Theophany

Visible appearance of God. In the Qurʾān, the closest one comes to a visible appearance of God is in Q 7:143. Moses (q.v.) expresses his wish to see God, who replies: "You shall not see me. Look at the mountain, though; if it stays in its place, then will you see me." The verse continues: "So, when his lord (q.v.) manifested himself *(tajallā)* to the mountain, he flattened it, and Moses, thunderstruck, collapsed. When he came to, he said, 'Glory to you! I turn toward you in repentance, and I am the first of the believers'" (see REPENTANCE AND PENANCE; GLORIFICATION OF GOD). The hairsplitting discussions (in the qurʾānic commentary of al-Rāzī, for example; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) over the possibility of humans seeing God represent attempts to vindicate theological positions staked out long after the revelation of the Qurʾān (see REVELATION AND INSPIRATION; THEOLOGY AND THE QURʾĀN; ANTHROPOMORPHISM; GOD AND HIS ATTRIBUTES). Both the letter and the spirit of Q 7:143 indicate that, according to the Qurʾān, in this world at least, human eyes (q.v.) cannot see God. Q 6:103, "Eyes cannot perceive him," makes the same point. The Qurʾān does say that God "actually spoke to Moses" but this does not mean that, in that conversation, Moses, in some sense, saw God (cf. *Exod* 33:11, which, using figurative language, says that God spoke to Moses "face to face"; see SPEECH; WORD OF GOD). Q 42:51 says that God speaks to human beings in one of three ways — in revelation, from behind a veil (q.v.) or through a

messenger (q.v.; see also PROPHETS AND PROPHETHOOD). Thus, in reference to Q 7:143, the most one can say is that God did manifest himself on the mountain but that Moses was unable to see him; Moses' contrite "I turn toward you in repentance" upon regaining consciousness is proof of Moses' realization that he was a little too bold in making the request to see God.

Not only is there no mention in the Qurʾān of the several types of theophany found in the Bible, theophany probably would not have belonged in the theoretical framework of the Qurʾān (as we know, there is no history, in Islam, of any epiphany festival; see FESTIVALS AND COMMEMORATIVE DAYS; SCRIPTURE AND THE QURʾĀN). Q 4:153 cites disapprovingly the Israelites' demand to see God with their eyes (see CHILDREN OF ISRAEL). Also, theophany would be classed as a miracle and the Qurʾān is, in principle, averse to the idea of showing palpable miracles to establish the Qurʾān's veracity or Muḥammad's prophethood (see MIRACLES; MARVELS). According to the standard Muslim theological position, the Qurʾān is the miracle of Islam (see INIMITABILITY; CREATEDNESS OF THE QURʾĀN). In a sense, the Qurʾān — which is the speech of God and, as such, a manifestation of one of God's attributes — may be called the theophany of Islam but this would be a figurative use of that word, as Muslim theologians do make a distinction between God's being and his attributes, just as they distinguish between God and his signs (q.v.), the Qurʾān being one of those signs. In the same vein, the term "inlibration," which is sometimes used to distinguish the Qurʾān-event in Islam from the Christian doctrine of incarnation, has no more than a rhetorical value of highlighting a contrast between the two religions. For additional qurʾānic allusions to divine self-manifestation (albeit not a "visible appearance"), see SHEKHINAH; FACE OF GOD.

Throne of God

Qurʾānic (and biblical) image related to God's sovereignty. The two terms used most commonly in the Qurʾān and exegetical literature for the throne of God are *ʿarsh* and *kursī,* although the latter has often been understood not as a seat but as a footstool or other accessory to the throne itself. The word *ʿarsh* appears twenty-five times in the Qurʾān with reference to God's throne,

as well as the thrones of others: the seat on which Joseph (q.v.; Yūsuf) placed his parents (q.v.) is referred to as an *ʿarsh* (Q 12:100), as is the throne of Bilqīs (q.v.), the Queen of Sheba (q.v.; Q 27:23, 38, 41, 42). When referring to the throne of God, verses speak either of the throne itself or use it in a relational epithet to emphasize aspects of God's majesty. The latter category is the more common and God is referred to as the "lord (q.v.) of the throne" (*rabb al-ʿarsh,* Q 43:82) or "lord of the noble throne" (*rabb al-ʿarsh al-ʿaẓīm,* Q 9:129; cf. *rabb al-ʿarsh al-karīm,* Q 23:116). Elsewhere, God is referred to as "the one with the throne" (*dhū l-ʿarsh,* Q 40:15; cf. 17:42). A literal reading of the Qurʾān gives a clear sense of the throne of God as a concrete object (see LITERARY STRUCTURES AND THE QURʾĀN; METAPHOR; SIMILE; LANGUAGE AND STYLE OF THE QURʾĀN). Thus the angels (q.v.) are mentioned as circling God's throne (Q 39:75); elsewhere the Qurʾān describes the throne as being carried while it is being circled (Q 40:7). The image of the throne being borne by the angels appears explicitly in descriptions of eschatological events (see ESCHATOLOGY): "And the angels shall be ranged around (the heavens') borders (see HEAVEN AND SKY), eight of whom will be carrying above them, on that day, the throne of your lord" (Q 69:17). The term *kursī* is used for "throne" on two occasions. One of these refers to the throne of Solomon (q.v.; Sulaymān, Q 38:34). The other instance (Q 2:255) is the most famous reference to the throne of God in the Qurʾān, and may very well be the most popular verse in the Qurʾān (see VERSES), having come to be known as the "Throne Verse" *(āyat al-kursī)*. Eight sentences long, the verse only refers to God's throne once: "His throne encompasses the heavens and the earth (q.v.), and their preservation does not burden him."

The throne of God, both as *ʿarsh* and *kursī,* has figured prominently in theological and mystical debates over God's transcendence and the status of anthropomorphic references in the Qurʾān (see THEOLOGY AND THE QURʾĀN; ṢŪFISM AND THE QURʾĀN; ANTHROPOMORPHISM). Ḥasan al-Baṣrī (d. 110/728) is said to have regarded the two terms as synonyms, as have some later scholars. A wide variety of writers have interpreted the throne of God metaphorically, beginning with both al-Ṭabarī (d. 310/923) and Ibn al-Jawzī (d. 597/1200) who credit Ibn ʿAbbās (d. ca. 68/686) with stating that *kursī* refers to divine knowledge (*ʿilm;* see KNOWLEDGE AND LEARNING). Al-Suyūṭī (d. 911/1505) takes a different approach and interprets the roof of heaven (*al-saqf al-marfūʿ,* literally "the upraised roof," Q 52:5) as a reference to God's throne.

In Ṣūfī literature the notion of God's throne has been a source of much speculation and interpretation, as has the Throne Verse mentioned above. In some schools of mystical philosophy, the throne of God *(ʿarsh)* is the lowest or seventh heaven. This is sometimes seen to coincide with the locus of divine self-manifestation *(tajallī)*. Ibn al-ʿArabī (d. 638/1240) referred to the throne of God on many occasions in his writings and viewed the mystical heart (q.v.; *qalb*) as a microcosm of God's throne, in that it is capable of encompassing all things. This concept is perpetuated in Ṣūfī thought derived from Ibn al-ʿArabī, primarily through the influence of al-Jīlī's (d. 561/1166) understanding of the "perfect man" *(al-insān al-kāmil)*.

The notion of a divine or supernatural throne is developed further in ḥadīth and *tafsīr* literature (see ḤADĪTH AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) where God's throne is described as possessing different designs and colors as well as being decorated with precious stones. The collections

of al-Bukhārī (d. 256/870) and Muslim (d. ca. 261/875) refer to three celestial thrones, including those of Satan (see DEVIL) and Gabriel (q.v.; Jibrīl) along with that of God. Muslim and al-Tirmidhī (d. ca. 270/883) speak of Satan's throne floating on water and being surrounded by snakes, an image with important resonances in the study of comparative religion. See also SOVEREIGNTY; KINGS AND RULERS; POWER AND IMPOTENCE.

Time

The successive continuum of events and its measurement. The Qurʾān employs a rich terminology for aspects of time but uses these terms *ad hoc* and at random, in concrete and practical ways, rather than systematically and methodically addressing abstract and theoretical notions of time. This qurʾānic vocabulary does not include the principal technical terms for time, *zamān,* and eternity (q.v.), *qidam,* which are widely used in Islamic philosophy (see PHILOSOPHY AND THE QURʾĀN), nor does the Qurʾān contain typical philosophical terms such as *mudda* for extent of time and *dawām* for duration or *azal* and *abad* for eternity *a parte ante* and *a parte post* (though it uses the adverb *abadan,* "forever and ever," twenty-eight times). Three questions involving "time" and the Qurʾān will be excluded from this article because they are treated elsewhere: (1) the scholarly analysis of the text of the Qurʾān with regard to the sequence of the various stages of its composition and fixation as a normative text (see CHRONOLOGY AND THE QURʾĀN; CODICES OF THE QURʾĀN; COLLECTION OF THE QURʾĀN), (2) the vision of history embodied in the Qurʾān as well as the use of the Qurʾān as a historiographical source (see HISTORY AND THE QURʾĀN) and (3) the fixed times of ritual prayer cited in the Qurʾān (see PRAYER; cf. e.g. al-Ṭabarī's [d. 310/923] commentary on "the middle prayer," *al-ṣalāt al-wusṭā,* of Q 2:238, in his *Tafsīr,* ad loc.; cf. Gilliot, *Elt,* 149-50).

The qurʾānic day

Numerous references in the Qurʾān refer to the full twenty-four-hour cycle of the day by the term of *yawm* (see DAY, TIMES OF). The term is used 374 times as a singular noun *(yawm)* or a temporal adverb *(yawma),* three times in the dual *(yawmayn)*

and twenty-seven times in the plural *(ayyām)* as well as seventy times in the form of the temporal adverb *yawmaʾidhin,* "on that day" (see FORM AND STRUCTURE OF THE QURʾĀN; RHETORIC AND THE QURʾĀN). The entire day, *yawm,* is understood in Semitic fashion as reckoned from sunset to sunset (see SUN; EVENING), beginning with the darkness of night followed by the brightness of daytime, namely "night" (collectively, *layl,* eighty-one times, singular, *layla,* eight times, plural, *layālin,* four times and never in the dual) and "day" (*nahār,* fifty-eight times, always in the singular; see DAY AND NIGHT). Likewise, the use of the term *sarmad* to signify the "continuous time" of night or day, which appears twice in Q 28:71-2, follows this precedence of night before day.

The word *yawm* may also refer to a historical event, such as "the day of deliverance" (*yawm al-furqān,* Q 8:41; see CRITERION; VICTORY) with reference to the battle of Badr (q.v.) in 2/624 or "the day of Ḥunayn" (Q 9:25) with reference to the battle of Ḥunayn (q.v.) in 8/630. Most frequently, however, it signals an eschatological event (see ESCHATOLOGY), such as "the day of resurrection (q.v.)" (*yawm al-qiyāma,* seventy times) or "the last day" (*al-yawm al-ākhir,* thirty-eight times), "the day of judgment" (*yawm al-dīn,* thirteen times; see LAST JUDGMENT), "the day of decision" (*yawm al-faṣl,* six times) and "the day of reckoning" (*yawm al-ḥisāb,* three times). This threatening and disastrous day of doom is further depicted by an abundance of apocalyptic and awe-inspiring attributes in the Qurʾān (see APOCALYPSE; FEAR; PIETY). Finally, *yawm* can signify a ritual event, such as "the day of assembly" (*yawm al-jumuʿa,* Q 62:9, referring to the congregational prayer on Friday; see FRIDAY PRAYER), "the day of the greater pilgrimage (q.v.)" (*yawm al-ḥajj al-akbar,* Q 9:3) or "the day of their Sabbath" (Q 7:163) with reference to the Jewish Sabbath (q.v.; see also JEWS AND JUDAISM).

Ayyām, the plural of *yawm,* is used in the Qurʾān in a sense congruent with the pre-Islamic combats of tribal prowess and battles of vengeance (q.v.), known collectively as "the days of the Arabs" (*ayyām al-ʿarab;* see TRIBES AND CLANS; PRE-ISLAMIC ARABIA AND THE QURʾĀN; ARABS). For example, *yawm buʿāth* names the battle between the Medinan tribes of Aws and Khazraj in 617 C.E. (see MEDINA). In the Qurʾān, however, the term is attributed to "the days of God" *(ayyām Allāh),* the *magnalia Dei,* manifested by God's intervention in human history through his acts of creation (q.v.), revelation (see REVELATION AND INSPIRATION) and retribution (see DAYS OF GOD). In this sense, the *ayyām Allāh* are explicitly compared to God's "signs" (q.v.; *āyāt*), revealed through Moses (q.v.), leading his people from darkness (q.v.) to light (q.v.; Q 14:5) and to God's final victories with their retribution of eternal gain or loss for what people's deeds have earned (Q 45:14; see GOOD DEEDS; EVIL DEEDS; REWARD AND PUNISHMENT). Similar to the biblical six day-work of creation, the Qurʾān (Q 7:54; 10:3; 11:7; 25:59; 32:4; 50:38; 57:4) understands God to have accomplished the creation of the heavens and the earth "in six days" *(fī sittati ayyām).* Further, God is seen to create the universe for a purpose, rather than for idle sport (Q 21:16-17; cf. 38:27; 44:38), in order to provide for the needs and wants of humans (Q 2:22 and passim) and to put their conduct to the test (Q 11:7; see TRIAL). In a peculiar passage (Q 41:9-12), the account of creation assigns two days to the creation of the earth (q.v.), then four days to setting it in order and, finally, two more days to the creation of the seven heavens (see HEAVEN AND SKY), while Q 71:14 asserts that God

"created you in stages" (literally "times," *aṭwāran,* with reference to the stages of the embryo's growth; see BIOLOGY AS THE CREATION AND STAGES OF LIFE).

Other uses of the term *ayyām* include the incident when Zechariah (q.v.; Zakariyyāʾ) is struck dumb for "three days" (Q 3:41) or "those days" *(tilka l-ayyām)* when defeat is anticipated in Muḥammad's address before the battle of Uḥud in 3/625 (Q 3:140; see EXPEDITIONS AND BATTLES). The Thamūd (q.v.) were given the sign of a she-camel on an "appointed day" (*yawm maʿlūm,* Q 26:155) and hid "three days" in their dwellings before calamity overtook them (Q 11:65; see CAMEL; PUNISHMENT STORIES). The ʿĀd (q.v.) "were destroyed by a violent, roaring wind which [God] impelled against them seven nights and eight days, uninterruptedly" (Q 69:6-7; see AIR AND WIND), "in days calamitous" (*fī ayyāmin naḥisāt,* Q 41:16) or on "a day of constant calamity" (*fī yawmi naḥsin mustamirrin,* Q 54:19). Divine warnings are given to unbelieving people about "the like of the days of those who passed away before them" (*mithla ayyāmi lladhīna khalaw min qablihim,* Q 10:102; see WARNING; GENERATIONS; GEOGRAPHY) and the blessed of paradise (q.v.) are made the promise of "eating and drinking with relish for what you paid in advance in the days gone-by" (*fī l-ayyāmi l-khāliya,* Q 69:24; see FOOD AND DRINK).

Ritual observances apply on "a certain number of days" (*fī ayyāmin maʿdūdātin,* Q 2:203) or "days well-known" (*fī ayyāmin maʿlūmātin,* Q 22:28) of the pilgrimage (see RITUAL AND THE QURʾĀN). An exception is made for its performance in "two days" when one is in haste (Q 2:203) and, under certain circumstances, its ritual offering may be substituted by "a fast of three days in the pilgrimage, and of seven when you return, that is ten completely" (Q 2:196; see FASTING). Other ritual excuses with regard to the month of fasting (see MONTHS; RAMAḌĀN) are made through "a certain number of days" *(ayyāman maʿdūdātin)* for people who are sick or on a journey (q.v.; Q 2:184-5; see also ILLNESS AND HEALTH). In expiation for a wrong oath (Q 5:89; see OATHS) "three days" of fasting are required. The Jews claim that hellfire (see HELL AND HELLFIRE) shall not touch them except "for a certain number of days" (*ayyāman maʿdūdātin,* Q 3:24; see also POLEMIC AND POLEMICAL LANGUAGE).

The qurʾānic vocabulary of the times of day

Night and day are used antithetically in the Qurʾān (twenty-four times), e.g. "by night and day" (*laylan wa-nahāran,* Q 71:5; see PAIRS AND PAIRING). Night and day, created by God, are among the signs *(āyāt)* of divine power (Q 17:12; 41:37; see POWER AND IMPOTENCE) and put at the service of humankind (Q 14:33). God brings forth the day from the night (Q 35:13), "covering the day with the night it pursues urgently" (Q 7:54). Night and day are complementary (Q 6:60; 25:47; 27:86; 30:23; 34:33; 36:40; 40:61), mutually concurrent (Q 31:29; 39:5; 57:6) and succeed one another with regularity (Q 2:164; 3:190; 10:6; 23:80; 45:5). While *nahār* follows upon *layl* consistently in the Qurʾān, the order reverses as the sun, the asterism of the daytime, precedes the moon (q.v.), the asterism of the night when both are cited together (except in Q 71:16). This sequence of sun and moon is paralleled by *yawm* preceding *layla* in extra-qurʾānic literature, indicating that both lunar and solar reckonings of time were known to the Arabs (cf. Fischer, Tag und Nacht, 745–9; see CALENDAR). Notice, however, the switch of gender (q.v.), the sun being feminine and the moon masculine, while it is the opposite for *yawm* and *layla,* whereas *layl* and *nahār* are both masculine (see GRAMMAR AND THE QURʾĀN).

Specific terms in the Qurʾān identify a

number of regular time intervals and particular times of day and night. "Daybreak" *(al-falaq)* appears when God, "the lord of the daybreak" (Q 113:1), "splits the sky into dawn" (q.v.; *fāliq al-iṣbāḥ,* Q 6:96). The Qurʾān swears by the time of "dawn" (*fajr,* Q 89:1) when "the white thread becomes distinct to you from the black" (Q 2:187), a phenomenon defining the time of the "morning prayer" (*qurʾān al-fajr,* Q 17:78; *ṣalāt al-fajr,* Q 24:58) when god-fearing people ask forgiveness at "the times of dawn" (*bi-l-asḥār,* Q 3:17; 51:18; see MORNING). Lot's (q.v.) family was delivered "at dawn" (*bi-saḥar,* Q 54:34), their appointed time "in the morning" (*ṣubḥ,* Q 11:81), while his disloyal people were punished "in the early morning" (*bukratan,* Q 54:38). Muḥammad and Zechariah are bidden to give glory (q.v.) to God "in the evening and early morning" (*bi-l-ʿashī wa-l-ibkār,* Q 3:41; 40:55) and the latter signals his people to give glory "in early morning and evening" (*bukratan wa-ʿashīyan,* Q 19:11, cf. 19:62; see GLORIFICATION OF GOD). Muḥammad, exhorted to remember the name of his lord (q.v.) "in the early morning and evening" (*bukratan wa-aṣīlan,* Q 76:25; cf. 33:42; 48:9; see REMEMBRANCE; BASMALA), is accused of having ancient tales recited to him at those times (Q 25:5; see MYTHS AND LEGENDS IN THE QURʾĀN). The Qurʾān swears by the "morning" (*al-ṣubḥ,* Q 74:34; 81:18; cf. 100:3) and exclaims, "so glory be to God in your evening hour and in your morning hour" (*ḥīna tumsūna wa-ḥīna tuṣbiḥūn,* Q 30:17). But when punishment descends, "evil will be the morning *(ṣabāḥ)* of those who have been warned" (Q 37:177; see CHASTISEMENT AND PUNISHMENT; GOOD AND EVIL).

Generally, *ghadan* refers to "tomorrow" (Q 12:12; 18:23; 31:34; 54:26), yet every soul (q.v.) should consider "what it has forwarded for the morrow" (*ghad,* Q 59:18, possibly with reference to the last day). Muḥammad is bidden to remember his lord, without raising his voice, "at morn and eventide" (*bi-l-ghuduwwi wa-l-aṣāl,* Q 7:205), the times when the shadows bow to God (Q 13:15; see BOWING AND PROSTRATION) and God's name is glorified by people of prayer (Q 24:36), "calling upon their lord at morning and evening" (*bi-l-ghadāti wa-l-ʿashiyyi,* Q 6:52; 18:28). The folk of Pharaoh (q.v.) will be exposed to the fire (of hell) "morning and evening" (*ghuduwwan wa-ʿashiyyan,* Q 40:46) and the wind, subjected to Solomon (q.v.), blew in the morning and in the evening (Q 34:12). The Qurʾān swears "by the forenoon" (*ḍuḥā,* Q 93:1) and "by the sun and its morning brightness" (*ḍuḥāhā,* Q 91:1) and God brings out the "morning brightness" (*ḍuḥāhā,* Q 79:29; cf. 79:46). Adam (see ADAM AND EVE) does not have to "suffer the sun" *(wa-lā taḍḥā)* in the garden (q.v.) of paradise (Q 20:119) and Moses has the people mustered on the feast day *(yawm al-zīna)* at "the high noon" (*ḍuḥan,* Q 20:59). "The people of the cities" (*ahl al-qurā,* possibly Jewish villages around Medina; cf. Bell, *Commentary,* i, 243) are warned lest they are overcome by divine might at night and in "daylight" (*ḍuḥā,* Q 7:97-8). The "afternoon" (q.v.; *ʿaṣr,* Q 103:1), used in a qurʾānic oath, may actually be another term for time as destiny (q.v.; cf. Paret, *Kommentar,* 521; Brunschvig, Le culte et le temps, 168; see also FATE). "The twilight" (*shafaq,* Q 84:16) also appears once in the form of an oath in the Qurʾān while "the evening (q.v.) prayer" *(ṣalāt al-ʿishāʾ)* is cited in Q 24:58. Joseph's (q.v.) brothers (see BROTHER AND BROTHERHOOD) return to their father in the "evening" (*ʿishāʾ,* Q 12:16) and standing steeds are presented to Solomon in the evening (*bi-l-ʿashiyy,* Q 38:31), while the mountains join with David (q.v.) giving glory to God at evening and sunrise (*bi-l-ʿashiyyi wa-l-ishrāq,* Q 38:18).

Typical features of the qurʾānic language of time

The qurʾānic language of time commonly invokes particular times of day by random and mysterious oaths.

By the dawn *(fajr)* and ten nights *(layālin),*
by the even and the odd (see NUMERATION),
by the night *(layl)* when it journeys on!
(Q 89:1-4).

By the night *(layl)* enshrouding, by the day *(nahār)* in splendor! (Q 92:1-2).

By the bright forenoon *(ḍuḥā),* by the brooding night *(layl)*! (Q 93:1-2).

By the sun and her morning brightness *(ḍuḥāhā),* by the moon when it follows her, by the day *(nahār)* when it displays her, by the night *(layl)* when it enshrouds her!
(Q 91:1–4).

By the heaven of the constellations, by the promised day *(al-yawm al-mawʿūd)*!
(Q 85:1–2).

By heaven and the shooting star *(al-ṭāriq)*!
(Q 86:1; see PLANETS AND STARS).

By the afternoon *(ʿaṣr)*! (Q 103:1) — an oath possibly invoking "time" in a more general sense (cf. Paret, *Kommentar,* 521).

By the snorting chargers, striking fire in sparks, storming forward in the morning *(ṣubḥan)*! (Q 100:1–4).

Nay! By the moon, by the night *(layl)* when it retreats and by the dawn *(ṣubḥ)* when it is white! (Q 74:32–4).

No! I swear by the day of resurrection *(yawm al-qiyāma)*! (Q 75:1).

On the day *(yawm)* when the first blast shivers and the second blast follows it!
(Q 79:6–7).

By the night *(layl)* swarming, by the dawn *(ṣubḥ)* sighing! (Q 81:17–18).

No! I swear by the twilight *(shafaq)* and the night *(layl)* and what it envelops!
(Q 84:16–17).

In one instance the seeking refuge from evil is related to an interval of time, i.e. a particular time of day, "I take refuge with the lord of the daybreak" (*rabb al-falaq,* Q 113:1).

References to intervals of day and night, expressed in succinct metaphorical phrases, are another typical feature. Examples include: "the ends of the day" (*aṭrāf al-nahār,* Q 20:130), referring to sunrise *(al-mashriq)* and sunset *(al-maghrib),* frequently cited in tandem (whether in the singular Q 2:115, 142, 177, 258; 26:28; 73:9, in the plural, *mashāriq, maghārib,* Q 7:137; 70:40; cf. 37:5, or in the dual, as "the two easts," *al-mashriqayn,* Q 43:38; 55:17; and the "two wests," *al-maghribayn,* Q 55:17). Intervals of the night, "when it runs its course" (*idhā yasrī,* Q 89:4), are termed "the watches of the night" (*ānāʾ al-layl,* Q 3:113; 20:130; 39:9), while dusk is depicted as "the darkening of the night" (*ghasaq al-layl,* Q 17:78) and "the night of the night" (*zulafan min al-layl,* Q 11:114). *Zulafan,* which is plural, may refer not only to dusk but also to dawn, which another qurʾānic image calls "the withdrawal of the stars" (*idbār al-nujūm,* Q 52:49). The beginning of the day is likened to "the face of the day" (*wajh al-nahār,* Q 3:72) and "the rising of dawn" (*maṭlaʿ al-fajr,* Q 97:5). The sunrise is described by the images of "the sun shining forth" (*al-shams bāzighatan,* Q 6:78), the actual "rising" of the sun (*al-ishrāq,* Q 38:18), "the sun when it rises" (*al-shams idhā ṭalaʿat,* Q 18:17) and "experiencing the sunrise" (*mushriqīn,* Q 15:73; 26:60), while the early morning is the time when God "has stretched out the shadow" (*madda l-zilla,* Q 25:45). Noontime is marked by the "heat of noon" (*al-ẓahīra,* Q 24:58), "when you enter noontide" (*ḥīna tuẓhirūn,* Q 30:18), just as "you enter the evening and the morning" (Q 30:17). "The sinking of the sun" (*dulūk al-shams,* Q 17:78) follows the time "before the setting [of the sun]" (*qabla l-ghurūb,* Q 50:39) and the night covers like a "garment" (*libās,* Q 78:10; see CLOTHING) offering rest for sleep (q.v.).

The Qurʾān frequently uses temporal clauses, introduced by "when" *(idhā)* or "upon the day, when" *(yawma),* especially in conjuring up the awe-inspiring phenomena of the last day and impressing these upon the listeners. Some examples for *idhā:*

When the sun shall be darkened, when the stars shall be thrown down, when the mountains shall be set moving, when the pregnant camels shall be neglected, when the savage beasts shall be mustered, when the seas shall be set boiling, when the souls shall be coupled, when the buried infant shall be asked for what sin she was slain (see INFANTICIDE), when the scrolls (q.v.) shall be unrolled, when heaven shall be stripped off, when hell shall be set blazing, when paradise shall be brought near, then shall a soul know what it has produced (Q 81:1–14).
When heaven is split open, when the stars are scattered, when the seas swarm over, when the tombs are overthrown, then a soul shall know its works, the former and the latter (Q 82:1-5).
When heaven is rent asunder and gives ear to its lord, and is fitly disposed, when earth is stretched out and casts forth what is in it, and voids itself (Q 84:1-4).
When the terror descends (Q 56:1).
When the earth shall be rocked (Q 56:4).
When the trumpet is blown with a single blast (Q 69:13).
When the trump is sounded, that day will be a harsh day (*yawm,* Q 74:8-9).
When the sight is dazed and the moon is eclipsed (Q 75:7-8).
When the stars shall be extinguished, when heaven shall be split, when the mountains shall be scattered and when the messengers' time is set *(uqqitat),* to what day shall they be delayed? To the day of decision (*yawm al-faṣl,* Q 77:8-13).
When the great catastrophe comes upon the day *(yawm)* when man shall remember for what he has striven (Q 79:34-5).
When earth is shaken with a mighty shaking and earth brings forth her burdens (Q 99:1-2).
When comes the help of God and victory (Q 110:1).

A qurʾānic passage using *idhā,* "when it reaches the clavicles" (Q 75:26), introduces the moment of death, the soul departing from the body (see DEATH AND THE DEAD).

Some examples for *yawma:*

On the day when heaven shall be as molten copper (Q 70:8).
On the day when the trumpet is blown (Q 78:18).
On the day when a man shall flee from his brother (Q 80:34).
On the day when men shall be like scattered moths (Q 101:4).

The fixing of time in the Qurʾān

Fixing the divisions of time for the purpose of communal life is a qurʾānic preoccupation, which combines the pre-Islamic custom of reckoning time on the basis of the rising and setting of stars, called *anwāʾ* (a term absent from the Qurʾān, though appearing once in the verbal singular, *la-tanūʾu,* Q 28:76), with the observation of the lunar phases, called *manāzil,* "stations" (Q 10:5; 36:39), and the "mansions" *(burūj)* of the signs of the zodiac (Q 15:16; 25:61; 85:1). By and large, the pre-Islamic Arab year was lunisolar, with the year beginning in autumn and an intercalary month added in leap years (see SEASONS). The Qurʾān, however, opted for the lunar year (of 354 days) as established by God's creation. God created the sun and the moon as a pair for "reckoning" *(ḥusbān)* time (Q 6:96; 55:5), "stretching out the shadow" and appointing "the sun to be its guide" (Q 25:45). By divine ordainment, he has the sun return

to its "fixed resting place" *(mustaqarr)* and has the moon marked by "its stations till it returns like an aged palm-bough" (Q 36:38-9; see DATE PALM; SYMBOLIC IMAGERY). The computation of years and months is rooted in the will of the creator, "who made the sun a radiance and the moon a light, and determined it by stations that you might know the number of the years *(ʿadada l-sinīn)* and the reckoning [of time]" (*ḥisāb,* Q 10:5; cf. 71:16). It is the creator who "determines the night and the day" (*yuqaddiru l-layla wa-l-nahār,* Q 73:20) and establishes their order: "We have appointed the night and the day as two signs; then we have blotted out the sign of the night and made the sign of the day to see, and that you may seek bounty from your lord, and that you may know the number of the years and the reckoning" (Q 17:12). Sun and moon have each their orbit, and night and day have each their measure, both assigned by God with neither intruding on the domain of the other: "It behooves not the sun to overtake the moon, neither does the night outstrip the day" (Q 36:40). Time moves in a regular mode, in the measurable rhythm of sun and moon, with the moon and its phases fixing the calculation of the months and years.

In the Qurʾān, the moon is the actual measurer of time, and the beginning of the month and the year is established by the observation of the new moon (*hilāl,* mentioned once in the Qurʾān in the plural, *ahilla*). Each lunar month begins with the sighting of the crescent in the clear sky: "They will question you concerning the new moons *(al-ahilla)*. Say, they are appointed times *(mawāqīt)* for the people, and the pilgrimage" (Q 2:189). The month, called *shahr* (twelve times in the singular, twice in the dual, and six times in the plural *ashhur,* and once in the plural *shuhūr*), is established by God who divided the year into twelve lunar months by divine decree: "The number of months *(shuhūr),* with God, is twelve in the book of God, the day he created the heavens and the earth; four of them are sacred" (Q 9:36). The names of the pre-Islamic sacred months, Dhū l-Qaʿda, Dhū l-Ḥijja, al-Muḥarram and Rajab, are absent from the Qurʾān, but there are allusions to them in the qurʾānic phrases, "Journey freely in the land for four months" (Q 9:2) and "When the sacred months *(al-ashhur al-ḥurum)* have slipped away, slay the idolaters" (Q 9:5; see VERSES; IDOLATRY AND IDOLATERS; FIGHTING).

Of the twelve lunar months only the month of fasting is mentioned by name in the Qurʾān, "the month of Ramaḍān wherein the Qurʾān was sent down" (Q 2:185). This statement is frequently linked with the verse, "We [God] sent it down in the night of destiny" (*laylat al-qadr,* Q 97:1; see NIGHT OF POWER), with "it" explained as referring to the Qurʾān on the basis of the parallel passage, "By the clear book *(al-kitāb al-mubīn),* we have sent it down in a blessed night" (Q 44:2-3). It is reasonably certain that Muḥammad first adopted the Jewish custom of the ʿĀshūrāʾ fast observed on the Day of Atonement and replaced it in 2/623-4 by the institution of the fast of Ramaḍān (Q 2:183-5) after the battle of Badr (cf. Q 3:123). This battle is usually understood to be the referent of Q 8:41, "What we sent down on our servant (q.v.; *ʿabdinā*) on the day of deliverance *(yawm al-furqān)*." It is probable that "a certain number of days" or "counted days" (*ayyāman maʿdūdātin,* Q 2:184) represents a ten-day fast as a stage of transition before the Qurʾān established the month-long fast of Ramaḍān (Goitein, Zur Entstehung, 101-9). It is disputed, however, whether the "night of destiny" refers to a night in the month of Ramaḍān when Muḥammad received his first revelation while practicing religious devotion (*taḥannuth;* see VIGILS) on mount Ḥirāʾ out-

side Mecca (cf. Ibn Isḥāq, *Sīra,* 151-2; Ibn Isḥāq-Guillaume, 105-6) or whether it signifies the sending down of the entire Qurʾān (a notion which is in conflict with verses stating that the Qurʾān was revealed gradually, cf. Wagtendonk, *Fasting in the Koran,* 87; see OCCASIONS OF REVELATION). Scholars also differ over whether the "night of destiny" was chosen against the background of the ancient Arabian new year, celebrated around the summer solstice and frequently identified with the 27th of Ramaḍān (cf. Wensinck, Arabic new year, 5-8) or whether the night of the 27th of Rajab should be determined as the night of Muḥammad's first revelation (Wagtendonk, *Fasting in the Koran,* 113; see YEAR).

The month of the pilgrimage is clearly called "the holy month" (*al-shahr al-ḥarām,* Q 2:194, 217; 5:2, 97) although, somewhat enigmatically, the pilgrimage *(al-ḥajj)* is said to fall in "months well-known" (*ashhur maʿlūmāt,* Q 2:197). The practice of adding an intercalary month *(nasīʾ)* to bring the lunar year in step with the seasons was expressly prohibited in the Qurʾān as "an increase of unbelief" (Q 9:37; cf. Moberg, *an-Nasīʾ*). The Qurān's fixing the number of months as twelve and its prohibition of intercalation prepared the way for Islam to adopt the lunar calendar, beginning with the 1st of Muḥarram of the year of the *hijra* (not the *hijra* itself; see EMIGRATION), in the caliphate of ʿUmar (r. 13-23/634-44; see CALIPH). A random reference to *shahr* in the Qurʾān refers to the wind that was subjected to Solomon and "blew a month's (journey) in the morning *(ghuduwwuhū shahrun)* and a month's (journey) in the evening" (*rawāḥuhā shahrun,* Q 34:12). Ritually, a fast of "two successive months" (Q 4:92; 58:4) can be substituted if one does not find the means to pay the bloodwit (see BLOOD MONEY). "A wait of four months" is recommended for those who forswear their women (Q 2:226; see ABSTINENCE; MARRIAGE AND DIVORCE; SEX AND SEXUALITY). Widows (see WIDOW) are to wait "four months and ten days" (Q 2:234) before they can remarry after the husbands' death, while the waiting period is reduced to "three months" (Q 65:4) for those whose menstrual periods have ceased (see MENSTRUATION). According to the Qurʾān, the bearing and weaning of a child lasts "thirty months" (Q 46:15; see MAINTENANCE AND UPKEEP; CHILDREN; WET-NURSING) and mothers are required to suckle their children "two years completely" (*ḥawlayn kāmilayn,* Q 2:233), a duration in step with Luqmān's (q.v.) instruction to his son that weaning a child lasts "two years" (*ʿāmayn,* Q 31:14). The week *(usbūʿ)* is not cited in the Qurʾān; Friday (*yawm al-jumuʿa,* Q 62:9) appears only once, and the Jewish Sabbath five times (Q 2:65; 4:47, 154; 7:163; 16:124).

For the year, the Qurʾān uses the terms *sana* (seven times in the singular, and twelve times in the plural *sinīn*) and *ʿām* (eight times in the singular and once in the dual) interchangeably. Noah (q.v.) remained among his people "a thousand years, all but fifty" (Q 29:14) and Pharaoh's people were struck with years of famine (q.v.; Q 7:130). Joseph explains the king's dream vision of seven fat and seven lean cows as meaning seven fertile and seven hard years (Q 12:47-9) and, forgetting a fellow-prisoner's wish, Joseph causes him to languish in prison for "some years" (Q 12:42). Moses also remained among the people of Midian (q.v.) for "some years" (Q 20:40) and, when sent to Pharaoh, is asked, "did you not tarry among us years of your life?" (Q 26:18). The people of Israel (q.v.; see also CHILDREN OF ISRAEL) wandered about the earth "for forty years" (Q 5:26). God sealed the ears of the seven sleepers for years (Q 18:11; see MEN OF THE CAVE) and "they remained in their cave (q.v.) three hundred years and nine more" (Q 18:25). The Meccans are told that a day *(yawm)*

with God is "as a thousand years" (Q 22:47) and the unbelievers wish to live a thousand years (Q 2:96; see BELIEF AND UNBELIEF; OPPOSITION TO MUḤAMMAD). The last day is compared to a millennium, it is "one day *(yawm)* whose measure is a thousand years of your counting" (*miqdāruhu alfa sanatin mimmā taʿuddūn,* Q 32:5), while the angels (q.v.) and the spirit (q.v.) mount up to God in a day *(yawm),* "whereof the measure is fifty thousand years" (Q 70:4). Perhaps with reference to Ezekiel 27, the simile of a man who was dead for a hundred years and then finds himself raised up believing himself dead for only a day or part thereof is given in Q 2:259 (see SIMILES). A similar time argument against the resurrection is rejected by the rhetorical question of Q 23:112, "How long have you tarried in the earth, by a number of years?" According to the Qurʾān, a man reaches maturity (q.v.) at "forty years" (Q 46:15) and the believers are exhorted to go to war (q.v.) once or twice a year (Q 9:126) while the idolaters are debarred from the sacred mosque of the Kaʿba (q.v.) "after this present year" (Q 9:28). Although it is difficult to fix the particular event, Q 30:4 refers to the defeat of the Byzantine forces *(al-Rūm)* on the northern borders of Arabia in about 614 C.E. and promises them victory against the Persians in "a few years" (*fī biḍʿi sinīn;* see BYZANTINES).

Just as the Qurʾān pays no attention to fixing particular historical events in time, so it hardly betrays any awareness of historical epochs preceding its own advent, except perhaps with regard to the term *al-jāhiliyya,* which is generally taken as denoting the age of Arab pagan ignorance (q.v.) preceding the appearance of Islam (see AGE OF IGNORANCE). Rather than to a historical epoch of pre-Islamic lack of knowledge (see KNOWLEDGE AND LEARNING), this term primarily refers in the Qurʾān to an age of uncouth behavior as opposed to moderate conduct (*ḥilm,* cf. Goldziher, *MS,* 201-8; see MODERATION). This may be the primary meaning in Q 33:33, where Muḥammad's wives (see WIVES OF THE PROPHET) are admonished not to act in the immodest ways (see MODESTY) of "the former age of ignorance" *(al-jāhiliyya l-ūlā)*; in Q 5:50, where "the (mode of) judgment (q.v.) of the age of ignorance" *(ḥukm al-jāhiliyya)* is contrasted with God's judgment; in Q 48:26, where "the fierceness of the age of ignorance" *(ḥamiyyat al-jāhiliyya)* is overcome by the divine assurance of self-restraint; and in Q 3:154, where untrue "assumptions of the age of ignorance" *(zann al-jāhiliyya)* about God are defeated by those peacefully trusting in God (see TRUST AND PATIENCE).

The vision of time in the Qurʾān

Arabic, a Semitic language and the language of the Qurʾān, distinguishes two aspects of time, complete *(māḍī)* and incomplete *(muḍāriʿ),* lacking the morphological distinction into three tenses common to the Indo-European languages and operating without proper verbs for "to be" and "to become" (see ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QURʾĀN). Similarly, the Arabic Qurʾān does not exhibit a notion of time divided into past, present and future, but envisages time either as phases of time in the past or moments of time understood as instants whether present or future. Furthermore, the vision of time in the Qurʾān is firmly rooted in an Arabic vocabulary that betrays virtually no influence of foreign loanwords, unlike some of the ritual and religious terminology in the Qurʾān (see FOREIGN VOCABULARY; COSMOLOGY; SCRIPTURE AND THE QURʾĀN). Rather, the Qurʾān seems to intertwine a great variety of genuinely Arabic terms of time, combining them with a vision of God as the lord over time in the beginning and at the

end of creation as well as during all of humanity's instants of time.

The Qurʾān rejects the pre-Islamic fatalism of impersonal time and destiny (*dahr,* Q 45:24; 76:1), also termed "fate's uncertainty" (*rayb al-manūn,* Q 52:30), which holds sway over everything and erases human works without hope for life beyond death (cf. Ringgren, *Studies*, 117-18; id., Islamic fatalism, 57-9). Rather than being forsaken to impersonal destiny, the Qurʾān emphasizes that "all things come home" *(taṣīru l-umūr)* unto God (Q 42:53) and "unto God is the homecoming" (*al-maṣīr,* Q 3:28; 24:42; 35:18; cf. 2:285; 5:18; 22:48; 31:14; 40:3; 42:15; 50:43; 60:4; 64:3), which for the wicked is an "evil homecoming" (*biʾsa l-maṣīr,* Q 2:126 and passim; *sāʾat maṣīran,* Q 4:97, 115; 48:6; cf. 25:15) to hellfire (Q 14:30; cf. Berque, l'Idée de temps, 1158). Proclaiming the creation of the universe by God and affirming the resurrection of the body in the world to come, the Qurʾān explains time from the perspective of a transcendent and omnipotent God, who obliterates the spell of fate and subdues the all-pervading power of time.

God begins the creation of the world and humanity with his creative command, *kun,* "Be!": "When he decrees a thing, he says to it, 'Be,' and it is" (Q 2:117; 3:47; 19:35; 40:68; cf. 3:59; 6:73; 16:40). God gave this command of creation when he formed the first human being (Q 3:59) and made the heavens and the earth (Q 6:73), fashioning them in six days (Q 7:54; 10:3; 11:7; 25:59; 32:4; 50:38; 57:4). "His are the creation *(khalq)* and the command" (*amr,* Q 7:54). God is not only creator at the beginning of creation and at the origin of a person's life, he also is judge at the end of the world and at the individual's death when humankind will hear "the cry in truth" (Q 50:42). In the final "hour" *(sāʿa),* the only perfect moment that there is, the divine command is revealed in "the twinkling of an eye" (*lamḥ bi-l-baṣar,* Q 54:50; cf. 16:77). In the Qurʾān, the divine creative command constitutes the beginning of time brought about by God who is beyond time. God brings it abruptly to its end in an apocalyptic termination when "the whole earth shall be his handful on the day of resurrection and the heavens will be rolled up in his right hand" (Q 39:67).

In the Qurʾān, the word *sāʿa,* "hour," generally denotes a brief lapse of time rather than the precise measure of one of the twenty-four hours of the day. The term appears forty-eight times, always in the singular, and predominantly designates the last hour. While the vivid imagery of apocalyptic signs, reversing the natural order and producing cataclysmic events (many of them quoted in the "when" passages, cited above), is depicted in reference to the *day* of doom, these terrifying happenings are rarely associated explicitly with the last *hour.* The hour is "coming" (*ātiya,* Q 15:85; 20:15; 22:7; 40:59) and comes with God's chastisement (Q 6:40; 19:75; 40:46). It "comes" (*taqūmu,* Q 30:12, 14, 55; 45:27), "there is no doubt of it" (Q 18:21; 45:32), and comes "suddenly" (Q 6:31; 12:107; 22:55; 43:66; 47:18) with its signs and "tokens" (*ashrāṭ,* Q 47:18). Only a few tokens of the last hour are cited in the Qurʾān, such as "the earthquake of the hour is a mighty thing" (Q 22:1), "the hour is their tryst, and the hour is very calamitous and bitter" (Q 54:46), and god-fearing people "tremble because of the hour" (Q 21:49). The unbelievers are in doubt of the hour (e.g. Q 42:18), are heedless of its coming (Q 18:36; 41:50) and do not seek to know the hour (Q 45:32), believing that it will never come to them (Q 34:3) and crying lies to the hour (Q 25:11; see LIE). On the last day humanity will be mustered as if they had not tarried in their graves "but an hour of the day" (*sāʿatan mina l-nahār,* Q 10:45; cf. 46:35), and the sinners will

swear that they have not remained in their graves more than an hour (Q 30:55; see SIN, MAJOR AND MINOR). The term *(ajal)* of a nation can neither be put back "by a single hour" nor put forward (Q 7:34; 10:49; 16:61; 34:30), and the Meccan emigrants and Medinan helpers followed the Prophet "in the hour of difficulty" (*fī sāʿati l-ʿusra,* Q 9:117; see EMIGRANTS AND HELPERS).

The Qurʾān insists that only God knows the "hour" (Q 7:187; 33:63; cf. 31:34; 41:47; 43:61, 85) which is near (Q 33:63; 42:17; 54:1), as if in "a twinkling of the eye" (*kalamḥi l-baṣar,* Q 16:77; cf. 54:50). In the context of God's knowledge of the hour, the Qurʾān uses the term *waqt,* "moment, instant," which influenced the notion of an atomism of time in Ṣūfism (cf. Bowering, *Ideas,* 217–32; see ṢŪFISM AND THE QURʾĀN): "They will question you concerning the hour, when it shall berth. Say, the knowledge of it is only with my lord; none shall reveal it at its proper time *(waqt),* but he" (Q 7:187). Furthermore, the term appears twice as a description of the day of doom as "a day of a known time" (*al-waqt al-maʿlūm,* Q 15:38; 38:81), "when the messengers' time is set" (*uqqitat,* Q 77:11; see MESSENGER) and "when the former and later generations will be gathered to the appointed time of a known day" (*ilā mīqāti yawmin maʿlūm,* Q 56:50). "Surely, the day of decision is their appointed time *(mīqātuhum),* all together" (Q 44:40). Another use of the term *mīqāt* refers to Moses' encounter with God, when he came "to our (God's) appointed time" (*li-mīqātinā,* Q 7:143; see THEOPHANY). In fact, "We (God) appointed with Moses thirty nights and we completed them with ten more, so the appointed time of his lord *(mīqāt rabbihi)* was forty nights" (Q 7:142). "Moses chose of his people seventy men for our appointed time" (*li-mīqātinā,* Q 7:155), while Pharaoh's sorcerers were assembled for "the appointed time of a fixed day" (*li-mīqāti yawmin maʿlūm,* Q 26:38; see MAGIC). Both *waqt* and *mīqāt* denote a momentous instant whether it is the eschatological instant of the last hour or the moment of Moses' encounter with God.

Four times the Qurʾān uses the term *amad* for "space of time," considered with regard to its end. The believers are admonished to be unlike those to whom revelation had come before "and for whom the space of time was long" (*fa-ṭāla ʿalayhimu l-amad,* Q 57:16). Each individual wishes to have a "wide space of time" until the reckoning of a person's actions on judgment day (Q 3:30). The seven sleepers calculated the "space of time" they had tarried in the cave (Q 18:12) and Muḥammad professes not to know whether God has set a long "space of time" for the arrival of the last day (Q 72:25). The Qurʾān also employs the temporal clauses, *al-ams,* "yesterday, the day before" (Q 10:24; 28:18-19, 82) and, more prominently, *ḥīna,* "when" (once in the form *ḥīnaʾidhin*), *al-āna,* "now, at the present time" (Q 2:71, 187; 4:18; 8:66; 10:51, 91; 12:51; 72:9) and *ayyāna,* "when," with regard to the instant of the last hour and the day of resurrection (Q 7:187; 16:21; 27:65; 51:12; 75:6; 79:42). The indefinite noun denoting "an instant" *(ḥīn)* is used to manifest God's causality in its actual "efficacy" (e.g. Q 21:111; 26:218; 37:174; cf. Massignon, Time, 108). The Qurʾān's linguistic stress on the moment exerted an influence on the concept of temporal atomism that emerged in the theological occasionalism of Islam which, however, relied heavily on extra-qurʾānic nomenclature for its terminology (cf. Macdonald, Continuous re-creation, 328-37; van Ess, *TG,* iv, 474; see THEOLOGY AND THE QURʾĀN). Thinking atomistically, Muslim theologians envision time as a "galaxy" or constellation of instants rather than a continuous duration (cf. Massignon, Time, 108).

God ends the cosmos by setting a term *(ajal)* to his maintenance of the universe and human life. The Qurʾān differentiates between an irrevocable period of time assigned by God for each human being in this world *(dunyā)* and an endless period of time *(khulūd)* for his/her life in the world to come *(ākhira),* whether in paradise or in hellfire. The term *ajal,* as designating "appointed time" of a person's life, carries the notion that the date of death is fixed for humans, who each have their "stated term" of death (*ajal musammā,* Q 11:3; 39:42). The Qurʾān uses the phrase *ajal musammā,* probably derived from the legal vocabulary of Muḥammad's time, to refer to the date when a debt (q.v.) is due (Q 2:282; cf. 2:231-5; 65:2, 4; see also TRADE AND COMMERCE; ECONOMICS; MONEY) or to Moses fulfilling the "term" of serving a period of years *(ḥijaj)* in order to obtain his wife (Q 28:27-9; see WOMEN AND THE QURʾĀN). The Qurʾān, however, ordinarily uses the word for God's setting a term to his own action. God creates humans from dust and appoints for each of them a stated term of death (Q 6:2). He determines the moment when each embryo leaves the womb (q.v.; Q 22:5) and, every day anew, wakes up each soul to life until humans reach their "appointed time" of death (Q 6:60; 39:42). All humanity will return to God when the stated term is completed on the last day (Q 6:60) and all those looking to encounter God will experience God's term *(ajal Allāh)* surely coming (Q 29:5). The *ajal* is "fixed" (*li-kulli ajalin kitāb,* Q 13:38; cf. 8:68) for both individuals (Q 6:2; 11:3; 63:11) and communities (Q 7:34; 15:5; 23:43). It can neither be anticipated nor deferred (Q 7:34; 10:49; 16:61; 35:11; 63:10-11), although God grants the repentant sinner a respite until a "stated term" (Q 14:10; 16:61; 35:45; 71:4; see REPENTANCE AND PENANCE). This is why the wicked are not punished at once and they do not find that sinning shortens their existence (Q 35:45; 63:10-11). Challenged to hasten the final punishment, Muḥammad declares himself unable to do so because it will come suddenly at its "appointed time" (Q 29:53; see PROVOCATION). Not only humans have their appointed time of existence, the whole universe was created by God with finality built into it. God created the heavens and the earth as well as all natural phenomena "between them," decreeing their duration until "a stated term" (Q 30:8; 46:3) and established the unchangeable course of the sun and the moon, "running to a stated term" (Q 13:2; 31:29; 35:13; 39:5; see NATURE AS SIGNS). God unambiguously enunciated the stated term through "a word" *(kalima)* that proceeded from him (Q 42:14; cf. 10:19; 11:110; 20:129; 37:171; 41:45; 42:21; see SPEECH; WORD OF GOD).

There is no place in the Qurʾān for impersonal time. God, rather than an impersonal agent, rules the universe. The destiny of human beings is in the hands of God who creates male and female, grants wealth (q.v.) and works destruction, and gives life (q.v.) and brings death (Q 53:44-54). God is active even in a person's sleep, for "God takes the souls unto himself *(yatawaffā l-anfus)* at the time of their death, and that which has not died, in its sleep. He keeps those on whom he has decreed death, but releases the others till a stated term" (*ajal musamman,* Q 39:42). Unless God has decreed a person's death, he sends back the soul and the human person wakes up. The divine command *(amr)* rules all of human life and resembles a judicial decision, proclaiming God's decree with authority and stating the instant that releases the acts which humans perform. Both human life and human action begin with the announcement of the divine *kun* ('Be!') and come to an end at the stated

term (*ajal,* Q 40:67) as the irrevocable period of life assigned by God comes to an end at the moment of divine sanction. This appointed term of human life is fixed, it can neither be anticipated nor deferred. "No one has his life prolonged and no one has his life cut short except as [it is written] in a book [of God's decrees]" (Q 35:11; see HEAVENLY BOOK). The image-rich promise of the new human creation beyond time in paradise heightened the awareness that nothing escapes the grasp of God's perpetual presence. From the *kun* of his creation to the *ajal* of his death, individual human existence falls under the incessant decrees of God, which occur instantaneously. God is the lord of the instant. What God has determined happens.

Tolerance and Coercion

Accepting attitude towards a plurality of viewpoints and the use of force to influence behavior or beliefs. Qurʾānic vocabulary lacks a specific term to express the idea of tolerance but several verses explicitly state that religious coercion *(ikrāh)* is either unfeasible or forbidden; other verses may be interpreted as expressing the same notion. Pertinent qurʾānic attitudes underwent substantial development during Muḥammad's prophetic career. The earliest reference to religious tolerance seems to be included in Q 109, a sūra that recognizes the unbridgeable gap between Islam (q.v.) and the religion of the Meccans (see POLYTHEISM AND ATHEISM; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC) and concludes by saying: "To you your religion, and

to me mine" (Q 109:6). This is best interpreted as a plea to the Meccans to refrain from practicing religious coercion against the Muslims of Mecca (q.v.) before the *hijra* (Zamakhsharī, *Kashshāf,* iv, 293; cf. Q 2:139; see EMIGRATION), but since it does not demand any action to suppress Meccan polytheism, it has sometimes been understood as reflecting an attitude of religious tolerance on the part of the Muslims (cf. Q 2:139; 28:55; see also RELIGIOUS PLURALISM AND THE QUR'ĀN).

Q 15:85 and Q 43:89, dated by Nöldeke (*GQ,* i, 129, 131-2) to the second Meccan period (see CHRONOLOGY AND THE QUR'ĀN), are also relevant. In contradistinction to Q 109:6, these verses clearly address the Prophet and enjoin him to turn away from those who do not believe (see BELIEF AND UNBELIEF). Q 15:85 reads: "Surely the hour is coming; so pardon, with a gracious pardoning" *(fa-ṣfaḥi l-ṣafḥa l-jamīl);* this injunction is related to the imminent approach of the last day (see LAST JUDGMENT). The verse seems to mean that the Prophet may leave the unbelievers alone because God will soon sit in judgment (q.v.) and inflict on them the just punishment (see REWARD AND PUNISHMENT). Then there is Q 10:99-100:

> And if your lord had willed, whoever is in the earth would have believed, all of them, all together. Would you then constrain the people, until they are believers? It is not for any soul (q.v.) to believe save by the leave of God; and he lays abomination upon those who have no understanding.

The verse seeks to convince the Prophet that matters of religious belief are in the hands of God and that any attempt to spread his faith by coercion would be an exercise in futility. It also sounds as though it were an attempt to allay the Prophet's distress at his initial failure to attract most Meccans to Islam: people believe only as a result of divine permission and the Prophet should not blame himself for their rejection of the true faith. Despite prophetic efforts to the contrary, most people opt for unbelief (Q 12:103; 16:37). The Qur'ān declares in numerous passages that prophets can only deliver the divine message (see PROPHETS AND PROPHETHOOD); it is not within their power to assure its acceptance or implementation (Q 16:35, 82; 28:56; 29:18 and elsewhere; cf. also Paret, Toleranz). This argument may be seen as compatible with the idea of predestination.

Moving to the period immediately following the *hijra,* we should consider the famous document known as the Constitution of Medina *('ahd al-umma)* which included a clause recognizing the fact that the Jews have a distinct — and legitimate — religion of their own (see JEWS AND JUDAISM): "The Jews have their religion and the believers have theirs" (*lil-yahūd dīnuhum wa-lil-mu'minīna dīnuhum;* Abū 'Ubayd, *Amwāl,* 204). Rubin (The constitution, 16 and n. 45) has already referred to the affinity between this passage and Q 109:6. Both accept the existence of religions other than Islam in the Arabian peninsula. It stands to reason that both passages reflect very early attitudes of nascent Islam, which had been willing, at that time, to tolerate the existence of other religions in the peninsula. This seems to have been the understanding of Abū 'Ubayd (d. 224/838-9) who thought that the *'ahd al-umma* clause originated at a time when "Islam was not yet dominant and strong, before the Prophet was commanded to take *jizya* (see POLL TAX) from the People of the Book" (q.v.; *qabla an yazhara al-islām wa-yaqwā wa-qabla an yu'mara bi-akhdh al-jizya min ahl al-kitāb,* Abū 'Ubayd, *Amwāl,* 207).

Q 2:256, "There is no compulsion in religion . . ." *(lā ikrāha fī l-dīni)* has become

the *locus classicus* for discussions of religious tolerance in Islam. Surprisingly enough, according to the "circumstances of revelation" *(asbāb al-nuzūl)* literature (see OCCASIONS OF REVELATION), it was revealed in connection with the expulsion of the Jewish tribe of Banū l-Naḍīr (q.v.) from Medina (q.v.) in 4/625 (cf. Friedmann, *Tolerance,* 100-1). In the earliest works of exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), the verse is understood as an injunction *(amr)* to refrain from the forcible imposition of Islam, though there is no unanimity of opinion regarding the precise group of infidels to which the injunction had initially applied. Commentators who maintain that the verse was originally meant as applicable to all people consider it as abrogated *(mansūkh)* by Q 9:5, Q 9:29, or Q 9:73 (see ABROGATION). Viewing it in this way is necessary in order to avoid the glaring contradiction between the idea of tolerance and the policies of early Islam which did not allow the existence of polytheism — or any other religion — in a major part of the Arabian peninsula. Those who think that the verse was intended, from the very beginning, only for the People of the Book, need not consider it as abrogated: though Islam did not allow the existence of any religion other than Islam in most of the peninsula, the purpose of the jihād (q.v.) against the People of the Book, according to Q 9:29, is their submission and humiliation rather than their forcible conversion to Islam. As is well known, Islam normally did not practice religious coercion against Jews and Christians (see CHRISTIANS AND CHRISTIANITY) outside the Arabian peninsula, though substantial limitations were placed in various periods on the public aspects of their worship.

Later commentators, some of whom are characterized by a pronounced theological bent of thought, treat the verse in a totally different manner. According to them, Q 2:256 is not a command at all. Rather it ought to be understood as a piece of information *(khabar),* or, to put it differently, a description of the human condition: it conveys the idea that embracing a religious faith (q.v.) can only be the result of empowerment and free choice *(tamkīn, ikhtiyār)*. It cannot be the outcome of constraint and coercion *(qasr, ijbār)*. Phrased differently, belief is "an action of the heart (q.v.)" in which no compulsion is likely to yield sound results *(li-anna l-ikrāh ʿalā l-īmān lā yaṣiḥḥu li-annahu ʿamal al-qalb)*. Religious coercion would also create a theologically unacceptable situation: if people were coerced into true belief, their positive response to prophetic teaching would become devoid of value, the world would cease to be "an abode of trial" (*dār al-ibtilāʾ;* Rāzī, *Tafsīr,* vii, 13; Ibn al-Jawzī, *Zād,* iv, 67; see TRUST AND PATIENCE; TRIAL) and, consequently, the moral basis for the idea of reward and punishment would be destroyed. This argumentation uses the verse in support of the idea of free will (see FREEDOM AND PREDESTINATION).

These tolerant attitudes toward the non-Muslims of Arabia were not destined to last. After the Muslim victory in the battle of Badr (q.v.; 2/624), the Qur'ān started to promote the idea of religious uniformity in the Arabian peninsula. Q 8:39 enjoins the Muslims "to fight… till there is no temptation [to abandon Islam; *fitna*] and the religion is God's entirely" (cf. Q 2:193). Once this development took place, the clauses in the *ʿahd al-umma* bestowing legitimacy on the existence of the Jewish religion in Medina had to undergo substantial reinterpretation. The clause stipulating that "the Jews have their religion and the believers have theirs" was now taken to mean that the Jewish religion is worthless (*ammā l-dīn fa-laysū minhu fī shayʾ;* Rubin, The constitution, 19-20, quoting Abū

ʿUbayd, *Amwāl,* 207). Similar was the fate of Q 109:6, which was declared abrogated by Q 9:5 *(āyat al-sayf)* or interpreted as a threat against the polytheists. This new attitude was also expressed in the prophetic tradition according to which "no two religions will coexist in the Arabian peninsula" (*lā yajtamiʿu dīnāni fī jazīrat al-ʿarab;* Friedmann, *Tolerance,* 91-3).

Despite the apparent meaning of Q 2:256, Islamic law allowed coercion of certain groups into Islam. Numerous traditionists and jurisprudents *(fuqahāʾ)* allow coercing female polytheists and Zoroastrians (see MAGIANS) who fall into captivity to become Muslims — otherwise sexual relations with them would not be permissible (cf. Q 2:221; see SEX AND SEXUALITY; MARRIAGE AND DIVORCE). Similarly, forcible conversion of non-Muslim children was also allowed by numerous jurists in certain circumstances, especially if the children were taken captive (see CAPTIVES) or found without their parents or if one of their parents embraced Islam (Friedmann, *Tolerance,* 106-15). It was also the common practice to insist on the conversion of the Manichaeans, who were never awarded the status of *ahl al-dhimma.*

Another group against whom religious coercion may be practiced are apostates from Islam (see APOSTASY). As a rule, classical Muslim law demands that apostates be asked to repent and be put to death if they refuse (see REPENTANCE AND PENANCE; BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT). It has to be pointed out, however, that the Qurʾān does not include any reference to capital punishment for apostasy. The Qurʾān mentions people who abandoned Islam and reverted to their former faith; those of them who did this willingly are condemned in a harsh and vindictive tone. There is a sense of resentment at the idea that someone who had perceived the truth of Islam and joined it only a short time ago could be swayed into reverting to idolatry or another false religion (see IDOLATRY AND IDOLATERS). The Qurʾān therefore asserts that the endeavors of the unrepentant apostates will fail, God will visit them with his wrath and will send valiant warriors against them; however, the main punishment of those who abandoned Islam will be inflicted upon them, according to the Qurʾān, in the hereafter (cf. Q 2:217; 3:86, 90; 4:137; 5:54; 9:74; 47:25). But in the ḥadīth and *fiqh* literature, the attitude toward the apostate became much harsher. It stands to reason that the Bedouin (q.v.) insurrection against the nascent Muslim state after the Prophet's death was the background for this development. The new attitude, which effectively transfers the punishment for apostasy from the hereafter (see ESCHATOLOGY) to this world, is reflected in utterances repeatedly attributed to the Prophet in the earliest collections of tradition. The most frequently quoted of these reads: "Whoever changes his religion, kill him" (*man baddala* or *man ghayyara dīnahu fa-qtulūhu* or *fa-ḍribū ʿunuqahu;* Mālik, *Muwaṭṭaʾ,* ii, 736). In another formulation, taking into account the idea that a person forced to abandon Islam is not considered an apostate, the Prophet is reported to have said: "Whoever willingly disbelieves in God after he has believed, kill him" *(man kafara bi-llāhi baʿda īmānihi ṭāʾiʿan fa-qtulūhu).* Most jurists maintain that the apostate should be given the opportunity to repent; there is a great variety of views concerning the time allowed for this purpose (Friedmann, *Tolerance,* 121-59; see REPENTANCE AND PENANCE).

Hence, the ideas of tolerance and coercion have undergone substantial development in the Qurʾān and are characterized by a great deal of variety in the literature of tradition and jurisprudence. Yet whatever the original meaning of Q 2:256 may

have been, it is more compatible with the idea of religious tolerance than with any other approach. Any Muslim who wanted to practice religious toleration throughout the centuries of Islamic history could use Q 2:256, Q 10:99 and Q 109:6 as a divine sanction in support of his stance. On the other hand, Q 9:5, Q 9:29 or Q 9:73 may be interpreted as going a long way in the opposite direction.

Tools for the Scholarly Study of the Qurʾān

The entire body of scholarship, both Muslim and non-Muslim, must be the foundation of any responsible scholarly study of the Qurʾān. Certain tools, however, form key elements of any scholarly library.

The text of the Qurʾān

The basic tool for the study of the Qurʾān is, of course, the text itself. Unlike the situation in scholarly study of some other scriptures, decisions regarding the base text to be used for analysis do not face scholars from the outset. We have a text of the Qurʾān before us, accepted by every Muslim. It is the text which is the well-known, well-established book, found between two covers in virtually every Muslim home, known for convenience as the ʿUthmānic text (see CODICES OF THE QURʾĀN; COLLECTION OF THE QURʾĀN; ʿUTHMĀN). That said, it must be admitted that this is a somewhat simplistic way of presenting the matter (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN).

It is common to speak of the Royal

Egyptian edition of the Qurʾān published under the patronage of King Fuʾād I in 1342/1923 as being the modern standard text of the scripture (see PRINTING OF THE QURʾĀN). This edition has been criticized as not conveying the best rendition of the Ḥafṣ *ʿan* ʿĀṣim transmission which it purports to represent because it is based upon late Muslim sources for the details of the reading (see Bergsträsser, Koranlesung; see READINGS OF THE QURʾĀN). Some other copies of the Ḥafṣ *ʿan* ʿĀṣim tradition printed in the Muslim world — including a second edition of the Cairo text which appeared in 1952 — contain an additional (but small) number of minor variations especially in orthography (q.v.) and verse numbering (see VERSES). Printed copies of other established transmissions (e.g. that of Warsh) are available but their distribution is not widespread.

Still useful is the European edition of the Qurʾān produced by Gustav Flügel, which was published in 1834 and revised in 1841 and again in 1858. This edition maintains its value — it is typeset in a pleasant font, for example — but its verse numbering scheme, being at variance with any accepted Muslim tradition, has created an unfortunate complexity in scholarly referencing. To complicate matters further, Flügel constructed an eclectic edition of the text using undefined editorial principles. His edition has been subject to criticism on many grounds (see e.g. Ambros, Divergenzen; Spitaler, *Verszählung*).

Neither the Royal Egyptian text nor the Flügel edition may be considered a critically edited text in the sense that is understood in contemporary scholarly practice. Of course, such a concept may be thought redundant in the case of the Qurʾān, given the Muslim view of the authenticity of the written qurʾānic text and reliability of its transmission (see RECITERS OF THE QURʾĀN; TEXTUAL CRITICISM OF THE QURʾĀN; UNITY OF THE TEXT OF THE QURʾĀN). Even so, a substantial scholarly resource exists related to the establishment of such a critical text. Much of the material is the result of a project initiated in the 1930s which never achieved completion (see Nöldeke, *GQ*, iii *[Die Geschichte des Korantexts];* Bergsträsser, *Plan;* Pretzl, *Fortführung;* Jeffery, Progress). In recent years a new effort has begun, one based on the critical analysis of texts written in the Ḥijāzī script, believed to be the oldest record of the text which we have available (see Noja, Note; see ARABIC SCRIPT; MANUSCRIPTS OF THE QURʾĀN; CALLIGRAPHY). Other manuscripts, epigraphy (see EPIGRAPHY AND THE QURʾĀN), scholarly emendations and related sources will also prove to be important elements in creating such a critical text, but attempts to gather these into a scholarly tool have yet to be made.

As a part of the effort to establish the critical text, attention has been paid to the variant readings and traditional codices of the Qurʾān. Jeffery's *Materials* was conceived as a major step along the way to the critical text edition, bringing together much of the data on variant readings *(qirāʾāt)* of the text. Such work needs considerable updating today in light of more extensive collections of variant readings that are becoming available (see ʿUmar and Mukram, *Muʿjam;* see also al-Khaṭīb, *Muʿjam;* the Qurʾān manuscripts discovered in 1973 in the Great Mosque of Ṣanʿāʾ present yet another potential source of information on the early history of the qurʾānic text; cf. Puin, Observations, 110-11).

The text of the Qurʾān is readily available in electronic form, following, for the most part, the tradition of the printed Egyptian edition (see COMPUTERS AND THE QURʾĀN). The text is available for downloading in fully voweled text format (for example, see www.al-kawthar.com/kotob/quran.zip [8 September 2005]); some unvoweled versions still linger at

other sites, the result of limitations of early personal computer applications. The text is available for consultation on the Web in a variety of formats; the most useful ones are in text form rather than graphic images as the former facilitates the process of "cutting-and-pasting" into other applications.

Concordances

Even in this age of electronic texts, the study of the Qurʾān is substantially eased by the existence of printed concordances; the closest thing available (which displays great potential) is a project at the University of Haifa for creating a web-accessible tagged qurʾānic text (see http://www.cs.haifa.ac.il/~shuly/Arabic/; accessed 7 September 2005). Two works are especially worthy tools. ʿAbd al-Bāqīʾs *al-Muʿjam al-mufahras li-alfāz al-Qurʾān al-karīm* is a concordance of the Arabic text (in the Cairo edition) organized according to Arabic word roots. Hanna E. Kassis, *A concordance of the Qurʾān,* is a concordance based on the translation by Arberry but organized according to the Arabic word roots, indexed to their English meanings. Such concordances may not be perfect tools (as Ambros, Lexikostatistik, 11, has pointed out) in that the analysis of the root structure of some words (and other technical matters) is open to dispute and confusion. Until, however, a fully lemmatized and annotated computerized text is produced (which would have to allow the recognition of differences of opinion on grammatical issues), these works certainly have their place. The issues which Ambros raises illustrate the difficulty of the task. The concordance function of Paret, *Koran,* is not complete but its attention to thematic and phrase parallels makes it an essential and unique tool (cf. also the thematic concordance of Jules La Beaume, with a supplement by Edouard Montet). An additional merit of Paret's work is its inclusion of separate lists of sūra (q.v.) titles; those lists may be supplemented by Lamya Kandil, Surennamen. Since virtually every Arabic commentary on the Qurʾān uses the names of the sūras rather than their numbers to refer to chapters of the text, such listings can be essential in clarifying cross-references.

While the Arabic text of the Qurʾān is easily available electronically and is thus fully searchable, a morphologically tagged text of the Qurʾān does not currently appear to be available electronically for manipulation on one's computer. Neither does there appear to be an electronic version of a concordance such as that of ʿAbd al-Bāqī. The CD ROM *Jame': Software of quranic tafsir,* produced by Nashr-e Hadith-e Ahl al-Bayt Institute in Iran, allows for text search of the Qurʾān by word roots as well as individual words (while also providing English and Persian translations of the text, Arabic recitation, and fifty-nine commentaries in Arabic or Persian; see RECITATION OF THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). Only the results of such searches, however, may be printed; there is no facility for exporting the texts themselves. Another useful search facility is available online at altafsir.com [February 26, 2003] which allows searching by root; those results allow for successful "cut-and-paste" operations from one's web browser into other applications.

Dictionaries

Until recently there did not exist a complete dictionary of the Qurʾān in any European language that could be considered a true modern scholarly tool. Penrice, *Dictionary,* was first published in 1873 and was based almost completely upon al-Bayḍāwīʾs (d. prob. 716/1316-17) commentary. That work continues to be a convenient place to start lexical investiga-

tion, but it is very limited in scope. Other European languages have been no better served; works include F.H. Dieterici, *Handwörterbuch* (1881); S. Fraenkel, *Vocabulis* (1880); C.A. Nallino, *Chrestomathia* (1893). The recent publication of Arne Ambros and Stephan Procházka, *A concise dictionary of Koranic Arabic* (Wiesbaden 2004), improves the situation substantially; the work is compiled on the basis of an extensive analysis of the text of the Qurʾān and consideration of earlier scholarly etymological examinations; the lexical impact of variant readings is also documented.

Specialized works on aspects of qurʾānic vocabulary continue to provide some supplementary support for lexicographical purposes. While not a full dictionary, an extensive and useful work is Mir, *Verbal idioms*. For the most part, standard scholarly bilingual dictionaries, such as those of Lane and its ongoing completion by M. Ullmann, *Wörterbuch,* and the *Dictionnaire* of R. Blachère, are essential for determining the range of possible meaning of many qurʾānic words.

Foreign vocabulary (q.v.) and proper names have attracted a good deal of scholarly attention and there are a number of works that help in the etymological understanding of non-Arabic words: Jeffery, *Foreign vocabulary,* has an extensive bibliography of Qurʾān-related lexicographical studies and provides a summary of etymological data on many words. Such information is in need of substantial updating in light of modern philological principles and more recent research (see for example, Zammit, *Comparative*).

Additionally, there are a large number of scholarly articles that treat a more limited range of individual qurʾānic words, but the lack of an effective bibliographical tool in the field means that the material cannot always be utilized effectively. Paret's *Kommentar* provides one means of locating references in standard scholarly works to lexicographical studies but only those published before the last quarter of the twentieth century. Finally, there is no substitute for the critical use of the Muslim commentary *(tafsīr)* tradition and its subsidiary lexicographical works when it comes to determining the range of meanings that Muslims have ascribed to qurʾānic words. Some of the books that treat "difficult words" in the Qurʾān approach the dimensions of a full Arabic dictionary of the Qurʾān; the classic text by al-Rāghib al-Iṣfahānī (fl. early fifth/eleventh cent.), *Mufradāt,* is the best example (see DIFFICULT PASSAGES).

Grammars

The situation for studying the grammar of the Qurʾān is similar to that of vocabulary; the best sources for grammatical details remain standard grammars such as that of W. Wright, *Grammar,* T. Nöldeke's *Grammatik,* and R. Blachére and M. Gaudefroy-Demombynes, *Grammaire.* Once again, a large number of specialized studies must be consulted on individual issues of grammar, for example Bergsträsser, *Verneinungs- und Fragepartikeln;* M. Chouémi, *Le verbe;* F. Leemhuis, *D and H stems;* Reckendorf, *Arabische Syntax*. Analysis of qurʾānic grammar is, of course, a part of most *tafsīr* works but even in the tradition of Arabic grammarians, no extensive and synthetic grammar devoted to qurʾānic Arabic appears to exist (see also GRAMMAR AND THE QURʾĀN; DIALECTS).

Thematic indices

The bibliography of scholarly treatments of the contents of the Qurʾān is extensive. A few works attempt to provide synoptic overviews. Mir, *Dictionary,* is introductory but useful, as is F. Sherif, *Guide to the contents*. Older but still valuable is H.U. Weitbrecht Stanton, *Teaching of the Qurʾān*.

The punch card analysis, Allard, *Analyse,* is now primitive in its technology but its

ability to provide access to what would now be termed "hyperlinks" between subjects within the Qurʾān has still not been replaced. One continuing value of the work resides in the analytic system that its author constructed; it is probably the most sophisticated and complete of any attempt to thematize the Qurʾān through its semantic worldview.

Commentaries

Translations of the Qurʾān (q.v.) may be considered valuable tools for research since such works provide access to interpretations of the meaning of the Qurʾān; it is important to remember, of course, that the nature of a translation is necessarily monovalent. Thus the more extensive commentaries that have been written to accompany various translations are more useful tools. Paret, *Kommentar,* is essential; certain elements of Bell, *Commentary,* are also helpful. A more recent project is A.T. Khoury, *Der Koran,* a twelve-volume commentary incorporating a translation. Such commentaries cannot match the wealth of information and analysis available in the Arabic (and Persian) *tafsīr* tradition, of course.

Approaches to the Qurʾān

A number of introductions to the study of the Qurʾān exist which can be used with great profit because they incorporate many of the basic resources needed to orient a scholarly reading. As well, in their presuppositions, they provide basic methodological orientations to the field. Nöldeke, *GQ;* Blachère, *Introduction;* Bell, *Introduction,* updated as Watt-Bell, *Introduction,* clearly stand out as "classics." Protracted and explicit discussions of the methods by which one approaches the Qurʾān in scholarly study have yet to appear; most such reflections have been limited to articles or introductions to books. The oeuvre of M. Arkoun is probably the most significant in trying to bring attention to the issue (for example, Arkoun, Bilan).

Four books can be singled out because of their impact on the field in setting models for how studies might proceed; they also speak about the general contents of the Qurʾān and thus provide significant overviews of major portions of the scripture. These works indicate the range of concerns of more contemporary scholars and each in its own way has had a significant impact on qurʾānic studies as a discipline. Few serious studies of the Qurʾān can proceed without some acquaintance with the following works: (1) Izutsu, *God,* and (2) Izutsu, *Concepts:* each of these works tries to define a semantic range of vocabulary central to religious discussion and to examine it in the context of Arabia (see SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). Concepts in these books are defined broadly, and the two works in combination provide a significant view of the religious and cognitive structures of the Qurʾān. The attention to the workings of the semantic method that is contained in these books has had a lasting effect on the discipline. (3) F. Rahman, *Major themes,* approaches the scripture with a structure that reflects the central tenets of Muslim theology as conceived in the late twentieth century: God (see FAITH; GOD AND HIS ATTRIBUTES; BELIEF AND UNBELIEF), man as individual, man in society (see ETHICS AND THE QURʾĀN), nature (see NATURE AS SIGNS), prophethood and revelation (see PROPHETS AND PROPHETHOOD; REVELATION AND INSPIRATION), eschatology (q.v.), Satan and evil (see DEVIL; GOOD AND EVIL; FALL OF MAN; VIRTUES AND VICES, COMMANDING AND FORBIDDING), and the emergence of the Muslim community (see COMMUNITY AND SOCIETY IN THE QURʾĀN). Rahman's volume is thus able to provide a full overview of the Qurʾān while demonstrating a historical mode of analysis within the basic frame-

work of Muslim assumptions. (4) Wansbrough, *QS,* deals with the content of the Qurʾān under the following rubrics: revelation and canon (the document, its composition), emblems of prophethood, and origins of classical Arabic (issues of language; see LANGUAGE AND STYLE OF THE QURʾĀN). Attention in this book is primarily to the relationship between form and content (see FORM AND STRUCTURE OF THE QURʾĀN). The work has been considered controversial in its treatment of the Qurʾān's contents because its use of a biblical-Jewish paradigm to contextualize the scripture is criticized as offering only a limited view of the contents of the text in all its dimensions. Methodologically his study draws attention to the need for contextualization of the Qurʾān as an essential part of the process of understanding it. His work demonstrates a reading of the text that could be constructed outside the framework traditionally established for it by Muslim historiography (see SĪRA AND THE QURʾĀN; OCCASIONS OF REVELATION; HISTORY AND THE QURʾĀN). Each of these four works, then, provides not only an overview of the contents of the Qurʾān but also a model by which the analysis of that content can proceed.

Bibliographical aids

The scholarly study of the Qurʾān has a long history, certainly not as long as the Bible, but significant nonetheless (see also PRE-1800 PREOCCUPATIONS OF QURʾĀNIC STUDIES). The history of the study has not been written, although a number of bibliographically-oriented articles provide good introductions. Valuable contributions are W.A. Bijlefeld, Some recent contributions; A. Jeffery, Present status; A. Neuwirth, Koran. As mentioned previously, Paret, *Kommentar,* is the only comprehensive bibliographical tool available, although given its age its function is now limited to more "classic" works of scholarship. This *Encyclopaedia of the Qurʾān* will likely provide the best bibliographical tool for scholars for most purposes. See also POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY.

Torah

The scripture revealed by God to Moses (q.v.) on Mount Sinai (q.v.). In the Qurʾān, it is mentioned by name (Ar. *Tawrāt*) eighteen times, but a number of other terms are used for the same revelation. The Arabic word *Tawrāt* clearly derives, if perhaps indirectly, from the Hebrew *Torah,* meaning law (see Jeffery, *For. vocab.,* 95-6; Lazarus-Yafeh, Tawrāt). In keeping, however, with the widespread belief that the Qurʾān does not contain words of foreign origin (see FOREIGN VOCABULARY), Muslim commentators traced it back to an Arabic root, viz. *w-r-y,* which means to strike fire (q.v.), a reference to the light (q.v.) said to be in the Torah (Q 5:44; 6:91; and cf. Q 3:184; 21:48; 35:25; see *Lisān al-ʿArab,* xv, 389). Some, like the exegetes al-Rāzī (d. 606/1210) and al-Zamakhsharī (d. 538/1144), rejected this etymology and admitted its non-Arabic origin. Although in the Qurʾān the name Torah is mostly used in its proper sense, i.e. the books of Moses or Pentateuch, it is often applied in post-qurʾānic Islamic literature to the entire Hebrew Bible, and even to Jewish extra-canonical literature. The rabbinical literature, too, is sometimes called Torah, which is not surprising considering the fact that Judaism considers these sources to be the "oral Torah."

References to the Torah in the Qurʾān

The word *Tawrāt* appears in the following verses: Q 3:3, 48, 50, 65, 93 (twice); 5:43, 44, 46 (twice), 66, 68, 110; 7:157; 9:111; 48:29; 61:6; and 62:5. In most of these cases it is mentioned in combination with the Gospel (q.v., Ar. *Injīl*), the sacred scripture of the Christians (see CHRISTIANS AND CHRISTIANITY). The Torah had earlier been confirmed by Jesus (q.v.; Q 3:50; 5:46; 61:6), and was now once again confirmed and clarified by the new revelation brought by Muḥammad (e.g. Q 3:3, and see also Q 2:89, 97, 101; 4:47; 5:15, 19, 48; 6:93; 46:12, 30; see REVELATION AND INSPIRATION; SCRIPTURE AND THE QURʾĀN). In addition to the instances of the word *Tawrāt,* the Qurʾān contains a much larger number of passages which clearly refer to this same scripture, describing it as the book brought by Moses, the book given to Moses, to Moses and Aaron (q.v.), or to the

Children of Israel (q.v.; Q 2:53, 87; 6:91, 154; 11:17, 110; 17:2; 23:49; 25:35; 28:43; 37:117; 40:53-4; 41:45; 45:16; 46:12). In numerous verses the Torah is subsumed under the collective rubric of the book (q.v.), possessed by the People of the Book (q.v.), which often indicates the Jews and the Christians together, but at times seems to refer to the Jews alone. Such verses are encountered in sūras (q.v.) from both the Meccan and the Medinan periods (e.g. Q 2:113, 121, 145, 146; 3:19, 23, 70, 71, 98, 110, 113, 199; 4:131; 5:59, 65; 6:20, 114; 13:36; 28:52; 29:46; see CHRONOLOGY AND THE QUR'ĀN). All verses containing the word Torah seem to date from the period of the Prophet's preaching in Medina (q.v.), after he had come into close contact with Jews (see JEWS AND JUDAISM), although Q 7:157, which declares that Muḥammad can be found in the Torah and the Gospel, is assigned by many to the late Meccan period (see MECCA). Verses referring to the Torah as the Book of Moses, however, can be found in sūras from both periods of Muḥammad's preaching. Closely related to *Tawrāt* is another term: the *ṣuḥuf* or scrolls (q.v.; and see also SHEETS) of Moses, mentioned in combination with those of Abraham (q.v.; Q 53:36-7; 87:19), which form part of a set of ancient or previous scrolls (Q 20:133; 87:18). The question of whether these scrolls of Moses are identical with the Torah, or were revealed before it and constitute a separate set of revelations, is debated. Figures given for the total number of scrolls revealed by God vary between fifty and one hundred and sixty three; those given to Moses are said to number ten or fifty.

In a series of verses dealing with the revelation on the Mount, we also encounter the tablets (*alwāḥ;* see COMMANDMENTS) which God gave to Moses (Q 7:145, 150, 154), and which are believed to have contained the entire Torah. There is much speculation in post-qur'ānic literature about the kind of precious stone the tablets were made of, as well as about their color and their number: the familiar figure of two is given, as are three, seven, and ten. In two of the qur'ānic verses mentioning the term *furqān* (viz. Q 2:53; 21:48; see CRITERION) the revelation to Moses is intended. The term is ordinarily translated as criterion, and glossed as what distinguishes between true and false, right and wrong, allowed and prohibited. Two further terms that should be mentioned as belonging to the same semantic field are *dhikr* (remembrance [q.v.]) and *zabūr* (pl. *zubur,* revealed scriptures), which are occasionally interpreted as references to the Torah, although the *zabūr* is most often taken to mean the Psalms (q.v.; see Q 3:184; 16:43-4; 21:7; 26:196; 35:25). In what follows, a composite account will be given of the Qur'ān's treatment of the Torah, using the whole gamut of terms applied in the Qur'ān and its exegesis to the Mosaic law. A substantial portion of the verses relates to the period of Moses and the Children of Israel, while others refer to the Jewish contemporaries of Muḥammad. We shall not discuss textual parallels between the Qur'ān and the Torah (for these, see Speyer, *Erzählungen;* Thyen, *Bibel und Koran*), nor address the questions of Muḥammad's acquaintance with the Bible or the extent of Jewish or Christian influence on him, on which there is a host of scholarly and less scholarly literature. Suffice it to say that Muḥammad's opponents (see OPPOSITION TO MUḤAMMAD) accused him of listening to, or copying from, Jewish and Christian informants (q.v.), which is vigorously denied in the Qur'ān, namely in Q 16:103 and Q 29:48. Although the first verse seems to admit that Muḥammad did have interlocutors from among the People of the Book, their role is reversed in Muslim tradition to

that of recipients of Muḥammad's teachings (see Gilliot, Les 'informateurs').

References to the book of Moses in the Qurʾān

God had given prophethood and scripture to the offspring of Abraham and Noah (q.v.; Q 4:54; 29:27; 57:26, and cf. 3:84; 6:83-90; see PROPHETS AND PROPHETHOOD). One of their descendants, Moses, was chosen to guide the Children of Israel (Q 2:53; 11:110; 17:2; 23:49; 32:23; 40:53-4). God summoned him to the Mount, where a conversation ensued (Q 7:142-3; see THEOPHANY). (This has given rise to the composition of a genre of texts called *Munājāt Mūsā,* the conversations of Moses with God; see Sadan, Some literary problems, 373-4, 395-6.) The meeting lasted forty nights, at the end of which God gave Moses the tablets, on which he had written admonitions and explained all things. This is taken as a reference to the Torah. (It is said that Moses could hear the squeaking of God's pen on the tablets; see *Lisān al-ʿArab,* ix, 192; x, 117.) In Moses' absence, the Children of Israel had made a calf which they worshiped (see CALF OF GOLD). Upon seeing this, he threw down the tablets, but once his anger abated, he took them up again. According to later sources, Moses had read in the tablets the description of an exemplary nation *(umma)*. He asks God to make them his people, but is told that they are the people of Muḥammad. It is at this point that he shatters the tablets (see Rubin, *Between Bible and Qurʾān,* ch. 2). According to al-Suyūṭī (d. 911/1505; *Itqān,* i, 122f.), it is said that the tablets were originally seven in number, but that God kept six of them to himself, returning to Moses only one tablet. What is implied here is that God was saving the larger part of his heavenly book (q.v.) for a future occasion.

The verb used for God's revelation of the Torah is *anzala,* and that for the revelation of the Qurʾān *nazzala* (Q 3:3). The difference between these two forms of the same root, say the commentators, is that the Torah was revealed on a single occasion, whereas the Qurʾān was sent down piecemeal (see OCCASIONS OF REVELATION), and for a good reason: like the Israelites before them, the Muslims would have found it difficult to receive God's commandments all at once; it would be much easier to accept the new dispensation in small doses (Suyūṭī, *Itqān,* i, 121). Unlike the Qurʾān, the Torah was revealed directly by God (Q 4:164), without the mediation of an angel (q.v.). This, says al-Suyūṭī (*Itqān,* i, 122-3), is because the Torah was revealed to a prophet who could read and write (see LITERACY), whereas the Qurʾān was sent down in separate installments to an illiterate prophet (the most commonly accepted interpretation of the word *ummī* [q.v.] with which Muḥammad is described in Q 7:157; see also ILLITERACY). If Moses was grateful for this favor, the Children of Israel were not; they were reluctant to accept God's covenant (q.v.) contained in the Torah, and only accepted it after God held the Mount over their heads and threatened to send it crashing down on them (Q 2:63, 93; 4:154; 7:171; this motif is reminiscent of the Mishna: Sabbath, 80a, Avoda Zara, 2b). Soon, however, they broke their covenant (Q 2:64, 83, 93; 4:155; 5:13, 70), maligning and killing the prophets, uttering different words from the ones they were ordered to speak by God (Q 2:59; 7:162; see FORGERY; REVISION AND ALTERATION), and generally rejecting God's injunctions. The latter included both the duty to fight for God's cause (Q 9:111; see FIGHTING; PATH OR WAY) and the order to refrain from killing (Q 5:32; see MURDER; BLOODSHED). The commentators mention an additional violation of the covenant: the Israelites hid the description of Muḥammad *(naʿt Muḥammad),* which, according to Q 7:157, is

found in their Torah and which they were under obligation to divulge (see also POLEMIC AND POLEMICAL LANGUAGE; INSOLENCE AND OBSTINACY).

The abrogation of the Mosaic law

The disobedience (q.v.) of the Israelites had grave consequences for themselves and their descendants, the Jews. Not only was their punishment in the afterlife assured, but in this life they were burdened with harsh laws (Q 4:160; see REWARD AND PUNISHMENT): much of what had earlier been allowed is now forbidden (q.v.) to them, especially in the realm of dietary law, where Israel (q.v.), i.e. Jacob (q.v.), had already imposed some restrictions on himself which did not originally form part of God's law (e.g. Q 3:93; 6:118-19, 146; see Wheeler, Israel and the Torah; see also LAWFUL AND UNLAWFUL). Jesus came to abrogate a number of these laws (Q 3:50), and further restrictions were later lifted by Muḥammad (Q 5:5; 7:157; see ABROGATION). There is obviously no contradiction between their confirming the earlier law and abrogating it. That the Torah was indeed abrogated and had lost its validity, inasmuch as it did not correspond with the teachings of Islam, was not doubted by any Muslim, although there apparently remained some who believed that certain Mosaic laws applied to them as well (see Adang, Ibn Ḥazm's critique; that God abrogated parts of his revelation or cast them into oblivion, only to replace them with something similar or better, is stated in Q 2:106, which is, however, mostly linked to the abrogation of one qurʾānic verse by another).

Rejection of the confirming scripture

In rejecting their covenant, the Israelites had behaved exactly like all the other nations to which God had sent messengers (see MESSENGER), and Muḥammad would encounter the same reaction during his mission (cf. Q 3:184; 35:25). When he began to preach his message, he was first opposed by the polytheists of Mecca (see POLYTHEISM AND ATHEISM), and later also by the People of the Book, especially the Jews among them. They denied that Muḥammad was receiving revelations (Q 6:92) and demanded that he bring a revelation like the one given to Moses, although they had not been impressed when Moses brought his book, wanting to see God instead (Q 4:153). Despite Muḥammad's overtures and attempts to point out the similarities between their religions (Q 29:46), and the fact that he believed in all the earlier prophets (Q 3:84), their reaction was negative, and there were only a few who believed (Q 3:110, 113; cf. 29:47, which is seen as a reference to the Jewish convert ʿAbdallāh b. Salām and the sympathetic king of Ethiopia; see ABYSSINIA). Yet they should have recognized this message (or perhaps the Prophet himself; see the commentaries to Q 2:144; 6:20) as they recognized their own sons. The People of the Book, more than anyone else, should embrace it. Instead, they fling the book behind their backs (Q 2:101; this is taken to mean either the Torah with its annunciations of Muḥammad, or God's revelations in general; see also Q 3:187 where it is the covenant that is discarded). Despite their overall hostility, Muḥammad is told to consult the People of the Book if he has any doubts about what God revealed to him (Q 10:94, and cf. Q 16:43-4; 21:7). Various commentators explain that it is only the believers among the People of the Book, like ʿAbdallāh b. Salām, who are intended here (see BELIEF AND UNBELIEF).

For all the skepticism with which they regarded Muḥammad, a group of Jews appealed to his judgment (q.v.; Q 5:42-3; cf. also Q 3:23). Post-qurʾānic sources are virtually unanimous about the

circumstances which supposedly gave rise to the revelation of these verses: an adulterous Jewish couple was brought before Muḥammad, who was asked to pass judgment on them. This was a test to see whether he would apply the law of the Torah, which he claimed to confirm. Muḥammad asks the Jews what punishment is prescribed in the Torah (see CHASTISEMENT AND PUNISHMENT; BOUNDARIES AND PRECEPTS), so that he can apply it, following the example of the prophets, the rabbis and the scholars of the Jews (Q 5:44; see SCHOLAR). Taken aback, the Jews cover the passage which prescribes stoning (q.v.), and tell him that adulterers are to be flogged and their faces blackened — which is how they used to deal with the more prominent members of their community (see FLOGGING; ADULTERY AND FORNICATION). Muḥammad is unconvinced, and is proven correct when a convert to Islam points to the relevant passage in the Torah. The Prophet thereupon decides to have the couple stoned, much to the horror of the Jews. Q 5:43 expresses amazement at the fact that the Jews appeal to Muḥammad, when they possess the Torah in which God has given his ruling. And moreover, say the commentators, why should they turn to a prophet whose mission they utterly reject? Q 3:23, too, is cited as proof that the Jews were averse to the contents of the Torah. According to the exegetes, it was revealed after Muḥammad entered the *Bayt al-Midrās* and became embroiled in a discussion about Abraham. He told the Jews to bring the Torah to clinch the issue, but they refused. This story can in turn be connected with Q 3:65, in which the Jews and the Christians are criticized for claiming Abraham as one of their own although he predated the revelation of the Torah and of the Gospel and, therefore, the beginnings of their respective religions. (That the Jews and the Christians clashed with each other, despite the fact that they both read the scripture, is stated in Q 2:113.)

In two verses (Q 5:66, 68) the Jews are told that they will not be rightly guided unless they observe the Torah, and the same is true about the Christians and their scripture. The commentators tell us what they understood by "observing the Torah": accepting its teachings, such as the mission of Muḥammad, and its laws, which include a prohibition of taking interest (Q 4:161; see USURY). But the Jews deliberately ignore the revelation with which they have been entrusted, and do not apply the Torah. They have as much understanding as an ass carrying books (Q 62:5; see METAPHOR).

Tampering with the Torah

The Qurʾān more than once accuses the Israelites, the Jews, and the People of the Book in general, of having deliberately changed the word of God as revealed in the Torah and of passing off as God's revelation something they themselves wrote (Q 2:75-9; 4:46; 5:13). They are charged with confounding the truth (q.v.) with falsehood (Q 2:42; 3:71; see LIE), concealing the truth (e.g. Q 3:187), hiding part of the book (Q 6:91), or twisting their tongues when reciting the book (Q 3:78). In some verses we find a combination of allegations (e.g. Q 2:42; 3:71; 4:46). What may be at the root of these allegations is that the Jews denied that Muḥammad was mentioned in their scripture. Since the Qurʾān does not always explicitly state how, when, and by whom this misrepresentation (known as *taḥrīf*) was effected — some authors ascribe a major role to Ezra (q.v.) — different interpretations of the relevant verses soon arose. According to one, the Jews did not corrupt the text of their scripture, but merely misrepresented its contents. The other view, which developed somewhat

later and seems to be held by the majority of Muslims, asserts that the Israelites and later the Jews changed the written text of the Torah, adding to and deleting from it as they pleased. Its most vocal and influential representative was Ibn Ḥazm of Cordoba (d. 456/1064), but several other polemicists took his cue, among them Jewish converts to Islam such as ʿAbd al-Ḥaqq al-Islāmī (wrote ca. 797/1395) and Samawʾal al-Maghribī (d. 570/1175), who sought to demonstrate the superiority of their adopted faith at the expense of Judaism. According to both interpretations of the tampering-verses, the Israelites and the Jews were motivated by a desire to delete or obscure the scriptural references to Muḥammad, as well as by their aversion to certain God-given commandments, such as stoning adulterers, as was seen. The allegation of textual corruption continues to be aired even in modern times. It has been used to delegitimize Jewish claims to Palestine, by stating that in the unadulterated Torah the land was promised not to the descendents of Isaac (q.v.), i.e. the Jews, but to those of Ishmael (q.v.), i.e. the Arabs (q.v.); the former just substituted the names (see Haddad, *Arab perspectives,* 89-122).

Ambivalent attitudes

Since the Qurʾān calls the Torah a divine scripture, Muslims must treat it with the respect due any one of God's books (Q 2:177, 285; 4:136) even if they have their doubts about the authenticity, and hence the sanctity, of the Torah which the Jews possess. The ambivalent attitude towards the Torah is well illustrated in a number of texts from the Muslim west. A *fatwā* from fourth/tenth century Qayrawān deals with the question of if and how to punish a Muslim slave who, in a fit of anger, reviled the Torah, if it can be proven that he only targeted the forged Jewish Torah and not the original divine scripture, in which case his offense did not constitute blasphemy (q.v.; al-Wansharīsī, *Miʿyār,* ii, 362-3, 525-6; see Adang, Tunisian mufti). In sixth/twelfth century Cordoba Ibn Rushd "the elder" (d. 520/1126) forbade Muslims to sell books supposedly containing the Torah or the Gospel, since there was no way to establish whether these were the true, uncorrupted scriptures, and it is unlawful to make a profit from such dubious transactions. But in any case, he adds, even the genuine scriptures have been abrogated, so that dealing in them is out of the question (Ibn Rushd al-Jadd, *al-Bayān,* xviii, 559-60). In Naṣrid Granada a *fatwā* was issued to the effect that despite doubts about the Torah's authenticity, Jewish litigants who appear before the Muslim *qāḍī* and are required to take an oath, should solemnly swear by their book, and preferably in the synagogue, for the fact that they hold the Torah to be true and sacred considerably reduces the risk of perjury (al-Wansharīsī, *Miʿyār,* x, 309 f.; Adang, Swearing).

Tracing Muḥammad in the Torah

Muslims who believed that the Jews possessed the original Torah, and merely interpreted it incorrectly assumed, naturally, that the references to Muḥammad of which Q 7:157 speaks could be found in the book (see Rubin, *Eye,* ch. 1, on early attempts to trace Muḥammad). Paradoxically, however, even commentators who regarded the Torah as a corrupted book that was not to be relied upon tapped it for references to Muḥammad, his nation and his religion (see McAuliffe, Qurʾānic context). That such references could still be found in an otherwise corrupted book was sometimes explained with the claim that God had preserved these specific passages from distortion. Muslim writers did not usually attempt to trace these passages in the Jewish scriptures themselves. First of all, they did not need to: lists of testimonies

had been available at least since the late second/eighth century, when a number of them were included in an epistle sent on behalf of the caliph Hārūn al-Rashīd (r. 170-93/786-809) to the Byzantine emperor Constantine VI. They are clearly of Christian origin, being mostly Messianic passages made available to Muslim scholars by converts to Islam. Even Ibn Qutayba (d. 276/889), one of the few scholars to demonstrate some familiarity with the Torah, and especially the book of Genesis, apparently relied on a list of testimonies for his "Proofs of Prophethood" (*dalā'il al-nubuwwa;* translated in Adang, *Muslim writers,* 267-77), which was used, among others, by Ibn Ḥazm and Ibn Qayyim al-Jawziyya (d. 751/1350). The testimonies cited most often by Muslim authors are Gen. 17:29; Deut. 18:18f.; Deut. 33:2f. and Isa. 21:6-10, the latter belonging to the Torah in its wider sense. These and other passages became a standard ingredient in tracts about the proofs of Muḥammad's prophethood (*dalā'il* — or *a'lām — al-nubuwwa;* see Stroumsa, The signs of prophecy). Secondly, apart from Jewish and Christian converts to Islam, few Muslims knew Hebrew, Syriac or Greek, and translations of the Torah and further parts of the Bible into Arabic were not readily available before the mid-ninth century: the claims of Aḥmad b. ʿAbdallāh b. Salām (active around the end of the second/eighth century) to have produced a full translation of the Torah, faithful to both the source and the target language is not altogether credible (Ibn al-Nadīm, *Fihrist,* 24; Adang, *Muslim writers,* 19-20), while the translations produced in the eighth and ninth centuries C.E. in some isolated monasteries in Palestine probably did not reach the Muslim public. The earliest Arabic translations accessible to Muslim readers seem to have been those by Ḥunayn b. Isḥāq (d. 260/873), which is referred to by al-Masʿūdī (d. 345/956; *Tanbīh,* 112-13) as the one considered most accurate, and al-Ḥārith b. Sinān, who seems to have been active in the latter part of the third/ninth and the first half of the fourth/tenth century. Both were translated not from the Hebrew, but from the Greek, first into Syriac and subsequently into Arabic. Further translations, based on the Hebrew, had been made by a number of Jewish scholars, Rabbanite and Karaite alike. The most influential one was that by Saʿadya Gaon (d. 942 C.E.). These translations, however, were clearly for internal consumption: since most Jewish scholars used the Hebrew script even for their Arabic writings, they would not have been easily accessible to the Muslims.

Pseudo-biblical quotations

Contrary to what might have been expected, the increased accessibility of the Torah did not lead to an increase in reliable quotations. In the case of the *kalām* theologians this is understandable: they preferred rational to scriptural arguments. But apart from some authors of works of an encyclopedic or comparative character, such as Ibn Qutayba, al-Masʿūdī (d. 345/956), al-Maqdisī (wrote ca. 355/966), and al-Bīrūnī (d. ca. 442/1050), and writers moved by polemical considerations, like Ibn Ḥazm, hardly anyone used the Torah (as distinguished from islamized versions of biblical accounts) as a source. This may be explained from the fact that many religious scholars were strongly opposed to consulting this book which was abrogated at best, and possibly corrupted as well. They were equally disapproving of seeking information from Jews about their beliefs, although the transmission of biblical narratives (q.v.) whose protagonists had become islamized, was permitted (see Vajda, Juifs et musulmans; Kister, Ḥaddithū). Spurious quota-

tions from the Torah, intended to lend authority to certain views, proliferated, which shows that the theory of the scripture's corruption was not generally accepted. Because the Torah remained a closed book to most Muslims, it was possible to ascribe sayings to it whose connection with the actual scripture was tenuous at best. As is only to be expected, the popular genres of *Qiṣaṣ al-anbiyāʾ* and *Isrāʾīliyyāt,* which deal with the lives of the prophets and the Israelites, abound in pseudo- or semi-scriptural passages. They can be found, however, in smaller or larger quantities, in almost all genres of Muslim writing, ranging from ḥadīth (see ḤADĪTH AND THE QURʾĀN) and *tafsīr,* to historiography, geography, lexicography, and biography. A good example is *Ḥilyat al-awliyāʾ,* a biographical dictionary of pious and ascetic Muslims, which contains many statements ascribed to the elusive Kaʿb al-Aḥbār, Wahb b. Munabbih, Mālik b. Dinār and other putative specialists in the sacred books, on the pattern "it is written in the Torah" *(maktūb fī l-Tawrāt),* or "I have read in the Torah" *(qaraʾtu fī l-Tawrāt),* usually followed by some moral or ethical principle, or saying in praise of ascetical attitudes and practices (see ASCETICISM).

Apart from more or less universal ethical principles (see ETHICS AND THE QURʾĀN), which can be said to correspond at least to the spirit of the Jewish scriptures, less obvious things were traced to the Torah as well; the Greek theory of the four humors, for example, and the description of the second caliph, ʿUmar ("a horn of iron"; perhaps inspired by Dan. 7; see Abū Nuʿaym al-Iṣfahānī, *Ḥilyat al-awliyāʾ,* vi, 25), whose murder, too, was foretold in the Torah (al-Mālaqī, *Maqtal ʿUthmān,* i, 36). And Ḥaydara, one of the names of ʿAlī b. Abī Ṭālib (q.v.), could be encountered there (Khalīl b. Aḥmad, *Kitāb al-ʿAyn,* iii, 156). The Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz (r. 99-101/717-20) was allegedly described in the Torah as a righteous man, whose death was bewailed by the heavens for forty days (Abū Nuʿaym al-Iṣfahānī, *Ḥilyat al-awliyāʾ,* v, 339, 342); and not only Mecca, but also the city of Rayy is mentioned in the book of Moses in positive terms (Yāqūt, *Buldān,* iii, 118; iv, 225). At some point, however, someone must have decided that this was going too far: in an equally fictitious account, the (unnamed) Jewish exilarch told his Muslim interlocutors that what Kaʿb was telling them was a pack of lies, and that actually the Torah was very similar to their own scripture (Ibn Ḥajar, *Iṣāba,* v, 651).

Similar, yet different

The notion that there is a large degree of correspondence between the Qurʾān and the Torah is implicit in the qurʾānic statements that it confirms the earlier scriptures, that it constitutes a revelation like the Torah and the Gospel, and that it is contained in the earlier scriptures (Q 3:3; 26:196; 29:47). The exegetes state that certain passages from the Qurʾān correspond verbatim with the Torah. As proof they cite two passages which are assumed to occur also in the Torah, namely Q 5:45, which mentions the law of talion (see RETALIATION), and Q 48:29, which states that the believers are described in the Torah as having a mark on their foreheads as a result of their frequent prostration (see BOWING AND PROSTRATION).

ʿAbdallāh b. ʿAmr b. al-ʿĀṣ (whose father, incidentally, is said to have received permission from the Prophet, or from ʿUmar, to read the true Torah) said that Muḥammad is described in the Torah in the same way that he is described in the Qurʾān: as a witness (see WITNESSING AND TESTIFYING) and a bearer of good tidings (see GOOD NEWS) and a warner (q.v.; see Q 17:105; 25:56; 33:45; 48:8); he is not harsh nor

rough nor does he cry in the streets. And Kaʿb al-Aḥbār attributed the following saying to the Torah: "Oh Muḥammad, I am revealing to you a new Torah, which will open blind eyes (q.v.), deaf ears (q.v.) and uncircumcised hearts" (Suyūṭī, *Itqān,* i, 115; see VISION AND BLINDNESS; HEARING AND DEAFNESS; HEART; CIRCUMCISION). These passages are reminiscent of Isaiah 42:2 and 35:5. The same man is credited with the information that the opening verse of the Torah corresponds with Q 6:1 ("Praise be to God, who has created the heavens and the earth, and has appointed darkness [q.v.] and light. Yet those who disbelieve ascribe rivals to their lord"), and that it ends with Q 17:111: "Praise be to God who has not taken a son […] and magnify him with all magnificence." The saying that the final verse of the Torah is identical to the second half of the last verse of Q 11, Sūrat Hūd ("so worship him and put your trust in him. Your lord is not unaware of what you do," Q 11:123; see KNOWLEDGE AND LEARNING; HIDDEN AND THE HIDDEN), however, is also ascribed to Kaʿb, as is the statement that the first verses to be revealed in the Torah were ten verses from Q 6 (Sūrat al-Aʿnām, "Cattle"), starting with Q 6:151: "Say: Come, I will recite to you that which God has made a sacred duty for you" (*mā ḥarrama rabbukum ʿalaykum;* see SACRED AND PROFANE; LAW AND THE QURʾĀN). These verses bear a striking resemblance to the ten commandments (see Brinner, An Islamic Decalogue). Q 62:1 ("All that is in the heavens and all that is in the earth [q.v.] glorifies God, and he is the mighty, the wise"; see HEAVEN AND SKY; GLORIFICATION OF GOD) is said to appear 700 times in the Torah, and al-Raḥmān, the name by which God made himself known to Moses, is said to be found throughout the Torah (Suyūṭī, *Itqān,* i, 116), which contains an additional 999 names for God (Ibn Kathīr, *Tafsīr,* i, 20). It is said that while the contents of the two scriptures are essentially the same, their chapters bear different titles. Thus Q 50, Sūrat Qāf, is entitled in the Torah *al-Mubayyiḍa,* since it will whiten the face of he who believes in it on the day when faces will be blackened; Q 36, Sūrat Yā Sīn, appears in the Torah under the name *al-Muʿamma,* for it encompasses the good things of this life and of the afterlife. Many more examples of this kind could be cited. But not only isolated passages were attributed to the Torah: longer texts purporting to contain the true Torah were compiled, as were islamized Psalters. The texts in question appear to be ethical treatises which resemble the Qurʾān rather more than the Torah (see Sadan, Some literary problems; Jeffery, A Moslem Torah).

While the Torah, then, is believed to be very similar to the Qurʾān, the two scriptures are also said to differ on important points. Although it was important to emphasize that the Qurʾān stood at the end of a long line of venerated scriptures, which strengthened its authority, it was equally important to stress its unique nature and superiority (see Shnizer, *The Qurʾān*). It is said, for example, that Q 1, Sūrat al-Fātiḥa ("The Opening"; see FĀTIḤA), is unique to the Qurʾān, and unparalleled, and that neither in the Torah nor in the Gospel did God reveal anything like it. But the main difference was that unlike the Torah, the Qurʾān constituted an inimitable miracle and was matchless in style, composition and content (see INIMITABILITY; LANGUAGE AND STYLE OF THE QURʾĀN).

Translatable, therefore inferior

Many Muslim apologists and polemicists were aware that different versions of the Torah had existed even prior to its translation into Arabic, namely that of the Jews, the Samaritan Pentateuch and the Greek Septuagint. While some, like Ibn Ḥazm,

pointed to the discrepancies between these versions as proof of the scripture's corrupted state, others, like Ibn Qutayba and al-Bāqillānī (d. 403/1013), argued — without playing the distortion card — that the existence of translations of the Torah was one of the clearest proofs of its inferiority to the Qurʾān which, because of its inimitable character, remained untranslated and untranslatable. For the Karaite al-Qirqisānī (fl. tenth cent. C.E.) the very fact that the Qurʾān only existed in one language weakened not the Jewish case, but the Muslim one, for, he said, only those fluent in Arabic could possibly appreciate the miraculous nature of the Qurʾān (Ben-Shammai, The attitude).

Further proof of the Qurʾān's superiority in the eyes of the Muslims is that it had been revealed in the presence of the entire nation, unlike the Torah, which had been given to Moses in the presence of a selected few only, and was not transmitted to the entire community, nor was it transmitted in uninterrupted succession from one generation to the other *(tawātur)*. Although hardliners like Ibn Ḥazm took the view that the Israelites and Jews had deliberately suspended the transmission of their (essentially unwanted) scripture, others, like the astronomer al-Bīrūnī, took a more charitable view: the Jews could not possibly have transmitted their Torah from generation to generation, because of the adversities they suffered, like expulsion and captivity.

Jewish reactions to attempts at discrediting the Torah

The Jews took up the defense of their scripture in polemical and apologetical tracts that were usually for internal consumption. In Iraq Saʿadya Gaon and his Karaite contemporary Yaʿqūb al-Qirqisānī, among others, tried to demonstrate, with rational and scriptural arguments, that the Torah had not been and would not be abrogated. They do not address the allegation of scriptural corruption, which was not usually raised by the Muslim *mutakallimūn* either; Muʿtazilī (see MUʿTAZILĪS) and Ashʿarī theologians attempted to refute the Jewish argument for the eternal validity of their scripture by rational means (see Sklare, Responses). Rabbanite and Karaite commentators did not deny that Islam was referred to in the Hebrew Bible: it was the last of the four kingdoms that subjugated Israel, according to the book of Daniel. Redemption will come when this kingdom ends. This should in no way, however, be taken as an endorsement of Muslim claims that Muḥammad is a true prophet. If anything, it was the falsity of his claims that could be demonstrated on the basis of the biblical text.

In later centuries it was formidable Jewish scholars like Jehudah ha-Levi (d. 1141 C.E.), Abraham b. Daud (d. 1181 C.E.), Moses Maimonides (d. 1204 C.E.), and Solomon Ibn Adret (d. 1310 C.E.), interestingly enough all Spaniards, who defended Judaism and its Torah against the attacks of the Muslim scholars. The influence of the arguments of their fellow-countryman, Ibn Ḥazm, can easily be discerned in their works.

Trade and Commerce

Economic activity focused on the exchange of goods among people. The language of the Qurʾān is imbued with the vocabulary of the marketplace both in practical, day-to-day references and in metaphorical applications (see METAPHOR; LITERARY STRUCTURES OF THE QURʾĀN). The way in which commercial activities are to be conducted among people is dealt with as a moral issue and a matter of social regulation (see ETHICS AND THE QURʾĀN). For example, rules governing contracts and trusts, and general economic principles find their place in the text and have been used within the *sharīʿa* to formulate the legal structures of society (see LAW AND THE QURʾĀN). Those aspects of this topic have been treated under many entries in this encyclopedia: see BREAKING TRUSTS AND CONTRACTS; CONTRACTS AND ALLIANCES; DEBT; ECONOMICS; MARKETS; MEASUREMENT; PROPERTY; SELLING AND BUYING; USURY; WEIGHTS AND MEASURES. Of particular interest in this entry are the terms which have sometimes been classified as constituting the commercial-theological terminology and which consist of a series of words linked to trade and commerce that are employed in order to provide a moral basis for the structures of society. Modern scholarship has understood this language as pivotal for reconstructing the nature of pre-Islamic society, the rise of Islam and Muḥammad's place in his community (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). The classic analysis by C.C. Torrey in his 1892 dissertation has set the basic dimensions of understanding the semantic field related to trade and commerce in the Qurʾān through an intuitive summary of relevant vocabulary; later works which provide a

general treatment of metaphor have added some level of greater systematization to the definition (see Sabbagh, *Métaphore,* 212-16, and his classification of "Les termes se rapportant au commerce" under "Vie sédentaire," a sub-category of "La vie sociale"; and Sister, Metaphern, 141-2, "Das gesellschaftliche Leben" under "Der Mensch und sein Leben") but the basic scope of the concept has remained fairly stable.

Torrey spoke of the general "business atmosphere" of the Qurʾān and he saw the vocabulary which relates to this context falling into five main categories:

(1) Marketplace terminology: *ḥisāb,* "reckoning," used thirty-nine times plus many related verbal uses; *aḥṣā,* "to number or count," used ten times (see NUMBERS AND ENUMERATION); *wazana,* "to weigh," used seven times plus *mīzān,* "a balance," used sixteen times; *mithqāl,* "a weight," used eight times plus related verbal and adjectival instances.
(2) Employment terminology: *jazāʾ,* "recompense," used forty-two times plus many related verbal uses (see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT); *thawāb* and *mathūba,* "reward," used fifteen times plus related verbal usages; *ajr* (plural *ujūr*), "wage," used 107 times; *waffā,* "to pay what is due," used nineteen times usually with "wages"; *kasaba,* "to earn," used sixty-two times (see INTERCESSION).
(3) Negative trading terminology: *khasira,* "to lose," used sixty-five times in various verbal and nominal forms; *bakhasa,* "to defraud," used seven times in various forms; *ẓalama,* "to wrong," used frequently and has become, as *ẓālimūn,* a general ethical term for "wrongdoers"; *alata,* "to defraud, used once; *naqaṣa,* "to diminish," used ten times in various forms.
(4) Positive trading terminology: *sharā* and *ishtarā,* "to sell," used twenty-five times; *bāʿa,* "to sell, to bargain," used fifteen times in various forms; *tijāra,* "merchandise," used nine times; *thaman,* "price," used eleven times; *rabiḥa,* "to profit," used once.
(5) Finance: *qaraḍa,* "to provide a loan," used thirteen times in various forms; *aslafa,* "paid in advance," used twice; *rahīn* and *rihān,* "pledge," used three times.

The terminology is thus wide-ranging and the contexts in which it is employed are diverse, demonstrating the extent to which this range of language permeates the text. Three contexts may be isolated for the occurrence of the terms, in common with the overall themes of the Qurʾān but also illustrating the full range of the employment of the vocabulary: in recounting the stories of the prophets of the past (see NARRATIVES; GENERATIONS; PROPHETS AND PROPHETHOOD), in legislating the Muslim community and in describing the eschatological period (see ESCHATOLOGY). Many examples could be cited; the following is just a sampling.

Of the seven uses of "defraud," as derived from *bakhasa,* the first clearly deals with contemporary legal practice since the overall context relates to commercial transactions and the keeping of records. Q 2:282 contains the statement, "Let him fear (q.v.) God, his lord (q.v.), and not diminish [the debt] at all," when speaking of the scribe who will record the transaction (see WRITING AND WRITING MATERIALS; ORALITY AND WRITING IN ARABIA) where the verb *lā yabkhas* (translated here as "let him not diminish") takes on the sense of "he shall not defraud" (see CHEATING). In Q 7:85, the context is that of Midian (q.v.) and its prophet, Shuʿayb (q.v.), who is commanded to tell his people, "Do not undervalue (people's goods)," *lā tabkhas,* that is, "do not defraud them of its value." Q 11:85 puts the same phrase in Shuʿayb's mouth again as does Q 26:183 in which Shuʿayb

addresses the "People of the Thicket" (q.v.). In Q 12:20, Joseph (q.v.) is sold by his brothers (see BROTHER AND BROTHERHOOD) for "a price which was fraudulent" *(bakhs)* because his brothers did not value him. In Q 11:15-16, the context is that of speaking of the reward and punishment in the voice of God: "If any [people] desire the life of this world with all its finery, we shall repay them in full in [this life] for their deeds — they will not be defrauded *(lā yubkhasūna)* — but such people will have nothing in the hereafter but the fire (q.v.)." Finally in Q 72:13, the jinn (q.v.) speak of the final reckoning being such that "whoever believes in his lord (see BELIEF AND UNBELIEF) need fear no fraud *(bakhs)* or injustice (see JUSTICE AND INJUSTICE)." The terminology thus spreads over the focal points of salvation (q.v.) history, past, present and future (see also HISTORY AND THE QUR'ĀN).

The same observations can be made concerning the image of the "balance," *mīzān*. The statement in the Qur'ān, "Fill up the measure and the balance with justice," recurs as a regular motif with the end result that God is pictured as governing creation (q.v.) in the same way that humans should, if they are moral beings, run their own affairs: that is, with a full sense of justice. Q 11:84-5 has Shu'ayb preach, "O my people, serve God! You have no god other than him. Diminish not *(lā tanquṣū)* the measure *(al-mikyāl)* nor the balance *(al-mīzān)* [in weight]. I see you are prospering but I fear for you suffering on an encompassing day. O my people, fill up the weight *(al-mikyāl)* and the balance *(al-mīzān)* justly. Do not defraud the people of their things, and do not sow corruption (q.v.) in the land." The word *mīzān* also finds its place in passages of a legal nature addressed to the contemporary believing audience. In Q 6:152, Muḥammad is commanded to enunciate a rule for his followers using the same words as those used by Shu'ayb, "Fill up the measure and the balance with justice." Overall, however, the use of the word *mīzān* predominates as an image in eschatological passages which thereby invoke the references in the past (the time of the ancient prophets) and in the present (the present community of Muḥammad). Q 21:47 says, "We shall set up the scales *(al-mawāzīn)* of justice for the resurrection (q.v.) day, so that not one soul (q.v.) shall be wronged anything." Other passages which use the idea of a balance on the judgment day include Q 7:7-8, 23:102-3, 101:6-9, among others. It may also be noted that *wazana,* "to weigh," is used verbally in all three contexts as well.

The concept of *ajr* (plural *ujūr*), "wage(s)," is also widespread in the Qur'ān. In Q 11:51, Hūd (q.v.) says, "O my people, I do not ask of you a wage *(ajr)* for this; my wage *(ajr)* falls only upon him who originated me; will you not understand?" This is also found in the sequence of prophet stories in Q 26:105-91 where the same phrase occurs five times with Noah (q.v.), Hūd, Ṣāliḥ (q.v.), Lot (q.v.), and Shu'ayb in sequence. In terms of passages relating to regulations of the Muslim community, Q 4:24-5, 5:5, 33:50 and 60:10 all use "wages," *ujūr,* in reference to marriage in the sense of "dower," *mahr,* and also general subsistence (see MARRIAGE AND DIVORCE; BRIDEWEALTH; MAINTENANCE AND UPKEEP; SUSTENANCE). The eschatological uses of "wage" abound: "Their wage *(ajr)* awaits them with their lord" and variations on that phrase occur five times in sūra 2 alone (Q 2:62, 112, 262, 274, 277).

In the study of these words, many scholars have tended to emphasize, according to the principles of the historic-philological approach, how the language of the qur'ānic text must reflect the social situation at the time of Muḥammad (see LANGUAGE AND STYLE OF THE QUR'ĀN;

FORM AND STRUCTURE OF THE QUR'ĀN; RHETORIC AND THE QUR'ĀN). Thus, the language is understood as being extended to the prophets of the past whose lives are retold in a manner which reflects the life circumstances of Muḥammad, even to the level of the vocabulary used to express common ideas and motifs (see ARABIC LANGUAGE; FOREIGN VOCABULARY). That understanding is also extended to eschatology, reasoning that language would have been used in a way in which the people in Muḥammad's time would best understand the concepts of the hereafter and judgment day (see LAST JUDGMENT). Torrey's work set the tone for much subsequent work when he declared, "Mohammed's idea of God, as shown us in the Koran, is in its main features a somewhat magnified picture of a Mekkan merchant. It could hardly have been otherwise" (*Commercial-theological,* 15). Torrey suggested that these words form a cluster of terms derived from actual commercial applications which have taken on theological overtones in the Qur'ān (see THEOLOGY AND THE QUR'ĀN). The full implications of the ideas underlying his work were developed later in works by H. Lammens, M. Rodinson and W.M. Watt, among many others, in their treatments of Muḥammad and the notion that economics and social revolutions are crucial to the rise of Islam. The evidence for those theories is, at least partially, to be found in the language of the Qur'ān and its commercial emphasis. For example, Watt's reading of the Qur'ān allows him to perceive a society in the throes of the impact of individualistic capitalism being challenged by a prophet of social justice. In Watt's seminal *Muhammad at Mecca* and *Muhammad at Medina* the theme is clear; Watt states, for example,

> The Qur'ān has ample evidence of the importance of voluntary "contributions" in the plans for the young community at Medina. Men are commanded to believe in God and his messenger and contribute of their wealth. Their contributions are a loan they lend to God; he knows more than they do; he will replay them the double and more (*Medina,* 252).

Watt clearly pictures the social environment and its regulations being reflected in the language which is used to talk about God, the essence of the notion of the "commercial-theological" terminology.

The critique of such a reading of the qur'ānic text has been raised primarily in the context of implications that underlie the debates about the pervasiveness and depth of commercial activity in pre-Islamic Arabia. P. Crone points out that there are only vague details for the model of a society in the throes of economic transformation within the Arab historical texts. Arguing that the view provided in the classical Greek texts of a flourishing trade throughout Arabia speaks of a situation some 600 years prior to the rise of Islam, Crone suggests that the later Muslim writers have been read rather imaginatively in light of the information provided about this earlier period. When the texts are read for what they say rather than for what is assumed, she says,

> such information as we have leaves no doubt that [the Meccans'] imports were the necessities and petty luxuries that the inhabitants of Arabia have always had to procure from the fringes of the Fertile Crescent and elsewhere, not the luxury goods with which Lammens would have them equip themselves abroad (*Meccan trade,* 150-1).

It is noteworthy that the body of early Arab poetry (see POETRY AND POETS), whether genuinely pre-Islamic or not, does

not provide testimony to this commercial environment. As Peters comments (Quest, 292), the poetry "testifies to a quite different culture." The Meccans traded, certainly, but mainly within the confines of their own area and in response to their basic needs and not for "the commercial appetites of the surrounding empires" (Crone, *Meccan trade,* 151).

It is not clear, however, where such critiques leave our understanding of the qurʾānic vocabulary. The difficulties with the common interpretation have certainly been noted by writers such as K. Cragg, although the matter of how to resolve the issue has not been pursued. As Cragg notes,

strangely, the word *tājir* (merchant) does not figure in the Qurʾān, and *tijāra* (merchandise) only on nine occasions, [yet] commerce is the central theme in the life it mirrors and in the vocabulary by which it speaks (*Event,* 98).

Further, the question must arise, when the issue is considered within the context of the entire debate concerning the nature of pre-Islamic trade, of whether we can read references to the goods of trade such as dates (see DATE PALM), gold (q.v.) and silver (see METALS AND MINERALS) which are mentioned in the Qurʾān as allowing us to infer historical evidence of the context of the time and place of Muḥammad (cf. Heck, Arabia without spices; see also MONEY; NUMISMATICS).

One answer might be found through a new investigation of the vocabulary in light of biblical and general near eastern religious metaphors (see RELIGIOUS PLURALISM AND THE QURʾĀN). One aspect of Torrey's argument regarding the reading of this vocabulary that justified his tying of these particular terms to the historical environment of Muḥammad is his assertion that "the mathematical accounting on the judgment day is alien to Judaism and Christianity" (*Commercial-theological,* 14; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). This statement may well have reflected the state of research at the turn of the twentieth century but such a position can no longer be maintained. Torrey himself notes (*Commercial-theological,* 17 n. 3) that he had been informed that the image of a balance being used at the final judgment was to be found in Egyptian religion. That, it is now well known, only scratches the surface of the extent to which it may be claimed that the Qurʾān shares in a near eastern mythic universe of judgment day symbolism (see SYMBOLIC IMAGERY). The eschatological vision is that of justice and the images used for that are ones which are common in near eastern religious language. God's justice on judgment day is the grounding image: all prophets, past and present, have urged that this must be reflected in human society (see also RELIGION; JUDGMENT). Ultimately, eschatological imagery may be seen to drive mundane symbolism and not vice-versa (Rippin, Commerce of eschatology). In that sense, the symbolism here is not necessarily a reflection of the state of affairs at the time of revelation (see REVELATION AND INSPIRATION). Rather, it expresses the aspirations of humans to achieve the moral standards of the eschaton, just as those standards are believed to have been enacted in the mythic past (as demonstrated by the earlier prophets; see MYTHS AND LEGENDS IN THE QURʾĀN) and just as implementation of those standards is urged in the present by the current prophet. The eschaton functions to assert the ultimate justice of the world while being the moral goal for human existence.

Tradition and Custom

The way things have been done, or are understood as having been done, in the past. In many societies the appeal to tradition and custom as the basis for current practice serves to legitimize the present. For a religion emerging in opposition to some of the beliefs and practices of its society, however, appeal to tradition or custom by its opponents is an obstacle to be overcome. At the same time, adherents of the new order may well attempt to justify it by reference to the past.

In Islam the positive value of tradition is most obviously manifest in the concept of *sunna* (q.v.), the accepted practice. The *sunna* of the Prophet is a model that all believers should strive to emulate and, according to the classical Sunnī theory of law, it is the most important source of the law alongside the Qurʾān (see LAW AND THE QURʾĀN). Innovations (*bidʿa, ḥawādith;* see INNOVATION) on the other hand, are commonly regarded as reprehensible. Naturally, the attitude towards custom and tradition may vary according to circumstances. A category of commendable innovation *(bidʿa ḥasana)* is recognized and what by many has been understood as the positive value of adherence to a tradition *(taqlīd)* may, in the hands of a religious reformer like Ibn Taymiyya (d. 728/1328), be reassessed as mere servile and blind imitation.

The Qurʾān reflects these tensions regarding tradition and custom. The prophet Muḥammad denies that he is anything new *(bidʿ)* among the messengers (Q 46:9; see MESSENGER) and references to preceding prophets (see PROPHETS AND PROPHETHOOD) and messengers emphasize their following in the footsteps *(āthār)* of their predecessors (e.g. Q 5:46; 57:27). One of the complaints made against the Christians, who are accorded some merits (see CHRISTIANS AND CHRISTIANITY), is that they had "invented" *(ibtadaʿū)* monasticism (Q 57:27; see MONASTICISM AND MONKS).

What is "known" or "recognized" *(maʿrūf)* is good or honorable in contrast to what is reprehensible (*munkar,* Q 3:104, etc.; see VIRTUES AND VICES, COMMANDING AND FORBIDDING; LAWFUL AND UNLAWFUL). Although some commentators gloss *maʿrūf* as "known or recognized by reason or revelation" (see INTELLECT; REVELATION AND INSPIRATION), the related word *ʿurf* in Q 7:199 (where it is contrasted with "ignorance" [q.v.; *jahl*] and understood to mean simply "goodness" or "kindness") is in Islamic law one of the most common words for traditional practice or custom, which has a limited role as a legal principle.

On the other hand, following the footsteps *(āthār)* of predecessors and ancestors is reprehensible if that means following the wrong path (see PATH OR WAY; ASTRAY; ERROR). In its arguments against those who refuse to accept its message, the Qurʾān frequently presents them as appealing to the tradition of their fathers in justification of their refusal to accept the truth (q.v.).

Those opponents (see OPPOSITION TO MUḤAMMAD), like the opponents of previous prophets, are portrayed as using the justification that their fathers' beliefs and practices were good enough for them and there is no reason why they should go against their customs. "We found our fathers attached to a religious community and we are guided by their footsteps *(wa-innā wajadnā abāʾanā ʿalā ummatin wa-innā ʿalā āthārihim muhtadūna/muqtadūna),*" as they are reported as saying in Q 43:22 and 23. This sentiment, repeated sometimes with relatively minor variations of wording and usually involving reference to the "fathers," recurs frequently throughout the Qurʾān, in the mouths of the opponents of its prophet and of earlier ones like Moses (q.v.; e.g. Q 2:170; 5:104; 6:148; 7:28; 10:78; 21:53; 26:74; 31:21). In a slightly different manner, reference is made to this assertion in the account of the primordial covenant (q.v.) that God made with humans prior to their earthly lives. Q 7:172-3 affirms that the conclusion of the covenant by all mankind should rid the nonbelievers from claiming on the day of judgment (see LAST JUDGMENT) that it was only their "fathers" who ascribed partners to God and that they were their "seed" after them (see PARENTS; POLYTHEISM AND ATHEISM): "So will you destroy us on account of that which the falsifiers did (see LIE)?"

The social setting is presumably one in which a high value is placed on loyalty (q.v.) to one's ancestors. Q 2:200 urges people to "remember God as you remember your fathers" (see REMEMBRANCE). In such a society loyalty to the family tradition would be a major hindrance to proselytism. Q 9:23 commands the believers not to take their fathers or brothers as friends *(awliyāʾ)* if they take pleasure in disbelief (see BELIEF AND UNBELIEF; FRIENDS AND FRIENDSHIP; CLIENTS AND CLIENTAGE), and the account of Abraham's (q.v.) break with his father and his father's religion would presumably be especially resonant (see IDOLATRY AND IDOLATERS).

In the Qurʾān, *sunna* never has the sense of the exemplary custom of the Prophet. When scholars sought a qurʾānic support for that notion they commonly found it in the phrase "the book (q.v.) and the wisdom" (q.v.; *al-kitāb wa-l-ḥikma;* e.g. Q 2:231; 4:113; cf. 33:34; see also SIGNS; VERSES), which they interpreted as indicating the Qurʾān and the sunna of the Prophet (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). In the Qurʾān *sunna* nearly always refers to God's exemplary and customary punishment of earlier nations to whom he had sent his messengers only for them to be rejected (see PUNISHMENT STORIES). The believers are exhorted, when they travel in the land (see JOURNEY; GEOGRAPHY), to take note of the sunna of those earlier peoples *(sunnatu l-awwalīn, sunanu lladhīna min qablikum)* or of the sunna of God regarding them *(sunnatu llāhi fī lladhīna khalaw)*. God's sunna in this respect is not subject to change or variation *(tabdīl, taḥwīl;* Q 33:62; 35:43; 48:23). In such passages *sunna* usually appears in collocation with either God or the earlier generations (q.v.; *al-awwalīn* or *alladhīna min qablikum*).

Another word signifying "custom" or "habit" is *daʾb*. In the Qurʾān this occurs three times in the expression "as was the *daʾb* of the people of Pharaoh (q.v.) and those [who were] before them" *(ka-daʾbi āli firʿawna wa-lladhīna min qablihim,* Q 3:11; 8:52, 54) and once (Q 40:31) in a similar expression: "like the *daʾb* of the people of Noah (q.v.) and ʿĀd (q.v.) and Thamūd (q.v.) and those [who came] after them" *(mithla daʾbi qawmi nūḥin wa-ʿādin wa-thamūda wa-lladhīna min baʿdihim)*. In each case it is not easy to see what force *daʾb* adds to the preceding preposition "like" *(ka-, mithla)* but on each occasion the passage refers to the divine punishment (see CHASTISEMENT

AND PUNISHMENT) that befell the peoples mentioned (those of Pharaoh, Noah, ʿĀd, Thamūd and others) and it is likely that *daʾb* is the equivalent of *sunna* in the passages mentioned above. Commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) sometimes gloss *daʾb* by the relatively neutral word "deeds" *(ṣanīʿ, fiʿl)* but one also finds it understood as equivalent to *sunna*. Its other occurrence (Q 12:47) is in the adverbial form *daʾban* and clearly means "as usual" or "as is customary."

Commentators frequently explain parts of the Qurʾān as referring to the traditions and customs of the pre-Islamic Arabs (q.v.; see also PRE-ISLAMIC ARABIA AND THE QURʾĀN). Sometimes, as with infanticide (q.v.; e.g. Q 6:137, 140, 151; 16:57-9; 81:8-9) or "entering houses from their backs" (Q 2:189; see HOUSE, DOMESTIC AND DIVINE), the alleged tradition of the *jāhilī* Arabs is rejected (see AGE OF IGNORANCE). Sometimes, as with the circumambulation of Ṣafā and Marwa (q.v.; Q 2:158) or engaging in commerce while making the pilgrimage (q.v.; *ḥajj,* Q 2:198), it is confirmed (see also TRADE AND COMMERCE; MONTHS; SACRED AND PROFANE). Cumulatively, such interpretations help to substantiate the image of a revelation addressed in the first instance to the society of the pre-Islamic period *(jāhiliyya)*.

On the whole, therefore, the Qurʾān does not have the strongly positive evaluation of tradition and custom that Islamic culture later displays. It portrays the past negatively as a series of episodes in which various communities have rejected God's message and messengers, and those whom it addresses have to break the pattern by dissociating themselves from the tradition of their fathers. Only God's tradition and custom — his sending of messengers and his destruction of those who do not heed them — is consistently good (see also GOOD AND EVIL; HISTORY AND THE QURʾĀN).

Traditional Disciplines of Qurʾānic Studies

In Islamic theological representation the Qurʾān is considered *the* "knowledge/science" *(ʿilm),* so it is not surprising that the understanding and exegesis *(tafsīr)* of this text were considered the most excellent kinds of knowledge (see KNOWLEDGE AND LEARNING). Thus in a tradition attributed to Muḥammad (see ḤADĪTH AND THE QURʾĀN), transmitted by the Companion Ibn Masʿūd (see COMPANIONS OF THE PROPHET), we read: "Whoever wants knowledge, has to scrutinize the Qurʾān, because it contains the knowledge of the first and last (generations)" (Ibn Abī Shayba, *Muṣannaf,* vi, 127, no. 30,009; Abū ʿUbayd, *Faḍāʾil,* 41-2, no. 79; Abū l-Layth al-Samarqandī, *Tafsīr,* i, 71; Bayhaqī, *Shuʿab,* ii, 332, no. 1960; Ghazālī, *Iḥyāʾ* [8, *Ādāb tilāwat al-Qurʾān],* i, 254, l. 18; Zabīdī, *Itḥāf,* v, 94; Qurṭubī, *Tafsīr,* i, 446-53; Zarkashī, *Burhān,* i, 8). Or in another tradition attributed to Muḥammad: "The best of you is he who learns the Qurʾān and teaches it" (Bukhārī, *Ṣaḥīḥ,* iii, 402 [66, *Faḍāʾil al-Qurʾān,* 21]/trans. iii, 534; see TEACHING AND PREACHING THE QURʾĀN). The superiority of the Qurʾān's language vis-à-vis every other language is similar to the superiority of God vis-à-vis his creatures (in

some versions: because it comes from him; Baghdādī, *Faṣl,* i, 234-6; Ibn Ḍurays, *Faḍāʾil,* 77-8, nos. 132-40; Ājurrī, *Akhlāq,* 61-8; Rāzī, *Faḍāʾil,* 70-1, nos. 26-7; Ibn Rajab, *Mawrid,* 75-6; Suyūṭī, *Itqān,* iv, 124; cf. Biqāʿī, *Maṣāʿid,* i, 378-9, then 298-301, and Fīrūzābādī, *Baṣāʾir,* i, 57-64, both with other traditions; *UQM,* i, 69-86). Or according to a tradition attributed to ʿAlī: "God has sent down in this Qurʾān 'the exposition of all things' (an echo of Q 16:89), but our knowledge is too limited for it" (Biqāʿī, *Maṣāʿid,* i, 379, from the commentary of ʿAbd b. Ḥamīd, d. 249/863; Sezgin, *GAS,* i, 113). For Muslim scholars: "The book of God and the traditions of his Prophet are the exposition of every knowledge" (*bayān li-kulli maʿlūm;* Ibn al-ʿArabī, *Qānūn,* 180). In time, the science derived from the Qurʾān or applied to it, was divided into many "sciences," "the sciences of the Qurʾān" *(ʿulūm al-Qurʾān),* called in the above title "traditional disciplines of qurʾānic studies."

The Qurʾān, the noblest of the sciences?

As noted above, according to Islamic representation, the Qurʾān contains all science and particularly all legal knowledge, *expressis verbis* or virtually (see LAW AND THE QURʾĀN; see also SCIENCE AND THE QURʾĀN; MEDICINE AND THE QURʾĀN). The locus classicus for this conviction is Q 16:89: "And we reveal the scripture unto you as an exposition of all things *(tibyānan li-kulli shayʾin)"* (see the interpretations below; see BOOK; TEACHING). Sometimes Q 6:38, "We have neglected nothing in the book," is also quoted in the same spirit (Suyūṭī, *Itqān,* iv, 28 [chap. 65]). The theme of the "seven aspects (*aḥruf,* sing. *ḥarf;* in a later context *ḥarf* sometimes corresponds to what French linguists call 'articulation')" in which the Qurʾān is supposed to have been delivered also played a major role in that theological representation, as can be seen in the use of this prophetic tradition by the Andalusian jurist Abū Bakr Ibn al-ʿArabī (d. 543/748; *Qānūn,* 70, 189-95; see OFT-REPEATED; POLYSEMY). For him, "The sciences of the ḥadīth are sixty, but the sciences of the Qurʾān are more" (op. cit., 193), and for him the sciences of the Qurʾān are 77,450, i.e. the number of the words he said it contained (op. cit., 226-7; Zarkashī, *Burhān,* i, 16-17; Suyūṭī, *Muʿtarak,* i, 23; id., *Itqān,* iv, 37 [chap. 65; cf. chap. 19, i, 242, for the number of words: 77,435, 77,437, or 77,200]; Rosenthal, *Knowledge,* 20: ca. 78,000). This last declaration seems to come from Ṣūfī scholars (see ṢŪFISM AND THE QURʾĀN); it was already in *The revival of the religious sciences* of al-Ghazālī (d. 505/1111; *Iḥyāʾ,* Cairo 1939, i, 290: 77,200 sciences).

In a later period, the Ḥanbalite traditionist Ibn Rajab (d. 795/1395) wrote a book, now lost, entitled *Bayān al-istighnāʾ bi-l-Qurʾān fī taḥṣīl al-ʿilm wa-l-īmān* ("The exposition showing that the Qurʾān is sufficient for acquiring science and faith"; Ḥājjī Khalīfa, *Kashf,* i, 273, no. 613); he mentioned it in his treatise against singing and his other treatise on submission to God during prayer (q.v.; *Nuzhat al-asmāʿ,* in Ibn Rajab, *Majmūʿ rasāʾil,* ii, 463: against singing the Qurʾān and singing in general; *al-Dhull wa-l-inkisār* or *al-Khushūʿ fī l-ṣalāt,* in *Majmūʿ rasāʾil,* i, 298: on people who died of pleasure on hearing the Qurʾān; see RECITATION OF THE QURʾĀN; WEEPING). This last work is usually mentioned with the title *al-Istighnāʾ bi-l-Qurʾān* ("That the Qurʾān is sufficient"; quoted by Biqāʿī, *Maṣāʿid,* i, 379). In the introduction to his *Nafaḥāt al-Raḥmān fī tafsīr al-Qurʾān wa-tabyīn al-furqān* ("Fragrances of the merciful and elucidation of the evidence"), the Shīʿī Muḥammad b. ʿAbd al-Raḥīm al-Nihāwandī (born 1289/1871; see SHĪʿISM AND THE QURʾĀN) provides an impressive list of all the knowledge supposed to be found in the Qurʾān, which "contains everything" (quoted in *UQM,* i, 179-81). ʿAlī is

purported to have said, "The Qurʾān was sent down in four parts: a part concerning us (i.e. the people of the family of the Prophet), one part concerning our enemies, one part obligations and regulations *(farāʾiḍ wa-aḥkām),* and one part permitted and prohibited *(ḥalāl wa-ḥarām).* And the exalted *(karāʾim)* passages concern us" (Furāt al-Kūfī, d. ca. 310/922, *Tafsīr,* 45-6, no. 1, with other versions, 46-50; Bar-Asher, *Scripture,* 88-9).

Thus studying the Qurʾān is the most sublime duty. According to Ibn al-Jawzī (d. 597/1200): "The holy Qurʾān, being the noblest of the sciences, the insight into its meanings is the most complete of insights *(kāna l-fahmu li-maʿānīhi awfā l-fuhūm)* because the nobility of a science depends upon the nobility of the subject of this science" (*Zād,* i, 3; cf. Ibn Abī Shayba, *Muṣannaf,* vi, 125-6 [22, *Faḍāʾil al-Qurʾān,* 16]).

The origins and development of the sciences of the Qurʾān

To enforce recognition of the new religion, Muḥammad and/or Islam used a kind of competitive mimeticism (French *mimétisme concurrentiel,* an expression used by anthropologists) in viewing the Qurʾān *("al-kitāb")* as superior to the other sacred books. They based this claim on the well-known tradition attributed to Muḥammad: "The first scripture came down according to a single *ḥarf* [mode, face, edge, letter, passage, meaning or reading? in other versions *bāb,* i.e. gate], while the *Qurʾān* came down according to seven [other versions have four or five]" (Ṭabarī, *Tafsīr,* i, 21-71; Eng. trans. i, 16-30; Mahdawī, *Bayān,* 24-8; Gilliot, Lectures, i; id., *Elt,* 111-33). The alleged limitation of the prior scriptures and the polysemy of the word *ḥarf* opened the way to an interpretation such as the following:

By the first Book coming down from one gate he (Muḥammad) meant the Books of God which came down on his prophets to whom they were sent down, in which there were no divine ordinances and judgments, or pronouncements about what was lawful and what was unlawful, such as the Psalms of David, which are invocations and exhortations, and the Evangel of Jesus, which is glorification, praise and encouragement to pardon and be charitable, but no legal ordinances and judgments besides this, and scriptures like these which came down with one or seven meanings, all of which are contained in our Book which God conferred on our Prophet, Muḥammad and his community (Ṭabarī, *Tafsīr,* i, 71; Eng. trans. i, 30; Gilliot, Lectures, ii, 56).

The theme of "seven *ḥarf*s" (in the Sunnī tradition; cf. *EQ,* ii, 127-207) has probably been borrowed from Judaism or Christianity, and their notion of the quadruple sense/meaning of scripture (Heb.: *peshat, remez, derash, sod;* Lat: *sensus litteralis, sensus spiritualis,* divided into: *littera/historia, allegoria, tropologia/moralis, anagogia;* Wansbrough, *QS,* 243; Böwering, *Mystical,* 139-40; Gilliot, *Elt,* 120-1; see Gilliot/Larcher, Exegesis, 100b). The tradition on the seven (three, four or five; Biqāʿī, *Maṣāʿid,* i, 382-8) "meanings/faces" *(aḥruf)* of the Qurʾān was interpreted in different ways (16 or 35 interpretations in the Sunnī tradition, which we have reduced to seven kinds; Gilliot, Lectures, i, 18).

Imāmī Shīʿa (*EQ,* ii, 209-38), especially the "rationalists" *(uṣūliyya),* also discuss the Sunnī way of interpreting these traditions but early Shīʿism and the group of those who were called later "traditionists/traditionalists" (*akhbāriyya;* Amir-Moezzi and Jambet, *Qu'est-ce que le chiisme,* 221-3) reject the theme of the seven *aḥruf,* in accordance with their doctrine of the falsification of the Qurʾān by the Companions (see also SHīʿA). They use as their authority a declaration attributed to Jaʿfar al-Ṣādiq (d. 148/765): "The Qurʾān was only sent

down in one *ḥarf,* and the disagreement comes from the transmitters" (*UQM,* ii, 237-8). But the tradition was also explained as seven possibilities of interpretation, so according to Jaʿfar al-Ṣādiq: "The Qurʾān was sent down in seven *aḥruf,* and the most suitable for the imām *(adnā mā li)* is to deliver his opinions *(an yuftiya)* in seven ways *(wujūh)*. Then he said: 'This is our gift, so bestow, or withhold, without reckoning'" (Q 38:39; Ibn Bābawayh, d. 381/991, *Khiṣāl,* 358; *UQM,* ii, 212).

One of these interpretations is especially interesting for our subject. According to Ibn Masʿūd, Muḥammad should have said: "The first Book came down from one gate according to one *ḥarf,* but the Qurʾān came down from seven gates according to seven *ḥarf*s: prohibiting and commanding (see FORBIDDEN; VIRTUES AND VICES, COMMANDING AND FORBIDDING), lawful and unlawful (q.v.), clear and ambiguous (q.v.), and parables" (Ṭabarī, *Tafsīr,* i, 68, no. 67; Eng. trans. i, 29; Abū Shāma, *Murshid,* 107, 109, 271-4; Suyūṭī, *Itqān,* i, 170-1; Gilliot, Lectures, i, 20; cf. Abū ʿUbayd, *Faḍāʾil* [44], i, 278-9, no. 87: different, and from another Companion; see also PARABLE). Or in another version the seven are "command and reprimand (*zajr;* or prohibition, *nahy*), encouragement of good and discouragement of evil (*targhīb wa-tarhīb;* see GOOD AND EVIL), dialectic (*jadal;* see DEBATE AND DISPUTATION), narratives (q.v.; *qiṣaṣ*) and parable (*mathal;* Ṭabarī, *Tafsīr,* i, 69, no. 68; trans. i, 29, modified by us; Māwardī, *Nukat,* i, 29). We are not at all sure that Muḥammad ever uttered such a declaration, but what interests us here is that this tradition with the symbolic number seven (see NUMBERS AND ENUMERATION; NUMEROLOGY), which relates to perfection, was one way to express the conviction that the Qurʾān contains all knowledge. The word knowledge *(ʿilm)* does not appear in it nor does it use substantives, but only participles and adjectives; yet the way was opened to creating categories from these, i.e. different "genres" or "sciences." This is exemplified in a declaration attributed to the same Ibn Masʿūd: "God sent down the Qurʾān according to five *aḥruf:* lawful and unlawful, clear and ambiguous, and parables" (Ṭabarī, *Tafsīr,* 69, no. 70; trans. i, 29).

The early exegete Muqātil b. Sulaymān (d. 150/767; Gilliot, Muqātil) has summarized in two lists, a shorter and a longer, the various aspects or genres contained in the Qurʾān (see LITERARY STRUCTURES OF THE QURʾĀN). He does not refer to the prophetic traditions on the *aḥruf* of the Qurʾān but his lists clearly relate to that subject. They are also an attempt to establish some exegetical or hermeneutical principles (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). He does not speak of "science" *(ʿilm),* but we can see in these lists an indication for what will become in the future the "sciences of the Qurʾān." In the first list, he says: "The Qurʾān was sent down according to five aspects/modes/genres (*awjuh,* pl. of *wajh;* Goldziher, *Richtungen,* 84-5): its command *(amruhu),* prohibition, promise, threat *(waʿīd),* and account of the ancients" (Muqātil, *Tafsīr,* i, 26; Nwyia, *Exégèse,* 67; Gilliot, *Elt,* 118). This declaration should be compared with that attributed to the Companion Ibn ʿAbbās (d. 69/688) and transmitted by al-Kalbī (d. 146/763), since both al-Kalbī and Muqātil have numerous exegetical interpretations in common and are considered the heirs of the exegesis of the Companion Ibn ʿAbbās:

The Qurʾān was [revealed] in four aspects *(wujūh): tafsīr* [the literal meaning?] which scholars know; Arabic with which the Arabs (q.v.) are acquainted (see ARABIC LANGUAGE); lawful and unlawful *(ḥalāl wa-ḥarām)* of which it is not permissible for

people to be unaware; [and] *taʾwīl* [the deeper meaning?], that which only God knows.

Where a further explanation of *taʾwīl* is demanded, it is described as "what will be" (*mā huwa kāʾin;* Muqātil, *Tafsīr,* i, 27; see Gilliot/Larcher, Exegesis, 100b).

Muqātil's second list is a considerable expansion of his first one:
The Qurʾān contains references that are: (1) particular and (2) general; (3) particular to Muslims; (4) particular to certain idolaters, particular to one idolater (see IDOLATRY AND IDOLATERS); (5) general to all people; (6) ambiguous and (7) well-established (or clear, univocal); (8) explained *(mufassar)* and (9) obscure (or unexplained, *mubham*); (10) implicit *(iḍmār)* and (11) explicit *(tamām);* (12) connections *(ṣilāt)* in the discourse. It also contains (13) abrogating and (14) abrogated [verses (q.v.); see ABROGATION]; (15) anteposition *(taqdīm)* and (16) postposition (*taʾkhīr;* Gk. *hysteron* vs. *proteron*); (17) synonyms/analogues *(ashbāh),* with many (18) polysems/homonyms *(wujūh),* and with apodosis *(jawāb)* in another sūra (see SŪRAS). [It contains also] (19) parables *(amthāl)* by which God refers: to himself, (20) to unbelievers and idols (see IDOLS AND IMAGES), (21) to this world (q.v.), (22) to resurrection (q.v.), and to the world to come (see ESCHATOLOGY); (23) report (or history; *khabar*) about the ancients, (24) about paradise (q.v.) and hell (see HELL AND HELLFIRE); (25) particular to one idolater; (26) duties (*farāʾiḍ,* or perhaps here: inheritance? [q.v.]), (27) legal rules *(aḥkām)* and (28) punishments (*ḥudūd;* see BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT); (29) accounts of what is in the hearts of the believers, (30) or in the hearts of the unbelievers; (31) polemics *(khuṣūma)* against the Arab idolaters; then (32) interpretation *(tafsīr),* and (33) the interpretation which has an interpretation (Muqātil, *Tafsīr,* i, 27; Gilliot, *Elt,* 118-19; Versteegh, *Arabic grammar,* 104-5).

This list could be compared to the list of thirty aspects attributed to "ancient" scholars by al-Suyūṭī (*Itqān,* iii, 117-18 [chap. 51]).

As for Q 16:89, "And we reveal the scripture unto you as an exposition of all things" (see above), it played a role comparable to the traditions of the "seven *aḥruf*" in preparing the way for the establishment or creation of "qurʾānic sciences." Indeed, this verse was interpreted by an early exegete, Mujāhid (d. 104/722), as: "What is permitted and what is forbidden" (Ṭabarī, *Tafsīr,* xiv, 162). For one of the first theorists of the methodology of law, al-Shāfiʿī (d. 204/820):

God has revealed the scripture as an exposition of all things, and this clarification *(tabyīn)* has several forms: Either he has clearly stated duties *(mā bayyana farḍahu fīhi),* or he has given general revelations (*mā anzala jumlatan;* see REVELATION AND INSPIRATION), and in this case he has elucidated how it should be, through the tongue of his prophet, or he has given a ruling on duties in a general way *(jumlatan)* and ordered to investigate it, but giving indications *(ʿalāmāt)* which he has created… (Shāfiʿī, *K. Jimāʿ al-ʿilm,* in id., *al-Umm,* vii, 277; ix, 15; trans. according to this latter, better ed.; Suyūṭī, *Itqān,* i, 16; cf. ibid., iv, 29 [chap. 65]; Ibn ʿĀdil, *Lubāb,* xii, 140-1, commenting on Q 16:89, adds: consensus, analogy, information coming from a single traditionist, etc.).

For al-Shāfiʿī, "the Qurʾān virtually contains all the modes of the *bayān*" (Yahia, *Contribution,* 310). It should be noted that *bayān* cannot be translated as a single word because it is "the manifestation of the divine meanings, the intentions of the Creator who conveys them by the acts of

his will, the *aḥkām*" (i.e. rules). "It is a theophany of the meaning" (Yahia, *Contribution,* 362).

But the same al-Shāfiʿī related the interpretation of Q 16:89 with the tradition on the "seven *aḥruf*" and its interpretations, opening the way to a representation of "the science (then sciences) of the Qurʾān," in ca. 189/805, when he appeared before the caliph Hārūn al-Rashīd, in the presence of the famous Ḥanafī jurist, Muḥammad b. al-Ḥasan al-Shaybānī, who defended him. The caliph asked al-Shāfiʿī about his "knowledge/science" of the "book of God" *(kayfa ʿilmuka bihi),* and al-Shāfiʿī answered:

About what science do you ask, Commander of the Faithful? Is it the science of its descent (revelation, *tanzīl*) or of its interpretation *(taʾwīl)*? The science of what is clear (*muḥkam,* or well established) or ambiguous (*mutashābih,* or similar) in it? What is abrogating *(nāsikh)* or abrogated *(mansūkh)* in it? Its narratives *(akhbār)* or rules *(aḥkām)*? Its Meccan or Medinan (sūras or verses; see MECCA; MEDINA; CHRONOLOGY AND THE QURʾĀN)? What was sent down in the night or during the day? During a journey (q.v.; *safar;* see also TRIPS AND VOYAGES) or at home *(ḥaḍarī)*? The elucidation of its description *(tabyīn waṣfihi)*? The arrangement of its forms (?) *(taswiyat ṣuwarihi)*? Its synonyms/analogues *(naẓāʾir)*? Its good pronunciation (or grammatical pronunciation/explanation; *iʿrāb;* see GRAMMAR AND THE QURʾĀN)? The modes of its reading (*wujūh qirāʾatihi;* see READINGS OF THE QURʾĀN)? Its words *(ḥurūfihi)*? The meanings of its manners of speaking *(maʿānī lughātihi)*? Its legal punishments *(ḥudūdih)*? The number of its verses?

Hārūn al-Rashīd said, "You claim that you have a great knowledge of the Qurʾān" (Bayhaqī, *Manāqib,* i, 136; Zurqānī, *Manāhil,* i, 26: an abridged report without references, of which the beginning does not seem authentic: "The sciences of the Qurʾān are numerous…").

This list of al-Shāfiʿī is not unconnected to that of Muqātil b. Sulaymān because he knew Muqātil's exegesis and held it in high esteem, and he reportedly declared that, "All people are dependent on *(ʿiyāl)* three men: on Muqātil b. Sulaymān for exegesis…" (Ibn Khallikān, *Wafayāt,* v, 255; Abbott, *Studies,* ii, 100).

Books on the topic or with the term "sciences of the Qurʾān" in their title

The emergence of the technical expression "sciences of the Qurʾān" has been credited to the sixth/twelfth or seventh/thirteenth century (*EQ,* i, 10), or seventh/thirteenth century (Zurqānī, *Manāhil,* i, 27), or even to the beginning of the fifth/eleventh century (ibid., i, 28). A precise determination, however, depends on the state of our knowledge, and to date no complete study in Arabic or any other language exists concerning this subject.

What can be said is that this technical term already occurs in the title of a book from the second half of the third/ninth or the beginning of the following century: Ibn al-Marzubān (Abū Bakr Muḥammad b. Khalaf al-Muḥawwalī al-Baghdādī al-Ājurrī, d. 309/921; Brockelmann, *GAL,* i, 125; S i, 189-90; Samʿānī, *Ansāb,* v, 221) wrote a large book in twenty-seven parts *(ajzāʾ)*, entitled *al-Hāwī fī ʿulūm al-Qurʾān* ("The compendium in the sciences of the Qurʾān"; Ibn al-Nadīm, *Fihrist,* 149; Ibn al-Nadīm-Dodge, 328; Yāqūt, *Irshād,* vi, 2645, no. 1115, has: Muḥammad b. al-Marzubān Abū l-ʿAbbās al-Dīmiratī, *leg.* al-Dīmīratī; Dhahabī, *Siyar,* xiv, 264; Dāwūdī, *Ṭabaqāt,* ii, 141, no. 486; Ṣāliḥ, *Mabāḥithi,* 122). We know nothing about the content of this book, which could be a Qurʾān commentary. The author was primarily a man of letters and he translated more than fifty books from Persian into

Arabic. One of his students, Ibn al-Anbārī (d. 328/940; Brockelmann, *GAL,* i, 119; S ii, 182; Sezgin, *GAS,* viii, 148, ix, 144-7) is said to have composed *ʿAjāʾib ʿulūm al-Qurʾān* ("The marvels of the sciences of the Qurʾān"; Sezgin, *GAS,* ix, 147 *op.* 4: ms. Alexandria), in which he dealt with the excellent qualities *(faḍāʾil)* of the Qurʾān, its descent in seven modes, the writing of its codices (see CODICES OF THE QURʾĀN), the number of its sūras, verses and words, etc. (Ṣāliḥ, *Mabāḥith,* 122). This title does not appear in the list of his works (Ibn al-Anbārī, *Ẓāhir,* i, 21-7), but since a presumed manuscript of it has been preserved, this manuscript should be examined thoroughly to establish authenticity. On the other hand, we are sure that he wrote *al-Mushkil fī maʿānī l-Qurʾān* ("The obscure in the meanings of the Qurʾān") which he dictated over the years but only completed up to Q 20 (Sūrat Ṭā Hā; Sezgin, *GAS,* viii, 153).

An author who was accused of extremist Shīʿī tendencies, al-Ruhnī (Muḥammad b. Baḥr, fl. early fourth/tenth century; Yāqūt, *Irshād,* vi, 2434-6, no. 1004; Kohlberg, *Medieval Muslim,* no. 441) wrote *Muqaddimat ʿilm al-Qurʾān* ("The introduction to the science of the Qurʾān," not extant) in which he emphasized that ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB) and the People of the House (q.v.; i.e. the family of the Prophet; see FAMILY OF THE PROPHET) are the sole authority (q.v.) for the interpretation of the Qurʾān, stating also that the copies of the Qurʾān which ʿUthmān (q.v.) sent to the great cities of the empire differed from each other in their reading of certain passages, etc. (see also RECITERS OF THE QURʾĀN).

The Muʿtazilī philologist al-Rummānī al-Ikhshīdī (d. 384/994) wrote several books on various qurʾānic topics (see Qifṭī, *Inbāh,* 295), among them a huge qurʾānic commentary, of which parts 7, 10 and 12 are extant (part 12 in 150 folios, from Q 14:17 to Q 18:37!) — namely *al-Ǧāmiʿ fī ʿilm (ʿulūm) tafsīr al-Qurʾān* ("The comprehensive treatise on the science [or sciences] of the exegesis of the Qurʾān"; Sezgin, *GAS,* viii, 112-13, 270; for both, see Mubārak, *Rummānī,* 93-9). It seems to be identical with his *al-Tafsīr al-kabīr* ("Great commentary").

A confusion was made in some sources (Ibn al-ʿArabī, *Qānūn,* 119; id., *ʿAwāṣim,* 97-8) between two works of Abū l-Ḥasan al-Ashʿarī (d. 324/935), *al-Mukhtazan* ("The depository"), a book on dialectic theology, and *Tafsīr al-Qurʾān* ("Commentary of the Qurʾān," in 500 volumes!) in which he refuted his opponents and especially the Muʿtazilite Abū ʿAlī l-Jubbāʾī and al-Kaʿbī. Ibn al-ʿArabī claims that only one copy (!) of this work existed in the fourth/tenth century, for which al-Ṣāḥib Ibn ʿAbbād (d. 385/995) is reported to have paid 10,000 dinars to put it in the Dār al-Khilāfa, but the copy was destroyed in a fire (Gimaret, Bibliography d'Ashʿarī, 255-6, 260-2). Ibn Fūrak (d. 406/1015) tells us that there existed only rare copies of this commentary and that it was unknown by most of the Ashʿarites (Ibn Fūrak, *Mujarrad,* 165, 325).

In the second half of the fourth/tenth century or the beginning of the following, a great exegete of Khurāsān, the Karrāmite Ibn Ḥabīb al-Nīsābūrī (d. 406/1016; Gilliot, Exégèse, 139), who became a Shāfiʿī, wrote *al-Tanbīh ʿalā faḍl ʿulūm al-Qurʾān* ("The exhortation on the precedence of the sciences of the Qurʾān"; not in the list of his works, but quoted in Suyūṭī, *Itqān,* i, 36), and *Kitāb al-Tanzīl wa-tartībihi* ("The book of the descent and its arrangement"), which are extant (Saleh, *Formation,* 45-7, 88). His well-known student, the Nīsābūrian exegete Abū Isḥāq al-Thaʿlabī (d. 427/1035) composed *al-Kāmil fī ʿilm al-Qurʾān* ("The complete work in the qurʾānic science"); one of his most

noted disciples Abū l-Ḥasan al-Wāḥidī (d. 468/1076) read it in his presence (Yāqūt, *Irshād,* iv, 1663; Gilliot, Exégèse, 140; Saleh, *Formation,* 51). These three books are not extant.

But the works of these Nīsābūrians were possibly preceded by those of the Karrāmites of Nīsābūr (Saleh, *Formation,* 87-8: on al-Thaʿlabī's fourteen hermeneutical aspects). Another testimony of their great activity in the qurʾānic disciplines is *The book of foundations* (*Mabānī,* in Jeffery, *Muqaddimas,* 5-250; Gilliot, Sciences coraniques) of Ibn Bisṭām (Abū Muḥammad Ḥāmid b. Aḥmad b. Jaʿfar b. Bisṭām al-Ṭuḥayrī, or al-Ṭakhīrī? Ṣarīfīnī, *Muntakhab,* 211, no. 638; Gilliot, Sciences coraniques, 19-20, 59). This book on qurʾānic sciences was completed in 425/1034, as an introduction to Ibn Bisṭām's qurʾānic commentary. We had previously attributed it erroneously to Abū Muḥammad Aḥmad b. Muḥammad b. ʿAlī l-ʿĀṣimī (Gilliot, Théologie musulmane, 183) but the right attribution has recently been definitively established (Anṣārī, Mulāḥaẓāt-i, 80). This Karrāmī tradition in qurʾānic sciences, however, is earlier and comes from the great Karrāmī master of Nīsābūr, al-Ḥakīm Ibn al-Hayṣam al-Nabī (d. 409/1019; van Ess, *Ungenützte Texte,* 60-74), who had a *Kitāb Iʿjāz al-Qurʾān* ("Book on the inimitability of the Qurʾān") and from important elements going back to Ibn Karrām (d. 255/869) himself, as seen in the *Kitāb al-Īḍāḥ* of another Karrāmī, Aḥmad b. Abī ʿUmar al-Zāhid al-Andarābī (d. 470/1077) who was a student of Ibn Bisṭām (Gilliot, Théologie musulmane, 18-19, 57-8). Al-Andarābī had also collected in a manuscript written by his own hand (extant in Mashhad, Maktaba Riḍawiyya, ms. 12405 with a *waqf* signed by al-Andarābī) five books or treatises on the qurʾānic sciences pertaining to the Karrāmī legacy, like *Qawāriʿ al-Qurʾān* ("The book on the verses containing maledictions against Satan," copied by al-Andarābī in 429/1038, with certificates of audition; edited in Iran but not on the basis of the manuscript of al-Andarābī; Anṣārī, Mulāḥaẓāt-i, 69-71). The leader of the Nīsābūrian Karrāmites at his time, Abū Bakr ʿAtīq b. Muḥammad al-Sūrābādī (d. 494/1101; van Ess, *Ungenützte Texte,* 73-4), composed a commentary on the Qurʾān which has been edited. Numerous manuscripts of the Karrāmite productivity in the field of qurʾānic sciences are extant, above all in Iranian libraries.

Al-Bāqillānī (d. 403/1013), the Mālikī and Ashʿarī scholar, who lived first in Baṣra and then Baghdād, was the author of *Iʿjāz al-Qurʾān* ("The inimitability of the Qurʾān"). He also wrote *[Nukat] al-Intiṣār li-naql al-Qurʾān* ("The victory for the transmission of the Qurʾān"), which contains much material on qurʾānic disciplines, such as: the names of the Qurʾān (q.v.), sūra, verse (see FORM AND STRUCTURE OF THE QURʾĀN); its transmission and arrangement (see MANUSCRIPTS OF THE QURʾĀN; MUṢḤAF); refutation of the Shīʿīs and others on it, the seven aspects *(al-aḥruf al-sabʿa);* its language and style (see LANGUAGE AND STYLE OF THE QURʾĀN); the satanic verses (q.v.); its collection (see COLLECTION OF THE QURʾĀN); the variants and the seven readers; etc.

The Egyptian grammarian and exegete al-Ḥawfī (Abū l-Ḥasan ʿAlī b. Ibrāhīm, d. 430/1039) wrote a qurʾānic commentary in thirty volumes, called *al-Burhān fī tafsīr al-Qurʾān* ("The proof concerning the exegesis of the Qurʾān"; Brockelmann, *GAL,* ii, 411; S i, 729; Ḥājjī Khalīfa, *Kashf,* ii, 46-7, no. 1794; i, 241; Yāqūt, *Irshād,* iv, 1343-4, no. 713; Zarkashī, *Burhān,* i, 301; iii, 222). It is extant in about fifteen volumes. It is a commentary that follows the order of the text but with subdivisions according to the "sciences of the Qurʾān": the syntax

of the verse and its sense in the context (i.e. *al-nazm,* "the arrangement"; cf. Biqāʿī, *Nazm;* Suyūṭī, *Tanāsub:* on the relation between the sūras), then the grammatical and lexical points, or *"prononciation grammaticale"* (*iʿrāb;* Silvestre de Sacy, Muqniʿ, 307). Al-Zarkashī (d. 794/1392; *Burhān,* i, 301, puts this book in the list of the best books on that subject). This commentary treats the meaning and the exegesis *(maʿnā, tafsīr)* of the verse, then issues concerning the recitational pause or its impossibility *(al-waqf wa-l-itmām),* then the textual variants *(qirāʾāt),* then, if necessary, the legal rules *(aḥkām),* the occasions of revelation *(asbāb al-nuzūl),* the abrogation *(naskh),* etc. (Zurqānī, *Manāhil,* i, 27-8; according to al-Zurqānī, al-Ḥawfī had originally entitled his commentary *al-Burhān fī ʿulūm al-Qurʾān,* "The proof concerning the sciences of the Qurʾān").

In the fifth/eleventh century, the man of letters and poet Abū ʿĀmir al-Faḍl b. Ismāʿīl al-Tamīmī l-Jurjānī (d. after 458/1066) wrote *al-Bayān fī ʿilm/ʿulūm al-Qurʾān* ("The exposition on the science or sciences of the Qurʾān"; Yāqūt, *Irshād,* 2166, 2170; Ḥājjī Khalīfa, *Kashf,* ii, 82, no. 2012). It was probably a commentary with special emphasis on the philological and literary aspects of the Qurʾān, like *Durj al-durar* ("The drawer of pearls"; Brockelmann, *GAL,* S i, 504, *op.* viii) of his colleague, the philologist and rhetorician ʿAbd al-Qāhir al-Jurjānī (d. 471/1078; see RHETORIC AND THE QURʾĀN), if the attribution of this title to al-Jurjānī is true (Ḥājjī Khalīfa, *Kashf,* iii, 222, no. 5043, expresses a doubt).

The Shāfiʿī jurist, judge and Ashʿarī theologian of Baghdād (who was originally from Jīlān, which was noteworthy for an Ashʿarī), Shaydhala (Abū l-Maʿālī ʿAzīzī/ʿUzayzī b. ʿAbd al-Malik al-Jīlī: d. 494/1100; Brockelmann, *GAL,* i, 433; S i, 775; Ibn Khallikān, *Wafayāt,* iii, 259-60), wrote *al-Burhān fī mushkilāt al-Qurʾān* ("The proof about the difficult passages of the Qurʾān"). Al-Suyūṭī (*Itqān,* i, 31-2; 177-81) puts this book on the list of handbooks on the sciences of the Qurʾān that do not provide exhaustive coverage of the constitutent topics of this discipline. It is also quoted by al-Zarkashī, especially concerning the "inimitability" (q.v.) of the Qurʾān (*Burhān,* ii, 90; iii, 375).

In the sixth/twelfth century, the Khurāsānī Shāfiʿī of Marw al-Rūdh, al-Zāghūlī (Muḥammad b. al-Ḥusayn al-Aruzzī, d. 559/1164), is said to have written a work in 400 volumes, *Qayd al-awābid,* "The fettering of the fleeing (animals)"/"The registration of the fleeting (ideas)," a kind of huge encyclopedia on the sciences of exegesis, tradition, law and language, which is not extant (Dhahabī, *Siyar,* xx, 492-3; Ahlwardt, *Verzeichnis,* i, no. 450/2; Ḥājjī Khalīfa, *Kashf,* iv, 590, no. 9688, has "four volumes"; ed. Yaltkaya, ii, 1367 has "400 volumes").

The Ḥanbalī polymath from Baghdād, Ibn al-Jawzī (d. 597/1201), wrote several books on the subject, e.g. *ʿAjāʾib ʿulūm al-Qurʾān* ("The wonders of the sciences of the Qurʾān"; Brockelmann, *GAL,* i, 504, *op.* 30; ʿAlwajī, *Muʾallafāt,* no. 324), which is edited (Gilliot, Textes arabes, in *MIDEO* 19, no. 29). The title mentioned by Brockelmann (*GAL, op.* 32), *al-Mujtabā fī ʿulūm al-Qurʾān* ("The selection on the sciences of the Qurʾān"), extant in one volume, deals not only with qurʾānic knowledge (like variants), but also with other matters, ḥadīth, etc. (ʿAlwajī, *Muʾallafāt,* no. 383). Ibn al-Jawzī also wrote an abridgment of it, *al-Mujtabā min al-mujtabā* ("The selection of the selection"; Brockelmann, *GAL,* S i, 918, *sub op.* 32; ʿAlwajī, *Muʾallafāt,* no. 384). A third work, *al-Mudhish* ("The marvelous"), also called *al-Mudhish wa-l-muḥāḍarāt* ("The marvellous and the lectures," or "The marvellous on exhortations and sermons," etc.), completed in 591/1194, treats

some qurʾānic matters in the first chapter (2-22), then language, ḥadīth, historiography, and parenetics, such as legends of the prophets, etc., in the remaining four chapters (Brockelmann, *GAL,* i, 506, *op.* 81; S i, 920; Ḥājjī Khalīfa, *Kashf,* v, 477, no. 11704; ii, 1640; ʿAlwajī, *Muʾallafāt,* no. 329). But the book which is the closest to the genre of the later voluminous and exhaustive handbooks on the sciences of the Qurʾān, like those of al-Zarkashī and al-Suyūṭī, is Ibn al-Jawzī's *Funūn al-afnān fī ʿajāʾib ʿulūm al-Qurʾān* ("The disciplines of the branches in the wonders of the sciences of the Qurʾān"; Brockelmann, *GAL,* i, 504; S i, 918; ʿAlwajī, *Muʾallafāt,* no. 167). It is also extant with other titles like *Fann al-afnān fī ʿuyūn ʿulūm al-Qurʾān* ("The discipline of the branches in the sources of the sciences of the Qurʾān"). But the relation between the first and the last of these works should be checked, taking into account the content of the different manuscripts of both. Finally, it should be noted that Ibn al-Jawzī, like other scholars, also wrote separate books on various sciences of the Qurʾān (see below; cf. also Fanīsān, *Āthār al-ḥanābila,* 94-9).

In the seventh/thirteenth century at least two handbooks were composed on the sciences of the Qurʾān: *Jamāl al-qurrāʾ wa-kamāl al-iqrāʾ* ("The beauty of the Qurʾān reciters and the perfection of the recitation"; Gilliot, Textes arabes, in *MIDEO* 19, no. 24) by ʿAlam al-Dīn al-Sakhāwī (d. 643/1246). It is divided into ten books: the sūras and verses of the Qurʾān; its inimitability; its meritorious qualities; its divisions; the number of its verses; noncanonical variants; abrogation; readers and readings; recitation *(tajwīd);* pause and beginning *(al-waqf wa-l-ibtidāʾ).* It is one of the sources of another handbook: *al-Murshid al-wajīz ilā ʿulūm tataʿallaq bi-l-kitāb al-ʿazīz* ("The brief guide to sciences connected with the august book"; Ḥājjī Khalīfa, *Kashf,* v, 494, no. 11,801) by the Damascene historian Abū Shāma al-Maqdisī (d. 665/1267); it falls in six chapters: revelation *(nuzūl),* collection, seven modes *(aḥruf),* recognized readings, irregular readings, and useful sciences of the Qurʾān.

The eighth/fourteenth century witnessed the most complete handbook on the subject yet produced: *al-Burhān fī ʿulūm al-Qurʾān* ("The proof concerning the sciences of the Qurʾān") of the Egyptian Badr al-Dīn al-Zarkashī (d. 794/1392). It was made up of forty-seven chapters (Brockelmann, *GAL,* ii, 91-2; S ii, 108, *op.* 20; Anawati, Textes arabes, in *MIDEO* 4, no. 18; no. 15 in *MIDEO* 6).

The work of the Andalusian Ibn Juzayy al-Kalbī l-Gharnāṭī (d. 741/1340), entitled *al-Tashīl li-ʿulūm al-tanzīl* ("The facilitation in the sciences of revelation"), is a commentary, but with a long introduction on these sciences (op. cit., i, 4-29). Another book, *al-Durr al-maṣūn fī ʿulūm/ʿilm al-kitāb al-maknūn* ("The protected pearls on the sciences or science of the covered book") of al-Samīn (or Ibn al-Samīn) al-Ḥalabī (d. 756/1355), which has been edited in six volumes, is in fact a commentary limited to grammatical and lexical explanations supported by numerous poetical quotations (see POETRY AND POETS). For this reason it is also called *Iʿrāb al-Samīn* ("The grammatical commentary of al-Samīn"; Brockelmann, *GAL,* ii, 111; S ii, 137-8, *op.* 1; Ḥājjī Khalīfa, *Kashf,* iii, 190, no. 4870).

The genre thrived in the ninth/fifteenth century, a century that can be called the century of the great handbooks on the qurʾānic sciences. Thus we have the author of a well-known Arabic dictionary *(al-Qāmūs),* al-Fīrūzābādī (d. 817/1415), writing his *Baṣāʾir dhawī l-tamyīz fī laṭāʾif al-kitāb al-ʿazīz* ("Insights of those having discernment in the subtleties of the holy book"). Then *Mawāqiʿ al-ʿulūm fī mawqiʿ al-nujūm*

("The positions of the sciences in relation to the places from which the stars set") is written by the Egyptian Jalāl al-Dīn ʿAbd al-Raḥmān al-Bulqīnī (d. 824/1421; Brockelmann, *GAL,* ii, 112; S ii, 139). This title is inspired by the concept of *nuzūl/ tanzīl* (descent) which is one of the terms used for the Islamic concept of "revelation." The book of Bulqīnī, together with that of al-Zarkashī, is one of the numerous sources of the *Itqān* of al-Suyūṭī who was a student of the former's younger brother ʿAlam al-Dīn al-Bulqīnī (Ḥājjī Khalīfa, *Kashf,* vi, 233-4, no. 13,351; Suyūṭī, *Itqān,* i, 17-18, with the introduction of al-Bulqīnī; id., *Taḥbīr,* 27-8).

The Ḥanafī of Bergama who settled in Cairo, Muḥammad b. Sulaymān al-Kāfiyajī (d. 879/1474; Brockelmann, *GAL,* ii, 144-5, *op.* 1), one of al-Suyūṭī's teachers, wrote a small handbook entitled *al-Taysīr fī qawāʿid ʿilm al-tafsīr* ("The facilitation of the principles of the science of exegesis"), which was completed in 856/1452. It is said that the author "was very proud of his book, thinking that nobody had produced such a good one before him. But he had probably not seen *al-Burhān* ("The proof") of Zarkashī, otherwise he would have been ashamed" (Ḥājjī Khalīfa, *Kashf,* ii, 487, no. 3813). It is divided into two chapters: 1. The technical terms of the qurʾānic sciences necessary for exegesis. 2. The rules of exegesis and various related questions.

The Egyptian polymath Jalāl al-Dīn al-Suyūṭī (d. 911/1505) succeeded in writing the most complete handbook on the genre. When he read the book of his master al-Kāfiyajī on the sciences of the Qurʾān, he was disappointed. Then he read the *Mawāqiʿ* of Jalāl al-Dīn al-Bulqīnī, as per the advice of the brother of the author, his own master, ʿAlam al-Dīn al-Bulqīnī; he found it to be informative and well-organized, but thought it needed to be completed on a large number of important points and to be reorganized. He thus compiled *al-Taḥbīr fī ʿilm al-tafsīr* ("The refinement of the science of exegesis"; often called *al-Takhbīr,* "The index"; Ḥājjī Khalīfa, *Kashf,* ii, 248, no. 2729), which was written in 872/1467-8, in 102 chapters (Suyūṭī, *Itqān,* i, 16-23). Still unsatisfied, he wanted to do better and to write an exhaustive work. At this point, he discovered al-Zarkashī's *Burhān,* which pleased him greatly. He decided to reorganize it in a better way, and to add chapters and questions to it. This resulted in his writing *al-Itqān fī ʿulūm al-Qurʾān* ("The perfection of the sciences of the Qurʾān"; *Itqān,* i, 23-31), which was completed in 878/1474, in eighty chapters, as an introduction to his major qurʾānic commentary, *Majmaʿ al-baḥrayn wa-maṭlaʿ al-badrayn,* which he had already begun (Ahlwardt, *Verzeichnis,* i, no. 423, on the genesis of the *Itqān;* Brockelmann, *GAL,* ii, 144; S ii, 179, *op.* 1). In spite of the smaller volume of the *Burhān,* it contains things which are not in the *Itqān*. Before his *Itqān,* al-Suyūṭī had written *Muʿtarak al-aqrān fī iʿjāz al-Qurʾān* ("The gymnasium of the equal [plurivocal words] about the inimitability of the Qurʾān"; Ḥājjī Khalīfa, *Kashf,* v, 620, no. 12,346), on the rhetorical and stylistic aspects of the Qurʾān. Although it does not deal with all the sciences of the Qurʾān, this book has numerous chapters in common with the *Itqān* (e.g. *Itqān* chapters 22-7/*Muʿtarak* chapter 10; 37-8/13; 43/9; 44/11; 45/14; 47/8; 48/7; 55/12; 60/5; 62/4; 63/6; 65/1; 67/29; 68/30, etc.).

The Shāfiʿī Ṣūfī of Damascus, Ibn ʿArrāq (Muḥammad b. Aḥmad b. ʿAbd al-Raḥmān, d. 933/1526) wrote a kind of anthology in 138 folios entitled *Jawharat al-ghawwāṣ wa-tuḥfat ahl al-ikhtiṣāṣ* (Brockelmann, *GAL,* ii, 332, *op.* 1; Ahlwardt, *Verzeichnis,* i, no. 427), on the sciences of the Qurʾān, the Prophet, legends, the Companions, and mystical notions. In it he

copied Ibn al-Jawzī's *Risāla fī ʿilm al-mawāʿiẓ* ("Treatise on the science of religious exhortations"; Brockelmann, *GAL,* S i, 919, *op.* 75a; ʿAlwajī, *Muʿallafāt,* no. 168, not extant apart from this ms.), in four chapters: sciences of the Qurʾān, Qurʾān and philology, the sciences of tradition, historiography. He also copied *Radd maʿānī al-āyāt al-mutashābihāt,* or *Radd al-mutashābih ilā l-muḥkam* ("The meanings of the ambiguous passages of the Qurʾān") by al-Labbān al-Miṣrī (d. 749/1349; Brockelmann, *GAL,* i, 111, *op.* 3; Ahlwardt, *Verzeichnis,* i, no. 716). Ibn ʿArrāq followed this with his own *Nawḥ al-qulūb* ("The intention of the heart") on the Prophet and Companions, etc., which has nothing to do with qurʾānic sciences, and then included a small treatise on special qurʾānic expressions coming from dialects (q.v.), according to the order of the sūras (ff. 14-30), transmitted by Abū Ṭāhir al-Silafī (d. 576/1180), in 572/1176, which is in reality *Kitāb Lughāt al-Qurʾān* ("The dialectal expressions in the Qurʾān"), attributed to Ibn ʿAbbās, transmitted to al-Silafī by al-Wazzān (Rippin, Ibn ʿAbbās, 19; Biqāʿī, *Kitāb Lughāt al-Qurʾān,* 137-8). Ibn ʿArrāq ends his collection with Ṣūfī explanations of a hundred qurʾānic expressions, drawn from the beginning of the qurʾānic commentary written by Abū l-ʿAbbās al-Būnī (d. 622/1225; Brockelmann, *GAL,* i, 497-8).

In his *Miftāḥ al-saʿāda wa-miṣbāḥ al-siyāda fī mawḍūʿāt al-ʿulūm* ("The key of happiness and the lamp of mastership on the subjects of the sciences"), an encyclopedic bio-bibliographical work on the classification of the sciences, Abū l-Khayr Ṭāshkubrīzādah (d. 968/1561) devotes the sixth chapter to the legal sciences (vol. ii), i.e. Qurʾān, ḥadīth and law *(fiqh),* in which the qurʾānic sciences receive considerable attention: exegesis of the Qurʾān, particularly the books written about this discipline (ii, 62-128); the branches of the [variant] readings (*furūʿ al-qirāʾāt;* 369-77); the branches of exegesis (*furūʿ al-tafsīr;* 380-595). That means that for him most of the qurʾānic sciences center on exegesis. Others consider them to be studies about the Qurʾān, except those devoted to "the meanings *(maʿānī)* and exegesis *(tafsīr)* of its verses" (*UQM,* i, 9).

The writing of handbooks on qurʾānic sciences continued in the following centuries, until the present day. We have thus *Maḥāsin al-taʾwīl* ("The beauties of exegesis") of Jamāl al-Dīn al-Qāsimī (d. 1914), which is a qurʾānic commentary containing much information on the sciences of the Qurʾān; *Tibyān al-furqān fī ʿulūm al-Qurʾān* ("The exposition of the discrimination of the sciences of the Qurʾān") of the Damascene Ṭāhir al-Jazāʾirī (d. 1920); *Manāhil al-ʿirfān fī ʿulūm al-Qurʾān* ("The springs of the knowledge of the sciences of the Qurʾān") of the Azharī scholar of the first half of the twentieth century, Muḥammad ʿAbd al-ʿAzīm al-Zurqānī, published in 1943, and quoted by some scholars as a source, although it is devoid of references; *Manhaj al-furqān fī ʿulūm al-Qurʾān* ("The method of the discrimination of the sciences of the Qurʾān") of M.ʿA. Salāma; *Fī ʿulūm al-qirāʾāt* ("On the sciences of the qurʾānic readings") of S.R. al-Ṭawīl, etc. And recently an anonymous collection was published under the title *ʿUlūm al-Qurʾān ʿinda l-mufassirīn* ("The sciences of the Qurʾān according to the exegetes," which has been abbreviated to *UQM* in this article) in three volumes, and also *al-Tamhīd fī ʿulūm al-Qurʾān* ("The facilitation of the sciences of the Qurʾān") of Ayatollah Muḥammad Hādī Maʿrifa.

It should be also noted that several exegetes wrote introductions to their commentaries which include different aspects of the sciences of the Qurʾān (*UQM,* i, 12), e.g. al-Ṭabarī (d. 310/923; *Tafsīr,* i, 3-110; Eng. trans. i, 5-51); al-Thaʿlabī (d. 427/

1035; *Kashf,* i, 73-87); al-Ṭūsī (d. 460/1067; *Tibyān,* i, 1-21); Rāghib al-Iṣfahānī (d. prob. 502/1108; *Muqadimma* to his *Jāmiʿ al-tafāsīr,* 27-109); Ibn ʿAṭiyya al-Andalusī (d. 541/1147; *Muḥarrar,* i, 33-57; Jeffery, *Muqaddimas,* 251-94); al-Shahrastānī (d. 548/1153; *Mafātīḥ al-asrār,* i, f. 1v-27r; Monnot, Introduction); al-Ṭabarsī (d. 548/1153; *Majmaʿ,* i, 17-34); al-Qurṭubī (d. 671/1273; *Jāmiʿ,* i, 1-107); Niẓām al-Dīn al-Ḥasan b. Muḥammad b. al-Ḥusayn al-Nīsābūrī l-Aʿraj (d. after 730/1329; *Tafsīr,* i, 1-48; Gilliot, Exégèse, 142-3, with reference to the studies of Monnot); Ibn Juzayy (d. 741/1340; *Tashīl,* i, 4-29); Abū Ḥayyān al-Gharnāṭī (d. 745/1344, *Baḥr,* i, 3-14: sources, masters and disciplines of exegesis); Ibn Kathīr (d. 774/1373; *Faḍāʾil,* as an independent book but also as a part of his commentary in some manuscripts (at the end; *Faḍāʾil,* 3-4; and perhaps in some editions); however, the introduction of the *Tafsīr* (i, 11-18) is different from that in his *Faḍāʾil;* al-Biqāʿī (d. 885/1480; *Maṣāʿid,* i, 97-478); Maḥmūd al-Ālūsī (d. 1854; *Rūḥ,* i, 22-85), etc. Some scholars, however, considered a general introduction, without detailed treatment of the qurʾānic sources, to be sufficient, while others would write a few pages on the necessity of exegesis, e.g. al-Māturīdī (d. 333/944, *Taʾwīlāt,* ed. Jubūri, 5-6; ed. Vanioğlu, i, 3-4: on *tafsīr* and *taʾwīl*), Abū l-Layth al-Samarqandī (d. 373/983; *Tafsīr,* i, 71-113), or al-Māwardī (d. 450/1058; *Nukat,* i, 23-43), on the names of the Qurʾān, the sūra, the seven aspects *(aḥruf),* "inimitability" and exegesis.

We should also mention the great books of traditions *(ḥadīth),* many of which have a "chapter on exegesis" *(Kitāb al-Tafsīr),* e.g. Saʿīd b. Manṣūr al-Khurāsānī (d. 227/842; in his *Sunan,* ii-iv, up to Q 5); al-Bukhārī (d. 256/870; in his *Ṣaḥīḥ,* iii, 193-390 [bk. 65]; Fr. trans. iii, 249-519); Ibn Ḥajar, in his *Fatḥ* (viii, 155-744); Muslim (d. 251/875; *Ṣaḥīḥ,* iv, 2312-23 [bk. 54]); al-Nasāʾī (d. 303/915; in his *Sunan,* vi, 282-526 [bk. 82]); Ḥākim al-Nīsābūrī (d. 405/1014; in his *Mustadrak,* ii, 220-541), etc. Many of them also have a *Faḍāʾil al-Qurʾān* ("Book on the meritorious qualities of the Qurʾān"), e.g. Saʿīd b. Manṣūr, in his *Sunan* (i, 7-232), one of the sources of al-Suyūṭī (*Itqān,* i, 48); Ibn Abī Shayba (d. 235/849, in his *Muṣannaf,* vi, 117-56 [bk. 22]); al-Bukhārī, in his *Ṣaḥīḥ* (iii, 391-410 [bk. 66]; Fr. trans. iii, 520-43); Ibn Ḥajar, in his *Fatḥ* (ix, 3-103); Muslim, in his *Ṣaḥīḥ* (iv, 543-66, within book 6, on the prayer of the travelers; see PRAYER FORMULAS); al-Nasāʾī, in his *Sunan* (v, 3-34 [bk. 75], or in an independent book such as Ḥākim al-Nīsābūrī, *Mustadrak,* ii, 220-57, i.e. at the beginning of *Kitāb al-Tafsīr*).

A survey of qurʾānic sciences based on the Itqān *of al-Suyūṭī*

Of course, before handbooks covering "all" qurʾānic disciplines were compiled and written, independent works on each of these qurʾānic disciplines were already in circulation. Yet we still have no exhaustive study, either in Arabic or in other languages, on the genesis and development of each of the so-called "qurʾānic sciences or disciplines." We shall thus attempt to provide here some ordering of this topic, based on the chapters of al-Suyūṭī's *Itqān,* and to give a brief chronological survey of books written on some of these disciplines (Nolin's *Itqān and its sources* is be used with caution because it contains many mistakes in proper names and titles as well as other errors). The eighty chapters of the *Itqān* can be divided into nine sections (Suyūṭī-Balhan, *Révélation,* 23-9; for all these disciplines, see also Ṭāshkubrīzādah, *Miftāḥ,* 380-595).

I. *Where and how the Qurʾān was sent down (inzāl, tanzīl, nuzūl;* Gilliot, Le Coran, fruit d'un travail collectif?): 1. What was sent

down in Mecca (q.v.) or in Medina (q.v.; *UQM,* i, 303-20). ʿIzz al-Dīn al-Dīrīnī (d. 697/1297; Brockelmann, *GAL,* i, 451-2, *op.* 3; Ahlwardt, *Verzeichnis,* i, no. 466-7) wrote a poem of thirty-three verses, *Fī tartīb nuzūl al-Qurʾān al-ʿazīm,* on the arrangement of the sūras according to the place of their revelation. The question was also treated by the Mālikī Makkī b. Abī Ṭālib al-Qaysī l-Qayrawānī l-Andalusī (d. 437/1045), but al-Suyūṭī (*Itqān,* i, 36) does not include the title of his book. The interpolation of Medinan verses into Meccan sūras is treated in this discipline (Nagel, *Einschübe,* according to Ibn ʿAbd al-Kāfī's [d. after 400/1009] book without a title).

What was sent down: 2. At home or on a journey (or during a campaign; Ḥājjī Khalīfa, *Kashf,* i, 75 no. 4358; see EXPEDITIONS AND BATTLES). 3. During the day or at night. 4. In the summer or in the winter (see SEASONS). 5. In bed and while sleeping (see DREAMS AND SLEEP; VISION). 6. On the earth (q.v.) or in the sky. 7. First revealed, chronologically, either generally or on a particular subject (e.g. on wine [q.v.] or food; see FOOD AND DRINK; SUSTENANCE). 8. Last revealed.

9. The occasions of revelation. It is said that the earliest book on this subject was composed by ʿAlī b. al-Madīnī (d. 264/849; Sezgin, *GAS,* i, 108; Suyūṭī, *Itqān,* i, 177), but *al-Taʿrīf li-asbāb al-tanzīl,* attributed to Maymūn b. Mihrān (d. 117/735), although probably a later redaction with material coming from him, is extant in manuscript (introduction of the edition of Ibn Ḥajar, *ʿUjāb,* i, 80, with a list of twenty-two titles on this subject, 80-4).

10. Revelations (literally "descent") which coincided with the speech of one of the Companions. 11. Revelations which were repeated. 12. Revelations containing legal rules which were not applied immediately or revelations which were revealed after the application of a legal rule. 13. What was sent down in fragments or as a whole *(jumʿan).* 14. What was sent down accompanied (by angels; see ANGEL) or unaccompanied. 15. What had (already) been sent down to a prophet or was not sent down before the Prophet. 16. The modalities of the revelation (trans. Suyūṭī-Balhan, *Révélation,* 30-88).

II. *Its edition:* 17. The names of the Qurʾān (*UQM,* i, 21-52) and of the sūras (*UQM,* i, 321-34): In Shaydhala Abū l-Maʿālī ʿAzīzī's (d. 494/1100) *al-Burhān fī mushkilāt al-Qurʾān* ("The proof about the difficult passages of the Qurʾān"), it has fifty-five names (*Itqān,* i, 178-81). 18. Its collection (*jamʿ; UQM,* i, 335-412; Gilliot, Le Coran, fruit d'un travail collectif?, 195-9, on Zayd b. Thābit; on its collection and the problem of its falsification from a Shīʿī point of view, see Amīn, *Dāʾirat,* ix, 122-8) and arrangement (*tartīb;* Gilliot, Traditions). 19. The number of its sūras and verses (Pretzl, Koranlesung, 239-41, for both; Nöldeke, *GQ,* iii, 237-8: verses; Amīn, *Dāʾirat,* ix, 133a: 6236 verses), words and letters.

III. *Its transmission:* 20. Those who have memorized (Gilliot, Traditions) or transmitted it (see MEMORY). 21-27. The character of the various chains of authorities (*isnāds*) through which the different qurʾānic readings (variants) were transmitted (Nöldeke, *GQ,* iii, 116-231: readings, readers and books; Pretzl, Koranlesung, 17-47, 230-45; books: Ḥājjī Khalīfa, *Kashf,* iv, 506-8).

On readings and readers: Mahdawī (d. after 430/1039), *Bayān* (justification of the different readings); Andarābī (d. 470/1077), *Qirāʾāt.* On the seven canonical readings: Ibn Mujāhid (d. 324/936), *Sabʿa;* Ibn Khālawayh (d. 370/980), *Ḥujja;* Abū Manṣūr al-Azharī (d. 370/980), *Maʿānī l-qirāʾāt;* Abū ʿAlī l-Fārisī (d. 377/987),

Ḥujja; Abū l-Ṭayyib b. Ghalbūn (d. 389/999), *Istikmāl;* Ibn Shurayḥ al-Ruʿaynī l-Ishbīlī (d. 476/1083), *al-Kāfī;* Ibn Siwār al-Baghdādī (d. 496/1103), *Mustanīr;* Ibn al-Bādhish al-Gharnāṭī (d. 540/1145; Pretzl, Koranlesung, 28-9, no. 11: where *leg.* Bādhish, not Bādhash), *Iqnāʿ,* held in high esteem by Abū Ḥayyān al-Gharnāṭī (*Baḥr,* i, l. 11-12). On the eight (see their names and ways of transmission in Gilliot, Textes, in *MIDEO* 25-6, no. 78), i.e. the seven canonical readers and Yaʿqūb b. Isḥāq al-Ḥaḍramī (d. 205/821): Ibn Ghalbūn (Ṭāhir, d. 399/1009, the son of the previous Ibn Ghalbūn), *Tadhkira;* Ahwāzī (d. 446/1055), *Wajīz,* 63-76 (Kohlberg, *Medieval Muslim,* no. 643); Abū Maʿshar al-Ṭabarī (d. 478/1085), *Talkhīṣ.* On the ten readings: Abū Bakr b. Mihrān (d. 381/991), *Ghāya;* id., *Mabsūṭ,* which is a commentary on his larger work, *al-Shāmil fī l-qirāʾāt al-ʿashr* (not extant); Makkī b. Abī Ṭālib, *Tabṣira;* Abū l-ʿIzz al-Wāsiṭī l-Qalānisī (d. 521/1127; Pretzl, Koranlesung, 40, no. 28), *Irshād;* Ibn al-Jazarī (d. 833/1429), *Nashr,* i, 2-192, with a list of books on readings in general. On the fourteen readings and ways of transmission: Bannāʾ al-Dimyāṭī (d. 1117/1705), *Iḥtāf,* i, 75-9 (see Khaṭīb, *Muʿjam al-qirāʾāt;* Hamdan, *Koranlesung;* id., Nichtkanonische Lesarten; Muḥaysin, *Qirāʾāt,* on the influence of the readings on Arabic grammar and philology; Gilliot, *Elt,* 135-64). Of course, most qurʾānic commentaries quote a great number of variants, but this is done above all by the great Andalusian grammarian Abū Ḥayyān al-Gharnāṭī (d. 745/1344) in *al-Baḥr al-muḥīṭ* (see Khān, *Lahjāt,* a study on this commentary).

On the differences in the consonantal ductus between the so-called "codex of ʿUthmān" and other codices we have: Ibn Abū Dāwūd (d. 316/929), *Maṣāḥif;* Ibn al-Anbārī, *Marsūm al-khaṭṭ;* id., *al-Maṣāḥif* (Sezgin, *GAS,* ix, 147, *op.* 7, one of the sources for al-Suyūṭī, e.g. *Itqān,* ii, 320); id., *al-Radd ʿalā man khālafa muṣḥaf ʿUthmān* (Suyūṭī, *Itqān,* ii, 322; Sezgin, *GAS,* ix, 147, *op.* 6); Ibn Ashta (d. 360/971), *al-Maṣāḥif* (not extant; one of the sources of al-Suyūṭī, *Itqān,* chapter 18, i, 205; chapter 41, ii, 323-4, 327-9); Abū l-ʿAbbās al-Mahdawī, *Hijāʾ;* Ibn al-Bannāʾ al-ʿAdadī l-Marrākushī (d. 721/1321), *ʿUnwān;* Farmāwī, *Rasm al-muṣḥaf;* Qannawjī, *Abjad,* ii, 299; Ḥamad, *Rasm al-muṣḥaf.*

IV. *Its recitation:* for all forms of pronunciation (Silvestre de Sacy, Alcoran, 76-110; Ḥamad, *Dirāsāt ṣawtiyya*) we have Dānī (d. 444/1053), *Taysīr* (summarized in Pretzl, Koranlesung, 291-331); Makkī b. Abī Ṭālib, *Riʿāya.* 28. The pause and the "beginning" (*al-waqf wa-l-ibtidāʾ/al-iʾtināf,* called also *al-Maqāṭiʿ wa-l-mabādiʾ,* the title of the book of Ibn Mihrān, which is not extant; Nöldeke, *GQ,* iii, 234-7; Pretzl, Koranlesung, 234-8; Silvestre de Sacy, Repos de voix; id., Pauses). 29. The exposition of what is connected *(mawṣūl)* according to the wording but separated *(mafṣūl)* in meaning. 30. Vocalic inflexion of *a* (*imāla;* Nöldeke, *GQ,* iii, 197, 37; Pretzl, Koranlesung, 318-26; Grünert, Imâla). 31-33. Other phenomena of pronunciation (Pretzl, Koranlesung, 293-318). 34-35. On memorization and the learning of reading *(tilāwa)* and recitation (*tajwīd;* Nöldeke, *GQ,* iii, 231-4; Pretzl, Koranlesung, 232-4, 290-1).

V. *Its linguistic aspects:* 36. Uncommon or rare words or words acquiring special meaning in particular contexts (all of this is called *gharīb;* Ḥājjī Khalīfa, *Kashf,* iv, 322-32: Science of the lexical rarities of Qurʾān and ḥadīth). Lists on that subject had been established very early or attributed to early scholars (Rippin, Ibn ʿAbbās's *Gharīb al-Qurʾān;* id., Ibn ʿAbbās's *al-Lughāt fī l-Qurʾān;* Neuwirth, Der Koran, 125-6). A list of eighty-five titles, including, however, also some *Maʿānī* ("meanings") *al-Qurʾān* titles, has been collected (Marʿashlī, in-

troduction to Makkī b. Abī Ṭālib, *ʿUmda,* 19-37). Very early in Islam the vocabularly of ancient poetry was used to explain words of the Qurʾān, as evidenced by the *Responsa* to the Khārijī Nāfiʿ b. al-Azraq (see KHĀRIJĪS) attributed to Ibn ʿAbbās (d. 69/688), which were collected in various versions (Suyūṭī, *Itqān,* ii, 67-105; *Masāʾil Nāfiʿ b. al-Azraq;* Neuwirth, Die *Masāʾil;* Gilliot, Textes, in *MIDEO* 23 [1997], no. 44, with bibliography).

37. Words that are not in accordance with the manner of speaking *(lugha)* of the Ḥijāz. 38. Words that do not pertain to the Arabic language (see FOREIGN VOCABULARY). 39. Polysemy/homonymy and synonymy *(al-wujūh wa l-nazāʾir)*. Under *al-wujūh wa-l-nazāʾir* should be listed kinds of concordances of the Qurʾān, such as: Muqātil, *Ashbāh;* Hārūn b. Mūsā (d. 170/786), *Wujūh;* Yaḥyā b. Sallām (d. 200/815), *Taṣārīf;* Dāmaghānī, *Wujūh;* Ibn al-Jawzī, *Nuzha;* Samīn, *ʿUmda,* one of the best in this genre.

40. Knowledge of the particles, letters and special words (*adawāt, ḥurūf,* etc.) which is necessary for the exegete (ʿUmayra and al-Sayyid, *Muʿjam al-adawāt wa l-ḍamāʾir fī l-Qurʾān;* Sharīf, *Muʿjam ḥurūf al-maʿānī fī l-Qurʾān*). 41. Case and mood (*iʿrāb;* Ḥājjī Khalīfa, *Kashf,* i, 352-7, no. 926; Qannawjī, *Abjad,* ii, 80-2; Shantarīnī, *Tanbīh al-albāb*). Among the books on this subject mentioned by al-Suyūṭī (*Itqān,* ii, 309, partly repeating, as usual, al-Zarkashī, *Burhān,* i, 301): Makkī (d. 437/1047), *Mushkil;* al-Ḥawfī (d. 430/1039) who had a book in ten volumes on this subject; Abū l-Baqāʾ al-ʿUkbarī (d. 616/1219), *Tibyān;* al-Samīn al-Ḥalabī (d. 756/1355), *Durr,* also called *Iʿrāb al-Samīn;* the commentary *(Baḥr)* of Abū Ḥayyān al-Gharnāṭī, which contains much on *iʿrāb*. 42. The morphological rules (Gilliot, *Elt,* 165-203), e.g. the pronouns, masculine and feminine, affirmation and negation, singular and plural, false synonymy, question and answer, etc.

VI. *Its normative (legal) aspect:* 43. Clear and ambiguous or similar verses (al-Kisāʾī, d. 189/805, *Mutashābih;* al-Khaṭīb al-Iskāfī, d. 421/1030, *Durrat al-tanzīl;* al-Kirmānī, d. ca. 500/1106, *Burhān,* which includes a list of books on the subject, 61-4; Ḥājjī Khalīfa, *Kashf,* v, 370, no. 11350-1; *UQM,* iii, 11-165). 44. Anteposition *(muqaddam)* and postposition *(muʾakhkhar)*. 45. General and particular. 46. Synoptic or ambiguous *(mujmal)* and elucidated or clear *(mubayyan)*. 47. Abrogating and abrogated. 48. What poses a problem (*mushkil;* Ḥājjī Khalīfa, *Kashf,* v, 559-60, no. 12,093-16) and suggests disagreement *(ikhtilāf)* or contradiction. The grammarian Quṭrub (d. 206/821) is said to have written a book on this subject; it is probably *Kitāb Quṭrub fī mā saʾala ʿanhu l-mulḥidūn min āy al-Qurʾān* (Sezgin, *GAS,* viii, 65); Ibn Qutayba (d. 276/889) composed *Taʾwīl mushkil al-Qurʾān* ("The interpretation of the difficult passages [q.v.] of the Qurʾān"). 49. Absolute and restricted statements *(muṭlaq, muqayyad)*. 50. Expressed or understood statements *(manṭūq, mafhūm)*.

Special books on the legal content or the exegesis of the legal verses of the Qurʾān have been composed, and are entitled *Aḥkām al-Qurʾān* ("The legal rules of the Qurʾān"; Ḥājjī Khalīfa, *Kashf,* i, 173-4, no. 156). The following book should be added to our list (see Gilliot, Exegesis, 113-14): Ibn Faras al-Gharnāṭī (d. 599/1202), *Aḥkām al-Qurʾān* (Brockelmann, *GAL,* S i, 734; Suyūṭī, *Itqān,* i, 49, 54, etc.).

VII. *Its rhetorical and stylistic aspects and its inimitability:* 51-64 (see also LITERATURE AND THE QURʾĀN).

VIII. *Various aspects:* stylistic again, the proper names in the Qurʾān, its meritorious qualities *(faḍāʾil),* the writing of the Qurʾān, etc. 65. Knowledge drawn from the Qurʾān. 66. The parables *(amthāl)*.

Māwardī (d. 450/1058) has collected these parables in *al-Amthāl wa-l-ḥikam* (see also Ibn al-ʿArabī, *Qānūn,* 261-96). 67. The oaths (q.v.). 68. Dialectic, argumentation and polemics *(jadal):* according to al-Suyūṭī (*Itqān,* iv, 60), Sulaymān ʿAbd al-Qawī l-Ṭūfī (d. 716/1316) wrote a book on this topic. 69. The proper names.

70. The unidentified individuals (*al-mubham;* Ḥājjī Khalīfa, *Kashf,* v, 367, no. 11, 342-3): Suhaylī, d. 581/1185, *Taʿrīf;* Ibn ʿAskar of Malaga, d. 636/1239, *Takmīl* (correct Suyūṭī, *Itqān,* iv, 93, and Suyūṭī, *Mufhamāt,* 7, both of which have erroneously Ibn "Asākir"); Suyūṭī, *Mufhamāt*. In numerous cases this discipline is related to the occasions of revelations. 71. The names of those upon/about whom the Qurʾān was sent down (cf. chapters 70 and 9).

In the literature numerous books were written on this topic, in particular concerning ʿAlī, the subsequent imāms (see IMĀM), and the family of the Prophet (Kohlberg, *Medieval Muslim,* no. 83, 107-8, 149, 488, 623). But deciphering anonymous and obscure expressions to uncover them *(taʿyīn al-mubham, tasmiya)* was also a focus of interest during the earlier stage of Shīʿī exegesis on "positive" and "negative" verses, the former referring to members of the Prophet's family, the latter to enemies like Abū Bakr, ʿUmar, or ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR), e.g. on Q 15:44 (Bar-Asher, Scripture, 106-10; Amir-Moezzi, *Guide,* 217-20; Amir-Moezzi and Jambet, *Qu'est-ce que le chiisme,* 91-3); also with words and expressions which are not in the ʿUthmānic text, for both positive and negative verses: Q 2:225; 4:63, 65-6; 20:115; 33:71; 42:13 (Amir-Moezzi and Jambet, *Qu'est-ce que le chiisme,* 92-3).

72. The meritorious qualities of the Qurʾān (*Faḍāʾil al-Qurʾān,* see also above and below).

73. The best of the Qurʾān and what makes it so (*afḍal, fāḍil;* Ḥājjī Khalīfa, *Kashf,* i, 373, no. 1022). This issue is a matter of disagreement among scholars: al-Ashʿarī, Ibn Ḥibbān (d. 354/965), al-Bāqillānī, probably already Mālik b. Anas (d. 179/795), etc., did not find this topic acceptable. They argued that since the Qurʾān is the speech (q.v.) of God (see WORD OF GOD), everything in it is excellent. Yet, others did discuss this topic: Isḥāq b. Rāhawayh (d. 238/853), al-Ghazālī (*Jawāhir,* 37-8), Abū Bakr b. al-ʿArabī (*Qānūn,* 230-40, on Q 1 and 112, also referring to al-Ghazālī), etc.

74. Selected passages *(mufradāt)* of the Qurʾān. This chapter is connected with the previous one, but instead of saying "the best of…," it discusses expression(s) or verse(s) that are "the most sought" *(arjā),* for one reason or another. 75. Its prophylactic and propitiatory properties *(khawāṣṣ)*. According to the *Itqān,* al-Tamīmī wrote *Khawāṣṣ al-Qurʾān*. He was a physician of Jerusalem called Abū ʿAbdallāh al-Tamīmī (d. last quarter of the fourth/tenth century; Ḥājjī Khalīfa, *Kashf,* iii, 180, no. 4814; Sezgin, *GAS,* iii, 318, *op.* 2: *Manāfiʿ khawāṣṣ al-Qurʾān*). Al-Ghazālī also wrote a book on the subject (*Kitāb al-Dhahab al-abraz [al-ibrīz] fī asrār khawāṣṣ kitāb Allāh al-ʿazīz;* cf. Bouyges, *Chronologie,* 127-8, no. 199).

76. The calligraphic form (*marsūm al-khaṭṭ;* see ORTHOGRAPHY OF THE QURʾĀN) and the discipline of writing the Qurʾān. Among those who wrote on this subject, al-Suyūṭī mentions the treatises of al-Dānī on orthography (*Muqniʿ;* Silvestre de Sacy, Muqniʿ) and "punctuation" (*Naqṭ;* Silvestre de Sacy, Mémoire, 320-49; id., Traité de ponctuation; id., De différents traités); Ibn Wathīq al-Ishbīlī (d. 654/1256), *Jāmiʿ;* Ibn al-Bannāʾ al-Marrākushī, *ʿUnwān* (see above, chapters 21-7).

IX. *Exegesis and exegetes* (chapters 77-80; see Gilliot, Exegesis; add: Amir-Moezzi and Jambet, *Qu'est-ce que le chiisme,* 139-74: on symbolic interpretation, *taʾwīl,* in Shīʿism; *UQM,* iii, 169-587; French translation of passages of several commentaries in

Borrmans, *Commentaire*): The early commentator Yaḥyā b. Sallām (d. 200/815) had listed twelve qualities *(khaṣla)* requisite for the exegete, namely the knowledge of what is Meccan and Medinan, the abrogating and the abrogated, the anteposition and the postposition, what is separated *(maqṭūʿ)* and what is connected (*mawṣūl;* cf. Suyūṭī, *Itqān,* chap. 29), the particular and the general, ellipsis *(iḍmār)* and the Arabic language (that is, the technical knowledge of this language; Ibn Abī Zamanīn, d. 399/1008, *Tafsīr,* i, 114).

It can be said that al-Zarkashī's *Burhān* and al-Suyūṭī's *Itqān* represent the result of centuries of Islamic studies on the Qurʾān. Up to the present day they remain the main sources, especially the *Itqān,* for those who write "new" handbooks in Arabic on the sciences of the Qurʾān, e.g. Qaṭṭān, *Mabāḥith,* a sort of abridgment of the *Itqān,* also to a certain extent Ṣāliḥ, *Mabāḥith*.

Final remarks

It should be emphasized that several authors have written much on various qurʾānic sciences, e.g. the reader and grammarian of Kūfa, al-Kisāʾī (d. 189/805), was the author of more than ten books on qurʾānic philology (Sezgin, *GAS,* ix, 130-1), and materials from his *Maʿānī l-Qurʾān* have been recently collected. One of his students, the grammarian and author of *Maʿānī l-Qurʾān,* al-Farrāʾ (d. 207/822), wrote several other books on qurʾānic philology (Sezgin, *GAS,* ix, 133). The grammarian Ibn Khālawayh (d. 370/980) wrote some fifty books, five of which were on qurʾānic disciplines (see the introduction of ʿUthaymīn to *Iʿrāb al-qirāʾāt,* i, 62-85). Makkī b. Abū Ṭālib (d. 437/1045) produced about 100 books, sixty-seven pertaining to qurʾānic sciences. These include twenty-five on the readings, a qurʾānic commentary in seventy *ajzāʾ (al-Hidāya fī bulūgh al-nihāya),* another in fifteen volumes (*mujallad*s; *Mushkil al-maʿānī wa-l-tafsīr*), a book on recitation *(Riʿāya),* several on the pause, etc. (Marʿashlī, ed. of Makkī, *ʿUmda,* 50-4). Among the more than forty books that Abū ʿAmr al-Dānī (d. 444/1053) composed, twenty-nine were on qurʾānic sciences, of which fifteen were on readings or readers, others on qurʾānic philology, like *al-Idghām al-kabīr* ("The great book of assimilation in the Qurʾān"), *Taḥdīd* (on recitation; see the introduction of the edition of *Muktafā,* 35-42; introduction to *Naqṭ,* 15-19, listing only twenty-eight books). Ahwāzī (d. 446/1055) wrote some thirty books (introduction to *Wajīz,* 31-7), of which sixteen were on readings and readers. Ibn al-Jawzī (d. 597/1200) wrote more than 200 books (list of Ibn Rajab, ʿAlwajī, *Muʾallafāt,* 20-8, who lists in his book 574 titles, of which many are actually the same book but with variant titles), twenty-eight of which were on qurʾānic sciences: two on abrogation, one on occasions of revelation, one on the seven readings, one on interpretative constants (*al-Wujūh wa-l-nazāʾir,* i.e. *Nuzha*), two on rare or strange words *(gharīb),* several on exegesis (*Zād, al-Mughnī, Taysīr al-bayān;* ʿAlwajī, *Muʾallafāt,* 269-70; Ibn al-Jawzī, *Funūn,* 9-11, introduction of the edition), etc.

Mention has been made several times in this article of the "genre" known as the "meritorious qualities of the Qurʾān" *(Faḍāʾil al-Qurʾān)*. This title is often used for books or chapters of major ḥadīth collections containing traditions attributed to Muḥammad or the Companions, or coming from scholars of the first two centuries of Islam or later. Some of them are small handbooks of qurʾānic sciences in general with chapters on: (1) learning, teaching and recitation of the Qurʾān; (2) those who know and recite the Qurʾān and what is required of them; (3) the sūras and verses, and the merits attached to the recitation of the different sūras; (4) the collection of the Qurʾān, words contradicting the ductus of the so-called ʿUthmānic codex and the

various codices; (5) linguistic problems (dialects, etc.); (6) Meccan and Medinan sūras; (7) the readers; (8) its exegesis; (9) the orthography of the Qurʾān, etc. (see Abū ʿUbayd's, Ibn Kathīr's, and also, but to a lesser degree, ʿAbd al-Raḥmān al-Rāzī's *Faḍāʾil,* and Ibn Rajab's *Mawrid*). Other books have little or nothing about the history of the text (see TEXTUAL HISTORY OF THE QURʾĀN), but more about the merits acquired through its recitation, audition and occupying oneself with it (*taʿāhud;* cf. Ibn Abī Shayba, *Muṣannaf* [bk. 22, *Faḍāʾil,* ch. 13], vi, 124: *Fī taʿāhud al-Qurʾān*), e.g. Firyābī's *Faḍāʾil*. In the arrangement of the collection of traditions of Ibn Ḥibbān (d. 354/965) by Ibn Balbān al-Fārisī (d. 729/1329), the equivalent of the *Faḍāʾil* is the chapter on the recitation of the Qurʾān, a part of the *Book of subtleties* (Ibn Ḥibbān, *Ṣaḥīḥ* [bk. 7, *Raqāʾiq,* ch. 7, *Qirāʾat al-Qurʾān*], iii, 5-83).

According to Franz Rosenthal, over time there was a tendency in Islam to give preference "to a disjunctive juxtaposition of individual data as against a continuous and integrated exposition" of science. He further explained, "It can also be assumed to have contributed to the growing tendency of constantly adding to the number of what was considered to constitute independent scientific disciplines" (*Knowledge,* 44) until they reached the number of 150, or even 316 (Ṭāshkubrīzādah, *Miftāḥ,* i, 74-5). This statement about sciences in general is even truer for the "sciences of the Qurʾān" whose specification and proliferation was a matter of ultimate importance because they are supposed to lead to salvation (q.v.) in the hereafter. According to a declaration attributed to Muḥammad: "The believer will never become surfeited with beneficial *(khayr)* [religious knowledge] until he reaches paradise" (Tirmidhī, *Ṣaḥīḥ* [42, *ʿIlm,* 19], v, 50-1, no. 2686; Rosenthal, *Knowledge,* 89). But some of these disciplines have also contributed to several "profane" fields of knowledge, like grammar, lexicography, stylistics, rhetoric, etc., which became, for many scholars, ancillary disciplines for the study of the Qurʾān.

Claude Gilliot

Transitoriness

Being subject to change, departure or destruction. The Qurʾān contrasts the transitoriness of this world (q.v.; see also GENERATIONS; HISTORY AND THE QURʾĀN; AIR AND WIND; ASHES) with the eternally enduring quality of the hereafter (see ESCHATOLOGY) and also with the eternity (q.v.) of God (see GOD AND HIS ATTRIBUTES). The Qurʾān often states that whereas this life *(al-ḥayāt al-dunyā)* will pass away (e.g. Q 10:24; 18:45) and both its

pleasures (e.g. Q 57:20) and its trials (e.g. Q 7:94-5; see TRIAL; TRUST AND PATIENCE) are transitory, the realities to come in the hereafter *(al-ākhira)* will endure forever. More emphasis is laid on the latter point as the Qur'ān repeatedly emphasizes the everlasting destinies of believer and unbeliever in the garden (q.v.) and hellfire, respectively (see BELIEF AND UNBELIEF; REWARD AND PUNISHMENT; PARADISE; HELL AND HELLFIRE); "abiding in it forever" *(khālidīna fīhā)* is one of the most distinctive qur'ānic refrains (e.g. Q 2:81-2; 98:6, 8). Believers should therefore not be deceived, as unbelievers are, by the alluring quality of this world's attractions (Q 2:212, on which see Paret, *Kommentar,* for numerous other references) but rather are to be schooled in a perspective that sets greater store by that which is eternal than by that which is transitory. "You prefer this life *(al-ḥayāt al-dunyā)* but the hereafter *(al-ākhira)* is better and more enduring" (*abqā,* Q 87:16-17); "that which you have wastes away *(yanfadu);* that which is with God endures" (*bāqin,* Q 16:96; cf. 28:60; 38:54; 42:36). The unbeliever, failing to grasp this truth, seeks to confer immortality upon himself in ways doomed to failure: Q 104:3 speaks of an unbeliever who believes that wealth (q.v.) will make him immortal; the construction of impressive defensive buildings *(maṣāniʿ)* can also appear as a misguided human attempt to escape the transitoriness of this life (Q 26:129; see CITY; HOUSE, DOMESTIC AND DIVINE).

In terms of frequency of reference this is the main emphasis in the qur'ānic perspective on the transitory quality of this life: a contrast between this life and the life to come. The Qur'ān does, however, also contrast the transience of this world with God himself. "Everyone who is thereon [on the earth] will pass away *(fānin);* there endures *(yabqā)* only the face of your lord (q.v.), possessor of might and glory" (q.v.; Q 55:26-7; see also FACE OF GOD; POWER AND IMPOTENCE). Although this passage is not obviously echoed elsewhere in the Qur'ān (Paret, *Kommentar,* indicates no parallels) it memorably encapsulates the qur'ānic insistence on the gulf between creator and creation (q.v.). Only God is inherently eternal; everything else is transitory. The wider qur'ānic context supplements this theological foundation (see THEOLOGY AND THE QUR'ĀN) with the message that in the hereafter God will bestow eternity on the destinies that human beings earn for themselves (see FATE; DESTINY).

Translations of the Qur'ān

Translations of the Qur'ān did not have the same significance during the early spread of Islam that, for example, translations of the Bible had during the spread of Christianity. This is connected to the role of Arabs (q.v.) as the original target audience and bearers of Islam, as well as to the increasing importance of the Arabic language in the newly conquered territories. An additional role was played by the conviction of the stylistic inimitability (q.v.) of the Qur'ān. In the Qur'ān itself, its Arabic nature is repeatedly emphasized (cf. Q 41:2-3; 12:2; 13:37; 20:113; 39:28; 41:2-3; 42:7; 43:3; see also ARABIC LANGUAGE). Herein lies the deeply rooted conviction among Muslims that a "valid" recitation of the Qur'ān (q.v.) is possible only in the Arabic language. Only the Ḥanafite law school (see LAW AND THE QUR'ĀN; THEOLOGY AND THE QUR'ĀN) allows for exceptions in this regard, as set forth in detail in 1932 by the Ḥanafī Azhar scholar al-Marāghī (d. 1945).

In the Islamic world up to the early twentieth century

The question of qur'ānic recitation should be kept separate from that of the conveyance of its contents, i.e. its "meaning" (Ar. *ma'ānī*) in Islamic vernaculars. Commensurate with the paramount significance of the oral tradition of delivering the Qur'ān (see RECITERS OF THE QUR'ĀN), sermons also played an important role (see TEACHING AND PREACHING THE QUR'ĀN). The Qur'ān was always recited and then, afterwards, paraphrased (and hence, explained) from the Arabic text into the vernacular. From al-Zamakhsharī's (d. 538/1144) exegesis of Q 14:4, it becomes clear that he not only sanctioned the translation of the Qur'ān from the Arabic, but also that such translations actually existed. Even the annotation (Ar. *tafsīr*) of the Qur'ān's text (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) could only be meaningfully conveyed to non-scholarly non-Arabs in their respective mother tongues (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). The oldest example for this is the translation of al-Ṭabarī's monumental commentary *Jāmi' al-bayān* into Persian (see PERSIAN LITERATURE AND THE QUR'ĀN), which was prepared for the Sāmānid ruler Abū Ṣāliḥ Manṣūr b. Nūḥ (r. 349-63/961-74). An ancient Turkish version was produced, almost simultaneously, on the basis of the Persian version (see TURKISH LITERATURE AND THE QUR'ĀN). Numerous Ottoman annotations exist for the most important commentaries, such as al-Bayḍāwī's (d. prob. 716/1316-17) *Anwār al-tanzīl;* however, thus far, the question of circulation of the most important commentaries in the vernacular remains largely unexamined. Evidence for the secondary significance of vernacular translations with respect to the Arabic original may be found in the form of the interlinear version, which is extant in numerous manuscripts. It frequently gives simply the isolated meaning of the individual words, and rarely indicates a coherent text. The latter becomes common only later, mainly after the widespread introduction of the printing press in the Islamic world in the nineteenth century (see PRINTING OF THE QUR'ĀN).

Important impetuses for the translation of the Qur'ān arose through the confrontation between the Islamic and Christian worlds (see PRE-1800 PREOCCUPATIONS OF QUR'ĀNIC STUDY). This happened initially in Spain, as a result of the Christian *reconquista,* and in India as a result of English colonization. In Spain, as of the fifteenth century, translations of the Qur'ān arose in Aljamiado (that is, in old Spanish dialects), which were written in Arabic script; however, a complete translation written in Latin script, dating from the year 1606, is also preserved (cf. Lopez-Morillas, *Six Morisco-versions,* 20). Although not probable, it cannot be ruled out that the majority of the remaining fragmentary Aljamiado texts of the Qur'ān were influenced by the old-Castilian translation prepared by the jurist Yça of Segovia (that is, 'Īsā dhā Jābir, also known as Yçā Gidelli) between 1454 and 1456 in Aiton/Savoy at the request of Cardinal John of Segovia (see below, under *"Qur'ān translations outside the Islamic world until ca. 1700"*). Traces of an Aragonite translation of the Qur'ān can be found in the polemical work of the convert Juan Andres, *Confusion dela secta mahomatica* (Valencia 1515). In India, it was Shāh Walī Allāh Dihlawī (1114-76/1703-62) who, in conjunction with his pursuit of modernization, called for the translation of the Qur'ān and, with his Persian-language work, *Fatḥ al-Raḥmān bi-tarjamat al-Qur'ān* (1737), delivered a Persian translation of the Qur'ān that is still meaningful today (first printed in Delhi, in 1283/1866). His two sons, Shāh Rafī' al-Dīn (1749-1818) and Shāh 'Abd al-Qādir (1753-1814), translated the Qur'ān into

Urdu (printed in Calcutta in 1840, Delhi 1829; see SOUTH ASIAN LITERATURE AND THE QUR'ĀN).

Actually, since the emergence of the printing press, numerous translations have appeared in India in various regional Indian languages such as Urdu (first in 1828, by ʿAbd al-Salām Badayūnī), Sindhi (1876), Punjabi (1870), Gujarati (1879), Tamil (1884), and Bengali (1886; incidentally, this translation was produced and repeatedly reprinted at the initiative of Girish Chandra Sen [1835-1910], a follower of the neo-Hindu reformer Keshab Chandra Sen [1838-84]; see also LITERATURE AND THE QUR'ĀN).

Even in the nineteenth century, the Qur'ān and qur'ānic translations were very influential throughout the Islamic world. The first printed Qur'ān in a Turkish translation appeared in Cairo in 1842, and a Turkish translation of the *Tafsīr al-Jalālayn* in 1877. In Istanbul, Turkish translations have only been printed since 1865. The first printed Persian translation appeared in Tehran in 1855 and the first Pashtu edition in Bahupal in 1861. The first Serbo-Croatian translation (based on a French translation) was published in Belgrade in 1895.

In the Islamic world during the twentieth century

In the first half of the twentieth century, printed translations of the Qur'ān were still being published for the most important languages used by Muslims. In Asia, this necessitated translations into Balochi (1911), Brahui (1916), Telugu (1938), Malayan (1923), Indonesian (1928), Chinese (1927) and Japanese (1920; see SOUTHEAST ASIAN QUR'ĀNIC LITERATURE). In Africa, a translation into Yoruba appeared in 1906. A translation into the Zanzibar dialect of Swahili (printed 1923), produced by Godfrey Dale and G.W. Broomfield, was deemed unacceptable for Muslims due to an added Christian apologetic text, despite the quality of its language (see AFRICAN LITERATURE). At this time, two other factors became very significant: the missionary activities of the Aḥmadiyya (q.v.) movement and the efforts of the government of Kemal Atatürk in Turkey to put the Qur'ān into Latin script, aiming to publish only the Latin transcription without further publication of the Arabic Qur'ān text (see ARABIC SCRIPT; CALLIGRAPHY).

Both existing branches of the Aḥmadiyya movement valued above all spreading the Qur'ān in European languages (such as English, Dutch, and German). There is therefore an unmistakably rationalistic tendency in the older Aḥmadiyya translations (Maulvi Muhammad ʿAli, 1917). Thus, for example, in the English version of 1920 (a text identical to the London first edition of 1917), the word *naml*, "ants," appears in Q 27 as the description of a clan and "by hudhud is not to be understood the *lapwing*, but a person of that name" (see ANIMAL LIFE; NATURE AS SIGNS). The explanatory statement that follows says: "The verses that follow show clearly that Solomon (q.v.) was speaking of one of his own officers: the infliction of severe punishment on a small bird by such a mighty monarch as Solomon, and the exposition of the great religious doctrine of Unity by the lapwing, are quite incomprehensible" (p. 747, n. 1849). A comprehensive study of the different Aḥmadiyya translations is lacking. The debate over the Qur'ān in the Turkish Republic led to important discussions in al-Azhar, and in its journal these debates coalesced into multiple, significant essays (cf. Paret/Pearson, Translations, 429f.). In an essay from the year 1936, the later Rector of al-Azhar, Maḥmūd Shaltūt (1893-1963), expressly embraced the use of translation for non-Arabs, arguing that even translations contain the meaning of

God's word (see SPEECH; WORD OF GOD).

In contrast, the British author and convert, Marmaduke Pickthall (1875-1936), took a considerably more conservative position. In 1930, he published a translation of the Qur'ān bearing the title *The meaning of the glorious Koran,* "the first English translation of the Koran by an Englishman who is a Muslim" (p. vii). In the foreword, he wrote: "The Koran cannot be translated. That is the belief of old-fashioned Sheykhs and the view of the present writer. The Book is here rendered almost literally and every effort has been made to choose befitting language. But the result is not the Glorious Koran, that inimitable symphony, the very sounds of which move men to tears and ecstasy. It is only an attempt to present the meaning of the Koran — and peradventure something of the charm — in English. It can never take the place of the Koran in Arabic, nor is it meant to do so" (ibid.). Pickthall's translation, which contains exceedingly few annotations, had enormous success among Muslims and continues to be reprinted today (for example, in Istanbul, 1996f.). Another prominent convert was the Austrian journalist and, later, acting diplomat for Pakistan, Leopold Weiss (1900-92), who took the name Muhammad Asad after his conversion in 1926. He published an English translation of the Qur'ān in Gibraltar in 1980.

Four years after Pickthall (1934), a further translation appeared, which is still common today. It stems from the Indian scholar ʿAbdallāh Yūsuf ʿAlī (1872-1951) and is explicitly a response to Pickthall's work. In its introduction, "Translations of the Qur-an," ʿAlī writes of Pickthall's translation, that it is " 'almost litteral': it can hardly be expected that it can give an adequate idea of a Book which (in his own words) can be described as 'that inimitable symphony, the very sounds of which move men to tears and ecstasy.' Perhaps the attempt to catch something of that symphony in another language is impossible. Greatly daring, I have made that attempt." In the numerous notes to his bilingual edition (the Arabic text in calligraphy by Pir ʿAbdul Ḥamīd), ʿAlī strives for a contemporary exegesis that seeks primarily to answer the question: "What guidance can we draw for ourselves from the message of God?"

After the Second World War, intensified efforts to make the Qur'ān accessible in as many languages as possible can be discerned — always with the theologically motivated condition that the main concern be with translating, i.e. explaining, the meaning of the Qur'ān. Henceforth, translations by Muslims outnumber those by non-Muslims. In the English language, numerous new translations were published; notable are the translations by Abdul Majid Daryabadi (Lahore 1957) and, that favored by the Aḥmadiyya movement, the translation of Muhammad Zafrullah Khan (first published in London, 1971), both of which contain detailed commentaries. The first American translation derives from T.B. Irving (Vermont 1985). In 1959, the scholar Muhammad Hamidullah (1908-2002), who came from Haydarabad in India, published an excellent French translation. This edition underwent more than twelve editions and was also translated into Turkish. Preceding the translation itself is an extremely valuable survey of earlier Qur'ān translations. In 1972, Sheikh Si Hamza Boubakeur published a French translation with detailed commentaries based on traditional sources; it is particularly popular among north African migrants. In Germany, several translations by Muslims first appeared in the 1990's, independently from one another.

The increasing number of Muslim immigrants from various Islamic countries

has been of great importance in different European countries. Because of this phenomenon, the task of translating the Qur'ān into the languages of their new host countries was set before Muslims themselves. At the same time, intensified Islamic missionary efforts are discernible worldwide, particularly in African countries south of the Sahara. In this context, the "King Fahd Complex for the Printing of the Holy Qur'ān" (Ar. *Mujamma' al-Malik Fahd li-ṭibā'at al-Qur'ān al-karīm;* founded 1982, opened 1984; www.qurancomplex.org) in Medina acquires a very specific importance. The ultimate goal of this institution is to make the Arabic text of the Qur'ān, together with "the translation of the meaning of the Qur'ān," freely accessible worldwide. Presently, translations in 44 different languages (23 Asian, 11 African, and 10 European) are available. All of these editions, produced with an excellent quality of typographic technique and binding, are bilingual, and some even have additional, relatively extensive commentaries. In the meantime, however, editions not containing the Arabic text have also appeared.

Qur'ān translations outside the Islamic world until circa 1700

In the Middle Ages and in pre-modern times, translations of the Qur'ān by non-Muslims initially originated from the polemical conflict with Islam (see POLEMIC AND POLEMICAL LANGUAGE; APOLOGY). A complete translation of the Qur'ān into Greek is not preserved. Remnants of this translation can, however, be found in polemical works by Byzantine theologians such as Niketas of Byzantium (third/ninth century; cf. Versteegh, *Greek translations*). References to a possible Syriac translation of the Qur'ān can be found in the west Syrian theologian Barṣalībī's (d. 565/1170; cf. Mingana, Ancient Syriac translation) polemical tract against Jews, Nestorians, and Muslims (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). The complete Qur'ān was repeatedly translated into Latin; however, only two of these translations were also printed, namely that by Robert of Ketton (1142/43, printed in Basel, 1534) and that by Ludovico Marracci (printed together with the Arabic text in Padua, 1698; the Latin text only in Leipzig, 1721, published by Christian Reineccius). The oldest complete Latin translation of the Qur'ān was produced in Spain in the years 1142/43, at the instigation of the Abbot of Cluny, Peter the Venerable (1092-1156). The translator was the English scholar Robert of Ketton (Robertus Ketenensis, or Robert of Chester, Robertus Cestrensis; exact lifespan unknown), who availed himself of the assistance of a native "Moorish" speaker named Muḥammad. This translation, together with several non-qur'ānic Islamic texts, found a remarkable circulation in Europe, possibly because of its association with Cluny. The quality of this translation, however, was sharply criticized as early as the fifteenth and sixteenth centuries, and by none other than Juan of Segovia in the Prologue to his own translation (see below), Martin Luther (1483-1564) in his German adaptation of Ricoldo's *Contra legem Sarracenorum* (1542), as well as, eventually, by Justus Joseph Scaliger (1540-1609; cf. Bobzin, Reformation, 38 n. 127). Above all, the typical qur'ānic first-person speech of God is completely obscured by merely referential paraphrase. Nevertheless, this translation had great influence well into the seventeenth century, because of its printing in 1543 as a reference work. Incidentally, the first completely preserved translation into the Italian vernacular was based upon this version (see below).

A second complete Latin translation belongs in the realm of the polemical conflict

with the doctrine of the Almohads (al-Muwaḥḥidūn, r. in north Africa and Spain in the sixth-seventh/twelfth-thirteenth cents.). Supported by the Archbishop Don Rodrigo Jiménez de Rada (ca. 1170-1247), Mark of Toledo (Canon Marcus of Toledo, exact lifespan unknown) produced a new, fairly literal translation, apparently in total ignorance of the earlier work by Robert of Ketton. This translation, however, was not widespread outside of Spain (cf. d'Alverny and Vajda, *Marc de Tolède*).

A third Latin translation was produced by John of Segovia (Juan de Segovia; ca. 1398-1458); it was, however, basically just an accessory to an old-Castilian Qur'ān translation, which he composed between 1454 and 1456 in the Monastery of Aiton in Savoy, together with the Muslim scholar ʿĪsā dhā Jābir (alias Yçā Gidelli). Both translations have been lost, with the exception of the Latin prologue (cf. Gázquez, Prólogo). A fourth Latin translation was produced by Johannes Gabriel Terrolensis (exact lifespan unknown) for the Roman curial cardinal Aegidius of Viterbo (Egidio da Viterbo; 1470-1532). What is valuable about this work, available in two recensions, is a column of notes, based on the Muslim exegesis of the Qur'ān (cf. Burman, *Latin-Arabic Qur'ān edition*), next to the Latin transcription of the Arabic text. Another Latin translation, of which two manuscripts are known, is attributed to the Byzantine patriarch Kyrillos Lukaris (1572-1638). Two manuscript recensions also remain of the translation of the Franciscan, Dominicus Germanus de Silesia (1588-1670; cf. Devic, *Traduction inédite*).

The translation by the Italian Fr. Ludovico Marracci (1612-1700), which appeared in 1698, ushered in an entirely new era. For his translation, Marracci was able to rely on the collection of Arabic manuscripts belonging to the Bibliotheca Vaticana, which was rather substantial for the time (cf. Nallino, *Fonti arabe*). In it, he found the most important Islamic commentaries to the Qur'ān, which he used extensively for his translation and from which he had numerous excerpts printed in Arabic with a Latin translation. Because of its accuracy, Marracci's translation can be used profitably to this day. Of Marracci's Qur'ān edition, Edward Denison Ross quite rightly says: "It represents a most remarkable feat of scholarship, greatly in advance of most Orientalism of the period" (Ross, *Marracci*, 118).

Like the printed Latin precursor translation, Marracci's translation was also used as a template, that is, as a reference work, for further translations into the vernacular. The German translation by the Nuremberg pastor, David Nerreter (1649-1726), refers directly and explicitly to Marracci's text. Nerreter revised *Pansebeia* (1653), the work in comparative religion, by the Scottish author Alexander Ross (1590-1654), and contributed his own extensive volume about Islam, titled *Neu eröffnete Mahometanische Moschea* (Nuremberg, 1703). After a general description of Islam based on the sources known at the time, the German text of the Qur'ān followed in a second tract, translated according to Marracci's Latin version. Nerreter's work is still fully immersed in the tradition of anti-Islamic polemics of the previous century; he translates the Qur'ān in order that every individual can see for themselves the "corruptive teachings of Mohammad" (schädliche Lehre Mohammeds). Nerreter's work, chronologically the third German translation of the Qur'ān, had no noteworthy repercussions. The first Hungarian translation of the Qur'ān (1831), by Imre Buzitai Szedlmayer and György Gedeon (born 1831), is also based on Marracci's translation.

The oldest complete translation into a

European vernacular, namely the Italian, is in the Qur'ān edition issued by the Venetian publisher Andrea Arrivabene in 1547. Although the title asserts that the Qur'ān was "newly translated from the Arabic," the translation is actually based exclusively on the 1543 Latin Qur'ān by Theodor Bibliander, as noted by the two great Leiden philologists, Justus Joseph Scaliger and Thomas Erpenius (1584-1624). Arrivabene divides his Qur'ān edition into three books, with the text of the Qur'ān being contained only in the second and third books. The first book contains three treatises, *Chronica mendosa et ridiculosa Sarracenorum, De generatione Mahumet et nutritura eius,* as well as *Doctrina Machumeti,* which were published alongside a translation of the Qur'ān in the "Corpus Toletanum" (cf. Bobzin, Reformation, 264f.). The first German translation of the Qur'ān, by the then-pastor of Nuremberg, Salomon Schweigger (1551-1622), is based on Arrivabene's edition. In the foreword to the book, which first appeared in 1616, he wrote that he had come to know of Arrivabene's translation of the Qur'ān during his travels as a missionary preacher to Istanbul in Turkey (1578-61). Schweigger's edition is entirely dependent upon Arrivabene's in its composition and, astonishingly, lacks any acknowledgement of the Latin edition of the Qur'ān by Bibliander. In the year 1659, an edition of Schweigger's works, with a substantially expanded commentary section, appeared in Nuremberg in the prominent printing office of Endters', without, however, naming Schweigger as the translator (reprinted 1664). The first Dutch translation of the Qur'ān, printed in 1641, also goes back to Schweigger's text, whose name appears as "Swigger" on the title page; the name of the Dutch translator is unknown and the place of publication given there ("Hamburg") is false.

The oldest French translation (Paris 1647) comes from André du Ryer, "Sieur de la Garde Malezair" (d. 1672). Supported by the French diplomat, François Savary de Bréves (d. 1618), du Ryer studied Turkish, Arabic and possibly also Persian from 1616-21 in Egypt. His path as a diplomat led him first to an appointment as vice-consul to Alexandria and Cairo, and then, as interpreter and ambassador, to Istanbul. He published one of the first studies of Turkish grammar (1630; 1633) and translated one of the most famous works of Persian literature, the "Flower garden" *(Gulistān),* by Saʿdī, into French (1634). Du Ryer's translation of the Qur'ān is the oldest complete translation of the Qur'ān into a European vernacular and became an unparalled literary success, to which reprints in France and even more numerous reprints in the Netherlands during the seventeenth and eighteenth centuries testify. The easy availability of the Qur'ān accompanied a newfound interest in the Orient; additionally, du Ryer's translation lacked the polemical tone of previous editions, an orientation which arose mainly in ecclesiastical contexts. Du Ryer used Islamic commentaries such as al-Bayḍāwī's *Anwār al-tanzīl,* the *Tafsīr al-Ǧalālayn* by al-Maḥallī (d. 864/1459) and al-Suyūṭī (d. 911/1505), or an excerpt from al-Rāzī's (d. 606/1210) great commentary made by al-Rāghī l-Tūnisī (d. 715/1315) entitled *al-Tanwīr fī l-tafsīr,* quite casually in his translation, merely noting them in the margins. The deprecatory tone present in the introductory chapter, "Sommaire de la religion des Turcs," can be understood as an attempt at camouflage (cf. Hamilton and Richard, *André du Ryer,* 94f.). The success of du Ryer's translation, despite its philological shortcomings, which were already recognized by his contemporaries, rests on its use as a basis for the production of further translations.

Already two years after the first French edition, in 1649, the Scottish author Alexander Ross, previously mentioned in connection with Marracci and Nerreter, published an English translation, whose author is unknown. Ross prefaced his translation with a very traditional view of Muḥammad's life and an extensive presentation of Islam. That problems with censorship existed is evidenced by the subtitle: *With a Needful Caveat, or Admonition, for them who desire to know what use may be made of, or if there be danger in Reading the Alcoran*. The success of the book arose from the fact that it was reissued in the year of its initial publication, 1649, as well as in 1688. Eventually, the translation was incorporated as a fourth volume in *The Compleat History of the Turks from the Origin in the Year 755 to the Year 1718,* by David Jones (London 1718). It appears, without mention of Ross's name, after the biography of Muḥammad titled *The True Nature of Imposture fully Display'd in the Life of Mahomet,* by Humphrey Prideux (1648-1724). It is of particular interest to note that the first translation printed and published in America was that published by Ross (Springfield 1806), not the translation by Sale (see below), which, at the time, had already completely displaced Ross's work in Britain.

The second language into which du Ryer's Qur'ān was translated was Dutch. The Mennonite Jan Hendricksz. Glazemaker (d. 1682) worked as a professional translator of Latin, French, German, and Italian; the list of works he translated (among them, works by Descartes and Spinoza) is impressive. His Qur'ān translation is "an elegant piece of prose which was obviously intended for a public more interested in literature than in the theological study of Islam" (Hamilton and Richard, *André du Ryer,* 115). Glazemaker's Dutch translation appeared first in Amsterdam in 1658. The translation was printed together with a life of Muḥammad from Thomas Erpenius's Latin translation of the *Historia Saracenica* by the Coptic historian al-Makīn (Jirjis b. al-ʿAmīd, d. ca. 1273), as well as with excerpts from the works of various ecclesiastical authors who wrote about Muḥammad (cf. Hamilton and Richard, *André du Ryer,* 115f.). Furthermore, a text about Muḥammad's ascension (q.v.) to heaven, as well as a version of the so-called *Masāʾil ʿAbdallāh b. Salām* (cf. Bobzin, Reformation, p. 334, n. 310 and 312), which had already appeared in the earlier Toledo collection, was added. Glazemaker's translation of the Qur'ān was extraordinarily successful and a total of six reprints were issued up to 1734. Glazemaker based the second German translation of the Qur'ān upon the Dutch translation. It appeared, however, not as an independent work, but rather as part of the collected edition *Thesaurus Exoticorum* (Hamburg 1688), published by the late-baroque professional writer Eberhard Werner Happel (1647-90). In this version, the Qur'ān was embedded in the framework of an all-encompassing cosmographic presentation, in which the "Asiatic, African and American nations" were presented. In this extensive encyclopedic volume, the translation of the Qur'ān follows a detailed illustrated description of the Ottoman empire. Yet, the impact of du Ryer's translation does not end with the third German translation, but with two Russian translations of the French edition. The first appeared at the command of czar Peter the Great in 1716 in St. Petersburg; the translator was Petr Vasilyevic Pos(t)nikov. This translation contains numerous misinterpretations. The second translation, penned by the litterateur Mikhail Ivanovic Verevkin (1733-95), appeared in 1790, shortly after the first Arabic edition of the Qur'ān, which was printed in St. Petersburg in 1787 at the

behest of the empress Catherine II (cf. Hamilton and Richard, *André du Ryer,* 117f.).

18th century translations outside the Islamic world

In contrast to all previously presented Christian translations, the history of the impact of the translation done by the English jurist and Orientalist George Sale (d. 1736) endures until today. According to J. Fück, "through a somewhat prosaic neatness, it illustrates that what matters is to reflect the contents of the work clearly and effectively" ("zeichnet sie sich durch eine etwas nüchterne Sauberkeit aus, welcher es nur darauf ankommt, den Inhalt des Werkes klar und deutlich wiederzugeben," Fück, *Studien,* 104). In his discussion of Marracci's translation, Sale writes, "This translation… is very exact; but adheres to the Arabic idiom too literally to be easily understood." Undoubtedly, Sale's own translation is based on the Arabic text, for the interpretation of which Sale regularly drew on the commentary by al-Bayḍāwī. But he continuously looked at Marracci's interpretation of the text and used Marracci's work copiously in his extensive notes: "So much had been achieved by Marracci that Sale's work might also have been performed with a knowledge of Latin alone, as far as regards the quotations from Arabic sources" (E.D. Ross in the foreword to his edition of Sale, ix). Of particular significance, however, is the detailed "Preliminary Discourse"; herein Sale gives a detailed description of the history and religion of the pre-Islamic Arabs, supporting himself above all with the *Specimen Historia Arabum,* by Edward Pococke (1604-91), which appeared in 1650. To this, he adds a general introduction to the Qur'ān, as well as an overview of the most important Islamic sects. Sale's translation had extraordinary success. In the eighteenth century itself four additional editions appeared, and in the nineteenth, well over 60. This translation is still on the market. Since 1825, editions preceded by a "sketch of the life of George Sale," penned by Richard Alfred Davenport (d. 1852) are available, with expanded notes based on translations such as the French translation by Savary (see below). In 1882-6, Elwood Morris Wherry (d. 1927) republished the work under the title *A comprehensive commentary on the Quran* without adding anything essentially new to the edition. Additionally worth noting is the edition of 1921, to which the British Orientalist Edward Denison Ross contributed an insightful introduction, pointing out the manner in which Sale was indebted to Marracci's work (see above).

The fourth German translation is based on Sale's translation. It was composed by Theodor Arnold (1683-1761), an English teacher who also composed a widely used study of English grammar (Leipzig 1736) and translated numerous English works into German, among them Ockley's *History of the Saracens*. Arnold's German translation appeared in Lemgo in 1764. Although not widely circulated, Goethe used it for his *West-östlichen Divan* and its accompanying *Noten und Abhandlungen*. Furthermore, the third Russian translation of the Qur'ān (St. Petersburg 1792) goes back to Sale's text by way of Alexej Vasiljevic Kolmakov, as does the first Hungarian (1854) translation, by way of Istvan Szokoly (1822-1904).

The first German translation produced directly from the Arabic was published in 1772 by the Frankfurt scholar David Friederich Megerlin (1699-1778). From the fact that an etching of "Mohammad, the false Prophet," faces the title page, one can infer that Megerlin remained entirely attached to the traditional Christian polemic against Islam. With respect to this translation, Goethe spoke of an "elende Produktion" (wretched production). Only

one year later (1773), a further translation directly from the Arabic appeared. It was composed by the Quedlinburg clergyman Friedrich Eberhard Boysen (d. 1800). A contemporary reviewer criticized the translation for its tendency to paraphrase improperly. In 1775, a second print run was issued. In 1828, a revision that attempted to rebut the scathing critique by the most important German Arabic scholar of the time, Fleischer (1801-88), was issued by the Orientalist Samuel Friedrich Günther Wahl (1760-1834), who, at the time, was teaching in Halle/Saale.

Claude Etienne Savary (1750-88) produced a new French translation in 1783. It originated during an extended stay in Egypt (cf. *Lettres sur l'Egypte*), quasi "sous les yeux des Arabes," as Savary wrote in the foreword. Consequently, Savary can be viewed as the first translator of the Qurʾān who had a feel "for the perfection of the style and the grandeur of the imagery" (für die Perfektion des Stils und die Großartigkeit der Bilder) of the Qurʾān. For this reason, he can rightly characterize du Ryer's translation as a mere "rhapsodie plate et ennuyeuse;… en lisant sa traduction, on ne s'imagerinait jamais que le Koran est le chef-d'oeuvre de la langue arabe." Accordingly, in his translation, Savary tried to preserve precisely the linguistic character of the Qurʾān's style: "To the extent of my abilities, I have imitated the concision, energy and grandeur of its style" ("J'ai imité autant qu'il a dépendu de moi la concision, l'énergie, l'élévation de son style"). Above all, a certain stylistic obscurity should not be smoothed out in the translation. Savary preceded his translation with a "life of Muḥammad," compiled from different Arabic authors. The notes to the text are rather sparse, although nevertheless substantive; they were later incorporated into a part of Sale's editions. Savary's translation, of which there are a total of seventeen different editions, is still read to this day and is still on the market. Incidentally, Savary was the first to give up the until-then common European usage of "Alkoran" (Alcoranus) in favor of "Koran." The Spanish translations by Joaquin Garcia-Bravo (1907) and A. Hernandez Cata (1913), as well as an anonymous Italian translation (1882), draw on Savary's text.

19th century translations outside the Islamic world

A further translation of the Qurʾān, likewise still available today, was produced by Albin de Biberstein Kazimirski (d. 1887), a Polish immigrant to France. He was a student of Silvestre de Sacy (d. 1838) and worked as an interpreter of Arabic and Persian. Kazimirski's translation first appeared in 1840, as part of the three-volume collection entitled *Les livres sacrés de l'Orient,* published by the Sinologist Jean Pierre Guillaume Pauthier (d. 1873), which also contained translations of the *Shi Kīng* and the laws of the *Manu*. This juxtaposition is significant in the history of ideas in that the Qurʾān was thereby placed on an entirely new plane of understanding, as the document of a world religion, that is, of an independent culture. In the same year (1840), a separate edition, which was frequently reprinted, appeared. The translation was certified as preserving "the poetic vapor of numerous passages of the Qurʾān" ("le soufflé poétique de nombreux passages du Coran," G.C. Anawati). Another testament to its quality is certainly the fact that scholars such as G.H. Bousquet (1959), Mohammed Arkoun (1970), and Maxime Rodison (1981) reissued the translation, adding a new introduction each time. The Spanish editions by Jose Garber de Robles (1844) and Vicente Ortiz de la Puebla (1872), as well as the Russian translation by K. Nikolajev (1864),

are all based on Kazimirski's translation. In addition to further translations from other languages, Kazimirski's constitutes the basis for the two Dutch translations by L.J.A. Tollens (1859) and Salome Keijzer (1860).

A German translation was put out in 1840 as well, by the Rabbi Lion (Ludwig) Baruch Ullmann of Krefeld (d. 1843). Ullmann was inspired in his work by the dissertation of the important Jewish scholar Abraham Geiger (1810-74), *Was hat Mohammed aus dem Judenthume aufgenommen?* (Bonn 1833), and emphasized in the preface to his translation his conviction that "what this translation will have above and beyond all others is the exact observation and documentation of everything that Muḥammad borrowed from Judaism" ("Was diese Übersetzung vor anderen voraushaben wird, ist die genaue Beachtung und Nachweisung alles dessen, was Muhamed aus dem Judenthum entlehnt hat"). Although this translation was sharply criticized for its philological shortcomings by such important scholars of Arabic as H.L. Fleischer (1801-88) and Th. Nöldeke (1836-1930), a ninth edition was issued in 1897. A revision (1959) by Leo Winter did nothing to improve the quality of the translation; nevertheless, this edition, though linguistically deficient, remains widely popular in Germany to this day.

A few years before Ullmann, the German poet and Orientalist Friedrich Rückert (d. 1866), using the newly published Arabic edition of the Qurʾān by Gustav Flügel as his basis, attempted a poetic rendition of the Qurʾān that simultaneously observed the philological standards of the time, but not in the form of a complete translation. Rückert's work was first published after his death. Annemarie Schimmel wrote of the translation, "Rückert spürte mit dichterischem Instinkt die poetische Kraft und Schönheit weiter Parteien des Textes und suchte sie so wiederzugeben, daß der Originalcharakter- sei er stärker poetisch oder prosaisch- gewahrt blieb" (Rückert felt with a poet's instinct the poetic power and beauty of sections of the text and attempted to render them in such a manner that the original character- whether strongly poetic or prosaic- remained preserved).

The first Swedish translation of the Qurʾān stems from the linguist and diplomat J. Fredrik S. Crusenstolpe (1801-82) and appeared together with a historical introduction in 1843. It was followed in 1874 by the translation by Carl Johan Tornberg (1807-77), a student of de Sacy, who had been teaching Orientalism in Lund since 1847. Tornberg prefaced this with a Swedish translation of Nöldeke's *Das Leben Muhammeds* (Hannover 1863).

The first Italian translation of the Qurʾān directly from the Arabic is by Cavaliere Vincenzo Calza (1847). The first Polish edition of the Qurʾān was published by Jan Murza Tarak Buczacki, together with a *Life of Mahomet* (London 1849/50) by Washington Irving (d. 1859), information about various aspects of the relationship between Poland and the Turks and Tartars, and about the pre-Islamic Arabs and the Qurʾān (from Sale's "Preliminary Discourse"). Eventually, a few of the prayers, translated from the Arabic, were added. This edition was reprinted in 1985 and 1988.

The 1857 Hebrew translation by the Jewish scholar Hermann (i.e. Zvi Chajjim) Reckendorf (d. ca. 1875) is noteworthy; additionally, it even contains three essays about the pre-Islamic Arabs, the life of Muḥammed, as well as about the Qurʾān. Yosef Yoel Rivlin made another Hebrew translation (1937), which is still viewed as the most popular such translation; several editions have been published over the years. Aaron Ben Shemesh published a

third Hebrew translation in 1971. To this list should be added the 2005 Hebrew translation by Uri Rubin.

In 1861, a new English translation of the Qur'ān by the clergyman John Meadows Rodwell (d. 1900), who was an old friend of Darwin's, appeared. It is unusual in that, for the first time in a translation of the Qur'ān, the sūras were arranged by taking into consideration their chronological order. Rodwell could resort to the prior works of Gustav Weil (*Mohammed der Prophet*, Stuttgart 1843), William Muir (*The life of Mahomet*, London 1858f.), and Theodore Nöldeke, *GQ* (first ed. 1860); he nevertheless followed his own ideas about arrangement, compiling the older sūras according to thematic considerations rather than historical allusion. Particularly noteworthy is Rodwell's perception of the significance of the originally oral character of the Qur'ān: "Of all the Suras it must be remarked that they were intended not for *readers* but for *hearers*- that they were all promulgated by public recital- and that much was left, as the imperfect sentences shew, to the manner and suggestive action of the reciter" (Preface). G. Margoliouth, who revised the translation for the "Everyman's Library" in 1909, characterized it in his introduction as "one of the best that have as yet been produced. It seems to a great extent to carry with it the atmosphere in which Muhammed lived, and its sentences are imbued with the flavour of the east." In 1875, the first Spanish translation from the Arabic prepared by a Christian, Benigno de Murguiondo y Ugartondo, appeared. Like the translation by Marracci, it included an extensive refutation on the basis of the doctrine of the Catholic church. This is amply expressed by the title. Three years later (1878), the first modern Greek translation, by Gerasimos I. Pentakes, appeared; by 1887, three further editions had been published.

The first Russian translation of the Qur'ān from the Arabic (first appearance 1877/9) was prepared by the Orientalist Gordij Semjonovic Sablukov (d. 1880) from Kazan on the basis of the so-called Petersburg Qur'ān (1787; see above; see also PRINTING OF THE QUR'ĀN). As of the third edition (1907), the Arabic text, set in the Kazan Arabic typeface, was printed on the opposing page. Reprints of this edition still appeared after the second World War, but without exact dates of publication.

To produce the Qur'ān translation for the well-known series, Sacred Books of the East, the publisher, F. Max Müller (d. 1900), engaged the services of the Cambridge Orientalist Edward Henry Palmer (d. 1882), who completed the task in a short period of time. The two sections appeared in 1880 as the sixth and ninth volumes in the series. Palmer added a historical introduction (pp. ix-lxxx), as well as an "Abstract of the contents of the Qur'an" (pp. lxxxi-cxviii), to the book. The short period of time allowed for completion of the translation led to what Stanley Lane-Poole (1854-1931) described as "the grave fault of immaturity." H.A.R. Gibb (1895-1971) judged the translation to be "rather literal and inadequate." Nevertheless, Palmer's translation was reissued numerous times and, as of 1928, was even incorporated into the renowned serial "World's Classics," with the addition of an "Introduction" by Reynold Alleyne Nicholson (1868-1945).

Two years later (1882), the first Portuguese translation appeared in Rio de Janeiro. A translator is not named.

20th century translations beyond the Islamic world

Progress in Arabic philology in the nineteenth century initially had hardly any effect on the translation of the Qur'ān. In the festschrift for Theodor Nöldeke

(Bezold, *Orientalische Studien,* i, 34 n. 1), the German Arabist August Fischer wrote, "daß unter allen vorhandenen, vollständigen wie partiellen, Qoran-Übertragungen keine einzige strengen philologischen Anforderungen genügt" (of all the Qur'ān translations available, whether complete or partial, not a single one satisfies the stringent standards of philology). This statement makes clear that philologically weak translations could still be exceedingly successful, even in the twentieth century. A good example of this is the German translation by Max Henning (d. 1927), who was certainly not an Arabist. This version first appeared in 1901 as a volume in the popular and highly circulated "Universal-Bibliothek," published by Ph. Reclam in Leipzig. In 1960, this edition was republished in the West German branch of Reclam in Stuttgart, slightly revised by Annemarie Schimmel (d. 2003). In 1968, another revision of this translation was published by the Leipzig historian of religion, Kurt Rudolf, in the East German branch of Reclam in Leipzig. This version distinguished itself through its particularly meticulous and comprehensive commentary. Henning's translation is easy to read but philologically unreliable; it is noteworthy that it was republished by Turkish authorities for migrants from Turkey. The translation experienced a last, considerably more incisive revision by the Muslim convert Murad Wilfried Hofmann (first published in Istanbul, 1998).

More decisive philological advances than those made by Henning's translation are present in three other translations, which are still reissued to this day, although with partially new introductions. These are the Swedish translation (1917; expanded reprint 1971 and more recently) by Karl Vilhelm Zetterstéen (1866-1953), the Italian translation (1929; numerous reprints) by Luigi Bonelli (1865-1947), and the French translation (1929; expanded reprint 1998) by Edouard Montet (1865-1934). Three other translations stand out because of enduring scholarly qualities: the English version by Richard Bell, the French version by Régis Blachère, and the German version by Rudi Paret.

Rodwell was the first translator of the Qur'ān to arrange the sūras (q.v.) according to chronological principles (see CHRONOLOGY AND THE QUR'ĀN). The Scottish Arabist Richard Bell (1876-1952) went one step further down this path. Although he held to the traditional order of the sūras in his translation of the Qur'ān (1937-9), in the sūras themselves, he followed a "re-arrangement" according to the origin of the individual components of the sūras. Underlying this is a concept of "three main periods" of the composition of the Qur'ān (Bell, *Qur'ān,* i, vii), as explained in the preface: "(a) an early period from which only fragments survive consisting mainly of lists of 'signs' and exhortations to the worship of Allah; (b) the Qur'an period, covering the latter part of Muhammad's activity in Mecca (q.v.), and the first year or two of his residence in Medina (q.v.), during which he is producing a Qur'an giving in Arabic the gist of previous revelation; (c) the Book-period, beginning somewhere about the end of the year II, during which Muhammad is definitively producing a Book, i.e. an independent revelation." In his translation, these composition processes are also visualized within the individual sūras. Even if one cannot follow Bell's analysis in all its points, his very exacting translation is an asset to the historical understanding of the text of the Qur'ān. No other researcher of the Qur'ān put as much thought into the inner coherence of the sūras as did Bell (see FORM AND STRUCTURE OF THE QUR'ĀN; UNITY OF THE TEXT OF THE QUR'ĀN;

TEXTUAL CRITICISM AND THE QUR'ĀN). The many notes and explanatory statements which Bell produced were mostly left out of the printed version. In 1991, two volumes of Bell's *Commentary on the Qur'ān* drawn from materials left in his estate (admittedly in unsatisfactory typographical form) were published by C.E. Bosworth and M.E.J. Richardson.

In 1947-9, the French Arabist Régis Blachère (1900-73) brought forth a three-volume introduction to the Qur'ān *(Introduction au Coran)*, as well as a new translation of the Qur'ān itself, in which the sūras (similarly to Rodwell's edition) were presented in the order Nöldeke had suggested, with only slightly modified chronological changes. Blachère's translation is, as far as I know, the first scholarly translation of the Qur'ān that uses the Cairene Qur'ān text of 1342/1923 as its foundation. Furthermore, Blachère's careful and exacting translation is notable for its continuous observance of important ways of reading the Qur'ān (see READINGS OF THE QUR'ĀN), which every now and again lead to translations that depart from the traditional perception of the text. The two extensive commentaries by al-Ṭabarī (d. 310/923) and al-Rāzī are constantly taken into account, as well as those by al-Bayḍāwī and al-Nasafī (d. 710/1310; *Madārik al-tanzīl wa-ḥaqā'iq al-ta'wīl*), although only for grammatical issues. In 1957, a revised edition of the translation appeared which, however, followed the traditional arrangement of the sūras.

Already in 1935, Rudi Paret (d. 1983) had published his "Plan einer neuen, leicht kommentierten wissenschaftlichen Koranübersetzung." In this article, Paret developed his concept of a historically grounded translation, the main purpose of which should be to "render the text in the same manner as contemporaries heard it from the Prophet's mouth" ("daß sieden Wortlaut so wiedergibt, wie ihn die Zeitgenossen aus dem Munde des Propheten gehört haben," Paret, *Übersetzung,* 1). Therefore, the Arabic commentaries, "which are full of later, ahistorical interpretations of the text" ("die voll sind von späteren, unhistorischen Auslegungen des Textes," Paret, Plan, 122), are to be used only with great reservation. Instead, one must "seek the key to understanding difficult sections in the Qur'ān itself" ("im Koran selber den Schlüssel zum Verständnis schwieriger Stellen zu suchen"; ibid). Above all, Paret's translation, which appeared in 1962 after much preparatory work, is marked by these two principles which he implemented rigorously throughout. Addenda necessary to understanding the text, which presents "an effectively condensed historical commentary" ("gewissermaßen einen kondensierten historischen Kommentar"; ibid.), are parenthetically inserted into the text. In the relatively sparse critical apparatus, the literal translation is often given; aside from that, alternative translations are provided. The complementary volume *Kommentar und Konkordanz,* published in 1971, painstakingly and exhaustively lists parallels within the Qur'ān and gives historical explanations for selected sections. With regard to the style of the translation, Paret emphasizes that it is not intended "für erbauliche Zwecke" (for edifying purposes), and that he therefore did not aim for a lofty style ("gehobene Ausdrucksweise"). In a second edition (1982), Paret carried out a series of alterations, and, above all, occasionally considering alternative readings (such as that by Ibn Mas'ūd [d. 32/652-3]).

The German translation by Adel Theodor Khoury (1987) is entirely dependent on Paret's concept of the text, but with hardly any indication of alternative translation possibilities. Khoury published a twelve-volume commentary (1990-2001)

on the basis of this translation which, unfortunately, does not present a real step forward in historical and literary scholarship on the Qur'ān because it only selectively engaged contemporary research literature. In 2004, the same translator published a brief one-volume commentary with text and translation.

Paret's translation, of which, incidentally, reprints published in Iran are available (for example Qom 1378/2000), had a wide-reaching effect on the German-speaking world. Many of the translations into various European languages that have appeared since Paret's are unthinkable without the philologically pioneering work of his translation.

Among the numerous English translations, that by the Cambridge Arabist Arthur John Arberry (1901-69) holds a special place. The very title, *The Koran interpreted,* hints that Arberry follows the concept, first emphasized in the English-speaking world by Pickthall, that the Qur'ān is actually untranslatable. In noticeable contrast to Bell, Arberry intends "to imitate, however imperfectly, those rhetorical and rhythmical patterns which are the glory and the sublimity of the Koran," and beyond that, "to show each Sura as an artistic whole, its often incongruent parts constituting a rich and admirable pattern" (p. 25). Particularly among Muslims, Arberry's translation is held in special esteem because of its linguistic form. Also widely popular is the translation by N.J. Dawood that first appeared as a Penguin paperback (1956). Among the French translations, that by Denise Masson (Paris 1967) stems from the ambit of Louis Massignon and is indebted to a dialogical attitude towards Islam. In 1990, two new translations appeared simultaneously. With his very biblical language, André Chouraqui, who also translated the Bible, tried to emphasize the continuity of the three monotheistic religions. Jacques Berque is primarily concerned with rendering the Arabic text in a stylistically fitting linguistic manner, while at the same time providing scholarly justification for the translation. The aforementioned Italian translation by Bonelli has, since 1955, been joined by a very academically valuable work by Alessandro Bausani. Among the Spanish translations, both that by Juan Vernet (1963) and that by Julio Cortes (1980) deserve special notice. Of the academically significant translations into Slavic languages, the following two are noteworthy: the Russian edition by Ignatij Julianovic Krackovskij (1963) and the Czech edition by Ivan Hrbek (1972).

Tree(s)

A perennial woody plant with a main trunk. The *Lisān al-ʿArab* defines the term *shajar* as the "kind of plant that has a trunk or stem." In the Qurʾān, the denominative *shajara (nomen unitatis)* is the form used most frequently (nineteen times) to designate this concept. The nominal *shajar* is found generally in a collective sense of trees, bushes or plants; in two instances (Q 56:52; 36:80), however, it refers to specific trees, of which more below. For mention of other trees (date palm [q.v.], olive, etc.) see AGRICULTURE AND VEGETATION.

The contexts in which the collective sense of *shajar* appears depict the creative, supreme power of the one, unique deity (see CREATION; POWER AND IMPOTENCE). For example, "It is he who sends down water (q.v.) from the skies for you (see HEAVEN AND SKY; GRACE; BLESSING); from it is drink and from it is foliage *(shajar)* upon which you pasture [your beasts]" (Q 16:10; see SUSTENANCE; ANIMAL LIFE). The fol-

lowing verse mentions specific plants such as the olive tree, date palm, grape vine and many (unnamed) fruits, as portents for those who reflect upon God's creation. In two similar passages (Q 22:18; 55:6), all things in heaven and on earth prostrate before God (see BOWING AND PROSTRATION), including the sun (q.v.), moon (q.v.), stars (see PLANETS AND STARS), mountains, trees and beasts (see ANIMAL LIFE). Whereas God alone causes splendid orchards or gardens (see GARDEN) to spring forth, humans cannot produce (the seeds of) the trees (Q 27:60; see also Q 56:72). The ḥadīth collector Muslim (d. ca. 261/875) records a tradition in which God is said to have created trees on the third day, Monday, after the earth (q.v.) and the mountains (cf. Tibrīzī, *Mishcàt,* ii, 691-5 [chap. 7]).

One of the two instances of the nominal form referring to a particular tree is the "green tree" (*al-shajar al-akhḍar*, Q 36:80). Al-Zamakhsharī (d. 538/1144) explains this as one of the marvels of God's creation, the wood of such a tree containing the opposite qualities of fire (q.v.) and water. A proverb claims that "In every tree there is fire *(nār),* the best species being the *markh* and the *ʿafār*" (cf. Zamakhsharī, *Kashshāf,* ad Q 36:80). A green twig the size of a tooth stick *(siwāk)* cut from both trees, each of which secretes drops of water, would be rubbed together. Underlying the proverb is the notion of fertility since the male twig *(markh)* rubbed against the female twig (*ʿafār)* ignites fire with God's permission.

The second instance refers to *shajar min zaqqūm* (Q 56:52), a term that appears in two other verses as *shajarat al-zaqqūm* (Q 37:62; 44:43). Ibn Manẓūr (d. 711/1311-12) in the *Lisān* offers the explanation that, when Q 44:43-4, "Verily the tree of Zaqqūm is the food of sinners" (see SIN, MAJOR AND MINOR; FOOD AND DRINK; HELL AND HELLFIRE; REWARD AND PUNISHMENT), was revealed, the Quraysh (q.v.) did not understand what tree it referred to as it did not grow in the region. Abū Jahl enquired if anyone could identify it. A north African replied that in the dialect of Ifrīqiya it meant a dish of dates and fresh butter (*al-zubd bi-tamr;* the qurʾānic commentator al-Zamakhsharī attributes the food to the Yemenis). Abū Jahl ordered a plate of it for his companions and, having sampled it, they mockingly exclaimed, "Is this what Muḥammad has tried to scare us with in the hereafter?" God then revealed Q 37:62-5 in which the Zaqqūm is described as a tree that grows in the depths of hell, the fruits thereof being like the heads of devils or, according to al-Bayḍāwī (d. prob. 716/1316-17), like terrible serpents foul in aspect, having manes. In Q 56:52 the tree feeds the "companions of the left hand" (see LEFT HAND AND RIGHT HAND), unbelievers tormented in the afterlife who drink boiling water to quench their thirst (see HOT AND COLD). Hence, from being the food of the people of the fire, the word was extended to apply to any deadly food. Combining other lexicographical explanations, the tree might have been an import to the Middle East (possibly from India) known for its pungent odor or astringent and bitter qualities. The tree is alluded to in Q 17:60 as the "cursed tree in the Qurʾān." In this context al-Zamakhsharī presents a rejoinder to the unbelievers' scoffing scepticism that a tree that did not burn could possibly exist in hell. He cites the example of an animal's fur skin used by the Turks as a "table cloth." When it became dirty it was thrown onto the fire, the dirt vanished and the table cloth remained unaffected by the fire. The real purpose of the passage, he notes, is that God revealed it to frighten the Prophet's followers who feared the earthly punishment of death at the battle of Badr (q.v.). Among the multiple symbolic functions of trees in the world's religions, there is a notably infrequent occurrence of the tree as a direct

source of danger, or as an instrument of punishment. The tree of Zaqqūm is one such symbol which, as an integral part of God's creation, reflects the divine control over both destinies in the afterlife, hell as well as heaven. In the post-biblical *Book of Zohar,* the fruit of the tree of knowledge is said to have brought death to the whole world.

With the story of the forbidden tree in paradise (q.v.), the qurʾānic narrative falls well within the earlier biblical tradition, although with certain significant differences. The first reference occurs in Q 2:35 where God permits Adam and his wife to dwell in the garden (see ADAM AND EVE), saying, "Eat freely of its plenty wherever you wish, but do not go near this tree, or you will be wrongdoers." The tree is unidentified in this passage and al-Ṭabarī's (d. 310/923) sources suggest it referred to wheat or the vine, among others. Al-Ṭabarī himself concludes that God had indicated to them by name which tree he meant. In the next passage (Q 7:19-22), the tree is again unidentified. Iblīs (Satan), whom God had already expelled from the garden for his refusal to bow to Adam (see BOWING AND PROSTRATION; INSOLENCE AND OBSTINACY; ARROGANCE), secretly re-enters it and deceitfully *(bi-ghurūrin)* advises the pair of God's intention behind his prohibition. This was to prevent their becoming angels (see ANGEL) or one of the immortals (see ETERNITY). In Q 20:120 the tree is explicitly named. Here Iblīs (Satan) whispers (see WHISPER) to Adam, "Shall I lead you to the tree of immortality *(shajarat al-khuld)* and a kingdom that does not decay?" Satan's real purpose was to expose the couple to their own nakedness (of which they had previously been unaware) and shame in their disobedience (q.v.) of God (see NUDITY; FALL OF MAN). In his *History,* al-Ṭabarī presents several overlapping accounts of these events. In one, originating with Wahb b. Munabbih (d. ca. 110/728), the tree is described as having intertwining branches which bore fruit of which the angels ate in order to live eternally. Then, addressing Adam after his sin of disobedience, God says, "Neither in paradise nor on earth was there a tree more excellent than the acacia *(ṭalḥ)* and the lote-tree *(sidr),*" a pointed allusion to these mentioned in Q 56:28-9.

Lane says the denominative form *(sidra)* denotes a species of lote-tree called by Linnaeus *rhamnus spina Christi* and by Forskal *rhamnus nabeca,* its fruit known as *nabiq*. The (thornless) lote and acacia in the collective sense appear in Q 56:28-9 in a description of the day of judgment (see LAT JUDGMENT), where the companions on the right hand (of God), the faithful, dwell among the shade of the trees, gushing water and abundant fruit. The lote-tree *(nomen unitatis sidra)* is also mentioned in Q 53:14, 16, but here it is a unique tree, the *sidrat al-muntahā,* the lote tree of the furthermost boundary near the garden of refuge *(jannat al-maʾwā)*. Al-Zamakhsharī notes that here ends the knowledge of the angels and others and no one knows what lies beyond the tree, and that the spirits of the martyrs end here (see MARTYR). In the ḥadīth literature (see ḤADĪTH AND THE QURʾĀN), details from the two qurʾānic passages appear to be conflated. In one, the Prophet said, "In paradise there is a tree in whose shade a horseman would be able to ride for a hundred years." In another, also preserved in al-Tabrīzī's (fl. eighth/fourteenth cent.) *Mishkāt al-Maṣābīḥ* (Tibrīzī, *Mishcàt,* i, 24) as a citation from al-Bukhārī (d. 256/870) and Muslim (cf. Bukhārī, *Ṣaḥīḥ,* i, 306-7 [bk. 59, *K. Badʾ al-khalq,* 6]; Fr. trans. ii, 428-31; Muslim, *Ṣaḥīḥ,* i, 145-7, no. 259 [bk. 1, *K. al-Īmān,* 74]), the Prophet describes his night journey and ascension (q.v.) through the heavens where, in the seventh sphere (in another version, the sixth), he is taken

to the *sidrat al-muntahā*. Its fruits were as large as earthenware pots and its leaves like elephants' ears. His companion, the angel Gabriel (q.v.), tells him of the four rivers he witnessed; the two concealed which were in paradise and the two manifest which were the Nile and the Euphrates. As the *sidrat al-muntahā* figured in the ascension stories, it proved an attractive symbol in the Ṣūfī tradition (see ṢŪFISM AND THE QURʾĀN). For example, al-Tustarī (d. 283/896) links this qurʾānic passage about the celestial tree with the light of Muḥammad when it appeared before God a million years prior to creation. There was unveiled "the mystery by the Mystery Itself, at the Lote Tree of the Boundary, that is the tree at which the knowledge of everyone comes to an end" (Schimmel, *Muhammad,* 125; see INTELLECT; KNOWLEDGE AND LEARNING).

Historians of religion have seen in this account of the lote tree parallels with shamanic visions of the world-tree. N.R. Reat has argued that the most common name of the Islamic world-tree is taken from a ḥadīth in Ibn Ḥanbal's (d. 241/855) *Musnad*. To the question, "What is bliss *(ṭūbā)*?", the Prophet answered that it is a tree in paradise called *shajarat al-ṭūbā,* the like of which does not exist on earth. In the Shīʿī tradition (see SHĪʿISM AND THE QURʾĀN), Muḥammad Bāqir al-Majlisī's (d. 1110/1698) life of the Prophet contains several references to the same tree. Jesus (q.v.) inquired about it and was told by God that he had planted it himself; that its "trunk and branches are gold and its leaves beautiful garments. Its fruit resembles the breasts of virgins and is sweeter than honey and softer than butter and it is watered by the fountain of Tesneem" (Majlisī, *Life,* 92; see SPRINGS AND FOUNTAINS). Muḥammad, on his ascension journey, describes the tree as so immense that a bird could not fly around its trunk in seven hundred years; that its roots lay in ʿAlī's celestial palace (see ʿALĪ B. ABĪ ṬĀLIB; SHĪʿA) and "there was not a residence in that blessed world to which a branch of that tree did not extend." In this account, Gabriel tells Muḥammad that God has referred to the tree in Q 13:29: "Those who believe and do what is right (shall enjoy) bliss *(ṭūbā)* and a happy resurrection (q.v.)." It is clear from Majlisī's account, however, that *ṭūbā* was a tree distinct from the *sidrat al-muntahā,* lying beyond the former and "every leaf of which shaded a great sect." Al-Ṭabarī's sources are more equivocal in his discussion of Q 13:29. Some exegetes argue for the abstract notion of "bliss" or "bounty," while others claim it is a garden in Ethiopia or India or a tree in paradise, for which last meaning he provides lengthy discussion.

Of the remaining references to trees in the Qurʾān, the most notable occurs in the famous "Light Verse" (Q 24:35): "A blessed olive tree, of neither east nor west, whose oil gives light (q.v.), though fire (q.v.) touches it not," forming part of a simile of God (see SIMILES) as "the light of the heavens and earth." Prayer rugs may be designed with a niche, a lamp and a stylised tree appearing to feed it with its oil. Al-Zamakhsharī explains that the best olive tree with the purest oil grows in Syria and that the rising and setting sun should fall upon it, hence it is both of the "east and west."

Finally, in Q 14:24, 26, there occurs the parable (q.v.) of the good word which is like a good tree *(shajara ṭayyiba)* with firm roots and high branches while an evil word is like an evil tree *(shajara khabītha)* uprooted and unstable (see SPEECH; GOOD AND EVIL). Q 37:147 refers to Jonah (q.v.) and how he was cast up from the sea upon the shore and a gourd vine *(shajara min yaqṭīn)* was caused to grow over him for protection. A historical allusion is found in Q 48:18, that "God was well pleased with

the believers when they swore allegiance to you under the tree." This is a reference to the 1500 persons who declared themselves for the Prophet at Ḥudaybiya (q.v.; see also CONTRACTS AND ALLIANCES). Robertson Smith, citing Yāqūt (d. 626/1229), says this tree was visited by pilgrims seeking its blessing until the caliph (q.v.) ʿUmar cut it down to avoid its being worshipped like al-Lāt and al-ʿUzzā (see POLYTHEISM AND ATHEISM; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). Among the numerous references to God's causing vegetation to grow from the rain he sends down, there is the lone mention (Q 23:20) of "a tree that issues from Mount Sinai (q.v.) yielding oil *(duhn)* and seasoning *(ṣibgh)* for all to eat." At Q 28:30 God speaks to Moses (q.v.) from a bush *(al-shajara)* on blessed ground. In contrast to the examples discussed above (with the possible exception of the "green tree"), the trees mentioned in this last paragraph are all terrestrial rather than supernatural (see also ESCHATOLOGY).

Trial

Challenge to be endured. Some one hundred verses in the Qurʾān deal directly or indirectly with trial, in particular as a trial or test of true belief. Four verbs and/or their verbal nouns are especially used, of which the first two constitute the vast majority of these references: *balāʾ, ibtilāʾ* (e.g. Q 2:49; 3:186; 47:31; 89:16), *fatana, fitna* (e.g. Q 8:28; 64:15), *maḥḥaṣa* (only in Q 3:141 and 154) and *imtaḥana* (only in Q 49:3 and 60:10; Q 60 is additionally entitled *al-Mumtaḥana,* literally, "she who was tested," but its main concern is relations between believers and non-believers, which is tangential to this article; see BELIEF AND UNBELIEF). For trial in the sense of inquisition, see INQUISITION.

Yet the meaning of the Qurʾān in its entirety can be taken as a trial or test since it affords humankind the way to salvation (q.v.) if people choose to follow God's commands (see COMMANDMENT; OBEDIENCE) presented in it. Trials serve the purpose of distinguishing between those who do right and those who do not (Q 2:152-7; 47:31; 60:10; 67:2; see GOOD DEEDS; EVIL DEEDS; VIRTUES AND VICES, COMMANDING AND FORBIDDING) or between believers and unbelievers. In his exegesis of a qurʾānic verse dealing with the issue of coercion in religious matters (Q 2:256; see TOLERANCE AND COMPULSION), the exegete al-Rāzī (d. 606/1210; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) actually speaks of this world as a place of trial *(dār al-dunyā hiya dār al-ibtilāʾ)* with reference to the fact that people have a choice to believe or not

(see FREEDOM AND PREDESTINATION; GRATITUDE AND INGRATITUDE). Carrying the argument further, he says that, had there been no choice and all were true believers, the world would be a perfect place and the notion of later punishment or reward would cease to have any meaning (see REWARD AND PUNISHMENT). Believers are subjected to trials in this world, both materially and spiritually (e.g. Q 2:155; 3:186; 5:48; 6:165; 21:35; 89:16). Hope (q.v.) and endurance (patience; see TRUST AND PATIENCE) help a believer during moments of trial (Q 4:104; 31:17). God gives signs (q.v.) as a test to people (Q 44:33) and God rewards those who stand in the face of adversity (Q 2:155-7). Even God's prophets (see PROPHETS AND PROPHETHOOD) are not exempt from these tests: "Thus we have appointed for every prophet an adversary (see ENEMIES; OPPOSITION TO MUḤAMMAD): the demons of humankind or of jinn (q.v.), who inspire to one another pleasing speech intended to lead astray (q.v.) through guile" (Q 6:112; cf. also Q 22:52; see DEVIL).

In light of the above, trials of past prophets and communities serve as examples for humankind. Abraham (q.v.), for instance, endured trials but in the end succeeded because he accepted God's commandments (Q 2:124; 37:104-7). The story of Joseph (q.v.) recounts his torment but final victory (Q 12) and that of his father Jacob (q.v.) who had lost his sight as a result of his distress over the loss of his son (Q 12:84), only to regain it later after learning that, true to his inner belief, his son was indeed not dead (Q 12:96). The Children of Israel (q.v.) suffered persecutions under the people of Pharaoh (q.v.; Q 2:49) but were delivered from this shame by the lord (q.v.; Q 44:30; see also DELIVERANCE). God grants mercy (q.v.) to those who are faithful in the face of numerous trials, illustrated, for example, by the initial childlessness of Zechariah (q.v.), and the allegations of Mary's (q.v.) immoral behavior — both of whom were ultimately rewarded and/or exonerated (Q 19:2-33; see CHASTITY; ADULTERY AND FORNICATION). Satan, too, may tempt and hence test people by raising doubt in sick hearts (Q 22:53; see HEART) and Satan brought agony to the prophet Job (q.v.) which was taken away after Job asked God for help (Q 38:41f.).

The qurʾānic emphasis on the trials of this world is reflected in the theological gloss given to the struggles of the Islamic community, particularly in its early years. This is especially evident in the portrayal of social and political upheavals of the first generations as rebellion (q.v.) against the divine law (see LAW AND THE QURʾĀN), leading to schism which could threaten the purity of the faith (q.v.) of the believers (cf. Gardet, Fitna). Disturbances such as that between ʿAlī and Muʿāwiya were often labeled as eras of *fitna,* or trial, for the believing community (see also POLITICS AND THE QURʾĀN).

Tribes and Clans

The social units that constituted Arabian society in pre-Islamic and early Islamic times (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). As the Muslim polity developed, Muslim society became more complex and

tribes ceased to be the sole constituent element. Nonetheless, Arab tribes did not disappear altogether (see ARABS; BEDOUIN). Modern historians of Islam understand the word "tribe" as a social unit larger than a "clan," but there is no consensus about the definition of either of these terms. Other words are occasionally used as synonyms of "clan," such as "sub-tribe," "branch," "faction," and "subdivision," but all of these lack a fixed meaning. Anthropologists, in contrast, use such terms in a much more technical and precise fashion. The Arabic designations of social units, such as *qabīla, ḥayy, ʿashīra, qawm, baṭn,* etc., also lack precision and the sources often use them interchangeably (see also KINSHIP). The common practice among modern Islamicists is to translate *qabīla* as "tribe."

Four terms in the Qurʾān express the notion of a social unit: *ʿashīra, asbāṭ, shuʿūb* and *qabāʾil*. The first of these, *ʿashīra,* occurs three times (Q 9:24; 26:214; 58:22) and seems to denote an extended family (q.v.) rather than a tribe. The second, *asbāṭ,* occurs five times, invariably referring to the tribes of the Children of Israel (q.v.; Q 2:136, 140; 3:84; 4:163; 7:160). Medieval Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) explain that the word *asbāṭ* is used to denote the tribes of the descendants of Isaac (q.v.; Isḥāq) in order to distinguish them from the descendants of Ishmael (q.v.; Ismāʿīl); the latter, the Arabian tribes, are referred to as *qabāʾil*. As for etymology, certain exegetes derive the term *asbāṭ* from *sibṭ* in the sense of "a grandchild," for the Children of Israel are like grandchildren to Jacob (q.v.; Yaʿqūb). Others assign to *sibṭ* the meaning of "succession," explaining that the generations (q.v.) of the Children of Israel succeeded one another and therefore they are *asbāṭ.* Yet another derivation of *asbāṭ* is from *sabaṭ,* a certain tree; the exegetes explain that the father is likened to a tree and the descendants to its branches (Ibn al-Hāʾim, *Ṭibyān,* i, 111; Qurṭubī, *Jāmiʿ,* ii, 141; vii, 303; Ibn Kathīr, *Tafsīr,* i, 188; Shawkānī, *Fatḥ,* i, 147). The word *asbāṭ,* however, seems to be a loan word from the Hebrew *shevaṭim* (sing. *shevet*), "tribes."

The third and the fourth terms, *shuʿūb* and *qabāʾil,* occur in the Qurʾān once, in the famous verse that served the Shuʿūbiyya movement (see below), "O people, we have created you male and female, and made you groups and tribes *(shuʿūban waqabāʾila)* so that you may know one another; the noblest among you in the sight of God is the most pious" (Q 49:13). *Shaʿb* (pl. *shuʿūb*) probably was the South Arabic term parallel to the Arabic *qabīla* (pl. *qabāʾil;* see Beeston, Some features; al-Sayyid, *al-Umma,* 29). There were, however, important differences. First, the Arabian social units called *qabāʾil* were based on common descent, whereas the south Arabian units called *shuʿūb* were not; secondly, the latter were sedentary, whereas the former included both nomads (q.v.) and settled people. Muslim exegetes, however, interpreted the qurʾānic *shuʿūb* and *qabāʾil* according to the needs of their own days. The various interpretations reflect the dispute about equality between Arab Muslims and other Muslims, the ideas of the Shuʿūbiyya movement and the response of their rivals (see POLITICS AND THE QURʾĀN). One line of interpretation conceives of the two words as applying to north and central Arabian social units of different size and different genealogical depth. According to this interpretation a *qabīla* is a tribe, such as the Quraysh (q.v.), whereas a *shaʿb* is a "super tribe," that is, the framework that includes several tribes, such as Muḍar. Another line of interpretation endows the two words with an ethnic coloring. According to this, *qabāʾil* refers to Arabs, whereas *shuʿūb* means non-Arabs

or *mawālī* (clients; see CLIENTS AND CLIENTAGE) or social units based on territory rather than on genealogy (which again amounts to non-Arabs, see e.g. Ibn Kathīr, *Tafsīr*, iv, 218; for a detailed discussion and references, see Goldziher, *MS*, i, 137-98; Mottahedeh, Shuʿūbiyya; Marlow, *Hierarchy*, 2-3, 96-9, 106; al-Sayyid, *al-Umma*, 26-36).

The scarcity of resources in Arabia on the one hand and the tribal structure of the society on the other, led to incessant competitions and feuds between the Arabian social units. These facts of life were idealized and became the basis of the social values of the Arabs (Goldziher, *MS*, i, 18-27; Obermann, Early Islam; al-Sayyid, *al-Umma*, 19-25). Naturally, when the Prophet sought to establish a community of believers, he hoped to achieve unity among all Muslims (Goldziher, *MS*, i, 45-9). Many prophetic traditions (ḥadīths; see ḤADĪTH AND THE QURʾĀN) were circulated, denouncing tribal pride, tribal feuds and tribal solidarity that disrupted the overall unity of the Muslim community. The Qurʾān, however, advocates unity among Muslims (e.g. Q 3:103; 8:63; 49:10) without denouncing tribal values. Indeed, the Qurʾān does not even reflect the fact that pre-Islamic Arabian society was a tribal society. It is nevertheless important to understand the structure and the social concepts that constituted the setting prior to the advent of Islam.

Arabian society of pre-Islamic and early Islamic times may be schematically described as consisting of hierarchies of agnatic descent groups that came into being by a process of segmentation. As a rule, the major part of any given group considered itself the descendants in the male line of a single male ancestor, thus differentiating itself from other descent groups (see PATRIARCHY). At the same time, it considered itself part of ever larger descent groups because its members were also the offspring of ancestors further and further removed up the same male line. Any given descent group referred sometimes to a closer, at other times to a more distant ancestor, according to its interests. When referring to a distant ancestor, a descent group ignored the dividing lines between itself and those segments which, like itself, descended from the same distant ancestor. Thus, the more distant the ancestor, the larger the descent group and the greater the number of segments included in it. All Arabs considered themselves to be ultimately descended from two distant ancestors, in two different male lines, so that the genealogical scheme may be represented approximately as two pyramids. Descent groups are typically called "*Banū* so-and-so," i.e. "the descendants of so-and-so." It should, however, be noted that not every name mentioned in the genealogies stands for a founder of a descent group and that the recorded genealogies are not always genuine (some would even say are never genuine). Groups were sometimes formed by alliances, not by segmentation; but such groups, too, were eventually integrated into the genealogical scheme by fabricated genealogies and considered to be agnatic descent groups.

The sources preserved the names of many agnatic descent groups, which varied greatly in size and in their genealogical depth or level of segmentation. It is often clear that a given descent group was an entity of considerable genealogical depth that comprised a great number of independent segments. In the genealogies, the ancestor of such a comprehensive descent group would be far removed up the male line; the constituent segments of the group would be called after various descendants in the male line of that distant ancestor. Modern scholars of Arabia and Islam

commonly refer to the comprehensive descent groups as "tribes" although, technically speaking, the term is perhaps not entirely appropriate. A descent group (comprehensive or not) consists of all descendants in the male line of a single male ancestor. A tribe, usually having a descent group at its core, includes others as well (clients, confederates; see BROTHER AND BROTHERHOOD). It is in fact difficult to determine whether the familiar names such as Quraysh, Tamīm, ʿĀmir, Ṭayyiʾ, Asad, etc., stand for tribes or for comprehensive descent groups. Obviously, the sources do not make this distinction (although they may include various specifications); neither do Islamicists who refer to these entities as tribes. As far as the medieval books of genealogy are concerned, these names stand for comprehensive descent groups. The records of Quraysh, Tamīm, etc., in these sources only include descendants in the male line of the respective distant ancestors. The genuineness of the genealogies is often disputed but no confederate or client is included as such in the record of any given group. On the other hand, it stands to reason that, in practice, a descent group and its confederates and clients counted as one entity, at least for certain purposes. Were it not so, there would have been no point to the existence of categories such as confederates and clients. This ambiguity is reflected in the way the historical sources record details of groups such as participants in a given battle (see EXPEDITIONS AND BATTLES). The names of the genuine members of each tribe are recorded first, followed by a separate list containing the names of the clients and the confederates. The same analysis applies to the segments that constituted the tribes. For the genealogical books they are descent groups but in practice they included outsiders as confederates and clients, so that they were not in fact descent groups; they may be referred to as "sections." The processes of segmentation and alliance effected constant changes in the composition of descent groups, tribes and sections. Because of this fact and the fluidity of the genealogical references, the distinction between tribes and sections is often blurred.

There is no dispute about the tribal nature of Arabian society before and after the advent of Islam; yet we do not know what the members of any given tribe had in common other than the name and perhaps some sense of solidarity (see an example of such solidarity in Ṭabarī, *Taʾrīkh,* vii, 175). Defining features such as those that exist for modern Bedouin tribes cannot be discerned for the period under discussion. A modern Bedouin tribe in the Negev and Sinai may be defined by a common name, common leadership, common territory, sometimes common customary law, and external recognition, both legal and political (see Marx, *Bedouin,* 61-3, 95, 123-4; id., Tribal pilgrimages, 109-16; Stewart, *Bedouin boundaries;* id., ʿUrf, 891). By contrast, the defining features of the tribes of old are far from clear. The members of a given tribe sometimes occupied adjacent territories but the legal significance of this fact, if any, is unknown (see al-Jāsir, Taḥdīd). As often as not, sections of one and the same tribe were scattered over large, non-adjacent areas. It is therefore not possible to define a tribe by its territory. Customary law seems to have constituted a factor uniting all Arabian tribes rather than a boundary differentiating between them. A pre-Islamic tribe certainly had no common leadership and its sections did not usually unite for common activities. Political division within one and the same tribe was the rule rather than the

exception. When the sources seem to be reporting a joint activity of a tribe, it often turns out that the report is misleading. The confusion arises from the fluidity of the genealogical references. Apparently following the practice of the tribesmen themselves, the sources call sections interchangeably by the names of their closer and more distant ancestors. Obviously, a designation by a more distant ancestor applies to a more comprehensive segment. As a rule, a smaller section may be designated by the name of one of the larger ones to which it belongs but not vice versa (except when a specific name becomes generic, such as Qays, which came to designate all the so-called "northern tribes"). Thus when various versions of one and the same account refer to a given group by different names, the smallest framework mentioned is probably the one that was really involved in the events related in that account (Landau-Tasseron, Asad; id., Ṭayyiʾ). We are thus left with no real definition of an Arabian tribe in the period discussed here, except its name and a measure of solidarity. The concept of *ʿaṣabiyya,* commonly rendered as "tribal solidarity," was too vague and too fluid to bind all the men of any given tribe or section.

ʿAṣabiyya should not be confused with the concept of shared legal responsibility. The latter was a factor that drew precise boundaries between groups; the groups thus defined, however, were neither tribes nor sections because they consisted of adult males only. In pre-Islamic and early Islamic society the adult male members of certain agnatic descent groups shared legal responsibility. They were accountable for each other's offenses. At its most extreme manifestation, this rule meant that they jointly sought revenge or received blood money (q.v.; see also RETALIATION) when one of them was killed by an outsider (see MURDER; VIOLENCE); conversely, they were all exposed to vengeance (q.v.) or obliged to pay blood money when one of them killed an outsider. The obligation of mutual assistance applied not only in matters of blood revenge but also in less extreme situations. Such a group of men sharing legal responsibility may be called a co-liable group (see Marx, *Bedouin,* chaps. 7 and 8). The rules by which co-liable groups were formed in the past are unknown. The material at hand does not disclose whether they came into being on the basis of a certain genealogical depth, mutual consent of the members, a decision by the elders, external public opinion or any combination of these or other factors (cf. Stewart, *Texts,* i, 26-122; id., Thaʾr; id., Structure of Bedouin society; Marx, *Bedouin,* 63-78, 180-242).

Agnatic descent groups often accepted outsiders into their ranks. The male adults from among these outsiders shared liability with the male adults of the descent group that they had joined. It should be noted that, as a rule, a section bore the name of the descent group that formed its core; the co-liable group based on a given descent group, or on the section that crystallized around it (if any), bore the same name. Obviously, great confusion ensues when one and the same name designates three groups of different kinds (a descent group, the section that crystallized around it and the male adult members thereof, i.e. the co-liable group).

Co-liable groups were thus based either on descent groups or on sections, but not every descent group and every section constituted the framework of a single co-liable group. The actual boundaries of liability, that is, the lines dividing the various co-liable groups, are unknown. We may be certain that the men of a tribe never constituted a single co-liable group; we cannot

tell, however, which sections within each tribe fulfilled this function at any given point in time.

In conclusion, we know thousands of names of tribes and sections but we cannot describe the defining features of a tribe or a section. We can define the phenomenon of the co-liable groups that were based on tribal sections but we cannot draw the lines dividing them.

Trinity

The distinctive Christian doctrine of one God in three persons, directly alluded to three times in the Qurʾān. The overwhelmingly powerful assertion in the Qurʾān that God is absolutely one rules out any notion that another being could share his sovereignty (q.v.) or nature (see GOD AND HIS ATTRIBUTES). The text abounds with deni-

als that there could be two gods (Q 16:51) and that he could have partners (e.g. Q 6:163; 10:18, 28-9; 23:91; see POLYTHEISM AND ATHEISM) or relations (Q 6:100; 16:57; 17:111; 25:2; 112:3) and explicitly repudiates the idea that he took Jesus (q.v.) as his son (Q 4:171; 19:34-5). This is the context in which its rejection of belief in the Trinity is to be understood. Whether it does, in fact, reject the doctrine has been contested, though from a very early date there has been little doubt of this among Muslims.

The three direct references to triple deity occur in the two late sūras, Q 4 and 5, which number 100 and 114 respectively in the chronological order suggested by Nöldeke, *GQ*. What appears to be the most straightforward of the three is Q 5:73: "Certainly they disbelieve (see BELIEF AND UNBELIEF) who say: God is the third of three *(thālith thalātha),* for there is no god except one God." It has been suggested that this verse criticizes a deviant form of Trinitarian belief which overstressed the distinctiveness of the three persons at the expense of their unity as substance (Masson, *Coran,* 93; Watt-Bell, *Introduction,* 158). It has also been noted that, in fact, this is not a reference to the Trinity but to Jesus, who in Syriac literature was often called "the third of three" (Griffith, Christians and Christianity, 312-13). By this reading Q 5:73 must be seen as constituting part of a sustained criticism of the belief in the divinity of Christ that occupies the whole of Q 5:72-5, i.e. an emphatic repetition of the criticism in verse 72 that God and Christ are identical (see CHRISTIANS AND CHRISTIANITY; POLEMIC AND POLEMICAL LANGUAGE). But it is equally plausible to read this and the preceding verse, which is evidently intended as a pair with this since it begins with the same formula *(laqad kafara lladhīna qālū inna…)*, as intentional simplifications of the two major Christian beliefs in the humanity and divinity of Christ and the Trinity, simplifications that expose the weaknesses they each contain when analyzed from the strictly monotheistic perspective of the Qurʾān. Thus, Q 5:72 attacks what it portrays as the eternal God (see ETERNITY) and the human born of Mary (q.v.) being identical, while Q 5:73 attacks the notion that God could have partners in his divinity. The teaching in this verse is certainly that Christians place other beings alongside the true God. If it is taken in its context, the implication can be drawn from Q 5:72 and 75 that one of these is Jesus, while from the firm emphasis on his and his mother's human needs in Q 5:75 ("Christ the son of Mary was no more than a messenger [q.v.]… and his mother was a woman of truth [q.v.]; they had both to eat food"; see FOOD AND DRINK; PROPHETS AND PROPHETHOOD), it is even possible to infer that the other was Mary (*Jalālayn,* ad loc.).

Whether or not this is the intention in Q 5:73, the second reference in the Qurʾān to three deities makes such an accusation explicit. This is in Q 5:116: "And behold! God will say: 'O Jesus, the son of Mary! Did you say to people *(al-nās),* "Take me and my mother for two gods beside God?"' He will say, 'Glory to you (see GLORIFICATION OF GOD)! Never could I say what I had no right [to].' " In what is intended as an eschatological interrogation of Jesus (see Q 5:109; see ESCHATOLOGY), God brings up a claim evidently associated with him, that he encouraged people to regard himself and Mary as gods besides God *(min dūni llāh)*. The implication is that Christians made him the source of the wrong belief they hold. Strictly speaking, this verse need not be read as a reference to a version of the Trinity but rather as an example of *shirk,* claiming divinity for beings other than God (see IDOLATRY AND IDOLATERS). As such, it could be

understood as a warning against excessive devotion to Jesus and extravagant veneration of Mary, a reminder linked to the central theme of the Qurʾān that there is only one God and he alone is to be worshipped (see WORSHIP). Nevertheless, this verse has been read in relation to the Trinity and linked with others such as Q 6:101, which denies that God has a consort and therefore a son, to assert that Christians believe in a godhead comprising God, Mary and Jesus.

It has been argued that this accusation, which is remote from orthodox Christianity, may be directed at a particular form of deviant belief, such as that associated with the Collyridians, a female sect who sacrificed cakes, *kollyrídes,* to Mary (Masson, *Coran,* 93; Parrinder, *Jesus,* 135). They are described by the fourth century heresiographer Epiphanius (d. 403 C.E.) as a sect that "came to Arabia from Thrace and northern Scythia" (*Panarion* LXXIX). This suggestion is helpful in linking the accusation with a historical referent but it raises the problem of why the Qurʾān should take this comparatively little-known belief as a representative formulation of the Trinity. To accept such a link may have some attraction on historical grounds (though firm proof is entirely lacking), but it entails acknowledging that the Qurʾān is not addressing mainstream Christian beliefs. If, on the other hand, there is no sectarian version of Christian doctrine being addressed in this verse, it need not be read as a rejection of a deviant doctrine of the Trinity but as a denial that Jesus and Mary are equal with God, and a warning (q.v.) against making excessive claims about them. Thus, it can be understood as an instance of the warning against the divinization of Jesus that is given elsewhere in the Qurʾān and a warning against the virtual divinization of Mary in the declarations of the fifth-century church councils that she is *theotókos,* "God-bearer." The vehement opposition of Nestorius (d. ca. 451) and his followers to this title as incompatible with the full humanity of Christ may be part of the historical context from which the polemics of this verse arise. It is not farfetched to think that ecclesiastical extravagances as related by groups of Christians to whom they were distasteful, combined with the constant emphasis in the Qurʾān on the uniqueness of God, produced this dramatically conceived denial that other beings could be divine besides him.

The third clear reference to triple deity occurs in Q 4:171:

> O People of the Book (q.v.)! Commit no excesses in your religion (q.v.), nor say of God anything but the truth. Christ Jesus the son of Mary was only God's messenger and his word (see WORD OF GOD) which he bestowed on Mary, and a spirit (q.v.) from him. So believe in God and his messengers and do not say "Three"; desist, it will be better for you. For God is one God, far removed is he in his glory from having a son.

When read as part of the whole verse, the reference here to "three" is most obviously connected with the rejection of the related claims that Jesus was more than a human messenger and that God had a son. So a straightforward interpretation would be that here as in Q 5:73 the Qurʾān warns against both divinization of Christ and Trinitarian exaggerations because no other beings should be placed beside God in divinity. (There is a curious reminiscence of the classical Christian doctrine in the immediately preceding mention of Jesus as word and spirit of God, though also a clear denial of it on the grounds that the titles hypostasised into persons of the godhead by Christians are no more than qualities to be ascribed to the human Jesus.) Like the

other two, this third qurʾānic reference to tripleness in deity is, then, really directed against associating creatures with God, though it must be taken as intended to refute the central Christian doctrine of the Trinity, and, as such, as a radical deconstruction of that doctrine in its essential formulation of three discrete beings who share in divinity.

It appears that unless they are naïve misunderstandings of the doctrine, all of these three references to the Trinity are directed from the context of the uncompromising insistence in the Qurʾān upon the unity of God against claims that challenge this. (It is, however, worth recalling that in their discussions of these verses early commentators often noted that for Christians the "three" was an internal characteristic of the godhead in the form of the persons rather than a series of external beings placed together with God.) The lack of detail about what these claims actually consist of suggests that the Qurʾān has no concern to analyze and evaluate them but simply to deny them as distortions of its central teaching of divine unicity.

The undeviating denial in the Qurʾān of any god besides God has not prevented Christians over the centuries from detecting in it hints of the Trinity. As early as the mid-second/eighth century the anonymous treatise entitled *Fī tathlīth Allāh al-wāḥid* alludes to the plural forms of self-address in such verses as Q 90:4, 54:11 and 6:94 as indications of a triune godhead (Gibson, Triune nature, 77; trans., 5; for dating of this work see Samir, Arab apology, 61-4). A little later the Nestorian patriarch Timothy I in his dialogue with the caliph al-Mahdī, dated to 165/781, refers to such verses as Q 19:17 and Q 21:91 for the same purpose, as well as to the groups of three letters at the start of some sūras (Mingana, Apology, 201-4; see MYSTERIOUS LETTERS). And some years after him the Jacobite Ḥabīb b. Khidma Abū Rāʾiṭa also refers to the evidence of the plural forms of address (Graf, *Schriften,* 20). This motif can be traced through the medieval period and is employed as late as 1461 C.E. by the German cardinal Nicholas of Cusa in his *Cribratio Alkorani,* where he also regards Q 42:52, 4:171; 26:192-5; and 16:102 as open references to the three persons of the godhead (Hopkins, *Nicholas of Cusa,* 119, 126-7; see PRE-1800 PREOCCUPATIONS OF QURʾĀNIC STUDIES). Just as provocatively, the Melkite bishop Paul of Antioch (thought to have been active towards the end of the sixth/twelfth century), who knew the Qurʾān more thoroughly than most earlier Christians, sees a Trinitarian allusion in the Throne Verse (see VERSES; THRONE OF GOD), "God, there is no god but he, the living, the self-subsisting" (Q 2:255) and also marshals mentions of God's word and spirit in Q 5:110, 37:171, 40:68, and 66:12 into an argument that supposedly supports the doctrine from the Qurʾān itself (Khoury, *Paul d'Antioche,* 69-71; trans., 177-8).

Needless to say, Muslim polemicists unanimously rejected such attempts to base the doctrine on the Qurʾān and took what they read as the denial of the Trinity in their scripture as the basis of their own arguments against it. As early as the beginning of the third/ninth century the Zaydī Imām al-Qāsim b. Ibrāhīm (see IMĀM; SHĪʿISM AND THE QURʾĀN) describes the doctrine in tritheistic terms as "three separate individuals" *(thalāthat ashkhāṣ muftariqa),* which are "one compacted nature" (*ṭabīʿa wāḥida muttafiqa,* di Matteo, Confutazione, 314-15, trans., 345) and goes on to argue that the names "Father" and "Son" cannot refer to the eternal being of God since they derive from the temporal act of begetting (di Matteo, Confutazione, 318-9; trans., 349-50). A little later the philosopher Abū Yūsuf al-Kindī (see PHILOSOPHY AND THE QURʾĀN) also describes the persons as

ashkhāṣ who are each distinguished by particular properties and argues that they cannot be eternal since they are composite and, according to the Aristotelian system, must be categories of existents which may contain other categories of existents within them or themselves be members of categories (Périer, Traité). At about the same time the independent thinker Abū ʿĪsā al-Warrāq (fl. third/ninth cent.), in the most searching examination of the Trinity that survives from a Muslim author, painstakingly demonstrates that the Christian doctrine cannot be reconciled with monotheism as long as it also itemizes a number of constituents in the godhead (Thomas, *Polemic*).

Arguments such as these which exposed the tritheistic nature of the Trinity set the pattern for later Muslim approaches towards the doctrine. Despite their differences in detail, they all acknowledge the lead of the Qurʾān in focusing on the accusation that the doctrine imports plurality into the godhead.

Trips and Voyages

Travel episodes of long or short duration. Instances and descriptions of travel may be real, e.g. trips undertaken by qurʾānic characters, or figurative, e.g. following the straight path (see PATH OR WAY) to earn God's pleasure. Both feature prominently in the Qurʾān. Common also are references to modes of and motives for travel and allusions to the journeys (see JOURNEY) undertaken by Muḥammad (e.g. the night journey; see ASCENSION) and by the early Muslim community (e.g. the *hijra* from Mecca [q.v.] to Medina [q.v.]; see EMIGRATION).

The Qurʾān acknowledges the fact that the course of human activity includes the undertaking of trips and voyages. Among God's gifts to humanity is the ability to travel upon the earth (q.v.): "And he has set upon the earth… rivers and roads *(anhāran wa-subulan)* that you may guide yourselves, and sign-posts too; and stars by which to be guided" (Q 16:15-16; see PLANETS AND STARS; GRACE; BLESSING; NATURE AS SIGNS). These trips may be commercial, military, diplomatic, religious or political (see EXPEDITIONS AND BATTLES; MARKETS; CARAVAN). Indeed, in the context of certain ritual practices (see RITUAL AND THE QURʾĀN), this translates into explicit provisions. Fasting (q.v.) in the month of Ramaḍān (q.v.), for instance, is enjoined on believers (see BELIEF AND UNBELIEF) but

those on a trip (*ʿalā safarin,* also identified as wayfarers, *ʿābirī sabīl,* in Q 4:43) and the sick (see ILLNESS AND HEALTH) are exempt from this obligation (Q 2:184, 185; see also CLEANLINESS AND ABLUTION). Ritual prayers may also be curtailed by reason of travel (*wa-idhā ḍarabtum fī l-ard*…, Q 4:101; cf. 5:106; see PRAYER). The hazards of travel are the reason for such provisions and are frequently invoked by the Qurʾān. One danger facing travelers in the late antique world was ambush, either on the road or at sea. This helps explain the Qurʾān's harsh view of pirates and highway robbers (see THEFT), the threat of the latter being mentioned in one place together with sexual relations between men (see HOMOSEXUALITY; SEX AND SEXUALITY) and the giving of wicked counsel (Q 29:29; see also BOUNDARIES AND PRECEPTS).

The danger posed by weather (q.v.) conditions (sometimes evoked directly, as in Q 77:1-4) and the vagaries of nature are implicit in the Qurʾān's frequent reference to the fact that God's grace is what allows ships (q.v.; in twenty-three places) to travel without difficulty and for humanity's profit upon the seas (Q 17:66; cf. 2:164; 17:70). From God's bounty also come the means by which to navigate: "He is the one who placed the stars so you may be guided by them through the darkness (q.v.) of land and sea" (*wa-huwa l-ladhī jaʿala lakumu l-nujūma li-tahtadū bihā fī zulumāti l-barri wa-l-baḥri,* Q 6:97) — although it should be noted that in some Shīʿī commentary these stars are identified as the imāms (see Ṭabarsī, *Majmaʾ,* iv, 132; see SHĪʿISM AND THE QURʾĀN; IMĀM). The most famous ship mentioned in the Qurʾān is Noah's (q.v.) ark (q.v.), which God instructs him to build to save himself, his kin and the righteous from the flood he will send as punishment (Q 11:36-49; see CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES). Noah's appeals to God to save his unbelieving son (Q 11:45-7) are rejected by God; Noah's wife, too, is not spared (Q 66:10) and so neither makes the momentous trip to safety and grace (see Zamakhsharī, *Kashshāf,* ii, 218-19; iv, 118). There is one instance of a journey in the belly of a fish: the prophet Jonah (q.v.; Yūnus, also called Dhū l-Nūn) is thrown overboard, swallowed by a fish and cast forth on a barren shore (Q 37:139-48).

Danger during trips also helps explain the Qurʾān's use of safe passage and of public safety as a metaphor (q.v.). At Q 14:35, Abraham (q.v.) prays for a secure land; at Q 95:3 God swears by a safe city (q.v.; *wa-hādha l-baladi l-amīn*); and at Q 34:18, God tells the people of Sheba (q.v.), "Travel *(sīrū)* between [the cities] in all security *(āminīn),* day or night." Sheba is the place to which Solomon's (q.v.) hoopoe travels and returns, bringing news of its people and queen (Q 27:22; see BILQĪS). Solomon then dispatches both a human and jinn (q.v.) embassy (Q 27:37-40) prompting the queen's visit (Q 27:42). Her people are the ones who had covetously asked God to place greater distances between their way stations (Q 34:19) because they wished to monopolize trade and benefit from the hardship to others (*Jalālayn,* 430; see TRADE AND COMMERCE). The latter is one of countless references to trade in the Qurʾān, a revelation vouchsafed, it should be remembered, to a merchant of the Quraysh (q.v.) tribe (see e.g. Q 35:29 for a metaphorical use of *tijāra,* commerce; see also TRIBES AND CLANS).

The Quraysh and their caravans are described in Q 106, a short early Meccan revelation (see REVELATION AND INSPIRATION; CHRONOLOGY AND THE QURʾĀN). Although this sūra (q.v.) does not explicitly mention the animals used in the caravans, they are enumerated elsewhere (see ANIMAL LIFE): Q 16:5-8, for example, mentions the creation of cattle *(anʿām)* which "carry your

heavy loads (see LOAD OR BURDEN) to lands that you would not otherwise reach except with great distress." Animals are beneficial also because their skins can be used to make tents, in particular for use on trips (*yawma ẓaʿnikum wa-yawma iqāmatikum,* Q 16:80; see HIDES AND FLEECE). Horses, mules and donkeys (*wa-l-khayl wa-l-bighāl wa-l-ḥamīr,* Q 16:8) are also identified. Q 59:6 makes reference to the use of horses and camels in battle, and in Q 105, a short Meccan sūra which describes the unsuccessful attempt of the Abyssinian governor Abraha (q.v.) to besiege Mecca and take the Kaʿba (q.v.), war elephants are mentioned (see also CAMEL; PRE-ISLAMIC ARABIA AND THE QURʾĀN; ABYSSINIA; PEOPLE OF THE ELEPHANT).

That humankind may be involved in struggles, both unarmed and armed, is evoked in formulations such as "go forth lightly or heavily equipped and struggle with your wealth (q.v.) and your persons in the cause/way of God" (*infirū khifāfan wa-thiqālan wa-jāhidū bi-amwālikum wa-anfusikum fī sabīli llāhi,* Q 9:41; see EXPEDITIONS AND BATTLES; JIHĀD). Of special significance here is the use of the term *sabīl Allāh — sabīl* (way, cause), and its plural *subul,* occur in 176 places in the Qurʾān. At Q 4:94, the Qurʾān addresses those who do God's work *(fī sabīl Allāh),* such as those calling people to Islam (q.v.; see also INVITATION). These righteous and pious folk are occasionally specifically described, like *sāʾiḥāt* (Q 66:5), women who travel for faith (q.v.; cf. *al-sāʾiḥūn* at Q 9:112; see also PIETY; VISITING; FASTING).

Q 16:9 reads: "And unto God leads straight the way" *(wa-ʿalā llāhi qaṣdu l-sabīl),* highlighting the fact that one's very life is a journey (cf. Gimaret, *Jubbāʾī,* 543 for a reading of this as God's imparting of knowledge; see KNOWLEDGE AND LEARNING) and that life's destination is God: *innā lillāhi wa-innā ilayhi rājiʿūn* (Q 2:156). The path to [God] is called by the Qurʾān *al-ṣirāṭ al-mustaqīm*. Though typically described as straight, most famously at Q 1:6 (*ihdinā l-ṣirāṭa l-mustaqīm,* "guide us to the straight path"), it is also described as "the path of [God], the mighty, the praised" (*ṣirāṭ al-ʿazīz al-ḥamīd,* Q 14:1; see GOD AND HIS ATTRIBUTES; PRAISE; POWER AND IMPOTENCE), contra the path to hellfire (*ṣirāṭ al-jaḥīm,* Q 37:23; see HELL AND HELLFIRE; REWARD AND PUNISHMENT) and contra the path of those who have earned God's wrath (*al-maghḍūb ʿalayhim,* Q 1:7; see Āzād, *Tarjumān al-Qurʾān,* i; see ANGER). The possibility that one can be led astray (q.v.) is in one instance expressed by the righteous (see GOOD AND EVIL) who ask whether they should be "like the one whom the demons have made into a fool (see IGNORANCE), wandering bewildered through the earth" *(ka-lladhī istahwathu l-shayāṭīnu fī l-arḍi),* averring that God's guidance is the only guidance (*inna hudā llāhi huwa l-hudā,* Q 6:71; cf. 10:23). The human need for guidance on earth even extended to Muḥammad: God asks the despairing Prophet (see DESPAIR; HOPE) in Q 93:7, "did he not find you wandering and guide you" *(wa-wajadaka ḍāllan fa-hadā)* — though this is understood by some commentators to mean that Muḥammad was ignorant of God's law (see e.g. Zamakhsharī, *Kashshāf,* iv, 219; see LAW AND THE QURʾĀN).

In this worldly life, one desirable destination is God's house, i.e. the Kaʿba in Mecca (see HOUSE, DOMESTIC AND DIVINE). When the prophet Abraham leaves his home in Mesopotamia because of the idol worship there (see IDOLATRY AND IDOLATERS), he travels to Mecca where he rebuilds God' house, first erected by the prophet Adam (cf. Q 3:96; see ADAM AND EVE) and by the angels (see ANGEL) before him (*Jalālayn,* 62), where worship (q.v.) of the one true God then resumes (Q 2:125).

The pilgrimage (q.v.) to Mecca is enjoined on believers several times (e.g. Q 2:196). And blocking the path to God or that of the pilgrims to the holy precincts (see SACRED PRECINCTS; FIGHTING) is described as a grave offence (*wa-ṣaddun ʿan sabīli llāhi wa-kufrun bihi wa-l-masjid al-ḥarām,* Q 2:217). The peril associated with the trip to Mecca is suggested in the following appeal at Q 22:27: "And proclaim the pilgrimage among people: they will come to you on foot *(rijālan)* and on every kind of mount *(wa-ʿalā kulli ḍāmirin),* from distant mountain highways *(min kulli fajjin ʿamīq)*."

Many of the messengers and prophets in the Qurʾān travel about the earth on foot (see MESSENGER; PROPHETS AND PROPHETHOOD), calling people to belief or leading their people to safety, such as Moses (q.v.; see also MYTHS AND LEGENDS IN THE QURʾĀN). Moses' own life begins with a fateful trip when his mother places him in a basket upon the river to protect him from Pharaoh (q.v.; Q 20:39) who is killing newborn boys (Q 28:4); but Moses is saved when he is picked up and adopted by Pharaoh's wife (identified in commentary as Āsiya, Q 28:9). Moses will in adult life lead the Israelites (see CHILDREN OF ISRAEL) away from Egypt to the holy and promised land (Q 5:21; see also e.g. Q 28:29). That trip includes surviving another body of water (Q 7:138; 10:90), namely the Red Sea; traveling by night (Q 20:77; see DAY AND NIGHT); and wandering in the desert for forty years (Q 5:26; cf. 28:29). Joseph (q.v.; see Q 12) is also cast out (by his plotting brothers; see BROTHER AND BROTHERHOOD). He is picked up by a caravan and transported to Egypt (q.v.), where he eventually rises to a position of authority (q.v.). He is later reunited with his brothers and father who had traveled to Egypt to seek food and sustenance (q.v.) in times of difficulty (see Beeston, *Baiḍāwī's commentary*).

Though less momentous for the religious history of the Israelites, Moses takes another well-known trip in the Qurʾān when he sets out on a journey in search of one of God's elect (Q 18:60-82). He eventually finds this man — unnamed but identified as al-Khaḍir/Khiḍr (q.v.) by Muḥammad — at a confluence and implores him to let him accompany him (Q 18:66). The man reluctantly agrees and they journey along a river (see Q 18:71 for a boat and its passengers) and then on to an unnamed town. Their trip comes to an end when Khiḍr demonstrates to Moses that he (Moses) is unable to abide him and his actions. Earlier, the sūra recounts the story of the companions of the cave (*aṣḥāb al-kahf,* Q 18:9-26; see MEN OF THE CAVE), whose trip is the earliest example of "time travel" in Arabic literature (see TIME; SPATIAL RELATIONS). Later in the same sūra (Q 18:83-101) are described the travels of Dhū l-Qarnayn, many features of whose story resemble those of Alexander (q.v.). In the qurʾānic account, he journeys to the east to deal with Gog and Magog (q.v.), building an iron wall to contain them (Q 18:94). The terrestrial travels of Jesus (q.v.) are not described in the Qurʾān but the fact that he was not captured or crucified but rather raised alive to be with God is mentioned (Q 3:55; see CRUCIFIXION; POLEMIC AND POLEMICAL LANGUAGE; RESURRECTION).

A number of the trips taken by Muḥammad are mentioned in the Qurʾān (see SĪRA AND THE QURʾĀN). His *hijra* or emigration, together with the small Muslim community, north from Mecca to Yathrib/Medina is explicitly mentioned at Q 48:11 where those who opted out of the trip for selfish reasons *(al-mukhallafūna mina l-aʿrābi)* are criticized. At Q 59:8-9 and elsewhere those who did emigrate are praised, as are those who strive in the way of God (Q 2:218; see EMIGRANTS AND HELPERS; HYPOCRITES

AND HYPOCRISY). On his way to Yathrib/Medina, Muḥammad is reported to have hidden in a cave (q.v.), together with Abū Bakr, to escape Meccan pursuers. This is alluded to at Q 9:40 and foreshadows the reference a few verses later to unbelievers and hypocrites desperately seeking caves in which to hide from God (Q 9:57; see Suyūṭī, *Durr,* iii, 436, 447). Of all Muḥammad's voyages, the most spectacular is the nocturnal one from Mecca to Jerusalem (q.v.), called the *isrāʾ* (and thence to heaven [see HEAVEN AND SKY], called the *miʿrāj*). The *isrāʾ,* or night journey, is the subject of a whole chapter (Q 17, Sūrat al-Isrāʾ), which opens "Glory to God who took his servant for a journey by night *(asrā bi-ʿabdihi laylan)* from the sacred mosque (Mecca) to the farthest mosque" (Jerusalem; Q 17:1; see GLORIFICATION OF GOD).

At Q 29:20, God asks believers to proclaim, "Travel through the earth and see how God originated creation" (q.v.; *qul sīrū fī l-arḍi fa-nzurū kayfa badaʿa l-khalq;* see Ghazālī, *Jewels,* 126; and cf. e.g. Q 3:137 for travel that reveals the consequences of those who rejected God's messengers; see TRIAL). And at Q 55:33 God urges "O company of jinn and men, if you are able to break through the regions of the heavens and the earth (q.v.), then break through, but (know that) you will not do so without our sanction." This has been interpreted by certain modernists to be an invitation to space travel (see e.g. Haeri, *Keys,* iv, 73; see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY; SCIENCE AND THE QURʾĀN). Terrestrial or otherwise, the prophet Muḥammad recommended the following passage be recited when setting out on a journey: "Glory be to the one who has subjected these [modes of travel] to our use because we could not have accomplished this by ourselves" (*subḥāna lladhī sakhkhara lanā hādhā wa-mā kunnā lahu muqrinīn,* Q 43:13). The possibility that one may die (see DEATH AND THE DEAD) on a trip is adumbrated at Q 31:34: "and no soul (q.v.) knows in what land it will die" (*wa-mā tadrī nafsun bi-ayyi arḍin tamūt;* see also FAREWELL PILGRIMAGE; FESTIVALS AND COMMEMORATIVE DAYS; HOSPITALITY AND COURTESY).

Triumph see VICTORY

Troops

Individuals massed together, often to form an army. Qurʾānic references to "troops" in the military sense fall second to those in which "forces" or "hosts" are meant in a more general sense. The military sense also is usually obscured by an emphasis on the

eschatological thrust of a given reference (e.g. Q 10:90 on Pharaoh's "armies"; see ESCHATOLOGY; PHARAOH). In the second category, a distinction is to be made between temporal and other-worldly "forces" (see also RANKS AND ORDERS).

The relevant terms are principally the hapax legomenon *shirdhima,* and/or *zumar, fawj* and *jund*. The first term, usually translated as "band," occurs in Q 26:54, in Pharaoh's dismissive reference to the Children of Israel (q.v.; *shirdhimatun qalīlūna,* "a worthless little band"). Al-Ṭabarī (d. 310/923; *Tafsīr,* xix, 74) treats it as a small group or "the remnant" of a larger whole. *Zumar* (sing. *zumra*), the usual name of the thirty-ninth sūra (q.v.), occurs there twice as "groups" or "throngs," in the one case (Q 39:71) in reference to those destined for hell (see HELL AND HELLFIRE), and in the second case (Q 39:73) for paradise (q.v.; see also REWARD AND PUNISHMENT). *Fawj* (pl. *afwāj*) occurs synonymously; al-Ṭabarī defines it as "group" *(jamāʿa)*. One occurrence (Q 27:83) speaks of the host (of evil-doers) drawn from each community and arranged in ranks. The relevant verbal phrase *yūzaʿūna,* "kept in ranks," has a distinct military ring (see, as Paret suggests, Q 27:17; 41:19).

Jund (pl. *junūd*), the most frequent of the terms, occurs in roughly three ways and, as a result, occasions some debate among early exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). References to military forces include those to Pharaoh's armies (Q 10:90; 20:78; 28:6, 8, 39-40; 44:24; 51:40; 85:17-18), and to those respectively of Saul (q.v.; Ṭālūt) and Goliath (q.v.; Jālūt; Q 2:249), and of Solomon (q.v.; Q 27:37). On the passage concerning Saul's troops at the river's edge, see M.M. Ayoub (*Qur'ān,* i, 241-3). Less specific occurrences are understood by the exegetes in reference to the Quraysh (q.v.) and others of the Prophet's opponents in battle (see OPPOSITION TO MUḤAMMAD; FIGHTING). Al-Ṭabarī (*Tafsīr,* xxiii, 126), commenting on Q 38:11, puts it in relation to the battle of Badr (q.v.), and Q 33:9 in relation to the Quraysh and their allied forces arrayed against Medina (q.v.) at the battle of the Trench (Ṭabarī, *Tafsīr,* xxi, 126-7; see EXPEDITIONS AND BATTLES). The reference to military forces *per se* is incidental: the forces of Pharaoh are mostly on display to demonstrate the certainty of destruction through divine retribution (e.g. by drowning [q.v.]; see also CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES). In addition, these references to "armies" appear to be only loosely connected to the patterns and rules of warfare dealt with at some length elsewhere in the Qur'ān (see WAR). *Jund* also occurs in two references to earthly "forces." Q 37:173 speaks of those aligned with God as inevitably victorious (*ghālibūn;* see VICTORY; PARTIES AND FACTIONS). Q 36:75 seems to refer to the forces of those devoted to idols and false gods who are thus misled (see IDOLS AND IMAGES; ERROR; ASTRAY; POLYTHEISM AND ATHEISM; ENEMIES). Al-Ṭabarī notes a disagreement among his sources on the occasion of the idols' intervention on behalf of their followers (see INTERCESSION). He sides with those who see it as a reference to the forces aligned with the *mushrikūn* on earth and not, in the opposing view, at the day of judgment (see LAST JUDGMENT). A final set of references concerns otherworldly "forces." A sole reference (Q 26:95, using *jund*) refers to the "gathered hosts" of hell led by Iblīs (*junūdu iblīsa ajmaʿūna;* see DEVIL). The remaining examples treat the celestial "hosts" at God's disposal. Q 36:28, 48:4 and 48:7 speak in general of these hosts (respectively, *min jundin mina l-samāʾi, junūdu l-samāwāti wa-l-arḍi*). Q 9:26, 9:40 and 33:9 refer to "hosts that you perceive not" *(junūdan lam tarawhā)* sent down, as is consistently understood by the exegetes, as divine intervention on behalf of the prophet Muḥammad. Al-Ṭabarī (*Tafsīr,*

xxiii, 1-2), referring to an early debate over Q 36:28, argues that *jund* is to be understood in terms of "forces" and not, as some suggested, as reference to a new scripture (*risāla;* see REVELATION AND INSPIRATION; SCRIPTURE AND THE QUR'ĀN). As for the intervention of the celestial hosts, considerable discussion in the exegetical literature surrounds the angels of Q 3:124-5 (see Ayoub, *Qur'ān,* ii, 314-17; see ANGEL).

Trust and Patience

Belief in another's integrity, justice or reliability, and forbearance in the face of adversity. According to the Qur'ān, trust and patience are two distinguishing virtues (see VIRTUES AND VICES, COMMANDING AND FORBIDDING) of the "faithful" person (i.e. *mu'min;* see BELIEF AND UNBELIEF). There are two qur'ānic concepts typically translated by the English word "trust." The first, *tawakkul (ʿalā),* is a *maṣdar* (abstract noun expressing action) derived from the fifth form of the Arabic root *w-k-l,* meaning "to give oneself over to" *(istaslama ilayhi),* "to rely/depend on" *(iʿtamada ʿalayhi),* or "have confidence in" *(wathiqa bihi)* another as *wakīl,* that is as one's "guardian" or "protector" (i.e. *ḥāfiẓ; Lisān al-ʿArab,* xv, 387; Bustānī, *Muḥīṭ,* 984; see CLIENTS AND CLIENTAGE). Evidence from classical Arab grammarians (see GRAMMAR AND THE QUR'ĀN; ARABIC LANGUAGE) suggests that, in pre-Islamic usage, the word *wakīl* was nearly synonymous to the word *rabb* (a qur'ānic term applied to God and most commonly translated as "lord" [q.v.]) in the sense that both imply a position, not primarily of ownership, but of responsibility (q.v.) to nurture to its fullest potential the thing, animal, or person over which the *wakīl/rabb* has charge (*Lisān al-ʿArab,* ibid.; Bayḍāwī, *Anwār,* ad Q 1:2). Although the word *tawakkul* does not itself occur in the Qur'ān, the fifth-form verb meaning "to trust [in God]" (in various tenses and moods, i.e. *tawakkala, yatawakkalu, tawakkal*), and the fifth-form active participle from the root *w-k-l (mutawakkil)* meaning "entrusting oneself [to God]" are attested a total of forty-four times.

The second qur'ānic concept understood to mean "trust" is *amāna,* a *maṣdar* derived from the root *'-m-n* and ordinarily used to refer to something given "in trust" *(wadīʿa)* with the expectation that it will be cared for diligently and faithfully by the trustee. (*Lisān al-ʿArab,* i, 223 and 224; Bustānī, *Muḥīṭ,* 17). This word *(amāna)* occurs in the Qur'ān a total of six times. In only one of these six occurrences (Q 33:72) does the word "trust" (i.e. *al-amāna*) have cosmic significance as the 'covenant (q.v.) of obedience' (q.v.; *ṭāʿa*) that is the foundation of the divine-human relationship (see Ṭabarī, *Tafsīr;* Bayḍāwī, *Anwār,* ad Q 33:72).

The qur'ānic concept typically translated by the English word "patience" is *ṣabr,* a *maṣdar* from the first form of the Arabic root *ṣ-b-r* originally having to do with binding or "restraining a living creature" *(ḥabs al-rūḥ)* for prolonged slaughter or execution (see also SACRIFICE; CONSECRATION OF ANIMALS), but also coming to mean — especially in a qur'ānic context — to exercise "self-restraint" *(ḥabs al-nafs),* "to be persistent," and/or "to endure great adver-

sity" (*Lisān al-ʿArab,* vii, 275; Bustānī, *Muḥīṭ,* 496). *Ṣabr* — along with other derivatives of the same root, including: the first-form verb meaning "to have patience" (in various tenses and moods, i.e. *ṣabara, yaṣbiru, iṣbir*); the third-form verb *(ṣābara)* meaning "to excel in patience" or "compete with one another in forbearance"; the eighth-form verb *(iṣṭabara)* meaning "to be patient"; the first-form active participle *(ṣābir)* meaning "having patience"; and the first-form intensive noun *(ṣabbār)* meaning "of the utmost patience" — is attested in the Qurʾān a total of 103 times. It is important to note that, although in one hundred of these 103 attestations *ṣabr* and other derivatives from the same root carry the virtuous connotation of "patient endurance," in the remaining three cases *ṣabr* does connote the vice of "stubborn persistence" in the worship of ancestral deities (Q 25:42; 38:6; see POLYTHEISM AND ATHEISM) as well as in other errant behaviors (Q 41:24; see ERROR; ASTRAY).

Tawakkul

In the Qurʾān, God is the only proper object of *tawakkul*. Thus, in a qurʾānic context, *tawakkul* is best understood as a human being's "absolute trust in," or "unmitigated reliance upon," God *(tawakkul ʿalā llāh)*. In this sense, *tawakkul* is, as Izutsu notes (*Concepts,* 62), a fundamental component of *īmān,* the qurʾānic term for "faith" (q.v.). This is particularly evident in those five verses which make it explicitly incumbent on the faithful to place their absolute trust in God: "And it is in God that the faithful must place their absolute trust" (*wa ʿalā llāhi fa-l-yatawakkali l-muʾminūn,* Q 3:122; 5:11; 14:11; 58:10; 64:13). Of these five verses, two (Q 5:11; 64:13) speak about *tawakkul* as a general moral and spiritual imperative, with each verse drawing an essential connection between *tawakkul* and a specific component of faith. In the case of Q 5:11 this component is *taqwā* or "God-consciousness" (Asad, *Message,* passim; see FEAR), and in the case of Q 64:13 this component is *ṭāʿa* or "obedience" to both God and God's messenger (q.v.; i.e. Muḥammad [q.v.]; cf. Q 64:12). The remaining three verses refer to specific instances of extreme duress in the context of which *tawakkul* becomes the key to survival for the person of faith. Each of these instances involves a confrontation with powerful enemies (q.v.) whose goal is the ultimate dissolution of their would-be victim's faith. In Q 3:122 there is the implication that it was the faithful's absolute trust in God that yielded the miraculous victory (q.v.) of the vastly outnumbered Muslim army at Badr (q.v.), and that it was Muḥammad's absolute trust in God that prevented the ultimate desertion of the Banū Salima and the Banū Ḥāritha clans at Uḥud, and thus forestalled the Meccans from completely decimating the Muslim forces that day (Ṭabarī, *Tafsīr;* Bayḍāwī, *Anwār,* ad Q 3:122; see EXPEDITIONS AND BATTLES; MECCA). In Q 14:11 we find the trope of the *tawakkul* of God's messengers as their only real source of resistance against those who deny the validity of their message (*innā kafarnā bi-mā ursiltum bihi,* Q 14:9) and who seek to do harm to God's messengers. And finally, in Q 58:10 *tawakkul* is presented as the best defense against the most powerful enemy of all — Satan (*al-shayṭān;* see DEVIL) — who insinuates himself into the "private" or "secret conversations" *(munājāt)* of human beings, threatening to destroy the faithful and their community, not from without, but from within.

The mainstream theological rationale for the centrality of *tawakkul* to the life of faith is rooted in the important qurʾānic teaching regarding the divine power of

determination over everything *(qadar)* and the divine "decree" (*qaḍāʾ;* see FREEDOM AND PREDESTINATION). There are, for example, two verses (Q 33:3, 48) in which God warns Muḥammad never to yield to "those who deny God" (*al-kāfirīn;* see LIE; GRATITUDE AND INGRATITUDE) and to the "hypocrites" (*al-munāfiqīn;* see HYPOCRITES AND HYPOCRISY) — especially when, at one point, they seek reconciliation by pressuring him to compromise the integrity of the divine message and recognize the intercessory role of certain pagan deities before God (Bayḍāwī, *Anwār,* ad Q 33:1-2). Even when such a compromise appears to be the sine qua non of Muslim survival in an overwhelmingly pagan environment, Muḥammad is told that compromise is not an option. Instead, both verses (Q 33:3, 48) go on to enjoin the Prophet — and, by implication, all the faithful — to place absolute trust in God *(tawakkal ʿalā llāh)* precisely because "God is the guardian *(wakīl)* who never fails" *(wa-kafā bi-llāhi wakīlan)*. For classical Sunnī exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) such as al-Bayḍāwī (d. prob. 716/1316-17), the statement, "God is the guardian who never fails" (Q 33:3, 48) is synonymous with the statement in Q 39:62, "God is the guardian of everything" *(wa-huwa ʿalā kulli shayʾin wakīlun);* each statement means that "all matters are in God's charge" (*mawkūlan ilayhi l-umūru kulluhā;* Bayḍāwī, *Anwār,* ad Q 33:3), or that God "has absolute power of disposal [over all things]" (*yatawallā l-taṣarruf;* Bayḍāwī, *Anwār,* ad Q 39:62).

Modern translators and exegetes (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY) such as Muḥammad Asad (d. 1412/1992) agree and point out that the qurʾānic references to God as *wakīl* (i.e. the only proper object of *tawakkul*) allude "to God's exclusive power to *determine the fate* of any created being or thing" (Asad, *Message,* ad Q 17:2). In general, therefore, the qurʾānic imperative that the faithful place their absolute trust *(tawakkul)* in God, and the corollary imperative that they adopt no one other than God as the ultimate guardian of their affairs (e.g. Q 17:2) have a deep semantic and theological connection to the well known qurʾānic refrain, attested a total of thirty-five times: "God has the power of determination over everything" (*Allāh* [or simply *huwa*] *ʿalā kulli shayʾin qadīrun*). In other words, the only proper human response to the absolute and limitless nature of God's power of determination over all things *(qadar)* is an equally absolute and limitless trust in, and reliance upon, God. Anything less would necessarily imply the sin of *shirk* — ascribing a partner to the partner-less God — and would thus seriously compromise one's faith.

Ṣabr

Reference to Job (q.v.) as a paradigmatic embodiment of the virtue of patience is as deeply qurʾānic as it is biblical. Of the four appearances of the prophet Ayyūb (i.e. the biblical "Job") in the Qurʾān (Q 4:163; 6:84; 21:83-5; 38:41-4) two are substantive and make reference to Ayyūb's legendary afflictions (i.e. Q 21:83-5; 38:41-4). There is, however, at least one important difference between the biblical portrait of Job and the qurʾānic portrait of Ayyūb (see SCRIPTURE AND THE QURʾĀN; NARRATIVES; MYTHS AND LEGENDS IN THE QURʾĀN). Though both are portrayed as enduring great adversity, unlike Job, Ayyūb is not depicted as being plagued by the problem of theodicy. Not only does Ayyūb refrain from cursing the day he was born (cf. Job 3:1-12), but he not once — as does Job — attributes his travails to God (cf. Job 6:4; 8:17-18; 10:3, 8, 16; 13:24; 16:7, etc.); nor does he ask God for the reason he is suffering (q.v.; cf. Job 6:24; 10:2b); nor does he protest that "there is no

justice" (cf. Job 19:7b; see JUSTICE AND INJUSTICE); nor does he witness to his own "righteousness" (cf. Job 29:14-20; 31:5-40). In keeping with the highly idealized qurʾānic presentation of the prophets (see PROPHETS AND PROPHETHOOD) and messengers of God as nearly perfect in their submission (i.e. *islām*) to God's will, Ayyūb merely mentions his tribulations (*annī massaniya l-ḍurru* and *annī massaniya l-shayṭānu bi-nuṣbin wa-ʿadhābin,* Q 21:83 and 38:41, respectively), and in the very same breath — without ever explicitly asking for deliverance — praises God as "the most merciful of the merciful ones" (*wa-anta arḥamu l-rāḥimīn,* Q 21:83; see MERCY; GOD AND HIS ATTRIBUTES). Thus, in both the Bible and the Qurʾān, neither Job nor Ayyūb ever curses God (see CURSE); in their respective literary traditions both are regarded as paragons of patience because of their ability to endure great adversity without cursing God. The one significant difference, however, is that the Qurʾān seems to set the threshold of "patience" a bit higher for Ayyūb than the Bible does for Job. Whereas Job's patience allows him to question God, including asking God why he should be patient (Job 6:11); and whereas Job is only silenced in humility when God speaks to him "out of the whirlwind" (Job 38), Ayyūb's patience has no questions for God — only praise and dutiful silence.

This difference is significant because it underscores the degree to which the qurʾānic proclamation of Ayyūb's *ṣabr* or paradigmatic "patience" (*[ayyūb] wa-ismāʿīl wa-īdrīsa wa-dhā l-kifli kullun mina l-ṣābirīn,* Q 21:85 and *innā wajadnāhu ṣābiran,* Q 38:44) is predicated, not only on his endurance, but quite specifically on his *unquestioning* and presumably placid acceptance of suffering and adversity (see also ISHMAEL; IDRĪS; DHŪ L-KIFL). Nowhere is this link between *ṣabr* and a thoroughly unquestioning and tranquil disposition more apparent than in the story of the prophet Moses (q.v.; Mūsā) and the mysterious 'servant of God' (see SERVANTS) known to traditions of qurʾānic exegesis as "Khiḍr" (Q 18:65-82; see KHAḌIR/KHIḌR). Here, although the adversity is not his own (perhaps we are to presume that, as a prophet, Moses did indeed have the patience of Ayyūb when it came to his own personal suffering?), Moses cannot abide the seemingly antinomian acts (i.e. Q 18:71, 74, 77) of his newfound teacher without asking for a reason or justification. In so doing, however, Moses loses the privilege of discipleship which was originally established on the basis of the stipulation that the prophet would bear patiently (i.e. unquestioningly — *fa-lā tasʾalnī ʿan shayʾin ḥattā uḥditha laka minhu dhikran,* Q 18:70) with Khiḍr. The first two times Moses impatiently asks a question of Khiḍr, the latter chastises the former with the words, "Did I not say, 'You will not be able to bear with me patiently'?" (*a-lam aqul innaka lan tastaṭīʿa maʿiya ṣabran,* Q 18:72; cf. 18:75). The third time Moses breaks his vow of patience, Khiḍr finally declares "This is the parting of the ways between me and you" (*hādhā firāqu baynī wa-baynika,* Q 18:78). Although Khiḍr is willing to give Moses a third and final justification for the former's third antinomian act, he makes it clear to Moses that he has not yet cultivated the patience necessary to receive the special "knowledge learned through intimacy" with God (i.e. *ʿilm ladunnī* from *wa-ʿallamnāhu min ladunnā ʿilman,* Q 18:65; see Schimmel, *Dimensions,* 193), knowledge that he might otherwise have received from Khiḍr had he been able "to bear patiently what he did not comprehend" (*wa-kayfa taṣbiru ʿalā mā lam tuḥiṭ bihi khubran,* Q 18:68). This connection between unquestioning patience *(ṣabr)* and special knowledge *(ʿilm laddunī)* — a connection which is made quite explicit in

the narrative of the encounter between Moses and Khiḍr — comes to play a central role in Ṣūfī (see ṢŪFISM AND THE QUR'ĀN) understandings of "patience" (see below).

Tawwakul *and* ṣabr

In three instances (Q 14:12; 16:42; 29:59) the Qur'ān makes it clear that, on a foundational level, the concepts of *ṣabr* and *tawakkul* belong to what Izutsu refers to as a single "semantic category" (Izutsu, *Concepts,* 9). In all three of these instances, the qur'ānic concepts of trust *(tawakkul)* and patience *(ṣabr)* are understood as defining and informing each other. In Q 14:12, we find one of the many qur'ānic accounts of how all of God's messengers at one time or another faced great adversity, especially in the form of persecution at the hands of those who refused to accept their messages (see OPPOSITION TO MUḤAMMAD). Yet all of these messengers "patiently endured" whatever harm might come their way, "placing absolute trust in God." The messengers are quoted as having said to themselves and their persecutors, "Why should we not place absolute trust in God when he has guided us along our ways? We shall patiently endure whatever harm you might bring us! Let those who trust place absolute trust in God [and God alone]!" In Q 16:42, the original group of Meccan faithful who emigrated with Muḥammad to Medina (q.v.; i.e. the *muhājirūn*) in the year 1/622 are described as "those who have patiently endured and place absolute trust in their lord" (*alladhīna ṣabarū wa-ʿalā rabbihim yatawakkalūn;* see EMIGRATION). For al-Bayḍāwī, these émigrés endured "adversities such as the persecution of those who deny God and separation from their homeland" *(ṣabarū ʿalā l-shadā'idi ka-adhā l-kuffār wa-mufāraqati l-waṭan)* precisely by "keeping their exclusive attention on God, realizing that every matter is in his charge" (*munqaṭiʿīn ilā llāh mufawwiḍīn ilayhi l-amra kullahu*; Bayḍāwī, *Anwār,* ad Q 16:42). In Q 29:59, "those who are faithful and do righteous deeds" (*alladhīna āmanū wa-ʿamilū l-ṣāliḥāt,* Q 29:58; see GOOD DEEDS; GOOD AND EVIL) are promised paradise (q.v.) and are declared to be "those who have patiently endured, and place absolute trust in their lord" (cf. Q 16:42).

In addition to pairing "patience" and "trust" into a single semantic category, the Qur'ān does the same with "patience" and "thankfulness" *(shukr)*. There are, in fact, four occurrences of an identical refrain in which an intensive noun-form *(ism al-mubālagha)* of both roots (i.e. *ṣabbār* and *shakūr*) are placed in apposition to each other (i.e. Q 14:5; 31:31; 34:19; 42:33). Each of these verses mentions an astonishing occurrence (e.g. the deliverance of the Hebrews from bondage and ships cruising on the seas; see CHILDREN OF ISRAEL; SHIPS), and in reference to the occurrence declares: "Surely in that there are signs (q.v.) for every truly patient and thankful person" *(inna fī dhālika la-āyātin li-kulli ṣabbārin shakūrin)*. This qur'ānic pairing of the concepts of the "patient" and the "thankful" person eventually becomes the basis for Ṣūfī teaching that while patience in adversity is undoubtedly a virtue, an even greater virtue lies in the capacity to go beyond patience and actually express genuine thankfulness to God for the purgative opportunities inherent in every trial (q.v.; see Schimmel, *Dimensions,* 124-5).

Ṣūfī interpretations of tawakkul *and* ṣabr

The *Tafsīr al-Qur'ān al-karīm* (published under the name of the great Ṣūfī master and mystical theologian Ibn al-ʿArabī [d. 638/1240], but actually the work of ʿAbd al-Razzāq al-Kāshānī [d. 730/1329]) draws a direct connection between "patience" *(ṣabr)* and "courage" (q.v.; *shajāʿa*), while at the same time rooting both of

them in the deepest profession of the oneness of God *(tawḥīd Allāh)*. In his exegesis of Q 3:145-51, a set of verses discussing the "patience" of the many prophets who fought for the sake of God (see FIGHTING; PATH OR WAY; JIHĀD) without ever "flagging" or "growing weak" in either body or spirit *(mā wahanū… wa-mā ḍaʿufū),* the author argues that the "terror" *(ruʿb)* that eventually erupts in the hearts of the enemies of God's prophets "is a result of their ascribing partners to God" *(musabbaban ʿan shirkihim)*. The exegete goes on to explain that "courage and the other virtues [such as absolute trust in God] emerge out of the proper balance of the faculties of the lower self when it exists beneath the [luminous] shadow of the divine oneness; that is, when it is illuminated by the light of the heart enlightened by the light of the divine oneness. [Courage], therefore, truly attains its fullness only when the one who professes the oneness of God [in thought, word, and deed] has attained certitude in his or her profession" (ibid.). In this passage, the author is attempting to convey the deeper meaning of a legend regarding the state of the great Ṣūfī Shaqīq al-Balkhī's heart. According to Shaqīq's longtime companion, Ḥātim b. al-Aṣamm, one day — in the midst of an intensifying battle — Shaqīq put down his weapon, put his head on his shield, and fell asleep on the battlefield to the point that Ḥātim could hear him snoring. "This," al-Kāshānī [pseudo. Ibn al-ʿArabī] writes, "is the ultimate state of reliance on God and confidence in him; it belongs to the faculty of absolute certitude" (*wa-hādhā ghāyatun fī sukūni l-qalbi ilā llāhi wa-wuthūqihi bihi li-quwwati l-yaqīn;* ibid.).

It is no coincidence that al-Kāshānī (pseudo. Ibn al-ʿArabī) reflects on the attainment of absolute certitude in professing God's oneness in his exegesis of a qurʾānic passage which, at one point, proclaims God's "love" (q.v.; *ḥubb* or *maḥabba*) for the "patient" (*wa-llāhu yuḥibbu l-ṣābirīn,* Q 3:146). Just thirteen verses later, in the very same chapter, the Qurʾān also proclaims God's love for those who have absolute trust in him (*inna llāha yuḥibbu l-mutawakkilīn,* Q 3:159). Since, for the Ṣūfīs, love is the medium par excellence for the purification of the soul (q.v.), any quality in the human being which occasions divine love must be a quality which is indispensable for the perfection of the human heart. Therefore, as a Ṣūfī, al-Kāshānī (pseudo. Ibn al-ʿArabī) understands patience and trust not only to be "distinguishing marks of the person of faith" (*ʿunwān al-muʾmin;* see Bayḍāwī, *Anwār,* ad Q 14:5), but as stations *(maqāmāt)* and states *(aḥwāl)* of the interior mystical journey to the goal of unqualified profession of divine oneness (i.e. *tawḥīd*). For this author, as for many Ṣūfīs before and after him, trust and patience become two of the key ingredients in the alchemy of spiritual purification and the achievement of human perfection.

In his magnum opus, *The Revivification of the religious sciences (Iḥyāʾ ʿulūm al-dīn),* the renowned medieval Sunnī jurist, theologian, and mystic, Abū Ḥāmid al-Ghazālī (d. 505/1111), devotes an entire book to the subject of the "profession of divine oneness and absolute trust in God" (bk. 35, *Kitāb al-Tawḥīd wa-l-tawakkul*) and another entire book to the subject of "patience and thankfulness" (bk. 32, *Kitāb al-Ṣabr wa-l-shukr*). In his treatment of *tawakkul,* al-Ghazālī articulates the thesis, later developed by (the real) Ibn al-ʿArabī and others, that absolute trust in God is "[not only] one of the stations of those who possess certitude, but it is also indicative of one of the highest ranks of those who are drawn near to God" (*wa-maqāmun min maqāmāti l-mūqinīn bal huwa min maʿālī darajāti l-muqarrabīn*; Ghazālī, *Iḥyāʾ,* xiii, 154/2490). Al-Ghazālī argues that because

the profession of the divine oneness *(tawḥīd)* is the source or root *(aṣl)* of *tawakkul,* the perfection of both are coterminous. This is why al-Ghazālī correlates the attainment of absolute trust in God with what he refers to as the "fourth [and highest] degree" *(al-rutba l-rābiʿa)* of the profession of divine oneness. It is the state in which the one who has attained it "does not perceive anything in existence, but one being.… [This is the person] whom the Ṣūfīs designate as [having attained the state of] 'passing away in the divine oneness' from whence he or she perceives nothing but one being, and thus does not even perceive him or herself" (Ghazālī, *Iḥyāʾ,* xiii, 158/2494).

From al-Ghazālī's perspective, however, the problem with *tawakkul* is not the understanding that, as a spiritual state, it is coterminous with complete realization of the divine oneness. The problem, rather, is with erroneous understandings that the attainment of *tawakkul* is marked by a radical trust in God which eschews all purposive action on the part of the human person (Ghazālī, *Iḥyāʾ,* xiii, 154/2490). ʿAbd al-Qādir al-Jīlānī (d. 561/1166) deals with this very same issue in his "Satisfaction for those who seek the path of truth" *(Kitāb al-Ghunya li-ṭālibī ṭarīqi l-ḥaqq)* where he quotes a well-known ḥadīth (see ḤADĪTH AND THE QURʾĀN), reported on the authority of Anas b. Mālik (d. ca. 92/711), which appears to be a scriptural *locus classicus* for reflecting on the relationship between absolute trust in God and responsible purposive action on the part of the human being (see Ibn Abī l-Dunyā, *Tawakkul,* n. 11, 46). According to al-Jīlānī's version of this ḥadīth, a man arrives riding on a she-camel which belongs to him and says, "O messenger of God, shall I just leave her [i.e. unattended] and place my trust [in God]?" *(adiʿuhā wa-atawakkalu)*. To which Muḥammad replies, "Tie her up, and then place your trust [in God]" *(iʿqilhā wa-tawakkal;* Jīlānī, *Ghunya,* 219). Both al-Ghazālī and al-Jīlānī represent mainstream Ṣūfī teaching that the attainment of *tawakkul* should have no effect on whether one responsibly fulfills one's duties to God and to others, but simply on how attached one is to outcomes.

As for *ṣabr,* al-Ghazālī quotes two ḥadīth that have been attributed to the Prophet. The first is a report with a weak chain of transmission and which states plainly, "Faith has two halves: patience and thankfulness" (*fa-inna l-īmāna niṣfāni niṣfu ṣabrin wa-niṣfu shukrin;* Ghazālī, *Iḥyāʾ,* xii, 32/2176), and in doing so echoes the original qurʾānic coupling of *ṣabr* with *shukr* (see above). The second has a much stronger chain than the first and simply reads, "Patience is half of faith" (*al-ṣabru niṣfu l-īmān;* Ghazālī, *Iḥyāʾ,* xii, 33/2177). As al-Ghazālī sees it, the other half of faith to be coupled with "patience" can be construed to be either "certitude" *(yaqīn)* or "thankfulness" *(shukr),* depending on one's perspective on faith. If one thinks of faith primarily from the perspective of belief, then "'certitude' refers to those definitive types of knowledge (see KNOWLEDGE AND LEARNING) that come through God's guidance of his servant to the fundamental principles of religion (q.v.), and 'patience' refers to action on the basis of that certitude" (Ghazālī, *Iḥyāʾ,* xii, 42/2186). Thus certitude is the first half and patience the second half of faith. If, however, one thinks of faith primarily from the perspective of states of being that give rise to various types of practice — and one identifies one state as appropriate for that which benefits the servant in this life and the next, and another for that which harms the servant in this life and the next, then "'patience' is the state that correlates with what is harmful and 'thankfulness' the state which correlates with what is beneficial"

(*wa lahu bi-l-iḍāfati ilā mā yaḍurruhu ḥālu l-ṣabri wa bi-l-iḍāfati ilā mā yanfaʿuhu ḥālu l-shukr;* Ghazālī, *Iḥyāʾ,* ibid.; see GOOD AND EVIL; REWARD AND PUNISHMENT). Whichever perspective one might prefer, patience remains one of the necessary and paramount virtues of the faithful person. As al-Ghazālī writes, "The majority of the virtues of faith enter through [the door of] patience" (*fa-aktharu akhlāqi l-īmāni dākhilun fī l-ṣabr;* Ghazālī, *Iḥyāʾ,* xii, 43/2187).

As for mainstream Ṣūfī teaching on the relationship between "trust" and "patience" — not so much as cardinal virtues of the faithful person, but as stations and states on the mystical path — the following anecdote communicates one of the dominant perspectives: "Abu ʿAlī al-Rūdhbārī… said, 'With respect to absolute trust in God *(tawakkul),* there are three levels. The first is [the servant of God's] thankfulness *(shukr)* when [something he or she wants] is bestowed upon him or her, and patience *(ṣabr)* when he or she is denied. The second is when it is one and the same whether the servant is denied [what he or she wants] or it is bestowed upon him or her. The third is when the servant meets denial with thankfulness — denial being more dear to him or her [than bestowal] because of his or her knowledge that this is God's choice for him or her'" (Jīlānī, *Ghunya,* 217).

Truth

That which is established by evidential or experiential proof. A number of qurʾānic lexemes convey this significance *(ḥaqq, qayyim, ṣawāb, ṣadaqa/ṣidq)*, *ḥaqq* being the most prevalent. Evidence abounds in the Muslim tradition to support a multivalent understanding of *ḥaqq* as alternatively "true" or "real," yet that is only the beginning of a story with a pre-history. "The original meaning of the Arabic root *ḥ-q-q* has been obscured but can be recovered by reference to the corresponding root in Hebrew with its meanings of (a) 'to cut in, engrave' in wood, stone or metal, (b) 'to inscribe, write, portray'" (Macdonald and Calverley, Ḥaqq). From this it can be inferred that "the primary meaning of *ḥaqq* in Arabic is 'established fact'…, and therefore 'truth' is secondary; its opposite is *bāṭil* [vain] (in both readings)" (ibid.). Yet as one of the ninety-nine canonical "names of God" (see GOD AND HIS ATTRIBUTES), *ḥaqq* will exploit both of these meanings as well as the original notions of forming or inscribing. Besides the five times the term is introduced formally as a divine name, it is found 247 times in the Qurʾān.

Beyond these philological considerations, we must attend to our understanding of "true," and even of "real," in order to

grasp the import of this term in the Qurʾān and hence for Muslims. To appreciate the complexities involved, let us canvas the transformations needed in our prima facie grasp of these notions. At least since the development of Hellenic philosophy, reinforced by medieval scholars and in a peculiar way by modernity, "true" is properly applied to statements rather than to things, whereas "real" is paradigmatically said of things. The crucial difference presented by qurʾānic use centers on the creator, one of whose proper names — *al-ḥaqq* — should remind us that whatever be true or real about everything else, the created universe derives from this One who is paradigmatically true and real (see CREATION; COSMOLOGY). Since the concept of a free creator is shared by all Abrahamic faiths (see RELIGION; ABRAHAM), Western medieval scholars also underlined this difference, introducing a novel notion of the "truth of things," whereby things (as created) can be said to conform to the creator's intent, much as statements conforming to what is the case can be said to be true. So if God, the free creator, is paradigmatically true, then events or things will be true (or false) as they conform (or fail to conform) to the creator's intent. Yet that intent cannot be discerned from creatures themselves, whose derived status is hardly perspicuous, so humankind has been gifted with the Qurʾān (see REVELATION AND INSPIRATION). While the primacy of creation can hardly be gainsaid, without the guidance of the Qurʾān there can be no access to things-as-created, nor *a fortiori* to the creator. So while the creator's intent is what makes things be, and be what they are, it is the Qurʾān which makes that intent known, in the measure that it can be made manifest at all, giving to the notion of truth in the Qurʾān a radical coherence (with divine intent) as well as correspondence with what is.

Hence the very One "who sent down upon you the book with the truth" (Q 3:3), "verifies the truth by his words" (Q 8:7; 10:82). If the creating word makes things to be, "it is he who created the heavens and the earth (q.v.) in truth" (Q 6:73; see HEAVEN AND SKY), and that same word in the Qurʾān becomes the "call to the truth" (Q 13:14) and the ground by which a people "guide [others] in the truth" (Q 7:159, 181) and to the truth. Hence the centrality of promise "be patient; surely God's promise is true" (Q 30:60; cf. 31:33; see TRUST AND PATIENCE); indeed the Qurʾān is given "that they might know that God's promise is true" (Q 18:21), even though the truth asserted there remains to be fulfilled. For with promise comes faith (q.v.), "those who believe follow the truth from their lord" (q.v.; Q 47:3), which is the Qurʾān "guiding to the truth and to a straight path" (Q 46:30; see PATH OR WAY). Notice how "truth" can never be anyone's possession; it remains a lure yet with definite parameters for the search: the "straight path" (Q 1:6) of the Qurʾān together with the sunna (q.v.) or traditions of the Prophet (see ḤADĪTH AND THE QURʾĀN), enshrined in and interpreted by the community or *umma* (see COMMUNITY AND SOCIETY IN THE QURʾĀN). So the truth revealed in the Qurʾān becomes a path to discovering the "truth of things" as created, by which one can hope to find one's way to the creator. Only then, according to the Ṣūfīs (see ṢŪFISM AND THE QURʾĀN), will the promise, the hope and the faith, be transmuted in such a way that one could begin to say with al-Ḥallāj (exec. 309/922): *Anā l-ḥaqq,* "I am the truth" (Massignon, *Passion,* 216-18). Yet however coherently and properly it may be expressed, the very fact that *ḥaqq* is one of the names which God gives himself in the Qurʾān assures us that the path which is the Qurʾān and the sunna will lead us

from the term to the divine name by a process designed to transform us. As emphasized in Ṣūfī thought, this is one more manifestation of the way in which the exoteric can meld into the esoteric in Islam (see POLYSEMY), as believers who walk the path come to realize its transforming power.

The Qurʾān consistently contrasts those who accept the truth in faith with those who reject it: "We brought you the truth but most of you were averse to the truth" (Q 43:78; see LIE; BELIEF AND UNBELIEF), where the reference is to Jesus' (q.v.) followers who placed him on a level with God (see CHRISTIANS AND CHRISTIANITY; POLYTHEISM AND ATHEISM; POLEMIC AND POLEMICAL LANGUAGE). Yet here, too, the truth will emerge when "they encounter their day promised them" (Q 43:83; see LAST JUDGMENT; ESCHATOLOGY). So any denial of the truth — especially the truth of creation — will be short-lived, for when "the promised truth draws near, then the unbelievers, their eyes wild with terror, will say: 'Woe betide us! We were heedless of this!'" (Q 21:97). Moreover, such a denouement is perfectly reasonable, for such is the nature of things: "to return to us is the destiny of each and all. Whoever has done good deeds (q.v.), being a believer, will not find his endeavors denied" (Q 21:93-4). So the truth which things owe to their being created freely by a wise God will be realized in those who believe the truth revealed to them, while the reverse side of the same truth will be realized for those who reject that revelation (see REWARD AND PUNISHMENT). Since there is no escaping this creating truth, it is best to follow the "straight path" to its benign realization. Yet if the revelation of the Qurʾān is the precondition for human beings to realize their true reality, the community engendered by that revealed truth will offer them the way to attain it. So "true" and "truth" in the Qurʾān have an inescapably "performative" dimension, on God's part as well as ours: "God meant to verify the truth of his words by the total rout of the truth-rejecters, demonstrating how true the truth is and how vain the falsehood" (Q 8:7-8). "This is truth, certain truth" (Q 56:95; 69:51), or alternatively, the "truth of certainty," *ḥaqq al-yaqīn*, where *yaqīn* carries more metaphysical than epistemological connotations: the truth which stands fast. The Qurʾān is less concerned with our hold on what is true than with truth's hold on us; and rightly so, since we cannot "hold onto" a truth meant to be realized in and through our "return" to it as our source. That is why the final consequence of that return is less individual reward than it is human access to the divine manifestation, even though justice (see JUSTICE AND INJUSTICE) demands that believers be recompensed, positively or negatively, for an act which is theirs. Accepting the offer would not be free were we not able to refuse it, so the truth the Qurʾān insists will be realized bears no hint of determinism (see FREEDOM AND PREDESTINATION). The human capacity to accept or reject is internally linked with the "graceful" offer which the Qurʾān extends (see GRACE; BLESSING).

Yet just as our access to the truth of creation is dependent upon our accepting the truth revealed in the book (q.v.), so our grasp of that revealed truth will be shaped by the community which embodies it. Because for Muslims, the Qurʾān is inextricably linked with the sunna, the meaning of "truth" in the Qurʾān will be unveiled in practices characteristic of that community. Greeting each other, Muslims will invariably end their exchange with *al-ḥamdu lillāh*, "God be praised" (see LAUDATION; GLORIFICATION OF GOD). Even when a cliché, it remains an illuminating one. As Eric Ormsby has noted, in explicating

al-Ghazālī's (d. 505/1111) insistence that the world as it stands is "the best possible," there is nothing Panglossian here, primarily because al-Ghazālī is not claiming that we could know what the best would be, such that this world conforms to it. It rather states the conviction that we do not know what "best" would be like but that to those who believe, the world discloses unsuspected ways of realizing the divine wisdom (q.v.) that directs its unfolding. That is closer to the qurʾānic insistence that God's truth will be realized, even in the case of scoffers. The divinely ordained context of our lives — what William Chittick and Sachiko Murata *(Vision of Islam)* translate as "the measuring out" *(qudra)* — reflects the truth as the Qurʾān sees it: the outworking of what is divinely ordained. Such an operative notion of truth demands that we let go of any pretension to control what will happen, which in fact only makes good sense (see FATE; DESTINY).

At this point, we are bound to ask: what kind of truth can the Qurʾān be expounding? One that is certain, yet unveiled only as one's life unfolds; one more akin to coming to understand a wisdom initially hidden, than to knowing straightforwardly what is the case (see KNOWLEDGE AND LEARNING; IGNORANCE). So the truth of the Qurʾān is of a paradoxical sort: it turns on accepting as true what the Qurʾān reveals, and then on following the "straight path" it prescribes to allow that truth to be realized, and so confirm one's original acceptance. Recourse to metaphor (q.v.) signals our inability to say anything directly about this "truth," since it embodies the ineffable relation of creation to the creator:

> the thing which most deserves to be [called] true is the One whose existence is established by virtue of its own essence, forever and eternally; and its knowledge as well as the witness to it is true forever and eternally (al-Ghazālī, *Ninety-nine names,* 124, commenting on *al-ḥaqq* as a name of God).

But note how al-Ghazālī's exposition follows the performative ethos of the Qurʾān itself (see ETHICS AND THE QURʾĀN), appending the following counsel:

> Man's share in this name lies in seeing himself as false, and not seeing anything other than God — great and glorious — as true. For if a man is true, he is not true in himself but true in God — great and glorious — for he exists by virtue of him and not in himself; indeed he would be nothing had the Truth not created him.

By tracing the abiding Ṣūfī sentiment of one's proper nothingness to the originating act of creating, al-Ghazālī seeks to align the conclusions of *kalām* with Ṣūfī convictions (Gimaret, *Les noms divins,* 142; see THEOLOGY AND THE QURʾĀN; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). While this reconciling move is characteristic of al-Ghazālī, it is illuminating as well, signaling that the relation of creatures to their creator, which allows us to speak of them as true, exceeds our capacity for articulation; and so opens the way for Ibn al-ʿArabī's (d. 638/1240) insistence that the creator/creature relation be utterly unlike any relation which obtains between creatures themselves (Chittick and Murata, *Vision,* 61). For creation is the founding or grounding relation, allowing things to be true in their dependent existence. And if this be recondite philosophy, it can be found implicit in the paradoxical uses of "true/real" in the Qurʾān itself.

Tubbaʿ

"The people of Tubbaʿ" *(qawm tubbaʿ),* an extinct community mentioned twice in the Qurʾān. Among other pre-Islamic groups, they were punished because they refused to believe God or obey God's prophets (see BELIEF AND UNBELIEF; OBEDIENCE; PROPHETS AND PROPHETHOOD). Q 44:37 compares Muḥammad's detractors (see PROVOCATION; OPPOSITION TO MUḤAMMAD), who challenged him to prove resurrection (q.v.) by himself reviving the dead (see DEATH AND THE DEAD), with the people of Tubbaʿ, who were destroyed for their sins (see SIN, MAJOR AND MINOR; PUNISHMENT STORIES): "Are they better, or the people of Tubbaʿ and those before them? We destroyed them, for they were sinners." In Q 50:14, the people of Tubbaʿ are listed along with other lost communities (see GEOGRAPHY): the people of Noah (q.v.), those of al-Rass (q.v.), and the Thamūd (q.v.), the ʿĀd (q.v.), Pharaoh (q.v.) and the brethren of Lot (q.v.): "And the dwellers in the wood (see PEOPLE OF THE THICKET), and the people of Tubbaʿ: all denied the messengers (see MESSENGER; LIE), so [my] threat took effect."

Arab lexicographers (see ARABIC LANGUAGE; GRAMMAR AND THE QURʾĀN) define the term *tubbaʿ* as a title of rulership among the kings (see KINGS AND RULERS) of Yemen (q.v.) and specifically among the Ḥimyar. The title is explained from the root meaning "to follow": every time one *tubbaʿ* died, he was followed immediately by one who took his place. Specifically, *tubbaʿ* was the royal title of the kings of the second Ḥimyarite kingdom (ca. 300-525 C.E.). According to Ibn Isḥāq (d. ca. 150/767), Ibn al-Kalbī (d. ca. 205/820), al-Yaʿqūbī (fl. third/ninth cent.), al-Ṭabarī (d. 310/923) and others (with differences in detail), the Tubbaʿ Asʿad Abū Karib returned from Iraq (q.v.; or Yathrib [see MEDINA]) with two rabbis (*ḥabrayn min aḥbār al-yahūd;* see JEWS AND JUDAISM), who convinced him to destroy the image of the idol (see IDOLS AND IMAGES) or place of sacrifice (q.v.) called Riʾām, located in Medina, Mecca (q.v.) or in Yemen (see also SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). "Thereupon they demolished it, and the Tubbaʿ, together with the people of Yemen, embraced Judaism" (Faris' translation of Ibn al-Kalbī). Beeston questions whether the Ḥimyar actually became Jewish or practiced some heterodox indigenous pre-Islamic expression of monotheism. The Ḥimyar are known in legend to have remained Jewish for a century until the time of their last great king, Yūsuf, also known as Dhū Nuwās, who was killed according to legend after his massacre of the Christians of Najrān (q.v.) and the subsequent invasion of the Christian Abyssinians to destroy him (see ABYSSINIA; CHRISTIANS AND CHRISTIANITY).

According to most commentators, the Tubbaʿ referenced in the Qurʾān was good and a believer but his subjects were not. They (the qurʾānic "people of *tubbaʿ*") are destroyed while he is saved. The role of the two Jewish learned men includes (1) proving the future coming of Muḥammad through the esoteric knowledge of the Jews and thus convincing the Tubbaʿ not to destroy Yathrib, the future home of the Prophet, and (2) proving the original

monotheistic purity of the Kaʿba (q.v.) even before Muḥammad. They affirm that "it is indeed the temple (see SACRED PRECINCTS) of our forefather Abraham (q.v.)… but the local people… set up idols around it." They instruct the Tubbaʿ how to perform the pilgrimage (q.v.) rituals at the Kaʿba and he subsequently learns in a dream (see DREAMS AND SLEEP) that he should make for it a beautiful *kiswa* or covering. In an oft-repeated legend, when the Tubbaʿ returns to Yemen with the two Jewish learned men, the people of Ḥimyar refuse him entry because he abandoned their ancestral religion. The Tubbaʿ calls them to his new religion and the Ḥimyarites propose that the conflict should be settled by their traditional ordeal of fire (q.v.), through which the guilty are consumed while the innocent remain unscathed. The idolaters (see IDOLATRY AND IDOLATERS) came with their idols and offerings (see CONSECRATION OF ANIMALS) while the (Jewish) learned men came with their texts *(maṣāḥif)* hanging from their necks (see SCROLLS; SHEETS). The idolaters are consumed along with their idols but the wise men are not. The Ḥimyarites are convinced and thus accept Judaism, the Tubbaʿ's religion. The Ḥimyarites were said to have claimed that there were seventy Tubbaʿ kings.

Tubbaʿ is a name as well as a title. Al-Thaʿlabī (d. 427/1035) cites Wahb b. Munabbih (d. ca. 114/732), who narrates how Solomon (q.v.) married Bilqīs (q.v.) to Tubbaʿ the great, king of Hamdān, and brought him back to Yemen, and conflates this with Dhū Tubbaʿ, who ruled over Yemen with the support of King Solomon and the help of the Yemeni jinn (q.v.). In al-Kisāʾī's *Qiṣaṣ,* Kaʿb al-Aḥbār (d. 32/652-3) is made to include a Tubbaʿ among the twelve male children of ʿĀd b. ʿŪṣ b. Aram b. Sām b. Nūḥ.

A pre-Islamic alabaster stele made by "Layaʿathat the Sabaean" (see SHEBA) on behalf of "Abibahath wife of Tubbaʿ son of Subh" for the goddess Shams depicts a male figure with bow, spear and dagger, presumably Tubbaʿ, making an offering with his wife to the goddess. See also PRE-ISLAMIC ARABIA AND THE QURʾĀN.

Turkish Literature and the Qurʾān

The acceptance of Islam in Anatolia towards the end of the third/ninth century brought new beliefs and social norms, and began to create a new linguistic and liter-

ary climate which would dramatically reshape the Turkish language and its literary traditions. The literary language was eventually enriched with a large number of borrowings from Arabic, the sacred language of the Qurʾān (see ARABIC LANGUAGE), and from the court poetry of Persia. In their effort to be pious Muslims, the new converts adopted the script of the qurʾānic language as well (see ARABIC SCRIPT). Regardless of the degree to which Turkish-speaking peoples have, or have not, had access to the semantic content of the Qurʾān, its iconographic power has been extremely influential on their cultural outpourings (see MATERIAL CULTURE AND THE QURʾĀN). The Arabic script, in its association with the Qurʾān, conveys an aura of spirituality and provides a calligraphic and symbolic entry into the Islamic world (see REVELATION AND INSPIRATION; CALLIGRAPHY).

The pre-Islamic Turkic epics went through a striking transformation in Anatolia after the acceptance of Islam and its holy book. The birth of the romantic epic *(hikaye)* with new dimensions of love (q.v.) began to manifest Islamic references but at the same time kept the pre-Islamic (particularly Shamanistic) rituals and symbols. In these epics, one can observe a remarkable intertextuality of different and often contrasting religious practices and references. While a troubadour or bard played his *saz,* a stringed instrument, performing his epic to his audience, he would not hesitate to talk about wine (q.v.) or his character's sexual life (see SEX AND SEXUALITY), while at the same time citing a verse from the Qurʾān. In some cases, the epic-teller would address his audience through a digression, saying that he knows it is not right to cite from the Qurʾān while he is holding a musical instrument in his hands (see LAWFUL AND UNLAWFUL; RITUAL PURITY; RECITATION OF THE QURʾĀN). Linguistically speaking, these quotations from the Qurʾān are often highly corrupt and out of context. Since the audience would not know Arabic, immediately after the qurʾānic quote the epic-singer would offer his own Turkish translation and commentary.

Turkish hagiographic legends exhibit a similar use of the Qurʾān and ḥadīth (see ḤADĪTH AND THE QURʾĀN). Though no scholarly treatment of the qurʾānic verses in these compositions exists, in the great majority of the manuscripts, the composers do not cite the Arabic verses correctly, and their Turkish renderings are rather more like approximations than accurate translations. This is typical of folk literature, whether its transmission was written or oral. Just as the peoples of Anatolia created their own version of folk Islam, their folk literature created its own version of Islam, the Qurʾān, and Muḥammad.

The treatment of the Qurʾān finds a new level of sophistication in Turkish, or more properly Ottoman, court literature. It functioned as one of the major sources of this classical literary tradition (thirteenth-nineteenth centuries C.E.). Although the subjects and vocabulary of *taṣawwuf,* Islamic mysticism (see ṢŪFISM AND THE QURʾĀN), dominate those aspects of Turkish court literature that carry religious themes, the Qurʾān also has a very special place, both in terms of its vocabulary and direct quotations from it, as well as reworkings of some famous qurʾānic stories (see NARRATIVES; MYTHS AND LEGENDS IN THE QURʾĀN). One important reworking of such stories is Şeyyād Ḥamza's (fl. seventh/thirteenth century) retelling of the Joseph story. This narrative of Joseph (q.v.) was widely used in Ottoman literature. Also

known as "the most beautiful of stories" (cf. Q 12:3), the tale has more or less the same plot in Turkish court poetry: Joseph (Ar. Yūsuf; T. Yusuf) was one of the twelve sons of the prophet Jacob (q.v.; Ar. Yaʿqūb; T. Yakub/Yakup). He was more loved by his father than his other siblings (see BENJAMIN; BROTHER AND BROTHERHOOD). One day he saw in a dream (see DREAMS AND SLEEP) that eleven stars (see PLANETS AND STARS) and the sun (q.v.) and the moon (q.v.) worshipped him. He recounted his dream to his father. Jacob interpreted these eleven stars as his brothers. He believed that what Joseph saw in his dream was a divine message from God to announce that Joseph had been chosen to be a prophet (see PROPHETS AND PROPHETHOOD). He told his son to be careful and not to tell his dream to his brothers. He was afraid that jealousy would invade the hearts of his eleven other sons and, indeed, his worries turned out to be true. Joseph's brothers plotted against him, threw him into a well, and told their father that a wolf had eaten him. When Jacob heard the devastating news, he cried, from that moment on, day and night; Jacob's dwelling came to be known as "the house of grief." In fact, his brothers had sold Joseph into slavery to a merchant for a couple of silver coins. The merchant took Joseph with him to Egypt (q.v.) where he was bought at the slave market by an Egyptian notable named ʿAzīz (T. Aziz; see KINGS AND RULERS). When his wife, Zulaykha (T. Züleyha; see WOMEN AND THE QURʾĀN), saw Joseph, she was drawn to him sexually as he had unrivaled physical charm. She did everything to attract his attention. One day, Zulaykha entered Joseph's room and tried to seduce him. While he was struggling to escape from her, Joseph's shirt was torn. When he went out, he found ʿAzīz in front of him. Zulaykha seized this opportunity to take revenge on Joseph for rejecting her. She told her husband that Joseph had attacked her. His resistance to her desires brought him disgrace and imprisonment. In prison, Joseph stayed with two other men. He interpreted their dreams correctly. One of his fellow prisoners was released and became the king's cup-bearer. Through this man, the king of Egypt found out the truth about the Joseph-Zulaykha relationship and released the innocent man. Joseph interpreted one of the king's dreams, too. He was later appointed a minister by the king. After a while, his brothers came to Egypt and were warmly welcomed by Joseph. They did not know that he was an important man. In the end, Joseph forgave all of his brothers (see FORGIVENESS) and also brought his father from Canaan to Egypt. Extra-qurʾānic details elaborate the narrative. For example, in the meantime, great misfortunes had befallen Zulaykha. Her husband had died, and she had become desperate. She had also lost her beauty (q.v.). When Joseph found this out, he felt sorry for her, and decided to marry her. Having done so, God bestowed her former beauty upon her and happiness was restored to the family.

The practice of citing from the Qurʾān and ḥadīth was usually called *îktibas* (Ar. *iqtibās*), and is similar to another common figure of speech known as *îrsal-i mesel*, "providing a proverb and its application in a single distich." The main purpose of these quotes was to reinforce the poet's discourse on a subject, on the assumption that no one would challenge the word of God (q.v.) or that of the Prophet, thus giving more credibility to the poet's own statements. Often times, the poets use a figure of speech called *telmih* (Ar. *talmīḥ*), "allusion," to a particular verse of the Qurʾān or a ḥadīth (see also LITERATURE AND THE QURʾĀN). A scholarly examination of these quotes and allusions in Turkish literary texts and their contextualization (and in

many cases decontextualization) has not been undertaken.

While the authors of folk narratives would often provide their audience with a Turkish translation or approximation of the qurʾānic passages they were citing (see TRANSLATIONS OF THE QURʾĀN), Ottoman court poets did not engage in such practice. Indeed, there was no practical reason for it. Generally speaking, court poetry assumed an educated audience, an audience usually literate in Turkish, Persian and Arabic, and with an adequate education in the Islamic sciences (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). Not translating such quotes, and not providing any explicit source for the quotes, also challenged the capacities of the audience and added to the overall liveliness of this tradition.

Despite the tremendous efforts of modern Turkish philologists since the founding of the Turkish republic to decipher and publish the major Ottoman literary sources, unfortunately a great majority of the existing sources remain in manuscript form, and have not been studied. Thus, any attempt to write an overview of the Qurʾān and Turkish literature is necessarily incomplete. Based on some of the most significant studies on Ottoman literature, the following list of the most frequently cited verses of the Qurʾān in Turkish court poetry can be composed (cf. Levend, *Divan;* Onay, *Eski Türk;* Pala, *Ansiklopedik dīvān;* Tarlan, *Fuzūlī divani*): Q 21:22; 95:4; 14:34; 36:69; 2:47; 89:27-8; 61:13; 2:82; 13:23; 16:31; 20:76; 39:73; 111:4; 6:2; 17:1; 2:224; 12:87; 11:70; 20:21-68; 27:10; 28:25-31; 29:33; 7:172; 43:32; 2:1; 29:1; 30:1; 31:1; 32:1; 2:225; 7:206; 13:15; 16:49; 17:107; 19:58; 22:18; 25:60; 27:25; 32:15; 38:24; 78:40; 24:36; 8:17; 3:14; 35:33; 39:73; 24:35; 2:2; 81:1; 95:4; 2:256; 5:45; 9:25; 93:1; 68:1; 56:30; 28:88; 56:29; 33:4; 20:6; 92:1; 93:2; 21:107; 30:50; 55:1; 24:35; 93:2; 17:1; 31:77; 39:73; 2:115; 53:9; 17:37; 31:18; 71:5; 35:1; 37:35; 47:119; 13:30; 39:6; 59:22; 27:30; 26:224; 36:69; 2:115; 78:40; 65:7; 84:5-6; 48:1; 39:22; 20:12; 2:285; 4:46; 5:7; 24:51; 96:19; 21:30; 61:13; 50:20; 87:1; 27:7; 28:29; 24:36; 8:17; 3:14; 9:72; 13:23; 16:31; 18:31; 19:61; 20:76; 38:50; 61:12; 39:73; 24:35; 81:1; 95:4; 2:256; 5:45; 9:25; 56:30; 28:88; 33:4; 20:4; 53:9; 15:72; 26:88; 25:53; 83:26; 21:23; 7:179; 25:44; 75:40; 14:7; 65:10; 5:100; 3:13; 59:12; 43:32; 55:26; 33:41; 39:53; 3:103-12; 20:66; 26:44; 21:107; 93:2. Many of these verses were commonplace in the collections of Turkish poetry and for centuries poets have alluded to them repeatedly. Ottoman Turkish court poetry was highly technical, linguistically cumbersome, and rhetorically charged, but at the same time it had a limited lexicon. Thus it is not surprising to see the repetition of these verses in collections (*divan*s) written centuries apart. The established literary tradition dictated the vocabulary of the medieval poet, as did the limited number of canonical books, the Qurʾān being the most significant of all. Generally it was viewed by the Ottoman poet as the supreme example of "poetic perfection" (see INIMITABILITY).

In Turkish court poetry, the Qurʾān is equated with the beauty of the beloved: his or her beautiful face, tall stature, long and dark hair, eyes, eyebrows, cheek fuzz, and mole. Sometimes it is designated as the *kitap,* "book" (q.v.), *mushaf* (see MUṢḤAF), "book, volume," *ayet* (pl. *ayat*), "verses" (q.v.; see also SIGNS; MIRACLES; MARVELS), *fürkan,* "that which distinguishes truth (q.v.) from error (q.v.)" (see also CRITERION), and *nur,* "light" (q.v.). In the majority of the *divan*s, it is the absolute truth with utter perfection, and thus it is referred to with utmost respect (see also NAMES OF THE QURʾĀN).

In the eighteenth century, Ottoman court poetry (together with other arts of the empire, such as miniature painting) went

through a dramatic change in its language, themes, representation of the real world, manifestation of human sexuality, and depiction of the place of religious discourse in poetry. Indeed, the whole society began to display signs of a Turkish "renaissance," one that emphasized a more secular state of mind. The clash between the *rind,* "the epicurean poet," and *zahid,* "zealot," had long dominated the pages of Turkish *divan*s, but in eighteenth century poetry, serious challenges to religion and religious authorities were evident, but without the previous centuries' reliance upon mysticism to mediate this clash. The poet Nedim (1681-1730) was one of those Ottoman authors who openly confronted some of the strongest proscriptions of Islam, such as drinking alcohol and consuming opium (see INTOXICANTS; FORBIDDEN) during the holy month of Ramaḍān (q.v.), refusing to write a single *tevhid,* "composition praising the unity of God" (see GOD AND HIS ATTRIBUTES), *münacat,* "poem which calls upon God for help, communicates with God," or *naʿt,* "poem in honor or praise of Muḥammad" (see PRAYER FORMULAS; NAMES OF THE PROPHET), and provocatively disparaging the Qurʾān itself:

Oh zealot, excuse me but your face seems rather homely (literally "there is some heaviness on your skin")
your ugliness can be perceived even by the thickness of your book!

This secular or anti-religious posture in literature became much stronger in the nineteenth and twentieth centuries with the advance of modernist movements in Turkey (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN). The positivist mentality of modern Ottoman and Turkish literature emphasized critical thinking, belief in positive sciences (see SCIENCE AND THE QURʾĀN), and a desire to free the human mind from the dogmas of Islam and its holy book. Among the foremost figures of this literature of the Turkish enlightenment were Tevfik Fikret (1867-1915), Reşat Nuri Güntekin (1889-1956), Nāzım Hikmet (1902-1963), and Aziz Nesin (1915-1995).

The philosophy exemplified in Fikret's poem entitled "Halūk's credo" (written for his son Halūk, and translated by Walter G. Andrews; Silay, *Anthology,* 259-60) occupied the pages of Turkish literature until the 1980s. A few lines can convey some sense of this philosophy:

There is a universal power, supreme and limitless
Holy and sublime, with all my heart, so
do I believe
The earth is my homeland, my nation all humankind;
A person becomes human only by knowing this, so
do I believe
We are Satan, and jinn (q.v.), there's no devil (q.v.), no angels (q.v.)
Human beings will turn this world into paradise (q.v.), so
do I believe
The perfect is immanent in creation (q.v.); in that perfection
By way of the Torah (q.v.), of the Gospels (q.v.), of the Koran
do I believe

The military coup in Turkey on September 12, 1980 not only reshaped the whole political, cultural and economic nature of the country but its literature as well. Whether Marxist-Leninist or Kemalist, the positivist character of Turkish literature began to go through a remarkable "postmodern" transformation and thus reflected a much more positive image of the so-called "Ottoman times" in general and Islam and its icons in

particular (see also POLITICS AND THE QUR'ĀN).

Ṭuwā

An enigmatic term mentioned in the Qur'ān, denoting a place or a concept of holiness. The term's semantic origins are obscure — a place name, a term meaning "twice done," even a misreading of the Syriac *ṭūr/ṭūrā* ["mountain"] have been suggested (cf. Bell, *Commentary,* i, 523 [ad Q 20:12]; cf. also Horovitz, *KU,* 125). The sacred place called *ṭuwā* is found in two sūras (Q 20 and 79), both of which speak of a holy valley and mention Moses (q.v.), but which are quite different otherwise. While Q 20 consists of 135 verses and Q 79 of only forty-six verses, they include only slight similarity (see SŪRAS).

Q 20, entitled Ṭāhā (see MYSTERIOUS LETTERS), begins with "We did not reveal to you [Muḥammad] the Qur'ān that you should be distressed, but to admonish the God-fearing" (Q 20:2-3; see PIETY; FEAR; WARNER). Verses 9-12 tell what Moses did, after which God spoke to him and mentioned *ṭuwā:* "Have you heard the story of Moses? When he saw a fire (q.v.) he said to his people: 'Stay here, for I can see a fire. Perchance I can bring you a lighted torch, or find guidance at the fire.' When he came near, a voice called out to him: 'Moses! I am your lord. Take off your sandals, for you are in the sacred valley of *ṭuwā*.'" In verse Q 20:15 God speaks

strongly, that "the hour is surely coming (see TIME; LAST JUDGMENT; ESCHATOLOGY). But I will keep it hidden so that every soul may be rewarded for its striving (see REWARD AND PUNISHMENT; PATH OR WAY)." Then God frightens Moses by telling him to throw down his staff (see ROD) which becomes a serpent. He then tells him to take it with no fear, for it will return to its former state, and promises that he will show him most wondrous signs (q.v.). God tells Moses that he has chosen him to serve him (see WORSHIP; SERVANT), to recite his prayers (see PRAYER; RITUAL AND THE QUR'ĀN) in remembrance of him and warns that the hour (of doom) has come. God continues (Q 20:16), "Let those who disbelieve in the hour (see BELIEF AND UNBELIEF) and yield to their desires not turn your thoughts from it, lest you perish (see DEATH AND THE DEAD)." Moses asks God to put courage (q.v.) into his heart (q.v.), free his tongue from impediment, and to appoint his brother Aaron (q.v.) to strengthen him and share his task. God agrees and tells the story of the birth and early years of Moses, then goes on with the story of Pharaoh (q.v.).

Q 79 is called al-Nāziʿāt, a title that is little understood, and translated by various English names such as "The Soul-Snatchers," "Those Who Pull and Withdraw," "Those Who Drag Forth," and "The Pluckers" (see, for instance, the translations of A. Ali, A.J. Arberry, N.J. Dawood, M. Pickthall, J.M. Rodwell and M.H. Shakir). Q 79 briefly notes the story of Pharaoh, with a mention of the fire and the hour (of doom) as in Q 20, and includes a few final words of future events that threaten humanity (see APOCALYPSE). The two first words of this sūra *(nāziʿāt/sābiḥāt)* are difficult to understand and have been the subject of considerable exegetical discussion. Q 79 contains the brief verses 15 and 16: "Have you heard the story of Moses? His lord (q.v.) called out to him in the sacred valley of *ṭuwā.*"

Although exegetes differ as to the meaning of the term *ṭuwā,* the most plausible tradition is that which maintains that *ṭuwā* is the name of a sacred place, the one that was entered by Moses (but cf. SACRED PRECINCTS). *Ṭuwā(n)* has also been defined as something "twice done," as though folded, and medieval writers (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) have said that *ṭuwā* is "twice sanctified, twice blessed and twice called," as God calls Moses.

[Al-]Ukhdūd

Substantive (or proper name) found in the qurʾānic expression *aṣḥāb al-ukhdūd* (Q 85:4):

> [They] were destroyed, the men of the furnace *(aṣḥāb al-ukhdūd)*, a fire (q.v.) abundantly fed, while they were sitting by it, and they were witnesses of what they did to believers (see BELIEF AND UNBELIEF), and they ill-treated them for no other reason than that they believed in God (Q 85:4-9).

Islamic tradition is almost unanimous in identifying these *aṣḥāb al-ukhdūd* with those involved in the persecution at Najrān (q.v.; a large oasis in southern Saudi Arabia, on the border with Yemen [q.v.]), in November 523 C.E. (regarding this event and the sources dealing with it, see Beaucamp et al., La persécution), but quite often without specifying whether they mean the Jewish persecutors (directed by the king Zurʿa dhū-Nuwās Yūsuf, the Yūsuf Asʾar Yathʾar of Ḥimyarite inscriptions; see JEWS AND JUDAISM) or their Christian victims (see CHRISTIANS AND CHRISTIANITY). For Wahb b. Munabbih (d. ca. 114/732; *Tījān*), Ibn Ḥabīb (d. 245/860; *Muḥabbar*) or Nashwān al-Ḥimyarī (d. 573/1178; *Mulūk Ḥimyar*), they are the persecutors, since these authors call the king Yūsuf *ṣāḥib al-ukhdūd,* but others remain rather vague (Ibn Isḥāq, *Sīra,* followed by Ṭabarī, *Taʾrīkh;* Nashwān al-Ḥimyarī, *Shams al-ʿulūm,* ad *ḫ-d-d,* etc.)

As a consequence of this identification, tradition interprets al-Ukhdūd as a place name of the Najrān oasis (Bakrī, *Muʿjam mā staʿjama,* i, 121, ad "al-Ukhdūd"; al-Ḥasan al-Hamdānī, *Ṣifat jazīrat al-ʿArab,* specifies that "the ancient city is the site of 'al-Ukhdūd' "). In pre-Islamic sources (principally the inscriptions of south Arabia, but also external sources such as Christian hagiographies relating to the persecution, written in Greek and Syriac), however, no evidence is available for such a place name; in inscriptions, the oasis and main city are first of all called *Rgmtᵐ* (*RES* 3943/3; Maʿīn 9/5; M 247/2; in Hebrew *Raʿmā,* in Greek *Ragma,* in *Gen* 10:7 = *I Chron* 1:9, and *Ezek* 27:22), then, after the start of the Christian era, *Ngrⁿ* (in Arabic Najrān; see ARABIC SCRIPT). There is good reason to believe that the name "al-Ukhdūd" bestowed upon the ruins of Najrān (already indicated in the tenth cen-

tury C.E. by al-Hamdānī and still used nowadays, see Philby, *Arabian highlands*) postdates Islam and is derived from an interpretation of Q 85.

Other observations have led the majority of contemporary scholars to doubt the identification of the *aṣḥāb al-ukhdūd* with those responsible for, or the victims of, the Najrān persecution. While the Qurʾān speaks of a ditch filled with fire (for R. Blachère, a furnace), since the meanings given to the Arabic *ukhdūd* (pl. *akhādīd*) are "ditch, cavity, pit" (for references in Yemeni dialects, see Serjeant, Ukhdūd), scholars note that, according to Christian hagiographies, those executed were not thrown into a furnace but put to the sword. Besides, the text of the Qurʾān, which gives no indication of location or time, at no point suggests that the "believers" were Christians (see PEOPLE OF THE DITCH).

For al-Ṭabarī (d. 310/923), followed by some Islamicists, most recently Régis Blachère, the Qurʾān is alluding to the "fiery furnace" (Daniel 3:6, 11, 15, 17, 20, 21, 23 and 26) into which the three young men are thrown. Other scholars, such as Rudi Paret, following Hubert Grimme and Joseph Horovitz, prefer an eschatological interpretation (see ESCHATOLOGY): the *aṣḥāb al-ukhdūd* will be the wicked cast into hell (see HELL AND HELLFIRE) at the time of the last judgment (q.v.) because of their crimes against believers, even if it is very unusual to use the term "ditch" to describe hell (see REWARD AND PUNISHMENT).

This last objection has disappeared following the publication of texts from Qumrān, in which Sheol is constantly referred to by the Hebrew *šaḥat,* "ditch." Marc Philonenko, who stresses this point, equally notes the expressions *bny h-šḥt,* "sons of the ditch," and *ʾnšy h-šḥt,* "men of the ditch," to denote the wicked, the damned or rather those who suffer punishment (see CHASTISEMENT AND PUNISHMENT; GOOD AND EVIL) on judgment day. The qurʾānic expression *aṣḥāb al-ukhdūd* could be an exact equivalent of the expressions from Qumrān.

Ummī

A qurʾānic epithet for the prophet Muḥammad that acquired significantly different interpretations in the course of Islamic history. Traditionally, Muslims understand *ummī* as "illiterate" and as unequivocally identifying Muḥammad as "the illiterate Prophet" *(al-nabī l-ummī)* — a view that has come to constitute an article of orthodox faith and spirituality in Islam (see ILLITERACY). Recent research, however, recovering some of the earliest exegetical glossing, has suggested that *ummī* in the Qurʾān signifies the ethnic origin (being an Arab, Arabian) and the originality of the Prophet of Islam (coming from among a people, the Arabs [q.v.], who had not yet received a revelation; see REVELATION AND INSPIRATION).

Terms in the Qurʾān and their interpretations

The term *ummī* occurs only in Q 7:157 and 158; its plural, *ummiyyūn*, is found in Q 2:78; 3:20, 75 and 62:2. In Q 7:157 and 158, God proclaims:

> My mercy (q.v.),… I shall ordain it for those who are God-fearing,… those who believe in our signs (q.v.; Q 7:156), [those] who follow the messenger (q.v.), the *ummī* Prophet, whom they find mentioned in their [own scriptures, the] Torah (q.v.) and the Gospel (q.v.; see also SCRIPTURE AND THE QURʾĀN), who bids them to what is just (see JUSTICE AND INJUSTICE) and forbids them what is reprehensible (see VIRTUES AND VICES, COMMANDING AND FORBIDDING; FORBIDDEN), and who makes lawful for them the good things and unlawful for them the corrupt things… (Q 7:157; see LAWFUL AND UNLAWFUL; GOOD AND EVIL). Say: "O humankind, I am the messenger of God to you all.…" Therefore, believe in God and in his messenger, the *ummī* Prophet who believes in God and his words. Follow him! Perhaps, you will [then] be guided (Q 7:158; see ERROR; ASTRAY).

In commenting on these verses, the classical Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) offer several interpretations for *ummī*, including "unable to read (and write; see LITERACY; ORALITY AND WRITING IN ARABIA)," Arab/Arabian (derived from *umma*, "nation, the people of the Arabs"), Meccan (from *umm al-qurā*, "Mother of all Cities," an epithet for Mecca [q.v.]), and, "pure, natural," like a newborn from its "mother" *(umm)*, thus incorporating the notions of being "unlettered," "untaught," "intellectually untouched" (see KNOWLEDGE AND LEARNING), and "spiritually virgin," by virtue of which Muḥammad became the receptacle for the divine revelation. (For references and discussion of these and the following derivations, see Günther, Illiteracy, esp. 493-9; and id., Literacy, esp. 188.) Despite these various possible meanings, the classical commentaries stress that *ummī* in the two verses characterizing the prophet Muḥammad means "unable to read (and write)." Presenting a threefold argument, they suggest (1) that *ummī* most likely relates to *umma*, "the people of the Arabs" who, (2) at

the time of Muḥammad, were mostly an "illiterate nation" *(umma ummiyya)*, "neither reading nor writing," and, (3) since Muḥammad belonged to this nation, he neither read nor wrote, or was unable to do so.

Western scholars have contested, in particular, the idea that *ummī* means "illiterate." While some scholars suggest the meaning of "ethnically Arab/Arabian," others argue in favor of "untaught" or "ignorant" (of the scriptures, as opposed to being "learned," "knowledgeable" about them) or "not having received a revelation" and, strictly speaking, "pagan" and "heathen," or "gentile" (see Günther, Illiteracy, 496; see POLYTHEISM AND ATHEISM; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC).

Analysis of the qurʾānic expressions *ummiyyūn* and *umma* (the latter being the noun from which *ummī* is most likely derived, as both classical exegetes and contemporary scholars agree) highlights above all two things. First, *umma* in the Qurʾān means "a people" or, more specifically, "the nation [of the Arabs]" (notwithstanding its other meanings, which are not relevant here; see Günther, Illiteracy, 496-8). Second, the term *ummiyyūn* in the Qurʾān identifies "Arabs who have not [yet] been given a divinely inspired scripture" (cf. Q 3:20, 75; 62:2). On one occasion, however, a certain group among the Jews (see JEWS AND JUDAISM) is called *ummiyyūn*, "not knowing the scripture," or "not being well-versed in the book [q.v.; because they are not reading in it]" (Q 2:78). When the terms *ummī* and pl. *ummiyyūn* are examined in conjunction with the previous two remarks, it becomes clear that in the Qurʾān they do not represent a single meaning. Rather, they suggest a spectrum of ideas, which includes (a) someone belonging to a people *(umma)* — the Arabs — who were a nation without a scripture as yet; (b) someone without a scripture and thus not reading it; and (c) someone not reading a scripture and, therefore, not being taught or educated [by something or somebody] (cf. Günther, Muḥammad, 15-16). Although this spectrum of ideas does not include the meaning of "illiterate" as such, it apparently formed the basis upon which the idea of *ummī* meaning "illiterate" was developed.

The dogma of the Prophet being ummī, *"illiterate"*

The fact that questions surrounding the possibility of Muḥammad's literacy were already an issue of considerable significance at the time of the revelation seems to be evident, for example, in Q 25:5. This passage echoes attempts made by "unbelievers" (polytheists in Mecca) to discredit Muḥammad by claiming that he was not communicating divine revelations, but "stories taken from writings of the ancients (*asāṭīr al-awwalīn;* see GENERATIONS), which he has written down (see WRITING AND WRITING MATERIALS; OPPOSITION TO MUḤAMMAD) and which were dictated to him *(tumlā ʿalayhi)* at dawn (q.v.) and in the early evening" (q.v.; see also Günther, Illiteracy, 492-3). In contrast, Q 29:47-8 states: "We have sent down to you [Muḥammad] the book *(al-kitāb)*.… Not before this did you read *(tatlū)* any book, or inscribe it with your right hand…" (for *talā* referring to "reading [the holy scriptures]," see Günther, Literacy, 190).

The concept of the Prophet's illiteracy, however, "seems to have evolved in some circles of Muslim learning not before the first half of the second century of the *hijra* (see EMIGRATION; CALENDAR)," i.e. the first half of the eight century C.E. (Goldfeld, Illiterate prophet, 58). Furthermore, it seems that Muḥammad's illiteracy had already become dogma by the end of the third/ninth century when al-Ṭabarī (d. 310/923) summed up much of the

learning of previous generations of Muslims (see Goldfeld's research into certain exegetical works, which al-Ṭabarī used as sources and quoted in his comments on *ummī* and *ummiyyūn;* see THEOLOGY AND THE QUR'ĀN). The famous theologian al-Ghazālī (d. 505/1111), for example, advocates this creed on numerous occasions in his *The revival of the religious sciences (Iḥyā' ʿulūm al-dīn),* his greatest and most authoritative work. Here he states that: "He (the Prophet) was *ummī;* he did not read or write.… God [himself] taught him all the virtues of character, the praiseworthy ways of behaving and the information about the ancients and the following generations" (*Iḥyā',* ii, 364 [ch. 11]).

In the course of time, the notion of the illiterate Prophet of Islam came to be a central argument in defending Islam against opponents who attempted to discredit the prophet Muḥammad and his message. Moreover, for the exegete al-Rāzī (d. 606/1210), and other orthodox Muslim scholars in medieval and modern times, this concept also underscores the inimitability and uniqueness of the Qur'ān in terms of content, form and style (*iʿjāz;* see INIMITABILITY), its miraculous nature (*muʿjiza;* see MIRACLES) and the outstanding place Islam and its Prophet deserve within the canon of the monotheistic religions (see LANGUAGE AND STYLE OF THE QUR'ĀN; FORM AND STRUCTURE OF THE QUR'ĀN). In other words, Muḥammad's illiteracy came to be seen as a particularly excellent sign and proof of the genuineness and nobility of his prophethood (see al-Rāzī's lengthy statement in Günther, Illiteracy, 495-6). The Ṣūfī (see ṢŪFISM AND THE QUR'ĀN) ʿAlī b. Muḥammad al-Baghdādī, known as al-Khāzin (d. 741/1340), for example, says:

The Prophet was *ummī;* he did not read, write, or count.… His being *ummī* is one of the greatest and most magnificent miracles. Had he mastered writing and then come forward with this magnificent Qur'ān, he could have been accused of having written and transmitted it from others (*Lubāb,* ii, 147).

To expand on this tenet could result in trouble, as seen in the example of Abū l-Walīd al-Bājī al-Mālikī (d. 474/1081), a distinguished theologian and man of letters in eleventh-century Spain. The controversy began in the city of Denia, during a teaching session on al-Bukhārī's (d. 256/870) famous collection of "Sound prophetic traditions," which includes an account of the events in 6/628 at al-Ḥudaybiya, when a peace treaty was agreed on between Muḥammad and the Meccan tribe of Quraysh (q.v.). As al-Bukhārī has it: "the messenger of God took the document and wrote this (his name)," *fa-akhadha rasūl Allāh… al-kitāba fa-kataba hādha* (no. 2700), although "he did not write well…," *wa-laysa yuḥsinu yaktubu* [sic] *fa-kataba hādha* (no. 4251; Dārimī, *Sunan,* no. 2507; *wa-laysa yuḥsinu an yaktuba fa-kataba…,* Ibn Ḥanbal, *Musnad,* no. 18,161). Al-Bājī explained the significance of the event and stated furthermore that this tradition was authentic and a proof that the Prophet wrote on that day. Because of his explanation, al-Bājī was accused of heresy and atheism. At a specifically organized public disputation, however, he convinced the learned audience that his opinion did not contradict the Qur'ān — and its notion of the *ummī*/illiterate Prophet — because Q 29:47-8, as al-Bājī argued, indicates (only) that Muḥammad did not write any scripture before he received the revelation *(al-kitāb)* and became a prophet. Al-Bājī later wrote an epistle on this subject to justify his doctrinal position (edited in Bājī, *Taḥqīq,* 170-240), which in turn gave rise to trea-

tises, for and against his position, written by Muslim scholars in Spain, north Africa and Sicily (cf. Bājī, *Taḥqīq,* 115-16, 119; Abū Ḥayyān, *Baḥr,* vii, 155; Sprenger, *Moḥammad,* ii, 398; and esp. Fierro, Polémicas, 425). A similar argument is made by the influential Twelver-Shīʿī scholar (see SHĪʿISM AND THE QURʾĀN) and legal authority (see LAW AND THE QURʾĀN), ʿAllāma Majlisī (d. 1110/1698), after he surveyed for his Persian readership the various interpretations of *ummī* common among Muslim scholars. Basing himself also on Q 29:47-8, he supports the idea that Muḥammad was "never taught to read and write" before he became a prophet. He says, however:

whether [or not] he [actually] read and wrote after he became prophet,… there can be no doubt of his ability to do so, inasmuch as he knew all things by divine inspiration, and so by the power of God was able to perform things impossible for all others to do.… How could the Prophet be ignorant [of reading and writing] when he was sent [by God] to instruct others (cf. Majlisī, *Ḥayāt,* ii, 155).

It appears that Q 29:47-8 was instrumental in harmonizing the doctrinal concept of Muḥammad's "illiteracy" with the data given, for example, in historical and biographical sources (see SĪRA AND THE QURʾĀN), according to which Muḥammad seems to have had (some) knowledge of reading and writing at a later stage of his life. Nonetheless, the well-attested incident that reportedly took place on Thursday, June 4, 632 C.E. — i.e. four days before Muḥammad's death — also provides no conclusive answer to the question as to whether or not the prophet Muḥammad was able to read and write at the end of his life. The accounts given by Ibn Saʿd (d. 230/845) relate that the prophet Muḥammad was lying on his sick-bed when he said: *"iʾtūnī* [sic] *bi-dawāt wa-ṣaḥīfa aktubu lakum kitāban lā taḍillū baʿdahu,"* which seems to mean, "Bring me writing instruments and a piece of parchment (or papyrus). I will write (i.e. dictate?) a will for you, after which you will not go astray," rather than, simply, "… I will draft for you a writing.…" (cf. Ibn Saʿd, *Ṭabaqāt,* ii, 244-5; for the entire passage, see pp. 242-55, the chapter entitled *al-Kitāb alladhī arāda rasūl Allāh an yaktubahu li-ummatihi;* see furthermore Ghédira, Ṣaḥīfa; Sprenger, *Mohammad,* ii, 400-1; for *kataba [li]* meaning in the Qurʾān also "to decree, to ordain [a will, or law]," see Günther, Literacy, 190-1; similarly, Lane, vii, 2590; on the verbal use of the root *k-t-b* in the Qurʾān in general, see Madigan, *Qurʾān's self-image,* 107-24; on the importance that writing and political documents generally had for Muḥammad in Medina [q.v.] after he had become a statesman, see Hamidullah, *Six originaux,* 23-38, 48-51; Margoliouth, *Mohammed,* 5; see POLITICS AND THE QURʾĀN; for the frequent occurrence of the expressions *al-nabī l-ʿarabī,* "the Arab/Arabian Prophet," in biographical and historical Muslim sources, see for example Wāqidī, *Futūḥ,* ii, 42, 54, 164; Ibn Saʿd, *Ṭabaqāt,* i, 19, 259; Dhahabī, *Siyar,* i, 375; Ibn Khaldūn, *Muqaddima,* 3; Ibn Kathīr, *Bidāya,* ii, 16, 85; Maqqarī, *Nafḥ,* vii, 340, 427; Kātib Chelebi, *Kashf al-ẓunūn,* ii, 1523 and 1718). In conclusion, one notes two things: While the meaning of the terms *ummī* and *ummiyyūn* in the Qurʾān can be determined as indicated above, the question as to whether or not the prophet Muḥammad knew how to read and write (at the end of his life) is another matter that cannot be decided conclusively on the basis of the textual evidence available today.

see BELIEF AND UNBELIEF; POLYTHEISM AND ATHEISM; FAITH

Uncertainty

Questioning the truth or existence of something. In the Qurʾān, this is a quality often attributed to those peoples, past and present, who do not believe or trust the messengers (see MESSENGER) or signs (q.v.) of God (see LIE; BELIEF AND UNBELIEF; OPPOSITION TO MUḤAMMAD; TRUST AND PATIENCE). And, like its first auditors, Islamic tradition (and certainly non-Muslims) has grappled with how to understand — and interpret — the word of God (q.v.).

According to the tradition, Islam began with Muḥammad's uncertainty and panic (*fa-akhadhatnī rajfa; al-nashiʾ ʿan al-ruʿb;* Suyūṭī, *Itqān,* i, 93; see FEAR) after a very early revelation (most authorities claim that Q 96:1-5 was the first revelation; see Zarkashī, *Burhān* [*Nawʿ* 10], i, 264; followed by Suyūṭī, *Itqān,* i, 93; see REVELATION AND INSPIRATION) in, or shortly after leaving, the cave (q.v.) of al-Ḥirāʾ (see SĪRA AND THE QURʾĀN; CHRONOLOGY AND THE QURʾĀN; OCCASIONS OF REVELATION; for the archetypical theme of the mythic hero and the cave, see Jung, *Memories,* 160-1; Dreifuss

and Riemer, *Abraham,* 6; see also Schub, *"Hakim al-balad…"*). He rushed home to his wife Khadīja (q.v.) in such an agitated state that she threw cold water on him (see e.g. Zarkashī, *Burhān,* i, 264); he then told her to wrap him in a mantle to soothe him (Khadīja was the first *umm al-muʾminīn,* "mother of the faithful"; for a discussion of Muḥammad's revelation in the context of their relationship, cf. Dreyfuss and Riemer, *Abraham,* 89; see WIVES OF THE PROPHET; WOMEN AND THE QURʾĀN; BELIEF AND UNBELIEF). She reassured him that he was indeed worthy, being an exemplary upright individual (*tuʾaddī al-amāna…*, literally "you [always] return the surety to its rightful owner…"; on *amana,* cf. Dreyfus and Riemer, *Abraham,* 30); this is the *sabab al-nuzūl,* the occasion for the revelation, of Q 73, Sūrat al-Muzzammil, "The Enshrouded One," and Q 74, Sūrat al-Muddaththir, "The Cloaked One."

The Qurʾān describes itself as a "book in which there is no doubt *(rayb)* [whatsoever]" (Q 2:2; the word *rayb* is glossed by al-Qurṭubī [d. 671/1272; *Jāmiʿ,* i, 119] in his commentary as: (1) equivalent to *shakk,* "doubt"; (2) *tuhma,* "suspicion" [q.v.]; or (3) *ḥāja,* "want"); as *al-yaqīn,* "certainty" (Q 15:99; 74:47); *ḥaqq al-yaqīn,* "certain truth" (q.v.; Q 69:51); *ʿilm al-yaqīn,* "certain knowledge" (Q 102:5; see KNOWLEDGE AND LEARNING); *ʿayn al-yaqīn,* "certainty itself" (Q 102:7), etc. (for discussion of biblical struggles over questions of faith [q.v.], see Gries, Heresy, 341). Its truth (q.v.) is sempiternal; it is inscribed on the heavenly "preserved tablet" (q.v.; *al-lawḥ al-maḥfūẓ*). The Sunnīs believe that it is uncreated *(ghayr makhlūq)* and coterminous with God (see CREATEDNESS OF THE QURʾĀN); the medieval Muʿtazilīs (q.v.) demurred, pointing to a resulting diminution of God's unicity (see GOD AND HIS ATTRIBUTES; THEOLOGY AND THE QURʾĀN).

Despite the qurʾānic assertions of its indubitable nature, the received text of the Qurʾān was subject to scrutiny (see TEXTUAL HISTORY OF THE QURʾĀN; MUṢḤAF; UNITY OF THE TEXT OF THE QURʾĀN; COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN) by the early Muslim community, and elements such as the foreign vocabulary (q.v.) of the Arabic Qurʾān had to be explained (see ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QURʾĀN; GRAMMAR AND THE QURʾĀN):

> From Abū Bakr, the eminently veracious *(al-siddīq),* [is related] that when asked about the meaning of *abb* [Q 80:31, a word, probably from Syriac, that is usually translated as "herbage"], he said: "Which heaven would cover me and which earth would support me if I were to say that there is something in the Book of God that I know not?" [A correct translation: "If I were to say about the book of God what I know not."]
>
> From ʿUmar [is related] that when asked about the meaning of *abb,* he said that he once recited this verse and said: "We all know that. But what is *abb?*" Then he threw away a stick which he had in his hand, and said: "By the eternal God! That is artificiality. What does it amount to for you, son of the mother of ʿUmar, if you do not know what *abb* is?" And then he added: "Obey what is clear to you in this Book and leave aside what is not clear!" (Gätje, *Qurʾān,* 64, translating Zamakhsharī, *Kashshāf,* ad Q 80:31).

It should be noted, however, that neither Shīʿīs nor Sunnīs doubt the authenticity and veracity of the received text of the Qurʾān although some Shīʿī scholars have questioned its integrity (see INIMITABILITY).

The therapeutic antidote to uncertainty/doubt and its resulting anxiety is to invoke the *sakīna* (e.g. Q 2:248; 9:40; 48:4, 18, 26; see SHEKHINAH) through "patience and prayer" (Q 2:45, 153; see TRUST AND PATIENCE; PRAYER) in order to be able to

grasp *al-ʿurwa al-wuthqā* (Q 2:256; 31:22, lit. "the firm hand-hold on the camel-saddle"; see METAPHOR).

Unity of the Text of the Qurʾān

As a subject of study, the unity of the qurʾānic text assumes special importance because the Qurʾān does not always seem to deal with its themes in what most readers would call a systematic manner (see FORM AND STRUCTURE OF THE QURʾĀN). Western scholars of Islam have often spoken of the "disconnectedness" of the Qurʾān (see PRE-1800 PREOCCUPATIONS OF QURʾĀNIC STUDIES; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). Historically, most Muslim exegetes have not raised the issue at all (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Of those who have, some have offered the apologetic explanation that a text revealed in portions (see REVELATION AND INSPIRATION) over more than two decades cannot have a high degree of unity (see CHRONOLOGY AND THE QURʾĀN; OCCASIONS OF REVELATION). But a few others, notably Fakhr al-Dīn al-Rāzī (d. 606/1210) and Ibrāhīm b. ʿUmar al-Biqāʿī (d. 885/1480), present the Qurʾān as a well-connected text (for further discussion of the concept of *tanāsub/munāsaba,* see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY). A distinction must, however, be made between connection and unity: the former may be defined as any link — strong or weak, integral or tangential — that is seen to exist between the components of a text (see LITERARY STRUCTURES OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN), whereas unity arises from a perception of a given text's coherence and integration and from its being subject to a centralizing perspective. In the second chapter of *al-Burhān fī ʿulūm al-Qurʾān,* al-Zarkashī (d. 794/1392) seems to make this distinction, but most of his illustrative examples bear upon the Qurʾān's connectedness rather than upon its unity. The attempts of al-Rāzī and others also do not go beyond demonstrating that the Qurʾān is, in the above-noted sense, a connected text. In modern times, however, a number of Muslim scholars from various parts of the Muslim world have, with varying degrees of cogency, argued that the Qurʾān possesses a high degree of thematic and structural unity, and this view seems to represent a modern consensus in the making (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). In the introduction to his *Tafhīm al-Qurʾān,* Abū

l-Aʿlā Mawdūdī (d. 1979) maintains that one can appreciate the unity of the qurʾānic text if one notes that nowhere does the Qurʾān depart from its subject (humankind's ultimate success and failure; see ESCHATOLOGY; REWARD AND PUNISHMENT), its central thesis (the need for humans to take the right attitude in life — that is, to accept God's sovereignty [q.v.] in all spheres of life and submit to him in practice; see VIRTUES AND VICES, COMMANDING AND FORBIDDING) and its goal (to invite man to adopt that right attitude). One of Sayyid Quṭb's (d. 1966) premises in *Fī zilāl al-Qurʾān* is that each sūra (q.v.) of the Qurʾān has a *miḥwar* (pivot, axis) that makes the sūra a unified whole. But perhaps the most sustained effort to bring out the unity of the qurʾānic text has been made by two exegetes of the Indian subcontinent, Ḥamīd al-Dīn al-Farāhī (d. 1930) and his student Amīn Aḥsan Iṣlāḥī (d. 1997). Developing his teacher's ideas, Iṣlāḥī in his *Tadabbur-i Qurʾān* shows that the Qurʾān possesses unity at several levels: the verse-sequence in each sūra deals with a well-defined theme in a methodical manner (see VERSES); the sūras, as a rule, exist as pairs, the two sūras of any pair being complementary to each other; and the sūras are divisible into seven groups, each dealing with a master theme that is developed systematically within the sūras of the group. The Farāhī-Iṣlāḥī thesis would seem to constitute a serious challenge to the theories that view the Qurʾān as a disconnected text.

see CONTAMINATION

Usury

[Unlawful] profit gained as interest charged when loaning money. The Qurʾān refers to both interest and usury as *ribā* and renounces evil effects on the equal, just and productive distribution of resources. The denunciation of *ribā* applies to excesses in both financial contracts *(ribā l-faḍl)* and fungibles *(ribā l-nasīʾa)*. It also applies to all forms of interest — nominal, real, effective, simple and compound (see also ECONOMICS; MONEY; TRADE AND COMMERCE).

Q 30:39 provides the general definition of *ribā* relating to all forms and measures of gifts (see GIFT AND GIFT-GIVING) and exchanges:

> And that which you give in compensation *(wa-mā ātaytum min riban)* in order that it may increase [i.e. your wealth (q.v.)] from other's property (q.v.), has no increase with God; but that which you give in charity seeking God's countenance (see FACE OF GOD), then those they shall have manifold increase (Q 30:39).

In marked contrast with the qurʾānic encouragement and praise of the charitable distribution of wealth, such as almsgiving (q.v.; cf. Schacht, Ribā), we can infer the unacceptability of all forms of interest

from the following qurʾānic verse by using the idea of the term structure of interest rates. The Qurʾān says: "O you who believe! Devour not *ribā,* doubled and multiplied; but fear (q.v.) God, that you may prosper" (Q 3:130). Although a few Islamicists do not concede to a uniform implication of the qurʾānic *ribā*-law in all forms of interest (i.e. usury versus interest, compound versus simple interest), this differentiation is untenable. It is well-known from the theory of the term structure of interest rates that any simple (i.e. one period) interest rate can be expressed as the compound rates over many smaller time-periods within a given time horizon. Besides, because nominal rates are abolished in the *ribā* rule, real rates cannot exist. The real rate is the nominal rate net of the rate of change in price level (inflation rate). Nominal rate is abolished by the financial and real economic interrelationship, which also, by means of the direct productivity consequence of such an interrelationship, causes the rate of increase in money to equal the rate of increase in real economic returns. Consequently, inflationary conditions caused by a mismatch of the above-mentioned two rates cannot exist. The inappropriateness of the equation in terms of nominal, real and inflation rates is therefore non-existent in Islamic economic relations, and the reason behind this is both the complementary relationship between money and real economy and the institutional and policy action towards realizing such complementarities.

Regarding the qurʾānic principle of just measure (see WEIGHTS AND MEASURES; MEASUREMENT) in gifts and exchanges there is the following in Q 2:279:

> And if you do not do it [i.e. give up *ribā*], then receive a declaration of war (q.v.) from God and his messenger (q.v.), but if you repent (see REPENTANCE AND PENANCE), you will have your *capital sums (ruʾūs amwālikum)*. Deal not unjustly and you will not be dealt with unjustly (see JUSTICE AND INJUSTICE).

The Qurʾān strongly forbids *ribā* on the grounds that it fosters the unjust acquisition of wealth at the expense of social justice, the equitable distribution of wealth and the well-being of the community. According to the Qurʾān, these important values are achieved through solidarity, cooperation and active production of the good things of life (see GOOD AND EVIL; BLESSING; GRACE; ETHICS AND THE QURʾĀN). The jurist al-Shāṭibī (d. 790/1388) explains the concept of the good things of life as a combination of necessities *(ḍarūriyyāt),* comforts *(ḥājiyyāt)* and refinements *(taḥsīniyyāt),* all of which belong to the hierarchy of positive, life-fulfilling goods.

Several verses testify to this interconnection between the abolition of *ribā* and the promotion of trade, charity and social well-being. On the causal linkage among charity, trade, prosperity and social well-being, the Qurʾān declares:

> Those who (in charity) spend of their goods by night and day (see DAY AND NIGHT), in secret and in public (see SECRETS; HIDDEN AND THE HIDDEN), have their reward with their lord (q.v.): On them shall be no fear, nor shall they grieve (see JOY AND MISERY). Those who devour *ribā* will not stand except as stands one whom the evil one by his touch has driven to madness (see INSANITY; DEVIL). That is because they say: "Trade is like *ribā'*. But God has permitted trade and forbidden *ribā*…" (Q 2:274-5).

Q 2:265 makes the connection between spending on the good things of life and social well-being:

And the likeness of those who spend their substance, seeking to please God and to strengthen their souls (q.v.), is as a garden (q.v.), high and fertile (*jannatin bi-rabwatin;* see also PARABLES): heavy rain (see WATER) falls on it and makes it yield a double increase of harvest, and if it receives not heavy rain, light moisture [suffices it]. God sees well whatever you do (Q 2:265; see SEEING AND HEARING).

This interrelationship between the abolition of *ribā* and the productivity and well-being attained through trade and charity is important to note. There are clear connections between the abolition of *ribā* and the implementation of co-operative and participatory financial instruments for resource mobilization, such as profit sharing, equity participation and trade. These generate and mobilize productive spending on the good things of life and allow economic participation for all ranks of society, thereby creating social and political empowerment (see KINGS AND RULERS; OPPRESSED ON EARTH, THE; OPPRESSION; POLITICS AND THE QURʾĀN). Q 2:267 speaks to these issues of production, consumption, exchange and distribution:

O you who believe (see BELIEF AND UNBELIEF)! Give of the good things which you have [honorably] earned, and of what we have produced for you from the ground (see AGRICULTURE AND VEGETATION), and do not aim at [getting anything which is] bad, in order that you may give away some of it, when you yourselves would not receive it except with closed eyes. And know that God is free of all wants *(ghaniyyun),* and worthy of all praise (q.v.; Q 2:267; see also GOD AND HIS ATTRIBUTES).

While the full implication of these interrelationships mentioned above are too detailed to be elaborated in this brief entry, the salient feature can be stated: the abolition of *ribā* can activate the mobilization of financial resources through its linkage with real resource development. This causes employment, profitability, equity and efficiency, entitlement, empowerment and social security to emerge as elements of the total social well-being (see WORK). These gains ratify, in turn, the judgment to abolish *ribā* and generate a continuing cycle of socially beneficial economic development.

Uterus see WOMB

ʿUthmān

Abū ʿAbdallāh ʿUthmān b. ʿAffān, third caliph (q.v.; r. 23-35/644-55) and first

"rightly guided" *(rāshid)* caliph from the Umayyad clan, an early convert to Islam and emigrant (*muhājir;* see EMIGRANTS AND HELPERS) to both Abyssinia (q.v.) and Medina (q.v.; see also EMIGRATION). These pious credentials (see PIETY) are tainted by his absence at the battle of Badr (q.v.), his flight at Uḥud (see EXPEDITIONS AND BATTLES), his absence at Ḥudaybiya (q.v.; see Bukhārī, *Ṣaḥīḥ,* 66, *Faḍāʾil al-Qurʾān,* 3; ed. Krehl, iii, 93; trans. Houdas, iii, 522-3) and his alleged impiety during the latter six years of his caliphal rule (Masʿūdī, *Murūj,* iii, 76). He was stabbed to death while reading from the Qurʾān (supposedly from the *muṣḥaf* [q.v.] now known as the Samarqand codex) by insurgents from Egypt. ʿUthmān is often credited with standardizing and codifying the present qurʾānic text, which is therefore called the ʿUthmānic codex (see also COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN).

The historicity of the ʿUthmānic codex narrative is, for the most part, accepted by scholars in preference to narratives attributing the collection to Abū Bakr or other early caliphs (Caetani, ʿUthmān; Nöldeke, *GQ,* ii, 11-27, 47-62; Jeffery, *Materials,* 4-9; pace Mingana, Transmission). This narrative relates that one of ʿUthmān's generals (Ḥudhayfa), alarmed at disputes between his Syrian and Iraqi soldiers over qurʾānic recitation (see RECITATION OF THE QURʾĀN; SYRIA; IRAQ) during the conquests (see CONQUEST), asked the caliph for guidance, imploring: "O Commander of the Faithful, inform this community what to do before we are divided in our reading (see PARTIES AND FACTIONS; READINGS OF THE QURʾĀN) like the Jews (see JEWS AND JUDAISM) and the Christians" (Bukhārī, *Ṣaḥīḥ,* 62, *Faḍāʾil aṣḥāb al-nabī,* 7; ed. Krehl, ii, 430-1; trans. Houdas, ii, 601-2; see also CHRISTIANS AND CHRISTIANITY). In response, ʿUthmān secured the Qurʾān materials already gathered by Abū Bakr from Ḥafṣa (q.v.; who had received them via Abū Bakr's successor, her father ʿUmar; see also WIVES OF THE PROPHET). With this as reference, and with a committee made up of the pro-Qurayshite Medinan Zayd b. Thābit (also protagonist of the Abū Bakr collection narrative) and three Qurayshites (see QURAYSH), ʿUthmān had a *muṣḥaf* written in the dialect of the Quraysh (see DIALECTS; ARABIC LANGUAGE). He sent copies of it to Baṣra, Kūfa, Damascus and Mecca (q.v.; Yaʿqūbī, *Taʾrīkh,* ii, 160, adds Egypt, Bahrain, Yemen and the Jazīra) and ordered that all variant versions be destroyed, an order that met with resistance from many (see RECITERS OF THE QURʾĀN; TEACHING AND PREACHING THE QURʾĀN) and outright refusal from the Companion Ibn Masʿūd in Kūfa (see COMPANIONS OF THE PROPHET). Al-Balādhurī (fl. third/ninth cent.; *Ansāb,* v, 36) has Ibn Masʿūd declare the caliph's blood licit in response, while al-Yaʿqūbī (d. early fourth/tenth cent.; *Taʾrīkh,* ii, 160) relates that the two came to blows in the mosque at Kūfa.

The historicity of this narrative, however, is not beyond dispute. A number of factors — conflicts between different versions, redundancies with the Abū Bakr collection narrative and the temporal distance of sources from events — suggest that it is more the product of speculation and apology than historical dictation (in fact, early Muslim scholars disputed how to reconcile the redundant and contradictory reports; Khaṭṭābī [d. 386/996] concludes that God inspired *[alhama]* all of the "rightly guided caliphs," *al-khulafāʾ al-rāshidūn;* see Suyūṭī, *Itqān,* 202 [beginning of chap. 18]). J. Burton (*Collection,* 202-39) argues that the narrative is meant to conceal the fact that Muḥammad himself compiled the Qurʾān, thus justifying the absence from the *muṣḥaf* (that is, the Qurʾān in book form; see ORALITY AND WRITING IN ARABIA) of certain elements argued to be in the revealed

Qurʾān (e.g. the stoning [q.v.] verse, *āyat al-rajm*). Burton also points out that alternate codices continued to be used in legal disputes after they were supposedly destroyed by ʿUthmān's orders, suggesting that they were actually "posterior, not prior, to the ʿUthman text" (ibid., 228; see ABROGATION; LAW AND THE QURʾĀN). J. Wansbrough (*QS,* 45), meanwhile, noting the absence of extant variations to the ʿUthmānic codex and considering it unlikely that the caliph could have done such a complete job of destroying other versions, suggests that the story is meant to conceal the late origins of the Qurʾān. A recently edited work, however, further complicates this hypothesis (cf. Crone and Zimmermann, *Epistle*).

Thus scholarly opinion differs in its estimation of ʿUthmān: some see him as the one who established, with pious meticulousness, the *textus receptus ne varietur* of the Qurʾān; others regard him as a semi-legendary figure of Islamic salvation history. This much seems clear: many traditions surrounding ʿUthmān's codification of the Qurʾān come from a period when Islamic religious development was fueled by apologetical and polemical concerns (see APOLOGETICS; POLEMIC AND POLEMICAL LANGUAGE). In the third and fourth Islamic centuries texts on the proofs *(dalāʾil)* of Muḥammad's prophecy (see PROPHETS AND PROPHETHOOD; MIRACLES), the inimitability (q.v.; *iʿjāz*) of the Qurʾān and the refutation *(radd)* of other religions proliferated (see TOLERANCE AND COERCION; RELIGIOUS PLURALISM AND THE QURʾĀN). The ʿUthmānic codex narrative serves a clear purpose in this context: it confirms to Muslims that their *muṣḥaf* is indeed the Qurʾān sent down from heaven (see BOOK; HEAVENLY BOOK; THEOLOGY AND THE QURʾĀN; CREATEDNESS OF THE QURʾĀN). Further work on early Qurʾān manuscripts (such as the find in Ṣanʿāʾ; see MANUSCRIPTS OF THE QURʾĀN; TOOLS FOR THE STUDY OF THE QURʾĀN) — not excluding the study of the orality (q.v.) and variety of readings of the qurʾānic text (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN) — remains a desideratum for a fuller understanding of the historicity of the narratives concerning the formation of the ʿUthmānic codex (see also TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY; VERSES; SŪRAS).

Vainglory see PRIDE

Valley see GEOGRAPHY

Variant Readings see READINGS OF THE QUR'ĀN

Vegetation see AGRICULTURE AND VEGETATION

Vehicles

Objects used to carry people or things from place to place, on land or sea or through the air. The Qur'ān mentions several kinds of vehicles while attributing their existence to God's bounty (see BLESSING; GRACE), as stated, for example, in Q 17:70: "And surely we have honored the children of Adam, and we carry them in the land and the sea (see EARTH; WATER), and we have given them of the good things (see SUSTENANCE)…." The same idea recurs in Q 10:22: "He it is who makes you travel by land and sea" (see also TRIPS AND VOYAGES; JOURNEY).

The vehicles operating on land are beasts of burden, and their kinds are enumerated in Q 16:8: "And (God made) horses and mules and asses that you might ride upon them…." The camel (q.v.; *baʿīr*) is mentioned separately as a vehicle carrying wheat (Q 12:65, 72; see AGRICULTURE AND VEGETATION). Q 59:6 implies that camels (called here *rikāb*), as well as horses, were used also in military campaigns (see EXPEDITIONS AND BATTLES; FIGHTING; WAR).

God's creation of beasts on which people can ride and of which they eat (see FOOD AND DRINK; HIDES AND FLEECE) is praised in Q 36:72 as a manifestation of the things that God has subdued to them for their own benefit (see also Q 40:79). Beasts of burden carry not only people but also cargo: They "carry your heavy loads to regions which you could not reach but with distress of the souls" (Q 16:7; see also Q 6:142; see SOUL; LOAD OR BURDEN). On the other hand, sacred kinds of such animals were considered by the idolaters forbidden (q.v.) for usage as vehicles (Q 6:138).

Ships (q.v.), too, signify God's benevolence toward humankind, and they are mentioned alongside of riding animals in Q 43:12-13: "He who created pairs of all things (see PAIRS AND PAIRING), and made for you ships and beasts of burden such as you ride, that you may firmly sit on their backs, then remember the favor of your lord when you are firmly seated thereon,

and say: Glory be to him (see GLORIFICATION OF GOD) who made this subservient to us and we were not able to do it" (see also Q 2:164; 23:22; 40:80).

The imposing shape of sailing ships signifies God's creative powers, as stated in Q 42:32: "And among his signs (q.v.) are the ships that ride on the sea like landmarks" (see also Q 55:24). The glory (q.v.) of ships as representing divine blessing comes out most clearly in the fact that in Q 51:3 God swears by them, calling them "the smooth runners" (*fa-l-jāriyāti yusran;* see OATHS).

The idea that God is the one who has put ships under human command means that people should be thankful to him (Q 14:32; 16:14; 17:66; 22:65; 30:46; 31:31; 35:12; 45:12; see GRATITUDE AND INGRATITUDE). Noah's (q.v.) ark (q.v.) was the first manifestation of God's kindness in providing transport on sea and all ships have preserved the beneficence of this original model of divine salvation (q.v.). This parallelism comes out in Q 36:42 in which God alludes to the ark saying: "And we have created for them the like of it, whereon they ride." Most commentators hold that by "the like of it" ships are meant but some contend that the allusion is to camels (see SYMBOLIC IMAGERY).

Vehicles operating in the air (see AIR AND WIND) occur in the legendary sphere, in the commentaries on Q 21:81. This verse states that God has made the wind subservient to Solomon (q.v.) and it was "blowing violent and pursuing its course by his command to the land which we have blessed." Tradition has it that the wind would carry Solomon from place to place and then bring him back to his home in the holy land (see SACRED PRECINCTS; SACRED AND PROFANE). See also ANIMAL LIFE for further discussion, and bibliography.

Veil

Device that creates separation or privacy. The concept of veiling associated with a woman covering her body (see NUDITY) appears in no definitive terms in the Qurʾān. Instead the Qurʾān contains various verses (q.v.) in which the word *ḥijāb,* literally a "screen, curtain," from the root *ḥ-j-b,* meaning to cover or screen, is used to refer to a sense of separation, protection and covering that has both concrete and metaphorical connotations (see METAPHOR). *Ḥijāb* has, however, evolved in meaning and is most commonly used to denote the idea of a Muslim woman's veil, either full or partial, and more generally to denote a level of segregation between the sexes (see GENDER; WOMEN AND THE QURʾĀN). The word appears seven times in the Qurʾān (according to the traditional chronological sequence of revelation, Q 19:17; 38:32; 17:45; 41:5; 42:51; 7:46; 33:53; see CHRONOLOGY AND THE QURʾĀN) and has a common semantic theme of separation (Stowasser, *Women,* 168), albeit not primarily between the sexes. In Q 19:17, Mary (q.v.) withdraws from her family and "places a screen *(ḥijāb)* [to screen herself] from them." In Q 17:45, when the believers (see BELIEF AND UNBELIEF) recite the Qurʾān (see RECITATION OF THE QURʾĀN), God "places a thick/invisible veil *(ḥijāban mastran)* between them and those who do not believe in the hereafter" (see ESCHATOLOGY). Similarly, in Q 41:5, those who do not wish to listen to or accept Muḥammad's message say that there is a distance, *ḥijāb*, between them and the Prophet (see OPPOSITION TO MUḤAMMAD). In Q 7:46, for those people who deliberately lead others

astray (q.v.) from God's path (see PATH OR WAY) or do not believe in the hereafter, "there will be a veil/screen *(ḥijāb)* between them and… those who know" (see KNOWLEDGE AND LEARNING). In Q 42:51, God claims that he sends revelation to humankind in one of three ways: inspiration (see REVELATION AND INSPIRATION), messengers (see MESSENGER; PROPHETS AND PROPHETHOOD) or from behind a veil/curtain *(min warāʾi ḥijāb)*. Commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) have drawn on traditions from Muslim's (d. ca. 261/875) ḥadīth collection (see ḤADĪTH AND THE QURʾĀN) to the effect that this veil refers to a veil of light. In these verses, *ḥijāb* carries various metaphorical levels of meaning, specifically as something that separates truth (q.v.) from falsehood (see LIE) and light (q.v.) from dark (see DARKNESS). This idea has been elaborated significantly by the mystics (see ṢŪFISM AND THE QURʾĀN) who see *ḥijāb* as the curtain or barrier (q.v.) that lies between them and God, the object of their devotion.

The most common meaning of screen or veil as implied in *ḥijāb* has, however, become synonymous with the various forms of clothing (q.v.) that a Muslim woman wears to cover either her hair, her hair and face or her full body when in public or when in the company of those outside close kinship (q.v.) bonds (see also PROHIBITED DEGREES). Although the Qurʾān itself enjoins modest behavior for both men and women (see MODESTY; SEX AND SEXUALITY) and contains no precise prescriptions as to how a woman's body should be covered in public, arguments in favor of such modes of covering stem from a literal as well as historical interpretation of various verses (see FEMINISM AND THE QURʾĀN; PATRIARCHY). Some of the verses deal specifically with items of clothing, some refer more generally to behaving modestly. The verse most famously known as the *ḥijāb* verse itself refers more specifically to the observance of certain manners when in the company of the Prophet and/or his wives (see WIVES OF THE PROPHET). Q 33:53,

> O believers, do not enter the Prophet's houses unless permission is given to you for a meal… and if you ask them [the Prophet's wives] for something you need, ask them from behind a *ḥijāb,* that is purer for your hearts and their hearts (see HEART).

There are variances in opinion as to the exact context in which this verse was revealed (see OCCASIONS OF REVELATION) but many of the *tafsīr* accounts identify the occasion as Zaynab bt. Jahsh's marriage to the Prophet. The guests invited to the wedding outstayed their welcome but they also failed to observe the proper etiquette when in proximity to the Prophet's wives. The concept of *ḥijāb* here is actually a literal curtain/screen which the Prophet let fall between his chambers and his companions so as to afford his wives privacy and protection. It also prescribes a level of seclusion for the Prophet's wives away from the public gaze by virtue of their special and specific status. In fact, the verses soon after in Q 33:55 give a list of individuals with whom it is permissible for the wives to associate face to face ("their fathers, their sons, their brothers, their brothers' sons, their sisters' sons, their women, the [slaves] whom their right hands possess"). The subsequent revelation in Q 33:59, known as the "mantle verse," addresses itself to the Prophet that he should "tell his wives and daughters and the women of the believers" that they should cover themselves in a mantle or a cloak *(jalābībihinna)* when out-

side. The verse explains that this is so that believing women are recognized in the streets by virtue of their outer covering and not molested in the streets of Medina (q.v.). The advice on preserving modesty is contained in Q 24:30 which tells the believing men to "lower their gaze and guard their private parts" *(yaghuḍḍū min abṣārihim wa-yahfaẓū furūjahum)*. Q 24:31 goes on to address Muslim women:

And tell the believing women to lower their gaze and guard their private parts, and to not display their adornments *(zīna)* except for what is apparent, and let them draw their coverings (*khumur,* sing. *khimār*) over their bosoms (*juyūb,* sing. *jayb*), and not display their adornments except to their husbands, their fathers (see FAMILY; MARRIAGE AND DIVORCE)....

Both these verses deal directly with the external appearance of all believing women, urging them to adopt a certain decorum in both their posture and clothing when outside the home. The verses are not concerned with restricting women's movement nor secluding women within the home. Q 33:33, however, which instructs the Prophet's wives to "stay in your houses" as befitting the wives of God's messenger, has also become part of the whole segregation/modesty debate. The internal domestic space for the wives of the Prophet becomes the ideal space for all righteous women.

The concept of veiling then develops between the two distinct but related concepts of clothing that hides and space that secludes. In both cases, the conceptual framework is one where gender boundaries are already assumed within the predominant cultural context and the issue at hand is that of determining the basis upon which these boundaries can be further established. The use of these three words, *ḥijāb, jilbāb* and *khimār* in the Qurʾān and the subsequent *tafsīr* and legal debate (see LAW AND THE QURʾĀN) have led to a diversity of opinion about the exact nature and context of female covering or veiling. To some extent the discussions have revolved around the distinction made between those verses that address the wives of the Prophet in particular, for whom both physical covering and physical seclusion with the advent of the *ḥijāb* verse reflects their special status, and those verses that advise all believing women to adopt some level of concealing dress. Scholars have argued on both sides; either that whatever has been prescribed for the Prophet's wives must naturally be applied to all believing women or from the opposite perspective that it was precisely because the Prophet's wives were seen as a privileged group of women that they were advised to assume a greater level of seclusion from public gaze for their own protection.

Classical commentaries go into very little discussion about the precise nature of female dress but do discuss specific issues such as what parts of her body a woman is permitted to show. In so doing, they debate the very nature of a woman's *ʿawra,* literally, genitalia or pudendum. For al-Ṭabarī (d. 310/923), as women pray (see PRAYER) and perform the pilgrimage (q.v.; *ḥajj*) with their face and hands exposed, it would be correct to argue that these parts of a woman's body are not *ʿawra* and therefore can and should be left exposed. He argues that it is therefore the hands and the face that are alluded to in Q 24:31, "except that which is apparent" (Ṭabarī, *Tafsīr,* v, 419). Al-Bayḍāwī (d. prob. 716/1316-17; *Anwār,* ii, 20), however, argued that a woman's whole body is *ʿawra* and must therefore be concealed from the eyes of men outside the

permitted degrees of kinship. This discussion continued well into the legal tradition, but aside from a general consensus that women should be covered in public, no form of dress is prescribed. For the Shāfiʿīs and the Ḥanbalīs, the concept of *ʿawra* was applied to the entire female body, including the face, hands and below the ankles; the Mālikīs and the Ḥanafīs, however, excluded the face and the hands from *ʿawra* on the basis that the Prophet's own instructions to the "believing women" was to bare their face and hands.

The ḥadīth canons also vary on the issue of female veiling. Despite mention of technical terms such as *khimār* and *jilbāb* in al-Bukhārī (d. 256/870) and Abū Dāwūd (d. 275/889; cf. Wensinck, *Concordance,* s.vv.), the scant references to any specific type of veiling give the overall impression that adult females covered themselves to some extent in public and that this continued to be encouraged as a form of public modesty after the arrival of Islam; once again, however, no exact dress form is prescribed.

During the last two centuries, the issue of female veiling has become one of the most contentious religious and cultural debates in the Muslim world and also in Western societies where there are relatively large communities of Muslims (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY; POLITICS AND THE QURʾĀN). Female veiling is very often used as the distinguishing factor between "traditional" and "modern" societies. The word *ḥijāb* has shifted in meaning from delineating physical boundaries between men and women to becoming very much a boundary reflected through various types of modest clothing, most specifically in the form of headscarves. But it symbolizes far more than a simple head-covering, chador (cloak mainly worn in Iran) or *niqāb,* face veil. Women who cover or veil in loose clothing much of their bodies when in public or in mixed company feel that this is the manner of dressing most in conformity with the spirit if not the literal prescription of the Qurʾān and the associated ḥadīth references. The fact that the Qurʾān does not specifically refer to veiling as understood and practiced in a variety of ways today is of little consequence, for the Qurʾān could take for granted the social practices of its time or modify them slightly (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). Conservatism has generally tended to see this type of covering as synonymous with a woman's expected social and domestic role. Many women, however, in both Islamic societies and in non-Muslim countries have in recent years turned to wearing the headscarf as a sign of reaffirming their religious devotion. This has often been done in variance to the prevailing female dress in their particular cultures, and the veil represents at times a political as well as religious position. For many, veiling in its various forms offers a kind of liberation from the fashion expectations of modern life; it does not signify coercion or oppression within any patriarchal system. As more and more Muslim women take up public professions, or are schooled in mixed educational spaces, the issue of male/female segregation is perhaps not as significant as it once was in many societies. The idea, however, that modesty has to be preserved between the sexes is most apparent in the frequent preoccupation with female dress and more importantly, female covering. For Islamists in countries such as Saudi Arabia and Iran, the issue of female dress remains significant in terms of how a society perceives its own religious values. In many other parts of the Muslim world, female veiling may no longer be central to a country's Islamic

identity, but it remains at the margins of what is still considered an ideal of an Islamic society.

Vengeance

Punishment inflicted in return for an injury or offense, closely related to the concept of retaliation (q.v.), i.e. "to return like for like." In some dozen qurʾānic passages the eighth verbal form of the Arabic root *n-q-m* is employed to describe God as "taking vengeance" upon sinners (i.e. Q 30:47; 32:22; see SIN, MAJOR AND MINOR), repeat-violators of the regulations relating to the pilgrimage (q.v.; i.e. Q 5:95) and people who reject his signs (q.v.; i.e. Pharaoh [q.v.] and his people, cf. Q 7:136; see also LIE; BELIEF AND UNBELIEF; GRATITUDE AND INGRATITUDE). In addition to being an attribute of God (cf. Q 3:4; 5:95; 14:47; 39:37; see GOD AND HIS ATTRIBUTES), vengeance is also the provenance of humans, although different lexemes are utilized (see REWARD AND PUNISHMENT and PUNISHMENT STORIES for further discussion of God's vengeance).

The first murder (q.v.) and the fear of revenge in human history occurred soon after the creation (q.v.) of humankind (see also BLOODSHED; BLOOD MONEY). According to the Hebrew Bible, after being punished for the murder of his brother Abel, Cain said, "My punishment is too great to bear… anyone who meets me may kill me" (*Gen* 4:13-14; see CAIN AND ABEL). The second commandment states, "You shall not murder" (*Exod* 20:13). There is also a sanction for murder, "He who fatally strikes a man shall be put to death" (*Exod* 21:12) and "… a life (q.v.) for a life" (ibid., 23; see also BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT). The continuation of that biblical verse specifies different types of murder, including "eye for an eye" and "tooth for a tooth," etc. (see TEETH; EYES). Also in the Hebrew Bible a distinction is made between murder or premeditated murder and killing, and there is mention of cities of refuge for murders committed unintentionally (*Num* 35:10-31). It is worth comparing those verses with Q 5:45 (Sūrat al-Māʾida, "The Table Spread"): "And in it [the Torah] we prescribed for them life for the life, the eye for the eyes, the nose for the nose and the ear for the ear.…"

In the *jāhiliyya* period (see AGE OF IGNORANCE), Arabic poetry (see ARABS; POETRY AND POETS) is disdainful of mercy (q.v.), moderation (q.v.) and compromise. The early poetry glorifies force, even to the point of murder, and a desire for battle and revenge. The poet ʿAmr b. Kulthūm, from the tribe of Taghlib, is cited in the *Muʿallaqāt:* "Hatred as a result of hatred will overcome you" (verse 32); "Because our blood was spilled, their blood was made to flow" (verse 42); and "A person who will harm you will be injured twice as severely" (verse 51). Even after the advent of Islam, the poet al-Mutanabbī (d. 354/955) said, "You killed me, God will kill you. Attack the enemy and kill." He said, "God will kill you," but in fact the deed will be

carried out by humans (Goren, *Ancient Arabic poetry,* 17; cf. 30-4; Pellat, al-Ḥakam b. ʿAbdal; see also Fākhūrī, *Taʾrīkh,* 602-50).

The Qurʾān, by contrast, refers to murder-killing eight times (Q 4:29, 92, 93; 5:32; 6:151; 17:33; 25:68; 50:74) and the general instruction is not to kill. Vengeance, *al-qiṣāṣ,* is mentioned four times (Q 2:178, 179, 194; 5:45). Commentary on these verses clarifies the concept of vengeance and the notion of using blood money instead of revenge as well as how the issue should be handled (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). An example of such legal explication would be Ibn Qayyim al-Jawziyya (d. 751/1350; *Iʿlām,* ii, 78-9) who claims that without a system of punishments it is impossible to have a properly-functioning society. According to him, such punishments have a deterrent effect.

The method of avenging the murder has also been discussed. Ibn al-Qayyim states that the murderer has to be killed by a sword, which supposedly causes him less suffering, while others insist that a murderer should be executed in the same way as he murdered his victim. Ibn al-Qāsim (d. 191/806), the Mālikī jurist, specifies the mode of retribution depending on whether the murderer used a stick, a stone, fire or drowned the victim. Ibn Qayyim al-Jawziyya (*Iʿlām,* ii, 195 and 196) cites authorities who refer to Q 2:194, "And one who attacks you, attack him in the manner as he attacks you" and Q 16:126, "If you punish [them] punish with the like of that wherewith you were afflicted"). Further, Q 2:178 states that vengeance for murder of a free man is the murder of a free man and likewise a slave for a slave and a woman for a woman (see SLAVES AND SLAVERY; WOMEN AND THE QURʾĀN).

There are, however, differences of opinion about how to punish a person who murdered a woman. Some say that he must be executed. Others say that he has to pay the *diya,* blood money, instead. Another approach emphasizes that, although murder deserves the punishment of death, the woman's family must pay the murderer's family the *diya* for the "difference" — the man being considered more "valuable" than the woman (Aḥmad b. Ḥanbal [d. 241/855] and the Baṣran jurist ʿUthmān b. Sulaymān al-Battī [d. 143/760; cf. van Ess, *TG,* ii, 156f.] as well as ʿAṭāʾ [d. ca. 114/732] in Shinqīṭī, *Aḍwāʾ,* 49). Yet another view insists that only the sultan or the imām (q.v.), who represent religious authority in Islam, can decide in an individual case whether the punishment is execution or payment of the *diya* (Sarakhsī, *Mabsūṭ,* v, 219; a similar approach can be found in Shinqīṭī, *Aḍwāʾ,* iii, 375). There is a common agreement among the scholars that when *diya* is paid instead of execution as revenge, a need to conduct a *ṣulḥ* is called for, a reconciliation ceremony (Shinqīṭī, *Aḍwāʾ,* iii, 3). The *ṣulḥ* ceremony is performed upon receiving the *diya,* which is based on Q 2:178 "and for him who is forgiven somewhat by his (injured) brother (see BROTHER AND BROTHERHOOD; FORGIVENESS), prosecution according to usage and payment unto him in kindness. This is an alleviation and a mercy from your lord."

A ban on punishing a sleeping man who killed someone exists, a ban which is also applicable for a minor or an insane person (see SLEEP; MATURITY; INSANITY). There is no capital punishment for a master who killed his slave or a father who murdered his son (Ibn Qudāma, *Mughnī,* ix, 349). The murder of one of the "People of the Book" (q.v.; *ahl al-kitāb*) i.e. a Jew or Christian (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY), is, however, punishable by death (ibid.); the Prophet executed a Muslim who murdered a person from the

People of the Book, saying "I am the first one who has to fulfill my duties towards the People of the Book. If a Muslim or a person of the People of the Book murders a non-believer *(kāfir)* he will not be punished and will not have to pay *diya* either" (ibid., 341).

The modern jurist Shurayḥ al-Khuzāʿī al-Shinqīṭī (d. 1913) summarizes the classical jurisprudence on the response to murder by offering three options: to execute in revenge, to receive *diya,* and the third is to forgive without any payment (Ibn Qudāma, *Mughnī,* ix, 381).

Bedouin (q.v.) and semi-rural Arab societies have behavioral norms which do not always correspond with the instruction of the Qurʾān. Execution as revenge can be carried out by killing any individual adult in the *khams,* the collective responsibility unit of five generations (cf. Marx, *Bedouin,* who introduced the term "co-liable group" to define this collective responsibility unit of five generations). Collective responsibility means that each member of the co-liable group knows that if he murders someone or even if he kills someone unintentionally without any premeditation, he creates a conflict with the injured co-liable group that might lead to blood revenge, the exile of his co-liable group, or, at the very least, payment of *diya*. The blood dispute is not ended until there is a reconciliation ceremony or revenge is taken. It is not always the individual who caused the murder upon whom revenge is taken. It can be any member of the murderer's co-liable group — somebody who is completely innocent and not involved in the original argument may be murdered in revenge in the name of collective responsibility. Although any member of the group can be killed in revenge, members of the injured group will usually try to kill a close relative of the murderer (see Ginat, *Blood revenge,* 26-30; for *diya* see al-ʿĀrif, *Qaḍāʾ;* ʿAbbādī, *Min al-qiyam;* see also TRIBES AND CLANS; KINSHIP; EVERYDAY LIFE, THE QURʾĀN IN).

In contrast to the Qurʾān and the ḥadīth instructions, in contemporary Bedouin societies the murder of a woman is revenged by the murder of four men in the case where a man kills a woman. In most such cases there is an attempt to solve the conflict by payment of *diya* in an amount equal to the *diya* of four men.

A group whose economy is based on wage labor will be anxious to resolve a blood quarrel quickly as compared to tent dwellers whose economy is based on raising herds (see TENTS AND TENT PEGS). More and more Bedouin are now entering the wage labor market on a permanent basis (see WORK). In undertaking such work a Bedouin accepts a certain responsibility to attend work regularly. If, for reasons of a blood dispute, he decides one morning that it is unsafe for him to attend, it is highly likely that his job will not be waiting for him when he decides that it is safe to return. The wish to keep one's job and the benefits of a regular income are strong reasons to make sure that blood disputes are settled quickly. The major factor affecting revenge or settlement is the political "condition" of the avenging group. A leader anxious to promote cohesiveness within the group will encourage revenge. Mutual responsibility (q.v.) constitutes the ultimate obligation of members of a co-liable group. By deliberately increasing tension a leader can make his group aware of their collective responsibility, thus promoting group cohesiveness (cf. Marx, Organization). Even if the leader does not advocate revenge he can achieve cohesion by not permitting a cease-fire agreement. There are also political circumstances where it is in the interest of the injured

group to agree to a settlement (see Ginat, *Blood revenge,* 25-6).

While the Qurʾān and the ḥadīth are the basic laws that govern the determination of punishment for murder, throughout the generations the values, the norms, the *ʿurf* (tradition) have widened the gap between the original rules and the existing reality.

Verdict see JUDGMENT

Verse(s)

The smallest formally and semantically independent qurʾānic speech units, marked by a final rhyme. The qurʾānic word *āya* (pl. *āyāt,* probably from Syriac *āthā,* cf. Heb. *ōth;* see Jeffery, *For. vocab.*), "sign," has become the technical term used to denote a verse of the Qurʾān. Like the term *sūra* (q.v.), however, which also entered the Arabic language (q.v.) through the Qurʾān, in the qurʾānic corpus itself the word *āya* means a literary unit undefined in extent, perhaps at no stage identical with the qurʾānic verse (see LITERARY STRUCTURES AND THE QURʾĀN). During the process of the qurʾānic communication *āya* figures primarily as part of the discourse of scriptural authority that the Prophet and his listeners engaged in through the entire period of the emergence of the Qurʾān (see REVELATION AND INSPIRATION). This discourse involves the notions of *āya, sūra, qurʾān* and *kitāb* (see BOOK; NAMES OF THE QURʾĀN). It is only in the *muṣḥaf* (q.v.), the canonical codex of the Qurʾān codified after the death of the Prophet (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN), that the word *āya* comes unequivocally to denote a qurʾānic verse. In this entry, first the qurʾānic discourse that occurred in the course of Muḥammad's career will be sketched. In the second part, evocations and quotations of early verses in later qurʾānic texts will be discussed (see CHRONOLOGY AND THE QURʾĀN) and, finally, various manifestations of the literary unit "verse," *āya,* in the canonical text will be surveyed.

The qurʾānic imagination of āya

Āya in the Qurʾān is not a descriptive term but rather a functional designation that in the early sūras primarily denotes nonscriptural signs (q.v.) of divine omnipotence (see POWER AND IMPOTENCE), such as

those visible in nature (Q 76:6-16; 77:25-7; 79:27-32; etc.; see NATURE AS SIGNS) or remembered from history (Q 51:34-46; 79:15-26; etc.; see HISTORY AND THE QUR'ĀN; FORM AND STRUCTURE OF THE QUR'ĀN). In the vast majority of instances, the word *āya,* thus, is not connected to a text. In one rather early sūra, Q 83:13, however, it appears to cover an undefined textual unit: "when our signs are recited to him he says: mere legends of the ancients" (*idhā tutlā ʿalayhi āyātunā qāla asāṭīru l-awwalīn;* see GENERATIONS). In this sūra, one that already reflects the bifurcated categorization of the listeners into believers *(alladhīna āmanū)* and transgressors, unbelievers (*alladhīna ajramū,* Q 83:29; see BELIEF AND UNBELIEF), the "signs" are unambiguously presented as texts that are recited and that function as proofs of divine power. The context is polemical (see POLEMIC AND POLEMICAL LANGUAGE): the hermeneutic value of the recited texts (see RECITATION OF THE QUR'ĀN) is not recognized by a group of listeners who try to distance themselves from the message, claiming to know it from of old, and who do not acknowledge the function of the *āyāt* as signs of authority (q.v.). The qur'ānic speaker, however, through the use of the word *āyāt,* which recalls the much more frequently discussed visual and often miraculous signs of divine omnipotence observed in nature and history, claims a miraculous and immediately convincing character for the texts being recited (see MIRACLES; MARVELS; INIMITABILITY). It is first and foremost their linguistic guise, their particularly poetic code (see RHETORIC AND THE QUR'ĀN; LANGUAGE AND STYLE OF THE QUR'ĀN), that substantiates the claim of the qur'ānic text sections to miraculous signs of divine power. The closeness of early qur'ānic texts to poetry (see POETRY AND POETS) or the equally artistic speech of the soothsayers (q.v.) is, more than once, indirectly acknowledged by the Prophet's adversaries (see OPPOSITION TO MUḤAMMAD). Indeed, the poeticity of the early qur'ānic texts seems to have triggered attempts at disqualifying him as a messenger (q.v.) by connecting him typologically to poets (Q 69:40-1: *innahu la-qawlu rasūlin karīmin wa-mā huwa bi-qawli shāʿirin… qalīlan mā tuʾminūn,* "it is the speech [q.v.] of a noble messenger, and it is not the speech of a poet! How little do you believe!" cf. Q 52:29 f.; 68:2; 81:22, where *shāʿir,* "poet," is represented by *majnūn,* "possessed, mad"; see INSANITY; PROVOCATION; REFLECTION AND DELIBERATION) and soothsayers, the *kāhins* (Q 52:29: *fa-dhakkir fa-mā anta bi-niʿmati rabbika bi-kāhinin wa-lā majnūn,* "so remind them, for you are not, by the grace of your lord [q.v.], a soothsayer or a madman"; see Neuwirth, Der historische Muhammad). His speech — perhaps not least in view of the claim to a supernatural source occasionally raised for it — appeared closest to the enunciations of those speakers, familiar in ancient Arabia, who are themselves under the spell of a superhuman power (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). It has been justly underscored, however, that the qur'ānic claim to truth (q.v.) in the early texts relies less on extra-textual reference than on its very medium, the poetic character of its language.

The early sūras' claim to validity is not anchored in something beyond the text; rather, it is the truth of what is being said within the text, as made evident through a variety of poetic devices, that grounds its claim to validity: One might speak of a poetic, rather than a theological truth-claim (see THEOLOGY AND THE QUR'ĀN). Thus, in sūras such as Q 89, 91, 99 or 100 the question on whose authority the recitations can legitimately demand their listen-

ers to mend their ways is nowhere posed. Their normative claim on the audience rests on the fact that artful rhetoric, such as the oath clusters (see OATHS), functions like an artfully ground lens which allows one to glimpse something distant, yet visibly real, namely, the imminent nature of divine judgment (see LAST JUDGMENT). Rhetoric, then, is conceived of not primarily as an instrument of deception, as modern prejudice would have it, but rather as an instrument of making manifest that which is, and can be seen to be, the case. Exploring the lens metaphor more might say that knowing who has produced the lens is of much less importance than simply looking through it. In a sense, then, it would be entirely amiss to pose the question on whose authority one ought to acknowledge what one sees (Sinai, From qurʾān to kitāb, forthcoming).

It is initially the linguistic code, then, that warrants the character of qurʾānic text units as signs of divine authority. The gradual self-theologization of qurʾānic discourse — to refer again to Sinai's survey — continues with the third-person authorizations of Muḥammad.

In response to scathing polemics and sarcastic objections, Muḥammad's recitations are forced to provide some account of whence and how they reach their audience. The Qurʾān is thus driven into a rudimentary form of prophetological reflection, as attested by 81:19-25: *innahu la-qawlu rasūlin karīm/dhī quwwatin ʿinda dhī l-ʿarshi makīn/muṭāʿin thumma amīn/wa-mā ṣāḥibukum bi-majnūn/wa-laqad raʾāhu bi-l-ufuqi l-mubīn/wa-mā huwa ʿalā l-ghaybi bi-ḍanīn/wa-mā huwa bi-qawli shayṭānin rajīm,* "it is the speech of a noble messenger, who has power with the lord of the throne and is highly placed, obeyed and trustworthy. Your companion is not mad. He saw him upon the luminous horizon; he is not regarding the unseen, niggardly. And it is not the speech of a devil, accursed." Cf. Q 53:2f. where Muḥammad's unspecific claim to divine inspiration is now with greater terminological precision qualified as "revelation," in *huwa illā waḥyun yūḥā/ʿallamahu shadīdu l-quwā,* "it is only a revelation being revealed. The mighty one taught him" (Q 53:4-5; Sinai, From qurʾān to kitāb, forthcoming).

One might count the identification of Muḥammad's recitation with divine signs, *āyāt,* among these stratagems of indirect authorization (see Q 46:7; 34:43; 31:7; 2:252). The more or less systematic employment of the "prophetical you," datable to early Meccan times, may be regarded as a second step, reflecting development on the level of literary technique.

Nicolai Sinai identifies a third step along the same lines in those early Meccan passages, in which the qurʾānic discourse is traced back to a written heavenly archetype (see HEAVENLY BOOK). Most probably, this step, too, was triggered by polemics. As Q 74:52 implies, the orality (q.v.) of Muḥammad's recitations was seen as betraying their human origin: "rather each one of them wishes to be given scrolls (q.v.) unrolled" *(bal yurīdu kullu mriʾin minhum an yuʾtā ṣuḥufan munashshara)*. Elsewhere, and probably by way of reaction to similar charges, such *ṣuḥuf,* "scrolls," are presented as indeed forming some kind of written draft of which Muḥammad's recitations are but the oral promulgation or reading (Q 80:10-16): "Yet, it is only a reminder, whoever wishes, will remember it, in scrolls highly honored, lifted up and purified, by the hands of scribes, honorable and pious" (*kallā innahā tadhkira fa-man shāʾa dhakarahu fī ṣuḥufin mukarramatin marfūʿatin muṭahharatin bi-aydī safaratin kirāmin barara,* Q 80:11-16;

see MEMORY; REMEMBRANCE; PIETY). Since the performative orality of Muḥammad's revelations, which appear to have been viewed as incompatible with their claim to divine authorship, could not very well be simply denied, it is at least counterbalanced.

Finally, in yet another passage, the term *kitāb* instead of *ṣuḥuf* or *lawḥ*, "tablet" (as in Q 85:22; see PRESERVED TABLET; WRITING AND WRITING MATERIALS), is used: "it is indeed a noble *qurʾān*, in a hidden book, that only the purified shall touch, a revelation from the lord of the worlds" (*innahu la-qurʾānun karīm fī kitābin maknūn lā yamassuhu illā l-muṭahharūn tanzīlun min rabbi l-ʿālamīn*, Q 56:77-80). Thus, first Muḥammad's revelations are qualified either from a functional viewpoint — they serve as *tadhkira*, i.e. admonition — or from a performative one — they are presented as *qurʾān*, recitation — then they are said to be "in" *(fī)*, something else: *ṣuḥuf, lawḥ, kitāb*. This latter entity is most likely viewed as a kind of transcendent storage medium to which the basic message of Muḥammad's preaching is traceable. In Q 56:80, this bipartite self-predication is expanded upon by a third element, namely, reference to the process by which the heavenly writing is transformed into an earthy recitation, i.e. *tanzīl*, "revelation."

Where is the notion of āya *as verse to be located in this process?*

The word appears first, and only once, in a text from the end of early Meccan times, serving as an indirect authorization of the Prophet (Q 83:13). The accusation of not respecting the signs presented here becomes, in later Meccan and Medinan sūras, a stock argument (Q 31:7; 34:5, 38). This argument is further enhanced by the qualification of the signs as *bayyināt*, "made clear," by the divine sender himself ("we have made clear the signs for people who firmly believe," *qad bayyannā l-āyāti li-qawmin yūqinūn*, Q 2:118; "look, how we make clear the signs for them, then look how they are perverted," *unzur kayfa nubayyinu lahumu l-āyāti thumma nzur annā yuʾfakūn*, Q 5:75; cf. 2:99; 5:89; 45:25, 46).

The idea that the recitation is particularly adapted to fit the listeners' capacities for understanding is further developed in texts that attest to additional acts of clarification, first through the structuring of the texts *(taḥkīm)*, then through their expounding them *(tafṣīl)*: the late Meccan sūra Q 11 (Sūrat Hūd) starts thus: "*Alif lām rā*. A book with sections which are elaborately formulated and clearly expounded from the wise, the all-aware" (*alif lām rā. kitābun uḥkimat āyātuhu thumma fuṣṣilat min ladun ḥakīmin khabīr*, Q 11:1; see GOD AND HIS ATTRIBUTES; WISDOM; KNOWLEDGE AND LEARNING; HIDDEN AND THE HIDDEN). Such clarification of the texts is even considered as the decisive factor for the constitution of an emerging Arabic scripture: "a book whose sections have been well expounded, an Arabic *qurʾān* addressed to a people who know" (*kitābun fuṣṣilat āyātuhu qurʾānan ʿarabiyyan li-qawmin yaʿlamūn*, Q 41:3; for the intra-qurʾānic and exegetical debates about the Arabic character of the text, see FOREIGN VOCABULARY). At a still later stage, *āyāt* made clear and unambiguous (see AMBIGUOUS) are explicitly contrasted to others that allow for more than one understanding — see the Medinan verse Q 3:7: "it is he who sent down to you the book, with sections that are precise in meaning, and which are the mother of the book, and others that are ambiguous" *(huwa lladhī anzala ʿalayka l-kitāba, minhu āyātun muḥkamātun hunna ummu l-kitābi wa-ukharu mutashābihātun)*. Equally Medinan is the idea put forward in Q 2:106 that an *āya* may, during the communication process, occasionally become the object of modification or be forgotten and replaced:

"whatever verse we abrogate or cause to be forgotten, we will bring instead a better or similar one" (*mā nansakh min āyatin aw nunsihā naʾti bi-khayrin minhā aw mithlihā;* see ABROGATION). From late Meccan times onwards, the term *āya* loses its connotation of a sign that exerts a particular appeal and comes to mean simply "text unit, section."

In this late understanding, the term *āya* is employed in the context of an argument of central importance that had been aroused by the unique situation of the qurʾānic revelations. The unbelievers raised the provocative question of why Muḥammad's revelation had not come down in one piece but in small parts: "the unbelievers say, if only the Qurʾān had been sent down to him all at once?" (*wa-qāla lladhīna kafarū law lā nuzzila ʿalayhi l-qurʾānu jumlatan wāḥida,* Q 25:32), i.e. as a complete book, as in the case of Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; SCRIPTURE AND THE QURʾĀN). The qurʾānic response to that challenge was: "that is how [it is revealed] because we wanted to strengthen your heart (q.v.) with it and we have recited it in a distinct way" (*ka-dhālika li-nuthabbita bihi fuʾādaka wa-rattalnāhu tartīlan,* Q 25:32). The fact that, because of the Qurʾān's situatedness, the scripture to be recited is not under the control of the transmitter, is presented as the result of divine wisdom. What had been viewed by adversaries as an embarrassing shortcoming was turned "into a precondition for God himself assuming the hitherto human activities of recitation *(qurʾān)* and exegesis *(bayān)*. Hence, Judaism and Christianity are trumped by an ingenious redescription of the Qurʾān's '*ad rem* mode of revelation'" (Madigan, *Qurʾān's self-image,* 68) transforming it from a liability into an asset. There is no better illustration of how the dynamics of inter-communal polemics can bring about a true revaluation of values: that which one party considers an appalling flaw is elevated by the other party, "through a blend of spite and theological cunning, to the rank of a veritable hallmark of its self-definition" (Sinai, From qurʾān to kitāb, forthcoming). This *tafṣīl al-āyāt,* the expounding of the qurʾānic text sections (Q 41:3), qualifies the revelation to pose as an Arabic text speaking to the hearts in an understandable way. At the end of this development, the *āya* is established as a term to designate relevant, though undetermined, units of the qurʾānic text. Thus the qurʾānic text that attests to both the emergence of a scripture and a community (Abraham [q.v.] and Ishmael's [q.v.] prayer [q.v.] of consecration of the Kaʿba [q.v.]) can refer to the *āyāt* shape of the revelations as an achievement that enables Mecca (q.v.), its place of origin, to rival Jerusalem (q.v.) in its most prominent prerogative: to be recognized as the birthplace of divine communications (*Isa* 2:3: The law will go out from Zion and the word of the lord from Jerusalem; see Neuwirth, Spiritual meaning). Q 2:128-9 says: "Our lord, cause us to submit to you, and make of our posterity a nation that submits to you. Show us our rites and pardon us (see RITUAL AND THE QURʾĀN; FORGIVENESS), you are indeed the pardoner, the merciful (see MERCY). Our lord, send them a messenger from among themselves who will recite to them your signs and teach them the book and the wisdom and purify them (see CLEANLINESS AND ABLUTION; RITUAL PURITY); you are the mighty, the wise" *(rabbanā wa-jʿalnā muslimīna laka wa-min dhurriyyatinā ummatan muslimatan laka wa-arinā manāsikanā wa-tub ʿalaynā innaka anta l-tawwābu l-raḥīmu. rabbanā wa-bʿath fīhim rasūlan minhum yatlū ʿalayhim āyātika wa-yuʿallimuhumu l-kitāba wa-l-ḥikmata wa-yuzakkīhim innaka anta l-ʿazīzu l-ḥākīm).*

Verses alluded to and verses quoted in the Qurʾān: basmala *and Fātiḥa*

Although during the communication process there appears to have been no term to designate "verse," from early on the notion of verse was strongly developed in the Qurʾān. Verses are neatly structured and unambiguously delimited often through phonetically expressive rhymes (see RHYMED PROSE). Though identical verses sometimes recur in the Qurʾān — such as the phrase *waylun yawmaʾidhin lil-mukadhdhibīn,* "woe on that day to those who denounce," that figures as a refrain in Q 77 (Sūrat al-Mursalāt; Q 77:15, 19, 24, etc.) and recurs in Q 83:10 — their repetition does not usually convey a sense of textual quotation, in view of the strongly oral character of the Qurʾān (see ORALITY AND WRITING IN ARABIA). Some verses from earlier texts, however, seem to be quoted or evoked in later qurʾānic contexts, thus shedding light on the self-referentiality of the Qurʾān. A case in point is the *basmala* (q.v.), the formula "in the name of God, the compassionate, the merciful." Thus, in Q 27:30 a letter dispatched by Solomon (q.v.) to the queen of Sheba (q.v.) is quoted: "it is from Solomon and it says: 'in the name of God the compassionate, the merciful' " (*innahu min sulaymāna wa-innahu bi-smi llāhi l-raḥmāni l-raḥīm;* see also BILQĪS). What is demonstrated here, according to the most plausible hypothesis, is that the custom of starting written documents with the *basmala* is a dignified ancient custom, applied already by an ancient prophet to his written message (see PROPHETS AND PROPHETHOOD). It is usually assumed that qurʾānic texts were successively put into writing in the middle and late Meccan periods, when verses became more complicated structurally and through that procedure were connected to the *basmala*. That formula, which displays the divine name *al-raḥmān* in a prominent position, most probably originated from the time when this divine name had replaced others. Since in Q 27:30 the divine name *al-raḥmān* figures only in the *basmala,* the formula should be considered a quotation in that text. But, of course, the *basmala* that was promulgated through the Fātiḥa (q.v.) is also a proper introduction to orally conveyed sacred speech. In the Qurʾān it precedes the texts of all sūras with the sole exception of Q 9. The *basmala* is counted as an ordinary verse in the first sūra (Sūrat al-Fātiḥa, "The Opening"), although when the text is recited in ritual prayer it is separated from the bulk of the text of the Fātiḥa through other formulas (see Neuwirth, Sūrat al-Fātiḥa; see also PRAYER FORMULAS). Its consideration as an ordinary verse is due, as will be shown, to the peculiar recognition that the Fātiḥa has found in the qurʾānic text itself (see EVERYDAY LIFE, THE QURʾĀN IN).

Q 15:87 triumphantly states that, besides his scriptural recitation, there are now at the disposal of the Prophet a particular group of verses fit to be repeated over and again — the "seven litany-verses": "verily we gave you seven litany-verses *(mathānī)* and the mighty recitation" (*wa-laqad ātaynāka sabʿan mina l-mathānī wa-l-qurʾāna l-ʿazīm;* see OFT-REPEATED). Although no particular term is mentioned, the units counted as *sabʿ* (seven) are certainly verses. The allusion is to the Fātiḥa — an interpretation already held by a major group of classical exegetes (see Neuwirth, Referentiality). The alternative interpretation advocated by some scholars like R. Paret (*Koran;* Rubin, Exegesis) and A. Welch (Ḳurʾān), that *mathānī* should point to the punishment legends (see Horovitz, *KU*) is untenable (see PUNISHMENT STORIES) since these stories were not yet composed at the time the Qurʾān is emerging. The word *mathānī,* a plural form of *mathnā* ("in double number," Q 4:3; 35:1; 34:46), occurs in

Q 39:23 where it is used to denote not an individual partial corpus apart from the Qurʾān, made up of seven units, but appears as a qualification of the *kitāb* in toto: "God has sent down the best discourse in a book with similar, repeated texts, from which the skins of those who fear their lord shiver; then their skins and hearts mellow at the mention of God" *(allāhu nazzala aḥsana l-ḥadīthi kitāban mutashābihan mathāniya, taqshaʿirru minhu julūdu lladhīna yakhshawna rabbahum thumma talīnu julūduhum wa-qulūbuhum ilā dhikri llāhi)*. *"Mathānī"* here refers to similarly repeated units of texts that appear to be larger than single verses, and, in view of the psychological effect ascribed to them, perhaps refer to punishment stories. This meaning is, however, deduced from the particular context of late Meccan polemic and is completely incompatible with the earlier situation of Q 15, when no plurality of punishment stories had yet existed, let alone seven such stories (see Neuwirth, Sūrat al-Fātiḥa). The Fātiḥa, in its canonical form, indeed consists of seven verses, a number achieved through the counting of the *basmala* that is usually not considered a verse but an introductory invocation. The fact, however, that the Fātiḥa "originally" did not consist of seven, but of six, verses does not contradict its identification with the seven *mathānī,* "seven" being often understood in the sense of a small, "round" number, not necessarily numerically seven (see NUMBERS AND ENUMERATION). A strong argument in favor of *sabʿ mina l-mathānī* meaning the Fātiḥa is the fact that the entire sūra (Q 15) is replete with short evocations of the text of the Fātiḥa, thus marking the emergence of this particular text as a significant development. The Fātiḥa indeed marks a turn of the liturgical practice of the community since its text was, originally, not considered to be part of the *qurʾān,* the recitation, but was rather used as a communal prayer, and as such was often repeated, thus deserving of the label of *sabʿ mina l-mathānī* (see Neuwirth, Referentiality). Eventually, the Fātiḥa came to complete the liturgical service which, until then, must have consisted in a *qurʾān* (see Q 15:87; *al-qurʾān al-ʿazīm*) and the inherited ritual gestures. At that point, the Fātiḥa was presumably known under one of its alternative designations, namely *al-ḥamd* (alluded to as such in Q 15:98; see PRAISE; LAUDATION).

Typology of the qurʾānic verses

The poetical structure of the Qurʾān is marked by the rhyme endings of the verses. A classification of the rhymes has been undertaken for the Meccan parts of the Qurʾān in Neuwirth, *Studien*. It was shown that semantically determined verse groups in early sūras are regularly bracketed by a joint rhyme pattern; thus eschatological introductions like Q 101:1-3 are distinguished from the ensuing prediction of the events on the last day (Q 101:4) and again from the description of the judgment (q.v.; Q 101:6-11) by individual rhyme patterns (see also ESCHATOLOGY; LAST JUDGMENT; APOCALYPSE). There is a significant difference between those sūras classified as early Meccan whose endings comprise no less than eighty types of rhyme, those classified as middle Meccan with seventeen types of rhyme endings, and those classified as late Meccan with only five types of rhyme endings. The scope of diversity among the rhymes is related to the general style of the Qurʾān. The sūras commonly considered the oldest, i.e. those that display *sajʿ* rhymed prose in the strict sense — short units rhyming in frequently changing sound patterns reiterating the last consonants and based on a common rhythm — are made up of monopartite verses containing one colon each. (For the colon, a text unit borrowed

from classical rhetoric, see Norden, *Kunstprosa;* Neuwirth, *Studien;* loosely construed, a colon equals a single phrase. This, however, is not sustained indefinitely. As soon as the topics become less expressive, turning from immediate appeal to description or more sophisticated argument, verses tend to become longer and more complex.)

Monopartite verses

Principally, two types of monopartite verses can be distinguished, verses of the *sajʿ al-kāhin* type (oath clusters, *idhā*-phrase-clusters, etc.; see FORM AND STRUCTURE OF THE QURʾĀN) and others reminiscent of monotheistic hymns (*sabbiḥi sma rabbika l-aʿlā,* "praise the name of your lord, the exalted," Q 87:1). The earliest verses thus are not necessarily modeled after *kāhin* speech but often seem to echo monotheistic hymnal texts. One has also to keep in mind that *kāhin* style verses have changed their function: the enigmatic speech does not prepare the way for the disclosure of a truly unknown danger, as is often the case in *kāhin* predictions (see Neuwirth, Der historische Mohammad), but the solution of the enigma built up by the short verses of oath clusters (see Neuwirth, Images) and *idhā*-phrase clusters comes as no real surprise: it is the news of the imminent day of judgment. Still, from a rhetorical point of view, a tension is generated in these texts by means not found in the existing literary genres, thus extending the spectrum of literary forms substantially. The clusters of particular syntactic structures as presented in the short verses are remote from functional ordinary speech; nor are they familiar from poetry either. It is noteworthy that the qurʾānic *sajʿ* sometimes inverts the ordinary sequence of syntagmata in order to facilitate the achievement of expressive rhymes; thus in the qurʾānic *idhā*-phrase clusters the verb stands in the final position, contrary to ordinary prose (for the aesthetic impact of the monopartite verses, see Sells, *Approaching*). On the other hand, short hymnal verses would have been familiar from the liturgical language in Christian use (see Baumstark, Jüdischer und christlicher Gebetstypus). Indeed the typological similarity of the qurʾānic hymnal sections to Christian hymns has inspired Günther Lüling's hypothesis of a Christian origin of the Qurʾān (*Über den Urkoran;* see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). One has, however, to bear in mind that qurʾānic hymns are mostly functionally employed, serving as introductions to longer texts or as personal exhortations to the Prophet to perform liturgical tasks. These verse groups are not infrequently followed by a report concerning the acceptance of their recitation, thus bringing them into a scenario of debate (see Neuwirth, Vom Rezitationstext; see DEBATE AND DISPUTATION). Only in one case can a specific model for a hymnal text, Q 55 (Sūrat al-Raḥmān, "The Merciful"), be determined, namely Psalm 136 (see Neuwirth, Qurʾānic literary structure; see also PSALMS). Still, through its re-casting the psalm has been thoroughly islamized and indeed turned into a new text altogether. Similarly, the doxological introductory verses that become familiar with the mid-sized sūras in Medina (q.v.; Q 59, 61, 62, 64) are not to be read as drawing on a pre-existing "*Ur*-text" from another religious tradition but rather as rephrasings of formulas derived from psalms that were current in monotheistic liturgical use of the time.

Whereas early *kāhin*-style and hymnal verses are usually monopartite, more discursive sections, such as the description of paradise (q.v.) in Q 52:17-28 and the debate in Q 52:29-44, usually display bipartite or even pluripartite verse structures, i.e. verses

made up of an entire sentence, mostly paratactically structured. The transition attested in early Meccan texts from *sajʿ* speech with monopartite verses to a more ordinary, though still poetically tinted, articulation attests to the transformation of an adherence to standard pre-Islamic tradition into a novel literary paradigm. This can be considered to be a genuine qurʾānic development marking a new stage in the history of the Arabic literary language (see LITERATURE AND THE QURʾĀN).

Pluripartite verses

Even the structure of pluripartite verses remains extremely conducive to recitation (see Nelson, *The art of reciting*). The colometric structure of qurʾānic style, comparable to that familiar from ancient rhetoric (see Norden, *Kunstprosa*), facilitates the oral performance of texts. A comparison between the shape of biblical narratives (q.v.) narrated in the Qurʾān and in poetry contemporary to the Qurʾān, e.g. that of Umayya b. Abī l-Ṣalt, supports this argument strongly (see also MYTHS AND LEGENDS IN THE QURʾĀN). A comparison between qurʾānic recitation and the — equally chanted — recitations of Hebrew Bible and New Testament texts confirms the unique predisposition of qurʾānic verses for recitation. In Jewish and Christian traditions, the scriptural texts, most of which were originally not composed to be recited, were, at a later stage, structured by musical notation to ensure the preservation of the meaning and to facilitate recitation (see Neuwirth, Three religious feasts). Though in later tradition the Qurʾān is also furnished with additional markers to prevent mistaken readings through problematic connecting or disconnecting of units of meaning (see READINGS OF THE QURʾĀN; ORNAMENTATION AND ILLUMINATION; MANUSCRIPTS OF THE QURʾĀN), it is not comparably dependent on additional regulations since the text is largely free of overlong phrases and complex hypotactic periods.

It is noteworthy that two multipartite verses have acquired particular popularity among Muslims, the Throne Verse (*āyat al-kursī*, Q 2:255; see THRONE OF GOD) and the Light Verse (*āyat al-nūr*, Q 24:35; see LIGHT), both outstanding examples of especially meditative qurʾānic texts. It is *āyat al-nūr* in particular ("God is the light of the heavens and the earth," *allāhu nūru l-samāwāti wa-l-arḍ;* see EARTH; HEAVEN AND SKY) that through its complex similes (q.v.) and metaphors ("his light is like a niche in which there is a lamp [q.v.], the lamp is in a glass, the glass is like a glittering star," *mathalu nūrihi ka-mishkātin fīhā miṣbāḥ/al-miṣbāḥu fī zujāja/al-zujājatu ka-annahā kawkabun durrī;* see also PLANETS AND STARS; SYMBOLIC IMAGERY) simultaneously discloses the paths leading to the knowledge of the divine and upholds their mystery. The description of the nature of the divine light contained in its mysterious receptacles (colons 2-8) is followed by a call for interpretation; colons 9-10 identify the image of the lamp as an example, a *mathal*, that demands from the reader the hermeneutic task of de-coding (see PARABLES). Finally, colon 11 comes to confirm God's wisdom in a hymnal clausula, a fit conclusion for a section about an epistemic issue. Multipartite verses like this — no longer spontaneous addresses to the immediate listeners only but composed to consider later readers as well — describe the full circle of communicating knowledge to the reader and challenging the reader's response.

Clausula verses

Any similarity to *sajʿ* is abandoned when verses exceed the bipartite structures. In these cases, the rhyming end of the verses

follows the stereotypical *-ūn, -īn*-pattern that would hardly suffice to fulfill the listeners' anticipation of a resounding conclusion. A new mnemonic technical device that enters the picture is the rhymed phrase, a syntactically stereotyped colon that is distinguished from its context inasmuch as it does not participate in the main strain of the discourse but presents a kind of moral comment on it. One might term this concluding phrase a "cadenza" — in analogy to the final part of the speech units in Gregorian chant, which through their particular sound pattern arouse the expectation of an ending — or, more modestly, a "clausula." The musical sound pattern of the often stereotypically structured clausula phrase enhances the message encoded in it, which in many cases introduces a meta-discourse entailing a moral judgment on the behavior of the protagonists of a narrative, as in Q 12:29, "verily, you were one of the sinners" (*innaki kunti min al-khāṭi'īn;* see SIN, MAJOR AND MINOR). They thus transcend the main — narrative or argumentative — flow of the sūra, introducing a spiritual dimension: divine approval or disapproval. Indeed, their most typical manifestation is the reference to one of God's attributes, as in Q 3:29, "verily God has power over everything" *(wa-llāhu ʿalā kulli shay'in qadīr)*. These meta-narrative insertions into the narrative or argumentative fabric of the qur'ānic text would, of course, in a written text meant for silent reading, appear rather disruptive of the larger argument or narrative. They add, however, substantially to the impact of the oral recitation. The Qur'ān thus consciously styles itself as a text evolving on different, yet closely intertwined, levels of discourse. Although it is true that not all multipartite verses bear such formulaic endings, cadenzas may be considered characteristic for the later Meccan and all the Medinan qur'ānic texts. The resounding cadenza, thus, replaces the earlier expressive rhyme pattern, marking a new and irreversible development in the emergence of the text and of the new faith.

The cadenza is a characteristically qur'ānic device that connects story and commentary, making the divine sender of the message also its exegete. The story is told as a representation of human interaction, the cadenza functioning to relate that interaction to the divine authority in an interplay of horizontal and vertical vectors. The opening up of a communication between the divine speaker and his human audience, which is celebrated in the early sūras as a novel achievement, bestows on the here and now the vision of an attainable equilibrium between the opposites governing reality (see PAIRS AND PAIRING). Two textual stratagems contribute to this breakthrough in qur'ānic hermeneutics: (i) the self-referential technique of reflecting the narrated world through diverse layers of the textual structure, both the worldly and the transcendent, and (ii) the genre-transcending stratagem of introducing two strands of speech, one communicated through the main text, the other through the clausula. We are confronted here with a unique kind of intrinsic qur'ānic commentary, through both self-reference and exhortation, which invites the listener to explain, to practice *bayān,* and to make apparent the hidden dimension of meaning (see POLYSEMY; EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). The listener does so by interpreting the information conveyed in the narrative strand as tokens of divine faculties, divine promises, and divine demands — that is, social rulings (see LAW AND THE QUR'ĀN; ETHICS AND THE QUR'ĀN). The listener's exegetical semio-

tization of the words received is thus an indispensable part of the text itself, its intrinsic exegesis.

Victory

Success, often in the face of military aggression. The principal meanings of "victory" in the Qur'ān are conveyed by derivatives of the verbal roots *f-t-ḥ, n-ṣ-r, f-w-z,* and *gh-l-b*. Particularly in the case of *fatḥ,* a specific military meaning can pertain to the defeat of one's foes in battle (see EXPEDITIONS AND BATTLES; FIGHTING; ENEMIES) and, by extension, conquest, as in the opening verses of Q 48, entitled "Victory" (Sūrat al-Fatḥ), and referring to the conquest of Mecca in 8/630 by the Prophet and the early Muslims. More often than not reference to aspects of an eschatological "triumph" is intended (see ESCHATOLOGY). On *f-t-ḥ,* see CONQUEST.

The many occurrences of *n-ṣ-r* nearly always refer to divine "support," the back-

ing necessary to the success of God's cause and its partisans (see PATH OR WAY). Specific contexts in which *n-ṣ-r* occurs include references to Badr (q.v.; Q 3:123) and Ḥunayn (q.v.; Q 9:25), and the "help" provided by God to Noah (q.v.; e.g. Q 21:76-7), Jesus (q.v.; e.g. Q 3:52; see also APOSTLE) and the prophets as a group (e.g. Q 6:34; see PROPHETS AND PROPHETHOOD). A more general meaning is the "help" provided by those who remain true to God's cause. In this sense, God is the provider *(naṣīr),* a term frequently coupled with "protector" (*walī,* e.g. Q 9:74, 116; see FRIENDS AND FRIENDSHIP; CLIENTS AND CLIENTAGE). It follows that the unbelievers (see BELIEF AND UNBELIEF) are those who, seeking "help" from other sources, be they false gods or armed conflicts, will inevitably fail (e.g. Q 7:197; 21:43; see IDOLS AND IMAGES; POLYTHEISM AND ATHEISM). The term *anṣār,* "helpers," occurs both in reference to Muḥammad's Medinan supporters (e.g. Q 9:117; see MEDINA; EMIGRANTS AND HELPERS) and, more generally, to those who perpetuate God's way by siding with Jesus or other prophets (e.g. Q 61:14).

Most occurrences of *f-w-z* are in the nominal form *(fawz),* always joined by one of three modifiers: *mubīn,* "clear, obvious" (Q 6:16; 45:30); *kabīr,* "great, mighty" (Q 85:11) and, most often, *ʿaẓīm,* "supreme" (Q 9:72 and elsewhere). *Fawz* designates the final reward, the "victory" as it were, of God's activity on behalf of humankind (see REWARD AND PUNISHMENT). Thus, in Q 6:16, it is the avoidance of damnation (see HELL AND HELLFIRE), what Muḥammad Asad (*Message,* 173) calls "a manifest triumph." Similarly, in Q 9:72, alongside the "physical" pleasures of paradise (q.v.), God's satisfaction *(riḍwān)* occurs as "the supreme felicity" (Yūsuf ʿAlī, *Meaning,* 459). Four verses (Q 9:20; 23:111; 24:52; 59:20) speak of those sure to be victorious *(al-fāʾizūn).*

Gh-l-b and derivatives, as in the case of *f-t-ḥ,* carry both the general sense of "to overcome" and the more specific meaning of military victory (or defeat). An example in the first category is the evildoers of Q 23:106 (see EVIL DEEDS; VIRTUES AND VICES, COMMANDING AND FORBIDDING), who are described as "overwhelmed" by their own misfortune *(shiqwa),* or in Q 41:26, about those who seek by continuous chatter to drown out or overwhelm the sound of the Qurʾān so as to "gain the upper hand" (see RECITATION OF THE QURʾĀN; OPPOSITION TO MUḤAMMAD). In the second category, an example is Byzantium *(al-rūm)* in Q 30:2-5 which, as most exegetes understand it, nearly fell to the Sasānids only to rally as the prediction here would have it (see BYZANTINES). The "party of God" (*ḥizb Allāh,* Q 5:56; see PARTIES AND FACTIONS) are "the true victors" *(al-ghālibūn).* Some disagreement surrounds the pronominal suffix in *wa-llāhu ghālibun ʿalā amrihi* (Q 12:21), as noted by Paret (*Kommentar,* 249).

Vigil

Wakefulness at night for religious observance. There are a number of places in the Qurʾān where night prayer (q.v.) is mentioned. The term which came to be used for it in Islam is *tahajjud,* the verbal noun *(maṣdar)* of *tahajjada.* In one place in the Qurʾān the imperative of this verb is used: "And in a part of the night, perform a vigil *(tahajjad)* with it (*bihi,* i.e. with the Qurʾān)

voluntarily (*nāfilatan,* Q 17:79). In Q 3:113 we find a reference to the People of the Book (q.v.) who perform this rite: "They are not all alike; among the People of the Book is a steadfast community *(ummatun qāʾimatun)* that recites the signs (q.v.) of God during the night, prostrating themselves" (see BOWING AND PROSTRATION). Probably Christians are meant (see CHRISTIANS AND CHRISTIANITY) as influence from Byzantine orthodox Christianity, from monophysite Ethiopia (see ABYSSINIA) or from Nestorian Christians in al-Ḥīra appears to have been present in seventh-century Arabia. Priests and monks are positively mentioned in the Qurʾān (Q 5:82; but cf. 9:31, 34; see MONASTICISM AND MONKS), and were likely known to Muḥammad. From the beginning of his mission Muḥammad practiced nightly prayer (cf. Q 73:1-4, "O enfolded one, stand up [in prayer] during the night, except a small portion of it, the half or rather less, or rather more, and recite the Qurʾān with accuracy *[tartīlan]*"), although nightly vigil was never a prescribed rite for his followers (see RECITATION OF THE QURʾĀN; RITUAL AND THE QURʾĀN). Also in another early Meccan verse (see VERSES; MECCA; CHRONOLOGY AND THE QURʾĀN) it is Muḥammad himself who is addressed: "And mention the name of your lord (q.v.) in the morning (q.v.) and in the evening (q.v.) and in the night prostrate yourself before him and praise (q.v.) him the livelong night" (Q 76:25f.; see DAY, TIMES OF; DAY AND NIGHT; REMEMBRANCE; BASMALA); "And perform the *ṣalāt* at both ends of the day and in the stations *(zulafan)* of the night" (Q 11:114). Eventually, pious followers joined him (Q 73:20). The righteous sleep (q.v.) little and pray at night, says the Qurʾān (Q 51:15f.). In Medina (q.v.), when Muḥammad and those who followed him in night-vigils were not in a position to pray at night because circumstances had changed, he was granted dispensation from it: "Your lord knows that you stand (in prayer) nearly two-thirds of the night… and a party of those with you.… He knows that you will not count it precisely, so he has relented towards you. So recite of the Qurʾān what may be convenient; he knows that some of you will be sick and others are traversing the land seeking the bounty of God and others striving in the way of God (see PATH OR WAY; JIHĀD; FIGHTING; GRACE; BLESSING; JOURNEY; ILLNESS AND HEALTH). So recite of it what is convenient" (Q 73:20).

One night is especially mentioned in the Qurʾān, the Night of Power (or, better, "measuring-out"; *laylat al-qadr;* see Wagtendonk, *Fasting,* 83f.; Wensinck, *Arabic new year,* 1-13; see NIGHT OF POWER), an ancient Arabian new-year's night (Q 97:1-5). It is not known in which way this night was celebrated in Muḥammad's time but later generations held vigils in it as the night of the beginning of the revelation of the Qurʾān to the Prophet (see REVELATION AND INSPIRATION; PRE-ISLAMIC ARABIA AND THE QURʾĀN). Although vigils are not a communal obligation, and there is no set time for the pious practice of a protracted stay in a mosque (*iʿtikāf,* i.e. retreating to a mosque for a specified period of time, including nights, and not leaving except for the performance of natural functions and ablutions; cf. Bousquet, Iʿtikāf), such extended retreat vigils are particularly popular in the last ten days of Ramaḍān (q.v.).

Violence

Aggression; use of physical coercion against others. How does the concept of violence emerge from the qurʾānic corpus? To answer this question simply identifying the qurʾānic vocabulary concerning violence is not enough. One needs to identify, if possible, the social, political and religious status of violence, without, of course, permitting oneself to make the usual extrapolations from synchronic analysis to diachronic extrapolation or, conversely, devising an Islamic doctrine of violence (see ETHICS AND THE QURʾĀN; POLITICS AND THE QURʾĀN; VIRTUES AND VICES, COMMANDING AND FORBIDDING).

Let us begin with some negative observations. The usual term employed in present-day Arabic for violence is *ʿunf.* It is not found in the Qurʾān. In the biblical corpus, violence is designated by the Hebrew word *hamas,* which, as an acronym, has strong political overtones in contemporary Arabic. *Ḥams* in early and present-day Arabic covers the semantic fields of force, constancy, bravery and courage (q.v.) in combat: anger (q.v.) and rage are also covered by the term. This implies momentary violence in interpersonal relations but, above all, war-like violence, which is always accorded added value by each group participating in the combat (see WAR; FIGHTING; EXPEDITIONS AND BATTLES). The root word is similarly absent from the qurʾānic corpus. To the extent that we can make use of a corpus of authentic texts, particularly poetic ones (see POETRY AND POETS), that are contemporary with the Qurʾān, it would be useful to ascertain the use made of the roots *ʿ-n-f* and *ḥ-m-s*. It would be seen, in fact, that the Qurʾān is never interested in violence in itself, whereas today, a focus on violence has become a major anthropological theme (see SOCIAL SCIENCES AND THE QURʾĀN; CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN).

Among the qurʾānic roots from which are derived terms implying violence, one finds *j-h-d, q-t-l, ḥ-r-b, q-ṣ-ṣ, q-s-r, ʿ-d-w, f-s-d, ʿ-q-b, ḍ-r-b, b-gh-y, z-l-m*. The two dominant notions are *z-l-m,* oppression (q.v.), injustice (see also JUSTICE AND INJUSTICE; OPPRESSED ON EARTH, THE), and *q-t-l,* fighting the enemy, killing (see ENEMIES; MURDER; BLOODSHED). *Ẓ-l-m* and its derivatives are used 319 times (with ninety-one times for *ẓālimīn* and forty times for *ẓalamū*). *Q-t-l* is found 173 times; *ʿ-d-w,* to attack (without provocation), to transgress the limits (see BOUNDARIES AND PRECEPTS; MODERATION), is found 106 times, with fifty-six recordings for *ʿaduww,* enemy; *f-s-d,* meaning corruption (q.v.), disorder, is found fifty times; *ʿ-q-b,* to punish, chastise, twenty-seven times (see CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT); *b-gh-y,* to cause wrong, to go against correct norms, thirty times. But *ḥ-r-b,* to wage war, is found only six times, *jihād* (q.v.) four times, *mujāhidūn* four times, *jāhada* twenty times, and *qiṣāṣ,* meaning retaliation (q.v.), six times.

The disproportion between the number of times *z-l-m* appears (319) and the number of times *ʿ-d-l* (only thirteen) is observed, throws light on the strategy of qurʾānic discourse (see LANGUAGE AND STYLE OF THE QURʾĀN); it is concerned with stigmatizing, rejecting and condemning unjust conduct, by referring to it insistently (see RHETORIC AND THE QURʾĀN). Likewise, the numerous appearances of *q-t-l* aim to fix strict conditions for recourse to deadly combat, to define the merits of those who struggle to protect the true faith (q.v.; *dīn al-ḥaqq;* see also RELIGION; TRUTH; RELIGIOUS PLURALISM AND THE QURʾĀN), and to disqualify the attitude of those who retreat or refuse to give their lives to protect truth, justice and the common welfare, such as they are redefined when confronting different agents who "cannot clearly distinguish" *(yaʿqilūn)* between just and unjust combat (see HYPOCRITES AND HYPOCRISY). The designations of the forms and shapes of "violence" are never named as such but always aiming at an attitude, or at intolerable conduct that rejects values, knowledge (see KNOWLEDGE AND LEARNING), and the "limits" *(ḥudūd)* fixed by God and his envoy (see MESSENGER; PROPHETS AND PROPHETHOOD; LAW AND THE QURʾĀN). The processes of composition and the arguments of qurʾānic discourse strive to instill the idea of a legitimate "violence," humanized in the sense of "making sacred the human individual" *(taḥrīm al-nafs),* and to protect him from arbitrary domination, or pointless killing in the pursuit of mere power (see POWER AND IMPOTENCE), booty (q.v.), and conquest of territory, etc. (see also KINGS AND RULERS; CONQUEST). On this essential point, the Qurʾān continues, in its own style and in a different context, the work of the Bible and the Gospels (q.v.; see also TORAH; SCRIPTURE AND THE QURʾĀN), which convert archaic usages of "violence" in tribal societies into a "violence" contained in a new symbolism (see TRIBES AND CLANS; ARABS; PRE-ISLAMIC ARABIA AND THE QURʾĀN). While this symbolism seeks to be spiritual, its inner dynamic is to consider sacred (see SACRED AND PROFANE), without realizing it, the rituals of violence it was in search of "transcending." For specific examples of qurʾānic allusions to violent acts, see — in addition to the articles cross-referenced above — MARTYRS; CONSECRATION OF ANIMALS; AGE OF IGNORANCE; ARBITRATION; BYZANTINES; CRUCIFIXION; DROWNING; FLOGGING; ḤUNAYN; INFANTICIDE; JEWS AND JUDAISM; NIMROD; OPPOSITION TO MUḤAMMAD; PHARAOH; POVERTY AND THE POOR; PRISONERS; PROVOCATION; PUNISHMENT STORIES; REBELLION; SACRIFICE; SIN, MAJOR AND MINOR; SLAUGHTER; SLAVES AND SLAVERY; STONING; SUFFERING; SUICIDE; TOLERANCE AND COMPULSION; VENGEANCE; WOMEN AND THE QURʾĀN.

see HOURIS; CHASTITY

Virtue

Moral excellence. Qurʾānic terminology has no exact equivalent to "virtue" or to the Greek word *areté* but it deals with how moral excellence is taught, the noble ideals of the righteous person and the virtues of a God-fearing society (for virtue in the sense of sexual propriety, see MODESTY; CHASTITY). Ethical reflection as such, including the question of what constitutes a

virtuous act, was taken up by Muslim thinkers over time in a variety of genres (see ETHICS AND THE QUR'ĀN). Yet the Qur'ān's message is steeped in moral categories: "God poured out his favor on the believers by sending to them a messenger (q.v.) from their midst to recite to them his signs (q.v.), to purify them, and to teach them the book (q.v.) and wisdom (q.v.), though they had previously been in manifest error" (q.v.; Q 3:164). This message was proclaimed by Muḥammad in an Arabic dialect easily intelligible to his hearers (Q 26:195; see DIALECTS; LANGUAGE AND STYLE OF THE QUR'ĀN). At the same time, it provoked hostility and opposition from the leaders of pagan Mecca (q.v.; see also OPPOSITION TO MUḤAMMAD). As contemporary theories of semantics and hermeneutics necessarily raise issues of sociology and anthropology (see CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN), one would have to look at the social, cultural and political implications of this hostility to fully grasp the Qur'ān's ethical vision.

The Qur'ān exhorts its hearers to cultivate virtues that were also prized by Arab Bedouin (q.v.) culture — but always with a twist (Hourani, Ethical presuppositions, 24; Izutsu, *Concepts,* 74-104): generosity (see GIFT AND GIFT-GIVING) and charity (see ALMSGIVING), not for show but out of submission to God (Q 2:264) and without recklessness (Q 17:26, 27); courage (q.v.) in battle, not for personal or tribal glory, but for God (Q 9:5, 13, 44-5, etc.; see EXPEDITIONS AND BATTLES); loyalty (q.v.; *wafā',* also as keeping covenant [q.v.], expressed in the Qur'ān through the verb *awfā*) directed to God and, beyond the tribe (see TRIBES AND CLANS), to one's fellow Muslims (Q 2:40; 48:10); truthfulness (these related words appear ninety-seven times: *ṣadaqa, ṣidq, ṣādiq, ṣiddīq*) as a virtue the believer acquires because God himself is truthful (e.g. Q 3:152; 9:119; 29:3; 33:24) and abhors lying (over 200 instances of the root *k-dh-b;* see LIE); patience (*ṣabr,* steadfastness and endurance) in battle (Q 2:249-50; 3:146) and in the face of opposition to God's cause (Q 2:153-6; 6:34; 7:128; 73:10; see TRUST AND PATIENCE; TRIAL; PATH OR WAY).

At the same time, the Qur'ān is no stranger to the Greek virtue of moderation (q.v.): "Those who, when they spend, are not extravagant and not niggardly, but hold a just [balance] between those [extremes]" (Q 25:67). Ibn Kathīr (d. 774/1373) explains, "they are not wasteful by spending over that which they need, and they are not stingy with regard to their family by withholding what is theirs by right and thus making them needy, but act justly and kindly, and the best of options is the middle ground" (*wa-khayru l-umūr awsaṭuhā;* Ibn Kathīr, *Tafsīr,* x, 322). The prophet Muḥammad and his Companions (see COMPANIONS OF THE PROPHET) displayed this virtue, affirms al-Suyūṭī (d. 911/1505), quoting from a ḥadīth: "Those are the Companions of God's apostle, who would not eat food out of a desire for pleasure from it, and would not wear clothes out of a desire for beauty from them, but they were of one heart" (Suyūṭī, *al-Durr,* vi, 77). Besides presenting us with a fuller version of the above ḥadīth (see ḤADĪTH AND THE QUR'ĀN), al-Shawkānī (d. 1255/1839) quotes the third/ninth century Baṣran grammarian Abū ʿUbayda (see GRAMMAR AND THE QUR'ĀN) who wrote that this median between excessive largesse and miserliness means to stay "within the bounds of what is right" *(al-maʿrūf),* and cites a parallel passage, Q 17:29 (*Tafsīr,* iv, 109). Fazlur Rahman (*Major themes,* 29) expresses a consensus among modern commentators when he avers that this virtue of the middle path is at the heart of the qur'ānic message and it is best portrayed in the qur'ānic term, *taqwā:* "to be squarely anchored

within the moral tensions, the 'limits of God,' and not to 'transgress' or violate the balance of those tensions" (see PIETY; FEAR; BOUNDARIES AND PRECEPTS).

One might ask: what would this virtue of self-restraint in obedience (q.v.) to God have meant to Muḥammad's contemporaries? The chief characteristic of the *jāhilī* mindset (see AGE OF IGNORANCE) is described in the Qurʾān (Q 48:26) as *ḥamiyya,* "passion, violence (q.v.), arrogance (q.v.)." By contrast, "God brought down serenity (*sakīna;* see SHEKHINAH) upon his messenger and imposed on believers the word of self-restraint" (*kalimata l-taqwā,* Q 48:26). Commentators are unanimous about the circumstances under which this passage (indeed, the whole Q 48, Sūrat al-Fatḥ ["Victory"]) was revealed (see OCCASIONS OF REVELATION; REVELATION AND INSPIRATION): Muḥammad's Ḥudaybiya (q.v.) treaty of 628 C.E. (see CONTRACTS AND ALLIANCES). On the impulse of a dream (see DREAMS AND SLEEP), Muḥammad set off from Medina (q.v.) with a group of about 1,500 men to perform a pilgrimage (q.v.) to Mecca *(ʿumra)*. At Ḥudaybiya, on the outskirts of Mecca, a Meccan armed delegation refused to let them pass. Negotiations began but seemed to falter. At this tense moment, the Qurʾān informs us that the Muslims made a pledge of loyalty to Muḥammad, "the pledge under the tree" (Q 48:18), which pleased God who sent down his peace or tranquility upon them (again, *sakīna,* the second of three instances in this sūra, the first is in verse 4). Finally, an agreement was reached, in which the Muslims would be obliged to sacrifice (q.v.) their animals, at Ḥudaybiya this time (see also CONSECRATION OF ANIMALS), but would be allowed to perform their pilgrimage to Mecca the following year. In the context of this passage, therefore, the tranquility God sent was in large measure an affirmation of Muḥammad's controversial decision and a calming of those among the Muslims who would rather have fought the Meccans then and there — after all, was not their behavior going against the accepted Arabian customs of the time?

What then is this *ḥamiyya* that took hold of the unbelievers' hearts (see HEART; BELIEF AND UNBELIEF) at this time? Al-Ṭabarī (d. 310/923) says, without specification, that it was what made them act in this way, and that "all of this sprung from the nature (or ethics, *akhlāq*) of the people of unbelief, and none of it was permitted for them — neither by God, nor by any of his messengers" (Ṭabarī, *Tafsīr,* xxvi, 104). Al-Zamakhsharī (d. 538/1144) defined *ḥamiyya* as *anafa,* "pride, or disdain," and *sakīna* as *waqār,* "sobriety, dignity, a composed demeanor." Following al-Ṭabarī, and in concert with most other commentators, he sees the Meccans' *ḥamiyya* as their refusal to allow Muslim wording in the compact (the *basmala* [q.v.] and the *shahāda* [see WITNESS TO FAITH]) and this, mainly because of the phrase *kalimat al-taqwā* which is invariably seen as the *shahāda* or, in some cases, Sūrat al-Ikhlāṣ ("Purity," Q 112; e.g. Ibn Kathīr, *Tafsīr,* xiii, 112-13; Qurṭubī, *Jāmiʿ,* xvi, 275-6). Even if we grant the historicity of the theological squabbles over the wording of the treaty (see THEOLOGY AND THE QURʾĀN), it is likely that later commentators tended to over-spiritualize the term *ḥamiyya*. More in line with al-Zamakhsharī, al-Shawkānī (*Tafsīr,* iv, 67) quotes the early commentator Muqātil b. Sulaymān (d. 150/767) in saying that the *ḥamiyya* of the Age of Ignorance *(jāhiliyya)* was in the Meccans' reasoning: "They have killed our sons and brothers and now they will attack us in our homes and the Arabs will say that they have entered [our city] to humiliate us." The main issue was whether Muḥammad would respond in kind and enter by force or whether he would express God's

sakīna by offering the kind of peaceful terms that would allow a greater victory for Islam in the years to come (Quṭb, *Ẓilāl,* vi, 3325-9).

Ironically, the *jāhilī* Arabs (q.v.) themselves contrasted "unbridled passion for honor" *(jahl)* with forbearance, shrewdness, and self-control (*ḥilm;* Goldziher, *MS,* i, 201-8) but it was always the prerogative of the powerful (Izutsu, *God,* 203-15; see POWER AND IMPOTENCE; IGNORANCE). The Qurʾān espouses this same ideal but teaches that *ḥilm* can only blossom in a soul (q.v.) that gratefully receives God's bounty and mercy (q.v.; the root meaning of *kāfir* is "ungrateful"; see GRATITUDE AND INGRATITUDE; BELIEF AND UNBELIEF; BLESSING). Muḥammad cares for the orphan and the poor because he himself had been an orphan, wandering and poor (Q 93; see ORPHANS; POVERTY AND THE POOR). This ethic of showing mercy to the most vulnerable and needy is to be the hallmark of the emerging Muslim community (Q 28:77; 59:7; 80:1-10; 107; see OPPRESSED ON EARTH, THE).

The greatest break with *jāhilī* culture is seen in the Qurʾān's assertion that virtue is not determined by this-worldly considerations but rather in light of the awesome reality of divine judgment (q.v.) in the life to come (see LAST JUDGMENT). The primary meaning of the key qurʾānic term *taqwā* (especially in the early Meccan sūras) is "trembling in fear of God" or "trembling with piety before God" (e.g. Q 12:1). In contrast to the fierce arrogance of the *jāhilī* Arab, the Qurʾān calls for submission and surrender to God (*islām,* e.g. Q 3:19, 52, 64, 67). Thus only the pious *(taqī)* who has surrendered his will to God can be truly righteous (*ṣāliḥ* appears thirty-three times; *bārr,* a close synonym, nine times) and produce the good deeds (q.v.; *ṣaliḥāt,* ninety-eight times) that God will reward. The centrality of the root *taqwā/ittaqā* (almost 200 instances) and its connection to the qurʾānic ethical ideal is best illustrated by the verse "Surely the noblest among you in God's sight is the most pious of you" (*atqākum,* Q 49:13). See also VIRTUES AND VICES, COMMANDING AND FORBIDDING.

Virtues and Vices, Commanding and Forbidding

Forms of the phrase *al-amr bi-l-maʿrūf wa-l-nahy ʿani l-munkar,* literally "commanding right and forbidding wrong" (hereafter usually abbreviated as "forbidding wrong") appear eight times in the Qurʾān. Just what is intended in the relevant qurʾānic passages is somewhat unclear, and the exegetes interpret them in more than one way. By far the most widespread interpretation relates them to the duty of the individual Muslim to forbid wrong as developed in classical Islamic thought (see GOOD AND EVIL; SIN, MAJOR AND MINOR; BOUNDARIES AND PRECEPTS; ETHICS AND THE QURʾĀN).

The qurʾānic attestations

In the context of an appeal for the unity of the community of believers, Q 3:104 enjoins "Let there be one community *(umma)* of you, calling to good, and commanding right and forbidding wrong." This strongly

suggests that forbidding wrong is a duty to be performed by the community as a whole; but we are not told to whom the commanding and forbidding are to be addressed and there is no further specification of the right and wrong to which they are to relate. The same is true of some further references to forbidding wrong. One that follows a few verses later in Q 3:110 speaks of forbidding wrong in similar terms (though with no explicit indication that it is a duty): "You are *(kuntum)* the best community *(khayra ummatin)* ever brought forth to people, commanding right and forbidding wrong." Q 9:71 states that "the believers, the men and the women (see BELIEF AND UNBELIEF), are friends one of the other; they command right, and forbid wrong." (This contrasts with Q 9:67, in which the terms are transposed: "The hypocrites [see HYPOCRITES AND HYPOCRISY], the men and the women, are as one another; they command wrong, and forbid right.") Q 22:41 refers to "those who, if we establish them in the land . . ., command right and forbid wrong." This latter verse may, however, relate to believers engaged in holy war (q.v.; see also FIGHTING; JIHĀD; EXPEDITIONS AND BATTLES; PATH OR WAY) rather than to the believers at large, if the reference is to "those who fight because they were wronged" in Q 22:39. The same may be true of Q 9:112, which speaks of "those who repent (see REPENTANCE AND PENANCE; FEAR; FORGIVENESS), those who serve (see WORSHIP), those who pray (*ḥāmidūn;* see PRAYER; LAUDATION), . . . those who command right and forbid wrong, those who keep God's bounds," if the people in question are in fact identical with those who wage holy war in the preceding verse; but the relationship between the two verses poses a serious syntactical problem in the standard text of the Qurʾān (see GRAMMAR AND THE QURʾĀN; TEXTUAL HISTORY OF THE QURʾĀN). Even if in Q 9:112 and Q 22:41 it is only a subset of the believers who forbid wrong, it is nevertheless the most significant part of the community. Q 3:114 belongs with the verses discussed so far inasmuch as it speaks of a community forbidding wrong; however, the "upstanding community" (*ummatun qāʾimatun,* Q 3:113) in question is part of the People of the Book (q.v.; *ahl al-kitāb*).

In contrast to these passages, two verses refer to forbidding wrong as something done by individuals. One is Q 7:157, which refers to "those who follow the gentile prophet (*al-rasūl al-nabī l-ummī;* see UMMĪ; ILLITERACY; PROPHETS AND PROPHETHOOD; MESSENGER) whom they find inscribed in their Torah (q.v.) and Gospel (q.v.; see also SCRIPTURE AND THE QURʾĀN)"; it is stated that, among other things, he "commands them right and forbids them wrong." This verse is also the only one in which it is specified to whom the commanding and forbidding are addressed, and the reference is clearly to Jewish or Christian followers of the gentile prophet (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). The other verse in which forbidding wrong appears as something done by an individual is Q 31:17, in which the pre-Islamic sage Luqmān (q.v.) tells his son to "perform the prayer, and command right and forbid wrong, and bear patiently whatever may befall you (see TRUST AND PATIENCE)."

To sum up the data presented so far, we can say the following: forbidding wrong is usually referred to as something done by the community as a whole or a significant part of it but occasionally as something done by individuals. Only one verse tells us to whom the commanding and forbidding is addressed, in that instance the Jewish or Christian followers of the gentile prophet. No verses give further indications regarding the content of the commanding and forbidding.

It may be noted that the two components of the phrase — "commanding right" and "forbidding wrong" — scarcely appear separately in the Qurʾān, although there are a couple of references to "forbidding indecency and wrong" (Q 16:90; 29:45, and cf. Q 24:21; the possible relevance of Q 5:79 will be discussed below). The term "right" (*maʿrūf,* literally "known," hence "recognized, approved of") appears frequently in the Qurʾān (Q 2:178, 180, 228, 229, etc.), normally as a substantive but occasionally as an adjective (for the latter, see for example Q 2:235; 24:53). It usually, though not always, appears in legal contexts but does not seem to be a technical term; it appears to refer rather to performing a legal or other action in a decent and honorable fashion, and a few verses suggest that it may be synonymous with "kindliness" (*iḥsān,* see Q 2:178, 229, and cf. Q 2:236; see GOOD DEEDS). The word "wrong" (*munkar,* literally "unknown," hence "not recognized, disapproved of") is much less common (Q 22:72; 29:29; 58:2), and its appearances do not help to limit the scope of the term. The words "command" *(amara)* and "forbid" *(nahā)* are, of course, of common occurrence in the Qurʾān (see FORBIDDEN).

As an indication of the scope of forbidding wrong, it is perhaps worth noting the kinds of themes that appear in conjunction with it in the relevant verses: performing prayer (Q 9:71, 112; 22:41; 31:17); paying alms (Q 9:71; 22:41; see ALMSGIVING); believing in God (Q 3:110, 114), obeying him and his Prophet (*rasūlahu,* Q 9:71; see OBEDIENCE), keeping his bounds (Q 9:112), reciting his signs (q.v.; *āyāt,* Q 3:113; see also VERSES); calling to good (Q 3:104), vying with each other in good works (Q 3:114), and enduring what befalls one (Q 31:17). There is nothing here to narrow the concept of the duty.

Two further passages require discussion, though it is not clear that either refers to forbidding wrong. One is Q 5:78-9. After stating that those of the Children of Israel (q.v.) who disbelieved were cursed by David (q.v.) and Jesus (q.v.) for their sins, the passage continues: *kānū lā yatanāhawna ʿan munkarin faʿalūhu*. This is the only qurʾānic occurrence of the verb *tanāhā*. Etymologically it would be possible to interpret this form in a reciprocal sense derived from *nahā,* "to forbid"; the meaning would then be that the Children of Israel "forbade not one another any wrong that they committed." This would suggest that forbidding wrong is something individual believers do to each other. Yet there seems to be no independent attestation of such a sense of the verb, and in normal Arabic usage *tanāhā* is a synonym of *intahā;* this verb, common in the Qurʾān and elsewhere, means "refrain" or "desist" (as in Q 2:275 and Q 8:38). Thus the sense would be that "they did not desist from any wrong that they committed," and the passage would then have no connection with forbidding wrong. There is in fact a variant reading (see READINGS OF THE QURʾĀN), with *yantahūna* in place of *yatanāhawna,* that would provide further support for this (in a text written with *scriptio defectiva,* the two forms would be distinguishable only by the pointing of the second and third consonants; see ORTHOGRAPHY; ARABIC SCRIPT).

The other passage is Q 7:163-6. These verses tell a story about God's punishment of the people of a town by the sea who fished on the Sabbath (q.v.; see also PUNISHMENT STORIES). The context implies that a part of this community had reproved the Sabbath-breakers; another part *(ummatun)* then asked the reprovers why they took the trouble to admonish people whom God would punish in any case (see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). God then saved those who forbade evil (*alladhīna yanhawna ʿani*

l-sūʾ, Q 7:165), and punished those who had acted wrongly. Here we have a clear conception of forbidding evil as something done by members of a community toward each other, and we learn in concrete terms what the evil in question was. The passage, however, speaks of forbidding "evil" *(sūʾ)*, not "wrong" *(munkar)*.

What is the origin of the qurʾānic phrase "commanding right and forbidding wrong"? To judge from *jāhilī* poetry (see AGE OF IGNORANCE; PRE-ISLAMIC ARABIA AND THE QURʾĀN; POETRY AND POETS), the terms here rendered "right" and "wrong" were well-known in pre-Islamic Arabic, and might be paired; but there is no worthwhile evidence that people spoke of "commanding" and "forbidding" them. The phrase finds a parallel in Hellenistic Greek, which might be its source; but the similarity could be accidental, inasmuch as a similar phrase can be found in classical Chinese (for the question of origins, see Cook, *Commanding right,* chap. 19).

The pre-modern exegetical tradition

It will be evident from the survey given above that the relevant qurʾānic passages left wide latitude to the exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Often they take some verse, usually Q 3:104, as an occasion to set out a classical doctrine of forbidding wrong reflecting the traditions of their sect or school (see LAW AND THE QURʾĀN). Such discussions are likely to have much in common with accounts of the duty in other genres and to have little bearing on the exegetical problems raised by the verse in question. In this article we will be concerned only with the treatment by the exegetes of properly exegetical questions.

With regard to the question as to who is obligated by the duty, a major focus of exegetical attention is an ambiguity of Q 3:104 (see AMBIGUOUS). The verse states that there should be a "community of you *(minkum ummatun)*" forbidding wrong. The issue is the sense of "of" *(min)*. Does it mean "consisting of," or does it mean "from among"? In the technical language of the exegetes, the first would be an instance of "specification" *(tabyīn)* and would imply that all members of the community had the duty of forbidding wrong; the second would be an instance of "partition" *(tabʿīḍ)* and would imply that only some members were obligated (for this terminology, see, for example, Zamakhsharī, *Kashshāf,* ad loc.; Rāzī, *Tafsīr,* ad loc.). The prevalent view among the exegetes was the second (see, for example, Zamakhsharī, *Kashshāf,* ad loc.; Qurṭubī, *Jāmiʿ,* ad loc.; Abū Ḥayyān, *Baḥr,* ad loc.; Ibn Kathīr, *Tafsīr,* ad loc.). The minority view, however, was held by a scholar as distinguished as the philologist al-Zajjāj (d. 311/923) who held that "Let there be one community of you" meant "Let all of you be a community" (*Maʿānī,* ad loc.; see also Māturīdī, *Taʾwīlāt,* ad loc.). The position of al-Ṭabarī (d. 310/923) is unclear (*Tafsīr,* ad loc.) and Fakhr al-Dīn al-Rāzī (d. 606/1210) sits on the fence (*Tafsīr,* ad loc.). Exegetes often link the issue to the highly technical question whether forbidding wrong is a "collective duty" *(farḍ ʿalā l-kifāya)* or an "individual duty" (*farḍ ʿalā l-aʿyān;* see, for example, Zamakhsharī, *Kashshāf,* ad. loc; Rāzī, *Tafsīr,* ad loc.; Qurṭubī, *Jāmiʿ,* ad loc.; Bayḍāwī, *Anwār,* ad loc.). (To say that a duty is collective means that when one person undertakes it, others are thereby dispensed from it, whereas in the case of an individual duty there is no such dispensation.) The exegetes may also adduce as people unable to perform the duty women, invalids and the ignorant (see, for example, Abū l-Layth al-Samarqandī, *Tafsīr,* ad loc.; Zamakhsharī, *Kashshāf,* ad loc.; Rāzī, *Tafsīr,* ad loc.; Bayḍāwī, *Anwār,* ad loc.; Nīsābūrī, *Tafsīr,* ad loc.; Abū Ḥayyān, *Baḥr,* ad loc.;

see WOMEN AND THE QUR'ĀN; GENDER; ILLNESS AND HEALTH; IGNORANCE). Here the occasional exclusion of women seems odd in the light of the reference to "the believers, the men and the women" in Q 9:71.

The exegetes have little to say about the question to whom the commanding and forbidding is addressed. Occasionally they supply "people" *(al-nās)* as the object of the verb "command" in Q 3:104 (Ṭabarī, *Tafsīr,* ad loc.) or Q 3:110 (Muqātil, *Tafsīr,* ad loc., echoing the use of the word earlier in the verse).

The most interesting divergence concerns the scope of the duty. One line of interpretation limits the duty to enjoining belief in God and his Prophet. This early trend is particularly well established in the *wujūh* genre, that is to say in a tradition of works devoted to setting out the senses of qur'ānic terms that have more than one meaning (see POLYSEMY). According to the earliest of these works, that of Muqātil b. Sulaymān (d. 150/767-8), "commanding right" in Q 3:110, 9:112, and 31:17 means enjoining belief in the unity of God *(tawḥīd),* while "forbidding wrong" in these verses means forbidding polytheism (*shirk;* see POLYTHEISM AND ATHEISM); at the same time, in Q 3:114 and Q 9:71, "commanding right" refers to following *(ittibāʿ)* and affirming belief *(taṣdīq)* in the Prophet, and "wrong" refers to denying *(takdhīb)* him (*Ashbāh,* 113-14 no. 13; for the most part these interpretations also appear in the commentary to the relevant verses in his *Tafsīr;* see LIE). This analysis recurs in later works of the same genre (Yaḥyā b. Sallām, *Taṣārīf,* 203 no. 42; Dāmaghānī, *Wujūh,* 113; Ibn al-Jawzī, *Nuzha,* 544 no. 270, 574 no. 286). Interpretations of this type are also ascribed to yet earlier authorities. Thus there is a view attributed to Abū l-ʿĀliya (d. 90/708-9) according to which, in all qur'ānic references to "commanding right" and "forbidding wrong," the former refers to calling people from polytheism to Islam, and the latter to forbidding the worship of idols and devils (Ṭabarī, *Tafsīr,* ad Q 9:71 and Q 9:112; and see Mujāhid, *Tafsīr,* ad Q 31:17; Abū Ḥayyān, *Baḥr,* ad Q 3:110 and Q 9:71; Suyūṭī, *Durr,* ad Q 3:104 and Q 9:67; see IDOLS AND IMAGES; IDOLATRY AND IDOLATERS; JINN; DEVIL). Similar views are ascribed to Saʿīd b. Jubayr (d. 95/714; Māwardī, *Nukat,* ad Q 9:112; Suyūṭī, *Durr,* ad Q 31:17) and Ḥasan al-Baṣrī (d. 110/728; Ṭabarī, *Tafsīr,* ad Q 9:112). Such interpretations are likewise an element in the mainstream exegetical tradition, but we do not find them adopted consistently there (see, for example, Zajjāj, *Maʿānī,* ad Q 9:67, 112; Māturīdī, *Taʾwīlāt,* ad Q 3:114).

The more usual interpretation does not limit the scope of forbidding wrong in this way. Thus al-Ṭabarī in his commentary on Q 9:112 explicitly rejects such limitation, declaring that "commanding right" refers to all that God and his Prophet have commanded, and "forbidding wrong" to all that they have forbidden (*Tafsīr,* ad loc.). Likewise Fakhr al-Dīn al-Rāzī in commenting on Q 3:114 emphasizes that the terms "right" and "wrong" are to be understood without restriction — they refer to all "right" and all "wrong" (*Tafsīr,* ad loc.; see also Abū Ḥayyān, *Baḥr,* ad Q 3:104). This approach justifies the common understanding of the duty as extending to such everyday sins as drinking liquor (see WINE; INTOXICANTS) and making music.

There is a significant tendency among the exegetes to construe as references to forbidding wrong verses which make no explicit reference to it. A striking example of this is found in the commentary of al-Qurṭubī (d. 671/1273), who takes the reference to "those who command justice *(qisṭ)*" in Q 3:21 as an invitation to embark on his major discussion of forbidding wrong (*Jāmiʿ,* ad loc.); most commentators would

have waited till Q 3:104. Another such case is Q 5:79, where the exegetes favor the interpretation of *yatanāhawna* as "forbid one another" rather than "desist." For example, Fakhr al-Dīn al-Rāzī notes both interpretations but describes the first as that of the mainstream (*Tafsīr,* ad loc.) and many exegetes simply omit to mention the second (see, for example, Wāḥidī, *Wasīṭ;* Baghawī, *Maʿālim;* Ibn al-Jawzī, *Zād;* Qurṭubī, *Jāmiʿ;* Ibn Kathīr, *Tafsīr; Jalālayn,* ad loc.). Likewise the exegetes regularly take the story of the Sabbath-breakers (Q 7:163-6) to be about forbidding wrong, despite the fact that the passage speaks rather of forbidding "evil" (*sūʾ;* see, for example, Zajjāj, *Maʿānī;* Ṭabarī, *Tafsīr;* Wāḥidī, *Wasīṭ;* Zamakhsharī, *Kashshāf;* Ibn Kathīr, *Tafsīr,* ad loc.). Their main concern in interpreting the passage is with the group who saw no point in admonishing people whom God would punish anyway: were they saved with those who spoke out, or damned with those who had violated the Sabbath? (see Zajjāj, *Maʿānī,* ad loc.). The Qurʾān provided no clear guidance on the question, inviting division among the exegetes. There are, for example, traditions ascribing three different views to ʿAbdallāh b. al-ʿAbbās (d. 68/687-8): that those who kept silent were saved, that they were damned and that he did not know (Ṭabarī, *Tafsīr,* ad loc.). This issue was related to a question regularly discussed in formal accounts of forbidding wrong: does the duty lapse where it is known that performing it would not achieve anything?

In commenting on Q 31:17, the exegetes often stress that one should be willing to endure the unpleasant consequences of forbidding wrong. This reflects the fact that, immediately after telling his son to command right and forbid wrong, Luqmān goes on to say that he should "bear patiently" whatever befalls him *(wa-ṣbir ʿalā mā aṣābaka)*. This is related to another doctrinal issue: is one dispensed from performing the duty in cases where this would put one in harm's way? Most exegetes took the patience enjoined by Luqmān to refer to the consequences of forbidding wrong (see, for example, Muqātil, *Tafsīr;* Ṭabarī, *Tafsīr;* Abū l-Layth al-Samarqandī, *Tafsīr;* Wāḥidī, *Wasīṭ;* Rāzī, *Tafsīr;* Ibn Kathīr, *Tafsīr,* ad loc.). The alternative interpretation, that the verse refers to the trials and tribulations of life in general, is mentioned by some exegetes but does not find much favor with them (Māwardī, *Nukat;* Zamakhsharī, *Kashshāf;* Qurṭubī, *Jāmiʿ;* Bayḍāwī, *Anwār;* Abū Ḥayyān, *Baḥr,* ad loc.). In this context it is worth noting a variant reading for Q 3:104 which adds after "forbidding wrong" the words "and they seek God's help against whatever may befall them" (*wa-yastaʿīnūna llāha/bi-llāhi ʿalā mā aṣābahum;* Jeffery, *Materials,* 34); some exegetes draw the same moral from this textual variant, even while rejecting it (Ibn ʿAṭiyya, *Muḥarrar,* ad loc.; Abū Ḥayyān, *Baḥr,* ad loc.). Some verses, though making no mention of forbidding wrong, may be interpreted to refer to incurring death in the course of it. One example is Q 2:207, which falls in a passage contrasting sincere and insincere adherents of the Prophet; here the sincere follower is described as one "who sells himself desiring God's good pleasure." Among the traditions quoted regarding the circumstances in which this verse was revealed, there is one from ʿUmar b. al-Khaṭṭāb (d. 23/644) according to which it referred to a man who forbad wrong and was killed (Ṭabarī, *Tafsīr,* ad loc.; Wāḥidī, *Asbāb,* ad loc.; Ibn al-ʿArabī, *Aḥkām,* ad loc.; see MURDER; BLOODSHED). Al-Ṭabarī takes the wider view that the verse includes both forbidding wrong and holy war (Ṭabarī, *Tafsīr,* ad loc.).

A verse that posed a problem for the exegetes, though it made no mention of for-

bidding wrong, was Q 5:105: "O believers, look after your own souls *(ʿalaykum anfusakum)*. He who is astray (q.v.) cannot hurt you, if you are rightly guided." The plain sense of this verse clearly undermines the idea that the believer has a duty to forbid wrong. The exegetes therefore sought to inactivate the verse, either by referring it to some future time when the duty of forbidding wrong would indeed lapse, or by insisting that those who fail to forbid wrong cannot be considered "rightly guided." In an extensive commentary on the verse, al-Ṭabarī adduces earlier authorities in support of both views, and states his preference for the second (*Tafsīr,* ad loc.). Some went so far as to entertain the idea of abrogation (q.v.) within the verse (see, for example, Abū ʿUbayd, *Nāsikh,* 98).

All that has been said so far about exegesis relates to the Sunnī tradition. The exegetical literature of the major sectarian traditions is for the most part similar in character: it draws on the same pool of material, and presents its results in the same kind of way. This is true of such Ibāḍī and Zaydī commentaries as are easily available and also of much Imāmī commentary. Thus the relevant discussion in the exegetical works of Abū Jaʿfar al-Ṭūsī (d. 460/1067) and al-Ṭabrisī (d. 548/1153) is more strongly colored by Muʿtazilī than by Shīʿī thought (see MUʿTAZILA; SHĪʿISM AND THE QURʾĀN). There is, however, a strongly Shīʿī tradition of exegesis that is particularly well-represented in Imāmī sources and construes certain verses on forbidding wrong as references to the (Shīʿī) imāms (see IMĀM). Thus the commentary attributed to ʿAlī b. Ibrāhīm al-Qummī (alive in 307/919) interprets Q 9:111-12 to refer to them — those who command right are those who know all that is right, as only the imāms do (*Tafsīr,* ad loc.; and see ʿAyyāshī, *Tafsīr,* ad loc.). In commentary to Q 3:110 this is linked to a variant reading transmitted by the Imāmīs, in which "the best community" *(khayra ummatin)* becomes "the best *imāms*" (*khayra aʾimmatin;* Qummī, *Tafsīr,* ad loc.; ʿAyyāshī, *Tafsīr,* ad loc.). These views appear in Imāmī commentaries down the centuries, though they are almost absent from that of al-Ṭūsī (see, for example, Abū l-Futūḥ Rāzī, *Rawḍ,* ad Q 3:110; Kāshānī, *Manhaj,* ad Q 3:110; Baḥrānī, *Burhān,* ad Q 3:104; and cf. Ṭūsī, *Tibyān,* ad Q 3:110).

Modern exegesis

The exegetes of the thirteenth/nineteenth century remained overwhelmingly traditional in their approach to the relevant verses (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). Thus there is nothing even incipiently modern about the treatment of Q 3:104 in the commentaries of the Yemeni Shawkānī (d. 1250/1834) or the Iraqi Maḥmūd al-Ālūsī (d. 1270/1854; Shawkānī, *Tafsīr;* Ālūsī, *Rūḥ,* ad loc.).

It is with the *Tafsīr al-manār* of Muḥammad ʿAbduh (d. 1323/1905) and Rashīd Riḍā (d. 1354/1935) that modernity floods in (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN). Their commentary on Q 3:104 is a good example of this (Rashīd Riḍā, *Manār,* ad loc.). Thus it sets out an elaborate curriculum of study for Islamic missionaries, including political science *(ʿilm al-siyāsa),* by which is meant the study of contemporary states; this missionary enterprise requires organization, and should be in the hands of what these days is called an association *(jamʿiyya),* with a leadership *(riyāsa)* to direct it. In a similar vein, Riḍā was able to find in this verse a basis for government by a representative assembly such as is found in republics and limited monarchies.

Another area in which modern concerns are manifested in discussions of forbidding wrong is an increased interest in the

role of women (see FEMINISM AND THE QUR'ĀN). On the whole, however, this has little impact on Sunnī commentaries on Q 9:71. Nevertheless, the Palestinian Muḥammad ʿIzzat Darwaza (d. 1404/1984) understands the verse to establish the equality of the sexes, in particular with regard to forbidding wrong (*Tafsīr,* xii, 186).

Perhaps the most original approach to forbidding wrong in modern Sunnī exegesis is that of Sayyid Quṭb (d. 1386/1966) in his commentary on Q 5:79 (*Ẓilāl,* ad loc.). At first he seems to align himself with traditional views: he observes that the Muslim community is one in which no one who sees someone else acting wrongly can say "what's that to me?" and that a Muslim society is one in which a Muslim can devote himself to forbidding wrong, without his attempts being reduced to pointless gestures or made impossible altogether, as is regrettably the case in the *jāhilī* (i.e. neopagan) societies of our times. The real task is accordingly to establish the good society as such, and this task takes precedence over the righting of small-scale, personal and individual failings through forbidding wrong; such efforts can only be in vain as long as the whole society is corrupt. All the sacred texts bearing on forbidding wrong, he argues, are concerned with the duty of the Muslim in a Muslim society — that is to say, in a form of society that does not exist in our time.

Modern Imāmī discussions of forbidding wrong have tended to be more innovative than Sunnī ones. This contrast has little to do with qurʾānic exegesis but it finds echoes in Imāmī commentaries. Modern Imāmī exegetes are significantly more likely than their Sunnī counterparts to take Q 9:71 as an occasion to discuss the role of women in forbidding wrong (see, for example, Akbar Hāshimī Rafsanjānī, *Tafsīr,* ad loc.). While Sunnī exegetes rarely quote Imāmī commentaries, Imāmī exegetes have a liking for the discussion of Q 3:104 in the *Tafsīr al-manār* (see, for example, Muḥammad Riḍā Āshtiyānī and others, *Tafsīr,* ad loc.).

Modern exegetes, whether Sunnī or Shīʿī, have little that is new to say about the properly exegetical questions raised by the relevant verses.

Vision

The perception of reality through the eyes, or — for immaterial realities or future events — also the "mind's eye." Two main semantic fields converge in the notion of

"visions": one is oneiric, referring to dreams (*ruʾyā;* see DREAMS AND SLEEP) and the other is sensory, meaning the actual faculty of sight (*baṣar,* pl. *abṣār*). In both cases divine action plays a central role (see REVELATION AND INSPIRATION). When associated with dreams, visions appear as processes forced upon humans by divine stimulation. Most prominent of these are: the dream of Abraham (q.v.) that involves the sacrificing of his son (Q 37:102-5; see SACRIFICE); Joseph's (q.v.) dream that eleven stars (see PLANETS AND STARS), the sun (q.v.) and the moon (q.v.) bow before him (Q 12:4-6; see BOWING AND PROSTRATION); and Muḥammad's dream that precipitates his night journey (Q 17:60; see ASCENSION). In all these instances, the dreams are premonitions that intimate a divine plan rather than random somatic or mental activities (see FORETELLING; DIVINATION). In fact, Joseph's father tells his son that God will teach him the skill of dream interpretation (Q 12:6), recognizing at the outset the significance of such experiences within the revelatory order. Most exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), however, focus on the possible names of the planets and stars and/or their meaning, thus engaging in the intricacies of dream interpretation and acknowledging that Joseph's father was fully aware of the significance of such divine interventions (Ṭabarī, *Tafsīr;* Kāshānī, *Ṣāfī;* Ibn Kathīr, *Tafsīr*). In certain instances, exegetes point out that *ruʾya* (the visual faculty) is not to be confused with *ruʾyā* (dream), especially in the case of Joseph's experience (Kāshānī, *Ṣāfī;* Zamakhsharī, *Kashshāf*). Al-Ṭabarī (d. 310/923), however, does recognize the double entendre in Q 17:60 which evokes *r-ʾ-y* as possibly dreaming and/or seeing (see SEEING AND HEARING; VISION AND BLINDNESS), and he reports divergent opinions on this matter. Here, God announces that he has induced a dream *(jaʿalnā l-ruʾyā)* so that he could show *(araynāka)* Muḥammad a test for the people (see TRIAL; TRUST AND PATIENCE). Similarly, in Q 48:27, in reference to the signing of the peace of Ḥudaybiya (q.v.) and taking control of Khaybar (see EXPEDITIONS AND BATTLES), God confirms the fulfillment of Muḥammad's dream about entering Mecca (q.v.) with his people (Kāshānī, *Ṣāfī;* Ibn Kathīr, *Tafsīr,* ad loc.). Dreams, then, belong to the category of God's signs (q.v.) through which he communicates with humankind, although it is not clear that all dreams are to be viewed as such.

In the semantic field of the root *b-ṣ-r,* God gives human beings the capacity to see (Q 76:2), which throughout the Qurʾān is directly linked to the cognitive and psychological potential of human beings to recognize and accept God (see BELIEF AND UNBELIEF; KNOWLEDGE AND LEARNING). In that way, the sensory and other human faculties interrelate as the criteria of faith (q.v.). God thus characterizes his prophets, specifically Abraham, Isaac (q.v.) and Jacob (q.v.), as possessing vision *(abṣār)*. In Q 59:2, God addresses the believers as "people of vision!" *(yā ūlī l-abṣār)*, that is, those, according to Ibn Kathīr (d. 774/1373; *Tafsīr,* ad loc.), on whom God has bestowed clarification for his actions. But just as God creates vision, he can disable or remove it (Q 6:46, 110), seal it (Q 2:7), seize it (Q 2:20-2), or restore it (Q 12:96; 50:22; see POWER AND IMPOTENCE; VEIL). In turn, those who refuse God are accused of turning away their vision (Q 24:37; see LIE; GRATITUDE AND INGRATITUDE). The true vision is one that, even if it does not perceive God, learns to perceive his signs and results in submission. After all, unlike the divine, human vision is limited, as per Q 6:103: "No vision can comprehend him; but he comprehends all visions" *(lā tudrikuhu l-abṣār wa-huwa yudriku l-abṣār)*. Al-Suyūṭī (d. 911/1505; *Durr,* ad loc.) explains that, according to the tradition (see ḤADĪTH

AND THE QUR'ĀN; SUNNA), this means that, while in this world (q.v.) God can never be seen (see THEOPHANY; FACE OF GOD), in the afterlife one will be able to see him on the horizon the way one now sees the moon rise in the night sky (see ESCHATOLOGY). The ability to see is understood at once as a physical and ethical capacity (see ETHICS AND THE QUR'ĀN) whereby vision is opposed to blindness, figuratively as well as literally, as per Q 35:19-20: "The one who is blind is not the same as the one who can see *(al-baṣīr)*, just as the darkness (q.v.) and the light (q.v.) are not the same" (see also PAIRS AND PAIRING; SYMBOLIC IMAGERY; METAPHOR).

Vision and Blindness

Ability, or lack thereof, to perceive physical objects and, when used metaphorically, ideas and concepts.

Witnessing the unseen

The Qur'ān divides existence into this world (q.v.) and the next, followed by a second division into the seen *(shāhid)* and the unseen *(ghayb),* as in Q 59:22, "He is God, besides whom there is no god, the one who knows the unseen and the seen" (see HIDDEN AND THE HIDDEN). The two dichotomies overlap in an important way. The next world is entirely unseen but this world consists of elements seen and elements unseen. God is not visible (see GOD AND HIS ATTRIBUTES), as in Q 7:143, "Moses (q.v.) said, 'My lord, show yourself to me and let me gaze upon you!' God said, 'You will never see me' " (see THEOPHANY). Elements of the unseen world are made visible, however, in miracles (q.v.) granted to prophets (see PROPHETS AND PROPHETHOOD) and saints (see SAINT), like Muḥammad's ascension (q.v.; *mi'rāj*). Q 53:1-18 asserts that "The heart [of Muḥammad] never denied what he saw" (*ra'ā,* Q 53:11) and "[his] vision *(al-baṣar)* never swerved nor did it transgress" (Q 53:17; see also ERROR; ASTRAY; SEEING AND HEARING). The term for Prophet, *nabī,* is derived from a verbal root meaning to be lofty and command a far-reaching overview *(n-b-y),* connoting the ability to inform others of what is beyond the horizon of their sight. A ḥadīth report (see ḤADĪTH AND THE QUR'ĀN) clarifies that "Truthful vision *(al-ru'yā al-ṣāliḥ)* is one fortieth part of prophecy" (see also VISION; TRUTH).

Seeing is believing

God's signs in the world can be seen and can prompt people to have faith (q.v.) in what is beyond routine perception. Angels (see ANGEL) and jinn (q.v.) are normally unseen but can be manifest to human sight, forming two important conduits between the world of human habitation and the ambiguities beyond. For example, Mary (q.v.) sees an angel who announces the birth of Jesus (q.v.) in Q 19:17: "Then we sent our spirit (q.v.) to her, and it appeared to her [vision] *(tamaththala lahā)* exactly like a man." In this way, the Qur'ān gives profound depth to the truism that "seeing is believing." Physical vision is a powerful metaphor (q.v.) for faith *(īmān):* faith is the vision of the heart (cf. e.g. Q 58:22) rather than the eyes (q.v.; cf. e.g. Q 6:103). Conversely, blindness is a meta-

phor for deliberate disbelief (see BELIEF AND UNBELIEF; LIE; GRATITUDE AND INGRATITUDE) when confronted with the truth or spiritual insensitivity, and is often linked to deafness (e.g. Q 7:179; 11:20; 47:23; see HEARING AND DEAFNESS).

The Qurʾān links true vision to perception of the prophets and acceptance of the covenant (q.v.; *mīthāq*) they offer. Q 5:78-9 says that whenever a prophet came to Israelite tribes (see CHILDREN OF ISRAEL) with a message that contradicted their desires (see MESSENGER), a part of them called the prophet's mission a lie and fought against the prophet: "They estimate that there will be no trial (q.v.)? Thus they go blind and deaf. Yet God turns to them accepting repentance (see REPENTANCE AND PENANCE), still many of them remain blind and deaf. But God is the one who sees *(baṣīr)* all they do."

The Qurʾān often informs the prophet Muḥammad of what he sees or will see in the future and clarifies the spiritual importance of what Muḥammad sees or provides prognostic visions (e.g. Q 17:60; 48:27; see FORETELLING; DIVINATION). The Meccan revelations often stress eschatological vision (e.g. Q 99 and 102; see ESCHATOLOGY; FORM AND STRUCTURE OF THE QURʾĀN), while the Medinan revelations frequently allude to what the community will see in the near earthly future (see CHRONOLOGY AND THE QURʾĀN; MECCA; MEDINA). The Qurʾān often equates Muḥammad's revelation with vision as well as audition, as in Q 4:105: "We have caused the message (*al-kitāb;* see BOOK) to descend upon you in truth (see REVELATION AND INSPIRATION), so that you judge between the people (see JUDGMENT) by means of what God has shown you *(arāka)*."

The Qurʾān expresses ambivalence toward routine vision. It challenges people to see the signs (q.v.) of God in nature, human history and individual experience (see also HISTORY AND THE QURʾĀN; GEOGRAPHY; GENERATIONS; NATURE AS SIGNS). Q 67:3-4 challenges, "Do you see *(tarā)* any imbalance in the creation (q.v.) of the compassionate one? So turn your vision to it again — do you see any flaw?" Q 24:41 asks, "Have you not seen *(a-lam tara)* that all beings in the heavens and the earth glorify God (see GLORY; GLORIFICATION OF GOD), even the birds in flight (see ANIMAL LIFE)?" In these examples, seeing is a test, not simple perception. It is witnessing the truth (*shahāda;* see WITNESS TO FAITH) if sight causes the heart to recognize God's presence but it is ignoring or covering the truth *(kufr)* if sight urges the heart toward denying God's presence or aggrandizing the ego. Q 96:6-8 pronounces, "No indeed, the human being transgresses the limits, and sees *(raʾāhu)* him/herself as independent (see ARROGANCE) — [but no indeed,] to your lord all things return." Ṣūfī commentaries (see ṢŪFISM AND THE QURʾĀN) understand "returning" as "remembering" the primordial moment of witnessing the truth (see REMEMBRANCE; WITNESSING AND TESTIFYING), when each human before creation witnessed *(sh-h-d)* God directly in seeing, hearing and being present, as in Q 7:172 (see COSMOLOGY).

Deceptive appearances

Vision can misconstrue the truth; seeing something from one's own perspective can mean holding an opinion that may be false. In this way, the Qurʾān often uses the verbal root "he saw" *(r-ʾ-y)* as synonymous with the verbal root "he imagined" *(z-ʿ-m)* or "he thought" (*n-ẓ-r;* see SUSPICION; KNOWLEDGE AND LEARNING; INTELLECT). Q 6:46 provides an example: "Say, 'Do you think *(a-raʾaytum)* that when God snatches away your hearing and your sight

(abṣārukum) and seals up your hearts that there is any other god (see POLYTHEISM AND ATHEISM) that could return [them] to you?" Seeing could be disbelieving if the heart's spiritual vision is obscured by darkness (q.v.; cf. e.g. Q 6:25; 17:46; 22:46), impaired by disease (cf. e.g. Q 2:10; 5:52; 8:49; see ILLNESS AND HEALTH), or sealed up with rust (cf. e.g. Q 83:14; cf. 42:24; 47:24 see HEART).

From the contrary perspective, blind people can have intense spiritual insight. Q 80 describes an incident when Muḥammad turned away from a blind man who sought spiritual guidance. The blind man had interrupted the Prophet's meeting with a tribal leader who, if he converted to Islam, would bolster the early Muslim community. Q 80:1-6 states,

He frowned and turned away, when the blind man *(al-aʿmā)* came to him. And what might let you know if he would increase in purity, or if he were bearing [God] in mind that he might benefit from the reminding? But as for him who considers himself independent, you turn to him to attend his needs!

This is the only qurʾānic passage to mention an actual blind person and in it, the Qurʾān chastises Muḥammad. According to Muslim tradition he remained ashamed of this incident throughout his life, to the point of wishing that if any phrases of the Qurʾān could be erased, these are the ones he would like to see eliminated. This is because the Qurʾān condemns hypocrites for their deceptive appearance (and judging people by how they appear; see HYPOCRITES AND HYPOCRISY): in Q 63:4, "When you see them *(raʾaytahum),* their external appearance *(ajsāmuhum)* pleases you, but when they speak, you hear them speak it is as if they are hollow timber propped up."

Metaphorical blindness

Despite this example of an actual blind man, the Qurʾān mainly refers to the blind in a metaphorical sense (see SYMBOLIC IMAGERY). The blind are those whose hearts have no spiritual perception, and they are the subject of critique, ridicule and threat of punishment. Q 13:16 (cf. Q 6:50) rhetorically contrasts the blind to those with sight (see RHETORIC AND THE QURʾĀN): "Say, 'Is the blind person equal to one endowed with vision, and is the darkness equal to the light?'" Q 35:19 answers the question negatively (those with sight are better); and Q 40:58 offers a further comparison to clarify the ethical importance of the question (see ETHICS AND THE QURʾĀN): "Not equal are the blind and those who see *(al-aʿmā wa-l-baṣīr)*! Nor are those who believe, performing good works (see GOOD DEEDS), and those who perpetrate evil actions (see EVIL DEEDS; GOOD AND EVIL)!" Those who believe have true vision because their hearts perceive the spiritual reality of the unseen consequence of action. In contrast, those who do evil are truly blind: the arrogance and waywardness of their hearts blinds them, rather than the vision of their eyes. Q 22:46 clarifies that "It is not their eyes that are blind *(lā taʿmā l-abṣār),* but rather the hearts in their breasts that are blind." Abū Ḥāmid al-Ghazālī (d. 505/1111) provided a profound commentary on physical vision and spiritual vision in his treatise *Mishkāt al-anwār,* "Niche for lights."

Visiting

Traveling to another place and staying there for a period of time. The terms that usually come to mind when considering the concept of visiting are derived from the root *z-w-r*. These terms occur in ḥadīth literature (see ḤADĪTH AND THE QURʾĀN) in reference to visiting graves (see BURIAL), usually in order to pray for the deceased (see Wensinck, *Handbook,* 89-90; see DEATH AND THE DEAD; PRAYER FORMULAS). In popular parlance, *ziyāra* came to be identified with spiritual practices (see ṢŪFISM AND THE QURʾĀN) involving the visitation of saints' tombs (see SAINT) so that pilgrims could acquire blessings, request miracles (q.v.) and benefactions, or seek mediation for sins (see SIN, MAJOR AND MINOR; INTERCESSION). The term, in this sense, does not occur in the Qurʾān. Words stemming from the root *z-w-r,* which pertain to the concept of visiting, occur only once, in Q 102:2, "until you come *(zurtum)* to the graves." According to al-Ṭabarī (d. 310/923), the term *"zurtum"* is a metaphor (q.v.) for death that ends the struggle for material wealth (q.v.; *Tafsīr,* xii, 678-9). The more common term used in the Qurʾān for visiting or visitation is *ʿumra,* as in Q 2:196 that refers to the minor pilgrimage to the Kaʿba (q.v.). The verb *iʿtamara* also occurs in Q 2:158 which specifies what *ʿumra* entails and serves as the qurʾānic basis for legal rules outlining pilgrimage (q.v.; see Ṭabarī, *Tafsīr,* ii, 47-55, 212-19). An example of how far later legal discourse moved away from the Qurʾān as a basis of law (see LAW AND THE QURʾĀN) is the rather lengthy discussion of *ḥajj* and *ʿumra* in the *al-ʿAzīz sharḥ al-Wajīz* (iii, 456-523) by Abū l-Qāsim al-Rāfiʿī (d. 623/1226), the most important Shāfiʿī legal text of the late medieval period, which does not refer to the two qurʾānic passages but bases its entire discussion on ḥadīth.

Mathāba, as a place of visitation, is mentioned in Q 2:125 although there appears to have been a dispute as to the specific boundaries of the area around the Kaʿba to which it refers. Al-Ṭabarī said that it could refer to the whole of Mecca (q.v.), the *ḥaram,* or more specifically to the immediate area of the Kaʿba itself. Finally, the term *ṭāʾif,* or *ṭāfa,* came to be interpreted as a kind of visitation from a supernatural entity. In Q 7:201 Satan (Shayṭān; see DEVIL) visits humans, although the nature of the visitation was, according to al-Ṭabarī, a matter of some dispute. He argued that some theologians held that the visitation *(ṭāʾif)* came in the form of a whisper (q.v.) or a low voice that the individual heard and was thus prompted into action. Others held that Satan came over the person in the form of emotions such as anger (q.v.) or jealousy (see ENVY). In Q 68:19, a variation of this occurs, which states "So there came *(ṭāfa)* on it a visitation *(ṭāʾif)* from your lord (q.v.) [all around], while they slept" (see SLEEP). In this instance, al-Ṭabarī maintains that *ṭāʾif* refers to the command *(amr)* of God as embodied by Muḥammad. According to Ibn Kathīr (d. 774/1373; *Tafsīr,* viii, 214), however, the "it" refers to the Quraysh (q.v.) who rejected Muḥammad and *ṭāʾif* refers to their destruction. In other words, God visited [destruction on] the people of Quraysh who rejected Muḥammad as a prophet (see OPPOSITION TO MUḤAMMAD;

PROPHETS AND PROPHETHOOD). For visitors in the sense of "guests," see HOSPITALITY AND COURTESY; ABRAHAM.

Vocabulary

see LANGUAGE AND STYLE OF THE QURʾĀN; FOREIGN VOCABULARY

Vow

A promise made to God to undertake an act of piety (q.v.). It differs from an oath (q.v.) which is not a promise to do something but a solemn declaration of truth (hence, its essential role as a form of juridical evidence; see WITNESSING AND TESTIFYING) performed by an act of swearing (often but not necessarily by God; but for overlap in juristic discourse on oaths and vows, see Calder, Ḥinth, esp. 220-6). A vow, which in Islam can only be made to God (for vows in pre-Islamic Arabia and non-religious vows after Islam, see Pedersen, Nadhr; see PRE-ISLAMIC ARABIA AND THE QURʾĀN), may or may not include an act of swearing (*aqsama* and *ḥalafa* in Arabic), but does imply a pledge of oneself — one's honor and credibility — i.e. it places one in a state of self-dedication. Thus, failure to fulfill a vow in Islam carries the same requirement for the performance of "penance" (i.e. expiation, *kaffāra;* see REPENTANCE AND PENANCE) as does breaking an oath. This usually entails feeding or clothing ten poor (see POVERTY AND THE POOR; FOOD AND DRINK), releasing a slave (see SLAVES AND SLAVERY), or, in case of hardship, fasting (q.v.) for three days (on the basis of Q 5:89). There is also the possibility of releasing oneself from a vow that one could perform but no longer feels it good to do so, through the performance of expiation.

A vow (*nadhr,* pl. *nudhūr*), a self-imposed promise to carry out a religious act not required by the law *(ilzām al-nafs bi-qurba),* is understood as obligatory (in effect, the vow renders the supererogatory act of piety a required individual duty, *wājib ʿaynī,* to God). Those who do not fulfill their vowed religious pledges *(ʿahd)* are hypocrites (Q 9:75-8; cf. 48:10; and Bukhārī, *Ṣaḥīḥ,* no. 6695, where the Prophet declares that Muslims in the third generation after him will begin to break their vows; see HYPOCRITES AND HYPOCRISY; ḤADĪTH AND THE QURʾĀN), while righteous servants of God fulfill their vows (Q 76:5-7). The mother of Mary (q.v.), in an echo of 1 Samuel 11, vowed to God what was in her womb (q.v.; Q 3:35) and Mary herself, the Qurʾān reports, made a vow to fast and to speak to no human for a day (Q 19:26). Finally, vows are associated with involuntary alms (see ALMSGIVING) at Q 2:270, supporting evidence for defining vows as religious acts above and beyond what is prescribed by law.

That humans had made vows before the coming of Islam was recognized by the first Muslims (e.g. Bukhārī, *Ṣaḥīḥ,* no. 6697, where ʿUmar b. al-Khaṭṭāb asks the Prophet whether he should fulfill a vow he made before his conversion; Q 3:35 and Q 19:26 are also cited in this regard), as was the fact that they had made them for purposes of religion (q.v.), e.g. before idols (Q 6:136; 39:3; see IDOLS AND IMAGES). Given this recognition, it was important to establish an understanding of vow-making acceptable to Islam: the consensus

eventually established this as a vow capable of being fulfilled and freely made as an act of obedience (q.v.) to God by a Muslim of legal majority (Abū Fāris, *Aymān,* 138-40; the Ḥanbalī school, however, recognized as valid the vow of non-Muslims; see LAW AND THE QUR'ĀN; RELIGIOUS PLURALISM AND THE QUR'ĀN). The vow must stipulate the act to be performed, i.e. a supererogatory act with its origin in the ritual duties of Islam *(furūḍ al-islām)*. It is thus permitted to vow to give alms, spend the night in prayer (q.v.; see also VIGIL), fast, go on (additional) pilgrimage (q.v.; both *ʿumra* and *ḥajj*), sacrifice (q.v.) an animal (see also CONSECRATION OF ANIMALS), but not to do something forbidden (q.v.; e.g. consume pork or alcohol; see INTOXICANTS; WINE) or even something permitted (see LAWFUL AND UNLAWFUL) that is not ritual in nature (e.g. divorce one's wife, eat food, sleep [q.v.] at night; Abū Fāris, op. cit., 140-5; however, a condition commonly used in vow-making has been the promise to divorce one's wife, see Pedersen, Nadhr; see also MARRIAGE AND DIVORCE).

A vow, then, was equated with obedience *(ṭāʿa)* to God in the sense of ritual acts *(ʿibādāt),* by which one might draw close to God (see RITUAL AND THE QUR'ĀN). Any other element in the formulation of a vow was incidental. For example, a vow to walk to Iraq or Morocco has no meaning; in contrast, a vow to walk to Mecca (q.v.), with the goal being the performance of pilgrimage, is acceptable. The vow to walk, however, is itself incidental, while the performance of pilgrimage, an act of piety, is the element of the vow that renders it meaningful (see Calder, Ḥinth, 226-32). There is no set formula for a vow, although it must be uttered aloud. It need not be accompanied by a condition (e.g. if X happens, I will do Y) but can be simply a formal statement of ritual intention (e.g. I will fast tomorrow), and it is invalidated if accompanied by the phrase "if God wills" (*in shāʾa llāh,* Abū Fāris, *Aymān,* 145-7). A vow is also invalidated if it involves pledging goods belonging to someone else (on the basis of a ḥadīth in which a woman of the Anṣār, held captive by enemy tribes, wrongfully vowed to sacrifice the Prophet's camel upon the back of which she made her escape; Muslim, *Ṣaḥīḥ,* no. 4245; see PROPERTY) but it is recommended that one fulfill a vow made by a deceased relative (Bukhārī, *Ṣaḥīḥ,* nos. 6698-9; see DEATH AND THE DEAD; KINSHIP).

The prophetic tradition is careful to downplay any magical dimension of vows (i.e. the idea that a vow might cause the deity to carry out the condition of the vow; see MAGIC; POPULAR AND TALISMANIC USES OF THE QUR'ĀN), essentially declaring vows to be useless since they cannot influence God (see POWER AND IMPOTENCE). Thus, excessive piety of the kind that hopes to influence the divine will was discouraged. The Prophet ordered a man who had vowed to go on foot to the Kaʿba (q.v.) to mount his riding animal, since God "has no need of this [man's] chastisement of himself" (*ghanī ʿan taʿdhīb hadhā nafsahu,* Muslim, *Ṣaḥīḥ,* no. 4247) and "has no need of you or your vow" (*ghanī ʿanka wa-ʿan nadhrika,* Muslim, op. cit., no. 4248). A vow is therefore incidental to God's foreordained decree *(qadar),* acting only as a pious supplement to it on the part of the votary — a means not to hasten or delay divine decree but to extract some good from the miserly (Bukhārī, *Ṣaḥīḥ,* nos. 6692-4; see GOOD AND EVIL; FREEDOM AND PREDESTINATION). A vow, then, is a spur to piety, the condition of which, if it is accomplished, merely coincides with the foreordained decree of God (Muslim, *Ṣaḥīḥ,* no. 4025). It is in this sense that a vow generally was understood in Islam, as a mechanism to encourage believers (see BELIEF AND UNBELIEF) to strive towards a

life of piety and to help them to persevere in it.

Wahhabism and the Qurʾān

The eighteenth century revival and reform movement founded by the scholar and jurist Muḥammad b. ʿAbd al-Wahhāb (d. 1206/1792), in the Arabian peninsula. Based on the central qurʾānic concept of *tawḥīd* (absolute monotheism), Wahhabism called for a direct return to the Qurʾān and ḥadīth for study and interpretation (see SUNNA; ḤADĪTH AND THE QURʾĀN; TOOLS FOR THE STUDY OF THE QURʾĀN).

Ibn ʿAbd al-Wahhāb considered the Qurʾān and ḥadīth to be the only infallible (see IMPECCABILITY) and authoritative sources of scripture with the Qurʾān, as the revealed word of God (q.v.), holding absolute authority (q.v.) in cases of conflicting views (see ABROGATION; INIMITABILITY). Other source materials, including legal opinions (see LAW AND THE QURʾĀN) and qurʾānic commentary (*tafsīr;* see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), could be consulted, but could not contradict the Qurʾān or ḥadīth. Ibn ʿAbd al-Wahhāb's Qurʾān interpretation was based on historical contextualization of the revelation and on consideration of the use of both terms and concepts within the broader context of the entire Qurʾān in order to know which prescriptions were universal as opposed to those that were limited to specific historical conditions (see OCCASIONS OF REVELATION). This methodology was then combined with legal concepts like *maṣlaḥa* (consideration of public welfare) to interpret Islamic law. For example, although the Qurʾān requires payment of *zakāt* (almsgiving [q.v.]), Ibn ʿAbd al-Wahhāb used *maṣlaḥa* to allow delay of payment during times of public hardship, such as the aftermath of a natural disaster.

Ibn ʿAbd al-Wahhāb also sought to determine broad qurʾānic values, such as the obligation to preserve human life (q.v.; see also MURDER; BLOODSHED) as a higher priority than obedience (q.v.) to Islamic law or ritual (see RITUAL AND THE QURʾĀN), for application in both private and public life. Examples of the application of this value include the limitation of violence (q.v.) and killing during jihād (q.v.; see also FIGHTING; PATH OR WAY; EXPEDITIONS AND BATTLES; WAR) and the command that women (see WOMEN AND THE QURʾĀN) should seek medical care when ill or injured, even when this means sacrificing modesty (q.v.).

Ibn ʿAbd al-Wahhāb believed that the Qurʾān assigned equal responsibilities to men and women with respect to God, accompanied by a balance of rights in their human relations. He held both genders responsible for carrying out the five pillars of Islam and for studying and interpreting the Qurʾān (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). He declared a balance of rights in matters of marriage and divorce (q.v.), guaranteeing the woman the right to divorce by *khulʿ* through repayment of the dower (*mahr;* see BRIDEWEALTH) to the husband upon her recognition that she could no longer fulfill the requirements of marriage. This interpretation assured the woman the practical right to assert *khulʿ* unfettered by the husband in the same way that the husband has the right to divorce by *ṭalāq* unfettered by the woman. He balanced the husband's rights in marriage by granting the woman the right to stipulate conditions favorable to her in the marriage contract relating both to the contracting and the continuation of the marriage (see CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS).

By the twentieth century, Wahhabism had become synonymous with literal interpretations of the Qurʾān and ḥadīth that did not appear to take context into consideration (see SĪRA AND THE QURʾĀN). The result was a more legalistic interpretation of Islam. At the turn of the twenty-first century, however, as interest in Ibn ʿAbd al-Wahhāb's methodology was renewed, Wahhābī legal scholars in Saudi Arabia re-initiated a more context-sensitive interpretation of the Qurʾān, combined with greater attention to legal tools like *maṣlaḥa* and recognition of the Qurʾān's gender balance of rights and responsibilities.

Waiting Period

The period that must be observed by a married couple after separation. Waiting periods are known in many cultures. Within the Qurʾān this concept is expressed by two Arabic words: *tarabbaṣa* or *tarabbuṣ,* literally "waiting," and by *ʿidda,* literally "number." The first word appears in Q 2:226, 228, 234 and seems to be the earlier expression because the verses in which the term *ʿidda* is used (Q 33:49; 65:1, 4) answer questions that must have been raised from rules stipulated in Q 2 (see LAW AND THE QURʾĀN). The clear relation between the two groups of verses shows that the word *ʿidda* in this context has to be interpreted as *ʿiddat al-tarabbuṣ,* i.e. "waiting period."

There are three different causes of separation that necessitate a waiting period: (i) death of the husband (Q 2:234), (ii) divorce (Q 2:228; 65:1) — except in the case in which the marriage has not been consummated (Q 33:49; see MARRIAGE AND DIVORCE) — and (iii) the oath of the husband to stop intercourse with his wife (Q 2:226; see OATHS; SEX AND SEXUALITY). The length of the waiting period differs accordingly. It is (i) four (lunar) months

(q.v.) and ten days in the case of death of the husband (Q 2:234); (ii) three menstrual periods *(qurūʾ)* for menstruating women or three months for non-menstruating women after divorce has been pronounced provided that the marriage had been consummated (Q 2:228; 65:4; see MENSTRUATION), or until the birth of the child in the case of a divorced pregnant woman whose divorce has become definite (Q 65:4; see BIRTH); and (iii) four months after the oath of continence (Q 2:226; see ABSTINENCE).

The waiting period has different functions. First, in the case of a revocable divorce and that of an oath of continence, it gives time to the man to think over his decision that could have serious personal and financial consequences for himself, his wife and their children (q.v.; see also FAMILY; WOMEN AND THE QURʾĀN). He can return to his wife during the waiting period. Second, the waiting period after divorce has been pronounced and after the death of the husband serves as a means to establish whether the wife is pregnant. A prerequisite is, on the one hand, that no sexual intercourse with the husband (or anyone else) take place during the waiting period after the divorce has been pronounced — a condition implied but not expressly stipulated in the qurʾānic rules, and, on the other hand, that the wife does not conceal a pregnancy that becomes apparent during this period (Q 2:228). This is important for two reasons: pregnancy and thus the prospect of offspring may influence the husband's decision to separate from his wife; the ruling prevents the wife from remarrying and then giving birth to a child whose father's identity is doubtful (see PATRIARCHY; PARENTS). Consequently, there is no need for a waiting period in the case of divorce before consummation (Q 33:49). Third, the waiting period after the husband's death has, in addition, the function of a period of mourning that should be respected by men wishing to marry the widow (q.v.; see also DEATH AND THE DEAD; BURIAL). Hence, it is strictly forbidden to propose a marriage to a widow or to arrange for it during the waiting period (Q 2:235). The Qurʾān is silent on the question of whether a husband whose wife has died must observe a mourning period of similar length.

Several responsibilities are combined with the waiting period. First, the responsibility for its correct observance. The responsibility is given partly to the wife (Q 2:228, 231, 234), partly to the husband (Q 2:226; 33:49; 65:1, 4). In the case of divorce, the end *(ajal)* of the waiting period must be established in the presence of two witnesses (Q 65:2; see WITNESSING AND TESTIFYING). Second, the husband is obliged to provide maintenance (*matāʿ, nafaqa, rizq,* Q 2:241; 65:1, 6, 7) for his wife during the waiting period and to let her remain in her house (Q 65:1) without doing any harm to her (Q 65:6; see MAINTENANCE AND UPKEEP). The widow has the right to maintenance and housing at her former husband's expense even for a whole year (Q 2:240). The woman is obliged to live chastely (see CHASTITY) during the waiting period; otherwise she forfeits her rights (Q 65:1).

It seems that the qurʾānic rules concerning the waiting period changed the existing customs of pre-Islamic Mecca (q.v.) and Medina (q.v.). According to Muslim traditions the mourning period of a widow in pre-Islamic times was a year (Muslim, *Ṣaḥīḥ,* 18:146; Bukhārī, *Ṣaḥīḥ,* 68:46; see ḤADĪTH AND THE QURʾĀN; PRE-ISLAMIC ARABIA AND THE QURʾĀN). Whether there had been a custom of a waiting period for divorced women at all is doubtful. Yet the new rules of the Qurʾān provided only a basic framework and gave rise to many questions concerning details. The answers

are found in ḥadīth compilations as well as in exegetical and legal literature (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL).

War

A state of open, armed and often prolonged conflict between states, tribes or parties, frequently mentioned in the Qurʾān. It is usually referred to by derivatives of the third form of *q-t-l,* "fighting" (q.v.), sometimes with the qualification *fī sabīl Allāh,* "in the path of God" (see PATH OR WAY); but we also hear of *ḥarb,* "war," both against God and the messenger (q.v.; e.g. Q 5:33; 9:107; cf. 5:64) and by or for them (Q 2:279; 8:57; cf. 47:4). Derivatives of *j-h-d* are used for efforts which include fighting without being reducible to it (see JIHĀD).

Wars mentioned

Past wars are rarely mentioned (see HISTORY AND THE QUR'ĀN). The vanished nations are destroyed by brimstone, fire and other natural disasters (see PUNISHMENT STORIES), not by conquest (q.v.), though the messenger expects to punish his own opponents by military means (Q 9:14, 52). Of the Israelite conquest of the holy land we are only told that when Moses (q.v.) ordered the Israelites (see CHILDREN OF ISRAEL) to enter this land, all except two refused on the grounds that it was inhabited by mighty men *(jabbārīn);* the Israelites thus had to wander in the desert for another forty years (Q 5:21-6; cf. *Num* 13:31-14:34). But elsewhere we learn that many prophets were accompanied in battle by large numbers, who never lost heart when they met disasters (Q 3:146). There is also an obscure reference to thousands who went out from their homes: God told them to die (so they did), whereupon he revived them. This is told in encouragement of fighting in God's path (Q 2:243f.), followed by an account of the Israelite demand for a king (Q 2:246-51; see KINGS AND RULERS): they wanted a king so that they could fight in the path of God (cf. *1 Sam* 8:5, 19; *Judg* 8:22), having been expelled from their homes and their families; but when fighting was prescribed for them, they turned back, except for a small band. Worse still, when their prophet announced that God had appointed Ṭālūt, i.e. Saul (q.v.), as their king, they disputed his authority (q.v.); and when Saul set out to fight Goliath (q.v.), most of them failed the test he set for them (cf. *Judg* 7:4-7; see TRIAL; TRUST AND PATIENCE); but the steadfast uttered the famous words, "How many a small band has vanquished a mighty army by leave of God," and David (q.v.) slew Goliath. No further Israelite wars are mentioned down to Nebuchadnezzar, whose destruction of Jerusalem (q.v.) is briefly alluded to, as is the Roman destruction of the Temple, in both cases without any names being named; the two disasters are presented as punishment for Israelite sins (see JEWS AND

JUDAISM), with a period of wealth and power in between and a possibility of better times ahead (Q 17:4-8). Another sūra (Q 30:2-4) notes that the Byzantines (q.v.) have been defeated, predicting that they will soon win (over the Persians) or, alternatively, that the Byzantines have been victorious, predicting that they will soon be defeated (by the believers).

Most warfare in the Qur'ān is conducted by the believers in the present. One verse regulates fighting among the believers themselves: one should make peace (q.v.) between the two parties or fight the wrongdoers (Q 49:9; see ARBITRATION). Another threatens war against the believers when they take usury (q.v.; Q 2:278f.). But most encourage the believers to fight others, variously identified as "those who fight you" (Q 2:190), unbelievers (e.g. Q 4:84; 9:123; 47:4), the polytheists altogether (Q 9:36), People of the Book (q.v.) who do not believe in God and the last day (Q 9:29; see LAST JUDGMENT), hypocrites (Q 9:73), friends of Satan (Q 4:76), and imāms of unbelief (Q 9:12), without it being clear how far these groups are identical or distinct. The hypocrites side with the believers when the latter win but not when they lose (Q 4:141) and once appear in alliance with unbelieving People of the Book (Q 59:11). All war is assumed to involve religious issues.

The moral status of war

Fighting is declared legitimate in self-defense, by way of preemption (Q 9:8; cf. 60:2), for the rescue of fellow believers (Q 4:75) and for the righting of wrongs, including the punishment of the wrongdoers (Q 9:13-14). The basic principle is that one should treat other communities as they treat one's own (see ETHICS AND THE QUR'ĀN). "As for the person who defends himself after having been wronged, there is no way of blaming them" (Q 42:41); God would help those who had always met like with like, only to be wronged (Q 22:60), for a bad deed called for another like it (Q 42:39-42; see GOOD DEEDS; EVIL DEEDS). "Fight in the path of God those who fight against you, but do not transgress" (Q 2:190); "a sacred month for a sacred month… whoever aggresses against you, aggress against him in a like manner" (Q 2:194; see MONTHS); "fight the polytheists all together as they fight you altogether" (Q 9:36). Where the principle of like for like is abandoned (see RETALIATION), the claim is that bloodshed (q.v.) is the lesser evil ("kill them wherever you come upon them, expel them from where they expelled you, for *fitna* is worse than killing," Q 2:191; cf. 2:217; see GOOD AND EVIL). The famous "sword verse" ("kill the polytheists wherever you find them, take them, seize them, besiege them, and lie in wait for them," Q 9:5), seems to be based on the same rules, given that it is directed against a particular group accused of oath-breaking and aggression (Q 9:1-23; cf. 8:56-60; see BREAKING TRUSTS AND CONTRACTS; OATHS) and that polytheists who remain faithful to their treatises are explicitly excepted (Q 9:4). Here as elsewhere, it is stressed that one must stop when they do (Q 2:193; 4:90; 8:39f., 61; 9:3, 5, 11) and, though the language is often extremely militant, the principle of forgiveness (q.v.) is reiterated in between the assertions of the right to defend oneself (Q 42:37-43).

Justifying war appears to have been hard work. The exhortations (q.v.) are addressed to a people who were not warlike ("prescribed for you is fighting, though you dislike it," Q 2:216), who assumed warfare to be forbidden (q.v.; "permission has been granted to those who fight/are fought, because they have been wronged," Q 22:39),

and who had to be persuaded that it could be morally right ("if God did not drive back some people by means of others, cloisters, churches/synagogues *[biyaʿ],* oratories *[ṣalawāt],* and mosques in which God's name is much mentioned would be destroyed," Q 22:40; "the earth would be ruined," Q 2:251). Only the *jizya* verse (Q 9:29; see POLL TAX) seems to endorse war of aggression. If read as a continuation of Q 9:1-23, however, it would be concerned with the same oath-breaking "polytheists" (cf. Q 9:30f.) as the sword verse.

Mobilization

Orders to fight came down in "sūras" (q.v.), apparently on an ad hoc basis (Q 9:86; 47:20) and always in what appears to be a mobilizing rather than a legislative vein (for Q 2:216, an apparent exception, compare Q 2:246; 4:77). Exhortations to fight abound (Q 2:244; 4:71, 84; 8:65; 9:36, 41, 123; 61:4, etc). Those who emigrate (see EMIGRATION; EMIGRANTS AND HELPERS) and strive for the cause with their wealth (q.v.) and their lives are promised rich rewards, not least when they fall in God's path (e.g. Q 2:154; 9:20; 22:58f., see MARTYRS; REWARD AND PUNISHMENT). They rank higher than those who sit at home (Q 4:95), just as those who joined the fighting before the victory rank higher than those who joined after it (Q 57:10; cf. 9:20; see RANKS AND ORDERS). Fighting and/or striving in God's path is described as selling the present life to God for the hereafter (Q 4:74; 9:111), a loan that will be repaid many times over (Q 2:245; 57:11; cf. 57:18; 73:20) and a commerce that will deliver from painful chastisement (Q 61:10f.; see TRADE AND COMMERCE; ESCHATOLOGY). Whatever one spends, God will repay in full (Q 8:60).

The response to these appeals is frequently deemed inadequate. "How is it with you that you do not fight in God's path?" (Q 4:75; cf. 4:72); "What is the matter with you, that when you are told to go forth in the path of God you sink heavily into the ground?" (Q 9:38). Some people are apparently happy to pray and pay alms but protest when fighting is prescribed for them, asking for postponement (Q 4:77). Some hope for a sūra but would look faint if one were to come down mentioning fighting (Q 47:20; cf. 9:86). Some plead ignorance of fighting or turn back, wishing that their brethren who have fallen in battle had done the same (Q 3:155f., 167f.). Others ask for permission to leave before a battle, pleading that their own homes are exposed (Q 33:13) or ask not to be put in temptation (by being asked to fight against kinsmen?; Q 9:49; cf. Q 60; see KINSHIP). Bedouin (q.v.) shirkers plead preoccupation with their flocks *(amwāl)* and families (Q 48:11; see FAMILY). Some turn their backs in actual battle (Q 3:155; 8:15f.; 33:15f.).

All lack of martial zeal is debited to base motives. The blind, sick, weak and destitute are of course exempted (Q 9:91; 48:17; see POVERTY AND THE POOR; ILLNESS AND HEALTH) but shirkers are sick of heart (q.v.; Q 47:20), unwilling to be inconvenienced by long journeys (Q 9:42) or heat (Q 9:81), keen to stay at home with their women (Q 9:87, 93), reluctant to contribute even though they are rich (Q 9:81, 86, 93), cowards who anticipate defeat (Q 48:12; see COURAGE; FEAR), who are scared of death (cf. Q 33:18f.; 47:20) and who would boast (q.v.) of their luck if the expedition were hit by disaster but wish that they had been present when things went well (Q 4:72f.); if they were Bedouin (q.v.), they are only interested in booty (q.v.; Q 48:15). Such people are liars (Q 9:42; cf. 48:11), hypocrites (Q 3:167),

cursed by God for only obeying part of what he sent down (Q 47:26), closer to unbelief than to faith (Q 3:167), indeed outright unbelievers (Q 3:156; 33:19; cf. 9:44f.), who are really fighting for *ṭāghūt* (Q 4:76, cf. 4:72; see IDOLS AND IMAGES; JIBT); they will be cast into a blazing fire (q.v.; Q 48:13) and hell is to be their abode (Q 9:95; see HELL AND HELLFIRE). Some people who have been granted permission to stay behind, a decision now regretted, are singled out for particular attention in increasingly sharp terms (Q 9:43-88). But the Bedouin who stayed behind are promised a second chance: they will be called against a mighty people and rewarded if they obeyed (Q 48:16). The believers in general are told that if they would not go forth, God will punish them and choose another people (Q 9:39). If they think their fathers, sons, brothers, wives, kinsmen, trade and houses are more important than God, his messenger, and *jihād fī sabīl Allāh,* then they will eventually learn otherwise (Q 9:24). There is no need to be afraid. Death will come at its appointed time, wherever one may be (Q 4:78), and God might restrain the power of the unbelievers (Q 4:84); in any case, unbelievers, hypocrites and People of the Book are all cowards who will turn their backs (cf. Q 3:110f.; 48:22; 59:11f.).

Attempts are also made to shame the believers into fighting by construing war as a test: God could have avenged himself on his opponents but he wants the believers to do it so that he and they can see their true worth (Q 47:4, 31). Most people have failed the test, as they had done back in the time of Moses and Saul and David (q.v.; above), whose experiences clearly reflect the messenger's own (see NARRATIVES). Misfortunes in battles are likewise cast as tests (Q 3:166f.; 33:10f.). God alternates good and bad days to purify the believers and to destroy the unbelievers, i.e. to weed out those of little faith (Q 3:140f.). Here as so often, the unbelievers seem to be members of the party deemed lacking in commitment to the cause.

The objectives of war

Opponents have wronged the believers by breaking their oaths and plotting to expel or kill the messenger (Q 8:30; 9:13; 17:76) and by actually expelling both him (Q 60:1; 9:40) and the believers without right, just for saying "God is our lord" (q.v.; e.g. Q 22:40; cf. 60:1, 8f.); they have also blocked access to the sanctuary (Q 2:217; 48:25; see SACRED PRECINCTS). The objective of war is to avenge these wrongs, to help the weak men, women and children left behind (Q 4:75; see OPPRESSED ON EARTH, THE), to expel the people in control of the sanctuary as they expelled the believers (Q 2:191), to put an end to *fitna* (trial or test, traditionally understood as persecution, more probably communal division), to make the religion entirely God's (Q 2:193; 8:39), to make his religion prevail even if the polytheists dislike it (Q 9:33; 61:9; cf. 48:2) and to punish the opponents: one should fight them so that God might chastise them "at your hands" (Q 9:14); God will chastise them either on his own (*min ʿindihi,* presumably meaning by natural disasters; see WEATHER; COSMOLOGY) or "at our hands" (Q 9:52); he would have exacted retribution himself (see VENGEANCE) if he had not decided to do it through the believers to let them test one another (Q 47:4). The *jizya* verse stands out by enjoining fighting until unbelieving People of the Book are reduced to tributary status (Q 9:29). That the opponents will be destroyed is treated as certain: "How many a city (q.v.) stronger than the one that expelled you have we destroyed," God says (Q 47:13); "are your unbelievers better than they?" (Q 54:43). And the objectives are in fact achieved: God has expelled the un-

believing People of the Book from their homes and their fortresses, banishing them (Q 59:2f.); and he has fulfilled the vision he had granted the messenger by allowing the believers to enter the sanctuary (Q 48:27), though the presence of believing men and women there has caused him to withhold his punishment (Q 48:25).

Exegesis

The exegetes understood the qurʾānic verses on war as legislation regarding the Islamic duty of jihād and typically treated each verse as an independent unit for which the context was to be found in the tradition rather than the Qurʾān itself. For the result, see CONQUEST, JIHĀD, JEWS AND JUDAISM, and the further cross-references given there.

Warmth see HOT AND COLD

Warner

One who foretells the (negative) consequences of actions. The Arabic word *nadhīr* (pl. *nudhur*) appears no fewer than fifty-eight times in the Qurʾān, scarcely less frequently than the verb *andhara* (including nominal and adjectival forms, particularly *mundhir*) from which it derives, and nearly always in the sense of "warner" (cf. *Lisān al-ʿArab,* xiv, 100). As Watt puts it (*Muhammad at Mecca,* 71), the verb "describes the action of informing a person of something of a dangerous, harmful, or fearful nature, so as to put him on his guard against it or put him in fear (q.v.) of it" (see also CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT). Particularly in the language of the *sīra* (see SĪRA AND THE QURʾĀN), *andhara* is also used to describe the Prophet's foreknowledge — his "giving notice" — of future events (see FORETELLING; MIRACLES; MARVELS) and as such can be counted as one of the signs (q.v.; see also PROOF) of his prophethood (Ibn Isḥāq, *Sīra,* i, 134; Ibn Ḥazm, *Jawāmiʿ al-sīra,* 10f.; see PROPHETS AND PROPHETHOOD).

The primary sense of *nadhīr* in pre-qurʾānic Arabic seems to have been connected to warfare: the *nadhīr al-jaysh/al-qawm* is usually described as the scout who warned the main force of the enemy's presence (see WAR; ENEMIES), a usage that continues in the Islamic period (see Bevan, *Naḳāʾid,* 12, "one who gives the alarm," and 517, "a warner"; Ibn Qutayba, *ʿUyūn,* i, 109; Wensinck, *Concordance,* s.v. *andhara*). It is apparently this sense that lies behind the

prophetic ḥadīth in which Muḥammad identifies himself as the "naked warner" (*al-nadhīr al-ʿuryān;* cf. Wensinck, *Concordance,* iv, 203), who waves his shed garments in order to raise the alarm (see ḤADĪTH AND THE QURʾĀN). Unlike *bashīr* (and its cognate, *mubashshir,* "the bearer of good news"; see NEWS; GOOD NEWS) or, for that matter, *nadhr* ("vow"), which have parallels in pre-Islamic Semitic languages (see Jeffery, *For. vocab.,* 79f. and 278; Widengren, *Muḥammad,* 13f.), usage of the term *nadhīr* apparently becomes monotheistic only in the Qurʾān itself (see FOREIGN VOCABULARY; GRAMMAR AND THE QURʾĀN). Although the jinn (q.v.) can occasionally warn people (see Q 46:29 and Ibn Isḥāq, *Sīra,* i, 130), here as elsewhere God, acting out of his mercy (q.v.), usually sends men. The *bashīr,* with which *nadhīr* is frequently paired (at least in part for reasons of rhyme; see RHYMED PROSE; PAIRS AND PAIRING; RHETORIC AND THE QURʾĀN), promises good news for those who believe (see BELIEF AND UNBELIEF), but God's warners invariably promise bad news for those who do not (see, for the two antonyms, al-Rāghib al-Iṣfahānī, *Mufradāt,* s.v. *n-dh-r;* and on Q 34:28, Muqātil b. Sulaymān, *Tafsīr,* iii, 533). In this respect, *andhara* and *nadhīr* lie close to the qurʾānic *dhakkara* "to remind, admonish" (on which see Bravmann, *Spiritual background,* 87 n. 1; see REMEMBRANCE; MEMORY; REFLECTION AND DELIBERATION). As the last of the prophets, Muḥammad seems to have been construed as the last of the *nadhīr*s, and exhorting the faithful to fear would later fall to preachers of varying status, some of whom took their name from the far less common qurʾānic term *mudhakkir* (for examples, see Ibn al-Jawzī, *Quṣṣāṣ,* 42f.; see TEACHING AND PREACHING THE QURʾĀN).

Attempts to assign fairly precise dating to the "warner" passages (thus Horovitz, *KU,* 47; Speyer, *Erzählungen,* 34f.; Andrae, *Mohammed,* 43f.; see CHRONOLOGY AND THE QURʾĀN) are only as persuasive as the schemes upon which they otherwise rely. But if one holds to the traditional and modern consensus that Q 74:2 ("Rise and warn!") is among the earliest lines — indeed, perhaps the earliest — revealed to Muḥammad, then his role as God's warner is at least as old as that (thus Ṭabarī, *Tafsīr,* xxix, 143f.; id., *Taʾrīkh,* i, 1153f.; Rubin, Shrouded messenger; see OCCASIONS OF REVELATION). Even if one does not, Muḥammad's role as warner is still attested in Q 26:214 ("And warn your nearest relatives…"; see KINSHIP), which is held to signal the beginning of his public preaching, an event conventionally dated three years after his first revelation (thus Ibn Isḥāq, *Sīra,* i, 166; Ṭabarī, *Taʾrīkh,* i, 1169; Nöldeke, *GQ,* i, 129). In the traditional literature, the imagery is one of the battlefield (see Rubin, *Eye,* 130f.), which may suggest a relatively early date (see EXPEDITIONS AND BATTLES). That this verse marks the concept's point of entry into the Qurʾān is also suggested by echoes of the parochialism (cf. also Q 42:7) that characterizes earlier warners, who had warned their communities of their own particular fates: the thunderbolt that fell upon ʿĀd (q.v.) and Thamūd (q.v.) in Q 41:13, the blow delivered to the people of Lot (q.v.) in Q 54:36 and the "painful chastisement" promised by Noah (q.v.; Q 71:1), which is glossed in tradition as the flood (thus Ṭabarī, *Tafsīr,* xxix, 91; see PUNISHMENT STORIES).

Muḥammad is certainly portrayed as one of a line of monotheistic warners (thus Q 28:46; 32:3), "there is not a community but that it has had a warner" (Q 35:24), and warning sometimes appears to have been intrinsic to prophecy itself (see especially Q 6:48 and Q 18:56: "We have not sent

messengers save as bearers of good news and warners"; see MESSENGER). Unlike his predecessors, however, Muḥammad is frequently given to warn through a scripture that was revealed to him (e.g. Q 6:19; 7:2; 42:7; 46:12; see BOOK; REVELATION AND INSPIRATION); he is also given to warn "all humankind" (Q 34:28), and whereas Noah's "painful chastisement" (*ʿadhāb ʿalīm,* Q 71:1) was the flood, Muḥammad warns of nothing less than the eschaton itself: "the day of meeting" (Q 40:15; cf. 40:18; see ESCHATOLOGY) and "the flaming fire"(q.v.; Q 92:14; see also HELL AND HELLFIRE). At least once (Q 78:40), this day of chastisement is said to be near to hand, but the precise timing of the end probably held more interest for later Muslims than it did for Muḥammad himself (see Bashear, Muslim apocalypses; see APOCALYPSE). In sum, "this is a warner of the warners of old" (Q 53:56), but the Prophet brings together an altogether unprecedented combination of vision, scripture and political action (cf. Cook, *Muhammad,* 35f.; Cook and Crone, *Hagarism,* 16f.; see SCRIPTURE AND THE QURʾĀN; POLITICS AND THE QURʾĀN).

Water

The compound of oxygen and hydrogen on which every form of life depends. Of the four Heraclean elements, water has the highest number of attestations in the Qurʾān and appears in the greatest variety of forms. In its general sense, it is designated by the Arabic word *māʾ*. It subsists in the sky as clouds *(saḥāb, muzn, muʿṣirāt, ghamāma, ʿarḍ),* falls to the earth as rain *(māʾ min al-samāʾ, wadq, maṭar),* or hail (*barad;* see WEATHER) or is condensed from the atmosphere as dew *(ṭall)*. It rises from within the earth as springs *(ʿayn, yanbūʿ)* and is also accessible as wells (*biʾr, jubb;* see SPRINGS AND FOUNTAINS). It flows across the land as

rivers (*nahr,* pl. *anhār*) and foaming torrents *(sayl)*. It comprises the great aqueous mass of the sea (*yam, baḥr,* pl. *biḥār*), and its surges are waves *(mawj)*. Often explicit mention of it is elided *(maḥdhūf)* and its presence indicated by context, through such verbs as *ghasila,* "to wash," or *saqā,* "give to drink" (see FOOD AND DRINK). There is the water of bodily fluids, such as semen (*nutfa, māʾ mahīn, māʾ dāfiq;* see BIOLOGY AS THE CREATION AND STAGES OF LIFE) and tears (*damʿ;* see WEEPING). Finally, there is in hell scalding water *(ḥamīm)* and putrid liquid *(ṣadīd)* among the torments of the damned (see REWARD AND PUNISHMENT; HELL AND HELLFIRE).

Water in all these forms has a part in the divine economy of creation (q.v.). The words that designate it interact with each others' meanings, creating what Frithjof Schuon calls a spiritual geometry that yields structures of religious meaning characteristic of qurʾānic rhetoric (see RHETORIC AND THE QURʾĀN). They occur individually but are also combined to form images of power and beauty (q.v.). Water is a sign of God's power (see NATURE AS SIGNS; POWER AND IMPOTENCE). It reveals aspects of the dependence of creation on him, his dealings with it, and its duty to serve him.

God created water before the heavens (see HEAVEN AND SKY) and the earth (q.v.) — this is how the commentators (al-Ṭabarī, al-Rāzī, al-Nasafī), understand the verse "[God] created the heavens and the earth in six days, when his throne was above the water *(māʾ)*" (Q 11:7), and "He raised up the dome [of the sky], then perfected it; he made dark its night and made bright its day (see DAY AND NIGHT), he laid out the earth, and drew forth from it its water *(māʾ)* and its pasturage" (Q 79:28-31; see AGRICULTURE AND VEGETATION). It is life-giving. Further God says, "We made every living thing of water *(māʾ)*" (Q 21:30; cf. 24:45) and, as seminal fluid, in phrases such as *māʾ mahīn* (Q 77:20), and *māʾ dāfiq* (Q 86:6), water passes on life (q.v.) from one generation to the next.

From above the earth

"Water from the sky" *(min al-samāʾ māʾ),* a regular periphrasis for rain, is among the gifts celebrated in hymnic pericopes (see LANGUAGE AND STYLE OF THE QURʾĀN; GIFT AND GIFT-GIVING) such as: "He has set the earth for you as a resting place, and placed across it paths for you, and sent down from the sky water by which we have brought forth in profusion greenery of various kinds" (Q 20:53). It is one reason for humankind to worship (q.v.) God (see also GRATITUDE AND INGRATITUDE). Water is a single entity, but it produces a variety of wonderful things. "In the earth are neighboring tracts of land and gardens, of grapes, land with sown crops, date palms in clusters (see DATE PALM), sprung from a single root, or standing singly, though irrigated by one water" (*māʾ,* Q 13:4; cf. 80:25). By it "he makes grow for you your crops, olives, dates, grapes and fruits of every kind" (Q 16:10-11; cf. 50:9-10). Humankind depends totally on God's bounty, "Have you reflected on the water *(māʾ)* you drink? Did you make it come from the cloud *(muzn)* or did we?" (Q 56:68-9; cf. 67:30; see REFLECTION AND DELIBERATION; GRACE; BLESSING).

Water may be taken away (Q 23:18), and without it, everything withers. "We send down [water] from the sky. The greenery of the earth blends with it, but then becomes dry grass that the wind scatters" (Q 18:45). Water is carried by the clouds *(saḥāb)*. The winds *(riyāḥ lawāqiḥ)* impregnate them (with water), and by them "We send water *(māʾ)* down from the sky, then give it to you as drink. It is not you who

hold it in store" (Q 15:22). The winds drive the clouds to carry water wherever God wills.

Clouds may portend blessings. "We spread over you clouds *(ghamāma),* and sent upon you manna and quails" (Q 2:57). The winds carry them, "… you see rain *(wadq)* come from the midst of them," and "his servants (see SERVANT)… who receive it rejoice" (Q 30:48). They may, however, contain thunder and lightening, and send down hail *(barad),* and threaten punishment (Q 24:43; see CHASTISEMENT AND PUNISHMENT).

The wonderful effect water has on drought-stricken earth is proof of God's power to resurrect the dead. "Among his signs (q.v.) is [this]: That you look on the earth [and see it] barren, yet when we send down upon it water *(mā')*, it is stirred and becomes fecund. Indeed, he who brings it back to life restores to life the dead" (Q 41:39; cf. 7:57; 16:65; see DEATH AND THE DEAD; RESURRECTION).

On earth

Water is given to humankind in wells, rivers and torrents *(sayl)* flowing through the valleys (Q 13:17) and springs. Wells are mentioned in Q 12:10, 15 as *jubb,* and as *bi'r* in Q 22:45. The miraculous appearance of the well of Zamzam near Mecca (q.v.), is implied in Q 2:158, that prescribes the *sa'y* between Ṣafā and Marwa (q.v.), and is the scriptural basis for the story of Ishmael (q.v.; Ismā'īl) and Hagar (Hājar).

Rivers provide water for irrigation, are a means of travel and transport and are sources of food and ornaments. Like rain they are celebrated in hymnic pericopes of great beauty (cf. Q 13:3; 14:32; 16:15; 27:61). The unbelievers (see BELIEF AND UNBELIEF) say to Muḥammad that they will not believe unless "You provide for us a garden (q.v.) of date palms and grapes, and rivers *(anhār)* gush through it" (Q 17:91; see OPPOSITION TO MUḤAMMAD). On two occasions, *yamm* replaces *nahr* to identify the river Nile, when the infant Moses (q.v.) was left to float in a box to be carried by its waters to safety (Q 20:39; 28:7).

Springs have a place in the canon of divine blessings: "he has caused you to have abundance of cattle and sons, of gardens and springs" (Q 26:133-4). And "we set [upon the earth] gardens of date palms and grapes, and we make gush from it springs" (Q 36:34). Yet springs only gush from the earth because God so wills (Q 67:30). Like God's other gifts they may be taken back due to people's wickedness (see GOOD AND EVIL). Ṣāliḥ (q.v.) warned his people that, if they did not accept his message, the "gardens, springs, tilled fields, and date palms with heavy sheaths" (Q 26:147-8) they enjoyed would be taken away from them (see WARNER; PUNISHMENT STORIES).

So precious are they that the unbelievers said to Muḥammad, "We will not believe you until you make a spring *(yanbū'an)* gush forth for us" (Q 17:90). Moses had performed such a miracle (q.v.). When he asked God for water in the desert, God replied, "'Strike the rock with your staff (see ROD),' and twelve springs gushed from it" (Q 2:60).

The sea

There are two words for sea: *baḥr* and *yamm,* the latter of which is attested only eight times in the Qur'ān. In four places, *yamm* refers to the sea in which Pharaoh (q.v.) drowned (Q 7:136; 20:78; 28:40; 51:40; see DROWNING), and once to the sea in which were thrown the ashes of al-Sāmirī's idol (Q 20:97; see SAMARITANS; CALF OF GOLD). The sea *(baḥr)* is mighty. God swears by Mount Sinai (q.v.), by the Torah (q.v.), by the heavenly Ka'ba (q.v.), by the

vault of the sky, and by the ever brimful sea (Q 52:1-6) that the punishment he threatens will come about (Q 52:7; see OATHS). The water of the sea is salty. The Qurʾān contrasts it with the fresh water of springs and rivers, speaking of the two seas *(baḥrayn):* "It is he who has let flow the two seas, one sweet and one salty and set a barrier (q.v.) between them" (Q 25:53-4; cf. 55:19-20; see also BARZAKH). The point of meeting of the two seas is apotheosized in the Qurʾān as the place at which Moses meets the prophet al-Khiḍr (Q 18:60-5; see KHAḌIR/KHIḌR). Though different, both serve humankind: "From each you can eat fresh fish and find ornaments. You can watch the ships (q.v.) cleaving them with their prows as they seek his bounty" (cf. Q 14:32; 16:14; 17:66; 22:65; 31:31; 35:12; 45:12; see HUNTING AND FISHING). Especially vivid is "his are the ships on the sea with sails aloft like mountains" (Q 55:24).

The sea is also a place of terror and darkness (q.v.). God gives protection against these perils: "God has set the stars to guide you in the darknesses of land and sea" (Q 6:63, 97; 27:63; see PLANETS AND STARS). It is at its most terrifying when mariners are threatened by a tempest: "When waves are suspended over them like a canopy, they call on God, in total sincerity, but when he has brought them safely to land, their faith (q.v.) grows feeble" (Q 31:32; cf. 10:22; 17:67).

Water as punishment

Water may be an instrument of punishment. One occasion, in historical time, is referred to in Q 34:16: "Then they turned away from us, so we sent to overwhelm them the torrent *(sayl)* of the great dam (*al-ʿarim* [q.v.])," referring to the devastation of Sabaʾ (see SHEBA) after the collapse of a dam above the city. On a greater scale is the flood sent to punish the people of Noah (q.v.), wiping out all of humankind apart from Noah and his family. "So we opened the gates of the sky to let water *(māʾ)* pour forth, then we made springs *(ʿuyūn)* gush from the earth until the water *(māʾ)* [from above and below] met to accomplish what had been decreed" (Q 54:11-12; cf. 69:11). The waves *(mawj)* drowned Noah's son (Q 11:43), who put his trust in a mountain instead of God. The waters of the sea drowned Pharaoh and his armies (Q 10:90; 44:24). God has total power over the waters. He saved Noah, "By God's help, the ark (q.v.) sailed safely amid [waves] like mountains" (Q 11:42). God saved Moses from Pharaoh by dividing the sea (Q 2:50; 7:138; 20:77; 26:63).

In paradise

A surging up of the sea (Q 81:6; 82:3) is a sign of judgment day but it is no longer mentioned in the hereafter (see ESCHATOLOGY; LAST JUDGMENT). Water, however, still has a role. In the gardens of paradise (q.v.) are springs (Q 15:45; also Q 44:52; 55:50; 77:41-3) and from them the blessed are given drinks of wonderful taste (Q 37:45-7; 76:6), including *zanjabīl* from a spring called *salsabīl* (Q 76:17-18). Those brought close to the divine presence drink from water called *tasnīm* (Q 83:27-8; see FACE OF GOD). Through these gardens flow rivers (Q 64:9; 65:11; cf. 2:266; 98:8), the water of which will never run brackish (Q 47:15). For those enjoying them is assurance of forgiveness (q.v.), the ending of hostilities and peace (q.v.; Q 47:12; 48:17; see also ENMITY).

In hell

Water is also part of the torments of the damned. The most terrible form of it is *ḥamīm*. It is a scalding, seething fluid, with a terrible taste (Q 38:57; 44:46). There are other liquid torments. The damned who cry out calling for cooling water (Q 7:50)

are given water like fused brass, like the dregs of oil (Q 18:29; see SMELL; HOT AND COLD). It is foul and purulent, and can scarcely pass their throats (Q 56:42). There are springs that add to their agony such as one that spouts scalding water (Q 88:5).

In God's design

Water plays a direct role in the dispositions of divine providence. One example is the vignette of Moses, after his flight from Egypt, helping the two daughters of Jethro water their flocks (cf. Q 28:23-4). This was a critical moment in his career, for it set the stage for his return to Egypt as a prophet (see PROPHETS AND PROPHETHOOD). Another is the pivotal role played by "water from the sky" the evening before the battle of Badr (q.v.), rain making the soft and shifting sand firm underfoot for the Muslims, and providing a stream to furnish drink and from which to take water for ritual ablutions (cf. Q 8:11; see CLEANLINESS AND ABLUTION; RITUAL PURITY).

In purification

Q 8:11 alludes to the nexus between water and the ritual purity necessary for the valid performance of the ritual prayer (q.v.), and by extension, progress in the spiritual life. Q 4:43 and Q 5:6 prescribe the ritual of *wuḍūʾ* and the circumstances that render it necessary. Q 38:42 shows water as an agent of healing, sanctifying and restoring. After Job (q.v.) has suffered for many years, God says to him, "Scuff [the earth] with your foot! This is [a spring]. A cool place to bathe, and [it is] drink" (Q 38:42), the words "water" and "spring" being understood. The water this miraculous spring provides quenches Job's thirst, cleanses him from disease, and is a sign that everything taken from him is to be restored. It is a cue to the spiritual dimensions of water in the Qurʾān, richly exploited in the Ṣūfī tradition (see ṢŪFISM AND THE QURʾĀN), notably in the thought of al-Ghazālī (d. 505/1111) and Ibn al-ʿArabī (d. 638/1240).

In rhetoric

Metaphors in which water plays a part highlight its connotations (see METAPHOR). Unbelieving hearts are harder than stone (for nothing good can come from them; see HEART), whereas from some stones rivers gush forth, others shatter, and water flows from them (Q 2:74). The unbeliever is totally ignorant and blind (see IGNORANCE; VISION AND BLINDNESS). He is "in the darkness of a vast sea; waves envelop him, above them further waves, above them clouds, [forming] layers of darkness, one upon the other" (Q 24:40). Finally, even the plenitude of the sea is little compared to the words of God, for if all the trees of the world were pens, and the seas seven times over were ink, they would not suffice to write them (Q 18:109; 31:27; see WRITING AND WRITING MATERIALS; WORD OF GOD).

Conclusion

Water, in its primal position in the order of creation, the variety of its forms and uses, its literal and symbolic significances (see SYMBOLIC IMAGERY), has a dominant position in the Qurʾān's presentation of natural phenomena. In it is an inherent dynamism that makes it unique. It is one, but fecundates life in diverse forms. The movement of the life-cycle from the germination of a seed depends on it. It brings the dead earth back to life and is thus an image of God's power to resurrect the dead. The frequent periphrasis "water from the sky" instead of rain *(wadq, maṭar)* highlights water as substance, untrammeled by any accident.

Every attestation elaborates the spiritual economy of the qurʾānic revelation (see REVELATION AND INSPIRATION). Like the Qurʾān *(tanzīl)*, it is sent down *(nazala)* from the sky, as a mercy (q.v.) to humankind. It

is essential to every form of life and a symbol and agent of spiritual purity. Mystics have found in it an infinity of aspects and significances.

Water of Paradise

Rivers and springs found in the paradisiacal garden, as described in the Qurʾān. The phrase "rivers of paradise," *anhār al-janna,* occurs forty-six times, while the terms *ʿayn,* spring, and its plural, *ʿuyūn,* occur nine times only (see also WATER; SPRINGS AND FOUNTAINS). There are four kinds of rivers in paradise (q.v.): Rivers of milk (q.v.) whose taste never alters, rivers of pure honey (q.v.), rivers of delightful wine (q.v.) which causes neither drunkenness nor heaviness (see INTOXICANTS) and, finally, rivers of water that are always gushing, as in Q 47:15.

Where are these rivers and springs located? Al-Qurṭubī (d. 671/1272) mentions that the qurʾānic expression "underneath them" means that rivers flow "under the dwellers of paradise's couches and under their chambers" (*Jāmiʿ,* viii, 312). A much earlier commentator, al-Ṭabarī (d. 310/923), had offered an expanded explanation: "God means the trees, fruits, and plants in the garden (q.v.; see also AGRICULTURE AND VEGETATION), not the ground. That is why he has said 'underneath which rivers flow,' because it is clear that he wanted to say that the water of the rivers therein flowed under the trees, plants, and fruits, not under the ground. For, when water flows under the ground, it is not the lot of someone above it to see it unless the cover between it and him is removed. According to the description of the rivers of the garden, they do not flow in underground channels" (*Tafsīr,* ad loc.). Al-Qurṭubī delves into the location of these rivers. He cites al-Bukhārī's (d. 256/870) *Ṣaḥīḥ:* "If you asked God, then ask him to dwell in *al-firdaws* which is in the middle of the garden. It is located in the highest place. On top of it is placed the Throne of God (q.v.), the merciful (see MERCY; GOD AND HIS ATTRIBUTES). It is from *al-firdaws* that the rivers of paradise flow" (*Jāmiʿ,* ix, 311).

Islamic tradition (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY) has ascribed various names of qurʾānic origin to these rivers (e.g. Kawthar, Kāfūr, Tasnīm, Salsabīl; cf. Smith and Haddad, *Islamic understanding,* 88, esp. n. 76). One of them, *al-kawthar,* occurs only once in the Qurʾān. Ibn Qayyim al Jawziyya (d. 751/1350) cites a ḥadīth of the Prophet (see ḤADĪTH AND THE QURʾĀN) from Muslim (d. ca. 261/875): "*al-kawthar* is a river in paradise that my God promised me" (*Ḥādī l-arwāḥ,* 314). Abū Nuʿaym al-Iṣfahānī (d. 430/1038) quotes the following ḥadīth: "Then *sidrat al-muntahā* (the lote-tree of the boundary; see TREES; ASCENSION) was uncovered for me, and I saw four rivers: two internal and two external; I said: 'What are these rivers, O Gabriel (q.v.)?' He said, 'The internal ones are in paradise and the external are the Nile and the Euphrates'" (*Ṣifat al-janna,* iii, 157-8; see GEOGRAPHY).

In Q 76:18, we read that the faithful will drink from a source called *salsabīl*. Its water is flavored with ginger (Q 76:17) and the

calyx of sweet-smelling flowers (cf. Q 76:5; see CAMPHOR; SMELL; FOOD AND DRINK).

Water of paradise purifies literally and metaphorically (see METAPHOR; CLEANLINESS AND ABLUTION; RITUAL PURITY). Al-Qurṭubī (*Jāmiʿ,* x, 33) interprets Q 15:45 as follows: "when the people of paradise enter paradise, two springs are offered to them. They drink from the first one, and God erases all hatred and desire for vengeance (q.v.) from their hearts (see HEART). Then, they enter into the second spring and wash themselves. Their faces (q.v.) become serene."

Inasmuch as the water of paradise purifies, it was connected to light (q.v.). Light, like water, renews and regenerates. Thus, al-Qurṭubī interprets the term *nahar* in Q 54:54 as light rather than river (*Jāmiʿ,* xvii, 149). These two meanings of radiance and refinement can be understood in a highly esoteric way, as expressed in the commentary published under the name of the great Ṣūfī (see ṢŪFISM AND THE QURʾĀN) Ibn al-ʿArabī (d. 638/1240) as "the sources of the esoteric sciences and their branches" (*Tafsīr,* i, 234; see POLYSEMY).

Weakness see OPPRESSED ON EARTH, THE

Wealth

Worldly possessions and property. In this sense, "wealth" occurs often in the Qūrʾan. The most common term for it, *māl* and its plural *amwāl,* prevails in the later (Medinan) sūras (q.v.; see also CHRONOLOGY AND THE QURʾĀN). Additional terms include *ghināʾ* and other words derived from its root, especially in the early (Meccan) sūras. Sometimes property (q.v.) seems taken for granted as a simple fact of life: God "has made it a support for you" (*allatī jaʿala llāhu lakum qiyāman,* Q 4:5); one reason for men's control over women is "the expenditure they make [for them] out of their property" (Q 4:34; see MAINTENANCE AND UPKEEP; WOMEN AND THE QURʾĀN; PATRIARCHY). For the most part, however, wealth is considered permissible and even desirable under certain conditions but a dangerous thing overall.

To begin with, God is *ghanī,* which means both "wealthy" and "able to dispense with" something or someone (see GOD AND HIS ATTRIBUTES). He has no need of creation (q.v.) and the world (q.v.; *ghaniyyun ʿani l-ʿālamīn,* Q 3:97; 29:6). Human beings, however, need at least a bare minimum of the goods of this world, which can only come from God. God combines his wealth with mercy (q.v.; Q 6:133), providing humans with property to satisfy their needs (Q 53:48, *aghnā wa-aqnā*). Accordingly, we have the famous passage Q 35:15, "Oh you people! You are the (poor) ones in need of God (*al-fuqarāʾu ilā llāhi;* see POVERTY AND THE POOR), while God is the wealthy and praiseworthy one (*al-ghaniyyu l-ḥamīd;* see PRAISE; LAUDATION; GLORIFICATION OF GOD)." God's gifts (see GIFT AND GIFT-GIVING) may be related to the sustenance

(q.v.; *rizq*) which he provides, as for instance in the quickening rain (see WATER; BLESSING). More to the point here, however, is the fact that the divine beneficence is often called *faḍl,* which means "grace" (q.v.) but, also, in many cases, something more like "surplus" (see Bravmann, Surplus of poverty). "So if you fear (q.v.) poverty, God will make you wealthy out of his *faḍl*" (Q 9:28); those who lack the means for getting married should wait chastely for God's *faḍl* to arrive (Q 24:33; see MARRIAGE AND DIVORCE; CHASTITY).

God's generosity contrasts with the hoarding and greed of certain people (Q 10:58; see AVARICE). It is especially blameworthy to respond to God's *faḍl* with vengeful behavior (cf. Q 9:73-4; see VENGEANCE). Yet many people are misled by or through their material goods. In the days of old, the Children of Israel (q.v.; Bānū Isrāʾīl) rejected their prophet's designation of Saul (q.v.; Ṭālūt) as king over them, because they did not consider him rich enough (Q 2:247; see KINGS AND RULERS). The people of Midian (q.v.) asked Shuʿayb (q.v.) if his religion would require them "to cease doing whatever we like with our property" (Q 11:87). The dazzling splendor and wealth of the present life which God permitted to Pharaoh (q.v.) and his chiefs caused them to lead people astray (q.v.) from God's path (Q 10:88; see PATH OR WAY). In Muḥammad's own time, the unbelievers spent their wealth in precisely the same way (Q 8:36; see BELIEF AND UNBELIEF). Acquisition of wealth is repeatedly described as useless (e.g. Q 15:84; 69:28; 92:11; 111:1-2, etc.). In a great many verses, worldly wealth is paired with children (q.v.), together constituting a vain enticement or temptation away from God (Q 3:10, 116; 8:28; 9:55, 69, 85; 17:6, 64; 18:34, 39, 46; 19:77; 23:55-6; 26:88; 34:35, 37; 57:20; 58:17; 63:9; 64:15; 71:21; see TRIAL; TRUST AND PATIENCE).

Hoarding, avarice and arrogance (q.v.) all go together (see Q 57:23-4; 4:36-8, "God does not love the arrogant and vainglorious, nor those who are stingy and who hide the benefits that God has bestowed on them… nor those who spend of their substance so as to be conspicuous before others"). Every time a warner (q.v.) appears before a people, its well-off members *(mutrafūhā)* say, "We do not believe…; we have more in wealth and children, and we cannot be punished" (cf. Q 34:34-5). Of course they are proved wrong; and in the afterlife, the saved will call down to the damned (see REWARD AND PUNISHMENT): "Of what profit to you were your hoarding and arrogant ways?" (Q 7:48; cf. 14:21). The basic problem with avarice is its claim to self-sufficiency (Q 92:8, *man bakhila wa-staghnā*). Avarice thus comes at the cost of one's own soul (q.v.; Q 47:38) and to be saved from the "covetousness of one's soul" is to achieve true "prosperity" (Q 64:16). Similarly, greed is a form of ingratitude: the creature whom God created and to whom he granted abundant goods and sons, and whose life he made comfortable, is now greedy for more (Q 74:11-15). Man, though created for toil and struggle (see WORK), still boasts, "I have squandered abundant wealth" (Q 90:4-6).

A great many passages in the Qurʾān speak of arrogance and the arrogant *(alladhīna stakbarū),* rather than of wealth and the wealthy. These two groups (the arrogant and the wealthy) are related, if not identical. Interestingly, the Qurʾān, like the New Testament (Mark 10:25; Matthew 19:24; Luke 18:25) talks of a camel (q.v.) going through the eye of a needle yet here the object of comparison is not the wealthy man seeking entrance to heaven (see PARADISE) but rather "those who reject our signs (q.v.) and consider them with arrogance" (Q 7:40; see LIE; GRATITUDE AND INGRATITUDE).

Despite its many dangers for us, we can purify our wealth by giving it away without any thought for favors in return (Q 92:18-19). We should not mar our acts of charity (see GOOD DEEDS; ALMSGIVING) with reminders of our generosity or with unkind remarks (Q 2:264). In this way, our wealth may come to resemble God's original gift to humankind (*rizq* or *faḍl*), which was likewise given without any expectation of its being restored to the original donor. This reciprocity between God and the donor becomes clear when we are called upon to help meritorious *mukātab* slaves (see SLAVES AND SLAVERY): "give them some of God's wealth *(min māli llāhi)* which he has given you" (Q 24:33). Many passages specify how to take alms from property and the right or claim *(ḥaqq)* for "the needy and the deprived" that inheres within the property itself (Q 51:19; 70:24-5; see OPPRESSION; OPPRESSED ON EARTH, THE).

Wealth becomes an aid to salvation (q.v.) when it has not only been "purified," but also spent "in the path of God" (Q 2:261-5). Repeatedly, the believers are enjoined to struggle with their possessions and their persons *(bi-amwālihim wa-anfusihim);* often (as at Q 4:95; 8:72; 9:44, 81, 88) this refers specifically to fighting (q.v.) and warfare (see WAR), though in other cases perhaps not (see JIHĀD). God has purchased the possessions and persons of the believers in return for the garden (q.v.; Q 9:111). Here, through war and conquest (q.v.), material wealth becomes a positive value: "He made you heirs of the lands, houses and goods [of the People of the Book (q.v.)], and of a land which you did not frequent previously" (Q 33:27).

There are also many passages that deal with the management of property. Orphans' estates must be handled honestly (see ORPHAN; GUARDIANSHIP). Money is prescribed for dowries (Q 4:24; see BRIDEWEALTH) and should not be made over to the weak of understanding (Q 4:5; see MATURITY; INTELLECT). You should not devour your own substance and that of others by spending it on vanities or on bribes (?) for judges (e.g. Q 2:188; 4:29). The alternative to such spending on vanities is commerce based on mutual good-will (*tijāratan ʿan tarāḍin minkum,* Q 4:29). Similarly, *ribā* denotes a kind of bad transaction, contrasted with alms (Q 30:39), and permissible trade (Q 2:274; see USURY).

Regarding the historical context for references to wealth in the Qurʾān, in one place, Q 48:11, the term *amwāl* is used to refer to the herds of nomadic desert-dwellers (see NOMADS). Otherwise, we seem to be in a world consisting largely of town-dwellers, perhaps one in a process of intense social change, as Watt *(Muhammad at Mecca; Muhammad at Medina),* Ibrahim *(Merchant capital)* and Bamyeh *(Social origins)* have variously proposed (see CITY). It is not often clear, however, whether or to what extent the references to wealth in the Qurʾān have to do with moveable or immoveable property. Clear references to money (q.v.) are lacking altogether. Only rarely does the Qurʾān provide much context for these matters. One example may be Q 4:160-1, where the Jews (see JEWS AND JUDAISM) are mentioned together with *ribā* (usury?); however, this may fit within a well-established thematic of monotheist debate (see DEBATE AND DISPUTATION), as Rippin (Commerce) has suggested regarding the commercial vocabulary of the Qurʾān (see TRADE AND COMMERCE; POLEMIC AND POLEMICAL LANGUAGE).

Despite the variety among them, these qurʾānic themes relating to wealth and property together constitute a coherent view. A summary of this view, at Q 47:36-8, makes it clear that if people believe and do the right things (see VIRTUES AND VICES, COMMANDING AND FORBIDDING; ETHICS AND THE QURʾĀN), if they are generous and

open-handed, and if they remember that this life is mere play and frivolity, then God will allow them to keep their worldly property after all. Among the classical exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), al-Ṭabarī (d. 310/923) had a particularly strong sense of the qur'ānic moral economy regarding property and wealth.

Weather

In general terms, the state of the atmosphere at a given time and place, involving the variables of heat, cold, moisture, wind and pressure, and referring both to beneficial and destructive consequences. In the Qur'ān there are a number of words covering many of these aspects, some phenomena having more than one term. In the vast majority of contexts, the agency of God is explicit (e.g. Q 30:48).

Rain, for example, is expressed in several ways. The most frequent is the mention of God's "sending down water from the sky" thereby giving life (q.v.) to or restoring it on earth (q.v.; see also AGRICULTURE AND VEGETATION). The word *ghayth* is also employed in a bountiful sense in Q 42:28 and Q 57:20 (see GRACE; BLESSING). The two occurrences of *wadq* (Q 24:43; 30:48) mean a heavy rain falling from a cloud; *ṣayyib* (Q 2:19) is also rendered heavy rain or rainstorm. A neutral sense is conveyed in Q 4:102 where fighters are allowed to set aside their arms (see FIGHTING; EXPEDITIONS AND BATTLES; WEAPONS) if sick (see ILLNESS AND HEALTH) or discomfited by rain *(maṭar)*. The causative verbal form IV of this root *(m-ṭ-r)* is used exclusively to express divine punishment, as in Q 25:40 where it "rained an evil rain" *(umṭirat maṭara l-saw'i)* upon Sodom. The same occurred to the people of Lot (q.v.; Q 7:84; 26:173; 27:58), although in Q 11:82 and Q 15:74 (see also Q 8:32) "stones" *(ḥijār)* were rained down upon them, possibly a metaphor (q.v.) for a volcanic eruption (see STONE).

A series of related weather terms, wind (sing. and pl.; see AIR AND WIND), storm (*'āṣif,* Q 14:18), and cloud may be treated together. In Q 22:31, ascribing partners to God (see POLYTHEISM AND ATHEISM) is likened to a wind *(rīḥ)* that carries someone far away. Another simile (q.v.) compares those who devote themselves to the life of this world to a biting icy wind (*rīḥ fīhā ṣirr,* Q 3:117) that destroys the harvest. Solomon (q.v.) is granted a fair wind by God by which he could safely set sail at sea (Q 21:81; 38:36). On the other hand, the ungrateful (see GRATITUDE AND INGRATITUDE) may feel a sense of security but God could drown them in a mighty storm or hurricane (*qāṣifan mina l-rīḥi,* Q 17:69; see DROWNING). A fierce roaring wind (*rīḥ ṣarṣar 'ātiya,* Q 69:6; cf. also Q 41:16; 54:19;

al-rīḥ al-ʿaqīm, Q 51:41) destroyed the people of ʿĀd (q.v.) for their disobedience (q.v.). The faithful (see FAITH; BELIEF AND UNBELIEF) are reminded of God's favor that when they were besieged at Medina (q.v.) by the Quraysh (q.v.), he sent against them a strong wind (*rīḥan,* Q 33:9) and hosts they could not see (see RANKS AND ORDERS; ANGEL). God sends winds (*al-riyāḥ bushran,* Q 7:57; see also Q 25:48; 27:63; cf. 30:46) that herald his mercy (q.v.) by bringing clouds to water a scorched earth (see WATER).

Two words for cloud, *ʿāriḍ* and *saḥāb,* the latter used in a collective sense as well, naturally occur along with mention of wind(s) (Q 2:164; 46:24) and rain. One splendid passage (Q 24:43) contains numerous signs of God's lordship as creator and sustainer of the natural order in the clouds, rain, hail *(barad)* and lightning (*barq;* see CREATION; SUSTENANCE; LORD; NATURE AS SIGNS). Thunder *(raʿd)* and lightning appear naturally together in Q 2:19-20 along with thunderbolts (*ṣawāʿiq;* see also Q 13:12-13). The people of Thamūd (q.v.) were destroyed (Q 69:5) by a divine punishment which appeared to combine the qualities of thunder and lightning *(ṭāghiya),* a term occurring only in this context (see PUNISHMENT STORIES). Lane notes that it is synonymous with *ṣāʿiqa* (pl. *ṣawāʿiq*) meaning "thunderbolt" (Q 41:13), although translators render it as "lightning" as well. Thunder *(raʿd)* is also the title of the thirteenth chapter of the Qurʾān (see SŪRA).

Wedding see MARRIAGE AND DIVORCE

Weeping

Shedding of tears as a result of a heightened emotional state. Weeping out of piety (q.v.) or the fear (q.v.) of God is considered an expression of great devotion and several ḥadīths relate that this is what the Companions of the Prophet (q.v.) used to do when they heard sermons and preaching (see TEACHING AND PREACHING THE QURʾĀN). According to a ḥadīth reported by Abū Hurayra (d. ca. 58/678; see ḤADĪTH AND THE QURʾĀN), among "the seven people to whom God gives his shade on the day" of resurrection (q.v.), there is "a man who remembers God in solitude and his eyes become tearful" (Bukhārī, *Ṣaḥīḥ, K. Adhān* 14; Tirmidhī, *Ṣaḥīḥ, K. Zuhd,* 53; see REMEMBRANCE; VIGILS). Another ḥadīth, reported by ʿAbdallāh b. al-Shikhkhīr (fl. fourth/tenth cent.), says that the Prophet himself, "when he was performing prayers, would sob and his chest sound like a boiling kettle" (Abū Dawūd, *Sunan, K. Ṣalāt,* 22, 157; see PRAYER). In the Qurʾān, some verses say that the believers (see BELIEF AND UNBELIEF) are those who, listening to the holy book, "fall down on their faces in tears" (Q 17:109; see RECITATION OF THE QURʾĀN), and the same is said about the ancient prophets who "would fall down in prostrate adoration and in tears" (Q 19:58; see BOWING AND PROSTRATION). These verses are among the eleven, according to al-Qayrawānī (d. 385/996, *Risāla;* most traditional schools speak of fourteen or fifteen occasions) that, when recited, Muslims are commanded to perform *sujūd* (see RITUAL AND THE QURʾĀN). Al-Bukhārī (d. 256/870) and Muslim (d. ca. 261/875) report that Muḥammad ordered Abū Bakr (q.v.) to lead the prayer, but ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR) said that he could not because he "will not be able to recite the noble Qurʾān to the people on account of weeping" (Bukhārī,

Ṣaḥīḥ, K. Faḍā'il al-ṣaḥāba, 3; Muslim, *Ṣaḥīḥ, K. Faḍā'il al-ṣaḥāba,* 2). In spite of that, the Prophet re-affirmed his order. The question of whether it is permitted to weep for the dead is more complex (see DEATH AND THE DEAD; BURIAL). Muslim scholars agree that weeping for the dead is permissible, whereas lamenting and wailing are not (cf. Halevi, Wailing; Rippin, Sadjda). Many narrations report that in particular ʿUmar admonished those who wail for the dead, recalling that the Prophet had said: "A dead person is tormented by the wailing of the living people" (Bukhārī, *Ṣaḥīḥ, K. Janā'iz,* 33; Muslim, *Ṣaḥīḥ, K. Janā'iz,* passim). After the death of ʿUmar, ʿĀ'isha said, in reply to the son who had admonished those who were crying for his father, that, on the contrary, "The messenger of God did not say that a believer is punished by the weeping of his relatives. But he said that God increases the punishment of a non-believer because of the weeping of his relatives" (Bukhārī, *Ṣaḥīḥ, K. Janā'iz,* 32; Muslim, *Ṣaḥīḥ, K. Janā'iz,* passim). She further added, quoting the Qurʾān: "Nor can a bearer of burdens bear another's burdens" (Q 35:18). Ibn ʿAbbās (d. ca. 68/686-8) then recited: "It is he who grants laughter and tears" (Q 53:43). After that, Ibn ʿUmar did not say anything. On the other hand, it is related that the Prophet himself wept on the death of his son Ibrāhīm and said: "The eyes shed tears and the heart feels pain, but we utter only what pleases our lord. O Ibrāhīm! We are aggrieved at your demise" (Sayyid Sābiq, *Fiqh al-sunna,* iv, 21). The verb "to weep" recurs only rarely elsewhere in the Qurʾān. Regarding those who were congratulating themselves on having successfully avoided taking part in the expedition of Tabūk (see EXPEDITIONS AND BATTLES; HYPOCRITES AND HYPOCRISY), it is said: "Let them laugh a little: much will they weep" (Q 9:82; see LAUGHTER). Joseph's (q.v.) brothers also pretend to weep on their return to their father after having sold their sibling (Q 12:16; see BROTHER AND BROTHERHOOD; BENJAMIN). Those who make fun of the announcement of the end of the world (see ESCHATOLOGY) are rebuked for laughing instead of weeping (Q 53:60). Lastly, we are told that neither heaven nor earth shed tears for the people of Pharaoh (q.v.), after being punished by God for not having listened to Moses (q.v.; Q 44:29; see also CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT; JOY AND MISERY).

Weights and Measures

Means for making quantitative evaluations. Information about weights and measures in the Qurʾān must be derived from symbolic discourse (see SYMBOLIC IMAGERY; SIMILES; METAPHOR). This is true even for very concrete weights and measures and is reflected in the exegetical literature (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND

MEDIEVAL), which contains often divergent information and explanations about weights and measures in the Qurʾān. What follows is a closer examination of the qurʾānic (1) measures of length; (2) measures of weight; (3) mixed measures; and (4) measures of time. The Qurʾān makes no mention of explicit measures of area.

Measures of length

Dhirāʿ, "cubit," appears only in Q 69:32, in "a chain of seventy cubits reach." It is equivalent to "the part of the arm from the elbow to the tip of the middle finger" (see Hinz, Dhirāʿ, on its concrete early Islamic, not qurʾānic, dimension). Al-Ṭabarī (d. 310/923) simply says "God knows best the span of its length" (*Allāhu aʿlamu bi-qadri ṭūlihā; Tafsīr,* xii, 220). He also mentions the opinion that "one *dhirāʿ* corresponds to seventy *bāʿ*." The term *bāʿ* does not occur in the Qurʾān but in early Islamic times it corresponded to about two meters (see Hinz, *Islamische Masse,* 54). Following al-Ṭabarī, one *bāʿ* can also represent — symbolically, of course — a distance that is supposed to be longer than the distance between Kūfa and Mecca (q.v.).

Qāb denotes "a short span" and appears only in Q 53:9, in combination with *qaws,* "bow," or "cubit" (see Lane, vii, 2575) as *qāba qawsayn,* literally the "distance of two bow-lengths," meaning "very close." Al-Ṭabarī (*Tafsīr,* xi, 507-9) reports opinions on the length of *qāba qawsayn,* including, among others, "half the length of a finger" or "length of a finger." He also explains the phrase as referring to either the distance between the archangel Gabriel (q.v.) and God or between Muḥammad and God.

Measures of weight

Mithqāl, "(an undefined) weight," appears eight times, six occurrences of which (Q 4:40; 10:61; 34:3, 22; 99:7-8) are in a genitive construction with *dharra*. *Dharra* (e.g. "God does not do a grain's weight of wrong," Q 4:40) denotes something tiny, a speck (e.g. an ant — a hundred of them weigh one grain of barley; see Lane, iii, 957), or, in modern Arabic usage, an atom. Following al-Ṭabarī (*Tafsīr,* x, 574) with regard to Q 10:61, *mithqāl dharra* denotes the weight of one single, small speck. With regard to Q 34:3, al-Ṭabarī says: "God misses nothing in heaven (see HEAVEN AND SKY) and on earth (q.v.), even if it has only the weight of a *dharra* (*Tafsīr,* x, 346) and at Q 34:22 he comments: "There are no gods but God, so they do not even own something of the weight of a *dharra* in heaven and on earth" (ibid., x, 371; see POLYTHEISM AND ATHEISM; IDOLS AND IMAGES; POWER AND IMPOTENCE).

Kayl appears repeatedly for "measure" in general. In just one place the Qurʾān uses *kayl baʿīr,* "camel-load" (see CAMEL), as the definition of a weight which is, following the verse itself, "an easy measure": "We shall… get an extra measure of a camel(-load). That is an easily acquired measure" (*nazdādu kayla baʿīrin dhālika kaylun yasīrun,* Q 12:65). Apart from that, whenever *kayl* appears — ten places in all — it never refers to a defined weight (see MEASUREMENT).

Some other expressions belong to the sphere of measures of weight. Twice, *mithqāl* appears in connection with *ḥabba min khardal,* "grain of mustard" (Q 21:47; 31:16): "… if it be the weight of a grain of mustard, and it be in a rock,… God will produce it" (Q 31:16). In all other places where *ḥabba,* "grain," occurs alone, it is a mere metaphor (cf. the metaphorical "grain of a mustard seed" of the Bible, e.g. in Mark 4:31).

Ḥiml, "load," serves in three places as a periphrasis for a weight: as "camel-load" (*ḥiml baʿīr,* Q 12:72, synonymous to the

above-mentioned *kayl baʿīr*); one burdened soul (q.v.) will not bear the burden of another (Q 35:18; see also INTERCESSION; REWARD AND PUNISHMENT); some will bear a burden on the resurrection (q.v.) day (Q 20:101; the same meaning is denoted by *wizr,* "load," in the preceding verse, Q 20:100).

Similarly metaphorical are *waqr,* "heaviness," which occurs four times (Q 6:25; 17:46; 18:57; 31:7), and *wiqr,* "burden," where once (Q 51:2) it denotes metaphorically the burden of water (q.v.) that clouds carry (see also AIR AND WIND; WEATHER).

Mixed measures

Some terms of measure in the Qurʾān signify simultaneously weight and value (see also TRADE AND COMMERCE; MARKETS; MONEY; NUMISMATICS).

Dirham denotes the early Arabic silver coin, and, at the same time, a weight as a coin was understood to be of a particular weight. It appears only once, in the plural *darāhim* (Q 12:20). From there, it simply follows that it is a measure for a small value: "They sold him [Joseph (q.v.)] for a low price, a certain number of *dirham*s, for they thought little of him." At the time of the prophet Muḥammad, one *dirham* was supposed to have the value of a tenth or a twelfth of a *dīnār* (Miles, Dirham).

Dīnār denotes the early Islamic gold coin and appears only once, too. It is of a lesser value than the *qinṭār* (Q 3:75). It is said that Christians and Jews who had borrowed *dīnār*s from Muslims would sometimes not give them back (Miles, Dīnār; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY).

Qinṭār, mostly understood as "talent," appears three times (Q 3:75; 4:20; pl. *qanāṭīr,* Q 3:14). It is apparently derived from the Latin *centenarius* (Ashtor, Mawāzīn). In Q 3:14 "talents of gold (q.v.) and silver" are listed as earthly enticements, in addition to women (see WOMEN AND THE QURʾĀN), children (q.v.), excellent horses, cattle (see ANIMAL LIFE) and land (see also GRACE; BLESSING; PROPERTY; WEALTH). Commentaries on this verse list many different opinions on the meaning of *qinṭār*. Al-Ṭabarī *(Tafsīr,* iii, 199-202) says repeatedly that it means "a lot of property *(māl)* of gold and silver" and that it cannot be defined by weight. The other interpretations al-Ṭabarī lists range from 1200 *ūqiyya,* "ounce" (not in the Qurʾān; in early Islam it denoted a weight of 125 grams; see Hinz, *Islamische Masse,* 35) to over 1200 gold *dīnār*s; or 1200 *dīnār*s and 1200 *mithqāl* (see above) in silver; or 12,000 *dirham,* or 1000 *dīnār;* until the equally unclear "as much gold as a sack made of bull hide can contain" *(milʾu maski thawrin dhahaban)*. Ibn Kathīr (d. 774/1373; *Tafsīr,* ii, 17-18, 57) concedes that the opinions of the interpreters differ. He understands *qinṭār* simply as "money" or "property" *(māl),* although he has heard opinions that it is worth 40,000, 60,000, and 80,000 *dīnār*s. He refers to the Prophet who is said to have assigned to a *qinṭār* the weight of 12,000 *ūqiyya* (see above): each single *ūqiyya* is supposed to be more valuable than everything between heaven and earth *(kullu ūqiyyatin khayrun mimmā bayna l-samāʾi wa-l-arḍ)*.

Again for the sake of completeness, two metaphorical expressions for something of little value should be noted: *qiṭmīr,* "skin of a date-stone," which denotes symbolically very little value and appears only in Q 35:13: "Those whom you call upon, apart from him, have not power over the skin of a date-stone"; and *qabḍa,* "a handful," which occurs twice, as in Q 39:67: "The earth as a whole will be his handful on the day of resurrection" (also Q 20:96). Al-Ṭabarī (*Tafsīr,* viii, 451-2) says with regard to Q 20:96: "A handful (of dust) from the track, which the hoof of the horse of the

archangel Gabriel (who came to reveal the Qurʾān to the prophet Muḥammad) had left."

Measures of time

A number of terms are used with the meaning "eternity, unlimited period of time" (for further discussion of measurements of time, see ETERNITY; TIME): *dahr* (twice, in Q 45:24; 76:1), also with the meaning of "fate" (q.v.; see Watt, Dahr); *sarmad* (twice, in Q 28:71-2), meaning "incessant continuance" (see Lane, iv, 1353); *abad,* always in the accusative case, *abadan* (twenty-eight times), fourteen of which are with the meaning of "forever," e.g. Q 64:9: *khālidīna fīhā abadan,* "to abide therein forever." In the remaining places, *abadan* is not a measure of time in the strict sense, because it appears as a negation meaning "never."

In contrast, *amad* denotes a clearly limited period of time (four times, in Q 3:30; 18:12; 57:16; 72:25): "Time, considered with regard to its end" (Lane, i, 95; Ṭabarī, *Tafsīr,* xii, 275, with regard to Q 72:25). Al-Ṭabarī (*Tafsīr,* iii, 231) gives the term a different gloss at each occurrence: he acknowledges with regard to Q 3:30 the interpretation "period of time" as well as "place" *(makān),* meaning an undefined measure of dimension or space. Then, he compares the *amad* of Q 18:12 (Ṭabarī, *Tafsīr,* viii, 187) with *ghāya,* "extreme limit," noting that it can denote both a temporal and a spatial dimension. He knows also the interpretation "number" *(ʿadad)* for *amad*. Moreover, al-Ṭabarī (*Tafsīr,* xi, 682) narrates an opinion about Q 57:16 in which *amad* is synonymous to *dahr* (see above).

Not much more concrete are the synonymous terms *sana* and *ʿām,* both meaning "year," because they are used either metaphorically or for the vague description of longer periods of time. *Sana* appears seven times in the singular and twelve in the plural *sinīna; ʿām* appears nine times (see YEAR). Q 2:189 and 10:5 indicate that time-fixing follows the new moon (q.v.). The calculation of the year according to the lunar calendar (in which one year is ca. 354 days) thus has a qurʾānic basis (see CALENDAR). The Qurʾān, however, knows a year longer than the lunar year because it mentions a leap month (Q 9:37, see below; see MONTHS).

This leads us to the next smallest unit of time, *shahr,* "month," of which twelve make one year (Q 9:36). *Shahr* appears twenty-one times, twelve of which are in the singular, twice in the dual, once in the plural *shuhūr,* six in the plural *ashhur*. One month is indicated by its name: Ramaḍān (q.v.; Q 2:185). Sacred months in general (see SACRED AND PROFANE) are mentioned eight times (in Q 2:194, 197, 217; 5:2, 97; 9:2 — here the four months during which one can travel safely in the country, because feuds are forbidden [q.v.]; see also FIGHTING; LAWFUL AND UNLAWFUL; JOURNEY). A travel distance of two months corresponds to the distance that the wind, which was made to serve Solomon (q.v.), covered in one day (Q 34:12; see below at *yawm*).

Shahr is also used metaphorically: "The Night of Power (q.v.) is better than a thousand months" (Q 97:3). When God created the heavens and the earth (see CREATION; COSMOLOGY), he simultaneously created twelve months, four of which are sacred (Q 9:36). Thirty months are the time for a woman to become pregnant and wean her child (Q 46:15; see BIOLOGY AS THE CREATION AND STAGES OF LIFE; WET-NURSING; FOSTERAGE; LACTATION; MILK). Other regulations in connection with the measure of months can be found in Q 4:92 (about fasting [q.v.] for the sake of repentance; see REPENTANCE AND PENANCE),

Q 58:4 (about remarriage; see MARRIAGE AND DIVORCE; LAW AND THE QUR'ĀN), Q 2:226 and 65:4 (about the woman's waiting period [q.v.] after divorce and before remarriage), Q 2:234 (about a widow's [q.v.] waiting period before she may be remarried after her husband's death). If we assume that the Arabs (q.v.) at the time of the revelation followed the lunar calendar (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN), a qur'ānic month has an average duration of around 29.5 days (see De Blois, Ta'rīkh, 258). The length of the leap month, *al-nāsī',* whose insertion is prohibited (Q 9:37; see CALENDAR; MONTHS; cf. De Blois, Ta'rīkh, 260), is unclear.

The next smallest unit of time is *yawm,* "(an entire) day (between sunset and sunset)." *Layl* and *layla,* "night" (pl. *layālin*), stands for the first half of the twenty-four hour day, *nahār,* "day," for its second half. The times of the day generally denote vaguely defined periods of time (for more details see DAY AND NIGHT; DAY, TIMES OF). For example, two terms describing times of the day signify a short period of time in relation to the (metaphorical) hour of the last judgment (q.v.): *'ashiyya* (late, dark evening) and *ḍuḥā* (forenoon): *ka-annahum yawma yarawnahā lam yalbathū illā 'ashiyyatan aw ḍuḥāhā,* "On the day when they see it, it will be as if they had not tarried more than an evening, or its morning" (only Q 79:46; see MORNING; EVENING).

Two other terms appear in connection with the time or the distance which the wind that was made to serve Solomon covered in one day: *ghuduww* (morning) and *rawāḥ* (evening, or "afternoon [q.v.], from the declining of the sun [q.v.] from the meridian until night"; see Lane, iii, 1182); both terms appear only in Q 34:12: "And to Solomon (we subjected) the wind which blew a month's (journey) in the morning, and a month's (journey) in the evening…." Al-Ṭabarī (*Tafsīr,* x, 353) repeats the opinion that the wind covers in one day the distance that one travels in two months (a distance equal to that between Kābul and an unidentified place).

The smallest unit of time in the Qur'ān is *sā'a,* commonly translated as "hour." *Sā'a* appears forty-eight times. It denotes a period of the day shorter than its second part, *al-nahār;* as in Q 10:45 (cf. Q 46:35): *lam yalbathū illā sā'atan min al-nahār,* "On the day when we round them up as if they had not remained (in the grave; see BURIAL; DEATH AND THE DEAD) an hour of the day." Therefore, it can also be understood as "a time, a (little) while, a space, a period, an indefinite short time" (Lane, iv, 1467).

Wet-Nursing

Breastfeeding — voluntary or for payment — of an infant by a woman other than its own mother, or by the latter, following divorce (see MARRIAGE AND DIVORCE). *Murḍi'a* (pl. *marāḍi'*) in the Qur'ān denotes in general "suckling female" (Q 22:2, Bell; "nursing mother," Pickthall) and, more specifically, a "foster-mother" (Q 28:12, Arberry) or a "wet-nurse." In Q 65:6 the root *r-ḍ-'* in the fourth form describes the act of wet-nursing, and in Q 2:233 the tenth form of this root denotes "seeking, or demanding, a wet-

nurse" (see Lane, 1097). The term *ziʾr,* "one that inclines to, or affects, the young one of another, and suckles or fosters it" (Lane, 1907-8), which became very common in Islamic legal and medical writings from the classical through the medieval periods (Giladi, *Infants,* esp. 106-14), was in use already in early qurʾānic exegesis (Muqātil, *Tafsīr,* ad Q 2:233) but has no qurʾānic roots (see LAW AND THE QURʾĀN; MEDICINE AND THE QURʾĀN).

Inasmuch as it assumes a connection between a nurse's blood and her own milk, Q 4:23 makes ties created by suckling similar to ties of blood kinship (q.v.; see also BLOOD AND BLOOD CLOT) and therefore explicitly forbids sexual relations (see SEX AND SEXUALITY; PROHIBITED DEGREES) between men and their (non-biological) milk-mother(s) and milk-sister(s). In ḥadīth (see ḤADĪTH AND THE QURʾĀN) and *fiqh* writings these impediments were gradually widened to include the nurse's husband and his relatives — a development based on the idea that the nurse's milk is created by the man who made her pregnant (Benkheira, Donner le sein, 5-52).

Q 28:12 furthermore points out that infants sometimes reject the milk of women other than their own mothers (see LACTATION; FOSTERAGE). The Qurʾān, however, sanctions in principle (in the specific context of divorce) mercenary nursing of an infant either by its divorced mother or, if the divorced parents "find mutual difficulties" (Q 65:6), i.e. disagree on the fee, by "some other woman" (see also Q 2:233). Both verses (as well as Q 65:7) encourage men to be both fair and even generous towards women hired to nurse their own infants (and see e.g. Muqātil, *Tafsīr,* ad Q 65:6-7).

The Qurʾān itself gives almost no hint about actual wet-nursing practices in seventh century Arabia or neighboring areas — e.g. in which circumstances they were applied, how popular they were, how gender (q.v.) relations within the nursling's family and that of its wet-nurse both affected and were affected by these practices, what the common criteria were for selecting wet-nurses and the physical and moral demands with which these women had to comply, etc. (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). Suggestions, e.g. that it was the accepted custom to send a child to foster-parents in Mecca (q.v.) but not in Medina (q.v.; Stern, *Marriage,* 96), are based on the interpretation of post-qurʾānic sources and are, in any case, debatable (see Benkheira, Le commerce, 3-6). From later exegetical and legal writings, however, one gleans that in the Islamic classical and medieval periods wet-nursing was practiced in vast areas of the Muslim world.

Muslim scholars who interpreted Q 2:233 as pertaining to parents (q.v.) in general (see e.g. Jaṣṣāṣ, *Aḥkām, bāb al-raḍāʿ;* Rāzī, *Tafsīr,* ad Q 2:233), distilled from this verse a great number of rules (see LACTATION; Giladi, *Infants,* 53-6, 106-14). As they clearly viewed breastfeeding as a maternal instinct and the preferable way of feeding infants (see LACTATION; MILK), Muslim scholars generally regarded it as a natural right of the mother (see e.g. Ṭabarī, *Tafsīr,* ad Q 2:233 and 65:6; Jaṣṣāṣ, *Aḥkām, bāb al-raḍāʿ*) but often insisted that no mother could be forced to suckle her baby unless the nursling's health would otherwise be endangered (see e.g. Ṭabarī, *Tafsīr;* Zamakhsharī, *Tafsīr;* Rāzī, *Tafsīr,* ad Q 2:233). Wet-nursing is a legitimate option when the mother is unable or refuses to breastfeed. In these and similar circumstances (specified e.g. in Ṭabarī, *Tafsīr* and Rāzī, *Tafsīr,* ad Q 2:233; see also Ibn al-ʿArabī, *Aḥkām,* ad Q 2:233), it is the father's duty to look for a wet-nurse and pay for her services (Muqātil, *Tafsīr,* ad Q 2:233; Jaṣṣāṣ, *Aḥkām, bāb al-raḍāʿ;* Rāzī, *Tafsīr,* ad

Q 2:233; see MAINTENANCE AND UPKEEP; CHILDREN). In the same context such other questions are discussed, as the father's duty versus his economic ability (see e.g. Ṭabarī, *Tafsīr,* ad Q 2:233), the hiring of a woman by her own husband to breast-feed their infant (see e.g. Zamakhsharī, *Tafsīr,* ad Q 65:6), the duties of the wet-nurse, both concerning her own way of life and health (see Benkheira, Le commerce; Giladi, *Infants,* 53-6, 106-14) as well as the proper treatment she should extend to the infant and other legal aspects of the hire agreement (see e.g. Ibn Qudāma, *al-Mughnī,* vi, 73-5; on the detailed chapter in al-Sarakhsī's *al-Mabsūṭ* in this regard, see Shatzmiller, *Women and wage,* 182-8; Giladi, *Infants,* 106-14). The core of the Islamic attitude towards wet-nursing is perhaps best characterized by the insistence of legal-moral authorities to try if at all possible not to separate nurslings from their mothers (see e.g. Jaṣṣāṣ, *Aḥkām, bāb al-raḍāʿ,* passim).

Whisper

Barely audible speech or sound, often with sibilance. The Qurʾān is a text to be heard *(samʿ)* more than to be read and within the text there are many allusions to aurality and its different degrees (see BOOK; RECITATION OF THE QURʾĀN; ORALITY; ORALITY AND WRITING IN ARABIA). In the most common qurʾānic scenario one hears a noise without discerning its source. This is the meaning of *ḥasīs* in Q 21:102. Those who will escape the tortures of hell (*jahannam;* see HELL AND HELLFIRE; REWARD AND PUNISHMENT) on the day of promise *(waʿd)* will be saved by discerning (aurally) the presence of the brazier near them. They will thus escape the terror (initially not visible) which will grip the damned.

The auditory contents can be positive but also entirely negative. A positive inspiration *(waḥī),* perceived as a distant and persistent noise like a roll of thunder, is contrasted to a category of very different noises (see REVELATION AND INSPIRATION). These are unexpected, furtive, worrying sounds which take one's hearing unawares. Even before Islam, they were to be classed as negatively supernatural. These collective obsessions are linked to a parallel world, conceived as dangerous, of jinn (q.v.) and desert beings (Wellhausen, *Reste,* 148-59; Eichler, *Die Dschinn,* 8-39; Niekrens, *Die Engel,* 65-7; see SPIRITUAL BEINGS). In the Qurʾān the collective representations of the jinn conclude by coalescing into the extremely negative form of *shayṭān,* the devil (q.v.). As for people who give them-

selves over to secret intrigues and assemblies, they, too, will be seen as participating in a jinn-like and diabolical activity. The Qurʾān therefore uses a largely recycled terminology ("une terminologie largement de remploi") relating to earlier usages which seem to be hardly changed.

The following roots link directly with the jinn and the diabolical world: *w-s-w-s,* from the connotation of a light, intermittent wind sound (see AIR AND WIND), the concealed approach of hunters laying an ambush (see HUNTING AND FISHING), or the muted jingling of jewelry worn by a woman, shifts to the confused and pernicious murmurs of Q 114:4-5. With a form of conspiracy, a jinn-like murmurer, *waswās,* passes furtively *(khannās)* after implanting an evil proposition in the breasts (the center of understanding; see HEART; KNOWLEDGE AND LEARNING; INTELLECT) of people *(nās)*. But God, whom nothing escapes, as the Qurʾān emphasizes constantly, is there to oppose this. In the later passages of Q 7:20 and 20:120, the association of *w-s-w-s* with the devil, *shayṭān,* becomes explicit (cf. Ṭabarī, *Tafsīr,* ed. Shākir, xii, 346-7, ad Q 7:20, *fawaswasa lahumā*).

The concealed whisper is negative, as in Q 20:108 (*hams,* the murmur), with respect to the damned (in this context, Q 20:108 must be read in conjunction with the preceding verses, esp. Q 20:103; cf. Ṭabarī, *Tafsīr,* ed. ʿAlī, xvi, 214, ad Q 20:103, *yatakhāfatūna baynahum*). Connected to the sphere of the secret word (*sirr;* see SECRETS) it is opposed to *jahr,* the word spoken clearly to be heard by everyone. But God knows both (i.e. Q 67:13). The *rikz,* however, the voice heard from so far away as to be almost imperceptible, is linked in a more neutral way to the very rich terminology of hearing in the desert world. In this environment one must listen constantly and alertly to protect oneself from danger. Q 19:98 indicates that one does not hear the least murmur *(rikz)* of the people in the past whom God destroyed (cf. Ṭabarī, *Tafsīr,* ed. ʿAlī, xvi, 134; see PUNISHMENT STORIES; GENERATIONS; GEOGRAPHY). It is a way of saying that no survivor has remained of them.

The theme of a hostile secret assembly looms large in qurʾānic discourse. It concerns both people and the devil simultaneously. The *takhāfut bayna,* a precise expression that designates the transferring of secrets, and so of offering a word that divides rather than unifies, occurs only twice, both in entirely negative contexts: Q 20:103, the damned who whisper, thinking they are not heard by God, and think they can escape punishment, and Q 68:23, the futile secret assembly of two greedy men whose plans God frustrates.

The terminology that conveys notions of dissimulation (q.v.; *katama, asarra* versus *aʿlana, jahara*) occurs most frequently. A commonly found meaning is that of voluntarily suppressing the truth, *katm al-ḥaqq,* and is applied often to the adversaries of Muḥammad in Medina (q.v.; i.e. Q 2:159; 21:110). The secret word (v. *asarra,* n. *sirr*) among men, against God, or that which is concealed by the individual (a thought formed in secret) — is in the same category (see also HIDDEN AND THE HIDDEN). But *sirr* and its cognates also has a wider meaning, both in Meccan and Medinan sūras (q.v.; Q 2:77; 16:19, etc.; see also CHRONOLOGY AND THE QURʾĀN). These words or secret thoughts cannot escape God (Q 64:4). More rarely one meets *ajwā, tanājī, najwā* (to speak into someone's ear in order to weave a plot, often in association with *asarra, sirr,* cf. Q 17:47; 20:62; 21:3). As for the terms linked to ruse and the intent to deceive *(makr, kayd, khadʿ, ibrām),* they refer to the whole process of deceit (see MAGIC)

and leading astray (*ḍalāl, taḍlīl;* see ERROR; ASTRAY). The devil, *shayṭān,* is associated with deceit but also with divinity; he has the same supreme power of deceiving any enemy, human or demon (Q 86:16; 13:42), and of foiling the most cunning plots hatched against him (e.g. Q 52:42; 4:76).

Widow

A woman whose husband has died. The Qurʾān speaks of the widow by addressing the male believers in Q 2:234-5 (see BELIEF AND UNBELIEF), who die leaving behind wives *(yadharūna azwājan).* The term itself has no Arabic equivalent in the Qurʾān though it is implied in the status of the *thayyibāt* in Q 66:5, which refers to any woman who is not a virgin (see CHASTITY; ABSTINENCE), a woman who has had sexual intercourse (see SEX AND SEXUALITY) either as a previously married woman, a divorced woman (see MARRIAGE AND DIVORCE) or a widow. In this particular verse, the wives of the Prophet (q.v.) are admonished for their jealousies and told that they could be replaced by other women (see WOMEN AND THE QURʾĀN). There follows a long list of desirable virtues (see VIRTUE; VIRTUES AND VICES, COMMANDING AND FORBIDDING) with the words *thayyibātin* and *abkāran,* virgins, at the end of the verse. The juxtaposition of the two words signifies that these qualities could belong to both sorts of women, "the women who are deflowered and whose virginity has gone and the virgins" (Ṭabarī, *Tafsīr,* ad loc.).

The first reference to the specific status of the widow is made in the context of verses pertaining to marriage and divorce. Inasmuch as every dissolution of a marriage that has been consummated, or even where there has been a presumption of consummation, requires the wife to observe a waiting period *(ʿidda),* so it is for the widow. The Qurʾān states specifically four months and ten days as the widow's *ʿidda.* This is longer than the *ʿidda* for the divorced woman, which is three menstrual cycles (Q 2:228; see MENSTRUATION). The primary legal concern (see LAW AND THE QURʾĀN) in the case of both the widow and the divorced woman is to ascertain whether or not the woman is pregnant with her husband's child (see CHILDREN). In such cases, the widow should not remarry until she has given birth (q.v.) to the child. Once she has given birth, she is free to remarry and the full period of *ʿidda* need not be observed (see WAITING PERIOD).

In the case of the widow, the time of *ʿidda* is longer, as it is also a time of mourning for the deceased husband (see BURIAL; DEATH AND THE DEAD). There is, however, no indication in the Qurʾān that the woman's position as a widow should be seen as either a social stigma or a disadvantage to her. Widowhood is understood to be a temporary situation. Q 2:235 speaks immedi-

ately to those men who would wish to ask for the widow's hand in marriage. It is appropriate that they do so openly and not in secret once the woman has observed her period of *ʿidda.*

Q 2:240 explains what men should bequeath to their widows in terms of financial and residential support (see INHERITANCE; MAINTENANCE AND UPKEEP). A widow should be entitled to a year's maintenance and full residence in the husband's home. If, however, she herself chooses to leave the home, she is entitled to do so. Q 4:12 refers to inheritance rights in which the widow is entitled to a quarter of her husband's property (q.v.) if he leaves no children and an eighth if he leaves children.

In the legal discussions on *mahr* (dower paid to the wife on marriage; see BRIDEWEALTH), widowhood is one of the three situations, along with consummation and divorce, which confirms the payment of the full *mahr* to the wife. Even if the husband dies before the marriage has been consummated, the widow is entitled to the full *mahr* because "by the death of the husband, the marriage is rendered complete. For everything becomes established and confirmed by its completion, and becomes established with respect to all its effects" (Marghinānī, *Hidāya,* i, 204).

Wine

Intoxicating beverage made from fermented grapes or other substances. The most common word for wine in the Qurʾān is *khamr,* a term prevalent in early Arabic poetry, although the Arabs of the peninsula customarily drank *nabīdh,* a fermented beverage made, for example, from barley, honey, spelt or different kinds of palms. While the climate and geography of much of "Arabia" is not suitable for wine production, parts of the Yemen, as well as areas such as Medina and Ṭāʾif, would have had the necessary conditions for the cultivation of grapes. Wine was also imported from Syria and Iraq, particularly through the agency of the Jewish and Christian communities in the peninsula (the Arabic *khamr* may derive from the Syro-Aramaic *ḥamrā*).

The qurʾānic *khamr* marks both earthly and paradisiacal vintages (see FOOD AND DRINK; PARADISE). Unlike later Islamic exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), who privileged a limited set of wine references to support its strict prohibition, the Qurʾān expresses a highly nuanced and largely ambivalent attitude towards this beverage and its effects (see INTOXICANTS; LAW AND THE QURʾĀN). *Khamr* is linked with gambling (q.v.) and identified as a source of both sin and profit (Q 2:219; see SIN, MAJOR AND MINOR), with gambling, idol worship (see IDOLS AND IMAGES; POLYTHEISM AND ATHEISM) and divination (q.v.) arrows, and labeled an abomination (Q 5:90-1). Joseph's dreams (see DREAMS AND SLEEP) in prison

feature *khamr* (Q 12:36, 41), and dwellers of paradise delight in rivers of wine (Q 47:15; see McAuliffe, Wines). In addition to *khamr, sakar* appears as an inimical earthly intoxicant (cf. Q 4:43) that undermines prayer (q.v.) but also serves as a divine gift (Q 16:66-9; see GIFT AND GIFT-GIVING), a sign (*āya;* see SIGNS) for those who understand (see INTELLECT; KNOWLEDGE AND LEARNING). Also mentioned is *raḥīq,* the purest, most excellent of heavenly wines (Q 83:25) and a celestial goblet (see CUPS AND VESSELS) with liquid from a pure spring *(maʿīn)* mirroring its earthly counterpart in every way but its ability to intoxicate (Q 37:45; 56:18-19). Throughout the shorter sūras (q.v.) of the Qurʾān, a chaotic, intoxicated madness that marks the day of judgment (see LAST JUDGMENT) contrasts sharply with the tranquil, perfected garden of repose (see GARDENS), where righteous ones imbibe as much wine as they please without the drunken effects. This tension between the real and the ideal may also account for the Qurʾān's sober portrayals of Noah (q.v.) and Lot (q.v.), men all too familiar with the pleasures of the vine in their Jewish and Christian contexts (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY) but pillars of abstinence (q.v.) in the Islamic revelation (see REVELATION AND INSPIRATION; SCRIPTURE AND THE QURʾĀN), where their actions must match the integrity of the message they bear. Even servants of God (see SERVANT; WORSHIP) may fall prey to wine's earthly enticements. The Qurʾān's ambivalent treatment of wine was resolved by early exegetes, who determined the historical "occasion" upon which God revealed each wine passage (see OCCASIONS OF REVELATION). By examining such passages sequentially, qurʾānic commentators noted a gradual diminution in tolerance toward wine consumption (see ABROGATION; FORBIDDEN; LAWFUL AND UNLAWFUL). Al-Ṭabarī (d. 310/923; *Tafsīr,* v, 58) records how God allowed humans to enjoy his gift until they proved incapable of drinking responsibly. After a series of such atrocities, like the Prophet's uncle mutilating ʿAlī's camel in a fit of drunkenness, God finally prohibited wine. While both Sunnī and Shīʿī schools of law assert the prohibition of wine (a position that critiques the pre-Islamic, libertine position; see AGE OF IGNORANCE; PRE-ISLAMIC ARABIA AND THE QURʾĀN), dissensions over what constitutes "wine," or whether the substance itself or only its effects are prohibited, can be detected in legal discussions surrounding this beverage. The Ḥanafīs, for example, note that since the Qurʾān only condemns *khamr,* the prohibition of *khamr* should not extend to other alcoholic beverages. Contrary to this view, the majority opinion emphasizes a drink's potential to intoxicate over and above its composition and forbids intake of any amount of liquid if it causes (or may potentially cause) one to become drunk. The law extends well beyond mere consumption to include the production and sale of alcoholic beverages under penalty of punishment (see BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT). Despite its prohibition, wine becomes a favorite metaphor of mystics (see ṢŪFISM AND THE QURʾĀN), who exploit the Qurʾān's ambivalence towards this potent substance to confuse the boundaries that separate sobriety from intoxication, licit from illicit, human from divine and, ultimately, real from ideal.

Winter see SEASONS

Wisdom

Ability to understand deeply and judge soundly. God is wise *(ḥakīm)*. He is, however, never described by this characteristic alone, but always in conjunction with another characteristic. *Ḥakīm* is most frequently connected with *ʿazīz,* "almighty" (forty-seven times; see POWER AND IMPOTENCE), and almost as frequently is God described as *ḥakīm* and *ʿalīm,* "omniscient" (thirty-six times; see KNOWLEDGE AND LEARNING; INTELLECT). *Ḥakīm* with *khabīr,* "knowing," is rare (three times) and even rarer are the occurrences of *ḥakīm* with "forgiving" *(tawwāb),* "all-embracing" *(wāsiʿ),* "praiseworthy" *(ḥamīd),* and "exalted" (*ʿalī;* see GOD AND HIS ATTRIBUTES).

God possesses wisdom *(ḥikma),* which he can give "to whom he wishes" (Q 2:269), mainly to the prophets (see PROPHETS AND PROPHETHOOD; MESSENGER): Abraham (q.v.) and his family (Q 4:54), David (q.v.; Q 2:251; 38:20), Jesus (q.v.; e.g. Q 5:110; 43:63) and Muḥammad (Q 4:113), but also to Luqmān (q.v.; Q 31:12). Wisdom is a revelation (e.g. *awḥā,* Q 17:39; see REVELATION AND INSPIRATION) and the Qurʾān is also "wise" (*al-Qurʾān al-ḥakīm,* Q 36:2; see NAMES OF THE QURʾĀN), for wisdom stands on an equal footing with scripture (*kitāb;* see BOOK; SCRIPTURE AND THE QURʾĀN), including the Torah (q.v.) and the Gospel (q.v.; Q 3:48; 5:110). God teaches scripture and wisdom (e.g. Q 3:48; see TEACHING): he sends down scripture and wisdom (Q 2:231). It remains unclear whether in such collocations "wisdom" means another holy scripture or is a summative reference to the contents of those holy books just mentioned. The task of the messenger or prophet is to deliver the scriptures together with wisdom to the people (cf. Q 2:151; 43:63), or to recite the scripture and wisdom to the people (cf. e.g. Q 33:34; 62:2; see RECITATION OF THE QURʾĀN; ORALITY AND WRITING IN ARABIA). Qurʾān commentators understand *ḥikma* as knowing and understanding the Qurʾān, or as understanding and reflecting on the religion, or even as fear (q.v.) of God (godliness, devoutness, piety [q.v.]; *khaysha, waraʿ,* Ṭabarī, *Tafsīr,* iii, 60f.; Qurṭubī, *Jāmiʿ,* iii, 330; Ibn Kathīr, *Tafsīr,* i, 571f.).

God is the omnipotent, omniscient creator of the world (q.v.; see also CREATION; COSMOLOGY), in which the wisdom of God reveals itself, the recognition of which is the task of the wise. *Ḥikma,* as human wisdom, is understood in two ways. First, Greek philosophy *(falsafa),* natural science and medicine in its Arabic-Islamic form are *ḥikma*. Thus the biographical lexicons for philosophers, natural scientists, physicians, etc. are called *taʾrīkh al-ḥukamāʾ* — for example, Ibn al-Qiftī's (d. 646/1248) *Taʾrīkh al-ḥukamāʾ;* additionally, accounts and collected works are called *ṣiwān al-ḥikma* (e.g. al-Bayhaqī's *Tatimmat ṣiwān al-ḥikma;* see SCHOLARS; SCIENCE AND THE QURʾĀN; MEDICINE AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN).

In devout-mystic circles, *ḥikma* is wisdom delivered through the pronouncements of wise men *(ḥukamāʾ)* mostly anonymously: edifying, devout and mystic aphorisms. In

this context, in the third/ninth century, *ḥikma* becomes mystical wisdom and also theosophy (see ṢŪFISM AND THE QURʾĀN). Of this, the best example is the east Iranian mystic al-Ḥakīm al-Tirmidhī (who died between 318/936 and 320/938). For him, *ḥikma* is the mystic knowledge of the soul (q.v.) and the world. A further step was the syncretic mingling of the more mystical *ḥikma* — theosophy — with Greek philosophy and non-Islamic religious concepts. This occurred in the systems of Suhrawardī (d. 587/1191) and Ibn al-ʿArabī (d. 638/1240).

Lastly, for the gloss of *al-ḥikma* (in *al-kitāb wa-l-ḥikma* of e.g. Q 2:129) as *sunnat al-nabī*, see SUNNA.

Wish and Desire

The act of hoping for or wanting something and the object of that act. There are three main agencies through which wish and desire are exercised in the Qurʾān: one is divine, another human, and the third satanic (see DEVIL). The manifestations and the interplay of the three create an ethical tension (see ETHICS AND THE QURʾĀN) that evokes questions of accountability, responsibility (q.v.) and justice (see JUSTICE AND INJUSTICE). In that sense, wish and desire become the principles whereby the subject and the object are placed into a value-laden relationship. Be it an act of God, Satan, or the human being, wish and desire are a function of the subject's awareness and expectations of the object. Among the three, God's wishes are mentioned most frequently. The phrase "God willing" *(in shāʾa llāh)* is both common and varied, indicating that God's wishes are exercised at both cosmic and everyday levels (see COSMOLOGY). Like many other passages, Q 5:17 affirms that it was through God's wish/will that the world came into being *(yakhluqu mā yashāʾu)* in such a way that associates his wishing with his infinite power (*wa-Allāh ʿalā kulli shayʾin qadīrun;* see POWER AND IMPOTENCE; FREEDOM AND PREDESTINATION). As divine wish is inextricably linked with divine omnipotence, it is continuously carried out within and beyond worldly limits (see WORLD). No wonder then that the verb *shāʾa* and its derivatives appear over 500 times in the Qurʾān, mainly in reference to God.

Although at first glance God's wishes appear volatile and unpredictable, the Qurʾān ascertains that their function and purpose can be appreciated only after the human mind accepts its own limitations (see INTELLECT; KNOWLEDGE AND LEARNING). In Q 18:23-4, the Qurʾān warns: "And do not say anything like 'I will surely do this tomorrow.' Unless God wishes, and remember your lord (q.v.) when you forget (see REMEMBRANCE; MEMORY) and say, 'Maybe my lord will guide me (see ASTRAY) to a nearer way to truth (q.v.) than this.'" Historically understood as a response to Muḥammad's negligence when he answered a Quraysh inquirer (see QURAYSH) with inappropriate self-confidence — "Come tomorrow and I will surely give you an answer" but without adding the phrase *in shāʾa llāh* — this verse was ostensibly intended to highlight the unpredictability of divine volition even in the context of Muḥammad's own prophetic mission (see PROPHETS AND PROPHETHOOD). Reflecting upon this essential dependability on, yet inacces-

sibility to, divine wishes, classical Muslim exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) interpret the ubiquitous *in shā'a llāh* phrase in relation to their theological positions on free will and predetermination. Al-Rāzī (d. 606/1210), for example, develops a lengthy argument by contrasting the Mu'tazilī (see MU'TAZILA) and his own Ash'arī positions and concludes that: one, we can never be sure that we will/can do anything until God gives us permission; and, two, we should never anticipate future events because, if they prove to be different, we will be deemed liars (see LIE; FORETELLING; THEOLOGY AND THE QUR'ĀN). He charges the Mu'tazila with transferring the agency of wishes and desire to human beings rather than leaving it with its divine source. When God asks for belief (see BELIEF AND UNBELIEF) and obedience (q.v.) and his servants disobey (see DISOBEDIENCE), al-Rāzī continues, God's wishes are not fulfilled. In contrast, he holds that everything that God wills must happen: for example, if a man says, "Tomorrow I will return the debt I owe, if God wills," and if he fails to do it, he cannot be blamed because this was clearly God's wish and we can either understand it or not. He contrasts this interpretation with that of the Mu'tazila, according to which it is the man who is to blame if the debt is not returned because man's evil nature (see GOOD AND EVIL; FALL OF MAN) prevents him from doing what he has promised (Rāzī, *Tafsīr*). Al-Rāzī's interpretation poignantly relates to Q 81:27-9 which says, "This is surely a reminder to all human beings *(lil-'ālamīna),* and those among them who wish to change their ways *(an yastaqīma);* you cannot wish but what God, the lord of all worlds, wishes" (the wording almost identical to Q 76:29-30).

In addition to *shā'a,* God's wishes are also expressed through the verb *arāda*. Although often used synonymously with *shā'a, arāda* evokes more strongly divine intentionality, as in Q 2:26: "What does God intend/mean *(mādhā arāda)* by this parable (q.v.)?" Reflecting thus with divine deliberation, *arāda* attempts to lay out the inner workings of the divine order in the implementation of God's desires, as per Q 16:40: "Truly, when we refer to a thing, if we want it to be *(idhā aradnāhu),* we just tell it 'Be!' and it is." God does not desire without a purpose but the speculations of what that purpose might be yields different theological possibilities.

While continuously attesting to the power of divine desire, both *shā'a* and *arāda* place human beings in a direct and dynamic relationship with it. But the nature of that relationship is far from simple. In fact, its complexity has created a theological conundrum and the rise of several scholastic positions on the questions of free will and predestination. Can human beings act on their own wishes and desires? Do these desires predate them in accordance with the divine plan? Notwithstanding the theological and political implications of such questions in Islamic history, it is clear that the Qur'ān keeps the tension among different possibilities alive, placing divine and human wishes simultaneously in harmony and conflict, and perpetuating sharp ethical differentiations between the wishes and desires of believers and those of nonbelievers. There are no simple answers in the Qur'ān or in the later intellectual tradition, even though the message seems rather straightforward, as Q 6:125 states (similarly, in Q 5:41; 6:17, 125; 7:176; 10:107; etc.): "Whomever God wishes to guide, he opens his heart (q.v.) to Islam; whomever God wishes to lead astray, he restricts his heart, as if he is rising to heaven (see HEAVEN AND SKY). This is how God inflicts punishment (see CHASTISEMENT AND PUNISHMENT) on those who do not believe."

In this sense, because the relational function of divine desire necessitates reciprocity, many qurʾānic passages posit human beings not only as objects of God's wishes and intentions but as subjects/agents exercising their own desires. It is here that the Qurʾān draws a sharp distinction between believers and nonbelievers. Believers surrender to God's wishes and, in turn, become conscious of, and act on, their desires for divine grace (q.v.) and mercy (q.v.). Nonbelievers, on the other hand, reject God and direct their desires elsewhere, for which they become eternally condemned, as in Q 18:29, "Say, The truth comes from your lord; whoever so wishes, let them believe; whoever wishes, let them disbelieve," upon which the Qurʾān details the difference in the outcome of the two choices for the condition in the hereafter (Q 18:30-44; see ESCHATOLOGY; REWARD AND PUNISHMENT). Human desire directly reflects both one's knowledge of God and one's system of belief (see FAITH; RELIGION). Those who lived in the pre-Islamic Age of Ignorance (q.v.; *jāhiliyya*) are accused not only of their ignorance (q.v.) of the creator (see CREATION) but of the stubborn, blinding urge to fulfill their desire for material and visible goods (see WEALTH; INSOLENCE AND OBSTINACY): "There is only our life in the present world; we die (see DEATH AND THE DEAD), we live (see LIFE), and only fate (q.v.)/time (q.v.; *al-dahr*) destroys us" (Q 45:24). The pursuit of this-worldly desires is a pursuit for self-realization that reflects the pre-Islamic teaching that all sensations and experiences belong to the physical world only, in contrast to the qurʾānic cosmos in which the greatest self-fulfillment comes in the hereafter, as worded in Q 87:16-17: "No, you prefer the life of this world; whereas the hereafter is superior and lasting" (see TRANSIENCE; ETERNITY). Human desires are thus bifurcated into those that are low and worldly, characteristic of a conduct inspired by one's whims and fancies (*ahwāʾ* [sing. *hawā*], appearing numerous times, e.g. Q 3:14; 18:28; 20:16; 25:43; 28:50; 42:15; 45:18), and those that are ethically sound and inspire to behave and do one's duty as a servant (q.v.) of God. An example of this distinction is those incidents at the early stages of Muḥammad's career when pagan Arabs hurled accusations at him and the Qurʾān responded (Q 53:2-3): "No, your companion has not strayed away nor has he erred, and he does not speak on a whim (*mā yanṭiqu ʿani l-hawā;* see OPPOSITION TO MUḤAMMAD; PRE-ISLAMIC ARABIA AND THE QURʾĀN)."

In addition to the ethics of desire-driven behavior, the issue of human wishes and yearning acquires another interpretative trajectory, associated with the Ṣūfī worldview (see ṢŪFISM AND THE QURʾĀN). For the Ṣūfīs, a *ḥadīth qudsī* (see ḤADĪTH AND THE QURʾĀN) exemplifies the principle of the relationship between God and human beings: "I was a hidden treasure and I longed to be known, so I created the world." The desire for self-reflection is believed to inspire the very act of creation. Focusing on the language of love (q.v.) and yearning that permeates much of the Qurʾān (e.g. Q 2:165, 195; 49:9; 57:19, 23; 60:1, 8; etc.), the mystics define desire as a spiritual propeller that allows the wayfarer (see JOURNEY) to achieve closeness with God. The wayfarer is often referred to as the *murīd* — the active participle form of *arāda* — in accordance with the aforementioned double-entendre of *arāda,* to want and to intend. The desire for God is personalized as both affection and primordial yearning for beatific vision (see FACE OF GOD), in accordance with not only the *ḥadīth qudsī* mentioned above, but also with the qurʾānic phrase *ibtighāʾa wajhi llāh,* "out

of yearning for God's face," that appears in Q 2:272, 6:52 and 92:20. After all, it is only God's face that lasts forever while everything else perishes (Q 28:88). Desiring it (both *arāda* and *ibtaghā* are used in the Qurʾān) is therefore the only ultimate kind of desire and yearning a believer can have in this self-reflective genesis of creation.

Finally, in the ethical triangle of wishing/desiring, Satan's role in splitting humankind into believers and nonbelievers is instrumental: *wa-yurīdu l-shayṭānu an yuḍillahum ḍalālan baʿīdan* (Q 4:60; see PARTIES AND FACTIONS; ENEMIES). The Qurʾān repeatedly mentions Satan's desire to confuse and lead humankind astray as a vindictive reaction against his expulsion from heaven. Satan's rebelliousness (see REBELLION; ARROGANCE) is thus expressed through his desires to intervene at the level of human action. Because metaphysically speaking Satan is neither superior nor equal to God, his desires do not pose a competition to God's nor do they overrun them. Rather, being more powerful than inferior human beings, Satan desires to confuse them about the nature of divine commands, leading them away from God's path (e.g. Q 4:48, 60; 22:52; see PATH OR WAY), making them forget God (Q 5:91), tempting them with various promises which he never fulfills (Q 4:120; 7:20; 8:48; 14:22, etc.) and ever deceiving them (Q 4:76; 24:21; 58:10; see JOY AND MISERY). Satan thus redirects human desire from God to himself, turning himself into the false object of desire: "God made a true promise to you (see COVENANT). I too made promises, but did not keep them. I had no authority over you, but when I called out to you, you answered. Do not blame me; blame yourselves." Those who, against God's warnings (e.g. Q 7:27, "Children of Adam, do not let Satan seduce you"; see ADAM AND EVE; OATHS; BREAKING TRUSTS AND CONTRACTS), respond to Satan, are doomed, as in Q 43:36: "And whoever turns away from remembrance of the compassionate (see GOD AND HIS ATTRIBUTES), we shall assign Satan to be his companion."

Divine wishes thus tower over both human and Satanic ones, keeping the two in a tension that creates a range of possibilities that people can choose once they are offered the knowledge of God's path. This interplay functionally separates the three agents only in the realm of individual action, laying out specific guidelines for practical judgments as well as inducing divergent theological debates on the issues of accountability, justice and responsibility. In the cosmic scheme of things, however, divine wishes prevail and reflect the integrity and omnipotence of God's plan to make all human beings aware of the ways to realize their ultimate desires. Regarding the theological matters of agency, Muslim orthodoxy eventually found a middle ground that, no matter what the subjective reasons for acting on one's desires through the principles of acquisition *(kasb)* may be, the epistemic frame of reference is unwavering, stable, and clear. The Ashʿarīs sum up this position in the following terms:

His will is one, everlasting, connected to all willing from his own actions, and the actions of his servants insofar as they are created for him, not insofar as they are acquired from them. From that, he said that he willed everything, good and bad, beneficial and harmful, just as he willed and knew it to be. He willed from his servants what he knew and what he commanded his pen (see WRITING AND WRITING MATERIALS) to write on the preserved tablet (q.v.). That is his decree, ruling, and predetermination which never changed and can never be replaced. It is

impossible for anything to be against what is known and predetermined in form in this manner (from Shahrastānī, *Milal,* i, 66-9; trans. M. Sells, *Early Islamic mysticism,* 320).

Witness to Faith

Arabic *shahāda,* i.e. the statement "I testify that there is no god but God and I testify that Muḥammad is the messenger of God," *ashhadu an lā ilāha illā llāh wa-ashhadu anna Muḥammadan rasūlu llāh*. The utterance of the statement in Arabic is required of all Muslims to signify acceptance of Islam and thus it must be said at least once, with full intention, in a lifetime. The *shahāda* also plays a central role in the structure of the daily prayer (q.v.; *ṣalāt*) as well as in other life-cycle occasions and thus is repeated frequently in a Muslim's life. In the Qurʾān the statement itself is not found as a formula nor is there indication of the ritual act which later Islam has made it (as one of the five pillars; see RITUAL AND THE QURʾĀN). The content of the statement, however, and the phraseology of the two elements (known as the *shahādatāni*) of the *shahāda* are in the Qurʾān, as is a very strong sense of the role of "witnessing" one's faith (q.v.; see also BELIEF AND UNBELIEF; WITNESSING AND TESTIFYING).

Proclaiming the unity of God

"There is no god but God" is found in the Qurʾān in the exact phrasing of the *shahāda* only in Q 37:35 and Q 47:19. The first of these passages is especially interesting given the development of the ritual *shahāda,* since it speaks of an oral profession of the statement in front of unbelievers (see ORALITY; GOD AND HIS ATTRIBUTES). Verses 34 through 36 of Q 37 state: "Even so it is with the sinners (see SIN, MAJOR AND MINOR). When it is said to them, 'There is no god but God,' they wax proud (see PRIDE; ARROGANCE) saying, 'What, shall we forsake our gods for a poet possessed (see POETRY AND POETS; INSANITY; JINN)?' " Q 47:19 is a command to believers but not one entailing ritual testimony: "Know therefore that there is no god but God and ask for forgiveness [q.v.; of your sin]." Given this, it would be accurate to suggest that the performative aspect of the statement of the oneness of God as it is expressed in the *shahāda* is clearly post-qurʾānic. That said, it is worth remembering that the statement, "There is no god but he," *lā ilāha illā huwa,* is a constant refrain in the Qurʾān, found over forty times with some variations, including "There is no god but I" and "There is no god but you" (e.g. Q 2:163; 16:2; 21:87). Sometimes (e.g. Q 2:255) this is prefaced by the word "God," *Allāh lā ilāha illā huwa,* "God, there is no god but he!" In Q 3:62 and Q 38:65 the phrasing of the negative in the statement "There is no god but God" is another variant of the ritual *shahāda,* using *wa-mā min ilāhin* rather than the particle of absolute negation, *lā* (see GRAMMAR AND THE QURʾĀN). The theological position of "There is no god but God" is a major

theme of the Qurʾān, even if the precise way in which that is ritually expressed in Islam is, at best, latent in the text.

The non-qurʾānic status of the precise phrasing (as well as some variability in how the statement was to be expressed in the early centuries of Islam — on which see below) has led some to seek the background to the phrase outside the Islamic context. Attention has been drawn to the Samaritans (q.v.) as having a parallel formulation (Baumstark, Herkunft; Macuch, Vorgeschichte).

Proclaiming Muḥammad's status

The figure of the "messenger of God" is a constant presence in the Qurʾān with phrases such as "He is the messenger of God" in Q 49:3 and proclamations such as "I am the messenger of God" in Q 7:158 (see MESSENGER). References to "God and his messenger" with variants such as "me and my messenger" also abound (e.g. Q 4:13, 136; 5:111, with Jesus as the messenger; 9:62). The precise phraseology "Muḥammad is the messenger of God" is, however, included in scripture only once, in Q 48:29. The context there is a statement of fact and not of ritual enunciation: "Muḥammad is the messenger of God and those who are with him are hard against the unbelievers, merciful to one another (see MERCY)." The other three instances of the use of the proper name Muḥammad (q.v.; see also NAMES OF THE PROPHET) in the Qurʾān (Q 3:144; 33:40; 47:2) do not suggest any notion of a ritual formula.

The emergence of the formula of the shahāda

Within the early Islamic period the *shahāda* and variations on it emerged as identifiers of Islamic allegiance, being found on coins and in inscriptions dating from the first Muslim century (see EPIGRAPHY AND THE QURʾĀN; NUMISMATICS; MONEY). It is during this period that the *shahāda* clearly gained status and, eventually, a set formulation. The precise phrasing of the statements displays some variation over time. Commonly the word "alone" (*waḥda* or *wāḥid*), is added after *Allāh,* perhaps picking up on the phrasing of Q 6:19 (cf. Q 18:110, etc.), which states, *huwa ilāhun wāḥidun,* "He is one god." This phrase, as found in coins and inscriptions, is often followed by "He has no partner," *lā sharīka lahu* (as found in Q 6:163; see POLYTHEISM AND ATHEISM). A typical example of this formulation is found in the wall mosaic located in the ruins of some Umayyad shops in Baysān (today, Bet Shean, in Israel) dating from earlier than 131/749 (when the town was destroyed by an earthquake). This inscription reads, "In the name of God, the merciful, the compassionate. There is no god but God alone; he has no partner. Muḥammad is the messenger of God" (Khamis, Two wall mosaic inscriptions, 163). The examples of coins with the phrasing "There is no god but God alone" from the post-ʿAbd al-Malik monetary reform period are well known. Examples still exist from as early as the years 77/696 and 78/697. Those coins often add the phrase "Whom he sent with guidance (see ASTRAY) and the religion (q.v.) of truth (q.v.), that he might make it victorious (see VICTORY) over all religions" (cf. Q 9:33; 48:28; 61:9; for examples see Walker, *Catalogue*). The existence of these phrases on coins might suggest that, at this time, the ritual status and formulation of the *shahāda* had not yet been reached. The same observation may be made for the inscriptions in the Dome of the Rock in Jerusalem (q.v.) dating from the same period. Even in the ḥadīth literature of the third Muslim century/ninth century C.E. (see ḤADĪTH AND THE QURʾĀN), the place and the formulation of the *shahāda* as an independent ritual activity (outside of its

incorporation into the prayer ritual) appears to be not yet completely fixed (see Rippin, *Muslims,* 98-100; Wensinck, *Muslim creed,* 27-35).

"Witnessing" as a qurʾānic theme

The Qurʾān uses the root *sh-h-d* some 200 times in a variety of senses, some of which may be connected with the sense of "giving witness to faith," thus providing impetus, it may be thought, to the development of the *shahāda* as a ritual activity.

There are two main senses of witnessing in the Qurʾān. One relates to matters of faith and the other, to various legal matters (see LAW AND THE QURʾĀN). While it may be argued that there is a relationship between those two, especially since God is described as *al-shahīd,* the witness over everything (e.g. Q 58:6; 85:9), the emphasis on a notion of testifying specifically to one's faith, a notion which is not present in the legal "witness" passages, suggests that at least a theoretical separation is possible.

On the legal side, the Qurʾān speaks of witnesses as needing to be involved in various commercial and personal transactions (see CONTRACTS AND ALLIANCES). Such witnessing is deemed evidence and the words *bayyina,* "evidence," and *shahāda,* "witnessing," are often used interchangeably. The Qurʾān (e.g. Q 2:282; 4:15; 24:4) requires such witness-evidence from people in a number of situations, including lawsuits, matters regarding the status of persons (marriage, divorce, manumission, bequest; see MARRIAGE AND DIVORCE; SLAVES AND SLAVERY; INHERITANCE), financial matters and *ḥadd* offences (i.e. those which involved prescribed penalties such as fornication, adultery, manslaughter and so on; see BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT; ADULTERY AND FORNICATION; MURDER; BLOODSHED).

Of its religious uses the first thing to note is that witnessing is not passive but active. It is a demand to "bear witness" or to "testify." Q 3:64 states, "If they [the People of the Book (q.v.)] turn back, say, 'Bear witness that we are Muslims.'" Q 2:143 has biblical resonances in stating, "Thus we have made you a middle nation that you might be witnesses to the people and the messenger a witness to you." It is relevant to the development of the *shahāda* as a spoken ritual activity that God bears witness to his oneness in Q 3:18, "God bears witness that there is no god but he," and believers bear witness to the truth of Muḥammad's message in Q 3:86, "How can God guide those who disbelieve after they have accepted faith and testified that the messenger was true and that the clear signs (q.v.; see also VERSES) had come to them?" Statements close to both elements of the *shahāda* are thus found in the Qurʾān in a context which suggests an active process of witnessing.

Martyrdom as witnessing faith

The semantic link between "witnessing faith" (being a *shāhid*) and being a "martyr" *(shahīd)* — two terms and usages clearly separated in later Islamic times — is not evident in the Qurʾān (see MARTYRS). Goldziher (*MS,* ii, 350-4) argued that the development from witness to martyr derived from Christian Syriac usage of the cognate *sāhdā* in translating the Greek *martus*. Those who are spoken of as "witnesses to faith" in the Qurʾān (either *shuhadāʾ,* the plural of *shahīd,* as in Q 3:140; 4:69; 39:69; 57:19, or *shāhidūn* in Q 3:53; 5:83, etc.) fit within the meaning sketched above of those who "testify" to their faith in God and Muḥammad (the plural uses of the word as "legal witnesses" are clearly separated). Many commentaries, however, interpret *shuhadāʾ,* especially in Q 3:140, in the sense of "martyr" by connecting it to the context of the battles of Badr (q.v.) and

Uḥud which occurred during the lifetime of the Prophet (see EXPEDITIONS AND BATTLES). The early authority Ibn Jurayj is reported by al-Ṭabarī (d. 310/923; *Tafsīr,* vii, 243, report no. 7915) to have said regarding "So that God may know those who believe and may take witnesses/martyrs from among you" (Q 3:140), that the Muslims used to petition their lord (q.v.) by saying, "Our lord, show us another day like the day of Badr in which we can fight the polytheists, strive well in your cause, and seek therein martyrdom." That prayer was said to have been answered at Uḥud because, on that day, the Muslims met the polytheists in battle and God chose martyrs from among them. Such readings of these verses are also found in very early exegetical works; the meaning of the *shuhadāʾ* as "those martyred in the path of God" is, for example, the fourth of six meanings given to the word by Muqātil b. Sulaymān (d. 150/767) in his *al-Ashbāh wa-l-nazāʾir fī l-Qurʾān al-karīm* (148-9) connected to Q 4:69 and Q 57:19 (see PATH OR WAY). As Goldziher has pointed out, however, the more standard qurʾānic phrase for referring to the martyrs who die in battle is "those killed in the path of God" (e.g. Q 3:169, "Think not of those who are slain in the path of God as dead! They live, finding sustenance [q.v.] with their lord"; see DEATH AND THE DEAD; REWARD AND PUNISHMENT; PARADISE). Be that as it may, it is clear that by the time of the ḥadīth literature, *shahīd* as "martyr" is well established, with martyrdom understood in a very broad sense, not limited to those killed in battle, and often carrying an implicit criticism of those who seek death in order to gain the status of the martyr.

The shahāda *in theology*

The ritual repetition of the *shahāda* is often treated as the core or ground level of faith, *īmān,* as a whole. In many discussions, the profession of the *shahāda* is the one action required for someone to be considered a Muslim. Questions about the status of works beyond that required profession produced the debates about the role of works in the life of the believer in Islam (see GOOD DEEDS; THEOLOGY AND THE QURʾĀN). Most famously, this related to the discussion of the status of the "believing sinner" which, in the extreme case, applied to someone who only said the *shahāda* but whose actions were otherwise not in keeping with Islamic requirements. In later Muslim times, likely starting with al-Ghazālī (d. 505/1111), the *shahāda* was understood as the creedal statement of Islam, providing the basis for the discussion that characterized all theology as an explanation of the two sentences of the *shahāda* (Wensinck, *Muslim creed,* 270-6).

Witnessing and Testifying

Perceiving something and giving evidence of it. These two notions are distinct from each other but interrelated, insofar as the one is the prerequisite of the other. Also, the act of perception results in knowledge that can later be passed on, and so may be considered to be oriented towards the future; bearing evidence, by contrast, refers to the past. Thus, witnessing and testifying establishes a chain of information, with the witness serving as a connecting link between a past event and a person inquiring about it. From an epistemological point of view, however, this chain consists of two different relationships. On the one hand, the witness' relationship to the event in question is normally characterized by trust in his own perception; the inquirer, on the other hand, must always decide whether the witness is credible and, therefore, whether the information he is obtaining is true. Since the practice of witnessing and testifying is one of the most important methods of arriving at a decision in the field of law, formulating criteria to ensure the credibility of the witness has always been of pivotal importance.

The Arabic counterpart to the English notion of "witnessing and testifying" is derived from the root *sh-h-d,* which occurs 160 times in the Qurʾān, mainly in the first verbal form. The verb *shahida* (44 times) covers a set of notions that includes: first, "to be present (at)" or "to be (eye)witness (of)" (with acc.: e.g. Q 2:185; 12:26; 27:49; 43:19); second, "to bear evidence of something" (*bi-,* seldom *ʿalā*), or "against someone or oneself" (*ʿalā;* e.g. Q 6:130; 12:81; 41:20; 46:10); and, third, "to declare" or "to profess" (with acc. or *anna,* "that"; e.g. Q 3:81; 7:172; 11:54; 25:72; with even God as its subject: Q 3:18). Likewise, the active participle *shāhid* (21 times, including its plural forms *shāhidūn, shuhūd* and *ashhād*) and the verbal adjective *shahīd* (56 times, including the dual *shahīdān* and the plural *shuhadāʾ*) mostly refer to the eyewitness of deeds and events (e.g. Q 4:72; 12:26; 28:44), to the witness who gives evidence in the court either in this world or in the hereafter (e.g. Q 4:166; 24:4; 40:51; see JUDGMENT; LAST JUDGMENT) and to the witness who attests to his faith (q.v.) or beliefs (e.g. Q 3:53; 6:150; 46:10; not *shahīd*).

Finally, the verbal noun *shahāda* (26 times) signifies the "manifest" in contrast to *al-ghayb,* "the hidden" (see HIDDEN AND THE HIDDEN), in the recurrent formula *ʿālim al-ghayb wa-l-shahāda* ("[God] knower of the unseen and the visible"; e.g. Q 6:73; 9:94; cf. 6:19). It also denotes witnessing the conclusion of an agreement (e.g. Q 2:282; 5:106; see CONTRACTS AND ALLIANCES) and testifying to one's knowledge (e.g. Q 2:140; 24:4; see KNOWLEDGE AND LEARNING), while in Q 24:6, 8 its meaning comes close to that of an oath (see OATHS). There are, however, several instances where it is not easy to determine in which sense words derived from the root *sh-h-d* should best be understood (e.g. Q 3:18, 99; 11:17; 46:10; 74:13; 83:21).

At any rate, due to its complex shades of meaning, the term *shahāda* with its derivations gained central importance in three different fields of Islamic culture. It refers, first, to witnessing in a judicial context, second, to the credo statement, "I confess *(ashhadu)* there is no god except God, Muḥammad is the messenger of God" (see WITNESS TO FAITH) and third, to martyrdom (see MARTYRS).

Two types of witnesses: attesting and testifying

In the Qurʾān, the notion of witnessing is a main issue in the description of events on judgment day, on the one hand, and in the prescriptions for procedural rules in penal and civil law cases in this life, on the other (see LAW AND THE QURʾĀN; CHASTISEMENT

AND PUNISHMENT). These two usages should be treated separately.

To give an idea of the impending divine judgment at the end of time, the Qurʾān — aside from referring to the metaphor (q.v.) of the mechanical and hence impartial scale (e.g. Q 7:8-9; 21:47; see WEIGHTS AND MEASURES) — evokes above all the imagery of a great trial. The Qurʾān, however, hardly talks about the course of events at this trial; rather, it focuses on the impact of two kinds of evidence that will be presented there: 1) written documents (see ORALITY AND WRITING IN ARABIA; WRITING AND WRITING MATERIALS), and 2) the testimony of witnesses. Both draw their authority from the close surveillance to which human beings are subject during their lifetime. Nothing that happens on earth escapes God (cf. Q 50:16; 58:7; see POWER AND IMPOTENCE). Therefore: "God is sufficient as witness" (*shahīd,* Q 4:79; cf. 3:98; 4:33; 6:19; 13:43; and sometimes God is called *raqīb,* "watcher," e.g. Q 5:117; 33:52; both designations belong to his "most beautiful names," *al-asmāʾ al-ḥusnā;* see GOD AND HIS ATTRIBUTES). Also he (Q 3:181; 19:79; 36:12), or rather some angelic beings who are mostly called "our messengers" (*rusulunā;* e.g. Q 10:21; 43:80; see ANGEL) or "guardians" (*ḥāfiẓīn,* Q 82:10; *ḥafaẓa,* Q 6:61; cf. 4:166; 13:11; 50:17-18), write down the deeds of every human being (see HEAVENLY BOOK).

According to some verses (q.v.), on judgment day there will be one comprehensive book (q.v.; *kitāb*) for all (Q 18:49; 39:69; cf. 36:12); according to others, there is one book for the sinners and one for the pious (Q 83:7, 18; see SIN, MAJOR AND MINOR), one for each community (*umma,* Q 45:28-9; see COMMUNITY AND SOCIETY IN THE QURʾĀN), or one record for each individual (Q 17:13-14, 71; 69:19, 25; 84:7, 10). Be that as it may, the notion of celestial registers of deeds belongs to the common religious heritage of the Near East (see SCRIPTURE AND THE QURʾĀN). In the Qurʾān, as well as in biblical texts (cf. Malachi 3:16-17; Daniel 7:10; Revelation 20:12), written documents, whether collective or individual, are the decisive evidence in the last judgment. In fact, due to their precision and comprehensiveness, these writings themselves dictate unmistakably the final fate of the souls (see SOUL; REWARD AND PUNISHMENT). The events on judgment day do not themselves serve to determine the verdict — since God is all-knowing, this is already clear — but rather to demonstrate that the divine verdict is just (see JUSTICE AND INJUSTICE). Therefore, on judgment day the records of deeds will be made public: they will be spread open before the souls (Q 17:13; 18:49; 39:69); they will be handed over to them (Q 17:71; 69:19, 25; 84:7, 10); everyone has to read his own register aloud (Q 17:14, 71; 69:19). Thus the pious as well as the sinners, after gaining insight to the records of their deeds, will acknowledge the supreme divine justice (Q 17:14; 18:49; 69:19f.).

The second piece of evidence that plays a major role on the day of judgment, the testimony of witnesses, is only ever mentioned in connection with evil-doers (Q 50:21 might appear to be an exception, but as the context shows, the sinner is the focus of attention here, too; see EVIL DEEDS). Those who are summoned to appear as witnesses before the tribunal include first of all the messengers of God, who are to testify against the peoples to whom they have been sent (e.g. Q 4:41, 159; 5:116-17; 16:84, 89; 28:75). Q 2:143 is relevant here, too. Concerning the Muslim community, it says: "… that you may be witnesses against humankind *(shuhadāʾa ʿalā l-nās),* and that the messenger may be a witness against you *(ʿalaykum shahīdan)*…." Here, as well as in Q 22:78 where nearly the

same formula recurs, the context in which it appears has to do with Muslim ritual duties, especially prayer (q.v.; *ṣalāt;* see also RITUAL AND THE QUR'ĀN). Thus, it could be argued that these verses imply that the believers, while performing their duties, are considered to act as witnesses for God in face of the unbelievers (see BELIEF AND UNBELIEF). The mainstream of Muslim exegesis, however (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), relates this expression to the role of Muḥammad's community on the day of judgment: Relying on what their Prophet taught them, the members of the community will testify that God's messengers indeed conveyed their message to the nations. And the nations in turn, impressed by the Muslims' privileged status, will exclaim: "This community, they all were nearly prophets!" (see Ṭabarī, *Tafsīr,* ad loc.)

Another important group who will be gathered to give evidence are the *shurakā'* — the associates (whom the unbelievers venerated beside God; see POLYTHEISM AND ATHEISM). When they are asked whether they led the unbelievers astray (q.v.), they will renounce them and give the unbelievers full responsibility (q.v.) for their conduct (Q 25:17-19; 28:62-6; cf. 11:18; 16:86; 37:22-32; 39:69; 40:51). The unbelievers will be called upon to produce witnesses for their own claims, but they will be unable to comply (Q 41:47; cf. 6:94; 10:28; 30:13; etc.) — a motif that also recurs in the polemical passages of the Qur'ān (e.g. Q 2:23; 11:13-14; 68:41; see POLEMIC AND POLEMICAL LANGUAGE) and that can be traced back to God's tribunal on the heathen nations in Isaiah 43:8 f. In this context, mention must also be made of Q 50:20-9. It says that on judgment day "every soul shall come, and with it a driver *(sā'iq)* and a witness" (*shahīd,* Q 50:21): "… And his comrade *(qarīnuhu)* shall say, 'This is what I have, made ready'" (Q 50:23); and, "'Our lord (q.v.), I made him not insolent, but he was in far error'" (q.v.; Q 50:27; see also INSOLENCE AND OBSTINACY). The question of who the "driver," the "witness" and the "comrade" are, is not easy to answer. Aside from other, partly metaphorical interpretations, Islamic exegesis usually takes the "driver" to be a kind of heavenly court usher; while the "witness" is generally understood as the angels who record the human deeds. These angels, however, are nowhere else expressly called "witnesses" (see above). As for the soul's "comrade" who denounces him, al-Zamakhsharī (d. 538/1144; *Kashshāf,* ad loc.) explains that it is a satan (see DEVIL) who was sent to seduce him (cf. Q 4:38; 6:112; 25:31; 41:25; 43:36). This "comrade," then, is reminiscent of the Judaic conception of Satan as an angel of God whose office it is to tempt human beings on earth and to act as heavenly prosecutor against them before the last judgment (Zechariah 3:1; Job 1:6 f.; Ps. 109:6). Finally, God will also enable the limbs and sense organs of the unbelievers to testify to their actions (Q 41:20-2; 24:24; 36:65). Thus, left alone without any witness for the defense, the unbelievers — human beings and jinn (q.v.) — will give evidence against themselves and end up in hell (Q 6:130; 7:37; see HELL AND HELLFIRE).

Now, while the qur'ānic view anticipating the events of the last judgment is characterized by trust in the triumph of divine justice, the qur'ānic attitude towards legally relevant matters in worldly affairs takes a rather more realistic tone. This is demonstrated clearly in the prescriptions related to the attesting and testifying witnesses. (As to terminology, in the Qur'ān, both *shāhid* and *shahīd* signify both the attesting and the testifying witness [see above]. But since *shahīd* later acquired the meaning of "martyr," Islamic jurisprudence then began using the term *shāhid*

exclusively for the witness in legal matters.) The Qurʾān expressly demands the presence of witnesses for five kinds of acts — four of them belonging to civil law, one to penal law. These include: the agreement on a financial obligation (Q 2:282; see DEBT), the delivery of property (q.v.) to orphans (q.v.) by their guardian (Q 4:6; see GUARDIANSHIP), the drafting of the last testament (Q 5:106-8; see INHERITANCE), the decision on the continuation or dissolution of a marriage after the prescribed waiting period (q.v.; Q 65:1-2; see also MARRIAGE AND DIVORCE), and the execution of the *ḥadd*-punishment for fornication (Q 24:2; see ADULTERY AND FORNICATION). (It could be argued that Q 2:185, *man shahida… al-shahr* implies that witnesses are required to attest to the new moon [q.v.], as well, but this is not at all clear. For the discussion concerning the *ruʾyat al-hilāl* — "attesting of the new moon" — see Lech, *Geschichte,* i, 73-105; see also MONTH; RAMAḌĀN). As for the last-named act, i.e. punishing a fornicator, the reason for the attendance of witnesses lies in the special character of the qurʾānic *ḥadd*-regulations. Because they are prescribed by God, they cannot be altered, and it is the duty of the community of believers to implement them duly if the accused is found guilty (see BOUNDARIES AND PRECEPTS). The execution of the punishment is therefore a public concern, and the witnesses represent the community. In this respect, Muslim commentators speak of *tashhīr* — public exposure. But since Q 24:2 simply says: "Let a party *(ṭāʾifa)* of the believers witness their punishment," the teachings from the scholars diverge as to the minimum number of witnesses required. According to al-Ṭabarī's (d. 310/923) commentary, Mujāhid (d. bet. 100/718 and 104/722) considered the presence of only one person to be sufficient; the majority, however, prefer at least three, but better four, witnesses, analogous with the prescriptions concerning fornication (see below).

In contrast, the other instances mentioned above (Q 2:282; 4:6; 5:106-8; 65:1-2) deal with private-law agreements. There, the number of the witnesses has to be (at least) two. Q 2:282, the extremely long *āyat al-dayn* — the verse of debt — deals with witnessing agreements concerning financial obligations. It lays down the following: first, that a scribe has to fix such agreements in writing; and, second, that two witnesses must be called in to attest to the drafting of the contract, in order to be able to give evidence of its proper course in case of future legal contest. Now, this prescription conforms generally with the corresponding regulations in Talmudic law. In the Talmud, however, women are excluded from acting as attesting and testifying witnesses (cf. Josephus, *Antiquities,* bk. 4, chap. 8, par. 15) except in the case of typically female matters. The Qurʾān, on the other hand, stipulates the rule: "If the two be not men, then one man and two women, such witnesses as you approve of *(mimman tarḍawna mina l-shuhadāʾ),* that if one of the two women errs the other will remind her" (see WOMEN AND THE QURʾĀN; GENDER). According to the Ḥanafīs, this means that the testimony of two women and one man may be accepted for all cases, except for *ḥadd* and *qiṣāṣ* (retaliation [q.v.]). The other Islamic schools of law, however, restricted this possibility mainly to financial transactions and otherwise conceded women the right to testify in matters within their special realm of knowledge. In such matters, the judge could confine himself to the testimony of women only — although the required number of female witnesses in these cases differed from school to school.

Q 65:2 stipulates that after the *ʿidda* — the waiting time of three menstural periods *(qurūʾ;* cf. Q 2:228; see MENSTRUA-

TION) — the husband's decision whether to retain his wife or to part from her must be attested to by "two men of equity from among yourselves *(dhaway ʿadl minkum)*." It continues: "and perform the witnessing to God *(wa-aqīmū l-shahādata lillāh)*." Q 5:106 uses the same notion, i.e. "two men of equity" should be present when a testament is made. Both should come "from among yourselves *(minkum),*" but if the testator faces death away from home, two others *(ākharāni min ghayrikum)* will do as well. For the Shāfiʿī and Mālikī jurists (just as for the Ḥanafī exegete al-Zamakhsharī), this differentiation between "from yourselves" and "from others" refers to the relatives of the testator and to strangers. Scholars of the Ḥanafī tradition (and also the Shāfiʿī commentator al-Suyūṭī [d. 911/1505]), however, explain it as referring to Muslims on the one hand, and to non-Muslims on the other, allowing the "People of the Book" (q.v.) thereby to witness in this special case, when no Muslims can be found. (As a rule, the testimony of the "People of the Book" is admissible only when it concerns their own religious communities.) In the continuation of Q 5:106, the wording leaves space for interpretation, as well. It says the witnesses should be detained after prayer *(ṣalāt)* and, in case of doubt, made to swear by God *(fa-yuqsimāni bi-llāh):* "We will not sell it for a price, even though it were a near kinsman (see KINSHIP), nor will we hide the testimony of God *(lā naktumu shahādata llāh),* for then we would surely be among the sinful." Here, it is neither entirely clear whether the prescriptions mentioned refer to the first pair of witnesses, those "from among yourselves," or to the second pair, the "two others"; nor whether the moment of drafting the last testament or giving evidence of this act at a later time is intended.

As to the criteria of witness credibility, *ʿadl* — equity — is the only one expressly mentioned in the Qurʾān (Q 5:106; 65:2). There, this term sometimes implies a certain legal competence (cf. Q 5:95; 42:15); in later times, however, it was usually understood as referring generally to a good reputation. Al-Shāfiʿī (d. 204/820) defined it as "acting in obedience (q.v.) to God" and added that one's surface impression of a person suffices to attest to his *ʿadl*. In addition to *ʿadl,* later Islamic scholars also drew up lists of further criteria for both the attesting and the testifying witness. These criteria include the following: the witness should be a Muslim (thus, Jews and Christians are normally excluded from witnessing, see above; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY), a free man (*ḥurr;* see SLAVES AND SLAVERY), in full possession of his mental faculties (*ʿāqil;* see INSANITY), have attained the age of majority (*bāligh;* see MATURITY), not be suspected of having personal interests in the case (*nafy al-tuhma;* the classical definition of the testimony is *ikhbār bi-ḥaqqin lil-ghayri ʿalā ākhar*), and not have been previously punished by *ḥadd* because of defamation (*ghayr maḥdūd fī l-qadhf;* cf. Q 24:4). The judge (*qāḍī,* pl. *quḍāt*) is responsible for examining whether the witnesses meet these conditions before the court. Now, while the external conditions can easily be checked, the verification of the *ʿadāla* is problematic. (Since *ʿadl* can also be used as an adjective, it is often replaced by "*ʿadāla*" as a noun.) According to the procedure of *taʿdīl* — declaring one's equity — it is incumbent upon the judge to make secret enquiries about a candidate's reputation and private life, and to question him in public, before accepting him as a witness.

ʿAdāla understood as good reputation is, however, an extremely flexible notion and can be interpreted arbitrarily. Therefore, one finds in the sources that not only the belief in the doctrine of free will (see

FREEDOM AND PREDESTINATION), but also eating in the streets or breeding pigeons and the like could disqualify someone from acting as a witness. Due to the subjective nature of interpreting this term, private-law agreements could easily be contested later on by denying the *ʿadāla* of the witnesses that attested to the act. To minimize this risk, already in the second/eighth century, judges started to confer a permanent status of *ʿadāla* to a limited group of persons, who were then regularly examined. The presence of these officially approved witnesses at the closing of contracts and passing of sentences secured the legality of these acts. In this way, a class of notarial witnesses, the *shuhūd ʿudūl* (sing. *shāhid ʿadl*), evolved. They belonged to the judge's entourage, but could also work independently as notaries, attesting and testifying legal acts, drawing up deeds and documents. The notary profession (which was called *ʿadāla,* as well) required specialist knowledge of law and legal jargon — the *ṣināʿat al-wirāqa,* arithmetic, calligraphy (q.v.) and so on, and was the subject of the treatises of *ʿilm al-shurūṭ* — the discipline pertaining to the conditions (of the notary profession). Conversely, the evidentiary weight conceded to written documents — although recommended in Q 2:282 (and decisive in the hereafter; see above; see ESCHATOLOGY) — was originally very limited, at least in theory: Those witnesses who attended the drafting of a document had to reappear before the court in order to testify to its validity. It was only for practical reasons that written documents eventually became fully admissible as evidence — chiefly by a revaluation of the witnesses' signatures on the document — except in cases of *ḥadd* and *qiṣāṣ*.

Concerning the role of witnesses testifying before a worldly court, the Qurʾān contains very little information (cf. Q 21:61, the trial against Abraham [q.v.; Ibrāhīm], and Q 12:26-8, the acquittal of Joseph [q.v.] through circumstantial evidence). Only in two passages are precise prescriptions given: Q 4:15 says: "Such of your women as commit indecency *(al-fāḥisha),* call four of you to witness against them *(fa-stashhidū ʿalayhinna arbaʿatan)*; and if they bear witness *(fa-in shahidū),* then detain [the women] in [their] houses until death takes them or God appoints for them a way." Q 24:4, too, demands the testimony of four witnesses: "And those who accuse honorable women but bring not four witnesses *(bi-arbaʿati shuhadāʾ),* scourge them with eighty lashes (see FLOGGING) and never afterward accept their testimony *(shahāda)*." While this verse deals with the accusation of fornication *(zinā),* the delict in Q 4:15 is interpreted either as lesbian sex (*siḥāq;* see HOMOSEXUALITY) or fornication, as well. In the latter case, the difference between the penalty in Q 4:15 (house arrest or a divine decision) and the one in Q 24:2, where a hundred lashes are prescribed for the fornicator, is clarified by taking recourse to the supposed order of revelation (see REVELATION AND INSPIRATION; CHRONOLOGY AND THE QURʾĀN; OCCASIONS OF REVELATION): first, Q 4:15 came down; it was then replaced by Q 24:2; this in turn was superseded by the notorious verse of stoning (q.v.), the *āyat al-rajm,* "whose recitation is abrogated but not its validity" (*mā nusikha tilāwatuhu dūna ḥukmihi;* Suyūṭī, *Itqān, nawʿ* 47; see ABROGATION).

Be that as it may, two items deserve mention here: First, Islamic jurisprudence has always restricted the necessity of the testimony of four (male) witnesses to *zinā* (and *siḥāq*) only. For all other cases, murder (q.v.) and manslaughter included (see BLOODSHED), two witnesses suffice — a rule which is in accordance with Mosaic law (cf. Deuteronomy 17:6; 19:15 f.). The witness'

statement before the judge has to be introduced by the formula, "I testify by God" *(ashhadu bi-llāh),* or simply "I testify" and is considered an oath *(qasam)*. Second, he who cannot call four witnesses to support his charge is guilty of defamation *(qadhf)* and risks not only losing his right to give evidence, but also a corporal punishment, one which is only slightly milder than the punishment for the fornicator. (It is characteristic of the qurʾānic *ḥadd*-prescriptions that they are followed by restrictive clauses, which gave rise to discussions about their respective fields of application; besides Q 24:4-5, see Q 3:86-9; 5:33-4, 38-9.) Within the sphere of marriage, however, in Q 24:6-9 the Qurʾān allows the procedure of *liʿān,* which entitles the husband, instead of calling four witnesses, to swear four oaths that his accusation is true. And because the truth of these oaths normally cannot be verified, he then has to declare in a fifth oath that, in case of perjury, he should be subject to God's curse (q.v.). In order to evade punishment, the accused wife in turn must invalidate her husband's oaths, swearing four times that he is a liar and a fifth time that she, too, if lying, should incur the wrath of God (see ANGER). Insofar as in the *liʿān* each of them is invoking an ordeal, it can be compared with the *mubāhala,* the mutual curse in Q 3:61.

There are yet other instances in Islamic law where an oath may replace the testimony of a witness. Except for the Ḥanafīs, all other schools accept the oath *(yamīn)* of the plaintiff together with the testimony of another man as valid in financial matters. It is also valid the other way round: if the plaintiff's testimony is not based on sufficient evidence, the defendant can reject the accusation by means of an oath. Finally, in a situation where there is strong, but not sufficient, evidence against a person suspected of killing someone else, i.e. when there are neither two eye-witnesses nor the confession of the culprit, the practice of *qasāma* is allowed as supplementary evidence. This consists in the swearing of fifty oaths, either by fifty men or by fewer persons who then have to swear more than once in order to make up the required number. According to the Ḥanafīs, the *qasāma* on the part of the relatives of the suspect, swearing that they were neither involved in the crime nor do they know the culprit, prevents the mechanism of retaliation. For the Mālikīs, however, the *qasāma* is an instrument for the relatives of the victim. Their fifty-fold oath that the suspect is doubtless the offender increases the weight of the available, legally insufficient evidence to a sufficient degree.

As a rule, giving evidence is a duty for the Muslim community, but if someone can thereby be exonerated, the duty is individual (cf. Q 2:282). Nevertheless, in cases of *ḥadd*-delicts, it is laudable to keep one's knowledge to oneself in order to spare the suspect the corporal punishment.

The profession of faith

In its second meaning, the term *shahāda* refers to the credo statement of Islam. Although there exist some slight variations in wording (see Fischer, Gestalten; ʿAlī, *ṣalāt,* 57 f., 136 f.), the *shahāda* essentially consists in the bipartite slogan "There is no god except God *(lā ilāha illā llāhu)*" and "Muḥammad is the messenger of God *(Muḥammadun rasūlu llāhi)*." It is therefore also called "the two words" — *al-kalimatān* — its first part being the *kalimat al-tawḥīd* — the word of God's oneness — (or, with respect to its sound, the *tahlīl*), its second part the *kalimat al-rasūl* — the word of the Prophet. For the Shīʿa (q.v.) it is commendable, though not indispensible, to add a third phrase, namely: "ʿAlī is the friend of god" (*ʿAliyyun waliyyu llāh;* as to the alleged ʿAlawite

shahāda see Guyard, Fetwa, 182; Firro, ʿAlawīs, 5f.; see also SHĪʿISM AND THE QURʾĀN; ALĪ B. ABĪ ṬĀLIB). In Islam, the *shahāda* is considered a performative utterance: Saying it intentionally in the presence of a Muslim audience means embracing Islam or emphasizing one's affiliation to it. By speaking the formula "I confess *(ashhadu)*" that precedes the whole declaration and that may be repeated before its second — and, as far as the Shīʿites are concerned, also its third — part, the performative nature of the *shahāda* is made explicit. In the philological tradition of Islam, this special character is mostly refered to as *inshāʾī,* what can be rendered approximately as "declarative," in contrast to pure statements, which are classified as *ikhbārī,* i.e. "informative" (see the discussion in Ālūsī, *Kanz,* 32f.).

As a performative, the *shahāda* requires publicity. This public nature of the *shahāda* shows above all in its prominence in the whole complex of the Islamic common prayer, the *ṣalāt:* First of all, it is part of the *adhān* — the call to prayer — which means that it can be heard loudly from above the minarets (see MOSQUE) five times a day in artistic rendering, sometimes even collectively performed (Damascus) or with instrumental accompaniment (Mashhad). It thereby became one of the most noticeable features of the Islamic world. It then figures in the *ijāba* — the individual Muslim's response to the *adhān* — and in the *iqāma* — the repetition of the *adhān* immediately before the prayer starts. In addition, at the end of every two *rakʿas* — series of ritual acts in the *ṣalāt* (see BOWING AND PROSTRATION) — and at the end of each *ṣalāt* itself, the believer utters the *tashahhud* — a set of phrases which includes the *shahāda,* too. (Because one has to raise the forefinger of the right hand while saying *lā ilāha illā llāhu* in the *tashahhud,* this finger is also called the *shāhid* — the confessor.) But beyond this importance in daily ritual, the *shahāda* accompanies the Muslim literally throughout his or her whole life: It is a custom to whisper it into the ear of the new-born child, a Muslim should die with it on his lips (see DEATH AND THE DEAD), and the deceased, before being buried (see BURIAL), is reminded of it so that he or she may know what to answer when asked in the grave by the two angels Munkar and Nakīr (q.v.).

These practices illustrate that the *shahāda* is considered the essential message of Islam. Accordingly, al-Ghazālī (d. 505/1111) used it as his starting point to unfold Islamic dogma *(ʿaqīda)* in his "Revival of the religious sciences" (*Iḥyāʾ ʿulūm al-dīn,* i, 160f.), and the 9th/15th century theologian al-Sanūsī concludes his creed (q.v.), saying: "The meanings of all these articles of belief are brought together in the words, 'There is no god exept God; Muḥammad is the messenger of God'" (see Watt, *Islamic creeds,* 94). Therefore, every Muslim is admonished to remember the two words constantly; according to the Shāfiʿite scholar al-Bayjūrī (d. 1276/1860), the Islamic teachers of law — the *fuqahāʾ* — recommended that one should repeat it at least three hundred times a day.

Generally, the first part of the *shahāda,* the *kalimat al-tawḥīd,* is considered to imply the second part, the *kalimat al-rasūl,* as well (see e.g. Shaʿrānī, *Fatḥ,* 24). But not only for this reason do the words *lā ilāha illā llāhu* hold a great fascination. Theology discusses the logical structure of its phrasing as an exception clause and the philosophical implications of this (cf. Bayjūrī, *Ḥāshiya,* 35f.; see THEOLOGY AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN). With its distinctive rhythm and sound, it became a prefered formula for the *dhikr*-exercises of the mystics (see REMEMBRANCE; ṢŪFISM AND THE QURʾĀN) and for exorcisms (cf. Schimmel, Sufis). The graphical shape of

its letters made it a favorite motif for calligraphic embellishments (see ARABIC SCRIPT). The number of these letters and the existing symmetries among them invite to further speculations about hidden harmonies (cf. Canteins, *Mirroir;* see also NUMEROLOGY). And popular imagination all along was able to decipher it in natural phenomena like flowers, trees or swarms of bees. Thus, the *shahāda* is one of the most important constituents of communal identity in Islam. This is clearly expressed in a prophetic saying that calls the believers the "people of *lā ilāha illā llāhu"* (cf. Ghazālī, *Iḥyāʾ,* i, 505). Despite this popularity, however, the origins of the *shahāda* remain rather obscure.

In order to express the core idea of monotheism, the Qurʾān uses various formulations, e.g. the statement of Q 42:11: *laysa ka-mithlihi shayʾun,* "Like him there is naught," the rhetorical question Q 35:3: *hal min khāliqin ghayru llāhi,* "Is there any creator apart from God?" (see CREATION; RHETORIC AND THE QURʾĀN), and the command in Q 112:1: *qul huwa llāhu aḥadun,* "Say: He is God, one." Two kinds of formulas, however, are especially prominent. There is, on the one hand, the positive statement *ilāhukum ilāhun wāḥidun,* "Your god is one god" (six times, e.g. Q 2:163; 18:110; 21:108; 41:6) with the variations "He *(huwa)* is one god" (three times: Q 6:19; 14:52; 16:51) and "God *(allāhu)* is one god" (once only: Q 4:171). As A. Baumstark pointed out (Zur Herkunft), this formula can be traced back indirectly — via a supposed Jewish-Arabic version of Aramaic translations (see FOREIGN VOCABULARY) — to Deuteronomy 6:4, the opening verse of the *shᵉmaʿ* — the Judaic creedal prayer: "Hear, O Israel: The lord *(yhwh)* our God, the lord *(yhwh)* is one." In its historical context, Deuteronomy 6:4 originally demanded Israel's exclusive cultic veneration of Yahweh alone, while implicitly conceding the existence of other gods for other nations. In exilic times, however, after Israel's turn to exclusive monotheism, i.e. to the negation of the existence of other gods, this verse could no longer be understood in its original sense, and the predicate "one" had to be interpreted in an absolute way (cf. Rechenmacher, *"Außer mir gibt es keinen Gott!,"* 195 f.). The same holds true, of course, of the qurʾānic formula as well, and, thus, the Muslim commentators explain the predicate *wāḥid* as meaning "one in essence" or "the unique one," etc. (cf. Ṭabarī, *Tafsīr*, ad Q 2:163 and compare the different translations of this formula).

On the other hand, there is the exception clause, "There is no god but he" (*lā ilāha illā huwa,* thirty times, e.g. Q 2:163, 255; 3:18; 9:31; 73:9) with the alternative endings "but I" (*illā anā,* three times: Q 16:2; 20:14; 21:25), "but God" (*illā llāhu,* twice: Q 37:35; 47:19) and "but you" (*illā anta,* only Q 21:87). According to Baumstark (Zur Herkunft), the wording *lā ilāha illā huwa* ultimately echoes Deuteronomy 4:35, 39 and must have been part of a pre-Islamic Jewish-Arabic cult prayer. In fact, many passages where this phrase figures exhibit a distinctive Jewish-Christian coloring, e.g. when combined with Hebrew or Aramaic borrowings like *al-qayyūm* — "the everlasting" (Q 2:255; 3:2) and *rabb al-ʿālamīn* — "the lord of all being" (Q 40:64-5), in connection with the biblical motif of the throne (Q 2:255; 9:129; 20:5-8; 27:26; see THRONE OF GOD) or in juxtaposition to *al-raḥmān* — "the all-merciful" — the name under which God was venerated in pre-Islamic times by the Jews of the Yemen (q.v.): e.g.: "Your god is one god; there is no god but he, the all-merciful, the all-compassionate" (*al-*

raḥmān al-raḥīm, Q 2:163; cf. 13:30; 59:22). Thus, it must be assumed that the phrase *lā ilāha illā huwa* was, at the time the Qurʾān originated, a popular slogan in Arabian Jewish or Christian circles. But then, the way the Arabic proper name "God," *Allāh,* becomes connected with this phrase in the Qurʾān, shows how the new religious movement first adopted and, later on, started to monopolize it. There are verses where the word *Allāh* simply precedes the *lā ilāha illā huwa* (e.g. Q 2:255; 3:2; 4:87; cf. 3:18), while in others, *Allāh* is almost defined by means of it (Q 20:98; cf. 6:102; 39:6; 40:62, 64-5). After a short hymn to *al-raḥmān* on the throne, Q 20:8, which runs "God *(Allāhu)*, there is no god but he, his are the most beautiful names *(lahu l-asmāʾu l-ḥusnā)*," may be read as a justification for the use of the Arabic *Allāh* in connection with the exception clause (cf. Q 17:110). One may discern another attempt to justify this connection in Q 3:18, where the praxis of confessing *lā ilāha illā huwa* is somewhat illogically attributed to *Allāh* himself. Finally, in two verses the name *Allāh* enters the exception clause itself and constitutes the *kalimat al-tawḥīd*. And it is especially noticeable that in both instances the preceding verbs indicate that the resulting slogan *lā ilāha illā llāhu* was already in use for purposes of teaching and proselytizing (see TEACHING AND PREACHING THE QURʾĀN): "When it was said to them *(idhā qīla lahum):* There is no god but God *(Allāh),* they were scornful" (Q 37:35; cf. 47:19).

A central motif in the Qurʾān is the emphasis on the authority (q.v.) of the prophetic duty (see PROPHETS AND PROPHETHOOD). One of the means to effect this, is to equate the belief in and the obedience (q.v.) to God with the belief in and the obedience to the messenger (*rasūl;* the term "prophet," *nabī,* by contrast, is seldom used: Q 2:177; 5:81; 7:158). This principle is clearly stated in Q 4:80: "Whosoever obeys *(man yuṭiʿ)* the messenger *(al-rasūl),* thereby obeys God" (cf. Q 4:64). And thus, many qurʾānic orders and regulations are enforced with formulations like "Those only are believers, who believe in *(āmanū bi)* God and his messenger and who, when they are with him upon a common matter, go not away until they ask his leave" (Q 24:62; cf. 49:15; 61:11) or with the imperative "Obey God and obey the messenger!" (e.g. Q 4:59; 5:92; cf. 24:47). And although there are some short catechisms which add further elements, like the belief in angels and the scriptures of revelation or the performance of the prayer and the payment of the alms (*zakāt;* e.g. Q 2:285; 4:136; 9:71; see ALMSGIVING), verses like Q 48:17 suggest that obedience is in the end the decisive criterion for salvation (q.v.): "Whosoever obeys God and his messenger, he will admit him into gardens underneath which rivers flow" (cf. Q 33:71; see GARDEN). It is characteristic, however, not only of these passages, but of the Qurʾān as a whole, that this messenger remains without a name, except for four verses — Q 3:144; 33:40; 47:2 and 48:29 (see NAMES OF THE PROPHET) — which identify *Muḥammad* (q.v.) as the messenger of God and as a recipient of revelations. It has been suggested that these verses were later insertions into the Qurʾān; Islamic tradition, too, doubted the genuineness of at least Q 3:144 (see Suyūṭī, *Itqān, nawʿ* 10; Nöldeke, *GQ,* ii, 81f.; van Ess, *TG,* i, 3 n. 3). Anyway, at the end of Q 48 — after the divine promise to his messenger: "You (pl.) shall indeed enter the inviolable place of worship (*al-masjid al-ḥarām;* see SACRED PRECINCTS)" in verse 27 and after the assurance that God sent his messenger to make the "religion (q.v.) of truth" (q.v.; *dīn*

al-ḥaqq) prevail over all religion in verse 28 — the final verse (Q 48:29) identifies this messenger and extols his supporters. This is the only qurʾānic instance of what later was to become the second part of the *shahāda:* "Muḥammad is the messenger of God."

In the Qurʾān can be found at least three ways to declare one's belief in and obedience to God and his prophet: first, the formula "We hear and we obey (*samiʿnā wa-aṭaʿnā;* see also SEEING AND HEARING)" with which the believers accepted the covenant (q.v.) with God (Q 5:7) and with which they submit to the decisions of the prophet (Q 24:51; this formula ultimately goes back to Deuteronomy 5:27, and therefore, the Qurʾān especially connects it with the Israelites, although in a deliberately distorted form; cf. Q 2:93; 4:46; see CHILDREN OF ISRAEL). Second, there is the confession of faith "We believe" (*āmannā,* Q 2:14, 76; 29:2; 49:14; sometimes with additions such as "in God and the last day" or "in God and the messenger, and we obey": Q 2:8; 24:47; cf. 40:84). That this is not merely an expression of an inner conviction, but should rather be understood as a performative utterance which confers upon its speaker a privileged status, is clear from verses like Q 40:84-5 and 49:14 (this latter verse plays exactly on the possible double use of *āmannā;* cf. Q 9:97). Finally, the verb *shahida* is used to signal the consent of the children of Adam (see ADAM AND EVE), of the prophets and of the Children of Israel in the covenant *(mīthāq)* with God (Q 2:84; 3:81; 7:172). But there are also instances where it obviously signifies a formal declaration of loyalty (q.v.) to the messenger of God, e.g.: "How shall God guide a people who have disbelieved after they believed, and bore witness *(shahidū)* that the messenger is true?" (*anna l-rasūla ḥaqqun,* Q 3:86; cf. 63:1; as for Q 3:86, see above).

Opinions differ considerably about when and how the *shahāda* as credo statement developed. According to K. Cragg (Shahādah), it was used in the Prophet's Medinan period (see MEDINA) as a formula for conversion, but its wording probably belonged to an even earlier time. M.J. Kister (Study) connects the origin of the twofold *shahāda* with the experiences of the wars of apostasy (q.v.; *ḥurūb al-ridda)* after the death of the Prophet. A.J. Wensinck (Tashahhud) argues that the *shahāda* must be comparatively early since it is part of the *ṣalāt*-rite and that it was customary to proclaim it at conversion to Islam in the second half of the first century A.H. — a view largely adopted by W.M. Watt *(Formative period),* too. By contrast, T. Nagel (Inschriften) thinks that from 72/691-2 onwards the Umayyad caliph (q.v.) ʿAbd al-Malik (r. 65-86/685-705) propagated especially the second part of the *shahāda* against the inner-Islamic opposition of the Zubayrids in order to legitimize the prophetic tradition, the ḥadīth (see ḤADĪTH AND THE QURʾĀN), as an authoritative source of its own. Finally, A. Rippin *(Muslims)* assumes that the *shahāda* "received its final shape fairly late" and that it gained acceptance as the first of the five pillars of Islam not before the third Islamic century.

Thus, the problem of the early history of the *shahāda* can be summarized in three questions: First, at what time were the two *kalima*s combined with each other? Second, what was the underlying intention thereby? And, third, when did the *shahāda* gain general acceptance as a set phrase to express Muslim identity? To start with, there is no evidence that the two parts of the *shahāda* were combined with each other before the second half of the first century A.H. Both formulas were originally independent from each other. When, for instance, the phrase "Muḥammad is the

messenger of God" begins to appear on coins (see EPIGRAPHY AND THE QURĀN), from 66/685-6 onwards, it is introduced by the *basmala* (q.v.), but not accompanied by the *kalimat al-tawḥīd*. There exist several variations, especially to this latter phrase. For example, a south Jordanian graffiti (see also ARCHAEOLOGY AND THE QUR'ĀN), probably from the first century A.H., runs: "O God, I do call you to witness that you are God. There is no god but you *(allāhumma innī ushhiduka annaka llāhu lā ilāha illā anta)*." The favorite wording, however, of the Umayyads — still preserved in the *tashahhud* — is: "There is no god except God alone, he has no associate *(waḥdahu lā sharīka lahu)*." From the seventies of the first Islamic century onwards, both words of the *shahāda* appear together. In 72/691-2, a drachma was issued in Sistan which on its reverse bears a Pahlavi text very close in meaning to the *shahāda* (see NUMISMATICS). And from 73/692 on, there are Arab-Sasanian and Arab-Byzantine coins with both the *basmala* and *shahāda* on the margin. These examples, however, are still tentative efforts to link the notion of the exclusiveness of God with the claim that Muḥammad is his messenger. Both words of the *shahāda* were freely combined with other religious phrases, too. There is, for example, the outer inscription of the ambulatory of the Dome of the Rock (see ART AND ARCHITECTURE AND THE QUR'ĀN) from 72/691-2. In five sections, the text emphasizes the two basic ideas of the *shahāda,* and in each of these sections, both *kalima*s appear. They do not, however, make up a distinct unit, but are rather divided from each other by additional formulas. Likewise, in the standard legend on the Umayyad coins from ʿAbd al-Malik's reform (77/696-7 onwards), the two *kalima*s are separated from each other and are given different weight: The obverse has the Umayyad version of the first *kalima* as cited above, and the reverse gives the text of Q 112 (without the initial "Say: He"), while the legend on the margin runs: "Muḥammad is the messenger of God. He sent him with the guidance and the religion of truth, that he may uplift it above every religion, though the unbelievers be averse" (cf. Q 9:33; 61:9; also Q 48:28; see above). Only when the ʿAbbāsids came to power and struck new coins, did the *kalimat al-rasūl* take the place of Q 112 on the reverse and thereby became the true counterpart of the *kalimat al-tawḥīd* on the obverse (see also POLITICS AND THE QUR'ĀN).

This epigraphic and numismatic material suggests that it was in the period from the reign of ʿAbd al-Malik (r. 65-86/685-705) until the ʿAbbāsid assumption of power in 132/750, that both words of the *shahāda* first became combined with each other and finally coalesced into a set phrase expressing Muslim identity. Therefore, it is not likely that the *shahāda* should have been used before ʿAbd al-Malik's reign as a slogan for conversion. By contrast, there is plenty of evidence that at least throughout the first/seventh century allegiance to Islam was expressed — besides many other formulations — by a declaration of the type: "I believe" (*āmantu;* see Ory, Aspects; Abbott, Ḳaṣr Kharāna). In addition, it seems that before the seventies of the first century A.H./ the end of the seventh century C.E., none of the rival factions in early Islam — Zubayrids, ʿAlids, Khārijīs (q.v.) and Umayyads — explicitly mentioned the Prophet in their creedal formulas (see below). But then, the decision of ʿAbd al-Malik to promote the *kalimat al-rasūl* hardly had an inner-Islamic background. Since the phrase "Muḥammad is the messenger of God" ascribes God-given authority to the Arab Muḥammad, it is more likely that it was originally directed towards the non-Arab, non-Muslim subjects in the new empire and emphasized the Umayyad

dominance in the field of religion, too. This becomes especially evident in the inscriptions of the Dome of the Rock. In any case, ʿAbd al-Malik's propagation of the two words of the *shahāda* created for him serious diplomatic tensions with the Byzantines (q.v.; see Walker, *Catalogue of the Arab-Byzantine and post-reform Umaiyad coins,* liv).

The discussion of the term *islām,* as preserved in the medium of the ḥadīth — the prophetic tradition — shows how the *shahāda* started to play a role in theology. Given the fact that eventually *islām* was defined by five "pillars" (*arkān,* sing. *rukn*), A.J. Wensinck (*Creed,* 17f.) argued that definitions, which are less complex, can be considered preliminary stages belonging to an earlier date. Besides a tradition that defines *islām* solely by five daily prayers, obedience and the fast of Ramaḍān (e.g. Muslim, *Ṣaḥīḥ, K. Īmān,* 8), three principal groups of ḥadīths can be distinguished: first, traditions that emphasize the exclusive veneration of God and add three further, mostly ritual duties (e.g. Muslim, *Ṣaḥīḥ, K. Īmān,* 5, 7, 12, 14, 15); second, traditions where a catalogue of five pillars is established, which, however, do not include any declaration of loyalty towards the Prophet (e.g. Muslim, *Ṣaḥīḥ, K. Īmān,* 19, 20, 22); and, third, the kind of tradition where the bipartite *shahāda* figures as the first of the five pillars of *islām,* either in answer to Gabriel's (q.v.) examination of the Prophet or introduced by the formula, "Islam is built upon five" (e.g. Muslim, *Ṣaḥīḥ, K. Īmān,* 1, 21). Wensinck rightly called this type "a masterpiece of early Muslim theology." Its importance lies in the fact that it holds the middle position between the Murjiʾī thesis that the public confession of faith *(īmān)* alone establishes one's status as a believer, on the one hand, and the Khārijī rigorism with its emphasis on works, on the other (see GOOD DEEDS; EVIL DEEDS). All the traditions of this type go back to ʿAbdallāh b. ʿUmar (d. 73/693), a personality famous for his neutrality during the Umayyad civil wars and therefore a suitable candidate for the attribution of such a compromise solution. The names in the *isnād*s — the chains of transmitters — point, however, to the milieu of proto-Sunnī traditionalists of the second/eighth century who, equally opposed to Murjiʾīs, ʿAlids, Khārijīs and Qadarīs, formulated these traditions and put them in circulation.

Now, the instruction in these ḥadīths to testify to both *kalima*s ("Islam is the testimony *[shahāda]* that there is no god but God and that Muḥammad is the messenger of God…"), signals, first, that, at that time, they both belonged together and, second, that they were used as a performative utterance. This strongly suggests that the *shahāda* must already have been part of the *adhān* and the *tashahhud* in the *ṣalāt*-rite. It is of great interest to know when the *ṣalāt* got its final shape but this is still an open question. Wensinck's argument, that the *ṣalāt* must have been standardized shortly after the Prophet's death "since there are no traces of deviation from the common ritual of the *ṣalāt* among the sects" (*Creed,* 32), as plausible as it seems at first sight, is after all an argument *ex nihilo*. We do not even know at what time the five daily prayers were introduced (cf. Alverny, Prière; Rubin, Morning; Monnot, ṣalāt). What we do know is, on the one hand, that according to Muslim tradition the Prophet was taught the *adhān* either during his ascension (q.v.) to heaven or while sleeping in the lap of ʿAlī (cf. Ibn Bābawayh, *Man lā yaḥḍuruhu,* 28of.), and that he taught the *tashahhud* "the way he used to teach us a sūra (q.v.) of the Qurʾān" (Muslim, *Ṣaḥīḥ, K. Ṣalāt,* 60). On

the other hand, there are indications that the Umayyads more than once enforced alterations in the rite of the *ṣalāt*. During the revolt of Ibn al-Ashʿath (80-3/699-702), for example, their opponents reproached them with the demise of the *ṣalāt,* and, at Dayr al-Jamājim, the battle cry of the *qurrāʾ* (see RECITERS OF THE QURʾĀN; READINGS OF THE QURʾĀN) runs: "Revenge for the *ṣalāt!*" What they meant by this, however, is not at all clear; further research is neccessary. For use of the term *shahāda* to mean "martyrdom," see MARTYRS.

Wives of the Prophet

The Prophet is usually said to have had thirteen wives or concubines, of whom nine survived him. But there is some dispute as to the identity of the thirteen. Some modern Muslim biographers have linked the large size of the Prophet's harem to the fact that all of the Prophet's marriages had been concluded by the time that the early Medinan revelation of Q 4:3 limited the number of wives to four (Haykal, *Life of Muḥammad,* 293; see MARRIAGE AND DIVORCE). Conversely, an Orientalist historian of the qurʾānic text has suggested that the Prophet had only four wives at the time of the revelation of Q 4:3 (Stern, *Marriage,* 78-81; see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN).

In ḥadīth (see ḤADĪTH AND THE QUR'ĀN) and classical qur'ānic exegesis (*tafsīr;* see EXEGESIS OF THE QUR'ĀN), the Prophet's right to less restricted polygamy is presented as a prerogative that *sunnat Allāh,* God's "law" for the world (see SUNNA; LAW AND THE QUR'ĀN), had always granted to God's prophets and apostles (see PROPHETS AND PROPHETHOOD; MESSENGER). Furthermore, the classical sources found the scriptural legitimization of the Prophet's larger household (see FAMILY OF THE PROPHET) in Q 33:50, a late Medinan revelation that enumerated the "categories of females" lawful to the Prophet for marriage as follows (see LAWFUL AND UNLAWFUL; PROHIBITED DEGREES; WOMEN AND THE QUR'ĀN): wives with whom the Prophet contracted marriage involving payment of "hires" (dowers; see BRIDEWEALTH); female prisoners of war (slaves) who fell to him as part of his share of the spoils (see SLAVES AND SLAVERY; BOOTY; CAPTIVES); paternal and maternal cousins who had migrated to Medina (q.v.; see also EMIGRANTS AND HELPERS; KINSHIP; FAMILY); and

a believing woman (see BELIEF AND UNBELIEF), if she gives herself to the Prophet, if the Prophet should wish to marry her. Especially for you, exclusive of the believers. We know what we have imposed upon them concerning their wives and slaves. So that there be no restriction on you. And God is forgiving, compassionate (see FORGIVENESS; MERCY; GOD AND HIS ATTRIBUTES).

The interpretation of the verse has presented difficulties because it appears to relate to a social system that had ceased to exist within a century after the Prophet's death (Watt, *Muhammad at Medina,* 393). Especially problematic within the changing code of early Islamic marriage law was the institution of *hiba,* possibly a pre-Islamic form of marriage, by which a woman "offers herself" to a man without a guardian (*walī;* see GUARDIANSHIP) to negotiate the union and without expectation of a dower. Later Muslim interpreters were uncomfortable with the institution of *hiba* and some opined that it was not a lawful form of marriage for anyone with the sole exception of the Prophet himself. Consequently, they used Q 33:50 primarily as an aid to classify the Prophet's consorts; but it also provided them with scriptural proof that Muḥammad's marriages — even though more than four — were divinely sanctioned.

Ḥadīth reports agree overall that the Prophet was married to the following women:

1. Khadīja bt. Khuwaylid (Quraysh [q.v.] — Asad; see KHADĪJA). She was married to Abū Hāla Hind b. al-Nabbāsh of Tamīm with whom she had two sons, Hāla and Hind, and to ʿAtīq b. ʿĀbid of Makhzūm, with whom she had a daughter, Hind. Twice widowed (see WIDOW), Khadīja was a wealthy merchant woman who is said to have employed Muḥammad in a business enterprise in 595 C.E. and then proposed marriage to him (see MARKETS; CARAVAN). He was twenty-five years old at that time and she was forty. They had two or three sons, named Qāsim, ʿAbdallāh al-Ṭāhir al-Muṭahhar (and Ṭayyib?), and four daughters, Zaynab, Ruqayya, Umm Kulthūm, and Fāṭima (q.v.). All the male children died in infancy. When the revelations began (see REVELATION AND INSPIRATION), Khadīja was the first person or, some say, the first woman to accept Islam from the messenger of God. Khadīja died three years before the migration to Medina (see EMIGRATION) and was buried in Mecca (q.v.).
2. Sawda bt. Zamʿa (Quraysh — ʿĀmir).

She was married to Sakrān b. ʿAmr, an early Muslim, and made the *hijra* (emigration) to Abyssinia (q.v.) with him. He died after their return to Mecca and she married the Prophet around 620 C.E. when she was about thirty. She migrated with his household to Medina where she died in 54/673-4.

3. ʿĀ'isha bt. Abī Bakr (q.v.; Quraysh — Taym), married in 1/623 when she was nine. She was the only virgin Muḥammad married. She remained childless and died in Medina in 58/677-8.

4. Ḥafṣa bt. ʿUmar b. al-Khaṭṭāb (Quraysh — ʿAdī) was the widow of Khumays b. Ḥudhāfa, a Muslim killed at Badr (q.v.). She married the Prophet in 3/625 at age eighteen. She died in 45/665 (see ḤAFṢA).

5. Umm Salama (Hind) bt. al-Mughīra (Quraysh — Makhzūm) married the Prophet in 4/626 at age twenty-nine. Her husband Abū Salama had died of a wound received at Uḥud and had left her with several small children (see EXPEDITIONS AND BATTLES). She died in 59/678-9.

6. Zaynab bt. al-Khuzayma (ʿĀmir b. Ṣaʿṣaʿa — Hilāl) was first married to al-Ṭufayl b. al-Ḥārith (Quraysh — al-Muṭṭalib) who divorced her. Then she married his brother ʿUbayda who was killed at Badr. Her marriage to the Prophet took place in or around 4/625-6 when she was about thirty. She died just a few months later.

7. Juwayriyya (al-Musṭaliq — Khuzāʿa), daughter of the chief of the tribe, was captured in the attack on her tribe in 5/627, married by Muḥammad on her profession of Islam and set free. She was about twenty years old at the time. Some say that she was at first only a concubine (see CONCUBINES) but that she had become a full wife before the Prophet's death. Juwayriyya died in 50/670.

8. Zaynab bt. Jaḥsh (Asad b. Khuzayma) married Muḥammad in 5/626-7 at age thirty-eight after her divorce from Zayd b. Ḥāritha. She was a granddaughter of ʿAbd al-Muṭṭalib, and Muḥammad's first cousin on his mother's side. Her father was a client of the clan of ʿAbd Shams of the Quraysh tribe (see CLIENTS AND CLIENTAGE). Zaynab bt. Jaḥsh died in 20/640-1.

9. Māriya the Copt (see CHRISTIANS AND CHRISTIANITY) was a slave-concubine whom the ruler of Egypt (q.v.) sent to the Prophet as a gift in or around 6/627-8. She bore Muḥammad a son called Ibrāhīm who died when he was less than two years old. She remained a concubine. She died in 16/637.

10. Umm Ḥabība (Ramla) bt. Abī Sufyān (Quraysh — ʿAbd Shams) was about thirty-five when the Prophet married her on his return from Khaybar in 7/628. She was the widow of ʿUbaydallāh b. Jaḥsh with whom she had made the emigration to Abyssinia. She died in 46/666.

11. Ṣafiyya bt. Ḥuyayy (of the Jewish al-Naḍīr tribe; see JEWS AND JUDAISM; NAḌĪR, BANŪ L-) was captured at Khaybar in 7/628 and assigned to the Prophet. She was seventeen. Perhaps she was at first a concubine, but later accepted Islam, was set free, and became a wife. She died in 52/672.

12. Maymūna bt. al-Ḥārith (ʿĀmir b. Ṣaʿṣaʿa — Hilāl) became Muḥammad's wife at age twenty-seven in the year 7/629 during or right after the lesser pilgrimage (q.v.). She died in 61/680-1.

13. Rayḥāna bt. Zayd (of the Jewish al-Naḍīr tribe) was captured in 5/627 during the attack on the Banū Qurayẓa (q.v.) to whom her husband had belonged. With the Prophet, she had the status of concubine which she apparently retained until her death in 10/631-2.

In addition to these thirteen women generally acknowledged to have been either regular wives or concubines, there is some

information on a number of others whose names are linked with the Prophet, but the accounts are truncated, often contradictory, and on the whole quite dubious. The Prophet is said to have married several women whom he divorced (or some of whom divorced him?) before the marriage was consummated; mentioned are Fāṭima bt. al-Ḍahhāk b. Sufyān of the Kilāb tribe and ʿAmra bt. Yazīd of the Kilāb tribe (often assumed to be one and the same person), Asmāʾ bt. al-Nuʿmān of the Kinda tribe, Qutayla bt. Qays of the Kinda tribe, and Mulayka bt. Kaʿb of the Banū Layth. To some additional women, marriage was proposed but the marriage contract was not concluded (see CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS). The identity of the women who "gave themselves to the Prophet" by way of *hiba* is likewise quite obscure, as the list contains some additional names but also the names of several of the established wives.

When the Prophet died in 11/632, three of his thirteen consorts — Khadīja bt. Khuwaylid, Zaynab bt. Khuzayma, and Rayḥāna bt. Zayd — were already dead. Māriya retained her rank of concubine. The other nine were recognized as rightful bearers of the honorific title "Mothers of the Believers" (cf. Q 33:6, a late Medinan revelation; see CHRONOLOGY AND THE QURʾĀN).

The Prophet's wives in the Qurʾān

The Qurʾān specifically addresses the Prophet's wives on numerous occasions; many other revelations are linked with members of their group in the ḥadīth literature. They are clearly the elite women of the community of the faithful whose proximity to the Prophet endows them with special dignity. But this rank is matched by more stringent obligations. While the Qurʾān (Q 33:32) says of the Prophet's wives that they "are not like any [other] women," their peerlessness also entails those sharper rebukes for human frailties and more stringent codes of private and public probity, with which the scripture singles out the Prophet's consorts (see VIRTUES AND VICES, COMMANDING AND FORBIDDING). By linking dignity with obligation and elite status with heightened moral responsibility (q.v.; see also ETHICS AND THE QURʾĀN), their example defines two aspects of *sunnat Allāh,* God's "law" for the world. On the one hand, the Prophet's wives emerge in the qurʾānic context as models of the principle of ethical individualism. On the other hand, the dynamic of the revelations when read in chronological order moves toward increasing emphasis on the perfection of the Prophet's household as a whole; it is this collective entity that the revelations ultimately mean to strengthen and elevate to model status, even if it be at the expense of individual ambitions and the idiosyncrasies of some of its members.

The Prophet's wives figure unequally in qurʾānic exegesis, which is to say that only a small number of their group are consistently presented as key figures in the ḥadīth accounts of contexts of specific revelations (*asbāb al-nuzūl,* "occasions of revelation"). The following presents the qurʾānic revelations commonly linked with one, or several, or all of the members of the Prophet's household in the traditional chronology of revelation.

1. Q 33:37-8, *Lawfulness of marriage with former wife of adopted son,* and Q 33:4, 40, *Adopted sons are not sons*

Muslim scholarship dates these revelations to the fifth year after the *hijra* and commonly links them with the figure of Zaynab bt. Jaḥsh. The Prophet had arranged her marriage with Zayd b. Ḥāritha, a former Arabian slave of Khadīja's whom the Prophet had freed and

adopted as a son. The marriage was not harmonious and Zayd desired a divorce. The Prophet is then said to have begun to feel an attraction for Zaynab; he concealed it because at that time adopted sons were regarded as the full equals of legitimate natural sons, which rendered their wives unlawful for the adopting father. The revelations of Q 33:37-8 commanded the Prophet to marry Zaynab, and Q 33:4, 40 abolished the inherited notion of legal equality between real sons and adopted sons.

2. Q 33:53, *The* ḥijāb *verse,* and Q 33:55, *exemptions thereto*

Zaynab bt. Jaḥsh's marriage to the Prophet, likewise said to have occurred during the fifth year after the *hijra,* is identified in the majority of ḥadīth and *tafsīr* accounts as the occasion of God's legislation of the *ḥijāb,* "curtain, screen," imposed by God to shield the Prophet's women from the eyes of visitors to his dwellings (see VEIL; MODESTY). Many traditions maintain that this revelation was vouchsafed after some of the wedding guests had overstayed their welcome at the nuptial celebration in Zaynab's house. Another strand of traditions mentions ʿUmar b. al-Khaṭṭāb in the role of counselor who urged the Prophet to conceal and segregate his wives as a protective measure. For some of the later medieval exegetes, such as al-Bayḍāwī (d. prob. 716/1316-17) and Ibn Kathīr (d. 774/1373), ʿUmar's vigilance for the good of the Prophet's wives rates greater consideration as an occasion of revelation of Q 33:53 than do the accounts of the Prophet's annoyance at the guests who lingered in Zaynab's house on the wedding eve. The *ḥijāb* verse is followed by a revelation that establishes the classes of relatives and servants with whom the Prophet's wives were permitted to deal face-to-face rather than from behind a partition (Q 33:55). The qurʾānic directive to the Prophet's wives in Q 33:33 to stay in their houses and avoid strutting about is dated later than Q 33:53 (cf. below; see HOUSE, DOMESTIC AND DIVINE).

Self-protection of "the Prophet's wives, his daughters, and the women of the believers" was thereafter enjoined in Q 33:59-60 by way of God's demand that Muslim women cover themselves in their "mantles" *(jalābīb)* when abroad, so that they would be known (as free women) and not molested. Once again, classical exegesis has here identified ʿUmar b. al-Khaṭṭāb as the main spokesman in favor of a new clothing (q.v.) law. An additional legislative item on female modesty, directed at Muslim women in general, was revealed at a later date in Q 24:31 which prescribed use of their "kerchiefs" (*khumur,* sing. *khimār*) as a means to cover up "their bosoms" *(juyūb)* and their finery *(zīna)* except in the company of their husbands, other males to whom marriage is taboo and female friends and relatives, slaves, and the small children. It was on the basis of Q 33:53 (*ḥijāb,* "curtain" or "partition"), Q 33:59 (*jalābīb,* "mantles"), Q 24:31 (*khumur,* "kerchiefs") and Q 33:33 ("stay in your houses and avoid self-display") that classical law and theology (see THEOLOGY AND THE QURʾĀN) thereafter formulated the medieval Islamic ordinance for overall female veiling and segregation. Muḥammad's wives' domestic seclusion behind a partition *(ḥijāb)* merged with the clothing laws to such an extent that the very garments which Muslim women were commanded to wear in public came to be called *ḥijāb*.

3. Q 24:11-26, *The qurʾānic injunction against slander*

In chronological terms, the next block of qurʾānic legislation consistently linked in the ḥadīth with a member of the Prophet's

household is Q 24:11-26, the injunction against slander (see GOSSIP). The verses are dated into the fifth or sixth year after the *hijra* and are said to have been occasioned by ʿĀʾisha bt. Abī Bakr's involvement in "the affair of the lie (q.v.)," *al-ifk*.

The medieval ḥadīth describes ʿĀʾisha as the Prophet's favorite wife. The only virgin among Muḥammad's brides, she was betrothed to the Prophet three years before the *hijra* when she was six or seven years old, and the marriage was concluded and consummated when she was nine. The "affair of the lie" thus occurred when she was eleven, twelve, or thirteen. Returning from a military expedition on which she had accompanied the Prophet, ʿĀʾisha was inadvertently left behind at the last camping ground when the army departed for Medina in the darkness of early morning. She was rescued and returned to Medina by a young Arab Bedouin (q.v.; see also ARABS; NOMADS). A scandal broke that was mainly instigated by the Prophet's enemies (q.v.) but also tore the Prophet's followers apart (see OPPOSITION TO MUḤAMMAD). A full month later, the revelation of Q 24:11-26 was vouchsafed which established ʿĀʾisha's innocence, severely reprimanded the believers for their unrighteous behavior, and announced grievous penalties for all who would perpetrate unfounded slander of chaste women (see BOUNDARIES AND PRECEPTS; CHASTITY). Additional legislation on slander is found in Q 24:4-5. The transgression was later classified in Islamic jurisprudence as one of the *ḥudūd* offenses ("canon law cases with unalterable punishments"; see CHASTISEMENT AND PUNISHMENT).

4. Q 33:28-9, *The verses of choice*

Ḥadīth accounts do not reflect a consensus on the incident or incidents that led to the Prophet's seclusion from all of his wives for a month until he received the revelation of Q 33:28-9 that instructed him to have his wives choose between "the life of this world and its glitter" and "God, his Prophet, and the abode in the hereafter." This revelation has been dated to the late fifth, seventh, or ninth year after the *hijra*. The ḥadīth sources mention several different episodes of household disagreement caused by the women's (or some of the women's) insubordination and backtalk (see INSOLENCE AND OBSTINACY; OBEDIENCE), material demands that the Prophet was unable to fulfill (see MAINTENANCE AND UPKEEP), and mutual jealousy (see ENVY), that may all have fed into one major crisis. By all accounts, the domestic turmoil was of significant proportions and when the Prophet secluded himself for a month, there was fear in the community that he would divorce his wives.

When the Prophet returned, he repeated the newly-revealed "verses of choice" to each of them. Thereupon each of the women, beginning with ʿĀʾisha, declared that she chose God and his Prophet and the abode in the hereafter over the world and its adornment. It is said that ʿĀʾisha reached her decision swiftly and without consulting her father (or parents), and that the Prophet was gladdened by her choice.

5. Q 33:30-1, *Double punishment and double reward for the Prophet's women,* Q 33:32, *Peerlessness of the Prophet's women and injunction against complaisant speech,* Q 33:33-4, *Command that they stay in their houses, avoid displaying their charms, and be pious, charitable, obedient, and mindful of God's verses and wisdom recited in their houses*

These verses are generally thought to have been revealed soon after the crisis that had led to the Prophet's seclusion from his wives. They acknowledge the peerlessness of the Prophet's consorts and also impose

specific and far-reaching restrictions on the women's accessibility, visibility, and manner of comportment. Q 33:30-1 establish double punishment in the case of clear immoral behavior, and double reward for obedience to God and his apostle and godly acts (see GOOD DEEDS). In Q 33:32, the Prophet's women are then told that they are "not like any (other) women," and are enjoined to abstain from submissive speech that might be misunderstood. In the verses immediately following, Q 33:33-4, the expression "O women of the Prophet" does not appear, but both verses are syntactically tied to the four that precede them. Because of the context, qurʾānic exegesis has traditionally understood Q 33:33-4 as having been addressed to the wives of the Prophet. The question of context is here especially significant because the verses include important pieces of legislation. In Q 33:33, the Prophet's wives (or, a plurality of women?) are commanded to stay in their houses, avoid *tabarruj,* "strutting-about," in the manner of *al-jāhiliyya l-ūlā,* "the first age of unbelief" (see AGE OF IGNORANCE; IGNORANCE), perform the prayer (q.v.), give alms (see ALMSGIVING), and obey God and his Prophet. In Q 33:34, they are commanded to be mindful of God's signs (q.v.; or verses [q.v.]) and the wisdom (q.v.) that is recited in their houses (see RECITATION OF THE QURʾĀN).

In terms of Islamic legal-theological institution building, when Q 33:33 was later applied to Muslim women in general it enjoined them to stay at home and also be indistinguishable from all other females when abroad, as *tabarruj* came to mean a woman's display of her physical self in all manners of speaking that would include the wearing of revealing garments, the use of cosmetics, unrestricted gait and the like. While the exact definition of *tabarruj* has varied over the ages, its condemnation by the custodians of communal morality has always included the qurʾānic reference that it is un-Islamic, a matter of *jāhiliyya* and therefore a threat to Islamic society. *Tabarruj,* forbidden to the Prophet's wives in Q 33:33, eventually came to signify the very antithesis of the *ḥijāb* imposed on the Prophet's wives in Q 33:53, both in its qurʾānic sense of seclusion qua "partition" and also its extended meaning of a concealing garment worn outside the house. In their totality, the three qurʾānic commands to Muḥammad's wives of Q 33:53 and 33:33 thus became the scriptural foundations for an Islamic paradigm of women's societal role in which space, clothing and comportment were powerful factors (see GENDER; PATRIARCHY).

6. Q 33:6, *The Prophet's wives are the Mothers of the Believers,* and Q 33:53, *Muslims may not marry the Prophet's wives "after him"*

These revelations are thought to have been received at a later date than the verses of choice (Q 33:28-9) and the peerlessness and restriction verses (Q 33:30-4). Muslim qurʾānic interpretation has recognized a connection between the honorific title of "Mothers of the Believers" in Q 33:6 and the injunction against marriage with the Prophet's wives (or widows) in Q 33:53, because, according to Q 4:23, marriage with the mother is forbidden. Even though Q 33:6 and Q 33:53 are not consecutive in the established qurʾānic text, they are generally considered to belong together. Qurʾān interpreters point out that the injunction against marriage with the Prophet's wives or widows was divinely enjoined in order to glorify the Prophet, alive or dead. In fact, none of the Prophet's established wives are known to have been divorced by him and none of his widows remarried after he had died.

7. Q 66:1-5, *Release of the Prophet from certain restrictions, expiation of oaths, a wife who betrayed the secret, warning to two women who conspired against the Prophet, threat of divorce and enumeration of wifely virtues*

This group of verses has been dated to the period of, or right after, a major crisis in the Prophet's household that culminated in the Prophet's month-long seclusion from his household. The revelation relieves the Prophet from some unspecified, apparently self-imposed, restriction. Mentioned then is the duty to expiate oaths (q.v.). A matter of confidence was disclosed by the Prophet to one of his wives but she divulged it. Two women are called to repent, are sternly reprimanded, and are warned not to conspire against the Prophet. Thereafter the wives are threatened with the possibility that if the Prophet divorces them, God in exchange will give him "better wives than you, Muslims, believers, devout, penitent, obedient in worship, observant of worship and contemplation, both formerly married and virgins."

Clearly these verses also refer to a major crisis in the Prophet's household, which ḥadīth and exegetical literature again attribute to shortcomings (insubordination, greed, jealousy) on the part of the women. There is a great deal of overlap in the details of the quoted *asbāb al-nuzūl* (occasions of revelation of qurʾānic verses) materials, and some sources even collapse the occasions of revelation of Q 33:28-9 and Q 66:1-5.

8. Q 33:50, *Classes of women lawful for marriage with the Prophet,* Q 33:51, *Special privileges for the Prophet within his polygamous household,* Q 33:52, *Injunction against additional marriages?*

These verses have been dated to the late Medinan period. Q 33:50, specifying the categories of women from which the Prophet was empowered to choose his wives and concubines, was discussed at the beginning of this article. Q 33:51, most probably revealed on the same occasion as Q 33:50, grants the Prophet greater freedom in choosing — or dealing with — his wives, by permitting him to "defer" or to "take in" whom of the women he willed; the verse continues with the words "and if you desire one whom you have sent away, it is no sin for you (see SIN, MAJOR AND MINOR). This is more appropriate that their eyes be gladdened and that they should not be sad (see JOY AND MISERY), and all be satisfied with what you have given them. God knows what is in your hearts." One school of exegesis links Q 33:51 with Q 33:50 in order to read Q 33:51 as divine permission for the Prophet to enter into new marriage arrangements and terminate old ones. Another strand of interpretation stipulates that Q 33:51 applies only to the Prophet's relations with his existing spouses, whence it means a release from the rigid pattern of marital equity that Muḥammad had practiced in the past. Q 33:52 (which appears to contradict Q 33:50 and Q 33:51) instructs the Prophet that henceforth (additional) women are not lawful for him (for marriage) nor in (ex)change for (established) wives, with the exception of his slaves. According to some commentators, this revelation put an end to further marriages by the Prophet. Others interpreted the verse as limitation on the groups, or classes, or categories, from which the Prophet was empowered to choose new marriage partners. A third point of view maintained that Q 33:52 was abrogated by Q 33:51 (see ABROGATION); the stipulation of abrogation eliminated the apparent contradiction between Q 33:52 and Q 33:51 and also served to confirm the Prophet's complete freedom with regard to his marital arrangements.

The qurʾānic legislation directed at the

Prophet's wives is entirely of Medinan provenance and belongs to the last six or seven years of the Prophet's life. Considered in chronological sequence of date of revelation, the duty of seclusion behind a partition in the presence of nonrelatives was the first rule imposed on the Prophet's wives. It was accompanied, or soon followed, by stringent codes of modest comportment in private and public that emphasized the women's duty to maintain seclusion in their houses, in addition to piety (q.v.), charity (see ALMSGIVING), and obedience to God and his Prophet. Added thereto were strongly worded warnings against domestic disobedience (q.v.) in the form of plots or conspiracies. While the Prophet was granted unequalled rights concerning the number and type of marriages he might wish to conclude, remarriage of his wives "after him" was forbidden.

The chronological sequence of revelations was clearly an important concern of early Muslim ḥadīth, *tafsīr,* and *fiqh* (Islamic jurisprudence), made all the more urgent by the doctrine of *naskh,* "abrogation" of an earlier revelation by a later one, that had theological as well as legal import. While in chronological terms the qurʾānic legislation on the Prophet's domestic affairs progressed toward granting him increasing control over his women, the time frame also suggests a trend toward greater restraint, not increasing "liberation," of the Prophet's women. The Qurʾān itself provides the *ratio legis* for this trend in its repeated statements of concern for the collective wellbeing, indeed the perfection, of the Prophet's household. The Prophet's polygamous household here becomes a prime example of qurʾānic reasoning in favor of righteous institutions over individual aspirations. At the same time, the qurʾānic legislation also signifies the principle of ethical individualism in its linkage between individual elect status and individual virtue (q.v.; see also ELECTION). As posited in the "verses of choice" of Q 33:28-9, double shares of divine reward are compensation for the Prophet's wives' choice to accept obligations more stringent than those which the Qurʾān imposes upon Muslim women in general. According to *sunnat Allāh,* God's "law" for the world, human virtue bears rewards both individual and communal, when virtuous institutions are maintained by the individual virtue of their members. That is to say that the Qurʾān's promise of everlasting elite status for the Prophet's consorts hinges on their acceptance of greater and graver obligations, since for their group the conditions of "obedience to God and obedience to his Prophet" are cast in more exacting terms.

The Prophet's wives in the classical ḥadīth

In a complex mixture of history and paradigm, the Prophet's wives appear in the classical ḥadīth in at least three distinct sets of personae: as models for the righteous, as elect consorts touched by the miracles (q.v.) that marked the Prophet's career, and as embodiments of female emotionalism, irrationality, greed, and rebelliousness (see REBELLION). The first of these three symbolic images of the Prophet's wives is most pervasive in the authenticated, or "sound," ḥadīth collections that bear the imprint of development of the terms of Islamic law. Second, the hagiographic material in the ḥadīth is largely linked with the legacy of the *quṣṣāṣ,* popular tellers of pious lore. Third, the image of the Prophet's wives as "ordinary women" who display all the frailties and foibles of their sex (see SEX AND SEXUALITY) is mainly found in ḥadīth works compiled for biographical purposes, such as Ibn Saʿd's (d. 230/845) *Kitāb al-Ṭabaqāt al-kubrā,* of which the eighth volume deals with the ḥadīth by and about the women of early Islam. Ibn Saʿd's col-

lection includes items pertaining to all of the normative, hagiographic and anecdotal ḥadīth on Muḥammad's wives, and much of the material that he assembled can later be encountered in the classical *tafsīr* literature.

The Prophet's wives as models to be followed

Their Qurʾān-established rank, role as the Prophet's helpmates and supporters in his mission to preach and implement the true religion (q.v.; see also TEACHING AND PREACHING THE QURʾĀN; INVITATION), and their intimate involvement with the righteous Prophet in all of the minutiae of daily life elevated the Prophet's wives even during their lifetime to a level of prestige well above the community's other females. This special status grew loftier with the progression of time, when Muslim piety came to view the women of the Prophet's household as models for emulation. Eventually, the Prophet's wives' behavior was recognized as *sunna,* an "impeccable model," that furnished many of the criteria of what was lawful or forbidden for Muslims, especially Muslim women. These criteria were then codified qua examples in the works of early Islamic jurisprudence *(fiqh)*.

The interplay between the principle of the women's righteousness and their function as categorical norm-setters is especially clear in the traditions that deal with modesty, veiling and seclusion, where the Prophet's wives are depicted as both models and enforcers of the then newly imposed qurʾānic norms. Their invisibility went beyond the restrictions placed upon Muslim women in general at that time. In addition to obligatory seclusion in their houses, the Prophet's wives were shrouded in multiple garments when abroad, such as during prayer and the pilgrimage, and they traveled in camel (q.v.) litters so unrevealing and undistinguishable that even the Prophet mistook one wife's litter for that of another. In some sources, the fact that the Prophet on his return from Khaybar wrapped his war captive Ṣafiyya in his own cloak from the top of her head to the bottom of her feet was taken as proof that Ṣafiyya was no longer a concubine but had become a wife. ʿĀʾisha is said to have hidden behind the *ḥijāb* of her house even in the presence of a blind man and to have replaced her niece's flimsy *khimār* with a thick cloth, reminding her of the revelation of Q 24:31.

At the Farewell Pilgrimage (q.v.), the Prophet is said to have enjoined his wives to stay home at all times (and even forego the pilgrimage in the future), and after he had died, several of his widows did opt for complete confinement. The most notable exception to such righteous immobility on the part of the Mothers of the Believers was ʿĀʾisha's well-established active involvement in public affairs after the Prophet's death which culminated in the Battle of the Camel. ʿĀʾisha's behavior was clearly outside of the norms reportedly observed by the Prophet's other widows. The ḥadīth overall deals with the event not by way of reports of censure that others cast against her but emphasizes the fact that ʿĀʾisha herself regretted her involvement most bitterly and passed her final days in self-recrimination.

The Prophet's wives coexisted with one another in mutual love (q.v.) and compassion and thus embodied the ideal spirit of a harmonious polygamous household. They called each other "sister" (q.v.) and praised each other's uprightness, devotion, and charity. When Zaynab bt. Jaḥsh fell ill, it was the Prophet's other widows who nursed her and, when she died, it was they who washed, embalmed and shrouded her body (see DEATH AND THE DEAD; BURIAL). They also lived lives of voluntary poverty (see POVERTY AND THE POOR) and denied themselves even lawful pleasures. Of

ʿĀʾisha, for instance, it is said that she fasted continuously (see FASTING) and freely gave alms at the expense of her own already meager food supply and that she wore threadbare clothes which she mended with her own hands. Of Maymūna it is reported that she picked up a pomegranate seed from the ground to keep it from going to waste. Zaynab bt. Jaḥsh, nicknamed "the refuge of the poor," gave away all her wealth, including the large yearly pension that she received during the caliphate of ʿUmar b. al-Khaṭṭāb (see CALIPH), since she regarded wealth as *fitna,* "temptation," and ʿĀʾisha donated in charity the five camel loads of gold (q.v.) that the Umayyad caliph had sent her for the sale of her house located near the Medinan mosque (see MOSQUE OF DISSENSION). The Prophet's wives were also profoundly knowledgeable about matters of the faith (q.v.) and they were scrupulously honest in transmitting traditions. ʿĀʾisha's knowledge was such that very old men who had been Companions of the Prophet (q.v.) came to seek her counsel and instruction. Based on the criteria provided by the medieval ḥadīth, the main components of the exemplary precedent set by the Prophet's wives are: segregation and quiet domesticity, modest comportment, invisibility through full veiling when outside of the house, ascetic frugality (see ASCETICISM), profound knowledge of the faith and devout obedience to God and his Prophet. Since the Prophet was also the husband of these women, special emphasis is placed on wifely obedience as an important dimension of female righteousness.

The Prophet's wives in early ḥadīth hagiography

The ḥadīth collections contain reports of miraculous events that embellished the lives of the Prophet's consorts. These occurrences always involve the Prophet, and it is in their relationship with him that the women were granted miraculous experiences and abilities. Before her marriage to the Prophet and the coming of Islam, Muḥammad's first wife Khadīja bt. Khuwaylid was participating in a popular, annual, pagan celebration for the women of Mecca (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC) that centered around an idol in the shape of a man, when the idol began to speak, predicting the coming of a prophet named Aḥmad (see NAMES OF THE PROPHET), and advising those who could among the women of Mecca to marry him. While the other women pelted the idol with stones, Khadīja paid attention to its words. Later, after she had hired Muḥammad to trade on her behalf in Syria (q.v.), she heard about the miraculous events that had occurred on this journey, and it was because of this information that she asked him to marry her (Ibn Isḥāq-Guillaume, 82-3). Most of the Prophet's other wives experienced dream visions (q.v.) prior to their marriages with him (see also DREAMS AND SLEEP). While Sawda was still married to her previous husband, she dreamt that Muḥammad approached her and placed his foot on her neck, and also saw a moon that hurled itself upon her while she lay prostrated. When Umm Ḥabība and her husband lived as temporary refugees in Abyssinia, she had a dream in which she saw her husband disfigured. On the following morning she learned that he had apostatized (see APOSTASY) and when she rebuked him, he took to drink and died soon afterwards. Then she heard a dream voice that addressed her as Mother of the Believers, and on the following morning the ruler of Abyssinia informed her that the Prophet had written a letter asking for her hand in marriage. Ṣafiyya, the woman of Jewish

descent from Khaybar, saw herself in a dream standing by Muḥammad's side while an angel's wing covered the two of them. Later she dreamt that a moon had drawn close from the direction of Medina and had fallen into her lap. Her husband hit her in the face when she told him of this vision, and the mark was still visible when the Prophet married her after the conquest of Khaybar. In ʿĀ'isha's case, it was not she but the Prophet who was favored with a sign, as it is reported that Muḥammad only asked Abū Bakr for her hand in marriage after the angel Gabriel (q.v.) had shown him her picture as his future wife. Later it was only ʿĀ'isha in whose company Muḥammad is said to have received revelations (see REVELATION AND INSPIRATION); some traditions report that ʿĀ'isha could even see the angel on these occasions and exchanged salutations with him, while others say that she could not see him but that she and the angel greeted each other through the Prophet. Zaynab bt. Jaḥsh was miraculously blessed by God when the meager food that the Prophet's servant Anas b. Malik had prepared for her wedding feast multiplied until it sufficed to feed a large crowd.

The ḥadīth collections establish that all of the Prophet's terrestrial wives will be his consorts in paradise (q.v.). The angel commanded the Prophet to take Ḥafṣa bt. ʿUmar back after he had divorced her, saying that she was a righteous woman and would be his wife in heaven. Sawda implored the Prophet not to divorce her because she yearned to be his consort in heaven. The angel showed the dying Prophet ʿĀ'isha's image in paradise to make his death easier with the promise of their reunion in the hereafter. The first of the wives to join the Prophet in heaven was Zaynab bt. Jaḥsh. He had predicted this when he said that the wife who had "the longest arm" would arrive there soon after him; later the women comprehended that what he had meant was "charity," because the first to die after him was the charitable Zaynab bt. Jaḥsh. Traditions of this genre, then, are of inspirational character. They depict the Prophet's wives as divinely favored individuals, ranked above ordinary womankind and surrounded by God's grace, because they are his Prophet's chosen consorts.

The Prophet's wives as "ordinary women"

Many of the accounts of life in the Prophet's household contain detailed descriptions of the jealousies and domestic quarrels of the Mothers of the Believers. These reports present the Prophet's wives as a petty, greedy, backbiting and power-hungry lot. The unseemliness of their behavior is more glaringly highlighted by the many traditions about the Prophet's impartiality towards his wives. He is said to have been scrupulous in treating them equitably, visiting each of them once a day. After a wedding night spent with a new wife, he wished his other wives well and asked to receive their good wishes. Each wife had her turn of a fixed period of companionship and sexual contact with the Prophet, a prerogative that she zealously guarded as her right and could give to a rival if she chose. If a new bride opted for a longer period of privacy and intimacy with the Prophet after the wedding, then the other wives were entitled to the same. On travels and military expeditions, he determined by lot which two of his wives would accompany him. This equitable system was upset time and time again when a wife would think of some trick or another to detain the Prophet in her house during his daily visit. An oft-quoted story tells that Ḥafṣa bt. ʿUmar (or maybe Umm Salama) who knew of Muḥammad's love for sweets

detained him by offering a honey drink, until the ruse was discovered and thwarted by a counter-ruse of ʿĀʾisha, Sawda and Ṣafiyya (or maybe it was ʿĀʾisha and Ḥafṣa).

Many traditions state that the women were dissatisfied with the manner in which food and other presents were distributed among them. But most of the jealousy narratives have a sexual and emotional theme. New arrivals in the Prophet's household are said to have evoked intense jealousies among the established wives who feared that a new rival might replace them in the Prophet's affection. Such jealousies could make a new wife appear more imposing and beautiful than perhaps she really was. ʿĀʾisha, for example, is said to have been most fearful when the Prophet had married the Meccan Makhzūmī aristocrat Umm Salama, or brought home the beautiful Arab war captive Juwayriyya, or the young Jewish war captive Ṣafiyya. Umm Salama was especially prone to jealousy and had warned the Prophet about this fact before accepting his marriage proposal. Some of the Prophet's wives reviled each other and each other's fathers and did so even in his presence; such backbiting and bragging matches are reported between Zaynab bt. Jaḥsh and ʿĀʾisha, Umm Salama and Ṣafiyya, and ʿĀʾisha and Ṣafiyya, while Zaynab bt. Jaḥsh is also said to have refused to lend one of her camels to Ṣafiyya whose mount had become defective. All of the wives were intensely jealous of the Prophet's concubine Māriya the Copt, especially after she had given birth to Ibrāhīm, the Prophet's only child after the sons and daughters whom Khadīja had borne him; their jealousy of Māriya was so intense that the Prophet had to assign her a dwelling in a loft he owned that was at some distance from his established wives' living quarters. The women also boasted among themselves (see BOAST) about who had played a special role in an "occasion of revelation," or held a special rank with the Prophet. Some traditions assert that the wives disliked Zaynab bt. Jaḥsh's reminders that her marriage to the Prophet had occurred by divine dispensation, and that the *ḥijāb* verse had been revealed on the occasion of her wedding. ʿĀʾisha, in turn, reminded the wives that she had been the only virgin bride among all of them and that the Prophet often called her his favorite wife. Some of the traditions on the Prophet's wives' mutual jealousies may very well have carried some underlying political meaning during the period of their first formulation, since the Prophet's wives hailed from different clans and even tribes of whom many were, or later turned out to be, affiliated with opposing factions in early Islamic history (see POLITICS AND THE QURʾĀN; HISTORY AND THE QURʾĀN). The Jewish background of two of Muḥammad's consorts, Ṣafiyya and Rayḥāna, and the Christian faith of his concubine, Māriya the Copt, may also at some level have influenced the shape and import of the jealousy narratives. In any case, the almost formulaic early ḥadīth image of the Prophet's wives as jealous, competitive, petty and backbiting, while perhaps in part historically correct, was retained and even highlighted in medieval Islamic scholarship because it supported *ʿulamāʾ* opinion of women's irrational nature. In part, the ongoing popularity of traditions depicting the Prophet's wives as "ordinary women" was surely due to the need and desire of the pious to collect background information on the qurʾānic verses of rebuke and censure revealed on their behalf. But this preference was also grounded in the generally low opinion of women's nature as expressed in medieval legal-theological literature as a whole, where information on the flaws of the first female elite of Islam served to reinforce an

emerging blueprint of gender discrimination (see FEMINISM AND THE QUR'ĀN).

The Prophet's wives in modern Muslim interpretation

It is symptomatic of the new age and debates on women's questions that the modern and contemporary literature on the Prophet's consorts has largely excised the "anecdotal" materials so copious in Ibn Sa'd and other medieval sources. The same is largely true for the hagiographic dimension. With the exception of works of popular piety (that often have a Ṣūfī bent; see ṢŪFISM AND THE QUR'ĀN) and some traditionalist inspirational writings, contemporary Muslim literature now deemphasizes the miraculous experiences of the Prophet's wives, just as it also deemphasizes their all-too-human frailties. It is as fighters for the establishment of Islamic values — and there mainly by way of impeccable morality and manner of life — that the wives of the Prophet are now depicted. As such, they embody the model behavior that the contemporary Muslim woman can recognize and which she must strive to follow.

Modern Muslim literature on the Prophet's life and domestic affairs often includes long passages on gender issues in general. Dignity, honor, and rights both spiritual and material provided for the women in Islam are contrasted with women's chattel status in the Arabian *jāhiliyya* and other past and present godless societies, especially of the West. Criticism of the West focuses on pre-modern legal inequities and also the ongoing exploitation of the Western woman in the workplace and as a sexual object in the entertainment and advertising industries (Haykal, *Life of Muḥammad,* 318f.; al-'Aqqād, *'Abqariyyat Muḥammad,* 99f.; Bint al-Shāṭi', *Tarājim,* 206f., 257; Gharīb, *Nisā',* 114f., 122f.). While women's exploitation in Western societies undermines self-serving Western claims to being "advanced," women's rights in Islam verify the collective dignity of all Muslims, indeed of the whole Islamic system, that the West (missionaries and Orientalists) had set out to defame. History itself proves the Prophet's superior nature in that Muḥammad not only founded a legal society in which women were at long last recognized, but he himself also treated women, including his own wives, better than did any other man at any time in human history before or after his lifetime (Haykal, *Life of Muḥammad,* 298; al-'Aqqād, *'Abqariyyat Muḥammad,* 102f.; Bint al-Shāṭi', *Tarājim,* 208f.; Gharīb, *Nisā',* 121f.). In some of the modern literature, the medieval ḥadīth is omitted or used very sparingly (Haykal, *Life of Muḥammad;* al-'Aqqād, *'Abqariyyat Muḥammad*), while in other works the old texts are read in new ways (Bint al-Shāṭi', *Tarājim*). In both approaches, the old hagiographic traditions are eliminated. Instead the Prophet's wives are depicted as helpmates and participants in the Prophet's mission, and their "jealousy," that is, their competitive love for him, is frequently attributed to piety, commitment to the cause, and their own attractive and lively natures. The Prophet's harmonious household supports the argument in favor of polygamy when its main features are legality, equity, honor, practicability, and necessity. The large size of the Prophet's harem is now interpreted as a sign of his perfected humanity (see IMPECCABILITY). That the Prophet married his many wives for reasons involving some sexual interest is indication of his sound original nature (al-'Aqqād, *'Abqariyyat Muḥammad,* 110-11; Bint al-Shāṭi', *Tarājim,* 204; Gharīb, *Nisā',* 122f.). That he then had the power to fulfill the demands of his mission and also his wives' demands is proof of his superiority as a human. But mere pleasure-seeking was never a motive in his

choice of any of his wives, before or after his call, in youth or old age. Muḥammad was a man of seriousness and equanimity who could have lived like a king but chose to live like a pauper. He chose frugality even though this went against the wishes of his wives who craved the means to beautify themselves for him. Clearest proof that the Prophet was free from base instincts such as lust (as claimed by the Orientalists) are the historical facts of his celibacy until his twenty-fifth year and then his monogamous marriage with a woman fifteen years his senior, to whom he was completely devoted until she died and he was more than fifty years old. In Khadīja, his first follower and supporter, he also found a substitute mother (Bint al-Shāṭiʾ, *Tarājim,* 223; Gharīb, *Nisāʾ,* 119). The many other marriages that the Prophet concluded after her death were either means to cement political alliances with friends and foes alike, or they were concluded in order to provide a safe haven of refuge as well as rank and honor for noble women whom the Islamic struggle had left unprotected or even destitute. Even the marriage with ʿĀʾisha came about at first because the Prophet wished to strengthen his relationship with her father, Abū Bakr; it was only later that she emerged as his most beloved wife, but even then she could not take Khadīja's place in his heart (Bint al-Shāṭiʾ, *Tarājim,* 233f., 240-1, 254, 272f.). The marriages with Ḥafṣa bt. ʿUmar, Umm Ḥabība bt. Abī Sufyān, Juwayriyya of the Banū Musṭaliq and others were likewise primarily political unions but the compassion motif was never absent (al-ʿAqqād, *ʿAbqariyyat Muḥammad,* 115-17; Bint al-Shāṭiʾ, *Tarājim,* 242f., 304f., 319f., 355f., 377f., 382f., 387f.).

Modern Muslim biographers do not exclude the jealousy theme from their descriptions of the Prophet's domestic relations, but their use of the theme differs from the medieval ḥadīth in both mood and purpose. In many instances, jealousy is equated with the power of love and also other attractive human traits that distinguish full-blooded and lively women such as the Prophet's wives (Bint al-Shāṭiʾ, *Tarājim,* 278f., 293). The Prophet himself permitted his wives to fill his private world with warmth, emotion, and excitement, and barring a few instances when they went out of bounds and he had to deal with them sternly, he did not mind spending his free hours observing their small battles that were kindled by their love and jealousy for him. Since the Prophet was the perfect husband, all of his wives found honor and happiness with him such as no monogamous marriage to another man could have entailed (Bint al-Shāṭiʾ, *Tarājim,* 204f.).

The large-scale replacement of the medieval jealousy theme with the attractive modern image of the lively and loving spouse signifies the end of the classical construct of female weakness, including female powerlessness. As the Prophet's wives once again emerge as ideal women in the modern literature, the qualities now emphasized differ from the past. Prominently featured are the women's participation in the Prophet's struggle for the cause, that is especially constituted by their active role as helpmates on the home front. Here, the domesticity theme involves the glorification of the female in her God-given roles of wife and mother. The fact that of Muḥammad's actual wives only Khadīja bore him children may explain why it is she who now emerges in the debate on the wives of the Prophet as the most prominent figure, unlike the medieval ḥadīth which placed far greater emphasis on ʿĀʾisha. Modern sources celebrate Khadīja as both wife and mother while she

was also the Prophet's most important supporter and his fellow-struggler in his great jihād that she waged as his deputy from the moment of their first meeting until the day of her death (Bint al-Shāṭiʾ, *Tarājim,* 233-5; al-ʿAqqād, *ʿAbqariyyat Muḥammad,* 113-15, 118; Gharīb, *Nisāʾ,* 118f.; Razwy, *Khadīja,* 146-7). The interrelationship of domestic support and shared struggle for the cause is also pursued in the examples of the Prophet's later wives. Bint al-Shāṭiʾ defined the virtues of the wives of the Prophet as follows: constancy in worship, charity, devotion to the husband, raising her children by herself in order to free him for a greater purpose, self-control, dignity, pride (q.v.), courageous defense of Islam against unbelievers (see COURAGE) even if these be blood relatives (see BLOOD AND BLOODCLOT), knowledge of the doctrines and laws of Islam, and wise counsel in religious matters (*Tarājim,* 271, 297, 311-12, 317-18, 322-3, 352, 364-8, 387-8).

A perhaps more activist modern approach to the legacy of the Prophet's wives insists that Muḥammad's consorts were dynamic, influential, and enterprising, and that they were full and active members of the community. They were the Prophet's intellectual partners and they accompanied him on his raids and military campaigns and shared in his strategic concerns. He listened to their advice which was sometimes the deciding factor in thorny negotiations (e.g. Mernissi, *The veil,* 104, 113-14). The wives of the Prophet were activists who in Medina worked to secure equal status for women with men regarding economic (see ECONOMICS) and sociopolitical rights, mainly in the areas of inheritance (q.v.), participation in warfare and booty, and marital relations (Mernissi, *The veil,* 118f., 129f.). Even ʿĀʾisha's involvement in political affairs (the Battle of the Camel) after the Prophet's death, an occurrence much criticized in ḥadīth and most later religious literature, here counts as proof that the Prophet's widows had the power to be political actors in their own right (Mernissi, *The veil,* 49-61). Changed in essence but not always in form, the ḥadīth materials on the wives of the Prophet continue to play an important role as a framework of religious self-understanding, a normative mirror-image of contemporary Muslim societal realities and plans for the future.

Wolf see ANIMAL LIFE

Womb

The female reproductive organ, the uterus, by extension, the importance of kinship and blood relationships. The root of the Arabic term for "womb" (*raḥim, riḥm,* pl. *arḥām*), *r-ḥ-m,* is also the base of *raḥma,* "compassion," and the divine names *al-raḥmān* and *al-raḥīm,* the merciful and compassionate, each of which signals the feminine associations of the divine quality of mercy (q.v.; see also GOD AND HIS ATTRIBUTES; ARABIC LANGUAGE; GENDER). The use of the term "womb" in the Qurʾān most often refers either to the generative function of the female reproductive organ (Q 2:228; 3:6; 13:8; 22:5; 31:34; see BIOLOGY AS THE CREATION AND STAGES OF LIFE) or to the importance of the bonds of kinship (q.v.; *ṣilat al-raḥim;* e.g. Q 47:22, 60:3; cf. 4:1, 8:75, 33:6).

Some of the verses mention the womb in the context of the legal implications associated with conception and birth (see LAW AND THE QURʾĀN); for example women about to be divorced should not "hide what God has created in their wombs" (Q 2:228; see MARRIAGE AND DIVORCE; WOMEN AND THE QURʾĀN), and the closeness of kinship should be taken into account in settling inheritance (q.v.; e.g. Q 8:75; 33:6). In the case of these latter two verses the classical commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) interpret the statement, "those related by 'the womb' are nearer to one another in the book [q.v.; God's decree]," to refer to their primary claims to inheritance based on proximity of kinship. The implication in this case was that the "brotherhood relationship" initially established between the emigrants from Mecca (q.v.) and the Medinan "helpers" (see MEDINA) should no longer affect inheritance rights (see BROTHER AND BROTHERHOOD; EMIGRANTS AND HELPERS; FAMILY). In the case of Shīʿī *tafsīr* (see SHĪʿISM AND THE QURʾĀN), the primacy of those related by the womb is interpreted as indicating the superior rights of the Prophet's descendants in authority (q.v.), sovereignty (q.v.) and faith (q.v.; Majlisī, *Biḥār,* xxiii, 257-8; see FAMILY OF THE PROPHET).

The reference to the womb's shrinking and swelling, or to its gestation periods (Q 13:8), conveys but one aspect of a complex qurʾānic embryology, including the mention of a "sperm-drop" (*nuṭfa,* Q 23:13), "a hanging element" (*ʿalaq,* Q 23:14) and a "chewed lump" (*muḍgha,* Q 23:14) during the early phases of conception. Such verses have inspired a particular genre of modern Islamic apologetic that understands these phrases as anticipating current scientific findings about the stages of pregnancy (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY; SCIENCE AND THE QURʾĀN). In the Qurʾān the "ties of the womb," i.e. kinship bonds, are so strong that reverence for them is paired with the fear (q.v.) of God *(taqwā)* in the opening verse of Q 4 ("The Women," Sūrat al-Nisāʾ) and breaking these ties is an aberration paired with "sowing corruption (q.v.) in the land" in Q 47:22. On the last day (see LAST JUDGMENT; APOCALYPSE), however, these ties will not offer a person any relief (Q 60:3; see INTERCESSION). The idea of upholding relationships, first those based on blood ties (see BLOOD AND BLOOD CLOT) and then more remote ones, is a basic moral teaching affirmed in the Qurʾān:

Worship (q.v.) God and join not any partners with him (see POLYTHEISM AND ATHEISM); and do good (see GOOD DEEDS; VIRTUES AND VICES, COMMANDING AND FORBIDDING) — to parents (q.v.), kinfolk, orphans (q.v.), those in need (see POVERTY AND THE POOR), neighbors who are near,

neighbors who are strangers, the companion by your side, the wayfarer [you meet; see TRIPS AND VOYAGES; JOURNEY]… (Q 4:36; see also HOSPITALITY AND COURTESY; ETHICS AND THE QUR'ĀN; STRANGERS AND FOREIGNERS).

Many ḥadīths (see ḤADĪTH AND THE QUR'ĀN) also refer to the ties of the womb (kinship), for example, "Worship God and do not associate anything with him, establish regular prayer (q.v.), pay *zakāt* (see ALMSGIVING), and uphold the ties of kinship" (Bukhārī, *Saḥīḥ,* bk. 73 *[K. al-Adab],* no. 12).

Later philosophical (see PHILOSOPHY AND THE QUR'ĀN) and Ṣūfī interpretations (see ṢŪFISM AND THE QUR'ĀN) connect the womb with broader concepts of the creative process in nature.

Women and the Qur'ān

Only one woman is actually named in the Qur'ān, but a large number of verses refer to women. A long chapter of the Qur'ān is titled "The Women" (Q 4, Sūrat al-Nisā') and contains a great deal of material relating to gender (q.v.), but numerous verses (q.v.) in other chapters (see SŪRA) are also gender-related. These include exhortations (q.v.) addressed to the believing men and the believing women, revelations specific to women or to relations between men and women, and laws pertinent to marriage (see MARRIAGE AND DIVORCE), illicit sexual relations (see SEX AND SEXUALITY; ADULTERY AND FORNICATION), divorce, inheritance (q.v.), etc. Female characters appear in qur'ānic narratives about pre-Islamic figures and some verses have been ascribed to various women who lived in proximity to the prophet Muḥammad (see WIVES OF THE PROPHET). According to Islamic tradition, a number of women among the early believers had a role in the transmission of the text of the Qur'ān (see COLLECTION OF THE QUR'ĀN; CODICES OF THE QUR'ĀN; MUṢḤAF; TEXTUAL HISTORY OF THE QUR'ĀN), and through the centuries, women learned the qur'ānic text (see READERS OF THE QUR'ĀN; RECITATION OF THE QUR'ĀN). Female and feminist exegetes, however, appear to be an innovation of the twentieth century (see EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY; FEMINISM AND THE QUR'ĀN).

Spiritual equality, symbolic weakness and social reality

In the spiritual realm, women and men are regarded in the Qur'ān for the most part as equal in the eyes of God and as having similar religious duties (see RITUAL AND THE QUR'ĀN). A large number of verses are addressed to the believing men and the believing women (see BELIEF AND UNBELIEF) or, conversely, the hypocritical men and the hypocritical women (see HYPOCRITES AND HYPOCRISY) as well as the idolatrous men and idolatrous women (Q 9:67, 68, 71, 72; 24:12; 33:35, 36, 58, 73; 48:5-6, 25; 52:12, 13; 71:28; 85:10; see IDOLATRY AND IDOLATERS; GRATITUDE AND INGRATITUDE; POLYTHEISM AND ATHEISM). The most commonly quoted of these is Q 33:35: "Lo! Men who surrender unto God, and women who surrender, and men who believe and women who believe, and men who obey and women who obey (see OBEDIENCE; DISOBEDIENCE), and men who speak the truth (q.v.) and women who

speak the truth, and men who persevere [in righteousness] and women who persevere (see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING), and men who are humble and women who are humble (see ARROGANCE), and men who give alms and women who give alms (see ALMSGIVING; CHARITY), and men who fast and women who fast (see FASTING), and men who guard their modesty (q.v.) and women who guard (their modesty), and men who remember God much and women who remember (see REMEMBRANCE; MEMORY) — God has prepared for them forgiveness (q.v.) and a vast reward" (see REWARD AND PUNISHMENT).

Humans as well as other creatures were created in pairs, male and female (Q 4:1; 7:189; 35:11; 49:13; 51:49; 53:45; 76:39; 78:8; 92:3 and the creation [q.v.] story below). Both are admonished to believe in God and do good works (Q 16:97; 40:40; cf. 4:124; see GOOD DEEDS; EVIL DEEDS) in order to enter paradise (q.v.). The giving of alms is specifically required of both women and men (cited above and again in Q 57:18). Moreover, the women's oath of allegiance to the Prophet is described (Q 60:12; see CONTRACTS AND ALLIANCES). Like men, believing and righteous women will go to heaven while the wrong-doers will suffer in hell (see GARDENS; HELL AND HELLFIRE), but women's fate in the afterlife is associated with that of their husbands (Q 36:55-6; 37:22; 43:70). Most problematic are a number of verses that promise believers in paradise modest, beautiful woman who are sometimes explicitly described as virgins (Q 37:48; 38:52; 52:20; 55:56, 72, 74; 56:22, 36; 78:33; see HOURIS).

Symbolically, the concept of woman in the Qur'ān is undoubtedly that of a being who is considered to be weak, flawed or passive. Menstruation (q.v.), a prime signifier of the female, is an illness or an impurity (Q 2:222; 4:43; see CLEANLINESS AND ABLUTION; ILLNESS AND HEALTH). Not surprisingly, the earth is female and humans consider themselves her masters (e.g. Q 39:69). Thus, the much-quoted verse "Your women are a tilth for you, so go to your tilth as you will" (Q 2:223) may be understood as the obverse of the earth-woman metaphor (q.v.; see also LITERARY STRUCTURES OF THE QUR'ĀN). Women's subaltern status is reflected in verses that position them among orphans (q.v.), children (q.v.) and men who are too weak to fight (Q 4:2-3, 75, 98, 127; see FIGHTING; EXPEDITIONS AND BATTLES; WAR). Women's dependency is expressed not only in the fact that they are not named (except for Mary [q.v.] discussed below) but also that they are almost always ascribed to men as mother of, wife of, "women of," and so on, all forms of linkage to men (see FAMILY; KINSHIP).

In social matters, women's position is depicted ambivalently in the Qur'ān. There are a number of instances of matrilineal ascription (see PATRIARCHY): Moses (q.v.) is described by Aaron (q.v.) as "son of my mother" (Q 7:150; 20:94) and Jesus (q.v.) is referred to as the son of Mary (as will be seen below). Preference for the birth of a son over that of a daughter is one of the sins of the pagans (Q 16:58-9), for female or male offspring (or barrenness) are in the hands of God (Q 42:49-50; see POWER AND IMPOTENCE; GRACE; BLESSING). The burying alive of a girl-child is specifically mentioned as an unnatural, evil act (Q 81:8-9; see INFANTICIDE).

Gender relations are most succinctly expressed in a phrase that has been widely quoted throughout the centuries to support the superiority of men over women: "Men are the sustainers of women as God has preferred some of them over others, and because they sustain them from their

wealth…" (Q 4:34). Some classical exegetes interpreted this verse in the narrow sense as a reflection of men's duty to provide material support for women (see WORK; MAINTENANCE AND UPKEEP). Others expanded the phrase to refer to men's superiority in a number of religious, political and intellectual fields (see SCHOLAR; TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). In the twentieth century, the meaning of the verse has been subject to alternative translations and interpretations (see below). Women's status compared to that of men is expressed in a variety of contexts. Women have rights but the rights of men are a degree above them (Q 2:228). Women are ranked separately after the free man and the slave (see SLAVES AND SLAVERY) regarding the issue of retaliation (q.v.) for murder (q.v.; Q 2:178; see also BLOODSHED; BLOOD MONEY), but they are punished equally for stealing (Q 5:38; see THEFT; BOUNDARIES AND PRECEPTS; LAW AND THE QUR'ĀN; CHASTISEMENT AND PUNISHMENT).

Women's testimony is another ambivalent issue in the Qur'ān (see WITNESSING AND TESTIFYING). When two male witnesses are required but no men are available, the testimony of one man and two women is specified. The reason for this inequality is clearly stated in the relevant verse (Q 2:282), "so that if one of them errs, the other can remind her." In other words, women are reliable enough to provide legal testimony but their memory is not as accurate as that of men. When making a will, however, only two male witnesses are stipulated (Q 5:106).

The seclusion of virtuous Muslim women and their separation from men who are not their kin are rooted in the interpretation of a number of rather obscure qur'ānic verses. The wives of the Prophet are ordered to "stay in your houses" (Q 33:33) and subsequently most legists explicated rules which prohibited women from traveling more than three days walking distance without the permission of their male guardians and, even then, only when accompanied by a chaperon (see JOURNEY). Another reading of the same phrase would have the wives of the Prophet be honorable or quiet in their homes (*qirna* as opposed to *qarna;* see WHISPER). Another exegetical question is whether the instruction refers only to the Prophet's wives or to other Muslim women as well. The continuation of the verse commands the women to dress modestly (see CLOTHING), pray regularly (see PRAYER), give to the poor and obey God and his messenger (q.v.), and these are surely not requirements restricted to the wives of the Prophet. Thus, one could deduce that the order to stay in your houses (or alternately to be honorable or quiet) may be extrapolated to apply to all Muslim women.

Conversely, the verse ordering the believers to speak to the wives of the Prophet from behind a curtain also prohibits them from marrying the Prophet's widows after his death (Q 33:53; see VEIL; WIDOW), a limitation unique to the Prophet's wives. In this case, separating women from male visitors by a curtain, a *ḥijāb,* would logically apply only to the Prophet's wives. Nevertheless, Muslims endeavored to seclude women within the house (see HOUSE, DOMESTIC AND DIVINE; SUNNA), whether by a curtain in a modest dwelling such as that of the Prophet or by the demarcation of more elaborate domestic quarters similar to the ancient Greek gynaeceum. The context of this verse of the *ḥijāb* is crucial to understanding its meaning (see OCCASIONS OF REVELATION; SĪRA AND THE QUR'ĀN). A simple reading of the verse implies that some of the early Muslims entered the Prophet's house at all times of the day and night, without asking permission, and stayed around talking. The

Prophet was too shy to ask them to leave but God revealed an injunction against this improper behavior. In qur'ānic exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), the circumstances upon which the verse was revealed *(asbāb al-nuzūl)* indicated that some visitors bothered the Prophet's wives to the point of sexual harassment. These accretions would dictate a more stringent approach to the separation of the women of the household from men who are not their kin, both for the Prophet's wives and, by extension, for other Muslim women as well.

The term *ḥijāb* came to refer to the proper attire for modest Muslim women when they are in public, and justification for the "dress code" is anchored in the interpretation of a number of qur'ānic verses that apply to the Prophet's women as well as to believing women in general. The issue is addressed directly in two verses admonishing men and women to be modest (Q 24:30-1). While the verse addressed to men is expressed in general terms, the modesty of women is specified as in the command to show only those ornaments that are revealed and "draw their veils (*khumur,* sing. *khimār*) over their bosoms." The ornament in question *(zīna)* seems to be a type of jangling jewelry that draws attention to the woman wearing it, since in the latter part of the verse, women are told not to stamp their feet to draw attention to this hidden ornament, apparently ankle bracelets. As for the "veil," it has been interpreted as a kerchief on the head, as a scarf that the women of Mecca (q.v.) and Medina (q.v.) wore over their chests with differing degrees of modesty, and even as a face covering. Another qur'ānic verse instructs the believing women to draw their outer garments (*jalābīb,* sing. *jilbāb*) around themselves so that they will be recognized and not bothered (Q 33:59). In the third/ninth century, the time of the crystallization of Islamic law, prominent qur'ānic commentators were not certain what parts of the body a woman was supposed to cover. This imprecision and difference of opinion among major exegetes continued for centuries, although it would appear that the "ornaments" which drew attention to a woman were gradually expanded until they encompassed the whole body. The dominant opinion among the legists, however, seems to require that Muslim women conceal their entire bodies with the exception of their feet, their hands and their faces. A well-known ḥadīth (saying of the Prophet; see ḤADĪTH AND THE QUR'ĀN) advised a young man to go see his prospective bride, indicating that her face was not covered, which would preclude legislating the face-veil for Muslim women. The ambiguity of the qur'ānic text on the issue of the *ḥijāb* leaves room for a multiplicity of social, cultural, economic and geographical factors to define the precise code of behavior for Muslim women at a given time and place.

The relationship between husbands and wives is described in general terms as mutual and equal: they are raiments for each other, helpmates and pairs for themselves (Q 2:187; 30:21; 42:11; see PAIRS AND PAIRING). Elsewhere, however, wives are described as created for their mates (Q 26:166). The balance of rights and duties of a husband and wife are discussed in greater detail in the legal proscriptions regarding marriage and divorce (elaborated below).

The work of females as well as males is valued (Q 3:195) and both women and men retain what they have earned (Q 4:32). Thus, women are independent economic individuals who may generate income and

possess their own property (q.v.; see also WEALTH; ECONOMICS; TRADE AND COMMERCE).

In sum, the overall image of women in the Qur'ān is ambivalent. They are autonomous in religious obligations and economic affairs but are subject to men in the social sphere. Women are also objectified, most notably as one of the rewards for men in the hereafter (see ESCHATOLOGY). Women's modesty is specified in greater detail than that of men, albeit in terms that were obscure even to the earliest legists. This implies either that women's sexuality is more threatening than men's or that women require more guidance to protect their modesty. Matrimony is regarded as the natural state of human affairs (see ABSTINENCE; CHASTITY). These principles are amplified in a mass of laws pertaining to gender and family affairs set down in the Qur'ān.

Legal material relating to women and gender

Some eighty percent of the legal material in the Qur'ān refers to women. Marriage is regarded as a formal, legal connection and referred to as a contract (*'uqdat al-nikāḥ,* Q 2:237). A relative who arranges the nuptials in the name of the bride is referred to in the Qur'ān (Q 2:237) although the technical term *walī* and its precise legal definition were later derived from traditions of the Prophet. Polygyny is clearly sanctioned in the Qur'ān which permits a man to take up to four wives so long as he treats them equally (Q 4:3). A later verse in the same chapter (Q 4:129) states that it is virtually impossible not to prefer one wife over the others and admonishes the husband not to neglect any of his wives. This requirement was interpreted up to the twentieth century in technical, economic terms by which a husband was required to provide equal lodgings, food, clothing, etc. for each of his wives as well as to divide his sexual attention equally among them.

In addition to the women a man weds by a marriage contract, he may conclude an agreement with a virtuous woman for sexual relations in return for a fee and this is not considered illicit (Q 4:24). These "pleasure," or *mut'a,* marriages, contracted for a limited time between a man and an unmarried woman, were subsequently the subject of debate among legists (see TEMPORARY MARRIAGE). Shī'īs (see SHĪ'ISM AND THE QUR'ĀN) recognize them as legal to this day, while Sunnī scholars maintain that the qur'ānic reference to *mut'a* was cancelled by several subsequent verses (Q 4:3; 23:5-6; 65:4). In addition, Sunnī authorities argue that the Prophet recommended the existing custom to his soldiers only because of exigencies specific to his time when men were separated from their wives for long periods while they went off to war. Moreover, the second caliph (q.v.) 'Umar interpreted the Prophet's intent and banned the practice. The dispute about the legitimacy of *mut'a* has been a major bone of contention between Sunnīs and Shī'īs and is rooted in contradictory interpretations of the Qur'ān as well as differing approaches to religious and political authority (q.v.; Haeri, *Law of desire,* 61-4; see also POLITICS AND THE QUR'ĀN; IMĀM).

Concubines (q.v.), or literally "those whom your right hand possesses" or "women whom you have purchased," are frequently mentioned in the Qur'ān alongside wives (Q 4:3, 24-5; 23:6; 33:50; 70:30) and there is no limitation on the number of concubines a man may acquire. The legal and spiritual status of slaves is regulated in the Qur'ān, including specific rules relating to sexual relations that are permitted or forbidden to them (see LAWFUL AND UNLAWFUL). Thus, a master may not prostitute his slave (Q 24:33) and he has a

moral obligation to marry her off to either a free man or slave (cf. Brunschvig, ʿAbd, esp. p. 25). The status of a female slave who bears her master a child, an *umm al-walad,* is not defined in the Qurʾān; her unique rights developed during the codification of Islamic law in about the third/ninth century.

Illicit sexual relations are referred to as *zinā* (often translated as fornication or adultery) and are strictly forbidden (Q 17:32; cf. 6:151: *al-fawāḥish*). Two separate verses stipulate the punishment for such infractions: one mentions only women and specifies that they should be incarcerated in their homes for a period of time which may be until their death (Q 4:15); the other refers to a male and a female offender, both of whom are to be punished by one hundred lashes (Q 24:2; see FLOGGING). *Zinā*, however, is extremely difficult to prove because the verses referring to "the affair of the falsehood, or slander" (*al-ifk,* Q 24:4-26; see LIE; GOSSIP), require four witnesses to the act and prescribe dire punishment, eighty lashes, for a false accuser. The punishment of stoning (q.v.) for *zinā* is not in the Qurʾān but is based on the traditions of the Prophet.

Homosexuality (q.v.) and sodomy are discussed in the Qurʾān in the many references to Lot (q.v.) and his family, who were the only ones of their people who repented their lewd acts and were spared by God. Those who did not change their ways are severely condemned and both parties to a homosexual relationship are to be strictly punished (Q 4:16; 7:81). Lesbianism *(siḥāq)* is not cited in the Qurʾān; it is forbidden by ḥadīth sayings of the Prophet, as is transvestitism.

Divorce is discussed extensively in the Qurʾān: a chapter is titled "Divorce" (Q 65, Sūrat al-Ṭalāq), a long section is devoted to the subject in Q 2, and several verses appear in Q 4 (Sūrat al-Nisāʾ, "Women"). Divorce is the prerogative of the husband and he may divorce his wife in the presence of two witnesses without any formal ceremony (Q 65:2). The divorce is not final until the wife has completed three menstrual cycles (Q 2:228; see WAITING PERIOD); during that period she remains in her husband's home and he must support her (Q 65:6). The purpose, of course, is to ascertain if she is pregnant as well as to give the husband an opportunity to withdraw the divorce. The latter explanation dovetails with the preference for reconciliation between an estranged couple rather than divorce, which appears in several places in the Qurʾān (Q 2:229, 4:35). If the wife turns out to be pregnant, the divorce does not take effect until after she gives birth (Q 65:6; see LACTATION). A husband may divorce his wife and change his mind only twice; after the third divorce, she is not lawful to him until after she has married another man (Q 2:229-30).

A clause in the Qurʾān states that "it is no sin for either of them if the woman ransom herself" (Q 2:229); this is the basis for a type of divorce that is designated *khulʿ* (divestiture) in Islamic law. When a woman wishes a divorce, she may, with the permission of her husband, return to him the bridewealth *(mahr)* and any gifts she had received from him. Even in a divorce initiated by the wife, it is the husband who retains the right of divorce. Moreover, this type of divorce is economically unfavorable for the wife. A marriage contract, like any other contract, may also be annulled by a court for violation of inherent elements of the pact (see BREAKING TRUSTS AND CONTRACTS). Thus, for example, a woman whose husband is incapable of carrying out sexual relations for a long period of time could obtain an annulment. The dissolution of a marriage contract at the

discretion of a court is a rather extreme measure, but could be claimed by either spouse for a variety of reasons that have differed over time and place.

The laws of inheritance are specified precisely and in great detail, leaving little room for interpretation (Q 4:7-20, 175). These regulations are extremely complex and were regarded as an area of expertise apart from the general field of law. From a gender point of view, a number of basic principles may be summarized. Women inherit, but their portion is usually half of the share of a man of the same degree of kinship. Daughters, for example, inherit half as much as sons, sisters half of the brothers' portions, and mothers half the inheritance of fathers. Women inherit from their husbands and husbands from their wives, again according to the rule of half a share. Inheritance, therefore, is an area in which women's status as legal persons, as well as the right of a woman to own her own property, is firmly anchored. Moreover, the right of married women to make wills is clearly stipulated in the Qur'ān (Q 4:12), although this privilege is more symbolic than practical because of general limitations on wills. The inheritance of maternal brothers and sisters is also alluded to (Q 4:12), reflecting ongoing semi-matrilineal ties in what was fundamentally a patrilineal society.

In addition to inheritance, women receive bridewealth (q.v.) upon marriage (termed *ajr* in the Qur'ān rather than *mahr,* the designation which became prevalent later). A woman may, however, remit part of her bridewealth to her husband of her own free will (Q 4:4). Husbands' duty to provide material support for their wives is implied in the quintessential qur'ānic verse defining gender relations (Q 4:34). A man may not withhold divorce from a woman in order to take her property, nor may he divorce her with false accusations of lewdness so that he may get part of her property (Q 4:19-20).

The unusually liberal property rights of women anchored in the Qur'ān have been the subject of much speculation. Classical Muslim scholars explained that, since the inheritance rules follow a section dealing with care for orphans, they reflect concern for the kin of Muslims who died in battles for the sake of Islam. In view of the fact that these relatives of fallen Muslim heroes would revert to the care of their families who most likely were anti-Muslim, it was deemed important to provide for them economically. Some modern scholars of early Islam (such as Goitein and Stern) have suggested that, in the mercantile city of Mecca before the advent of Islam, women had certain rights of inheritance, citing the vast property of the widow Khadīja (q.v.) and a number of other women. Thus, the social reality at the time and place of the Qur'ān's revelation could have influenced the economic provisions regarding women. The association made between women, orphans and children in the Qur'ān suggests that women were regarded as weaker social entities and therefore providing for their welfare was viewed as an ethical act (see ETHICS AND THE QUR'ĀN). Women's inheritance of half the portion of a man logically follows from men's double financial responsibility to support their wives. Some have argued that women were generally not as economically incumbered as men were and therefore required fewer financial resources. In any case, the qur'ānic inheritance rules, while providing women with a crucial source of income, are also a concrete reflection of their subordinate status.

Female characters in qur'ānic narratives

Some narratives (q.v.) in the Qur'ān are about pre-Islamic figures such as Adam and Eve (q.v.), Joseph and ʿAzīz's wife, the

wife of Pharaoh (q.v.) who was Moses' step-mother, Solomon (q.v.) and the Queen of Sheba (q.v.; see also BILQĪS), and Mary, mother of Jesus. They project a variety of roles and images of women, and have been the subject of various interpretations and amplifications. Some of these could change the dominant precedent or role model that emerges from the holy text.

Adam's wife (though nameless) is mentioned in the Qur'ān in three passages (Q 2:30-7; 20:115-23; 7:11-25) and is referred to in several isolated verses (Q 4:1; 7:189; 39:6), while elsewhere the creation of humanity and stories of the first man refer only to Adam. Some narratives of the creation do not mention the first man's partner, but other verses state that God created man and his mate from a single soul (q.v.). Adam alone is granted an exceptional position among the angels (q.v.) and the creatures, but this appears to be an indication of his status as a prophet (see PROPHETS AND PROPHETHOOD) rather than as a male. Both Adam and his wife, however, are instructed to dwell in the garden and both are warned not to eat of the tree of immortality (see TREES; ETERNITY; FALL OF MAN). Most importantly, in the qur'ānic version, both Adam and his wife are tempted by Satan (see DEVIL), both eat of the tree and both are expelled. (Only in one verse, Q 20:120, is Adam alone tempted.) Moreover, for the most part, Adam repents his disobedience and is forgiven and given guidance by his lord (q.v.; see also ASTRAY; ERROR). Only in one verse, do Adam and his wife admit their guilt and beg for forgiveness (Q 7:23). In short, the qur'ānic text describes the creation of the first woman (when it is referred to at all) as contemporaneous and similar to that of the first man. She is not responsible for tempting him, and if there is any unequal guilt, it is Adam who bears a greater degree of culpability. Moreover, the gender issue in the story of Adam and his wife may be viewed as marginal to the main qur'ānic message of the covenant (q.v.) between God and humanity, and his forgiving of the folly of both male and female believers (Q 7:172-3; 33:72-3).

From the earliest periods of qur'ānic exegesis, as well as in ḥadīth traditions of the Prophet, Islamic world histories and popular stories of the prophets, however, the image of Eve (Ar. Ḥawwā') is portrayed in negative terms. She is held responsible for Adam's temptation and fall, and is usually depicted as deliberately deceiving him. Only Adam's repentance is mentioned (see REPENTANCE AND PENANCE), while the participation of Ḥawwā' in a joint admission of guilt is ignored. Highlighting the transgressions of Ḥawwā' and suppressing her repentance allowed qur'ānic exegetes to multiply the punishments said to be borne by Eve (and by extension all women). These include the pain of childbirth (see BIRTH; BIOLOGY AS THE CREATION AND STAGES OF LIFE), menstruation and women's duties such as weaving, spinning, preparing dough and baking bread. Even upon his death, Adam accuses her of being responsible for his transgression and punishment. Thus, in contrast to the qur'ānic text, classical Islamic scholars portrayed the first woman as a threat to her husband and by extension to all humankind.

The seduction of Joseph (Ar. Yūsuf) by the wife of the Egyptian al-'Azīz is narrated as one trial in a series of ordeals that the hero must overcome in order to demonstrate his greatness. In a chapter of the Qur'ān named for the protagonist (Q 12), Joseph is thrown into a pit by his brothers (see BROTHER AND BROTHERHOOD) and sold into slavery to al-'Azīz, who brings him home and treats him like a son. After Joseph achieves maturity (q.v.), al-'Azīz's wife attempts to seduce him but he rejects her. He was actually tempted and desired

her, but his faith in God as well as his fine qualities enable him to overcome evil and licentiousness. The two race for the door, the wife tears Joseph's robe from the back and at the entrance they encounter the husband. At this point, Joseph is exonerated of the wife's allegation of immoral conduct. Her husband rebukes her and all women, saying: "This is of the guile *(kayd)* of you women. Your guile is great" (Q 12:28). The wiles of women and their unbridled passion are further illustrated in a tale in which Joseph is objectified. When women in the city began to gossip about the infatuation of al-ʿAzīz's wife for the young slave, she invited them to a banquet and gave each a knife. When she ordered Joseph to appear before them, the women were so confounded by his beauty, which they likened to that of an angel, that they cut their hands with their knives. Having proven her point, al-ʿAzīz's wife threatens Joseph that if he does not obey her orders, he will be imprisoned (Q 12:30-2). Joseph appeals to the lord to fend off the women's wiles for he fears that he will capitulate to them and prefers incarceration. God answers his prayer and he is sent to prison (Q 12:33-5).

Joseph is fully and finally vindicated on the occasion of his release from prison when he appeals to the king to investigate the deceitful women who cut their hands, and the king investigates those women who had tried to seduce him (Q 12:51). The women absolve Joseph, and al-ʿAzīz's wife confesses and affirms his honesty and virtue. But Joseph admits that he was inclined to evil and thanks the lord for helping him to overcome his human instincts (Q 12:53). Joseph is taken into the king's service, becomes custodian of the storehouses, takes revenge on his brothers and performs a miracle (see MIRACLES; MARVELS; DREAMS AND SLEEP).

The story of Joseph and Zulaykha (as al-ʿAzīz's wife came to be known in Islamic literature) has provided rich material not only for commentaries on the Qur'ān, ḥadīth traditions, popular stories of the prophets and world histories, but also for mystical love poetry and visual art (see ART AND ARCHITECTURE AND THE QUR'ĀN; ṢŪFISM AND THE QUR'ĀN). It is frequently referred to in other genres and may have been integrated with ancient Egyptian, pre-Islamic Iranian or Indian morality tales about the guile of women as well as with the analogous narrative in the Hebrew Bible and Jewish interpretations of the Bible (see SCRIPTURE AND THE QUR'ĀN; JEWS AND JUDAISM; TORAH).

In the exegesis of the Qur'ān, the focus of the story of Joseph and Zulaykha was often shifted from a tale about a prophet overcoming adversity to an account of the dangers of female sexuality and of women's cunning as embodied in the term *kayd* which appears no less than seven times in the narrative (Q 12:28, 33, 34, 50, 52). The unbridled sexuality and guile of woman is amplified in Islamic histories and stories of the prophets, and these are genres that tended toward embellishment and were not restricted by the rules of the Islamic sciences (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). In these narratives, Zulaykha is punished for her transgressions, redeemed and becomes Joseph's wife and mother of his children. Thus, the dangerous sexual woman becomes an ideal spouse, in the process fulfilling her love for Joseph.

The theme of passion and love (q.v.) was particularly developed in mystical literature. Esoteric mystical commentary identified the woman Zulaykha as the lower world of matter and sensuality in contrast to Joseph who is the heart (q.v.) on a spiritual quest for gnosis (Stowasser, *Women,* 54; see INTELLECT; KNOWLEDGE AND LEARNING). While some mystical authors

censured Zulaykha's attempt to subvert Joseph's innocence, others extolled her unreserved love for him. The earthly love, however, was also interpreted as a metaphor for the love of God and was expressed in clearly sexual terms. Thus, Zulaykha, the lover, desires union with the divine symbolized by Joseph's exceptional beauty (q.v.; Merguerian and Najmabadi, Zulaykha and Joseph, 497-500). Mystical poets viewed the female soul as inciting to evil (based on Q 12:53, where the feminine *nafs* is used) but may be purified through inner struggle and suffering (Schimmel, *My soul,* 68). The Ṣūfī writers of these works were men, and both their identification with Joseph, the man who overcomes his base instincts, as well as the desire to unite with Joseph the epitome of divine, even feminine, beauty, have interesting transsexual ramifications. The dramatic and concise qur'ānic story of Joseph and al-'Azīz's wife, we are told, is meant as a lesson and a guide for the righteous (Q 12:102, 111). It has been woven into a variety of images of women which captured the imaginations of Muslims for centuries.

Among the women related to Moses in the Qur'ān, Pharaoh's wife attained the most prominence as an example to believers because of her having convinced Pharaoh not to kill the infant Moses. She was a righteous woman who prayed to God to build her a house in paradise and save her from Pharaoh's wrongdoing and from evil people (Q 28:9; 66:11). Āsiya, as Pharaoh's wife is called in the commentaries and stories of the prophets, was one of the four most outstanding women of the world and also of the four "ladies of heaven" (along with Mary, mother of Jesus, Khadīja, Muḥammad's wife, and Fāṭima [q.v.], his daughter). Miraculous events surrounded her birth and early life, and her marriage to Pharaoh was a sacrifice she made for her people but it was never consummated. Āsiya saved and protected the infant Moses on many occasions. She suffered torture and death at the command of the wicked infidel Pharaoh, but the angel Gabriel (q.v.) succored her and neutralized her pain. Āsiya and the three other most hallowed women in Islamic tradition represent paragons of virtue. They are revered primarily for their commitment to God and obedience to his command, but as women they are variously characterized by virginity, purity and motherhood, and in Āsiya's case by her act of adoption.

The Queen of Sheba appears in the Qur'ān as a sovereign ruler who engaged in political negotiations with the wise and knowledgeable Solomon (see KINGS AND RULERS); eventually they submit to God together. Solomon is mentioned frequently in the Qur'ān where he is cited for his wisdom (q.v.), justice (see JUSTICE AND INJUSTICE) and God-given esoteric knowledge and miraculous powers. The story of the Queen of Sheba is narrated in a single chapter (Q 27:22-44). Solomon learns that there is a pagan woman ruler and sends a letter to Sheba asking its inhabitants to submit to him (or to become Muslims). The queen first turns to her advisers, claiming she has never decided a matter alone, but they defer to her command. She wishes to avoid the suffering of war and opts instead for diplomacy. Solomon tests her by disguising her throne. Upon entering his palace, she uncovers her legs thinking that she is in deep water. But Solomon reveals to her that in fact the palace was paved with glass. She responds that she has "wronged herself" and that she submits together with Solomon to God. Clearly, the story as a whole is an affirmation for Solomon, for the Queen of Sheba and for Muslims in general that God is the one and only god to whom they must submit (see GOD AND HIS ATTRIBUTES). The Queen of Sheba seems at first to be hesitant about

making a decision on her own, but the qur'ānic text leaves no doubt that she is capable of independent reasoning in affairs of state and that her decisions have legitimacy. Her acumen seems equal to Solomon's when she passes the test of the throne that he has prepared for her. In the anecdote about the glass floor that appears as water, however, he clearly bests her by ruse and humiliates her as well. Nevertheless, it is intriguing that at the end of the qur'ānic story, the two submit together to God.

In exegesis of the Qur'ān, Islamic history and popular tales of the prophets and Islamic legends relating to the Queen of Sheba (or Bilqīs, as she came to be known), a major issue was the manner in which she came to be a ruler, her competence in this role and the potential precedent for Islamic society. A great beauty, she tricked the king who wanted to marry her on their wedding night, cut off his head and convinced his ministers to declare their loyalty to her. Thus, one could conclude that she attained the throne by proximity to a male ruler and by exploiting her feminine attraction and cunning. As queen and in her stand-off with Solomon, however, she proves her intelligence and good judgment, and these are qualities generally attributed to men. Interestingly, classical Islamic authors rarely address the question of whether this astute and legitimate qur'ānic queen could serve as a precedent for women's role in their own society. Among the gifts that the Queen of Sheba sent to Solomon to test his moral fiber were not only gold (q.v.) and silver but one hundred young slave boys dressed as girls and one hundred young slave girls in boys' clothing. Solomon, for his part, miraculously moved the queen's throne to his court, a slight but perhaps symbolic embellishment on the qur'ānic narrative. Solomon's cunning test of the glass floor provided a base for interpretive explanations of precisely what the queen's legs or feet would reveal about her. The vivid picture of Bilqīs standing in the water before Solomon revealing her hairy legs (or whether she had donkey's feet), surely undermines her image as a capable, independent ruler.

Maryam, or Mary, is frequently named in the Qur'ān to designate the matrilineal ascription of Jesus ('Īsā b. Maryam) since according to Islamic belief Jesus had no human father (e.g. Q 2:253; 4:156, 171; 5:17, 46, 75, 78, 110, 112, 114, 116; 9:31; 19:34; 23:50; 33:7; 43:57; 57:27; 61:6, 14). Both Jesus son of Mary and his mother are regarded as signs (q.v.) of God's powers and humanity's need to believe and worship (q.v.) him (Q 23:50). Mary's story is depicted in two chapters of the Qur'ān (Q 3:35-47; 19:16-34), one of which, Q 19, is named for her. The virgin birth is mentioned several times (Q 19:20; 66:12, for example) and Mary is considered to be chosen among all the women of the world (Q 3:42). The idea that both Jesus and his mother are deities is directly refuted (e.g. Q 5:75, 116), although the verses that rebut Mary's divinity raise questions about the origin of this belief. Western scholars have naturally focused on a comparison between the qur'ānic story of Mary and Jesus and the Gospels and other Christian texts and folklore (see CHRISTIANS AND CHRISTIANITY; GOSPEL; PRE-ISLAMIC ARABIA AND THE QUR'ĀN). In the Qur'ān, Mary is divinely succored during childbirth with water (q.v.) from a brook and dates from a palm-tree (Q 19:23-6; see DATE PALM; SPRINGS AND FOUNTAINS).

Muslim commentators have discussed Mary's religious status, often comparing her with Fāṭima, daughter of the prophet Muḥammad, who is not explicitly mentioned in the Qur'ān. While the miraculous events surrounding her were augmented, a debate evolved about

whether she was a prophet and about her ranking among the women of this world and the next. Some Muslim theologians argued that Mary (as well as Sara, the mother of Isaac [q.v.], the mother of Moses, and Pharaoh's wife Āsiya) should be considered prophets because they received the word of God from angels or by divine inspiration (see REVELATION AND INSPIRATION). But even these scholars differentiated between the prophethood *(nubuwwa)* which some women attained and the message *(risāla)* which was restricted to men. The consensus of Sunnī thinkers, however, has been to reject the notion of Mary's prophethood as heretical because as a menstruating woman she could not attain purity (see RITUAL PURITY). Despite the fact that in the Qur'ān Mary is specifically purified by God (Q 3:42), ḥadīth traditions and scholarly opinions have been marshaled to prove that Mary's purity meant that she was free of menstruation or, conversely, that she menstruated like all other women but was ethically pure. A more practical problem was God's command to Mary to bow down in prayer with the praying men (Q 3:43; see BOWING AND PROSTRATION). Classical commentators interpreted this to mean that Mary prayed with the congregation of men, contributing to the debate on whether women should pray in the mosque (q.v.) or in the privacy of the home. Another subject of debate was Mary's ranking among the chosen women of the Qur'ān: alternately including Āsiya, the Prophet's wives Khadīja and ʿĀ'isha and his daughter Fāṭima. For the most part, qur'ānic exegesis and stories of the prophets tend to exclude ʿĀ'isha from the foursome of the most excellent women of the world and the paramount females in heaven. In Sunnī as well as Shīʿī tradition, Mary and Fāṭima have been conflated as both were visited by angels, were miraculously assisted during childbirth and were free of menstruation and post-partum bleeding. Both are noted for their sorrows and suffering. Most Shīʿīs rank Fāṭima above Mary and she is sometimes referred to as Mary the Greater (*Maryam al-kubrā;* McAuliffe, Chosen of all women, 27-8; Stowasser, *Women*, 79-80). Both Muslims and Christians have focused on the image of Mary, particularly in popular piety, as underpinning a commonality between the two faiths. Similarities between the two religious traditions have been underscored for ecumenical or for missionary purposes. For many centuries, however, Mary has also been central to polemical controversies between Christians and Muslims and to the expression of mutual suspicion and misunderstanding (see POLEMIC AND POLEMICAL LANGUAGE).

The wives of Noah (q.v.), Lot and Abraham (q.v.), as well as other women in the life of Moses, are mentioned less prominently in the Qur'ān, but present a variety of female images. In addition, classical Muslim biographers and commentators tried to identify some of the numerous, seemingly anonymous women referred to in the Qur'ān through the stories connected to the revelation of the verses in which they appear. Among the well-known stories explicating a qur'ānic verse that refers anonymously to a woman is that of Zaynab, daughter of Jaḥsh, the divorced wife of Muḥammad's adopted son Zayd, whose marriage to the Prophet was expressly permitted in a revelation and served as a precedent for the legality of such unions (Q 33:37). At least three women are connected to another obscure verse that permits the Prophet to marry his paternal and maternal cousins who emigrated with him (see PROHIBITED DEGREES; EMIGRANTS AND HELPERS) and to "a believing woman if she gives herself to the Prophet" (Q 33:50). Perhaps the most

famous story elucidating a qur'ānic passage is that of the slander (*al-ifk;* cited above) against ʿĀ'isha, the Prophet's wife (see ʿĀ'ISHA BINT ABĪ BAKR), which explains the stringent rules for proving adultery and the harsh penalty for unsubstantiated allegations against a woman (Q 24:4-26). Shīʿīs point out that, since ʿĀ'isha is not actually mentioned in the Qur'ān, she was never exonerated of the accusation of adultery. The qur'ānic chapter "She Who Disputes" (Q 58, Sūrat al-Mujādila) opens with verses about a woman who complained to the Prophet that her husband had divorced her using the formula "be to me as the back of my mother," a custom Muḥammad had apparently abolished. Classical Muslim scholars have speculated about who the woman in question was. The chapter title "She Who is to Be Examined" (Q 60, Sūrat al-Muntaḥana) was identified as a reference to Umm Kulthūm, daughter of ʿUtba, because of its verses that sanctioned refuge from her pagan family for her and other Muslim female refugees. A female simile for breaking oaths — "a woman who breaks into untwisted strands the yarn which she has spun, after it has become strong" (Q 16:92) — led Muslim classical scholars to an obscure Abyssinian woman (see ABYSSINIA; OATHS; MAGIC; PRE-ISLAMIC ARABIA AND THE QUR'ĀN).

In the Qur'ān, Muḥammad's wives, the "mothers of the believers," are quite frequently addressed and they are held up as paragons for Muslims but are also subject to obligations that are more stringent. None of these women, however, are identified by name, so it was left to classical exegesis to attempt to link revelations to wives of the Prophet, particularly by fleshing out stories about the "occasions of revelation" or *asbāb al-nuzūl*. These commentaries and ḥadīth traditions of the words and deeds of the Prophet have served as the basis for numerous anecdotes about the jealousy, covetousness and scheming of the women of his household. While a polygynous family undoubtedly provides fertile ground for petty intrigues, it would seem that the classical male Muslim scholars relished interpretations that highlighted harem politics.

The rich narratives in the Qur'ān include a variety of female characters and the images of these women were often changed in classical commentary and popular literature composed in patriarchal societies, as we have seen. Modern and feminist interpretations of the Qur'ān retrieved the original images from the holy text, provided their own role models and attempted to read these stories as women would have done.

Women's scholarship and feminist readings of the Qur'ān

A number of women among the early believers had a role in the transmission of the text of the Qur'ān. ʿĀ'isha, the Prophet's favorite wife, heard passages of the Qur'ān from the Prophet himself, ordered a full written copy to be prepared and corrected the scribe. Ḥafṣa (q.v.), daughter of the caliph ʿUmar and widow of the Prophet, gave the caliph ʿUthmān (q.v.) written pages of the Qur'ān that she had received from her father. ʿUthmān had the pages gathered into a book and declared this text to be the official version of the holy book. Ḥafṣa also corrected a scribe who was writing a qur'ānic text. During the first three or four centuries of Islam, ʿUthmān's text was only one of various versions of the Qur'ān that were ascribed to Companions of the Prophet (q.v.), the caliphs ʿUmar and ʿAlī (see ʿALĪ B. ABI ṬĀLIB), and widows of the Prophet — ʿĀ'isha, Umm Salama and Ḥafṣa. One of the Prophet's female Companions, Umm Waraqa, collected and recited the Qur'ān and may have assisted ʿUmar in assembling the text.

Throughout the centuries, girls as well as boys have learned the Qur'ān (generally by rote) in primary schools *(kuttāb, maktab)* in gender-defined spaces, occupying separate areas of the classrooms, separate rooms, classrooms or informal venues (for classical examples, see FIGS. I and II; for a contemporary female Qur'ān study group, see FIG. III). There have been attestations of this in Islamic painting, biographies, government statistics and autobiographies. Women as well as men were required to obtain the minimal knowledge needed to be good Muslims and this included gender-specific principles and laws. The Islamic religion did not serve as a barrier to this learning since traditions of the Prophet encourage the education of girls. Moreover, segregation of the genders did not preclude prepubescent girls and boys attending qur'ānic schools together (see TEACHING AND PREACHING THE QUR'ĀN). Nevertheless, to the best of our knowledge, no woman was among the classical exegetes of the Qur'ān.

Proponents of Islamic reform movements, like those of other scriptural religions, quite naturally returned to the original text of the Qur'ān to reinterpret what they regarded as incorrect readings of the divine word by classical exegetes (see CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN). Some of the earliest proponents of the liberation of Muslim women anchored their arguments in their rereading of the Qur'ān. The Indian Mumtaz ʿAli in his *Women's laws* (1898) promoted the explanation of Q 4:34 as meaning that women have precedence over men who work for them. He refuted the belief that Adam had precedence in creation and a privileged position over Eve as being contrary to the Qur'ān. As for the disparity between male and female witnesses, he argued that the relevant verse refers to business transactions, something with which male Arab merchants were more familiar than women. For matters of personal law, a woman would be as qualified to testify as a man. On the question of polygyny, Mumtaz ʿAli held that the condition not to treat one wife better than others effectively cancels the possibility of a man marrying more than one woman since it is humanly impossible to love several women equally. As for purdah or *pardah,* the Urdu word for the Arabic *ḥijāb,* Mumtaz ʿAli argued that only one verse of the Qur'ān refers specifically to this. Other verses recommend modesty in general terms and purdah as it developed in Muslim India was a recent, indigenous phenomenon.

The modern Syrian commentator Muḥammad Jamāl al-Dīn al-Qāsimī concluded that a woman could lead the prayer as imām based on a verse referring to Mary, but then neutralized this potential empowerment of women by falling back on a classical view that a unique woman like Mary is like a man in the eyes of God. Moreover, even if a woman might serve as a religious leader for other women, she could not participate in the communal prayer, not only because of her impurity, but also because of her physical weakness and the shame involved in mixing with men (Smith and Haddad, The Virgin Mary, 163-4, 173).

Calls for the liberation of Muslim women in the Arab world emerged from and were influenced by the *salafiyya* movement which aspired to return to the true, early untainted Islam. The Egyptian Shaykh Muḥammad ʿAbduh (1849-1905) and his follower Muḥammad Rashīd Riḍā (1865-1935) composed a new exegesis of the Qur'ān that initially appeared in their journal *al-Manār* to address contemporary problems. ʿAbduh emphasized women's humanity and their equality before God. Adam together with his wife represent humankind which is tested (see TRIAL;

TRUST AND PATIENCE), goes astray, repents and is forgiven. Mary's physical, spiritual and behavioral purity, however, granted her a distinctive status and should not be regarded as a precedent for all women. ʿAbduh is credited with the determination that the qurʾānic verse which appears to permit a man to marry up to four wives actually indicates that monogamous marriages should be the norm, by a logic similar to that of Mumtaz ʿAli. On the question of the *ḥijāb,* however, ʿAbduh refused to take a stand. By a similar methodology, Riḍā interpreted a fragment of a verse on divorce (Q 2:228) to define the relationship between man and wife as equal and reciprocal, but defers to the view of classical exegetes that a husband has sexual rights over his wife as a concomitant to her rights to material support from him. Alongside the hesitant efforts of Muslim reformists, commentaries on the Qurʾān that relied on the methods and contents of classical exegesis with regard to women's issues and female characters continued to appear.

An important innovation of this period was the utilization of qurʾānic interpretation to bolster views on the status of women, not only by recognized Islamic scholars like Shaykh ʿAbduh (who had been chief mufti of Egypt) but also by Muslim writers who did not have formal, systematic religious training. One of the most prominent, albeit misogynist, works of this kind was *Woman in the Qurʾān (al-Marʾa fī l-Qurʾān),* by the Egyptian writer Maḥmūd ʿAbbās al-ʿAqqād. Works of this type paved the way for Muslim lay thinkers, both men and women, to engage in qurʾānic commentary.

The first Muslim woman to undertake qurʾānic exegesis was Dr. ʿĀʾisha ʿAbd al-Raḥmān (1913-96), known by her pen-name, Bint al-Shāṭiʾ. She studied Qurʾān commentary with her professor, mentor and husband, Amīn al-Khūlī, who was considered one of the outstanding modern experts in the field. Some scholars regard ʿAbd al-Raḥmān's exegesis as a reflection of al-Khūlī's theory, and in fact, in the preface to the first volume of her qurʾānic exegesis, she writes of her "attempt" to apply al-Khūlī's method to a few short chapters and compares the usual method of Qurʾān interpretation to "our new way." As the first woman engaged in what had for centuries been an all-male endeavor, it is not surprising that she and some scholars would present her ground-breaking, ambitious work as a mere extension of the theoretical framework of her male mentor. Actually, ʿAbd al-Raḥman published her first of two volumes of qurʾānic exegesis in 1962, several years before the death of her husband. Moreover, the choice of difficult, theological qurʾānic verses with no social implications whatsoever seems to be the strategy of an ambitious woman carefully invading a traditionally male domain. It is also no accident that this innovation emerged from Cairo University's Department of Arabic Language and Literature rather than from a woman studying at al-Azhar. ʿAbd al-Raḥmān's qurʾānic exegesis was published by one of the largest publishing houses in Cairo in a series devoted to literary studies of Arab poetry and other genres as well as non-Arabic literature, perhaps an additional strategy to avoid conflict with the religious establishment. Her qurʾānic commentary brought her prominence in Egypt and the Arab world but its content could not be considered feminist nor was it meant to be.

The qurʾānic underpinnings of the Islamist movements originate with the efforts of Sayyid Abū l-ʿAlā l-Mawdūdī (1903-1979), an Indian Muslim whose ideas on the seclusion of women were written in Urdu in the 1930s, translated into Arabic and subsequently in English. Of his

six-volume exegesis of the Qur'ān, the only selection translated into Arabic was devoted to a chapter dealing with female sexuality (Q 24; cf. Swanson, Commentary on Surat al-Nur, 187). Mawdūdī interpreted some rather vague verses on visiting other homes (Q 24:27-9) in gender terms to the extent that a man must announce his arrival before entering a house even to the women in his own household. On the issue of modesty (Q 24:30-1), he regards virtually everything connected with a woman as seductive and therefore requires the most extreme forms of concealing dress, including a thick face-veil and gloves. Even a woman's perfume or voice are sexual and should be restricted. Marriage is the proper outlet for human sexuality and Mawdūdī regards the Islamic state as responsible for providing financial support for a man who is precluded from marrying because of the expense.

The Egyptian Sayyid Quṭb (d. 1966) followed Mawdūdī's lead in many respects but appears to have had a more intensive dialogue with western notions of gender and with contemporary technologies. In his exegesis on the story of Eve, he emphasizes the equal responsibility of women and men to battle Satan and their equal rewards for their struggle in the path of God (see PATH OR WAY; JIHĀD). He stresses that the Queen of Sheba was intelligent and independent. Mary, however, serves as a role model for the gender segregation for Muslim women. Quṭb's stand on women's seclusion is no less extreme than that of Mawdūdī but he responds to Freud's theories in his own coin by warning of psychological disorders that can arise if sexuality is not restrained. Thus, a man must warn even his female relatives that he will be entering the house by telephoning to ask permission. Marriage is the natural state of affairs but, despite what many commentators have stated, the husband's exclusive right of divorce is specific to dissolving a marriage and does not imply superiority over his wife.

In the 1990s, Muslim women began to read the Qur'ān with a feminist agenda in mind. Feminism in the Muslim world (even when it was termed secular) had frequently drawn from Islamic sources and employed Islamic discourse from its onset in the nineteenth century. The innovative aspect of Islamic feminism has been that Muslim women, who usually did not have formal religious training, have rejected the commentaries on the Qur'ān by generations of male exegetes who had functioned in patriarchal societies and independently interpreted the text of the divine word. In order to enhance the legitimacy of these daring projects, they often used neo-classical methods such as *ijtihād* or independent reasoning. This phenomenon has emerged in various parts of the Muslim world, has usually been spearheaded by academic women and activists, and has been disseminated by new media and networking (see MEDIA AND THE QUR'ĀN).

One of the earliest efforts by Islamic feminists to read the Qur'ān was undertaken by a non-hierarchical study group of women who met in 1990 under the auspices of Women Living Under Muslim Laws, a network founded in 1984. The proceedings were subsequently distributed in English and French, two common languages for millions of Muslims throughout the world. The participants, who remained anonymous, were from Algeria, Bangladesh, Egypt, India, Indonesia, Malaysia, Pakistan, Sri Lanka, Sudan and the United States. Six resource persons (who were also not identified) opened the sessions with presentations but they were questioned and even challenged in the ensuing discussions. The aim was to interpret the Qur'ān only

from the Qurʾān itself and therefore great emphasis was placed on philological exegesis and classical Arabic dictionaries were employed (see GRAMMAR AND THE QURʾĀN). Nevertheless, classical Islamic sources were occasionally referred to, as well as liberal and conservative modern Muslim thinkers such as Mumtaz ʿAli and Sayyid Quṭb. The issue of skewed translations of the Qurʾān (q.v.) was raised, since translation inevitably involves a degree of interpretation (and is theologically questionable) and also since the majority of Muslims do not know Arabic well enough to understand the qurʾānic text (see ARABIC LANGUAGE; INIMITABILITY; LANGUAGE AND STYLE OF THE QURʾĀN). In view of the rich and variegated academic backgrounds of the women who studied the Qurʾān, it is not surprising that they employed universal scientific methods alongside classical Islamic ones such as psychology, sociology, literary theory, linguistics, etc. (see LITERATURE AND THE QURʾĀN; SOCIAL SCIENCES AND THE QURʾĀN).

The point of departure for Women Reading the Qurʾān was a discussion of "foundational myths" that ostensibly support the notion that men are superior to women. The first of these relate to the story of the creation of Adam and Eve, her role in the fall and the purpose of woman's creation. The women argue that the Qurʾān explicitly states that woman and man were created equal and the creation of Ḥawwāʾ from a male rib is a product of biblical and Christian influences, inaccurate translations of the original Arabic, qurʾānic exegesis, and most seriously, ḥadīth traditions of the Prophet (see ḤADĪTH AND THE QURʾĀN), many of which are not genuine. These supplements to the holy text supported the view held by most Muslims that woman is secondary, derivative and subordinate. Similarly, Eve's culpability, which raises questions about the trustworthiness of all women, is not found in the Qurʾān but is the product of subsequent patriarchal readings.

Debunking the belief that woman was created for man is tied to a lengthy discussion of the qurʾānic verse which embodies gender relations, Q 4:34, rendered by Pickthall as follows: "Men are in charge *(qawwāmūna)* of women, because Allah hath made the one of them to excel the other, and because they spend of their property (for the support of women). So good women are obedient, guarding in secret that which Allah hath guarded. As for those from whom ye fear rebellion, admonish them and banish them to beds apart, and scourge them. Then if they obey you, seek not a way against them. Lo! Allah is ever High, Exalted, Great." The women use the translation of the modernist Muslim commentator M. Yusuf Ali who interprets the phrase "Men are the protectors and maintainers of women," and emphasizes that men may only beat women lightly and as a last resort. The women focus on reinterpretation of crucial words in the verse such as *qawwāmūn*. This term had previously been taken a step further than M. Yusuf Ali to mean the basic idea of moral guidance and caring by the feminist Aziza al-Hibri (Study of Islamic herstory). One resource person at the workshop suggested that *qawwāmūna* means breadwinners and, philosophically, men ought to be breadwinners although not all men fulfill this function. Thus, the comparison is not between men and women but between men in terms of their ability to be breadwinners. A second resource person understood *qawwāmūna* as standing upright or men's upholding the rights, protection, well-being and material support of women. In other words, in Islamic society men have a psychological, social, spiritual

and financial responsibility to women. Participants challenged these and other explications by the resources persons. A similar methodology was applied to the words excel *(faḍḍala),* obedient *(qānitāt)* and rebellion (q.v.; *nushūz*).

From the fundamental principles of gender, the Women Reading the Qur'ān move on to Islamic family law and women in society. The issues of Muslim jurisprudence discussed are: divorce, post-divorce maintenance, polygamy and age of marriage, inheritance, adoption and marriage to non-Muslims. Under the rubric of women in society, the related subjects of *zinā,* evidence and punishment are addressed. Menstruation and the image of "your wives as a tilth" (Q 2:223) are discussed. Finally, the *ḥūr* (sing. *ḥawrā'*) who are promised to the righteous Muslims in paradise are considered. These have been defined in patriarchal terms as fair white virgins with large eyes but, in the interpretation of women reading the Qur'ān, all believers, male and female, will be paired with soul companions.

Amina Wadud-Muhsin produced a feminist exegesis of the Qur'ān as a whole in 1992. Perhaps because Arabic is not her native language, she came up with the radical but controversial idea that verses of the Qur'ān relating to women are an artifact of Arabic as a gendered language. As a result, many verses which appear to refer to men and women should actually be understood in more gender-neutral language. Her book has become very popular and even Arabic-speaking feminists have endorsed her methodology.

Another important forum for women to interpret the Qur'ān in accordance with their own needs has been the Persian women's magazine *Zanān* published in Tehran. *Zanān* was founded in 1992 and by 1994 had become a major voice for reform of the status of women. The magazine's editor, Shahla Sherkat, and other women well-versed in the Qur'ān have championed the right of women to use *ijtihād* or independent reasoning, thereby challenging the primacy of the clergy in the realm of interpretation. Similarly, the Iranian expatriate Nayereh Tohidi has promoted feminist *ijtihād* in Persian-language writings and lectures and promoted reinterpreting the Qur'ān. In the mid-1990s, some proponents of Islamic feminism argued that endeavors like those of *Zanan* opened a dialogue between religious and secular feminists in the heady debate carried on in the Islamic Republic of Iran and the Iranian diaspora.

Feminist exegesis of the Qur'ān by women outside the Muslim scholarly establishment has not been without its critics and it is yet to be seen what its long-term influence will be. One problem is undoubtedly the language barrier between Muslims in different parts of the world and in particular among those who do not read or write Arabic or, conversely, read neither English nor French. Translation of seminal works in this field into Arabic has greatly enhanced their prestige as well as their impact in the Arab world. Trans-global media have also facilitated the dissemination of new readings of the Qur'ān. A second generation of Islamic feminists have begun to cite the pioneering exegesis of women who have reinterpreted the Qur'ān and no longer have to analyze the holy text themselves. Nevertheless, women and men will continue to seek varying views on gender as well as specific rules relating to women and discrete female role models in the Qur'ān.

Wonders see MARVELS

Wood see TREES

Wool see HIDES AND FLEECE

Word see SPEECH; OATHS

Word of God

Divine verbal utterance that bridges the gap between God's transcendence and the created world. That God addresses himself to the world by means of speaking is one of the most influential concepts in the whole monotheistic tradition and is also a central issue for the Qurʾān (see REVELATION AND INSPIRATION; ORALITY; SCRIPTURE AND THE QURʾĀN; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC). There, several verbs describe God as speaking, e.g. *nādā,* "to call" (ten times), *qaṣṣa,* "to relate" (thirteen times), or *nabbaʾa,* "to tell" (twenty-one times); but the most important verbs are *qāla,* "to say" (around 120 occurrences), and *kallama,* "to speak to" (seven times). Stemming from the same roots as the two last-named verbs, *q-w-l* and *k-l-m,* the nouns *qawl* (about twenty-two times), *kalām* (four times), *kalima* (sixteen times) and its plural form *kalimāt* (twelve times) are also attributed to God. In most of their occurrences these nouns can be rendered literally in English as "word(s)," as in *qawl rabbinā,* "our lord's word" (Q 37:31), *kalām Allāh,* "God's word" (Q 2:75), *kalimatuhu,* "his word" (Q 4:171), or *min rabbihi kalimātin,* "words from his lord" (Q 2:37). Nevertheless, they cover a broad range of meanings and, according to their different contexts, can be translated as "verbal address," "revelation," "decree," and "creative command" (see also SPEECH).

The mystery of monotheism

There are two distinct concepts that underlie biblical monotheism: On the one hand — because of the historical situation

of competition with other deities — God's exclusive oneness is emphasized (see GOD AND HIS ATTRIBUTES). Characterized ontologically as the creator of the universe and cause of being (see COSMOLOGY; CREATION), and ethically as the supreme lawgiver and final judge for humankind (see JUSTICE AND INJUSTICE; LAST JUDGMENT; JUDGMENT; LAW AND THE QUR'ĀN; ETHICS AND THE QUR'ĀN), God is conceived of as the sole true, yet personal, agent in a monopolar world order. On the other hand, and in order to glorify God's majesty, stress is laid on his transcendent uniqueness. Although he is, at times, described in anthropomorphic terms, God, in his essence, is thought to transcend the realm of the created world (see ANTHROPOMORPHISM): He dwells not only beyond the reach of human disposal, but he also exceeds human intellectual capacities (see INTELLECT; KNOWLEDGE AND LEARNING). When, however, these two notions are combined with each other — as is the case in biblical monotheism — a clear tension appears between them. While the first concept suggests direct contact between God and the world, the second implies their definite separation. So, the question arises of how to understand the relationship between God and his creation, i.e. how to reconcile the opposing notions of transcendence and immanence.

Deeply rooted in the religious thinking of the ancient Near East, Islam — like Judaism and Christianity before it (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; PEOPLE OF THE BOOK) — proposed the "word of God" as one of the most important answers to this question. God created the universe by means of his word, and it is his word that he revealed to humankind. Nevertheless, this idea raises further questions. First, does "word of God" mean the same thing in respect to creation as in reference to revelation, or are these two entirely different concepts that only share the same terms, i.e. the creative command as opposed to the speech of God? Secondly, the notion of God's creative command as the sole causation for entities coming into being directly calls for an inquiry into the underlying assumptions concerning the relationship between language and existence. Thirdly, the idea of the "word of God" carries with it considerable difficulties in respect to the nature of revelation. Not only is the physical means of God's act of communication to be questioned; even more important is how to conceive of the nature of his speech. In order to be understandable, God has to address humankind in human language. But does that mean that the very language of revelation is part of God's essence — thus presenting a common link between God and his creation that comes close to a manifest anthropomorphism — or is revelation rather a kind of translation of God's true speech that exceeds the human capacity of understanding? And if the latter is so, how can this translation be understood? It is in the context of these questions that the qur'ānic use of the "word of God" must be considered.

Word and creation

Eight qur'ānic verses unambiguously state that God creates by means of the imperative "Be." The most prominent formula of this is "When he decrees *(qaḍā)* a thing *(amr),* he but says to it 'Be' *(kun),* and it is" (Q 2:117; 3:47; 19:35; 40:68; cf. 3:59; 6:73; 16:40; 36:82; and see below). As an expression of faith (q.v.) , this passage emphasizes God's omnipotence (see POWER AND IMPOTENCE) and suggests that, by virtue of his command, God's decree is tantamount to its realization. As a dogmatic statement, however, the exact wording by which this idea is expressed deserves closer examina-

tion. Though the single words that occur in this passage are quite common in the qurʾānic vocabulary, here they acquire meanings that are rather exceptional. The verb *qaḍā,* to begin with, is generally translated as "to decide" or "to carry out," and the noun *amr* usually denotes something like "command," "plan," "action" or "affair," thus being an appropriate complement for *qaḍā*. Indeed, there are several instances where both words appear together, as in the recurrent formulation *quḍiya l-amru* — approximately "the affair was decided" (Q 2:210; 6:8, 58; 11:44; 12:41; 14:22; 19:39). In the verse cited above, however, *amr* is described as something being spoken to; therefore the word in this context has to be understood as a kind of personalized entity. This observation is corroborated by the parallel passages Q 16:40 and 36:82 (see below), where the proper word for "thing" *(shayʾ)* is used instead. And since a thing, strictly speaking, cannot be decided or carried out — and the verb *qaḍā* thus takes on a meaning that is not entirely clear — again, the parallels Q 16:40 and 36:82 replace it by forms of the verb "to want" *(arāda)*. In addition, with the possible exceptions of Q 2:280, 193 and 8:39, this passage exhibits the only qurʾānic occurrence where forms of the verb "to be" *(kāna)* are not used as copulas or as determiners of tense, but in an absolute mode meaning "to exist." Based on these observations, the obvious implication of this passage is that there are two realms of existence, one hidden (*al-ghayb;* see HIDDEN AND THE HIDDEN) and the other manifest *(al-shahāda);* and that in the *ghayb,* there are entities conceived of as personalized beings with the ability to obey God's command (see OBEDIENCE) and to enter the realm of manifest existence. Thus, the process of creation consists of an interplay between command and obedience, and does not rest upon any alleged magical power of words. This understanding of the operational mode of the word of God goes back to the time of Hellenistic Judaism. At that time, although the idea of the creation with the word in Genesis 1 was labeled as a *creatio ex nihilo* (2 *Macc* 7:28), it was also frequently combined with the motif that God exerts his authority (q.v.) over the universe, just as a military commander does over his subordinates (*Jer* 44:26; 48:13; *Ps* 33:9; *Matt* 7:9). While rather precluding any speculations about the origins of primeval chaos, the resulting concept of creation by direct address (*Syrian Apocalypse of Baruch,* 21:4; 48:8; as cited in Schlier, *Römerbrief,* 132; also *Rom* 4:17; *Heb* 11:3; 2 *Clem* 1:8) together with the concomitant notion of the pre-existence of non-being (Philo, De migratione Abrahami 9; *Babylonian Talmud,* Nesikin, ch. Sanhedrin 91a; as cited in Schlier, *Römerbrief,* 132) causes both philosophical and theological problems: It raises the question of the ontological status of the pre-existent, and it seems to limit the divine omnipotence, by suggesting that the pre-existent possesses a certain independence from God. Nevertheless, in spite of these difficulties, this concept became successful because it helps to explain not only the primeval creation of the universe, but also the way God controls his creation and effects the phenomena of human birth (q.v.) and resurrection (q.v.; see also CREATEDNESS OF THE QURʾĀN; THEOLOGY AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN).

The creation of the heavens and the earth is a recurrent motif that appears more than fifty-five times in the Qurʾān. The verb that is most frequently attributed to God in this respect is "to create" *(khalaqa)*. While this verb leaves the manner of creation open, other, far less frequently employed verbs suggest a similarity to handicraft activities, like "to level" (*sawwā,* e.g. Q 2:29), "to make" (*jaʿala,*

Q 6:1; 13:3), "to cover" (*aghshā,* e.g. Q 7:54; 13:3), "to raise up" (*rafaʿa,* Q 13:2), "to stretch out" (*madda,* Q 13:3) and "to rip open" (*fataqa,* e.g. Q 21:30). There is, however, one single instance where God clearly appears to be speaking in connection with the creation of the cosmos:

Then he lifted himself to heaven (see HEAVEN AND SKY) when it was smoke (q.v.), and said *(qāla)* to it and to the earth (q.v.), "Come willingly, or unwillingly!" They both said, "We come willingly." So he determined *(qaḍā)* them as seven heavens in two days, and revealed *(awḥā)* its commandment in every heaven (Q 41:11-12).

This passage exposes further peculiarities of the concept of creation by direct address. On the one hand, it illustrates what has already been said about the implications of the *kun* formula: The preexistence of heaven — amorphous as "smoke" — and earth is taken for granted (cf. Q 21:30); and both heaven and earth appear as personified and obeying God's command. On the other hand, there are also elements that enlarge the creation concept: God's command, "Come" instead of "Be," refers here only to a preparatory stage of creation, while the actual creative work is indicated by the verbs "to determine" and "to reveal." The latter verb denotes at least a kind of mental activity through which God conveys his orders to living beings (cf. Q 16:68; see below), and seems to fit in by and large with the "Be" concept. In the case of the other verb, "to determine," however, it is not clear whether the molding of the seven spheres out of the primeval smoke comes to pass by creative command, also, or is brought about in some other way (cf. Q 2:29, where "to level" replaces "to determine"). These divergences arise because the passage (Q 41:9-12) — not unlike Genesis 1 — tries to combine two different, disharmonious concepts of creation: the notion of a creative command that effects the immediate realization of its objects, on the one hand, and the idea of creation as a demiurgic process, lasting several days and passing through successive stages, on the other.

In several instances the creation of the universe with the word is referred to by the term *ḥaqq*. This term occurs 247 times in the Qurʾān, and predominantly means "reality, truth (q.v.), right." In eleven passages, however, where it says — mostly in connection with the announcement of resurrection — that God "created the heavens and the earth with the *ḥaqq*" (e.g. Q 14:19; 30:8; 45:22), it seems to mean the "wisdom" (q.v.) or "wise plan" inherent in creation. In addition, Q 6:73 shows that *ḥaqq* can encompass the creative command "Be" as well:

It is he who created the heavens and the earth with the *ḥaqq*. On the day when he utters "Be" and it is, his utterance is the *ḥaqq*. His is the sovereignty (q.v.) on the day when the trumpet is blown. He knows the unseen and the seen. He is the all-wise, the all-aware (cf. Q 19:34, where *qawla l-ḥaqq,* "the word of the truth," probably refers to the creation of Jesus [q.v.]; see below).

The origins of the extensions of meaning that *ḥaqq* undergoes in the Qurʾān — from "reality" to "wisdom" to "word of creation" — can be traced back to late Hellenistic times. "Truth" was then identified with God's precepts (*Ps* 119:86; *Dan* 9:13), and "wisdom" was understood as the originator of creation (*Wis* 7:12), so that ultimately "truth," too, could refer to the creative command (James 1:18). Against this background, Q 21:18 ("We hurl forth the *ḥaqq* upon the *bāṭil* [lit. "vain, invalid"] and it [the *ḥaqq*] overcomes it and look! the

bāṭil is disappearing"; cf. Q 34:48-9) can be understood as another attempt to articulate the effect that the creative command "Be" exerts on the pre-existent (cf. Joseph and Asenath, 8:9; as cited in Schlier, *Römerbrief,* 132).

God's relationship to nature after creation is also described in different ways. First, there are processes that seem to function on their own, following God's initial command, like the movements of the sun (q.v.) and the moon (q.v.; cf. Q 13:2; 14:33; 31:29; 35:13). Then there is an assortment of ongoing divine activities attributed to God, especially in respect to life (q.v.) and death (see DEATH AND THE DEAD), rain and provision (see SUSTENANCE). These are indicated by such verbs as *aḥyā,* "to give life," *amāta,* "to cause to die," *anzala,* "to send down" (of rain), or *razaqa,* "to sustain" (e.g. Q 3:156; 10:59; 16:65; 30:40). Additionally, some passages express the idea that God continues to act upon nature and history in the same way he did in respect to primeval creation, i.e. by means of his command (see NATURE AS SIGNS; HISTORY AND THE QUR'ĀN). This is evident in Q 21:69, which relates how God rescued Abraham (q.v.) from his people: "We said, 'O fire (q.v.), be coolness and safety for Abraham!'" In the same manner the metamorphosis of the Sabbath-breakers is effected (Q 2:65; 7:166; see SABBATH). And just as in Q 4:47 the word *amr* (command) refers to this punishment, it is likely that *amr* indicates the divine command in respect to other punishment stories and the eschatological cataclysm, as well (e.g. Q 11:40; 19:39; 46:25; cf. 2:243; see ESCHATOLOGY; APOCALYPSE; REWARD AND PUNISHMENT). It is characteristic of this *amr* not only that it happens in "the twinkling of an eye" (Q 54:50), but also that it is sometimes accompanied by, or even becomes audible as, "the cry" (*al-ṣayḥa,* e.g. Q 11:67; 15:73; 36:29; 54:31).

God's command, however, is particularly linked with the origin of life, both in this world and the hereafter. This is especially clear in the eight qur'ānic "Be" passages that justify either the message of bodily resurrection, or the denial that Jesus is the son of God. There, the idea that at the end of days the dead will be resuscitated by means of divine command is explained by referring to God's previous creative activity:

> . . . He says, "Who shall quicken the bones when they are decayed?" Say: He shall quicken them, who originated them the first time. . . . Is not he, who created the heavens and the earth, able to create the like of them? Yes indeed; he is the all-creator, the all-knowing; his command, when he desires a thing, is to say to it 'Be,' and it is (Q 36:78-9, 81-2).

The underlying assumption of this comparison is that the unborn, like the dead, have a hidden existence until God calls them to life (see Q 2:28; 30:25; cf. 7:172). In Q 3:59, Jesus is compared to Adam (see ADAM AND EVE), in that both were created by "Be." The *tertium comparationis,* however, is not that only these two came to life in this way — this holds true for everyone (cf. the annunciation stories of Isaac [q.v.; Isḥāq] and John the Baptist [q.v.; Yaḥyā]; Q 3:38-40; 11:71-3; 19:7-9) — but rather that in their case, the activity of the creative command is particularly evident, since both have no natural father. Besides, in three much-disputed verses Jesus is called "a word from God/him" (*kalimatin mina llāh/minhu,* Q 3:39, 45) or "his word" (*kalimatuhu,* Q 4:171). And although this naming has often been explained as a reference to the creative imperative (because Jesus was created by the word "Be," he was called "word of God"), considering what has been mentioned above, it is more prob-

able that here, as elsewhere in the Qurʾān, *kalima* has simply the connotation of a "promise" made by God (see below; see COVENANT).

Word and revelation

The idea that God speaks to humankind is central to the Qurʾān; in numerous verses, various terms characterize him as speaking (see above). Yet Q 42:51 shows that in respect to revelation, the very expression "God speaks" can be understood in different ways or modes: "It belongs not to any mortal that God should speak to him *(yukallimahu),* except (1) by inspiration *(waḥy),* or (2) from behind a veil (q.v.), or (3) that [God] should send a messenger (q.v.) and he inspires *(fa-yūḥiya)* whatsoever he will, by his leave; surely he is all-high, all-wise." Three modes of revelation, each of which is understood as a kind of speaking, are presented here in a probably hierarchical ranking. As to "inspiration" *(waḥy),* it is evident from the episode of the dumb Zechariah (q.v.; Zakariyyā) coming out from the sanctuary and signaling *(fa-awḥā)* to his people "Give you glory (q.v.) at dawn (q.v.) and evening" (q.v.; Q 19:11; cf. 3:41; see GLORIFICATION OF GOD), that it denotes a nonverbal and inaudible form of communication. It nevertheless imparts precise contents, like hidden knowledge (e.g. Q 12:15; 14:13; 17:39; see KNOWLEDGE AND LEARNING; HIDDEN AND THE HIDDEN), or orders to behave in a certain way (e.g. Q 7:117; 10:87; 20:77; 23:27), and can be conveyed either directly (mode 1) or indirectly (mode 3). (Phenomenologically, however, it seems that the latter mode is nothing but the personalization of the God-given prophetic state of mind; see in this respect the oscillating term *rūḥ* in Q 42:52.) And although *waḥy* as a mode of revelation comes close to pseudo-prophecy or dream-inspiration (cf. Q 6:93, 112, 121 and 12:44; 21:5; 52:32; see DREAMS AND SLEEP), it still represents the normal method of divine communication to former prophets and messengers as well as to the qurʾānic prophet (Q 4:163 f.; 12:109; 16:43; 42:3; etc.). Thus, in order to deliver the divine message to their audience, it is the prophet's task to translate the *waḥy*-revelation into human language.

The second mode of speaking, "from behind a veil," is contrasted to *waḥy*. This motif goes back to the idea in Hellenistic Judaism that God is hidden by a veil that surrounds his throne (see THRONE OF GOD), even when he speaks to the angels (see ANGEL). The only human being to whom he spoke "from mouth to mouth" and "from face to face," i.e. without a veil, was Moses (q.v.; cf. *Num* 12:8; *Exod* 33:11; *Deut* 34:10; see THEOPHANY). Now, while the Qurʾān concedes to Moses, and only to Moses expressly (and tacitly to the Children of Israel [q.v.] gathered at the foot of the mountain; cf. Q 2:63, 93; 4:154), that on Mount Sinai (q.v.) God "really spoke" to him (*kallama llāhu Mūsā taklīman,* Q 4:164; cf. 7:143; 2:253), it nevertheless denies him the privilege of a vision of God (Q 7:143; cf. *Exod* 33:18 f.; see FACE OF GOD). Thus, as the concept of *waḥy* is nowhere connected with the Mount Sinai revelation, the speaking "from behind a veil" can probably be understood as an indirect reference to this event, admitting that Moses heard God's true speech but explicitly denying that he saw him (see SEEING AND HEARING). This attitude towards the Mosaic revelation is in line with the general qurʾānic tendency to play down the paramount significance of the Mount Sinai events in Judaism. And so, although God "really spoke" only on Mount Sinai, there is no indication in the Qurʾān of which language he used. The Qurʾān seems to avoid the question of any concrete *lingua sacra,* but rather considers language, as such, as a God-given, effective

means of communication (cf. the passages on "names" and "naming" and "clear Arabic speech," Q 2:31-3; 7:71; 16:103; 26:195, etc.; see LANGUAGE, CONCEPT OF; ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QUR'ĀN; NARRATIVES). This would imply that from the qur'ānic point of view, the word of God, his speaking, is not defined by any linguistic idiom — to put revelation in words is the task of the prophets — but only by its divine origin and content.

As mentioned above, the two most important consonantal roots from which the verbs and nouns referring to the word of God are derived are *q-w-l* and *k-l-m*. The verb *qāla,* "to say," is most often used to characterize God as speaking. Approximately half of all its occurrences appear in the context of the events in the garden (q.v.) of Eden (thirty-two times), or on the day of judgment (twenty-eight times); the rest are distributed over the course of history, frequently in connection with Moses (sixteen times). *Qāla* is nearly always followed by direct discourse, which often contains orders (e.g. Q 2:131; 7:13; 29:55; see COMMANDMENTS; EXHORTATIONS), but also announcements (e.g. Q 3:55; 38:84-5), rhetorical questions (e.g. Q 5:116; 27:84; see RHETORIC AND THE QUR'ĀN) and other kinds of statements (e.g. Q 2:33; 7:143; 10:89; see LITERARY STRUCTURES OF THE QUR'ĀN). When the corresponding noun *qawl,* "saying, word," is attributed to God, its meaning sometimes comes close to "utterance" (Q 36:58) or "message" (Q 14:27; 28:51; 39:18; 73:5). In other instances, it is used in connection with divine decisions and unchangeable decrees, such as the creative command (Q 3:59; 6:73; 16:40; 40:68, etc.). Especially when combined with the verb *ḥaqqa,* "to be realized," *qawl* stands for God's firm intention to punish the sinners, and it is not entirely clear whether this implies divine predestination (see FREEDOM AND PREDESTINATION): "If we had so willed, we could have given every soul its guidance (see ERROR; ASTRAY); but now my word *(qawl)* is realized *(ḥaqqa):* 'Assuredly I shall fill Gehenna (see HELL AND HELLFIRE) with jinn (q.v.) and people all together'" (Q 32:13; cf. 17:16; 28:63; 37:31; 41:25; 46:18).

As to *k-l-m* and its derivations, when the verb *kallama,* "to speak to," is attributed to God, it implies that, for the addressee, being addressed by God is a special privilege. This is clear since God spoke to Moses (Q 4:164; 7:143; cf. 2:253; 42:51), the ignorant demand from him that he speak to them (Q 2:118; see IGNORANCE), and in the hereafter he will not speak to the sinners (Q 2:174; 3:77; see SIN, MAJOR AND MINOR). In Q 7:144, the noun *kalām,* "speaking, speech," also has the connotation of an "honoring address." In Q 2:75 and Q 9:6, however, *kalām Allāh* obviously refers to the whole of the revelations delivered by the qur'ānic Prophet; and in Q 48:15, it is — like *qawl* — synonymous with "God's decision" (cf. Q 3:59; 7:162). The noun *kalima,* "word, statement," signifies the divine decision not to put an end to strife about religion in this world, and to postpone punishment to the hereafter (e.g. Q 10:19; 11:110; 20:129; see CORRUPTION; RELIGIOUS PLURALISM AND THE QUR'ĀN). Just like *qawl,* it implies the intention to punish (e.g. Q 10:96; 11:119; 39:19; 40:6); but other than *qawl,* it sometimes also stands for promises (Q 7:137; 37:171; 6:115). In its singular form, it nowhere refers expressly to the creative command, and thus it is more probable that in respect to Jesus, too, it means "promise" (see above). Yet, in its plural form, *kalimāt,* it is not easy to decide whether the expression in Q 8:7, 10:82 and 42:24 *(yuḥiqqu l-ḥaqqa bi-kalimātihi)* must be translated by "He realizes the truth with his words" or "in his words." In any case, *kalimāt* mostly refers to former

revelations, and bears the connotation of promises, as well (Q 2:37, 124; 6:34; 7:158; 10:64; 18:27; 66:12). The single exception to this is the simile in Q 18:109 and Q 31:27 (see SIMILES), which is of rabbinic origins and praises God's omniscience and omnipotence.

Work

The activities engaged in to earn a living; occupation. Words associated with the root *ʿ-m-l* are used over one hundred times in the Qurʾān to signify "actions" or "deeds" in the broad sense; only a few times (Q 18:79; 34:12, 13) do they signify "work" in particular. *Sh-gh-l* twice signifies "occupation," both in the sense of livelihood and what keeps one busy (Q 36:55 and 48:11). The Qurʾān's repeated emphasis on "good works" (*al-ṣāliḥāt;* see GOOD DEEDS) while reflecting little interest in the occupations of believers, indicates that shaping a proper moral outlook, rather than structuring a particular kind of socioeconomic order, is a primary goal of the revelation (see REVELATION AND INSPIRATION; ETHICS AND THE QURʾĀN).

Qurʾānic references to specific occupations may provide some indication of the social context of the revelation, although caution should be exercised in this respect since the Qurʾān uses selected metaphors (see METAPHOR), parables (see PARABLE) and images (see SYMBOLIC IMAGERY) to achieve its didactic and liturgical function (see LITERARY STRUCTURES OF THE QURʾĀN). Among references to occupations, the cultivation of crops, especially grapes, dates, other fruits and grains are plentiful (see AGRICULTURE AND VEGETATION). Domestic cattle *(anʿām)* are mentioned almost thirty times in the Qurʾān, often as a corollary to the cultivation of crops (see ANIMAL LIFE). In contrast, shepherding and pasturing animals are referred to only in the story of Moses (q.v.; Q 28:23) and in a negative light in connection with the

Bedouin (q.v.; Q 48:11). Hunting and fishing (q.v.) are indicated as activities (Q 5:4, 94-5), if not occupations. Trade *(tijāra)* and its constituent activities including weighing, measuring, buying and selling (see TRADE AND COMMERCE; WEIGHTS AND MEASURES; MEASUREMENT; MONEY; MARKETS; CARAVAN), are the most frequently cited activities in which the believers engage to earn a living *(kasb)*. There are few references to manual labor (q.v.). Aside from the references to Noah's (q.v.) ark-building (see ARK), building *(ṣ-n-ʿ)* and construction *(kh-l-q)* are generally noted negatively in connection with oppressive rulers (e.g. Q 7:137; 26:129; 89:6-12; see KINGS AND RULERS; OPPRESSION; OPPRESSED ON EARTH, THE). Forced prostitution is condemned (Q 24:33; see SEX AND SEXUALITY; ADULTERY AND FORNICATION; SLAVES AND SLAVERY). The description of servants in paradise (q.v.) as being ageless and beyond fatigue (Q 56:17; 76:19) is understood by some scholars as recognition of the tiresome nature of such work in this life (Ṭabarī, *Tafsīr,* ad loc.; see SERVANT). The Qurʾān gives some guidelines for the employment of wet-nurses (Q 2:233; see WET-NURSING), an occupation that provided an opportunity for the mother of Moses to have her infant returned to her (Q 28:12-13).

Scholars discuss the issue of the lawfulness of a believer working for an enemy or an immoral person in reference to the story of the mother of Moses and also in reference to the prophet Joseph (q.v.) working for the "king" of Egypt (q.v.; Q 12:54-6; see also ENEMIES; PHARAOH). Al-Qurṭubī (d. 671/1272; *Jāmiʿ,* ad Q 28:12-13) says that Moses' mother accepted a daily wage from Pharaoh not for nursing her son but as spoils of war (see BOOTY; LACTATION; MAINTENANCE AND UPKEEP). Scholars disagreed on the rulings that could be derived from the example of Joseph. Most scholars were concerned with the way in which authority (q.v.) was passed from the employer to the employee. If the employee derived the authority to do his job directly from an immoral person or unlawful ruler, the employment could be unlawful. If the employee was performing a divinely ordained task, like the distribution of *zakāt* (see ALMSGIVING), this may be permissible, despite the corruption of his employer (see LAW AND THE QURʾĀN; LAWFUL AND UNLAWFUL; FORBIDDEN).

A fuller picture of work in seventh-century Arabia (see PRE-ISLAMIC ARABIA AND THE QURʾĀN) has been drawn by scholars who rely mostly, but not exclusively, on textual sources. It should be noted that nomads (q.v.), although an important segment of the Arabian population, were present in much smaller numbers than sedentary people, whose professions reflected the diversity of their environments (Donner, *Early Islamic conquests,* 11-20; see CITY; ARABS). In the fertile lands of southern Arabia, agriculture and shepherding were significant occupations, as was the case in desert oases like Yathrib (see MEDINA) and Yamāma. Across Arabia, the manufacture of items from the skin and hair of animals was a major activity (see HIDES AND FLEECE). Tanning and weaving were occupations shared by nomadic and sedentary people. Leather was made into containers to store oils and other liquids and used for many other purposes (see CUPS AND VESSELS). Goat-hair and wool from camels and sheep were processed and woven for many purposes — in particular, to make carpets and Bedouin tents. Wool was the most readily available material for clothes, but a desire for more comfortable fabrics allowed a number of Meccans to make a living importing cotton, linen and silk (q.v.), all of which were produced to a

limited extent in southern Arabia (see CLOTHING). A number of prominent Meccans are said to have been cloth merchants or tailors. Residents of Mecca and other towns also worked as blacksmiths, arrow-makers, saddle-makers, carpenters, butchers and builders, among other things. In Medina, some Jewish tribes are said to have specialized as goldsmiths and in trading in precious jewels (see METALS AND MINERALS; GOLD).

In seventh-century Arabia, women, like men, worked in a wide variety of occupations, including trading, manufacturing and agriculture (see WOMEN AND THE QUR'ĀN; GENDER; PATRIARCHY). Specialty occupations for women included wet-nurse, beautician, singer and prostitute. There were male and female musicians, magicians and servants (see MAGIC; SOOTHSAYER). The Prophet's wife, Khadīja (q.v.), is portrayed as a successful businesswoman who first met Muḥammad when she employed him to trade for her. One assumes that domestic chores like child-rearing, cooking and cleaning occupied much of the average woman's day (see CHILDREN; FAMILY; MAINTENANCE AND UPKEEP). Grinding grain and making bread appear to be two of the most tiresome daily chores most women had to perform. Ḥadīth reports show some female Companions of the Prophet (q.v.) expressing a desire for servants or slaves to help them with their work; in some cases the women were given help, in other cases, they were advised that the more pious path was to do the work themselves (see PIETY; ḤADĪTH AND THE QUR'ĀN). These ḥadīth arise in scholarly discussions about the dignity or dishonor of labor. The Prophet's wives (see WIVES OF THE PROPHET; WIDOW) are said to have occupied themselves with useful tasks after his death, despite receiving large annual state allowances. ʿĀ'isha taught children (see ʿĀ'ISHA BINT ABĪ BAKR), Ḥafṣa (q.v.) administered her father's agricultural estate and Zaynab bt. Jaḥsh manufactured items she gave to the poor.

Due to the nature of the sources, few definitive statements about attitudes towards work at the rise of Islam are possible. There are, however, a number of indications that a shift in the status of certain occupations occurred with the rise of Mecca (q.v.) and other towns to greater prominence. According to the martial norms of the Bedouin, most work other than fighting was done by slaves and women, while sedentary people labored to produce the food and goods Bedouin acquired through force, trade and negotiation (see WAR; FIGHTING; CONTRACTS AND ALLIANCES). Despite the lingering prejudice of Bedouin culture, there are a number of indications that before the Islamic conquests, an individual's occupation was generally not a significant marker of social status for townsmen. After the conquests (see CONQUEST), cities in the central Islamic lands exhibited more complex, varied and often hierarchical work environments than were present in seventh-century Arabia. Two centuries into the Islamic era, the Iraqi scholar Ibn Qutayba (d. 276/889; *Maʿārif,* 575-7) finds it notable that at the rise of Islam, so many of the "nobles" *(ashrāf)* among the Quraysh (q.v.) worked in professions considered base or menial in his time. These occupations include: butcher, carpenter, veterinarian, blacksmith, arrow-maker, slave trader and leather merchant. Although the Qur'ān does not associate honor or dishonor with certain occupations, or even work itself, this is widely discussed in early Islamic literature.

The Qur'ān does indicate that it is obviously preferable to be a master than a slave (Q 16:71). There are many possible reasons why a slave may have been employed instead of a free person for any given task.

Slaves were not confined to menial labor but were employed in virtually all occupations. The absolute dependence of slaves on their owners clearly gave them some advantages as employees but simple availability may have been the most critical advantage. The relationship between slavery and labor shortages in this period needs further study.

World

In English, "world" denotes mainly the entire cosmic system whether created by God, by chance, or simply having existed throughout eternity (q.v.). In its more limited sense the world means the earth (q.v.), all its inhabitants and specifically humankind characterized by certain institutions — social, religious and so on. World also conveys the sense of a special time (q.v.), as in "this world" meaning "lifetime" as opposed to "the world to come" (see ESCHATOLOGY). Some of these meanings appear in the Qurʾān but are expressed by particular words as explained as follows.

ʿĀlam

The word *ʿālam* occurs seventy-four times in the Qurʾān in the oblique plural *(ʿālamīn).* It is a loan word from either Hebrew or Aramaic/Syriac sources (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; SCRIPTURE AND THE QURʾĀN; FOREIGN VOCABULARY), although it is also found in Nabatean and Palmyran inscriptions. In biblical Hebrew it means any duration of time (q.v.; see also SPATIAL RELATIONS) and in Rabbinic usage, as in Aramaic, it denotes "age": this world *(ha-ʿōlam ha-zeh),* as contrasted with the next world *(ha-ʿōlam ha-bā).* The common qurʾānic phrase *rabb al-ʿālamīn* is equivalent to *ribbon ha-ʿōlamim,* "the master of all people," in the Jewish liturgy (see LORD).

As a rule, Muslim exegetes (see COSMOLOGY AND THE QURʾĀN) understand *ʿālamīn* in most verses and particularly in the second verse of Q 1 "Praise (q.v.) be to God, the lord of all created beings" *(rabb al-ʿālamīn)* as denoting all creatures (see CREATION): human beings, angels, devils, animals and so on (see ANGEL; DEVIL). Some exegetes exclude animals (see ANIMAL LIFE), claiming that the term applies only to rational beings (see INTELLECT). In a tradition ascribed to Ibn ʿAbbās (d. 68/687), *ʿālamīn* has the meaning of the whole creation: the heavens (see HEAVEN AND SKY) and the earth and what is in them and between them (Ibn Kathīr, *Tafsīr,* i, 43). According to al-Zajjāj (d. 311/923), *al-ʿālam* (in the singular) is whatsoever God created in this world and in the world to come (ibid., i, 44). Elsewhere, however, *ʿālamīn* can only be understood as human beings, as in "O Children of Israel (q.v.), remember my favor which I bestowed on you, and that I preferred you to all human beings" (Q 2:47; see ELECTION; GRACE; BLESSING), and "God chose Adam (see ADAM AND EVE) and Noah (q.v.) and the house of Abraham (q.v.) and the house

of ʿImrān (q.v.) above all human beings" (Q 3:33; see also Q 3:96, 108, 7:80, 26:165).

In al-Ṭabarī's (d. 310/923) view (*Tafsīr,* i, 48f.), *ʿālamūn* (the nominative form) is the plural of a collective noun *(ism jamʿ),* namely *ʿālam,* which has no singular form, like *jaysh,* army, or *raht,* a group of human beings. Each nation is an *ʿālam* and each nation in a certain generation is also called *ʿālam*. Likewise, each genus of creation is an *ʿālam*. Thus *ʿālamūn* includes all things except God (cf. Qurṭubī, *Jāmiʿ,* i, 138). Al-Qurṭubī (d. 671/1272; *Jāmiʿ,* i, 139) adds another interpretation of *ʿālam* which he derives from *ʿalam* or *ʿalāma* meaning a "sign" (see SIGNS), for *ʿālam* demonstrates its producer *(yadullu ʿalā mūjidihi),* that is, serves as a sign for the existence of its creator (cf. Rāzī, *Tafsīr,* i, 229).

Dunyā

Al-dunyā, the feminine of the elative adjective (literally, "lower, lowest," "nearer, nearest") means "this world." *Al-dunyā* is found in one hundred and fifteen places in the Qurʾān and denotes both the place and time spent in this world. Q 2:201 reads: "And others among them say: 'Our lord, give to us in this world *(al-dunyā)* good (see GOOD AND EVIL), and good in the world to come (*al-ākhira;* see REWARD AND PUNISHMENT), and guard us against the chastisement of the fire'" (q.v.; see also Q 5:33; 7:156; 9:69; 16:30; 27:29; see also HELL AND HELLFIRE). The aspect of time is clearly indicated when the word "life" *(ḥayāt)* is juxtaposed to *al-dunyā* as a combination of a noun with an adjective. It is not, however, only lifetime which is meant by *al-ḥayāt al-dunyā;* this term is also colored by moral traits (see ETHICS AND THE QURʾĀN). Lifetime is replete with temptations and evils which human beings should avoid (see TRIAL; SIN, MAJOR AND MINOR). As Q 3:185 says,

> Life in this world *(al-ḥayāt al-dunyā)* is nothing but pastime and amusement (see LAUGHTER); surely, the next world (*al-dār al-ākhira,* literally, "the last abode") is better for those who are God-fearing (see FEAR; PIETY). Do you, thus, not understand (see KNOWLEDGE AND LEARNING)?

Although the present life is nothing but the joy of delusion (Q 3:185), some people desire it, although others do not (Q 3:152). Human beings enjoy real life, states the Qurʾān, only in the next world (Q 29:64). These and other similar verses served the Ṣūfīs (see ṢŪFISM AND THE QURʾĀN; ABSTINENCE) in their censuring of this world. In his *Iḥyāʾ ʿulūm al-dīn,* al-Ghazālī (d. 505/1111) devoted a whole book to disparaging this world (Bk. 26, *Kitāb Dhamm al-dunyā,* iii, 174-99; many traditions of which are taken from Ibn Abī l-Dunyā's [d. 281/814] book by the same name).

Ākhira

Like *al-dunyā, al-ākhira,* the feminine of *ākhir* (the last), appears one hundred and fifteen times. This term signifies "the next world" as opposed to *al-dunyā,* "this world," or to the latter's equivalent, "the first" *(al-ūlā)*. For example, Q 93:4 reads: "And the next world is better for you than this world" (literally, "the first world"). Similar to *al-dunyā, al-ākhira* connotes both place and time. When it occurs with *dār* either in a construct state *(dār al-ākhira)* or as a combination of a noun and an adjective *(al-dār al-ākhira),* it means "paradise" (q.v.), that is, the world prepared for the God-fearing, as stated in Q 7:169 "…and the last abode is better for those who fear God…" (see also Q 6:32; 16:30; 29:64; 33:29; see also HOUSE, DOMESTIC AND DIVINE). In contrast to *al-dunyā,* the connotations of *al-ākhira* are in general positive; however, the Qurʾān explicitly states that the punishment in the last abode is stronger and more enduring

than that of this world (Q 13:34; see CHASTISEMENT AND PUNISHMENT). Belief in the next world is an important part of one's religion (q.v.). Just as a man gives alms (see ALMSGIVING), he should believe in the coming of this period (Q 27:3; 41:7).

al-Samāwāt wa-l-arḍ

In the Qurʾān there is no single specific word that designates the whole physical world or cosmos (see COSMOLOGY). *Al-samāwāt wa-l-arḍ* (literally, "the heavens and the earth") comes near to such a designation, namely, the entire physical entity that was created by God. "Praise be to God, who created the heavens and the earth…" (Q 6:1; see also LAUDATION; GLORIFICATION OF GOD). It also seems that the phrase *malakūt al-samāwāt wa-l-arḍ,* "the kingdom of the heavens and the earth" (Q 6:75; 7:185; see SOVEREIGNTY; KINGS AND RULERS) has the same meaning. In two instances the phrase "the heaven (in the singular) and the earth" *(al-samāʾ wa-l-arḍ)* accompanies a reference to creation (Q 38:27; cf. 30:25). Two verses (Q 26:23-4) show that *rabb al-ʿālamīn,* "the lord of the world" (literally, "worlds") is equivalent to *rabb al-samāwāt wa-l-arḍ:* "Pharaoh (q.v.) said: 'And what is the lord of the world?' [Moses (q.v.)] said: 'The lord of the heavens and earth….'" A more inclusive phrase is "the heavens and the earth and what is between them" (see e.g. Q 25:59; 32:4; 50:38).

Arḍ

Arḍ, literally, "earth," can be interpreted to mean all humanity, that is, all inhabitants of the earth. Q 2:251 reads: "If God had not repelled some people by others, all the inhabitants of the earth *(al-arḍ)* would have been corrupted (see CORRUPTION). But God is gracious to all human beings" (*al-ʿālamīn;* Rāzī, *Tafsīr,* vi, 192). In certain cases *al-arḍ* means *al-dunyā,* that is, "this world," as it is said in Q 23:112: "How long have you stayed in this world?…" (*fī l-arḍ,* lit. "in the earth"). *Al-arḍ* also contrasts with *al-dār al-ākhira,* "the last abode," which further demonstrates its meaning as "this world." Q 28:83 states: "That is the last abode; we make it for those who desire neither haughtiness (see ARROGANCE; PRIDE) nor corruption in this world *(fī l-arḍ)*."

God and the world

God created the world (the heavens and the earth and what is between them) in six days (Q 25:59). He is not only the creator of the world but also the owner of whatsoever is in it (Q 2:284; 3:129) and the knower of all that exists (Q 3:29; see POSSESSION; HIDDEN AND THE HIDDEN; POWER AND IMPOTENCE). Later Muslim scholars tried to find the notion of creation *ex nihilo* in the qurʾānic text by deducing this notion from Q 16:40: "When we desire a thing, the only word we say to it is 'Be,' and it is." Thus things were brought into existence after their nonexistence by the imperative "be" (see also Q 19:9). The world was created purposefully (Q 23:115; 44:38), so that people will worship (q.v.) God (Q 51:56). Most of the phenomena observed in the world were designed by God for the benefit of humankind (see also NATURE AS SIGNS):

Verily it is God who splits the grain of corn and the date-stone (see AGRICULTURE AND VEGETATION). He brings forth the living from the dead, and the dead from the living (see LIFE; DEATH AND THE DEAD)… He splits the dawn (q.v.), and has established the night as a time of rest (see SLEEP; DAY AND NIGHT), and the sun (q.v.) and the moon (q.v.) as a reckoning (of the festivals; see CALENDAR)… It is he who has established for you the stars to guide you in the darkness (q.v.) of the land and sea (see

WATER; PLANETS AND STARS)… And it is he who has brought down water from the heaven, and thereby we have produced shoots of every kind… In that there are signs for people who believe (Q 6:95-9; see BELIEF AND UNBELIEF).

The world is full of signs (q.v.) which might lead one to believe in God. On the basis of these verses and others of the same kind, Muslim theologians have elaborated the argument from design, according to which the design in the universe proves God's existence, unity, wisdom, rule and providence (see GOD AND HIS ATTRIBUTES).

The notion of the last abode *(al-ākhira)* presupposes the end of this world. Although the termination of *al-dunyā* is not stated explicitly in the Qurʾān, it is alluded to in the following verses: "It is he who created you of clay (q.v.), then decreed an appointed time of death *(ajal)*…" (Q 6:2), "…the affair is finished…" (Q 2:210) and "all [that dwells] on [the earth] will perish, and only the face of your lord will remain" (Q 55:26-7; see FACE OF GOD; FREEDOM AND PREDESTINATION). Rationalist theologians interpreted God's face to mean his essence. Adding to this interpretation the phrase "he is the first and the last" (Q 57:3), they concluded that just as God was alone before creation, he will be alone after the termination of the world.

In contrast to the finality of the present world, most of the traditionalist theologians claim that the world to come, which is divided into paradise and hell, will exist forever. "And as for those who believe and do righteous deeds (see GOOD DEEDS), we shall make them enter gardens (q.v.) underneath which rivers flow, to dwell therein forever…" (Q 4:57). The two Ḥanbalī theologians Ibn Taymiyya (d. 728/1328) and his distinguished disciple Ibn Qayyim al-Jawziyya (d. 751/1350) held the view that hell will finally come to an end. Their textual basis is Q 78:21-3: "Behold, Jehenna has become an ambush, for the insolent a resort, therein to tarry for ages." Since it is impossible to measure eternity by periods of time ("ages"), says Ibn al-Qayyim, the duration of hell is finite.

Whether God has already created the world to come, that is, paradise and hell, or whether he will create it after the judgment (see LAST JUDGMENT), is another question dealt with by the theologians. Most traditionalist theologians held the view that paradise and hell have already been created by God. Q 3:133 reads: "And vie with one another, hastening to forgiveness (q.v.) from your lord, and to paradise *(janna)* whose breadth is as the heavens and the earth, prepared for the God-fearing *(uʿiddat lil-muttaqīn)*." "Prepared," which also referred to hell (Q 3:131), was interpreted to mean "was already created." Rationalist theologians, however, argued that God always acts for the benefit of humankind. Since as places of reward and punishment, paradise and hell will be needed only after the day of judgment, it follows that they have not yet been created.

Worship

The veneration of God (or any other being or object regarded as worthy of worship), by the performance of acts and/or the utterance of words that signify attitudes such as adoration, submission, gratitude (see GRATITUDE AND INGRATITUDE), love (q.v.) or fear (q.v.). Arabic does not have a direct semantic parallel to the English word but derivatives of the root *ʿ-b-d,* conveying ideas of obedience (q.v.), dependence (see also CLIENTS AND CLIENTAGE) and service (see SLAVES AND SLAVERY; SERVANTS), are often rendered in English translations of the Qurʾān by "worship." In a broad sense the worship of God involves fulfilling his law (see LAW AND THE QURʾĀN; VIRTUES AND VICES, COMMANDING AND FORBIDDING) and submission *(islām)* to him and in that sense it may be said that the fundamental message of the Qurʾān is the need for humankind to worship God alone (see IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM). In commentary (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), the Qurʾān's recurrent prohibitions against "associating others with God" *(shirk)* are often amplified to explain that we must not worship or serve *(ʿabada)* anything other than him.

In Islam acts that express obedience and submission to God, especially those duties required in fulfilment of the "five pillars of Islam" (see RITUAL AND THE QURʾĀN), are commonly referred to as the *ʿibādāt* (sing. *ʿibāda*), and it is clear that they are regarded as the most important ways in which humankind should worship God. The fundamental reason for performing those acts of service is that they are required by God. In fulfilling his requirements his servants *(ʿibād)* demonstrate their submission to his commands (see also COMMANDMENTS). Of those duties it is the five-times-daily performance of the ritual prayer (q.v.; *ṣalāt*) that is the most frequent and fundamental expression of their service or worship. Some scholars writing in English, such as E.E. Calverley, prefer to translate *ṣalāt* by "worship" rather than "prayer."

In a number of qurʾānic passages serving God is clearly linked to the performance of acts of worship. Q 7:206 refers to the way in which the angels (see ANGEL) serve God by constantly praising (see LAUDATION) and prostrating before him (see BOWING AND PROSTRATION). At Q 20:14 God is reported as saying to Moses (q.v.) from the burning bush, "There is no god but me so serve me *(fa-ʿbudnī)* and establish prayer in remembrance (q.v.) of me *(wa-aqimi l-ṣalāta li-dhikrī)*." At Q 29:16-17 Abraham (q.v.) is described as calling on his people to abandon the idols that they serve instead of God (see IDOLS AND IMAGES), to serve God and fear him *(uʿbudū llāha wa-ttaqūhu),* to seek provision (*rizq;* see SUSTENANCE) from him, to serve him and give thanks to him. Q 53:62 commands us to make prostration to God and serve him *(fa-sjudū lillāhi wa-ʿbudū)*. Clearly in all of these passages and many others and in Muslim discourse in general, the idea of serving God (or other beings) is largely coterminous with worship. According to Q 51:56, God's sole purpose in creating humankind and the jinn (q.v.; see also CREATION) was that they should serve/worship him *(illā li-yaʿbudūnī)*.

Apart from the names of the "five pillars," common words in the Qurʾān connected with the performance of ritual acts of worship relate to prostration and bowing *(s-j-d, r-k-ʿ),* circumambulation *(ṭ-w-f),* the offering and slaughter (q.v.) of animals *(h-d-y, n-ḥ-r, dh-b-ḥ, n-s-k;* see also CONSECRATION OF ANIMALS), remaining in a holy place (*ʿ-k-f;* see SACRED PRECINCTS), offering praise (q.v.) to God (*s-b-ḥ, ḥ-m-d;* see also GLORIFICATION OF GOD), and calling God to mind *(dh-k-r)* by repetition of

his name or names (see MEMORY; GOD AND HIS ATTRIBUTES). Such acts should be carried out in an attitude of submission or obedience (*q-n-t;* e.g. Q 2:238; 3:17). Among terms that appear in the Qurʾān and are commonly used in connection with Islamic worship are *qibla* (q.v.; the direction of prayer), *masjid* (place of prostration, mosque [q.v.]), *bayt* (house, sanctuary; see HOUSE, DOMESTIC AND DIVINE; SACRED AND PROFANE), *ʿumra* (the minor pilgrimage; see PILGRIMAGE) and *ṣadaqa* (alms, charity; see ALMSGIVING).

The Qurʾān is relatively rarely concerned, however, with the details of the correct forms of such acts of worship. Frequently it merely alludes to them and seems to assume that they are normal ingredients of religious life, the forms of which are already known (see RELIGION). Even when there are passages that refer to aspects of performance (such as Q 2:183-7, concerned with fasting [q.v.] in Ramaḍān [q.v.]), they are not so full that they would allow us to reconstruct all the details of the performance simply from the Qurʾān alone. For that we would need to refer to texts outside the Qurʾān. There is clearly the possibility that we assume too readily that the Qurʾān is referring to institutions of worship existing in exactly the same forms as they are known from other Islamic texts or from observation.

The references to the ritual prayer are especially allusive and often consist of no more than calls for the "establishment" *(iqāma)* of the *ṣalāt,* sometimes linked with the command to bring the *zakāt*. There is a reference (Q 5:58) to making a call to prayer *(idhā nādaytum ilā l-ṣalāt),* but no clear and unambiguous qurʾānic text that indicates it should be performed five times daily, nor any precise details as to its timing (see DAY, TIMES OF), the sequence of bodily postures and words to be followed, the number of "cycles" *(rukūʿ)* to be performed for the different times of prayer, etc. One passage (Q 17:78-9) orders *"ṣalāt* at the setting of the sun until the darkness (q.v.) of night (*li-dulūki l-shamsi ilā ghasaqi l-layl;* see EVENING) and the *qurʾān* of the dawn (q.v.; *al-fajr*)" and also prayer (not specifically *ṣalāt*) at night (*wa-mina l-layli fa-tahajjad bihi nāfilatan laka;* see DAY AND NIGHT); another (Q 2:238) refers to the "middle" prayer (*al-ṣalāt al-wusṭā;* see NOON; RECITATION OF THE QURʾĀN).

Nevertheless, qurʾānic verses (q.v.), when suitable ones exist, are usually cited in commentaries and law books as evidence of the legal obligation regarding a particular *ʿibāda*. The obligation of *ḥajj* (and, according to some, *ʿumra* also) is related to Q 2:196 ("complete the *ḥajj* and the *ʿumra* for God") and more especially Q 3:97 (*"ḥajj* of the house is a duty upon men towards God, those who are able to find a way"; see KAʿBA). The revelation of Q 2:144-5 ("…turn your face towards *al-masjid al-ḥarām"*) is taken to have imposed the duty of facing towards the Kaʿba (instead of Jerusalem [q.v.]) in prayer *(qibla).* The fast of Ramaḍān (replacing the fast of ʿĀshūrāʾ) is regarded as instituted by the revelation of Q 2:183-7, "fasting is prescribed for you … the month of Ramaḍān in which the Qurʾān was revealed …" (see REVELATION AND INSPIRATION; OCCASIONS OF REVELATION). Discussions of *zakāt* in the law-books (for whom it is intended and on what goods it is to be paid) refer to a large number of different verses, especially Q 9:60 (which actually refers to alms as *ṣadaqāt* rather than *zakāt*). When the details of Muslim practice concerning the *ʿibādāt* cannot be related to qurʾānic texts, they tend instead to be ascribed to the *sunna* (q.v.). A notable example concerns the number and times each day of the *ṣalāt,* reported as having been indicated to the Prophet in extra-qurʾānic revelations that are recorded in ḥadīths and accounts of his

life (see ḤADĪTH AND THE QURʾĀN; SĪRA AND THE QURʾĀN).

As an alternative to the traditional view that the forms of Islamic worship are derived from such revelations, it may be theorized that they developed as a result of evolving community practices (adapting forms of rituals already in existence in the milieu from which Islam emerged) and that the textual "sources" are a result of scholars making links between the already existing practices and available texts. Making such links would sometimes involve creative interpretation of the texts (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY).

Muslim acts of worship frequently include the recitation of parts of the Qurʾān, and reciting the whole or extended parts of it is regarded as an act of worship in itself. Al-Ghazālī (d. 505/1111) refers to recitation *(tilāwa)* of the Qurʾān as the most important form of *ʿibāda* with the tongue, and he sets out (*Iḥyāʾ*, book 8) the conditions (such as being in a state of ritual purity [q.v.]) necessary for the ritual. The daily *ṣalāt* ritual involves saying the opening chapter (Sūrat al-Fātiḥa; see FĀTIḤA; PRAYER FORMULAS) and other short chapters or verses chosen as appropriate for the time of day or the nature of the festival (see FESTIVALS AND COMMEMORATIVE DAYS), and commonly longer passages are recited following the conclusion of the *ṣalāt*. Informal prayer ceremonies such as the *dhikr* frequently begin with and include passages of the scripture. In Ramaḍān it is customary for the whole of the Qurʾān to be recited in the mosque in thirty sections, one for each day of the month. During the ceremonies of the *ḥajj* there are many occasions when the pilgrim recites or hears parts of the Qurʾān (see ORALITY), but it is notable that some scholars disapproved of its recitation during the circumambulation *(ṭawāf)* of the Kaʿba. Although al-Shāfiʿī (d. 204/820), for example, held that the *ṭawāf* was the place of *dhikr* and the most important form of *dhikr* was reciting the Qurʾān, other scholars disapproved of qurʾānic recitation during the act of circumambulation (Muḥibb al-Ṭabarī, *Qirā,* 311). It is not clear why that should be so since in general the Qurʾān lies at the heart of Islamic worship (see also EVERYDAY LIFE, THE QURʾĀN IN; POPULAR AND TALISMANIC USES OF THE QURʾĀN).

Writing and Writing Materials

Inscribing characters, letters or words for others to read; the instruments (q.v.) used in such inscription. The Qurʾān attests to written materials and the process of writing with a variety of lexemes — both metaphorical and concrete (see METAPHOR) — supplying evidence that supplements epigraphic traces of the development of writing in seventh-century Arabia (see ORALITY AND WRITING IN ARABIA; ARABIC SCRIPT). Among the most prominent qurʾānic terms for materials used in the writing process are: ink (*midād,* Q 18:109), parchment (*qirṭās,* pl. *qirāṭīs,* Q 6:7, 91), pen (*qalam,* pl. *aqlām*; cf. Q 31:27; 68:1; 96:4). The act of writing itself — and the written product, the book (q.v.) — is most commonly denoted by derivatives of the Arabic root letters *k-t-b,* a root frequently used in the context of scripture and revelation (see REVELATION AND INSPIRATION). Other Arabic roots, such as *s-ṭ-r, kh-ṭ-ṭ* and *r-q-m* are also employed to convey "inscription" (cf. *yasṭurna,* Q 68:1; *masṭūr,* Q 17:58; 33:6; 52:2; *mustaṭar,* Q 54:53; *khaṭṭa,* e.g. Q 29:48; *marqūm,* Q 83:9, 20; see also SCROLLS; HEAVENLY BOOK; SCRIPTURE AND THE QURʾĀN; ORALITY).

Verses from the Qurʾān have been written on a variety of materials, from pottery shards, bones and mosaic to woodwork, metal wares and buildings (see EPIGRAPHY AND THE QURʾĀN; MATERIAL CULTURE AND THE QURʾĀN), but the most frequent form used to copy the full text of the revelation is the codex (see CODICES OF THE QURʾĀN). Traditionally written with a reed pen *(qalam),* manuscripts of the Qurʾān (q.v.) nevertheless vary enormously in materials, format, aspect, and function.

The earliest manuscripts were copied in brown, tannin-based ink on parchment. The sources mention the skin of goat, calf, donkey, and even gazelle, but the most common animal used was sheep. The skin was cured, scraped to remove any fat or flesh remaining on the inside, sanded, stretched taut and then dried. Occasionally it was also dyed, as in the famous, now-dispersed "Blue Qurʾān." The calligrapher penned the text freehand in various styles of angular script often now known as Kūfic (see CALLIGRAPHY), on the individual folios, which were then gathered in quires and bound in leather. Most were produced in the horizontal ("landscape") format, perhaps to differentiate them from other non-qurʾānic and even non-Arabic codices.

We do not know how early these parchment manuscripts were produced, for there is, as yet, no convincing method to date any manuscript of the Qurʾān before the third/ninth century. Scholars have tried different methods, from paleography and codicology to radiocarbon analysis, in order to assign dates to the mass of undated parchment folios and fragments but no manuscript contains an authentic colophon with a date or the authentic signature of a known calligrapher. So far the only secure evidence is an endowment notice *(waqfiyya),* such as the one in a manuscript endowed by the ʿAbbāsid governor of Damascus, Amajur, to a mosque in Tyre in 262/875-6 (dispersed; many pages in Istanbul, Türk ve Islam Eserleri Müzesi). Parchment manuscripts were certainly made before this date but as yet we do not know which ones.

From the late fourth/tenth century Qurʾān manuscripts written in brown, tannin-based ink on parchment were increasingly replaced by copies written in black, carbon-based ink on paper. The first surviving example (dispersed, e.g. Chester Beatty Library 1434 and Istanbul Uni-

versity A6758) was transcribed by ʿAlī b. Shādhān al-Rāzī l-Bayyiʿ (sic) in 361/972. These materials had already been used to transcribe other Arabic manuscripts for at least 150 years, and their slow adoption for copying the Qurʾān was undoubtedly due to the reverence accorded the divine revelation. In comparison to earlier parchment manuscripts, the paper codices were smaller, cheaper and more portable and were usually made in vertical ("portrait") format. They were also more readily readable, as they came to be written typically in the rounded hand known as *naskh*. They often recorded variant readings (see READINGS OF THE QURʾĀN) and catered to a more diverse audience. Some manuscripts, such as the well-known copy penned by Ibn al-Bawwāb at Baghdād in 391/1000-1 (Dublin, Chester Beatty Library), were apparently made for a specifically Shīʿī clientele.

Once accepted, paper became the most common material used for Qurʾān manuscripts, adopted regularly in the eastern Islamic lands from the fifth/eleventh century and in the Maghrib from the seventh/thirteenth. It came in many sizes, from pocket-book to the large "Baghdād" sheet (approximately 100 × 70 cm), used for stupendous thirty-volume manuscripts commissioned by the Ilkhānids and Mamlūks. Transcribed in a bold *muḥaqqaq* script, sometimes in black outlined in gold and decorated in glowing colors (see ORNAMENTATION AND ILLUMINATION), these extraordinary manuscripts, which contained as many as two thousand sheets and took as long as six or seven years to transcribe and decorate, are some of the finest manuscripts produced anywhere in the world. Year

The time required for the earth to complete a revolution around the sun. *ʿĀm* and *sana,* the qurʾānic Arabic words for "year," raise questions of both meaning and chronology. Q 29:14, "1000 years *(alf sanatin)* save 50 *(khamsīn ʿāman),*" contains both words and implies their equivalence. Al-Zamakhsharī (d. 538/1144; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) explains in the *Kashshāf* that the repetition of the same word should be avoided and that writing "950 years" would require more words. The Qurʾān's phrasing, as opposed to "1000," also conveyed precision. Q 22:47, "a day with God is as 1000 years" (see DAYS OF GOD), though, has been understood metaphorically (see METAPHOR; LITERARY STRUCTURES OF THE QURʾĀN), because of the particle *ka-*, "as."

ʿĀm and *sana* are not always synonymous in the Qurʾān. Al-Rāghib al-Iṣfahānī (fl. early fifth/eleventh cent.) in his *Mufradāt,* cites Q 12:49, "a year when the people have plenteous crops (see AGRICULTURE AND VEGETATION; GRACE; BLESSING)," to argue that *sana* could denote a year of barrenness, and *ʿām* a year of plenty. According to *Lisān al-ʿArab,* an *ʿām* could be a winter and a summer (see SEASONS) and therefore shorter than a *sana,* which was either a solar year or twelve lunations (see SUN; MOON). A passage from al-ʿAjjāj (d. 97/715), *min* [or, *wa-*] *marr aʿwāmi l-sinnīna l-ʿuwwami* ("from the passage of the years' lengthy summers and winters"; cf. *Tāj al-ʿarūs,* xxxii, 157, for the reading with *"wa-"*), supports such a distinction, a distinction difficult to discern from the Qurʾān.

In Q 10:5, the Qurʾān states that the moon is a way to measure the passage of time: "He it is who appointed the sun a splendor and the moon a light (q.v.; see also LAMP), and measured for it stages, that you might know the number of years and the reckoning." The stages *(manāzil)* are asterisms that track the moon's monthly path. The heliacal (just before sunrise) ris-

ings and acronychal (soon after sunset) settings of certain asterisms were called *anwāʾ* and were how the pre-Islamic Arabs (q.v.) marked time (q.v.), including festivals (see FESTIVALS AND COMMEMORATIVE DAYS), before the development of a calendar (q.v.) in the late pre-Islamic period (see PRE-ISLAMIC ARABIA AND THE QURʾĀN).

The pre-Islamic lunar calendar used the names of the months (see MONTH) that are known from the Muslim calendar, though sometimes *Ṣafar* 1, then followed by *Ṣafar* 2, took the place of *al-Muḥarram*. The length of a year of twelve lunar months, 354 days, is tied implicitly to the length of a solar year. So by 420 C.E., the pre-Islamic Arabs had adopted, probably from the Jews (see JEWS AND JUDAISM), the practice of adding an intercalary month in order to have the lunar year keep pace with the solar. Like the Jewish year, the new year would occur in the autumn. While the Jews at the time probably intercalated a month every seven of nineteen lunar years, Ginzel (*Handbuch,* 245) accepted al-Bīrūnī's (d. ca. 442/1050) report that the Arabs intercalated a month every nine of twenty-four years.

The Qurʾān banned intercalary months, on the occasion of Muḥammad's Farewell Pilgrimage (q.v.; see also PILGRIMAGE), in Q 9:37: "Postponement is only an excess of disbelief (see BELIEF AND UNBELIEF)… [so that] they allow that which God has forbidden (q.v.)." Fakhr al-Dīn al-Rāzī (d. 606/1210) comments in his *Tafsīr* (ad loc.) that adding intercalary months would be privileging *dunyā* over *dīn* (see RELIGION; WORLD). The problem remains that a precise lunar year is eight hours, 48 minutes, and 36 seconds longer than 354 days; eleven times in a thirty-year cycle, *Dhū l-Ḥijja* contains a thirtieth day.

Yemen

Name derived from the Arabic *al-yaman,* which indicates the south of the Arabian peninsula. Etymologically, *al-yaman* means "the south" and is the opposite of *al-shām,* "the north" (see SYRIA). These two words are themselves derived from Arabic terms for right and left. Before Islam there is no evidence of the proper name Yaman in the sources, whether they are internal (the inscriptions of south Arabia) or external, to indicate the country. They refer to the Ḥimyarīs, the tribe which ruled south Arabia from the end of the third century C.E. In the list of titles of the fourth, fifth and sixth century Ḥimyarī kings, however, south Arabian inscriptions mention a region called *Ymnt* (apparently the Ḥaḍramawt south), a name which certainly derives from the ḥimyarite substantive *ymnt,* "south" (as opposed to *sʾmt* "north"; for the precise location of place names and ethnic groups, see Robin and Brunner, *Map of ancient Yemen*).

The geographical extent of the historical Yemen varies according to the historical period and point of view. For the Yemeni al-Ḥasan b. Aḥmad al-Hamdānī (d. bef. 360/971), Yemen includes all the territories

south of a line which starts at Qaṭar and reaches the Red Sea midway between Mecca (q.v.) and Najrān (q.v.; Hamdānī, *Ṣifat jazīrat al-ʿArab,* 51). On the other hand, al-Masʿūdī (d. 345/956) assigns to Yemen borders which are very close to those of the current nation (*Murūj,* 1034).

The religious history of Yemen in the centuries preceding Islam is distinguished principally by the rejection of polytheism during the 380s (see POLYTHEISM AND ATHEISM; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGIONS IN PRE-ISLAMIC), that is nearly 240 years before the *hijra* (see EMIGRATION), and by a very favorable disposition towards Judaism until the period of rule by the (Christian) Aksumites, who were followed by the (Zoroastrian) Persian Sasanians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; MAGIANS; ABYSSINIA).

The sources

The Ḥimyarī inscriptions after the rejection of polytheism, about one hundred in number (plus around twenty fragments), are the most reliable source because they are contemporaneous and still in their original form (without the danger of alteration and manipulation of manuscript transmission). But they only shed light upon a tiny part of society and are far from objective, since their authors are concerned with themselves, whether to celebrate their glorious feats and commemorate their good works, or to establish rights of custom and property. These inscriptions, sometimes drawn up by the sovereign (eighteen, plus several doubtful instances), but most often by private individuals, are of three kinds: commemorations of buildings and various public works (for example, the building of a sanctuary portico, establishment of a cemetery, repair of the Maʾrib dam, etc.); commemorations of buildings for personal use (palaces); commemorations of the glorious deeds of the sovereign or aristocrats. These documents provide us with indirect information on the religious attitude of the ruling classes, thanks to the religious invocations they contain (and sometimes by their silence; see also EPIGRAPHY AND THE QURʾĀN). As far as archaeological remains are concerned, they are of little significance (see ART AND ARCHAEOLOGY AND THE QURʾĀN): there are some column capitals from the great church of Ṣanʿāʾ reused in the grand mosque (q.v.), some artifacts from daily life, and finally a building in Qānīʾ which could have been a synagogue (Finster, Arabien in der Spätantike). The last source consists of the Arabic traditions which were collected from the early days of Islam but have been passed on to us through works, the oldest of which have been composed at a relatively late date, more than 150 years after the *hijra*.

The rejection of polytheism

Before the unification of south Arabia by the Ḥimyarī kings Yāsir^{um} Yuhanʿim (who annexed the kingdom of Sabaʾ around 275; see SHEBA) and Shammar Yuharʿish (who conquered the kingdom of Ḥaḍramawt several years before 300), all the inscriptions, both those drawn up by the sovereign and those by private individuals, are polytheistic. Nevertheless, certain third century texts present an innovation vis-a-vis those of earlier periods: the final invocations of the dedication of the most important Sabaean temple, consecrated to Almaqah, mention this single god, whereas previously they would list all the divinities of the Sabaean pantheon and, frequently, the (personal and tribal) divinities of the authors of the text. Certain scholars have concluded from this that Almaqah must have become a kind of supreme god.

In January 384 (*ḏ-dʾw*^{n} 493 of the Ḥimyarī era), the ruling kings, Malkīkarib Yuhaʾmin

and his sons Abīkarib Asʿad and Dharaʾamar Ayman, celebrated the construction of two new palaces, called Shawḥaṭān and *Klnm*, in two inscriptions (*RES* 3383 and Garb Bayt al-Ashwal 2) coming from Ẓafār, the Ḥimyarī capital. In the final invocation, where the pagan divinities are normally mentioned, they call upon "the support of their lord (q.v.), the Lord of the Heaven" *(b-mqm mrʾ-hmw Mrʾ Sʿmyn)*. These documents clearly show a new religious orientation by the Ḥimyarī authorities. The formula, which is somewhat laconic, does not, however, allow us to determine the exact nature of the new religion. A little earlier (around 380?), the same king Malkīkarib, co-ruling with just one of his sons (perhaps Abīkarib Asʿad), had a building constructed at Maʾrib described as *mkrb* (Ja 856); unknown from more ancient inscriptions, *mkrb* seems to be the Ḥimyarite term for a synagogue.

These three inscriptions reveal radical and definitive religious change since later documents are all monotheistic. Only one small text, dating from 402-3 C.E. (512 Ḥimyarite), which mentions a temple of the pagan god Taʾlab in passing, may be an exception. This religious change clearly demonstrates the success of a unification which had been initially political (with the annexation of Sabaʾ and Ḥaḍramawt) and linguistic (with the disappearance of the Ḥaḍramawtian language and, much earlier, of Madhabite and Qatabānian; see also ARABIC LANGUAGE; ARABIC SCRIPT) and subsequently affected the calendar (q.v.).

The religious position of Ḥimyarīs during the transitional period, between 300 and 380, is more hypothetical. It is probable that polytheism was dominant. The temples remained in use and all the inscriptions drawn up by private individuals (except YM 1950 which will be discussed further and two unpublished inscriptions, discovered in 2003) are polytheistic. But no royal inscriptions (with the exception of two insignificant fragments, which make no mention of religion) have yet been found, so that the personal stance of the sovereigns is not known.

The first indication of progress towards monotheism is the inscription YM 1950, dated *d-ḫrfn* [..]3, which bears an invocation to king Thaʾrān Yuhanʿim, co-ruling with a son whose name has disappeared, in all likelihood Malkīkarib Yuhaʾmin; from this fact, the date can be reconstructed as *d-ḫrfn* [47]3 or [48]3 Ḥimyarī, or August [36]3 or [37]3 C.E. The authors of YM 1950 are powerful lords *(qayls)* of an important tribe with territory bordering Ṣanʿāʾ to the north west; in this text they are apparently commemorating the construction of a sanctuary in honor of "[their lor]d the Master of Heaven" (… *mr](ʾ)-hmw Bʿl-Sʿmyn;* see HEAVEN AND SKY). The name of the divinity appears again on line 4 in the expression *w-l-ysʿmʿn Bʿl-Sʿ[myn…],* "and which is granted by the Master of He[aven…]". No other deity is mentioned or invoked. The text seems monotheistic but its brevity prevents us from deciding whether this monotheism is pagan, Christian or Jewish. The two unpublished texts date from ca. 355 C.E. for the latest, and from the preceding decades for the earliest (see also GOD AND HIS ATTRIBUTES).

An external source, corresponding to roughly the same period, casts further light upon this. Apparently, between 339 and 344, a Byzantine embassy (see BYZANTINES), sent by Constantius II (r. 337-61) under the leadership of Theophilus the Indian, had gone to the Ḥimyarīs with the intention of converting the sovereign and obtaining "the building of a church (q.v.) for the Romans who came there and for any locals who might be disposed towards religion." The results were encouraging:

The sovereign of the people with pure-hearted judgment, was disposed towards religion and built three churches, rather than just one, throughout the country, and he did this not with the imperial funds brought by the ambassadors, but with what he eagerly contributed from his own wealth.

It seems, however, that we cannot really speak of the conversion of the Ḥimyarīs: the report of Theophilus does not mention the baptism of the sovereign or the creation of a church hierarchy. Regarding the religious practices of the Ḥimyarīs, Theophilus indicates that the people are still polytheists, even if Judaism, of which this is the first datable mention in Arabia, is particularly influential in the king's circle (Philostorgius, *Kirchengeschichte*).

During the period 300-380, it would therefore appear that Yemen was still polytheistic. From the inscriptions, the abandonment of polytheism by certain individuals dates from the reign of Thaʾrān Yuhanʿim (ca. 324-ca. 375). If Jewish and Christian monotheism did indeed gain support, the inscriptions do not yet give any indication of this. As regards the personal attitude of the sovereign, this is unknown. The official rejection of polytheism occurred in the following reign, the reign of Malkīkarib Yuhaʾmin (ca. 375-ca. 400), co-ruling with two sons, Abīkarib Asʿad and Dharaʾʾamar Ayman.

"Judaizing" monotheism, from the 380s to 525-530

For nearly 140 years, from the reign of Malkīkarib Yuhaʾmin (ca. 375-ca. 400) to that of Yūsuf Asʾar Yathʾar (522-between 525 and 530), Ḥimyarī epigraphy displays the same characteristics. Their rulers use only vague expressions and brief formulas when they refer to religion (fifteen inscriptions in total). As far as individuals are concerned, while they often do the same as their rulers (more than thirty inscriptions), they do sometimes explicitly demonstrate their sympathy towards Judaism (seven inscriptions could be described as "judaizing"). This sympathy is shown by the use of the ritual exclamations "amen" *(ʾmn)* and "shalôm" *(sʿlwm)*, or by bequests in favor of Jews (as in Ḥaṣī 1, which establishes a cemetery set aside for Jews). There are few indisputably Jewish inscriptions. The most significant (Garb Bayt al-Ashwal 1), which comes from the beginning of the fifth century, is written by one Yahūdaʾ Yakkuf *(Yhwdʾ Ykf)*, apparently a proselyte, who counts upon "the help and grace of his lord, who gave him his being, the lord of the living and the dead (see LIFE; DEATH AND THE DEAD), the lord of heaven and earth, who created all things, and on the prayers of his people Israel" (*b-rdʾ w-b-zkt mrʾ-hw d-brʾ nfsʿ-hw mrʾ ḥyn w-mwtn mrʾ sʿ|myⁿ w-ʾrḍⁿ d-brʾ klᵐ w-b-ṣlt sᵊʿb-hw Ysᵊrʾl*; see CHILDREN OF ISRAEL). An addition in Hebrew is carved in the central monogram. The text contains several terms borrowed from Aramaic, notably *zkt* (Arabic *zakāt;* see ALMSGIVING) and *ṣlt* (Arabic *ṣalāt*; see PRAYER), words which are again found in the Qurʾān (see FOREIGN VOCABULARY).

Two other documents could be Jewish. There is both the inscription *CIH* 543 (date uncertain), in which is found the name Israel (q.v.; Ysᵊrʾ), and the divine epithet "Lord of the Jews" *(Rb-yhd)*, as well as the fragment Garb, Framm. no. 7 (ca. 400-20) which mentions Israel *(Ysᵊrʾl)*.

A final document, DJE 23 (also of uncertain date), may also be added to this small corpus. Written in the Hebrew language and alphabet, it sets out part of the list of twenty-four priestly classes, already detailed in the Book of Chronicles (I, 24:7-18), adding the name of the village in Palestine where each class originates. The reign of the famous king Joseph, in

Sabaean, Yūsuf Asʾar Yathʾar (*Yws¹f ʾs¹r Yṯʾr* in Ja 1028/1; *Ys¹f ʾs¹r* in Ry 508/2), deserves particular examination. This king does not have a south Arabian, but a foreign name, one which occurs in the Bible (Arabic Yūsuf, in Hebrew Yosef), followed by two south Arabian names. In Syriac hagiography, he has the surname Masrūq, in Greek hagiography Dounaas and in the Arabic tradition Zurʿa dhū Nuwās. The external sources (Syriac, Greek and Arabic) all depict him as a Jewish radical, who persecuted Christians, especially in the Najrān oasis. Three large inscriptions (Ry 508, Ja 1028 and Ry 507), dated *d-qyẓ*^{n} and *d-mḏrʾ*^{n} 633 Ḥim., as well as a handful of small engravings beside them, refer to his reign. Their author is an army commander called Sharaḥʾīl Yaqbul, who had undertaken the siege of the Najrān oasis, in the months before the persecution, which took place in November 523 according to Syriac hagiography. This dating allows us to date Ry 508, Ja 1028 and Ry 507 to June and July 523 C.E. and to place the beginning of the Ḥimyarī calendar in April 110 B.C.E. Although these documents were produced at the height of a religious war — they speak also of the destruction of churches at Ẓafār and Makhawān (in Arabic al-Makhāʾ, or Mokha, the Red Sea port) — they scarcely mention doctrinal matters. Although there are several implicit references to Judaism, the Bible is not quoted and they are not accompanied by Jewish symbols, such as the *menorah* or the *shofar* (there is not a single ancient example in Yemen). The nature of this judaizing monotheism has not yet been decisively resolved. Although very close to Judaism, it seems to have been distinct. It brings to mind instead the powerful religious currents of paganism, which imitated Judaism in the eastern part of the Roman world until the fourth century (Mitchell, Cult of Theos Hypsistos).

Some important documents contain no mention of religion. These include the two inscriptions that the kings Abīkarib Asʿad and Ḥaśśān Yuhaʾmin in the first instance (Ry 509, dated around 440) and Maʿdīkarib Yaʿfur in the second case (Ry 510, dated June 521), had engraved in central Arabia, probably at the time of operations to strengthen the Ḥujrid principality. Similarly we might also mention BR-Yanbuq 47 (April 515). This silence probably indicates a situation of instability or conflict. Finally, there is no evidence of Christianity throughout this entire period.

Christian Yemen (525/530-beginning of the 570s)

The persecution by Yūsuf provoked the intervention of the Christian Aksumite king, Kaleb. He conquered Yemen (between 525 and 530) and placed on the throne a Ḥimyarī Christian, Sumūyafaʿ Ashwaʿ (we have only one inscription, Ist 7608 bis + Wellcome A 103664), who is called Esimiphaios by Procopius. According to the Syriac and Greek hagiographies, Kaleb installed a bishop and founded a large number of churches.

A short time later, Abraha (q.v.; an Aksumite army leader) overthrew Sumūyafaʿ and seized power. He built a magnificent church at Ṣanʿāʾ, which is described by al-Azraqī (d. 250/865). From this time onwards, Ṣanʿāʾ supplanted Ẓafār as the seat of power of Yemen. Abraha tried to retain control of the tribes of the Arabian desert, previously under Ḥimyarī rule. In 552 (662 Ḥim.), he launched an important expedition to central Arabia, which reached Ḥulubān (300 km southwest of Riyadh) and Turabān (130 km east of al-Ṭāʾif; Ry 506). He would subsequently undertake the expedition which, according to Arabic Islamic traditions, was to halt before Mecca, to which the Qurʾān alludes in sūra 105 with the expression "the men with the elephants" (*aṣḥāb al-fīl;* Kister,

Campaign of Ḥulubān; Simon, L'inscription Ry 506; see PEOPLE OF THE ELEPHANT).

Although they had never been so previously, all the inscriptions henceforth are explicitly Christian, no longer making any direct or indirect reference to Judaism: Christianity has become the official religion. The Sumūyafaʿ inscription ends with the invocation: "in the name of Raḥmānān and of his son, the conquering Christ" (1st 7608 bis/16, *b-sʿm Rḥmnⁿ w-bn-hw Krsᵓtsᵓ Ḡlbⁿ .[…]*). Abraha's inscriptions contain equally clear formulas. The most significant is *CIH* 541, which begins "With the power, help and mercy of Raḥmānān, of his Messiah and of his Holy Spirit" (q.v.; *b-ḫyl w-[r]dᵓ w-rḥmt Rḥmnⁿ w-Msʿḥ-hw w-Rḥ [q]dsʿ*), and recounts a Christian celebration: "… they came back to the town of Marib and celebrated a mass at the church in Marib, because there was a priest there, the abbot of its monastery" (ll. 65-67: … *ʿdyw hgrⁿ Mrb w-qdsʿw bt Mrb k-b-hw qsʿsᵐ ᵓb-msʿtl-h*). Despite this, the Christian symbol of the cross appears only rarely: it may be noted once at the start of Ry 506, twice in the margin of Ja 544-547 and on several artifacts. It is equally noteworthy that the inscriptions never mention church authorities or make use of any biblical quotations (in contrast to contemporary Aksumite inscriptions, where there are numerous such references). All these Christian documents come from characters linked to the Aksumite regime, no doubt reflecting his political and religious inclinations, which were also those of the Egyptian church (opposed to the decisions of the Council of Chalcedon of 451 C.E.). Other Christian movements would certainly have had followers in Yemen, in particular the Nestorians, but they have left no trace. Yemen, decimated by the Aksumite conquest, then by the plague, sank into crisis: the last datable inscription (*CIH* 325) refers to 559-560 (669 Ḥim.). Two sons of Abraha, Aksūm (described as "the son of the king" in *CIH* 541/82) and Masrūq (known only through the Arabic Islamic traditions) briefly occupied the throne at the end of the 560s or the beginning of the 570s. The Aksumite dynasty, which then collapsed, was replaced by Persian Sasanian rule, which lasted for some sixty years.

The name of God and the name of the sanctuary

In the Ḥimyarī monotheistic inscriptions, God is addressed in many ways, as if his complex nature could not be expressed by a single name. In the first period (until around the 430s), he is described with a simple circumlocution, "Master of Heaven" *(Bʿl-Sʿmyⁿ)*, "Lord of Heaven" *(Mrᵓ Sʿmyⁿ)* or "Lord of Heaven and Earth" *(Mrᵓ Sʿmyⁿ w-ᵓrḍⁿ)*. Next, even before the end of the reign of Abīkarib Asʿad, God begins to be given a proper name. Sometimes it is Raḥmānān *(Rḥmnⁿ)*, a name of Aramaic origin, elsewhere he is called by the title "the god, God" (Īlāhān and variants: Īl, Īlān and Aᵓluhān, *ᵓlhⁿ*, *ᵓl*, *ᵓlⁿ* and *ᵓᵓlhⁿ*) used as a proper name. Although it is not used exclusively, Raḥmānān predominates from 462 (Garb Sh .Y., *ḏ-ᵓlⁿ* 572 Ḥim.) in inscriptions of all kinds, royal or private, explicitly judaizing or not, whatever their source. It was clearly successful, since it was adopted by the majority of Arab monotheistic movements, in particular the Christian Ḥimyarīs (for the first person of the Trinity [q.v.]). Sometimes the name Raḥmānān is qualified, "Raḥmānān the merciful" (Fa 74/3, *Rḥmnⁿ mtrḥmⁿ*) or "Raḥmānān the most high" (Ja 1028/11, *Rḥmnⁿ ʿlyⁿ;* see GOD AND HIS ATTRIBUTES). In three inscriptions (*CIH* 543, Ja 1028 and Ry 515), God is not only called "Raḥmānān," but also "Lord of the Jews"

(*Rb-yhd, Rb-hd* and *Rb-hwd*). This syntagma consists of the substantive *rb,* unknown in Sabaean (except perhaps in onomastica) in the sense of "lord (q.v.), master," and of the term *(Y)h(w)d,* which means "Jews." The most significant text, but also the most difficult to interpret, is *CIH* 543 of which only the opening blessing has survived: *[b]rk w-tbrk s¹m Rḥmnⁿ ḏ-b-S¹myⁿ w-Ysᵌrᵌl w-|ᵌlh-hmw Rb-yhd ḏ-hrdᵌ ᶜbd-hmw Sᵃhrᵐ w-|ᵌm-hw Bdᵐ w-ḥs²kt-hw Sᵃmsᵐ w-ᵌl|wd-hmy Ḍmm w-ᵌbs²ᶜr w-Mṣr|ᵐ w-kl bht̲-h[…],* "May they bless and be blessed the name of Raḥmānān who is in heaven, Israel and its God, the Lord of the Jews, who helped their servant Shahrᵘᵐ, his mother *Bdᵐ,* his wife Shamsᵘᵐ, their children (of them both) …*Ḍmm,* Abīshaᶜar and Miṣrᵘᵐ, and all their close rela[tives.…]." Strangely, this document seems to indicate two divine beings, "Raḥmānān who is in heaven" and "the God (of Israel), the Lord of the Jews," plus perhaps a third, Israel, mentioned with them. Finally in Ja 1028, already quoted, we find a double exclamation at the end *Rb-hd b-Mḥmd,* "Lord of the Jews, with *Mḥmd*" (l. 12). *Mḥmd,* probably pronounced Maḥmūd or Muḥammad, meaning "deserving of praise," is definitely a divine name: for it to be considered as a human name, there would need to be a family name and an indication of the rank of *Mḥmd* in the social hierarchy (see also NAMES OF THE PROPHET).

The most remarkable piece of information is that God has the same name, Raḥmānān, in the inscriptions of the Christians and those whom we have called monotheistic "judaizers." On the other hand, the same term is not used to indicate the sanctuary (see SACRED PRECINCTS). The Jews and "judaizers" used the term *mikrāb (mkrb),* while the Christians used *qalīs* (*qls¹,* from the Greek *ekklesia*) and *bīᶜat* (*bᶜt,* which comes from a Syriac word meaning "egg, dome"). On one occasion we discover *ms¹gd* (Arabic *masjid*) and *kns¹t* (Arabic *kanīsa*) but the context is unclear (see MOSQUE).

An outstanding personality, king Abīkarib Asᶜad

According to the Arabic Islamic traditions, Yemen became Jewish after king "Tubān Abū Karib b. Malkī Karib," also called Asᶜad the Perfect (Asᶜad al-Kāmil), had brought back with him two Yathrib rabbis (see MEDINA; TUBBAᶜ). This conversion is often considered doubtful for two reasons. This same Abū Karib is the hero of an epic cycle, consisting of far-flung military expeditions in Asia. Besides, the figure of the king has been reconstructed by Islamic apologetics, which recognizes in Abū Karib the originator of the practical rituals at the Kaᶜba (q.v.) at Mecca and one of those who believed in Muḥammad before his coming. The inscriptions allow us to see this more clearly. The Ḥimyarī royal family completely and definitively rejected polytheism during the reign of Malkīkarib Yuhaᵌmin, a sovereign who, most likely because of his advanced age at accession, is first seen co-ruling with one son (probably Abīkarib Asᶜad), then with two (Abīkarib Asᶜad and Dharaᵌamar Ayman). The relation between religious reform and the person of Abīkarib established by tradition is thus quite precise. The neglect of Malkīkarib probably stems from the particularly outstanding reign of Abīkarib, who ruled for over 50 years (at least 493-543 Ḥim.) and imposed Ḥimyarī rule on the tribes of central Arabia as shown by the inscription Ry 509 (250 km west of Riyadh) and the lengthening of the royal list of titles. The nature of Abīkarib's religious reforms is harder to determine. If the renunciation of polytheism is general, emphasizing the strength of central authority, only a number of private individuals demonstrate a particularly firm commitment to Judaism. The rulers and

the majority of those responsible for inscriptions seem satisfied to refer to their commitment to monotheism, without being more specific. Similarly, there is the complete absence of the Jewish symbols so common in the Roman world during the same period. The religious reform which occurred in the reign of Abīkarib Asad was therefore not really a conversion to Judaism. It was rather a commitment of principle, giving rabbis a privileged status (Beeston, Martyrdom of Azqir), without new "followers" undertaking to follow all the very restrictive practices of Mosaic law. This in no way precludes the conversion of individuals and small groups, who thus broke with their original background. In this hypothesis, the crisis, which began after the disappearance of Abīkarib and reached its peak in the reign of Yūsuf, had as its cause not only the advance of Christianity supported by Byzantium and Aksum, but also the pressure of the central authority in favor of total conversion to Judaism: thus both Christian hagiographies and Islamic traditions also stress the appeals of king Joseph to choose between conversion to Judaism and death. The incomplete nature of the conversion to Judaism is further emphasized by the fact that neither the language, the script, the calendar nor the dating system underwent any change, whereas one would have expected a more important role for Hebrew or the adoption of the Jewish liturgical calendar.

Youth and Old Age

The early and last stages of the normal [human] lifespan. The Qurʾān portrays youth and old age in two main contexts: to demonstrate God's power (see POWER AND IMPOTENCE) and to illustrate the proper relations between generations (q.v.). The "ages of man" occur in recitals of divine signs (q.v.): "There have come to me clear signs *(bayyināt)* from my lord (q.v.). . . . He it is who has created you from earth (q.v.; *turāb*), then from a drop of sperm, then from a clot (see BLOOD AND BLOOD CLOT); then he brings you forth as an infant *(ṭifl),* then to reach your full strength, then to be old *(shuyūkh),* though some among you die before that, and [in any case] to fulfill an appointed term: perhaps you will attain wisdom" (q.v.; Q 40:66-7; cf. 22:5; 30:54; 35:11; see BIOLOGY AS THE CREATION AND STAGES OF LIFE). Q 80:18-22 culminates the sequence: after God creates the embryo, smoothes its way, and causes it to die, he resurrects it (see CREATION; DEATH AND THE DEAD; RESURRECTION).

Relations between young and old, and the psychological and physical characteristics that deserve special treatment, are usually set in family (q.v.) contexts. Muslims must not regard children (q.v.) simply as possessions (Q 8:28; 63:9; see PROPERTY). Unlike pre-Islamic society (Q 6:137, 140, 151; 81:8-9; see PRE-ISLAMIC ARABIA AND THE QUR'ĀN), Muslim society assumes responsibility for children's weakness (see MAINTENANCE AND UPKEEP; GUARDIANSHIP; MATURITY). Children are among the oppressed whom Muslims must fight to protect (Q 4:75; see FIGHTING; PATH OR WAY; OPPRESSED ON EARTH, THE). Orphans (q.v.) require special kindness and protection of any property they may have inherited (Q 4:2, 6-10; see INHERITANCE) but this does not include legal adoption (Q 33:4f.). At least five passages concern the proper nursing of babies (e.g. Q 2:233; 28:7-13; see LACTATION; FOSTERAGE; WET-NURSING). Wet-nurses may be hired in the absence of the mother (cf. Q 65:6). Children are born knowing nothing (Q 16:78; see KNOWLEDGE AND LEARNING; IGNORANCE); sexual innocence gives them freedom of the house (Q 24:31) but puberty restricts it (Q 24:58f.; see SEX AND SEXUALITY). Outside the family, beauty and purity are personified in the companions of paradise (q.v.; Q 52:24; 76:19), though female companions will be "of equal age" (Q 56:37; 78:33; see also HOURIS).

Aged wisdom instructs youth. Luqmān (q.v.; Q 31:13-19) first enjoins monotheism on his son, then care and gratitude to parents (q.v.); but a child is not to obey if unbelievers (see BELIEF AND UNBELIEF) try to make him worship other gods (Q 31:14f.; cf. 19:41f.; see OBEDIENCE; POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS). Aged parents are not to be reprimanded but addressed honorably and kindly: "My lord, have mercy on them as they raised me in childhood" (Q 17:23-4). It is duty to their old father that exposes two Midianite women to strange men (see MIDIAN), until Moses (q.v.) helps them water their flocks (Q 28:23). By contrast, Joseph's (q.v.) brothers (see BROTHER AND BROTHERHOOD) cruelly remind their father of his mental decline; Jacob's (q.v.) forgiveness (Q 12:98) is thus all the more astounding. Old age *(kibar)* strikes like a whirlwind and weak children are part of the doom that is a sign of God (Q 2:266; see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT).

Reversal of age-related characteristics is also a sign of God. John's wisdom as a youth (Q 19:12f.; see JOHN THE BAPTIST), Jesus' (q.v.) speech (q.v.) in the cradle (Q 19:29f.) and the child's hair that turns gray on the day of judgment (Q 73:17; see LAST JUDGMENT) are all unnatural to youth. Abraham's (q.v.) wife asks incredulously, "Woe is me! Shall I bear a child when I am an old woman *('ajūz)* and this husband of mine an old man *(shaykh)?*" (Q 11:72). Finally, Zechariah (q.v.; Zakariyyā'), successfully praying for an heir, describes his age in unforgettable imagery: "O lord, my bones are weak, and my head has burst into gray flame!" (Q 19:4).

Zaqqūm

The tree of Zaqqūm, or the cursed tree mentioned four times in the Qur'ān, with three explicit references (Q 37:62; 44:43; 56:52) and one implicit (Q 17:60). Unlike the beautiful trees with clustered fruits in paradise (q.v.; Q 69:23), the good tree of "the good word" (Q 14:24) and the heavenly tree of eternity (q.v.) from which Adam and Eve (q.v.) were prohibited to eat (Q 20:120), the tree of Zaqqūm stands out as the ugliest and the most terrifying tree described in the Qur'ān (see TREES; AGRICULTURE AND VEGETATION). It grows at the bottom of hellfire (see HELL AND HELLFIRE), its blossom *(ṭal'uhā)* like "devils' heads" (Q 37:64-5), is "bitter in taste, burning in touch, rotten in smell (q.v.), black in appearance. Whoever eats from it cannot tolerate its [revolting] taste and therefore is forced to swallow it" (Rāzī, *Tafsīr,* xxix, 174; see FOOD AND DRINK).

The one possible implicit reference to Zaqqūm is very brief and speaks of *al-shajarata l-mal'ūnata fī l-Qur'ān,* "the tree cursed in the Qur'ān" (Q 17:60) being a "trial (q.v.) for men." The majority of the commentators (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), and the translators following suit (see TRANSLATIONS OF THE QUR'ĀN), take for granted that *al-shajarata al-mal'ūnata* is the tree of Zaqqūm (Ṭabarī, *Tafsīr,* xv, 113-15). In explanation of its description as a trial (*fitna,* Q 17:60; 37:63), the commentators often relate the story that, when the tree of Zaqqūm was mentioned for the first time in the Qur'ān, the unbelievers (see BELIEF AND UNBELIEF) were skeptical about a tree growing "at the bottom of hellfire" (Q 37:64; see UNCERTAINTY), and said: "One day Muḥammad claims that hellfire burns stones (see STONE), and the next day that it grows trees!" Thus, according to the commentators, it is indeed a trial for men: on the one hand, the believers will accept that God is capable of creating a tree that does not burn in the blazing flames of hellfire and that it will be one of many punishments for the unbelievers (see REWARD AND PUNISHMENT) and, on the other hand, the unbelievers will not believe in it and will

reject (see LIE) and mock (see MOCKERY) the Qurʾān as they in fact did (Zamakhsharī, *Kashshāf,* ii, 675).

The name of the tree is derived from "deadly food," "ingestion," or "excessive drinking." The lexicographers as well as the commentators are uncertain about the origin of the word Zaqqūm. In addition to the meanings suggested above, all of which are based on speculation about what the root *z-q-m* might mean, they relate a story suggesting that it is the name of a tree which grows in the desert or an African word for *ʿajwa,* dates mashed with butter (*Lisān al-ʿArab,* iii, 1845 and Fīrūzābādī, *al-Qāmūs,* 1118). It is curious to note, however, that the same stories are repeated almost identically and always without examples of usage from any other text than the Qurʾān. The subtlest explanation is that of al-Rāghib al-Iṣfahānī (fl. early fifth/eleventh cent.), who ignores all the stories and suggests that the qurʾānic use came first and "thereafter the root was 'borrowed' for ingestion of distasteful food" (*Mufradāt,* 380).

The three explicit references occur in a typical punishment/reward qurʾānic discourse (see FORM AND STRUCTURE OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). All three describe the tree as one of the hellfire horrors which the unbelievers will be forced to experience. Together they provide us with a very powerful image detailing the physical description of the ugly tree and its effect on those who will be forced to eat it, i.e. the sinful (see SIN, MAJOR AND MINOR) and the unbelievers (Q 44:44; 56:51). It will "boil in their insides like molten brass *(al-muhl),* like the boiling of scalding water" (Q 44:45-6). The image is taken at its literal meaning by mainstream Sunnī commentators but is understood by rationalists as a metaphorical objectification of the mental and emotional torture awaiting the unbelievers (see METAPHOR; SYMBOLIC IMAGERY; THEOLOGY AND THE QURʾĀN).

Zealotry

Religious and/or political fanaticism. The main qurʾānic stand on zealotry is expressed in Q 2:143 where the Muslim community is described as a "community of the middle," a community that is "in the middle between any two extremes," thereby assigning to its members the responsibility of maintaining a community that is just and moderate in all its beliefs and practices (Quṭb, *Ẓilāl,* 130-2; see

MODERATION). This characteristic is, according to the exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), what makes the Muslim community the "best community" applauded in Q 3:110, "because the middle is the best" (Zamakhsharī, *Kashshāf,* i, 198; Rāzī, *Tafsīr,* iv, 108-12). The implication of Q 2:143, then, is that in its endeavor to be the best community, the Muslim community should not be extreme in its practice or understanding of its own religion (q.v.). Various prophetic ḥadīths support this view (see ḤADĪTH AND THE QUR'ĀN), such as "Beware of zealotry!" (*iyyākum wa-l-ghuluww fī l-dīn;* Albānī, *Ṣaḥīḥ,* no. 2680, i, 522) and "Death be to zealots!" (*halaka l-mutanaṭṭi'ūn;* ibid., no. 7039, i, 1183). Nevertheless, there appears to be no explicit, general condemnation of zealotry or religious fanaticism in the Qur'ān, although many of its characteristics are denounced in various contexts. It is worth noting, however, that words like *taṭarruf* (extremism) and *uṣūliyya* (fundamentalism) are modern translations of foreign words and hence are not used to express these meanings in the Qur'ān and classical Arabic texts. A recurrent theme of the qur'ānic discussions of how different people practice their religion is that of taking the law (see LAW AND THE QUR'ĀN) into human hands (e.g. by forbidding [see FORBIDDEN] what God has made lawful [see LAWFUL AND UNLAWFUL], an all too familiar attitude encountered among modern day zealots). The theme occurs in six different verses (Q 5:87; 6:116, 140; 7:32; 10:59; 66:1), all condemning this attitude, sometimes in a very harsh tone (e.g. Q 6:116; 10:59).

Though not mentioned in many discussions about the qur'ānic criticism of Christianity (see CHRISTIANS AND CHRISTIANITY; POLEMIC AND POLEMICAL LANGUAGE), the verb *taghlū,* "to be overzealous, to exceed the bounds," is used in two qur'ānic verses that warn the Christians against *ghuluww* as represented in their notion of Jesus' (q.v.) "sonship" to God (see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS; GOD AND HIS ATTRIBUTES). It is hard to see, however, how holding to the doctrine of the Trinity (q.v.), to which these verses object, makes Christians zealots. A possible explanation for the use of *ghuluww* here can be understood to imply the literal interpretation of the text, a characteristic often associated with zealotry, in which case the Christians are being blamed for their literal interpretation of the biblical use of the word "Father" in phrases like "the cup of my Father," "to do the will of my Father," and "I must be about my Father's business" (see Cragg, *Jesus,* 31, whose argument approximates this interpretation; see also CORRUPTION; FORGERY; SCRIPTURE AND THE QUR'ĀN).

Many other qur'ānic passages can be seen as either encouraging or discouraging forms of zealotry, depending on which parts of the context one chooses to emphasize (see CHRONOLOGY AND THE QUR'ĀN; OCCASIONS OF REVELATION). Among them is religious intolerance, which the Qur'ān discourages very strongly in numerous verses (see TOLERANCE AND COMPULSION; RELIGIOUS PLURALISM AND THE QUR'ĀN). The most widely cited verse in this context is Q 109:6, which some commentators argue has been abrogated (see ABROGATION). Other exegetes deny this, especially in the light of verses such as Q 2:113, 256; 22:56, 69, all of which stress the fact that judgment (q.v.) between persons is not to be made by persons in this life but by God on judgment day (see LAST JUDGMENT). Similarly, there is no unequivocal qur'ānic judgment with regard to controversial matters such as exclusivism (see PARTIES AND FACTIONS) and the use of violence (q.v.) to achieve political aims (see

POLITICS AND THE QUR'ĀN). Islamic philosophers (see PHILOSOPHY AND THE QUR'ĀN), exegetes and jurists have argued opposing views, always on the basis of qur'ānic verses (q.v.). In sum, in its discussions of various forms of zealotry, the Qur'ān expresses firm objections to some practices and allows room for dispute about many others.

Zechariah

The father of John the Baptist (q.v.) in both the Bible and Qur'ān. Zechariah (Zakariyyā) is mentioned in four qur'ānic passages (Q 3:37-44; 6:85 [a passing reference]; 19:2-15; 21:89-90). He is not directly named as a prophet *(nabī)* but by implication is included in the collective references to prophets at Q 19:58 and prophethood *(nubuwwa)* at Q 6:89 (see PROPHETS AND PROPHETHOOD). The qur'ānic story (see NARRATIVES) of Zechariah and John is always linked to that of Mary (q.v.) and Jesus (q.v.).

The fullest account of Zechariah occurs at Q 19:2-15. There he is portrayed as a pious old servant of God who prays in secret for a successor (Q 19:3-6). When an unnamed speaker (God? angels?: see below) responds with "good tidings of a boy whose name is John" (Q 19:7; see GOOD NEWS), Zechariah asks how this can be, in view of his old age and his wife's barrenness (Q 19:8), thus prompting a simple affirmation of God's power to create effortlessly out of nothing (Q 19:9; see COSMOLOGY; CREATION). Zechariah then asks for a sign and his request is granted: he will not speak for three days (Q 19:10; see SIGNS). The passage then shifts its focus to John (Q 19:12-15). This Meccan narrative (see CHRONOLOGY AND THE QUR'ĀN) about Zechariah is set within a sequence of stories (Q 19:2-58) in which a common theme is God's bestowal of mercy (q.v.) on his faithful servants (q.v.) as they endure various trials (childlessness for Zechariah, allegations of immorality for Mary, Q 19:16-33, a hostile pagan father for Abraham [q.v.], Q 19:41-50). Note that the word "mercy" *(raḥma)* is emphasized in the opening words of the Zechariah story (Q 19:2; cf. 19:50, 53; also 19:21 in a slightly different sense). In this Meccan context the significance of Zechariah to Muḥammad and his followers thus appears to be that his story is one of many which speak encouragingly to believers of the mercy that God will show them in the midst of their difficulties (see TRIAL; TRUST AND PATIENCE). The same interpretation holds for the much briefer Meccan narrative at Q 21:89-90, which simply portrays Zechariah crying out to God and God responding with the gift of John. Stress is also laid on the humble, godfearing piety (q.v.) of Zechariah and his wife. The wider context is a sequence of stories describing God's deliverance of his faithful servants from adversity (e.g. Q 21:68-71, 74, 76-7, 83-4, 87-8). Again, Zechariah is an encouraging example of how the believer should persevere through difficulties, trusting in God.

The one Medinan passage about Zechariah (Q 3:37-44) has distinctive narrative

features. In contrast to Q 19, where the story of Zechariah precedes that of Mary and Jesus, here the story of the birth of Mary (Q 3:35-6) leads into an account of the role of Zechariah as her guardian. Whenever he enters the sanctuary, Zechariah finds that she is mysteriously supplied with food by God (Q 3:37; Zechariah's guardianship of Mary is also mentioned at Q 3:44). At this point Zechariah prays for "goodly offspring" (Q 3:38) and in Q 3:39-41 the story then unfolds much as at Q 19:2-15, except that Q 3:39 mentions angels as responding to Zechariah's prayer (see ANGEL). This Medinan passage about Zechariah and John, although telling broadly the same story as in the Meccan versions, needs to be understood within the changed context of the tense relationship between Muḥammad and the Jews of Medina (q.v.) that is apparent throughout the third sūra (see JEWS AND JUDAISM). The longer narrative sequence (Q 3:33-58) is essentially a history-lesson warning the Jews that, however much they might oppose Muḥammad, God will vindicate him, just as he did other faithful servants in the past (see HISTORY AND THE QUR'ĀN). This lesson is most explicit in the culminating story of Jesus, rejected by Jewish unbelievers but vindicated by God (Q 3:45-57), but it is natural to assume that the same lesson underlies the whole narrative sequence. That suggests that the brief reference to Zechariah and John might assume knowledge of the fate of John as one of the prophets killed by ungodly Jews (such prophets are mentioned often in Q 3; see Q 3:21, 112, 181, 183; see BELIEF AND UNBELIEF; POLEMIC AND POLEMICAL LANGUAGE). The inclusion of the story of Zechariah and John here would then be serving as part of an extended reminder that if Muḥammad was rejected by unbelieving Jews, that had been the experience of prophets before him; nevertheless, the prophets are all honored in the sight of God (see the affirmations bestowed upon John at Q 3:39) and the scheming of the unbelievers is ultimately frustrated. (This analysis is more fully argued in Marshall, Christianity, 12-14.)

This survey shows that while there is a constant narrative core to the qur'ānic passages about Zechariah, his significance varies with the changing wider context of the challenges faced by Muḥammad and his followers, first in Mecca (q.v.) and then in Medina. Commentators have addressed a number of issues raised by these passages. For example, many take the view that it was the sight of God's miraculous provision for Mary that emboldened Zechariah to pray for the miracle of a son (see MIRACLES). They also fill out the brief reference in Q 3:44 to give a fuller account of how Zechariah becomes Mary's guardian through a process of casting lots (see DIVINATION). They discuss the apparent problem that Zechariah's request for a sign suggests that he, a prophet, has doubted God's message (see UNCERTAINTY; IMPECCABILITY). They also address the related question as to whether Zechariah's silence for three days should be seen as a punishment (see CHASTISEMENT AND PUNISHMENT; for a range of comments on these and other points, see Ayoub, *Qur'ān,* 99-122; see also SCRIPTURE AND THE QUR'ĀN). Finally, it should be noted that the exegetical tradition contains reports linking Dhū l-Kifl (q.v.) to Zechariah (and also Elijah [q.v.]; cf. Tha'labī, *Qiṣaṣ,* trans. Brinner, 438).

PREFACE

In my Preface to the first volume of the *Encyclopaedia of the Qur'ān*, I promised that the final volume would include "a very thorough indexing of both English words and transliterated Arabic terminology." With the publication of this volume, I am pleased to deliver on that promise. As initially conceived, I expected this index to form part of the fifth volume of the *EQ*. When the effort of indexing got underway in earnest, however, two recognitions quickly asserted themselves: (1) to serve readers well, the *EQ* would require multiple indices and (2) the size and scope of these combined indices would demand an additional volume. So it was decided to add a sixth volume to the *EQ* and to complete the print publication of this reference work with a tool that could significantly enhance its utility, particularly for scholars.

This concluding volume of the *EQ* offers five separate indices: (1) a roster of contributing scholars and their academic affiliations, (2) a comprehensive list of all articles, (3) a registry of the proper names of people, places, religious and social groupings, etc., (4) a lexicon of transliterated Arabic words and phrases, and (5) an inventory of the qurʾānic verses and sūras that are cited in the five volumes of the *EQ*.

The first three of these indices require little additional explanation. The *Author List* furnishes an alphabetically ordered record of all those scholars who have contributed to the *EQ*. It also notes the article (or articles) that each author has written as well as his or her institutional affiliation. The *Article List*, which is divided by volume, provides both the name of the author and the inclusive pagination of each article. Blind entries have not been included in this list.

The *Index of Proper Names* gathers the references to persons, places, languages, clans, tribes, religions, rulers and dynasties as these are found in the *EQ*. Ordinarily, this index captures terms that were consistently capitalized in the *EQ*. The death dates of individuals, frequently in both *hijrī* and *mīlādī* forms, have been supplied when these could be drawn from *EQ* articles or from commonly available reference sources. In some cases, information that amplifies what is found in the *EQ* has been added where this could be helpful to the researcher. Recognizing the name variation that occurs in both primary and secondary sources, an effort has been made to direct readers to the version of a name that most regularly identifies a noted figure from the formative or classical period of Islam. Honorifics, such as Imām, Shaykh,

Saint, King, have been placed before the individual's name but do not affect the alphabetization of the name itself. Occasionally, Arabic transliteration for technical terms has been provided and placed in square brackets after the term. In those instances where a proper name designates an *EQ* entry, the page and column number are given in bold. Finally, nominal and adjectival forms have frequently been consolidated. For instance, the listing "Ṣūfī(s)" will include volume, page and column indicators that refer to the ascetical-mystical trend in Islam, as well as to individuals associated with that trend.

The fourth of these indices, the *Index of Arabic Words and Phrases*, may require a bit more explanation. In the Preface to the first volume of the *EQ* I described the critical decision that the associate editors and I took during our first editorial meeting as we gathered to discuss the development of the *EQ*. In order to make this reference work useful to scholars beyond the fields of Islamic and qurʾānic studies, to assure its accessibility to readers who have no background in Arabic, we decided to organize the *EQ* under English-language lemmata and to supply the translation of key qurʾānic words and phrases wherever possible. While a few exceptions were permitted to this policy, it provided the primary guidance for authors as they drafted their articles. We felt, moreover, that this decision need not compromise the scholarly integrity of the *EQ*. Since the authors who contributed to these five volumes are among the finest international scholars of the Qurʾān, their entries draw upon the depth of their research concentrations and the range of their many publications, making frequent use of Arabic terms and phrases, as well as occasional reference to the vocabulary of other languages. Work in the field of qurʾānic studies normally proceeds on the basis of Arabic sources and of secondary literature that is keyed to those sources. Consequently, the associate editors and I felt that it would be important, especially for our scholarly colleagues, to produce an index for the *EQ* that collected all its important Arabic words and phrases in their transliterated forms.

In this *Index of Arabic Words and Phrases*, the individual listings are alphabetized as in a modern Arabic-English dictionary, i.e. by the Arabic triliteral root. Doubled root letters also follow this alphabetical order so, for example, *ḥ-q-q* appears after *ḥ-q-b* rather than at the beginning of *ḥ-q-*.... Within each triliteral listing, verbal forms, in their usual dictionary order, precede nominal ones. Verbs are catalogued in the third, masculine singular *māḍī* while nominal forms are represented as found in the *EQ*. Thus plural, collective and feminine forms sometimes follow the masculine singular or are sometimes listed separately, depending on their *EQ* occurrences. The purpose of this index, as exemplified in the choices that guided its production, was not the creation of a comprehensive qurʾānic dictionary but of a focused research tool that would offer scholars access to the Arabic vocabulary found in *EQ* articles.

Phrases have been included selectively but have not been extensively cross listed. Deciding the entry under which to place a phrase is necessarily a subjective judgment so users are urged to look for phrases under more than one of their constituent elements. As is the case with the listing of single words, in the alphabetization of phrases, the singular form of the term under which the phrase is listed precedes its plural forms. Within each of these groupings, phrases in which the entry term is the first word are listed before those in which it is a subsequent term. Multiple phrases appear in *English* alphabetical order as based on the first letter of the first word that is not the entry word. The definite article and parenthetical terms are ignored in this ordering. Again with this index, page and column numbers are given in bold in the few instances where an Arabic term (e.g. ḥadīth, sūra) is the title of an entry.

The *Index of Qurʾān Citations*, the last of these five indices, attempts to collect all significant *EQ* references to the qurʾānic text whether these are given by sūra name or by numeric citation of sūra and verse. Citations have been arranged by sūra order, beginning with the first sūra, al-Fātiḥa, and ending with the last, al-Nās. In cases where a sūra has been known by more than one title, that found in the standard Cairo edition has been used. Within each sūra, *EQ* references to the entire sūra are placed first and are arranged by volume number. References to individual verses within each sūra follow these. Clusters of verses are incorporated after the individual listing of the first number in the cluster, with the order running from short to long clusters. In addition to inclusive page numbers and column indications, all these listings note the title of the entry itself. This should give the interested researcher a cursory overview of the range of topics for which a given Qurʾān citation may be adduced. *EQ* mentions of those verses that have acquired special names, such as the "Throne Verse" or the "Light Verse," can be found in the *Index of Proper Names* when such verses were identified by name, rather than sūra and verse number.

I hope that this final volume of the *EQ* will help its readers derive maximum benefit from the five volumes that preceded it. I hope that it will assist them in opening new avenues of insightful investigation and of productive research within the field of qurʾānic studies and well beyond. Finally, I hope that it will allow those who revere the Qurʾān as a life-guiding sacred text and those who approach it as a cultural achievement of immense importance to deepen their understanding and appreciation of this singularly significant scripture.

As I pen these final words for a project that has occupied my mind and tapped my energy for the last thirteen years, I cannot resist the temptation to thank again those colleagues whose contribution of time and effort has sustained me and has made the *EQ* possible. Particular thanks are due both Foke Deahl and Clare Wilde for their painstaking work in the compilation and proofreading of these indices. Theirs was an arduous task and one requiring extraordinary patience and dedication. The editorial team at Brill, despite numerous personnel changes over the years, has consistently supported the *EQ* at every stage of its development. The associate editors, Claude Gilliot, William Graham, Wadad Kadi and Andrew Rippin, suggested potential entries and authors, saw every article and contributed countless comments, citations and bibliographic suggestions. The assistant editors, Monique Bernards and John Nawas, carefully reformatted every submission for editorial consistency, and drew attention to matters requiring further clarification. My editorial assistant Clare Wilde and her predecessors and helpmates, Eerik Dickinson, Paul Heck, David Mehall and Bethany Zaborowski, have been a constant source of support at every point in the editorial process. The Advisory Board, Nasr Hamid Abu-Zayd, Mohammed Arkoun, Gerhard Böwering, Gerald Hawting, Frederik Leemhuis, Angelika Neuwirth and Uri Rubin, wrote major articles for the *EQ* and, in several instances, responded to my pleas for help when a promised piece by a commissioned author was not forthcoming. Finally, these six volumes could never have been published without the willing collaboration of all the friends and colleagues who so graciously agreed to share their expertise by writing for the *EQ*. To this host of generous souls, I offer my most sincere thanks. May the enduring value of the *Encyclopaedia of the Qurʾān* be a tribute to each one of them.

ʿAbd al-Ḥamīd (or Ḥumayd; d. 249/863) — II 110b; V 319a

ʿAbd al-Ḥamīd II — IV 267a

ʿAbd al-Ḥamīd b. Bādīs — II 129a, 130b

ʿAbd al-Ḥamīd al-Kātib (d. 132/750) — III 215a, 217a

ʿAbd al-Ḥaqq al-Islāmī — V 305a

ʿAbd al-Ḥaqq Shīrāz Amānat Khān — III 324a

ʿAbd al-Ḥayy — IV 266a

ʿAbd al-Jabbār b. Aḥmad al-Asadābād al-Qāḍī al-Hamadhānī (d. 414–15/1025) — I 117b, 118b, 267b, 470a, 470b, 484b; II 114b, 115b, 532a, 533a, 534a, 534b, 535a, 535b; III 396b, 468b, 469b, 470b, 471a; IV 123a; V 111b, 135b

ʿAbd al-Karīm b. ʿAjarrad (fl. second/eighth cent.) — III 86b

ʿAbd al-Karīm al-Jīlī (d. ca. 832/1428) — II 119b

ʿAbd al-Karīm al-Qushayrī — see al-Qushayrī, Abū l-Qāsim ʿAbd al-Karīm b. Hawāzin (d. 465/1072)

ʿAbd al-Khāliq — IV 266b

ʿAbd al-Laṭīf al-Baghdādī — see al-Baghdādī, ʿAbd al-Laṭīf (d. 629/1231)

ʿAbd al-Malik — see ʿAbd al-Malik b. Marwān, Umayyad caliph (r. 65/685–86/705)

ʿAbd al-Malik b. ʿAbd al-ʿAzīz b. Jurayj (d. 150/767) — II 388a, 388b; IV 533a

ʿAbd al-Malik b. Ḥabīb — see Ibn Ḥabīb, ʿAbd al-Malik (d. 238/853)

ʿAbd al-Malik b. Hishām — see Ibn Hishām, ʿAbd al-Malik (d. 218/833)
ʿAbd al-Malik b. Jurayj — see Ibn Jurayj, ʿAbd al-Malik (d. 150/767)
ʿAbd al-Malik b. Marwān (r. 65-86/685-705) — I 125a, 126a, 126b, 131a, 139b, 156b, 169b, 279a; II 30a, 30b, 34a, 268a; III 142b, 258b, 298b, 299a, 299b, 429b, 465a, 556a, 559b; IV 73a, 386b; V 31b, 32a, 166b, 185b, 186a, 502b, 503a, 503b, 504a
ʿAbd al-Malik b. ʿUmayr (d. 136/754) — II 395a
ʿAbd al-Malik Mujāhid — IV 273b
ʿAbd Manāf — I 290b; II 296b, 490a, 577b
ʿAbd Manāt — IV 577b
ʿAbd al-Masīḥ al-Kindī — see al-Kindī, ʿAbd al-Masīḥ
ʿAbd al-Muʾmin (Almohad ruler; d. 558/1163) — I 174a; III 303b, 307b
Abd al-Muʾmin Ṣafī al-Dīn al-Urmawī (d. 693/1294) — IV 381a
ʿAbd al-Muṭṭalib (grandfather of the Prophet) — II 19b, 466a; III 119b; IV 45a, 51b, 329b; V 122b, 508b
[Shāh] ʿAbd al-Qādir (d. 1813) — III 223b; V 341b
ʿAbd al-Qādir al-Jīlānī — see al-Jīlānī, ʿAbd al-Qādir (d. 561/1166)
ʿAbd al-Qāhir al-Baghdādī — see al-Baghdādī, ʿAbd al-Qāhir (d. 429/1037)
ʿAbd al-Qāhir al-Jurjānī — see al-Jurjānī, ʿAbd al-Qāhir (d. 471/1078)
ʿAbd Rabbih — III 523a
ʿAbd al-Raḥmān, ʿĀʾisha (Bint al-Shāṭiʾ) — II 125b, 132b, 133b, 291b, 535b; V 521a, 537a, 537b
ʿAbd al-Raḥmān b.ʿAlī b. al-Jawzī — see Ibn al-Jawzī, ʿAbd al-Raḥmān b. ʿAlī (d. 597/1200)
ʿAbd al-Raḥmān b. al-Aswad — IV 96a
ʿAbd al-Raḥmān b. ʿAwf — I 389a
ʿAbd al-Raḥmān al-Bisṭāmī — III 316b
Abd al-Rahman Ibrahima (d. 1829) — I 30a
ʿAbd al-Raḥmān Jāmī (d. 898-9/1492) — III 223b
ʿAbd al-Raḥmān al-Rāzī — V 336a
ʿAbd al-Raḥmān al-Saʿdī — see al-Saʿdī, ʿAbd al-Raḥmān
ʿAbd al-Raḥmān al-Suddī — see al-Suddī al-Kabīr, ʿAbd al-Raḥmān (d. 127-8/745-7)
ʿAbd al-Raḥmān b. Zayd b. Aslam (d. 182/798) — II 407b
ʿAbd al-Raʾūf Singkeli — V 98a, 98b
ʿAbd al-Rāziq — IV 148b, 149a

ʿAbd al-Razzāq b. Hammām al-Ṣanʿānī (d. 211/827)
I 399a, 528a; II 107a, 377b, 389b, 390b, 400a, 408a; III 283a;

ʿAbd al-Razzāq Kamāl al-Dīn al-Qāshānī
see al-Qāshānī, ʿAbd al-Razzāq Kamāl al-Dīn (d. 730-1/1329-30)

ʿAbd al-Razzāq Nawfal
II 130b

ʿAbd al-Razzāq al-Sanhūrī
I 434b

[Shaykh] ʿAbd al-Ṣabūr Shāhīn
II 136b

ʿAbd al-Salām Badayūnī
V 342a

ʿAbd al-Salām Faraj
see Faraj, ʿAbd al-Salām (d. 1982)

ʿAbd al-Ṣamad
III 345a; IV 381b

[Banū] ʿAbd al-Shams
I 290b; II 513b; III 339b, 422a, 461a; IV 577b; V 508b

ʿAbd al-ʿUzzā b. ʿAbd al-Muṭṭalib
see Abū Lahab

ʿAbd al-ʿUzza b. Qatan
I 110b; IV 577b

ʿAbd al-Wahhāb (vocalist)
IV 381b

ʿAbd Yaghūth
V 92a

ʿAbdallāh (father of the Prophet)
II 317a; III 110b, 283a, 283b

ʿAbdallāh b. al-ʿAbbās
see Ibn (al-)ʿAbbās, ʿAbdallāh (d. 68-9/686-7)

ʿAbdallāh b. ʿAbbās (d. 98/716-17)
II 17b, 18a, 183a

ʿAbdallāh b. ʿAbd al-Raḥmān al-Dārimī
see al-Dārimī, ʿAbdallāh b. ʿAbd al-Raḥmān (d. 255/869)

ʿAbdallāh b. Aḥmad (d. 290/903)
I 481b; II 110b

ʿAbdallāh b. Aḥmad b. Dhakwān
see Ibn Dhakwān, ʿAbdallāh b. Aḥmad (d. 242/857)

ʿAbdallāh b. ʿAlī
III 423b

ʿAbdallāh b. ʿĀmir (118/736)
see Ibn ʿĀmir, ʿAbdallāh

ʿAbdallāh b. ʿAmr al-ʿĀṣ (d. 63/682)
IV 570b, 588a; V 307b

ʿAbdallāh b. ʿAṭūs
I 284b

ʿAbdallāh b. Bisṭam
I 78a

ʿAbdallāh b. Ibāḍ
see Ibn Ibāḍ, ʿAbdallāh

ʿAbdallāh b. Ismāʿīl al-Hāshimī
II 531a; IV 236a

ʿAbdallāh b. Jaʿfar
III 131b

ʿAbdallāh b. Kathīr al-Dārī
see Ibn Kathīr al-Dārī, ʿAbdallāh (d. 120/738)

ʿAbdallāh b. Kullāb (d. 240/854)
I 470b, 471a

ʿAbdallāh b. Masʿūd
see Ibn Masʿūd

ʿAbdallāh b. Muʿāwiya (r. 129/746-7)
III 557a

ʿAbdallāh b. al-Mubārak
see Ibn al-Mubārak, ʿAbdallāh (d. 181/797)

ʿAbdallāh b. al-Muqaffaʿ (d. 139/756)
IV 73b

ʿAbdallāh b. Rawāḥa (d. 8/629)
III 215b

ʿAbdallāh b. Saba'
III 33a

ʿAbdallāh b. Salām
see Ibn Salām, ʿAbdallāh

ʿAbdallāh b. al-Shikhkhīr — V 471b
ʿAbdallāh b. Thābit al-Tawwazī — see al-Tawwazī, ʿAbdallāh b. Thābit (d. 308/920)

ʿAbdallāh b. ʿUbayd b. ʿUmayr — III 408b
ʿAbdallāh b. Ubayy — see Ibn Ubayy b. Salūl, ʿAbdallāh
ʿAbdallāh b. ʿUmar — see Ibn ʿUmar, ʿAbdallah (d. 73/693)

ʿAbdallāh b. Wahb — see Ibn Wahb, ʿAbdallāh (d. 197/813)

ʿAbdallāh b. Yaḥyā b. Kunāsa (d. 207/822) — III 215a
ʿAbdallāh b. Yazīd al-Fazārī — III 87b
ʿAbdallāh b. Zayd — II 241a
ʿAbdallāh b. al-Zubayr — see Ibn al-Zubayr, ʿAbdallāh
ʿAbdallāh Anṣārī — IV 62a

nabī [nabiyy], pl. *nabiyyūn, anbiyāʾ* I 62a, 245b, 261a, 325a; II 264a, 353a, 499a, 563b, 567a; III 16a, 55b, 188b, 207a, 382b, 440b, 445a, 463a, 485b, 486b, 502a, 502b, 503a, 503b; IV 289a, 526b, 561a; V 69a, 96b, 140a, 174b, 402b, 445b, 501a, 574a
al-nabī al-ummī I 325a; II 499a; III 188b, 445a, 503b, 528a; IV 289a, 289b, 306a, 375a
nubuwwa I 371a; III 82b, 421b; IV 127b, 289b, 297a, 297b, 441b; V 534a, 574a

n-t-f
nutfa I 3a, 230b, 231a, 476b; II 328a; III 354b, 597a; V 267a, 462a, 522b

n-j-d
najd II 306a, 306b; IV 2a
najdān/najdayn II 306a, 306b; IV 2a

n-j-s
najas I 342b, 410b, 411a; III 33b; IV 132b, 499a, 502b, 504a
najāsa I 411a
najis I 344a, 411a; III 376b

najāshī IV 411a
n-j-m
najm, pl. *nujūm* I 36a, 204a; II 369b; III 202b, 561b; IV 102b, 106b, 107a, 108b, 109a, 217a; V 51b
najūman IV 444a
munajjaman I 250b; II 85b; IV 444a
n-j-w IV 523b
najjā I 518b, 519a; IV 523b
anjā I 518b, 519b; IV 523b
tanājī V 479b
najāt [najāh] I 486b; II 184a, 353a; III 423a; IV 524a
najwā II 63b; IV 496b; V 198a, 479b
munājāh, pl. *munājāt* I 86b; IV 292a; V 379b
n-ḥ-b
naḥb IV 485b, 486a
n-ḥ-r V 555b
naḥr III 339a; V 55a
n-ḥ-s
nuḥās II 546a; III 383a
n-ḥ-l
naḥala II 313b
intaḥala II 313b
naḥl I 95a
niḥla I 258b; II 313a, 313b
n-kh-l
nakhl I 42b, 44b, 494b; II 305a, 305b
nakhla, pl. *nakhīl* I 494b; II 305a, 305b
n-d-b
mandūb II 225a; III 159b, 175a
n-d-d
nidd, pl. *andād* II 476b, 478b
n-d-r
nadr II 362b
nādira III 517a
n-d-m
nādim, pl. *nādimūn* IV 428b
nadām IV 430b
n-d-y
nādā II 558b; IV 225b; V 110a, 541b
nādī II 558b; III 128a; V 36b
nādaya V 110a
tanādī II 558b
munādī I 113b; II 558b

nadwa I 201a
n-dh-r I 246b
nadhara II 82b; III 562b
andhara V 459b, 460a
nadhr, pl. *nudhūr* I 403a; III 562b; IV 485b, 486a; V 449b, 460a
nadhīr II 341b; III 382a, 440b, 442b, 503b, 512a; IV 3b, 486a; V 459b, 460a
nadhīr al-jaysh V 459b
nadhīr al-qawm V 459b
nadhīr al-ʿuryān V 460a
mundhir IV 3b; V 459b
n-r-d
nard II 281a, 281b
n-z-ʿ I 513b
nāziʿāt V 396b
nāzaʿa I 513a
intizāʿ III 215a
n-z-f
anzafa II 556a
n-z-l I 246b; III 442a; IV 292b, 443a, 443b
nazala I 530b; IV 292b, 293a; V 322b, 465b
nazzala I 87a, 87b, 178b, 245b, 487a; II 424b, 442a; III 440a, 550b; IV 292b, 293a, 443a; V 8a, 115b, 302b, 423a
tanzīl I 85b, 424b, 555b, 556a; III 505b, 506a, 510b, 511a, 514b; IV 36a, 292b, 437b, 443a, 443b, 444b, 446a; V 115b, 271b, 323b, 328a, 330b, 422a, 465b
anzala I 42a, 42b, 245b, 346b, 400b, 487a, 554b; II 302b, 303a, 561b; III 103a; IV 292b, 293a, 295a, 295b, 443a; V 8a, 116a, 302a, 322b, 545a
inzāl III 413a; IV 292b; V 330b
tanazzala IV 292b
tanazzul V 115b
nazla I 177b
nuzūl V 327b, 328a, 330b
manzil, pl. *manāzil* I 272b; II 458b, 461a; III 413a, 415b; IV 107a, 108a

manāzil al-qamar I 272b; III 415b; IV 571b
manzila, pl. *manāzil* II 170b; III 466b; IV 347a, 571b; V 283b, 560b
manzila bayna l-manzilatayn II 170b; III 466b
n-z-h
tanzīh I 106b; II 160b, 373a; V 18b
nuzha I 203a
n-s-ʾ
nasaʾa I 16a, 34a; II 547a; III 412a
nasīʾ II 179b, 432b; III 339b, 411b, 412a, 415a; IV 255b, 259b, 571b; V 285a
minsaʾa II 544a, 547a; III 208a; IV 509a
n-s-b
munāsaba III 126a, 194b; IV 482b; V 405b
tanāsub III 194b; V 405b
nasab I 368b; II 11a, 48a, 174b; III 96a, 97a, 99b; V 248b
nasīb II 300b; IV 55a, 472b
nisba II 496b, 498a; IV 406b; V 105b
n-s-t-ʿ-l-y-q
nastaʿlīq III 265a
n-s-kh I 14b
nasakha I 14b, 15a, 353a; IV 532b; V 497b
nāsikh I 72a, 248a, 320b, 535a, 554b, 556b; II 135a, 378b, 388b, 389a; III 570b; IV 449a; V 143a, 323a
(al-)nāsikh wa-(l-)mansūkh I 72a, 320b, 535a; II 135a, 378b, 388b, 389a; III 570b; IV 449a; V 143a
nāsikhāt I 72a
mansūkh I 342a, 342b, 554b, 556b; V 130b, 291a, 323a
mansūkhāt I 72a
tanāsukhiyya II 422a
istansakha I 14b; II 493a
naskh I 11b, 14b, 16a, 17a, 137a, 142a, 251a, 349b, 351a; II 382b, 388b; III 39a, 160a, 265a, 319a, 320b, 321a, 326b, 328a, 328b, 595a, 598b, 599a; IV 325b, 326a, 327a; V 146a, 165a, 326a, 514a
naskh al-tilāwa dūna l-ḥukm I 349b–350a
naskhī I 136b, 282b, 283a; III 262b, 263a, 263b, 265a

nuskha, pl. *nusakh* I 14b; II 544b, 545a; IV 588b
n-s-k V 555b
nask I 181a
nusk I 181a
nusuk I 181a, 403b
nussāk IV 387a
mansik, pl. *manāsik* I 7a, 403b; IV 518a, 519a
mansak I 372a; II 205a, 432a; IV 132b
n-s-l
nasl II 63a
n-s-w
niswa, pl. *nisāʾ* II 289b, 291a; IV 501a
