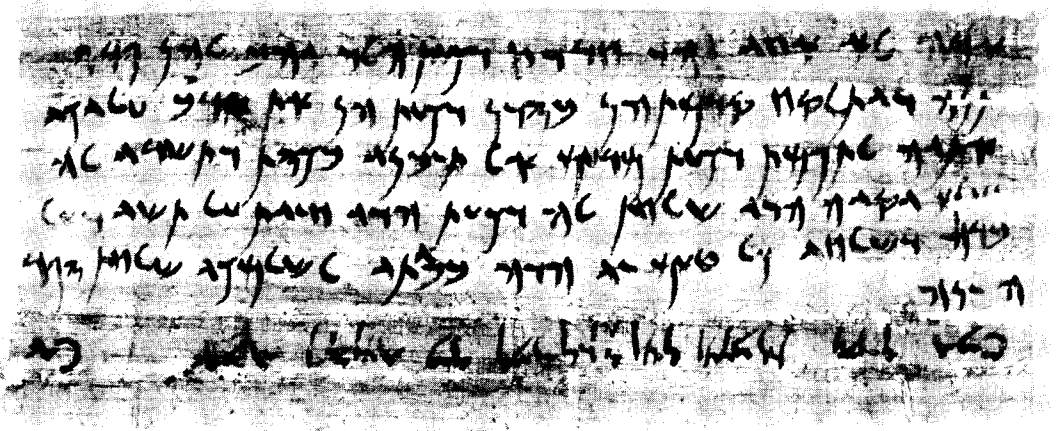

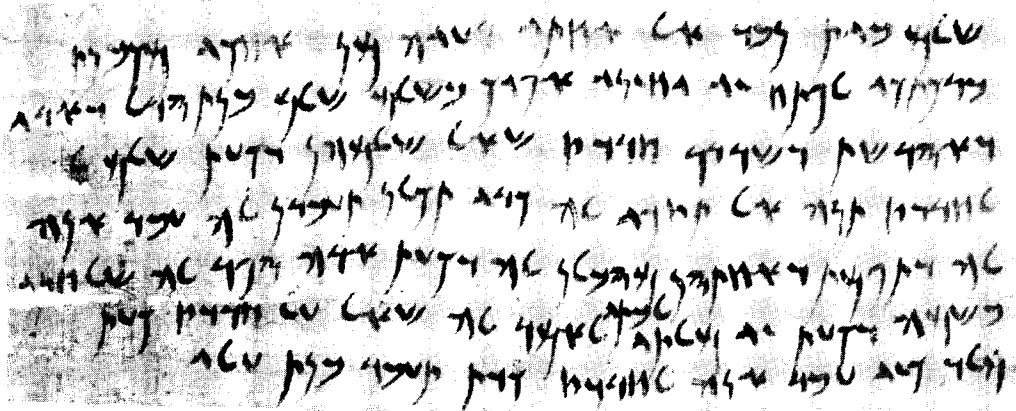

**d. Aramaic.** Aramaic epigraphy falls into three easily separable stages. The first is represented by inscriptions of the early first millennium B.C. (see i-iv below); these are closely related except for the dialect of Zenjirli (ancient Sam'al), which shows several archaic features and in some other features is more akin to the Canaanite dialects than the Aramaic (see YA'UDI[S]). The second is represented by many scores of inscriptions, ostraca, clay tablets, and papyri, written in the standardized dialect adopted by the Assyrians and after them by the Babylonians and Persians as a lingua franca (v-viii). The biblical books of Ezra and Daniel contain portions written in this official or imperial Aramaic. After the fall of the Persian Empire regional differences began to reassert themselves (stage three); one of the new dialects was the Palestinian, employed in the TARGUMS and TALMUD. The Aramaic letters and documents of Bar Kochba (see §a xii above) and some of the Judean scrolls are in an earlier form of this dialect. See further ARAMAIC; ARAMAIC[S].

i. *Barhadad.* This inscription, dedicated to Mel-

carth, the chief deity of Tyre, and belonging to the ninth century B.C., was discovered in 1939 near Aleppo. However, it was drawn up by a king of Damascus and therefore reflects the dialect of that kingdom. The veneration, in an Aramean kingdom, of a Tyrian deity can be compared with events in contemporary Israel, where Jezebel introduced the cult of the Tyrian Baal (I Kings 16:31-32). The second line, which is badly faded, was brilliantly restored by Albright to read: "Barhadad, son of Tobrimmon, son of Hezion, king of Aram" (cf. I Kings 15:18). This interpretation has recently been challenged by a number of scholars, but the alternative solutions they propose yield rather peculiar formulas; thus, e.g., "Barhadad, son of Ezer, the Damascene, son of the king of Aram" (Cross); "Barhadad, son of Idri-šamš, who [was] the father of the king of Aram" (Lipiński). According to the first of these interpretations Barhadad is a son of [Hadad]ezer, and according to the second, a brother of Hazael. The existence of either Barhadad is not elsewhere attested. In my opinion Albright's restoration should still stand.

ii. *Northern Israel.* Two short inscriptions were discovered at Ein Gev and Tell DAN in Galilee in the 1960s. That from Ein Gev reads "For (the use of) the wine butlers" (cf. Gen. 40:1; Neh. 1:11); that from Dan "For [the use of] the butchers or cooks" (cf. I Sam. 9:23). The scripts belong to the ninth century and probably witness to the Aramean occupation of towns in this area by Barhadad during the reign of Baasha (I Kings 15:20).

iii. *Sefire.* One of the three long inscriptions from Sefire near Aleppo was edited as long ago as 1931, but full study of these very important texts has had to wait for the excellent editions of Dupont-Sommer (1956-68) and Fitzmyer (1967). They date to the mid-eighth century B.C. Stelae i and ii record two treaties between Barga'yah, king of an unknown city or territory called *Ktk*, and the local king, Mati'el of ARPAD. Only part of stela iii survives; it was clearly a similar treaty, perhaps drawn up between Mati'el and some other king, though the partners' names are not preserved. The contents of the three texts include, in addition to the detailed stipulations, lists of the gods of the contracting parties, who are called upon to witness the treaty, and series of curses to be enacted against the king of Arpad should he violate it; there are also descriptions of magical rites with wax models to be made effective under the same circumstances. Of special interest to OT students are the parallels in format and phraseology between the Sefire stelae and Hittite and Assyrian treaties of the late second and the first millennia B.C., and between all of these and a number of biblical passages in which the themes of covenant or of blessing and curse are prominent (see COVENANT, MOSAIC[S]). Among the gods mentioned are El and Elyon (cf. Gen. 14:9; Ps. 78:35), and also vague entities like "Heaven and Earth" (cf. Deut. 4:26; 30:19; Job 16:19) or "Abyss and Springs" (cf. Isa. 44:27). The curses may be compared with Deut. 27 and 28 and Lev. 26. The stipulations of the treaties evidence the concern for a peaceful succession which so occupied

3. Aramaic papyrus from Hermopolis

monarchs in that bloody era; cf. Solomon's execution of Adonijah, Joab, and Shimei (I Kings 2); I Kings 16:11; II Kings 10:6-7; 11:1, etc.

iv. *Luristan*. Two tiny inscriptions on a bronze juglet and cup from Luristan, north of Elam, were published in 1964. The articles belong to the eighth century B.C., and may have been taken to Luristan by a group of ethnic Arameans emigrating from Babylonia, where the Kaldû (Chaldeans) and other tribes had established themselves early in the millennium. They are our earliest evidence of an eastern Aramaic dialect.

v. *Tell el-Maskhuta*. A number of fifth-century inscribed silver bowls, acquired in the 1950s, were reported to have been found at this site near Ismailia in Lower Egypt. They witness to the presence in the Delta region of a community of N Arabs belonging to the tribal confederacy of Kedar (Gen. 25:13; Isa. 60:7). One bowl (see KEDAR Fig. 2) was presented to the community shrine by the chief of the confederacy on a visit; his name shows him to have been the son of Nehemiah's archenemy (Neh. 2:19; 6:1-2). The inscription reads: "That which Qainu, son of Geshem, king of Kedar, offered to han-Ilat." The

goddess han-Ilat is known from later Nabatean inscriptions and is mentioned in the Koran.

vi. *Asia Minor*. Two new inscriptions of the fifth-fourth centuries B.C. were published in the 1960s, one from a boundary stone discovered in 1957 at Bahadirli in Cilicia, and one from a funerary stele found in 1965 at ancient Daskyleion near the Bosphorus. The stele is decorated with secular scenes in relief and adjures passers-by in the name of the Mesopotamian deities Bel and Nebo not to disturb the grave. If, as a recent study suggests, the dead man was a Jew, one Elnaf son of Ishyahu, we have an indication both of the wide westward outreach of the Diaspora not two centuries after the fall of Jerusalem and of a laxity of religious practice not dissimilar to that evidenced by the Elephantine papyri from contemporary Egypt.

vii. *Papyri from Egypt*. Eight well-preserved papyri were discovered at Hermopolis in 1945, though not published till twenty years later (see Fig. 13). They were written in Memphis, and comprise private letters addressed to relatives resident in either Syene or Thebes. The writers were probably soldiers in the employ of the Persian

administration in Egypt, who belonged to Aramean communities in these two places. Those from the former place would belong to the "Arameans of Syene," mentioned several times in the documents from Elephantine. The chief importance of these papyri lies in the sphere of language, where in several particulars they present a different picture from the ELEPHANTINE PAPYRI; this is probably because the writers were, unlike the Jews of Elephantine, not simply using an official language but, being native Arameans, were still speaking their ancestral tongue.

Another interesting papyrus, found in Egypt at the beginning of the nineteenth century and published in 1960, was written by a Jewish resident in Migdol to his son on military service in Elephantine. A reference to the temple of Yahu (Yahweh) dates the papyrus prior to its destruction in 410 B.C. The writer encourages his son "to be a man," and informs him that some difficulty over his salary had been cleared up.

viii. *Palestine*. Two tiny fourth-century ostraca from Tell 'Arad and Nebi Yunis were unearthed in Israeli excavations in the early 1960s, providing a welcome supplement to the scant written remains from postexilic Judah. The one from Arad reads: "The cave of Anani/and his straw shed/and his ox stable"; if, as seems likely, the man himself lived in the cave, this little text vividly illustrates the poverty of the times. On the discovery of a number of fragmentary papyri from Samaria, also belonging to the fourth century, see SAMARIA PAPYRI[S]; SAMARITANS[S] §1.

e. *Phoenician*. The last couple of decades have seen a revival of Phoenician and Punic epigraphic studies, partly because of the impetus of the Ugaritic discoveries. There have been a number of articles re-examining older finds like the Nora stone, the Arslan Tash incantation text, and the Karatepe and Kilamuwa inscriptions, many of them drawing parallels with biblical constructions and motifs.

i. *Pyrgi*. The most important new Phoenician find (1964) is a fifth-century votive text from Pyrgi, N of Rome, which witnesses to the close relations between the Etruscans, who ruled that area, and the Phoenicians and Carthaginians. It announces the building by an Etruscan king of a "holy place" or cell in a temple of Astarte; this cell contained an image of the goddess, the dedication being made on the "day of the burial of the deity," probably some cultic occasion. The last lines read: "And [may] the years for the votive gift of the deity in her temple [be] years like these stars (*km hkkbm 'l*)!" Noting the difficulty that commentators have had in finding a referent for the final phrase, Dahood has proposed "like the stars of El" (cf. Isa. 14:13), which certainly improves the sense. The definite article is idiomatically prefaced to the whole phrase, and the *m* is enclitic.

ii. *Seville*. A statue of Astarte with an inscription on the pedestal was discovered near Seville in 1963. It belongs to the eighth century B.C. and adds to the growing evidence of early Phoenician colonization in Spain. Recently, also, C. H. Gordon has reawakened an old controversy over a Phoeni-

cian text from Paraiba in Brazil, which had long previously been pronounced a forgery. Gordon argues that it is genuine, proving that the Phoenicians did not only reach the far W of the Mediterranean, but sailed across the Atlantic as well. Most scholars have, however, been unconvinced by his arguments.

iii. *Other finds*. Several more Phoenician and Punic inscriptions were discovered during the 1960s in the course of excavations at Sidon (the temple of Eshmun) in Phoenicia proper, and on the islands of Sardinia (Monte Sirai), Sicily (Motya), and Malta (Tas Silg), but unfortunately few of them are complete or clear.

4. *Conclusion*. These inscriptions are so varied in content and originate from so many widely scattered places that their impact on the study of the Bible is less immediately felt than that of major finds at a single site like Qumran or Ras Shamra. They are nevertheless vital if the ongoing interpretation of biblical truth is to be anchored solidly in the ancient Semitic world from which the Bible came.

*Bibliography*. Students' and other important collections of texts: H. Donner and W. Röllig, *Kanaanäische und aramäische Inschriften, I: Texte, II: Kommentar, III: Glossare, Indizes, Tafeln* (1962-64 [2nd ed., 1966-69]); J. C. L. Gibson, *Textbook of Syrian Semitic Inscriptions, I: Hebrew and Moabite Inscriptions* (1971), II: *Aramaic Inscriptions, Including Inscriptions in the Dialect of Zenjirli* (1975), III: *Phoenician and Punic Inscriptions* (in preparation); J. Fitzmyer, *The Aramaic Inscriptions of Sefire* (1967); P. Grelot, *Documents araméens d'Égypte* (1972); M. G. Guzzo Amadasi, *Le iscrizioni fenicie e puniche delle colonie in occidente* (1967).

Individual inscriptions: The text with bibliography of all but the most recent discoveries can be found in the collections of Donner-Röllig and Gibson. For the Bar Kochba material and the Samaria papyri, see BAR KOCHBA[S] and SAMARIA PAPYRI[S]. On the Ammonite inscriptions, S. H. Horn, "The Amman Citadel Inscription," *BASOR*, 193 (1969), 2-13; F. Cross, *ibid.*, pp. 13-19; G. Garbini, *Le lingue semitiche* (1972), ch. vi; H. O. Thompson and F. Zayadine, "The Ammonite Inscription From Tell Siran," *Berytus*, XXII (1973), 115-40. On the Seville inscription, F. M. Cross, "The Old Phoenician Inscription From Spain," *HTR*, LXIV (1971), 189 ff.; a useful study of other important recent Phoenician texts is W. Röllig, "Beiträge zur nordsemitischen Epigraphik (1-4)," in *Die Welt des Orients*, V (1969), 108-25. On the Phoenician inscription from Brazil, C. H. Gordon, "The Authenticity of the Phoenician Text from Parahyba," *Orientalia*, XXXVII (1968), 75-80; the latest study is by G. I. Joffily, "L'inscription Phoenicienne de Parahyba," *ZDMG*, CXXII (1972), 22-36.

Translations: Selections are given in J. B. Pritchard, ed., *ANET* (2nd ed., 1955, and suppl. vol., 1969); D. Winton Thomas, ed., *Documents from OT Times* (1958).

Illustrations: Plates or figures of many inscriptions are included in most of the collections mentioned in the first paragraph above, and in the books by Diringier, Birnbaum, and Michaud mentioned in the seventh and eighth paragraphs below. A useful selection is available in J. B. Pritchard, ed., *The Ancient Near East in Pictures* (1954 and suppl. vol., 1969).

Grammars and studies on language: K. Beyer, *Althebräische Grammatik* (1969); B. S. J. Isserlin, "Epigraphically Attested Judaean Hebrew," *AJBA*, II (1972), 197-203; J. A. Emerton, "The Problem of Vernacular Hebrew in the First Century A.D. and the Language of

Jesus," *JTS*, NS XXIV (1973), 1-23; R. Degen, *Altaramäische Grammatik der Inschriften des 10-8 Jh. v. Chr.* (1969); E. **A. WITHIN THE OT.** Certain passages in the OT contain literary elements which were originally not part of the text. These addenda may be identified as modes of interpretation. A similar judgment is reached from a comparison of duplicated or related texts, where a later version puts a different construction on, or redresses a deficiency in the earlier one.

To appreciate the procedures underlying interpretation within the OT, reference to the broad principles of the rabbinic system will be helpful. There are two main categories of exposition, designated by the terms *peshat* (*pšt*, "to make plain") and *derash* (*drš*, "to inquire, search"). In the former the intent may be to explain a seeming obscurity or anomaly in a biblical text or to extend its range in a manner akin to exegesis. In the latter category, however, nonrational as well as logical methods of interpretation may be applied in order to derive scriptural authority for a rabbinic prohibition or ordinance, or to embellish themes in biblical folklore and point to moral teachings. These two categories are to be found, in rudimentary forms, in the OT itself.

1. **History and folklore.** Under this broad heading, types of *peshat* interpretation are found as follows.

**a. Parallel or related passages.** In Num. 20:12 and Deut. 32:50-52 we learn that Moses was denied entry into the Promised Land because he disobeyed God's explicit command to speak to the rock at Meribah. In Deut. 1:37, however, the blame for this ban is laid on the people. This passage (Deut. 1:22-39) recalls the discouraging report brought back by the spies (Num. 13:25-33), the resulting mass agitation against Moses and Aaron (Num. 14:1-10), and the consequent divine punishment by which the adult population died in the wilderness (Num. 14:22-24). It looks as if the Deuteronomist included Moses in the category of condemned adults and thus exonerated him from any fault to which the ban on his entry into Canaan could be attributed.

Ps. 106:32-33 acknowledges that the divine ban on Moses' entry into Canaan resulted from the incident at Meribah, but again it is the people, and not Moses, who are censured. "They (the people) angered him (God) at the waters of Meribah, and it went ill with Moses on their account; for they made his spirit bitter." In the consonantal Hebrew text (before vowel points were devised) the word *hmr* could be read as either *himrú*, as in the Masoretic text, from the root *mrrh* and meaning "they rebelled," or *hēmārú*, as scholars generally adopt, from the root *mrr* and meaning "they embittered." Perhaps the poet intended that both notions should be understood. In rabbinic homiletic interpretation a dual meaning of a word is often induced by accepting both the *kethibh* (the word in a text) and the *qere* (the oral substitute; see QERE-KETHIBH[S]), thereby implying a dual meaning.

In II Sam. 7:2 (and I Chr. 17:1) David intimated to the prophet Nathan his desire to build a temple, but a divine revelation to the prophet denied him this honor, which was to be reserved for his son (II Sam. 7:12, 13). No explanation is offered for this disqualification, but this omission is remedied in I Chr. 22:8 and 28:3. In the first passage David explained to Solomon, and in the latter passage to the assembled leaders of Israel, that his disqualification was due to his having "shed so much blood." The Hebrew expression implies willful killing. Recalling how David arranged for the elimination of Uriah (II Sam. 11:14-17) and the murder of Saul's surviving sons, with the exception of Mephibosheth (II Sam. 21:7-9), the phrase aptly describes David's ruthless acts. The Chronicler, however, associates David's bloody exploits with the necessities of war and thus slurs over the sordid side of his character.

**b. Editorial notes.** Exod. 20:12 and Deut. 5:16, versions of the Decalogue commandment to honor one's parents, offer the promise "that your days may be long" (in itself an addition to the statement of the commandment). The Deuteronomy text adds the assurance "and that it may go well with you," as does the LXX in both passages. The additional note was evidently meant to assure the reader (or the listener) that the promised long

life would be a happy one. The tendency to make explicit what is obviously implicit is characteristic of rabbinic exposition, and here we find its prototype in the OT. The fact that this additional note appears in the LXX of both passages indicates that this kind of interpretation was well established before the second century B.C. Furthermore, the addition to the Masoretic text of Deuteronomy indicates that this method was applied to sacred texts long before the final editing of that book.

Ps. 1:3 provides an example of interpretation, in practical terms, of what the poet meant to convey in poetical imagery. The psalmist describes the happy lot of the man who shuns the company of sinners, and whose delight is in God's Torah. "He is like a tree planted by streams of water, that yields its fruit in its season, and its leaf does not wither." At the end of the verse is a line out of harmony with this poetical picture—"in all that he does, he prospers." This is an editorial expository note.

**c. Glosses.** A gloss may be recognized primarily by its interrupting the flow of thought, so that its elimination restores a smooth sequence. Yet glosses are of interest, in that they represent types of interpretation or comments on words or phrases in the text. A simple example is found in Josh. 1:15. In this chapter Joshua reminds the tribes of Reuben and Gad and the half-tribe of Manasseh of the pact they had made with Moses (Num. 32). They were allotted territory E of the Jordan, but had agreed to join the rest of the tribes in the conquest of the territory W of Jordan. Once they fulfilled their commitment, they would be free to return to their allotted lands. The text under consideration may be translated: "Then shall you return to your inherited land, and you shall possess it which Moses, the servant of the Lord, gave you beyond the Jordan." The italicized words destroy the smooth reading of the line; their removal restores an even flow of thought. The judgment that we have here a gloss is confirmed by the absence of these words in the LXX. The interposed note makes explicit what is clearly implicit in the verse, namely, that returning implied taking possession.

An explanatory gloss designed to avoid anthropomorphism is found in Ps. 18:6 [H 7]. It may be translated: "My cry before him (God) enters his ears." The rules of parallelism in Hebrew poetry make it clear that this line read, "My cry enters his ears." The extra word *לפני*, meaning "before him," breaks the flow of thought and is therefore a gloss. The annotator explained that what is meant by the seeming anthropomorphic phrase "enters his (God's) ears" is "enters his presence." The avoidance of such phrasing by the interpolation of a word is characteristic of the Aramaic TARGUMS. A typical example is Gen. 6:9 where the Hebrew expression "Noah walked with God" is rendered by both Targs. as "Noah walked in the fear of God."

The differences between an editorial note and a gloss are that: (1) An editorial note deals with the subject matter of the text, while a gloss comments on a word or phrase. (2) An editorial note

was apparently consciously added to the verse, since it becomes a continuum with it, while a gloss, because it breaks the smooth flow of thought, was apparently meant to be external to the text but was subsequently incorporated into it by faulty copying.

2. **Law.** The rabbinic device of securing scriptural authority for a prevailing prohibition by artificially deriving it from a biblical text was anticipated by the narrative in Gen. 32:32 [H 33]. To take an example of the rabbinic method first, the prohibition of eating meat and milk together is associated with the negative command in Exod. 23:19 (and elsewhere), "You shall not boil a kid in its mother's milk." The forbidding of mixing meat and milk in this special case was sufficient, in the rabbinic system of *derash*, to warrant the deduction of the general prohibition current in their time. The biblical narrator states that the angel "touched the hollow of his (Jacob's) thigh, and Jacob's thigh was put out of joint" (Gen. 32:25). "Therefore to this day the Israelites do not eat the sinew of the hip which is upon the hollow of the thigh" (vs. 32). One is led to the conclusion that (1) in ancient Israel the prohibition against the eating of this membrane of an animal was operative before the final editing of the Pentateuch, and (2) the folk tale was sufficient warrant to derive the prohibition from this incident. Thus this passage provides an early example of what became a widespread rabbinic mode of interpretation.

Often a dilemma caused by conflicting legal texts was resolved by the rabbis by merging the two discrepant texts into one composite directive. An illustration of this method is provided by Exod. 21:2-6 as modified in Deut. 15:12-18.

The Exodus law states, "When you buy an עבֵרִי slave, he shall serve six years, and in the seventh he shall go out free, for nothing." The term עבֵרִי is usually translated "Hebrew," but it seems more likely that the law refers, not to an Israelite slave, but to a HABIRU. The Habiru were a rootless society whose members engaged themselves as mercenaries in time of war, but entered menial service in peace time. The Exodus law regulated the terms of service of Habiru with an Israelite master. The Habiru apparently disappeared after the eleventh century B.C. and even their name was not known to later generations. Because of such designations as "Abram the עבֵרִי" in Gen. 14:13 and the "God of the עבֵרִים" in Exod. 3:18, the term came to be identified with "Israelite."

The dilemma which presented itself to the Deuteronomic legislator was this. With the Hebrew term עבֵרִי identified with "Israelite," the Exodus law seemed to be expressly contradicted by Lev. 25:39-46. This latter law laid down that an impoverished Israelite could voluntarily enter the service of a fellow Israelite, but he was to be treated as a hired servant and not as a slave. The problem was solved by interpreting the Exodus law in the light of the Leviticus law, so that the Exodus law was made to refer to an impoverished Israelite selling himself into the temporary service of an Israelite master.

The following translation of Deut. 15:12-18 (with

interpolations) adheres to the Hebrew text more closely than the standard translations. "If your brother, a Hebrew (i.e., an Israelite) man—or a Hebrew (i.e., an Israelite) woman—sells himself to you (i.e., according to the law in Lev. 25:39), and he serves you six years, and in the seventh year you let him go free from you (i.e., as laid down in the law of Exod. 21:2), then, when you let him go free from you, you must not let him go free empty-handed. You must furnish him liberally out of your flocks, your threshing floor, and your wine press; . . . for at half the cost of a hired servant (as in the Leviticus law), he has served you six years (as in the Exodus law)."

This is only one example of the several biblical laws and historical incidents recorded in Exodus, Leviticus, and Numbers which have been modified or extended in Deuteronomy. This phenomenon can best be explained by postulating the existence and operation of an oral TORAH (like the later MISHNA), a corpus of law and history outside and co-existing with the written Torah, of which authorized interpretation of the sacred text was a part. Because Deuteronomy was the accepted official interpretation of the Torah, it came to be endowed with divine inspiration and was attached to the earlier books.

Neh. 8:1-8 describes the scene in which, under the direction of Ezra, the Levites instructed the assembled people in the Torah. "[They] helped the people to understand the law" (vs. 7). "And they read from the book, from the law of God clearly (or, with interpretation—RSV n.); and they gave the sense, so that the people understood (or, they, the Levites, gave understanding to) the reading." It is likely that Ezra extended to the public the practice, which may have earlier been confined to selected groups, of teaching the Torah by means of a uniform exposition.

The significant conclusion reached by the study of interpretation within the OT is that, during the period of the formation of the OT, a system of expounding the Hebrew Scriptures was already established and that it continued in a direct line of tradition into the early rabbinic era.

## B. AT QUMRAN AND IN THE TARGUMS.

1. **Qumran.** A great variety of writings belonging to the literary genre of Bible interpretation have survived among the documents concealed in the Qumran caves. Our purpose is to distinguish the diverse forms of exegesis used by the Dead Sea sectaries and to reconstruct and evaluate their methods.

### a. *The forms of Qumran exegesis.* i. *The peshet.*

This Hebrew term (pl. *pesharim*), the etymological

meaning of which is "interpretation," has acquired a twofold technical significance. It may designate a literary work in which a biblical book is quoted continuously verse by verse (or unit by unit), each citation being accompanied by exegesis. Or it may denote a certain type of nonliteral interpretation (see §aiii below).

It cannot be proved theoretically that the literary form of *pesher* was restricted at Qumran to the interpretation of prophecy alone, but the fact is that the only surviving and published examples belong to this class. The most important *pesherim* relate to Habakkuk, Nahum, Isaiah, Hosea, and Ps. 37.

From the point of view of structure, the *pesherim* belong to one or the other of two categories: the interpreter either deals with each biblical unit separately or seeks to establish a connection between the successive verses.

In the first instance, the MS opens with a biblical text followed by a formula introducing the exegesis, such as, "Its interpretation: . . ."; "Its interpretation concerns. . ."; "The interpretation of the saying concerns," etc. When the exposition is completed, the next section of Scripture is quoted, and the same process recommences. The treatment of Hab. 2:3a in IQpHab 7.5-8 may serve as an illustration.

*For there shall be yet another vision concerning the appointed time.*

*It shall tell of the end and shall not lie.*

Interpreted, this means that the final age shall be prolonged and shall exceed all that the Prophets have said; for the mysteries of God are astounding.

Occasionally, the biblical excerpt consists of more than one verse and is too long for an uninterrupted exegesis. In such cases the interpreter first expounds the initial part of the unit, then, employing a special introductory formula (usually, "As for that which He said"), repeats the next section of Scripture and appends to it his further comments. For example, IQpHab 6.14-7.5 interprets Hab. 2:2 in the following manner:

*And the Lord answered [and said to me, Write down the vision and make it plain] upon the tablets that [he who reads] may read it speedily.*

God told Habakkuk to write down that which would happen to the final generation, but He did not make known to him when time would come to an end. And as for that which he said, *That he who reads may read it speedily*, interpreted, this concerns the Teacher of Righteousness, to whom God made known all the mysteries of the words of His servants, the Prophets.

In the less frequent second category of *pesherim*, the interpreter links his exegesis of the previous verse to the subsequent quotation. In 4QpIs<sup>b</sup> 2.13 on Isa. 5:10 we read:

*[For ten acres of vineyard shall produce only one bath, and an omer of seed shall yield only one ephah.]*

Interpreted, this saying concerns the last days, the devastation of the land by the sword and famine. At the time of the Visitation of the land there shall be *Woe to those who rise early in the morning to run after strong wine* (Isa. 5:11).

ii. *Midrashic paraphrase of large units.* The most important example of a full-scale midrashic paraphrase at Qumran is the Genesis Apocryphon (IQapGen). Instead of quoting and explaining the biblical narrative, the author recasts the story so that Scripture and its interpretation form an undivided whole.

*Gen. 12:17*  
But the Lord afflicted Pharaoh and his house with great plagues because of Sarai, Abram's wife.

*IQapGen 20.16-17*  
And on that night the Most High God sent a spirit of affliction, an evil spirit, to afflict both him and his house. He was afflicted and all his household, and he could not approach her and he knew her not.

The author of IQapGen not only provides a more vivid description, but also makes it plain that the virtue of Sarah was unquestionably safeguarded through God's direct intervention.

iii. *Midrashic interpretation of smaller units.* The Damascus Rule (CDC) frequently adduces sundry short citations from the Bible to demonstrate the particular issue under discussion. For instance, in CDC 6.11-13, Mal. 1:10 serves to justify the withdrawal of the sect's priests from active service in the temple of Jerusalem.

None of those brought into the Covenant shall enter the Temple to light His altar in vain. They shall bar the door, forasmuch as God said, *Who among you will bar its door? And, You shall not light my altar in vain.*

iv. *Collection of proof texts.* The only relevant document so far edited is the Messianic Anthology or 4QTest. Its aim is to provide scriptural backing for the community's expectation of a "Prophet and the [two] Messiahs of Aaron and Israel" (IQS 9.11). According to our text the prophet is announced in Deut. 5:28-29; 18:18, 19; the king in Num. 24:15-17; and the priest in Deut. 33:8-11. For further remarks, see DEAD SEA SCROLLS[S] §8.

v. *Collection of legal texts arranged according to subjects.* The well-established Jewish custom of explaining one text of Scripture by another is attested at Qumran. In the legal domain, one of the most striking illustrations is furnished by the Damascus Rule when it demonstrates (CDC 4.20-5.2) the absolutely binding nature of monogamy. The opponents of the sect are accused of committing fornication in "taking a second wife while the first is alive, whereas the principle of the creation is, *Male and female created He them* (Gen. 1:27). Also, those who entered the ark went in two by two (Gen. 7:9). And concerning the prince, it is written, *He shall not multiply wives to himself* (Deut. 17:17)."

vi. *Collection of doctrinal texts arranged according to themes.* Apart from the incidental combination of such passages in the Damascus Rule (e.g., Num. 21:18 and Isa. 54:16 in CDC 6.3-8; or Amos 5:25-26; 9:11 and Num. 24:17 in CDC 7.14-21), two principal compositions must be mentioned in this context. First, the Midrash on the Last Days, or 4QFlor, expounds II Sam. 7:10-14 with the help of Exod. 15:17-18 and Amos 9:11, and Ps. 1:1 by means of Isa. 8:11 and Ezek. 44:10.

Secondly, the Melchizedek Document, or 11QMelch, establishes a link between Isa. 61:1; Lev. 25:13; and Deut. 15:2, to conflate their respective messages into a single eschatological doctrine. See MELCHIZEDEK[S] §1.

The sectarian interpreters were convinced that these six classes of exegesis constituted a highly technical and sophisticated system that enabled them to clarify the obscurities of the Bible and to prove "scientifically" that their laws and beliefs had been divinely ordained. For them, Bible interpretation was an indispensable tool in the construction of a theological or apologetic edifice.

**b. Methods of Qumran exegesis.** To evaluate the exegetical methods of the Dead Sea community, it will be of help to recall that ancient Jewish Bible interpretation had a dual purpose: on the one hand, it aimed at rendering the message of the text intelligible, coherent, and acceptable (pure exegesis); on the other, it sought to discover in Scripture answers to nonbiblical questions by searching for hidden general principles which could be applied to new situations and fresh problems (applied exegesis).

i. *Midrashic supplement to a story.* a) Pure exegesis. In the Genesis account of Abram's journey to Egypt, the biblical author fails to indicate how the patriarch learned of the danger that he would incur should he and his beautiful wife cross the southern frontier of Canaan. The Genesis Apocryphon introduces a premonitory dream as a result of which Abram keeps his wife out of the sight of the Egyptians for five years. Her attractions are discovered only when three princes of Pharaoh are dispatched explicitly to make inquiries concerning the foreign couple (1QapGen 19.14-24).

b) Applied exegesis. In their endeavor to prove that their community had replaced the Jewish people as God's elect and that their council had been substituted for the Jerusalem temple, the sectaries discovered in Hab. 2:17, "for the violence done to Lebanon shall overwhelm you," the evidence they needed. To understand how they managed to render this text as, "For Lebanon is the Council of the Community" (1QpHab 12.3-4), it should be borne in mind that there was already in existence a popular Jewish tradition identifying Lebanon with the temple. The application, therefore, of the same Lebanon metaphor to the council simply proclaims the community's belief that the replacement of Jerusalem by the spiritual sanctuary of the sect was predestined by God and foretold by Habakkuk.

ii. *Halachic reinterpretation.* a) Pure exegesis. In ch. 30 of Numbers, the biblical legislator proclaims that a vow made on oath by a man is always binding, but one made by a woman may be annulled by a male guardian, viz., her husband or father. The law recorded in the Damascus Rule introduces a moral distinction, and limits the right of the husband or father to cancel the vows in question by stipulating that they may revoke only those which should never have been made.

Concerning the oath of a woman. Inasmuch as He said, *It is for her husband to cancel her oath* (Num. 30:9), no husband shall cancel an oath without know-

ing whether it should be kept or not. Should it be such as to lead to transgression of the Covenant, he shall cancel it and shall not let it be kept. The rule for her father is likewise (CDC 16.10-12).

b) Applied exegesis. Conflict between a man's duty toward his dependents and piety toward God, expressed in the form of gifts to the temple, must have been a familiar dilemma in the intertestamental period (cf. Mark 7:9-13; Matt. 15:3-6). The author of the Damascus Rule demonstrates by means of a punning exegesis of Mic. 7:2 that the sectary's obligation to his parents takes precedence over his obligation to send gifts to the sanctuary. In poetic language, the prophet accuses the Israelites of hunting one another with a "net" (*herem*). The same Hebrew word can, however, also mean a "votive offering." The Damascus Rule therefore has only to substitute the one meaning for the other: "No man shall consecrate the good of his house to God, for it is as He said, *Each hunts his brother with a votive offering*" (CDC 16.14-15).

iii. *Fulfillment of prophecy.* The Qumran sectaries, like all protagonists of an eschatological outlook at the turn of the eras, were convinced that the final age had already begun, and that they themselves were witnessing the last act of the human drama about which the prophets had spoken. As a consequence, they were able to detect in the events of their own time the realization of ancient predictions. The words of Habakkuk or Nahum, for instance, were seen to adumbrate the end of world history in general, and the sect's destiny in particular, but to make such hints fully intelligible the interpreter had to correlate the prophetic announcements with fulfillments. Peculiar though this kind of interpretation may be, it is still to be regarded as "pure exegesis." Nevertheless, when the logical sequence is reversed, and the starting point is a disconcerting contemporary event, we are faced with a specimen of "applied exegesis."

By interpreting Hab. 1:6a, "For behold I rouse the Chaldeans, the bitter and hasty nation," as announcing the coming of "the Kittim [who are] quick and valiant in war, causing many to perish" (1QpHab 2.10-13), the Qumran exegete believed that he was merely spelling out the full eschatological meaning (or *peshet*, cf. §ai above) of the words of Habakkuk. The prophet thought that the final conquerors of the world would be the Chaldeans, but the sectaries recognized the enemy's true identity and knew that they were the "Kittim," i.e., the Romans.

By contrast, when a fairly general utterance of Hab. 2:8b, "Because of the blood of men and the violence done to the land, to the city and to all its inhabitants," is explained in 1QpHab 9.8-12 as referring to "the Wicked Priest whom God delivered into the hands of his enemies because of the iniquity committed against the Teacher of Righteousness and the men of his Council," the exegete does not proceed to explain the text by means of a contemporary illustration, but adopts a dogmatic stand. The event, he asserts, is the fulfillment of

Hab. 2:8b, and as such it was foreordained by God from all eternity.

It should be noted that the interpreter occasionally takes liberties with the text of Scripture in order to ensure that it conveys the meaning he intends it to have, as for instance in his reshaping, in CDC 7.14-20, of Amos 5:26-27—originally a divine threat—to read as a promise of salvation. This is, however, exceptional. The usual attitude is so respectful that at times it presents the exegete with difficulties. For example, in Hab. 2:16, the commentator reproduces the Hebrew text with a LXX-type variant, “Stagger!” (*hērāʿēl*), instead of the Masoretic reading, “Show your foreskin!” (*heʿārēl*). He writes:

You have filled yourself with ignominy more than with glory. Drink also and stagger!

Yet his exegesis discloses knowledge of both textual traditions:

Interpreted, this concerns the Priest whose ignominy was greater than his glory. For he did not circumcise the foreskin of his heart, and he walked in the ways of drunkenness that he might quench his thirst (1QpHab 11.12-14).

This rendering not only implies an acquaintance with the variants; it also shows an inability or unwillingness to choose between them. Both readings are cleverly mingled, revealing that, far from being free with the biblical text, the interpreter held in profound esteem every witness of what in his view was the sacred record of the word of God.

**2. The Targums.** The translation of the Hebrew Bible into vernacular Aramaic was intended to render its message easily intelligible to the ordinary Jew. It was not merely offered as reading material—in fact, if the Mishna is to be believed, the Targ. was to be recited without a script—but as an uncontroversial guide for practice and belief. The Targumists adopted different styles of presentation which vary according to the nature of the scriptural books and also according to the interpreter's notion of his own particular role. The Targ. therefore oscillates between a fairly straightforward translation and a rich, homiletic paraphrase. Our analysis, based on the earlier and more important Targs. to the Pentateuch and the Prophets, will first outline matters relating to Targumic form and structure, and will follow this with a succinct account of Targumic exegetical principles. See also TARGUM; TARGUM[S].

**a. Targumic form and structure.** Although no Aramaic version of Scripture can be described as strictly a literal translation, the Targ. ascribed to Onkelos comes nearest to such a genre. The Palestinian Targs. (Pseudo-Jonathan, Fragmentary Targ., Neofiti, and Cairo Genizah fragments) often contain large midrashic additions, whereas the Jonathan Targ. to the Prophets occupies an intermediate position.

The Targ. of Onkelos, which was finally compiled in Babylonia, offers, in a literary language, a verse-by-verse translation of the Torah with only a small amount of paraphrase, apart from obscure poetic passages where it scarcely differs

from the more expansive Palestinian Targs. The intention of the final redactor was to keep the Aramaic as close as possible to the Hebrew. He sought, for instance, to translate one Hebrew by one Aramaic word, preferably always the same. (In this respect, Onkelos is comparable to the Greek version of Aquila, and foreshadows the modern German version of the OT by Buber and Rosenzweig; see VERSIONS, ANCIENT §2b; VERSIONS, MEDIEVAL AND MODERN, NON-ENGLISH §3.) Again, wishing to remain closely linked to the biblical original, Onkelos attempted to explain its legal and doctrinal difficulties as laconically as possible, as the following example illustrates. The age-old taboo against boiling a kid in its mother's milk, recorded in Exod. 23:19, developed in time into a legal principle, which first prohibited the use of milk in the cooking of meat, and later became one of the foundations of rabbinic dietary law in which meat and milk must be kept absolutely apart. Onkelos, in rewriting the Exodus passage, took all this evolution into account and rendered it quite simply as, “You shall not eat flesh with milk.”

In the doctrinal field, Onkelos used key words and short allusions to suggest complex haggadic developments. Gen. 4:24, “If Cain is avenged sevenfold, truly Lamech seventy-sevenfold,” was transformed by Onkelos into, “If seven generations were suspended for Cain, shall there not be seventy-seven for Lamech, his son?” The Targumist tried to convey in a limited number of words the doctrine expounded in the Palestinian Targs. and midrashic literature that God never punishes without offering an opportunity for repentance, and that during this period the sinner lives as it were under a suspended sentence.

The unlearned, to be sure, required still further clarification after listening to the “literal” type of Targ., but through his skillful choice of words, Onkelos provided teachers and preachers with material to which they could easily attach any additional commentary that they needed.

The midrashic, or fully paraphrastic, Targ. represented by the Palestinian variety may take two different forms. Either the Targumist appended a developed exegesis to every part of the scriptural account, or he selected a few key verses and enlarged on them without significantly altering the rest of the narrative. In the interpretation of the sacrifice of Isaac (Gen. 22:1-18), Pseudo-Jonathan testified to the former method. Neofiti, by contrast, chose vss. 8, 10, and 14, which no doubt originally inspired the midrash, and built on them an elaborate HAGGADAH.

**b. Targumic exegetical principles.** As has been stated, the primary purpose of Bible interpretation is to clarify obscurities, harmonize contradictions, and identify predictions. To achieve these aims, the exegete employs accepted principles of interpretation, a number of them devised to cope with philological or stylistic problems, and others to deal with more complex exegetical topics.

In the field of language, one obvious difficulty is posed by the use of a foreign word in the Hebrew text. “Babel” is one such term. The Bible itself contains a pointer to its meaning by ignoring its original Akkadian significance, “gate of the

deity," and expressing it by means of a vaguely similar-sounding Hebrew verb, *balal*, to confuse: "Because there the Lord confused the language of all the earth" (Gen. 11:9). Onkelos followed, and even improved on, the biblical pattern by choosing the corresponding slightly cleverer Aramaic pun, *balbēl*. The Palestinian Targs., on the other hand, introduced a more ordinary Aramaic term conveying the idea of mingling or mixing (*arbēb*), but concealing the fact that the original exegesis was construed on a play on words. Likewise, the Egyptian word uttered by heralds to announce the arrival of Joseph is explained in the Palestinian Targs. (Gen. 41:43) from the Hebrew, by a process called *notrikon*, the artificial division of a word into several parts which are then separately interpreted (see WORDPLAY IN THE OT §1). Thus, the Egyptian *abrek* (probably, "pay homage") is split into *ab* and *rek*, "father," and "tender," and the verse becomes: "Long live the father of the king, who is great in wisdom, although tender in years."

Other linguistic problems may spring from genuine textual corruptions; or they may be invented by the interpreter himself when, for religious reasons, he is unwilling to accept that the Bible may be formulating an archaic view; or they may derive from an elliptic phrase requiring supplementation.

Furthermore, it is common in the Targ. to replace symbols by the object symbolized. This type of conversion is often simple: seed=children, lion=king, etc. Sometimes it is more complex, as may be seen in the Targ. to Hos. 1:2.

*Hosea*  
Go, take to yourself a wife of harlotry and have children of harlotry, for the land commits great harlotry by forsaking YHWH.

*Targ.*  
Go and prophesy a prophecy about the inhabitants of the erring city who continue to sin. For the residents of the land err indeed away from the worship of YHWH.

The elimination of anthropomorphisms belongs to the same type of exegesis: "sons of God" become "sons of the judges" (Gen. 6:2); "YHWH came down"="the glory of the Shekhinah (Presence) of YHWH revealed itself" (Gen. 11:5). Apropos of the Targumic substitutes for the Tetragrammaton, especially *Sh'khina* (Presence) and *memra* (word), it has been recently argued that originally they were not used haphazardly, but fulfilled particular purposes, the former appearing in contexts of manifestation and divine residence, the latter in circumstances of speech and communication. They tended, however, to lose their special connotations and to be used in an indeterminate manner.

Geographical terms are either modernized or interpreted symbolically. Thus "Erech, Accad and Calneh in the land of Shinar" of Gen. 10:10 (Good-speed) are replaced in the Palestinian Targs. by, "Edessa, Nisibis and Ctesiphon in the land of Babel (or Pontus)." In the second alternative, a simple geographical description may be transformed into a detailed story, as in the Targumic exegesis of Deut. 1:1.

*Deut.*

These are the words that Moses spoke . . . in the wilderness, in the Arabah, over against Suph, between Paran and Tophel, Laban, Hazereth, and Di-zahab.

*Targ.*

These are the words that Moses spoke. . . . He reproved them because they sinned in the wilderness, and had angered [God] in the plain (*Arabah*), over against the sea of Reeds (*Yam Suph*); because they had scorned (*ittappalu*=*Tophel*) the manna (*Laban*=white) and had angered [God] in Hazereth on account of meat, and had made the golden calf (*Di-zahab*=that which is of gold).

One of the basic principles of all forms of Jewish exegesis is to assemble parallel passages and explain one with the help of the other. Pseudo-Jonathan follows this custom in respect to Exod. 21:7 by reinterpreting the old legislation of the Code of the Covenant, according to which Hebrew slave women were not granted emancipation in the sabbatical year, in the light of later scriptural rulings.

If a man, a son of Israel, sells his daughter, a minor, to be a bondmaid, she shall not go out as do the Canaanite slaves who gain liberty through [the loss of] a tooth and an eye (Exod. 21:26-27), but in the years of release (Deut. 15:12), through the tokens [of puberty], at the Jubilee (Lev. 25:40), the death of her master (Lev. 25:45-46) and through payment of money (Exod. 21:8).

A final Targumic characteristic concerns the interpreter's attitude to prophecy. When Pseudo-Jonathan explains that Balaam's description of the king of Israel as "higher than Agag" (Num. 24:7) refers to Saul's victory over the Amalekite king in question, he propounds an exclusively historical exegesis. Against this, Neofiti and the Fragmentary Targ. stress the messianic significance of the same words: "He shall be stronger than Saul, who showed mercy to Agag king of Amalek, and the kingdom of the king Messiah shall be exalted."

Here, as in many other instances, the interpreter advances a comprehensive view of history in which past and future are perceived at a single glance. The best example of this kind is afforded by Pseudo-Jonathan on Deut. 34:1-3, where Moses's contemplation of the Promised Land is transformed, through a combination of space and time, into a complete history and eschatology of Israel.

Moses went up from the plain of Moab to Mount Nebo, the high peak opposite Jericho, and the Word of YHWH showed him the mighty ones of the land: the acts of valor that Jephtha of Gilead would do and the victories of Samson son of Manoah of the tribe of Dan; the thousand officers of the house of Naphtali who would associate themselves with Barak, and the kings whom Joshua son of Nun of the tribe of Ephraim would kill, and the acts of valor of Gideon son of Joash of the tribe of Manasseh; and all the kings of Israel and the kingdom of the house of Judah who would rule over the land until the last Temple would be destroyed; and the king of the south who would associate himself with the king of the north to ruin the inhabitants of the land, and the Ammonites and the

Moabites, the inhabitants of the plain who would oppress Israel; and the exiles of the disciples of Elijah who would be exiled from the vale of Jericho and the exiles of the disciples of Elisha who would be exiled from the city of the palm trees by their brethren, the house of Israel, two-hundred-thousand men; and the affliction of each generation and the punishment of the wicked Armalgos (Armillos) and the battle of Gog; and in the time of this great tribulation, Michael would arise to save with his arm.

Bearing in mind the exegetical contents of the Targs. and their common teaching function in the weekly liturgy, we can safely reassert the widely held thesis that the main body of Targumic exegesis reflects the ordinary, nontechnical understanding of the message of the Bible current among Aramaic-speaking Jews in the first two or three centuries of the Christian era.

G. VERMES

**C. NT INTERPRETATION OF THE OT.** Interpretation of the OT in the church of NT times involved complex methods and processes only partly discernible to modern research, but there can be no doubt of the enormous and enduring effect of the OT on primitive Christianity.

**1. External data.** The NT contains over 1,600 citations of the OT and many more allusions to it. Among the direct quotations, 239 are introduced by formulas which usually underline their authority. It must be assumed that the appearance in early Christian documents of OT concepts, images, turns of phrase, and deliberate quotations is only the visible tip of an iceberg that profoundly influenced the sea of early church life and thought. Yet church use of the OT awakened controversy and occasionally outright repudiation (MARCION and certain Christian Gnostics), and some early Christian writings refer to it only rarely (e.g., I and II Thessalonians, Colossians, the Pastorals, the Johannine and Ignatian letters).

Unlike some sources behind the NT whose existence and character can only be matters of conjecture, the OT writings exist today in probably about the form or forms known to the first Christians. Generally the NT quotes the OT according to the LXX; but there are numerous departures from the LXX text, which may in particular cases stem from faulty recollection, intentional rewriting, or reliance on the MT, on other versions, or

on intermediate sources ("testimony books," etc.). See QUOTATIONS §1.

**2. Hermeneutics.** The historical question is not "What is there about primitive Christian interpretation of the OT that moderns can approve or appropriate?" but simply "What were the working principles and procedures of that ancient exegesis?" (see HERMENEUTICS[S] §§7, 9). The general principles and procedures cannot be understood in isolation from the specific religious interests directing the exegesis (see §3 below), but a number of interpretive approaches used in the early church can be identified and often related to contemporary (mainly Jewish) hermeneutics.

**a. General assumptions.** In Rom. 15:4, Paul declares, "Whatever was written in former days was written for our instruction, that by steadfastness and by the encouragement of the scriptures we might have hope." He thus expresses perhaps the most basic hermeneutical principle of the early church, viz., that the OT was written for the sake of the church. Further, its "instruction" is designed not merely to inform but to inspire confidence in the future. Finally, the passage suggests that scriptural study must be coupled with steadfastness, a divine gift bound up with faith in Christ (15:5, 13; cf. 5:1-5). Early Christian interpretation of the OT is typically a venture of faith seeking deeper understanding and conviction. The general attitude seems to have been that Jesus as the Christ opens up the true meaning of the OT, and it, in turn, offers a major path toward comprehension of Christ and the church (e.g., Luke 24:44-47; Ign. Phila. 8:2-9:2).

The exegetical methods of early Christianity must often have appeared dubious or arbitrary to non-Christians. Exegetes like Paul, however, claimed that authentic interpretation required the spiritual perspective of believers in Christ (II Cor. 3:14-17). Theirs was an aggressive, authority-claiming, pneumatic exegesis. The Jews were recognized as historical recipients of God's oracles, but the standard Christian view came to be that adherents of the synagogue misread their scriptures by failing to perceive that they bore witness to Jesus (John 5:39-47; cf. Mark 12:24).

An eschatological attitude prevailed in most early Christian exegesis, as Paul suggests in a comment on a Pentateuchal narrative: "Now these things happened to them (Israelites led by Moses) as a warning, but they were written down for our instruction, upon whom the end of the ages has come" (I Cor. 10:11; cf. II Cor. 1:20; 6:2).

**b. Particular methods.** In the light of the NT church's sense of existing "in the last times," its general tendency to regard the OT as a book of promises and prophecies "now" in the process of being fulfilled (e.g., I Pet. 1:10-12) is not altogether strange.

This "prophecy-fulfillment" schema finds vivid expression in direct NT statements that various events in the life of Jesus and the church were anticipated in the OT (e.g., Mark 1:2-3; Acts 2:16-21). A special group of eleven fulfillment quotations appears in Matthew (e.g., 1:22-23; 27:9-10), and a similar set of thirteen in John. These sets of citations are introduced by distinctive form-

ulas and characterized by an interpretive approach having important affinities with the midrash *pesher* attested in certain QUMRAN texts (e.g., IQpHab), where the text forms of OT passages are selected or altered to bring out the commentator's interpretation and those passages are conceived to be apocalyptically "fulfilled" in the days of the TEACHER OF RIGHTEOUSNESS and his community (see above §B1b; DEAD SEA SCROLLS §5a; DEAD SEA SCROLLS[S] §8). The apostle Paul also seems to shape his OT citations in *pesher* fashion in some instances (e.g., I Cor. 15:54-55). See MIDRASH[S] §5c, d.

Less direct use of the prophecy-fulfillment pattern is found in NT narratives that allude to the OT without quoting it. The first two chapters of Luke are outstanding in this regard (the hymnic materials are especially noteworthy; the Magnificat, e.g., powerfully recalls Hannah's song without ever directly quoting I Sam. 2:1-10).

A related exegetical approach that also presupposes a two-aeon view of history is TYPOLOGY, which correlates OT persons, events, or things with counterparts in the age of fulfillment. Some key instances connect Adam and Christ (Rom. 5:12-21; I Cor. 15:21-22, 45-49; probably Phil. 2:6-11), Melchizedek and Jesus (Heb. 7:1-17), Noah's deliverance and Christian baptism (I Pet. 3:21; see BAPTISM[S] §2f), Israel under Moses and Joshua, and the church under Jesus (I Cor. 10:1-13; Heb. 3:7-4:10). See MOSES IN THE NT[S].

It is difficult and quite likely illegitimate to make a sharp differentiation between typology and ALLEGORY as the latter is practiced in the NT church. Paul explicitly says that the story of Sarah and Hagar is allegorical (Gal. 4:24), signifying the conflict between law-bound Judaism and spirit-freed Christianity. Similarly, the singular "seed" promised to Abraham is identified with Christ (Gal. 3:16), and primeval words about marriage are judged a "mystery" concerning Christ and the church (Eph. 5:32). Allegory is not always related to crucial events of salvation history: Paul can say that Mosaic words apparently dealing with oxen really are meant to express God's concern for human ministers (I Cor. 9:8-10; cf. I Tim. 5:18). All such interpretations imply that a secret "spiritual" lesson underlies the OT text, but the hidden meaning is usually eschatological in character rather than oriented to a domain of timeless realities (as in the typical allegories of PHILO). The Epistle of Barnabas employs typology and allegory lavishly to extract an eschatological *gnosis* concealed in the Jewish Scriptures (e.g., 9:8-9).

A number of hermeneutic methods common in rabbinic literature are utilized in the NT. The technique of building an interpretation on a single detail in a text is seen in Mark 12:26, 35-37; John 10:34; Gal. 3:16. The practice of constructing a chain of OT quotations dealing with a single theme or term is well illustrated in Rom. 3:10-19; 10:18-21; I Pet. 2:6-8. The general rabbinic principle that scripture should be interpreted from scripture is practiced in Christian passages joining OT texts in intricate webs of elucidation. A fine example is Rom. 10:5-13, where Paul pits Deuteronomy against Leviticus and then introduces cita-

tions from Isaiah and Joel to draw out a firm conclusion about justification by faith. In this passage and in several gospel pericopes (e.g., Matt. 5:21-48; Mark 7:15), the truth of certain OT texts seems disputed or denied. More commonly, however, an early Christian writer sets OT texts side by side without questioning the validity of any, a procedure more in line with Pharisaic practice. Finally, whether early Christians heeded the rabbinic precept that scripture be interpreted with regard to original context is still a subject of controversy among scholars.

3. **Exegetical results.** Christians of the NT era used the OT for many purposes: to praise the God of Israel (using the Scriptures directly as a liturgical resource of the church), to think through religious and theological problems, to give depth to teaching within the church, to support positively the main points of missionary preaching, and to defend the *kerygma* against objections from both Jews and Gentiles. The exegesis was functional, generally aimed at affirming, clarifying, or defending beliefs about Christ and the church.

a. **Christology** (see also CHRISTOLOGY IN THE NT [S]). Early Christian images of Jesus as the bringer of SALVATION were very largely formed with OT materials. Many of the central christological titles were taken more or less directly from the scriptures: MESSIAH, SON OF MAN, SON OF GOD, son of David, the SERVANT OF THE LORD, the high priest, "the prophet."

Most of the christological references to the OT in the NT affirm or argue that Jesus is the Messiah; they do not seek to prove that God needed to send a deliverer or Messiah (perhaps that was widely regarded as self-evident). Presumably the matters most in need of scriptural explanation from the start were Jesus' death and resurrection (cf. Acts 17:3). This view is supported by I Cor. 15:3-5, which many scholars regard as substantially a pre-Pauline creed: here the parallel declarations that Jesus died "for our sins" and was raised on the third day are each accompanied by the phrase "in accordance with the scriptures." The passage neglects to specify any particular scriptural texts, but it at least implies that at a very early date the OT was used to express and perhaps explain Jesus' death and resurrection as in accord with God's salvation plan.

The NT regularly connects Jesus' resurrection with his exaltation as LORD and SAVIOR, and most of the OT passages cited in regard to the Resurrection bring out this soteriological orientation (e.g., Pss. 8:6; 68:18; 110:1).

Jesus' suffering and death must have early been a prime subject for Christian reflection and apologetic. Isa. 53, of vast importance in later Christian centuries, is oddly unused in much of the NT. The most clear-cut linking of that passage with an atoning view of the death is in a relatively late passage, I Pet. 2:21-25, although passages like Mark 10:45; 14:24; and Rom. 4:25 may reflect much earlier thinking along those lines. The passion narratives in the gospels offer a large number of OT quotations and allusions (especially to passages in the Psalms and in Zechariah); the result is, if not a full theory of atonement, at least a

powerful assertion that Jesus died by the predetermined will of God (cf. Mark 14:21a; Matt. 26:24a; Luke 22:22). The formation of the passion narratives (see PASSION NARRATIVE[S]) was probably marked by some historicizing of these OT "predictions" (i.e., events connected with Jesus' death were invented or modified to bring them into line with expectations based on the OT). In only a few other places in the NT is Jewish Scripture directly referred to in order to show the necessity or meaning of his death (see particularly John 3:14; Gal. 3:13; Heb. 9).

Major events connected with Jesus' birth, pre-Passion career, and ministry are also set forth as fulfilling OT prophecy, particularly in summary or programmatic statements (e.g., Luke 4:16-21; Matt. 8:17; 12:17-21). The OT is also used to articulate convictions about Christ's pre-existent roles in creation (Heb. 1:10-12) and salvation history (I Cor. 10:4; Heb. 11:26), as well as his future parousia (Mark 13:26; 14:62; Matt. 24:30; Luke 21:27; Matt. 26:64; Luke 22:69; Rev. 1:7; etc.).

Not the least christological contribution of OT interpretation may have lain in the area of enabling the church to affirm the uniqueness of Jesus as Savior while also maintaining a staunch monotheistic faith in a sovereign Creator (cf. I Cor. 15:25-28; Heb. 1:1-14; 2:5-13).

**b. Ecclesiology.** OT exegesis also had a decisive impact on the development of reflection on the church. In the act of claiming the OT as God's word for them, the earliest Christians identified themselves as members of God's chosen people, the true Israel (see ISRAEL, CONCEPTIONS OF[S] §4). They rapidly appropriated other OT descriptions for the church—e.g., children of Abraham, God's flock, the vine, the bride of the Lord (see CHURCH, IDEA OF). The critical implication was that the Christian movement was no merely human religious society (or loosely knit group of societies); the church was rather a unified community miraculously founded and sustained by grace (Rom. 9:6-33; Eph. 2:11-22; I Pet. 2:9-10). At the same time the OT could help the church recognize its imperfections, its liability to temptations and suffering (I Cor. 10:12-13), and its burgeoning history of success (Rom. 10:18), failure (Acts 13:41), and surprise (Acts 15:15-18).

OT study also gave the church primary impetus and guidance in formulating an interpretation of past salvation history (e.g., Acts 7:2-53; Gal. 3:6-4:3; Rom. 5:12-14). At the same time it helped the church define its sense of universal mission (e.g., Rom. 4:11-17) and its final eschatological hopes (e.g., Rom. 8:19-22; 11:7-36; the book of Revelation, which is saturated with OT allusions; etc.).

**c. Ethical responsibility.** The deontological emphasis of primitive Christian ethics is grounded in the OT attitude that man discovers his true being through submission to God's kingdom and will (Matt. 4:10; Luke 4:8). Jesus' summons to repentance and the calls of early Christian preachers for Christians to live out a radical trust in God as manifested in Christ echo the demands of OT prophets for inner transformation and trust (see,

e.g., I Cor. 1:31). The early church generally took over the OT moral law, above all the command to love one's neighbor as oneself. Apart from marriage regulations, however, the OT social, economic, and political teachings were usually ignored by Christians in the NT period. The cultic laws of the OT were by and large viewed as having been abrogated. OT personages were readily cited as moral examples, sometimes in extended haggadic homilies (Heb. 11; I Clem. 9-12). See also ETHICS IN THE NT and supplementary article.

**4. How OT interpretation developed.** In a vital sense, NT exegesis of the OT begins with the statements about scripture that the gospels attribute to Jesus. Severe critical problems arise when one attempts to determine whether these particular attributions are historically true. Since the communities that produced the gospels obviously studied the OT intensively in their efforts to understand Jesus, there is great difficulty in deciding where his scriptural interpretations end and those of the church begin.

Still, there is no reason to doubt that Jesus studied the OT closely, and in all probability it played a vital role in his teaching and deeply conditioned his sense of personal mission. Scholarship is sharply divided on the issue of whether early Christian exegesis of the OT was directly influenced by Jesus' interpretations. It is at least probable, however, that what early Christians thought Jesus had said on particular issues related to the OT (e.g., I Cor. 7:10) had a significant impact on their thinking.

**a. The question of intermediate sources.** Study of OT exegesis in the early church has uncovered some important indications of unity in interpretation. For example, early Christians cite certain scriptural texts with a frequency that can hardly be due to simple coincidence, and there is considerable unanimity regarding their interpretation (some of the most prominent texts are Pss. 2:7; 8:6; 110:1; 118:22; Isa. 8:14; Jer. 31:31-34).

No single collection of OT quotations ("testimony book") can have guided all or most of the exegesis found in early Christian writings. Yet, particularly in the light of discoveries of biblical florilegia at Qumran (especially 4QTest.; see §1aiv above), there is little reason to doubt that early Christians may have often worked and traveled with brief or lengthy collections of OT quotations. Copies of the entire OT cannot have been accessible everywhere. Probably, too, Christian exegesis was shaped to some degree by other kinds of documents or fixed traditional materials underlying the surviving documents of the NT age, particularly liturgical confessions or hymns (see LITURGICAL MATERIALS, NT[S]) incorporating OT references (e.g., I Pet. 3:18-22; Polyc. Phil. 2:1). Perhaps, too, the early church produced some extensive commentaries on OT passages resembling Jewish mid-rashes; such materials might lie behind John 6:31-58 or Rom. 4:1-22.

**b. Diversity despite unity.** While there are unifying features in primitive Christian OT interpretation, there are also remarkable differences in detail and in the general attitude toward the OT. Even where separate Christian authors cite the

same OT text, each usually gives it a unique nuance of meaning. Shifts in application occur, although the development of these cannot be charted with much probability. Christian exegetes follow no single party line in method or results; at most they are unanimous only in believing that the OT speaks of Jesus and the church.

Plainly the "workshop of early Christian theology" was one in which many different patterns of thinking were stimulated and guided by the Jewish Scriptures. Missionaries like Paul and the congregations with whom they communicated must have been occupied with ongoing exegetical explorations, sometimes with conflicting conclusions. There is evidence that several different "schools" or traditions of OT exegesis emerged in the church of the NT period.

Recent study of the gospels has emphasized their use of the OT as a major clue to the distinctive theological views of the evangelists and the traditions on which they rely (see REDACTION CRITICISM, NT[S]). MATTHEW, for example, lays consummate stress on Jesus as fulfilling the Mosaic law and the expectations of OT prophets. JOHN, if possible, gives even greater emphasis to Jesus' relation to the OT, but at the same time draws the hardest line in the NT between Jewish and Christian interpretations of the OT. Paul, perhaps the most ingenious and flexible among NT exegetes, cites the OT for a multitude of purposes; but he does so most characteristically and forcefully in declaring it a witness to a revelation of God's righteousness apart from the Law (Rom. 3:21-22; see TORAH [S]). The Letter to the Hebrews (see HEBREWS, LETTER TO THE) weaves a rich argumentative tapestry portraying Christianity largely with OT threads; yet the author regards the OT as containing revelation that is meaningless or obsolete apart from its witness to the New Covenant in Jesus' blood (e.g., 7:18-19; 8:6, 13; 11:39-40).

Modern scholarship has increasingly demonstrated that early Christian exegetes, despite their varied reservations about Judaism, owed much to the results and the methods of contemporary Jewish scriptural interpretation. The new religion's acceptance of the OT necessarily kept alive the issue of Jewish-Christian relations. Some church exegesis was polemically addressed to Jews; the "Pharisees" in the gospels may often symbolize the "synagogue on the other side of the street" offering alternative interpretations. Yet a considerable portion of early Christian scriptural study was also motivated by a desire to convert Jews, and tolerant biblical discussions may have sometimes materialized when proselytizing failed (cf. Just. Dial. 142).

**D. EARLY RABBINIC.** Biblical scholarship among the rabbis of Roman Palestine or Sassanian Babylonia was not cultivated in isolation from other activities in guiding the social, political, economic, cultural, and religious life of the people. In the synagogues where they preached, the law courts where they passed judgment, or the academies where they studied, the rabbis sought to uncover the timeless significance of Scripture by making it respond to contemporary issues and problems. They accomplished this by reading Scripture as if the meaning of its idiom were not limited to the ancient Near Eastern culture that produced it and by assuming that the pertinence of the biblical laws and message was not restricted to the historical situation they once actually governed and addressed. It was their exegetical task to permit Scripture to meet the needs and satisfy the diverse ideological, moral, and aesthetic sensibilities that had emerged in Jewish life and thought during the fateful turmoil of the period prior to and following upon the destruction of the temple in A.D. 70.

To animate Scripture with the same immediacy and self-evident freshness that it had possessed for their ancestors, the rabbis first needed to explain biblical *realia* and translate difficult or rare words into a simpler Hebrew or Aramaic. Since for linguistic purposes they considered the entire Bible a single unit, they often explained one passage in the light of another, e.g., the use of Isa. 31:5 (RSV "He will spare . . . it") to interpret Exod. 12:13 וַפְסַחְתִּי to mean "I will protect you" (RSV "I will pass over you"). They also had resort to Phoenician, Coptic, Syriac, and other languages to elucidate difficult terms in Scripture (see Lieberman, pp. 48-53).

**1. Oral Torah.** More complicated is their treatment of the customs and traditions already well established in Jewish life, but not explicitly mentioned in Scripture. In Antiq. XIII.x.6 Josephus reports that the "Pharisees had passed on to the people certain regulations received from their forefathers but are not recorded in the law of Moses" (see PHARISEES[S]). Rabbinic willingness to allow the "oral laws" to stand independently without seeking to supply them with a scriptural proof text is a characteristic of early exegetical activity, i.e., before A.D. 70.

Perhaps it was the rabbis' view of Scripture as a revealed, universally applicable prescription of God's unchanging, yet eternally normative will, together with the constant demand for new legislation and the need to refute the Saducean (and

later the sectarian and Christian) refusal to submit to their interpretations of Scripture, that led them to search for biblical bases, both for the old laws rooted in tradition and for the new laws they generated while governing the people. Although biblical literature itself could not explicitly account for Jewish life and thought as they had developed in Roman Palestine or Sassanian Babylonia, it became axiomatic in rabbinic exegesis that everything in Jewish life and thought could be shown to have scriptural warrant if only the scholar had mastered the "correct" methods of interpretation. "Search it (i.e., Torah), and search it, for everything is in it" (M. AB. 1.5). Especially after the destruction of the temple in A.D. 70, the task was to derive and deduce oral Torah from the written. It was the function of MIDRASH to produce these derivations and deductions.

**2. Hermeneutic rules.** The best known of the midrashic methods used by the rabbis to derive new laws from the (written) Torah and to find support for old ones stemming from the "oral tradition" are the seven rules associated with Hillel the Elder and their expansion into the thirteen rules of Rabbi Ishmael. Lieberman and others have explored the possible Hellenistic provenance of several of these methods. The seven rules are: (1) inference *a minori ad majus*; (2) inference by similarity of language in two different passages; (3) constructing a general principle on the basis of a single passage; (4) constructing a general principle on the basis of two passages; (5) the general and the particular, the particular and the general; (6) exposition by means of another similar passage; (7) deduction from the context. Rule 3, e.g., uses Deut. 17:2, 6 to establish that two or three witnesses are also required in the cases mentioned in Deut. 18:10; 22:22; and 24:7 (on the basis of the recurring idiom כִּי יִמָּצֵא, "if there be found"). Scholars are generally agreed that the rabbis used these and other methods only to create biblical support for already existing norms and practices. Hillel himself did not convince the Bene Bathyra by employing his exegetical ingenuity until he informed them that he was merely transmitting the traditional law as he had learned it from his teachers. Indeed the range of rule 2 is severely limited by the rabbis, who permit its use only in the case of a well-established law.

**3. Akiba and Ishmael.** The classical period of midrashic activity is that of Rabbi Ishmael and Rabbi Akiba. In the second century these two scholars, together with their colleagues and disciples, perpetuated and perfected the means by which Johanan ben Zakkai had reconstructed and consolidated Jewish life after the destruction of the temple. It is largely to Akiba that we are indebted for what Heinemann has termed "creative philology" and "creative historiography," or what Moore has described as "atomistic exegesis, which interprets sentences, clauses, phrases, and even single words, independently of the context or the historical occasion" (vol. I, p. 248). As Goldin states: "Not a curlicue, not a peculiarity of the biblical text was devoid of higher meaning to the man. Conjunctions, particles, repetitions were to him sources of most significant implication. Protest as

his notable colleague Rabbi Ishmael might, that Torah must be interpreted only by means of established hermeneutic rules, that Hillel's formulas plus a few more were all that was needed, that many peculiarities of Scripture were no more momentous than similar peculiarities in human speech, Akiba persisted in his own course" (p. 157).

A single passage (T.B. Sanh. 64b) will illustrate both Rabbi Akiba's method and Rabbi Ishmael's opposition. Interpreting Num. 15:31 ("that person shall be utterly cut off," הַכֹּרֵת הַכֹּרֵת), the Talmud takes the absolute infinitive to mean that the idolator "shall be cut off in this world" and the finite verb to mean that he shall be cut off "in the world to come." This is Rabbi Akiba's view. But Rabbi Ishmael said: "But the previous verse (Num. 15:30) has already stated that 'the person shall be cut off.' Are there then three worlds?" Rabbi Ishmael proceeded to use the phrase from vs. 30 to refer to being cut off from this world, and the infinitive from vs. 31 to refer to being cut off from the world to come. As for the repetition of the finite verb, Rabbi Ishmael invokes the principle that the "Torah speaks in the language of man," by which he means that Rabbi Akiba should desist from deriving matters of law from mere stylistic embellishments in scriptural syntax. Epstein identifies no less than thirteen major differences between the exegetical methods employed by Rabbi Akiba and his school and those exploited by Rabbi Ishmael and his school (pp. 521-36).

In accounting for their divergencies, some scholars, e.g., Finkelstein, point to the social and economic interests represented by each school. In his view, Rabbi Ishmael was "pro-agrarian, pro-patrician, and pro-property" (p. 167). Rabbi Akiba, by contrast, represented the plebeian class. Other scholars, most notably Heschel, correlate their exegetical tendencies with theological presuppositions and religious typologies, identifying Rabbi Ishmael as the sober, rationalistic thinker, and Rabbi Akiba as the theocentric, almost mystical visionary.

**4. Haggadah.** Compared to the exegetical methods by which the rabbis adjusted legal material to contemporary life, their treatment of the non-legal portions of Scripture is marked by a dramatically larger measure of freedom and imagination. The same rabbi may offer any number of interpretations of a single verse, thereby illustrating the rabbinic view that Scripture possesses a multiplicity of meanings, as long as the verse in question is not a legal one, i.e., a matter of halachah (law). In Rabbi Ishmael's school, Jer. 23:29 was understood to mean that just as a rock "is split into many splinters, so also may one biblical verse convey many teachings" (T.B. Sanh. 34a). Even the so-called thirty-two hermeneutic rules of the Haggadah (nonlegal material) reflect less a set of methodological controls than a summary of the most widely applied rhetorical devices for interpreting biblical narratives or poetry. Among these methods are reading Scripture symbolically or allegorically; paronomasia; *gematria* (computing the numerical value of words); cryptography (sub-

stitution of letters according to a set pattern); *notrikon* (individual letters of a single word are taken as the initial letters of other words, i.e., acrostics); and anagrams (cf. Lieberman, pp. 68-82; WORDPLAY IN THE OT[S] §1). Moreover, Ginzberg's *Legends of the Jews* clearly shows that the rabbis borrowed vast amounts of foreign folklore, which they utilized in describing various biblical figures and situations. Anachronisms and outright fabrications also abound in midrashic literature.

In every case something in Scripture itself, or the occasion on which it is read, and the other biblical texts that are read with it trigger and justify the commentary supplied by the rabbis (see LECTONARY CYCLE, RABBINIC[S]). A seemingly superfluous word in Scripture, the juxtaposition of sections, an apparent contradiction, the order of words in a sentence, even the spelling of a word, all underlie many a rabbinic homily. For the rabbi, what the Bible means is inseparable from how it means. Gen. 6:9, e.g., teaches that Noah was a righteous man, blameless or perfect in his generation. Reading Scripture through rabbinic eyes uncovers an ambiguity in the words "his generation." Either it suggests that he would not be blameless had he lived in any other age or it means that his righteousness is all the more noteworthy for he was blameless despite the moral standards of his time (T.B. Sanh. 108a).

When a midrash weaves Deut. 6:20-25; Exod. 12:26-27; 13:14; and 13:7 into a sermon about a father's obligation to recount the Exodus to his children by assigning the verses respectively to a wise son, a wicked one, a simple-minded one, and one who lacks the ability to inquire at all; or when it discovers in the abrupt style of Exod. 6:1-4 a dialogue between God and Moses in which the prophet convinces God to shorten his name so that the people will not be burdened by anxieties over their future fate (T.B. Ber. 9b); or when it justifies the apparent superfluity of Gen. 22:2 in identifying Isaac by reference to God's concern for Abraham's psychological reaction to the command; or transforms Gen. 4:13 into an audacious challenge of God's mercy by reading it as a rhetorical question rather than as a declarative statement of Cain's confession; rabbinic literature signals an acute literary and aesthetic sensibility born of an unsurpassed intimacy with Scripture and a heightened moral awareness of man's nature. Midrash haggadah reflects the rabbinic recognition of and response in kind to the characteristics of biblical literature: "certain parts brought into relief, others left obscure, abruptness, suggestive influence of the unexpressed, 'background' quality, multiplicity of meanings and the need for interpretation, universal-historical claims, development of the concept of the historically becoming, and pre-occupation with the problematic" (Auerbach). As a creation of Hellenistic culture, midrash haggadah also emerges as the Bible rewritten to conform in many respects with Auerbach's Homeric basic type, i.e., that style which favors "fully externalized description, uniform illumination, . . . all events in the foreground, displaying unmistakable meanings."

Even this does not exhaust the richness and

complexity of the Haggadah. There is the esoteric midrashic activity based on the opening chapters of Genesis, the chariot visions of Ezekiel, and the theosophical rendering of the Song of Songs; discussions of doctrinal and creedal matters, including those concerning the pre-existence of Torah, the name of the Messiah, etc.; and various attempts to find in Scripture predictions of "future events" which the interpreter knew had already taken place either in biblical or postbiblical times, as well as considerable attention to eschatological speculations based on Scripture. And there is still more: cosmological and scientific asides on a wide variety of subjects; theological discussions concerning the phenomena of prophecy and revelation; and debates on the nature of interpretation.

Early rabbinic interpretation was collected in anthologies, recorded in the Talmuds, and embedded in the liturgy of the synagogue. It was cited as authoritative in medieval Jewish exegesis, was influential in Christian and Islamic literature, and is relied upon in contemporary scholarship. There is no gainsaying its genius and its continued influence.

V. P. FURNISH

**F. MEDIEVAL JEWISH.** The prime interest of Jewish scholars in the period after the canonization of the Bible was not so much in the written book as in the oral law, the HALACHAH, i.e., the legal conduct of the way of life as derived from biblical sources. Their purpose was to find authority for the rules and teachings of Judaism. There was little concern with free interpretation or the original meaning of the text. Simultaneously, however, the HAGGADAH, homiletic exposition, flourished.

The interpretation of the Bible in the Middle Ages encompassed linguistic studies, philosophical explanations, and homiletic expositions. The linguistic evaluation of the text and context was objective; the other modes were more subjective and even dependent upon current notions.

**1. In the Eastern Mediterranean.** Islamic culture and the Arab conquests soon opened new vistas. In imitation of Moslem study of the Koran and the prevailing interest in philosophy and poetry, biblical research expanded to include the reconciliation of philosophical thought with traditional teachings and the portrayal of the poetic and aesthetic contents of the Bible.

**a. Karaites.** The Karaite sect, by rejecting the Talmud and pursuing the dictum "search the Scriptures diligently," helped extend freedom of interpretation still further. Among the outstanding Karaite authors were Anan (ca. 770), Benjamin Nahawendi (ca. 830), Judah the Persian, Hivi al-Balkhi (ca. 880), Salmon ben Yeruham, Sahal ben Masliah, Daniel al-Qumisi (ca. 900), al-Kirkisani, Japheth ben Ali, and Eliyahu ha-Melammed.

**b. Saadiah.** The Rabbanites made every effort to offset the vast Karaite research by promoting their own investigations. The outstanding Rabbanite protagonist, who set the course for the Judeo-Arabic scholars and may be regarded as the founder of the philosophical and philologic schools, was Saadiah Gaon (882-942). His translation of the Bible into Arabic, which removed all anthropomorphisms, and was free from literalism, stimulated the study of later scholars. He wrote short and long commentaries for the laymen and for the learned, and in special introductions explained the purpose of each book and the incidents it contained, seeking particularly to reconcile apparent contradictions. He commented profusely on biblical passages in his philosophical tome *Emunot ve-De'ot*, finding in the Bible support for his concepts of theology and demonstrating thereby that Torah can be explained in rational terms. To him

there were essentially three authorities for the basis of exegesis: reason, tradition, and Scripture itself. His translation, *Tafsir*, is still read in its original by Oriental Jews.

Saadiah's methodology was carried on by Samuel ben Hophni, the last Gaon of Sura (ca. 1000). He was more literal than his predecessor in his translation, though he endeavored to interpret such incidents as Jacob's wrestling with the angel or the speech of Balaam's ass as being only dreams. Only fragments of his works survive.

**c. North Africa.** Soon the scene of biblical research shifted to Africa, to Kairawan (Tunis). The philosopher Isaac Israeli (ca. 950) wrote an Arabic commentary on Genesis. Judah ben Koreish, the grammarian, drew on Targumic insights and revived the Talmudic adage, "The Torah uses human forms of speech." The Talmudists Hananel ben Hushiel and his contemporary Rabbi Nissim (ca. 1000) coupled midrash with their scope of exegesis. Fragments reveal their concern with explaining the Jewish calendar on the basis of Exod. 12. See MIDRASH[S].

**2. In Spain.** Activity in biblical research abounded. This community at first was dependent for its traditions on the Babylonian Gaonate, and Palestinian Jewry had little impact on Spanish culture. After the Gaonic period Spanish Jewry attained critical independence. Great interest developed in poetic writing, utilizing biblical prose and poetry as the criterion. The poet thus had to be both philologist and exegete.

**a. Philological studies.** The basic biblical study in Spain was in philology, grammar, lexicography, syntax, analysis of uni-, bi-, and tri-literal roots, accentuation, classification of nouns, conjugation of verbs, determination of antonyms, synonyms, and homonyms, and evaluation of the consonants. Such probing resulted at times even in ignoring the Masoretic text or in suggesting textual emendations. Menahem ibn Saruk (910-970), who discovered the parallelisms in biblical verse, expanded his scientific investigation in his dictionary *Mahberet*, written in Hebrew. He was severely criticized by his contemporary Dunash ben Labrat (920-990). Their debates heightened interest in Hebrew grammar and provided the tools for future exegetes eager for the correction of misinterpretations resulting from lexicographical errors. Their work was also continued by Judah ben David Hayyuj (ca. 1000), who set up the standards for the fixing of the consonantal nature of the verb and its root. These endeavors were also promoted by Jonah ibn Janah (ca. 1000), who demonstrated in his *Sefer ha-Rikmah* over two hundred textual omissions and interchanges of letters in the Scriptures. He formulated the syntactical laws of biblical Hebrew in his lexicon of roots, *Sefer ha-Shorashim*, thereby removing guesswork in rhetoric and lexicography. He likewise did not hesitate to set tradition aside in favor of the natural and literal sense of the text. Moses ben Samuel Gikatilla (d. 1080) was the first to suggest the lateness of some Psalms and also to indicate a Deutero-Isaiah from ch. 40 on. He is also remembered for his translation of earlier scientific works from Arabic into Hebrew. He endeavored to show that

the prophets spoke of their own times and not of the messianic era, and that the biblical miracles are to be explained rationalistically. Judah ibn Balaam (d. 1090) similarly contributed to the understanding of Hebrew accents and philology. Most of the early Arabic writings were lost but are mentioned by Abraham ibn Ezra (1092-1167) and David Qimhi (see §3b below). Only in the last generation have scholars published fragments of these compositions.

Their scientific biblical investigation was primarily directed toward finding the sense of a passage without sacrificing the inviolability of the received text. Textual "corruptions," ellipses, word or sentence sequences, vocalization, haplography, omissions, or substitutes were rationalized on the basis of the Talmudic rules for hermeneutics and exegesis as set by the tanna, Rabbi Eliezer ben Yose ha-Gelili (second century).

Comparative studies of languages also were undertaken. Saadiah had already used this methodology to explain *hapax legomena*. The Karaite lexicographer David ben Abraham al-Fasi had employed Persian, and Judah ben Koreish had probed the similarity in vocabulary and the grammatical formations and rules of Hebrew and Arabic. Textual criticism in the modern sense was unknown.

**b. Ibn Ezra.** One of the most versatile of biblical commentators was Abraham ibn Ezra (1092-1167), who also engaged in poetry and philosophy. His method, combining scientific investigation and traditional interpretation, led him to probe every text according to verse context, grammar, philology, and simple literal meaning. He demonstrated boldness and critical independence in a biting and curt style, and he opposed allegorical interpretations, any full reliance on midrash, or even the introduction of unnecessary secular learning. He also disdained the Karaite mode of explaining Scripture by ignoring tradition. His commentary is in substance a condensation of the achievements of the past, making this knowledge available to scholars in France and Germany (see §3 below). In addition, he wrote several books, including an outline of grammar, and dealt specifically with explanations of the vowel system.

A relative, Moses ibn Ezra (d. 1139), studied the poetry of the Bible from an aesthetic point of view, stressing its artistic expression of the human spirit. Similarly, Solomon ibn Gabirol (1021-69), the poet and philosopher, is said to have written a commentary on the Pentateuch in an allegoric mystic fashion, portraying Adam, Eve, and the serpent as symbols of the rational, animal, and vegetative souls, respectively. These writings have now been lost, but are referred to by later medieval authors.

**c. The Bible and philosophy.** Another aspect of biblical interpretation may be found in the works written to reconcile revelation and reason. Bahya ibn Pakuda (ca. 1000), Abraham ben Hiyya (1065-1136), and Joseph ben Zaddik (d. 1149) are among those who included explanations of verses in their philosophical expositions. Judah Halevi (1086-1141), on the other hand, in his *Kuzari* emphasized the fundamentalist approach against the rationalistic. He held that nothing in the Bible

contradicted that which is manifest, and that Scripture is to be interpreted only according to tradition and historical experience. Philosophical truths are to be uncovered in the text; allegory is to be spurned.

Another philosophical commentary was by Levi ben Gershom (1288-1344), who sought rationalism but indulged in astrology. He even introduced a mystic vein to most of the Bible text, stressing the moral lesson derived from it.

**d. Maimonides.** The outstanding philosopher of the age was Moses ben Maimon, or Maimonides (1135-1204), whose *Guide to the Perplexed* is full of biblical quotations, utilizing antonyms and homonyms as part of his philological-philosophical exegesis. His major concern was to promote reason, and so he read Aristotelian metaphysics into Scripture. He maintained that the Bible utilized all of the resources of human language, including metaphors and figures of speech to convey meaning. Prophecy is explained in terms of psychic experiences, and in Scripture there is both exoteric and esoteric meaning. In his code book, the *Yad*, he derived the halachah from the direct interpretation of Scripture.

**e. Nahmanides.** One who blended the secular scholarship of Spanish Jewry with the religious learning of the French rabbis (see §3 below) was Moses ben Nahman, or Nahmanides (1194-1270). He sought to reconcile the traditional rabbinic interpretation and the plain sense of Scripture in order to demonstrate the rationale of rabbinic precepts. Yet he severely rebuked the rationalism of ibn Ezra (see §b above). He also combined a mystical approach and Cabalistic insight with his rabbinic and philological analysis.

Following Nahmanides was Bahya ben Asher (d. 1340), who explained verses in four ways: midrashic, philosophical, mystic, and by use of the literal meaning (*peshat*). Much of his commentary was borrowed from his predecessors. Jacob ben Asher (d. 1340), on the other hand, based his interpretations on the numerical value of the consonants (*gematria*; see WORDPLAY IN THE OT §1). Also of importance from this era are the commentaries of Simeon ben Zemah Duran in the spirit of *peshat* and the homiletic interpretations by Isaac Arama (ca. 1490). The Tibbon family, by translating many medieval Arabic texts into Hebrew, contributed to better comprehension of the Bible. The Talmudic studies of Menahem ben Solomon Meiri (1249-1306) and the works of Joseph ibn Kaspī (1280-1340), who quoted ibn Ezra in his glosses, demonstrated particularly how, even in rabbinic research, biblical exegesis was not ignored.

**f. Abarbanel.** The last of the Spanish-Jewish exegetes was Don Isaac Abarbanel (1437-1509), who opposed the rationalism of Maimonides and the notions of Levi ben Gershom. He shunned Cabalah (see §3c below) and the methodology of the philosophical, allegoric school. He also avoided philologic and grammatical probings, devoting more attention to the biblical contexts by writing prefaces and excursuses on the dates and historic nature of events. He utilized contemporary social and political patterns to explain the Bible. In ad-

dition, perhaps because of the turbulence of the era, he wrote messianic tracts and strenuously refuted those who found Christian messianic teachings in the Bible.

3. **In France.** Unlike Spain, where topical, philological, and philosophical issues were stressed, there was little interest in secular studies in France. Above all, the basic rabbinic traditions were cultivated there, and the major activity was in Talmudic pursuits. The earlier rabbinic and mid-rashic homiletic explanations were used profusely. In their attempts to give the student a clear understanding of the literal meaning in the text, the scholars drew on the writings of Menahem and Dunash for knowledge of grammatical forms (see §2a above). N France was influenced by the German Talmudists, and S France by the Spanish teachers. Thus geographic influence is evident in the resultant modes of *derash* (homiletics) and *peshat*.

Menahem ben Helbo was one of the first French commentators to stress *peshat*, but he had little feeling for grammatical nuances. Another was Moses ha-Darshan (the Preacher) of Narbonne (eleventh century) whose forte was homiletical exposition. Gershom ben Judah, known as the "Light of the Exile" (ca. 1000), and Joseph Bonfils were primarily concerned with copying Masoretic lists and transmitting the correct readings.

a. **Rashi.** From these precedents the most prominent of biblical commentators, Solomon ben Isaac, called Rashi (1040-1105), emerged. He utilized both *peshat* and *derash* to produce a full running commentary by word and verse, while recognizing the differences between biblical and rabbinic linguistic style. Conciseness was his special quality. Depending much on his predecessors, he also followed closely the Aramaic translation of Onkelos in the Pentateuch and that of Targ. Jonathan in the Prophets. He did not hesitate to employ current French expressions to clarify a text. Basically, his approach was rabbinic, and he viewed the text with a literal simplicity. His dictum was that the biblical text does not depart from its plain meaning (based on T.B. Shab. 63a). Because of the popularity of his commentary, it was the first Hebrew book printed in Italy in 1475, and through the work of Nicolas of Lyra and the school of St. Victor, Rashi's work later influenced Martin Luther's German translation of the Bible, as well as the King James version. See INTERPRETATION §2d; §G3c below.

The French school of biblical commentators followed Rashi's synthetic methodology closely. His disciples, Joseph Kara (1113-40) and Shemaiah, added to their master's work. The grandson of Rashi, Samuel ben Meir (called Rashbam), especially encouraged simplicity by his interpretations. At times he disagreed even with rabbinic tradition. He also noted that his grandfather had sought to rewrite his commentary with more clarity, because new insights arise daily. Moreover, the growing christological interpretations of that period necessitated more careful literal explanation of questionable texts.

In the subsequent era anthologies of commentaries were compiled by scholars of the Rashi

school known as Tosafists (from *tosefet*, addition); these eclectic comments are generally included in a work known as *Hadar zekenim*. Outstanding among the Tosafists was Rabbi Joseph ben Isaac of Orleans, known as Joseph Bekhor Shor (twelfth century). His perspective was rationalistic; he used the vernacular; and he reduced biblical miracles to natural phenomena (for example, he explained the pillar of salt of Lot's wife as an encasement of lava that overtook her). He also opposed the use of allegory, explained away anthropomorphisms, refuted christological notions, and interpreted the Bible in terms of social conditions. As the last important representative of *peshat*, he also commented on the duplicate accounts found in the Pentateuch.

b. **Qimhi.** The Spanish commentators wrote in Arabic. The new literary activity in France used Hebrew and also made translations into the vernacular. The Qimhis (thirteenth century), were the most prominent writers. David Qimhi's extensive commentary presented the literal meaning, yet was permeated with rabbinic lore. Like his father, Joseph, he dealt with the *qere-kethibh* (see QERE-KETHIBH[S] §8b). His commentary on Psalms, because of its polemics against Christian exegesis, was one of the first Hebrew books to be published, though with many deletions.

c. **Other schools.** The di-Trani family (ca. 1200), although immersed in Talmudic investigations, was also concerned with philology and emendations, in addition to the traditional approach, as evident in a commentary on the book of Judges. Another synthetic work wherein the chronological aspects were evaluated was prepared by Tanhum of Jerusalem, one of the last authors of this era.

Exegesis may also be noticed in the holiday liturgy, where the *payyetanim* (poets) paired biblical verses, demonstrating thereby their own research. As a result, later exegetes referred back to them to substantiate their own interpretations of the Bible.

Despite the tendency to literalism in interpretation, interest in midrashic collections never waned, as is evident in the emergence of an anthology known as *Yalkut Shimoni* (thirteenth century). Similarly, the appearance of the Zohar as a running mid-rashic commentary stimulated mystic lore, and Menahem Recanati (fourteenth century) drew from it to write his Cabalistic work.

The accepted tendency throughout was to encourage interpretation on the basis of *pardes*, a mnemonic which included a fourfold approach: (1) *peshat*, literal, plain sense; (2) *remez*, allusion or allegory; (3) *derash*, homiletics; and (4) *sod*, secret, mystical sense.

Modern scholars have now recognized their indebtedness to these medieval traditional Jewish commentators. Their early contributions have paved the way for present-day scientific biblical investigations and research.

**G. MEDIEVAL CHRISTIAN** (from Jerome to the end of the fifteenth century). The period is marked by the development of literal interpretation, with its emphasis on the importance of the direct and original meaning of the biblical text, and by the study of Hebrew and the consulting of Jews in the search for a more complete understanding of scripture. Literal interpretation, however, forms only a part of the vast spectrum of medieval interpretation.

1. **Jerome.** Jerome (ca. 347-420) drew the material for his exegetical works from many different sources (see also LATIN VERSIONS[S] §2b). As a young man he studied the classics at Rome; he attended lectures in Antioch, and thus he was acquainted with the principles of that exegetical school; he was also influenced by the Alexandrians and frequently quoted Origen; and finally, when he was about thirty years old, he began to learn Hebrew from a converted Jew. His literary ability caused Pope Damasus to ask him to undertake a revision of the Latin text of the NT of which there existed "almost as many versions as codices." For this revision, which much later (in the sixteenth century) was to become known as the Vulgate, Jerome used what he himself calls "ancient" Greek MSS. After settling with his small community in Bethlehem (385), he continued his work of collating and revising the text of Scripture. With the help of Origen's Hexapla, he revised the existing Latin version of the books of the Hebrew canon, which was originally based on the LXX. In all his OT studies Jerome shows an implicit faith in the Hebrew text, the *Hebraica veritas*, as he calls it.

Jerome was not a systematic thinker, and he did not compose a formal treatise on the interpretation of Scripture. Occasionally he refers to a threefold interpretation, but, in general, exegesis for him is divided into literal or historical interpretation and spiritual exposition, also called tropology or anagoge. According to him each of these senses requires the other, the spiritual developing naturally from the literal. But while the literal sense gives the interpreter no liberty, "tropology is free and is limited only by these laws. It must yield a pious meaning, keeping close to the language of the context and must not violently conjoin really disparate matters" (PL XXV, 1281D-1282A). During the course of his life Jerome moved further and further away from the fanciful allegorical exposition as put forward by Origen; in his last unfinished commentary, that on Jeremiah, spiritual interpretations are comparatively rare. Apart from his biblical commentaries, Jerome's works most

used by later exegetes are: *Liber de Nominibus Hebraicis*, a collection of interpretations of all the proper names of both OT and NT; *Liber de Situ et Nominibus Locorum Hebraicorum*, a geographical dictionary of towns, mountains, rivers, and other relevant names occurring in the Bible; *Liber Hebraicorum Quaestionum in Genesim*, a book of explanations of selected passages, and of corrections of faulty opinions about the Hebrew text in the Greek and Latin codices.

Jerome, with his interest in the literal interpretation of Scripture, especially the OT, and his discussions with Jews concerning their explanations, was very much an exception. The great majority of interpreters concerned themselves primarily with the typological meaning of Scripture, where the events and personalities of the OT foreshadowed those of the NT, where the church stood for virtue, the synagogue for vice. (See also CHB, II, 80-101.)

2. **The fifth-eleventh centuries. a. Gregory.** From the fifth to the eighth century it was in the monasteries of western Europe that Bible study and interpretation took place. The main aim of the monk, apart from leading a holy life, was the contemplation and understanding of Scripture, and while he grew in purity of heart, he increased his perception of the spiritual senses. It is hardly surprising therefore that in this atmosphere the main stress in exegesis fell on allegory, i.e., on the discovery of the hidden, spiritual meaning of the text.

The master of spiritual interpretation was undoubtedly Gregory the Great (d. 604). Many of his biblical works (commentaries on Job, Ezekiel, Kings, and the gospels) are based on sermons and lectures to clergy and laity. His famous comparison of interpreting Scripture to erecting a building was frequently quoted in the Middle Ages. First, according to Gregory, we lay the historical foundation; next we steady our faith by pursuing the typical sense; and, lastly, by the grace of moral teaching, we color the whole structure. For him the whole of Scripture, OT as well as NT, is really concerned with one subject only: the revelation of God in Christ. Everything in the Bible is inspired; therefore its deeper spiritual meaning should always be sought beneath the letter. But this search does not for Gregory take the form of theoretical speculation; above all he was a practical man and a moralist, who finished his sermons on Ezekiel while a barbarian army stood before the gates of Rome. "We hear the words of God," he said in his *Moralia in Job*, "when we act upon them." And also: "Throughout Scripture God speaks to us for this purpose alone, to lead us to the love of himself and of our neighbour."

In the latter half of this period many reference books were produced, for example the *Etymologiae* of Isidore of Seville (d. 636), a kind of encyclopedia based on Scripture which became very popular with later commentators. We also find many so-called florilegia, collections of extracts from the Bible with their interpretations.

**b. The Carolingian revival (ninth-eleventh centuries).** In the second half of the eighth century, at the beginning of the Carolingian era, we see a

renewed, though not particularly original, exegetical activity in the monastic and cathedral schools. Some of the best-known commentaries of the period are those of Rabanus Maurus, but they are mainly a compilation of the writings of the Fathers and Gregory. Also of importance is the revision of the text of the Vulg. which Alcuin undertook on request of Charlemagne, and for which he made use of ancient MSS. (For an extensive discussion of this text, see *CHB*, II, 133-40.) Two features of the Carolingian revival, however, did influence the development of later medieval exegesis. First, an interest in linguistics, based on a concern for the correct text of the Bible, with a few attempts here and there to learn Hebrew; second, a "questioning" of obscurities and contradictions in the patristic authorities, which gave rise to the production of many collections of so-called *Quaestiones*.

3. The twelfth-fifteenth centuries. a. **Victor.** Toward the end of the eleventh century we find a revival of Bible study in cathedral schools such as Chartres and Laon. In the latter the brothers Anselm and Ralph taught. The most famous product of this school is the Gloss (*Glossa Ordinaria*), which can be best described as a text of the Bible in which extracts of patristic and earlier medieval commentators are written in the margin or between the lines. The Gloss soon gained popularity, and it became the standard work of reference for interpretation.

Until the second half of the twelfth century the Bible, with its various aids of study, was the only set book in the schools. The growing interest, however, in science and pagan philosophy made a wider frame of reference necessary. Books of sentences came into being in which opinions or weighty statements on theological questions of the schoolmasters were collected. The most authoritative collection, the *Liber Sententiarum*, was compiled by Peter Lombard, ca. 1150; it covered the whole field of theology as it was then taught.

The most important Paris school in the twelfth century was undoubtedly St. Victor, a house of canons regular under master Hugh (d. 1141). Hugh was a deeply religious person, a mystic, but a scholar too. Before embarking on the study of the Bible he advised his pupils to acquire a wide knowledge of contemporary science: "Learn everything; you will find nothing superfluous; a narrow education displeases." Then, when progressing to Scripture, the student should start with the literal, historical sense. For Hugh this was so vital, because he saw biblical history as reflecting God's handling of events. History thus becomes history of salvation (*historia salutis*). Therefore, according to him, in order to understand this deeper meaning of the events mentioned in Scripture, the student ought to come to grips first with the basic, literal sense. And on this knowledge he can then base his allegorical interpretations. In stressing the fundamental importance of the letter of the biblical text, Hugh reacted strongly against an uncritical use of allegory which was all too common in his days:

The mystical sense, is in the first place gathered from what the letter suggests. . . . [But some say:] "We do not care for the letter, we teach allegory." But how

can you read Scripture and not the letter? . . . "The letter," they say, "means one thing according to the literal sense, another according to the allegorical. Lion, for example, is according to the historical sense a beast, but allegorically it means Christ. . . ." But I ask you, who approves of this, why lion means Christ? Perhaps you answer, as one should in such a case when the meaning has been derived from a likeness: "because a lion sleeps with open eyes," or something like that. Thus a lion signifies Christ because he sleeps with open eyes! (PL CLXXV, 13A-C).

Allegory, according to Hugh, should be based on facts as narrated in Scripture, not on single words taken out of their context. Having mastered the historical and allegorical sense, Hugh then lets his pupil progress to tropology, which will lead him away from knowledge to meditation and contemplation of the works of God.

Hugh put his ideas concerning the literal sense into good practice. He compiled two chronicles and a map of the world in order to facilitate the understanding of historical and geographical references in the text. And, more important, he made an attempt to learn Hebrew, the results of which can be found in his *Notulae*, a collection of literal interpretations on parts of the OT, in which there are a number of references to the Hebrew text and Jewish explanations. See also INTERPRETATION §2d.

His pupil Andrew (d. 1175) followed his master's footsteps in that he too studied Hebrew and concentrated exclusively on the literal interpretation of the OT. In doing so he claimed to have used as his sources, first, Jerome, then what his own studies had shown him, and lastly whatever information he could gather from contemporary Jews. However much he may at times seem to have been influenced by Jewish exposition, he used their interpretations only as aids for understanding the literal sense of Scripture and never had any intention of denying its deeper spiritual meaning. This has not always been sufficiently appreciated.

By stressing the importance of a knowledge of Hebrew for a scholarly understanding of the text of the OT, and by his consistent references to Jewish interpretation, Andrew opened up a whole new field of biblical studies which was soon to be integrated in the curriculum of the Paris schools.

b. **The masters of the biblical-moral school.** In Paris three masters continued to work out the Victorine program: Peter Comestor (d. 1179), Peter the Chanter (d. 1197), and Stephen Langton (d. 1228). They had in common a lively interest in biblical studies and in practical moral questions. Peter Comestor, so called because he had "eaten and digested" the whole of Scripture, made a compendium of sacred history, the *Historia Scholastica*, which became a standard textbook. All three masters left glosses on both the OT and NT. In their expositions they were much concerned about what should and should not be included in the literal sense; on the whole they decided that whatever was in the writer's mind belonged to the literal sense. For example, Num. 24:17, "A star shall come forth out of Jacob, and a scepter shall rise out of Israel," can, ac-

ording to Langton, be taken literally as referring to Christ. It is interesting to note that later he gives the spiritual interpretation; allegorically the star is the Blessed Virgin, the scepter her son; tropologically the star is the light of good works, the scepter the chastisement of conscience. In spite of their interest in literal exposition, the spiritual interpretations of the three were the more popular ones, and the confusion remained of what did and did not belong to the literal sense. In fact it was not until the work of the friars in the thirteenth century that literal interpretation became more generally accepted.

**c. The friars.** In the thirteenth century we also see a multiplication of aids to study in the form of concordances to the Bible and the Fathers, biblical dictionaries, and geographies of Palestine. The Dominican Hugh of St. Cher, who taught in Paris from 1230-35, supplemented the Gloss on the whole Bible with more excerpts from patristic and medieval commentators in his *Postilla*. Robert Grosseteste lectured in Oxford and did much to promote biblical studies there. He realized the value of studying Greek for biblical scholarship. Indexes became more efficient, references more accurate, and one is aware of a greater concern for the correct biblical text. Thomas Aquinas (d. 1274) finally succeeded in making the literal sense acceptable by defining it as the writer's full original meaning, even if he expressed himself by means of prophecy, parable, or metaphor. One should no longer think of the letter as superficial only, but as having a rich, deep meaning in its own right, which could contain both prophecy and moral instruction. The spiritual meaning Thomas defined as what God, the divine author of Scripture, made known through the events related by the human author, these events being sometimes understood better by later interpreters in the light of subsequent revelation than by the original author.

In the next century, roughly between 1310 and the outbreak of the black death in 1348/49, the friars were again active in Bible study in all the great centers of Europe: Paris, Oxford, Cambridge, Toulouse, Avignon, Cologne, Florence, Bologna, and Padua. The most influential product of their efforts is the *Postilla litteralis* on the whole Bible by the Franciscan Nicholas of Lyre (d. 1349), in which he made frequent use of Jewish interpretations, in particular those of Rashi. See INTERPRETATION §2e.

In the end of the fourteenth century, masters not belonging to a religious order entered the field of theology, for example John Wyclif (d. 1384), who studied at Oxford. In his exegetical work he shows a critical attitude toward much of the traditional interpretation and toward the monopoly in this respect claimed by the religious orders. Like John Gerson, who revived biblical studies in Paris, Wyclif thought that Scripture had been understood better in the early days when it was still free from later explanations.

In the late fourteenth and fifteenth centuries a desire arose among devotional groups of lay people in England, and even more so in Germany and the Low Countries, to be able to read Scripture

in the vernacular. In England the work of translation was begun by Wyclif. The church, however, regarded these vernacular versions with the utmost suspicion, unwilling to lose the monopoly of interpretation, and afraid that the availability of Scripture to theologically untrained people would lead to heresy, as was indeed considered to have happened in Wyclif's circle.

V. P. FURNISH

**I. NINETEENTH- AND TWENTIETH-CENTURY CHRISTIAN.** The question is how scholars understood the biblical witness to God to be related to historical event. In the preceding centuries, dogmatic orthodoxy had equated the two.

**1. The nineteenth century** (see also **BIBLICAL CRITICISM, HISTORY OF §2; BIBLICAL THEOLOGY, HISTORY OF §§2, 3**). Fundamental attacks were made on the historical credibility of the biblical witness. H. E. G. Paulus, in *Leben Jesu* (1828), questioned all supernaturalism, while D. F. Strauss, in *The Life of Jesus* (1835 [ET 1946]), saw the gospel's Christ as the mythical creation of early Christian messianic expectation derived from the OT. F. C. Baur, leader of the Tübingen school (1826-60), maintained in a series of writings that the simple Jewish Christianity of Jesus and the apostles had been overlaid with Paul's universalistic theology and a later second-century Catholic synthesis. In England, *Essays and Reviews* (1860) called for a purely scientific approach to the Bible, while in Germany, A. Harnack's *What Is Christianity?* (1901 [ET 1902]) posited a humanistic understanding of Jesus, and W. Wrede's *The Messianic Secret* (1901 [ET 1971]) maintained that messianism was a post-Resurrection creation of the Christian community. The Roman Catholic Church defended the Scriptures as inerrant and inspired, principally in M. J. Lagrange's *La Méthode historique* (1904) against A. Loisy's modernistic attack on the church's interpretive authority, in *L'Évangile et l'église* (1902).

In every field the century was characterized by developmentalism, history, and scientific criticism. The definitive result of these emphases in OT interpretation was Wellhausen's philosophy of Israelite history, *Prolegomena to the History of Ancient Israel* (2nd ed., 1883 [ET 1957]), and *Israelitische u. jüdische Geschichte* (1894). Rejecting all supernatural causes, Wellhausen understood Israel's history to be a natural development of human institutions and thought from primitive to higher forms. OT studies subsequently took the form of histories of Israel's religion, understood in developmental and naturalistic terms. The first of these was R. Smend's *Lehrbuch der alttestamentlichen Religionsgeschichte* (1893), while Oesterley and Robinson, *Hebrew Religion, Its Origin and Development* (1930), was characteristic

of English works. Some scholars tried to point to the theological witness of the OT, but the fifth edition of H. Schultz's *OT Theology* (1896 [4th ed., ET 1895]) and A. B. Davidson's *The Theology of the OT* (1904) were the last attempts to write OT theologies, in German and English respectively, for almost thirty-five years.

In the NT field, the teachings of Jesus were considered most important, and Christianity was understood largely as a natural, historical phenomenon, within the context of the ancient Jewish and Hellenistic world. H. J. Holtzmann's *Die synoptischen Evangelien* (1863) was the first important liberal life of Jesus, although O. Pfeleiderer's *Primitive Christianity* (1887 [ET 1906-11]) was considered the father of German religio-historical theology. K. Lake, in *The Earlier Epistles of St. Paul* (1911), introduced this German scholarship to the English-speaking world, with W. Bousset's *Kyrios Christos* (1913 [ET 1970]) forming perhaps the definitive summary of such NT interpretation.

The Roman Catholic Church would have none of this modernism. Its defense of the inerrancy of the Scriptures and the authority of tradition and church to interpret them is seen in the papal encyclicals *Providentissimus Deus* (1893), *Pascendi Dominici Gregis* (1907), and the decree of the Holy Office, *Lamentabili* (1907).

**2. The twentieth century** (see also **BIBLICAL CRITICISM, HISTORY OF §3; BIBLICAL THEOLOGY, HISTORY OF §4**). A new approach was signaled by attacks on a purely historical understanding of the NT. M. Kähler's *The So-called Historical Jesus and the Historic, Biblical Christ* (1892 [ET 1964]) and J. Weiss's *Jesus' Proclamation of the Kingdom of God* (1892 [ET 1971]) pointed to the theological character of the NT. Schweitzer's *The Quest of the Historical Jesus* (1906 [ET 1910]) made it clear that it was impossible to write a historical account of the life of Jesus, while E. C. Hoskyns and N. Davey, *The Riddle of the NT* (1931), and R. H. Lightfoot, *History and Interpretation in the Gospels* (1935), emphasized the theological nature of the gospels. But the decisive call to hear the Word of God through the Scriptures came from Karl Barth in *The Epistle to the Romans* (1918, rewritten 1921 [ET 1932]), *The Word of God and the Word of Man* (1924 [ET 1928]), and *The Doctrine of the Word of God* (1932 [ET 1936]).

The problem was, however, how to relate the witness of the Bible to a scientific understanding of its history. After much debate in German periodicals, Eichrodt's comprehensive *Theology of the OT*, 3 vols. (1933-39; rev. ed., 1957 [I, ET 1961; II, ET 1967]), pioneered in the demonstration of method. This unleashed a flood of OT theologies in Europe: W. Vischer, *The Witness of the OT to Christ*, 2 vols. (1934 [I, ET 1949]); L. Koehler, *OT Theology* (1935 [ET 1957]); O. Procksch, *Theologie des AT* (1950); E. Jacob, *Theology of the OT* (1955 [ET 1958]); T. C. Vriezen, *An Outline of OT Theology* (1954 [rev. ed., ET 1958]); and G. A. F. Knight, *A Christian Theology of the OT* (1959). Eichrodt portrayed the covenant relationship as the structural center of OT faith in every period and formed his the-

ology around it. In contrast, on the basis of tradition criticism, von Rad pointed to the dynamic character of the Word of God to Israel in *OT Theology*, I (1957 [ET 1962]), II (1960 [ET 1965]), and *Wisdom in Israel* (1972, posthumous). Roman Catholic contributions came from P. Heinisch, *Theology of the OT* (1940 [ET 1950]), and P. van Imschoot, *Theology of the OT*, I (1954 [ET 1965]), II (1956), the first major Roman Catholic theology after the papal encyclical of 1943, *Divino Afflante Spiritu*.

Important NT theologies were P. Feine, *Theologie des NT* (1913), and E. Stauffer, *NT Theology* (1941 [ET 1955]); but NT theology found its most comprehensive expression in G. Kittel, *Theological Dictionary of the Bible* (1932-73 [ET 1964-74]).

In Britain and the United States, the result of the recovery of the Bible's witness to God was the biblical theology movement, which emphasized the unity of the Bible, the revelation of God in history, the Hebrew mentality of the Bible, and the uniqueness of biblical faith over against its environment. For bibliog. and full discussion see BIBLICAL THEOLOGY[S].

At the same time, the Roman Catholic Church accepted the methods of modern criticism in the encyclicals *Divino Afflante Spiritu* (1943) and *Humani Generis* (1950). The Dogmatic Constitution, *Dei Verbum*, from Vatican II (1962) gave full freedom to Roman biblical scholars so that their methodology now differs little from that of Protestants and Jews.

The principal weakness of the biblical theology movement was its failure to define the nature of the history with which it purported to deal. One of its sharpest critics has been J. Barr in *The Semantics of Biblical Language* (1961), *Old and New in Interpretation* (1966), and *The Bible in the Modern World* (1973).

The writings of Bultmann have attempted to solve the problem of the relation of faith to history by demythologizing the biblical text and interpreting the Christian faith in existentialist, eschatological terms: *Jesus and the Word* (1929 [ET 1934]); *NT and Mythology* (1941, in *Kerygma u. Mythos*, I, 1948 [ET 1957]); *Theology of the NT*, I (1948), II (1951), III (1953), 2 vols. in ET, 1951-55; and *The Presence of Eternity: History and Eschatology* (1957). B. W. Anderson, ed., *The OT and Christian Faith* (1963), is a discussion of Bultmann's treatment of the OT.

The new hermeneutic attempts to unite history and faith in the gospels by using the later Heidegger's understanding of the function of language include E. Fuchs, *Hermeneutik* (1954), *Zum hermeneutischen Problem in der Theologie* (1959), *Studies of the Historical Jesus* (1960 [ET 1964]), *Marburger Hermeneutik* (1968), and *Jesus, Wort und Tat* (1971); G. Ebeling, "Hermeneutik," *RGK*, III (3rd ed., 1959), 242-62, *The Nature of Faith* (1959 [ET 1962]), *Word and Faith* (1960 [ET 1963]), *Einführung in theologische Sprachlehre* (1971); J. M. Robinson and J. B. Cobb, eds., *New Frontiers in Theology*, I (1963), II (1964), III (1967); R. W. Funk, *Language, Hermeneutic, and*

*Word of God* (1966); P. J. Achtemeier, *An Introduction to the New Hermeneutic* (1969).

Most NT scholars recognize that the NT's history is the product of faith, and recently there has been much work on the methods and theology manifested by the NT evangelists (see REDACTION CRITICISM, NT[S]; BIBLICAL CRITICISM, NT[S] §2c). Yet, many believe that there is a possibility of getting behind such faith to something of the historical Jesus. On the new quest for the historical Jesus, see BIBLICAL CRITICISM, NT[S] §4c.

But the problem of the relation of the Bible's faith to its history remains. In the latest, still largely unjudged interpretive works, historical criticism is largely ignored. Structuralism, using the methods of Lévi-Strauss, interprets the Scriptures in terms of structures of human thought, usually binary and often defined in a seemingly arbitrarily manner (see LITERATURE, BIBLE AS §4a and bibliog.). Canonical exegesis, as represented by B. S. Childs' *Biblical Theology in Crisis* (1970) and *The Book of Exodus* (1974), abandons the findings of historical criticism for an acceptance of the interpretation imposed upon any text by the total canon and church. J. A. Sanders' *Torah and Canon* (1972) is more moderate.

- Bibliography

1. The book as a whole. a. *The diversity of the book and the canonical process.* The rich diversity of the book of Isaiah is unequaled elsewhere in the prophetic canon. It is the result of re-presentation and expansion of the tradition that arose with the great prophet of the eighth century and extended through several centuries of the life of the Judean and postexilic Jewish community. It is customary to speak of a First and Second

Isaiah (chs. 1-39 and 40-66, respectively), but it has become increasingly evident that a long series of writers are responsible for the book. Interest in discerning the witness of Isaiah in the context of eighth-century Judah remains high, but there is today an equal or greater interest in tracing the book's dynamic development amid the crises and challenges of subsequent centuries.

There is almost no explicit information available about the origin and growth of the components of the book; therefore, there is no sure way to account for its richness and diversity—in form, contents, and historical background—as compared to the other prophetic books. One can only suppose that it is due to the intrinsic power of Isaiah's witness and to the formation of a group of disciples who maintained that witness in the next generation (Isa. 8:16-17), and who gave rise to a "school of Isaiah" that persisted into the postexilic era.

It is likely that older strata in the tradition were preserved, not for antiquarian reasons, but because they continued to be reapplied and reinterpreted in each new phase of the community's life. Thus the eighth-century oracles of judgment against Judah (1:2-26; 2:6-4:1; 5-8; 9:8-10:34; 22:1-14; 28:1-29:16; 30:1-8; 31:1-5) would have seemed painfully relevant to sensitive persons during the decades before and after the fall of the Judean kingdom (598-586 B.C.). We can also imagine that the oracles concerning foreign nations were adapted and expanded during this era, as the nations of the Near East were thrown into turmoil in the power struggles marking the transition from the Assyrian to the Neo-Babylonian empire (cf. Isa. 13-23). And then, as the Isaianic tradition was enlarged by the addition of the great cycle of exilic poems (chs. 40-55), the older collection provided the historical-theological presuppositions for the new proclamation of salvation. From this point on the process is relatively easy to imagine. The corpus was large and varied and susceptible to adaptation by means of additions. The early postexilic oracles (most of chs. 56-66) were an effort by several writers to make sense prophetically of the ambiguous realities of the age anticipated by the exilic poet. The addition dealing with Isaiah, which was taken from the exilic historical work (II Kings 18:13-20:19; cf. Isa. 36-39), was a natural move in an age of extensive scribal activity. Chs. 24-27 are difficult to date, but the incorporation of these universalist-eschatological oracles is perfectly understandable in either the Persian or Hellenistic period, when cosmic speculation and eschatology were rife.

At each stage in this process of expansion, the older portions of the tradition would have been allowed to speak anew to the religious community, alongside, and partly by means of, the new words which were formed in response to the demands of faith in changing circumstances.

**b. Computer studies and the unity of the book.** Electronic computers have been used recently to analyze statistically the linguistic phenomena of the book, especially with the aim of establishing the unity or diversity of authorship. However, contradictory results have been produced so far by this method. Therefore we must continue to rely upon

the established methods of historical and literary criticism to deal with the question of authorship, until such time as objective criteria for computer programming have been agreed upon.

**2. First Isaiah. a. The man Isaiah.** As awareness of the complexity and vitality of the canonical process has increased, confidence in older deductions about Isaiah the man has decreased. The common inference that Isaiah was an aristocrat (witness his exalted literary style), who had access to if not membership in the royal court (witness his dialogue with Ahaz in ch. 7), must be questioned. (The late, legendary account of Isaiah's activity in Hezekiah's court [Isa. 36-39] is an unreliable witness to the actual circumstances of his ministry.) The only explicit indication of Isaiah's relationship with the court is that he had to accost Ahaz while the king was (apparently) inspecting the water supply of Jerusalem (7:3). If anything, this implies the inaccessibility of the court to Isaiah.

It is also dubious to conclude from the images in Isaiah's vision (ch. 6) that he was in the temple when the visionary experience occurred, let alone that he was a cultic prophet there (an inference sometimes drawn). The vision presupposes familiarity with Yahwistic cultic practice, but nothing more. In short, all we know about Isaiah is that his father's name was Amoz (1:1) and that he gave symbolic names to two of his children (7:3; 8:1 ff.), one of whom was born to a woman referred to as "the prophetess" (8:3). But we have his oracles, and their meaning does not depend upon knowledge of the man.

**b. The David and Zion traditions in Isaiah.** These traditions are prominent in First Isaiah (Zion in 1:12-31; 2:1-4; 4:2-6; 10:12, 27-34; 14:28-32; 17:12-14; 29:1-8; 30:27-33; and 31:1-9; the Davidic king in 9:1-7; 11:1-9; and 32:1-5). However, they are variously interpreted. One view is that the oracles proclaiming the inviolability of Zion and the glories of the future king are later additions. The Zion oracles are taken correspondingly as reflecting in part the legend of the miraculous deliverance of the city from Sennacherib in 701 B.C. (II Kings 19:20-37; Isa. 37:21-38), and in part the ardent hope for the restoration of the city and temple that marked the piety of exilic Jews. The royal oracles, then, are regarded as examples of postexilic messianism (see MESSIAH, JEWISH §3b).

At the other end of the critical spectrum is the view that much of this material originated with Isaiah and rested upon a deeply rooted tradition concerning the twofold divine election of the Davidic line and of the city of Jerusalem (cf. II Sam. 7; I Kings 8:12-21). The truth may lie somewhere between these extremes. Zion surely appears to be a prominent symbol of the faithful religious community in Isaiah's message, a community he believed God would preserve, even though only as a remnant, against all threats of destruction. However, the superstition that the city and temple were proof against military conquest is incompatible with the oldest Isaianic corpus (e.g., 1:2-8; 2:6-22; 3; and 5:24-30), as well as the unanimous witness of the other pre-exilic writing prophets (see ZION TRADITION[S]).

Assessment of the messianic oracles is more dif-

ficult. Isa. 11:1-9 incorporates the prophetic insistence upon maintenance of justice as the chief obligation of the agent of God. In its present form, however, it appears to presuppose the eclipse of the Davidic dynasty in 586 B.C. (11:1). Isa. 9:1-7 [H 8:23-9:6] is less easily datable. It shares motifs common in the royal psalms (e.g., Pss. 2, 72, 89) and, like them, could well be a pre-exilic composition. But whether it is Isaiah's cannot be determined on purely objective grounds. Alt's theory that 9:1-7 is an oracle addressed to the northern Israelite territories conquered by Assyria in 732 B.C. (the Plain of Sharon, Transjordan, and Galilee, cf. 9:1), on the occasion of the birth (or coronation) of a new Judean king (perhaps Hezekiah), is a brilliant possibility.

*c. Isaiah and wisdom.* Isaiah, like Amos (see AMOS[S] §3), was influenced by the wisdom traditions of ancient Israel. This can be seen in his use of literary forms prominent in these traditions: parables (1:3; 5:1-7; 28:23-29), proverbial sayings (or, disputation fables, 10:15 and 29:16), and summary appraisals (14:26 and 28:29); and in his appropriation of the wisdom terms "counsel/plan" (verb עָצָה, noun עֵצָה), especially in the sense of a (fixed) divine plan or counsel (e.g., 5:19; 14:24; 28:29; 30:1-5). The woe oracle, employed more often by Isaiah than any other prophet (nineteen times; e.g., 3:9, 11; 5:8, 11, 18, 20, 21, 22), is regarded by some as a further sign of wisdom influence, but the origin of this form is still being debated (the main options are the curse, the funeral lament, and wisdom—either of court or clan). In order to recognize Isaiah's use of wisdom motifs it is not necessary to determine whether and to what extent these motifs derived from professional wise men in the kingdoms of Judah and Israel (a question currently under discussion; see WISDOM IN THE OT[S]).

By challenging the older view that the direction of influence was entirely from the prophets to the wisdom writers, contemporary scholars have effected the same kind of corrective as that of a generation ago with regard to the relationship between the prophets and the Pentateuch. In both instances it has become clear that there was mutual interaction among the various literary traditions and institutions of Israel.

*d. Other literary genres.* The study of the literary genres used by the prophets has advanced rapidly in recent years (see FORM CRITICISM, OT[S]; PROPHECY IN ANCIENT ISRAEL[S]). The genre occurring most often in First Isaiah is the oracle of judgment, which is generally regarded as the basic type of address originating in prophetic circles. However, Isaiah did not always use it merely in its conventional two-part form (accusation plus announcement of punishment), but sometimes adapted it creatively. Thus Melugin has shown how he mixed words of promise or disputation with the standard judgment form, to heighten the effect of the latter (28:7-13; 28:14-22; and 30:15-17), or interwove the traditional elements of the oracle of judgment in new ways, in order to show a cause-and-effect relationship between Israel's evil desires and their (unexpectedly) destructive fulfillment.

*e. Isaiah 6 and the purpose of prophecy.* The

once conventional view that the purpose of the prophets' preaching was to call Israel to repentance in order to avert the national disaster which they threatened is only partly accurate at best. They did indeed call for repentance and reform. However, the eighth-century prophets all announced the unconditional destruction of the political and cultic establishments of the northern and southern kingdoms. Whatever reformation or revitalization of the religious community they envisioned was to take place in spite of or as a consequence of the fall of the monarchy, that is, through the response of a REMNANT (express or implied). This idea is explicit in Isaiah's message (7:3; 10:20-23). Therefore, the terrible recognition by Isaiah, at his commission, that his proclamation would be an instrument of national disaster, by hardening the people's hearts (6:9-13), should not be explained away as the retrospective rationalization of a disappointed reformer, as has commonly been done.

Isaiah believed that the new obedience of God's people would come only after the experience of radical purgation—a sapling growing from a burned-out stump (6:13) (see DISCIPLINE, DIVINE [S]). (There are no objective grounds for deleting vs. 13 as a late addition. Contrary to an often repeated opinion, the final clause *is* present in the majority of Greek manuscripts of the LXX; and, in the case of the two in which it is missing, it can be shown that the omission is due to a simple scribal error.)

*f. Isaiah 7—faith and Immanuel.* In recent study of the Immanuel oracle (7:13-17), the view that the child to be born was Isaiah's has gained considerable support. "Immanuel" would thus be viewed as a third child of the prophet to bear a prophetic name (along with Shear-jashub, 7:3, and Maher-shalal-hash-baz, 8:1-4).

On the meaning of the famous oracle in 7:9 ("If you will not believe, surely you shall not be established"), see FAITH, FAITHFULNESS IN THE OT[S] esp. §6.

*g. Isaiah 24-27.* The judgment that this section was very late (second-first century B.C.), disjointed, and apocalyptic—a view that dominated criticism for decades and is still influential—has been displaced in significant respects in more recent study. Considerable literary unity has been perceived, at least in over-all design, whether it be the alternation of eschatological poems (24:1-6; 24:16b-20; 25:6-10a; 26:20-21; 27:12-13) with responsive songs of thanksgiving (24:7-16a; 25:1-5; 26:1-14; 27:2-11) (Lindblom), or the linking together of three prophetic liturgies (24:1-20; 24:21-25:10a; 27:1-6, 12-13) with a song (26:1-6) and a prayer (26:7-21) (Fohrer), or the building of an oracular crescendo through the series oracle, song, oracle, song, prayer, climactic oracle (24:21-27:1) (March). Since many distinctive features of late Jewish apocalyptic are absent, and many features of earlier prophecy are evident, the prevailing judgment today is that Isa. 24-27 should be characterized as eschatological prophecy, or at most, proto-apocalyptic, rather than apocalyptic. Current dating varies from fifth to third century B.C. Isa. 24:1-20 is closely related to the oracles on the nations in chs. 13-23; and 24:21 ff. may be viewed as a fitting conclusion to

this whole collection of oracles. See APOCALYPTICISM; APOCALYPTICISM[S] §3.

3. **Second Isaiah. a. Nationalism and universalism in Isaiah 40–55.** Modern interpreters have generally regarded Second Isaiah as proclaiming the universal establishment of God's justice and the conversion of all peoples to faith in him. However, on the basis of such passages as 42:10-17; 43:3-4; 45:14-17; and 49:22-26, several scholars have argued that Second Isaiah was a fervid nationalist, interested only in dispersed Jews, their ingathering to a restored Jerusalem, and the humbling of their oppressors. In this view, though the prophet's monotheism was intrinsically universalistic, he did not carry out its ethical implications.

To the extent that previous expositions have smoothed over the harsh words in the passages listed above, this challenge is a timely corrective. Nevertheless, these passages are not the touchstone by which to judge all others. The universal scope of salvation is set already in the opening poem: "all flesh" shall see the glory of God (40:5). And it is recapitulated in the concluding poem: "every one who thirsts" is invited to the eschatological banquet (55:1 ff.). Between these passages there are many others that require a universalist interpretation: 42:1-4—the servant's mission is to establish justice for the nations and the earth and bring *torah* (RSV "law"; see TORAH[S]) as far as the coastlands (*torah* here meaning true religion—the story of God's grace and his demands); 42:6—the servant is a light to the nations; vs. 5 confirms the universal scope of vs. 6; 49:6—the salvation of God is to reach the ends of the earth; 45:22-23—every knee shall bow, every tongue confess Yahweh's sole godhead and righteousness; see also 45:6; 52:10; 52:15 ff.

The universal acknowledgment of Yahweh cannot be dismissed as a mere admission by the nations that Israel's god is greater than theirs; for Yahweh is God alone—all alternatives are illusions (see MONOTHEISM[S]). Therefore, to acknowledge him—to see his glory (40:5)—is to share the prophet's faith, and this is the final measure of salvation (though it includes also release from bondage, etc.). The reversal of fortunes between conqueror and conquered is indeed depicted—the proud despoilers of peoples will be led in captives' chains (45:14), and Babylon will surely be humiliated (ch. 47). But these acts are not the final ones in the age of salvation announced by the prophet.

b. **Cyrus.** Isa. 44:28 and 45:1 represent the Persian king as a second agent, alongside Israel, of God's rule in history. The world conqueror defeats the tyrant Babylon, releases the prisoners, and enables Israel to fulfill her mission. Most commentators regard Cyrus also as the one referred to in 41:2, 25 and 46:11. However, Smart has recently revived Torrey's theory that the original figure was an Israelite messiah, descendant of Abraham (the prototype of the one called from the E, 41:2, etc.), and that Cyrus' name was added to 44:28 and 45:1 retrospectively by a scribe who mistook Cyrus' achievements as the fulfillment of Second Isaiah's prophecy. In this view military-political and legisla-

tive-religious leadership were both to be vested in Israel.

Although few adherents have been won to this interpretation, it provides a corrective to an over-emphasis upon the role of Cyrus. There is a universal scope and finality in the prophet's expectation that exceeds anything accomplished by Cyrus, who did not call upon the name of Yahweh (41:25). Some would say that Second Isaiah was disappointed by Cyrus and therefore recast his prophecy after 539 B.C. (when Cyrus conquered Babylon and acknowledged the Babylonian god Marduk). Isa. 49–55 does not mention Cyrus, and there is a more somber note here in the representation of Israel's mission than in 40–48, perhaps reflecting a measure of disillusionment on the prophet's part. In this view, then, Second Isaiah turned, in his later years, more fully toward the future as the time when the promised salvation would be completed—"to the ends of the earth." In the views of Torrey and Smart, his message had this eschatological quality from the outset; but the resultant proclamations are similar in the two views.

c. **The Servant of the Lord.** The interpretation of the Servant as Israel, both in the Servant Songs (42:1-4; 49:1-6; 50:4-9; 52:13–53:12) and elsewhere (e.g., 41:8; 42:19), holds the field today, though a few regard the figure as the prophet himself (and many Christians believe the Servant's mission was completed only by Jesus). The fluctuation between passages in which he is clearly a symbol of Israel and others in which he is a minister to Israel (49:6) are explained less in terms of the social psychology of ancient Israel (the theory of "corporate personality," according to which Israelites allegedly made less distinction between a group and its individual members than we do) and more in terms of the poetic-dramatic character of Isa. 40–55. Thus, the Servant is viewed as a representative figure, the holder of a prophetic office, the paradigm of the faithful covenanter, the symbol of the true man/people of God. His office is that of mediator to Israel of the prophetic word of salvation and to the nations of the *torah* and justice of God. This second dimension of the office is one that Israel herself is responsible for as well; so the Servant merely represents the people in this ministry.

Several scholars recently have challenged the idea that 52:13–53:12 describes the Servant as a vicarious sufferer for the redemption of others, or as dying and being revived. The second idea is perhaps debatable, since the text does not say unambiguously that he died or was killed. Nevertheless, it is clear that he has suffered to the very point of death, at least, in faithful discharge of his task. The first idea, however, can hardly be denied, in the face of 53:4-5, 10-11. The Servant's affliction has made others whole and healed (vs. 5) and brought them into a right and righteous relationship with God (vs. 11), overcoming their sinfulness.

The text does not tell us precisely what has led the speakers of 53:1-10 to change their minds about the Servant's affliction—that is, instead of regarding it as God's punishment of a guilty one, perceiving it as the means of their own redemption by one who is innocent of wrongdoing—unless it is the

extremity of his suffering or his willingness to bear it. Nor does this passage spell out the full meaning of their healing, wholeness, and justification. However, in the light of the other Servant Songs, and of the total proclamation of Isa. 40-55, this can only be their acknowledgment of the truth about the Lord as the sole creator, judge, and redeemer of all things, and their obedience to him as a consequence of this faith. The speakers of 53:1-10 are to be identified with the "kings/many nations" referred to in the introduction to this confession (52:13-15).

It should be noted that the famous references to Nebuchadnezzar as the servant of Yahweh in Jer. 25:9; 27:6; and 43:10 are textually very insecure. The LXX does not call him this in any of these passages, and it is probable, in the light of the latest textual study, that the Hebrew text is corrupt at this point.

**d. Literary forms in Isaiah 40-55.** There has been a definite trend in the last decade away from the atomizing of literary components in Second Isaiah toward an appreciation of the unity of the whole complex of poems, including the Servant Songs. Yet study of the prophet's use of various genres in the literary tradition continues to be fruitful. The main ones are these: (1) oracle of salvation (41:8-13; 41:14-16; 43:1-4; 43:5-7; 44:1-5; 54:4-6) often following a popular lament form and containing an address to the audience, assurance of salvation, substantiation of the assurance (the power of God, his former saving acts, etc.), description of the immediate outcome, and indication of the final goal (e.g., rejoicing in Yahweh); (2) proclamation of salvation (41:17-20; 42:14-17; 43:16-21; 46:12-13; 49:7-12; 49:14-26; 51:1-8; 51:9-16; 51:17-23; 54:7-10; 54:11-17; 55:1-5) including introduction, allusion to a collective lament, proclamation of God's turning toward Israel or his intervention on her behalf, and indication of the final goal; (3) trial speech (e.g., 41:1-5; 41:21-29; 42:18-25; 43:8-13; 43:22-28; 44:6-8; 45:18-25; and 50:1-3), containing a variety of the usual elements of court procedure; and (4) disputation (40:12-31; 44:24-28; 45:9-13; 46:5-11 [13]; 48:1-11; 48:12-15 [16]; and 55:8-13), a monologue in loose form used to justify the message of salvation to a discouraged audience. Hymns are also used in the book (e.g., 43:10-13; 44:23; 52:9-10; 54:1-3). See FORM CRITICISM, OT[S].

**e. Isaiah 56-66.** It is generally agreed that these chs. come from the generation after Second Isaiah (i.e., the writer of 40-55) and reflect the conflict of viewpoints in the Palestinian Jewish community during and after the rebuilding of the temple of Jerusalem (520-515 B.C.). According to Westermann's analysis the following strands may be distinguished: (1) the nucleus (60-62), composed by a disciple of Second Isaiah and reflecting his theology, set within two communal laments (59 and 63-64), and associated with other utterances from the same writer (57:14-20; 65:16b-25; 66:7-14; and possibly 58:1-12); (2) a series of independent sayings reflecting a split in the community between those who regarded themselves as devout Yahwists and those whom they regarded as transgressors (56:9-57:13; 57:21; 59:2-8; 65:1-16a; 66:3-4; 66:5, 17); (3) a group of judgments against foreign nations (60:

12; 63:1-6; 66:6, 15-16, 20, 22-23), meant to counteract the positive view of foreigners shown in the first strand, together with some apocalyptic additions to 60:19-20; 65:17, 25; 66:20, 22 ff.; and (4) additions in 56:1-2, 3-8 and 66:18-19, 21, exhibiting openness toward Gentiles and concern for sabbath observance.

\***ISHBAAL.** See ISHBOSHETH[S].

\***ISHBOSHETH** [יִשְׁבֹּשֶׁת, man of Bashtu]. See ISHBAAL for personal history.

The element *bosheth* derives from *bashtu*, later *baltu*, a theophoric element meaning "genitals, sexual potency, abundance, dignity, pride." *Bashtu*, in Assyrian lexical lists, is identified with *shēdu*, a winged male figure who holds a pine cone and bucket for the purpose of bestowing fertility. *Bosheth*, in the names Ishbosheth and Mephibosheth, is a divine epithet designating Baal as giver of life. It need not be considered a late scribal substitute showing contempt for Baal.

Mesopotamian names making use of *bashtu* fall into five categories: (a) *bashtu* plus suffix (Baltānu [O, our potent one!]; Bashtia [O, my potent one!]); (b) god name plus *bashtu* (<sup>d</sup>Abba-bashti, Ishtar-bashti, Sin-balti [god X is my potent one]; compare Mutibashti [my husband is my potent one]); (c) *bashtu* plus god name (<sup>f</sup>Balti-Adad, Baltu-Shamash [My potent one is god X]); (d) *bashtu* plus verb (<sup>f</sup>Balti-libur [may my potent one be strong]); (e) *bashtu* in a three-element name (Ashur-baltu-nishe [Ashur is the potent one of the people], Nabu-baltu-ilani [Nabu is the most potent of the gods]). Also the verbal root *BŠ* appears in Akkadian names with similar meaning.

The Ugaritic cognate *bīt* means "richness" (RS 22.225:6, 12, 13 in CRAI (1960), 180-86).

The word *bashtu* (pronounced *bosheth* in biblical Hebrew) came to mean "shame," often retaining sexual connotation (Mic. 1:11). Thus a name like Ishbosheth would no longer be understood in a positive, theophoric sense, but might evoke amusement or repugnance.

**ISRAEL, CONCEPTIONS OF.** "Israel," the new name given to Jacob (Gen. 32:28; 35:10), designates both this biblical forebear and those descended from him. The people Israel are the corporate body of central concern and attention of the OT, regarded as occupying a special role in God's economy.

**1. Origin of the concept.** The clue to the rise of a conception of Israel lies in the development of monotheistic-universalistic views about the Israelite deity. Perhaps the scholarly view is right that there are clear indications in biblical literature of a development whereby Yahweh was initially a tribal god of some associated clans, then became a "national god," thereafter traversing a period of henotheism (i.e., the notion of one god in one

land, with Yahweh the god of the land of Canaan), and emerging into a view that he was the god of all peoples, of all the world, and indeed the only god. In a situation of many peoples and only one God, the biblical conception of Israel is the response to the question: What is the special role of this one people to the God of all the peoples and all the world? If universalistic monotheism had not arisen, no "conception of Israel" would have arisen.

**2. OT views.** Two different (though inseparable) themes mark this conception of Israel. One is historical, i.e., a matter of origins and of the flow of events. The PENTATEUCH sets forth such a view: From the three sons of Noah the world was repopulated after the flood. From the eldest son, Shem, whose descendants settled in the eastern area ultimately called Chaldea, there was born ABRAHAM, the first of three patriarchs. He left his native land, and after a sojourn in Haran, migrated to Canaan, the land divinely destined for his descendants. Abraham had several offspring, ISAAC by his wife Sarah, ISHMAEL by Hagar, and Zimran, Jokshan, Medan, Midian, Ishbak, and Shuah by Keturah (Gen. 25:1-2). From Abraham's nephew Lot the kindred Ammonites and Moabites were descended. However, the preferred line went from Abraham through Isaac.

Isaac had two sons, Esau and JACOB-Israel, the preferred line going through the latter.

Jacob-Israel had twelve sons, the ancestors of the twelve tribes. On Jacob's move to Egypt, the collective family numbered seventy; these are called the "children" (KJV) of Israel (Gen. 46:8-27). Between the time of Jacob and the time of Moses the children of Israel—at times called the Hebrews—increased to 600,000 men, apart from women and children. Enslaved in Egypt, they were freed through Moses and led to Sinai-Horeb, where a covenant (see COVENANT, MOSAIC[S]) was concluded by which Yahweh became Israel's special deity and Israel his special, chosen people. Under JOSHUA (SON OF NUN), this people conquered Canaan and in the period of the Judges settled in the land.

Many modern scholars assert that the foregoing is not reliable history. Rather, what took place was the gradual infiltration of Canaan by related Hebrew tribes, bound to each other in a confederation (AMPHICTYONY), and only as a sequel to this confederation did a collective, corporate Israel arise.

Further to complicate the somewhat obscure matter of origins, the pre-exilic prophetic literature seems completely unacquainted with an eastern origin (i.e., Abraham coming from Ur), but instead attributes the origin to the wilderness (which, in the Pentateuchal narrative, is not the place of origin but only a transitory phase through which the people passed; see Jer. 2:1-2; Deut. 32:10).

A second, related view is essentially theological. Canaan had had its deity, the Baal. Through conquest Canaan had come to belong to Yahweh, who demanded an exclusive fidelity from his people. In the thought of the pre-exilic prophets, the Baal was no god, and the worship of him by Israel violated its covenantal requirement of fidelity to Yahweh. Through the speeches and writings of the pre-exilic prophets, the view became common that

Israel was God's people, and not the Baal's. As God's people, chosen by him for his purposes, Israel had unique responsibilities to him which other peoples did not have. Moreover, as God's special people, Israel was assured of his beneficent guidance and protection, at least so long as it abided by the responsibilities implied by fidelity. Infidelity to Yahweh relieved him, as it were, of his obligation to beneficent guidance and protection, thereby allowing Israel to become a prey to invaders. Cumulative corporate guilt could bring the two-way relationship to a crisis, and even end it.

In time the view arose that a righteous remnant could and would escape the corporate doom. Moreover, the view that infidelity could be cumulative implied that prior to the climax, the deity exercised tentative forbearance; hence, he was characterized by prolonged mercy as well as strict, immediate justice. Indeed, insofar as he was characterized by mercy and grace, his abstention from immediate punishment raised the issue of theodicy, an issue destined to flower in various ways (e.g., the punishment of the innocent along with the wicked; the forgiveness, by grace, of the culpable; and, on an individual basis, the observed prosperity of the wicked and the misery of the righteous).

The unfolding of such matters, which are traceable in the prophets, is best explained by the often tacit premise of the special relation existing between the deity and his people. Israelite thinking, no matter how universalist it became, began with Israel and centered in it. Thus, though Amos declares that Israel is like the Ethiopians, and the Philistines, and the Syrians (9:7) to the deity, he also declares, "You only have I known of all the families of the earth" (3:2a). He adds, significantly (3:2b), "therefore I will punish you for all your iniquities." In prophetic thought, the ELECTION of Israel always carried with it a sense of special obligation from which other nations were exempted; the supposition that election meant capricious privilege is denied in this passage in Amos and in many other passages. See PROPHET, PROPHETISM §D2.

In the view of Amos, Israel's infidelity had cost it the deity's protection, so that an invader (Assyria) would be allowed to devastate the land and send the northern kingdom into exile (Amos 3:11; 9:9). But in ISAIAH, the deity, rather than passively permitting the invader to attack, actively controls him, bringing him in to invade as a tool by which God punishes his people (Isa. 10:5-14). Isaiah also appears to envisage a saved or even saving remnant, thereby modifying the earlier view of total corporate punishment (10:20-23).

An often repeated theme tells that the land promised to Abraham had a special place in God's economy, as the place where his special people was to dwell. At one stage in Hebrew thought, God, people, and land were deemed inseparable. The Babylonian conquest (598) and the EXILE (587) wrought a significant change. Now the connection was primarily between deity and people, though concern for land never completely disappeared. The change is explicit in Jeremiah (29:7). It is heightened in Second Isaiah (42:1 ff.; 43:14-24) where the Exile is viewed as part of Yahweh's plan,

openly announced from earliest times. In that plan Israel is God's servant in the working out of God's universal salvation. Whereas Jeremiah had viewed the Exile as a means of purifying a defective Israel, Second Isaiah proceeded to declare Israel forgiven for its past trespasses as an act of divine grace (43:25).

3. **A special people.** It is in Second Isaiah that the concept of Israel as the special people of the one and only God, whose sway is universal, gets its clearest initial expression: Israel is God's elect people, chosen by him for his divine purposes.

Subsequent times preserved this sense of a special people in a variety of ways. On the one hand, it was envisaged that Gentiles could, as proselytes, enter into the elect people (Zech. 8:20-23; Isa. 2:2-3; Mic. 4:1-2). On the other hand, passages in Ezra and Nehemiah (e.g., Ezra 4:3 ff.) reflect the deliberate exclusion from the people of God of the SAMARITANS, and also extreme steps of purging the restored postexilic community of the intrusion into its midst of "Gentiles" (Neh 13:23-30). Against such exclusivism were raised the tolerant views of the book of Ruth and the universalistic book of Jonah. If the Pentateuch, as modern scholars assert, reached its full form in the age of Ezra and Nehemiah (utilizing older materials), perhaps the recurrent hostility expressed against the ancient Canaanites is in part a retrojection into the patriarchal and Mosaic ages of the postexilic exclusivism and hostility; the Canaanites are depicted in the Pentateuch as destined for and worthy of complete annihilation; this was, lamentably, imperfectly carried out by Joshua, who was deceived into sparing the Canaanite Gibeonites (Josh. 9).

The concept of Israel as God's chosen, elected for obligation, but first in divine concern and affection, became a cornerstone of Israelite thought. In the variety of abundant passages reflecting the concept (e.g., in Psalms), one voice might stress God's universalism, virtually ignoring the particular people, while another voice might stress the particular people, virtually ignoring the heritage of universalism.

A by-product of the view of God as the universal deity is the prophetic denunciation not only of Israel, but of other nations, especially Edom, as part of the divine concern (see Jer. 46-51).

The Samaritans, excluded by the Judeans (see the basis provided in II Kings 17:24-41), made their implicit response by appropriating the Pentateuch as their own, and by exalting their temple on Mount Gerizim as the true sanctuary of God. The Samaritan schism reflects the emergence of a new kind of question, namely, which people is truly God's chosen? The Samaritans and Judeans shared in common the view that God indeed had his own people, but each contended that it was the chosen, the Israel of God.

4. **Early Christian views.** Within the NT, which concedes that Christianity arose out of Judaism, the view is expressed in a variety of ways that now "Christians" rather than Jews have become the elect of God, for the Jews have been supplanted in God's economy as his special people. Paul, for example, expresses this in his allegorizing (Gal. 4:21-31; cf. Rom. 9:6-13) of Sarah and Hagar as

the patriarchs from whom respectively the "free" (the Christians) and the "slaves" (the Jews) are descended. In the gospels, the genealogies provided in Matt. 1:1-17 and Luke 3:23-38 imply the continuity of Christendom with the OT forebears, especially Abraham (see also GENEALOGY, CHRIST and supplementary article). The explicit identification by Paul of Christians as now the true Israel (Gal. 6:16) is expressed in the gospel narrative in which John the Baptist asserts that God can raise true descendants of Abraham from stones (Matt. 3:7-9). Christians are deemed the spiritual descendants of Abraham, superior to the supplanted Jews whose descent from him was only of the body. Rarely is the Christian claim of being God's Israel expressed in the gospels without a denial of a Jewish right to that status.

This contention of supplanting is expressed in a variety of tones (see JEWS, NT ATTITUDES TOWARD [S]). In Paul, the expression is ordinarily one of painful regret (Rom. 9:1-2) accompanied by the caution that Gentiles are branches engrafted in the tree (Rom. 11:17), while Jews are the true branches that were broken off but who, in some future time, would be returned into God's favor and affection (Rom. 11:25-27). In Luke-Acts, Christianity is the unbroken continuity of the ancient Judaism, and never marred by infidelity to any Jewish requirement or sensibility. Rather, the Jews are the ones who have gone astray, as a result of their failure to see how law grew into gospel. In Mark, the Jewish opponents of Jesus are blindly hostile, and his Jewish disciples are blind and disloyal. In Matthew, "the kingdom of God" is in some passages the "church" from which exclusion or expulsion is possible, e.g., Matt. 7:15-23. More explicitly than Mark, Matthew treats the Jews with unrelieved denunciation, especially the Pharisees (see Matt. 23). In John, the opponents of Jesus, though occasionally Pharisees, are usually "the Jews." Though "salvation is from the Jews" (4:22), especially in view of invalid Samaritan claims (4:21), the Jesus of John seems conceived of as not a Jew at all ("your" synagogue, etc.).

Perhaps the clearest expression of Christianity as the Israel of God is I Pet. 2:9-10. "But you are a chosen race, a royal priesthood, a holy nation, God's own people. . . . Once you were no people but now you are God's people."

The Epistle to the Hebrews (1:1-2) expresses the view that Christianity is the climax in the history of revelation that had begun with the Jews; in Hebrews, Judaism is the imperfect foreshadowing now outmoded by the perfection characteristic of Christianity.

Unflattering to Judaism and to Jews as are many NT, especially gospel, passages, they do not approach in virulence the Epistle of BARNABAS or the strictures of such church Fathers as John Chrysostom of Antioch (of the fourth century).

5. **Later Christian views.** While outside the NT, some voices (e.g., the second-century MARCION) seem to have regarded Christianity as historically unconnected with Judaism, this view was ungenial to others in the church. The normal view was that Christians had supplanted Jews as God's elect and the OT promises were really addressed to

Christians. For this reason the Jewish Bible was retained by Christians, but viewed now as their own Scripture, their OT. OT and NT constituted a single, continuous scripture. Later Christians ordinarily regarded themselves either as the "third race," differentiated from Jews and Gentiles, or more usually as *Verus Israel*, "the true Israel" of God.

6. **The nonelect.** In both OT and NT, and in the ancient rabbinic literature roughly contemporaneous with NT writings, the often felicitous view of election as a demand for a higher morality carried with it an unexpressed doctrine, that there were the nonelect who merited God's curse and wrath. The claim of divine election is thus sporadically blemished by the omission of the usual demand for a higher morality, and by the substitution of a dismal arrogance instead.

**Bibliography.** The best historical study is M. Simon's *Verus Israel: étude sur les relations entre Chrétiens et Juifs dans l'Empire romain* (2nd rev. ed., 1964), pp. 135-425. P. Richardson, *Israel in the Apostolic Age*, NTSMS, X (1969), presents much material, frequently in an idiosyncratic way. S. Sandmel, *The Several Israels* (1971), deals with aspects of claims of both Jews and Christians of being God's Israel. See also H. H. Rowley, *The Biblical Doctrine of Election* (1952).

S. SANDMEL

\***ISRAEL, HISTORY OF.** The original article by Rowley exemplifies his well-known concern for precision, thoroughness, and balance, and does not call for extensive correction or revision. Archaeological activity over the last few years, however, has provided a welcome supplement to our previous knowledge (see ARCHAEOLOGY[S] §§1-2). For example, a destruction layer found at HAZOR can most probably be associated with the Israelite conquest; on the contrary, the stratigraphy at SHECHEM reveals no such layer, confirming the assumption, based on biblical evidence, that the city passed into Israelite hands without a major battle. Recent work at JERUSALEM has clarified the history of its fortifications and water system, and excavations at BEER-SHEBA have revealed a well-planned late Israelite city. A casemate wall and gate from the Solomonic period at GEZER are also of interest in confirming that city's connection with Hazor and Megiddo (I Kings 9:15), where similar remains have been found. In addition to these sites, mention must be made in particular of AI, ARAD, ASHDOD, DAN, EGLON (Tell el-Hesi), EN-GEDI, LACHISH, TAANACH, SHILOH, and ZARETHAN. Occasionally fresh investigations have cast doubt on the earlier identification and attribution of certain archaeological features; for example, it is now probable that the famous "Solomonic stables" at MEGIDDO should be associated rather with the building activity of Ahab, and that the evidence for flues of copper smelters at TELL EL-KHELEIFEH (see also ELATH; EZION-GEZER) is to be reinterpreted rather as gaps left by burned-out beams.

New inscriptions have also cast light on the history of Israel, as well as on the life and customs of biblical times (see INSCRIPTIONS, SEMITIC[S]). In this connection the SAMARIA PAPYRI are particularly important. They contain information, es-

pecially in the form of proper names, which will be of considerable help in interpreting the post-exilic history of Palestine in general and the history of the SAMARITANS in particular. Inscriptions discovered in neighboring lands continue to provide data of interest to the biblical scholar. For example, a stele found in 1967 at Tell er-Rimah in Iraq tells of a campaign by Adad-nirari III (811-784 B.C.) to the W after which the Assyrian king received tribute from "Mari' (Ben-Hadad?) of the land of Damascus . . . , Ia-'a-su (or Iu-'a-su) of the land of Samaria, the [ruler] of Tyre, and the [ruler] of Sidon." This is the first occurrence of the name of King Joash/Jehoash (801-786 B.C.) in an Assyrian text, and also the first designation of the northern kingdom as "Samaria"; the usual Assyrian term is "Bit Humri," i.e., "house of Omri" (see JOASH §8; JOASH[S]). Finally, recently published Dead Sea Scrolls continue to cast at least indirect light on the later history of Israel and especially its religious sects and parties. See DEAD SEA SCROLLS[S]; MANUSCRIPTS FROM THE JUDEAN DESERT[S].

In addition to assessing the significance of discoveries such as these, the historian of Israel must continually re-evaluate the biblical sources. Recent study of the PENTATEUCH has brought into sharper relief the distinctive contributions of its various oral and literary traditions, and has emphasized the theological significance of Israel's attempts to understand history as God's "mighty acts" (see YAHWIST[S]; ELOHIST[S]; PRIESTLY WRITERS[S]). Furthermore, the great importance of the DEUTERONOMIC HISTORY is now becoming quite clear. Rather than being merely a continuation of the earlier Pentateuchal sources, it is a new attempt, not only to bring Israel's history up to date, but also to make it relevant for the needs of the current generation (see also JUDGES, BOOK OF[S]). Finally, the work of the Chronicler (see CHRONICLES; EZRA AND NEHEMIAH) is now receiving new attention. It has long been known that in spite of its relatively late date it contains a great deal of authentic data for the historian. But recent studies have concentrated on the sources and various editions of the work, and have helped to explain some of its inconsistencies and confusions which have long plagued the study of postexilic history.

These two concurrent enterprises—the appropriation of new data and reassessment of old—have brought about certain changes of perspective in the study of most of the major periods of Israelite history.

For many decades scholars have held widely differing opinions on the date and background of the PATRIARCHS, with a few denying any historicity to the narratives of Genesis. Extrabiblical inscriptional evidence (see esp. MARI[S] §8; NUZI[S] §2, but note the cautions contained therein) and the discoveries of Palestinian archaeology seem now to locate them in the Middle Bronze Age; here we find a period to which we can attribute with some confidence patriarchal names, customs, and style of life and religion. Some are inclined to place them early in the period and regard them as donkey caravaneers (Albright); others suggest MB II and stress the patriarchs' connection with

the great folk movements associated with the AMORITES.

Israel's entry into Canaan may now be seen with greater clarity as a penultimate phase of this larger movement, and thus as a stage in a continuous process that lasted for many centuries. The biblical historians concentrate on the last act of this continuum, depicted as a military conquest of the Canaanite city-states in three lightning campaigns under the leadership of the traditional figure of Joshua. But this conquest was most probably preceded by decades of infiltration, intermarriage, and peaceful co-existence; various archaeological surveys (see Aharoni) have provided evidence of this, and placed in new perspective other data usually associated with the Israelite destruction of certain cities. Such a view also helps to interpret other traditions in the OT, such as Judg. 1:1-2:5 and certain variant texts even in the book of JOSHUA, which imply that the Israelite settlement was not as rapid and unified as it first appears. All of this makes it unlikely that one can assign a precise date to the exodus from Egypt; indeed it is probable that Israel's departure took place in two or more stages, and that the wanderings in the wilderness and Transjordan followed several different routes and were associated with different tribal groups. See CANAAN, CONQUEST AND SETTLEMENT OF[S].

There has been increasing criticism of the once popular thesis that Israel under the judges was organized as a "tribal league" or AMPHICTYONY; in this connection the role and function of the judge has been widely discussed (see JUDGES, BOOK OF[S] §3). Studies of the Israelite monarchy have centered on such topics as the nature of kingship and the character of David (see COVENANT, DAVIDIC [S]), the "enlightenment" under Solomon, and the correlation of Israel's history with that of her immediate neighbors and the great empires of the ancient Near East. The Exile is now seen to be one of Israel's most productive and creative eras, and the postexilic period has been illuminated from new finds and fresh perspectives, leading some to conclude that the traditional order of Ezra and Nehemiah may after all prove to be correct.

\*ISRAEL, SOCIAL AND ECONOMIC DEVELOPMENT OF.

1. Sources and methods of study; socioeconomic structure
  2. Major turning points in socioeconomic history
- Bibliography

1. **Sources and methods of study; socioeconomic structure.** The still unrealized project of reconstructing the social and economic history of Israel has at its disposal considerable biblical data, largely unsystematized, to which can be added a growing fund of information on Syro-Palestinian society and economy derived from material remains and from extrabiblical texts. What has been lacking is the sustained and systematic application of social scientific method (from anthropology, sociology, economics, and political science) in conjunction with adjunct disciplines for recovering the material base of society (cultural or ethnological ARCHAEOLOGY, cultural geography, demography, climatology, metallurgy, agronomy, etc.). In particular, sociological theory concerning such historical phenomena as peasant revolts, tribal organization, the pre-industrial city, class composition and class struggle, and premodern bureaucratic empires can provide analytic and synthetic grids for cross-sectional and temporal reconstructions of Israel's socioeconomic life. These reconstructions must also be viewed in relation to adjacent Near Eastern peoples and to peoples observed first-hand at similar stages of socioeconomic development.

In brief, the basic societal component of ancient Israel was a populace engaged primarily in intensive rain and spring-irrigated AGRICULTURE, practicing supplemental forms of stock-breeding and handicrafts, and eventually selectively engaged in state-promulgated light industry and commerce (see TRADE AND COMMERCE §§2-3). The populace was village-based and organized tribally on pseudo-KINSHIP lines, an infrastructure progressively overlaid and fractured by political hierarchy and social stratification. Increasing urbanization, confined to a few centers, dominated and exploited the countryside but failed to draw a majority of the populace into the cities. The Israelite socioeconomic system was solidified and legitimated, and its internal conflicts heavily surcharged, by a highly developed religious ideology that was in part continuous with ancient Near Eastern religious ideologies and in part highly idiosyncratic.

2. **Major turning points in socioeconomic history.** In its initial tribal form, Israel's socioeconomic relations were egalitarian in the sense that the entire populace was assured of approximately equal access to basic resources by means of its organization into extended families (*bêth-'abhôth*), protective associations (*mishpāhōth*, not to be construed as exogamous "clans"), and tribes (*sh'bhātim* or *matōth*), federated as an inter-tribal community ("Israel," "Israelites," or "tribes

of Israel"). Political hierarchy, introduced by the monarchy, gave impetus and protection to "creeping" social stratification. Increasingly, the former, communally owned means of production, vested in extended families, fell into the hands of a minority of state officials, merchants, and large landholders, who never constituted more than five to ten per cent of the total populace. Between the tenth and the early sixth centuries, the conjunction of domestic social conflict and imperial aggression destroyed this mixed tribal-statist social system, in both the northern and the southern kingdoms. Israelite/Judean survivors of the downfall of the two states, including those who returned to Palestine under Persian sponsorship, retained features of tribal existence vis-à-vis the great empires to which they were subordinated (Persia, Macedonia, Seleucids, Ptolemids, Rome), while simultaneously incorporating internal social stratification in which disproportionate wealth and power were vested in native elites.

There were four primary turning points in the social and economic development of Israel.

a. **Revolutionary tribal origins.** Prevailing models of Israel as an invading or immigrating seminomadic people of a distinct ethnic type have singularly failed to provide a plausible account of Israelite beginnings. More convincing is the hypothesis that Israel burst into Near Eastern history as an ethnically and socioeconomically heterogeneous coalition of insurgent mercenaries and freebooters (*'apiru*; see HABIRU[S]), tribally organized farmers and pastoral nomads (*Shosu*), depressed, "feudalized" peasants (*hupshu*), assorted craftsmen (including Kenite-Rechabite metallurgists; see RECHABITES[S]), and renegade priests, all of whom joined in rebellion against the imperial and quasi-feudal sociopolitical structures of Egyptian-dominated Canaan. *But see also* CANAAN, CONQUEST AND SETTLEMENT OF[S].

The first Israelites were peasants. Evidence from prehistory and ethnology, combined with close scrutiny of the biblical text, indicates that pastoral nomadism was no more than a minor component in the Israelite economy. Israelite pastoral nomads were integrated with the vast peasant majority in a symbiosis dictated by the dependence of sheep, goat, and ass breeding on contractual pasture and water rights in the settled regions. The pastoral nomadic component in Israel, serving in part as a mode of political escape and asylum, fluctuated according to changing economic and political conditions but probably never exceeded ten per cent of the total population. *See* NOMADISM[S].

Indigenous Israelite tribalism must be accounted for, not by the chimerical extension of seminomadism into Canaan, but by the organized resurgence of suppressed rural and village independence against the drafting and taxing powers of the hierarchic state as exercised by the Egyptian Empire, Canaanite city-states, Midianites who attempted a commercial empire in eleventh-century Transjordan, the nascent national states of Ammon, Moab, and Edom, and the Philistine military oligarchy. In Israel, diverse segments of the Canaanite underclasses, previously divided and at odds, gathered in the hill country and united in

free agriculture based on regional mixes of grains, wine, oil, and assorted fruits and vegetables, supplemented by small bovine herds and larger sheep and goat herds, only a fraction of which were tended by seasonal nomadic movements into the steppes. The basic unit of material production and reproduction was the extended family, which consumed or bartered what it produced. The larger groupings into protective associations, tribes, and intertribal confederacy served the needs for mutual aid, external defense, and a comprehensive religious ideology of covenanted or treaty-linked equals. Tribal leadership was largely patriarchal, although women as a whole—relative to Canaanite class society—benefitted from their participation as members of the tribal production and defense systems.

*b. Monarchic superstructures.* The centralized military leadership that arose in Israel to cope with the Philistine threat did not disband after the defeat of Philistia (see KING, KINGSHIP; SAMUEL, I AND II[S] §4). Instead, it rapidly imported a state apparatus for fiscal and military administration and embarked on fateful wars of expansion and domination in a totally new departure from Israel's immediate tribal past (see WAR, HOLY[S] §§1c, 2c). Unable to reverse this hierarchic-imperial growth, the tribes at least slowed the process by breaking up the united monarchy. The surviving parts, however, continued as monarchic states.

The continuing tribal infrastructure stood in accommodation, tension, and contradiction to the superimposed political structures in N and S, often fiercely contesting and openly resisting arbitrary state powers. To varying degrees and at differing tempos, state power in the divided kingdoms of Israel and Judah strengthened and validated the social stratification, which penetrated more and more into the egalitarian tribal structure in a bitter seesaw struggle. Tribally guaranteed access to basic resources for all Israelites slowly gave way before the concentration of wealth in the state treasury and in the hands of merchants and landlords who were largely urban-based and backed by explicit or implicit state power, including a judicial system largely compliant to the newly enriched speculators.

As elsewhere in the ancient Near East, it is probable that the Israelite state apparatus, while protecting and furthering the vital interests of the new propertied classes it had brought to power, also strove to stand above sectoral conflict by occasional redress of the most vocal grievances of the disadvantaged segments of society. The "benign neutrality" and periodic "reforms" of the state (including Josiah's effort) failed to alter or to stem the accelerating social stratification, and may never have been fully intended to bring about fundamental changes in the socioeconomic structures.

*c. Intrusion of the great empires.* Tribal Israel and early statist Israel capitalized on a period when no great empires imposed their wills on the ancient Near East. From the mid-ninth century, however, Assyria, and later Neo-Babylonia, intruded on the autonomy of Syro-Palestinian states in programs of economic and political domination

intended to maximize the production, circulation, and concentration of international wealth to the advantage of the imperial metropolis.

This intervention in Israel and Judah coincided with protracted internal social strife. To strengthen their positions vis-à-vis the threatening foreign powers, the Israelite states centralized and deployed their limited wealth—necessarily extracted from the peasants' precarious "surpluses"—for armaments and a favorable balance of trade. Monarchic war against foreign states was simultaneously and ineluctably war against the mass of Israelite peasants. Land, the primary mode of production for the vast majority of Israelites, became subject to excessive taxation and to predatory merchant capital offered at exorbitant interest rates and issuing in debt SLAVERY for growing numbers of impoverished Israelites. See also JUBILEE, YEAR OF[S]; SABBATICAL YEAR[S].

So skewed was the socioeconomic structure of Israel and Judah in favor of a rapacious minority—a minority no doubt fully convinced of the wisdom and virtue of their policies in the name of "national security"—that by the time of the culminating Assyrian and Neo-Babylonian interventions in 722 and 587 B.C. the rural population was so demoralized and impoverished as to offer only feeble resistance and, with the connivance of some urban elements, to welcome the conquerors as a possible or probable respite from the unrelenting depredations of their own domestic ruling class (rather similar to the way that Jews later embraced Pompey and the Romans as a relief from corrupt and oppressive Hasmonean rulers).

The prophets of the eighth through the early sixth centuries, widely construed as religious mystics or utopian dreamers, were in fact articulate spokesmen for the grievances of the suffering Israelite masses. They effectively invoked the weighty and rich resources of the society's religious ideology in order to steer the Israelite states toward a socioeconomic and political course that would heal the fractured tribal infrastructure and restore the social unity of the people. The prophets astutely perceived that the insatiable longings of the Israelite ruling classes to emulate world empires were totally unrealistic. The sole lasting result would be the destruction of tribal egalitarianism, which was the material and spiritual foundation of Israelite autonomy and vitality.

*d. Renewed socioeconomic autonomy and conflict.* The old infrastructure of tribal egalitarian life, fueled by its resourceful religious ideology, continued to inform the consciousness of Israelites and Judeans, both those left in their homeland and those deported to Mesopotamia. The Neo-Babylonian deportation policies were not so destructive of conquered and transplanted communities as Assyrian policies had been. The Jews in Babylonian detention lived contiguously and retained a measure of self-rule (see EXILE §2). These deportees had been the elite in the former state of Judah; when some of them returned to set up a semiautonomous Jewish community under Persian tutelage, class struggle was renewed in a triangular form among the peasant masses and two rival elite classes. A Samaritan Jewish elite

(surviving from the downfall of the northern kingdom) had penetrated into Judah during the exile, filling the leadership vacuum left by the deported Judean upper classes and taking control of deserted properties. A fierce contest was joined between the Samaritan and the Judean elite for socioeconomic and political hegemony over the peasant masses. See SAMARITANS §§A3, B1.

In spite of bold efforts by some of the new leaders, such as Nehemiah and Ezra, to prevent the recurrence of socioeconomic inequities (cf. Neh. 5:1-13), the Israelite lower classes once again faced economic repression at the hands of the native elite, this time backed by Persian authority. This lengthening class struggle can be traced through the Maccabean-Hasmonean, Herodian, and Roman periods in Palestine. Increasingly, however, the internal socioeconomic contest was eclipsed by Jewish ethnic and religious self-consciousness as a marginal people of status, by turns privileged or disadvantaged, but in all events distinctively rooted in a historical consciousness and identity interpreted and validated by a religious ideology of extraordinary tenacity and vitality with its touchstone in a sacred literature of unusual historical scope and socioreligious richness. One of the unfinished tasks of a social and economic history of Israel is to discern in greater detail the postexilic contradictions between the group and class struggles within the community and the external ethnic-status struggle between the community as a whole and its various political overlords.

IVVAH. See SEPHARVAIM[S].

\***JACHIN AND BOAZ.** The two pillars Jachin and Boaz are believed by most scholars to have served a purely decorative or symbolic purpose. The archaeological evidence usually adduced in support of this theory consists of the following: two stone bases flanking the entrance to the main room of the sanctuary excavated at Arad, conical pillar bases found inside the porch of the Late Bronze Age II temple at Hazor, and a relief from Quyunjiq (Nineveh), on which one can distinguish two big and apparently freestanding pillars topped with fleur-de-lis capitals.

Preoccupation with the symbolism of the pillars seems to have detracted the attention of scholars from significant details in the textual tradition available to us. The two words לבית חלונִי (*lab-bāyith hallōnī*, JB "windows for the Temple") in I Kings 6:4 may describe the 'ūlām (RSV "vestibule") as a *bit bīlānī* type, i.e., a N Assyrian type of portico with one, two, or even three columns often placed at the top of a low flight of steps. No scholar has claimed that such columns had to be freestanding. This argument is further supported by a reading preserved in LXX III Kings 7:9 which states that an architrave (μέλαθρον) rested on top of the two pillars. It might then be proper to describe the Solomonic structure as a temple with columns *in antis* (in front) without having to visualize Jachin and Boaz as freestanding pillars.

\***JAMES, LETTER OF.** 1. **Form, language, and style.** James consists largely of parenetic material, and many believe that the epistolary form does not extend beyond the salutation in 1:1. Recent study of the form and function of Hellenistic letters, however, has reopened the possibility of assessing James as a letter. For example, the parenetic letter, established by the first century A.D.

as a form of exhortation, may have provided the cultural form for the author's interests. Nevertheless, in distinction from such letters as those of Paul, the letter of James lacks situational immediacy. See LETTER §§2, 3a; LETTER[S].

There is no doubt that James was written in Greek, especially in view of the fact that the author employs frequent wordplays (2:22; 4:13), catchword connections (1:4, 5, 12, 13), alliteration (1:2), and other linguistic devices which can only be explained if Greek were the original language. But James is also characterized by many instances of Semitisms, including direct, spontaneous Semitisms unrelated to the LXX. For example, 1:19 where ἔστω δὲ πᾶς ἄνθρωπος τάχως εἰς τὸ ἀκούσαι (Let every man be quick to hear) appears as a rather literal rendering of וְכֹל אִישׁ יִמְהָר לְשָׁמֹעַ; the LXX always renders מָהַר and the infinitive by ταχύνειν τοῦ and the infinitive. With reference to sentence syntax James displays more Semitisms—in distinction from septuagintisms—per page of the text than any other NT letter except I-III John. The author knew ordinary Koine Greek as it was written by people of some education, but he also had recourse to a Semitic style.

2. **Traditional material and message.** Parenesis is avowedly traditional, and James' exhortations reflect a variety of traditions found in Christian, Jewish, and other Hellenistic-Roman literature (see PARENESIS[S]). Many of the parenetic precepts in James would be congenial to a wide audience and are not distinctively Christian. Thus the exhortation to regard trials joyfully as a testing of faith (1:2-4) is paralleled in I Pet. 1:6-7, is in keeping with Eccles. 2:1-6, and is similar to Seneca's maxim "Disaster is virtue's opportunity." But it must also be observed that the author has selected critically from traditional material, and he has shaped these traditions according to his interests. Thus, for example, James does not draw on parenetic traditions concerning sexual behavior, but he does draw on traditions related to hospitality (2:15, 25). James draws on Jewish judicial tradition in 2:2-4, but he has used this tradition, not to give court instructions, but to warn against divisive partiality in the community.

The recognition of the use of traditional material brings into question the relationship of James to other Christian literature. Parallels with such writings as I Peter, I Clement, and Hermas are best explained as due to the use of common traditions, rather than literary borrowing. James shares traditions with Matthew and Luke, but in some instances James preserves a more primitive form. Thus the prohibition of oaths in 5:12 represents an earlier form than that which appears in Matt. 5:34-35. And the sharp distinction between rich and poor in 2:6-7 is closer to the sources of Luke-Acts than to the view of the redactor of Luke-Acts.

James' knowledge of the Pauline letters or a misunderstood Paulinism continues to be affirmed by many interpreters, but it is questioned by others. The crucial passage, 2:14-26, can be understood as developed from a wisdom tradition or parenetic traditions concerning hospitality without presupposing a controversy with Paul.

The parenesis of James is sometimes informed by eschatological expectation (e.g., 2:5; 5:7), and in the sections which betray the most *creative* work of the author (e.g., ch. 2) there is a concern for proper, well-ordered fraternal relations within the elect community. James relies heavily on the Jewish wisdom tradition in its understanding of man and the world, and his Christology may be a wisdom Christology. See WISDOM IN THE NT[S].

3. **Text.** Papyrus Bodmer 17 (P<sup>74</sup>), a seventh-century MS, offers a significant variant reading to 1:27. Instead of ἵππιου ἐαυτὸν τηρεῖν (to keep oneself unstained), P<sup>74</sup> reads ὑπερασπίζειν αὐτοῦς —“to protect them” (the needy) from the world. This reading makes better sense in context, for it regards the world as dangerous (cf. 4:4) but not polluting, and it underscores the social interest elsewhere evidenced in the letter.

R. B. WARD

\***JAMES, PROTEVANGELIUM OF.** See APOCRYPHA, NT[S].

\***JAPHETH.** 1. **Japheth in J.** In the J story (see YAHWIST[S]) of Noah's drunkenness, Gen. 9:20-27, the sons of Noah are Shem, Japheth, and Canaan (“Ham, the father of” in vs. 22 is a harmonizing gloss). This etiological narrative (see ETIOLOGY[S]) sees in the three sons the ancestors not of mankind but merely of the three population groups of Palestine. With Canaan standing for the subjugated natives, and Shem for the Israelites (cf. “Shem, the father of all children of Eber,” i.e., Hebrews, Gen. 10:21), Japheth can only represent the Philistines. The benevolent attitude shown toward the Philistines has puzzled some commentators, but it must be remembered that after David's victories over the Philistines the relations between them and Judah were generally peaceful. The idea of friendly coexistence underlies the narratives of alliance and delimitation between Abraham and Isaac and the Philistine king Abimelech (Gen. 21:22-34; 26:26-33).

2. **Japheth in P.** In the genealogy of P, the three sons of Noah are Shem, Ham, and Japheth (now

Noah's youngest son). In the table of nations (Gen. 10), Japheth is the ancestor of northern peoples and countries: Gomer (Cimmerians), Magog (taken from Ezek. 38:2; 39:6, probably <Akkad. \*māt-gugi, “the land of Gyges,” or Lydia), Madai (Media), Javan (Ionians, and by extension all Greeks), Tubal (Tabal), Meshech (Phrygia), and Tiras (Tyrsenians=Etruscans), as well as of the “sons” of Gomer: Ashkenaz (<\*Ashkuz, Scythians), Riphath (unidentified), and Togarmah (a city in eastern Anatolia), and the “sons” of Javan: Elishah (Alashya=Cyprus), Tarshish (Tartessus in southern Spain), Kittim (Citium in Cyprus), and Dodanim (preferably Rodanim [Rhodians] with I Chr. 1:7). The Philistines, conversely, were relegated by P to the descendants of Ham through Egypt.

3. **Japheth and Iapetos.** What is the relationship between Japheth and his virtual namesake Iapetos (Hesiod, *Theogony* 133-34), one of the six Titans who ruled the world before the ascent of Zeus? Iapetos was the father of Prometheus; Prometheus was the father of Deukalion, the survivor of the Flood, whose son was Hellen, the eponymous ancestor of the Greeks. The flood motif suggests that the connection of Japheth with Iapetos transcended mere onomastic resemblance. On the other hand, it is not Iapetos but his grandson who is the hero of the flood myth; of Iapetos, only the name remained in the genealogy, with no narratives or concrete characteristics attached to it. It has been surmised that Iapetos may have played a larger role among the pre-Greek inhabitants of the Aegean, and that the Philistines may have brought him to Palestine as their mythical ancestor. But epigraphic discoveries have failed so far to reveal his name in Greece and Crete of the Bronze Age, and the hypothesis remains unconfirmed.

**Bibliography.** E. Meyer, *Die Israeliten und ihre Nachbarstämme* (1906), pp. 219-21; E. Dhorme, “Les peuples issus de Japhet. . .,” *Recueil Eduard Dhorme* (1951), pp. 167-89; “Iapetos,” *PW*, IX (1916), cols. 721-24.

M. C. ASTOUR

\***JEREMIAH THE PROPHET.** The summary by Muilenburg of the issues surrounding the prophet Jeremiah and the book bearing his name is an admirable reflection of the consensus at the end of the 1950s (see JEREMIAH THE PROPHET). Since then we have seen an updating of the German commentaries of Rudolph and Weiser and the appearance of a new one by Bright. Research has gone on in many areas; four will be dealt with here—the chronology of Jeremiah, form criticism of Jeremianic material, the content of Jeremiah's message, and the text and composition of the book. No synthesis of the results of such work has appeared, so that representative literature is scattered (see *bibliog.*).

1. **Chronology.** From several quarters doubts have been raised regarding the traditional dating for Jeremiah's ministry, namely that he began to prophesy in 627/6 B.C. and therefore that many of the oracles in the first few chapters of the book (e.g., in chs. 2-4) are from the period 626-621. Instead a “lower” chronology has been proposed, by which

the prophet would have begun to prophesy in 609, when Josiah was killed, or even in 605, at the time of the battle of Carchemish. One suggestion is that the "thirteenth year" of Josiah (627/6; see Jer. 1:2) is the date of the prophet's birth. Theologically Jeremiah perceived the basic encounter with God to have been before his birth (1:5), and this event may then be what is marked by the "thirteenth year" of Josiah. In this way difficulties raised by the traditional chronology are removed: the seeming silence of Jeremiah about Josiah's reform (ch. 11 can hardly be a reference to it); the prophet's presumed silence during the period 621-609; the puzzle of the identity of the foe from the north (the hypothesis that they were SCYTHIANS must be abandoned). Such a dating would also bring into focus Jeremiah's understanding of himself as the prophet like Moses (cf. Deut. 18:18 with Jer. 1:7, 9): it was the reform by Josiah in 621 which turned people's attention to Moses, but Josiah's death in 609 put Moses' instruction in limbo (cf. 7:9), so that 609 would be a plausible date for the beginning of Jeremiah's ministry. But the matter is not settled among scholars.

**2. Form criticism.** Aware of uncertainties in the chronology of Jeremiah, and aware, too, that to ask the date of a given oracle is not always to ask the most important question about it, scholars have moved their attention to using form-critical methods on the material (see FORM CRITICISM, OT[S]). They raise the question of what literary category Jeremiah was employing in a given instance, and whether he was reshaping an older category for a fresh purpose. Form criticism alerts us to how much we might have been using modern psychological assumptions in separating Jeremiah from his own culture.

This reminder came in an extreme form in a study in which Reventlow tried to show that Jeremiah was the holder of a cultic office and that the "I" of Jeremiah's words, especially in the so-called "confessions," was simply a way to say "we" on behalf of the people. By this reading, then, Jeremiah's own personality could not be known by us at all. This view, however, has been refuted by Bright and Berridge; Jeremiah is still an individual prophet with a unique voice. But Reventlow's work was a needed corrective, indicating the peril of an overromanticized reconstruction of the prophet.

Form-critical work in other directions has brought permanent gains. Thus scholars examining the "foe from the north" material in 4:5-12 point out that the passage assumes the themes of "holy war" (see WAR, IDEAS OF §§1, 3): the sounding of the horn, the battle cry, the flight of the enemy and his terror and demoralization. Jeremiah here has taken the old category of an appeal to holy war and applied it against Judah: Yahweh now declares war against his own people.

Again the "confessions," though the utterances of Jeremiah personally, are not simply an ancient equivalent of a private diary. Jeremiah voiced them as an individual, but also as one bearing the judgment of God in the context of his people. Thus the reply of God (15:19-21) to one of Jeremiah's confessions (15:15-18) involves the vocabulary of

holy war ("fortified wall of bronze"). The wording of 1:17-19, which is very similar, suggests the same understanding ("gird up your loins," 1:17; cf. I Kings 20:11). In his life and ministry Jeremiah symbolically represents that holy war which Yahweh will wage against Judah.

**3. The content of Jeremiah's message.** Fresh exegesis of specific passages has in many cases brought into sharper focus Jeremiah's message and his understanding of God. Thus it is now clear that a phrase in 12:1 must be translated "yet I would pass judgment upon thee" instead of "yet I would plead my case before thee" (RSV); for the Hebrew idiom, cf. H 39:5. If God can pass judgment on the people because they did not keep their promise to him, then Jeremiah for his part feels free to pass judgment on God because he did not keep his promise to deliver Jeremiah (cf. 1:8). Again, it seems likely that 9:2 (H 9:1) is spoken not by Jeremiah but by God; Jeremiah has wished that his eyes might be a fountain of tears, that he might weep for his people (9:1 [H 8:23]), but then God, mimicking Jeremiah's diction, wishes to have a shelter in the desert, far away from his people.

Jeremiah seems to have loved ambiguity in words. This trait is exhibited in his use of double meanings, puns, and assonance. It may be, then, that in a given case any argumentation over two interpretations of a phrase is beside the mark—Jeremiah may have had *both* in mind. For example, in 14:8 and 17:13 does *miqwé* mean "hope of" (RSV) or "pool of" Israel (Dahood)? Linguistically, it could be either, and "pool of" would fit the imagery of 2:13; 2:31 (by implication), and 15:18. The answer doubtless is that in Jeremiah's mind the word carried both meanings.

In addition to fresh exegesis, scholars have been reassessing the judgments of earlier commentators that certain passages in Jeremiah were not genuine. The majority have now accepted the genuineness of 4:23-26, and of most if not all the poetic material in chs. 30-31. A few scholars have even argued that 10:1-16 is authentic to Jeremiah.

The image of God which emerges from Jeremiah's oracles is that of a deity who is radically innovative, never bound by the decisions of the past. He is willing to destroy Jerusalem in Jeremiah's day, even though he was understood to have guaranteed the safety of Jerusalem in the time of Isaiah (Jer. 7:1-15; cf. Isa. 37:33-35). Correlatively, Jeremiah emerges all the more clearly as a highly innovative person himself, turning old patterns of thinking and speaking into new directions. It is arguable that the catastrophe of the fall of Jerusalem in 587 was so shattering (cf. Lam. 4) that only such an innovative person could offer a theology with enough flexibility to carry people into the novel circumstances of the exilic and postexilic periods.

**4. Text and composition of the book.** Spurred by the discoveries of biblical texts among the Dead Sea Scrolls (see DEAD SEA SCROLLS §4; DEAD SEA SCROLLS[S] §4), scholars have made a fresh attack on the problem of the divergent Hebrew text traditions before the first century A.D. (see TEXT, OT; TEXT, HEBREW, HISTORY OF[S]). In this regard the text of Jeremiah offers noteworthy problems, since the LXX of this book differs quite markedly from

the MT (see JEREMIAH THE PROPHET §D11). Janzen has concluded that the MT of Jeremiah, originating in Palestine, is full of secondary expansions (sometimes single words like the specification of the missing subject of a verb, sometimes longer phrases or even verses), while the LXX, originating in Egypt, gives in most cases a "purer," less expanded text tradition; and that the traditions began to diverge in the period 450-350 B.C. Argumentation in these matters continues lively.

When we turn from the issue of text transmission to that of the composition of the book, we note progress in scholarly investigations, but as yet no overall theory that brings consensus; the process by which the book took shape was complex in the extreme. We take note of three recent efforts, out of many, to deal with aspects of the process.

Rietzschel has offered a closely reasoned study, concentrating on the process by which large "blocks" of material were added to the book and on the motives which led the collectors of each of these successive blocks to supplement the growing collection. Rietzschel located the original scroll (cf. Jer. 36) in chs. 1-6, and found the "Deuteronomistic" material, Mowinckel's source *c* (see JEREMIAH THE PROPHET §D7) to be not a source at all but a literary category present in several of his blocks of material. His analysis is impressive, but perhaps overconfident in its preciseness.

Fresh doubts have been raised about earlier assumptions regarding that "Deuteronomistic" material. H. Weippert has demonstrated, by a careful examination of the typical phrases of that material in their contexts, that it is not at all related to the prose of the Deuteronomistic school but fits the message of Jeremiah after all, and is simply another literary category ("formal prose"; German: *Kunstprosa*) through which Jeremiah's message was preserved.

The present writer has suggested that rhetorical criticism (cf. LITERATURE, BIBLE AS[S]) may be useful in analyzing the way by which the oracles and other units were originally collected, and that such an analysis might lead to greater certainty as to the contents of the original scroll described in Jer. 36. It remains for the future to show whether these attempts and others can lead us with certainty to a clearer understanding of the composition of the book.

\***JERICO.** 1. The name. The toponym Jericho is composed of the personal name of the West Semitic moon-god, Yara/iḥ, plus the terminative -ō (< -ā), whose precise signification is disputed. This explanation seems better than relating the word to Assyro-Babylonian *yarḫu*, "water hole, pond," despite Jericho's situation next to the strong spring of 'Ain es-Sultan. Moreover, *yarḫu* never seems to refer specifically to a spring, and its consistent orthographic representation without an "i"-vowel suggests caution in identifying it as the etymon of Jericho. Curiously, Jericho is never mentioned in extant epigraphic sources of the third and second millennia B.C.; and though it may be present under a different name, this has never been demon-

strated. Its absence may be due to the fact that at the time our epigraphic material was written Jericho was either unoccupied or only sparsely settled. The place name bears some relationship to the clan name Yariḥû, one of the subtribes of the Banū-yamīna mentioned in the Mari correspondence (see BENJAMIN, BENJAMINITES and supplementary article §2). However, despite the identity in name between the biblical and Mari Benjamins, it is not clear, without further evidence, that the Jordan Valley Benjaminite town of Jericho took its name from some far-spread offshoot of the N Mesopotamian Yariḥû (note that the final -û in this name would expectedly remain -û in Canaanite and Hebrew, certainly not become -ô).

**2. Prebiblical Jericho.** Carbon-14 tests of burned material uncovered in Kenyon's 1952-58 excavation indicate that Jericho's earliest occupation must be pushed back into the Mesolithic (Palestinian Natufian) era, ca. 8000 B.C. Permanent sedentary life on the site, however, did not begin until the prepottery Neolithic period (ca. 7000 B.C.), when the earliest fortified town so far known was established at Jericho. Its well-built defense system, featuring a massive circumvallation wall with look-out towers and moat, bespeaks a well-organized and prosperous community (see PREHISTORY IN THE ANE[S] §2a). After the end of the Neolithic period (ca. 4000 B.C.), Jericho was abandoned until the Early Bronze Age, when once again significant town life flourished on the site for some six centuries (2900-2300). The last major sedentary occupation was during the so-called Hyksos period of the late Middle Bronze Age (ca. 1750-1560), when a comparatively simple culture existed there, defended in typical Hyksos fashion by a strong mud-brick wall crowning a massive sloping plastered stone revetment. After the complete destruction of MB Jericho, ca. 1560 B.C., the town was not reoccupied until the beginning of the fourteenth century, but archaeological evidence for this is extremely slender. Three nearby tombs yielding Late Bronze pottery clearly datable to the fourteenth century also support some kind of LB occupation, but there is nothing to suggest that Jericho had once again become a fortified town. Though the disappearance of much more extensive LB remains has been attributed to wind and rain erosion, it is nonetheless strange that in the erosion tip lines at the base of the tell there is almost no LB pottery. Since there is no evidence at all of a thirteenth-century occupation (the few samples of local imitations of Mycenaean pottery types found principally in tombs away from the mound are best assigned to a fourteenth- rather than thirteenth-century context), it would seem that Jericho had again become an abandoned site by the last quarter of the fourteenth century.

**3. OT Jericho.** Biblical traditions referring to the conquest and destruction of Jericho presuppose its existence as a walled town (Josh. 2, esp. vss. 15, 18 [LXX]; 24:11; 6). Because of a lack of any archaeological evidence for a thirteenth-century occupation of Jericho (seemingly the most probable date for the Hebrew exodus and conquest, but see Exodus, Book of §2), if there is any historical validity to the Joshua traditions they refer either

to the fourteenth-century destruction or to a later overturn of such a small settlement that its remains have totally disappeared or have not yet been discovered by archaeologists. It is possible that the tradition about Jericho's fall is only an ETIOLOGY, i.e., an explanation of the site's impressive ruins, created long before Joshua's day, but subsequently attributed to the invasion under his leadership (as may have been the case with respect to Ai).

It is striking that most of the remaining OT references imputing some kind of sedentary life at Jericho (cf. Judg. 3:13; II Sam. 10:5; I Kings 16:34; II Kings 2:5, 15, 18; Ezra 2:34; Neh. 3:2; 7:36) are likewise without any archaeological support. After the fourteenth century, occupation at Jericho is not substantially attested again until the eighth, but principally the seventh century B.C. At the base of the W side near the N end of the mound, the Austro-German expedition (1908-11) uncovered what seems to have been an unfortified settlement which developed through three building phases, the middle of which represented a rather significant structure. Archaeologically, this is the last time we have any indication of settled life at Tell es-Sultan, correlating possibly with reference to Jericho in II Chr. 28:15 from the time of Hezekiah. It may well be that this occupation continued until the coming of Nebuchadrezzar's army in the early sixth century B.C. (cf. II Kings 25:5; Jer. 39:5; 52:8).

**4. Hellenistic Jericho.** Among the Testimonia from Cave IV at Qumran, there is a pseudographic work called the Psalms of Joshua, which, in quoting and interpreting Josh. 6:26, bears witness to the Hellenistic rebuilding of Jericho (at Tulul Abu el-'Alayiq) by "a cursed man, a man of Beliel" and his two sons, presumably a reference to Simon the Maccabee and his sons, whose death in Jericho at the hand of Ptolemy in 134 B.C. is interpreted by the Qumran community as a reapplication of Joshua's curse in their own time.

\***JEROBOAM** [Heb. ירבעם "may the people multiply" or "he who fights the people's battle" (viz., against the tyranny of Rehoboam King of Judah)]. The first king of the northern kingdom following partition of the united kingdom after Solomon's death (928-907 B.C.); son of Nebat. His mother, Zeruah ("leprous"), is described as a widow in I Kings 11:26, while in LXX III Kings 12:24b she is called Sarira and depicted as a harlot. Whether deliberate vilification was intended by either the MT or the LXX is an open question. It is also doubtful whether Jeroboam was of humble origin or—as may be indicated in I Kings 11:28 (גביר חיל)—an affluent landowner. His ability was recognized by Solomon, who put him in charge of the *corvée* of the tribes of Ephraim and Manasseh.

Jeroboam's rise to power is reported in two contradictory versions. The MT records that the

prophet AHIJAH of Shiloh, predicting the imminent collapse of Solomon's kingdom, assured Jeroboam that he would become king over the ten northern tribes. Encouraged by this prophetic support, Jeroboam rebelled, but was forced to flee to Egypt, where Shishak (Shoshenk) I, founder of the Twenty-second Dynasty, provided asylum to Solomon's enemies (cf. I Kings 11:14-22, 40).

After Solomon's death, Jeroboam headed a delegation of tribal leaders who petitioned Rehoboam to reduce the onerous burdens imposed by his father. When this petition was contemptuously rejected, the northern tribes seceded (I Kings 12:1-16; II Chr. 10:1-16). According to another account, however, it was only after the secession that Jeroboam was summoned by the northern tribes to be crowned king of Israel (I Kings 12:20).

The LXX offers an entirely different narrative (III Kings 12:24). Jeroboam fortified the town of Sarira and assembled three hundred chariots in an abortive uprising against Solomon. Having taken refuge in Egypt, he was given Pharaoh's sister-in-law in marriage, presumably to tie him more closely to Pharaoh's political ambitions. However, in view of the extraordinary similarity of this part of the narrative to MT I Kings 11:14-22 (where Hadad the Edomite, another enemy of Solomon's, is depicted as Pharaoh's favorite and brother-in-law), it is likely that some confusion has crept into the LXX text.

When Jeroboam returned to his homeland, he assembled his fellow tribesmen and again fortified Sarira. At this point the LXX changes the entire chronological order of the MT. The sickness of Jeroboam's son and the visit by Jeroboam's wife to consult the prophet Ahijah—which in the MT occur at a much later time (I Kings 14)—precede Jeroboam's assumption of kingship. Ahijah's role is reversed, and instead of announcing Jeroboam's rise to power, he predicts the ruin of his dynasty. Since Jeroboam had not yet made the golden calves (which in the MT are the primary reason for the prophetic denunciation of him), one may assume that the (Alexandrian) LXX author, reflecting the views of his own time, wished to convey the idea that Jeroboam's Egyptian marriage was the central cause of the curse pronounced by the prophet upon his dynasty. Nevertheless, the LXX does record prophetic support for Jeroboam's ascent to power: Shemaiah (cf. RSV I Kings 12:22-24; II Chr. 11:2-4) announces that Jeroboam is to reign over the ten tribes. The historical reliability of the LXX account has been a matter of dispute, though it is probable that it contains at least some historical basis. It is no more tendentious than the MT.

Jeroboam, conscious of security considerations, rebuilt or fortified the cities of Shechem, Penuel, and possibly Tirzah (I Kings 12:25; 14:17). The latter seems to have been his capital (although some believe that it was during Baasha's reign that Tirzah became the capital; cf. 15:21), conceivably because Shechem lacks strong natural defense lines.

Jeroboam felt insecure while Jerusalem continued its religious hegemony over the entire country. The threat of a reawakened loyalty to

the Davidic dynasty if pilgrimages to Jerusalem continued induced Jeroboam to establish an independent Yahweh cult at Bethel and Dan. To counter the prestige of the Jerusalem temple, Jeroboam—probably harking back to an old northern tradition which regarded Aaron as the originator of an Israelite cult—built two golden calves (or bulls) to serve as pedestals for the enthronement of Yahweh just as the ark and cherubim served at Jerusalem. See CALF, GOLDEN[S].

Jeroboam also asserted his religious and political authority by appointing a new, non-Levitical priesthood dependent on himself, thereby imitating Solomon, who had deposed Abiathar and appointed ZADOK as a subservient court priest (I Kings 2:35). Furthermore, Jeroboam postponed the Festival of Ingathering (Succoth) by one month, probably because of the later harvests in the north. As the climactic symbol of his supremacy, Jeroboam himself performed the priestly office (I Kings 12:32; 13:1).

Although Jeroboam maintained an authentic form of Yahweh worship, his challenge to the supremacy of the Jerusalem temple was uniformly condemned by the later court annalists of the Davidic dynasty. It is exclusively the view of the Judahite Deuteronomistic-prophetic school which is reflected in the negative evaluation of Jeroboam and his successors in the books of Kings. The partition of the monarchy and the establishment of the bull cult were the cardinal "sins of Jeroboam which he sinned and which he made Israel to sin" (I Kings 15:30 and *passim*).

Jeroboam's position was seriously weakened by Shishak's invasion of Palestine (ca. 924 B.C.). According to an inscription at Karnak, Shishak captured a considerable number of Israelite cities, and archaeological evidence indicates that Gezer, Beth-shan, Taanach, Megiddo, and many other cities were destroyed (*ANET* [3rd ed.], pp. 242-43). The invasion was disastrous for the country, weakening its economy and undermining its military strength. Henceforth Jeroboam and his son and successor, Nadab, were involved in frequent border warfare with the resurgent Philistines and with a militarily strong Judah under Rehoboam and Abijah (II Chr. 12:15; 13:2-20; cf. I Kings 14:30; 15:6-7).

While the author of the books of Kings is remarkably reticent concerning the wars between Jeroboam and the kings of Judah, the Chronicler adds many details—derived in the main from the chronicles of the kings of Judah. Thus, he describes a major victory over Jeroboam (II Chr. 13:2-20). While the Chronicler's account includes many embellishments and exaggerations (e.g., 500,000 Israelite battle casualties [vs. 17]), the list of cities captured seems genuine enough. It was probably as a result of this crushing defeat that the northern kingdom lost the disputed territory of Benjamin and, temporarily at least, parts of southern Ephraim. Although King Baasha of Israel seems to have regained southern Ephraim, he was unable to reconquer the land of Benjamin (I Kings 15:17-21).

Jeroboam was further weakened by the erosion of prophetic support. Even Ahijah turned against

him. When Jeroboam sent his wife to ask whether her sick son would recover, Ahijah prophesied the extermination of Jeroboam's dynasty (I Kings 14:1-16). The reason given for this radical change of attitude is that Jeroboam had made himself "other gods, and molten images" (vs. 9). Although the golden calves are not expressly mentioned here, it is evident that Jeroboam's cultic innovations brought about the loss of prophetic support. This, combined with the military setbacks, which must have had serious economic consequences, undermined Jeroboam's regime. While he died a natural death, apparently as a result of a plague (II Chr. 13:20), his son Nadab was overthrown and killed, along with Jeroboam's entire family (I Kings 15:27-29).

L. SMOLAR

**\*JERUSALEM. 1. The Israelite period.** It is concerning this period that the largest amount of new information has come as a result of the recent excavations. The most important discovery is a 130-foot stretch of city wall, 23 feet thick, excavated in the Jewish Quarter. Such a wall, situated on the upper part of the E slope of the W hill, is indeed a great surprise, but seems to be in accord with the previous scholarly opinion (the "middle view") that only the areas in the TYROPEON VALLEY were encompassed within the walled city during the time of the Judean kingdom. The excavator of the new city wall, Avigad, dates it by stratigraphic position to the end of the eighth century B.C. (see Fig. J1). Pertinent are the rock-cut tombs found at the foot of the E slope of the W hill. Mazar dates them to the second half of the eighth century and the first half of the seventh century B.C. Since tombs would have been placed outside the walled city, we must assume that the part of the W hill which is within the Avigad wall was incorporated after the initial use of these tombs.

The fact that floors, walls, and sherds of the Israelite period were found in every excavation throughout the Old City, from the Citadel to the Armenian Garden and Mount Zion, seems to indicate that the whole W hill was inhabited during that period, though most probably not walled until (as the new line of wall proves) the middle of the eighth century B.C.

New explorations to the N and the W of the Old City revealed various tombs of the Israelite period, such as those in the grounds of École

Israel Exploration Journal, XXII

1. Excavations in the Jewish Quarter, Jerusalem

Biblique, or in the area of Mamilla, or those recently discovered at the foot of the W slope of the W hill.

**2. The Persian period.** New information has come mainly from Kenyon's excavations on OPHEL (see DAVID, CITY OF[S]). These excavations revealed the existence of late Iron Age houses beneath the "Jebusite Wall" (R. A. S. Macalister)—a fact which proves that this wall is at the earliest of the Persian period. Kenyon ascribes it to Nehemiah. Thus, this seems to be the E city wall of Jerusalem in the period of the return to Zion. All the recent excavations, however, have not brought about a definite answer to the problem of the extension of the city toward the W. The problem is whether the city was confined to the SE hill (known as Ophel), or whether it included part of the W hill, that part which is enclosed within the newly discovered city wall (the Avigad wall).

**3. The Hellenistic period.** Most of the Hellenistic remains which have been recently uncovered in the Jewish Quarter, in the Citadel, and on Mount Zion belong to the Hasmonean period. Pre-Hasmonean remains are known mainly on the Ophel, discovered long ago by Macalister and Duncan (*PEF Annual*, 1923-25; see also DAVID, CITY OF). In the other parts of the city, the remains are as follows: (a) In the Jewish Quarter a tower assignable to the Hasmonean period was discovered, built on top of the remains of the city wall of the first-temple period. (b) In the citadel extensive remains of the Hasmonean period came to light. The first city wall, which had been excavated on its outside by C. N. Johns, was now excavated on its inside face. It contained an inwardly projecting tower, the length of which is over 33 feet. Adjacent to the tower and the wall,

rooms have been found, one preserved almost to full height, containing a doorway with its lintel and jambs. (c) In the excavations S and W of the temple mount cisterns and water installations were found. They were built into cave tombs which date back to the eighth-seventh centuries B.C.

Finds of special interest include two colossal capitals and a base of the Ionic order found in the Jewish Quarter (not *in situ*). They belong to columns at least 39 feet high, and may have been part either of the Temple of Apollo built by Antiochus IV or of one of the Hasmonean palaces. Both were located somewhere on the W hill.

**4. The Herodian period. a. The temple.** See TEMPLE OF HEROD[S].

**b. Herod's palace.** The location of the palace has never been in dispute: the whole area of the present-day citadel, to the SW corner of the city wall, an area about 985 feet long and 330 feet broad. The recent excavations by Kenyon-Tushingham, Amiran-Eitan, and Broshi-Bahat have proved that this location is right, and they have discovered some features of the engineering method. The clearest evidence, from within the Hasmonean city wall in the courtyard of the Citadel (Amiran-Eitan), shows that the whole palace stood upon a platform (podium) raised considerably above the floor levels of the Hasmonean houses. The foundations are walls 33 feet thick and 10-13 feet high, filled in with huge quantities of soil mixed with stones and sherds. In the Armenian Garden (Kenyon-Tushingham and Broshi-Bahat) similar foundation walls came to light, proving that the podium extended throughout the area of the palace. A few rooms escaped the fate of the rest of the palace, thanks to the fact that they were located at the very edge of the podium in the NW corner of the city wall. Vessels, coins, and other objects found on their floors date them to the first half of the first century A.D.

**c. Private dwellings.** Recent excavations on the W hill have uncovered a number of private dwellings from the Herodian period. These large-scale, magnificent houses of the well-to-do families are in accord with the evidence of Josephus. The houses had two or more stories built around a central court, beneath which was a basement containing cisterns and ritual baths. The rooms have mosaic floors or *opus sectili*, and the plastered walls often have frescoes which imitate marble panels or typical Herodian masonry. The walls contain niches for use as cupboards. Small objects include pottery, metal objects, inscribed weights, and a large quantity of vessels made locally of soft chalk. Special mention should be made of magnificent stone tables resting on one foot.

On the E slope of the hill the houses were built in steps, or terraces. Along their N boundary a street extended from about the middle of Herod's palace to the flight of stairs which lead to the temple mount (Robinson's Arch; see TEMPLE OF HEROD[S]). These houses existed until the eighth of Elul, A.D. 70, when they were destroyed along with the temple. Evidence of a great conflagration may be seen in the ruins of these houses.

**5. The walls** (see IDB, Vol. I, map XXIV). a.

**The first wall.** The alignment and parts of the W and S first wall are known since the work of Maudslay (1871-75) and Bliss and Dickie (1894-97). Johns discovered the NW corner of the first wall in his excavations in the courtyard of the Citadel. He established the method by which the Herodian Phasael tower was inserted into the then-existing first wall (Hasmonean). In the fragments of the wall that Johns discovered he distinguished two types of construction, assigning both to the Hellenistic period. In the recent excavations (Amiran and Eitan, 1968-69), a tower belonging to the same city wall has been discovered (see §3b above). The two types of building seem to belong to the Hasmonean period (150-30 B.C.). The Herodian engineers made use of the Hasmonean wall in various ways. Sometimes they left it unchanged; sometimes they thickened it; and sometimes they built new segments to replace the previous ones. Excavations along the outside face of the present (Turkish) city wall (by Broshi) produced analogous results: the present wall makes use of the Hasmonean-Herodian wall at many points along the W side.

**b. The second wall.** The alignment of the second wall is one of the most controversial problems of the historical topography of Jerusalem, mainly because of its close connection with the problem of the location of the HOLY SEPULCHRE (see also JERUSALEM §11). Not much factual data has been added recently, but some negative information should be mentioned. Kenyon has found that the area she has excavated in the vicinity (site C) was outside the city area until the middle of the first century A.D., which pushes the N-S stretch of the second wall eastward.

Hennessey's clearance of Hamilton's excavations (1937-38) outside the present Nablus Gate reopened the magnificent Aelia Capitolina Gate, the remains under which may go back to a gateway of the second wall.

**c. The third wall.** Excavations carried on in 1965 (Kenyon-Hamrick) and in 1972-73 (Ben Arieh and Netzer) have added new information. Work was done in two areas, one of which had been excavated in 1927 and 1940 (Sukenic and Mayer); the other area was a little to the W of the first. Foundations of a 197-foot stretch of the wall and the bedding of two oblong towers (one is 29 x 36 feet) were uncovered. Avi-Yonah has summarized the evidence for the identification of this wall with the third wall mentioned by Josephus.

Excavations in 1971-72 (Bahat and Ben Ari) outside the NW corner of the present city wall (outside the Tancred Tower, sometimes called Goliath Tower) produced no trace of a city wall earlier than the Crusader period. Thus, the problem of the alignment of the third wall still remains.

**6. Cemeteries.** The line of cemeteries stretching from Haqal Dama in the S, to the Kidron Valley, the Mount of Olives, and Mount Scopus continues without interruption toward Sanhedria, since a large number of tombs have recently come to light on Giv'at ha-Mivtar and on Mount Scopus. Most are of the usual type; a central room and

niches (*kókhim*) with a courtyard in front. Interment is in ossuaries (see TOMB[S] §3). Among the most important finds are: (1) A tomb on Giv'at ha-Mivtar with an ossuary inscribed with "Simon builder of the Temple." (2) Another tomb on ha-Mivtar with a skeleton of a crucified man (see CRUCIFIXION, METHOD OF[S]). (3) A tomb on Mount Scopus, with a beautifully carved sarcophagus of hard stone, and some ossuaries, one incised with the inscription, "Hanania son of Jonathan the Nazir." (4) An unusual cave tomb on Giv'at ha-Mivtar with a long inscription in Aramaic (but in Paleo-Hebrew script) by one "Abba son of the priest Eleazar, son of Aaron the great . . . , who was born in Jerusalem and went into exile into Babylonia and brought Mattathia son of Jud[ah] . . . [and buried him in the cave]."

\***JESUS CHRIST.** See CHRISTOLOGY IN THE NT[S]; TEACHING OF JESUS[S]; SAYINGS OF JESUS, FORM OF [S].

**JEW, NT ATTITUDES TOWARD.** Earliest Christianity was a movement in Judea, of and by Jews, for a Jewish purpose. In a relatively short time it spread outside Judea and became a movement primarily of Gentiles. The NT attitude toward Jews is a complex of many factors, primarily disputes over the messiahship of Jesus and Paul's view of the Law, but with attendant conflicts and mutual Jewish-Christian hostilities. Ultimately the church came to believe that it was a discrete entity, and that God had cast off the Jews as his people and replaced them with Christians (see ISRAEL, CONCEPTIONS OF[S] §§4, 5). Jews and Judaism figure in Christian scripture, but Christians and Christianity do not, of course, figure in Jewish scripture.

**1. The gospels.** The gospels present Jesus in a Jewish setting and in varying kinds of relations with his fellow Jews, including the severely critical (see TEACHING OF JESUS[S] §§2, 3b). Assuming full historical reliability here, Jesus can thus be viewed as being in the loyal line of the pre-exilic prophets (e.g., Amos, Isaiah, Jeremiah) who criticized their people from within their common traditions and common assumptions. Only a few scholars have insisted that Jesus really stood over against the Jews and Judaism, and that the polemic attributed to him was, and is, justified.

Because the canonical gospels were written ca. A.D. 70-100, many scholars believe the attitude toward Judaism reflected in them indicates as much about the church's situation in this period as about the nature of Jesus' own ministry. In this period there was acute antagonism between Jews and Christians: the Jews resented the nonparticipation of Jewish Christians in the rebellion against Rome in A.D. 66; Christians contended that the Roman destruction of the temple in A.D. 70 was both a punishment of the Jews for having "rejected" Jesus and a vindication of their own Christian claims. These same scholars also stress the shift of attention from temple to synagogue in postbellum Judaism, resulting in the reorganization of Judaism by rabbinic leaders at Jamnia and increased emphasis upon the scrupulous observance of the Mosaic laws and secondary regulations derived from them. It is claimed that laxity in observing these regulations by Jewish Christians led to the punishment by flogging of Christians, to their exclusion from synagogues, or even to their persecution. There are some NT echoes of this latter, e.g., John 16:2.

Yet early rabbinic sources (the "tannaitic literature") lack the term "Christian" and the hostility found in these sources is directed to the enigmatic *minim*. These could have been pagan, Jewish, or even Christian Gnostics. Local harassment of Christians by Jews is recurrently described in Acts, where Christian preaching in a particular synagogue elicits opposition, punishment, and even violence. But there is no evidence for any determined, directed Jewish persecution of Christians. No Jewish decrees or hortatory statements that might have spurred deliberate maltreatment are extant. Indeed, in Acts the stoning of Stephen (6:1-7:60) and the events in Iconium and Lystra (14:1-19) are treated as lamentable but unplanned uprisings. The same author also shows how Gamaliel persuaded the Sanhedrin against killing the apostles (Acts 5:17-42). Though beaten and forbidden "to speak in the name of Jesus" (vs. 40), the apostles were released and continued "teaching and preaching Jesus as the Christ" (vs. 42). Although "a great persecution . . . against the church in Jerusalem" is mentioned (8:1), the peace and progress of the church "throughout the region of Judea and Samaria" is also noted. Incidents of hostility and mean treatment of Christians there were; but the Jews pursued no consistent, over-all policy of persecution toward the Christians. That Jewish stringencies after A.D. 90 resulted in the exclusion of Christians from synagogues is not confirmed in Jewish sources, but reasonably inferred from Chris-

tion writings. If the gospels reflect the bitter church-synagogue feelings, then the question of the historical reliability of the gospel accounts of conflicts between Jesus and the Jews of his time must remain uncertain and moot.

**a. Mark.** Scholarly inquiry into anti-Jewish sentiments in the gospels has usually fixed on certain limited materials: e.g., the TRIAL OF JESUS or the parable of the wicked tenants (Mark 12:1-12; Matt. 21:33-46; Luke 20:9-19). But attention to limited pericopes or sections, though valid, surely needs supplementing by attention to the totality of a gospel, of its tone and accentuations.

Mark, usually regarded as the earliest of the gospels, is no less than a thorough disparagement both of Jews (who are blindly hostile) and of Jesus' Jewish disciples (who are opaque, lacking in full understanding, and disloyal). Mark's Jesus is kindly and noble, opposed by Jews of each and every sort, ranging from ordinary people in synagogues to Herodians, scribes, Pharisees, Sadducees, and priests. These opponents are portrayed as vicious, pitiless hypocrites and villains. The disciples—Jews—are portrayed as ineffectual, unreliable and finally disloyal. Only a Roman centurion, a Gentile, recognizes Jesus for what he is (Mark 15:39). The anti-Jewish tone of Mark is more than sporadic pericopes; it is the warp and woof of the gospel.

**b. Matthew.** Here the hostility to Jesus is more overt. Ch. 23 is a collection of woes against the scribes and Pharisees. The title rabbi is not to be used (vs. 8); the scribes and the Pharisees are hypocrites who "shut the kingdom of heaven against men" and neither enter themselves "nor allow those who would enter to go in" (vs. 13). In traversing sea and land to make a single proselyte, they make him "twice as much a child of hell" as themselves (vs. 15). They swear not by the temple, but by its gold (vss. 16 ff.). They "tithe the mint and dill and cummin," but "have neglected the weightier matters of the law" (vs. 23). And Jerusalem kills the prophets (vss. 29 ff.). In the PASSION NARRATIVE, Pilate, to show his innocence, "washed his hands before the crowd," and the Jews responded, "His blood be on us and on our children!" (27:24-25). (Most modern Christian scholars deny the validity of the medieval interpretation of this passage which held that all Jews, of whatever time or geography, are culpable for the death of Jesus.)

**c. Luke-Acts.** The hostility to Jews is more subtle here. Jesus and his followers are represented as never having trespassed against Judaism; but the Jews are portrayed as having trespassed against Christians. The narrative of the rejection at Nazareth is expanded and placed earlier (4:16-30; cf. Matt. 13:54-58; Mark 6:1-6) as if to imply that this Jesus, faithful in his synagogue attendance, was rejected by the Jews at the very start of his career. In the parable, the Samaritan (10:29-37) was a good neighbor when a priest and a Levite (both Jews) were not. When the prodigal son returns home, his elder brother (Judaism) is angry and refuses to attend the feast (15:11-32). The view in Luke-Acts is that the Law grew naturally into the gospel and that the Way (e.g., Acts 9:2)

became true Judaism, for Jews had lost their position of favor with God (cf. the parables of the marriage feast, Luke 14:16-24, and of the rich man and Lazarus, Luke 16:19-31).

**d. John.** Jesus' opponents are usually called "the Jews." (Some scholars interpret "the Jews" in John to mean only "the people," thus attempting to mitigate the apparent "anti-Semitism," an anachronistic word.) Jesus is depicted in controversy with Jews who had (once) believed in him, and whom he charges with being descended from the devil rather than from Father Abraham (8:31 ff.). Jesus is greater than Abraham was and Abraham rejoiced to see his day (vss. 53-57). In this gospel, to be sure, certain affirmative notes are struck (4:22, "salvation is from the Jews"; 1:47, "an Israelite . . . in whom is no guile"). And, more than in the Synoptic gospels, the quarrels and animosities between Christians and Jews seem historically rooted in the evangelist's own day (e.g., 6:41-51; ch. 9; 16:2; see JOHN, GOSPEL OF[S]).

In the gospels, the animosities are clearly twosided. The most significant anti-Jewish motif of all was (and is) the contention that while the Romans did the crucifying, the Jews were the true culprits. In Christian writings a progressive shift in blame from Romans to Jews culminates in an unreserved blame of the Jews and the unreserved exonerating of the Romans for the death of Jesus (Riddle).

**2. The letters of Paul.** As distinct from the portrayal of Paul in Acts, only an occasional passage in his own letters reflects focused hostility toward Jews. The charge in I Thess. 2:14-16 that the Jews killed both Jesus and the prophets and have suffered the wrath of God is sometimes regarded as an interpolation, largely because it seems so out of keeping with the apostle's ordinary views, and seems to reflect a later time (especially if "wrath" alludes to the destruction of the temple in A.D. 70). The attacks in Phil. 3:2 and Gal. 5:12 may be against Gentile Judaizers, not Jews. Significantly, Paul is critical of Judaism, as distinct from Jews, holding Judaism to be unable to provide salvation. Not by the observance of laws (self-reliance) but only through faith can true salvation come. But since Paul himself is a Jew, even in his denigrating Judaism he reserves some praise for it, and he expresses the hope that all Israel, though hardened in heart, will be saved (Rom. 11:25-26). By implication, a Jew is an adherent of an ineffective and superseded religion.

**3. Elsewhere in the NT.** Hebrews deals with Judaism, not Jews, and argues that Christianity is perfection, superior to the imperfect Judaism which prepared its way. While scorn is expressed about "Jewish myths" in Tit. 1:14 no evidence has yet been discovered for the actual existence of such. In Rev. 2:9, allusion is made to slanderers "who say that they are Jews and are not, but are a synagogue of Satan" (cf. 3:9). Such passages served in medieval times for identifying Jews and Satan.

**4. Conclusions.** It is probable that hostility toward Christians surfaced in some Jewish literature just as hostility toward the Jews is apparent in the NT and following. Although no such Jewish sources have survived, overtones may be recovered

from Celsus, *True Word*. Jewish denunciations of paganism (e.g., LETTER OF JEREMIAH) and second-century Christian attacks on Greek culture (e.g., Pseudo-Justin, Discourse to the Greeks), and Christian attacks on fellow Christians (e.g., Irenaeus, *Against Heresies*) show that religious controversies in the early centuries of the church's life were never genteel. The anti-Jewish tones of the NT are products of a particular age and set of historical circumstances. Many modern Christians are disquieted by these anti-Jewish sentiments and regard them as passing, angry outbursts, historic curiosities, possessing no ongoing validity, and surely not normative for a modern Christian's attitude toward Jews.

SANDMEL

\***JOASH, KING OF ISRAEL.** The discovery of a stela honoring the Assyrian king Adad-nirari III (810-783 B.C.) at Tell er-Rimah (N Mesopotamia) made Joash the sixth king of Israel to be named in an Assyrian record. Its line 8 mentions tribute from \**Ia-'a-su* KURŠa-me-ri-na-a, i.e., Joash of the land of Samaria. *Ia-'a-su* is a defective writing of \**Ia-ù-'a-su* (cf. in Tiglath-pileser III's annals *Ia-ù-ḥa-zu* instead of \**Ia-ù-'a-ḥa-zu* for Jehoahaz=Ahaz); *s* stands here, according to the Assyrian usage, for *š*. The new piece of evidence raised questions relating to both Assyrian and Israelite chronology. The likeliest date of Joash's payment of tribute to Adad-nirari III is 796, when the Assyrian king invaded Mansuate (the Biqa' Valley N of Israel). See CHRONOLOGY, OT[S].

\***JOB, BOOK OF.** While recent studies of Job can hardly claim to have solved any of the major technical or interpretive problems, new evidence has been brought to bear, new approaches have been suggested, and older ones have been revised.

1. **Evidence from Ugarit.** The most significant evidence has come from texts discovered at UGARIT (modern Ras Shamra). Many of these celebrate the exploits of gods and goddesses in poems of epic length. Although they considerably predate the writing of Job, it is clear that these or similar sagas were known by the author, and that they influenced both his mode of expression and his literary iconography. They have also led scholars

to a clearer grasp of the many mythological allusions which fill the book.

It is now certain that Leviathan (לִוְיָתָן), mentioned in 3:8 and described extensively in ch. 41, is not a whale or a fantastic crocodile but rather a mythological sea serpent with seven heads (cf. Ps. 74:13-14). Indeed one of his epithets, "the fleeing serpent" (Job 26:13; cf. also Isa. 27:1), reproduces exactly an ancient title now known from the Ras Shamra tablets. The gruesome description of the wicked man's end at the hands of "Death's first-born"/"the King of Terrors" in 18:13-14 (ABi) is given clearer comprehension through reference to the ravenously hungry god MOT (Death).

2. **New parallels proposed.** Other parallels or influences have long been proposed, particularly Mesopotamian literary works (see JOB §7). Recently further parallels have been suggested. Holland has called attention to the Attic comedy as exemplified by the plays of Aristophanes. He argues, rather unconvincingly, that the structure of Job and that of the Greek comedies are similar and likely stem from the same or similar origins in "Phoenician-Canaanite traditions."

The recent suggestion of Hoffner that a parallel may be found in the Hurrian-Hittite myth of Appu is somewhat more likely. Appu's complaint is childlessness, and this causes him to suffer severely. Like Job, Appu must endure the chiding of an unsympathetic wife. Finally he declares: "You are a woman and of a woman's temperament—you know nothing at all" (cf. Job 2:10). However, the Appu story appears to have more affinities with the Cain and Abel narrative than with Job. Hoffner therefore does not press the parallel too far. Rather, he suggests that if Appu and Job are one and the same, the Appu tale may be a traditional story which portrays a further incident in the life of the righteous Job of folk legend (cf. Ezek. 14:4; see JOB §5). The slight resemblance of the names Appu and Job (i.e., Ayyabu; see JOB §1) lends some shaky support to this proposal.

3. **Qumran.** The ancient biblical scrolls from Wadi Qumran include manuscripts of Job. While some of these still await publication, a Targum, or Aramaic translation from the eleventh cave, was published in 1971. The scroll (11Q<sup>g</sup>Job) preserves parts of thirty-eight columns of text and contains a translation of about one third of Job over-all, running intermittently from 17:14 to 42:11. This Targ., which probably should be dated to the first century B.C. or perhaps the latter half of the second century, is the oldest Job MS of any extensive length so far known. Along with two small unpublished fragments from Qumran Cave IV (one from yet another Aramaic translation of Job), it is also the earliest known exemplar of a Targ. of any sort. See JOB §2; DEAD SEA SCROLLS[S] §2.

The discovery of this scroll not only gives insight into the textual history of Job but also greatly aids our understanding of the Aramaic language, and is invaluable evidence for targumic research. For the most part the basic text type and order is the same as found in the traditional Hebrew (MT). The notable exception is the prose Epilogue

(ch. 42, col. 38, in 11Q<sup>g</sup>Job). Here the indications are that the Job Targ. preserves a text ending at 42:11, six verses short of the MT version. (We can further contrast this with the LXX, which has an even fuller Epilogue than that found in the Hebrew.)

Most of the numerous variants from the MT appear to be secondary, and hence can be employed only occasionally to improve the text (see TEXTUAL CRITICISM, OT[S]). Modifications appear consistently to be employed to soften the picture of a rebellious Job and to place blame instead on the three friends and Elihu. For example, where Elihu remarks about Job, "God may vanquish him," the Targum renders, "but God will condemn us" (Job 32:13=11Q<sup>g</sup>Job 21:5).

Some scholars (Tuinstra, Caquot) have argued that 11Q<sup>g</sup>Job was composed in the context of the Essene sect at Qumran, with their spiritual leader, the "Teacher of Righteousness," as the model for the portrayal of Job. It is further suggested that this Targum may well be the same as the text ordered buried by Rabbi Gamaliel (Tosef. Shab. XIII.2). While both of these proposals are possible, the evidence is not decisive.

**4. Structure, unity, and date.** A new defense of single authorship has been recently mounted by Gordis. He argues that the Elihu speeches—most suspected of being an interpolation from a second author (see Job §10)—were in fact added by the original author in a later period of his life. Freedman accepts the predominant view that the Elihu speeches are a later interpolation, but he does not think that they were all intended by their author to be placed at the end of Job's final speech. Instead, he believes that each was meant to be inserted at a turning point in the Dialogue section: the first three Elihu speeches respectively at the end of the first three "cycles" of the debate, and the last speech where all of Elihu's remarks now stand. To support this argument, Freedman cites close correlations between each of Elihu's speeches and the sections of Job with which each was meant to be grouped.

A "structuralist" approach has been presented by Polzin. He side-steps the historical issue of the unity or disunity of Job and endeavors to approach the book as a *de facto* unit for the purpose of analysis. This done, he is able to view the book as a "confrontation of inconsistencies," i.e., a framework in which an original equilibrium is upset by a conflict which, in being resolved, engenders yet another conflict, and so on in succession until the original equilibrium is re-established when Job receives double his wealth in the Epilogue. The main drawback to Polzin's theory is that it requires a number of *ad hoc* technical and interpretive assumptions, none of which can be objectively verified. If one rejects even one of them, the analysis falls apart.

An inquiry into the date of the Prologue and Epilogue by Hurvitz has advantages that Polzin's study lacks, namely external and hence largely objective criteria. Employing, as a standard for dating, linguistic elements found in biblical books unmistakably datable in the exilic/postexilic period (Esther, Ezra, Chronicles), he compares these with

similar linguistic elements in the Prologue-Epilogue. Hurvitz is thus able to point to a date no earlier than the Exile (sixth century B.C.) for the composition of these sections as we now have them. One must therefore conclude that whatever patriarchal or epic substrata are found in this prose work are either survivals from an earlier form of the story or are archaisms. Beyond this, certain implications may be drawn, depending on whose views are followed. If one agrees with Pope's tentative dating of the Dialogue to the seventh century B.C., for example, it follows that the Prologue-Epilogue was added by a redactor at a later period. If on the other hand one accepts Cross's view that Job contains archaic material probably reworked by the poet in the sixth century B.C., one may well see a single author for Dialogue and prose sections.

**5. Interpretations.** For most readers the more technical difficulties are incidental to the central question: What is the point of the book? Recent studies have focused upon the THEOPHANY section as a key. One view declares that, though on a strictly rational level God's reply to Job is not very satisfactory, on a level beyond the bounds of man's intellect it is able to reach and indeed to bring peace to Job. This argument was probably given its best treatment some time ago by Otto, who speaks of "the sheer absolute wondrousness that transcends thought, . . . the *mysterium* presented in its pure non-rational form," which Job finds in his encounter with God. When Scott speaks of "wisdom of the soul, . . . not the same thing as intellectual knowledge," or Gordis of "a sense of reverence for the mystery and miracle of life," or Polzin of Job's "assent to the sphere of belief" after being "overwhelmed by the theophany," they are largely voicing similar ideas.

Yet one must ponder whether this is a sufficient answer. One cannot help recalling that it is precisely an overwhelming burst of divine power (such as is found in the Theophany) which Job begged God not to unleash (13:21-22; cf. 9:34). Job well knew that without such forbearance (or lacking this, some guarantor or umpire who could offer protection, cf. 9:33; 16:19; 19:25) his position was hopeless (9:15).

In view of this difficulty, one must consider the interpretation by Tsevat, who denies a resolution in a nonrational sphere. He believes that the confrontation between mortal and divine compels the reader to the logical conclusion that the world is an amoral environment in which man's standards of right and wrong cannot be imposed upon God. Job loses his belief in justice, but gains in its place a closer relation to the Deity, an appreciation of his accessibility to man.

Tsevat's argument is attractive, yet problematical. Amoral implies indifference, a world where, as Koheleth says, "God is in heaven, and you upon earth" (Eccl. 5:2). Yet God is depicted as far from indifferent; can the author therefore have implied that he is amoral?

What these remarks demonstrate is that any interpretive analysis of Job is open to question. Every point one can make tends to have an equally defensible counterpoint. As Zophar states, "There are

two sides of wisdom" (Job 11:6, Pope's trans.) and in Job the cross current of ideas is particularly strong. A solution to the book perhaps is not really desirable. We should rather understand Job as a penetrating insight into the deepest thoughts of mankind, and recognize that the dark ponderings engendered by this insight are as inevitable as life itself.

creation of the spiritual world rulers and of man, and the struggle to rescue man from his imprisonment in the body and the material world. Though much of the content was already known from reports of the church Fathers, it appears here in a form and context which shed new light on the unresolved problem of the relationship between Gnosticism and Christianity. The heterogeneous body of Gnostic tractates which share themes or details with ApocryJn raises the question of the origin and function of these writings.

1. **Text and date.** Four copies of ApocryJn are extant, representing three independent translations from Greek into Sahidic COPTIC. Codex Berolinensis 8502 (BG) and NAG HAMMADI Codex III (NH III,1) contain the shorter and probably older version, while NH II,1 and IV,1 represent two copies of the same Coptic translation of the longer version. BG has been the basis of the discussion up to now, since it is the best preserved and the only one available in a dependable edition. It probably dates from the fifth, the NH copies from the fourth century A.D. The teachings of the Gnostics described in *Iren. Her. I.xxix* are largely identical with the cosmological section of ApocryJn. At the end of this section the tractate shows a possible literary seam (BG 44,19), since it changes from a revelation discourse to a dialogue. Though Irenaeus apparently did not know ApocryJn in its present form with its Christian title and framework, but only the first part with some significant differences in detail, it is certain that the main teaching of the tractate existed before A.D. 185, the date of Irenaeus' Heresies. ApocryJn was still used in the eighth century A.D. by the Audians in Mesopotamia.

2. **Purpose and content.** ApocryJn supplies answers to two basic questions posed not just by Gnostics: What is the origin of evil? How can we escape from this evil world to our heavenly home? The cosmogony, in spite of its exotic details, also serves this purpose. The supreme deity is defined in terms of an abstract Greek concept of perfection which excludes all anthropomorphisms and involvement in the world. From him emanated a series of light beings which include Christ and Sophia.

The Fall occurred when Sophia desired to bring forth a being without the approval of the great Spirit and her consort. She produced the monstrous Creator-God Ialdabaoth, who possessed some of the light power of his mother. He created angels to rule over the world and to aid in the creation of man. Man is fashioned after the image of the perfect Father which was mirrored on the water. He comes to life when Ialdabaoth is tricked to breathe his light power into him. This initiates a continuous struggle between the powers of light and of darkness for the possession of the divine particles in man. The evil powers put man in a material body to keep him imprisoned. They also create woman and sexual desire to spread the light particles, and so to make escape more difficult. Christ is sent down to save men by reminding them of their heavenly origin. Only those who possess this knowledge and have lived ascetically can return to the light realm; others are reincarnated until they also come to saving Gnosis.

\***JOHN, APOCRYPHON OF.** Considered the most important work of mythological Gnosticism. Within the framework of a revelation by the resurrected Christ to John, the son of Zebedee, a remarkably clear description is given of the transcendent God, the light realm, the origin of the evil Creator, the

The longer version includes a lengthy enumeration of the angels who created the different parts of the human body, and the powers who rule in these parts, said to come from some "book of Zoroaster" (NH II 15, 29-19, 12). We probably have here a typical example of how Gnostic writings were changed and expanded. The syncretistic interest of the anonymous author and redactors in esoteric books knew few bounds. The other major addition is a remarkable section spoken in the first person by the perfect Protonoia relating his three descents into the world (II 30, 14-31, 25).

**3. Relationship to Christianity and Judaism.** The Christian framework is not integral to the revelation. It appears that also the revelation itself has been Christianized. Christ and the Holy Spirit have been given a prominent though not essential role. There is little more than a crude identification of the savior-revealer with a Christ who lacks his characteristic NT features. The mythology is developed largely in terms of the early chapters of Genesis with the dramatic value reversals typical of this kind of Gnosticism. The vilification of the OT God is not a sign of anti-Semitism, but a necessary consequence of the belief that the world is evil by nature. The OT itself is not rejected, for it reveals, when correctly interpreted, not only the evil nature of the Creator, but also the beginnings of the Gnostic race. The knowledge of Jewish traditions is too extensive to deny that mythological Gnosis in its pagan and Christian forms derived, in some way, from Judaism.

**4. Place within Gnosticism.** The NH library contains many tractates which share some themes or details with ApocryJn. These are the Nature of the Archons, On the Origin of the World, the Gospel of the Egyptians, Eugnostos the Blessed, the Sophia of Jesus Christ, the Apocalypse of Adam, the Concept of our Great Power, the Second Treatise of the Great Seth, the Three Steles of Seth, Zostrianos, the Letter of Peter to Philip, Melchizedek, the Thought of Norea, the Testimony of Truth, Allogenes, and Trimorphic Protennoia. Yet the agreements are mostly incidental and are few, compared with the differences. It is impossible to claim that they represent the teachings of a specific sect or even closely related sects. It is questionable whether any of these writings meant to present normative teaching. More likely they were written by visionaries whose main aim was to aid believers in reaching mystical Gnosis. By assuming that these books presented the doctrinal statements of heretical groups the church Fathers mistakenly concluded that the Gnostic movement was fragmented into many separate sects. The heresiological tradition has attached the name Barbelo-Gnostics to the group whose teaching Irenaeus reports in Her. I.xxix. It is doubtful that such a sect ever existed or that there was ever a group which possessed ApocryJn as its distinctive teaching. It is characteristic of the Gnostic movement and its literature that ApocryJn could appeal to a wide variety of Gnostics. See also ADAM, APOCALYPSE OF[S].

**\*JOHN, GOSPEL OF.** The Fourth Gospel gained canonical status only when it was generally recognized as the work of John the apostle.

Among the problems posed by the traditional view of authorship none is greater than the Fourth Gospel's differences from the Synoptics. Such differences extend not only to the order of events and content, but also and particularly to the style and form of Jesus' speech (see JOHN, GOSPEL OF §§C1, D2a). The disparity between the Johannine Jesus, who constantly speaks of his own role and dignity, and the synoptic tradition of Jesus' sayings is difficult to reconcile, and it is generally agreed that the Synoptics represent more accurately the mode and themes, as well as the style, of Jesus' speech. Nevertheless, the Fourth Gospel is not without historical value, and some Johannine data (e.g., the dating of Jesus' crucifixion) may be superior to what is found in the Synoptics.

John was probably written near the end of the first century and after the Synoptics (surely after Mark). Quite possibly the author was not acquainted with any of the Synoptics. Moreover, it is generally acknowledged that he did not use any canonical gospel as his source in the way Matthew seems to have used Mark, but relied mainly on sources or traditions not otherwise known. The evangelist clearly represents a distinct theological perspective, but one nevertheless influenced by traditional Christian, Jewish, and perhaps other concepts and ways of thinking. The uniqueness of his work may account for a hesitancy in some quarters of the early church to accept it as authoritative and canonical. Possibly this historic bulwark of orthodoxy was itself at one time suspected of heterodoxy.

  2. Traditional and theological developments underlying the gospel
  3. Principal religious and cultural influences upon the gospel
  4. Purpose and historical setting of the gospel
- Bibliography

**1. Sources and composition of the Gospel of John.** Taking up numerous suggestions of earlier scholarship, Rudolf Bultmann proposed in his

epoch-making commentary (1941) that the Fourth Gospel was composed on the basis of several major sources (revelation-discourse source, *semeia* or miracle source, passion and Easter sources) and that its present form is the result of an apparently accidental disarrangement of the original text and its subsequent infelicitous restoration and editing by means of a process called "ecclesiastical redaction." His elaborate analysis, in which every sentence of the gospel is ascribed to the evangelist, one of his sources, or the redaction, has not gained general acceptance, but it embraces critical elements which are widely regarded as well-established results of Johannine research, e.g., the existence of a collection of miracle stories upon which the evangelist drew, as well as a passion tradition or source, the substantial independence of the gospel from the Synoptics, the secondary character of ch. 21, and the reversal of the order of chs. 5 and 6.

The use of sources in the Fourth Gospel can be most convincingly demonstrated in the miracle and passion narratives, where Johannine redaction may sometimes be clearly distinguished from a traditional narrative. Moreover, the enumeration of the signs in 2:11 and 4:54 has the appearance of a vestigial remnant of an earlier source. Although written sources for the discourses seem less likely than for the narratives, it is possible that they embrace traditional patterns and forms of speech. Thus, discourses of much the same type appear again in the Johannine epistles, although these may not be the work of the same author. Moreover, chs. 15-16 (17) follow awkwardly after 14:31 ("rise, let us go hence") and may represent traditional materials added rather late in the process of composition.

**2. Traditional and theological developments underlying the gospel.** The distinctiveness of the Fourth Gospel in relation to the Synoptics, the existence of the related Johannine letters, and the likely incorporation of earlier sources or traditions into the gospel suggest the possibility of analyzing and describing a history of the Johannine tradition. That I John differs somewhat theologically and in other respects from the gospel (see JOHN, LETTERS OF[S] §1) in no way militates against such an analysis, since the discrepancies are what might be expected in documents representing the life and thought of a living community. In recovering the tradition-history of the gospel, it is necessary to consider the evangelist's use of narrative sources, particularly a miracle source; the possible divergence of his own theological perspective from that of his sources; the significance of "the Jews" in the Fourth Gospel; and the possibility of placing the gospel, its constituent parts, and related documents in the context of the development of early Christianity.

Although the evangelist is critical of shallow faith in miracles, he does not reject the positive view of miracles as signs pointing to the divinely given authority of the miracle worker (see SIGN IN THE NT[S] §3). The greater sophistication of the gospel in matters of miracle and faith is related to the way the miracle stories serve as points of

departure for the theologically pregnant discourses and debates in which Jesus plays the central role. The existence of a Johannine miracle source and tradition presupposes a community, in which the individual stories likely served more than one function. Thus the hypothesis of a development in reflection upon and use of miracle stories within the Johannine community seems to be warranted. In addition, raising the question of the purpose of *collections* of miracle stories leads to a fruitful hypothesis regarding their relation to the Jewish environment of the gospel. See also MIRACLE STORIES, NT[S]; MIRACLE WORKERS[S].

If the pervasive Jews of the Fourth Gospel are not of symbolic significance only, they must afford some clue to the milieu from which the gospel arose. Their presence probably reflects a historical setting in which efforts to convert Jews led to charges and countercharges between Johannine Christians and other synagogue members (cf. 5:17-18; 6:41 ff.; 7:40-43; 8:33 ff.), culminating in the exclusion of those who confessed Jesus to be Christ from synagogue fellowship (9:22; 12:42; 16:2). (See JEWS, NT ATTITUDES TOWARD[S].) The suggestion that the Johannine miracle or sign stories were originally compiled to convince a Jewish audience that Jesus was the Messiah corresponds to their present context in the gospel, where they lead to debate with the Jews about Jesus' identity and issue in such statements as 12:37 and 20:30-31. The difficulty that miracle-working played no major role in contemporary Jewish messianism is offset somewhat by a recognition that such activity was expected of an anticipated eschatological prophet like Moses (Deut. 18:15-22), and that this figure may have colored some Jewish messianic expectations. Moreover, Jesus was known as a miracle worker, and in all probability in this as in other respects what he said and did contributed to the understanding of his messianic role, i.e., the articulation of Christology, among his followers.

The passion tradition and related material in the gospel include scriptural testimonies (e.g., 12:13, 14-15, 38, 40; 13:18; 15:25; 19:24, 28, 36-37) that are primitive and presuppose a Jewish mentality, for which scripture was authoritative. Even if the apparent apologetic intention of such testimonies only answers to the Christians' own need to put the passion in a positive light as the fulfillment of God's will, it bespeaks the Jewish milieu and presuppositions of the tradition. The implicitly anti-Jewish episodes of the PASSION NARRATIVE (e.g., 18:38-40; 19:4-7, 12-16) and the polemical exchanges between Jesus or his followers and Jews (or Pharisees) elsewhere in the gospel (e.g., 8:31-59; 9:24-34) support rather than disprove a Jewish provenance, for such deeply felt polemics are best explained on the basis of genuine, experienced confrontation and conflict.

The gospel is not, however, concerned solely with Jewish-Christian identity and relations. Although after the conclusion of the public ministry (ch. 12) the theme of Jewish hostility recurs (e.g., in 15:18-16:4 as well as in 18:38-40; 19:4-7, 13-16), from ch. 13 onward the focus shifts to subjects of

distinctly Christian character: the relationship of Jesus' followers to one another (13:34-35; 15:12 ff.) and their continuing communion with Jesus after his departure from them. In this regard the promise of the PARACLETE, the Spirit of Truth, becomes especially important (14:15 ff., 25 ff.; 15:26-27; 16:7 ff.). The gospel's abandonment of the fervid apocalyptic expectation typical of much primitive Christianity is accompanied by an awareness of the continued presence of Jesus in the community (14:18-24), mediated by the Spirit. Thus in chs. 13-17 the postresurrection community of Jesus' disciples occupies the center of attention. In the Johannine letters certain pastoral and even organizational questions become explicit, as with the passage of time problems of church doctrine and discipline inevitably emerge. Such matters are adumbrated in the gospel itself, although there they are subordinated to the evangelist's dominant christological interest.

The author of Revelation (see REVELATION, BOOK OF §B and supplementary article) can scarcely have been the evangelist or the author of the letters of John, for the literary styles are quite different and the colorful apocalypticism of Revelation is foreign to the other books. Nevertheless, Revelation contains striking parallels with concepts or terms found in the gospel, and the possibility of some significant traditional relationship between it and the other Johannine books is worthy of serious consideration.

**3. Principal religious and cultural influences upon the gospel.** The content and character of the Gospel of John were shaped by a form of Christian preaching which developed where Christians were in close touch with the synagogue, whether in Palestine or elsewhere. The Jewishness of the Fourth Gospel is reflected not only in its citation of the OT and the frequent polemical and other references to Jews, but also in the way Jesus is constantly compared with the leading figures of Jewish history, particularly Moses (e.g., in 1:17), and in the familiarity with Jewish scriptures, custom, and tradition which it manifests (e.g., 7:40-41; 7:51-52). See MOSES in THE NT[S] §5.

Recent archaeological and manuscript discoveries have underscored the Jewishness of this gospel. The distinctive documents of the sectarian community of Qumran (see DEAD SEA SCROLLS §5 and supplementary article) contain remarkable terminological and conceptual parallels to the gospel (cf. esp. the dualism of the MANUAL OF DISCIPLINE). Such similarities show that certain Johannine features once thought characteristic only of pagan Hellenism were not foreign to Judaism, even Palestinian Judaism. The Qumran parallels do not, however, exclude the possibility of Hellenistic influences in the Fourth Gospel, nor do they guarantee a Palestinian provenance of the gospel, although the Johannine tradition probably originated there. The Qumran community's rather narrow sectarian bias perhaps also finds a parallel in the Johannine Jesus' injunction to love one another (13:34-35), meaning one's Christian brother, rather than the neighbor generally, and there is in both a similar emphasis on the oneness or unity of the community. Yet the Qumran com-

munity, unlike Johannine Christianity, is based on obedience to the law, and the vivid apocalypticism of some of its documents (e.g., the War Scroll) differentiates it from John's gospel. The eschatology of this gospel, with its claim to realization and accompanying emphasis on union with God (and Christ), finds closer parallels in PHILO, the WISDOM OF SOLOMON, and the HERMETIC LITERATURE than in the Qumran scrolls. John's characteristic emphases on individual faith and the attainment of salvation in the form of eternal life, as well as the language of (mystical) union with the Savior, can indeed be paralleled in Judaism, particularly Hellenistic Judaism, but they also serve to show the gospel's participation in the broader religious currents of the Greco-Roman world.

The Mandaean documents (see MANDAEISM[S]) contain striking parallels with the Gospel of John (terms such as "knowledge," "life," "truth"; dualism; and perhaps also the redeemer figure). In view of the character of its esoteric teaching and because the name "Mandaean" seems to be derived from a Semitic word meaning knowledge, this literature has been widely acclaimed as representative of (pre-Christian) Gnosticism and has therefore stimulated considerable interest in the Gnostic affinities and possible Gnostic milieu of Johannine Christianity. It is impossible, however, to date these documents in the period of Christian origins or earlier, although they themselves have not been influenced by the NT in obvious ways. In their present form they are later than the Fourth Gospel by many centuries. Moreover, their treatment of John the Baptist appears to be derivative from Christianity. Yet very old tradition may be preserved in the Mandaean books, especially the liturgical material, and the claim of a Palestinian Jewish origin of the sect (and subsequent migration eastward) has won the support of modern Mandaean research. At best, however, the historical relationship of ancient Mandaeanism to the Fourth Gospel remains unclear, and its literature may be used only with great caution to illuminate the milieu of Johannine Christianity.

Since mid-century, interest in possible Gnostic influence upon the Fourth Gospel has again been stimulated by the discovery of a library of Coptic Gnostic documents at NAG HAMMADI in Upper Egypt. Most of these documents were known previously, if at all, only through references in patristic authors. One of them, the GOSPEL OF TRUTH, is a narration of the revelatory and saving work of Jesus, told without much reference to the familiar gospel story. Yet its Christology is closer to the Fourth Gospel than to any of the Synoptics. Some of the documents contain "I am" sayings similar to those ascribed to Jesus in the Fourth Gospel. Neither the library nor its constituent parts may be dated earlier than the Fourth Gospel, and most are at least a century or more later. Yet they may afford evidence of a basically non-Christian Gnosticism to which Christian language and interpretation have been added secondarily, while at the same time they contain some isolated features strikingly similar to the Fourth Gospel. Some of the documents manifest decidedly Jewish

characteristics apparently not mediated through the NT. This suggests the possibility of a Jewish Gnosticism, or a Gnosticism in which Jewish elements were more primitive than Christian.

The Nag Hammad documents and the Mandaeen sources have in common Jewish as well as Gnostic features, and both bear certain conceptual and linguistic similarities to the Fourth Gospel. This gospel, which arose out of Jewish-Christian dialogue, has some relation, possibly in origin and certainly in earliest use, with Gnosticism. Affinities or connections with Judaism and Gnosticism, as well as with Johannine Christianity, have also been found in the letters of IGNATIUS and in the early Christian ODES OF SOLOMON. Yet to trace all the historical relationships that are thereby suggested is a task for which the evidence is probably not sufficient.

Significant parallels to Johannine thought have also been found in certain Jewish mystical speculations (e.g., III Enoch), in Jewish wisdom books and traditions (see WISDOM IN THE NT[S]), and in Samaritanism, where interest in Moses and, accordingly, in the eschatological Mosaic prophet call to mind corresponding aspects of the Fourth Gospel (see MOSES IN THE NT[S]). That the fourth evangelist or his tradition has a special interest in Samaria and Samaritans is clearly evident (cf. John 4). Moreover, John the Baptist plays a role in John (cf. 1:6-8, 15, 19 ff.; 3:22 ff.), which suggests that he or his followers are of some importance for understanding the gospel's origins. Difficult as it may be to put all the possibly relevant historical materials into a single picture of the religious and cultural matrix of the Fourth Gospel, it is nevertheless clear that Johannine Christianity has links with several forms of Judaism and sources influenced by Judaism. Thus the continuing search for its roots within Judaism or at its boundaries remains a fascinating, fruitful, and necessary, if complex, task. But to locate the germinal ground of Johannine Christianity there is not to deny its Hellenistic character or development. Just such a complex and syncretistic setting, nominally Jewish as it may have been, typified the Hellenistic world of antiquity.

#### 4. Purpose and historical setting of the gospel.

If a basic outline of the origin, pattern, and development of Johannine Christianity now suggests itself, it remains to be asked why and under what circumstances the gospel in its present form was composed. Its original conclusion (20:30-31) is an important statement of purpose, but it leaves open the question of whether the gospel was intended to arouse faith, as the aorist tense of πιστεύειν (believe) suggests, or to sustain faith, as is also possible. Although the statement is a valid index of John's emphasis upon faith in Jesus as the way to salvation, i.e., eternal life, it is so general as to be applicable also to other gospels. Moreover, 20:30-31 does not suggest any peculiar circumstances or problem that may have evoked the writing of the gospel.

Interpreters have often demurred from attempting a more precise definition because of the gospel's apparent intention of presenting a universally applicable version of the Christian message. Never-

theless, it has been suggested that the Gospel of John was written as a missionary tract for Jews generally, for Hellenistic Jews, for disciples of John the Baptist, or for one-time adherents of the Qumran community. Alternatively, it has been regarded as a book designed to interest and attract adherents from a philosophically oriented piety of late Hellenism. It has been seen either as Gnostic or as anti-Gnostic (or anti-Docetic) in intent; or again, either as the product of a sectarian, Spirit-inspired, and somewhat heterodox Christianity defending itself against incipient institutionalism or as a bulwark of Christian orthodoxy. There may be some truth in each of these proposals, but they cannot all be correct. Some relative assessment is necessary.

The various efforts to relate John's gospel to a Jewish milieu or to a first-century dialogue and controversy between Judaism and Christianity point in the right direction insofar as the origin and milieu of Johannine Christianity are concerned. But the sharp polemic against the Jews, particularly Pharisees and other authorities, and the finality of the Jewish rejection of Jesus (18:28-19:16) do not comport well with the view that the extant gospel is a missionary tract for Jews. Furthermore, the farewell discourses and prayers (chs. 13-17) focus attention upon the community of Jesus' followers and on his promise that they will not be separated from him. The continuing relationship of the community to Jesus comes into focus again in the original conclusion of the gospel, where Thomas' desire to touch Jesus (20:24-29) and confirm the reality of his resurrection becomes the occasion for Jesus' commendation of those who have not *seen* him, and yet believe (20:29). The Gospel of John was intended to reassure Christians that through faith the reality of Jesus is accessible and the eternal life, which only he brings (14:6), attainable.

Moreover, there are hints within the gospel that it was addressed to a community facing a crisis of faith. Precisely such situations elicit the most genuine and significant theological affirmations. If a period of friendlier relations with the synagogue had come to an end, perhaps because of the missionary efforts of Johannine Christians, the role played by the Jews in the Fourth Gospel is still significant. While they are indeed surrogates for the hostile world in its rejection of Jesus, their prominence nevertheless suggests that Judaism remains within the evangelist's environment and purview, if only as a part of that hostile world that opposes Jesus, persecutes his followers, and thus makes the question whether to have faith in him an urgent one. The gospel conveys the unmistakable impression of a closely knit community, at least as a desideratum. The solidarity of that community, and the necessity of its solidarity, was in some measure a result of pressure from without.

If, however, a community is held together only by external pressure, it soon disintegrates. The Johannine community had a center of allegiance and solidarity in Jesus, while it also faced questions about his accessibility and even his reality. The gospel was written for a community under duress at a time near the end of the first century

when the original apocalyptic expectation of the triumphant return of Jesus was no longer a source of reassurance but, because of its delay, a problem. The appendix (esp. 21:20-23) indicates that John was published among Christians facing such a problem, as does the deliberate juxtaposing of traditional apocalyptic hopes with the present eschatological reality of Jesus (11:23-27). A major purpose of the farewell discourses (chs. 14-16) is to show Jesus addressing himself to the problem of his departure from the disciples by redefining the traditional apocalyptic eschatological terms so that they refer to possibilities in the present rather than to an indefinite future.

Nevertheless, the evangelist does not reduce significant time to the present. The future of Jesus' followers is assured even beyond death (14:1-4; 17:24-26). The past is also significant as the time of Jesus' earthly ministry, unfulfilled as that was until his glorification (2:22; 7:39; 12:16; 16:7). For apart from his death, departure, and the coming of the Paraclete or Spirit, the revelation of God in Jesus was incomplete. After his departure the Spirit continues the revelation and mediates the reality of Jesus among his followers. Thus in the community of faith the giver, Jesus, and the gift, eternal life, continue to be real and accessible amidst a hostile world (cf. 17:3, 14 ff.; also 14:6; 11:25).

The date and place of composition cannot be established with certainty. Nevertheless, the last decade of the first century is late enough to take account of the gospel's developed perspective on the events it narrates and of the familiarity with post-Jamnian controversies between Jews and Christians reflected in it. Such a dating agrees both with critical insights and with ancient tradition. The traditional place of publication, Ephesus, remains a possibility, particularly if the gospel was not ascribed originally to John the son of Zebedee. Otherwise, Ignatius' failure to mention John as he mentions Paul in his letter to the Ephesians (ca. A.D. 110) becomes a serious difficulty. Wherever the place of composition may have been, a Syrian or Palestinian origin of the Johannine tradition seems likely. See also CHRISTOLOGY IN THE NT[S] §3c.

D. M. SMITH

\***JOHN, LETTERS OF.** As early as the third century Bishop Dionysius of Alexandria argued that all three letters and the GOSPEL OF JOHN, but not the Revelation of John (see REVELATION, BOOK OF and supplementary article) were from the same hand. While this view has long been the predominant one in critical scholarship, the common authorship of the gospel and epistles should not be taken for granted. The three letters did not gain canonical recognition as a group, or with the gospel, the longer I John taking precedence over the other two.

1. **The relation of the letters to the Gospel of John and to each other.** While the question of authorship remains undecided and there is a distinct possibility that the gospel and letters are the work of more than one writer, it can safely be said that most of the difficulties in ascribing the Fourth Gospel to John the son of Zebedee apply also to the letters (see JOHN, GOSPEL OF §SE, F). Moreover, the author of II and III John describes himself as an elder rather than an apostle. If he is also the author of I John, none of the letters is likely the work of an apostle, despite the statements of I John 1:1-3.

The question of authorship aside, the letters appear to be later than the gospel. Although they contain no specific data or references which allow us to date them absolutely, their relation to the gospel may be inferred from several lines of evidence. The Jews, who play so prominent a role in the gospel, have disappeared from the letters altogether, and no OT testimonies are adduced. The author of I John cites the love commandment (cf. John 13:34) as the old, rather than the new, commandment (I John 2:7-8; 3:11; II John 5); it is the commandment his readers have had from the beginning. Moreover, he plays upon the meaning of "new" in relation to "old" (I John 2:7-8). Jesus' word in the gospel about laying down one's life for his friends (15:13) is seemingly taken up in I John's injunction to lay down one's life for the brethren (3:16). Although the gospel is nowhere explicitly quoted, its teaching or the tradition behind it appears to be assumed as the basis for the author's exhortation.

The prologue of I John (1:1-4) is apparently modeled on the gospel prologue (John 1:1-18), but the "word of life" is not the pre-existent Word of the gospel. Rather it seems to be the Christian message, and "from the beginning" (instead of the gospel's "in the beginning") refers to the origin of the gospel preaching in Jesus' life and ministry. The author also repeatedly refers to doctrine which he regards as well established (2:13-14; 4:1-3; cf. II John 9).

Against such evidence favoring the priority of the gospel must be weighed I John's futuristic eschatology (2:18, 28; 3:2) and apparently primitive doctrine of the vicarious atonement by Jesus' blood (1:7; 2:2), neither of which is emphasized in the gospel. Although both teachings might be regarded as signs of the letter's earlier date, they also comport well with the view that I John is more indebted to a developing conventional church doctrine than is the gospel. The Johannine letters

are probably correctly characterized as Johannine pastoral.

2. **Questions of orthodoxy and church order as reflected in the letters.** The doctrinal and disciplinary emphases of the Johannine letters, including the exhortations to love, are to be seen against the background of heterodox teaching and practice. The opponents hovering in the background are perceived as miscreants who have departed from good and approved conduct (I John 2:3-6, 10-11; 3:4-10), as well as from the true teaching (I John 2:18-19; II John 9). Invective is not spared. They are "antichrists" (I John 2:18, 22; 4:3) who teach that Christ has not come in the flesh (I John 4:2-3); they practice hate rather than love (I John 1:6-7; 2:3-11, esp. 9-11; 4:20-21). The doctrinal heresy is apparently understood as fundamental, while disobedience and hate are seen as the natural consequences of it. In any event, I John reflects a situation in which doctrine is developing along incompatible lines; thus there emerges the struggle between orthodoxy and heresy, with each side believing in its own rectitude.

III John does not deal with the same set of problems as I and II John, but rather with questions of church polity or governance. Controversy centers around DIOTREPHESES (9-10), whose willingness to exercise authority against other Christians has affected the author. He is generally thought to be a claimant to the powers of the monarchical episcopate in his church, but it is not clear whether the elder objects to him because his own customary supervisory role over a number of churches (perhaps in a geographic area) is challenged, or because he himself represents a basically antihierarchical approach to church polity, whereas Diotrephe wishes to be a bishop. The hypothesis that Diotrephe has excommunicated the elder because of the latter's flirtation with Gnosticism as a potential vehicle of Christian thought is suggestive, but the slim evidence at our disposal is scarcely sufficient to confirm it.

3. **The relationship of the letters to contemporary religious movements.** The battle joined by the author of I John with Gnostic or Docetic opponents probably did not leave him unaffected, if indeed he did not originally share some ideas with them (see JOHN, LETTERS OF §1b, c). Similarities to the DEAD SEA SCROLLS also appear, particularly in the dualism and dualistic terminology (e.g., Spirit of Truth/Spirit of Falsehood). Certain of these affinities may be stronger than in the case of the Fourth Gospel, even though the severe rejection of the world (I John 2:15-17) is more Gnostic than Essene. Nevertheless, the Johannine letters, especially I John, stand closer in language, style, and conceptuality to the Fourth Gospel than to any other extant document or body of literature.

\***JOHN THE BAPTIST.** Recent research has focused more on the origin of traditions about John the Baptist and their use by the evangelists than on his own life and work.

1. **The origin of the traditions about John the Baptist.** John did not intend to found a sect, but by BAPTISM across sectarian lines, to prepare a people for the baptism of the Coming One (Matt. 3:11-12; Mark 1:7-8; Luke 3:16-18). The inner circle of adherents who assisted in his work had their own style of life, to be sure, including fasting, sobriety, fixed forms of prayer, and ethical norms appropriate to a repentant life (Mark 1:6; 2:18; Matt. 11:16-18; Luke 11:1; 3:7-14). But the vast majority of those baptized by John returned to their regular occupations to await the expected one (cf. Luke 3:8, 10-14). To one or the other of these circles Jesus and most (or all?—Acts 1:22) of his first disciples belonged.

In the early period of the church, John's disciples continued to be regarded fraternally, since both groups fully endorsed the ministry of John. For the most part the Baptist movement was absorbed into the Christian church. The remaining holdouts first protested that the MESSIAH had not come; then in defensive reaction some proclaimed John Messiah, apparently meaning thereby the eschatological prophet. Using Christian sayings against Christians, they asserted John's superiority over Jesus by means of Jesus' own words (see esp. Matt. 11:11a; Luke 7:28a).

In response, the church hedged about its traditions concerning John with various defense mechanisms, the purpose of which was not only to safeguard belief in Jesus as the Christ, but to preserve John for the church. On the whole, though, John's position in Christian theology was already secure by virtue of continuing veneration by those in the church who had come to Jesus by way of John, and because the tradition itself was so uncompromising and unanimous in its declaration that the actual events proclaimed as "gospel" by the church had begun with John.

In short, the church stood at the center of John's movement from the very beginning and became its one truly great survivor and heir. The church thus already possessed a full store of authentic traditions about John from its inception and continued to be the primary locus for their legendary and theological elaboration. As John's followers continued to convert to the church, they no doubt brought with them oral traditions with which to supplement the church's treasury of lore about John. Some of these traditions may have eventually made their way into the NT. There is no evidence, however, that written documents or "gospels" about John existed or were employed by the evangelists.

2. **The use of Baptist traditions by the church.** Explicit polemic against the remnant of John's disciples is present only in the Fourth Gospel and Q. Traces of apologetic are clearly present in Luke's sources, but Luke himself appears not to be engaged in struggle against John's followers. And in Matthew and Mark there are no signs of antagonism against a Baptist sect.

It is rather John's role as "the beginning of the gospel" which accounts for his positive religious

significance for the writers of the NT. Under this formula each successive evangelist has developed his own peculiar understanding of John's role.

Mark portrays John as ELIJAH incognito, whose sufferings prepare the way of the Lord and serve as an example to the persecuted Christians of Rome. In his introductory narrative Mark creates every conceivable presumption that John is Elijah. Yet even in 9:11 John is not explicitly called Elijah; his identity in God's purpose must remain, like that of Jesus, hidden until the resurrection (9:9b).

But John also suffers, and it is only in order to underline this fact that the bizarre account of John's beheading is included in such detail. By uniting the fate of John with that of Jesus, Mark succeeds in saying that John's suffering is not meaningless, any more than is that of the Christians in Rome. He too, like Jesus and the church, struggled in obscurity and humiliation. His true identity was concealed from the world. He too suffered ignominious death. But he suffered as Elijah, and in that suffering shares the fate of Jesus and his elect. What "they" (HEROD and Herodias, 9:13) did to John, so also "they" (contemporary opponents of the church, 13:9) will do to Christians now. This is as it must be, but this epoch of suffering and humiliation will soon give way to the day of vindication, when humiliation will be swallowed up in victory.

Matthew's treatment of the Baptist, supplemented as it is by materials from Q, is quite different from that in Mark. Matthew is polemically involved against contemporary Jewish authorities in proving that God's promises have been fulfilled in the church. Therefore he removes all doubt about John's identity; John is Elijah (Matt. 17:12-13). By this open identification Matthew is able to validate the messiahship of Jesus by reference to John according to the proof-from-prophecy schematism. But there is another reason; for if John is Elijah, then his rejection by the Jewish authorities becomes all the more inexcusable. Matthew uses John's fate to illustrate the hostility of "pseudo-Israel" to every overture from God. John and Jesus are brought into the closest possible relationship; words of Jesus are even placed on John's lips, and vice versa. John's fate prefigures the fate of Jesus. Together they stand against the wall of opposition thrown up by the authorities. John thus is made to witness against both "that" generation (John's) and "this" (Matthew's) that they have rejected the will of God and have lost the keys of the kingdom (21:32). Claim is therefore laid on John for the "true" people of God, the church. It is this deep gulf dividing the "false" from the "true" Israel which accounts for the way Matthew "Christianizes" John and quarters him in the Christian camp.

Luke also used the Baptist traditions of Q and Mark, along with sources of his own (especially for the infancy narratives), but his treatment of John is altogether different from Matthew's. Luke, in fact, makes very little change in the conception of John already present in Q. Luke also pictures John as the forerunner of the Messiah, the preacher of judgment and REPENTANCE; and as in Q, Luke does not explicitly identify John with Elijah. In other respects Luke simply follows Mark. Luke's

greatest innovation lies in the manner in which he incorporates John into his grand scheme of redemptive history. John occupies a niche all to himself as the one who inaugurates the time of fulfillment, but his ministry is completely separate from that of Jesus. His work as preparer of the way marks the first stage in the central epoch of salvation history. Luke's contribution therefore lies in placing the figure of John within a panoramic theology of history.

Finally, the Fourth Evangelist divests the Baptist of every known role in the Jewish expectation. He becomes simply "the voice." As such he witnesses to Jesus as the Christ. He points continually away from himself to Jesus. John is not the bridegroom but only the friend of the bridegroom, who hears him and rejoices greatly at the bridegroom's voice (3:22 ff.). John is not the light, but only came to bear witness to the light, that all might believe through him (1:6-8). Indeed, the Baptist's last words stand as a motto over the entire representation of him in the Fourth Gospel: "He must increase, but I must decrease" (3:30). John's only wish, in short, is to be transparent, invisible—a voice which no one sees, but which directs everyone to Christ. The evangelist thus makes John the Baptist the first confessing Christian and the ideal image of the true missionary of Christ.

Behind this striking diversity in the evangelists' treatments of John lies a surprising unity: each continues to make him the "beginning of the gospel." Jesus himself appears to have been the source of this estimate of John's role in God's saving activity. The conviction that John is "the beginning of the gospel," and all of the Christian elaborations thereof, are but the theological expression of a historical fact, that through John's mediation Jesus perceived the nearness of the KINGDOM OF GOD and his own relation to its coming. Each evangelist has developed this tradition in the light of urgent contemporary needs, but also in faithfulness to Jesus' basic conception of John as the one through whom the eschatological event is proclaimed to be "at hand" even though it may seem to be indefinitely remote.

The early church used the figure of John typologically, as a means of setting forth its conception of its own role in "preparing the way of the Lord." John is the archetype of that moment before the light dawns (Luke 1:76 ff.), the catalyst for a sort of chaos out of which God creates something new. The image of John thus personifies the frontier character of the Christian proclamation as it encounters persons at the border of the times and calls them to receive the kingdom.

\***JONAH, BOOK OF.** 1. The figure of Jonah ben Amittai. That the author of the book of Jonah

took as his hero (or perhaps better, anti-hero) Jeroboam II's court prophet, Jonah ben Amittai, seems beyond serious doubt, though why he selected this particular, obscure prophet remains elusive. Outside his name, no other detail has apparently been appropriated from the Deuteronomic historian's preserved tradition about Jonah (II Kings 14:25), and this has led some scholars to propose that it was precisely the emblematic significance of the name (meaning "dove," and as such, a suggestive symbol for Israel) which moved him to choose Jonah as the chief protagonist for his story. Hosea appears to be the first to introduce the figure of the dove as a metaphor for Israel in both a pejorative and positive sense (cf. Hos. 7:11; 11:11), but while the author of Jonah doubtless did intend a significant group within Israel to see their own views reflected in the recalcitrant prophet, the story does not seem originally designed as an allegorical representation of all Israel. Perhaps of greater interest to the author was the fact that the historical Jonah ben Amittai was a successful "prophet of salvation," a feature which he uses in an ironical way by portraying him as the reluctant instrument of a far more amazing divine deliverance than is associated with him in II Kings 14:25. The author has broadened both the extent and nature of the prophetic task, and through a remarkably bad example (perhaps chiefly the product of his own literary imagination, though possibly some unwritten tradition associated with the historical Jonah ben Amittai should not be ruled out), has depicted by implication what a true "prophet of salvation" should be.

2. **The literary analysis of the book. a. Its form.** Form-critically, the book of Jonah is a short story or *novella*, distinguished by mythical and folkloristic motifs as well as a definite didactic aim that essentially set it apart from historical biography. Though reminiscent of so-called prophetic legends among the stories of Samuel (cf. I Sam. 7:2-8:22; 10:17-27; 12), Elijah and Elisha (I Kings 17-19; II Kings 4-6), Ahijah (I Kings 11:29-39; 14:1-18), and certain anonymous "men of God" (I Kings 12:33-13:32), the book should probably not be classified as the compilation of one or more legends, primarily because its chief figure is not, in the final analysis, presented as an exalted example for emulation. Moreover, the prophetic legends in Samuel and Kings would appear to have a more substantial historical nucleus than does the book of Jonah. See FORM CRITICISM, OT[S].

Because the author has placed on the lips of Jonah (in 4:2b) a traditional description of the gracious and merciful character of Yahweh (cf. Exod. 34:6; Num. 14:18; Pss. 86:15; 103:8; 145:8; Nah. 1:3; Joel 2:13; Neh. 9:17), some scholars have wanted to see the whole book as an attempt to probe the meaning and implications of this scriptural tradition, so that the work has the function, if not precisely the form, of what was later to be called a midrash (see MIDRASH[S]). As early as the fifth century B.C. there existed a type of literary work known as the midrash of a prophet (cf. II Chr. 13:22 [RSV "story"]; also note II Chr. 24:27 [RSV "commentary"]). However, the form and character of these *midrashim* can only tenta-

tively be inferred from the rather meager evidence the OT offers, and lacking any certain surviving examples, it is impossible to say whether in the fifth century or earlier a work like the book of Jonah might have been called a midrash. In any case, the central theological thrust of the book is related to the way in which the author understood the implications of 4:2b.

In light of its obvious didactic purpose, the book might perhaps best be described literarily as a short story in the form of a parable, or in OT terms, as an example of one type of *masal*. Though somewhat longer than the typical biblical parable, the book nonetheless illustrates all the distinctive features of the parable form: a comparatively short, simple, dramatic story, not necessarily historically factual, designed to teach a lesson embodied in basically one central point, emphasized and broadened by several subsidiary points, climaxing directly or indirectly in a call for decision on the part of the hearers or readers, motivated by a mutually understood analogy between the characters and events portrayed and real-life persons and events.

b. **Its structural composition and the problem of the psalm.** The author has constructed his story in two major parts (chs. 1-2 and 3-4) which are virtually parallel detail for detail until 4:8b is reached. There is also a thematic parallelism between the major motifs, with the focus initially upon the non-Israelites (the sailors in ch. 1, the Ninevites in ch. 3), then upon Jonah (chs. 2 and 4). Thus in chs. 1-2, both the sailors and Jonah are threatened with destruction; they respond with prayer to Yahweh; Yahweh reacts to their prayers by rescuing them; and they conclude by worshipping Yahweh. In chs. 3-4, the Ninevites and Jonah are confronted by a crisis involving destruction (for Jonah the crisis is not his own destruction, but the fact that Nineveh apparently will not be destroyed!); they respond to Yahweh: the Ninevites with faith and repentance, Jonah with anger, complaint, and a request for death; this is followed by Yahweh's response: to the Ninevites by changing his mind about destroying the city, to Jonah by encouraging the prophet to change his mind about wanting the city to be destroyed. Thus, structural analysis presupposes the integral relationship of the psalm (2:2-9 [H 3-10]) to the book as a whole, contrary to the general scholarly consensus which has rather seen it as the inept interpolation of a later editor. Though the vocabulary and linguistic characteristics of the psalm indicate that the author did not compose it especially for his story, its formal, structural, and meaningful compatibility with other elements in the prose parts suggests that it could well have been the writer himself who inserted it precisely in its present position. Moreover, as a psalm of declarative praise, it is typologically appropriate to the context. As one who has just experienced deliverance from death in the sea, it is fitting that Jonah express his gratitude to the Deity rather than petition the latter for release from the fish, which, as the psalm itself makes clear, never posed a threat to him. Finally, the usage of the "three days and three nights" motif in 1:17 [H 2:1] to describe the temporal limits of a journey between

the nether and upper worlds (cf. the Sumerian myth of the Descent of Inanna to the Nether World, *ANET* [2nd ed.], p. 55) further strengthens the thesis that it was the author of Jonah who inserted the psalm with its explicit reference to the underworld (cf. 2:6 [H 2:7]) as the place from which Jonah was rescued. The contextual interpretation of the psalm adds certain dimensions to the character and personality of Jonah which prevent him from being interpreted too consistently and simplistically, thereby denying the complexities and contradictions in his actions and beliefs which the author seems deliberately to have intended.

**c. Implications of the structural analysis for the message of the book.** At the end of the first half of the story, when the sailors and Jonah have been faced with similar perils, they both supplicate Yahweh, are rescued by him, and cultically respond to him in similar fashion. But in the last two chapters, the conduct of the Ninevites and Jonah is radically distinct, so that the conformity in chs. 1-2 serves to heighten and emphasize the lack of it in chs. 3-4. The most striking contrast is that Jonah, unlike the Ninevites, does not repent. Though the writer clearly wants to emphasize the limitless character of the merciful divine will to save, offered equally to non-Israelite and Israelite, he wants also to stress the link between the two parts of the human response—prayer and repentance. With respect to prayer, Jonah was on the same plane as the sailors, but with respect to repentance, his response does not match the Ninevites', and at the end he is contemplating death instead of life. Hence the original thrust of the author's message may well have been this: given the divine compassion to save all who repent, repentance is easier for the most wicked non-Israelite metropolis imaginable than for one Israelite who has been treated mercifully. The author seeks to underline the difficulty some Israelites have in bringing any change in attitude toward what Yahweh wants of them. Thus the purpose is not to remind the Israelites of their mission to foreigners but to get them to see how incongruous their conduct is, and, it is hoped, to elicit a more favorable response. But the story's ending suggests that the writer is not hopeful about what his intended audience will do. All he can say is that Yahweh is unswerving in offering his pity and compassion to repentant sinners, whether they are Ninevite or Israelite. Without repentance they may be left to their doom, though Yahweh will persist to the end to bring about a change of mind and heart.

**3. Date and setting.** Nothing in either the language or content of the book points decisively to a particular period in Israel's history. Reference is often made to a group of so-called Aramaisms in the book, deemed an indication of a postexilic milieu. However, closer scrutiny of these terms in light of comparative Semitic philological data has tended to show that most of them stem from northern Israelite-Phoenician usage rather than Aramaic. But since both northern Israelite-Phoenician and Aramaic linguistic phenomena were in use in Hebrew both before and after the Exile, and almost none of those occurring

in Jonah can be clearly demonstrated to have only postexilic currency, they are not very helpful for dating. The use of the perfect tense ("was") form in 3:3 with Nineveh as subject does not necessarily mean that the city had long since been destroyed by the time of the writer, since the same form is often used simply as a regular narrative tense form (cf., e.g., Gen. 29:17; Exod. 9:11; Num. 14:24). Also we should probably abandon the assumption that the author's alleged unhistorical use of the expression "the king of Nineveh" in 3:6 means that he was remote from Assyrian customs of royal titlature. Not only is the identification of kings with their chief royal residence attested in Israel (cf. I Kings 21:1; II Kings 1:3), but also in the Neo-Assyrian inscriptions. Finally, the various literary affinities between the book of Jonah and other biblical writings are not very useful for dating, since they occur in both pre- and postexilic works, and it is hard to demonstrate that the author of Jonah was actually dependent upon any of these for particular expressions or ideas.

There has long been agreement among OT scholars that the book was written to combat certain narrowly nationalistic and exclusivistic tendencies as a result of the work of Ezra and Nehemiah (see JONAH, BOOK OF §3e). Though it is obvious how the book may have been used to address that situation, there is actually nothing in the content of the book that unequivocally indicates that the author wrote it primarily to persuade his fellow Jews to be more open and merciful to Gentiles in the postexilic period. Increasingly, evidence seems to suggest that substantially the entire prophetic corpus of the OT had been written and collected by ca. 500 B.C., which would mean that the book of Jonah was most likely a creation of the sixth century, either before or after Deutero-Isaiah (see CANON OF THE OT[S] §2b). Since the book's universalism is expressed somewhat differently from that of the latter prophet, and in no way shares in Deutero-Isaiah's exclusive monotheism and polemic against idolatry, there is no evidence that the author of Jonah was directly under the influence of the great exilic prophet. If it is correct that the writer had an overriding concern about the lack of repentance within the Israelite community, a motif which finds its most prominent stress precisely in the writings of several of the sixth-century prophets, then it would seem he was breathing the same theological air, so to speak, as Jeremiah, Joel, and Ezekiel, some of whose ideas he definitely shared (note esp. Jer. 18:7 ff.; Joel 2:13; Ezek. 33:11). It may even be that he wrote especially against the background of Israel's early sixth-century crisis, whose life-or-death implications convinced him that his people's survival in the land was contingent upon their bearing the fruits of repentance.

G. M. LANDES

**JOSEPH STORY, THE.** The material in the last part of the book of Genesis which relates the adventures of Joseph, son of Jacob, in the land of Egypt and his relations with his brothers and father. Most broadly, it includes chs. 37-50, but ch. 38 (the story of Judah and Tamar) and ch. 49 (the so-called "blessing of Jacob") deal with quite different matters.

**1. Contents.** The Joseph story opens with the presentation of a family torn by destructive tensions: a doting father who lavished favors on a spoiled youngest son, arousing the envy and hatred of the other sons, who were even more incensed when their younger brother related his dreams which indicated that they all would do obeisance before him. Sent on one occasion to report on his brothers, Joseph was seized by them, and eventually was sold in Egypt to an official named Potiphar. The grieving father, deceived by his sons, presumed Joseph to be dead. In Egypt, Joseph's abilities soon became apparent, and he was placed in a position of total authority over his master's estate. But his fortunes suddenly turned as he attracted the enamored attention of his master's wife. Rejecting her advances, he found himself accused of attacking her and was cast into prison. There he came to the attention of the royal butler and baker by interpreting their dreams. Events happened as he predicted, and, although forgotten for a while, he was later summoned when the pharaoh had two dreams that none of his courtiers could interpret. Joseph interpreted the dreams—warnings of a seven-year famine coming after seven years of plenty—and offered advice on how to meet the danger. His display of ability made him the obvious candidate to put such advice in operation: thus he became the vizier of Egypt, subject only to the pharaoh himself. His actions were effective, and when the famine came, only in Egypt was there a store of grain.

In time Joseph's brothers came to Egypt seeking supplies. He recognized them, but they did not recognize the harsh official who accused them of being spies, threw Simeon into prison, and told them not to come back without their youngest brother, Benjamin. Only when all supplies were gone was their reluctant father persuaded to permit a second trip. They took Benjamin along, were politely received, and Simeon was restored to them. Yet, fortune turned again: Benjamin was accused of theft, and the brothers found themselves once more able to resolve a difficult situation by giving up a younger brother. However, they had changed; Judah offered himself in place of Benjamin, and the tension was finally broken as Joseph revealed his identity. The good news was reported to Jacob, and he and the rest of the family moved to Egypt. Jacob died in time and

was buried in Palestine, and the tale came full circle as the brothers were reassured of Joseph's good will and prostrated themselves before him. The narrative ends with a notice of Joseph's death in Egypt.

**2. Literary analysis.** Critical study of Genesis has long noted that chs. 37-50 stand apart from what precedes them, both in terms of subject matter and literary style. They form, not loosely gathered, short, independent units such as comprise the cycles dealing with Abraham and Jacob, but an organically constructed and artfully tailored romance or *novella*, where plot development and complex characterization extend over many chs., and the parts are interdependent and cannot stand alone. Yet it must also be noted that the story falls into two parts. Gen. 37, 42-48, and 50 deal with the internal affairs of the family of Jacob, while Gen. 40-41 relates the adventures of Joseph in the Egyptian court and contains no clear reference to the brothers or to the tensions and developments of the former material. In Gen. 40-41 a new set of characters and problems appears, and only when these are finally dealt with does the narrative return to those presented and left hanging in Gen. 37. These two parts are, however, carefully blended: while Gen. 40-41 could stand independent of Gen. 37, 42-48, 50, the latter builds upon this unit and forms the framework for it. It must be noted further that, as the Joseph story now stands, it is divided by literary criticism among the sources designated J and E, and to a lesser extent P (see DOCUMENTS). This suggests three stages in the literary development of the Joseph story.

**a. Joseph the Egyptian courtier.** Gen. 40-41 comprises a courtier tale of small beginnings and a happy ending. A foreign youth rises from life's lowest rung to become the highest official in the land. Gen. 47:13-26 and 50:26 might have been part of this tale. The former, which breaks into its present context, graphically illustrates this courtier's effective service for the pharaoh. The latter tells of the courtier's death at 110 years and his proper burial, an important element in the story of any Egyptian courtier. The bulk of the Egyptian elements in the Joseph story are found in this tale (see §5 below), and it is here that Joseph acts most fully as a model for the wise (see §3 below). While the story is set in the Egyptian court, the fact that the hero is a foreigner, along with the picture of the pharaoh as awesome, but not a divine king, and the understanding of royal dreams presented in Gen. 41 suggest that this tale was formed and circulated in a non-Egyptian setting. A Late Bronze Age city-state in Palestine, which throughout the Eighteenth and Nineteenth Dynasties was under Egyptian political and cultural influence, might be proposed as a home for this tale.

**b. Joseph and his brothers.** The tale of Joseph the Egyptian courtier was later utilized as a kernel around which the story of Joseph and his brothers was constructed, possibly using older traditions about the sons of Jacob. The hatred of the brothers became the occasion for Joseph's being sold into Egyptian slavery, and his position in the court

of the pharaoh became the critical factor in the later resolution of the story. This forms a tightly constructed story with complex characterization and high tension and drama. The interest in the psychic dimension, some affinities with wisdom, and the understanding of divine providence revealed in this story (see §4 below) suggest that its place of origin was possibly the court of Davidic or Solomonic Jerusalem.

**c. J, E, and P.** In time this story of Joseph and his brothers was taken up within the sacred story of ancient Israel, where it served as an elaborate transition piece between the patriarchal material and that dealing with Moses and the Exodus. Thus, it found a place in both J and E (and possibly, with some differences, in P, cf. 37:2) and now appears in a form that is the result of the redactional combination of these sources (see GENESIS §B4; PENTATEUCH §B1b; contrast Whybray, "The Joseph Story," pp. 522-28). The tightly knit structure of the story was broken, especially at the conclusion, as additional materials were added dealing with Joseph (Gen. 39, a traditio-historically secondary addition of possible Egyptian provenance and set apart by style and vocabulary; Gen. 48 and 41:51-52), the other sons of Jacob (Gen. 38; 46:8-27), and Jacob's last days and death (Gen. 46:1-7; 49; 47:29-31 and 50:1-14).

**3. The Joseph story and wisdom.** Drawing upon Egyptian instruction literature and upon the book of Proverbs, G. von Rad has sought to demonstrate that the Joseph story is steeped in wisdom themes and motifs, and that the picture of Joseph presents, as a didactic model, the educational ideal of the court wisdom schools. Joseph is a skilled interpreter of dreams (41:15; cf. Dan. 2; 4) and a sage adviser to the pharaoh, self-disciplined (cf. Prov. 14:29; 15:18), restrained (cf. Prov. 10:19; 14:30; 15:33), courteous (cf. Prov. 10:12; 24:29), yet forceful in speech (cf. Prov. 15:23; 16:21-24), and Pharaoh describes him as "discreet and wise" (41:39; cf. 41:33; Prov. 1:2-6). Von Rad's thesis has received some criticism and modification, but it has much to recommend it. It is especially in Gen. 40-41; 47:13-26 that Joseph appears as the model wise courtier and that most of von Rad's examples are to be found. And, while he is hardly such a model in much of Gen. 37, 42-48, 50, the material dealing with Joseph and his brothers is not without examples as well; e.g., the speech of Judah (44:18-34) is a model of courtly petition. Wisdom schools flourished in the setting of the royal courts (see WISDOM IN THE ANE[S] and WISDOM IN THE OT[S]), and especially in the court of Solomon, whose patronage of the wise made his own wisdom legendary (cf. I Kings 4:29-34; 10:1-10; Prov. 10:1; 25:1).

**4. Theology and purpose.** The prevalence of wisdom motifs in the tale of Joseph the Egyptian courtier suggests that it was intended to function as a didactic piece, designed to appeal to the youths in the wisdom schools and to recommend the model of the wise courtier. It serves to entertain and at the same time to inculcate a particular style of life.

Von Rad has called attention to the notices in Gen. 45:5-8; 50:20 concerning divine control of

human events, and he suggests that they represent an understanding of providence characteristic of wisdom thought in particular (cf. Prov. 16:1, 2, 9; 19:21; 20:24; 21:30-31). Here is expressed a belief in a divine purpose that is at times beyond comprehension and is apparent only below the surface of human history. Yet, this understanding turns the brief references to God in Gen. 40:8 and 41:16, 25, 32 into confessions about a pervasive divine providence and gives added dimension to the dreams of Joseph in Gen. 37 (cf. 42:9; 50:18).

As this story is incorporated into the sacred story of ancient Israel, attention is moved from Joseph to the traditio-historically more critical figure of the patriarch Jacob. As a transition piece within the sacred story, certain of its themes receive new accentuation. The divine promise of progeny is again affirmed (cf. Gen. 12:2; 15:4-6; 26:3-5; 28:14); the patriarchal line, threatened by famine, is preserved by the God of the patriarchs (48:4-5); Israel is seen functioning as a source of blessing for the nations (cf. 12:1-3). This narrative is remarkably open to the possibility of creative interaction with the Egyptians; it is in Egypt that the sons of Israel find sustenance, it is for the pharaoh (47:13-26) that Joseph works, and the patriarch Jacob himself blesses the Egyptian ruler (47:7, 10). This is a far cry from the later situation when "there arose a new king over Egypt, who did not know Joseph" (Exod. 1:8).

**5. Historicity.** In light of the development and function of the Joseph story outlined above, it is clear that its central concerns are literary, didactic, and theological, rather than historical. Thus, the degree to which the historian can utilize this material in the reconstruction of the life of a historical Joseph, let alone early Israelite intertribal relations, is quite limited. The "rags to riches" motif that governs the tale of Joseph the Egyptian courtier is a popular one in folk literature. Even if the author of the story of Joseph and his brothers drew upon earlier traditions about the twelve tribes, these have been fully reworked and submerged in the story. And there is no mention of a Joseph in Egyptian court records; yet the tale does show affinities, not only with such Egyptian materials as the story of Si-nuhe and the shipwrecked sailor, but with the so-called tomb biographies of Egyptian courtiers as well.

Traces of Egyptian coloring are found in Gen. 40-41; 47:13-26; 50:26 (Egyptian loan words, elements in the dreams, court customs, officials, and titles, onomastica, economic situation, age at death, burial practices, etc.). They function as integral parts of the tale, while the two prominent notices of supposed Egyptian practice in the remainder of the story, Gen. 43:32 and 46:34, find no support from Egyptian materials and are intrusive and artificial in the narrative, creating an impossible situation if pressed to their logical conclusion. Thus, the author of the tale of Joseph the Egyptian courtier seems acquainted with Egypt, while the author of the story of Joseph and his brothers reveals both a limited knowledge of Egypt and a desire to provide some sense of verisimilitude for his story by bringing in these two notices that

reflect an outsider's awe and fear of that dangerous and mysterious land.

**1. Joshua and the Deuteronomistic history.** Joshua has a very close affinity to Deuteronomy. It might be summarized, in fact, as an account of the completion of the program anticipated by Deuteronomy: the conquest of the land (chs. 2-12), the allotment of territory to the tribes (chs. 13-21), and the establishment of the Yahwistic cult (8:30-35; 24:1-28). The theological motifs which characterize Deuteronomy—e.g., covenant and law, the holy-war ideal—find further expression in Joshua. A common literary style is apparent even in translation. Both books emphasize the role of Joshua as Moses' successor.

Deuteronomy-Joshua can be read as a conclusion to the account of Israel's origins presented by Genesis-Numbers. Thus earlier scholars favored the term *HEXATEUCH* and sought to trace J, E, and P through Joshua. This approach has not been abandoned entirely, but most contemporary critics doubt that these sources can be traced in Joshua, even if they are present there, since the materials have been so thoroughly reworked by Deuteronomistic editors. See *YAHWIST*[S] §3; *ELOHIST*[S] §4a.

The five books which follow in the Hebrew canon (Judges, I-II Samuel, I-II Kings) also have been edited from a Deuteronomistic perspective, and when read in sequence with Deuteronomy-Joshua, they provide a continuous survey of Israel's history from Moses to the Exile. The essential unity of this survey was emphasized by M. Noth in 1943. While recognizing that the survey incorporates numerous traditions from various periods, he insisted that the over-all unity of plan and theological perspective is such that its compilation must have been

essentially the work of a single Deuteronomistic compiler-historian during the Exile—i.e., roughly contemporary with the last events recorded in the survey (cf. II Kings 24-25). In short, as far as their literary history is concerned, Deuteronomy and Joshua are not to be understood as the conclusion to the Hexateuch but as the beginning of the DEUTERONOMISTIC HISTORY.

**2. Composition.** The statement in Josh. 13:1a, "Now Joshua was old and advanced in years," prepares the reader for his farewell address in 23:1b-16, which is introduced with virtually the same statement. Thus Noth was probably correct in identifying the long excursus on the tribal allotments which interrupts this sequence as a secondary appendix. That this excursus also derived from Deuteronomistic circles is indicated by the characteristically Deuteronomistic summary and transition in 21:43-22:6. The report of Caleb's allotment (14:6-15) probably does not belong to the appendix, but was transferred from 11:21-22 to its present position when the appendix was added. The transferral would have been invited by the fact that Caleb's allotment (Hebron and vicinity) fell within the territory which the appendix assigned to Judah (cf. esp. 15:54).

The two passages which focus on the sanctuary at Shechem (8:30-35; 24:1-28) are to be associated with each other. Yet both are problematic in relation to the remainder of the book. The account of the establishment of the altar (8:30-35) has no recognizable connection with its present context. The account of the second Shechem assembly (24:1-28) is redundant and anticlimactic to Joshua's farewell address (ch. 23). Shechem plays no cultic role elsewhere in the book; Gilgal (4:19 ff.) and Shiloh (18:1 ff.) are the usual places of tribal assembly. Probably both passages should be read together (8:30-35 immediately following 24:1-28) and understood as another Deuteronomistic appendix which was introduced with reference to the instructions given in Deut. 27:2 ff.

Any analysis of the composition of the book of Joshua must take Judg. 1:1-2:5 into account. (1) This bloc of material contradicts the contention of the Deuteronomistic editor(s) that the whole land was conquered by a unified Israel under the leadership of Joshua. (2) It appears to be connected with the Deuteronomistic survey only loosely, having been attached by means of a second summary statement regarding Joshua's death and burial (cf. Josh. 24:29-33 with Judg. 2:6-10). (3) Most of the traditions which are combined in Judg. 1:1-2:5 appear also in Joshua. They are introduced separately in Joshua, however, sometimes in significantly different versions and generally at the expense of considerable redactional effort. For example, the report of the defeat of Adoni-zedek in Josh. 10:1 ff. is clearly related tradition-historically to the report of the defeat of Adoni-bezek in Judg. 1:4 ff. The report of Caleb's and Othniel's conquests in Hebron and vicinity is almost word for word the same in Josh. 15:13-19 and in Judg. 1:11-15. Note that this report conflicts with Josh. 11:21-23; 14:6-15, which attributes the conquest of the whole land including Hebron to Joshua. The conflict has been eased somewhat, but not removed entirely, by the edi-

torial gloss in 14:12b, "for you heard on that day how the Anakim were there, with great fortified cities: it may be that the Lord will be with me, and I shall drive them out as the Lord said." Finally, the cities which appear in the so-called "negative conquest list" of Judg. 1:21, 27-35 have been incorporated for the most part into the description of the tribal allotments (see §4 below).

**3. The conquest narratives.** The conquest narratives in Joshua 2-11 have been so thoroughly reworked and edited from the Deuteronomic perspective that it is difficult to reach any secure conclusions regarding the history of their pre-Deuteronomic transmission. However, there is widespread agreement among critical scholars on the following points.

**a. The narratives.** Most of these narratives pertain to the territory of Benjamin (10:16 ff. are the exceptions) and probably circulated independently among the Benjaminites during the earliest stages of transmission. Occasionally more than one version of a tradition existed—e.g., there appear to have been two versions of the story about the execution of the five kings at Makkedah: one in which the kings were buried alive in the cave, and one in which they were hanged on five trees (10:16-17). There are indications as well that motifs and details were sometimes transferred from one tradition to another. Note the striking similarity between the description of the military tactics employed at Ai and at nearby Gibeah (cf. Josh. 8 and Judg. 20).

**b. Pre-Deuteronomic collection.** Most of these narratives probably were already collected into essentially their present arrangement before being re-edited and incorporated into the Deuteronomic history. Whether this pre-Deuteronomic collection included the non-Benjaminite traditions (10:16 ff.) or presumed an initial conquest of the whole land by all Israel under the leadership of Joshua is uncertain. Joshua as leader of a unified Israel has in any case been superimposed upon most of the narratives. This is especially evident in the account of the covenant with Gibeon (ch. 9), where Joshua tends to fade into the background, even in the present form of the narrative.

**c. Etiology.** These narratives reflect a strong interest in ETIOLOGY, e.g., the explanations for the names "Gibeath-haaraloth" and "Gilgal" provided in Josh. 5:2-9. Some narratives may be entirely etiological in origin. But caution is in order. Recent studies have demonstrated that an etiological explanation can be secondary to the structure and central theme of a narrative.

**d. Cultic factors.** The possibility must be taken into account that some of these narratives are basically cultic in origin; chs. 3-4 come into special consideration in this regard. The holy-war ideal must be counted among the cultic influences. Not only does it play a major role in the Deuteronomic theology, but it appears to have been a significant element in some of these narratives in their pre-Deuteronomic stage of transmission. Thus the narrator of the account of the fall of Jericho was very much concerned to depict the incident as a divine victory rather than the result of human might. Israel's only responsibilities in the affair

were to perform the proper rituals and to maintain the holy-war regulations.

**4. The city and boundary lists.** Josh. 10:29-39 is generally recognized as an authentic list which harks back to some early campaign. Vs. 10:42 probably belongs to this itinerary rather than to the concluding Deuteronomic summary (vs. 40-43). The original historical context of the itinerary cannot be established. It is tempting to associate it with Saul's conquests; except that Lachish, according to the archaeological evidence, was virtually unoccupied between ca. 1200-1000 B.C. But the summary of W Jordanian conquests in Josh. 12:7-24 is generally suspected of being an artificial list, the names of which would have been derived primarily from the traditions preserved in chs. 2-11 (including the itinerary of 10:29-39, 42). A problem with this explanation is that some of the names in the list do not appear in the preceding chapters, and in fact are not associated with the Conquest anywhere else in the OT. If the list is authentic, and a fairly strong case can be made in its favor, it is probably to be associated with King Solomon's reign.

Discussion of the Judean district list (15:20-62; 18:21-28) focuses on the first subgrouping of Benjaminite cities (18:21-24). Since the territory to which this subgrouping pertains normally belonged to the northern kingdom, some scholars contend that the subgrouping originally represented the Benjaminite district of the northern kingdom and has been attached to the Judean district list secondarily. This is of course possible, but by no means a necessary conclusion. The list is internally consistent as it stands now (i.e., including 18:21-24) and the boundary between the two kingdoms is known to have fluctuated from time to time.

We noted above that data from the "negative conquest list" (Judg. 1:21, 27-35) have been incorporated into the description of the tribal allotments (cf., e.g., Josh. 15:63; 16:10; 17:11-13). This created editorial problems in that the tribal holdings presupposed by the list did not always correspond to those presupposed by the allotment system. Note, e.g., that the list associates Gezer with Ephraim (Judg. 1:29; Josh. 16:10), although Gezer was situated in the very heart of the territory allotted to Dan (Josh. 19:40-48). One detects in the description of Joseph's (Ephraim's) southern boundary (16:1-3) a not entirely successful effort to deal with this contradiction. On the basis of the allotment system, one would expect this boundary to (1) correspond to Benjamin's northern and western boundary to the point where it meets Judah's northern boundary (Josh. 18:12-14); (2) follow Judah's northern boundary from that juncture to the vicinity of Beth-shemesh (Josh. 15:9b-10); and then (3) turn to the NW via Aijalon (Arab. Yalo) and Jehud (el-Yahudiyeh) to the Mediterranean Sea—i.e., in order to allow for Dan's allotment (Ir-shemesh in Josh. 19:41=Beth-shemesh in 15:10). The description begins as expected, following Benjamin's northern boundary as far as Lower Beth-horon. But then we are told simply that it extended "then to Gezer, and it ends at the sea" (16:3). Apparently the original boundary description has been curtailed and replaced

with this vague editorial gloss in an effort to bring Gezer within the bounds of Ephraim. A similar editorial problem occurred in connection with Manasseh's allotment and explains the curious statement in Josh. 17:11-13: "Also in Issachar and in Asher Manasseh had Beth-shean and its villages, and Ibleam and its villages" (cf. Judg. 1:27-28). See TRIBES, TERRITORIES OF; TRIBES, TERRITORIES OF[S].

Scholarly opinion remains widely divided regarding the list of Levitical cities recorded in Josh. 21 (cf. the slightly different version in I Chr. 6). Some view it as an entirely artificial and utopian list without any historical basis. Those who attribute historicity to it express various opinions regarding its date and the circumstances of its origin. In any case the list is highly schematized. Four cities are listed for each tribe. The only exceptions, Judah and Naphtali, offset each other and probably are to be attributed to corruptions in the text.

5. **Historical issues.** The question of historicity must be raised at two levels. First, do the individual narratives and lists reflect actual historical events or circumstances? Second, does the Deuteronomistic presentation of the conquest and settlement, under which these narratives and lists have been subsumed, have any claim to historicity?

a. **The pre-Deuteronomistic narratives and lists.** We have already noted that several of the lists are probably authentic historical sources, although the dates and circumstances of their origin cannot be established with certainty. In any case they generally derive from later periods of Israel's history than their present context in the book of Joshua would imply. Thus, while the district list in Josh. 15:20-62; 18: (21-24), 25-28 is an extremely valuable source of historical information regarding the administrative system of the southern kingdom, it is only indirectly relevant for the study of the premonarchical period. Some of the narratives in chs. 2-11 probably also hark back to actual historical events. For example, the account of the covenant with Gibeon (ch. 9) apparently preserves the memory of an early agreement which was broken later by Saul (II Sam. 21:1-14). But other traditions preserved in these chapters may be entirely etiological or cultic in origin; and even those which are based on actual historical events have undergone such significant changes during the process of transmission that their historical basis is no longer clearly discernible.

The account of the conquest of Ai is a case in point. The opening scene (7:2 ff.) continues the holy-war theme which dominates the preceding account of the conquest of Jericho: victory was to be given by Yahweh and was in no way dependent upon human might. The initial defeat at Ai illustrates Israel's helplessness when the holy-war regulations were not maintained. We have already observed that the description of the tactics employed during the second attack (8:3 ff.) is related tradition-historically to the account of the conquest of nearby Gibeon (Judg. 20). Both stories circulated orally among the same folk population, and it is not surprising that elements of one would have been transferred to the other. Finally, the account of the conquest of Ai provides an etiological

explanation for the prominent ruin situated SE of Bethel. The Hebrew name "Ai" means "the ruin." According to Josh. 8:24-28, the ruin resulted from Joshua's destruction of a massive Canaanite city at the time of Israel's conquest of the land. Excavations have demonstrated that the massive ruins had already been standing for hundreds of years before Israel appeared on the scene. Possibly Israel did fight a significant battle in the vicinity, but if so, the memory is preserved so indirectly that the possibility must remain in the realm of speculation.

b. **The Deuteronomistic presentation of the Conquest.** The Deuteronomistic editor(s) of the book of Joshua wished to emphasize that the whole land of Canaan was conquered by a unified Israel under the leadership of Joshua. This view is not supported by the narratives in chs. 2-11. Even if taken as historically accurate sources, they account for the conquest of only a portion of the land. Certain non-Deuteronomistic traditions strongly suggest, moreover, that Israel took possession of the land by means of a less unified and more gradual process. The traditions preserved in Judg. 1:1-2:5 imply that the various tribes acted on their own, and that their initial attempts were only partially successful (cf. esp. Judg. 1:21, 27-35). The distinction maintained between the "Leah" and "Rachel" tribes suggests that the settlement occurred in at least two major phases (cf. esp. Gen. 29:31-30:13 + 35:16-20). Even within the book of Joshua there are hints that the Deuteronomistic presentation of the Conquest is more ideal than historically accurate (cf. esp. 11:13; 13:1-13; 17:14-18).

In view of the apparently contradictory nature of the biblical evidence, it is not surprising that scholars have reached widely divergent conclusions regarding the conquest. See CANAAN, CONQUEST AND SETTLEMENT OF[S].

c. **The archaeological evidence.** Evidences of Late Bronze (ca. 1500-1200) destructions have been uncovered at Tell Deir'alla (biblical Succoth?), Megiddo, Beth-shan, Bethel, Gezer, Beth-shemesh, Lachish, Tell Beit Mirsim, Tell Abu Hawam, and Ashdod. Some would associate these destructions with Joshua's campaign, but this involves both an overextension and an oversimplification of the archaeological evidence: (1) It cannot be assumed that these LB destructions occurred in a single wave or were due to a single cause. None of the destructions can be dated precisely; and the end of the LB age was a politically turbulent period for Palestinian city-states apart from whatever pressures Israel exerted. (2) The destroyed cities are for the most part not the ones which the biblical texts associate with Joshua's conquests. The two unquestionable exceptions are Lachish (Josh. 10:3 ff.) and Hazor (11:1 ff.). Gezer and Bethel are listed in the summary list of Josh. 12:7-24. But Josh. 10:33 carefully avoids the notion that Joshua actually took the city of Gezer itself (cf. also 16:10; Judg. 1:29; I Kings 9:16-17); and the account of the taking of Bethel does not appear prior to the summary, as one would expect if its conquest were to be credited to Joshua, but in Judg. 1:22-26, where the deed is credited to "the house of Joseph." Actually, one need not assume that the

taking of Bethel as described in Judg. 1:22-26 involved the city's destruction. (3) Excavations at sites which do figure prominently among the conquests attributed to Joshua have, with the exception of Hazor, produced only negative evidence. Jericho and Ai appear to have been unoccupied during the LB age. Gibeon may have been occupied at that time; but if so, all the evidence escaped the excavators except four tombs.

*d. Shechem and the amphictyony.* It was observed above that 8:30-35 and 24:1-28 stand apart from the remainder of the book of Joshua in that they presume SHECHEM to have been the place of tribal assembly (i.e., rather than Gilgal and Shiloh). It is often held that 24:1-28 preserves the remembrance of an ancient ceremony by which the tribes bound themselves together into amphictyonic union, a ritual which may have been repeated at regular intervals during the premonarchical period. According to the hypothesis, Shechem would have served as the first amphictyonic center. Gilgal, Bethel, and Shiloh may have served as amphictyonic centers at later periods.

The amphictyonic hypothesis is falling under increasing attack and not without good reason (see AMPHICTYONY[S]). One of the least convincing aspects of the hypothesis is the role it ascribes to Shechem. There is no direct evidence that it was an early Israelite cultic center aside from the two problematic passages in Joshua. These two passages are clearly Deuteronomistic in their present form, and appear to be secondarily Deuteronomistic at that (see §2 above). The claim that 24:1-28 is based on a very old, pre-Deuteronomistic tradition is possible, but cannot be satisfactorily demonstrated.

\***JOTHAM (KING OF JUDAH).** The seal bearing the inscription *lytm* (see JOTHAM §3, with Fig. 31; the reading *lytm* is in error) was discovered at TELL EL-KHELEIFEH. This site cannot be positively identified with Ezion-geber.

\***JUBILEE, YEAR OF** [יובל], etymology uncertain; traditional: a word for "ram"; some scholars compare, rather unconvincingly, the root *ybl*, "to bring (a gift)"; the word has no relation to Lat. *jubilare*, "to raise a shout," and its English derivations]. שנת היובל, the year concluding a cycle of seven sabbatical years.

1. **The word.** In Exod. 19:13 a musical instrument, חִיבֵל, is mentioned; the same instrument is called לַרְנָת הַיּוֹבֵל in Josh. 6:5, whereas vs. 4, 6, 8, 13 of this chapter speak of שׁוֹפְרוֹת הַיּוֹבֵלִים, "trumpets of rams" (?). According to the Mishna (R.H. 3:3) the trumpet of the New Year was made of a straight horn of a mountain goat; Rabbi Judah maintained (3:5) that this instrument was used at the beginning of the year of jubilee only, whereas at all other New Year festivals the ram's horn was blown.

2. **Legislation.** The legislation concerning the year of jubilee—sometimes called simply "the jubilee"—in Lev. 25:8-17, 23-25 stands in close connection with regulations for every seventh year, Lev. 25:1-7, 18-22 (see SABBATICAL YEAR and supplementary article). Though the jubilee has some characteristics of its own, all that is prescribed for the sabbatical year applies to the jubilee as well. This is already an argument in favor of assuming the identity of the jubilee and the seventh sabbatical year, as in the Book of Jubilees. This identity was maintained by Rabbi Judah (T.B. Ned. 61a) against the majority of the rabbinical authorities who concluded from Lev. 25:10, 11, where the jubilee is called "the fiftieth year," that the jubilee was the year following the seventh sabbatical year. It is more probable, however, that we have to understand "fiftieth" in the same way as Christ is said to have risen "on the third day," though the resurrection took place on the second day after his death. The jubilee begins on the tenth day of the seventh month, on the Day of Atonement, and is inaugurated by "sending abroad the loud trumpet (שׁוֹפָר, not יוֹבֵל) throughout the land" (Lev. 25:9). In such a way "liberty" is proclaimed to all the inhabitants (vs. 10). This word, דְּרוּר, indicates the manumission of slaves, i.e., of those Israelites who, because of poverty, had sold themselves either to fellow Israelites (vss. 39-43) or to non-Israelites dwelling in Israel (vss. 47-54). In Ezek. 46:17 "the year of liberty" is another name for the jubilee.

It has often been said that the manumission in the year of jubilee contradicts Exod. 21:2-6, which prescribes the manumission of a Hebrew slave

after his sixth year of bondage (cf. Deut. 15:12-17). One should, however, note the differences. Exod. 21:2-6 has to do with a private contract between a hopelessly poor man and his wealthy neighbor, but Lev. 25 belongs to public law, general measures for which the whole community is responsible. The laws of Exodus and Deuteronomy leave open the possibility that a Hebrew slave, if he wished, might remain a slave after the expiration of the period of six years; in the jubilee, however, such slaves are also set free. Moreover, while the laws of Exodus and Deuteronomy apply only to an Israelite slaveowner, the public law of Leviticus applies to the non-Israelite slaveowner as well. Even if the ordinances of Exod. 21:2-6 were always obeyed—which may be doubted—there was ample scope for a general public law restoring liberty to every Israelite.

In the jubilee all land sold during the preceding years returns to the original owners or to their descendants. If the land were not returned to the newly freed slave, he could find himself compelled to enter bondage again. This law, however, has a wider application: it also benefits those who have sold their land, or part of it, without selling themselves into slavery. The motivation, therefore, is different from that of the gifts to be presented to the freed slave according to Deut. 15:14. The aim of jubilee is the restoration of the position as it was of old: free persons living on free land.

This does not mean that Israelite society during the forty-nine years following a jubilee could follow a policy of *laissez-faire*. The next of kin of the seller had the duty, if he had means enough, to redeem the land; the seller, if he became prosperous again after the sale, had the same duty (Lev. 25:25-27). Though it is not said explicitly, it is evident that in such cases the buyer had to comply. In the same way, an Israelite who had sold himself as a slave to a non-Israelite resident in the country had to be redeemed or could redeem himself (vs. 47-49). The price of redemption, both of slaves and of land, was to be calculated in accordance with the years during which the buyer had the use of the property (vs. 15-17, 27) or of the labor of the slave (vs. 50-52). The general principle is that what is sold is not the land or the person, but their use, as it says in vs. 16: "for it is the number of the crops that he is selling to you." In the case of a person selling himself into slavery, the buyer should regard his bondsman "as a hired servant and as a sojourner" (vs. 40). It would be better still if the wealthy man sustained his poor neighbor by an interest-free loan (vs. 35-38).

Vss. 29-31 define a difference between a house in a walled city, which may be redeemed only in the first year after the sale, and a house in a village, which may be redeemed at any time, and which in any case will return to the original owner in the jubilee. It is not said why such a distinction is made. Probably the house in the village was considered part of the field, while such a relation did not exist between a field and a house situated in a walled city. The houses of Levites, even in a walled city, could be redeemed at any time (vs. 32). If a Levite other than the original owner

exercised the right of redemption (so the Hebrew text of vs. 33), he could retain it until the jubilee, when it was returned to the original owner. The fields of the Levites, as designated in the regulations concerning the Levitical cities, could not be sold (vs. 34). These special regulations are to be explained by the position the Levites had in Israelite society.

The jubilee is mentioned incidentally in two other legislative sections. Lev. 27:16-25 deals with an owner's voluntary dedication of a field to the sanctuary; in principle also this is not a transfer of property, but of a fixed number of harvests. If the owner wants to redeem it, one fifth is to be added to its value, computed in accordance with the number of years between the moment of redemption and the next jubilee. If not redeemed, or if sold to somebody else, the field will become the absolute property of the sanctuary in the jubilee.

Num. 36:1-12 prescribes that "every daughter who possesses an inheritance in any tribe" (vs. 8; cf. Num. 27:1-8) is not allowed to marry outside her tribe, because her inheritance would be added to the tribe into which she has married, "when the jubilee of the people of Israel comes" (vs. 4). Not only is the ownership of an individual and his inheritors safeguarded, but also the tribal boundaries are fixed once and for all.

**3. Theory and practice.** The occurrence of the word jubilee in Lev. 27:16-25 and Num. 36:4, sections which do not deal expressly with this institution, is an indication that Lev. 25 is not a utopian speculation by a single late theorist, as has often been maintained by Western commentators during the last two centuries. These scholars, apparently influenced by the Western capitalistic structure of society, had no idea of the practicability of other economic and social structures. Their main argument was that the jubilee is mentioned only in what were considered to be late parts of the Pentateuch. Its occurrence in Lev. 27:18, 21 and Num. 36:4, in contexts which deal with other matters, speaks for the real existence of the institution. The antiquity of the institution is attested by the fact that no convincing etymology of the word *יובל* was known in postexilic times. Had a late utopian coined the word, its meaning would have been known to his contemporaries. Another argument may be derived from the Nuzi texts in which Gordon has found traces of similar customs. In Nuzi contracts it is often stipulated that a transfer of property, e.g., took place "after *šūdūtu*" or "after *andurāru*." The latter word is etymologically related to *d'ror*, "liberty" (Lev. 25:10). Since *šūdūtu* occurs far more frequently than *andurāru*, Gordon equates the former with the sabbatical year, the latter with the jubilee. One could also compare the proclamation of *andurāru* by Akkadian kings, often in the year of their ascension to the throne (see Kraus). It is feasible that after the introduction of kingship in Israel the proclamation of "liberty" and the carrying out of its implications became the duty of the king.

There are a few indications that the institution was known and sometimes carried out. Whether Isa. 37:30 (cf. II Kings 19:29) alludes to either a sabbatical year or a jubilee is not certain. The

manumission of Hebrew slaves in the year 588 (Jer. 34:8-22) could be a belated jubilee, the same jubilee as alluded to in Jer. 31:26, though the reference is to Deut. 15, not to Lev. 25. According to Sarna the year 588 was a sabbatical year, but, as we have seen, the jubilee was a sabbatical year with additional implications.

This does not mean that the jubilee was always observed; there were too many kings who neglected their duties in this respect. According to II Chr. 36:21 (cf. Lev. 26:34, 35) the sabbatical year had often been neglected; the same applies *a fortiori* to the jubilee.

**4. Theological relevance.** The jubilee restored equality among the citizens and gave new opportunities to those families which had become so impoverished that they had lost their possessions or even their liberty. On the other hand, the rich were reminded that there would come a time when their Israelite slaves would once more be their equals who could bring them to court for maltreatment during the years of bondage. When a king reigned in justice, he was to proclaim the jubilee in due time, delivering the needy (cf. Ps. 72:4, 12-14). Justice, in Israelite law, is primarily the protection of the weak.

The institution was based on definite theological insights. Ownership of land was not absolute; the land was given to the Israelites as a fief. God is the liege lord, and the individual head of a family is his vassal. God wants the country to remain equally divided among all his bondsmen, as was done in the days of Joshua. A vassal should not acquire permanent possession of the fiefs of his fellow vassals. "The land shall not be sold in perpetuity, for the land is mine; for you are strangers and sojourners with me" (Lev. 25:23). God does not allow permanent strife between classes; all the members of his chosen nation are equally dear to him. The dominance of the rich over the poor is a breach of God's covenant with the whole nation.

In the same way, God does not want some of his bondsmen to be the slaves of others. He has delivered all Israelites from the bondage in Egypt and wants them to be free from permanent servitude to men. They are his servants and this service is their freedom. If some of them become the servants of others, God's own rights over them are infringed upon by the slaveowners (Lev. 25:55). Nobody can serve God and at the same time oppress God's servants.

God's gifts to Israel (liberty and a country) have been given conditionally. Israelites cannot do with the land what they wish, naming lands their own (Ps. 49:11); neither should one person's liberty infringe upon that of another. If God's laws concerning land and liberty are not recognized, the nation will forfeit both, as happened in the Exile.

For Christianity, these laws, extended over the whole of mankind, retain their basic value. Within any region and society the need for social reform, taking away the injustice inherent in all human developments, should always be recognized. Such reforms should take place in accordance with God's will and without creating new injustices, in con-

trast to reform which is brought about through violence. Applied to nations, the principles underlying the jubilee condemn permanent colonialism and unbridled exploitation of the soil to the detriment of its inhabitants. One nation should not be subjugated to another, stronger, nation. The proclamation of a "solemn rest for the land" in the sabbatical year (Lev. 25:5) and therefore in the jubilee as well (Lev. 25:11) also has meaning in the present-day struggle against the destruction of natural resources, for "the earth is the Lord's and the fulness thereof" (Ps. 24:1).

A. VAN SELMS

**\*JUDAH, FORMATION OF.** The name Judah, linked by popular etymology to the root יהד, "to thank" or to "praise" (Gen. 29:35), perhaps derives from *yhd* (Arab. *whd*), meaning "lowland," referring to coastal plains and wadis in the region. From the terrain the name may have been transferred first to the people and then their eponymous hero in the traditional accounts of the Israelite tribes. Judah's position as Leah's youngest son suggests the late development of the group associated with his name, while Leah's secondary status as a wife (Gen. 29:21-30) may reflect the originally inferior status of the groups descended from her.

The picture of the tribes as self-aware entities moving from the desert to the conquest of Canaan represents an idealized retrojection based upon the political realities of a period no earlier than the united monarchy. The purpose of such retrojection was to provide the various sociopolitical units ("tribes") that had developed in the land with the ideological benefits accruing from a claim to corporate continuity going back to the wilderness and even to patriarchal times. See CANAAN, CONQUEST AND SETTLEMENT OF[S]; TRIBE; TRIBE[S]; GENEALOGY §3.

The case of Judah provides an excellent example of the development of an Israelite "tribe." The growth of Judah was characterized demographically by a continuing blend of the original invading nucleus with the indigenous populations of Canaan; geographically, by the gradual expansion of these blended populations over most of the region S of a boundary running roughly from the N end of the Dead Sea W toward the coast at Jamnia; politically, by the gradual creation of numerous independent polities of varying size, cohesiveness, stability, and strength; and ideologically, by the gradual extension to all groups of Yahwistic allegiance and Judahite identity.

The mingling of the invading groups with the local population is exemplified eponymously in the account of Judah's marriage to the daughter of Shua (who lived in the region of Timnah, Adul-

lam, and Achzib), and in his relations with his daughter-in-law, Tamar ("palm tree," perhaps a totem; Gen. 38; see TOTEMISM[S]). The Shelanites, who were descendants of the first union, and the Perizzites and Zerahites, descended from the second, represent groups amalgamated with the Judeans, who were already possibly composed of various Hebrew ethnic blends (see HABIRU; HABIRU[S]). The process of absorption also included Kenite elements (see KENITES), the Kenizzite clans of Othniel and Caleb (possibly of Edomite origin), and the Jerahmeelites living in the Negeb, ethnically akin to the Calebites, since Jerahmeel is said to have been Caleb's brother (I Chr. 2:42). Among the Calebite areas absorbed was Ephrathah, personalized as Caleb's second wife (I Chr. 2:24, 50; 4:4). Ephrathah is identified with Bethlehem, which appears to have been a later and geographically more comprehensive name for the city. In their expansion, the Judahites eventually pushed the Reubenites across the Jordan and confined the Simeonites and the Levites to small areas. They appear also to have participated in the containment of Dan, and at least in a minor way in the events leading to the decimation of Benjamin. In this regard, the abuse of the Judahite concubine (Judg. 19) suggests a successful Benjaminite military violation of the population of Judah rather than an organized and active participation of the latter in the decimation of Benjamin.

The story of the theft by Achan (Josh. 7; Achar in I Chr. 2:7), reflecting the treason of an entire clan, or, at least, one of its major components, suggests intense competition at an early period in the conquest, although the narrative cannot be further elucidated or located historically or geographically.

It was not until the time of David in the tenth century that the various Hebrew elements in Judah were united into a single polity. David's father, it should be recalled, is described as an Ephrathite of Bethlehem (I Sam. 17:12), not a Judahite. The actual creation of the state can probably be connected with David's flight from Saul's court after his failure to effect a palace coup. The new state, called Judah, with its capital at Hebron, provided David with a base to mount opposition to Saul's kingdom and, eventually, to subdue it after Saul's death. The figures for the population of Judah, 74,600 for the first census (Num. 1:27; 2:4) and 76,500 for the second (Num. 26:19-22), belong most appropriately to the period of the united monarchy.

The absence of Judah from the roll of the tribes in the Song of Deborah (Judg. 5) may indicate that the tribe did not exist at the time, while its mention in a pre-Davidic context elsewhere in the Bible suggests in each case a retrojection from post-Davidic times. The town and boundary lists of Judah in Josh. 15, purporting to record an allotment by Moses, are probably post-Davidic, and yield no information about conditions of earlier centuries. Jacob's blessing of the tribes (Gen. 49) is a *beneficium post eventum* which, in Judah's case, reflects attainment of "the scepter" and "the ruler's staff" among the tribes and the realistic hope that this hegemony "shall not depart." Such

a position was not attained by Judah until sometime after David's establishment of the united monarchy. The blessing of Moses (Deut. 33) represents a similar retrojection. Though some scholars have dated this composition as early as the eleventh century B.C. on the fragile evidence of style, others, on the same evidence, place it three centuries later. Still others suggest the use of older forms by a later writer to create the impression of antiquity. It has also been suggested that the present composition represents the embellishment of an original eulogy of a limited number of tribes, in which the present section on Judah was not included. In any event, it is impossible to determine whether or not the section on Judah represents a plea for help from a nascent state struggling with Israel, or a powerful state with marauding armies away at war, or a weakened state struggling with its foes.

\***JUDAISM, EARLY RABBINIC.** Rabbinic Judaism is that mode of Jewish belief and observance molded by the Palestinian and Babylonian rabbis of the early centuries of the Common Era, and ultimately embodied in compendia of Jewish law and lore, most notably the TALMUD. Many scholars trace the origins of rabbinic Judaism back into the Hellenistic if not Persian periods, or even to the time of the Babylonian exile. Often termed "scribism" (see SCRIBE) or "Pharisaism" (see PHARISEES [S]) in its formative phases in Palestine, it remained generally inchoate in nature until the late first century A.D., when the destruction of the Jerusalem temple by Rome occasioned a radical reorientation of life in Judea. The priestly hierarchy and SADUCEES now faded along with the sacrificial cult, but Pharisaism survived and flourished. Its leaders, by now having assumed the title RABBI (in the sense of "teacher"), emerged as the recognized authoritative interpreters of Scriptures.

1. **Essential elements.** While no systematic description of rabbinic Judaism is presented by its literature, the following fundamental elements emerge:

a. **Twofold law.** The hallmark of early rabbinic Judaism was its view that God at Mount Sinai had imparted to Moses a twofold revelation: The written Law (תורה שבכתב, i.e., the Pentateuch; see TORAH[S]), declaring God's will for the world, also detailed the duties and obligations devolving spe-

cifically upon the Israelite people as a "holy nation"; by virtue of its written form, this revelation was readily accessible to all. Also imparted, but never promulgated, was an unwritten Law (תורה שבעל פה), preserved through oral tradition by Moses and Joshua, and transmitted by the prophets to especially eminent and authoritative personages of later times. The unwritten Law could be recovered through the application to the written text of specific hermeneutic or exegetical principles (see HERMENEUTICS[S]; INTERPRETATION, HISTORY OF, [S] §D), the development and unique mastery of which enabled the rabbis to establish themselves as the authoritative interpreters of God's revelation.

Through these principles, the rabbis derived scriptural support not only for laws, regulations, and institutions already operative in society, but for new enactments required by changing conditions of their own day. Biblical laws no longer susceptible of observance or possessing significance were often reinterpreted exegetically so as to assume new relevance; others were suspended altogether in the belief that they would someday reacquire importance. The rabbis thus attempted to uphold the written Law as eternally valid and divinely sanctioned, and yet, through the skillful application of the oral tradition, to harmonize the Scriptures with the ever-changing realities of life (see LAW IN FIRST-CENTURY JUDAISM).

**b. Nature of God.** The existence of but one God, eternal, indivisible, incorporeal, omnipresent, omnipotent, and omniscient, who created the universe, whose creative powers continue to function in the processes of nature, and whose presence pervades human affairs, was accepted axiomatically. The promulgation and preservation of this belief, together with a relentless campaign against polytheism and idolatry, were conceived of as the purpose of the Jewish people. Twice daily the Jew affirmed his belief in monotheism (Deut. 6:4 ff.; cf. Mark 12:28 ff.) and his willing submission to divine injunctions (see SHEMA, THE). He conceived of God as a loving father, supramundane yet not extramundane, ever-near to mortal man in his need; no intermediary was needed or tolerated between man and God.

**c. Nature of man.** The human race, in both its physical and spiritual dimensions, was considered God's pre-eminent creation, the singular blend of the earthly and the divine. There was no inherent impurity in the flesh as opposed to the spirit (see JUDAISM, HELLENISTIC[S] §§3, 6); the body, in its marvelous construction, was perceived as itself a masterpiece. While it might induce one toward sensual desires, the body by no means compelled one to sinfulness. Rather the human soul, the spiritual force within, was endowed with free will, enabling each one to choose the good and reject the evil. Sin was thus an erring from the path of virtue, and not the depraved state of mankind.

Active in every human being were two urges—one to goodness (יצר הטוב), the other to evil (יצר הרע); a person's free will determined which was to have dominance. Nor was the evil impulse without positive purpose, for it allowed people to have a moral sense, thus elevating them above the animals; without the possibility of consciously doing what

was evil, righteous deeds ceased to be righteous in any meaningful sense.

Those who attempted to live a righteous life received assistance of two kinds. First, the commandments (מצוות; singular מצוה), 613 in all, encompassed within the twofold law, guided them along the paths of virtue. God also provided the option of sincere repentance, a procedure by which persons could neutralize their wrongdoings. God not only anxiously awaited their repentance but also facilitated it; for God's attribute of compassion and pardon (מדת הרחמים) supplanted his disposition toward stern justice and punishment (מדת הדין). The decision to repent nevertheless resided with human beings: they could sin; they could atone; then God could forgive.

At the same time, the attribute of justice demanded that the righteous be rewarded and the unrepentant wicked punished, if not in this life then in the life to come. While cognizant that motives of reward and punishment were not the loftiest incentives toward ethical conduct, the rabbis hoped that righteous behavior so induced would ultimately condition people to righteousness for its own sake.

**d. Israel and the nations.** The biblical theme of intimate and unique interrelationship between God and the Israelite people (see COVENANT §C2, 3; ELECTION §4) was richly amplified by the rabbis. Small in numbers, weak in possessions, and repeatedly the victims of exile and persecution, the Jewish people had but one treasure: they had been made the guardians of the twofold law bequeathed in the wilderness. No favoritism need be imputed to God, for all other nations had long before refused acceptance of God's guidance (see, e.g., *Meh. Bahodesh*, Yitro, §5; *Sifre Deut.*, Berakah, §343, 142b; and, later, *Exod.R.*, Yitro, xxvii, 9; *Pes. K.* 199b fin-200a; *Tanh.B.*, Yitro, 38b).

Israel, however, by accepting the Law, assumed favored status before God, henceforth being considered the chosen depository and guardian of his universal truths. To keep these truths forever intact, Israel was obliged to accept laws and rites specifically national in character—ritual and cultic laws, hygienic and dietary practices, and calendrical observances which had for their major object the shielding of the Jewish people from all heathen inducements to idolatry and impurity; only so detached could Israel maintain itself as "a kingdom of priests and a holy nation" (Exod. 19:6).

Though receipt of the Torah sealed the covenant between God and Israel, yet the Torah was not Israel's exclusive possession. For through Israel the Torah was to be promulgated to all nations. The door was thus open to any Gentile seeking entry to the Hebrew people out of pure motives. Gentiles not disposed to enter the fold could yet merit divine approval by abiding by the sevenfold Noachian code (*Tosef. 'A.Z.* VIII.4; *Sanh.* 56a: practicing social justice; refraining from blasphemy, idolatry, incest, bloodshed, robbery, eating flesh torn from a living animal; cf. Gen. 9:3-6). Ultimately, all nations would accept the Torah's teachings, and God's kingdom would be recognized as established on earth, the righteous of all peoples inheriting the bliss of the hereafter.

*e. The hereafter.* It is not possible to systematize rabbinic notions of the hereafter; both in conception and terminology, there is a lack of clarity and consistency. Generally speaking, an imperfect conflation or overlapping of two schemes emerges—one supernatural and cosmic in dimension, the other political and national. Presupposed in the one was a separation, at death, of the souls of the righteous from those of the wicked, the former going to a blessed abode, the latter to Gehinnom (see GEHENNA). At the appointed time, the bodies of the dead would be restored and, upon rising from their tombs, become rejoined to their respective souls, the whole person now being summoned to a last judgment before God, the verdict determined in accordance with the individual's conduct in the former life.

The completion of this pattern of events was contingent upon an earlier, interim age of national and international crisis and resolution thereof. During this period, accordingly, the final destiny of Israel and the nations would be determined. While externally Israel was to recover independence and power from the rule of foreign oppressors, internally the people were to undergo religious and moral regeneration. A golden age was to ensue, patterned not upon the detested Hasmonean or Herodian dynasties but rather on the glorious Davidic monarchy of old, represented by the person of the Messiah of the Davidic line, who would preside over the whole world in an era of universal peace and prosperity, rectitude and pious fidelity to God and his Law. Jews in other countries would be miraculously gathered to the Holy Land to partake of the bliss of the messianic age.

While resisting precise delineation, the term "KINGDOM OF GOD" (מַלְכוּת שָׁמַיִם; literally, "Kingdom of Heaven") in rabbinic literature often seems to connote universal recognition of God's kingship. While God was already—indeed had always been—king over all the earth, Israel alone of all the nations had acknowledged his sovereignty; but ultimately all nations would acknowledge it, and the universal reign of God would find realization in the relations of all men to God and their fellows. The messianism of rabbinic Judaism, with the exception of the Bar Kochba period (see BAR KOCHBA [S]), thus anticipated fulfillment only in the remote future, in contrast to certain expressions of imminent messianism encountered in, e.g., the Pseudep. and NT. Nor do the rabbinic notions so extensively partake of apocalyptic imagery (see APOCALYPTICISM[S]; ESCHATOLOGY articles). In particular, the Messiah generally emerges not as antemundane or supernatural but rather as an earthly personage.

*f. The essentials of personal, domestic, and communal living.* The wholesome life, according to rabbinic Judaism, could be achieved not only through faithful adherence to the Torah's injunctions but also through pious imitation of God himself. While God had revealed the Torah, the Torah also revealed God as the exemplar of holiness, righteousness, compassion, and loving-kindness. Imitation of God was possible since every person was created in his image. When people fashioned their lives after the divine model, they experienced a feeling of

complete kinship with the Creator. Thus the adage, "You shall be holy; for I the Lord your God am holy" (Lev. 19:2), emerges as the heart of the Law. Underpinning this concern with holiness were the many precepts of rabbinic law—its moral directives, its hygienic, dietary, and marriage laws, its calendrical observances and the like.

The rabbis were mindful that the stability of a society and the piety of life within it depended ultimately on the integrity and holiness of the domestic family unit. They thus preferred wedded life as the natural state; celibacy was disapproved of. A name of the marriage relation was קְדוּשֵׁינַן ("holiness" or "consecration"), reflecting the chastity and purity which the rabbis viewed as inhering in the union of man and woman—the precise figure which God himself had chosen to illustrate his bond to Israel (see MARRIAGE §§3, 4). This union was to be essentially spiritual; at the same time, since the flesh was also God's creation, sexual union was itself deemed proper and sacred.

The legal status of WOMAN under rabbinic law represents a noticeable advance over that in contemporary civilizations and in the biblical legislation. No longer was the woman sold from father to husband, transferred from one subjection to another (see MARRIAGE; WOMAN IN THE ANE[S]; WOMAN IN THE OT[S]); marriage was a voluntary union dependent on the woman's consent. The rabbis developed new legal institutions to aid and protect wives and daughters, in particular the כְּתוּבָה, a document given to the bride by the groom at the marriage ceremony, affording wife and children financial protection in various contingencies. With respect also to DIVORCE, the husband's right to dismiss his wife at pleasure was progressively limited and restricted by the rabbis.

A major purpose of marriage was the rearing of children, who would in turn transmit the religious heritage unimpaired to later generations. A system of universal education was adopted toward this end. Adults meanwhile were to assemble on the sabbath day in special houses (see SYNAGOGUE §§2, 6) where sections of the Torah were read and interpreted by exegetes, followed by the *haftarah*, a reading from the Prophets.

The rabbis emphasized that people were intended to live not in isolation but as members of society, and that, consequently, many duties devolved upon them with respect to one another. The social order depended in particular on the maintenance of justice, truth, and peace.

The administrators of justice bore a heavy responsibility; only their integrity guaranteed honest enforcement of the duties and rights safeguarding society's classes and individuals. Public justice was administered impartially, and the accused was presumed innocent until proven guilty, elaborate precautions being taken to prevent wrongful conviction.

Any deviation from the truth was vigorously censured in rabbinic literature. Every man was to be inwardly exactly what he appeared outwardly. Integrity in business dealings was particularly emphasized. The rabbis denounced every mode of deception and fraudulent dealing, every gain secured

by gambling or economic speculation, every breach of promise, every act of calumny.

Only on a foundation of peace could a community enjoy stability and well-being. The Hebrew שָׁלוֹם meant not simply "peace" but fulfillment of every kind: contentment and health, security and prosperity. Only these were productive of that harmony essential to the welfare of all components of society. The principle "You shall love your neighbor as yourself" (Lev. 19:18; cf. Mark 12:28-31) was the only true standard of human relationship. Hence, pre-eminence was given to גְּמִילוּת חַסְדִּים ("deeds of loving-kindness"): the alleviation of the burdens of the afflicted and the extension to all one's fellows of gestures of friendship and heartfelt concern.

**2. Historical origins and development.** Rabbinic literature manifests little concern with historical data and offers no systematic presentation of rabbinic Judaism's origins and growth. Even when historical episodes are narrated, testimony may be incomplete, inaccurate, or overlaid by legend. Josephus' treatment of the Persian, Hellenistic, and Roman periods generally confines itself to *political* developments through the fall of the temple; he is thus of somewhat limited assistance in reconstructing the history and institutions of rabbinic Judaism, and problems attend even to his descriptions of the Pharisees. While the NT—especially the gospels—mentions scribes and Pharisees frequently, such testimony may be utilized only with the greatest caution (see §3 below). Because the evidence is so incomplete, classical reconstructions of the history of early rabbinic Judaism must be viewed with great reserve; these usually present the following general picture:

Jews in Babylonia, during and after the Exile, being without a temple, developed a new institution, the synagogue, where they gathered to hear scripture read and expounded. Their interest in the study of these writings thus awakened, a demand arose for men equipped with the learning to qualify them to act as teachers. These instructors became known as סוֹפְרִים (scribes), and foremost among them, in the middle of the fifth century B.C., was EZRA, "a scribe skilled in the law of Moses" (Ezra 7:6).

Ezra traveled to Jerusalem during the reign of Artaxerxes I (465-424 B.C.) with a royal warrant to reform religious conditions. He instituted public reading of the Torah on the sabbath, festivals, and all public occasions, accompanied by learned interpretation, the latter required so as to bring the Torah into harmony with changing societal conditions. Ezra's system of interpretation (later termed Midrash) would thus render him the founder of scriptural exegesis.

Ezra commissioned a special synod of teachers, so tradition relates, called the Great Assembly (בְּנֵי־הַגְּדוּלָה; see SYNAGOGUE, THE GREAT[S]) to receive the corpus of doctrine preserved till their day and to adapt and develop it so as to suit the new conditions of their age. This Great Assembly ceased to exist sometime in the third or second century B.C. (AB. 1:1-2) and was followed by another organization, called the SANHEDRIN (see also SANHEDRIN[S]), which took charge of the affairs of

the community in Judea. The sanhedrin was headed by a series of five זוגות ("pairs [of sages]"), ending, with Hillel and Shammai, about A.D. 10; one of each pair was נָשִׂיא ("Prince," i.e., president), and the other was אֲבִי בֵית דִּין ("Father of the Court of Law," i.e., vice-president).

HILLEL, a Babylonian by birth, reputedly descended from the Davidic dynasty, personified the Jewish ideal of peace and loving-kindness; he epitomized the ethics of Judaism in one famous maxim: "Do not unto others that which is hateful to thee" (Shab. 30b-31a; see also GOLDEN RULE, THE; GOLDEN RULE, THE[S]). It was Hillel who gave a heightened impetus to exegetical activity by introducing implementation of seven hermeneutic rules by which HALACHAH was to be derived. Shammai, according to rabbinic depiction, was a sterner man and more conservative in nature, as reflected in his interpretations of the Law.

Down to the destruction of Jerusalem in A.D. 70, the halachah proliferated and the successors of Hillel and Shammai, called respectively בֵּית הֵלֵל (House of Hillel) and בֵּית שַׁמַּי (House of Shammai), struggled to impose their particular legal interpretations. Ultimately, the Hillelites prevailed because, we are told, their teachings were more adaptable to life and grounded in sounder logic.

The youngest of Hillel's disciples was said to be Johanan ben Zakkai. Convinced of the futility of the Jews' rebellion against Rome, which began in A.D. 66, he counseled surrender but went unheeded; thereupon he adroitly secured from the Roman general VESPASIAN permission to establish a school at Jamnia (or Jabneh; see JABNEEL) which he later fashioned into an academic sanhedrin, thus guaranteeing Judaism's survival (see esp. Git. 56ab and ARN 4). This court was modeled after and considered a continuation of the Jerusalem sanhedrin which had earlier met within the temple precincts.

Following the period of Johanan's leadership, the office of *nāsi'* was held by a succession of patriarchs of the family of Hillel; the *nāsi'* became considered the nation's accredited representative to Rome, and his jurisdiction was recognized by Jews throughout the DISPERSION (see also JUDAISM, HELLENISTIC[S] §1b). He traveled extensively outside the Holy Land, often with certain other eminent scholars; visits to Rome most likely involved a presentation of Jewish interests to imperial authorities.

Under strong leadership, the sanhedrin at Jamnia exercised a powerful centralizing influence, especially in its regulation of the calendar for the whole Dispersion as well as Palestine. Liturgy became defined and canonized by the leaders, and the contents of the final section of Hebrew Scriptures were determined. Above all, efforts began to be made to control and systematize the ever-proliferating volume of halachic material. See also TALMUD.

At the same time, patterns of worship and assembly became structured around the decentralized synagogue, which replaced the temple and its sacrificial cultus. Liturgical features rooted to the temple were detached where possible and adapted to synagogue observance—such as the blowing of the shophar (see MUSICAL INSTRUMENTS §B2e) on New Year's day (see NEW YEAR[S] §3) and marching

with palm branches and willows at Tabernacles (see BOOTHS, FEAST OF). Divine forgiveness was now to be secured through prayerful repentance and good deeds rather than through animal sacrifices.

Hadrian's decision to erect on the remains of the temple a new structure to Capitoline Jupiter provoked a revolt by the Jews in A.D. 132 under Simeon BAR KOCHBA, acclaimed by the eminent Rabbi Akiba as Messiah. Hadrian reacted by suppressing the sanhedrin and forbidding on pain of death the study and practice of Torah. Akiba, publicly defying the prohibition, was executed.

Antoninus Pius, succeeding Hadrian in 138, revoked a number of prohibitions, thus allowing rabbinic activity again to spring to life. A new academic sanhedrin was established in Galilee, which had been spared much of the ravages of the Hadrianic wars. Simeon ben Gamaliel II was recognized as supreme head of the Jews; his son, succeeding him, was Judah Hanasi ("the Prince"; died 217), often called simply "Rabbi" (i.e., the teacher, par excellence).

The proliferation of halachic material during the period from Hillel onward prompted eminent scholars to compile private collections. Compendia produced by the schools of Akiba and Ishmael ben Elisha evolved into nuclei of later works of halachic midrash (see MIDRASH; MIDRASH[S]). Akiba himself was the first to systematize on a wide scale the contents of the earlier traditional Law according to subject matter with divisions and subdivisions. To this MISHNA collection, Akiba's disciples attached comments by their master himself and by his contemporaries—and thus prepared halachic collections for their individual use. As the number of these private collections multiplied, variants and divergences of transmission began to occasion considerable confusion. This prompted Judah Hanasi and his colleagues to collate the traditions of the different academies and to produce the authoritative edition of the Mishna. This work served both as a code and a digest of the oral Law, indicating the accepted decisions while preserving worthy divergences of opinion. See TALMUD §§3, 4.

The classical understanding of early rabbinic history as outlined in the preceding paragraphs takes its cue mainly from the reconstruction of same attempted by Sherira, Gaon of Pumbedita in the tenth century A.D. In response to a query concerning the origins of the Mishna, Sherira fashioned a historical outline by recourse to narrative episodes and sayings in the Mishna itself, supplemented by like material in other rabbinic works, all of which he arranged in a simple chronological order. Sherira stressed that the laws ultimately incorporated into the Mishna by Judah Hanasi had their origins in antiquity, but through memorization had been accurately transmitted in oral form throughout an uninterrupted chain of tradition, from Sinai, through the men of the Great Assembly, to later times, each master teaching his disciples the exact words of his own instructor before him. Initially, these laws had been fully understood so that disputes over them never arose; later, however, sages began to vary their language when teaching the laws; poor discipleship and the turbulence produced by war con-

tributed further to an unsettled state. Accordingly, disputes began to arise over the provisions of the laws and the reasons behind them. Akiba and his disciples, Meir in particular, played an instrumental role in preserving the accurate halachah, setting the stage for Judah Hanasi to produce his authoritative corpus.

Sherira's reconstruction maintains influence disproportionate to its credibility. Since the early nineteenth century, scholars have learned to take a skeptical view of historical and biographical narrative imbedded in biblical literature. Such reserve should be applied to the study of rabbinic traditions as well.

It should be realized, e.g., that to the ancient mind religious credentials, to be authentic, required a grounding in antiquity. The rabbis' ascription of halachoth to Ezra and the Great Assembly—let alone to Moses himself—thus emerges as suspect, as do the early origins assigned the synagogue or the sanhedrin or the office of *nāsi'*. Some have thus questioned whether the Great Assembly ever existed, or, if so, whether it, not to mention Ezra himself, actually bore any connection with incipient rabbinic Judaism. Sherira himself, it must be noted, was an ardent opponent of Karaism—a movement denying the authenticity of rabbinic Judaism—and he was thus naturally disposed to demonstrate how the oral Law went back, uninterrupted, through the men of the Great Assembly to Sinai. He thus gravitated toward those rabbinic traditions which rooted rabbinic institutions in the remote past and accepted these traditions at face value. A more convincing speculation would hold, by contrast, that the pioneers of rabbinic Judaism emerged not in the Babylonian or Persian periods but much later—most likely in the second century B.C.—surfacing in some fashion or another on the successful tide of the Hasmonean revolt.

There is, moreover, the problem of bias. While the alleged Pharisaic dominance over the Sadducees before A.D. 70 may be factual, the many traditions to this effect were recorded, preserved, and ultimately included in rabbinic literature by sages Pharisaic in sympathy, and at a time when the Sadducees had faded from the scene. The pro-Hillelite slant of rabbinic literature may have similarly colored traditions about Shammai and his followers, while embellishing those about Hillel and Beth Hillel. All these considerations should serve to focus scholars' attention on developments after A.D. 70, the formative period of Jamnia and following, when the process of collecting and reworking traditions concerning earlier Pharisaism and developing halachah was undertaken on a wide scale. Only through the application of form and redaction critical perspectives to this material can a more viable picture of the history of early rabbinic Judaism emerge. But the process is fraught with problems, especially in that the material itself resists such analysis. It is particularly taxing to determine how much the image of pre-70 Judaism, its teachings and institutions—particularly the sanhedrin and its make-up and procedures—may be only a retrojection of the post-70 period, or, in some respects, purely an idealization of beliefs and

practices never actively implemented (see SANHEDRIN).

**3. Relation to Christianity.** For many years, the image Christian scholars accepted of rabbinic Judaism was determined largely by NT testimony. They noted Jesus' frequent denunciation of the scribes and Pharisees for zealotry over the letter of the Law and asserted that Jesus came to restore the heart to such barren religion. Paul's denigration of Pharisaic life under the Law was presumed an echo of Jesus' own sentiments. Excerpts from rabbinic literature in translation served to confirm for many the alleged absurdities of the rabbinic preoccupation with the Law, invidious comparisons being drawn between rabbinic literature and Christianity's authoritative writings, with an eye toward establishing the latter's superiority (see, e.g., PHARISEES, an article severely criticized, in print, by Jewish scholarship).

Several twentieth-century Christian scholars, however, pre-eminently Moore and Herford (see *bibliog.*), themselves proficient in rabbinic texts in the original, drew attention to whole strata of rabbinic literature treating purely of moral and spiritual teachings in terms as lofty as those advanced by Jesus himself and suggested that even legalisms of the Talmud reflected high spirituality. Special focus was assigned to ethical maxims which documented beyond refutation that many of Jesus' teachings were similar if not identical to those of the rabbis. In particular, many parables of Jesus, especially when pared down from their extended allegorical form, were seen virtually to duplicate rabbinic parables.

These observations all served to establish Jesus' proximity to rabbinic Judaism and thus also to temper at least somewhat the one-sided portrayal of rabbinic authorities in the gospels. At the same time, certain form critics have suggested that many of the gospel controversies between Jesus and the rabbinic leaders—scribes and Pharisees—may actually reflect confrontations of the later church with Jewish authorities, rather than Jesus' own relations with them; some scholars have ventured that the Pauline denigration of the Law was attributed, in the gospels, to Jesus instead, and that Jesus himself had actually valued the Torah's teachings and significance. Alongside these skeptical views, the more conservative outlook has persisted.

Careful study reveals that Matthean and Lukan portrayals of scribes and Pharisees are explicable as merely extensions of the Markan usage and that a number of Markan passages that mention scribes and Pharisees are themselves secondary to the pericopes in which they are imbedded, at least some of these (particularly the appearance of "scribes" in 2:16 and 7:1, 5) inserted in the interest of a literary accommodation of Mark's sources to one another. The artificial distinction of scribes from Pharisees in Mark (and hence the Synoptic gospels as a whole) also essentially derives from Mark's dependence on sources for this material, two of these (one the pre-Markan passion narrative) using only "scribes" as the term for rabbinic leaders, and the third only "Pharisees"; Mark, unfamiliar with who scribes were, failed to detect the synonymy of the usage and presents us with

two groups rather than one. The appearances of the scribes and Pharisees in the Synoptic gospels, not even to mention John, are thus often the result of improvisation, artificial construction, and literary artistry by writers themselves largely unfamiliar with Jewish leaders in Jesus' own day. Hence, we cannot determine whether traditions of controversy between Jesus and rabbinic authorities are historically reliable, or whether, instead, pericopes regarding the controversies reflect in good measure tensions between Christians and Pharisees in the apostolic period, retrojected by the tradition to the time of Jesus' ministry. The latter view has much to commend it; Jesus' foremost enemies would most likely have been within the priestly establishment, and the grounds of such confrontation political. Controversy over the validity of the law of Moses as interpreted by rabbinic spokesmen reflects a later context.

Attention to rabbinic literature has also prompted reconsideration of the gospel accounts of Jesus' trial (see TRIAL OF JESUS[S]). Rabbinic literature is sharply at variance with gospel testimony in describing the nature of the sanhedrin and the procedures it followed in capital cases. Some scholars, fully accepting the rabbinic portrayal, have questioned whether the gospels' trial narratives can be adjudged reliable. While doubts must be entertained on this score, the discrepancies between the sources can be better resolved by viewing the sanhedrin mentioned in the gospels as a (perhaps *ad hoc*) political institution serving the interests of the procurator and headed by his appointee, the high priest (see Jos. Antiq. XVIII. ii.2; iv.3), and not at all related to the religious בית דין portrayed in rabbinic literature, whose procedures may themselves be something of an idealization. See SANHEDRIN; SANHEDRIN[S].

\***JUDAISM, HELLENISTIC.** In its general sense, the experience of the Jewish people dispersed in communities throughout the Greco-Roman world during the period beginning with Alexander the Great (reigned 336-323 B.C.) and extending several centuries into the Common Era; in a more restricted sense, the process by which Jews in these communities accepted and assimilated Hellenistic language, manners, and culture, thus fusing Hellenism with characteristic modes of Jewish thought and observance. While Hellenism made substantial inroads also into Palestine itself, under the Seleucids in particular, its penetration and influence were in some measure checked by the success of the Hasmonean revolt in the mid-second century B.C. (see MACCABEES, BOOKS OF) and the subsequent development of rabbinic Judaism. See JUDAISM, EARLY RABBINIC[S].

1. **The Diaspora. a. Development in Greco-Roman period.** The term διασπορά denotes the process by which Jews gradually came to be distributed in lands outside Palestine, primarily as a consequence of war and foreign domination (see DISPERSION). In the Hellenistic period, Greek rulers intermixed populations as a means of consolidating (cf. Jos. Antiq. XII.iii.4) and populating their territories. Over succeeding centuries, myriads of prisoners of war were transported from Palestine to the West—particularly after Jewish insurrections under VESPASIAN, TRAJAN, and HADRIAN. Frequently, they were sold as slaves on the world market (cf. Jos. War VI.viii.2; ix.3); but where settled together in sufficient numbers, they survived to form nuclei of later Jewish communities, especially in Italy, Spain, and Gaul (see Philo, *On the Embassy to Gaius* XXIII).

Meanwhile, developing commercial opportunities encouraged formation of Jewish colonies outside Palestine. Conquests by ALEXANDER widened channels of commerce, by sea routes in particular, thus rendering attractive the prospect of dwelling along Mediterranean coasts. The achievements of Greco-Roman art and civilization, promoting cultural interests, also contributed to emigration from Palestine to Diaspora lands, while enticing those visiting there to remain.

Once established, the Jewish presence in the Diaspora ultimately assumed enormous dimensions both in terms of geographic expanse and popula-

tion; a high rate of natural reproduction, plus effective proselytism, probably rendered Jewish population in the first-century Diaspora considerably in excess of that in the mother country.

**b. Ties to Palestine.** Strong ties nevertheless persisted between these outside communities and Jerusalem. Male Jews twenty years and older annually contributed a half-shekel (Exod. 30:11-16; cf. Matt. 17:24-27; Mishna Shekalim, entire) or two Greek drachmas for maintenance of the Jerusalem temple's sacrificial cult (Philo, *On the Embassy to Gaius* XXIII; *On Monarchy* 2.3; Jos. Antiq. XIV.vii.2; XVIII.ix.1); even Egyptian Jews preferred the Jerusalem cult to the temple of ONIAS at Leontopolis (Jos. Antiq. XII.ix.7; XIII.iii.1-3, x.4; XX.x.1; Jos. War I.i.1; VII.x.2-4; cf. Sib. Or. V, 501). Moreover, on the three pilgrimage festivals, huge crowds flocked to Jerusalem (see Jos. War VI.ix.3; *On Monarchy* 2.1). Even after the temple's destruction, the patriarchate in Palestine, hereditary among Hillel's descendants (see JUDAISM, EARLY RABBINIC[S] §2), served as a center of religious solidarity for Jews the world over. The temple tax, however, was now channeled by imperial authority for support of the temple of Jupiter Capitolinus (Jos. War VII.vi.6; Dio Cassius 66.7).

2. **Nature of Jewish communities. a. Organization.** Wherever Diaspora Jews lived together in sufficient numbers, they organized themselves into societies protective of their interests and ancestral religious customs. The precise mode of organization in the Greco-Roman world was not, however, everywhere identical. At Alexandria, they formed a single great semiautonomous political corporation, termed a πολιτεία, seemingly a small state within the state, with administrative, financial, and judicial functions (Ep. Aris. §310). In Rome, by contrast, Jews were more modestly organized into private societies safeguarding their religious interests, small associations of worshipers, including proselytes. These were each designated by the term συναγωγή, and served political as well as religious functions. The term πολιτεία is found in the case of Alexandria, and Berenice in Cyrenaica; the synagogue mode of organization seems characteristic of most other Jewish communities. Almost everywhere we find the managing committee of the community bearing the title ἄρχοντες. The appearance of the terms γερουσιάρχης or γερουσιάρχων on Italian tomb inscriptions implies the existence also of a γερούσιον ("assembly of elders") in many communities in Italy and most probably elsewhere as well. The presence of these terms indicates that organization of Jews in these Diaspora communities largely modeled itself on the communal constitution of the Greek cities.

**b. Status.** Almost everywhere in the Dispersion, the Jews were extended toleration by Greek and Roman authorities. Under the Ptolemies and the Seleucids, they enjoyed religious freedom and certain political privileges; the repressive policies of ANTIOCHUS IV Epiphanes accordingly emerge as exceptional. Roman legislation, also, permitted the Jews free exercise of their religion and other privileges, and forbade attempts at their suppression (Jos. Antiq. XIV.viii.5, x, xii.3-6; XVI.vi.2-7); Judaism enjoyed legal status as a

*religio licita* throughout the Roman Empire (Tert. Apol. 21; cf. *On the Embassy to Gaius* XXIII).

The Jews were specially excused from participation in the cult of the emperor, an exemption seriously menaced only under Caligula (Jos. Antiq. XIX.v.2-3). Other exceptional privileges included permission to administer their own funds (including the collection and export of dues to the Jerusalem temple; cf. *On the Embassy to Gaius* XXIII, XI; Jos. Antiq. XVI.vi.2-7), and to settle their own legal affairs in civil suits involving one Jew against another; even Jews possessing Roman citizenship preferred submission of such disputes to their own tribunal (cf. Jos. Antiq. XIV.x.17). Certain correctional authority may also have been conceded Jewish communal leaders (e.g., II Cor. 11:24; cf. Acts 18:12-16).

Deference to Jewish sabbath observance occasioned a wide range of other privileges including exemption from military service (Jos. Antiq. XIII.viii.4; XIV.x.11-14, 16, 18-19) and from court appearances on the sabbath (Jos. Antiq. XVI.vi.2, 4); distributions of money or grain falling on the sabbath day were deferred, in the case of Jewish recipients, till the morrow (*On the Embassy to Gaius* XXII). Allotments of pagan oil, use of which was forbidden Jews by their law, were rendered to Jews in monetary equivalent (Jos. Antiq. XII.iii.1).

It remains unclear, however, whether the Jews possessed the civic right in the Greek cities—i.e., municipal rights of citizens to participate in the city's public life, election of magistrates, determination of municipal affairs, and the like. The affirmative view relies primarily on the testimony of Josephus, who repeatedly asserts that Jews and Greeks possessed equal rights (ἰσοτιμία, ἰσονομία, ἰσοπολιτεία): Alexander rewarded Jews for assistance in conquering Egypt, placing them on equal footing with the Macedonians when he founded Alexandria (Jos. Apion ii.4; cf. Jos. Antiq. XIX.v.2) and allowing them to refer to themselves as Macedonians (Jos. War II.xviii.7; see ALEXANDER)—while the Egyptian masses were consigned to an inferior status. These equal political rights were confirmed to them by Caesar (here, most likely Augustus) who set up a brass pillar in Alexandria declaring the Jews Alexandrian citizens (Jos. Antiq. XIV.x.1; Jos. Apion ii.4). A similar situation prevailed with regard to Antioch and certain other cities (Jos. War VII.iii.3, v.2; Jos. Antiq. XII.iii.1; cf. XVI.vi.1; Jos. Apion ii.4).

An opposing viewpoint holds that, since the acquisition of citizenship carried with it special status and advantages, including exemption from certain taxes, traditions naturally arose in Jewish circles alleging that Jews had received equivalent rights. Such allegations become especially misleading in the hands of so apologetic a writer as Josephus, who seeks to persuade Gentiles that their own forebears had held the Jews in highest affection and esteem. Since Josephus generally copied or interpreted his sources uncritically, we cannot assess the extent to which his testimony here is reliable. Moreover, Josephus was expert in neither Greek law nor correct usage of Greek legal terms; Philo himself employed such terms loosely, often

straying from their precise juridical significance. While Jews did enjoy significant privileges in deference to their ancestral religious customs, Josephus has perhaps misconstrued these rights as the actual rights of citizenship. It is difficult to conceive of Greek cities bestowing citizen rights on people who refused to acknowledge the city's official cult; most likely, Jews were eligible to become full citizens only if, renouncing their ancestral religion, they worshiped the gods of the πόλις.

**3. Essentials of religious outlook.** The Hellenistic world was hospitable to a diversity of religious expression; from the Greek standpoint, Judaism was just another cult which had been transplanted, accepted, and absorbed into the Hellenistic milieu. The essentials of Judaism as perceived among Hellenistic Jewish writers were obedience to the law of Moses (see, e.g., IV Macc. 5:19-26; 9:2; Jos. Apion ii.39; Philo, *Life of Moses* 2.3, 5; III Macc. 2:31-33; Sib. Or. III, 573-85, 762-71) and faithful adherence to their ancestral customs. Specially stressed were the injunctions toward monotheism and imageless worship, moral ideals and precepts for ethical conduct, sabbath observance, circumcision, and avoidance of swine meat. Their belief in a sole, universal, just, omnipotent Creator of the universe was inevitably contrasted by Diaspora Jews with what they perceived to be the crass pagan polytheism surrounding them. Their resultant pride in Jewish adherence often reflected itself in ridicule of pagan polytheism and worship of images (Wisd. Sol. 13:10-19; 15:7-17; Jos. Apion ii.34-35) and attempts to account for the origins of such paganistic outlook (Wisd. Sol. 13:1-9; 14:12-21; Jos. Apion ii.36).

At the same time, the Jews could hardly escape the influence of the Hellenistic milieu, in particular the Greek language. Around 250 B.C., Greek-speaking Jews were numerous enough, and sufficiently estranged from knowledge of Hebrew, that they found it necessary to render the five books of Moses into Greek (see SEPTUAGINT; SEPTUAGINT[S]); in due course the remainder of Hebrew Scripture was translated. Greek was the language of the synagogue service, and it was the Greek Bible which was used in the synagogue (see Just. Apol. i.31; Just. Dial. 72; Tert. Apol. 18).

While the Torah, or Pentateuch, embodies narrative history plus teachings, customs and observances, as well as fundamentally legal material, Greco-Jewish writings most commonly render תורה simply as νόμος (see TORAH[S]). Just as pagan Greeks had compiled law codes of their own, and attempted to justify their philosophical validity, so also Hellenistic Jews presented Moses as a lawgiver and came to focus on Judaism as though it were both in essence and as a totality law and nothing but law. The preservation of Jewish-Hellenistic literature by the church has perpetuated this misidentification of Judaism with Law, so that even rabbinic Judaism, which never availed itself of this identification, is still commonly so misconstrued. See JUDAISM, EARLY RABBINIC[S].

Similarly, through the prism of allegorical interpretation, certain Jewish-Hellenistic writers dissolved the literal meaning of the Pentateuch by investing, indeed saturating, Scripture with mean-

ings suggested by Greek language, habits, and philosophy, by Greek views on the nature of man, of sin, of righteousness, faith, and the like (see GREEK RELIGION AND PHILOSOPHY). Often they accounted for the resultant similarities between Greek philosophy, on the one hand, and the Law of Moses, on the other, by the suggestion that Greek philosophers had themselves learned and then usurped these eternal universal truths of reality from their Jewish predecessors, the patriarchs and Moses. By thus appropriating and assimilating Greek notions as their own, and then claiming prior possession of these ideas by their own forebears, Hellenistic Jews managed to maintain loyalty to their Scripture and ancestral practices, and yet also to feel at ease with Greek modes of thought.

The Greeks conceived of man's spiritual soul as the captive of the material, and hence evil, body. A leitmotiv of Greek religion was the soul's escape from bondage to bodily passions and sensual desires. In the writings of Philo (see PHILO JUDEUS), Judaism, replete with its ritual and regimen—especially sabbath observance, circumcision, and dietary restrictions—becomes the symbolic vehicle through which the individual's soul or mind can prevail over the lusts and passions of the body and attain to spiritual freedom and immortality. The specific laws, thus rendered allegorically, emerge reshaped as reflective of universal spiritual truths; the external requirements of Jewish practice remain, but their spiritual utility is thus reappraised.

It cannot be determined to what extent Jews in the Dispersion actually continued to abide by the Law. Abroad, subject as they were to an alien culture and religious environment, the Jews found their fidelity to ancestral faith and practices severely tested. The eagerness with which they rendered the Hebrew Scriptures into Greek clearly evinces determination by many to preserve the Judaism of old even while dressing it in Hellenistic garb. Problematic, however, is the extent to which the Law could have been followed. Many of the observances enjoined in the Pentateuch focused on the temple in Jerusalem. But most Jews dwelling in the Dispersion, especially those in the more remote regions, could not undertake expensive and difficult pilgrimages, and, while they may have considered it important to contribute the temple tax, yet the many individual prescriptions dealing with the sacrificial cult probably could elicit only sentimental attachment. While Philo applauds those who, through recourse to allegorical interpretation, have penetrated to the higher philosophical or ethical sense of the commandments, he yet laments the consequent neglect by some—we cannot gauge how numerous they were—of the literal observance of scriptural injunctions, for all these, even the ceremonial and dietary, are based upon reason and nature (Philo, *De Migratione Abraham* 89 ff.). Even cases of more substantive defection, however, probably seldom resulted in an actual break from the organized community—especially where there was no guarantee that the defector could attain Greek citizenship; the Jewish community had been accorded so many special privileges that this alone

may have impelled Jews to maintain their communal affiliation if not also their religious conformity.

At the same time, the religious life of the majority was probably regulated by adherence to the Law of Moses insofar as was practicable. Jews had the privilege of erecting, within those quarters where they lived, association halls for purposes of reading the Law, common worship and education (Philo, *On the Special Laws* ii.62), festive celebration, or simple assembly. Native synagogues seem to have functioned actively as centers of Jewish education and expression in the Dispersion. Larger cities had more than one, and Alexandria a great many (*On the Embassy to Gaius* XX); Acts portrays Paul encountering synagogues throughout his journeys.

**4. Relations with Gentiles.** Also sustaining Judaism in the Dispersion was extensive proselytism. Even aside from missionary activity, Jews—by their very presence and contacts, and their synagogues open to all—commanded favorable notice among many Gentiles. Particularly appealing was Judaism's emphasis on monotheism, the original oneness of the human race, ethical conduct, judgment by God, the promise of eternal salvation, plus Judaism's opposition to polytheism, idolatry, and wickedness. To some, Judaism appeared a philosophy, and synagogue worship as an assembly of teachers and disciples of a foreign philosophical school; to others, Judaism resembled the Oriental mystery cults offering eternal life. Especially alluring were fidelity to sabbath observance and lights, fasts, and dietary prohibitions.

Circumcision, however, proved a deterrent, and accounts for the fact that most proselytes were women. Besides those formally received into Judaism, many Gentiles attached themselves in a loose form as "God-fearing" (σεβόμενοι, φοβούμενοι τὸν θεόν), and constituted a kind of appendage to the Jewish community. Undoubtedly, the extremely rapid Hellenization of Christianity is in large measure traceable to inroads made by Jewish proselytism; and, very likely, many who were deterred from Judaism mainly because of required circumcision were all the more receptive to the preaching of Gentile Christianity.

At the same time, much hostile sentiment accrued against Jews. Though Hellenism was hospitable toward innumerable cults and their gods, the Jews were unable to reciprocate and denied recognition and tolerance to the Greek and Roman pantheon. Their religious particularism was frequently represented as atheism; their social particularism was often misconstrued, sometimes deliberately, as a hatred of mankind. The special privileges and exemptions allowed Jews by Roman authorities aroused envy and ill will; so also did the continuous flow of Jewish funds toward Jerusalem. Proselytes to Judaism cut themselves adrift from family and friends, intensifying resentment among those remaining Gentiles.

**5. Jewish-Hellenistic literature.** Such tension reflected itself on the literary plane. Manetho, Cheron, Lysimachus, and Apion, among others, produced severely negative and distorted assessments of Judaism and its origins; these are cited and

refuted by Josephus (Apion i.26 ff.; ii.1 ff.). The Jews were also the butt of Roman satirists, such as Horace, Persius, Martial, and Juvenal, and were maligned by the historian Tacitus as well. Much Jewish-Hellenistic literature thus serves apologetic ends—the defense of Judaism through assertion of its antiquity and glorification of its credentials and accomplishments.

Aside from the LXX, this literature falls mainly into three major classifications: history, poetry, and philosophy. The historical writings include the works of JOSEPHUS, and Philo's *Against Flaccus* and *On the Embassy to Gaius* (see PHILO JUDEUS). Earlier, JASON of Cyrene produced a history of the Maccabean wars, of which II Maccabees is basically a condensation (see MACCABEES, BOOKS OF). Alexander Polyhistor, Josephus, Clement of Alexandria, and Eusebius preserve for us fragments from a number of others, including Demetrius, Eupolemus, Artapanus, and Cleodemus. III Maccabees and the Letter of ARISTEAS, although fictional, are historical in form.

Christian writers, especially Eusebius, preserve reference to works of poetry and drama: an epic on Jerusalem by a poet named Philo, a long poem on Shechem by Theodotus, a work on the Exodus by the dramatist Ezekiel. In the SIBYLLINE ORACLES, Jewish poets attributed to ancient, oracle-giving sibyls verses teaching the truths of Judaism and directed at reformation of paganism.

The WISDOM OF SOLOMON, an exhortation to seek wisdom, is reminiscent of Palestinian wisdom literature (see WISDOM; WISDOM IN THE OT[S]), but reflects as well the influence of Greek philosophy, especially Stoicism. IV Maccabees is also a Stoicizing work, extolling the supremacy of devout reason over the passions (see MACCABEES, BOOKS OF). A work by ARISTOBULUS represents an early attempt (mid-second century B.C.) to expound the law of Moses through ALLEGORY. Alexandrian Jewish philosophy, along with allegorical interpretation, reached its culmination with Philo of Alexandria, whose works have been preserved to us in great numbers.

**6. In relation to Judaism in Palestine.** Broad contrasts emerge between Hellenistic Judaism and the two fundamental modes of Judaism contemporaneous with it in Palestine—Pentateuchal Judaism, functioning under the postexilic theocracy, succeeded by emerging Pharisaic or early rabbinic Judaism.

For Hellenistic Jews, the Pentateuch was a Greek work of law, revealing a God of refined philosophic reason, and suffused with philosophic concerns: Logos (see WORD, THE), universals and particulars, causality, chance and fate, the individual's plight, resurrection, immortality, and the like. Its specific laws enabled individual man to triumph over his passions, ensuring his soul's escape from bondage and attainment of life eternal in the realm of the incorporeal. Such motifs, however, are foreign to Pentateuchal Judaism functioning in Palestine. At face value, the Pentateuch actually addresses itself not to sophisticated Greek Jews in the vibrant Greek cities, nor, to be sure, to any urban environment at all, but rather to a seminomadic wilderness community ultimately to adopt agricultural pursuits

in Canaan. Here an anthropomorphic and anthropopathic immanent God (see GOD, OT VIEW OF §C4) intervenes in nature, is personally in touch with his people, and even addresses Moses face to face. Focus rests on God's COVENANT with Israel as a people, not with the plight of the individual and his soul's quest for resurrection and immortality. Only when refracted through the lens of Hellenistic allegory does the God of the Pentateuch become transcendent and purest reason, totally spiritual and free of passions; only then does Moses emerge as philosopher, statesman, and lawgiver par excellence, rather than as one plagued by insecurity and imperfection, and the patriarchs emerge as paradigms of the laws of nature.

So also is Hellenistic Judaism noticeably incongruent with Pharisaism. The concept of unwritten law to Philo signified the law of nature, and in no sense was this equivalent to the rabbinic פה תורה שבקל, the category of traditional HALACHAH functioning parallel to the written Law. While the Pharisees for years conveyed their teachings only orally, and conceived themselves as a scholar class in an unbroken chain of authorities extending back to Moses himself, Jewish-Hellenistic spokesmen communicated in writing, as individuals, many citing as their motivation only personal inclination and disposition. Rabbinic Judaism is clearly at variance with many Hellenistic conceptions, as, e.g., regarding evil and fate and the nature of God and man; the rabbinic conception of Torah is, moreover, considerably broader than the Greek designation νόμος suggests (see above §3; see also TORAH [S]; JUDAISM, EARLY RABBINIC[S]).

The question naturally arises whether Hellenistic Judaism and the modes of Judaism in Palestine experienced contact with each other. Clearly, it was the deep penetration of Hellenistic influence into the heart of Palestine itself under the Seleucids which set Jerusalem society astir, ultimately provoking the HASMONEAN revolt. Archaeological finds and other substantive evidence indicate that despite the rebellion's political success, Greek influence, albeit diminished, persisted in Palestine in subsequent centuries, becoming especially noticeable again during the reigns of Herod the Great and Archelaus. Hundreds of Greek loan words found in tannaitic sources also attest to assimilation of some overtones of Greek culture in Palestine during the early rabbinic period. Yet this Hellenistic presence, while seemingly extensive, must be judged as essentially superficial.

Far-reaching in import is the opposite problem: Pharisaism's incursion into the Diaspora. We remain ill informed concerning this penetration—as to precisely when and where it commenced and what form it took. Paul of Tarsus, a native of the Diaspora (Acts 21:39; 22:3; cf. 9:11, 30; 11:25), informs us he was Pharisaic in upbringing (Phil. 3:5; cf. Gal. 1:14). The author of Acts links Paul's Pharisaic upbringing with Gamaliel I in Jerusalem (22:3; cf. 26:4-5). Paul's genuine epistles, however, in no way confirm this portrayal and, if read independently of Acts, could be construed as indicating that Paul was never in Jerusalem during his upbringing (Gal. 1:13-14, 22; cf. PAUL §A2a-c). If we rely on the epistles, we may infer

that whatever Paul himself means by his Pharisaic background, he received it in the Diaspora. The content or nature of Pharisaism as known to the apostle Paul cannot be gauged from what we know of Pharisaism in Palestine, because, on the one hand, it is difficult to reconstruct the nature of Pharisaism in Palestine before A.D. 70, and, on the other hand, we have no assurance that Pharisaism in the Diaspora in the time of Paul was identical with its counterpart in Palestine. Even if we presumed that Pharisaism had spread into Asia Minor as early as the period of Paul's youth, we could not assess precisely how it interacted with and was affected by the Hellenistic milieu which determined so much of Paul's own thinking. We are informed that, in later times, rabbinic emissaries traveled from Palestine into the Diaspora, but we are uncertain how early this practice began and how it affected the spread of Pharisaism. Clearly our understanding of the nature of Diaspora synagogues, of the dynamics of Jewish proselytism, and of many other dimensions of the Jewish experience in the Dispersion, hinges very basically on how this general problem is to be resolved.

combined with historical fragments, theological insight, and editorial opinion. Though efforts to unravel the threads of this composition have been fruitful, many questions yet remain to be answered.

1. Introduction
  2. Narratives of the major judges
  3. The minor judges
  4. Appendixes
  5. Composition
- Bibliography

1. **Introduction.** The book can be divided into four sections: (1) a prelude (1:1-2:5) which describes the extent of Israelite occupation of the land; (2) an introduction (2:6-3:6) to the main body of the book; (3) a collection of narratives dealing with individual judges (3:7-16:31); and (4) two appendixes recounting the origin of the tribal sanctuary of Dan (17-18) and the deplorable behavior of the Benjaminites of Gibeah (19-21).

**a. Prelude.** Though 1:1-2:5 contains passages which have parallels in the book of Joshua (1:12-15 with Josh. 15:13-19; 1:21 with Josh. 15:63; 1:29 with Josh. 16:10; 1:27-28 with Josh. 17:11-13; and 1:34-35 with Josh. 19:47), in its present position this section appears to stand in sharp contrast with the description in Joshua of a sweeping conquest of the land. According to 1:1-2:5 there were many areas that were not conquered (see JOSHUA, BOOK OF[S] §2). Some scholars now hold that this section once functioned as the conclusion of the book of Joshua when that book served as the final portion of the HEXATEUCH.

The Hexateuch was of short duration; once Joshua was removed, the resultant PENTATEUCH concluded with the account of the death of Moses. In order that the book of Joshua might also end with the death of its hero, its conclusion was placed at the beginning of the book of Judges, thus creating the impression of a contrasting view of the Conquest. Support for this view is the possibility that the source strata of the Pentateuch (see DOCUMENTS) may continue through Joshua and Judg. 2:5. (See §4b below. For another perspective, see JOSHUA, BOOK OF[S] §1; DEUTERONOMIC HISTORY, THE[S] §§1-2; YAHWIST[S] §3; ELOHIST[S] §4b.) Following this shift in position, the parallel passages noted above were then interpolated from Judg. 1 into the book of Joshua, most likely in the postexilic period (Fohrer). Earlier, 2:6-9 served as an introduction of the book of Judges, providing a link to Josh. 23:16.

**b. Theological interpretations.** The remainder of the introductory section (2:11-3:6) contains two theological interpretations of history. The first (2:11-19) describes the apostasy of the people, their subsequent punishment, and their deliverance. Upon the death of the deliverer, however, the pattern of apostasy, punishment, and deliverance is repeated. This pattern differs from the theological framework of the hero narratives (e.g., 3:12-15a, 30; 4:1a, 2, 3a, 23) in that the latter pattern contains an additional element of repentance. The interpretation in 2:11-19 is more recent and depicts the deliverance as an undeserved act of Yahweh's mercy.

\***JUDGES, BOOK OF.** A remarkable collection of folklore, tribal traditions, and hero tales com-

The second of the two theological interpretations (2:20-3:6) understood the series of crises which Israel experienced as a period of probation which tested Israel's proficiency in warfare and her will to obey Yahweh's commandments.

**2. Narratives of the major judges.** The traditions dealing with the major judges (3:7-16:31) originated as single stories, each circulating individually before being combined into larger narratives. The major judges were associated with particular tribes in the early cycles. Later their heroic deeds were made to refer to Israel as a whole (probably during the time of the united monarchy).

It has recently been proposed (Richter) that the pre-Deuteronomiac collection of hero tales consisted of 3:12-9:55 and first existed in the form of a northern Israelite deliverer book (*Retterbuch*). The geographical area encompassed by this collection extended from Benjamin in the S (3:15) through Manasseh and Ephraim in the central portion (6:11; 7:23-24; 8:2) to Naphtali, Asher, and Zebulun in the N (4:10; 7:23). Issachar and the Israelite tribes of Transjordan play no role in this book, or at least there is no example of a deliverer from these groups. According to this view the deliverer book was compiled at a time when Gilead no longer formed a part of Israel—probably during the second half of the ninth century B.C.

The compiler of the deliverer book edited his traditions where it seemed advisable. He combined the prose and poetic versions of the Deborah-Barak tradition and reworked the Gideon material, identifying the latter with Jerubbaal, the father of Abimelech. He arranged the material in such a way that the refusal of the kingdom by Gideon in 8:22-23 contrasts sharply with the Abimelech tradition. Thus Abimelech exemplified the worst that one might fear in the monarchy, and this is further emphasized by Jotham's fable (9:5b, 7-21). The intent of the deliverer book was to portray the strength of the war of Yahweh and the deliverers whom Yahweh called forth; its thrust was directed against the monarchy in which the war of Yahweh could no longer be implemented spontaneously (see WAR, IDEAS OF §1; WAR, HOLY[S]). Placing the prophet Deborah on a par with the deliverer Barak is thought to indicate that the editor of the deliverer book was someone within the prophetic circles of the North.

Whether or not the pre-Deuteronomiac collection of hero tales can be limited to 3:12-9:55 remains problematic. Another proposal based upon I Sam. 12:11 suggests that the earliest form of the pre-Deuteronomiac deliverer book consisted of the traditions of Jerubbaal (Gideon), Bedan (RSV "Barak"), Jephthah, and Samuel. In a secondary expansion, Jerubbaal and Jephthah were combined with the narratives of other deliverers. The tradition of Bedan was set aside and lost completely; that of Samuel, which was closely linked to the Saul tradition, was removed from the collection (Fohrer).

**a. Othniel.** The tradition of Othniel (3:7-11) remains something of an enigma. Though this narrative is possibly derived from an early tradition, no earlier form has thus far been identified. Given its strong Deuteronomiac influence and schematic

nature, the narrative in its present form is thought to have originated no earlier than the Exile.

**b. Ehud.** The tradition in its earliest form consisted of 3:15b-26. Its expansion through vs. 27-29 was intended to associate all Israel with the hero's feat. The so-called "double" entrance of Ehud in 3:19-20 has caused some to suggest the possibility that two sources are combined in this narrative.

**c. Shamgar ben Anath** is unique in that no information is provided about his call, tenure in office, place of burial, or tribal connection. The name Shamgar is possibly Hurrian (occurring in certain Nuzi texts) while ben Anath, "son of Anath," is Semitic. On the basis of the MARI texts, where there is evidence that worshipers of the warrior-goddess Anath often served in military capacities, it has been suggested that Shamgar ben Anath was a mercenary (Craigie). Perhaps Anath came to be associated with mercenaries in general as the expression "ben Anath" might indicate. The reference to Shamgar in Judg. 3:31 seems to be secondary, and the name may have been suggested by the brief reference in 5:6.

**d. Deborah and Barak.** The earliest tradition concerning Deborah and Barak consists of Judg. 4:4a, 6-9a, 9c-10, 12-16. Vss. 4b-5 which mention Deborah's role as arbiter appear to be an editorial expansion likely based upon the memory of a sacred oak associated with another Deborah, Rebekah's nurse in Gen. 35:8 (Gray). The tradition of Jael's murder of Sisera was originally an independent narrative. It has been proposed that two traditions have been fused in the prose account of ch. 4, as might be reflected in the two locations of the muster—one at Mount Tabor (4:6, 12, 14) and the other at Kadesh (4:9-10). The tradition of Jabin, whose defeat has already been attributed to Joshua (Josh. 11:1-11), has been secondarily joined to that of Sisera.

The Song of Deborah (ch. 5) is the most authentic source we have dealing with the time of the Judges. A victory song composed soon after the battle it commemorates, it has been variously described as a thanksgiving psalm (Bentzen), a cultic drama and liturgy for covenant renewal within the AMPHICTYONY (Weiser), or (omitting vs. 1-5 and 31) a propaganda song (Richter). Ch. 5 is primarily devoted to extolling the victory of Yahweh, while ch. 4 provides a broader historical account. The catalog of tribes in 5:14-18 has been thought to include the potential participants in this engagement (Smend). Those tribes that did not respond were censured or derided for their disloyalty. In view of the celebratory nature of the Song of Deborah, 5:14-18 has also been taken simply as a tribal roll call intended to maintain solidarity among members of the amphictyony, and thus, with the possible exception of vs. 18, is not directly related to the military effort of Barak and Deborah (Weiser). According to this view, only vs. 19-30 in ch. 5 are relevant to the military encounter. Based upon 4:6, 10, and possibly 5:18, only the tribes of Zebulun and Naphtali actually participated in the campaign; and even their participation is secondary to the main purpose of the Song—the praise of Yahweh's victory.

**e. Gideon.** The most complicated use of source materials is found in the account of Gideon (chs. 6-8) and the Abimelech episode (ch. 9). Various traditions and fragments were deftly combined around the theme of apostasy. The tradition of Gideon's call (6:11b-17) has been combined with that of the sanctuary of Ophrah (6:11a, 19-24) and further enhanced by a legend of an unknown sanctuary that was later identified with Ophrah (6:25-32) (Haag). It is in this latter passage that Jerubbaal first appears. Vs. 32 provides an ETIOLOGY for Jerubbaal and the name change. Haag has seriously questioned any connection between Gideon and Ophrah. It is more likely, however, that Jerubbaal, who is named only four times in chs. 6-8 (6:32; 7:1; 8:29, 35), originally belonged to the Shechem tradition of ch. 9. Gideon was not connected with Shechem. The conclusion of the vocation narrative (6:11b-17) is found in 6:36-40.

Gideon's heroic effort against the Midianites as preserved by his clan Abiezer is described in 7:11b, 13-21 (expanded by vss. 9-11a, 12, 22). The war cries of 7:18 and 7:20 are thought to represent two variant traditions. In 7:24-8:3 we may have two versions of an awkward episode that occurred between Gideon and Ephraim. The Abiezer version (7:24-25) of the slaying of two Midianite chiefs contains etiologies of "Raven Rock" (rock of Oreb) and "Wolf Winepress" (winepress of Zeeb). The Ephraimite version (8:1-3) was preserved because of the compliment which Gideon paid Ephraim in 8:2.

The memory of Gideon's raid into Transjordan is preserved in 8:5-9, 13-21ab, 28a (expanded by vss. 4 and 10-12). The campaign against the chiefs Zebah and Zalmunna represents an original element in the tradition as over against the etiologies in 7:25.

Though Gideon's connection with Ophrah has been questioned, Deuteronomistic judgment on his activity (8:27b) would seem to attest to the genuineness of this tradition. The account of Gideon's refusal of the kingship, however, is problematic. Earlier critics saw his refusal as indicative of northern resentment of the monarchy as voiced within prophetic circles during the eighth century B.C. Such resentment was shared by the Deuteronomistic theologians. Gideon's refusal of the kingship has also suggested two other possibilities: (1) he may have accepted the power without the title; or (2) his emphatic refusal may as a matter of principle have preceded his acceptance of the kingship (cf. Gen. 23:11 ff. and II Sam. 24:21 ff.) (Davies). Our text (8:22-23) may not contain the entire tradition of this incident, but only its beginning which suited the purpose of the pre-Deuteronomistic compiler.

Despite Gideon's fashioning an ephod, he died "in a good old age" and was buried with honor. No doubt, this was due to his stature and success as a deliverer. It has been suggested that the account of his making an ephod was an etiological legend explaining the tradition of an ephod at Ophrah. Others have noted, however, that given Gideon's position of influence, it is more likely that the historicity of this account lay with his claim of access to the oracle of God which the ephod in

part represented (I Sam. 14:3; 23:6, 9; 30:7) (Gray). 8:31 is a Deuteronomistic insertion which provides a literary link to ch. 9.

**f. The Abimelech episode,** which is made up of several originally independent stories (9:1-5a, 6, 23-24; 9:26-40; 9:41-45; 9:46-49; 9:50-54), was preserved because of the identity of Jerubbaal with Gideon. A pre-Deuteronomistic summary is offered in 9:55-57a. The fable of Jotham has been interwoven through the first portion of the cycle (9:5b, 7-21). It has been suggested that the earliest version may have consisted of 9:5b, 7, 16a, 19b-21. It could have been cited in a shorter form originally, or suggested by a passage like vs. 20.

Abimelech's quest for power provided the compiler an opportunity to assail the concept of the hereditary monarchy. In addition, it also offered the Deuteronomist an opportunity to portray the retribution incurred by Gideon through his making of an ephod at Ophrah (8:27).

**g. Jephthah.** The position of the Jephthah cycle (10:6-12:7) in the midst of the notices of five minor judges (10:1-5; 12:8-15) may be related to the nature of his selection by the elders of Gilead. It has been suggested that Jephthah's appointment is that of a minor judge, since only later (11:29) is the charismatic nature of his position mentioned (Gray); see also §3 below. The lengthy and detailed introduction (10:6-16) distinguishes this cycle from the earlier narratives.

Jephthah's campaign against the Ammonites (10:17-11:29, 32b-33a) appears to combine two separate traditions: (1) Jephthah's appointment as a minor judge or ruler at the sanctuary of Mizpah, the military threat by the Ammonites, and Yahweh's victory over the Ammonites (11:1-11, 29, 32b, 33aβ); and (2) a more recent report involving a dispute over Moabite land (10:17; 11:12-28, 32a, 33aα) which, even though edited to agree with the above, is strongly reminiscent of Num. 20:14-21; 21:13, 21-24a.

Combined also within this narrative complex is the story of Jephthah's vow (11:30-31, 34-40). Some have seen the vow as an act of desperation following an unsuccessful recruiting effort (11:29a). The prototype of the story may be rooted in mythology rather than history. What may originally have been a rite connected with the annual mourning for the death of a deity is explained etiologically by this tradition (Burney).

An episode involving the Ephraimites (12:1-6) recalls an earlier incident connected with Gideon (8:1-3). In the case of Jephthah, however, the threat to "burn your house over you with fire" was far more serious. The Ephraimites apparently were opposed to the independent military action of Jephthah's people, whom they called "fugitives of Ephraim." Given the overwhelming victory of the Gileadites, this would appear to be a Transjordan tradition that was likely associated with the sanctuary at Mizpah. The report of Jephthah's death is in a form (12:7) similar to those of the five minor judges (10:2b, 5; 12:10, 12, 15).

**h. Samson.** Though the Samson cycle (13-16) was not a part of the pre-Deuteronomistic deliverer book, many of the stories contained therein are of great antiquity. Two separate collections (13-15

and 16) are suggested by the presence of two separate summary statements in 15:20 and 16:31b.

Chs. 14 and 15 combine folkloristic episodes, riddles (*see* RIDDLE[S]), and anecdotes into a single narrative with an over-all theme which reveals the secret role of Yahweh (14:4) in the deliverance of his people (15:8) (Wharton). Indicative of this scheme are feats of strength originally credited to Samson's prowess which are now attributed to the spirit of Yahweh (14:6, 19; 15:14), and the prayer in 15:18 in which Samson acknowledges his dependence upon Yahweh. Another indication of the editorial art can be seen in the interpolation of Samson's parents into this narrative (14:5, 6, 9, 16) in order to relate chs. 14 and 15 more closely to ch. 13 and the role of Yahweh in all that transpires.

Ch. 13 may contain the original introduction to chs. 14 and 15, plus later insertions that have been made to further the theological interests of the editor (13:4-5, 7b, 14a, 16b-18, 19b, 21, 24b-25) (Eissfeldt). The disruptive effect of vss. 4-5 and 7b upon the relatively uncomplicated narrative of ch. 13 was necessitated by the introduction of the Nazirite theme of uncut hair, which is crucial to the dramatic unfolding of 16:4 ff. (Wharton). Vss. 4, 5, and 7b were likely added by the same hand that combined chs. 13-15 with 16.

The narrative in these chapters is fully resolved with the two etiologies of Ramath-lehi (jawbone hill) and En-hakkore (the spring of him who called) in which Samson confesses complete dependence upon Yahweh for his strength in performing his feats. The summary formula in 15:20 clearly concludes this literary unit.

It has been proposed that the rustic episode in 16:1-3 was used by the editor as a culmination of Samson's prowess when he was victorious over the entire city of Gaza. This episode served to offset the impact of betrayal and humiliation (16:4 ff.) which Samson subsequently experienced at Gaza prior to his final act of vengeance (Wharton).

The narrative of 16:4 ff. may have originally attributed Samson's strength simply to his uncut hair without any mention of his role as a Nazirite (16:13, 19). If this were the case, his strength would have returned as his hair grew (16:22). Once the theological scheme was superimposed, however, Samson fell prey to the Philistines because "Yahweh had left him." In his final act of vengeance, Samson regained his strength only after praying to Yahweh; no mention is made of his hair. The summary formula in 16:31b agrees with its counterpart in 15:20 concerning a period of twenty years.

The abbreviated introduction in 13:1 is closely modeled after 6:1, and was probably added along with 15:20 when chs. 13-15 were incorporated into the first Deuteronomistic revision of the deliverer book (*see* §5 below). Ch. 16 was included through a subsequent revision. Even within the theological scheme which has been superimposed upon these literary pieces, it is clear that Samson did not function as a judge or deliverer. He neither organized nor led any military campaign against a foreign enemy or oppressor. Yet, the end result

is the reaffirmation of the presence of Yahweh (Wharton).

3. **The minor judges.** A second group, consisting of five leaders, is mentioned in 10:1-5 and 12:8-15. The lack of information about their activities stands in sharp contrast with the often lengthy accounts given concerning the deliverers. This points up two basic scholarly understandings of the function of the שפוט: (1) a judicial and administrative official (judge), and (2) the deliverer or military hero. שפוט as "judge" is thought to include such functions of civil administration as governing or ruling and dispensing justice, excluding military activities (Richter, Smend). The term שפוט seems originally to have applied primarily to the five minor judges, each of whom is specifically said to have "judged Israel." The minor judges likely gave their title to the deliverers (Smend) through a Deuteronomistic redactor who no longer distinguished between the two.

The only heroic figure who likely "judged" in addition to his role as deliverer was Jephthah. The concluding note on his tenure as judge and his death (12:7) corresponds closely with the notices of the other five. It is probably no coincidence that the minor judges are placed adjacent to Jephthah. This note on his role as a minor judge may have prompted a later redactor to include at that point the notices of the other minor judges, since Jephthah's playing of both roles possibly obscured any significant distinction between the two types, and since some effort may have been made to achieve a total of twelve leaders (even though the present text does not reflect this).

The record of Jephthah's exploits as deliverer is recounted at length. When the account shifts to his role as judge (12:7), there is little to be reported (Smend). Even the number of years assigned (six) corresponds with the random numbers attributed to the five minor judges, whereas the deliverers are assigned multiples of forty years. All this would seem to suggest that the role of minor judge represented a regular office that was well documented. Beyond this, opinion is currently divided. One approach is to see this list as an old document of genuine historical value. Accordingly, these figures in sequence occupied a permanent office in the Israelite tribal league (Noth).

A second approach considers the design of this list to be influenced in part by records of the early monarchical period (I Sam. 13:1 and I Kings 11:41-42). The time sequence is seen as secondary; these minor judges may have ruled simultaneously. Their primary association with towns or cities is thought to indicate the transition from the tribal state to district and city rule. Within this view, Israel is understood as a concept of political geography and not as an amphictyony of twelve tribes (Richter).

4. **Appendixes. a. Chs. 17 and 18.** Variations within the text seem to indicate a lengthy period of transmission. An earlier hypothesis of parallel sources for this section (Eissfeldt) has been questioned by those who contend for its essential literary unity (Noth). The adherents of both positions, however, acknowledge the presence of changes made by later hands.

This narrative is comprised primarily of three themes: (1) the origin of a cultic object in the tribal sanctuary at Dan (17:1 ff.); (2) the role of a Levite from Bethlehem (17:7 ff.); and (3) exploration and conquest by the tribe of Dan (18:1b-29). Though this remarkable composition ostensibly describes the founding of the Danite tribal sanctuary, it does so in a way that subtly disparages each of the three themes it embodies. The cultic object made from silver stolen by Micah is in turn stolen from Micah's private shrine. A Levite who was hired by Micah to attend the shrine is made a priest among the Danites, much to his delight, and his ungrateful behavior is duly noted. Even in the conquest of a new tribal territory, emphasis is so placed upon the defenseless and unsuspecting nature of the indigenous people that their subsequent slaughter can hardly be seen as courageous or praiseworthy.

Previously, chs. 17-18 were understood as an effort to discredit the royal cult of Jeroboam I with its sanctuaries at Bethel and Dan (I Kings 12:28-29). However, as Noth has shown, these chapters are likely the work of the royal priesthood of Dan in an effort to represent every phase of the earlier tribal cult in an unfavorable light. This view would appear to be supported by 17:6, "In those days there was no king in Israel; every man did what was right in his own eyes" (cf. 18:1a). Both passages seem to look favorably upon the role of the king (such as Jeroboam I) in the installation of priests.

Of the two concluding verses (18:30-31), 30 and 31b are later glosses which attempt to identify the otherwise nameless Levite with the priesthood of Moses. The gloss in vs. 30 would seem to indicate that the tribal priesthood of Dan was later a rival of the royal cult. Repeated mention of EPHOD and TERAPHIM (17:5; 18:14, 17-18, 20) may be intended to indicate that, in the time of the royal cult, the tribal priesthood had been reduced to the practice of delivering oracles. In its earliest form, the narrative likely ended with 18:31a (Noth).

Given this favorable view of the king and especially of his role in cultic affairs, the description of the untrustworthy Levite and the slaughter of a defenseless city by the Danites, it is readily apparent why this narrative was not included in early editions of the book of Judges (see §5). Yet, with its account of the migration of Dan, the ridicule of Micah's cultic object and the apparent premonarchical setting, it was added by a later redactor who may have been unaware of its polemical nature.

**b. Chs. 19-21** raise anew the question of source strata (see §1a above). Positions vary from the view that this appendix is comprised of parallel Hexateuchal narratives—L and J (Eissfeldt)—to the more recent proposal that we have here an authentic historical memory only partially preserved at the time of its postexilic composition (McKenzie). Between these extremes is the view which assumes the combining of two major traditions from the shrine of Mizpah and the sanctuary of Bethel plus additions by a postexilic redactor (Burney). Repeitions and parallels within such episodes as the

fall of GIBEAH and the provision of wives for Benjamin are thought to support the last position. In the latter episode, for example, wives for Benjamin are provided by a reprisal raid on JABESH-GILEAD (21:1-12, 14a, 24a) and by the rape of the daughters of SHILOH (21:16-23). The Jabesh-gilead incident has been seen as an etiological explanation of the appeal which that group made to Saul (I Sam. 11:1-4; 31:11-13; II Sam. 2:4-5) when besieged by Nahash the Ammonite. The rape of the daughters of Shiloh may be an effort to provide a historical basis for a local vintage festival noted for its rites of sexual license or ritualistic rape.

The major literary themes of this narrative are (1) outrage in Gibeah (19:1-30); (2) war between Israel and Benjamin at Gibeah (20:1-48); and (3) the survival of Benjamin (21:1-25). In the first of these themes, action is directed toward an episode in Gibeah. Reference to Benjamin occurs only twice (19:14, 16c), and 19:16b ("sojourning") is likely a redaction based upon Gen. 19:9b. In its earliest form this tradition may have dealt solely with Gibeah; the actual crime involved may have been unknown to later writers, who thus turned to Gen. 19:4 ff.

In the second theme, the fall of Gibeah is reminiscent of the destruction of Ai (Josh. 8). This has prompted two proposals: (1) the initial defeats suffered by Israel (20:19 ff.) may have involved circumstances, now lost, similar to those of Joshua's initial defeat at Ai (Josh. 7) (McKenzie); and (2) more recently, the view that the fall of Ai is not historical at all but is based upon the account of the fall of Gibeah (de Vaux). (See Ai; Ai[S] §5.) In evaluating the significance of this report on the fate of Gibeah and Benjamin, it is often recalled that SAUL, Israel's first king, was from the city of Gibeah and the tribe of Benjamin. It has been widely accepted that we have here a strong bias against the kingship of Saul, reflecting a Judean recension (Fohrer) which can also be seen in 20:18. Such a bias has been understood by many as a later reflection upon an unfortunate experience with the monarchy. Others insist that this opposition was likely expressed at the outset of Saul's rise to power and may be traced in part to Samuel himself (Bright). However, it must be remembered that in the wake of David's success as king, Saul was a figure of little significance in Judah. If this antimonarchical bias was early rather than late, its origin was likely not in Judah, but rather among the centers of Yahwistic influence in the N.

The traditions preserved in ch. 21 make no mention of Gibeah and likely had no connection with that city in their earliest forms. The attack upon Jabesh-gilead seems to attest to a unique relationship between this city and Benjamin. In all likelihood the traditions in ch. 21 do represent authentic memories of intertribal conflicts involving Benjamin. It is much less likely, however, that all the other tribes of Israel were originally involved. The same would hold for the size of the military forces mentioned and the complete mobilization of all Israel as recorded in 20:1-2.

The narrative in 19-21 in its present form is a product of the postexilic period in which it was

fashioned from several early traditions and motifs (cf. Judg. 19:29 with I Sam. 11:7). Various redactors contributed a number of passages (21:12b, 19b), certain of which are reminiscent of P (20:1; 21:10, 13, 16) (Fohrer). It has been proposed that this narrative is midrashic in nature (see MIDRASH [S] §§1-3), aimed at eliminating corruption in Israel, even though an entire tribe is faced with possible annihilation (McKenzie). Thus its *raison d'être* may be primarily theological rather than historical. This is further reflected in 20:19 ff. where, despite overwhelming odds, Israel is twice defeated by Benjamin; and only after Yahweh promises to "give them into your hand" (vs. 28) is there victory.

In 19:1a and 21:25 are two formulas we have encountered earlier in 18:1 and 17:6 respectively. In the first appendix these formulas appear to relate directly to the preceding passages and thus play a significant role in that context. In 19:1a and 21:25, however, they appear to be redactional, even superfluous (Noth). Here they serve as the opening and concluding verses in an effort to relate this narrative to chs. 17-18 which had been added in an earlier recension.

**5. Composition.** The present book of Judges can best be traced from the pre-Deuteronomiac collection of hero narratives which circulated individually prior to the monarchy. There is broad consensus that the old deliverer book underwent at least two Deuteronomiac revisions. The first revision, in the spirit of Deuteronomy, produced the theological framework for each of the narratives in 3:12-9:57, probably during the Exile. Also added at this time were the Othniel narrative (3:7-11), the Jephthah narrative (10:6-10a, 16; 10:17-12:7), and a portion of the Samson narrative (13-15).

The second Deuteronomiac revision incorporated the expanded deliverer book into the larger scheme of the Deuteronomiac history. Numerical data were added to provide a chronological order corresponding to the 480 years which elapsed, according to I Kings 6:1, between the Exodus and the beginning of Solomon's temple. This revision included a new introduction (2:11-19) which omitted any mention of the people's repentance and understood Yahweh's deliverance as an act of mercy. A second complex of Samson materials (13:4-5, 7b; 16:1-31) was also added. Possibly as a later part of this second revision were added an

introductory link with the book of Joshua (2:6-9) and an additional theological interpretation (2:20-3:6) which viewed the crises of the deliverers as a period for testing Israel. It has been suggested that at this point the over-all Deuteronomiac scheme was likely projected beyond the deliverers to include Eli, Samuel, and the latter's sons. The editor(s) of the second revision may well have felt that the degeneration of the office of deliverer had led directly to the selection of the deliverer Saul to be king (Richter).

Following the Deuteronomiac revisions, the book of Judges consisted of 2:6-16:31, excluding the notices of the minor judges (10:1-5 and 12:8-15), which were included in the postexilic era under the influence of the notice pertaining to Jephthah (12:7). Other postexilic additions are the appendixes of chs. 17-18 and 19-21 and the former conclusion of the Hexateuch (1:1-2:5).

\***KING, GOD AS.** The idea of God as king in the OT has two meanings and apparently two origins. The meanings can be distinguished by the different answers to the question: King of whom? One answer is: of the gods; the other: of the people. The first, the mythical meaning, is found primarily in the Psalms; elsewhere its occurrence is sporadic or uncertain. In most of the Hagiographa neither usage is found.

The mythical concept originated outside of Israel. The religion of Israel was henotheistic from the beginning and as such has had little occasion for, and no interest in, the development of a pantheon which provides for the position of a king over the other members (see COUNCIL, HEAVENLY[S]; SONS OF GOD; HOSTS, HOST OF HEAVEN). In its later, monotheistic phase no conditions for the creation of this position were present.

In the Bible the mythical meaning is most clearly stated in Ps. 95:3, "The Lord is a great (i.e., the supreme) God, and a great King above all gods." But such statements of relatively pure mythical kingship are few (Ps. 89:5-10 [H 6-11]; 103:19-22?). (Occasional motifs from supernatural battles, familiar fixtures in the regions of the eastern Mediterranean, are further indications of the origin of the mythical meaning.) More frequent is the tendency to describe or praise Yahweh as the king of the cosmos. The transition follows easily from the notion that Yahweh's mythical officials (cf. I Kings 22:19, 21-22), i.e., gods of lower or lowered rank (cf. Ps. 82), appear as powers of nature (Ps. 104:4). It follows in turn that those who praise him—other than men—are not only the mythical beings, attendants of the heavenly court (Isa. 6:3), but the whole cosmos in all its parts, and its praise is its recognition of God as king (Pss. 96-99). A further extension presents God as the king of the universe, which comprises nature and humanity alike. Expressions of this extended perception are usually eschatological in various degrees, although Israel is not always accorded much

attention (Jer. 10:7, 10; Zech. 14:9, 16-17; Ps. 22:28 [H 29]; 47).

The line that has been plotted so far will converge with the line spun from the other meaning of the kingship of God. A paraphrase of Isa. 24:21-23 may show this: The one who commands mythical, cosmic, and historical forces will rule as king in Zion amidst his people Israel.

The other, the societal meaning, expresses the concept that God is king of a society, Israel. In telling contradistinction to the first meaning, this meaning entails the people's recognition of God as king with all the resulting commitments, duties, and prohibitions. (Even an individual member of the people may personally commit himself and call God "my king" [Ps. 5:2 [H 3], etc., and personal names; see NAME §C2c].) It is often said that this meaning arose during the later time of the monarchy or in the Babylonian exile. This position is to be rejected. Although there are pertinent passages of significance (Exod. 15:18; Num. 23:21; Judg. 8:23; I Sam. 8:7; 10:19; 12:12) that refer to early Israel, their time of origin is controversial (see SAMUEL, I AND II[S] §3), and the argument will therefore rest only (a) on personal names and (b) on the general idea of gods as kings in the ancient Near East.

a) In the premonarchical names Abimelech (Judg. 8:31, etc.), Ahimelech (I Sam. 21:1 [H 2], etc.), Malchishua (14:49), and, probably, Malchiel (Num. 26:45, etc.) the components *-melech* and *malchi-* (king) cannot refer to a human monarch but only to a deity. Even if the names were borrowed from other peoples—and there is no indication that they were—they had an unequivocal meaning for their givers and bearers: the kingship of God, that is, the kingship of Yahweh. See NAMES, RELIGIOUS SIGNIFICANCE OF[S].

b) Even if there were no scriptural attestation to the idea that God is the king of Israel, one would be tempted to suppose its existence. Excepting the Egyptians, virtually every people of the ancient Near East, Semites and non-Semites alike, held that a god was the king of their polity. This fundamental idea, religious, social, and political, is expressed numerous times from Urukagina (Uruinimgina) of twenty-fourth-century Sumer to the Phoenicians and Carthaginians of Roman times. Urukagina and the Sargonic rulers Rimush and Naram-Sin a century later say that their respective chief gods, Ningirsu and Enlil, had entrusted to them land to hold and administer. The Old Assyrian king Šulili (ca. 2000?) says: "[The god] Ashur is the king, and Šulili is the governor of Ashur." The idea is also documented in several small Mesopotamian states of the eighteenth century, viz., Warum, Mari, and Der. A Hittite text (fourteenth century?) is explicit: Kingship is the storm god's, who has given the government to his human deputy. The application of this principle to early Israel is not refuted by maintaining that in the premonarchical period Israel did not have the specific experience that would enable it to give that shape to its religious ideal. *Malk* and other forms or words conventionally translated "king" in fact denote the highest ruler, chief, or leader of the political organization

of a given kind of society. The question is not primarily one of this or that ancient lexeme. The *abbū* of the Haneans in the area of eighteenth-century Mari are also called *šarrānu*. The first word is usually translated "sheiks" (literary "fathers"), the second "kings." The Midianites, no less nomadic than contemporary Israel, were ruled by *m'lāchīm* ("kings"; Judg. 8:12) as well as by *sārīm* ("princes"; Judg. 7:25). The basic question is in whom the chief authority of the polity is vested. If it is God, concentration of power in one man for more than a fleeting moment is excluded, and the formation of firm and permanent institutions of leadership, lawgiving, and decision-making is hardly tolerated. See SAMUEL, I AND II[S] §4.

A combination of arguments (a) and (b) makes it quite probable that the societal meaning of the kingship of God is early and genuine Israelite. In practice it differed from similar phenomena of other Near Eastern civilizations, as far as they are known to us, in the consistency and dedication with which the ideal was held and with which its implementation was tried again and again.

Later the societal meaning was fused with the mythic meaning (as in Isa. 41:21-24; 44:6-7; Ps. 47), in a characteristic expression of monotheism.

M. TSEVAT

\***KINGDOM OF GOD.** This remains a central topic in biblical, especially NT research. In addition to the bibliography with the original article, the following representative studies are important.

1. **The kingdom of God in OT and Jewish Sources.** J. Bright, *The Kingdom of God* (1953); A. Schweitzer, *The Kingdom of God and Primitive Christianity* (1951 [ET 1968]), Pt. I; J. Bonsirven, *Palestinian Judaism in the Time of Jesus Christ* (1950 [ET 1964]), chs. 8-10.

2. **Jesus and the Synoptic gospels. a. Future and apocalyptic interpretations.** H. S. Reimarus, *The Goal of Jesus and His Disciples* (ET 1970), also trans. as *Fragments* (ET 1970), was first published by G. E. Lessing in 1778. Reimarus held that Jesus was thinking mainly of a political kingdom. J. Weiss, *Jesus' Proclamation of the Kingdom of God* (ET 1971), was a major event when it first appeared in 1892. A. Schweitzer (cited in §1 above), Pt. II, presents his fullest account of Jesus' eschatological message. See also R. H. Hiers, *The Kingdom of God in the Synoptic Tradition* (1970), and *The Historical Jesus and the Kingdom of God* (1973).

b. **The kingdom of God as present.** J. A. T. Robinson, *Jesus and His Coming* (1957), argues that Jesus did not expect significant future eschatological occurrences. C. H. Dodd, *The Parables of the Kingdom* (rev. ed., 1961), maintains the viewpoint set forth in his earlier works. N. Perrin, *Rediscovering the Teaching of Jesus* (1967), and *Jesus and the Language of the Kingdom* (1975), emphasizes a present, experiential kingdom of God.

c. **Both future and present.** Several excellent studies find Jesus' understanding of the kingdom of God both future and present, but like W. G. Kümmel, *Promise and Fulfilment*, SBT, XXIII (3rd ed., 1956), finally claim the latter essential, while

tending to subordinate the former; H. Ridderbos, *The Coming of the Kingdom* (1950 [ET 1962]); G. Lundström, *The Kingdom of God in the Teaching of Jesus* (1947 [ET 1963]); N. Perrin, *The Kingdom of God and the Teaching of Jesus* (1963); R. Schnackenburg, *God's Rule and Kingdom* (1959); G. E. Ladd, *The Presence of the Future* (rev. ed., 1974); J. Reumann, *Jesus in the Church's Gospels* (1968), chs. 6-8.

3. **Early Christianity.** See R. Bultmann, *Theology of the NT*, 2 vols. (1948-53); A. Schweitzer (cited in §1 above), Pts. III, IV, as well as his classic, *The Mysticism of Paul the Apostle* (1911 [ET 1931]); E. Käsemann, *NT Questions of Today* (1964), ch. 5. D. E. Aune, *The Cultic Setting of Realized Eschatology in Early Christianity*, NovT Sup, XXVIII (1972), proposes that early Christians experienced eschatological salvation through worship as evidenced, e.g., in the Gospel of John and the ODES OF SOLOMON. Problems and consequences deriving from the fact that the kingdom of God did not come are examined by M. Werner, *The Formation of Christian Dogma* (1941 [ET 1957]); E. Grässer, *Das Problem der Parusieverzögerung in den synoptischen Evangelien und in der Apostelgeschichte*, BZNW, XXII (2nd ed., 1960); and J. G. Gager, *Kingdom and Community* (1975), ch. 2. H. Conzelmann, *The Theology of St. Luke* (1957), and W. C. Robinson, Jr., *Der Weg des Herrn*, Theologische Forschung, XXXVI (1964), see the delay of the PAROUSIA as a basic Lukan concern.

4. **The kingdom of God and ethics.** C. Walther, *Typen des Reich-Gottes-Verständnisses*, FGLP, XXII (1961), treats nineteenth-century interpretations (Kant, Fichte, Hegel, Schleiermacher, Rothe, and Ritschl). A. N. Wilder, *Eschatology and Ethics in the Teaching of Jesus* (rev. ed., 1950), urges that Jesus' announcement of the coming kingdom was only a formal, symbolic and secondary sanction for his ethics. R. H. Hiers, *Jesus and Ethics* (1968), reviews the positions of Harnack, Schweitzer, Bultmann, and Dodd. C. E. Braaten, *Eschatology and Ethics* (1974), relates biblical eschatology to current issues.

5. **The kingdom of God and contemporary theology.** J. Moltmann, *The Theology of Hope* (1964), W. Pannenberg, *Theology and the Kingdom of God* (1969), and C. E. Braaten, *Christ and Counter-Christ* (1972), exemplify the "new" theology or "theology of hope," blending biblical research, Reformation doctrines, and contemporary theological concerns.

R. H. HIERS

\***KINGS, I AND II.** I. **Kings as part of the "Former Prophets."** That the two books of Kings form a single unit is evident from the continuity in the Elijah cycle of narratives (I Kings 17-II Kings 2), itself part of a major section running from I Kings 17 to II Kings 13, in which primary place is given to prophetic material (see §3 below). It is also clear that the opening of I Kings forms a con-

tinuous narrative with that of II Sam. 9-20, interrupted only by appendices to the books of Samuel (see SAMUEL, I AND II §§5-6 and supplementary article). In their turn these books are closely linked with Joshua and Judges. Thus as it stands, the section of the Hebrew Bible known as the "Former Prophets" has a literary unity; consideration of any one of its component parts cannot ignore the implications of such an over-all unity of final redaction. As regards structure, the question is whether the very evident differences between the four books (Joshua to Kings) are sufficiently explained as due to the differences of the materials utilized by their compiler(s) or require the supposition of quite independent redactional activity; as regards purpose, whether differences of emphasis are again sufficiently accounted for if they are viewed as belonging to the prior stages through which the material has passed, and whether they may be seen as subsumed within a single recognizable and definable ultimate intention on the part of a final redactor whose activity cannot be placed earlier than the mid-sixth century B.C. (later than the latest event recorded in II Kings 25:27-30). See DEUTERONOMIC HISTORY, THE[S].

**2. Redactional activity in Kings.** The widely accepted "two edition" view of the books of Kings (see KINGS I AND II §§5-6) endeavors to resolve the contradiction between passages which clearly envisage the exilic situation and those (e.g., II Kings 22:20 on the death of Josiah) which appear to be unaware of it. It is clear that account must be taken of the degree to which earlier material retains its original form even when incorporated in a framework or a larger work which offers a different, even a contradictory, interpretation. Such a survival of contradiction may be seen in the positive statements concerning Jeroboam II in II Kings 14:25-29 (see also §3 below); the principle is in any case familiar in other parts of the OT, notably in the PENTATEUCH. Detailed examination of particular sections of the work—for example the Hezekiah narratives—suggests that a greater degree of redactional unity was given to the work in the exilic age than has sometimes been supposed. As with other kinds of material, notably psalmody and prophecy, the provision of a new context, or a minimum of verbal change, may invite the reader to see a quite different meaning in words which originally applied to a situation other than his own. See REDACTION CRITICISM, OT[S].

Detailed study of the framework material—the formulas which introduce and close the reigns of individual rulers—suggests that it is not all of one piece, though it may be doubted whether the verbal differences are sufficient to establish precise stages in the redaction. It is clear that Deuteronomic and Deuteronomistic are terms which should not be regarded as suggesting a single moment or a single process, but more precise definition may not be possible on the basis of the limited evidence available. The textual problems (see below) alone forbid too simple a delineation of the process. Moreover, it may with justice be affirmed that, in a period before strict and meticulous

copying was enjoined, each copy of a work may in some degree be equivalent to a new edition. And such clues as we have point to a multiplicity of text forms in the earlier stages. Thus the two forms of the Hezekiah-Isaiah narrative (II Kings 18:13-20:21; Isa. 36-39) reveal different "editorial" stages: the absence of II Kings 18:14-16 from the latter, and the addition of a "prayer of Hezekiah" in Isa. 38 (plus deviations in other respects in that narrative) make this clear.

The supposition that the last part of II Kings represents a shortened version of Jer. 37-44 hardly does justice to the complex relationship between these two sharply divergent forms of the same or similar material; it may be better to think in terms of two alternative endings to one work. The same applies to the slighter differences to be seen in Jer. 52.

The textual situation also remains unresolved. The MT, LXX, and Qumran texts illustrate the variety and complexity of the textual evidence, and the Qumran texts provide support for a more positive evaluation of the LXX *Vorlage* (see SEPTUAGINT[S] §A1; TEXT, HEBREW, HISTORY OF[S] §1). The relationship between the texts of Kings and Chronicles is a matter of great complexity. At some points it is probable that the text of Kings has been influenced by the Chronicles text; a two-way process of influence may have continued until a relatively late date. We are not able either to trace a completely coherent history of the textual development or to adjudicate firmly between one form of the text and another. See CHRONICLES, I AND II[S].

These considerations make it evident that while we may observe certain main points in the development of the present form of Kings, we must also acknowledge that a precise definition in terms of two or more "editions" does less than justice to the facts. We may need to recognize that the text, in any of the forms known to us, represents a certain element of accident, of fixation at a point which is not neat and well-rounded, but leaves unevenness and inconsistency.

**3. Prophetic material in Kings.** It is evident that a crucial part is played in the narratives by prophets, named and unnamed. A pattern of judgment and promise, already begun in Judg. 6 and in the Samuel narratives, develops into a much closer correlation between prophetic intervention and the sequence of events. The reign of Solomon is set in the prophecies of Nathan (I Kings 1) and Ahijah (I Kings 11); his successor Rehoboam in Judah and the line of rulers in the N come under prophetic comment in I Kings 12-16. The whole section from I Kings 17 to II Kings 13 is dominated by the complex twofold cycle of Elijah and Elisha, with the indications of overlap in the portrayals of these two nevertheless distinctive figures; the former's traditions are interwoven with the separate prophetic elements of I Kings 20 and 22, the latter's with material concerning prophetic bands, depicted as associated with Elisha, who nevertheless, like Elijah, appears also as a lone figure.

From this point on, a different question emerges. While there is much prophetic material, and

frequent allusion to prophetic activity, the absence of reference to the major prophets with the exception of Isaiah (II Kings 18-20) and the less significant mention of Jonah (II Kings 14:25) presents a curious problem. Various solutions have been proposed, ranging from the supposition that a prophetic canon was already sufficiently established for such reference to be unnecessary (but if so, why the inclusion of the Isaiah material?), to the idea that in some degree the books of Kings offer a critique of prophetic judgment, with II Kings 14:25-27 as a denial of the doom oracles of Amos. In reality the situation is considerably more complex. The presence of the Isaiah material in II Kings 18-20 is all the more remarkable because of the absence of allusions to Isaiah in the Ahaz narrative of II Kings 16 (cf. Isa. 7). The existence of an alternative narrative form in Jer. 37-44 shows evidence of a presentation in which Jeremiah is a full participant (see §2 above). The form of the text again in this respect suggests a moment of fixation which has in it both an element of chance (the Isaiah material present) and an element of choice (the Jeremiah material not included); the final form would thus be in some degree related to the existence of a prophetic collection, but not consistently ordered with that in view. See CANON OF THE OT[S] §2b.

What is more, we may observe in the prophetic material that is included a variability of editorial method. In the case of Isaiah there is a substantial, though not a full, measure of editorial integration. In the Elijah and Elisha material, there is in general much less evidence of such reworking, though it is not entirely absent. For the most part the reinterpretation of those narratives depends on their context, their being fitted into the framework so that they become comments on the reigns of particular rulers, while retaining much of their earlier form.

**4. Problems of chronology.** No one solution appears to meet all the chronological problems presented by the figures given for individual reigns and for synchronisms between the two kingdoms. Suppositions regarding calendar change at the time of the Neo-Babylonian conquest open up some possibilities of clarification; the probable practice of co-regency, or at least its use in some specific cases such as that of Uzziah and Jotham, offers another approach; the recognition that numerical symbols or number-words, especially if abbreviated, are readily susceptible of error, adds a third possible element (see ABBREVIATIONS, HEBREW TEXTS[S]). Intractable inconsistencies remain, and no one of these or other suggestions can resolve all the difficulties. We have a sufficiently close chronology for general purposes; the endeavor to work out a detailed scheme, even for the last years of Judah where we have a great deal of information, must inevitably remain hypothetical at many points. See CHRONOLOGY OF THE OT and supplementary article.

**5. The nature and purpose of Kings.** The continuity of material from the preceding books inevitably means that any comment on the books of Kings alone is inadequate. Yet within this particular section of the narrative presentation of what

led up to the final collapse of the kingdoms of Israel and Judah, we may observe the degree to which the compiler or compilers have engaged in a process of selection, clearly taking up only a part of the material which must have been available to them; they have offered a patterned presentation, not as highly stylized as that of the later Chronicler (see CHRONICLES, I AND II[S] §4), but nevertheless in some respects artificial. The reign of Solomon is clearly a high point because of the building of the temple, which is a central theme of the work; for the compiler, loyalty to Yahweh is substantially equated with loyalty to the Jerusalem sanctuary. This section incorporated the markedly homiletic prayer of Solomon (I Kings 8), which provides a significant punctuating moment. The whole account of Solomon is set within the initiating prophecy of Nathan and the judgment of Aijah, and might in this respect almost be said to epitomize the whole. The pattern of the kings of the North, universally condemned, is broken by the interventions of Elijah and Elisha, which obliquely say so much about the nature of Yahwistic faith in that area. With the decline and collapse of the North, there is both the occasion for the introduction of one of the major commenting discourses (II Kings 17, comparable with such an earlier passage as I Sam. 12) and the moment for introducing a more stylized pattern into the reigns—bad and good alternating (Ahaz, Hezekiah, Manasseh-Amon, Josiah, Jehoahas-Jehoiakim-Jehoiachin-Zedekiah) to the first moment of doom in 597. That these judgments are in some measure artificial is clear from a close examination of the material. The description of Hezekiah begins to move to that greater degree of idealization typical of later accounts. This may explain the inclusion of the Isaiah material, which centers around him, whereas the books of both Isaiah and Micah (cf. Jer. 26) suggest a much more negative appraisal. It is too simple a judgment to see Ahaz as evil because his temple reforms (II Kings 16) are negatively assessed; or Manasseh (II Kings 21) because his reign is associated only with apostasy. The complexities of politics and religion are not in reality so readily unraveled, and Manasseh in particular has been utilized as a counterpart for Judah of the Jeroboam ben Nebat who "caused Israel to sin." We may note that in the later presentation by the Chronicler the emphasis has shifted: Ahaz has become the supreme example of evil, whereas Manasseh has been transformed into a penitent and a reformer (II Chr. 28 and 33).

Such stylizing marks a homiletic exposition and cautions against too simple a reconstruction of history based upon it. Whatever may have been the motivation of the compilers of earlier structures, its ultimate form is directed toward providing instruction and encouragement for those who looked back on Judah's total collapse. The books of Kings give, not simply in the somewhat equivocal ending with Jehoiachin's release, but in the whole presentation with its repeated hints of warning and promise, a look at the past which holds within itself a rethinking of the community's life for the future.

P. R. ACKROYD

**KINSHIP AND FAMILY.** A system in each society which structures and labels those interpersonal relationships, with their attendant rights and duties, which are based on real or putative ties of genealogy or marriage. A kinship system may also, depending on the defining principles involved, specify certain bounded groups (family, lineage, clan, etc.) which may function collectively. In most human societies, kinship ties are the most important ties between persons, and the obligations they entail override all others. There are even societies in which kinship ties are the only ones which bind the society together.

In general, societies which have the simplest subsistence patterns (hunting and gathering) have the fewest nonkinship associations, but kinship organization itself in such societies ranges from the minimal (Eskimos) to the extremely elaborate

(Australian Aborigines). Societies which practice pastoralism tend to have highly developed kinship systems but little other social structure. Agricultural societies typically have complex kinship systems, and may also have highly developed nonkin associations based on age, sex, or other considerations (much of traditional Asia and Africa). Modern industrial societies tend to elaborate a high number of associations but to simplify their kinship systems.

1. **Learning one's kinship system.** As a child (Ego) becomes gradually aware of the social world in which he lives, he or she first recognizes the existence and some of the significance of the people he sees around him: parents, siblings, perhaps grandparents, aunts and uncles, and so forth. He learns that these people have distinctive labels that make them "relatives" or "kin" to separate them from all others. He learns that each labeled relationship between him and other persons entails a set of expected attitudes and behaviors, a set of rights and duties. He learns that his relatives are often—depending on the system—related to each other. Some of his kin are related to him by descent ("blood"), some by marriage. As male Ego grows up, he learns that some women are sexually taboo because of kinship. Female Ego learns that some men are sexually taboo. Both learn that some partners are taboo for marriage, while others are preferred or even prescribed. In short, Ego learns

his or her kinship system: the rules for deciding who is related to him and in what way, and the attitudes and behaviors that these relationships involve.

**2. Descent systems and kinship groups.** Though each person normally feels that his own kinship system is the "right" or "natural" one, in fact human societies operate with every possible kind of system, based on every possible view of the nature of descent. These systems illustrate the fact that kinship is fundamentally a social, not a biological, reality. That is, each society agrees upon what factors shall be taken into consideration in deciding who are kin. The American system, in which biological relationship is crucial, is only one possibility among others; and it is a social agreement that makes biology predominate, just as by social agreement some societies partially ignore biology.

**a. Bilineal systems and kindreds.** Bilineal systems (sometimes called bilateral) such as the American system give equal weight to relationships through Ego's father and mother. Though recent findings in genetics give biological support to this view, the system long antedates knowledge of genetics. The terminology reflects the sameness of relations on both sides by using the same terms, for example, for father's father and for mother's father.

Two facts characterize bilineal systems and the kinship "groups" they generate: (1) The system can be extended in all directions and to all generations to the limits of one's interest and available information without coming to any boundary across which people are not related; in other words, the *kindred* generated by a bilineal system is not a bounded group. (2) The set of persons who are related to any given Ego and his full siblings is unique: I am related to everyone who is related to my father, but my father is not related to everyone who is related to me. Since a kindred is not bounded there is no possibility of its ever functioning corporately. It is also possible in such a system for Ego to be caught in the middle of a conflict between people to whom he is related but who are not related to each other. Since a kindred is so weak, societies with bilineal systems assign great responsibility to the nuclear family, which is the only unit with any degree of boundedness and coherence.

Bilineal systems exist typically (though by no means exclusively) at the two extremes of the subsistence ladder: among hunters and gatherers, and in modern industrial societies. Both of these otherwise totally different kinds of societies require a high degree of flexibility and mobility for the minimal unit, the nuclear family; in the first, there often seems no need for some of the functions fulfilled by elaborate kinship systems, in the latter many of the necessary functions are fulfilled by nonkinship associations.

**b. Unilineal systems and resulting groups.** An alternate approach is to select as crucial relationships established through only one parent. In other words, biological relationships which exist through the other parent are ignored or even denied,

whether or not the people involved have the relevant genetic knowledge.

**i. Matrilineal systems.** A matrilineal system says that Ego is related to his mother and her kin, but not to his father and his kin. Such a system, of course, emphasizes the already obvious cruciality of the mother for the birth and early survival of her child and de-emphasizes the role of the father. Society may, for instance, deny biological paternity; or it may recognize it but deny that it has important social consequences. In a number of such societies, the father is an indulgent adult, or he may be largely absent and have no significant relationship with Ego. In many such situations, it is mother's brother who is the male authority figure.

**ii. Patrilineal systems.** Though the patrilineal system appears to be a mirror image of the matrilineal one, in that the child is related to father and his kin, but not to mother, it is in fact not just a mirror image because of the irreducibly different biological roles of father and mother. Whereas in a matrilineal system father can be reduced to a virtual zero, there is no way of similarly reducing mother's role. Thus, at least in Ego's subjective experience, the relative importance of the two parents tends to be more balanced in a patrilineal system. But in jural terms, the child belongs unequivocally to his father. Because of the greater indispensability of the mother, the nuclear family is often more important and more stable in patrilineal than in matrilineal societies.

**iii. Lineage, clan, moiety, phratry.** In one respect, unilineal systems are alike and together contrast with bilineal ones: they both produce defined, bounded groups, such that each individual belongs to one group only. It is (in principle if not always in reality) possible to list the members of such a group and to tell unambiguously whether a given person is a member or not. There are several types of such groups.

A *lineage* consists of all descendants of a real, known, historical ancestor. The depth in generations varies with the ability of society to keep records, but it rarely exceeds four or five generations.

A *clan* consists of the real or putative descendants of a legendary, mythical, or very remote ancestor, so that there may be reason to doubt the strict accuracy of genealogies. When the ancestor is a mythical creature or an animal, it may continue to have a special relation to the clan and its members in the form of a totem. See TOTEMISM[S].

A *moiety* is one of two complementary and exogamous groups into which an entire society is divided for the reciprocal exchange of women. A *phratry* is like a moiety except that there are more than two phratries in the society.

Within a given unilineal society, it is possible for lineages, clans, and moieties (or phratries) to co-exist, each fulfilling certain roles in the total scheme. In such a case, a moiety (or phratry) is divided into clans, and a clan into lineages. Each lineage may, in some societies, be further divided into sublineages.

Roughly two thirds of the societies of the world are unilineal, the large majority being patrilineal. Pastoral societies without known exception are

patrilineal; agricultural societies may be either patrilineal or matrilineal.

*c. Double descent and ambilineal systems.* These are much rarer than the others.

In double descent, Ego is related to both parents, but in quite different ways and for different social purposes. Each individual belongs to one patrilineage (or clan) and one matrilineage (or clan), but only full siblings belong to the same pair.

In ambilineal (sometimes called nonunilineal) systems, male Ego chooses, subject to the approval of present members, whether he will belong to the kinship group of his father or to that of his mother. The group thus constituted, called a ramage, is bounded like a clan, but not unilineal. Ego may also, for convenience or social prestige, and with the consent of present members, choose to belong to the ramage of his wife (via her father or mother). Though a person may belong to two or more ramage, only one is fully functional at any period of his life. This system is found in the Pacific, notably in Samoa.

**3. Kinship terminology.** This is the set of terms used to designate or to address all persons categorized as kin. Terminology obviously reflects kinship structures—that is, the patterned statuses and prescribed interpersonal relations, though not always with total accuracy. In any system, some terms are particularizing, in that they designate a single person (e.g., “father” in English), others are classificatory, in that they lump together a number of persons who occupy quite distinct places in the genealogical chart (e.g., “cousin” in English). Clearly, the emotional flavor of relations between two individuals will be in some ways unique to the pair; but in the structural sense, it is generally true that the kin who are lumped under a single term, however different they may be in all other respects, owe the same duties to Ego and expect the same privileges from him or her.

*a. Principles involved.* We have already seen that biology can be ignored in favor of a social reality structured along different lines. A broader statement is that although all societies make use of a set of universal categories or dimensions in grouping or splitting kin types and in defining kin terms, each system uses a particular subset of these categories and applies them in a unique way. The categories most commonly used are as follows:

1. *Difference of generation.* Contrast “father” and “son.”
2. *Difference between lineal and collateral kin.* Contrast “father” and “uncle.”
3. *Difference in sex.* Contrast “brother” and “sister.”
4. *Difference between consanguineal and affinal kin.* In English, “husband” and “wife” are exclusively affinal; all others are consanguineal unless followed by “-in-law.”
5. *Difference in sex of linking relative.* This category, not used in English, characterizes unilineal systems because it distinguishes kin through father from kin through mother.
6. *Difference in age within same generation.* This is found in societies conscious of seniority, where it may be important to distinguish older brother from younger brother.

7. *Difference in sex of Ego.* In such systems, which are rare, men and women use different terminologies.

8. *Same sex vs. opposite sex.* This distinction, which is fairly rare, obtains only for siblings. A man calls his brother and a woman calls her sister by a term meaning “sibling of same sex”; a man will call his sister and a woman her brother by a term meaning “sibling of opposite sex.”

No system uses all of these, nor will they be used by the same rules. English uses only 1-4.

*b. Types of systems.* The interplay of these categories with the different descent rules generates a potentially enormous number of distinct terminologies (disregarding the trivial matter of the actual phonetic forms used). But in fact all terminologies can be classified into six broad groups, depending upon which kin are lumped together and which are differentiated in parents' generation; which are lumped and which are differentiated in Ego's generation; and the operation of certain skewing rules which reflect descent and marriage rules. In what follows, I will use the most elementary kin terms in a strictly genealogical sense and compound them for more remote kin.

i. *The Hawaiian system* (also called the generational system) lumps people of the same generation and distinguishes people of adjacent generations. Thus, a single term covers father, father's brother, and mother's brother, and a parallel term covers mother, mother's sister, and father's sister. Similarly a single term (or a pair of sex-distinguished terms) covers all siblings and first cousins. Such a system, of course, is used in a bilineal society, since kin of both sides are treated in the same way.

ii. *The Eskimo system* (also called the lineal system) lumps father's brother and mother's brother, but has a distinct term for father; it lumps mother's sister and father's sister, but has a distinct term for mother; and it has a single term for first cousins, but distinguishes them from siblings. This is obviously the American system. It reflects a bilineal society in which the nuclear family is the fundamental unit, by distinguishing lineal from collateral kin.

iii. *The Iroquois*, iv. *Crow*, and v. *Omaha systems* all have in common that they reflect unilineal societies. They lump father's brother with father but distinguish mother's brother; they lump mother's sister with mother but distinguish father's sister; and they lump parallel cousins (father's brother's children, mother's sister's children) with siblings but distinguish cross cousins (father's sister's children, mother's brother's children). Such a treatment shows that these societies consider parallel cousins to be the same as siblings, but do not so consider cross cousins; the latter may even be preferred marriage partners. The skewing rules which distinguish these systems from each other are complex, but their effect is to make the Iroquois system weakly correlated with matriline, the Crow strongly correlated with matriline, and the Omaha strongly correlated with patriline.

vi. *The Sudanese system* has the most particularizing terms, in that there are separate terms for father, father's brother, and mother's brother; for

mother, mother's sister, and father's sister; and for siblings, parallel cousins, and cross cousins. This is the rarest of all the terminologies.

4. **The regulation of marriage.** Some consider the regulation of marriage to be the most important function of kinship systems. This begins with the incest taboo, but goes much further, in that it specifies rules of exogamy, rules of endogamy, and even, in some cases, rules which pinpoint a particular kin position whose occupant (s) is/are the preferred or prescribed spouse.

*a. Exogamy.* This is the rule that one may not marry a fellow-member of a particular group, usually a kinship group. In all societies this includes the nuclear family, and usually the extended family. It is rare in bilineal societies that the rule goes further; but in unilineal societies it is not uncommon for lineages or even clans to be exogamous, even when they number in the millions. In societies with moieties and phratries, these are by definition exogamous. The origin and rationale of exogamy are in dispute, but one effect is to force each exogamous group to find wives outside itself.

*b. Endogamy.* This is the rule that one should marry a fellow-member of one's own group. This may be a kinship group, as when certain pastoral peoples, including ancient Hebrews in patriarchal times, practiced lineage endogamy to keep women, their future children, and their property in the lineage. Many societies practice community endogamy, or social class/caste endogamy, or religious endogamy, or society-wide endogamy, so that marriage with foreigners or outsiders is forbidden or frowned upon.

*c. Preferred and prescribed marriages.* Many societies have more specific rules than exogamy and endogamy. In some cases, kinship groups have between themselves long-standing arrangements for the direct exchange of women: e.g., you marry my sister, I'll marry yours. Some societies practice deferred but still direct exchange in alternate generations. In still other instances, three or more groups, such as phratries, have a circular system whereby group A gives wives to B, B gives wives to C, and C gives wives to A. Finally, the rules may be so precise that the preferred or prescribed marriage narrows down to a particular position in the kinship network; in some patrilineal societies, the preferred bride is mother's brother's daughter (she is not of one's group, since she is not of father's group). Obviously, the more specific the rule, the more often it happens that no one occupies the preferred position. But in such cases all societies make provision for alternative marriages; in societies with the most restrictive rules, the "preferred" marriages are in fact statistically rare. In other words, societies can either define a broad class of available women within which it is easy to find a suitable mate; or they can make narrow rules and provide for many exceptions.

*d. Resulting relations between groups.* Relations between groups which exchange women, either directly or indirectly, are often ambivalent. On the one hand, there must be a minimum of civility to permit the often complicated negotiations that precede marriage. On the other hand, unilineal groups are often competitive and even hostile out-

side marriage arrangements. Thus, one finds two motifs in explanations of intergroup marriage relationships: "We marry our enemies" and "We marry to cement alliances." Groups which have exchanged women are often regarded as having enduring rights and obligations in their relationships; these can be an important factor in maintaining a sometimes precarious superkin unity within society as a whole. It is hardly ever the case that marriage is regarded as a purely private arrangement between the spouses themselves.

Another dimension of this question is that a group which has given a woman to another is at that moment in a creditor, that is, a superior position, with respect to the receiving group. If the exchange is direct and immediate, there is no problem. If the exchange is deferred, the receiving group is in an inferior-debtor position until the balance is restored. But in the case of complex exchange, each group remains in a permanently inferior position in relation to the group that always gives it wives and in a permanently superior position with respect to the group to which it gives wives. This aspect of the question is only partially altered in the case of societies which practice bride wealth payment. See also DIVORCE[S]; MARRIAGE[S].

5. **The family.** The family is that kinship unit which lives together on a fairly continuous basis. It should not be confused with the household, however, since the latter often includes nonkin.

*a. The nuclear family.* In most societies, a nuclear family is established when a man and a woman marry; in some, it does not begin until the birth of the first child; and in a very few, it is hard to identify such a unit at all. In some societies, the nuclear family endures until the last child gets married or otherwise leaves home; in others, it lasts until the death of one spouse; in many, it can end with divorce. Whatever the precise social definition of the beginning and end of a nuclear family, it is clearly a relatively temporary and unstable unit. Furthermore, each individual during his lifetime normally belongs to two such units, the one into which he or she is born and the one founded when he or she marries; and it is not unusual for the interests of these to be in conflict and for the individual to be torn between incompatible obligations. Societies provide different resolutions to these conflicts, whether in favor of one's natal family or of one's conjugal family.

*b. The composite family.* This type of family exists whenever one marriage partner has more than one spouse (polygamy). The commonest pattern is polygyny, in which a man has more than one wife. In such a situation, each wife with her children constitutes an important unit, while the husband is the single tie that binds the whole together. The composite family may itself be merely a unit in a still larger family.

*c. The extended family.* This may be defined as a sublineage which lives together. In a typical patrilineal extended family, a patriarch will be at the head; with him live his wife or wives, his married sons and their wives, their married sons and their wives, and all unmarried children, grandchildren, and so on. The mirror image obtains in a matrilineal society, though authority is often in

the hands of the brothers and sons of the core women rather than in the hands of the women themselves. In such a system, there is normally a sharp distinction between insiders (men and their children in a patrilineal system, women and their children in a matrilineal one) and the outsiders who have married in. In some societies, spouses are given full rights and are received with much affection; at the opposite extreme are cases where bitter hostility continues between spouses and affinal kin even after the marriage, and the in-marrying persons are harshly treated.

**6. Residential units.** Though residential units are not in themselves necessarily kinship groups, in almost all societies kinship and marriage are the most important factors on which co-residence is based.

*a. The household.* This is the smallest residential unit. The core is typically a family (in any of the above senses); but the household often includes unrelated persons such as servants or slaves and long-term guests.

Not all members actually need dwell in the same building, though they may (a typical example would be the pueblos of the matrilineal extended families of the Hopi, Zuni, and other Southwestern peoples). Composite or extended families often live in a cluster of huts, perhaps surrounded by a fence or hedge.

In addition to co-residence, the household is characterized by centralization of authority and of family activities, including economic activities and the management of family assets.

*b. Nomadic units.* When nomadic—that is, hunting and gathering or pastoral—peoples have residential units larger than the household, they are called, in order of increasing size, the camp and the band. The camp includes one or more households that stay together most of the time; they may be tied together by kinship, but need not be. The band comprises several camps that recognize their special relationship by getting together periodically—often annually—for social, economic, and religious purposes.

Nomadic units are often fairly unstable, since a marked increase in population or a decrease in resources often requires fission. This was the case when Abraham and Lot had to separate when pasture and water were insufficient for their animals (Gen. 13:1-13). See also NOMADISM[S].

*c. Sedentary units.* Sedentary peoples often live together in units larger than households. In order of increasing size, they are the neighborhood or ward, the village or town, and the district. The extent to which kinship is involved in these groupings varies all the way from total determination to virtual lack of correlation.

In some cases, sedentary peoples reflect their kinship relationships not only in residential patterns, but also in patterns of land distribution and use, so that the closer the kinship between farmers, the closer together their fields. Something of this kind appears to have resulted from the initial distribution of the land of Canaan among the Israelites after the Exodus. See TRIBES, TERRITORIES OF[S].

**7. Functions of kinship.** Scholars debate hotly

which is the predominant function of kinship; some emphasize descent and inheritance; others the regulation of marriage; others, especially cultural materialists, emphasize economic considerations; still others emphasize ideological, mythical, and religious factors. What is clear is that kinship in most societies plays multiple roles, and their relative importance varies widely. The following list includes those functions which are most commonly fulfilled, in whole or in part, by kinship systems.

*a. Social identity.* By defining the conditions of legitimacy and affiliation, the rules of marriage and kinship provide each person with his social identity. A child who for any reason is not recognized by the rules is a social outcast in many societies; in others, the rules function in such a way as to assign legitimate parentage to every child, regardless of biology.

*b. Socialization.* Whether or not a society has formal schools (a small minority do), the bulk of the socialization process is carried out by the kin group, especially the family.

*c. Social security.* In most non-Western societies, kinship provides for each member's social security in the broadest sense. This includes co-operation and mutual aid, both routine and emergency, co-operation and mutual defense in litigation and conflicts with other groups, the acceptance of collective responsibility for the actions of members, provision for orphans and widows, and so forth. In societies which have no social structure apart from kinship, protection of members extends even to military action (Gen. 14:13-24).

*d. Economic co-operation.* The rational pooling of major resources, especially land and water, and co-operative labor make possible large undertakings with a minimum of nonkin structure, as can be seen from the extensive mountainside irrigation terraces of the Ifugao (Philippines). Ownership of land by a kinship group is almost the norm, on a world-wide basis. And all sorts of enterprises, whether pastoral, agricultural, commercial, or industrial, can be and often are owned and operated by kin groups.

*e. Social order.* Kin groups are often involved in ensuring internal order by enforcing rules and penalizing deviants.

*f. Descent and inheritance.* We have already discussed descent; it remains to say something about inheritance. The orderly passage to other persons of the rights and possessions of the dead is almost always regulated in terms of kinship, though the specifics vary widely.

*g. Regulation of marriage.* See §4 above.

*h. Religious and ceremonial functions.* Certain types of religious functions, including totem cults and ancestor cults, are by definition tied to kinship groups. But many other types of religious and ceremonial activities center on the kin group or take it seriously into consideration. One also finds fairly often that religious specialization is assigned on the basis of kinship (cf. the role of the Levites and the Aaronic family in Israel).

**8. Kinship in ancient Israel.** Kinship played an especially crucial role among the Hebrews as the very foundation of the entire society: they considered themselves descendants of Abraham, Isaac,

and Jacob, and circumcision of males was the sign of their being one people, the "children of Israel." This explains their pre-occupation with genealogy throughout their history; if one could not trace physical descent from Jacob, his status was in jeopardy (cf. §2 above). Examples of a whole society considering itself to be one enormous kinship group are rare, at least when the society numbers more than a few thousand people. What is likely is that at some stage a mechanism was invoked to incorporate related smaller peoples into the "children of Israel."

**a. Patriarchal times.** In the lifetimes of the three patriarchs, the whole people was simultaneously a sublineage, an extended family, and a vast household/camp. Though ties for marriage purposes were maintained with the patrilineage in Haran, the camp was in every other way self-contained, self-sufficient, and autonomous. The patriarchs moved about as they pleased and ruled their households with absolute authority. The kinship group provided fully for every one of the functions listed in §7 above. In a time of emergency, Abraham was able to mobilize 318 adult male household members, no doubt mostly servants and slaves (Gen. 14:14). By the time Jacob moved to Egypt, the extended family (only kin) is said to have contained seventy persons (Gen. 46:26-27).

**b. After the Exodus.** By the time of the Exodus, the twelve sons of Jacob had become, by the multiplication of their descendants, the ancestors of twelve "tribes," which in our terms should be called clans. One clan, that of Levi, was set apart for religious functions; that of Joseph was split into two to maintain the number of twelve. Apart from the personal charismatic leadership of Moses, then Joshua, and the religious unity in the worship of Yahweh centralized in the Aaronic priesthood, the people continued to think of themselves primarily in terms of their clans, lineages, and sublineages; national unity was thus fairly tenuous and continued to be through the time of the Judges. Clans often failed to co-operate, and sometimes actually fought. The land of Canaan was apportioned on the basis of kinship groups, right down to the family (e.g., Josh. 17:1-6). The "Judges" themselves seem to have been mostly *ad hoc* clan heroes rather than national leaders.

**c. The kingdom.** With the advent of the monarchy, political dominance began to slip away from the clans in favor of the centralized power, somewhat in the way that religious power had been centralized earlier. But the clans remained strong enough to serve as the basis for the split between the northern and southern kingdoms under Rehoboam. Apparently the lower order units (lineages, extended families, etc.) continued to fulfill most of their functions in providing social identity, socialization, social security, and so forth.

**d. After the return from exile.** The Jews who returned from Babylon attempted to re-establish their former system, and in particular Ezra enforced again national endogamy and restored the temple worship and the priesthood. This required the reconstruction to his satisfaction of the genealogies on which the priesthood depended (Ezra 2:36-63).

In the Diaspora, the synagogue gradually evolved and assumed a significant role in the education of children, thus supplementing but not replacing the socialization function of the home. But throughout the biblical period the Hebrews/Israelites/Jews continued to be a strongly patrilineal society which assigned first place of honor and responsibility in all of society to the family and the home. As society became more complex, religious and political institutions evolved to take over certain spheres; but these served to supplement, not to supplant, the kinship groups.

\***KIR** (in Mesopotamia). A place whither Tiglath-pileser III transplanted the people of Damascus (II Kings 16:9; an editorial gloss in Amos 1:5). In the Deuteronomic interpolation Amos 9:7, Kir is mistakenly called the place of origin of the Arameans. In Isa. 22:6 (written in 539 B.C.) Kir figures along with Elam (i.e., Persia) as enemies of Babylon (cf. Isa. 21:2, where the enemies of Babylon are Elam and Media). No place called *Qir* is mentioned in ancient records; however, *Qir*, West Semitic for "wall," should be understood as a translation of the city name *Dēr* with the same meaning (var. of Akkad. *dūru*). The name was ideographically written BAD.DINGIRKI, "wall of the gods," or simply BADKI, "wall." Tiglath-pileser III, who called it *Dūru*, transferred its inhabitants to northern Syria (after 738); it would thus be natural if they were replaced, a few years later (in 732), by exiles from Damascus. *Dēr*, an important ancient city E of the lower Tigris (now Badrah), on the main road from Elam to Babylon, was in the Neo-Babylonian period the capital of the province of Gutium. Its governor, Gubaru, joined Cyrus in 539 and was the first, with his troops, to enter the city of Babylon.

\***KNOWLEDGE IN THE NT.** The idea of knowledge is expressed by the noun γνώσις and the more frequently used verbs γινώσκω and οἶδα. Virtually synonymous (Mark 4:13; cf. Mark 15:10 and Matt. 27:18), these verbs can refer to such rudimentary concepts as the acquiring of information and the ascertaining of facts (Mark 10:42; Matt. 20:25; Acts 19:35). The OT idea of personal involvement in knowledge forms the background of the NT concept, illustrated by the use of "to know" for sexual intercourse in Matt. 1:25; Luke 1:34 (Gr.). The NT also echoes the OT understanding of the intimate relationship between God and his people (II Tim. 2:19; John 10:14), grounded in the priority of God's knowledge (cf. Jer. 1:5 and Gal. 1:15). God knows the needs of his people before they ask (Matt. 6:8, 32; Luke 12:30).

The NT is also influenced by concepts of knowledge current in the Hellenistic environment; by means of mediators and "divine men" (see DIVINE

MAN[S]), secrets and mysteries are conveyed from the distant deity to chosen recipients. Thus Jesus, displaying supernatural knowledge (Matt. 9:4; Luke 5:22), is sometimes described as a dispenser of cryptic teachings (Matt. 10:26-27; 13:11; Luke 8:10). In later christological reflection, Christ himself is viewed as the embodiment of the divine mystery (Col. 2:3). Texts like these have led many interpreters to conclude that NT writers have used Gnostic expressions (see GNOSTICISM[S] §1) to communicate Christian concepts and to do battle with "what is falsely called knowledge" (I Tim. 6:20). In contrast to Gnosticism, the NT stresses God's acts of revelation in history culminating in Jesus Christ (Heb. 1:1-2). In response to him, Christians can confess, "I know whom I have believed" (II Tim. 1:12; cf. Acts 2:36).

Paul frequently uses verbs of knowing and employs the noun γνῶσις twice as often as the rest of the NT. Like the OT writers, Paul stresses the priority of God's self-disclosing action. God foreknows his people (Rom. 11:2; 8:29) and makes known to them "the riches of his glory" (Rom. 9:23). Thus, the knowledge of God is granted on the basis of a relationship which God creates (Gal. 4:9; I Cor. 8:3). God's will is made known in the law (Rom. 2:18) and possibly in nature (Rom. 2:14). According to Rom. 1:19-21, the knowledge of God has been shown to the Gentiles in the things which he has made. Elsewhere Paul insists that the heathen "do not know God" (I Thess. 4:5; cf. Gal. 4:8). What is revealed in the creative acts of God is "his invisible nature, . . . his eternal power and deity" (Rom. 1:20). Proof of the Gentile failure to appropriate this revelation is seen in their devotion to visible and powerless idols. Though they are able to know of God's transcendence, they do not acknowledge him as God (Rom. 1:21).

The frequency of the term γνῶσις within the Corinthian correspondence (fourteen times) is explained by Paul's opposing the false understanding of knowledge advocated by sponsors of a type of incipient Gnosticism (I CORINTHIANS). The knowledge which they claim "puffs up" (I Cor. 8:1), and they express pride in a charismatic gift of knowledge (12:8; 1:5). In I Cor. 2:6-16, Paul borrows their language to refute them, claiming that he imparts wisdom to the mature, and that the gift of the Spirit makes known the "depths of God" (vs. 10). For Paul, the "secret and hidden wisdom of God" (vs. 7) is embodied in God's redemptive plan and revealed in history in the crucifixion (vs. 8); and consequently the wisdom of his opponents does not impart the knowledge of God. See WISDOM IN THE NT[S]; FOLLY[S].

Although he never uses the noun γνῶσις, the author of the Fourth Gospel employs verbs meaning "to know" more often than any other NT writer. He stresses that Jesus is the one who reveals God (cf. 1:18). Like the Hellenistic "divine man," Jesus performs signs and wonders (3:2) and displays his omniscience (1:48; 2:25; 16:30). He can serve as revealer since he has come from above (3:31; 6:38, 41, 50). Because he has been sent by God (3:17, 34; 5:36), Jesus knows God (8:55; 17:25) and enjoys a special relationship with him

(10:15). "If you knew me," he says, "you would know my Father also" (8:19; 14:31). John uses the metaphor of seeing to express the idea of knowing (cf. 6:46 and 17:24). In ch. 9, Jesus is presented as the light of the world who gives sight to the blind, so that "those who do not see may see, and that those who see may become blind" (vs. 39). Authentic sight, like true knowledge, is seeing with the eyes of faith (20:29). Although he uses Gnostic motifs, John affirms historical revelation. The glory of the Logos is disclosed in the flesh (1:14), and the hour of his glory is the hour of his death (12:27, 33). Faith in Jesus leads to knowledge and knowledge leads to life (10:38). "And this is eternal life, that they know thee the only true God, and Jesus Christ whom thou hast sent" (17:3). This knowledge provides not a way of escape but a responsible life of obedience (13:17) to the command of love (13:34-35). See also JOHN, GOSPEL OF and JOHN, GOSPEL OF[S] §3.

\*KUE. Eastern Cilicia was known to the Neo-Assyrians as *Quae* or *Que*, to the Hebrews and Arameans as קִיָּק, and to the Neo-Babylonians as *Hume* (pronounced *Huwe*). But its native population called it for its central city, Adana (which still bears that name): *Adanawa* in hieroglyphic Hittite; עִדָּן, "the Plain of Adana" in Phoenician; the ethnic designation of its inhabitants was, in Phoenician, דַּנְנִים, "Danunians." This, and much other information about the country, was learned from the long bilingual (in Phoenician and hieroglyphic Hittite) which was discovered in 1945-47 at Karatepe and which belongs to the ninth or eighth century B.C. The inscription sheds much light on the social and political life of a typical half-Semitic Neo-Hittite state on the confines of Syria (see HITTITES[S] §2 and map), and particularly on the Canaanite religion of its inhabitants.

\***LACHISH. 1. Recent excavations.** Explorations at Lachish (Tell ed-Duweir) in 1966 and 1968 have added considerably to our understanding of the Hebrew cultus during and after the period of the monarchy.

**a. The Jewish temple.** Archaeologists returned to Lachish primarily to study the stratification of a structure which Starkey had interpreted to be a "Solar Shrine." Recent excavation at Tell 'Arad had uncovered an Israelite temple of the monarchial period, and its similarity in architecture to the "Solar Shrine" prompted further investigation (see **TEMPLES, SEMITIC[S]** §2). Expeditions sponsored jointly by Tel Aviv University and the University of North Carolina, and directed by Y. Aharoni, restricted operations to the shrine and its immediate environs.

The structure consists of two main rooms and a court, corresponding to those in the Arad temple, as well as to biblical descriptions of Solomon's temple and the tabernacle in the wilderness. It now seems certain that the structure is to be interpreted as a Jewish temple dating ca. 200 B.C. Further excavation beneath the court and in the area adjacent to the temple walls revealed a Late Bronze level (stratum VI) as well as four Iron Age levels (strata V-II) and postexilic levels.

**b. The Israelite sanctuary.** Beneath the temple a steeply inclined street extended in an E-W direction, on either side of which were rooms and industrial installations.

The street came to an end at a terrace which was constructed ca. 900 (stratum IV) and on which were erected the buildings of the acropolis. The terrace partially overlaid a sanctuary (stratum V) — a rectangular room of about ten by sixteen feet with a rich assemblage of cultic vessels of the tenth century including a horned stone altar, four incense burners, chalices, lamps, offering bowls, etc., but no figurine or other artifact that would negate the conclusion that it was a place of Yahwistic worship.

**c. The high place (bamah).** Just SE of the sanctuary and partially covered by the Holy of Holies of the Jewish temple a raised platform was discovered which, in view of the sacred nature of

the place, is interpreted to be a *bamah* (see **HIGH PLACE**). Just S of the Holy of Holies, there is a large stone standing upright and held in place by three smaller stones fixed against its base. It was set into the debris of stratum VI only four inches below the floor level of stratum V. Thus this massive stone remained standing throughout strata IV and III. Clearly it is a *massebah* (see **PILLAR** §3 and **PILLAR[S]**). Directly in front of it there was a rounded heap of black ashes, the charred remains of a tree trunk. Possibly archaeology has at long last discovered the remains of an **ASHERAH**. Perhaps it was this *bamah* which occasioned Micah's bitter indictment of Lachish as "the beginning of sin to the daughter of Zion" (1:13).

**d. The temple of the Persian period.** Excavations resumed at Lachish in 1973. There is strong evidence of another temple situated ca. 44 yards SE of the Jewish temple. Pottery finds, including an incense stand, indicate that the structure belongs to the Persian period, and was abandoned at about the same time the Jewish temple was built. Exploration continues in this area as well as in the general area between the "Governor's Palace" and the gate.

**2. Conclusions.** The discovery of four places of worship within so severely restricted an area, spanning at least nine hundred years, is unprecedented. Clearly there was an ancient tradition of a sacred area at Lachish. It must now be assumed that during the period of the united monarchy the Solomonic temple was by no means the only Israelite temple in the land.

**LA'IR** lä'ir [לעיר]. It has been suspected that the awkward לעיר in Isa. 37:13 (=II Kings 19:13) does not mean "of the city" but represents a toponym. It was proposed, as early as 1912, to identify לעיר with Laḥiru, a city on the upper Diyāla River. This assumption is confirmed by Aramaic letters of the fifth century, in which (no. VI, line 1) Laḥiru is spelled לער. Laḥiru was annexed to Assyria by Sargon II in 712 B.C. Understanding לעיר as a place name requires the restoration of <לעיר> between it and ספרוים. See **SEPHARVAIM[S]**.

\***LAODICEA.** Despite the historical importance of Laodicea, its attractive ruins remained completely unexcavated until 1961-63. During the excavations an elaborately ornamented nymphaeum (public fountain) was uncovered on one corner of a paved intersection of the city's streets near the center of the flat-topped mound. At first, discovery of a fairly complete, colossal statue representing the

goddess Isis or one of her priestesses led to the supposition that the building was a sanctuary of Isis, but the structure's true character through its various phases of use and alteration between the third and fifth centuries A.D. soon became apparent. See Fig. Ll.

Laodicea Excavations, Université Laval, Quebec

1. Statue of Isis, from the nymphaeum at Laodicea

In the mid-fourth century when Laodicea was the foremost bishopric of PHRYGIA, the nymphaeum was laid out with façades facing N and W, each with marble-lined semicircular niches serving as fountains to one side, and sharing a large rectangular basin between. The basin was faced with a marble parapet ornamented with scenes of Theseus and the Minotaur, ZEUS and Ganymede. Behind the basin rose a high colonnade framing statues of Roman officials. Probably as the result of an earthquake in the late fifth century the entire city of Laodicea including the nymphaeum was heavily damaged.

Subsequently the basin was filled in with debris (including the statue of Isis), and walls were erected over the basin's parapets to create an elevated and enclosed room entered by a stairway and door on the N. Crosses carved on various blocks suggest that the new construction was used by the Christians of the city whose earliest converts had met in the house of NYMPHA (Col. 4: 15). The niches to either side of the former basin, although altered, continued to serve as public fountains, now decorated with at least two stone plaques carved with simple, modified motifs of Christian symbolism: a vase and the monogram of Christ.

In relation to the newly discovered nymphaeum the much older study of the high-pressure stone pipeline and aqueduct at Laodicea takes on new importance. This Roman Imperial feat of engineering transported water over five miles from springs near the well-watered Turkish city of Denizli on the S to a distribution tower prominent among Laodicea's ruins. From here the water would have been apportioned to the luxurious thermae (baths) and nymphaea of the city. NNE of Laodicea the white mineral cascades of the hot springs and modern bathing resort at Pamukkale, ancient HIERAPOLIS, are visible.

The OL versions date back to the period of Christian origins; for the NT, the earliest examples can be safely dated to the century that followed the creation of the Greek text.

1. **The Old Latin Bible. a. Origins: the African text.** For some centuries, Greek was the written language of western Christianity—from Mark's Gospel and the Letter to the Romans through Clement of Rome, Hermas, Irenaeus, and Hippolytus. Whatever may have been the Oriental element in the membership of Christian communities (e.g., slaves), it is clear that the Latin language maintained a certain position, though, for some time simply as a spoken language. If written documents did exist, they were not considered worth preserving. Latin Christian literature really began in Africa with Tertullian, who wrote between A.D. 197 and 222. Numerous scriptural quotations are found in his writings, but they are based on the Greek text, and cannot stem from any well-defined Latin version, whether such a version already existed or not. The situation changed, however, with Cyprian, bishop of Carthage. His quotations, more than 1500 in number (representing 950 different texts), are taken from a well-established Latin text, substantially identical with that found in later MSS, e.g., k (Bobbiensis) for the gospels, and Vulg. for Wisdom of Solomon and Ecclesiasticus. This version, which first appears at Carthage, is commonly called African. The name is not intended to define the area where it originated or circulated or the provincial character of its language. It certainly did not originate with Cyprian; his use of it is already marked by certain retouching. Different translators were responsible for the various biblical books, but there are certain common characteristics. First, the Greek text they translated represents the Western textual tradition—which, with its many glosses and harmonizations, is a good example of a text that circulated in cultural milieus free from rigid controls. It could still, however, preserve valuable readings, by virtue of the fact that it had not passed through the sieve of the Alexandrine philologists. This same textual tradition also finds support in the Syriac versions, and in certain ancient or very popular citations by Greek writers (see TEXT, NT §E5d and TEXT, NT[S]). For the OT, Lucian's LXX recension has preserved something of this ancient tradition (see SEPTUAGINT[S] §B). Second, the translation is marked more by respect for the letter than by intelligent freedom, and uses popular and distinctive vocabulary. Some scholars have sought to identify in this version traces of a Latin text of Marcion or of Tatian's Diatessaron—as if a heretical initiative underlay the church's version. All in all, their arguments cannot stand up under searching criticism. Finally, any attempt to discover vestiges of Jewish pre-Christian Latin versions, made on an analogy with the LXX, must fail for total lack of evidence.

b. **European recensions.** As early as the time of Cyprian, Novatian preserves citations where the

vocabulary is less markedly African. The evidence, first by way of citations and later of MSS, increases, till, by the latter part of the fourth century, we are faced with a great variety of versions. Such a situation is understandable in view of the rapid evolution of Christian communities, on both the social and the literary levels; and, since knowledge of Greek was widespread, everyone was tempted to make his own improvements in the Latin text. These versions are commonly called European. Augustine, it is true, once used the expression *Itala*, but this term can scarcely be understood as referring to a well-defined type, or be applied as a geographical description to recensions found in Rome, Milan, or Spain. In fact, so numerous are the variants that many think we are dealing with two or three independent versions, especially since common traits can be explained by reference to the same basic Greek text. However, from one book to the next, residual "Africanisms" are too numerous to be satisfactorily explained merely by accidental contacts. A more balanced explanation would take into account the prior existence of a Christian vocabulary with local variations, and of traditions engendered by viva-voce liturgical translation. Hence, when an "African" text came into being in a given locality, it was soon adopted everywhere, with necessary adaptation to local usages. During the period prior to the appearance of the first witnesses which have been preserved, constant use entailed further development. The resultant pluralism thus seems normal. However, ill-regulated attempts at emendation only produced further textual corruption and the net result was confusion. By the end of the fourth century the situation had become intolerable.

c. **Critical editions.** P. Sabatier edited in three large folio volumes the principal textual material known in his time: *Bibliorum sacrorum latinae versiones antiquae seu Vetus Itala* (Reims, 1745-49)—a work still indispensable. It is impossible to list here the editions of individual MSS that gradually came to light, or the monographs devoted to individual patristic sources. A. Jülicher (and, after his death, W. Matzkow and K. Aland) edited a collection of the OL MSS of the gospels in *Itala* (Berlin, 1938-72). However, citations are not included, and the classification adopted is problematic and needs further critical study. B. Fischer, assisted by W. Thiele, H. J. Frede, and the editorial staff at Beuron, undertook the monumental task of preparing a rigorously critical edition of the whole corpus of material, in *Vetus Latina* (Freiburg, 1949—). Vol. I contains a list of sigla, which can be kept up-to-date through loose-leaf insertions. Vols. 2, 24, and 26/1 (Genesis, Ephesians, Philippians, Colossians, Catholic Epistles, 1949-71) have been published. Vols. 7/2, 11, and 25/1 (Judith, Wisdom of Solomon, Ecclesiasticus, and Thessalonians through Hebrews) are in preparation. The work so far accomplished has set the problems of the Latin Bible in much sharper focus than heretofore and has completely revised the techniques employed in earlier scholarly editions. Considerable effort by way of initiation is demanded of the reader, but he or she will be repaid a hundredfold. Besides these general edi-

tions, a few specialized collections deserve mention: *Old-Latin Biblical Texts* (7 vols.; Oxford, 1885-1923); *Collectanea Biblica Latina* (14 vols.; Rome, 1912-72); *Aus der Geschichte der lateinischen Bibel* (8 vols.; Freiburg, 1957-74). The *Bulletin de la Bible latine*, an appendix to the *Revue Bénédictine*, contains a survey of current bibliography by M. Bogaert.

**d. The character of OT MSS.** The OL MSS that have come down to us are frequently mutilated, and not very numerous, since the success of the Vulg. tended to eliminate them. At best they represent only certain books. There exists one copy of the Heptateuch. Apart from that, and setting aside palimpsests and papyri, the OT is represented principally by Psalters, with collections of canticles appended—for local recensions continued in use in the liturgy. Frequently the OL version of OT books or parts is to be found tucked away in MSS predominantly Vulg. in character. Often enough OL texts were preserved after the fashion of relics, since people believed they had been written by, or had belonged to, some saint. This is particularly true of the OL gospels, which are somewhat more familiar to the biblical scholar, for they are frequently cited in critical editions of the Greek NT, or in specialized studies involving textual criticism. We shall now enumerate the chief witnesses to the European text, grouping them by "families" rather than listing them by sigla in alphabetical order.

Palatinus (e, fifth century) has a text recognizably African in character, but behind it lies a long history, marked by corrections not always well understood. Colbertinus (c), though very late (twelfth century), also preserves an African base, especially in Luke; but this is overlaid by borrowings both from the European text and from the Vulg. A group of MSS, principally a (Vercellensis, fourth century), n (Sangallensis, fifth century), and s (Ambrosianus, 0.210 sup., fifth century), include a number of "Africanisms" in their text, which is related to that of Novatian, and, for John, to that of Lucifer of Cagliari. Another group, however, b (Veronensis, fifth century), ff<sub>2</sub> (Corbeiensis, fifth century), and i (Vindobonensis, fifth century), is the best representative of the text current in Italy in 350-80. This is the text of Ambrose and Ambrosiaster, and, for Luke, of Lucifer of Cagliari. It also lay behind Jerome's Vulg. The Hiberno-Gallican text, used, e.g., by Hilary of Poitiers, has come down to us in h (Claromontanus, fifth century), r (Usserianus, ca. 600, from Ireland), and g (Sangermanensis, ninth century—example of a fine Vulg. text blended with an OL tradition, especially in Matthew). Finally, moving farther E, there is q (Monacensis, seventh century) from Illyria or Pannonia, containing the text used ca. 400 by the Latin Arians.

Mention must also be made of the well-known bilingual Codex Bezae (fifth century). The Greek part is virtually the only surviving representative of the Western text. The Latin (d) has been carefully edited to conform closely to the Greek, but without entirely eliminating earlier OL readings. Codex Bezae covers not only the gospels, but also Acts. The latter is also found in another bilingual MS, e (Laudianus, sixth century), known

to St. Bede. The Latin text here is closer to the Vulg., but it, too, is artificial and made to conform to the Greek. For Acts, Revelation, and Catholic Epistles, we have the palimpsest fragments of Fleury (h, fifth century)—an African text, slightly revised. The remarkable Gigas (g, thirteenth century), a massive Bohemian Vulg. Bible, contains Acts and Revelation in a version reminiscent of that used by Lucifer of Cagliari ca. 350.

For the Pauline corpus, there are especially the great bilingual uncials, of which Claromontanus (d, fifth century) is the best example. The Greek part is a noteworthy witness to the Western text. The Latin derives from a very ancient version that has been adapted to the facing Greek. Its primitive form, however, can be reconstituted by reference to Lucifer of Cagliari's citations, and to a MS from Budapest, recently discovered and published.

The OL Psalters are designated by minuscule Greek characters. We shall not attempt an enumeration, but simply single out for mention the bilingual MS of Verona, with Greek text written in Latin characters (fifth or sixth century). These Psalters were conveniently published by R. Weber, together with the old Roman Psalter, in *Psautier Romain* (Rome, 1953).

**e. Significance of the OL tradition.** All these MSS clearly tell us something about the period when they were written and used, but, in general, the text they reproduce is older. The Greek text to which they bear witness can be dated to the second century, if, that is, they have preserved the primitive version, or if the changes they have undergone are due to liturgical usage, not to comparison with another Greek prototype. Hence, use of their readings for textual criticism presupposes the following: knowledge of the history of the Latin Bible; utilization of the entire evidence, including patristic citations; and a grasp of the significance of "clusters" formed by agreement among the authorities. A hundred testimonies drawn from one and the same widely circulated version do not have the same weight as a single witness taken, for example, from a palimpsest which represents an archaic version. Patristic citations, moreover, are often made with a freedom that seems capricious. However, in some cases, e.g., the *Speculum de Divinis Scripturis* of Pseudo-Augustine, quotations are taken with great accuracy from a written Bible. Finally, the specialist who knows the characteristics of each author and is trained to make the best use of citations will frequently uncover genuine elements of tradition underlying free quotations from memory. One conclusion clarifies another, and so the history of the text bears a certain consistency, however freely it may have been used.

Linguistic and literary factors played a large part in this evolution of the Latin text. Another factor was the authority of the Greek text that was adopted, not without good reason, by the philologists and the churches of the East. The great Greek uncials, which have survived precisely because they were rightly acknowledged as valid witnesses, give us a good idea of the textual standard attained by fourth-century culture. Church leaders in the West could hardly escape the in-

fluence of this standard. In fact their literary education led them to correct the popular versions, which found more favor in other social strata. Hence, there arose, almost spontaneously, a process of fermentation, marked by a quest for readings at once more literary, more intelligible, more uniform, and more faithful to the Greek—qualities difficult to bring together. The *Vetus Latina* of Beuron—not without some occasional over-simplification—has marshalled all these revisions under two or three major heads, and so isolated the various trends at work. Finally, the Vulg. appeared. It gained acceptance on its own merits, for it responded well to the bulk of these tendencies.

## 2. Jerome and the Vulg. a. Terminology.

Originally the term "vulgata" designated simply the most widely-circulated text. Jerome never used it to describe his own work. He used it, first, to refer to the common Greek text as opposed to Origen's critical edition (the Hexaplaric text, i.e., his recension of the LXX collated with the Hebrew, part of a monumental synopsis in six columns of all known witnesses to the text). Secondly, he used the term to denote the Latin version current in his time. This version he was always inclined to disparage, contrasting its material dissemination with its poor intrinsic value. It was an irony of fate that led to the "vulgarizing," or broad dissemination (with consequent corruption), of his own version, which in turn became the butt of criticism from those who clamored for yet another revision. One good aspect of this subsequent "vulgarizing" was that biblical books never translated by Jerome himself were inserted into the corpus of his translations.

**b. Jerome's career.** Jerome (Hieronymus) is the prince of translators (see also INTERPRETATION, HISTORY OF[S] §G1). Born ca. 347 and blessed with an exceptional literary education, he became proficient in Greek and learned Hebrew during his stay at Antioch (374-80). Both then and later he had the opportunity of listening to teachers from the best exegetical schools of the East: Apollinaris of Laodicea, Gregory of Nazianus, Didymus the Blind, and various rabbis. On his return to Rome he soon became the oracle of a pious circle of aristocratic ladies, who both sponsored him financially and encouraged him in his work. He spent the last part of his life (385-420) in Palestine, in direct contact with the Holy Land, and within reach of the excellent library established at Caesarea by Origen and Eusebius. His creative work, it is true, is not very original—yet, in the course of history, few Western scholars have had his opportunity of imbibing at the sources of the Greek and Semitic East with the same curiosity, the same ample documentation, and the same enthusiasm. However, one must admit that this enthusiasm produced more solid results when curbed by the demands of public good, as in his biblical translations, than when given free rein in literary and polemical pursuits.

The authority of the Vulg. has sometimes been explained in terms of a direct commission from Pope Damasus. This would have established it from the first as the official version of the Roman Church. This opinion takes too seriously the ded-

icatory letter, *Novum opus*, that accompanied the revised version of the gospels (385). In it Jerome certainly credits the Pope with the initiative for the work. Yet even if Damasus effectively sheltered the enterprise against criticism, it is nowhere stated that he did so in his official capacity. In any event, his commission would only have applied to the gospels. One other book, the Psalter, was revised (according to the Greek) before the death of Damasus. This version has been lost, there being no grounds for identifying it with the Roman Psalter, long used in Italy and England, but now only in St. Peter's Basilica in Rome. Its disappearance would be inexplicable if it had been officially adopted by the Pope. Subsequently Jerome's relations with Pope Siricius and the Roman clergy so deteriorated that he resolved to quit Rome and settle down at Bethlehem. There could no longer be any question of completing a commissioned work. It was according to his own ideas that Jerome set about revising the OT on the basis of the Hexaplaric Greek text, which he found at Caesarea. Such an undertaking was calculated to meet with complete approval from men like Rufinus of Aquileia or Augustine. They wished, in effect, to eliminate the corruptions that disfigured the Latin MSS and be guided by the best available Greek text, yet without any radical departure from a usage traditional in the churches since the apostles' time. Of this revision according to the Hexapla, we possess the Psalter, later named Gallican, after Charlemagne adopted it for the liturgy of the Frankish Empire. Previously it had circulated widely in Ireland. Its subsequent acceptance by the Franciscans ensured its use in the whole Western church until the time of Pope Pius XII. Job, Song of Songs, and many quotations of Proverbs have also survived, for the wisdom books were accepted as almost definitive for church usage. Jerome claims (*Epistulae*, CXXXIV) that he corrected the whole Latin Bible by the Hexapla, and complained that the work was "stolen"; however that may be, he does not seem to have regretted the loss.

In the years 389-90, after touring Palestine, he compiled, in imitation of Philo, Origen, and Eusebius, two learned compositions, lists of proper names of persons and places. This led him to a new and more concrete type of interpretation. He undertook a careful investigation of the different Greek versions in the Hexapla, and went on to compose his *Quaestiones Hebraicae*. No sooner had he completed revising the book of Genesis than he decided to abandon the Greek Hexaplaric text in favor of the Hebrew, as clarified by Aquila, Symmachus, and Theodotion. Toward 391 he published his version of the Prophets, a very literal translation of a difficult original. There followed, before 395, Samuel and Kings, in a more flexible rendition, and the *Psalterium juxta Hebraeos*. Job, with Ezra-Nehemiah, appeared in 394, and, two years later, Chronicles. However, Jerome's recourse to the original Hebrew (the *Hebraica veritas*) was far from meeting with an enthusiastic welcome. The Origenist controversy, which was to distract Jerome's attention for some time, was not without some bearing on the new Bible. An incomplete Greek version of it by Sophronius met with no

success. In 398 Jerome translated the three books of Solomon—in eight days, so he claimed. The Octateuch, begun the same year, was completed only in 405, at the same time as Esther. Meanwhile, at the request of his friends, Jerome had translated, in somewhat offhand fashion, two of the Apocryphal (deuterocanonical) books, Tobit and Judith.

**c. Other translators.** It is now generally admitted that the revision of the Epistles, Acts, and Revelation is not the work of Jerome. However, the guiding principles of this revision are the same as those laid down by Jerome in his preface to the revised gospels. The difference is that these principles are now applied much more methodically, without erratic stylistic changes. The author appears to be Rufinus the Syrian, a disciple of Jerome at Bethlehem, who returned to Rome a little before 400. The work was completed in Rome ca. 405. It was possibly begun around 386 under the direction of Jerome, for, beginning at this time, he has quotations from the Catholic Epistles that herald the Vulg. text. It may be that Jerome began the work himself, then relinquished it in favor of his translation from the Hebrew, and finally entrusted its completion, more or less explicitly, to one of his disciples.

**d. Jerome and the canon.** By his choice of the *hebraica veritas*, Jerome excluded from his biblical canon the Apoc. (deuterocanonical books) of the OT. However, they were soon introduced and appear in all the MSS. The only exception is Baruch, which, in four different forms, passed imperceptibly into a few MSS in isolated sectors of the church; the definitive text arose only ca. 800, in the Bibles of Theodulf of Orléans. Wisdom of Solomon and Ecclesiasticus obviously follow the OL African text as a basis, with a few additions modeled on the Greek, and many more accidental changes. Maccabees, on the other hand, is clearly an anonymous revision.

**e. Critical and literary value.** The critical value of the Vulg. and also its literary quality thus vary considerably from one book to another, and even within the same book. It has been remarked that in the course of the same book, e.g., Genesis, Jerome showed greater respect for the OL in the case of oracles, prayers, and formulas already consecrated by the liturgy or by popular Christian piety. This left him more elbowroom, so to speak, in rendering the narratives. Thus the Vulg. cannot serve as a source book for a course on linguistic evolution or on the development of religious belief before or after the Babylonian exile. It is not a rigorously scientific tool for the study of the original text. Its true historical importance lies elsewhere. It made use of the best available Greek text and of a Hebrew text almost identical with the MT, but five centuries older. Jerome's rabbinic education did not deprive him of a Christian perspective on the unity of the two testaments. Since, moreover, the Vulg. Bible had been completed by the translation of some books from the LXX, and since it became familiar to medieval readers in the context of the liturgical year, with many elements (e.g., anthems, responsories, and commentaries) inspired by the OL, it underwent a certain adaptation and synthesis. Its literary

quality—restrained by respect for the language of the OL, marked by numerous Semitisms, and refined by constant use, sacred and secular—unquestionably served to open up the Bible to the Western world and to make it the most influential of books.

**3. History of the Vulg. in the church. a. Earliest times.** Jerome used his new version as the basis for his learned commentaries, side-by-side with a version made from the Greek. He himself, however, habitually quoted from the OL, and so did his friend Chromatius of Aquileia, to whom he dedicated several of his translations, and so too, as is evident, did Rufinus. Augustine followed the same practice, at least for books translated from the Hebrew; while for the gospels and the Hexaplaric revision of the Psalms he readily used Jerome's work. At Rome, Pelagian circles were possibly the first to exploit the Vulg., not without some deliberate "improvements," i.e., retaining OL Italian readings which seemed as good as those of the Vulg. This kind of textual cross-influence took place in the years immediately following publication of the Vulg. It is, indeed, to be expected that mixed texts will arise once a new revision is presented to a public already familiar with an existing translation.

We still possess important fragments of a book of the gospels (Saint Gall MS 1395), which could have been written in Jerome's lifetime. There is some hope of supplying the missing portions, thanks to an early ninth-century copy made direct from the MS. Some 485 scribal errors have been counted—this represents a high degree of textual purity. Deserving of special attention are the marginal variants (apparently by the same hand as the text), frequently drawn from Jerome's commentaries. Here we see how, at a time when criticism was held in honor, texts could not be handed on without retouching.

**b. The centuries of the great MSS.** In the centuries that followed, sustained efforts to revise from the Greek seemed to have been exhausted, perhaps for want of capable translators. It is interesting to compare this with the situation in the Syrian Church, where such revision was in progress in the fifth century (NT Peshitta, to be attributed to Rabbula, despite some denials), and continued till the seventh (Philoxenian and Harclean revisions, and Syro-Hexaplar version). In the West, the fifth and sixth centuries seem to be characterized by an abundance of prologues and *capitula*, the remains of partial editions, which found their way into later Bibles. One example is well known. In 547, Victor, bishop of Capua, had a NT MS copied and corrected—a work today preserved at Fulda. In it he went to the trouble of collating a gospel harmony (*Diatessaron*) with the Vulg. text, rather than simply taking over Jerome's work. Cassiodorus (d. 570) mentions three complete Bibles: an OL copy in nine volumes, a large volume containing Jerome's Hexaplaric version, and a Vulg. in smaller format. The Vulg., however, made rapid progress. The oldest complete Vulg. Bible is the celebrated Amiatinus, copied at Jarrow in Northumbria by Abbot Ceolfrid (d. 716). Intended as a present for the Pope, it was taken to St. Peter's at Rome per-

haps in exchange for certain valuable Italian MSS, on which it had been modeled. Its text is of exceptional value, though of unequal merit, and less pure than the MSS of southern Gaul, where John Cassian and Eucherius were very early witnesses to the Vulg. After that, MSS multiplied; for details the reader should consult specialized works. With the eighth century, the art of illumination produced de luxe editions. Churches and monasteries spared no expense to honor God's Word and to dignify both worship and culture. At the beginning of the ninth century, strenuous effort was expended on textual criticism at Charlemagne's court, at Tours (Alcuin), Orléans (Theodulf), Corbie, and Saint Gall, with its bilingual MSS and pride in Greek learning. The most damaging variants, of course, were not those blunders that a careful reader could easily dispose of, but intelligent and untimely corrections, facile readings that are contagious. In Spain, and in the entourage of Theodulf or Rabanus Maurus, recourse was had to the rabbis. The best texts came from Italy, while, on the confines of the W, in Spain and Ireland, isolated traditions were maintained, usually more bizarre than pure, which occasionally returned to influence the center of Christendom. As early as the eighth century, the Latin text was glossed by versions in Anglo-Saxon, Irish, and German, a foreshadowing of the multiplication of glossed medieval versions of the Vulg., from Italian and Spanish to Scandinavian languages. Finally, brief mention must be made of the continued work of Cistercians, Franciscans, and Dominicans, and of the universities, in setting up a standard text and providing it with necessary aids, such as divisions, dictionaries, and concordances. The first book printed by Gutenberg (1456?) was the forty-line Mainz Bible.

For further information on the Peshitta and the Philoxenian and Harclean revisions, see SYRIAC VERSIONS[S] §2c, d, e.

c. *The rise of humanism.* The rise of humanism, and the literary studies that accompanied it, together with renewed access to the original texts, followed by the crisis of the Reformation—all this meant that the authority of the Vulg. soon came under attack. As early as 1440, Lorenzo Valla composed his *Annotationes in latinam Novi Testamenti interpretationem*, subsequently printed by Erasmus in 1505. New translations were made from the Greek, e.g., by Erasmus in 1516, and from the Hebrew, e.g., by Santes Pagnini (completed in 1518, printed in 1527), and by Cajetan (published 1530-32). On the Protestant side, versions from the Hebrew were made by Sebastian Münster (Zurich, 1539), Leo Jud (Zurich, 1543), and Sebastianus Castellio (Basel, 1551). Editions of the Vulg., corrected by the Hebrew, were published by Osiander (Nuremberg, 1522, 1527, 1529) and Pellicanus (Zurich, 1582); and, on the Catholic side, by J. Rudel (Cologne, 1527), A. Steuco (Venice, 1529), I. Clario (Venice, 1542), and others. Controversy followed. It was very likely the teaching of J. Driedo, in *De ecclesiasticis Scripturis* (Louvain, 1535), that formed the basis of the decree *Insuper* of the Council of Trent (April 8, 1546), in which—among all the Latin translations in circulation—the Vulg. was acknowledged as the

authentic version of the Catholic Church. This decree occasioned some surprise in Rome, where men were more accustomed to humanism and its criticism of the errors of the Vulg. The Council theologians, however, were trying to express their theological perspective of the authority of the church. The traditional Bible of the church, they argued, could not be in error as regards revealed truth—though obviously, as a version, it necessarily referred back to the original texts. A somewhat rigid interpretation of the Council's decree occasioned much pointless polemic. At the Council's request, the Popes set about preparing an official edition of the Vulg., an undertaking that entailed fifty years of meticulous work. The Sistine edition (1590), the work of Sixtus V, took little account of the MSS or of the learned commission that had consulted them. The Pope died soon after, and the edition was withdrawn, to be replaced by the Clementine Vulg. (1592, reprinted 1593 and 1598).

d. *Critical editions.* A critical edition of the NT was begun by J. Wordsworth, and continued by H. J. White and H. F. D. Sparks: *Novum Testamentum Domini nostri Jesu Christi latine secundum editionem S. Hieronymi* (Oxford, 1889-1954). A commission appointed by Pius X, and, later, the abbey of San Girolamo, established by Pius XI, undertook the *Biblia Sacra . . . ad codicum fidem* (Rome 1926—; fourteen volumes so far, up to Baruch). An *editio minor*, with critically revised text, has been published under the direction of R. Weber: *Biblia Sacra juxta vulgatam versionem* (Stuttgart, 2nd ed., 1975). A series of *concordantiae* has been invaluable for the study of the Vulg. A new concordance, based on the critical text and variants, will be published in connection with the Stuttgart Bible.

e. *Modern revisions of the Vulg.* In 1945 Pope Pius XII authorized for use a new version of the Psalter, prepared by the professors of the Biblical Institute under the direction of A. Bea. At the request of the Second Vatican Council, Paul VI commissioned a new version of the Vulg., corrected by the original texts, entitled *Neovulgata*. The first volume appeared in 1969. This version will be used henceforth in the Vatican's official Latin documents.

*Bibliography.* The most recent scholarly studies, with ample bibliog., are those of B. Fischer, H. Frede, and M. Thiele, in *Die alten Übersetzungen des Neuen Testaments*, (1972); cf. also the introductions to the major eds. of the texts, esp. *Vetus Latina*. In Eng.: *The Cambridge History of the Bible*, vols. I-II (1969-70); H. W. Robinson, ed., *The Bible in its Ancient and English Versions* (1940); F. Kenyon, *Our Bible and the Ancient Manuscripts* (2nd ed., 1958); B. Smalley, *The Study of the Bible in the Middle Ages* (2nd ed., 1952). Some older works are still indispensable, e.g., for the Renaissance versions, F. Kaulen, *Geschichte der Vulgata* (1868), details need checking. J. GRIBOMONT

#### \*LAW IN THE OT.

1. The range of the law
2. Ancient law codes and biblical parallels
3. The origins of biblical law

- Bibliography

1. **The range of the law.** The laws written down in the OT do not encompass the full range of procedures, statutes, and regulations that governed ancient Israelite society. Narrative and other non-legal portions of the Bible reveal areas of legal life that are not in the laws, e.g., sale of children for debts of parents (II Kings 4:1; Isa. 50:1), ADOR-TION (I Chr. 2:34-36; Ps. 2:7 ["begotten"]; see Kraeling 8), division of spoil in warfare (I Sam. 30:23-26).

Comparison of OT law collections with similar materials, i.e., ancient Near Eastern laws, reveals additional gaps. The Bible, e.g., has no laws dealing with craftsmen, professions, or merchants. Some of these omissions can be explained by the observation that ancient Israelite society was not as developed as that of its neighbors.

But there are gaps and omission that cannot be explained in this way. To cite one example: a law governing the hire of a wet nurse is recorded in Eshnunna Laws 32, but it is omitted in the Hammurabi Laws. (For law codes cited in this article, see *ANET* [2nd ed.] and supplement.) There can be no question as to the use of wet nurses in Hammurabi's society, since §194 of his laws regulates the case of a wet nurse who concealed the death of the infant from his parents—a case which, in turn, is not covered by the Eshnunna Laws. Wet-nurse laws are totally absent in the OT (and in the Hittite Laws), but there can be no doubt as to the use of wet nurses in ancient Israel (cf. e.g., Gen. 24:59; Exod. 2:7; II Kings 11:2). There doubtlessly existed customs and regulations regarding her fees and responsibilities; but these laws, along with so many others, have simply not been preserved among the extant OT laws.

The study of Israelite law lacks the resources of private records which could reveal the everyday practice of law in ancient Israelite society. These documents exist in Mesopotamia, and they have shown that there are many areas of legal life that the extant laws do not discuss.

A hint of what data could be forthcoming is seen, e.g., from comparing the references to "the sealed deed of purchase, . . . and the open copy" in Jer. 32:11 with the bills of sale found among the Dead Sea Scrolls; cf. Hos. 2:2 [H 4] with the marriage formula, "She is my wife and I am her husband from this day and forever," found in the Jewish Aramaic papyri from Elephantine; and the possibility of DIVORCE proceedings initiated by women (Cowley 15; Kraeling 2, 7, 14). In sum, the field of Israelite law is much broader domain than the areas discussed by the biblical laws; the

laws of ancient Israel included many more concepts and categories than the OT actually records. The Pentateuchal compositions are collections of laws and not codes; comprehensive codes in the modern sense simply did not exist in the ancient Near Eastern world.

2. **Ancient law codes and biblical parallels.** Many scholars have regarded the written Pentateuchal laws as expressions of sterility, rigidity, and decline in religious idealism in Israelite society. They believe that ancient Israel took a false turn when it began to concretize its sense of religious affinity with God into specific, prescribed written forms. The discovery of the laws of Hammurabi and similar collections with parallels to Israelite traditions brought scholars to the recognition that fixed written laws played a more vital part in ancient Semitic societies than was formerly imagined. See LAW IN THE OT §B; HMMURABI.

In many instances, the laws are so close that the offenses and penalties are described in identical fashion. This is so in laws about false witness (Exod. 23:1-3; Deut. 19:16-20; Hammurabi Laws 1, 3, 4), kidnaping (Exod. 21:16; Hammurabi Laws 14), loss of deposited animals (Exod. 22:10-13 [H 9-12]; Hammurabi Laws 266-67), the responsibility for borrowed animals (Exod. 22:14-15 [H 13-14]; Hittite Laws 75), an ox goring another ox (Exod. 21:35-36; Eshnunna Laws 53).

Identical or near-identical formulations are also found in cases of sexual relations with a stepmother in the lifetime of the father (Lev. 18:8; 20:11; Deut. 27:20; Hittite Laws 190), sexual relations with a stepmother after the father's death (I Kings 2:13-22; Hittite Laws 190; Hammurabi Laws 158), sexual relations with a daughter-in-law (Lev. 18:15; 20:12; Hammurabi Laws 155), sexual relations with one's mother (Lev. 18:7; Hammurabi Laws 157; Hittite Laws 189), sexual relations with a daughter or granddaughter (Lev. 18:10; Hammurabi Laws 154; Hittite Laws 189), sexual relations with two sisters (Lev. 18:18—the OT has no stated penalty—Hittite Laws 191-92), rape of a betrothed woman (Deut. 22:25-27; Eshnunna Laws 26; Hammurabi Laws 130; Hittite Laws 197), BESTIALITY (Lev. 18:23; 20:15; Deut. 27:21; Hittite Laws 187-88, 199), personal injuries (Exod. 21:23-25; Hammurabi Laws 196-97, 200), brawling men causing a miscarriage to a bystander (Exod. 21:22-23; Sumerian Laws; Hammurabi Laws 209, 210; Hittite Laws 17; Assyrian Laws A 21, 50-52), an ox goring a person (Exod. 21:28-32; Eshnunna Laws 54-55), sorcery (Exod. 22:18 [H 17]; Deut. 18:10-12; Hammurabi Laws 2; Assyrian Laws A 47), and the protection of the rights of a first wife whose husband marries another (Exod. 21:10; Lipit-Ishtar Laws 28).

There are other instances where the biblical laws and the ancient Near Eastern laws are close but not identical; the offensive act is universally condemned but the penalties or some other detail of handling may differ. This is so in cases involving debt SLAVERY (Exod. 21:2-11; Deut. 15:12-18; Hammurabi Laws 117), ADULTERY (Deut. 22:22-24; Ur-Nammu Laws 4; Hammurabi Laws 129; Hittite Laws 197-98; Assyrian Laws A 13-16, 22-23), setting a careless fire or letting one's animal graze in a

neighbor's field (Exod. 22:5-6 [H 4-5]; Hittite Laws 98-107), rape or seduction of an unmarried girl (Exod. 22:16-17 [H 15-16]; Deut. 22:28-29; Assyrian Laws A 55-56), murder (Exod. 21:12-14; Lev. 24:14, 21; Assyrian Laws A 10), striking one's parent (Exod. 21:15; Hammurabi Laws 195), sexual relations with a mother and daughter (Lev. 18:17; 20:14; Hittite Laws 191, 194, 200), a woman seizing a man's genitals in a fight (Deut. 25:11-12; Assyrian Laws A 8), sexual relations between males (Lev. 18:22; 20:13; Assyrian Laws A 19-20; *see* HOMOSEXUALITY[S]), and regulation of punishment of a debt slave (Exod. 21:20-21; Lev. 25:43, 53; Hammurabi Laws 115-16; Assyrian Laws A 44).

And finally, there are a number of cases where the biblical laws and the pagan laws both address the same problem. The common focus demonstrates a shared, underlying cultural background, but the respective legal treatments are different. This group includes illegal entry and theft (Exod. 22:1-4 [H 21:37-22:3]; Eshnunna Laws 12-13; Hammurabi Laws 21-22; Hittite Laws 57-70, 93-97), community responsibility for a slain murder victim (Deut. 21:1-9; Hittite Laws 6), the eating and use of fruit from a young tree (Lev. 19:23-25; Hammurabi Laws 60), a wife suspected of adultery (Num. 5:11-31; Ur-Nammu Laws 11; Hammurabi Laws 131-32; Assyrian Laws A 17), violation of a slave girl (Lev. 19:20-22; Ur-Nammu Laws 5; Eshnunna Laws 31), sale and redemption of a house (Lev. 25:29-34; Eshnunna Laws 39), return of lost articles or animals (Deut. 22:1-3; Hittite Laws 45), a female debt slave (Exod. 21:7-11; Hammurabi Laws 117; Assyrian Laws A 48), mixed seeding in the same field (Lev. 19:19; Deut. 22:9; Hittite Laws 166-67), and sexual relations with a sister-in-law plus LEVIRATE marriage (Lev. 18:16; 20:21; Ruth 4:4-11; Gen. 38:8; Deut. 25:5-10; Assyrian Laws A 30; Hittite Laws 193, 195).

**3. The origins of biblical law.** The similarity between the Israelite and pagan laws is remarkable and unexpected. The language in which the respective laws were formulated is at times so close that questions have arisen as to the originality and independence of the Israelite legal traditions. Many scholars argued that Israelite law was an outright borrowing from Mesopotamia. Others maintained that Abraham or the ethnic unit he represents brought this knowledge with him from Ur. But still other scholars, worried about how to explain the long interval between the patriarchs and the composition of the PENTATEUCH (*see* DOCUMENTS), posit a more gradual intermediate influence—the existence of a common Near Eastern legal tradition developing in Mesopotamia and spreading northward to Anatolia and westward to Syria and Palestine. They would see the Israelites learning this Near Eastern law from their more sophisticated Canaanite neighbors, after entering the Promised Land. This view has won widespread favor and remains the working hypothesis of many scholars today. But it must be remembered (1) that there is no evidence for Canaanite law of any kind; (2) the legal traditions of the ancient Near East, of which the OT is a part, were alive and functioning over a long period of time. Mesopotamian

laws of the Neo-Babylonian period have also been discovered (*see* ANET, pp. 197-98); these are not extensively preserved, but the existence of these later laws, as well as the continued scribal study of more ancient collections like the Hammurabi Laws in Chaldean times, makes it impossible to assign the Israelite-Mesopotamian connection to a particular point in time.

**4. The age of the Covenant Code.** It is widely assumed that the Covenant Code (*see* LAW IN THE OT §C3) belongs to the oldest part of Israelite history because it contains the greatest number of parallels to the pagan laws. This is only partly true. Out of twenty-seven cases cited above where similarities are present, twelve relate to the Covenant Code alone, another five have parallels with the Covenant Code and with another part of the Bible, but the remainder have no connection with the Covenant Code and find their correspondence in either Leviticus or Deuteronomy. Scholars have at times assigned parts of Deuteronomy to the Covenant Code, which have their parallels to the ancient Near Eastern laws: such similarities, they claim, are a characteristic of the Covenant Code. But this is circular reasoning. Scholars have also taken those parts of the Holiness Code (*see* LAW IN THE OT §D3) which have parallels with the ancient Near Eastern laws to represent the oldest materials in that collection—again using the argument that the parallels are proof of antiquity.

**5. The function of case law.** Most of the OT laws which have parallels in the ancient Near Eastern law collections are formulated in case or casuistic form (*see* LAW IN THE OT §C3): cf. e.g., "If a man strikes his father they shall cut off his hand" (Hammurabi Laws 195), and, "If a man steals an ox or a sheep and kills it or sells it, he shall pay five oxen for an ox, and four sheep for a sheep" (Exod. 22:1 [H 21:37]). It is said that casuistic laws are essentially secular and represent instruction for the day-to-day work of lawyers and judges. Recent research, however, has raised questions about the use and application of ancient Near Eastern law collections in their settings. In reading through thousands of ancient legal documents which are contemporary to these codes, it has been noted that the documents never refer to the codes and often differ from the regulations contained in them. Even the kings who published them take no special notice of them in their historical records. The repetition of similar laws in collections by succeeding rulers suggests that the codes were written not for judges or government officials but for literary purposes, in documents addressed to the gods or to some distant human posterity who will read the text and recognize how just and righteous the rulers have been.

The changing image of non-Israelite case law gives reason to re-examine the role of case law in ancient Israel. If it cannot be shown that casuistic law served judges or courts in the teeming centers of Babylonia, Assyria, and Asia Minor, then there is little reason to claim this function in ancient Israel. One must search anew to understand the purpose of writing down these laws in the Bible; one cannot simply assume that they belong to the

administration of justice in the monarchy or, indeed, any other period.

**6. The use of writing in law.** The Bible preserves historical memory of periods in Israelite history when writing was not yet an integral feature of legal life and procedure. Abraham purchased the cave of Machpelah without writing a document (Gen. 23:7-16). Symbolic gestures rather than writing were employed for the transfer of the levirate and the redeeming of property in Ruth 4:7-11. The use of written deeds is first encountered in the redemption and transfer of real estate in Jer. 32:9-14. Written documents were used for divorce in Deut. 24:3; Isa. 50:1; and Jer. 3:8; but this is not the ancient custom for, as late as the fifth century B.C., the Elephantine Papyri still preserve a ceremony of divorce accomplished by the recitation of oral formulas (see §1 above). It appears that the custom of writing legal documents came into widespread use during the monarchy, and probably only toward the end of that period (cf. further Isa. 8:16; Job 31:35). There is no reason to assume the need for law books prior to the emergence and use of writing in the general conduct and practice of legal affairs. The ancient Israelite judges apparently never came to rely upon written laws; when a judge was puzzled about the law, he was to seek the help of a higher official in the capital (Deut. 17:8-11).

**7. The Ten Commandments.** There are traditions in the Bible about laws first being inscribed upon stones; one finds this in connection with the Ten Commandments (Exod. 31:18; 32:15-19; 34:1-4, 28-29; Deut. 5:22; 10:1-5) and in connection with unspecified larger corpora (Deut. 27:4-8; Josh. 8:32). These traditions are reminiscent of the writing down of the Twelve Tables at Rome and the Laws of Gortyna in Crete. The purpose of these monumental records was not for the dissemination of the laws via written media but rather to preserve a fixed text, at least in one place, should dispute ever arise as to their wording and intent. At ancient Rome, the setting up of the Twelve Tables preceded the general use of writing by several centuries; as in ancient Israel, the conduct of legal affairs remained an oral matter. See also TEN COMMANDMENTS[S].

**8. The forms of the law.** Most ancient Near Eastern laws are presented in case or casuistic form (see §5), but most of the OT laws are not set in this form. They occur in the form of prohibitions, prescriptions, instructions, and commands—sometimes spoken in second person—enjoining or forbidding a certain activity most usually without stating a penalty, which is almost always present in casuistic laws. (For examples, see Exod. 21:13-17; 22:18-24 [H 17-23]; 23:6-19; Lev. 18:7-23; Deut. 27:15-26.) These "categorical" or "apodictic" legal statements (see LAW IN THE OT §C3) are not unknown in the ancient Near Eastern law codes. They occur in the Eshnunna Laws (10-11, 15-16, 51-52), the Hammurabi Laws (36, 38-40), the Assyrian Laws (A 40, 57-59), and in the Hittite Laws (48, 50-52, 54-56). Second-person statements are not found among these law collections, but they do commonly occur in ritual and magical manuals, where priests, diviners, or magi-

cal experts are told how to proceed with their tasks. Negative prohibitions are rarer in the non-Israelite literature, but excellent parallels to the biblical prohibitions have been found in the Hittite vassal treaties of the latter part of the second millennium B.C.

One cannot claim, as some scholars do, that these apodictic or declarative laws are uniquely Israelite in contrast to casuistic formulations. At the same time, however, it remains true that the Bible does use the former style to a much greater extent than found elsewhere. This use is probably best explained by a setting of oral address in situations where listeners are being informed and instructed. The Bible repeatedly utilizes the scenario of the priests reading the Law to Israel on special occasions (Deut. 31:9-13; Neh. 8:1-8; 13:1-3); the book of Deuteronomy is stylistically presented as the public address of Moses to the people; and the Decalogue, the Covenant Code, and indeed all of the laws are presented as materials for public address.

**9. Law and authority.** The Bible has preserved record of a number of authority groups: family, elders, tribes, kings, prophets, and priests, who had a claim to regulate the life of Israelites in some way. At the earliest level, there was family and tribe (§14 below; see also KINSHIP AND FAMILY[S] §8); subsequently, monarchy developed and, with the loss of political independence, disappeared (§§11-12). The family units persisted throughout Israelite history (cf. Ezra 2, 8), but tribal leadership dissolved soon after the monarchy was established. The elders also survived the transition from kinship to contiguity, and they continued to function throughout the centuries (Deut. 22:18; I Kings 21:8-14; Ruth 4:2-12) regardless of shifts in authority at the top of the social ladder (§14). Priestly authority seems to have been of little importance during the tribal phase (cf. Judg. 17, 18) but gained strength toward the end of the monarchy (§10), as the political fortunes of Judah sank, and especially after the Exile, when secular and religious power was given to them by the Persian kings (see AARON, AARONIDES[S] §2). The prophets seem to have flourished during the monarchy (§13); and while there is occasional mention of prophets earlier—Moses and Abraham are called prophets (Gen. 20:7; Deut. 18:18; 34:10)—the galaxy of prophetic heroes is most visible during the period between Saul and Zerubbabel. Prophecy seems to come to an abrupt end in the days of the second temple; its disappearance may be linked to the firm establishment of priestly authority and the Law in Israel. The power of the prophet to communicate with heaven was no longer needed and indeed was felt to be disruptive, once the Law was established and fixed (cf. Deut. 13:1-5; 18:15-22).

**10. The law and the priesthood.** The oral character of the apodictic or declarative laws and the pronounced emphasis of the OT laws in general upon ritual and cultic matters are a result of the important role of the priesthood in developing the written Pentateuchal laws. It is for this reason that the term "Torah" (RSV "law," "instruction"), which is intimately associated with priestly

lore (e.g., Deut. 17:8-13; Jer. 18:18), comes to describe the Pentateuch as a whole (see TORAH[S]). The Bible's emphasis on religious rather than secular matters is a natural outgrowth of the priestly point of view and priestly desire to establish the public maintenance of the centralized cult. The Bible thus extensively addresses itself to the observance of festivals, expiations, sacrifices, tithes, benefices, questions of rank, hierarchy, and the like. One must not underestimate the historical role of the priests in shaping the Scriptures, for only after their participation is fully evaluated is it possible to look for the contributions of other authority groups. See PRIESTLY WRITERS[S].

**11. Law and kingship.** After the priesthood, the monarchy is the next most important source of authority and law. Monarchs are certainly the most active agents for the promulgation of law in the pagan cultures of Sumer, Babylonia, Asia Minor, and Rome, as well as in early medieval Europe. The reforms of JOSIAH, and the probable connection of these reforms with the origin of the book of DEUTERONOMY, are one clear link between monarchy and law. Yet, here too, the priests also play a significant role (cf. Deut. 17:14-20). Some scholars would connect the Covenant Code to the activities of the monarchy; that code, after all, bears the closest resemblance to the ancient Near Eastern laws. This remains a plausible even if not yet a provable hypothesis. See KING §6a; GOVERNMENT, ISRAELITE[S].

**12. The law and the state.** It may be possible to detect evidence of the advancing power of the state in the biblical laws of *talion* (Exod. 21:23-25; Lev. 24:19-20; Deut. 19:21), which customarily have been considered a relic from Israel's nomadic past (see LEX TALIONIS[S]). Recent discoveries, however, have supplied new perspectives. In the Eshnunna Laws (42-48) and the Ur-Nammu Laws (15-19), which precede the Hammurabi Laws in time, the penalties for assault and personal injury are all monetary. The later Hammurabi Laws (196-205) punish assaults against free men by *talion* or public beating, while injuries to persons of lower class and slaves are punished by monetary penalties. *Talionic* sanctions continue to be found in the later Assyrian Laws as well. From comparison with old Saxon law, Diamond argues that the sociocultural progression is not from *talion* to monetary penalties but the reverse. As the state becomes more powerful and central authority grows, it intrudes into the private domain, declaring an increasing number of wrongdoings (murder, rape, adultery, wounding, grand larceny) to be crimes against the state (and God). In archaic societies, the trauma of these wrongs is assuaged by compensation; in the advancing state, the state punishes the wrongdoer (often severely, by death) but the victims are now without remedy (cf. Assyrian Laws A 21).

**13. Law and the prophets.** The prophets do not seem to function as sources for law except in the Pentateuch, where Moses brings the laws to the people in the manner of a prophet (Deut. 18:15; 34:10; Hos. 12:13 [H 14]). The prophets, however, are definitely aware of the Law; their condemnations contain numerous references to specific

actions which are also the subject of laws in the Pentateuch. To cite only a partial list of categories: false weights (Amos 8:5; Mic. 6:10-11; Deut. 25:13-15; Lev. 19:35-36), taking interest in the form of food (Amos 5:11; Deut. 23:19 [H 20]), taking garments in pledge (Amos 2:8; Exod. 22:26-27 [H 25-26]), withholding wages (Jer. 22:13; Lev. 19:13; Deut. 24:14-15), eating swine and other forbidden foods (Isa. 65:4; 66:17; Lev. 11:7; Deut. 14:8), catching a sneak thief (Jer. 2:34; Exod. 22:2 [H 1]), remarrying a divorced wife after she has been married (Jer. 3:1; Deut. 24:1-4), writing a bill of divorce (Isa. 50:1; Jer. 3:8; Deut. 24:1-4), circumcision (Jer. 4:4; 9:25-26; Gen. 17:10-14), observance of new moons, sabbaths, and festivals (Amos 8:5; Isa. 1:13; 56:4; Jer. 17:22-27; Ezek. 20:12-21; Exod. 20:8-11; etc.), the Nazirite (Amos 2:12; Num. 6:1-21), child sacrifice (Jer. 19:4-5; 32:35; Lev. 18:21; 20:2).

It is not possible to assume (1) that the literary prophets came before the development of the Law, or (2) that the prophetic position was antithetical to the Law. The prophets, however, were responsible for a new emphasis on morality which forever set Israel apart from her neighbors who, while by no means insensitive to morality and justice, nevertheless believed in a fundamentally amoral universe. The ancient Israelites no doubt came to believe that a God who asked for righteousness and justice would also supply the means of instructing his people in his ways. One may see the emergence of the written laws as a partial response to this search for divine guidance. The fall of the northern kingdom in the eighth century probably accelerated this process; the people of Judah came to hearken more soberly to the message of those prophets who preached that destruction was a consequence of the lack of morality, and they accepted the commandments emanating from the "prophet" Moses, by which they hoped to gain God's favor and blessing.

**14. Before the monarchy.** There is no evidence for any promulgation of laws during the tribal phase of Israelite history. That is not to say that there were no laws during this period; there were certainly norms, traditions, and customs. Many of the later written laws, cultic, secular, and ritual, may be older than the time of their becoming incorporated into the written collections; and some of them were surely in existence during the tribal period. But there is no clear way to attach any of the OT laws to the leadership or authority of the tribes. There are those who reconstruct the existence of a tribal AMPHICTYONY or religious federation which functioned during the tribal epoch. Similar institutions have been suggested for Greece and for Sumer; these other amphictyonies, however, did not produce any laws.

During the tribal period, chieftains were active in leading the people and in making decisions (cf. Judg. 20, 21), but they were not lawgivers. The same can be said of the judges who led Israel into battle, and who administered justice in cases of disputes. There is no way of knowing whether any of the laws of the Pentateuch derive from their judicial activities. See JUDGES, Book of [S].

The elders appear to have played a passive role and never appear as originators of policy or law (cf. Deut. 22:18; I Kings 21:8-14; Ruth 4:2-12); rather, they carried out the existing laws of the land under the leadership of higher authorities (cf. Ezra 10:7-8).

The family would seem to be a group far removed from the activities of lawgiving. Nevertheless, Gerstenberger has looked for links between the family or clan and the law. He draws attention to affinities between the negative prohibitions of the laws and exhortations found in the wisdom books and parallels to be found in Egypt and Babylonia. From contexts like Prov. 3:5-12, 27-31; 22:17-24:22; and Jer. 35:6-7, where advice is given by a father to his children, Gerstenberger suggests that the negative apodictic prohibitions are remnants of clan or family wisdom, which was taught to the young as a catechism to be learned prior to their being accepted into adulthood (see PROVERBS, BOOK OF[S] §2c). This is possible, but it must be remembered that a good deal of what is called wisdom in the ancient Near Eastern sources is in reality court literature: the education of young noblemen in the arts of flattery, caution, and humility before their all-powerful lords (cf. also Prov. 23:1-5; Eccl 8:2-4; 10:20; see JOSEPH STORY[S] §3). Then, too, the speaker of wisdom appeals to the good sense of the listener, frequently adding motive clauses to explain his admonitions; the lawgiver possesses an implied authority to speak and to direct the lives and actions of his listeners. For other possible remnants of familial jurisdictions, compare Gen. 31:32, 37; 38:24; 48:5-6. See also WISDOM IN THE ANE[S] §§1a, 2a; WISDOM IN THE OT[S] §3.

15. **Corporate and individual identity.** The emergence of the written law caused a change in the Israelite viewpoint on responsibility. Earlier, the group or community could legitimately suffer for the wrongdoings or sins of one of its members. This is true in the narratives (e.g., Josh. 7:24-25; II Sam. 12:14; 21:1-6; 24:10-15) and in the Pentateuch (e.g., Exod. 20:5; 34:7; Num. 14:18; Deut. 5:9), and the concept is implied in the prophetic predictions of disaster overtaking the entire nation of Israel because of the sins of the wicked among them. The promulgation of written laws laid open the requirements and preconditions for securing God's favor; each person could learn the commandments, and it became his responsibility to do so. People came increasingly to believe that each person should suffer for his own sins (cf. Gen. 18:23-32; Deut. 24:16; Jer. 31:29-30—contrast 32:18; Ezek. 14:12-20; 18:1-20; 33:1-20), thus laying the groundwork for the idea of individual reward and punishment. See EZEKIEL[S] §4.

16. **Law and covenant.** The new emphasis on individualism and the growing power of the central government eroded any remnants of kinship and tribalism that may have survived the formation of the state. The units of tribe and clan had fit in well with the older concept of communal or corporate identity. There was a need for a new framework which could integrate the individual into the nation and, at the same time, maintain the primacy of God, who was the supreme ruler

of a moral universe. The concept of the national covenant came into prominence at this time, modeled after the great international treaties between Israelite kings and their Assyrian overlords (see Frankena). This covenant supported individuality by incorporating the written Pentateuchal laws into stipulations of agreement between God and the people of Israel; at the same time it offered the notion of the community of the covenant to replace the old communality which was based on kinship. The covenant was not the catalyst for the laws. The concept of covenant existed independently of the laws, as can be seen by the strong biblical tradition of covenants without stated stipulations (cf. Gen. 9:8-17; 15:17-21; Num. 25:13; II Sam. 23:5). The concept of Israel's special relationship with Yahweh was of course not a new idea. What was new is the expression of this relationship in the form of a formal agreement between God and each individual Israelite.

The national covenant became a dynamic principle of faith only during the late monarchical period, and hence the prophets do not make extensive use of this concept. There are those who would reconstruct this later national covenant as a part of the premonarchic and preprophetic phases of Israelite history (see COVENANT; COVENANT, MOSAIC[S]; COVENANT, DAVIDIC[S]). These theories are complete speculation; if the national covenant can be Mosaic, then one can likewise attribute the Pentateuchal laws to Moses, for there is certainly more biblical evidence for this position than for ascribing the covenant to the period of Moses or of the tribal federation.

**LECTIONARY CYCLE, RABBINIC.** Deut. 31:10-13 and Neh. 8:1-8 are the earliest references to the Jewish practice of a liturgical or didactic public reading of appropriate passages from the TORAH (i.e., Pentateuch) as the central element of com-

munal worship during festival celebrations (cf. T.B. Meg. 32a). By A.D. 200 the practice had developed into an established tradition of Pentateuchal readings for every Monday, Thursday, and sabbath; special readings for all the festivals, including Hanukkah and Purim; and special readings for fast days. M. Meg. 3.4-6, which identifies these readings, also includes the special readings assigned to each of the four sabbaths immediately preceding the Passover festival. According to Elbogen, the practice of weekly sabbath readings grew by extending the pre-Passover custom to every sabbath. (cf. Acts 15:21; Jos. Apion II.175; Philo, II *Somnii* 27). It was only as a result of these weekly sabbath readings that the Torah came to be read serially in its entirety.

Two different lectionary systems emerged: the one associated with Palestine, the so-called "triennial cycle," and the other associated with the Babylonian Jewish community, in which the Pentateuch was divided into fifty-four *parashoth* (e.g., Gen. 1:1-6:8; 6:9-11:32; 12:1-17:27, etc.; note the siglum פָּרָשָׁה in the margin of *Biblia Hebraica*) and completed in a single year. The Palestinian system divided the Pentateuch into either 141, 153, 155, or 167 weekly *sedarim* depending upon the particular synagogal list (e.g., Gen. 1:1-2:3; 2:4-3:21; 3:24-4:26; 5:1-6:8, etc.; note the siglum סָדָרָה in the margin of *Biblia Hebraica*) and therefore required from three to three and one half years to complete the Pentateuch. The pioneering arguments of Buechler (see Petuchowski) and Mann for a uniform Palestinian cycle have been refuted, with most scholars today agreeing on the co-existence of many different cycles.

Historically, it was the Babylonian system of annual completion that became the standard Jewish practice, even within Palestine itself.

The second main stage in the incorporation of the Bible into Jewish liturgy was the "completion" (*Haphtarah*) of the Pentateuchal reading by a selection from such books as Isaiah, Jeremiah, I and II Kings, Ezekiel, etc. Though the origins of this practice are shrouded in mystery, we may assume that it emerged only after the Pentateuchal reading was already established. As suggested in Luke 4:16-21, prophetic readings for an ordinary sabbath were originally not fixed. According to Tosefta and T.B. Meg. 31a-b, *Haphtarah* readings were determined only for the festivals and the four pre-Passover sabbaths. As in the case of the Torah itself, the practice was extended to every sabbath of the year as well as to other special days, e.g., the Ninth of Ab. Hence there emerged a fixed prophetic reading for each sabbath or festival or fast day on which the Torah was read. The criterion for selection was merely that the prophetic reading somehow resemble the Pentateuchal portion in content or language (T.B. Meg. 29b). E.g., Isa. 42:5 was assigned to Gen. 1:1 ff. and Mic. 5:6 ff. to Num. 22 ff. It is also clear that the Palestinian "triennial" cycle demanded three times the number of *Haphtarah* readings required in the Babylonian annual system. As the later cycle became the dominant pattern, it usually selected the first of the three *Haphtarah* readings assigned to its particular *parashah* (weekly portion).

The impact on midrashic literature and on the development of Jewish homiletics cannot be overestimated. It has been shown that many rabbinic homilies are largely the result of weaving together the Pentateuchal and prophetic readings of a given day into complex sermonic fabrics.

The final stage in the full development of the Jewish lectionary system was the assignment in Talmudic times of Esther to Purim, and later the assignment of Ruth to Shavuoth (Pentecost), Song of Songs to Passover, Lamentations to the Ninth of Ab, and Ecclesiastes to Sukkoth (Booths). Some have argued for a "triennial" reading of Psalms, basing this claim on its 150 chapters, five books, and significant internal midrashic evidence, but this is difficult to prove.

\***LETTER.** The letter is one of the oldest and most common types of written texts. Letters have long been recognized as important documentary sources for most areas and branches of historical research. Less attention has been paid to the ancient history and phenomenology of letter writing, in spite of some pioneering works; but interest in epistolography is increasing among biblical and other scholars.

1. **Source materials.** All letters in the Bible and most letters from ancient Greece and Rome have been preserved by way of literary tradition. Unfortunately, it is often hard to know the extent to which letters contained in collections or in historical works (e.g., I and II Maccabees, Josephus) are authentic.

Modern archaeology has vastly increased the source materials, but the number of recovered letters does not reflect the frequency of letter writing. Akkadian letters on clay tablets and brief notes on potsherds (see OSTRACA) have resisted decay, in contrast to Greek and Latin letters on waxed wooden tablets (diptychs; see WRITING AND WRITING MATERIALS §B1). Papyrus letters have been found primarily in Egypt and—in much smaller quantities—in the desert of Judah and other places with a dry climate. On letters of importance for various periods of the history of Israel and Judaism, see esp. MARI, TAANACH, TELL EL AMARNA, LACHISH, BAR KOCHBA, and supplementary articles; also ELEPHANTINE PAPYRI. See further, *bibliog.*

2. **Written message and oral text.** As indicated by the terms used, the concept "letter" includes both a message conveyed and a written document (see LETTER §1). As the written text of spoken words the letter could—in Israel and elsewhere—open with the messenger formula, "Thus says. . ." (e.g., Ezra 1:1-2; cf. Rev. 2:1). Only the context makes it clear whether or not a letter is implied by the clause "A sends to B, saying" (cf. II Kings 19:9, 14). Throughout antiquity, the sender's name was placed at the beginning, as in oral messages.

The written document authenticated the message,

especially when signed with the sender's seal (cf. I Kings 21:8; Esth. 8:8), which also made it possible to send an order without revealing it to the courier, as in II Sam. 11:14-15. With increased use of letters the distinction between oral and written messages became sharper—a development which had at an early date taken place in Assyria. Many papyri are petitions (probably handed in by the applicant), contracts and other legal documents in letter form.

Even in later periods letters and oral reports often supplemented one another. Individuals who were not able to employ special couriers had to entrust their letters to occasional travelers. Phoebe might be one example (Rom. 16:1-2). The letter carrier could add informal information about the sender, whether the letter itself was a conventional token of affection or an elaborate document (cf. Col. 4:7-9). The separation of PAUL from his churches was overcome by exchange of delegates as well as of letters (e.g., I Cor. 16; II Cor. 7 and 8; Phil. 2:19-30, cf. Acts 15:22-33; III John 9-10).

**3. Addressors and addressees.** The form and function of letters depend upon the relationship between senders (addressors) and recipients (addressees). Letters to and from kings, especially orders and decrees, are prominent in the OT (e.g., I Kings 5 and II Chr. 2; II Kings 10:1-6; Ezra 4-7). Exchange of letters between superiors and subordinates became increasingly common at all levels of administration and also during military operations (cf. JOSEPHUS' *Life* and the letters of BAR KOCHBA).

Corporate bodies, e.g., city-states and councils, could receive and issue edicts and encyclicals, or engage in diplomatic correspondence with monarchs and with one another (e.g., I Macc. 8:22-30; 12:1-23; 14:16-23). They could also be addressed by absent individuals in letters which substituted for a speech (e.g., letters of Demosthenes).

Many letters were neither purely private nor strictly official, e.g., business letters, legal briefs, letters from counselors or "friends," oracular responses, and prophetic letters (II Chr. 21:12-15; Jer. 29), letters from scholars and philosophers (Plato, Epicurus, and others), and even the letters of Paul.

The idea of the "familiar letter" as the most genuine type of letter originated among the Greeks. According to rhetorical theory, the style of a letter should be dignified but only moderately ornate, since the letter was a gift among friends, a substitute for personal conversation, and a medium for spiritual presence (*παρουσία*, cf. I Cor. 5:3; Col. 2:5).

**4. Composition.** The purpose of letters is in general (a) to maintain contact, (b) to provide information, and (c) to make requests. The form is both highly conventional and extremely flexible.

The maintenance of contact and fostering of good relations can be taken care of by opening and closing greetings. Optional items include other good wishes, assertions of intercession and thanksgiving, expressions of joy or shared grief, of confidence in the addressees and of hope for reunion, polite compliments and reminders of previous good relations, greetings from or to other persons. "Philo-

phronetic" statements (*φιλοφρόνησις*, friendly disposition) occur mainly in opening and closing segments of a letter and are most elaborate in familiar letters and diplomatic correspondence. Paul combines epistolary conventions with the language of thanksgiving, blessing, and prayer (e.g., I Thess. 1-3; Philem. 1-7, 21-25; cf. II John 1-3, 12-13; III John 4-6a, 13-15). In certain circumstances "philofronetic" statements give way to expressions of disappointment and embarrassment (often introduced by *θαυμάζω*, "I am surprised"), reproach, irony, and warnings (e.g., Gal. 1:6-9; 3:1-5; 4:8-11; 5:2; 6:17).

The nature and specific content of information and requests depend upon the occasion for and purpose of a letter and range from personal matters and business to policy and philosophy. Conventional phraseology is often used for purposes of introduction and transition, as in "disclosure formulas"—"I want you to know" (e.g., Rom. 1:13)—or simply "concerning" (*περὶ δὲ*, I Cor. 7:1, etc.; I Thess. 4:9). Requests can be formulated as commands or petitions, but are frequently introduced by polite clichés, such as "I appeal to you" (*παρακαλῶ*, e.g., Rom. 12:1; cf. Philem. 8-10) or "You will do well to" (*καλῶς ποιήσεις*, III John 6). Paul uses these epistolary conventions with considerable freedom, as do highly literate letter writers like Cicero.

In more elaborate letters, including some private papyrus letters, the issues at hand are illuminated by references to general human experience, by proverbs and maxims, by quotations and historical paradigms, and by rules for proper conduct. In a similar way, NT letters include scriptural passages and examples; kerygmatic, hymnic, and catechetical traditions, etc. See LISTS, ETHICAL §3; LISTS, ETHICAL[S]; PARENESIS[S]; LITURGICAL MATERIALS IN THE NT[S].

In antiquity the composition of letters was treated as part of rhetoric. The influence of forensic, deliberative, and laudatory ("epideictic") rhetoric is most prominent when a letter is intended to persuade. Classical models were provided by the letters of Plato, Isocrates, and Demosthenes—authentic or not. Examples from the first century A.D. include Agrippa's written plea to Caligula on behalf of the Jews (Philo, *On the Embassy to Gaius* XXXVI-XLI) and Paul's letters, especially those to the Corinthians, Galatians, and Romans.

**5. Types of letters.** Letters can be classified according to several criteria which often overlap: writing materials; mode of preservation; private, official, or public character; levels of style; and what was most important to ancient letter theory—occasion, scope, and mood. A main distinction was made between "familiar" letters and "negotial" letters, those which discussed issues. There were also more or less fixed patterns for some special genres, like petitions, reports (cf. Acts 23:26-30), communication of official decisions (cf. Acts 15:23-29), letters of consolation, etc. Handbooks on epistolography list quite a number of types, but several of them are likely to represent the style to be used for various purposes rather than distinct subgenres.

Paul's letters were written in his capacity as an

apostle of God and addressed to "the saints" or "the church" at various places. But he appeals to the experience and judgment of the recipients (Philem. 8-9; Rom. 15:14 ff.). The structure and style are more akin to familiar and diplomatic letters than to official orders and decrees. The individual letters, or more often parts of them, conform more or less exactly to recognized types: the letter of recommendation (Philemon; Rom. 16:1-2; cf. II Cor. 3:1-3); the letter of thanksgiving (Phil. 1:3 ff.; 4:10 ff.) or a response (I Cor. 7-14); the didactic (esp. Rom. 1-11) or the apologetic letter (esp. Gal. 1-2, II Cor. 10-13, even I Cor. 1-4 and Romans); the parenetic letter of exhortation (esp. I Thessalonians); and the symbouleutic letter of advice (Galatians; cf. I Cor. 7; II Cor. 8). Philophronetic features predominate in II Cor. 1-7, in spite of strained relations.

Later Christian letter writers, e.g., IGNATIUS and POLYCARP, were influenced by Paul. But other models were also important. Letters from Jewish authorities about fasts, festivals, and other matters must have been common practice (cf. I Kings 21:9; II Chr. 30; Esth. 9:20-22; II Macc. 1-2; TB Sanh. 11a; Acts 9:2; 28:21). Several NT letters are in the form of encyclicals (Acts 15:23; Rev. 1:4-7; I and II Peter; James). I Clement is a letter of advice from the church of Rome to the church in Corinth.

III John is a familiar letter and II John is written in the style of one. But the letter form can also be used for writings which otherwise belong to different genres: sermons (Hebrews; cf. I John), WISDOM and parenesis (James), mandates for ministers of the church (I Timothy, Titus), literary testaments (most clearly II Timothy and II Peter), prophecy and apocalyptic (Rev. 2-3 and also 1:4-6; 2:21; cf. e.g., II Bar. 78-87). See also LITERATURE, EARLY CHRISTIAN[S] §4.

**6. Publication and literary fiction.** Royal and other official letters of general interest were published by oral proclamation, posted, and even cut in stone as inscriptions. Other letters could be copied and forwarded, kept in archives, occasionally even used as models of style. The correspondence of Aristotle (now lost), of Cicero, and of many after them was eventually published. The letters of Paul are likely to have been copied and circulated before they were edited as a collection. Ignatius' letters were almost immediately collected (cf. Polyc. Phil. 13).

The distinction between "true letters" and literary "epistles" (see LETTER §4) has a limited validity. As a technical term "epistle" should be reserved for writings which are in the style of a letter but intended for a general public, so that the specific address, if any, is a literary fiction or a propagandistic device. It is contrary to ancient theory and practice to make spontaneity and confidentiality part of the definition of a true letter. Even familiar letters could be of more than personal and ephemeral interest; some were written by masters of style, many by professional scribes.

Sometimes letters were forged in order to deceive the recipients (cf. II Thess. 2:2). More frequently, fictitious letters were composed as part of rhetorical school exercises or for literary purposes, entertainment, historical fiction, or propagation of ideas.

Historians felt free to compose letters as well as speeches, and there was no great step from a literary "dialogue" to an imitated letter (see PSEUDONYMOUS WRITING[S] §3). For the most famous example of Jewish literature in letter form, see ARISTEAS.

Among the NT apocrypha the correspondence between Paul and Seneca is fiction in letter form, the "Letter to the Laodiceans" an attempt to substitute for a letter that was assumed to have been lost. Among the letters or "epistles" included in the NT canon, II Peter is certainly spurious. In other cases, it is possible that the author drew upon genuine traditions from the alleged addressor ("Deutero-Pauline" epistles, I Peter, James[?]).

The frequency of fictitious as well as of genuine letters in early Christianity is remarkable. Within the fellowship of scattered believers, letters and writings similar to letters were the most appropriate form for written communication and exposition of the common faith. Up to the time of the second-century apologists (and Gnostics) only the narrative form of the gospels had an equal importance.

\***LEVITICUS** [Heb. ויקרא; LXX ΛΕΥΙΤΙΚΟΝ]. The book is more aptly described by its tannaic name חוקת כהנים, "The Priests' Manual." It is thematically an independent entity. In Exodus, the P code (see **PRIESTLY WRITERS**[S]) describes the construction of the cultic implements (the tabernacle and the priestly vestments), whereas Leviticus converts this static picture into scenes from the living cult. Numbers then concentrates on the cultic laws of the camp in motion, e.g., the military arrangement of the tribes, the censuses of the warriors, the transport of the sanctums and their protection against encroachment (see **ENCROACHMENT**[S]). Since the latter is the main function of the Levites, it is striking that all the laws pertaining to the Levites are in Numbers, and none are in Leviticus.

Although "The Priests' Manual" focuses on the priests, few laws are reserved for them alone (Lev. 8-10; 16:1-28; 21:1-22:16). Their role is defined in pedagogic terms: to teach the distinctions "between the holy and profane, between the pure and impure" (10:10; cf. 14:57; 15:31). They must do this, because Israel's moral sins and physical impurities lead to the defilement of the sanctuary and its eventual abandonment by God (see **ATONEMENT IN THE OT**[S]; **ATONEMENT, DAY OF**[S]). The priests, then, are charged with a double task: to instruct Israel not to cause defilement, and to purge the sanctuary whenever it is defiled. However, Leviticus is not just a collection of rituals. On the contrary, the ethical element fuses with and even informs the ritual so that one may seek a moral basis behind each ritual act.

From the point of view of literary criticism, Leviticus is relatively uncomplicated: it is a single source (see **SOURCE CRITICISM, OT**[S]). Even if another stratum is recognized (see §4 below), it has been thoroughly assimilated by P. Furthermore, the text has been excellently preserved; the few divergencies in the versions are nearly all secondary to the MT. The difficulty lies in the terminology used to describe the cult. It is a conservative vocabulary whose meaning was sometimes already lost on those who lived in the age of the second temple and even more so on subsequent generations.

1. Chs. 1-7: the sacrificial system
  2. Chs. 8-10: the inaugural service at the sanctuary
  3. Chs. 11-16: the laws of impurities
  4. Chs. 17-26: the Holiness Source (H)
  5. Ch. 27: commutation of gifts to the sanctuary
- Bibliography

1. **Chs. 1-7: the sacrificial system.** In chs. 1-5 the sacrifices are listed from the point of the donor: chs. 1-3, the spontaneously motivated sacrifices ('*ôlâ minhâ*, '*šlāmim*'); chs. 4-5, the sacrifices required for expiation (*hattā'th* and '*āšām*'). Chs. 6-7 regroup these sacrifices in order of their sanctity in the daily ritual, i.e., most-sacred: '*ôlâ*, *minhâ*, *hattā'th*, '*āšām*; sacred: '*šlāmim*'. The common denominator of the sacrifices discussed in these chapters is that they arise in answer to an unpredictable religious or emotional need, and are thereby set off from the sacrifices of the public feasts and fasts that are fixed by the calendar (chs. 9, 16, 23; cf. Num. 28-29). See **SACRIFICES AND OFFERINGS, OT**[S] §§1b, 2-3, for §§a-g below.

a. **1:1-2: general introduction.** The Hebrew particles for introducing general and particular statements in legal formulation indicate that chs. 1 and 3 were originally a single unit which was later split by the insertion of ch. 2. The conditional construction of 1:2a underscores the voluntary basis of the sacrifices. Though these verses are addressed to Israel alone, the sacrifices were made available to the resident alien (Lev. 17:8; 24:15-22; Num. 15:14-16, 29).

b. **1:3-17: the whole offering ('*ôlâ*; RSV "burnt offering").** It is the only sacrifice which is entirely consumed on the altar, hence the translation "whole" (cf. Deut. 33:10; I Sam. 7:9). Vss. 3-5 encapsule the major concepts of the sacrificial system: laying on of hands, acceptance, EXPIATION, slaughter, blood manipulation, entrance to the tent of meeting. The donor is an active participant in the ritual. The whole offering must be chosen from male, unblemished and eligible species of the herd, flock, or birds. The '*ôlâ* is probably the oldest and most popular sacrifice (Tosef. Zeb. XIII.1). Its function here is expiatory (vs. 4; cf. 9:7; 14:20; Job 1:5; 42:8; UT 9:1, 7), but in P, whenever it is offered by an individual, the motivation is joyful (e.g., Lev. 22:17 ff.; Num. 15:1-11).

c. **Ch. 2: the tribute (cereal) offering (*minhâ*).** In the non-Priestly texts, *minhâ* connotes both "a present made to secure or retain goodwill" (Driver; e.g., Gen. 32:13-21 [H 14-22]), and a tribute brought by subjects to their overlords, both human (Judg. 3:15-18) and divine. It could be either animal or vegetable (Gen. 4:3; I Sam. 2:17). In P, however, it is exclusively cereal, either choice flour (Lev. 2:1-3), or cakes of choice flour (vss. 4-10), or roasted grain (vss. 14-16). Because leaven and honey (fruit syrup) ferment, whereas salt preserves, the first two were forbidden, and salt was required on the altar (vss. 11-13). Leaven, however, was permitted as a **FIRST-FRUIT** offering to the priest (23:17; II Chr. 31:5). The restriction to cereal emphasizes that man's tribute to God should be from the fruit of his labors on the

soil. In daily life, however, the aspect of appeasement may also have been present (I Sam. 26:19; cf. *ANET* [2nd ed.], p. 439, 1. 51). Because cereal was abundant and cheap, it became the poor man's 'ölā (Philo, *On the Special Laws*, I.271; Lev. Rabbah 8:4), and probably replaced it in popularity and function.

**d. Ch. 3: the well-being offering** (*š'lamim*; RSV "peace offering"). This offering never serves as expiation. Its basic function is simply to permit the consumption of flesh. It was usually spontaneous and motivated by elation. The rules are similar to those of the whole offering, except that the victims may be female but not birds. Also, being of lesser sanctity, its portions were assigned to the donor as well as to God. The choicest internal fats (suet) were turned to smoke.

**e. Ch. 4: the purgation offering** (*ḥattā'th*; RSV "sin offering"). Its purpose is to remove the impurity inflicted upon the sanctuary by the inadvertent violation of prohibitive laws (but not ethical violations). The brazen violation of these laws is punishable by death through divine agency (*כרת*, RSV "cut off," Num. 15:27-31). Other instances specify the nature of the violations: holy days (e.g., Passover, Day of Atonement), contamination of sanctums (e.g., Lev. 7:20-21), prohibited cultic acts (e.g., 17:3-4, 8-9) and illicit sex (18:29). The last mentioned is among the ritual sins, since it leads to the pollution of the land (18:27).

**f. 5:1-13: borderline cases of the purgation offering.** Rabbinic tradition distinguishes between the purgation offering of ch. 4 and that of 5:1-13, calling the latter "the scaled offering" (RSV "guilt offering") geared to the financial means of the offender (not his status, as in ch. 4). This separate *ḥattā'th* probably arises from the failure or inability to cleanse impurity immediately upon its incurrence.

**g. 5:14-6:7 [H 5:14-26]: the reparation offering** (*āšām*; RSV "guilt offering"). It is prescribed for trespass (*בעל*) upon the property of God or man, the latter through the use of a false oath. The sin to which it relates is desecration: the sanctums or the name of God have become desanctified (as opposed to cases of the purgation offering, ch. 4, where the sin is contamination of sanctums).

**h. Ch. 6-7: supplementary instructions.** Since the well-being offering is eaten chiefly by the donor, the rules pertain mainly to him (7:11-34, esp. vss. 23, 29). Otherwise they are the concerns of the officiating priest. The subjects are: the altar fire (6:8-13 [H 1-6]); the manner and place for eating the tribute offering (6:14-18 [H 7-11]); the daily tribute offering of the high priest and the voluntary one of the ordinary priest (6:19-23 [H 12-16]); safeguards in sacrificing the purgation offering (6:24-30 [H 17-23]); the ritual for the reparation offering (7:17, missing in ch. 5); the priestly share in the whole and tribute offering (7:8-10); the types of well-being offering and their taboos (7:11-21); the prohibition against eating fat and blood (7:22-27); the priestly share of the well-being offering, set aside by the donor (7:28-36); the summation (7:37-38). The inclusion of the consecration offering before the well-being

offering in this summation suggests that a section based on Exod. 29 originally preceded 7:11.

**2. Chs. 8-10: the inaugural service at the sanctuary.** This section follows logically and chronologically on Exod. 35-40; the priests are inducted into service after the priestly vestments and the tabernacle are completed. It is not Aaron, however, but Moses who dominates the scene. He is the one who conducts the inaugural service, consecrates the priests, and apportions all tasks. Aaron is clearly answerable to him, as seen from their confrontation in 10:16-20. Strikingly, the superiority of prophet over priest is insisted upon by the Priestly document! See, however, AARON, AARONIDES [S].

**a. Ch. 8: the consecration of the priests.** "To ordain you" (vs. 33) is literally "to fill your hands." In Scripture this phrase is used exclusively for the consecration of priests (Exod. 32:29; Judg. 17:5, 12; I Kings 13:33), but in the archives of MARI it refers to the distribution of booty. Thus, the Hebrew idiom indicates that installation rites officially entitle the priests to their share of the revenues and sacrifices brought to the sanctuary. "As the Lord commanded Moses" concludes each phase of the consecration ceremony, a reminder that this chapter is a repetition of the instructions in Exod. 29.

**b. Ch. 9: the priests assume office.** On the eighth day following the week of consecration, the priests begin their official duties. They offer up special sacrifices for the people "that the presence (RSV "glory") of the Lord may appear" (vs. 6; also vss. 4, 23). Indeed, the whole purpose of the sacrificial system is revelation, the assurance that God is with his people. However, God's presence is never assumed to be a co-efficient of the cult (in contrast to other religions); it is always viewed as an act of his grace. See PRESENCE OF GOD, CULTIC[S] esp. §§1-4.

**c. 10:1-11: the sin of Nadab and Abihu.** That the fire was "alien" could be charged either to the offering or the offerer. Most likely, the fire was taken from elsewhere, not from the altar (16:12; Num. 16:46 [H 17:11]).

**d. 10:12-20: the consumption of the initiatory offerings.** This section continues ch. 9. The tribute and well-being offerings are eaten by the priests in accordance with 6:16 [H 9] and 7:28-34. But the procedure for the purgation offering is switched from the individual to the communal form: the disposal of blood (9:9, 15; 10:18) has been according to 4:30 but not the disposal of its flesh (vs. 11), which follows 4:12 rather than 6:26 [H 19] and despite 6:30 [H 23]. The death of Nadab and Abihu has intervened. Aaron follows the more stringent procedure of destroying rather than eating the sacrificial meat because it has been doubly polluted by the sin and death of his sons. Its ingestion would not be "acceptable in the sight of the Lord," and it must be burned outside the camp.

**3. Chs. 11-16: the laws of impurities.** Knowledge of contagion is clear from the following procedures: (1) Lustration is limited to impurities arising from animal cadavers and certain human skin diseases and fluxes, all prime sources of putrefac-

tion and infection. (2) One who contracts the impurity from a human being washes at once (antiseptis through washing is effective only the first few hours), even though ritual impurity lasts till nightfall; the one who is afflicted is removed from the camp (Num. 5:2-4) and washes only after he is healed. (Lustration serves no medical purpose once infection sets in.) (3) Living animals never transfer impurity (in contrast to the Egyptian attitude toward swine: Herodotus II.47). The carcass, however, must be disposed of; hence its handling is never prohibited, but anyone contaminated by it must purify himself with water. For details, see CLEAN AND UNCLEAN.

**a. Ch. 11: animal impurities.** The food prohibitions are certainly older than the rationale given for them. Regardless of their origin, the fact remains that no punishment befalls anyone who violates them. In P, there is not even a prohibition against eating carrion: demons, formerly thought to have caused such death, have been banished.

The laws themselves offer but one rationale: holiness (Lev. 11:44-47; 20:22-26; cf. Exod. 22:31 [H 30]; Deut. 14:21), a word which bears the dual connotation of "sanctification" (by emulating God's nature, 11:44a) and "separation" (from the impurities of the pagans, 20:23-26; cf. comment on chs. 18-20, §4a below; SACRIFICES AND OFFERINGS, OT[S] §3b). The food and blood prohibitions form a united dietary code allowing humans to consume meat and not be brutalized in the process. (i) 11:1-8: *land animals*. Compare vss. 3-4 with Deut. 14:4-6, where the permitted quadrupeds are named. The classification is the result not of empirical medical knowledge (Albright) but of the universal need to classify the world into beneficent and destructive categories (Douglas). (ii) 11:9-12: *fish*. That neither the prohibited nor permitted fish are enumerated (nor in Deut. 14:9) may be explained by the relative absence of sea life in the Mediterranean prior to the Suez Canal. Fish—alone among the creatures—were not named by Adam (Gen. 2:19-20). (iii) 11:13-23: *birds and winged insects*. No classification is given for birds, probably because none was known. A number of the identifications (translations) are conjectural. (iv) 11:24-40: *impurity by contact with carcasses*. This section is an insertion from another source, since it interrupts the fourfold classification (vs. 46) of creatures that may not be eaten. Nonporous articles are polluted by cadavers of the eight species listed in vss. 29-30 and must be washed, but contaminated earthenware (porous and absorbent, 6:28 [H 21]) may never be reused. Food and seed grain are immune to impurity except when moist, since water is an impurity carrier. (v) 11:41-47: *swarming things and summation*. Continues 11:23.

**b. Ch. 12: the impurity of childbirth.** For seven days following the birth of a male and fourteen days for a female no conjugal relations are allowed. For an additional period of thirty-three and sixty-six days respectively, contact with sanctums is proscribed. That sacrifices are brought only subsequently indicates that earlier ideas of demonic control of this period have been rejected. The rite certifies that passage of the prescribed time

has removed impurity, and it is scaled to economic circumstances (cf. 5:7-13; 14:21-32).

**c. Chs. 13-14: the impurity of skin diseases.** The priest is instructed to identify and isolate those who are afflicted with contagious skin diseases. The word translated "leprosy" actually refers to a variety of afflictions. The noncontagious kind is probably vitiligo or, less likely, psoriasis (see LEPROSY). Lev. 13:47-59 describes the deterioration of garments probably because of mildew or fungus, and 14:33-53 describes the infection of houses because of the spread of saltpeter or moss, in which case quarantine procedures are also enforced. Unusual considerations for property are reflected in vs. 36: the priest clears the house prior to his inspection so that the contents will not be condemned with the house.

**d. Ch. 15: the impurity of genital discharges.** This chapter is composed of two sections: natural discharge of men and women (vss. 16-18, 19-24, respectively), whose impurity is simply removed by bathing, and pathological discharges (vss. 2-15, 25-30, respectively), which require sacrificial expiation.

**e. Ch. 16: the impurities of the sanctuary and the nation.** According to vs. 1, ch. 16 follows upon ch. 10. Thus, chs. 11-15 are an insert listing the specific impurities that will contaminate the sanctuary (15:31) for which the purgation ritual of ch. 16 is mandated. See ATONEMENT, DAY OF[S].

**4. Chs. 17-26: the Holiness Source (H).** The remainder of the book of Leviticus, it is often held, consists largely of an independent code in which moral and ritual laws alternate, and whose motivation is holiness. This, however, is to be doubted. Ch. 17, the alleged beginning of the code, is connected thematically and verbally with the preceding chapters. Chs. 25-26, the alleged conclusion, form an independent scroll, to judge by the unique vocabulary (e.g., 25:18-19; 26:5), theme (25:8-13; 26:34-35, 43), and redaction (25:1; 26:46). Nonetheless, much of the language and some ideas in chs. 17-26 differ with the first part of Leviticus. Most likely P incorporated into these chapters an earlier document which might be called the Holiness Source (H).

**a. Ch. 17: killing for food.** Whosoever kills a sacrificial animal outside the sanctuary is guilty of murder (vss. 3-4). Two ends are thus achieved: Sacrifice to "satyrs" is abolished (vss. 5-9), and expiation for killing the animal is assured through a ritual by which its lifeblood is returned to its creator, either upon the altar (vss. 10-12), or by being drained and covered by earth, in the case of hunt animals (vss. 13-14; cf. Deut. 12:16). The inescapable conclusion to be drawn from the context is that vs. 11 has nothing to do with the expiation of sin in general. See SACRIFICES AND OFFERINGS, OT[S] §3b.

**b. Chs. 18-20: on being holy.** Though these three chapters were originally independent, they are thematically united: ch. 20 prescribes the penalties for the illicit relations and homicidal cult practices of ch. 18 (cf. 20:1-5) and for violating the ban on magic of 19:31 (cf. 20:6). Moreover, the entire unit is framed by a single goal: separation from the Canaanites, whose idolatry

and immoral practices pollute the divinely chosen land (18:3, 24:30; 20:22-24). That the arraignment of Ezek. 22 contains a mixture of ethical and ritual sins based solely on those chapters shows that their written formulation is pre-exilic.

The key word in this section is **שָׁרֵף**, "holy." A **שָׁרֵף** cluster is found in the food prohibitions (Lev. 11:44-47; 20:23-26) and only one other context—the rules concerning the priesthood, 21:6-8. This fact is significant. The priesthood, Israel, and man, respectively, form three rings of decreasing holiness about the center, God. The biblical ideal is that all Israel shall be "a kingdom of priests and a holy nation" (Exod. 19:6). If Israel is to move up to a higher sphere of holiness, it is enjoined to a more rigid code of behavior than practiced by the nations, just as the priest lives by more stringent standards than his fellow Israelites. Holiness, then, implies separation, and is so defined in 20:26. The positive aspect of holiness is discussed in ch. 19.

i. *Ch. 18: illicit sexual relations.* The list of prohibitions is encased by a framework (vss. 1-5; 24-30) which castigates the sexual mores of the Egyptians and the Canaanites. They worshiped and deified sex, applying the term "holy ones" to cult prostitutes (see **PRIESTS**[S] §1). In contrast, Israel is charged with an exacting code of family purity whose violation means death (cf. 20:10-16). Only the Holiness Source proclaims the sanctity of the land of Canaan; hence the responsibility of both Israelites and resident strangers to maintain its sanctity (18:26-27; 20:2; 24:22). The moral justification for its conquest (18:27-28; 20:22) is also a warning: if guilty of the same infractions, Israel, too, will be "vomited out."

ii. *Ch. 19: Imitatio dei—positive holiness.* For Israel, "holy" means more than that which is unapproachable. It becomes a positive concept, an inspiration and a goal associated with God's nature and his desire for humans: "You shall be holy; for I . . . am holy" (vs. 2). That which man is not, nor can ever fully be, but which he is commanded to emulate and approximate, is what the Bible calls "holy." Holiness means *imitatio dei*—the life of godliness.

How can human beings imitate him? The answer of Lev. 19 is given in a series of ethical and ritual commands, soaring above which is the commandment to love all persons (vs. 18), including aliens (vs. 34). Such love must be concretely expressed in deeds: equality in civil justice (20:2; 24:16, 22; Num. 35:15), free loans (25:35-55; cf. Deut. 10:18), and free gleanings (19:9-10).

iii. *Ch. 20: penalties for certain infractions in chs. 18-19.* The penalties for illicit sex relations are graded according to the severity of the punishment: vss. 9-16, death by man; vss. 17-19, death by God; vss. 20-21, childlessness. Since there had been such apparent and notable violators as Abraham (vs. 17; cf. Gen. 20:12) and Amram (vs. 19; cf. Exod. 6:20), the offender may only be reprimanded; God alone would settle with him. Of the idolatrous varieties, only **MOLECH** worship and oracles through mediums are singled out, the former because of its monstrousness, and the latter because of its prevalence (Deut. 18:9-12; I Sam.

28:9; Isa. 8:19). That the lofty pronouncements of ch. 19 are not in this list is mute evidence that ethics are really unenforceable.

c. *Chs. 21-22: the disqualifications of priests and sacrifices.* Restrictions are placed upon the priests in order to guard against moral and ritual defilement which might inflict dire consequences on them and the people (22:9, 15-16; cf. 4:3; 15:31).

d. *Ch. 23: the festivals.* P's listing of the festivals is distinguished from JE (Exod. 23:14-17; 34:21-23) and D (Deut. 16) by emphasis on natural and agricultural data. Because Lev. 23 is addressed to the lay farmer rather than the priest, the New Moon festival is omitted (on this day the Israelite had no special duties or prohibitions). Indeed, with the exception of vss. 13 and 18-20, all requirements of the priestly, public cult are ignored, and only the offerings of the individual farmer are enumerated. See **PASSOVER AND FEAST OF UNLEAVENED BREAD; WEEKS, FEAST OF; NEW YEAR; NEW YEAR**[S] §2; **ATONEMENT, DAY OF**[S].

e. *Chapter 24: Miscellany.* i. *24:1-4: the lamp oil.* Since the lampstand stood inside the sanctuary building, its greater sanctity required the use of pure oil, and that it be lighted by the high priest (Exod. 30:7; Num. 8:1-4; "sons" in Exod. 27:21 is a probable error). See **MENORAH**[S] §1.

ii. *24:5-9: see BREAD OF THE PRESENCE.*

iii. *24:10-14; 23: the law of blasphemy.* Blasphemy means more than speaking contemptuously of God, for which there is no stated penalty (Exod. 22:28 [H 27]). It must involve the additional offense of uttering the **TETRAGRAMMATON**, and it is the combination of the two (vss. 15-16) that warrants the death penalty. The Tetragrammaton's power affects not only the speaker but the hearers; their contamination is literally transferred back to the blasphemer by the ritual of laying on the hands.

iv. *24:15-22: an appendage of civil-damage laws.* That **LEX TALIONIS** (Exod. 21:23-25; Deut. 19:21) was extended to the stranger is one of the great moral achievements of P's legislation. Every distinction is eradicated not only between the powerful and the helpless but even between the Israelite and the non-Israelite. The interpolation of these civil statutes, with their emphasis upon the resident alien, is due to the legal status of the half-Israelite offender.

f. *Ch. 25: the sabbatical and jubilee years.* Each seventh year is a sabbath of liberating rest for Israelite slaves (Exod. 21:2-6; Deut. 15:12-18), debtors (Deut. 15:1-11), and the land (Exod. 23:10-11). In P, this "full" sabbatical is reserved for the jubilee, whereas the seventh-year sabbatical applies only to the land. See **JUBILEE, YEAR OF**[S]; **SABBATICAL YEAR**[S].

g. *Ch. 26: the concluding exhortation.* The threat of total destruction and exile appears in three other books of the Bible: Deuteronomy, Jeremiah (while he was still a Deuteronomist evangelist), and Ezekiel (whose eschatology is largely based on Lev. 26). These also share with this chapter the pre-prophetic view that cultic sins alone determine the nation's collapse—idolatry (vs. 1) and the neglect of the sabbatical system (vss. 2, 34-35) are specified here. Since chs. 25-26

are attributed to Israel's sojourn at Mount Sinai (25:1; 26:46), they may constitute the text of the Sinaitic covenant according to the Holiness Source.

5. **Ch. 27: commutation of gifts to the sanctuary.** This chapter is a P appendix to the Holiness Source. The following gifts are discussed: persons (vss. 1-8), animals (9-13), houses (14-15), land (16-25), firstlings (26-27), devotions (28-29), and tithes (30-33). The organizing principle of this chapter is that gifts offerable on the altar may never be desanctified, but nonofferable gifts (with the exception of devotions) may be desanctified by their sale or redemption. See SANCTIFICATION IN THE OT[S].

**LEX TALIONIS** λέξ τάλι ὄνας. The term derives from a provision in the Twelve Tables, the first compilation of Roman law (450 B.C.): "If a man has broken a limb (i.e., of another man), unless he makes his peace with him (i.e., by making a pecuniary compensation) there shall be like for like (*talio esto*)." The principle of punishing a wrongdoer with exactly those injuries or damages he has inflicted upon someone else is known in a number of ancient and primitive laws. It is most often—but not exclusively—applied to cases of bodily injury. Whereas *talion* emphasizes the kind of punishment warranted in such cases, the principle of blood feud—which is occasionally mistaken by modern writers as *talion*—denotes the persons within the group of the victim of murder or manslaughter who are required to execute punishment against the person who committed the act or against other members of his group.

The only ancient Near Eastern laws besides those in the OT in which *talion* is clearly represented are the laws of Hammurabi (secs. 195-204; probably also secs. 116 and 153). *Talion* is found neither in the older laws of Ur-Nammu and Lipit Ištar nor in the laws of Eshnunna. The Middle Assyrian laws stipulate sympathetic sanctions for a number of offenses (e.g., sec. 9, cutting off a man's lower lip for kissing a married woman), but these do not qualify as *talionic* in the strict sense. Secs. 1-18 of the Hittite laws, often cited in discussions of *talion*, represent a stage where monetary com-

penensation for manslaughter or murder has superseded the ancient custom of blood feud. *Talion* is part of the pre-Islamic Arabic tribal laws (Caskel), and is adapted with certain restrictions into the Koran (Sura 2).

Some writers have viewed the *talion* as a primitive principle of law which was gradually replaced by a more humane system of monetary compensation (Driver and Miles). However, other scholars regard the opposite as true: *talion* has replaced an earlier system of monetary compensation whereby wrongs formerly regarded as merely private civil offenses now become criminal, as the state assumes greater responsibility for the welfare of its members (Diamond, Finkelstein).

*Talionic* sanctions are found in three places within the OT: Exod. 21:23-25; Lev. 24:17-21; Deut. 19:21. They are phrased in an abstract and apodictic style (an eye for an eye, etc.; see LAW IN THE OT[S] §5) in contrast to the casuistic formulation of the laws of Hammurabi. Each context is different, and careful textual analysis shows that the *talion* serves as a generalization for sanctions resulting from the possibilities of the individual case. Exod. 21:23-25 refers to injuries suffered by a pregnant woman who was accidentally caught in a fight between two or more men. The resulting miscarriage is treated in casuistic style in vs. 22, but in case of additional bodily injuries summary reference is made to the *talionic* formula, which is an obvious interpolation in this context (Alt, Diamond). The contrast with the casuistically styled laws of the bulk of the Book of the Covenant (Exod. 20:23-23:33) is evidence that the *talionic* sanctions of the OT originated in tribal law. In Lev. 24:19, the *talionic* regulation concerning bodily injury is in a secondary position after a regulation concerning restitution in kind for herd animals killed. It likely was added because of the words "life for life" in vs. 18. In Deut. 19:21 the *talionic* formula is again only a generalization of the sanctions stipulated for false or malicious accusations, which means that a person who cannot prove his accusations suffers the penalty the accused would have suffered if found guilty. For this principle of *calumnia*, widely attested in ancient Near Eastern laws, see Petschow.

No specific mention is made in the OT of the actual implementation of the *talionic* punishments.

The rabbinic abrogation of the *talion* results from the conflict between the commitment to follow the Mosaic laws and the obvious impossibility of executing the *talionic* sanction. The argument for abrogation is based on the assumption that no two persons have identical bodily members, and *talion* therefore could not be applied fairly. *Talion* was replaced by a system of monetary compensation (T.B. B.K. 83b-84a; Mekilta).

Jesus expands and reverses the *talion* (originally restricted to bodily injury) by exhorting his disciples, when they fall victim to wrongdoing and malicious treatment, not to retaliate but to endure it (Matt. 5:38-42; Luke 6:29-30).

\***LIBNAH (CITY).** With EKRON firmly established at Tell el-Muqanna', the identification of Libnah with Tell eš-šāfi (Tel Zafit) becomes impossible. Sennacherib took Ekron first (*ANET*, 287b) and then went on to besiege other Judean towns; only after taking Lachish did he turn on Libnah (II Kings 19:8). No intelligent strategist would have left a hostile outpost at Tell eš-šāfi to threaten his supply lines while mounting a siege of the proportions required to reduce Lachish. He surely would have taken Tell eš-šāfi and probably also Azekah, thus securing the Vale of Elah before moving against Lachish. Besides the fact that eš-šāfi means "the shining one," not "white," the original name evidently goes back to Aramaic *šāphithā* (Gr. *Saphitha* on the Madeba Map), "watch tower."

\***LISTS, ETHICAL. I. Catalogues of virtues and vices.** Some have sought the origin of the NT catalogues in an early Jewish proselyte catechism (Klein, Carrington), but the existence of such is problematic (Vögtle). Others have emphasized Stoic origins, but Christian borrowing from Stoicism is limited: the Stoic ethic is informed by what is natural, the NT ethic by love (*agape*) and faith; there is no Stoic parallel to Paul's identification of virtues with "fruit of the Spirit"; the four cardinal virtues and corresponding vices of Stoicism are not present in NT catalogues; and many of the virtues in the NT lists were regarded as vices in Stoicism.

Kamlah has refined Wibbing's notion of an Iranian origin of the NT catalogues by distinguishing two forms, the "descriptive" catalogues which close with a promise of salvation and a threat of destruction (e.g., Gal. 5:19-23) and the "parenthetic" ones which depict a "putting off" of the old and a "putting on" of the new (e.g., Col. 2:20-3:17). He posits a background in Hellenistic syncretism for the latter and a background in the dualistic cosmology of Iranian religion for the former. But in Judaism and the NT God remains sovereign Lord and there is no place for a dualistic cosmology of the Iranian type. The NT catalogues manifest, rather, the sort of ethical dualism implicit in Israel's expectation of the DAY OF THE LORD which will bring salvation for some and judgment for others, and in such OT passages as Deut. 27 ff. where a catalogue of curses and blessings has been incorporated into a hortatory setting

closing with the appeal: "See, I have set before you this day life and good, death and evil . . . blessing and curse; therefore choose life" (30:15, 19; cf. Jer. 21:8; Ezek. 18:5-9, 15-17).

2. **NT station codes. a. Types.** Three types of literature have been grouped together under the term HAUSTAFEL, but they are so different in form, content, and function that they must be distinguished.

i. *Station codes proper.* These are in Col. 3:18-4:1; Eph. 5:22-6:9; I Pet. 2:13-3:7 and Rom. 13:1-7. Christians are addressed in their stations in life as wives, children, or slaves, with the subordinate member of each reciprocal relationship mentioned first. The emphasis is on being subordinate (ὑποτάσσουμαι) and the form is that of direct address, followed by an exhortation in the imperative mood and supported by a motivating statement.

ii. *Church-order regulations.* These address church officers (bishops, deacons) or members of the church (old, young, widows) with respect to their stations in the church and deal with life in the church, not in society. To this form belong I Tim. 2:8-15; 6:1-2; Tit. 2:1-10; I Clem. 1:3; 21:6-9; Ign. Pol. 4:1-6:1; Polyc. Phil. 4:2-6:3.

iii. *The Didache and Barnabas.* Although the exhortations in Did. 4:9-11 (parallels in Barn. 19:5-7) are addressed to stations in society (fathers, children, slaves, masters), they stand materially and formally closer to the wisdom tradition and to the Two-Ways doctrine than do the NT station codes. Only Did. 4:11 contains a remnant of these latter.

b. *Origin.* (See also PARENESIS[S].) i. *Stoicism.* The evidence does not support the view that the form and content of the NT station codes were taken over from Stoicism, either directly or via Hellenistic Judaism. There are, first, important formal differences. In Stoic texts the stations are not addressed directly, nor is the imperative mood employed; the naming of the station was sufficient to indicate the appropriate conduct. Similarly, motivating phrases are lacking. There are also differences in content. The stations emphasized in the NT (wives, children, slaves) are seldom if ever mentioned in the Stoic lists; the NT codes use ὑπακούω not πείθομαι for obedience; and the ἀνήκειν ("it is fitting") is not left to stand alone (Col. 3:18, "as is fitting in the Lord").

ii. *Hellenistic Judaism.* Some scholars argue that the relationship of the NT station codes to Jewish proselyte literature indicates a Hellenistic Jewish origin. But in addition to questions about the existence of a Jewish proselyte catechism, the sharp distinction between Hellenistic and Palestinian Judaism this view presupposes does not hold up. Further, the differences between station codes in the NT and in Hellenistic Judaism have not been fully appreciated; and what similarities remain are better explained by positing a common dependence upon OT and Jewish traditions.

iii. *Multiple roots.* The NT station codes reflect the influence of diverse traditions. Formally (direct address, imperative mood, motivating statements) they are indebted to the OT apodictic law (Deut. 5:16). The stating of the ethic in terms of stations in life is typically Hellenistic, especially Stoic. The content is drawn basically from the OT,

Judaic tradition, although with the addition of certain Greek (what is fitting) and Christian (*agape*) concepts. The basic ethical conception of the NT codes—that without belonging to the world as such, one has responsibilities within the structures of society—takes us back to the teaching and example of Jesus himself.

**LITERARY CRITICISM.** Analyzes texts in order to determine their structure and composition, possible use of sources (oral or written), integrity (whether the text is composite), and style. The more questions of genre are pursued, the more literary criticism merges with FORM CRITICISM, since the latter can no longer be limited to oral or pre-literary traditions. In biblical scholarship, literary criticism early became intertwined with historical or HIGHER CRITICISM, since the prevailing desire was to write the biblical history the way it "really happened." To do so, it was necessary to relate the biblical books and their sources to their own times and places.

Recently, a "new criticism" has been applied to biblical literature. This understands texts as aesthetic objects in their own right, and finds the key to meaning in the logic intrinsic in the form and structure of the writing rather than in its historical situation, use of sources, or the intention of the writer. See LITERATURE, BIBLE AS[S].

The earlier literary criticism, however, being concerned with genetic relationships between texts and parts of texts, attempted to recover sources (assumed to be texts) as precisely as possible. Hence older discussions tend to equate literary criticism with SOURCE CRITICISM. Literary criticism has shown that the books of the Bible are the end products of sometimes long and always complex processes of writing, compiling, and editing. See BIBLICAL CRITICISM §5c; BIBLICAL CRITICISM, NT[S] §2; BIBLICAL CRITICISM, OT[S] §2.

L. E. KECK

\***LITERATURE, THE BIBLE AS.** This phrase designates a point of view taken by a relatively

small but increasing number of biblical scholars toward the writings contained in the Old and New Testaments. These scholars, who come from diverse philosophical and theological traditions, are united in considering the Bible primarily and fundamentally as a literary document (as opposed, e.g., to considering it as a historical or theological document). Despite this unity, however, they employ often very different and even incompatible methodologies for the study of literary texts and usually disagree markedly about the implications of their work for the understanding of the Bible.

Generally speaking, they do not feel that their work invalidates other approaches to the Bible. Yet it is clear that their enterprise, viewed in the context of Western culture as a whole, is part of a turning away from a preoccupation with history and a turning toward a concern with language. For this reason, they believe that their studies provide a helpful corrective to a prepossession with history among biblical students. Because of their concern with language, they find themselves looking to such fields as linguistics and semiology (the study of the use and meaning of signs) for basic presuppositions and methodological tools.

The movement to consider the Bible as literature may be part of the general secularization of Western culture. It is noteworthy that many of its practitioners are teachers in secular institutions who have no specifically religious or theological interest in the Bible. Their study of it as literature is rooted in an appreciation of the biblical portrayal of the human situation. There are other advocates of a literary approach to the Bible, however, whose final concern is religious. They believe that the literary appreciation of the Bible is one more way of appropriating God's word spoken through documents centuries old.

- Bibliography

1. **Literature as paradigm.** The exceptional literary merit of the Bible has been recognized from the earliest times. Both Jewish and Christian commentators from the founding fathers on have noted the simple grandeur of its prose narrative, the evocative power of its imagery, and the penetrating insight of its characterizations. Furthermore, LITERARY CRITICISM has long been recognized and practiced as an important part of biblical interpretation (e.g., its delineation of genres of literary speech). Yet the new literary critics distinguish their work from that of the older criticism, while at the same time acknowledging their own indebtedness to that which form and source analysts have been doing.

Contemporary sociologists of knowledge have used the word "paradigm" to describe any idea or set of ideas that provides the framework within which a given set of phenomena are understood. One

can say, then, that the *paradigm* which has governed practically all modern research on the Bible is history. Scholars operating under this paradigm have either remarked on the literary quality of a text as an aside or have engaged in literary tasks for the purpose of answering historical questions (e.g., the attempt to establish the authentic sayings of Jesus by form criticism). The paradigm, or controlling idea, guiding the research of literary critics is, on the other hand, literature. Consideration of the Bible as literature is itself the beginning and end of scholarly endeavor. The Bible is taken first and finally as a literary object. It is because of this shift from history to literature as paradigm that contemporary literary critics wish to distinguish themselves from their predecessors. They claim that it is possibly the most significant change of paradigm in biblical studies since the adoption of the historical model sometime after the Middle Ages, and that it will revolutionize the way the Bible is assimilated into modern culture. An analogy with Homer is often made. The questions an ancient Greek would have asked, believing the *Iliad* both a sacred text narrating the activities of the gods and a historical document reporting the Trojan War, are far different from those asked by a modern Homeric critic.

**2. Consequences of paradigm change.** With a change in paradigm goes a shift in criteria governing the type of problems that are studied, the selection of methods used to solve these problems, and the legitimacy and adequacy of proposed solutions. Thus, for help in framing questions to be asked of biblical materials, for tools of analysis, and for basic notions of what an acceptable answer looks like, practitioners of the new literary criticism tend to call upon a broader field of general literary and linguistic studies. Exod. 1-15 can be used as an example to illustrate how this new literary analysis works, although it should be kept in mind that what follows is only one among numerous ways the passage might be studied by these critics.

An initial reading indicates that Exod. 1-15 has many features of literary comedy, especially dramatic comedy. By a comparison of this material with other examples of this genre, and a study of various critical analyses of comedy in literature, some basic tools with which to test the initial hypothesis may be gained (e.g., theories of characterization and plot structure typical of comedy). Thus, one is able to see, for instance, that the *dramatis personae* in Exodus conform very neatly to the characterization found in the comedy genre. Pharaoh is a typical *alazon* (an imposter, one who tries to be more than he is), and Moses a typical *eiron* (one who subverts the *alazon*). Yahweh is a good example of the behind-the-scenes initiator and sustainer of the comic action, Aaron a characteristic hero's helper, and the Egyptian army an exemplary *pharmakos*, or scapegoat. Moreover, the verbal contest, or *agon*, between Moses and Pharaoh is a recurring feature of comic plots, as is the final outcome of the action: a move from one society to a more authentic alternative.

Further testing of the hypothesis that Exod. 1-15 is a literary comedy would have to lead to

an assessment of the internal consistency of the narrative so viewed, and to a comparison with other acknowledged examples of the genre. This comparative study is crucial. If one encounters no significant negative evidence, the hypothesis gains the status of a theory and is used to examine certain larger questions of meaning, including the meaning of comedy and its function within human societies.

This illustration, brief as it is, points to several common characteristics of the new literary criticism of the Bible. First, no extraliterary hypotheses (e.g., that Exod. 1-15 is Scripture, that it is historical reportage, or that it originally had a place in the cultic celebrations of ancient Israel) are introduced to account for any features of the text or as evidence in support of any conclusions drawn. That Exodus is considered by some to be a sacred text is irrelevant to the discussion. That the events it describes are considered by many to be historical is also irrelevant. For the literary critic nothing depends on the truth or falsity of these historical claims. The situation is exactly comparable to reading, e.g., Gibbon as literature. Gibbon intended to write history, and his initial readers certainly read him that way. The literary critic simply brackets this intention and reads him in a wholly different context, one in which the accuracy of his account of ancient Rome never comes into question. Finally, that the *Sitz-im-Leben* out of which Exod. 1-15 came was a cultic one would not surprise the literary critic, since much literature may have such an origin. But, if it were proved that this hypothesis were false, it would not influence his findings one way or the other. The situation in this case is comparable to the study of Greek drama in relation to its reputed origin in Greek religion. Such information might give the critic some clues about the social significance of drama, but would otherwise be unhelpful.

Second, literary critics in general do not believe it is necessary to use the traditional disciplines of biblical research (e.g., source, form, or tradition criticism) or to employ the findings of those disciplines. Upon occasion a critic may indeed make use of these—if, e.g., there is a special interest in analyzing the JE version of the Exodus. Source criticism would then be employed in order to establish the text. But much more often the text is simply taken in its received form, so that information about its construction from smaller units (whether these units are oral or written) is not likely to be crucial. In any case, wherever literary critics do make use of these disciplines, it is for their own purposes.

Third, the new literary criticism may be described as inherently ahistorical. For instance, should a text be available in several recensions, the choice of which recension to study is essentially idiosyncratic, depending on the interests of the critic, and is unrelated to assumptions about greater value lying in greater antiquity or in closer proximity to original author(s). Also, since such critics consider that all individual works comprise one vast body of literature, they normally feel quite free in studying a particular work in relationship to any other, of whatever date or

from whatever place. It follows, moreover, from this same assumption that these critics freely employ modern ideas as explanatory concepts in the attempt to comprehend ancient texts. They do not assume that the viewpoint of the author(s) or of the original audience is privileged over the point of view of any other reader.

Fourth, to adopt the paradigm of literature in one's interpretation of the Bible usually also involves an assumption about the nature of symbols, namely, that their final direction is inward not outward. Symbols are understood to have been used, not instrumentally, but imaginatively, to construct a fictive world where actions are not real actions but imitations of real actions, and where ideas do not apply directly to the real world but to the fictive world. Ideas in literature are hypothetical constructs, and the route one would take in transferring them from fictive to real world is most circuitous. This of course has implications for the thorny question of "truth" in literature. Generally speaking, a question about the truth of an action or idea expressed in a work of literature resolves itself into a question of its rightness or appropriateness in context. The truth of Jesus' resurrection, e.g., becomes a question of how fitting it is as the climax of the narrative action told in the gospels and is parallel to the rightness of Hermione's return to life in *The Winter's Tale*. Likewise, the truth of a biblical theme like the fall of man is parallel to the problem of the truth of Keats' proclamation in "Ode on a Grecian Urn" that "beauty is truth, truth beauty." In both these cases the question is whether a truth claim is valid, not in the real world, but within the fictive world that the work creates. The Bible's significance as literature is closely tied to the power of the literary symbolism present in its various books. The centripetal force of literary symbols draws the reader into the work, and, through an effort to unite its symbols in a total realization of its structure, one is led finally to surrender oneself to the force of the work.

**3. Objections to literary study of the Bible.** Two closely related objections are often made to studying the Bible as literature. It is said that such study entails an essential distortion of the meaning of biblical texts because it makes them into something they were not meant to be. The second objection is that literary methods of analysis are successful only on works self-consciously written as literature. Literary critics do not deny that they place the biblical materials in a context alien to those in which they were originally written. They argue, however, that the designation of these texts as Scripture (another clear instance of a paradigm shift) also places them in an alien context, and that such changes in contextual frameworks are inevitable as history changes the concerns of mankind. In response to the second objection, one may simply observe that critics have for generations successfully studied numerous materials not self-consciously written as literature (e.g., Donne's sermons, C. Wesley's hymns, Milton's political tracts, the King James translation of the Bible).

**4. Current research.** Although certain presuppositions held in common by sponsors of the new

literary criticism of the Bible have been identified, it is not surprising to find also some important differences. The liveliest debate among interpreters interested in moving from the history to the literature paradigm centers on the validity and usefulness of structuralism as a critical methodology.

**a. Structuralism.** Two presuppositions are crucial to structuralism both as a philosophy and as a critical methodology. The first is that appearances are not reality. Phenomena (like literary texts) as they meet the eye are to be explained by phenomena below the surface, called deep structures. The second assumption is that deep structures express themselves as codes. All human activities, from kinship patterns to literary texts to fashions, are coded expressions of the deep structures of the human brain. The fundamental model for understanding all codes is language, which explains the peculiarly important place that linguistics plays in structuralist theory. By decoding human activities one can not only discover the reality behind the appearances of everyday life, but can also, potentially, map the structure of the mind.

One particular implication of these presuppositions is of special importance for structuralist literary criticism: in order to break codes one must pay attention to wholes. One should not, as has been the case so often in the past, dissect wholes into parts and then consider that these parts have meaning apart from the whole. The proper procedure, rather, is to study works as wholes by showing the interrelation of their parts.

For the structuralist, then, at one pole is the literary text as it meets the eye, a text capable of being reduced to very small units, like words, images, metaphors. At the other pole are the deep structures which have been coded in the text. In between are a series of intermediate structures of ever increasing abstraction, like narrative sequences, plot structures, genres. The entire model should be compared to the analysis of language into phonemes, morphemes, words, phrases, sentences, groups of sentences, etc. Structuralist criticism may begin at any one of these levels, but it finally always proceeds from whole to ever larger whole.

Structuralists have done significant work at many different levels, e.g., on genre, style, metaphor, narrative, and characterization. Since it is not feasible to discuss their methodology in each of these areas, a hypothetical example will be used to illustrate certain of their basic procedures. Typically they assign the major functional elements in a story (i.e., characters, objects, conditions, feelings, etc.) to one of six different roles: subject, object, recipient, ordainer, helper, opponent. When these roles are placed in relation to actions, one arrives at the following schematized plot (of which there are innumerable refinements): a subject, aided by a helper and hindered by an opponent, wants to possess an object or render it to a recipient, the object and possibly even the entire action proceeding from an ordainer. Usually the outcomes of potential actions represented by this plot are arranged into binary sets (reflecting a general propensity within structuralism to understand things in terms of binary opposition): sub-

ject does/does not possess object, recipient takes/refuses to take object, etc.

Using the above schemata and others like them the structuralist critics, from their own intuition and from the example of their predecessors, attempt to identify the meaningful units of a given text, e.g., a parable of Jesus. These units may be specific actions, episodes, themes, relationships between characters, or the like. For simplicity the meaningful units of a particular parable may be represented by the symbols *a, b, c*. Next, choosing similar texts (e.g., the remaining parables of Jesus), the critic performs the same analysis and may arrange the findings in a chart:

Parable 1	a b c
Parable 2	a c d e
Parable 3	a b d
Parable 4	b c d e
Parable 5	b d e

This chart, taken as a whole, represents the set, parable of Jesus, and read across line by line it shows the relation of one parable to the set. It is easy to see that reading any one parable will give only part of the total message. One would need to read the entire set to understand the fuller meaning. In fact, it is possible that the meaning units of any one parable may be so arranged as to mislead the reader. In this case, the parable would have a surface meaning and a deeper meaning. One could discover this latter meaning only by comparing the parable with the entire set. It is even possible, maybe even the rule, according to structuralists, that the meaning units of a given series of texts will be so arranged that the real meaning of the whole series is obscured. In this case, the surface meaning of every text in the series is different from its deep meaning. Even a serial reading of the entire group will not yield the deep meaning. Only when a serial reading (horizontal axis in the above chart) is combined with a formal reading (vertical axis) will the true meaning become clear.

This analysis of Jesus' parables could be carried a step further by producing a similar set for the parable genre. This set would be what is called the generative matrix out of which all parables come by means of certain laws of transformation. The process is similar to the one by which specific English sentences are generated from the matrix, English language, by means of the laws of grammar. One of the major objects of structuralist activity is to discover the laws of transformation governing all aspects of human behavior. Knowing these laws for parables, the critic, by comparing Jesus' actual parables (his performance as a maker of parables) with the generative matrix, can draw conclusions about Jesus' competence (or his ability to generate parables). In less abstract terms, such a procedure would allow the critic to discover the distinctiveness of Jesus' style and message.

Clearly this is a very different type of analysis from that undertaken in the context of historical study. Given a particular text the historian will ask what conditions in the context caused it to be the way it is. For the structuralist, on the other hand, both the generative matrix and the human mind that is ultimately the locus of that matrix

are transtemporal and transspatial. When structuralist critics, therefore, draw conclusions about Jesus' parables, they are not making historical statements, but drawing comparisons between one set of structures and other sets, and also with the pool that includes all possible sets.

*b. Nonstructuralist criticism.* Much of the literary criticism of this century, especially that known as new criticism, has been principally concerned with the text as it presents itself to the reader. The hallmark of this type of criticism is "close reading," the meticulous, detailed analysis of the verbal texture of the work, paying particular attention to patterns of imagery, use of metaphors, and the type of interplay between words that generates wit, paradox, and irony. These critics emphasize the way the verbal interrelations within the text work together to produce an organic whole that is more than the addition of the parts. It follows that each work is indivisible and unique, so that paraphrase is heresy and even translation grossly inadequate. Furthermore, since the poem is unique, each experience of the poem, accomplished by an intense "close reading," is also utterly unique, and is characterized by a heightened integration of body and mind and self and world. New criticism agrees with structuralism in its concentration upon the text as object and in its willingness to divorce the text from its historical moorings, but it abhors the tendency of structuralism to dissolve the particularity of the object in ever larger abstractions.

"Close reading" works best on texts that are written out of an intense self-consciousness and so possess a very dense aesthetic surface (e.g., the poems of Donne). Since there are few texts within the Bible that are so written, application of new criticism to biblical materials has been sporadic and uneven. Some interesting analyses have been done on books like Job, Jonah, Mark, and Revelation. In the long run it may be that work done by new critics on narrative style may be more useful in biblical criticism. Unlike the structuralists, who tend to abstract narrative elements from the text in a process called normalization, new critics concern themselves with the actual language of the text, with such matters as choice of syntactic constructions and vocabulary, point of view, and tone of voice.

As interest in new criticism has waned, scholars have turned their attention increasingly to classificatory schemes for literature, especially to the notion of genre. Some but not all of this activity has been structuralist oriented (*see above*). Biblical scholars have been concerned both with the smaller genres found within larger works (e.g., songs, stories, proverbs) and with the larger works themselves. Studies of the smaller units, in many ways related to form criticism, have tried, by comparing these units with certain traditional genres, to come to a fuller understanding and appreciation of the distinctive qualities of biblical speech. Investigation of the larger units has, for the most part, amounted to the study of biblical books as wholes (e.g., gospels, letters, histories) and is related to redaction criticism. An attempt has been made to show that these books belong to genres

and to discover the basic conventions of these genres. The notion that the writing of history is itself a literary genre governed by literary conventions is particularly exciting, and illustrates, once again, the tendency of literature to swallow up history.

One attempt to isolate the units of which larger wholes consist depends not upon traditional classification of genre but upon the rhetorical strategies used by their authors. With works very obviously oratorical (e.g., Second Isaiah) this method has produced significant results. Efforts to apply it more broadly have not, as of yet, been very successful.

See also ACTS, GENRE[S]; APOCALYPSE, GENRE[S]; DISCOURSE STRUCTURE[S]; FORM CRITICISM, OT, NT [S]; GOSPEL, GENRE[S]; LETTER[S]; PARABLE[S]; POETRY, HEBREW[S]; REDACTION CRITICISM, OT, NT[S]; SOURCE CRITICISM, OT[S].

**Bibliography.** The most useful bibliography of works on literary criticism is that published in annual volumes by the Modern Language Association. J. D. Crossan, "A Basic Bibliography for Parables Research," *Semeia*, I (1974), 236-73, is useful for the biblical student interested in structuralism.

Literary criticism: There are numerous anthologies of literary criticism from Plato to the present; a good one is H. Adams, *Critical Theory Since Plato* (1971). Biblical students should begin with N. Frye, *Anatomy of Criticism* (1957), to which the present discussion is heavily indebted. Other important studies are: I. A. Richards, *Principles of Literary Criticism* (1924) and *Practical Criticism* (1929); K. Burke, *The Philosophy of Literary Form* (1941); G. Bachelard, *The Poetics of Space* (1957), a very good example of phenomenological criticism; M. Krieger, *The New Apologists for Poetry* (1956), a useful summary of literary critical debate through the first half of this century, and *A Window to Criticism* (1964), which has a fascinating discussion of the relation of poem to reality; F. Kermode, *The Sense of an Ending* (1967), for a discussion of the meaning and significance of fictions; and R. Wellek and A. Warren, *Theory of Literature* (3rd ed., 1963), for basic orientation. Additional critics who are likely to be helpful to biblical students are J. C. Ransom, R. P. Blackmur, and C. Brooks (all new critics); G. Santayana and A. W. Levi (for philosophical orientation); R. S. Crane (a neo-Aristotelian formalist); G. Poulet and J. H. Miller (both phenomenologists); G. Steiner (for the implications of modern linguistic theory for literary criticism); as well as the prose writings of T. S. Eliot, Ezra Pound, and Wallace Stevens.

Structuralism: There are four helpful anthologies of structuralist writings: R. Macksey and E. Donato, eds., *The Languages of Criticism and the Sciences of Man* (1970); J. Ehrmann, ed., *Structuralism* (1970); M. Lane, ed., *Introduction to Structuralism* (1970); and R. and F. DeGeorge, eds., *The Structuralists from Marx to Lévi-Strauss* (1972). The latter two contain excellent introductions. One should begin with the three founding fathers: K. Marx, *Capital* (3rd ed., 1887); S. Freud, *The Psychopathology of Everyday Life* (1904), only one of numerous possible selections; and F. de Saussure, *Course in General Linguistics* (1916 [ET 1959]). After them one should turn to the giants of structuralism as a self-conscious movement: R. Jakobson and M. Halle, *Fundamentals of Language* (1956); R. Jakobson, *Selected Writings*, vol. I (1962); R. Barthes, *Writing Degree Zero* (1953 [ET 1968]), *Elements of Semiology* (1953 [ET 1968]), and *On Racine* (1960); C. Lévi-Strauss, *Structural Anthropology* (1958) and *The Savage Mind* (1962); E. Leach, *Claude Lévi-Strauss* (1970),

helpful in understanding the man and his work; N. Chomsky, *Language and Mind* (1968). Among structuralist examinations of individual genres V. Propp's *Morphology of the Folktale* (1928 [ET 1968]) should probably be singled out as most important for biblical students. In order to pursue individual interests beyond the above basic list, Crossan's bibliography should be consulted.

Literary criticism of the Bible: James Barr, "Reading the Bible as Literature," *BJRUL*, LVI (1973), 10-33, offers a general survey with references to a number of pertinent studies. Much of the work is to be found in journals. One should pay special attention to *Linguistica Biblica* and *Semeia*, two journals devoted exclusively to literary criticism of the Bible and related matters. Also, *Interpretation*, XXVIII (1974), a special issue on structuralism, should be consulted. Several general books in the field are: R. G. Moulton, *The Literary Study of the Bible* (rev. ed., 1899), a pioneering and still useful study; D. B. McDonald, *The Hebrew Literary Genius* (1933); T. Henn, *The Bible as Literature* (1970); S. Sandmel, *The Enjoyment of Scripture* (1972); A. Wilder, *Early Christian Rhetoric: The Language of the Gospel* (1971), a basic work on the literary art of the NT; L. Alonso-Schökel, *The Inspired Word* (1965). For structuralist and/or linguistic oriented studies see: R. Funk, *Language, Hermeneutic, and Word of God* (1966); E. Güttgemanns, *Offene Fragen zur Formgeschichte des Evangeliums* (1970); E. Leach, *Genesis as Myth and Other Essays* (1969), a fascinating and potentially revolutionary study of several biblical stories from the point of view of a structuralist anthropologist; D. Via, *The Parables (1967) and Kerygma and Comedy in the NT: A Structuralist Approach to Hermeneutic* (1975). Other useful studies are: W. Beardslee, *Literary Criticism of the New Testament* (1970), a fine study of the larger genres like gospel and apocalypse; E. Good, *Irony in the Old Testament* (1965); E. Auerbach, *Mimesis* (1946), which includes a classic study of Hebrew narrative style. J. Muilenburg's exegesis of Isa. 40-66, *IB*, V (1956), 381-418, 422-773, introduces the concept of "rhetorical criticism." See also S. E. McEvenue, *The Narrative Style of the Priestly Writer*, *AnBib*, L (1971); D. Redford, *A Study of the Biblical Story of Joseph*, *VTSup*, XX (1970).

Sociology of knowledge: Those interested in this subject and in the idea of paradigm should begin with T. Kuhn, *The Structure of Scientific Revolutions* (1962) and P. Berger and T. Luckmann, *The Social Construction of Reality* (1966).  
D. ROBERTSON

**\*LITERATURE, EARLY CHRISTIAN.** Most of the writings from the first 150 years of Christian history (ca. A.D. 30-180) belong to collections which are referred to by certain traditional designations: the twenty-seven writings of the NT canon (see CANON, NT; CANON, NT[S]); the APOSTOLIC FATHERS, writings which were believed to have been written by disciples of the apostles; and the NT Apoc., writings which usually bear the name of an apostle, but were not admitted to the canon of the NT (constantly increasing in number through new discoveries; see APOCRYPHA, NT[S] §1; NAC HAMMADI[S]). Some of the works of the Apologists, as well as some of the Acts of Christian martyrs must also be included.

These writings are of very different types. They include brief letters as well as long treatises comprising several "books." They belong to several distinct literary genres, and not all of them were written in order to be published. Yet all of these Christian writings share the features which gen-

erally characterize other literature of the period—features which in many instances were mediated through the Hellenistic-Jewish literature of that time. Moreover, all these Christian writings served particular purposes in the development and history of Christian communities (propaganda, edification, organization, polemics). Their function usually determines their literary genre.

**1. Preservation.** Even though Jesus apparently did not write anything himself, among the earliest Christian writings some must have been composed in ARAMAIC. This is generally assumed for the synoptic sayings source used by Matthew and Luke (see Q; Q[S]), for the collection of parables used in Mark 4, and perhaps for the Gospel of Thomas (see THOMAS, GOSPEL OF[S]). Some scholars also believe that certain sources of the Gospel of John were originally written in Aramaic; however, no such sources of the known gospels have survived. Without exception, all writings which are preserved were originally written in Greek, and it seems that the production of Christian writings in languages other than Greek (Latin, Syriac) did not begin until late in the second century.

Of the several hundred Christian writings from this period known to have existed, all the autographs are lost; only copies are extant. In the case of the canonical writings of the NT, one very small papyrus fragment of such a copy can be dated as early as the first half of the second century A.D. (P<sup>52</sup>), a few more papyri of parts of the NT come from the late second and third centuries, and the oldest MSS of the whole NT date from the fourth century, with an ever increasing number of NT MSS in Greek and in translations from subsequent centuries (see TEXT, NT §B; TEXT, NT[S] §1). In contrast, most of the works of the Apostolic Fathers and Apologists are preserved only in one or two MSS which are sometimes of a rather late date. Of some we possess only fragments, e.g., the Preaching of Peter (see PETER §12), the Apology of Quadratus (see APOSTOLIC FATHERS[S] §10), and the Interpretations of the Lord's Oracles by PAPIAS, all as early as some of the later books of the NT. The preservation of the NT Apoc. is even worse, though some are known from fragments of papyrus which were written as early as the second century (an "Unknown Gospel" fragment in the Papyrus Egerton 2, the Gospel of Thomas in several papyrus fragments from Oxyrhynchus). Of many others the original Greek text is lost and only translations into other languages (Latin, Syriac, Coptic, Ethiopic) survive. It is therefore often difficult to be

certain about their original text, and in many instances even the original scope and content of such works is not sufficiently known.

**2. Cultural context.** Early Christianity developed within a literary culture. The Hellenization of the whole eastern half of the ancient Mediterranean world since the time of Alexander the Great had brought with it a marked increase of literacy, especially in the hundreds of Greek cities which had been founded in the areas ruled by the successors of Alexander (see HELLENISM[S] §§5, 6). The Roman conquest of these countries did not bring any major changes; indeed, it renewed the strength of the Hellenization process. Most of the cities had public schools and libraries. Writing, no longer the privilege of priestly, prophetic, or philosophical schools and traditions, had become democratized. Literature was produced and widely distributed, often for the sole purpose of entertainment. Written communication was a matter of course for most people, and many genres of formal and informal writing developed and became firmly established—from the private or business LETTER to the various genres of political and religious propaganda, philosophical treatises, scientific and medical handbooks, didactic poetry and entertaining novels, to name only a few.

Jews of the Hellenistic period had fully participated in these developments, not only the Jews of Alexandria living in the center of culture and scholarship, but also, to various degrees, those living in other areas—Asia Minor, Rome, Antioch, Babylon, and markedly in Palestine itself (see JUDAISM, HELLENISTIC[S] §5). Christianity's missionary efforts were most successful in the major cities, so the majority of early Christian writings come from those urban centers which reached the highest level of civilization and literacy during the Roman Imperial period: Antioch, the cities of western Asia Minor and Greece, and Rome, later also cities in eastern Syria, Egypt, and Africa. It was in these centers and among their largely literate populations that the use of the written medium of communication was most likely to be effective.

The literary genres employed by early Christian writers were quite distinct from those of classical Greece (tragedy, comedy, epic, etc.), but parallels to the classical literature of Israel are equally rare. In the late Hellenistic and Roman Imperial periods, however, the differences between Christian, Jewish, and pagan literary genres are less striking. This is particularly true of the functional literature that serves the needs of apologetics, propaganda, community organization, education, and edification (as distinct from that which is primarily artistic, philosophical, or scientific). Most of the genres of such functional literature had been adopted by Jewish circles during the Hellenistic period. Often Christianity could simply adopt them from Judaism and rely on their continuing effectiveness within a culture that remained largely "Hellenistic."

**3. Written literature and oral tradition.** Because of the functional role of early Christian literature, it is closely related to the various forms of oral communication and oral tradition (see TRADITION, ORAL[S]; FORM CRITICISM, NT[S]). Oral tradition preceded literature and continued to co-exist with

it, because worship and prayer, preaching and teaching, polemics and community organization provided a natural situation for oral forms in the life of the church. It is probably wrong to see the expectation of Christ's imminent PAROUSIA as the cause of a preference for oral tradition. Indeed, it is Paul, who certainly expected Christ's coming in the immediate future, who produced the earliest Christian writings which have been preserved (*see* §4 *below*). Literature comes into existence wherever special circumstances require it; e.g., the need to communicate with a newly organized church from which the apostle is physically separated, the desire to introduce oneself or a fellow missionary to another community in advance of one's arrival, the attempt to produce manuals for church order that would be binding for churches in different cities. Early examples of such literature soon served as models and stimuli for subsequent literary productions; Paul's letters were imitated by the authors of the Deutero-Pauline epistles; later, gospels and church orders used and expanded earlier exemplars of such literature.

Because the situations for oral tradition and written literature were often analogous in the life of the churches, large amounts of oral materials appear in early Christian literature. Some writings are primarily collections of oral traditions, both sayings and narratives (e.g., the DIDACHE; to a certain degree the Synoptic gospels, the ACTS OF THE APOSTLES, and the Epistle of James). Hymns and other LITURGICAL MATERIALS are quoted and used frequently. Parenetic sections in many epistles utilize and interpret catalogues of vices or virtues and tables of duties for the members of the household (*see* LISTS, ETHICAL; LISTS, ETHICAL[S]; PARENESIS[S]). Such writings also reflect the style of oral communication. Paul's letters consistently reveal the language of his preaching (the style of the Cynic and Stoic diatribe); prophetic writings not only contain traditional sayings of Christian prophets (*see* PROPHECY IN THE EARLY CHURCH[S]), but also imitate their style in the production of apocalyptic literature (*see* APOCALYPTICISM; APOCALYPTICISM[S] §3e).

4. **Letters.** The earliest preserved Christian writings are the letters of Paul. In their external form, these letters correspond to the private letter of the Hellenistic and Roman period (*see* LETTER §2; LETTER[S] §§3-5). There are, however, several peculiar features in the Pauline letters which distinguish them from the common private letter form. (a) The sender introduces himself with his title ("Apostle")—a feature otherwise found only in official letters, not in private correspondence. (b) In addition to personal information which usually appears in the expanded proem (it often includes the "travelogue," cf. II Cor. 1:3-2:11; I Thess. 1:2-3:13), the body of the letter presents mostly "official" information. (c) Paul utilizes literary genres and oral materials which are not normally parts of private correspondence: church-order materials (I Cor. 5:1-14:40; I Thess. 4:1-12), eschatological treatises (I Cor. 15; I Thess. 4:13-5:11), apologies (II Cor. 10-13; Galatians). This demonstrates that the Pauline letters are not

private correspondence, but political instruments in the organization of mission congregations.

A special kind of church-political letter is the letter of recommendation, frequently found in private and official letters in antiquity. The opponents of Paul in II Corinthians apparently used letters of recommendation from other churches where they had worked successfully (II Cor. 3:1). Rom. 16, perhaps an originally independent writing (*see* ROMANS, LETTER TO THE[S] §1b), is a letter of recommendation for Phoebe, a Christian minister from CENCHREA; a long list of greetings is attached in order to reaffirm the leadership and good standing of those named. The letter to PHILEMON recommends a runaway slave and instructs the addressee to accept him back "no longer as a slave, but . . . as a beloved brother" (Philem. 16); the official form of the letter—addressed to the whole church—indicates that what is recommended is meant to have general validity.

The letter genre as developed by Paul became normative for almost all later epistolary literature in ancient Christianity. Colossians, Ephesians, and I Peter contain primarily interpretations of liturgical traditions, together with church order and other parenetic traditions (catalogues of vices, tables of duties for the household). These letters, as well as other Deutero-Pauline epistles which contain similar materials (the Pastoral Epistles, I Clement, Polycarp to the Philippians) imitate and vary the Pauline prescript and proem. Paul's use of letters as instruments of church politics also influenced Ignatius of Antioch; through his letters he tried to propagate the institution of the monarchic episcopate as the only guarantee for the true "gospel" and the effective use of the eucharist. As collections of Pauline letters became more widely known and accepted, the "official" letter was established as an important medium, not only of communication, but also of propaganda, polemics, and organization; cf. the letters of Bishop Dionysius of Corinth (fragments preserved in Euseb. Hist. IV.xxiii), the letters of Bishop Cyprian of Carthage, and many others.

The letter form has also been used as an external dress for writings which actually belong to a different literary genre: II Timothy is better understood as a TESTAMENT. Hebrews, Barnabas, and I John are theological treatises (*see* §10 *below*). The letter to Rheginos is a tractate on the immortality of the soul (*see* RESURRECTION, THE TREATISE ON[S]).

5. **Wisdom books.** Israel had long since known a literature in which the sayings of the wise men were collected, edited, and transmitted (*see* WISDOM §2). Later, such writings not only served as a repository of wisdom traditions, but also became books in which the religious convictions of particular groups ("wisdom movement") found expression (Ecclesiasticus, Wisdom of Solomon). Usually, such writings present sayings in only externally connected form, but thematic ordering also occurs (*see* WISDOM IN THE OT[S]).

Jewish wisdom literature apparently served as a model for the compilation of sayings of Jesus into Christian wisdom books in which Jesus appears as

a teacher of wisdom (see SAYINGS OF JESUS, FORM OF[S] §1). Later on catechetical material and prophetic sayings were included in such collections. This is evident in the source ("Q") from which Matthew and Luke drew the sayings materials for their gospels. In a related wisdom book, the (Coptic) Gospel of Thomas, a considerable number of wisdom sayings have been added to the older stock, and the whole writing is dominated by the concept that is typical of this genre: secret sayings of wisdom which give life. That the transmission and composition of such sayings collections continued into the second century A.D. is also demonstrated by the work of Papias (ca. 130 A.D.), who composed five books of Interpretations of the Lord's Oracles. II Clement, Justin Martyr (Apol. I, 15-17), and the author of the Pseudo-Clementine Homilies had access to such books which were, in part, compiled on the basis of the canonical gospels. See also WISDOM IN THE NT[S].

**6. Apocalyptic literature.** Beginning with the Exile, apocalyptic began to replace prophecy, and an apocalyptic literature evolved which, though it is by no means uniform, has a number of characteristic features (see APOCALYPTICISM[S] §§2-3; APOCALYPSE, GENRE[S]). Of these features the following recur in Christian apocalyptic writings: the setting for the revelation is usually a remote place (e.g., Rev. 1:9), often a mountain (e.g., Mark 13:3); the revelations are given in the form of visions (also "parables" or "similitudes") which are then explained by an angelic interpreter (in Christian apocalypses and in Gnostic revelations it is often Christ himself who assumes that role); the interpretations give the opportunity to raise theological problems which will be solved by the interpreter or revealer; the conclusion occasionally contains an oath formula which protects the inviolability of the writing (Rev. 22:18-19) or its secrecy.

This literary genre influenced at an early date the collection of sayings of Christian prophets whose pronouncements were given and transmitted under the authority of the "Lord" (e.g., I Thess. 4:15-16). The setting in which such prophetic sayings appear in Mark 13—Jesus with selected disciples, seated on the Mount of Olives and answering questions about the events of the future—indicates that this collection was understood as an "apocalypse" (cf. also Matt. 24-25 where an apocalyptic setting has attracted additional materials of a similar kind). Similar apocalypses, usually containing traditional materials, have been added to writings of a different character: the Didache (see §9 below) concludes with an apocalypse (ch. 16; cf. also the apocalyptic sections at the end of several letters: I Thess. 4:13-5:11; I Cor. 15; II Pet. 3:1-13).

Major apocalyptic writings in Christianity follow the patterns established by the Jewish apocalypses. The earliest of these Christian books is the Revelation of John (see REVELATION, BOOK OF §§A-C; REVELATION, BOOK OF[S]; APOCALYPSE, GENRE[S] §1; APOCALYPTICISM[S] §1), written at about the same time as two of the later Jewish apocalypses, Baruch and IV Esdras (in the last decades of the first century A.D.). Two Christian apocalyptic books which appear in the Latin translation of IV Esdras as chs.

1-2 and 15-16 (V, VI Esdras) are direct continuations of this Jewish apocalyptic tradition (see ESDRAS, BOOK OF §3b). This genre also had room for the incorporation of typically Hellenistic speculations about the various punishments of the wicked in the afterlife or Hades, which occur for the first time in the Apocalypse of Peter (see PETER, APOCALYPSE OF) and became a very significant element in later Christian piety. The ties between Jewish and Christian and pagan eschatology are equally obvious in the related genre of the SIBYLLINE ORACLES. Apologetic and apocalyptic materials are here presented in the form of (often crude) hexameters, written by Jews and later by Christians in imitation of the pagan oracle books of the several Sibyllae.

Another kind of apocalyptic literature is found in the Gnostic books of revelations. These were imperfectly known until recently, when many such writings were discovered in the library of Nag Hammadi. The setting is often the same as in the apocalypses: the mountain, appearance of Jesus from heaven, an esoteric group, revelations in questions and answers (the revealer functions as angelic interpreter), and an oath formula (the Apocryphon of John, the PISTIS SOPHIA, etc.). The contents of such revelations are actually theological treatises, containing interpretations of Genesis, wisdom material, and church orders (Eugnostos the Blessed presents the same materials in the form of a treatise which the Sophia of Jesus Christ presents in the form of a revelation dialogue).

**7. Aretalogy, biography, romance.** The origin of the ARETALOGY, an account of the powerful deeds of a hero or of a god, is the typical Hellenistic belief that divine power is present in the miraculous or marvelous deeds (the ἀρεταί) of a DIVINE MAN. This is expressed in the character of such writings—enumerations of marvelous accomplishments—and in their typical endings (cf. John 20:30-31, the original ending of an aretalogical source used by John; I Macc. 9:22; cf. Ecclus. 43:27). Aretalogical features are also predominant in ancient biographies, such as Suetonius' *Lives of the Emperors*, Philo's *Life of Moses* and *Life of Abraham*, and Philostratus' *Life of Apollonius of Tyana* (cf. also the *Parallel Lives* of Plutarch). The similarities in the narrative materials of the gospels of Mark and John are best explained if one assumes that both evangelists used closely related source materials which were aretalogies of Jesus. In the Gospel of John, this is the well-known "signs source" which contained the stories of the wedding feast at Cana (John 2:1-11), the official's son (John 4:46-54), the paralytic (John 5:1-9), the feeding of the multitude (John 6:1-13), the walking on the sea (John 6:16-21), the blind man (John 9:1-7), and Lazarus (John 11) (see SIGN IN THE NT[S] §3). The author of the Gospel of Mark, in addition to a similar aretalogy (cf. Mark 6:34-52; also 8:22-26), used still another source of the same type from which he drew stories that present Jesus as an exorcist (e.g., Mark 1:23-28; 5:1-20; see EXORCISM IN THE NT[S]). The genre of aretalogy is further developed in the Infancy Gospel of Thomas, in the stories of martyrs and saints, and in the Acts of the Apostles.

A new component, however, has contributed to the latter genre. A popular type of literature in the Hellenistic and Roman period was the romance, which reflected the new experience of life that Hellenism had made possible. The heroes of the romance travel by land and by sea (even encountering shipwrecks! cf. Acts 27) to strange countries, see untold marvels, encounter numerous obstacles which they overcome miraculously, and speak of the ideals of love and morality to foreign kings and barbarian audiences. Thus, the readers' horizons are extended far beyond the traditional city-state. A number of motifs from older Greek literature recur, but the chief concentration is upon the individual's fate, experiences, troubles, and ultimate success. That Judaism also was influenced by the Hellenistic romance is evident from *TOBIT* and *Joseph and Asenath* (though in the latter, only the love motif is utilized).

Not only the apocryphal Acts of the apostles (see *ACTS*, *APOCRYPHAL*), but also the canonical Acts of the Apostles are modeled after this literature (see *ACTS*, *GENRE*[S]). Aretalogical motifs are clearly present, e.g., in the miracles which the apostles do (cf. Acts 3:1-10; 5:1-11). But from the romance derives the travel motif (Paul's journey to Rome takes up several chs. of Luke's Acts, and in the Acts of Thomas the apostle travels all the way to India), and the ascetic life of the apostle corresponds to the love motif of the Hellenistic romance. The most elaborate romance is preserved in the Pseudo-Clementine literature which uses the typical motif of "recognitions"; members of the same family, divided by fate, finally are brought together and recognize each other—which provides the climax of the story.

**8. Passion narrative and "gospel."** There is no obvious non-Christian analogy to the Christian literary genre known as the "gospel" (εὐαγγέλιον), a complex literary phenomenon. The gospels used sources which belong to quite different literary genres: aretalogy, wisdom book, apocalypse (see above). Mark, the earliest, is actually a *PASSION NARRATIVE* (from the entry into Jerusalem, ch. 11, to the Crucifixion, ch. 15) with a comparatively brief biographical introduction which consists mostly of aretalogical materials, interspersed with sayings (4:1-34; 7:1-23) and an apocalyptic discourse (ch. 13). The model for the passion narrative, however, is the Christian kerygma of Jesus' suffering, death, and resurrection which earlier had been called "gospel" by Paul (I Cor. 15:1-5). The term certainly originated here, and not until the middle of the second century A.D. is there evidence that it was used for the writings which we now know under that name. Literary models are absent, unless one assumes that Jewish stories of martyrdom had already developed into a distinct literary genre; but that is uncertain (despite IV Maccabees). Yet, Christian experience of martyrdom has certainly influenced the later development of Jesus' passion narrative, especially in the gospels of John and Luke. Further expansion of the narrative and sayings materials in the gospels, and in particular the adding of birth narratives (Matt. 1-2; Luke 1-2), have given these writings the appearance of biographies. As such, these gos-

pels have made it possible that the central Christian presentation of the event of revelation remained the story of a human being and of his experiences. See *GOSPEL*, *GENRE*[S].

A large number of noncanonical writings from the second and third centuries are also known as "gospels." Only a few of these could have belonged to the same genre as the canonical gospels, and only fragments have been preserved (Gospel of Peter, the "Unknown Gospel" of Papyrus Egerton 2, Secret Gospel of Mark). All others are works of a different character: theological treatises (Gospel of Philip, Gospel of Truth), revelations (Gospel of Mary, and many other so-called Gnostic gospels), aretalogies (Infancy Gospel of Thomas, Proto-Gospel of James). But the proliferation of literature under this title gives evidence for the authority and influence which the literary genre of gospel had gained. See *APOCRYPHA*, *NT*; *APOCRYPHA*, *NT*[S] §3.

**9. Church orders.** Church order materials were incorporated into the gospels and epistles quite extensively. In the case of genuine Pauline letters such sections (e.g., Rom. 12-14; I Thess. 4:1-11) rest on materials which were used and transmitted orally. The Gospel of Matthew makes an attempt to mold such traditions into a written church order: instructions for individual behavior, concluding with a reference to the "Two Ways" (Matt. 5-7), instructions for missionaries (Matt. 9:35-10:42), regulations for the community life (Matt. 18), and teaching about the eschatological events (Matt. 24-25). Matthew may be following an already established genre which also appears in the *Didache*, a writing that begins with the "Two Ways," i.e., a traditional description of the way of life and the way of death, adds instructions for baptism, prayer, and eucharist, and regulations for church officers, and concludes with an eschatological chapter. That the same topics (especially also the "Two Ways") constituted even earlier the *Manual of Discipline* from Qumran demonstrates the direct introduction of a Jewish model into this Christian literature. Occasionally Christian church orders are presented in the form of an epistle (I Timothy and Titus) or of a prophetic writing (the *Shepherd of Hermas*). But the *Didache* became also the prototype of a special literary genre of which several examples are preserved (*Didascalia*, *APOSTOLIC CONSTITUTIONS*, *Apostolic Order*, *Apostolic Tradition of Hippolytus*).

**10. Apologies and theological treatises.** Christian apologetic literature is a direct continuation of Jewish apologies (Letter of *ARISTEAS*, *WISDOM OF SOLOMON*, cf. the apologetic writings of Philo [see *PHILO JUDEUS* §2]) which in turn depend upon the Greek philosophical apology and the *protrepticus* (an invitation to a philosophical life, known since the time of the Sophists). Patterns of apologetic writings appear in Paul's letter to the Romans (Rom. 1:18-3:20), and apologetic motifs are found in the use of the argument from Scripture in the speeches of the book of Acts (e.g., Acts 2:14-36; 7:2-52) and in the Epistle to the Hebrews. A Christian literature to which this term "apology" can be applied begins around the turn of the first century, when the written defense of and propa-

ganda for the Christian kerygma or creed (the "gospel") makes its appearance. The oldest apology, the Preaching of Peter, seems to rely primarily on a pattern of argument in which scriptural proof is provided for the events which are proclaimed in the kerygma. The Apology of Aristides adds the defense of monotheism, which was to become the first article of the creed. The basic pattern is fully developed in Justin Martyr, who gives full quotes both of scriptural passages (OT) and of the events of fulfillment (written gospels). He uses as the ordering principle the credal formula of his church, which was similar to what later became known as the Apostles' Creed. In the further development of this literature, renewed dependence upon the Greek *protrepticus* (Clement of Alexandria, Augustine) and of legal arguments (Tertullian) are important factors.

Each single *topos* of the creed, however, could also be developed into an apologetic or parenetic writing in its own right. This is the origin of the theological treatise. Topics of the creed treated most frequently are the creation (Origen's *On First Principles*; cf. Philo's *On the Creation of the World*; Gnostic literature has focused particularly on this topic, with obvious attention to the interpretation of the book of Genesis, e.g., *The Nature of the Archons* and the Apocryphon of John), the origin of the soul (Tertullian's *On the Soul*), the Resurrection (Athenagoras, also the Gnostic Treatise on Resurrection). A comprehensive theological treatise from the second century A.D., anti-Gnostic in its orientation, is the Epistle of the Apostles (see APOSTLES, EPISTLE OF THE). This begins with an explanation of the first article of the creed, continues with an account of Jesus' birth, ministry, death and resurrection, and finally, of the church (including church order material and eschatological sections). Here various genres are welded together in the defense of the creed. This became the primary concern of much Christian literature, and has provided the basic outline of systematic theological writings ever since.

**Bibliography.** The best comprehensive history of early Christian literature in English is still M. Dibelius, *A Fresh Approach to the NT and Early Christian Literature* (1926 [ET 1936]), but see now P. Vielhauer, *Geschichte der urchristlichen Literatur* (1975). Important older works are F. Overbeck, *Über die Anfänge der patristischen Literatur* (1882 [repr. 1955]), and P. Wendland, *Die urchristlichen Literaturformen*, HNT (1912).

For bibliog. on the individual genres of early Christian literature see ACTS, GENRE[S]; APOCALYPSE, GENRE[S]; GOSPEL, GENRE[S]; LETTER; LETTER[S], as well as the introductions in E. Hennecke and W. Schneemelcher, *NT Apocrypha*, I (2nd ed., 1968), II (1964).

The most convenient survey of non-Christian literature of this period can be found in A. Lesky, *A History of Greek Literature* (2nd ed., 1963), pp. 642-897.

H. KOESTER

**LITURGICAL MATERIALS, NT.** Form criticism and literary analysis have given access to the meaning of the worshiping life of the earliest Christian communities. The results are seen in the following classifications of fragmentary data which we may assume formed part of the worship current in the period.

1. **Acclamations.** From the Jewish traditions in the temple and synagogue, Christians brought over such ejaculations in praise of God as *Amen* (I Cor. 14:16) and *Hallelujah* ("Praise Jah," Israel's covenant God). The latter is found at Rev. 19:1, 6 in the song of triumph to celebrate the victory of the heavenly host, but reflects the joy of the church on earth in its worship.

More specifically Christian forms are *Abba*—a caritative form of 'Abh ("father")—used as a child's title for his earthly parent and meaning "dear father" and *MARANATHA* ("Our Lord, come," a prayer as in Rev. 22:20; Did. 10:6). Both *Abba* and *Maranatha* played significant roles in NT prayer (see *ABBA*; *ABBA[S]*). The presence of *Abba* in Gal. 4:6; Rom. 8:15 seems to indicate that the invoking of God as Father passed early into the religious vocabulary of Gentile churches.

Acclamations of Jesus as *LORD* (*Kyrios*) are found in I Cor. 12:3 (in a polemical setting), Rom. 10:9 (in a baptismal context), and at Phil. 2:11 (a eucharistic or baptismal milieu has been postulated). The affirmation "Jesus is Lord" contains the elemental Christian confession of faith. The "Son of God" formula has been traced to a baptismal origin in Jesus' own baptism (Mark 1:11; Matt. 3:17; Luke 3:22) and the parallelism with the Christian experience of sonship worked out in early hymns (Col. 1:12-14 seen as an introit to the citation of the hymn in 1:15-20; cf. Acts 8:37 [RSV n.]). The so-called ἄξιος acclamations in Rev. 4:11; 5:9, 12 ascribe worthiness to God or the exalted Christ.

2. **Hymnic confessions** are more extensive tributes of praise to God and the enthroned Christ. The distinction between hymns and confessions of faith is not absolute. Confessions are short, simple sentences such as "Jesus is Lord," whereas the hymns represent a longer statement of the person and achievement of Christ. One-member confessions developed into two-member statements (I Tim. 2:5) and then into a triadic structure under pressure of polemical situations (Eph. 4:5) or through the rise of baptismal formula (Matt. 28:18-20). Other confessional formulas are directed against incipient Gnosticism in its Docetic form (esp. I John 4:2b). Paul had earlier warded off a Gnosticizing denial of the Cross at Corinth by asserting in a credal formula the main elements of the tradition (I Cor. 15:3-5). Scattered through the Pauline corpus are credal snatches that highlight chiefly the atoning (Rom. 4:24-25; II Cor. 5:21) and soteriological (Rom. 8:34; cf. Gal. 1:4; 2:20; Eph. 5:2, 25; I Tim. 2:5-6; Tit. 2:14; I Thess. 1:10; I Cor. 1:30) significance of the Christ-event.

Some hymnic forms show the influence of the Greek-speaking synagogues of the Diaspora (Rev. 4:8, 11; 11:17, 18; 14:7; 15:3, 4). Distinctively Christian hymnic creations are chiefly christological, incorporating a twofold summary of Christ's existence, denoted by the terms "flesh-spirit" (Rom. 1:3-4; I Pet. 3:18; cf. II Tim. 2:8). The clearest example is in I Tim. 3:16, a confessional statement in solemn, hieratic style composed as a hymnic tribute. Eph. 5:14 is identified as hymnic with its introductory formula ("Therefore it is said") and its swinging, trochaic rhythm. Its *Sitz im Leben* is

most likely baptism for which it provides the accompanying choral chant.

Longer hymnic specimens are in Phil. 2:6-11 (a hymn embracing the three states of the Lord's existence as pre-mundane, incarnate, and victorious); Col. 1:15-20 (a tripartite hymn to Christ as the agent in the creation and preservation of the world and in redemption); and John 1:1-18 (where the much debated issue is how far we are able to detect a hymn already in use which the biblical author has edited and so adapted to his own purpose). Fragmentary hymns have been detected in I Peter (1:18-21; 2:21-25; 3:18-22) and Hebrews (1:1-4; 7:26-28).

**3. Sacramental and ecclesiastical procedures and ceremonies.** Prayer-speech, partly based on the Jewish "blessing" of God in the synagogue liturgy (II Cor. 1:3; Eph. 1:3; I Pet. 1:3) and partly indebted to Greek models (e.g., Phil. 1:3), has been isolated. Paul's custom of using liturgical language in the opening paragraphs of his letters may reflect his desire to link himself with the congregation at worship (I Cor. 1:2), and it is the same with the doxologies scattered through the NT (Rom. 1:25; 9:5; II Cor. 11:31; Phil. 4:20, praising God; II Pet. 3:18; Rev. 1:6, praising Christ). See also LETTER[S].

Baptismal and eucharistic hymns and confessions may be read in the light of a developing insistence on the need to hold fast to the apostolic kerygma and homology (Heb. 3:1; 4:14; 10:19-25) in time of testing and in the face of false teaching. Attempts to find a fixed, detailed liturgy, whether baptismal (I Peter) or eucharistic (I Cor. 16:21-24) in the NT have not been too successful. Just as problematical have been the endeavors to locate a "church order" in the NT. I John supposedly contains allusions to the catechumenate, confirmation, first communion, and a confessional system. More likely is the hypothesis that a free, charismatic ordering of worship in the pre-Pauline churches (I Cor. 14:26-27) developed into a more fixed and orderly sequence, both in structure and personnel (Eph. 4:11-16). Part of the evidence for church life and worship in the "early catholic" period is seen in the emphasis on ordination (the Pastorals), church officials (Eph. 4; Heb. 13:17; I-III John)—both men (I Pet. 5; I Tim. 3:1-10) and women (I Tim. 3:11-12)—a concern to deal with lapsed church members and their restoration (Hebrews), the use of the creeds as a bastion against heresy (Eph. 4:3; Hebrews; I-III John), and an incipient sacramental system.

sive bibliography (to 1967). See also C. S. Mosna, *Storia della domenica dalle origini fino agli inizi del V secolo*, Analecta Gregoriana, CLXX (1969); Paul K. Jewett, *The Lord's Day: A Theological Guide to the Christian Day of Worship* (1971). The pertinent texts, with an introduction, translation, and commentary, are assembled in W. Rordorf, *Sabbat und Sonntag in der Alten Kirche*, Traditio Christiana, II (1972).

\***LOVE IN THE NT.** The distinctiveness of the NT view of love resides in the centrality given to the commandment: "Love your enemies" (Luke 6:27; Matt. 5:44).

**1. Jesus' command: "Love your enemies."** Scholars agree that the command to "love your enemies" goes back to Jesus, and that it is most often quoted in the second century. Its popularity among early Christians probably stems from the openness which first-century Jewish and Greek society had toward the idea, rather than the conviction of the church that it was the most important element in the TEACHING OF JESUS. Those Jewish writers who had been influenced by Stoic and Pythagorean thought (TESTAMENTS OF THE TWELVE PATRIARCHS, Joseph and Asenath, Josephus, the Assumption of Moses [see MOSES, ASSUMPTION OF]) and who rejected violence are close to the NT teaching.

The NT concept of love shares with its Hellenistic environment an inclusiveness of object. Just as Jesus actually associated with sinners and ate and drank with the despised, so the practice of love among the Epicureans and Stoics was more important than discussions about it. Within Judaism as well, the theology of narrow particularism was yielding to an understanding that, as God's love encompassed all persons, so those who sought to follow God must be prepared to love even their enemies. The idea of loving enemies is not found in Greek thought before Socrates. Lysias (458 B.C.) had expressed the common folk morality: "I considered it ordained that one should harm one's enemies and serve one's friends" (*For the Soldier* 20; cf. 14). But this idea was gradually overthrown by Greek ethical teachers, especially by Socrates, but also, according to Thucydides, by Pericles, who urged victory over foes through generosity (IV.xix.1-4); and later Musonius Rufus (X [79, 3 ff., C. E. Lutz ed.]) refers to forgiving the offender instead of taking vengeance. Indeed, vengeance begins to assume the form of showing love toward the enemy and thus "overcoming evil with good" (e.g., Test. Benj. 4:3; Test. Iss. 7:7; Test. Joseph 18:2-3).

The new element in the teaching of Jesus is that he commands love, even toward the enemy. Like Pythagoras, he called into being a community, instructing them to practice benevolence toward enemies yet refusing to predict the outcome of such action. Pythagoras saw this as a way of transforming enemies into friends (Diogenes Laertius VIII.i.23), and in the DIDACHE the command to love is given along with a promise that then "you will have no enemy" (1:3). But in the NT itself this expectation is lacking, and the command stands without any prudential grounds attached to it, even though various injunctions of ancient wisdom literature are used to make it concrete: give the

hungry enemy food and drink; if he is in need, provide him with money; if he curses, respond with a blessing.

The admonition to return a blessing for a curse shows most strikingly the new element in the teaching of Jesus. While the curse-blessing formula found in Deuteronomy was applied by the Qumran community both to outsiders and to defectors (IQS 2.2-17), Jesus urges that his followers *return* blessings for curses (Luke 6:28; cf. Rom. 12:14; I Cor. 4:12). Thus, passive acceptance of reviling and insults is also rejected, for the disciple of Jesus is to respond actively to hostile action with love.

Even though one is commanded to love the neighbor (singular), the command to love *enemies* always uses the plural. The intent of this is apparently to include all enemies, "national" as well as "personal."

**2. The NT idea of love.** The Johannine literature prefers to speak of "loving the brother," without relinquishing love for the enemy. Even the Apocalypse does not give up the idea of loving the enemies, for the dominant symbol of the book, the Lamb, overcomes by absorbing suffering and conquers his enemies by the Word of his mouth (Rev. 19:13-15). The followers of the Lamb are to overcome in the same way (12:11). Vengeance here, as throughout the NT, is left entirely in the hands of God, although during the continuing persecution there is restlessness about when God will avenge the innocent (6:10).

With the NT writers a significant shift has taken place in the model of love. The synoptic writers depict Jesus as one who eats and drinks with sinners, just as he does with the righteous. Likewise, God is impartial in his love; he loves both the sinner and the just, and allows rain to fall and sun to shine on everyone (Matt. 5:45). Similarly, the followers of Jesus are to love their enemies. Luke uses an enemy, a Samaritan, to show what it means to love the neighbor (Luke 10:25 ff.). Just as the profoundest view of love in the OT is found in Hosea in connection with the prophet's marriage, so in the NT, the profoundest view of love comes in the command to love one's enemies. God, too, loved his enemies and thus reconciled them (Rom. 5:10).

**LOWER CRITICISM.** Undertakes to establish the identity, extent, and best text of a given document, relying heavily on external evidence; commonly equated with **TEXTUAL CRITICISM**. Matters of grammar and lexicography also belong to lower criticism. In contrast with **HIGHER CRITICISM**, lower criticism evaluates the credentials of the text, not the credibility of its content. The distinction between "higher" and "lower" criticism, seldom used today, entered biblical scholarship through the work of J. G. Eichhorn (1752-1827; see **BIBLICAL CRITICISM** §3a). L. E. KECK

**\*LUKE, GOSPEL OF.** Recent Lukan study has been concerned especially with the theology of the author of Luke-Acts; this has been due primarily, in the case of the gospel, to H. Conzelmann's influential work (see §§1, 2 below).

**1. Conzelmann's interpretation of Luke.** While using and acknowledging previous studies, Conzelmann shifted the focus from literary criticism's search for sources and from form criticism's efforts to construct a social history of the traditions, and focused on an analysis of Luke's literary achievement seen as a whole—which Marxsen later labeled **REDACTION CRITICISM**. Conzelmann incorporated earlier recognition of Luke's dominant emphasis on the will and plan of God (e.g., Cadbury; this was also the main point of Schubert's "proof from prophecy" interpretation). This is expressed in a "sense of direction" in divinely led history (Dibelius) which Luke conceived as a salvation history in three parts: the epochs of Israel, of Jesus ("the middle of time"; cf. the German title of Conzelmann's book, *Die Mitte der Zeit*), and of the church (von Baer). Luke portrayed Jesus' ministry as a peaceful period during which Satan withdrew (between Luke 4:13 and 22:3, von Baer). In this period danger was distant (contrast the "now" of Luke 22:36 [buy a sword] and the "then" of Jesus' time, 22:35, when lambs were safe among wolves [Luke 10:3] without any need to be "wise as serpents" [contrast Matt. 10:16]), and the very essence of the **KINGDOM OF GOD** was exhibited (Luke 4:18-22; 7:21-23; Acts 10:35, Noack).

Conzelmann directed these insights, together with the analysis of numerous passages and concepts in Luke, toward accomplishing the principle of historical interpretation set out fifty years earlier by W. Wrede: "The first task must always be the thorough illumination of the accounts in the spirit of those accounts themselves, to ask what the narrator in his own time wanted to say to his readers, and this task must be carried to its conclusion and made the foundation of critical historiography." Luke was concerned with the theological legitimacy of the Christian church near the end of the first century, when the passage of time had made it difficult to continue defining Christian existence on the basis of the expectation of Jesus and the earliest Christians that the kingdom was soon to come.

Luke was not the first to experience this difficulty; that the delay of the **PAROUSIA** had already become a problem is evident in the sources he used. Nor is Luke's distinctiveness to be found in the way he, like his sources, sought to avoid im-

plying the imminence of the Parousia. Rather, Luke's own achievement, as Conzelmann showed, was in facing the problem and in offering a solution in which "eschatology was no longer the decisive, all-inclusive force" (Wilckens). In the gospel the immediate expectation of the end no longer defined the kingdom, the church, or the Christian life. Instead, Luke's emphasis was on the nature of the kingdom (see above and also Luke's treatment of Mark 1:15; 9:1; 14:62; Luke 4:14 ff.; 9:27; 22:69). For him the church was legitimated because it was within the will and plan of God, and so was led and empowered by the Spirit. While eschatology still functioned in exhortations to watchfulness and prayer (Luke 18:1; 21:36), it did not perform that function because the end was known to be near, but because the time of its coming could not be known (Luke 17:20; 12:40, 46). Conzelmann's interpretation quickly gained widespread acceptance.

**2. Critiques of Conzelmann's views.** Conzelmann's interpretation has been criticized, chiefly on the basis of certain statements in Luke's gospel which seem to anticipate an imminent Parousia, e.g., 10:9, 11; 18:8; 21:32 (see §2a below). Some of these have been explained as tradition which Luke took over unchanged from his sources (e.g., Cadbury), but this explanation has been unacceptable to others who think Luke would have omitted them if his aim actually had been to de-eschatologize the tradition (e.g., Kümmel). To disallow such an explanation is fundamental to Conzelmann's most radical critics (see §2b below), although they permit themselves similar explanations in attempting to deal with those passages not congenial to their interpretation, where a delay of the Parousia is implied (Luke 12:38, 45; 13:8).

**a. Lukan reinterpretation.** It should be noticed that some of these statements of imminence, though retained verbatim by Luke, have been reinterpreted in his recasting of the material. Thus, in his usage they do not imply that he expected the kingdom to come soon. The most troublesome to Conzelmann's interpretation, Luke 21:32 ("this generation will not pass away till all has taken place"), is the same in position and almost the same in wording as in Luke's source (Mark 13:30), but the sense is different. Luke has reworked Mark's apocalypse so that most of it (Luke 21:5-24) refers solely to Jerusalem's destruction and only the predictions from Luke 21:25 on refer to the end. Thus, the common practice of interpreting all of Luke 21:7 ff. on the basis of Luke 17:20 ff. is wrong; Luke 17:20 ff. should be taken only with Luke 21:25 ff. Luke separated the final events from Jerusalem's downfall (pace Francis) by omitting Mark's linking statements (Mark 13:24; contrast Luke 21:25) and by distinguishing the signs in the cosmos (Luke 21:25-26) from those on earth (Luke 21:7 ff.; Robinson). Thereby he profoundly altered the meaning of the Markan material used in Luke 21:25 ff.; he has projected it into that final time when the universe totters and the SON OF MAN appears (Luke 21:25-27). Then the final redemption of believers will be literally near (Luke 21:28). "This generation" (Luke 21:32) no longer meant (as in Mark) those of Jesus' lifetime, but those

at that incalculable future time (Luke 17:20) of the coming of the Son of man. That generation would, literally, "not pass away until all has taken place" (Luke 21:32).

The statements that when Jesus came near (Luke 10:1), the kingdom was near (Luke 10:9, 11) fit Luke's conception of Jesus' ministry as a proleptic manifestation of the kingdom of God (Noack, Conzelmann), in which Jesus' presence was a divine visitation (Robinson; cf. Francis) which required a response and imposed consequences on negative response (Luke 19:37-44). In short, when Jesus came near, the kingdom was near (Noack, Robinson), and Luke 10:9, 11 assert nothing about imminence from Luke's place in time. Ott has argued that Luke 18:1-8 is yet another illustration of Conzelmann's point that one consequence of giving up the near expectation is increased emphasis on the suddenness of its coming. This passage agrees with other Lukan exhortations to pray and therefore fits easily into Luke's eschatology as Conzelmann has presented it.

**b. Conzelmann's radical critics.** The most radical criticism of Conzelmann has come from Bartsch and his followers. They claim that Luke, far from seeking to solve problems resulting from an acknowledged delay of the Parousia, "consistently maintained the near expectation." He was thereby correcting a view which put the Parousia in the past by believing it occurred with Jesus' resurrection, a belief useful to early Christian Gnosticism (Bartsch, Talbert). This view, however, is not convincing. First, as noted above, such critics use a double standard in holding Luke less strictly accountable for retaining implications of delay than for retaining those of imminence. Second, they refuse to allow that the theme of the suddenness of the Parousia, based on inability to calculate the end in advance (Luke 17:20; cf. 12:40, 46), does not require an expectation of its nearness though it is compatible with it. Finally they exclude the nuances by reducing to a single sense all language that sounds eschatological. In this way they rule out in advance the possibility that exhortations to "watch at all times, praying . . ." (Luke 21:36, which Bartsch used as the title of his book) or "always to pray and not lose heart" (Luke 18:1) are Lukan means for dealing with the offense arising from the delay of the Parousia (Ott, Wilckens).

**c. Assessment.** Conzelmann's interpretation of Luke seems to be correct in the main, even though it claims too much Lukan concern to remove all implications of imminence and is unconvincing in its treatment of John the Baptist (Robinson). Conzelmann is also right in identifying Luke's theology as salvation history (*Heilsgeschichte*), yet his claim that the evangelist articulated this in three epochs is problematical (see §3 below).

**3. Luke's "salvation history."** As noted above (§1), Conzelmann's interpretation made use of von Baer's argument that in Luke salvation history is presented as consisting of three epochs. Von Baer had found evidence for the first of these (the epoch of Israel) in chs. 1-2, but Conzelmann could not use this evidence, since he questioned the authenticity of those chapters. Conzelmann's own

attempt to use Luke 16:16 as the basis is not convincing. The aspects of Luke's work which, on comparison with his sources, appear most obviously to be his innovations are (1) Acts and (2) the travel narrative in Luke 9:51 ff. In both instances a journey is involved, not just movement incidental to storytelling. Travel is a major structural element in Luke's presentation of the providential leading of history (where the church has its rightful place) and in the qualification of the witnesses (Acts 13:31), from which the church could offer its message with assurance. Therefore, the metaphor which best describes Luke's theology is not "the middle of time" (Conzelmann) but, rather, "the way of the Lord." This metaphor is more appropriate to Luke's own presentation, and the phrase itself appears in Luke 3:4 in a quotation from Isa. 40 which Luke took over from Mark. But Luke has gone beyond Mark's quotation (Luke 3:5-6) to include the all-encompassing assertion, "And all flesh shall see the salvation of God." Luke concluded his two-volume work with similar words (Acts 28:28) and by showing how the word of God had actually reached Rome.

Luke viewed salvation history, therefore, as a course of events following a schedule of times set by God and directed by God toward all people. In Jesus' ministry the way led from Galilee to Jerusalem (Luke 23:5; Acts 10:37), during which the Christian witnesses became qualified (Acts 1:21-22; 13:31), and in Acts it led from Jerusalem to Rome (Luke 24:47; Acts 1:8), when "the word of God increased" (Acts 6:7; cf. 12:24; 19:20), empowered by the Holy Spirit (Luke 24:49; Acts 1:8; 2:1 ff.). In Jesus' ministry Luke presented the paradigm of God's gracious reign (see §1 above), so that the Christian's present life might be marked by joy (Luke 2:10; Acts 2:46; 8:8; 13:52; 15:3) rather than by anxiety about the things of the world (Luke 8:14; 10:41-42; 12:11, 22-24, 25-26; 21:34). Hence, Christians need not fear the future: when the end does come, believers—knowing the gracious nature of God's kingdom from Luke's portrayal of it in Jesus' ministry—are to "look up and raise [their] heads, because [their] redemption is drawing near" (Luke 21:28; cf. the terms used in Acts 3:19-21: "times of refreshing," "time for establishing").

Since Luke connected the "restoration" (RSV "establishing") with the Parousia (Acts 3:21) rather than with the outpouring of the Spirit

(Acts 2:1 ff.), the disciples' question about the time of the restoration of the kingdom (Acts 1:6) is in effect rejected. A separation in time is made between the outpouring of the Spirit and the final restoration (von Baer). While the outpouring of the Spirit "in the last days" (Acts 2:17) was for Luke an eschatological aspect of his own time, it was a "prolepsis of the end" (Cullmann), not "the eschatological gift, but the substitute in the meantime for the possession of ultimate salvation" (Conzelmann; vs. Francis). Calculation of the time of the end being impossible, the only way to be ready is to stay ready (Luke 21:34-36; 17:26 ff.; 12:35 ff.), and this meant regular practice of the Christian life (Luke 12:40 ff.; "daily": 9:23; 11:3; Acts 2:46-47a; 5:42; 16:5), especially in prayer (Luke 11:1-13; 18:1-8; 21:34-36; 22:31-34, 39-46) and in reliance on the gift of the Spirit (see the key scenes early in each of Luke's writings, Luke 4:16 ff. and Acts 2:1 ff.).

\***MACEDONIA.** Recent discoveries illustrate the transitions between the classical and Hellenistic periods and between pagan and Christian culture.

Excavation on the central Macedonian plain at Leucadia has uncovered a large Macedonian tomb built in the late fourth century B.C. Like other Macedonian tombs, it has a vaulted structure and a temple-like façade, but its painting is unusually brilliant. Chance finds at Pella, ca. twenty-four miles W of Thessalonica, have resulted in systematic study of the Hellenistic capital of Macedonian royalty. The spacious ancient houses, built in orderly blocks, are notable for their pebble mosaics depicting such lively scenes as a lion hunt and the god Dionysus riding a panther. At Derveni, ca. six miles N of Thessalonica, rich graves dated by coins to the fourth century B.C. have been uncovered. Their contents included a papyrus sheet on which was copied an Orphic cosmogony, a large gilded bronze vase decorated with scenes of revelry, and much precious jewelry and armor.

More has been discovered about sites visited by Paul in a westward journey (Acts 16-17). In NEAPOLIS remains of the late archaic and classical sanctuary of a virgin goddess identified with Athena have been studied. Macedonian tombs have been found in Philippi and Amphipolis, and important buildings and graves of Hellenistic and Roman times have been uncovered below the modern cities in Thessalonica and Beroea. Many elaborate churches from the early Byzantine period discovered at various sites witness to Macedonian Christianity.

\***MADMANNAH.** Though the ancient name is echoed in the Arabic name Khirbet Umm ed-Deimeh, there are no suitable Israelite remains

at that place. Furthermore, it is situated in the hills rather than in the Negeb. Not far away is a large antiquity site, actually in Negeb territory, with ample Iron Age ceramics (as well as Hellenistic and later), viz., Khirbet Tatrît, about 4½ miles S of ez-Zâheriyah on the Beer-sheba road. Placing Madmannah here confirms the accuracy of the regional distinctions in Josh. 15 between the Negeb and the hill country.

**Bibliography.** M. Kochavi, "The Land of Judah," in M. Kochavi, ed., *Judaea, Samaria and the Golan, Archaeological Survey 1967-1968* (1972), pp. 80-81, Hebrew. A. F. RAINEY

\***MAGDALA.** Probable town of Mary Magdalene (Μαγδαληνή = "of Magdala"). Generally identified with Migdal Nûnyâ (מגדל נונים = "Tower of [salted] Fish") of the Babylonian Talmud (T.B. Pes. 46b) and the Tarichea (Ταριχῆα = "[Place of] Salted Fish") of Josephus (War II.xxi.8; III.ix.7-x.5) and perhaps Migdal Şeb'iyâ (מגדל צביעי'א = "Tower of Dyers") of the Jerusalem Talmud (J.T. Ta'an. IV.8), today usually identified with Mejdél on the W shores of the Sea of Galilee.

Recent excavations at Mejdél have uncovered possible early Roman, i.e., first-century A.D. structures. These include a small synagogue at the intersection of two well-paved Roman streets or roads just S of a large, unidentified building. W of the synagogue is a Roman period masonry tower.

The putative synagogue is only 26.8 x 23.8 feet and equipped with five stone benches (risers) on the N wall. The interior is in the form of a small basilica with nave and two aisles the length of the building and an aisle across the back or S side. The size of the building implies a small congregation, as there is room for perhaps thirty on the risers, and the nave will accommodate about twenty-five comfortably.

A harbor has been located and plotted. Thus this was surely a fishing village that perhaps supplied dried fish to the region, hence the name Migdal Nûnyâ. See also SYNAGOGUE, ARCHITECTURE[S].

**MAHALATH.** 1. A daughter of Ishmael. She became one of Esau's wives (Gen. 28:9).

2. A daughter of Jerimoth, one of King David's sons. She became the wife of Rehoboam, her father's half brother (II Chr. 11:18).

\***MAN, NATURE OF, IN THE NT.** The person, male or female, is the creature whose body is made alive by God's breath, whose divine image can be defaced by sin and redeemed by the apportioned Holy Spirit, and whose historical destiny is defined by relationships from birth to death.

1. **Introduction.** The OT legacy is generally

carried over into the NT, in that man is viewed as a totality, with terms such as heart, soul, flesh, or spirit denoting not a portion but the entire person from a particular point of view. It is assumed that humans are sexual creatures and that flesh is intrinsically good, so long as one does not boast in its prowess. Since all NT writers assume the human dilemma lies in disobedience rather than materiality, the crucial differences between them arise in conceptualizing sin and its cure. (a) A tendency to divide the world between saints and sinners along predestinarian, moralistic lines is common to Revelation and the Pastorals. (b) A tendency toward moral gradualism through obedience to ethical norms is a mark of Luke, Matthew, and James. (c) A doctrine of relationship, in which the line between saint and sinner is marked by faith in God or lack of faith is typical for the historical Jesus and the Pauline and Johannine traditions.

Each approach to sin implies a different concept of man's destiny and salvation. Since option (c) has the strongest claims to originality and consistency with the Christ event, it will be developed more fully below.

**2. Discipleship and servanthood.** That "no one can serve two masters" (Matt. 6:24) presupposes that some form of servanthood is intrinsic to man. He is determined by whom he serves, whether God or mammon. Freedom is not absolute autonomy but release from idolatrous forces which distort life. Jesus' struggle against legalism (Mark 2:27), Paul's attack on justification by works (Rom. 3), and the struggle in Hebrews and Colossians against the veneration of cosmic forces (Heb. 1-2; Col. 2) all aim at restoring man to proper servanthood. The images of stewardship (Matt. 25:14-30; Luke 17:10), DISCIPLESHIP (Mark 6:8-11), sonship (Gal. 4), and being begotten by God (John 3; I John 3) imply high levels of independent initiative for those who know their Father's will. To stand fast in freedom (Gal. 5:1) is to fulfill one's destiny through service in love (I John 3), to reject continuously all conformity, while being impelled by grace to render service to the world (Rom. 12:1-2). For those set free by Christ, socially imposed subservience is no longer determinative, and equality is the result (Gal. 3:28). One is free to discover an appropriate form of servanthood that brings fulfillment (I Cor. 9:19; 7:22; Eph. 6:6).

**3. Finitude and ethics.** Freedom does not include release from the essential conditions of bodily, historical existence. Man remains "body" (Rom. 8:10); his life is "in the flesh" (Philem. 16; Rom. 7:5); even the "inner/outer nature" categories (II Cor. 4:16; Rom. 7:22) indicate Paul did not think of a real self in contrast with fallen flesh, for these categories were borrowed from opponents and were redefined within the context of Pauline theology. So constitutive is bodily existence that each person must find an appropriate way to express sexual inclinations (I Cor. 7). Each must work for daily bread (I Thess. 4:11-12; II Thess. 3:6-13). The alienation which these relationships produce is overcome by Christ, but we remain finite. Thus, although there are remarkable efforts to overcome inequalities (I Cor. 7:4; Luke 10:41-42), Paul once

found it necessary to reimpose traditional sex roles temporarily in face of Gnostic demands to eradicate such finite factors from Christian self-identity (I Cor. 11:2-16). Each person's sexual "gift" (I Cor. 7:7; cf. Matt. 19:12) must be exercised in holiness (I Cor. 6:12-20; I Thess. 4:4), i.e., display the love of Christ (Eph. 5:21-33; I Cor. 7:4).

The love ethic (John 13:34-35) is not legalistic; it requires the full use of rational judgment (I Cor. 7:6, 33-38). The gift of the Spirit (I Cor. 14:14-15) unleashes rather than subordinates the practical intellect. Man is called to exercise prudence, particularly in relation to the future, whose trials and judgment are unpredictable (Matt. 25:1-13; Mark 13:32-33; I Thess. 5:1-11). Man is the creature who moves toward God's future (Phil. 3:12-14; Heb. 13:13), whose deeds and values face judgment (I Cor. 4:3-5), and whose virtues can therefore never be an occasion for boasting (Eph. 2:9). Even the most exalted spiritual insights are finite and need eschatological fulfillment (I Cor. 13:12). To be human requires faith rather than perfect certainty, hope rather than present fulfillment. As a pilgrim, man is to "[go] out, not knowing where he [is] to go" (Heb. 11:8). With adversity his expected lot (Matt. 8:20; Heb. 11:32-40), he remains vulnerable until the eschaton (II Cor. 12:5-10; Rom. 8:18-30; Heb. 13:3).

**4. Reconciliation and resurrection.** It follows that SALVATION involves RECONCILIATION *in* rather than release *from* finitude. Each person repeats the choice of Adam to sin by disregarding his limits (Rom. 5:12-21). Those under the Law fall into self-righteousness while those outside the Law violate conscience and fall prey to idolatry (Rom. 1:18-32; 3:23). The essence of SIN is not rule-breaking but alienation—the refusal of the creature to acknowledge the creator. "Flesh" in this context denotes the tendency to mistake one's accomplishments for the good, and thus to enter into conflict with divine righteousness (Rom. 7:13-25; 10:1-10). The human dilemma is therefore not weakness but mistaken strength, which relates closely with Paul's critique of misguided zeal (Rom. 10:1-4) and Jesus' opposition to unbridled anger (Matt. 5:21-26). The Cross reveals the depths of this alienation, and the RESURRECTION gives the power that persons need to break free (Eph. 2:12-16; Rom. 3:21-26).

When anyone receives this gospel and is reconciled with God, the righteousness of God is restored (Rom. 1:17-18), and that person regains his rightful role in the creation (Rom. 8:12-25; 12:1-2; I Cor. 6:3). He takes up responsibility in the world (Heb. 13:1-16) and extends reconciling love into his economic, family, and political obligations (Eph. 5:21-6:9; I Pet. 2:13-25; I Cor. 7; Rom. 13:1-7). He is set free to enjoy creaturely existence (Matt. 11:19; Phil. 4:8) and to find "rest" in his encounter with God's word day by day (Heb. 3:7-4:13). Man thus restored exhibits an alert, resourceful vitality as he moves in hope toward the fulfillment only God can provide (Matt. 24:42; Phil. 3:8-16; Heb. 11-12). He is reconciled to the exigencies of historical life (Heb. 13:1-6; Phil. 1:14-26) and thus can face death with courage, expecting the resurrection of the body (I Cor. 15),

but knowing that nothing in his power can pass unscathed through the judgment (I Cor. 3:12-15). Man's situation is therefore decisively shaped by the tension between present reconciliation and future fulfillment (I Cor. 7:29-31; Rom. 8).

**MANDAEISM** män də'izm. A syncretistic, Gnostic religion whose adherents constitute the sole surviving sect of ancient GNOSTICISM.

1. **The Mandaicans.** There are about 15,000 Mandaicans in Iraq and a much smaller number in SW Iran. Their texts are written in Mandaic, an eastern Aramaic dialect, in a script which resembles the Elymean and Characenic scripts of the second century A.D. The earliest of their texts are amulets in lead strips from the third century A.D. and inscribed magic bowls from ca. 600. The religious MSS are mainly from the eighteenth and nineteenth centuries, with the oldest MS dating to the sixteenth century. The most important work is the *Ginza*, which relates the creation of the cosmos and the fate of the soul after death. The book of John describes John the Baptist as a Mandaean, but the traditions about John are quite late. The Mandaicans regard Christ as a false Messiah.

2. **Teachings.** The Mandaicans believe not only in the First Life but also in a second (*Yoshamin*), a third (*Abathur*), and a fourth (*Ptahil*). In their dualistic cosmogony Ptahil creates the world (*Tibil*) with the aid of the evil Spirit (*Ruha*), the Seven (planets), and the Twelve (signs of the zodiac).

Ptahil also creates man, who is a dual being, comprised of physical Adam (*Adam pagria*) and secret Adam (*Adam kasia*). Manda d-Haiye, "Gnosis of Life," reveals himself to man as an incarnation of three Uthras, "heavenly spirits." At death the soul of the Mandaean leaves behind his "stinking" body and ascends through the seven hostile planetary spheres back to the world of light.

3. **Cult.** In contrast with other Gnostic sects the Mandaicans observe elaborate rituals which are administered by the head priest (*ganzibra*) or priests (*tarmide*). There is a clear distinction between the *mandaye*, the semi-ignorant laity, and the *naṣoraye*, the initiated clergy.

The Mandaicans observe a magically purifying rite of baptism (*maṣbuta*), celebrated in the precinct of a cult hut with a "Jordan" (*yardna*) of running water flowing through it (see also BAPTISM [S] §1biii.) At death a sacramental meal (*masiqta*)

is celebrated to assist the soul in its journey to the world of light.

4. **Ethics.** The Mandaicans have a highly developed code of ethical and ritual behavior. Their emphasis on marriage for the purpose of procreating as many children as possible is unique among Gnostic groups.

5. **Origins and significance for the NT.** Many scholars have argued for a pre-Christian, Palestinian origin of the Mandaicans, and some have made use of Mandaean texts to reconstruct a pre-Christian Gnosticism, which they have then assumed in their interpretation of the NT.

Though Rudolph and Macuch are convinced that the Mandaicans originated in pre-Christian Palestine (see *bibliog.*), their position is based largely on alleged parallels with Johannine texts (see JOHN, GOSPEL OF[S] §3). There is no objective evidence of the establishment of Mandaicism earlier than the second century A.D.

**MANUAL OF DISCIPLINE.** (IQS). A scroll from Cave 1 at Wadi Qumran, containing the rules and doctrines of the Qumran community. It is also known as Rule of the Community, and sometimes identified as IQS<sup>c</sup>. See DEAD SEA SCROLLS §5b; DEAD SEA SCROLLS[S] §6 and *bibliog.*; INTERPRETATION, HISTORY OF[S] §B1aiv.

#### MANUSCRIPTS FROM THE JUDEAN DESERT.

Before the Qumran discoveries it was an axiom among archaeologists that no document written on perishable material (leather, parchment, papyrus) could survive in Palestine. But once the theory was contradicted by the Qumran facts, determined individuals—amateur Bedouin scroll hunters and professional explorers—set out to look for further ancient documents and managed to uncover various caches in scattered corners of the wilderness of Judea. The finds made in caves situated in Wadi Murabba'at (1951-52 and 1955), in Nahal Hever, Nahal Ze'elim, and Nahal Mishmar (1960-61), and at Masada (1963-65) are securely dated by coins and explicit literary evidence to the first and early second century A.D.

1. **Qumran.** See DEAD SEA SCROLLS; DEAD SEA SCROLLS[S].

2. **Other discoveries. a. The Murabba'at documents.** First discovered by Ta'amireh Bedouin, and subsequently excavated by de Vaux and Harding, the caves of Murabba'at have yielded leather and papyrus fragments and ostraca with Hebrew, Aramaic, Greek, and Latin texts. Biblical remains (Genesis, Exodus, Numbers, Deuteronomy, Isaiah, minor prophets) form only a small part of the total find. The majority of the texts are non-literary, namely, lists of goods, contracts, and letters. The most significant of these are legal and historical documents belonging to the era of the second Jewish war against Rome under Hadrian (A.D. 132-35) and providing for the first time direct and contemporary Jewish evidence concerning Bar Kochba, the leader of the revolt, and his men. After being occupied by rebels in the second century, the caves were occasionally visited in later times, as is indicated by Arabic documents dating between the ninth and the fourteenth centuries, among them a receipt from A.D. 938/939, and Christian Greek fragments, written on paper and belonging to the tenth and eleventh centuries. See also BAR KOCHBA[S] §4b.

**b. Documents from Nahal Hever, Nahal Ze'elim, and Nahal Mishmar.** In 1960 and 1961 Israeli archaeologists organized a systematic exploration of the caves between En-gedi and Masada and found a few biblical fragments representing a phylactery and Pss. 15 and 16, an important collection of Hebrew, Aramaic, and Greek letters from the time of Bar Kochba, and an archive of thirty-five Nabatean, Aramaic, and Greek documents dating from A.D. 93/94 to 132 dealing with the affairs of a certain Jewish lady by the name of Babata, daughter of Simeon, and her family. Nahal Ze'elim produced eight papyrus fragments in Greek giving lists of Jewish names in Hellenized forms; and another fragment of the same type, and no doubt issued by the same office, has been found in Nahal Mishmar. Finally, thirteen shreds of parchment were discovered in Nahal Hever itself belonging to a Greek version of the twelve minor prophets. The bulk of this MS, twenty-four fragmentary columns extending from Jonah 1:14 to Zech. 9:4, was removed from the cave in question in 1952 by Bedouin who sold it to the Palestine Archaeological Museum in Jerusalem. A preliminary edition of the text was published by Barthélemy in 1963. See also BAR KOCHBA[S] §4c-f.

**c. Documents from Masada.** The famous rock fortress, which was constructed by Alexander Jannaeus, embellished and enlarged by Herod the Great, and held during the first war by the Zealots in their courageous stand against the Romans even after the fall of Jerusalem, was thoroughly excavated between 1963 and 1965 by an international team of volunteers under the direction of Yadin. Their work brought to light important written

documents, none of which can have originated later than A.D. 74, the recently suggested date of the conquest of Masada, previously thought to have taken place in A.D. 73.

The Bible is represented by a fragment each from Genesis and Leviticus, and by a somewhat larger relic of a Psalms scroll (Pss. 81:3-85:10). The Apoc. are attested by twenty-six fragments of Ecclesiasticus, or the Wisdom of Ben Sirach, forming thirteen columns, and corresponding to Eccles. 39:37 to 44:20. A small scrap of the Qumran Angelic Liturgy has also been unearthed, as well as a Hebrew papyrus written in archaic script, but it is too damaged for identification. We have also a Greek letter written on papyrus from an Abascantos to a Jew called Judah. The several Latin papyri found here derive from the Roman garrison of Masada. Finally there are over two hundred ostraca in Hebrew and Aramaic, indicating mostly the contents of a vessel and the name of its owner. See also MASADA[S] §2.

Before discussing the particular significance of the various finds, we should consider two general points which affect our understanding of the Dead Sea Scrolls. (1) At Masada and in the caves occupied by the revolutionaries of Bar Kochba, the biblical and other religious texts are outnumbered by the secular documents, whereas at Qumran the literary deposit is almost exclusively religious. This is an external confirmation of the special nature of the Dead Sea Community. (2) The presence at Masada of a sectarian Qumran writing—the Angelic Liturgy—can be explained in three ways: it can be interpreted to mean either that the Qumran sectaries were Zealots; or that the Qumran Essenes joined the Zealots in the struggle against Rome, as appears to be implied by Josephus' mention of John the Essene among the Jewish generals, and of the heroism of the members of the sect when subjected to Roman torture; or that the Zealots occupied the Qumran site after its evacuation by the Essenes and transferred to Masada some of the MSS found there. The first hypothesis, as has been shown earlier, is unlikely (see DEAD SEA SCROLLS §5), but the second and the third seem equally plausible.

3. **The biblical MSS.** The biblical fragments from Masada have not yet been published, but according to a preliminary account Gen. 46:7-11 may contain some variants; Lev. 4:3-9 agrees with the MT; and so, with one exception, does the Psalms scroll. A Psalms fragment from Nahal Hever is also in line with the received version apart from the omission, possibly accidental, of four words from Ps. 16:3. According to Yadin it may predate the Bar Kochba war by several decades and belong to the same period as the Masada specimen.

The biblical documents from Murabba'at are to all intents and purposes the same as the Masoretic version of the OT. They attest, not only a Masoretic consonantal text, but also the same internal divisions of the text into sections, the same type of script, and the same format and arrangement of the writing on a leather scroll. Likewise, the Murabba'at phylactery—and that from Nahal Ze'elim—follow the traditional rules, whereas those found at Qumran depart from them considerably.

This would suggest that the decisions concerning the Bible taken at the academy of Jamnia (Jabneel) at the end of the first century A.D. were implemented without delay; in MS deposits of the Bar Kochba age, only one generation after Jamnia, the scriptural text is Masoretic, and not a single fragment represents either the Apoc. or other non-canonical literature.

4. **Apoc. and Pseudep.** Masada, by contrast, which fell before the work of Jamnia was undertaken, testifies to noncanonical Jewish writings. Its most important contribution in this respect comes from a fragmentary scroll of the Hebrew Ecclesiasticus which is considerably more substantial than the small Qumran fragments. This discovery has removed once and for all any doubts that may still have lingered concerning the authenticity and antiquity of the Hebrew text revealed by the medieval copies of the Cairo Genizah. If the date proposed by the editor, Yadin—namely, the end of the second century B.C.—is accepted, the Masada MS falls to within a hundred years of Ben Sirach's original composition (habitually dated to around 190 B.C.) and is roughly contemporaneous with the Greek translation prepared by the author's grandson. The Masada fragments were published in 1965 and have since been used, together with the Genizah and Qumran MSS, in a new edition of Ben Sirach issued in 1973 by the Academy of the Hebrew Language and the Shrine of the Book in Jerusalem.

Apart from Ecclesiasticus, Masada has yielded other pseudepigraphic writings, as yet unidentified and unpublished, in addition to the fragment from the Qumran Angelic Liturgy already mentioned. This would imply that the otherwise strictly observant Zealots had no scruples about keeping, and presumably reading, books which received official disapproval a decade or two later at Jamnia.

5. **Legal documents prior to the Second Revolt.** Murabba'at and the southern caves have provided us with dated contracts and other documents in Hebrew, Aramaic, and Greek that shed unprecedented light on Jewish legal customs and terminology prior to the legislation codified in the Mishna. They include an Aramaic acknowledgment of debt, dated to the second year of the emperor Nero (A.D. 55/56), that expressly stipulates that the sum borrowed must be repaid in full, even in a sabbatical year. We have a bill of divorce from the sixth year of the province of Arabia (A.D. 111), an Aramaic marriage contract from the eleventh year of the same era (A.D. 117), and another the date of which is missing. And we have thirty-five papyri constituting the family archive of Babata (A.D. 93/94-132), records which represent various types of legal texts, from Babata's marriage contract to property deeds and other occasions of litigation. Among the papyri is Babata's tax or census declaration made in Greek, on December 2, 127, before the Roman district governor at Rabbath Moab, and sworn "by the Tyche of the Lord Caesar," although from what is known of her financial affairs it was probably incorrect. It is noteworthy that besides Hebrew and Aramaic, Greek and even Nabatean were used by legal scribes in a Jewish territory, and that the dating

of the documents followed the secular era in force at the time in question.

Belonging to the Babata collection are also several tied deeds. In these, the text has been copied twice on the same papyrus, and the upper half then rolled up and tied with knots, against each of which a witness put his signature at the verso of the papyrus. The lower half was left untied for consultation. A similar custom existed already in the time of Jeremiah (Jer. 32:11-14).

6. **Documents relating to the Second Revolt.** Until the Bar Kochba discoveries, the history of the Jewish rebellion against Rome under Hadrian was known only from a brief notice of the Roman historian Dio Cassius, and from occasional rabbinic and patristic references. The new texts, though too scanty to allow a proper account of the war to be written, afford a valuable fresh insight into the system of administration adopted by the rebels, and into the discipline imposed by the leader of the revolt on his men and the ideals which inspired the anti-Roman fight.

Before the recent find, it was already known, thanks to the coins minted by him, that the name of the chief of the insurgent was Simeon, nicknamed later by his supporters, according to Jewish and Christian sources, Ben or Bar Kochba (Son of the Star=Messiah), and by his rabbinic critics, Bar Koziba (Son of the Lie=False Messiah). It is only now that we are able to determine that his real name was Simeon ben Kosiba. (The pronunciation can be ascertained from a Greek text.) Furthermore, his title of *nasi* (head of government), which appears on coins, is also confirmed by our papyri.

The outbreak of the war (A.D. 132) was chosen as the start of another era, that of the "Liberation of Israel," and various documents are dated to the first, second, third, and fourth year of the new age. The territory under rebel control was divided into districts, and their command entrusted to the care of military governors. Four of these are named: Jonathan bar Ba'ayan and Masabala bar Simeon were in charge of the En-gedi region; and Judah bar Manasseh, of Kiriath Arabayya. The command of Joshua ben Galgula is not named, but doubtless it too was situated in the Judean Desert.

Each community was administered by *parnasin*, or leaders, whose duties entailed, in addition to those of normal local government, the leasing of land belonging to the state and yearly rent collections: the *nasi* seems to have appropriated all property formally owned by the Roman emperor. The *parnasin* were also in control of liaison with the military commander of the district.

Simeon ben Kosiba was authoritarian, as excerpts from several of the letters issued in his name make abundantly clear. He threatened, for example, the people of Tekoa with punishment for wasting their time on repairing their houses. When the inhabitants of the same town and those of Tel Arazin were reported to be unwilling to fight, they received a stern warning: "Let it be known to you that I will inflict punishment on you!" Ben Kosiba's menaces, as other evidence demonstrates, were no empty words: we know of named individ-

uals, among them Joshua bar Tadmorayya, who were arrested on his order.

High-ranking officers were handled equally firmly. The two district commanders of En-gedi were told: "You sit, eat and drink from the property of the House of Israel, and care nothing for your brothers." A brief message addressed to another commander, Joshua ben Galgula, ends with the following ominous words: "I call Heaven as my witness that if anyone among the Galileans who are with you is ill-treated, I will put your feet in irons, as I did to ben Aphlul."

The letters so far published nowhere refer to the actual conduct of hostilities. The Romans are only rarely mentioned, once by name, and on a few other occasions as "the *goyim*" (the Gentiles). For instance, two local dignitaries explain to the same Joshua ben Galgula that they would have reported to him in person if "the *goyim*" had not been so close.

In regard to geographical data, some of the localities appearing in the letters are otherwise unknown, but those which are identifiable, e.g., Engedi, Herodium, Tekoa, are all situated in the Judean Desert. According to rabbinic tradition, the last stand of the revolutionaries took place there, and Simeon was himself killed in the battle of Bether, S of Jerusalem.

One of the most fascinating features to emerge from these papyri is the considerable importance which the leader of the revolt attached to the strict observance of Jewish religious practices. In a letter, Simeon ben Kosiba directs that a certain Eleazar bar Hitta should be sent to him "before the Sabbath." According to another, his messengers are to be provided with accommodation so that they can rest on the sabbath, and not travel until the following day. A legal document specifies that taxes are to be paid in nature with tithed corn; in several deeds, reference is also made to the sabbatical year.

One final message from the *nasi* deserves to be quoted for its sheer irrelevance to the perils of the moment. "Simeon to Judah bar Manasseh at Kiriath Arabayya. I am sending you two donkeys and you shall dispatch with them two men to Jonathan bar Ba'ayan and Masabala in order that they pack and send you palm branches and citrons for the camp. You shall send other men from your place to bring you myrtles and willows. Tithe them and send them to the camp." These are instructions to collect and deliver to headquarters all that was required for the proper celebration of the Feast of Tabernacles, no doubt in the autumn of A.D. 134, a few months before the final collapse of the rebellion.

Though costly, the subsequent Roman victory was total. The few surviving revolutionaries fled to inaccessible caves which with the passing of time became the burial places, not only of their MSS, but also of their families and themselves. The cave appropriately designated by the archaeologists as the Cave of Horrors has revealed the tombs, and also a large number of skulls and skeletons, of refugees who died of starvation. To one of them, a potsherd stands as a pathetic memorial. On it is

written simply: "Saul the son of Saul. *Shalom* [Peace]!" See also BAR KOCHBA[S] §4f.

\***MARESHAH (CITY).** The present name, Tell Sandahannah, is probably an Arabic corruption of the crusader Church of St. Anna which was constructed in the vicinity. See MARESHAH for a survey of the city's history.

Excavations have revealed a typical Hellenistic city which flourished from the third to the first century B.C. Streets intersected at right angles, and buildings were constructed around an open court in each block. The city was divided into industrial, administrative, and religious sections. In the eastern quarter a building thought to be a temple has been discovered. Almost square, 450 by 480 feet, it was surrounded by two walls, the inner near the mound's edge and the outer a few feet below on the tell's slope. A revetment between the walls strengthened the inner one. Four corner towers constructed of brick-like soft limestone added to the city's defenses. Circumstantial evidence based on the account of the Nabatean destruction of the city in 40 B.C., after which Mareshah ceased to be occupied, has led some to conjecture that Herod the Great was born there and held family property in the vicinity.

Painted tombs found between Tell Sandahannah and Beit Jibrin provide valuable data for reconstructing the history and culture of Mareshah. Objects and graffiti, in Greek, Nabatean, and Aramaic, date the use of the tombs from the third to the first century B.C. Access is through a stone door, from which steps lead down into an entrance hall and then to burial rooms. Single rows of perpendicular, triangular-topped burial niches, each high enough to hold two bodies, are cut into the walls of the burial halls. The triangular or gabled roofs of the burial niches probably represent a temple. Some tombs contain larger vaults

probably intended as sarcophagi for the chief figures buried there. A ledge extends around the burial halls, with small square niches below to contain the bones of decomposed corpses. The painted friezes of the tombs exhibit a wide variety of African animals, human forms, and Cerberus of Greek and Roman mythology. Among the inscriptions there is a reference to the Idumean god Qos, and to a Sidonian, Apollophones, who ruled Marissa (Mareshah) for thirty-three years. One of the most celebrated finds is a small terra-cotta figurine of Aphrodite, which some scholars date several centuries after the destruction of Mareshah.

In the area around Mareshah, 132 carefully cut *columbaria* (lit. dovescotes) caves have been explored. Some scholars maintain they were for human burial, others that they were for raising doves sacred to the Aphrodite-Atargatis cult. Approximately one third of the caves are cross shaped; in them row upon row of cubical niches have been cut, with one cave containing over two thousand. Archaeological evidence dates these *columbaria* from the third to the first century B.C. The other caves are circular or square, and have, in addition to the carved niches, tall conical pillars, generally in the center. These caves continued in use until the fourth century A.D. Niches in both types of caves are eight inches in height, width, and depth. Discoveries at other sites prove that pillars and doves were sacred to Aphrodite and Atargatis. This, plus the fact that the niches were too small to contain burial remains, gives support to the cultic view. Other scholars, however, claim the niches are sufficiently large to hold ashes of the deceased.

**3. The royal archives.** Some twenty thousand cuneiform tablets were found in the palace levels of ca. 1800-1760 B.C. The bulk of these date from the time of Iasmah-Adad and Zimri-Lim. A smaller corpus of texts dates to the time of Sumû-Iamam, and a few scattered documents stem from the reign of Iaḥdun-Lim. Most of the documents were administrative in content, concerned with the care of the palace and the feeding of its occupants. These,

together with juridical, economic, and epistolary texts were found scattered throughout the vast palace. Except for a very few examples written in Hurrian, the tablets were composed in Akkadian. Divergence from the "classical" Akkadian of Hammurabi of Babylon, lexical peculiarities, and nouns that were obviously West Semitic indicate a population that spoke Amorite.

**4. History.** Although the first unequivocal reference to Mari was not inscribed earlier than the reign of Eannatum I of Lagash (ca. 2450), archaeological remains indicate the area of Mari to have been settled in the Jemdet Nasr period.

A recent discovery (1965) enhances the possibility that the beginning of Mari's history may have to be sought around 2600 B.C. A large jar was found which contains fifty-two objects, some of which are stylistically similar to artifacts from the famous royal graves of Ur. (See Ur [CITY].) An inscribed lapis lazuli "pearl" states that it was dedicated by Mesannepada, king of Ur (ca. 2600). Two levels indicate periods of destruction attributed to Lugal-zaggesi of Uruk and Sargon of Agade. These destructions inaugurate a period, half a millennium long, in which Mari was dependent on various Mesopotamian powers (2400-1900 B.C.). We do possess the name of a number of *šakkanakkû* (governors). Kupper offers some evidence to reconstruct plausible chronological sequences for reigns, beginning in the Ur III period and ending with the arrival of the Lim dynasty.

Iaggid-Lim was probably not the Amorite leader who established a dynasty in Mari of the Old Babylonian period, but he is the first about whom we have historical information. A remarkable letter sent to a god tells us that Iaggid-Lim was occupied in battling the king of neighboring Terqa. His son, Iaḥdun-Lim, made an expedition to the Mediterranean. Although the latter boasted of exacting tribute from enemies he had subdued on his journey homeward, it is likely that no permanent benefits were obtained by Mari.

Shamshi-Adad, a native of Terqa who had managed to occupy the throne of Asshur, probably instigated a palace revolt which ultimately ended with his son, Iasmah-Adad, becoming the new ruler of Mari. The legitimate heir to the throne, Zimri-Lim, escaped to find shelter, probably in Aleppo-Iamḥad. It is likely that Iasmah-Adad's control of Mari lasted not more than a decade. With Shamshi-Adad's death, Zimri-Lim recovered his throne, aided by his father-in-law, the powerful king of Iamḥad, Iarim-Lim. Recently published documents indicate that the struggle, requiring a number of campaigns, ended in the escape of Iasmah-Adad.

After the death of Iarim-Lim, king of Iamḥad, relations between Mari and Aleppo deteriorated. The new ruler, Hammurabi, directed a reordering of alliances, favoring his namesake in Babylon over Zimri-Lim. Difficulties between the allies developed mostly as a result of Mari's economic policies. Additionally, evidence indicates that after the death of Iarim-Lim, Mari was no longer acting as dutiful vassal. Babylonian troops destroyed Mari in two stages. Hammurabi of Babylon, in the thirty-second through thirty-fourth years of his reign, with the

tacit approval of Iamḥad, dismembered Mari (ca. 1757, "middle" CHRONOLOGY) and divided the spoils with Aleppo. Although a small settlement remained there, at least five hundred years later, the glorious days of Mari had ended.

5. **Economy.** The period following the demise of the Ur III Empire saw a redistribution of economic power from the hands of S Mesopotamian (i.e., Sumerian) rulers to those of dynasts who settled all along the Euphrates. (See SUMER §2c.) Because of its geographical situation Mari was in a position to benefit from the transfer of goods and raw materials from one area to another. Heavy taxes were levied on raw products such as wood, stone, and cereals, as these were shipped between the nations. Tin trade, in particular, seems to have prospered the kings of Mari, as Mari distributed Elamite tin to Levantine markets. The manufacturing of clothing, leather objects, metal vessels, and weaponry were other profitable ventures. Not the least source of Mari's income were the tribute payments from minor allies and numerous vassals rendered in exchange for security.

6. **Society and administration.** The Mari texts speak of *awilum*, *muškēnum*, and *wardum*, the three "classes" of the Hammurabi law code. This terminology should not be forced into specific definitions. F. R. Kraus tries to show that the term *awilum* in Old Babylonian refers to a "privileged, elite person." This view holds well, in a number of instances, for Mari. The term is also used in a more social and legal context to mean: "a messenger from [X], a ruler of [X]." *Muškēnum*, sometimes contrasted to *awilum*, at Mari refers to the "common citizenry," and not to "serfs" as it is sometimes claimed. Whereas the king, his family, and his top administrators certainly belonged to the elite class, it is not possible to ascertain the proper position for the officers, merchants, messengers and traveling artisans who are mentioned in the texts. As to *wardum*, "slaves," most of the Mari references indicate that this group consisted of those who failed to repay loans or who were captured in military clashes.

a. **The king.** One of the famous Mari wall paintings depicts the ceremony which took place whenever a prince, at the death of his father, was invested with the symbols of kingship. The temple area, in which the king is depicted as meeting the goddess Ishtar, is remarkably reminiscent of Solomon's house of worship. One document (ARM X:10) hints that in another ceremony the king received the acclamation of his soldiers.

The king was constantly on the move. Records of rations for the king's table generally indicate that only during the months of December through May was the king likely to remain in his capital. The rest of the year was devoted to his activities in the provinces and in foreign lands. The warmer months were set aside for warfare. While away on expedition, the king kept in touch with developments at home by means of fast couriers. Particularly during those days, the king sought advice from the gods, sent to him through "prophets." Other travels of the king saw him visiting shrines of provincial gods, dispensing justice, meeting with foreign potentates, and visiting foreign courts and

temples. To ease the burden of such travel, palaces were built in four localities outside of Mari. These palaces were equipped with miniature courts complete with wives, bureaucrats, attendants, and workers.

A letter informs Zimri-Lim of the king of Ugarit's desire to have his emissary visit the Mari palace. According to archaeological evidence, the palace was a remarkable building of over 250 rooms and open courtyards, covering an area of some eight acres. Within it, one finds not only the royal and guest chambers but also workshops, a scribal school, storehouses, and kitchens. Many of the walls were decorated with frescoes. One document tells us that at least four hundred persons were employed in the palace. Meals were prepared by a large kitchen staff. Meats were not plentiful, probably eaten only after the offering of sacrifices. Seasonal bounties, however, included pickled grasshoppers, wild truffles, and choice fish. Good wine, honey, and olive oil were shipped from the N. Even in the summer's heat, an ingenious structure stored ice that had been transported by night from cooler climates. For entertainment, the king hunted lions and deer, enjoyed watching performances of trained (?) bears, and personally selected attractive maidens for his large corps of dancers and singers.

b. **The queen.** The future queen was probably selected for the prince by a reigning monarch eager to cement political relations with a ruler of equal status. A first wife could not easily be repudiated, or indeed even slighted. This is confirmed by a letter in which Shamshi-Adad scolds his son for neglecting his wife, hence ultimately humiliating her father, the king of Qatna.

Our documents most often speak of Šiptu, daughter of Iarim-Lim of Iamḥad and Zimri-Lim's queen. Šiptu's correspondence reveals her to have performed as an "acting king" while her husband was away from the capital. Her letters to Zimri-Lim, published mostly in ARM X; are full of encouragement, advice, and solicitous exhortations: "May my Lord protect his body from sun-blisters" (X:11); "May my Lord act according to the god's order" (X:11). In general, however, most of Šiptu's letters concern her activities as a palace administrator. Responding to her husband's requests, she directed the dispatch of foodstuffs, wine, and other objects to her husband and to other potentates (X:131); made sure that garlic was properly dried before storage (X:136); supervised the division of an estate (X:134); kept watch over political hostages (X:124); took action to prevent the spread of a contagious disease (X:129, 130); controlled access to sealed storerooms (XIII:22; XIII:14; X:12); prevented officials from remaining idle (X:157, 154); and acted in moments when quick decisions were needed (X:160).

But it is in her cultic involvement that Šiptu appears to be most unusual. One text (X:120) records Zimri-Lim's order for the queen to offer sacrifices to a goddess. Additionally, Šiptu receives precise instruction from her husband on the process of extracting information from the gods. It was her responsibility, too, to collect prophetic utterances and to communicate them, together with necessary proofs of authority, to the king. In X:4,

one even notes the queen's readiness to promote her own interpretation of a divine revelation.

*c. The royal family.* Zimri-Lim's children, it appears, were all female, although at least one male child died young. Some of his daughters were married to vassals who might best promote the king's cause, and some were married to court officials. We are fortunate to possess a number of letters written by these ladies, for they add a dimension to our knowledge of Near Eastern society rarely attested to elsewhere. Some of the girls, happily married, wrote to bolster their husbands' positions before the king. Others bitterly complained about their fate, threatened to come back home, or even talked of suicide. Two sisters, like the daughters of Laban, even married the same person; one was desperately unhappy, while the other basked in her husband's favor.

A number of girls were dedicated as priestesses to gods, local and foreign. One princess was sent to Sippar as a "daughter-in-law" of the god Shamash. Two others remained, unmarried, in the palace. Zimri-Lim's sister became the high priestess of Adad. See WOMAN IN THE ANCIENT NEAR EAST[S].

*d. Administrative personnel.* For convenience' sake, the government of Mari could be divided into two branches: that of Mari proper and that which ruled the provinces. The bureaucrats, however, easily moved from one position to another. For this reason, it is not surprising to note the presence of the same functionary at a number of localities. Bureaucrats survived, largely undisturbed, the upheavals brought about by changes in dynasties. Obviously administrative talent was rated higher than allegiance to individual leaders.

Kupper and Marzal have provided us with the greatest insight into the administration of the provinces. Two terms seem to be used for the governor: *merḫum* and *šāpīṭum*. The first title seems to include an additional power, that of a military commander. While the etymology of the first term is unclear, the second term is undoubtedly derived from a root similar to biblical *šāphaṭ* (to judge). One cannot, however, equate the activities of the Mari *šāpīṭum* with the biblical *šōpēt* (Judge). The former was only incidentally concerned with administration of justice. Rather, he performed the king's will in areas where the king was not likely to be present. The *šāpīṭum*'s authority ranged widely over a number of personnel who were probably appointed by the king. The *abu bitim* may have been an aide to the governor, yet probably reported to the king any unusual activity. A third-level rank was that of the *ša sikkatim*, whose specific functions are yet to be determined. These bureaucrats, established as leaders of provincial districts, acted through the agency of local authorities, whether village chieftains (*suqāqu*), elders, or leaders of townships. As executors of the king's decision, the *šāpīṭum* and the *merḫum* were provided with police, soldiers, and scribes. Their decisions dealt as much with keeping the district safe from nomadic invasion as with collecting taxes due to the palace, repairing canals and dikes on royal land, and when needed, ministering to the needs of local gods.

Mari and the palace were administered by the king; but when he was absent, by the queen or by a high official. The king apparently had a private secretary whose powers were wide. There were also persons given the titles of "king's body-guard," "friends," "beloveds," and "acquaintances." It is this group, probably, that shared the king's table and it is from this group, very likely, that the king chose emissaries to foreign potentates. Such was the *ḫazannu* sent to vassals as a "resident delegate." The *šandabakkū* and the *šatammu* also lived in Mari, and, together with other officials, these illiterate officials could be considered all-purpose bureaucrats, able to shoulder a variety of responsibilities, not the least being the dispensation of materials stored within the palace under their supervision. Additionally, they controlled workshops in which were produced textiles, jewelry, furniture, and armament. There were, however, a few "specialists"—officials who directed scribal, musical, and dance instruction.

*e. The military.* The military was drawn from the citizenry, the number of soldiers being considerably enlarged by levies on "nomadic" groups. The act of registering and tallying the citizens for military purposes involved scribes and officials in a ceremony called the *tēbibtum*. This subject was studied by, among others, Speiser and Kupper. While Speiser highlighted the military connotation of the term, Kupper emphasized the religious involvement in a purification ceremony. Some scholars have found parallelism with biblical institutions detailed in Exod. 30 and Deut. 20.

The conscript's time of duty probably lasted throughout the hostilities, which diminished as cold weather approached. The forces on either side of the battle could reach enormous proportions. One of Shamshi-Adad's wars saw him raise some sixty thousand men. Military organizations, theoretically headed by the king, included the following commissioned personnel: the *rabi amurrim* (general; literally, "leader of the Amurru people"); the *rabi pirsim* (squad leader); the *laputtum* (lieutenant); the UGULA 10.LÚ (corporal); the *rēdum* ("privileged" soldier); the *bā'irum* and the *be'rum*, (draftee and "tenant" draftee). One West Semitic term, *baddum*, probably refers to "leader of a scouting team."

The weaponry employed included throw sticks, bows and arrows, slings, spears/lances, axes, maces, swords, and daggers. Heavy weaponry included a variety of chariots, siege towers, breach-mines, rams. Flaming arrows and torches were also used to attack any city defended by ramparts. The soldier wore a helmet, hauberk, and a codpiece; he carried a large shield and a ram's horn.

Elaborate rituals, both religious and political, preceded military undertakings. The king wrote a letter to the gods and to his protective spirits (cf. I:3; IV:68), sacrificed at local shrines, consulted the omens, and collected oaths of support from his officers. Data about the enemy were gathered from itinerant artisans, friendly merchants, and affected vassals. Ambassadors at foreign courts kept their ears open, seeking information from "secret sources." Evidence was gathered from intercepted documents and from spies. Occasionally

fifth columnists and rumor-mongers were injected into disputed areas to demoralize the citizenry. Assassination was attempted as a quick solution to a thorny issue.

Defeat meant a dismantled rampart, burnt fields, and destroyed homes. Prisoners were led away to slavery. There was a possibility, however, for ransoming the males. Females entered the workshops of the victors. Those of nobler blood were either killed or taken as hostages. At religious ceremonies some prisoners were released.

**f. Nomads.** One of Mari's important contributions is undoubtedly the light its archives shed on Near Eastern nomadism. (See NOMADISM[S].) Kupper was the first to evaluate the nature and extent of nomadic culture among the Amorites of the Old Babylonian period. Additionally, our understanding has appreciably deepened due to a large extent to the works of M. B. Rowton and A. Malamat. Malamat studied the tribal terminology, *ummatum*, *hibrum*, and *gd'um*, and showed that all three terms have Hebrew cognates and refer to nomadic conglomerations. Terms such as *nawum* and *ḥašārūm* seem to retain their full meaning, "settlement," even beyond patriarchal time. Rowton distinguishes between "enclosed" and "bedouin" nomadism. While the latter type is to be found in Central Asia and in the Arabian deserts, the former was prevalent in the areas that concerned Mari and the biblical writers. In these last regions, no sharp distinction is to be made between the world of nomads and that of sedentary folk. Urban settlements were encircled, if not pockmarked, with pastoral land. Mari's nomads depended not on the camel, but on the sheep, an animal whose nature did not allow for long and deep forays into desert regions. Constant return to well-watered regions, particularly in the warmer period, was necessary. Additionally, the conveniences of the settled regions were needed even in winter, for sheep do not weather well the cold season in the mountains to the N. The ensuing interaction between the state and the *nawum*, the migratory group within the tribe, fostered mutual dependence and, at the same time, mutual hostilities. Our records from Mari disclose the existence of tribes that had, in this atmosphere, struck a balance of varying proportions between these two antithetical positions. Depending on the strength, determination, and independence of the tribal leadership, the rulers of Mari would, with varying degrees of success, extend their authority and usurp the right to determine the pattern of seasonal migration.

**7. The cult.** Although we possess data on the pantheon at Mari before the Old Babylonian dynasty, this survey will concentrate on the era of the Lim dynasty (ca. 1800-1760 B.C.). The most striking document dating to this period enumerates the distribution of sacrificial sheep to the various temples and gods of Mari. The largest consignment, seven sheep, was offered to the goddess Diritum. This is a bit surprising, since her main shrine was located in Dēr, a village about a day's journey from the capital. Six sheep were offered to each of the following deities [(f) indicates females]: (f) Bēlet-ekallim ("The Lady of the

Palace"), Dagan, (f) Ninhursagga, Shamash, Itur-Mer, (f) Annunitum, and Nergal. Two sheep each were given to: Shamash of the Heavens, Sin, IGI-KUR, (f) Nanni, (f) Ḥanat ("Anat"), (f) Ishtar, (f) Bēlet-Agade, Numuša, (f) Kišitum ("Lady of Kish"), (f) Ḥiṣamitum ("Lady of Ḥiṣamta," a local village), (f) Marat-Altum. A sheep each was granted to (f) Ishtar of the Palace, (f) Ninkarrak, (f) Iṣhara, and (f) Bēlet-ḥiṣari ("Lady of the Enclosure").

It is interesting to note the heterogeneous nature of this pantheon. Some deities are Sumerian in origin; others Amorite in background. A few are known to have been worshiped in S Mesopotamia; some are named after cities in which they reigned; others are unique, as yet, to Mari. The archives and the personal names contained therein reveal Mari's knowledge of over 140 deities. Among the West Semitic deities known are: Abba, Addu, Amurru, Ašar, Ašmun, Askur, Dagan, Epuḥ (Yapuḥ), Eraḥ (Yareḥ), Ešuḥ (Yašuḥ), Ḥal ('Al), Ḥammu ('Ammu), (f) Ḥanat ('Anat), Ḥatta, Ḥawran (Ḥoron), (Y)akrub-El, El, (Y)atur-Mer (?), (f) Lab(w)a, Laban, Malik, Nas(s)i, Naru, Neḥim, Rasap (Rešep), and Salim. Hurrian deities such as Tešub, Ḥepat, and Allai were worshiped in the area of Sagaratum, one of the king's residential cities.

Many festivals in honor of individual deities are known to have been celebrated. Preserved in a somewhat fragmentary condition is the following description of a ritual for Ishtar. An early meal is followed by presentation of offerings before the gods and their emblems. The king dressed in a special garment and sat on a sailor's seat, flanked by his "favorite" and by his bodyguard. As chanting, accompanied by musical instruments, was performed by the priests, acrobatic feats and dramatic performances were presented. Libations and display of provisions ended the ceremony.

Of temple personnel we know the following: priestesses, *kalū* (singers), *bārū* (diviners), *āpīlum* (prophets), *muḥḥum* (ecstatics), *assinu* (transvestites), *kumru* (priests), and lower-level temple functionaries. It is unlikely that the average Mari citizen played a role in cultic presentations, except possibly to observe the statues of the deities as they were carried outside their temples. The *kispu* ceremony required the king, at least once a month, to offer sacrifices to the spirits of his ancestors.

**8. Mari and biblical research.** The fact that preliminary reports on Mari's archives indicated the nature of the documentation to be concerned with the activities of Middle Bronze Age Amorites from the Middle and Upper Euphrates Valley attracted early the attention of those who were predisposed to place the patriarchal age within a similar context. (See PATRIARCHS[S].) It would be fair to state that attempts to use Mari documentation to confer historicity on the patriarchal narrative have largely failed. Success has been achieved, however, when some Mari institutions were compared with those drawn from the OT.

**a. Geography, ethnology, onomastics.** The Mari archives have given us valuable information on Upper Mesopotamia, the region which included ARAM-NAHARAIM, home of the biblical patriarchs.

Two cities, Nahur and Haran, play a large role in the politics of Mari. Haran was an important trading center. The Mari archives have also furnished us with substantial information concerning movements of tribal and ethnic groups around 1800 B.C. Still at issue is the connection between one tribe, the DUMU-Iamina, and the BENJAMINITES of the OT.

Mari's onomastica provide the biblical scholar with the most potent arguments in favor of dating the patriarchs into the second millennium. The names of Abi-ram (Abraham), Laban (cf. also Ahi-Laban, Il-Laban), Iaḥqub-el (Jacob), etc. occur in lists from the Sumū-Iaman period.

**b. Covenant making.** See ASS[S] §2.

**c. Census.** Speiser, who studied the Mari institution of *tēbibitum*, believes that a connection could be made with the Hebrews' *kippurim*, a personal (*nepheš*) tax of half a shekel aimed at warding off a plague in the wake of a census (Exod. 30:12). Speiser further points to the narrative of II Sam. 24 which records the outbreak of a pestilence among the Israelites following a census ordered by David. Speiser suggests that this occurred precisely because no *kopher* was offered by David's people after the tallying was completed.

**d. Prophetic texts.** See PROPHECY IN THE ANCIENT NEAR EAST[S] §5c.

**e. Law, patrimony.** In the OT the term *nahālā* (patrimony) implies a property whose transfer is affected only within a family or a tribe. The twelve tribes, in sharing the Promised Land, received territory which was expected to remain whole and unbroken. In Mari, six texts make allusion to the verb *nahālum* with a meaning which parallels biblical usage.

**f. Adoption.** ARM VIII:1, a text dating to the Assyrian period (trans., ANESTP, p. 545), records that an adopted son would receive a double share of the inheritance should his adopters choose to acquire more sons. Mendelsohn believes this practice, attested also in the OT, originated among seminomadic, agricultural societies. On this problem, however, see De Vaux, *Histoire ancienne d'Israël*, I, pp. 238-39.

**Bibliography.** Extensive bibliographies are in H. Huffman, *Amorite Personal Names in the Mari Texts* (1965), pp. 274-77; 281-99; A. Malamat, BA, XXXIV (1971), 22. The "Keilschriftbibliographie" of *Orientalia* is a yearly index with items on Mari often found under sections 33 and 45. See also A. Malamat, IEJ, XXI (1971), 37-66; *Orientalia*, XL (1971), 75-89, and in *Near Eastern Archaeology in the Twentieth Century*, ed. J. Sanders (1970), pp. 164-77; G. Dossin, RA, LXIV (1970), 17-44, 97-106, 163-68; Syria, XLVIII (1971), 1-19, and L (1973), 1-12; J. R. Kupper, RA, LXV (1971), 113-18; M. Birot, RA, LXVI (1972), 131-34; Syria, L (1973), 1-12; F. R. \***MARK, GOSPEL OF.** Before the general acceptance of FORM CRITICISM it was possible to argue from the PAPIAS tradition of the early church that the evangelist Mark had been a companion of Peter and that he had composed his gospel largely from eyewitness reminiscence of the ministry of Jesus, particularly that of Peter himself. The gospel would then be interpreted as essentially a chronicle of the ministry of Jesus. For such an interpretation see MARK, GOSPEL OF esp. §§2, 8. But such a view is held today only by a small minority of scholars, who either reject form criticism or seek to minimize its findings. Beginning with the work of Lightfoot and Marxsen (see §2 below), the interpretation of this gospel has proceeded with a full acceptance of form criticism.

**1. Form criticism and the Gospel of Mark.** So far as the Gospel of Mark is concerned form criticism made two points, one concerning the nature of the gospel material and one concerning the work of the evangelist, and hence the nature of the gospel. Form critics saw the material in the gospel, the SAYINGS OF JESUS and the stories about him, as having been formed, and in no small part actually created, in the tradition of the early Christian communities where it served a variety of purposes: missionary preaching and propaganda, catechetical instruction, exhortation, liturgical practice, and so on. This material had a long history of transmission, use, and interpretation in the early Christian communities, and when it reached the hand of Mark any element of historical reminiscence had long since been lost. The evangelist himself was primarily a collector and organizer of this traditional material, and his purpose in writing was to unite the characteristic Hellenistic Christian kerygma of Jesus as the crucified and risen Savior of men with the traditional Jesus material. The Gospel of Mark, therefore, is narrative proclamation.

This view of the gospel carried full conviction with regard to the nature of the gospel material; subsequent research has strengthened and refined the form-critical understanding of the sayings of Jesus and the stories about him. But the view of the work of the evangelist carried less conviction. The pioneer form critics were more interested in the traditional material and the history of its use in the early Christian communities than they were in the Gospel of Mark itself, and their statements about the evangelist and his work tended to be rather perfunctory. So far as the interpretation of the gospel was concerned, the way forward was shown by two scholars: R. H. Lightfoot in England and W. Marxsen in Germany.

**2. Lightfoot and Marxsen on the Gospel of Mark.** In a series of works (see bibliog.) Lightfoot introduced English readers to form criticism and set out to interpret the Gospel of Mark in light of its findings. He pioneered in the treatment of the evangelist as an author, paying particular attention to his compositional techniques, e.g., intercalation, and to his symbolic use of geographical references (especially Galilee). Lightfoot insisted that Mark be treated as a literary unit and any one part interpreted in light of its function in the whole. His work may be said to have reached a climax in

the commentary on the gospel written by his pupil Nineham.

In Germany, Markan compositional techniques were also a special concern of Lohmeyer, and this concern for Markan composition led to the work of Marxsen. In a series of studies (on John the Baptist, the geographical outline in Mark, the word *evangelion*, Mark 13) Marxsen concerned himself with the evangelist's editing and compositional use of traditional material. In each instance he went on to consider the further editing of the Markan material by Matthew and Luke. Marxsen coined the term *Redaktionsgeschichte* (see REDACTION CRITICISM, NT[S]) to describe this method of approach to the gospels and so ushered in a new era in their interpretation.

**3. From redaction criticism to literary criticism.** Since redaction criticism is concerned to investigate the evangelist's editing and use of traditional material, it has been naturally accompanied by the attempt to isolate pre-Markan material in the text of the gospel and then to observe how it has been redacted. Such a procedure, however, is not only difficult to carry out, but also has obvious limitations. Consequently, although the attempt has not been abandoned, there is a growing tendency to turn to Markan composition of the gospel as a whole. This involves a study of the structure and the function of the various parts within it and observation of the themes the evangelist pursues, i.e., a general literary criticism of the gospel. More and more the evangelist is being considered as an author who has made extensive use of traditional material, but nonetheless *an author*, and a conscious attempt is being made to develop a literary-critical method that would be appropriate to the interpretation of the text he has created. An early move in this direction was made by Best, and it is a particular feature of the American interpretation of the gospel represented by such scholars as Weeden and Perrin.

**4. Some issues in the most recent discussion. a. The question of a model.** If, as many believe, this evangelist is the first to write a gospel, and hence the creator of a new literary genre, one must consider first of all what sort of a model he might have been following (see GOSPEL, GENRE[S]). Among the possibilities are the following.

i. The **ARETALOGY**, understood as a cycle of stories exhibiting the power of a hero figure, possibly concluding with an account of his death as an apotheosis. Koester and Robinson suggest that this was Mark's model.

ii. The **PASSION NARRATIVE**. A popular dictum concerning the gospel is that it is a "passion narrative with an extended introduction." Some scholars claim that the passion narrative in Mark is essentially pre-Markan, and that the evangelist composed the remainder of the gospel as an introduction to it (Marxsen, Burkill).

iii. **Apocalyptic**. Ch. 13 clearly plays an important role in the gospel, and the evangelist has an overall concern for the apocalyptic **PAROUSIA** of Jesus as **SON OF MAN**. This has led some scholars to suggest that Mark is modeling his work on Jewish Christian apocalyptic (so, in different ways, Kee

and Perrin). See **APOCALYPTICISM**; **APOCALYPTICISM** [S].

**b. Thematic concerns.** A major feature of current interpretation of the gospel is recognition of the fact that the evangelist is an author who systematically pursues thematic concerns. Among the Markan themes being studied are:

i. The messianic secret. See **SECRET, MESSIANIC**[S].

ii. **Christology**, which many interpreters (e.g., Weeden, Perrin) see as a, if not the, major concern of the evangelist.

iii. **Discipleship**. It is clear that disciples and discipleship play a large role in the gospel (see **DISCIPLESHIP**[S]). Two extended and very different treatments of the theme are offered by Weeden and Meye.

iv. **Galilee and the Gentile mission**. Lightfoot and his pupils (Boobyer and Evans) have shown that two of the major concerns in the Gospel of Mark are for Galilee and the Gentile mission, and that the former is used symbolically for the latter.

v. **Eschatology**. Mark's understanding of the **KINGDOM OF GOD** and this understanding as a theme in the gospel has been investigated by Kelber.

**c. Mark's purpose in writing.** The older form-critical judgment that Mark's intention was to unite the Hellenistic kerygma and the Jesus tradition is too general. Increasing knowledge of the evangelist as an author has made more precise statements possible, even though recent discussion has not reached a consensus, except perhaps for recognition of the fact that any understanding of the purpose of the evangelist must take into account and integrate all facets of the gospel uncovered by the redaction- and literary-critical investigation. If Mark is an author exercising control over his material, then all that material must be embraced in a statement of his purpose in writing.

Although there is no scholarly consensus, there is some agreement that the evangelist is writing for a community or communities of Christians caught up in a period of apocalyptic fervor occasioned by the circumstances of the Jewish War, and that he is writing either shortly before or shortly after the fall of Jerusalem in A.D. 70. His purpose is to help his readers prepare themselves for the coming of Jesus as Son of man, an event both he and they regard as imminent. To this end he composes what is essentially a *didactic history*; he tells the story of Jesus in such a way as to instruct his readers. He and his readers face the prospect of suffering as a prelude to the coming of Jesus as Son of man and the consequent glory which will be the reward of those who endure to the end. But Mark sees Jesus himself as having, of divine necessity, suffered his passion as a prelude to being redeemed out of his death, and quite literally out of his tomb, to be with God in the heavens until the moment of his coming on the clouds of heaven as Son of man. So his purpose is to prepare his readers to face the necessity of following their Master through the reality of suffering to the equal and indeed surpassing reality of the glory they will share with him at his (second)

coming. In all probability Mark is writing specifically against a Christology which understood Jesus only in terms of glory, one which played down the reality of his suffering and of the prospective suffering of the believer, as only the necessary accompaniment to an apotheosis. For Mark, both the suffering and the glory are equally real. They were so for Jesus and they are to be so for the believer.

N. PERRIN

**MARK, SECRET GOSPEL OF.** A title derived from an eighteenth-century Greek MS, discovered in 1958, which purports to transmit a section "from the letters" of Clement of Alexandria (ca. A.D. 150-215) to a certain (otherwise unknown) "Theodore" (Pl. I, line 1). In the process of warning about "the unspeakable teachings of the Carpocratians" (a second-century Gnostic sect), the author urges that their false version of Mark's Gospel must be distinguished from the evangelist's "secret Gospel" (II, 6-10). The latter is described as an expanded version of Mark's original gospel, prepared by him as "a more spiritual Gospel for the use of those who were being perfected" (I, 21-22). One narrative, said to have been included between Mark 10:34, 35, is quoted in full (II, 21-III, 11), as well as one sentence said to have been added after Mark 10:46a (III, 14-16).

The MS of Clement's letter, discovered in the library of the desert Monastery of Mar Saba near Jerusalem by Smith, occupies two and a half pages in the back of a printed book of the seventeenth century. The text breaks off in midsentence (III, 18). On the basis of orthography, an eighteenth-century date seems assured, and there has been general agreement that the MS preserves part of a

previously unknown, but authentic, letter of the Alexandrian theologian.

Scholarly discussion has focused primarily on the significance of the narrative which Clement quotes here from the Secret Gospel. It tells of Jesus' raising a young man from the dead at Bethany, and mentions that the youth, six days later, came to Jesus at night and was "taught . . . the mystery of the kingdom of God" (III, 10). Smith has argued that this story derives from an early Aramaic source common to Mark and John (cf. the story of the raising of Lazarus in John 11), and that it discloses that the historical Jesus practiced an esoteric baptism of certain disciples, singly and at night, perhaps with erotic aspects. There has been a virtually unanimous rejection of Smith's interpretation, however, as incautious and unfounded. Other scholars have pointed out fundamental errors in Smith's methodology and his misuse of ancient texts. The consensus is that this newly discovered fragment is indeed from Clement, but that it does not provide evidence of an ancient gospel source. What it brings to light, instead, is a hitherto unknown version of the Gospel of Mark, an esoteric gospel approved by Clement. It is to be classed with the other second-century apocryphal gospels. See APOCRYPHA, NT; APOCRYPHA, NT[S].

V. P. FURNISH

\***MARRIAGE.** Marriage is in almost all societies that institution by which the nuclear family is established; this is so even in the frequent case in which the nuclear family is only a unit in a larger kin group such as the lineage or the clan. It is to be distinguished from mating in that it is formalized, and in that it has important functions in addition to the sexual gratification of its members. The functions of marriage in the OT are similar to those found for the majority of human societies: (a) the regulation of sexual behavior, especially of women; (b) companionship between husband and wife (Gen. 2), though this was often modified by the working of the double standard; (c) economic functions through family enterprises; (d) religious functions, in that the majority of festivals centered on participation by households; (e) most importantly, the procreation, legitimation, and socialization of children. In the absence of any clear doctrine of personal immortality, the Hebrews believed that a man lived on through his posterity. Thus, children were the supreme example of divine favor (Gen. 12:2; Deut. 28:9-11; Ps. 127:3-5), and childlessness was a curse (Gen. 15:2; Deut. 28:18, 30). The desire for large families

is characteristic of both pastoral and horticultural societies. So crucial was the need for sons to perpetuate the lineage that in one case a man without sons gave his daughter to a slave so she could bear children (I Chr. 2:34-35).

Marriage was regarded as man's normal estate, and there was no recognized status for celibates (Isa. 4:1), who could be considered socially irresponsible. In this context, Jeremiah's divinely commanded celibacy (Jer. 16:1-4) becomes a sinister sign of impending judgment in which family lines will be cut off. In the NT, marriage is again seen as normal and honorable (Heb. 13:4), and Paul goes so far as to call compulsory celibacy a heresy (I Tim. 4:1-3). When he advises against marriage (I Cor. 7:26), it is clearly specified as being because of impending hard times.

**1. Who could or should marry?** Throughout the OT, it is taken for granted that Ego, the person taking the initiative, is the man (or his family), and all rules are so stated.

**a. Incest taboo.** The INCEST taboo prohibited marriage to certain women (Lev. 18:6-18): one's mother and stepmother, sister and half sister, granddaughter, father's and mother's sisters, and the wives of brother, father's brother, and son; also wife's mother, sister, daughter, and granddaughter. It is clear that all these prohibitions have as their aim the avoidance of conflicts within the nuclear family and the lineage.

A number of these seem not to have been operative in patriarchal times. Instances of marriage to half sister (Gen. 20:12), wife's sister (Gen. 29:21-30), and father's widow (I Chr. 2:24) are cited without reproach.

**b. Endogamy.** Hebrews were supposed to marry only within the twelve tribes, though this was often disregarded. The reason given was to avoid cultural-religious syncretism (Exod. 34:15-16; Deut. 7:3-6; Josh. 23:11-13); there was no "racial" basis for this taboo, as can be seen from the marriage of Moses with a Cushite (=black) woman, for which God defended him from the accusations of Miriam and Aaron (Num. 12:1-16). Throughout Israel's independent history, intermarriage was practiced, especially by kings, though it was condemned in the "official" view. Tribal exogamy may be inferred from the story (Judg. 21) of the tribe of Benjamin, to which the other tribes had vowed not to give wives. It proved necessary to find a city which had not made the vow, kill the men and nonvirgins, and give the virgins to Benjamin as wives. Ezra and Nehemiah (Ezra 9-10; Neh. 10:28-30) restored ethnic endogamy after the Exile. But by NT times (Acts 16:1-3; 24:24), Jews of the Diaspora married non-Jews.

**c. Parallel cousin marriage.** In the patriarchal period, there was a special form of preferential marriage within the patrilineage: the ideal mate was one's paternal parallel cousin (father's brother's daughter). Failing this specific person, another woman of one's patrilineage would do: one's half sister (Gen. 20:12), father's brother's granddaughter (Gen. 24), or even mother's brother's daughter (Gen. 29:21-30), since she was, in this case, also a member of the patrilineage by descent from Abraham's brother. There is another case

(Exod. 6:20) in which a man is said to have married his father's sister. Though in most other societies, and in later times in Israel, many of these marriages would be considered incest, in a few societies they are normal. Specifically, they are found where there is a strong patrilineal lineage structure, a slight or nonexistent political structure apart from the lineage structure, and the custom of permitting women to inherit in their own right (Num. 27:1-11; 36; see also Lev. 22:12-13, where a woman loses certain rights when she marries outside her patrilineage). The effect of this custom is to keep within the lineage the wealth and the fertility of the woman, both important in interlineage conflicts. In Israel, as among Bedouin tribes, this custom persisted until the development of urbanism and the state (Josh. 15:16-19; Judg. 1:12-15), but it then largely disappeared, as among urbanized Arabs. At this later time, a number of the women became taboo, though not first cousins; and there are cases, especially among royalty, of paternal parallel cousin marriage (II Chr. 11:20-22).

**d. The levirate.** One could obtain wives also through the levirate, which specified (Gen. 38:6-26; Deut. 25:5-10) that when a married man died childless, his brother should marry the widow; the purpose was to beget children in the name of the dead man and to preserve lineage property (Ruth 4:1-6). Implicit, but certainly important, was the obligation to provide for the economic, social, and sexual needs of a widow still young enough to marry and to bear children. Though the obligation fell first on the brother of the dead man, it was in fact a corporate responsibility of his lineage, so that Judah accepted the blame for not providing for Tamar (Gen. 38:26). There was a recognized order of priority among the kin, in case there was no brother or in case someone chose not to do his duty (Ruth 2:20; 3:2, 12, 13; 4:1-10). Naomi had suggested to Ruth, since Naomi could have no more sons, that she was free to return to her father's home; but the fact that Ruth stayed with Naomi was highly regarded (Ruth 2:11-12). The levirate, then, functioned for some of the same purposes as parallel cousin marriage, though it lasted much longer (Matt. 22:23-28; Luke 20:27-33). In the first century, marriage to brother's wife during the brother's lifetime continued to be regarded as incest (Mark 6:16-19). Widows past child-bearing age were less fortunate (Ruth 1:12); they were classed with orphans and strangers who had no natural defenders, so that God took the responsibility (Ps. 146:9). It is not clear whether or not Caleb's marriage to his father's widow (I Chr. 2:24) is an extension of the levirate; though of course the rationale of providing children for a childless man would not be operative.

**e. Marriages for alliance.** Kings not infrequently, after the example of their neighbors, married foreign princesses to cement alliances (I Kings 3:1). Solomon merely carried this policy to extremes.

**f. Captives and slaves.** An important source of secondary wives, in times of external warfare (from the time of the Conquest through the time of the kingdoms), consisted of women taken captive. Since

slavery was an accepted institution, it followed that victorious soldiers and wealthy men would have a ready supply of women who as their property could be used at their will (Num. 31:18-19; Deut. 21:10-14; see SLAVERY IN THE OT[S]). The patriarchs also took slaves as concubines, but these were the property of their wives (Gen. 16; 29:24, 29; 30:3-13), and they were used explicitly as surrogate ovaries and wombs to produce children who would belong to their mistresses. The story of Sarah and Hagar (Gen. 16:4-6) shows that human emotions can get in the way of accepted social practice.

**2. Selection.** Initiative in making a specific selection could be taken by the man's family, especially if he was young and was taking his first wife (Gen. 24). Or the man could take the initiative (Gen. 29; Judg. 14:1-2). In a few cases, a prominent man promised his daughter to whoever would perform some valorous feat (Josh. 15:16-19; I Sam. 17:25; 18:17-27). There is no case of marriage being initiated by a woman, at least on her own behalf.

**3. Solemnization.** The solemnization of marriage included the payment of bride wealth or suitor service, the engagement, and the wedding; not all parts were equally elaborate in all periods.

**a. Bride wealth or suitor service.** Like many other societies, the Hebrews felt that a man owed his prospective father-in-law compensation for the loss of his daughter, and especially of her progeny, which would strengthen another lineage. This compensation usually took the form of bride wealth (Gen. 34:12; Exod. 22:16), the amount of which is unspecified except in the case of a forced marriage after rape (Deut. 22:29). This bride price, or better, progeny price, should not be confused with the gifts made to the bride and to members of her family at the time of betrothal (Gen. 24:22, 30, 47, 53). It was rather the sign of a valid marriage and of the legitimacy and lineage affiliation of the subsequent children. Nor should it be confused with a dowry, which was rarely if ever practiced by the Hebrews, except in the form of slaves given to a bride by her father at the time of her marriage (Gen. 24:59; 29:24, 29; Josh. 15:18-19). It is said that Pharaoh gave his daughter the city of Gezer when she married Solomon (I Kings 9:16).

When a young man was deserving but poor, he could work for his father-in-law instead of paying bride wealth (Gen. 29:15-30).

**b. Engagement.** Once the matter of bride wealth was settled, the father of the bride made a solemn commitment to the groom (I Sam. 18:21b), which initiated the engagement. This was a serious matter. The groom enjoyed all rights of marriage short of cohabitation, and it required a divorce to break the engagement. Engaged men were exempt from military duty (Deut. 20:7). Rape of an engaged woman was treated as adultery (Deut. 22:23-27), and an engaged woman guilty of infidelity was punished for adultery. It was grounds for divorce (Matt. 1:18-19).

**c. Wedding.** A marriage could be solemnized with a minimum of fuss (Gen. 24:66-67). But as social life became more elaborate, so did weddings. At the appointed time, the groom and his friends would go to the bride's house (Song of S. 3:6-11),

where they would find her veiled, richly dressed, and adorned with jewels (Ps. 45; Isa. 61:10). They would escort her, with singing and dancing, to the groom's home (Gen. 24:67; Ps. 45; I Macc. 9:39; Matt. 25:1-13). There would be a great feast (Gen. 29:22; Judg. 14:10) lasting seven to fourteen days, and including the singing of love songs (Song of Solomon). At some stage of the proceedings, there was, according to the Elephantine documents, the use of a solemn formula by the groom: "She is my wife, I am her husband, from this day forever." The marriage was consummated on the first night (Gen. 29:23), at which time it was the responsibility of the bride's family to preserve the tokens of her virginity (see VIRGINITY, TOKENS OF[S]).

Since marriage was an arrangement between families for their mutual benefit, it could happen that one party might for his own advantage try to alter the terms at the last minute; this was usually the bride's father, as Jacob (Gen. 29:23-26), Samson (Judg. 14:15-15:2), and David (I Sam. 25:44) discovered to their chagrin.

**4. Residence.** In patriarchal times, as might be expected, the prevalent residence pattern was patrilocal; that is, the new couple lived with the groom's family (Gen. 24:67; Judg. 12:9). Exceptions were due to special circumstances (Gen. 31:26, 43). Later, as the Hebrews in Canaan became town dwellers, the single nuclear family became relatively more independent, and sons built their own houses.

**5. Polygyny.** From the earliest times for which we have reliable records, polygyny was known and accepted. However, it was never statistically prevalent, if only because of the normal demographic balance between men and women. Economic considerations would also make it hard for most men to have more than one wife. Abraham apparently had only one wife at a time (Gen. 16:1-4; 25:1-6), though he also had concubines. Isaac seems to have married only Rebekah (Gen. 24:67). Esau had two Hittite wives (Gen. 26:34) and one wife who was a granddaughter of Abraham (Gen. 28:9). Jacob had two wives and two concubines (Gen. 29:21-30:13). It is not until Gideon that we hear of a man with "many" wives (Judg. 8:30), but their number is unspecified. However, it was with the institution of the monarchy that polygyny came to be practiced on a large scale. David had six wives whose names are recorded (I Sam. 25:39-43; 27:3; II Sam. 3:2-5), and Solomon had a genuine Oriental royal harem of seven hundred wives and three hundred concubines, most of them to cement alliances. However, the "proper" attitude was that a king should not have many wives, because of their bad moral influence (Deut. 17:17).

Concubinage was a recognized status decidedly lower than that of a wife, and a concubine's children did not have the rights of a wife's children, unless their mother was a stand-in for her mistress, in which case they were the mistress' children (Gen. 21:14; 25:5-6).

As do most polygynous people, the Hebrews recognized that relations between co-wives could be strained and hostile. Jealousy over the husband's favors and over privileges for their children often

pitted wife against wife. The contempt of a fertile wife for a barren one was a source of hatred. One approach to a solution was to require a kind of "equal time" between the wives, and the law required that the first-born son of an unloved wife be given his rights rather than the younger children of a beloved wife (Deut. 21:15-17).

Wives and concubines of a deposed or conquered king were booty for his conqueror (II Sam. 12:8; I Kings 20:3). For this reason Absalom's act of going in to his father's concubines during the latter's flight (II Sam. 16:20-22) was considered such a great insult, and Adonijah's request to be given Abishag was tantamount to a demand that he be given the throne (I Kings 2:13-25).

In NT times, monogamy seems to have been the normal practice, though there is no explicit prohibition of polygyny except for church leaders (according to a possible exegesis of I Tim. 3:2, 12; Tit. 1:6).

**6. Rights and obligations.** The respective rights and obligations of spouses seem, at first sight, to be totally lopsided. The husband has authority and freedom, especially in sex, and the wife is subject to him and liable to divorce or other penalty for displeasing him. An adulterous wife was punished for violating her husband's rights; an adulterous man was punished only if he had infringed upon some other man's rights.

But it must not be thought that the wife had no rights. Especially in the case of polygyny, minimal fairness was enforced on the husband. Furthermore, wives had property rights of their own, e.g., in slaves given them by their fathers. Finally, a wife always had ways of asserting herself, including the withholding of sexual favors, if her rights were neglected.

In a more positive sense, the picture of the ideal wife (Prov. 31:10-31) is hardly that of a weak, secluded, compliant child. She clearly has a great deal of authority and knows how to use it, and her economic role is extremely important. And even in the case of sharply defined specialization in the roles of the sexes, this very fact has been found to give each sex certain exclusive prerogatives which can be translated into leverage.

The NT, while it does not eradicate the double standard, does give teachings which undermine it just as surely as they undermine slavery: the spiritual equality of the sexes "in Christ" (Gal. 3:28) and the teaching that husbands ought to love their wives "as Christ loved the church" (Eph. 5:25) both clearly imply that though rights and duties may not be identical, they are essentially equal. See also FAMILY; WIDOW; SEX, SEXUAL BEHAVIOR[S]; DIVORCE[S].

**MARRIAGE IN THE NT.** From the few references to marriage in the NT it is not possible to assemble a specific Christian teaching about marriage and the marital relationship. In general, marriage is accepted and the partners urged to love and care for each other; doubtless most early Christians continued to live within and create new families, regardless of the sometimes intense expectation of the end of history. Nevertheless the church was not all of the same view, and differences both of substance and nuance can be seen.

**1. The esteem accorded to marriage in the early NT period.** The basic tone is set by the dispute about DIVORCE in Mark 10:2-9, the nucleus of which may go back to Jesus himself. There marriage is said to be an indissoluble bond between two persons, whose selves are altered by virtue of the sexual union. The bond has its sanction in God's will as expressed in the created order; that is, it is rooted in the very nature of humankind (Gen. 1:27; 2:24). In the gospels, the joyous marriage feast gives rise to metaphors which describe the joy and bliss of life in the kingdom of God (see MARRIAGE §3).

Paul, while encouraging unmarried people to remain single (see §2 below), nevertheless accepted marriage as a positive and caring relationship between two people (I Cor. 7:32, 35) and exhorted both husband and wife to express this care in their sexual relations (I Cor. 7:3-5). It appears that most church leaders of his day were married (I Cor. 9:5). See ETHICS in the NT[S] §3dii.

**2. Tendencies toward the single life.** At the same time there is evidence of an early dethronement of marriage from the all-important place it held in Jewish society. Jesus and Paul, as John the Baptist before them, do not appear to have been married. Some Corinthian Christians apparently believed that because sex was evil marriage should not be consummated, if, as is likely, I Cor. 7:1 cites their view rather than Paul's own. In the following verse Paul objects to this view. Nevertheless he does promote the single state for any of the unmarried or widows who would not find such celibacy disturbing (I Cor. 7:8-9, 36-40). The interpretation of I Cor. 7:36-38 is uncertain. It refers either to fathers who have refused to offer their daughters in marriage or, more likely, to engaged couples who have hesitated to take the final step of formal marriage. In either case it evidences an inclination by some Corinthians toward the single state. Contrary to the Corinthian ascetics, Paul's reasons for remaining unmarried are (1) the avoidance of the inevitable split in loyalty between spouse and church which a married person confronts (I Cor. 7:32-35), and (2) the imminent end of this world (I Cor. 7:27-31).

In Mark 12:25 Jesus echoes a common apocalyptic notion that there is no sexuality and therefore no marriage in heaven. Such a view, coupled with belief that the kingdom of God is already manifested within the Christian communities, could have formed another basis for the movement away from marriage, especially among the Gnostics. In its present place in Matthew, the unusual saying about people becoming eunuchs for the kingdom of God may be a comment on the kind of life neces-

sary after a person has separated from his or her spouse (i.e., no remarriage is permitted; cf. Matt. 19:9-12). In the oral tradition, however, it must have been an exhortation to, or defense of, believers (or of Jesus?) who practiced celibacy, either because they thought they were living already in the kingdom of God, or in order to give complete devotion to work for the kingdom. See EUNUCH; ETHICS IN THE NT[S] §1e1.

This early tendency toward the single state was continued in some segments of the later church. The silence about marriage in the Gospel of John and Johannine epistles may indicate uncertainty in that circle about marriage. In the book of Revelation the redeemed in heaven are said to have been celibate, assuming the language is intended literally rather than metaphorically (14:4). Nowhere else in the book, however, is the idea repeated; thus it plays no important role in the thought of the final author. Only Gnostic Christianity seems to have stressed celibacy, though the evidence for this is largely of post-NT date. The author of I Timothy, however, is already fighting a view of Christianity in which marriage is prohibited along with certain kinds of foods (I Tim. 4:1-3); here he stands against an ascetic movement which may have connections with emerging GNOSTICISM. A fully formed, extreme position against marriage can be found in such late second-century writings as the Acts of Thomas (e.g., 12-14; see THOMAS, ACTS OF).

**3. Emphasis upon marriage in the later NT church.** The tendency toward the single state did not deflect the mainstream church, however, from preserving the validity and sanctity of marriage. In fact, the dispute with Gnostic groups may have intensified the insistence upon marriage in this period. A popular form of ethical admonition in the later first century, the "rules for the household," simply assume the validity of marriage and procreation (see LISTS, ETHICAL §§1-4; LISTS, ETHICAL [S] §2; ETHICS IN THE NT[S] §§4a, 5a). Heb. 13:4 exhorts its readers to honor marriage. It is in the Pastoral epistles, however, that the greatest stress is laid upon marriage, an emphasis which may actually imply that remaining single was fairly widespread in actual practice (see also ETHICS IN THE NT[S] §4b). Marriage is asserted to be an order of creation and therefore good (I Tim. 4:4); bishops, deacons, and elders are assumed (and perhaps encouraged) to be married and to have children (I Tim. 3:2, 12; Tit. 1:6); the function of woman seems to be narrowed to the bearing and raising of children (I Tim. 2:15); and younger widows are encouraged to remarry and have children (I Tim. 5:14; cf. Paul's more reluctant concession about the remarriage of widows, I Cor. 7:39-40).

**4. The quality of the marital relationship.** Whenever marriage is accepted, it is accepted in all its dimensions. Sexual relationships are highlighted by Paul (I Cor. 7:3-5) and assumed in the later traditions. For Paul, peace is necessary to marriage, and he is sensitive to the care each partner bestows on the other. Likewise he stresses the equality and mutuality within the marriage bond (I Cor. 7).

The later rules of the household highlight, on the one hand, the need for tenderness and love on the part of the husband and, on the other, the willing subordination of the wife to him. For the author of Ephesians the model for the husband's love is the total self-giving of Christ for the church (5:25). See WOMAN IN THE NT[S] §2b.

Paul, however, sounds a warning against the possible usurpation through marriage of one's primary allegiance to Christ (I Cor. 7:29-31). When one allows marriage and spouse to become the ultimate concern, he or she is still living in that old order now being transcended in the new creation. See also Luke 14:26.

\***MASADA.** After the surveys conducted at Masada in 1953 and 1955-56 it was decided to hold full-scale excavations at the site. In these excavations (1963-65) nearly all the structures on Masada were uncovered and partially reconstructed; the water system was examined; and one of the Roman camps encircling Masada was surveyed and partially excavated. The finds belong to three main periods: the Herodian period (37-4 B.C.), the period of the Revolt (A.D. 66-73), and the Byzantine period (fifth-sixth century A.D.). No remains of pre-Herodian structures were uncovered.

**1. The Herodian period.** Most of the structures on Masada belong to this period and can be divided into two groups: the N group which comprises the northern palace, the storerooms, the bathhouse, and three structures, the administrative building, the residential building, and the apartment building, and the SW group, which includes the western palace, smaller palaces (XIII, XII, and XI), the *columbarium*, and the swimming pool. See Fig. M1.

**a. The water system.** There is no permanent source of water near Masada, and therefore water was the first problem Herod had to deal with on building the fortress. The water system has three basic components: storm-water drains from the wadis in the W, reservoirs for this water on the NW side, and a system of cisterns on top of the mountain. The cisterns at the NW side were quarried in two rows—eight in the upper row and four in the lower. All these together held 1,400,000 cubic feet of water. The water was carried by people or pack animals over a winding path which led from the cisterns to the vicinity of the N palace. See Fig. M2.

**b. The wall and gates.** Although Masada enjoys a naturally defensible position, a casemate wall fifteen hundred yards long was built to encircle the entire top of the mountain. Thirty towers and four gates were set in it. The gates are all

similar, with a square room and an opening in the internal and external walls. The Snake-Path Gate is situated in the NE section of the wall; its internal walls are plastered in white and decorated with false "panels" imitating Herodian masonry, and its floor is built on slabs of stone. The W gate is situated in the middle of the W wall. The S gate (Cistern Gate) is situated NE of the southern end of the cliff; it served for the conveying of water from the SE cisterns. The NW gate (Water Gate), situated at the end of the NW

wall, served as an entrance for the water carriers from the upper row of cisterns.

*c. Public storerooms.* Situated in the N block, they are divided into a northern part composed of long rooms (66 x 12 feet), most of which have only one entrance (from the S), and a southern part, which is larger and comprises eleven long storerooms (88 x 13 feet) with entrances in the N side. Here was stored wine, oil, flour, etc. Three storerooms were constructed encircling the administrative building on the W and S, and others were

later added to the SE side. These were all constructed at a later stage to increase the capacity of the main storerooms.

*d. The palaces.* The northern palace resembles a private villa intended only for the king and his entourage. Herod's western palace was used for administrative and ceremonial purposes, and a group of smaller palaces housed the king's family and the court ministers.

i. The northern palace was built on three terraces of the N cliff. The upper terrace held only a few rooms, while on the two others were luxurious buildings. The upper terrace was composed of two main parts: a semicircular platform bounded by two concentric semicircular walls upon which was probably built a portico of two rows of columns. To the S of the platform are the dwelling structures consisting of only four rooms. Their walls were decorated with plant and geometrical designs, and the floors were paved with a black-and-white mosaic. The entrance to the entire palace was on the E side of this terrace.

The middle terrace is located 66 feet below the upper one and contains two main elements, a circular building and a complex to the S of it. The only remains of the former are the foundations of the two concentric walls which supported the upper structure. It seems that the circular building had the form of a cupola, with two rows of columns supporting its roof. The southern complex comprises three parts, a staircase at the W, a big hall at the E, and an open area between. Here too the walls were decorated with paintings. The staircase was hidden from view from the outside and connected the middle to the upper ter-

race. This complex served as an entertainment area.

The lower terrace is about 50 feet below the middle terrace. Its buildings were constructed on a raised, square platform (57 x 57 feet), built on the edge of the cliff with the aid of supporting walls. The main structure was a square central space surrounded by porticoes, the inner walls of which had columns interspaced by windows. The S wall was formed by a plastered rock face with half columns attached to it. They have Corinthian capitals painted in gold. The portico walls are decorated with wall paintings imitating panels. It seems that the central courtyard was open, while the space between the two concentric porticoes was roofed. To the E of the square building was a small but complete bathhouse with hot, tepid, and cold rooms, while to the W a staircase led from the middle to the lower terrace. The structures on this terrace were also designed for pleasure and not as living quarters. See Pl. XXXV (c).

The northern palace has the air of a private, intimate villa. Its special architectural character seems to carry the personal stamp of Herod the Great.

ii. The western palace is the biggest complex of living quarters on Masada (its over-all area encompasses about 36,000 square feet), and it was the main administrative and ceremonial palace. It was composed of four blocks: the SE block (the living quarters and throne room), the NE block (the service and work rooms), the SW block (the storerooms), and the NW block (the administrative wing). The main entrance was at the N.

The living quarters were constructed around a big central court, S of which was a large covered hall separated from the court by two columns. From here one passed into the throne room through a triple entrance in the SE corner. Most of the palace walls were covered with white plaster imitating panel designs, and the floors of the waiting room and bathroom were decorated by multicolor mosaics with plant or geometrical patterns. In this section there was also a small bathhouse which served those living in the palace.

The service and work rooms were also built around a large court. The storeroom block comprises one very long storeroom (230 feet) in the W and three smaller storerooms between this block and the palace. The administrative block is located in the NW and comprises three buildings.

iii. The small palaces were probably inhabited by the royal family and high officials. The apartment building, situated S of the storerooms, differs from the others. It chiefly consisted of a row of groups of rooms placed around a central court, and served, most probably, as the family quarters of the royal guard.

iv. Other buildings. Besides the two small bathhouses attached to the main palaces, Herod also built a large and luxurious bathhouse W of the northern group of storerooms. It consisted of four rooms and one big, open courtyard. A swimming pool is situated alongside one of the small palaces and is cut out of the bedrock and covered in plaster. The *columbarium* is a round structure on the S of Masada. Its diameter is 25 feet, and its internal

area is divided in two by a wall with an entrance. Hewn into the internal face of the walls are small niches (about 6 inches wide, high, and deep) in straight rows. These apparently served as a depository for the ashes of non-Jewish members of the Herodian garrison.

Between the Herodian period and the revolts of A.D. 66-73, a garrison stayed on Masada, leaving only a few coins behind them. It is possible however that some of the changes in the Herodian structures were made during this period.

2. *The Revolt (A.D. 66-73)*. During this period most of the Herodian structures underwent great changes at the hands of the Zealots, who tried to adapt them to their needs. Similarly, primitive structures were erected in other parts of Masada, particularly in the casemates of the wall encircling the fortress. Most of the architectural elements such as columns and their capitals were used by the Zealots as building material. They also used much of the wooden parts of the structures. The northern palace was probably used by the Zealots as their military headquarters, for a large amount of arrows and other weapons were found there (see ZEALOT; ZEALOT[S]). Beneath the layers of debris in the bathhouse three skeletons were uncovered, as well as ostraca written in Aramaic and fragments of a prayer shawl.

The western palace was used mainly for administrative purposes. Hundreds of burnt arrows, coins from the days of the Revolt, and ostraca with personal names were found here. When found, most of the palace was covered with the ashes—a result of a great conflagration.

The smaller palaces were inhabited by the families of the Zealots, and remains of ovens were discovered in most rooms. During this period interior walls had been built to divide rooms into smaller units. The baths and bathhouses continued to be used, but the Zealots made a few changes in them. All the rooms in the walls and towers were inhabited by their families. Among the rich finds in these rooms were much pottery, clothes, leather articles, basketware, glass, stone, bronze ware, remains of food, as well as fragments of scrolls and ostraca. The scrolls include fragments of the Holy Scriptures, Ecclesiasticus, and Qumranic literature. Because of the dry climate on Masada, most of these articles were very well preserved. See MANUSCRIPTS FROM THE JUDEAN DESERT[S] §§2c, 4.

In addition, the Zealots also constructed religious buildings including two *mikveh* (ritual baths) and a long room in palace XIII which may have been used as a "religious study house." Along three of the room's walls were benches and between them a table. The synagogue built by the Zealots is also of great importance. Situated in the NW section of the wall, it is a rectangular structure 41 x 34 feet facing W, that is, toward Jerusalem. Along three walls of the room, four rows of benches were built one above the other out of architectural elements removed from the northern palace. In the W, there was only one bench. Two rows of columns supported the roof. Parts of scrolls of the Scriptures were found here—deliberately buried under the floor—as well as ostraca

containing writings cultic in nature. This is the earliest synagogue ever found.

The finds from the period of the Revolt include some seven hundred ostraca, most written in Hebrew and Aramaic and a few in Greek and Latin. Some of them may have been used as food coupons distributed during the siege. Some had single names on them, including the name of Ben Yair, who was known to have been the Zealot leader at Masada; these ostraca may have served as "lots." Some of the remains discovered on the ash layer indicate that a Roman garrison remained behind after the final conquest. From the beginning of the second century A.D. Masada was deserted until the Byzantine period.

3. *The Byzantine period*. In the fifth and sixth centuries A.D. monks settled on Masada. They built a church mainly consisting of an elongated hall with an apse in the E wall. The floor of the hall was made of colored mosaics, as were the floors of the other rooms which adjoined the hall. During this period other buildings were repaired, and signs of occupation have been found in a few caves hewn in the S cliff, alongside of which the monks built a few rooms and cells.

\*MATTHEW, GOSPEL OF. Advances in our understanding of the gospel have been achieved primarily by means of redaction criticism (see REDACTION CRITICISM, NT[S] §3). By paying special attention to the way the final work is composed scholars have gained new insight into its background, its structure, and its teaching. There has also been renewed discussion of the possible primacy of Matthew among the synoptic sources.

1. Background
  2. Structure
  3. Teaching
  4. Sources
- Bibliography

1. *Background*. The creative milieu (*Sitz im Leben*) of Matthew contained the opposing forces of conservatism and radicalism. This evangelist seeks to steer between the two extremes. His most obvious criticism is directed against "the scribes and Pharisees" who represent the conservative element (23:13-36); but the disagreement with "enthusiasts" is also clearly discernible (7:15-23). The author presents himself as one who is able to profit from both the Law and the gospel, both the tradition and the Spirit, as a "scribe who has been trained for the kingdom of Heaven," who "like a householder brings out of his treasure what is new and what is old" (13:52).

The designation of himself as a "scribe" suggests

that the author worked in a "school," and that his gospel issued from this kind of scholarly milieu. Such a background would seem to be confirmed by the way this evangelist used quotations from the OT and the perceived similarity between his usage and that of the exegetes of QUMRAN (Stendahl). (See also INTERPRETATION, HISTORY OF[S] §§B1, C2b; ESSENES §4g.) Davies has claimed to see in Matthew's handling of the tradition in the SERMON ON THE MOUNT a procedure similar to the Gemara of the post-Jamnian rabbis, i.e., an extension or modification of the scope of a commandment to make it applicable to present circumstances (e.g., the "antitheses" of Matt. 5:18 ff.). Gerhardsen has argued that the temptation narrative and the famous parable chapter (13) are constructed on the basis, firstly, of the SHEMA, secondly, of texts from the OT, and thirdly, in the case of the temptation narrative, on rabbinic moral theology. The method used was that of the rabbinic MIDRASH. The assumption that this gospel comes from a scholarly milieu, roughly analogous to a rabbinic house of Midrash, has, therefore, proved fruitful in understanding many of its features.

Such a background might explain Matthew's polemic against the "scribes and Pharisees." As a rival to a rabbinic "school" of interpretation, the Matthean church claimed that its acceptance of Jesus as the MESSIAH and its understanding of the tradition in the light of his words and deeds made it the true Israel (cf. the temptation narrative in which Jesus, as God's son, withstands all the temptations to which Israel, as God's son, succumbed in the wilderness, and thus shows himself to be the true Son of God, heir to the promises, and, accordingly, shows his followers to be the true Israel of God). (See ISRAEL, CONCEPTIONS OF[S] §4.) Likewise, the church's moral teaching is a righteousness higher than that of the Pharisees (5:20). The Matthean church claims, vis-à-vis the "synagogue across the street," to be the true Israel living the truly righteous life. This is the "conservative" element.

The radical element in Matthew's milieu is discernible by contrast in the strictures against lawlessness (ἀνομία: 7:23; 24:11-12). The purveyors of this lawlessness are called "false prophets" (ψευδοπροφήται: 7:15, 24:11), and their "evil fruit" (7:18-19) is the cooling off of all love (24:12), or, in the context of the Sermon on the Mount, the contravention of the GOLDEN RULE, which, in turn, is said to be the epitome of all religious obligation laid down in the Law and the Prophets (7:12). Jesus' magisterial interpretation of the Law and Prophets is summed up in the binding obligation to love, even one's enemies (5:44), and certain false prophets in Matthew's community have made such love difficult. Hence they are in contravention of the Law of the Messiah and so guilty of lawlessness. Schweizer has shown that Christian prophets (see PROPHET IN THE NT; PROPHECY IN THE EARLY CHURCH[S]) and their "charismatic" activity were an important part of this gospel's milieu. The references to false prophets imply the existence of the true; their coming in disguise, as wolves in sheep's clothing, shows that they were part of the Christian com-

munity and not outsiders. They call Jesus "Lord" (7:15, 21).

The presence of true "prophetic" or "charismatic" Christianity in the Matthean church can also be seen from the following: in 4:23 and 9:35 a frame is set around the picture of Jesus as the Messiah of word and deed, which summarizes his activity as teaching, preaching, and healing. In 10:1 the disciples are given the same authority "to heal every disease and every infirmity," the same expression that was used in 4:23 and 9:35. In chs. 8 and 9 Matthew collects MIRACLE STORIES from Mark and Q and at the end adds two more, the healing of two blind men (9:27-31) and one dumb man (9:32-34), all of which he tells again later (20:29-34 and 12:22-24). He makes this collection in order that the answer to the disciples of John in 11:4-5, "Go and tell John what you hear and see: the blind receive their sight and the lame walk, lepers are cleansed and the deaf hear, and the dead are raised up, and the poor have good news preached to them," might be precisely illustrated from the deeds of Jesus. The answer to John's question, which chs. 8 and 9 illustrate, is placed, however, not immediately after ch. 9, but only after ch. 10. Why? Because ch. 10 tells how the healing power of Jesus, which will convince the followers of John, continues to be exercised by Jesus' disciples. Charismatic healing, therefore, was a mark of the disciple of Jesus, a sign that the Spirit of the Lord continued to operate through his disciples. A further illustration of this point occurs in 10:40-42 where we find the identification of Lord and disciple explicitly stated—"He who receives you receives me"—along with the self-designations chosen by the Matthean Christians: "prophet," "righteous man," and "little ones" (cf. 25:40, 45, author's trans.). Matthew's was the church of the "little ones" who were also prophets and righteous folk.

The background of the gospel is to be found, therefore, among people who considered themselves bound to the Law as interpreted by Jesus, obliged in its terms to be righteous, yet free to reinterpret it for new occasions by means of the spirit of Jesus guiding them, folk who were both scribes and prophets, little ones who followed Jesus and by his power were great enough to teach, preach, and heal.

Schweizer suggests that the most likely provenance for such a gospel was Syria, which also gave us the DIDACHE—so explicit in its interest both in Christian prophets and in church order (another characteristic of Matthew). Recently, Schweizer claims, this conjecture about provenance has been confirmed by the discovery of the Apocalypse of Peter at NAG HAMMADI, which represents a group of "these little ones who are seen (by God)" and opposes those "who let themselves be called bishops, and also deacons" (ApocPet 79, 19 ff.; cf. Matt. 23:6-10; 18:10). The Matthean church, therefore, was "the body of these little ones who are ready to follow Jesus, a group with an ascetic and charismatic character, that found its continuation in the Church of Syria, finally merging into the monastic movement of the Catholic Church" (Schweizer).

**2. Structure.** Bacon's analysis of Matthew into five great discourses, punctuated by the phrase "And when Jesus [had] finished" (7:28; 11:1; 13:53; 19:1; 26:1), with a preamble (chs. 1-2) and an epilogue (chs. 26-28), and patterned on the Mosaic Pentateuch (*see original bibliog.*), has not stood the test of time. Two arguments have proven fatal to the hypothesis. First, to place the infancy narratives and the passion and resurrection accounts outside the main structure of the gospel is to overlook the fact that Matthew presents his gospel as history, not as a law code or a church manual, and that he views the Cross and Resurrection as marking a climax in the historical process. Second, since ch. 11 is a collection of logia, and between ch. 23 and chs. 24-25 there is a complete change of setting, there are actually six or seven, rather than five, great discourses. Bacon and his many followers have mistakenly taken the gospel as a code of religious instruction topically arranged, and nothing more. Consequently, they have overlooked the fact that Matthew works within the usual biblical concept of salvation as history (*Heilsgeschichte*).

The structure of Matthew's gospel is being re-studied at present, and lasting new results have not yet emerged. One of the proposals offered as an alternative to Bacon's long-accepted hypothesis may be worth considering, nevertheless, as an example. Kingsbury suggests that 4:17 and 16:21, "From that time Jesus began," mark the points of new departure in Matthew. This insight produces the following division of the gospel: (1) The Person of Jesus the Messiah (1:1-4:16); (2) The Proclamation of Jesus the Messiah (4:17-16:20); (3) The Passion, Death, and Resurrection of Jesus the Messiah (16:21-28:20). This scheme has the advantages of including the birth narrative and the passion narrative within the main structure, which Bacon's proposal could not do, and of enabling one to take the element of "saving history" into account—salvation is given in and through the history of Jesus the Messiah. It also enables one to give a persuasive account of Matthew's teaching.

**3. Teaching.** The theology of the gospel is focused on Christ, as Kingsbury's proposed outline shows. It is in the first place Christology; but the Christology unfolds in the events of Jesus' history and then merges into the doctrine of the church, as the power of Jesus is believed to be passed on to his disciples.

Many have argued that Matthew divides the history of salvation into three epochs: of Judaism, of Jesus, and of the church, respectively (Trilling, Walker, Strecker). However, it seems preferable, with Kingsbury, to see only two epochs in the gospel: of Judaism, and of Jesus. The epoch of the church is an extension or subcategory of the epoch of Jesus. Especially by means of the formula quotations from the OT, the evangelist shows that the period of prophecy is over and the time of fulfillment has come. The phrase "[in] those days" (3:1; 24:19, 22a, c, 29) shows that the time of fulfillment extends from the period of John and Jesus to the end of the age, thus leaving no room for another epoch (of the church). Positive evidence for the exclusion of a church epoch is

provided by the emphasis on Jesus' abiding presence with the disciples (1:23; 14:27; 18:20; 28:20) and the presentation of the ministry of the disciples as a recapitulation and continuation of the ministry of Jesus.

If this twofold pattern of Matthew's salvation history is accepted, then the center of his thought cannot be the church, as Bacon and many others aver. It must be, rather, the Christ, thus making the church a corollary of the Resurrection presence of Jesus (Kingsbury). Whether or not we accept Kingsbury's further analysis, namely, that upon the twofold *Heilsgeschichte* Matthew has superimposed a threefold topical organization of (1) the Person, (2) the Proclamation, and (3) the Passion, there is good reason to believe that Kingsbury is correct in identifying the central interest of Matthew to be Christology.

The keynote of the gospel is in 1:23: Emmanuel, "God with us." Jesus Christ is "God with us" for the Matthean church because he is God's Son (1:1, 18, 20, 23). Gerhardsson has shown brilliantly that the temptation narrative (4:1-11) with its repeated phrase, "If you are the Son of God" (4:3, 6), and its constant reference to Deut. 6-8 (4:4=Deut. 8:3; 4:7=Deut. 6:16; 4:10=Deut. 6:13) contrasts Jesus, the faithful Son of God, with God's unfaithful son, Israel, whose temptation in the wilderness is described in Deut. 6-8. The temptation narrative is a skillful midrash on the Deuteronomy passage, dominated by the theme of Sonship.

In the Sermon on the Mount, as Davies has shown, Jesus is portrayed in comparison with Moses. He is not Moses redivivus, a prophet like Moses à la Deut. 18:15, however, but greater than Moses. As Emmanuel, "God with us," Jesus gives the Torah of the Messiah, which supersedes the Torah of Moses by bringing it to radical fulfillment in the command to love—the so-called Golden Rule (7:12—"for this is the law and the prophets").

But the climax of Matthew's exposition of "Emmanuel" is the identification of Jesus with the Wisdom of God (Suggs). In passages like Matt. 11:18-19, 28-30; 23:34-36, 37-39, Jesus is identified as the pre-existent Sophia (Wisdom) which, in Jewish circles, had been identified with the Torah. The great invitation in 11:28-30—"Come to me, all who labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn from me"—is like something Wisdom would say in the tradition (Ecclus. 51:23-30; 24:19-22; Prov. 1:20-23; 8:1-21). Davies calls this text "the quintessence of the Matthean interpretation of Christianity as Gospel and Law." Jesus is "God with us" because he is the very Wisdom/Torah/Son of God, incarnate. The chapter on church discipline (18) is controlled by the same ideas. In 18:20 Jesus is the SHEKINAH (cf. AB. 3.2).

As 11:28-30 shows, there is also a strong emphasis on the humility of the incarnate one (8:17; 12:17-21; 21:4-5). But the humble one is he to whom all authority in heaven and earth has been given, through his death and resurrection. He will be with his disciples until the end of the age (28:18-20), and in the end this humble one will use his

authority to judge all the nations (7:21-23; 13:36-43, 25:31-46).

4. **Sources.** The problem of the synoptic sources has been reopened, and although there are no conclusive results to date, sufficient doubt has been cast on the traditional two-document hypothesis to warrant caution (see *SYNOPTIC PROBLEM[S]*). The renewed discussion focuses on the agreements between Matthew and Luke against Mark. In the case of a triple tradition (one attested by all three gospels) it has usually been assumed that Mark provides the middle term. But there are instances in which it seems that Matthew performs this function (e.g., Matt. 8:4; 13:22; 17:17), and a few where Luke does (Luke 12:1; 23:52). This, along with other considerations, raises at least the possibility of the chronological priority of Matthew (Farmer), and, in any case, the need to recognize that the relationships among the Synoptic gospels are more complex than the received two-document hypothesis allows.

\***MEGIDDO.** After the publication of the results of the 1925-39 excavations at Megiddo, a few problems concerning the stratigraphy of the site still remained unsolved. In the light of excavations conducted at Hazor and a study of Gezer, Y. Yadin decided to take another look at the wall which had been attributed to Solomon and at the stratigraphical problems of the tell during the Israelite period. Excavations were conducted during 1960, 1966, 1967, and 1971.

In 1960 the area selected for the trial dig was in the N side of the E half of the tell, to the E of the "Schumacher Trench" and the DD area. In this section an "offsets/insets" wall had been well preserved, and Yadin's assumption that this wall (stratum IVA) was not Solomonic (based on the fact that at both Hazor and Gezer the wall from the time of Solomon was a casemate wall) could now be checked.

1. **Structures of the Solomonic period.** It soon became clear that the offsets/insets wall was constructed in this area upon the foundations of a large structure, probably a palace (no. 6000 in Yadin's report), whose courses were mainly built of ashlar stones. This building also stretches beneath the foundations of the northern stable complex (407) which is situated alongside the area under discussion. (See Fig. M3.) Furthermore,

Courtesy Y. Yadin

3. Megiddo excavations of 1960, 1966-67; the new Solomonic palace and the casemate walls. Note position of strata VB, VIA.

on both sides of this palace a casemate wall was discovered. The offsets/insets wall was constructed upon this casemate wall and upon its rooms which had been filled in. It became clear that the northern stable complex (also called "Solomon's stables"), the wall, and the building are later than the Solomonic period and can definitely be attributed to stratum IVA, that is, to the period of the dynasty of King OMRI. From this it could be seen that the palace and the casemate wall belong to IVB-VA (Solomonic period) as does the palace. The S palace is similar to palaces found in Zinjirli and at sites along the Phoenician coast, all from the early centuries of the first millennium B.C. This kind of structure, known from Assyrian sources as the "Bit Hilani," functioned mainly as a ceremonial palace. The presence of such a building at Solomonic Megiddo is yet more evidence to the biblical assertion of the Phoenician influence upon Solomon's building projects.

It was now possible to attribute gate 2156, which has six chambers and two towers, definitely to Solomon and to associate it with the casemate wall. In this manner the other Israelite gates previously discovered at Megiddo fell into their correct stratigraphical periods. We may now attribute gate 500B to the offsets/insets wall, that is to sub-stratum IVA (the dynasty of Omri), and gate 500 to stratum III. See Fig. M4.

2. **The water system.** Various questions relating to the water systems at Megiddo were also cleared up. In the SW section of the tell the previous excavators had unearthed a structure which they labeled "gallery 629": a narrow passage just over three feet in width, leading outside the city to the SW slope of the tell where a spring is situated. The passage walls were built of well-dressed ashlar stones, laid header-and-stretcher fashion. Strati-

Courtesy Y. Yadin

4. Megiddo city gates, strata VA-III

graphically speaking, the passage is situated underneath the offsets/insets wall which the excavators considered Solomonic, and they therefore concluded that the gallery was pre-Solomonic. Finding it impossible to assign this magnificent structure to earlier meager strata, they attributed the gallery to stratum VIIA (the days of Ramses III, twelfth century B.C.). See Fig. M5.

Courtesy Y. Yadin

5. The 1967 excavations near gallery 629

This erroneous assumption resulted, in turn, in an incorrect dating of the great water system, which consists of two parts: a vertical shaft and a long horizontal tunnel (see MEGIDDO Fig. 30; WATER WORKS Fig. 7). The purpose of the tunnel was to convey the spring waters from the natural cave at the foot of the tell to the bottom of the vertical shaft, where the city's inhabitants could draw water in times of siege.

On the basis of pottery found in the cave, the latest of which was typical of stratum VIIA (thirteenth-twelfth centuries B.C.), and other data, the excavators decided the water system could not have been constructed before the thirteenth century B.C. Because they attributed the quarrying of the shaft and tunnel to the twelfth century, they automatically assigned the gallery to the period prior to the completion of the water system, for

after this there was no need for a gallery leading to the spring outside the wall.

When it was ascertained that wall 325 was later than Solomon's period, the gallery beneath it could then be attributed to his rule for the following reason. During the trial dig (1960, and especially 1966) it became clear that the foundation of the gallery was cut into the fallen burnt bricks of stratum VIA and VB (eleventh century B.C.). It is possible to conclude therefore that the gallery was constructed before the wall, but after the destruction of strata VIA and VB, that is, during Solomon's reign. Thus we may ascribe the later great water system to the dynasty of Omri (ninth century B.C.), when both the stables and the offsets/insets wall were built. See Fig. M6.

Courtesy Y. Yadin

6. Site plan: key plan of Megiddo in strata IVA; IVB-VA

Stratum IVA was therefore constructed under the dynasty of Omri, during the second quarter of the ninth century, and because it is quite clear that repairs and additions were made to the stables, we may presume that the city continued to exist until it was destroyed in 733 B.C. by the Assyrians.

An additional water system was discovered during the 1960 trial digs. Below the city gates a well-built staircase was unearthed which seemed to incline with the path leading to the gates. The previous excavators of Megiddo had not completed their investigation of this system (which incidentally seemed to have been roofed), and claimed that the stairs served as a pedestrian entrance into the city. On further examination, however, it became clear that these stairs led to yet another source of water in the N, which had possibly been connected to Megiddo's second water source close to the tell. The continuation of the staircase was discovered running E toward a well-plastered pool. This water system can be attributed to the dynasty of Omri (ninth century B.C.) and probably served as a supply of water only during days of peace, since it is situated beyond the city's fortifications, while the large, subterranean water system served the city during days of siege. See also ARCHAEOLOGY[S].

\***MELCHIZEDEK. 1. In the Dead Sea Scrolls.** Fragments of a MS found in 1956 in Qumran Cave 11 give us details of a Melchizedek tradition which was alive in certain circles of late Palestinian Judaism. Of thirteen fragments, nine or ten can be arranged to form the greater part of one column of the original MS and a few words of the next column. For paleographic reasons, the fragments are to be dated toward the beginning of the Common Era. This text is an example of an eschatological MIDRASH in which, by means of associative interpretation of texts, various scriptural passages are grouped together thematically and interpreted as relating to the coming eschaton. Because in the extant part of the original MS Melchizedek plays a central role, the document was designated 11Q-Melch by its editor.

Isa. 61:1-2 supplies the most important themes for the scriptural exegesis of 11QMelch (the acceptable year; the vengeance exacted by Melchizedek; the bringer of good tidings). First, the author finds in Lev. 25:13 and Deut. 15:2 prophecies not only of the return from the DIASPORA, but also of the time of the proclamation of release from captivity and sin. In the view of the interpreter, the jubilee year ("yóbbhēl-year") mentioned in Lev. 25:13 refers to the last or tenth jubilee year, with which (as in Dan. 9) a period of seventy weeks of years, i.e., 490 years, comes to a close and the awaited time of salvation dawns. Then the atonement of all the faithful children of God will occur, for "that is the time of the acceptable year of Melchizedek" (line 9). Because of the fragmentary nature of the extant text, it is difficult to determine whether this atonement occurs by Melchizedek's agency and whether he acts as priest. But in the sequel the author relates Ps. 82:1 to him: "The Heavenly One ('*elōhīm*) standeth in the congregation of God ('*ēl*)" (line 10). In this quotation '*elōhīm* is interpreted as referring to Melchizedek, who stands in the assembly of God and judges among the heavenly ones (angels). Thus the author has designated Melchizedek as a heavenly, angelic figure, something he could doubtless do only because this tradition was known to him. Correspondingly, in the whole MS God is referred to as '*ēl*, never as '*elōhīm*. In 11QMelch, then, Melchizedek is neither a purely earthly figure of the past (cf. Gen. 14:18) nor an earthly man whose appearance is expected in the future.

It is incorrect to explain the figure allegorically as a "copy" of the figure in Gen. 14, or even as a person who merely has the same name as the former priest-king of Salem. Because Melchizedek suddenly appears in Gen. 14, and because Abraham—as Levi's ancestor—gives Melchizedek a tenth of all his booty and thus acknowledges Melchizedek's superiority over Levi, the thought had sooner or later to arise that Melchizedek was exalted above even the most blessed of men. Melchizedek's designation as "priest of the Most High" allowed him to appear as God's heavenly high

priest officiating in the heavenly sanctuary. But because he is also a king, the author of 11QMelch can also declare, with reference to Pss. 7:8-9 [H 9-10] and 82:2, that at the eschaton Melchizedek "will exact the vengeance of the judgments of God and will rescue all the Children of Light from the power of Belial and from the power of all spirits of his lot," and that "all the heavenly gods are for his help" (lines 13-14).

This rescuing of the Children of Light is, elsewhere in the Qumran writings, ascribed to an angelic prince who is designated as "Prince of Light(s)" (1QM 13; CDC 5.18) or as "His (= God's) Angel of Truth" (*mal'akh 'amittō*: 1QS 3.24; 4QCatena\* 12-13, col. I, 7), and who appears as the adversary of the Angel of Darkness (1QS 3.20). From 1QM 17.5-9 it is clear that by this "Prince of Light(s)" only the archangel MICHAEL can be meant. According to late Jewish tradition, Michael not only is the guardian angel of Israel and is commissioned by God to pass judgment upon the spirits of Belial, but he is also the heavenly high priest who offers sacrifice in the heavenly temple and intercedes for the pious before God (T.B. Hagiga 12b; Z'bhāhīm 62a; M'nāhōth 110a). Consequently Melchizedek is also later expressly identified with Michael in some parts of the Jewish tradition. The appearance of Melchizedek in the final battle, and his annihilation of Belial's angelic hosts, mean the beginning of the time of salvation prophesied—according to the author of 11QMelch (lines 15-16)—by Isa. 52:7. Here our author interprets the "bringer of good tidings" as the one "anointed with the Spirit" of Isa. 61:1 (cf. Luke 4:18-19), who proclaims the appearance of '*elōhīm*, the Heavenly One. Unfortunately the text breaks off just at the point where it explains who is meant by this '*elōhīm*; but the word "Belial" in the sequel makes it probable that Melchizedek is meant. The column ends with a quotation of Lev. 25:9 (cf. 1 Thess. 4:16).

**2. In the Letter to the Hebrews.** From 11QMelch new light falls on the designation of Christ as "high priest after the order of Melchizedek" (Heb. 5:5-10; 6:20; cf. Ps. 110:4) and especially on Heb. 7.

In 7:2 "Melchizedek" is interpreted as "king of righteousness," and "king of Salem" as "king of peace." ("Righteousness" and "peace" are eschatological gifts.) Unique in this context is especially Heb. 7:3, where it is said of Melchizedek that "he is without father or mother or genealogy, and has neither beginning of days nor end of life, but resembling the Son of God he continues a priest for ever." Apart from "resembling the Son of God," all these epithets can now be explained by looking at 11QMelch. As a heavenly angelic figure he has no genealogy or parents, as humans do, and he does not die, as they do. The author of Hebrews here doubtless quotes a text which was also known to his readers and which he thus could use to describe Christ's high-priestly office. Consequently, in 7:4-10 the author tries to prove Melchizedek's superiority to Abraham, Levi, and Aaron. He remarks, first, that Melchizedek received tithes from Abraham, and therefore also from Levi (whose

priestly descendants ask tithes from the people). Consequently, Melchizedek is superior to (Abraham and) Levi. Secondly, the author emphasizes that Melchizedek blessed Abraham, who received God's promises. Melchizedek therefore must be greater than Abraham and Levi. A third argument is taken from 7:3. The Levitical priests are mortals, but of Melchizedek we may say that "it is testified that he lives" (7:8). The new priesthood after the order of Melchizedek has been predicted. If the Levitical priesthood had been destined to bring perfection, God would not have spoken of another priest "after the order of Melchizedek."

Now a change of priesthood means a change of law (7:15 ff.). On the basis of Ps. 110:4 it is pointed out that the "covenant" of which Jesus is "the surety" is far superior to the previous one (7:22): the priests of the old order "took their office without an oath" (7:21) and had after their death to be succeeded by others (7:23), but Christ "was addressed with an oath" (7:21) and "holds his priesthood permanently" (7:24). He is the perfect high priest who always lives to "make intercession" for "those who draw near to God" (7:25). Thus Christ's greater dignity and the superiority of his high-priesthood to that of the Levitical priests is emphasized in Heb. 7 by reference to the Melchizedek tradition. On the other hand, however, the words about Melchizedek's "resembling the Son of God" (7:3) emphasize the subordination of the archangel Melchizedek to the pre-existent Son of God: the former is only a "copy" of the Son of God whose absolute superiority to all angels has been established in Heb. 1-2. The similarity of both is found in their "continuing for ever" (cf. 7:3, 24).

Thus, on the basis of 11QMelch it is no longer necessary to suppose that the strong anti-Aaronite conception of a heavenly high priest in Hebrews was influenced by Jewish-Gnostic or Philonic traditions.

\***MENORAH.** Hebrew מנורה is a generic term for the repository or support of a lamp or source of light. KJV "candlestick" is anachronistic. Although there is one instance (II Kings 4:10) of the secular

use of such a lampstand, the term normally indicates a cultic object found in the central Israelite sanctuaries. See LAMPSTAND.

1. **The tabernacle menorah.** It has long been supposed that because the Priestly texts (Exod. 25:31-40 and 37:17-24) which describe the menorah date in their final form from exilic or postexilic times, the menorah (if not the tabernacle itself) is to some degree a projection into the wilderness period of what existed in the second temple (see PRIESTLY WRITERS[S] §4). However, the wealth of detail given in its description allow it to be placed, in light of archaeological and artistic motifs, at the end of the Late Bronze Age. Furthermore, its exceptional status indicates that it is an object of symbolic value above and beyond its ritual function.

a. **Construction.** The functional value of the lampstand resides in the central portion, the ירבה וקנה (Exod. 25:31; 37:17). These words together represent a cylindrical stand with a flaring lower portion which typified ceramic and metallic stands (see LAMPSTAND Fig. 9) from the third millennium until the sixth century B.C., when tripod stands become ubiquitous. "Menorah" is used in the priestly texts to refer to this portion alone (Exod. 25:31-35; 37:17-21) as well as to the total object (Exod. 26:35; 40:4, 24; Num. 8:2-3). To the central portion are added six branches, which seem to have no functional value; the lamps, not an integral part of the description of the lampstand, are nowhere said to be placed at the end of each branch. Thus, where the lamps are said to be placed on the menorah (as Lev. 24:4), the central portion may be the intention.

The vocabulary describing the branches, as well as the decorative elements, is firmly rooted in architectonic language. In addition, many of the terms (such as קנה, פרח, כפתר, משקרים) have a vegetal origin, indicating the translation of plant forms into architectural features.

The triple rendition of the floral capital (Exod. 25:33) can be related to a similar development in cylindrical cultic stands at the end of the Late Bronze Age. The bowl element (גביעים; RSV "cups") can be related to the double-bowl lamp (a bowl containing a smaller cylindrical form of one piece with it, also called "cup-and-saucer" lamp), most common in Palestinian contexts in the LB II period. This receptacle, with antecedents in Egypt and the Aegean, may have served originally as a source of light for the tabernacle or tent of meeting (see Exod. 27:20; Lev. 24:2), with the use of discrete lamps dating to a later period. The instructions in P concerning the direction in which light is to fall (Exod. 25:37; Num. 8:2-3), seem to indicate the use of nozzled lamps, a fifth-/fourth-century development in Palestine (see LAMP).

The workmanship indicated by the use of the terms "pure gold" (Exod. 25:31, 36; 37:17, 22) and "one piece of hammered work" (Exod. 25:36; 37:22) is rooted in ancient metallurgic technology. The former term, when set against other references to gold in the Bible, reflects an independent gold-working tradition allied with Egyptian practices. It is distinctly different from the northern technical influences involved in the construction

of the Solomonic temple and its furnishings. The second term is also technical and indicates the use of sheet gold or gold foil rather than gold leaf and thus implies the use of a wooden model.

**b. Symbolism.** Since there is no functional necessity for the six side branches or the elaborate floral capitals, a symbolic purpose must be supposed. Three pairs of branches are a convention in Near Eastern iconography as far back as the Old Akkadian period. By far the most common theme expressed by branched forms of any kind is that of fertility and the sustenance of life. The association of life trees with celestial symbols is a recurrent pattern. The form that most closely parallels the menorah is found in the Late Bronze Age culture of the MITANNI Empire, from whence it was disseminated to the E Mediterranean areas, including Palestine. The tabernacle artisan, in drawing this form from the symbolic lingua franca of his age, was introducing into the Israelite cult a powerful symbol—whatever specific meaning attached to it. See Fig. M7.

The menorah in the tabernacle is singled out (Exod. 25:40; cf. Num. 8:4) as having its pattern revealed "on the mountain." This invocation of the mountain paradigm, along with the epithet

7. Mitanni-type theme of seven-ball branch on a seal, cut and laid out like a scaraboid; from Lachish, LB II

8. Metopic design on Ajjul ware showing tree and antithetical animals; from Lachish, LB II

9. Six-branched tree with ledged stem plus human figures and assorted symbols on a Cypriote common-style seal; from Salamis, LB II

"pure" (Exod. 31:8; 39:37) as an indication of cosmic brightness, serves to place the menorah within the realm of indicators of sacred space, the dwelling of the Lord in his heavenly abode or its earthly counterpart. As a visual expression of an arboreal form, within a culture in which the fertility and immortality themes associated with life trees are negated, it is transformed into a symbolic assurance of God's presence.

**2. Solomonic temple menorahs.** One would expect the ten menorahs of the Solomonic temple (I Kings 7:49) to have been cylindrical stands of the same sort as the central portion of the tabernacle menorah, since that sort of cultic stand still predominated at the beginning of the Iron II period. They also seem to have possessed some sort of floral capital; however, the text does not mention the branches, which are a predominate part of the composite tabernacle menorah. The lamps which surmounted the first temple lampstands were perhaps of the seven-lipped variety such as are typical in Palestine, especially in cultic contexts, from the Middle Bronze Age through the Iron Age; the lampstand in Zechariah's vision (Zech. 4), though of a more elaborate nature, seems to reflect such a possibility.

**3. Second temple menorah.** Zechariah's vision exhibits the second temple emphasis on continuity with the past. The still uncompleted temple is depicted, in its reversion to a single menorah, as following the prescriptions of the tabernacle texts. Yet the divergency of Zechariah from later sources such as Josephus perhaps indicates that Zechariah is preserving a historical memory of Solomonic lampstands. However, changes in technology (e.g., in refining of gold, use of closed lamps) and artistic tradition (use of tripod stands) since the time of the wilderness cult meant that the second temple menorah could not duplicate in a technical way the tabernacle archetype. Furthermore, the language of the Exodus texts, as the somewhat confused LXX renderings may indicate, was not fully understood. Possibly more than one menorah was constructed because of lootings of the temple before its final destruction by the Romans in A.D. 70. With the cessation of the Jerusalem cult, the menorah emerged into the everyday symbolism of the people, in synagogues and tombs, amulets and lamps, thus demonstrating the continuing power of this ancient symbol of the divine presence.

\***MESSIAH, JEWISH.** Although the belief in a Messiah was to become the foundation of Christianity and, ultimately, an essential belief within Judaism, its roots in the OT are tenuous. It is nowhere to be found in the Pentateuch, and is only intimated in the historical, prophetic, and hagiographic books. This idea lay dormant in Jewish writings until the Hasmonean age and flowered only during the turbulent years of Roman rule which followed the death of Herod (4 B.C.).

- Bibliography

1. **The emergence of the messianic idea.** To understand the emergence and the development of the Messiah idea in Israel we must distinguish the various stages in the evolution of the religion of Israel. None of the patriarchs, or Moses, or Joshua, or any of the Yahwistic leaders were "anointed." The prevailing assumption throughout Israel's early history was that Yahweh would bring his people to a land flowing with milk and honey, where he would make his will known through divinely chosen spokesmen like Abraham, Moses, and Joshua. Neither an "anointed" king with a special divine destiny nor an idyllic end-of-days was anticipated. Only when the Philistines threatened to overwhelm Israel did the need for a military leader impel Samuel to "anoint" first Saul (I Sam. 9:16; 10:1; 15:1-17), and then David, as king (I Sam. 16:3, 12-13; see SAMUEL, I AND II[S] §4). It was here that the idea of a Messiah was born.

Yahweh promised his beloved David that his descendants would sit on the throne forever (II Sam. 7:8-29). Even though some of them might prove disloyal, Yahweh would never annul his covenant (II Sam. 7:14-15). It was this divine commitment to David which planted the seed that was subsequently to flower as the messianic idea. See COVENANT, DAVIDIC[S].

The commitment was given a radically new meaning by passages in Amos, Hosea, Micah, and Isaiah, which envisioned a perfect and righteous king who would reign over Israel in an idyllic future. This new meaning was articulated in response to a set of grave internal and external problems. Internally there was rampant disloyalty to Yahweh, economic and social distress, and political and moral corruption. Externally there were imperial powers which threatened the land with devastation and the people with death and exile. The optimal solution was a perfect king, a perfect society, perfect peace among the nations, and perfect harmony throughout God's creation. Swords would be beaten into plowshares, the lion would lie down with the lamb, war would be unthinkable, and justice, righteousness, mercy, and the knowledge of the Lord would be the norm. Over such a perfect society, a shoot from the stock of

Jesse would reign as the wonderful counselor, Mighty God, Everlasting Father, Prince of Peace. The throne of David would be synonymous with justice and righteousness (Isa. 2:1-4; 9:2-7; 11:1-9; Amos 9:11; Jer. 33:14-22; Ezek. 37:24-28).

Although virtually all the prophets shared similar visions of the future, some prophetic books made a greater impression on subsequent generations. Of these, none was more influential than Isaiah, the First Isaiah for his unsurpassed vision of the ideal David and the idyllic future and the Second Isaiah for his proclamation of good tidings and for his picture of the Suffering Servant. Also, the Davidic motifs employed by the Psalmist (Pss. 89; 132) and the bold expression "Son of man" used by Ezekiel were to find strong echoes in the interpretation of Jesus in the gospels.

2. **The eclipse of the eschatological idea.** These prophetic dreams were rudely shattered by the economic, political, and social reality following upon the Babylonian exile and Judean restoration. Although CYRUS was hailed by the Second Isaiah as Yahweh's anointed (45:1), the restoration which his decree made possible bore little resemblance to the serene end-of-days so alluringly pictured by the prophets. Instead, there were bitter struggles for power between priests and Davidites, struggles which the contemporary prophets deplored while seeking to adjudicate and ameliorate them (cf. Zech. 3:1-4:10). Where righteousness was to have flourished, corruption abounded; where justice was to have reigned, there was exploitation; and where an ideal king was to have mounted the throne, the monarchy itself was being effectively undermined. The prophets of the restoration had no other recourse than to dream away the present. Malachi reassures the people that though corruption among the Levitical priests may now be the rule, there will come a day when their offerings "will be pleasing to the Lord as in the days of old and as in former years" (Mal. 3:4), and that though evil-doing is now rife, Yahweh "will send you Elijah the prophet before the great and terrible day of the Lord comes" (Mal. 4:5).

Paradoxically, the final outcome of these decades of turmoil, indecision, and disillusionment was a restored community which no prophet, with the partial exception of Ezekiel (chs. 40-48), had even remotely envisaged—a restructured society under priestly hegemony. There was to be no king at all. Even more startling, there were to be no prophets. In their stead was the canonized PENTATEUCH with its proclamation that God had revealed immutable laws. The Pentateuch gave a mandate to the priests, the "sons of Aaron," to exercise hegemony over the cultus, over the Law, and over the congregation of Israel, hence negating the need for kings. The priest, and not the king, was the "anointed" one. With the promise of agricultural abundance, long life, and many children, there was no longer a need for a radically transformed future. See AARON, AARONIDES[S].

The dissolution of the eschatological vision is confirmed by Ecclesiasticus. The author's overriding interest is the Pentateuch, and in the Pentateuch it is the role of Aaron as the father of the

priesthood that stirs him most deeply (45:6-22). He is not unmindful of David or of God's promise to him (45:25; 47:11), but a verse or two is all that he can spare. The prophets are held in awe, but neither their teaching nor their vision of an idyllic future captivates him. Their prophecies had, so it seemed, been meant for an earlier day, for a sinful Israel. Neither they nor their admonitions had much relevancy for a community that lived by the Torah and was devoted to Yahweh, his cultus, and his priesthood.

**3. The emergence of alternative viewpoints.** This long period of eschatological dormancy came to an end with the take-over of Palestine by the Seleucids (ca. 197 B.C.) and the promulgation by ANTIOCHUS Epiphanes of his infamous decrees (168 B.C.) aimed at shattering the religion of Israel by demanding worship of Greek deities. These upheavals dealt a mortal blow to the authority of the high priesthood. First Jason and then Meneleus bought the sacred office from Antiochus, and they confronted the Jews loyal to God with a problem for which there was no easy answer. Antiochus and the radical Hellenists demanded, on pain of death, that all Jews transfer their loyalties from God to gods. Trapped between apostasy and an utterly unforeseeable outcome, loyal Jews desperately searched for a constructive resolution of their dilemma. See ISRAEL, HISTORY OF §14.

Four basic solutions emerged: (1) faith in God's power to save and a readiness to die rather than violate his law (the Hasidim); (2) revival of prophetic vision, but assigning this vision to a prophet-like figure who had lived during the years when prophecy was both alive and credible (DANIEL; see APOCALYPTICISM; APOCALYPTICISM[S]); (3) armed uprising (the HASMONEANS; see MACCABEES, MACCABEAN REVOLT); (4) a mutational form of Judaism which shifted the focus from earthly rewards and punishments to heavenly ones (Pharisaism; see PHARISEES[S]).

Of these four, armed uprising under the Hasmoneans, combined with an enthusiastic response to the novel teachings of the Pharisees, formed the solution which most Jews favored. Nevertheless, the pseudepigraphic device for reviving prophecy was used with such success by the author of the book of Daniel that it was resorted to again and again when visionaries (Enoch, Testaments of the Twelve Patriarchs, Psalms of Solomon, IV Ezra, Baruch, the Syballine Oracles) glimpsed solutions to ongoing problems which were at odds with those advocated by the dominant Pharisaic leadership who rejected these books as spurious. See PSEUDONYMOUS WRITING[S].

Daniel is important for the development of the messianic idea since its author used such enigmatic expressions as "Son of man," gave sanction to the reality of specific angels such as Gabriel and Michael, spoke of an "anointed" prince (*māshiah nāgid*), conjured up the puzzling image of the "ancient of days," and held out a hope for RESURRECTION.

Although only the book of Daniel gained scriptural status, this approach was appealing whenever conditions were turbulent. In some pseudepigraphic writings there are visions of deliverance

through a Son of man, a Messiah, and of a sweeping away of the alien tyrants and the establishment of the kingdom of God on earth.

**4. The contribution of the Pharisees.** The Pharisaic solution to the problem posed by Roman persecution and by the agonizing grip of the Roman procurators was a steadfast faith in 'ōlām habbā' (the world to come) and t'hiyath ham-mēthim (the resurrection of the dead). The focus was on individuals and their eternal life, and not on the shifting configurations of an unsteady and unreliable external world. Those who adhered to the twofold law comprised the true community of Israel, which was not dependent for its viability on either the land or the temple but on its selection by Yahweh. Pharisaism was transnational, universal, and oriented toward the individual's yearning for salvation. For the Pharisees, a Messiah who would liberate the Jews from the Roman yoke and restore the throne of David would be far more a problem than a solution. For them the key issues were not liberation from pain and suffering, but the life beyond the grave; not national independence, but true and steadfast belief; not Israel of the flesh, which would necessarily include nonbelieving Sadducees, but Israel of the spirit—those who were steadfastly loyal to the twofold law and the salvation which it promised.

This focus can be clearly discerned in the decision of the Pharisaic leadership to acknowledge the right of the Roman governor to take a census and levy tribute. They believed that as long as the Pharisaic sages were permitted to teach freely the twofold law (see MISHNA; TORAH[S]) and to preach the good news of life eternal, Rome had a right to collect the tribute for Caesar. For the Pharisees, the Roman imperium was an exercise of authority over this transient world and did not cut off access to the enduring world to come. Those scholars who refused to accept this decision, but insisted that allegiance to Rome was disloyalty to God, were forced to promulgate a fourth philosophy of their own which differed, according to Josephus, from that of the Pharisees on this issue alone (cf. Jos. Antiq. XVIII.1.1-2, 6).

It is thus evident that Pharisees did not look upon themselves as resurrected prophets. They did not rely on fresh dreams of an idyllic end-of-days or of a righteous shoot from the stock of Jesse to provide solutions to the ongoing problems of the people of Israel.

**5. A new set of alternatives for the Jews.** Although the majority of the Jews held fast to the salvation system of the Pharisees, large numbers of them were drawn to alternative solutions, since living under the procurators proved to be an increasingly stressful experience. These alternatives were: (1) the revolutionary doctrines of the Fourth Philosophy or Sicarii, which called for continuous terrorist activity against Rome and for an egalitarian society (but see ZEALOT[S]); (2) a revolt against Rome and the establishment of a Jewish polity which would be nonoppressive and quasi-democratic; (3) a charismatic leader, a Messiah, who would sweep away the tyranny of Rome and usher in the kingdom of God—as foretold by the prophets of old and as reiterated in the pseu-

depigraphic visions (cf. Jos. War VI.v.2-viii.3; Antiq. XVIII.v.2).

The messianic alternative, however, was risky since neither the prophetic visions nor the pseudigraphic foretellings were specific. They did not spell out names and they did not give dates. They were even unclear as to whether the Son of man was to be a descendant of David or whether there was to be a specific person at all. Many were disillusioned as now this and now that would-be Messiah was caught by the Romans and put to death, and as the anticipated kingdom did not come.

**6. Jesus and the Pharisees.** It was in this climate of messianic uncertainty that Jesus began his ministry. As a Jew, Jesus had been nurtured on the teachings of the Pharisees and had absorbed their faith in the world to come and their firm belief in the resurrection of the dead. He had also absorbed the Pharisaic mode of using scripture—a mode which drew freely on any verse which it deemed appropriate to a specific situation, wherever it might be in Scripture, and without any regard for its contextual setting. This mode may best be designated as situational exegesis. Such a mode was not a commentary on Scripture, but on events. A verse from Isaiah joined to a verse from Deuteronomy joined to a verse from Daniel was deemed to be far more helpful in elucidating the divine meaning of an event than the next verse in Isaiah or Deuteronomy or Daniel. To the extent that Jesus himself drew on Scripture as illustrative of his teaching or his messianic role, he invariably used the situational exegesis of the Pharisees. And so, too, did his disciples and Paul. See INTERPRETATION, HISTORY OF[S] §§B, C-D.

But Jesus deviated radically from the Pharisees insofar as he based his "new" teaching of the approaching kingdom on his own personal authority, as though he were the Son of man or a prophet like Elijah, or a son of God, or the Messiah. Such claims the Pharisees could not tolerate, and in seeking to refute them the Pharisees had to develop some concept of the Messiah, since they were confronted with scriptural proof texts indicating that a Messiah had indeed been foreseen by the prophets. This concept, however, was thoroughly defensive; i.e., it was a concept that, while affirming that a Messiah, son of David, will come, indeed, must come, set conditions that no would-be Messiah, least of all Jesus, was ever likely to meet. Among these were (1) an impeccable, unchallengeable genealogy of Davidic descent, (2) a public display of signs and wonders, (3) the return of Elijah prior to the advent of the Messiah, (4) fulfillment of his messianic mission during his lifetime, demonstrated as having been implicitly or explicitly spelled out by the prophets. To all intents and purposes, therefore, the messianic idea of the Pharisees, whom the majority of the people followed, was a negative one. It supported the belief even as it undercut its contemporary relevance. By Pharisaic criteria, Jesus could not be, or have been, the Messiah since, (1) he appears to disclaim Davidic descent ("How can the scribes [Pharisees] say that the Christ

[Messiah] is the son of David? David himself, inspired by the Holy Spirit, declared, 'The Lord [God] said to my Lord [the messiah-King], Sit at my right hand, till I put thy enemies under thy feet.' David himself calls him [the messiah] Lord; so how is he his [David's] son? And the great throng heard him gladly" [Mark 12:35-37]); (2) he did not perform persuasive signs and wonders ("The Pharisees came and began to argue with him, seeking from him a sign from heaven, to test him. And he sighed deeply in his spirit and said, 'Why does this generation seek a sign? Truly, I say to you, no sign shall be given to this generation'" [Mark 8:11-12]); (3) it was not agreed that Elijah had appeared prior to Jesus' ministry ("And they asked him, 'Why do the scribes say that first Elijah must come?' And he said to them, 'Elijah does come first to restore all things; . . . But I tell you that Elijah has come, and they did to him whatever they pleased, as is written of him'" [Mark 9:11-13]); (4) he was crucified, and this form of execution utterly nullified his claims. Although the gospels insisted that Jesus was a descendant of David, did indeed perform persuasive signs for those who had faith in him, that Elijah had in fact already come, and fully confirmed that he was the Messiah by his resurrection, neither the people at large or the Pharisees in particular were impressed or convinced by the gospel writers, or by Paul.

Paradoxically, it was the core teaching of the Pharisees that made the gospel claims for Jesus as the Christ credible. The Pharisees had made possible the fundamental belief of the Christian faith (that Jesus was the Messiah because he had been resurrected) since belief in the Resurrection is not based on the OT, but on Pharisaic doctrine. Unlike the many prophetic utterances referring to the restoration of David's throne and visions of an idyllic end time, there was no prophetic anticipation of the agonizing death of the son of David and his resurrection as the necessary prelude to those events. The only scriptural support for the belief in the Resurrection is that which follows from the situational exegesis of the Pharisees, an exegesis which Jesus drew upon to confute the Sadducees and win the approbation of the listening scribe (Pharisee) (Mark 12:18-27). What, for the Pharisees, had been a defense against the claims of would-be Messiahs, namely, that the pretensions of a Messiah dissolve with his death, was regarded by the Christians as their most telling proof, a proof made credible by the Pharisees themselves.

If, then, we seek to account for the breakthrough of Christianity to novel messianic ground, and seek to discover the Jewish roots which made such a breakthrough possible, we would posit that there was fusion of (1) the belief that God had made a promise to David, his anointed, to establish his throne forever (cf. Mark 11:8-10); (2) the prophetic linkage of an ideal Davidic king with an idyllic future; (3) the Pharisaic belief in the world to come and the Resurrection; (4) the Pharisaic mode of applying disconnected scriptural verses to ongoing events.

And if we seek to explain why ideas so long dormant were revived in so fresh and compelling a manner, we need only note the agonizing experience of the Jews under the procurators, an experience that was ultimately to drive even the most loyal followers of the Pharisees into a suicidal war against Rome. In these circumstances, so reminiscent of the agony which had stirred Amos, Hosea, Isaiah, and others to frame a perfect solution to such relentless distress, it is little wonder that the hope for a kingdom of God and the wish for a perfect king should have been revived and believed.

What must be stressed is that insofar as the gospel record is concerned, the roots of the Christian messianic idea are deeply embedded in the Pharisaic system of Judaism and not in the pseudographic writings. Like the Pharisees, Jesus and his followers considered these writings to be spurious and therefore at no time did they cite them.

**7. Subsequent developments in Judaism.** However for most Jews, the messianic alternative, even in its highly novel and audacious Christian message of a risen Christ and a second coming, was rejected. The majority continued to adhere to the Pharisaic faith in the world to come and the resurrection of the dead, and in the verifications which the Pharisees demanded of the Messiah and which they alone would evaluate.

Whereas the belief in the world to come and the resurrection are affirmed in the Mishna as binding on every Jew (cf. M. Sanh. 10.1), the belief in the Messiah has no doctrinal status whatsoever. The term Messiah occurs only twice in the Mishna (Ber. 1:5; Soṭ. 9.15).

The messianic idea in Judaism did subsequently gain the status of a dogma, but not during the Pharisaic and tannaic periods. To be sure, the highly esteemed teacher of the twofold law, Rabbi Akiba, hailed Simon Bar Koziba as the Messiah, calling him *BAR KOCHBA* ("Son of the Star," alluding to Num. 24:17-19), and supported his ill-fated revolt (132-135 A.D.) against the Roman emperor HADRIAN. But even R. Akiba did not look upon Bar Kochba as other than a mortal leader.

It was not until the time of Maimonides (1135-1204) that the belief in the Messiah was declared to be a fundamental principle of faith.

In grappling with the messianic idea during the years following the Hasmonean revolt, it is necessary to evaluate the relevance and the significance of the DEAD SEA SCROLLS. These scrolls do indeed reveal a keen interest in the Messiah, whom they refer to as the *moreh tsedek* (teacher of righteousness), and they are fraught with eschatological concerns. Yet one hesitates to use these materials in the same way as one would use the pseudographic literature. Scholarly discretion demands that we regard the scrolls as sources which are still being processed and that we refrain from integrating them into our reconstructions of Jewish history. See DEAD SEA SCROLLS[S] §9.

**MESSIANIC BANQUET.** A great feast for the faithful in the age to come was a feature in Jewish and Christian speculation about the end time. Where the Messiah is not mentioned, it may more properly be called the eschatological banquet.

**1. Jewish sources contemporary with the NT period.** It is often stated that such a banquet was a common feature of Jewish apocalyptic thought. This is probably correct, though direct and explicit references are comparatively few. Apocal. Bar. 29:4-8 and Enoch 62:14 are regularly cited. Strictly speaking, the former refers not so much to the eschatological banquet as to an abundance of food in the eschatological era. The flesh of the mythical creatures Leviathan and Behemoth, the manna, and fruit, the food of Adam in paradise, will be fare for the redeemed. The latter passage says of the righteous "with that Son of Man shall they eat/And lie down and rise up for ever and ever." Two later (perhaps A.D. 250-300) apocalypses, III Enoch and the Apocalypse of Elijah, also speak of eating with the Messiah. A text from Qumran supplies important evidence. 1QS<sub>a</sub> 2.17-22 describes a community meal presided over by the Priest and the Messiah of Israel. Allusion to the messianic banquet is apparent. (Presence of the Priest and the Messiah of Israel refers to the Qumran expectation of two messianic figures.) At the end of the passage, however, the provision is given, "And they shall act according to this decree at every meal [when] at least ten men are gathered." Thus, at Qumran the regular common meal of the community, described also in IQS 6.4-6, seems to have been considered an anticipation of the future messianic meal. Other passages in apocalyptic writings contain partial allusions and reminiscences of the theme, implying that it was more widely a part of the "common knowledge" of apocalyptic speculation than the few explicit references might indicate.

**2. NT evidence.** Witness to the banquet in the NT may be summarized under the following classifications.

a) Some passages indicate that the motif, apparently well-known to Jesus and his hearers, could be used as a general illustration without detailed explanation or specific connection with Jesus the Messiah (Matt. 8:11-12=Luke 13:28-30; and probably the parables in Matt. 22:1-10=Luke 14:16-24; and Matt. 25:1-13). Such general usage was early given a messianic interpretation in the tradition (see Luke 14:15 and the setting of Matt. 8:11-12).

b) Two passages clearly refer to Jesus as host at the messianic banquet (Luke 22:28-30; Rev. 19:9).

c) The Last Supper was considered to have a peculiar relationship with the coming banquet, as Jesus refers to eating and drinking with his disciples afterward in the kingdom (Matt. 26:29; Mark 14:25; Luke 22:15-18. See LAST SUPPER §3; PASS-OVER §2).

d) Less direct, but significant, are the miraculous feeding narratives (Matt. 14:13-21; 15:32-39; Mark

6:35-44; 8:1-10; Luke 9:12-17; John 6:1-14) and the post-Resurrection accounts in Luke 24:28-43 and John 21:9-14. All these seem to have been understood as anticipations of the banquet of the end time.

e) Further, it appears that in some early Christian circles celebration of the Lord's Supper was considered both a commemoration of the death of Jesus and an anticipation of the coming messianic feast (1 Cor. 11:23-26).

f) Finally, Rev. 19:17-18 treats the theme in an entirely different way. Depicted is the great eschatological supper of God, but the emphasis is on the judgment and destruction of God's enemies rather than the joy of his redeemed.

3. **OT backgrounds.** Detailed examination of OT motifs which contributed to the picture of the eschatological banquet goes beyond the scope of this note. Attention may be directed, however, to Isa. 25:6-8 which, in an eschatological context, speaks of a feast to be enjoyed by all peoples on the day when the Lord has vanquished death, and to the summons to eat and drink in Isa. 55:1-5, a passage which is usually interpreted eschatologically. Two other themes in the OT also had considerable influence. A number of passages (e.g., Zeph. 1:7-9; Jer. 25:15-34; 46:10; Isa. 34:5-7; Ezek. 39:17-20) mention the sacrificial slaughter of God's enemies on the day of his triumph. In some of these, eating is associated with the sacrifice, though the participants at the meal are not the members of the redeemed community. The emphasis is on judgment, not joy (cf. Rev. 19:17-18). A variation of this theme portrays the mythical beast Leviathan as the object of the sacrifice (Ps. 74:12-17; cf. Ezek. 29:3-5; 32:2-8), though no mention is made of the redeemed as sharers in the feast. (The Leviathan myth is well attested in many cultures and its Ugaritic [Canaanite?] version no doubt influenced biblical usage. See LEVIATHAN.) Jewish and Christian apocalyptic writers drew from all these themes (and others, e.g., marriage imagery) and interwove them into the varied descriptions of the eschatological banquet discussed above.

Eating and drinking was a common OT manner of expressing joyous fellowship, both on the human level and in a covenantal context between the worshiping community and God (see MEALS §4a). Thus the messianic (eschatological) banquet served as a striking pictorial representation of God's final triumph, which would be characterized by communion between him and the faithful in the New Age. The meal stood as a symbol of triumph and of joy.

\***METALLURGY.** See TELL EL-KHELEIFEH[S].

**METEORITES.** Sanchuniathon, the Phoenician priest whose account of Canaanite religion was preserved by Philo of Byblos, said that, as Astarte was traveling through the world, she encountered "a star falling through the air," took it up and consecrated it on the holy island of Tyre. Tyrian coins from the third century A.D. portray two stones with the inscription ΑΜΒΡΟΣΙΕ ΠΕΤΡΕ, "divine stones." Acts 19:35 refers to the city of ΕΡΗΣΟΣ as the "temple keeper of the great Artemis and of the sacred stone that fell from the sky." The black stone revered in the Ka'ba sanctuary at Mecca is, like these others, a meteorite, and was in pre-Islamic times revered as divine, a portion of himself sent by a sky god to serve as the sacred center of a city consecrated to him. These are but a few of the many examples found in ancient Greece and the Middle East of the worship of sacred meteorites.

In Canaanite religion, the meteorite-god seems to have been called Bethel (god-house), and was worshiped in Israel also (see BETHEL, DEITY). One of the gods of Tyre is named Baitilani (a plural form of Bethel). Sanchuniathon lists Baitulos as a son of Heaven and Earth and states that Ouranos (Heaven) used *baitulia*, which are λίθοι 'εμφύχοι (stones with souls), as weapons in his unsuccessful struggle against his son EL.

Gen. 28:10-22 relates the story of Jacob's dream of a "ladder" reaching to heaven. The stone upon which he slept, possibly a meteorite, he declared to be "God's house" and thus he named the place "Bethel." Material from Egypt contains a number to motifs which appear similar to those in this biblical story. The stone would thus have "opened" the heavens to Jacob, as did the meteorite of Thebes for its high priest. The "ladder" would be like the iron or meteorite ladders of Egypt, on which the divinized pharaohs walked. On awakening, Jacob exclaimed, "This is the gate of heaven," words identical to those used in connection with Pharaoh's ladder and reminiscent of the title of the high priest at Thebes, "the Opener of the Gates of Heaven."

\***METHUSELAH.** See SHALAH[S].

\***METHUSHAEL.** For etymology see DEITIES, UNDERWORLD[S] §2biii.

\***MICAH THE PROPHET.** Recent study of the book of Micah, as of other prophetic writings, centers on the identification of the varieties of tradition utilized in the book—and their literary affinities and social settings—and the setting and purpose of the book in its final, edited form.

1. **The final edition of the book.** In contrast to the atomizing criticism of a previous generation, contemporary scholars have sought the unifying features in the arrangement of the book. The most comprehensive investigation of this has been made by Willis. He holds that the editor, who may have been among the disciples of Isaiah left in Judah after the fall of Jerusalem in 586 B.C., arranged the book in a series of three groups of alternating (and composite) oracles of doom and salvation. In the first and third groups the doom oracles are extensive (1:2-2:11 and 6:1-7:6), and the oracles of hope are brief (2:12-13 and 7:7-20), while the reverse is true in the middle group (doom, 3:1-12; hope, 4:1-5:15). His purpose was to persuade the exilic Jewish community that God had not abandoned them. Since the portions of the collection deriving from Micah had been uttered in the Assyrian crisis of 734-700, their republication in and after the Babylonian crisis of 605-586 was a fitting appropriation of prophetic tradition. These portions were supplemented with anonymous oracles of salvation reflecting the Davidic and Zionistic traditions of Jerusalem (see ZION TRADITION[S]). To this analysis may be added the observation that the oracles of doom would have functioned in the exilic situation to justify the destruction of Judah, which had already occurred, as a divine punishment for iniquity, and to elicit a spirit of contrition among the survivors.

2. **Older traditions.** Following the lead of Gunkel, several scholars have recognized ch. 7 as a liturgical composition, deriving originally from the northern kingdom of Israel. Thus Reicke argues that 7:1-6 is a communal lament (not an oracle of judgment), in which the speaker identifies himself with the sin and suffering of the people in the manner of the royal psalms of lamentation, and 7:7-20 is the prophetic response. The whole is modeled after a liturgy of penance from the autumnal New Year's festival, or perhaps the Day of Atonement. The description of distress (7:1-6) utilizes in part the conventional language of ancient Near Eastern eschatological texts (e.g., the dissolution of family solidarity).

Others have interpreted the mixture of oracles of doom with oracles of salvation in the book as a whole as the result of its origin in the public worship of the pre-exilic period, i.e., Micah's own time. However, the argument for an exilic date for the final collection, and some of the oracles of promise, is more convincing.

\***MIDRASH** mid'rāsh מדרש, from דרש, *dāraš*, see §1 below, perhaps related to Arab. *darasa*, "to tread," "to study" and Akkad. *darāsu-darāsu*, "to trample

upon," "to press hard"]. The most important and characteristic term in the ancient rabbinic milieu for interpretation of scripture, including its aims, methods, and results. An understanding of midrash can be approached by tracing the semantic development of the term, the historical factors which contribute to its development, its presuppositions, aims, and characteristics, and the forms in which it comes to expression in rabbinic literature. In addition, recent study has focused on the history of midrash with the result that the term is currently associated with the whole phenomenon of biblical interpretation in early Judaism, and its importance in the milieu in which Christianity arose.

1. **Semantic development.** The verbal root *dāraš* has several meanings in the OT among which "to seek, inquire," "to investigate" are prominent, and most important for the semantic development of the term. The seeking of God's will (Ps. 119:10; II Chr. 17:4; 22:9), the inquiry of God through prophetic oracle (I Sam. 9:9; I Kings 22:8; II Kings 3:11; Jer. 21:2), and the thorough investigation of a matter (Judg. 6:29; Deut. 13:15; 17:4; 19:18) develop in the course of time into the particular type of seeking, inquiry, and investigation associated with the interpretation of scripture.

The transition to a later usage can be seen when one compares the different objects which the verb takes in similar phrases found in II Chr. 30:19 and Ezra 7:10. In the former, King Hezekiah had prayed for "everyone who sets his heart to seek God" (לדרוש האלהים). In the latter, Ezra the scribe "had set his heart to seek the law of the Lord" (לדרוש את תורת יהוה). While we should probably not attribute an explicitly exegetical sense to *dāraš* in Ezra 7:10, nor assume that the techniques associated with later rabbinic interpretation of scripture are already implied in the verb (though procedures akin to later midrash are already found in the Bible, see §5a below), we do have the first instance of *dāraš* applied to an authoritative text and signifying, at the least, the thorough study of the Torah in conjunction with its teaching and practice (cf. Ps. 119:45, 94, 155; I Chr. 28:8; Ecclus. 32:15).

By the first century B.C., there are instances in Qumran and associated writings where *dāraš* clearly has an exegetical meaning. Legal conclusions were drawn from the interpretation of scripture

and made binding on the sect (CDC VI.7; VII.18; 4QFlor 1.11; 1QS 6.6; 8.12). The extent to which interpretation was recognized as a basis for deriving legal ordinances in scribal and Pharisaic circles prior to the destruction of the temple is debated. In any case, this practice receives new impetus with the influential figure of Rabbi Akiba (active ca. A.D. 110-135) who derived *halachoth* (rabbinic prohibitions and ordinances) from the interpretation of particles in the biblical text. See INTERPRETATION, HISTORY OF[S] §D.

Though one finds instances of an earlier and more general usage in rabbinic writings, the exegetical meaning of *dārash* becomes dominant and is associated with the full range of methods employed in the interpretation of scripture. In addition to this, there is one other distinctive meaning of the verb in rabbinic writings: "to convey" or "declare to others," thus, to preach a sermon, give a public oration, to pronounce a *halachah*, recite a midrashic text.

The noun *midrāsh* appears twice in the OT and in both cases in the *status constructus*. The Chronicler refers to מדרש הנביא עדו ("story of the prophet Iddo," II Chr. 13:22) and to מדרש ספר המלכים ("Commentary on the Book of the Kings," II Chr. 24:27). The meaning of *midrash* in the Chronicler's work is uncertain. Although RSV translates "Commentary" at II Chr. 24:27, it is unlikely that this is already the meaning of the term. The LXX translates "book" and "writing" respectively, and many modern commentators follow this view. It is possible that the Chronicler has coined the word *midrash* to cover both a historical narrative and an account of prophecy (cf. Gertner). If this is correct, *midrash* has the notion of conveyance before it comes to mean interpretation.

The later development is again evidenced in Qumran writings where in several instances *midrash* refers to study and interpretation of Torah (1QS 8.15; CDC XX.6; cf. 4QFlor 1.14 where *midrash* stands as a heading for a contemporizing interpretation of Ps. 1:1. In contrast to this usage, cf. 1QS 6.24; 8.26). (See also INTERPRETATION, HISTORY OF[S] §B1.) The NT may also have the term *midrash* in view in passages which concern questions or matters (ζήτησις, ζήτημα) of scripture (Acts 25:19-20; 23:29; 18:14-15; 26:3; cf. I Tim. 1:4; 6:4; II Tim. 2:23; Tit. 3:9).

In the rabbinic writings, *midrash* becomes the characteristic term for interpretation of scripture, denoting both the activities involved and the results produced. In the latter sense, it can refer to a single biblical text with its interpretation, and to a collection or book of *midrashim*. It also refers to the school or college (בית מדרש) where Torah was studied and interpreted. In addition, early rabbinic usage often equates *midrash* with biblical חק (statute). This equation stems in part from the semantic relationship between the Hebrew verbal roots חקק (to cut in, engrave, or to decree statutes) and דרש, both of which are found in the Bible as synonyms of חקר ("to investigate, search out, examine," Judg. 5:15, 16; Deut. 13:15). Similarly, Qumran circles equate the Lawgiver (מחוקק) with the Interpreter of the Law התורה; see CDC VI.7; VII.18; cf. T.B. Sanh. 5a).

**2. Historical factors.** The semantic development of *dārash/midrash* is symptomatic of the pervasive and deep-rooted historical and conceptual changes which mark the long development from the biblical period to the beginnings of rabbinic Judaism. In pre-exilic Israel, the will of God was largely ascertained by means of inquiry through priestly and prophetic oracle. By the beginning of the rabbinic period (ca. end of the first century A.D.), the mantle of inspiration and authority had passed to those responsible for discerning the will of God through interpretation of sacred texts.

Among the factors contributing to this change in the Persian and Hellenistic periods are the decline of prophecy, the final editing of Israel's epic, legal, and prophetic traditions, their collection in a two-fold canon of Torah and Prophets, and the emergence of lay scholar groups to compete with the traditional teaching authority of the priests. The development of biblical interpretation by the rabbis parallels the work of the Alexandrian grammarians on the sacred texts of Homer, and coincides with the standardization of the Hebrew Bible text (see TEXT, OT §A3b). The weakening or destruction of other institutions of Israel's religious and national life also affected the development of midrash. Following the destruction of the temple in A.D. 70, the Bible was the only part of Israel's national heritage that remained intact. To the creative interpretation of this source, the rabbis devoted their energy, skill, and ingenuity to find a basis for customs and legal precedents which, at least in part, had arisen independent of the Bible, and to provide comfort and instruction that would both forge a link with the biblical past and make scripture relevant to the present.

**3. Presuppositions, aims, and characteristics.** This general aim of midrash is rooted in a certain understanding of scripture, and operates in the historical distance that separates the world of the Bible from the world of the rabbis. The Bible was not merely a revered record of the nation's past, but the single and complete revelation of God's will for the nation in all generations, the unshakable ground of action and identity, the mystery of man and the world, and the vision of Israel's destiny. From this perspective, scripture was productive of an inexhaustible wealth of meaning which could be uncovered and made relevant through intensive meditation and proper probing of the biblical text. The spirit which had spoken through Moses and the prophets spoke now in the creative reflection on scripture, in midrash, which, from another angle, was but the appropriate transmission of what was received from scripture in the context of the present needs and circumstances of the community.

Yet the world in which the Bible was thus understood was no longer the world out of which the Bible had emerged. As a record of a bygone age composed of diverse traditions transmitted, reworked, and combined over generations, the Bible presented for a later age a strange and often obscure world, and at the same time the contemporary voice of God in which their own world was reflected. Contradictions in the biblical text, both real and apparent, had to be resolved and the unity of scripture unfolded. The legal corpora of

the Bible had to yield directives for new cases under new conditions. The biblical narratives had to be updated, ethical and cultural perspectives modernized, and new tales composed out of the "silence" of scripture. By means of midrash, the Bible was wrapped in the garment of contemporary perceptions, issues, and concerns, and thus transformed; in turn, the contemporary world was perceived in the light of scripture, and thereby illuminated.

**a. Hermeneutical rules.** In postbiblical Judaism, the formulation of a list of rules for interpretation of scripture is found only in the rabbinic tradition. Seven *middōth* (hermeneutical rules) are ascribed to Hillel (Tosef. Sanh. VII.11). The terminology of several of these rules appears to be influenced by formulations of the Alexandrian grammarians for interpretation of the Greek classics. An expanded edition in the form of thirteen *middōth* is attributed to R. Ishmael (*Mek. de Rabbi Simeon bar Yohai* on Exod. 21:1). These rules involve various types of inference and analogy and are largely confined to the derivation of rabbinic *halachoth* from the written Law of the Pentateuch (*midrash halachah*). A late tradition ascribes thirty-two *middōth* to R. Eliezer ben Jose Ha-gelili. These are largely confined to the interpretation of the nonlegal portions of scripture (*midrash haggadah*). See INTERPRETATION, HISTORY OF[S] §D.

**b. Rational and mantic characteristics.** Though these rules do not encompass all the procedures employed in midrash, as a whole they do reflect two general features of midrash which can be distinguished, yet which often figure in the same tradition. The rabbis, like modern readers, often found the text of the Bible obscure, and in general recognized that scripture spoke with an economy of language. Obscurities in the text were elucidated, gaps filled in, and situations clarified, partly by comparison with words and verses from other biblical loci, partly by what appeared appropriate from the perspective of the rabbis. Thus, on the one hand, midrash invokes the principle of learning the unknown from the known, and in this connection sometimes proceeds via logical inference and sound philological observations, yet usually without making the clarification of a biblical text a goal distinct from the actualization of that text in the present.

On the other hand, there is a distinctly mantic characteristic which is pronounced in midrash. The Bible is regarded as a vision and portent of the future. Its language is not only laconic, but intentionally elliptical and ambiguous, the language of dreams and oracles, those direct modes of divine communication known from antiquity. (Cf. the earlier biblical meaning of *dārash*, "to inquire of God.") As an oracular text, scripture is not bound by the grammatical proprieties, semantic possibilities, literary contexts, and temporal sequences of ordinary texts. Hence, especially in the atomistic interpretation of words and letters and the variety of wordplay, midrash proceeds in a manner similar to magical and symbolic procedures employed in interpretation of dreams and oracles in the contemporary Greco-Roman world and known from high antiquity.

This view of scripture as divine oracle is certainly not limited to the rabbinic tradition. It is important for the general phenomenon of biblical interpretation, its methods and goals, in early Judaism, and it is especially evident in eschatological and mystical interpretation—e.g., in Qumran *pesharim*, NT christological interpretation, and Philonic allegory. In the rabbinic tradition, such methods are clearly popular and not confined to passages thought to have eschatological or mystical import. Indeed, in rabbinic midrash, there is a tendency to organize in scientific-like classification the results of interpretation gained by such methods.

**4. Rabbinic Midrashim.** The major midrash books (Midrashim) of the rabbinic corpus can be broadly classified along the lines of content and literary genre. Thus, one speaks of halachic and haggadic Midrashim according to whether the contents are largely of a legal or nonlegal character, and of exegetical, homiletical, and narrative Midrashim. Exegetical Midrashim are verse-by-verse commentaries on large portions of biblical books, and present a variety of individual traditions which are not organized in any larger structural patterns. As the name implies, homiletical Midrashim develop sermonic themes which are presented on only the first verse (or first few verses) from the weekly sabbath portion of the Pentateuch read in the synagogue, or from the Pentateuchal and Prophetic lections for festivals. Narrative Midrashim are not commentaries, but gather legendary material associated with biblical stories and with the history of biblical and postbiblical times.

**a. Composition and date.** The rabbinic Midrashim in their extant form are largely a composite literature. A single midrash book may evidence structural features of more than one genre, and the time and place of composition may vary in different sections of the work. The date of final editing itself is often difficult to determine with any precision. Even more difficult to determine is the date of the individual traditions which compose a Midrash. One cannot rely on the date of final editing. Nor is it possible to rely on the ascription of traditions to known rabbinic authorities without testing this evidence by other internal criteria.

**b. Types and characteristics.** The halachic Midrashim belong to the category of exegetical midrash. They are the earliest rabbinic Midrashim, generally thought to have received their final editing in the third century A.D. Since large portions of Exodus-Deuteronomy are treated in these works, not all the biblical material commented on is legal, and therefore one finds sections of haggadic midrash as well. On the basis of the different authorities cited and differences in technical terminology and hermeneutical rules, it has been shown that the halachic portions of these Midrash books derive from the Palestinian schools (disciples) of R. Akiba and R. Ishmael.

The haggadic Midrashim are dated from the fifth through the twelfth centuries. The characteristic feature of the homiletical Midrash is the proem or introduction to each homily. Since most homilies begin with a series of proems, it is very unlikely that each chapter in a homiletical Midrash was drawn from a single sermon as it was actually

delivered in the synagogue. Rather, the literary homilies of the Midrashim have probably been compiled from parts of many sermons delivered in the synagogues. The proem has a distinct rhetorical structure. It begins with a biblical text (the proem verse), often drawn from the Hagiographa and seemingly remote in content from the opening verse of the Pentateuchal lection. From this proem verse, a chain of expositions is evolved, often on the basis of a verbal tally or play on words with the lection verse, until the connection is finally made with the lection verse with which the proem closes. By means of this chain of expositions, proem and lection verses are linked, and both are thereby seen in new perspective.

Although the narrative Midrashim are late, several are closer to the pre-Christian genre of rewritten Bible (i.e., to Jubilees, the Genesis Apocryphon, Pseudo-Philo) than to the exegetical or homiletical Midrashim. They embellish biblical stories, sometimes with legendary material otherwise unknown. (For a listing of the major Midrashim, see MIDRASH; for fuller listings with pertinent information on editions, translations, etc., see *bibliog.*)

**5. Recent study of midrash.** Since the end of World War II, the term *midrash* has increasingly come to be associated with study of the origin, evolution, and varieties of biblical interpretation in early Judaism, including the NT. From this perspective, the study of midrash is not limited to the rabbinic literature, nor to the direct antecedents of the rabbinic movement.

**a. Origins.** The origins of midrash are found in the Bible (see INTERPRETATION, HISTORY OF[S] §A). The indications are especially clear in the exilic and postexilic periods with the emerging consciousness of a canon. The adaptation of the words of Deutero-Isaiah by the writer of Trito-Isaiah, the apocalyptic appropriation of Jeremiah's prophecy of the seventy years in Dan. 9:2 ff., the harmonizing of earlier texts by the Chronicler and by the final redactors of the Pentateuch, the creation of new contexts in the historicizing headings of certain psalms all evidence responses to the consciousness of a canon, and are akin to procedures used in later midrashic literature. The authority of earlier biblical texts becomes independent of their original contexts and function. The unity of Torah is presupposed, and data from other scripture provide specific historical settings for originally cultic texts. Thus, the process of attributing unique and permanent authority to earlier tradition, i.e., the process of canon, and the emergence of midrashic procedures belong in their initial phases to study of the formation and shape of the Hebrew Scriptures.

**b. Evolution.** Study of the evolution of biblical interpretation in early Judaism has been affected by three major factors since World War II: (1) The discovery of the DEAD SEA SCROLLS with their importance for the history of the biblical text and their eschatological contemporizing of biblical prophecy, and the discovery of a complete Palestinian Targum to the Pentateuch (Codex Neofiti I) resulting in a re-evaluation of the targumic literature for the evolution of Jewish exegesis (see

TARGUMS[S]). (2) The recognition that the multifaceted character of Jewish exegesis is not merely the product of individual creativity, but develops within traditions whose evolution can be traced.

(3) The application of historical-critical methods for tracing the history of exegetical traditions in the literature of early Judaism and in the rabbinic Midrashim. It is not a closer definition of midrash which is of primary concern in such study, but the manifold types of evidence that are relevant for tracing the history of exegetical traditions. (Among the earliest of such evidence are glosses on the biblical text, editorial expansions and harmonizations, and the Bible versions.) The recognition of exegetical traditions which often cross the boundaries of particular communities and which are present in different literary forms provides a larger historical context from which to assess the common ground and distinctive features, as well as the issues at stake, in particular applications of biblical texts.

**c. Varieties.** The varieties of biblical interpretation in early Judaism must also be stressed (see INTERPRETATION, HISTORY OF[S] §B). This applies to content (e.g., legal, historical, prophetic, apocalyptic, allegorical, mystic christological) and form (e.g., narrative, anthological, *pesher*, homiletic, targumic), and also to exegetical techniques, hermeneutics, and *Sitz im Leben*. The authority of scripture was not only common ground in early Judaism, but, in the very impulse to meditate on and live out of what was uncovered in scripture, a source of sectarian division. The sectarian tendencies of Judaism prior to the destruction of the temple reflect the social as well as the intellectual impact of biblical interpretation. Creative exegesis and the formation and maintenance of community are closely linked in this milieu.

**d. Comparative midrash.** This comparative study of midrash has developed out of the recognition of the formative role of biblical interpretation for the historical shape and creative thought of early Judaism. Nowhere is this role more apparent than in the formation of christological traditions in the NT which recent study has shown are marked at every stage by the creative use of scripture (see INTERPRETATION, HISTORY OF[S] §C). Comparison of exegetical traditions, midrashic structures and techniques, and the social settings of biblical interpretation provides important avenues of access to the literature, history, and thought of early Judaism. Such study must also take full account of the larger Greco-Roman milieu. The influence on midrash of Alexandrian textual scholarship and of Greco-Roman rhetorical forms has been recognized in recent scholarship.

**e. Problem of definition.** When the study of midrash was largely confined to the rabbinic tradition and literature, the varied nuances, emotive force, and broad cultural resonance of the term nonetheless had a point of reference in a particular tradition with its associated concepts, and in a certain type of literature where the word itself was for the most part to be found. The more recent tendency to associate midrash with the whole phenomenon of the use of scripture in early Judaism, and thus with groups, traditions, and

literature which differ markedly from the rabbinic, has raised the problem of what is properly denoted by the term. The suggestion has recently been made to apply the term exclusively to the special characteristics of a literary genre. However, such a modern limitation, whatever the gains in clarity—and this itself is doubtful—involves a serious attenuation of traditional usage. In its ancient loci, midrash refers to the activity as well as the results of biblical interpretation, and even in rabbinic tradition comes to expression in different literary forms.

At present, there appears to be no wholly satisfactory way to resolve this problem. On the one hand, midrash as the characteristic term for biblical interpretation in the rabbinic milieu has clear analogues with respect to presuppositions, procedures, and functions in literature outside and prior to the rabbinic movement. On the other hand, the term tends to lose its descriptive power when applied to a variety of uses of scripture in early Judaism, especially where the task is to discern the distinctive traditions of biblical interpretation. In this circumstance, it would perhaps be best to retain a broad, synthetic use of the term for describing the general characteristics and evolution of biblical interpretation in early Judaism, and to develop more specific classifications for distinguishing the special types and traditions. See also JUDAISM, EARLY RABBINIC[S] §1; CANON OF THE OT.

\***MILETUS.** In the reactivated excavations, new evidence both for "older" Miletus (the earliest Iron Age settlement) and for "oldest" Miletus (principally the Minoan and Mycenaean Bronze Age occupations) has been produced.

1. **Oldest Miletus.** Sherds and miniature vessels (votives?) from a house near the temple of Athena have been dated to the transition from the middle to the late Minoan periods (roughly the sixteenth century B.C.) and are said to be Cretan imports. This house, in view of its superior construction, decoration, and votives, may have been a shrine representing the founding of the cult later to be recognized as belonging to Athena. The Mycenaean colonists who immediately succeeded the Minoan traders seem to have felt completely secure on the unfortified site until the thirteenth century B.C. when they stretched a wall around the city. Although the full extent of the fortification has not been absolutely determined, the area enclosed seems rather extensive and may contain a palace and archives.

2. **Older Miletus.** The Mycenaean wall was destroyed ca. 1100 B.C., and this destruction marked a partial change in the city's population. A Mycenaean megaron beneath the Athena temple seems to have been refurbished and re-used as a temporary shrine until new cult installations were established in the Protogeometric and Geometric periods. Because Homer (*Iliad* II.868-69) mentions that Miletus was occupied by Carians at the time of the Trojan War, the new population has been tentatively identified as Carian. The seventh-century Archaic temple of Athena, due to its light construction and poor preservation, was regarded until recently as an unimportant, makeshift building. The recent excavations, however, have shown that it was a noteworthy megaron-shaped building with a single line of columns along the central axis, but no surrounding colonnade (more like a Mycenaean house than a classical Greek temple). This temple was destroyed at the end of the Ionian Revolt in 494 B.C. after the Persian sea victory by the island of Lade (just offshore from Miletus). Only after the corresponding Persian defeat in the Battle of Mycale (N of Miletus) in 479 B.C. was a new temple of Athena erected in a "modern" Greek form.

3. **Sanctuaries of Apollo in Miletus and at Didyma.** The principal divinity of Miletus was actually not Athena but Apollo. On the waterfront of the northernmost and best of Miletus' four harbors was an open sanctuary dedicated to Apollo Delphinios, protector and guide of all who cross the sea. PAUL probably walked by here when he landed in Miletus (Acts 20:15). A processional road led from this sanctuary through the city and

sacred gate to Miletus' most important shrine of Apollo miles to the S at Didyma, where recent excavations have also increased our knowledge of Miletus' early history. Directly below the later temple, the earliest structure was a late Geometric enclosure which probably contained the sacred spring and laurel tree of Apollo. In the Archaic period a small shrine or *naiskos* replaced the enclosure, and around the *naiskos* was constructed the first colossal temple of Apollo, which was also destroyed by the Persians in 494 B.C.

After being freed by ALEXANDER, the Milesians planned a new temple at Didyma on such a magnificent scale that it proved impossible to finish the building despite the distinguished patronage which the project received. Alexander aided the rebuilding; SELEUCUS Nicator (312-281 B.C.) continued the work and restored to Didyma the cult statue of Apollo Phileios, which the Persians had carried off to Ekbatana; and later the Roman emperor CALIGULA (A.D. 37-41) also attempted to complete the temple. Both TRAJAN (98-117) and HADRIAN (117-138) held the honorary position of chief priest while contributing to the construction. Diocletian (284-305) must have made some contribution after the oracle here advised him to continue the persecution of the Christians (Caecilius, *De mortibus persecutorum* XI.vi.7). Julian the Apostate (361-363) tried to revive the oracle by ordering the governor of Caria to burn the superstructure and dig up the foundations of the Christian chapels which had arisen inside Apollo's sanctuary (Sozomenus, *Ecclesiastical History* V.xx). Nevertheless, the Didymaeon oracle seems to have foreseen the victory of Christianity, because when Licinius petitioned the oracle concerning his struggle with Constantine (ca. A.D. 308), he received two lines from Homer (*Iliad* VIII.102-3) as a reply: "Old man, you are beset by young warriors, your strength is gone, and grievous old age is upon you" (Sozomenus I.vii). After the promulgation of the Edict of Theodosius (A.D. 385), a basilica was erected inside the temple of Apollo. See Fig. M10.

**MIRACLE STORIES, NT.** In the gospel tradition the miracle stories are generally presented as aspects of the inbreaking kingdom of God. The closest formal and material parallels to these stories are found in the rabbinic and Hellenistic popular stories of the first century A.D. which include, typically, a description of the incurable nature of the disease, its duration, mode of cure and the visible consequences. Form critics have classified the more compact narratives as either paradigms (Dibelius) or apothegms (Bultmann) and the more extensive accounts as tales (Novellen [Dibelius]) or simply miracle stories (Bultmann).

**MIRACLE WORKERS. 1. OT and Jewish miracle workers.** In the OT and the intertestamental writings the deeds performed by miracle workers or in their behalf (by direct divine intervention) serve to confirm them as chosen instruments of God. The prototype is Moses, through whom "signs and wonders" accomplish the deliverance of Israel from bondage. The divine sanction of the prophetic roles of Elijah and Elisha is likewise provided through miracles performed by them or at their word. In the apocalyptic tradition, God acts in a miraculous way to vindicate his people and is expected to act through signs and wonders (Dan. 6:27) to defeat the enemies of his people and establish his eternal rule (Dan. 7; 9:15 ff.). Eschatological deliverers working redemptive miracles are expected in a range of texts from 200 B.C. on (e.g., Ecclus. 48:5-10; Test. Levi 5:2 ff.; Apoc. Baruch 71:1-75:8).

**2. Hellenistic miracle workers.** The closest analogy to the itinerant ministry of Jesus and his disciples as portrayed in the gospels—and probably to the actual course of Jesus' peripatetic ministry of preaching and healing—is that of the Cynic-Stoic wandering teacher-preachers of Asia Minor and Syria (first and second centuries A.D.). There are also reports of miracles worked by certain rabbis, of whom Haninah ben Dosa is the best-known. Although there are formal analogies between stories of miracles attributed to these Jewish and pagan charismatics and those told of Jesus, the functions they serve are significantly different. The pagan miracles are presented either as the acts of tricksters

and charlatans exploiting a gullible public (so Lucian) or as demonstrations of the independence of these itinerant wise men from all earthly claims and limitations (as in Philostratus' *Life of Apollonius of Tyana*). The miracles preserved from the tannaic traditions of Judaism concern chiefly the personal authority of the rabbi as interpreter of the Law or his insight concerning the future or the identity of his demonic opponents.

**3. Miracle workers in the NT.** The gospels interpret Jesus' miracles as an essential part of a larger undertaking: the defeat of the evil powers in preparation for the coming of God's kingdom (e.g., Mark 3:22-26; Luke 11:19-20). His disciples are commissioned to extend his ministry (e.g., Mark 3:14-15), yet the authority of Jesus' name is reported to have been exploited by his followers (Acts 3:6) and also others (Mark 9:38). Paul views miracle-working as a gift of the Spirit (I Cor. 12:9-10).

**\*MITANNI.** A powerful empire in N Mesopotamia and surrounding regions, one of the four great powers in the Near East during most of the Late Bronze Age. Also known as Hanigalbat (mainly in Akkadian texts), Hurri, and Naharina (in Egyptian texts). The circumstances of Mitanni's rise are obscure. It seems to have been formed ca. 1600 B.C. (LOW CHRONOLOGY OF THE OT) through unification of numerous Hurrian (see HURRIANS; HURRIANS[S]) and Amorite states, under a dynasty of Indo-Aryan origin (a splinter of the Aryan migra-

tion to India). The number of Indo-Aryans in N Mesopotamia was relatively small, and their impact on the native population was limited: twenty to forty personal names of Sanscrit derivation; four Indian gods in the Mitannian pantheon; and about a dozen words, mainly relating to horses and chariotry, which entered the Hurrian language (often with Hurrian suffixes). One of the latter, *maryannu*, "charioteer," was also adopted by the West Semites of Syria and by the Egyptians. Otherwise, Mitanni was predominantly Hurrian in language, religion, and culture. But the role of the Indo-Aryans as political unifiers and military innovators must not be underestimated.

During the Hittite Old Kingdom (see HITTITES[S] §1), Hurri/Hanigalbat was strong enough to invade Anatolia at the time of Hattusilis I, to attack Mursilis I on his way back from Babylon, and to wrest northern Syria from his successors. Ca. 1520, under Thut-mose I, the first Egyptian ruler to have reached the Euphrates, the name *Mitanni* makes its appearance in Egyptian records and opens a century of intermittent warfare between the two powers for the control of Syria. Ca. 1500, the overlordship of the Mittannian king Barattarna was recognized by Alalakh (see ALALAKH TEXTS[S]) in northern Syria, Kizzuwadna in southeastern Anatolia, and Arrapha in the Trans-Tigris. In the next fifteen years, Mitannian influence spread into southern Syria and Palestine. Many Canaanite cities received Mitannian garrisons and rulers, whose successors continued to bear Hurrian and Indo-Aryan names over a century later. Thut-mose III reconquered Palestine in 1482, southern and central Syria in 1476-1474, but his domination of northern Syria was short-lived (altogether six years). King Shaushshatar of Mitanni (mid-fifteenth century) still reigned over a vast empire

The Mitanni Empire ca. 1450 B.C.

from the Zagros to the Anti-Taurus and the Mediterranean and from southern Armenia to the middle Orontes. His successor Artatama concluded peace with Thut-mose IV (ca. 1420), and relations between the two empires became cordial. Tushratta, the great-grandson of Artatama, repelled the first attack on northern Syria by the Hittite king Suppiluliumas (ca. 1386), but twenty years later Suppiluliumas invaded Mitanni from the N, sacked its capital, and deprived it of its Syrian dependencies (see HITTITES[S] §1). This humiliation was followed by the murder of Tushratta and a civil war between his successors. Suppiluliumas, by backing one of the pretenders, was able to impose a Hittite protectorate over Mitanni. However, the decline of Mitanni played into the hand of its former vassal, Asshur. The Assyrian king Adad-nirari I, early in the thirteenth century, invaded Mitanni and made it his tributary; and his son Shalmaneser I destroyed the last remainders of Mitannian statehood and annexed it to Assyria. The massive resettlement of N Mesopotamia by Arameans in the following two centuries obliterated the last traces of the Hurrian ethnic element.

The capital city of Mitanni was Washukkanni, plausibly identified with the huge mound of Tell Fekheriyeh near Rās el-'Ain, at the principal source of the Habur. Limited excavations conducted at that site failed to disclose the royal palace or any Mitannian documents.

Mitanni had a profound influence on the Hittites, especially at the time of the New Kingdom. Hurrian deities and cults were adopted, and Hurrian myths and tales were translated into the Hittite language. Many Hurrian words also entered the Assyrian dialect of Akkadian. Some scholars found parallels between the family law of Nuzi and the marriage practices of the patriarchs as described in Genesis, and believed that the Hebrews had borrowed them from the Hurrians. Others denied that there was any particular similarity between the two sets of customs (see NUZI §2; NUZI[S]; MARI[S] §8). Besides implanting a number of Indo-Aryan and Hurrian names in Palestine, one of which may have survived to the time of David (see ARAUNAH), they transmitted to the Canaanites the tactics of chariotry warfare (associated with the Canaanites in Judg. 1 and 5) and the ensuing rise of charioteers as an upper class. Even though ethnic Hurrians formed a small minority in the S Canaanite society, the Egyptians applied the term *Ḥuru* to the whole population of Palestine long after the end of Mitanni. This term was, in turn, taken over by certain sources of the OT to designate pre-Hebrew populations in southern Palestine and Edom (see HORITE).

### MNEMONIC DEVICES. I. The alphabetic acrostic.

The use of the successive letters of the alphabet to introduce consecutive verses is an external principle of arrangement which, at times, subordinates sequence of thought to a formal literary structure. Though some have attributed this device to the magical power of letters (Löhr), it is more likely an expression of the skill of the writer, who, in his attempt at conveying the idea of totality or comprehensiveness of an emotion or a belief, utilizes a pedagogic memory scheme, which may have its roots in wisdom circles (Munch, Gottwald).

In the Hebrew Bible there are fourteen literary units which completely or partially employ the letters of the alphabet; all but one (Nahum) are to be found in the Hagiographa. The complete abecedaries, consisting of all twenty-two letters of the Hebrew alphabet, are Ps. 111 (note the use of *šin* for *šim* in vs. 10b) and Ps. 112, where successive letters initiate each half verse; Ps. 119, an acrostic tour de force, which consists of stanzas of eight lines apiece headed by the same letter; Prov. 31:10-31, where the initial letter heads each full verse; and the first four chapters of Lamentations. Lam. 3 consists of twenty-two stanzas of three lines apiece, each headed by the same letter. The last chapter of Lamentations also consists of twenty-two verses, but is not arranged alphabetically. An interesting transposition of the letters 'ayin and pēh occurs in Lam. 2:16-17; 3:46-51; and 4:16-17. This variant order of letters also lies behind the LXX's translation of Prov. 31:25-26, where the Hebrew 'ayin and pēh verses are reversed. It has also been reasonably suggested that the order pēh, 'ayin was original to Ps. 34:15-16 [H 16-17], since the subject of the *zadi* verse (17 [H 18]) refers back to the subject of the 'ayin verse (15 [H 16]), and not to that of the pēh verse (16 [H 17]).

An incomplete alphabetic arrangement is found in Ps. 25, where both the *wāw* and *qōph* verses are missing, and the letter *rēš* heads two separate lines. Possible reconstructions of both missing verses, however, have been offered by modern critics. Ps. 34 also lacks a line for the letter *wāw*, and both Pss. 25 and 34 conclude with an additional verse beginning with the letter pēh. Ps. 37, where the letters begin alternate verses, lacks a verse beginning with the letter 'ayin, which has been reconstructed in vs. 28b on the basis of the LXX's translation. In the Hebrew text of Ps. 145 only the *nūn* verse is missing. However, here too the verse can be supplemented by the Greek and Syriac translations, and a similar *nūn* verse is now found in 11QPs<sup>a</sup>. Traces of an acrostic arrangement are also present in Pss. 9-10, possibly a single psalm as evidenced by the Greek translation, and in Nah. 1:2-9. To be noted also is the sequence of the three consecutive letters *lāmedh*, *mēm*, and *nūn* in Song of S. 4:9-11.

Another incomplete acrostic composition is found in the Apoc., in Ecclus. 51:13 ff. Acrostic literary works are also found in Hellenistic and Roman poetry (Marcus).

The phenomenon of word and sentence acrostics is also present in cuneiform literature. The "Baby-

lonian Theodicy" (*ANET* [2nd ed.], pp. 438-40) (dated between 1000-800 B.C.) is an acrostic poem originally consisting of twenty-seven stanzas of eleven lines each. Each line in each stanza starts with the same sign, and when completely restored (only nineteen stanzas have been preserved) spells out the authorship of the work. Five other acrostics are known from Akkadian literature, with the two dated examples coming from the reigns of Ashurbanipal and Nebuchadrezzar II, seventh and sixth centuries B.C. For attempts to discover acrostic devices purporting to convey the name of the author in biblical psalms, see Driver (pp. 206-8).

**2. Concatenation of catchwords, phrases, or ideas.** Associative reasoning was well known to students of Talmudic literature and is now being more and more recognized as a key to unraveling the arrangement of otherwise disparate prose, legal, prophetic, psalm, and wisdom sections. A few selected examples from different literary genres will be noted.

The legal portion of the Book of the Covenant (Exod. 21:12-22:16) has an arrangement of its individual sections and laws based upon the principle of associative reasoning: (a) 21:12-27, laws pertaining to crimes committed by one man against another; (b) 21:28-32, laws pertaining to crimes committed by a man's property (an ox) against another man; (c) 21:33-36, laws pertaining to damages caused by one man's property (a pit) against another's property (an ox); (d) 22:1-17 [H 21:37-22:16], laws pertaining to crimes committed by one man (directly or indirectly) against another's property and cases of natural forces. In sum: (a) man against man; (b) property against man; (c) property against property; (d) man and natural forces against property. The individual laws in each section are also linked together by similar principles (Paul). It has also been suggested that an associative external and internal ordering is present, too, in the various cuneiform legal corpora.

In the book of Numbers the regulation of the priestly dues (5:5-10) is followed by the ordeal of jealousy (5:11-31), which in turn precedes the laws pertaining to the Nazirite (6:1-21). These three originally unconnected sections are linked to one another by key phrases central to each unit: the first two by *למעל מעל*, "breaking faith" (5:6; cf. vs. 12, "acts unfaithfully"), and the second two by *ראש . . . וצרע* (5:18, "unbind the hair"; 6:5, "hair . . . grow long"). (Cassuto has called attention to many such literary attractions in his commentaries to Genesis and Exodus.) Num. 15:22-23 serves as a prologue to the laws pertaining to those who unwittingly fail to observe the commandments. A sin offering is then prescribed, which must be brought by the community (vs. 24-26) or by the individual (vs. 27-29) for inadvertent sins. This section is followed in turn by the law for anyone who "with a high hand," that is, willfully and defiantly, violates the commandments. He is to be "cut off from among his people" (vs. 30-31). The immediately following literary unit, pertaining to a man who is caught gathering wood on the sabbath day, serves as an

illustration of such a defiant act, and, as to be expected, the sinner is put to death (vs. 32-36). Finally, the chapter concludes with a seemingly totally disconnected section, the instructions for making fringes upon the corners of the garments (vs. 37-41). The key to the understanding of the position of this unit is actually provided by the reason for this specific law. Its religious motive states that the man is to wear fringes so that when he sees them he will "remember all the commandments of the Lord, to do them." In other words, the fringes serve as a reminder for the observance of the Law, and thus constitute the antithesis of the preceding prescriptions, which pertain to those who inadvertently or willfully disregard it. Compare vs. 22, "if you fail to observe any one of the commandments," and vs. 40, "thus you shall be reminded to observe all my commandments" (Paul).

Such mnemonic devices are prevalent in prophetic literature as well. For example, the six oracles against the nations, which are placed at the beginning of the book of Amos (1:3-2:3), are arranged in accordance with an internal literary order which weaves the separate oracles into a cohesive and sequential pattern. Each link in this chain of prophecies is connected to the next by the concatenation of key words, phrases, and ideas common only to the two oracles contiguous to one another (Paul). The prophetic book which most clearly demonstrates such linguistic and thematic associations is Second Isaiah. Key words present within the individual prophecies pass from one prophecy to another, forming a remarkable literary bond (Mowinckel, Kaufmann).

For another illustration, note how the unit which concludes with Isa. 1:9 mentions Sodom and Gomorrah. The topically unrelated unit 1:10 ff. begins with these same names. The sequencing of the units may reflect the aid to memorization which such "catchwords" provided. On the transmission of the prophetic materials, see LITERATURE §6; see also TRADITION, ORAL and supplementary article.

Such aids to the memory are also noticeable in the arrangement of many of the psalms and proverbs, and even, at times, in the arrangement of the individual sections in the Song of Songs. Note, for example, that almost all the literary units which contain the word *לבנון* (Lebanon) are to be found in ch. 4 (vs. 8, 11, 15), and that the first of these sections is preceded by a lyrical section which contains, toward its conclusion, the somewhat similar-sounding word *לבונה* (frankincense).

**Bibliography.** For Talmudic and post-Talmudic usages of acrostics and other mnemonic devices, see *Encyclopaedia Judaica* (1971), II, cols. 230-31; XII, 187-90; and XVI, 1424-25. These authorities, as well as medieval biblical interpreters, frequently used inferences from the juxtaposition of sections as an exegetical principle.

\***MOAB.** Knowledge of Moab in the earlier periods, the Proto-Urban (or the transition between the Chalcolithic and the Early Bronze) and, again, between the end of the latter period and the beginning of Middle Bronze, has expanded in recent years, partly because of excavation and partly because of increased scholarly interest in the problem of the Amorites and the historical setting of the patriarchs.

1. **The Bronze Age.** At Bab edh-Dhra', on the Lisan peninsula, a vast cemetery covering the range of these prehistoric periods has been found, complementing a walled city of the EB period which had been discovered in the 1920s. This cemetery was probably used as a communal burial ground for different groups dwelling in the area—perhaps in the **CITIES OF THE VALLEY**. See **TOMB[S]**.

An alternative name for the fortified city on the Lisan is Tell el Alawiyyin, "the tell of the giants," thus continuing the biblical tradition (Deut. 2:10-11) that the predecessors of the Moabites were a race of giants known as the **EMIM**.

The findings at Bab edh-Dhra' will have an important bearing on the history of Palestine during the twenty-fourth to nineteenth centuries B.C. and may help to solve the problem of the **AMORITES** and the part they played in the eclipse of the EB urban civilization and the subsequent urban revival. The excavations at **AROER** have underlined the theory that much of Moab was unoccupied during the greater part of the second millennium. See **MOAB §3b**.

2. **Iron Age.** In the Iron Age, Aroer played an important function as a fortress, either in conjunction with **DIBON** and/or as a vital link in the security chain of communications along the **KING'S HIGHWAY**. The earliest occupation at Dibon coincides almost exactly with King **MESHA** (ca. 840-830 B.C.). Excavations at Tell Hesban have provided no archaeological substantiation for the traditional identification with biblical **HESHBON**, the capital of Sihon, king of the Amorites (Num. 21:26). In the Neo-Assyrian period, there were flourishing communities at both Dibon and Hesban, and both testify to a general decline in sedentary life from the end of the sixth down to the end of the fourth century B.C.

3. **Religion.** From Moab comes attestation of a

cultic practice which, though attested W of the River Jordan at places such as **GEZER** and **HAZOR**, has not been discovered in the other states making up Transjordan: a series of stones, or monoliths, usually unadorned, either in a straight or in a slightly curved N/S line. So far, they have been found at Bab edh-Dhra', Ader, Khirbet Iskander, El Mugheirat, and Lejjun, all of which sites have EB/MB occupation. These monoliths are a well-recognized and common feature in Semitic religions, and references to them in the OT are manifold. See **PILLAR**; **PILLAR[S]**; **MOAB §3a**, with Figs. 57-58.

Stockton, "Stones at Worship," *AJBA*, I, no. 3 (1970), 58 ff.; A. D. Tushingham, *The Excavations at Dibon (Dhiban) in Moab*, *AASOR*, XL (1972). C.-M. BENNETT

**MONOTHEISM.** The belief in and the exclusive worship of one god. Strict monotheism, which implies the denial of the existence of other gods, is a fairly rare phenomenon represented primarily by Judaism, Christianity, and Islam, and to a certain extent Zoroastrianism.

The long-prevailing evolutionistic school of comparative religion held monotheism to be the last and highest stage in the evolution of religions. An opposite view has been advocated by such scholars as Lang and Schmidt, who argue in favor of primitive monotheism as the origin of religion. A useful distinction was introduced by Pettazzoni, who maintained that strict monotheism comes into existence only as a protest against polytheism. Primitive monotheism, which is found among many illiterate peoples and tribes, is much more vague and never worked out theoretically. It involves the belief in a high god, who is often located in or identified with the sky and who is believed to be the master of man's destiny (Widengren). This, however, does not exclude the belief in other gods of a lower rank, but the high god is usually accepted as superior.

The historical origin of Israelite monotheism is a matter of debate. Even the traditionally accepted role of Moses in the formation of Israelite religion is called into question by many, and there is in any case no consensus as to what elements in Israel's faith really go back to Moses. See **MOSES[S]**; **CREDO**, **ANCIENT ISRAELITE[S]**.

If the Decalogue (see **TEN COMMANDMENTS**) and the laws of Exod. 34 are accepted as documents of early Mosaic religion, it must be admitted that they do not teach strict monotheism. The first commandment (Exod. 20:3; Deut. 5:7) forbids Israel to worship gods other than Yahweh, but the existence of these gods is not questioned. The same is true of Exod. 34:14. In other words, this amounts to monolatry (rather than to monotheism): Yahweh is the God of Israel, and they shall worship him exclusively, but other peoples may have other gods and be allowed to worship them. Accordingly, Judg. 11:24 presupposes Chemosh to be the god of the Moabites, just as Yahweh is the god of

Israel, and I Sam. 26:19 states that David had to serve other gods dwelling outside Israel. II Kings 5:17 shows that, in the opinion of Naaman the Syrian, Yahweh could be worshiped properly only on Israelite soil. Not even Deut. 6:4, "Hear, O Israel, Yahweh our God, Yahweh is one (or: is one Yahweh)," expresses strict monotheism. Either it refers to the oneness of Yahweh in contradistinction to the many gods of other nations, or it can be taken to emphasize that there is only one Yahweh and not several local deities as there were local forms of BAAL. The emphasis is on the oneness of Israel's God, not on his being the only and exclusive God of all the world.

There are, however, several traits in the early Israelite conception of God that could easily develop into strict monotheism. First of all, Yahweh appears as an ambivalent high god, from whom both good and evil derive. In the song of Hannah (I Sam. 2), we learn that Yahweh "kills and brings to life; . . . makes poor and makes rich; he brings low, he also exalts" (vss. 6-7). The same is later stated by Deutero-Isaiah: "I form light and create darkness, I make weal and create woe" (45:7). Thus a monistic view pervades the religion of Israel. Yahweh is not only the giver of good gifts, wealth, victory, and happiness, but also the evil in human life comes from him (Amos 3:6). Deut. 32:39 had developed the statement "I kill and I make alive; I wound and I heal" in a monotheistic direction: "There is no god beside me." It is only in later Judaism that a dualistic view develops, deriving evil from a separate being, SATAN.

Secondly, the Song of the Sea (Exod. 15) contains the question of incomparability: "Who is like thee, O Lord?" (vs. 11). A similar question is found in Ps. 113:5-6a: "Who is like the Lord our God, who is seated on high, who looks far down?" Such questions are common in Akkadian hymns in a polytheistic environment, proclaiming the absolute superiority of the deity in question. In Israel this question extols Yahweh above the gods of other nations and brings out his superiority.

Thirdly, the Psalms praise the greatness of Yahweh as the king of the world, which implies that he is the creator and ruler of the whole world and "a great King above all gods" (Ps. 95:3). Sometimes such psalms contain a reference to the futility of other gods, e.g.: "All the gods of the peoples are idols; but the Lord made the heavens" (Ps. 96:5). The word for "idols," *'e'ilim*, sounds very much like *'e'lôhîm*, "god," but has a pejorative sense: futile gods who are not really gods. There are also statements which call the other gods *lô' 'e'lôhîm*, i.e., "not-gods." One example is in Deut. 32:16-17: "They stirred him to jealousy with strange gods; . . . they sacrificed to demons which were no gods, to gods they had never known." Similar statements are found in Jer. 2:11; 5:7. The context in these passages indicates that the "non-gods" are powerless and of no avail.

The prophets sometimes allude to the fact that the other gods are nothing but "the work of men's hands" (Hos. 8:6; 13:2; Isa. 2:8, 20; Mic. 5:13 [H 12]). Hosea even adds: "it is not God" (8:6). Even if these polemic statements lack the positive assertion that Yahweh alone is God, they come very

close to a monotheistic attitude. It should also be kept in mind that in the prophetic literature there are allusions to Yahweh as the sovereign master of world history. Amos 9:7 asserts that just as Yahweh brought Israel out of Egypt, he also brought the Philistines from Caphtor and the Syrians from Kir. The majestic poem in Isa. 10 makes mighty Assyria the instrument of Yahweh's wrath without any initiative of its own; it is Yahweh who is active in and behind the military exploits of Assyria. This of course excludes the activity of other gods. Explicitly monotheistic statements, however, are not found earlier than Deutero-Isaiah. He repeats the argument that the gods of the nations, especially of Babylon, are nothing but stone, wood, gold, and silver, and have no power at all (40:18-20; 44:9-20; 46:6-7). The question of incomparability recurs: "To whom then will you liken God, or what likeness compare with him?" (40:18; cf. 40:25). "To whom will you liken me and make me equal, and compare me, that we may be alike?" (46:5). The answer is self-evident: there is none. Accordingly, there are also positive statements: "I am God, and there is no other; I am God, and there is none like me" (46:9); "I am the Lord, and there is no other, besides me there is no God" (45:5). In a way, this monotheism is the result of opposition to the polytheism of the surrounding nations and corresponds to Pettazzoni's definition cited above.

Two similar statements in Deuteronomy are probably approximately contemporaneous with Deutero-Isaiah. One is 32:39, "There is no God beside me," immediately following a monistic statement. The other is ch. 4, the latest chapter of the prologue, which contains clear allusions to the Exile: "The Lord is God; there is no other besides him" (vs. 35; cf. vs. 39). It is probable that both these statements are dependent on the same cultic tradition as Deutero-Isaiah.

Express references to monotheism are comparatively rare in the postexilic books of the OT. In the book of Malachi there is a reference to Yahweh receiving true worship and pure sacrifices all over the world (1:11), but the meaning of this verse is somewhat obscure. The book of Daniel contains several allusions to Yahweh's superiority to the gods of Babylon (2:21, 47; 3:29; 4:35 [Aram. 32]; 6:26 [Aram. 27]), but none of these passages deny the existence of these gods; they do state, however, that Yahweh is the almighty ruler of the world, while the other gods are completely useless.

In the intertestamental literature, monotheism is taken for granted. It is typical that the God of Israel is often referred to not by his proper name, Yahweh—even the pronunciation of the divine name was avoided—but by means of several circumlocutions: the Almighty One, the Lord, the Holy One, the Name, etc. Strangely enough, this monotheistic attitude is coupled with a tendency toward a dualistic view, insofar as evil is ascribed to a being different from God, called Satan, Mastema, the Angel of Darkness, etc. At the same time, certain divine activities acquire semi-independence as hypostases, e.g., Wisdom and the Word (*memra*); and the importance of the angels is increased.

None of these phenomena, however, is regarded as an infringement on monotheism.

\***MOSES** [מֹשֶׁה, from Egyp. *mśy*, "to be born"]. The quest for the historical Moses continues, with no evidence that scholars are approaching a consensus. The article MOSES can still be accepted as a fair and balanced study of critical problems, while taking a moderate position on important issues. But much significant work has been done in the intervening years.

**1. Methodological matters.** For those who accept the biblical traditions as a literal and accurate historical account there are few problems. Scholars who employ the critical tools of biblical research, however, are not so blessed. SOURCE CRITICISM has led to the position that reliable information concerning Moses in the PENTATEUCH is preserved by and large in the J and E documents rather than D or P. Relying on source analysis, archaeological data, and geographical considerations, Beegle constructs a biography of Moses which generally accepts the JE epics as providing fairly detailed and accurate information. Employment of FORM CRITICISM and TRADITION CRITICISM, however, complicates the quest. Von Rad and Noth delineate four major themes in the Pentateuch connected with Moses: exodus from Egypt, revelation at Sinai, wandering in the wilderness, and entrance into the Promised Land. If, in its preliterary existence, the Sinai tradition was formed as the cult legend of a covenant festival, and the other themes also developed in separate settings among the various tribes, then the question emerges as to whether Moses could have been involved in more than one of these (see CREDO, ANCIENT ISRAELITE[S]). If these traditions preserve the memory of separate historical experiences of different tribes, the answer would apparently be in the negative. Noth concluded that the only authentic Mosaic tradition concerned his tomb in Transjordan, and subsequently, Koch announced the death of the view that Moses was in any sense the founder of Israel's religion. Thus a great gulf would exist between the historical Moses and the Moses portrayed by J and E, to say nothing of D and P. Such minimal conclusions need not lead to theological nihilism, as is evinced by the creative commentary by Childs, which deals with literary and theological matters but virtually no historical questions. Many other scholars who have followed this general critical path have been less skeptical concerning the historical value of the traditions, but have tended to locate Moses in either the Sinai or the Exodus themes. For example, von Rad and Seebass (at least in his first book) opted for Sinai, while Smend and Schnutenhaus located him in the Exodus event.

**2. Sinai and the suzerainty treaty.** An important

contribution was made by Mendenhall, who contended that Moses used an international suzerainty treaty form to express the covenant relation between Yahweh and his people under Moses at Sinai (see COVENANT §§1a, 3a; COVENANT, MOSAIC[S]). The preamble, in which the king identifies himself, may parallel Exod. 20:2a: "I am the Lord your God"; and the historical prologue, in which the suzerain recounts the benevolent deeds he has performed for his vassal, recalls Exod. 20:2b: "who brought you out of the land of Egypt." Acceptance of this position would lead to the conclusion that Moses was involved in both the Sinai and the Exodus events. If so, there would seem little reason to deny his original connection with the others as well.

Subsequent research, particularly by McCarthy, has rendered this position less compelling than originally believed. He pointed out that the blessings and curses, essential elements of the suzerainty treaty, do not appear in the Decalogue. Equally important, two essential elements of the covenant at Sinai—the theophany and the ritual for sealing the compact—are not found in the suzerainty form. One might add that the J covenant tradition in Exod. 33-34, a parallel of the E account in Exod. 19-24, reveals almost no evidence of treaty influence. While there may be traces of such influence in the E tradition about Sinai, in Josh. 24 and unquestionably in the book of Deuteronomy, whether Moses himself used such a form is quite uncertain. See EXODUS, BOOK OF[S] §§2, 3.

**3. A portrait of the historical Moses.** Even apart from heavy reliance on the suzerainty treaty hypothesis, it is possible for scholars to sketch a portrait of Moses which may not be too far removed from the historical man. This has been done by Schmid, Hermann, de Vaux, and Newman (who no longer holds that Moses made use of a suzerainty treaty at Sinai).

The recognition that the major traditions developed independently during their early oral existence does not preclude the possibility that Moses was involved in all of them. The crucial experiences of Moses and of the Hebrews under his leadership could have been remembered on different cultic occasions, just as in the Christian church the birth of Jesus is remembered in one season with certain liturgical traditions and the death and resurrection of the same Jesus at other times with different traditions. The traditions of the plagues and escape from Egypt could have been formed in connection with the Passover; the Sinai legend involving the same group and the same Moses could have developed separately in connection with covenant worship, and so on. These traditions would have been brought together over an extended period in premonarchical times and eventually resulted in the J and E epics.

Viewing the stories in such a way does not permit the writing of a detailed biography, but it opens up the possibility of sketching the general contours of his life and work. And those contours in broad outline conform to the present text of the OT account.

\***MOSES IN THE NT.** Moses is named seventy-eight times in the NT (not counting John 8:5), most frequently in citing or alluding to the scriptures attributed to him. As in contemporary Greek Jewish writers, he appears most frequently as law-giver and prophet. TORAH in its narrow sense can be called "the law of Moses" (Luke 2:22; 24:44; John 7:23; Acts 13:39; 15:5; 28:23; I Cor. 9:9; Heb. 10:28) or "the book of Moses" (Mark 12:26) or simply "Moses" (Luke 16:29, 31; 24:27; Acts 15:21; II Cor. 3:15). A citation may be introduced by "Moses commanded," "Moses said," or the like (Mark 1:44; Matt. 8:4; Luke 5:14; Mark 7:10; 10:3-4; Matt. 19:7-8; Mark 12:19; Matt. 22:24; Luke 20:28, 37; John 1:45; cf. 5:45; Acts 3:22; 26:22; Rom. 10:5, 19; Heb. 8:5). More carefully expressed, the law was not given by Moses, but through him (John 1:17); he was its "mediator" (μεσίτης, Gal. 3:19). "Moses said" (Mark 7:10) is the equivalent of "God said" (Matt. 15:4, from Gr.); Moses is the one to whom "God has spoken" in a unique way (John 9:29; Acts 7:44; Rom. 9:15; cf. Num. 12:7-8; Deut. 34:10). In short, he was the prototypical prophet. The early Christians seized on this aspect of the tradition in order to legitimate their reinterpretation of Pentateuchal texts as prophecies of the events which had constituted their own faith.

Since not only individual commandments and the five books of the Torah but all the "customs" (ἄ ἔθνη) of Judaism were thought to have been transmitted by Moses (Acts 6:14; 15:1), the whole institutional and ritual structure of Judaism could be identified with his name (Acts 6:11; 21:21). When Matt. 23:2 speaks of "the chair (καθέδρα) of Moses" (JB) and John 9:28 of "disciples of Moses," they are probably reflecting the tendency

of the rabbinic academy to present itself as a "school" whose founder was "Moses our master."

The early Christian writers used elements of the story of Moses in a variety of ways: as examples for admonitions to the community, as tacit or explicit features in their portraits of Jesus, and for both positive and invidious comparisons to clarify the relationship of Christianity to Judaism.

1. **Moses in the Pauline letters.** In I Cor. 10:1-10 a parenthetic homily (see PARENESIS[S]) presents a series of incidents from the Exodus story (Passover Haggadah?) as cautionary "models" (τύποι, vs. 6, author's trans.; cf. vs. 11, τυπικῶς συνέβαινε). Paul's summary (vs. 11) closely resembles the eschatological exegesis in the *pesharim* from Qumran (see DEAD SEA SCROLLS[S] §8; MIDRASH[S] §3; INTERPRETATION, HISTORY OF[S] §C). Paul appears to move in the direction of an explicit Moses/Christ typology in vs. 2, yet nowhere else in the undisputed letters of Paul are Moses and Christ paralleled in such a way that the one could be called a "type" of the other. In Eph. 4:7-11 there is perhaps an implicit typology, for Ps. 68:18 (LXX 67:19), applied here to the "gifts" of Christ following his exaltation, refers in rabbinic midrash to Moses' gift of the Torah, which he received in heaven after ascending from Sinai.

In II Cor. 3:7-8 Paul contrasts Moses with Christ, but compares him with himself as apostle of the "new covenant." His peculiar exegesis of Exod. 34:29-35 is a parody of Jewish interpretations, which took the shining of Moses' face to represent the glory of God's image, lost by Adam but restored in the giving of the Torah. There is probably an allusion in 3:18; 4:6, and in I Cor. 13:12 to Num. 12:8. In at least one other place Paul compares himself with Moses: his rhetorical offer to sacrifice his own salvation for that of Israel (Rom. 9:3) echoes Moses' intercession after the sin of the golden calf (Exod. 32:32).

2. **Presynoptic tradition.** Moses and ELIJAH appear together in the Transfiguration narrative (Mark 9:2-10; Matt. 17:1-9; Luke 9:28-36), presupposing the tradition that Moses like Elijah was assumed into heaven at the end of his life. Matthew and Luke strengthen the allusion to Exod. 34:29 (Matt. 17:2; Luke 9:29). Other elements in the story are also reminiscent of the Sinai THEOPHANY: the mountain, the cloud that overshadowed the group, the voice of God (quoting Deut. 18:15b?), Peter's desire to erect tents (*sukhoth*?); note also Mark 9:2, "after six days" (cf. Exod. 24:16); Luke 9:31, *exodos* (see below).

The stories of the miraculous feeding (Mark 6:32-44; Matt. 14:13-21; Luke 9:10-17; Mark 8:1-10; Matt. 15:32-39) may have contained from the outset some allusions to the manna miracle, which become explicit in the Johannine version (see below). THE TWELVE disciples inevitably recall Israel's TWELVE tribes and could suggest Moses' installation of twelve tribal leaders (cf. Num. 1:4; 7:84), but NT texts make nothing of this except perhaps in Matt. 19:28; Luke 22:30. The Q version of Jesus' temptation contains a secondary allusion to Moses' forty-day fast (underlined by Matthew's addition, "and forty nights").

3. **Luke-Acts.** The fullest recital of the Moses

saga in the NT is in the speech of Stephen (Acts 7:17-44), which contains traces of the elaboration of the story known from extant Jewish writings in Greek. The author emphasizes Moses' rejection by the people whom he was sent to save (vss. 27, 35, 39-41). The summation (vss. 51-53) asserts that the same treatment was accorded all the prophets, culminating in Jesus, whose coming, betrayal, and murder not only repeat the pattern, but also fulfill the prophets' predictions. The parallel between Moses and Jesus is emphasized by the formal structure of statements about them (compare 7:35 with 2:36; 3:14; 4:10; 5:30-31), while the fulfillment of prophecy is specified by the quotation of Deut. 18:15 both here (vs. 37) and in 3:22. The numerous references to Jesus' prophetic mission, beginning with the solemn appropriation of Isa. 61:1-2 in the Nazareth sermon (Luke 4:16-30), must be read in the same light. Like Moses, Jesus was the "prophet mighty in deed and word" (Luke 24:19; Acts 7:22) and more: the anointed ruler and leader who was destined "to redeem Israel." Luke could call that redemption Jesus' *exodos* (Luke 9:31). Luke's account of Jesus' ascension in Acts 1:9-10 may have been modeled after legends of Moses' translation. The seventy missionaries of Luke 10:1-12 may be related to the seventy elders of Num. 11:24-30. The Pentecost account in Acts 2 contains imagery found in haggadic versions of the Sinai theophany.

4. **Matthew.** In the Matthean infancy narrative, not only the direct verbal allusion to Exod. 4:19 in Matt. 2:20 but also the hostility of the king, the slaughter of children, the warning dreams, and perhaps the initial impulse of the father to divorce the mother all echo motifs found in haggadic accounts of Moses' birth. In late versions of the latter the portentous star and the astrologers who interpret it also appear, but this element originated, so far as Jewish folklore is concerned, in the Abraham legends. Matthew's setting of the SERMON ON THE MOUNT suggests a deliberate allusion to the Sinai theophany (compare 5:1 with Exod. 19:3), but attempts to find an elaborate typology portraying Jesus as "the new Moses" and the five discourses in Matthew as "the new Torah" are not convincing.

5. **John.** The Fourth Gospel shows a remarkable ambivalence toward the Moses traditions, to which it makes numerous allusions. The law which was given through Moses is both parallel to and supplanted by the "grace and truth" which came "through Jesus Christ" (1:17). Jesus is the one of whom "Moses in the law . . . wrote" (1:45; 5:46) so that a faithful comprehension of the scriptures would discover testimony to Jesus (5:39, 46-47). Like Moses, Jesus conveyed to his disciples both God's words and "new commandment" and God's name (17:6, 8, 11-12, 26). Also the manna (6:31-58) and Moses' lifting up of the serpent (3:14) are supplanted by Jesus. In each case John insists that Jesus' gift—finally identical with himself, given in the crucifixion—grants eternal life, qualitatively superior to the sustenance or temporal healing brought by the corresponding gift of Moses. Like Moses in Samaritan and Jewish tradition, Jesus is the agent of God. He is the expected

prophet like Moses (6:14; cf. 4:19, 25b, 29; 7:40-52; 9:17), yet greater than Moses as he is greater than Jacob (4:12 ff.) and Abraham (8:53 ff.), so believers are forced to choose between being disciples of Moses and being disciples of Jesus (9:28). Those who put their trust in Moses (as advocate on the last day) will find him instead their accuser (5:45); those who rely on Moses' heavenly revelations are misled, for "no one has ascended into heaven but he who descended from heaven, the Son of man" (3:13).

6. **Hebrews.** A certain ambivalence toward the Moses tradition is evident also in Hebrews; the author wants to show not only that Jesus, like Moses, is superior to the angels (chs. 1-2), but also that Jesus as Son of God and anointed high priest of the heavenly sanctuary is far superior to Moses the servant of God, who founded the earthly copy of that sanctuary. He accomplishes this by an ingenious midrash (3:1-6) combining Num. 12:7 with the Nathan oracle (I Chr. 17:12-14) and the Eli oracle (I Sam. 2:35). Other references to Moses as leader of the Exodus and mediator at Sinai (3:16; 8:5; 9:19; 10:28; 12:18-21) all serve the principal warning theme that runs through Hebrews: if the old law and cultus mediated through Moses, though a mere shadow of the heavenly reality, brought such severe penalties to those who were unfaithful to it, how much more must constant faith and endurance be required in the new covenant mediated through Jesus? In 11:23-28, on the other hand, Moses becomes a direct paradigm of the requisite faith and endurance.

7. **Other passages.** As Moses led a hymn of triumph beside the Sea of Reeds, according to an early rabbinic midrash, so he will lead Israel in song when the dead are raised. Thus in Rev. 15:3 the Christian witnesses who have conquered "the beast" (ch. 13) sing in heaven "the song of Moses, the servant of God, and the song of the Lamb." Features of Moses and Elijah are used to portray the "two witnesses" of ch. 11; certainly the plagues of vs. 6, like the other plagues mentioned in Revelation, recall those of Moses. Exodus motifs are prominent in 12:13-16, but Moses is absent. Legendary expansions of the Moses saga are taken up in both II Tim. 3:8 and Jude 9. In the former, the Egyptian magicians who opposed Moses (unnamed in scripture, but provided by folklore with names and histories) become types of Christian heretics. In Jude the restraint shown by Michael as he struggled with Satan for Moses' corpse (recounted in the ASSUMPTION OF MOSES, according to Origen *et al.*) becomes a model for proper piety toward angels, violated by those whom the author opposes. See also INTERPRETATION, HISTORY OF[S] §C.

W. A. MEEKS

**MOT.** The word for death, *māweth*, *mōth* (*mawth*), is several times personified in the OT (e.g., Jer. 9:21 [H 20]; Job 18:13, NEB). In some instances, the term is a personified place name, standing in synonymous parallelism with Sheol, or with another term for the abode of Death (Isa. 38:18; Hos. 3:14; Job 28:22; 30:23). "Death" as a designation of the infernal realm derives from the name of its ruler, Mot, alluded to under a variety of epithets, such as "king of terrors" (Job 18:14), "Ravenous One" (Job 18:12, ABi) and "first-born" (Job 18:13). Cf. ABi, XV (3rd ed.), 134-35.

Philo of Byblos mentioned a deity Muth, Death, compared to Pluto. Texts from ancient Ugarit have brought us fuller information on Mot/Death as the chief foe of BAAL.

Mot's realm in the Ugaritic texts is commonly designated simply as "earth," *ars*. The entrance to his infernal abode is marked by twin mountains with names still unexplained, corresponding apparently to the "dark mountains" of postbiblical Jewish lore. The fullest characterization of Mot and his abode is given in Baal's instructions to his messengers:

Then set face  
Toward Mount TRGZZ,  
Toward Mount TRMG,  
Toward the mounds that plug Earth.  
Lift the mount on your hands,  
The hill on top of your palms;  
And descend to the pest house (*bt ḥpīt*) of Earth.  
Be counted with those who descend to Earth.  
Then set face  
Toward his city Oozy (*hmry*);  
Low, the throne of his see,  
Slime, the land of his heritage.  
But beware, O servitors of the gods;  
Do not get close to divine Mot,  
Lest he make you like a lamb in his mouth,  
Like a kid in his gullet's breech you be crushed (Baal  
Cycle 4 [51].VIII.1-37)

The "pest house" (*bt ḥpīt*) is virtually identical with the בית ההפשיית in II Kings 15:5=II Chr. 26:21 (KJV "several house"; RSV "separate house") used of an isolation ward for lepers who are unclean and as good as dead. The term rendered "Oozy" (*hmry*) is cognate with the *hapax legomenon* מַהֲמָרִית of Ps. 140:10 [H 11], (slimy) "pits" from which one cannot rise. The watery, slimy, filthy character of Mot's abode explains the remark by Philo of Byblos that the term Muth itself denotes slime or a putrescent watery mixture. Mot applies the same term to his esophagus when he invites Baal to dinner both as guest and as main course:

You shall go down the throat of divine Mot,  
The gullet (*mhmt*) of El's beloved hero. (5 [67].I.6-8).

The opposition between Baal and Mot, the conflict between fertility and sterility, life and death, is apparently seasonal. Baal meekly acquiesces to Mot's summons to be swallowed. Baal's sister-consort, the violent virgin Anath, however, pines for her lost lover and accosts Mot:

She seized Mot by the hem of his garment,  
Grabbed him by the end of his robe.  
"Thou, Mot, give [up] my brother."  
Divine Mot replied:

"I met Mighty Baal.  
I put him like a lamb in my mouth,  
Like a kid in my gullet's breech was he crushed.  
The god's lamp, Sun, glows,  
The skies gleam in the power of divine Mot.

She seized divine Mot.  
With a sword she split him,  
With a sieve she sifted him,  
With fire she burned him,  
With millstones she ground him,  
In the field she sowed him.  
His flesh the birds ate,  
His parts sparrows consumed.  
Flesh to flesh did cry (6 [49].II.9-37)

In text 23 [52].8-9 there is reference to "pruning" of the god:

Death-and-Evil sits,  
In his hand the rod of bereavement,  
In his' hand the rod of widowhood.  
Let the pruners prune him [like] a vine,  
Let the binders bind him [like] a vine,  
Let them lop his tendrils like a vine.

The word *šdmt*, rendered "tendrils," occurs several times in the OT and has evoked considerable and continuing discussion. It has been taken as a compound meaning "field(s) of Mot," but the occurrences in Deut. 32:32; Hab. 3:17-18; and Isa. 16:8 in parallelism or association with the vine, as in the Ugaritic passage cited, suggest "tendrils," or the like.

Aspects of Anath's treatment of Mot suggest a grain ritual and recall the Israelite offering of the first fruits in the form of crushed grain parched with fire (Lev. 2:14-15), further described by Philo of Alexandria (*On the Special Laws* II, 20), Josephus (*Antiq.* III.x.5), and in the Mishna (*Men.* 10). The women of Haran, according to Ibn an-Nadīm, wept for Tammuz because he was ground and strewn to the wind. Thus it has been supposed that Mot had a dual character, like other chthonic deities such as Tammuz-Adonis, Osiris, Pluto, Demeter, and Kore (see DEITIES, UNDERWORLD[S]). The figure of death, resurrection, and fertility in the planting, germination, and increase of grain is applied to the death of Jesus in John 12:24. There is, however, no corroborative evidence in the Ugaritic texts for beneficent fertility function on the part of Mot. Destruction and sterility are his concern and fear is the natural response to Mot, both for gods and people. Mot's standard epithet *ydd* (Yadid), "Beloved," must be euphemistic for the opposite sense. Mot's power is sufficient even to overcome mighty Baal, to halt his life-giving rain, and to turn the blazing sun into an

instrument of death. The expression "strong as Hell" has an ancient background. A private letter from Ugarit contains the pregnant lines "and the hand/love of the gods here [is] like Mot/Death exceeding strong." Whether the grapheme *yd* here (54:11) represents "hand" or "love" (more likely the former in the sense of plague or other calamity), the comparison is with the strength of Mot/Death. In Song of S. 8:6 it is love that is affirmed strong as Mot/Death and Sheol/Hell, and this assertion may be more than a mere superlative statement since love, fecundity, and faith are the only defenses against the dread power until the final victory, the death of Death and Hell's destruction (cf. I Cor. 15:54-55; Rev. 20:14).

We have no sure representation of Mot in early art. A strange stele from Ugarit (*Ugaritica* II, pl. 22 right; *ANEP*, p. 489) has been thought to depict Mot, among other deities, but this is highly conjectural. Among verbal characterizations, we have reference to Mot's rod (*ḫt*=Akkad. *ḫattu*), but it is clear only that it is an implement for bereavement, *ḫl* and widowhood, *ulmn* (23 [52].8-9). The Angel of Death, *mīk mwt'*, is depicted on an Aramaic magic bowl with sword and spear in his hands and these have been related to the rod(s) of bereavement and/or widowhood of Death-and-Evil, *Mt-w-Šr* of the Ugaritic text.

\***MOUNT, MOUNTAIN.** To be added to the IDB list of Hebrew terms for "mountain" is צוּר. In many cases the translation "rock" or "crag" is appropriate (e.g., Isa. 8:14, צוּר in parallelism with אֲבֶן). However, in other occurrences of the word, both context and poetic parallelism require the translation "mountain." In Job 14:18, for example,

צוּר and הַר are clearly synonymous. In Num. 23:9, where the context indicates that Balaam is standing on an elevation of some significance, the nouns נֶגְבָּוֹת and צִרִים are parallel to each other. Significantly, נֶגְבָּוֹת is the regular synonym of הַר, the most common Hebrew word for mountain (Hab. 3:6; Ps. 114:4, 6). Hebrew צוּר and Aramaic טוּר are cognate to Ugaritic ḡr, "mountain."

The fact that צוּר may be translated "mountain" is of more than philological interest. It is well known that the Hebrews referred to their God as צוּר יִשְׂרָאֵל (II Sam. 23:3; cf. 22:33; Deut. 32:30; Ps. 78:35). Though the traditional "Rock of Israel" is not impossible (cf. Gen. 49:24), "Mountain of Israel" is preferable. The Mesopotamians referred to various gods by the epithet "great mountain" (Akkad. *šadū rabū*; Sumer. *kur. gal*). Among these gods were Addu, Amurru, Asshur, Enlil, and Girra. Clearly, the epithet emphasizes the protective power and formidability of the deity. Thus an Akkadian name such as *Aššur-šad-nišēšu*, "Asshur-is-the-mountain of his people," is very similar to the Hebrew name types צוּרֵי אֱלֹהִים, "El [God]-is-my-mountain" (Num. 3:35), and טַרְהַצוּר, "The-mountain-has-redeemed" (Num. 1:10).

More problematical is the question of whether to include the divine name Shaddai (שַׁדַּי) among mountain epithets. As early as the nineteenth century, proposals were made to relate the Hebrew name to Akkadian *šadū*, "mountain," and thus to elucidate the origin of the deity. Speakers of Akkadian distinguished between *ilī māti*, "lowland [valley] gods," and *ilī šadi*, "mountain gods" (*TCL* 3:315). In Asia Minor and Syria, literary and non-literary sources demonstrate that mountains were deified, worshipped, invoked as witnesses to treaties, and given offerings along with other deities. A particularly well-studied example is the Syrian divine mountain Zaphon (see ZAPHON, MOUNT[S]), which received divine homage and was employed as a theophoric element in such names as Ugaritic *bdšpn*, "Slave-of-Zaphon," *bdšpn*, "In-the-hand [care]-of-Zaphon," as well as Phoenician גַּרְצַפֶּן, "Client-of-Zaphon." However, the simple equation of *šadū* and Shaddai fails to account for the doubling of the second Hebrew consonant as well as for the final diphthong (Albright). The same objection may be made against the equation of אֱלֹהֵי שַׁדַּי with Amorite *bēl šadē*, "Lord of the Mountain[s]," an epithet of Amurru (Bailey). Furthermore, unlike *bēl šadē*, each element of אֱלֹהֵי שַׁדַּי may stand alone. It thus appears to be a composite name along the lines of אֱלֹהֵי עֵינֹן and אֱלֹהֵי בֵית אֱלֹהֵי. The Amorite epithet, on the other hand, is a construct genitive, similar in form to בעַל שָׁמַיִם, "Lord of Heaven" (e.g., *KAI* 4:3), and בעַל בַּת, "Lord of the dynasty" (*KAI* 24:16). A related hypothesis is to equate the Hebrew with Akkadian *šaddā'u*, "mountain dweller." Linguistically sound, this proposal is in harmony as well with Yahweh's association with mountains (e.g., Deut. 33:2; I Kings 20:23). It must be cautioned however that Akkadian *šaddā'u* is poorly attested and never as a divine epithet (cf. GOD, NAMES OF §C2a; ALMIGHTY). Hebrew religion was, by its nature, antithetical to some elements of Near Eastern mountain mythology. Clearly, mountains could not be deified

without infringing on Yahweh's right to Israel's exclusive worship. Yet, other elements of Near Eastern mountain myth made their way into Hebrew religious literature, some merely as poetry, others as vestiges. A good example is the *הר מועד*, "mount of assembly" (Isa. 14:13). Though it was at one time thought that Isaiah's description reflected Babylonian notions, it has been shown that Canaanite mythology underlies the chapter. Accordingly, the "mount of assembly" can be traced back to the mountain (*L*) upon which sat the divine assembly of Ugarit (*p̄hr m'd*, "assembled gathering," e.g., *CTA* 1:II:20). In fact, it has been suggested that *בהר מועד* be emended to *בפחר מועד*.

Scholars have suggested that the Hebrews shared with the ancient Mesopotamians the concept of a *Weltberg*. That notion, known from comparative folklore, describes the world as a huge mountain at whose peak is heaven and at whose base is the underworld. It is difficult to find support for this view in the OT. Moreover, there is no clear evidence that the Mesopotamians actually held such a belief (Clifford). Sargon II, for example, describes a mountain, *ša eliš rišša samāmi endāma šaplānu šuršāša šukšudū qereb arallī*, "whose peaks above lean against the heavens, while below, its roots reach the heart of the nether world" (*TCL* 3:19). As the context demonstrates, Sargon is merely conveying the viewer's awe of majestic mountains which dominate the landscape, and which can be scaled only with great difficulty. In Akkadian and Sumerian literature the idea of greatness may be expressed by saying that a particular object has its base in the underworld and its top in the heavens. These objects may be as diverse as a god, a temple, a god's weapon, a mythical tree, or the speaker of an incantation. Even those mountains which are explicitly identified as the gateways to the nether world (e.g., Ugar. *trǵzz* and *trmg*, *CTA* 4:VIII:3:1-9) are not necessarily indications of Near Eastern belief in a *Weltberg*. Rather, they may be taken as expressions of the widespread view that mountains (usually in the N) mark the edge of the world. Naturally, then, beyond that edge the underworld is located.

Yet Hebrew religion knew of sacred mountains. Among these were BASHAN (Ps. 68:15-16 [H 16-17]), GERIZIM, HOREB (Exod. 3:1), and of course SINAI and ZION. The mythology of Mount Zion provides a clear example of how the Israelites appropriated earlier religious traditions and made them their own. Prior to the discovery of Ugaritic it was difficult to understand why an author would locate Mount Zion in the "far north" (*יִרְכְּתֵי צָפוֹן*), Ps. 48:2 [H 3]. However, it is now known that Zaphon was the proper name of Baal's holy mountain, the site of his temple, and itself divine. Accordingly, *יִצְוֹן* in our passage should be treated as a proper name as in Ugaritic (cf. NEB n.). Yahweh's mountain is here identified explicitly with Zaphon. Accordingly, the Psalmist has no difficulty in applying to Zion the grandiose terminology of myth.

\***MURATORIAN FRAGMENT.** This partial list of NT books, previously held to have originated in Rome about the end of the second century, must now probably be regarded as Eastern, dating from the early fourth century.

1. **Rise to importance.** The fragment, discovered in an eighth-century codex at Milan, is a mutilated list of NT books now beginning with the third gospel and ending abruptly. Portions are found also in four Latin MSS (eleventh or twelfth century) at Monte Cassino which were not copied from the Milan MS. Campos has shown that the Latin of the MF was influenced by the Vulg., assuring its Greek origin.

Nineteenth-century scholars associated the MF with the Peshitta and the Old Latin versions as representative lists dating from about A.D. 170. Harnack endowed the fragment with new importance when he claimed that it was an official list published in Rome as the NT canon for the whole church. Despite subsequent discrediting of these claims, the fragment has retained the prominence it first attained through Harnack's claims.

2. **Re-evaluation.** Recent scholarship has determined that an early fourth-century date and an Eastern provenance are more probable than the view which has become traditional.

a. **The case against Rome.** The argument for a Roman origin of the fragment was built chiefly on its use of specific phrases and words. It has been shown, however, that the expression *catholica* (*ecclesia*) should not be limited to Rome, because Cyprian applied it to the Christian community in each city, and that Roman writers referred to their city with *hic in urbe Roma*, not with *cathedra urbi Romae ecclesiae*, as in the MF. Moreover, the use of the word *urbs* for Rome (lines 38-39) is dependent upon Rom. 15:24, 29; Acts 28:14b-31, and in any case such a usage is not limited to writings

of Roman origin. Other linguistic arguments have likewise been seriously questioned or refuted.

**b. The case against the late second-century dating.** The early dating of the fragment has been based almost exclusively upon the phrase *nuperrime temporibus nostris*, usually translated "very recently, in our time," and taken to mean, within a generation of Pius I. But this interpretation is tendentious. It could also mean "most recently," with respect to the previously named books; and "in our time" could therefore just as well refer to postapostolic times in general (cf. Euseb. Hist. IV.xxii.4; III.xxxi.6-xxii.1; Iren. Her. V.xxx.3). Thus, the date of the MF must be determined in some other way.

**3. The Eastern provenance and fourth-century date of MF.** It is significant that the fragment does not approve the Shepherd of Hermas for public reading in the church, because, except for Tertullian (a special case due to his Montanism), the work was highly regarded in both East and West until Eusebius and is first called into question in the East (Euseb. Hist. III.iii.6-7; xxv.4). MF also conforms to the Eastern tendency in excluding the Wisdom of Solomon from the OT and including Jewish apocrypha in NT lists. For example, Eusebius, illustrating Irenaeus' use of NT books, mentions his quotations from the Wisdom of Solomon among them (Hist. V.viii.1-8); Epiphanius (d. 403) included Wisdom of Solomon and Sirach in his NT list (Her. III.i.5); and the index of Codex Alexandrinus (probably Palestinian) concludes the NT list with Psalms of Solomon. An Eastern provenance and later date for MF are also indicated by its placing of the book of Revelation, along with the Apocalypse of Peter, on the fringe of the canon, following the Wisdom of Solomon. The book of Revelation was only questioned in the East following Dionysius (265). Moreover, scant evidence of acquaintance with the Apocalypse of Peter is found in the West, and its inclusion in the canon was considered only in the East (e.g., Euseb. Hist. VI.xiv.1-2; II.xxv.4, 6-7).

Apart from MF, the earliest NT list we possess is that of Eusebius. Thus, if the fragment does date from the end of the second century, it must have been composed in a corner and preserved by chance; it surely had no influence on the developing NT canon in the West. The evidence suggests, rather, that MF is to be dated in the fourth century and regarded as an Eastern list.

**Bibliography.** A. C. Sundberg, Jr., "Canon Muratori: A Fourth-Century List," *HTR*, LXVI (1973), 1-41, provides the full argumentation and evidence for the view that MF is an Eastern list from the fourth century. See also A. von Harnack, "Das Muratorische Fragment und die Entstehung einer Sammlung Apostolisch-Katholischer Schriften," *Zeitschrift für Kirchengeschichte*, III (1879), 358-408, 595-98; J. Campos, "Epoca del fragmenta Muratoriano," *Helmantica, Revista de Humanidades Clasicas*, XI (1960), 485-96.

A. C. SUNDBERG, JR.

\*MUSIC. Assyriological research since 1959 has led to the discovery of four Akkadian cuneiform texts that describe ancient Near Eastern music theory and practice from ca. 1800 B.C. to ca. 500 B.C. Dating

to the Old Babylonian, Middle Assyrian, and Neo-Babylonian periods, they demonstrate that the ancient Mesopotamian musical scales were heptatonic and diatonic. Thus, our evidence for the antiquity of Western music has been pushed back some 1400 years earlier than the earliest Greek evidence.

Fourteen Akkadian terms are known as names of musical intervals—seven names for intervals of fifths and fourths, seven for thirds and sixths.

String		
Designations	fifths and fourths	
1-5	<i>nīš gabarī</i>	"rise of the duplicate"
2-6	<i>išartu</i>	"normal"
3-7	<i>embūbu</i>	"reed-pipe"
4-1	<i>nīd qabli</i>	"fall of the middle"
5-2	<i>qablītu</i>	"middle"
6-3	<i>kitmu</i>	"closed"
7-4	<i>pītu</i>	"open"
String		
Designations	thirds and sixths	
7-5	<i>šēru</i>	"song"
1-6	<i>šalsātu</i>	"third"
2-7	<i>rebūtu</i>	"fourth"
1-3	<i>išqu</i>	"throwstick/lot"
2-4	<i>tītur qablītu</i>	"bridge of the middle"
3-5	<i>tītur išartu</i>	"bridge of the normal"
4-6	<i>serdū</i>	(a type of music)

These terms do not indicate differences between major or minor thirds, perfect or augmented fourths, etc.; in other words, these terms do not reflect the position of semitones in the scale. This position depends on the tuning. There are seven tunings:

			Corresponding Greek Octave-Species
<i>išartu</i>	"normal"	E F G A B C D	Dorian
<i>kitmu</i>	"closed"	E F# G A B C D	Hypodorian
<i>embūbu</i>	"reed-pipe"	E F# G A B C# D	Phrygian
<i>pītu</i>	"open"	E F# G# A B C# D	Hypophrygian
<i>nīd qabli</i>	"fall of the middle"	E F# G# A B C# D#	Lydian (=our major scale)
<i>nīš gabarī</i>	"rise of the duplicate"	E F# G# A# B C# D#	Hypolydian
<i>qablītu</i>	"middle"	E# F# G# A# B C# D#	Mixolydian

Tuning was accomplished by a series of fifths and fourths, which produced a diatonic scale in Pythagorean tuning. Each tuning was named for the fifth or fourth that began the series; in each tuning the tritone, hence the semitones, was located in a different place.

One complete piece of music, a syllabic cuneiform Hurrian cult hymn to the goddess Nikkal, dating to ca. 1400 B.C., has been found at ancient UGARIT. This piece, written (as its colophon tells us) in the *nīd qabli* (=major) scale uses a notational system based on the Akkadian terminology

discussed above. No directions for rhythm or tempo are given. The notation consists of interval names followed by numerals. It is thought that the numerals indicate the number of times the dichord (i.e., the two notes of the interval sounding simultaneously) is to be played or sung. Analyzing the notation thus, the hymn from Ugarit appears to be provided with heterophonic music as shown in Fig. M11. It is assumed that the top melodic line was to be sung, and that the bottom notes represent the harmonic accompaniment. Until additional texts with explicit notation are brought to light, this interpretation of the notational system in Ugarit must remain hypothetical.

In the Neo-Babylonian period (middle to late first millennium B.C.), a different but related system of notation appears to have been in use. There, notations are placed directly next to the lines of the hymnic literature and apparently amount to abbreviated directions. But this late system is not yet understood by scholars.

**MYSTERY RELIGIONS.** See GREEK RELIGION AND PHILOSOPHY.

**\*MYTH IN THE NT.** The term "myth" designated originally an "account" or "story," but it came to mean "rumor" or "fable," and in the NT is always used in this negative sense. However, in some NT writings (e.g., Revelation), mythological imagery is used to convey the Christian message. The question therefore arises: To what extent is myth present in the NT and how is mythological material to be interpreted?

The question was sharply focused by Bultmann's program of demythologizing, formally advanced in 1941. He argued that the earliest Christians used mythological expressions in formulating their Christology and eschatology. The task of interpretation, he concluded, is to disclose the Christian message (*kerygma*) expressed there and to expose its meaning for human existence. Bultmann's view of myth as the prescientific depiction of transcendent reality in this-worldly, objective terms has been widely debated, and a variety of alternative definitions of myth have been offered. Most influential has been the work of Eliade, for whom myth is the recital of a sacred history. By describing events of a primordial time, myth tells the beginning of existence; retelling the myth then makes it possible to participate in the basic sources of being. On this basis, Tillich, Gilkey, and Aulén have insisted that myth or symbol is essential to religious expression, and Knox has even described the biblical drama of redemption as "the Christian myth."

Although it is widely agreed that the NT world view includes mythological elements, some interpreters believe that much of what Bultmann calls myth, e.g., the miracles and the Resurrection, should be identified as history. The resulting charge that Bultmann has abandoned the historical basis of the *kerygma* seems oblivious to his stress on the historical event of Jesus. Some of Bultmann's followers are engaged in a "new quest of the historical Jesus," in which the words and deeds of Jesus are recognized as an essential part of the Christian proclamation (see BIBLICAL CRITICISM, NT[S] §4c). At the same time, Bultmann's contention that the NT uses a pre-Christian, Gnostic redeemer myth in formulating its christological confessions has been called into question by recent research into GNOSTICISM.

Much of the demythologizing debate has failed to recognize that Bultmann intends to interpret rather than eliminate myth. Nevertheless, his use of existentialism as a method of interpreting the meaning of myth has led to the claim that Bultmann has exchanged the old myth for a new philosophical or scientific one. While Bultmann actually believes the *kerygma* to be independent of any objective (mythological) formulation, his concern with the method of interpretation has provoked a lively interest in HERMENEUTICS. Some of his followers, influenced by the later writings of M. Heidegger, are engaged in the "new hermeneutic." According to their view, the revelation of God occurs in the "language-event" of Jesus, and the texts which witness to his words are not objects to be interpreted, but the Word which interprets the hearer, offering authentic existence. Other interpreters take a literary approach (see LITERATURE, BIBLE AS[S]), insisting that the meaning of myth is intrinsic to the mythological form (Wilder), or that religious language needs to be enriched by mythological expression so that the poverty of the modern imagination may be overcome (Ricoeur). Structuralists have sought to apply the theories of Lévi-Strauss and to show that myths reflect patterns of narrative structure which correspond to basic structures of human life and thought.

**NAG HAMMADI** nāg hām mā'dē. A site in the vicinity of the modern city of Nag Hammadi in Upper Egypt, where an extensive collection of fourth-century Christian and non-Christian Gnostic writings in Coptic was discovered in 1946. The modern history of the discovery is quite complex and in some details still unclear. On the ancient history of the library of papyrus codices, little can be known except by inference; archaeological excavations at the site of the find may help clarify the origin of the books. The contents of the library are extremely rich and varied, representing many literary types of Gnostic literature as well as diverse forms of Gnosticism itself. The importance of the collection for the history of religions, the history of early Christianity, the study of the Coptic language, and many other fields is incalculable. For the first time, students of Gnosticism have at hand a large collection of original Gnostic writings with which to understand the movements so bitterly and successfully combated by church authorities in the early centuries of our era. Such major problems as that of the origin of the Gnostic religion are enlightened by these documents, and the Christian, Jewish, and pagan contributions to the syncretistic amalgam of Gnostic myth can be distinguished with greater clarity.

**1. Description of the codices.** The Nag Hammadi codices represent some of the oldest extant examples of what corresponds to the modern bound book. They consist of folded PAPYRUS leaves assembled into one or more quires and sewn into a leather cover. The earlier literature on the collection has spoken of thirteen codices, but Robinson has shown that Codex XIII, which consists of one tractate plus a few lines of another on its last page, was placed in antiquity as a set of eight folios within the cover of Codex VI. Thus one should properly speak of twelve codices (of which much of Codex XII is missing, perhaps lost in modern times) and parts of a thirteenth. The covers of Codices II-XI are preserved, along with the pages of all the codices, in the Coptic Museum of Old Cairo; the cover of Codex I is in the collection of the Institute for Antiquity and Christianity, Claremont, California. Because of the extremely fragmentary nature of many of the leaves, calculations of the total number of extant inscribed pages vary considerably. Thus far at least 1,139 complete or partial pages have been identified.

The codices contain several different copyists' hands, some of them very elegant and all of them remarkably clear and legible. Because Coptic literary hands varied only slightly over long periods of time, it is difficult to date MSS on paleographic grounds. In such cases one has recourse to the papyrus scraps, often letters or other documentary papyri, used to stiffen the leather covers of books. Preliminary analysis of the contents of the cover of Codex VII by J. Barns uncovered the dates 339 and 342, and while a complete study of all the covers is under way, one may safely date the collection to the middle of the fourth century. Of itself this date does not determine the date of origin of the literary works contained in the codices; in some cases it is known with virtual certainty that individual writings are much older.

The language of the codices is not entirely uniform. All are in Coptic, the late form of Egyptian written mostly in Greek uncial letters and used in Christian times, but the dialects are neither uniform nor, in the sense of modern grammarians, pure. The bulk of the codices are in a form of Sahidic, but Codices I and X and part of Codex XI are in the Subachmimic dialect (*see* COPTIC LANGUAGE[S] §2*a*, *b**iii*). The apparently "mixed" quality of the dialects may be a sign of an early stage in their development or evidence of influence from neighboring dialects. The effect of this large amount of early Coptic documentation on the study of the language has yet to be assessed. The working hypothesis of almost all scholars is that we are dealing with Coptic translations of works originally written in Greek. In a few cases such as the Gospel of Thomas, fragments of the Greek are extant elsewhere. Sporadic attempts to demonstrate a Semitic original or a Coptic original for certain of the works have not won general acceptance.

Most of the codices contain more than one tractate, varying from two in Codices IV, VIII, and apparently XIII to eight in Codex VI. Codex X, which is only poorly preserved, apparently con-

tained only one work. In some cases writings are grouped by literary genre, e.g., four "apocalypses" in Codex V, or by origin, e.g., three consecutive Hermetic works in Codex VI, but for the most part no principle of arrangement is immediately evident. Not all the tractates have titles, but because of lacunae we cannot be sure that all the original titles survived. Those that are extant appear either at the beginning or at the end, or, in some cases, in both positions, without apparent systematic arrangement.

**2. History of the discovery.** Precise details of the manner and site of the discovery are not available, but scholars have been able to piece together much of the story. The codices were found in 1946 by a local peasant in one of a number of caves or tombs in the lower face of the Gebel et-Tarif cliff about 6.2 miles NE of the city of Nag Hammadi, near the village of Hamra Dom. A number of references in the papyrus cartonnage of the covers indicate that they come from the region around Chenoboskion, an early center of monastic life. The codices were presumably sold to middlemen and eventually came into the hands of antiquities dealers.

**a. The Jung Codex.** Codex I, commonly called the Jung Codex, has its own distinct history. A large portion of it along with the cover came into the possession of an antiquities dealer named Albert Eid and disappeared from Egypt. In the winter of 1948-49 it was offered for sale to the Bollingen Foundation in New York, but the transaction had not taken place when the owner died. After long delays and considerable detective work, the codex was discovered in Brussels, examined, and in 1952 purchased there by Gilles Quispel of Utrecht on behalf of the C. G. Jung Institute in Zurich. It was known that some of the folios of Codex I were in the Coptic Museum at Old Cairo, and in exchange for the right to publish them along with the bulk of the codex, the Zurich authorities agreed to return the Jung Codex folios to the museum to rejoin the rest of the collection once they had been published. The codex has now been completely published and the whole returned to Cairo.

**b. The other codices.** In 1946 a middleman brought Codex III to the attention of the curator of the Coptic Museum, Togo Mina, who purchased it for the museum. The contents were identified by the French scholar Jean Doresse in 1947, and the discovery was made public in Cairo and in Paris in early 1948. Meanwhile an antiquities dealer in Cairo assembled the remaining codices and fragments from several middlemen, and the collection was offered for sale to the museum in 1948. Doresse again examined and identified the material, and the museum agreed to its purchase. Doresse announced this discovery in Paris in mid-1949. The codices were kept sealed for security while funds were being raised. There they remained through the Egyptian revolution and the reorganization of the Department of Antiquities, and it was not until 1956 that they were declared national property and study of them could be resumed.

**c. Major publications.** In the first twenty-five

years after existence of the collection was reported, publication was complicated and incomplete. Only a sketch of major projects can be given here (for details see *bibliog.*). The contents of Codex I were completely published in five volumes and one supplement from 1956 to 1975. These contain facsimiles, transcription, translations into French, German, and English, introductions, notes, and indexes.

Plans made in 1948 to publish Codex III never materialized, but some knowledge of its contents was made available in 1955 by Till, who published the first edition of Berlin Codex 8502 and in footnotes printed the variant readings of three of the tractates of Codex III which were related to parts of the Berlin Codex. In 1956 the Coptic Museum, under its director (Labib), undertook the preparation of a photographic facsimile edition of the entire corpus, but only the first volume appeared. It contained photographs of those pages of Codex I that were not in Zurich and also of the first 110 pages of the voluminous and unnumbered Codex II. At that time and at various periods during the next fifteen years the aid of UNESCO was enlisted in the appointment of an international committee of scholars to publish critical editions of the material. As none of these efforts was successful, the director of the Coptic Museum turned to scholars present in Cairo to edit and publish some of the texts. Thus all or parts of Codices II, III, IV, V, VI, and VII were published at intervals between 1956 and 1973 by Labib and other scholars, including Doresse, Till, Krause, Böhlig, and Giversen. In the meantime a certain amount of scientific photographic work was undertaken under the auspices of the UNESCO committee.

By 1970, in response to the initiatives of J. M. Robinson, the UNESCO committee had been reactivated and reorganized with the result that a proper facsimile edition began to appear in 1972, and the work of placing unidentified fragments, properly photographing the papyri, and ensuring their proper preservation went rapidly forward. Under Robinson's general editorship preparation of an international English edition of the complete library was undertaken by an international board.

**3. Contents of the library.** An accurate table of contents of the entire collection has emerged only slowly, as the placement of fragments and decipherment and translation work has gone forward. In the process, several systems of numbering the codices have been used; the one used below has now been generally accepted, and a collation with previous systems may conveniently be found in the Nag Hammadi bibliography by Scholer and in the introduction to the facsimile edition by Robinson. The table indicates the codex number, tractate number, page and line references, the ancient titles of the tractates or in some cases titles assigned by modern scholars, and the system of abbreviated titles used by the English-language edition. Square brackets indicate missing pages and lines and asterisks designate conjectural pagination in the case of fragmentary codices.

The codices are now referred to by the siglum CG, for (Codex) Cairensis Gnosticus, in imitation of the designation BG, (Codex) Berolinensis

Gnosticus, used for Berlin Codex 8502. The latter was first brought to light by Carl Schmidt in 1896, but because of a long history of unfortunate accidents was never published until Till's edition of 1955. It is a Coptic codex, dated by Schmidt and others to the fifth century, which is close to the

Nag Hammadi collection in contents, two of its four tractates being also found in CG III (cf. also II, IV, and V). It is therefore appropriate to include BG 8502 in the following table, as it is included in the English-language edition of the Nag Hammadi library.

### The Nag Hammadi Library

(Completing and correcting the list of Chenoboskion writings printed in IDB, Vol. A-D, p. 169)

<i>Codex, tractate, pages, lines</i>	<i>Title</i>	<i>Short title</i>
I,1:1,1-16,30	The Apocryphon of James	ApocryJas
I,2:16,31-43,24	The Gospel of Truth	GTr
I,3:43,25-50,18	The Treatise on Resurrection	OnRes
I,4:51,1-140,25	The Tripartite Tractate	TriTrac
I,5[141,1-142,end]143,1-144,9	The Prayer of the Apostle Paul	PrPaul
I,5a:144,10-11	Colophon	
II,1:1,1-32,9	The Apocryphon of John	ApocryJn
II,2:32,10-51,28	The Gospel of Thomas	GTh
II,3:51,29-86,19	The Gospel of Philip	GPh
II,4:86,20-97,23	The Nature of the Archons	NatArch
II,5:97,24-127,17	On the Origin of the World	OnOrgWld
II,6:127,18-137,27	The Exegesis on the Soul	ExSoul
II,7:138,1-145,19	The Book of Thomas the Contender	ThCont

4. **Preliminary classification of the writings.** No definitive classification of the Nag Hammadi tractates can be undertaken, either in terms of literary genre or in relation to types of Gnosticism, until they have been submitted to thorough and painstaking analysis. The following paragraphs are therefore provisional approaches to categorization, intended only to describe further the materials contained in the codices.

a. **Literary genres.** The collection contains a striking variety of literary genres, many of them typical of Gnostic literature, others imitative of existing genres in Christian and other literatures. The following list of types is based in part on the titles in the codices and in part on comparison with other works. The genres are often mixed and rarely found in a pure form, so that individual tractates might appropriately be considered under several headings. In addition, some of them are so fragmentary as to render classification premature if not impossible.

i. **Gospels.** Of the works entitled "gospel" in the library, namely GTr, GTh, GPh, GEgypt, and GMary, none corresponds to the gospel genre of the NT (see APOCRYPHA, NT[S] §3; GOSPEL, GENRE [S]; PHILIP, GOSPEL OF[S]; THOMAS, GOSPEL OF[S]; TRUTH, GOSPEL OF[S]). GTr, for example, is a meditation on the person of Christ and his saving work. GMary is a combination of dialogue between the risen Jesus and his followers and of revelation discourse. The most important in terms of genre is GTh, a collection of sayings of Jesus, most of which are introduced with the formula "Jesus said" without any narrative framework. Such a "gospel" may be the lineal descendant of the type of sayings collection that one supposes the hypothetical Q document may have been. See Q[S] §3.

ii. **Apocalypses.** Several of the tractates are titled "apocalypses," and a number of others should best be described this way: e.g., ApocPaul, 1 ApocJas, 2 ApocJas, ApocAd, ApocPet, and Apoc-Ascl, NatArch (in part at least), ParaShem, and others (see APOCALYPSE, GENRE[S] §§1, 2). The best example of the genre, though itself a mixed one, is the ApocAd (see ADAM, APOCALYPSE OF[S]), a

revelation of the future course of Gnostic history which Adam receives from celestial visitors and transmits to his son Seth. Some of the works, such as ApocPaul, which is not identical with the NT apocryphal work of the same title (see PAUL, APOCALYPSE OF), describe the visionary experiences of NT personages with typically Gnostic features or background.

iii. **Acts.** Two of the tractates use the name "acts" in their titles, the AcPetTwAp and the AcPet (see ACTS, GENRE[S]). The latter is not a Gnostic work at all, but a fragment of the larger body of apocryphal acts of Peter which had wide currency and a complicated history in the early church. Though it is entitled "The Letter of Peter to Philip," VIII,2 is really modeled on the NT book of Acts; the title applies only to the beginning of the work.

iv. **Letters.** Several of the tractates are often referred to as epistles because they are addressed directly to readers, among them OnRes (the "Letter to Rheginos") and Eug. These are more properly treatises, however, and it is notable that the collection does not include any imitations of the Pauline letter form. PetPhil contains a letter in imitation of the letters embedded in narratives.

v. **Dialogues.** One of the most characteristic genres of Gnostic literature is the dialogue between the risen Jesus and his disciples in which Gnostic teaching is revealed. In the Nag Hammadi library the SJC and the DialSav exemplify the genre, but it is also represented in many other works with ostensibly different genres. Codex VI also contains a Hermetic dialogue in the classical form.

vi. **Secret books.** The term "apocryphon" is used in the titles of two works, the ApocryJas and the ApocryJn, of which four copies, in two recensions, survive (see JOHN, APOCRYPHON OF[S]). Strictly speaking it does not identify a genre but can be applied, as in the latter case, to a combination of apocalypse and revelation dialogue.

vii. **Speculative treatises.** Many of the tractates fall into this category, some of them, such as OnOrgWld and Eug, beginning formally with a brief discussion of divergent or erroneous opinions

which are to be contrasted with the true explanation that follows.

viii. *Wisdom literature.* The presence of a Coptic version of the S<sup>Sex</sup>t in Codex XII provides an example of a work of aphoristic wisdom literature that is not of Gnostic provenance but presumably was subject to an interpretation congenial to the compilers of the library. Silv is an important witness to the survival of the wisdom literature genre in Christian, possibly monastic, circles; it is modeled on the OT wisdom literature and is perhaps not of Gnostic origin.

ix. *Exegesis.* The tractate of Codex II entitled ExSoul is unique in the collection in that it sets forth a mythical explanation of the fate of the soul trapped in the world, with numerous citations from the OT, the NT, and the *Odyssey* of Homer as proof texts.

x. *Revelation discourses.* Under this heading are grouped documents in which a revealer figure such as Sophia speaks in the first person. There are fragmentary examples in such passages as the ending of the long version of Apocryjn and elaborate ones like the TriProt. The most striking of all, however, is Thund, in which the voice of the thunder represents the revealing voice from the world of the divine expressing itself in a long series of I-am sayings with antithetical and paradoxical predicates.

xi. *Prayers.* Finally, the collection contains a number of prayers of different types. There are brief scribal prayers in colophons and there are whole tractates, some Christian and some non-Christian, in prayer form. Codex I ends with a prayer of the apostle Paul, Codex VI contains a Hermetic prayer of which both Greek and Latin versions were previously known, and Codex VII has an important and elaborate prayer under the title 3StSeth.

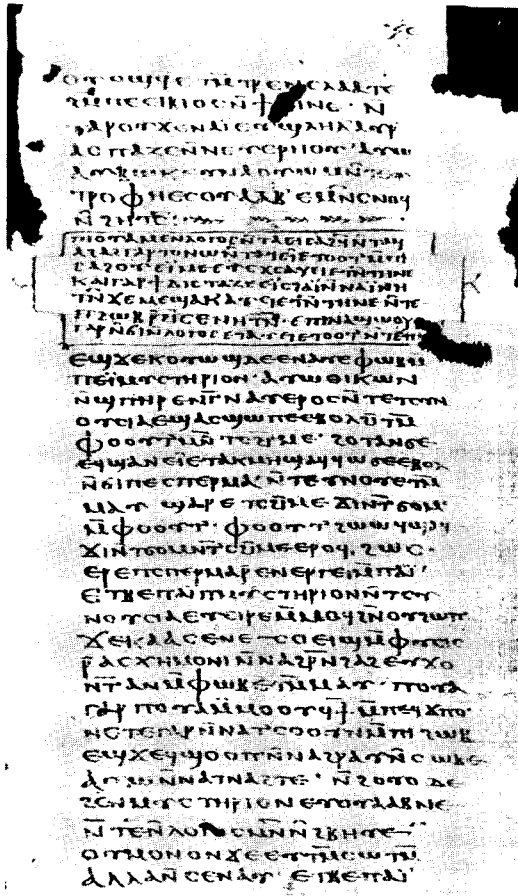

b. *Types of Gnosticism.* It is probably more important but certainly more speculative to undertake to classify the materials of the collection according to the types of Gnosticism they represent. The enterprise is difficult in part because the types of Gnosticism described by the church Fathers themselves are insufficiently distinct to allow us to construct a satisfactory typology (see G<sup>N</sup>OSTICISM [S]). Moreover, for some scholars the very existence of the Nag Hammadi library has called into question the attempts of Irenaeus and others to distinguish a variety of Gnostic "systems" in the second century. The following divisions are therefore tentative and merely suggestive.

i. *Sethian.* The fact that a number of the tractates such as G<sup>E</sup>gypt, ApocAd, ParaShem, GrSeth, 3StSeth, and others give a prominent place to the figure of Seth as channel of the gnosis, or resemble some features of the patristic descriptions of Sethianism, led Doresse and others to regard the library as basically a Sethian collection with a generous admixture of other writings. This may yet be the case, but it is important to note that virtually none of the tractates corroborates in detail the patristic accounts of Sethianism. The ParaShem, a difficult but important Gnostic apocalypse, has much in common with Hippolytus' description of the Sethian doctrine and the "Para-

phrase of Seth," but it does not allow the interpreter to conclude that it is the source of Hippolytus' account.

ii. *Valentinian.* There seems to be little reason to question the patristic descriptions of Valentinianism as referring to a distinct group in the second century, though it is a complex group with important internal variations. The Nag Hammadi library contains a number of works that can be classified as Valentinian with varying degrees of certainty, some of them quite clearly in close affinity to the *Excerpta ex Theodoto* and other works. Among the Valentinian works one should enumerate perhaps all of Codex I, certainly the GPh from Codex II, 1 ApocJas from Codex V, and at least some of the tractates of Codex XI. See also G<sup>N</sup>OSTICISM[S] §4b.

iii. *Other Gnostic types.* It is not the intention here to suggest specific Gnostic sects represented in other tractates of the collection, but it is plain that many of the works, including some of the most important such as the GTh, Eug, Thund,

Courtesy the Institute for Antiquity and Christianity, Claremont Graduate School

1. Nag Hammadi Codex VI, p. 65, with scribal note concerning the copying of Hermetic tractates. This 7-line scribal note appears between the Prayer of Thanksgiving and the Apocalypse of Asclepius.

Melch, etc., do not clearly fit the world either of Sethian or of Valentianian systems. The Gnostics were syncretistic, as is well known, but there is reason to think that the Nag Hammadi library deliberately collected a variety of writings. The suggestion that the collection was made to provide material for a comprehensive refutation of the patristic type recurs in the literature on Nag Hammadi. It tends to be supported by the colophon of Codex VI but not by the prayerful colophons of other codices. The collectors may indeed have been fourth-century Gnostics interested simply in any literature they found congenial.

iv. *Hermetic*. The last suggestion derives some support from the fact that Codex VI contains three pieces in succession which unmistakably belong to the type of purely pagan gnosis known as Hermetism (see HERMETIC LITERATURE[S]). These include a typical Hermetic dialogue, part of the Asclepius preserved otherwise only in a Latin translation, and a well-known Hermetic prayer. Contacts between Hermetism and Christian Gnosticism have not been well attested, and this dimension of the Nag Hammadi corpus may prove to be an important one for the study of religions in Egypt in the early Christian period.

v. *Non-Gnostic writings*. The greatest surprises in the Nag Hammadi library came from the recognition of works that are not Gnostic at all. Among these is the rather inferior Coptic translation of a passage from the *Republic* of Plato in Codex VI, which one must suppose to have had a Gnostic interpretation. The same must be said of the moralizing S<sup>Sex</sup>t, and perhaps one should include Silv, possibly a relatively orthodox monastic work, part of which corresponds to a Coptic fragment preserved in the name of St. Anthony, and the AuthTeach, another treatise on the dangerous existence of the soul in the world. That there existed a tradition of Gnostic exegesis of biblical texts is well attested and universally accepted. The possibility that other literature received a peculiarly Gnostic interpretation should not be surprising (e.g., PlatoRep).

5. *Issues in interpretation*. In addition to the suggestions already made, it is possible here to mention only a few of the more general questions to which the Nag Hammadi library gives rise. These are important issues in that they contribute to the long-standing debate about the role of Gnosticism in the formation of the Christian tradition and to the "Gnostic problem" itself. See GNOSTICISM[S] §§1, 2, 5.

a. *Christian and non-Christian origins*. Whether Gnosticism is properly understood as a Christian heresy or a non-Christian religion that made a serious impact when it confronted nascent Christianity has been debated for over a century. The Nag Hammadi collection significantly contributes to the debate in that it contains several works that apparently are not of Christian origin, or at least do not contain obvious Christian elements. In this connection such tractates as Eug, ApocAd, ParaShem, and Allog, among others, are of prime importance. To conclude that these are pre-Christian Gnostic works would be unjustified, especially in view of the relatively late date of the

collection. But that they are non-Christian seems undeniable (as of course are the Hermetic works in the collection). Yet they represent a fully developed Gnostic myth with a Gnostic redeemer figure who is not inspired by the Christ of the NT. See ADAM, APOCALYPSE OF[S] §§2, 3.

Considerable importance must be attributed to the one example in the collection in which the transition from non-Christian to Christian Gnosticism can be documented. This is the case of the work called Eug in which there is no apparent Christian influence. In the SJC this treatise is transformed into a revelation of the risen Jesus to his disciples. Krause has demonstrated convincingly that the literary relationship between the two documents proceeds in the direction of Christianization. Perhaps an analogous relationship must be seen between the apparently non-Christian ApocAd and the Christian G<sup>E</sup>gypt in which Christ is seen as a manifestation of the Gnostic Seth. The extrinsic character of the Christian elements of the ApocryJn, the NatArch, and other writings points in the same direction. The Nag Hammadi library cannot yet be said to prove conclusively the non-Christian origin of Gnosticism, but it adds a great deal of probability to this classic position.

b. *Jewish materials*. Interpreters of Gnostic literature are not surprised to find in it considerable use of the Genesis story as a basis for the Gnostic myth of origins, but many have discovered in the Nag Hammadi writings elements of Jewish haggadic tradition that point to a prominent role of Judaism itself in the formation of Gnosticism, especially in the documents of the Sethian type. In addition, there is evidence of considerable Jewish influence on the structure of the Sophia myth, the techniques of biblical interpretation, the apocalyptic schematization of history, and many other features of the contents of a large number of tractates. Such Jewish influence has reopened the discussion whether some type of Judaism that was oriented to wisdom and apocalyptic may have served as a matrix for the evolution of Gnostic myth. Specific attempts to identify the Judaism in question have not been successful, however; nor are there solid grounds for thinking that the basic antic cosmic dualism of any Gnostic system is itself to be derived from Jewish tradition. In the syncretistic process of Gnostic origins, nevertheless, the Nag Hammadi library points to a much more prominent Jewish role than previously acknowledged.

c. *Gnosticism and the NT*. The most important contribution of the Nag Hammadi library to the history of religions lies in the light that it sheds on the nature and variety of the Gnostic phenomenon itself. In addition, one can anticipate the possibility of answers to some other questions in the field, e.g., the suggestion that in Allog, Zost, 3StSeth, and perhaps other tractates one has access to the Gnostic sources used by Plotinus in his anti-Gnostic polemic. From the first announcement of the discovery of the codices, NT scholars have also shown great interest in them. The debate about the possible interaction between Gnosticism and early Christianity within the formative period of the NT itself is an old one, and

it was not unreasonable to expect a collection of original Gnostic writings to shed some light on it. Indirectly it does so by strongly reinforcing the view that Gnosticism is non-Christian in origin. Whether it is pre-Christian in a chronological sense has not been demonstrated on the basis of the Nag Hammadi library, but it seems at least contemporaneous with nascent Christianity.

In several more specific ways individual Nag Hammadi tractates impinge upon the study of the NT. This is obvious in the case of the GTh, where comparison of the Jesus sayings with the synoptic tradition has even resulted in the inclusion of the GTh in some recent synopses of the gospels (see THOMAS, GOSPEL OF(S)). In other cases it is less obvious but possibly more significant, and these can be expected to remain under study for some time. The ApocPet of Codex VII, e.g., which contains some polemic against the church, seems to admit the reader to the debates about authority and legitimacy in the early second century which also underlie II Peter in the NT. Again, the variety of attitudes toward baptism in some of the texts, often quite negative ones, makes it possible to reconstruct a theory of the interaction of Jewish, Christian, and Gnostic motifs in baptist and anti-baptist circles of the first century. Several of the Nag Hammadi revelation discourses, such as Thund and TriProt, provide clearly Gnostic models for the type of revelation discourse found throughout the Fourth Gospel. But the evidence does not permit us to suggest that we have in such documents access to the source of the Johannine discourses. To give one final example, if the non-Christian character of ApocAd, ParaShem, and other tractates proves to be correct, then the NT scholar has evidence of a redeemer myth outside of the Christian message which must be examined for its possible influence on some forms of NT Christology.

The first quarter of a century since the Nag Hammadi discovery has been dominated by efforts to edit, translate, and publish the materials, with only modest efforts at interpreting them and weighing their significance. It remains the task of scholarship for years to come to carry on the work of interpretation.

**Bibliography.** An exhaustive bibliog. of materials pertaining to the codices may be found in D. M. Scholer, *Nag Hammadi Bibliography 1948-1968*, Nag Hammadi Studies, I (1971) and in the same author's annual supplements in *NovT* (1971 ff.). The more specialized bibliographies of the articles on individual tractates (ApocAd, ApocryJn, GPh, OnRes, GTh, GTr) are not repeated here.

The principal publication of the texts is *The Facsimile Edition of the Nag Hammadi Codices* (1972 ff.). P. Labib, *Coptic Gnostic Papyri in the Coptic Museum at Old Cairo*, I (1956), is also valuable for its early photographs of parts of Codices I and II.

**\*NAMES, RELIGIOUS SIGNIFICANCE OF.** The giving of personal names in ancient Israel was not merely for the purpose of providing a distinctive label for an individual but was also commonly an occasion for expressing religious convictions associated with the birth of a child or its future. As such, personal names provide an invaluable source for the religious ideas of the ordinary Israelites. Even those names that do not directly express religious feelings often have importance for an understanding of Israelite religion. In the late periods, however, names came to have less immediate religious significance.

The meaning of many names remains unclear, in part because of their archaic character, in part because of our limited knowledge of classical Hebrew vocabulary, and in part because of a lack of comprehension of Israelite naming practices. See NAME §C for general discussion.

1. **The structure of personal names.** Typical of Semitic names is the utilization of a variety of structures. Many names are themselves sentences, and others represent phrases. The shorter, one-element names may be either abbreviations of longer names or full names in themselves.

**a. Sentence names.** Names may embody any type of simple sentence used in Hebrew. For example, verbal sentence names with a perfect verb, such as Shemaiah—"The Lord has heard [the parents' prayer]," and Benaiah—"The Lord has built [a family line]," make a statement. Names with an imperfect verb are less clear. Ishmael may mean, "May God hear [the child]"; "God will hear [the child]"; or "God has heard [the parents]." The case of Ibnijah—"May the Lord build [a line]," or "The Lord will build/has built [a line]," and

parallel names is similar. It is clear that some names do express a wish; for others, the underlying grammatical structure may be unclear, or may be inappropriate for a wish.

Tobiah="The Lord is good," and Elijah="The Lord is my God," are names based on nominal sentences. An example of an interrogative sentence is Michael="Who is like God?" Names with an imperative are quite rare, but Shubael (Shebuel)="Turn [to me], oh God" is one example. Another rare type, with three elements, is Elihoenai/Elihoenai="My eyes are on the Lord."

**b. Construct-phrase names.** By their nature as expressions of possession, these names express a quality of the name bearer or his relationship with God. Typical examples are Obadiah="Servant of the Lord," and Solomon's other name, Jedidiah="Beloved of the Lord."

**c. Hypocoristic names.** For the compound names illustrated above, hypocoristica or abbreviated forms may also exist. The hypocoristic names may either be given as regular names or be used alongside the compound name. Occasionally both name forms are attested, as with King Ahaz (=He has taken [for protection]), for whom the longer form, equivalent to Jehoahaz (=The Lord has taken), occurs in Assyrian sources. It is often impossible to determine whether a one-word name is a hypocoristic. Hypocoristic names frequently make use of a special ending, often expressing endearment, such as with Abdon="[Little] servant."

**d. One-word names.** Simple names that are not hypocoristica of compound names include gentilics such as Judith="The [female] Judean"; animal or plant names such as Deborah="Bee," and Hadassah="Myrtle"; names which mark the bearer as a substitute for a person who has died, Menahem="Comforter."

**2. The semantics of personal names.** Although the interpretation of many individual names is unclear, general classes of names can be distinguished. The special symbolic names that the prophets Hosea and Isaiah give their children are not discussed here; see MAHER-SHALAL-HASHBAZ; SHEAR-JASHUB; IMMANUEL §1; LO-AMMI; LO-RUHAMA; JEZREEL §2.

**a. Names with divine elements.** More than one tenth of the Israelite names make direct reference to Yahweh. The divine name appears in four different shortened forms: initially as *yó-* or *y<sup>h</sup>ó-*, as in Jonathan/Jehonathan="The Lord has given [a child]," and—much more commonly—finally as *-yāhú* or *-yá*, as in Zedekiah="The Lord is righteous for me," for which the English rendering does not distinguish the two Hebrew spellings.

Another common divine element is *'ēl*, which means simply "god." However, it was also the name of the head of the Canaanite pantheon, El, though Baal had replaced El in immediate significance and everyday power. Also, El was a well-known deity among the Amorites of Mesopotamia and other Semitic language groups. Accordingly, the use of *'ēl* in Israelite names, where it is exceeded in frequency only by forms based on Yahweh, is of considerable interest. Names such

as Eliezer="My God is help," and Nathaniel="God has given [a child]," indicate that awareness of El as a Canaanite deity was not strong enough to inhibit the use of the common word "god" in Israelite names. El worship apparently was not a threat to Yahwism in the same way that Baal worship was. Some interpreters conclude in addition that the naming practices fit into a picture of accommodation between Yahweh and El, and even of derivation of Yahwism from circles where El was worshiped. See GOD, NAMES OF §C1-2; EL[S].

A third divine element, which occurs in only three names, is Shaddai, as in Zurishaddai="Shaddai is my protection." This divine name, in the form El Shaddai, is connected with the patriarchal time (see Exod. 6:3) and was not seen as in opposition to Yahwism.

The element *ba'al* represents both a common noun, "lord, husband," and the name of the Canaanite deity BAAL. It occurs in only seven Israelite names in the OT, and its meaning was disputed. The older sources show that the element was regarded by the tradition as improper for an Israelite name, so in the DEUTERONOMIC HISTORY all such names are given a tendentious etymology or have an altered form, which substitutes a word meaning "shame"; e.g., Saul's son, Ishbaal="The lord/Baal exists," became Ishbosheth="Man of shame" (see, however, ISHBOSHETH[S]). Jerubbaal, doubtless meaning, "May the lord/Baal exalt [the child]" (see §1a above), is explained by the tradition as, "Let Baal contend against him" (Judg. 6:32). Baal obviously became identified so closely with opposition to Yahwism that the element could not be used in its common meaning, assuming that it was used among Israelites in the time of Saul and David in the sense, "lord, master." (In the Chronicler the names with *ba'al* were left unchanged.) In the Samaria ostraca, dating from the eighth century B.C., after the battles with Baal of Elijah's time, names containing a form of Yahweh only slightly outnumber those containing *ba'al*. This suggests something of Baal's popularity in the northern kingdom two hundred years or more after the time of Saul and David.

Many names contain a divine epithet such as *'ādhôn*, "lord, master," *melekh*, "king," *sār*, "rock," or one of the kinship terms discussed below, in place of the divine element. The names are otherwise parallel.

**b. Names with elements expressing kinship.** Elements such as *'ābh*, "father," *'āh*, "brother," and, less frequently, *'amm-*, "kindred, paternal uncle," are generally theophoric, the deity being identified as a protective relative. For example, the name Abishua="My [divine] father is help," is paralleled by Joshua="The Lord is help," and Malchishua="My [divine] king is help." Other names with kinship elements, but without such parallels, may represent substitution names.

**c. Expressions of trust.** Many names express the trust that the individual's parents have in the deity. Note such names as Adonijah="The Lord is my master"; Uzziyah="The Lord is my strength"; Bezalel="In God's protection"; and perhaps also Ibneiah="The Lord will build [a line]" (see §1a above).

*d. Expressions of thanks.* The birth of a child elicited parental thanks, and many names so indicate. Note Shemaiah="The Lord has heard [the parents' prayer]," Azariah="The Lord has helped," and Abinadab="My [divine] father inclined himself [to me]."

*e. Expressions of acknowledgment.* Names such as Saul="Asked [of God]," Baruch="Blessed [by God]," Abdeel="Servant of God," and Benaiah="Son of the Lord," acknowledge the person as closely tied to the deity. Similarly, names such as Micaiah="Who is like the Lord?" and Malchiel="God is my [divine] king," confess qualities of the deity.

*f. Expressions of wishes.* The interpretation of the names discussed here is disputed (see §1a above). Names expressing wishes clearly exist in related onomastic corpora, and the tradition is surely correct in understanding the name Joseph as, "May the Lord add to me another son" (Gen. 30:24). Names such as Jeberechiah="May the Lord bless [the child]," Jacob="May he [the deity] protect [the child]" (cf. the tendentious etymology as, "He will supplant," given in Gen. 27:36; cf. also Gen. 25:26), Iphdeiah="May the Lord redeem [the child]," and Ishmaiah="May the Lord hear [the child]," illustrate this type.

*g. Substitution names.* A child was often welcomed as replacing a deceased relative, as able to keep alive something of the deceased person's character. The personal names reflect this basic concern for the continuity of life. For examples note Ahikam="My brother has arisen [again]"; Jashobeam="May my paternal uncle return [in me]"; Eliashib="May God bring back [the deceased]" (cf. §1a above); and Meshullam="Given as a replacement." The name Solomon may be of this type, meaning, "His [the deceased elder brother's] wholeness," though other interpretations are possible.

Also, some names that express sorrow, such as Job="Where is the father?" and Ichabod="Where is the glory?" (note the explanation given in I Sam. 4:21), point to the family's sense of loss and the desire that the child provide continuity for the future.

*h. Animal and plant names.* Animal names as personal names, such as Rachel="Ewe," Jael="Mountain goat," and Jonah="Dove," have formerly spurred some interpreters to see evidence of totemism (see TOTEMISM[S]). However, the widespread use in the ancient Near East of animal names, and of plant names such as Habakkuk (though the precise identification of the plant is uncertain), suggests a playful sense of continuity between the human and the natural worlds rather than totemism, fear of plant spirits, or the like.

*i. Personal qualities as names.* Many names point to personal characteristics: Haggai="Born on a festival day," Hashum="Flat nose," and Amon="Reliable," are a few examples.

**3. Naming practices.** Habits in name giving changed in terms both of the individual names which were in favor and the types of names. For example, names with imperfect verbal elements fluctuated in popularity, as did names with perfect

elements. Likewise, simple and compound names varied in esteem. Some name types even go almost completely out of use.

One custom that endured throughout the OT was that of feminine names having theophoric elements much less frequently than masculine names, a practice that may well reflect the very minor involvement of women in Israel's cult.

A number of Israelites bear foreign names. Moses, clearly an Egyptian name, is the best known, and the priestly names Phinehas, Hophni, and Pashhur are also Egyptian. Later, during the exilic and postexilic periods, Aramaic and Akkadian names are found, even among Davidic descendants, e.g., Zerubbabel, an Akkadian name meaning "Offspring of Babylon." In the late period Persian names are also found. The use of foreign names points to a somewhat less than rigid tie between religious and linguistic identity.

A major change in the practice of name giving was a shift during the postexilic period away from emphasis on the meaning of names and toward the giving of names because of the persons who had borne them previously. This seems to have happened fairly early in the priestly families, where names recur several times, and, to a more modest extent, among royalty. A specific practice of this type, which may have originated in Aramaic customs, was *papponymy*, i.e., naming a child after its grandfather. It was widely practiced during the Persian and Hellenistic ages.

*Bibliography.* J. J. Stamm, "Hebräische Ersatznamen," in *Studies in Honor of Benno Landsberger*, AS, XVI (1965), 413-24, and "Hebräische Frauennamen," VTSup, XVI (1967), 301-39. H. B. HUFFMON

**NAVEL OF THE EARTH.** The JB uses this expression to translate טבור הארץ (Ezek. 38:12; cf. Judg. 9:37, "Navel of the Land"). טבור is apparently identical with Mishnaic Hebrew and Late Aramaic *tibbūr* (navel) and thus a synonym of שרר (e.g., Song of S. 7:2 [H 3]; Ezek. 16:4). Though the translation suggests a connection with Near Eastern and Hebrew cosmogonies (see COSMOGONY), it is not clear that the biblical Hebrew phrase has any cosmic significance. Complicating matters is the fact that ארץ need not refer to the entire earth (γῆ) in contrast to heaven, but may refer only to a particular geographical or political entity—"land," "country," "region" (χώρα; so RSV at Judg. 9:37).

The belief was widespread in antiquity that shrines, principal cities, and even private homes were located at the center of the world. Each of these domains could constitute the bond which linked the various components of what modern people call the universe. Thus, ancient Mesopotamians referred to the city of Nippur as "the bond of heaven and earth." Such a bond is often described as a "navel," indicating the centrality and prominence of the locale as well as its function as a link between the realms of heaven, earth, and underworld. The conical stone omphalos (navel) at Delphi was said to mark the earth's center. (Greek myth claimed that Zeus had released two eagles of equal speed from opposite ends of the earth, and these had met at Delphi.)

L. R. Bailey  
2. Omphalos, Delphi Museum

(See Fig. N2.) Similar omphali have been found elsewhere in the Greco-Roman world.

The idea of Jerusalem as a "navel" is reflected in Jewish Midrashim: "God created the world like an embryo. Just as the embryo begins at the navel and continues to grow from that point, so too the world. The Holy One, blessed be He, began the world from its navel. From there it was stretched hither and yon. Where is its navel? Jerusalem. And its [Jerusalem's] navel itself? The altar" (Jellinek, *Beth ha-Midrash*, V, 63). Clearly the above midrash employs the symbolism of the navel to indicate the centrality of Jerusalem and its altar within the cosmos. Still earlier, Jub. 8:19 (cf. Enoch 26:1) refers to Mount Zion as "the center of the navel of the earth."

These Jewish images have parallels in Greek and Latin sources as well as among Buddhists, Celts, and Hindus. In fact, the translations of the two biblical attestations by the LXX and Vulg. (*δμφαλος τῆς γῆς*; *umbilicus terrae*) suggest that the biblical and nonbiblical conceptions be equated.

Cults at earth-navel sites often involved serpent imagery, chthonian rites, and, at least covertly, sexual symbolism. Accordingly, some scholars allege that snake worship, chthonian rites, male prostitution, and androgyny were all to be found at Delphi and other Greek earth-navel shrines as well as at Jerusalem. Inasmuch as earth-navel mythology fuses the earthly, chthonian, and heavenly realms, we would not be surprised to find elements of each in its cult and ritual. Furthermore, sexual symbolism connected with fertility rites would be appropriate at a shrine which claimed to be at the center of the world and its point of origin.

The above hypothesis must, however, be treated with caution. It must first be demonstrated that each of the features suggested is indeed related to earth-navel symbolism; secondly, that each is actually found both at Jerusalem and at undisputed earth-navel shrines; and, thirdly, that whatever elements are in fact common play similar roles in the myths and rituals which are being compared. Thus, the serpent was important at Delphi and in Israelite religious sources. Yet within the Bible itself serpent symbolism is polyvalent (see

SERPENT; SERPENT[S]). In the cult it is found only as a healing figure (see NEHUSHTAN; SERPENT, BRONZE). Moreover, it is uncertain that the serpent was part of the temple worship in Jerusalem.

Regarding the remaining items suggested for comparison, (a) there is no evidence of chthonian rites associated with the Jerusalem temple (see DEITIES, UNDERWORLD[S]). (b) The attribution of male prostitution and ANDROGyny to Israelite cult depends on the proper identification of the קרשים, whose function is by no means certain. The Ugaritic *qdsm*, presumably related to the biblical *qdsm*, are known only to have been cultic personnel (see PRIESTS[S] §1). (c) Solar worship, though attested at Jerusalem (see SUN), was seen by Greeks as a hallmark of barbarian worship. The solar cult at Rhodes was unique, and was universally viewed as a foreign importation.

Accordingly we must examine the two biblical attestations of מְבוֹר הָאָרֶץ to see if the earth-navel comparisons can be substantiated.

In Judg. 9:36 a group of invaders is described as "coming down from the mountain tops." In the following verse, what appear to be these same forces are described as "coming down from the center of the land [מְבוֹר הָאָרֶץ]." The context indicates that the phrases are synonymous. The verb employed, "coming down," suggests that the distinctive feature is height rather than centrality. Scholars have therefore suggested that the reference must be to Mount Gerizim, in line with Samaritan tradition that Gerizim was indeed the navel of the earth, the blessed mountain which was not submerged by the Deluge. Here again caution is warranted. The relevant Samaritan traditions date only from the early centuries of the present era and cannot be considered infallible evidence of authentic reminiscences of premonarchic Shechem. Secondly, the very identification of Gerizim with the "navel" would be open to question on the grounds that Mount Ebal, opposite Gerizim, is actually some two hundred feet higher.

In Ezek. 38:11, an invader has assembled his host in order to "go up against the land of unwalled villages" and "fall upon the quiet people who dwell securely." In vs. 12 these same intended victims are described as living on the navel of the land (RSV "who dwell at the center of the earth"). The alternation of phrases indicates that emphasis is not upon privileged position in the cosmos but rather upon vulnerability. The intended victims are as unprotected as the human navel in the center of the body. Old Babylonian omen texts describe an invasion as a penetration to the "navel of the enemy's land" (*abunnat mā' nakrim*: YOS, X.33,iii. 41; cf. 34:15). All that is described is an incursion which has passed through the outer defenses into the center. Needless to say, we learn nothing of the victim's cosmology.

Apparently, then, we should see no more than poetic personification in the Ezekiel passage. To ancient speakers of Hebrew, and related Semitic languages, the earth had an eye (Exod. 10:15), a face (Gen. 11:9), a mouth (Num. 16:32), hands (Gen. 34:21) and even a nakedness (Gen. 42:9; RSV "weakness"). Note that Judah has a neck (Isa. 8:8). In none of these cases should we infer

that a mythology underlies the personification. In this vein it should be mentioned that Josephus relates that his contemporaries referred to Jerusalem as the "navel of the country" (Χώρα; War III.iii.5). A similar intention must have motivated the pun of Rabbi Jeremiah (T.B. Meg. 6a), who explains that in his day (fourth century), biblical Rakkath was properly called Tiberias inasmuch as it was located on the navel of the land of Israel. He meant simply that Tiberias was the center of Jewish Palestine in his time.

**NEW COVENANT, THE.** A phrase בְּרִית הַדָּוָד first appearing in Jer. 31:31-34 which became basic for the Christian faith.

1. The background
  - a. "Covenant" in the OT
  - b. Jeremiah's message of judgment and restoration
2. Jer. 31:31-34
3. The "new covenant" in subsequent material
  - a. Absence of reference in subsequent OT material
  - b. The intertestamental literature
  - c. The NT

#### Bibliography

1. The background. a. "Covenant" in the OT. The idea of a "new covenant" must be seen against the general Israelite background of "covenant" (see COVENANT §C). Israel was convinced that God had taken the initiative in covenanting (contracting) with her for a special purpose. This covenanting was pre-eminently at Sinai by the mediation of Moses and implied God's protection and blessing in war and peace (see WAR, IDEAS OF §1; PEACE IN THE OT §§2, 3; KING, KINGSHIP §7). It also stipulated that Israel was to conform to ethical norms set forth in the TEN COMMANDMENTS and other legal collections (see LAW IN THE OT §§C, D, E). Israel was further convinced that this covenant which God had initiated with her set her apart from all other nations (see ELECTION §4). This concept, then, is basic in OT theology.

The consciousness of covenant obligations and

privileges was powerfully reinforced for the inhabitants of Judah by the reform of JOSIAH in 621 B.C. This reform, based on the discovery of a scroll (I Kings 22-23) which evidently became the core of Deuteronomy (see DEUTERONOMY §8), meant a rediscovery of Moses and of the Sinai covenant at a time when many aspects of religion and society in Judah had become conformed to pagan patterns. Many evidently assumed that once reforms had been carried through according to the stipulations of the scroll, God would protect and bless the nation as he had in the past. This conclusion was reinforced by the centrality of Jerusalem and the temple in the reform: altars outside Jerusalem were destroyed and sacrifice officially could take place only at the temple in Jerusalem. Since on an earlier occasion, when Jerusalem had been under siege by Sennacherib in 701 B.C., the city and its temple had survived unscathed, it was widely assumed in Josiah's day and thereafter that Jerusalem would be a haven from any impending destruction. See PRESENCE OF GOD, CULTIC[S] §3.

b. Jeremiah's message of judgment and restoration. Jeremiah saw the matter differently, as Jer. 7:1-15 and 26:1-24 make clear (see JEREMIAH THE PROPHET §B). The people had turned their backs on God (Jer. 2:27), so that God had no other recourse than to declare holy war against his own people, war in which land and cities would be devastated, including Jerusalem (4:5-8; 7:14); there seemed only a slim chance, if the people repented totally, that the execution could be stayed (4:14). In Jeremiah's view, the covenant had been so broken by the people as to leave no basis for a "business-as-usual" relation with God (6:27-30).

Jeremiah was convinced that the victories of the Babylonian king NEBUCHADREZZAR over Judah in 597 and 587 B.C. were the carrying out of God's punishment (Jer. 28-29; 37-40, e.g., 38:1-3). Events therefore gave the lie to more complacent folk within the nation, like Hananiah (Jer. 28). Both Jeremiah's theology and his perception of history suggested to him that the Sinai covenant was dead.

But Jeremiah also saw the possibility that God would restore the covenant. Just before the final fall of Jerusalem, the prophet returned to his village to buy a tract of land which was in danger of being lost to his family (Jer. 32:1-15), because "thus says Yahweh: . . . Houses and fields and vineyards shall again be bought in this land" (vs. 15). Most of his hopeful oracles are found in chs. 30-31, and most of these are authentic to the prophet (cf. JEREMIAH THE PROPHET §D8). Two passages here employ the word "new." The first is 31:21-22, in which Jeremiah looks forward to a restoration of the community socially and politically: "For Yahweh has created a new thing on the earth: a woman protects a man"—that is, sex roles will be reversed, so that the prostration of the army (cf. 30:5-6) will no longer be a curse or cause for shame but a blessing for the restored community. The second is the "new covenant" passage, 31:31-34.

2. Jer. 31:31-34. Though commentators disagree

as to how authentic these exact words are to Jeremiah, there is no doubt that the substance of this novel idea goes back to the prophet himself. The first section of the passage is rounded off in the middle of vs. 33 (with "says the Lord") and simply states in legal diction that God will make a new covenant with the people unlike the old one which had been broken. The second section, beginning "I will put my law within them" (vs. 33) and continuing to the end of vs. 34, breaks into poetic form. Because of the theological importance of the passage, it is necessary to understand clearly what each phrase means.

The expressions "I will put my law within them" and "I will write it upon their hearts" (vs. 33) are parallel. The law (or instruction) stipulated in the Sinai covenant had of course been written on tablets of stone (Exod. 24:12; 34:1). Now, by contrast, God will write it on the "heart" or "inward parts" (KJV) of the people. The conception of HEART in the OT centers more on volition than on emotion. The heart is the center of planning and the carrying out of plans; see e.g., Isa. 10:7, where the Hebrew text reads, "But it is not thus that he plans, and it is not thus that his heart devises." The words "inward parts" (RSV "within them") are no different. The passage suggests that a law outwardly written on tablets of stone may elicit disobedience, or else grudging or insincere obedience; next time, therefore, God will write the law inwardly, making it a part of the total will of the people, so that they obey God, not because they are supposed to, but because they want to. Thus God's will permeates the people's will, so that each conforms perfectly to the other. Is this coercion? Jeremiah does not say.

What is the result of God's action? First, says God, "I will be their God and they shall be my people." This simple formulation was a traditional mode of expressing the covenantal relationship (e.g., Exod. 6:7; Lev. 26:12), a relationship now broken by the people (cf. Hos. 1:9). God has forsaken his people (Jer. 12:7) because they have forsaken him (2:19); but soon the relationship will be restored.

Then there will be no necessity for the people either to teach one another of the obligation to know God or to be reminded of it (31:34): it will come naturally to everyone. "Know" has intimate overtones in the OT (cf. Gen. 4:1); to "know God" implies, not knowledge about him, but a relationship with him (see KNOWLEDGE §1b). Hosea had complained that "there is . . . no knowledge of God in the land" (Hos. 4:1). Teaching the lore of God was always an obligation in Israel, particularly teaching that lore to one's children (Deut. 11:18-21); but this will become unnecessary. Because God's will has been grafted into the will of his people, everyone in the community, from top to bottom, will know God.

Finally, God will forgive the iniquity of the people and remember their sin no more (31:34). The iniquity of the people was what had led them to break with God (cf. Jer. 5:7 where the word translated "pardon" is the same word as "forgive" in 31:34). Now God will restore the re-

lationship, and all the nightmarish past with its rupture between God and his people will be gone. In Jer. 2:2 we hear that he "remembers" the honeymoon loyalty of Israel to him, a loyalty which died away (2:5); now we hear that God will not "remember" this sin any more, so that a fresh relationship like that of the honeymoon time will be established.

This idea of a new covenant is an extraordinary one; such a radical solution to the problem between God and his people suggests how radical the problem is. For one thing, it hints that God did not take adequate steps the first time to ensure people's loyalty; there were loopholes in the first contract which God will now close. This image of a God who, it is implied, learns by his mistakes must have been shocking to Jeremiah's hearers. (The question in 2:5, "What wrong did your fathers find in me that they went far from me?" hints at the same image of God.) For another thing, it suggests that the rock-bottom certainty which some traditions affirmed about covenant-making in the past needs modification. (For example, the covenant with Abraham and that concerning circumcision are described as an "everlasting covenant," Gen. 17:7, 13, 19; "[God] is mindful of his covenant for ever," Ps. 105:8. There are many such expressions in the OT.)

### 3. The "new covenant" in subsequent material.

*a. Absence of reference in subsequent OT material.* The notion of the new covenant was so extraordinary that there is no further reference to the idea in subsequent OT material. It often happens with important ideas in scripture that there are echoes of them as later generations re-express them; thus the "swords into plowshares" passage in Isa. 2:2-4; Mic. 4:1-3 turns up as "plowshares into swords" in Joel 3:10 [H 4:10]. But the new covenant is not mentioned in later OT material. The idea was perhaps too unsettling, not meeting the religious cravings of the people. Rather, it was the unending stability of God's promises which was emphasized; e.g., Deutero-Isaiah writes a half century after Jeremiah, "The word of our God will stand for ever" (Isa. 40:8; see ISAIAH §B2g). The idea of the new covenant is not picked up again until the time of the intertestamental literature and of the NT.

*b. The intertestamental literature.* The term "new covenant," after Jeremiah, is found first in Hebrew writings of the DEAD SEA SCROLLS. In the so-called "Damascus Scroll" (CDC; see ZADOKITE FRAGMENTS; DAMASCUS, COVENANT OF), the phrase "new covenant" occurs three times (6.19; 8.21 = 19.33-34; 20.12; the citations as they appear in *APOT* are viii.15; ix.28, 37 of the Zadokite Fragments). In addition, there is a passage in the Habakkuk Commentary containing the word "new" with a lacuna in the MS where scholars suspect the word "covenant" stood (IQpHab 2.3; see DEAD SEA SCROLLS §5a).

These passages make it clear that those in the Dead Sea community understood themselves to be members of a "new covenant" ("all the men who entered into the new covenant in the land of Damascus," CDC 8.21—it is uncertain whether "Damascus" here refers to the actual location of

a branch of the sect or is a code name for members located elsewhere). Those entering the sect separated themselves from the main body of Jews and by prayer, fasting, study, and ritual cleansings understood themselves to be outside the range of Israel's sin and therefore to be fulfilling the words of Jeremiah.

The Jeremiah passage is also reflected in I Bar. 2:35 and Jub. 1:17-18, 23-25, as well as in other passages in the Dead Sea Scrolls, but without the specific words "new covenant."

**c. The NT.** The phrase "new covenant" (in Greek, ἡ καινὴ διαθήκη) appears in the tradition about Jesus, particularly in connection with the Last Supper. The earliest citation is I Cor. 11:25; this letter of Paul's is dated A.D. 55 (see CORINTHIANS, FIRST LETTER TO THE §9). Paul gives the words of Jesus at the Last Supper on the basis of careful oral tradition (11:23); his version of the words over the cup are: "This cup is the new covenant in my blood. Do this, as often as you drink it, in remembrance of me" (11:25). The wording in Mark, dated not long after A.D. 65 (see MARK, GOSPEL OF §3), is slightly different: "This is my blood of the covenant, which is poured out for many. Truly, I say to you, I shall not drink again of the fruit of the vine until that day when I drink it new in the kingdom of God" (Mark 14:24-25). Matthew (26:27-29) enlarges on this phrasing slightly, but neither Mark nor Matthew, in the earliest and best MSS, use "new" with "covenant" (though later MSS do offer "new" at that point). Luke (22:17-20) offers two text traditions, a shorter one which does not mention "covenant" at all, and a longer one which mentions "the new covenant" (cf. RSV footnote to vs. 19). It is altogether likely that the traditions in Paul and in Mark rest on reliable historical information. If Jesus said "new covenant," he had Jer. 31:31-34 in mind; if he said "covenant" without "new," he had Exod. 24:8 in mind, a covenant secured by shedding blood; but he might also have had Jer. 31:31-34 in mind, as the earliest Christian church certainly did in handing down the tradition (see LAST SUPPER, THE §3).

Paul mentions the "new covenant" once more, in II Cor. 3:5-6: "Our sufficiency is from God, who has qualified us to be ministers of a new covenant, not in a written code but in the Spirit." This passage reflects the basic dichotomy in Paul's thinking between "law" and "faith" (cf. PAUL THE APOSTLE §6a) and affirms that all those in the church serve to mediate the new covenant.

The work in the NT which reflects Jer. 31:31-34 in the greatest detail, however, is the Letter to the Hebrews. Heb. 8:8-12 quotes the whole passage (as it appears in the LXX) and applies it to the sacrifice of Jesus Christ.

The first-century Christian community was thus profoundly moved by the conviction that God has acted in a new way through Jesus Christ, a way which left them so completely in God's debt (Rom. 8:12; I Cor. 7:23) that their love for each other, for God, and for the world results from God's love for the world (I John 4:19). In this understanding, doing God's will flows out of God's loving relationship with mankind (Rom. 14; I Cor. 8), a

relationship signaled and sealed by the Cross (Heb. 4-10). Such ethical freedom is derived from Jesus' own stance and life (cf. Mark 2:27-28). This total Christian perception was congruent on a very deep level with Jeremiah's idea of God's law planted within the people's heart; after all, Jesus is remembered as saying in the Garden of Gethsemane, "Yet not what I will, but what thou wilt" (Mark 14:36). The idea was generalized in the naming of the two parts of the Scripture, the Old "Testament" and the New "Testament," because *testamentum* is Latin for "covenant." See TESTAMENT; TORAH[S].

\***NEW YEAR.** New Year is taken to mean here both New Year's day and the season of New Year. The date of New Year in Israel naturally depended on the CALENDAR employed from time to time. It is clear that in postbiblical times a festival of New Year was in existence; the character of that festival is well-attested in the rabbinic sources. But the nature and even the existence of such a festival in pre-exilic times remains hypothetical.

- Bibliography

1. **In the ancient Near East.** Most Near Eastern civilizations observed New Year celebrations.

**a. Babylonia.** In Babylon a New Year festival (the Akitu festival) was celebrated in the spring, on Nisan 1-11. A ritual text for days 2-4 survives (*ANET*, pp. 331-34), but it is not comprehensive since it concerns only the role of the leading priest. Moreover it is not always reliable evidence for Babylonian practice of Israelite times, since it comes from the Seleucid period (third and second centuries B.C.). However, from it and other references to the festival, we know that the celebration included the following: recitation of the Babylonian Creation Epic to the statue of Marduk; purification of the temple; ceremony of renewal of the king's authority—including a ritual humiliation of

the king; procession to the Akitu house outside the city; probably a ritual drama there depicting Marduk's primordial victory over Tiamat, the chaos monster (see CHAOS[S] §1); upon return to the city, a ritual marriage (*hieros gamos*) of Marduk in the temple Esagila. It is doubtful that the king played the role of the god in these ceremonies, as is sometimes claimed, and it is almost certainly incorrect that the festival included a celebration of Marduk's death and resurrection. Elsewhere in Babylonia there is evidence also of autumn Akitu festivals.

**b. Assyria.** The celebrations were similar to those at Babylon, with some exceptions: the festival lasted about twenty days; there is no evidence of a ritual humiliation of the king; and a sacred banquet of the gods (*tākultu*) may have been a feature of the rites. References also exist to Akitu festivals in other months of the year, so it is unwise to regard all the details of Akitu rituals as proper to New Year celebrations.

**c. Egypt.** New Year rituals are best known from the late (second-century B.C.) inscriptions of the temple of Edfu. Prominent among the rituals was the bringing forth of the statue of Horus from his temple to be exposed to the rays of the sun, a reuniting of the soul of the god with his body.

**d. Canaan.** The autumn harvest festival played an important, and probably the most important, role in the religious life of the CANAANITES (see also UGARIT; UGARIT[S] §4). But it has not yet been convincingly shown that the Canaanites celebrated that festival as a festival of New Year. It is far from certain that the BAAL myth, telling of the building of a temple for Baal as a symbol of his kingship and of his resurrection and victory over MOT, the god of death, had a special connection with the autumn festival or with a celebration of New Year.

**2. In Israel and Judah. a. The date of New Year.** The prevailing view distinguishes—often tacitly—the regnal New Year and the liturgical or agricultural New Year. The regnal New Year, by which the reigns of kings were reckoned, is usually believed to have begun in the month of Nisan (spring) in Israel, and in Tishri (autumn) in Judah throughout the greater part of the monarchical period (see CHRONOLOGY OF THE OT §3a). Many think, however, that the Assyrian spring calendar was adopted by Judah in the eighth or seventh century B.C. The liturgical year corresponded more closely to the cycle of the agricultural year, which is thought to have begun in the autumn. None of the above statements has gone unchallenged, however.

**i. The regnal New Year. a)** Solomon's temple was begun in the second month of his fourth year and completed in the eighth month of his eleventh year (I Kings 6:1, 37-38), but I Kings 6:38 also says that he spent seven years in building it. If the usual inclusive manner of counting is employed—whereby the fractions of years at beginning and end counted as full years—"seven years" makes sense only if his regnal years were reckoned from Tishri, the seventh month, while the years during which the work was carried out were reckoned from Nisan. However, it seems that the "seven

years" are not inclusive, since they form part of a total of Solomon's reign (see I Kings 9:10; 11:42), and inclusive reckoning is not employed when adding figures. Moreover, the "seven years" may be a schematic and symbolic figure. See SEVEN, SEVENTH, SEVENTY.

**b)** In the account of Josiah's reforms (II Kings 22-23), the discovery of the book of the law occurred "in the eighteenth year" of Josiah (22:3), while the Passover that concluded his reforms also occurred "in the eighteenth year" (23:23). On Nisan reckoning, all the events of these chapters must have occurred in the improbably short time of two weeks; a Tishri reckoning allows six months. Yet it is clear from II Chr. 34 that not all the events of II Kings 22-23 occurred in the eighteenth year, and again the figures seem to be too schematic for sure chronological inferences to be drawn.

**c)** Jeremiah wrote prophecies in a scroll in the fourth year of Jehoiakim, and had them read in the temple in the fifth year, in the ninth month (Jer. 36:1, 9). Clearly the months are numbered from the spring, for the ninth month is wintry (cf. 36:22). But if the regnal year was reckoned from the spring, Jeremiah must have waited at least nine months for the public reading of his scroll. It might seem more likely that a Tishri reckoning was in force, involving an interval of only three months. But even so, why did Baruch not read the scroll on the fast day in the seventh month? If a three-month interval is inexplicable, a nine-month interval is perhaps no less likely.

**ii. The agricultural and religious New Year. a)** The autumn Festival of Ingathering (see BOOTHS, FEAST OF) occurred, according to the ancient festival calendars, at the "going out" (צֵאת) or the "turn" (תְּקִיפָה) of the year (Exod. 23:16; 34:22). Whether these terms signify not only that the agricultural year ended with the last harvest festival but also that the next year began immediately thereafter, as is usually assumed, is open to question. For the correlative of the "going out" of the year is the "return" (חֲשִׁיבָה) of the year in the spring (II Sam. 11:1; I Kings 20:22, 26; I Chr. 20:1), and the "turn" of the year probably means simply the transition from summer to winter, for it is used also for the vernal transition from winter to summer (II Chr. 36:10).

**b)** The Gezer calendar (see CALENDAR §3b), which lists the chief agricultural activities of the year, begins in the autumn. But it is noteworthy that it begins with two months of "ingathering," which is the final element in the Israelite festival calendars (Exod. 23:14-17; 34:18-23). So if the Gezer calendar represents the beginning of the agricultural year, it is out of step with the Israelite religious year. It is more probable, however, that the Gezer calendar, written rather crudely as it is, has no normative status for establishing the time of the year Israelite peasants regarded as the beginning of the year.

**c)** The festival calendars (Exod. 23:14-17; 34:18-23) stress that the Festival of Unleavened Bread is to be kept in the month Abib (later Nisan). It is hard to see why the month of observance should be mentioned in the case of this festival

alone unless the month had some special significance, e.g., as the first month. Exod. 12:2, indeed, specifically requires Israel to count Abib as the first month of the year, but many scholars regard this passage as postexilic and therefore of no evidential value for the pre-exilic period. Others believe that premonarchic Israel observed a spring New Year. What is clear, however, is that the festival calendars enumerate three chief festivals beginning in the spring, which would be strange if pre-exilic Israel usually began its religious New Year at the time of the autumn festival. But because the current view is that Israel reckoned at least its religious New Year from the autumn, it is now necessary to examine the evidence for that view.

*b. A New Year's day?* Tishri 1, the first day of the "seventh" month—months always being numbered from the spring—is often thought to have been regarded as New Year's day in pre-exilic Israel, as it was in postbiblical times. Though the first day of every month, the New Moon day, was a religious festival (cf. Hos. 2:11 [H 13]; Amos 8:5), the first day of the seventh month was observed with more impressive ritual (Lev. 23:23-25; Num. 29:1-6). Work was forbidden, a cultic assembly was held, and sacrifices additional to those prescribed for the other new moon days were offered. These Priestly texts probably embody pre-exilic practice, though many scholars still believe they were first reduced to writing in the exilic or postexilic period (see *PRIESTLY WRITERS*[S] §§1-2). But there is no suggestion that the significance of this day lay in its being the New Year's day; it was rather that it introduced the month of two most solemn observances, the Day of Atonement (see *ATONEMENT, DAY OF* and supplementary article) on the tenth, and the Festival of Tabernacles (see *BOOTHS, FEAST OF*) on the fifteenth to the twenty-first or twenty-second.

Tishri 1 was also the date of Ezra's reading of the Law (Neh. 8:2), but since that was a unique occasion, it is somewhat speculative to infer that the day was chosen because it was New Year's day.

The term "beginning of the year" (*רֵאשִׁית הַשָּׁנָה*) occurs only in Ezek. 40:1, where it probably designates not New Year's day, but the season of the year. Comparison of the chronology with the Babylonian Chronicle shows that a spring date is here intended.

*c. A New Year Festival?* If no New Year's day is attested, may there have been celebrations for the season of New Year? Those who have identified a New Year festival in pre-exilic Israel have by no means claimed that they had discovered a hitherto unknown festival additional to the well-attested festivals of the liturgical year—Passover, Weeks, and Booths. They have rather insisted that the New Year celebrations are only one aspect (albeit, for most scholars of this opinion, the most important aspect) of the regular autumn Festival of Ingathering, or, in one or two opinions, of the spring Festival of Passover. They are therefore freed of the necessity of demonstrating the existence of the festival; they have only to show that the rituals and ideology of the festival signify that it bore the character of New Year celebrations. Here

the New Year rituals of the ancient Near East are given greater or less weight by different scholars, and the degree to which an Israelite festival may have modified non-Israelite practices is variously assessed. An Israelite New Year festival has been understood in various ways.

*i. A festival of Yahweh's enthronement.* This view, propounded principally by Mowinckel and accepted in many circles of biblical scholarship, holds that the New Year festival was primarily a celebration of an enthronement of Yahweh (see *KING, GOD AS*[S]). Many of the Psalms, especially those concerned specifically with Yahweh's kingship (e.g., Pss. 47, 93, 96, 97, 99), are assigned to the liturgy of this festival. The frequent phrase *יְהוָה מָלַךְ* in these psalms would mean: "Yahweh has become king" (in the cultic ritual just performed). This need not mean that Yahweh ever ceased to be king; indeed Ps. 93:2 affirms that the kingship that Yahweh has just now entered upon has been his "from of old." Crucial to this understanding is the conception of cult as creative drama, which not only brings reality into being, but also is a representation of primordial reality. Thus the enthronement of Yahweh that is celebrated and made a present reality at the New Year festival is his entering upon kingship at the time of creation, when he stilled the unruly waters of chaos (cf., e.g., Ps. 93:3-4). The New Year is therefore the time when Yahweh re-creates and makes all things new. The most prominent ritual of the festival was a procession of the ark, re-enacting the ark's removal to Jerusalem by David and dramatizing Yahweh's entry into his palace. Other features of the ritual included the reconsecration of the temple (cf. Ps. 93:5) and the communal acclamation of Yahweh as king (Ps. 47:1-2 [H 2-3]).

Some have emphasized rather more strongly the dramatic character of the ritual and have found it possible to reconstruct from a number of psalms a liturgical cycle such as would have been employed at the festival. Thus Johnson finds evidence for a ritual battle between the forces of light, led by the Davidic king, and the forces of darkness, chaos, and death. Ps. 89:38-45 [H 39-46] presents then the ritual humiliation and defeat of the king, Ps. 101 his protestation of loyalty and righteousness, Ps. 18 his thanksgiving after deliverance from the forces of death, and Pss. 2 and 110 his re-enthronement as the climax of the ritual drama. The outcome of the drama portrays at the same time Yahweh's primordial defeat of chaos and darkness and his own enthronement as king.

Nevertheless, while Yahweh's kingship was undoubtedly celebrated in the cult—quite possibly by means of ritual and dramatic actions—there is no clear link between celebration of Yahweh's kingship and the autumn Festival of Ingathering. One late postexilic text (Zech. 14:16) indeed mentions both together, but even if their conjunction is more than accidental, it does not prove that in the pre-exilic period the festival was largely concerned with that theme. Some have argued that the psalms of Yahweh's kingship were more probably used as sabbath psalms than as psalms for the autumn festival (Snaith), but perhaps it would be wiser to acknowledge that we do not know the occasion

on which such psalms were sung, or indeed whether they were intended for one particular occasion. It can also be persuasively argued that the phrase יהוה מלך does not mean "Yahweh has become king," but rather "It is Yahweh who is king," focusing attention on the fact that it is Yahweh, and not Baal nor even the human king, who fully deserves that title.

ii. *A typical Near Eastern New Year festival.* This view, not so influential as that previously mentioned, is associated chiefly with adherents of the myth and ritual school (e.g., Engnell and Hooke; see MYTH, MYTHOLOGY §B). They believed it possible to identify traces in the OT of a New Year festival identical in many respects to those of the rest of the ancient Near East. In addition to the elements of the re-enthronement of Yahweh and the ritual battle, the liturgy of the festival will have included: a period of chaos in which law and order are abolished and roles are reversed, with the king being humiliated and deposed and the god depicted as descending into the underworld; the cultic portrayal of the god in his death and resurrection by the king; a celebration of the *hieros gamos*, "sacred marriage," by the king and his consort, symbolizing and creating fertility and prosperity; the fixing of the destinies for the ensuing year; and the recitation of creation myths as a means of ensuring the renewal of creation. A variant upon this view portrays the king in the role of the resurrected sun-god on New Year's day, the autumn equinox (see NEW YEAR).

Two principal objections can be raised against this hypothesis:

a) The ritual pattern it invokes is much more fragmentary than has been claimed. Recent studies in Near Eastern religions emphasize the differences in ritual and belief between cultures, and the scarcity of information about the rituals and especially about their significance. Hence there is no fixed Near Eastern pattern from which gaps in our knowledge about Israelite religion can be filled. The question remains whether New Year observances in the Near East exhibit sufficient unity to enable us to reconstruct such observances in Israel—when little specific OT evidence exists.

b) The relation between mythological texts and rituals is complex. Myth is not simply the spoken accompaniment of ritual. Near Eastern myths are often essentially literary productions, with only distant connections to particular ritual acts. Even when they were recited during a ritual—as was the case with the Babylonian Creation Epic—the ritual activities cannot be safely reconstructed from the myths. Equally hazardous are inferences about Israelite festivals based on OT Psalm texts.

iii. *An agricultural New Year festival.* The autumn festival, whatever else it was, was primarily a harvest festival. In the earliest OT references, it is called the "feast of ingathering" (Exod. 34:22; 23:16). It has been argued—notably by Snaith—that a festival that marks the end of one agricultural year will also mark the beginning of the next. While it commemorates the blessings of the past, it must also invoke blessings for the coming year. In that sense the autumn festival in Israel will have had the character of a festival of

the New Year. Principal among its concerns will have been anxiety for the coming of the rains, especially the EARLY RAIN (see also PALESTINE, CLIMATE OF §5) which is expected in October, i.e., within a few weeks of the autumn festival. It is not surprising that prayers for rain figure in the later Jewish liturgy for New Year (see §3 below).

Though there is no direct biblical evidence for such an element in the celebration of the autumn festival, it is quite probable that the major festival of the year did not pass without prayers for the future, and, to be more specific, for the ensuing new agricultural year. Whether that probability constitutes sufficient grounds for calling the Festival of Ingathering or Booths a New Year festival is, however, open to doubt—especially because the biblical sources never refer to the festival in such terms.

It may be concluded that even if pre-exilic Israel and Judah did reckon their liturgical year from the autumn—and that is by no means self-evident, as we have seen above—the evidence that they celebrated the autumn festival as a New Year festival is far from compelling, however attractive and imaginative some of the resultant interpretations of OT texts may be.

3. *In postbiblical Judaism.* For reasons as yet unclear, the beginning of the year, reckoned from the spring by the early postexilic community, came to be celebrated in the autumn in Judaism. The sounding of the ram's horn (שופר); see MUSICAL INSTRUMENTS §B2e) figured prominently in the ritual of the festival, held on Tishri 1-2, while the liturgy emphasized the themes of judgment, God's kingship, and creation.

Nisan 1 continued to be recognized as New Year's day for the reckoning of the reigns of Jewish kings and for festivals. Thus, although the calendar year began with Tishri 1, Passover was regarded as the first festival of the year. Of minor significance were the New Year's days on Elul 1 and Shebat 1, for the tithing of cattle and for trees respectively.

D. J. A. CLINES

\***NOMADISM.** Pastoral nomadism, a socioeconomic mode of life that is based on intensive domestication of livestock and requires movement in a seasonal cycle dictated by the need for pasturage and water, is well attested in the ancient Near East and in the Bible. Unfortunately, historians and exegetes have acquired and clung to erroneous and inexact conceptions of the place of pastoral nomadism in social evolution, the numbers of pastoral nomads, their self-sufficiency and isolation from settled peoples, their role as presumed bearers of major historical, social, and cultural changes, and the supposed socioeconomic and cultural equivalence of village tribalism and pastoral nomadism.

**I. Ancient Near Eastern pastoral nomadism. a. Origins of pastoral nomadism.** Data from prehistory and ethnology have clarified the secondary and limited adaptive development of pastoral nomadism out of a prior mixture of agriculture and animal husbandry in the settled zones. Humans first entered the river valleys of Mesopotamia, not from the Arabian Desert, but from the Anatolian and Iranian hills and grasslands. Animals were domesticated within the Neolithic farming village. Under specific economic and political conditions, some groups specialized in herds of goats, sheep, and asses that were grazed on the marginal desert steppes, both to take advantage of the otherwise unexploited winter growth and to escape oppressive political authorities in the settled regions. See **AGRICULTURE**; **PREHISTORY IN THE ANE**, and supplementary articles.

**b. Numbers of pastoral nomads.** In modern times no more than ten per cent of the total populace in the Middle East has been composed of pastoral nomads. Extrapolating backward, there appear to be no ecological or technological factors that would have increased that percentage at any time throughout recorded history. Before the advent of camel and horse nomadism, which permitted deeper penetration into the Arabian Desert (from the twelfth century B.C. on), the number of ass nomads was probably far fewer.

**c. Self-sufficiency of pastoral nomads.** The degree of self-sufficiency and isolation of pastoral nomads

varies markedly. It depends upon the animals that are bred, distances traveled, terrain traversed, frequency and types of exchange of goods and services with settled peoples, the total mixture of economic modes among the nomads, language and other cultural similarities or differences between nomads and the settled people they contact, and the presence or absence of state boundaries or police powers and other political factors. In some cases the same community has pastoral nomadic and farming segments; in other cases a whole people alternates pastoral nomadism with crop cultivation in half-yearly cycles. A gamut of nuanced relations between pastoral nomads and settled peoples may range from virtually complete merger, except for the peculiarity of the periodic trek (which in transhumance pastoralism may be led by a small number of herders in a basically agricultural community), to frequent or stated periodic contacts between demographically and culturally similar or dissimilar people for the purpose of exchange of goods and mutual services (e.g., grazing rights over field stubble in return for the fertilization of the fields by animal manure). These contacts are as often friendly and symbiotic as they are hostile and hegemonic. On occasion pastoral nomads try to build commercial empires by controlling trade routes and imposing tribute (e.g., Midianites in the eleventh century B.C. and Nabateans in Greco-Roman times).

**d. Pastoral nomads as major change agents.** Historical and sociological reconstructions of the ancient Near East, and of Israel in particular, have been obscured and distorted by the "pan-nomadic" hypothesis which posits the Arabian Desert as an inexhaustible source of population influxes, military conquests, dynastic changes, cultural departures, and religious mutations. Recent study of the AMORITES, for example, shows that they have been carelessly subsumed under the broad heading of "pastoral nomadism" which has in turn, with no concrete evidence, been attributed to an origin in the desert. Amorites at MARI, who were indeed pastoral nomads of a sort, were integrated into village communities and their restiveness and conflict with the state was not due to their invading or infiltrating from the desert but rather to their rural-based resistance to the drafting and taxing powers of the state. Again and again migration due to uprooting because of natural and historical circumstances has been naively equated with nomadism as regular movement in the exercise of a socioeconomic mode of life.

**e. Village tribalism and pastoral nomadism.** In socioeconomic and cultural terms, features of tribal organization and typical elements of rural life have been mistakenly identified as specifically pastoral nomadic traits. Often this disastrous confusion derives from unfamiliarity with anthropology (see **TRIBE(S)**) which has made abundantly clear that village tribalism is exhibited in societies with a wide range of economic modes.

The great majority of supposed pastoral nomadic indicators have no singular diagnostic value. Asses were used as favorite riding animals and reliable beasts of burden throughout the ancient Near East. Sheep and goats were kept by settled peoples.

Tents were used by merchants, armies, and royal hunting parties, and by farmers for guarding and harvesting distant fields or where building materials were scarce. For that matter, nomads often lived, not in tents, but in grass or wood huts, mud houses, windcreens, or caves. Moreover, evidence in Israel, and among other ancient Near Eastern peoples, of blood revenge and hospitality, brotherly covenants, and solicitude for strangers, orphans, and widows, "democratic" or egalitarian social institutions and behavior, and warfare by ambush, feigned flight, single combat, and destruction of captives and booty (see WAR, HOLY[S]) has been customarily attributed to distinctively pastoral nomadic origins. But every one of these traits, and often all of them together, can be found throughout a range of tribal social organization in which not a single pastoral nomad is present.

**2. Israelite pastoral nomadism. a. Limited incidence.** A careful reading of the biblical text shows that a component of pastoral nomadism as a socio-economic phenomenon existed in Israel, probably in two forms: (1) winter treks into the steppes lying S and E of Canaan, and (2) spring/summer treks into the well-watered uplands of Canaan. Owing to the close proximity of steppe and cultivable zone in Canaan, as well as the fluctuating line between them governed by erratic rainfall, agricultural and pastoral nomadic modes of life were closely juxtaposed and interwoven. Many pastoral nomads were part-time or seasonal, and there were farmers who took to pastoral nomadism and returned to farming as economic and political circumstances dictated. There is no reason to believe that the Israelite people—at any time of their existence—included more than ten per cent pastoral nomads.

On the other hand, numerous traits of rural village life and of tribal social organization long assumed to be "pastoral nomadic" have been profusely cited without justification. Mention of asses and tents (see §1e above), flocks and herds, wells and stockades, as well as a host of customs and laws reflecting tribal practice, can no longer be equated with pastoral nomadism unless there are specific indications of seasonal movement by herders. When there are such indications, it must be further determined, if possible, what specific forms of pastoral nomadism are referred to, since references may be to a trek conducted by a handful of herders from a farming community or to the pastoral movements of one segment of a community in which half or more of the populace is fully resident and engaged in farming.

**b. Patriarchs as pastoral nomads?** Migration is not *ipso facto* pastoral nomadism (contrast NOMADISM §§3, 4a). People move for many other reasons than to tend herds; they move because of famines, debts, political turmoil, war, and marriage, and for purposes of religious pilgrimage. The reasons given for the movements of the patriarchs are more often than not precisely such factors. Moreover, the form-critical and traditio-historical cautions against reading the text of Genesis on a single spatiotemporal plane, coupled with the dominant retrojected motif of wandering on an as-yet-unpossessed promised land, should warn us

against making snap judgments about the socio-economic and cultural context of the patriarchs.

**c. Wilderness wandering as a nomadic trek?** The movement of Israelites out of Egypt and across the wilderness, long taken for granted as a pastoral nomadic trek, fails to satisfy the appropriate criteria. The departure from Egypt was flight, expulsion, or armed escape—not a herding trek. The mass of people are pictured as unfamiliar with desert terrain and modes of survival. Animals and people perish. Only the intervention of a Midianite familiar with the environment saves the disoriented fugitives. They settle for long years around the oases at Kadesh where agriculture was certainly practiced. The diet of fish and vegetables which they recall was hardly pastoral nomadic fare. In every way the desert is presented as an alien place.

**d. Nomadic conquest of Canaan?** Did land-hungry nomads conquer Canaan? What is the evidence for this "obvious" assumption? Positively, it consists essentially of no more than the superficial assumption that a people whose patriarchs had been nomads (but see §2b above), and who had managed to flee Egypt and cross the wilderness to Canaan, must have been pastoral nomads. This conclusion begs all the questions and flies in the face of all the counterindications and caveats referred to above. Insofar as they may have adopted some pastoral nomadic survival measures, it was more by compulsion than by advance preparation or preference.

The logical alternative is to look for the origins of Israel in the land of Canaan itself, for it is not to be forgotten that even those who came out of Egypt had once lived in the land of Canaan. In particular it will be necessary to examine the Canaanite matrix of those features of village and rural life and those traits of tribal organization which the pastoral nomadic mirage has so long monopolized. In a model of early Israel as a rift within strife-torn Canaanite society there will be room for a moderate dash of Israelite pastoral nomadism as a subspecialization and outrunner of a basically agricultural people organized in tribal egalitarianism (see ISRAEL, SOCIAL AND ECONOMIC DEVELOPMENT OF[S] §§1, 2a; CANAAN, CONQUEST AND SETTLEMENT OF[S]).

**e. "The nomadic ideal."** The widely-hailed "nomadic ideal" of Israel evaporates once it is recognized that what is praised is not a pastoral nomadic mode of life but an egalitarian tribal society in which religious ideology and praxis and social ideology and praxis were complementary and harmonious aspects of a cultural totality. See WILDERNESS[S] §§1e, 2; RECHABITES[S]; HABIRU[S] §§ 3-4.

N. GOTTWALD

**\*NUMBERS, BOOK OF.** The Greek and Latin names *arithmoi* and *Numeri* agree with the Talmudic designation of the book as *hōmeš haḥpik-ḥūdim* (T.B. Soṭ. 36b) "the 'fifth' of the census," i.e., that one of five Torah books containing the wilderness census.

The variegated materials incorporated in Numbers and its tenuous literary structure make a two-stage analysis desirable. The non-Priestly materials will be studied independently in order to assess their historical and religious significance, followed by a detailed examination of the Priestly (P) materials. See PRIESTLY WRITERS[S].

1. Non-P materials
  2. Historical significance of the non-P materials
  3. Religious significance of the non-P materials
  4. P materials
- Bibliography

1. **Non-P materials.** a) Numbers contains continuous sections from the YAHWIST and ELOHIST, including excerpts from early collections of Hebrew poetry. See CANON OF THE OT[S] §1a.

i. 10:29-12:16: a series of narratives epitomizing Moses' leadership as divinely ordained, reminiscent of Exod. 16-18.

ii. 20:14-25:5 (except 20:22-29; 22:1): attempts

to penetrate Canaan from the KADESH area, the subsequent circumvention of Edom, and events in the steppes of Moab.

b) Edited non-P sections where early materials have been worked into a later account.

i. Chs. 13-14: the dispatching of advance scouts to spy out S Canaan as far as Hebron (13:22). The P writer(s) provided an introduction (vss. 1-16, or 17a), and by inserting 13:21 extended the area to be surveyed all the way to Hamath, an interpretation of the mission predicated on the theoretical description of the Promised Land (cf. Num. 34:1-2). Original is the attempt to approach S Canaan by proceeding W from Kadesh along the way to the wilderness of Shur, which was repulsed by the AMALEKITES (14:40-45). It is probably the P writer, however, who introduced Yahweh's wrathful edict against the wilderness generation (14:26-39).

ii. Ch. 16: the attempted rebellion against Moses' leadership, a theme prominent in 10:29-12:16. The P writer made of this an internecine struggle among the Levitical clans. Early material is found in 16:1, 12-15, 25-34. (Ch. 17 is probably all the work of P writers.)

iii. Ch. 32: the request of Reuben, Gad, and half of Manasseh to settle in Transjordan. Source criticism of this chapter has been unsuccessful. Noth has stressed the historicity of vss. 39-42. The tradition of Num. 32 was utilized in Deut. 3:8-9.

2. **Historical significance of the non-P materials.** Numbers preserves early historiography otherwise unavailable for the period prior to the entry of the Israelites into Canaan. The Midianite connection in the pre-Canaanite period, first encountered in Exodus, is presented in Numbers. Despite differences in detail, both traditions place the Israelites and Midianites together in NE Sinai. This correlates with the dispatching of the scouts from Kadesh (13:26-27), and with the attempt to reach Canaan by moving W along the road to the wilderness of Shur, again from Kadesh (14:40-45). Finally, the request for passage through Edom also came from Kadesh (20:14-21). Thus the early historiography of Numbers is the principal source on the function of Kadesh-barnea as the Israelite base in Sinai.

All attempts to penetrate Canaan apparently failed until after the circumvention of Edom. De Vaux's conclusion that the Israelite victory over the Amalekites (recorded in Exod. 17:8-13) is historical must be questioned. More reliable is the account in Num. 14:44-45, which records an Israelite defeat (cf. Deut. 25:17-19). The Exodus account incorrectly places the event at Rephidim in S Sinai, whereas Numbers has it at Hormah in the Negeb. The battle against the king of ARAD is problematical (21:1-3). It is unlikely that the Israelites were victorious, and vss. 2-3, which echo holy-war themes (see WAR, HOLY[S]), represent a later tradition. It is improbable that, afforded an opportunity to penetrate the Negeb directly, the Israelites would have resorted to a route around Edom that took them all the way to Elath (21:4 ff.).

Of obvious historical importance is the Israelite advance from Kadesh to the steppes of Moab. They ended up controlling Transjordan up to the Ammonite border, including Jazer, N of HESHBON

(21:4-32). The battle of Edrei, in the Bashan (21:33-35), would have taken them far afield, and is probably the record of a later event.

The poetic excerpts fit into the historical reconstruction. De Vaux interprets 21:27b-30 as a ballad celebrating the Israelite defeat of Sihon, against the refrain of Sihon's earlier defeat of the Moabites. In effect this meant that Moabite claims to parts of Transjordan need not be honored in principle because they had lost hegemony over them even before the advent of the Israelites.

It was Albright who first pointed out that references to the Kenites and the characterization of the Seir area in the Balaam oracles would be more understandable if these poems reflected a twelfth-century situation, or even the late thirteenth century. The oracles thus antedate the narrative framework by a considerable period of time.

Archaeological excavations and historical research have shed new light on the situation in NE Sinai and Transjordan during the thirteenth and twelfth centuries B.C. Giveon's recent study of the Shosu nomads has clarified relations between the pharaohs Seti I, Ramses II, and Mer-ne-Ptah and nomads in the Dead Sea area and Transjordan. Rothenberg's excavations at Timna', near Elath, show extensive Egyptian mining activity during the fourteenth through twelfth centuries. Surveys of Transjordan initiated by Glueck and continuing excavations indicate that there was little permanent construction in Edom, Moab, or further N in Gilead during a period of six hundred years prior to the Iron Age. Biblical traditions which speak of cities and permanent settlements in these areas are, therefore, products of a later time, probably the period of the Judges. There were active overland trade routes in NE Sinai and Transjordan before the Iron Age, and the availability of ample water in the Kadesh area made it suitable as an Israelite base.

The early accounts in Numbers do not resolve the problem of the S route of migration indicated by Rephidim (Exod. 17:1, 8; 19:2), Hazereth (Num. 11:35; 12:16), and Dizahab (Deut. 1:1). The interpretation of significant passages in Numbers depends on whether we posit a unified penetration of the Israelite tribes into Canaan. See EXODUS, THE[S].

**3. Religious significance of the non-P materials.** The early sections of Numbers highlight the charismatic leadership of Moses as judge, administrator, and intercessor on behalf of a recalcitrant people. Moses' personal virtues are brought out more fully in Numbers than in Exodus, despite the dramatic saga of the Egyptian encounter. The Deuteronomist drew on Numbers in dealing with this theme.

The BALAAM oracles (chs. 22-24) are an epitome of Yahweh's providence, a theme introduced in the story of the manna (ch. 11). They also afford us an exceptional glimpse into early notions of prophecy. Balaam employed DIVINATION as well as sacrifices, and actively sought divine communications rather than simply waiting for a response.

**4. P materials.** a) The P materials in Numbers represent a variety of genres, and Gray was correct in positing more than one stratum. In addition to Priestly editing in chs. 13-14, 16 (and 17), and 32,

already noted above, the following mostly narrative sections take their cue from the earlier traditions in Numbers.

- i. 20:1-13: events in the Kadesh area.
- ii. 20:22-29: the death of Aaron and the transfer of priestly authority to his son, Eleazar.
- iii. 25:6-18: the zeal of the priest Phinehas in stemming a plague resulting from Yahweh's wrath over the Baal-Peor episode.
- iv. 27:12-23: the designation of Joshua as Moses' successor.
- v. Ch. 31: another version of the Midianite war (cf. 25:16-18).
- vi. Ch. 33: a P version of the route of the Israelites from Egypt to the steppes of Moab, drawing on traditions of Exodus and Deuteronomy as well as Numbers.
- vii. Chs. 34-36: matters related to the anticipated division of Canaan. This material is loosely related to ch. 32, which introduced the theme of tribal territories.

All of the above sections bear a clear Priestly stamp. The Midianite war of ch. 31 (cf. 25:16-18) may be a later echo of the situation during the period of the Judges (cf. Judg. 6:1-8:9), inserted here because the Balaam and Baal-Peor episodes were associated with the Midianite-Moabite alliance against Israel.

The theme of the division of the land allows for the introduction of a census list in ch. 26, additional to the one provided in ch. 1 (*see below*). The delineation of Canaan (34:1-12) corresponds to the Egyptian province of Canaan as defined in the treaty of Kedesh, ca. 1270 B.C. (*see HITTITES; HITTITES[S]*). As demonstrated by Kaufmann, this territorial description never matched any actual program of occupation or conquest, but was merely an idealized conception of the Promised Land. Alt and Albright, followed by Mazar, have considered the lists of LEVITICAL CITIES in Num. 35:1-8 (cf. Josh. 21; I Chr. 6:54-81) as reflecting an ancient institution. Note the reference to such properties in Leviticus (25:33-34) as part of an early system of land tenure. Similarly, the cities of refuge (*see CITY OF REFUGE*), which, according to Num. 35:6, account for six of the forty-eight Levitical cities, are related to the ancient right of asylum stipulated in the Book of the Covenant (Exod. 21:13-14), mentioned in I Kings 1:50, and provided for in Deut. 4:41-43. Num. 36, referring to the settlement of the clan of Machir (cf. 32:39-42), introduces a series of estate laws thematically associated with the case of Zelophehad's daughters (27:1-11). These laws attest the principle that, as a general rule, sons inherit ancestral property, and that such real estate cannot pass out of the control of the clan. This again points to Lev. 25, with its provision for the JUBILEE YEAR.

Num. 16-17 in their final P version deserve special comment. The P writers present a rebellion against Moses and Aaron by a rival Levitical clan (Kohath). They charge Aaron and his clan with arrogating all the priestly offices to themselves. Here we have early notions on divine selection (the sprouting of a rod, or the acceptance of an incense offering). Haran has interpreted the role of the censers in this story within the framework

of graduated taboos affecting specific areas of the sanctuary and courtyards. Num. 16:25-34 belongs, together with vs. 1b-2a and 12-15, to the non-P material, and presents an alternate mode of destruction for the usurpers. The name of Korah was inserted by the P writer. See AARON, AARONIDES[S].

b) Numbers presents a plethora of P materials, which fall into two categories.

i. *The Israelite camp.* Num. 1-4 constitutes a loose literary unit. Ch. 1 contains a census list; ch. 2 a prescribed encampment according to a unit called *deghel*, and a marching order; and chs. 3-4 prescribe the Levitical assignments according to tribal subdivisions. Related thematically to chs. 1-4 are 9:15-10:28, and of course the census list in ch. 26. (Num. 26:52-56 concerns the division of the land, and belongs with chs. 27 and 32 ff.).

Speiser's brief study on the technical term "*bhōdhath mattānā*," "a service of dedication" (Num. 18:7), and Liver's observations on the specialized sense of "*bhōdhā*" in certain P sources, have now been followed by Milgrom's more extensive investigation of Levitical terminology. The terminology of these P sections is not fabricated, and has its analogues in cognate Near Eastern usage. A good example is the array of the Israelite camp according to the *deghel* unit. Hebrew *deghel* is usually rendered "banner, standard," but the evidence on the organization of the military colony at Elephantine (see ELEPHANTINE PAPYRI) shows that, in Egypt under the Persian administration, the *deghel* represented an actual military unit, which Porten estimates as consisting of one thousand men. Aharoni has discovered an Aramaic ostraca from ARAD, also dated to the Persian period, which lists one person as belonging *ldgl 'bdhy*, "to the unit of '*Abdīhāt*.'" In this light, one is tempted to regard Ps. 20:5 [H 6] against a military background: "May we shout for joy in your victory, arrayed by 'units' in the name of our God" (author's trans.). The translation "unit" is preferable in Numbers as well.

The traditions employ the term *šābā'* and its derivatives to connote a team of workers, in this case Levites. Elsewhere this term almost always refers either to a military force or to the heavenly "hosts" (see HOSTS, HOST OF HEAVEN). The distinctive Priestly usage closely follows Akkadian where *šābu*, the cognate of Hebrew *šābā'*, often designates groups of personnel.

Of central importance are the census lists of chs. 1 and 26. Mendenhall suggests that Priestly writers were aware of the procedure of assigning tribal quotas for the Israelite militia in the premonarchic period. Thus, the term '*eleph*' originally designated a tribal subdivision or clan, a sense attested in early biblical sources. The exaggerated numerical totals preserved in Numbers may reflect a later interpretation of '*eleph*' as "one thousand," the normal strength of a royal military unit. What we have in Numbers is a P reconstruction of a premonarchic system, under which the militia was mustered according to tribe, and the units commanded by the tribal chieftain, the *nāšī'*.

Speiser's study of the office of the biblical *nāšī'*, in which he also discusses the subtribe called *bēth-ābh*, "patriarchal clan," strengthens the con-

clusion that we have in the Priestly reconstruction a background reality, recast by later writers, but certainly not a fabrication. The office of *nāšī'* is mentioned in the Book of the Covenant (Exod. 22:28 [H 27]), and the patriarchal narratives also attest to its earliness (Gen. 23:6; 34:2). We even read of the *nāšī'* in the early monarchy (I Kings 11:34). As Speiser noted, it was Ezekiel who envisioned a restored Israel governed by a *nāšī'*, not a *melekh*, "king" (Ezek. 34:24; 46:18). Ezekiel thus expresses the Priestly outlook on ideal government, the system which had once obtained in ancient Israel and would arise again.

The social connotation of the term *bēth-ābh*, which can merely designate a place of residence, is unambiguous in Judg. 6:15, where it is synonymous with '*eleph*,' "clan," and in I Sam. 22:1, where it is synonymous with '*ah*,' "kinsman." The P writers revived premonarchic notions of tribal organization, and built upon them an elaborate portrayal of the wilderness period. We encounter lists of tribal chiefs in Num. 7 (see below); in 10:11-21; 13:1-16. Not all of the lists derive from the same source. Excluded from all lists in the book of Numbers are the Levites, who are always listed separately. They are deprived of the usual *nahald*, "homestead," in Canaan, and have special duties.

ii. *Cultic rites and laws.* Of the P materials in Numbers, there remain only certain rites and codes of cultic praxis, all associated at least tangentially with maintaining the purity of the Israelite camp and its cult place.

Num. 7 records the dedication of the tabernacle altar, and is to be linked with the tabernacle texts in Exodus (chs. 25-30, 35-40). Levine has classified Num. 7 as an archival record presented narratively and listing the uniform donations of each chieftain. Of all the P accounts, Num. 7 is the closest in format to an original temple record, in which the numerals were originally ideographic, which accounts for the inverted order of listing items and quantities: "oxen, 2; rams, 5; he-goats, 5; yearling lambs, 5," etc. Levine also reconstructed Num. 7 as a two-dimensional record, reading down and across in several columns, a convention employed at various periods by cuneiform scribes. Once the introduction is read (vs. 1-11), there are few verbs, and only formulaic features characteristic of a record.

Num. 8:5-26 prescribes the consecration of the Levites, and as such is a companion to Lev. 8-9, the installation of the Aaronide priests (see PRIESTS[S]; AARON, AARONIDES[S]).

Num. 18 is a roster of gifts which the priests are to receive from the offerings of the people, in return for their responsibility in maintaining the purity of the sanctuary and its altars. Ch. 18 draws on diverse traditions, Levitical and Deuteronomic. It includes a section on Levitical gifts (vs. 21-24) and represents the tithe both as compensation for the service of the Levites and as a grant in lieu of a land inheritance.

Directly related to the purity of the sanctuary and its priesthood are the provisions of ch. 19, which prescribe procedures for ridding the camp of impurity resulting from contact with a dead body, considered sufficiently severe as to endanger

the sanctuary itself (vs. 20). Levine has treated the religio-magical conceptions involved in such purificatory rites, where sacrificial blood was employed in order to ward off contamination. In this case, some of the sacrificial blood was sprinkled at the entrance of the tent of meeting (vs. 4) as a means for protecting the sanctuary and its resident deity from impurity. The expiatory sacrifice prescribed here (*hattā'th*) is of the type usually reserved for expiating offenses by the chief priest or the community as a whole (see ATONEMENT IN THE OT[S]). Its utilization here is due to the unusual seriousness of contact with dead bodies in the Priestly conception of purity. This same type of *hattā'th* was prescribed for the periodic purification of the sanctuary (cf. Lev. 16). The concern for purity is also reflected in Num. 5:1-4 (cf. Lev. 15), which requires the removal from the camp of those having bodily eruptions or discharges.

Numbers preserves three sacrificial codes: 9:1-14; ch. 15; and chs. 28-30. All of them are composites based on earlier P sources and are probably to be assigned to the final stratum of the P redaction. See SACRIFICES AND OFFERINGS, OT[S].

Num. 9:1-14 is a code for the PASSOVER festival, based on Exod. 12-13. Absent from the code of Exodus is the provision for a deferred Passover in the second month (for those distant from the temple or impure at the appointed time in the first month). This provision appears to have Deuteronomic overtones (cf. Deut. 12:21; 14:24), and is the source for the tradition of the second Passover ordered by Hezekiah (II Chr. 30:3, 17-18).

Num. 15 can be linked quite clearly to earlier P sections. Vss. 22-31 are a précis of Lev. 4-21, the only addition being a concern for the resident alien (*ger*, vss. 16, 29-31). Num. 15:1-16 represents a sacrificial code dealing with the *zebhah* (slain offering) and can serve as a complement to Num. 28-30 where this type of sacrifice is conspicuously excluded. The basis is a statement in the Holiness Code (Lev. 19:5-8), and the more complete prescriptions of Lev. 1-3; 7:11-38.

Num. 15:17-21 deals with the FIRST FRUITS and employs late terminology, most notably the term *'arisd* ("baking?"), otherwise attested only in Ezek. 44:30 and Neh. 10:38. Num. 15:32-36 represents a didactic account on the observance of the sabbath. Of interest is the reference to a detention facility (*mišmār*), one of the two exceptional cases (cf. Lev. 24:11-12) of such use of prisons for offenders against the TORAH. There is an implicit reference in Num. 11:28.

Finally, Num. 15:37-41 instructs the Israelites to wear fringes on their garments as a reminder of Yahweh's commandments. This section was incorporated into early Jewish liturgy in the period of the second temple as part of the SHEMA prayer, a recitation composed entirely of Torah passages (Deut. 6:4-9; 11:13-21; and Num. 15:37-41; cf. M. AB. 2.3).

Num. 28-30 presents a calendar of appointed times for sacrificial offerings, which is clearly subsequent to Lev. 23, and dependent on it. Num. 28-30 incorporates interpolations already inserted in Lev. 23 (vss. 12-13, 18-20). In its original version, Lev. 23 refers only to an *'iššē* for each sacred

occasion. Hebrew *'iššē* is a general term applied to burnt, altar offerings. Num. 28-30 adds the *tāmidh* (daily offering), and prescribes an entire regimen of sacrifices including the holocaust, grain offering, libation, and a preparatory expiatory sacrifice (*hattā'th*) whose purpose was to rectify any offenses on the part of the priests that would have prevented their officiating on festivals and other sacred days. Rainey has pointed out that, in using such cultic texts for establishing the order of sacrifices in the public cult of ancient Israel, one must distinguish between the administrative order of listing materials allocated for sacrifices and the operative order in which they were presented as sacrifices. The operative order was: *hattā'th*, where required; holocaust, and its accompanying grain offerings and libations; and slain offering (*zebhah*), where appropriate.

There are three remaining sections in Numbers which require comment. Num. 5:11-29 is a cultic ordeal for determining the innocence or guilt of a wife suspected of adultery (see ORDEAL, JUDICIAL [S]).

Num. 6:1-21 and 30:2-17 are codes reflecting the votive system of ancient Israel (cf. Lev. 27) and the institution of the NAZIRITE. The P tradition is concerned primarily with what the Nazirite devotes to the cult and with his purity. Num. 30:2-17 deals with the duties of a father vis-à-vis his daughter and a husband vis-à-vis his wife in fulfilling votive obligations undertaken by women.

Numbers is the least coherent of all the Torah books. Yet from a meager repository of early historiography and epic poetry, the P writers developed a full-blown portrayal of the wilderness period. In so doing they revived early notions of cult, social organization, and government, and focused attention on the central importance of the priests and Levites in Israelite life. For further discussion of the dates and *Sitz im Leben* of the P traditions, see PRIESTLY WRITERS[S].

\*NUZI. I. New texts. More than four fifths of the approximately five thousand Nuzi tablets recovered from excavations at Yoghlan Tepe (ancient Nuzi) and from the city of Kirkuk (ancient Arrapkha) have been published. New sites have also yielded tablets which from their provenance, form, script, and contents may be classified as Nuzi-type texts. Over 840 such tablets have been unearthed in the first two excavation campaigns (1967-69) at Tell al-Faḥḥār, which is located about nineteen miles SW of Nuzi. A study of the texts argues for an identification of this site with Kurrukhanni, mentioned in the Nuzi texts, rather than with the city of Arwe as first assumed. Two Nuzi-type texts were also found W of the Tigris at Tell er-Rimah (ancient Karanā), located approximately 115 miles NW of Nuzi. The major portion of the over 250 texts which have been published during the last thirteen years relate to family law.

2. Bearing on the Bible. A re-evaluation of the importance and usefulness of the Nuzi material for biblical studies has begun (see also MAR[S] §8). It must be borne in mind that proponents of Nuzi parallels have admitted from the outset that often a certain disparity does exist between the Nuzi and biblical accounts. It is assumed that this disparity is due to distortion which resulted because the biblical redactor misunderstood ancient traditions. Arguments for re-evaluation of suggested parallels must thus be based either on the testing of previously advanced interpretations of the Nuzi data or on ascertaining the uniqueness of the Nuzi data within Mesopotamian sociolegal traditions. If an interpretation becomes untenable, the parallel can no longer be drawn. If, however, the interpretation is still valid, but the Nuzi data can be shown to be no longer uniquely Hurrian but rather reflect common Mesopotamian practice, the parallel is of less value in resolving historical and chronological issues of biblical inquiry.

Based upon re-examination of old evidence and upon data from recently published documents, a few previously advanced interpretations can no longer be maintained with any degree of certainty. One is the role of the Nuzi house gods as symbols of inheritance rights. It may be inferred from the texts that upon the death of the head of the house-

hold and the subsequent division among the heirs, each new household would normally make new house-god images. The ancestral images were usually bequeathed to the chief heir, although one text records their bequeathal to a secondary heir. Although it is clear that the house gods were symbols of the unity of the household and the integrity of its membership, there is no evidence that they also functioned as tokens of inheritance rights. Their only attested function specified in the texts is of a cultic nature.

Similarly, new evidence has weakened the assumption that in Nuzi a husband could have the concurrent status of brother by adopting his wife from her natural brother. It is clear from the texts that, presumably in the absence of the father, a brother assumed certain rights and obligations over an unmarried sister, including the right to assign her in marriage or in adoption with her consent. Through adoption into sister-ship, a brother could transfer his rights over an unmarried sister to another, who was then empowered to assign his newly acquired sister to a third party in marriage and receive her price. The evidence indicates that the rights and obligations of either the natural or adoptive brother terminated with the subsequent marriage of the sister to another party. Since the brother of a married woman no longer possessed legal rights over his sister, his sister's husband could not acquire such rights from him. One could argue that the concurrent status of husband and brother could be achieved by first adopting a sister and then marrying her. However there is no evidence that sistership adoptions entailed the granting of conjugal rights to the adoptive brother, and hence he did not *ipso facto* possess the right to marry his adopted sister himself. From all indications, the marrying of one's adopted sister would first necessitate the ceding of one's adoptive rights.

Lastly, it should also be noted that there is no new data to corroborate the thesis that at Nuzi the transfer of a pair of shoes was a symbolic act validating an irregular legal practice.

The attempt to delineate the uniqueness of Nuzi sociolegal traditions within the orbit of Mesopotamian civilization is hampered by the nature and extent of presently available source material. A major difficulty in defining any Mesopotamian sociolegal institution is due to the terse, static, and tenacious nature of the legal formulae of cuneiform contracts. In addition, the Nuzi texts constitute one of the rare private archives from Mesopotamia, especially distinguished in its quantitative representation of family law. Thus the discernment of distinctive characteristics of Nuzi sociolegal practice is impeded by the nature of the source material in general, and in particular by the lack of equal documentation from chronological periods and geographic sites other than Nuzi.

The customs of inheritance and concubinage may serve to illustrate this problem. In Nuzi, the "eldest" son was entitled to a double portion of the paternal estate. This practice is also attested in Middle Assyrian legal tradition. Although the laws of Hammurabi seem to reflect a tradition in which sons normally divided property in equal

shares, some Old Babylonian private documents also refer to the additional share of the "eldest" son. A close examination of the Nuzi documentation reveals, however, that the term "eldest" does not refer to chronological priority, but rather it refers to legal primacy created by paternal decree. Such a definition is not as clearly evident from the scant documentation of the Old Babylonian and Middle Assyrian periods. See FIRST-BORN[S] §2.

Similarly, a custom of concubinage was practiced in Nuzi, whereby the childless wife provided her husband with a handmaiden to bear children in her stead. Such a custom is also cited in the laws of Hammurabi with reference to a priestess-wife. The contention that such concubinage was not applicable to other marriages is based on an argument from silence, and certain Old Babylonian documents may indeed reflect such general practice. Old Assyrian marriage contracts also record similar provisions of concubinage, although the nature of the relationship between the chief wife and the handmaiden's children cannot be presently ascertained for comparison with the Nuzi data.

B. L. EICHLER

**ODES OF SOLOMON.** An early hymnbook, neither pre-Christian and Jewish nor late and Gnostic, which reflects the joyful thanksgivings of the early Jewish Christians and contains metaphorical language characteristic of the DEAD SEA SCROLLS and the Johannine literature.

The Odes, which were listed by Nicephorus and Pseudo-Athanasius and quoted by Lactantius and the author of the *PISTIS SOPHIA*, were discovered by J. Rendell Harris in one of his Syriac MSS, now John Rylands Library Cod. Syr. 9. Subsequently Syriac MS B.M. Add. 14538 and Papyrus Bodmer XI were found to contain versions of the Odes.

1. **Original language.** Early arguments for a Greek original were undermined by recognition of the Semitic quality of the Odes, whereupon a Hebrew original was proposed. But there are impressive data to indicate that Syriac may itself be the original language. On the one hand, most of the reasons for a Greek original have lost their persuasiveness: occasional dependence upon the LXX, parallels with Gnostic literature, and the style of the extant Greek. On the other, the reasons against a Syriac original were suggested early in the century when Syriac was often denigrated and when some scholars anachronistically judged the Syriac poetry of the Odes according to the late classical norms of Ephraem. The most impressive argument for a Syriac original is the intrinsic quality of the Syriac: the play on words, some of which is possible only in Syriac (*viz.*, 19:9), assonance, parallelisms, metrical scheme, and rhythm. Numerous variants between the Coptic, Greek, and Syriac are evidently explained by a Syriac *Urtext*: *maryā* for *m'raimā* in 5:2 and 23:4, *brk* for *krk* in 22:6; and *rahmā* for *rūhā* in 25:8.

2. **Date.** Dating is difficult because the Odes neither quote nor are quoted in literature composed during the first two centuries; they do not refer to historical events; and they are defined by religious experience not dogma. The attempts to place them within the sect that composed the DSS have failed to convince specialists, since Christian elements permeate the hymns and are not merely redactional. They cannot be earlier than A.D. 30, and since significant parallels are not with patristic literature but with the *PSEUDEPIGRAPHA* and especially the DSS, they are probably not later than A.D. 150. The impressive parallels with the sectarian scrolls and the apparently close but not dependent relationship with the Johannine literature suggest

that the most probable date is A.D. 100. This date is supported by the Odes' joyfulness, strong Jewish nature (the term "Gentiles" is used negatively, 10:5; 23:15 [N]; 29:8), and primitive Christology.

3. **Provenance.** Affinities between the Odes and the Fourth Gospel (*see* JOHN, GOSPEL OF[S] §3) make either *EPHESUS* or *ANTIOCH* a likely place of origin. Either Antioch or Edessa is probable if the original language is Syriac. The Odes' relationship with the Johannine literature, parallels to the DSS, early date, and affinities with *IGNATIUS* support the hypothesis that the Odes were composed in or near Antioch.

4. **OT.** Although the odist never quoted the OT, he often borrowed a phrase or metaphor (*cf.* Ode 6 and Ezek. 47). Ode 41:9 seems dependent upon Prov. 8:22, and Odes 8:19; 16:12; and 22:9 are influenced respectively by Isa. 58:8; Gen. 2:2; and Ezek. 37:4-6. The odist's major dependence is upon the PSALMS, which he probably knew in Hebrew and Greek. Odes 7:10 and 9:8-9 are based apparently upon the LXX of Psalms 50:3 [H 51:1] and 20:4 [H 21:3]. In at least two places he seems to have diverged from the LXX; Odes 5:8 and 29:10 follow the Hebrew, or Syriac, not the Greek of Psalms 21:11 and 1:4. As expected in a Christian hymnbook that rejoices in Christ's passion, the most influential psalm is the twenty-second (28:14=Ps. 22:16; 28:18=Ps. 22:18; 31:8-13=Ps. 22:16-18).

5. **Dead Sea Scrolls.** The Odes are strikingly parallel to many ideas and images in the DSS, especially the *Hodayoth*. The Odes contain a dualism similar to that developed in 1QS 3.13 ff., notably the paradigm opposing light and truth to darkness and perversity, with hypostatic creatures in polemical confrontation but subordinate to a creator. The Odes and the major sectarian scrolls contain a consciousness of being "the Way," the dwelling place of the holy ones which God has founded upon the rock, and God's planting for his glory. Likewise both employ "knowledge," "the war," "crown," "living water," and "the sun" as symbols. It is difficult to attribute all these similarities to a shared milieu within sectarian Judaism; perhaps the Odes were influenced by the ideas developed in the DSS.

6. **NT.** The NT is not quoted in the Odes, but it, or the traditions recorded therein, is evidently behind many of the poetic phrases. The traditions that praise Jesus' birth from a virgin, baptism, and walking on the water motivate the odist in Odes 19, 24, and 39 respectively. The Passion and Crucifixion are celebrated in Odes 8:5, 27; 28:9-20; 31:8-13; 42. The tradition behind Matt. 16:18 is reflected in Ode 22:12:

And the foundation of everything is Thy rock.  
And upon it Thou hast built Thy kingdom,  
And it became the dwelling-place of the holy ones.

The most significant, striking, and numerous parallels are between the Odes and John. It is possible that both come from a community in western Syria that was characterized by a Word Christology, an emphasis upon love, and which expressed eternal life through the drinking of "living water."

7. **Gnosticism.** Few scholars would attribute the

Odes to the fully developed Gnostic systems of the second century, but many would place them within proto-GNOSTICISM. They seem to be a tributary to Gnosticism since their concept of knowledge is akin to the Qumran idea that God has made known his mysteries to an elect few who will enjoy a new covenant relationship (cf. 1QpHab 7 and 1QS 1.1-20 with Odes 8:8 ff. and 9:6 ff.).

**8. Theology.** The Odes' Christology is related to the concept of the Trinity (cf. 19:2; 23:22), but is not necessarily Docetic, as some scholars argue. Passages once considered Docetic are better seen as praises of Christ's pre-existence, virginal birth, and victorious death (e.g., 28:17-18), because the Odes do not deny that Christ has come in the flesh. The Docetism of the Acts of John (*see* JOHN, ACTS OR) is quite different.

The most prominent feature of the Odes is an expression of joy in the presence of eternal life and love. This salvation is achieved by Christ, through the Incarnation (7:1-6), Crucifixion (e.g., 42:1-2), descent into hell (e.g., 42:15-20), and Resurrection (e.g., 42:6-13). Note, e.g., the words attributed to Christ in 31:6-9, 12-13.

Come forth, you who have been afflicted,  
And receive joy.  
And possess yourselves through grace,  
And take unto you immortal life.  
And they condemned me when I stood up,  
Me who had not been condemned.  
Then they divided my spoil,  
Though nothing was owed them. . . .  
And I bore their bitterness because of humility;  
That I might redeem my nation and instruct it.  
And that I might not nullify the promises to the  
patriarchs,  
To whom I was promised for the salvation of their  
offspring.

J. H. CHARLESWORTH

**\*OFFERING FOR THE SAINTS.** A collection of money undertaken by the apostle Paul for the benefit of Christians in Jerusalem. Direct references to it appear in I Cor. 16:1; II Cor. 8:4; 9:1; and most fully in Rom. 15:26. Very probably Paul and the Jerusalem apostles agreed on the project during the meeting described in Gal. 2:1-10: "they would have us remember the poor" (vs. 10). Paul then communicated with his churches. His letter to the Corinthians is mentioned in I Cor. 5:9. Paul planned to revisit all his churches to promote the collection, supervise its reception, and arrange for its transfer to Jerusalem. At Ephesus he received a letter from the Corinthians indicating their willingness to participate. In response he directed them to set aside money weekly until his arrival (I Cor. 16:1-2). Paul was intending to travel N and W to Macedonia when Pentecost (late May?) was past, and thence S to Corinth in the fall (16:5-9). For reasons of safety and for symbolism the churches were to supply representatives to form a party which would carry the money to Jerusalem before winter (16:3-4).

Paul's plans, however, went awry. While he was still in Ephesus a crisis occurred in which he "despaired of life itself" (II Cor. 1:8). How long this "deadly peril" lasted Paul does not say, but eventually he made his way to Macedonia. There he intercepted Titus, who was returning with news of the Corinthians—good news except about the collection. Paul then wrote a letter (II Cor. 1-9) pleading with the Corinthians "to complete what a year ago you began not only to do but to desire" (8:10). They seem to have suspected that Paul was intending to divert some of the funds for his own expenses. Paul responded, "We intend that no one should blame us about this liberal gift which we are administering, for we aim at what is honorable" (8:20-21).

The next mention of the collection is in Romans. There Paul speaks of the imminent completion of the project, of his obligation to accompany the money to Jerusalem, and of his plans to leave his former area of mission to begin anew in Spain (15:24-28). He expressed apprehension about his safety in Jerusalem and even whether his "service for Jerusalem" would be "acceptable to the saints" (15:31). If, as some scholars think, II Cor. 10-13 was written in this period, Paul's final words to the Corinthians include a further protest about his honorable intentions (II Cor. 12:14-18).

At this point the evidence in the letters breaks off. Acts makes no direct reference to the project (24:17 is a mere hint). Acts does, however, preserve a list of names of men from various churches, traveling companions for Paul on his last and ultimately fatal visit to Jerusalem (20:4). These may have been the representatives carrying the collection according to Paul's original plan.

The collection had several purposes. (a) There was genuine need, perhaps a result of property sharing (Acts 4:34-5:11), famine (*see* CHRONOLOGY OF THE NT §B1b), or apocalyptic excitement (II Thess. 3:6-13). (b) The project gave Paul a concrete opportunity to respond to the Jerusalem apostles in gratitude for their entrusting him with the Gentile mission (Gal. 2:7-9). (c) It served as a thank offering from the Gentile churches for their share in the salvation originally given to Jewish Christianity (II Cor. 9:12; Rom. 15:27). The undertaking had no real antecedent, although alms and gifts for religious purposes were common. The Jewish temple tax (*see* TAX, TAXES) is the closest parallel.

**ORDEAL, JUDICIAL.** Trial by ordeal is an appeal to divine judgment to decide otherwise insoluble cases that cannot be allowed to remain unresolved.

1. The nature of ordeals. An individual at law

is subjected to a physical test and is adjudged loser or winner on the basis of a bodily response. Such trials were used by all the great historical civilizations with the exception of ancient Egypt and China. They are purely Old World phenomena and are found in the Americas only in a few isolated and obviously borrowed instances.

There are many forms of trial by ordeal. The most common involve immersion in water, drinking or otherwise coming into contact with various potions, or ordeals by heat, in which the individual must retrieve a given object from a boiling liquid, or touch, lick, walk upon, or carry a red-hot object a given distance. There have been many explanations offered for the efficacy of such trials, and parallels have been drawn between them and modern physiological measuring devices such as the polygraph. Whatever scientific validity that these tests may (or may not) have, the common denominator among them and the rationale consistently offered by the practitioners is the belief in the supernatural character of the trial. The supernatural agent may be the element itself, or a god embodied in the element, or a more transcendent god, but in all cases there is some divine agent whose superior knowledge is being invoked to help solve the case.

**2. Ordeal, divination, and oath.** The supernatural character of trial by ordeal indicates its close affinity to two other well-known procedures for appealing to the supernatural: DIVINATION and oath. The three procedures may utilize the same natural elements and may as a consequence appear markedly similar, but they are distinguished from each other by the roles they play in the legal system, and the role played by the divine.

Divination and ordeal are both methods of invoking the special knowledge of the supernatural agent in order to decide upon a course of action. Divination, however, is used as a preliminary procedure to identify a suspect and provide a prima-facie case against him, whereas the ordeal is used to decide the guilt or innocence of the accused. The classic case of legal divination in the Bible, the story of Achan (Josh. 7:10-26), is a clear illustration of their different functions. Joshua has announced that the defeat at Ai was due to a crime committed by a member of Israel, and Achan is thereafter chosen by lots, one of the major forms of biblical divination. He does not stand guilty of the charge, however, and is not convicted or punished until after he has confessed. This is in clear distinction to the ordeal, which is used when there is no confession, and when the case cannot be decided in any other way.

An oath may also be used to resolve unsolvable cases. The defendant may take a "purgatory oath" in which he swears his innocence and is thereupon cleared by the court, on the assumption that he would be punished by the divine agent if he swears falsely. The chief difference between these oaths and the ordeal is the mode in which the divine enters the case. The ordeal sets up a specific test in which the divine manifests his verdict, revealing the individual undergoing trial to be innocent or guilty. The jurisdiction over the accused rests with the court, which almost invariably retains the right

to pass sentence. The oath is fundamentally different: jurisdiction is transferred to the power in whose name the oath is sworn, and the court has no further power over the defendant. It can only adjourn the case to the higher court, which will ultimately pass judgment and sentence the wrongdoer. The oath cannot therefore be used when matters cannot be left in abeyance indefinitely, either because public feeling runs high or because the crime is considered intolerable by society at large. In such cases the ordeal will be imposed.

**3. The biblical ordeal. a. Description.** The one ordeal prescribed in the Bible is the trial of a woman whose husband accuses her of adultery. This ordeal, sometimes called the "ordeal of jealousy" or "ordeal of bitter waters," is prescribed in Numbers 5:11-31 (see WATER OF BITTERNESS). The procedure has two parts: the "jealousy offering" that the husband brings for his wife, and the drinking of the "bitter, curse-bearing waters" (vs. 18). The offering (one tenth of an ephah of flour) may be seen as a form of payment for the trial itself, in which the woman, upon solemn declaration of innocence, drinks a special potion composed of "holy water" and "dust that is on the floor of the tabernacle" (vs. 17) and into which a scroll bearing the legal curse has been immersed until the writing has dissolved (vs. 23). The innocence or guilt of the woman will then be determined by her physical reaction to the waters. If she is guilty "her belly will swell and her thigh will fall off," whereas if she is innocent no harm will befall her and "she will bear seed" (vss. 27, 28). The allusion may be to the sexual organs, which the waters will destroy if the woman is guilty, while leaving the innocent woman fertile.

**b. The critical problem.** Numbers 5:11-31 is not a homogeneous section, but is rather composed of two distinct literary strands. The portion is repetitive and disjunctive, with no way to tell which of the two strands was original. The major difference seems to be the order of events: one strand records the offering of the sacrifice before the drinking of the potion (vs. 16) and the other, afterward (vss. 24-26). The writing of the curse is only mentioned once, and for this reason some scholars have sought to distinguish between a phase of the ordeal in which there was simply an oral adjuration and a potion of water and dust, and another, perhaps later, phase in which the curse was dissolved in the water. These conjectures do not seem to have any substantive weight, and it is best to consider the ordeal as one procedure described in two originally separate literary strands.

**c. The form of the ordeal.** The form of the biblical ordeal presents a problem in comparative analysis. Biblical law is usually seen as arising out of, and in juxtaposition to, the great cuneiform legal tradition (see LAW IN THE OT §B and LAW IN THE OT[S]). We should therefore expect the biblical ordeal to be the same as the ordeal by river. In this ordeal, which is found in pre-Sargonic and classical Sumer, in Old Babylonian Elam, Ešnunna and Mari, in Nuzi, Assyria, Babylonia, and among the Hittites, the accused plunges into the river and is acquitted if he or she successfully floats or navigates the river. The Bible may pos-

sibly be alluding to this practice in Isa. 43:2, although it seems more likely that this passage is an allusion to the crossing of the Red Sea. In either case, the only ordeal prescribed in Israel is one of drinking a potion, and we are therefore dealing with a different family of trials, that of the "poison" ordeal and, most specifically, a special subcategory of this ordeal, that of drinking specially prepared water.

In the "poison" ordeal, which should perhaps better be called a "potion ordeal," the individual drinks a medicinal concoction which may be (but is frequently not) actually poisonous. The medicine is considered a mystic reagent which will demonstrate the innocence or guilt of the individual by causing various physical reactions. The ordeal by special water is distinguished from the other potion ordeals in that there is no pharmacological agent. The water is rendered potent by ritual action which imparts to the water the power and attributes of the divine agent invoked. The closest parallel to the biblical ordeal is one prescribed in the Code of Vishnu. The accused must drink water in which the statues of the gods have been washed. The results are manifested in a few weeks.

The distribution of these potion ordeals is extremely limited. The "poison" ordeal was prominent in African tribal legal systems, where it was the most common form of ordeal. It is found in the Indian law books, and was practiced in Arab tribes, but does not seem to have been used elsewhere. The ordeal of drinking "sanctified" water is even rarer, although oaths are frequently accompanied by the drinking of sacred substances.

Judicial drinking may not have been totally unknown in the ancient Near East. We have one incomplete text from Mari (ARM X:9) in which several minor deities appear to be taking an oath before Ea, promising fealty to the city and ruler of Mari and drinking a potion of water mixed with dust and cornerstone (sic) of the gate of Mari. The concept behind the potion is markedly similar to that in Num. 5, with the dust imparting the essence of the place to both potions. The legal nature of the act, however, is different, for the Mari text does not involve an ordeal. The gods swear by the water in much the same manner as the gods of Greece swear by the river Styx: Should the oath be false the power of the oath will ultimately catch up with those who take it and punish them. The one true potion ordeal in the Near East seems to be among the Hittites: "drinking the rhyton of the life of the god" (contra *ANET* [2nd ed.], p. 210 #18). There is no way of knowing what the potion consisted of, or any of the details of its use, but it does seem to be partially parallel to the biblical trial.

**d. Practice.** The only information that we have about the ordeal in early Israel is the passage from the book of Numbers. There are two major sources for the later use of the ordeal, the Mishna and Tosefta *Soṭah*, "the Errant woman," which contain specific and concrete information about the procedures and materials used. Although these sources are tannaïtic, and thus compiled after the destruction of the temple and the abolition of the ordeal by Johanan ben Zakkai (M. *Soṭ.* 9.9), they

record architectural details about cultic installations and specific locations within the temple bearing on the ordeal. The potion was drunk at the Nicanor (eastern) gates of the temple (M. *Soṭ.* 1.5). The officiating priest, who was chosen by lot (*Tosef. Soṭ.* 1.7), prepared the potion. Holy water was poured from the laver, and the dust was taken from underneath a slab, one cubit square, that was located within the sanctuary to the right of the entrance. The slab had a ring attached so that it could be lifted to get the dust (M. *Soṭ.* 2.2). Rather than have the priest go each time to open the scroll of the Law in order to copy the proper verses, the portion was inscribed on a golden tablet which hung on the far wall of the sanctuary visible from the outside (*Tosef. Soṭ.* II.1). A golden tablet for this purpose is recorded elsewhere (M. *Yoma* III.10) as one of the gifts presented to the temple by Queen Helena, Queen Mother of Adiabene. Such architectural details appear to be authentic and indicate that the ordeal of the errant wife was considered a living legal procedure. The Mishna, however, records so many restrictions and prerequisites that, if the Mishna can be taken as an indication of second temple practice on this issue, ordeals must have been very rare. The situation would be analogous to that of capital punishment, which, although not only permitted but required by the Law, was imposed extremely rarely (M. *Mak.* 1.10). There are rabbinic accounts of an occurrence of the ordeal (M. *Eduyot* 5.6; T.B. *Ber.* 19a; J.T. *Soṭ.* 18a), but we cannot be certain about the precise circumstances.

**e. Legend.** The relationship of God to Israel is often seen as a marital union, with Israel frequently portrayed as a faithless wife. The Jewish tradition interprets the incident of the golden calf in this light, and *Exod.* 32:20, where Moses grinds the calf into powder, places it on water and makes the Israelites drink, is explained by the Talmud as an ordeal of Israel as an errant wife (T.B. 'A.Z. 44a). The biblical passage does seem to record a potion ordeal for the nation, and thus the analogy to the ordeal of the wife may be very early, and may be embedded in the prophetic images of the "cup" that Israel drinks. It is fully and explicitly developed in later Midrashic writings.

We would expect the pregnancy of the betrothed Mary to have given rise to speculations about an ordeal, and both the gospel of Pseudo-Matthew (XII) and the Protoevangelium of James (XVI) record variant legends of such a trial of Mary as a suspected adulteress.

\***PARABLE.** REDACTION CRITICISM has greatly enhanced our understanding of how the individual evangelists used parables in their gospels, and linguistic and literary criticism have opened up new possibilities for appreciating the nature of the parable.

1. **Redaction criticism and the NT parables.** Three generalizations may be made. (i) The extensive modifications of the parables, in both context and wording, introduced by all three synoptic evangelists make it abundantly clear that the first question to be asked is not, "What did Jesus mean?" but, "What did the individual evangelist mean?" or even, "What does the present text mean?" (ii) Similarly, since all of the parables have passed through the alembic of the early church and particularly the individual evangelist, we become less sure of the interpretation of individual parables the farther back we attempt to go. (iii) While no one denies that Jesus spoke in parables or that the substance of much of the parabolic material in the gospels rests on the authentic TEACHING OF JESUS, we are far less certain today than we formerly were how much of it can be ascribed to Jesus or interpreted in the light of his teaching. Every successive retelling has introduced another layer over the original parable, so that, even in the case of authentic parables (and not all need to have originated with Jesus), it is difficult to separate the various layers of tradition and recover the original form. Redaction criticism makes us aware of the various layers and may, if practiced with sufficient patience, illuminate some of them, but it by no means leads infallibly to the teaching of the historical Jesus.

The role of redaction criticism in the study of the parables may be illustrated with reference to the so-called "hardening theory" of Mark (see PARABLE §4b). It can easily be shown that Matthew and Luke, who take over and modify Mark 4:10-12, do so for quite different purposes, none of which have much to do with the view that Jesus taught

in parables in order not to be understood. Matthew's concern is clearly that the true disciple should understand (cf. Matt. 13:16-17, 19, 23, 51), a view that is probably implicit in Mark's source for ch. 4 (cf. Mark 4:33) but rejected by Mark himself (4:34). Luke, on the other hand, restricts the question about the "parables" (Mark) to the single parable of the sower (Luke 8:9); he notes that for the "others" (which?) something (unspecified—cf. Mark's "all things") is "in parables" (i.e., not understood, 8:10); and he puts the entire discussion in the context of the true hearing of the word of God (cf. Luke 8:15, 19-21). In addition, Mark does not really say that only the parables (which he sees as somehow obscure, as in apocalyptic) are given in order to harden human hearts; Jesus' words, acts, and indeed his entire ministry serve that purpose. Note "everything," not "everything I say" in Mark 4:11 and the insistence in vs. 34 that everything Jesus said—whether parabolic in form or not—was a "parable" needing explanation.

Finally, the statement in Mark 4:11-12 does not really say that parabolic speech in our sense was intended to prevent belief, but rather that the withholding of the "secret" (μυστήριον) of the kingdom of God was so intended. Even the pre-Markan tradition (from which the saying surely comes) cannot be understood as saying that Jesus used parables in order to be misunderstood; it says that Jesus' entire ministry is intended, in the purpose of God, to condemn those whose hearts have been hardened. Since this is not compatible with what we know of the teaching and intention of Jesus, and since for various technical reasons the statement cannot be retranslated into an Aramaic saying which can be plausibly ascribed to Jesus (Carlston), we must probably see Mark 4:11-12 as originating in connection with the theological problem created by Jewish rejection of the Christian message and elaborated in different ways in Mark's source and in our three Synoptic gospels.

Such multiple layers—in this case at least four—are behind most of the gospel parables, and any particular parable can be understood "historically" only in terms of its setting in each of these layers. So far as one is committed to "historical" questions, therefore, redaction criticism is indispensable for understanding the early history (and thus provenance) of any particular parable.

2. **Linguistic and literary criticism.** It is only possible here to make some generalizations about the various ways in which linguistic and literary criticism have shifted the emphasis of contemporary parabolic interpretation.

a) Neither a parable nor any other metaphor "says one thing and means another." A parable is a particular way of speaking, not a code, and what it means is what it says (Black).

b) Parables, like all metaphorical speech, rest to some extent on common cultural assumptions and experiences. The varying degrees to which those assumptions and experiences are shared thus results in varied apprehensions of a parable's nuances. Further, while some degree of nonmetaphorical interpretation may be desirable in individual cases, such interpretation shifts the kind of response evoked and thus the "meaning" of the parable.

c) "Historical" questions, as commonly asked in modern biblical studies, stand in constant danger of misunderstanding the text in any or all of the following ways: (i) by "atomizing" the text; (ii) by seeing the text only as a formal unit, subject to laws of transmission and historical forces (FORM CRITICISM); (iii) by interpreting the text as simply a modification of its sources (redaction criticism). What is lost in all three cases is the integrity of the text itself as well as its character as a text, i.e., as a particular statement with its own validity.

Structuralism, which specifically elaborates this last point in various ways, attempts to understand a text primarily in terms of its structure. Structuralism is concerned, not simply about the organization or movement of a text, but about its organic wholeness. It has devised a particular method of analysis in order to disassemble and then reassemble the text so that its inner unity may be understood. Many structuralists go even further, arguing that, while the possibilities of language are enormous, they are still finite, and seeking to determine the "deep structure" of the human psyche that seems to have imposed some kind of limited order on those possibilities. See LITERATURE, BIBLE AS[S] §4a.

It is by no means clear how the various new approaches to linguistic and literary criticism will develop, or how their varied forms will affect future interpretation of the parables. But many of their basic insights—if not always their specific methods and esoteric vocabularies—will surely become part of the tools of parabolic interpretation in the next generation.

Two other points must be noted. (i) Most practitioners of such newer methods understand their techniques as corrective supplements to other methods rather than substitutes for them. (ii) So far as Christian theological reflection rests on the method, speech, or action of Jesus, it must accept the fact that parables are a part of Jesus' ministry, but only a part. No sound critical method will allow us to attribute much more (or less) of the parabolic than of the nonparabolic materials of the gospels to Jesus. Insofar as the NT parables are parables of Jesus, they come from a context which included nonparabolic statements as well, and each kind of statement must be interpreted in the light of the other.

C. E. CARLSTON

\***PARACLETE.** This distinctively Johannine term does not occur in the LXX but is found in other Jewish writings contemporary with the NT. Outside the NT it most commonly means "advocate," "mediator," or "intercessor," one who appears in another's behalf. Such a meaning finds support in rabbinic sources and is appropriate in I John 2:1, where Christ's role as advocate before God the Father is clearly meant.

Because of the way in which the Paraclete's functions are described in the Fourth Gospel a number of translations have been proffered, e.g., "Comforter" (KJV), "Counselor" (RSV), as well as "Advocate" (NEB). None of the titles is entirely satisfactory, however, and it is doubtful that purely linguistic research will prove conclusive. Recently efforts have been made to understand the term on the basis of its conjectured historical background. The Mandaean figure of the "helper" and also the figure of the archangel Michael as described in Qumran texts have each been adduced as models (see MANDAISM[S]; DEAD SEA SCROLLS[S]).

The safest course is to attempt to understand the Paraclete on the basis of the gospel itself. Clearly the Paraclete, the Spirit of truth (John 14:17; 15:26) or HOLY SPIRIT (14:26), is sent from the Father (14:16; 15:26) after the departure of Jesus (16:7) to be with his followers forever (14:16). He remains unknown to the world (14:17), but he teaches the disciples and reminds them of what Jesus has said, thus glorifying him (14:26; 16:14). He imparts truths from Jesus that the disciples could not have borne during his earthly ministry and declares things that are to come (16:12-15). He bears witness concerning Jesus (15:26) as the disciples who have been with him from the beginning bear witness (15:27). He confutes and exposes the world concerning sin, righteousness, and judgment (16:8-11). In fact, the Paraclete functions in the absence of Jesus' physical presence to make his guidance and power real among his followers. Thus with some reason he is called another Paraclete (14:16), having succeeded Jesus (I John 2:1).

The specificity of the gospel's description of the Paraclete's role conveys a sense of vivid, concrete reality. The figure of the Paraclete seems to be neither a mere object of hope nor a creation of the imagination, but rather the literary distillation of a living experience and discrete function within the community. Quite possibly the evangelist had in view a prophetic office exercised in the Chris-

tian church whereby the Paraclete became accessible to the community. In this connection it is significant that the seven letters of Rev. 2-3, in which the risen Jesus instructs the prophet (1:3, 10; 22:6-7, 9-10, 18-19) what to write to the churches (1:11), contain certain parallels to the Johannine Paraclete. Each letter is a word from the living Christ (1:17-19; described in various ways at the beginning of each letter: 2:1, 8, 12, 18; 3:7, 14), but also a word of the Spirit (2:7, etc.), so that Christ and Spirit merge, much as they do in the Johannine figure of the Paraclete. Although there are many differences between Revelation and the Fourth Gospel, their portrayals of the Spirit (Paraclete) are in some respects mutually supportive.

D. M. SMITH

**PARENESIS** *pâr ē nē' sīs* [Gr. παραίνεσις, advice; παραινέω, advise, exhort]. Commonly used as a technical term to refer to all general exhortations of an ethical or practical nature. Only the verb appears in the NT (Acts 27:9, 22). Elsewhere (e.g., Luke 3:18; Acts 2:40; 11:23) παρακαλέω (to exhort) is used in much the same way (see EXHORTATION IN THE NT[S]).

Parenesis is common in the literature of Stoicism and Hellenistic Judaism (TOBIT, Pseudo-Phocylides, TESTAMENTS OF THE TWELVE PATRIARCHS, Pirke Aboth) and also in the church fathers (DIDACHE, I CLEMENT, BARNABAS, HERMAS). In the NT, major portions of Paul's letters consist of parenesis (I Thess. 4-5; Gal. 5-6; I Cor. 6-7; Rom. 6, 12-15), whereas other epistles have it distributed throughout (Hebrews, I Peter) or are almost entirely parenetic (James).

NT parenesis ranges over various topics (e.g., love, Gal. 5:13-14; marriage, fidelity, and celibacy, I Cor. 7; interpersonal relationships, Rom. 12:19-21; 14:1-15:7; II Thess. 3:6-10; Heb. 12-13; I Pet. 5:1-5) and includes various ethical catalogues and station codes indicating how one ought to live in society (see LISTS, ETHICAL; LISTS, ETHICAL[S]). Parenetic materials are typically eclectic and loosely arranged, formulated with an eye not to specific situations but to what is universally applicable. Parenesis, therefore, provides information about the church and its traditions in general rather than about particular congregations being addressed.

Once the traditional nature of NT parenesis was recognized it became necessary to inquire about its origin. Those who have traced this to an early baptismal liturgy (Perdelwitz) or catechism (e.g., Seeberg, Selwyn) cannot fully explain why the same parenesis appears in such varied contexts within the NT. Moreover, these parenetic materials were undergoing constant development and change: e.g., the station code, not yet fully born in I Cor. 7:17-24, comes to full fruition in Col. 3:18-4:1, but is absorbed into a church-order regulation in I

Timothy (see LISTS, ETHICAL[S] §2a, esp. ii). Equally unsatisfactory is the view that the church developed its ethical teaching only when faced with a delay of the PAROUSIA, and that it had then to draw on readily available Jewish and Hellenistic sources (Wendland, Dibelius). On the contrary, ethical as well as doctrinal material was part of the apostolic tradition from the beginning (see EXHORTATION IN THE NT[S]).

It is more realistic to regard the various elements of NT parenesis as due to various life settings: (a) the teaching and ministry (practice) of Jesus himself (I Cor. 7:10; 11:2-3; Jas. 2:7); (b) oral traditions formulated within the earliest church, setting forth the implications of Jesus' life and teaching for Christian faith and practice (I Thess. 4:1-2; Rom. 6:17; 16:17); (c) apostolic instructions called forth by the problems of specific congregations and conveyed with a sense of divine authority (I Cor. 7:40); (d) opinions or judgments offered in response to given circumstances (I Cor. 7:25-35).

**PASSION NARRATIVE.** The title given those chapters of the gospels which depict the last days and hours of Jesus' life (Mark 14-15; Matt. 26-27; Luke 22-23; John 18-19). While there is ample testimony that the suffering and death of Jesus was the subject of early Christian preaching and confession (Acts 2:23, 36; 4:10; 5:30; 10:39; Rom. 8:32; I Cor. 1:23; 15:3) and was liturgically celebrated (Rom. 6:3-5; I Cor. 11:23-26; Phil. 2:6-11), the gospels contain the only extended narrative of these events.

**1. Formation of the narratives.** Different facts point to the formation of a narrative tradition older than the gospel accounts. While John and the Synoptics differ radically in their pictures of the public ministry of Jesus, there is remarkable convergence of the four evangelists in those sections of the passion narrative which follow the arrest of Jesus (Mark 14:43; Matt. 26:47; Luke 22:47; John 18:2). The second and third predictions of the Passion in the Synoptics begin with the "handing over" of Jesus (Mark 9:31; 10:33; Matt. 17:22; 20:18; Luke 9:44; 18:32), as does the tradition of Paul in I Cor. 11:23. A suggested development of

the passion traditions would be: (a) a short kerygmatic account, much like 1 Cor. 11:23-26; (b) a longer account which began with the arrest of Jesus, recounted his appearance before religious and civil officials, and included the crucifixion and burial; (c) longer accounts to which incidents such as the Last Supper and Gethsemane were added; and (d) the gospel accounts.

Though previous critics tended to identify the longer account, (c), with the Markan account, recent work on the literary sources such as that of Taylor and the work of the form critics (Bultmann, Dibelius, Linnemann, *see bibliog.*) indicates clearly that Mark created his account out of existing traditions.

**2. Characteristics of the accounts. a. Mark.** The passion narrative occupies roughly twenty per cent of Mark. Mark's hand is especially evident in the temporal and topological notations which link the pericopes and give a structure to the account (14:1, 3, 12, 17, 26, 32, 42, 53, 72; 15:1, 16, 25, 33, 34). Mark writes from the viewpoint of the Easter faith; his passion theology is rooted in the paradox of faith. The Cross is salvation; the humiliation of Jesus is his exaltation; the way of discipleship is the way of suffering; a Gentile centurion confesses Jesus as the Son of God (15:39); he who dies, forsaken by God, is fulfilling the will of God (15:34; 14:36). The christological thrust is of prime importance. Throughout Mark's gospel Jesus conceals his identity by ordering silence (1:25, 34, 44; 3:12; 5:43; 7:36; 8:26) and by private teaching (4:10-12; 13:3-37), and his own disciples misunderstand the nature of his mission (8:32-33; 9:32; 10:35-45). This messianic secret (*see* SECRET, MESSIANIC) is unveiled in the Passion. In the Sanhedrin trial (14:53-65), in response to the question, "Are you the Christ, the Son of the Blessed [God]?" Jesus answers with the revelational formula "I am," and qualifies the SON OF GOD title by affirming that he is the SON OF MAN. In Mark, the Son of man is he who exercised authority on earth (2:10, 28), followed the way of suffering (8:31; 9:12, 31; 10:33, 45; 14:21, 41), and will be revealed in glory to his elect (8:38; 13:26; 14:62). By unveiling the secret in the TRIAL OF JESUS, Mark conveys to his readers that only those who follow Jesus on the way of the Cross will understand who he is. In place of the disciples who flee and deny Jesus during the Passion (14:50, 66-72), faithful women follow Jesus to the cross (15:40-41), and to them is given the news of the Resurrection (16:1-7). Therefore, in Mark, passion traditions become a passion theology. The reader is called on to affirm in faith that the lowly one is the Messiah, that the way of discipleship is the way of the Cross, and that the small band who wait in Galilee will be the temple "not made with hands" (14:58).

**b. Matthew.** Matthew's passion is to be viewed in the context of the whole gospel. Matthew writes a Jewish-Christian work which articulates a theology for a community in the process of separation from Judaism (*see* MATTHEW, GOSPEL OF §8). Jesus is the new Moses (*see* MOSES IN THE NT[S] §4) who teaches a new Torah (chs. 5-7) and is the founder

of the new ecclesia or community of Israel (16:18). In the infancy narratives Matthew tells his readers that Jesus is the Christ, the scion of David (1:1), the fulfillment of prophetic hope (1:22), and the one to whom Gentile lords give homage (2:1-12).

The heightened christological status and the church as the new Israel influence Matthew's passion. In Matthew "Jesus" is not simply a name, but a title—he who will save the people from their sins (1:21). In contrast to Mark, Matthew introduces the major parts of the passion narrative with the title "Jesus." Matthew stresses Jesus' foreknowledge of events (26:2, 25). In the arrest Jesus exercises control over events. He addresses Judas as "friend" and only "then" (26:50) can the arrest occur. He has the power to summon angels to his aid, but does not because he is aware that scripture must be fulfilled (26:53, 54, 56). In the temple saying Jesus is the one who is able to destroy the temple (26:61), and the high priest ironically affirms Jesus' dignity by using the Christian form of confession, "the Christ, the Son of God" (26:63).

The trial before PILATE (27:11-26) achieves special significance since here the separation of the new and old Israel takes place. Prior to the trial Matthew inserts the story of the death of JUDAS (27:3-10). By throwing the "blood money" into the temple, Judas symbolically transfers the responsibility for Jesus' death back to the Jewish leaders. The intervention of Pilate's wife, while emphasizing the righteousness of Jesus (27:19), also anticipates the mission of the new Israel to the Gentiles (28:19). Matthew adds the explicit gesture by which Pilate disclaims responsibility and with the cry, "His blood be on us and on our children!" (27:25), shifts the blame for the death to the old Israel. Caution should be observed in interpreting this cry of the people apart from its historical context. This saying represents a secondary polemical motif of Matthew's theology in its struggle with Judaism after the destruction of the temple and should not be used as a historical indication of the attitude of the Jewish people at the time of the death of Jesus, nor as a prophecy for subsequent generations of Jewish people.

Matthew addresses his church with a picture of Jesus who goes to death as lordly master of his own fate, and whose death signals to the Christian of his time that he or she is a member of the new Israel.

**c. Luke.** While it is usually agreed that Matthew used Mark as a source for his passion account, the relation of Luke to Mark is problematic. Though the passion narratives in Mark and Luke are about the same length, only twenty-seven per cent of Mark's vocabulary appears in Luke, and Luke has thirty-four verses from his own tradition. Also, while in the body of the gospel Luke carefully follows the Markan order, in the passion narrative there is constant transposition and alteration of this order. These divergences raise the question as to whether Luke had a particular source (Proto-Luke), and, if so, whether he revised Mark in light of the source or reworked Mark into the content and order of his source (*see* SYNOPTIC PROBLEM §B3c and SYNOPTIC PROBLEM[S]). While there

is no consensus on this subject, a definite Lukan theology does emerge in the passion narrative.

Luke is distinctive in not ascribing a directly salvific significance to the death of Jesus. He omits Mark 10:45 from the body of his gospel and the originality of 22:19b-20 (the redemptive aspect of the meal) is uncertain. Instead, Luke stresses Jesus as the paradigm of the innocent martyr. Pilate proclaims him innocent three times (23:4, 14, 22), as do Herod (23:15), one of the criminals at the cross (23:41), and the centurion (23:47). Another theme is that, in the Passion, Jesus achieves final victory over Satan. After the third temptation (4:13) Satan leaves "until an opportune time" but returns during the Passion, entering into Judas (22:3). He is ready to capture Peter (22:31), and the Passion is the assault of the power of darkness (22:53). However, Satan's attacks are futile, both against the disciples and against Jesus. Unlike the Markan portrayal, the disciples do not fail during the Passion, but are described as "those who have continued with me in my trials" (22:28). Luke does not have the prophecy of scandal (Mark 14:27); Jesus prays for Simon that his faith will not fail, even after the denial (22:32). The sleep of the disciples is excused (22:45-46), and Jesus is followed to his cross not only by faithful women but by "acquaintances" (23:49) from Galilee. The attacks against Jesus are also futile. At his arrest Jesus remains a healer (22:51); he teaches the disciples (22:35-38); he prophesies to the women of Jerusalem (23:28-31); and he offers salvation to the good thief (23:43). At the death agony Luke omits the cry of dereliction, and Jesus dies with words of filial trust, "Father, into thy hands I commit my spirit" (23:46). Jesus is the model for those who suffer innocently; just as suffering did not destroy Jesus, neither will it destroy those who follow him (cf. 21:13-14).

**d. John.** John's passion narrative is the shortest of the accounts (eighty-two vs.) and, while it has points of contact with the Synoptics, is not directly dependent on them (see JOHN, GOSPEL OF [S]; JOHN, GOSPEL OF [S] §1). The narrative is characterized by a doctrinal concern—the Christology; an apologetic concern—an intensified picture of the Jews as the agents of Jesus' death; and a dramatic concern—carefully constructed narratives such as the trial before Pilate (18:28-19:16). The theology of the passion narrative emerges not only from the narrative itself, but also from the farewell discourses (chs. 14-17), which function as an extended commentary on the Passion.

In John the harsher aspects of the sufferings of Jesus are softened (the scourging and mocking are reduced to two verses, 19:2-3). The Passion is therefore less a story of degradation than the triumphal return of the Word to the Father and the hour of glorification (17:1), as well as a prelude to the sending of the PARACLETE (15:18-26). Authority and majesty characterize Jesus in the Passion. At his arrest Jesus knows what is to befall him (18:4), and his captors fall before his majesty (18:6). He has the power to protect the disciples (18:8-9; cf. 17:12). His death is the willing acceptance of the cup his Father has given him (18:11). In the hearing before Jewish officials, in

contrast to the silence or cryptic answers in the Synoptics, Jesus interrogates his captors (18:20-24). In the Pilate sequence Jesus confounds the powers of the world (19:10-11) and Pilate is reduced to the role of powerless questioner (18:38; 19:9). John sees the saving significance of the Passion in the victory Jesus achieves over the powers of the world (cf. 15:18-26), in the picture of Jesus as a model of love, the good shepherd who lays down his life (cf. 10:1-18), and in the fact that, when Jesus is lifted up, he will draw all men to himself (cf. 12:32; 8:28).

**3. Conclusion.** The passion narratives are not primarily history but theology of the history of the events surrounding the suffering and death of Jesus. Mark invites the reader to an act of faith in the paradox of the cross. Matthew calls for adoration and worship of the Lord who is master of his fate. Luke invites participation in and imitation of the suffering of the martyred Jesus. And John proclaims that we must celebrate the victory of one who, as a model of love, followed the Father's will to the end.

\***PATRIARCHS** [אבות, πατριάρχαι; Lat. *patriarchae*]. The Hebrew term אבות, "fathers," is somewhat ambiguous. It can mean the previous generations of the people, often used in a derogatory way by the prophets (Jer. 7:14, 22-26; 11:7-10; 16:10-13). It can also refer to the founders of the people, either to the first generation who came out of Egypt (Jer. 2:4-8; 11:3-5; Ezek. 20:1-8), or to the triad of ancestors, Abraham, Isaac, and Jacob. It is this last meaning of patriarchs corresponding to the modern usage which will be dealt with here. (On the wider usage in OT and NT see **PATRIARCHS**.)

1. **The historicity of the patriarchs.** The notion that the patriarchal stories in Genesis reflect the second millennium B.C. has long been accepted as a tenet of OT scholarship, even though opinion varies greatly on the precise limits of their period within the Middle Bronze or Late Bronze Age. Over the past few decades many scholars have taken up the task of comparing new epigraphic and archaeological knowledge of the second millennium with the patriarchal stories. It is helpful to examine the nature and limits of some of these parallels. See PATRIARCHS §3a.

a. **The patriarchs as nomads.** To the casual reader of Genesis, the patriarchs, especially Abraham, appear to lead a nomadic way of life, grazing their flocks, living in tents, and moving from place to place. This picture has invited comparison with the sheep-breeding nomads (often called seminomads) mentioned in the second-millennium sources. The stories are thus believed to reflect an early presettlement phase of nomadic life carried on by the forefathers of the later Israelites.

Such a view, however, encounters many problems in the present stories. They tell of the patriarchs' possession of camels and tents, features more appropriate to the desert nomads of the first millennium. On the other hand, the patriarchs also possess cattle, animals belonging to a sedentary way of life. Isaac is pictured in Gen. 26:12 ff. as a successful farmer, the envy of the Philistines. Laban (Gen. 29-31) and Jacob (Gen. 37) are owners of large flocks; their families remain in one location while their sons take the sheep to distant pasturage. All the patriarchs have households of slaves and hired hands, but, except for Lot's brief stay with Abraham, there are no accompanying clansmen. It is for this reason that both Isaac and Jacob must obtain wives from the old homeland in Aram-naharaim. Even Abraham's movements do not reflect the nomadic seasonal change of pasture, but only an artificially constructed itinerary to tie the story units together. Thus, while the stories may reflect a rural and pastoral setting, they do not suggest a presettlement form of nomadic life. See NOMADISM[S].

b. **Personal names, peoples, and places.** It is often argued that the names of the patriarchs fit very well with those of West Semitic names in the second millennium. The names Abram (in the form *Abi-ram*) and Jacob (as a component in such names as *Ya'qub-ilu*) occur in both the early and late second millennium. Some of the names of the twelve tribes, such as Simeon, Ashur, and Benjamin, may also be attested. But the antiquity of a tribal name by itself counts for very little, since the tribes may antedate by many years the stories about their eponymous ancestors. And the nontribal, personal name *Abi-ram* also belongs to a name type common in the first millennium as well, as is

evident in the very similar Phoenician name *Ahi-ram*. The form ABRAHAM is not found in the second millennium and is best explained as an Aramaic dialectical variant of Abram.

The names TERAH, NAHOR, and SERUG in Abraham's genealogy are also cities in Upper Mesopotamia in the region of Haran, from which Abraham is said to have set out for Canaan. Of these cities, Nahor, Haran, and also Ur in southern Mesopotamia, are known from early second-millennium sources. But Terah and Serug, as well as the others, are found in inscriptions of the first millennium, and Ur of the Chaldeans and Haran in *Aram-naharaim* point, by these designations, directly to the great prominence these cities attained in the late Assyrian and Neo-Babylonian times (the eighth to sixth centuries B.C.). Likewise, the close relationship of the patriarchs to the sedentary northern ARAMEANS and the nomadic Arabs (see ARABIANS), with their accompanying genealogies (Gen. 22:20-24; 25:1-18), reflect the circumstances and importance of these two peoples in the mid-first millennium.

The terms for the indigenous inhabitants of Palestine (Amorite, Hittite, Canaanite, and Horite) all have their origins in the second millennium. But the way these terms are used does not fit the historical realities. Instead, they represent a tendency toward the use of archaisms common to many first-millennium sources. Thus in the late cuneiform texts the terms *Hatti* (Hittite) and *Amurru* (Amorite) were artificially applied to the population of Syria-Palestine as a whole. Similarly, the terms Canaanite and Horite seem to correspond to the Egyptian archaic terms for this region. The reference to PHILISTINES in Genesis has been widely recognized as anachronistic for any period prior to their coming to Palestine (ca. 1200 B.C.). See AMORITES[S]; HITTITES[S]; HURRIANS[S].

c. **The customs of the patriarchs.** Another argument for the antiquity of the patriarchal traditions has been the citing of parallels to the social customs of the second millennium. Recent studies have cast considerable doubt upon such parallels. First, a number of distinctive customs reconstructed from cuneiform sources never actually existed. Examples of these are the so-called *erebu* marriage, a special "wife-sister" marriage, and a use of the household gods (*teraphim*) as a claim to property rights. (See NUZI; NUZI[S]; MARI[S] §8.) Second, there has been a tendency to supply the stories of Genesis with missing elements to make the comparison complete. Thus parallels have been drawn to the Jacob story on the assumption that he was adopted by Laban, but nothing in the story itself warrants such an assumption. Third, parallels were often drawn to second-millennium sources while ignoring the extant first-millennium evidence for a given custom. In fact, there are no customs of the second millennium parallel to the Genesis stories which are not also attested from the first millennium. (For works on the current state of this debate see *bibliog.*)

d. **Archaeology and the patriarchs.** Some attempts have been made to associate the patriarchs with various archaeological periods in the second millennium but it is difficult to make any one period

fit all the relevant stories. Some scholars have suggested MB I (2200-1900 B.C.) as a background for the "age of Abraham." They point to the evidence of an extensive settlement in Transjordan and in the Negeb, followed by a gap in occupation until the Iron Age. This would make only MB I suitable for such stories as the Sodom tradition (Gen. 14; 18-19). But a lack of urban settlement in this period would cause many difficulties for other stories. Others have associated the cultic installations at SHECHEM in MB II with the building of altars there by Abraham and Jacob. But the cultic interpretation of some of the architectural features is disputed and nothing points specifically to the patriarchal stories (see JOSHUA, BOOK OF[S] §5d). On the other hand, recent excavations at BEER-SHEBA have revealed that there was no settlement there before the Iron Age, even though the place name is closely associated with all three patriarchs. This fact alone would raise grave doubts about the use of archaeology in elucidating the background of the patriarchs.

*e. The patriarchs in world events.* Few patriarchal stories make any mention of the broader world events of the day. The story of Abraham's victory over the kings of the E in Gen. 14 is an exception, but opinions vary greatly on its historical value. The names of some of the persons and places seem quite enigmatic. The story seems to suggest that a great coalition of four world powers (Elam, Babylonia, Assyria, and the Hittites) conducted a campaign throughout Transjordan and the Negeb, explicitly for the purpose of punishing a group of rebellious kings in the region of the Dead Sea. These foreign invaders were in turn routed by Abraham and his 318 servants. Such a course of events, however, cannot be reconciled with our extensive knowledge of the political history of the second millennium. Neither Elam nor any other eastern or northern power had a foreign empire in Palestine or Transjordan in the second millennium. A coalition between these powers cannot be imagined, since they were enemies whenever there was any mutual contact. Finally, a campaign into this western region would have been totally pointless, for there was scarcely anything there at the time to warrant it. In fact it is more likely that the story reflects the knowledge of the domination of this region by the successive empires of Assyria, Babylonia, and Persia in the first millennium B.C.

Even the setting of the JOSEPH STORY in Egypt gives us no name of any pharaoh nor any other clue as to the time of the events. The Egyptian coloration in the story is more characteristic of the first millennium than any earlier period. Attempts to establish specific connections with such periods as the Hyksos rule of Egypt, first proposed by Josephus, fail for lack of any specific evidence. See HYKSO[S].

*f. Conclusion.* The presence in the patriarchal stories of such features as camels and Philistines has been regarded in the past as an anachronism which "updated" the original stories. But these features would appear to be far more numerous than could be covered by such an explanation. They call into question the whole scholarly search for parallels with the second millennium and sug-

gest instead that the traditions were largely molded by and for the social and religious community of a later date, including the period of the Exile.

**2. The tradition-history of the patriarchal stories.** Another approach to the patriarchal traditions, tradition-history, has recently attained widespread acceptance. See TRADITION CRITICISM, OT[S].

*a. The stories as oral tradition.* The method as applied to the patriarchal traditions arises out of Gunkel's commentary on Genesis in which he traced the origins of the various stories back to legends (*Sagen*) handed down and transformed by oral tradition (see TRADITION, ORAL[S]). Such legends were originally separate from one another and belonged to various life-settings and localities. Some were non-Israelite in origin but, in time, were adapted by Israelites to their own perspective. In identifying and describing the earliest legend form, the most important criterion for Gunkel was the presence of etiology in the stories (see ETIOLOGY[S] esp. §3; FORM CRITICISM, OT[S]). Most of the traditions were viewed as various kinds of etiology, reflecting a seminomadic or early settlement period of Israel's history (either native to the Israelites or taken over from the indigenous population).

*b. The religion of the patriarchs.* One of the earliest attempts to use Gunkel's analysis for religious history was by Alt. According to Alt, the OT consistently represents Yahweh as the God who was in covenant with the tribes of Israel as a whole when they were settled in the land. But such a religion would not reflect the earliest nomadic period of the patriarchal traditions which even the OT seems to recognize as religiously distinct from the later period (Exod. 3:13 ff.; 6:2-3). Alt identified two religious forms of worship in the tradition prior to Yahwism. One was the worship of EL in various local forms at the different sanctuaries throughout the land. This was the religion of the indigenous population. Each particular form of EL, along with its cultic traditions, especially those having to do with sacred trees, pillars (*māṣṣeboth*), and altars, was tied to a specific cult center. The other form of religion was the "God of the fathers," which Alt reconstructed by analogy with the personal deities of Nabatean religion and which he regarded as reflecting the original cult of a nomadic community. Thus the patriarchs were regarded as individuals who founded their personal cults, i.e., the God of Abraham, the God of Isaac, and the God of Jacob, among nomadic peoples on the edge of the arable land of Palestine before the Israelite settlement. When these originally distinct cults entered the land with different clan groups, they became associated with a local sanctuary and merged their traditions with those of the EL deity of the place. Eventually, by interaction among the various clans, the three cults of the patriarchs were combined by the fiction of genealogical connection, and thus resulted in the one God of the fathers: the God of Abraham, Isaac, and Jacob. See GOD, NAMES OF §C.

One consequence of this view was to assert the personal and individual identity of the patriarchs against the view that they were merely the personification of tribes. This would mean, in the case

of Jacob, that the tribal and national use of the name is secondary to its original designation of an actual person. Another result of Alt's view has to do with the theme of the divine promises to the patriarchs, which are presented throughout Genesis as coming from the God of the fathers. Alt suggested that these promises originated in the promise of land made by the deity of the personal cult to the land-hungry nomads. See PROMISES TO THE PATRIARCHS[S].

**c. The patriarchs and the settlement.** Noth expanded upon Alt's thesis by making the themes of both the land promise and the promise of numerous progeny the primary focus of the early traditions of all three patriarchs. In distinction from Alt's view, however, the patriarchal tradition did not develop its unity separate from the other Pentateuchal traditions. Instead, the Jacob tradition, with its divine promises, first combined with the exodus-conquest traditions of the house of Joseph in such a way that the promise of land to Jacob was viewed as fulfilled in the Conquest (see YAHWIST[S] §3). Similarly, the combined Abraham-Isaac traditions with their promise themes were taken up by the tribes settling in the S. The total union of the patriarchal traditions expressed in the genealogical chain of Abraham, Isaac, and Jacob represents the latest stage in the development of the Pentateuchal tradition which came about only with an all-Israel confederation of tribes. Thus for Noth, the patriarchal traditions also reflect the complex history of Israel's settlement in the land. See CANAAN, CONQUEST AND SETTLEMENT OF[S].

**d. Critique.** In spite of the current popularity of this approach, a number of questions have arisen. First, the degree to which oral tradition lies behind the stories of Genesis has not yet been settled. Gunkel's primary criterion of etiology to identify the legend form has become very doubtful, but nothing else has adequately taken its place. This also means that Alt's use of cult etiologies as the means of explaining the attachment of traditions to certain places (*Ortsgebundenheit*) is greatly weakened. The fact that Beer-sheba, a prominent cult center in the patriarchal traditions (Gen. 21:22 ff.; 26:23-33; 46:1-4), did not come into existence until the Iron Age points up this same weakness. Also against Alt, the designation of a deity as the "god of [name]" does not exclude its being used of a high god like El or Yahweh, and it is not necessarily nomadic nor primitive; such usage is also common in later Israel. Furthermore, even Alt recognized that the form "God of the fathers" and the theme of promises scarcely have any trace in the oldest extant traditions but instead constitute the framework for the literary composition of the patriarchal tradition. Finally, against Noth's reconstruction, it remains unexplained how the house of Joseph, with its conquest tradition, is to be related to the Jacob group with different traditions of identity and land-claim. Between such groups one would naturally expect protracted conflict rather than an artificial rationalization of traditions and claims.

**3. The patriarchs in written sources.** The two

concerns of historicity and tradition-history have largely overshadowed any interest in the stories of the patriarchs as literature. They have largely assumed the literary analysis of the PENTATEUCH established by J. Wellhausen, with the modification that the written sources originated in a basic body of fixed oral tradition. On this view the authors were reduced to editors and compilers of ancient lore. But a decline in these dominant methods could result in a revival of interest in the literary aspects of the stories. See LITERATURE, BIBLE AS[S].

Closely related to any literary reappraisal is the role of the written tradition in the life of the people. Recent studies have viewed the so-called Yahwistic source (J) of the Pentateuch, dated to the early monarchy, as using the themes of promises and covenant to Abraham to support the dynastic ideology of the monarchy (see YAHWIST[S]). But no text dealing with royal ideology makes any reference to Abraham. The role of the Abrahamic tradition and of the patriarchal promises as a means of expressing the community's identity and destiny are found, outside the Pentateuch, only in sources from the exilic period, and it is in fact to this period that the J source belongs. With the demise of the monarchy, its author skillfully transferred the royal covenant and ideology to Abraham, the father of the people, and so to the people as a whole. Thus comparisons must be made with J's contemporary, Deutero-Isaiah, in which the patriarchs symbolize the hope of a new day (Isa. 41:8-10; 51:1-2).

**Bibliography.** On arguments for a patriarchal age in the second millennium B.C.: J. Bright, *A History of Israel* (2nd ed., 1972); E. A. Speiser, *Genesis* (1964); R. de Vaux, *Histoire ancienne d'Israël* (1971), contains the best comprehensive treatment of all the arguments. Critical of arguments for historicity is the work of T. L. Thompson, *The Historicity of the Patriarchal Narratives* (1974).

On tradition-history: H. Gunkel, *The Legends of Genesis* (1901); A. Alt, "The God of the Fathers," *Essays on OT History and Religion* (1966), pp. 1-77; M. Noth, *A History of Pentateuchal Traditions* (1972).

On the dating of J: compare R. E. Clements, *Abraham and David* (1967); N. E. Wagner, "Abraham and David?" *Studies on the Ancient Palestinian World*, ed. J. W. Wevers and D. B. Redford (1972), pp. 117-40.

For my own fuller review of these questions see *Abraham in History and Tradition* (1975).

1. **The sources.** *a. Paul and the computer.* Statistical treatment of vocabulary and syntax is an important technique for ascertaining authorship and is now made practical by the availability of the computer. The approach is still in its infancy; there are as yet relatively few workers, and not unexpectedly the results are uneven. Unfortunately, when applied to Paul this approach has two limitations. (1) Paul's letters, particularly the disputed ones (EPHESIANS, II THESSALONIANS, COLOSSIANS), are uncomfortably brief for statistical treatment. (2) To decide whether Paul or some unknown person probably wrote a given letter is considerably more difficult than to decide, for example, whether a particular Federalist paper is closer to the style of Madison or of Hamilton, each author known by a large body of undisputed text. This new technique supplements the standard tools of historical research, and, as it becomes more widely understood, its usefulness will rapidly increase.

*b. Letter structure.* Paul's letters are related to common Greek letters of the day in their salutation, greeting, and polite opening (see PAUL THE APOSTLE §A1a). But recent study indicates that the relationship is much richer and the common letter far more structured than had previously been supposed (see LETTER[S] §§4, 5). The study of other genres, e.g., homilies and benedictions, has revealed further structural parallels. Attention is also being given to internal patterns. One of the most interesting of these is Paul's use of CHIASMUS, i.e., a.b./b.a. (or even a.b.c.d. . . /. . . d.c.b.a.) structures. In I Thess. 2:19-20, for example, appear "joy . . . crown . . . you . . . before our Lord Jesus/at his coming . . . you . . . glory . . . joy" (Greek word order), and there are many other examples. Paul had a habit of winding his way into a passage and then unwinding it so as to end where he began. One should not, however, try to press all Paul into this single mold. (For a.b.a. patterns see THESSALONIANS, FIRST LETTER TO THE[S]).

*c. Paul's life from the letters.* For Paul's life the letters are our "primary" historical sources and Acts is a later, "secondary" historical source (see PAUL THE APOSTLE §A1b). Increasingly it is recognized that the two different kinds of information gained from these two different types of sources should not be mingled. Courts of law in general admit only firsthand evidence; hearsay is rejected. The historian cannot afford to be as fussy and must use all the evidence. However, before the secondary evidence is admitted, as much information as possible must be squeezed from the primary sources. Otherwise the secondary material will dominate, precisely because it was written to be more helpful (cf. the supremacy of Acts in most "lives" of Paul).

The first problem posed by the letters, once one has dealt with their genuineness and integrity, is their original sequence. Their order in the NT

canon is not chronological. Over the years a variety of sequences have occurred. At present the letters are arranged in order of descending length, first those to churches, then to individuals. When the letters are arranged according to data they themselves provide, and this sequence is integrated with the pattern of Paul's Jerusalem visits similarly derived (see CHRONOLOGY, PAULINE[S]; OFFERING FOR THE SAINTS[S]), the following outline of Paul's biography is possible.

- Conversion (Gal. 1:15-16; I Cor. 15:8)
- Sojourn in Arabia (Gal. 1:17)
- Escape from Damascus (II Cor. 11:32-33)
- First Jerusalem visit (Gal. 1:18-19)
- Mission in Syria and Cilicia (Gal. 1:21)
- Illness in Galatia? (Gal. 4:13-14)
- Persecution in Philippi (Phil. 4:15; 1:5, 30)
- Opposition in Thessalonica (Phil. 4:16; I Thess. 2:2)
- Mission in Corinth (II Cor. 1:19; 10:14; 11:9)
  - II Thessalonians*
  - Work in Illyricum? (Rom. 15:19) Elsewhere?
  - Stay in Athens (I Thess. 3:1-5)
    - I Thessalonians*
- Second Jerusalem visit—Apostolic Council and start of the collection journey (Gal. 2:1-10)
  - Previous Letter to Corinth (I Cor. 5:9)
  - Trouble in Antioch (Gal. 2:11-14)
  - Visit to Galatia (I Cor. 16:1)
  - Stay in Ephesus (I Cor. 16:8, 19)
  - Response letter from Corinth (I Cor. 7:1)
    - I Corinthians* from Ephesus
    - News of trouble in Corinth (II Cor. 2:5-10)
    - "Painful" visit to Corinth (II Cor. 2:1)
    - Severe Letter to Corinth (II Cor. 2:3-4; 7:8-12)
    - "Affliction" (prison) in Ephesus (II Cor. 1:8-9)
    - Money from Philippi (Phil. 4:14-18)
    - Epaphroditus' illness (Phil. 2:25-30)
      - Philippians* from an Ephesian prison
    - Release; trip to Troas (II Cor. 1:10; 2:12)
    - Meeting with Titus in Macedonia (II Cor. 2:13; 7:5-6)
  - Collection officials from Jerusalem (II Cor. 8:18-24)
    - II Corinthians* 1-9 sent via Titus and officials
  - News of Judaizers in Galatia
    - Galatians*
    - Romans*; plans for Spain (Rom. 15:24, 28)
    - "False apostles" in Corinth (II Cor. 11:13)
      - II Corinthians* 10-13
    - Last visit to Corinth (II Cor. 12:14; 13:1)
  - Third Jerusalem visit to deliver collection
    - Arrest and imprisonment
      - Colossians, Philemon* (and "*Ephesians*")?
        - (Transfer to Rome; execution)

Variations are, of course, possible. What is important is that the evidence come first from the letters.

*d. Theological development?* To give primacy to Paul's letters leads directly to a chronological view of his writing and raises the question whether one should look for theological change or development. Those who start with Acts date the letters late in Paul's career and in general do not allow development in that period of Paul's thought. But as more attention is given to the uniqueness of each individual letter—its historical occasion, content, and

structure—the differences among the letters become clearer. How should we think of these differences? Some nineteenth-century writers cast Paul's thought in an evolutionary mold. Others think of Paul's letters as occasional expressions of a single theology. A better way lies between. Most would agree that at the level of personality, religious experience, and theological orientation it is the same Paul throughout the letters. But in the course of his ministry Paul interacted with events and sought theological explanations for them. These reactions came more from Paul's basic religious attitude than from the logic of his previous utterances (not that he was unaware of the latter). And as Paul confronted a particular issue, he added lines of argument and associations for key words to his intellectual equipment. One may reasonably expect to see the effect of such struggle in his subsequent writing. "Development" is perhaps not the best word if it invokes logical or biological images. The process was not the unfolding of a logically coherent system. Rather, we may attempt to trace how Paul learned from experience.

**2. Biography and theology.** Several exemplary ways in which Paul's biography and theology are related may be noted. *a. Apocalypticism.* Behind Paul's earliest letters lies his original, apocalyptic message. He taught that the "Lord Jesus Christ" would soon appear. His arrival (the PAROUSIA) will be preceded by a series of disasters: social anarchy, appearance of Satan's "man of lawlessness," opposition to all religion, delusion of the damned, and desecration of the Jerusalem temple. Then the Lord with his mighty angels will slay the man of lawlessness and all non-Christians (II Thess. 2:3-4, 8-10; 1:7-10). Christians, on the other hand, will enjoy "the presence of the Lord" in his kingdom (II Thess. 1:9; I Thess. 4:17). Battle with the forces of evil will continue until even death is destroyed (I Cor. 15:24-26). In the great judgment which will follow, Christians will serve as judges over the world and even over angels (I Cor. 6:2-3).

The message is similar to the SON OF MAN apocalypticism found, e.g., in Mark 8:38-9:1; 13:24-27, but with two key differences. The resurrection of Jesus meant to the early church (1) that Jesus was this expected Son of man, and (2) that the apocalyptic sequence which would end this age had actually begun. God himself had given the church the sign which Jesus had refused his hearers (Mark 8:12; Matt. 12:39).

The messianic age was clearly future and not present, for wickedness flourished unchecked outside the church. But the community looked toward the kingdom and tried to put some of its ways into practice. MARRIAGE would have no place in the kingdom (Mark 12:25). Therefore Paul had advocated asceticism both for the unmarried (I Cor. 7:8, 25-26, 38) and the married (I Cor. 7:5-6). Women enjoyed considerable freedom (e.g., to preach; I Cor. 11:5), since in the kingdom sexual differences would disappear (cf. Gal. 3:28; see WOMAN IN THE NT[S] §2). Within a few years, however, Christianity began the necessary process of adapting to changing times, and the apocalyptic fervor faded.

*b. The death of the body.* Paul had not anti-

ipated that Christians would die before the Parousia. In I Thess. 4:13-18 he deals with the problem for the first time, making a simple pastoral statement. Just as Jesus had been raised prior to the general resurrection, so too Christians who die will be raised in time to enter the kingdom with their fellows. A similar statement must have been included in the "Previous Letter" to Corinth (cf. I Cor. 5:9). The Corinthians objected to the materialism of bodily resurrection. Paul responded with I Cor. 15, where he explained that at the Parousia fleshly bodies would be instantly transformed into spiritual bodies.

Then occurred Paul's "crisis in Asia." In a time of intense personal conflict Paul came to believe that the bond binding Christians to God through Christ was far more of a present reality than his apocalyptic mode of preaching expressed. He came to reflect on his present suffering and possible death, and on the humility, obedience, and death of Jesus (Phil. 2:5-11). He came to base his hope of resurrection on likeness to Christ (Phil. 3:7-11).

In Phil. 3:20-21 he still speaks of spiritual bodies as given at the Parousia, but II Cor. 1-9 shows a new approach. Instead of the instantaneous change he substituted a gradual transformation. As suffering erodes the flesh, spirit is granted in its place (II Cor. 3:18; 4:7-5:5). In a sense Paul "demythologized" his eschatology. Instead of using the apocalyptic model to describe the relation of the believer to God, he substituted analogies drawn from personal relationships: e.g., adoption as sons (Gal. 4:1-7; Rom. 8:14-17), manumission (Gal. 5:1; Rom. 6:16-23), and marriage (Rom. 7:1-6; II Cor. 11:2; Eph. 5:21-33). The end of the age receded into the indefinite future.

*c. Christians and the Law.* At the apostolic council the Jerusalem apostles decided that circumcision would not be required of Gentile converts (Gal. 2:1-10). Paul's trouble with Judaizers in Antioch (Gal. 2:11-14; cf. 2:3-5) indicates, however, that not all Jewish Christians were content with this decision. Nothing more is heard about the problem until Paul's imprisonment in Ephesus. There Paul, writing an otherwise loving and generous letter, warns against those who "preach Christ from envy and rivalry" (Phil. 1:15, 17) and who seek to "mutilate the flesh" (3:2). Shortly later we discover that the Jerusalem church has sent representatives ("apostles"; II Cor. 8:23 [RSV "messengers"]) to help administer the collection. It is hard to resist the conclusion that Paul's imprisonment had something to do with this outbreak of Jewish-Christian activity. News about Paul had probably reached Jerusalem. Leaders there may well have considered that their agreement to stay out of Paul's territory was therefore suspended.

With his release the Judaizing problem seemed to fade in Paul's mind, although he continued to think about the claim of the Mosaic law (II Cor. 3). Then, however, he heard the news from Galatia. Paul's response (Galatians) is so angry that it is easy to exaggerate the difficulties there. Because Paul considered these Judaizers his enemies does not mean that they presented themselves as his enemies. On the contrary, Paul seems to be fighting the suggestion that he also was a Jerusalem mis-

sonary (Gal. 1:11-2:14) who preached circumcision (5:11). They seem to have advocated circumcision for its symbolic and practical (avoidance of persecution; 5:11; 6:12) value. Paul had to insist that this partial observance of law necessitated the whole Law (5:3).

Paul felt so keenly the interference from Jerusalem that he decided to move to Spain. Yet out of his conflict over the Law he produced his greatest achievement, his doctrine of justification by faith. Here we see Paul's greatness.

J. C. HURD

\***PELLA OF THE DECAPOLIS.** The most notable feature of this ancient caravan city is an oval mound of ruins more than 400 yards long and about 100 feet high. At the S foot of the mound is a copious spring that was undoubtedly the most important reason for habitation at this spot for thousands of years. In addition, the site enjoys one of the most satisfactory climates to be found in the Jordan Valley; although the valley is hot during the summer, Pella's mean maximum temperature is lower than that of most other locations in the valley, and its particular situation on the lower slopes of the eroded Transjordanian plateau keeps it free of frost during the winter, an advantage over most locations on the valley floor proper.

Much information about Pella has been obtained in recent years as a result of excavations, soundings, the clearing of tombs, and occasional discoveries of seals and previously unknown coin-types from the site. Pella was probably occupied very early, though just how far back in prehistory has not yet been determined. Excavations have yielded Chalcolithic sherds that attest occupation by about 3400 B.C. In Canaanite times (MB and LB) Pella was a flourishing city. Many of the surrounding slopes were utilized for rich tombs, eleven of which were discovered in 1964 and two more in 1967. Some of Pella's pottery in those times was apparently imported from Cyprus and other E Mediterranean localities.

The 1958 and 1967 excavations showed that Pella was inhabited during the Iron I and Iron II periods (ca. 1200-600 B.C.). This evidence is particularly welcome, since the absence of historical references to Pella during these periods had previously prompted some scholars to suppose that Pella was not occupied throughout this time. The city took on fresh vigor in Hellenistic times, although the much later assumption by Stephen the Byzan-

tine that Alexander the Great himself founded Pella cannot be substantiated. Pella was wrested from Ptolemaic control by the Seleucids in 218 B.C. and prospered as a commercial link between Arabia and the Mediterranean region. Jars from Rhodes are known to have been a part of the commerce that flowed through the city. Pella's capture by the Hasmonean king Alexander Janneus in 83-82 B.C. resulted in adversity for the inhabitants, but Josephus' statement that Pella was destroyed by Alexander must be regarded as an exaggeration. It was at this time, if not before, that Pella gained the reputation of being hostile to Jews.

Marching through the Jordan Valley in 63 B.C., the Roman general Pompey liberated Pella from Jewish control and may have organized the ten commercial cities bordering on Arab territory into

the DECAPOLIS, a loose federation that was to last for several centuries. The Roman period seems, from archaeological remains, to have been one of increasing population and prosperity for Pella, made possible by the Roman government's improvement of roads and protection of trade routes. On Tell el Husn, a towering conical hill lying immediately S of Pella, a massive temple was constructed in Roman style, perhaps dedicated to an old local deity who by then had become identified with Jupiter. Pella began minting its own coins in A.D. 82-83, a practice that lasted intermittently until 219-220. Several tombs uncovered in the East Cemetery have contents that reflect the prosperity of the city. A small plain that extends W from the city became a popular place for wealthy Pellaecans to construct mausoleums. A forum may have been laid out in the little valley that lies between the city and Tell el Husn, an area that was embellished with colonnaded streets, an elegant two-story nymphaeum (fountain), and other structures in provincial Roman style. None of the present evidence, whether literary or archaeological, contravenes the tradition that Christians of the Jerusalem church fled to Pella on the eve of the first Jewish revolt (A.D. 66-70); indeed, some circumstantial evidence tends to support that tradition, although by no means demonstrating it conclusively.

During the Byzantine period the city expanded, most notably to the northwestern slopes of Tell el Husn. On the plain W of the city a large church was constructed above part of the existing cemetery. This West Church is thought by some to have been the cathedral of the city. Pella probably reached its greatest size in the fifth and sixth centuries. From the early seventh century onward the city declined. In 635 Islamic invaders fought a great battle with the Byzantine army in the Jordan Valley between Pella and Beth-shan and subsequently occupied Pella. The conquerors did not insist that all the inhabitants convert to Islam, and for several centuries thereafter the population was mixed Arab and non-Arab. Pella continued to be inhabited throughout the Middle Ages and was not totally abandoned until a few centuries ago. By that time its exact location had been forgotten in the West, and it was not until the mid-nineteenth century that the site, then in complete ruins, was rediscovered. See PELLA; DECAPOLIS.

\*PERGA. Research at Perga has been continued in regular campaigns since 1967. The excavations at the city gate, by the nymphaeum, in the market place, and along the main streets have yielded rich architecture, well-preserved sculpture, and historically informative inscriptions. The search for the elusive temple of ARTEMIS Pergaia and the study of her cult image have also been continued.

1. **The city gate.** The main entrance to the city was on the S toward the sea and comprised two consecutive gateways at either end of a long plaza. The outer element, a passageway built into the fourth-century A.D. extension of the city walls, incorporated arched and columned façades erected during the reigns of HADRIAN (A.D. 117-138) and Septimius Severus (193-211). The inner Hellenistic gate consisted of two round towers flanking the entrance to a horseshoe-shaped courtyard which opened toward the center of the city. (See Fig. P2.) During the early second century A.D. a benefactress of the city, Plancia Magna, daughter of the governor of BITHYNIA, embellished this courtyard with statues of the principal divinities of the city (Apollo, Aphrodite, Hermes, Herakles, etc.), the legendary founders of Perga (Mopsos, Kalchas, and Machaon, among others), and the honorary founders (including Plancia Magna, her father, and her brother). Plancia Magna was also responsible for the tripartite arch at the open end of the courtyard. An inscription in bronze letters informs us that Plancia Magna dedicated the gateway to her "fatherland," apparently meaning Perga. Cuirassed male and draped female figures from the monument are identified by inscriptions as the divine TRAJAN, Hadrian, and other members of the Roman Imperial family. The tomb of Plancia Magna, who was both high priestess of the city goddess, Artemis, and of the cult of the emperor, is located just outside the gateway complex.

2. **Nymphaeum.** From the S gateway a broad avenue led northward to the city's acropolis. At the foot of the acropolis stood a monumental, U-shaped nymphaeum (fountain) which complemented the open horseshoe-shaped gateway at the opposite end of the avenue. Colonnaded wings held statues both of gods and emperors and

V. P. Furnish

2. The inner Hellenistic gate at Perga: view from the center of the city

Dionysiac reliefs. The fountain proper comprised three vaulted niches flanked by doorways. A pedestal in front supported a reclining statue representing the river god Cestrus. Since the Cestrus River provided easy communication and transport between the city and the sea, PAUL probably sailed the seven miles up this river to a landing E of Perga (Acts 13:13-14; 14:25). See Fig. P3.

V. P. Furnish

3. The nymphaeum at Perga, with the reclining statue of Cestrus

3. **Market.** The food market of Roman Perga was an open area well over two hundred feet square NE of the city gate. The square was enclosed by Corinthian porticoes behind which were lines of shops. Entrances to the square were located in the center of each side. In the middle of the open area stood a circular building bounded by sixteen Corinthian columns; it seems to have been the focus of the market's activities and may also have had some religious function. Sculptures representing Artemis, Attis, and a priest of the emperor cult have been recovered from the market area. During the Byzantine period the N entrance to the market was converted into a chapel.

4. **Artemis Pergaia.** The most renowned monument of ancient Perga, the temple of the city goddess, has still not been found. Ancient descriptions indicate that the temple of Artemis Pergaia was situated in a high place near the city and that it was outstanding in size, quality of workmanship, and beauty. At one point, the discovery of a Hellenistic Doric temple less than one mile S of Perga gave rise to hopes that Artemis' temple had finally

been found, but none of the expected votives and inscriptions were discovered. Moreover, the famous temple should be either Ionic or Corinthian rather than Doric according to the representations of it on coins. We also know that at the end of the third century A.D. the statuary in the sanctuary of Artemis was destroyed by a band of Christians (martyred); therefore, the temple, too, may eventually have been leveled.

Representations of Artemis Pergaia have been found in various places within the city. Artemis Pergaia in her most primitive form was represented either as a squarish block of stone, perhaps a meteorite, or a rather formless wooden statue. The gold stripped from the goddess in 79 B.C. by the Roman governor Gaius Verres (Cicero, *Against Verres* II, I.xx.54, III.xxi.54, IV.xxxii.71) may have covered this primitive idol. The goddess was also represented in the manner of Artemis of Ephesus, or even like a Greek Artemis with bow, quiver, the crescent moon, and stars. The celestial nature of Artemis Pergaia is indicated by a relief disc sculptured with a bust of the goddess surrounded by the twelve signs of the zodiac, and by an inscription referring to solar discs in the goddess' temple treasury. Perhaps the astronomical aspect of the cult is connected with the success of the third-century B.C. mathematician and astronomer Apollonius of Perga who, through his study of ellipses, came very close to a true understanding of the form and movement of the solar system.

5. **The transformation of Artemis.** The central avenue of Perga was lined with shops fronted with Ionic columns. One remaining column bears a relief representing Apollo in his chariot, and a second is carved with his virgin sister Artemis. During the Byzantine period a church was built into the shops behind these columns, but the images of Artemis and Apollo were not effaced. In the case of this Artemis, her representation with a halo-like crown and crescent must have made possible her identification with the Virgin, and Apollo in his chariot might easily have been taken for one of the prophets. In such a manner the transition of religious allegiance was facilitated in Perga.

\***PERGAMUM.** Recent work at Pergamum concerns the *heroon*, the sanctuary of Demeter, the "Red Hall," and the sanctuary of Asclepius (Asclepieum). One important result of this work has been the development of a fairly comprehensive picture of the wide range and varying degrees of religious experience in Pergamum.

1. **Heroon.** A building just outside the upper citadel has been recognized as a sanctuary dedicated to the cult of the heroized kings of Pergamum.

The sanctuary was centered on a colonnaded courtyard roughly sixty feet square. On the NE was a broad chamber where services related to the cult probably took place. Behind this chamber lay a smaller room characterized as a mausoleum by a podium set against the rear wall in the interior and by a high, columned attic on the exterior. ATTALUS I (241-197 B.C.), who defeated the marauding Galatians and was the first to take the title of King of Pergamum, and EUMENES II (197-159), who brought Pergamum to its height of power and cultural pre-eminence, received special honors here as semidivine heroes. Such reverence was a prelude to the divine status accorded the Roman emperors. TRAJAN, HADRIAN, and Caracalla were so honored in Roman Pergamum, and the presence of Rome represented by these cults made Pergamum in a sense "Satan's throne" for the early Christians (Rev. 2:12-13).

2. **Demeter sanctuary.** A cult in which the women of Pergamum, like those of CNIDUS, took a special interest was that of Demeter, whose Pergamene sanctuary lay on the S slopes of the acropolis. To the W, inside a long courtyard enclosed by colonnades, stood Demeter's temple and altar. These structures were originally dedicated by Philetairos (281-263 B.C.) and his brother Eumenes I (263-241) in honor of their mother, Boa. A bank of steps to one side between the temple and the gateway of the sanctuary probably served as a grandstand for participants in the mystery rites of Demeter, Kore, and Hades. Just outside the gateway and flanking the approach were a semicircular nymphaeum (fountain) and a stone-lined pit; here the worshipers, before entering the sanctuary, made their ablutions and deposited their offerings.

4. **The "Red Hall."** The large building to the S of Pergamum's acropolis derives its modern name, the "Red Hall," from the color of the bricks in its exposed core. At the time of its erection during the second century A.D., however, the building was veneered with colored marble. At one end of an approximately six-hundred-foot-long courtyard, underneath which the Selinus River was channeled, stood the monumental rectangular structure flanked by two tower-like buildings. On either side of the central structure and in front of the "towers," courts containing long pools were bounded by rows of columns sculpted with human figures in an Egyptian style. The Egyptianizing figures, the presence of numerous pools and basins throughout the complex, and the tripartite division of the architecture suggest that the building was a temple dedicated to the Egyptian trinity Serapis, Isis, and Harpocrates, divinities popular in the Roman world.

The central rectangular building was entered through an enormous doorway on the W. The interior was lighted by means of five great windows on either side high above the marble floor. The E end, however, was left in semidarkness. In the center of the hall was a shallow basin beyond which a broad podium supported the base for the cult statue. A hole in the base gave entry to a subterranean tunnel through which the priests may have entered the cult statue in order

to speak in the god's person. The Red Hall was used as a church during the Byzantine period.
