As Iranian cultural norms were prevalent in most of the eastern Islamic lands in the

period after ca. 650/1250, the Iranian combination of an *īwān* leading to a dome over the *miḥrāb,* or even the four-*īwān* type plan, was widely disseminated, although, like the hypostyle mosque before it, its features were often creatively reinterpreted, as at the Ūlū Cāmiʿ (621/1224) at Malaṭya in southeast Anatolia, where the courtyard is very small, and the mosque of Baybars I (665/1266) in Cairo, where the *īwān* is a sort of hypostyle hall and the dome was built of wood.

The Iranian type of four-*īwān* mosque was used on the Indian subcontinent, as for example at Thatta (1054/1644), but the essential features of the plan were more commonly adapted to create a new Indian type of mosque more suited to the climate. Like earlier Hindu temples, this type of mosque is often raised on a high plinth. It comprises a vast walled court with minarets set at the exterior corners and massive portals on the main and lateral axes. On the exterior, these are approached by flights of steps and are topped with small minaret-like towers and open pavilions. Within the court, which often has no surrounding arcade, the prayer hall occupies most but not all of the *qibla* wall's width. Projecting into the court, the fairly shallow prayer hall comprises a central *īwān*-like portal leading to a dome chamber over the *miḥrāb* and *minbar*. This *īwān* and dome unit is usually flanked by smaller versions of it, other domed bays and towers linked together behind a screen-like facade. An early example is found at the Atala mosque at Jaunpur (810/1408; see Fig. VII); a later one is the Badshahi mosque at Lahore (1084/1673), said to be the largest mosque in the subcontinent.

Another distinctive type of mosque, characterized by a single large dome, developed in Anatolia, particularly under the Ottomans (r. 1281-1924 C.E.). After the region was opened for Muslim settlement following the Battle of Manzikert in 463/1071, the first mosques erected, such as the ʿAlāʾ al-Dīn mosque in Konya (550-617/1155-1220), were hypostyle structures. Perhaps in response to the severe Anatolian winter climate, these mosques had no courtyard, or only a vestigial one. Most early Anatolian mosques were, therefore, closed halls resting on a multitude of columns, sometimes fronted by courtyards akin to the forecourts of some Byzantine churches. Indigenous Byzantine experience with building domed and vaulted churches in stone, combined with the knowledge of Iranian traditions of building brick vaults and domes brought by the Saljūqs, undoubtedly encouraged local builders to experiment with the covering of mosques with domes and vaults; the subsequent history of the mosque in Anatolia, particularly under the Ottomans, is dominated by the desire to create a unified prayer space under a domical covering.

Scholars have debated the origins of the mature type of Turkish domed mosque. Some see its origins in the simple, single domed mosque preceded by a portico, such as the Mosque of Ḥacī Özbek at Iznīk (734/1333), while others see it in the more complex organization of domed and vaulted elements characteristic of the Bursa-type or *zāwiya* (Turk. *zaviyelī*) mosque usually associated with a dervish cloister, in which a domed central space precedes a vaulted or domed *īwān*-like prayer hall and is flanked by corresponding *īwān*-like spaces to the left and right which could be used for teaching, etc. (see ṢŪFISM AND THE QUR'ĀN). Other vaulted or domed chambers in the corners, often furnished with fireplaces, could be used for lodging itinerant dervishes. This completely covered mosque type, well suited to the harsh Anatolian climate, is exemplified by the Yeşil Cāmiʿ (815-22/1412-19) at Bursa.

In the ninth/fifteenth and tenth/six-

teenth centuries the Ottoman sultans sponsored a series of immense domed congregational mosques which combined various trends, including the single domed space (as at Iznīk), the completely covered space (as at Bursa), the large dome before the *miḥrāb* (as in Iranian mosques) and the open arcaded forecourt (as in the Great Mosque of Damascus or Byzantine churches). These buildings were the centerpieces of large religious and charitable foundations. The earliest examples, such as the Üç Şerefeli mosque in Edirne (841-51/1437-47), have vast central domes with low subsidiary spaces, but the best known examples represent creative responses to the models of Byzantine architecture, primarily the great church of Hagia Sophia in Istanbul, which had been founded by the emperor Constantine in the fourth century C.E. and rebuilt in the sixth century by the emperor Justinian. Immediately after the conquest of Constantinople in 857/1453 by the Ottoman emperor Meḥmed II the church was converted into the city's first congregational mosque by the addition of a *miḥrāb, minbar* and minarets. The Süleymāniye mosque in Istanbul (964/1557), the masterpiece of Ottoman architecture by the great architect Sinān, for example, follows the model of Hagia Sophia by using an immense central dome buttressed at either end by semi-domes. The many windows create a highly centralized space, which contrasts with the strongly directional space of the prototype. Unlike many mosques of earlier times, in which the exterior facade was often neglected in favor of a focus on the interior or courtyard, the exteriors of the imperial Ottoman mosques were clearly meant to be monumental, presenting cascades of domes and semi-domes punctuated by slender minarets. The central mass is often enveloped in the domes of the adjacent religious and charitable foundations, which frequently included the tomb of the founder.

The power and prestige of the Ottoman empire in the Balkans, north Africa and the Near East encouraged the construction of similar if somewhat simpler mosques (and complexes) in the capital cities of the Ottoman empire. Sometimes these structures incorporated local architectural motifs and techniques, such as the striped masonry used in the Sulaymāniyya complex at Damascus, completed in 962/1554-55, or the ogee windows of the tenth/sixteenth-century mosque of Sinān Pasha in Cairo. In the nineteenth and twentieth centuries C.E., the Ottoman type of domed mosque has been adapted throughout the world and has become one of the most popular designs for new mosques. These can range from banal copies of Sinān's masterpieces in reinforced concrete to inventive reinterpretations in modern materials, such as Vedat Dalakoy's State Mosque (1970-86) in Islamabad, Pakistan, or Skidmore, Owings and Merrill's Islamic Cultural Center (1987-91) in New York (Holod & Khan, *Contemporary mosque*).

Distinct types of mosques have also developed in other areas of the Islamic world. In Indonesia, for example, the Java-type mosque is set in a courtyard surrounded by a stone wall. It has a veranda on the front, and is characterized by a square plan, raised foundations, tapering roof two to five stories high, and a projecting *miḥrāb*. In China, many mosques, particularly those built under the Ming emperors, are reminiscent of indigenous Chinese temples. Other distinct styles have also evolved in east and west Africa.

Decoration of mosques

Virtually all media of Islamic art are represented in the decoration of mosques, with the one proviso that Islam forbids the representation of animate beings (i.e. humans

and animals) in such situations where they might be taken as objects of devotion, as in mosques. Thus, one rarely, if ever, finds pictorial or sculptural representations in mosques, whose main decoration has consisted of inscriptions, often from the text of the Qurʾān, and vegetal and geometric designs. In the early period, the interior decoration of major Umayyad mosques, such as those in Mecca, Medina, Jerusalem and Damascus, adapted the techniques and many of the motifs of Byzantium, so colored and gold glass mosaic was popular. In later times, carved and molded plaster, carved and painted wood, glazed ceramic tile and marble paneling were commonly used media of decoration.

In many times and places, the interior of the mosque has been more important than the exterior, and the decoration has been concentrated largely on the inside. This may have resulted from the idea that the mosque is centered around the courtyard, and consequently the building is planned and intended to be seen from the courtyard outwards. The result is that exteriors were neglected, often irregular, and hardly distinguished from the surrounding urban fabric. At first, doorways were simple affairs with no great decoration, but eventually they became places of some importance, perhaps following the lead of the portals to the "sacred mosque" *(al-masjid al-ḥarām)* in Mecca, which were monumentalized at an early date, and eventually projected from the mosque wall itself. The earliest fancy portal to survive is the Bāb al-Wuzarāʾ, "Vizier's Gate" (241/855-6) at the Great Mosque of Cordoba, in which the doorway has been embellished with inscriptions and carving (Brisch, Zum *Bāb al-Wuzarāʾ*). Congregational mosques of the Fāṭimid period emphasize the doorways, probably because of the Fāṭimid aversion to building minarets. The triple-arched portal of the Great Mosque at Mahdiyya (308/921), the first Fāṭimid mosque in Tunisia, is modeled on a late antique triumphal arch (Bloom, The origins). Archaeologists working in Iṣfahān in the 1930s discovered a large portal in baked brick and carved plaster. On the basis of its style, it has been identified as the portal of the Jurjir mosque built by the Būyid vizier Ibn ʿAbbād in the third quarter of the fourth/tenth century (Blair, *Monumental inscriptions,* 52-3).

Qurʾānic inscriptions in mosques were usually prepared as coherent programs of decoration, although few complete programs have survived and the meaning is usually inferred from surviving fragments. The mosaic inscriptions in the Great Mosque of Damascus, for example, are known to have focused on eschatological texts about the day of judgment (sūras 78 and 79 of the Qurʾān; Finster, Die Mosaiken; see ESCHATOLOGY; LAST JUDGMENT; APOCALYPSE), while the stucco inscriptions carved in the walls of the mosque of al-Azhar in Cairo (founded 363/972) used verses such as Q 21:101-7 to describe the paradise that awaited the true believers (see BELIEF AND UNBELIEF). Other decorative programs seem to have been somewhat less selective: medieval sources assert that the carved wooden friezes running under the ceiling of the mosque of Ibn Ṭūlūn in Cairo (265/879) repeated the whole text of the Qurʾān, and the inscriptions in the mosque of al-Ḥākim, also in Cairo, contain the opening verses of many different chapters (Bloom, Mosque of al-Hakim).

Nevertheless, specific qurʾānic verses were inscribed in appropriate situations. The most common qurʾānic text used for inscriptions in mosques is Q 9:18, which states that God's mosques should be reserved for good Muslims who believe in God, pray, pay alms (see ALMSGIVING), and

worship God alone (Dodd and Khairallah, *The image;* Blair, Mosque inscriptions). The text, one of the few in the Qurʾān to actually mention mosques and what should be done within them, quickly became popular in congregational mosques. Other qurʾānic citations commonly found in mosques include the Throne Verse (Q 2:255; see THRONE OF GOD), which extolls God's majesty and is often used around domes, the Light Verse (Q 24:35-8), which describes God as the light (q.v.) of the heavens (see HEAVEN AND SKY) and the earth (q.v.), and Sūrat al-Fatḥ ("Victory," Q 48; see VICTORY). Although the Light Verse is often associated, because of a mistranslation, with the common motif of a lamp in a niche, certain verses were often associated with specific parts of mosques. *Miḥrāb*s often contained verses Q 17:78-9, which mention prayer and vigil (see VIGILS).

Qurʾānic verses were also selected to give a particular inscription a specific ideological position. An inscription once on the exterior of the mosque of al-Ḥākim (380-405/990-1013) quotes Q 28:5, which uses the word *aʾimma,* the plural of *imām,* the title by which the Fāṭimid rulers styled themselves. Similarly, an inscription on one of the same mosque's towers cites Q 11:73, containing the phrase *ahl al-bayt* ("people of the house"), which the Fāṭimids interpreted as a direct reference to themselves as the descendants of the Prophet (Bloom, Mosque of al-Hakim). Similarly, the portal of the Jurjir mosque in Iṣfahān (ca. 350/960) is inscribed with Q 3:18, in which the use of the word *qisṭ* may have been chosen to advertise the building's function as a Muʿtazilite foundation (Blair, The octagonal pavilion; see MUʿTAZILĪS). As sectarian struggles increased over the course of the fourth/tenth and fifth/eleventh centuries, such pointed uses of qurʾānic inscriptions only increased, but in later times verses with more general application came to be expressed in monumental tiled and painted inscriptions.

Mosque of the Dissension

Scene (and symbol) of opposition to Muḥammad in Medina (q.v.) in 9/630, to which allusion is made in Q 9:107: "And those who have taken a mosque (q.v.) in opposition (*ḍirāran,* see OPPOSITION TO MUḤAMMAD) and unbelief (see BELIEF AND UNBELIEF), and to divide the believers, and as a place of ambush for those who fought God and his messenger (q.v.) aforetime, will swear 'We desire nothing but good'; and God testifies they are truly liars (see LIE)." This obscure incident took place in Qubāʾ, in upper (i.e. southern) Medina (see Lecker, *Muslims,* map. 2), sometime after Rajab 9/October 630 (the date of the expedition of Tabūk; see EXPEDITIONS AND BATTLES). The mosque (q.v.) to which the passage alludes has various designations: "mosque of the dissension" or "mosque of the opposition" (*masjid al-ḍirār;* less commonly, "mosque of division" or "mosque of hypocrisy" *[masjid al-shiqāq/al-nifāq];* see HYPOCRITES AND HYPOCRISY; CORRUPTION; PARTIES AND FACTIONS).

Although the accounts of the incident agree about the outline of the events, they do reveal some significant differences. The essential outline of events is as follows: well after Muḥammad's emigration (q.v.) from Mecca (q.v.), a group of "dissenters" established a mosque in lower Medina, rivaling a mosque already in place. As Muḥammad became more firmly established in Medina, the political leadership of lower Medina came under his control. Sometime after the erection of the mosque, but still within the Prophet's lifetime, and as the political opposition to Muḥammad decreased, the "mosque of the dissension" burnt to the ground.

Despite the qurʾānic assertion that the builders of the "mosque of dissension" erred, the report transmitted by Saʿd b. Jubayr (d. 93/714), is sympathetic to these builders: "The [clan of] ʿAmr b. ʿAwf built a mosque and their nephews, the [clan of] Ghanm b. ʿAwf [in some versions: the so-and-so; ʿUmar b. Shabba, *Taʾrīkh,* i, 53], envied them. They said: 'We, too, built a mosque and invited the messenger of God to lead our prayer (q.v.) in it as he did in the mosque of our companions. Perhaps Abū ʿĀmir will pass by and lead our prayer in it'. When the Prophet was about to set out to go to them, he had a revelation [prohibiting him to go]" (Balādhurī, *Ansāb,* i, 282; trans. Lecker, *Muslims,* 76-7). In the context of this report, it is noteworthy that Saʿīd b. Jubayr adopts an anti-Khazrajī position in the dispute between the tribe of Aws (specifically the ʿAmr b. ʿAwf) and the tribe of Khazraj (see TRIBES AND CLANS) over the identification of another mosque, that founded upon piety (q.v.; Q 9:108). From the account of ʿUrwa b. al-Zubayr (d. bet. 91/711 and 101/720), it could be inferred that the mosque of "dissension" was built before the battle of Badr (q.v.), that is, several years before its destruction in the year 9/630 (Balādhurī, *Ansāb,* i, 283; ʿUmar b. Shabba, *Taʾrīkh,* 54-5; Lecker, *Muslims,* 81-5). According to yet a third account, ascribed to Ibn ʿAbbās (d. 68/687-8), this mosque was built by order of the great opponent of Muḥammad, Abū ʿĀmir (the "monk"), as a "hostile stronghold" for a Byzantine expedition force (Ṭabarī, *Tafsīr,* xiv, 270, no. 17187; Lecker, *Muslims,* 85-7; see BYZANTINES).

The account of the exegete Muqātil b.

Sulaymān (d. 150/767), while agreeing with the outline of the accounts found in the other versions, adds a number of details to their testimony (Muqātil, *Tafsīr,* ii, 195-8; trans. Lecker, *Muslims,* 87-91). It reinforces the idea that we have here a case of local competition between two mosques in Qubāʾ (Sprenger, *Moḥammad,* iii, 34 n. 1 speaks of "Concurrenz-Bethaus") and that the twelve "hypocrites" *(munāfiqūn)* built this mosque in an attempt to harm the mosque of Qubāʾ (Lecker, *Muslims,* 95). Most of these "hypocrites" belonged to an ʿAmr b. ʿAwf clan (Ibn Isḥāq, *Sīra,* 356-9; Ibn Isḥāq-Guillaume, 243-4; Lecker, *Muslims,* 101 f.; for the list of the names of these individuals, see Ibn Isḥāq, *Sīra,* 907; Ibn Isḥāq-Guillaume, 609-10; they are also found in Ṭabarī, *Tafsīr,* xiv, 468-9, no. 17186; Muqātil, *Tafsīr,* ad loc.; Thaʿlabī, *Tafsīr,* ii, f. 161^{v}, l. 20-3; ed. Ibn ʿĀshūr, 92^{v}, l. 16-9).

The event of the mosque of the dissension is important because it reveals that in 9/630 many of the "Muslims" in Qubāʾ — i.e. those who had "submitted" (either by accepting Islam or by coming under the political leadership of Muḥammad) — were still opposed to the authority (q.v.) of Muḥammad as a prophet or as a leader (see POLITICS AND THE QURʾĀN). Members of the most important families of the ʿAmr b. ʿAwf (the tribe of Abū ʿĀmir) or perhaps others entertained the hope that their exiled military and spiritual leader Abū ʿĀmir might return (Lecker, *Muslims,* 145; see also MUSAYLIMA). This mosque was not only a gathering place for the supporters of this noteworthy man (termed "the sinner" by Muḥammad) but was also a symbol of their tribe's autonomy from Muḥammad's territorial base in lower Medina (the *sāfila*). Muḥammad, acting with resolution (he let this mosque burn), humiliated them and reduced the prestige of the most influential men of Qubāʾ (Lecker, *Muslims,* 146). Ironically, Mujammiʿ b. Jāriya, one of the twelve "builders" and the imām (q.v.) of this mosque, became the imām of the Qubāʾ mosque and the apologetic literature attests that the second caliph (q.v.), ʿUmar, forgave and rehabilitated him (Thaʿlabī, *Tafsīr,* ii, f. 162^{r}, l. 9-18; ed. Ibn ʿĀshūr, 93^{v}; Ibn Isḥāq, *Sīra,* 358; Ibn Isḥāq-Guillaume, 244; Lecker, *Muslims,* 152-3).

Muḥammad

The Muslim Prophet to whom God's revelation was "sent down" (*nuzzila,* Q 47:2; see PROPHETS AND PROPHETHOOD; REVELATION AND INSPIRATION). On three occasions the name is followed by the title "messenger" (q.v.; *rasūl*), i.e. God's messenger (Q 3:144; 33:40; 48:29).

Names and appellations

When, however, the Qurʾān addresses the Prophet directly in the second person, he is not referred to as "Muḥammad," but is called by various appellations that indicate his relation to God. Here, apart from *rasūl,* the title most frequently used is *al-nabī,* "prophet" (Q 8:64; 66:8, etc.). The appellation "servant" (q.v.; *ʿabd*) of God is also used most probably with reference to the Prophet (Q 17:1; 25:1; 39:36; 72:19). Other epithets allude to the purposes of his mission, the most frequent being *bashīr,* "announcer," and *nadhīr,* "warner" (q.v.; e.g. Q 2:119, etc.), as well as *mudhakkir,* "reminder" (Q 88:21). In Q 33:45-6, a series of titles is provided: *shāhid,* "witness" (see WITNESSING AND TESTIFYING), *mubashshir,* "bearer of good tidings" (see GOOD NEWS), *nadhīr, dāʿī,* "one who calls [unto God]" (see INVITATION), and *sirāj munīr,* "light-giving lamp" (see LIGHT; LAMP).

More particular designations are derived from his state at the time of the address (see OCCASIONS OF REVELATION). Thus the Qurʾān addresses him as *al-muzzammil,* "the enwrapped" (Q 73:1) and *al-muddaththir,* "the shrouded" (Q 74:1) when prompting him to rise and accomplish his mission. This pair of appellations probably symbolizes withdrawal and reluctance. See also NAMES OF THE PROPHET.

Revelation

The revelation of the divine message, which the qurʾānic Prophet is supposed to deliver, is described in a variety of terms depicting the content as well as the process of revelation. What is revealed to the Prophet is most frequently called *qurʾān* (e.g. Q 6:19; 20:2, etc.), which the Prophet is supposed to "recite" (*li-taqraʾahu,* Q 17:106; *an atluwa,* Q 27:92; see ORALITY; RECITATION OF THE QURʾĀN), or "chant" (*rattil,* Q 73:4). But the latter command may also

be understood in a different sense (Paret, *Mohammed,* 492). The Qurʾān is not only recited by the Prophet but is also being recited to him during revelation (Q 75:18; cf. Q 87:6).

The revelation received by the Prophet is most frequently described as a *kitāb,* a "book" (q.v.; Q 4:105; 5:48, etc.). It is recited to him during revelation (Q 28:2-3) and he, in turn, is supposed to recite it (Q 18:27; 29:45). The plural, *kutub* ("books"), also appears as something recited *(yatlū)* by the Prophet, and as contained in purified pages (*ṣuḥuf muṭahhara,* Q 98:2-3; see WRITING AND WRITING MATERIALS). In this case the "books" are probably separate units of revelation.

Indeed, the Qurʾān refers more than once to separate units of revelation. The name most frequently used for them is *āyāt,* "signs" [q.v.; of God], which form part of the *kitāb* (Q 10:1, etc.; see also VERSES). They also stand for something that is revealed to him (Q 2:99), or recited *(natlūhā)* to him (Q 2:252; 3:108; 45:6; cf. 3:58), and the Prophet, for his part, is also expected to recite *(yatlū)* them to his audience (see Q 2:129, 151; 3:164; 28:45; 62:2; 65:11).

Another unit, which the Prophet is expected to recite, is *nabaʾ* (pl. *anbāʾ*), "report, tidings" (see NEWS). This term usually signifies stories about past generations (q.v.), mainly of biblical origin (see NARRATIVES). For example, the Prophet is instructed to recite *(utlu)* the *nabaʾ* of the two sons of Adam (Q 5:27; see ADAM AND EVE; CAIN AND ABEL), the *nabaʾ* of Noah (q.v.; Q 10:71) and of Abraham (q.v.; Q 26:69). Again, such stories are also recited to the Prophet upon being revealed to him, as is the case with the *nabaʾ* of Moses (q.v.; Q 28:3). These units are also being "related" *(naquṣṣu)* to him upon being revealed (Q 7:101; 11:100, 120; 18:13; 20:99). They are also referred to as *anbāʾ al-ghayb:* "stories of the unseen" (see HIDDEN AND THE HIDDEN), because the Prophet did not witness them in person (Q 3:44 of Mary [q.v.]; Q 11:49 of Noah; Q 12:102 of Joseph [q.v.]).

Stories of past generations recited by the Prophet may also be described as *dhikr,* as with the story of Dhū l-Qarnayn (Q 18:83; see ALEXANDER). This form is the infinitive of *dhakara,* to "mention," or to "remind," so that *dhikr* is an "allusion" to a story (see MEMORY). Nevertheless, the same term is also the name of the entire revelation (Q 16:44, etc.), probably because it alludes quite frequently to stories of past generations. In fact, the injunction *udhkur fī l-kitāb,* "mention in the book," is frequently used in passages prompting the qurʾānic Prophet to recount stories about previous prophets (Q 19:16, 41, etc.).

The primary stage of revelation that precedes public recitation of texts is represented by the verb *awḥā,* which is frequently used in the Qurʾān to describe the act of communicating divine texts to the Prophet. The *kitāb* is communicated to him in this way (Q 35:31), as well as the Qurʾān (Q 12:3) and the stories of the unseen (*anbāʾ al-ghayb,* cf. Q 3:44; 11:49; 12:102). That the verb *awḥā* describes the initial stage of revelation is indicated in several passages in which the Prophet is expected to recite what has been revealed *(awḥaynā; ūḥiya)* to him (Q 13:30; 18:27; 29:45), which means that an intimate process of revelation has preceded actual recitation. Instructions as to how revelation should be received are given to the Prophet in Q 20:114, where he is advised not to "hasten" *(lā taʿjal)* with the Qurʾān before the completion of revelation *(waḥy)*. More specific directions are given in Q 75:16-9 where he is instructed not to move his tongue with (revelation) to hasten it, and wait with its recitation till it is recited to him (in full).

The revelations received as *waḥy* by the

Prophet originate in a person, an angel (q.v.), described as "terrible in power," who stood on the "higher horizon" and then drew nearer and nearer (Q 53:4-10). Elsewhere he is described as "having power, with the lord of the throne (see THRONE OF GOD) secure, obeyed moreover trusty," and the Prophet "saw him" *(raʾāhu)* in the clear horizon (Q 81:20-1, 23). The heart (q.v.; *al-fuʾād)* of the Prophet once "saw" *(raʾā)* this mighty person near a (celestial?) lote-tree called *sidrat al-muntahā* (Q 53:11-8; see AGRICULTURE AND VEGETATION).

The most prevalent verbs, however, which describe the imparting of texts to the Prophet are various derivatives of *n-z-l*, "to come down." For example, in Q 17:106 the Prophet is expected to recite the Qurʾān that was sent down successively *(nazzalnāhu)* to him. What was sent down to him this way is called in one instance *furqān* (Q 25:1; see NAMES OF THE QURʾĀN), which is also the name of what was given to Moses (Q 2:53). The process of sending down ends at the Prophet's heart *(ʿalā qalbika),* and is carried out by an intermediary called Jibrīl, the angel Gabriel (q.v.; Q 2:97), or *al-rūḥ al-amīn,* "the faithful spirit" (Q 26:193-4); elsewhere he is called *rūḥ al-qudus,* "the holy spirit" (Q 16:102; see HOLY SPIRIT).

The beginning of the process of sending down revelation seems to be indicated in Q 44:2-3 where it is stated that the *kitāb* was sent down during a "blessed night." Elsewhere this night is called *laylat al-qadr* (Q 97:1; see NIGHT OF POWER), and in yet another passage, the sending down of the Qurʾān is said to have taken place in the month of Ramaḍān (q.v.; Q 2:185). The sending down of the *kitāb* is praised as a grand manifestation of God's bounty (see BLESSING) to the Prophet, which has provided him with knowledge (see KNOWLEDGE AND LEARNING) that he did not have before (Q 4:113; 42:52). The Prophet himself has not asked for this favor (Q 28:86), and had it not been for God's mercy (q.v.), he might have withdrawn the revelation altogether (Q 17:86-7). God's benevolence, however, which emanates from the revelation of the book, also envelops the believers (see BELIEF AND UNBELIEF). The Prophet is expected to teach them the book, thus providing them with knowledge that they do not have yet (Q 2:151; 3:164; 62:2). The book is also the means by which the Prophet is expected to decide in matters on which the believers are disagreed (see JUDGMENT) and guide them to the right path (Q 16:64, 89; see PATH OR WAY; ASTRAY). Therefore the sending down of the book indicates God's compassion *(raḥma)* unto them (Q 16:89), as does also the sending of the Prophet himself as a messenger to all beings (Q 21:107).

Aims of the mission

The mission of the qurʾānic Prophet has a dominant apocalyptic aspect, as his role is to warn the unbelievers of their eschatological punishment (see APOCALYPSE; ESCHATOLOGY; REWARD AND PUNISHMENT). This aspect comes out in passages describing the aims of revelation. Thus in Q 38:70, the essence of what is revealed *(yūḥā)* to the Prophet is focused on his mission as a warner *(nadhīr)*. In Q 6:19, the Prophet says that the Qurʾān was revealed *(ūḥiya)* to him so that he "may warn you thereby," and in Q 21:45, he says that he warns only by the *waḥy*. Likewise, the book *(al-kitāb)* is said to have been sent down so that the Prophet may warn by it (Q 6:92; 7:2, etc.). What he is expected to warn of is the hour (e.g. Q 79:42-5, etc.), or the day of judgment (see LAST JUDGMENT) that the Qurʾān calls by various names (e.g. Q 14:44; 19:39; 40:18, etc.). Some passages do not explicitly refer to the eschatological future and focus instead on examples from the history of some extinct communities (see

HISTORY AND THE QUR'ĀN; GEOGRAPHY). Here the Prophet is requested to warn his contemporaries of the calamity that befell the peoples of ʿĀd (q.v.) and Thamūd (q.v.; e.g. Q 41:13-6, etc.).

Other passages in which the Prophet is addressed directly bring out the monotheistic message in his mission. He is demanded to proclaim *(iqraʾ)* the name of his lord (q.v.; Q 96:1), or praise *(sabbiḥ)* his name (Q 56:96; 69:52; 87:1; see LAUDATION; GLORIFICATION OF GOD) or declare *(udhkur)* it (Q 73:8; 76:25). In other passages he is instructed not to worship idols apart from God (Q 17:22, 39; 26:213; 28:88), and not to be one of the *mushrikūn,* i.e. those who associate other deities with God (Q 12:108; 28:87, etc.; see IDOLS AND IMAGES; IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM).

Scope of the mission

The scope of the mission of the qurʾānic Prophet changes between universal and local. The latter comes out in passages in which the Prophet is supposed to warn his own people *(qawm)* in his own language *(bi-lisānika),* namely Arabic, thus making his message easy to understand (Q 19:97; see also Q 44:58). The local scope of the Prophet's mission is further evident in the statement that every messenger was sent to address his people *(qawm)* by their own language (Q 14:4). The same is implied in the idea that the Prophet has been sent to a *qawm* to which a warner was never sent before (Q 28:46; 32:3; 36:6; see also Q 34:44). His audience is even smaller in a passage commanding him to warn his closest clan (*ʿashīra,* Q 26:214). In another passage he is said to have been sent to a community *(umma)* that has been preceded by other nations (Q 13:30), which seems to mean that his audience is Arabian, and is different from previous nations (Jews and Christians). Moreover, in Q 62:2 he is presented as a messenger belonging to the *ummiyyūn,* i.e. the gentiles, to whom he has been sent to teach the book and the wisdom (q.v.). This corresponds to further passages in which he is presented as one of his own audience (*minkum, min anfusikum;* see Q 2:151; 9:128, etc.). Above all, he is said to have received an Arabic Qurʾān so that he may warn Umm al-Qurā (Q 42:7; see also Q 6:92, 90:1-2), which is probably Mecca (q.v.), and those who dwell around it. God himself, whom the Prophet is commanded to worship, is described as local, namely, "the lord of this town which he has made sacred" (Q 27:91). This again may be a reference to Mecca.

On the other hand, other passages, of a clear universal orientation, imply that the Prophet has been sent as a messenger, or to warn and bear good tidings, to all humankind *(lil-nās),* or all beings *(lil-ʿālamīn)* or human beings *(bashar),* without confining the audience to a specific group (Q 4:79; 7:158; 21:107; 25:1; 34:28; 74:36). When a specific group is nevertheless indicated, it is the People of the Book (q.v.), to whom the Prophet has come in order to warn and display many things that they have been concealing of the book (Q 5:15). He has come to them after an interval *(fatra)* between the messengers (Q 5:19), and is expected to judge them according to the book that has been revealed to him (Q 5:42-3, 48, 49; see also Q 4:65, 105). This is based on the idea that the Qurʾān can clarify for the Children of Israel (q.v.) most of the matters they dispute (Q 27:76). Apart from human beings, the Qurʾān also affects the demons *(jinn),* who listen to its recitation and become believers (Q 46:29-31; 72:1-2).

The faith of the qurʾānic Prophet

The qurʾānic Prophet was the first of his people to become a Muslim, one who has deserted *shirk* (i.e. the worship of deities

other than God, considered as his "associates"). This is stated in Q 6:14: "Say: 'Shall I take to myself as protector other than God, the originator of the heavens (see HEAVEN AND SKY) and of the earth (q.v.; see also CREATION), he who feeds and is not fed?' Say: 'I have been commanded to be the first of them that became a Muslim *(aslama)*.' Be you not of the associators *(lā takūnanna mina l-mushrikīna)*." The battle against *shirk* that underlies the Prophet's monotheistic thrust also emerges in Q 6:162-3: "Say: 'My prayer (q.v.), my ritual sacrifice (q.v.), my living, my dying — all belongs to God, the lord of all being. He has no associate *(sharīk)*. Thus have I been commanded and I am the first of those who have become Muslims.'" The abandonment of *shirk* means the purification *(ikhlāṣ)* of one's faith (q.v.); it is this that has made the Prophet a Muslim: "Say: I have been commanded to serve God, purifying my religion (q.v.) for him, and I have been commanded to be the first of those who have become Muslims" (Q 39:11-2).

The qurʾānic Prophet and previous prophets

Although the Prophet is the first Muslim among his people, previous prophets are also described as fighting against *shirk* and are hence designated as Muslims. This is the case with Noah who is one of "those who became Muslims" (Q 10:72), while Moses is the "first of those who became believers" (Q 7:143). This reveals the notion that the Prophet is a link in a chain of prophets sent to previous communities. In fact, he is the final link, as indicated in the title *khātam al-nabiyyīn*, "seal of the prophets," by which the Qurʾān designates Muḥammad (Q 33:40). Muḥammad, so the Qurʾān states, is only a messenger following other messengers who passed away before him (Q 3:144). In this respect he is like any other messenger in that chain, for example, Jesus (q.v.), about whom it is also stated that other messengers passed away before him (Q 5:75). As a link in a successive chain, the Prophet appears in the list of prophets with whom God made a covenant (q.v.; Q 33:7) and here, apart from the Prophet himself, the other prophets mentioned are Noah, Abraham, Moses and Jesus.

The affinity between the Prophet and the previous ones comes out in the idea that all of them experienced the same process of revelation. This is stated in Q 4:163: "We have revealed to you *(awḥaynā ilayka)* as we revealed to Noah and to the prophets after him, and [as] we revealed to Abraham, Ishmael (q.v.), Isaac (q.v.), Jacob (q.v.), and the tribes (see ISRAEL), Jesus and Job (q.v.), Jonah (q.v.) and Aaron (q.v.) and Solomon (q.v.) and we gave psalms (q.v.) to David (q.v.)…." The book that was revealed to the Prophet is not unique to him either, as other prophets were also sent with "the book" that was designed to guide them and resolve their disputes (Q 2:213). The goals of revelation are also common to all prophets, including the Prophet. He was sent to give warning as well as good tidings *(bashshir)* to the believers (e.g. Q 2:25, etc.), and the same is applicable to the previous messengers who were also sent to warn the evildoers and bear good tidings to the righteous (Q 6:48, etc.; see GOOD DEEDS; EVIL DEEDS; GOOD AND EVIL). The model of the previous prophets is continued in the career of the Prophet, and this comes out most clearly in what is known as the "punishment stories" (q.v.; for which see e.g. Watt-Bell, *Introduction*, 127 f.). They describe the events in the lives of prophets such as Ṣāliḥ (q.v.) in terms identical to those used for the experience of the Prophet (ibid., 133-4). In one case (Q 73:15), the parallelism is explicitly drawn, where it is stated that God sent the Prophet in the same manner as a messenger (i.e. Moses) was sent to warn Pharaoh (q.v.).

As a result of the affinity between the Prophet and the other prophets, the religion revealed to all of them is one and the same (Q 42:13). Hence the Qurʾān urges the Muslims to believe in all that was sent down to each one of the prophets and not make division among any of them (Q 2:136, 285; 3:84). It follows that the message of the book that was revealed to the Prophet is essentially the same as that of the books revealed to previous messengers. Therefore, the Qurʾān asserts several times that the book that was sent down to the Prophet "confirms *(muṣaddiq)* what was before it" (Q 35:31; cf. 3:3; 5:48; 6:92). In one case, the Arabian provenance of the Prophet's book is declared (Q 46:12; see ARABS; ARABIC LANGUAGE) and here the Qurʾān points out a specific book that has preceded the Arabian one, namely, the book of Moses (see also Q 46:30). In the same way, Jesus is said to have confirmed the Torah (q.v.) that had been revealed before him (Q 3:50; 5:46; 61:6).

The messianic position of the qurʾānic Prophet

In some passages, however, the Prophet occupies a distinguished position among the prophets, and the covenant God makes with them revolves exclusively around his own person, which thus acquires a messianic position. To begin with, in Q 3:81 God establishes a covenant with the prophets to the effect that when a messenger comes and confirms the book that is with them, they should believe in him and support him. This seems to mean that all prophets, as well as their respective peoples, must join the Prophet whenever he appears. Moreover, the description of the qurʾānic messenger is said to have been written in the scriptures of the Jews and the Christians (see SCRIPTURE AND THE QURʾĀN; CORRUPTION; FORGERY), namely, the Torah and the Gospel (q.v.), where he is described as *al-nabī al-ummī*, "the gentile prophet" (cf. Rubin, *The eye,* 23-30; see UMMĪ; ILLITERACY), and God's mercy is promised to those among them who follow him (Q 7:157-8). A more specific name of the qurʾānic messenger as described in the scriptures of the previous prophets is Aḥmad, about whom Jesus brings to the Children of Israel the good tidings (Q 61:6). Taken together, these passages build up a messianic image of the Prophet behind whom humankind is supposed to unite as one community of believers (see COMMUNITY AND SOCIETY IN THE QURʾĀN).

The religion of Abraham

The universal link of the Prophet, which is based on the identity of the message he shares with the prophets of the Children of Israel, or the People of the Book, is absent from other passages that establish a direct connection between the Prophet and Abraham. Thus in Q 3:68 it is declared "those standing closest to Abraham are those who followed him and this Prophet, and those who believe." The qurʾānic Prophet is explicitly instructed to follow what is called the "religion" *(milla)* of Abraham, and such passages surely exclude the religion of the Jewish and Christian prophets from the scope of the Prophet's faith (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). Abraham himself is declared to have preceded the revelation of the Torah and the Gospel (Q 3:65), and to have been neither Jewish nor Christian, but a *ḥanīf* (q.v.), a Muslim and not a *mushrik,* "associator" (Q 3:67). As the latter designation stands mainly for Arabian polytheists (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), following the religion of Abraham means dissociation not only from the Jewish and Christian religious legacy but also from the Arabian one. The Prophet is explicitly demanded to follow the religion of Abraham in Q 16:123, while the rest of the believers are ordered to do the same in Q 3:95. In

Q 2:135 the believers who adhere to the religion of Abraham are thus refraining from becoming Jews or Christians. In another passage the Prophet is merely instructed to become a *ḥanīf* and here the demand is designed to prevent the Prophet from being a *mushrik* (Q 10:105). Although Abraham's name is not explicitly mentioned, the demand again is probably to follow Abraham's model. The same applies to Q 30:30 where the Prophet is urged to become a *ḥanīf* and adhere to the religion which is God's "original creation" *(fiṭra),* upon which he created humankind. The relation between the idea of the "original" religion and Abraham is clear from other passages describing Abraham's natural monotheism (Q 6:79).

The particularistic trend of the passages which create a direct connection between Abraham and the Prophet again seems to confine the scope of the message of the Prophet to the Arabian sphere, because Abraham himself, when linked to the Prophet, features in a clearly local context. This is the case in Q 2:127-9, where Abraham and Ishmael "raise up" the foundations of the house (the Kaʿba [q.v.]), and then Abraham prays to God to send from among his descendants a prophet who will teach them the book and the wisdom.

The qurʾānic Prophet between God and man

As a messenger of God, the Prophet is a chosen person, because God "chooses *(yaṣṭafī)* messengers of the angels and of humankind" (Q 22:75). The Qurʾān is therefore described as the "speech (q.v.) of a noble messenger" (Q 69:40). As God's chosen messenger, the Prophet is the recipient not only of his revelation but also of his infinite supervision, compassion and protection (q.v.). This is noted in passages such as that in which God is said to have never forsaken the Prophet (Q 93:3), and to have exalted his fame (Q 94:4), or raised him up to a laudable position (*maqām maḥmūd,* Q 17:79). God's compassion towards the Prophet comes out in the statement that God himself, as well as the angels, pray for the Prophet's peace (Q 33:56). For his part, the Prophet is instructed to ask for God's pardon (Q 4:106; 47:19; see FORGIVENESS), and is in fact granted complete forgiveness for all sins (Q 48:2; see SIN, MAJOR AND MINOR). God's guidance is also secured for the Prophet (Q 93:7), as well as his benefaction. God thus has improved the socio-economic status of the Prophet (Q 93:6, 8), and gave him "abundance" (*al-kawthar,* Q 108:1), as well as the "oft repeated" (q.v.; *mathānī*) and the great Qurʾān (Q 15:87). God has also alleviated from him the burden of fears and anxieties (Q 94:1-3). God's guidance is also manifest in the ritual sphere (see RITUAL AND THE QURĀN), and it is he who instructs the Prophet on when to pray (e.g. Q 20:130; 40:55; 50:39-40), and on what the direction of prayer (*qibla* [q.v.]) should be (Q 2:144). The fact that the Prophet has become the first Muslim among his community is the result of God's ritual guidance. The Prophet is ordered to say (Q 6:162-3): "My prayer, my ritual sacrifice, my living, my dying — all belongs to God, the lord of all being. No associate has he, so I have been instructed, and I am the first of those who have become Muslims" (cf. Q 6:14).

The qurʾānic Prophet and the believers

God's mercy on the Prophet is extended to the community that is supposed to follow the Prophet and support him, and it is God who has consolidated the believers behind the Prophet. The Prophet could not have achieved this alone (Q 8:63). God's mercy for the Prophet generates the Prophet's mercy for the believers, or as stated in

Q 3:159: "It was by God's mercy that you were gentle to them…." In the subsequent part of the same passage, God advises his messenger to pardon the believers and ask forgiveness for them, and to consult them in his affairs. Accordingly, the Prophet is described as "a messenger from among yourselves; your suffering (q.v.) is grievous to him, and he is anxious for you, gentle and compassionate to the believers" (Q 9:128). Forgiveness of sins, which emanates from the Prophet's presence, is particularly emphasized. Thus in Q 4:64 it is stated: "… If, when they wronged themselves, they had come to you and prayed for God's forgiveness, and the messenger had prayed for forgiveness for them, they would have found God forgiving, compassionate" (see GOD AND HIS ATTRIBUTES). The Prophet's mercifulness towards the believers is also manifest in his function as a "witness" *(shahīd)* for his community (Q 2:143; 22:78). This seems to be an eschatological role, as is indicated in passages describing the last judgment in which the Prophet is a witness for his community while the other communities have their own witnesses, their prophets (cf. Q 4:41; 16:89; see also Q 16:84; 28:75). His role as a *shahīd* probably means that he gives evidence as to the identity of both the righteous among his people, and of the evildoers. For their part, the believers are expected to take the Prophet as their model *(uswa)* in their devotion to God and in hoping for his reward at the last judgment (Q 33:21). Their love for God is the reason why they must follow the Prophet, which is the only way to gain God's love and mercy in return (Q 3:31; see LOVE AND AFFECTION). From this affinity between God and his messenger follows the need to obey them both (Q 3:32; 4:59), because to obey the Prophet means obeying God (Q 4:80; see OBEDIENCE). Similarly, pledging allegiance *(bayʿa)* to the Prophet means pledging allegiance to God (Q 48:10) and God is indeed pleased with those who pledge allegiance to his Prophet (Q 48:18; see CONTRACTS AND ALLIANCES). Women, too, pledge allegiance to him and when they do they must follow strict religious and moral codes and obey him (Q 60:12; see ETHICS AND THE QURʾĀN; VIRTUES AND VICES, COMMANDING AND FORBIDDING; WOMEN AND THE QURʾĀN). Apart from obedience, the believers are expected to be more loyal to their Prophet than to their own selves (Q 33:6), and treat him with due respect (see LOYALTY). This means that when they are in his presence they cannot withdraw without first asking his leave (Q 24:62-3), and they are not permitted to raise their voices above his (Q 49:1-5, 7; see SOCIAL INTERACTIONS). As the believers' model of devotion, the Prophet is also the source of their law, which he gives to them through a revelation (see LAW AND THE QURʾĀN). Thus in Q 6:151-3 he is commanded to tell them: "Come, I will recite what your lord has forbidden (q.v.) you.…" This is followed by a list of legal and moral regulations (see BOUNDARIES AND PRECEPTS).

The Qurʾān does not only deal with the duty to obey the Prophet but also with his own individual status among the believers. This is apparent mainly in verses defining his share in the spoils of war as compared with the shares of the rest of the believers (see BOOTY). In Q 59:7 the spoils belong to God and his messenger, as well as to his kinsmen (see FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE) and needy Muslims (see POVERTY AND THE POOR), and the Prophet is given complete authority to distribute the booty: "Whatever the messenger gives you, take; whatever he forbids you, give up." Similarly, in Q 8:1 it is stated that the spoils *(anfāl)* belong to God and

the messenger. In Q 8:41, however, only one-fifth of the booty belongs to the Prophet and the needy, and the rest is distributed among the participating warriors.

Reference is also made to the status of the Prophet's wives among the believers (see WIVES OF THE PROPHET). They are proclaimed as equal in status to the mothers of the believers, which means that they cannot become wives to the believers after the Prophet (Q 33:6). Special moral obligations are prescribed to them as wives of the Prophet, and their conduct must be immaculate. If they wish to remain his wives and not be divorced (see MARRIAGE AND DIVORCE), they must undertake not to behave indecently, remain in their homes, not display their finery, as was the custom in the first Age of Ignorance (q.v.; *jāhiliyya*) and they have to pray and give alms (see ALMSGIVING) and obey God and his messenger. God will reward them twice over for all this (Q 33:28-34). Instructions to the believers as to how to behave in the Prophet's household are also specified. The believers should not call uninvited, nor linger after meals. They have to ask his wives for any object they want only while standing behind a curtain (Q 33:53; see VEIL; BARRIER). Nevertheless, allusion is made also to some obscure domestic problems that the Prophet had with two of his wives (Q 66:1-5), as well as to a group of persons who "came with the slander *(ifk)*" (Q 24:11 f.; see GOSSIP). The nature of the slander is not disclosed in the Qurʾān, but Muslim tradition associates it with ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR). In contrast to the qurʾānic proclamation that the Prophet's wives are the mothers of the believers, the Qurʾān declares that Muḥammad is not the father of any of the believers (Q 33:40), meaning that he can marry their women after them. This statement is made in connection with the affair of Zayd (b. Ḥāritha), Muḥammad's adopted son, the only contemporary of Muḥammad — apart from the Prophet himself — who is mentioned by his proper name in the Qurʾān. It is stated that after Zayd accomplished what he would of his wife, God gave her in marriage to the Prophet, and the Qurʾān asserts that it is lawful for the believers to marry the wives of their adopted sons (Q 33:37; see LAWFUL AND UNLAWFUL).

The qurʾānic Prophet and the unbelievers

The relationship between the Prophet and the unbelievers occupies the bulk of the qurʾānic passages dealing with his prophetic mission, and many aspects of the negative reaction of the unbelievers to his message are described (see OPPOSITION TO MUḤAMMAD). Their disbelief is depicted in some chapters as a refusal to listen to him. In one passage the unbelievers say: "Our hearts are veiled from what you call us to, and there is heaviness in our ears (see HEARING AND DEAFNESS), and between us and you there is a veil" (Q 41:5). In another instance they almost strike him down with their glances when they hear him preach (Q 68:51). Scornful reactions are also typical when the Prophet reproaches them for worshipping deities other than God (Q 21:36; 25:41-2; see MOCKERY). The Qurʾān emphasizes the unbelievers' stubbornness (see INSOLENCE AND OBSTINACY) when stating that even if God sent the Prophet "a book on parchment which they can touch with their hands," they would still not believe in him (Q 6:7).

Disbelief is often focused on a specific article of the faith preached by the Prophet, namely resurrection (q.v.) and the last judgment, which the unbelievers usually reject as an impossible process (Q 17:49, 98; 21:38, etc.). The unbelievers also make specific demands as a condition for their belief in the qurʾānic Prophet. In

Q 10:15 they ask him to change the contents of his revelations and make them more agreeable, and in Q 2:120 (see also Q 2:135) the Jews and the Christians ask him to follow their religion. The disbelief of the Jews, or the People of the Book, is especially condemned. They have rejected the Prophet despite the fact that the book revealed to him confirms their own scriptures. They are accused of deliberately ignoring the injunctions of their own book [i.e. to believe in the Prophet] (Q 2:89, 91, 101; see also Q 4:47).

Active persecution by the unbelievers is also addressed in the Qurʾān, particularly their threat to expel *(akhraja)* the Prophet from his homeland (Q 17:76). In Q 8:30 this is one of a series of other options contemplated, such as confining him or even killing him. In Q 9:13 the scheme to expel the messenger is coupled with the violation of oaths taken by the unbelievers, two offences that justify waging war on them (see BREAKING TRUSTS AND CONTRACTS). The threat of expulsion recurs in stories about previous prophets (Q 14:13) such as Shuʿayb (q.v.; Q 7:88) and Lot (q.v.; Q 7:82; 26:167; 27:56), where it again forms a major component of persecution. Expulsion, however, is not merely a threat but is also an accomplished fact that emerges in the reference to "your city which has expelled you" (Q 47:13). The Prophet and the believers suffer expulsion from the homeland, as indicated in Q 60:1. Here, "expelling the messenger and you [i.e. the believers]" features as one of the offences of the unbelievers, and in Q 2:217 those expelled are the inhabitants of the sacred mosque (q.v.; see also SACRED PRECINCTS). Expelling them and denying them free access to the sacred mosque are denounced as offences worse than fighting (q.v.) during the forbidden months (q.v.). The believers who have been expelled are ordered to kill their foes "wherever you come upon them and expel them from where they have expelled you…" (Q 2:191), which again makes expulsion a cause for war (q.v.). The same offence of forced expulsion is also a reason for the believers to dissociate from unbelievers guilty of this offense, or of assisting others in it (Q 60:9).

Not only does the Qurʾān refer to the existence of disbelief but it also reveals the various reasons for it, which stem from different sources. In one case its origin is fear; the unbelievers say that if they follow the Prophet they will be snatched from their land (Q 28:57). Those who speak here are probably the people of Mecca, to whom God immediately answers that he has established for them a "secure sanctuary *(ḥaraman āminan),* into which are brought the fruits of everything" (Q 28:57; cf. Q 8:26; 29:67). The message of the Prophet stands here in clear contrast to the Arabian values on which the security of the people of Mecca rested. The disbelief of the contemporaries of the Prophet is often coupled with doubts as to the authenticity of his message, i.e. whether he truly is the messenger of God. These doubts originate with presumed faults in his personality and message. The personal accusations against the Prophet are often based on the claim that he is but human, and God does not usually send humans as his messengers, only angels (Q 17:94; 21:3). The Jews also held this point against him (Q 6:91), and similar reservations were also held about previous prophets by their contemporaries (e.g. Q 11:27, Noah; Q 26:154, Ṣāliḥ; Q 26:186, Shuʿayb). Even as a human being the social status of the Prophet is not elevated enough to be a prophet (see SOCIAL RELATIONS). This claim by the unbelievers is indicated in Q 43:31: "They say: 'Why was this Qurʾān not sent down to some distinguished *(ʿazīm)* man of the two cities?'"

As a result of the notion that a messenger of God must be an angel, the demand is

often raised by the unbelievers that the Prophet produce signs from heaven, i.e. miracles (see MIRACLE). He is asked either to produce an unspecified sign *(āya)* himself (Q 7:203), or have one sent down to him from God (Q 13:7, 27). In Q 11:12 he is requested to have a treasure sent down to him, or an angel escorting him (see also Q 6:8-9; 25:7-8). A prolonged series of specific signs is required in Q 17:90-3: that a stream be made to gush forth (see SPRINGS AND FOUNTAINS); that he produce a garden (q.v.) of palms and vines with rivers flowing through it; that he make heaven fall; bring God and the angels as a surety; produce a house of gold (q.v.) ornamentation; go up to heaven and bring down a book that can be read. The People of the Book (Q 4:153) also ask for a real book from heaven, and the Jews expect to see a sacrifice that will be devoured by fire (q.v.; as a sign of its acceptance by God; Q 3:183).

Failing to produce proofs of his divine person, the Prophet is accused of being a sorcerer (Q 10:2; 11:7, etc.; see MAGIC) and a poet possessed by jinn (q.v.; *majnūn,* Q 37:36; 44:14; see also INSANITY; POETRY AND POETS). His prophetic message, too, is not accepted as divine, and is rejected as a "hotchpotch of dreams" (Q 21:5; see DREAMS AND SLEEP). The unbelievers usually mention such faults when refusing to abandon the worship of their deities (Q 37:36). His messages are often rejected as forged (Q 11:35; 46:8) or plagiarized (see FORGERY). In the latter case, his sermons are denounced as "fairy-tales of the ancients" that have been dictated to him (Q 25:4-6; see also Q 6:25-6, etc.), or have been learnt from a human master (Q 74:25; see also Q 44:14), whose origin is said to be non-Arab (Q 16:103; see INFORMANTS; see also Ahrens, *Muhammed,* 42-4). They too, so the unbelievers claim, can do the same (Q 8:31). His message, however, is also denounced as being an innovation previously unheard of in other religions (Q 38:7), one which deviates from the forefathers' religion (Q 34:43). The criticism in this respect is mainly directed against the clear dissimilarity between the structure of the Prophet's sermons and those of previous prophets. Thus in Q 28:48 the unbelievers wonder why the Prophet has not received a revelation like that of Moses, and in Q 25:32 they ask why the Qurʾān was not revealed to the Prophet all at once.

Divine protection

A large space is allotted in the Qurʾān to God's defense of the Prophet against the various aspects of rejection, providing the main basis on which rests the status of the Prophet as a messenger of God. In general, the Qurʾān asserts the absurdity of disbelief by stressing that it arose in spite of the unbelievers' original desire for guidance. Thus in Q 35:42 the unbelievers swear that if a warner came to them they would be more rightly guided than any other nation, and in Q 6:157 they swear that if a divine book was revealed to them they would be more rightly guided than any other nation (see also Q 37:167-70). God sets out to legitimize the authority of his messenger as an exclusive source of guidance, and for this a variety of arguments are set forth in defense of the authenticity of his message. In response to attacks on the mental integrity of the Prophet, God addresses the unbelievers saying: "Your comrade is not astray, neither does he err (see ERROR), nor does he speak out of caprice" (Q 53:2-3). In calling him "your comrade" *(ṣāḥibukum),* the Prophet is made one of their own kind, whose integrity must be well-known to them. In this manner God also addresses the unbelievers in Q 34:46, telling them that "no madness *(jinna)* is in your comrade" (cf. Q 7:184), and again in Q 81:22: "Your comrade is not possessed *(majnūn)*."

The origin of the Prophet's integrity and mental fitness is God's mercy *(niʿma)* which prevents him from being a *kāhin,* "soothsayer," or possessed (Q 52:29), and indeed God repeatedly asserts that he is neither a *kāhin,* nor a poet or possessed (Q 68:2; 69:40-2, etc.). To this context seems also to belong the frequent qurʾānic insistence that the Prophet is not expecting a reward or a wage *(ajr)* for his messages (e.g. Q 25:57; 34:47; 38:86), which means that he is delivering the word of God and not his own. A more straightforward statement about the authenticity of his revelation is repeated in numerous passages asserting that the Prophet was sent "with the truth" (*bi-l-ḥaqq;* cf. Q 2:119, 252; 4:170; 9:33; 35:24, etc.; see TRUTH), and that God and the angels bear witness to the truth of his message (Q 4:166; 13:43, etc.). The fact that the Qurʾān confirms the previous scriptures, and mainly the stories about earlier prophets, is also invoked in support of its authenticity (Q 12:110-1). Similarly, when the Prophet is himself beset by doubts as to the genuine nature of what has been revealed to him, he is advised to consult those who are well versed in previous scriptures — and thus know that the Qurʾān and those scriptures are alike (Q 10:94).

The Qurʾān also answers more specific aspects of the doubts raised by the unbelievers as to the authenticity of the Prophet's message. To the charge of plagiarism God responds by pointing to the Arabic language of the Qurʾān, which excludes the possibility of a non-Arab master teaching the Prophet, as insinuated by his opponents (Q 16:103). The Arabic language renders the Qurʾān clear to the audience (Q 12:2; 41:3) who would not have accepted a non-Arabic revelation that could not have been understood (Q 26:195, 198-9; 41:44). Perhaps the assertion that the Prophet did not read any book before the revelation of the Qurʾān or write it down (Q 29:48) is also designed to refute the charge of plagiarism. The human nature of the Prophet, which is held against him by his opponents, is admitted by God himself, who orders his messenger to say that he is merely a human being who (nevertheless) receives revelations (Q 18:110; 41:6; see also IMPECCABILITY). God stresses that the mortality of the Prophet does not prevent him from being a messenger of God, and to prove this, God tells his Prophet to remind the unbelievers that other prophets were mortals too. Thus God advises his Prophet to say that Moses received revelations as a human being (Q 6:91), and that messengers to older communities were also merely humans (*rijāl,* Q 12:109, etc.). The same argument is followed when the Qurʾān asserts that the Prophet is not an innovation among other messengers (Q 46:9). Moreover, a messenger of God always remains mortal, and he is not permitted to have other people worship him as a god (Q 3:79). While the human nature of the Prophet is acknowledged, however, the divinity of his message is emphasized. To prove this, God advises the Prophet to challenge the unbelievers who claim that the Qurʾān is forged to produce one or ten chapters (*sūra*s) similar to the qurʾānic ones, if they can (Q 10:38; 11:13), or a story *(ḥadīth)* like it (Q 52:33-4; see INIMITABILITY; PROVOCATION). Due to the Qurʾān's divinity the human qurʾānic Prophet has no control over its contents, nor of the time of its revelation. This point is made when people demand that he change his message into a more agreeable one, to which he is prompted to say: "It is not for me to alter it of my own accord; I follow nothing except what is revealed to me… Had God willed it, I would not have recited it to you… I have been living among you a lifetime before it…" (Q 10:15-6).

The constant human nature of the

Prophet prevents him from complying with the demands for miracles, and when this demand is made, God commands his messenger to say that the unseen *(ghayb)* belongs to God alone (Q 10:20). This seems to mean that he is but a mortal messenger who cannot perform supernatural acts of his own volition. Only God has the power to produce signs, as the Qurʾān itself states elsewhere (Q 6:37, etc.), and it is for him to decide whom he wishes to guide (Q 13:27). Previous prophets are put in the same situation when commanded to produce signs, and they too answer that they are but mortals and that they can only produce miracles with God's permission (Q 14:10-11). Besides, the Qurʾān says that the unbelievers had a chance to draw a lesson from previous scriptures which they know (and not wait for fresh signs; cf. Q 20:133). The same reply, namely, that the Prophet has no knowledge of the unseen, is given when demands are made for signs of the approaching hour, i.e. the end of the world, about which the Qurʾān warns quite often (Q 7:187-8; 72:25-7). The demand to produce signs sent by God may take the form of a request to bring down from heaven a written text *(kitāb)* that humankind can read (see above). To this the Prophet is again directed to say: "I am but a mortal, a messenger" (Q 17:93). Elsewhere he is advised to say that he is not an angel, which also seems to be in response to the request for signs (Q 6:50; cf. Q 11:31, Noah). Nevertheless, the Prophet himself does get a chance to see God's signs, as stated in Q 17:1: "Glory be to him who carried his servant by night from the sacred mosque to the further mosque which we have blessed all around, that we might show him some of our signs…."

Apart from defending his authenticity in the eyes of the unbelievers, God directly helps the Prophet himself, which is designed to encourage him and offer him various kinds of comfort and moral support (see CONSOLATION). To begin with, comfort is offered through the statement that God exempts the Prophet from responsibility for the unbelievers, saying that his mission is only to deliver the message (Q 5:99), and that he is not supposed to be the guardian of the unbelievers (Q 6:107; 10:108; 17:54, etc.). God himself undertakes the responsibility for them (Q 42:6). To emphasize this point God says that the Prophet cannot guide the dead (see DEATH AND THE DEAD), the blind (see VISION AND BLINDNESS) and the deaf (Q 27:80-1; 30:52-3; 35:22), neither can he force them (to repent; Q 50:45; see TOLERANCE AND COMPULSION; REPENTANCE AND PENANCE). To comfort the Prophet and encourage him, God tells him that he is aware of the distress that the words of the unbelievers have caused him (Q 15:97), and advises him not to let his soul be wasted in regrets for the unbelievers (Q 35:8). Although the Prophet tends to consume himself with anguish over their disbelief (Q 18:6; 26:3), God tells him not to let the unbelievers torment him by what they do or say (Q 3:176; 5:41; 10:65; 15:88; 16:127; 27:70). God states that the Qurʾān has not been revealed to him to make him miserable (Q 20:2), nor to disquiet his heart (Q 7:2). In a series of passages God encourages the Prophet to bear patiently *(iṣbir)* the hardships and adhere to his prophetic mission (see TRUST AND PATIENCE). For example, in Q 10:109 he is urged to endure his sufferings patiently and to follow what is being revealed to him (cf. Q 43:43). In Q 20:130 he is told to bear patiently what the unbelievers say, and continue proclaiming the lord's praise day and night (see also Q 52:48-9, etc.). In other passages God demands that the Prophet patiently endure his sufferings along with those who call to their lord in the morning (q.v.) and evening (q.v.), and not yield to the temptations of worldly pleasures

(Q 18:28; cf. Q 20:131). When urging his Prophet to endure the hardships, the example of previous prophets is often adduced. Thus, in Q 46:35 he is entreated to be as patient as other prophets previously were, and in Q 38:17 he is told to exercise patience with what is being said to him and remember David the man of might. Conversely, he is told to be patient and avoid bad examples such as that of the "man of the whale" (Yūnus, i.e. Jonah; Q 68:48-50).

The example of previous messengers plays a central role in the encouragement of the Prophet (Q 11:120; cf. Q 23:44; 51:52-4). They too, God says, were rejected as liars by their respective peoples (Q 3:184; 6:33-4; 35:4; 41:43), and when they were almost overtaken by despair (q.v.), God rescued them, and the unbelievers suffered his retribution (Q 12:110; 38:14). Likewise, previous messengers were mocked (Q 6:10; 13:32; 21:41) and had enemies (q.v.), but God was their savior (Q 25:31). As for the signs demanded from him by the unbelievers, God says that such signs would be useless just as they were useless to previous prophets who were commanded to produce them (Q 2:118; 21:5-6). The Prophet can, of course, try and seek out a hole in the ground or a ladder in heaven if he were distressed because the unbelievers have turned away from him, but in the end it is God alone who can turn them into believers (Q 6:35).

In many passages God advises the Prophet how to remain on his own path when under pressure from different quarters. In some cases the Prophet is simply advised to part company with the unbelievers to avoid open confrontation. Thus in Q 73:10 God tells him to "forsake them *(wa-uhjurhum)* graciously," and in Q 43:89 he is told to turn away from them *(isfaḥ ʿanhum),* and the same is suggested to him in other passages (Q 51:54, *tawallā ʿanhum;* Q 15:94; 32:30, *aʿriḍ;* Q 15:3; 43:83, *dharhum*). In some instances God prompts him to tell the unbelievers that his own religion will remain different from the one they follow, as for example in Q 10:104: "I do not worship those you worship apart from God" (see RELIGIOUS PLURALISM AND THE QUR'ĀN). Similarly, in Q 10:41 God says: "If they say that you lie, tell them: 'I have my work and you have your work. You have nothing to do with what I do, and I have nothing to do with what you do'" (see also Q 26:216). The same quietist policy is suggested to the Prophet in passages advising him to rely on God and await his final judgment. Thus in Q 22:68-9 God tells him: "And if they should dispute with you, say: 'God knows very well what you are doing, God shall judge between you on the day of resurrection.…'" Elsewhere he is advised to say, when the people turn their backs on him: "God is sufficient for me, there is no God but he, in him I have put my trust" (Q 9:129; cf. Q 27:79; 33:48). Similarly, he is advised to debate with the unbelievers in a gentle and a refined manner (Q 16:125; 23:96; see DEBATE AND DISPUTATION).

When the unbelievers demand of the Prophet that he abandon his religion and follow them instead, God again advises him on how to stay firm. In one particular instance the Prophet and his followers are challenged to become Jews and Christians, in which case, staying firm means following the religion of Abraham (Q 2:135). In more general terms, the unbelievers would like to see the Prophet following their "evil inclinations" *(ahwāʾ),* and here God encourages him not to follow their *ahwāʾ* and adhere to his own *sharīʿa* (Q 45:18; 5:48-9; see also Q 42:15). In more explicit terms, God demands that he "not obey" the unbelievers and the *munāfiqūn,* "hypocrites" (see HYPOCRITES AND HYPOCRISY), and only follow what is being revealed to him (Q 33:1-2).

A unique case is Q 17:73-5 in which the unbelievers come near to tempting the Prophet away from that which has been revealed to him, inciting him to forge a more agreeable revelation, following which they will take him as their friend (see FRIENDS AND FRIENDSHIP). It is only thanks to God's intervention that he remains firm, and the Qurʾān asserts that if he had inclined to them God would have punished him severely. A similar situation of a distorted revelation is described in Q 22:52 with reference to previous prophets: Each one of them was subjected to the temptation of Satan who cast words of his own into their recitation. The Qurʾān, however, asserts that God annuls what Satan casts and confirms his own signs.

In other passages God's protection of his messenger is more active which implies a more militant clash between the Prophet and the unbelievers. To begin with, in Q 5:67 God grants him immunity from the people to help him deliver his message safely. When the unbelievers expel the Prophet, God sends him his sechina (q.v.; *sakīnatahu*) and supports him with unseen legions. This event occurs when the Prophet and a companion of his are hiding in a cave (q.v.) and he reassures his friend that God is with them (Q 9:40). To help the Prophet endure his expulsion, God promises him in a special vision *(ruʾyā)* that he and the believers will enter the sacred mosque and there perform the rituals (Q 48:27). A similar promise is perhaps made in Q 28:85: "He who imposed the Qurʾān on you will surely restore you to a place which will be home." In direct military clashes with the unbelievers, God actually fights for him (Q 8:17), and grants him victory (q.v.; *fatḥ,* Q 48:1). God's protection and aid emanate from his mercy and bountifulness towards the Prophet, which avert all attempts at injuring him (Q 4:113), and as a result of this God has rid him of those who mock him (Q 15:95), and promises to rid him of those who do not believe (Q 2:137). His foes are explicitly warned about God's wrath, as in Q 17:76, where those who plot to expel him from the land are warned of a swift destruction. Likewise, God took vengeance on the foes of previous prophets (Q 30:47). Fighting angels inflict God's wrath on the Prophet's foes, smiting them above the necks (Q 8:12-13). The angel Gabriel (q.v.) too is his protector, alongside the righteous among the believers and the other angels (Q 66:4). But God's retribution usually awaits the foes in hell (see HELL AND HELLFIRE). The fate of hell awaits those who assault the Prophet during prayer (Q 96:9-19), and those who make a breach with him (Q 4:115; 59:4; cf. Q 47:32). In response to such opposition, the Qurʾān sets clear limits to God's mercy as emanating from the Prophet, and explicitly excludes the unbelievers from it. Thus in Q 9:113 it is stated that "It is not for the Prophet and the believers to ask pardon for the associators, even though they may be near kinsmen (see KINSHIP), after that it has become clear to them that they will be the inhabitants of hell." For his part, the Prophet is commanded to wage holy war on the unbelievers, as stated in Q 9:73 and in Q 66:9: "O Prophet, struggle *(jāhid)* against the infidels and the hypocrites and be harsh with them; their refuge is hell — an evil homecoming" (see also Q 25:52; see JIHĀD). God's help to the Prophet also encompasses the entire community of believers, and his help is therefore described in several passages as being extended to them collectively. Thus in Q 8:26 God says: "Remember when you were few and abased in the land (see OPPRESSED ON EARTH, THE), and were fearful that the people would snatch you away; but he gave you refuge and assisted you with his help, and provided you with

the good things, for which you might be haply thankful." Divine help is usually given to the believers on the battlefield, as seems to be the case in Q 3:13: "There has already been a sign for you in the two companies which encountered each other, one company fighting in the way of God and another unbelieving; they saw them twice the like of them, as the eye sees, but God assists with his help whom he will…." A specific designation of the place in which God helped the believers is provided in Q 3:123: "God helped you at Badr (q.v.) when you were abject…."

The Qurʾān and Muḥammad's sīra

The Qurʾān contains numerous allusions to events in the Prophet's life without placing them in a concrete context. Apart from issues already mentioned above there are many more allusions to incidents and experiences, most of which gain their context outside of the Qurʾān, in the realm of the *sīra,* i.e. Muḥammad's biography. Here the qurʾānic allusions to the Prophet's life and prophetic experience reappear as embedded in a clear chronological sequence of events. It is impossible to survey here all the qurʾānic allusions that are found in the *sīra;* only some of them will be highlighted.

One of the earliest *sīra* compilations in which a massive presence of qurʾānic allusions exists is by Ibn Isḥāq, whose *sīra* of Muḥammad is available in several recensions, the most famous of which is Ibn Hishām's (d. 218/833). Here the general narrative framework — which is retained in every other biography of Muḥammad — is as follows: The life of the Prophet is divided into two major phases, Meccan and Medinan, which corresponds to the traditional division of the Qurʾān into Meccan and Medinan periods. The Meccan period spans from Muḥammad's birth until his emigration (q.v.) to Medina (q.v.). The episodes covering this phase describe his birth and his early years in Mecca, his first revelation, the beginning of his public preaching, his persecution by his fellow Quraysh tribesmen, and his emigration to Medina. The Medinan period consists of episodes describing his arrival there, the consolidation of his relations with the local Arab tribes, his struggle against the local Jews, and primarily his campaigns and battles *(maghāzī)* against Mecca (see EXPEDITIONS AND BATTLES). These clashes culminated in the fall of Mecca, and in the eventual spread of Islam throughout Arabia. This sequence of events has a well-established chronological framework: The Meccan period begins with what is known as the "Year of the Elephant," in which, according to most traditions, Muḥammad is said to have been born (with reference to sūra 105, "The Elephant"; see ABRAHA). His first revelation is said to have occurred when he was forty, his emigration is dated to ten years later (622 C.E.), and the fall of Mecca is dated to 8/630, while Muḥammad's death is said to have taken place in 11/632.

The Meccan period

For the Meccan period the *sīra* uses qurʾānic passages that have been embedded in traditions describing Muḥammad's first revelation, first admonitions, and especially his persecution by the unbelievers (for details see Rubin, *Eye,* 103-66). For the first revelation the most prevalent passage that has been selected is Q 96:1-5: "Recite in the name of your lord who created…." For the subsequent event of the temporary lapse of revelation, Q 93:3 was chosen: "Your lord has not forsaken you nor does he hate [you]." For his first public sermon, Q 26:214 was adduced: "And warn your nearest relations…." Several qurʾānic passages appear in *sīra* descriptions of Muḥammad's persecution by the Meccans, e.g. sūra 111 in which Abū Lahab is cursed

and promised punishment in hell. Abū Lahab is the designation of an uncle of Muḥammad and in the *sīra* he leads a strong opposition against the Prophet for which this chapter is said to have been revealed as divine retribution. Other passages that appear in the context of persecution describe the exchange of accusations between the Prophet and his opponents (e.g. Q 41:3-4; 13:31; 25:7-8; 17:90-3; 16:103). One of them, Q 38:4-8, is embedded in traditions describing the role of Abū Ṭālib, another of the Prophet's uncles, in helping his nephew confront the unbelievers. The passage about the Prophet and his companion in the cave (Q 9:40) appears in the descriptions of Muḥammad's journey *(hijra)* from Mecca to Medina, the companion being Abū Bakr (see COMPANIONS OF THE PROPHET).

The Medinan period

The Medinan period revolves around Muḥammad's campaigns against the Meccans as well as against the Jews, and in some cases the links between them and the Qurʾān are obvious, because the names of some campaigns are explicitly mentioned in scripture. This applies to Badr (2/624), which is mentioned in a passage describing angels assisting the fighting believers (Q 3:123-8), and to Ḥunayn (q.v.; 8/630). The latter location is mentioned in a passage again describing how the sechina as well as unseen legions (of angels) help the fighting believers (Q 9:25-6). In other cases the link is only revealed through the traditions (see ḤADĪTH AND THE QURʾĀN), while in the Qurʾān explicit links are missing. Thus there are additional passages linked in traditions to Badr, mainly Q 8:1-19 in which the division of spoils is discussed, and the help of angels smiting the unbelievers is described yet again. The connection with other campaigns is revealed through traditions only. Passages that are linked to the battle of Uḥud (3/625), for example, are Q 3:121-2, in which the Prophet lodges the believers in their ditches for the battle, and "two parties" of the believers are about to lose heart. The praise of martyrs (q.v.; *shuhadāʾ*), whom the Qurʾān describes as "living with their lord" and rejoicing in his bounty (cf. Q 3:169-71) is also linked to the believers who fell at Uḥud. The expulsion of the Jewish tribe of al-Naḍīr (see NAḌĪR, BANŪ AL-) from Medina is reported with reference to Q 59:1-3 which describes the expulsion of the unbelieving People of the Book from their habitations. They thought that their fortresses would defend them but God defeated them in the end. A link to the Battle of the Ditch (see PEOPLE OF THE DITCH) and the subsequent campaign against the Jewish tribe of Qurayẓa (q.v.; 5/626-7) is found in traditions about Q 33:9-27. Here the Qurʾān describes hosts of confederates *(aḥzāb)* coming against the believers whom God defeats by means of winds (see AIR AND WIND) and unseen legions (of angels).

Special reference is made to the role of the hypocrites *(munāfiqūn)* in spreading doubts among the Medinan believers, "people of Yathrib," and in inducing them to retreat. The faithful believers who have remained firm are praised, and the passage concludes with the defeat of the People of the Book who supported the confederates. They are brought down from their fortresses and the believers slay some of them and take others as captives. God bequeaths their lands and possessions to the believers. To the Jews of Qurayẓa are also linked the verses of Q 8:55-8 in which those who have broken their compact with the Prophet are severely criticized. The affair of al-Ḥudaybiya (6/628) and the subsequent campaign against the Jews of Khaybar are linked to the bulk of sūra 48. In it the believers pledge allegiance to the Prophet

"under the tree," and God rewards them with a swift victory and many spoils.

Among the remaining qurʾānic allusions in the *sīra,* sūra 9 may also be mentioned. It is connected to events that took place during Muḥammad's campaign to Tabūk (9/630) as well as during Abū Bakr's pilgrimage (q.v.) to Mecca (9/631). Problems with opposing groups within Medina (led by Abū ʿĀmir and others) are also connected to this sūra, mainly to Q 9:107 in which reference is made to "those who have taken a mosque in opposition and unbelief, and to divide the believers…" (see MOSQUE OF THE DISSENSION). The final stages of his career, when most of the pagan Arabs became Muslims and delegations came from all over Arabia to pledge allegiance to the Prophet in Medina, are connected to Q 110 (Sūrat al-Naṣr, "Succor"). In it (Q 110:2) the Prophet sees "men entering God's religion in throngs." Muḥammad's farewell sermon which he delivered during his last pilgrimage to Mecca (10/632; see FAREWELL PILGRIMAGE), a few months before his death, has also many qurʾānic links, e.g. Q 5:3: "Today I have perfected your religion for you, and I have completed my blessing of you and I have approved Islam for your religion."

The chronology of revelation

The link between the Qurʾān and the life of Muḥammad as established in the *sīra* has provided the Qurʾān with a concrete context of revelation, or *asbāb al-nuzūl,* as this came to be known among Muslim Qurʾān exegetes. Since the mid-19th century C.E., scholars investigating the history of the Qurʾān have followed the *sīra* framework which the Qurʾān has acquired, and developed the traditional *asbāb al-nuzūl* into an elaborate chronology of revelation (see CHRONOLOGY AND THE QURʾĀN). They divided the qurʾānic passages not only into Meccan and Medinan periods, but also into "early Meccan," "late Meccan," and so on. Not all of the scholars have shown the same degree of dependence on Islamic tradition and some, like Bell, gave more weight to textual considerations of style and form (see FORM AND STRUCTURE OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). All of them, however, have treated the Qurʾān as the prophetic creation of the historical Muḥammad, and as a key to the study of his own spiritual development. The relationship between the qurʾānic text and the historical Muḥammad is, however, far from clear. Some, like John Wansbrough, have not even accepted the Arabian provenance of the Qurʾān. Above all, it should especially be borne in mind that the *sīra* and the *asbāb al-nuzūl* traditions are all part of ḥadīth material, the historical authenticity of which has been shown to be very problematic. A reconstructed chronology of revelation based on this material must therefore be taken with the utmost caution.

Murder

The unlawful killing of a human being with malicious forethought. The Qurʾān uses the verb *qatala* to denote "kill" as well as "murder." In the latter sense it is used to describe both infanticide (q.v.), as in Q 6:140: "Lost are they who slay their children (q.v.) out of folly and ignorance (q.v.)," and the intentional killing of another without legal right, such as in Q 5:32: "Whosoever kills another — unless for murder or highway robbery (*fasād fī l-arḍ,* see THEFT; CORRUPTION) — it is as though he has killed the entirety of humanity." The penalty for the latter is the death of the murderer at the option of the victim's next of kin, as in Q 17:33: "Nor take life — which God has made sacred — except for just cause. And if anyone is mur-

dered, we have given his heir authority [to demand *qiṣāṣ* or to forgive]." If they choose not to exercise this right, they are entitled to compensation, *diya,* as in Q 2:178, "If any remission is by the deceased's heir [lit. "brother"; see INHERITANCE], then reasonable demands are granted and generous compensation is his due" (see BLOODSHED; BLOOD MONEY; KINSHIP; BOUNDARIES AND PRECEPTS).

According to the Qurʾān, intentional murder is second only to associating other deities with God in terms of its sinfulness (see SIN, MAJOR AND MINOR; IDOLATRY AND IDOLATERS). Indeed, it is the only sin other than polytheism (see POLYTHEISM AND ATHEISM) for which the Qurʾān explicitly threatens eternal damnation (see ETERNITY; ESCHATOLOGY), at least in cases where the victim is a believer in God, as in Q 4:93, "Whosoever intentionally kills a believer is punished in hell (see HELL AND HELLFIRE), to dwell therein forever, with the anger of God and his curse (q.v.); and God prepares for him an awful punishment" (see REWARD AND PUNISHMENT). The best reading of the Qurʾān, however, would also extend this threat to include the intentional murder of any person, simply by virtue of the victim's humanity. This non-sectarian reading of the absolute immorality of murder (see ETHICS AND THE QURʾĀN) is based on the general language of Q 5:32, which states in full: "Whosoever kills another — unless for murder or highway robbery *(fasād fī l-arḍ)* — it is as though he has killed the whole of humanity. And, whosoever saves a life (q.v.), it is as though he has saved the whole of humanity."

This verse appears at the end of the story of Cain and Abel (q.v.), and the Qurʾān describes this rule as having been decreed for the Children of Israel (q.v.). None of the commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), however, suggest it is limited to that group but, instead, assume that its significance also extends to Muslims. One report attributed to al-Ḥasan al-Baṣrī (d. 110/728) explains this extension as follows: "Why should the blood of Jews (see JEWS AND JUDAISM) be more precious to God than our blood?" (Ṭabarī, *Tafsīr,* x, 239, ad Q 5:32). According to the Qurʾān, Cain killed Abel because he was jealous when his sacrifice to God was rejected but Abel's was not. When Cain resolved to kill Abel and informed him of that intention, Abel appears in the Qurʾān to accept calmly his brother's decision, announcing that he would rather die than kill his own brother unlawfully (see LAWFUL AND UNLAWFUL; BROTHER AND BROTHERHOOD). Indeed, Abel's apparent willingness to submit to his brother's plan gave pause to interpreters of the Qurʾān who argued that Abel must have defended himself. Accordingly, they agreed that he only meant that he would not kill his brother in self-defense for fear of killing him unlawfully. Alternatively, some argued that self-defense might not have been allowed at that time.

The classical commentators do not give an explicit answer about the relationship of Q 4:93, where the threat of eternal punishment for murder is expressly associated with the murder of a believer (see BELIEF AND UNBELIEF; COMMUNITY AND SOCIETY IN THE QURʾĀN), to the more general language of Q 5:32, except by explaining how it is possible to equate the murder of one person with the murder of all humankind. Indeed, this latter problem occupies most of the attention of the commentators. Al-Ṭabarī (d. 310/923; *Tafsīr,* ad Q 5:32) reports several different opinions on the meaning of this seemingly problematic analogy, beginning with an opinion attributed to Ibn ʿAbbās (d. 69/688). According to this report, *nafs,* "person," as used in Q 5:32, does not mean a generic person, but rather connotes either a prophet (see

PROPHETS AND PROPHETHOOD) or a religious leader (imām, q.v.). Most opinions al-Ṭabarī reports, however, suggest that the analogy is conceptual, viz. the sin of intentional murder should be deemed as monstrous as killing the whole of humanity. Al-Ṭabarī accepts this position mainly on the corroborating evidence of Q 4:93, which conclusively establishes the monstrosity of even one intentional murder. Al-Rāzī (d. 606/1209; *Tafsīr,* ad Q 5:32) further develops this argument, saying that the analogy has three plausible interpretations. The first is that humans should deem the intentional killing of even one of them as heinous as killing all of them; the second is that humans should act just as urgently to prevent the murder of one person as they would to prevent the murder of their species; and the third is that someone who is prepared to kill another intentionally for worldly gain, is prepared to kill again, and thus represents a threat to all humanity.

The question unanswered by al-Rāzī and al-Ṭabarī, however, is why the sin of murdering one person is morally comparable to killing all humanity. Al-Zamakhsharī (d. 538/1144; *Kashshāf,* ad Q 5:32) tries to explain why this is so. He argues that all human beings share certain common attributes, namely dignity *(karāma)* and a personal right to life *(ḥurma)*. An intentional murder does more than kill a single life; it also destroys a being whom God has honored and to whom God has granted this right to bodily integrity, thereby insulting something that God has honored. Thus, the relevant aspect of the analogy comes from the spiritual dignity humans enjoy as God's privileged act of creation (q.v.). Intentional murder, then, is not simply a despicable act for a fleeting gain; it is also a direct assault on God's creative plan (see also COSMOLOGY).

This last notion, while only implied by al-Zamakhsharī, is made explicit by al-Ṭabāṭabā'ī (d. 1982). He argues that humanity, although characterized by plurality, is united by a common essence that each member of the group enjoys. It is this trait of humanity that God wants to preserve throughout time. Intentional murder is then a direct interference with God's plan to preserve the human race (see also WAR; JIHĀD; HOSTAGES; DEATH AND THE DEAD).

Musaylima

Musaylima b. Thumāma b. Kabīr b. Ḥabīb b. al-Ḥārith b. ʿAbd al-Ḥārith, a leader of the Banū Ḥanīfa and rival of the Prophet. Muslim sources derisively nickname him "Musaylima the liar" (*al-kadhdhāb,* see LIE). Musaylima is a diminutive form of Maslama; this can be deduced from a verse of ʿUmāra b. ʿUkayl (Mubarrad, *Kāmil,* iii, 26).

The basis of the rivalry between Muḥammad and Musaylima was the latter's claim to prophethood (see PROPHETS AND PROPHETHOOD). Musaylima made his people believe that he was receiving revelation from God the Merciful (*al-Raḥmān,* see GOD AND HIS ATTRIBUTES) through the angel Gabriel (q.v.). It is essential to stress that

Musaylima never denied the prophethood of Muḥammad; he rather claimed that he was destined to share this mission with him. In all their encounters, Muḥammad categorically rejected the quest of Musaylima to share his mission or be appointed Muḥammad's successor after his death (see CALIPH; POLITICS AND THE QUR'ĀN; COMMUNITY AND SOCIETY IN THE QUR'ĀN). The letters exchanged between them bear clear evidence of their contrasting attitudes. Musaylima wrote to Muḥammad using the title "Messenger (q.v.) of Allāh" and claimed that God bestowed on him partnership in prophethood *(fa-innī qad ushriktu fī l-amri maʿaka)*. "Half of the earth (q.v.) was given to Quraysh (q.v.) and the other half was allotted to us (i.e. to Banū Ḥanīfa), but Quraysh are people who exceed their bounds." In his response, the Prophet addresses Musaylima as "the liar," asserts that the earth (in its entirety) belongs to God who gives it "as heritage to whomever he pleases of his servants" (Bayhaqī, *Maḥāsin,* i, 49; see GEOGRAPHY; COSMOLOGY).

Early traditions (see ḤADĪTH AND THE QUR'ĀN) may help establish the period of Musaylima's activity and his connections with Mecca (q.v.). According to reliable sources, he married Kayyisa bint al-Ḥārith of the Meccan aristocratic clan of ʿAbd Shams (see TRIBES AND CLANS). Musaylima was her second husband. The Prophet met Musaylima in Medina (q.v.) several times (it is reported that when Musaylima arrived in Medina for the first time accompanied by a unit of Banū Ḥanīfa warriors, he stayed in Kayyisa's grove). In reference to the impertinent demands of Musaylima, Muḥammad refused to give him "even a splinter of a palm branch" which he held in his hand. At a later meeting with a delegation of Banū Ḥanīfa, the members of the delegation decided to embrace Islam, but changed their minds after returning to Yamāma, and aligned themselves with Musaylima instead. Musaylima was held in high esteem: his companions called him "the merciful one of Yamāma" *(raḥmān al-Yamāma)*. Also, as befitted the usual manner in which holy persons, soothsayers (q.v.) and prophets appeared, he was veiled and disguised. There are many common features and methods in the prophetic careers of Musaylima and Muḥammad. Like Muḥammad, Musaylima claimed to be the recipient of divine revelation (see REVELATION AND INSPIRATION). Further, he claimed to heal the sick (see ILLNESS AND HEALTH) and work miracles (see MIRACLE). Naturally enough, Muslim tradition describes his claims to such powers as totally baseless.

In Yamāma, Musaylima succeeded in gaining the support of many tribal groups who came under his control after the death of Hawdha, the former chief of the area in the service of Persia. In the last years before the Prophet's death, he attempted to establish a social order based on an alliance (see CONTRACTS AND ALLIANCES) between the people of Yamāma and tribal groups which moved to Yamāma and settled there. Musaylima erected a safe area *(ḥaram)* in which certain places inhabited by his allies *(qurā al-aḥālif)* were included. According to Muslim sources, the *ḥaram* was managed in a corrupt way and the Banū Usayyid, who served as its guardians mistreated other groups. When these groups complained, Musaylima did not redress the injustice. Instead, he read to them "the answer he got from heaven," meaning a verse from his Qur'ān: "(I swear) by the darkness of the night and by the black wolf, the Usayyid did not violate [the sanctity] of the *ḥaram*" (see SANCTITY AND THE SACRED; JUSTICE AND INJUSTICE). When the Usayyid continued their transgressions, another verse was released: "[I swear] by the dark night and by the softly treading

lion, the Usayyid cut neither fresh nor dry."

The death of the prophet Muḥammad raised the hopes of the community of Musaylima. In one of the speeches said to have been delivered in that period and which was directed to the Banū Ḥanīfa, Musaylima stressed the qualities of his people and his land in comparison with Quraysh and Mecca: "What made Quraysh more deserving of prophethood than yourselves? They are not greater in number than you; your land is wider than their land. Gabriel (Jibrīl) descends from heaven like he used to descend to Muḥammad." Musaylima claimed that the revelation transmitted to Muḥammad had ceased with his death and henceforth it would be transmitted to him alone. The feeling that he was now the sole prophet is expressed in a verse attributed to Musaylima:

O you, woman, take the tambourine and play,
and disseminate the virtues of this prophet!
Passed away the prophet of Banū Hāshim,
and rose up the prophet of Banū Yaʿrub
(Ibn Kathīr, *Bidāya*, vi, 341).

Musaylima's adherents grew in number and prestige. The situation in Yamāma inspired a feeling of security and peace (q.v.). This feeling was, however, shaken by the unexpected arrival of a former soothsayer (see DIVINATION; FORETELLING), who claimed that she had been granted revelations from heaven. Her name was Sajāḥ bt. al-Ḥārith. She was a Christian of the tribe of Tamīm but lived among the Christian Arabs of Taghlib (see CHRISTIANS AND CHRISTIANITY; ARABS). According to some sources, the forces led by Sajāḥ intended to attack the troops of Abū Bakr under the command of Khālid b. al-Walīd who set out to crush the apostasy (q.v.; *ridda*) of the tribes after the Prophet's death. In her forces were warriors from her people and others who joined them. After some skirmishes, she decided to fight Musaylima and conquer Yamāma. Musaylima invited her to meet him in order to negotiate a peaceful solution. He recognized Sajāḥ as his partner in prophethood and declared that the land allotted by God to Quraysh would be transferred to Sajāḥ and her people. The other half would belong to Musaylima. Moreover, Musaylima granted Sajāḥ the crops Yamāma had produced that year and promised her the crops of the next year. Sajāḥ returned to the Jazīra after a few days. (Some reports maintain that Musaylima married Sajāḥ, but differ as to whether she remained with him until his death, or if he cast her off soon after their marriage; cf. Vacca, Sadjāḥ.)

Abū Bakr became aware of the rising authority of Musaylima and decided to send Khālid b. al-Walīd at the head of the Muslim army to fight Musaylima and his forces. He wrote a letter to Khālid b. al-Walīd, stressing the power of the Banū Ḥanīfa and their courage. The bravery of Banū Ḥanīfa is said to have been mentioned in Q 48:16. On his way to fight Musaylima, Khālid b. al-Walīd informed his army of Abū Bakr's letter concerning Banū Ḥanīfa. In the clashes with the Banū Ḥanīfa, a division of the army that came from those Medinans who had assisted Muḥammad in his emigration (q.v.) from Mecca (the Anṣār, see EMIGRANTS AND HELPERS) attacked Yamāma and fought bravely together with the Meccans who had fled with Muḥammad (the Muhājirūn). They were summoned to help out in dangerous situations in the bloody battle of ʿAqrabāʾ. At the outset, the Banū Ḥanīfa succeeded in repulsing the bedouin (q.v.) attacks. The solution of Khālid was to put the bedouin fighters of the army behind the lines of the well motivated and stead-

fast warriors of the Emigrants (Muhājirūn) and Helpers (Anṣār). Cases of exemplary bravery on the part of these groups are recorded in the sources. Eventually, Waḥshī killed Musaylima with his javelin in a place dubbed in the Muslim sources as "the Garden of Death." According to some far-fetched traditions, Musaylima was 140 or 150 years old when he died in 11/632.

The intense loyalty of Musaylima's followers can be gauged from the various stories that have been passed down. A woman who heard about his death exclaimed, "Alas, prince of the believers!" *(wā amīr al-muʾminīnāh)*. A wounded warrior of the Banū Ḥanīfa, in his agony, asked a Muslim warrior to kill him in order to put him out of his misery. Upon hearing of Musaylima's death, he remarked: "A prophet whom his people caused to perish" *(nabiyyun ḍayyaʿahu qawmuhu)*. The Muslim warrior, enraged by these words, gave him the *coup de grâce*.

The belief in the prophethood of Musaylima survived among his believers in the first decades of Islam. His adherents used to gather in the mosque of the Banū Ḥanīfa in Kūfa and the call *lā ilāha illā llāh wa-Musaylima rasūlu llāh* was heard from the minaret. ʿAbdallāh b. Masʿūd ordered the detention of the followers of Musaylima. Some repented and were released. Those who clung to their faith were executed.

Muṣḥaf

A non-qurʾānic term (pl. *maṣāḥif*) denoting the written corpus of the Qurʾān; in both classical and modern contexts this term creates a theological distinction between the individual's copy of the Qurʾān and the hypostatized notion of God's speech (q.v.; see also HEAVENLY BOOK; PRESERVED TABLET; WORD OF GOD; BOOK). The term stems from the same root as the word *ṣuḥuf,* "pages, books," which the Qurʾān sometimes uses for documents of superhuman origin (for lexicographical details see Burton, Muṣḥaf, 668-9; see also INSTRUMENTS; WRITING AND WRITING MATERIALS). Several issues are connected with the written corpus of the Qurʾān: its origin; the history and art of writing down the Qurʾān (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; CALLIGRAPHY; ARABIC SCRIPT; ART AND ARCHITECTURE AND THE

QUR'ĀN; ORNAMENTATION AND ILLUMINATION); its orthography (q.v.) and reading signs; and the etiquette of using the *muṣḥaf* (see MANUSCRIPTS OF THE QUR'ĀN; EVERYDAY LIFE, QUR'ĀN IN; RITUAL AND THE QUR'ĀN). The following will treat only the first issue; for the other aspects see the respective entries (see also TEXTUAL HISTORY OF THE QUR'ĀN).

The question of how the written corpus of the Qur'ān came into being is disputed among Muslim and Western scholars (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN). The dispute results from a difference in opinion concerning the reliability of the sources that can be used to answer the question (see CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN). No text or partial text of the Qur'ān can be reliably dated to the lifetime of Muḥammad: to date, there is no textual evidence that the Prophet himself or scribes whom he may have used penned any of the oldest surviving qur'ānic manuscripts (see ILLITERACY). Early manuscripts of the Qur'ān are rare and their dating is controversial (see CHRONOLOGY AND THE QUR'ĀN). The text itself does not contain clear indications as to its compiler. The view that the written corpus of the Qur'ān is a reliable collection of revelations received by Muḥammad is, therefore, essentially based on the Islamic tradition (see INIMITABILITY; REVELATION AND INSPIRATION; EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). Many Western scholars doubt the reliability of this tradition, at least as far as the first Islamic century is concerned (see INFORMANTS). Nevertheless, most of them accept the gist of the reports on the collection and edition of the Qur'ān as historically true.

According to current Muslim opinion, the written corpus of the Qur'ān as it exists now — and as it is also attested in manuscripts dating at least from the third/ninth century, possibly even from earlier times — came into being as follows: When the Prophet died, there was no complete and definitive collection of the revelations that had been authorized by him. More or less extensive pieces of qur'ānic revelation had been committed to memory by his followers (see ORALITY; MEMORY); and several individuals had written some of the revelation down on various materials. Shortly after his death, the first collection of these written and memorized records of the revelation was made by order of the first caliph (q.v.), Abū Bakr (r. 11-13/632-4) and it was written on leaves *(ṣuḥuf)*. The reason given for this collection and compilation was the death of several Companions (see COMPANIONS OF THE PROPHET). These men, who were famous for their knowledge of the Qur'ān, had died during the wars of apostasy (q.v.; *ridda*) and people were afraid that with further deaths parts of the Qur'ān might become lost. Abū Bakr gave Zayd b. Thābit, a former scribe of the Prophet, the task of collecting all of the Qur'ān that was available. When Abū Bakr died, the leaves on which Zayd had written the Qur'ān passed to the caliph's successor, ʿUmar (r. 13-23/634-44); and, after his death, to his daughter, Ḥafṣa (q.v.), who was also one of the widows of Muḥammad (see WIVES OF THE PROPHET). Some twenty years after Abū Bakr's collection, during the caliphate of ʿUthmān (r. 23-35/644-56), dissension between followers of other collections of the Qur'ān induced the caliph to issue an official collection of the Qur'ān, to deposit a copy in the most important administrative centers of the empire and to suppress other existing collections. This canonical version was again edited by the Medinan Zayd b. Thābit, helped by three men from Quraysh (q.v.), on the basis of the collection he had already made at Abū Bakr's request, and which Ḥafṣa put at the disposal of the committee. This caliphal

edition of the Qurʾān, *al-muṣḥaf al-ʿuthmānī*, quickly achieved universal acceptance, becoming the *textus receptus* among Muslims. Such, in summary, is the traditionally accepted Muslim view of the origin of the written corpus of the Qurʾān. It is based on two reports that are transmitted in a large number of sources. Alternative accounts, which are also found in Islamic sources (see Schwally, Sammlung, 15-8, 50-4; Burton, *Collection,* 120-8; 138-59), found no permanent recognition.

Some Western scholars have challenged the Muslim view about the history of the *muṣḥaf*. F. Schwally rejected the historicity of the first collection, that made at the behest of Abū Bakr. Others considered the Islamic narrative on this double collection completely fictitious and provide various suggestions for the date of origin of the written corpus: the time of the caliph ʿAbd al-Malik (r. 65-86/685-705, Casanova, *Muḥammad;* Mingana, Transmission of the Ḳurʾān; Crone and Cook, *Hagarism*), or the third/ninth century (J. Wansbrough, *QS*), or the time of the Prophet himself (Burton, *Collection*). According to most of these scholars, the traditional reports concerning the collection and edition of the Qurʾān were fabricated during the third/ninth century. A recent study (Motzki, Collection) shows, however, that the two traditions upon which the current Muslim understanding of the history of the *muṣḥaf* is based have Ibn Shihāb al-Zuhrī (d. 124/742) as an undeniable common link (see ḤADĪTH AND THE QURʾĀN), and both were already in circulation by the first quarter of the second/eighth century. The content of these traditions probably goes back to the last decades of the first/seventh century. Accordingly, an official written corpus must have already existed in the second half of the first/seventh century. This suggests that the time of ʿUthmān may indeed be a reasonable date of origin for the *textus receptus* of the Qurʾān, a conclusion that is corroborated by several reports about ʿUthmān, which seem to be independent of each other. Yet, what the early dating of these traditions means for the reliability of the details they report still needs to be investigated.

The above-mentioned traditions suggest that before the official edition of the Qurʾān was promulgated, several written compilations of codices of the Qurʾān existed, which were made or owned by different Companions. Although they became obsolete after the emergence of the official version and allegedly were suppressed, there are reports of scholars who, as late as the fourth/tenth century, claim to have seen manuscripts based on Companion codices (Ibn al-Nadīm, *Fihrist,* 29). Variants of these *maṣāḥif* from the *textus receptus* were collected and discussed as early as the beginning of the second/eighth century (see Motzki, *Origins,* 110-11), a practice continued in subsequent centuries (see READINGS OF THE QURʾĀN). The reliability of the alleged variants is difficult to ascertain. According to Burton (*Collection,* 211) they are fictitious and contribute nothing to the understanding of the history of the written corpus. In view of the early date of some reports concerning the Companion codices, however, the issue requires further study.

According to Islamic tradition and as evidenced in the earliest extant manuscripts of the Qurʾān, the first copies of the *muṣḥaf* were devoid of diacritical points, vowel signs, markers to indicate the end of the verses and of the sūras (q.v.), and the names of the sūras (see RECITATION OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN; ARABIC LANGUAGE; ARABIC SCRIPT). Although these devices to make the reading of a text unambiguous (see AMBIGUOUS; DIFFICULT PASSAGES) and to facilitate its use developed only in the course of the first Islamic centuries (see

GRAMMAR AND THE QURʾĀN), the question of the permissibility of adding diacritical points *(naqaṭa)* and vowels *(shakala)* to the *muṣḥaf* was already being discussed by scholars during the first half of the second/eighth century (see Ibn Wahb, *Jāmiʿ*, 26).

Muʿtazila

A religious movement in early Islam, the Muʿtazila became the dominant theological school in the third/ninth and fourth/tenth century (see THEOLOGY AND THE QURʾĀN). The movement was allegedly founded by Wāṣil b. ʿAṭāʾ (d. 131/728-9) who was towards the end of his life joined by ʿAmr b. ʿUbayd (d. 143/760 or 144/761), a prominent disciple of al-Ḥasan al-Baṣrī (d. 110/728). Most issues related to the incubation phase of the movement as well as the original meaning of the term Muʿtazila — which has the sense of "those who dissociate themselves, who keep themselves apart" — remain enigmatic. Later sources offer a number of different explanations, sometimes blatantly tendentious. It was apparently Abū l-Hudhayl (d. ca. 227/841) who first defined the five principles of the Muʿtazila — the principle of God's unity (*tawḥīd,* see GOD AND HIS ATTRIBUTES), of God's justice (*ʿadl,* see JUSTICE AND INJUSTICE), of the promise and the threat (*al-waʿd wa-l-waʿīd,* see REWARD AND PUNISHMENT), of the intermediate state of the Muslim sinner (*al-manzila bayn al-manzilatayn,* see SIN, MAJOR AND MINOR) and the principle of enjoining what is good and forbidding what is evil (*al-amr bi-l-maʿrūf wa-l-nahy ʿan al-munkar,* see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING) — as indispensable to Muʿtazilī identity. Later authors differentiate between two periods of Muʿtazilism following the incubation phase. In the early phase (ca. 200-35/815-50), when Muʿtazilism was at the height of its political influence and public prestige, the representatives of the movement displayed great diversity on the doctrinal level. In the second, scholastic phase Muʿtazilī thought was systematized. Coherent theological frameworks were formulated by Abū l-Qāsim al-Kaʿbī al-Balkhī (d. 319/913),

who was identified with Baghdād, and by Abū ʿAlī al-Jubbāʾī (d. 303/915), who was identified with Baṣra; the latter was followed by his son Abū Hāshim (d. 321/933), the founder of the so-called Bahshamiyya or Bahāshima. The last innovative school within Muʿtazilism originated with Abū l-Ḥusayn al-Baṣrī (d. 436/1044), who developed independent theological views that set him apart from the school of Abū Hāshim. Despite much criticism by the Bahshamiyya and later heresiographers that he introduced philosophy (see PHILOSOPHY AND THE QURʾĀN) under the cover of theology, Abū l-Ḥusayn's views were successful to the extent that his school established itself side by side with the Bahshamiyya. In some areas the Muʿtazila persisted until the Mongol invasion at the beginning of the seventh/thirteenth century. Muʿtazilism was also adopted by the Zaydiyya and the Twelver Shīʿa (see SHĪʿISM AND THE QURʾĀN) and determined their respective theological outlooks for centuries to come.

The nature of the Qurʾān

Because of their uncompromising interpretation of God's unity *(tawḥīd)* as expressed in Q 27:26, Q 112, etc., the Muʿtazilīs were strictly opposed to the admission of anything co-eternal with God (see ETERNITY). This applied first and foremost to God's essential attributes, which must be identical with him and not different eternal attributes or entitative determinants. This also applied in their view to the Qurʾān — the speech of God (*kalām Allāh,* see WORD OF GOD; SPEECH) — that cannot possibly be co-eternal with God but was necessarily created in time (see CREATEDNESS OF THE QURʾĀN). Thus they accused those denying that the Qurʾān had been created of asserting its eternity and of destroying God's unity by claiming that something was co-eternal with him. Among the standard Muʿtazilī arguments was Q 2:106, which was also the qurʾānic basis for the doctrine of abrogation (q.v.). The centrality of this doctrine for the Muʿtazilīs can be seen from the numerous titles of works on *khalq al-Qurʾān* listed by Ibn al-Nadīm (fl. fourth/tenth cent.) in the section of his *Fihrist* devoted to the Muʿtazila (Ibn al-Nadīm-Dodge, i, 388-9, 391, 393, 395, 396-7, 401, 412, 414-6, 418, 425, 429-30). It was basically this insistence of the Muʿtazilīs — on the createdness of the Qurʾān, in the sense of its temporality, and their accusation that the opponents, in fact, held to the eternity of the Qurʾān — which provoked the traditionists to combine their denial of the createdness of the Qurʾān with the affirmation of its eternity or pre-existence. This line of argumentation was first formulated by Aḥmad b. Ḥanbal (d. 241/855). In the pre-*miḥna* period (see INQUISITION), by contrast, the conflict over the nature of the Qurʾān was not concerned with the question of its temporality versus its eternity. Rather, the discussion was whether God speaks in a literal sense, i.e. whether the Qurʾān is the speech of God, as the upholders of an anthropomorphic concept of God held (see ANTHROPOMORPHISM), or whether God does not speak in a literal sense but rather creates the sound of speech which can be heard, as was the view attributed to Jahm b. Ṣafwān (d. 128/745). Both positions implied the temporality of the Qurʾān. Another discussion on the nature of the Qurʾān in the pre-*miḥna* phase associated with Abū Ḥanīfa (d. 150/767) and Imām Jaʿfar al-Ṣādiq (d. 148/765) revolved around the issue of whether the Qurʾān, in accordance with the commonly accepted dogma that everything besides God is created, is also created (see CREATION). Whereas Imām al-Ṣādiq reportedly rejected this conclusion, arguing that the

Qurʾān is neither creator nor created, but rather the speech of God, Abū Ḥanīfa apparently accepted the argument and held that the Qurʾān indeed is created. Again, those who denied the createdness of the Qurʾān in this second discussion refrained from combining their view with the notion of the uncreatedness or even eternity of the Qurʾān. It was therefore only after the *miḥna* and as an immediate result of the Muʿtazilī argumentation on this issue that the conflict turned on the question of the createdness of the Qurʾān, in the sense of its temporality, versus its uncreatedness in the sense of its eternity. A further difference to the pre-*miḥna* period was that, unlike the Jahmiyya, the Muʿtazilīs did not deny that God really speaks, and they affirmed that the Qurʾān is indeed the speech of God. The difference between human and divine speech is that God, because of his omnipotence (see POWER AND IMPOTENCE), does not need instruments when he produces speech. It was only Muʿammar (d. 215/830) among the Muʿtazilīs who deviated from this view. According to him, God does not actually speak nor does he have actual speech. He also maintained that the Qurʾān is brought forth *(muḥdath)* — not truly created — by the substratum in which it inheres. For the Qurʾān is an accident and God does not create accidents.

The majority of the Muʿtazilīs, like almost all theological schools, considered the Qurʾān as the principal miracle confirming Muḥammad's prophethood (see PROPHETS AND PROPHETHOOD; MIRACLE). The proof of its miraculous character was human inability to match the Qurʾān despite the challenge to do so (e.g. Q 10:38; 11:13; 52:33-4; also Q 2:23-4; 17:88; see INIMITABILITY). They differed among themselves, however, on the question of why those who were challenged were unable to match it. While some Muʿtazilīs maintained that the miraculous inimitability of the Qurʾān arises from its intrinsic quality, others denied this and argued that it is due to God's preventing humankind from matching it. The latter position was known as the doctrine of prevention *(ṣarfa)*. The view that God deprived the people of the power to match the Qurʾān is usually ascribed to Abū Isḥāq al-Naẓẓām (d. around 221/836), who was apparently the first to consider the Qurʾān a miracle. Another early representative of the *ṣarfa* doctrine was al-Jāḥiẓ (d. 255/869), who also composed a book on the choice and arrangement of words in the Qurʾān *(Kitāb fī l-iḫtijāj li-nazm al-Qurʾān),* as did Ibn al-Ikhshīd (d. 326/937; *Kitāb Naẓm al-Qurʾān,* see FORM AND STRUCTURE OF THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). Al-Jāḥiẓ' contemporary ʿAbbād b. Sulaymān (d. ca. 250/864) and the latter's teacher Hishām al-Fuwaṭī (d. ca. 218/832) are reported to have still denied that the Qurʾān is to be considered as a miracle proving Muḥammad's prophetic mission, although both subscribed to the doctrine of *ṣarfa* (van Ess, *TG,* iv, 7, 41, 609). The *ṣarfa*-doctrine was held by most of the representatives of the school of Baghdād. The majority of the later Baṣran Muʿtazilīs rejected the doctrine of prevention, arguing that the inimitability of the Qurʾān was based on the rhetorical uniqueness of the book (q.v.) and the excellence of its style (see RHETORIC OF THE QURʾĀN). ʿAbd al-Jabbār (d. 415/1025), for example, who devotes an entire volume of his *Mughnī* to the issue of *iʿjāz,* explains the miraculous inimitability of the Qurʾān with its intrinsic stylistic excellence and its eloquence *(faṣāḥa)* and argues against the doctrine of prevention. The earliest Muʿtazilī treatises on the issue of the miraculous inimitability of the Qurʾān were composed as early as the second half of the second/eighth century by two students of al-

Jubbāʾī: Muḥammad ʿUmar al-Bāhilī (d. 300/913) wrote a treatise entitled *Kitāb Iʿjāz al-Qurʾān;* and Muḥammad b. Zayd al-Wāsiṭī (d. 306/918) wrote *Kitāb Iʿjāz al-Qurʾān fī nazmihi wa-taʾlīfihi*. Neither of these is preserved. The earliest extant independent Muʿtazilī treatise on this issue carrying the word *iʿjāz* in its title was written by ʿAlī b. ʿĪsā al-Rummānī (d. 384/994; *al-Nukat fī iʿjāz al-Qurʾān,* in Rummānī et al., *Rasāʾil*).

Qurʾānic exegesis

Among the extant Muʿtazilī commentaries on the Qurʾān, al-Zamakhsharī's (d. 538/1144) *al-Kashshāf ʿan ḥaqāʾiq al-tanzīl* is the most renowned. Its popularity was grounded in its mostly philological character; by contrast, it rarely provides theological argumentation, although al-Zamakhsharī was familiar with the last two school traditions within Muʿtazilism, the followers of Abū Hāshim al-Jubbāʾī and those of Abū l-Ḥusayn al-Baṣrī. Most of the earlier Muʿtazilī commentaries, which were apparently much more representative of the Muʿtazilī tendency, are lost. In some cases, only titles of works are preserved; for other commentaries, substantial portions are preserved in the writings of later authors. According to Ibn al-Nadīm, Ḍirār b. ʿAmr (d. 180/796?) composed two exegetical works, a commentary *(tafsīr)* and an interpretation *(taʾwīl)* of the Qurʾān (Ibn al-Nadīm-Dodge, i, 416-7). It is not clear whether these two titles refer to two different works or to one and the same, nor whether the(se) work(s) constituted complete Qurʾān commentaries or only dealt with selected passages. Among the Muʿtazilīs of the early third/ninth century, Ibn al-Nadīm reports that Bishr b. al-Muʿtamir (d. 210/825-6) composed a *Kitāb Taʾwīl mutashābih al-Qurʾān,* and Jaʿfar b. Ḥarb (d. 236/850) authored a *Kitāb Mutashābih al-Qurʾān,* both of which are lost (Ibn al-Nadīm-Dodge, i, 80, 391, 411). The latter-mentioned work was consulted by the Muʿtazilī Ibn al-Khallāl when he composed his *Radd ʿalā l-jabriyya al-qadariyya fī mā taʿallaqū bihi min mutashābih al-Qurʾān al-karīm* during the fourth/tenth century (van Ess, *TG,* vi, 288, no. 3). Ibn al-Nadīm further reports that Abū l-Hudhayl composed a book on *Mutashābih al-Qurʾān* (Ibn al-Nadīm-Dodge, i, 80; cf. also van Ess, *TG,* iii, 265 f.; v, 367-9, no. 55), traces of which are apparently preserved in ʿAbd al-Jabbār's *Mutashābih al-Qurʾān,* in al-Faḍl b. al-Ḥasan al-Ṭabarsī's (d. 548/1153) *Majmaʿ al-bayān fī tafsīr al-Qurʾān* and Muḥammad b. al-Ḥusayn al-Sharīf al-Raḍī's (d. 406/1015) *Ḥaqāʾiq al-taʾwīl.* Abū l-Hudhayl apparently defined in this work the criteria that need to be applied in Qurʾān exegesis. On the issue of how knowledge can be gained from the Qurʾān, he addressed the question whether passages of the Qurʾān that are formulated in a general manner may be restricted to a particular group of people. The issue was raised by the Murjiʾīs, who denied that qurʾānic verses that speak about the fate of the unbelievers (see BELIEF AND UNBELIEF) and the eternal punishment in hell (see HELL AND HELLFIRE) in a general manner are to be applied to Muslims also. As a Muʿtazilī, Abū l-Hudhayl believed in eternal punishment for grave sinners and therefore argued that general qurʾānic statements are to be understood in a general manner as long as there is no indication to the contrary. Abū ʿAlī al-Jubbāʾī later on adopted and further elaborated Abū l-Hudhayl's view, whereas his son Abū Hāshim took the opposite view. During the second quarter of the third/ninth century, Qāsim b. Khalīl al-Dimashqī (al-Dimishqī), who, according to al-Kaʿbī, was a student of Abū l-Hudhayl, wrote a commentary of which no traces are preserved (Ibn al-Nadīm-Dodge, i, 393;

van Ess, *TG,* iv, 236-7). Extensive systematic commentaries on the Qurʾān were composed by Abū Bakr al-Aṣamm (d. 201/816), Abū ʿAlī al-Jubbāʾī (d. 303/915), Abū l-Qāsim al-Kaʿbī al-Balkhī (d. 319/931) and by Abū Muslim Muḥammad b. Baḥr al-Iṣfahānī (d. 322/934; cf. Ibn al-Nadīm-Dodge, i, 76), whose *Ǧāmiʿ al-taʾwīl li-muḥkam al-tanzīl (*or *Ǧāmiʿ ʿilm al-Qurʾān)* is reported to have consisted of 14 or 20 volumes, or even more (Sezgin, *GAS,* i, 42-3; Kohlberg, *Medieval Muslim,* 203-4, no. 231). Although, again, none of these *tafsīr* works is preserved, ample quotations from them survive in the extant works of later authors, such as *al-Tafsīr al-kabīr* of Fakhr al-Dīn al-Rāzī (d. 606/1210), the Imāmī exegetical works of Abū Jaʿfar al-Ṭūsī (d. 459/1067; *al-Tibyān fī tafsīr al-Qurʾān*) and of al-Ṭabrisī *(Majmaʿ al-bayān)* and, most importantly, al-Ḥākim al-Jushamī's (d. 494/1101) *al-Tahdhīb*. Al-Aṣamm apparently dealt in his commentary on the Qurʾān with historical and philological issues as well as with doctrinal matters (van Ess, *TG,* ii, 403-7; v, 198-202 [texts nos. 15-21]). The work was consulted by Abū ʿAlī al-Jubbāʾī and fragments of it are preserved in Abū Manṣūr al-Māturīdī's (d. 333/944) *Taʾwīlāt ahl al-sunna,* in Aḥmad b. Muḥammad al-Thaʿlabī's (d. 427/1035-6) *al-Kashf wa-l-bayān fī tafsīr al-Qurʾān* and particularly in *al-Tahdhīb fī l-tafsīr* of al-Ḥākim al-Jushamī (d. 484/1091); the latter usually gives al-Aṣamm's view together with those of Abū ʿAlī al-Jubbāʾī and Abū Muslim al-Iṣfahānī. Al-Aṣamm's commentary is also often quoted by Abū l-Futūḥ al-Rāzī (first half sixth/twelfth century), by his contemporary al-Ṭabarsī and later on by Fakhr al-Dīn al-Rāzī, although it may be assumed that those later authors received al-Aṣamm's commentary through intermediary sources. No mention of al-Aṣamm's *Tafsīr* is to be found, by contrast, in al-Ṭabarī's (d. 310/923) *Ǧāmiʿ al-bayān ʿan taʾwīl āy al-Qurʾān,* although the possibility that the latter was familiar with the work cannot be excluded, nor is there any mention of his commentary in ʿAbd al-Jabbār's *Kitāb Mutashābih al-Qurʾān* or in Abū Jaʿfar al-Ṭūsī's *al-Tibyān*. To judge from the preserved fragments, al-Aṣamm endeavored to develop a comprehensive qurʾānic theology, dealt with the issue of abrogation, and formulated an original view on the distinction of clear *(muḥkamāt)* and ambiguous (q.v.) verses *(mutashābihāt),* both of which can be grasped rationally; the only difference is that in the latter case deeper reflection is called for. Quotations from the multi-volume commentary of al-Kaʿbī are preserved in the *Amālī* of al-Sharīf al-Murtaḍā (d. 436/1044) and possibly in the *Kitāb al-Tawḥīd* of al-Māturīdī (d. 333/944). In particular, later commentaries preserve ample quotations and paraphrases of Abū ʿAlī al-Jubbāʾī's exegesis; this is especially true of *al-Tibyān* of Abū Jaʿfar al-Ṭūsī and *Majmaʿ al-bayān* of Abū ʿAlī al-Ṭabrisī among the Imāmīs, of *al-Tafsīr al-kabīr* of Fakhr al-Dīn al-Rāzī and, most significantly, of *al-Tahdhīb fī l-tafsīr* of the Muʿtazilī, later Zaydī, scholar al-Ḥākim al-Jushamī, which still awaits critical editing. On the basis of this material, Daniel Gimaret *(Ǧubbāʾī)* and Rosalind W. Gwynne *(The "Tafsir")* have tried to reconstruct Abū ʿAlī's commentary. Against the exegeses of Abū ʿAlī al-Jubbāʾī and Abū l-Qāsim al-Kaʿbī, Abū l-Ḥasan al-Ashʿarī (d. 324/935) wrote his *Tafsīr al-Qurʾān wa-l-radd ʿalā man khālafa l-bayān min ahl al-ifk wa-l-buhtān wa-naqd mā ḥarrafahu l-Ǧubbāʾī wa-l-Balkhī fī taʾlīfihimā* (Sezgin, *GAS,* i, 604 no. 10), of which only the introduction *(muqaddima)* and fragments are preserved.

Of the apparently very large commentary, *al-Ǧāmiʿ fī ʿilm (*or *tafsīr) al-Qurʾān,* of ʿAlī b. ʿĪsā al-Rummānī (d. 384/994), a fol-

lower of the school of Ibn Ikhshīd, who himself had abridged the commentary of al-Ṭabarī (Ibn al-Nadīm-Dodge, i, 76), only a small portion is extant in manuscript (Sezgin, *GAS,* viii, 112-3). It was highly regarded by later authors and has been used extensively by al-Ṭūsī in his *Tibyān,* the latter being, according to Daniel Gimaret, "un plagiat pur et simple de celui de ʿAlī b. ʿĪsā ar-Rummānī" (Gimaret, *Jubbāʾī,* 23). A contemporary of al-Rummānī, Abū ʿAlī al-Fārisī (d. 377/987), composed a work entitled *Kitāb al-Tatabbuʿ li-kalām Abī ʿAlī al-Jubbāʾī fī l-tafsīr,* which is lost (Sezgin, *GAS,* viii, 110). Also lost is a work of Aḥmad b. Muḥammad al-Khallāl al-Baṣrī (alive in 377/987) entitled *Mutashābih al-Qurʾān,* excerpts of which are preserved in writings of Ibn Ṭāwūs (d. 664/1266) (Kohlberg, *Medieval Muslim,* 292-3, no. 457). Various exegetical works authored by representatives of the Bahshamiyya, notably of ʿAbd al-Jabbār, are extant; to these belong his *Tanzīh al-Qurʾān ʿan al-maṭāʿin,* which was published twice before the discovery of its author's *summa theologica* during the 1950s in Yemen (Cairo 1326, 1329) and his *Mutashābih al-Qurʾān* which is concerned with the ambiguous verses, i.e., those that apparently convey meanings incongruent with Muʿtazilī positions. By contrast, ʿAbd al-Jabbār's most extensive commentary, apparently entitled *al-Muḥīṭ,* seems to be lost. The most significant Muʿtazilī work of exegesis after ʿAbd al-Jabbār was *al-Tahdhīb fī l-tafsīr* of al-Ḥākim al-Jushamī, a student of Abū Ḥāmid Aḥmad b. Muḥammad b. Isḥāq al-Najjār (d. 433/1041), who in turn was a student of ʿAbd al-Jabbār.

Mysterious Letters

The alphabetic characters of the Arabic language (q.v.) that appear in non-verbal combinations at the beginning of certain sūras (q.v.) of the Qurʾān, just after the *basmala* (q.v.). The gift of "letters" came to

the Arabian peninsula by way of a slow evolution of orthographies (see ARABIC SCRIPT; CALLIGRAPHY; ORALITY AND WRITING IN ARABIA). While the whole story is quite complex, the cursive consonantal alphabet of twenty-eight letters in which the Qurʾān was recorded was derived from a form of the Nabatean script, which in turn had descended from Syriac/Aramaic forms (see SYRIAC AND THE QURʾĀN). It ultimately sprang from the same common ancestor whose innovation around 1500 B.C.E. gave rise to the Hebrew alphabet and the south Arabian alphabets that first recorded the exploits of the kings of Sabaʾ (see SHEBA) and Ḥadramawt (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; KINGS AND RULERS). Indeed, with the exception of the far-eastern symbols and syllabaries still in use in China and Japan, every language on the earth is written today with forms that are related in some way to this alphabetic family.

One could hardly say too much regarding the impact of the Qurʾān culturally and literarily on the Arab peoples (see ARABS; LANGUAGE AND STYLE OF THE QURʾĀN). The Qurʾān is considered the epitome of the Arabic language, and the works of the classical grammarians and exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) who examined the inimitability (q.v.; *iʿjāz*) of the Qurʾān laid the groundwork for the rules of Arabic grammar (see GRAMMAR AND THE QURʾĀN). Eventually the Qurʾān was credited with a stabilization of speech (q.v.) and orthography (q.v.) that enabled increased expression, and a consequent advancement of learning (see KNOWLEDGE AND LEARNING). But it must be remembered that a substantial portion of the works of the early grammarians was devoted to attempting to explain those qurʾānic passages that fall outside of the purview of the normative "rules" of Arabic grammar. At an even more basic level, qurʾānic orthography is itself archaic (cf. Nöldeke, *GQ*, iii, 26 f.), and, in fact, can *not* be said to have become "standard." One mystery in the Qurʾān that endures is the existence of seemingly inexplicable combinations of letters that appear at the beginning of twenty-nine of the sūras. They are referred to as "the isolated/disconnected letters" *(al-ḥurūf al-muqaṭṭaʿa)* or "the opening letters" *(ḥurūf al-fawātiḥ)*. These "mystery letters" themselves and the sūras they precede are given here for reference: *alr*, Q 10, 11, 12, 14, 15; *alm*, Q 2, 3, 29, 30, 31, 32; *almr*, Q 13; *almṣ*, Q 7; *ḥm*, Q 40, 41, 43, 44, 45, 46; *ḥmʿsq*, Q 42; *ṣ*, Q 38; *ṭs*, Q 27; *ṭsm*, Q 26, 28; *ṭh*, Q 20; *q*, Q 50; *khyʿṣ*, Q 19; *n*, Q 68; *ys*, Q 36.

Before presenting contemporary and traditional explanations of these letters, mention must be made of the orthography of the mysterious letters in the context of the Arabic script, particularly that of the seventh century. There are eighteen Arabic graphemes *(alif, bāʾ, jīm, dāl, rāʾ, sīn, ṣād, ṭāʾ, ʿayn, fāʾ, qāf, kāf, lām, mīm, nūn, hāʾ, wāw, yāʾ)*, fifteen in the non-final position (identical *bāʾ/nūn/yāʾ* and *fāʾ/qāf*), expressing a total of twenty-eight sounds (for further details, see ARABIC SCRIPT). In the earliest Arabic script, there were no dots to indicate the difference between letters that were represented by the same grapheme, but had different sounds: a *bāʾ* ("b") and a *tāʾ* ("t"), without the presence of, respectively, the single dot below or the double dots above the hooked form of the letter, become indistinguishable. The fourteen letters that compose the mysterious letters represent every consonantal form in Arabic as exemplified in this early script (in which *wāw, fāʾ* and *qāf* were the same grapheme, as were *dāl, dhāl* and *kāf*). Thus, the mysterious letters comprise — comprehensively — the graphemes of the Arabic script of the seventh century: the five that represent only one letter *(alif, lām, mīm, nūn, hāʾ)*, as well as

the other nine *(yāʾ, ḥāʾ, rāʾ, sīn, ṣād, ṭāʾ, ʿayn, qāf, kāf)*. It is not unreasonable to assume, therefore, that these mysterious letters were intended to represent the Arabic alphabet (see Welch, al-Ḳurʾān, 414), shedding new light on passages such as Q 16: 103, which state that the revelation of the Qurʾān is "clear Arabic tongue/speech" *(lisānun ʿarabiyyūn mubīnun)*. But this theory does little to explain the reason for the placement of the letters at the head of their respective sūras (see also UNITY OF THE TEXT OF THE QURʾĀN). While Muslim scholars have developed a variety of explanations for these letters, a number of Western scholars have also set themselves the task of explaining both the meaning of the letters themselves, as well as the reason for their placement at the beginnings of these particular sūras.

Traditional explanations

To the faithful Muslim, these letters are part of the divine revelation of the Qurʾān itself (see REVELATION AND INSPIRATION). In the recitation of the Qurʾān (q.v.), these "openers" or "beginnings" of the sūras *(fawātiḥ al-suwar; awāʾil al-suwar)* are recited as letters of the alphabet (i.e. Q 2:1 is read *"alif lām mīm"*). A variety of explanations for the letters has been proffered in the classical commentaries: these letters are the names of the sūras or markers for the separation of the sūras, names of God or abbreviations of his names (i.e. *alr* standing for *al-raḥmān, alm* for *al-raḥīm* or *Allāh laṭīf majīd* ["God, gentle, glorious], etc.; cf. Welch, al-Ḳurʾān, 412; Robinson, Discovering, 320 n. 10; see GOD AND HIS ATTRIBUTES), oaths (q.v.) by which God proclaimed. Traditional sources also suggest that the letters are mystical signs with symbolic meaning (see ṢŪFISM AND THE QURʾĀN) based upon the numerical values assigned to the letters (see NUMBERS AND ENUMERATION; NUMEROLOGY), or, alternatively, suggest that the letters were a means of attracting the attention of the Prophet or his audience (cf. Suyūṭī, *Itqān,* iii, 21-30).

One theory that has gained interest and adherents among Muslims in more recent times concerns the claimed existence of multiple patterns of the number "nineteen" hidden in the text of the Qurʾān (cf. Khalifa, *Quran*). This is said to be an experientially provable sign of the inimitability of the Qurʾān, the inexpressible and unrepeatable quality of the Qurʾān's style. Some of these findings, while interesting, seem somewhat contrived, e.g. the assertion that "nineteen" can be found in the mysterious letters because twenty-nine sūras (by one calculation) in the Qurʾān begin with them, fourteen different letters from the alphabet are used (again, depending on whether one counts the single letters *ṣād, qāf* and *nūn* which occur before three sūras) and there are fourteen different combinations of these disconnected letters in the beginning of the sūras. The sum of these numbers is fifty-seven (29 + 14 + 14 = 57). Fifty-seven is a multiple of nineteen ($3 \times 19 = 57$).

Although, as can be seen from the preceding paragraphs, Qurʾān commentators have put forth many explanations for these mysterious letters (one of the most popular and enduring — although lacking any consensus — being that these mysterious letters are contractions of words or phrases; see Watt-Bell, *Introduction,* 64), most classical and contemporary Muslim scholars maintain that the full signification of these letters is known only to God (Welch, al-Ḳurʾān, 412).

Contemporary theories in western scholarship

Non-Muslim theories have varied widely, but tend to fall in two categories: abbreviationist and redactional. (Other recent, but less tenable, proposals include the theories that they are mystical symbols used as battle cries, or that they are mnemonic devices

which summarize the contents of the sūras; Robinson, *Discovering,* 320 n. 10; Watt-Bell, *Introduction,* 64). Proponents of abbreviationist positions have tended to view the mysterious letters as independent of the original qurʾānic text. In this category may be listed Hans Bauer (Anordnung), who proposed that the letters stood for various catchwords, and Eduard Goosens, who has argued that the letters are contractions of earlier, now defunct, titles of the sūras. James Bellamy (Mysterious letters) proposed an abbreviation theory that is less arbitrary than the others: following the suggestions of classical qurʾānic commentators that the majority of the mysterious letters are abbreviations for *al-raḥmān* and/or *al-raḥīm,* Bellamy posits that most of the mysterious letters stand for these names of God in the *basmala* and that all of the other mysterious letters (with some emendations, which he elaborates upon in a later article; see his Proposed emendations, 572-3) are abbreviations for the *basmala*. In his view, these abbreviations were introduced (in the Meccan period, by the Prophet's scribes) at the beginning of 29 sūras instead of the *basmala,* and that later scribes did not understand the abbreviation and inserted the *basmala* in addition to the mysterious letters. Welch (al-Ḳurʾān, 413), however, argues that Bellamy's theory is not entirely consistent with the textual evidence concerning the chronology of the Qurʾān which would suggest that the letters are more likely from the Medinan period (see CHRONOLOGY AND THE QURʾĀN), and does not explain the relationship of the letters to their immediate contexts (i.e. why are they placed at these twenty nine sūras, and not others?).

The other category of theories, the redactional, examines the mysterious letters as a means for ordering the qurʾānic text (see FORM AND STRUCTURE OF THE QURʾĀN), and tends to see these opening letters as part of the original corpus (see MUṢḤAF). Although, as mentioned above, Bauer (Anordnung) believed the letters to be abbreviations of catchwords, he provided statistical support for the theory that the letters influenced the final arrangement of the Qurʾān (cf. Welch, 413-4 for a discussion of Loth and Schwally's contribution to the development of this theory). Bell saw both the mysterious letters and the *basmala* as part of the original corpus, albeit revised: he argued that they were early Medinan revisions adapting the sūras for inclusion in the written scripture (Welch, al-Ḳurʾān, 414; Watt-Bell, *Introduction,* 63-4, 138, 143). The current form of this redactional theory centers on the observation that the qurʾānic sūras are not strictly arranged from longest to shortest, even with the exclusion of the opening sūra (Sūrat al-Fātiḥa; see FĀTIḤA) and the two concluding sūras. It has been proposed that exceptions were made to the "decreasing-length" ordering for groups of sūras beginning with the same mysterious letters. In a recent study, however, Neal Robinson (*Discovering,* 260-70) has clearly demonstrated some problems with this theory: 1) there are some exceptions to the "decreasing-length" rule that cannot be accounted for even by the intervening sūras that begin with the mysterious letters and 2) not all the sūras that begin with the same letters are arranged together. While not entirely discounting the value of the sūra length and the presence of the letters in ordering the sūras, Robinson suggests that other factors (such as the repetition of key words or phrases in consecutive sūras) were taken into account by the redactors of the qurʾānic corpus.

But proponents of this theory have not only attempted to explain the discrepancies of the "decreasing-length" ordering of the sūras. They have also tried to explain what the individual letters stand for. In his

ground-breaking study, Theodor Nöldeke (*GQ,* 215 f.) argued that the letters were abbreviations standing for the names of people whom Zayd b. Thābit had consulted for the readings of the sūras (see READINGS OF THE QURʾĀN; RECITERS OF THE QURʾĀN). He later believed that they were merely mystical and meaningless symbols attempting to imitate the heavenly book (q.v.; see also BOOK) the Prophet would have beheld (for further discussion of this change in Nöldeke's thinking, which was effected by Loth's argument of a Jewish Kabbalistic influence on Muḥammad in the late Meccan and early Medinan periods, see Welch, al-Ḳurʾān, 412; see also JEWS AND JUDAISM). Hartwig Hirschfeld expanded on Nöldeke's initial theory and attempted to identify the sources themselves, suggesting that the letters stood for the following individuals: *m* = Mughīra; *ṣ* = Ḥafṣa; *r[z]* = al-Zubayr; *k* = Abū Bakr; *h* = Abū Hurayra; *n* = ʿUthmān; *ṭ* = Ṭalḥa; *s* = Saʿd (b. Abī Waqqās]; *ḥ* = Ḥudhayfa; *ʿ* = ʿUmar/ʿAlī/Ibn ʿAbbās/ʿĀʾisha; *q* = al-Qāsim b. Rabīʿa. The principal weakness of the Nöldeke/Hirschfeld theory, as with all the theories put forth on the issue, is that it does not — indeed, cannot — prove its case. The ability to produce identifications of the letters, whether they are names or whole words, does not prove that the identifications are correct. The catalogue of various identifications stands as a tribute to the imagination of the researchers rather than as a secure solution.

My own work on this issue has surfaced a previously undetected and potentially important detail about the mysterious letters. I observed that the patterns themselves produce a set ranking within the letters. Comparing the eleven different multiple-letter combinations in which thirteen different letters appear reveals that the order of the letters is not random or arbitrary. One would not expect this to happen if the letters stood for sentences or words; such a system would not have been likely able to prevent violations in a ranking. Thus, for example, the *mīm* never appears before the *sīn,* which in turn never appears before the *ʿayn;* the *lām* never appears before the *alif,* etc. (for a more detailed discussion of this "ranking" of the letters, see Massey, New investigation, 498-9). For this observation to hold true, however, some explanation is needed in the matter of Q 42, which begins with the pattern *ḥmʿsq*. At first glance, it seems that this violates the order (insofar as the *mīm* appears before the *sīn*). But the verse divisions have generally separated this cluster into *ḥm* and then *ʿsq*. In this case there are actually two separate patterns here. Another possibility is that, given the location of the sūra in the middle of six other sūras with the *ḥm* pattern, the *ḥm* has been added later by analogy.

Quite significantly, the set ranking I have observed goes well beyond the statistical possibility of a random production. Calculating the odds for such patterns if only two letters are used shows that there are about even odds of a random selection succeeding in having an inviolate pattern (156 possible patterns with seventy-eight [1/2] of them not violating any given pattern). When the pattern length is extended to three, however, the chance of randomness quickly diminishes (1716 possible patterns with only 286 of them [1/6] not violating any given pattern). In the case of the mysterious letters there are four cases of two letter patterns, four cases of three, four cases of four and one case of five. In this particular case, statistical analysis argues strongly against randomness. If the letters are not random, one can rule out the possibility that they are words or sentences. While such structures would have semantic intentionality, they would not

prevent the violation of an ordered list of letters. Also ruled out is the theory that the letters are nothing other than the imitation of celestial characters or nonsense letters. This observation, I would argue, lends strong support to the Nöldeke/Hirschfeld theory. If the letters are an ordered list, the best candidate for referents is the names of people who, for some reason, are being ranked by the person who has put down the letters.

The letters, then, constitute a form of critical textual apparatus (see TEXTUAL CRITICISM OF THE QUR'ĀN). According to reliable accounts from the early history of Islam, when Zayd b. Thābit, at the order of ʿUthmān (q.v.), compiled the Qurʾān (see MUṢḤAF; COLLECTION OF THE QUR'ĀN; CODIFICATION OF THE QUR'ĀN;), he used several sources. For those sūras that had either more than one source (or perhaps whose reading is supported by more than one source over and against other variant readings which he chose to reject), he acknowledged those sources by listing one-letter abbreviations of them, in his own perceived rank of importance and reliability. He was never inconsistent in his own ranking of the sources, hence the order we can now find among the mysterious letters was produced. Whether or not Hirschfeld has correctly identified the letters with the names for which they stand can simply never be known. He has astutely produced parallels for the letters from strong candidates of the period, but he may or may not be right. The names may all be scribes who never showed up in the tradition or any early literature. But the discovery of the ranking of these letters tips the scales in the direction of an ordered list of names. If this is a catalogue of sources the ʿUthmānic Qurʾān has carefully built into it an early attempt to assure the readers of the credibility of the text from which they were reading. It is possible, as some have suggested, that the letters that appear alone *(ṣād, qāf, nūn)* may not have the same purpose as the collections themselves. *Nūn* in particular has the story of Jonah (q.v.) and the great fish *(nūn)* as a cogent explanation of this letter.

Conclusion

Adequate explanation both for the meaning of the "mysterious letters" and why they occur before the 29 sūras in which they appear has yet to appear. Although a number of reasonable theories of the significance of these mysterious collections of letters has been proposed — abbreviations for the *basmala,* or for some of the divine names, or for various individuals (possibly reciters of the Qurʾān) — none is definitive. The inconsistencies with the observation that they appear largely before sūras that interfere with the "decreasing sūra-length" organization of the Qurʾān have yet to be explained satisfactorily. Finally, further study is needed about the fact that they represent, comprehensively, the graphemes of the earliest Arabic script.

Myths and Legends in the Qurʾān

Myths are narratives that serve to explain and describe the experienced world by laying bare its archetypal patterns (see COSMOLOGY); they are often staged in a cosmic or supernatural framework so as to manifest binding truths, to generate meaning and provide guidance. Legends, raising no such universal claim, may be understood as narratives of pious imagination celebrating an exemplary figure.

Are there myths and legends in the Qurʾān? Even today, this is a controversial question, since the term "myth," in particular, is sometimes thought to be irreconcilable with the concept of revelation (see REVELATION AND INSPIRATION). The reasons for such hyper-sensitivity are historical; to quote Jaroslav Stetkevych (*Golden bough,* ix):

> Within the premises of (the) Arabian stance — begun with the Qurʾān's instant, and almost total, doctrinal impact — Arabic cultural history with all its anthropological constructs, was supposed to have begun and thereafter forever to unfold in the clarity of broad daylight, as it were. All "falsehood" and all "truth" were forever absolutely differentiated into some timeless pre-revelation (the age of the Jāhilīyah) that was followed by an equally timeless revelation (the Qurʾān), that is, into that which exists not and that which exists: *al-bāṭil* and *al-ḥaqq*.

The two terms, myth/legend and revelation, once taken as indicators of different degrees of truth (q.v.), emanating from sources of unequal credibility, become mutually exclusive: Myths under such a perspective cannot be easily accepted as powerful expressions of significant human experience deemed worthy of transmittal to later generations because of their archetypal evidence and universal validity, but are, rather, suspected of representing deviance and willful ignorance *(jāhiliyya)*. Their re-use as a prop for scriptural events — a common practice in Christian iconography — occurred, although to a lesser degree, in the later haggadic elaboration of qurʾānic narrations (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). Events related in the Qurʾān itself, are, however, considered "true" and sufficient to represent the past (see HISTORY AND THE QURʾĀN). Non-qurʾānic pre-Islamic narratives are held to be devoid of meaning, as they were superseded by the only meaningful revelation (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC).

But the concepts of "myths and legends" cover not only ancient "pagan" narrative but have been redirected as terms to denote narratives informed with a particular hermeneutic code. It is their intrinsic ability to recall archetypal patterns of interaction that invites the listener to identify with or find guidance through particular figures. "Myth" and "legend," understood as hermeneutically distinguished genres of narrative, are to be found in all kinds of literature, irrespective of their profane or sacred character (see LITERATURE AND THE QURʾĀN). As diverse studies in the Hebrew Bible and the New Testament alike have shown (Alter and Kermode, *Literary guide;* Alter, *Biblical narrative;* Frye, *The great code*), mythic and legendary narratives figure amply in the two older monotheistic scriptures. The dynamics of their immanent mythopoiesis provides narrative texts with significant subtexts adding surplus meaning to the plot, thus proving not only effective with pre-revelation

audiences, but also particularly fit to serve the aims of revelation itself.

Although this article focuses on the Qurʾān, it will be necessary to survey particular aspects of the problematic in the broader framework of scripture in general (see LITERARY STRUCTURES OF THE QURʾĀN). Not only does the Qurʾān typologically represent a manifestation of monotheistic scripture and thus partake in the hermeneutical characteristics of a sacred canon, the Qurʾān also displays, even more perspicuously than the two other scriptures, the process of the emergence of a scripture. If this is true, a comparison between the treatment of myth(s) and legends in the Qurʾān on the one hand, and in the two other monotheistic scriptures on the other, promises to throw important light on the particular developments of the Qurʾān. Subsequently, an attempt at a typology of myths and legends in the Qurʾān will be undertaken through consideration of a selection of significant cases. Since the qurʾānic narrative is often inconsistent, i.e. sophisticated structures appearing alongside fragmented panels of mythic images, it is important to discuss not only complete narrative units but also overall mythical visions looming under dispersed single elements. As against the positive evidence of mythopoiesis in the Qurʾān, the anti-mythic tendencies, which likewise exist, will also be considered.

Scripture and myth

Scripture as a medium of the demythification of the world

Myth, in the narrow sense of a narrative about personified or demonized supernatural powers working in individual or collective human life, is of course incompatible with the scriptural concept of one exclusive divine agent in nature and history. In fact, scripture as such has been credited as the medium of demythification *par excellence*. It has been noted of the three monotheistic religions that their scriptures do not, in the way mythic thinking does, refer back to an archaic sacred order, anchored in a primordial beginning that needs to be restored, but refer to events that themselves are part of an extended continuous nexus of happenings. This is particularly true for Christianity and Islam, two religions that are based on events that are understandable only in view of what preceded: neither initiates traditions but rather presupposes them. It is noticeable that in both religions human history receives a new evaluation through the central event that necessarily judges the preceding era to be of inferior quality and that promises to have an imprint on all further history. The basic structure of past, present and future thus cannot be viewed in a symmetrical way since the theological evaluations are unequal (Zirker, *Christentum*, see TIME).

The fact that scripture dissolves premonotheistic, iterative or circular patterns of memory (q.v.), that it tends to "historicize" memory, becomes most evident from its re-interpretation of the myth-imprinted "pagan" world submitted to ever repeating cyclical processes of seasonal change (see FATE; DESTINY; GENERATIONS; GEOGRAPHY). In contrast, the scriptural worldview reflects the process of an evolution in linear time. Monotheistic scripture marginalizes cosmic experience, the impact of the powers of nature as manifest in the seasonal cycle, in favor of historical experience, presenting decisive communal events as unique manifestations of divine power (see POWER AND IMPOTENCE; FREEDOM AND PREDESTINATION). Scripturally institutionalized feasts (see FESTIVALS AND COMMEMORATIVE DAYS) thus no longer serve to mark the yearly changes of seasons (q.v.) but commemorate outstanding events

worked by the divine agent in the community in the past. Scriptural demythification thereby touches a realm of human life that is vital for the coherence of a society: i.e. rituals and feasts (see RITUAL AND THE QUR'ĀN). Once having placed a taboo upon viewing spirits and demons (see JINN; DEVIL) as potent agents in the drama of the seasonal cycles, scripture has to provide etiological substitutes to give meaning to the feasts as well as to inspire the effervescence and the perception of renewal that make up the festal atmosphere (Assmann, Fest). This reconstruction has been, in the Islamic context, carried out in a particularly rigorous way. Whereas the two other monotheistic religions kept the time frame of older seasonal feasts and co-opted their essential symbols, enriching and reshaping them according to the new salvation-historical meaning of the individual feast — thus preserving a mythic subtext to be reclaimed whenever desired, Islamic festivals have fared differently. Though strikingly conservative in terms of ritual procedure, i.e. continuing many of the ancient pre-Islamic ritual performances clearly informed by the symbolism of changing seasons (Wellhausen, *Reste*), Islam has strictly dissociated them from their ancient Arabian precedents through a new calendar (q.v.) which bears no relation to the seasonal cycle, thus dismissing any mythic association emanating from that source (Neuwirth, Three religious feasts). Moreover, the Islamic rites were given new meanings commemorating historical events crucial to the community's identity, or were reinterpreted as mere acts of worship (q.v.) divinely imposed through the words of earlier prophets (see PROPHETS AND PROPHETHOOD).

But myth is not exclusively about supernatural powers working in nature (see MIRACLE); it is also about extraordinary human figures, excelling in strength, courage (q.v.), shrewdness, endurance and other heroic faculties. In the Hebrew Bible not a few characters of heroic standing have survived scripturalization, i.e. integration into a vision dominated by divine will: they appear to act autonomously rather than being directed by a divine force behind them. Although not consistently designated as heroic but responding to diverse challenges of human acting and suffering, and never totally severed from divine will or providence, major biblical figures, primarily Moses (q.v.) and David (q.v.), and to a lesser degree also Abraham (q.v.), Jacob (q.v.), Joseph (q.v.) and Solomon (q.v.) as well as more episodic figures like Samson, Ehud and Judith have retained a heroic image. As against that, few heroic figures would be found in the Qurʾān. Not only are the protagonists of narratives from the ancient Arabian lore absent, but also most of the biblical figures that do play a role in the Qurʾān are not represented as heroes either. Their appearance has been changed: as they do not receive a consistent portrayal, nor are their stories continuously followed over a span of time long enough to display character development, but are, rather, presented episodically in very diverse contexts, these figures are not developed enough to impress as heroes (see the discussion of Solomon and David below). Others, like the Arabian Hūd (q.v.), Ṣāliḥ (q.v.) and Shuʿayb (q.v.), do not act autonomously but remain throughout performants of the divine will, so that their actions seem to lack momentum, making it difficult for the reader to associate them with those key figures contained "in kindred structures and symbolic systems that range from Gilgamesh and the Hebrew Bible to Homer and Vergil" (Stetkevych, *Golden bough,* ix). Still, in the Qurʾān some figures do acquire heroic dimensions such as Noah (q.v.; Nūḥ), Abraham (Ibrāhīm), Joseph

(Yūsuf) and, most especially, Moses (Mūsā).

Qurʾānic scripture and story-telling

Scriptural demythification, which is particularly strong in the Qurʾān, also touches upon another vital need: the transmission of knowledge, particularly the practice of story-telling. Qurʾānic narrative has hitherto usually been considered as a continuum. Its continuous treatment of prophetic episodes with similar, sometimes identical, messages led scholars to the conclusion that there is something like "the qurʾānic narrative," attesting a cyclical concept of revelation (Paret, Geschichtsbild). Although Horovitz, in his groundbreaking study on qurʾānic narrative, strictly committed himself to Nöldeke's periodization, scholars after him have ordinarily failed to acknowledge, or even rejected, any substantial development in the qurʾānic representation of prophets and messengers (see MESSENGER) except in terms of increasing detail. In general the Qurʾān has been judged to evidence no serious interest in history. Fred Donner (*Narratives of origin,* 84) states:

> The purpose of stories in the Qurʾān, then, is profoundly different from their purpose in the Old Testament; the latter uses stories to explain particular chapters in Israel's history, the former to illustrate — again and again — how the true Believer acts in certain situations. In line with this purpose, qurʾānic characters are portrayed as moral paradigms, emblematic of all who are good or evil.… [The Qurʾān] is simply not concerned with history in the sense of development and change, either of the prophets or peoples before Muḥammad, or of Muḥammad himself, because in the qurʾānic view the identity of the community to which Muḥammād was sent is not historically determined, but morally determined.

This view, which relies on a macrostructural reading of the Qurʾān, not surprisingly conforms with the image of the Qurʾān that became dominant in Islam itself after the official canonization of the corpus by ʿUthmān b. ʿAffān (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; ʿUTHMĀN): the Qurʾān was no longer perceived as a communicational process but as the time-transcending divine word (see WORD OF GOD) transmitted by the prophet Muḥammad, the final figure in a series of impeccable (see IMPECCABILITY) superhuman messengers bearing an identical message. This a-historical perception has recently been adopted by a number of modern scholars, inspired by postmodern methodological approaches no longer concerned with philological-historical problems (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). To view the Qurʾān in such a "holistic" way — in accordance with its later Islamic reading — is, however, only one possible way of reading it, since the a-historical image of the Qurʾān covers another, more complex, layer of understanding that can be laid bare only through an acute micro-structural reading (see FORM AND STRUCTURE OF THE QURʾĀN).

To do justice to qurʾānic narrative, one has to look for earlier narrative traditions familiar to the community that may have influenced the qurʾānic narrative style (see LANGUAGE AND STYLE OF THE QURʾĀN; ORALITY AND WRITING IN ARABIA; NARRATIVES; SCRIPTURE AND THE QURʾĀN). Given the fact that the early sūras (q.v.) display a linguistic and stylistic character very close to the enunciations of pre-Islamic soothsayers (q.v.; *kāhin,* pl. *kahana*) whereas

later sūras come close to monotheistic liturgies with pericopes of scriptural readings in their central part (for further discussion, see FORM AND STRUCTURE OF THE QUR'ĀN), one arrives at the conclusion that qur'ānic narratives partake in diverse discourses and thus constitute at least two distinct groups: texts that still mirror the principle of a highly emphatic, succinct and sometimes enigmatic presentation current in *saj' al-kahana* (see RHYMED PROSE) on the one hand, and texts more inclined towards a lively episodic presentation displaying sophisticated narrative strategies, on the other. The former genre is more formalized and thus limited in its narrative range, relying strongly on repetition, parallelism and anaphors, etc.; the latter is flexible, tending towards detail and diversity. Whereas the former drives home one particular message, there are far more complex intentions behind the second.

Due to the new qur'ānic worldview, which staged past and present events as part of the drama of a series of divine interventions in human interactions, the orally transmitted scenarios of Arabian memory (see ORALITY; ARABS), whose protagonists were committed to worldly, often heroic, aims were widely marginalized — if not dismissed as a whole — or re-interpreted to fit the new paradigm. In the words of Stetkevych (*Golden bough,* 10):

> The knowledge of the communal Arabian past and its inheritors' creative and re-creative self-knowledge within it were definitely not furthered by the concrete, a-historical and anti-mythical doctrinal stance that relegated mythic materials to anecdotal and "catechistic" functions.… The problem with a number of (these) nuclei of myth was that in their survival in the new code, that is, through their co-optation by the Qur'ān (and the subsequent dogmatizing tradition), they were put to the service of a rhetoric that was almost inimical to "narrative" itself — this despite the qur'ānic claim that there they are being told in the best of narrative ways. That is, in the Qur'ān, narrative and indeed everything else is subordinated to the overarching rhetoric of salvation [q.v.] and damnation.… [see REWARD AND PUNISHMENT] Rarely do we sense in the Qur'ān a self-sufficient and self-justifying joy in storytelling, indeed, rarely, if at all, does the Qur'ān allow for the formation of "themes" in the literary terminological understanding, that is, of descriptive (of imagist) units that possess their own formal and thematic circumscription and "sufficiency" and are not intruded upon by a stylistically disruptive rhetoric. Rather than themes in the literary sense, the Qur'ān, therefore, knows primarily rhetorically subordinated motifs.

What Stetkevych has labeled "rhetorics" is, however, deeply rooted in the qur'ānic message as such and thus from a different perspective should be viewed as complementary. It is true that qur'ānic storytelling does not express an authorial stance such as is that which Alter finds realizable in biblical narrating (*Biblical narrative,* 184):

> Perhaps the most distinctive feature of the role played by the narrator in the biblical tales is the way in which omniscience and inobtrusiveness are combined.… In the Bible… the narrator's work is almost all récit, straight narration of actions and speech, and only exceptionally and very briefly discourse, disquisition on and around the narrated facts and their implications. The assurance of comprehensive knowledge is thus implicit in the narratives, but it is shared with the reader only intermittently and at that quite partially. In this

way, the very mode of narration conveys a double sense of a total coherent knowledge available to God (and by implication, to His surrogate, the anonymous authoritative narrator) and the necessary incompleteness of human knowledge, for which much about character, motive, and moral status will remain shrouded in ambiguity.

As against the meticulous shaping of personages and the sophisticated coding and de-coding of their motives, which characterize biblical narrative, qurʾānic narrating pursues complex "para-narrative" aims. Narratives, at least insofar as they are unfolded to some extent and recall plots already known from biblical literature, are presented as excerpts or messages from the book (q.v.; *al-kitāb*), which is clearly taken to be a corpus of literature apart from the rest of the known stories that are currently available through oral tradition. This remoteness of "*kitāb*-generated" narrative certainly has a strong bearing on the style of the stories presented as *kitāb* readings. It forces on them a distinct linguistic code that, on the one hand, confers on the diction a highly stylized form (rhymed prose resulting in somewhat forced syntactic structures; see GRAMMAR AND THE QURʾĀN), serving to distinguish it from profane narrative. On the other hand, it implants these narratives with the new message of the imminent eschatological catastrophe (see ESCHATOLOGY; CATASTROPHE), which brings the narrative close to an exhortative appeal (see EXHORTATIONS) or, later, a sermon. It is exactly the discursive elements so marginal in biblical narrative that matter primarily in the qurʾānic narrative: the explicit presentation of the moral or theological implications for the community that can be deduced from the narrated facts or speeches (see ETHICS AND THE QURʾĀN; THEOLOGY AND THE QURʾĀN). To fulfill this purpose, a stylistic device unknown to the Bible has been created to accommodate the particular moral or theological deductions from the qurʾānic discourse, the clausula (see Neuwirth, *Studien*). This stylistic device consists in a particular closure of the long verses of late Meccan and Medinan times (see CHRONOLOGY AND THE QURʾĀN): the last sentence of a verse does not partake in the main strand of communication, but presents a comment on its contents indicating divine approval or disregard of the fact reported, e.g. "Truly you are of the faulty" (*innaki kunti min al-khāṭiʾīn,* Q 12:29; see SIN, MAJOR AND MINOR; VIRTUES AND VICES, COMMANDING AND FORBIDDING). It may also refer to one of God's attributes (see GOD AND HIS ATTRIBUTES), e.g. "Truly he is the hearer, the seer" (*innahu huwa l-samīʿu l-baṣīr,* Q 17:1; see SEEING AND HEARING), which, in the later stages of qurʾānic development, have become parameters of ideal human behavior. This comment is clad in a widely formalized shape and is thus easily identifiable.

Qurʾān and history

How does the Qurʾān view prior history? Keeping the canonical process in mind, we have to ask the question on two different levels, distinguishing between two subsequent paradigms. The Qurʾān, in the beginning of its development, encodes history in the discourse of the *umam khāliya,* the accounts about the dispatchment of messengers to previous communities who called their people to worship and obey one God but who failed to convert their communities (see OBEDIENCE; PUNISHMENT STORIES). Here, the Qurʾān "pans over a landscape where time is less a chronology than a continuum" (Khalidi, *Arabic historical thought,* 8). The scenarios are mostly, though not exclusively, Arabian (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). The early qurʾānic messenger stories have replaced a previously existing culture-

specific, coherent pre-Islamic Arabian myth. In Stetkevych's words (*Golden bough,* 3):

Arabia and the Arabia-nurtured and Arabic-speaking world [see ARABIC LANGUAGE] has most stubbornly denied itself the acknowledgment of a "mythological conditioning." An earnestness, and even somberness, of rigorous theological dogma came to reign with an almost puzzling… march through more than a millennium of history. It succeeded from the first qurʾānic moment in almost suppressing or banishing into unusually reclusive layers of subconsciousness that part of the counter-dogmatic Arabian cultural "self" which, under conditions of a less stable doctrinal rigor, would have had the strength to lead that culture to its remythologizing, or to an awareness of its "mythological conditioning." In this respect even more inhibiting than the suppressions and condemnations that came forth from the doctrinal apparatus which had formed itself around the newly-arrived Arabian sacred text and which soon succeeded in forming its own cultural code was the co-optation by that new code of much of the most centrally autochthony-determining materials of the old code.

The significance of the stories about the Arabian messengers lies in their endurance *(ṣabr)* and obedience in calling humans to accept divine guidance: every community should have been warned through a revelation in order to be spared temporary or eschatological punishment (see TRUST AND PATIENCE; WARNER). It is noteworthy that the qurʾānic virtue is no mere endurance, but

presupposes triumph. It is an outlasting of evil, rather than its transmuting. Its task is to outstay all opposition so that the good of prophecy is not overcome by the enmity of unbelief [see BELIEF AND UNBELIEF]. Its endurance keeps the cause from capitulation, so that it may anticipate the victory other factors will achieve. It is not, broadly, a suffering which in itself and of itself makes the fabric of the triumph that is to be. This calls for other forces whose opportunity tenacity ensures (Cragg, *Event,* 158).

It is sober, pragmatic thinking and acting, *ḥilm,* self-denying dedication to the divine message, *islām,* that is portrayed here — the reversal of *jahl,* heroic unrestraint (see ISLAM; FAITH; IGNORANCE). In fact, *jahl* in the Qurʾān itself was to become the label of the pre-Islamic epoch that was termed *jāhiliyya* (see AGE OF IGNORANCE).

Thus *jahl/jāhilīya* had to have been a singularly important concept (or state) in archaic Bedouinity [see BEDOUINS] to have deserved such a stupendous "transfer" into its new terminological prominence — and into its paradoxical semiotic self-denial. We must, therefore, entertain the strong notion that its denial by the new Arabia that emerged with Islam also meant Arabia's denial of myth as its cultural, autochthony-defining ingredient. For myth, all myth, is hardly conceivable without the presence of *jahl* somewhere near its very core. This *jahl,* however, also in its archaic Arabic understanding, is above all that kind of heroism that also contains its own tragic flaw (Stetkevych, *Golden bough,* 10).

The predicament of the ancient messengers whose message is rejected is shared by the Prophet himself (see OPPOSITION TO MUḤAMMAD). The contents of revelation in the *umam khāliya* discourse (i.e. the stories of earlier nations destroyed because of their unbelief) thus does not have a history; the bearers of the revelation and their addressees do not form a chain of succession.

History and revelation repeat each other following the same pattern.

This discourse has, however, to be differentiated from a grand narrative that emerges at a later stage in the Qurʾān. What is usually upheld to apply to the Qurʾān as such: the renunciation of a chronological frame for the events of pre-qurʾānic history, the repetitiveness of the qurʾānic narrative — "events are arranged in clusters, repetitive in form" (Khalidi, *Arab historical thought,* 8) — as a sign of the insistence of an identical message, the total disregard for mythic primacy, etc., on closer gaze, does not hold true except for the first paradigm. Here, "the whole history is present at once to God." But the situation successively changes substantially when a new paradigm is adopted, switching the focus from the deserted sites of the real homeland to the orbit of the messengers of the People of the Book (q.v.; *ahl al-kitāb*), the prophets *(anbiyāʾ),* whose discourse as intermediaries between God and man is much more sophisticated. Overtly, they form a prophetical succession and their activities taken together not only constitute a scenario of historical episodes, but, more and more, betray a tendency to chronology. Their communications and actions prove rich in experiences and fit to exert a mythopoeic impact on the self-understanding of the emerging community itself; indeed, these activities not seldom provide the matrix for the prophet's and his community's behavior in certain situations of crisis, and more often the matrix of their understanding of their own predicament (Neuwirth, Erzählen). It is no longer the projection of present experience onto the image of the past that was representative for the earlier discourse, but the converse: experiences of the past provide a model for the understanding of the present. The entrance of the qurʾānic community into the orbit of those earlier societies endowed with a scripture is presented as an event of seismic proportions: "If we sent down this Qurʾān upon a mountain, you would see it humbled, shattered by the fear of God" (Q 59:21; Khalidi, *Arab historical thought,* 7). This degree of self-confidence would not have been feasible in the earlier stages; it marks a caesura in arranging history that should not be ignored.

> The wide canvas from Adam [see ADAM AND EVE] to Jesus [q.v.] depicts for Muḥammad's people the meaning and destiny of their own cause. Biblical material, in independent shape, is rehearsed in lively corroboration of qurʾānic authority. All prophecy accumulates towards it, so that revelation may culminate. Other Scriptures are mentors, not masters. It is the ruling theme of prophecy as crisis which they consistently serve. The patriarchal retrospect witnesses to a continuity of truth and multiplies the signs by which the Meccan/Medinan situation must be read both in conflict and prosperity (Cragg, *Event,* 171).

Consequently, it is little surprising to find a particular hermeneutic trait familiar from the Hebrew Bible (see TORAH) and especially the Gospels (q.v.) prominent again in qurʾānic narrative: typology (Busse, Herrschertypen). "Types" are exemplary representations in scripture of still more momentous events or more significant figures yet to come. Thus the divine trials (see TRIAL) of the past are to be considered "types" of the last judgment (q.v.) that will supersede everything preceding it, the dispatch of earlier prophets in a way "prefigures" Muḥammad's activities. This device is crucial for the qurʾānic image of history:

> It is this historical review of the past in the present which gives to the Qurʾān and Islam the characteristic quality of *Jihād*

[q.v.], or struggle, in the deepest and non-technical sense of that term. The very sequence of the prophets is a sequence of law and claim, of insubordination and nemesis. The logic within it is the unremitting necessity of struggle and the necessary sinews of strength. To bring a divine message is to incur a human enmity and so, in turn, to enter a trial of stamina and resolve, of the will and the means to outstay the opposition.… In this logic, suffering is present as a preliminary to its redress. It is that which has to be endured before it can be terminated. It bears the odds until they can be evened and reversed. The successful eventuality is held open by the refusal to be denied it, and this demands persistence and non-compromise.… Existence is poised, so to speak, between prophecy and eschatology, in that the prophetic address to humanity must have, in token and in fact, that writ of success which eschatology brings to final authenticity in the last judgment. The utter unambiguity of the eschatological must belong suitably and surely with the interim evidence of prophetic standing in time and in power (Cragg, *Event,* 171-2).

Reflexions of myth and mythopoiesis in the Qurʾān

Virtual myths of history

In the following an attempt will be undertaken to classify myths and legends in the Qurʾān as to their cultural contexts. (Myths and legends are not taken to be mutually exclusive: viewing the stories about earlier prophets as legends does not preclude taking note of their mythical elements.) A historical classification following the biblical succession of "scripturalized myths" does not appear too promising in view of the non-historical disposition of the Qurʾān and the absence of the notion of a linear historical process leading up to the present of the listeners. The "atomism of time" that underlies the qurʾānic vision of history, "which is typological in nature and focused on the history of the prophets," has been noted (for more, see Böwering, Chronology, 319 f.). The myth of man's first transgression, the story of Adam (*Gen* 1:3), in the Qurʾān does not serve to initiate history as an unpredictable and ambiguous process of divine-human interaction, but rather constitutes one exemplary episode of the "anthropological constant" of human vulnerability to being seduced. Except for the expulsion from the garden, however, this does not bear grave consequences for the fate of humankind (see FALL OF MAN). The myth, which is introduced at a rather late stage of qurʾānic development and is presented in diverse contexts, serves to demonstrate changing insights into the nature of evil: it is less a myth of beginning than a debate about evil (see GOOD AND EVIL). The account will therefore be treated in its typological context (see "Transgressions" below).

Noah

Similarly, the biblically prominent myth of the renewal of the world after the flood (*Gen* 6:5-8) in the Qurʾān does not appear in its mythical-historical setting as the closure of a period of immediate divine interventions into creation (q.v.) as a whole. This story is related (or alluded to) within the two discourses of the destroyed peoples *(umam khāliya)* and of the prophets *(anbiyāʾ)*. First conveyed as the initial account of a chain of punishment legends in Q 54:9-17 (followed by stories about ʿĀd [q.v.], Thamūd [q.v.], Lot [q.v.], and the people of Pharaoh [q.v.; Firʿawn]) and, subsequently as a story filling a complete sūra, Q 71 (Sūrat Nūḥ, "Noah"; Q 71:1-28), the legend of Noah is introduced in isolation from a particular salvation-historical beginning, although the event is obviously imagined as preceding all the other stories in time. It is

shaped after the pattern of the punishment stories that emerge during the first Meccan period. Accordingly, both the flood and the ark (q.v.) are devoid of mythical dimensions, being reduced to mere instruments of individual punishment and salvation respectively. The story continues to be remembered through the entire Meccan period, not only in extended lists of punishment stories (Q 7:69; 11:89; 14:9; 38:12; 50:12; 51:46), but also in narrative form. In Q 37:75-9 it is followed by a story about Abraham's confronting his unbelieving community and other episodes of the history of the Children of Israel (q.v.; Banū Isrāʾīl); in Q 26:105-22 it is followed by stories about ʿĀd, Thamūd, the people of Lot, the "People of the Thicket" (q.v.; *aṣḥāb al-ayka*), always presenting Noah as a member of his people (*akh,* Q 26:106) who tries to convert them. None of these reports, however, dwell on the mythical dimension of the story as the first major caesura in history.

Noah receives new momentum after the change of paradigm and the new orientation to the *kitāb* tradition of the Children of Israel. The viewing of the prophets as a chain of succession within the orbit of scripture gives each one an individual significance. This change is reflected in a particularly extensive version of Noah's story in Q 11:25-49, followed by kindred stories of ʿĀd and others. Here, both the preparation of the ark *(fulk)* and the selection of the animal species are mentioned (see ANIMAL LIFE). The cosmic dimension of the flood is alluded to, the final blessing on Noah sounding as if the event was meant as a caesura in salvation history (an echo of this version appears in Q 10:71-4). At this later stage of the canonical process, when the world of the book has replaced the scenario around the sanctuary of Mecca (q.v.), Noah ascends from his stance as a mere warner *(rasūl)* to become a prophet *(nabī)* in the line of Adam — (Noah) — Abraham — Jesus. In this context, the longevity (Noah remained among his people 950 years; Q 29:14) and genealogical relations in general occasionally gain momentum: thus the Children of Israel are presented as the "seed of those whom we carried with Noah" (*dhurriyyata man ḥamalnā maʿa nūḥ,* Q 17:3; cf. 19:58). In still later, Medinan sūras, like Q 33:7, when the Prophet himself has entered the rank of the prophets *(anbiyāʾ)* and prophets are viewed as partners in a covenant (q.v.), Noah appears here as the first: *(wa-idh akhadhnā mina l-nabiyyna mīthāqahum wa-minka wa-min nūḥ)*. A structuring of prophetical history is in the making and it is this period of time into which Q 19:58 fits: "These are those whom God blessed from the prophets from the seed of Adam and of those we carried with Noah [on the ark]" *(ūlāʾika lladhīna anʿama llāhu ʿalayhim min al-nabiyyīna min dhurriyyati ādama wa-mimman ḥamalnā maʿa nūḥ…)*. This development reaches its climax in Q 3:33: "Truly God preferred Adam and Noah and the family of Abraham and the family of ʿImrān above all the creatures" *(inna llāha ṣṭafā ādama wa-nūḥan wa-āla ibrāhīma wa-āla ʿimrāna ʿalā l-ʿālamīna)*. Accordingly, the divine commandments (q.v.) have been transmitted through that line of succession: Q 42:13, "He ordained for you the religion (q.v.) that he commended to Noah and which we inspire in you" *(sharaʿa lakum mina l-dīni mā waṣṣā bihi nūḥan wa-lladhī awḥaynā ilayka)*.

Still, Noah remains part of two traditions, that of an episodic warner (in Medinan sūras; Q 9:70; 22:42) — one of many — whose people *(qawm)* vanishes and who thus would have no spiritual survival and that of a prophet *(nabī)* whose reception is secured through his participation in a succession of prophets who belong to the scriptural, i.e. biblical, tradition. What is most striking in the

Noah-legend is the lack, or at least the fading appearance, of the essentially mythical characteristics of the story. Thus, the catastrophic uniqueness of the event, the vehemence of the divine wrath (see ANGER) inducing the creator to annihilate humankind, the universality of the catastrophe, are nowhere expressed. The historical dimension, the total renewal after the drowning (q.v.) of humankind is not dramatized, the divine re-acceptance of humankind being only partial (Q 11:48; to say nothing of the conclusion of a new covenant between God and man). Not surprisingly, the age before the diluvium is not marked as it is in the Bible and in later Islamic historiography (al-Azmeh, *Ibn Khaldun*) by particular physical anomalies, such as the existence of fabulous creatures and miraculous qualities in humans, thus appearing as an epoch which does not yet partake of the historical period proper, but demands a new, a second beginning. In the Qurʾān the flood has no such function.

David and Solomon — virtual cultural heroes?

Nor does the "Solomonic mythic florilegium" (see DAVID; SOLOMON), which in the Qurʾān reflects post-biblical rather than biblical knowledge, constitute a consistent story. It focuses on the two heroes' power over the animal and spirit world, as well as natural phenomena: David is lord of the birds (Q 38:17-9), he commands the mountains (Q 38:18; 34:10); Solomon understands the language of the birds (Q 27:16) and of the ants (Q 27:18-9), he commands the wind (Q 21:81; 34:12; 38:36; see AIR AND WIND), and is in control over the demons *(shayāṭīn)* and jinn (Q 21:82). At the same time, both are in the rank of prophets *(anbiyāʾ),* a merit that in David's case is underlined by his receiving the psalms (q.v.; *zubur,* Q 17:55), his competent judgment (q.v.; Q 38:21-6; cf. *2 Sam* 2:1-15) and his just government (see JUSTICE AND INJUSTICE; AUTHORITY), which qualifies him to be called a *khalīfa* on earth (Q 38:26; see CALIPH). In Solomon's case this rank is evidenced by his being granted command over nature and demons. Yet, both remain symbolic figures (see SYMBOLIC IMAGERY), Solomon's essential fame being due to his miraculous relationship with animals and demons with particular supernatural faculties — a privilege that, however, does not distract him from his devotion to the one God. His faithfulness is particularly manifest in the episode with the Queen of Sheba (see BILQĪS). When her throne is transferred to his palace by the *ʿifrīt* (q.v.), he understands the miraculous act not as his personal triumph but as a trial *(fitna)* to prove his gratefulness (Q 27:40; see GRATITUDE AND INGRATITUDE). His aesthetically stunning palace *(ṣarḥ)* with fittings so fine that they produce a "trompe d'oeil" — the Queen takes the brilliant floor to be a water pool — becomes the reason for the conversion of the Queen to the worship of the one God, thus constituting an "antitype" to the building erected by Pharaoh (also *ṣarḥ*) with the blasphemous intent to have a view on the God of Moses (see BLASPHEMY). There are some hints at the conception of both figures as innovators: David is instructed to make coats of mail (Q 21:80; 34:10-11), and Solomon is knowledgeable about a source of metal (Q 34:12); yet their story is hardly apt to serve as an etiology for the human attainment of control over material resources and individual technical inventions; nor do the related facts mark initial achievements sufficient to portray the protagonists as cultural heroes.

Moses' exodus *(isrāʾ)*

The only qurʾānic narrative that could be viewed as a myth of history is the report of the exodus of Moses, which, in Jewish

tradition, signifies the deliverance of the Israelites from slavery; for the Muslim community, this exodus becomes a prototype for the believers' taking refuge from oppressive unbelieving rulers (see OPPRESSION; OPPRESSED ON EARTH, THE). The event of the exodus *(isrāʾ)* has certainly effected a strong influence on the Prophet's own experience of his emigration (q.v.; *hijra*); moreover, before that event, it served as a pattern of finding spiritual relief *(isrāʾ)* in a situation of social suppression in Mecca that had become unbearable to the believers (Neuwirth, Remote temple). Still, the story is not reflected through a full-fledged narrative but is only briefly evoked (i.e. Q 20:77; 26:15-7; 37:115-6). It does not, moreover, represent the decisive turn in the history of Moses' people. It is worth noting that in the qurʾānic story of Moses, the exodus is rivaled by another solution for the oppressed Children of Israel since the salvation of Moses' people is also portrayed in terms of a typological reprise of the flood story (Busse, Herrschertypen, 75). Thus, the invitation to Noah and his family to settle after the flood (Q 23:29) finds its analogy in Q 17:104, where the Children of Israel are given (cf. also Q 7:137; 26:59) the land of Egypt (q.v.) with all its gardens (see GARDEN), springs (see SPRINGS AND FOUNTAINS), fields and treasures (Q 26:57-8; 44:25-8; see BLESSING; GRACE; WEALTH). It is perhaps not the change of real place (as in the exodus) that matters. In the qurʾānic view the promised land may be anywhere that it is possible for the believers to live uncompromised — whether the place is purged of unbelievers through a divine trial, or whether the unbelievers have no further access to the believers after the latter have found refuge by an emigration *(hijra)*. Indeed, an "exodus," an *isrāʾ,* may even be performed spiritually, as shown in the example of the Prophet's night journey (see ASCENSION) — his nocturnal translation to the Jerusalem (q.v.) temple (Q 17:1; see AQṢĀ MOSQUE).

Power and violence

Local history inscribed with God's terror: *al-umam al-khāliya*

There appears to be one single — though variegated — archetypal paradigm in the Qurʾān that has retained its cathartic power throughout the development of the corpus: the story of the annihilated nations, *al-umam al-khāliya* (see PUNISHMENT STORIES). This archetypal topic, which in the Qurʾān has taken the place of the biblical myth of the destruction of the Babylonian tower, is about human hubris resulting in a divine retaliation that annihilates the community and destroys their ambitious project of self-sufficient existence. In the Qurʾān it is not one event but a cycle of similar happenings that demonstrates this pattern. Repeatedly, ancient communities have waxed proud in view of their social success, their wealth, sometimes their luxuriously built residences, their security and fame (see PRIDE; ARROGANCE). Being reminded by a divine messenger (see SHUʿAYB, ṢĀLIḤ, HŪD) of God's claim to worship and thanksgiving they defy and mock the warning (see MOCKERY). They are then overtaken by God's punishment and destroyed. The enigma of the still visible ruins and the vague memory of formerly flourishing communities in the broader neighborhood of the listeners have thus been given an explanation: Not unfavorable social conditions (as presupposed for the deserted living spaces recalled in the amatory introduction of the pre-Islamic *qaṣīda*) or changes in the area's balance of power, but a dramatic divine intervention, an outburst of divine wrath, caused the disappearance of the once glo-

rious cities (see CITY). The two most expressively presented concepts in these punishment stories are human hubris on the one hand, unfolded in "quotations" of the unbelievers' words of rejection, and divine wrath on the other, manifest in the rapidity, the suddenness of destruction often initiated by a divine sign, a seismic scream, or brought about by a vehement storm, an earthquake and the like.

Horovitz *(KU)*, who first examined the punishment stories, classified them as "legends." They deserve, however, to be considered as archetypes: human hubris, entailing blasphemy, leads to divine retaliation. What is missing from the stories is the expression of a fatal human intent to rival God — as is characteristic of the biblical tower-builders. The qurʾānic city-dwellers do not seek a confrontation with God: not being monotheistic believers they treat the divine warning rather indifferently, reacting (if at all) with arrogance and annoyance. The qurʾānic narrative, thus, as far as the contest between the peoples and their messengers is concerned, remains largely devoid of dramatic effects. The ever-recurrent typological pattern is overwhelming; it is due to an interpretation of history informed by the experience of the Prophet and his community (see OCCASIONS OF REVELATION): "Just as the qurʾānic emphasis on the atomism of time had frozen the flux of time into that of reiterated instants of God's action, so its typology of history had collapsed the rich variety of past events into a regularly recurring pattern" (see Böwering, Chronology, 319). This certain loss in terms of quantitative knowledge of historical facts may be viewed, however, as a gain in expressiveness in the process of conveying the message. It is God's role that retains highly dramatic traits; the divine figure appears sometimes strikingly close to that of a mythic agent: "And their [i.e. the Thamūd's] lord doomed them for their sin and razed [their dwellings]" (*fa-damdama ʿalayhim rabbuhum bi-dhanbihim fa-sawwāhā,* Q 91:14), "and your lord poured on them the disaster" (*fa-ṣabba ʿalayhim rabbuka sawṭa ʿadhāb,* Q 89:13). This highly metaphoric speech (see METAPHOR) is made possible by the linguistic medium of *sajʿ*, which would be ill-suited to accommodate complex narratives. One has to keep in mind that the historical and temporal scope of the Qurʾān cannot be viewed in isolation from the Qurʾān's rhetorical tradition, whose *kāhin*-speech models are undeniable (see RHETORIC OF THE QURʾĀN). *Kāhin* speech is shrouded in mystery; rather than revealing facts, it encodes them. Since the situation in antiquity is typologically close to that of the believing group around the Prophet, the vacuum is filled with rejoinders from their experience. Thus the current situation acquires surplus meaning by being underscored with an archetypal dimension whose pattern even appears inscribed into the landscape of the broader homeland.

Although the stories about the flood, on the one hand, and the destruction of Sodom and Gomorrah (see LOT) and the punishment of Pharaoh, on the other, are not geographically associated with the Arabian peninsula (belonging, rather, to the cycle of biblical stories situated in the Holy Land or its surroundings, a cycle which at a later stage of the qurʾānic development becomes dissociated from the punishment stories), they reveal in the early sūras the pattern of the Arabian retaliation (q.v.) legends. In summary, one may note that the punishment stories provide a pattern for the initial lack of success experienced by the Prophet and his community in Mecca. Worldly values held by the unbelieving elites and an endangered and isolated stance on the part of the messenger,

make up the ever-repeated pattern without generating a linear relation between them (for a reconstruction of the pre-Islamic myth wrought about the ancient people of Thamūd, see Stetkevych, *Golden bough*).

Trangressions of boundaries

The first act of disobedience as a double etiology: Man's exile from paradise, Satan's representation of evil

An explicit divine interdiction was violated by the first man, Adam, and his unnamed wife: despite a divine injunction not to approach a particular tree in paradise (q.v.), they both tasted the forbidden (q.v.) fruit (see AGRICULTURE AND VEGETATION). Through this act they became aware of their nakedness (see NUDITY). Shocked by this new awareness that is felt as shameful exposure, they feel the need to cover themselves (see MODESTY). Soon afterwards, they are called on by God to render account for their transgression (see BOUNDARIES AND PRECEPTS). Instead of being cursed and condemned to hard work and painful childbearing as in the biblical precedent, they are treated rather gently. They are sent "down" from paradise *(ihbiṭū)* to settle on earth (q.v.) — not, however, to their fatal detriment, since this punishment is immediately followed by a new offer of divine guidance (Neuwirth, Negotiating justice; see also ASTRAY). Nor is the news of their mortality, which is disclosed to them together with the news of their exile (Q 20:117), momentous since it is alleviated by the simultaneous assurance of their ultimate resurrection (q.v.).

It is true that the story serves *inter alia* to explain the existence of humankind on earth; this is not, however, in any striking contrast to their sojourn in paradise since, in the qurʾānic understanding, their terrestrial habitat is decent if not luxurious. More often, the story is adduced to demonstrate the dangerous nature of Satan — his obsequiousness exposing man's nakedness (Q 7:27), his insincerity in promising benefits he will not deliver (Q 7:22). Satan, who from the beginning of the qurʾānic reception of the story (Q 20) is instrumental in the couple's transgression, is only in the last report (Q 7) ultimately to blame. It is obviously not the etiological dimension that caused the story to be repeatedly presented in the Qurʾān, since a few virtual etiologies (which, in the biblical report support the significance of the narrative as a cultural myth) remain undeveloped in the Qurʾān, such as the fact of the first couple's achieving a mature perception of themselves, their learning about their sexuality (see SEX AND SEXUALITY) and their inventing the custom of clothing (q.v.). The telos of the story, rather, points to theodicy. It is true, the first couple were not substantially blamed and punished for their disobedience (q.v.), yet the pattern of "transgression followed by rendering account" — a particularly effective archetype — has been established as the primordial pattern of human-divine interaction (see RECORD OF HUMAN ACTIONS). In the qurʾānic understanding the regret of the perpetrator saves him from a hard punishment (see REPENTANCE AND PENANCE).

Satan, under the name of Iblīs, was viewed in the beginning as the tester, the agent of legitimate challenge to humans. He was delegated to perform this task during a debate with God that arose after he had shown his defiance of blind obedience (q.v.), refusing to bow down before a being — namely Adam (Q 15:33) — other than his divine lord (q.v.). Indeed, the transition of created beings from submissive creatures to autonomous agents in the interaction with the Divine, belonging to Adam in biblical tradition, in the Qurʾān is Iblīs' achievement whose tragic consequences he takes upon himself. It is only through his work that the elect community, who is not liable to fall victim to his seduc-

tion, becomes distinguishable from the unbelievers. Whereas God himself in the first debate scene agreed to the project proposed by Iblīs (Q 15:41), in the further development of the community Iblīs' image — once his persona has merged with that of Satan *(al-shayṭān)* — darkens considerably: in the end he appears as the enemy of humans, the personification of evil *par excellence*. He and his escorts will therefore be annihilated in hellfire so as to re-establish justice at the end of times (see HELL AND HELLFIRE). Iblīs is, however, rehabilitated in later Islamic tradition. Although the qurʾānic account of creation does not culminate in human acquisition of knowledge (see KNOWLEDGE AND LEARNING) as a fruit picked from the forbidden tree at Iblīs' instigation, still Iblīs is raised — in the profane tradition — to the rank of the seducer, the permanent agent of provocation through whom a substantial broadening of horizons of experience becomes possible. He enjoys an equally unique position in at least one branch of Ṣūfī tradition (see ṢŪFISM AND THE QURʾĀN) that has strongly influenced literature, where Iblīs is acknowledged as the sole figure possessing knowledge about the true will of God. His ongoing influence — not only as an ambivalent, but as a tragic figure as well — continues to manifest itself in diverse forms (Awn, *Satan's tragedy;* Shaikh, *Der Teufel*).

The elect space: From Mecca to Jerusalem

The mythical notion of a space that excels over all other space is traceable in the Qurʾān, though it is widely modified to suit the framework of a religion of revelation. While there is a strong notion of Mecca's excellence in the early sūras (Q 90:1; 95:3; 105; 106), the focus during the Meccan era switches to Jerusalem, which first enjoys the unique rank of being the point of orientation in the prayer (q.v.) of the early Muslim worshippers (see QIBLA). Although the Qurʾān itself does not explicitly mention Jerusalem by name, the adoption of the rite to pray towards it clearly presupposes its high rank in the community. The night journey *(isrāʾ)* of the Prophet in a miraculous way transferred him temporarily to the "remote temple" (Q 17:1, *al-masjid al-aqṣā*), the destination of the prayers of the community. During the later Meccan activities of the Prophet, Jerusalem with its temple becomes the prototype of a holy city. In Medina (q.v.) it served as the model for the perception of a religious center, after which the new Islamic holy city was shaped. Mecca, which takes over as the space of origin for Islam, is thus not only a place from which the Islamic ritual originated, but also — in analogy to Jerusalem (cf. *Isa* 2:3: For out of Zion shall go forth the Torah and the word of the Lord from Jerusalem) — the birthplace of Islamic verbal worship, as indicated in Q 2:129: "Our lord! And raise up among them a messenger from them who will recite to them your signs and teach them the book and the wisdom and enrich them. Truly you are the mighty, the wise" (*rabbanā wa-bʿath fīhim rasūlan minhum yatlū ʿalayhim āyātika wa-yuʿallimuhumu l-kitāba wa-l-ḥikmata wa-yuzakkīhim innaka anta l-ʿazīzu l-ḥakīm;* see Neuwirth, Spiritual meaning). As the place at which all Muslim prayers converge, Mecca is the center of the earth, the *omphalos mundi*.

Love and sexuality

Joseph and Zulaykha

The myth of the woman who, through her seduction of the man, brought mischief into the world does not exist in the Qurʾān (see GENDER; WOMEN AND THE QURʾĀN). Eve was not instrumental in Adams's transgression and is thus not considered responsible for Adam's predicament. Still the notion of a devious behavior innate in women is confirmed in the Qurʾān, labeled

kayd al-nisāʾ, which is explicitly and *par excellence* attributed to the unnamed wife of Potiphar, the Egyptian official in whose house Joseph (q.v.) was lodged. Although she does not succeed in seducing Joseph and leading him astray from his way as a chosen one of God (see ELECTION), she does exercise some power over him. Being sexually attracted to her and thus distracted from his exclusive devotion to God, he finds the strength to resist her only through divine intervention (Q 12:24). Still, she is not categorically derogated in the Qurʾān; rather, unlike the situation in the biblical story, she is given the opportunity to repent and acknowledge her moral failure. This opens the way for her post-qurʾānic rehabilitation and elevation to the rank of Joseph's beloved and, later, wife. It is worth noting that though her behavior in the Qurʾān appears to be an attempted act of *zinā* (see ADULTERY AND FORNICATION), she is not actually accused of such a transgression of the limits set to female freedom (see BOUNDARIES AND PRECEPTS). In view of her positive image in the Qurʾān, it is not surprising that she could be accepted in Ṣūfism as a female icon.

The virgin mother: Mary

A reverse projection of the seductress is the virgin mother, Mary (q.v.; Maryam). She, again viewed from the outward appearance of her fate, manifests a case of transgression of the limits of female freedom, although is herself innocent. Having borne a child outside of marriage, she is rescued from the wrath of her relatives by a miracle: her baby son is endowed with the power of speech (q.v.) and speaks on her behalf. He presents himself as God's elect, a rank also enjoyed by John (Yaḥyā; see JOHN THE BAPTIST), the son of Zechariah (q.v.; Zakariyyā), whose birth was likewise accompanied by miraculous circumstances. Mary is the only female figure in the Qurʾān presented by name; she also has the privilege of being personally addressed by God's word through an angelic messenger (see WORD OF GOD; HOLY SPIRIT; GABRIEL). In the Qurʾān, Mary is not presented as a suffering woman as she is in Christianity (see CHRISTIANS AND CHRISTIANITY) since she does not have to see her son suffer (see SUFFERING; CRUCIFIXION). In Islam the prototype of the suffering woman is, in later tradition, embodied in Fāṭima (q.v.), the daughter of the Prophet. Thus, the role that, according to Christian understanding, Mary plays in the eschatological realm is, in Islam, taken over by Fāṭima, although with a marked difference:

> Only Mary has a necessary role in the scheme of redemption. Fatima plays a more active role at the End of Days than does Mary, but there is no suggestion in Islam that redemption would be impossible without her. According to the (Shiʿite) Islamic view of redemption as the fulfillment of human life through suffering, Fatima, as the greatest sufferer on earth, will enjoy the greatest rewards on the day of resurrection (Sered, Rachel, Mary, Fatima, 136).

Paradisiacal distributions of the genders

What is not stressed in the narratives is, however, presupposed in the qurʾānic worldview: it is male dominance that "informs life on earth and life in heaven.… While the Qurʾān assures women of faith that they will go to heaven [Q 4:124; 16:97] it offers them no insight as to what their place in heaven will be" (Combs-Schilling, *Sacred performances,* 61). Paradisiacal space — this has been lamented over and over by Muslim feminists (see FEMINISM AND THE QURʾĀN) — seems to be equipped solely for the believer of the male sex. It is true that the depictions of paradise, which appear in the early sūras and portray banquet scenes with the believers being served

by beautiful youths and enjoying the company of (or being married to) beautiful young girls, labeled *ḥūr ʿīn* (see HOURIS) for the striking beauty of their eyes, reflect a purely male imagination of ultimate happiness (Q 55:56-8; 44:54). These descriptions of the qurʾānic *janna* (lit. "garden") have been discussed in detail by Horovitz *(Koranische Paradies),* who suggests that they reflect magnifications of festal banquets familiar in the circles of tribal elites and well-known to the listeners of the Qurʾān from their representation in ancient Arabic poetry. They may thus be understood as static tableaux of both natural and sensual consummation and spiritual bliss. Andrew Rippin (Commerce of eschatology, 134), in contrast, has viewed these images as a "fundamental appreciation of ideal human nature as the monotheistic tradition conceives it."

The images of the garden have been interpreted by anthropologists, — who view them through their exegetical amplifications — however, primarily under the aspect of sexual satisfaction:

> With the *ḥūrī,* sexual satisfaction is never ending, and not marred by fear as it is on earth. Men have nothing to fear from the *ḥūrīs,* for they have no personalities, no individual desires, no chance for roaming; the Qurʾān guarantees their virginity, that they will not have been touched by man nor jinn when the believing male enters them, and they will be permanently attached to the man to whom they are given (Combs-Schilling, *Sacred performances,* 95).

Whereas earlier sūras insist on these projections into the eternal sphere of earthly bliss understood on the basis of male experience, later texts modified the image. Their explicit mentioning of female participation in paradisiacal recompense (Q 43:70-3) reflects a new understanding of earthly and heavenly life on the side of the listeners. Meanwhile, a community had been established, where women — not least in the Prophet's own household (see WIVES OF THE PROPHET; FAMILY OF THE PROPHET) — played vital roles. The issue of transcendent happiness was no longer taken as part of a symbolic realm, but debated in its details and fleshed out to form a reference text for the believers. The "impressionist," somewhat enigmatic and highly symbolic text of the old *janna*-descriptions was transformed into a reference text where, ritually and legally, in terms of justice and morals, everything should be spelled out unambiguously.

It may be helpful for understanding the contextuality and historical conditions for the qurʾānic descriptions of *janna,* to remember that the Prophet himself may have had a more complex and positive appreciation of women.

> Early Islam exhibits much the same trajectory in the definition of the female as does early Christianity… Islam has its ʿA'isha [see ʿĀʾISHA BINT ABĪ BAKR] just as Christianity has its Mary Magdalene. Both are highly charged sexual and sensual females — the one suspected of adultery in the desert, the other confirmed of prostitution — and yet each is valued as somehow intrinsically pure and good in the eyes of the founder of the faith, Muhammad or Jesus. It seems plausible that these founders did not dichotomize sexuality and spirituality in the ways that their followers did, and in fact found them persuasively combined in these women. Yet their esteem for that combination was not to endure. Neither ʿA'isha nor Mary Magdalene became the dominant image of the proper female in the respective cultural traditions that arose out of the two faiths. Muslims on the whole find blasphemous the notion that it might have been good for ʿA'isha… to have become a public model for other

women, while Christians on the whole find blasphemous the notion that Jesus might have exchanged sexual tenderness with Mary Magdalene.… Yet it could be argued that the founders of the two faiths were broader in their understanding of the possible combinations of faith, womanhood, and sexuality than the majority of their followers, and that they made that acceptance clear — Muhammad by dying in ʿA'isha's arms and Jesus by first appearing after his crucifixion to Mary Magdalene, whom he authorized to go and tell the male disciples the earthshaking news that he still lived. These events are recorded in the hallowed texts. Yet the dominant cultural perspectives that have developed in the contexts of these faiths for the most part leave by the wayside these two women as embodiments of proper womanhood and instead concentrate the collectivity's attention and definitions on immaculate conception and virginal mothers (Combs-Schilling, *Sacred performances,* 91-2).

Fates of the hero

There are a few figures in the Qurʾān who acquire heroic dimensions, the most prominent being Abraham, Joseph, Moses (see for his appearance in Q 18, Jung, Four archetypes), and Jesus (see Bauschke, *Jesus*). Their stories are not devoid of archetypal traits as the following selected examples may illustrate.

Abraham, destroyer of idols

Abraham is the protagonist of a most diversified narrative reported in several qurʾānic texts (Q 6:74-84; 19:41-50; 21:51-73; 26:69-86; 29:16-27; 37:83-98; 43:26-7; 60:4). The earliest achievement in his career is the smashing of the idols (see IDOLS AND IMAGES), i.e. the destruction of the old order, thus making a new order possible. The incident, which is not biblical but midrashic, portrays him as a cultural hero. A debate with an unbelieving ruler usually identified with Nimrod (q.v.; Q 2:258-60) and the destruction of the idols of his father (Q 6:74-84; 19:41-50; 21:57-8; 26:16-27; 37:93; see IDOLATRY AND IDOLATERS), which is followed by his being sentenced to be burnt alive — a fate from which he is saved by God (Q 21:68-9; 29:24; 37:97-8), leads to his expulsion from his homeland. Abraham performs a *hijra,* a secession from his father and his homeland to encounter God in a new land where he will raise his family (Q 19:48-9; 21:71; 29:26). Though a number of further encounters with God are recalled in the Qurʾān (his intimate relationship with the divine lord earns him the title of a friend of God, *khalīl Allāh;* see FRIENDS AND FRIENDSHIP), it is his early identification as a monotheist (*ḥanīf,* q.v.) in a pagan world, that elevates him to his unique rank, in the Qurʾān and later in Islam, as the founder of monotheistic worship. With his emigration he sets an example for the believer who, when living under persecutors of religion, chooses emigration. He becomes the prototype of the prophet Muḥammad and, as such, rightly figures prominently in the text of the Muslim ritual prayer.

Abraham and sacrifice

The subverted approach to the problem of succession: not by the son's replacing the father, but the father's preparedness to annihilate his son is reflected in the Qurʾān in the episode of Abraham's sacrifice (q.v.) of his son (Q 37:102-13). Unlike the biblical case, in the Qurʾān the son voluntarily sacrifices himself (Q 37:102) but the father is spared the enactment of the sacrifice through divine intervention. The story, which is the central etiology of the Islamic pilgrimage (q.v.; *ḥajj*), a ceremony believed to have been initiated by Abraham, has

been interpreted by anthropologists in terms of a corroboration of patriarchy (q.v.).

The Ibrāhīm myth powerfully undergirds the rightful domination of father over son, of senior men over junior men, of all males over females and children — of patriarchy. Ibrāhīm (Islam's archetypal father) submitted to God's demand even to the point of trying to kill his own son, and the son, because he was faithful and loyal (Islam's archetypal son) actively cooperated with the father's attempt at his own sacrifice; the son knowingly submitted to what was to be his death at this father's hands.… Islam's myth both transcends and reinforces patrilineality, the inheritance [q.v.] of goods and position through the male line. Transcendence comes because, as told in the Qurʾān, the prophet Ibrāhīm had to deny his own father in order to remain faithful to the one God (Ibrāhīm's father rejected monotheism and forced the fissure between father and son). Yet the Qurʾān also reinforces patrilineality by portraying the ultimate sacrifice that God demands of humans as the sacrifice of the most precious tie on earth… the fundamental patrilineal connection. The myth of sacrifice ennobles that bond over all others. So at the same time that the Qurʾān underlines the limits of patrilineal affiliation (Muslims must deny it if it threatens the faith), it reinforces patrilineality, for it was the father in connection with the son that made for connection to the divine and won for father and son — and by extension also humanity — long life on earth and eternal life thereafter. According to tradition, Ibrāhīm and his son walked away from the place of sacrifice and went on to establish some of the holiest places in Islam (Combs-Schilling, *Sacred performances,* 57 f.).

Moses — prophet and leader of his people

The closeness of the Islamic Prophet to Moses is attested already in early sūras. Q 52 and Q 95 start with an oath (see OATHS) by Mount Sinai (q.v.) and the sanctuary of Mecca, the scene of Muḥammad's own activity. Moses is evoked in Meccan sūras more than 120 times, more often than any other biblical figure. This is not surprising since Moses is the Israelite prophet *par excellence*. To him God had spoken with an intimacy unrivaled by any other messenger. He had been granted the Torah and, by leading the exodus out of Egypt, had shaped the destiny of the Israelites in most significant ways. It is worth noting that Moses is portrayed first as a messenger sent to an unbelieving ruler, Pharaoh. But unlike the rest of the early warners, he is uniquely equipped for his task: he was called by God at a sacred place (*al-wādi l-muqaddas ṭūwan,* Q 20:12; cf. 79:16) where he was allowed to hear the voice of God himself — a point elaborated in later reports (Q 20:13; see ANTHROPOMORPHISM) — and was ordered to perform (and endorse) the ritual prayer (q.v.; *aqimi l-ṣalāta,* Q 20:14). It is this particular authorization and his subsequent delivery from fear (q.v.) and anxiety (*ishraḥ lī ṣadrī,* Q 20:25) that give him the strength to speak out in front of Pharaoh, the stubborn denier of the oneness of God (see INSOLENCE AND OBSTINACY). Moses is thus a prefiguration of the Prophet himself, who also was granted an intimate encounter with God, experiencing a vision — according to one interpretation — of God himself seated on his throne (Q 53:6-7: *dhū mirratin fa-stawā wa-huwa bi-l-ufuqi l-aʿlā;* see VISIONS; THRONE OF GOD), a supernatural experience which, like Moses', was staged in a particularly exalted place, near "the garden of promise" (*jannat al-maʾwā,* Q 53:15). Like Moses, Muḥammad

experienced a widening of the breast (Q 94:1: *a-lam nashraḥ laka ṣadraka*) during the early phase of his prophetic activity.

Later portrayals of Moses complement his fate before his divine call to prophethood without embellishing his ambivalent personality: while still in Egypt, he unintentionally killed a person, and is thus obliged to hide. It is on his way back from his refuge in Midian (q.v.) that he receives the divine call. The emphasis remains on his debates with the powerful ruler, Pharaoh, whom he is unable to convince, and who prevails over the messenger. Not unlike other stubborn unbelievers, Pharaoh is punished in this world and awaits punishment in the next. As in previous retaliation legends, in this case, too, the believers are saved, with a miraculous passage through the sea. The exodus *(isrāʾ),* which typologically resembles the *hijra,* is, however, not compared to that latter event. Moreover, it serves as a prototype for the Prophet's and the Meccan believers' spiritual exodus (Q 17:1) out of their local situation of distress; i.e. by imagining the Holy Land and orienting themselves in their prayers towards Jerusalem. Moses' role as a leader and lawgiver of his people is often evoked but rarely presented (see LAW AND THE QURʾĀN) — his trial of the culprits of the blasphemous veneration of the golden calf (Q 2:51-4; 20:87 f.; see CALF OF GOLD) is the only example of his practicing the ethical injunction to command the good and forbid the wrong (*al-amr bi-l-maʿrūf wa-l-nahy ʿan al-munkar,* see VIRTUES AND VICES, COMMANDING AND FORBIDDING).

Moses has also left traces in Islamic ritual, since his receiving the tablets of the law on Mount Sinai became significant for the Islamic festal calendar, with Ramaḍān (q.v.) having its prototype in the Mosaic Day of Atonement (see FASTING; ATONEMENT).

In the Medinan Sūrat al-Baqara ("The Cow"; Q 2), the sūra that contains the promulgation of the fast of Ramaḍān (Q 2:187-90), one of the main themes carries the motifs of the Moses story connected with the Day of Atonement. "Moses' stay on Mount Sinai, the sin of the golden calf, God's forgiveness [q.v.] and bestowal of the book… are repeated in sūra 2 with much emphasis" (cf. Goitein, Ramaḍān, 190). There is also a hint as to the time of the implementation of the Mosaic rule of fasting: the mention of the bestowal of the revelation together with that of *al-furqān* (lit. "decision, redemption, liberation") in Q 2:185 (*bayyinātin mina l-hudā wa-l-furqāni;* cf. Q 44:1-4; see CRITERION) — recalls the text commemorating the battle of Badr (q.v.; Q 8:41: *wa-mā anzalnā ʿalā ʿabdinā yawma l-furqāni yawma ltaqā l-jamʿān,* "what we revealed to our servant on the day of discernment, the day the two groups met"). In this latter context, *furqān* connotes a decisive, liberating victory over threatening enemies. It is both experiences — as K. Wagtendonk *(Fasting)* has concluded — the decisive military victory of the Muslim community and the bestowal of the book upon them, that have given rise to the institution of the month of fasting in Islam. This is very much in accordance with the case of Moses (Q 2:53: *wa-idh ātaynā mūsā l-kitāba wa-l-furqāna,* "when we gave Moses the book and the criterion"), the central figure of the founding legend of Jewish fasting on the Day of Atonement, who likewise brought his people a twofold blessing, political liberation and divine revelation (see POLITICS AND THE QURʾĀN).

Nadhīr

see WARNER

Naḍīr (Banū al-)

One of several Jewish clans of Medina (q.v.) in pre- and early Islamic times (see JEWS AND JUDAISM; TRIBES AND CLANS; PRE-ISLAMIC ARABIA AND THE QUR'ĀN). In the Islamic tradition, they are usually considered part of the triad of important Medinan Jewish clans that also includes the Banū Qaynuqāʿ (see QAYNUQĀʿ) and the Banū Qurayẓa, though often only the Naḍīr and the Qurayẓa (q.v.) are mentioned. The latter two were sometimes called *al-kāhinān,* "the two priest clans" and Arabic sources provide an Arabicized "Israelite" genealogy of the Naḍīr reaching back to Aaron (q.v.; Hārūn).

The actual origin of the Naḍīr is obscure, as is the derivation of their name. A number of persons belonging to them are known by name from the Arabic sources and some of these play an important role in Muḥammad's Medinan period (see CHRONOLOGY AND THE QUR'ĀN). Among the latter are the poet Kaʿb b. al-Ashraf, who mocked (see MOCKERY) the Prophet and was then assassinated in a nocturnal raid to Khaybar (see EXPEDITIONS AND BATTLES); Sallām b. Abī l-Ḥuqayq, likewise assassinated in Khaybar; and Ḥuyayy b. Akhṭab, the father of Ṣafīya, who eventually was one of Muḥammad's wives (see WIVES OF THE PROPHET). The Naḍīr, we are told, supported the Meccan allies against the Muslims, e.g. by sheltering Abū Sufyān and inciting the Meccans (as well as other Jewish clans) to oppose the Prophet (see OPPOSITION TO MUḤAMMAD).

The story of the Naḍīr and the exact chronology of events cannot, from today's perspective, be reconstructed with certainty. The most common version is as follows: After growing tensions, Kaʿb b. al-Ashraf was killed in 3/625. Then, after the battle of Uḥud (q.v.), the Naḍīr attempted to assassinate Muḥammad by having a rock fall upon him. The plot failed but the Muslims laid siege to their quarter in late 3 or 4/625. After about two weeks and possibly without any serious fighting (q.v.), the Naḍīr capitulated; they had lost their spirit when Muḥammad ordered their palms (see DATE PALM) to be destroyed, reference to which is found in Q 59:5, according to

Muslim exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). The Naḍīr agreed to leave Medina for Khaybar on the condition that they carry away their movable belongings but surrender their lands and dwellings. When the Muslims conquered Khaybar in 7/628, the Naḍīr were expelled again and this time left for Syria (q.v.). In Khaybar, Ṣafīya was taken captive; the Prophet freed her, she converted to Islam and was married to him.

This "orthodox" account of the conflict with the Naḍīr is, if studied in detail, not without serious drawbacks. Other sources report diverse motives for the siege (e.g. the Naḍīr breaking a treaty with the Muslims), and the sequence of events remains confused; even the second expulsion of the Naḍīr from Khaybar is questionable. The actions of prominent members of the Naḍīr cannot be fully individualized, and some later descendants of the Naḍīr whose existence is ascertained for the first Islamic centuries remain completely obscure.

Although the Naḍīr are not named in the Qur'ān, a number of passages are often said to refer to them or to one of their members, e.g. Q 2:84 f., 178, 256; 4:51, 60; 5:11, 42. Q 59:2-15 is, however, by far the most important passage. These verses relate, according to the majority of sources, to the siege and expulsion of the Naḍīr. Although these verses do mention some details of what is reported in the "orthodox" version (e.g. the destruction of the palm trees), the bulk of this passage deals with the partition of the booty (q.v.) among the Muslims (Q 59:6-10). In any case, the general vagueness of Q 59:2-15 also supports those existing reports that differ from the "orthodox" version of what, exactly, happened to the Naḍīr and why. It seems significant that some early exegetes did claim — due to the use, in Q 59:2, of the ambiguous term *al-ḥashr,* which might mean a grouping together of people (such as for a siege or for an expulsion) or the congregation of humankind on the last day (see LAST JUDGMENT) — that these verses do not refer to a historical event at all, but rather to the fate of the Jews at the end of time (see ESCHATOLOGY; APOCALYPSE).

Najrān

A major Arab urban center of pre-Islamic south Arabia, not attested by name in the Qurʾān, but probably alluded to in Q 34:18 and 85:10. The dominant group of the city was the tribe of Balḥārith, the chief clan of whom was Banū ʿAbd al-Madān (see TRIBES AND CLANS; ARABS; PRE-ISLAMIC ARABIA AND THE QURʾĀN). Najrān was both an agricultural and an industrial center producing cereals, fruits, vegetables, leather and textiles (see HIDES AND FLEECE; HUNTING AND FISHING; CITY; AGRICULTURE AND VEGETATION). It was also a caravan (q.v.) city, at which the celebrated spice route bifurcated, running through Yamāma into Mesopotamia and through the Ḥijāz into Syria (q.v.; Bilād al-Shām; see also GEOGRAPHY). But the flourishing caravan city became involved in religion — Judaism, Christianity, and Islam — which changed the course of its life and history (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY).

Christianity reached it in the fifth century, and soon Najrān became an episcopal see and the main center of Christianity — predominantly Monophysite — in the Arabian peninsula. Around 520 C.E., Yūsuf, the Judaizing king of Ḥimyarite south Arabia (see YEMEN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), persecuted the Christians of the region and some four hundred Najrānites were killed, both men and women, including their chief, al-Ḥārith/Arethas. Shortly thereafter, the Ethiopians (see ABYSSINIA) restored Christianity and this ushered in the golden period of Najrān as an Arabian martyropolis, "the city of martyrs," and the holy city of the Arabs for one hundred years. A great martyrion was built, Kaʿbat Najrān, which became a pilgrimage center for the Christian Arabs. The cult of relics was given an impetus, and martyria were constructed both in south Arabia and in Syria (Bilād al-Shām) among the Monophysite Ghassānids, relatives of the Balḥārith of Najrān. Its martyrs were canonized by the universal Church, which celebrates their feast on the 24th of October.

The rise of Islam in the seventh century profoundly affected the fortunes of Najrān. The two phases of its encounter with Islam, first the dialogue and then the confrontation, represent the earliest chapter in the history of Muslim-Christian relations. The first friendly encounter is reflected in the figure of Quss, said to have been the bishop of Najrān. It is not altogether incredible that he was such and that Muḥammad did indeed hear him preach at ʿUkāẓ. Najrān is implied in a qurʾānic verse (Q 34:18) either as one of the "blessed cities" or those "clearly visible" while a tradition attributed to Muḥammad (see ḤADĪTH AND THE QURʾĀN) considers it one of the protected, guarded cities. An echo of the martyrdom in Najrān may possibly be audible in a qurʾānic verse, Q 85:10 (and not in the allusion to the People of the Ditch [q.v.] of Q 85:4-9, as is often thought).

The Muslim conquest of south Arabia put Islam and Najrān on a collision course. A delegation reached the prophet Muḥammad from Najrān in Medina (q.v.) in 10/630. The objurgation (*mubāhala,* see CURSE; OATHS) was averted when the delegation withdrew from the contest, and Muḥammad concluded a treaty with them. In this treaty, the Najrānites were assured of their freedom of worship (q.v.) but they had to pay an annual tribute (see TAXATION; CONTRACTS AND ALLIANCES; RELIGIOUS PLURALISM AND THE QURʾĀN). This treaty was the first of its kind between the nascent Muslim state and a Christian one, the city-state of Najrān. Soon, during the caliphate of ʿUmar, the Najrānites were ordered to vacate their city, which

they did, settling in Iraq (q.v.) in al-Najrāniyya, a locale not far from Kūfa.

Christianity, however, did not entirely vanish from Najrān but lingered into early Islamic times. Part of Balḥārith apparently remained and did not emigrate. In due course, Christian Najrān did vanish and became a toponym denoting a heap of ruins, called Ukhdūd (q.v.), while another Najrān, Muslim Najrān, arose to the north-west of Ukhdūd, and whose Arabs still call themselves Balḥārith; today, both lie in the district of ʿAsīr in Saudi Arabia.

Names of God

see GOD AND HIS ATTRIBUTES

Names of the Prophet

The proper personal name as well as the titles and other additional names Muḥammad (q.v.) has claimed, or by which Muslims have recognized him.

The personal name of the Prophet

According to the rules of Arabic nomenclature, the full personal name of Islam's founder was Abū l-Qāsim Muḥammad b. ʿAbdallāh al-Hāshimī al-Qurashī. The *kunya* Abū l-Qāsim recalls that he was the father of a boy called al-Qāsim, who died at an early age. Some ḥadīths (see ḤADĪTH AND THE QURʾĀN) sought to limit the use of this *kunya,* after the time of Muḥammad (Déclais, La *kunya*). The name Muḥammad, "worthy of praise," had been used before Islam, albeit rarely (recently some western scholars have interpreted the belabored attempts to find attestations of "Muḥammad" in the Age of Ignorance [q.v.; *jāhiliyya*] as evidence that Muḥammad was not, in fact, the Prophet's given name). Ibn Saʿd collected several pious traditions, according to which five people (including an *usquf,* bishop) had been given this name before Islam. Their parents hoped that each would be the awaited prophet (see PROPHETS AND PROPHETHOOD). For his part, al-Qāḍī ʿIyāḍ (d. 544/1149) indicates that there were others who were called Muḥammad (*al-Shifāʾ,* 230) when he states: "God prevented those with this name from claiming to be prophets or others declaring them to be so or some cause manifesting itself in them which might make anyone consider the merits of their case." ʿAbdallāh is the name traditionally ascribed to Muḥammad's father. The other names indicate that he belonged to the Hāshim clan of the Quraysh (q.v.) tribe (see TRIBES AND CLANS; FAMILY OF THE PROPHET).

The Qurʾān mentions the name Muḥammad four times (Q 3:144; 33:40; 47:2; 48:29). In another verse (Q 61:6) the name appears as Aḥmad and its meaning is disputed. In this verse, Jesus (q.v.) states: "I announce a messenger (q.v.) who will come after me, whose name will be Aḥmad." The majority of commentators have regarded it as a

proper name but it may be simply a superlative adjective: "whose name will be most deserving of praise" (a reference to the meaning of Muḥammad). In the reading of Ubayy b. Kaʿb, this verse is rather different: "I announce a prophet whose community (see COMMUNITY AND SOCIETY IN THE QURʾĀN) will be the final one and by whom God will put the final seal on prophets and messengers" (Paret, *Kommentar,* 476). Be that as it may, Aḥmad has become a proper name among Muslims. The expressions *al-rasūl,* "the messenger" (Q 2:143; 3:32, 86, etc.), and *al-nabī,* "the Prophet" (Q 3:68; 5:81, etc.), indicate his mission and serve as actual proper names in the same way as "Christ" is used to describe Jesus of Nazareth by Christians (see CHRISTIANS AND CHRISTIANITY).

The names and titles of the Prophet in the ḥadīth collections

Mālik b. Anas (d. 179/796) concluded his *Muwaṭṭaʾ* with a section entitled "Chapter on the Names of the Prophet," which contains the following single ḥadīth of Jubayr b. Muṭʿim: "The Prophet said: 'I have five names. I am Muḥammad; I am Aḥmad; I am al-Māḥī, because through me God abolishes unbelief; I am al-Ḥāshir because men will be gathered behind me (at the end of time); I am al-ʿĀqib ("the last").'" Al-Bukhārī (d. 256/870; *Ṣaḥīḥ, Kītāb al-Manāqib*) has a section entitled "The Names of the Prophet." He quotes Q 33:40, 48:29 and Q 61:6, cites the abovementioned ḥadīth of Jubayr and adds the following ḥadīth of Abū Hurayra (d. ca. 58/678): "The messenger of God has said: 'Do you not admire how God has turned away from me the insult and the curse of the Quraysh? They insult a *mudhammam,* they curse a *mudhammam,* whereas I am a *muḥammad*.'" He ends with a parable upon "the seal of the prophets" and a ḥadīth on the Prophet's *kunya*. Muslim *(Ṣaḥīḥ, Kītāb al-Faḍāʾil)* has the same heading, under which he quotes the ḥadīth of Jubayr and the following one by Abū Mūsā al-Ashʿarī: "The messenger of God told us some of the names he had. He said 'I am Muḥammad and Aḥmad and al-Muqaffī (the one who comes after the others; cf. Q 2:87; 5:46; 57:27) and al-Ḥāshir and the Prophet of repentance (see REPENTANCE AND PENANCE) and the Prophet of mercy (q.v.).'" The *Musnad* of Ibn Ḥanbal quotes the same ḥadīths in the sections dedicated to Jubayr (iv, 80-4), to Abū Hurayra (ii, 244), to Abū Mūsā (iv, 404, with the variant "Prophet of battles" [see EXPEDITIONS AND BATTLES] instead of "Prophet of mercy"), and to Ḥudhayfa b. al-Yamān (v, 405). In the same way, he recounts from ʿAwf b. Mālik (vi, 25) how the Prophet proclaimed his titles before a Jewish assembly that refused to recognize him (see JEWS AND JUDAISM): "By God, I am al-Ḥāshir, I am al-ʿĀqib, I am the chosen Prophet *(al-nabī al-muṣṭafā)* whether you believe it or not!"

These lists have become a traditional, canonical set of information, as can be shown by Ibn Saʿd (*Ṭabaqāt,* i, 104), Ibn Ḥazm al-Andalusī (*Jawāmiʿ,* 19) or again by al-Ghazālī (d. 505/1111; *Iḥyāʾ, K. al-ʿĀdāt, ādāb al-maʿīsha wa-akhlāq al-nubuwwa*). Strictly speaking, these names are actually titles that define Muḥammad's mission. Their occurrence in collections of ḥadīth serves a dual purpose. Faced with the Arabs (q.v.) of Medina (q.v.) and the earlier religions (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), it is an affirmation that the Prophet of Islam was entrusted with a definitive and universal mission. And it perhaps also seeks to restrain the enthusiasm of the devout by restricting the names of the Prophet to ten or fewer.

Devotional litanies

In the *Musnad* of Ibn Ḥanbal, the ḥadīth of Abū Mūsā is introduced thus: "The mes-

senger of God told us his names. We have retained some of them but not others." This is an implicit admission that the Prophet had more names that are not known to us. There is nothing to prevent the faithful from seeking to find them once more and reciting them in certain instances, as in devotion. This is why lists appeared of what are called *al-asmāʾ al-sharīfa,* "the noble names," some comprising ninety-nine names, i.e. the same number as "the beautiful names" of God (see GOD AND HIS ATTRIBUTES), some with fewer, some with many more (cf. Epalza, Los nombros; Schimmel, *And Muḥammad,* 105-22). One example of the popular devotion that centered around the names of the Prophet (often taking the form of "litanies") is evidenced by the 201 names of Muḥammad contained in the list compiled by Imām al-Juzūlī (d. 869/1465; an Ar. version, with commentary, is found in al-Sharnūbī's *Sharḥ;* for an Eng. rendition of a similar list, see Ebied and Young, List; Rudvin, Supplementary note).

This phenomenon occurred at the same time as the establishment of the feast of the birth of the Prophet (*mawlid nabawī,* see FESTIVALS AND COMMEMORATIVE DAYS) in the seventh/thirteenth century; on this occasion, in fact, the faithful recited panegyrics in praise of the Prophet, in particular, the well-known *Burda,* "The Prophet's mantle," of the poet al-Buṣīrī (609-93/1213-95). Curiously, it was in this same period that devotion to the name of Jesus was becoming widespread in Christendom, particularly under the influence of St. Bernard (Noye, Jésus, 1115-20).

Certain scholars, such as al-Ghazālī (cf. Epalza, Los nombros, 152 n. 13, citing the thesis of F.M. Pareja, *Mahoma en el Islam,* Rome 1946, 67-8), criticized those who gave the Prophet names other than those that had been given him by his family and opposed the veneration of the names of the Prophet, a practice that, to them, seemed to involve a dangerous confusion with devotion to the names of God. Others, seeing these additional names as an established traditional collection, sought to understand and explain it. Thus al-Qāḍī ʿIyāḍ, an important figure in Andalusian Mālikī literature (see LAW AND THE QURʾĀN), dedicates eighteen pages of his popular work *al-Shifāʾ bi-taʿrīf ḥuqūq al-muṣṭafā,* "The healing through recognizing the rights of the chosen one," to the names of the Prophet (al-Qāḍī ʿIyāḍ, *Shifāʾ,* i, 228-46). In an initial chapter, he lists them as follows: Firstly, those laid down in the ḥadīths of Jubayr, Naqqāsh, Abū Mūsā and Makkī (who talks of "ten names," including Ṭā-Hā and Yā-Sīn, the initial letters of Q 20 and Q 36, respectively; it may be noted here that an exegetical trend existed wherein names of the Prophet were derived from the so-called "mysterious letters" [q.v.]). Secondly, there are those designations found in the Qurʾān itself, such as: *shāhid,* "witness" (see WITNESSING AND TESTIFYING); *mubashshir,* "bearer of glad tidings" (see GOOD NEWS); *nadhīr,* "warner" (q.v.); *dāʿī ilā llāh,* "caller to God" (see INVITATION); *sirājan munīran,* "shining lamp" (Q 33:46; see LAMP; LIGHT); or *al-ʿurwa al-wuthqā,* "the firmest handle" (Q 2:256); *al-nabī al-ummī,* "the Prophet coming from a pagan milieu" (Q 7:157-8; see ILLITERACY; LITERACY; UMMĪ; POLYTHEISM AND ATHEISM), etc.; or "in the earlier books of God, in the books (see BOOK) of the prophets, in the ḥadīths of his messenger, in the general practice of his community," as *al-muṣṭafā,* "the chosen one"; *al-ḥabīb,* "the beloved" (see LOVE AND AFFECTION); *sayyid waladi ādam,* "the lord (q.v.) of the sons of Adam" (see ADAM AND EVE), etc. Next, there are the names of supposed biblical origin, such as *al-mutawakkil,* "he who trusts" (see TRUST AND PATIENCE); *al-mukhtār,* "the chosen one";

muqīm al-sunna, "he who re-establishes the sunna (q.v.)"; *al-muqaddas,* "the holy one"; *rūḥ al-qudus,* "the spirit of holiness" and *rūḥ al-ḥaqq,* "the spirit of truth," "which is the meaning of Paraclete in the Gospel" (al-Qāḍī ʿIyāḍ, *al-Shifāʾ;* see HOLY SPIRIT; SPIRIT; TRUTH; GOSPEL). Finally, there are some names taken from earlier books, such as *mādh mādh,* which means *ṭayyib ṭayyib,* "twice good," the result of a midrashic interpretation of the Hebrew *ṭōv me ʾōd,* "very good," of Genesis 1:31. Other names are taken from Syriac (see SYRIAC AND THE QURʾĀN; SCRIPTURE AND THE QURʾĀN), such as *munḥaminnā,* "the comforter"; and from the Torah (q.v.), such as *uḫīd,* meaning "the man with the rod of fire" (cf. the Syriac *aḥīd kul,* "pankrator," and *Ps* 2:9; *Rev* 19:15) and taken to be an allusion to the "flexible sword" of Muḥammad. Al-Qāḍī ʿIyāḍ concludes: "In these books, there are many indications, titles and signs regarding him and, God willing, we will be satisfied with those we have mentioned."

The following chapter of al-Qāḍī ʿIyāḍ's book concerns "the honor (q.v.) which God has heaped upon the Prophet, by granting him some of his [i.e. God's] beautiful names and bestowing upon him some of his attributes." Indeed, if some prophets had one or two names in common with God, Muḥammad may be reckoned to have had some thirty. Al-Qāḍī ʿĪyāḍ lists these and shows how the Qurʾān allows them to be attributed to the Prophet; *nūr,* "light," from Q 5:15 is but one example. Sometimes the justification comes from both the Qurʾān and the Bible: thus it is with *ʿazīm,* "great," from Q 68:4 and Genesis 21:18 (wherein, referencing Ishmael [q.v.], God says he "will make of him a great nation"). Sometimes, however, the explanation for a particular designation is taken from the Bible in spite of an explicit qurʾānic denial of the attribute to the Prophet; thus, although Q 50:45 states that Muḥammad is not *jabbār,* "a powerful hero, tyrant," he may be given this name because of Psalm 45:4, which invites the royal hero (*gibbōr* in Hebrew) to draw his sword and impose his law (see KINGS AND RULERS; OPPRESSION). The author concludes by warning against any danger of anthropomorphism (q.v.): "just as the being of God is unlike that of other beings, so his attributes do not resemble those of his creatures (see CREATION)."

Esoteric meditations

The faithful can express their devotion to the beloved by reciting a litany of his names and qualities. They may also focus their meditation on one or two of the names and draw from them knowledge (see KNOWLEDGE AND LEARNING) hidden from the eyes of the profane (q.v.). Here, we will make do with a few references to a field which is *ipso facto* without limit.

The direct relationship between God and the name of Muḥammad should be stressed. Ḥassān b. Thābit, "the poet of the Prophet," is thought to have composed the following verse: "[God] has shared his name with him to heap honor upon him, because the master of the throne (see THRONE OF GOD) is *maḥmūd* and he is *muḥammad*" (al-Qāḍī ʿIyāḍ, *Shifāʾ,* i, 237). The authors of stories concerning the Prophet were certain that the name of the Prophet was written upon the divine throne itself. Many have been pleased to note the proximity of the names Allāh and Muḥammad in the words of the *shahāda* (see WITNESS TO FAITH). Consequently, it became acceptable to apply the usual process of esoteric interpretation to the name of the Prophet. Several exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; ṢŪFISM AND THE QURʾĀN) noted that the four consonants of his name resulted from the following four words *Majd,* "glory" (q.v.), *raḤma,* "mercy," *Mulk,* "royalty," and

Dawām, "perpetuity" (see ETERNITY). The very shape of these Arabic letters *(m-ḥ-m-d),* when written together, call to mind the silhouette of a prostrate human being (see BOWING AND PROSTRATION), forming the model upon which Adam was created (Ḥallāj, *Ṭawāsīn*). This opinion was developed at length by Ibn al-ʿArabī (d. 638/1240; *La profession,* 114-27), who also advises: "This chapter, which we have devoted to the composition of the letters of the name of the chosen one, is not known by the doctors of religious law and escapes their knowledge, except if God wishes it." Furthermore, the resources of Arabic calligraphy (q.v.) have been used to illustrate the name of Muḥammad in a wide array of styles (see also ARABIC SCRIPT). Still others have based their poems and meditations upon a ḥadīth *qudsī* in which God speaks thus: *anā aḥmad bi-lā mīm,* "I am Aḥmad without the letter *mīm,*" or, put in another way: "I am *aḥad* [the one and only]," says God. *Aḥmad* is therefore the messenger who is a guide towards the one and only God (cf. Schimmel, *And Muḥammad,* 257-9). To be sure, these considerations go beyond the qurʾānic text itself. Nevertheless, they demonstrate how Islam turned its prophet into a quasi-supernatural personality.

Names of the Qurʾān

The Qurʾān calls itself by a variety of names, which throw light on the various aspects under which it presents itself. A study of the names of the Qurʾān thus becomes part of the exercise in understanding the qurʾānic phenomenon. Scholars number differently the names the Qurʾān uses for itself. According to al-Ṭabarī (d. 310/923), the divine revelation (*tanzīl,* see REVELATION AND INSPIRATION) has four names: *qurʾān, furqān, kitāb,* and *dhikr*. Al-Ṭabarī hastens to add that, in the Arabic language (q.v.), each of these four names has "a meaning and an aspect" quite distinct from the meanings and aspects of the other three — implying that the distinction is retained in the Qurʾān.

To these four names, al-Suyūṭī (d. 911/1505) adds *tanzīl,* which, in fact, occurs in the opening part of al-Ṭabarī's statement just quoted. Al-Zarkashī (d. 794/1392; *Burhān,* i, 272-82) quotes Abū l-Maʿālī ʿUzayzī as saying that the Qurʾān has fifty-five names (al-Zarkashī and, following him, al-Suyūṭī [*Itqān,* i, 50-2], give brief explanations of many of these); he quotes another writer as saying that the Qurʾān has more than ninety names. The difference in the numbering is due to the fact that some writers consider only the best-known names (and so may count only a few substantives as names) while others also regard as names the many adjectives or phrases that are descriptive of the Qurʾān.

It is probably best to take a moderate view of the matter. The figure of ninety odd names seems too large and the figure of four or five too small. It is true that certain names of the Qurʾān are very well-known and come to mind immediately but their meanings are explained, illustrated, and qualified in a significant way by at least a small number of other words and phrases, which, too, may properly be termed names of the Qurʾān. All such designations will be so treated in this article. After examining the five names that make up al-Suyūṭī's principal list, we will look at a number of less well-known names, focusing, in both categories, on substantives. Next we will consider adjectives that are used, whether attributively or predicatively, to describe the Qurʾān.

Qurʾān

A proper name *(ʿalam)* of the Islamic scripture, the word *qurʾān* is originally a *maṣdar* (verbal noun), and is used in this sense in Q 75:17, 18: "It is our responsibility to collect it and recite it *(qurʾānahu);* so, follow its recitation *(qurʾānahu)* when we recite it." It is sometimes used as an indefinite and sometimes as a definite noun, and may refer to a part (Q 72:1) or the whole (Q 6:19) of the scripture; in several places, qualifying adjectives meaning "noble" (*karīm,* Q 56:77; *majīd,* Q 85:21; *ʿajab,* "marvelous," Q 72:1) are used. It has, however, also been suggested that *qurʾān* was not always understood to be a proper name for the Muslim holy book, and that it has its origins in the Syriac *qeryānā* (see Jeffery, *For. vocab.,* 233; see also FOREIGN VOCABULARY; INFORMANTS).

The triliteral Arabic root letters that form the word *qurʾān (q-r-ʾ)* have the sense of "to collect." The Qurʾān, literally "recitation" or "reading," is so called because, in reading or reciting it, one joins — or collects — a number of letters and words, reciting or reading them in sequence (see RECITATION OF THE QURʾĀN; ORALITY). The meaning of "collection" has led scholars to see thematic and structural significance in the scripture (see FORM AND STRUCTURE OF THE QURʾĀN). According to some theologians, the name Qurʾān draws attention to the fact that the scripture contains ("collects" in itself) the essence of all the revealed books (see BOOK) — or rather the essence of all knowledge (see KNOWLEDGE AND LEARNING; in al-Rāghib's words: *li-kawnihi jāmiʿan li-thamarati kutubihi bal li-jamʿihi thamarata jamīʿi l-ʿulūmi*). Supporting evidence for this idea is found within the scripture, according to which the Qurʾān offers an elucidation (*tafṣīl,* Q 12:111) or exposition (*tibyān,* Q 16:89) of all things. Referring to the same meaning of "collection," others have argued that the Qurʾān is a well-structured discourse in that its verses (q.v.), passages, and sūras (q.v.) are well-knit or well-composed — or "collected" — rather than disconnected or "uncollected" (see LITERARY STRUCTURES OF THE QURʾĀN). This view, they maintain, must constitute one of the assumptions in reading and interpreting the Qurʾān, and, furthermore, that one's study of the

Qur'ān must be guided by the principles that underlie the composition or structure of the Qur'ān.

The Qur'ān is an Arabic *('arabī)* Qur'ān (Q 12:2) — for Arabic was the language of the people to whom Muḥammad was sent as a prophet and to whom the Qur'ān was first addressed (see PROPHETS AND PROPHETHOOD): "We never sent a prophet except in the language of his nation, that he may make [matters] plain for them" (Q 14:4). Every prophet, therefore, speaks and presents his message in the language of his people. But according to the classical commentators verses like Q 12:2 do not necessarily suggest that the Qur'ān was addressed to the Arabs (q.v.) only, for the thrust of such verses is that the Arabs, since they were being addressed in their own language and so understood the Qur'ān without any difficulty, had no excuse for not accepting its message. Wordplay may also be involved in calling the Qur'ān Arabic. The root of the word *'arabī* has the meaning of clarity and lucidity — a meaning that is indicated in Q 16:103, where this word is contrasted with *a'jamī,* "non-Arabic," which in this context has connotations of lack of clarity or lucidity (but for another conception of the linguistic milieu of the Qur'ān and the first qur'ānic audience, see LANGUAGE AND STYLE OF THE QUR'ĀN).

An interesting use of the word Qur'ān occurs in Q 15:91, where it seems to have been used for the Jewish scriptures — "those who tore the Qur'ān to shreds," a reference, according to the commentators, to the Jews' (see JEWS AND JUDAISM) violations of the commandments of the Torah (q.v.; cf. the ḥadīth, cited by al-Suyūṭī, in which the Prophet called the Psalms [q.v.; *zabūr*] of David [q.v.], *qur'ān*). *Qur'ān,* in this larger, generic sense of "scripture" would be analogous to the word *islām* (q.v.) in its generic or perennial sense (cf. Q 3:19; also Q 2:133, and other verses, where several prophets before Muḥammad are called *muslimūn*).

Furqān

Furqān, a word of non-Arabic origin, means "that which sets apart or distinguishes," and is usually translated as "distinction" or "criterion" (for an Aramaic derivation meaning "deliverance, redemption," see Jeffery, *For. vocab.,* 225-9). In Q 8:41, the word designates the battle of Badr (q.v.; in the year 624 C.E.), because it clearly marked off the party of truth (q.v.) from the party of falsehood (see LIE). In Q 21:48 it is used for the Torah (also Q 2:53, the *wāw* between *al-kitāb* and *al-furqān* being exegetical), and in Q 25:1 (also Q 2:185), for the Qur'ān. According to Amīn Aḥsan Iṣlāḥī (1906-97; *Tadabbur-i Qur'ān,* i, 169, ad Q 2:53), the revealed scriptures are called *furqān* in four senses: first, they offer a detailed account of the divine commandments (q.v.) and injunctions; second, they distinguish between truth and falsehood, and between the lawful and the unlawful (see LAWFUL AND UNLAWFUL); third, they are absolutely clear as to their intent and purpose; fourth, they afford human beings the wisdom (q.v.) that enables them to go through life with a full understanding of the distinction between good and evil (q.v.), and between right and wrong.

The two words so far discussed, *qur'ān* and *furqān,* are regarded by al-Ālūsī (d. 1270/1854; *Rūḥ,* i, 10) as the two most fundamental names of the Qur'ān: all other names are reducible to these two. According to al-Ālūsī, these two names are often taken by Ṣūfīs (see ṢŪFISM AND THE QUR'ĀN) to represent, respectively, knowledge in a compact form and knowledge in a detailed form: *qur'ān* stands for "esoteric knowledge of divine origin that is summative in character and is a compendium of all the truths" *(al-'ilm al-ladunnī l-ijmālī*

l-jāmiʿ lil-ḥaqāʾiq kullihā), whereas *furqān* is "detailed knowledge that serves to set truth apart from falsehood" *(al-ʿilm al-tafṣīlī l-fāriq bayn al-ḥaqq wa-l-bāṭil)* — and the Islamic scripture contains both types of knowledge. With this distinction between *qurʾān* and *furqān* in mind, he cites Ibn al-ʿArabī (d. 638/1240) as saying that while *qurʾān* includes *furqān,* the opposite is not true, for the whole *(qurʾān)* may be said to contain parts *(furqān),* but the parts may not be said to contain the whole. This may serve to show why, in al-Ālūsī's view, *qurʾān* and *furqān* are the most fundamental of all the names of the Qurʾān.

Kitāb

The word *kitāb,* as used in the Qurʾān, has several meanings, many of which become constituent elements of the meaning of the name *kitāb* as used of the Qurʾān. These meanings are: revealed scripture (Q 2:44); authoritative document (Q 37:157); the Preserved Tablet (q.v.) that is in the heavens (see HEAVEN AND SKY) and that contains a record of everything that has happened or will happen (cf. Q 6:59); deed-scroll (Q 69:19, 25; see RECORD OF HUMAN ACTIONS); divine decree (Q 8:68); legal injunction (Q 98:3); and epistle or written message (Q 27:28). As a book that has been revealed (for example, Q 14:1, *kitābun anzalnāhu ilayka,* "a book that we have sent down to you [Muḥammad]"), the Qurʾān is an authoritative message from God, containing as it does a series of prescriptive laws. In many verses, the word *kitāb* is used for pre-qurʾānic scriptures — as, for example, in Q 2:87 (Torah) and Q 19:30 (Gospel; see GOSPELS). The designation of the Qurʾān as *kitāb* thus makes it part of a larger tradition of revealed scriptures.

By calling itself a book — *kitāb* (Q 2:2 and elsewhere) — the Qurʾān makes a break with the oral tradition of Arabia (see ORALITY AND WRITING IN ARABIA). In contradistinction to the Jews and Christians (see CHRISTIANS AND CHRISTIANITY), who possessed scriptures and so were called *ahl al-kitāb,* "People of the Book" (q.v.; e.g. Q 3:65; see LITERACY), the idolatrous Arabs (see POLYTHEISM AND ATHEISM; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), who did not have a scripture, were called *ummiyyūn,* "unlettered ones" (see UMMĪ; ILLITERACY). While *ummiyyūn* was an identifying title of these Arabs, and, as such, was value-neutral, in certain religious contexts it did connote — and the Arabs themselves understood it to connote — inferiority of status, the People of the Book being viewed as enjoying, by virtue of their possession of scriptures, an elevated status. This explains why, for example, toward the end of the Meccan period of Muḥammad's ministry (see CHRONOLOGY AND THE QUR'ĀN), the Quraysh (q.v.) sought to enlist Jewish and Christian "scriptural" support in their attempt to upstage Muḥammad by challenging qurʾānic pronouncements about biblical history and personages (see SCRIPTURE AND THE QUR'ĀN; NARRATIVES; MYTHS AND LEGENDS IN THE QUR'ĀN) — a fact that forms part of the background of such sūras as Q 18 (Sūrat al-Kahf, "The Cave"; see MEN OF THE CAVE) and Q 19 (Sūrat Maryam, "Mary" [q.v.]). With the advent of the Qurʾān — or rather the Qurʾān as *kitāb* — therefore, the Arabs came to possess a scripture similar to the Jewish and Christian scriptures, and were raised to the level of the Jews and Christians.

More important, the name *kitāb* highlights the function of scripture as law, for that which is written down is deemed to have at least three distinctive qualities (see LAW AND THE QUR'ĀN). The first of these is clarity: a piece of writing is supposed to be free from ambiguity (cf. the word "graphic"; see ORTHOGRAPHY). The second is objectivity: a document, having an

independent existence, serves as a check against subjective and arbitrary interpretation of the law — a function that, for example, the Twelve Tables were meant to perform in Rome during the early Republic when the plebeians agitated against patrician excesses. The use of *kitāb* in Q 68:37, "Do you have a book in which you read?" *(am lakum kitābun fīhi tadrusūn)* has this meaning of objectivity. The third is definitiveness: the written word has always enjoyed a putative authoritative status. As *kitāb,* then, scripture becomes a reliable source of knowledge and wisdom (Q 2:159; 35:40; in Q 10:1 and elsewhere, the Qur'ān is called *al-kitāb al-ḥakīm,* "the wise book"), a book that deserves to become one's object of study and reflection (Q 38:29; see TEACHING AND PREACHING THE QUR'ĀN), and an adjudicator of matters (Q 2:213; cf. 4:105). Q 46:30 parallels the Qur'ān — "a book that has been revealed after Moses (q.v.)" — with the Torah, highlighting the status of the Qur'ān as the law.

By calling itself *kitāb,* then, the Qur'ān claims to be a source of authority (q.v.). This explains the use of the plural *kutub* in the sense of "laws" in Q 98:3. Incidentally, when Muslim jurisprudents discuss the sources of Islamic law, they often use the word *al-kitāb* to designate the first source, the Qur'ān, probably because of the legal connotations of that word.

But the Qur'ān calls itself not just a book, but "the book" (*al-kitāb,* cf. the early Christian designation *ta Biblia,* literally "the books," for the scriptures). This serves to emphasize the status of the Qur'ān as an indispensable source of knowledge and guidance (see ASTRAY). *Al-kitāb,* in Q 2:2 for example, may also signify that the Qur'ān, being the final revelation from God, supersedes all other previous scriptures and that now it alone has the status of being the book.

In Q 39:23, the Qur'ān is described as *kitāban mutashābihan mathāniya*. *Mutashābih,* literally "resembling," implies that the contents of the Qur'ān are similar to, and concordant with, one another. In other words, the Qur'ān is marked by consistency, and, in spite of its considerable diversity of theme and variation of style, it possesses organic unity. As for *mathānī,* it is usually interpreted as "oft-repeated (q.v.) ones," which would be a reference to the fact that the Qur'ān frequently repeats its contents in order to fix these firmly in the minds of its listeners or readers.

Q 41:41 calls the Qur'ān *kitābun ʿazīzun,* "a mighty book." The Arabic word *ʿazīz,* usually translated "mighty," connotes unassailability. The Qur'ān is a book that — as the very next verse explains — is secure against any incursions of falsehood: "Falsehood does not encroach upon it from the front or from behind" *(lā yaʾtīhi l-bāṭilu min bayni yadayhi wa-lā min khalfihi)*.

In a sense, the name *kitāb* is a complement of the name *qurʾān*. As ʿAbdallāh Drāz says *(Nabaʿ, 13), qurʾān* and *kitāb* together represent the fact that the Islamic scripture is both recited and written, and, furthermore, that the scripture can be properly recited and written only when it is preserved in both *ṣudūr,* "human breasts," and *suṭūr,* "documentary form" — which in turn means that memory (q.v.) and document shall reinforce each other in the project of preserving the integrity of the divine word. And, Drāz concludes, this is exactly how the universal Muslim community fulfilled its mission or responsibility in this regard (for more on *kitāb,* see Jeffery, *Qurʾān* and, more recently, Madigan, *Self-image*).

Dhikr

Literally "remembrance," *dhikr* is used of the Qur'ān in several places, for example in Q 38:8, which reports an objection raised by certain opponents of Muḥammad (see

OPPOSITION TO MUḤAMMAD): "Has the remembrance been sent down upon him [Muḥammad] from among all of us?" *(a-unzila ʿalayhi l-dhikru min bayninā);* the words *dhikrā* and *tadhkira* (as in Q 6:90 and Q 69:48, respectively) are also used. In Q 43:44, where the Qurʾān is called "a *dhikr* for you and your people" *(dhikrun laka wa-li-qawmika), dhikr* acquires the additional meaning of exaltation and honor. The Qurʾān is called "the wise remembrance" (Q 3:58), "a blessed remembrance" (Q 21:50), and "a remembrance for the entire world" (Q 68:52). Not only is the Qurʾān itself a remembrance, the act of taking remembrance by it, too, has been made easy (Q 54:17, 22, 32, 40), so that no one might claim that the Qurʾān remained a closed book.

Dhikr is of two main types: verbal, *dhikr bi-l-lisān,* literally, "remembering by means of the tongue," and mental, *dhikr bi-l-qalb,* literally "remembering by means of the heart (q.v.)." Both are mentioned in the Qurʾān — for example, the first in Q 68:51: *lammā samiʿū l-dhikra,* "when they hear the remembrance," and the second in Q 3:135: *dhakarū llāha fa-staghfarū li-dhunūbihim,* "They remember God, and then they seek forgiveness (q.v.) for their sins (see SIN, MAJOR AND MINOR)." In a verse like Q 38:1: "By the Qurʾān, one of remembrance" *(wa-l-qurʾāni dhī l-dhikri),* the two meanings are combined. To call the Qurʾān *dhikr,* therefore, is to say that the text of the Qurʾān ought to be recited by the tongue and its teachings kept in mind. Thus both the development of the Islamic art of qurʾānic recitation and the popularity of the Muslim practice of memorizing the text of the Qurʾān may be seen as the unfolding, in history, of the idea of the Qurʾān as *dhikr*.

Furthermore, *dhikr* as a name of the Qurʾān signifies that the scripture reminds human beings of certain truths of which, at some level, they are already aware. This implies that the message of the scripture is not alien to human nature (what the Qurʾān calls *fiṭra* in Q 30:30), or that the truths introduced by the scripture are not inconsistent with the truths of which human beings have an instinctive understanding. In turning to the Qurʾān and accepting its message, therefore, human beings will only be responding to the call of their *fiṭra*. Thus, the sending down of scripture by God does not constitute an imposition on human beings, but rather is to be understood and appreciated as valuable help in giving direction to human life.

Tanzīl

Tanzīl (Q 26:192 and elsewhere) is usually translated "revelation" but, strictly, the word denotes sending something down in portions or installments, as opposed to sending it down all at once. Q 25:32 quotes an objection of the opponents of the Qurʾān: "Why was the Qurʾān not sent down *(nuzzila)* upon him [Muḥammad] all at once?" In light of this objection, the name *tanzīl* acquires some significance, for the Qurʾān does address the objection. To begin with, Q 17:106 contains, besides the word *tanzīl,* the phrase "And a Qurʾān which we have divided into parts, so that you may recite it to people at intervals" *(wa-qurʾānan faraqnāhu li-taqraʾahu ʿalā l-nāsi ʿalā mukthin)*. Q 16:102 may be taken to explain the wisdom behind *tanzīl*. According to this verse, *tanzīl* may have a threefold significance: first, it strengthens the believers by offering repeated and variegated expositions of the qurʾānic message; second, it provides for the believers, that is, the first-generation Muslims, guidance on matters and issues as they arise during their struggle to establish Islam in Arabia; and third, it reassures them by informing them that, like other believing nations in the past, they, too, will eventually meet

with success in this world and in the next (see also Q 16:89; see ESCHATOLOGY; REWARD AND PUNISHMENT).

Additional designations

The Qur'ān uses a number of other names for itself, and these, too, have formed the basis for extended exegetical and theological reflection:

Kalām Allāh, "The word/speech of God" (Q 9:6; 48:15). This name is also used for the Torah (Q 2:75). Divine revelation is called *kalām Allāh* in order to distinguish it from the speech of humans, jinn (q.v.), and angels (see ANGEL). The essence of the word *kalām* is *lafẓ,* "word," and this, according to some scholars, is proof that the revelation a prophet receives from God takes verbal form. Historically, it is this name — *kalām Allāh* — which gave rise to the theological issue of the createdness of the Qur'ān (q.v.) leading Muslim theologians to distinguish between various meanings of the word *kalām* as applied to divine revelation.

Waḥy, usually translated "revelation," literally means "quick intimation" *(ishāra sarī'a)* — which intimation, as al-Rāghib al-Iṣfahānī (fl. early fifth/eleventh cent.; *Mufradāt,* s.v. *w-ḥ-y*) explains, may take the form of word, sound, or gesture ("intimation" would seem to be a better word than Bell's [Watt-Bell, *Introduction,* 21] "suggestion," the connotations of which are somewhat different from those of the Arabic word). As a technical term, *waḥy* carries special importance because it is used in the Qur'ān both for the process and for the content of revelation (the same might be claimed for *tanzīl,* but the use of *waḥy* in the Qur'ān is more nuanced). The dual nature of *waḥy* can be seen in a verse like Q 53:4, "This is but a revelation that is being revealed" *(in huwa illā waḥyun yūḥā).* Q 42:51 identifies four ways in which God speaks to a human being *(an yukallimahu llāhu),* two of them involving *waḥy,* namely: God speaking to a person *waḥyan,* and a messenger (q.v.; that is, an angel) conveying *(yūḥī)* to a person whatever is willed by God. Q 2:97, which mentions Gabriel (q.v.) as the one who brought the Qur'ān to Muḥammad, would seem to establish the second of those two ways as the one in which Muḥammad received the scripture. Thus, *waḥy* as a name of the Qur'ān specifies the mode in which revelation was conveyed to Muḥammad. But the important point is that *waḥy* is identified in Q 42:51 with the speech, *kalām,* of God. Since *kalām,* as we have already noted, is verbal in character, the name would seem to lend support to the verbal conception of revelation. Furthermore, since *waḥy* is quick intimation, it is implied that a prophet's reception of revelation from an angel is virtually immediate — with the attendant implication that a prophet's revelation is unadulterated or uncompromised either by his own thought or imagination or by the intervention of any demonic power (see DEVIL; this last idea would in turn refute the objection, made by Muḥammad's opponents that, like the soothsayers [q.v.] of Arabia, he received revelation through the medium of jinn).

Hudā, "guidance" (Q 27:77). The Qur'ān is so called because it guides to the right path, clearly distinguishing it from the wrong path. The name implies that the choice to accept the *hudā* rests with human beings, the Qur'ān simply pointing the way (e.g. Q 76:3). For similar reasons, the Qur'ān is called *maw'iẓa,* "advice, admonition" (Q 10:57; see EXHORTATIONS; WARNING).

Nūr, "light" (q.v.; Q 4:174). The Qur'ān brings human beings forth from darkness (q.v.) and ignorance (q.v.) and sets them on the well-lit path of guidance (Q 5:15-6). The phrase actually used in Q 4:174 is *nūran mubīnan,* "clear light," which implies that

the light of the scripture is both unmistakable and easily accessible.

Baṣā'ir, "insights" (Q 7:203). The Qur'ān is a treasury of special insights, which, to interpret the Arabic word literally, help the listener or reader to "see" the truth (see SEEING AND HEARING; VISION AND BLINDNESS).

Ḥikma, "wisdom" (Q 17:39). The Qur'ān both contains and teaches wisdom. In Q 54:5 it is called *ḥikma bāligha,* "consummate wisdom," because it contains divine wisdom, which is the highest form of wisdom.

Raḥma, "mercy" (q.v.; Q 27:77). God, the creator of all, is the guide of all (Q 7:54: *a-lā lahu l-khalqu wa-l-amr,* "Behold, to him belong creation and command"). But guiding humanity, or furnishing it with a code of conduct, is a manifestation of the mercy of God. It is on account of his mercifulness that God has decided to save human beings by showing them the right course of action (see SALVATION). In Q 17:86-7, cessation of revelation is equated with denial or withholding of mercy.

Bashīr, "giver of good tidings" and *nadhīr,* "warner" (Q 41:4; see GOOD NEWS; WARNING). The Qur'ān promises reward to those who accept its message and threatens with punishment those who reject that message.

Rūḥ, "spirit" (q.v.; Q 42:52). The scripture is a life-giving force, and those who live by it will have true life (cf. *Deut* 8:3: "One does not live by bread alone, but by every word that comes from the mouth of the lord").

Aḥsan al-ḥadīth, "the finest discourse" (Q 39:23; see INIMITABILITY). The Qur'ān excels, both in point of beauty of style and in point of wisdom of content, any other discourse. In Q 12:3, the qur'ānic story of Joseph (q.v.) is called *aḥsan al-qaṣaṣ,* "the finest story."

Shifā', "cure, remedy" (Q 10:57; 17:82; see ILLNESS AND HEALTH). The Qur'ān treats the maladies of the heart and the soul (q.v.), purging people's inner selves of ignoble traits.

Muhaymin, "supervisor, protector" (Q 5:48). The Qur'ān "watches over" the other scriptures in the sense that, on the one hand, it contains the essence of their teachings and completes those teachings, and, on the other hand, provides the yardstick by which the authenticity and validity of those scriptures may be judged (see *muṣaddiq,* below).

Ḥabl Allāh, "the cord of God" (Q 3:103). The word *ḥabl,* "rope, cord," is an Arabic metaphor (q.v.) for covenant (q.v.). The Qur'ān is God's *ḥabl* because it at once constitutes and explains the terms of the covenant that God makes with humanity. The salvation of human beings, therefore, depends on their fulfillment of the covenant with God.

Balāgh, "communication" (Q 14:52). The Qur'ān, according to this verse, is *balāghun lil-nās,* "a communication for people." The name implies, first, that the Qur'ān has been communicated to humanity fully and accurately — in the very form in which it was sent down by God — and, second, that human beings, once they receive it are responsible for deciding what their relationship to it shall be.

Finally, a number of adjectival names are used to describe the Qur'ān in various contexts. A brief review of some of them follows (some of them were noted in the discussion above, but will be dealt with here from a more general point of view).

Mubīn, which can mean both "clear (in itself)" and "that which clarifies," implies (as in Q 12:1 and Q 36:69) that the language of the Qur'ān, being standard Arabic, is neither convoluted nor ambiguous (q.v.), and, consequently, generously yields its true meaning to those who come to it on its terms (Q 5:15-6). The use of the word implies that those who are being addressed by

means of it — the first addressees, that is — cannot reject it on the grounds that they are unable to understand it (see DIFFICULT PASSAGES).

Karīm, "noble" (Q 56:77). The Qur'ān is "noble" because it comes from a noble source, and, being noble, it deserves to be treated with reverence. The same may be said of *majīd,* "glorious, illustrious" (Q 85:21) and *ʿalī,* "exalted" (Q 43:4). In Q 80:13-4, the Qur'ān is called *ṣuḥuf,* "sheets/scriptures," that are *mukarrama,* "honored," *marfūʿa,* "exalted," and *muṭahhara,* "made pure."

Mubārak, "blessed" (Q 21:50; 38:29). The scripture is a source of blessings (Ar. *barakāt*) which, following Q 7:96, "blessings of the heaven and the earth" *(barakātin min al-samāʾi wa-l-arḍi),* can be interpreted as material as well as spiritual; compare with Q 5:66, which says that had the People of the Book upheld the Torah and the Gospel, "they would have eaten from above [their heads] and from under their feet," that is, they would have enjoyed material prosperity (see BLESSING; GRACE; WEALTH).

Ḥakīm, "wise" (Q 41:42). The word is used in the Qur'ān for both God and the scripture. This means that the Qur'ān, being the word of God (q.v.), reflects the attributes of the one who sent it down; both the word and its speaker are full of wisdom (see GOD AND HIS ATTRIBUTES). *Ḥakīm* also has the connotations of "solidity, firmness, decisiveness," and suggests that the Qur'ān is free from such weaknesses as vagueness, ambiguity, and doubt (q.v.; cf. *qawl faṣl,* "decisive word," in Q 86:13), and also that it has been made secure against any "interference" such as textual corruption (see FORGERY; CORRUPTION; COLLECTION OF THE QUR'ĀN; TEXTUAL CRITICISM OF THE QUR'ĀN).

Qayyim, "right, straight" (Q 18:2). This word is contrasted in the verse with *ʿiwaj,* "crooked, aberrant" (cf. Q 18:1). *Qayyim* (like *al-qayyūm,* which is used in Q 2:255 as an attribute of God) is one who or that which sustains not only himself or itself but also someone or something else. Al-Rāghib al-Iṣfahānī explains the word thus: "well-established [in its own right] and setting in order people's affairs as they pertain to this world and the next" (*thābit muqawwim li-umūr maʿāshihim wa-maʿādihim, Mufradāt,* ad loc.). Being *qayyim,* then, the Qur'ān both represents the straight course and ensures that those who follow it will stay on that course.

Muṣaddiq. The Qur'ān is "a *muṣaddiq* of that which precedes it" *(muṣaddiqan li-mā bayna yadayhi),* namely, the previous scriptures (Q 2:97). The Arabic word can mean "that which confirms (something else) to be true and correct," and this is the general interpretation of the word when it occurs in such a context. This, however, is not very convincing since the Qur'ān's confirmation of the previous scriptures would leave the matter of its own authenticity hanging in the balance — a thought that ill suits the contexts in which the Qur'ān is called a *muṣaddiq* of the earlier scriptures. A more plausible interpretation, one offered by Amīn Aḥsan Iṣlāḥī (*Tadabbur-i Qur'ān,* ad loc.), is that *muṣaddiq* in these contexts means "that which actualizes." In other words, the Qur'ān represents the materialization of the prophecies that were made in the early scriptures. The first meaning, "to confirm (something else)," would still be valid, but will have to be restated: the Qur'ān confirms those contents or parts of the early scriptures that agree with the Qur'ān's own outlook. In either case, the name *muṣaddiq* establishes an important connection between the Qur'ān and the earlier scriptures.

Conclusion

The foregoing makes it plain that a study of the names of the Qur'ān should be of

considerable interest to a student of the Islamic scripture. The pre-Islamic Arabian practice of assigning many names to a being, entity, or phenomenon might explain, in part, why the Qur'ān, too, uses so many names for itself (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN). But the practice, whether by the pre-Islamic poets (see POETRY AND POETS) or by the Qur'ān, was not indulged in for its own sake; rather, it was aimed at elucidating, from as many angles as possible, the nature and attributes of the thing in question. With the Qur'ān, however, the practice is raised to a higher level: the many different names of the Qur'ān not only represent so many facets of the Islamic scripture, but they also make up, when seen in relation to each other, a coherent and meaningful statement in their own right, shedding light on the ethos, orientation, and function of the scripture. We will conclude by offering a few observations.

First, an analytical look at the names (both substantives and adjectives) of the Qur'ān will indicate that they underscore different aspects of the Islamic scripture. For example, some names *(kalām Allāh, waḥy)* speak to the origin of the Qur'ān, maintaining that it comes from God — and that it is not, therefore, the product of the Prophet's mind or the concoction of a soothsayer (see OCCASIONS OF REVELATION). Others *(bayān, mubīn, ʿarabī)* claim linguistic purity and excellence for the Qur'ān (see LANGUAGE, CONCEPT OF), implying that the Qur'ān presents its meaning with the utmost clarity, such that it cannot be rejected or disregarded on the grounds of incomprehensibility or ambiguity. Still others *(hudā, ḥikma)* draw attention to the function and purpose of the Qur'ān: this is a book that guides to the right path and furnishes the wisdom that is needed to lead a successful life. Some names *(kitāb, kalām Allāh),* since they are used of other scriptures as well, stress that the Qur'ān is part of the series of divine dispensations that have come from God to prophets (e.g. Q 4:163 says that God gave Muḥammad *waḥy* in the same way in which he gave *waḥy* to Noah [q.v.] and other prophets). Other names *(muhaymin, muṣaddiq)* point to the distinction of the Qur'ān among the scriptures. The name *kitāb* endows the Qur'ān with authenticity, while the name *dhikr* stresses the consonance of the qur'ānic teaching with human nature.

Second, most of the names of the Qur'ān will be found to occur throughout the period of Muḥammad's revelation, which lasted for about twenty-two years. Take, for example, the five names discussed in the beginning. While some of them occur more frequently than others, all of them occur in both Meccan and Medinan sūras, an indication that the manifold conception of the Qur'ān had started taking shape quite early.

Third, it appears that the listener or reader of the Qur'ān is meant to keep in mind the interrelation of the names. This becomes clear from the fact that the names are frequently used in conjunction with, or in close proximity to, one another. We have already noted that substantive names are frequently qualified by adjectival ones. A few additional examples may be noted. *Tanzīl al-kitāb (*where *tanzīl* is a *maṣdar)* occurs more than once. *Mawʿiẓa, shifāʾ, hudā,* and *raḥma* occur together in Q 10:57. Q 17:106 may contain a possible word-play — *wa-qurʾānan faraqnāhu,* "and a Qur'ān that we have given in detail" — where *faraqnā,* from the same root as *furqān,* implies that the Qur'ān-as-collection is identical with the Qur'ān-as-distinction (see above).

Nāmūs

Term found in early Muslim traditions on the Prophet's life (*sīra,* see SĪRA AND THE QURʾĀN), but not explicitly mentioned in the Qurʾān. Its original meaning was "the revealed law." The word was later interpreted as a designation for the angel Gabriel (q.v.; Jibrīl).

In an early Arabic translation of a gospel fragment, the Greek expression *en tō nomō autōn* (*John* 15:25), which means "the law of the Jews," i.e. the Torah (q.v.), is rendered as *fī l-nāmūs* (Ibn Isḥāq, *Sīra,* 150). This rendering is based on a Palestinian Syriac translation of the gospel (q.v.; Guillaume, Version, 292; see SYRIAC AND THE QURʾĀN).

In the *sīra* traditions the word *al-nāmūs* occurs most prominently in the Khadīja — Waraqa story, of which several versions were transmitted and which is part of the reports about Muḥammad's call to prophecy (see PROPHETS AND PROPHETHOOD; INFORMANTS). Waraqa, a cousin of Muḥammad's first wife Khadīja (q.v.), is said to have become a Christian (see CHRISTIANS AND CHRISTIANITY), to have studied with Jewish and Christian scholars (see SCHOLAR; JEWS AND JUDAISM) and to have translated some texts of the gospels into Arabic (the rarer variant "Hebrew" seems to be a transmission error) and to have written them down. After having been informed about Muḥammad's revelations, Waraqa, in one of the versions, says: "This is the *nāmūs* which was sent down upon Moses" (q.v.; *hādhā l-nāmūs alladhī unzila ʿalā mūsā;* ʿAbd al-Razzāq, *Muṣannaf,* v, 323; Bukhārī, *Ṣaḥīḥ,* i, 4-5; Muslim, *Ṣaḥīḥ,* i, 142). This immediately suggests that, in this case as well, *al-nāmūs* is adopted from the corresponding Syriac word meaning "the revealed law" for, according to the Bible and the Qurʾān, this is what Moses and Muḥammad received.

Recent studies have shown that the famous version of the story of Muḥammad's call to prophecy, at least its essential elements, most probably goes back to the Meccan storyteller *(qāṣṣ)* ʿUbayd b. ʿUmayr (d. 68/687-8; Schoeler, *Charakter und Authentie,* 59-117; Juynboll, Early Islamic society, 160-71). This version was already a combination of different reports and narrative motifs, which must have circulated independently at that time or even earlier (see ORALITY AND WRITING IN ARABIA). This assumption is corroborated by versions of the story which do not contain the vision of an angel (q.v.), and which seem to be independent of the narration that goes back to ʿUbayd b. ʿUmayr. In one of these versions, Waraqa says: "This is a *nāmūs* like the *nāmūs* of Moses" (*fa-hādhā nāmūs mithla nāmūs mūsā;* Ibn Saʿd, *Ṭabaqāt,* i, 195; Ibn Ḥanbal, *Musnad,* i, 312). The reference to the *nāmūs* of Moses seems, therefore, to belong to the original kernel of the story and must have meant God's law revealed to Moses.

The Syriac word put into the mouth of an Arab Christian suggests that the original Muslim narrator of the story, who lived in the first half of the first/seventh century but cannot be identified any further, was

acquainted with the Christian expression. This does not hold for later transmitters and, in the course of time, the interpretation of the term changed. The fact that the Khadīja-Waraqa story came to be prefaced with narrations about visions of the angel Gabriel, contributed greatly to the development of the idea that *al-nāmūs* referred to this angel. This became, for Muslim scholars, the common understanding of the term *al-nāmūs* in the Khadīja-Waraqa story.

The change of meaning left both Muslim and Western scholars with a problem. Neither in the Qurʾān nor in the biblical book of Exodus is it said that Moses received his revelations through an angel. Muslim scholars solved the problem by generalizing Muḥammad's experience of revelation (cf. Q 2:97), claiming it for all prophets (see REVELATION AND INSPIRATION). Furthermore, Muslim scholars asserted that *al-nāmūs* is a word "applied to Gabriel by the people of the book" (Lane, 2854; see PEOPLE OF THE BOOK). Some Western scholars presumed that the idea of the *nāmūs* as an angelic being who came to Moses and other prophets had a Christian origin: in their purview, this interpretation resulted from a confusion of the terms *nomos* and *prophetēs,* which were used in conjunction in eastern Christian liturgical formulas (Baumstark, Das Problem, 565-6), and which were also closely related to one another in the Gnostic literature of Palestinian origin (Andrae, *Der Ursprung,* 204). The development of the meaning described above, however, makes such speculations superfluous. In later Muslim philosophical literature, the term *al-nāmūs* is used with the meaning of "the divine law" (Plessner, Nāmūs, 954-5; see LAW AND THE QURʾĀN).

Narratives

Stories of individuals and communities of the past, of varying length, many of which appear in numerous renditions throughout the qurʾānic text, but are found predominantly in the Meccan sūras of the Qurʾān (see CHRONOLOGY AND THE QURʾĀN). Although the Qurʾān does relate the tales of prophets (see PROPHETS AND PROPHETHOOD) and other notable persons, tales that presumably were already familiar to the first auditors of the Qurʾān (see ORALITY AND WRITING IN ARABIA; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), the stories that are characterized as "narratives" contain certain requisite structural features (Q 21, Sūrat al-Anbiyāʾ, takes its name — "The

Prophets" — from the fact that it is comprised of tales of various prophets, many of which fall within the parameters of this literary genre; see FORM AND STRUCTURE OF THE QURʾĀN). The proportion of the narratives in the Qurʾān is very large: 1453 verses (Sherif, *Guide,* 46), or about a quarter of their total number (ca. 6000; Abū ʿAmr al-Dānī, in Suyūṭī, *Itqān,* i, 232). They consist of accounts concerning prophets or so-called prophets, messengers (25 of them fall into these two categories; Suyūṭī, *Itqān,* chap. 69, iii, 67; see MESSENGER), sages, historical, historico-mythical or mythical celebrities of ancient times (see MYTHS AND LEGENDS IN THE QURʾĀN; HISTORY AND THE QURʾĀN). Before discussing the narratives themselves, an overview of the Arabic terminology for "narratives," as well as an outline of the qurʾānic passages that are termed as such, is in order.

The semantic field of narratives in the Qurʾān

The following list is an overview of the most important Arabic words used within the semantic field of "narratives" in its broadest sense: *qiṣṣa* or *qaṣaṣ* (story, narrative); *sīra* (lit. "way of acting," it is also used for "battles," "story," or "biography"; see SĪRA AND THE QURʾĀN); *ḥadīth* (denotes primarily a saying or an account of an action of the Prophet, and, secondarily, of his Companions [see COMPANIONS OF THE PROPHET], but also means "narrative," "speech," etc.; see ḤADĪTH AND THE QURʾĀN); *ḥikāya* (the verb from which it derives means "to relate," thus, "narrative," "story"); *samar* (literary entertainment, mostly at night); *khurāfa* (incredible tale, legend); *usṭūra* (history without foundation, legend; in present usage, sometimes also myth); *riwāya* (the verb means to recite, transmit a story, a poem; thus, a transmission or version; nowadays, a novel); *nādira* (short, witty, subtle and amusing anecdote); *khabar* (information, statement, narrative, piece of history); *mathal* (parable); *maqāma* (appears in the 4th/11th cent.; assembly, Fr. "séance"; for further discussion of these terms, see Abdel-Meguid, Survey).

Qiṣṣa does not appear in the Qurʾān. *Qaṣaṣ,* which lends itself to the name of a sūra (Q 28, Sūrat al-Qaṣaṣ, "The Story"), is used with a sense relevant to the present discussion four times (three of which contain permutations of the corresponding verb): at Q 3:62, "This is the true story" (concerning Jesus [q.v.]); Q 7:176, "So relate the story" (order given to Muḥammad; this "story" is glossed as both "the Qurʾān" [Muqātil, *Tafsīr,* ii, 75] and "the recitation" [Dāmaghānī, *Wujūh,* ii, 159]; see RECITATION OF THE QURʾĀN); Q 12:3: "We will relate to you the fairest of stories" (i.e. the tale of Joseph [q.v.]; here, Qatāda (d. 118/736) notes that *"qaṣaṣ"* means: "From the past books *[min al-kutub al-māḍiya]* and the ancient decrees of God about the nations *[wa umūr Allāh al-sālifa fī l-umam]*"; Ṭabarī, *Tafsīr,* ed. Shākir, xv, 551-2, no. 18772; Ibn Abī l-Zamanīn, *Tafsīr,* ii, 315); Q 28:25. The verb *qaṣṣa* (to tell a story, to relate; see above) is attested, among other places, at Q 11:100: "the cities whose tidings *(anbāʾ)* we relate *(naquṣṣu)* to you (see CITY; PUNISHMENT STORIES)"; Q 11:120: "We relate to you tidings *(anbāʾ)* of the messengers"; Q 18:13 (where it is used with *nabaʾ*); Q 20:99 (with *anbāʾ*); Q 40:78; Q 4:164; Q 7:7. It is used in the third person singular imperfect at Q 6:57 (subject: God himself) and at Q 27:76 (subject: the Qurʾān). In Q 16:118, the verb is in the perfect, and the subject is God (here, Blachère offers the following translation: "ce que Nous t'avons énuméré").

Ḥadīth, pl. *aḥādīth,* also occurs in the Qurʾān with the meanings of talk, saying, discourse, story, tale (Q 31:6; 12:6; 23:44, etc.; Hirschberg, "Gottes-Schriften,"

79-80; Horovitz, *KU,* 7). *Usṭūra* is mentioned 9 times, but only in the plural *(asāṭīr),* and always in the construct *asāṭīr al-awwalīn* (Q 6:25; 8:31; 16:24; 23:83; 25:5; 27:68; 46:17; 68:15; 83:13), usually translated as "tales/fairy tales of the ancients" (see GENERATIONS). But if we consider Q 25:5, where the opponents of Muḥammad (see OPPOSITION TO MUḤAMMAD) say "*asāṭīr* of the ancients that he has written down, so that they are recited to him at dawn and in the evening," the word could be also understood as "writings" or "scriptures" (see BOOK). Probably derived from Syriac (see SYRIAC AND THE QUR'ĀN; FOREIGN VOCABULARY), it is found also in the Sabean *sṭr* (lit. inscription). The Qur'ān uses also the verb *saṭara* in the meaning of "to write" (cf. Q 17:58; 33:6), as did the ancient poets (Nöldeke, *GQ,* i, 15-7; Horovitz, *KU,* 69-70; Hebbo, *Fremdwörter,* 30-1; see POETS AND POETRY). Al-Naḍr b. al-Ḥārith (see INFORMANTS), who was in close contact with the Christians of al-Ḥīra (see CHRISTIANS AND CHRISTIANITY), is reported to have said: "Muhammad cannot tell a better story than I and his talk is only of old fables which he has copied as I have" (Ibn Isḥāq, *Sīra,* 235, Eng. trans. Ibn Isḥāq-Guillaume, 162). *Khabar* (pl. *akhbār*) occurs 5 times in the Qur'ān with the meaning of "news, information, tidings of" (Q 27:7; 28:29; 9:94; 47:31; 99:4).

Although not one of the more common Arabic words for "narratives," to this list we should also add *naba'* (pl. *anbā';* story, information, or tiding, and which appears in Q 5:27; 6:34; 7:175; 9:70; 10:71; 14:9; 26:69; 27:22; 28:3; 38:21; 64:5; 68:2, etc.).

Distribution of the narratives in the Qur'ān

A single story is the focus of some sūras: Q 105 ("The Elephant," which alludes to the story of Abraha [q.v.]; for a discussion of this sūra, see Neuwirth, *Studien,* 36, 234; Marshall, *God,* 40-2; Blachère, no. 41. For all the references to Blachère below, note that Blachère, nos. 1-48 correspond to the first Meccan period, 49-70 to the second, 71-92 to the third, and 93-116 to the Medinan; see CHRONOLOGY AND THE QUR'ĀN.); Q 71 ("Noah"; Blachère, no. 53; Marshall, *God,* 90-3), in which there is an "arabization" of the pantheon of the opponents of Noah (q.v.): "Do not leave your gods, and do not leave Wadd or Suwā'…" (Q 71:23; Paret, Geschichtsquelle, 36-7; Fahd, *Panthéon,* 132-4, 154-6, 182-97, on the "five noachic idols"; see IDOLS AND IMAGES; IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM); Q 12 ("Joseph"; Blachère, no. 79), the longest narrative of the Qur'ān (see de Prémare, *Joseph et Muhammad*), but this, contrary to Q 105 and 71, ends with peroration (Horovitz, *KU,* 1); Q 28 ("The Story"; Blachère, no. 81) tells of Moses (q.v.), Aaron (q.v.) and Hāmān (q.v.; Q 28:2-46), adding an account on Korah (q.v.; Q 28:76-82; cf. Q 40:24; 29:39; 'Abbās, *Qaṣaṣ,* 416-9), probably because it was omitted in the preceding section on Moses (Bell, *Commentary,* ii, 53), which reads like a summary of Numbers 16. Some exegetes see a connection in the ordering and the themes of Q 26:18-9 and Q 27:7 (both on Moses), and Q 28:2-46, viewing this latter section as a commentary on the two earlier passages (Suyūṭī, *Tanāsuq,* 108).

Some narrative pieces, which, although in the redaction of the Qur'ān we possess (see COLLECTION OF THE QUR'ĀN; CODICES OF THE QUR'ĀN), have been integrated into sūras containing non-narrative materials, can be isolated from their position in the sūra and appear to be originally independent units: Q 89:6-14 (Blachère no. 42; Marshall, *God,* 46-7), which discusses 'Ād (q.v.), Iram (q.v.) of the pillars, Thamūd (q.v.) and Pharaoh (q.v.; on Iram see Horovitz, *KU,* 89-90). This segment has the same formulaic introduction as Q 105 ("Have you not seen how your lord did with…"). In

Q 38:67-88 (Blachère, no. 61), on Adam (see ADAM AND EVE), the angels (see ANGEL) and Iblīs (q.v.), the unity of the passage can be seen not only from the common subject, but from the rhymes in *īm, īn, ūn, ūm* (Nöldeke, *GQ,* i, 131; see RHYMED PROSE), and from introductory and conclusive formulas that both contain the word "tiding" *(naba')*. Q 14:1-21 ("Abraham"; Blachère, no. 78) can be isolated as a unity, although its limits are not as clear as in the preceding examples. The same thing could be said of Q 40:23-56 (Blachère, no. 80), on the incredulity of Pharaoh, because the following passage, Q 40:57-85, with rhyme in *īn* and *ūn,* has no relation to it (Nöldeke, *GQ,* i, 153; Horovitz, *KU,* 2).

In addition to these whole or partly closed narrative pieces we find other passages that are composed entirely of several stories, or which are built around a core of stories. Q 20 "Ṭā Hā," also called "the son of Moses"; Biqāʿī, *Maṣāʿid,* ii, 267; Kandil, Surennamen, 51; Blachère, no. 57) contains two stories, on Moses (Q 20:9-99) and Adam (Q 20:115-28), but it should be added that Q 20:1-113 appears as a textual unity, whose introduction is Q 20:1-8, the eschatological conclusion (see ESCHATOLOGY) being contained in Q 20:100-13. Q 20:115-35 seems to be an addition, as suggested by the content of Q 20:114: "So exalted be God, the true king.…"

On the other hand, we also have a set of stories in Q 54:9-42 (Blachère, no. 50): Noah (Q 54:9-17), the people of ʿĀd (Q 54:18-22), Thamūd (Q 54:23-32), Lot (q.v.; Q 54:33-40) and Pharaoh (Q 54:41-2). But Q 54:1-8 and Q 54:43-55 are in an inner relationship, which is the eschatological theme ("The hour has drawn nigh," Q 54:1; "The Hour" is another name for this sūra, now called "The Moon" [Sūrat al-Qamar]). This is why some exegetes (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) say that Q 54 is related to the end of the preceding sūra, Q 53:57: "The imminent is imminent" (Rāzī, *Tafsīr,* xxix, 28), or that it develops and elucidates the end of the same sūra (Biqāʿī, *Naẓm,* vii, 339, ad Q 54:1; id., *Maṣāʿid al-nazar,* iii, 39-40). In the same way, Q 26:10-189 (Blachère, no. 58; Marshall, *God,* 93-7) has a set of seven stories, to which Q 26:1-9 is the preamble, and Q 26:190-227 the conclusion: Moses (Q 26:10-68), Abraham (q.v.; Q 26:69-104), Noah (Q 26:105-22), Hūd (q.v.) and the people of ʿĀd (Q 26:123-40), Ṣāliḥ (q.v.) and Thamūd (Q 26:141-59), Lot (Q 26:160-75) and the People of the Thicket (q.v.; Q 26:176-89). See also Q 15:26-48 (Blachère, no. 59), on Adam and Iblīs, with a brief description of hell (see HELL AND HELLFIRE) and paradise (q.v.); Q 15:49-60, about Abraham: "Tell my servants (Q 15:49)… And tell them of the guests of Abraham" (Q 15:51); Q 15:61-75, on Lot; Q 15:76-9, on the People of the Thicket; and Q 15:80-4, on Ḥijr (q.v.; Horovitz, *KU,* 2).

In Q 19 ("Mary"; Blachère, no. 60), the two parts: Q 19:2-74 (composed only of stories) and Q 19:75-98, were probably not together initially, as seen from the difference in the rhyme scheme. In the narrative part (Q 19:2-63), we find some of the earliest qurʾānic mentions of New Testament figures: Mary (q.v.; in Q 19:28, Mary is called "the sister of Aaron"; later, at Q 3:35 and 66:12, she is likewise considered the daughter of ʿImrān [q.v.]; Horovitz, *Jewish proper names,* 10), Zechariah (q.v.), John the Baptist (q.v.) and Jesus (Q 19:2-40; Nöldeke, *GQ,* i, 130), followed by accounts of Abraham (Q 19:41-50), Moses, Ishmael (q.v.) and Idrīs (q.v.; Q 19:51-8). Q 38 ("Ṣād," also named "The Son of David"; Ibn al-Jawzī, *Zād,* vii, 3; Kandil, Surennamen, 51; Blachère, no. 61), one of whose narrative passages is discussed above, is constructed similarly: introduction (Q 38:1-11); stories: Q 38:12-6 (destroyed nations), Q 38:17-28

(David [q.v.]), Q 38:29-40 (Solomon [q.v.]), Q 38:41-4 (Job [q.v.]), Q 38:45-9 (mention of Abraham, Isaac [q.v.], Jacob [q.v.; in five qurʾānic verses he is seen as the son of Abraham, and not his grand-son; cf. Q 21:72; 29:27; 6:84], Ishmael, Elisha [q.v.], Dhū l-Kifl [q.v.]); and, finally, a conclusion on the believers and unbelievers in the afterlife (Q 38:50-66; Horovitz, *KU,* 2-3; for the rest of the sūra [Q 36:67-88], see above).

The construction of Q 18 ("The Cave" or "People of the Cave"; Blachère, no. 70) does not use the same mode of closure: introduction (Q 18:1-8), stories (Q 18:9-98), conclusion on the fate of the unbelievers and believers (Q 18:99-110). The stories are of: the Seven Sleepers (Q 18:9-26; see MEN OF THE CAVE), the master of the garden (Q 18:32-44; cf. Isaiah 5, the Song of the Vineyard; Luke 12:16-21; Hirschfeld, *New researches,* 87-8; Sabbagh, *Métaphore,* 217-18, §385, 265; Lohmann, Gleichnisreden, 88-96; cf. Q 68:17-33, "the masters of the garden"; Andrae, *Mohammed, sein Leben,* 70; id., *Mahomet,* 85 [Fr. trans.]; ʿAbbās, *Qaṣaṣ,* 419-23), Moses and the servant of God (Q 18:60-82), Dhū l-Qarnayn (lit. "the possessor of the two horns"; Q 18:83-98, with an evocation of the tale of Gog and Magog [q.v.]; Horovitz, *KU,* 150; see ALEXANDER). As we see here, Q 18:27-31 and Q 18:45-50 interrupt the set of stories. Q 27 ("The Ant," or the sūra of Solomon; Blachère, no. 69; Suyūṭī, *Itqān,* chap. 17, i, 194; Kandil, Surennamen, 51) also varies from the pattern. After the introduction (Q 27:1-6) we do find narrative sections: Moses (Q 27:7-14), David, Solomon, the hoopoe (see ANIMAL LIFE), the Queen of Sheba (Q 27:15-44, Lassner, *Demonizing;* Gilliot, La reine de Sabaʾ, légende ou réalité?; Norris, Elements, 256-7; see BILQĪS), Thamūd (Q 27:45-53), Lot (Q 27:54-8). But the rest of the sūra (Q 27:59-93) cannot be seen as the conclusion of the preceding stories; it is too long for that, and it has a hymnic, a polemical (see POLEMIC AND POLEMICAL LANGUAGE) and an eschatological content.

On the other hand, the major part of Q 11 ("Hūd"; Blachère, no. 77; Marshall, *God,* 97-105) deals with stories (Q 11:25-100), and is followed by eschatological reflections related to them (Q 11:101-17). The introduction (Q 11:1-24), however, appears not to have a close internal relationship to these two parts. The narrative sections are: Noah (Q 11:25-49), Hūd (Q 11:50-60), Ṣāliḥ (Q 11:61-8), Abraham (Q 11:69-83), Shuʿayb (q.v.; Wansbrough, *QS,* 21-5, 28-9) and the Midianites (Q 11:84-95; see MIDIAN) and Moses (Q 11:96-8). Q 29 (Blachère, no. 83) has various accounts: on Noah (Q 29:14-5), Abraham and Lot (Q 29:16-35), Midian, Shuʿayb, ʿĀd, Thamūd, Korah and Pharaoh, Hāmān and Moses (Q 29:36-40; Horovitz, *KU,* 23). In Q 7 (Sūrat al-Aʿrāf, "The Battlements"; Blachère, no. 89; Marshall, *God,* 106-14; see PEOPLE OF THE HEIGHTS) the narrative sections are predominant: Iblīs, Adam and his wife (Q 7:11-25; Hirschberg, Sündenfall, 33-6), Noah, Hūd, Ṣāliḥ, Lot and Shuʿayb, and the destroyed cities (Q 7:59-102), Moses, the magicians (see MAGIC) and the five scourges of Egypt (q.v.; Q 7:133), etc. (Q 7:103-62), the transgressors of the Sabbath (q.v.) transformed into monkeys (Q 7:163-8; Speyer, *Erzählungen,* 313-4, 340-1; see JEWS AND JUDAISM), reminder of the signs (q.v.) of God towards humankind (Q 7:169-74), reminder of the tidings *(naba)* of God (Q 7:175-6); but neither the long interruption in the text (Q 7:26-58), nor the end of this sūra (Q 7:177-206) are in an inner relation with these narratives. And in the introduction, we find only a brief allusion to them, in Q 7:4: "How many a city we have destroyed" (see Q 7:1-10; cf. Suyūṭī, *Tanāsuq,* 87, in which the relation between Q 6:6, "how we destroyed before them many a generation," and the beginning of Q 7

is stressed; see Horovitz, *KU,* 3). Q 2 (Blachère, no. 93) also contains several stories or legends: Adam (Q 2:30-9), Moses (Q 2:49-70; Marshall, *God,* 126-7; the name of the sūra "The Cow" is taken from Q 2:68 f.; cf. Numbers 1-10); Saul (q.v.), David (q.v.) and Goliath (q.v.; Q 2:243-52; Horovitz, *KU,* 106, 123; Jād al-Mawlā, *Qiṣaṣ,* 174-89).

Even if narrative sections do not comprise the major part of the entire text of other sūras, they do constitute an important part of some: Q 51:24-46 (on Abraham and his guests, Moses and Pharaoh, ʿĀd, Thamūd and Noah; Blachère, no. 49; Marshall, *God,* 48-9); Q 37 (Blachère, no. 52), on Noah (Q 37:75-80), Abraham and Isaac (Q 37:83-113), Moses and Aaron (Q 37:114-22), Elijah (Q 37:123-30), Lot (Q 37:133-8), Jonah (q.v.; Q 37:139-48); Q 44 (Blachère, no. 55), on Pharaoh (Q 44:17-33); Q 21 ("The Prophets"; Blachère, no. 67), on Moses and Abraham (Q 21:48-73), Lot, Noah, David, Solomon, Job, Jonah, Zechariah, John, with mention of Ishmael, Idrīs, Dhū l-Kifl, and allusion, without their names, to Mary and Jesus (Q 44:74-91; Horovitz, *KU,* 3); Q 36 (Blachère, no. 62), the parable/story of the inhabitants of the ungodly city who did not listen to the words of the three apostles (Q 36:13-29; often related to tales about disciples of Jesus at Antioch [see APOSTLE]; Ṭabarī, *Taʾrīkh,* i, 789-93; id., *History,* iv, 167-70; Masʿūdī, *Murūj/Prairies,* §127-8, 722; in particular, the figure of Ḥabīb the Carpenter, perhaps to be identified with Agabus, is often connected to this story; Vajda, Ḥabīb al-Nadjdjār; Grimme, *Mohammed,* ii, 97; Ahrens, *Mohammed,* 143-4; Bell, *Commentary,* ii, 138-9; Horovitz, *KU,* 19-20; Fück, Zum Problem, 74; Blachère, 250, n. 12: "Parabole des citadins impies"; Norris, Elements, 255-6); Q 34:10-9 ("Sheba"; Blachère, no. 87), on David, Solomon and al-ʿArim (q.v.; the last named possibly refers to the breaching of the dam of Mārib; Bell, *Commentary,* ii, 116); Q 6:74-83, on Abraham and his father Āzar (q.v.; Horovitz, *KU,* 85-6; Blachère, no. 91); Q 5 ("The Table"; Blachère, no. 116), on the two sons of Adam (Q 5:27-32; Cain and Abel [q.v.] are not named; cf. *Gen* 4:3-16), Jesus and the "table" (q.v.; *māʾida,* probably an Ethiopic derivative; Jeffery, *For. vocab.*, 255-6), etc. (Q 5:110-6, the "table" from which the sūra takes its name is often understood as a reference to the Eucharist; Norris, Elements, 255).

In other sūras the narrative sections are reduced to a few verses. This is the case in Q 69:4-12 (Blachère, no. 24), which references Thamūd, ʿĀd, Pharaoh, the subverted cities *(al-muʾtafikāt),* and the ark (q.v.; of Noah). Q 17 ("The Night Journey," also called "The Sons of Israel"; Blachère, no. 74; see ASCENSION) mentions Adam, the angels and Iblīs (Q 17:61-5), Moses and Pharaoh (Q 17:101-4). Some sūras have only allusive verses: Q 85 (Blachère, no. 43), to "the People of the Ditch" (q.v.; *aṣḥāb al-ukhdūd,* Q 85:1-7, this could be an allusion to the persecution of the Christians of Najrān [q.v.] by the Jew Dhū Nuwās; Muqātil, *Tafsīr,* iv, 647-8; this interpretation, and others, are seen in: Ṭabarī, *Tafsīr,* xxx, ed. ʿAlī, 131-5; Bell, *Commentary,* ii, 517-8; Horovitz, *KU,* 92-3), Pharaoh and Thamūd (Q 85:17-20; Marshall, *God,* 44-5); Q 53:50-4 (Blachère, no. 30; Marshall, *God,* 47), to ʿĀd, Thamūd, Noah, the subverted city *(al-muʾtafika);* Q 44:37 (Blachère, no. 55), to the people of Tubbaʿ (q.v.; Horovitz, *KU,* 102-3; for the longer narrative section of this sūra, see above). Finally, it should be noted here that the pericope of Sūra Luqmān (Q 31; see LUQMĀN) which deals with that legendary hero (Q 31:12-19; Blachère no. 84) pertains more to the genre of wisdom-literature than to that of narratives (Horovitz, *KU,* 132-6).

Still other verses contain a mere enumeration: Noah, the People of the Well/Ditch (*aṣḥāb al-rass,* see PEOPLE OF THE DITCH), Thamūd, ʿĀd, Pharaoh, Lot, the People of the Thicket and the people of Tubbaʿ (Q 50:12-4; Blachère, no. 56); Noah, ʿĀd, Pharaoh (in Q 38:12 Pharaoh is termed "he of the tent-pegs" [see TENTS AND TENT PEGS]; cf. Q 89:10; Muqātil [*Tafsīr,* iii, 638] describes some form of punishment supposedly practiced by him; Bell [*Commentary,* ii, 537] suggests boundary-posts or a form of punishment; Speyer [*Erzählungen,* 283] sees in it an allusion to the construction of the Tower of Babel attributed to Nimrod [q.v.]; Horovitz [*KU,* 130] thinks this eponym refers to constructions undertaken during his reign; see Q 28:38; Norris, Elements, 249), Thamūd and Lot (Q 38:12-4; Blachère, no. 42; see the discussion of the longer narrative section of this sūra above); the destruction of ʿĀd, Thamūd, the People of the Ditch, and other generations (Q 25:38; Blachère, no. 68); the people of Noah, of Abraham, of Lot, of Midian (Horovitz, *KU,* 138) and Moses, ʿĀd and Thamūd (Q 22:42-5; Blachère, no. 109; Marshall, *God,* 119-24); Abraham, Isaac, Jacob, Noah, David, Solomon, Job, Joseph, Moses, Aaron, Zechariah, John the Baptist, Jesus, Elijah, Ishmael, Elisha, Jonah, Lot (Q 6:83-7; Blachère, no. 91); see also Q 4:163-5 (Blachère, no. 102); Q 9:70 (Blachère, no. 115). The Qurʾān's transition from long narrative passages to such mere enumerations of narrative motifs is represented by passages which are very formulaic and concise, elliptical versions of stories, such as Q 21:74-91 (see above; Horovitz, *KU,* 3).

The reader of the Qurʾān is struck by the fact that the narratives and particularly the punishment stories occupy less space in the Medinan sūras than in the Meccan (Horovitz, *KU,* 25-7). In the Medinan period only a few brief narratives or set phrases (e.g. Q 2:246-51, where Muḥammad's new situation as a military leader is mirrored in the lives of Saul and David; Marshall, *God,* 162; Q 5:20-6, etc.), often in reference to punishment stories, "constitute the rather meagre narrative clothing of the believer-unbeliever relationship in Medina" (Marshall, *God,* 161). One explanation for why there is this difference in the pre- and post-emigration (*hijra,* see EMIGRATION) material could be the changed religious situation; yet another may be that Muḥammad's authority was better accepted in Medina (Marshall, *God,* 163), and that he therefore had to turn his attention to the legal matters involved in organizing a city: i.e. visions figured more prominently in the first stage of his mission, whereas practical matters absorbed much of the later part.

Categorization of the narratives

In a well known tradition, Muḥammad was taught to recite the Qurʾān according to seven *aḥruf* (pl. of *ḥarf,* edge, letter, word, aspect, etc.; Ṭabarī, *Tafsīr,* ed. Shākir, i, 43, no. 40; 50, no. 47; id., *Commentary,* i, 21 [Eng. trans.]; see READINGS OF THE QURʾĀN). This has been most commonly interpreted as dialects (q.v.), readings, etc. But, there are other understandings of *"ḥarf,"* which seem to be a summary of the essential genres contained in the Qurʾān: "The Qurʾān was sent down according to seven *ḥarf*s: command and prohibition (see COMMANDMENTS; FORBIDDEN), encouragement of good and discouragement of evil (see GOOD AND EVIL), dialectic [a better rendition of *jadal* is controversy; see DEBATE AND DISPUTATION], narrative, and parable *(qaṣaṣ wa-mathal)*" (Ṭabarī, *Tafsīr,* i, 58-70; id., *Commentary,* i, 29; Gilliot, Les sept "lectures," 20-1; in other versions, "narrative" *[qaṣaṣ]* is replaced by "ambiguous" *[mutashābih];* see AMBIGUOUS). Yet other interpretations understand the seven

*ḥarf*s to be: "[…] Permitted and prohibited, command and prohibition, relation *(khabar)* of what was before them and will be after them, the exposition of parables" (Abū ʿUbayd, *Gharīb al-ḥadīth,* iii, 160). This seems to be a primitive attempt to classify the essential genres contained in the Qurʾān. In some versions, where "narrative" is replaced by "ambiguous," the question arises as to whether or not the narratives were "ambiguous" (Suyūṭī [*Itqān,* chap. 43, iii, 4] takes qurʾānic legal passages [see LAW AND THE QURʾĀN], as well as "promise and threat," or eschatological discussions, to be "well established," *muḥkam;* narratives and parables are termed "ambiguous," *mutashābih;* ʿAbd Rabbih [*Buhūth,* 57] writes that narratives do not pertain to *mutashābih,* but he does not provide any further explanation), that is, in need of an interpretation. In this context the contrasting pair *muḥkam/mutashābih* (lit. clear/ambiguous) refers to the difference between legal proscriptions and prescriptions that must be obeyed, and the narrative materials, which are a matter of warning (see WARNER) and inquiry, or "the object of belief but not of conduct" (Abū ʿUbayd, *Nāsikh,* 3-4, according to Ibn ʿAbbās; Wansbrough, *QS,* 150-1). Be that as it may, the narratives appeared very early as one of the major components of the Qurʾān.

As for a classification of the narrative materials, we can distinguish between the stories of the prophets and messengers, the punishment stories (Watt-Bell, *Introduction,* 127-35; Welch, Formulaic features of the punishment-stories), which include large portions of the preceding category, and the other stories (see above under *Distribution of the narratives in the Qurʾān*).

Formulaic features in the narratives

It is well known that a wide variety of formulaic elements occur throughout the Qurʾān (see LANGUAGE AND STYLE OF THE QURʾĀN; GRAMMAR AND THE QURʾĀN). This is in keeping with its basically oral nature (see ORALITY), but perhaps is also a consequence of its reshaping. Such formulaic elements include introductory statements, refrains (e.g. "O which of your lord's bounties will the two of you deny?" in Q 55; see EXHORTATIONS), and repeated rhyme phrases, etc. (Nöldeke, *GQ,* i, 29-30; Wansbrough, *QS,* 25-7; Crapon de Crapona, *Coran,* 215 f.; Neuwirth, *Studien,* 175-8). The accounts of the Qurʾān also contain formulaic features, which are, in the words of Welch (Formulaic features, 77), "repeated elements that convey added force to passages that are already powerful in their warnings" to those who reject the supposed "messengers" of God.

The great deeds of God in history, in creation (q.v.) and in the universe (see COSMOLOGY) are his signs *(āyāt)*. This is the reason why we find so many transitions in the Qurʾān from descriptions of creation to narrative sections, as is the case in the Psalms (*Ps* 68, 105, 106, etc.), with which the Qurʾān shares so many features, stylistic forms, and themes in common (Paret, Geschichtsquelle, 38; indeed, these similarities have led some scholars to speak of "Semitic" rhetorical structures; Meynet et al., *Rhétorique sémitique;* Cuypers, Structures rhétoriques dans le Coran, 109, 191-3; id., Structures rhétoriques des sourates 105 à 114, 192-3). This creation-narrative transition results in a peculiar type of ellipsis, in which short words (like *idh* [usually translated as "when"] and *wa-idh* ["and when"]) introduce something new in the development of the text, indicating that "something happened/will happen." *Wa-idh* is the most frequent sign of this type of transition: Q 2:30, 34; 18:16, 50, 60; etc. Almost always this formula introduces legends or legendary features (Nöldeke, *Neue Beiträge,* 17; Horovitz, *KU,* 4). *Idh* occurs

only rarely in this function: Q 12:4; 27:7. These words are followed by the perfect, often of verbs expressing a mode of speaking *(qāla, nādā),* a fact which shows that, for the Qurʾān, it is not so much the events that are important, as the rendering of the words (Horovitz, ibid.; see SPEECH). The following are examples of other transitions:

One formula appears twice in the early period: "Have you not seen how your lord did with…" (Q 105:1; 19:6; also in Q 25:45, but here it is related to a natural phenomenon). A shorter (Medinan) formula: "Have you not regarded" (*a-lam tara ilā,* Q 2:243, 246, 258) is used in narrative sections, whereas a slight variation *(a-lam tara anna)* is frequent in hymnic descriptions (Horovitz, *KU,* 4-5).

The interrogative expression, "Have you received the story…" (*Hal atāka ḥadīth,* Q 85:17; 20:9; 51:24; 79:15; also in other contexts, such as the eschatological one of Q 88:1) is close to "Are there not come to you the tidings…" (*a-lam yaʾtikum nabaʾ,* Q 64:5; 14:9). A recurrent formula in the punishment stories is: "[So and So] cried lies" (*kadhdhabat,* Q 91:11; 69:4; 54:9, 18:23, 33; 26:105, 123, 141, 160; 38:12; 40:5; 50:12; see LIE).

Other formulas have as a common feature God speaking in the first person plural, as "Surely we have sent" *(laqad arsalnā),* "We have sent" *(innā arsalnā),* or "when we sent" (*idh arsalnā,* cf. e.g. Q 73:15; 71:1; 36:14; 23:23; 27:45; 2:151 ["as also we have sent," *kamā arsalnā*]); "we gave" *(wa-laqad ataynā)* or "we gave him" *(ataynāhu),* with an object (science, judgment [q.v.], wisdom, etc.; cf. Q 21:48, 51, 74, 79; 27:15; 31:12; 34:10); "we will recite to you something of the tidings of…" (*natlū ʿalayka min nabāʾi,* Q 28:3). See above for "we relate" (*naquṣṣu;* Horovitz, *KU,* 5).

"To recite" *(talā)* and " to inform" *(nabbaʾa,* see above under *nabaʾ),* however, are used mostly in the imperative: Q 26:69; 10:71; 7:175; 5:27. This is also the case for "to mention/remember" *(dhakara):* "and mention in the book" (Q 19:16, 41, 51, 54, 56); "and remember our servant" (Q 38:17, 41, 45); "and make mention of/remember" (Q 38:48; 46:21; Horovitz, ibid.). Another imperative is "Propose to them the parable/example of…" (*wa-ḍrib lahum mathalan,* Q 18:32; 36:13; cf. 16:112; 66:10, in which the subject is God, but neither of which is an imperative; Horovitz, ibid.). For the formulas particular to the punishment stories, see Horovitz, *KU,* 6 and Welch, Formulaic features.

It should be noted also that special formulas occur at the ends of legends in some sūras: "Now we have made the Qurʾān easy for remembrance" *(wa-laqad yassarnā l-qurʾāna lil-dhikri);* "Is there any who will remember" (*fa-hal min mudhakkir,* Q 54:17; cf. Q 54:22, 32, 40; or only with the end of this formula, Q 54:51); "Surely in that is a sign, yet most of them are not believers" (Q 26:8, 67, 103, 121, 139, 158, 174, 190). These *loci* belong to the broader genre of "sign-passages," an expression of R. Bell (Watt-Bell, *Introduction,* 123-7; Wansbrough, *QS,* 5-6).

Main characteristics of the narratives, their literary and theological effect

Most of these narratives present mythical characters of stereotyped figures. Their repetition throughout the Qurʾān, above all in the Meccan sūras, in long, middle-sized and short sections, or allusive passages, had and still has an effect on the listener or reader. Their binary oppositional form, peculiar to the myths, puts the listener/reader in a state of ethical or theological decision or choice concerning his or her own status (Gilliot, De l'impossible censure du récit légendaire; see ETHICS

AND THE QURʾĀN; THEOLOGY AND THE QURʾĀN). Some of these binary oppositions are: good vs. evil; staying on the right path *(hudā)* vs. straying from it (*ḍalāl,* see ERROR; ASTRAY); believers vs. unbelievers; submission *(islām)* to God vs. "rebellion" (q.v.; see also DISOBEDIENCE; CORRUPTION); hero vs. anti-hero; "messenger" or "prophet" (or king; see KINGS AND RULERS) vs. Pharaoh or "tyrant" (Gilliot, Récit, mythe et histoire, 280-3; see OPPRESSION; POLITICS AND THE QURʾĀN); good cities vs. subverted or destroyed cities (see PAIRS AND PAIRING). Muslim exegetes, with the help of extra-qurʾānic traditions, use these passages to establish a real typology of submission to God and rebellion against him, adding many other narratives or details, so that the allusive text of the Qurʾān might be "completed" (Gilliot, Mythe, récit, histoire du salut, 241), and, above all, so that these narratives — particularly the accounts about the prophets and messengers — may appear as a *preparatio prophetica,* i.e. a preparation and anticipation of the character and deeds of the prophet Muḥammad (Gilliot, Récit, mythe et histoire, 278-9). It is therefore no wonder, given the importance of the narratives in the Qurʾān, that the tales/stories of the prophets became a genre in its own right in Arabic Islamic literature, which had its beginnings towards the end of the first/sixth century (Khoury, *Légendes prophétiques*). These traditions, like those contained in the qurʾānic commentaries (there is much overlap between the accounts found in these two literary genres), are borrowed from the Jewish, Christian, Arabic, Hellenistic, Persian, etc., lore of the Middle East, but they are chosen, reinterpreted and adapted according to the *Weltanschauung* of Muḥammad, the Qurʾān and Islam (q.v.).

But the Qurʾān itself, whose narrative passages evince a familiarity with the aforementioned lore of the Middle East (leading some to the conclusion that Muḥammad, his informants and Companions probably, in several cases, had Aramaic books and oral traditions at their disposal; Luxenberg, *Die syro-aramäische Lesart,* passim) already manifests this same process. These accounts, however, most of which are not long (that of Q 12, on Joseph, is the longest one), have been established according to a new situation, a new representation of God, the universe, creation, prophets, and humankind: "In speaking of the Biblical prophets, Muḥammad more than once fashioned his narrative on the contemporary situation in Mekka and Yathrib" (Rezvan, Qurʾān, 41b, with examples). The characters presented in these stories are anticipations of Muḥammad, particularly the character of Abraham, who appears as a "Muḥammadan Abraham" or "a biblical Muḥammad" (Fück, Zum Problem, 77, probably referring to Snouck Hurgronje, *Het Mekkaansche Feest,* 23-30 [Fr. trans. in id., *Selected works,* 186-93]; C.H. Snouck Hurgronje, La légende qorânique d'Abraham). One could even say that in the narratives on the prophets, Muḥammad "substitutes his person to that of the ancient prophets" (Ahrens, *Muhammed,* 139; Nöldeke, *GQ,* i, 119-20). With the psychological and theological evolution of Muḥammad, the individuality of the different messengers becomes more and more indistinct, and the similarities with the Arabian prophet greater (see Q 6:84-90, with a mere list: Isaac, Jacob, Job, Joseph, Moses, Aaron, Noah, David, Solomon, Zechariah, John, Jesus, Elijah, Ishmael, Elisha, Jonah, Lot, but this time without the "Arab prophets," Hūd, Ṣāliḥ, Shuʿayb; Blachère, no. 91). At the same time, their adversaries express the peculiarities of the contemporary opponents of Muḥammad (R. Paret, Geschichtsquelle, 36). This treatment of the prophets in the Qurʾān has led at

least one scholar to speak of the "monoprophetism" of the Qurʾān and of Islam (A.-L. de Prémare, L'islam comme monoprophétisme), meaning that all the prophets are seen as Muḥammad saw himself in his conception of prophecy and in his life (cf. the allegation that the Arabian prophet had been foretold in the Hebrew and Christian scriptures in Q 7:157; Wansbrough, *QS,* 63-5). This is the consequence of Muḥammad's claim of finality, or completion (Ger. *Totalitätsanspruch;* Beck, Monotheistische Religion, 68), with respect to the preceding religions. These prophet narratives can therefore be considered one of the most important vehicles of qurʾānic and Islamic theology and ethics.

The narratives of the Qurʾān have, until the present day, continued to be very popular in Islam. Those on the prophets are especially so: they are presented in special books (even for children), together with the post-qurʾānic traditions about the prophets. Even if a number of contemporary Muslim scholars try to "purify" (censure) the Islamic exegetical literature of such "Judaica" (Abū Shahaba, *al-Isrāʾīliyyāt;* Rabīʿ, *al-Isrāʾīliyyāt fī Tafsīr al-Ṭabarī*), these "fairy tales" continue to be prized as narrative entertainment ("the pleasure of the text") and for the religious and ethical messages they convey. In fact, the passages described as narrative consist "not so much of narrative as of *exempla*" (Wansbrough, *QS,* 18), a remark which corresponds to the "fragmentary character of Muslim scripture" (ibid.; see SCRIPTURE AND THE QURʾĀN).

Today, debate occasionally arises among Muslim scholars concerning the literary qualification of qurʾānic narratives. All, or nearly all, are agreed upon the "inimitable" qualities of the Qurʾān, both in content and in style (Muṣṭafā, *al-Iʿjāz;* ʿAbd Rabbih, *Buḥūth,* 141-90; see INIMITABILITY). But some have insisted that the purpose of the narrative passages is not primarily "historical," but, rather, that the Qurʾān utilized the "narrative art" to convey its theological, social and ethical message (see CONTEMPORARY CRITICAL PRACTICES AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). For instance, M.A. Khalaf Allāh (born in 1916) wrote a thesis on the qurʾānic narratives, which he submitted in 1947 to the Fuʾād 1st University (now Cairo University), in Cairo. Under pressure from scholars of al-Azhar, it was refused. But the text was reworked by its author and published as a book in 1951 (Khalaf Allāh, *al-Fann al-qaṣaṣī;* Jomier, Quelques positions). The book takes a psychological approach towards the narratives (see also Naqra, *Sikūlūjiyyat al-qiṣṣa*), looking at the relations of Muḥammad and other prophets with their societies (see COMMUNITY AND SOCIETY IN THE QURʾĀN). It is also an apologetic work. Some suspected him (Khaṭīb, *al-Qaṣaṣ al-qurʾānī,* 275-348, where even the symbolism is rejected; ʿAbd Rabbih, *Buḥūth,* 215-61) of doubting, or bringing into question, the "historicity" of the qurʾānic accounts. While the work of Khalaf Allāh would not be a locus of controversy in European or North American universities, the standard insights of form criticism remain unacceptable in most Muslim institutions of higher learning. To apply the term 'myths' to the qurʾānic narratives, to speak of myths in the sense that historians of religion use the term in defining the generative and foundational elements of religion, is anathema in such institutions.

Nature as Signs

Creation, i.e. natural phenomena, as indications of God's existence and power. In Islamic belief the Qurʾān is God's final message *(risāla)* conveyed by God's last messenger (q.v.; *rasūl*) and Prophet (*nabī,* see PROPHETS AND PROPHETHOOD), Muḥammad, to all humankind. Not only is it a final, yet primary, message but it is also a lucid and enlightening message, a *Qurʾān mubīn* (Q 15:1; see NAMES OF THE QURʾĀN) which distinguishes the good from the bad (*qawl faṣl,* Q 86:13), and which was revealed in the Arabic language (q.v.; Q 12:2). Elaborating some general semiotic principles, Roman Jakobson (Language in relation) insists that all messages are composed of signs. The Qurʾān has no problems with this idea and, indeed, over and over again, articulates a fundamental semiotics of its own: it does not have the sophistication of the complex theories offered by a C.S. Peirce (1839-1914; *Collected papers*) or an Umberto Eco *(Theory of semiotics)* but in scope and breadth it has every claim to being their equal: God proclaims, for example, that he will show humankind his signs (q.v.; lit. *āyātinā*) on the furthest horizons as well as deep within themselves (Q 41:53). People, such as the prophet Joseph (q.v.; Yūsuf) and his brothers (see BROTHER AND BROTHERHOOD), can be signs for those who seek, or enquire after [the truth] (*al-sāʾilīn,* Q 12:7). The very heavens (see HEAVEN AND SKY) and earth (q.v.) are alive with the signs of God:

> Behold! In the creation (q.v.) of the heavens and the earth; in the alternation of the night and the day (see DAY AND NIGHT); in the sailing of the ships (q.v.) through the ocean for the profit of mankind; in the rain which God sends down from the skies, thereby giving life to an earth that is dead (see AGRICULTURE AND VEGETATION); in the beasts of all kinds that he scatters through the earth (see ANIMAL LIFE); in the change of the winds (see AIR AND WIND), and the clouds which they trail like their slaves between the sky and the earth; — (Here) indeed are signs for a people that are wise (*la-āyātin li-qawmin yaʿqilūna,* Q 2:164; see also Q 3:190).

It is clear from this brief quotation that natural phenomena comprise a large portion of the divine signs and it is with these that this article will deal. According to the Qurʾān, nature itself praises God (Q 24:41;

see PRAISE; LAUDATION; GLORIFICATION OF GOD).

We will examine firstly the classical Empedoclean elements of fire (q.v.), air, water (q.v.) and earth and then move from terrestrial phenomena, in terms of the semiotics of the flora and fauna of the Qurʾān, to an appraisal of the celestial phenomena, before concluding with a survey of the semiotics of nature in qurʾānic eschatology (q.v.).

The Empedoclean elements: The semiotic substratum

The pre-Socratic philosopher Empedocles (d. ca. 433 B.C.E.) held that the phenomenal world derived from the four key elements of fire, air, water and earth which would combine in varying proportions to produce all that we see around us. While the Qurʾān adheres to no such tidy theory, it is nonetheless clear that the four elements figure largely in a variety of forms and, importantly, denote or signify numerous salutary messages for the believers.

Fire

While fire is clearly a sign, reminder or memento *(tadhkira)* of God's providence to humankind (cf. Q 56:73), being in A. Yusuf Ali's words "an emblem of man's earliest civilisation" and standing "as a symbol of physical comfort and convenience to man [see BLESSING; GRACE], of the source of spiritual light [q.v.], and also of the warning to Evil [see GOOD AND EVIL] about its destruction" (Yusuf Ali, *Holy Qurʾān,* 1492, n. 5255), there can be little doubt that, for the majority of Muslims, fire *(al-nār),* primarily represents — indeed is! — hellfire (see HELL AND HELLFIRE; REWARD AND PUNISHMENT): and in harmony with his destined domain, Iblīs (see DEVIL) himself was created from fire. The wicked and the unbelievers (*kāfirūn,* see BELIEF AND UNBELIEF) are destined for hellfire where they will burn in appalling torment (see e.g. Q 40:70-2). Islamic eschatology, as Smith and Haddad *(Islamic understanding)* show, developed a vision of seven layers of *al-nār* with "each descending one an abode of increased torment." Thus "the purgatorial fire *(jahannam)*" will be reserved for grievously sinful Muslims (see SIN, MAJOR AND MINOR) while "the blazing fire *(saʿīr)*" will be for the Sabians (q.v.). Fire in the Qurʾān, then, in addition to being a gift (see GIFT-GIVING), may also signal pain, torment and loss. The latter, perhaps, constitute its primary signification.

Importantly, however, fire in the Qurʾān signifies presence, both divine and human (cf. Yusuf Ali, *Holy Qurʾān,* 791, n. 2541). For the prophet Moses (q.v.; Mūsā) the burning bush was a sign of God's presence and majesty (Q 20:10-12; see SECHINA). Immediate acknowledgement of that sacred presence was required in the divine command that Moses should remove his shoes (Q 20:12; compare *Exod* 3:1-5). God's voice "blazed forth" in the middle of nature itself, epitomized by that fire.

Finally, fire, paradoxically, signifies both danger and security in the Qurʾān: danger, because the giant-king Nimrod (q.v.) attempts to burn the prophet Abraham (q.v.; Ibrāhīm) to death in a fire (cf. Q 21:68-9, compare Daniel 3:16-50); security, because God commands the fire to be cool and to become a place of peace and safety *(salāman)* for Abraham.

Air

The standard Arabic word for "air, atmosphere, wind, weather, climate," is *al-hawāʾ (*pl. *ahwiya, ahwāʾ;* cf. Gk. *aēr).* It is in its synonyms, however, and especially in words for wind like *rīḥ (*pl. *riyāḥ)* which imply air, that we may best seek and survey this second Empedoclean element in the text of the Qurʾān. Wind is a sign of divine providence and bounty and, as A. Yusuf Ali

puts it (*Holy Qur'ān,* 1663, n. 5864), the winds "are powerful factors in the government of the physical world… [and] point to the power and goodness of God" (see POWER AND IMPOTENCE; MERCY). The winds are both subject at all times to his will (cf. Q 42:33) and powerful implements of that will: they drive the rain-bearing clouds, reviving dead lands with a fruitful harvest in a manner akin to the forthcoming day of resurrection (q.v.; Q 7:57, see also Q 15:22; 30:48, 51). Q 77 is entitled Sūrat al-Mursalāt, which means literally "those who have been sent." Watt (*Companion,* 289) notes that the oath (see OATHS) that comprises Q 77:1-5 ("By the emissaries [winds] in succession, by the raging hurricanes") has been variously interpreted. It is possible that the first three verses are a reference to rain clouds while the fourth and fifth describe destroying winds. But he is aware that all the verses may be interpreted as referring to angels (see ANGEL). If the reference in Q 77:5 ("those who bring down a reminder") is indeed to the broadcasting of a reminder or message (*dhikr,* see MEMORY) by the winds, then A. Yusuf Ali's (ibid.) comment has some merit: "They literally carry sound, and therefore Messages, and metaphorically they are instrumental in making God's Revelation accessible to hearers." Fanciful or not, it is clear from the above that the air, in the form of the winds, serves as a major vehicle of God's power and bounty, and implies a less fearsome aspect of his natural creation than the terrible *nār*.

Water

Just as God has absolute power over the winds (cf. Q 42:33) so too he is lord of water: if he wished he could make it immediately undrinkable by rendering it bitter or salty *(ujājan)* (Q 56:70; see also Q 11:7; see THRONE OF GOD). In a phrase that might variously have won the approval of both Empedocles and Darwin (although, of course, the Qur'ān does not teach evolution; see BIOLOGY AS THE CREATION AND STAGES OF LIFE), God states in the Qur'ān: "And we have made everything which lives out of water" (*wa-ja'alnā min al-mā' kulla shay'in ḥayyin,* Q 21:30; see also Q 24:45). People themselves are essentially a creation by God from, or out of, water (Q 25:54). Water, then, participates in a fundamental qur'ānic semiotics of divine creation.

Abdel Haleem *(Understanding)* reminds us that there are more than sixty references to water in the Qur'ān, more than fifty to rivers and more than forty to sea. The sacred text itself insists that in the rain (lit.: "in what God sends down from the heavens in the way of water") "are signs for a people who understand" (*āyātin li-qawmin ya'qilūna,* Q 2:164). The signs involve God's power and providence and may be divided semiotically into three major images and three simple signs, which build on these images: all together they constitute a kind of unstated covenant (q.v.) between God and man. It is not formally articulated in the style, for example, that the covenant is formulated in Genesis 15:18-21 and 22:15-8 between Yahweh and Abraham, but in its own way it is just as powerful.

Firstly, terrestrial life itself *(al-ḥayāt)* is likened to the rain that has a transitory effect on the parched earth: new plant life springs up but ultimately the earth absorbs the rainwater leaving only a more lasting aridity (Q 18:45). In the following verse, the Qur'ān points or signifies its own moral: money and heirs will pass but the merit derived from good deeds (q.v.) will endure in the sight of God (Q 18:46).

Secondly, water is a symbol and sign of life itself, terrestrially, but also, by extension, a sign of the divine life of God who has power over it. The Qur'ān asks what would happen if, one day, someone awoke

to find that his water had vanished. Who could replace that flowing water? (Q 67:30; see also Yusuf Ali, *Holy Qurʾān,* 1583, n. 5591). There are interesting analogies to be drawn here (but not pressed overmuch) with John 4:13-4, where we read of the encounter by the well of Jesus (q.v.) and the Samaritan woman to whom God promises water that will quench every thirst and flow continually.

Our third major qurʾānic image, particularly apposite in its linkage of divine message and water, is that of the sea *(al-baḥr)* transformed into ink *(midādan)* and its never being sufficient to write out the words of God (lit. *kalimāt rabbī*) even if replenished with another sea of ink like it (Q 18:109; see WORD OF GOD; WRITING AND WRITING MATERIALS; INSTRUMENTS).

Building particularly on the last image of water as transformed into the inky vehicle for the divine message, we may now note that the Qurʾān tells us that God provides two kinds of water for the benefit of humankind: sweet fresh water and salt sea water (see Q 25:53; 35:12; see BARZAKH; BARRIER). Water is a divine gift to man (cf. Q 23:18-9; 50:9-11; 80:25). This is our first "simple sign," water as a sign of divine bounty.

Just as with water, humans are free to accept or reject the message of God, for there should classically be no compulsion in religion (cf. Q 10:99, see also *lā ikrāha fī l-dīn:* Q 2:256; see TOLERANCE AND COMPULSION; RELIGIOUS PLURALISM AND THE QURʾĀN). In which case, pursuing our metaphorical (but, nonetheless qurʾānic; see METAPHOR) identification of water as an inky vehicle for the divine message, that water may "become" our second and third "simple signs": it may be a sign of divine reward or a sign of divine punishment. The righteous will drink from the bounteous rivers *(anhār)* of paradise (q.v.; cf. Q 47:15); the wicked will drink boiling water *(ḥamīm)* in hell and resemble thirsty camels (see camel) whose thirst cannot be slaked *(al-hīm)* in their anguish (Q 56:54-5; see FOOD AND DRINK).

The covenant which may be deduced or extrapolated from all these watery images, real and metaphorical, is a very simple one; its spirit infuses the whole Qurʾān: God tells the believers that, if they show gratitude (see GRATITUDE AND INGRATITUDE) for the multifarious examples of his terrestrial bounty (an example of which is water), by doing good deeds, then they will assuredly receive a full reward in paradise. Ingratitude or contempt for that same bounty equals disbelief *(kufr)* and will plunge the ingrate into the fires of hell.

Earth

The Qurʾān refers much more to "the earth" *(al-arḍ),* i.e. this terrestrial world, by comparison with the heavens or skies *(al-samāwāt),* than earth *qua* earth in the stark, elemental Empedoclean sense. Thus there are references to the creation of the heavens and the earth (Q 2:164; 3:190) and that creation is indeed one of the signs *(āyāt)* of God, a semiotic indicator to those with real insight of God's majesty and power. The earth is full of God's signs (Q 51:20) and God is the lord of the heavens and the earth (*al-samāʾ wa-l-arḍ,* Q 51:23). That spacious earth (Q 29:56; also Q 15:19), provisioned by God (Q 77:27) as a gift to man (see Q 78:6-16) to be managed by man (Q 67:15), will one day be changed out of all recognition, at the end of time on the last day (Q 14:48; see LAST JUDGMENT; APOCALYPSE). On that terrible day of resurrection even the most hidden deeds (see EVIL DEEDS), which have been performed on the earth, will be made known (see Q 99:1-8; also Yusuf Ali, *Holy Qurʾān,* 1771, n. 6238; see RECORD OF HUMAN ACTIONS).

Much closer to the Empedoclean sense of earth *qua* earth, as opposed to *the* earth, is

the Arabic word *ṭīn* meaning "clay" (q.v.) or "soil." In that great primal act of disobedience (q.v.), pride (q.v.) and rebellion (q.v.), Iblīs refuses to bow down before God's new creation, Adam (see ADAM AND EVE; BOWING AND PROSTRATION), as a mark of respect, proclaiming: *anā khayrun minhu: khalaqtanī min nārin wa-khalaqtahu min ṭīnin,* "I am better than he is: You created me from fire and you created him from clay" (Q 7:12; see also Q 2:34; 17:61; 38:71-6).

In addition to *ṭīn,* the Qurʾān also uses other Arabic words for the same event, which are closer to the Empedoclean elemental sense than *arḍ:* "Behold! your lord said to the angels: 'I am about to create man, from sounding clay, from mud molded into shape'" (*min ṣalṣālin min ḥamaʾin masnūnin,* Q 15:28; see also Q 15:33).

Terrestrial phenomena: The semiotics of the flora and fauna of the Qurʾān

Moving now from the four classical, simple Empedoclean elements of antiquity, fire, air, water and earth, out of which all natural phenomena were believed to be composed, we find that the Qurʾān is rich in the names of the more complex or compound natural structures or phenomena like trees (q.v.) and animals. These will be adumbrated here: several signify God's bounty to the earth, which he himself has created.

The Qurʾān mentions and symbolically utilizes a variety of trees (see SYMBOLIC IMAGERY). Some like the mysterious lote or lotus tree, *sidrat al-muntahā,* which grows in paradise, signify gardens (see GARDEN) and blessedness, especially when shorn of their thorns (Q 53:14; see also Q 56:28). A. Yusuf Ali (*Holy Qurʾān,* 1444, n. 5093) succinctly comments on the symbolism of this tree: "The wild Lote is thorny; under cultivation it yields good fruit and shade, and is symbolic of heavenly bliss.… The symbolism here is that the farthest Lote-Tree marked the bounds of heavenly knowledge as revealed to men (see KNOWLEDGE AND LEARNING), beyond which neither angels nor men could pass."

The lote tree, however, has a terrestrial as well as a celestial dimension. Besides being a sign of eternal life in paradise (see ETERNITY), it could also be a product and sign of terrestrial destruction and decay (see PUNISHMENT STORIES). The collapse of the Maʾrib dam in the sixth century C.E. in Sabaʾ (immortalized in the Qurʾān under the rubric of *sayl al-ʿarim,* "the flood of the dam," but recorded even before the revelation of the Qurʾān in the epigraphic south Arabian inscriptions, see CIH 541 in Conti Rossini, *Chrestomathia,* 73, 1.43; see also CIH 540 in ibid., 71, 1.6; see SHEBA; AL-ʿARIM; PRE-ISLAMIC ARABIA AND THE QURʾĀN) left in its wake, according to the Qurʾān, only two gardens "Producing bitter fruit and tamarisks, and some few (stunted) lote-trees" (Q 34:16; see GEOGRAPHY; EPIGRAPHY AND THE QURʾĀN).

Other trees of paradise named in the Qurʾān are the *ṭalḥ:* it is not entirely clear what kind of trees these are here but they are mentioned after the thornless lote trees (Q 56:29) and signify yet more examples of the joys and beauties of the plant life in the paradisiacal garden. A. Yusuf Ali (*Holy Qurʾān,* 1487, n. 5238) hazards that they may be a species of acacia tree and Arberry *(Koran)* has no hesitation in actually translating the word as acacias (Lane and Penrice, *Dictionary,* define *ṭalḥ* as a collective noun meaning a kind of acacia *[acacia gummifera]* but also as a banana tree). Both the thornless lote trees and these acacias are part of the furniture of paradise and, it hardly needs to be stressed here, the most common word for the latter in the Qurʾān has a particular semiotic significance in terms of visual beauty (q.v.): it is *al-janna,* the garden, a constant motif in qurʾānic

eschatology. Thus we are told that it is in "gardens of ease [happiness or bliss]" *(jannāt al-naʿīm)* that the above-named trees will be found (Q 56:12).

All nature, then, is deployed in the qurʾānic imagery of paradise to indicate a state of bliss to which the believer should aspire and towards which that person should work with sound belief and good deeds (see FAITH; JOY AND MISERY). The celestial paradise is made credible by reference to terrestrial natural images with which the recipients of the qurʾānic message are already familiar.

Of course, not all the trees mentioned in the Qurʾān signify blessedness. The text offers us a short simile in which an "evil word" *(kalima khabītha)* is said to resemble an "evil tree" (*shajara khabītha,* Q 14:26; see GOSSIP). Perhaps the most famous of the "evil trees" mentioned in the Qurʾān is the tree of Zaqqūm (q.v.), "the cursed tree" (*al-shajara al-malʿūna,* Q 17:60; see also Q 37:62-6; 44:43-6; 56:52). This tree, which is "bitter" and "pungent" (see Yusuf Ali, *Holy Qurʾān,* 711, n. 2250), represents all that is unpleasant in the way of plant life. Netton has defined it (*Popular dictionary,* 264) as follows:

> Bitter smelling and fearsome tree in the pit of Hell with flowers which resemble demonic heads. The stomachs of sinners obliged to eat from this tree in Hell will be badly burned.… The Zaqqūm tree with its bitter fruit and foul smell was not only associated with the infernal regions of Hell but also with Arabia.

Again, then, a powerful semiotic (and olfactory!; see SMELLING) link is made between actual and perceptible terrestrial phenomena on the one hand, and threatened potential phenomena that may be encountered in another life, on the other.

Turning now from the semiotics of the principal flora of the Qurʾān to the fauna, we note firstly that there are two general statements made about animals in the Qurʾān. The first of these is that the creeping animals *(dābba)* and flying birds are all said to form "communities" *(umam)* like humankind (Q 6:38; see COMMUNITY AND SOCIETY IN THE QURʾĀN). The extensive intertextual weight borne in Islam by such a word as *umma* needs no underscoring. Suffice it to say that here the word signifies *inter alia* a divine ordering or harmony of creation "in groups" where mutual cooperation *(taʿāwun)* and generosity are expected. The semiotic antitheses of these virtues are numerous and include "self-centeredness," "individuality," "isolation," and the selfishness and greed born of such attitudes and lifestyles: the Qurʾān (e.g. Q 89:17-20) condemned them all (see also ETHICS AND THE QURʾĀN).

Here the parable of the two men in Q 18 (Sūrat al-Kahf, "The Cave"; Q 18:32-44) is instructive. The proud, selfish arrogant man, who has two well-endowed gardens that are eventually ruined, is in sharp contrast to his humbler neighbor whom he clearly despises. But in his fall from material wealth (q.v.) the proud man equates his selfish attitudes with polytheism itself (Q 18:42; see POLYTHEISM AND ATHEISM). In this parable, then, the Qurʾān signals in the most lucid way that selfishness and greed lead to ruin and that divine protection (q.v.) is to be had in the *umma* whose characteristics are generosity, mutual respect and cooperation. The two gardens in the parable, of course, are twin images or signs of God's gift of paradise to humankind. But that gift has to be earned even though, in the parable, it is "given" almost gratuitously. From the point of view of the semiotics of nature in the Qurʾān and its ubiquitous didactic aspect, it is instructive to note that the parable of the two men in Q 18 follows on immediately from a vivid

description of the paradisiacal garden (lit. "the gardens of Eden," *jannāt ʿadnin,* Q 18:31), couched in the most physical — indeed natural — terms. The semiotic lesson is clear: Nature is an image of the garden of paradise itself. Nature misused, abused or taken for granted, signals contempt for the divine creator who will assuredly punish such attitudes and actions.

It comes as no surprise then, to learn that those who reject the signs of God, which are clearly present in the whole of nature (cf. Q 41:53), are specifically regarded as deaf *(ṣumm)* and dumb *(bukm)* and living in darkness (q.v.; Q 6:39; see vision and blindness; hearing and deafness).

The second major general statement about animals in the Qurʾān is that they have been created for the service of humankind whether they be cattle *(anʿām),* horses *(khayl),* mules *(bighāl)* or donkeys (*ḥamīr,* Q 16:5-8). The cattle provide warmth and food and foster a sense of beauty as they are driven backwards and forwards to pasture. The equines are for both riding and ornament *(zīna)*. The semiotics of these verses are abundantly clear and need little further emphasis: as with the "good" trees and plants, the animal kingdom as it flourishes on earth is a sign of God's bounty to humankind and it is designed for the latter's use (see also HIDES AND FLEECE; HUNTING AND FISHING). The ethic which pertains is very similar to that in Genesis 1:26-8 in which man is placed in command of all the wildlife on earth.

There are numerous references to animals, birds and insects in the Qurʾān; some give their names to whole sūras: e.g. Q 2, "The Cow" (Sūrat al-Baqara); Q 6, "The Cattle" (Sūrat al-Anʿām); Q 16, "The Bee" (Sūrat al-Naḥl); Q 27, "The Ant" (Sūrat al-Naml); Q 29, "The Spider" (Sūrat al-ʿAnkabūt); and Q 105, "The Elephant" (Sūrat al-Fīl). Elsewhere, there are references to camels (e.g. Q 7:73), birds (e.g. Q 67:19) and the small creeping animal *(dābba)* which gnawed through the staff of the prophet Solomon (q.v.; Sulaymān) after the latter's death (Q 34:14) and which is variously translated as "worm of the earth" (A. Yusuf Ali), and "the Beast of the Earth" (Arberry). All of these signify, to one degree or another, God's creative presence, power and majesty. Perhaps, however, the most dramatic and starkest of all the animals mentioned in the Qurʾān, in terms of any identification with sign, is the "she-camel" *(nāqa)* in Q 7:73-84. The prophet Ṣāliḥ (q.v.) is sent to the Arabian tribe of Thamūd (q.v.). Ṣāliḥ orders the tribe to worship the one true God and identifies, as a sign of the covenant God makes with them through him, a she-camel. This is to be left unharmed and permitted to graze at leisure. But Ṣāliḥ's message is rejected, the she-camel is hamstrung and the tribe of Thamūd, in turn, is hit by an earthquake. The she-camel, originally a sign of true belief, covenant, blessing and good order becomes a symbol of divine vengeance and destruction. Thus good signs in the Qurʾān can, Janus-like, turn into symbols of doom.

Celestial phenomena: The semiotics of the heavenly spheres

Q 41:53 proclaims that God's signs are visible in nature and elsewhere, in the furthest lands of the earth *(fī l-āfāqi),* and nowhere is this more evident or ubiquitous than in the qurʾānic contrast between light and darkness (see PAIRS AND PAIRING). Light is a clear sign of God's transcendence, as in the famous and poetic Light Verse, Q 24:35: "God is the light *(nūr)* of the heavens and the earth. The parable of his light is as if there were a niche and within it a lamp (q.v.): the lamp enclosed in glass: the glass as it were a brilliant star.…"

God is the creator of both light and darkness (Q 6:1) but the latter, as with many

other world religions, can be a sign of evil and isolation from God. Those who reject God's signs are characterized, not only as being deaf and dumb, but as being "in darkness" (*fī l-zulumāt,* Q 6:39). The very alternation of day and night is a set of two signs: a reminder of God's presence, a divinely appointed calendar (q.v.). And if the "sign of the day" *(āyat al-nahār)* is designed for sight or enlightenment (Q 17:12), then, by analogy, the purpose of the "sign of the night" *(āyat al-layl)* is abundantly clear.

As with some of the fauna mentioned in the Qurʾān which we have surveyed, the natural phenomena of the heavens give their names to a number of different sūras in the Qurʾān: for example, we note Q 53, "The Star" (Sūrat al-Najm; see PLANETS AND STARS); Q 54, "The Moon" (q.v.; Sūrat al-Qamar); Q 85, "The Constellations" or "The Signs of the Zodiac" (Sūrat al-Burūj); Q 89, "The Dawn" (q.v.; Sūrat al-Fajr); Q 91, "The Sun" (q.v.; Sūrat al-Shams); and Q 113, "Daybreak" or "The Dawn" (Sūrat al-Falaq; see DAY, TIMES OF).

It is interesting that some of these natural celestial phenomena whose names figure above as sūra titles, also feature as oaths in the sacred text (see LANGUAGE AND STYLE OF THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN). For example: "By the star when it goes down" (Q 53:1); "By the break of day" (Q 89:1); "By the sun and his (glorious) splendor, by the moon as she follows him" (Q 91:1-2). All of celestial nature thus constitutes a body of powerful signs, witnessing to God's creative power and bounty to humankind. As such, the above are powerful oaths indeed. In Q 113 refuge is sought with "the lord of the dawn" from, *inter alia,* "the evil of dusk at nightfall as it spreads" (*sharri ghāsiqin idhā waqaba,* Q 113:3). Here is that vivid contrast again between light as a sign of God and goodness, and darkness as a symbol of evil.

Conclusion: The semiotics of nature in qurʾānic eschatology

On the last day we are told in the Qurʾān that the heaven will be split and the stars put out while the mountains are scattered (Q 77:8-10), and that the sun will become dark, the stars will be dispersed and fall, the mountains will disappear and the seas will boil and be poured forth (Q 81:1-14; 82:1-5). All these cataclysmic signs will be the most lucid natural evidence that an Islamic *parousía* is nigh. Not only that but they will signal in the most terrible way the dawn of real self-knowledge for each individual (Q 82:5).

The semiotics of nature in the Qurʾān may be condensed into a simple fundamental truth: Nature is a body of created signs that reveal God's bounty, mercy and creative goodness to humankind. But the beauty with which God has endowed the earth is also a test: "That which is on earth we have made but as a glittering show for the earth *(zīnatan lahā),* in order that we may test them — as to which of them are best in conduct" (Q 18:7; see TRIAL).

Nature itself, then, shares in the general qurʾānic predilection for "questing and testing" (see especially Q 18, Sūrat al-Kahf; see also Netton, Towards a modern *tafsīr*). Nature can be a prime semiotic feature in the lesser testing of humankind on earth (see Q 18:7 above); its eschatological destruction will inaugurate the greater test of the last judgment.

Ian Richard Netton

News

Report of [recent] events. News in the Qurʾān centers around words derived from the root *n-b-ʾ,* especially the verb *nabbaʾa/yunabbiʾu,* meaning "to inform," which occurs forty-nine times, its synonym *anbaʾa/yunbiʾu,* occurring four times, and the noun *nabaʾ,* meaning "a piece of news," which, with its plural *(anbāʾ),* appears twenty-nine times. There is also a single appearance of *istanbaʾa/yastanbiʾu,* meaning "to ask for news" (Q 10:53). A completely different root, *kh-b-r,* provides seven occurrences of nouns meaning "news" or "information," *khubr, khabar,* and the plural of the latter, *akhbār*.

Qurʾānic references to news cover a considerable number of different meanings. Perhaps the most prevalent is the "great news" (*al-nabaʾ al-ʿazīm,* Q 78:2; cf. Q 3:15; 10:53; 34:7; 38:67, 88) of the coming day of judgment (see LAST JUDGMENT), one of the main bases of the prophet Muḥammad's teaching (see ESCHATOLOGY). This includes the frequently reiterated idea that God will inform all at the judgment of that which they used to do (Q 5:48, etc., often repeated; see RECORD OF HUMAN ACTIONS) and what they did not do (Q 75:13). In particular, God admonishes Jews (Q 62:8; see JEWS AND JUDAISM), Christians (Q 5:14; see CHRISTIANS AND CHRISTIANITY), hypocrites (Q 9:94, etc.; see HYPOCRITES AND HYPOCRISY) and unbelievers (Q 6:5; 26:6; see BELIEF AND UNBELIEF) that they will be informed at the judgment of their former actions. Furthermore, the prophet Muḥammad is particularly singled out as the bearer of various kinds of news. Thus, he informs his hearers about God and the afterlife (Q 3:15; 10:53; 15:49; 18:103). Muḥammad also imparts information from the unseen (see HIDDEN AND THE HIDDEN) concerning the fate of earlier peoples and their prophets (Q 5:60; 6:34; 7:101; 11:100, 120; 22:72; see GENERATIONS; PUNISHMENT STORIES; PROPHETS AND PROPHETHOOD), specifically giving stories or details about Adam (Q 5:27; see ADAM AND EVE; CAIN AND ABEL), Noah (q.v.; Q 10:71; 11:49), Abraham (q.v.; Q 15:51; 26:69), Joseph (q.v.)

and his brothers (Q 12:102; see BENJAMIN; BROTHER AND BROTHERHOOD), Moses (q.v.; Q 7:103; 20:99; 28:3), David (q.v.; Q 38:21), Dhū al-Qarnayn (Q 18:91; see ALEXANDER), Mary (q.v.; Q 3:44) and the Seven Sleepers of Ephesus (Q 18:13; see MEN OF THE CAVE). Such information is described as "news of the unseen" *(anbāʾ al-ghayb),* indicating that God has miraculously transmitted it to the Prophet (Q 3:44; 11:49; 12:102; see KNOWLEDGE AND LEARNING). Indeed, as if to emphasize this point, God reminds the Prophet that he was not an eyewitness to these ancient events but God is providing him with precise information about them (Q 3:44; 12:102). On the other hand, some news about past peoples should be common knowledge, for it has been given before (Q 9:70; 14:9). Perhaps even closer to the common notion of prophecy as extrasensory perception and precognition is Muḥammad's divinely conveyed knowledge about certain contemporary matters (Q 9:64, 94; 26:221; 66:3; see FORETELLING; DIVINATION). That various earlier prophets are also described as having such miraculous knowledge reinforces the concept of prophethood in general (Q 2:33; 3:49; 12:15, 36-7, 45; 18:68, 78). The ability of the prophets to give news of the unseen is contrasted with the inability of the angels (Q 2:31; see ANGEL) and the unbelievers (Q 6:143) to do the same.

Beside the more frequent qurʾānic usage of news to indicate divinely inspired information, the concept also refers occasionally to ordinary reports (Q 27:7, 22; 28:29; 33:20; 47:31; 49:6; 66:3). These include the interesting qurʾānic admonition to investigate ordinary news before acting on it, lest one make a regrettable mistake by a rush to judgment (Q 49:6). Associated with this concept is the idea that every piece of news has a final resting place (Q 6:67), which could be read as implying that a specific truth underlies every action, suggesting a positive view of reality. An equally positive view explains the verse as meaning that every piece of news about the afterlife will eventually be fully realized and fulfilled. See also GOOD NEWS.

Night of Power

The night during Ramaḍān (q.v.) when, according to classical exegesis, the Qurʾān was sent down. The phrase "Night of Power" *(laylat al-qadr)* appears in Q 97:1, and lends itself to the name of the sūra (Sūrat al-Qadr). Its Meccan or Medinan origin is in dispute, although it is usually associated with the early Meccan period (see CHRONOLOGY AND THE QURʾĀN). This night is described as a night better than a thousand months (q.v.) in which angels (see ANGEL) and the spirit (q.v.; *rūḥ,* i.e. Gabriel [q.v.], other high angels, etc., cf. Rāzī, *Tafsīr,* xxxiii, 32) descend by leave of their lord from every command (*amr,* cf. Q 16:2), and there is said to be a peace that lasts until the break of dawn. The "blessed" night during which God sent down the Qurʾān (Q 44:3; cf. 2:185; see REVELATION AND INSPIRATION; BOOK) is believed to be the night of *qadr* (Ṭabarī, *Tafsīr,* xxv, 64).

Commentators have understood *qadr* as either power or empowerment *(qudra),* or divine determination *(qadar)* or fate (q.v.; Sells, Sound, 255 and n. 50; see also DESTINY; FREEDOM AND PREDESTINATION).

Muslim commentators (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), following Ibn ʿAbbās (d. 68/686-8), have suggested that the Qur'ān was sent down from the Preserved Tablet (q.v.; cf. Q 85:21-2; see also HEAVENLY BOOK) to the lowest heaven (see HEAVEN AND SKY) on this night and then revealed by Gabriel to Muḥammad over a period of twenty or twenty-three years (Ṭabarī, *Tafsīr,* xxx, 166; cf. Ibn Isḥāq-Guillaume, 111-2); or, following al-Shaʿbī (d. ca. 103/721), that this night was the occasion of the first revelation (Ṭabarsī, *Majmaʿ,* ix, 516-21; Rāzī, *Tafsīr,* xxxiii, 27-8; cf. Ṭabarī, *Tafsīr,* xxx, 166); or, as noted by Sells (Sound, 244-5; cf. Burckhardt, *Introduction,* 43-4), following ʿĀ'isha (see ʿĀ'ISHA BINT ABĪ BAKR) and ʿAbdallāh b. ʿUmar (d. 73/693), that the Qur'ān would have been revealed to Muḥammad not verbally but in an experience in which the words were inchoate (see ORALITY; FORM AND STRUCTURE OF THE QUR'ĀN). Wagtendonk, Wensinck and Lohmann discuss its possible role as a new year's festival in pre-Islamic times. Bell (*Commentary,* ii, 563-4) alludes to the Christian feast of the eve of the Nativity (see CHRISTIANS AND CHRISTIANITY). Plessner, following Goïtein (Zur Entstehung, 189 f.), discusses its parallel with the Jewish holiday of the Day of Atonement (ʿĀshūrā', see FASTING; JEWS AND JUDAISM). For al-Ṭabarī (d. 310/923; *Tafsīr,* xxv, 64), Ramaḍān was a propitious period for revelations (other religious traditions; see FESTIVALS AND COMMEMORATIVE DAYS).

Classical interpreters debated over which night constitutes the night of *qadr* but most believed, following Ibn ʿUmar, that it could fall on several odd-numbered nights in the last ten days of Ramaḍān (Bukhārī, *Ṣaḥīḥ,* 381-2; Muslim, *Ṣaḥīḥ,* ii, 822-4); moreover, following ʿĀ'ishā and Abū Saʿīd al-Khudrī (d. 74/693), it is associated with the Prophet's retreats to the mosque (q.v.) for vigils (q.v.; *iʿtikāf*) during the last ten days of Ramaḍān (Muslim, *Ṣaḥīḥ,* 824, 828; Tirmidhī, *Ṣaḥīḥ,* v, 158-9). Due to uncertainty over the exact night, retreats to the mosque where vigils are held take place on several or all of these nights.

Present-day Shīʿī tradition celebrates this night along with the death of ʿAlī (the 19th, he is wounded; the 21st, he dies; the 23rd, the night of *qadr* proper; see SHĪʿISM AND THE QUR'ĀN). In popular tradition, this night is associated with a number of wonders (found in ḥadīths; see ḤADĪTH AND THE QUR'ĀN; MARVELS; MIRACLE): forgiveness (q.v.) of one's sins (see SIN, MAJOR AND MINOR), prostration of everything on earth (see BOWING AND PROSTRATION), determining every person's destiny for the upcoming year, direct entry into paradise (q.v.) for whoever dies on this night (see DEATH AND THE DEAD), granting of wishes (see WISH AND DESIRE), or, following al-Shaʿbī (d. 100/718-9), angels greeting every pious (see PIETY) human being (cf. Bousquet, Iʿtikāf; Qurṭubī, *Jāmiʿ,* xxviii, 134).

Nightmare

see DREAMS AND SLEEP

Nimrod

Abraham's antagonist. Nimrod was, as is told in the Bible, the first potentate on earth. His empire included Babel and the surrounding countries (*Gen* 10:8-12). According to Islamic tradition, Abraham (q.v.) was his contemporary. Although Nimrod (Ar. Namrūd) is not named in the Qur'ān, he is, according to the exegetical literature (*tafsīr,* see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), the qur'ānic tyrant who pretends to be able to give life (q.v.) and death (see DEATH AND THE DEAD), a claim which Abraham successfully refutes (Q 2:258). Nimrod is also said to have been the one who tried to burn Abraham in a furnace, from which he was saved by God's command: "O fire (q.v.)! Be cool!" (Q 21:67-9).

In Islamic tradition, as expounded in exegetical *(tafsīr)* and "stories of the prophets" *(qiṣaṣ al-anbiyā')* literature, the story of Nimrod and Abraham is richly adorned with elements taken from extra-biblical Jewish and Christian sources (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; SCRIPTURE AND THE QUR'ĀN). It resembles the story of Pharaoh (q.v.) and Moses (q.v.) as told in the Qur'ān. Like Pharaoh, Nimrod ordered all children who were still nursing (see LACTATION) to be killed when he was informed — either in a dream (see DREAMS AND SLEEP) or by the astrologers — that a child was going to be born who would contest his claim to be God. He distributed food to his subjects, dismissing, however, without supply those who refused to confess his deity. Abraham's dispute as told in Q 2:258 allegedly occurred when he appeared before the king to obtain his family's ration. Naturally, he went away empty-handed, but miraculously brought home excellent food. According to another version the dispute took place when Abraham was summoned because he had destroyed the idols.

The building of the tower of Babel has also been ascribed to Nimrod; he wanted to see Abraham's God, a parallel to Pharaoh's high palace built for the same purpose (Q 28:38). Nimrod's tower was destroyed by a heavy storm: "God took their structures from their foundations" (Q 16:26). As a result, human language was confused. Another version says that Nimrod erected a high building to look down on Abraham in the furnace. The high building sometimes is said to be the pyramids. In fact, the names Pharaoh and Nimrod are exchangeable. Nimrod even went so far as trying to kill Abraham's God: He rose to the sky in a chest lifted by eagles and fancied that he had killed God when the arrow he had shot returned smeared with blood. His death was as painful as that of Titus the conqueror of Jerusalem as told in the Talmud (*Gittin* 56b): a gnat penetrated into his brain,

tormenting him for four hundred years, the same length of time he had ruled as an ungodly king. See also NARRATIVES; MYTHS AND LEGENDS IN THE QUR'ĀN.

Noah

One of the major prophets of Islam, Noah (Ar. Nūḥ, Heb. Nōaḥ) is an equally important figure in Judaism and Christianity (see SCRIPTURE AND THE QUR'ĀN), where, however, he is not considered a prophet (see PROPHETS AND PROPHETHOOD). His biblical story, probably reflecting ancient Near Eastern precedents, occurs in Genesis 6-10 and in later Jewish texts. In the Qur'ān and in later Islamic tradition he is numbered among the prophets of warning (see WARNER), along with the Arabian prophets Hūd (q.v.) and Ṣāliḥ (q.v.), as well as the biblical Lot (q.v.; Lūṭ), Jethro (Shu'ayb, q.v.) and Moses (q.v.; Mūsā), conveying God's threats of punishment to their sinful peoples (cf. Q 9:70; 22:42; 25:37-8; 26:105; see PUNISHMENT STORIES; NARRATIVES).

Noah is attested in twenty-six sūras in the Qur'ān; Q 3:33 links him with Adam (see ADAM AND EVE), the descendants of Abraham (q.v.) and of Amram ('Imrān, q.v.), the father of Moses and Aaron (q.v.). The contents of Q 71, which bears his name, consist primarily of Noah's recounting to God how he continually urged his people to repent (see REPENTANCE AND PENANCE) their sins (see SIN, MAJOR AND MINOR) while both warning them of the consequences of God's punishment and conveying to them God's promise of reward if they repented (see REWARD AND PUNISHMENT). The people did not accept his warnings and instead urged him to worship their pagan gods (see POLYTHEISM AND ATHEISM). This account ends with their being drowned in the deluge, being cast into the fire (q.v.) and Noah's asking God not to leave any unbelievers in the land; a similar account occurs in Q 23:23-30. Some stories in the Qur'ān stress the vilification and mistreatment Noah suffered as his people's response to his warnings of divine punishment for their misdeeds. Here he is viewed as the prototype of the prophet Muḥammad, suffering the same hatred and threats of physical harm that the Prophet was later to experience from his Meccan compatriots (see OPPOSITION TO MUḤAMMAD). This is mentioned clearly in Q 14:9; 22:42; 51:41-6; 54:18, 23, which link Noah with the earlier prophets Hūd and Ṣāliḥ, reassuring Muḥammad by telling him that they, too, had been denied, vilified and mistreated by their people. Some elements of the qur'ānic account seem to parallel certain Jewish post-biblical midrashic embellishments of the Bible story, in which Noah appears as a prophet and admonisher: his people laugh at his building the ark, and the unbelievers of his family are punished with hot water (*Tal. Sanhedrin* 108a-b; *Gen Rabba,* xxix-xxxvi). This last element in the story is reflected in qur'ānic and later Islamic texts, where the deluge *(ṭūfān)* sent by God begins with the *tannūr* (oven, cauldron, furnace or kiln) gushing

forth with boiling water (Q 11:40; 23:27). Again, unlike the biblical account, Q 11:44 relates that after the deluge, the ark came to rest on the mountain al-Jūdī (see JŪDĪ) instead of the biblical "mountains of Ararat" (q.v.; *Gen* 8:4).

Later writers

Islamic Qurʾān exegetes, ḥadīth scholars and the authors of the literary genre of "tales of the prophets" *(qiṣaṣ al-anbiyāʾ)* expand and embellish the stories found in the Qurʾān and others found in the Bible (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; ḤADĪTH AND THE QURʾĀN). Using a variety of approaches, they base their work on the early biographers of Muḥammad, who tell of the many prophets before Muḥammad who were sent to their own peoples, beginning from creation (q.v.). A number of these biographical works, such as that of Ibn Saʿd (d. 230/845; *Ṭabaqāt*), which is based on earlier sources such as Ibn Isḥāq (d. ca. 150/767) and Ibn Hishām (d. 213/828 or 219/833), contain "tales" of various prophets. Ibn Saʿd tells of Noah's genealogy from Adam down to his father Lamech (Lamak), saying that because there was no one in those eras who prohibited forbidden (q.v.) acts, God made that Noah's task. Noah had preached to his people for 120 years without success and was commanded by God to build the ark when he was 600 years old. Differing from several other accounts, Noah had four sons (not the biblical three), the fourth being Canaan (Kanʿān), also called Yām by the Arabs, whereas in the Bible, Canaan is a son of Ham. Based on Q 11:43, some tales relate that Canaan refused to enter the ark, claiming that he could save himself from the deluge by climbing to the top of the highest mountain, but perished in the ever-rising water. We also learn that Noah's wife was one of the unbelieving people as was the wife of Lot. Both had married righteous men to whom they were unfaithful (Q 66:10), so when Noah asked God to have mercy on Canaan, God refused, saying that, as the offspring of his wife's deception, he was not his kindred (cf. Q 11:46).

In his *Ṣaḥīḥ,* al-Bukhārī (d. 256/870) relates that when Noah's people appear before God on the day of judgment (see LAST JUDGMENT) and are asked whether he had conveyed God's message to them, they would say that he had not, although Noah had previously told God that he had done so. When God asks him who would act as his witness regarding this matter, Noah answers that Muḥammad and his people would bear witness for him (see WITNESSING AND TESTIFYING). Noah came out of the ark on the tenth of Muḥarram, the ʿĀshūrāʾ, which therefore became a day of fasting (q.v.) for both humans and animals who had been in the ark for six months. Noah's wife is named Amzūra by al-Ṭabarī (d. 310/923) and joins Noah in the ark. But the later writer al-Bayḍāwī (d. ca. 685/1286) calls her Wāliya and, although in Q 66:10 she is simply referred to as a nonbeliever, here (and in some other accounts), she is left behind or drowned because she had said that Noah was *majnūn* ("insane"; see INSANITY) when he spoke to his people. For many scholars, the tales claiming that Noah's wife, otherwise said to have come out of the ark with him, was left behind or was drowned, raise the issue of how many humans were actually saved from the deluge. These numbers vary from seven, excluding her — Noah, his three sons and their wives — to eight, with her. In another version, however, the total number of those saved was eighty, including the pious children of Adam's son Seth.

The historian and Qurʾān exegete al-Ṭabarī, in his *Taʾrīkh,* tried to coordinate biblical figures like Noah with the semimythical early Persian rulers (see MYTHS

AND LEGENDS IN THE QUR'ĀN). He states that "some people" claim that Noah lived during the reign of the evil king Bīwarasb, also known as al-Ḍaḥḥāk. Though he admits that the Persians did not know the story of the deluge, al-Ṭabarī, in the story of the Iranian king Afarīdūn, says that he mentions him only because "some people" say that he was Noah; he later claims that Afarīdūn's story resembled that of Noah. Al-Ṭabarī also tells of Noah's long life, saying that for 950 years he had called the people to God but whenever one generation passed away, the next one followed in unbelief. He also recounts that the oven from which the boiling water poured forth had belonged to Eve and came into Noah's possession, either in India, according to one tradition, or in Kūfa in Iraq, according to another tradition transmitted by al-Ṭabarī. We also read in this work the biblical story of the raven and the dove sent forth by Noah, which is not found in the Qur'ān.

Al-Ṭabarī's works served as a significant source for the important later *qiṣaṣ* work *ʿArāʾis al-majālis* of al-Thaʿlabī (d. 427/1036), much expanded with additional and different tales, most of them about many more prophets, including others from non-qur'ānic sources. We are told that Noah planted teak trees that he cut down to use for building the ark after they had grown for forty years. Al-Thaʿlabī relates that during those years Noah ceased calling the people to God and that God made the women barren so no children were born during that time. God told Noah to build the ark with "its head like the head of a cock, its middle like the belly of a bird, and its tail inclining like the tail of a bird." The tales of al-Kisā'ī (dates unknown) include the story of Noah in a style that may seem to reflect folk literature. He writes of an evil king, a great-grandson of Enoch, son of Cain (see CAIN AND ABEL), who ruled the land where Noah lived and "was a mighty tyrant and the first to drink wine (q.v.), gamble (see GAMBLING), sit on thrones (see KINGS AND RULERS), commission work in iron, brass and lead (see METALS AND MINERALS), and to adopt clothing spun with gold (q.v.)." He and his people worshipped idols (see IDOLS AND IMAGES), the names of which resemble some of the pagan gods mentioned in the Qur'ān. This caused Noah to withdraw to the wilderness until God had Gabriel (q.v.) send Noah as a prophet to his people. In his *Qiṣaṣ,* the Andalusian al-Ṭarafī (d. 454/1062), in a chapter on Noah's story, relates that, although Q 29:14 says that Noah lived for "a thousand years minus fifty," earlier writers are quoted as maintaining that was only his age at the time of the deluge, saying variously that he actually lived to be 1550 or 1650 years old. Al-Ṭarafī also relates many conversations between Noah and God.

In some *qiṣaṣ* tales, the sinful people of Noah's time, rejecting the divine warnings that he relays, are said to have descended from the union of the offspring of Cain with those of Seth. Thereupon God commanded Noah to build the ark (*fulk,* lit. "boat"), in order to save himself and other believers from the deluge with which God would punish the rest of humankind. In some versions of this tale, Noah built the ark unaided (using the wood of trees he himself had planted many years earlier), while in others he was helped by his sons. He was mocked (see MOCKERY) and attacked by the people of his town, who refused to believe his dire predictions of doom; like his wife, some of them even called him *majnūn* (Q 54:9). The *qiṣaṣ* literature gives us the dimensions, form and arrangements of the vessel. In al-Kisā'ī's version of one such tale, we are told that Jesus (q.v.), at the urging of the apostles (see APOSTLE), called upon Shem (Sām),

the long-dead son of Noah, to rise from his grave and provide Jesus with information about the ark. We learn that its lowest level was for the animals, its second level for the humans, and the upper one for birds. The ants were the first creatures to enter the ark and the donkey the last, slowed down because Iblīs, the devil (q.v.), was holding on to his tail. Another unwanted figure who was saved from destruction was the giant Og (ʿŪj), son of ʿAnaq (Heb. for "giant"), who was too tall for the water to reach his head. The idea of his height is probably based on the biblical mention of Og being one of the last of the Rephaim, a people of giants (*Deut* 33:11, et al.).

Al-Kisāʾī states that the name Nūḥ means "he wailed (for his people)" from the verb *nāḥa,* whereas Jewish tradition derives it from the Hebrew *niḥam,* "he gave comfort." After the deluge the peoples of the earth became divided among Noah's three sons: Sām's descendants were the Arabs (q.v.), Persians and the Byzantines (q.v.; Rūm), the "good" nations; Yāfith (Japheth) was the ancestor of the Turks, Slavs and Gog and Magog (q.v.), possessing no good qualities. Because Ham (Ḥām) disobeyed the prohibition of intercourse while on the ark and had slept with his wife, his children were born black and all the black peoples of the earth are their descendants. In another version, blackness resulted from Noah's cursing Ham upon learning that, unlike his brothers, Ham had laughed when he saw his sleeping father's nakedness. The *Musnad* of Aḥmad b. Ḥanbal (d. 241/855) quotes the Prophet relating the testament of Noah to his sons, for example, forbidding idolatry (*shirk,* see IDOLATRY AND IDOLATERS) and pride (q.v.; *kibr*).

In Christian theology, Noah symbolizes the just man, providing an example of faith and submission to God, and becoming a prefiguration of Jesus. Elements of the story of Noah, the deluge, the ark and the dove are all incorporated into Christian symbolism. In Judaism Noah occupies a middle stage between Adam and Abraham, as a righteous and blameless man who walked with God and was saved from the flood to become the progenitor of a new human race. God's covenant with Noah (*Gen* 9:8-17) was expanded by the rabbis into the Noachide commandments, incumbent upon all humanity.

Nomads

Peoples who make and remake their settlements in a variety of places, often depending upon climactic conditions. Nomads

(aʿrāb) are the non-urban population of the Arabian peninsula, attested ten times in the Qurʾān.

Oasis-town and countryside

By the time of the Prophet, the Near Eastern social trichotomy of peasants, townspeople and nomads had developed into the dichotomy of nomads and urbanites in northern and central Arabia (see CITY; PRE-ISLAMIC ARABIA AND THE QURʾĀN). This was the result of the "bedouinization of Arabia," a social process which had set in with the emergence, since the first half of the first millennium B.C.E., of the bedouin (q.v.) — belligerent tribes led by a tribal aristocracy that practiced large-scale camel herding (see CAMEL). The bedouin dominated large territories due to their enhanced mobility, and brought small-stock breeders and farmers into submission. They cooperated with the oasis towns in long-distance trade. Sedentary tribes like the Hudhayl (see TRIBES AND CLANS) adopted the social organization, attitudes, values, literary forms and the inter-tribal language of this literature from the bedouin (thus creating what became known as the *Dīwān Hudhayl*). The trade goods exported from Mecca to Syria were basically the products of Mecca's nomadic environment: leather, textiles and livestock (Q 16:5-7; 16-80; see HIDES AND FLEECE). Q 16:80 still presupposes the archaic, round tent made of leather *(ṭirāf, qubba),* attested as early as the seventh century B.C.E. (i.e. on the reliefs of Ashurbanibipal), instead of the now common rectangular black tent made of goat-hair *(bayt al-shaʿr),* already mentioned in the Bible in connection with north Arabian tribes of the fifth through third centuries B.C.E. (*Song of songs,* 1:5).

The qurʾānic attitude towards the nomads

The tribes in the vicinity of Medina (q.v.) are blamed for insufficient zeal to fight in the Prophet's wars (Q 9:90, 120; 48:11, 16; see EXPEDITIONS AND BATTLES; JIHĀD). Their orthodoxy is doubtful: "The nomads *(al-aʿrāb)* are the worst in unbelief (see BELIEF AND UNBELIEF) and hypocrisy (see HYPOCRITES AND HYPOCRISY)…" (see Q 9:97-101). These nomads say that they believe, but the Prophet is told to say to them "You do not believe, but you [only] say 'We submitted'; For faith (q.v.) has not entered into your hearts" (49:14; see HEART). The conflict which surfaced here is one between attitudes that are fundamentally irreconcilable: the Prophet demands submission to his faith and allegiance to his politics once and for all (see POLITICS AND THE QURʾĀN) while the nomads are accustomed to a political system in which allegiances, intra-tribal as well as inter-tribal, are open to constant renegotiation (see CONTRACTS AND ALLIANCES; BREAKING TRUSTS AND CONTRACTS). The Prophet acts as leader of a theocratic state-to-be, in which citizenship of a totally egalitarian nature is acquired by conversion, i.e. an individual act. In the nomads' world, kinship (q.v.) and the collective decision of the clan or tribe are the highest authorities — whereas all freeborn males of a single tribe may regard themselves as equals, they might not hold other tribesmen (not to speak of peasants) in similar esteem (see COMMUNITY AND SOCIETY IN THE QURʾĀN). Muḥammad himself was an urbanite; the sphere of the nomads represents the spatial and social opposite of the town (Q 33:20). None of the prophets (see PROPHETS AND PROPHETHOOD) whom he cites as his predecessors was sent to nomads; their destinations were always oases and towns (see PUNISHMENT STORIES; NARRATIVES). Although he claims that the Qurʾān is revealed in clear Arabic (Q 12:2; 13:37, etc.; see ARABIC LANGUAGE; REVELATION AND INSPIRATION), its orthography (q.v.) is not that of the literary language of the

nomads (the language of classical Arabic poetry; see POETRY AND POETS). It is written down, rather, in the *koiné* of the west Arabian caravan (q.v.) towns (see ORALITY AND WRITING IN ARABIA). The term *ʿarab,* which never ceased to denote "nomad," had acquired the status of an ethnonym used by the Arabs themselves, as seen in the 328 C.E. funeral inscription of Imruʾ al-Qays from al-Namāra (*RCEA* 1); hence the ambiguity in the term *ʿarabī* and the irony contained in its application to the language of the Qurʾān. See also ARABS.

Noon

The middle of the day. In the Qurʾān, the Arabic word *zuhr* does not designate solely a time of day (see DAY, TIMES OF). Reference to derivatives of *z-h-r* is only made in the particular context of the noon observance of the ritual prayer (q.v.; *ṣalāt*) and the time prior to which it must not start; according to some interpretations, the "middle prayer" (*al-ṣalāt al-wusṭā,* Q 2:238) also alludes to noontime. Beyond the legal aspects of the noon prayer, however, discussion of the term involves issues of time and punctuality. It is in this respect that the institution is particularly significant as its point of reference is the sun (q.v.) at its zenith. The connection between noon prayer and the concept of time in general is clearly evidenced, among other indications, by the feminine form of verbs or adjectives associated with it, caused by the omission of the feminine noun, "prayer" (e.g. *wa-lammā kānat il-zuhr;* Ṭabarī, *Tafsīr,* ii, 98).

Noontime, like other prayer times, serves as the temporal anchor for various events, which go beyond the scope of this article. Suffice it to mention the rather interesting connection between noon and death (see DEATH AND THE DEAD), such as that of al-Maʾmūn (Ibn Kathīr, *Bidāya,* x, 280), to funerals (Baghdādī, *Taʾrīkh Baghdādī,* ix, 468), or to obituaries (Ibn al-Khaṭīb, *Wafāyāt,* i, 362). Noon served Gabriel (q.v.) more than once as the time in which he appeared to the Prophet: once when the direction of the prayer was changed (Ibn Ḥibbān, *Thiqāt,* i, 151; see QIBLA), another in the context of Qurayẓa (q.v.; ibid., i, 274). It was the time for many battles in history, such as the one waged against Abū Jahl (Ibn Kathīr, *Bidāya,* iii, 336), that against Quraysh (q.v.; ibid., iv, 14), and the battles of the first *fitna* (Qalqashandī, *Maʾāthir,* i, 95), among others (see EXPEDITIONS AND BATTLES; FIGHTING).

Segments of time connected with noon and the noon prayer often serve to indicate a definite time or period (Shāfiʿī, *Aḥkām,* i, 260) as well as its shortness or brevity (Abū Nuʿaym, *Ḥilya,* ix, 142). Whereas for the polytheists (see POLYTHEISM AND ATHEISM) the day of judgment (see LAST JUDGMENT) will continue for fifty thousand years, for the believer it will only last as long as the time between noon and evening (q.v.) prayer (Shawkānī, *Tafsīr,* v, 289).

Noon prayer

The origin of the name of the noon prayer is explained as derived from "the heat of the sun" *(ẓahīra),* "the time most suitable

(lit. apparent) for prayer" *(azharu awqāt al-ṣalāt),* or "the first prayer ever made public (lit. apparent) and prayed" (*awwalu ṣalāt uzhirat wa-ṣulliyat, Lisān al-ʿArab,* iv, 527). This prayer was also called *ṣalātu l-hajīri,* "midday heat," by the Prophet (*Lisān al-ʿArab,* v, 254). Historically speaking, the noon prayer is not one of the first in Islam but rather followed the night, dawn (q.v.) and evening prayers (Q 30:17-8; 50:39-40; 76:25-6; see DAY AND NIGHT). It was not in existence at the time of Solomon (q.v.; Qurṭubī, *Jāmiʿ,* xv, 195), but, according to some, it was the first to be made by Muḥammad (Suyūṭī, *Durr,* vii, 136) with Gabriel, immediately following the night journey (*isrāʾ,* Ālūsī, *Rūḥ,* xv, 6; see ASCENSION), or, according to another version, was given in the morning of that day (Ibn Kathīr, *Bidāya,* iii, 118).

The noon prayer is the one most valued *(aʿjab)* by the Prophet, as he used to spend the most prolonged period of time in performance of it (Qurṭubī, *Jāmiʿ,* ii, 224). For Muslims, on the other hand, it is the hardest *(ashaqqu ʿalā l-muslimīna),* perhaps because the Prophet used to conduct it at the hottest time of the day (*hājira,* Suyūṭī, *Durr,* i, 720); the hypocrites, by contrast, find the dawn and night prayers the hardest (Bukhārī, *Ṣaḥīḥ,* i, 73; see HYPOCRITES AND HYPOCRISY). It was so important for ʿUmar that he ordered the man responsible for the pilgrimage (q.v.) to open all ceremonies with it (Ibn Saʿd, *Ṭabaqāt,* v, 364). Its primary value, however, is not accepted by everyone: for example, al-Bukhārī (d. 256/870; *Ṣaḥīḥ,* i, 72-5), who dedicates a paragraph to the issue of the "virtues of" each of the other prayers, fails to do so with regard to the noon prayer.

Composition

The noon prayer consists of four *rakʿa*s (see BOWING AND PROSTRATION), the first two of which the Prophet used to prolong (Ibn Taymiyya, *Iqtidāʾ,* i, 102). Jurists prohibit the addition of a fifth *rakʿa* or the repetition of the prayer except in extraordinary circumstances (id., *Majmūʿ,* xxiii, 260). On the other hand, it is reported that in certain cases the Prophet himself would be content with two *rakʿa*s only (id., *Kutub,* xxiv, 190), or that sometimes he would have four *rakʿa*s before the prayer itself (Qurṭubī, *Jāmiʿ,* ii, 224) and two following it (Ghazālī, *Asrār,* 296). The noon prayer is therefore one of three that could be shortened (Shāfiʿī, *Aḥkām,* 179). Sometimes the Prophet would recite in its course Q 84:1 *(idhā l-samāʾu nshaqqat)* or Q 87:1 *(sabbiḥi sma rabbika l-aʿlā).*

Time of prayer

Noon prayer must not be made before its earliest mandated time (Ibn Taymiyya, *Minhāj,* vi, 202) and perhaps the fear of breaking this prohibition made ʿUmar establish the ruling that this prayer be performed when an object's shadow is one foot long (id., *Iqtidāʾ,* iv, 196). As a general rule the Prophet used to make it at noon (*bi-l-hājira,* Muslim, *Ṣaḥīḥ,* i, 446) but its temporal boundaries were set by Gabriel. The angel, on two consecutive days, prayed it with the Prophet: the first time was at the earliest possible moment, i.e. when the sun moves from the zenith and casts a shadow of a given object as thin as a shoelace (Ibn Taymiyya, *ʿUmda,* iv, 150), when the sun had just declined *(dalaka)* from the center (Ṭabarī, *Tafsīr,* xv, 137), or disappeared from the "belly" of the sky (*zālat ʿan baṭni l-samāʾ,* Shāfiʿī, *Aḥkām,* iii, 248). A much more forgiving phrasing for this earliest permissible moment for the performance of the prayer is given by al-Ghazālī (d. 505/1111; *Asrār,* 299): when the movement of the sun is apprehended by the senses. On the next day, Gabriel set the

latest time permissible as the time at which the shadow of the object equals its length (Ibn Taymiyya, *ʿUmda,* iv, 150), the time that is defined by the evening prayer (Shāfiʿī, *Aḥkām,* iii, 253). Once this moment has passed and the noon prayer has not been prayed, it is considered a sin (*fisq,* see SIN, MAJOR AND MINOR) and, being equivalent to the sins of adultery (see ADULTERY AND FORNICATION) or theft (q.v.), bars the believer from entering heaven (Ibn Taymiyya, *Kutub,* vi, 427; see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). Some lawyers set the final period for the noon prayer as the setting of the sun (Qurṭubī, *Jāmiʿ,* viii, 75). These parameters are not all that rigid as far as the season of the year is concerned: in summer the required length of shadow is three to five feet, whereas in winter it is seven (*Lisān al-ʿArab,* xii, 470). This is also true for the weather: in winter, due to clouds, one may set the prayer time earlier *(taʿjīl)* than the above decree (Ibn Taymiyya, *Iqtidāʾ,* i, 133). On the other hand, some advocated the permissibility of postponing the noon prayer until after sunset because of the heat (Bukhārī, *Ṣaḥīḥ,* i, 198).

Relation to other prayers

Many identify the noon prayer as the "middle prayer" referred to in the Qurʾān, because it is "in the middle of the day" (Ibn Kathīr, *Bidāya,* i, 292). It is sometimes counted along with the afternoon prayer *(al-ʿaṣr)* as belonging to the evening (*al-ʿishāʾ,* Rāzī, *Mukhtār,* i, 183), without conceding the separate identity of each prayer: joining the noon prayer to that of the afternoon is judged to be a breach, and is typical of the Shīʿīs and the Rawāfiḍ (Ibn Taymiyya, *Minhāj,* v, 175; see SHĪʿISM AND THE QURʾĀN). In rare cases it is allowed, as when the Prophet himself did so at ʿArafāt (q.v.; id., *Jawāb,* vi, 372). The Friday prayer (q.v.) is made around noon time, and is sometimes referred to as "the abridged noon (prayer)" (*al-ẓuhr al-maqṣūra,* id., *Majmūʿ,* xxiv, 190) but in spite of this similarity, different rules apply to each (id., *Kutub,* xxiv, 190), e.g. the rules of the call to prayer (*adhān,* id., *ʿUmda,* iv, 98).

Action

Like other prayers, the noon prayer pardons sins that were committed during the time between the dawn prayer and its performance (Ibn Kathīr, *Bidāya,* ii, 463). It is also a reference point to phenomena and actions that are not necessarily of a religious nature. Often the structure of such an indication is "the Prophet prayed the noon-prayer then…" (Ibn Qānī, *Muʿjam,* i, 249), or the time at which the subject arrived at a given place is given in relation to the time of the noon prayer (Ibn Qayyim al-Jawziyya, *Zād,* ii, 233; see JOURNEY; TRIPS AND VOYAGES).

Nose see ANATOMY

Nudity

The state of being devoid of clothing (q.v.). In general, the Qurʾān enjoins modesty (q.v.) and evokes nudity only negatively. Q 24:30-1 insists upon physical modesty for both men and women, while the narrative of Adam and his spouse in Q 7:19-27 (see NARRATIVES; ADAM AND EVE) associates nudity with the first human act of disobedience (q.v.).

As in the Hebrew Bible, the first couple's nudity is made manifest — the specific manner is disputed by the exegetes — after they partake of the fruit of the forbidden tree. Q 7:22 states, "So by deceit he [i.e. Satan; see DEVIL] brought about their fall (see FALL OF MAN): when they tasted of the tree, their *sawʾāt* became apparent to them, and they began to sew together the leaves of the garden over their bodies. And their lord called unto them: 'Did I not forbid you that tree, and tell you that Satan was an avowed enemy (see ENEMIES) unto you?' " The word *sawʾāt* is derived from the Arabic root meaning "to be bad, evil," and is sometimes interpreted to mean that Adam and Eve realized their error (q.v.) or "saw the evil of their [ways]." Following this interpretation, some English translations render the word as "shame" or "evil intentions." More concretely, the word *sawʾāt* is understood to refer to the genitals (*farj, ʿawra,* see SEX AND SEXUALITY). Certainly the idea of physical nakedness is implied by the qurʾānic text, in which the couple's reaction to the sudden manifestation of their *sawʾāt* is the fashioning of garments. For some exegetes, the word denotes the physical genitals while retaining connotations of moral negativity (see ETHICS AND THE QURʾĀN). Thus, the medieval Andalusian exegete al-Qurṭubī (d. 671/1272; *Jāmiʿ,* vii, 181) states that the private parts bear the names *sawʾa* and *ʿawra* because people find it unpleasant to display them *(li-anna izhārahu yasūʾu ṣāḥibahu)*. Jurists derived from this verse the legal principle (see LAW AND THE QURʾĀN) that it is undesirable *(qabīḥ)* to expose one's genitals, and that in the absence of any other suitable material it is incumbent on one to fashion clothing of leaves.

Exactly how Adam and Eve's nakedness "became apparent" is not specified in the Qurʾān; a widely-reported tradition attributed to the Prophet's Companion Ibn ʿAbbās (d. 68/686-8; see COMPANIONS OF THE PROPHET) states that in the garden (q.v.) they were covered with a coating that then receded from their bodies and remained only on the tips of their fingers and toes, forming the nails. The "nakedness" of Adam and his spouse is not merely a physical but a moral denudation; the passage continues by evoking God's mercy (q.v.) in providing clothing and adornment for humankind, and concludes by stating "the garment of consciousness of God *(libās al-taqwā)* is best" (Q 7:26; see PIETY; KNOWLEDGE AND LEARNING).

The words *sawʾa* and *ʿawra* are used elsewhere in the Qurʾān to refer, not to nudity *per se,* but to other states of exposure, vulnerability and intimacy. In Q 5:31, God sends a raven to show Cain how to cover the shamefully exposed body *(sawʾa)* of his murdered brother (see CAIN AND ABEL). In Q 33:13, unwilling warriors make the excuse that their houses are exposed to attack (*inna buyūtanā ʿawra,* see FIGHTING); and

Q 24:58 refers to three times of the day (see DAY, TIMES OF) when it is customary to withdraw into privacy (as well as, according to many commentators, to undress) as *ʿawrāt*.

Nūḥ see NOAH

Numbers and Enumeration

Words representing amounts and the designation of the number of objects. The Qurʾān makes full use of a range of Arabic words denoting numbers and counting. In doing so, it employs the number words both in terms of literal counting and of representative images and symbols (see SYMBOLIC IMAGERY), many with an ancient heritage. Words are employed for each of the cardinal unit numbers and occasional higher numbers, including 10, 11, 12, 19, 20, 30, 40, 50, 60, 70, 99, 100, 200, 300, 1,000, 2,000, 3,000, 5,000, 50,000, and 100,000. The number words "one" and "two," although numerically indicated through grammar in Arabic (along with the generic plural, of course), are used both for emphasis and counting purposes. Of the ordinal numbers, 2nd, 3rd, 4th, 5th, 6th and 8th appear in the text. Fractions also figure significantly, primarily because of their legal usage in matters of inheritance (q.v.) as dealt with in Q 4; 1/2, 1/3, 2/3, 1/4, 1/5, 1/6, 1/8, and 1/10 are all employed.

In terms of mathematical concepts, the Qurʾān makes use of addition, subtraction, multiplication, division and ratios. "Addition" is conveyed by words related to *zāda*, which is, however, often best understood simply as "increase." In a passage such as Q 18:25, "And they tarried in the cave (q.v.) three hundred years, and they added nine more," specific addition of numbers is suggested. A sense of subtraction is found in the word "less" as expressed through the use of the word *illā* as in Q 29:14, "We sent Noah (q.v.) to his people, and he tarried among them a thousand years less fifty." Mathematical multiplication may be conveyed by *kaththara* in Q 7:86, "You were few and he multiplied you," and by *yadhraʾu* in Q 42:11, "He has appointed for you, of yourselves, pairs, and pairs also of the cattle, therein multiplying you," although both of those may be taken in the sense of "reproduce" rather than mathematical multiplying. Doubling things specifically uses *ḍāʿafa* (and *ḍiʿf* for "a double") but this is also often taken with a more generic sense of "multiply" as in Q 64:17, "If you lend God a good loan (see CONTRACTS AND ALLIANCES; DEBT), he will multiply it for you." Division in the sense of separating things into parts is conveyed via words related to *qasama*, as in Q 54:28, "And tell them that the water is to be divided between them, each drink for each in turn." A sense of ratios emerges in passages having to do with odds in battle (see VICTORY; FIGHTING; WAR) such as Q 8:66, "If there be a hundred of you, patient men, they will overcome two hundred; if there be of you, a thousand, they will overcome two thousand by the leave of God." Note may also be taken of the idea of "odd," *watr*, and "even," *shafʿ*, employed in Q 89:3, although these terms appear outside a mathematical context. "Pairs," *mathnā*, is an elaboration of "two" and is used in counting sequences, for example, in Q 4:3, "Marry such women (see MARRIAGE AND DIVORCE; WOMEN AND THE QURʾĀN) as seem good to you, in pairs, triples or

quadruples" (also see Q 35:1 for the wings on angels; see ANGEL).

Counting itself — that is, doing mathematical reckoning — is quite frequently conveyed through *ʿadda,* "to number," and its derivatives, e.g. Q 9:36, "the number of months (q.v.) with God is twelve," and Q 19:84, "We are only numbering them for a number" in reference to the unbelievers (see BELIEF AND UNBELIEF). The root is also used in the sense of an indefinite number (i.e. "many") of items (Q 10:5, "the number of years"). The root *aḥṣā* is also used in a similar manner as in Q 36:12, "Everything we have numbered in a clear register." The use of both roots *(ʿ-d-d* and *ḥ-ṣ-w)* in Q 19:94 should be noted, "He has indeed counted *(aḥṣā)* them and he has numbered *(ʿadda)* them," in reference to all those in "the heavens (see HEAVEN AND SKY) and the earth (q.v.)." Another word, *ḥasiba,* and its derivatives convey a more general sense of "calling to account" with God as the reckoner.

On several occasions things are enumerated in the Qurʾān, simply for the purposes of counting, as in the debate regarding how many sleepers there were in the cave (Q 18:22; see MEN OF THE CAVE) or the presence of God being counted as one extra in groups who conspire secretly (Q 58:7).

The Qurʾān's vocabulary of numbers includes senses derived from the widespread Near Eastern symbolic value of numbers which undoubtedly permeated pre-Islamic culture as well as having been fully incorporated within the biblical tradition (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SCRIPTURE AND THE QURʾĀN). The social values, however, conveyed through number symbolism in the Qurʾān are less obvious than in other ranges of symbolism (e.g. as found in colors [q.v.]). For example, the symbolism of "seven" days in a week does not seem to convey a great deal about the social values of seventh century Arabia when it is employed in the Qurʾān. Rather, it speaks more significantly of the ancient heritage of such symbols whose actual social value has perhaps been lost but which provide a structuring to human experience nevertheless (see COMMUNITY AND SOCIETY IN THE QURʾĀN).

"Three" *(thalātha)* is a number of plurality, perhaps reflected in the fact that "two" can be indicated through the grammatical dual in Arabic whereas a separate word must be used for "three" (see GRAMMAR AND THE QURʾĀN; ARABIC LANGUAGE). Duality — whether expressed by the grammatical ending or by the word *ithnān* — is natural and perfect, whereas "three" indicates a collection of things (in common with the units up to ten), as is suggested by the use of the plural noun in grammatical construct case following the number word when enumerating things. The natural and perfect nature of "two" is reflected by the use of duality in the case of the animals going into Noah's ark (Q 11:40, "Embark on it two of every kind"; see ANIMAL LIFE) and in the description of creation (q.v.; Q 13:3, "And of every fruit he placed there two kinds"; see AGRICULTURE AND VEGETATION). There is also the qurʾānic injunction to have two male witnesses for contracts (although note one man and two women; Q 2:282; see WITNESSING AND TESTIFYING; CONTRACTS AND ALLIANCES). Duality is, at the same time, opposed to oneness — whether expressed in the word *wāḥid* or *aḥad* — quite clearly: "Take not to you two gods. He is only one God" (Q 16:51; see GOD AND HIS ATTRIBUTES). "Three," on the other hand, may be a number of pain and grief (see JOY AND MISERY; SUFFERING), especially as opposed to unity. Q 77:30 speaks of the punishment of the judgment day (see ESCHATOLOGY; REWARD AND PUNISHMENT; LAST JUDGMENT) in saying, "Depart to a triple-massing

shadow," the three-ness of this shadow being an emphasis on its awfulness (see DARKNESS). "Three veils" encircle the child in the womb according to Q 39:6 (see BIRTH). Fasting (q.v.) for three days overcomes legal problems (Q 2:196; 5:89). The people of Ṣāliḥ (q.v.) can enjoy their homes for three days before punishment comes (Q 11:65; see PUNISHMENT STORIES). And, of course, the idea of worshipping three gods is firmly condemned (Q 4:171; see CHRISTIANS AND CHRISTIANITY; POLYTHEISM AND ATHEISM).

Attention has been drawn in scholarship to the symbolism of "four," *arbaʿ,* and its multiples in Arab historical narratives and the resultant lack of precision in associated historical details. The grounding of those symbols is to be found in the Qurʾān. The role of "forty" is especially prominent but this is founded upon the widespread symbol of "four" as representing "perfection, completion and culmination." "Forty" becomes a major chronological unit, building upon the formative one of Muḥammad as forty years old when he began to receive revelation (see REVELATION AND INSPIRATION), an age likely selected as reflective of Q 46:15 and its association of the age of forty with maturity (q.v.) and religious wisdom (q.v.). Of "four" and "forty," it has been suggested that they are "the numbers which determine or express the extent to which certain deeds arouse divine approbation or ire or simply demonstrate the hand of God at work in the world" (Conrad, Abraha, 231). The qurʾānic material, however, adds an extra level of specification to the symbol of "four," and, in doing so, stays within Near Eastern patterns. "Four" is the number of perfection, completion and culmination, specifically of the "material order," as reflected in ideas of the four elements of existence, the four directions of the compass, the four corners of the earth (q.v.), the four phases of the moon (q.v.), the four seasons (q.v.), and so on. "Four" in the Qurʾān is the number used in the context of legal requirements (see LAW AND THE QURʾĀN), certainly reflecting ideas of the wholeness and perfection of material culture but defining that material culture primarily in legal terms, as is appropriate to the Islamic social world (see MATERIAL CULTURE AND THE QURʾĀN). A man may marry up to four wives (Q 4:3); four witnesses are required to the accusation of adultery (Q 4:15; see ADULTERY AND FORNICATION); if there are not four witnesses, then an oath uttered four times suffices (Q 24:4-9, with, note, the fifth oath to say that he is not a liar; see LIE; OATHS); there are four months that are sacred (Q 9:2, 36).

"Four" related to a period of time has legal status as well: four months of abstention from one's wife for divorce (Q 2:226; see ABSTINENCE) and widows (see WIDOW) are to wait four months plus ten days before remarrying (Q 2:234) — the perfection of the number "ten" being added to the legal number "four." No other number used in the Qurʾān predominates in its legal application in the way that "four" does. "Four" as the symbol of legality continues in later Islam with the four schools of law and the four righteous caliphs (see CALIPH). Certainly, other instances of the use of "four" do not have a specific legal overtone: creation is separated out into two days plus four, and in the latter four, God "ordained therein its diverse sustenance" (Q 41:10) — that is, the creation of the material world.

"Five," *khamsa,* on the other hand, is half a group — that is, half of "ten" — and despite its later significance in Islam in the ideas of the "five" daily prayers (see PRAYER), the "five" ritual pillars, and the five "pillars" of the creed (see CREEDS; FAITH), it is not used in the Qurʾān with any such reference. The enumeration of

rituals is not supported through a symbolic use of the number in the Qurʾān. "Five" is used in expressions of large numbers (5000 swooping angels in Q 3:125; one day is 50,000 years in Q 70:4; see DAYS OF GOD), and overall the number simply appears to convey a significantly large quantity.

The number "six," *sitta,* relates only to the number of days of creation in the Qurʾān; this is significant in that "six" is sometimes spoken of as a number symbolic of "incompleteness" because it is one less than the heavenly number of "seven." The Qurʾān does not use "six" apart from the creation story, and it speaks of those six days without giving any importance to the seventh day that follows it which, in the biblical tradition, completes the process. "Six" seems to have lost its symbolic value in the Qurʾān and is entirely subsidiary to Near Eastern creation traditions. It is also polemically charged — that is, it is used with an emphasis on the rejection of the day of rest, as in Q 50:38 and its "And no weariness touched us," along with the insistence upon creation being associated with God being on his throne (see THRONE OF GOD; SABBATH).

"Seven," *sabʿa,* like "three," is a prominent number of plurality but it clearly has a symbolic value deeply imbedded in the notion of the seven stars or planets from ancient Babylonian times (see PLANETS AND STARS). Virtually all the uses of "seven" in the Qurʾān relate to cosmography in one way or another (see COSMOLOGY). The seven heavens or firmaments (Q 17:44), seven gates to hell (Q 15:44; see HELL AND HELLFIRE), seven oceans (Q 31:27), and the motif of seven in the story of Joseph (q.v.) and the interpretation of the dreams (Q 12:43-8) all reflect this (see DREAMS AND SLEEP). "Seven" is the number of the supra-mundane world.

Such values continue in later Muslim tradition. Ibn ʿAbbās, while still a youth, is reported to have said to ʿUmar (see COMPANIONS OF THE PROPHET; ḤADĪTH AND THE QURʾĀN):

> God is odd in number and he likes odd numbers. Days of the universe turn around seven, he created our sustenance out of seven, he created man out of seven, above us he created seven skies, below us he created seven layers of the earth, he gave us the seven oft-repeated (q.v.; *mathānī*), he forbade marriage with seven relatives in scripture (see PROHIBITED DEGREES), and he divided the legacy into seven parts, he confined the numbers of bows of our bodies [in prayer] to seven (see BOWING AND PROSTRATION), the messenger of God walked around the Kaʿba (q.v.) seven times and between al-Ṣafā and al-Marwa (see ṢAFĀ AND MARWA) seven times, he threw seven stones [at Minā], and the night of glory (see NIGHT OF POWER) is one of the last seven nights of Ramaḍān (q.v.; Suyūṭī, *Itqān,* iv, 206-7).

"Seven" used in the form of "seventy" is generally interpreted simply as "a large number" (see Conrad, Seven, 46; and references including Ibn Khaldūn who says that "seventy" is used by the Bedouin [q.v.] to mean "many").

"Eight," *thamāniya,* is used five times, plus once as "the eighth" in a counting sequence (Q 18:22), once as "an eighth" in matters of inheritance (Q 4:12) and once as "eighty" for the number of lashes for bearing false witness (Q 24:4). There appears to be no unifying symbolic value in the qurʾānic use of "eight."

"Nine," *tisʿa,* being one less than "ten" is used with the sense of one remaining to be added or to bring completion. Moses (q.v.) received nine clear signs before Pharaoh (q.v.; Q 17:101; 27:12); nine people did cor-

ruption (q.v.) in the city of Thamūd (q.v.) and conspired against the tenth person who was Ṣāliḥ. Also note the use of "ninety-nine" in Q 38:23, the only time a combination of tens and units that equals more than the number nineteen is used in the Qurʾān; again, it is counted as one less than a hundred, suggesting that something is lacking, just as in the relationship between "nine" and "ten".

Arabic uses a decimal numeration system, as reflected in digits that are multiples of ten and the existence of separate words for one hundred and one thousand. "Ten," *ʿashr,* as a basic number of counting, seems a reasonable extrapolation from the physiological fact that humans have ten fingers upon which to count. The Qurʾān uses "ten" to reflect this, in that it is the number of counting and of transaction (see SELLING AND BUYING), and of dealing with gifts (see GIFT-GIVING) and with people. "Ten" carries a good value. One good deed brings ten like it (Q 6:160; see GOOD DEEDS); feeding ten people expiates an oath (Q 5:89); the bringing of ten sūras like the Qurʾān is the challenge put forth (Q 11:13; see INIMITABILITY; PROVOCATION); ten is three plus seven for the days of a fast in lieu of an offering on the pilgrimage (q.v.) both major and minor (Q 2:196, *ḥajj* and *ʿumra*).

From eleven through nineteen, the singular noun is used following the counting number in Arabic. There is a sense of a "heap" here, a plurality of things becoming one undifferentiated group when eleven is reached. Eleven itself is used only once in the Qurʾān, in the eleven stars that bow down to Joseph (Q 12:4). "Twelve," on the other hand, is used five times, in reference to fountains (Q 2:60; 7:160; see SPRINGS AND FOUNTAINS), chieftains (Q 5:12), tribes (Q 7:160) and months (Q 9:36). It certainly conveys a sense of completion and perfection, suggesting that "twelve" is not always meant literally but sometimes signifies that a full complement is found in the group being counted. Most interesting is the assertion that God declares there to be twelve months. The resultant sense of a divine legitimatization for such an aspect of human culture is striking.

"Nineteen" is famous because of its use in expressing the number of angels in Q 74:30 and may be understood as the sum of "seven" and "twelve," two numbers of ancient symbolic value. While some have suggested that the number "nineteen" has been used merely for rhyme purposes in the verse (see LANGUAGE AND STYLE OF THE QURʾĀN; RHYMED PROSE), the usage of this number drew attention early in Islam, and traditions emerged regarding, for example, the use of nineteen letters within the *basmala* (q.v.; also see Wensinck, *Handbook,* 12a, for the traditions on "nineteen" as the number of words in the call to prayer, *adhān*). The number continues to fascinate, especially because of the recent work of the late Rashid Khalifa in the United States and his attempt to prove the miraculous character of the Qurʾān via the numerical significance of "nineteen" (see MYSTERIOUS LETTERS). The Internet has become the current forum for the discussion of his ideas through his mosque community in Tucson, Arizona, called the United Submitters International (see www.submission.org). As is common with such attempted numerical proofs, the results are based upon both the characteristics of numbers themselves and statistical analysis of dubious validity (see Gardner, *The new age,* 170-4: i.e. the "demonic" 666, etc.).

The Qurʾān, not unexpectedly, uses the symbolic language of the Near Eastern monotheist culture. The Arabic of the

seventh century participates fully in those kinds of symbolic representations, although the values which they convey (for example, the auspiciousness of "seven" as reflected in its cosmographical usages in the very ancient world) are deeply embedded and not necessarily explicitly stated. The Qurʾān also uses these symbols with its own particular emphases, as in the legal character of the number "four" within the context of material culture. See also NUMEROLOGY.

Numerology

Study of the occult signification of numbers. Number symbolism is built into the Arabic alphabet since each letter in the Old Semitic *abjad* ordering had a numerical equivalent (see Table 1 below; see ARABIC SCRIPT). Muslims practiced gematria in divination (q.v.) and healing (see MEDICINE AND THE QURʾĀN) as well as in qurʾānic exegesis (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). In Islamic cosmology (q.v.) the alphabet numbers were linked to stars and planets (see PLANETS AND STARS), the four humors, names of God (see GOD AND HIS ATTRIBUTES), angels (see ANGEL), demons (see DEVIL) and a large variety of esoteric phenomena. The first nine numbers were aligned in a magic square, known as *budūḥ* or Geber's Square, which added up to 15 in all directions:

4	9	2
3	5	7
8	1	6

Originally from ancient China, Arab scholars attributed this square to Adam (see ADAM AND EVE) and commonly wrote it on amulets (q.v.) as a protection against evil spirits and misfortune. Magic squares were also constructed for names, such as one that adds up to 66, the numerical sum of the letters in "Allāh."

In qurʾānic interpretation Muslim scholars noted that half, or fourteen, of the letters of the Arabic alphabet appeared at the beginning of sūras (see MYSTERIOUS LETTERS). These were called *ẓāhir*, "visible," or *nūr*, "light"; the remaining letters were *bāṭin*, "hidden," or *ẓulma*, "dark." Some Ṣūfīs (see ṢŪFISM AND THE QURʾĀN) interpreted the fact that b (= 2) was both the first letter in the Qurʾān (from *bismillāh*, see BASMALA) and in the Hebrew Bible *(bʿreshit)* as an allusion to the created world (see CREATION). The repetition of certain numbers in the Qurʾān held special interest. For example, seven was the number of creations (Q 78:12), heavens (Q 23:86; see HEAVEN AND SKY), lands (Q 65:12; see EARTH), seas (Q 31:27), gates (Q 15:44), cows and years in Joseph's (q.v.) vision (Q 12:46, 47; see VISIONS; DREAMS AND SLEEP) as well

as the number of verses in the opening sūra of the Qurʾān, the Fātiḥa (q.v.), and words in the *shahāda* (see WITNESS TO FAITH). The seven letters that do not appear in the Fātiḥa were thought to be magically powerful (see MAGIC). Seven was also the number of days in a week, geographical zones, planets, stages of man (see BIOLOGY AS THE CREATION AND STAGES OF LIFE) and much more in Islamic belief and practice.

The Brethren of Purity *(ikhwān al-ṣafāʾ)* of fourth/tenth century Baṣra applied Pythagorean and Neoplatonic number theory in order to better understand the principle of unity at the center of Islamic belief. In their view, God relates to the world as one relates to other numbers. Of special interest was the perfect number (equal to the sum of its parts) 28, because it represents the letters in the Arabic alphabet, the lunar stations (see MOON), and vertebra in the backbone. This was also the sum of the top row and right column of the *budūḥ* (see above). See also NUMBERS AND ENUMERATION.

Numismatics

The subdiscipline of history that deals with coins as historical evidence. For Islamic coins, the use of qurʾānic inscriptions is an indicator of the issuing authority's religious belief and political loyalties (see POLITICS AND THE QURʾĀN).

Muslims in the Ḥijāz had used Roman and Persian coins, so it was natural, when they had conquered a large part of the Roman empire and the entire Sasanian empire of Iran, to allow similar coins to be minted in Egypt (q.v.), Syria (q.v.), and Iran. Only in Iran were Arabic inscriptions added under the early caliphs (see CALIPH). These were limited to simple brief religious statements added to the Persian images and inscriptions of the prototypes. The earliest, and most common, was *bism Allāh* ("in the name of God"; see BASMALA), and there are a variety of others (Gaube, *Arabosasanidische Numismatik,* plates 2-4), all merely slogans, in many cases used only by one governor, such as *bism Allāh rabbī* (on the coins of Ziyād b. Abī Sufyān, r. 47-55/668-75) or *bism Allāh al-ʿazīz* (on the coins of a certain ʿAbd al-ʿAzīz, 65/685-6).

Qurʾānic inscriptions do not appear until after ʿAbd al-Malik's conquest of the eastern caliphate in 72/691 (Crone and Cook, *Hagarism;* Whelan, Forgotten witness). In the same *hijrī* year, 72 (see CALENDAR; EMIGRATION), the mint of his capital Damascus began producing gold coins of Roman type and silver Persian-type coins with the *shahāda,* the Islamic creed (see WITNESS TO FAITH; CREEDS), which is not recorded before this date. The same formula appears among the inscriptions of the Dome of the Rock, built in 72/691, and on most Persian-type coins of the eastern caliphate beginning in 72 and 73 A.H. The *shahāda* does not appear as such in the Qurʾān, but it is composed of elements drawn from the Qurʾān: "There is no god but God" (*lā ilāha illā llāhu,* Q 37:35, and 47:19); "he alone" (*waḥdahu* applied to God, Q 7:70 and three other places); "He has no associate" (*lā sharīka lahu,* Q 6:163); and "Muḥammad is the messenger (q.v.) of God" (*Muḥammadun rasūlu llāhi,* Q 48:29). This formula, "There is no god but God alone, none is like unto him, Muḥammad is the messenger of God," remained a standard inscription on most Islamic coins for centuries, at least until the fall of the ʿAbbāsid caliphate in the seventh/thirteenth century, and thereafter, usually abbreviated to the first and last elements, into the twentieth century in some countries. In numismatic publications it is often called the *kalima,* perhaps an Anglo-Indian terminology.

The first two-thirds of the *shahāda* form the central obverse inscription of the first Islamic coins (without images, bearing only Arabic inscriptions), which were gold dinars minted in Damascus in 77/697, and silver dirhams beginning two years later (see MONEY; Fig. 1 of EPIGRAPHY). The central reverse inscription was Q 112:1-4, nearly the entire text of Sūrat al-Ikhlāṣ: "God is one, God is the eternal (see ETERNITY); he does not beget and he was not begotten, and there is nothing like him." The middle phrase suggests that the intended audience for this statement were the Christians, those of Rome and also those whom the Muslims ruled (see CHRISTIANS AND CHRISTIANITY; BYZANTINES). This inscription was standard only for the duration of the Umayyad caliphate, until 132/750, but it was used occasionally later, as late as the fifth/eleventh century; it would be interesting to examine the varied circumstances in which it was revived. These central inscriptions were arranged in horizontal lines on both faces. One of the two circular inscriptions that surrounded the central lines was another qurʾānic verse, "Muḥammad is the messenger of God, who sent him with guidance and the religion of truth to make it supreme over every religion, even if the polytheists detest it" (see POLYTHEISM AND ATHEISM). The first phrase, which completes the *shahāda,* is Q 48:29, while the rest

is Q 9:33 or the identical Q 61:9. Here again, the statement is directed to the non-Muslims within and outside the caliphate. This sentence also became a standard part of the inscriptions on all coins until the fall of the caliphate, and for a long time thereafter in Egypt and some other countries. The other outer circular inscription stated that the coin was struck in the name of God, and continued with the *hijrī* date in words, as well as the name of the issuing mint on silver dirhams. With this latter exception, coin inscriptions at the beginning were exclusively religious, justifying the term "Islamic" which was applied to them in medieval and modern times.

These were the main standard inscriptions of the Sunnī caliphates. Early rebels against them added two more qurʾānic inscriptions. The Khārijīs (q.v.), in the rebellions of the 70s/690s and again in those at the end of the Umayyad era, added the statement *lā ḥukm illā lillāh,* "There is no judgment (q.v.) but God's," which is not literally qurʾānic but parallels *ini l-ḥukm illā lillāh* found in three places in the Qurʾān (Q 6:57; 12:40, 67), as well as many other references to God's judgment. The partisans of the rule of the Prophet's family (see FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE; SHĪʿISM AND THE QURʾĀN) used another verse, Q 42:23, "Say: I do not ask of you for it any recompense except love of kin (see KINSHIP)," which appears on the coinage of ʿAbdallāh b. Muʿāwiya (r. 129/746-7) who claimed the caliphate for himself and that of Abū Muslim (d. 137/755) who fought for the ʿAbbāsids (Wurtzel, Coinage), as well as on ninth-century coins of the Zaydī imāms (see IMĀM).

With the victory of the ʿAbbāsid family, the central caliphal mint was transferred to Iraq, and the central reverse inscription of the Umayyads was replaced by the conclusion of the *shahāda,* "Muḥammad is the messenger of God," words which now appeared twice on the coins. This remained the standard central reverse inscription of most Islamic coins. The other inscriptions stayed the same, until, in 145/763, al-Mahdī, the governor of Khurāsān and the future caliph, was the first person allowed to put his name on dirhams (in an executive formula that replaced the normal reverse center inscription). Within a few years, it had become quite common for various individuals to be named on silver and then on gold coins, but the caliph al-Maʾmūn (r. 196-218/811-33) put a stop to this, restoring the completely anonymous, purely religious, inscriptions of the beginning of the ʿAbbāsid caliphate, and otherwise standardizing the coinage, making gold and silver coins alike in arrangement and epigraphy at all mints throughout the caliphate (see EPIGRAPHY AND THE QURʾĀN). He also made two additions to the former inscriptions, both of which remained standard for the duration of the ʿAbbāsid caliphate. In 193/809, when his father died leaving him as governor of the eastern caliphate on behalf of his brother the caliph, the single word *lillāh* was added to all coins issued in his realm in the space above the reverse inscriptions. This word, or rather prepositional phrase, has a clear meaning, either "for God" or "belonging to God," but its significance is not obvious. Does it apply to the coin or to the caliph who authorizes it? Whatever its import, it was probably put on the coins as an indication of al-Maʾmūn's piety in contrast to his brother al-Amīn (r. 193-8/809-13), whom he ultimately defeated in civil war. This victory was celebrated by the addition of another qurʾānic inscription, Q 30:4-5, "God commands *(lillāhi l-amru),* in the past and in the future; and on that day the believers will

rejoice in God's victory (q.v.)," placed on the obverse of all coins as a second outer circular inscription (El-Hibri, Coinage reform). Al-Muʿtaṣim (r. 218-27/833-42), al-Maʾmūn's successor, retained all these standard inscriptions, but with one important addition: his own caliphal title, *al-Muʿtaṣim bi-llāh,* placed below *Muḥammad rasūl Allāh* on the reverse. His successors followed the same practice, and sometimes added other names: their son and anticipated successor most commonly, but also, with increasing frequency, the names of certain distinguished *wazīr*s, powerful generals, and autonomous provincial governors. Legally, the powerful Sunnī dynasts of the fourth/tenth century onwards were in the latter category. Although they were named on the coins and controlled their minting, they always named the caliph as overlord and included all the elements mentioned above on their coinage: the "Victory Verse" around the outer edge of the obverse, with "struck in the name of God" followed by the denomination, mint city, and date as the inner circular inscription; the first part of the *shahāda* as the central element of the obverse, sometimes abbreviated; on the reverse, *lillāh* above "Muḥammad is the messenger of God," with the "prophetic mission" verse (Q 9:33 or the identical Q 61:9) around the edge.

Rebels against the caliphate, and Islamic dynasties outside the ʿAbbāsid caliphate, often used different inscriptions to proclaim their ideology and differentiate themselves from the Sunnī ʿAbbāsids. The pro-ʿAlid Abū l-Sarāyā exhorted his troops on dirhams of Kūfa (199/814-15) with the verse "Indeed, God loves those who fight in his path in ranks, as though they were a building well-compacted" (Q 61:4; see FIGHTING; PATH OR WAY). In place of the usual outer circular inscriptions ʿAlī b. Muḥammad, the *ṣāḥib al-Zanj,* used the beginning of Q 9:111: "God has purchased from the believers their persons and their goods, in return for paradise (q.v.) if they fight in the path of God," a stirring call to arms; and on the reverse, "And those who fail to judge according to God's revelation, they are the unbelievers" (*kāfirūn,* cf. Q 5:47; see BELIEF AND UNBELIEF), justifying his war against the Muslims around him (Miles, Ninth century hoard, 71-4, 131-3). The Zaydī imāms in Daylam and Ṭabaristān used several qurʾānic verses at one time or another, including Q 42:23, the so-called "kinfolk verse," mentioned above; Q 22:39, "Permission [to make war (q.v.) is given] to those who are oppressed, and surely God is able to give them victory" (*wa-inna llāha ʿalā naṣrihim la-qadīrun,* see OPPRESSION; OPPRESSED ON EARTH, THE); the end of Q 33:33, "God only wants to remove pollution from you, O people of the house, and to purify you thoroughly"; and Q 17:81, "Say, the truth (q.v.) is come and falsehood has vanished, for falsehood indeed is bound to perish" (Miles, al-Mahdi al-Ḥaqq; Stern, Coins, 211-19). This latter verse was widely employed, being found on some of the coins of the Idrīsids in eighth century Morocco (Eustache, *Corpus*) and on many coins of Yemen, having been introduced there in 297/910 by the Zaydī imām al-Hādī ilā l-Ḥaqq (Bikhazi, Coins).

Outside the ʿAbbāsid caliphate, the Fāṭimids proclaimed their descent through the addition of *ʿAlī walī Allāh* after *Muḥammad rasūl Allāh,* and through various other references to ʿAlī b. Abī Ṭālib (q.v.) and Fāṭima (q.v.), but did not employ any new qurʾānic verses. As heirs of the Aghlabids, who followed ʿAbbāsid practice in effect when they became autonomous, the Fāṭimids took no notice of al-Maʾmūn's innovations but employed all the standard inscriptions of early ʿAbbāsid coinage (Lane-Poole, *Catalogue,* iv, 275) plus ʿAlid additions. In

Spain, the Umayyad emirs retained the inscriptions of caliphal Umayyad dirhams to the letter, and when they declared themselves caliphs, merely substituted their names and titles for the former Umayyad reverse, Q 112:1-4. The first new qurʾānic inscription in the Maghrib was introduced by the Almoravids whose standard obverse marginal inscription was Q 3:85, "And whoever desires a faith (q.v.) other than Islam, it will not be accepted from him, and in the end he will be among those who perish." Subsequently a great many different qurʾānic verses and references were used by the Almohads and their successors; Hazard (*Numismatic history,* 36-40) lists 61 different verses and phrases used in north Africa, which are keyed back to the issues on which they appear on pages 365-71. In fourteenth-century Spain, the Naṣrids of Granada, facing extinction by the Christians, used the verse "Say: O God, master of dominion, you give dominion to whom you wish and strip dominion from whom you wish, and you exalt whom you wish and humble whom you wish — in your hand is all good" (Q 3:26).

After the fall of the ʿAbbāsid caliphate, the Īlkhāns and their successors, although their coinages were very diverse, introduced a few exceptional inscriptions which were used briefly under Ölceytü and Abū Saʿīd. Ölceytü's coinage (between 703-9/1304-10) bore two qurʾānic verses not used elsewhere on coins, the long first half of Q 48:29, and most of Q 24:55, as well as phrases indicating his new Sunnī allegiance, whereas before he had designated ʿAlī as *walī Allāh* and named the twelve imāms. Abū Saʿīd, on his issue of 718-21/1319-22, used the end of Q 2:137, "God will suffice you against them, for he is the all-hearing, the all-knowing" (see SEEING AND HEARING; GOD AND HIS ATTRIBUTES), forming the words into an arch resembling a *miḥrāb* (see MOSQUE) enclosing the abbreviated *shahāda* (Lane-Poole, *Catalogue,* vi, lvi-lvii, 46, 62).

The use of long qurʾānic quotations went out of style in the early modern era. The Ottomans scarcely ever employed religious inscriptions on their coinage. The Shāhs of Iran at most used the *shahāda* with the addition of *ʿAlī walī Allāh* and the twelve imāms; the Mughals did the same, without the Shīʿī additions. More often, both empires filled the coin faces with Persian verses and long titulature. In Yemen, coins issued by the Zaydī imāms continued to bear ʿAbd al-Malik's *shahāda* past the middle of the twentieth century.

O

Oaths

Solemn assertions or promises. In English the word "oath" has various related senses. One usually involves using the name of God, or of some other revered or dreaded being, object or place, in order to give force and solemnity to an utterance (an assertion, promise, denial, curse, etc.). Oaths of this type, where a statement includes a phrase such as "by God," "by the stars when they set," "by this land," etc., are common in the Qurʾān. Many such oaths occur in sūras traditionally regarded as having been among the earliest to be revealed, and their compressed grammar and unusual vocabulary pose difficulties of comprehension (see GRAMMAR AND THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). Understood as communications of God himself, there are nevertheless examples (e.g. Q 4:65; 16:63) where they are made "by God" *(tallāhi)* or "by your lord" (q.v.; *wa-rabbika*). The fact that God uses oaths in the Qurʾān is taken to be among the proofs of its inimitability (q.v.; cf. Suyūṭī, *Muʿtarak,* i, 449-55).

The interpretation of oaths to natural phenomena, such as stars (see NATURE AS SIGNS; PLANETS AND STARS), which occur in early sūras (see CHRONOLOGY AND THE QURʾĀN), has posed problems for exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; see also Kandil, Schwüre; Neuwirth, Images). Muqātil (d. 150/767) explains the oath of Q 53:1 ("by the star when it sets") as referring to the time that elapsed between revelations; the Qurʾān itself is therefore called *"najm"* (*Tafsīr,* iv, 159; cf. Ibn Qayyim al-Jawziyya, *Tibyān,* 161; al-Farrāʾ, *Maʿānī,* iii, 94). Later exegetes, such as al-Suyūṭī (d. 911/1505; *Itqān,* iv, 53-9), explain these oaths as following the custom of the Arabs (q.v.): as the Qurʾān was revealed in the language of the Arabs, it adopted their formulaic expressions (see ARABIC LANGUAGE; LANGUAGE, CONCEPT OF). The problematic is further complicated when the style of these formulaic expressions is examined: for, stylistically, these oaths have been understood to be akin to the rhymed prose (q.v.) of the pre-Islamic soothsayers (q.v.; see Ibn al-Naqīb, *Muqaddima,* 238-9; cf. Nöldeke, *GQ,* i, 60, 75; Wellhausen, *Reste arabischen Heidentums,* 135; see also POETRY AND POETS), yet the Qurʾān denies that Muḥammad is a soothsayer.

Finally, sometimes these oaths appear in the reported speech of, for example, Abraham (q.v.; Q 21:57: "By God, I shall set snares for your idols"; see IDOLS AND

IMAGES) or the sons of Jacob (q.v.) in Egypt (q.v.; Q 12:73: "By God, you know that we did not come to commit evil in the land…").

A second type of oath is typically a statement or promise guaranteed by calling upon a revered being or object as a witness, usually made to another person or party, often in a formal legal or quasi-legal context (see WITNESSING AND TESTIFYING; LAW AND THE QUR'ĀN). It is common to distinguish between an oath in this sense and a vow, a promise to do or avoid something, which may be made directly to God or some other being and may be made privately and internally. Inasmuch as the words of a vow, however, tend to follow fixed formulae, may involve other human beings, and may invoke the name of the being to whom it is being offered, the distinction between an oath and a vow is not always clear. There are some cases in the Qur'ān — and outside it — where derivatives of the root *y-m-n* (usually understood in connection with oaths) may be equally understood as referring to vows (see the discussion of *al-laghw fī aymānikum* below).

Vocabulary and types of oaths

The most common words indicating swearing and oaths in the Qur'ān are derivatives of the roots *y-m-n, ḥ-l-f,* and *q-s-m*. They seem to be used interchangeably and often jointly in expressions such as "oaths which you have sworn" (*aymānikum idhā ḥalaftum,* e.g. Q 5:89) or "they swear a solemn oath by God" (*aqsamū bi-llāhi jahda aymānihim,* e.g. Q 6:109). The root *q-s-m,* which is associated with the notion of dividing and apportioning, as well as with swearing and oath taking, is used both in connection with the oath as a forceful statement (Q 56:75-6: "I swear *[fa-lā uqsimu]* by the setting of the stars and that indeed is a mighty oath *[qasam],* if only you knew"), and with it in relation to legal matters (Q 5:106-7 recommends that when making a will two just men should be chosen as witnesses and asked to swear — *yuqsimān* — that they will not act corruptly). The references in Q 2:67-71 to the cow which God commanded the people of Moses (q.v.) to slaughter are sometimes explained by exegetes in connection with the group oath known in Islamic law as the *qasāma,* which is not attested by name in the Qur'ān.

On the other hand, *nadhara* and *nadhr,* understood more in connection with vows, occur independently and on some occasions clearly refer to the promising of a pious act to God: in Q 19:26 Mary (q.v.; Maryam) says, "I have sworn/vowed a fast *(nadhartu … ṣawman)* to God" (see FASTING); in Q 3:35 ʿImrān's (q.v.) wife, pregnant with Mary, says to God, "I have sworn/vowed *(nadhartu)* to you what is in my womb as a consecrated offering."

The *bayʿa* (giving allegiance or entering a contract of clientage) may also be understood as a form of oath (see CONTRACTS AND ALLIANCES). The noun *bayʿa* itself does not occur in the Qur'ān but there are a number of cases where the third form of the verb is used, and Q 48:10 makes it clear that it involves a ritual acceptance of God's representative as one's patron (see CLIENTS AND CLIENTAGE): "Those who offer allegiance to you *(yubāyiʿūnaka)* do so to God. God's hand (q.v.) is over theirs [an allusion to the hand clasp involved in such contracts]. Whoever betrays his oath *(man nakatha)* only betrays himself but whoever fulfils what he has contracted to God *(awfā bimā ʿāhada ʿalayhu llāha),* he will grant him a tremendous reward."

Two other procedures mentioned in the Qur'ān are related to swearing oaths and making vows. They involve a man renouncing sexual relations with a woman or women who would normally be available to him. Q 2:226-7 says that those who swear

or vow not to have relations with their wives *(lilladhīna yuʾlūna min nisāʾihim)* should wait for four months. If they revert *(fāʾū)* [i.e. resume relations?], God is forgiving and merciful; if they decide on divorce, he is all-hearing and all-knowing" (see MARRIAGE AND DIVORCE; ABSTINENCE; CHASTITY). Outside the Qurʾān the word *īlāʾ* is used with reference to a vow of (temporary) abstention from a certain woman or women. If the abstention lasts longer than four months, the man must either divorce the woman or resume relations with her (see SEX AND SEXUALITY). The vow is made invoking one of the names of God (see GOD AND HIS ATTRIBUTES) and is subject to an act of atonement *(kaffāra)* if broken. Some commentators say explicitly that *yuʾlūna* means *yaḥlifūna*.

Q 33:4 and Q 58:2-3 refer unfavorably to the practice whereby a man makes a wife sexually unavailable to him by *ẓihār* — a noun which does not occur in the Qurʾān, but is implied in the use of the related verb form in such phrases as *azwājakumu llāʾī tuẓāhirūna minhunna* (Q 33:4) and *alladhīna yuẓāhirūna minkum min nisāʾihim* (Q 58:2). Commentators explain that this practice involved the man putting the woman in the category of those prohibited to him for sexual relations (see PROHIBITED DEGREES) by saying to her, "You are to me as the back *(ẓahr)* of my mother," where "back" has a sexual connotation. Although this is not strictly an oath or vow, it does involve the use of a ritual formula and is subject to acts of atonement (listed in Q 58:3-4) which are more severe than those laid down in Q 5:89 for the breaking of (other?) types of oath.

Vocabulary used in connection with the breaking of oaths includes *n-k-th* (explained as metaphorical use [see METAPHOR] of its literal association with unraveling or untwisting the fibers of a garment or a wooden toothpick, *siwāk*) and *n-q-ḍ*. *Ḥ-n-th*, which is used outside the Qurʾān often as a technical term in connection with breaking or incurring liability for oaths (see BREAKING TRUSTS AND CONTRACTS), but also more generally in the sense of "sin" (see SIN, MAJOR AND MINOR), occurs twice: in the story of Job (q.v.; Q 38:44) we are told that God ordered him *lā taḥnath*, which some commentators understand as "do not break your oath," while in Q 56:46 persisting in *al-ḥinth al-ʿaẓīm* is mentioned as the sin of those consigned to hell (see HELL AND HELLFIRE).

The opponents' oaths

Many references concern the oaths that the opponents (*mushrikūn, munāfiqūn* [see BELIEF AND UNBELIEF; POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS], "People of the Book" [q.v.], and others; see also OPPOSITION TO MUḤAMMAD) make, falsely, insincerely, or for worldly gain. "[The *munāfiqūn*] would come to you swearing by God that that they only wanted benificence and reconciliation *(iḥsānan wa-tawfīqan)*" (Q 4:62); "on the day when God will raise them all together they will swear to him as they swear to you… but they are liars" (Q 58:18; see RESURRECTION; LIE); "the *mushrikūn* swear by God one of their strongest oaths that they will believe if a sign (see SIGNS) comes to them. Say: The signs are with God alone…" (Q 6:109). "Those who barter God's covenant (q.v.) and their oaths for a small price" (Q 3:77) is often associated with the Jews (see JEWS AND JUDAISM) and sometimes understood to refer to the swearing of a false oath *(yamīn fājira)* in order to obtain property illegitimately. Satan (see DEVIL) is reported to have sworn to Adam and Eve (q.v.; *qāsamahumā*) that he was a good adviser to them (Q 7:21).

Q 68:10 refers to the unidentified opponents as *ḥallāf mahīn*, "despicable swearer of oaths." Subsequently (Q 68:17-33), their

fate is compared to that of the unspecified "owners of the garden" (q.v.; *aṣḥāb al-janna*) who swore *(aqsamū)* to harvest it on the next morning. They failed, however, to make *istithnāʾ* — understood to mean that they omitted to say *in shāʾa llāh,* "God willing," after swearing. While they slept, an affliction sent by God befell the garden, and when they came to harvest the fruit they found that there was none left. Mutual recriminations and recognition of guilt followed. The parable has been read as a warning against pride (q.v.) or complacency (Speyer, *Erzählungen,* 426).

In two passages (Q 58:16 and 63:2) the hypocrites *(munāfiqūn)* are accused of making their oaths a *junna,* "shield, armor," and turning others from the way of God (see PATH OR WAY). These are interpreted as referring to the oaths or the *ḥilf* which the hypocrites of Medina (q.v.) had made with the Muslims, claiming that they were believers, in order to deflect the Muslims from the way of God, i.e. from the putting into practice of God's commands regarding the People of the Book and the unbelievers, to which they should really have been subject.

There are other allusions — especially in Q 9 — to agreements guaranteed by oath between the qurʾānic community and its opponents (see COMMUNITY AND SOCIETY IN THE QURʾĀN), although here too the emphasis is on the possibility or likelihood that the opponents will break them. Q 9:12-3: If the *mushrikūn* with whom you have made an agreement "undo their oaths after their agreement *(in nakathū aymānahum min baʿdi ʿahdihim)* and attack your religion, fight the imāms (see IMĀM) of *kufr.* They have no oaths *(innahum lā aymāna lahum)*.... Will you not fight a people who have undone their oaths...." Traditional commentators associate the first twenty-nine verses of Q 9 with the period following the conquest of Mecca (q.v.), when agreements previously made between the Prophet and non-Muslims in Arabia were ended — after a period of four months' grace — and non-Muslims were barred from the Meccan sanctuary (see KAʿBA; POLITICS AND THE QURʾĀN).

The binding and loosing of oaths

There are so many such references to the opponents swearing oaths (often "by God") that the qurʾānic texts must reflect a society in which the swearing of oaths was a stock feature of speech (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). Q 2:224, "Do not make God an *ʿurḍa* to your oaths..." (see further below), and Q 5:89, "preserve *(wa-ḥfaẓū)* your oaths," are sometimes interpreted as injunctions against prolixity in the making of oaths. As in other societies where oath taking is an important part of everyday life, tension must have existed between, on the one hand, the idea that oaths were solemn undertakings which, once entered into, had to be kept and, on the other, an awareness that it was often impossible to keep an oath. In the latter case some way out had to be found. Various qurʾānic passages, taken together, seem to illustrate this tension.

The verses which stress most strongly the need to honor oaths are probably Q 5:89 (where *wa-ḥfaẓū* is more usually understood as "keep" in the sense of "fulfil") and Q 16:91-2, 94. The latter repeat an injunction to fulfil the covenant of God *(ʿahd Allāh)* when it has been entered into *(idhā ʿāhadtum)* and not to break oaths *(lā tanquḍū l-aymāna)* after they have been affirmed. Breaking them is then likened to a woman who ruins her thread by untwisting *(n-k-th)* it, thus weakening it. A possible motive for breaking them is suggested by the phrase, "[Do not] take your oaths as a deception *(dakhalan)* between yourselves, one party

(ummatun) being more numerous than another" *(tattakhidhūna aymānakum dakhalan baynakum an takūna ummatun hiya arbā min ummatin)*. Q 16:94 then echoes the first part of that last phrase, "Do not take your oaths as a *dakhal* between you."

Dakhal is generally glossed by words meaning "trick" or "deceit," and a tribal practice of the Age of Ignorance (q.v.; *jāhiliyya*) is suggested as the reason why the oaths in question were sometimes broken: one of the contracting parties (a tribe or other social group) was induced to abandon the other by the appearance of a third party which was bigger and stronger (*arbā* is understood as meaning "more numerous"). Nevertheless, the passage is understood to contain a general principle: al-Ṭabarī, (d. 310/923; *Tafsīr,* xiv, 163-9), while not ruling out that there may have been an occasion of revelation (see OCCASIONS OF REVELATION) about which it is impossible to be certain, nevertheless considers the ruling contained therein to be generally applicable *(wa-inna l-āya kānat qad nazalat li-sabab min al-asbāb wa-yakūna l-ḥukm bihā ʿāmman fī kull mā kāna bi-maʿnā al-sabab alladhī nazalat fīhi)*.

Q 2:225 and 5:89, while they reassure us that God will not hold us responsible for *al-laghw* ("slips," but see below) in our oaths, nevertheless stress that he will hold us responsible "for what your hearts (see HEART) have acquired" (Q 2:225) or "for that which you have contracted oaths" (Q 5:89).

Nevertheless, both of those verses recognize the possibility of *al-laghw* in an oath: God will not hold us liable for *al-laghw* in our oaths *(lā yuʾākhidhukumu llāhu bi-l-laghwi fī aymānikum)*. The commentators disagree on the precise meaning of *al-laghw fī l-aymāni* but they agree that it refers to oaths which, because of the mental or physical state of the one swearing — for example he may be angry, making a joke, or involved in bargaining — or because the words used are inappropriate, are not binding.

Other than appealing to the circumstances in which it had been made, the other obvious way out of an oath which had been sworn but which could not be kept is the *kaffāra* (see ATONEMENT), various forms of which are set out in Q 5:89. Commentators and jurists differ regarding whether a *kaffāra* is necessary in the case of *al-laghw fī l-aymān*.

Oaths (or vows) of abstention, made for ascetic or other reasons (see ASCETICISM), may have been a particular problem. The reference to *al-laghw* in Q 5:89 follows the previous verse's command to "eat of what God has given you as lawful and good" (see LAWFUL AND UNLAWFUL; FOOD AND DRINK), while that in Q 2:225 follows the injunction, "Do not make God an *ʿurḍa* to your oaths." This latter verse raises questions of interpretation. It is often understood to mean that if there is the possibility of performing a good deed (see GOOD DEEDS), you should not avoid doing so on the grounds that you have sworn something which you would have to violate in order to perform the good. If you have sworn such an oath, then you should violate it and make an act of atonement. Another interpretation cites the example of someone who declares that something God has made permissible is forbidden (q.v.) to him. This procedure of *taḥrīm al-ḥalāl* is also sometimes mentioned in discussions of the meaning of *al-laghw*.

The Prophet himself is understood as having sworn such an oath. Q 66:1 reads, "O Prophet, why do you declare forbidden what God has made lawful for you, seeking the pleasure of your wives (see WIVES OF THE PROPHET)…?" The following verse then goes on to say that God has made

incumbent upon you (plural) the expiation (?) of your oaths *(taḥillat aymānikum)*. Commentators explain these verses as references to an incident in which the Prophet undertook to avoid something which was not contrary to God's law. Many versions talk of his expressing his determination to avoid sexual relations with a slave girl out of deference to one or two of his wives. Others refer to a certain drink or to honey (q.v.). God then made clear that it was not right that he should declare *ḥarām* what God had made *ḥalāl*.

Although Q 66:1 has a singular vocative addressed to the Prophet while Q 66:2 is understood as addressed to the Muslims in general, the reports about the Prophet's "declaring forbidden" tend to agree that it involved an oath. Whether the *taḥrīm* was in itself an oath, or whether it was made together with an oath, many reports refer to the Prophet's "swearing" *(ḥ-l-f* and *y-m-n)* and to his having to make a *kaffāra*. Some, interpreting the *taḥrīm* as a renunciation of sexual relations, use the noun *īlāʾ* and the verb *ālā*.

Questions concerning oaths and vows occupy considerable space in the classical works of Islamic law, and the qurʾānic materials are taken into account in the discussions. Typically oaths and vows are discussed under the heading *kitāb al-aymān wa-l-nudhūr* although *īlāʾ* and *ẓihār* are usually discussed mainly in the sections on divorce *(kitāb al-ṭalāq)*. For discussion of taking oaths *on* the Qurʾān, see EVERYDAY LIFE, QURʾĀN IN; POPULAR AND TALISMANIC USES OF THE QURʾĀN; RITUAL AND THE QURʾĀN.

Obedience

Act or fact of complying with the demands of one in authority (q.v.). The idea of obedience, with its concomitant concepts of legitimate authority and power to command, occurs with considerable frequency in the Qurʾān. Though several different Arabic expressions convey the idea of obedience, derivatives of the root *ṭ-w-ʿ*, especially the verb *aṭāʿa/yuṭīʿu,* predominate, as exemplified in the longest sustained passage on obedience (Q 24:47-56). While

aṭāʿa/yuṭīʿu normally means, "to obey," it sometimes bears the less insistent meaning of "to heed" (Q 3:168). The verb *ittabaʿa/yattabiʿu* carries the meaning "to obey" (as perhaps in Q 3:31, 53) with even less frequency, as it normally means "to follow," often in a negative sense. Verbs of the root *s-l-m,* especially *sallama/yusallimu* and *aslama/yuslimu,* give the meaning "to submit" but these connote a relatively passive initial act of submission and usually lack the element of putting obedience into active practice found in the verb *aṭāʿa/yuṭīʿu,* the sense of which they only occasionally approach (as perhaps in Q 3:20; 4:65).

Obedience demanded in the Qurʾān is primarily to God and the prophet Muḥammad (eleven occurrences together of *aṭāʿa/yuṭīʿu* in the imperative). Only one verse (Q 4:59) adds obedience to "those having authority among you," who are best explained as appointees of the Prophet representing his authority in his absence, although other explanations have been offered (see CALIPH; KINGS AND RULERS; IMĀM). Obedience to God and his Prophet means unquestioning submission to God's commands mediated through the Prophet (Q 4:65; 33:36). It is, however, somewhat tempered by the instruction to the Prophet to consult with his followers before deciding on an action (Q 3:159; cf. Q 4:83; 42:38).

Several other types of obedience also appear in the Qurʾān. Obedient wives (see MARRIAGE AND DIVORCE) are said to deserve kind treatment (Q 4:34) and the Prophet's wives (see WIVES OF THE PROPHET) in particular are told to obey God and his Prophet (Q 33:33), while two verses imply that children (q.v.) should obey their parents in all cases except where the latter oppose them in religion (Q 29:8; 31:15; see FAMILY; KINSHIP). Conversely, the Qurʾān warns the Muslims not to obey devils (Q 6:121; see DEVIL), unbelievers (Q 3:149; see BELIEF AND UNBELIEF), some People of the Book (q.v.; Q 3:100) and counsels the Prophet not to heed those who try to prevent worship (q.v.; Q 96:19), various stripes of unbelievers (Q 13:37; 18:28; 25:52; 68:8, 10), hypocrites (Q 33:1, 48; see HYPOCRITES AND HYPOCRISY), sinners (Q 76:24; see SIN, MAJOR AND MINOR), and most people (Q 6:116). The Muslims are also warned not to try to get the Prophet to obey their wishes (Q 49:7).

Thus, the Qurʾān provides a rather simple doctrine of obedience, giving a chain of command from God to the Prophet to the Muslims, in which no contradiction or immediate difficulty is visible. Nevertheless, there clearly seems to be a development of the doctrine when the relevant verses are placed in their probable historical context (see CHRONOLOGY AND THE QURʾĀN) according to the Prophet's biography (see SĪRA AND THE QURʾĀN) and the alleged dates and occasions of revelation (q.v.). First, most of the commands to the Prophet not to heed unbelievers fall in passages attributed to the Meccan period. This suggests that the situation of Islam was not yet securely established, so that intrusive outside influences were to be feared and that such reminders were needed to avoid the temptation of taking an easier path of compromise. Also, no calls to obey the prophet Muḥammad personally occur in Meccan passages of the Qurʾān at all, perhaps because the Prophet's authority was already accepted by his small following on a firsthand basis. In verses attributed to the Meccan period, only certain of the former prophets command their followers to be obedient to them personally (see PROPHETS AND PROPHETHOOD). These prophets include Noah (q.v.; Nūḥ), Hūd (q.v.), Ṣāliḥ (q.v.), Lot (q.v.; Lūṭ), Shuʿayb (q.v.), Aaron (q.v.; Hārūn) and Jesus (q.v.; ʿĪsā; cf. Q 20:90; 26:108, 110, 126, 131, 144, 150, 163, 179; 43:

57, 63; 71:3). If a need to obey Muḥammad is discoverable in such verses, it is only by implication, for no connection is made explicit there.

Rather, all of the direct calls for obedience to God and his Prophet come from passages considered Medinan, starting in 1/622 but mostly dating from 4/626 and later. When Muḥammad moved from leading a small religious group trying to establish itself at Mecca (q.v.) to actually founding a polity and eventually a sovereign city-state at Medina (q.v.), obedience to him personally grew in importance as a theme (see POLITICS AND THE QUR'ĀN). As the Muslims became more numerous and started to be drawn from more diverse ethnic groups than the Quraysh (q.v.) alone, the need for personal obedience to the leader became more obvious (see COMMUNITY AND SOCIETY IN THE QUR'ĀN). This was especially the case when fighting (q.v.) was prescribed by qur'ānic revelation (traditionally first in Q 22:39-40), requiring obedience to military commands. The command to fight was revealed either just before the second oath of al-ʿAqaba in 621 C.E. (see OATHS; CONTRACTS AND ALLIANCES) or right after the emigration (q.v.; *hijra*) in 1/622 (see also WAR; EXPEDITIONS AND BATTLES; JIHĀD).

Thereafter, the various oaths of allegiance *(bayʿa* or *mubāyaʿa)* mentioned in the *sīra* and the ḥadīth (see ḤADĪTH AND THE QUR'ĀN) constitute important milestones in the institutionalization of obedience to the Prophet in his lifetime. The few chronological indications in these sources usually connect such oaths with the two oaths of al-ʿAqaba in 620-1 C.E. and the oath of al-Ḥudaybiya in 6/628. Only the latter, however, has a clear chronological connection with qur'ānic verses — namely Q 48:10 and 48:18, wherein the allusions to a formal oath of allegiance clearly refer to al-Ḥudaybiya and are one of the best-established chronological indications in the Qur'ān. Other allusions to formal oaths of allegiance in Q 60:12 and Q 9:111 are later, attributable to 8/629 and 9/630 respectively. The covenant (q.v.; *mīthāq*) of Q 5:7, involving a promise of "We hear and obey," must likewise refer to a contractual obligation of obedience by the believers but the verse most likely postdates al-Ḥudaybiya. Cognate verses, however, containing the phrase "We hear and obey" (Q 2:285; 24:51; cf. Q 64:16) may be earlier in date. Whatever the details, one sees a formalization of vows of obedience in the form of a personal oath of allegiance to the Prophet as the Medinan polity grew. On the other hand, long, late passages such as Q 9:38-57 and Q 9:81-106 suggest the continuing difficulty that the Prophet had in enforcing compliance.

Later exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL; EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY) mostly equates obedience to God and the Prophet with obedience to the Qur'ān and the sunna (q.v.) of the Prophet. Passages most often quoted in support of this include Q 4:58-69, 5:44-50 and 33:36 as well as many ḥadīths. Pro-government interpretations are rare, as exegetes eventually do not consider Muslim polities legitimate successors of the Prophet, whatever the pretensions of the regimes themselves may have been. See also DISOBEDIENCE.

Occasions of Revelation

Reports, transmitted generally from the Companions of Muḥammad (see COMPANIONS OF THE PROPHET), detailing the cause, time and place of the revelation of a portion (usually a verse; see VERSES) of the Qurʾān. Underlying the material transmitted as "occasions of revelation" *(asbāb al-nuzūl)* are certain understandings about the process of qurʾānic revelation (see REVELATION AND INSPIRATION). The Qurʾān is understood to have been revealed piece by piece over the period of some twenty-two years of Muḥammad's preaching career. Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) have thus approached the Qurʾān through the framework of the life of Muḥammad, for example speaking of it as having different characteristics during the time Muḥammad was in Medina (q.v.) as compared to when he was in Mecca (q.v.). They also maintained that pieces of it were revealed in response to, or as reflections of, certain situations in the life of Muḥammad. Both the structure and the contents of the Qurʾān provided evidence to them of these conceptions (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN). The apparent conflict between these ideas and the normative Muslim notion that the Qurʾān is the eternal word of God (q.v.; see also ETERNITY) seems to have occasionally surfaced; it is found both as a motif of argument between those who professed the Qurʾān's eternality and those who supported the opposing doctrine of the Qurʾān as the created word of God (see CREATEDNESS OF THE QURʾĀN) and as a topos of inter-religious polemic. Ultimately, however, any conflict was resolved by the dogmatic assertion that there is no conflict and that God always acts in the best interests of his creation (q.v.). For example, the fifth/eleventh century author of *Kitāb al-mabānī li-nazm al-maʿānī* (40) simply states that the Qurʾān was revealed according to the needs of the situation but that the arrangement of the text as it stands today mirrors that found in the eternal "heavenly tablet" (on the author of this text, see Gilliot, Sciences coraniques, 57-60; see PRESERVED TABLET; BOOK; HEAVENLY BOOK).

Working on the basis that the text was revealed in certain circumstances, it was apparent to the exegetes, then, that the correct interpretation of a given verse could depend upon knowing those circumstances. This led to the identification and compilation of exegetical reports which talked about the revelation of a given verse; knowledge of those reports was asserted to be the key to all interpretation (although such claims are central to each and every approach to qurʾānic exegesis). Historically, it is not certain how the compilation of the *asbāb al-nuzūl* occurred. The reports may have originated within the context of the life story of Muḥammad

(see SĪRA AND THE QUR'ĀN); they may have been found among the stock of material used by the popular preachers in early Islam (see TEACHING AND PREACHING THE QUR'ĀN); they may have been a part of the documentation used by legal scholars to understand how a qur'ānic law was to be applied (see LAW AND THE QUR'ĀN); or they may have been a form of exegesis in and by themselves.

Fundamentally, as the material has been discussed and collected by Muslim exegetes, the *sabab* is differentiated by its literary character. A *sabab* is a report in which something or someone is characterized as having been involved in some way in the life of Muḥammad. The report will describe an event or situation and will state, "then the verse was revealed" *(fa-nazalat al-āya),* connecting a particular qur'ānic text to the situation. A typical example is as follows:

"They are asking you about wine [q.v.] and *maysir* [a type of gambling, q.v.]. Say: in them both is great sin [see SIN, MAJOR AND MINOR] and uses for the people, but their sin is greater than their use." This verse [Q 2:219] was revealed about ʿUmar b. al-Khaṭṭāb and Muʿādh b. Jabl and a group from the Anṣār ["Helpers"; see EMIGRANTS AND HELPERS] who came to the Prophet and said, "Give us a ruling about wine and *maysir* for the two of them are destroyers of the intellect [q.v.] and plunderers of property [q.v.]." So God revealed this verse (Wāḥidī, *Asbāb,* 64-5).

Such reports were an integral part of all exegesis, although in the early centuries the material was not separated out in any way — neither by technical terminology nor by literary form. The book of Abū l-Ḥasan ʿAlī b. Aḥmad al-Wāḥidī al-Nīsābūrī (d. 468/1075), *Kitāb Asbāb nuzūl al-Qur'ān,* collected together as many reports as the author could find, listing material relevant to sections of eighty-five sūras of the Qur'ān. This work is both the most famous of the genre devoted to gathering such material, and also one of the earliest (it is, at the very least, the work which firmly established the genre). Al-Wāḥidī's work may be seen as emerging at the time of the rise of traditionalism within Islamic learning in general, a period in which the authority of tradition, rather than reason, was judged to be supreme (thus making sense of al-Wāḥidī's explicit and polemical claim that the *asbāb* are the key to exegesis).

Several other works exist from the centuries after al-Wāḥidī which attempt either to gather more material or to refine the criteria used for collection. Among the works are those of al-ʿIrāqī (d. 567/1171), who attempts to distinguish the occasions of revelation from the stories of the prophets (*qiṣaṣ al-anbiyā'*, see PROPHETS AND PROPHETHOOD), two genres which al-Wāḥidī often conflates; al-Jaʿbarī (d. 732/1333), whose work provides an edited version of al-Wāḥidī's text; Ibn Ḥajar (d. 852/1449), who provides a compendium of reports from classical *tafsīr* sources; al-Suyūṭī (d. 911/1505), who both supplements al-Wāḥidī's sources (and thus has material on sections of 102 sūras) and eliminates reports he considers inappropriate; and al-Ujhūrī (d. 1190/1776), whose work gathers together material from various of the "sciences" *(ʿulūm)* of the Qur'ān including the "occasions of revelation" (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). Other anonymous or unidentified works exist in the manuscript libraries of the world and a few modern works have been published, but overall the inventory of texts devoted to the topic is fairly slim as compared to such other exegetical genres as abrogation (q.v.), *al-nāsikh wa-l-mansūkh*.

Within general exegetical texts, the *asbāb al-nuzūl* reports are usually integrated and

not distinguished from other material. When they are cited, they perform a number of exegetical functions. Central to these functions is the reports' capacity to embed lexical glosses, resolve literary figures, support variant readings (see READINGS OF THE QURʾĀN), provide narrative expansion (see NARRATIVES) and clarify contextual definition for narrative and legal purposes.

Lexical glosses are easily incorporated in a story such that the wording of a qurʾānic verse is restated:

They said, "Oh Prophet of God, is charity given secretly better or charity given openly [see ALMSGIVING]?" So God revealed the verse [Q 2:271], "If you expose charity, it is still good. If you hide them and give them to the poor, that is better for you and will act as an atonement [q.v.] for you from your bad deeds" (Wāḥidī, *Asbāb,* 82; see EVIL DEEDS).

Here the qurʾānic *abdā (tubdū),* "expose," is glossed as *ʿalāniya,* "give openly," and *akhfā (tukhfū),* "hide," as *sirr,* "secretly." In other contexts, this type of glossing facilitates the restatement in literal language of the meaning of a qurʾānic metaphor (q.v.) or the provision of a word left out by ellipsis. Different reports can also be cited in order to support different readings of the text.

Narrative expansion seems to reflect the needs of the qurʾānic storyteller and his audience. Many of the *asbāb al-nuzūl* reports answer the questions of curious people who will ask, "Who was it who said that?" or "Why did somebody do that?"

ʿAlī [see ʿALĪ B. ABĪ ṬĀLIB] had only four dirhams. He gave away one of the dirhams at night, one at day, one secretly and one publicly. The Prophet said to him, "What has made you do this?" He said, "I did it so that I would be worthy of God who has made a promise to me." The Prophet said to him, "Now that is yours." So God revealed the verse [Q 2:274], "Those who give their possessions at night and at day, secretly and in public, they will have their reward with their lord" (Wāḥidī, *Asbāb,* 86; see REWARD AND PUNISHMENT).

Such a report clarifies who it was who did the action with those specific characteristics (why are only these four types of giving specified, it may have been wondered). Noticeable in this particular instance are the possibilities for ideological argumentation on the basis of the *asbāb al-nuzūl* reports. For example, this story would support the Shīʿīs (see SHĪʿISM AND THE QURʾĀN) and their claims about ʿAlī.

While reports may well have additional implications in the legal realm, the impetus and relevance of the reports seem to lie primarily elsewhere. For example, when the Qurʾān proclaims in Q 2:189, "It is not piety to enter houses from their rear," it is difficult for the curious listener not to wonder just who it was who would have done such a thing (it was the pagan Arabs, although the circumstances under which they would have done so have varying interpretations; see PRE-ISLAMIC ARABIA AND THE QURʾĀN). Likewise, when the Qurʾān states in Q 2:116, "They say, 'God has taken a son; glory be to him!'" a *sabab* can answer the question of who "they" were who said such a thing (it was the Jews of Medina and the Christians of Najrān [q.v.], according to Wāḥidī, *Asbāb,* 36; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY).

Delimitation of the context of a given verse can in itself serve a number of functions. Sometimes, it is necessary to be able to assert the limits to a qurʾānic pericope in order to avoid misinterpretation of the following verses. In that sense, the *asbāb* function as indicating paragraphs within the

otherwise unpunctuated text. This can prevent interpretations that could have serious legal implications. One such example may be seen in Q 2:114-5. The first verse deals with the destruction of mosques (in some *asbāb* reports this is specified as the Christians destroying the temple in Jerusalem [q.v.], Wāḥidī, *Asbāb,* 33; see MOSQUE); verse 115 then goes on to say "To God belongs the east and the west; wherever you turn, the face of God (q.v.) is there." There are some interpreters, then, who suggest that these two verses go together; that is, Q 2:115 refers to situations in which a mosque has been destroyed and thus the *qibla* (q.v.) cannot be determined (Qurṭubī, *Jāmiʿ,* ii, 83). A great majority of reports, however, separate the context of the two verses and, for the latter, speak of a situation in which some people at the time of Muḥammad were traveling (either with or without the Prophet; the story varies; see JOURNEY; TRIPS AND VOYAGES) and they stopped for prayer (q.v.). Because it was cloudy, dark or foggy they could not determine the *qibla*. Everyone prayed in the direction that they thought best but in the morning the error became clear. Then this verse was revealed. While this situation may be thought to follow the same principle as that of the destroyed mosque in Q 2:114, the report makes it clear that the ruling of verse 115 is not limited by the specific situation of verse 114 and has more general applicability (see Suyūṭī, *Lubāb,* 26-7, for one example). As is characteristic of the *asbāb al-nuzūl* literature, however, another series of reports is found which provides a radically different situation for the revelation of Q 2:115, separating it even further from verse 114. These reports all relate to the permission given to perform the supererogatory prayer while riding a camel regardless of the direction being faced (see Wāḥidī, *Asbāb,* 35, for one example).

Overall, but perhaps best understood as their primary function, the *asbāb al-nuzūl* reports serve to "historicize" the Qurʾān; they ground the text firmly in the life of Muḥammad and make an otherwise context-vague text very much a part of the seventh century Ḥijāz (see HISTORY AND THE QURʾĀN; CHRONOLOGY AND THE QURʾĀN). Regardless of what the report might say in terms of the details, this specificity always underlies the story, regardless of how trivial or how complex it may be. Muslim exegetes express this sense by pointing out the way in which the material demonstrates that the Qurʾān really is revelation: the *sabab* is the proof of God's concern for his creation. Al-Suyūṭī (*Itqān,* i, 83) explains this by saying that the *sabab* is the "rope" — that being one of the root senses of the word *sabab* itself — by which human contemplation of the Qurʾān may ascend to the highest levels even while dealing with the mundane aspects of the text.

Ocean see WATER

Odors and Smells

Aromas — both pleasant and unpleasant — detected with the olfactory sense. In contrast to the many references to the senses of hearing and sight (see SEEING AND HEARING), smell is rarely mentioned in the Qurʾān. Two words from the root *r-w-ḥ* are used in this respect: *rīḥ* and *rayḥān*. The former appears nearly always with the meaning of "wind" (see AIR AND WIND), but on one occasion (Q 12:94) it is said that Joseph's (q.v.) father (see JACOB) perceives his son's scent *(rīḥ)* in the shirt brought to him by his brothers (see BROTHER AND BROTHERHOOD). As for the latter word, it occurs in Q 55:12, in the context of a description of God's creation (q.v.): "Fruits, and palm-trees (see DATE PALM) with sheaths, and grain in the blade (see GRASSES), and fragrant herbs *(rayḥān)*" (Q 55:11-2; see AGRICULTURE AND VEGETATION). The sweet odor which characterizes herbs such as basil-royal, common sweet basil or ocimum basilicum (see Lane, s.v. *rayḥān*) is considered here as one of God's gifts to humankind (see BLESSING). Herbal fragrances are, however, absent from the abundant references to heavenly gardens (see GARDEN), where other and more precious odors can be found.

Although the Qurʾān does not mention general Arabic terms for perfumes, such as *ṭīb* or *ʿiṭr,* it does mention that, in paradise (q.v.), "the pious shall drink of a cup (see CUPS AND VESSELS) whose mixture is camphor" (q.v.; Q 76:5) and "they are given to drink of a wine (q.v.) sealed whose seal is musk" (Q 83:25-6; see INTOXICANTS). In the ḥadīth literature (see ḤADĪTH AND THE QURʾĀN), camphor, which is distilled from the camphor tree, is repeatedly referred to in the context of funeral ceremonies (see DEATH AND THE DEAD). In the biographical texts about Zaynab, the daughter of the Prophet (see FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE), Muḥammad, upon her death, is depicted as having ordered Zaynab's corpse washed. In these accounts, the body was afterwards perfumed with camphor (cf. Bukhārī, *Ṣaḥīḥ,* i, 316-7). In Islamic culture, musk, a perfume derived from animal products, has been traditionally considered as the best and most expensive of all perfumes; in the ḥadīth literature, it is used to perfume the Prophet's head. The ḥadīth literature also describes the sand of the rivers in paradise (see WATER OF PARADISE) as being made of musk. Both camphor and musk, which were not known in classical antiquity, are of east Asian origins. Shortly before the advent of Islam they are documented in the Sasanid empire and in Byzantium (see BYZANTINES). Musk was mentioned in pre-Islamic Arabic poetry (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; POETRY AND POETS), as is attested in the poems by Imruʾ al-Qays. The presence of musk in the Qurʾān was to give this perfume a heightened status among other fragrances, enhancing its aromatic qualities with an added religious prestige. Musk and

camphor were also used for pharmaceutical recipes and, in the luxurious and cosmopolitan kitchen of the ʿAbbāsid caliphs, for cookery (see MEDICINE AND THE QURʾĀN; FOOD AND DRINK).

On a more common level of consumption, good smell *(al-rīḥ al-ṭayyib)* could be obtained through other and less expensive perfumes. There was a general appreciation of the well-being that is derived from good smells and odors. Well-known traditions speak of the love of the Prophet for three things in this world: prayer (q.v.), women (see WOMEN AND THE QURʾĀN) and perfume. According to ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR), the Prophet was preceded by his scent and his favorite perfumes were musk and amber. Perfuming the body was, according to the ḥadīth, a part of bodily hygiene (see CLEANLINESS AND ABLUTION), which includes bathing, the use of a toothbrush, hair care, etc. While perfumes were accepted for both women and men, many traditions discourage the former from using them both within and outside the home, except when it is for the pleasure of their husbands.

Offspring

see FAMILY; GENERATIONS

Oft-Repeated

One of the names of the Qurʾān (q.v.) or of parts of it. The Arabic form *mathānī* is the plural of *mathnā* or *mathnāt,* and is a derivative of the root *th-n-y,* which signifies repetition, duplication. In Q 39:23, the form *mathānī* occurs within the following description of the Qurʾān: "God has sent down the fairest discourse as a book (q.v.), similar in its oft-repeated *(mutashābihan mathāniya),* whereat shiver the skins of those who fear (q.v.) their lord (q.v.)…."

The most prevalent explanation is that the scripture has been called *mathānī* because its various themes — religious duties, laws and regulations (i.e. Ṭabarī, *Tafsīr,* i, 103; see LAW AND THE QURʾĀN; BOUNDARIES AND PRECEPTS), stories of previous prophets (i.e. Suyūṭī, *Itqān,* i, 184; see PROPHETS AND PROPHETHOOD; NARRATIVES), allusions to the reward awaiting the righteous in paradise (q.v.) and of the punishment of the sinners in hell (see HELL AND HELLFIRE; REWARD AND PUNISHMENT; SIN, MAJOR AND MINOR) — are repeated *(yuthannā)* throughout its chapters. Less frequently encountered explanations are that the Qurʾān is recited repeatedly and the audience never finds it boring (see RECITATION OF THE QURʾĀN). Another explanation takes *mathānī* as denoting the praise *(thanāʾ)* of God that is reiterated in the Qurʾān (see GLORIFICATION OF GOD; LAUDATION).

The term *mathānī* does not, however, always denote the entire Qurʾān: it is also explained as standing only for certain parts of scripture. This meaning is seen in the explanation that the term stands for the suffixes of the verses (Māwardī, *Nukat,* v, 123), which would be an allusion to the repetitive rhymed form of the verses (q.v.; see also LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN).

More prevalent is the identification of the term with qurʾānic chapters or groups of chapters. This is the case in traditions stating that *mathānī* are the sūras (q.v.) that come next *(thanā)* in terms of length to the sūras containing at least a hundred verses. Twenty to twenty-six sūras are included in this group.

The perception of the term *mathānī* as standing for some chapters of the Qurʾān underlies also the interpretations of Q 15:87, in which God says to the qurʾānic Prophet: "We have given you seven of the *mathānī* and the glorious Qurʾān." Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) have offered a variety of interpretations for the "seven of the *mathānī,*" most of which hold that seven *mathānī* out of the entire Qurʾān are meant. The closing phrase, "and the glorious Qurʾān," is explained as denoting the rest of the Qurʾān that has been given to the qurʾānic Prophet in addition to the seven *mathānī*.

The seven *mathānī* are defined in two major ways. First, the seven longest chapters of the Qurʾān. Muslim exegetes explain that they were named *mathānī* because of their repetitive treatment of various subjects, such as legal matters, stories, parables and admonitions (see WARNING). The second definition is the seven verses of the opening chapter (Q 1, Sūrat al-Fātiḥa; see FĀTIḤA) of the Qurʾān. Muslim exegetes explain that the verses of the Fātiḥa have been called *mathānī* because they are repeated *(tuthannā)* daily in every prayer (q.v.; cf. Ṭabarī, *Tafsīr,* i, 103). A different explanation is that the Fātiḥa was called *mathānī* because God gave it exclusively *(istathnāhā)* to the qurʾānic Prophet, and withheld it from all other prophets (see PROPHETS AND PROPHETHOOD). Yet another interpretation is that this sūra has been divided into two *(ithnān)* parts, one containing the praise of God and the other, the entreaty of his servants. Another explanation is that some words and phrases are repeated in it, etc. An interpretation appearing only in relatively late commentaries identifies the seven *mathānī* with the seven *ḥawāmīm,* i.e. the sūras opening with the letters *ḥāʾ* and *mīm* (see MYSTERIOUS LETTERS).

There is also an interpretation that places the seven *mathānī* outside the scope of the Qurʾān, and is included in a tradition of Jaʿfar al-Ṣādiq (d. 148/765), the sixth Shīʿī imām (q.v.; see also SHĪʿISM AND THE QURʾĀN). He reportedly said that the seven *mathānī* are seven exclusive virtues *(karāmāt)* by which God has honored his Prophet: (1) righteousness, (2) prophethood, (3) mercy (q.v.), (4) compassion, (5) love (see LOVE AND AFFECTION), (6) friendship (see FRIENDS AND FRIENDSHIP), (7) sechina (q.v.; Māwardī, *Nukat,* iii, 171). Other Shīʿī traditions identify the seven *mathānī* with seven Shīʿī imāms (ʿAyyāshī, *Tafsīr,* ii, 269-70).

Nevertheless, some exegetes held that the "seven of the *mathānī*" and the "glorious Qurʾān" are identical, being merely different designations of the one and the same object that was given to the qurʾānic Prophet. The clause "and the glorious Qurʾān" was explained as providing additional praise to the object described as "seven of the *mathānī*." From the syntactical point of view it was explained as a shortened or condensed form signifying: "… and [they, i.e. the seven *mathānī,* are] the glorious Qurʾān."

The object designated as "the seven *mathānī*" and as "the glorious Qurʾān" is explained in a variety of ways. Some exegetes identify it again with the Fātiḥa, in which case "the glorious Qurʾān" features as a name of this particular chapter, the seven verses of which constitute the seven *mathānī*. Yet other traditions say that the

object named "the seven *mathānī*" and "the glorious Qurʾān" is actually the entire Qurʾān. In this case the seven *mathānī* are taken as signifying seven repetitive aspects of the Qurʾān's contents: (1) commands (see COMMANDMENTS), (2) prohibitions (see FORBIDDEN), (3) good tidings (see GOOD NEWS), (4) warnings (see WARNER), (5) parables (q.v.), (6) divine mercy, (7) stories of past generations (q.v.).

In accordance with the notion that the seven *mathānī* are the entire Qurʾān, some exegetes say that their number denotes the seven *asbāʿ*, i.e. the seven parts into which the Qurʾān is divided, or its seven volumes.

Opposition to Muḥammad

Resistance to the political and religious authority (q.v.) of Muḥammad. The Qurʾān is very much a document that shows the struggle of a new faith (q.v.) coming into existence, and the career of Muḥammad is very much the story of a man who eventually defeated all odds when shaping the first community of believers (see COMMUNITY AND SOCIETY IN THE QURʾĀN). Additionally, the qurʾānic concept of prophecy (see PROPHETS AND PROPHETHOOD) is profoundly marked by the experience of opposition (see Q 25:31; 40:5). The fact of being opposed both theologically and politically (see POLITICS AND THE QURʾĀN; THEOLOGY AND THE QURʾĀN) has marked Islam from its beginnings, and the successful effort to overcome opposition was an important factor in its development which led to a self-confident religion of great appeal to possible converts.

Theological opposition was leveled against the tenets of the new faith as preached by the Prophet; political opposition was directed first against the social and economic consequences of nascent Islam in Muḥammad's hometown (see MECCA), then against the claim to hegemony of the quickly expanding Muslim community in Medina (q.v.). The most serious theological opposition came from Jews (see JEWS AND JUDAISM), while the Meccan pagans were hardly able, as far as we know, to counter Muḥammad's monotheistic vision (see below; see POLYTHEISM AND ATHEISM; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). The Christians (see CHRISTIANS AND CHRISTIANITY), who are generally portrayed in a more favorable light in the Islamic sources, appear less eager to enter into discussions with the Prophet (see DEBATE AND DISPUTATION)

and are more frequently reported as having been persuaded by the new message. Active political and military opposition against Muḥammad and his followers was primarily the work of the Meccans (see EXPEDITIONS AND BATTLES; FIGHTING); the Jewish tribes in Medina and Khaybar opposed the Prophet without resorting to open aggression (although not a few sources tend to stress that the Jews either provoked the Muslims or took active measures against them). Even Muḥammad's own family (see FAMILY OF THE PROPHET) were guilty of opposing him (cf. Q 111:1-5, and commentaries on this sūra).

Muḥammad, who acted both as prophet and founder of a new religion and as a political and military leader of his supporters, was, naturally, the main target of the opponents of early Islam, no matter how their hostile intentions were defined. With the concerns of faith and the duties of the believers inextricably linked in his person, opposing the Prophet meant opposing God, or, put differently: "Whosoever obeys the messenger, thereby obeys God" (Q 4:80; see also Q 4:152; 58:5; 59:7). As a result of the opposition that arose against his person, Muḥammad suffered, during his years in Mecca, from humiliation, derision (see MOCKERY) and from being treated either like a madman (see INSANITY) or an outcast. Some people would even fling pebbles at him while he was praying and others kicked stones at him so that he had to run away with bleeding feet. During the Medinan period (see CHRONOLOGY AND THE QUR'ĀN), he had to survive various attempts at his life, be it the poison of a Jewish woman or the drawn sword of a bedouin (q.v.; it is nevertheless difficult, as a perusal of the relevant sources shows, to link the specific events as reported in Islamic tradition and *sīra* literature with the rather vague qur'ānic allusions to such attempts: Q 5:11; 8:30, 71; 16:127; 48:20; see SĪRA AND THE QUR'ĀN).

Muḥammad's reaction against his opponents varied in time and according to the possibilities within his reach. In the Meccan period, he was satisfied — due to the lack of effective means and a large group of followers — to merely censure the activities of his opponents and to turn his back on them in patience and to leave their punishment to God (see TRUST AND PATIENCE; PUNISHMENT STORIES). This attitude becomes obvious from numerous qur'ānic verses that are traditionally reckoned to belong to Meccan sūras (e.g. Q 6:66-70; 10:108; 13:43; 15:89-99; 16:125-8, etc.). Also, the so-called "punishment stories" (*Strafl egenden;* see the list in Watt-Bell, *Introduction,* 132) were to provide the Prophet with fitting examples of what had happened in earlier times and in analogous situations. Once in Medina, however, and with military means at his disposal, the Prophet did not limit himself anymore to simply accusing and warning (q.v.) his opponents, but called his followers to actively fight for the cause of Islam (Q 2:190-3, 216; 3:146; 4:75 f., 84, 89 f.; 8:39, 65; 9:13 f., 29, 123; 47:4; 61:4) and was himself ordered to be the first in line (Q 9:73; see JIHĀD). The cause of Islam was thus no longer the cause of God alone, and Muḥammad exhorted the members of his community: "O believers! Fight the unbelievers who are in your vicinity and let them find you ruthless! And know that God supports the godfearing" (Q 9:123; see BELIEF AND UNBELIEF) — a sentiment very much in contrast to Muḥammad's passive stance during his former stay in Mecca. The transfer of power from God's hands into those of humans, that is, the switch from relying on eschatological punishment to settling matters in this world, seems complete (see ESCHATOLOGY).

As mentioned above, the two main groups of opponents during the career of Muḥammad were the Meccan pagans and the Jews. Both were eventually subdued by more or less violent means (see below). The Christians — much fewer in number than the Arabian Jews — never posed the same threat to the Prophet's community, and the encounter with the Christian population in northern Arabia (see PRE-ISLAMIC ARABIA AND THE QURʾĀN) and southern Syria (q.v.) in the last years of Muḥammad's lifetime generally did not lead to bellicose events; any conflicts were settled peacefully, e.g. by contracts (see CONTRACTS AND ALLIANCES). The same may be said of the bedouin tribes of the Ḥijāz (*al-aʿrāb,* see ARABS), who often opposed the Prophet's efforts to rally them to his cause (e.g. Q 48:11, 16) and thus, for a long time, were not an integral part of the nascent Islamic community (see Q 9:97-9). Also, tensions among the inhabitants of Medina had led to the formation of an, as it were, intra-Islamic group of opponents (a considerable part of whom were Jewish converts) known as "the hypocrites" (*al-munāfiqūn,* see HYPOCRITES AND HYPOCRISY; MOSQUE OF THE DISSENSION). Even though they feature prominently in the Medinan sūras (e.g. Q 59:11 f.; 63:1-8, but also 9:74, 106), their role can only be reconstructed from the extant sources with difficulty; nevertheless, their influence on the course of events in Medina as well as their potentially detrimental activities do not appear very threatening, at least when compared to those of the Meccans and the Jews.

The Meccan pagans

From the beginning of his prophetic mission, Muḥammad had to cope with the fierce opposition of many of his Meccan compatriots. Curiously, the qurʾānic data suggest that their opposition was primarily directed against elements of monotheist belief (Q 6:25), such as the resuscitation of the dead (see RESURRECTION), the day of judgment (see LAST JUDGMENT) or the denial of the existence of Arabian deities. In Islamic tradition, however, the pagans hardly figure as opponents on religious grounds. The few pagan "priests" (*kuhhān,* see SOOTHSAYERS) who appear in *sīra* literature and related genres are not depicted as Muḥammad's opponents but rather foretell or announce his prophethood. The Meccan leaders, on the other hand, are shown as being driven by the interest to preserve the status quo of the Meccan hierarchy, as well as by economic considerations (in order to save their sources of income which depended on pagan festivities); this is in accordance with the Qurʾān, which often censures their material greed (e.g. Q 89:17-20; 104:1-3; see WEALTH; MARKETS; SELLING AND BUYING; CARAVAN). When speaking, however, about the Meccan period as represented in the Qurʾān, W.M. Watt rightly observes: "There are virtually no factual details about the persons who accepted Islam, and only a modicum of general information about the opponents. Most of this last is about the verbal arguments between these and Muḥammad" (Watt, *Mecca,* 81).

What the Qurʾān does, in fact, convey is the sense of oppression Muḥammad must have felt in Mecca, coupled with an inability to counteract such adversities and even a fear of giving in to the pagans (Q 17:73 f.; see SATANIC VERSES). Over the years, Muḥammad's followers grew in number; with this, the opposition of the Meccans became less restrained. Some Muslims resorted to leaving their hometown and went into exile in Ethiopia (see ABYSSINIA). The Prophet himself first tried to gain a foothold in nearby Ṭāʾif but, when this had failed, he reached an agreement with the people of Medina at ʿAqaba. Thus the emigration (q.v.) of the Prophet to Medina

was, initially, the outcome of the Meccans' opposition (Q 47:13). Many of his followers accompanied Muḥammad, and the Qurʾān alludes in a number of verses not only to the general hardships endured by the early Muslims (Q 2:155, 3:120, 3:186, 60:2), but also to the painful experience of losing one's home and possessions: "And those that emigrated in God's cause (see PATH OR WAY) after they were wronged, we shall surely lodge them in this world in a goodly lodging; and the wage of the world to come is greater, did they but know" (Q 16:41; see also Q 4:100 f., 16:110, 22:39, 60:8 f.).

The Medinan period brought about the change from putting up with pagan opposition to striking back. Muslims and Meccans met each other in various skirmishes and bigger clashes, several of which are described at length in the Qurʾān, although even among the "orthodox" non-qurʾānic sources, there is no complete unanimity — with the exception of Q 3:123 (battle of Badr), Q 33:20-5 (War of the Ditch; see PEOPLE OF THE DITCH; EXPEDITIONS AND BATTLES) and Q 9:25 f. (battle of Ḥunayn [q.v.]) — as to which verses refer to which event. The early *tafsīr* works in particular, e.g. those by Mujāhid (d. 104/722) and Muqātil (d. 150/767), often yield accounts different from the later accepted versions. Up to the decisive treaty of al-Ḥudaybiya, traditionally associated with Q 48 (Sūrat al-Fatḥ, "Victory"), however, the Meccan opposition had gradually lost much of its force, and the Muslim conquest of Mecca largely put an end to the Meccan opposition (Q 110, Sūrat al-Naṣr, "Succor").

The Arabian Jews

Muḥammad encountered the opposition of Jews while still living in Mecca, although non-verbal conflict broke out only when he was in Medina. Aside from the pagans, Muḥammad appealed particularly to the Jews (Q 2:40-8), despite knowing that their aversion was the greatest: "That because God has sent down the book (q.v.) with the truth; and those that differ regarding the book, are showing strong enmity [?]" (Q 2:176; cf. Paret, *Mohammad*, 28; see PEOPLE OF THE BOOK). And although the Qurʾān repeatedly stresses that putting in doubt elements of faith and resorting to dispute is merely a general human trait (Q 18:54; 22:3, 8), the Jews — both in the Qurʾān and the Islamic tradition — are portrayed as having been the most tenacious antagonists of Muḥammad (although the Christians, too, had a share in that; cf. Q 2:139; 3:65). In *sīra* literature, already in the pivotal account by Ibn Isḥāq (d. 150/767), we normally find one or more lengthy chapters that deal with Muḥammad's theological discussions with the Jews, together with indications of which qurʾānic verses were either the subject or the result of those disputes; such discussions, both with Jews and other opponents, are reflected variously in the Qurʾān, in particular in the verses which start with the phrase "They question you about…" (e.g. Q 2:217, 219; 5:4; 7:187; 17:85; 18:83, etc.). Inevitably, the Prophet is depicted as defeating the arguments of his opponents, who then take to cheating (q.v.) or will not argue on the accurate record of their revealed scriptures (Q 2:75; see also 2:89-91, 101; see FORGERY).

In Medina, when Muḥammad distanced himself from pagan opposition, the Jewish opposition soon became a major preoccupation. After initial and intense follow-ups to the disputes in Mecca, between the years 2/624 and 5/627 the Muslim community got rid of the three major Jewish tribes: they expelled the Jewish Banū Qaynuqāʿ and Banū l-Naḍīr from Medina, while the Banū Qurayẓa were killed and enslaved (see NAḌĪR, BANŪ AL-; QAYNUQĀʿ;

QURAYẒA). The qurʾānic verses traditionally associated with these events by the Muslim scholars are Q 33:26 f. and Q 59:1-15. Moreover, during the same period some leaders of the Jewish opposition, notably Kaʿb b. al-Ashraf, were assassinated either in Medina or Khaybar; the latter town was conquered in 7/628. In the sources it remains unclear, however, whether at that point there were no Jews left in the Ḥijāz or whether some Jewish settlements (e.g. Fadak) persisted.

Finally, it must be remarked that a reconstruction of the events relating to the opposition to Muḥammad and their relevant chronology relies heavily on the information provided in the vast Islamic tradition, as well as on the commonly accepted chronology of qurʾānic verses. Many studies in recent years have shown that the historical value of this tradition cannot always be trusted (see COLLECTION OF THE QURʾĀN; ḤADĪTH AND THE QURʾĀN; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). On the other hand, by no means should Islamic tradition be considered irrelevant, as it might be utilized either in tracing the ideological differences within early Islam or in unearthing accounts which do not fit the "canonical" Islamic view (as developed from the late second/eighth century onwards); it could thus deepen or change our future understanding of early Islamic history.

Oppressed on Earth, The

Those with no political or other power; the downtrodden. Several verses of the Qurʾān refer to those who are "weak" (*ḍaʿīf,* pl. *ḍuʿafāʾ,* and other derivatives of *ḍ-ʿ-f;* Q 2:266, 282; 4:9; 9:91; 11:91; 14:21; 40:47) or those who are "deemed or made weak" (*mustaḍʿaf,* pl. *mustaḍʿafūn,* as well as the tenth verbal form of *ḍ-ʿ-f;* Q 4:75, 97-8;

7:75; 8:26; 28:4-5; 34:31-3). R.B. Serjeant (The *ḍaʿīf,* 33) has argued that the qurʾānic term *ḍaʿīf* does not simply mean "weak," but rather usually refers to "persons without the capacity to fight for and defend themselves" (see FIGHTING; OPPRESSION). By extension, it refers to the peasants and shepherds (see POVERTY AND THE POOR), to women (see WOMEN AND THE QURʾĀN) and children (q.v.), to clients (see CLIENTS AND CLIENTAGE) and slaves (see SLAVES AND SLAVERY), and to all those who do not bear arms and are dependent on others for their protection. The term *mustaḍʿaf* often has connotations similar or identical to those of the *ḍaʿīf* (ibid., 36) but especially those of degradation and debasement and often also of persecution. Q 28:4-6 describes Pharaoh's (q.v.) persecution when "he had exalted himself in the land and had divided its inhabitants into sects (*shiyaʿan,* see SHĪʿA), abasing *(yastaḍʿifu)* one party of them, slaughtering their sons and sparing their women, for he was of the workers of corruption (q.v.). Yet we desired to be gracious to those that were abased in the land, and to make them leaders (*aʾimmatan,* see KINGS AND RULERS; IMĀM), and make them the inheritors, and to establish them in the land." A tradition in al-Ṭabarī (d. 310/923; *Taʾrīkh,* i, 1563 f.; also Serjeant, The *ḍaʿīf,* 34 f.) characterizes the earliest followers of Muḥammad as "the weak *(al-ḍuʿafāʾ),* the poor, the young, and women." In Q 8:26, in what is often understood by the exegetes to refer to the condition of the earliest Muslims in Mecca (q.v.) before the migration (see EMIGRATION) to Medina (q.v.), God reminds the believers of God's favor on them at a time "when you were few and abased in the land *(mustaḍʿafūna fī l-arḍ)*… he gave you refuge and confirmed you with his help." In Q 4:75, the believers are reproached for not fighting "in the way of God (see PATH OR WAY), and for the men, women, and children who, being abased, say, 'Our lord, bring us forth from this city (q.v.) whose people are evildoers *(ẓālim)*."

Those who are thus abased or oppressed are expected to migrate from the land where they have been persecuted. To have the ability to migrate from such a land and yet not do so is enough to imperil one's salvation (q.v.), as the Qurʾān's strong admonition of those who falsely claim the status of the *mustaḍʿafān* makes clear (Q 4:97-9). This admonition refers, according to many exegetes (see EXEGESIS OF THE QURʾĀN, CLASSICAL AND MEDIEVAL), to those people in Mecca who had converted to Islam but had not migrated to Medina even though they had the ability to do so. Many of them were forced to participate in the battle of Badr (q.v.) on the side of the Meccans and against the Muslims of Medina (Ṭabarī, *Tafsīr,* ix, 100-12). The status of those killed while fighting on the side of the unbelievers, or those who died while still in Mecca was held by many exegetes to be the same as that of the unbelievers themselves, even though they claimed to have been coerced (cf. ibid., ix, 102 [no. 10259], 104 f. [no. 10263]; see BELIEF AND UNBELIEF; HYPOCRITES AND HYPOCRISY). Those, however, who were entirely lacking in any means to migrate — and who were, therefore, genuinely powerless — were excused. The famous scholar and Qurʾān exegete Ibn ʿAbbās (d. 67-8/686-8) claimed, together with his mother, to be among such *mustaḍʿafūn* in Mecca (Ṭabarī, *Tafsīr,* ix, 106 f.), though the exegetes found it more difficult to extend the same justification to his father, al-ʿAbbās — the uncle of the Prophet (see FAMILY OF THE PROPHET) and the progenitor of the ʿAbbāsid dynasty — who had fought on the side of the pagan Meccans under what he reportedly claimed were circumstances

of coercion (cf. ibid., ix, 106, no. 10265).

The *mustaḍʿafūn* in the Qurʾān include believers as well as unbelievers. Though their status as *mustaḍʿafūn* is defined by their dependence on others and/or by their lowly and persecuted condition in society, the Qurʾān pointedly notes that each individual bears sole responsibility for his or her moral conduct and is to be held accountable for it (see ETHICS AND THE QURʾĀN; FREEDOM AND PREDESTINATION; on children as *mustaḍʿafūn* in the sense of not bearing such responsibility, however, cf. van Ess, *TG,* i, 277). To argue, like those of the *ḍuʿafāʾ/mustaḍʿafūn* who are consigned to hell (see HELL AND HELLFIRE), that they had merely followed their leaders in error (q.v.) would be as futile as to call upon the latter for any help on or after the day of judgment (cf. Q 14:21; 34:31-3; 40:47-8; see LAST JUDGMENT; INTERCESSION).

Many modern Muslims have seen in God's promise to establish the *mustaḍʿafūn* on earth, and to make them its leaders, a qurʾānic sanction for revolutionary activism (see REBELLION). Franz Fanon's *The wretched of the earth* was translated by ʿAlī Sharīʿatī in the early 1960s as *Mostaḍẓʿafīn-i zamīn,* thus contributing to the social revolutionary connotations of this qurʾānic term, which now came to be understood as "the oppressed" and the disinherited in the sense, primarily, of being economically exploited (see ECONOMICS). Ayatollah Khomeini's speeches before and immediately after the Iranian revolution of 1979 were laced with references to the *mustaḍʿafūn* in this sense, and he often spoke of them as the main supporters of the revolution and thus as the people deserving to be its principal beneficiaries. A "Mustaḍʿafūn Foundation" *(bunyād-i mustaḍʿafīn)* was established in 1979 (as the successor to the powerful Pahlavī Foundation) to appropriate the properties belonging to those associated with the overthrown regime and to redistribute them among the poor; and the *mustaḍʿafūn* were prominent among those mobilized for participation in the Iran-Iraq war (1980-88). E. Abrahamian (*Khomeinism,* 52) has argued, however, that after the revolution, Khomeini came to moderate considerably his earlier rhetoric about a class struggle between the oppressed and their wealthy exploiters, and spoke increasingly of the need for harmonious ties between the middle and the lower classes; the term *mustaḍʿafūn* now "became — like the term sans culottes in the French Revolution — a political label for the new regime's supporters and included wealthy bazaar merchants."

In the context of the struggle against apartheid in South Africa, qurʾānic references to the *mustaḍʿafūn* became the basis of an Islamic variant of "liberation theology," with the prophet Muḥammad and indeed all the other prophets being seen as having struggled on behalf of the oppressed and the exploited. Where earlier understandings of the qurʾānic references to the *mustaḍʿafūn* seem to suggest that people would be judged in the hereafter on the basis of their conduct (see RECORD OF HUMAN ACTIONS; ESCHATOLOGY), and irrespective of their social standing in the world, certain contemporary religious intellectuals in South Africa have argued that the solidarity of the oppressed transcends differences of faith, and that the Qurʾān comes down on the side of the *mustaḍʿafūn* even when they are not believers (Esack, *Qurʾān, liberation and pluralism,* 98-103 and passim; see also POLITICS AND THE QURʾĀN).

Oppression

Unjust or cruel exercise of authority or power. There is no single word in the Qur'ān that perfectly translates the term "oppression." An array of words, such as *baghy* (attested seven times), *qahr* (ten times), *ṭughyān* (nine times; cf. Izutsu, *Structure,* 140-2), *ʿudwān* (seven times; cf. Izutsu, *Structure,* 161-4), *istiḍʿāf* (five times) and the most frequently attested, *ẓulm* (ca. twenty times; cf. Izutsu, *Structure,* 152-61), all share an essential semantic aspect of this concept: i.e. exceeding the appropriate limits of behavior in dealing with others, while violating their essential human rights. The qur'ānic portrayal of the behavior of Pharaoh (q.v.) and his people, *al-mala',* conveys perfectly the image of the oppressive ruler and the oppressive class on the one hand, and the oppressed subjects on the other. Similar models are conveyed in all the qur'ānic stories of the prophets and their peoples (see NARRATIVES; PROPHETS AND PROPHETHOOD), such as those of the people of ʿĀd (q.v.) and Thamūd (q.v.), of Noah (q.v.), Lot (q.v.), Abraham (q.v.) and Jesus (q.v.), where people are categorized as either *mustakbirūn* (lit. "proud, arrogant"; see ARROGANCE; PRIDE; cf. Izutsu, *Structure,* 131-44 for a discussion of the various aspects of haughtiness) or *mustaḍʿafūn* ("downtrodden"; cf. Q 7:75, 137, 150; 14:21; 28:4; 34:31-3; 40:47; and others; see OPPRESSED ON EARTH, THE). The former always deny God's revelation (see REVELATION AND INSPIRATION) and persecute the prophets and their followers, who are the *mustaḍʿafūn*. This is also the case of the prophet Muḥammad with the people of Mecca (q.v.; Q 8:26; cf. 4:75; see OPPOSITION TO MUḤAMMAD). In all such cases, the earth (q.v.) will be inherited by the oppressed, God promises (Q 28:5).

But Pharaoh exceeded even the limits of denying the divine message and persecuting Moses (q.v.) and his followers when he claimed divinity and the exercise of divine authority on earth. His image in the Qur'ān is that of the tyrannical ruler par excellence (Q 79:17; cf. 22:24, 34), who causes corruption (q.v.; Q 28:5), misleads his people (Q 20:79; see ASTRAY; ERROR) claims to be god (Q 29:40; 28:38) and demands the absolute submission and unquestioned obedience (q.v.) of the people (cf. Q 40:29). His actions cause the division of the people into the following groups (*shiyaʿ,* sing. *shīʿa,* Q 28:4; see SHĪʿA): on the one hand are the aristocrats *(al-mala'),* who are the privileged and ostentatious *(al-mutrafūn)* and, accordingly, the arrogant oppressors *(al-mustakbirūn);* on the other are the *mustaḍʿafūn* or the oppressed, those who have lost power, been marginalized, despised and persecuted. It is understandable, then, why the Qur'ān uses the same word to denote God's attribute (see GOD AND HIS ATTRIBUTES) of supreme power (*al-qāhir,* see POWER AND IMPOTENCE) and to refer to Pharaoh's oppressiveness. When Pharaoh responds to the conviction of his *mala'* that he must act against the people of Moses, the Qur'ān states: "Their male children will we slay; [only] their females will we save alive; and we have over them irresistible power" (*qāhirūn,* Q 7:127). The connotation of *qahr* in this specific context is very close to "oppression." This qur'ānic passage, therefore, lends itself to an

argument that *qāhr* may most closely denote the concept "oppression." The verbal form *taqhar* is used by the Qurʾān in the context of advising the prophet Muḥammad and, as a matter of fact, all Muslims, not to mistreat orphans (q.v.; Q 93:9). When related to humans, the nominal form *qāhir* refers, then, to someone claiming to be God (who alone is *al-qāhir* and *al-qahhār*) who performs massive mistreatment, i.e. oppression against others. In modern times, the categorization of the enemy — be it America or Ṣaddām Ḥusayn, or the apartheid political regime of South Africa — as the "oppressor" came to be a very effective ideological weapon in sacralized struggle (see JIHĀD).

Oral Transmission

see READINGS OF THE QURʾĀN; ORALITY; ORALITY AND WRITING IN ARABIA; COLLECTION OF THE QURʾĀN

Orality

The quality of spoken, as opposed to written, communication. The Arabic Qurʾān emerged against the backdrop of a long history of oral poetic composition and recitation (see POETRY AND POETS; ORALITY AND WRITING IN ARABIA). It is a composite text consisting of oral recitations born in an oral culture of great refinement and long tradition. It is hard to over-emphasize the importance of oral poetry among the northern Arab tribal nomads (q.v.) of the pre-Islamic world (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; ARABS; BEDOUIN). Their major art form was the spoken word of poetry, and in particular their three-part ode, or *qaṣīda*. The recitative chanting of their poetry was their music and the highest expression of their eloquence. Every tribe had a poet who could compose and recite verses in praise of it or in denigration of its opponents. Perfection of oral poetic composition and recitation was something much admired and much desired. It was in this oral poetic milieu that the qurʾānic recitations arose and became a new standard of oral literary and religious excellence and beauty (el Tayib, Pre-Islamic poetry; Zwettler, *Oral tradition,* 3-88; see RECITATION OF THE QURʾĀN).

Although the Qurʾān has had a rich and central role in the history of Muslim piety and faith as "sacred book," it has always been preeminently an oral, not a written text — as strikingly so as any of the world's great religious scriptures except the Vedas. In the history of Islamic piety and practice, the role of the written scriptural text has always been secondary to the dominant tradition of oral transmission and aural presence of the recited text. The qurʾānic revelation (see REVELATION AND INSPIRATION) recognized by Islamic tradition as the first given to Muḥammad, Q 96, begins: "Recite *(iqraʾ)* in the name of your lord (q.v.) who created." This signals clearly that the revelations were from the outset meant to be oral repetitions of the revealed word of God himself (see WORD OF GOD; SPEECH). The Prophet is quoted in one ḥadīth (see ḤADĪTH AND THE QURʾĀN) as saying, "Embellish the recitation *(al-qurʾān)* with your voices, for the beautiful voice increases the beauty of the Qurʾān"

(al-Dārimī, *Sunan,* 23.33.14; cf. 13). This underscores the centrality of the oral and aesthetic dimensions of the Qurʾān in Muslim tradition. As Stanley Lane Poole put it, "from first to last the Koran is essentially a book to be heard, not read" (Zwemer, Translations, 82; although note that this judgment is anachronistic, in that there was no "book" of the Qurʾān until long after the early revelations to be recited were proclaimed by the Prophet; see MUṢḤAF; COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; BOOK; MANUSCRIPTS OF THE QURʾĀN). In Muslim tradition, the highly developed system of rules for proper recitation *(tajwīd)* "is believed to be the codification of the sound of the revelation as it was revealed to the Prophet.… Thus the sound itself has a divine source and significance, and, according to Muslim tradition, is significant to the meaning" (Nelson, *Art,* 14). The only way to understand the Qurʾān and its place in Muslim history and contemporary life is to grasp the centrality of its role as oral text *par excellence*.

There can be little argument that the scripture *(al-kitāb)* of Muslims has been functionally a "spoken book" — the divine "word" itself, the very discourse of God *ipsissima vox,* given to Muḥammad as "an Arabic recitation" (*qurʾān ʿarabiyy;* cf. i.e. Q 12:2; 20:113; see ARABIC LANGUAGE). This has lent immense importance to the Arabic text of the Qurʾān, its verbatim memorization, and its artful and reverent recitation — so much so that the rejection of recitation of any translation of the Qurʾān (above all in the daily worship rituals, or *ṣalāt,* see PRAYER; RITUAL AND THE QURʾĀN; TRANSLATIONS OF THE QURʾĀN) has been almost total in Islamic societies.

Theologically, the Qurʾān as "word of God" in Islam compares not to the Bible in the Christian tradition (see SCRIPTURE AND THE QURʾĀN) but to the person of the Christ as the *logos tou theou,* the divine Word (Söderblom, *Einführung,* 117; cf. Graham, *Beyond,* 217 n. 3; Kermani, *Gott,* 465 n. 195; see CREATEDNESS OF THE QURʾĀN): the closest comparable Muslim practice to the Eucharist would consequently be either the ubiquitous practice among Muslims of oral recitation of the Qurʾān or that of learning the text by heart, *ḥifẓ al-Qurʾān* (Smith, Some similarities, 52, 56-7; see MEMORY). One of the most respected religious titles a Muslim can bear is that of *ḥāfiẓ(a),* one who knows the entire Qurʾān by heart. Qurʾān recitation and memorization have always been central to deep spirituality as well as to everyday life in Muslim societies: "The discipline of qurʾānic memorization is an integral part of learning to be human and Muslim" (Eickelman, *Knowledge,* 63; see EVERYDAY LIFE, QURʾĀN IN).

Historically, the original meaning of the very word *qurʾān* testifies to this fundamental orality of the text from its inception: the qurʾānic revelations were oral texts meant to be rehearsed and recited, first by Muḥammad (as witness the more than 300 occurrences of *Qul!,* "Say! [oh Muḥammad]," before particular passages of the sacred text), then by the faithful to whom Muḥammad was to recite them. They were explicitly not revealed as "a writing on parchment" (Q 6:7; see WRITING AND WRITING MATERIALS). The word *qurʾān* is a verbal noun form derived from the root *q-r-ʾ,* "to recite, read aloud," and hence the proper translation of *al-qurʾān* is "the Reciting" or "the Recitation" (Graham, Earliest meaning). The Arabic word *qurʾān* is not attested prior to the Qurʾān itself and it was likely derived from, or influenced by, the Syriac cognate word *qeryānā,* "lection, reading," used by Syriac-speaking Christian communities (see CHRISTIANS AND CHRISTIANITY) both for the oral liturgical reading from scripture *(lectio, anagnosis)* and

for the scripture passage that is read aloud *(lectio, perioché, anagnøsma)* in divine service (Bowman, *Holy scriptures;* A. Neuwirth and K. Neuwirth, *Sūrat al-fātiḥa;* cf. Graham, *Beyond,* 209 n. 36; see FOREIGN VOCABULARY; NAMES OF THE QUR'ĀN). Both the Muslim and Christian usages have parallels also in the rabbinic use of the Hebrew cognates *qerī'ā* and *miqrā'* to denote the act of scripture reading and the pericope read aloud, respectively (J. Horovitz, Qur'ān, 67; Nöldeke, *GQ,* i, 32; Graham, *Beyond,* 209 n. 37). In the qur'ānic text itself, there are a number of uses of the word *qur'ān* that can best be taken as verbal-noun *(maṣdar)* usages: e.g. "the dawn (q.v.) recitation" in Q 17:78 and "…Ours it is to collect and to recite it *(qur'ānuhu),* and when we recite it, follow the recitation of it *(qur'ānahu)*" (Q 75:17-8). These readings are bolstered in the ḥadīth at various points, such as when Muḥammad speaks well of whoever "is constantly mindful of God during [his] reciting" (*qur'ān,* Ibn Ḥanbal, *Musnad,* iv, 159). Other examples: when Muḥammad explains to a companion who witnessed a horse trying to bolt during his night recitation, "That was the divine presence (*sakīna,* see SECHINA) that descended with the reciting" (*al-qur'ān,* Bukhārī, *Ṣaḥīḥ,* 66.11), and the report that Muḥammad "raised his voice in the recitation *(qur'ān)* in his prayer" (*ṣalāt,* Muslim, *Ṣaḥīḥ,* 4.145; cf. 4.149, 154; 6.232-37).

These examples of the early understanding of *qur'ān* as a verbal noun remind us of the strong historical basis for the ongoing orality of the Qur'ān in Muslim usage down the centuries to the present moment. This orality has always been a striking element in both Muslim religious practice and even in quotidian life in Islamic societies, where the use of qur'ānic formulae has been a permeating reality of everyday speech, even down to small repeated phrases that have passed into everyday usage (see SLOGANS FROM THE QUR'ĀN). One thinks of the *basmala* (q.v.) and Fātiḥa (q.v.), or the many qur'ānic phrases such as *mā shā'a llāhu* (Q 18:39) or *al-ḥamdu lillāhi* (Q 1:2; see LAUDATION) as only the most evident (for examples of such usages, see Piamenta, *Islam in everyday speech,* 10, 73, 75, 86-7; Jomier, La place du Coran). The five-times-daily ritual of prayer *(ṣalāt)* is the most obvious place to look for daily recitation of the Qur'ān, since without some qur'ānic recitation the *ṣalāt* is legally invalid (see LAWFUL AND UNLAWFUL). But well beyond penetration of qur'ānic phrases into everyday speech and the formal demands of the rites of daily worship, the recited word of scripture has always been prominent in Muslim communities. Recitation of the Qur'ān is woven into the very fabric of life in Muslim communities. A ḥadīth has Muḥammad say, "the most excellent form of worship (q.v.; *'ibāda*) among my people is reciting the Qur'ān" (Ghazālī, *Iḥyā',* 1.8.1). Qur'ān recitation has been a, if not the, major form of entertainment in Muslim societies, and it has for centuries been raised to an art form (see Nelson, *Art;* Kermani, chap. 3). Qur'ān memorization, recitation, and study have formed the core of Muslim education at all times and around the world in Islamic societies (see TEACHING AND PREACHING THE QUR'ĀN). Centuries ago, Ibn Khaldūn (d. 784/1382; *Muqaddima,* iii, 260; Ibn Khaldūn-Rosenthal, iii, 300; cf. Graham, *Beyond,* 215 n. 35) noted that "teaching the Qur'ān to children is one of the marks of the religion that Muslims profess and practice in all their cities," and a still older ḥadīth text claims that "knowledge shall not perish so long as the Qur'ān is recited" (Dārimī, *Sunan,* 1.18.8; see KNOWLEDGE AND LEARNING).

In sum, the oral presence of the Qur'ān is a constant source of inspiration to Muslims in all walks of life. Al-Ghazālī

(d. 505/1111; *Iḥyāʾ,* 1.8.1) put it well: "Much repetition cannot make it [the Qurʾān] seem old and worn to those who recite it." The importance and power of the oral qurʾānic word are captured in the hyperbolic and metaphorical, but still acute, observation of the modern Iranian scholar, Muḥammad Taqī Sharīʿaṭī-Mazīnānī, about the aural impact of the recited text: "The Qurʾān was a light [q.v.] that extended through the opening of the ears into the soul; it transformed this soul and as a consequence of that, the world" (as cited in Kermani, *Gott ist Schön,* 44). See also LANGUAGE AND STYLE OF THE QURʾĀN.

Orality and Writing in Arabia

Transmission of knowledge through the spoken and written word. In pre-Islamic Arabia, culture was largely transmitted orally, with writing being used for practical matters of daily life (i.e. trade; see SELLING AND BUYING) — although there was an awareness of Jewish and Christian scriptures (see SCRIPTURE AND THE QURʾĀN; PRE-ISLAMIC ARABIA AND THE QURʾĀN). Apart from a couple of inscriptions and some defectively written graffiti, no primary sources exist for pre-Islamic Arabic writing (see EPIGRAPHY AND THE QURʾĀN; ARCHAEOLOGY AND THE QURʾĀN). Oral sources, by their very nature, are transient. We are thus left to glean what we can about orality (q.v.) and writing/script from secondary Arabic sources that were committed to writing long after Arabic script (q.v.) was fully developed. It may be said, however, that the interplay of orality and writing in this milieu shows up most clearly in the Qurʾān itself (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN).

Orally-transmitted attestations of writing and scripture in pre-Islamic Arabia

There were four kinds of oral literature in pre-Islamic Arabia: those of the poet (*shāʿir,* see POETRY AND POETS), the soothsayer (*kāhin,* see SOOTHSAYERS), the orator *(khaṭīb)* and the story-teller *(qāṣṣ).* The advent of Islam was very unfavorable to *kāhin* material and to pre-Islamic *khaṭīb* material, and the little that has survived

has nothing to tell us about writing, a subject to which neither the *kāhin* nor the *khaṭīb* was likely to have referred in the first instance.

Poetry

We are more fortunate in what we can draw together from the surviving corpus of pre-Islamic poetry. It contains a fair number of references to writing, usually based on the convention by which the traces of an almost effaced, long deserted campsite are compared to written material. Both epigraphic and documentary writing are mentioned. Very rarely does the same poem refer to both. Thus the *Muʿallaqa* of Labīd has: "the stones there contain writings " (*ḍamina l-wuḥiyya silāmuhā,* l. 2) and "writings whose texts have been renewed by their pens" (*zuburun tujiddu mutūnahā aqlāmuhā,* l. 8).

The majority of references must be assumed to refer to a script for Arabic writing, though its form is uncertain; but there are some passages that might possibly refer, explicitly or implicitly, to south Arabian forms of writing. This possibility can be seen in a passage from Labīd's *Qaṣīda nūniyya:*

… ka-annahā
zuburun yurajjiʿuhā walīdu yamāni
mutaʿawwidun laḥinun yuʿīdu bi-kaffihi
qalaman ʿalā ʿusubin dhabulna wa-bāni
… as though they were
writings over which the Yemeni lad moved back and forth
in his accustomed way, clever, his hand moving
a pen over dried palm-fronds or over pieces of a *ben*-tree

Not only does *walīdu yamāni* point to the south, the terms *zubur,* "writings," and *ʿusub,* "palm-fronds," would appear to have south Arabian origins (see WRITING AND WRITING MATERIALS).

The corpus of poetry contains a fair number of references to Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRSTIANITY) but references to their scriptures are difficult to find. There are some references to the Christian anchorites (see ASCETICISM; MONASTICISM AND MONKS) using lights for their devotions at night (and, by implication, reading), as in the *Muʿallaqa* of Imruʾ al-Qays (lines 39 and 72). Once, however, Imruʾ al-Qays has part of a line referring specifically to Christian writings: "like a line of writing in the books of monks" *(ka-khaṭṭi zabūrin fī maṣāḥifi ruhbāni);* and al-Aswad b. Yaʿfur refers to Jewish written material: "the letters of two Jews from Taymāʾ or the people of Madyan [see MIDIAN] on/their parchments which they recite with accomplishment" *(suṭūru yahūdiyyayni fī muhraqayhimā/mujīdayni min Taymāʾa aw ahli Madyan).*

The accepted view is that these references to writing were part of poetic convention and that the bedouin (q.v.) tribesmen themselves were little concerned with writing, and there seems to be no reason to doubt this. That the illiterate poet Ṭarafa should liken his camel's cheek to "Syrian parchment" seems typical of the convention (see LITERACY; ILLITERACY). Nor does there seem to be an exception in the case of the poet — or two poets — known as al-Muraqqish (probably meaning "the one who puts black on white"). The name is thought not to derive from him acting as a scribe but to be a soubriquet that stems from part of a line that runs: "the traces resemble what a pen has inscribed on the back of the /parchment" *(wa-l-rusūmu ka-ma * raqqasha fī zahri l-adīmi qalam).*

Stories

Moving on from the evidence of poetry to the story-tellers' material, very little is to be found in the background stories that accompany most of the surviving poems or

in the legends of the "days of the Arabs" *(ayyām al-ʿarab)*. Even then, the stories that have come down to us are at best problematical, as they were susceptible to recasting and accretion down to ʿAbbāsid times; and some of them, such as the placing of copies of the *muʿallaqāt* on the Kaʿba (q.v.), appear to be total fiction. Nevertheless, it is interesting to note two points from the famous story of the poets al-Mutalammis and Ṭarafa preserved in the *Kitāb al-aghānī* of Abū l-Faraj al-Iṣfahānī, in which they are portrayed as being sent off by the ruler of al-Ḥīra to the governor of al-Baḥrayn, each with a note telling the governor to execute the bearer of the note. In one way, the story hinges on the illiteracy of the two poets; in another, there is the assumption that literates who did not already know the contents of a message would be able to read it.

Extent of literacy in pre-Islamic Arabia

Overall, the background material seems to indicate that there was a certain amount of literacy in the settlements (see CITY), particularly the key centers of al-Ḥīra, Medina (q.v.) and Mecca (q.v.). This is plausible, though any direct evidence from the period is lacking. There is, for example, nothing to link Labīd's Yemeni youth with any particular place. It is not unreasonable, however, to suggest that his main concern was with documents and that the most likely place where documents would be produced was a settlement. But even if most of those employed in writing lived in settlements it is unlikely that they were numerous. It is also reasonable to assume that writing in Arabic script was for practical purposes, with other languages and scripts being used for religious purposes. Culturally this would have mattered little in pre-Islamic times, for the same sources make it clear that cultural material (that of the poets, soothsayers, orators and story-tellers) was orally transmitted.

There are other problems about the role of writing among the Arabs in the early seventh century C.E. to which we have no clear answer. One must accept the generalization that the crucial function of a script, whether alphabetic or not, is to convey a version of the spoken word in a form that can be recognized and understood by a person with knowledge of that script and of the language that it encodes. It is not clear, however, how this applied in early Arabic documents. Any document that has come down to us through traditional sources is now written in a fairly high register, and with no obvious colloquial features (see DIALECTS; GRAMMAR AND THE QURʾĀN). This may not be far from the mark; but, as is usual in Arabic sources, there is a total failure to pay any attention to the gradations of register between the four literary forms: *shāʿir — kāhin — khaṭīb — qaṣṣ*. Nor is there any sign of dialect. This simply does not tally with what we find in papyri, in which colloquialisms, a sign of dialect, are to be found from the earliest surviving documents onwards.

The traditional view is that Arabic script was defective until roughly the end of the seventh century C.E. This is certainly true of graffiti, but that is hardly germane to the discussion. The graffiti and the traditional view might also incline us to the view that the script functioned largely at an *aide-mémoire* level. Again it would appear that we are being pointed in the wrong direction. Labīd's vignette about the Yemeni youth and the story of al-Mutalammis and Ṭarafa seem to point to a fairly extensive use of writing, whether or not the script was fully formed.

Earliest literary evidence from the Islamic period

It is against this background that we should consider the implications of the surviving

papyri and in particular of the earliest extant Islamic document, a papyrus from upper Egypt, now preserved in the Austrian State National Library and known as PERF 558 (for more on this papyrus, see Gruendler, *Development,* 157; Jones, Dotting). It has texts in both Arabic and Greek, and each bears a date: in Arabic "the month Jumādā I of the year 22" and in Greek "the thirtieth day of the month of Pharmouthi of the Indiction year 1" (25 April 643).

This invaluable dating is not the only important thing about PERF 558. The script is more advanced than we might expect if we accept the traditional accounts of the development of Arabic script (q.v.). The Arabic text is written in a clear cursive hand; and it contains a fair sprinkling of dots. There are dotted forms of six letters (*jīm, khāʾ, dhāl, zāy, shīn* and *nūn,* all of which are also to be found without dots); there are some long vowels (*ā, ī,* and *ū* are all to be found, though medial *ā* is most frequently omitted); and there are some examples of *alif maqṣūra*.

The script of PERF 558 is rightly characterized by Beatrice Gruendler (*Development,* 135) as being a "fairly developed script." She adds "the first cursive impulse must therefore be expected several decades earlier." This also seems a fair judgment. A period of several decades, however, dating back from 643 C.E. takes us back into the pre-*hijra* period (see EMIGRATION). We are thus forced to conclude that the traditional accounts of the development of Arabic writing, and of the diacritics in particular, i.e. that in the seventh century the Arabic script functioned at a primarily *aide-mémoire* level, must be wrong so far as a cursive form of Arabic is concerned.

There is another scrap of evidence that we might reasonably consider as providing some corroboration of this view. There is a hemistich in Labīd's *qaṣīda mīmiyya* beginning *ʿafā l-rasmu am lā* that runs: "There is a trace of Asmāʾ that has become dotted like a sheet of writing" *(li-Asmāʾa rasmun kal-ṣaḥāfati aʿjamā)*. It is true that Labīd lived for almost forty years in the Islamic period, but his language and thought are very traditional and again take us back to the earlier part of the seventh century C.E.

A full use of the script is also indicated by some material found in the literature on the Prophet's biography (*sīra,* see SĪRA AND THE QURʾĀN). There are no cogent reasons, for example, to reject the authenticity of the treaty documents now known as the Constitution of Medina, or to believe that these were not committed to writing at the time that they were drawn up. Equally, writing plays a crucial role in the story about the expedition to Nakhla in Rajab of 2 A.H., in which the sealed orders were issued to the leader of the Muslim raiding party.

Finally the Qurʾān shows itself to be strongly in favor of the use of writing for practical purposes. The key passages are a very lengthy one, Q 2:282-3, concerning the recording of debts (q.v.) and other transactions, and the much shorter Q 24:33, about writing documents. It would seem that these stipulations about the writing of documents are possible because there was a pre-Islamic *sunna* of writing for practical purposes, and, on the evidence of the papyri, writing was a tradition of accomplished scribes.

The writing of the Qurʾān (see ORTHOGRAPHY; MANUSCRIPTS OF THE QURʾĀN) is another matter, for its original mode of delivery was oral (see RECITATION OF THE QURʾĀN). Thus any written version is a secondary form, as the text depicts in a narrative (see NARRATIVES) about Moses (q.v.; Q 6:91). Given, however, that there was knowledge of copies of Jewish and Christian scriptures, the psychological pressure for the nascent Islamic community to have written copies of its own scripture must have been irresistible

(see CODICES OF THE QUR'ĀN; COLLECTION OF THE QUR'ĀN). Tradition has it firmly that at least some of the Qur'ān was committed to writing during Muḥammad's lifetime, although there is no agreement about when the copying started or how much of it was copied during his lifetime — though most references are linked to the final years of his residence in Medina. This writing is said to have been done by a small group of scribes, known as the "scribes of the revelation" *(kuttāb al-waḥy)*. The authenticity of this material is disputed but even if it is rejected, it is likely to echo something of what happened.

This takes us back again to the form of writing used. It has always been thought that the development of the Kūfic form of Arabic script — without any diacritical dots — was a concomitant of the Qur'ān's being committed to writing. That may be so, but it would then point to a two-track evolution of Arabic script in the seventh century C.E.: Kūfic basically as a form of *aide-mémoire* to go with the oral text, while a more cursive form, which used dots at the whim of the writer, was employed for more practical documents.

Orality, writing and the Qur'ān

There is a remarkable contrast between the scanty gleanings set out above — i.e. the degree of literacy in the Arabia of Muḥammad's day, the function and nature of the Arabic script, and the evidence for the writing down of the Qur'ān during Muḥammad's lifetime (including the script in which it would have been recorded) — and what we find attested in the Qur'ān itself. First, the appurtenances of writing, though not frequently mentioned, are pretty well represented in the qur'ānic vocabulary: *qalam, raqq, qirṭās, sijill, lawḥ, ṣuḥuf, zubur, midād,* etc. Unfortunately there is nothing about the script beyond the odd phrase such as *kitāb masṭūr* (Q 52:2) and *kitāb marqūm* (Q 83:9, 20), which do not add to our overall knowledge.

The riches about writing, however, lie with the single root *k-t-b,* which is a key item in qur'ānic vocabulary. There are over fifty examples of the verb *kataba,* which are fairly evenly split between the concrete "to write" and the abstract "to prescribe." This is overshadowed, however, by the use of *kitāb,* which is the tenth most common noun in the text, with over 250 occurrences.

There are no real surprises about the meanings of *kitāb,* though perhaps they have a greater range than most of the central items of qur'ānic vocabulary. In over 200 of the occurrences it means what is normally translated as "scripture," with most of the rest meaning "document," "record" or "decree," with a couple examples each of "letter" and "fixed time" rounding off the meanings. Usage and context show, however, that when *kitāb* means "scripture" it is hardly ever concrete in sense.

There is, for example, the fact that *qur'ān,* "recitation," and *kitāb,* "scripture," are to some extent interchangeable. The most striking instance is the phrasing of Q 15:1, "These are the signs of the scripture and of a clear recitation" *(tilka āyātu l-kitābi wa-qur'ānin mubīn),* and Q 27:1, "These are the revelations of the recitation and a clear scripture" *(tilka āyātu l-qur'āni wa-kitābin mubīnin)*.

Also Q 46:29 has "Who listened to the recitation" *(yastami'ūna l-qur'āna),* while the following verse has "We have heard a scripture" (*innā sami'nā kitāban,* Q 46:30). There are also a number of verses which refer to the "scripture" being recited (see Q 2:44, 113, 121; 17:93; 29:51; also Q 29:48 quoted below).

There are, however, other passages that show that the essential relationship between the two words is more complex, with *kitāb* apparently referring to a heavenly exemplar and *qur'ān* to an earthly

recitation (see HEAVENLY BOOK; PRESERVED TABLET). Thus in Q 41:3 we find "A scripture whose signs are expounded as a recitation in Arabic" *(kitābun fuṣṣilat āyātuhu qurʾānan ʿarabiyyan),* and in Q 43:2-3, "By the clear scripture — we have made it a recitation in Arabic" (*wa-l-kitābi l-mubīni innā jaʿalnāhu qurʾānan ʿarabiyyan;* see also NAMES OF THE QURʾĀN).

On the basis of these and similar passages, particularly with the phrase *kitāb mubīn* (Q 12:1; 26:2, etc.; cf. 5:19; 13:1), one can make a good case for arguing that "divine message" would give a clearer indication of the meaning of *kitāb* than "scripture" does. God does not transmit the divine message to his messengers in writing. The use of the verb *awḥā,* "suggest, inspire," is perhaps the clearest indication of that.

That the committing of the divine message to a written form is a secondary stage after the revelation is indicated most clearly by Q 6:91, "Say, 'Who sent down the scripture which Moses brought as a light (q.v.) and a guidance to the people? You put it on parchments, revealing them, but concealing much'" *(qul man anzala l-kitāba lladhī jāʾa bihi mūsā nūran wa-hudan lil-nāsi; tajʿalūnahu qarāṭīsa, tubdūnahā wa-tukhfūna kathīran).*

In one passage, Q 29:48, a verse denying that Muḥammad had had a revelation before the Qurʾān, writing may be seen as having the same standing as recitation: "You did not recite any scripture before this nor did you write it with your right hand" (*wa-mā kunta tatlū min qablihi min kitābin wa-lā takhuṭṭuhu bi-yamīnika;* see OPPOSITION TO MUḤAMMAD; UMMĪ; LEFT HAND AND RIGHT HAND). The Prophet is never, however, given the command to "write," though from time to time he is told to "recite," and frequently, of course, the instruction is "say."

Nevertheless, the importance of written scripture is acknowledged in such early passages as Q 52:2-3: "By a scripture inscribed on unrolled parchment" *(wa-kitābin masṭūrin fī raqqin manshūrin)* and Q 87:18-9: "This is in the ancient scrolls (q.v.), the scrolls of Abraham (q.v.) and Moses" *(inna hādhā la-fī l-ṣuḥufi l-ūlā ṣuḥufi Ibrāhīma wa-Mūsā).*

It is several times acknowledged that the People of the Book (q.v.), as the Jews and Christians are generally known, have written versions of the scripture, and what they do with them is commented on very adversely in Q 2:79 (see POLEMIC AND POLEMICAL LANGUAGE; CORRUPTION; FORGERY).

In the end, none of the passages containing the root *k-t-b* can be said directly to encourage the writing of the divine message, but there is one verse, Q 25:5, that indicates that the Meccans linked writing to the revelation, in a pejorative way: "They say, 'Fables of the ancients that he has had written down; and they are dictated to him morning and evening'" (*qālū asāṭīru l-awwalīna ktatabahā fa-hiya tumlā ʿalayhi bukratan wa-aṣīlan;* see INFORMANTS). It is not fanciful to think that this priority of the oral over the written would have influenced early believers in one direction, while a very natural desire to have written copies would have pulled them in the opposite way.

On the other hand, the Qurʾān is strongly in favor of the use of writing for practical purposes. The key passage is a very lengthy one, Q 2:282-3, concerning the recording of debts and other transactions, which contains no less than eight places in which a form of *kataba* is used and one of *amalla,* "to dictate." One should also note the much shorter Q 24:33: "Such of those whom your right hands possess who seek the document, write it for them if you know some

good in them" *(wa-lladhīna yabtaghūna l-kitāba mimmā malakat aymānukum fa-kātibūhum in ʿalimtum fī-him khayran)*. The meaning of "the document" in this verse is disputed, but however it is interpreted it is clear that writing is stipulated for a practical purpose, and this is precisely the same thrust that we see in Q 2:282-3.

Conclusion

Although the Qurʾān reflects a prejudice for an oral — as opposed to a written — preservation of scripture, papyri from the early Islamic period show a highly developed script. This evidence, together with material found in the *sīra* — and even the Qurʾān itself — lend support to a theory of a pre-Islamic development of Arabic script with diacritics. These two trends (oral preservation of culture, but the utilization of writing in mundane matters) indicate a two-fold development of the Arabic script: one (Kūfic, mentioned above) that served as a memory aid in the preservation of orally-transmitted culture and scripture, and a more differentiated one used in the transactions of daily life.

Ornamentation and Illumination

From early times written copies of the qurʾānic text were embellished with various kinds of ornament that served to divide the text into manageable units, enhance readability, and enliven the visual qualities of the page and the book. Like the Torah of the Jews but unlike the Bible of the Christians, the Qurʾān was never illustrated with pictures, but rather embellished only with non-figural, nonrepresentational decoration. In contrast to the study of western manuscripts, where the term *illumination* encompasses both figural and non-figural decoration, scholars of Islamic art usually make a careful distinction between *illuminated* manuscripts, which were decorated only with non-representational geometric and vegetal designs, and *illustrated*, i.e. pictorial ones (see ICONOCLASM).

General considerations

Charting the origins and development of qurʾānic illumination is difficult since early manuscripts (i.e. those produced before the end of the third/ninth century) were never signed or dated (see MANUSCRIPTS OF THE QURʾĀN). Later manuscripts, in contrast, were often signed and dated by the calligrapher and sometimes even by the illuminator(s). In addition, otherwise-undated manuscripts can sometimes be

dated by later inscriptions, such as endowment records *(waqfiyya)* or other external evidence. One of the benchmarks for dating early manuscripts in the so-called Kūfic, or angular, script, for example, is the multi-volume Qurʾān manuscript endowed by Amājūr, governor of Damascus for the ʿAbbāsids, in 262/876 to a mosque in Tyre (Déroche, Qurʾān of Amāǧūr; see CALLIGRAPHY; ARABIC SCRIPT).

While it is unquestionably true that the general picture over the course of the centuries reveals a development from plain to ornately embellished manuscripts, it is often simplistically — but wrongly — assumed that the earliest copies of the text were always plain and that later examples carried increased amounts of ornament. This assumption is easily disproved by the discovery of at least one palimpsest, that is a reused parchment page, in Ṣanʿāʾ (Dār al-Makhṭūṭāt, MS 00-27.1), in which an unornamented version of the qurʾānic text in Kūfic script replaced an earlier one in a similar script embellished with ornamental headings. A cursory examination of the nearly 40,000 fragments from 1,000 early parchment manuscripts of the Qurʾān accidentally discovered in 1972 in the ceiling of the Great Mosque of Ṣanʿāʾ indicated that just one-eighth of them were illuminated (von Bothmer, Meisterwerke Islamischer Buchkunst).

In the fourth/tenth century, paper gradually began to replace parchment as the main medium for Qurʾān manuscripts, spreading from the east, where it was first used, to the west, where parchment remained the preferred support well into the seventh/thirteenth century. Coincident with this change of material was a shift in format from horizontal ("landscape") to vertical ("portrait"), as well as an increase in the amount and variety of the illumination, which was undoubtedly easier and therefore cheaper to execute on the new medium. The reverence universally accorded to the Qurʾān meant that calligraphers and illuminators used the finest materials for their work, and many Qurʾān manuscripts made in later centuries contain superb illumination, reckoning them among the finest works of art ever produced in the Islamic lands. Western scholars, accustomed to paying more attention to images than words or nonrepresentational decoration, however, have often neglected the study of qurʾānic illumination and decoration, and it is only in recent years that scholars, both Muslim and non-Muslim, have begun to address the subject with the care it deserves. Such careful study may help to localize and date particular manuscripts as well as to reveal how manuscripts of the Qurʾān were actually read and used.

Ornament was used in manuscripts of the Qurʾān to separate individual verses *(āyāt),* groups of verses, chapters (*sūra*s) and divisions such as sevenths and thirtieths which allowed the text to be read over the course of a week or a month. As these divisions, as well as the titles of the sūras (see SŪRA), were not considered to be part of the revealed text, they were almost always differentiated in some way, whether by size, script, color, or illumination. Ornament was also used to frame and enclose the full text or individual volumes of it with decorative frontispieces and finispieces. In addition, volumes were protected by bindings of leather and pasteboard which themselves could be ornamented with tooling, stamping, gilding, and other fancy techniques. In later copies of the Qurʾān, similar or complementary designs were used on the pages and the binding, but as few, if any, early manuscripts of the Qurʾān have survived attached to their original bindings, it is still impossible to discuss the relationships between the decoration of text and binding in the early period.

Given these problems of establishing the chronology of early Qurʾān manuscripts, the following article is arranged typologically according to the size of the division marked by the ornament. It does not consider the variously colored dots found in early manuscripts of the Qurʾān; although they may appear decorative, they were used to indicate vocalization of the text (Dutton, Red dots [parts I and II]). This discussion moves from smallest to largest, beginning with markers used to separate verses (q.v.) and culminating in full and double pages of illumination with and without text. Within each section, examples are generally presented chronologically. A final section investigates the growing division of labor that accompanied the increased decoration of the qurʾānic text. For a discussion of the modern printed Qurʾān, however, see PRINTING OF THE QURʾĀN.

Verse markers and marginal ornaments

The division of the qurʾānic text into 114 sūras with approximately 6200 verses is very old and the subject of occasional disagreement, principally on the placing of divisions between the verses, not on the contents of the text or the order of the verses themselves (see CODICES OF THE QURʾĀN), which is generally thought to have been established during the reign of the caliph ʿUthmān (q.v.; r. 644-56; see also COLLECTION OF THE QURʾĀN). Division into verses is marked by the occurrence of rhyme or assonance (see RHYMED PROSE; FORM AND STRUCTURE OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN); differences occur because of variants in reading (see READINGS OF THE QURʾĀN) and decisions about whether or not a particular rhyme marks the end of a verse. Another divergence occurs over whether or not the *basmala* (q.v.) is counted as a verse. The publication of the standard Egyptian edition of the Qurʾān in 1924 under the aegis of al-Azhar has provided a standard numbering system that is used by many scholars today. The divisions found in medieval manuscripts, therefore, do not necessarily correspond to those used at the present time, and it is possible that a close study of the variations of the verse markings used in different copies might help to establish localizations and chronologies for particular groups of manuscripts.

As calligraphers writing in the early Kūfic scripts did not generally differentiate between the internal spaces between the unconnected letters of a single word and the spaces between different words, let alone between sentences, division between verses might be indicated by something as simple as a series of diagonal slashes made by the calligrapher after writing the last word of a verse or by a gold circle or pyramid of three or six circles added by the calligrapher or someone else after the entire page had been copied. The celebrated calligrapher Ibn al-Bawwāb (d. 413/1022) discreetly marked the end of verses with three small dots in the copy of the Qurʾān he penned in the rounded *naskh* script in 391/1000-1, but did not otherwise interrupt the flow of his writing (Rice, *Unique Ibn al-Bawwāb manuscript*). Several centuries later, the Baghdādī calligrapher Yāqūt al-Mustaʿṣimī (fl. seventh/thirteenth cent.) typically used gold rosettes punctuated with blue dots to separate individual verses, and this style was later adopted by many calligraphers in Mamlūk Egypt, Ottoman Turkey, and elsewhere. Sometimes calligraphers left spaces for these verse markers; sometimes they wrote the text in an unbroken line, returning to add the verse markers above the line of script. A gold marker, whether a single rosette or a pyramid of circles, eventually became the standard indicator of the end of an individual verse.

To make it easier for a reader to locate a particular verse, especially in the longer chapters with hundreds of verses, calligraphers normally marked groups of five and ten verses. The standard marker for five verses was a teardrop shape, derived from the Arabic letter *hāʾ,* the alphanumeric *(abjad)* symbol for "five" (see NUMEROLOGY). As the alphanumeric symbol for "ten" — the letter *yāʾ* — would have been visually inappropriate, the standard marker for ten verses was a circle, often inscribed with the appropriate alphanumeric symbol for the decade (e.g. *sīn* for sixty). Since the alphanumeric system used in the Islamic west differed slightly from that used in the central and eastern lands, the way these systems count tens of verses can be an important means to distinguish manuscripts produced in the different regions. For example, the famous "Blue Qurʾān," written in gold on blue-dyed parchment, was once routinely attributed to ʿAbbāsid Merv and Persia. The manuscript, however, uses the western system of alphanumeric counting, where sixty is indicated by the letter *ṣād,* making an attribution to Qayrawān in Tunisia or elsewhere in the Maghrib much more likely (Bloom, Al-Maʾmun's Blue Koran).

To further facilitate finding one's place in the text, illuminators normally placed larger markers for groups of five and ten verses in the outer margin of the page at a place corresponding to where the group of verses ended in the text. Sometimes these markers repeat the teardrop or circular shape of the ornament found in the text; sometimes they stand in place of it. The teardrop shape is typically inscribed with the word *khams* (five), whereas the circular motif corresponding to the decades is normally inscribed with the number spelled out (e.g. *sittīn,* "sixty"). Sūras with many short verses, typically those revealed earlier in Mecca (q.v.), can require as many as six or seven marginal devices on a single page, thereby leading the illuminator to fill the outer margin with an alternation of oval and circular decorative motifs (e.g. Afarvand, *Gulchīnī,* 50).

Calligraphers and illuminators also came to use the outer margins to display other kinds of information, such as places in the text when bowing of the head *(rukūʿ)* or prostration *(sajda)* is indicated (see BOWING AND PROSTRATION; RECITATION OF THE QURʾĀN). Marginal notations were also employed to indicate division of the text into thirtieths *(juzʾ/ajzāʾ;* Pers. *sīpāra),* sevenths *(subʿ/asbāʿ)* and sixtieths *(ḥizb/aḥzāb),* which facilitated reading over the course of a month or a week. Such marginal notations do not appear in the earliest manuscripts of the Qurʾān, but became increasingly common from the fourth/tenth century onwards. For example, a manuscript of the Qurʾān made at Palermo in 372/982-3 has marginal ornaments outlined in black ink with red or green paint showing divisions into thirtieths, tenths, ninths, sevenths, and fifths (see Fig. 11). The *sajda*s are similar in form, but are written in gold; and the sixtieths are indicated by a circle containing the word *ḥizb* written in gold between two vegetal motifs against a red-hatched ground (Déroche, *Abbasid tradition,* no. 81). One fifth/eleventh-century scholar considered *sajda*-markings irreverent additions to the holy text, a clear indication that they had become common by his time (Rice, *Unique Ibn al-Bawwāb manuscript,* 17 n. 1).

Another use for the margin was to allow the calligrapher to correct mistakes he had made in transcription. For example, when copying folio 137b of his Qurʾān manuscript, Ibn al-Bawwāb inadvertently left out the hundreth verse of sūra 17. When he discovered his mistake, he corrected the omission by adding the missing verse in a rectangular *tabula ansata* in the margin. To

show the reader where to insert the missing verse, the calligrapher added a gold rosette in the space he had left for the circular marker he normally used to indicate the end of ten verses (Rice, *Unique Ibn al-Bawwāb manuscript,* 13 and pl. VIIIb). Similarly, after Yāqūt al-Mustaʿṣimī had inadvertently omitted the word *nutfa* (sperm) from Q 23:13 in a manuscript he completed in Jumādā I 685/June-July 1286, he added the missing word vertically in the inner margin, with a little arrow in the text showing where it should be inserted. When the manuscript was ruled, the outer bands had to be interrupted to enclose the missing word (Afarvand, *Gulchīnī,* 50).

Chapter divisions

There was great variation in the way illuminators could separate one chapter, or sūra, from another. The simplest was just to leave a blank line, but more often illuminators added vegetal or geometric decoration (illumination) and/or information about either the following or the preceding sūra. This information normally would include the sūra title, the number of verses in it, the place where it was revealed (either Mecca or Medina), the chronology, or a combination of any of these (Déroche, *Abbasid tradition,* 23). To call attention to this information, illuminators often wrote it in another color, typically gold, enclosed it in a box, and extended it into the outer margin with a palmette. The Palermo Qurʾān manuscript mentioned above has sūra titles in gold with no further ornament, but Ibn al-Bawwāb's manuscript has elaborate titles in rectangular frames with fantastic palmettes sprouting into the outer margin (see Fig. IV). His style was continued by Yāqūt and many later calligraphers. The palmette extending into the margin, which is already found in many manuscripts of the Qurʾān written in kūfīc script, served to indicate where a new chapter began without requiring the reader fully to open the book. This reader-friendly feature undoubtedly explains why this archaic motif persisted for many centuries.

At the end of the qurʾānic text, where the chapters are short, there might be as many as five or six chapter divisions on a double-page spread in a manuscript with many lines of writing on each page. This concentration of ornament could threaten visually to overwhelm the text, but a skilled artist adjusted his decorative scheme to escape such pitfalls. To avoid cluttering the pages at the end of his Qurʾān manuscript, Ibn al-Bawwāb, for example, did not frame his chapter titles as he had done elsewhere, but left them plain (James, *Qurʾāns and bindings,* no. 18).

Titles are normally written at the beginning of a sūra, but sometimes they were placed at the end. This was the case with a celebrated five-volume manuscript endowed to the Almohad mosque of the Qaṣba in Tunis during the reign of the Ḥafṣid sultan Abū Fāris in Ramaḍān 807/March 1405. The text was copied in silver ink on purple paper, but the chapter titles were written afterwards at the end of the chapter in gold ink with gold rosettes in the margins. In some cases, the calligrapher did not leave enough space for the full text of the title, and he had to squeeze it into the available space (Déroche, *Les manuscrits du coran. Du Maghrib à l'Insulinde,* nos. 305-308).

Fully-decorated text pages

To enhance further the visual qualities of the text page, calligraphers and illuminators increasingly enclosed the text block on each page within a decorative frame. By doing so, they vastly increased the labor and cost of production, especially on multi-volume manuscripts with five or seven lines of text per page that might run to many thousands of folios. The typical

frame comprised a series of lines of varying width and color — usually black, blue, and gold — ruled around the text block after it had been written. Such frames become relatively common in Persian, Turkish, and Indian manuscripts made from the seventh/thirteenth century onwards, but they are not normally found in early Kūfic manuscripts of the Qurʾān. One notable exception is a unique chrysographic (written in gold) manuscript in two volumes, most of which is in the Nuruosmaniye Library, Istanbul (see Fig. III). Each parchment page is framed with a decorative band of white fillets enclosing gold, green, and red dots; the outer margin of each page has a fantastic winged palmette sprouting golden pine cones and pomegranates (Déroche, *Abbasid tradition,* no. 41).

Equally unusual is the decorative treatment found in a dispersed manuscript on paper often known as the Qarmathian Qurʾān, conventionally dated to sixth/twelfth-century Iran. Each text page has four lines of an extremely attenuated form of the distinctive script variously known as Qarmathian, eastern Kūfic, New Style, or *warraq* enclosed within a rectangular frame from which half-palmettes extend from the corners into the outer margins (see Fig. V). The letters of the text are themselves enclosed in reserve panels, and the remaining surface of the text block is entirely filled with spiraling vegetal arabesques traced in pale ink. Each double spread is worked in matching colors, indicating that the manuscript was meant to be seen as a succession of double-page spreads. The production of the 4500 pages that this thirty-volume manuscript originally contained would have been an extraordinarily time-consuming and expensive undertaking in which the decoration was virtually as important as the calligraphy itself (Saint-Laurent, Identification).

Rulings and other forms of decoration were sometimes added to earlier manuscripts that were deemed too plain for later taste. For example, at some indeterminate date the Kūfic letters on an undecorated parchment page in Washington, DC (Freer Gallery of Art, 45.16) were enclosed by reserve panels and the background tinted blue (Atıl, *Art of the Arab world,* no. 2). At the same time, spurious attributions to famous figures in Islamic history, such as ʿUthmān or ʿAlī b. Abī Ṭālib (q.v.), were often added. The Ottomans, whose libraries contained an enormous quantity of earlier manuscripts transcribed by master calligraphers across the Islamic lands, often added decoration in the current Ottoman taste. For example, in 962/1554-5 the noted illuminator Qarā Memi sumptuously decorated a manuscript that had been copied by the Īlkhānid calligrapher ʿAbdallāh Ṣayrafī in 745/1344-5; the manuscript was also rebound at this time for the treasury of the Ottoman vizier Rüstem Pasha (Atıl, *The age of Sultan Süleyman the Magnificent,* no. 14).

From an early date, full pages of decoration were typically found at the beginning and the end of manuscripts of the Qurʾān. In particular, the opening double page containing Sūrat al-Fātiḥa ("The Opening," Q 1; see FĀTIḤA) and the first verses of Sūrat al-Baqara ("The Cow," Q 2) gave artists opportunities to display their mastery of many different types of decoration. Because the outer pages of a volume are more subject to wear and disintegration, they are the ones most often lost from early manuscripts. One rare survival, found in the Great Mosque of Ṣanʿāʾ, shows the Fātiḥa (with no title) enclosed in a broad multicolored frame with hatching between solid bands (see Fig. I of FĀTIḤA). One may imagine that the facing page in this manuscript would have contained the first verses of Q 2 in a similar frame. Writing in his small *naskh* script, Ibn al-Bawwāb found

that the Fātiḥa occupied only four lines, so his opening page also contains the first six verses of chapter 2 (see Fig. IV), which is continued on the facing page. To balance the copious ornament on the right-hand page, he expanded the marginal ornament on the left page. This arrangement seems to have become standard by the fifth/eleventh century (i.e. see Fig. II of FĀTIḤA).

In an attempt to create increasingly impressive opening pages, calligraphers from the ninth/fifteenth century onwards either spread the short text of the Fātiḥa over both opening pages (see Figs. IV A and B of FĀTIḤA) or put the Fātiḥa on the right-hand page and a corresponding number of verses from the beginning of Q 2 on the left-hand one. In either case the illuminator surrounded the small text blocks with large and elaborate frames of vegetal and geometric decoration, containing cartouches inscribed with such information as the title, verse count, and place of revelation. By the tenth/sixteenth century these decorative frames came to overwhelm the text itself, which might be inscribed in lobed oval cartouches worked into the overall decorative composition (see Figs. VI A and B).

One of the most magnificent examples of Ottoman illumination is the frontispiece to a manuscript transcribed by Aḥmad Qarāḥiṣārī in 953/1546-7 for Sultan Süleymān the Magnificent. The calligrapher and the illuminator, Qarā Memi, worked together closely, for the first and last lines on each page of the opening double page have been written not in the small *naskh* used for the rest of the text but in a majestic *thuluth* that frames the small text block. In addition to traditional motifs such as arabesques and cloud-bands, the illumination also contains naturalistic plants and flowers that revolutionized the decorative vocabulary of the age. In addition, the entire book was bound in cloth of silver over a pasteboard core and decorated with gold plaques inlaid with rubies, turquoises, and pearls, making it one of the most sumptuous copies of the Qurʾān to have survived (Atıl, *The age of Sultan Süleyman the Magnificent,* no. 9).

This was a unique manuscript commissioned by a royal patron, but such elaborate opening pages became the norm, even for commercial production. In Iran, the city of Shīrāz emerged as a center for the mass-production of manuscripts with elaborate frontispieces; to speed up production, the basic decoration was done with a template and the calligraphy and finer details added by hand (Bloom and Blair, *Islamic arts,* 337).

Decorative pages

Another way that manuscripts of the Qurʾān could be decorated was to add frontispieces and finispieces, or purely decorative pages set at the beginning and end of the text or of individual volumes. The thickness of the parchment used in early manuscripts and the few lines written on a single page of a large luxury manuscript meant that many early Kūfic copies of the Qurʾān, particularly those in a horizontal format, were produced as multi-volume sets, typically containing as many as thirty or sixty volumes. Each volume probably had a decorative double-page frontispiece, to judge from the many full pages of illumination found in museum collections around the world. The horizontal format of the codex led illuminators to decorate their pages with rectangles filled with strapwork ornament executed in gold and color, typically with an elaborate palmette projecting into the outer margin. These strapwork patterns are comparable to those found on early bookbindings from the Great Mosque of Qayrawān (Marçais and Poinssot, *Objets kairouanais*) and Ṣanʿāʾ (Dreibholz, Some aspects).

In addition to the many frontispieces with geometric decoration, there is one representational example known: an extraordinary, but very fragmentary, double frontispiece discovered in the Great Mosque of Ṣanʿāʾ (see Fig. 1). It depicts two buildings with arcades and hanging lamps that are generally accepted to represent mosques. As the date and provenance of these pages remain a matter of lively scholarly debate, it is difficult, if not impossible, to draw further conclusions about what mosques, if any specific ones, these images are meant to represent, although it has been commonly assumed that they are meant to represent either Mecca (q.v.) and Medina (q.v.) or Medina and Damascus (von Bothmer, Architekturbilder im Koran; see also AQṢĀ MOSQUE).

With the shift to vertical-format manuscripts on paper, full pages of non-representational geometric decoration, often known as "carpet" pages, began to proliferate. Ibn al-Bawwāb provided his manuscript with two sets of such pages, one before the beginning of the text (fols. 8b-9a) and the other after the end (fols. 284b-285a). Both are based on strapwork designs of intersecting circles. The apparent simplicity of the designs is belied by the complexity of the execution, making them early masterpieces of the illuminator's art. In addition to these non-representational pages, Ibn al-Bawwāb provided his manuscript with several other sets of double frontispieces and finispieces with text specifying the numbers of elements — chapters, verses, words, letters, diacritical marks, etc. — according to the particular reading (that of the Kūfans following ʿAlī b. Abī Ṭālib) adopted in the manuscript. The words have been written in various decorative scripts and enclosed within elaborate arabesque frames.

Perhaps the greatest examples of the illuminator's art are found in the large-scale multi-volume manuscripts produced for the Īlkhānids and Mamlūks in the eighth/fourteenth century. In the frontispieces to these manuscripts, the space normally occupied by the text block is filled with a geometric strapwork pattern, often generated from a central star polygon. The interstices between the strapwork bands are filled with exquisite arabesques, typically worked in gold and ultramarine blue, the whole enclosed by an arabesque frame with palmettes projecting into the outer margins. In their complexity and subtlety these magnificent double pages represent the epitome of Islamic illumination. The combination of gold and ultramarine blue remained perennially popular for illumination, ranging from verse markers and chapter titles to full pages. This choice is not surprising since these two pigments were the most expensive in the artists' palette and signified the reverence in which illuminators — and their patrons — held the holy scripture.

Because of the rectangular format of the page, Īlkhānid and Mamlūk illuminators were often led to divide the rectangular field into a central square field (which was easier to fill with a star motif) sandwiched between horizontal bands above and below. Sometimes the central motif was inscribed with an appropriate qurʾānic verse, such as Q 41:42 ("It is sent down by one full of wisdom worthy of all praise"), as on a manuscript illuminated by Abū Bakr, who was known as Ṣandal, in the opening years of the eighth/fourteenth century (James, *Qurʾāns and bindings,* no. 25). In other manuscripts a larger selection (e.g. Q 56:77-80 or Q 26:192-7) might also be written in the four bands across the top and bottom of the opening double pages. By contrast, in the Maghrib where square-format parchment manuscripts of the Qurʾān remained

popular for centuries, a distinctive form of carpet page decoration developed, with a square field enclosing overall strapwork patterns, often reserved in white against a gold ground.

In other types of books, the opening folio (1a) might contain a rosette with the title of the work, the name of the author, or the name of the patron who commissioned the manuscript, but, as the Qurʾān does not have a title, calligraphers and illuminators had to find other solutions. One was to inscribe the opening rosette with an appropriate qurʾānic citation such as Q 56:79: "Which none shall touch except those who are clean" (see CLEANLINESS AND ABLUTION; RITUAL PURITY). For example, Q 56:79 was inscribed in a rosette on the recto of the first folio of a multi-volume manuscript made at Marāgha in 738/1338 (James, *Qurʾāns and bindings,* no. 47). On other manuscripts the central rosette was inscribed with Q 17:88: "If the whole of mankind and the jinn (q.v.) were to gather together, they could not produce the like of this Qurʾān…" (Déroche, *Manuel de codicologie des manuscrits en écriture arabe,* 255).

Calligraphers and illuminators

In early times the illuminator and calligrapher may have been one and the same person. Ibn al-Bawwāb, for example, not only copied his manuscript but was also responsible for the fine and extensive program of illumination. We know this because he sometimes used the same tools (a pen, not a brush) and materials (ink, not color) for the illumination that he had used for the calligraphy. As manuscripts became increasingly large and complex, however, there was a corresponding division of labor between calligrapher and illuminator, and illumination became a distinct specialty, itself eventually divided into subspecialties such as outlining or gilding. One of the first known instances of an illuminator signing his work is found in a Qurʾān manuscript made at Bust (now in Afghanistan) in 505/1111-12 (Paris, Bibliothèque nationale de France, BNF Arabe 6041). A certain ʿAlī b. ʿAbd al-Raḥmān signed his work in the middle of the gold strapwork decoration on the final page above the colophon bearing the signature of the calligrapher, ʿUthmān b. Muḥammad (Lemaistre, *Splendeur,* no. 36). By Īlkhānid and Mamlūk times the division of labor had become even greater, a development that is no surprise considering the size and magnificence of the finest manuscripts. For example, in the seven-volume manuscript copied by Muḥammad b. al-Waḥīd for the Mamlūk emir (later sultan) Baybars al-Jashankīr in 704-5/1304-6, three separate artists worked on the decoration. Two masters — Abū Bakr, known as Ṣandal, and Muḥammad b. Mubādir — did the illumination *(tadhhīb),* and a third — Aydughdī b. ʿAbdallāh al-Badrī — did the outlining *(zammaka)*. Colophons and signatures clearly show that there was a hierarchy in these positions, for in a manuscript completed a decade later on 27 Ramaḍān 713/15 January 1314 for the Mamlūk sultan al-Nāṣir Muḥammad by the Ayyūbid prince and calligrapher Shādhī, Aydughdī had been promoted to illuminator and was himself assisted by the "left-handed draughtsman," ʿAlī b. Muḥammad (James, *Qurʾāns of the Mamlūks,* nos. 1 and 6).

Īlkhānid calligraphers and illuminators typically worked in steady teams. Aḥmad al-Suhrawardī, for example, was repeatedly paired with the illuminator Muḥammad b. Aybak b. ʿAbdallāh, and the calligrapher Arghūn al-Kāmilī worked with the designer *(naqqāsh)* Muḥammad b. Sayf al-Dīn. These teams typically worked on the multi-volume manuscripts from beginning to end. Aḥmad al-Suhrawardī

and Muḥammad b. Aybak, for example, worked in this way on the thirty-volume "anonymous Baghdād" Qurʾān (now dispersed; see Fig. VII), the former doing the copying first and the latter then illuminating the text. The dated colophons indicate that there was some overlap, for the calligrapher was completing the writing of the last volumes when the illuminator began decorating the first ones. The calligrapher worked twice as fast as did the illuminator: transcribing a *juzʿ* took a month and a half, while illuminating it took slightly less than three months. In total, it took seven years (701-7/1301-8) to produce the thirty-volume large-format manuscript (James, *Qurʾāns of the Mamlūks,* no. 39).

Few later patrons had the wealth or inclination to commission such splendid copies of the Qurʾān, so later examples are more often smaller and copied in fewer volumes with illumination concentrated in only a few places. Nevertheless, wealthy segments of society always desired fine copies of the Qurʾān, and several centers of commercial production emerged. A tenth/sixteenth-century visitor to Shīrāz, for example, described commercial production there, in which small family businesses employing fathers, sons, and even daughters as scribes, illuminators, and binders, produced a thousand books a year. Most of the artists were anonymous, but the biography of one famous calligrapher-illuminator, Rūzbihān Muḥammad, can be established. Having learned his art from his father, a calligrapher, and his grandfather, an illuminator, Rūzbihān had a long career spanning some thirty-five years, 920-54/1514-47. Similarly, from the twelfth/eighteenth century onwards, the town of Shumen in Bulgaria became a center for the almost-industrial production of elaborately decorated manuscripts of the Qurʾān, a cottage industry that ended only with the advent of commercial lithography in the late thirteenth/nineteenth century (Stanley, Shumen).

Orphans

Children (q.v.) who have lost their parents, generally to death. *Yatīm (*pl. *yatāmā),* a term designating a fatherless minor child (al-Rāghib al-Iṣfahānī, *Mufradāt; Lisān al-ʿArab,* s.v.), appears throughout the Qurʾān more than twenty times. Early verses from the first Meccan period (see CHRONOLOGY AND THE QURʾĀN), celebrating God's providence towards the orphan Muḥammad (Q 93:6), warn against oppressing orphans as such (Q 93:9) and identify those who turn away the orphan as unbelievers (Q 107:2; see BELIEF AND UNBELIEF). Later verses from the same period rebuke the unbelievers for not honoring the orphan (Q 89:17), exhort them to feed "on a day of famine (q.v.) an orphan of kin…" (Q 90:14-5; see KINSHIP) and refer to the reward reserved in the hereafter (see REWARD AND PUNISHMENT; ESCHATOLOGY) for believers who "give food for the love of him [i.e. God] to the poor (see POVERTY AND THE POOR), the orphan and the prisoner" (Q 76:8-9; see PRISONERS). These exhortations (q.v.) can be seen not only as a reaction against the injustice (see JUSTICE AND INJUSTICE) and violence to which widows (see WIDOW) and orphans were subjected by the Meccans (Roberts, *Social laws,* 44) but also as aimed at strengthening unity among the Muslim converts in the face of a growing threat from outside as well as from within the group (O'Shaughnessy, Qurʾānic view, 37; see OPPOSITION TO MUḤAMMAD; COMMUNITY AND SOCIETY IN THE QURʾĀN).

Rules concerning the fair and just way Muslims, who serve as guardians of orphans, should deal with their property (q.v.) are laid down by verses from the second and third Meccan periods (see ETHICS AND THE QURʾĀN). Fair treatment of orphans ranks as one of the primary moral obligations for Muslims (Q 17:34; 6:152; see Azhary-Sonbol, Adoption, 55). An example for the right treatment of orphans' wealth (q.v.; in the spirit of the abovementioned verses) where God himself serves as the guardian, can be read in the narration of God's servant (al-Khiḍr, according to Qurʾān commentaries) who, as one of his enigmatic acts, sets up a wall about to fall down, explaining that "it belonged to two orphan youths… and under it was a treasure belonging to them… and your lord (q.v.) wished that they should reach full age, and bring forth for themselves their treasure as a mercy (q.v.) from your lord" (Q 18:77, 82; see KHAḌIR/KHIḌR; MYTHS AND LEGENDS IN THE QURʾĀN).

In the early Medinan period, probably against the background of the battles of Badr (q.v.) and Uḥud which left large numbers of Muslim children orphaned (O'Shaughnessy, Qurʾānic view, 35, 37; Azhary-Sonbol, Adoption, 55; see EXPEDITIONS AND BATTLES), the Qurʾān reemphasizes, as part of the religious duties of Muslims, the importance of deeds of beneficence towards the orphan (e.g. Q 2:83, 177; 4:36; cf. *Exod* 22:21-3; *Deut* 24:17; 27:19; for comparison with Christian sources see O'Shaughnessy, Qurʾānic view,

36 n. 16) and encourages the believers to extend practical help to orphans by contributing to their welfare (Q 2:215) and by providing for them when inheritances and spoils are divided (Q 4:8; 8:41; see INHERITANCE; BOOTY). It also warns "those who consume the property of orphans wrongfully" that they will be punished in the hereafter with "fire (q.v.) in their own bellies" (Q 4:10; see HELL AND HELLFIRE) and gives guardians concrete instructions on how to handle the affairs of fatherless children and particularly how to protect their wealth and property rights (Q 2:220; 4:2, 6; Q 4:5 may also be understood as referring to orphans; see Ṭabarī, *Tafsīr,* ad loc.). Two Medinan verses (Q 4:3, 127, the latter explicitly) connect the treatment of orphans with the marriage of guardians (see Watt, *Medina,* 276, 281; id., *Prophet and statesman,* 154; Azhary-Sonbol, Adoption, 56; see MARRIAGE AND DIVORCE). The just treatment of orphans, a motif which receives much attention in the Qurʾān, has had a long-term impact on later Islamic ethics, law and practice (Chaumont and Shaham, Yatīm; Roberts, *Social laws,* 42-3; Azhary-Sonbol, Adoption, 55-7). See GUARDIANSHIP for a further discussion of the qurʾānic provisions for the protection of orphans.

Orthography

Lit. "correct writing," it has a three-fold nuance: a) the art of writing words with the proper letters, according to standard usage; b) correct spelling, or, alternatively, mode of spelling; c) grammar treating of letters and spelling. The history of the formation of a "standard" qurʾānic orthography is the focus of this article; the particularities of qurʾānic spelling, letters and grammar are treated in greater detail elsewhere (see ARABIC SCRIPT; ARABIC LANGUAGE; GRAMMAR AND THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN; INIMITABILITY; MYSTERIOUS LETTERS). The orthography of the Qurʾān — as a system of rules ensuring the uniformity of the text's written transmission — underwent several stages of development. Its history is inextricably bound with that of Arabic grammar and the traditional disciplines of qurʾānic study (q.v.; *ʿulūm al-Qurʾān*), primarily those of the readings of the Qurʾān (q.v.; *ʿilm al-qirāʾāt)* and the recitation of the Qurʾān (q.v.; *ʿilm al-tajwīd*), as well as the most important events that affected the Muslim community and the caliphate.

Muḥammad left no fixed text of the revelation (see MUṢḤAF), and Arabic writing at that time conveyed only consonants (see CALLIGRAPHY). Furthermore, the script was ambiguous, as the same sign could indicate several letters. Memorization remained the main method of preserving the sacred text (see MEMORY). The sources have retained traces of resolute opposition to the very idea of a written record of the text as doomed to reproduce mistakes (see

ORALITY; ORALITY AND WRITING IN ARABIA). The characteristic features of this period, in which the Qurʾān existed in both written and oral form, determined the difficulties that Muslim authorities encountered as they developed rules for recording a uniform text of the Qurʾān. The text attested in early qurʾānic fragments served, indisputably, only as an aid for recitation from memory. In codifying the sacred text (see CODICES OF THE QURʾĀN; COLLECTION OF THE QURʾĀN), it was imperative for the Muslim community to complete several tasks: to develop a graphic form of the qurʾānic text *(rasm* or *khaṭṭ, kitāb, kitāba, kataba)* acceptable to all authorities; to introduce a system of diacritics *(ʿajm, iʿjām, naqṭ)* and vocalization *(shakl, ishkāl, tashkīl, ḥarakāt,* sometimes also *naqṭ)* and to establish a single vocal form *(ḍabṭ* or *lafẓ, nuṭq);* and to establish uniform rules for recitation *(qawāʿid al-qirāʾāt),* because even after the solution of the first two problems the possibility of ambiguity remained (see AMBIGUOUS).

In order to create a unified redaction of the qurʾānic text, it was imperative to investigate the basic grammar of Arabic and to develop an apparatus for the written representation of the text. In addition, political will and authority (q.v.) were needed (see POLITICS AND THE QURʾĀN). According to Muslim tradition, the political will and authority needed for the task were provided, initially, by the rightly-guided caliphs (see CALIPH): Abū Bakr (q.v.; *al-ṣuḥuf al-bakriyya*), ʿUmar, ʿUthmān (q.v.; *rasm ʿuthmānī*) and ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB). Later, the initiative passed to two outstanding Iraqi governors, Ziyād b. Abīhi (d. 53/673) and al-Ḥajjāj (d. 95/714), and the protection of two influential *wazīr*s in the caliphate, Ibn Muqla (d. 329/940) and Ibn ʿĪsā (d. 335/946).

As consonantal roots in Arabic can be vocalized in diverse fashion, various systems developed in centers of Muslim scholarship, primarily the Iraqi cities of al-Kūfa and al-Baṣra. At that time, famed "readers" *(al-qurrāʾ)* were also famed grammarians, for example Ibn Abī Isḥāq al-Ḥaḍramī (d. 118/735-6) or Abū ʿAmr b. al-ʿAlāʾ (d. 154/770; see RECITERS OF THE QURʾĀN). The generation of the Prophet's grandchildren and great-grandchildren gradually succeeded in creating an elegant system of diacritics, which permitted a shift from a *scriptio defectiva* to a *scriptio plena*. A tradition insistently connects the first stage of this process with Abū l-Aswad al-Duʾalī (or al-Dīlī; d. 69/688). This man, from the circle around ʿAlī, is known as the founder of Arabic syntax *(ʿilm al-naḥw)*. Tradition connects Abū l-Aswad's work first with an initiative of ʿAlī and, later, with instructions from the noted Umayyad governor and sworn brother of Muʿāwiya (d. 60/680), Ziyād b. Abīhi, who ruled the entire eastern section of the caliphate.

The concrete individuals are less important than the way the tradition treats their roles, particularly those of ʿAlī and Ziyād b. Abīhi. The former must have understood the importance of furthering the unification of the qurʾānic text, both for the cause of Islam (q.v.) and for his own reputation. As for Ziyād, a faithful servant of the Umayyads famed for his intelligence and decisiveness, he was precisely the man to grasp, on the basis of state and dynastic interests, the imperative of continuing work on the text of the scripture. It is possible that, at this stage, the heart of the matter was the necessity of using already existing diacritical marks in copying the Qurʾān.

The tradition no less insistently foregrounds the role of another equally powerful, decisive and intelligent Umayyad governor, al-Ḥajjāj. He instructed his

clerks, Naṣr b. ʿĀṣim (d. 89/707) and Yaḥyā b. Yaʿmur (or Yaʿmar; d. 129/746), to complete the development of a system to designate long and short vowels as well as a number of additional elements in the writing system. It is important to note that this provoked opposition, especially in Medina (q.v.). Progress toward a *scriptio plena* threatened to reduce the influence of qurʾānic readers *(qurrāʾ),* who knew the text by heart and were recognized by society as the main bearers of the tradition.

The maturation of a writing system and the establishment of a grammatical system were largely completed by the end of the ninth century. At that time, Khalīl b. Aḥmad (d. 170/786-7 or 791) developed and introduced additional diacritical signs. His famous pupil Sībawayhi (d. ca. 189/796), the grammarians al-Aṣmaʿī (d. 213/828), Abū ʿUbayda (110-210/728-824-5), Abū Zayd al-Anṣārī (d. 215/830-1), pupils of the above-noted Abū ʿAmr b. al-ʿAlāʾ, and al-Farrāʾ (d. 207/822) created works which successfully codified the elements of language and established an orderly grammatical system. Sībawayhi's *Kitāb* contains an enormous number of qurʾānic examples. The grammar was created for the sake of the Qurʾān, but also relied upon it.

In the ninth century, the center of scholarly activity shifted to Baghdād, where the beginning of the tenth century witnessed several attempts to achieve a new level of unification in the qurʾānic text. The main role fell to Ibn Mujāhid (245-324/859-935), who worked in Baghdād and enjoyed the successive protection of two extremely influential grand *wazīr*s, Ibn Muqla and Ibn ʿĪsā. Ibn Mujāhid's work, *al-Qirāʾāt al-sabʿ,* pretended to near official status and established a system of permissible qurʾānic "readings." The system proposed in the work relied on the consonantal basis of the "ʿUthmānic version" and limited the number of variant vocalizations to seven; these belonged, correspondingly, to seven authorities of the eighth century. For each tradition, two slightly different variants *(al-riwāyāt)* were noted. All of them were acknowledged as equally lawful; the use of other variants *(al-ikhtiyār),* however, was forbidden. Although this system gradually became very widespread, others continued to exist. These were known as "three after seven" and "four after ten." In practice, however, only two of the systems noted by Ibn Mujāhid became widespread: the Kūfan, "*Ḥafṣ* (d. 246/860) *ʿan ʿĀṣim* (d. 127/744)," and, to a lesser degree, the Medinan, "*Warsh* (d. 197/812) *ʿan Nafiʿ* (d. 169/785)." The "battle of the readings" was accompanied by pointed polemics which, in sum, reflected serious ideological and political disagreements within the Islamic community.

Even after Ibn Mujāhid, however, it remained possible to understand the sacred text in more than one way. The system that had been developed did not provide for anything analogous to punctuation. The science of qurʾānic recitation *(ʿilm al-tajwīd),* which codifies the rules for reading the Qurʾān *(qawāʿid al-qirāʾāt),* provided a framework for solving the problem. The history of how the tradition of *ʿilm al-tajwīd* took shape, which is linked both to *ʿilm al-qirāʾāt* and the etiquette of reading, remains unwritten. It was closely tied to the mystical-ascetic movement in Islam later to be termed *al-taṣawwuf,* which emerged in the second half of the eighth and beginning of the ninth centuries (see ASCETICISM; ṢŪFISM AND THE QURʾĀN). Tradition holds that the first to write a special work on *ʿilm al-tajwīd* was a contemporary of Ibn Mujāhid, Mūsā b. ʿUbayd Allāh b. Khāqān al-Baghdādī (d. 325/936). The set of fifteen pausal signs employed by

qurʾānic readers went back to the detailed system developed and introduced by Khalīl b. Aḥmad. As the eighth book of al-Ghazālī's (d. 505/1111) *Iḥyāʾ ʿulūm al-dīn* indicates, by the twelfth century this system had already been worked out in detail and accepted by the community. The rules for reading the Qurʾān *(qawāʿid al-qirāʾāt)* described in detail questions of the assimilation and dissimilation of consonants, the influence of consonants on the pronunciation of the following vowel and the accentuation of phrases in accordance with meaning, etc. The placement of pauses *(waqf wa-ibtidāʾ)* was especially important, for pause indications fulfilled the role of punctuation, guaranteed the intelligibility of each verse's *(āya)* semantic content and bound them into a whole (see VERSES; FORM AND STRUCTURE OF THE QURʾĀN; SŪRA). Despite the complexity of the resulting system, it still serves only as a reminder and requires a thorough knowledge of the rules.

Although by the fifth/eleventh and sixth/twelfth centuries the basic problems involved in unifying the sacred text had been solved, centuries would be required to complete the process. Among the many events that took place during that time, we note two, which played a special role. In 1202/1787 the full Arabic text of the Qurʾān was printed for the first time in Russia (see PRINTING OF THE QURʾĀN). The edition differed in a basic fashion from European editions, primarily because it was Muslim in character: the text was prepared for printing by Mullah ʿUthmān Ismāʿīl. In 1216-7/1801-2 the St. Petersburg Arabic typeface was transferred to Kazan, where the Muslim printing press was opened, and where, beginning in 1217/1802, this text of the Qurʾān was published many times. The so-called "Kazan Qurʾāns," viewed as the first Muslim edition, spread widely in the East and were reproduced numerous times. It is possible that this edition played a decisive role in the centuries-long process of standardizing qurʾānic orthography.

The final stage of the work on the unification of the qurʾānic text is connected with the appearance in Cairo in 1342/1923-4 of a new edition of the text; it represents now the final step in canonizing the orthography, structure of the text and rules of reading. Drawn up by a special panel of Muslim scholars it was based on one of the "seven readings" *(Ḥafṣ ʿan ʿĀṣim)*. The members of the panel relied in their work not on an analysis of early manuscripts, but on contemporary Muslim works on the issue of "readings" *(al-qirāʾāt)* as well as on the living tradition of prominent Qurʾān reciters (Saʿīd, *Recited Koran*). This undoubtedly narrows the significance of the work. Nonetheless, the Egyptian edition, today accepted throughout the Muslim world, as well as by European scholars, represented a significant step forward. Together with the encyclopedia of qurʾānic readings (Kuwait, 1402-5/1982-5), it forms the nucleus of a critical edition. Still, the appearance of the Egyptian edition did not eliminate all other traditions of textual transmission. In the western Muslim world and in Zaydī Yemen, traditions remain which go back to a different transmitter of the text, Warsh. Today, publications of the Qurʾān in this transmission appear not only in North Africa but in Cairo and Riyadh as well.

Although an analysis of extant copies of the Qurʾān confirms the outline of the traditional history of qurʾānic orthography and the text in general, they also clearly demonstrate that new light may be shed on the current understanding of the history of the consolidation of the text of the Qurʾān (see MANUSCRIPTS OF THE QURʾĀN).

Qurʾānic fragments dated to the first/seventh — third/ninth centuries preserve a large number of mixed and transitional variants, whether one examines orthography, the numeration of verses *(āyas)* or known systems of variant readings. Either all of these variants and systems were artificial from the start, or they arose after the manuscripts of the early period were copied and reflect a higher level of uniformity and regularity in the copying of Qurʾāns.

The orthographic discrepancies preserved in the early manuscripts affect, for the most part, the writing of long vowels and the *hamza* (for examples of these orthographic discrepancies, see Rezvan, Qurʾān, 45-6 [Tables 11-13]). In the first place, one encounters the omission of *alif*s in various noun and verb forms. In many cases the *hamza* was conveyed where required by *alif, wāw* or *yāʾ* or simply omitted. Early qurʾānic manuscripts may preserve traces of discrepancies rooted in the morphological systems of the eastern and western Arabian dialectal groups. These manuscripts also display several vocalization systems based on the use of dots of various colors, as well as different systems of *tajwīd* marks which preceded those established in the fourth/tenth — sixth/twelfth centuries. Careful description and study of early manuscripts and the creation of a detailed data-base of early copies by paleographers, linguists and historians may furnish material for reconstructing the early history of qurʾānic orthography from a perspective different than that conveyed by the traditional accounts.

Pairs and Pairing

Any aspect of the language and style of the Qurʾān in which pairs are perceived as a structural element in the composition of the Qurʾān (see FORM AND STRUCTURE OF THE QURʾĀN), such as any form of parallelism or repetition, pairs of synonymous, synthetic or antithetic terms or concepts, double divine epithets (see GOD AND HIS ATTRIBUTES) as well as aspects of the number two or use of the dual form (see NUMBERS AND ENUMERATION).

Ethical dualism

Throughout the Qurʾān, an antithetic or dual parallelism is observable in the admonitions to humankind (see EXHORTATIONS), in the descriptions of an individual's fate on the day of judgment (see LAST JUDGMENT) as well as of the two possible final destinations for people, paradise (q.v.) and hell (see HELL AND HELLFIRE).

Admonitions to believe in and obey God and his apostle (see BELIEF AND UNBELIEF; MESSENGER; OBEDIENCE), to repent (see REPENTANCE AND PENANCE), to enjoin what is right and to prohibit what is wrong (see VIRTUES AND VICES, COMMANDING AND FORBIDDING), to be grateful (see GRATITUDE AND INGRATITUDE), to do right and to follow the right path as revealed to humankind are usually presented as a promise followed by a corresponding threat: "He who follows the right path (see PATH OR WAY) does so for himself, and he who goes astray (q.v.) errs against himself" (Q 10:108; cf. also Q 17:15; 39:41); "Those who disbelieve and obstruct (others) from the way of God will have wasted their deeds. But those who believe and do the right, and believe what has been revealed to Muḥammad (see REVELATION AND INSPIRATION), which is the truth (q.v.) from their lord, will have their faults pardoned by him and their state improved" (Q 47:1-3; cf. also Q 5:9-10; 35-6, 40-2; 9:67-72; 10:7-9; 22:50-1; 32:18-20; 35:7; 48:5-6; 57:19); "Whoever does good does so for himself, and whoever does wrong bears the guilt thereof" (Q 41:46; cf. also Q 16:90; 40:39-40; 45:15; 92:5-11); "If you obey, God

will give you a good reward; but if you turn back… he will punish you with grievous affliction" (Q 48:16; cf. also Q 13:18; 48:17; see REWARD AND PUNISHMENT); "It is better for you to repent. If you do not, remember that you cannot elude (the grip of) God" (Q 9:3; cf. also Q 4:141-7); "Remember, your lord proclaimed: 'If you are grateful I shall give you more; but if you are thankless, then surely my punishment is very great'" (Q 14:7; cf. also Q 2:152; 39:7).

The choices that human beings face are described as one between two paths, the path of rectitude *(sabīl al-rushd)* or the straight path *(sabīl mustaqīm),* on the one hand, and the path of error (q.v.; *sabīl al-ghayy*), on the other: "Did we not give him [i.e. humans] two eyes, a tongue, and two lips, and show him the two highways?" (*al-najdayn;* Q 90:8-10; cf. also Q 7:146; 76:3). As a norm of distinction, the believers are described as the "people of the right hand" *(aṣḥāb al-maymana/aṣḥāb al-yamīn)* whereas the unbelievers are described as the "people of the left hand" (*aṣḥāb al-mashʾama/ aṣḥāb al-shimāl,* Q 56:8-9, 27-56; 90:17-9; see LEFT HAND AND RIGHT HAND). By the same token, the believer is compared to one who can hear and see whereas the unbeliever is said to resemble a person who is deaf and blind (e.g. Q 11:24; 40:58; cf. also Q 30:52-3; 35:19; 43:40; 47:23; see SEEING AND HEARING; VISION AND BLINDNESS; HEARING AND DEAFNESS). In those qurʾānic passages where human responsibility appears to be completely eclipsed and where human destiny is said to depend on the will of God, it is God who either guides individuals rightly or leads them astray (Q 6:39; 7:30, 178; 14:4; 16:93; 35:8; 39:36-7), decreases or increases people's fortunes (*rizq,* Q 13:26) and means (*rizq,* Q 30:37), has mercy (q.v.) on people or punishes them (Q 5:18, 40; 17:54; 29:21; 41:43; 48:14; see FREEDOM AND PREDESTINATION).

Similar dual parallelisms are to be observed when it comes to the reckoning of an individual's deeds on the day of judgment. "On that day people will be separated so that he who disbelieves will bear the consequence of his unbelief; and he who does the right will straighten out the way for his soul, so that God may reward those who believed and did what was good, by his grace. Surely he does not love unbelievers" (Q 30:43-5; cf. also Q 11:105-8; 20:74-6; 22:56-7; 30:14-6; 33:73; 39:71-4; 42:7); "[Only] those whose scales are heavier in the balance will find happiness. But those whose scales are lighter will perish and abide in hell forever" (Q 23:102-3; cf. also Q 7:8-9; 101:6-9; see WEIGHTS AND MEASURES); "[Many] faces will that day be bright, laughing and full of joy; and many will be dust-begrimed, covered with the blackness (of shame)" (Q 80:38-41; see JOY AND MISERY).

On the day of judgment, the evil-doer will receive the book (q.v.; *al-kitāb*) containing the record of his deeds in his left hand or from behind his back, whereas the obedient will be given it in his right hand (Q 69:18-32; 84:7-12). The *sijjīn,* the books where the deeds of the evil-doers are listed, is contrasted with the *ʿilliyyūn,* the book where the deeds of the pious are listed (Q 83:7 f.; see HEAVENLY BOOK). An exception to this strict dual parallelism is to be found in Q 56 where humankind is said to be separated at the last judgment into three classes, the "people of the right side" *(aṣḥāb al-maymana),* the "people of the left side" *(aṣḥāb al-mashʾama)* and "those preceding" *(al-sābiqūn)*. "Those are the ones brought near *(al-muqarrabūn),* in gardens of delight, a multitude from the former (times) and a few from the later (times)" (Q 56:11-4). Those who belong to this class — the first converts to Islam, the prophets (see PROPHETS AND PROPHETHOOD) or any person of outstanding virtue

according to al-Zamakhsharī (d. 538/1144; *Kashshāf,* ad loc.) and al-Bayḍāwī (d. prob. 716/1316-7; *Anwār,* ad loc.) — are given the highest reward in paradise.

Qurʾānic descriptions of humanity's two final destinations also evidence a pair structure. A description of the joys of paradise or the torments of hell is, as a rule, followed by the antithetic description of the respective other. For example, "Certainly hell lies in wait, the rebels' abode where they will remain for eons, finding neither sleep *(bard)* nor anything to drink except boiling water and benumbing cold: a fitting reward. They were those who did not expect a reckoning, and rejected our signs (q.v.) as lies (see LIE). We have kept account of everything in a book. So taste (the fruit of what you sowed), for we shall add nothing but torment. As for those who preserve themselves from evil and follow the straight path *(al-muttaqīna),* there is attainment for them: orchards and vineyards, and graceful maidens of the same age (see HOURIS), and flasks full and flowing. They will hear no blasphemies (see BLASPHEMY) there or disavowals: A recompense from your lord, a sufficient gift" (Q 78:21-36). The parallelism is, however, at times, asymmetric. Depending on the context, either the description of hell or of paradise is more detailed. Such an asymmetric antithesis is to be observed in Q 55, where the fate of the unbelievers in hell is described in four verses (Q 55:39, 41, 43, 44), whereas the fate of the believers in paradise is described in eight verses (Q 55:46, 48, 50, 52, 54, 56, 58, 60), whereupon there follows another description of the garden of the same length (Q 55:62, 64, 66, 68, 70, 72, 74, 76; cf. Gilliot, Parcours exégétiques, 91-111). Having two sets of gardens for two classes of believers would seem to be confirmed by the parallel two classes of gardens in Q 56:10-38 (Abdel Haleem, Context, 91 f.; see GARDEN).

Pairs of concepts and terms

Pairs of synonymous as well as synthetic concepts are to be found in the description of Muḥammad and earlier prophets as "bearers of warnings and bringers of happy news" (*mubashshir[wa-] mundhir/mubashshir nadhīr/bashīr [wa-]nadhīr;* Q 2:119, 213; 4:165; 5:19; 6:48; 7:188; 10:2; 11:2; 17:105; 18:56; 25:56; 33:45; 34:28; 35:24; 41:4; 48:8; see WARNER; GOOD NEWS); of the book of Moses (q.v.; *kitāb Mūsā*) as a "way-giver and a grace" (q.v.; *imām wa-raḥma;* Q 11:17; 46:12; see IMĀM); of the Torah (q.v.) and the Gospel (q.v.) as containing "guidance and light" *(nūran wa-hudan/hudan wa-nūrun)* for humans (Q 5:44, 46; 6:91; cf. 42:52); and of the earlier revelations and the Qurʾān as a "guidance and grace" *(hudā wa-raḥma)* for those who believe (Q 6:154; 7:52, 154, 203; 10:57, et al.; *hudā wa-bushrā,* Q 27:2; *hudā wa-shifāʾ,* Q 41:44; *hudā wa-dhikrā,* Q 40:54). To the prophets God gave "wisdom (q.v.) and knowledge" (*ḥukm wa-ʿilm,* Q 12:22; 21:74, 79; 28:14; see KNOWLEDGE AND LEARNING). Another pair of terms frequently referred to in the context of earlier revelations is "scripture and wisdom" (*al-kitāb wa-l-ḥikma,* Q 2:231; 4:54, 113; 5:110; see SCRIPTURE AND THE QURʾĀN). The pair of terms "wealth and (male) children" *(māl wa-banūn/amwāl wa-banūn/amwāl wa-awlād/māl wa-walad/anʿām wa-banūn)* signifies wealth of this world (e.g. Q 9:55, 69; 17:6; 18:46; 23:55; 26:88, 133; 34:35, et al.; see CHILDREN). As a pair of antithetic concepts, the verses to be understood clearly *(muḥkamāt)* are contrasted with the parabolic verses of the Qurʾān *(mutashābihāt)* as mentioned in Q 3:7 (see AMBIGUOUS).

Contrasting pairs such as "heaven (see HEAVEN AND SKY) and earth (q.v.)," "sun (q.v.) and moon (q.v.)," "day and night" (q.v.; see also DAY, TIMES OF), "east and west," "land and sea," "known and unknown (see HIDDEN AND THE HIDDEN)," "before and after," "life (q.v.) and death

(see DEATH AND THE DEAD)" — all signifying the entirety of creation (q.v.) or "all" — are employed to describe God's unicity, omnipotence (see POWER AND IMPOTENCE) and omniscience. To God belongs all that is in the heavens and the earth (*mā fī l-samāwāt wa[-mā fī] l-arḍ,* Q 2:116, 284; 10:55, 68; 14:2; 16:52; 18:14, et al.; cf. also Q 35:44); his kingdom extends over the heavens and the earth (Q 7:158, 185; 9:116; 10:66; 13:16; 24:42, et al.); God holds the keys of the heavens and the earth (*maqālīd al-samāwāt wa-l-arḍ;* Q 39:63; 42:12); he is the light *(nūr)* of the heavens and the earth (Q 24:35); his are the armies of the heavens and the earth (*junūd al-samāwāt wa-l-arḍ,* Q 48:4, 7; see RANKS AND ORDERS), and his seat extends over heavens and earth (*wasiʿa kursiyyuhu al-samāwāt wa-l-arḍ,* Q 2:255; see THRONE OF GOD); and he provides people with food and sustenance [from the heavens and the earth] (Q 10:31; 16:73; 27:64; 31:20; 34:24; 35:3; 45:5, 13). The fact that God created the heavens and the earth (Q 2:117; 9:36; 10:3; 11:7; 12:101; 14:10, 19, 32, et al.; variation: God created the heavens and the earth and all that lies between them *[wa-mā baynahumā],* Q 15:85; 21:16; 25:59; 30:8; 32:4; 37:5; 38:27; 44:38; 46:3; 50:38) and that he brings to light what is hidden in the heavens and the earth (Q 27:25) indicate his omnipotence, whereas his omniscience is indicated by his knowledge which encompasses all that is in the heavens and the earth (Q 5:97; 11:123; 14:38; 16:77; 17:55; 18:26; 21:4, et al.) — there is not the weight of an atom "on the earth and in the heavens" that is hidden from him (Q 10:61; 31:16). His omniscience is further indicated by the fact that he knows "what is hidden and what is evident" (*al-ghayb wa-l-shahāda,* Q 6:73; 9:94, 105; 13:9; 23:92; 32:6; 39:46; 59:22; 62:8; 64:18), what humans "hide and disclose" (i.e. Q 2:33, 77; 16:19, 23; 21:110; 27:25, 74; 28:69; 33:54; 36:76; 60:1; 64:4; 87:7), and what was before humans and what lies behind them (*mā bayn aydīhim wa-mā khalfahum,* Q 2:255; 20:110; 21:28; 22:76). God's unicity is indicated by the fact that all things that move on the earth and in the heavens bow down before him (Q 13:15; 16:49; 22:18; 24:41; 57:1; 59:1, 24; 61:1; 62:1; 64:1; see BOWING AND PROSTRATION) and that his semblance is the most sublime in the heavens and the earth (Q 30:27). By the same token, the gods of the unbelievers are said to be without any power over the heavens and the earth, nor do they have any share in them (Q 34:22; 38:10; see POLYTHEISM AND ATHEISM). Moreover, God is the first and the last *(al-awwal wa-l-ākhir),* the transcendent and the immanent (*al-ẓāhir wa-l-bāṭin,* Q 57:3). God's omnipotence is further evident in that he created "the sun and the moon" (Q 10:5; 13:2; 16:12; 21:33; 22:61, et al.), and made "the day and the night" an alternation (Q 10:6, 67; 13:3; 16:12; 17:12; 23:80; 24:44; 25:47, 62, et al.), that he enables people to travel over "land and sea" (*fī l-barr wa-l-baḥr,* Q 10:22; 17:70; cf. also Q 27:63), that he gives life and death (Q 9:116; 10:31, 56; 23:80; 30:19; 40:68; 44:8; 45:26; 50:43; 53:44; 57:2), makes happy and morose (Q 53:43), and that he is the lord of the east and the west (*rabb al-mashriq wa-l-maghrib,* Q 26:28; 73:9; *rabbu l-mashriqayn wa-rabb al-maghribayn,* Q 55:17; *rabbu l-mashāriq wa-l-maghārib,* Q 70:40; *wa-lillāhi l-mashriq wa-l-maghrib,* Q 2:115, 142).

Pairs of contrasts such as "sky and earth," "sun and moon," "day and night," as well as of similar terms such as "fig and olive" are also encountered in oaths: "I call to witness the rain-producing sky and the earth which opens up" (Q 86:11-2); "I call to witness the sun and its early morning splendor, and the moon as it follows in its wake, the day when it reveals its radiance, the night when it covers it over, the heavens and its architecture, the earth and its

spreading out" (Q 91:1-6); "I call the night to witness when it covers over, and the day when it shines in all its glory" (Q 92:1-2); "I call to witness the fig and the olive" (Q 95:1). Idols are described as those who can neither harm nor profit their worshippers (*mā lā yaḍurruhu wa-mā lā yanfaʿuhu,* Q 22:12; cf. also Q 5:76; 6:71; 10:18, 106; 20:89; 21:66; 25:55; 26:72 f.; 34:42; see IDOLS AND IMAGES).

Contrasting this ephemeral world with the enduring hereafter serves to admonish humankind to concentrate on the latter (see ESCHATOLOGY). "O people, the life of this world is ephemeral; but enduring is the abode of the hereafter" (Q 40:39); "Whatsoever has been given you is the stuff this life is made of, and (only) its embellishment. What is with your lord is better and abiding. Will you not understand?" (Q 28:60; cf. also Q 8:67; 16:96; 30:7; 33:28-9; 42:20; 57:20).

The contrasting pair of "light and darkness" describes the benefit which the Prophet and the revelation bring to humankind: "An apostle who recites before you the explicating revelations of God that he may bring those who believe and do the right out of darkness (q.v.) into light" (Q 65:11; cf. also Q 14:5); "It is he who sends down resplendent revelations to his votary, that he may take you out of darkness into light" (Q 57:9; cf. also Q 14:1).

Double divine epithets

Double divine epithets occur frequently at the end of verses, particularly in the longer sūras. At times, these have little or no relevance to the verses they are attached to; in other instances the phrases are appropriate to the context. Numerous pairs of terms describing God consist of synonyms, such as the double epithet *al-raḥmān al-raḥīm* "most benevolent, ever-merciful" of the *basmala* (q.v.) formula which occurs in five further instances (Q 1:3; 2:163; 27:30; 41:2; 59:22); "all-forgiving and ever-merciful" (*ghafūr raḥīm,* Q 2:173, 182, 192, 199, 218, 226; 3:31, 129; 4:23, 25, et al.; *al-raḥīm al-ghafūr,* Q 34:2; *al-ghafūr dhū l-raḥma,* Q 18:58; see FORGIVENESS); "all-forgiving and forbearing" (*ghafūr ḥalīm,* Q 2:225, 235; 3:155; 5:101; *ḥalīm ghafūr,* Q 17:44; 35:41); "all-forgiving and loving" (*al-ghafūr al-wadūd,* Q 85:14); "benign and forgiving" (*ʿafuww ghafūr,* Q 4:43, 99; 22:60); "forgiving and ever-merciful" (*tawwāb raḥīm,* Q 4:16, 64; 49:12; cf. 9:104, 118); "compassionate and ever-merciful" (*raʾūf raḥīm,* Q 2:143; 9:117, 128; 16:7, 47; 22:65; 57:9; 59:10); "ever-merciful and loving" (*raḥīm wadūd,* Q 11:90); "just and merciful" (*al-barr al-raḥīm,* Q 52:28); "all-knowing, all-wise" (*ʿalīm ḥakīm,* Q 4:11, 17, 26, 92, 104, 111, 170; 8:71, et al.; *ḥakīm ʿalīm,* Q 6:83, 128, 139; 15:25; 27:6; 43:84; 51:30); "all-knowing and cognizant" (*ʿalīm khabīr,* Q 4:35; 31:34; 49:13; 66:3); "all-wise and cognizant" (*al-ḥakīm al-khabīr,* Q 6:18, 73; 34:1); "sublime and great" (*[al-]ʿaliyy [al-]kabīr,* Q 4:34; 22:62; 31:30; 34:23; 40:12); "great and most high" (*al-kabīr al-mutaʿāl,* Q 13:9); "sublime and supreme" (*al-ʿaliyy al-ʿazīm,* Q 2:255; 42:4); "powerful and mighty" (*[al-]qawiyy [al-]ʿazīz,* Q 11:66; 22:40, 74; 33:25; 42:19; 57:25; 58:21); "worthy of praise and glory" (*ḥamīd majīd,* Q 11:73). Moreover, God is humankind's only friend and advocate (*waliyy shafīʿ,* cf. Q 6:51, 70; *mawlan naṣīr,* cf. Q 22:78; *waliyy naṣīr,* cf. Q 4:123, 173; 29:22; 33:17; 42:8, 31; 48:22; see CLIENTS AND CLIENTAGE; FRIENDS AND FRIENDSHIP; INTERCESSION).

Other combinations of adjectives referring to God complement each other, such as "all-hearing and all-knowing" (*[al-]samīʿ [al-]ʿalīm,* Q 2:127, 181, 224, 227; 3:34, 35, 121; 4:148; 5:76; et al.); "all-hearing and all-seeing" (*[al-]samīʿ [al-]baṣīr,* Q 4:58, 134; 17:1; 22:75; 31:28; 40:20, 56; 42:11; 58:1); "[God is] near and answers" (*qarīb mujīb,* Q 11:61); "all-hearing and all-near" (*samīʿ*

qarīb, Q 34:50); "judge and all-knowing" (*al-fattāḥ al-ʿalīm,* Q 34:26); "the one and the omnipotent" (*al-wāḥid al-qahhār,* Q 13:16; 14:48). Other pair epithets describe different aspects of God, such as "mighty and all-wise" (*[al-]ʿazīz [al-]ḥakīm,* Q 2:129, 209, 220, 228, 240, 260; 3:6, 18, 62, 126, et al.); "mighty and all-knowing" (*[al-]ʿazīz [al-]ʿalīm,* Q 6:96; 27:78; 36:38; 40:2; 41:12); "mighty and worthy of praise" (*al-ʿazīz al-ḥamīd,* Q 14:1; 34:6; 85:8); "mighty and ever-merciful" (*[al-]ʿazīz [al-]raḥīm,* Q 26:9, 68, 104, 122, 140, 159, 175, 191, 217; 30:5; 32:6; 36:5; 44:42); "mighty and all-forgiving" (*[al-]ʿazīz [al-]ghafūr,* Q 35:28; 67:2; *al-ʿazīz al-ghaffār,* Q 38:66; 39:5; 40:42); "all-knowing and all-powerful" (*[al-]ʿalīm [al-]qadīr,* Q 16:70; 30:54; 35:44; 42:50); "all-knowing and forbearing" (*ʿalīm ḥalīm,* Q 22:59; 33:51); "infinite and all-knowing" (*wāsiʿ ʿalīm,* Q 2:115, 247, 261, 268; 5:54; 24:32); "infinite and all-wise" (*wāsiʿ ḥakīm,* Q 4:130); "responsive to gratitude and all-knowing" (*shākir ʿalīm,* Q 4:147); "all-forgiving and rewarding" (*ghafūr shakūr,* Q 35:30, 34; 42:23); "rewarding and forbearing" (*shakūr ḥalīm,* Q 64:17); "benign and all-powerful" (*ʿafuww qadīr,* Q 4:149); "self-sufficient and forbearing" (*ghaniyy ḥalīm,* Q 2:263); "self-sufficient and praiseworthy" (*ghaniyy ḥamīd,* Q 2:267; 4:131; 14:8; 22:64; 31:12, 26; 57:24; 60:6; 64:6; see PRAISE); "living self-subsisting (or: sustaining)" (*al-ḥayy al-qayyūm,* Q 2:255; 3:2); "the creator and all-knowing" (*al-khallāq al-ʿalīm,* Q 15:86; 36:81); "compassionate and all-wise" (*tawwāb ḥakīm,* Q 24:10); "all-wise and praiseworthy" (*ḥakīm ḥamīd,* Q 41:42); "all-high and all-wise" (*ʿaliyy ḥakīm,* Q 42:51).

Aspects of the number two and uses of dual forms

The Qurʾān frequently mentions that God created pairs of everything — humans, beasts and even fruits (Q 6:143-4; 13:3; 35:11; 36:36; 42:11; 43:12; 51:49; 53:45; 55:52; 75:39; 78:8; see ANIMAL LIFE; AGRICULTURE AND VEGETATION); he also commanded Noah (q.v.) to take a pair of every species into the ark (q.v.; cf. Q 11:40; 23:27). At the end of days God will create people a second time: "We created you from the earth and will revert you back; and raise you up from it a second time" (*tāratan ukhrā,* Q 20:55; cf. with variations Q 10:4, 34; 21:104; 27:64; 29:19, 20; 30:11, 27; 50:15; 85:13); "They say: 'O lord, twice you made us die, and twice you made us live. We admit our sins (see SIN, MAJOR AND MINOR). Is there still a way out?'" (Q 40:11).

Those who believe in God and his apostle are said to receive twice as much of his bounty and their reward will be duplicated: "What you give on interest to increase (your capital) through other people's wealth (see USURY) does not find increase with God; yet what you give in alms and charity (*zakāt,* see ALMSGIVING) with a pure heart (q.v.), seeking the way of God, will be doubled" (Q 30:39; cf. with variations Q 2:245, 261, 265; 4:40; 28:54; 34:37; 57:11, 18, 28; 64:17). By the same token, the punishment of those who commit acts of shamelessness will be doubled: "O wives of the Prophet (q.v.), whosoever of you commits an act of clear shamelessness, her punishment will be doubled. That is easy for God [to do]. But whoever of you is obedient to God and his apostle, and does right, we shall give her reward to her twofold; and we have prepared a rich provision for her" (Q 33:30-1; cf. with variations Q 9:101; 11:20; 17:75; 25:69). Similarly, the unbelievers call for those who led them astray to suffer double punishment: "They will say: 'O lord, give him who has brought this upon us two times more the torment of hell'" (Q 38:61; cf. also Q 7:38; 33:68).

The number two also occurs in numerous legal regulations (see LAW AND THE QURʾĀN). A borrower deficient of mind or infirm or unable to explain requires two male witnesses to draw up a debt contract

(Q 2:282; see DEBT). The same number of witnesses is proscribed when one dictates his last will (Q 5:106-7; see INHERITANCE) as well as in the case of divorce (Q 65:2; see MARRIAGE AND DIVORCE). Divorce is revocable two times after pronouncement; thereafter the husband has either to keep the wives honorably or part with them in a decent manner (Q 2:229). Following divorce, mothers should suckle their babies for a period of two years if both parents agree on this (Q 2:233; cf. also Q 31:14; see WET-NURSING; FOSTERAGE). Two honorable men are required to determine a livestock of equivalent value as atonement for the one who purposely kills game during pilgrimage (q.v.; Q 5:95; see also HUNTING AND FISHING). The share of the male child in inheritance is equivalent to that of two female children (Q 4:11).

The number two also plays a role in some of the qurʾānic parables such as the parable (q.v.) of the two men, one of whom owns two gardens (Q 18:32-44); the story of the two gardens of the Sabaeans (Q 34:15-7; see SHEBA), or the parable of the two men (Q 16:76). Furthermore, we have the episode of the two men who feared God (Q 5:23) as well as those passages where God is said to have made two bodies of water flow side by side *(maraja l-baḥrayn),* one fresh and sweet, the other brine and bitter, and to have placed a barrier (q.v.) between them (cf. Q 25:53; 27:61; 35:12; 55:19 f.; see BARZAKH). The number two also occurs in the creation account given in Q 41:9-12, which differs from the other qurʾānic accounts of the creation of the world in saying that God created the earth in two days rather than the more usual six; the creation of firm mountains and the means of growing food was completed in four days and the creation of the seven heavens in two days.

Contrast and dualism feature obviously throughout Q 55. The frequent use of the dual has baffled commentators and scholars alike, who often argued that the dual forms were demanded by the scheme obtaining there for verse juncture (Nöldeke, *Neue Beiträge,* 10; Horovitz, *Paradies,* 55; Müller, *Untersuchungen,* 132; see LANGUAGE AND STYLE OF THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN). Wansbrough [*QS,* 26-7] argued that there was a "juxtaposition in the canon of two closely related variant traditions, contaminated by recitation in identical contexts or produced from a single tradition by oral transmission." In their respective investigations of Q 55, Neuwirth (Symmetrie und Paarbildung) and Abdel Haleem (Context) have shown that most dual forms are to be explained by the grammatical context of the sūra (see GRAMMAR AND THE QURʾĀN). The addressees of the challenging question of the refrain in the dual, for example, "Which, then, of your lord's bounties do you deny?" — which is repeated thirty-one times throughout the sūra — are humans and jinn (q.v.), introduced in verses 14 and 15 (for the pair of humans and jinn see also Q 7:38; 32:13; 41:25, 29; 46:18; 72:5-6; 114:6). There are only two dual forms that are not to be explained by the immediate context. The use of duals in Q 55:17, "The lord of the two easts and the two wests," refers to the two extreme points on the horizon where the sun rises in the winter and in the summer, and where it sets in the winter and in the summer. As for the dual form "two gardens" (*jannatān,* Q 55:46 and 62), which is also not to be explained by the immediate context, Neuwirth and Abdel Haleem follow the suggestion of al-Farrāʾ (d. 207/822) that the notion of two gardens represents perfect eternal bliss (cf. Farrāʾ, *Maʿānī,* iii, 118).

Verse pairs

Pairs of verses which either together form complete sentences or can be identified on

the basis of exact parallelism or strict metrical regularity (see RHYMED PROSE) are the smallest stylistic entities of the Qurʾān (Neuwirth, *Studien,* 176 f.). Examples of pairs of verses characterized by strict parallelism and a metrical regularity are to be found in oaths (q.v.; Q 81:15-6, 17-8; 86:11-2; 100:4-5), in eschatological scenes (Q 52:9-10; 70:8-9; 89:21-2; 101:4-5), in descriptions of the last judgment (Q 89:25-6), and in ethical admonitions (Q 89:17-8, 19-20; see ETHICS AND THE QURʾĀN). Other pairs of verses fulfill only one function such as metrical regularity or strict parallelism. In another type of verse pair the second verse consists of a mere repetition of the first verse: "Surely with hardship there is ease. With hardship there is ease" (Q 94:5-6; cf. also 74:19-20; 75:34-5; 78:4-5; 82:17-8; 102:3-4). Other verse pairs consist of antitheses: "But no, you prefer the life of the world. Though the life to come is better and abiding" (Q 87:16-7; cf. also Q 51:54-5; 75:20-1; 86:13-4; 91:9-10; 95:4-5). Pairs of verses in which the second verse repeats or complements a portion of the first verse are to be classified as synthetic parallelism: "Read in the name of your lord who created, created man from an embryo" (Q 96:1-2; cf. also Q 2:149-50, 184-5; 37:20-1; 106:1-2; see BIOLOGY AS THE CREATION AND STAGES OF LIFE). Numerous pairs of verses that are characterized by synthetic parallelism also show grammatical and semantic parallelism: "Some of them listen to you: But can you make the deaf hear who do not understand a thing? Some of them look toward you: But can you show the blind the way even when they cannot see?" (Q 10:42-3). Parallel style is also found within one verse: "Bad women deserve bad men, and bad men are for bad women; but good women are for good men, and good men for good women" (Q 24:26); "Men should not laugh at other men, for it may be they are better than they; and women should not laugh at other women, for they may perhaps be better than they" (Q 49:11; see LAUGHTER; MOCKERY). Other pairs of verses, although not characterized by antithetic parallelism themselves, constitute antithetic parts of larger groups of verses: "Then he whose scales [of good deeds] shall weigh heavier will have a tranquil life. But he whose scales [of good deeds] are lighter will have the abyss for an abode" (Q 101:6-9). An example of an entire sūra being characterized by parallelism is Q 109: "Say: 'O you disbelievers, I do not worship what you worship, nor do you worship what I worship. Nor am I a worshiper of what you worship, nor are you worshipers of what I worship. To you your way *(dīnukum),* to me my way *(dīnī)*'" (see RELIGION; WORSHIP; RELIGIOUS PLURALISM AND THE QURʾĀN).

Sūra-pairs

The Indian Qurʾān commentator Amīn Aḥsan Iṣlāḥī (b. 1906), who, like most twentieth-century Muslim thinkers (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY) considers the sūras as organic unities, proposes that most of the Qurʾān consists of "sūra-pairs" that have closely related themes and complement each other. With this, he further developed the idea of his teacher, Ḥamīd al-Dīn al-Farāhī (1863-1930), who had argued that each sūra has a central theme, called *ʿamūd,* around which the entire sūra revolves. Iṣlāḥī holds that only adjacent sūras may form pairs and, given that the notion of complementarity underlies his concept of sūra-pairs, he identifies several types of complementarity, such as brevity and detail, principle and illustration, different types of evidence, difference in emphasis, premise and conclusion, and unity of opposites. These pairs are then said to constitute seven "sūra groups" (for a critical appraisal, cf. Mir, Iṣlāḥī's concept of sura-pairs).

Parable

An illustrative story teaching a lesson. The word for parable, *mathal* (pl. *amthāl,* often used with a form of the verb *ḍaraba/yaḍribu,* "to strike," "to coin"), occurs numerous times in the Qurʾān and evidences a much broader semantic range than does the English word "parable." For Arabic literature in general, *mathal* can be translated by such terms as simile, similitude, example, parable, allegory, proverb, motto, apothegm, aphorism, fable and maxim (see also SIMILES; LITERARY STRUCTURES OF THE QURʾĀN). This range of meaning for *mathal* also characterizes other Semitic languages, e.g. Hebrew *māshāl;* Aramaic *matlā.* Although *mathal* generally describes any item of discourse featuring one object or event illuminating another (usually) less tangible reality by comparison, some *amthāl* in the Qurʾān do not involve comparison at all (e.g. Q 25:8-9; 36:78). Furthermore, some exegetes have included as *amthāl* stories involving the supernatural and paranormal, such as Adam naming the animals (Q 2:30-4; see ADAM AND EVE; ANIMAL LIFE), a crow instructing Adam's son about the burial of his brother (Q 5:27-31; see CAIN AND ABEL) and Jesus (q.v.) calling down a table (q.v.) from God (Q 5:112-5).

In their complex of meaning, *amthāl* comprise one of the most significant categories of qurʾānic discourse (see FORM AND STRUCTURE OF THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN). A prophetic ḥadīth (tradition) includes *amthāl* among the five main categories of qurʾānic revelation (see REVELATION AND INSPIRATION; ḤADĪTH AND THE QURʾĀN). A statement attributed to ʿAlī b. Abī Ṭālib (q.v.; d. 41/661) says that *sunan,* "patterns of behavior" and *amthāl* comprise a fourth of the Qurʾān (see SUNNA). The legal theorist al-Shāfiʿī (d. 204/820) held that valid legal analysis *(ijtihād)* requires knowledge of the *amthāl* of the Qurʾān (cf. Suyūṭī, *Itqān,* chap. 63, iv, 44; see LAW AND THE QURʾĀN).

Al-Suyūṭī (d. 911/1505) notes that, for some, *amthāl* serve to clarify and support doctrines and laws by making them concrete through comparison with known events and objects in the everyday life of the receptor (Suyūṭī, *Itqān,* iv, 45). They assist in giving advice, in motivating and

restraining behavior, and in reflecting upon and determining truth by bringing to mind something that can be pictured and sensed. The Qurʾān insists, however, that only the knowledgeable will fully grasp their meaning (Q 29:43; see KNOWLEDGE AND LEARNING; SCHOLAR).

If parable in its qurʾānic context can be defined to include similitudes (extended explicit comparisons), example stories (featuring positive or negative characters to be emulated or avoided), parables (metaphors extended in a narrative; see METAPHOR; NARRATIVES) and allegories (featuring a series of related metaphors), then the following *amthāl* can be classified as parables: the fire [at night] (Q 2:17; see FIRE); the downpour (Q 2:19); the deaf, dumb, and blind (Q 2:171; see SEEING AND HEARING; VISION AND BLINDNESS; HEARING AND DEAFNESS); the sprouting seed (Q 2:261); the rock with thin soil (Q 2:264); the hilltop garden (Q 2:265; see GARDENS); the freezing wind (Q 3:117; see AIR AND WIND); the panting dog (q.v.; Q 7:176); the harvested bounty (Q 10:24; see GRACE; BLESSING; SUSTENANCE; AGRICULTURE AND VEGETATION); senses: dead and alive (Q 11:24); the futile reach (Q 13:14); the smelting foam (Q 13:17); the good and the corrupt trees (Q 14:24-7); the slave and the free man (Q 16:75; see SLAVES AND SLAVERY); the mute slave and the just master (Q 16:76; see JUSTICE AND INJUSTICE); the complacent town (Q 16:112; see PUNISHMENT STORIES); the man with two gardens (Q 18:32-44); the water and vegetation (Q 18:45); the light (q.v.) of God (Q 24:35; treated allegorically by exegetes); the desert mirage (Q 24:39); the darkness on the sea (Q 24:40); the spider's (q.v.) house (Q 29:41); the master and his slaves (Q 30:28); stark contrasts (Q 35:19-22; see PAIRS AND PAIRING); the unbelieving town (Q 36:13-29); the slave with several masters (Q 39:29); the verdure that withers (Q 57:20); the upright crops (Q 48:29); the book-laden donkey (Q 62:5); and the blighted garden (Q 68:17-34).

The most significant narrative parables include "the man with two gardens," "the unbelieving town" and "the blighted garden." Each occupies a prominent place in its respective sūra. The first (Q 18:32-44) is clearly identified as a *mathal*. God provides one of two men with two prosperous gardens supplied with abundant water. The fortunate man turns greedy and brags to his apparently landless colleague about his garden's produce, exuding confidence that his future is secure. He fears neither God nor the last judgment (q.v.; see also PIETY; FEAR). The other man, who professes never to have associated anything with God, warns him that his arrogance (q.v.) amounts to unbelief (see BELIEF AND UNBELIEF; GRATITUDE AND INGRATITUDE). Though poor in this world, this good man will receive God's reward in the next (see REWARD AND PUNISHMENT). He warns his wealthy counterpart that his gardens could be destroyed. When the gardens are suddenly destroyed, the hand-wringing proprietor expresses regret that he trusted in anything but God. The moral of the tale becomes explicit in Q 18:46: "Wealth (q.v.) and sons (see CHILDREN) are the adornment of the present world; but the abiding things, the deeds of righteousness (see GOOD DEEDS), are better with God in reward, and better in hope." Al-Suhaylī (d. 581/1185) transmitted a tradition in which the historical details of this story are given, including the names of the two men, Tamlīkhā and Fūṭīs (Suhaylī, *Taʿrīf*, 185).

The "unbelieving town" (Q 36:13-29) also starts out as a clearly labeled *mathal*. The people of a city reject the messengers (see MESSENGER) God sends, saying they are simply citizens like themselves and not

prophets (see PROPHETS AND PROPHETHOOD). The people associate an evil omen with the messengers and threaten to stone them (see PORTENTS; FORETELLING). An obedient citizen from the margins of the city comes and affirms the mission of the messengers. He urges the people of the city to obey their message since the messengers serve without reward and have received God's guidance (see OBEDIENCE; ASTRAY). He then rehearses his own good fortune in believing in the one God. He enters paradise (q.v.) praying for his people (see INTERCESSION; PRAYER). The city ends in destruction while the thematic unit containing the parable ends with God's lamentation over the people's rejection of his messengers (Q 36:30-2). Two traditions connect this parable with the city of Antioch and name the three messengers. One tradition makes the messengers disciples of Jesus: Simon, John and Paul (see APOSTLE). It names the obedient citizen Ḥabīb and reports that he was stoned to death (see STONING).

While "the blighted garden" (Q 68:17-34) is not specifically designated a *mathal,* its comparison is explicit: God has tried Muḥammad's opponents as he tried "the people of the garden" (Q 68:17). These people confidently resolve to get up in the morning and harvest their garden, resolving to leave nothing for the poor (see POVERTY AND THE POOR). But when they approach their garden, they find it devastated. A just person among them chides the others for not praising God (see PRAISE; LAUDATION; GLORIFICATION OF GOD). They respond by confessing their guilt and blaming each other. In the end they express hope for a restoration of an even better garden from God. The thematic unit containing the parable concludes with Q 68:34, "Surely for the godfearing shall be the gardens of bliss with their lord." Exegetes have cited reports that the garden actually existed in Yemen (q.v.).

Some typical features of qurʾānic parables follow. The truths they illustrate are usually stated explicitly. Taken largely from the agricultural and commercial worlds of seventh-century Arabia, they tend to be related by exegetes to historical events (see HISTORY AND THE QURʾĀN). Many are based on natural phenomena (see NATURE AS SIGNS). Their themes include justice and communal responsibility (see JUSTICE AND INJUSTICE; COMMUNITY AND SOCIETY IN THE QURʾĀN), the proper stewardship of wealth (see PROPERTY), the protection of the disadvantaged, the fleeting nature of this world's blessings, the certainty of divine judgment, and the importance of acknowledging the oneness and sovereignty of God. God is a prominent player in most of the parables and they frequently stress the oneness of God (see GOD AND HIS ATTRIBUTES) — even when it is not the main point of the comparison.

Paradise

The abode of the souls of the righteous after their death, heaven; also, the garden of Eden. In the Qurʾān, descriptions of the hereafter appear in relation to the arrival of a day, "the hour" *(al-sāʿa),* "reckoning day" *(yawm al-ḥisāb),* "the day of judgment" *(yawm al-dīn)*, "the last day" *(al-yawm al-ākhir),* or "the day of resurrection" *(yawm al-qiyāma),* in which every individual is resurrected and has to face up to his or her deeds and be judged accordingly (Q 52:21, "… Every man shall be pledged for what he earned…"). The descriptions of heaven and hell, which are very often adduced as opposites, are interwoven with descriptions of deeds that lead to reward or punishment; together they contribute to an understanding of the way divine providence operates: the righteous are rewarded and directed to the good abode, while the evil doers are punished and find themselves tortured in hell. All will happen when "the day" or, "the hour," comes (Q 19:75-6; 79:35-41; and more; see GOOD DEEDS; EVIL DEEDS; REWARD AND PUNISHMENT; LAST JUDGMENT).

The hereafter is portrayed in the Qurʾān as an eternal physical abode (see ETERNITY), and its permanent dwellers are presented as living, sensible human beings. The descriptions use worldly concepts, of the kind that can be readily understood by humans. These, among more general aspects related to Islamic eschatology (q.v.), are partially found in general books about Islam or in the few studies dedicated to the subject. They are widely described in early Islamic sources, either in the form of ḥadīths, dreams or theological and mystical inquiries (see THEOLOGY AND THE QURʾĀN; ṢŪFISM AND THE QURʾĀN). The following survey, however, is limited to the Qurʾān and focuses on the qurʾānic verses that treat the blessed part of the hereafter. Emphasis has been put on philological aspects insofar as the image of the qurʾānic paradise is depicted through its names. The edifying purpose of the heavenly delights is represented by listing the groups that will reside in paradise, the deeds that lead their performers to the ultimate bliss and the pleasures bestowed upon the blessed. Following these lines, no comparison has been made between the Meccan and Medinan sūras (see CHRONOLOGY AND THE QURʾĀN).

The names of the gardens

Janna: In the Qurʾān the term used most frequently for paradise is *janna* (cf. the Hebrew *gan, Gen* 2:8: "And the lord God planted a garden *[gan]* in Eden"; see also Katsh, *Judaism,* 34, especially note 2). The word *janna* means literally garden (q.v.) and Muslim philologists and commentators treated it as an Arabic word, derived from the root *j-n-n,* which means "to cover, to conceal, to protect." Al-Rāghib al-Iṣfahānī (fl. early fifth/eleventh cent.; *Mufradāt,* 204) defines *janna* as any garden, the trees of which hide the soil (a similar explanation is offered by Abū l-Walīd Marwān Ibn Janāḥ [d. 441/1050] in *Sepher Haschoraschim,* 96). Al-Rāghib al-Iṣfahānī further suggests that the word *janna* was chosen to indicate paradise either because it resembles worldly gardens or because its bliss is hidden from people's eyes, as stated in Q 32:17: "No soul knows what comfort is laid up for them secretly, as a recompense for that they were doing" (Arberry, ii, 18). The word *janna*

also appears in the Qurʾān with reference to the primordial garden, the dwelling place of Adam (Q 2:35; see ADAM AND EVE) and also in the meaning of a worldly garden (Q 2:264-5).

Although most commonly used (over eighty times), *janna* is not the only word in the Qurʾān that conveys the idea of paradise. Its plural form, *jannāt,* appears over forty times, of which about half occur in combination with other terms: *jannāt ʿadn* (six times), *jannāt al-naʿīm* (seven times), *jannāt firdaws/al-firdaws* (once each), *jannāt/jannat al-maʾwā* (once each). Other words presented in the commentaries as indicating paradise are *dār al-salām* (twice), *dār/jannat al-khuld* (once each), *dār al-muqāma* (once), *maqām amīn* (once), *maqʿad al-ṣidq* (once), *dār al-muttaqīn* (once), *dār al-qarār* (once), *ṭūbā* (once), *ʿilliyyūn/ʿilliyyīn* (once each), *rawḍa/rawḍāt jannāt* (once each), *ḥusnā* (four times), as well as numerous verses in which *al-dār al-ākhira/al-ākhira* is interpreted to mean paradise. This variety of names underlies the numerous traditions presented in the exegetical literature concerning the different facets of paradise.

Firdaws: According to words ascribed to al-Farrāʾ (d. 207/822), *firdaws* is an Arabic word (quoted in Jawharī [d. 398/1007], *Ṣiḥāḥ,* iii, 959; cf. *Tāj al-ʿarūs,* viii, 392). This is, however, an exceptional opinion. The commentaries on Q 18:107 focus on the foreign origin of the name, which means garden in Greek or Syriac (Suyūṭī, *Durr,* iv, 279; *Tāj al-ʿarūs,* viii, 392), and Ibn Janāḥ (*Sepher Haschoraschim,* 419) connects it with the Hebrew *pardes* (see FOREIGN VOCABULARY). Various commentaries also present a prophetic tradition, according to which the *janna* consists of a hundred levels, among which the *firdaws* is the best. God's throne (see THRONE OF GOD) is situated above the *firdaws* and from it spurt the rivers of paradise (Ṭabarī, *Tafsīr,* xvi, 30; Qurṭubī, *Jāmiʿ,* xi, 68; Suyūṭī, *Durr,* iv, 279; and see Zaghlūl, *Mawsūʿa,* iii, 363; iv, 514). Another prophetic tradition states that the *firdaws* consists of four gardens, two made of gold and two of silver (Ṭabarī, *Tafsīr,* xvi, 30; cf. Zaghlūl, *Mawsūʿa,* iv, 502, and the commentaries on Q 55:62 mentioned below).

ʿAdn: The biblical name Eden *(Gen 2)* is treated in Islamic sources as deriving from the root *ʿ-d-n,* which means "to be firmly established and have a long duration" (al-Rāghib al-Iṣfahānī, *Mufradāt,* 553; cf. Qurṭubī, *Jāmiʿ,* x, 396; Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 142; see also the detailed study of *ʿadn* in the meaning of a mineral *[maʿdan]* in Tamari, *Iconotextual studies,* chaps. 1 and 2). The plural form *(jannāt ʿadn)* is used to indicate width (Qurṭubī, *Jāmiʿ,* x, 396). Fakhr al-Dīn al-Rāzī (d. 606/1210; *Tafsīr,* xx, 25, ad Q 16:31) says that *jannāt* denotes the palaces and the gardens, whereas *ʿadn* conveys its eternity. Commentaries on Q 13:23 cite a prophetic tradition proclaiming that in the *janna* there is a palace, the name of which is *ʿadn*. It is surrounded by towers and meadows, and has five thousand (or ten thousand) doors. Each door opens onto five thousand gardens (or twenty-five thousand beautiful women), and only prophets (see PROPHETS AND PROPHETHOOD), righteous people, martyrs (q.v.; *shuhadāʾ;* see also WITNESSING AND TESTIFYING) and upright imāms (see IMĀM) are allowed to enter it (Qurṭubī, *Jāmiʿ,* ix, 311; Suyūṭī, *Durr,* iv, 65). As stated about the *firdaws, ʿadn* is also defined as the center of the *janna* (Qurṭubī, *Jāmiʿ,* ix, 311; x, 396; Suyūṭī, *Durr,* iv, 65; cf. Zaghlūl, *Mawsūʿa,* iv, 502). Other verses that mention *ʿadn* emphasize the luxuries it offers. Q 18:31, for example, reads: "Those — theirs shall be gardens of Eden, underneath which rivers flow; therein they shall be adorned with bracelets of gold (q.v.), and they shall be robed in green

garments of silk (q.v.) and brocade, therein reclining upon couches — O, how excellent a reward! and O, how fair a resting place!"

ʿIlliyyūn/ʿilliyyīn (Q 83:18-21): Most commentaries deal with the location of the *ʿilliyyūn,* and combine it with the basic meaning of the root of the word, namely height and glory. Thus *ʿilliyyūn* appears as lofty degrees surrounded by glory; as the seventh heaven (see HEAVEN AND SKY), where the souls of the believers stay; as the lotus tree in the seventh heaven (see ASCENSION; AGRICULTURE AND VEGETATION); as a green chrysolite tablet containing the deeds of people that hangs beneath the throne; as the most elevated place, the dwellers of which can be seen only as sparkling stars up in the sky; as the residence of the angels (see ANGEL), or the celestial host (Ṭabarsī, *Majmaʿ,* xxx, 71; Qurṭubī, *Jāmiʿ,* xix, 262-3). Other terms derived from the same root that indicate high degrees in paradise are *al-darajāt al-ʿulā* (Q 20:75) and *janna ʿāliya* (Q 69:22; 88:10).

Jannat/Jannāt al-maʾwā, "garden/s of the refuge": the abode of Gabriel (q.v.; Jibrīl) and the angels, or of the souls of the *shuhadāʾ* (both in Wāḥidī, *Wasīṭ,* iv, 198, ad Q 53:15), or of green birds that contain the souls of the *shuhadāʾ* (Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 142), or yet, the residing place of the believers in general (Wāḥidī, *Wasīṭ,* iii, 454, ad Q 32:19; see BELIEF AND UNBELIEF). Nothing is said about its location.

Dār al-salām (Q 6:127; 10:25): the abode *(dār)* of everlasting security and soundness *(salāma),* or the *janna (= dār)* of God, *salām* being one of God's names (see GOD AND HIS ATTRIBUTES; PEACE), derived from his immunity from any kind of evil (Wāḥidī, *Wasīṭ,* ii, 322; cf. al-Rāghib al-Iṣfahānī, *Mufradāt,* 421-2; Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 142; see GOOD AND EVIL). Similar is the meaning given to the term *maqām amīn* (Q 44:51), presented as the future dwelling of the righteous, and interpreted to mean the eternal world of security and immunity from fear (q.v.) and death (Muqātil, *Tafsīr,* iii, 825; cf. Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 145-6; see HOUSE, DOMESTIC AND DIVINE).

Dār al-khuld occurs in Q 41:28 in the meaning of hell (see HELL AND HELLFIRE), whereas *jannat al-khuld* is mentioned in Q 25:15 in the meaning of paradise, both aiming at an eternal existence. Muqātil (d. 150/767) gives the same meaning to *dār al-muqāma* (Q 35:35). He defines the latter as *dār al-khulūd,* the place where people stay forever (Muqātil, *Tafsīr,* iii, 558; cf. Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 141).

Maqʿad al-ṣidq (Q 54:55), the place of goodness promised to the righteous: Ibn Qayyim al-Jawziyya (d. 751/1350; *Ḥādī l-arwāḥ,* 146-7) considers it, as well as the term *qadam al-ṣidq* (Q 10:2), as one of the names of paradise.

Jannāt/jannat naʿīm/al-naʿīm: The name conveys the variety of pleasures *(niʿam)* offered in paradise (Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 145; see BLESSING). The commentaries that deal with the term concentrate mainly on the issue of compensation. Fakhr al-Dīn al-Rāzī (*Tafsīr,* xxii, 49, ad Q 5:65) deals with two kinds of happiness (see JOY AND MISERY). One is the removal of sins (see SIN, MAJOR AND MINOR; REPENTANCE AND PENANCE) and the other is the bestowal of reward. *Naʿīm,* in al-Rāzī's opinion, is to be understood as the latter. In several cases *naʿīm* is identified with *firdaws* (for example, Wāḥidī, *Wasīṭ,* iii, 356, ad Q 26:85).

Dār al-ākhira appears mostly in contrast with the present world *(al-dunyā)*. Q 40:39 juxtaposes the transience of the present world with the stability of the hereafter *(al-ākhira),* and defines the latter as *dār al-qarār*. Q 16:30-1 mentions *dār al-ākhira* together with *dār al-muttaqīn* and *jannāt ʿadn,*

and Q 29:64 defines it as the abode of life (q.v.; *ḥayawān*), meaning either the abode of eternal life, or the eternal abode (Wāḥidī, *Wasīṭ,* iii, 425-6; cf. Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ*, 144).

Ṭūbā (Q 13:29): A common tradition, cited by most commentators, states that *ṭūbā* is a tree in *janna* (Wāḥidī, *Wasīṭ,* iii, 15, 16; Jawharī, *Ṣiḥāḥ,* i, 173; cf. Zaghlūl, *Mawsūʿa,* iii, 360). An attempt to show a foreign origin may explain the statement that *ṭūbā* means *janna* in the Ethiopian/Indian language (Wāḥidī, *Wasīṭ,* iii, 16; Suyūṭī, *Durr,* iv, 67). Other explanations, however, treat *ṭūbā* as an Arabic word, meaning good, the eternal ultimate stage in *janna* (al-Rāghib al-Iṣfahānī, *Mufradāt,* 528; *Tāj al-ʿarūs,* ii, 189; for the usage of *ṭūbā* in Persian poetry, see Schimmel, Celestial garden, 18-9).

(Al-)ḥusnā is often interpreted to mean *janna* (for example Wāḥidī, *Wasīṭ,* ii, 104, 544; iii, 13, 68, ad Q 4:95; 10:26; 13:18; 16:62), but also as the ultimate good and as the vision of God (*Tāj al-ʿarūs,* xvii, 142; see FACE OF GOD).

The number of the gardens

Q 55:46 mentions two gardens awaiting those who fear God. The commentators offer several ways to distinguish one garden from another. Al-Qurṭubī (d. 671/1272; *Jāmiʿ,* xvii, 177) cites the following explanations: one garden was created especially for the individual, the other was inherited; one garden is for the destined, the other for his wives (see MARRIAGE AND DIVORCE); one garden is his home, the other his garden; one has the lower palaces, the other the upper ones. Abū Ḥayyān (d. 745/1344; *Baḥr,* x, 67) adduces similar ideas, among which he suggests that one garden is for those who obey God (see OBEDIENCE), the other for those who refrain from sin; one is for the jinn (q.v.), the other for people. Al-Ṭabarsī (d. 548/1154; *Majmaʿ,* vi, 101) mentions one garden inside the palace and another outside. Al-Suyūṭī (d. 911/1505; *Durr,* vi, 163) presents a prophetic tradition, according to which both gardens reach the width of a hundred years walking distance (cf. Q 3:133, which compares the width of the *janna* to that of heaven and earth; for Jewish parallels see Katsh, *Judaism,* 214), and both gardens have fruitful trees, flowing rivers, and wonderful fragrances. Al-Wāḥidī (d. 468/1076; *Wasīṭ,* iv, 225) cites al-Ḍaḥḥāk as saying that one garden is for the believers who worshiped God secretly and the other for those who worshiped him openly. Verse 62 of the same sūra (Q 55) also mentions two gardens. Most commentaries refer to these two as additional gardens, assuming altogether the existence of four gardens: two gardens of trees and two of plants and seeds; two gardens for the "foremost in the race" *(sābiqūn)* and "those brought near" *(al-muqarrabūn),* two for the "people of the right hand" (*aṣḥāb al-yamīn;* see LEFT HAND AND RIGHT HAND); the first two (v 46) are *ʿadn* and *naʿīm,* the other pair (v 62) the *firdaws* and *dār al-maʾwā;* the first two are of gold and silver, the others are of sapphire and emerald (Qurṭubī, *Jāmīʿ,* xvii, 183-4; cf. Ṭabarī, *Tafsīr,* xvii, 89-91; Suyūṭī, *Durr,* vi, 161-3; for a stylistic analysis of these verses, see Nöldeke, Koran, 45; Schimmel, Celestial garden, 17-8; Abdel Haleem, Context, 89-93).

The inhabitants of paradise

Sūrat al-Wāqiʿa ("The Event," Q 56), which describes the day of resurrection (q.v.), mentions three groups of people as the future inhabitants of paradise: (1) "the people of the right hand" (*aṣḥāb al-maymana,* Q 56:8), who are more commonly referred to as *aṣḥāb al-yamīn* (Q 56:27, 38, 90, 91; cf. *The Babylonian Talmud,* Tractate Shabat, 63a); (2) "the foremost in the race" (*al-sābiqūn,* Q 56:10); and (3) "those brought near" (*al-muqarrabūn,* Q 56:11).

Aṣḥāb al-yamīn/al-maymana: Q 56:28-38

give a picturesque description of the rewards awaiting the *aṣḥāb al-yamīn:* "Mid thornless lote-trees and serried acacias, and spreading shade and outpoured waters, and fruits abounding unfailing, unforbidden, and upraised couches, perfectly we formed them, perfect, and we made them spotless virgins, chastely amorous, like of age for the companions of the right hand." The commentaries explain their name in three ways: those who, on the day of judgment, will receive the record of their deeds in their right hand (cf. Q 17:71; 69:19; 84:7; see BOOK), those who are strong, and those whose belief is illuminated by the light of God (all in Rāzī, *Tafsīr,* xxix, 143, 163).

Al-sābiqūn: Q 9:100 reads: "And the outstrippers *(sābiqūn),* the first of the emigrants and the helpers (see EMIGRANTS AND HELPERS), and those who followed them in good doing, God will be well pleased with them and they are well pleased with him; and he has prepared for them gardens underneath which rivers flow therein to dwell forever and ever." The common identifications of the *sābiqūn,* adduced in the commentaries, are of two kinds: those who lived prior to the arrival of Muḥammad (Rāzī, *Tafsīr,* xxix, 149) and those who contributed to Islam in its first stages. Among the latter, the following are mentioned: those who prayed toward both *qibla*s (see QIBLA), those who participated in Badr (q.v.), those who took part in Ḥudaybiya (q.v.) or, more generally, those who lived during Muḥammad's lifetime (all in Wāḥidī, *Wasīṭ,* ii, 520). Fakhr al-Dīn al-Rāzī, who prefers to identify the *sābiqūn* as those who performed the emigration (q.v.) with Muḥammad, states that the *sābiqūn* are the most elevated in paradise (Rāzī, *Tafsīr,* xvi, 172, ad Q 9:100). In his commentary on Q 56:10-1, al-Rāzī (*Tafsīr,* xxix, 147) defines the *sābiqūn* as the most exalted among the *muqarrabūn,* higher than *aṣḥāb al-yamīn*, the most elevated among the *muttaqūn* (ibid., 148), and those who will reach paradise without judgment (ibid., 144).

Muqarrabūn: in Q 3:45 Jesus (q.v.; ʿĪsā) is considered one of the *muqarrabūn*. In Q 4:172 the angels are the *muqarrabūn,* while in Q 56:10-26 the *muqarrabūn* are identified as *sābiqūn,* and the description of the rewards bestowed upon them seems the most highly detailed in the Qurʾān: "In the gardens of delight … upon close-wrought couches reclining upon them, set face to face, immortal youths going round about them with goblets, and ewers, and a cup from a spring (see CUPS AND VESSELS), no brows throbbing, no intoxication (see INTOXICANTS; WINE), and such fruits as they shall choose, and such flesh of fowl as they desire, and wide-eyes houris (q.v.) as the likeness of hidden pearls, a recompense for that they labored. Therein they shall hear no idle talk (see GOSSIP), no cause of sin, only the saying peace."

Other verses promise heavenly delights to additional groups: Two groups often mentioned (over fifty times each), are (1) "the godfearing" *(al-muttaqūn/alladhīna ttaqū)* and (2) "those who believed and performed righteous deeds" (*alladhīna āmanū wa-ʿamilū l-ṣāliḥāt;* for detailed descriptions of the bliss bestowed upon each of the groups see Q 44:51-7 and Q 2:25 respectively). Also mentioned are "the inhabitants of paradise" (*aṣḥāb al-janna,* over ten times; see e.g. Q 2:82; 10:26), and the "pious" (*abrār,* six times; see PIETY).

Deeds that lead their performers to paradise

The general term "righteous deeds" *(ṣāliḥāt)* is mentioned about sixty times in the Qurʾān, always as a guarantee to entry into paradise. Q 4:122-4 read: "But those that believe, and do deeds of righteousness, them we shall admit to gardens underneath which rivers flow, therein dwelling for ever and ever … and whosoever does

deeds of righteousness, be it male or female (see GENDER), believing — they shall enter paradise …" (cf. Q 3:195, and see also the description of the *mu'minūn* in Q 8:2-4). Q 7:157-8, among other verses, emphasize the belief in God and his messenger as a guarantee of prosperity. Q 2:112 restricts good fate to "those who submit their will to God," namely Muslims, and implicitly excludes Jews and Christians from being potential dwellers in paradise (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). Q 13:20-3 and Q 70:22-35 mention a list of conditions, the fulfillment of which is necessary to gain entry into paradise. Other verses focus on particular deeds that ensure reaching paradise, such as praying (Q 2:277; 4:162; 27:3; see PRAYER), almsgiving (q.v.; Q 3:134; 27:3), belief in the last day (Q 58:22; 65:2), fear of the last day (Q 76:10), obedience (Q 3:132; 4:13), gratitude (Q 3:144; see GRATITUDE AND INGRATITUDE), patience (Q 76:12; see TRUST AND PATIENCE; TRIAL), restraint of rage and forgiving the evil of other people (Q 3:134; see ANGER; FORGIVENESS), fulfillment of vows (Q 76:7; see VOW; BREAKING TRUSTS AND CONTRACTS; CONTRACTS AND ALLIANCES), support of the needy (Q 76:8; see POVERTY AND THE POOR), participation in the emigration (*hijra,* Q 3:195), in Ḥudaybiya (cf. Q 48:18), and in jihād (q.v.; i.e. Q 2:218; 3:195; 4:95; 8:74; 9:20; 61:11-2).

Rewards in paradise

The bliss bestowed upon the dwellers of paradise may be divided into two types: sensual pleasures and spiritual ones.

Spiritual pleasures: Here one can find general expressions, such as God's pleasure (*riḍwān,* Q 3:15; for the personification of *riḍwān* in Persian poetry to mean the heavenly doorkeeper of paradise, see Schimmel, Celestial garden, 16-8; see PERSIAN LITERATURE AND THE QUR'ĀN), forgiveness (Q 3:136), acquittal of evil deeds (Q 3:195; 48:5), divine protection from the evil day (cf. Q 76:11), praise of God (see LAUDATION; PRAISE) and greetings of peace (Q 10:9-11; cf. 56:26). Q 10:26 promises *al-ḥusnā* and *ziyāda* "to the gooddoers" *(lilladhīna aḥsanū)*. *Al-ḥusnā* is interpreted to mean paradise and *ziyāda* is interpreted to mean looking at God's face (al-Rāghib al-Iṣfahānī, *Mufradāt,* 386; Wāḥidī, *Wasīṭ,* ii, 344-5; Suyūṭī, *Durr,* iii, 331-2). The ability to look at the face of the lord can be drawn from additional verses. Q 83:15 proclaims that those who do not believe will be "veiled from their lord." In the commentaries on this verse several traditions are adduced to indicate that if veiling is a sign of divine anger, unveiling, namely the permission to see God, is a sign of divine contentment (Wāḥidī, *Wasīṭ,* iv, 446; see VEIL). A more straightforward verse is Q 75:22-3: "Upon that day (resurrection day) faces shall be radiant, gazing upon their lord." (The issue of permission to see God became controversial and was widely discussed in theological and mystical circles; see Ibn Qayyim al-Jawziyya, *Ḥādī l-arwāḥ,* 402-77; Ājurī, *Taṣdīq;* Gimaret, Ru'yat Allāh; Baljon, 'To seek the face of God,' 254-66; Schimmel, *Deciphering,* 238.) Further aspects of spiritual pleasures can be drawn from the verses that deal with the fate that awaits the martyrs *(shuhadā'):* "Count not those who were slain in God's way as dead (see PATH OR WAY; EXPEDITIONS AND BATTLES; FIGHTING), but rather living with their lord, by him provided, rejoicing in the bounty that God has given them, and joyful in those who remain behind and have not joined them, because no fear shall be on them, neither shall they sorrow, joyful in blessing and bounty from God.…"

Sensual pleasures: The most frequently mentioned reward (over fifty times) focuses on rivers flowing beneath gardens. Q 47:15 describes four rivers flowing in paradise:

"… Rivers of water unstaling, rivers of milk (q.v.) unchanging in flavor, and rivers of wine — a delight to the drinkers, rivers, too, of honey (q.v.) purified.…" (Schimmel, Celestial garden, 15, points out that "The idea of the four rivers which flow through Paradise may have helped late architects to conceive the canals as they flow through the gardens of Iran and Mughal India, for it was said by the court poets of this time that every part of the royal garden was in some way a similitude of Paradise." See also Tamari, *Iconotextual studies,* chap. 3.)

Thoroughly studied, but also criticized in non-Islamic circles, is the topic of the women granted the faithful as a celestial reward in the qurʾānic paradise (see the bibliographical references mentioned in the notes of Wendell, Denizens of paradise). Compared to the carnal, sensuous, highly detailed descriptions of women awaiting the righteous adduced in ḥadīth literature, the qurʾānic text is restrained (see ḤADĪTH AND THE QURʾĀN). It mentions purified women (*azwāj muṭahhara,* Q 2:25; 3:15; 4:57), "wide-eyed houris" (*[bi-]ḥūr ʿīn,* Q 44:54; 52:20; 56:22; but see the exegesis of these verses for the various understandings of the phrase), maidens with swelling breasts, equal in age (*kawāʿib atrāban,* Q 78:33) and amorous virgins equal in age (*abkār ʿuruban atrāban,* Q 56:36-7).

Other rewards that await one in heaven are young boys serving wine (*wildān mukhalladūn,* Q 56:17; 76:19; *ghilmān,* Q 52:24), sofas to lean against (*surur,* Q 15:47; 37:44; 43:34; 52:20; 56:15; 88:13; *furush,* Q 55:54; 56:34; *al-arāʾik,* Q 18:31; 36:56; 76:13; *rafraf,* Q 55:76), green garments of silk and brocade (Q 18:31; 76:21), gold/silver bracelets (Q 18:31; 22:23; 35:33; 76:21), fruit (*thamara,* Q 2:25; *fākiha,* Q 36:57; 38:51; 43:73; 44:55; 52:22; 55:11, 52, 68; 56:20, 32; 80:31; *fawākih,* Q 37:42; 77:42, especially dates and grapes; see DATE PALM), wine that does not intoxicate (*khamr,* Q 47:15; *kaʾs,* Q 37:45; 52:23; 56:18; 76:17; 78:34; *sharāb,* Q 38:51; 76:21), vessels of silver and goblets of crystal (Q 76:15), plates/trays of gold (Q 43:71), pleasant weather (Q 76:13), shade (Q 4:57; 36:56; 56:30; 76:14; 77:41), provision (*rizq,* Q 37:41; 65:11; cf. 40:40), palaces (Q 25:10), and whatever the souls desire and in which the eyes delight (Q 43:71; cf. 50:35). Such pleasures and those like them are often defined as "[the great] triumph" (*fawz,* Q 4:13; 5:119; 9:72, 89, 100; 45:30; 48:5; 57:12; 61:12; 64:9; 85:11), mostly with emphasis on their eternal existence.

These heavenly delights became an issue that has often been used for polemical purposes against Islam. These descriptions "angered theologians for centuries … the large-eyed virgins, the luscious fruits and drinks, the green couches and the like seemed too worldly to most non-Muslim critics" (Schimmel, *Deciphering,* 238, especially note 44). The following words, ascribed to the so-called ʿAbd al-Masīḥ al-Kindī (probably third/ninth cent.), may give an idea about the nature of the non-Muslim reaction: "All these [descriptions of paradise in the Qurʾān] suit only stupid, ignorant and simple-minded people, who are inexperienced and unfamiliar with reading texts and understanding old traditions, and who are just a rabble of rough Bedouins accustomed to eating desert lizards and chameleons" (cited in Sadan, Identity and inimitability, 338, from al-Kindī's book, which, "transcribed by Jews into Hebrew characters and translated from Arabic into Latin, taught the Spanish Christians how to fight Islam in the most vigorous and harsh way"; see also notes 12 and 39).

Conclusion

Although comparison between the Meccan and Medinan sūras appears as one of the central features in the examination of

the Qurʾān, as it relates to paradisiacal descriptions, such a comparison seems superfluous. The components that comprise the descriptions of paradise of both periods are similar, and even though the issue of the last day is less prominent in the sūras of Medina (q.v.), one common concept underlies all the descriptions. This is the idea of a direct proportion between deeds and rewards that furnishes the eschatological status of the individual. It can be considered the *leitmotiv* of all the celestial descriptions found in the Qurʾān and the key to understanding the spirit of Islam.

Leah Kinberg

Bibliography

Primary (Although each of the ḥadīth collections has a chapter of paradisiacal descriptions, always with references to qurʾānic verses, there are also collections dedicated solely to the subject; the following list includes only these specialized collections.): ʿAbd al-Mālik b. Ḥabīb (d. 238/853), *Wasf al-firdaws,* Beirut 1987 (a ḥadīth collection dedicated solely to paradise); Abū Ḥātim al-Rāzī, Aḥmad b. Ḥamdān, *Kītāb al-Ẓīna fī l-kalimāt al-islāmiyya al-ʿarabiyya,* ed. Ḥ.b.F. al-Hamdānī, 2 vols., Cairo 1957-8, ii, 196-205; Abū Nuʿaym al-Iṣfahānī, *Waṣf al-janna,* Beirut 1988 (a ḥadīth collection dedicated solely to paradise); al-Ājurī, Abū Bakr (d. 360/970), *al-Taṣdīq bi-l-nazar ilā llāh taʿālā fī l-ākhira,* Riyadh 1985; Aṭafayyish, Muḥammad b. Yūsuf, *al-Ǧunna fī waṣf al-janna,* Oman 1985 (a ḥadīth collection dedicated solely to paradise); Bukhārī, *Ṣaḥīḥ,* ed. Krehl, ii, 314-7; iv, 239-45, 247-50, trans. O. Houdas and W. Marçais, *El-Bokhâri. Les Traditions islamiques,* 4 vols., 1903-14; ii, 306-13, 315-8, 438-43; al-Ghazālī, Abū Ḥāmid Muḥammad, *al-Durra al-fākhira,* ed. and trans. L. Gautier, *La perle précieuse* (ad-dourra al-fâkhira) *de Ghazālī. Traité d'eschatologie musulmane,* Geneva 1878, repr. Amsterdam 1974; id., *Iḥyāʾ ʿulūm al-dīn,* 4 vols., Būlāq 1289/1872, repr. Cairo 1933, iv, 455-67 (Book XL); trans. T.J. Winter, *Al-Ghazālī. Parents

Those who beget or bring forth children. Terms designating "parents" in the Qurʾān are *wālidāni* and *abawāni,* respectively the dual form of *wālid,* "father, one who begets a child" (the passive *al-mawlūd lahu* indicates "to whom the child is borne"; *wālida,* "mother, one who brings forth a child," appears in both the singular and the plural; *umm/ummahāt* also designate "mother"), and the dual form of *ab,* "father" (the singular means "nurturer," see Robertson-Smith, *Kinship and marriage,* 142; Lane, 10; in certain verses the plural *ābāʾ* means "ancestors").

Natural aspects of parenthood are particularly identified throughout the Qurʾān with maternal functions, pregnancy, giving birth (q.v.), breastfeeding and weaning (e.g. Q 16:78; 39:6; 53:32; 58:2; see also BIOLOGY AS THE CREATION AND STAGES OF LIFE). Q 2:232-3 calls upon divorced mothers to fulfill their natural role as nurses whereas the role of fathers is limited to supplying the nursing mother and the nursling with economic support (see LACTATION; MAINTENANCE AND UPKEEP). Moreover, maternal emotions of love (q.v.) and solicitude find emphatic expression in the qurʾānic story of Moses (q.v.; Q 28:7-13; 20:38-40; cf. Stowasser, *Women,* 57-8; Giladi, *Infants,* 14-5). In two verses, Q 7:150 and 20:94, Aaron (q.v.; Hārūn) calls his brother *"Mūsā ibn umma,"* thus attributing him to their mother ("to implore his mercy," cf. Ṭabarī, *Tafsīr;* Zamakhsharī, *Kashshāf;* Ibn Kathīr, *Tafsīr,* ad loc.) rather than to their father as could have been expected in a patrilineal system (see e.g. Q 8:75; 33:6 where blood relatives are referred to as *ūlū l-arḥām, arḥām* being the plural of *raḥim,* "womb"; see also PATRIARCHY; FAMILY). When, in Q 31:14 and 46:15, Muslims are commanded to honor both parents (see below), it is the (biological) role of the mother that is emphasized ("His mother beneath him in weakness upon weakness"; cf. Pickthall, *Koran*; Ibn Kathīr, *Tafsīr,* ad loc.), implying that it serves best to justify or explain the commandment.

As reproduction is (implicitly) presented as the goal of marriage (Q 4:1; 7:189; see MARRIAGE AND DIVORCE; SEX AND SEXUALITY; CHILDREN), both parents are depicted as bringing up their children (Q 17:24,… *kamā rabbayānī ṣaghīran*); fathers are described as having intimate knowledge of their sons (Q 6:20) and seeking comfort from their descendants as well as from their wives (Q 25:74).

Several verses from the second Meccan period onwards (see e.g. Q 4:36; 6:151; 17:23-4; also Q 31:13-4; cf. Ibn Kathīr, *Tafsīr,* ad Q 4:36: "For God made parents the reason for the servants to come into existence.") contain a recurring formula in which the commandment "to be good to one's parents" *(wa-bi-l-wālidayni iḥsānan)* is presented as second in importance only to the commandment "to worship no god but Allāh" (cf. *Lev* 19:2-4; Q 2:83; on the apparent influence of the Hebrew decalogue on the Qurʾān in this regard, see Roberts, *Social laws,* 46-9; see also IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM; SCRIPTURE AND THE QURʾĀN). Nevertheless, in cases of conflict, that is, when one's parents "strive hard with you that you may associate with me that of which you have no knowledge" (Q 29:8), and submission to God prevails, the duty to obey parents be-

comes void (see also Q 31:13-5 from the third Meccan period [Nöldeke] or early Medinan [Bell]). This is exemplified particularly through qurʾānic references from the second Meccan period onwards to the conflict between Abraham (q.v.; Ibrāhīm) and his people, including his pagan father (e.g. Q 9:114; 19:41-8; 37:83-98). Q 21:51-70 describes a dramatic clash in which Abraham uses the expression of exasperation *uffin lakum* ("fie on you," Q 21:67) which, according to Q 17:23, Muslims are never to direct at their parents (cf. Q 46:17). In several verses (e.g. Q 14:41; 26:86) Abraham is depicted as praying for his father, but unable to evoke divine response (Q 60:4). Noah (q.v.; Nūḥ) prays similarly, to no avail, for his sinful son (Q 11:45-6).

In contrast to the tension between him and his (polytheist) father, Abraham's relationship with his own (believing) son is harmonious. Abraham is depicted as asking God to give him "[one] of the righteous" *(mina l-ṣāliḥīna)* and is indeed granted a "mild-tempered" *(ḥalīm)* son who, being "one of the enduring ones" (*mina l-ṣābirīna;* see TRUST AND PATIENCE), is ready to obey God's command and be sacrificed for his sake (Q 37:100-7; see OBEDIENCE; ISAAC; ISHMAEL).

Thus, Muslims are guided to prefer loyalty to God above the fulfillment of filial duties, "to be witnesses for God, even though it be against yourselves, or your parents and relatives…" (Q 4:135). In any case, they are warned, "neither their relations nor their [polytheist; cf. *Jalālayn,* ad loc.] children will profit them on the day of resurrection" (the Medinan Q 60:3; cf. Ibn Kathīr, *Tafsīr,* ad loc.; see also the Meccan Q 70:11-2; 80:34-5). On the other hand, "those who believe and whose progeny have followed them in belief" are assured that God will "cause their progeny to be united with them [in paradise; cf. *Jalālayn,* ad loc.]" (Q 52:21; for a detailed discussion see Ṭabarī, *Tafsīr;* ad loc.; also Q 13:23; 40:8; and Motzki, Das Kind, 399 n. 42; see also REWARD AND PUNISHMENT; PARADISE; BELIEF AND UNBELIEF).

Attitudes of parents towards their children are also reflected in the Qurʾān, some of whom are strongly criticized from the point of view of monotheist morality (see CHILDREN). Although sons (and property) are acknowledged as signs of divine benevolence (see GRACE; BLESSING), they are also regarded as temptation for the believers (Motzki, Das Kind, 398). For example, there is a legend in which one of God's servants, al-Khiḍr (cf. Ṭabarī, *Tafsīr,* ad Q 18:74), kills a youth: "Have you taken an innocent life, not in return for a life?" Moses asks, adding: "Surely you have committed a thing unheard of" (Q 18:74). The unnamed servant of God then explains the act by saying that "his [i.e. the youth's] parents were believers and we feared that he might impose upon them arrogance (q.v.) and unbelief" (Q 18:80; cf. Ibn Kathīr, *Tafsīr,* ad loc.: "Their love for him might make them follow him in disbelief;" see KHAḌIR/KHIḌR).

In Mecca (q.v.), the Qurʾān had frowned on help based on ties of kinship (see O'Shaughnessy, Qurʾānic view, 37-8), but in the Medinan period, when blood ties and the duties they impose are again emphasized (see BLOOD AND BLOOD CLOT), a few verses were dedicated to parent-descendant relationships from the viewpoint of mutual socioeconomic responsibilities (see COMMUNITY AND SOCIETY IN THE QURʾĀN; ETHICS AND THE QURʾĀN; ECONOMICS). Reciprocal inheritance rules find a relatively detailed formulation in Q 2:180 and 4:7, 11 (see also INHERITANCE). In Q 2:215 Muslims are encouraged to support their parents economically, as well as relatives and such members of the community as are in need, e.g. "orphans (q.v.), the poor (see POVERTY AND THE POOR) and

the follower of the way (see JOURNEY)."

Prohibitions of marriage between, among others, males and their own mothers (as well as their non-maternal wet nurses, see LACTATION; WET NURSING), and between males and their own daughters (as well as their own wives' daughters, see FOSTERAGE) are enumerated in Q 4:23 (see PROHIBITED DEGREES). Q 33:6, wherein the Prophet's wives (see WIVES OF THE PROPHET) are referred to as the "mothers" of the believers, was understood to mean that they were not allowed to remarry after Muḥammad's death (*wa-azwājuhu ummahātuhum = wa-ḥurmat azwājihi — ḥurmat ummahātihim ʿalayhim,* cf. Ṭabarī, *Tafsīr,* ad loc.). See also GUARDIANSHIP.

Parody of the Qurʾān

Literary composition attempting to imitate the language and style of the Qurʾān. Parodies of the Qurʾān (sing. *muʿāraḍat al-Qurʾān*) have been known in Islamic history, but no authentic and complete texts of them have come down to us. What Islamic sources have recorded of them in snippets shows imitation that is obviously weak, grossly ludicrous and vastly inferior to the Qurʾān in language, style and content (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN), making the parodies themselves the object of ridicule.

When the qurʾānic challenge to disbelievers to produce a discourse like it (Q 52:33-4) or to fabricate ten sūras (q.v.; Q 11:13) or even one sūra (Q 10:38) like it was not met, the Qurʾān affirmed that, even if humans and jinn (q.v.) combined their efforts, they would be unable to produce a similar Qurʾān (Q 17:88; see PROVOCATION). Islamic doctrine holds that the Qurʾān is God's speech (q.v.) and, as such, it is characterized by inimitability (q.v.; *iʿjāz*) and is thus the prophet Muḥammad's miracle (q.v.; *muʿjiza*) and evidence of his prophecy (see PROPHETS AND PROPHETHOOD; WORD OF GOD; BOOK; CREATEDNESS OF THE QURʾĀN).

In Muḥammad's lifetime, the most famous parodist of the Qurʾān was Musaylima (q.v.). Known in Muslim writings as "the liar" *(al-kadhdhāb),* he claimed prophecy in Yamāma and held authority in eastern Arabia until he was killed in 11/633 in the war against apostates (see APOSTASY) waged by the first caliph (q.v.), Abū Bakr. As recorded in al-Ṭabarī (d. 310/923) and other Muslim sources, Musaylima's parody consisted of rhyming prose verses of unequal lengths (see RHYMED PROSE), in which oaths (q.v.) were often made, reference was made to the wonders of life and nature (see NATURE AS SIGNS), a God called Allāh and al-Raḥmān was invoked (see GOD AND HIS ATTRIBUTES) and very few regulations were posited (see VIRTUES AND VICES, COMMANDING AND FORBIDDING). The parody has a hollow ring to it, even when echoing a qurʾānic turn of phrase, because it lacks a sublime subject. It has been suggested, however, that the Islamic

tradition has handed down "weak" examples of Musaylima's prowess in order to make him look ridiculous. This argument contends that the Islamic tradition would not have termed him the "Liar" and expended the energy to make him the object of ridicule if he had been incapable of producing good verses or good rhymed prose in the style of the soothsayers, that could reasonably be compared to the Qur'ān (cf. Gilliot, Contraintes, 24-5).

Ibn al-Muqaffaʿ (executed in 139/756), whose acclaimed prose writings and translations attest to his command of Arabic, is said to have tried to imitate the Qur'ān but apparently abandoned the attempt, acknowledging its difficulty (cf. van Ess, *TG,* ii, 35-6). Fragments of his polemic against Islam and the Qur'ān are quoted in the refutation of the Zaydī Imām, al-Qāsim b. Ibrāhīm (d. 246/860) and citations from the parody of the Qur'ān attributed to him are quoted by the Zaydī Imām, Aḥmad b. al-Ḥusayn al-Mu'ayyad-bi-llāh (d. 411/1020).

Another early attempt to imitate the Qur'ān is attributed to Nashī l-Akbar (d. 239/906), a Murji'ite who was close to the Muʿtazilīs (q.v.): he is said to have died while trying to write an imitation of the Qur'ān (cf. van Ess, *TG,* iv, 146). Yet another early parodist was the renowned poet Abū l-Ṭayyib Aḥmad b. al-Ḥusayn (d. 354/965), known as al-Mutanabbī, "the would-be prophet." He parodied the Qur'ān in his youth and led some beguiled Syrian Bedouins (see BEDOUIN) in a revolt that ended in his imprisonment in 322/933 and his recantation. In adult life, he often dismissed that experience as a youthful escapade.

The skeptical, blind poet Abū l-ʿAlā' al-Maʿarrī (d. 449/1057) was falsely accused of parodying the Qur'ān in his *al-Fuṣūl wa-l-ghāyāt,* a work which praises God and offers moral exhortations. Only volume one of this book is extant, displaying a masterful style in rhyming prose disposed in chapters *(fuṣūl),* with paragraphs that have endings *(ghāyāt)* with a regular rhyme. In this work's rhyme scheme, these paragraphs all end in one letter of the alphabet, which is different for each chapter; additionally, each paragraph has sentences that rhyme or partly rhyme in other letters. This elaborate rhyming scheme, however, is not that of the Qur'ān.

It is interesting to note that we have attestations of Muslims admitting the possibility of compositions better than the Qur'ān up through the third/ninth century. Ibn al-Rawāndī (d. ca. 298/910-1) wrote in his *Kitāb al-Zumurrud,* "In the words of Aktham al-Ṣayfī, we find better than: "Lo! We have given you al-kawthar [Q 108:1]" (cf. van Ess, *TG,* vi, 472-3; Gilliot, L'embarras). In the traditional Islamic perspective, Q 108 is considered a great marvel (cf. Gilliot, L'embarras; see MARVELS). Further, the Persian Muʿtazilī Murdār (d. 226/821) refused the inimitability of the Qur'ān (van Ess, *TG,* iii, 608) and said that "people are able to bring something similar to this Qur'ān, or even more eloquent than it" (cf. van Ess, *TG,* v, 33, text 12 for the Arabic; see also Abdul Aleem, ʿIjazu'l-Qur'an for the names of some poets who denied the linguistic inimitability of the Qur'ān, or who criticized it and tried to surpass it in composition and style).

The attempt at imitating the Qur'ān has continued up until the present day. In 1995, unknown individuals anonymously offered four "sūras" on the Internet to meet the Qur'ān's challenge but, after Muslim protest, their website was closed by the server in the United States, although it continues in the United Kingdom.

Parties and Factions

Divisions within groups. The Qurʾān has a relatively rich and varied, but not precisely differentiated, vocabulary which refers to parties or factions within larger communities or groups (see COMMUNITY AND SOCIETY IN THE QURʾĀN). Although the words and phrases concerned are sometimes used in the Qurʾān in an apparently neutral way, for example, with reference to groups among the believers themselves (see BELIEF AND UNBELIEF), they are often employed there in a derogatory sense or in polemic against opponents. The opponents are accused of dividing their religion (q.v.) into factions, and a contrast is often made with the actual or ideal unity of the believers (see RELIGIOUS PLURALISM AND THE QURʾĀN). The value of the united community *(umma)* of the believers is stressed; in some passages believers are urged not to take intimates or friends among outsiders (e.g. Q 3:118; 5:51; see FRIENDS AND FRIENDSHIP) and marriage relationships with outsiders are regulated (see MARRIAGE AND DIVORCE; SOCIAL RELATIONS).

We do not receive the impression that the parties and factions that are referred to exist in any formal or organized sense and their identity is usually not specified precisely. For instance, Q 3:23 mentions a faction *(farīq)* among "those who have been given a part *(naṣīb)* of the book (q.v.)," whereas two other passages which use this latter phrase (Q 4:44, 51) lump them all together as "idolaters" (see IDOLATRY AND IDOLATERS) and followers of error (q.v.). In other passages factions are alleged to exist among opponents designated generally as "idolaters" (*mushrikūn;* see also POLYTHEISM AND ATHEISM) or "hypocrites" (*munāfiqūn;* see HYPOCRITES AND HYPOCRISY). Although the Qurʾān does contain the names of groups such as the "Emigrants" *(muhājirūn),* "Helpers" (*anṣār,* see EMIGRANTS AND HELPERS), and "believers" *(muʾminūn),* they are not generally referred to using the vocabulary of party and faction.

Among the words indicative of divisions and distinctions, the most obvious are *ḥizb* (pl. *aḥzāb,* which Nöldeke postulated as a loan word from Ethiopic; see FOREIGN VOCABULARY), *ṭāʾifa, shīʿa* (pl. *shiyaʿ*) and derivatives of the root *f-r-q*. All can be understood with the general meaning of "party" or "faction." Other words occur less frequently and sometimes their exact meaning is unclear: for example, the plural form *zubur* in Q 23:53 is sometimes interpreted as "sects" or "factions" *(firaq, ṭawāʾif)* but how the word, which is understood as the plural form of *zabūr,* comes to mean that is a problem (see PSALMS). In some passages the different words appear

to be used interchangeably and randomly — *ḥizb* being a variant of *ṭāʾifa, zubur* of *shiyaʿ,* etc.

Ḥizb in its singular, dual and plural forms appears nineteen times. The party of God *(ḥizb Allāh)* is victorious or successful (Q 5:56; 58:22) while the party of Satan (*ḥizb al-shayṭān,* see DEVIL) is lost (Q 58:19). The single *umma* of the believers is contrasted with the splits among their opponents who have made their affair into *zubur,* each *ḥizb* rejoicing in what it has (Q 23:52-3). Similarly, Q 30:31-2 appeals to the believers not to be like the opponents called *mushrikūn* who divided their religion and became parties *(shiyaʿ),* each *ḥizb* rejoicing in what it has. Q 38:13 identifies the *aḥzāb (ūlāʾika l-aḥzāb)* as a series of peoples who had rejected the prophets sent to them (see PROPHETS AND PROPHETHOOD), and the context of "the day of the *aḥzāb*" in Q 40:30 suggests the same reference although it is frequently understood as an allusion to the "battle of the ditch" in the year 5/627 (cf. Paret, *Kommentar,* 233, wherein he posits that in Q 38:11-3 and 40:5, 30-3, the expression *"aḥzāb"* is used in the Ethiopic sense of "pagans"; see also PEOPLE OF THE DITCH).

Sūra 33, Sūrat al-Aḥzāb ("The Clans"), is explained in the commentaries and *sīra* reports (material on the life of the Prophet; see SĪRA AND THE QURʾĀN) as containing a number of allusions to the events associated with the battle of the ditch when various parties *(aḥzāb)* among the opponents of the Prophet, are said to have united to facilitate an attack on the Muslims in Medina (q.v.). The Quraysh (q.v.) of Mecca (q.v.), the Arab tribe of Ghaṭafān, and the Jewish tribe of Qurayẓa (q.v.) within Medina are especially mentioned (see TRIBES AND CLANS; WAR; POLITICS AND THE QURʾĀN). Q 33:20 is often understood as referring to some hypocrites *(munāfiqūn)* who tried to persuade the followers of the Prophet that the *aḥzāb* had not really retreated and that they would come again, while Q 33:22 reflects the believers' recognition that the coming of the *aḥzāb* was simply what the Prophet had promised them.

Shīʿa (q.v.) and *shiyaʿ* occur eight times. It sometimes seems to be a fairly neutral expression: Moses (q.v.) had a *shīʿa* (Q 28:15) and there was a *shīʿa* of Noah (q.v.; Q 37:83). On the other hand, the believers are contrasted with opponents who have "divided their religion and become parties" (Q 6:159 and 30:32: *farraqū dīnahum wa-kānū shiyaʿan;* in the latter passage the opponents are referred to as *mushrikūn,* cf. Q 30:31).

Similarly, derivatives of *f-r-q,* which occur frequently, sometimes appear with reference to the believers. The one occurrence of *firqa,* which in Islamic literature is a common term for a "sect," refers to a unit among the believers: "the believers should not all go out together to fight; of every *firqa* of them a *ṭāʾifa* should remain behind to acquire religious knowledge" (Q 9:122; see KNOWLEDGE AND LEARNING; FIGHTING). Q 9:117, too, refers to God's having turned in forgiveness to *(tāba ʿalā)* "the Prophet and the Emigrants and Helpers who followed him in the hour of difficulty *(sāʿat al-ʿusra)* after the hearts of a *farīq* among them had almost turned away" (see HEART; FORGIVENESS). There are many passages containing formations from *f-r-q,* however, which call upon the believers to avoid division and disagreement in religion and which show those as characteristics of the opponents (e.g. Q 6:159 and Q 30:32 cited above; also Q 3:103, 105; 6:153; 42:13; see OPPOSITION TO MUḤAMMAD).

Ṭāʾifa and its dual forms appear twenty-three times. It may be a more neutral

expression, used more or less randomly to refer to groups or parties among the People of the Book (q.v.; Q 3:69, 72), the believers (Q 3:154; 4:102, etc.), the hypocrites (4:81, 113; 9:66; 33:13, etc.) and others, in the past and the present.

Stress on the divided nature of the opponents, therefore, may be seen as part of the polemical language characteristic of the Qurʾān. In non-qurʾānic and post-qurʾānic Arabic, too, *shīʿa, firqa,* and *ṭāʾifa* often reflect the negative implications of fragmentation and division contrasted with the positive value of unity *(umma, jamāʿa)*. They are the product of *fitna* (strife within the community) and in modern Arabic *al-ṭāʾifiyya* is a common translation of "sectarianism." It may be that this echoes Sunnī values in particular, since among the Shīʿīs one does find *al-shīʿa* and *al-ṭāʾifa* (the latter also among the Ṣūfīs), sometimes qualified by an epithet such as *al-muḥaqqiqa,* used in expressions of self-designation (see SHĪʿISM AND THE QURʾĀN; ṢŪFISM AND THE QURʾĀN). In the reports about early Islam, too, the word *shīʿa* is used quite neutrally to indicate the supporters of a particular individual: not only was there a *shīʿa* of ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB), but also of ʿUthmān (q.v.), Yazīd and others. As for *ḥizb* (party), the Khārijīs (q.v.) referred to their non-Khārijī opponents as the parties (*aḥzāb;* on their derivation of this negative connotation of *aḥzāb* from the Qurʾān itself, see van Ess, *TG,* ii, 462; see also POLEMIC AND POLEMICAL LANGUAGE; OPPOSITION TO MUḤAMMAD). The usage of *ḥizb* (party) has been influenced not only by the qurʾānic *ḥizb Allāh* (which has become the self-designation of the modern Shīʿī activist group, Hizbollah) but also by modern concepts of political parties.

The typical allusiveness of the qurʾānic style (see LANGUAGE AND STYLE OF THE QURʾĀN) combines with its use of polemic to make identification of the groups concerned, specification of their characteristics and even confirmation of their existence, difficult. Polemic involves distortion and exaggeration of the opponents' positions and standard polemical accusations, such as idolatry, following error, distortion of scripture (see SCRIPTURE AND THE QURʾĀN; FORGERY), and inventing lies about God (see LIE), are transferable between different opponents. Furthermore, the terminology is not specific to the contemporaries of the Qurʾān. As is evident from the examples cited above, words like *aḥzāb* and *shīʿa* are used in the Qurʾān with reference to groups in the past as well as the present and the same is true of designations like *muhājirūn* ("emigrants") and *anṣār* ("helpers"). In the Qurʾān, Lot (q.v.) describes himself as "a *muhājir* to my lord" (q.v.; Q 29:26) and the apostles of Jesus (q.v.) call themselves "*anṣār* of God" (Q 3:52; 61:14; see APOSTLE). "Hypocrite," the usual understanding of *munāfiq,* is a common term in monotheist polemic (e.g. *Matt* 23 passim).

In the commentaries on the Qurʾān (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) and other traditional Islamic literature such as the material on the life of the Prophet (*sīra* material), nevertheless, the parties and factions alluded to in the Qurʾān are identified in the context of Muḥammad's career. For example, the *aḥzāb,* as already indicated, are associated with the battle of the ditch, while the Emigrants and Helpers are identified as groups among the supporters of the Prophet.

The frequent occurrence and relative richness of the relevant vocabulary, the several accusations that opponents have divided their religion, the emphasis on the unity of the believers, and the measures designed to distinguish the believers from outsiders may reflect the appearance of the

qurʾānic materials in a situation of intense religious fragmentation and division. To the extent that parties and factions really existed beyond the realm of polemic, they could be understood as indicative of a religious society prone to the generation of numerous groups with the character of nascent sects. John Wansbrough *(Sectarian milieu)* identified the proliferation of barely distinguishable confessional groups as characteristic of the sectarian milieu out of which he considered Islam to have emerged to become eventually a major distinct tradition within monotheism.

In certain historical situations the tendency towards internal divisions and splits, which is a characteristic of the monotheistic (and perhaps other) religious traditions, may be intensified. The situation in Palestine around the beginning of the Christian era perhaps offers a parallel and the tendency to fragmentation, observable in certain modern right- and left-wing political movements, may also be relevant. Social and political circumstances as well as the character of the religious movement within which the divisions are generated are important for understanding the phenomenon of sectarianism.

The literary description in works other than the Qurʾān — for example works of qurʾānic commentary and prophetic biography — of the society in which the Prophet lived does not explicitly support the thesis of the sectarian milieu. To the extent that groups within it are identified, they are classified by their relationship and attitude to the Prophet *(muhājirūn, anṣār, munāfiqūn)* or as monotheists (Muslims, Jews, ḥanīfs; see ḤANĪF; JEWS AND JUDAISM; see also CHRISTIANS AND CHRISTIANITY) contrasted to idolaters *(mushrikūn)*. With some exceptions, we do not generally find in this literature reports about the Prophet arguing fine points of monotheist doctrine or behavior with groups in his environment or those groups being associated with one or more identifying doctrines or practices. This is in contrast with the way in which parties like the Pharisees and Sadducees appear in the gospels and other sources from the early Christian period.

In contrast, the Qurʾān itself contains numerous references to, and statements about, typical monotheist issues such as the validity of intercession (q.v.), belief in the last day (see LAST JUDGMENT; ESCHATOLOGY; APOCALYPSE), the status of Jesus (see TRINITY; ANTHROPOMORPHISM; POLYTHEISM AND ATHEISM) and questions of ritual purity (q.v.). This material can be seen as indicative of a situation in which these issues were topics of argument and polemic between parties and factions with common concerns and concepts. While we should be careful about transforming the qurʾānic polemic too readily into statements of fact, its language and ideas do seem consistent with a society particularly subject to sectarian tensions.

Path or Way

That along which one passes to reach a destination. The concept of the path or way (of God) — expressed by derivatives of several roots *(sabīl, ṣirāṭ, ṭarīq, minhāj)* — pervades the Qurʾān and is related to several basic notions of Islam such as right guidance (*hudā* or *hidāya;* see ASTRAY), the religious law (*sharīʿa;* see LAW AND THE QURʾĀN) and jihād (q.v.). When the Qurʾān uses this last notion (which connotes "struggle" and is often rendered as "holy war") in conjunction with the concept of the path or way of God, it is expressed exclusively by the term *sabīl* and only in a set phrase, "in the way of God" *(fī sabīli llāhi)*. This phrase — with or without *"jihād"* — occurs only in Medinan sūras (q.v.; see also CHRONOLOGY AND THE QURʾĀN) and comprises about one-third of the occurrences of *sabīl*. The analysis of the contexts related to jihād shows that all the basic aspects of the concept of "holy war" had already been laid down in the earlier qurʾānic passages (see also FIGHTING; WAR).

The frequency of the above-mentioned terms varies greatly — *sabīl,* 176 occurrences; *ṣirāṭ,* forty-five; *ṭarīq* (or *ṭarīqa*), nine; *minhāj,* once — but, as a rule, they are treated as synonyms by the Arabic lexicographers and commentators who explain the meaning of any given one of these terms through another. The only term that expresses virtually nothing but the notion of "the way of God" is *ṣirāṭ* (the sole exception being Q 7:86), while only five occurrences of *ṭarīq* are related to the notion in question (see Q 4:168, 169; 46:30; 72:16, *al-ṭarīqa*). About thirty occurrences of *sabīl* are unrelated to this notion, the most frequent phrase being "a man of the road" *(ibn al-sabīl),* a traveler who should be helped (see JOURNEY).

Several points are worth mentioning about this group of terms. First, only one occurrence of *sabīl* (Q 80:20) can be positively attributed to the early Meccan period and it has nothing to do with the notion of "the way of God." All other occurrences of such terms are divided equally between the later Meccan and Medinan sūras. Second, two of them *(sabīl, minhāj)* belong to common Semitic stock and some scholars suggest that they are loan words from Aramaic or Hebrew (see FOREIGN VOCABULARY). A third term *(ṣirāṭ)* is an established loan word from Latin (i.e. *strata*). Third, three of them (*sabīl, ṣirāṭ* and *minhāj*) are the only qurʾānic utilizations of the corresponding root letters, an uncommon event in Arabic (which generally uses multiple derivatives of the triliteral roots), and *ṭarīq (ṭarīqa),* too, very nearly falls into this category. All three observations point in one direction, namely, that the notion of the way, or path, is a late addition to the vocabulary of the Qurʾān (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN), most probably a replica of the analogous biblical and post-biblical concept (see SCRIPTURE AND THE QURʾĀN).

Let us now follow more closely the process of the formation of the concept of "the way of God" in the qurʾānic message. The first stage is Meccan. If we take the majority of the Meccan contexts, the notion in question appears within the concept of the prophetic mission as the realization of the lord's (q.v.) guidance of

his creatures. The phrase "the way of God" has several lexical manifestations (e.g. *ṣirāṭ Allāh,* Q 42:53; *sabīl Allāh,* passim; *ṣirāṭ rabbika,* "the way of your lord," Q 6:126). Additionally, one finds "the ways of your lord" (*subul rabbika,* Q 16:69) and "the way of the mighty, the glorious one" (*ṣirāṭ al-ʿazīzi l-ḥamīdi,* Q 14:1; 34:6). It is also used with personal pronouns, as in "your way" (*ṣirāṭaka,* Q 7:16; *sabīlika,* Q 10:88; *sabīlaka,* Q 40:7), "his way" (*sabīlihi,* Q 6:117, 153; 14:30), or "my way" (*ṣirāṭī,* Q 6:153; *sabīlī,* Q 12:108).

There are several aspects of the notion introduced in the later Meccan sūras. The "way of God" is the result of the lord's guidance (cf. Q 14:12; 16:15; 28:22; 29:69; 76:3). It is the "way of righteousness" (*sabīl al-rushd* or *rashād;* cf. Q 7:148; 40:38) and also the "straight" or "even" path. Of the two synonymous epithets, the first *(mustaqīm)* is more frequent in the Qurʾān, being used either with *ṣirāṭ* (twenty-one occurrences; cf. especially the contexts of Q 6:126, 153; 7:16) or with *ṭarīq* (Q 46:30). The second epithet is used either in the attributive phrase *ṣirāṭ sawiyy* (cf. Q 19:43; 20:135), or in the genitive phrase: *sawāʾ al-ṣirāṭ* (Q 38:22) or *sawāʾ al-sabīl* (Q 28:22; 60:1). Being originally "the way of God," it connotes the path of the true believers, of the righteous or the blessed, an idea which is also expressed in several other basically synonymous ways (Q 1:7; 31:15). All these themes are continued in the Medinan sūras as well, the only addition being that "the way of God" is equated with the sunna (q.v.) and the law (Q 5:48), which accords with the general character of these sūras, in which legal prescriptions are given (see FORBIDDEN; BOUNDARIES AND PRECEPTS; PROHIBITED DEGREES; ETHICS AND THE QURʾĀN).

The set of basic qurʾānic notions is characterized by a kind of conceptual dualism, in which almost every positive term has its negative counterpart (see PAIRS AND PAIRING). This feature applies also to "the way of God," which is contrasted to the other way, the way of the *ṭāghūt,* usually interpreted by Muslim commentators as Satan (*shayṭān;* see DEVIL). This latter way is opposed to the way of God (cf. Q 4:76; see ENEMIES), and is the way to hell (cf. Q 37:23; 4:169; see HELL AND HELLFIRE). It is the path of error (q.v.; *ghayy*) opposed to the path of righteousness (as in Q 7:146: "If they see the path of righteousness, they shall not choose it for [their] path; but if they see the path of error, they shall choose it for [their] path, because they disbelieved our signs *[āyāt]*"; see BELIEF AND UNBELIEF), as well as the way of the ignorant (Q 10:89; see IGNORANCE), of the wrongdoers (Q 7:142; see EVIL DEEDS) and of the wicked (Q 6:55; see SIN, MAJOR AND MINOR). It is noteworthy that a number of contexts show the interplay of the singular and plural forms, an interplay which embodies the opposition of the single straight path and many corrupt ways (see, for instance, Q 6:153: "And that this my path is straight *(ṣirāṭ mustaqīman);* so follow it, and follow not [other] paths *(subul)* lest they scatter you from his path" (*ʿan sabīlihi;* see RELIGIOUS PLURALISM AND THE QURʾĀN).

Yet, the concept of the two opposing ways, one of God and the other of Satan, one leading to paradise (q.v.) and the other to hell, or of the one right path contrasted with many wrong ways, is second in the Qurʾān to another concept, that of the right way and deviating from it, or, in other words, losing it *(ḍalāla)*. This latter concept is devoid of even the slightest trace of dualism. This deviation is the result of one and the same will, that of the lord, who guides *(yahdī)* whom he pleases and leads astray *(yuḍillu)* whom he pleases. At the same time, unbelievers and Satan can block *(ṣadda)* people from the right path. The exact understanding of the reasons

which govern human choice between the right path and the wrong path rests on one's interpretation of the complicated problem of the relation between predestination and human free will in the Qurʾān (see FREEDOM AND PREDESTINATION).

The second stage is Medinan. The new idea generated in the Medinan sūras is the notion of fighting or struggling "in the way of God" *(fī sabīli llāhi),* for God's cause or the idea of holy war *(jihād)*. In literary Arabic the phrase *fī sabīli,* "in the way of…" (which has a parallel in post-biblical Hebrew *bi-shᵉbīl*), acquires the same technical prepositional meaning as "for the sake of, because of" (cf. Jastrow, *Dictionary,* s.v.). It is not accidental, then, that in the Meccan sūras the preposition, *"fī,"* is used — instead of the phrase *"fī sabīli"* (see Q 29:69: "Those who fight/struggle *[jāhadū]* for our cause *[fīnā],* we will surely guide *[nahdī]* to our paths *[subulanā]*"). Nonetheless, as it is used in the Qurʾān almost exclusively in the above expression, it has become inseparable from the concept of holy war in Muslim tradition. The only exception relates to the conceptual dualism mentioned above, as it juxtaposes holy war with its opposite (see Q 4:76: "The believers fight *[yuqātilūna]* in the way of God and the unbelievers fight in the way of the *ṭāghūt*. Fight therefore against the friends of Satan *[shayṭān];* surely the guile of Satan is ever feeble.").

The phrase "in the way of God"/"in his way" occurs in the Qurʾān forty-nine times. The verbs most frequently used with it connote "fighting": *qātala* (fifteen occurrences, e.g. Q 2:190; 3:13; 4:75; 9:111; 61:4; 73:20) as well as *jāhada* and its derivatives (fourteen occurrences, e.g. Q 2:218; 5:35; 8:74; 9:20; 61:11). It is worth mentioning that both substantives derived from this latter root, *jihād* and *mujāhid,* which are so full of symbolic meaning in subsequent Muslim tradition, are already used in the Qurʾān in this context (see for the former Q 9:24; 60:1; for the latter Q 4:95).

The qurʾānic usage stresses the readiness to give one's own life for the cause of God as one of the most important aspects of the concept of jihād and assures that those who are killed "in the way of God" go straight to paradise (see Q 2:154: "And say not of those slain *[man yuqtalu]* in the way of God, 'They are dead'; rather they are living, but you are not aware"; cf. also Q 3:157, 169, 195; 22:58; 47:4; see MARTYRS).

At the same time, the qurʾānic message specifies another possible way of participating in jihād, namely, by giving money and everything one possesses for the cause of God; the verb *anfaqa* "to spend" occurs seven times in this context (Q 2:195, 261, 262; 8:60; 9:34; 47:38; 57:10). There is even a synthetic formula coined in the Medinan sūras which joins the two ways of jihād in a unified concept, "to fight in the way of God by one's wealth and one's life" (*jāhada fī sabīli llāhi bi-amwālihi wa-nafsihi;* cf. Q 8:72; 9:41, 81; 49:15).

These are the qurʾānic formulations of the concept of jihād, from which Muslim scholars developed an impressive theory of holy war that was, in some variants of Muslim doctrine, subsequently raised to the status of the sixth "pillar" *(rukn)* of Islam, next to the famous five (*shahāda* [see WITNESS TO FAITH], prayer [q.v.], fasting [q.v.], almsgiving [q.v.] and pilgrimage [q.v.]; see also FAITH).

Summing up, the concept of "the way of God" has two distinct meanings in the Qurʾān, that of obedience (q.v.) to the revealed law which governs all aspects of the life of a true believer and that of fighting and giving one's wealth and life for the cause of God which assures martyrs direct access to paradise without waiting for the day of resurrection (q.v.) and without passing through the purgatorial

stage of the "suffering of the grave" (*ʿadhāb al-qabr,* see LAST JUDGMENT; DEATH AND THE DEAD; ESCHATOLOGY).

Patriarchy

A social structure characterized by the supremacy of the father in the clan or family. References to patriarchy in the Qurʾān cluster around three concerns: (1) the roles of patriarchal authority in ordinary social relations (see SOCIAL INTERACTIONS), i.e. roles circumscribed in various ways (see FAMILY; PARENTS); (2) the patriarch as an ideal religious figure, expressed through narratives (q.v.) and allegories drawn from the biblical tradition (see LITERARY STRUCTURES OF THE QURʾĀN; SCRIPTURE AND THE QURʾĀN); and (3) the question as to whether divinity could possess patriarchal attributes (see GOD AND HIS ATTRIBUTES; ANTHROPOMORPHISM).

Patriarchal authority in ordinary social relations

While the Qurʾān highlights patriarchy as a desired status, it also surrounds it with limits. On more than one occasion the Qurʾān mentions progeny in the same sequence in which it lists other aspects of worldly material wealth (q.v.; cf. e.g. Q 3:10, 116; 8:28; 9:69, 85; 19:77; 34:35; see also CHILDREN; GRACE; BLESSING). Clearly patriarchal kinship (q.v.) structures are privileged. Not having progeny, especially male (see GENDER), is a sign of misfortune, and in the stories of patriarchs such as Zechariah (q.v.) or Abraham (q.v.), God reveals his merciful nature by offering sons to his pious followers in their old age, when they had despaired of the possibility (Q 19:2-7; 11:71-3). Muḥammad himself was of course without a male heir and in the Qurʾān God compensates the Prophet for this lack of proper patriarchal status with a special domicile within paradise (q.v.;

Q 108; see also FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE).

The value of male progeny, as explicitly stated in Zechariah's case, is clearly connected to the need to assure the welfare of the house of the patriarch after his passing away. This obligation is evident in the many edicts on honoring both parents, which permeate the qurʾānic text (Q 2:180; 4:11; 31:14). Likewise, when the social roles of patriarchy are detailed (as in Sūrat al-Nisāʾ, "The Women," e.g. Q 4:1-42, 127-30), the discussions deal with such central concerns to family law (see LAW AND THE QURʾĀN) as rules of inheritance (q.v.), marriage, polygamy (see MARRIAGE AND DIVORCE), property (q.v.) rights and the status of orphans (q.v.).

While the important passages in the fourth sūra admit of a variety of interpretations (see FEMINISM AND THE QURʾĀN), it is impossible to understand them apart from a conception of patriarchy as a type of authority (q.v.) justified by social responsibilities, rather than simply by privilege. Polygamy, for example, is discussed only in connection with the need to protect orphans' trusts (Q 4:3; see also CONCUBINES; WIVES OF THE PROPHET). Similarly, the edicts on the prerogatives of men over women are conditional on the ability of men to maintain more exacting virtue (q.v.; see also VIRTUES AND VICES, COMMANDING AND FORBIDDING) and sustained financial support for the family (Q 4:34, 24-5; 65:6; see MAINTENANCE AND UPKEEP): the man is forbidden to expel his wife, separate from her or claim their common domicile without good cause, which is usually understood to be verifiable sexual infidelity (*fāḥisha,* Q 4:15-6; 65:1-2; see CHASTITY).

As it sanctified the property of women, the Qurʾān explicitly prohibits a man from unlawfully claiming any part of a woman's inheritance or even claiming back his "gifts" to her (see BRIDEWEALTH), all of which automatically become an inviolable part of the woman's property (Q 4:19-20). Generally, men are expected to be in control of their temper (see ANGER); and all further discussions of patriarchy which detail social obligations beyond faith (q.v.) itself make patriarchal authority dependent on its ability to uphold domestic justice (see JUSTICE AND INJUSTICE), as well as to dispose income and charities responsibly.

The patriarch as an ideal religious figure

Patriarchy also appears in the Qurʾān in an idealized form, a form associated most directly with the requisites of transmitting common wisdom (q.v.) and proper religion (q.v.). Allegorized in the stories of pre-Islamic patriarchs (see PRE-ISLAMIC ARABIA AND THE QURʾĀN), the prototypical character in this regard is the sage Luqmān (q.v.). He instructs his son to adopt monotheism (see POLYTHEISM AND ATHEISM), honor his parents, seek out rightful company, appreciate the divine source of all life, worship (q.v.), bear adversity with fortitude (see TRIAL; TRUST AND PATIENCE) and stand up to derogation, while at the same time maintaining modesty (q.v.) throughout life (Q 31:13-9).

Likewise, the Qurʾān portrays several biblical prophets, such as Abraham, Noah (q.v.), Jacob (q.v.), Zechariah and others as having served mainly as transmitters of monotheistic faith to their sons specifically and to kin generally (e.g. Q 2:130-5; 14:35-7). The authority of patriarchy is assaulted, however, when it conveys the "wrong" wisdom. For example, the Qurʾān frequently denounces habitual, unthinking worship of idols (see IDOLS AND IMAGES; IDOLATRY AND IDOLATERS), which their worshippers justified by the fact that the idols had been passed on to the tribe by their forefathers (cf. e.g. Q 2:170; 5:101-4).

This dual approach to patriarchy as both

a vehicle for and obstacle to disseminating divine messages suggests that patriarchal hierarchy could even be reversed, in accordance with the principle of progress in human knowledge (see KNOWLEDGE AND LEARNING). This is evident in Abraham's assertion of a pedagogic posture toward his own father. In that case, Abraham leaves home as he asks God to forgive his idol-worshipping father (Q 19:41-7; cf. 14:41; see ĀZAR). A late qurʾānic sūra further shows Abraham disavowing intercession (q.v.) and disowning his father (Q 9:114). The possibility of the son showing the way to the patriarch is likewise evident in the story of Joseph (q.v.), which culminates in a complicated image of the prophet raising his parents to the throne while they simultaneously prostrate themselves in front of their young son (Q 12:100; see BOWING AND PROSTRATION).

Patriarchal attributes and divinity

As it distinguishes Islam (q.v.) from both Christianity (see CHRISTIANS AND CHRISTIANITY) and pre-Islamic paganism, the Qurʾān affirms from its earliest verses and consistently thereafter a highly abstract conceptualization of divinity. This requires rejecting the notion that God can be apprehended with references to experienced realities, including fatherhood. Indeed, one of the main early theological differences between Islam and Christianity (see THEOLOGY AND THE QURʾĀN; POLEMIC AND POLEMICAL LANGUAGE) concerns the Qurʾān's denunciation of the concept of "God the father" and its vehement assertion of the humanity of Jesus (q.v.), who is regarded as a mere messenger (q.v.) rather than God's son (esp. Q 4:171; 5:17, 75; 9:30; 19:34-5, 88-93; 112). This stance can likewise be understood in the context of Islam's early battle against paganism, which was defined by immediacy to divinity. From an early point the Qurʾān affirms as a logical precept that an appropriate concept of a high God means that God could not possibly be apprehended in terms of human relations. Thus if God is eternal (see ETERNITY), the divine could not have been "born," and if God is omnipotent (see POWER AND IMPOTENCE), there is no need for God to emulate the human methods of bringing forth life, e.g. begetting progeny (cf. Q 112). The divine simply brings being out of nothingness (Q 19:35; cf. 16:40; 40:68; see COSMOLOGY). Therefore patriarchal attributes, while meaningful in terms of social relations, social responsibilities and the requisites of knowledge transmission (see COMMUNITY AND SOCIETY IN THE QURʾĀN), could, when applied to God, only dilute or render inconsistent the necessarily abstract conceptualization of the divine.

Peace

State of tranquility or quiet. Peace *(al-salām)* plays an important role in the Qurʾān and in Muslim life, yet as a term and a concept it is most commonly paired with religious warfare, commonly termed

jihād (q.v.). This is unfortunate, since the word "peace" and related cognates from the Arabic root *s-l-m* reflect a semantic field of considerable depth and sophistication. Indeed, much of the emphasis and language of the Qurʾān mirrors a similar complexity found in Christian and Jewish scripture (see SCRIPTURE AND THE QURʾĀN). In order to indicate the principal dimensions within this semantic field, four distinctive foci need to be examined: the theological, eschatological, prophetic and social.

Theologically, the justification for the conceptual position of peace in Islam rests finally and ultimately in the character of God (see GOD AND HIS ATTRIBUTES): it is a spiritual quality attributed to his very nature (*al-salām,* Q 59:23). Hence, God provides an inner peace to those whom he guides (cf. Q 6:125-7) and welcomes the true believer to the garden (q.v.) of righteousness (see PARADISE) with "Enter it in peace" (cf. Q 50:31-4). God also bids greetings to be made to the Prophet with peace (Q 33:56). In a series of parallelisms on peace designed for intensification (see LANGUAGE AND STYLE OF THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN), God begins peace with Noah (q.v.), delegates it to Abraham (q.v.), imparts it to both Moses (q.v.) and Aaron (q.v.), instills it in Elijah (q.v.) and concludes, with a heightened flourish, by including all messengers as the beneficiaries of the divine bestowal of peace (Q 37:79-181). Moreover, peace itself attends the coming down of the Qurʾān on the Night of Power (q.v.; Q 97:1-5; see also REVELATION AND INSPIRATION) and tranquility (*sakīna;* see SHEKHINAH) is a spiritual gift sent down by God (cf. Q 9:26, 40; 48:4, 18). In short, the text gives ample justification for the Muslim claim that peace is a fundamental component in God's relationship with humans.

Second, the Qurʾān elaborates considerably on peace in its language dealing with matters of the end-time (see ESCHATOLOGY; APOCALYPSE): At the end of time, the heavens will be rolled up like a scroll (Q 21:104), angels (see ANGEL) will descend and God will reign (Q 25:25-6). Then will come the day when the book of deeds will be opened (cf. Q 17:71; see HEAVENLY BOOK) and each soul will stand on its own before God in judgment (i.e. Q 30:14-6; 82:1-15; see LAST JUDGMENT; INTERCESSION); believers will no longer fear (q.v.; Q 7:49) nor experience terror (Q 27:88-90) nor suffer grief (Q 21:97-103; see BELIEF AND UNBELIEF). Significantly, they will have joy (see JOY AND MISERY) and peace (Q 36:55-8) because, as believers in the book (q.v.), all will be judged by its standard (Q 28:85-7). The Qurʾān insists that peace must be assumed to be the wish of all people, even if it is quite possible they might use it deceitfully (Q 8:61-2). Such language underscores the key role that peace played in qurʾānic notions of the future (cf. Q 7:96).

Third, a functional notion of peace played a role both in defining Muḥammad's career and in shaping his attitude towards the people with whom he had to deal. This is often reflected in the sūras that treat his dealings with tribal peoples (see ARABS; BEDOUIN). In the late Medinan period (see CHRONOLOGY AND THE QURʾĀN), the Bedouins are castigated for their ignorance of the Prophet's purposes (Q 9:97); they itch for a fight and then evaporate when the Prophet decides to negotiate the submission of the enemy (cf. Q 48:17), as if fighting (q.v.) was an end in itself. The urban wealthy, who make journeys in winter and summer to other places (see CARAVAN; SEASONS), should acknowledge that they could not do this without God providing them both plenty and peacefulness (Q 106:1-5; see GRACE;

BLESSING). Like all Muslims, Muḥammad was enjoined to make peace between quarreling believers (Q 49:9), a requirement made even more telling by the fact that God is delighted with the believers when a treaty replaces conflict with the unconverted Meccans (Q 48:18). As a governing policy, the dictum, "But if the enemy incline toward peace, do you also so incline" (Q 8:61) must have posed difficult choices for the Prophet, especially in determining what "incline" might mean in any given context. His decisions must have also been made with one eye on the available history of the prophets who went before him (see NARRATIVES; PROPHETS AND PROPHETHOOD), for they are deemed examples (Q 43:28, 56, 57). Indeed, it is evident that the Prophet's relationship to this provisional peace shifted considerably throughout his career. In the first Meccan period, he appears as a warner (q.v.) and teacher (Q 71:10, 25; see TEACHING); his role then shifts to that of a deliverer à la Moses (Q 20:44, 47, 77) in order to face the forces that militate against the truth (Q 16:120) in the third Meccan period. In the late Meccan period, he reacts against violence, and, finally, moves to military jihād during the Medinan period (Q 4:95-6).

Finally, peace operates in a social and political milieu (see COMMUNITY AND SOCIETY IN THE QUR'ĀN; POLITICS AND THE QUR'ĀN). Peace is a matter of public policy, as Q 4:91 implies: "If they do not back away from you, and offer you peace, and temper their hands, then seize and kill them." This justifies fighting those who attack (Q 22:39), those who fight against Muslims (Q 2:190), but requires proper intelligence about the motives of those against whom war (q.v.) is carried out (Q 4:94). Judging from the Qur'ān, the principles that guided the use of jihād indicate that it had no universally perceived meaning; it functioned against a background of peace as one of the tools for bringing about the formation of the community of believers (*umma;* see BELIEF AND UNBELIEF) and was applied contextually by the Prophet. Hence it is probable that it functioned primarily within the community's task of establishing the *umma*. Only later would it develop into a sophisticated military element of state policy, which carried it in quite different directions, and added several other layers of legal and political interpretation to its history. Still, enough has been said to indicate that qur'ānic peace was of such complexity that it could give rise to that history after the time of the Prophet.

People of the Book

People of the Book [i.e. scripture] is the literal translation of *ahl al-kitāb,* a qurʾānic term used to designate both Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY) — collectively or separately — as believers in a revealed book (q.v.).

When *ahl* appears in a construction with a person it means his blood relatives (see FAMILY; KINSHIP; PEOPLE OF THE HOUSE), but with other nouns it acquires wider meanings, for instance, *ahl madhhab* are those who profess a certain doctrine or follow a particular school of law; *ahl al-islām* are the Muslims (see LAW AND THE QURʾĀN; COMMUNITY AND SOCIETY IN THE QURʾĀN). The term *ahl al-qurʾān,* which appears in the ḥadīth literature (see ḤADĪTH AND THE QURʾĀN), refers, according to Ibn Manẓūr (*Lisān al-ʿArab,* s.v. *ahl*) to those who memorize and practice the Qurʾān. He adds that "these are the people of God and his elect," in other words, the Muslims; as such, the term may at first glance seem synonymous to *"ahl al-kitāb."*

The term has also alternative forms that do not change its fundamental meaning, that is to say, people who possess a "book" presumably of a divine origin or to whom such a book or part of it "was given" (*alladhīna ūtū l-kitāb* or *alladhīna ūtū naṣīban mina l-kitābi,* e.g. Q 2:144-5; 3:19-20, 23; 4:44, 47,131; 5:5, 57; 6:20 and similar expressions: e.g. Q 2:146; 42:14). The idea is implied also in narratives (q.v.) wherein the circumstances in which "the book" was given to its respective recipients are mentioned (e.g. Q 6:91-2, 154-7; 35:25). In all these cases, the "giving" or "sending down *(tanzīl)*" of the book means a special act of grace (q.v.) on the part of God who chose certain people, or communities, to be the recipients and custodians of his word (see WORD OF GOD; REVELATION AND INSPIRATION). The actual act of the transmission of the book to its recipients was made through the mediation of a prophet-messenger (see PROPHETS AND PROPHETHOOD; MESSENGER). In the case of the Jews this was Moses (q.v.; Mūsā, Q 6:91; 11:110) and in the case of the Christians it was Jesus (q.v.; ʿĪsā, Q 3:44-8). It is possible to regard other prophets, especially David (q.v.; Dāwud, Q 4:163; 17:55), as instrumental in delivering a book to the Jews (cf. Q 2:87; see also CHILDREN OF ISRAEL). Sometimes the books are specified by their names (*tawrāt, injīl, zabūr,* respectively; see TORAH; GOSPEL; PSALMS) in addition to being identified as "the book" (*al-kitāb,* e.g. Q 4:105; 5:68, 110; 41:45).

According to the Qurʾān, since the Jews and Christians were chosen to be the recipients of the book, they were expected to follow its contents and to be worthy of being its custodians (Q 5:68; 40:53). On the whole, however, the Qurʾān regards the "People of the Book" as unworthy of this particular divine attention and benevolence (see also BLESSING). This is chiefly because they intentionally ignored the revelation given to Muḥammad, of which they should have good knowledge (Q 5:19, 41-4). If the People of the Book were to refer to the true book that was given to them, they would find that it confirms (*muṣaddiq,* Q 5:48; 6:91-2; 46:12) Muḥammad's message. Acting obstinately, however, they "concealed," "changed" and "substituted" (Q 2:174; 4:46; 5:13, 41) the true information in their book, in order to justify their opposition to the Prophet, thus joining hands with the polytheists (*mushrikūn,* e.g. Q 98:1; see FORGERY; POLEMIC AND POLEMICAL LANGUAGE).

The term *ahl* that the Qurʾān uses in order to describe a group of people — a family, a tribe, a community (see TRIBES AND CLANS; COMMUNITY AND SOCIETY IN THE QURʾĀN) — is used in the case of *ahl*

al-kitāb in an almost unique way, conveying the idea of a religious community which is identified by its scriptures. The usual usage of the term, which denoted people of a certain locality (Yathrib, Medina, Madyan; cf. Q 33:13; 9:101, 120; 15:67; 20:40; 28:45; see MIDIAN) or mode of settlement (*ahl al-qurā,* Q 7:96-8; see CITY) or family (*ahl [al-] bayt,* Q 11:73; 28:12; 33:33), was borrowed by the Qurʾān to indicate a group of people who follow the teaching of a book, a scripture of divine origin. This is made very clear when the Qurʾān refuses to accept the exclusive claim of the Jews to the ancestry of Abraham (q.v.; Ibrāhīm): "Abraham was not a Jew nor was he a Christian but he was a *ḥanīf* (q.v.), a Muslim, and he was not one of the polytheists (see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS). Surely the people who are nearest to Abraham are those who followed him and this Prophet, and those who have believed…" (Q 3:67-8).

Although the Qurʾān attributes the ancestry of the Jews to Abraham's grandson Jacob (q.v.; or son, Q 11:71), the text is far more interested in their and the Christians' affiliation to the revealed scriptures. These revealed scriptures are in the form of a *kitāb,* a "book." This term must have been well known to the people of western Arabia long before the time of the Prophet, since it is used freely in the Qurʾān (see ORALITY AND WRITING IN ARABIA; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). In the light of recent scholarship that indicates a fair degree of interaction of Arabic-speaking peoples with other Semitic linguistic communities, it is likely that the word itself, *keṯāb hak-kāthūb* in Hebrew and *kethābah* in Aramaic, would also have been well known in some circles there. The Jews in Yemen (q.v.) and Babylonia as well as the Aramaic (Syriac) speaking Christians may even have used it to denote the Bible in general. The Jews used the term *torah she-bi-ketāb* to identify the written law, the Pentateuch. Both parts of this term were likely known in the Arabian environment, and the Qurʾān refers to them separately, *kitāb* and *tawrāt,* in almost interchangeable fashion. It is clear in the Qurʾān that the *kitāb* was actually a written text and it is possible to read some qurʾānic references as indicating that its revelation differs from the former "books" only by the fact that it was orally transmitted and not written down (see ORALITY; RECITATION OF THE QURʾĀN). The majority of qurʾānic references, however, make clear that its message cannot be different from that of its predecessors and that it also had to be recorded in a book, identical with, and also confirming and bringing to perfection, the former books (Watt-Bell, *Introduction,* 142 f.). "[God] has sent down to you the book with the truth confirming what was sent before it, and he sent down the Torah and the Gospel aforetime as guidance for the people, and he sent down the *furqān*" (Q 3:3-4; see CRITERION). Nevertheless, in spite of this clear identification, the term *ahl al-kitāb* is still reserved in the Qurʾān for the followers of the Torah and the Gospel *(injīl).* In one instance, the text is more specific, when it identifies the Christians by the term *ahl al-injīl* (Q 5:47).

Thus, the holy book of the Jews and the Christians, the *kitāb,* assumed the place of the locality or blood relations as the primary point of identification for a particular group of people. By doing so, the Qurʾān followed its main doctrine of the community of believers, namely the overarching structure created by the bond of religion (q.v.). Just as the community of Muḥammad's followers was that of *muʾminūn* (and, less frequently, *muslimūn*) bound together by its revelation, the Jews and Christians were religious communities

as well, bound together by their respective revelations.

Since the divine origin of these revelations was not questioned (though in their present state these texts represent only a defective version of the original), it follows that *ahl al-kitāb* deserve special treatment by the community of believers. Exegesis of Q 9:5 and 9:29 has elaborated upon a seeming qurʾānic distinction between the treatment of "People of the Book" and "polytheists" *(mushrikūn)* as defeated military opponents of the believers (see FIGHTING; EXPEDITIONS AND BATTLES). Rather than the polytheists' choice between death and "submission," the believers may accept a settlement from the "People of the Book" that allows them to live within the Muslim polity without necessarily converting to Islam. But it is incumbent upon the community of believers to use force of arms, if necessary, in order to compel *ahl al-kitāb* to settle into the legal status fixed for them (Q 9:29; Kister, ʿAn yadin).

Most references to *ahl al-kitāb* in the Qurʾān are polemical. These peoples (or, frequently, the "disbelievers" from among them) are basically the enemies of the Muslims, who wish that the former accept their revelation in the Qurʾān. They are jealous of the Muslims because God had chosen to send them a prophet as well (Q 2:105-9). On the other hand, the Qurʾān also seeks common ground between Muslims and *ahl al-kitāb*. In Q 2:62 we find the assertion that "Jews, Christians and the Ṣābiʾīn (see SABIANS), whoever has believed in God and the last day (see LAST JUDGMENT; APOCALYPSE), and has acted uprightly (see GOOD DEEDS; VIRTUES AND VICES, COMMANDING AND FORBIDDING), have their reward with their lord (q.v.): fear (q.v.) rests not upon them, nor do they grieve (see JOY AND MISERY)." The search for common ground with the People of the Book reflected in this verse appears even more clearly in Q 3:64: "O People of the Book, come to a word (that is) fair between us and you, (to wit) that we serve only God, that we associate nothing with him…."

The later qurʾānic revelations, given at the time of intensive polemical encounters at Medina, reduced the base for such common ground with the Jews and the Christians to two: pure monotheism and belief in the day of judgment (or the "last day"). It seems, however, that these two principles, even if the People of the Book acknowledged them, were not enough to outweigh the doctrinal differences between the parties. The Qurʾān accuses both Jews and Christians of polytheism, because of the Christian doctrines of the Trinity (q.v.) and of the divine sonship of Jesus and the Jewish claim that ʿUzayr (see EZRA) was the son of God. The latter accusation is enigmatic and no satisfactory explanation has yet been offered for it. The name of ʿUzayr does not appear in this form in any Jewish text, and the idea of God having a son is not only completely alien to rabbinic thought of the time, but it was also the major area of conflict between mainstream Judaism and Christianity. But since the Qurʾān speaks about the sonship of ʿUzayr as an apparently known and accepted fact (Q 9:30: "The Jews say that ʿUzayr is the son of God and the Christians say that the Messiah *[al-masīḥ]* is the son of God…"), it might mean that there was a concrete group of people who called themselves Jews and attributed sonship to a person called ʿUzayr. The fact that the context of this assertion is the sonship attributed by the Christians to the Messiah *(al-masīḥ),* is likely significant. The preceding verse (Q 9:29) calls on the believers to fight against those "who do not believe in God or in the last day… of those who have been given the book" *(min alladhīna ūtū l-kitāb)*. Following immediately is the verse

about the polytheistic doctrines of the Jews and the Christians. It is clear first, that the Prophet is absolutely sure about the issue of ʿUzayr and second, that this passage does not speak about a difference of doctrine between the two communities but about the difference in the appellation that each one of them used for the son of God. The Christians call him *al-masīḥ,* the Jews ʿUzayr. The solution of the riddle is rather simple: The likely source of the name ʿUzayr is the Hebrew word *ʿOzēr,* rather than an Arabic diminutive. Taking into consideration that the only way to render the long *ē* in Hebrew is by the diphthong *ay* in Arabic, ʿUzayr would represent the transliteration of the Hebrew ʿOzēr into Arabic. ʿOzēr in Hebrew means "helper," or even "savior." The word appears in biblical and post-biblical sources alone and together with words derived from the root *y-sh-ʿ* denoting salvation, too. (At the beginning of the 18 Benedictions, the most important Jewish prayer, God is called: "king *[mēlek],* helper *[ʿozēr],* savior *[moshīʿa],* protector *[magen].*") In other words, the Qurʾān, when speaking about Jews and Christians as those to whom the book was given, speaks about two similar groups, both of whom believed in the son of God as the savior, with only one difference: each referred to him under a different title, the Jews called him *ʿozēr* and the Christians *masīḥ* (see SALVATION).

The problem of ʿUzayr has a wider implication in regard to the question of the identity of the Jews in the Medinan context (see MEDINA; CHRONOLOGY AND THE QURʾĀN). Based on the qurʾānic material alone it is very possible that at least some of these Jews (if not all of them) represented a sect with a distinct messianic doctrine, who regarded the Messiah as the son of God and called him "the savior," "the helper" *(ʿozēr, ʿuzayr).* This could well be the reason why many times the term *ahl al-kitāb* refers to both Jews and Christians, and one cannot always be sure if a certain reference in the Qurʾān refers to Jews, to Christians or to both. In all the thirty-one verses of the Qurʾān with a direct reference to *ahl al-kitāb* there are only two references that can be identified as referring specifically to Jews and to Christians, respectively. In Q 4:153-5, the People of the Book ask the Prophet to bring down to them a book from heaven (see PROVOCATION; OPPOSITION TO MUḤAMMAD); in doing so they follow the example of their forefathers who, even after they were given the evidence *(bayyināt),* made the golden calf (see CALF OF GOLD) and persisted with the rebellion (q.v.) against God, and his prophets. The other case is Q 4:171, where *ahl al-kitāb* are clearly Christians. Here the Qurʾān urges them to speak about God with truth, and not to exaggerate in their religion. Jesus (ʿĪsā) was only a messenger of God, even though he was created when God cast his spirit (q.v.) into Jesus' mother (see MARY). He is ʿĪsā son of Maryam, that is to say, not ʿĪsā son of God. But even in these two cases one cannot be sure that the Prophet is not speaking about two very similar groups, each of whom exalted Jesus as a messianic figure and "son of God," but under two different titles: "Masīḥ" (Messiah) and ʿOzēr" (Savior). From the qurʾānic references, it appears that the "Naṣāra" were those who termed him the "Messiah," while the "Yahūd" called him "Savior." Both are attacked in the qurʾānic discourse for saying that God has a son; they differ only in the name which they use to identify him. From this reading of the qurʾānic references to the "Yahūd," it would appear that they should not be equated with post-exilic Judaism which had categorically rejected any association with Jesus.

In what follows, the qurʾānic verses dealing strictly with *ahl al-kitāb* will be

summarized without reference to either ḥadīth or commentary, i.e. without exegetical interference. To begin, the second and third sūras contain a number of references.

Q 2:105 — those who disbelieve from *ahl al-kitāb* and the polytheists *(mushrikūn)* do not like the fact that the believers receive God's goodness and favor. Q 2:109 — many *ahl al-kitāb* are jealous of the Muslims and wish they would become unbelievers. Q 3:64 — the Qur'ān calls on *ahl al-kitāb* to accept monotheism as a common ground of belief with the Muslims. Q 3:65 — *ahl al-kitāb* cannot claim Abraham for themselves since the Torah and the Gospel were revealed only after his time. (Since Abraham plays a major part in both Judaism and Christianity, the verse cannot be identified with either one.) Q 3:69 — a group of *ahl al-kitāb* wish to lead the Muslims astray (q.v.), but they mislead only themselves. Q 3:70-1 — *ahl al-kitāb* are asked why they disbelieve in the signs (q.v.) of God and confuse truth (q.v.) with falsehood (see LIE). Q 3:75 — there are some individuals from *ahl al-kitāb* who are trustworthy, others who are not. These even lie about God himself. Q 3:98-100 — *ahl al-kitāb* disbelieve in God's signs and turn the believers away from his path. The believers are warned that some of those "to whom the book has been given" wish to render them unbelievers. Q 3:100-14 — it would have been much better if *ahl al-kitāb* were to believe but most of them are transgressors. The Muslims will defeat them. They are destined to permanent humiliation because they disbelieved in God's signs and killed the prophets. But not all *ahl al-kitāb* are the same: some recite God's revealed verses while prostrating in the night (see BOWING AND PROSTRATION; VIGILS) and believe in God and the last day. (Only the commentaries identify either Jews or Christians with these verses.) Q 3:199 — among *ahl al-kitāb* there are those who believe in God and in what was revealed to them as well as in what was revealed to the Prophet. God will properly reward them. Q 4:123-4 — reward and punishment (q.v.) depend on one's actions. They are not dependent on the convictions of either *ahl al-kitāb* or the Muslims.

The fourth sūra, al-Nisāʾ ("The Women"), includes three significant and lengthy paragraphs. Q 4:153-9 — *ahl al-kitāb* ask the Prophet to bring down for them a book from heaven. This is a sign of their audacity, for in the past they asked Moses to give them a clear sign of God, and even after they were struck by lightening they made the calf *(al-ʿijl)*. God lifted the mountain over them, ordered them to keep the sabbath (q.v.), and took from them "a firm compact" (see COVENANT). They will be punished for violating the compact, for their disbelief in the signs of God, for their killing of the prophets, speaking against Mary and for claiming to have killed the Messiah, ʿĪsā. In fact, they never killed or crucified him (see CRUCIFIXION); instead, God caused him to ascend to him: "And there are no People of the Book but will surely believe in him before his death, and on the day of resurrection (q.v.), he will be regarding them a witness (see INTERCESSION; WITNESSING AND TESTIFYING)." (This is the only clear reference to Jewish material, though it is not clear whether the reference here is to the events of the past or to some current controversy. Q 4:157 contains a reference to those who have differences of opinion about Jesus or have doubts concerning him, and, having no clear knowledge about him, they follow uncertain opinions. This verse cannot be attributed to either Jews or Christians but, unlike the other verses of a historical nature, this one seems to refer to the present and reflect differences of opinions

regarding the nature of Christ among Christians and Judeo-Christian groups.) Q 4:171 — *ahl al-kitāb* are warned not to exaggerate in their religion and regard Jesus only as a messenger (q.v.) of God and his word conveyed to Mary from a spirit which God cast into her. God is one, he is exalted above having a son (see GOD AND HIS ATTRIBUTES; ANTHROPOMORPHISM); he has all that is in heaven and earth (see POWER AND IMPOTENCE). (The verse seems to refer to the Christians but could well hint at a controversy concerning the nature of Christ among local Christian or pseudo-Christian groups, perhaps a distant echo of the debate in the institutionalized Byzantine church.)

In the first relevant reference in the fifth sūra (Q 5:15), *ahl al-kitāb* are informed that God's messenger has arrived revealing all that they had been concealing from the "book." God sent the light (q.v.) to them and a "clear book." Q 5:19 — *ahl al-kitāb* are told that God's messenger came to make things clear for them and as a bringer of good tidings (see GOOD NEWS) and a warner (q.v.). Q 5:59 — *ahl al-kitāb* are asked if they reproach the Muslims for their belief in what has been sent to them and what was sent before and for their belief in God. The implication is that whatever God has sent to them is identical with whatever was sent aforetime. Q 5:65 — if *ahl al-kitāb* were to become believers God would forgive their sins (see FORGIVENESS; SIN, MAJOR AND MINOR) and cause them to enter paradise (q.v.). Q 5:68 — *ahl al-kitāb* are called upon to keep the Torah and the Gospel; the Prophet's revelation causes many of them to increase their arrogance (q.v.) and disbelief. Q 5:77 — *ahl al-kitāb* are urged not to exaggerate in their religion, to speak only the truth about God, and to beware of following the ways of those who in the past have strayed from the straight path. (The verse is reminiscent of Q 4:171, but without the apparently Christian references.)

In Q 29:46-7, the Muslims are to debate with *ahl al-kitāb* in a positive manner (see DEBATE AND DISPUTATION) and stress the common belief in the one God and in what had been revealed to *ahl al-kitāb* (in the past) and the Muslims (at present). A book *(kitāb)* was revealed to the Prophet similar to the other book that was revealed in the past and in which *ahl al-kitāb* believe. Some of them will believe in this book, too. Only the unbelievers deny the signs of God (see GRATITUDE AND INGRATITUDE). Q 33:26 — God caused the Muslims to be victorious over *ahl al-kitāb,* who were compelled to forsake their towers *(ṣayāṣīhim)*. (According to tradition the verse and its context has to do with the "battle of the trench [or ditch]" and *ahl al-kitāb* here refers to the Jews who fought against the Prophet; see PEOPLE OF THE DITCH.) Q 57:29 — *ahl al-kitāb* have no power over any part of the bounty of God who is the sole possessor of all his bounty, which he bestows on whomsoever he wishes.

Q 59:2 is a somewhat ambiguous passage which deserves more extended attention: The believers were victorious over some *ahl al-kitāb* by the grace of God and caused them (i.e. the disbelievers from the People of the Book) to evacuate their homes and forts after they had thought that these were impregnable (and Muslims did not think that the People of the Book could be defeated). God put fear in their hearts and they destroyed their homes with their own hands. For the Muslims this victory came unexpectedly. (The verse is usually understood to refer originally to the expulsion of the Jews of the Banū Qaynuqāʿ [q.v.] which was revised and extended after the expulsion of the Jews of the Banū al-Naḍīr [see NAḌĪR, BANŪ AL-; cf. Bell, *Commentary,* ii, 363-4]. The verse speaks about those of the "People of the Book who have disbe-

lieved." They were the ones whom God expelled from their dwellings. The attribution of the reference to a certain clan of Jews is a reasonable assumption; the Qurʾān does not, however, use the word *"yahūd,"* but the more general term *ahl al-kitāb*. It is clear that the verse does not speak about doctrinal differences but about physical confrontation, which was given a religious garb. The group of *ahl al-kitāb* who took part in this confrontation are defined only as "unbelievers" and there is no other hint about their identity.)

Q 59:11 is also one of those verses that refer to *ahl al-kitāb* in the context of the Prophet's physical confrontation with his opponents. It speaks about the hypocrites *(alladhīna nāfaqū)* who promise "their brothers" from "those who disbelieve from among *ahl al-kitāb*" that they will go into exile with them if expelled and assist them if attacked (see HYPOCRITES AND HYPOCRISY). The passage adds that they are liars. (Again, according to the standard histories, this verse refers to the hypocrites of Medina before the expulsion of the Banū al-Naḍīr. There is nothing in the verse itself to back this presumption. Again, the verse uses the general term "the unbelievers from among the People of the Book" which, without any polemical context, is far from being specific. Yet, it is clear from the context and from the verses immediately following this verse, that the Qurʾān is speaking about a war [q.v.] in which their opponents fought the Muslim faithful "in fortified towns and behind walls" [Q 59:14].)

Sūra 98 is completely dedicated to the "unbelievers of the People of the Book" and the polytheists. The eight verses of the sūra speak about the union between these two groups, who were given the opportunity for salvation when the "evidence" *(bayyina)* of a true Prophet came to them "reciting pure scrolls (or sheets)" (*yatlū ṣuḥufan muṭahharatan,* see SHEETS; SCROLLS). Those who were given the book *(alladhīna ūtū l-kitāba)* separated (or had differences of opinion?) only after the evidence had come to them. They were ordered to worship God exclusively and observe the prayer (q.v.) and the payment of *zakāt* (see ALMSGIVING). Those of *ahl al-kitāb* (who disbelieved) and the polytheists are the worst of all creatures and are destined to abide in the fire of hell (*jahannam;* see HELL AND HELLFIRE). In comparison, those of them who do believe and do good deeds are the best of all creatures and are to dwell eternally in the garden (q.v.) of Eden wherein the rivers flow. (The sūra represents a summary of the Qurʾān's attitude to *ahl al-kitāb:* those who believe share the good fortune of all other believers. By believing the Qurʾān means acceptance of the Prophet as one who recites holy writing, as the evidence *(ḥujja)* and the practice of the two main ordinances of Islam: prayer *[ṣalāt]* and the prescribed payment of *zakāt*. Humanity is thus divided into two camps: the saved ones are the believers who are also the best of all creatures *[khayr al-bariyya]* — they inherit heaven; and the worst of all creatures, who are the unbelievers of *ahl al-kitāb* and the polytheists, who inherit hell).

Except for a few cases, therefore, *ahl al-kitāb* in the Qurān does not necessarily refer to either Jews or Christians. Even if such identification can be made, especially in the case of Jews, it is not clear to what kind of Jews or Christians the text refers, unless there is clear reference to past history. It is very possible that, in addition to rabbinic Jews (from Yemen and Babylonia?), the Prophet came into contact with messianic groups who identified themselves as *yahūd*. Based on the qurʾānic text it is impossible to be more specific about the identity of *ahl al-kitāb* with whom the Prophet had ideological, doctrinal and

physical confrontations. Part of them he succeeded in making believers while against others he had to fight to the end. The main subjects of the doctrinal confrontations were, first, the validity and truth of Muḥammad's prophecy and, second, the meaning and true nature of monotheism. Whether defined as Jews or Christians, *ahl al-kitāb* were, by the end of the Prophet's lifetime, accused of having forsaken the true monotheistic religion of old prescribed in their books and of having adopted polytheistic doctrines that put them in the same camp as the *mushrikūn* (cf. McAuliffe, Persian exegetical evaluation, 104-5). See also BELIEF AND UNBELIEF; FAITH; CHILDREN OF ISRAEL; RELIGIOUS PLURALISM AND THE QUR'ĀN.

People of the Cave

see MEN OF THE CAVE

People of the Ditch

The Qurʾān mentions the mysterious People of the Ditch *(aṣḥāb al-ukhdūd)* saying that "slain were the People of the Ditch — the fire abounding in fuel — when they were seated over it and were themselves witnesses of what they did with the believers" (Q 85:4-7). The Qurʾān adds that they were tortured in this way only because they believed in God "to whom belongs the kingdom of the heavens and the earth, and God is witness over everything" (Q 85:8-9).

The expression "People of the Ditch" is the single detail of this whole passage that has been subject to differing interpretations. Consequently, most exegetical works contain an interpretation of this phrase. Some are based on a long ḥadīth (see ḤADĪTH AND THE QUR'ĀN) in which Muḥammad tells the story of a boy who is learning magic (q.v.) from a magician. But, after meeting a monk (see MONASTICISM AND MONKS), the boy became a true believer in God. Subsequently, the boy was tortured by the king in order to make him abandon his faith, and after his death the king had ditches dug and burned those who followed the boy's religion (Muslim, *Ṣaḥīḥ,* iv, 2299-301, no. 3005).

In contrast, some other reports consider this passage an allusion to the martyrdom

of the Christians of Najrān (q.v.) by order of the king Dhū Nuwās, which, according to Christian sources, took place around 523 C.E. (see CHRISTIANS AND CHRISTIANITY). Dhū Nuwās, the last Ḥimyarite king, converted to Judaism and changed his name to Joseph (see JEWS AND JUDAISM; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). When he learned that there were some Christians in Najrān, he went there, intent upon forcing them to convert to Judaism. At their refusal, Dhū Nuwās had one or more ditches dug, in which wood was put and a fire was lit. All of the Christians, numbering in the thousands (eight, twenty or even seventy), refused to renounce their faith and adopt that of the king, so they were thrown into the fire alive. According to certain reports, only one of the people of Najrān, named Daws Dhū Thaʿlabān, was able to escape. He reached the Byzantine court where he sought assistance. Some reports refer to the dimensions of the ditch or of the fire, or add that among the people slain there was a woman with a two-months-old baby who miraculously spoke and convinced her to accept the torment (Muqātil, *Tafsīr,* iv, 648).

According to some interpretations, the expression "People of the Ditch" alludes instead to three kings, Dhū Nuwās in Yemen, Antiochus in Syria and Nebuchadnezzar in Iraq or Persia. A tradition explains the qurʾānic passage as referring to an Abyssinian prophet who summoned his people to faith but the people, who refused to listen to the prophet, dug a ditch and threw the prophet and his followers in it (Majlisī, *Biḥār,* xiv, 439-40). A report attributed to ʿAlī b. Abī Ṭālib (q.v.; d. 40/661) includes another version: the ditch was dug by a Mazdean king who decided to permit incestuous marriages, but when his people opposed this innovation, the king, failing to convince them, had them thrown into the burning ditch.

Modern research has proposed other interpretations. The story of the People of the Ditch mentioned in the Qurʾān could be an allusion to the men in the furnace in Daniel 3:15 f., as already suggested by al-Ṭabarī (d. 310/923; *Tafsīr,* xxix, 132-3) and other exegetes. Alternatively, it may refer to the members of Quraysh (q.v.) slain by the Prophet's army at Badr (q.v.). It may also simply be a generic allusion to those damned to hell (Paret, *Kommentar,* 505-6; see REWARD AND PUNISHMENT; HELL AND HELLFIRE).

People of the Elephant

The phrase in the first verse of Q 105 (Sūrat al-Fīl, "The Elephant"), from which *al-fīl* ("the elephant") provides the term by which that sūra is known. The verse is addressed directly to the prophet Muḥammad: "Have you not seen how your lord has dealt with the People of the Elephant *(aṣḥāb al-fīl)?*" The short sūra of five verses

is early Meccan (see CHRONOLOGY AND THE QUR'ĀN) and it describes an expedition in which one of the mounts was an elephant and which was miraculously annihilated by God, who sent flocks of birds against the invading host. The sūra leaves unknown both the identity of the People of the Elephant, the objective of the invading force, and the motives behind the expedition.

What was left obscure in the sūra was illuminated with great precision by the Arabic Islamic historical and exegetical tradition. *Aṣḥāb al-fīl* were Abyssinians (see ABYSSINIA); the leader was Abraha (q.v.); the target was Mecca (q.v.) and the Kaʿba (q.v.); the name of the elephant was Maḥmūd, its "driver" *(sā'is)* was Unays; the guide of the expedition was Abū Righāl; the elephant stopped at al-Mughammas and would not proceed towards Mecca; the route of the elephant, *darb al-fīl,* was charted from Yemen (q.v.) to al-Mughammas; the Prophet's grandfather, ʿAbd al-Muṭṭalib, was involved in negotiating with Abraha; and even Quraysh (q.v.), as Ḥums, were associated with the failure of the expedition of the People of the Elephant against the Kaʿba; Abraha died a dolorous death and was carried back to Yemen.

It is equally difficult to accept or reject any of the above data as provided by the Arabic Islamic tradition. Yet a modicum of truth may be predicated since, as is clear from the first verse of the sūra, the episode was a recent one and was probably still remembered by the Prophet's older Meccan contemporaries, who might well have been the first tradents of the later historical and exegetical tradition. Indeed, the so-called "Year of the Elephant," *ʿām al-fīl,* marked the inception of one of the Arab pre-Islamic eras (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN). The Islamic profile of the episode consisted in associating the year of the expedition with the birth date of Muḥammad; Umm Ayman, Muḥammad's nurse, was said to have been a captive from the defeated Abyssinian host; and Muslims were expected to stone the tomb of Abū Righāl at al-Mughammas. The sūra itself yields only the following: the expedition of the People of the Elephant was a serious and important event; the destruction of the invading host was theologically presented, effected by God himself; and since the sūra was addressed to the Prophet, the implication is that he or his city or Quraysh benefited from this divine intervention on their behalf. Hence, the failure of the expedition of the People of the Elephant sheds much light on the pre-Islamic history of Quraysh and on the pre-prophetic period of Muḥammad's life.

Attempts to invoke the epigraphic evidence from south Arabia to shed light on the People of the Elephant have failed. The Murayghān inscription commemorated a victory, not a defeat, for the Ethiopians and the site of the battle was very far from Mecca. Additionally, these attempts have been gratuitously plagued by the involvement of the Prophet's birth date — traditionally considered 570 C.E. — with the date of the expedition, mounted by the People of the Elephant. An alternative approach towards negotiating the imprecision of the sūra, namely, the exegesis of the Qur'ān by the Qur'ān *(tafsīr al-Qur'ān bi-l-Qur'ān),* has been more fruitful and successful. Many medieval Muslim scholars considered Q 106 ("Quraysh") not a separate sūra but a continuation of Q 105. The unity of these two sūras, however, had not been seriously considered until the present writer published an article to that effect in 1981. Accepting the unity of the two sūras *al-Fīl* and *Quraysh,* and setting them against the background of the history of western Arabia in

the sixth century, based on authentic contemporary sources, yield the following conclusions on the People of the Elephant and their expedition:

They were Abyssinians, not Arabs, the *fīl* being an African not an Arabian animal; their leader was either Abraha or one of his two sons who succeeded him, Yaksūm or Masrūq; the destination no doubt was Mecca and the Kaʿba, referred to in verse Q 106:3; the destruction of the Ethiopian host may be attributed to the outbreak of an epidemic or the smallpox. Its destruction was Mecca's commercial opportunity in international trade, now that it could safely conduct the two journeys (see CARAVAN; JOURNEY): the winter journey to Yemen and the summer one to Syria (q.v.; *bilād al-shām*); let the Meccans, therefore, worship the lord of the "house" (the Kaʿba; see HOUSE, DOMESTIC AND DIVINE), who made all this possible (Q 106:3-4). The true motives behind the expedition remain shrouded in obscurity but they must be either or both of the following: (1) Retaliation for the desecration of the cathedral/church, built by Abraha in Ṣanʿāʾ; or (2) the elimination of Mecca as an important caravan city on the main artery of trade in western Arabia.

Whatever the motive behind the expedition of the People of the Elephant was, the qurʾānic revelation that refers to them in Q 105 remains the sole reliable evidence for the importance of Mecca in the sixth century, clearly implied in the fact that the ruler of south Arabia found it necessary to mount a major military offensive against it. The destruction of the Ethiopian host is also the sole reliable evidence that explains the enhanced prosperity of Mecca as a result of long-distance international trade, through which the future Prophet of Islam benefited, materially and otherwise, in the fifteen years or so, during which he led the caravans before his prophetic call (see PROPHETS AND PROPHETHOOD; REVELATION AND INSPIRATION) around 610 C.E.

People of the Heights

Qurʾānic eschatological designation for people not destined for hell. The term *al-aʿrāf* (pl. of *ʿurf*) in Q 7:46 and Q 7:48 (where it appears in the construct, *aṣḥāb al-aʿrāf:* "the companions — or people — of *al-aʿrāf*") has been variously understood as "elevated place, crest, to distinguish between things, or to part them." *Al-aʿrāf* (the name of the seventh sūra of the Qurʾān) also signifies "the higher, or the highest," and "the first or foremost," hence the source of the English term "[the People of] the Heights," and of M.H. Shakir's (*Holy Qurʾān,* 140-1) translation as "the Elevated Places." Finally, the exegetical tradition has indicated a connection with the triliteral Arabic root for

"knowledge" (*ʿ-r-f;* see e.g. Ṭabarī, *Tafsīr,* xii, 450, ad Q 7:46, reporting a tradition from al-Suddī: "It is named *"al-aʿrāf"* because its companions 'know' — *yaʿrifūna* — humankind.").

The classical works of exegesis (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) list a number of interpretations of both *"al-aʿrāf"* and "the people of *"al-aʿrāf."* Al-Ṭabarī (d. 310/923) reports a tradition that identifies the "veil" (q.v.; *ḥijāb*) of Q 7:46 that separates those destined for heaven (see GARDEN) from those destined for hell (see HELL AND HELLFIRE) as both "the wall" *(al-sūr)* and "the heights" (*al-aʿrāf;* Ṭabarī, *Tafsīr,* xii, 449, ad Q 7:46; cf. Muqātil, *Tafsīr,* ii, 38-9, ad Q 7:46; see ESCHATOLOGY). A slight variation of this tradition is that *"al-aʿrāf"* is the "wall" or, alternately, the "veil," "between the garden and the fire" (q.v.; ibid.; see also BARRIER).

The exegetical tradition regarding the identity of the "men" *(rijāl)* or the "companions" *(aṣḥāb)* of *al-aʿrāf* is also multivalent: while some have posited angels (q.v.; cf. i.e. Ṭabarī, *Tafsīr,* xii, 459, ad Q 7:46), the majority has maintained that these individuals are human beings (children of Adam: Ṭabarī, *Tafsīr,* xii, 452, ad Q 7:46) — be they martyrs (i.e. those who "were killed in the path of God"; cf. Ṭabarī, *Tafsīr,* xii, 457, ad Q 7:46; see MARTYRS; PATH OR WAY), or virtuous humans or people whose good and evil works are equal (see GOOD DEEDS; EVIL DEEDS). This latter understanding is arguably the dominant one, as the "men" on *al-aʿrāf* (Q 7:46) have been understood to be those who "have not [yet] entered [paradise]" (Q 7:46): "the people of *al-aʿrāf*" *(aṣḥāb al-aʿrāf)* have been viewed as persons whose good and evil works are of equal quality (see WEIGHTS AND MEASURES). Thus, they should not merit paradise by the former or hell by the latter (cf. e.g. Ṭabarī, *Tafsīr,* xii, 452, ad Q 7:46) — nor merit it as prophets or angels (see PROPHETS AND PROPHETHOOD; ANGEL; cf. Rāzī, *Tafsīr,* xiv, 93, where the argument is put forth that the People of the Heights cannot be martyrs, as the description found in Q 7:46, that "they will not have entered [heaven], but they have an assurance" is explained as not applying to prophets, angels or martyrs; also, ibid., 94, where mention is made of the view, attributed to al-Ḥudhayfa and others, that the People of the Heights will be the last people to enter heaven; see THEOLOGY AND THE QURʾĀN; MUʿTAZILA). They are thus in the "intermediate" state between salvation (q.v.) and damnation, for Q 7:47 ("When their gaze will be turned towards the companions of the fire they will say, 'Our lord, do not put us with the wrongdoing people'") is also understood to refer to these people of *al-aʿrāf* (cf. Ṭabarī, *Tafsīr,* xii, 452-4, ad Q 7:46; see JUSTICE AND INJUSTICE; FREEDOM AND PREDESTINATION; DESTINY; FATE). Finally, Ṣūfī mystics have used the term to express a condition of the mind and soul when meditating on the existence of God in all things (see ṢŪFISM AND THE QURʾĀN).

Modern scholarship reflects the range of interpretations to be found in the classical exegetes. T. Andrae (*Der Ursprung,* 77) wrote that they were probably dwellers in the highest degree of paradise "who are able to look down on hell and on paradise." Bell (Men, 43), however, finds no linguistic justification for this claim, unless an unusual metathesis of the Arabic root letters of the verb "to raise up" (*r-f-ʿ* < *ʿ-r-f,* of *"al-aʿrāf"*) is assumed. Some interpreters imagined that *al-aʿrāf* was a sort of limbo, using the term *barzakh* (q.v.) for the patriarchs and prophets, or for the martyrs, and those whose eminence gave them sanctity.

Western translations of the Qurʾān reflect the lack of exegetical consensus regarding the phrase *"al-aʿrāf."* While some translators of the Qurʾān prefer to retain the

Arabic *"al-aʿrāf"* as the title of Q 7, others have attempted to translate the term, and have used their translations as the title of Q 7: e.g. Arberry (176-7) used "The Battlements" and "The Ramparts," and Pickthall (*Koran,* 121) "The Heights" (cf. Dawood, *Koran,* 112-3). Some rather more involved translations are the "Wall Between Heaven and Hell" (Ahmad Ali, *Qurʾān,* 137; e.g. his rendition of Q 7:46: "On the wall will be the men (of *al-aʿrāf*)…"; and of Q 7:48: "The men of *al-aʿrāf* will call [to the inmates of Hell]…."). Two earlier writers, Sale (*Koran,* 151) and Rodwell (*Koran,* 297-8), had simply used *al-aʿrāf* as the title. Sale named Q 7 "Al Araf" and did not divide the sections. He wrote, "… men shall stand on al araf who shall know every one of them…"; and "… those who stand on al araf shall call unto certain men…." Rodwell called it "Al Araf": "and on *the wall* Al Araf shall be men…" (Q 7:46; cf. his footnotes: "On this wall [the name of which is derived from *Arafa,* 'to know', with allusion to the employment of those upon it] will stand those whose good and evil works are equal, and are not, therefore, deserving of either Paradise or Gehenna…"; Q 7:48: "… and they who are upon Al Araf shall cry to those whom they know…"). The French scholar Kasimirski also retained the name *"al-aʿraf",* as the title of Q 7, and he rendered the relevant phrase of Q 7:46: "… sur l'Alaraf…."

People of the House

Literally, "(the) people of the house" *(ahl al-bayt),* a family, a noble family, a leading family and, most probably, also those who dwelt near the house of God (see HOUSE, DOMESTIC AND DIVINE), the Kaʿba (q.v.). Without the definite article *"al-,"* it means "household" (see FAMILY; KINSHIP; COMMUNITY AND SOCIETY IN THE QURʾĀN). In Shīʿī (see SHĪʿISM AND THE QURʾĀN) as well as Sunnī literature the term *ahl al-bayt* is usually understood to refer to the family of the Prophet (q.v.). In the Qurʾān the term appears twice with the definite article (Q 11:73; 33:33) and once without it (*ahl bayt,* Q 28:12).

According to the lexicographers, when *ahl* appears in a construction with a person it refers to his blood relatives (see BLOOD AND BLOOD CLOT), but with other nouns it acquires wider meanings: thus the basic meaning of *ahl al-bayt* is the inhabitants of a house (or a tent). They used to call the inhabitants of Mecca (q.v.; *ahl makka*) "the people of God" as a sign of honor (for them), in the same way that it is said "the house of God" *(bayt Allāh)*. *Ahl madhhab* are those who profess a certain doctrine; *ahl al-islām* are the Muslims, and so on (see for additional examples, *Lisān al-ʿArab,* s.v. *ahl*).

The Qurʾān frequently uses *ahl* to denote

a certain group of people. Sometimes the word is connected with the name of a place, and in these cases the term refers to the inhabitants of that place, such as: *ahl yathrib,* "the people of Yathrib" (Q 33:13) or *ahl al-madīna,* "the people of Medina" (q.v.; Q 9:101); *ahl madyan,* "the people of Midian" (q.v.; Q 20:40; 28:45). Sometimes the term is used to denote the people of unidentified locations such as *ahl qarya,* "the inhabitants of a town or village" (Q 18:77; cf. 29:31, 34), *ahl al-qurā,* "townspeople, dwellers of the villages" (Q 7:96-8; 12:109; 59:7; see CITY). At other times the word *ahl* refers to certain groups of people typified or identified by some ethical or religious characteristics, as in *ahl al-dhikr,* "people of the reminder" (Q 21:7; see MEMORY) or *ahl al-nār,* "people of the (hell-) fire" (Q 38:64; see HELL AND HELLFIRE). Or it has the meaning of "fit for," in which case the word describes an individual, not a group, such as *ahl al-taqwā,* "(a person) fit for piety" (q.v.; Q 74:56), or *ahl al-maghfira,* "(a person) fit for forgiveness" (q.v.; Q 74:56).

The term *ahl al-bayt* falls into one or more of these categories, namely people who belong to a certain house in the literal or socio-political meanings of the word. At least in one case (Q 33:33), however, its identification with the Prophet turned the term into a major issue in qurʾānic exegesis and tradition literature (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; ḤADĪTH AND THE QURʾĀN).

The qurʾānic usage of *ahl al-bayt* is as follows:

In Q 11:73 — the story of Abraham (Ibrāhīm) and the divine messengers. When the patriarch's wife is informed that she is going to give birth to Isaac (Isḥāq) and Jacob (Yaʿqūb), she reacts by saying: "Alas! Shall I bring forth when I am old and my husband here an old man? Verily this is a thing strange" (Q 11:72). The angels respond: "Do you think the affair of God strange? The mercy and blessing of God be upon you, O people of the house…" *(raḥmatu llāhi wa-barakātuhu ʿalaykum ahla l-bayti).*

In Q 28:12 — situated in the story of the rescue of the infant Moses (Mūsā) by Pharaoh's (Firʿawn) wife. The phrase appears without the definite article: Moses' sister asks, "Shall I direct you to a household who will take charge of him (the infant Moses) for you?…" *(hal adullukum ʿalā ahli baytin yakfulūnahu lakum).*

In Q 33:33 — "God simply wishes to take the pollution from you, O people of the house and to purify you thoroughly" *(innamā yurīdu llāhu li-yudhhiba ʿankumu l-rijsa ahla l-bayti wa-yuṭahhirakum taṭhīran).*

The first two verses, Q 11:73 and Q 28:12, were understood by almost all Muslim commentators to mean family, in the first case Abraham's family and in the second the prophet Moses' family. In the case of Q 33:33, however, the word *bayt* most probably means not a family but the Kaʿba, the house of God; thus the term *ahl al-bayt* would seem to mean the tribe of Quraysh (q.v.) or the Islamic community in general, as suggested by R. Paret (Der Plan, 130; cf. Bell, *Qurʾān,* ii, 414 n. 3; *Lisān al-ʿArab*).

The tribe of Quraysh was explicitly called *ahl al-bayt* in an early Islamic tradition recorded by Ibn Saʿd: "Quṣayy said to his fellow tribesmen, 'You are the neighbors of God and people of his house'" (*innakum jīrān Allāh wa-ahl baytihi;* Ibn Saʿd, *Ṭabaqāt,* i/1, 41, l. 16). In this sense the term assumes an even wider meaning: it includes all those who venerated the Kaʿba. This original meaning was neglected in favor of the more limited scope of the Prophet's family, and Q 33:33 became, consequently, the cornerstone for both Shīʿī and ʿAbbāsid claims to the leadership

of the Muslim community (see POLITICS AND THE QUR'ĀN). The Shīʿa (q.v.) claimed that the verse speaks about the divine choice of the ʿAlid family and their preference to all the other relatives of the Prophet. To be sure, the idea of divine selection was accepted also by the so-called non-Shīʿī, or Sunnī, tradition. Thus the Prophet is made to say: "God created human beings, divided them into two parties, and placed me in the better one of the two. Then he divided this party into tribes (see TRIBES AND CLANS) and placed me in the best of them all, and then he divided them into families (*buyūt,* lit. "houses") and placed me in the best of them all, the one with the most noble pedigree" (*khayruhum nasaban;* Fīrūzābādī, *Faḍāʾil,* i, 6). Within this concept of selection, there is a wide area of variation. The tendency of the Shīʿa has always been to carry the list of the divine selection further down, so as to achieve maximum exclusivity.

One of the most widespread traditions quoted by Shīʿī as well as Sunnī sources in relation to the interpretation of Q 33:33 is the so-called *ḥadīth al-kisāʾ.* Through the many variations on this ḥadith, the idea of the "holy five" was established. The Prophet is reported to have said: "This *āya* was revealed for me and for ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB), Fāṭima (q.v.), Ḥasan and Ḥusayn." When the verse was revealed, the tradition goes on to say, the Prophet took a "cloak" or "cape" (*kisāʾ,* meaning his robe or garment; see CLOTHING), wrapped it around his son-in-law, his daughter and his two grandchildren and said: "O God, these are my family *(ahl baytī)* whom I have chosen; take the pollution from them and purify them thoroughly." The clear political message in this tradition was stressed by additions such as the one in which the Prophet says: "I am the enemy of their enemies (q.v.)," or invokes God, saying: "O God, be the enemy of their enemies" (authorities quoted in Sharon, Ahl al-bayt, 172 n. 6).

To the same political category belong the various traditions which consider assistance and love for the *ahl al-bayt* a religious duty and enmity towards them a sin. "He who oppresses my *ahl bayt,*" the Prophet says, "or fights against them or attacks them or curses them, God forbids him from entering paradise (q.v.)." In another utterance attributed to the Prophet he says: "My *ahl bayt* can be compared to Noah's (q.v.) ark (q.v.), whoever rides in it is saved and whoever hangs on to it succeeds, and whoever fails to reach it is thrust into hell" (Fīrūzābādī, *Faḍāʾil,* ii, 56-9; 75-87).

Once the idea of the "chosen five" or the selected family was established as the main Shīʿī interpretation of the term *ahl al-bayt,* there was no reason why the idea of purification (see CLEANLINESS AND ABLUTION; RITUAL PURITY), which appears in the qurʾānic verse, should not be connected in a more direct way to the divinely selected family. In addition to *ahl al-bayt,* one therefore finds terms such as *al-ʿitra al-ṭāhira* and *al-dhuriyya al-ṭāhira,* "the pure family," or also "the pure descendents," an expression that is more than reminiscent of the holy family (i.e. Jesus [q.v.], Mary [q.v.] and Joseph) in Christianity. And as if to accentuate this point, Fāṭima and Mary are explicitly mentioned together as the matrons of paradise and Fāṭima is even called *al-batūl,* "the virgin" (see SEX AND SEXUALITY; ABSTINENCE; CHASTITY), a most appropriate description for the female figure in the Islamic version of the holy family (see McAuliffe, Chosen).

When the ʿAbbāsids came to power, they, too, based the claim for the legitimacy of their rule on the fact that they were part of the Prophet's family. Concurrently, therefore, the meaning of the term *ahl al-bayt* underwent modifications in opposite directions. While the Shīʿa moved towards the

formulation of the idea of the "holy five," or the "pure family" described above, the ʿAbbāsids strove to widen the scope of this family to include ʿAbbās, the Prophet's uncle, stressing that women, noble and holy as they may be, could not be regarded as a source of *nasab* and that the paternal uncle in the absence of the father was equal to the father (see GENDER; INHERITANCE). The extension of the boundaries of *ahl al-bayt* under the ʿAbbāsids followed an already existing model. The ḥadīths speaking about the process of God's selection stop at the clan of Hāshim to include all the families in this clan, the Ṭālibids as well as the ʿAbbāsids. Such traditions can be even more explicit, specifying that the families included in the Prophet's *ahl al-bayt* are *"āl ʿAlī wa-āl Jaʿfar wa-āl ʿAqīl wa-āl al-ʿAbbās"* (Muḥibb al-Dīn al-Ṭabarī, *Dhakhāʾir al-ʿuqbā,* 16).

Not all the commentators accepted the idea that the term *ahl al-bayt* in Q 33:33 is associated with the Prophet's family in the sense that the contending parties wished. Alongside the above-mentioned interpretations, one finds the neutral interpretation that *ahl al-bayt* means simply the Prophet's wives (*nisāʾ al-nabī;* see WIVES OF THE PROPHET). And as if to stress the dissatisfaction with the political and partisan undertones of the current exegesis, one of the commentators stresses that *ahl al-bayt* are the Prophet's wives, "and not as they claim" (Wāḥidī, *Asbāb,* 139-40; Sharon, Ahl al-bayt, 175 n. 15).

As may be expected, a harmonizing version also exists which interprets the term *ahl al-bayt* in such a way that both the Prophet's family and his wives are included. To achieve this end, the term *ahl al-bayt* was divided into two categories: the one, *ahl bayt al-suknā,* namely those who physically lived in the Prophet's home, and *ahl bayt al-nasab,* the Prophet's kin. The qurʾānic verse, according to this interpretation, primarily means the Prophet's household, namely, his wives. But it also contains a concealed meaning (see POLYSEMY), which the Prophet himself revealed by his action, thus disclosing that *ahl al-bayt* here included those who lived in his home, such as his wives, and those who shared his pedigree. They were the whole (clan) of Banū Hāshim and ʿAbd al-Muṭṭalib. Another version of this interpretation states that the Prophet's *ahl al-bayt* included his wives and ʿAlī *(Lisān al-ʿArab)*.

In Arabic literature the term *ahl bayt* is used generically to specify the noble and influential family in the tribe or any other socio-political unit, Arab and non-Arab alike (see ARABS). The nobility attached to the term is sometimes stressed by connecting it to the word *sharaf*. The word *bayt* on its own could mean nobility *(wa-bayt al-ʿarab ashrafuhā)* says Ibn Manẓūr (*Lisān al-ʿArab,* s.v. *bayt*). The usage of *ahl al-bayt* for denoting leading families in the Age of Ignorance (q.v.; *jāhiliyya*) as well as under Islam was very extensive. Two examples will suffice to make the point. Ibn al-Kalbī (d. ca. 205/820) says that Nubāta b. Ḥanẓala, the famous Umayyad general, belonged to a noble family of the Qays ʿAyalān "and they are *ahl bayt* commanding strength and nobility" *(wa-hum ahlu baytin lahum baʾs wa-sharaf)*. The same is said about non-Arabs. Speaking about the Byzantine dynasties (see BYZANTINES), Ibn ʿAsākir (d. 571/1176) mentions ten *ahl buyūtāt*. The Barmakids are referred to as "from the noble families of Balkh" (*min ahl buyūtāt Balkh;* references in Sharon, Ahl al-bayt, 180-1).

It is noteworthy that the usage of the phrase "people of a/the house" (Ar. *ahl bayt*) to denote the status of nobility and leadership is not unique to the Arabic language (q.v.) or Arab culture. It is rather universal: the ancient Romans spoke about the *patres maiorum gentum,* namely, the elders

of the major clans or houses. The tradition concerning this Roman expression goes back to the early days of the Roman monarchy, when the Roman senate was composed of 100 family elders: Tarquinius Priscus, the fifth king of Rome (r. 616-578 B.C.E.), enlarged the number of senate members by another 100 elders who were called "the elders of the minor houses" (*patres minorum gentium;* Elkoshi, *Thesaurus,* 279). In the Bible, the usage of the word "house" *(bāyit)* to denote a family is very common. Moreover, in many cases, the "house" is named after an outstanding personality, and has a similar meaning as the Arabic *ahl al-bayt* (e.g. *Gen* 17:23, 27; *Num* 25:15; cf. Brown et al., *Lexicon,* 109b-110a). The most famous of such "houses" is the "house of David" *(bēth David)*. When used in this way, the word has the same meaning as the English "house" in reference to a royal family or a dynasty in general.

It is only natural that under Islam the members of the caliphs' families were called *ahl al-bayt*. ʿAbdallāh, the son of Caliph ʿUmar, referring to his sister's son (the future caliph) ʿUmar b. ʿAbd al-ʿAzīz, says: "He resembles us, *ahl al-bayt,"* which means to say that the Umayyads referred to themselves as *ahl al-bayt.* In a letter written by Marwān II to Saʿīd b. ʿAbd al-Malik b. Marwān during the rebellion against Caliph Walīd II (125-6/743-4), the future caliph referred twice to the Umayyad family as *ahl bayt* and *ahl al-bayt* (for the reference see Sharon, Ahl al-bayt).

It may be concluded that once the caliphate had been established, the pre-Islamic Arabic *(jāhilī)* practice of calling the leading and noble families of the tribes *ahl al-bayt* was extended to each of the four families of the first caliphs. But since ʿAlī's caliphate was controversial, the definition of his family as *ahl al-bayt* was not shared by the whole Muslim community. The Umayyads and their Syrian supporters (see SYRIA) questioned the legitimacy of ʿAlī's rule, with the result that his Iraqi partisans (see IRAQ) and the Shīʿa not only emphasized the *ahl al-bayt* status of ʿAlī's descendents but also gave the term a specific and exclusive meaning. In this way, *ahl al-bayt* acquired a religious overtone, and in time lost its generic meaning. Once the term was attached to the Prophet's person, the road was open for qurʾānic exegesis, originating in Shīʿī circles, to establish its origin in the Qurʾān itself. All the politically charged interpretations of the qurʾānic phrase *ahl al-bayt* emerge because its original meaning was either deliberately or unintentionally forgotten. Yet one should also take into account that such interpretations of the term in connection with the Prophet's family would have been impossible had the term not been used generally as meaning family or kinsfolk.

On the other hand, it is doubtful whether in the Qurʾān the term *ahl al-bayt* (with the definite article) means family. R. Paret, who differentiates between the general term *ahl al-bayt* and the specific one, suggests that it literally meant "the people of the house," namely those who worshipped at the Kaʿba. In all cases in which the term *al-bayt* appears in the Qurʾān, it refers only to the Kaʿba sanctuary (Q 2:125, 127, 158; 3:97; 5:2, 97; 8:35; 22:26, 29, 33; 52:4; 106:3). *Al-bayt* may appear on its own or with an adjective, such as *al-bayt al-ʿatīq* (Q 22:29, 33), *al-bayt al-maʿmūr* (Q 52:4) or *al-bayt al-ḥarām* (i.e. Q 5:97). Paret goes on to suggest that the fact that the *ahl al-bayt* under discussion (Q 33:33) is mentioned in the context of cleaning from pollution falls well within the idea of the purification of the Kaʿba by Abraham and Ishmael (q.v.; Ismāʿīl), which can be found elsewhere in the Qurʾān. One may therefore quite safely conclude, Paret continues, that in the two cases where *ahl al-bayt* appears in this form in the Qurʾān, the original meaning must

have been the "worshippers of the house," the Kaʿba, as prescribed by Islam (Paret, Der Plan, 128: *"Anhänger des islamischen Kaʿba-Kultes"*). Along this line of thought, it would not be far-fetched to suggest that the original meaning of the term before Islam was the tribe of Quraysh in general and that this is what is meant in Q 33:33. As to Q 11:73 the connection with the Kaʿba is less certain.

To sum up, the meaning of *ahl al-bayt* in the Qurʾān follows the accepted usage of the term in pre- and post-Islamic Arab society. It denotes family and blood relations as well as a noble and leading "house" of the tribe. Only in the case of Q 33:33 does the term seem to have another, more specific meaning.

People of the Thicket

An English rendering of the Arabic phrase *aṣḥāb al-ayka* that occurs in four Meccan sūras (Q 15:78; 26:176; 38:13; 50:14). No consensus exists about the identity of these people who suffered the fate of punishment by destruction for their unbelief (see BELIEF AND UNBELIEF; PUNISHMENT STORIES). There are at least five different theories about the identity of these people who are associated with the prophet Shuʿayb (q.v.). Some exegetes consider them to have been the inhabitants of a place called Madyan (see MIDIAN) or, secondly, a subgroup of a people called Madyan; it is also posited that they are another people altogether, a second people to whom the prophet Shuʿayb was sent (i.e. in

addition to Madyan), while a fourth alternative suggests that *al-ayka* was a village *(balad),* namely, the village of al-Ḥijr (which is also the title of a qurʾānic sūra, Q 15; see ḤIJR). The fifth theory that is put forward suggests that they are simply Bedouins (*ahl al-bādiya,* people of the desert; see BEDOUIN). Lexicographers define *ayka* and its plural *ayk* as tangled vegetation or a dense forest or wood, hence the English "thicket" or, in Muḥammad Asad's translation, "wooded dales." Others add that it consisted of a particular palm tree, *al-dawm* in Arabic (see DATE PALM). The early exegete Muqātil b. Sulaymān (d. 150/767; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) explains that *al-dawm* is in fact *al-muql* (Theban palm; *Tafsīr,* ii, 434).

This inability to identify precisely the People of the Thicket is further complicated by the variant readings for *al-ayka* (see READINGS OF THE QURʾĀN). Al-Farrāʾ (d. 207/822) discusses the disappearance of the *alif* in two of the four verses which mention the *aṣḥāb al-ayka*. According to him, al-Ḥasan al-Baṣrī (d. 110/728), ʿĀṣim (d. 127-8/745) and al-Aʿmash (d. 148/765) all read *al-ayka* with an *alif* throughout the entire Qurʾān. The people of Medina (q.v.), however, read in two cases (in Q 26:176 and Q 38:13) *layka* instead of *al-ayka* (Farrāʾ, *Maʿānī,* ii, 91; see also RECITATION OF THE QURʾĀN; ORALITY AND WRITING IN ARABIA). Abū Ḥayyān (d. 745/1344) neatly summarizes this discussion, referring to the analogy of Mecca (q.v.) as *makka* in Q 48:24 and *bakka* at Q 3:96, adding that *"layka"* was rejected by the major exegetes. Abū Ḥayyān explains that the *alif* of the definite article was not written down, and that caused the *fatḥa* (the vowel "a") to be shifted to the letter *lām*. As a consequence, the *hamza* (the glottal stop) was dropped completely in these two verses (see ARABIC LANGUAGE). This resulted in some scholars' thinking that *layka* was derived from the radicals *l-y-k* (instead of *ʾ-y-k*). That suggestion, in turn, gave rise to the notion that Layka was a village located in the larger area of al-Ayka (Abū Ḥayyān, *Baḥr,* vii, 36).

Whatever the identification or the linguistic meaning of the word *al-ayka* may be, the qurʾānic importance of the People of the Thicket reflects their exemplification of a typical Meccan theme: a people who disregarded their prophet and who consequently perished. The People of the Thicket are but one of such peoples whose plight ended in destruction for not heeding God's message. The leading classical exegete al-Ṭabarī (d. 310/923) narrates that these people received a particularly harsh punishment since God first sent fire on the People of the Thicket for seven days, from which there was no refuge. After the fire, God sent a cloud as if to protect them and to offer them relief by the suggestion of water, but, in the end, they were annihilated by the fire that came out of the cloud (Ṭabarī, *Tafsīr,* vii, 530-1; likewise the Khārijī Hūd b. Muḥakkam, *Tafsīr,* ii, 354 and the Shīʿī al-Ṭūsī, *Tibyān,* 350; see KHĀRIJĪS; SHĪʿISM AND THE QURʾĀN). Beeston ("Men of the Tanglewood") provides some evidence that they were members of the Dusares cult of ancient northwestern Arabia, a vegetation deity (see PRE-ISLAMIC ARABIA AND THE QURʾĀN). Speyer (*Erzählungen,* 253), on the other hand, suggests that *ayka* may refer to the tamarisk that Abraham (q.v.) had planted near Beersheba (*Gen* 21:33; see AGRICULTURE AND VEGETATION).

Persian Literature and the Qurʾān

The influence of the Qurʾān on Persian language and literature has been pervasive but at the same time, diffuse and often mediated, making it difficult, in the absence of methodologically rigorous studies of the matter, to quantify or assess precisely. Persian poetry and prose *belles lettres* of the fourth/tenth to fifth/eleventh centuries, though of "Islamicate" expression, looked for the bulk of its subject matter to the pre-Islamic Middle Persian traditions of minstrelsy and lyric poetry, advice literature *(andarz),* epic and romance (which typically assert the values of the old Sasanian nobility over and above, or in addition to, Islamic ones) as well as translations of Sanskrit and Parthian tales. Persian poetry did, of course, adapt particulars from Arabic literary models: for example, the imitation of the *nasīb* and *raḥīl* of the pre-Islamic Arabic *qaṣīda* (see POETS AND POETRY; ORALITY AND WRITING IN ARABIA) by Manūchihrī (d. ca. 432/1041) and, later on, the reworking of the *Majnūn-Laylā* cycle by Niẓāmī (d. 605/1209) and scores of subsequent Persian, Turkish and Urdu poets (see LITERATURE AND THE QURʾĀN).

The Arabic Qurʾān, being in another language and in an inimitable category (see INIMITABILITY; ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QURʾĀN) above literature, rarely provided the initial inspiration for Persian literary texts, though it did help shape the lexical, stylistic and moral contours of the emerging literature of Islamicate expression in greater Iran, especially through Persian translations and *tafsīr*s of the text beginning in the fourth/tenth century or even earlier (see TRANSLATIONS OF THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY; GRAMMAR AND THE QURʾĀN). The practice, however, of professional poetry within the milieu of the princely courts — the source of most literary patronage — was often regarded as inherently secular or even un-Islamic, which initially discouraged the extensive incorporation of scriptural or religious subjects in literature. Some early Persian poetry, patronized by the eastern Iranian feudal nobility *(dihqāns),* evinces a strong concern with *sukhun* (modern *sukhan*), well-considered and carefully crafted speech of philosophical or ethical nature (see PHILOSOPHY AND THE QURʾĀN; ETHICS AND THE QURʾĀN). In the fifth/eleventh century religious poetry, of either popular expression (e.g. the quatrains of the Ṣūfī saint Abū Saʿīd-i Abī l-Khayr [d. 440/1049]; see ṢŪFISM AND THE QURʾĀN) or sectarian bent (the *qaṣīda*s of the Ismāʿīlī preacher Nāṣir-i Khusraw [d. ca. 470/1077]; see SHīʿISM AND THE QURʾĀN), achieved canonical status

within specific textual communities. Sanāʾī of Ghazna (d. ca. 525/1131), appealing consciously to the example of Ḥassān b. Thābit (d. before 40/661), managed to attract the patronage of the mystically-minded religious scholars *(ʿulamā)* in Khurasān. Here Sanāʾī achieved a reputation for combining the practice of poetry *(shiʿr)* with the preaching of religion *(sharʿ)* and was subsequently able to secure the patronage of Bahrāmshāh to pursue such mystico-didactic poetry at the Ghaznavid court (Lewis, *Reading,* 171-87; see TEACHING AND PREACHING THE QURʾĀN). The tension between court and cloister nevertheless remained a concern two hundred years later, as revealed in the belabored distinction that Sulṭān Walad of Konya (d. 712/1312) makes between the poetry of professional poets and the poetry of saints (*Mathnawī-yi waladī,* 53-5 and 211-2; see SAINT).

By the end of the sixth/twelfth century, allusions *(talmīḥāt)* and quotations *(iqtibās)* from Qurʾān and ḥadīth (see ḤADĪTH AND THE QURʾĀN) jostled with Greek philosophy and Iranian mythopoesis for authority, as indicated in the following verse *(bayt)* of Jamāl al-Dīn-i Iṣfahānī (d. 588/1192): *rah bi Qurʾān ast kam khwān harza-yi Yūnāniyān/aṣl akhbār ast mashnaw qiṣṣa-yi Isfandiyār,* "The path is through Qurʾān; do not read the nonsense of the Greeks so much!/The source is *akhbār;* do not listen to the story of Esfandiyar." The conscious and direct appeal to qurʾānic authority in Persian poetry reached its peak in the seventh/thirteenth to eighth/fourteenth centuries. Subsequent to this, qurʾānic motifs tend to assume more metaphorical and elastic qualities, in part because of the aesthetic ideals of the "Indian" style of poetry but also because the Qurʾān had so thoroughly permeated the tradition that qurʾānic allusions might evoke famous secondary or tertiary literary texts in Persian, rather than pointing the reader to the Qurʾān itself. From the Safavid era onwards, Shīʿī sacred history and ritual, as embodied in the mythopoetics of Ḥusayn's martyrdom (see PEOPLE OF THE HOUSE; FAMILY OF THE PROPHET; MARTYRS) and the passion play *(taʿziya),* informs the poetry of religious expression whereas the gradually secularizing literary canon of the late nineteenth and twentieth centuries reflects nationalist and modernist agendas as well as the influence of European letters (see also POLITICS AND THE QURʾĀN).

The Arabic element in Persian language and literature

The bulk of the Iranian nobility appear to have converted to Islam in the third/ninth century, until which time Zoroastrians (see MAGIANS) continued composing works in Middle Persian, an Indo-European language written in a script derived from Aramaic. By the fourth/tenth century (neo-) Persian had itself emerged as a vibrant literary language, written in the Arabic script (q.v.) and widely patronized throughout the eastern areas of greater Iran (Khurasan, Afghanistan and Transoxania).

The frequency of occurrence of lexemes of Arabic origin in Persian has been calculated (though on the basis of a rather limited corpus) at only about 10% in the fourth/tenth-century and 25% in the sixth/twelfth-century. The ratio of Arabic loanwords to native Persian lexemes in the entire lexicon has, however, been calculated for texts of the fourth/tenth century at about 25 to 30% and for the sixth/twelfth century at around 50% (Jazayery, Arabic element, 117). The increased penetration and use of loanwords from Arabic reflects at least in part the influence of the Qurʾān on Persian literature and society, though this naturally depends a great deal on the topic and genre of writing. During

the Safavid era Arabisms come into vogue in bureaucratic language and the volumes of religious writing (in which the vocabulary of Arabic and the Qurʾān are proportionally higher) while Arabic itself paradoxically waned as a living literary language in Persia (Perry, Persian in the Safavid period, 272, 276). In the middle of the twentieth century, it was estimated that words of Arabic origin occur at an average frequency of approximately 45%, though the percentage is far below this in poetry and higher for technical subjects relating to religion, philosophy or law (Jazayery, Arabic element, 118). Since that time, however, conscious efforts to use Persian roots for calques and new coinages (e.g. *Qurʾān-pazhūhī,* or "Qurʾānic studies," a term from the 1980s), encouraged by the Persian Academy of Language *(Farhangistān)* in Iran, have gradually led to a perceived (though as yet seemingly undocumented) decrease in this percentage.

Since lexical and morphological borrowing from Arabic occurred through a variety of social nexuses and institutions (military garrisons, government administration and registers, princely courts, religious courts, mosques and Ṣūfī lodges, the Niẓāmiyya colleges, etc.; see MOSQUE), this does not measure the direct influence of the Qurʾān, per se. Persian poetry borrowed from Arabic poetry the obligatory use of rhyme (see RHYMED PROSE), the conventions and terminology of rhetoric (see RHETORIC AND THE QURʾĀN) and prosody and the basic categories and thematics of the *qaṣīda* and the *ghazal* (which latter, however, Persian poets adapted from a thematic into a specific fixed-form genre). Likewise, certain metaphors, motifs or rhetorical conceits can be traced to particular literary models or Arabic proverbs (see the catalogues in Shamīsā, *Farhang-i talmīḥāt,* and Dāmādī, *Maḍāmīn-i mushtarak;* see METAPHOR). Among the most influential Arabic models for classical Persian literature we may note the panegyric *qaṣīda*s of al-Mutanabbī (d. 354/965); the wine (q.v.) odes of Abū Nuwās (d. 198/810); the literary anthologies of al-Thaʿālibī (d. ca. 427/1038); the artistic prose works of Ibn al-Muqaffaʿ (d. 142/760) and Badīʿ al-Zamān al-Hamadhānī (d. 398/1008); the philosophic and scientific treatises of Abū ʿAlī Ibn Sīnā (d. 428/1037) and al-Bīrūnī (d. 443/1051; see SCIENCE AND THE QURʾĀN; POPULAR AND TALISMANIC USES OF THE QURʾĀN); and works of mystico-didactic orientation by authors such as al-Qushayrī (d. 464/1072) or especially al-Ghazālī (d. 505/1111). It should be noted that several of these figures were ethnic Iranians and/or composed some of their works in Persian, a fact that doubtless played a role in facilitating the assimilation of Arabic literary traditions into Persian.

Arabic courtly literature may therefore have played a larger role than the Qurʾān itself in the Arabicization of Persian literature. Nevertheless, adoption of the Arabic script, adaptation of Arabic literary forms and the acceptance of a large body of Arabic-origin lexemes into both literature and everyday speech may all be read as indices of the oblique influence of the Qurʾān on Persian, insofar as the Qurʾān created the prerequisite conditions for Arabic to become an administrative, religious, scientific and literary lingua franca in greater Persia.

Translations of the Qurʾān in Persia

Though some poets of the seventh/thirteenth century, such as Saʿdī and Rūmī, would routinely compose original macaronic verse in Arabic and Persian, those literate in Persian (including Persophilic Turks, Mongols and Indians as well as ethnic or native Persian-speakers; see TURKISH LITERATURE AND THE QURʾĀN; SOUTH ASIAN LITERATURE AND THE

QUR'ĀN) might nevertheless remain imperfectly tutored in the Arabic of the Qur'ān. We are told that Shaykh Aḥmad of Jām (*Spiritual elephant,* 31-2), before his repentance at the age of twenty-two (ca. 463/1070), was unable to recite even the *al-ḥamd* (a familiar name in Iran for Q 1, Sūrat al-Fātiḥa; see PRAISE; FĀTIḤA). In one *ghazal,* Sanā'ī portrays a beautiful boy who, though newly repentant and celibate, previously spent his time at the taverns (the *kharābāt,* often associated with the Magians/*mughān*), had never before managed to memorize a short sūra like Q 95 and had in fact been so debauched that he would even invent short pseudo-sūras to declaim as if by heart (Sanā'ī, *Dīwān,* 1021-2; see MEMORY; RECITATION OF THE QUR'ĀN).

We may infer from such statements that, while a basic knowledge in Arabic of at least some sūras of the Qur'ān was expected of literate Persian-speaking Muslims (to say nothing of the large number of Persian scholars of religion and law, many of whom trained in Arabic in the Niẓāmiyya and other *madrasa*s from the fifth/eleventh century onward; see LAW AND THE QUR'ĀN; THEOLOGY AND THE QUR'ĀN), there was nevertheless a need to translate the Qur'ān for Persian Muslims. Many Persians apparently preferred to encounter the text in Persian, with the help of Persian commentaries and bilingual dictionaries/guides such as the *Wujūḥ-i Qur'ān* written in 558/1163 by Abū l-Faḍl Ḥubaysh of Tiflis. Abū Bakr-i Nayshābūrī, who wrote his *Tafsīr-i sūrābādī* circa 470-80/1077-87 in simple, fluent Persian prose, indicates that had he written it in Arabic, it would have needed a teacher to give an accurate and agreeable Persian translation (*targum,* Sajjādī, *Guzīda'ī,* 199). Abū l-Futūḥ-i Rāzī indicates in his voluminous Qur'ān commentary, *Rawḍ al-jinān wa-rūḥ al-janān* (composed over the years 510-56/1116-61) that he chose to write a commentary in Persian and one in Arabic but began with the former, for which there was more demand (Sajjādī, *Guzīda'ī,* 205). From Sulṭān Walad's remark in 700/1301 (*Rabābnāma,* 414) that all the legal schools allow the ritual prayers *(namāz)* to be recited in Persian and that the Ḥanafīs allow this even for a person who is capable of reciting them in Arabic, it would seem that Persian was preferred even for rote liturgical situations (see PRAYER; RITUAL AND THE QUR'ĀN).

Medieval sources attribute the first Persian translation of a portion of the Qur'ān — the Fātiḥa, for use in the *ṣalāt* prayers (see PRAYER FORMULAS) — to the first Persian believer, Salmān-i Fārsī, who supposedly attained the Prophet's tacit approval for this practice (see COMPANIONS OF THE PROPHET). Salmān is said to have translated the Arabic *basmala* (q.v.) using an entirely Persian lexicon, as *bi nām-i yazdān-i bakhshāyanda*. However apocryphal the Salmān story may be, Abū Ḥanīfa, whose eponymous legal tradition was dominant in pre-Safavid Iran, did permit translation of the Qur'ān for those who did not know Arabic well and although this position was not universally accepted, a large number of Persian translations of the Qur'ān exist from both the medieval and modern periods.

A fragmentary Persian translation (of Q 10:61 through Q 14:25) tentatively dated to the early fourth/tenth century documents an intermediate stage in the transition from popular accentual to the new quantitative Persian metrics. This translation (Rajā'ī, *Pulī*) presents the Arabic text of the Qur'ān broken into blocks (perhaps paragraphs or pericopes), each followed by the corresponding passage in a sonorous Persian that alternates between rhymed prose, quasi-accentual and quantitative metrics. This translation does not demonstrate a strong concern for consistency

in the Persian, ranging from an exact rendering in some places, to paraphrase in others, to a somewhat free interpretation in still others. Indeed, in another very early interlinear Persian translation (Riwāqī, *Qurʾān-i quds*), which is otherwise quite accurate, the Persian of the *basmala* often changes from sūra to sūra, becoming variously:

bi nām-i khudā-yi mihrbān-i raḥmat-kunār
bi nām-i khudā-yi rūzī-dādār-i raḥmat-kunār
(e.g. Q 7)
bi nām-i khudā-yi mihrbānī-yi bakhshāyanda
(e.g. Q 61)
bi-nām-i khudā-yi rūzī-dahanda-yi bakhshāyanda
(e.g. Q 34)

We might predict lexical variety from one Persian translation of the Qurʾān to another on the basis of regional or dialectical idiosyncrasies but such internal variation quite possibly reflects the fluidity of the Islamic homiletic tradition and the authority of orally delivered, or perhaps even prompt-book Persian "targums" for individual sūras, as delivered by different popular preachers in Iran. Al-Jāḥiẓ (d. ca. 254/868) tells of a contemporary, the popular bilingual preacher Mūsā b. Sayyār al-Aswārī, who would read a verse of the Qurʾān aloud to his class and then comment upon it in Arabic to the Arabs, sitting together at his right, and then turn to the Persians, sitting at his left, and repeat his comments for them in Persian (*Bayān,* i, 368).

In addition to stand-alone translations, many Persian works of exegesis also contain translations of the Qurʾān. The mid-fourth/tenth century *Tarjuma-yi tafsīr-i Ṭabarī,* a loose adaptation of material from al-Ṭabarī's (d. 310/923) commentary and his history, which might be more accurately described as "the Samanid Persian Commentary project," also includes an elegant and accurate Persian translation of the Qurʾān. The Samanid ruler, Manṣūr b. Nūḥ (r. 350-66/961-76), received a forty-volume manuscript in Arabic of al-Ṭabarī's works from Baghdād but finding it difficult to read it, commissioned several Transoxanian scholars to translate it to Persian. Probably because it was an official state project, and to avoid any theological objections, al-Manṣūr sought and received *fatwa*s declaring the permissibility of translating the book for those who do not know Arabic. This "translation" of al-Ṭabarī's *tafsīr* remained prestigious and influential but did not by any means end the market for new Persian *tafsīr*s, scores of which — from various theological standpoints — survive from the medieval and early modern period (see Muḥammad-Khānī, Tafsīr-i Qurʾān; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), some of them consisting primarily of a Persian rendering of the qurʾānic text, such as the *Tafsīr* of Abū Ḥafṣ Najm al-Dīn-i Nasafī (d. 538/1143). Mention should be made of Maybudī's popular Ṣūfī *tafsīr, Kashf al-asrār wa-ʿuddat al-abrār* (written 520/1126), which incorporates the commentary of his teacher, Anṣārī of Herat (see below), and features a three-step exegesis: first a literal translation of the sūra in question, then a traditional grammatico-lexical analysis and explanation of the circumstances of revelation (see OCCASIONS OF REVELATION) and, finally, a mystical-esoteric reading (see POLYSEMY; LITERARY STRUCTURES OF THE QURʾĀN).

Many theoretical works on *fiqh,* lay manuals about ritual observance (not a few in verse) and compilations of *fatwa*s were composed in or translated to Persian, beginning no later than the Ghaznavid period but becoming especially important in the Safavid era, when they assisted in the Shīʿīfication of the populace. Such works often contain translations and

glosses of some Qurʾān verses (see Barzigar, Fiqh, 1048-51). Though the Islamic Republic of Iran has placed greater emphasis on the study of Arabic in the curriculum, perhaps a dozen new Persian translations of the Qurʾān appeared in the 1980s and 1990s.

Formal features and imagery of the Qurʾān in Persian poetry

Persian prose texts of the fourth/tenth to fifth/eleventh centuries generally ignore rhetorical artifice and ornamentation. By the seventh/thirteenth century, however, rhymed prose *(sajʿ)* became *de rigeur* in Persian *belles lettres,* largely inspired by the secular example of Hamadhānī's *Maqāmāt,* and relying heavily on the morphological parallels of loanwords from Arabic. The application of *sajʿ* to devotional texts, such as the *Munājāt* (intimate prayers) of ʿAbdallāh Anṣārī of Herat (d. 481/1088), may also reflect the stylistic inspiration of the Arabic Qurʾān or a Persian translation (e.g. Rajāʾī, *Pulī*) which tried to create similar prose cadences and rhymes in Persian.

Persian narrative poems conventionally begin with a section *(ḥamd)* of several lines invoking and praising God. These doxologies, especially in the early period, tend not to emphasize the terminology of specific Islamic doctrine and theology but to expound God's transcendence in a generalized Persian vocabulary. It had, in fact, already been the practice to begin Middle Persian texts with the formula "In the name of God" *(pat nām-i Yazdān),* though the practice received further authority from the Qurʾān as well as the specific wording of the Arabic *basmala,* which usually appeared as a prefatory formula on the opening page of Persian texts. Niẓāmī moved the conventional *basmala* from its place at the head of the text as a disconnected prose formula and embedded it, with some metrical elasticity, as a quotation *(taḍmīn)* into the opening line of verse in his *Makhzan al-asrār* (ca. 572/1176?): *bism-i a[ ]lāhi l-raḥ[a]māni l-raḥīm/hast kilīd-i dar-i ganj-i ḥakīm,* "In the name of God, the merciful, the compassionate/is the key to the door of the treasure of the wise one." This practice was frequently emulated by subsequent poets composing in this same meter *(sarīʿ),* some of whom repeat the phrase as a litany throughout ten or more opening lines of the poem (Khazānadārlū, *Manẓūma,* 15-25).

Immediately following the opening invocation and doxology, the poet typically includes sections in praise *(naʿt)* of the Prophet (an additional section dedicated to the imāms often appears in the works of Shīʿī authors; see NAMES OF THE PROPHET; IMĀM; IMPECCABILITY; PROPHETS AND PROPHETHOOD) and a subsequent section recalling the Prophet's *miʿrāj* (see ASCENSION). These sections occasionally reference or allude to phrases in the Qurʾān (e.g. *qāba qawsayn,* Q 53:9), though they draw in the main on extra-qurʾānic elaborations. Illumination and illustration (see ICONOCLASM; ORNAMENTATION AND ILLUMINATION) were an integral feature of the Persian literary tradition, at least for manuscripts produced by royal courts, and some themes from the Qurʾān and its associated lore regularly recur in the miniature tradition, including the prophet Muḥammad riding Burāq on the *miʿrāj* and Joseph (q.v.) being rescued from the pit (see BENJAMIN; BROTHERS AND BROTHERHOOD). Though illustrations of the Prophet and ʿAlī do occur (e.g. Mīrzā ʿAlī's depiction of the Prophet and ʿAlī with Ḥasan and Ḥusayn in the ship of faith, ca. 1530, included in the Houghton/Shāh Ṭahmāsp *Shāhnāma;* see ʿALĪ B. ABĪ ṬĀLIB), the scenes depict extra-qurʾānic material, probably to avoid the iconic representation of sacred scripture.

Furthermore, one may point to specific

images or concepts which stem from the Qurʾān but occur in various literary contexts, both sacred and profane, without necessarily evoking a specific verse of the Qurʾān. Examples of this might include allusions to Isrāfīl and the blast of the trumpet of resurrection (q.v.; multiple qurʾānic references, e.g. Q 50:20; see also APOCALYPSE). The generative letters *kāf* and *nūn,* which joining together form the divine command *kun,* "Be!" as e.g. in the phrase *kun fa-yakūn* in Q 2:117 (see CREATION; COSMOLOGY), are evoked in the opening line of Asadī's *Garshāspnāma* (written 458/1066), as follows: *sipās az khudā īzad-i rahnamāy/ki az kāf wa nūn kard gītī bi-pāy,* "Thanks to God, the guiding lord/ who by the letters B and E set up the world." Discrete ideas and images from the Qurʾān are most commonly used as complementary terms in similes and metaphors. Niẓāmī's Majnūn, for example, finds himself in a garden with flowing rivers, like Kawthar, reminiscent of Q 108 and the definitions of *al-kawthar* elaborated in the ḥadīth and *tafsīr* literature (see GARDENS; SPRINGS AND FOUNTAINS).

Historical and exegetical works, such as the so-called translation of al-Ṭabarī's *tafsīr,* provided details about the lives of the qurʾānic prophets in Persian from at least the middle fourth/tenth century. Nevertheless, Persian panegyric poetry through the fifth/eleventh century contains infrequent mention of the prophets, with the exception of Nāṣir Khusraw's poetry in praise of ʿAlī and the Fāṭimid imāms, which alludes often to the stories of the prophets (Pūrnāmdārīān, *Dāstān-i payāmbarān,* 7-35). Persian imitations of the Arabic "stories of the prophets" *(qiṣaṣ al-anbiyāʾ)* genre are common, the most popular being the fifth/eleventh century prose work of Abū Isḥāq Ibrāhīm of Nayshābūr, though there are also some in verse. Entire poems are also dedicated to single prophetic figures, such as Moses (q.v.), Solomon (q.v.), etc. Niẓāmī's portrayal of Alexander (q.v.) in his *Iskandarnāma* draws upon the qurʾānic Dhū l-Qarnayn (Q 18:83 f.) for the image of Alexander as explorer/ conqueror, but also relies on the Alexander romance of pseudo-Callisthenes and medieval Persian literature of Zoroastrian provenance for the image of Alexander as philosopher and prophet.

The depiction of Jesus (q.v.) in Persian poetry derives primarily from the Qurʾān and *tafsīr* as well as from the *qiṣaṣ al-anbiyāʾ* literature and Arabic poetry (Aryān, *Chihra-yi masīḥ,* II, 96). It is worth noting the existence of a complete Judeo-Persian translation of the Pentateuch from 1319 C.E. (there are also earlier fragmentary versions), and Judeo-Persian poems in praise of Moses, Solomon and other Hebrew prophets from the fourteenth century onward; Jewish Persian scholars appear to have been consulted by Bīrūnī and others and may constitute an independent source of *Isrāʾīliyyāt* (i.e. Jewish and Christian lore; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; CHILDREN OF ISRAEL; PEOPLE OF THE BOOK) for Persian literature (Rypka, *History,* 737-8). Despite their familiarity with all these ancillary sources, Persian mystical poets nevertheless continued to think of the Qurʾān as the *Ur*-source for human knowledge of the prophets. The qurʾānic encounter between Moses and an unnamed servant (later identified with Khiḍr; see KHAḌIR/KHIḌR) endowed by God with knowledge that gives him superior insight (Q 18:65-82; see KNOWLEDGE AND LEARNING) is often upheld as a paradigm of the relationship of a disciple to his Ṣūfī master. Sulṭān Walad (*Mathnawī-yi waladī,* 41-2) compares the relationship between Jalāl al-Dīn Rūmī (d. 672/1273) and Shams-i Tabrīzī (disappeared ca. 645/1248) in terms of Moses and Khiḍr. Rūmī, meanwhile, sees the

Qurʾān as primarily a vehicle to attain similar prophetic insight, when he speaks (*Mathnawī,* i, 1537-8) of the mystic "states of the prophets, those fish of the pure sea of divine majesty… When you escape into the true Qurʾān, you mix with the soul of the prophets."

The Joseph narrative, described as "the best of stories" *(aḥsan al-qaṣaṣ)* in Q 12:3 (see NARRATIVES), was the primary qurʾānic narrative reflected in longer poems in Persian. In the late fifth/eleventh century two renditions of the story of Joseph (Yūsuf) and Potiphar's wife (invariably named Zulaykhā in the Persian texts, drawing on extra-qurʾānic lore) appeared: a prose version doubtfully attributed to ʿAbdallāh Anṣārī in the *Anīs al-murīdīn wa-shams al-majālis* and a verse recitation, formerly attributed to Firdawsī but perhaps by Amānī (fl. fifth/eleventh cent.). That this story was not thought of as a literary adaptation of the Qurʾān text but rather as an elaboration of the *Isrāʾīliyyāt* and a springboard for the poet's imagination can be seen in both the famous mystical elaboration by Jāmī (d. 898/1492), which goes far beyond and changes the focus of the "best of stories," and the politically progressive rendition of 1239/1823 by the Tajik poet, Hoziq of Bukhara.

Direct references to the Qurʾān in Persian literature

From the seventh/thirteenth century, mystico-didactic poetry became the dominant (though not exclusive) genre of Persian poetry, frequently presenting the stories of the prophets (including the biography of Muḥammad; see SĪRA AND THE QURʾĀN) and the saints (*aqṭāb* or *abdāl*) in verse. Such poetry might be thought of as the most intense locus of qurʾānic influence on Persian, though it draws as much, if not more, upon ḥadīth and *sīra,* the *Isrāʾīliyyāt,* the homiletic traditions of official preachers *(khaṭīb),* street preachers *(wāʿiẓ)* and story-tellers *(quṣṣāṣ),* Ṣūfī manuals and other vernacular and oral sources, however much these may all have seen the Qurʾān as their ultimate locus of inspiration.

Ritual use of the Qurʾān is, naturally, attested in Persian literature, especially with respect to healing and funerals (e.g. Shaykh Aḥmad, *Spiritual elephant,* story 13; see BURIAL; MEDICINE AND THE QURʾĀN). Saʿdī (*Gulistān,* 132) tells several jokes about muezzins and others reciting the Qurʾān poorly or in an ugly voice. One man with a particularly bad voice explains he receives no salary but chants for the sake of God; for God's sake, don't chant, he is told. Ḥāfiẓ (d. 792/1391), who claims the ability to recite the Qurʾān by heart in all fourteen canonical recitations (*chārdah riwāyat, Dīwān,* i, 202; see READINGS OF THE QURʾĀN), documents the still very common practice of swearing an oath upon the Qurʾān in everyday speech (Ḥāfiẓ, *Dīwān,* i, 892; see OATHS): *nadīdam khwushtar az shiʿr-i tu ḥāfiẓ/bi-Qurʾān-ī ki andar sīna dārī,* "I have never seen poetry more beautiful than yours, Ḥafiẓ!/By the Qurʾān which you carry within your heart!" Elsewhere, humorously consoling himself over the inability of pious ascetics to comprehend his debauchery *(rindī),* Ḥāfiẓ alludes to the belief that demons flee from people who recite the Qurʾān (*Dīwān,* i, 392; see DEVIL; JINN; ASCETICISM). Recitation of the verse *wa-in yakād* (Q 68:51) was believed to act as a prophylactic to the effects of the evil eye (see EYES), as a line of Humām-i Tabrīzī (d. 714/1314) attests: *dar ḥāl wa-in yakād bar khwānd har kas ki nazar fikand bar way,* "Immediately whenever anyone cast a glance upon him, he would recite *wa-in yakād*."

Poetry and secular prose attest a Persian vocabulary for the uttering of pious formulas, which though perhaps derived from the exegetical or theological literature, assumed a vernacular form of expression

(see EVERYDAY LIFE, THE QURʾĀN IN). We find phrases such as *istirjāʿ-kunān* (Bayhaqī, *Tārīkh,* 953), meaning "while reciting the verse *innā lillāh wa-innā ilayhi rājiʿūn,*" as per Q 2:156. Rūmī's *Mathnawī* (i, 50) argues the primacy of intention when it comes to the utterance of the *istithnā,* a term derived from *lā yastathnūna* (Q 68:18), meaning the recitation of *in shāʾ Allāh* as enjoined in Q 18:23-4: *ay basī n-āwarda istithnā bi guft/ jān-i ū bā jān-i istithnā-st juft,* "The soul of many a person is one with *istithnā* even without verbalizing the *istithnā* aloud."

The word *qurʾān* itself appears frequently in Persian poetry, pronounced, of course, according to Persian phonology (e.g. *qorʾān*) and behaving as a nativized Persian word, without the Arabic definite article *(al-).* Shīʿī translators of the text into Persian, following the descriptive adjective given in Q 50:1 and Q 85:21 typically title it *Qurʾān-i majīd.* A Middle Persian word, however, meaning book or document, *nubī* (the medial labial consonant is unstable, appearing also as *nupī* or *nawī*), also appears in classical Persian poetry as an alternate proper name for the Qurʾān ("the scripture"; see BOOK; NAMES OF THE QURʾĀN). In 485/1092 Asadī-yi Ṭūsī writes in his *Garshāspnāma* (3): *nubī muʿjiz ūrā zi īzad payām,* "The scripture inimitable, his message from God." Sanāʾī (*Dīwān,* 1061) says: *jamʿ kard īn rahī-t shiʿr-i tu rā/cun nubī rā guzīda ʿuthmān kard,* "This servant of yours gathered your poetry, just as ʿUthmān compiled the scripture" (see COLLECTION OF THE QURʾĀN). Several lines of Rūmī's *Mathnawī* begin with the phrase *dar nubī…,* "In the scripture…," such as this line (vi, 656) which glosses the phrase *yuḍillu bihi kathīran wa-yahdī bihi kathīran* from Q 2:26 as follows: *dar nubī farmūd k-īn Qurʾān zi dil/hādi-yi baʿḍī u baʿḍī rā muḍill,* "In the scripture [God] said that this Qurʾān, with respect to the heart (q.v.)/guides some and misleads some" (see ASTRAY; ERROR; FREEDOM AND PREDESTINATION).

Quotations from the Qurʾān in Persian literature

Perhaps because of the difficulty of setting quotations from Arabic of more than a word or two within one of the established Persian meters, poets frequently allude to particular verses of the Qurʾān by an abbreviated name, often deriving from the commentary tradition, though Persian poetry does not always use qurʾānic verses in a particularly pious context. In an early poem about the virtues of ʿAlī, Kisāʾī of Marw (b. 341/953) refers in one line to the *āyat-i qurbā* (Q 17:26 and Q 30:38) and in another to the *āyat al-kursī,* a conventional name for Q 2:255 (but sometimes alluding to Q 57:4; see VERSES; THRONE OF GOD). He even quotes a few phrases from the Qurʾān in Arabic (*Kīsāʾī,* 93, 95). Saʿdī (*Būstān,* 76) writes around 654/1256: *basā kas bi rūz āyat-i ṣulḥ khwānad/chu shab āmad sipah bar sar-i khufta rānad,* "Many a person will read the peace (q.v.) verse in the daytime/ When night comes, he'll charge the army against the sleeping [foe]." This allusion to the *āyat-i ṣulḥ,* or "peace verse," has been identified with Q 49:9-10 (e.g. *fa-aṣliḥū bayna akhawaykum*), though Q 4:128 *(al-ṣulḥ khayrun)* has also been suggested (see also ENEMIES; FIGHTING; DAY AND NIGHT). Nāṣir-i Khusraw seems to intend two separate verses, Q 48:10 and Q 48:18, by his reference to the *āyat-i bayʿat* in the following line: *yik rūz bikhwāndam zi Qurʾān āyat-i bayʿat/k-īzad bi Qurʾān guft ki bud dast-i man az bar,* "One day I read the verse of allegiance from the Qurʾān how God said in the Qurʾān that my hand was the upper one." The Perso-Arabic phrase *yār-i ghār,* "the friend in the cave (q.v.)," alluding to Q 9:40 as well as the extra-qurʾānic amplifications of the story of Abū Bakr accompanying the prophet Muḥammad on his migration to Medina (q.v.; see also EMIGRATION; OPPOSITION TO MUḤAMMAD), is proverbially and hyperbolically used in Persian poetry to describe exemplary friendship or dis-

cipleship (see FRIENDS AND FRIENDSHIP).

As noted above, Arabic prosody differs considerably from Persian and it requires some versatility to set extended Arabic phrases within the metrical constraints of Persian verse. Poets nevertheless managed to find ways to do this without altering the qurʾānic text, except for slight licenses (such as elision of the definite article *al-*), and, of course, vocalizing the words according to Persian phonology and prosody. The first to include citations from the Qurʾān extensively was Sanāʾī, who in the context of discussing the *miʿrāj,* for example, embeds *mā zāgha l-baṣar* from Q 53:17 in one poem (*Dīwān,* 568), and weaves the words *alladhī asrā* and *aqṣā* from Q 17:1 into another (Sanāʾī, *Ḥadīqa,* 195). ʿAṭṭār (d. ca. 617/1221) manages within a Persian hemistich of only fifteen syllables (*Dīwān-i ʿAṭṭār,* 774) to incorporate two Arabic quotations, of six and of five syllables in length, respectively, from the "light (q.v.) verse" (*āya-yi nūr,* Q 24:35): *ay chirāgh-i khuld az īn miskhāt-i muẓlim kun kinār/tā shawī nūrun ʿalā nūrin ki lam tamsas-hu nār,* "O lamp (q.v.) of the highest heaven, avoid this gloomy niche/That you may become "light upon light" though "no fire (q.v.) touched it." In part due to the subject matter, but also in part due to the fact that it constitutes two perfect feet of the *ramal* meter, Rūmī quotes the phrase *mā ramayta idh ramayta* from Q 8:17 in at least ten separate places in his *Mathnawī.*

Persian poems quoting extensively from the Qurʾān or focusing on qurʾānic themes came to be seen tongue-in-cheek as Persian scripture. An illuminated manuscript of Jāmī's *Haft Awrang* copied probably in Mashhad between 1556-65, introduces the poem *Yūsuf u Ẓulaykhā* (folio 84b-85a) with three lines inset in a roundel, including the following hemistich: *nazm-īst ki mīrisānad az waḥy payām,* "It is verse that conveys a message of revelation." Sanāʾī's *Ḥadīqat al-ḥaqīqa* incorporates many Arabic phrases quoted from the Qurʾān and for this reason has even been described as *Qurʾān-i pārsī,* the "Persian Qurʾān." The *Mathnawī* of Rūmī has likewise been styled as such, in lines variously ascribed to Jāmī or Shaykh Bahāʾī (Nicholson, *Mathnawī,* vii, xi, and Schimmel/trans. Lahouti, *Shukūh-i shams,* 846-7) and the following or similar lines are frequently included as a frontispiece or title-page to nineteenth century printings of the *Mathnawī:*

man chi gūyam wasf-i ān ʿālī-jināb/nīst payghambar walī dārad kitāb
mathnawī-yi mawlawī-yi maʾnawī/hast Qurʾān-ī bi lafẓ-i pahlawī
How suitably to praise his eminence?/Not prophet, yet he has revealed a book!
The mystic *Mathnawī* of Mawlawī/is a Qurʾān expressed in Persian tongue!

A variant reading of this line appears playfully blasphemous: *man namīgūyam ki ān ʿālī-jināb/hast payghambar walī dārad kitāb,* "I am not saying of his eminence/he is a prophet. Yet he has a book (q.v.)!"

Rūmī's *Mathnawī* often performs a non-traditional exegesis of the Qurʾān by juxtaposing various qurʾānic verses together. In discussing Ḥamza, the Prophet's uncle, and his bravery in battle, the *Mathnawī* (iii, 3422) poses this question: *Na tu lā tulqū bi-aydīkum ilā/tahluka khwāndī zi payghām-i khudā,* "Have you not read 'Do not cast yourselves by your own hands in/ruin' from the message of God?" A few lines further on, Rūmī alludes to this same verse Q 2:195, as *tahluka* (obviously for the hapax legomenon *al-tahluka,* "ruin"), and quotes a conjugated Arabic verb *(lā tulqū)* from it, while alluding in the following line to another verse (Q 3:133) from an entirely different sūra, by quoting its initial Arabic verb *(sāriʿū): ānki murdan pīsh-i chashm-ash "tahluka"-st/amr-i "lā tulqū" bigīrad ū bi*

dast//w-ānki murdan pīsh-i ū shud fatḥ-i bāb/"sāriʿū" āyad mar ū rā dar khatāb (*Mathnawī,* iii, 3434): "He whose eyes see dying as 'ruin'/Will seize hold of the command 'do not be cast'//And he who sees dying as an opening door/'Vie with one another' will be addressed to him."

The mystical ethos infecting much of Persian poetry for the last 750 years contrasts the restrictive and prescriptive outlook of the ascetic (*zāhid;* see ASCETICISM), the preacher *(wāʿiẓ),* the jurisprudent (*faqīh;* see LAW AND THE QURʾĀN), the judge *(qāḍī),* the vice officer *(muḥtasib)* and other figures of qurʾānic and Islamic authority, with the more expansive attitude of the lover (*ʿāshiq;* see LOVE), the mystic *(ʿārif),* the rogue *(rind)* and so on. By and large, it is the latter group whose interpretation and daily implementation of the Qurʾān is recommended as closer to the inner meaning *(maʿnā),* in contradistinction to the outward form *(ṣūra).* For this reason, one must read the Qurʾān with spiritual insight and open eyes (*Mathnawī,* vi, 4862). Rūmī compares the meaning of the Qurʾān to a human body — the soul of both are hidden within and might not be discovered by people who live in very close proximity to it, even for a lifetime (*Mathnawī,* iii, 4247-9). Thus, literalists see only words in the text of the Qurʾān, remaining blind to the illumination of the scriptural sun (*Mathnawī,* iii, 4229-31). Ḥāfiẓ (*Dīwān,* i, 34) rails against the hypocritical use of religion and the Qurʾān, urging us to drink wine and act disreputably, but not to wield the Qurʾān as a weapon, as others do in their duplicity *(dām-i tazwīr ma-kun chun digarān Qurʾān rā).* A work of expressly ethico-didactic intent, Saʿdī's *Gulistān,* does quote from the Qurʾān and ḥadīth more than forty times but also argues that "the purpose of the revelation of the Qurʾān is the acquisition of a good character, not the recitation of the written characters" (*Gulistān,* 184; see PIETY). Thus, canonical works of classical Persian literature which frequently cite and appeal to the authority of the Qurʾān argue on the whole for an interiorization of the Qurʾān in the life of the believer as opposed to a rigid or institutional imposition of scriptural laws.

Pharaoh

Title of the ancient rulers of Egypt. Pharaoh (Ar. *firʿawn*) means literally "(the) Great House" in Egyptian and was perhaps pronounced something like *pārĕō* or *pārʿōʿ*. It designated part of the palace complex at Memphis and came, through metonymy, by the mid-second millennium B.C.E., to refer to the king of Egypt himself, just as "the Porte" came to refer to the Ottoman sultan some three millennia later. The Arabic rendering, *firʿawn,* corresponds most closely to the Syriac *ferʿōn* and because current scholarship considers it unlikely that pre-Islamic poetic references to Pharaoh are authentic, the term seems to have entered Arabic literary culture through the Qurʾān. According to the traditional chronology of the qurʾānic revelations, the term appears as early as the first Meccan period (see CHRONOLOGY AND THE QURʾĀN; FOREIGN VOCABULARY).

The term occurs in the Qurʾān seventy-four times; it never appears in Sūrat Yūsuf (Q 12, "Joseph"), the Joseph (q.v.) narrative, where "king" is used instead (see KINGS AND RULERS), but occurs repeatedly in the many references to Moses (q.v.; and Aaron [q.v.] and the Children of Israel [q.v.]) in Egypt (q.v.). The story of Moses and Pharaoh takes its place among the many in the qurʾānic corpus that depict former human civilizations refusing to believe their divinely sent prophets or revelations, as a result of which they were destroyed (see PUNISHMENT STORIES; PROPHETS AND PROPHETHOOD; REVELATION AND INSPIRATION). The lesson for Muḥammad's contemporaries is that they, like Pharaoh's people *(āl firʿawn* or *qawm firʿawn)* and the people of ʿĀd (q.v.) or Thamūd (q.v.), the peoples of Noah (q.v.), Lot (q.v.), Midian (q.v.) and others, will be destroyed by God if they continue refusing to believe their prophet (see GRATITUDE AND INGRATITUDE; LIE; BELIEF AND UNBELIEF).

Pharaoh is an evil king but his people as a whole are condemned in more than a dozen verses. The "people of Pharaoh," or "house of Pharaoh" *(āl firʿawn),* did not believe God's signs (Q 3:11; 8:52, 54). They imposed upon the Israelites *(banū isrāʾīl)* the worst of punishments: destroying their sons while allowing the women to live (Q 7:141; 14:6). In Q 7:127, however, it is Pharaoh himself who sets this policy in response to the complaints of his notables *(al-malaʾu min qawmi firʿawna)*. As a result, the "people of Pharaoh" suffer the most severe punishment of the fire (q.v.; Q 40:45-6). This eternal fate (see ETERNITY; REWARD AND PUNISHMENT) does not contradict their destruction by drowning (q.v.; Q 8:54; 10:90; 17:103; 20:78; 28:40).

The ubiquitous qurʾānic paradigm of the destroyed or "lost/past peoples" *(al-umam al-khāliya)* who did not obey God (see OBEDIENCE; GENERATIONS) did not hinder developments in plot and detail in the various renderings of the theme within the Qurʾān. In Q 10:90, Pharaoh declares at the moment of his doom in the sea: "I believe that there is no god aside from the one in which the Children of Israel believe, and I am a submitter *(wa-anā mina l-muslimīna)*." Despite his submission, however, according to Q 11:98, Pharaoh will lead his people to hellfire (see HELL AND HELLFIRE) on the day of resurrection (q.v.). The example of Pharaoh's profession of belief was used in the *kalām* discussions of whether the conversion of a sinner on the point of death was possible (cf. Q 4:18; with relation to the case of Pharaoh, see van Ess, *TG,* iv, 581; see THEOLOGY AND THE QURʾĀN). Although most classical exegetes judged his conversion to be too late, others, such as Ibn al-ʿArabī (d. 638/1240), deemed Pharaoh to have been saved through his final act of conversion (see Gril, Personnage, 39, 49-50, 52). In the Qurʾān, Pharaoh is cruel and arrogant, transgressing limits (Q 20:24, 43; see ARROGANCE; BOUNDARIES AND PRECEPTS). He considers Moses bewitched (*masḥūr,* Q 17:101), or mad (*majnūn,* Q 26:27; see INSANITY; JINN). When his advisors set out to prove Moses and his signs wrong, they are quickly convinced of the reality and unity of God, as a result of which Pharaoh threatens to mutilate and crucify them (Q 7:124; 20:71; 26:49). Pharaoh accuses Moses of being ungrateful for having grown up in the royal court (Q 26:18-9) and threatens anyone who will choose a god aside from himself (Q 26:29).

In Q 28:4, Pharaoh's sins are enumerated (see SIN, MAJOR AND MINOR): he exalted himself overly much, divided the people into groups or castes, tried to weaken one of these by killing their sons, and generally caused corruption. Hāmān (q.v.; cf. biblical book of Esther) is Pharaoh's only named advisor (Q 28:8, 38) but Moses comes to

Korah (q.v.; Qārūn; cf. *Num* 16:1-35) along with Pharaoh and Hāmān with divine signs and proofs (Q 29:39; 40:23-4). Pharaoh commands Hāmān to build a tower that will reach into heaven so that Pharaoh can prove Moses' claims about God false (Q 28:38; 40:36-7). Pharaoh's claim to power is associated with the power and sustenance of the Nile (Q 43:51). He proclaims in Q 79:24, "I am your highest lord" *(anā rabbukum al-aʿlā)*. His wife, however, unlike the wives of Noah and Lot, demonstrates her righteousness by praying that God deliver her from Pharaoh and his sinful people and build her a house in "the garden" (q.v.; Q 66:10-1). As these examples illustrate, there is a great deal of variety in the qurʾānic accounts of Pharaoh; there is need for much further research into the qurʾānic intertextuality of the many renditions and references to the story of Moses and Pharaoh in Egypt.

The exegetical literature expands these brief qurʾānic references and mini-narratives into long and wonderful tales in which both known (scriptural) and other, surprising (i.e. non-scriptural) characters and personages and themes extend the breadth and depth of the story. In later Islamic literatures, especially Arabic literature, Pharaoh became a symbol of arrogance and evil.

Philosophy and the Qurʾān

Introduction

Although not a philosophical document in the strict sense, the Qurʾān has been at the center of the most heated philosophical and theological controversies in Islam. Now, if by philosophy is meant wisdom *(sophia)* or rather love of wisdom, as understood by Pythagoras, who coined the term *philo-sophos,* the Qurʾān itself attests to the merit of acquiring wisdom (q.v.; *ḥikma*) as a gift from God. For as Q 2:269 puts it: "He [God] gives wisdom to whomever he wills," adding that indeed "whoever receives wisdom has received an abundant good" (see GIFT-GIVING; GRACE; BLESSING).

More specifically, *ḥikma* refers in a number of verses to the Qurʾān itself as a divine revelation (see REVELATION AND INSPIRATION; NAMES OF THE QURʾĀN) to Muḥammad (Q 4:113; 54:5; 62:2) or to his predecessors, such as Luqmān (q.v.; Q 31:12), David (q.v.; Q 38:20) and Jesus (q.v.; Q 3:48; 5:110). In the latter two verses, Jesus is said to have been taught by God the Torah (q.v.) and the Gospel (q.v.) as well as the *ḥikma,* which appears to refer to the "sapiential" books of the Hebrew Bible (i.e. "wisdom literature"), generally attributed to Solomon (q.v.). In one verse (Q 43:63), Jesus is simply reported to have said: "I have come to you with the wisdom," and to have brought "the clear proofs" (see PROOF).

The broader meaning of the term philosophy in ordinary usage may be said to correspond to the activity of speculation, reflection or rational discourse in general. Thus, the *Oxford dictionary* defines "to philosophize" as "to speculate, theorize, moralize," whereas Aristotle tended to describe

wisdom *(sophia)* as the study of certain principles and causes, and first philosophy (i.e. metaphysics) as the study of first principles and causes (*Metaphysics,* 14 f.: bk. A.981b ln.29 f.).

In the Qurʾān, the terms reflecting *(tafakkur),* considering *(naẓar),* pondering *(iʿtibār)* and reasoning *(ʿaql)* are frequently used in what can only be described as a teleological context, intended to illustrate God's creative power (see CREATION), his sovereignty (q.v.; see also KINGS AND RULERS) and the rationality of his ways (see INTELLECT), as we will see in the next section, which deals with philosophical methodology and the Qurʾān.

There is thus a *prima facie* case for the correlation of philosophy and the Qurʾān, as this article proposes to show. As a matter of history, however, there were from the earliest times vast differences of opinion among Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL), jurists and other scholars, on the justifiability of applying rational discourse, the paramount expression of philosophical methodology, to the text of the Qurʾān, whether in the form of exegesis *(tafsīr)* or interpretation *(taʾwīl)*. Al-Ṭabarī (d. 310/923), one of the earliest and most learned commentators of the Qurʾān, prefaces his commentary by referring to those scholars who were reluctant to engage in exegesis "out of fear of error (q.v.), inadequacy or liability to sin" (Ṭabarī, *Tafsīr,* i, 46). He then quotes a saying of Ibn ʿAbbās (d. 68/687), cousin of the Prophet, to the effect that "he who discusses the Qurʾān by recourse to opinion *(raʾy),* let him occupy his place in hell." Without endorsing this opinion in full, al-Ṭabarī (*Tafsīr,* i, 42) comments that this prohibition bears on "exegesis *(tafsīr)* by recourse to reprehensible but not praiseworthy opinion." He, then, invokes the authority of Ibn Masʿūd (d. 32/652-3) and other scholars in support of the permissibility of *tafsīr* and quotes Q 38:29, which reads: "It is (i.e. the Qurʾān) a blessed book that we have sent down to you, that they may ponder its verses and that those possessed of understanding may remember" (see MEMORY; REMEMBRANCE; REFLECTION AND DELIBERATION). This is followed by Q 39:27, which reads: "We have given humankind every kind of parable (see PARABLES) in this Qurʾān that perchance they might remember." These verses, al-Ṭabarī comments, show that "the knowledge of *tafsīr* and the exposition of its senses is obligatory." For, "pondering, taking stock, remembrance and piety (q.v.)," he adds "are not possible without the knowledge of the meanings of the [qurʾānic] verses, grasping and understanding them." He then speaks of the two varieties of sound *tafsīr:* (1) that which rests on the traditions of the Prophet, provided they are well-accredited and sound (see SUNNA; ḤADĪTH AND THE QURʾĀN); and (2) that which meets the rules of the soundest demonstration *(burhān)* and is grounded in the knowledge of the meaning of words (see GRAMMAR AND THE QURʾĀN; ARABIC LANGUAGE), poems (see POETRY AND POETS), proverbs and different dialects (q.v.) of the Arabs (q.v.). To this doubly logical and linguistic criterion should be added, according to al-Ṭabarī, material derived from the ancients *(salaf),* including the Companions of the Prophet (q.v.), their immediate successors and other learned scholars (see SCHOLAR).

On the second question of interpretation *(taʾwīl),* al-Ṭabarī reviews the conflicting interpretations of Q 3:7, which refers to those parts of the Qurʾān which are precise in meaning *(muḥkamāt)* and those which are ambiguous (q.v.; *mutashābihāt*), then goes on to state: "As for those in whose heart there is vacillation, they follow the ambiguous in it, seeking sedition and intending to interpret. No one, however,

except God knows its interpretation. Those well-grounded in knowledge say, we believe in it; all is from our lord." Whether the phrase "those well-grounded in knowledge" should be conjoined to God raises a serious grammatical question that was at the center of the controversy which pitted liberal and conservative scholars against each other (see KNOWLEDGE AND LEARNING). According to al-Ṭabarī (*Tafsīr*, i, 214), Mālik b. Anas (d. 179/795) and ʿĀ'isha, wife of the Prophet (see WIVES OF THE PROPHET; ʿĀ'ISHA BINT ABĪ BAKR), chose the reading which stops at God; whereas Ibn ʿAbbās and Mujāhid b. Jabr (d. 104/722) allowed for the conjunction of God and those well-grounded in knowledge. Al-Ṭabarī himself appears to opt for the first reading, reserving the knowledge of the ambiguous parts of the Qur'ān to God. As for the distinction between the *muḥkamāt* and *mutashābihāt* parts, he holds the view that *al-muḥkam* is that of which the learned know the interpretation; whereas *al-mutashābih* is that of which no one but God has any knowledge, which is essentially a restatement of what Q 3:7 explicitly states. The only clarification he offers is that "ambiguous" references bear on such questions as "the time of the (second) coming of Jesus, son of Mary (q.v.), the coming of the hour, the end of the world and such like" (Ṭabarī, *Tafsīr*, i, 209; see LAST JUDGMENT; APOCALYPSE).

Philosophical methodology and the Qur'ān

The investigation of the relation of philosophy to the Qur'ān compels us to distinguish between two aspects of this relation, the methodological and the substantive. As regards the latter, any correspondence of the qur'ānic teaching with the classical philosophical tradition on such questions as the origin of the world (see COSMOLOGY), the nature of God (see GOD AND HIS ATTRIBUTES), human destiny (q.v.; see also FATE; REWARD AND PUNISHMENT) and the nature of right and wrong (see GOOD AND EVIL), is purely accidental; the method(s) used by traditional philosophers to arrive at these conclusions is entirely different. The crux of the methodological relation, on the other hand, consists in the degree to which the Qur'ān calls upon the believers to "consider, reflect on, or ponder" the creation, as a means of discovering the secrets of this creation, leading up to the knowledge of God, his omnipotence, his wisdom, and his sovereignty in the world. Thus, Q 7:185 asks: "Have they not considered the kingdom of the heavens (see HEAVEN AND SKY) and the earth (q.v.) and all things that God has created?" In Q 88:17 f., it is asked: "Will they not consider the camels, how they were created (see CAMEL); heaven how it was raised up, the mountains, how they were hoisted and the earth, how it was leveled?" (see ANIMAL LIFE; AGRICULTURE AND VEGETATION; NATURE AS SIGNS).

In these and similar verses, a teleological message is more explicitly preached: by reflecting on the creation of the heavens and the earth, "people of understanding" are said to perceive that the creation of the heavens and the earth is not in vain (Q 3:190-1). In Q 2:164, it is stated that: "Indeed, in the creation of the heavens and the earth, the alternation of night and day (see DAY AND NIGHT); in the ships that sail the seas with what profits humankind; in the water (q.v.) which God sends down from the sky to bring the earth back to life (q.v.) after its death […] — surely in these are signs (q.v.) for people of understanding" (see also PAIRS AND PAIRING).

In a number of verses, such as Q 59:2 (cf. Q 39:21), people of "understanding" or of "perception" are urged to "ponder" or take stock *(fa-ʿtabirū)* of the wonders of creation and the calamities which befall

the unbelievers (see PUNISHMENT STORIES; CHASTISEMENT AND PUNISHMENT), by recourse to the God-given light of reason. In token of this divine light, God is said in Q 2:31-2 to have taught Adam (see ADAM AND EVE), his deputy on earth (see CALIPH), the names of which the angels themselves were ignorant (see ANGEL).

The Qurʾān also speaks of people who reason *(yaʿqulūn),* and accordingly are capable of obeying God or worshiping him (see OBEDIENCE; WORSHIP). In fact, the expressions "they reason" or "you reason" occur forty-six times in the Qurʾān. In this context, it is assumed that, prior to revelation, as a well-known tradition of the Prophet (ḥadīth) has it, humankind partook of a natural religion *(dīn al-fiṭra)* into which they were born and were subsequently made Jews, Christians or Muslims by their own parents (see RELIGIOUS PLURALISM AND THE QURʾĀN; RELIGION; PARTIES AND FACTIONS).

No wonder, then, that the Qurʾān has defined the rules of debate between rival groups in terms of rational argument or good counsel (see DEBATE AND DISPUTATION). Thus, the Prophet is urged in Q 16:125 to "call to the way of your lord (q.v.) with wisdom and mild exhortation and argue with them in the best manner" (see INVITATION; EXHORTATIONS). It is this call, which, following the period of conquest, was historically at the basis of the debates with Christians. The earliest such instance is the debate between a Christian and a "Saracen" on the question of free will and predestination (see FREEDOM AND PREDESTINATION). This debate is attributed to Theodore Abū Qurra (d. 210/826), Bishop of Ḥarrān, or his teacher, St. John of Damascus (d. 130/748), the last great doctor of the Orthodox Church (cf. Sahas, *John of Damascus*). Another instance is the debate in which Abū Yaʿqūb b. Isḥāq al-Kindī (d. ca. 252/866) has given a "Refutation of the Christian Trinity," which has survived in the rebuttal of the Jacobite Yaḥyā b. ʿAdī (d. 363/974). The Muʿtazilī (see MUʿTAZILĪS) al-Jāḥiẓ (d. 255/868-9), al-Kindī's contemporary, has pursued the same theme in his own "Refutation of the Christians." An anti-Islamic polemical tract which pitted the Nestorian (see CHRISTIANS AND CHRISTIANITY) ʿAbd al-Masīḥ al-Kindī against the well-known Muslim scholar, ʿAbdallāh al-Hāshimī, had a broader impact, since it denigrated the Islamic rites of pilgrimage (q.v.), the qurʾānic account of the pleasures reserved to the righteous in paradise (q.v.) and the expeditions of the Prophet against Quraysh (q.v.; cf. Muir, *Apology;* see EXPEDITIONS AND BATTLES; FIGHTING; WAR).

Apart from his anti-Trinitarian polemic (see TRINITY; POLEMIC AND POLEMICAL LANGUAGE), Abū Yaʿqūb b. Isḥāq al-Kindī was the first Muslim philosopher to espouse the cause of the total compatibility of philosophy and Islam. For him, philosophy is the highest human art, which seeks "the knowledge of the first or true one *(al-ḥaqq)* who is the cause of every truth (q.v.)." Now, in so far as the aim of both philosophy and revelation, embodied in the Qurʾān, is the pursuit of truth, it follows, according to al-Kindī, that the "seeker of truth" should be willing to look for it from whatever source, even if that source was "races (q.v.) distant from us and nations different from us," by whom he undoubtedly meant the Greeks (Fakhry, *History,* 70; see STRANGERS AND FOREIGNERS). He concedes, however, that although religious truths belong to an order of "divine wisdom," which is higher than "human wisdom," the truths preached by the prophets (see PROPHETS AND PROPHETHOOD) are not different from those taught by the philosophers.

Contrary to the claims of his predecessors or contemporaries, such as Mālik b.

Anas (d. 179/796) and Aḥmad b. Ḥanbal (d. 241/845), al-Kindī then goes on to argue that the Qur'ān itself, which embodies that higher divine wisdom, is not averse to the use of reasoning or argument which is the core of the method used by the philosophers. To illustrate this point, he refers to a passage in the Qur'ān which bears on the mystery of resurrection (q.v.), questioned by the infidel (see UNCERTAINTY) who asks: "Who brings the flowers back to life, once they are withered?" In response the Qur'ān states: "He who originated them the first time and has knowledge of every creation" (Q 36:79) and goes on to add: "It is he who produces fire from green trees for you" and as such is able to bring the contrary from its contrary, fire (q.v.) from green trees, life from its opposite, and is accordingly able to create or re-create as he pleases. Thus, al-Kindī concludes, "the truth to which Muḥammad, the truthful, may God's blessings be upon him, has summoned, added to what he has received from God almighty," can be demonstrated by recourse to rational arguments, which only the fool can question. "People of sound religion and intelligence" cannot, therefore, doubt the need to resort to rational discourse or interpretation *(ta'wīl)* in the attempt to understand the ambiguous passages of the Qur'ān. He then illustrates this point by referring to Q 55:6, which reads: "And the stars and trees prostrate themselves" to God, to show how everything, including the outermost sphere, referred to in this verse as the stars, submits to God (Fakhry, *History*, 81; see BOWING AND PROSTRATION).

The earliest theological controversies

Al-Kindī, who was known for his Mu'tazilī sympathies, lived at a time when theological controversies had defined to some extent the course which philosophy and theology *(kalām)* were to take (see THEOLOGY AND THE QUR'ĀN). In concrete historical terms, the earliest controversies centered on such questions as grave sin *(kabīra;* see SIN, MAJOR AND MINOR), faith (q.v.; *īmān*) and free will and predestination *(qadar)*. Although those controversies had definite political undertones, the arguments that bolstered them were ultimately grounded in the qur'ānic text (see POLITICS AND THE QUR'ĀN). The first of these questions was raised by the Khārijīs (q.v.), who split from the main body of the army of 'Alī, the fourth caliph (d. 40/661; see 'ALĪ B. ABĪ ṬĀLIB), charging him with committing a grave sin *(kabīra)*, by exposing his legitimate claims to the caliphate to question, upon consenting to the so-called arbitration (q.v.), following the battle of Ṣiffīn (q.v.; 37/657). The Khārijīs' charge against 'Alī was later generalized to apply to any Muslim who committed a grave sin, political or other: such an individual was considered to become thereby an apostate deserving of death ('Alī himself was killed by a Khārijī at the mosque of Kūfa in 40/661; see APOSTASY). In the heat of ensuing controversy, the Murji'īs trod a moderate path, arguing that genuine faith cannot be determined in this life but should be deferred — hence their name of Murji'īs or "Deferrers" — and accordingly should be left to God (see DEFERRAL). Almost simultaneously, the Qadarīs raised the question of free will and predestination, designated by the ambiguous term of *qadar*, meaning human or divine power (see POWER AND IMPOTENCE).

This last question had a profound political significance during the early Umayyad period. The early Qadarīs, such as Ma'bad al-Juhanī (d. after 83/703) and Ghaylān al-Dimashqī (d. 116/743), challenged the Umayyad caliphs' claims that their actions, however vile or cruel, were part of the divine decree *(qaḍā' wa-qadar)* and could not for that reason be questioned. Although

both Maʿbad and Ghaylān were killed by the order of the caliphs, ʿAbd al-Malik (r. 65-86/685-705) and Hishām (r. 105-25/724-43), respectively, the former ruler, assailed perhaps by understandable doubts, is reported to have put the whole question of *qadar* to the eminent religious scholar, al-Ḥasan al-Baṣrī (d. 110/728), whose response has survived in a famous "Treatise on *qadar*" (cf. Fakhry, *Fikr,* i, 17-28). In this treatise, al-Ḥasan al-Baṣrī draws extensively on the Qurʾān, which, according to him, supports unquestionably the thesis of free will, or human *qadar,* as a prerequisite of religious obligation *(taklīf)* — a thesis which is also endorsed by reason or sound commonsense. For "God almighty," he writes, "is too just and equitable (see JUSTICE AND INJUSTICE) to cause the human servant to be blind and then order him to see, then tell him: 'Or else, I would punish you'; cause him to be deaf and then say to him: 'Hear or else I will torture you'" (see VISION AND BLINDNESS; SEEING AND HEARING). For "this is too obvious," al-Baṣrī adds, "to be misunderstood by any reasonable person" (Fakhry, *Fikr,* i, 24). He then proceeds to inveigh against the false interpretations, proposed by those who continue to question these propositions, by whom he undoubtedly meant the "determinists" *(jabriyya),* such as Jahm b. Ṣafwān (d. 128/745), Ḍirār b. ʿAmr (of the middle second/eighth century) and others.

The significance of this treatise, despite the doubts concerning its authenticity, is that it is the earliest instance of recourse to the Qurʾān in the attempt to resolve the controversy over the question of *qadar,* destined to become one of the pivotal issues in philosophical and theological circles. Interestingly enough, al-Ḥasan al-Baṣrī, who quotes the Qurʾān extensively, does not refer to the ḥadīth in this treatise but supplements the qurʾānic quotations by commonsense or rational arguments.

Other scholars of the period, such as Mālik b. Anas (d. 179/795), founder of one of the four Sunnī creeds (*madhhabs;* see CREED; LAW AND THE QURʾĀN), tended to reject absolutely the application of deduction or independent reasoning to qurʾānic questions. Asked once what he thought of the qurʾānic references to God's sitting on the throne (as in e.g. Q 7:54; 10:3; 13:2; see THRONE OF GOD; ANTHROPOMORPHISM), Mālik is reported to have answered "The sitting is well-known; its modality is unknown. Belief in it is a duty and questioning it is a heresy [or innovation] *(bidʿa)*."

This rigid traditionalism and deference to the authority of the revealed text was outstripped in the next century by Ibn Ḥanbal (d. 241/855), founder of another one of the four creeds, when in 212/827 the ʿAbbāsid caliph al-Maʿmūn (r. 198-218/813-33) proclaimed two doctrines to be official — i.e. the preeminence of ʿAlī (see SHĪʿISM AND THE QURʾĀN; SHĪʿA) and the createdness of the Qurʾān (q.v.; *khalq al-Qurʾān*) — a pronouncement that set the stage for the notorious *miḥna* or inquisition (q.v.). When the concurrence of all the religious judges and scholars in the Muʿtazilī thesis of the creation of the Qurʾān was demanded, Ibn Ḥanbal rejected this thesis with utter single-mindedness. Jailed, scourged and humiliated in a variety of ways, he refused to change his stand that the Qurʾān was the "eternal and uncreated speech (q.v.) of God" (see also WORD OF GOD; INIMITABILITY).

By Ibn Ḥanbal's time, however, the impact of Greek philosophy was beginning to be felt in theological and philosophical circles. The translation of the first three parts of Aristotle's *Organon,* i.e. the *Categories,* the *Interpretations* and the *Prior analytics,* as early as the eighth century by ʿAbdallāh b. al-Muqaffaʿ (d. 139/756) — or his son Muḥammad, presumably from Persian — had opened the door wide for

theological and philosophical discussions in an unprecedented manner. (Some time after, even the grammarians felt compelled to jump into the fray and question the authority of Aristotelian logic as superfluous.)

Greek philosophy and Aristotelian logic had been at the center of theological controversies among Syriac-speaking Jacobites and Nestorians centuries before at Antioch, Edessa, Qinnesrin and Nisibin, and contacts between Muslim and Christian scholars had been common since at least the time of the above-mentioned St. John of Damascus. Not surprisingly, the first theological movement in Islam was spawned as early as the second/eighth century by Wāṣil b. ʿAṭāʾ (d. 131/748), disciple of the illustrious al-Ḥasan al-Baṣrī. This rationalist movement was fully developed by the great theologians of the third/ninth century, Abū l-Hudhayl (d. ca. 235/849), al-Naẓẓām (d. ca. 226/845), al-Jubbāʿī (d. 303/915) and others. Even contemporary philosophers, like the aforementioned al-Kindī, were sympathetic to the Muʿtazilī cause. The teaching of that school centered around the two principles of divine unity and justice, which the Muʿtazilīs supported by recourse to reason, which they, like the philosopher al-Kindī, believed to be perfectly compatible with the teaching of the Qurʾān. They also believed, like the philosophers in general, that right and wrong can be determined by reason and are not, as their opponents contended, matters of divine injunction or prohibition (see COMMANDMENTS; FORBIDDEN). Divine revelation, embodied in the Qurʾān, simply confirms the validity of such principles and this confirmation is a divine grace or favor *(lutf)* that God "dispenses to humankind, so that whoever perishes would perish after a clear proof [had been given] and those who survive would survive after a clear proof" (Q 8:42).

The Ashʿarī onslaught on the philosophers

Some of the philosophers who succeeded al-Kindī did not evince the same deference to the revealed text. Thus, Abū Bakr al-Rāzī (d. ca. 318/930) rejected the whole fabric of revelation as superfluous and held that the God-given light of reason was sufficient for solving human philosophical, moral and practical problems (see ETHICS AND THE QURʾĀN). The source of all wisdom was, for him, Greek philosophy, as expounded particularly by Plato, "the master and leader" of all the philosophers. Al-Rāzī substituted, on essentially philosophical (Platonic) grounds, five co-eternal principles, i.e. the creator *(bāriʾ)*, the soul, space, matter and time, for the unique God of the Qurʾān.

By the fourth/tenth century, the philosophical scene was dominated by the names of the great system-builders and Neoplatonists, al-Fārābī (d. 339/950) and Ibn Sīnā (Avicenna) (d. 428/1037), who constructed an elaborate metaphysical and cosmological scheme, which they presented as an alternative to the Islamic system of beliefs. This Neoplatonic scheme had a remote resemblance to the qurʾānic worldview and was received from the start with suspicion by the traditional scholars and the masses at large.

The arch-enemies of the Neoplatonists during this period were the Ashʿarī theologians, whose leader, Abū l-Ḥasan al-Ashʿarī (d. 324/935) had been, up to the age of forty, a Muʿtazilī theologian of profound erudition. His disenchantment with the Muʿtazila, we are told, was inspired by a call of the Prophet to tend to the (Muslim) community *(irʿa ummatī)*. Without abandoning the Muʿtazilī methodology of rational discourse, al-Ashʿarī was thoroughly committed to Ḥanbalī traditionalism. The leading Ashʿarī theologians of the fifth/eleventh and sixth/twelfth centuries, such as al-Bāqillānī (d. 403/1013),

al-Baghdādī (d. 429/1037), al-Juwaynī (d. 478/1085) and al-Ghazālī (d. 505/1111) pursued al-Ashʿarī's line of anti-Muʿtazilism and Neoplatonism in an unabated manner.

Al-Ghazālī and al-Juwaynī, his master, were the most notable standard-bearers of the Ashʿarī onslaught on the Muslim philosophers, represented by al-Fārābī and Ibn Sīnā, with Aristotle as their master. Al-Ghazālī accuses those philosophers of irreligion *(kufr)* on three scores: the eternity (q.v.) of the world, God's knowledge of particulars and bodily resurrection. Thus, when they profess to prove the existence of God as creator of the world, the philosophers, according to him, are guilty of dissimulation *(talbīs)* since an eternal universe does not require a creator. They also impugn the perfection of God when they limit his knowledge to that of universals and are finally unable to demonstrate the resurrection of the body. On all those scores, none of the arguments of the philosophers are convincing or conclusive and the only recourse left to the conscientious searcher, according to al-Ghazālī, is the Qurʾān, whose authority on all these questions is indisputable. For the Qurʾān stipulates in unmistakable terms that God is the sovereign and all-knowing creator of the world in time (q.v.) and *ex nihilo,* who is able to do whatever he pleases. He is, in addition, the sole agent, who operates directly and miraculously in the world without reference to secondary or natural causes (Ghazālī, *Tahāfut,* question 17).

Ibn Rushd's anti-Ashʿarī polemic and the defense of Aristotle

The philosopher who pursued those questions relentlessly and confronted al-Ghazālī's onslaught head-on was the great Aristotelian philosopher and Mālikī judge, Ibn Rushd (Averroes; d. 595/1198) of Cordoba, Spain. In his *Faṣl al-maqāl,* "Decisive treatise," Ibn Rushd begins by defining philosophy as the art of "investigating entities and considering them in so far as they manifest the maker; I mean in so far as they are made." From this premise, he draws the inference that "existing entities actually manifest the maker… and the more complete their status as made *(maṣnūʿa)* is known, the knowledge of their maker is more complete" (Ibn Rushd, *Faṣl,* 27). After reviewing a series of qurʾānic verses, which call on humankind to "consider" or "reflect on" creation, he concludes that scripture *(al-sharʿ),* by which he clearly means the Qurʾān, has not only exhorted humankind to investigate "existing entities" but has actually regarded such investigation as obligatory.

As a good jurist, to whom we owe a major juridical treatise, *Bidāyat al-mujtahid,* the "Primer of the accomplished scholar," Ibn Rushd proceeds next to draw a close analogy between juridical and rational deduction *(qiyās)* and to defend the use of the latter as perfectly legitimate. In fact, rational deduction is more appropriate than juridical. For, as he asks, who indeed is more worthy of our esteem than he who investigates the very nature of existing entities insofar as they manifest their maker — by whom he obviously meant the philosopher.

Now, whoever wishes to know God, as the maker of existing entities, must begin by mastering the rules of deduction and distinguishing between the three modes of deduction, the demonstrative used by the philosophers, the dialectical used by the theologians *(al-mutakallimūn)* and the rhetorical used by the masses at large. These rules, as everybody knows, are embodied in Aristotle's logical treatises, especially the *Posterior analytics,* known in Arabic sources as *Kitāb al-Burhān,* the "Book of Demonstration." Ibn Rushd is emphatic that, of these modes, the demonstrative is the

highest. Fully conscious of the aversion to the study of logic and the other so-called "foreign sciences" in theological and popular circles, Ibn Rushd proceeds to defend such a study on the ground that the conscientious searcher cannot dispense with the assistance of his predecessors, "regardless of whether they share in our religion or not" (Ibn Rushd, *Faṣl,* 31). Moreover, logic, being simply a tool or "instrument of thought," has no specific religious character or national affiliation. Accordingly, it is our duty, he states, to look into the books of the ancients (by whom he meant the Greeks; see GENERATIONS; ORALITY AND WRITING IN ARABIA), and to examine what they have said about existing entities, and then determine the extent to which it conforms with the "principles of demonstration." "If we find," he writes, "that some of it is accordant with the truth, we should receive it gladly from them and thank them. If, on the contrary, it is not accordant with truth, we should draw attention to it, warn against it and excuse them" (ibid., 33). In stressing the "formal" character of deduction or logical discourse, Ibn Rushd cites the example of the lawful slaughter (q.v.) of animals, which is entirely independent of the instrument *(āla)* used (see also LAWFUL AND UNLAWFUL; CONSECRATION OF ANIMALS; SACRIFICE).

It is to be noted that, in drawing a parallel between juridical and rational deduction, Ibn Rushd exploits skillfully the ambiguity of the term *qiyās,* which derives from a root meaning "to measure" and does not occur in the Qur'ān at all (see MEASUREMENT). Juridical *qiyās* had been used from earlier times as a means of enunciating legal decisions on matters on which the Qur'ān was silent, by recourse to the method of analogy, accurately denoting resemblance *(shabah)* rather than deduction. What justified analogy in legal decisions was actually the reason *('illa)* which the parallel cases had in common. Thus, jurists, on the whole, were not willing to proceed beyond particular cases. Their procedure was, in other words, purely inductive; whereas rational *qiyās* was deductive and conformed to the syllogistic rules Aristotle and the Greek logicians had laid down. Al-Kindī, the first genuine Islamic philosopher, had used a more accurate term to translate the Greek *syllogismos,* i.e. *al-jāmi'a,* which, over time, fell out of use and was replaced by the ambiguous term *qiyās*.

Deduction or *qiyās* was thus recommended by the philosophers who, like the Mu'tazilīs, were willing to apply the rational canons of proof to the qur'ānic text. Faced with the anthropomorphisms and incongruities of that text, the two groups felt compelled to resort to another rational device, interpretation *(ta'wīl),* which, as we have seen, the Qur'ān had allowed where "ambiguous" verses were concerned.

Of the philosophers, no one exploited the method of interpretation in his theological treatises as thoroughly as Ibn Rushd. After explaining that by interpretation is meant eliciting the real meaning underlying the figurative connotation of scriptural terms, Ibn Rushd proceeds to argue that this method is explicitly recommended in that famous passage (Q 3:7) which speaks of the Qur'ān as a revelation from God, "with verses which are precise in meaning *(muḥkamāt)* and which are the mother of the book (q.v.) and others which are ambiguous *(mutashābihāt)*." The latter are then said to be the object of interpretation by "those in whose heart there is vacillation" and are in quest of sedition. Contrary to al-Ṭabarī's already-mentioned reading, however, Ibn Rushd proposes the conjunction of both "God and those well-grounded in knowledge," referred to in the last part of the verse, as equally com-

petent to undertake the interpretation of the ambiguous parts.

By those well-grounded in knowledge, Ibn Rushd is categorical: only the philosophers, or "people of demonstration" as he calls them, are meant. That definitely excludes the two lower classes: that of the theologians, the "dialectical," and the masses at large, the "rhetorical" class.

In his other theological treatise, *al-Kashf ʿan manāhij al-adilla,* the "Exposition of the methods of proof," written in 576/1180 as a sequel to the *Faṣl,* Ibn Rushd lays down the rules or "canon of interpretation," as he calls it, in a systematic way. The texts of scripture *(sharʿ),* he explains, fall into two major categories: (1) Those which are perfectly explicit and do not need any interpretation, corresponding to that part the Qurʾān has called "precise in meaning" *(muḥkamāt);* and (2) Those in which the intent of the scripture is one of allegory or representation and which fall into four parts: (a) in which the allegory or representation *(mithāl)* is too abstruse to be understood by any except the especially gifted; (b) which is the opposite of the former and in which the allegory or representation is readily understood; (c) which is readily recognized to be an allegory, but the significance of that allegory is known with difficulty; and (d) which is the opposite of the former, or that in which the significance of the allegory is readily recognized. The sense in which it is an allegory is, however, only known with difficulty (see POLYSEMY).

The first part (a), Ibn Rushd goes on to explain, should be accepted at face value by the theologians and the masses at large. The second part (b) may be interpreted but its interpretation should not be divulged to the public (see SECRETS; HIDDEN AND THE HIDDEN). The third part (c) may be divulged as a means of explaining the allegorical intent of scripture and the reason why it is expressed in the form of an allegory. The fourth part (d) may not be interpreted for fear that such interpretation may lead to "wild opinions," such as those in which the Ṣūfīs and their ilk are liable to indulge (see ṢŪFISM AND THE QURʾĀN).

Logic as an instrument of thought

In matters of both interpretation and deduction, it is clear that logic plays a preponderant role. Ẓāhirī scholars, however, such as Ibn Ḥazm (d. 456/1064), Ibn Qudāma (d. 620/1223) and Ibn Taymiyya (d. 728/1328) were averse to the use of logic or deduction in any form or guise. Some commentators of the Qurʾān, such as al-Zamakhsharī (d. 538/1144), tended to accord grammar a more preponderant role than logic in their qurʾānic exegesis. The Ashʿarīs, despite their anti-Muʿtazilī and anti-philosophical sympathies, did not exclude the use of deduction or logical methods of proof in theological disputations altogether. This is illustrated by al-Ashʿarī's own treatise, *Istiḥsān al-khawḍ fī ʿilm al-kalām,* "Vindication of the use of theological discourse" and al-Ghazālī's own attitude to logic in his anti-philosophical works. Here, as is explicitly stated in *Tahāfut al-falāsifa,* the "Incoherence of the philosophers," a clear-cut distinction is made between logic as an "instrument of thought" and the philosophical sciences, such as physics and metaphysics (see SCIENCE AND THE QURʾĀN). The former is perfectly innocuous from a religious viewpoint; whereas the latter contains the bulk of the philosophers' pernicious propositions which are "in conflict with the fundamentals of religion (i.e. Islam)."

In fact, apart from this friendly concession, al-Ghazālī bequeathed to posterity a very lucid and systematic treatise on Aristotelian logic entitled the *Miʿyār al-ʿilm,* "Criterion of knowledge." Even more to

the point, he developed in another treatise, *al-Qusṭās al-mustaqīm,* the "Straight balance," a variety of logic which may be termed qur'ānic, which, according to him, was proposed by God, taught by Gabriel (q.v.) and used by both Abraham (q.v.) and Muḥammad (Ghazālī, *Qusṭās,* 12).

This qur'ānic logic rests on three principles, according to al-Ghazālī: (1) the principle of parallelism; (2) that of concomitance; and (3) that of disjunction. He illustrates the first principle by referring to Abraham's challenge in the Qur'ān to Nimrod (q.v.), who arrogated to himself the title of divinity in these words (Q 2:258): "God brings the sun (q.v.) from the east, so bring it up from the west!" Being unable to meet this challenge, Nimrod's arrogation of divinity is logically confuted.

The second principle of concomitance is illustrated by reference to the qur'ānic dictum, "Were there in them both [i.e. the heaven and earth] other gods than God, they would surely have been ruined" (Q 21:22). Since they have not been ruined, we are justified in concluding that there is no god but God. The logical form of this argument, according to al-Ghazālī, is that of the conditional syllogism: If A then B; but not-B, therefore not-A. An instance of the third principle of disjunction is the question asked in the Qur'ān: "Say, who provides for you (see SUSTENANCE) from the heaven and the earth?" followed by the answer: "Say, God and you or we are either rightly guided or in manifest error" (Q 34:24). From this, we are justified in inferring that God is the provider and we, as well as the infidels who question this proposition, are in manifest error.

It is not without interest to note that, in developing this system of qur'ānic logic, al-Ghazālī actually refers to his two other treatises of conventional logic, *Mi'yār al-'ilm,* the "Criterion of knowledge" and the shorter *Miḥakk al-nazar,* the "Touchstone of speculation," in which, he says, he had refuted the ten deceptions of Satan (see DEVIL), which he does not list (*Qusṭās,* 42 f.). The chief advantage of the principles he has given in *al-Qusṭās* consist, according to him, in the fact that they are bound to confirm our faith in Muḥammad as the infallible teacher (see IMPECCABILITY), as against the Shī'ī imām (q.v.), who is in temporary occultation, as al-Ghazālī has also asserted in his autobiography, *al-Munqidh,* the "Deliverance from error." Moreover, the logic of the *Qusṭās,* he goes on to argue, will be found to be suitable "for measuring (or testing) the arithmetical, poetical, physical, juridical and theological sciences, as well as any real science, which is not purely conventional" (ibid., 53).

Notwithstanding this wild claim, it is clear, we believe, that a careful analysis of this alleged qur'ānic logic would reveal that it differs little formally from the traditional, Aristotelian scheme al-Ghazālī himself had expounded in the "Criterion of knowledge" and elsewhere. The only difference between the two systems consists simply in the type of qur'ānic instances he cites to illustrate his specific logical points. The syllogistic rules in both cases are really the same.

God, his existence and his attributes

The most overwhelming impression the Qur'ān leaves on its reader is God's utter uniqueness, his omniscience and his sovereignty or lordship. In the prefatory or opening sūra (Sūrat al-Fātiḥa; see FĀTIḤA), God is described as the "Lord of the worlds… master of the day of judgment" (Q 1:2, 4) and in the near-final Sūrat al-Ikhlāṣ (Q 112), God is said to be "the only one, the everlasting, who did not beget and is not begotten. None is his equal"

(Q 112:1-4). This last point is stated more dramatically in these words: "Nothing is like unto him" (Q 42:11).

As regards God's existence, the Qur'ān provides its readers with ample evidence which later theologians and philosophers were able to exploit to the full in formulating systematic proofs of his existence. In the process, they were divided into three groups: (1) Those who favored the argument from temporal creation *(ḥudūth)* or the argument *a novitate mundi;* (2) those who favored the argument from contingency *(jawāz)* or possibility *(imkān);* and (3) those who favored the teleological proof, or the argument from providence, as Ibn Rushd was later to call it.

The Ash'arīs and the Mu'tazilīs, who believed the world to consist of compounds of atoms and accidents, which do not endure for two instants of time, argued that the world was created by an act of divine fiat *(amr),* which the Qur'ān has expressed in these words: "Be and it [the world] comes to be" (Q 2:117, etc.). Al-Kindī, who was the first philosopher to formulate the first argument, held that both the world and its temporal duration are finite, and accordingly must have a beginning *(muḥdath).* As such, the world, being *muḥdath,* must have an originator, *muḥdith,* who created it in time.

The argument from contingency was developed by Ibn Sīnā, who argues in his *al-Shifā',* the "Book of healing" (and that of *al-Najāt,* "Salvation"), that the series of existing entities, being contingent or possible, terminates in a being who is noncontingent or necessary, whom he calls for that reason the necessary being; otherwise that series would go on *ad infinitum,* which is absurd (*Najāt,* 271 f.). The Ash'arī al-Juwaynī opted for this argument in his lost *Niẓāmiyya* treatise, as we are told by Ibn Rushd.

Ibn Rushd favored the teleological argument, which is supported by the most overwhelming evidence and is truly characteristically qur'ānic. This argument, which is the most accordant with the precious book, as Ibn Rushd has put it, rests on the premise that everything in the world is necessarily ordered in accordance with the dictates of divine wisdom, so as to serve the existence of humankind and their well-being on earth. Thus, he invokes verses Q 78:6-14, which ask: "Have we not made the earth as a wide expanse, and the mountains as pegs and [have we not] created you in pairs?… Have we not built above you seven mighty heavens; and created a shining lamp (q.v.); brought down from the rain-clouds abundant water?" Similarly, he invokes Q 25:61, which reads: "Blessed is he who placed in the heavens constellations (see PLANETS AND STARS) and placed therein a lamp and an illuminating moon (q.v.)." He finally cites verses Q 80:24-32, which read: "Let humankind consider its nourishment. We have poured the water abundantly; then we split the earth wide open; then caused the grain to grow therein, together with vines and green vegetation… for your enjoyment and that of your cattle" (cf. Ibn Rushd, *Kashf,* 152, 198 f.; see GRASSES; AGRICULTURE AND VEGETATION).

All these and similar verses prove, according to Ibn Rushd, the existence of a wise creator, who has determined willfully that the world and everything in it was intended to be subservient to the existence and well-being of humankind.

A closely related argument that is embodied in the Qur'ān, according to Ibn Rushd, is that of invention *(ikhtirā').* This argument is supported by a series of verses, such as Q 22:73 which reads: "Surely, those upon whom you call, beside God, will never create a fly, even if they band

together" (see POLYTHEISM AND ATHEISM; IDOLS AND IMAGES), or Q 7:185, which reads: "Have they not considered the kingdom of the heavens and the earth and all the things God has created?" Having been invented or created, Ibn Rushd concludes, the world must have an inventor or creator, who brought it into being, in the first instance.

For these and other reasons, Ibn Rushd was critical of the first two traditional arguments. To begin with, the argument from the temporal creation of the world as formulated by the Ashʿarī in particular and the *mutakallimūn* in general, rests on the two premises of temporality *(ḥudūth)* and the atomic composition of existing entities. Now, neither of these premises is demonstrable in a conclusive way and each is too abstruse to be readily understood by the learned, let alone the masses at large. As a good Aristotelian, Ibn Rushd was opposed to the thesis of atomic composition of substance as well as the creation of the world in time, expressed in the Arabic sources as temporality *(ḥudūth),* the antithesis of eternity.

Secondly, the argument from contingency or possibility runs counter to the incontrovertible maxim that everything in the world is causally determined by its wise creator, or maker, who did not abandon it to the vagaries of chance (*ittifāq;* Ibn Rushd, *Kashf,* 200 f.). Here and elsewhere, Ibn Rushd inveighs on two fundamental grounds against al-Ghazālī and the Ashʿarīs in general for repudiating the concept of causality: That whoever repudiates the necessary causal correlation between existing entities (a) repudiates divine wisdom, and (b) repudiates the very concept of reason, which is nothing but the faculty of apprehending causes (Ibn Rushd, *Tahāfut,* 522).

As for the attributes of God, the Muslim philosophers and theologians alike were inspired by the qurʾānic verse which states: "Were there other deities than God, they [i.e. the heavens and the earth] would have indeed been ruined" (Q 21:22); as well as Q 23:91, which reads, "God did not take to himself a child and there was never another god with him; or else each god would have carried off what he created, and some of them would have risen against the others."

The anti-Trinitarian implications of the first part of the second verse are not difficult to see. Accordingly, as mentioned above, many of the debates with, or polemical writing against, the Christians, turned on the question of the Trinity. The Neoplatonists among the philosophers, such as al-Fārābī and Ibn Sīnā, inspired by the teaching of Plotinus (d. 270 C.E.), built their cosmology and metaphysics around the pivotal concept of "the one" or "the first" [being]. Thus, al-Fārābī, the founder of Muslim Neoplatonism, opens his *opus magnum, al-Madīna al-fāḍila,* the "Virtuous city," with a discourse on the first (being), who is the first cause of all existing entities, is free from all imperfections and is entirely distant from everything else. In addition, he has no equal or partner *(sharīk),* has no opposite and is therefore utterly unique. His uniqueness, al-Fārābī goes on to argue, follows from the fact that "his existence, whereby he is distinct from all other existing entities, is nothing other than that whereby he exists in himself" (Fārābī, *Madīna,* 30). In short, God's uniqueness is synonymous with his existence, which is identical with his essence.

Another sense of unity, as applied to the first being, is then given as indivisibility, from which al-Fārābī infers that he is indefinable since the parts of the *definiendum* are reducible to the causes of its existence or its components, which in the case of the first being is impossible.

Other Neoplatonists, including Ibn Sīnā,

followed al-Fārābī's example in asserting the unity, indivisibility and indefinability of the first being, whom Ibn Sīnā calls the necessary being. Ibn Sīnā, however, denied that the necessary being has an essence, exposing himself to the vehement strictures of Ibn Rushd, Aquinas and others, who regarded the identity of existence and essence in God as incontrovertible. That identity was in a sense the hallmark of God's uniqueness.

The other attributes, known collectively as the seven attributes of perfection, consisted of knowledge, life, power, will, speech, hearing and sight. Those attributes were regarded by the philosophers and the Muʿtazilīs, despite allegations by their opponents to the contrary, as identical with the divine essence *(dhāt)*, whereas the Ashʿarīs regarded them as distinct from that essence. The most heated controversy raged around the two active attributes of speech and will. With respect to the first attribute, the controversy centered on the question of how God's eternal speech can be embodied in a temporal document, i.e. the Qurʾān. With respect to the second attribute, the question was asked: How can God will the creation of the universe in time, without a change in his essence?

In response to the first question, the Muʿtazilīs simply asserted that the Qurʾān, as God's speech, was created in time — rejecting the rival Ḥanbalī thesis of its eternity — on the ground that this would entail a multiplicity of eternal entities. For them, the only eternal entity is God, who is entirely one and whose attributes are identical with his essence. For that reason, the Muʿtazilīs labeled themselves as the "people of divine unity and justice." The Ḥanbalīs and the Ashʿarīs, relying on the qurʾānic references to the Qurʾān as the "preserved tablet" (q.v.; Q 85:22) and the "mother of the book" (Q 3:7; 13:39; 43:4) insisted that, as Aḥmad b. Ḥanbal put it: "The Qurʾān is God's eternal *(qadīm)* and uncreated speech," a position to which he stuck adamantly, despite the persecution and vilification to which he was exposed, in the wake of the afore-mentioned inquisition *(miḥna)* imposed by the caliph al-Maʾmūn.

Faced with the problems which the creation of the world in time raised, the Ḥanbalīs took an entirely agnostic line, whereas the Ashʿarīs took the more sophisticated line of proposing that God created the world in time by an act of eternal will. That thesis was rejected by the philosophers on the ground that, as Ibn Rushd was to argue in his rebuttal of al-Ghazālī, God's eternal will entails logically an eternal creation, which the Ashʿarīs rejected. For the world to come into being in time, subsequent to God's willing it from all time, entails the absurdity that an infinite lapse of time intervened between his willing and his action due to some outward impediment or some deficiency on his part. It follows, as Ibn Rushd argues, that the world, as the product of God's willing and doing, must be supposed to have existed from all time, or as the Latin scholastics were later to put it, to be the product of God's *creatio ab aeterno,* or eternal creation. For, of the two modes of creation or origination of the world, the "continuous" and the "discontinuous" *(dāʾim* and *munqaṭiʿ),* as Ibn Rushd calls them, the former — continuous — creation *(iḥdāth dāʾim)* is more appropriately predicated of God, whose creative designs can never be thwarted by any impediment or deficiency (Ibn Rushd, *Tahāfut,* 162).

Notwithstanding, Ibn Rushd was never fully reconciled to the concept of eternal will, as predicated of God. He accuses al-Ghazālī of conceiving of divine will as analogous to human will and asserts that the modality of God's will, like the modality of his knowledge, is unknowable (ibid., 149).

The other attributes of life, power and knowledge, asserted so dramatically in the Qur'ān, did not, on the whole, raise serious problems. Hearing and sight were likewise asserted on the authority of the Qur'ān which speaks of God as all-seeing *(baṣīr)* and all-hearing *(samīʿ)*. For the philosophers, such as al-Kindī and Ibn Rushd, those two attributes are predicable of God on the ground that his knowledge encompasses all objects of cognition, whether intelligible or perceptible.

The creation of the world

The Qur'ān speaks of God's creative power in the most dramatic terms. He created the world in six days and then sat upon the throne (Q 7:54; 10:3; 32:4: 57:4); he creates by a sheer act of divine fiat, for if he wills anything, he bids it to be and it comes to be (Q 2:117; 16:40; 36:82; 40:40). He has created "everything in truth" (Q 45:22; 46:3), for "we have not created the heavens and the earth and what lies between them as sport," as Q 44:38 puts it. What the purpose of creation is, is left undefined but in Q 51:56, it is stated, "I have not created the jinn (q.v.) and humankind except to worship me." The *mutakallimūn,* almost without exception, interpreted the Qur'ān to mean that God created the world *ex nihilo* and in time. A variety of terms are used in the Qur'ān to highlight God's creative might, such as creator *(khāliq),* cleaver *(fāṭir),* originator *(badīʿ, mubdiʿ),* fashioner *(bāriʾ)* and so on.

Although the philosophers did not question the fact of creation or bringing the world into being, they tended to steer clear of the term *khāliq* (creator) and *khalq* (creation) and to substitute for the first such terms as *bāriʾ* (al-Rāzī), *ṣāniʿ* (Ibn Rushd), *muḥdith* (al-Kindī) and for the second *ibdāʿ* (Ibn Sīnā), *iḥdāth* or *ījād* (Ibn Rushd), and so on. Al-Kindī went so far as to coin the two terms *muʾayyis* — "maker," from *aysa* (to be), the antonym of *laysa* — and the parallel term *muhawwi* — from the Arabic pronoun *huwa,* "he," or its Syriac equivalent — to express God's role as the creator of the world out of nothing.

The Neoplatonists, as we have seen, substituted for the concept of creation that of emanation *(ṣudūr, fayḍ),* derived ultimately from Plotinus, founder of Greek Neoplatonism, and his successor, Proclus. The universe, according to the emanationist view, is not the product of God's creative power or will, in the strict sense, but an eternal and necessary emanation or procession from God's very substance. According to this emanationist view, God (the one or first, i.e. being) generates, by an eternal act of overflowing, the first intellect *(nous),* followed by a series of intellects, culminating in the tenth or active intellect, followed by the soul *(psyche)* and finally matter. The lower world consists of an infinite variety of compounds of form and matter, whose simplest ingredients are the four elements of Aristotelian physics, fire, air (see AIR AND WIND), water and earth.

The philosophers questioned whether the Qur'ān explicitly supports the *mutakallimūn*'s concept of creation *(khalq), ex nihilo* and in time. Ibn Rushd, who rejected the Avicennian thesis of emanation while retaining the concept of eternal creation *(iḥdāth dāʾim),* as we have seen, argues that a number of verses in the Qur'ān, such as Q 11:7, imply, on the surface, the eternity of the universe. That verse reads: "It is he who created the heavens and the earth in six days, and his throne was upon the water," which implies the eternity of water, the throne and the time that measures their duration. Similarly, verse Q 41:11, which states that "he arose to heaven while it was smoke," implies that the heaven was created out of a pre-existing matter, which is smoke, rather than out of nothing as the *mutakallimūn* claim (Ibn Rushd, *Faṣl,* 42 f.).

What rendered the concept of eternity entirely nefarious from the Ashʿarī point of view in particular and that of the *mutakallimūn* in general was the contention that it appeared to entail a limitation of God's power to act freely, to create or not create the world at any time of his own choosing. The philosophers, including Ibn Rushd, as we have seen, rejected this contention on the ground that eternal creation was more in keeping with God's perfection. It ensured that creating the world involved no change in his essence and that his power, being infinite, could not be barred by some impediment or deficiency from bringing the world into being from all time.

Contrary to the philosophers, God's creation of the world, like his other actions or decisions, was represented by the *mutakallimūn* as miraculous, or independent of any conditions other than the divine will, spoken of in the Qurʾān as the divine command *(amr)*. For this reason, they were led to reject the Aristotelian concept of necessary causation, insofar as it entailed that other causes or agents, whether voluntary or involuntary, operated in the world beside God. For al-Ghazālī (*Tahāfut,* 276), who held that God is the sole agent, that claim runs counter to the consensus of the Muslim community that God is able to do whatever he pleases in a miraculous way.

On the question of the end of the world, the philosophers tended to assert the post-eternity *(abadiyya)* of the world, as a counterpart to its pre-eternity *(azaliyya, qidam)*. They were charged on this account by al-Ghazālī with heresy (q.v.) or innovation (q.v.; *tabdīʿ*), rather than the more serious charge of irreligion (*takfīr;* see BELIEF AND UNBELIEF). For the philosophers, whether Neoplatonists, like Ibn Sīnā, or Aristotelians, like Ibn Rushd, the post-eternity of the world was a consequence either of the eternity of prime matter and time (as Aristotle held) or the eternal procession of the universe from the one (as Plotinus held). The two major exceptions were al-Kindī, who adhered, as we have seen, to the qurʾānic view of creation in time and *ex nihilo (ḥudūth)* and al-Rāzī, who maintained a central metaphysical conception of five coeternal principles (see above: matter, space, time, the soul and the creator; cf. Fakhry, *History,* 121). Al-Rāzī adhered to a picturesque view of the creation of the world by the creator *(al-bāriʾ)* out of the three co-eternal principles of space, time and matter to serve as the stage upon which the soul's infatuation with a sister co-eternal principle, matter, could be requited. Once the union of these two sister-principles is achieved, the soul is led eventually to rediscover its original essence as a denizen of the intelligible world, through the therapeutic function of philosophy; the material world will then, according to al-Rāzī, cease to exist and the soul will in Platonic fashion regain its original abode in the higher world (Fakhry, *History,* 101).

The *mutakallimūn* without exception rejected the thesis of post-eternity as inimical to God's unlimited creative power. Their position was in line with those qurʾānic verses, such as Q 55:26-7, which explicitly indicate that nothing remains forever: once the world is destroyed or ceases to exist, all perishes except the "face of your lord" (see FACE OF GOD).

Ethics and eschatology

The Muʿtazilīs were the first genuine moral theologians of Islam. Their ethical speculation bore, from the start, on such fundamental issues as the justice of God, the nature of right and wrong, the capacity *(istiṭāʿa)* or power of the agent to act freely and the genuine meaning of responsibility (q.v.) or accountability, as a logical corollary of free will.

The precursors of the Muʿtazilīs in the first/seventh century, known as the Qadarīs, were the first to challenge the traditionalist view that all human actions are predetermined by God, for which the human agent cannot be held responsible. The early Umayyad caliphs, as we have seen, welcomed the determinists' view as a means of justifying their repressive policies, contending that, however cruel or heinous, their crimes or transgressions were part of the divine decree *(qadāʾ),* which cannot be questioned.

For the Muʿtazilīs, who rationalized what was in part a natural response to the political excesses of the Umayyads, God, who is just and wise, cannot perpetrate or sanction actions which are morally wrong. To substantiate this claim, they undertook to demonstrate that God was truly just, that human actions are known to be right or wrong in themselves, and that the human agent is both free and responsible for his deeds and misdeeds.

Despite their rationalist stand on these issues, the Muʿtazilīs sought a basis for these propositions in the Qurʾān. Apart from this, a careful perusal of the qurʾānic verses which bear on all three questions would reveal that the textual evidence is equally weighted in favor of both indeterminism and determinism and allows for divergent interpretations, as in fact the history of Islamic theology *(kalām)* shows.

Although justice is not predicated in positive terms of God, there are numerous verses in the Qurʾān, which assert that: "God [or your lord] is not unjust to the [human] servants" (cf. Q 3:182; 41:46). In Q 28:50, 46:10, etc., God is said "not to guide the unjust people [aright]," and in Q 16:90, God is said to "enjoin justice, charity and giving to kinsmen (see KINSHIP)," reinforced by the statement that "he forbids indecency (see MODESTY; ADULTERY AND FORNICATION), wrongdoing and oppression (q.v.)."

Overwhelmed by the parallel spectacle of God's absolute power and majesty, as depicted in the Qurʾān, the determinists *(jabriyya)* and traditionalists could not reconcile themselves to the notion of God submitting, like human agents, to a higher canon of right and wrong. In fact, they adhered to the maxim that right is precisely what God commands, evil what he has prohibited, and accordingly his actions cannot be described as either just or unjust. As al-Ghazālī has put it, to predicate justice or injustice of God is as frivolous as predicating playing or frolicking of the wall or the wind.

The Muʿtazilīs insisted from the start, however, that responsibility entailed the ability of the agent to discriminate between good and evil, right and wrong. In addition to such discrimination, the agent should be able to choose freely; otherwise no merit would attach to his actions, which would be no different from mechanical or involuntary reactions, such as convulsions, trembling or the like.

The two qurʾānic terms on which the Muʿtazilīs seized to describe the intrinsic property of goodness or badness predicated of human actions were *al-maʿrūf,* "approved," and *al-munkar,* "disapproved." Demanding or commanding the "approved" and prohibiting the "disapproved" were then posited as one of their five fundamental principles (see VIRTUES AND VICES, COMMANDING AND FORBIDDING).

If we turn to the qurʾānic text, we will find that right actions are, in general, spoken of as acts of obedience *(ṭāʿāt),* vicious actions as acts of disobedience (q.v.; *maʿāṣin*). The term applied frequently to the first category of action is *birr,* "righteousness," *khayr,* "goodness," *qiṣṭ,* "equity," or *maʿrūf,* "approved," whereas the term

applied to the second category is *ithm,* "wickedness," *wizr,* "burden, sin," or *munkar,* "disapproved" (see GOOD DEEDS; EVIL DEEDS).

In a number of verses, the Qur'ān speaks in laudatory terms of people who discriminate between those two categories. Thus, Q 3:104 reads: "Let there be among you a nation calling to goodwill *(al-khayr),* bidding the right *(al-ma'rūf)* and forbidding the wrong *(al-munkar)*. These are the prosperous." In Q 3:114, the People of the Book (q.v.) are commended as those "who believe in God and the last day, bid the right and forbid the wrong, hastening to do the good deeds." In the next verse, it is stated "that whatever good they do, they will not be denied it. God knows well the godfearing" (see FEAR). The deontological implications of this and similar verses are clear; the distinction between good and evil, right and wrong is explicit and God's pleasure or displeasure consequently is explicit, too.

As for human responsibility for freely chosen actions or, as the Qur'ān puts it, what an individual has "earned" or "acquired" (*kasaba* and *iktasaba*), the Qur'ān is categorical that the righteous and the wicked are bound to meet with their appropriate punishment or reward in the hereafter (see ESCHATOLOGY). Thus, Q 42:30 reads: "Whatever calamity might hit you is due to what your hands have earned *(kasabat)*." Q 2:281 reads: "Fear a day when you will be returned to God; then each soul will be rewarded [fully] for what it has earned, and none shall be wronged." Similarly, Q 2:286 reads: "God does not charge any soul beyond its capacity. It will get what it has earned and will be called to account for what it has acquired."

Set against these and similar verses, there are numerous verses in the Qur'ān which support the contrary or determinist thesis, according to which God's decrees are irreversible and unquestionable. Thus, Q 54:49 reads: "We have created everything in measure *(bi-qadarin)*" and Q 13:8, which reads: "Everything with him is according to a certain measure." Finally, Q 64:11 reads, "No disaster befalls you on earth or in yourselves but is in a book before we created it."

The concepts of measure and book in these and other verses clearly indicate that human actions, as well as their consequences, are part of the divine decree and will not escape God's ineluctable reckoning on the day of judgment. The book in question appears to be identified with the "preserved tablet" (Q 85:22), on which the Qur'ān was originally inscribed and is the embodiment of the divine decree, which admits of no alteration (see HEAVENLY BOOK; REVISION AND ALTERATION). This is forcefully brought out in Q 85, called appropriately Sūrat al-Burūj, "The Constellations," which asks rhetorically in verse 9: "To whom belongs the dominion of the heavens and the earth?" adding "God is witness of everything" (see WITNESSING AND TESTIFYING). Then, after assuring the righteous of their well-earned reward in heaven, and the unbelievers of their eventual consignment to hell, the supreme prerogative of God, "the lord of the glorious throne," is reasserted and the wicked are reminded that "the vengeance (q.v.) of your lord is surely terrible." (Q 85:12).

As far as the theological controversy is concerned, the early deterministes, such as Jahm b. Ṣafwān (d. 128/745) and al-Ḥusayn b. Muḥammad al-Najjār (d. middle of the third/ninth century), as well as the whole class of Ash'arīs, adhered to a theodicy in which God's creative power was absolute and his decrees irreversible. Thus, al-Ash'arī writes in *Kītāb al-Ibāna,* the "Book of clarification":

We believe that God Almighty has created everything by bidding it to be, as he says [in Q 16:40]: "Indeed, when we want a thing to be, we simply say to it 'Be' and it comes to be; that there is nothing good or evil on earth except what God has pre-ordained;… that there is no creator but God and that the deeds of the creatures are created and pre-ordained by God, as he says [in Q 37:96]: "God created you and what you make."

As regards the universal sway of providence, al-Ashʿarī continues:

We believe that good and evil are the product of God's decree and pre-ordination *(qaḍāʾ wa-qadar)*… and we know that what has missed us could not have hit us, or what has hit us could not have missed us and that the creatures are unable to profit or injure themselves without God's leave (Ashʿarī, *Ibāna,* 23 f.; McCarthy, *Theology,* 238 f.).

The leading Ashʿarī doctors of the next two centuries, such as al-Bāqillānī (d. 403/1013), al-Baghdādī (d. 429/1037), al-Juwaynī (d. 478/1085) and al-Ghazālī (d. 505/1111), developed and systemized the teaching of the master. To rationalize this deterministic view, they developed an "occasionalist" theory according to which the world consists of indivisible particles (atoms) and accidents, which God continuously creates and recreates as long as he wishes their compounds to endure. When God wishes them to cease to exist, he just stops the process of continuous creation or, as some Ashʿarīs had put it, he creates the accident of annihilation *(fanāʾ)* but in no substratum and then the world would cease to exist at once. Justice and injustice, as al-Ashʿarī had taught, consisted in what God commands or prohibits, and humans have no share in the production of their actions, which the Muʿtazilīs had attributed to them, considering people to be free agents. To moderate the extreme determinism of Jahm b. Ṣafwān and his followers, however, they made a purely verbal concession, based on those qurʾānic verses, which, as already mentioned, speak of acquisition or earning *(kasaba, iktasaba)* the merits or demerits of the actions by the agent. They continued to hold, nonetheless, that God creates both the choice and the action.

In the field of eschatology, the Qurʾān had depicted the fate of humans in the hereafter in such dramatic terms, especially in the Meccan sūras, that pious souls, especially among ascetics and mystics (see ASCETICISM; SAINT), were later obsessed with the spectacle of hell and its horrors drawn in these sūras; while others, especially poets, dwelt on the delectable pleasures of the garden (q.v.), reserved for the righteous in the life to come. Thus, a number of sūras bear such expressive titles as "The Earthquake" (Sūrat al-Zalzala, Q 99), "The Calamity" (Sūrat al-Qāriʿa, Q 101), "Worldly Increase" (Sūrat al-Takāthur, Q 102), "The Chargers" (Sūrat al-ʿĀdiyāt, Q 100), "The Clear Proof" (Sūrat al-Bayyina, Q 98) and "The Overwhelming Day" (Sūrat al-Ghāshiya, Q 88) to highlight the picture of hell and its horrors (see HELL AND HELLFIRE). People on the last day are said to be "like scattered butterflies and the mountains like tufted wool" (Q 101:4-5) and "faces on that day shall be downcast, laboring and toiling; roasting in a scorching fire; given to drink from a boiling spring" (Q 88:2-5; see SPRINGS AND FOUNTAINS). By contrast, the righteous are promised the most bounteous rewards in glowing terms, as in Q 88:8-16: "Faces on that day shall be blissful; well-pleased with their endeavor; in a lofty garden; wherein

no word of vanity is heard (see GOSSIP); wherein is a flowing spring; wherein are upraised couches, and cups passed round (see CUPS AND VESSELS), and cushions in rows, and carpets spread out."

For the Muslim philosophers, life after death raised the most acute questions (see DEATH AND THE DEAD; BURIAL; SALVATION). Some, like al-Kindī, concurred with the *mutakallimūn* in adhering to the thesis of bodily resurrection and the attendant pleasures or tortures of paradise or hell, as embodied in the Qurʾān. In support of this thesis, al-Kindī quotes Q 36:78 f., which refer to God's supreme power to "bring the bones back to life, once they are withered and to bring opposites from opposites," as he does in causing fire to come from green trees (Q 36:80).

Other philosophers, such as al-Fārābī and Ibn Sīnā, while conceding the immortality of the soul, were embarrassed by the qurʾānic thesis of bodily resurrection. Accordingly, they tried to interpret this resurrection in a variety of ways, which the *mutakallimūn* found unacceptable. For al-Fārābī, the soul's fate after leaving the body will depend on the degree of its apprehension of true happiness and its vocation as an inhabitant of the intelligible world. Upon separation from their bodies, souls will partake of a growing measure of happiness, as they join successive throngs of kindred souls in the intelligible world. Those souls, however, whose happiness consisted in clinging to bodily pleasures in this world, will continue to pass from one body to the other endlessly. Wayward souls will continue to be embodied in lower material forms until they have degenerated to the bestial level, whereupon they will simply perish. What adds to the misery of such wayward souls, as they pass through this cycle of transmigration, is the perpetual agony which they will suffer upon separation from the body and its pleasures, for which they will continue to yearn, until they perish completely (Fārābī, *Ahl al-madīna,* 118).

Al-Fārābī's spiritual disciple and successor, Ibn Sīnā, was committed to the view, adhered to by almost all the Muslim philosophers, especially the Neoplatonists among them, that the soul's perfection consists in achieving "conjunction" *(ittiṣāl)* with the active intellect. This is the precondition of true happiness and the warrant of the soul's becoming, once it fulfilled its intellectual vocation, a replica of the intelligible world to which it originally belonged, prior to its descent into the body. Those souls which have fallen short of this condition, by virtue of their attachment to the body and its cares, will suffer misery consequent upon the unwanted separation from the body. But once they are freed from this misery by attaining the level of apprehension proper to them, they will be able to partake of that intellectual pleasure which is "analogous to that blissful condition proper to the pure, living entities (i.e. spiritual substance) and is greater and nobler than any other pleasure" (Ibn Sīnā, *Najāt,* 330).

Ibn Sīnā, however, recognizes in addition to this intellectual condition of which the soul will partake upon separation from the body a scriptural *(sharʿī)* one, that resurrection "which is received from scripture *(sharʿ)* and can only be demonstrated by recourse to the holy law *(sharīʿa)* and assent to prophetic reports" (ibid., 326). "Thus, the true law," Ibn Sīnā writes, "which Muḥammad our Prophet has brought us, has set forth the nature of the happiness and misery in store for the body" (ibid., 326; see JOY AND MISERY). Ibn Sīnā does not call into question this bodily happiness but continues to hold that there is a higher intellectual happiness which the

"metaphysical philosophers" are intent on seeking in "proximity to God," which the mystics (Ṣūfīs) have placed at the center of their teaching and which is confirmed, according to Ibn Sīnā, by the "true holy law" of Islam.

Ibn Rushd, despite his divergence from Ibn Sīnā and the Neoplatonists generally, tended to agree with this conciliatory position. Resurrection or survival after death *(maʿād),* as he prefers to call it, is a matter on which "all the religious laws or creeds are in agreement and which the demonstrations of the philosophers have affirmed." After distinguishing three Islamic views of happiness and misery, which although generically different only in point of duration, degree of corporality or spirituality, he goes on to argue that the crass corporal resurrection entertained by the vulgar is untenable. According to that view, the soul, upon resurrection, will be reunited to the same body it dwelt in during its terrestrial existence. How is it possible, he then asks, for the same body which was reduced to dust upon death, then changed into a plant on which another man has fed, and then turned into semen which gave rise to another person, to enter into the makeup of a resurrected person? It is more reasonable, Ibn Rushd holds, to assert that the risen soul will be united on the last day to a body, which is analogous, but not identical, with its original body (Ibn Rushd, *Tahāfut,* 586). In fact, religious creeds are in agreement regarding the reality of survival after death, he goes on to explain, but are nevertheless in disagreement on its modality *(ṣifa)*. Some creeds, by which he probably meant the Christian, regard it as spiritual, whereas others, by which he meant Islam, regard it as doubly corporeal and spiritual. If, however, we probe the difference between the various creeds on this question, we will find, he argues, that they are reducible to the mode of "representation" *(tamthīl)* or idiom used by each one of them in describing the misery or happiness reserved to the wicked or righteous in the life to come. To the extent that corporeal representations are more effective in commanding the assent of the masses at large, they are preferable to purely spiritual representations that are appreciated only by the intellectually gifted, including the philosophers in general. Thus it appears, he writes, "that the (corporeal) representation found in this our own region (i.e. Islam) is more effective in leading to understanding, where the majority of humankind are concerned, and in moving their soul in that direction… whereas spiritual representation is less effective in moving the souls of the masses" (Ibn Rushd, *Kashf,* 244). Illuminationist (Ishrāqī) philosophers, such as al-Shīrāzī (d. 1050/1641), who recognized the harmony of philosophy and mysticism (Ṣūfism) for the first time in Islamic history, tended to follow the lead of Ibn Sīnā on this and similar questions.

Conclusion

This article has shown that the Qurʾān speaks in the first place of wisdom *(ḥikma),* both in the Greek sense of *sophia* and the Semitic or biblical sense of divine revelation to Muḥammad, Jesus and the Hebrew prophets. In the second place, it urges the believers to contemplate the wonders of creation, to reflect, to consider and ponder the mysterious ways of God. Such contemplation, reflection, consideration and pondering are the hallmarks of the philosophical method as it was applied to the theological and ethical questions which preoccupied the *mutakallimūn* and the philosophers from the earliest times.

The major problems around which controversy in theological and philosophical circles turned centered on such questions as the existence of God, the creation of the

world, the destiny of humans in the hereafter and the rationality and justice of God's ways as creator and providential ruler of the world. As the controversy between the philosophers and the theologians intensified, the latter split into two rival groups, the pro-philosophical, led by the Muʿtazilīs, and the anti-philosophical, led by the Ḥanbalīs and the Ashʿarīs. Naturally enough, both groups sought support in the Qurʾān for their conflicting interpretations of those ambiguous passages which bear directly or indirectly on the problems in question. Some theologians and jurists confined the prerogative of interpreting the so-called "ambiguous" passages of the Qurʾān to God; others, including some philosophers, extended this prerogative to the learned or specially gifted, as Ibn Rushd has done.

The status of the Qurʾān itself and whether it was created in time *(makhlūq)* or was eternal *(qadīm)* raised, from the third/ninth century on, the most acute questions and led to endless recriminations between some theologians, such as the Muʿtazilīs, and those jurists and tradition-mongers *(muḥaddithūn),* such as Ibn Ḥanbal and his followers, who insisted that the Qurʾān was "the eternal and uncreated word of God," relying in the last analysis on those passages in the Qurʾān itself which speak of the "mother of the book" and the "well-preserved tablet," in reference to the original codex on which the Qurʾān was inscribed since all time. The Ashʿarīs, who sought an intermediate position between the Muʿtazilīs and the Ḥanbalīs, tried to resolve the conflict by distinguishing between the "significations" *(dalālāt)* of the words in which the Qurʾān is expressed and the actual words themselves, written (see TEXTUAL CRITICISM OF THE QUR'ĀN; COLLECTION OF THE QUR'ĀN; MUṢḤAF; CODICES OF THE QUR'ĀN) or recited (see RECITATION OF THE QUR'ĀN), which could not as such be eternal or uncreated, since they belonged to the category of perishable accidents. Some philosophers, including Ibn Rushd, subscribed to this view. In popular Muslim consciousness, however, it is fair to say that the Ḥanbalī view, which stresses the sanctity and inimitability *(iʿjāz)* of the qurʾānic text, may be said to have triumphed, and the Qurʾān continues today to be regarded by the vast majority of Muslims as the miraculous word of God (see MIRACLES; MARVELS). Contemporary scholars, such as the late Pakistani Fazlur Rahman (d. 1988) and the Egyptian Naṣr Ḥāmid Abū Zayd, who attempted to draw a line of demarcation between the human and divine aspects of the qurʾānic text, or to apply the canons of literary or "higher criticism" to that text (see CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN), have been either reprimanded or declared infidel (*kāfir;* see EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QUR'ĀN). This has served as a warning to other contemporary liberal scholars or philosophers to avoid this highly sensitive subject altogether.

Piety

Exhibiting loyalty to parents (i.e. filial piety) or manifesting devotion to God. The concept of piety in Arabic can be conveyed by the non-qurʾānic terms *waraʿ* and *zuhd,* and the qurʾānic words *birr, taqwā* and *iḥsān*. (For *zuhd* as ethics, see Kinberg, Zuhd; see also ETHICS AND THE QURʾĀN. *Iḥsān* is often used to express filial piety and understood by the commentators as *birr;* see Rahman, *Major themes,* 42.) The following focuses on the terms *birr* and *taqwā,* which are treated in the Qurʾān as crucial components of true belief (see BELIEF AND UNBELIEF).

Those who practice *birr,* the *abrār,* and those who have *taqwā,* the *muttaqūn,* or *alladhīna ttaqū,* are mentioned among the future dwellers of paradise (q.v.; Q 82:13; 68:34). The most comprehensive definition of the term *birr* is given in Q 2:177: "It is not piety *(al-birr)* that you turn your faces to the east and to the west. [True] piety is [this]: to believe in God and the last day (see LAST JUDGMENT; APOCALYPSE; ESCHATOLOGY), the angels (see ANGEL), the book (q.v.), and the prophets (see PROPHETS AND PROPHETHOOD), to give of one's substance, [however cherished,] to kinsmen (see KINSHIP), and orphans (q.v.), the needy (see POVERTY AND THE POOR), the traveler (see JOURNEY), beggars, and to ransom the slave (see SLAVES AND SLAVERY), to perform the prayer (q.v.), to pay the alms (see ALMSGIVING). And they who fulfil their covenant (q.v.), when they have engaged in a covenant, and endure with fortitude misfortune, hardship and peril (see TRUST AND PATIENCE; TRIAL), these are they who are true in their faith (q.v.), these are the truly godfearing (*al-muttaqūn;* see also FEAR)." This list touches upon interpersonal relationships as well as human-divine relationships, and in this sense it agrees with the definition of piety as it appears in *Webster's new twentieth century dictionary:* (1) devotion to religious duties and practices; (2) loyalty and devotion to parents, family, etc.

For a more profound understanding, however, of the references to piety in the Qurʾān, one should examine the qurʾānic correlation between *birr* and *taqwā*. The ending of Q 2:177 mentions the *muttaqūn,* "the godfearing," and refers to them as those who fulfill all the duties presented in the first part of the verse, namely those who practice *birr*. Q 2:189 is even clearer about the similitude between *birr* and *taqwā:* "… Piety *(al-birr)* is not to come to the houses from the backs of them (see PRE-ISLAMIC ARABIA AND THE QURʾĀN); but piety is to be godfearing *(al-birru mani*

ttaqā); so come to the houses by their doors, and fear God; haply so you will prosper."

In both verses cited above, comparisons are made between the true believers and the others, either Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY) or the pre-Islamic Arabs (*jāhilīs*; see AGE OF IGNORANCE; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC) and the early Muslims who did not have the *sharīʿa* (see PATH OR WAY; LAW AND THE QURʾĀN) to follow (Qurṭubī, *Jāmiʿ,* ii, 237, 345). *Birr,* in both verses, presents duties, the performance of which indicates true belief, defined as being godfearing or possessing *taqwā*. Furthermore, Q 5:2 mentions *birr* and *taqwā* as two complementary elements of proper conduct: "… Help one another to piety *(al-birr)* and fear of God *(al-taqwā);* do not help each other to sin and enmity (see SIN, MAJOR AND MINOR; ENEMIES). And fear God; surely God is terrible in retribution" (see also Q 58:9). The commentators on this verse distinguish one term from the other by stating that *birr* implies duties one should perform whereas *taqwā* refers to actions from which one should refrain (Wāḥidī, *Wasīṭ,* ii, 150). This may be used to illuminate the way the two terms relate to each other and to clarify the way the Qurʾān understands piety. *Birr* is the inclusive term for ethics; it underlies the pleasing conduct in daily communal life; it is anchored in and stimulated by the feeling of fear of the one God *(taqwā),* which is fear of the consequences of actions that violate the values included under *birr* (see also VIRTUES AND VICES, COMMANDING AND FORBIDDING).

Pilgrimage

A journey to a holy place, and the religious activities associated with it. The words most often translated as pilgrimage, both in the Qurʾān and with regard to Muslim ritual (see RITUAL AND THE QURʾĀN), are *ḥajj* and *ʿumra*. The word *ḥajj* occurs nine times in five different verses (in Q 2:189, three times; in Q 2:196, three times; and once each in Q 2:197, Q 9:3 and Q 22:27), *ʿumra* twice in one verse only (Q 2:196) but there are also a number of related nominal and verbal forms for each. With reference to Muslim practice, *ḥajj* is sometimes distinguished as the major pilgrimage, *ʿumra* as the minor, but whether one is speaking of the Qurʾān or of Muslim practice, the word pilgrimage is not really an adequate indication of what *ḥajj* and *ʿumra* involve. The English word commonly suggests a journey to a sacred place made as a religious act. The focus is on the journey itself, even though the pilgrim may participate in religious ceremonies and rituals once the object of the pilgrimage has been reached. Those who make *ḥajj* and *ʿumra,* it is true, have nearly always traveled long distances to Mecca (q.v.) in order to do so, and a substantial part of the journey has to be made in the sacral state known as *iḥrām,* but it is the rites and ceremonies that are performed after arriving that really constitute the *ḥajj* or the *ʿumra*. If consideration is restricted to the relevant qurʾānic passages without reference to Muslim practice, it is questionable how far they evoke the idea of pilgrimage as journey, although it could not be ruled out that traveling to perform *ḥajj* or *ʿumra* is envisaged.

The traditional Arabic lexicographers associate the verbal forms *ḥajja* and *iʿtamara* with the idea of travelling to a place (especially the sanctuary; see KAʿBA) for the purpose of a visit *(ziyāra)* but that possibly reflects standard Muslim practice and may not be an accurate guide to the basic meaning of the words. The roots *ḥ-j(-j)* (or *ḥ-w-j*) and *ʿ-m-r* occur in other Semitic languages apart from Arabic but it is difficult to determine basic meanings for them. The use of cognate words to elucidate the meaning of *ḥajj* and *ʿumra* is complicated by the fact that Semiticists sometimes use Arabic materials influenced by Islam to attempt to clarify the vocabulary of, say, Hebrew or south Arabian. *Ḥ-j(-j),* it has been suggested, has a number of possible meanings including procession, round, dance or festival. It has been argued that basically it refers to the act of dancing or processing around an altar or other cultic object, and that that relates to the ritual of the circumambulation *(ṭawāf)* of the Kaʿba, which is an important part of both *ḥajj* and *ʿumra*. In the Bible the Hebrew *ḥaj* is usually translated simply as festival or feast, although it could involve the participants in journeying to the place, Jerusalem or elsewhere, where the *ḥaj* was to be held (e.g. *Exod* 23:14-7; *Deut* 16:16). In that light the Arabic *ḥajj* might be understood as a "pilgrim festival." The root *ʿ-m-r* is harder to document in any sense securely related to the Arabic *ʿumra*.

As well as the nine qurʾānic attestations of *ḥajj,* Q 3:97 proclaims *ḥijj* (sic) *al-bayt* (*bayt* referring to the house or sanctuary associated with Abraham; see ABRAHAM; HOUSE, DOMESTIC AND DIVINE) as a duty owed to God for anyone who can find a way to it *(mani staṭāʿa ilayhi sabīlan)*. This is the verse that is understood as establishing the obligation *(farḍ)* for every Muslim to make *ḥajj* at least once in his lifetime; possible justifications for failing to meet the obligation are discussed in commentary on the phrase "for anyone who can find a way to it." Generally, *ḥijj* is seen as no more than a dialectical variant of *ḥajj* without significance as to meaning, although there are some attempts to make distinctions in meaning between the two vocalizations. Q 2:158 uses the verbal forms *ḥajja* and *iʿtamara (man ḥajja l-bayta awi ʿtamara)*. Q 9:19 has the noun *ḥājj,* apparently indicating someone making *ḥajj,* in the context of a rhetorical question: "Do you count providing water for him who makes *ḥajj,* and habitation of *al-masjid al-ḥarām* (see PROFANE AND SACRED), as comparable with believing in God and the last day and making jihād (q.v.) in the way of God (see PATH OR WAY; LAST JUDGMENT; FAITH)?" The references to *ḥajj* and *ʿumra* sometimes occur in the context of more extended passages which contain regulations for those making them or which relate in some way to the sanctuary at which they take place. The qurʾānic verses do not, however, contain sufficient detail to enable us to use them as a blueprint even for those rituals to which they allude, and there are many aspects of the Muslim sanctuary and its pilgrimage ceremonies to which no allusion is made in the Qurʾān. The detailed Islamic regulations regarding these pilgrimages, therefore, do not depend primarily upon qurʾānic passages.

Furthermore, it sometimes seems that there is a degree of tension between Muslim practice or legal doctrines and some of the qurʾānic materials. The commentators, naturally, attempt to interpret the verses and the more extended passages, and to address the problems which they raise, with the Muslim forms of *ḥajj* and *ʿumra* in mind. They assume that the passages are concerned with the Kaʿba at Mecca and its related sacred places and that they not only refer to, but to some extent provide a warrant for, the *ḥajj* and

the *ʿumra* as we know them from Muslim law and practice (see LAW AND THE QURʾĀN).

In some cases, however, the qurʾānic materials are problematical from that point of view, and much of the interest in reading the commentaries on the verses relating to *ḥajj* and *ʿumra* consists in observing how the texts are accommodated to later Muslim assumptions. In general, it seems that while there are definite points of contact (e.g. in terminology and some proper names) between the qurʾānic passages and the pilgrimages as we know them from Muslim law and practice, it cannot be said that all the scriptural passages fit easily with the normative Muslim forms of *ḥajj, ʿumra,* and the sanctuary with which they are associated. The following examples illustrate some apparent disjunctions and some of the interpretative strategies that seem to be adopted in order to overcome them.

Q 2:158 reads: "Al-Ṣafā and al-Marwa (see ṢAFĀ AND MARWA) are among the signs *(shaʿāʾir)* of God. Whoever makes *ḥajj* of the sanctuary *(al-bayt)* or *ʿumra,* no wrong attaches to him if he makes circumambulation of the two *(lā junāḥa ʿalayhi an yaṭṭawwafa bi-himā)*. Whoever performs something good voluntarily *(wa-man taṭawwaʿa khayran),* God recognizes and knows (it)." Commentators here unanimously identify al-Ṣafā and al-Marwa as the two small elevations known by those names in Mecca, the former just to the south-east, the latter to the north-east, of the mosque which contains the Kaʿba, about 400 yards apart. The ritual of the Muslim *ḥajj* and *ʿumra* includes a seven-times-repeated passage between al-Ṣafā and al-Marwa, part of which has to be covered at a faster than walking pace. For that reason the ritual is ordinarily referred to as the *saʿy* (literally, "run"). The commentators, usually without discussion, identify the Islamic *saʿy* with the circumambulation implied in the Qurʾān's *an yaṭṭawwafa bi-himā* even though the Islamic ritual here can only questionably be described as a circumambulation. In discussions of the ritual in ḥadīth (see ḤADĪTH AND THE QURʾĀN) and jurisprudence *(fiqh)* it is usually referred to as *saʿy* but *ṭawāf* is not infrequent. The major issue discussed in connection with this verse, however, is why it is stated that "no wrong attaches to" *(lā junāḥa ʿalā)* the person who makes the *ṭawāf* of al-Ṣafā and al-Marwa when it is virtually unanimously accepted in Islam that the ritual is an integral part of both *ḥajj* and *ʿumra*. A well-known report tells us that ʿUrwa b. al-Zubayr asked ʿĀʾisha (see ʿĀʾISHA BINT ABĪ BAKR) whether it meant that no wrong accrued to a person who did not make the *ṭawāf* between them, an interpretation which she strongly rejected.

There are several variant reports intended to explain how something which is regarded as meritorious, and by most as obligatory, should be described as incurring no wrong (*junāḥ* is often glossed as *ithm,* "sin"; see SIN, MAJOR AND MINOR). Most attempt to do so by referring, with variant details, to a group, which before Islam avoided al-Ṣafā and al-Marwa because they were associated with idolatry (see IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM) and therefore had qualms about making the *ṭawāf* of them in Islam. The wording of the verse was intended to reassure them that God did not disapprove of the rite once its idolatrous associations had been removed. Another "occasion of revelation" (see OCCASIONS OF REVELATION) report refers to a group that did make this *ṭawāf* before Islam and were puzzled when God ordered the *ṭawāf* of the Kaʿba (Q 22:29 is understood to mean that) but did not mention the two hills. They asked the Prophet whether there was anything wrong in making the *ṭawāf* of al-Ṣafā

and al-Marwa and then the verse was revealed.

Some claimed that the passage between the two elevations is not an obligatory part of the ritual of *ḥajj* and *ʿumra* and, in addition to suggesting that the verse may be read "there is no harm in not making circumambulation of the two," wanted to see its concluding words, "whoever voluntarily does something good, God is thankful and cognizant," as a reference to the voluntary nature of this *saʿy/ṭawāf.* That was rejected by the majority who insisted that the ritual is an integral part of both *ḥajj* and *ʿumra,* and said that the concluding words of the verse allude to those who make a voluntary *ḥajj* or *ʿumra* — it has nothing to do with al-Ṣafā and al-Marwa. Among those who insisted that the ritual was obligatory, there were differences of opinion about the consequences of failing to perform the passage between al-Ṣafā and al-Marwa when making the obligatory once-in-a-lifetime *ḥajj (ḥijjat al-islām):* can missing it be compensated for by a recompense *(fidya)* of a blood offering (see SACRIFICE) like some of the other rites, or does it require a return to Mecca in person to perform it? There are conflicting views on this point.

Similar problems arise concerning the command at the beginning of the long verse Q 2:196: "Complete the *ḥajj* and the *ʿumra* for God." Commentary on this phrase is fundamentally concerned to establish the distinction between *ḥajj* and *ʿumra* (what rituals each involves) and with the issue of whether, as the wording might imply, the *ʿumra* is obligatory *(farḍ wājib)* like the *ḥajj,* or merely voluntary as the majority view in Islam holds.

Some proponents of the voluntary nature of *ʿumra* read that word in the nominative case, giving the sense, "complete the *ḥajj* but the *ʿumra* is for God…." Others who hold this understanding of the voluntary nature of *ʿumra* maintained the standard reading, with *ʿumra* in the accusative, but argued that "complete" *(atimmū)* means "complete it when you have undertaken to perform it." To the accusation that that could mean that the *ḥajj* also is voluntary, they responded by arguing that it is Q 3:97 and not this verse which establishes the obligatory nature for every Muslim of at least one *ḥajj*. Those who held the *ʿumra* to be obligatory preferred the standard reading and supported their argument with ḥadīths in which the Prophet included *ʿumra* among the obligatory things required of a Muslim. Their opponents rejected the validity of those ḥadīths and countered with ones proclaiming the opposite.

The continuation of Q 2:196 then presents a different problem regarding the accommodation of the text to extra-qurʾānic considerations. One immediately noticeable and surprising feature in the commentaries is the amount of attention given to the meaning of the expression "if you are detained" *(fa-in uḥṣirtum)* in the regulations about what should be done if you are unable to fulfil the verse's initial command to "complete the *ḥajj* and the *ʿumra* for God." Generally it is agreed that this means, "if you are detained when you have undertaken to make *ḥajj* or *ʿumra*." In that case, according to the verse, the person prevented from fulfilling the injunction made at its opening must make "a convenient [animal] offering" (*mā staysara mina l-hady;* see CONSECRATION OF ANIMALS) and must remain in the sacral state of *iḥrām* ("do not shave your heads") until the animal offerings arrive at the time and place for slaughter (q.v.; *ḥattā yablugha l-hadyu maḥillahu*). There is, however, quite complex discussion about the circumstances that may lead to detention. Does it mean only such things as illness (see ILLNESS AND HEALTH), injury to one's mount, and

financial difficulties (see POVERTY AND THE POOR); does it refer only to detention by an enemy (see ENEMIES) or a human agent such as a ruler; or does it cover all of these possible causes? Those questions are related to the fact that it is widely accepted that this verse was revealed at the time when the Prophet and his companions were prevented by his Meccan opponents from completing an intended *ʿumra* on which they had started (see OPPOSITION TO MUḤAMMAD). Most of the reports about that incident say that the Prophet ordered his companions to slaughter the animal offerings *(hady)* at al-Ḥudaybiya (q.v.) where they had been stopped. Most agree that al-Ḥudaybiya was outside the sacred territory (the *ḥaram;* see SACRED PRECINCTS), that the Prophet did not imply that he and his companions had any further obligations once the *hady* had been slaughtered, but that in the following year he went to Mecca and performed an *ʿumra* (known as *ʿumrat al-qaḍāʾ* or *ʿumrat al-qaḍiyya,* "the *ʿumra* of completion"). This tradition seems to conflict with the regulations set out in Q 2:196 concerning someone who is "detained" from completing *ḥajj* or *ʿumra* — that abandoning the sacred state should not take place until the animal offerings reach their time and place for slaughter. The complex and detailed discussions in the commentaries on this verse display varying attitudes as to whether priority should be accorded to the tradition about the Prophet's behavior at al-Ḥudaybiya, to the regulations set out in the verse (and further elaborated by some of the scholars), or to practicality. Generally the Mālikīs emphasize the importance of the tradition about al-Ḥudaybiya as a model for someone intending to make *ʿumra* but who is then prevented from completing it through detention by an enemy. Anyone detained by any other cause must not leave the consecrated state (except in the case of an illness the treatment of which necessitates this) until he has reached Mecca and performed an *ʿumra*. Al-Ṭabarī's (d. 310/923; *Tafsīr,* ad loc.) account of the Mālikī understanding of Q 2:196 and of the way in which they relate it to their doctrine is, however, hard to understand and does not seem completely logical. Others give priority to the wording of the verse and some attempt to harmonize it with the Ḥudaybiya tradition by excluding detention by an enemy from the cases covered by *fa-in uḥṣirtum*. In general, the complex arguments of the commentators on this part of the verse may be understood as the result of their attempts to interpret it in the light of existing practice, law and other material regarded as relevant for determining practice.

A further example of the difficulties which arise when attempting to interpret the qurʾānic material with the Muslim rituals in mind is provided by Q 2:198-9. Q 2:198 tells believers that after making *ifāḍa (fa-idhā afaḍtum)* from ʿArafāt (q.v.) they should remember God by *al-mashʿar al-ḥarām;* the next verse orders them to "then" make *ifāḍa* from where the people make it *(thumma afīḍū min ḥaythu afāḍa l-nāsu)*. In the Muslim *ḥajj* rituals, ʿArafāt, a hill about twenty-five kilometers to the east of Mecca, is the site of the ceremony of the *wuqūf,* without which, according to several traditions and legal authorities, *ḥajj* is invalid. The *wuqūf,* the "standing" ritual, takes place on the flat ground on the side of the hill towards Mecca on the 9th of Dhū l-Ḥijja. Outside the Qurʾān the name of the hill often occurs in the form ʿArafa, and the commentators discuss and offer various explanations for the seemingly feminine plural form of the name in the Qurʾān and for its etymology: associating it with the verb *ʿarafa,* "to know, to recognize," they relate various stories involving earlier prophets (especially Adam or

Abraham) who recognized people or things there (see ADAM AND EVE).

The attempted identification of *al-mashʿar al-ḥarām* is more complex and, to some extent, inconsistent. *Al-mashʿar* is understood to mean the same as *al-maʿlam,* "a place in or by which something is known, a place in which there is a sign" — here, a place in which rituals of the *ḥajj* take place. Statements attempting to locate *al-mashʿar al-ḥarām* give various specifications. Common to many of them is the idea that it is associated with al-Muzdalifa, the destination of a procession *(ifāḍa)* from ʿArafa in the Muslim *ḥajj*. The simplest statement is of the form "all of al-Muzdalifa is *al-mashʿar al-ḥarām*." Others are more specific but at the same time more confusing, while some seem to indicate a much wider area. For example, Ibn ʿUmar is reported to have said when he stood "at the furthest part of the hills *(jibāl)* adjoining ʿArafāt" that "all of it is *mashāʿir* to the furthest point of the *ḥaram*." In notable reports cited by al-Ṭabarī, Ibn Jurayj seems not to know the location of al-Muzdalifa while ʿAbd al-Raḥmān b. al-Aswad said that he could not find anybody who could tell him about *al-mashʿar al-ḥarām*. Al-Ṭabarī comments on these traditions in ways which limit their apparent significance. The verbal noun *ifāḍa,* literally a "pouring out" or "pouring forth," is understood as referring to a sort of hasty procession when the pilgrims pour forth from one place, where they have been gathered together, to another. The name is given to various "processions" involved in the *ḥajj* ceremonies, but it most commonly refers to that to al-Muzdalifa from the plain in front of the hill of ʿArafa. At al-Muzdalifa the pilgrims spend the night before going to Minā on the next day. It may be this which leads to the attempts to identify *al-mashʿar al-ḥarām* in connection with al-Muzdalifa. There is then a problem with the command, "then make *ifāḍa* from where the people make *ifāḍa,"* at the beginning of Q 2:199, since it comes after the phrase "when you have made *ifāḍa* from ʿArafāt" in Q 2:198. Some understand the same *ifāḍa,* i.e. that from ʿArafāt to al-Muzdalifa, to be referred to in both passages and see the latter command as addressed specifically to the Quraysh (q.v.) of Mecca who, in the Age of Ignorance (q.v.; *jāhiliyya*), belonged to a group called the Ḥums. The Ḥums, we are told, regarded it as beneath them to go outside the *ḥaram* at the time of the *ḥajj*. Since ʿArafāt lies outside the sacred area, they would not go to join in the *ifāḍa* thence like the rest of the people. That explains the apparent difficulty of having the command introduced after the allusion which suggests that the duty had already been fulfilled. Another approach is to see the *ifāḍa* commanded in the second passage as different from that in the former: while the former is that from ʿArafa to al-Muzdalifa, the latter is that from al-Muzdalifa to Minā (sometimes called the *daffāʿ*). The command is understood as addressed to the Muslims generally while "the people" *(al-nās)* is interpreted as a reference to Abraham. Al-Ṭabarī himself prefers this second possibility even though it is a minority one and even though it involves explaining how the collective *nās* could refer to a single individual. His reasoning is that he does not think that God would say "when you have made the *ifāḍa*" in the previous verse and then begin this one with the words "then make *ifāḍa*" if the same *ifāḍa* was meant both times.

In Q 2:203 the "numbered days" *(ayyām maʿdūdāt)* on which we are commanded to remember God are generally identified as the so-called *ayyām al-tashrīq* of the Muslim *ḥajj,* the three days spent at Minā following the slaughter of the animal offerings there. The following statement that no sin *(ithm)* is incurred by those who "make haste in

two days" *(man taʿajjala fī yawmayn)* nor by those who "delay" *(man taʾakhkhara),* so long as there is fear (q.v.) of God, is generally understood to mean that there is nothing wrong with departing from Minā after two days nor with doing so after three. Since the latter is the normal accepted practice, however, that raises the same question which we have seen asked about the qurʾānic reference to al-Ṣafā and al-Marwa: why would God say that no sin is incurred by doing something regarded as a normal part of the *ḥajj* rituals? An alternative way of interpreting this verse — that it is alluding to the Muslim belief that a properly accomplished *ḥajj* frees the pilgrim from some or all of his sins, and that that applies whether one cuts short the *ayyām al-tashrīq* or remains at Minā until they have finished — is probably to be understood as an attempt to avoid the difficulty inherent in the previous interpretation.

The mention in Q 3:96 of the "first house *(bayt)*… at Bakka," which is naturally understood as a reference to the Kaʿba at Mecca (Makka), involves the commentators in variant explanations as to why the Qurʾān uses the form Bakka. It seems obvious that all of the suggested explanations are simply attempts to account for something of which the commentators had no real knowledge, and the way in which it is done — e.g. by reference to the crowding (*izdiḥām,* a word the root of which is said to have the same meaning as that of *bakka*) of the people in the circumambulation of the Kaʿba — again illustrates the way in which the commentators attempt to relate the qurʾānic material to the Muslim pilgrimage rituals.

Finally in this connection there may be noted the difficulties the commentators have with the expression *al-ḥajj al-akbar,* "the greater *ḥajj,*" in Q 9:3 ("a proclamation from God and his messenger to the people on the day of *al-ḥajj al-akbar*"). Here there is considerable diversity in interpretation of the phrase: some wish to explain it as referring to a particular day or particular days of the *ḥajj* rituals — the day of the "standing" at ʿArafa, the day of the slaughter of the victims, etc.; most associate it with the *ḥajj* led by Abū Bakr immediately following the conquest of Mecca by the Prophet, but some with the "Farewell Pilgrimage" (q.v.) led by the Prophet himself in the last year of his life, and they give variant explanations of why the one or the other should be called *al-ḥajj al-akbar;* yet others explain it by reference to the distinction between the "major" pilgrimage (the *ḥajj*) and the "minor" pilgrimage (the *ʿumra* which may, allegedly, be called *al-ḥajj al-aṣghar*), or between a *ḥajj* combined with an *ʿumra* and a *ḥajj* performed alone. Again it seems obvious that the commentators have no real understanding of the phrase but try to make sense of it by aligning it with Muslim practice and, in this case, with traditions relating to the life of the Prophet.

It might be argued that, in spite of disjunctions of the sort illustrated above, the qurʾānic materials nevertheless reflect institutions and practices that are not radically different from those of Islam. Much of the qurʾānic terminology, after all, is used also in Muslim law and ritual practice, and the few proper names that occur (al-Ṣafā, al-Marwa, ʿArafāt) are those of places in or near Mecca. On the other hand, it might be thought that the relative paucity and lack of detail of the qurʾānic verses concerning *ḥajj* and *ʿumra* make it impossible to judge the extent to which they envisage the same rites in the same places as does classical Islam. Not only are some rites and places which are of major importance in Muslim practice (e.g. Zamzam, Minā, the *wuqūf,* the stoning ritual; see STONING; SPRINGS AND FOUNTAINS) not mentioned at all in the Qurʾān, those

names which do occur may not indicate the same things as they do in classical Islam. The traditional accounts of how the Meccan sanctuary and the rites associated with it came to be incorporated into Islam assume a basic continuity. According to tradition, the Prophet took over the Kaʿba and the other places in the vicinity of Mecca and did not radically change the rituals which at the time constituted the *ḥajj* and the *ʿumra*. He cleansed them of the idolatry which polluted them and restored the pristine monotheism which had existed when Abraham built the Kaʿba and summoned humankind to make *ḥajj* and *ʿumra,* but apart from that he made only minor and marginal alterations (see ḤANĪF).

Some scholars have suggested that the changes involved in the identification of the Meccan sanctuary as the Muslim sanctuary were more significant. Following Snouck Hurgronje and Wellhausen, many have argued that the evidence points to a unification of a number of originally distinct and independent holy places and rituals in a way that focused them on the Kaʿba at Mecca. According to that view, the *ḥajj* originally had nothing to do with Mecca or the Kaʿba but concerned Mount ʿArafa and other holy places at some distance from Mecca. It was the *ʿumra* which was originally the ritual associated with the Kaʿba.

The phrasing of Q 2:158 with its apparent concern to reassure the hearers that *ṭawāf* of al-Ṣafā and al-Marwa was an acceptable part of *ḥajj* or *ʿumra* has sometimes been explained by reference to that idea: it reflects an early stage in the process in which the rituals of the *ʿumra* came to be incorporated in the *ḥajj* and perhaps mirrors the objections of those who questioned the validity of that incorporation. (For a different approach, see Burton, *Collection,* 12, 16, 30-1.)

A particularly difficult passage in Q 2:196 might also reflect such a development. Following the section, discussed above, which establishes rules for those "detained" from meeting the command to "complete the *ḥajj* and the *ʿumra* for God," we then read: "and when you are in security, then whoever enjoys/benefits from the *ʿumra* to/for/until the *ḥajj (man tamattaʿa bi-l-ʿumrati ilā l-ḥajji),* then [there is incumbent upon him] a convenient [animal] offering *(mā staysara mina l-hady)*."

"When you are in security" *(fa-idhā amintum)* is understood as meaning "when the circumstances which detained you no longer pertain." Commentary then concerns itself with the knotty issue of what is meant by the *tamattuʿ* referred to in the following phrase. In their discussions commentators and other traditional scholars also use the forms *mutʿa* and *istimtāʿ* and they reflect a variety of understandings of what the phrase means. The relevant phrase in Q 2:196 *(man tamattaʿa bi-l-ʿumrati ilā l-ḥajji)* is difficult to translate, and attempts to interpret it reflect ideas current in Islamic practice or legal theory.

What most interpretations have in common is that *tamattuʿ* (or *istimtāʿ* or *mutʿa*) involves a premature abandonment of the consecrated state on the part of the pilgrim. For example, one of the most common understandings of the concept is that the pilgrim has begun by intending to perform both *ʿumra* and *ḥajj* and has stated that intention when he adopted *iḥrām*. On arriving at Mecca before the *ḥajj* has started he performs an *ʿumra* and then leaves the state of *iḥrām,* thus removing restrictions regarding such things as toilet, dress and sexual activity (see SEX AND SEXUALITY; RITUAL PURITY). He remains in this normal, desacralized state until the time for the *ḥajj* arrives, when he once more enters *iḥrām* and remains in the sacralized state until the *ḥajj* is over. For that break in *iḥrām*

he is liable to the penalty of an offering or something in lieu of it.

The issue is a contentious one and the traditions report disputes about it among the Companions and Successors (see COMPANIONS OF THE PROPHET). In spite of this qurʾānic verse which treats *tamattuʿ* in a rather matter-of-fact way even though it does say that an offering must be made by anyone who takes advantage of it, and in spite of traditions which tell us that the Prophet told his Companions to avail themselves of *mutʿa* (but one often involving a different understanding of it to that just summarized) at the time of the Farewell Pilgrimage, there are reports that some Companions and caliphs (see CALIPH) disapproved of and even forbade it. The caliph ʿUmar figures prominently in such reports. Nevertheless, the Sunnī schools of law *(madhhabs)* all recognize the validity of the procedure and the Shīʿīs (see SHĪʿISM AND THE QURʾĀN) even recommend it as the preferred way of performing *ḥajj*.

A related verbal form occurs in Q 4:24 *(mā stamtaʿtum bihi minhunna)*, where it clearly refers to the sexual enjoyment of women by men, and the word *mutʿa* is more widely known as the name of a form of temporary marriage (q.v.), where the contract specifies for how long the marriage will last (see also MARRIAGE AND DIVORCE). This form of marriage, as is well known, is generally rejected by Sunnī Islam but it is accepted as valid by the Shīʿa. In order to distinguish between it and the *mutʿa* that may be involved in making pilgrimage it is sometimes called *mutʿat al-nisāʾ* and the latter *mutʿat al-ḥajj*. Traditional scholarship and many modern scholars have insisted on the essential distinctness of the two forms of *mutʿa*. ʿAṭāʾ b. Abī Rabāḥ is quoted as insisting that the *mutʿa* connected with *ḥajj* is so called because it involves making *ʿumra* during the months of the *ḥajj* and "enjoying" or "benefiting from" the *ʿumra* for (or until?) the *ḥajj;* it is not so called, he insists, because it makes permitted the enjoyment of women *(wa-lam tusamma l-mutʿa min ajli annahu yuḥallu bi-tamattuʿi l-nisāʾ)*. Some modern scholars, however, have argued that the two *mutʿa*s were originally closely connected, essentially that the premature abandonment of *iḥrām* in the case of *mutʿat al-ḥajj* was intended to allow the pilgrim to resume normal sexual activity and that the temporary liaisons allowed by *mutʿat al-nisāʾ* were associated with the making of *ḥajj*. The evidence and competing views have been extensively investigated by Arthur Gribetz.

It may be that this qurʾānic passage also reflects the merging in early Islamic times of the previously distinct rituals of *ḥajj* and *ʿumra*. The preferred way of performing *ḥajj* and *ʿumra* — whether both separately, both combined, or one of them only — is much discussed and variously evaluated in Muslim law. A few scholars have gone further and envisaged more radical discontinuities in the development of the Muslim sanctuary and the rituals associated with it. Some have suggested the transference not only of ideas but also of ritual practices and nomenclature from other places to Mecca at a time in the emergence of Islam considerably later than the death of the Prophet. The qurʾānic materials are not inconsistent with such theories which, however, really depend on other evidence regarding the development of the sanctuary and the rituals associated with it in early Islam.

Pit

Deep abyss. The qurʾānic term *hāwiya,* the "pit, abyss," is related to the verb *hawā, yahwī,* "to fall," and is generally understood as one of the names of hell (see HELL AND HELLFIRE). It occurs once in Sūrat al-Qāriʿa ("The Great Calamity," Q 101), a text which depicts the cataclysmic events of the apocalypse (q.v.; Q 101:1-5) and the weighing of humankind's deeds on the day of judgment (Q 101:6-11; see LAST JUDGMENT; GOOD DEEDS; EVIL DEEDS; WEIGHTS AND MEASURES; REWARD AND PUNISHMENT). Two parallel conditional sentences describe the fate of humankind as a result of this weighing: Whoever's deeds weigh heavy will enter paradise (q.v.; Q 101:6-7) and whoever's deeds weigh light will enter hell (Q 101:8-11). While the overall purport of the sūra (q.v.) seems clear, verse 9 and the term *hāwiya* in particular have puzzled commentators. It reads *fa-ummuhu hāwiya,* which may be construed as "Then his mother will be *hāwiya* (adj.)"; "Then his mother will be a *hāwiya* (indefinite noun)"; or "Then his mother will be *Hāwiya* (definite proper noun)," alternatively "Then *Hāwiya* will be his mother." In recognition of the difficulty of rendering the verse accurately, Bell (*Qurʾān,* ii, 674 n. 6) retains the term *hāwiya,* then explains it in a footnote. Paret describes the passage as "a bizarre play on words" (Paret, *Kommentar,* 518).

There are three main explanations of this verse in Islamic tradition (see Ṭabarī, *Tafsīr,* xxx, 282-3; Ṭabarsī, *Majmaʿ,* x, 679-80; Zamakhsharī, *Kashshāf,* ad loc.). The most widely accepted is that *hāwiya* is a proper noun, one of several names of hell, and that *umm* here is used metaphorically to mean "refuge," as in Q 5:72: *wa-maʾwāhu l-nāru,* "Then his refuge will be hell." According to the second interpretation, attributed to the Companion Abū Ṣāliḥ (see COMPANIONS OF THE PROPHET), *umm* here means *umm al-raʾs,* "the crown of the head," and the verse as a whole, "The crown of his head will fall," referring to sinners' being pitched into hell head first. The third interpretation, attributed to Qatāda (d. ca. 117/735), connects the verse with the idiomatic expression *hawat ummuhu,* literally, "his mother has fallen," said of a man in a dire situation, something like the English expression "his goose is cooked." Al-Zamakhsharī (d. 538/1144) adds that *hawat ummuhu,* "May his mother fall!" is a curse (q.v.) wishing for a man's demise. This is similar to the more common curse *thakalatka ummuka,* "May your mother be bereft of you!" According to this interpretation, the verse would mean,

"Then his mother will fall," figurative for "Then he will perish."

Sprenger (*Moḥammad,* ii, 503) held that this last interpretation was the correct explanation of the word. Fischer (Qorān-Interpolation; Zu Sūra 101,6) also adopts this view and further suggests that the sūra originally ended with Q 101:9. In his view, a later reader, puzzled by verse 9 and interpreting *hāwiya* as referring to hell, added the following two verses to make this clear: *wa-mā adrāka māhiya — nārun ḥāmiya,* "But how should you know what that is?! A scorching fire." Goldziher (*Introduction,* 29 n. 37) endorses Fischer's interpretation and remarks that a true, critical edition of the Qurʾān should note such interpolations. C. Torrey (Three difficult passages, 466-7) rejects Fischer's explanation for several reasons. It is unlikely, in his view, that the Companions or early Muslims would have been mystified by the Arabic usage of this passage, as opposed to being puzzled by its content or interpretation. The attention to rhyme and rhetorical construction throughout the sūra (see RHETORIC AND THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN), including the odd modifications to produce a rhyme in *-iya,* paralleled in the forms *kitābiya* (Q 69:19, 25) and *sulṭāniya* (Q 69:29), also in rhyme position — and, we may add, *ḥisābiya,* Q 69:20, 26 and *māliya,* Q 69:28 — suggests that the final passage is not incongruous with the rest of the sūra (ibid., 467-68). Torrey interprets the phrase as an intentional pun, rather than an interpolation designed to explain a misunderstood expression, drawing both on the expression *hawat ummuhu* but at the same time interpreting *hāwiya* as a name for hell. Torrey (Three difficult passages, 470), holding that the most probable hypothesis when an odd theological term appears in the Qurʾān is that it is a foreign, borrowed term, suggests that *hāwiya* is a borrowing from Hebrew *hōwā,* "disaster" (*Isa* 47:11; *Ezek* 7:26; see FOREIGN VOCABULARY; THEOLOGY AND THE QURʾĀN). Bell (*Qurʾān,* ii, 674 n. 6) accepts Torrey's analysis, minus the Hebrew connection, adding a note to his translation explaining the untranslated term *hāwiya:* "i.e. childless; a phrase implying that the man will perish, or at least meet misfortune. The added explanation, however, takes *hāwiya* as a designation for Hell." Paret agrees with the first part of Torrey's interpretation but considers the link with Hebrew questionable. Jeffery objects to Torrey that the biblical passages in question do not describe hellfire specifically and are therefore unlikely to have served as a basis for this text. On the argument that this is a very early passage, he considers it unlikely to be related to the Jewish tradition but to the Christian tradition instead (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). He proposes, tentatively albeit, two Ethiopian words from the root combination *ḥ-w-y, ḥewāy,* meaning "the fiery red glow of the evening sky," or *ḥwe,* meaning "fire, burning coal" (Jeffery, *For. vocab.,* 285-6). These are both unlikely because the Ethiopic *ḥ* corresponds to the Arabic *ḥ* and not *h*. Jeffery also notes that Mainz suggested the Syriac *ḥewāyeh,* "his life," referring to the Messiah (cf. Mainz, Review, 300; see JESUS); this is also unlikely, for the same reason.

Bellamy *(Fa-ummuhū)* proposes an emendation of Q 101:9, suggesting that it should read *fa-ummatun hāwiya,* meaning, "Then a steep course downward" (sc. into hell shall be his). In other words, he understands *hāwiya* here to mean "falling" or "dropping off precipitously." This emendation is implausible for several reasons. First, it upsets the parallelism between the two conditional sentences in Q 101:6-9. Just as the pronoun *huwa* ("he") in the apodosis of the first conditional sentence (verse 7) refers

back to *man* ("whoever") in the protasis (verse 6), so does the attached pronoun *-hu* in *ummuhu* ("his mother") in the apodosis of the second conditional sentence (verse 9) refer back to *man* ("whoever") in the protasis (verse 8). Removing the pronoun upsets the balance between the two. Second, from the perspective of form criticism, the emendation would render this passage odd in comparison with similar oracular texts in the Qurʾān.

The construction *X * mā X * wa-mā adrāka mā X: * Y,* "X. What is X? And how do you know (lit. 'what made/let you know') what X is? (X is) Y" (see Sells, Sound and meaning, 410-3) is a standard form in the oracular stylistic repertoire of pre-Islamic soothsayers (q.v.). The full form consists of (1) the mention of an obscure or ambiguous term, (2) a rhetorical question concerning that term, (3) a second, more emphatic, rhetorical question concerning that term, and (4) a definition or explanation of that term. Repetition of the initial term necessarily creates a strong rhyme and rhythmical pattern. In the Qurʾān, the full form occurs only three times (Q 69:1-3; 82:14-9; 101:1-3). In other passages, (2) is omitted, producing the pattern *X * wa-mā adrāka mā X: * Y* (Q 74:26-7; 83:7-8; 83:18-9; 86:1-2; 90:11-2; 97:1-2; 104:4-5). In yet other passages, (3) is omitted, producing the pattern *X * mā X: * Y* (Q 56:8, 9, 27, 41). The passage under examination exhibits a reduced form of the *mā adrāka* construction: *fa-ummuhu hāwiya * wa-mā adrāka mā-hiya * nārun ḥāmiya,* "And how should you know what that is?! A scorching fire" (Q 101:9-11). It differs from other instances of the *mā adrāka* construction in that it does not actually repeat the ambiguous term *(hāwiya),* substituting the pronoun *hiya,* "she, it," instead: *wa-mā adrāka mā-hiya*. This feature probably helped suggest to Fischer (Qorān-Interpolation) that verses 10-11 represent an interpolation. The use of reduced forms of this construction is, however, quite common, and the use of the pronoun here may be due to the presence of the same construction in full at the beginning of the sūra (verses 1-3).

This construction is characterized by what Sells (Sound and meaning) terms semantic openness: The initial term, which is then defined, is necessarily ambiguous. For this reason, Sells leaves *qāriʿa* and *hāwiya* untranslated in his discussion of this sūra. Bellamy's emendation renders the initial term *ummatun hāwiya,* "a descending path," or "a steep course downward." An indefinite noun modified by an adjective would be an anomaly with regard to this oracular form in the Qurʾān. Most initial terms occurring in the *mā adrāka* construction are definite nouns, unmodified: *al-ḥāqqa* (Q 69:1-3), *al-ṭāriq* (Q 86:1-2), *al-ʿaqaba* (Q 90:12), *al-qāriʿa* (Q 101:1-3), *al-ḥuṭama* (Q 104:4-5). Other terms are nouns without the definite article but nevertheless definite and unmodified: *saqar* (Q 74:26-7), *sijjīn* (Q 83:7-8), *ʿilliyyūn* (Q 83:18-9). Ambiguous terms that consist of two words are all constructs: *aṣḥāb al-maymana* (Q 56:8), *aṣḥāb al-mashʾama* (Q 56:9), *aṣḥāb al-yamīn* (Q 56:27), *aṣḥāb al-shimāl* (Q 56:41; see LEFT HAND AND RIGHT HAND), *yawm al-faṣl* (Q 77:13-4), *yawm al-dīn* (Q 82:17-8), *laylat al-qadr* (Q 97:1-2; see NIGHT OF POWER). It is unlikely that the ambiguous phrase presented, questioned and then defined would be a noun modified by an adjective. Adjectives are circumscribing, narrowing modifiers and most often occur in the definitions that follow the rhetorical question rather than in the ambiguous terms themselves. For example, *sijjīn* and *ʿilliyyūn* are both defined as *kitābun marqūm*…, "an engraved book" (q.v.; Q 83:7-9, 18-20); *al-ṭāriq* is defined as *al-najmu l-thāqib*, "the piercing star" (Q 86:1-3; see PLANETS AND STARS); *al-ḥuṭama* is defined as *nāru llāhi l-mūqada*, "the kindled fire (q.v.) of God" (Q 104:4-6) and, here, the

term in question *(al-hāwiya)* is defined as *nārun ḥāmiya*, "a scorching fire" (Q 101:11). The emendation is thus probably wrong: *hāwiya* is not an adjective modifying the previous noun but a predicate; the ambiguous initial term is the final word *hāwiya* alone. It is worth adding that several of the other ambiguous terms in such passages also have the form *fāʿila* (see GRAMMAR AND THE QURʾĀN), such as *al-ḥāqqa* (Q 69:1-3) and *al-qāriʿa;* as do ambiguous terms occurring in oracular passages which do not exhibit the *mā adrāka* construction, such as *al-wāqiʿa* (Q 56:1), *al-ṭāmma* (Q 79:34) and *al-ghāshiya* (Q 88:1). Three other terms that occur in this construction and are devoid of the definite article all appear to be proper nouns. The terms *saqar* (Q 74:26-7) and *sijjīn* (Q 83:8) are names for hell and *ʿilliyyūn* (Q 83:19) is a name for heaven. The term *hāwiya* is likely to be a proper noun referring to hell.

It is well known that many verse-final words in the Qurʾān are modified in form to fit the rhyme scheme (see RHYMED PROSE; Suyūṭī, *Itqān,* ii, 214-7; Müller, *Untersuchungen;* Stewart, Sajʿ) and Ibn al-Ṣāʾigh al-Ḥanafī (d. 776/1375) cites *hāwiya* as an example of this phenomenon. In his view, *hāwiya* is an instance of a rare or odd word's being used in place of a common one for the sake of rhyme (Suyūṭī, *Itqān,* ii, 216). In my view, *hāwiya,* literally "falling (fem.)," is a cognate substitute understood as equivalent to *huwwa, mahwan,* or *mahwā,* all meaning, "pit, chasm, abyss." Many such cognate substitutes appear frequently in the Qurʾān: *taḍlīl* (Q 105:2) for *ḍalāl* (Müller, *Untersuchungen,* 46-50; see ERROR; ASTRAY); *lāghiya* (Q 88:11) for *laghw* (ibid., 24-6; see GOSSIP); *amīn* (Q 44:51; 95:3) for *āmin* (ibid., 54-59), and so on. Modifications for the sake of rhyme are evident in several verses of Sūrat al-Qāriʿa (Q 101) itself. As Sells (Sound and meaning) has shown in detail, rhyme and rhythm are crucial features of the sūra, so it is reasonable to suggest that such modifications occur. In verse 7, the active participle *rāḍiya,* literally "approving, pleased," appears with the meaning of the cognate passive participle *marḍiyya,* "approved, pleasant." The pronoun *hiya* occurs as *hiyah* in final position in verse 10; the two words *mā* and *hiyah* are also joined here to form one rhythmic unit or foot: *mā-hiyah*. *Hāwiya* would be an additional cognate substitute. Moreover, the morphological pattern of *hāwiya — fāʿila —* occurs frequently in such cognate substitutions: *kāshifa* (Q 53:58) for *kashf* (Müller, *Untersuchungen,* 26-8); *kādhiba* (Q 56:2) for *kadhib* (ibid., 20-4; see LIE); *bi-l-ṭāghiya* (Q 69:5) for *bi-ṭughyānihim* (ibid., 16-20); and *al-rājifa* (Q 79:6) for *al-rajfa* (ibid., 30-3). A parallel example is the term *al-ḥuṭama*, also a name for hell, that occurs in a *mā adrāka* construction (Q 104:4-5). It appears to be a cognate substitute for a form such as *al-ḥāṭima* or *al-ḥaṭṭāma* and conveys the general meaning of "the crusher."

The most plausible interpretation of the term *ummuhu* is that which takes *umm* as a metaphorical term for (destined, final) refuge or abode (see FATE; DESTINY; FREEDOM AND PREDESTINATION). This interpretation is in keeping with other passages of the Qurʾān that state that while heaven is the dwelling place of those who have faith (q.v.) and do good works, hell is the refuge or final place of the evildoers (see GOOD AND EVIL). The most common term used in this fashion is *maʾwā,* "refuge," which refers to the abodes of humankind in the afterlife: heaven in Q 32:19, 53:15; 79:41 and hell in Q 3:151, 162, 197; 4:97, 121; 5:72; 7:16; 9:73, 95; 10:8; 13:18; 17:97; 24:57; 29:25; 32:20; 45: 34; 57:15; 66:9; 79:39. Similar terms include *mathwā,* "abode," which refers to hell in Q 3:151; 6:128; 16:29; 29:68; 39:32, 60, 72; 40:76; 41:24; 47:12; *mihād,* "cradle, bed," which can also refer

to hell (cf. Q 2:206; 3:12, 197; 7:41; 13:18; 38:56); and *maʾāb*, "end, goal, place where one ends up," which refers to hell in Q 78:22, 38:55. Torrey (Three difficult passages, 469) states that the use of the term "contained the grimly ironical assurance that (the hearer's) acquaintance with Hāwiya would not be merely temporary; she would be his permanent keeper and guardian." In any case, perhaps closest to *umm* in this context is *mawlā*, "master," used to refer to hell in Q 57:15: "Your refuge is hell *(al-nār);* it will be your master, and what an evil destiny it is!"

Place of Abraham

A location in Mecca (q.v.) at which Abraham (q.v.) is believed to have stood and/or prayed. The station or place of Abraham *(maqām Ibrāhīm)* is cited twice in the Qurʾān. Q 2:125, "Take the station of Abraham as a place of prayer" (q.v.; *wa-ttakhidhū min maqāmi Ibrāhīma muṣallan*) and Q 3:97, "In it [the house of God, i.e. the *ḥaram* sanctuary in Mecca] are clear signs (q.v.), the station of Abraham." Most have read Q 2:125 as an imperative (referring to the Muslim community), rather than in the past tense *wa-ttakhadhū,* "and they took."

Opinions vary about the area to be considered as the station, whether, for example, it is all of the sacred territory of Mecca or, more narrowly, the *ḥaram* (see PROFANE AND SACRED; FORBIDDEN). Most, however, have identified the station with a stone bearing the footprints of Abraham located within the *ḥaram* a short distance from the Kaʿba (q.v.). Identifying the station with a stone, however, leaves a grammatical awkwardness due to the preposition *min,* "from," in Q 2:125. The verse could be rendered "Take within the station of Abraham a place of prayer," or "Take a part of the station of Abraham as a place of prayer."

For those who identify the station as a stone, there are a number of stories about how Abraham's footprints came to be impressed on it. For some, Abraham stood on a stone (or a water jug) when Ishmael's (q.v.) dutiful second wife once washed Abraham's head. But following a more commonly held story, while Abraham and Ishmael were building the Kaʿba, Abraham stood on the stone in order to reach the upper parts of the Kaʿba walls. According to a third story, Abraham stood on the stone when he called upon humankind to perform the pilgrimage (q.v.; Q 22:27). A fourth version has Abraham praying at the stone as his *qibla* (q.v.), turning his face to the Kaʿba door (see especially Firestone, *Journeys*).

A ḥadīth (Bukhārī, *Ṣaḥīḥ,* 8, *Ṣalāt,* 32; ed. Krehl, i, 113; trans. Khan, i, 395) links the

revelation of Q 2:125 to ʿUmar b. al-Khaṭṭāb who, during the Prophet's farewell pilgrimage (q.v.), said, "O messenger of God, if only we were to take the station of Abraham as our place of prayer." Shortly thereafter Q 2:125 was revealed (see ḤADĪTH AND THE QURʾĀN; OCCASIONS OF REVELATION). Other ḥadīths (Bukhārī, *Ṣaḥīḥ,* 8, *Ṣalāt,* 30; ed. Krehl, i, 113; trans. Khan, i, 389, 390; ii, 670) report that the Prophet performed the circumambulation *(ṭawāf)* around the Kaʿba and offered a two-*rakʿa* prayer (see BOWING AND PROSTRATION; RITUAL AND THE QURʾĀN) behind the station (of Abraham) and then performed the traversing *(saʿy)* of Ṣafā and Marwa (q.v.).

The stone identified as the station is some 60 cm wide and 90 cm high and has been placed in different locations within the *ḥaram* in the course of the centuries. For a time it was placed in a box on a high platform to keep it from being swept away in floods. The stone cracked in 161/778 and the ʿAbbāsid caliph al-Mahdī (r. 158-69/775-85) had it repaired with gold braces. In 256/870 the broken pieces of the stone were thoroughly restored (as reported in detail by al-Fākihī, an eyewitness [see Kister, A stone]; al-Fākihī noted some Ḥimyar letters on the stone; see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC; ARABIC SCRIPT).

In the nineteenth century the station was a little building with a small dome, while the Saudi reconstructions of the *ḥaram* in the mid-twentieth century have replaced that building with a small hexagonal glass-enclosed structure, within which the stone can be seen. (For photographs of the station as it was about one hundred years ago, see Nomachi and Nasr, *Mecca,* 19, 50, 190-1; Wensinck and Jomier, Kaʿba, plates ix and x; Frikha and Guellouz, *Mecca,* 32-3, 44-5.)

Plagues

Supernatural events inflicted upon the Egyptian Pharaoh (q.v.; *firʿawn*) and his nation and delivered by Moses (q.v.). Reference to the Egyptian plagues appears in the Qurʾān approximately twenty times. Identification of the actual plagues themselves appears only once (Q 7:133).

The most detailed qurʾānic accounts of Moses' interaction with the Egyptian Pharaoh appear in Q 7:100-41 and Q 20:1-77. These largely resemble the account in the biblical book of Exodus (*Ex* 7:14-12:30), in which God sends Moses to free the Israelites from slavery in Egypt; when Pharaoh refuses to acquiesce, God sends down ten plagues as punishment and as enticement for him to relent. In the Qurʾān, the plagues appear not as "plagues" but as "signs" (q.v.; *āya,* pl. *āyāt*). The difference in nomenclature points to the Qurʾān's understanding of their function, a function different than that in the Bible. In the Qurʾān it seems the main purpose of these *āyāt* is not to punish Pharaoh for refusing to free the Israelites (see CHILDREN OF ISRAEL). Rather, these events are first and foremost signs attesting to God's omnipotence and omnipresence, which Pharaoh has previously refused to

acknowledge. In fact, the account of Q 20:1-77 suggests that the freeing of the slaves is itself punishment; Pharaoh, we are told in Q 20:43, had become exceedingly rebellious (see DISOBEDIENCE; ARROGANCE) against God and so God sent Moses and his brother (see AARON) to him with God's signs. Other qurʾānic references to Moses and the signs mention neither the slaves nor their redemption at all. This omission indicates that the bringing of signs that would prove God's power (see POWER AND IMPOTENCE) to Pharaoh, and not the freeing of the slaves per se, was Moses' main charge (Q 7:103; 10:75; 11:96-7; 23:45; 28:4, 32; 29:39; 40:23; 43:46; one exception to this appears in Q 14:5).

Because of this different understanding of the purpose of these events, some decidedly non-plague events are included in the Islamic lists. The Qurʾān, in Q 17:101, puts the number of signs at nine but does not specify what they are. In Q 7:133, the Qurʾān identifies five of these, though without any further elaboration, as wholesale death, locusts, lice, frogs and blood (cf. the ten plagues in the Bible). Qurʾānic exegetes present various explanations of the remaining four. Some scholars identify these with four other signs mentioned in the Egyptian context: famine (q.v.), dearth of everything (Q 7:130), Moses' hand turning white and his staff turning into a serpent (Q 7:107-8; Ṭabarī, *Tafsīr,* ix, 30-40; Ibn Kathīr, *Tafsīr,* iv, 357; see ROD). Others maintain that the four are Moses' hand, staff, and tongue — presumably a reference to his speech impediment — and the sea — presumably a reference to its splitting and allowing the Israelites to walk through unharmed while the Egyptians drowned (Ṭabarī, *Tafsīr,* xv, 171-2). Yet others replace Moses' tongue with generalized obliteration (ibid.).

Horovitz (*KU,* 20) points out that Psalms 105:25-36 and the first century C.E. Jewish historian Josephus (in his *Antiquities,* book 2, chapter 14) recount only nine plagues, as in the Qurʾān, rather than Exodus' ten. Both lists differ from the Qurʾān's list as well as from each other.

Planets and Stars

Celestial bodies. Not unexpectedly, references to celestial phenomena in the Qurʾān were influenced by the contemporary knowledge of these phenomena in the Arabian peninsula. The ancient Arabs, prior to their contacts with Persian, Indian and Greek science (beginning in the second/eighth century), had developed over the centuries their own popular rather than "scientific" knowledge of the sky and celestial phenomena (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SCIENCE AND THE QURʾĀN). From the third/ninth century onward, Arabic lexicographers collected this astronomical information in special monographs, the so-called *anwāʾ*-books. The ancient Arabs knew the fixed stars and the planets, though the current words for "star," *kawkab* and *najm,* were used indiscriminately and with no distinction between the two. Several hundred stars were known by name (cf. Kunitzsch, *Untersuchungen*) and there were indigenous names also for the planets (cf. Eilers,

Planetennamen). Seasons (q.v.) and periods of rain and drought were connected with the observation of the acronychal settings and simultaneous heliacal risings of certain stars or asterisms, the so-called *anwāʾ* (cf. Pellat, Anwāʾ), while the stars were used for orientation *(ihtidāʾ)* in the migrations of the Bedouins (see BEDOUIN) by night (see DAY AND NIGHT; MONTHS). But from all this lore only one star is mentioned in the Qurʾān by name, *al-shiʿrā* (see below, under "Defined stars"; see also SIRIUS).

Vocabulary

It is noteworthy that many words used in the Qurʾān in connection with celestial phenomena later became part of the technical vocabulary in Arabic-Islamic "scientific" astronomy. Such words are *burj* (pl. *burūj*), "the constellations," or "signs," of the zodiac (Q 15:16; 25:61; 85:1; in Q 4:78 *[fī burūjin mushayyadatin],* however, *burūj* is used in the sense of "towers"); *fajr,* "dawn" (Q 2:187, etc.; see DAY, TIMES OF); *falak,* "sphere, orbit" (Q 21:33; 36:40; cf. Hartner, Falak); *gharaba,* "to set" (i.e. Q 18:17, 86), and derivations (*ghurūb,* "setting": Q 20:130; 50:39; and *maghrib,* "place of setting, west": Q 2:115, etc.); *khasafa,* the moon (q.v.) "is eclipsed" (Q 75:8); *kawkab* (pl. *kawākib*), "star" (Q 6:76, etc.); *manāzil,* "stations," or "mansions" of the moon (Q 10:5; 36:39; cf. Kunitzsch, al-Manāzil); *mashriq,* "east" (Q 2:115, etc.); *najm* (pl. *nujūm*), "star" (Q 16:16, etc.; also in Q 55:6, where the preferred interpretation of *al-najm* is "star[s]" rather than "plants," or "grasses" [q.v.]; cf. Paret, *Kommentar,* 465); *al-qamar,* "the moon" (Q 6:77, etc.); *al-shams,* "the sun" (q.v.; Q 2:258, etc.); *shihāb* (pl. *shuhub*), "fire" (Q 15:18; 37:10; 72:8-9; but in context rather more specifically "shooting star, meteor"); *ṭalaʿa,* "to rise" (i.e. Q 18:17, etc.) and derivations (*ṭulūʿ,* "rising": Q 20:130; 50:39; and *maṭlaʿ,* "rising" of the dawn: Q 97:5; also *maṭliʿ,* "place of rising" of the dawn: Q 18:90); and *ufuq* (pl. *āfāq*), "horizon" (Q 41:53; 53:7; 81:23).

Items of astronomical interest

The order of the universe

God has created the heavenly abode as "seven heavens," *samāwāt* (Q 2:29; 17:44; 23:86; 41:12; 65:12; 78:12), which are arranged in layers one above the other, *ṭibāqan* (Q 67:3; 71:15), or in paths or courses, *ṭarāʾiq* (Q 23:17; see HEAVEN AND SKY). While, on the one hand, this strongly reminds one of Greek cosmology (q.v.) with the famous spheres superimposed above each other, it is, on the other hand, unlikely that any echo of this Aristotelian-Ptolemaic theory had ever come to the knowledge of seventh-century Arabia. Also, the Greek system needs eight spheres for the sun, moon, the five planets and the fixed stars, whereas the Qurʾān speaks of only seven. So the qurʾānic seven heavens do not seem to belong to cosmology or astronomy, but rather to theological speculation and may be compared to the seven heavens mentioned in the "Testament of the XII Patriarchs" (*Lev* 3) and in the Talmudic literature (see THEOLOGY AND THE QURʾĀN). Similarly it remains an open question whether the courses *(ṭarāʾiq)* of Q 23:17 really refer to the courses of the sun, the moon and the five planets. Very interesting in this connection is also Q 21:33: "[God created] … and the sun and the moon, each of them moving in a sphere" (… *wa-l-shamsa wa-l-qamara wa-kullun fī falakin yasbaḥūn;* cf. also Q 36:40). This seems like an echo of Greek cosmology: each celestial body moves in its own sphere. But here again we hesitate to understand the Qurʾān's statement in such a strict scientific sense. The sun, moon and the stars are, at his command, "made to serve [humans]" (*musakhkharāt,* Q 7:54; cf. 14:33; 16:12; 31:20; 45:13). Sun and moon

were created as a means for calculating time (q.v.) by years and months (*ḥusbānan,* Q 6:96; or *bi-ḥusbān,* Q 55:5; cf. 10:5). For this purpose, God divided the moon's course into "mansions" (*manāzil,* Q 10:5; 36:39) and the heavens into "constellations," or, more specifically, "the zodiacal signs" (*burūj,* Q 15:16, 25:61). It remains undetermined whether the Qurʾān here refers to the complete system of the twenty-eight lunar mansions as developed in later Arabic writings or to some unspecified mansions only. The oldest known text showing the complete list of the twenty-eight lunar mansions is reported by ʿAbd al-Malik b. Ḥabīb on the authority of Mālik b. Anas (d. 179/795-6; cf. Kunitzsch, ʿAbd al-Malik). As far as the constellations are concerned, what evidence we have for seventh-century Arabia indicates an awareness of only some of the constellations of the — originally Babylonian — zodiac. The complete system of twelve constellations or, respectively, signs, became known only after contact with Greek science (cf. Hartner-Kunitzsch, Minṭaḳa).

Further qurʾānic citations indicate that observation of the new moons *(al-ahilla)* was used to determine time and the date for pilgrimage (q.v.; Q 2:189). The stars served for orientation by night *(ihtidāʾ)* on land and sea (i.e. Q 6:97; 16:16; cf. also Q 6:63; 27:63; see JOURNEY). Mention is frequently made of a "fire" (*shihāb,* pl. *shuhub*) in the sky, which is thrown at some satans trying to listen secretly to the discourse of the angels (Q 15:17-8; 37:6-10; 67:5; 72:8-9; see ANGEL; DEVIL). It is quite probable that this "fire" in the sky describes shooting stars, i.e. meteors. *Shihāb* later became the still current Arabic term for "shooting star." The "myth of the shooting stars" (*Sternschnuppenmythus;* cf. Ullmann, *Neger,* 73-6) became a favorite motif in post-classical Arabic poetry.

Unspecified stars

In several of the oldest sūras (see CHRONOLOGY AND THE QURʾĀN), oath formulas (see OATHS; LANGUAGE AND STYLE OF THE QURʾĀN) appear — such as "By the heaven with its constellations" (*wa-l-samāʾi dhāti l-burūj,* Q 85:1), "By the sun and its light in the morning" (*wa-l-shamsi wa-ḍuḥāhā,* Q 91:1), "By the moon when it is full" (*wa-l-qamari idhā ttasaqa,* Q 84:18) — which are all easily understandable. In some cases, however, an oath is sworn by some star which remains undefined, as in "by the heaven and the one coming by night" (*wa-l-samāʾi wa-l-ṭāriqi,* Q 86:1), where the ambiguous phrase, "the one coming by night" *(al-ṭāriq),* may refer to a star or, as some say, to the morning star, which would be Venus. But *al-ṭāriq* is explained in Q 86:3 as "the star brightly shining" *(al-najmu l-thāqibu),* which — by analogy to Q 37:10, where *thāqib* is the epithet of *shihāb,* a shooting star — may also here describe a shooting star or meteor. The setting of any star could be meant by Q 53:1: "By the star when it sinks" *(wa-l-najmi idhā hawā);* alternatively, it could specifically refer to the setting of the Pleiades (*al-najm* is reported as an Arabic name for the Pleiades; cf. Kunitzsch, *Untersuchungen,* no. 186), or — if *hawā* is interpreted as a sudden, quick, falling — as a meteor shooting down. Q 56:75, "I swear by the *mawāqiʿ* of the stars" *(fa-lā uqsimu bi-mawāqiʿi l-nujūmi),* is also ambiguous: *mawāqiʿ* could be the places where the stars set on the western horizon, or places where meteor showers come down. Further undefined celestial phenomena are the star *(kawkab)* seen in the night by Abraham (q.v.; Q 6:76; see Gilliot, Abraham) and the eleven stars *(kawkab)* seen by Joseph (q.v.), together with the sun and the moon (Q 12:4; on this topic cf. Joseph's dream in *Gen* 37:9; see also DREAMS AND SLEEP; VISIONS).

Defined stars

Only once is a star mentioned in the Qurʾān by its old Arabic name: "Has the one who turned away [from God's message] not been informed that (Q 53:33) … and that he is the lord of *al-shiʿrā?*" (*wa-annahu huwa rabbu l-shiʿrā,* Q 53:49). *Al-shiʿrā* is the star alpha Canis Maioris, Sirius, the brightest fixed star in the sky. The implication is that Sirius was adored by some Arab tribes in the Age of Ignorance (q.v.; *jāhiliyya*), the time before Islam (cf. Kunitzsch, al-Shiʿrā); here it is now stressed that God, the creator of all beings, is also the lord of Sirius, so that the adoration of stars has come to an end (see POLYTHEISM AND ATHEISM; IDOLS AND IMAGES; CREATION). A clear case is also Q 81:15-6, where an oath is sworn by the five planets (i.e. Mercury, Venus, Mars, Jupiter and Saturn; cf. Ibn Qutayba, *Anwāʾ,* 126, 6-8; Ibn Sīda, *Mukhaṣṣaṣ,* ix, 36,14-5; Ibn al-Ajdābī, *Azmina,* 90-4): "I swear by the [stars] retrograding,/travelling [and] hiding" *(fa-lā uqsimu bi-l-khunnas/al-jawārī l-khunnas)*. These three epithets refer to the characteristic qualities of the planets: retrogradation, their travelling (as opposed to the fixed stars, which always keep their position relative to each other; similar terms are sometimes found in later literature: *al-kawākib al-jāriya, WKAS,* i, 580 [col. b, ll. 29-30]; *al-nujūm al-jāriyāt,* Ullmann, *Naturwiss.,* 387) and their "hiding" in the light of the sun when they come near it (cf. Ibn al-Ajdābī, *Azmina,* 94,11).

Pledge

Something given as security for the satisfaction of a debt or other obligation; the contract incidental to such a guaranty. The term commonly translated as "pledge" appears three times in the Qurʾān in three different forms: *rahīn* (Q 52:21), *rahīna* (Q 74:38) and *rihān* (Q 2:283). Al-Qurṭubī (d. 671/1272), in his *Jāmiʿ,* reports that the term in Q 2:283 is also read by Ibn Kathīr and Ibn ʿAmr as *ruhun,* by ʿĀṣim b. Abī al-Najūd as *ruhn* and by Abū ʿAlī al-Fārisī as *rahn* (see READINGS OF THE QURʾĀN; RECITATION OF THE QURʾĀN; ORTHOGRAPHY OF THE QURʾĀN).

Exegetes interpret the uses of "pledge" in Q 52:21 and Q 74:38 as being parallel. In his *Tafsīr,* Abū l-Layth al-Samarqandī (d. 375/985) interprets both verses to refer to the day of resurrection (q.v.) on which all souls will be pledged and weighed for the works of each person (see GOOD DEEDS; EVIL DEEDS; LAST JUDGMENT). Ibn Kathīr (d. 774/1373; *Tafsīr,* ad loc.) says the meaning of both verses is that a person cannot

carry the sins of another with his good deeds (see SIN, MAJOR AND MINOR). Modern interpretations (see EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY) also stress that these verses militate against the idea of saintly or prophetic intercession (q.v.; see also SAINT; PROPHETS AND PROPHETHOOD).

Q 2:283 is the focus for exegesis about the legality of giving a pledge or "pawn" in the case of an exchange when no witness or writer is present to draw up a document of the exchange (see WITNESSING AND TESTIFYING; CONTRACTS AND ALLIANCES). Al-Qurṭubī (*Jāmiʿ*, ad loc.) defines a pledge as the legal retention of a specific object, in lieu of a document, until the price is paid. Legal theorists raise several points of dispute beyond this basic characterization (see LAW AND THE QUR'ĀN).

In his *Aḥkām* on Q 2:283, Ibn al-ʿArabī (d. 543/1148) reports that Mujāhid, based on a literal reading of Q 2:283, is of the opinion that a pledge can only be used when an exchange is made while traveling (see JOURNEY). Ilkiyā l-Harrāsī (d. 504/1110; *Aḥkām al-Qur'ān,* ad loc.) cites a report that the prophet Muḥammad once made a pledge to a Jew (see JEWS AND JUDAISM) in Medina (q.v.), thus demonstrating that pledging while not traveling is permitted.

There is also disagreement over the legal status of the pledge once it is in the hands of the party receiving it. According to al-Shāfiʿī (d. 204/820), the pledge is only in lieu of a document of contract. The recipients of the pledge, therefore, are not responsible for its upkeep; but neither are they allowed usufruct or confiscation of the pledge if the contract for which the pledge is made is not fulfilled by the giver of the pledge. The Ḥanafīs and Mālikīs hold that the party receiving the pledge is responsible for its upkeep, may use and benefit from the pledged item, and is entitled to keep the pledge if the giver of the pledge does not fulfill the contract in the specified time (see BREAKING TRUSTS AND CONTRACTS).

Other areas of dispute include: whether an item jointly owned may be pledged by only one of the owners or by both of them for different transactions; whether a debt (q.v.) can be pledged; to whom the pledge can be entrusted; the circumstances in which a slave or a slave's manumission may be pledged (see SLAVES AND SLAVERY); and what happens when the person receiving the pledge dies before the fulfillment of the contract (see INHERITANCE). See also COVENANT for "pledge" in the sense of testament, commitment or covenant.

Poetry and Poets

Composition in metrical and rhymed language; and those who compose such compositions. By the time the Prophet was born, Arabic poetry had long been the key cultural register of the language. Other literary forms, particularly oratory and story telling, had important cultural roles but it was poetry that dominated (see PRE-ISLAMIC ARABIA AND THE QUR'ĀN; LITERARY STRUCTURES OF THE QUR'ĀN; ORALITY AND WRITING IN ARABIA). It is uncertain when this poetry *(shiʿr),* which

has no functional parallel in any of the other Semitic languages (see RHYMED PROSE), first came into being, but it is reasonably clear that its original forms, rhyme patterns, meters and thematic conventions were largely fixed by the early part of the fifth century C.E. (the time of the earliest surviving pieces). There were to be developments after that, but they built on the foundations already in place. In later times the overarching themes were thought to be panegyric, lampoon, lament, love, description, self-glorification and aphoristic sayings; but such broad categorizations give little idea of the detailed thematic richness we find in the surviving corpus.

It is clear that most of this poetry is essentially tribal poetry; that the tribes were nomadic and dependent on their camels and, to a lesser extent, on their horses, sheep and goats (see CAMEL; ANIMAL LIFE); that they lived in the desert and semi-desert and the surrounding mountains (see ARABS; BEDOUIN; NOMADS); that the tribes frequently fought each other (see FIGHTING; WAR; EXPEDITIONS AND BATTLES); that life was at all times perceived as hard and dangerous; that intratribal and intertribal relationships had led to a complex code of conduct both for men and for women (see COMMUNITY AND SOCIETY IN THE QUR'ĀN; SOCIAL INTERACTIONS); that there was an ethical code based on the notion of *muruwwa* (see ETHICS AND THE QUR'ĀN); but that, in contrast, with few exceptions, religious ideas were relatively little developed (see RELIGION; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), with the vagaries of a rarely benevolent fortune and the ever-present menace of death and, particularly, untimely death consuming the tribesman's thoughts (see FATE). There was an ambivalent view of settlements (see CITY): they were the source of necessities not found in the desert and of imported luxuries such as wine (q.v.; see also INTOXICANTS); but they were thought to be unhealthy places.

There were also poets in the settlements themselves; for example, al-Samaw'al b. ʿĀdiyā at Taymā', ʿAdiyy b. Zayd at al-Ḥīra, and an older contemporary of the Prophet, Umayya b. Abī l-Ṣalt at al-Ṭā'if. None of the poets of the settlements, however, achieved the fame and status of the great Bedouin poets. It was to the latter that the Lakhmid rulers of al-Ḥīra and their rivals the Ghassānids of southern Syria turned when they wanted some panegyric (see BYZANTINES; CHRISTIANS AND CHRISTIANITY). By the beginning of the seventh century C.E. their patronage enabled successful poets such as Maymūn b. Qays al-Aʿshā to become itinerant troubadours. Al-Aʿshā was not the only master poet to be a contemporary of the Prophet. Others were Zuhayr b. Abī Sulmā, Labīd b. Rabīʿa, ʿĀmir b. al-Ṭufayl and Durayd b. al-Ṣimma. There were many more not of the highest rank.

Some seventy-five years ago, Gibb *(Arabic literature)* succinctly summed up some of the key reasons for the success of pre-Islamic poetry:

> [But] its appeal lies far more in the fact that, in holding the mirror up to life, it presented an image larger than life. The passions and emotions and portrayals were idealized in content and expression — in content because it presented the Arabs to themselves as they would have liked to be, immeasurably bold and gallant and open-handed, and in expression because these ideal images were clothed in rich, sonorous and evocative language, and given emotional intensity by the beating rhythms and ever-recurring rhyme (p. 25).… All of these subserved [the poet's] main purpose, so to stimulate the imaginative response of his audience that the poem becomes a

dialogue between them, a dialogue in which the audience are alert to grasp the hints and allusions compressed within the compass of his verse and to complete his portrait or thought for themselves (p. 26).

Factors such as these were instrumental not only in ensuring the success of the poetry in its own time but in providing it with an appeal that still grips Arabic-speaking hearers today.

None of this is likely to have troubled the Prophet greatly, but there were two aspects of poetry that must have been deeply disturbing to him. The first is that it was a short step from lampoon to obscenity or, much worse, to the uttering of curses (see CURSE). Poets' invective was common and caused much ill will. The second aspect is more complex and more serious. From the beginning the Arabs had linked their poets with magic (q.v.) or, at least, preternatural, non-human forces (see DEVIL; JINN; INSANITY). There is ample evidence that poets (and likewise *kāhin*s, soothsayers [q.v.]) were believed to have a preternatural driving force, given various names: *khalīl* (euphemistic "friend, companion"; see FRIENDS AND FRIENDSHIP), *jinn* and even *shayṭān* — the Greek *daimōn*. We do not rely on late sources for evidence on this. Al-Aʿshā, for example, several times refers to his demonic alter ego by the pet name *miṣḥal*, "the eloquent tongue."

It is against this background of the preternatural and of magic that one should view what the Qurʾān has to say about poetry and the poets. The key words found in the text are *shāʿir*, "poet" (Q 21:5; 37:36; 52:30; 69:41), *shiʿr*, "poetry" (Q 36:69), *majnūn*, "possessed by a jinn" (Q 15:6; 26:27; 37:36; 44:14; 51:39, 52; 52:29; 54:9; 68:2, 51; 81:22), *jinna*, "possession by a jinn" (Q 7:184; 23:25, 70; 34:8, 46) and also *kāhin*, "soothsayer" (Q 52:29; 69:42). Because of overlapping (Q 37:36, for example, has the phrase *shāʿir majnūn*), they involve nineteen passages, which fall into two kinds: (1) Those in which unbelievers are depicted as declaring that a prophet is a poet, a soothsayer, or possessed; and (2) those in which there is a strong denial of such claims.

Most of the passages are found in sūras thought to be early or middle Meccan, though there are also three from the late Meccan period (see CHRONOLOGY AND THE QURʾĀN). They are obviously of a polemical kind, though a surprising number are linked to eschatological material (see ESCHATOLOGY). There is no Medinan passage of this kind. The objections are normally put into the mouths of Muḥammad's Meccan opponents (see OPPOSITION TO MUḤAMMAD), though in the case of *majnūn*, two of the passages refer to Pharaoh (q.v.) and Moses (q.v.), and two to Noah (q.v.) and his opponents. The general picture is therefore that Muḥammad is not alone as a prophet in facing such objections. The passages specifically referring to *shāʿir* (and also *kāhin*), however, relate to Muḥammad rather than anyone else. The objections of the Prophet's opponents are vividly summed up in Q 21:5: "No! They say, 'Tangled nightmares. No! He has invented it. No! He is a poet. Let him bring us a sign, just as the ones of old were sent with signs'."

The slightly earlier Q 52:29-31 is a particularly striking passage. First, there is a firm denial that Muḥammad is either a *kāhin* or *majnūn*. This is then countered by a suggestion by his anonymous opponents that he is a *shāʿir:* "So give the reminder (q.v.). By the grace of your lord you are neither a soothsayer nor one possessed. Or they say, 'A poet for whom we await the ill-doings of fate.' Say, 'Wait. I shall be one of those waiting with you'." In addition to using three of the key words, the passage

has *rayb al-manūn,* "the ill-doings of fate," a phrase that has various parallels in pre-Islamic poetry.

The conclusion to be drawn from such passages is that there was a great deal of verbal sparring and polemic on both sides in Mecca (q.v.) and that the Prophet's opponents did not hesitate to call him "a poet," a "soothsayer," "one possessed" (and much else that is of no direct concern here). This makes good sense if the words are being used because of their pejorative background. The alternative suggestion that Muḥammad's opponents could not differentiate between poetry, the utterances of *kāhin*s and passages from the Qurʾān does not bear close scrutiny.

The Qurʾān also makes it clear that poetry is not an appropriate vehicle for the transmission of God's message by the Prophet. Q 36:69-70 runs: "We have not taught him poetry. That is not proper for him. This is only a reminder and a recitation that is clear, that he might warn those who are alive and that the word may be proved true against the unbelievers." In short, not only was the Prophet not possessed, either as a poet or anything else; in addition, poetry was not suitable as the register of the revelation (see REVELATION AND INSPIRATION; RECITATION OF THE QURʾĀN).

These passages thus determine the position of the Prophet and the revelation vis-à-vis poetry but they say nothing about other poets. For that we must turn to the final section of Q 26 and in particular to Q 26:224, which gives the sūra its name — "The Poets." Verses 224-7 are usually thought to be Medinan (whereas the rest of the sūra is considered to be middle Meccan) but there is no cogent reason for this view, apart from the final verse.

"Shall I tell you of those on whom the satans descend? They descend on every sinful liar (see LIE). They listen, but most of them are liars. And [there are] the poets, those who go astray (q.v.) follow them. Have you not seen how they wander in every valley, and how they say what they do not do? That is not the case with those who believe and do righteous deeds and remember God often and help themselves after they have been wronged. Those who do wrong will surely know by what overturning they will be overturned" (Q 26:221-7).

The passage is usually thought of as beginning at Q 26:224 but in view of the verses on *shāʿir* and *majnūn* mentioned above, it seems likely that the reference to *al-shayāṭīn,* "satans," in verse 221 is a typically oblique introduction to verse 224. Clearly poets are denounced but, as the passage is rhetorical (see RHETORIC AND THE QURʾĀN), the strength of the comment is very much a matter of interpretation. The view that it is a severe one seems to rely to some extent on views formed on the passages already discussed. If, however, one takes the view that Q 26:225-6 refer to the poets rather than to "those who go astray," one may reasonably take the view that it exempts at least some poets from stricture.

The possibility offered by Q 26:227 that some poets might be or become righteous fits in with the evidence of the *sīra,* the biography of the Prophet (see SĪRA AND THE QURʾĀN), and stories about the poets themselves, though there is much that cannot be taken at face value. It would appear that the well established, though minor, poet Ḥassān b. Thābit, of the Medinan tribe of Khazraj, composed poetry for the new community from the year 5/627 onwards (though quite what material this

was is now difficult to determine: at a conservative estimate 70% of his *Dīwān* is spurious). Also active on behalf of the Muslims was Bujayr b. Zuhayr b. Abī Sulmā, who eventually persuaded his brother Kaʿb b. Zuhayr to drop his opposition to Islam. Kaʿb then came to the Prophet, submitted and recited his eulogy *Bānat suʿād,* much to the delight of Muḥammad. Bujayr is alleged to have warned Kaʿb that at the conquest of Mecca Muḥammad had ordered the execution of "some of those who had satirized and insulted him" (cf. Ibn Isḥāq-Guillaume, 597). On the other hand, the Prophet appears to have taken no action against other hostile poets. Thus ʿĀmir b. al-Ṭufayl, who was implacably opposed to Islam, came on a deputation from the Banū ʿĀmir to visit the Prophet in 9/630. Despite being rumored to be involved in a plot to kill Muḥammad, he was allowed to leave Medina, though he died on the way back to his tribe, probably through an illness picked up in Medina. We may also note that somewhat later, when ʿĀmir's fellow legate, Arbad b. Qays, was killed by lightning, Arbad's half-brother Labīd, apparently by then a devout Muslim, saw nothing wrong in composing a series of laments for him.

On this basis the simple interpretation of Q 26:224-7, to wit that it shows some disapproval of poets, though with a let-out clause in Q 26:227, seems the most reasonable. That did not stop many commentators in later periods from taking a much dimmer view. This is not surprising as poets regularly got themselves into trouble for foul-mouthed satire or even inadvertently offending those in temporal or religious authority.

Polemic and Polemical Language

Discussion of controversial [religious] matters or allusion to them. Polemic in the Qurʾān consists primarily of argumentation directed against pagans (see POLYTHEISM AND ATHEISM and IDOLATRY AND IDOLATERS), Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY). Yet, polemical language may also be employed in other contexts, for example when addressing erring or recalcitrant Muslims (see ERROR; ASTRAY).

Polemic in the sense of argumentation or the refutation of others' beliefs is a prominent element in the Qurʾān since in the course of his mission Muḥammad encountered various types of opposition and criticism (see OPPOSITION TO MUḤAMMAD). It is easy, however, to underestimate the extent to which the Qurʾān contains polemical language since certain words or passages, if taken literally or at face value, would cease to be polemical (see next section; see LANGUAGE AND STYLE OF THE QURʾĀN; RHETORIC AND THE QURʾĀN; POLYSEMY).

Such an underestimation could be the consequence of preferring a literal reading as more in keeping with the solemnity and sacrosanct nature of scripture; nevertheless, elements such as hyperbole and lampooning are undeniably present in the Qurʾān (see LITERARY STRUCTURES OF THE QURʾĀN; HUMOR).

The process of refuting others' beliefs is often inseparable from the parallel process of defending one's own. For religious groups, this activity is an important part of identity-formation and boundary-drawing to the extent that a group defines itself by dissociating itself from others. In relation to the chronology of revelation (the traditional account of Muḥammad's life is here accepted in its broad outlines; see CHRONOLOGY AND THE QURʾĀN), this process is progressive. Thus, the arguments against pagans mainly in the Meccan period might constitute common ground with other monotheistic faiths, whereas the arguments deployed against Jews and Christians in the Medinan period are by definition more distinctive, serving to reinforce an Islamic identity over and against Judaism and Christianity. Among scriptures, the Qurʾān offers a particularly good example of this process since it reflects the fluctuating relations which Muḥammad and his followers had with the pagans, mainly in Mecca (q.v.), and with the Jews and Christians, mainly in Medina (q.v.). Furthermore the Qurʾān appears to have interacted in a very direct manner with its environment to the extent that it reflects a response to questions addressed to Muḥammad by specific individuals (see OCCASIONS OF REVELATION).

The nearest qurʾānic equivalents to the word "polemic" are the third-form verbs derived from the roots *jadala* and *ḥajja* (the former being rather more prevalent), both meaning to argue or dispute (see DEBATE AND DISPUTATION). Argument or disputation are activities usually attributed to Muḥammad's opponents and generally considered blameworthy (e.g. Q 3:20; 6:25; 8:6); in these instances both verbs might best be translated as "wrangling" (but it should be noted that *jadal* — or "debate" — does not necessarily have negative connotations; indeed, a treatise on the qurʾānic modes of *jadal,* i.e. the rhetorical devices employed in debating or disputing, was written by the Ḥanbalite Najm al-Dīn al-Ṭūfī [d. 716/1316]; cf. Suyūṭī, *Itqān,* iv, 60; Zarkashī, *Burhān,* ii, 24; McAuliffe, Debate with them). Disputing about God or his signs (q.v.) is considered particularly reprehensible (e.g. Q 2:139; 13:13; 40:69; 42:35). The Qurʾān says that every people *(umma)* disputed with the messenger (q.v.) who was sent to them (Q 40:5) and many of the arguments which are reported as having taken place between former prophets and their peoples (see e.g. Q 11:84-95; see PROPHETS AND PROPHETHOOD) have a bearing on Muḥammad's disputes with his contemporaries, whether they be doctrinal (e.g. relating to the oneness of God or the final judgment; see LAST JUDGMENT) or moral (e.g. exhorting to honesty [q.v.] in transactions; see ETHICS AND THE QURʾĀN; VIRTUES AND VICES, COMMANDING AND FORBIDDING). They are therefore to be considered an integral part of the qurʾānic polemic. The polemical function of these passages is reinforced by the frequent references to the punishment, whether temporal or otherworldly (see CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT), which was visited on the recalcitrant disputants.

The relationship between the qurʾānic polemic and pre-Islamic monotheistic polemic is of interest but rather too complex to be explored in any detail here (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC;

PRE-ISLAMIC ARABIA AND THE QUR'ĀN). John Wansbrough has sought to situate the qur'ānic polemic, along with the polemical material in the *sīra* literature (i.e. the "biography of the Prophet"; see SĪRA AND THE QUR'ĀN), within the broader Judeo-Christian tradition (see SCRIPTURE AND THE QUR'ĀN). To this end he identified twelve main themes and their pre-Islamic antecedents: prognosis of Muḥammad in Jewish scripture; Jewish rejection of that prognosis; Jewish insistence upon miracles (see MIRACLE) for prophets; Jewish rejection of Muḥammad's revelation (see REVELATION AND INSPIRATION); Muslim charge of scriptural falsification (see FORGERY); Muslim claim to supersede earlier dispensations (see ABROGATION); the direction of prayer (see QIBLA); Abraham (q.v.) and Jesus (q.v.) in sectarian soteriology (see ESCHATOLOGY; SALVATION; HISTORY AND THE QUR'ĀN); Solomon's (q.v.) claim to prophethood; sectarian Christology; the "sons of God"; and the "faith [q.v.] of the fathers" (Wansbrough, *Sectarian milieu,* 40-3; see BELIEF AND UNBELIEF; GENERATIONS; ḤANĪF).

Language and style

The form and style of the Qur'ān is integral to its import and impact (see FORM AND STRUCTURE OF THE QUR'ĀN), and polemic by definition seeks to have an impact on those whom it addresses. Elements of polemic are not confined to any particular sections of the Qur'ān, and there is a constant interplay and overlap between polemic and other elements such as eschatology, signs controversies and narrative (see NARRATIVES), as has been demonstrated by Robinson with reference to the early Meccan sūras (q.v.; Robinson, *Discovering,* 99-124). Polemical elements in the Qur'ān, which are often parenthetical, may incorporate any one or more of the following:

— exhortation (see EXHORTATIONS), e.g. Q 2:40: "O Children of Israel (q.v.)! Remember my favor I bestowed upon you (see GRACE; BLESSING); fulfill your covenant (q.v.) with me and I shall fulfill my covenant with you, and fear (q.v.) none but me";

— rebuke or criticism, e.g. Q 5:61: "When they come to you, they say: 'We believe,' but in fact they enter with disbelief and they go out the same";

— arguments, e.g. Q 16:103: "We know indeed that they say: 'It is a man that teaches him.' [But] the tongue of him they mischievously refer to is foreign, while this is a clear, Arabic tongue" (see ARABIC LANGUAGE; INFORMANTS);

— challenges, e.g. Q 2:111: "They say: 'None shall enter paradise (q.v.) unless he be a Jew or a Christian;' those are their vain desires. Say: 'Produce your proof (q.v.) if you are telling the truth'" (see PROVOCATION);

— refutations of accusations against Muḥammad, e.g. Q 53:2-3: "Your companion has neither gone astray nor erred, nor does he speak out of his own desire";

— discrediting opponents by means of a critical aside or by declaring them to be liars (see LIE), e.g. Q 37:151-2: "Behold they say, out of their own invention: 'God has begotten children'; but they are liars!";

— threats or warnings of temporal or otherworldly punishment, e.g. Q 9:61: "Those who molest the Prophet will have a grievous chastisement";

— declarations of woe, e.g. Q 2:79: "Woe to those who write the book (q.v.) with their own hands and then say: 'This is from God'";

— curses, e.g. Q 2:161: "Those who disbelieve and die in a state of unbelief, on them is God's curse (q.v.) and the curse of

angels (see ANGEL) and of all humankind";
— satire, e.g. Q 7:176: "His similitude (see PARABLES) is that of a dog (q.v.): if you attack him, he lolls out his tongue, and if you leave him alone, he lolls out his tongue. That is the similitude of those who reject our signs";
— rhetorical or hypothetical questions, e.g. Q 84:20: "What is wrong with them, that they do not believe?";
— exclamations, e.g. Q 7:10: "We have placed you on the earth and given you therein a provision for your livelihood, but little do you give thanks!";
— emphatic denials or denunciations, e.g. Q 104:3-4: "He thinks his wealth (q.v.) will give him immortality (see ETERNITY). By no means! He will certainly be thrown into the consuming one (see HELL AND HELLFIRE)!".

The range of qurʾānic terminology associated with polemic is too broad to be treated here. As far as the content of the polemic is concerned, this terminology could perhaps most usefully be analyzed in terms of clusters of words related to central concepts such as being astray/turned away (from guidance or the truth [q.v.]); immorality and unrighteousness; enmity and hostility (to God, Muḥammad and/or the Muslims; see ENEMIES); hypocrisy (see HYPOCRITES AND HYPOCRISY); haughtiness and pride (q.v.; see also ARROGANCE); rebellion (q.v.; see also DISOBEDIENCE) or stubbornness (see INSOLENCE AND OBSTINACY); and stupidity or ignorance (q.v.).

A striking feature of the qurʾānic polemic, particularly in its admonitory or exhortatory passages, is the regular occurrence of paired opposites: believers and unbelievers, truth and falsehood, guidance and error, paradise and hell (e.g. Q 2:2-7; 47:1-3; 59:20; see PAIRS AND PAIRING). These binary oppositions serve to confront the listener with a stark choice, and generally incorporate an implicit or explicit warning about the consequences of making the wrong one. Another common feature is a reciprocity or parallelism between the attitude of unbelievers or hypocrites to God and his attitude to them; thus they seek to deceive God but in fact he deceives them (Q 4:142); they forget him and so he forgets them (Q 9:67); they plot but so does God (Q 3:54; 8:30), and so on.

Polemical passages may be directed at particular groups of people (see headings below) or at particular beliefs or forms of behavior. Far from being a dispassionate discourse on morals, the qurʾānic condemnation of a given behavior often constitutes an accusation that such behavior is being engaged in, and the emphasis falls as much on the perpetrators as on the behavior itself. This is in accordance with the Qurʾān's tendency to emphasize the practical and the concrete rather than the abstract. It may, for example, describe those who are engaging in a particular form of morally reprehensible activity as "those in whose hearts there is a disease" (*alladhīna fī qulūbihim maraḍun,* e.g. Q 8:49; see HEART; ILLNESS AND HEALTH), or it may declare or call down God's curse on them, or refer to their unenviable destiny in the hereafter. The eschatological dimension shows the qurʾānic concern not just to describe or condemn, but also to motivate humans to avoid or desist from such behavior.

As indicated above, polemic is not necessarily to be taken at face value, as is clear from its frequent association with elements such as satire, encompassing features like hyperbole and caricature, and from its frequent use of metaphorical language (see METAPHOR). The Qurʾān contains many examples of the use of irony or satire to ridicule opponents: those who were charged with the prescriptions of the

Torah (q.v.) but failed to carry them out are compared to "a donkey laden with huge tomes" (Q 62:5); poets (see POETRY AND POETS), with whom Muḥammad's opponents sought to identify him, are described as "wandering distractedly in every valley" (Q 26:225); the pagans who attribute daughters to God prefer sons for themselves, and are grief-stricken when they receive tidings of a baby girl (Q 43:16-7; see INFANTICIDE; CHILDREN; GENDER); those who are reluctant to fight have rolling eyes or almost swoon at the mention of battle (Q 33:19; 47:20; see FIGHTING; EXPEDITIONS AND BATTLES; JIHĀD); and there is probably a lampooning element in the accusation that, for Christians, God is not just one of a trinity or tritheism but "the third of three" (Q 5:73; see TRINITY). Examples of the use of metaphorical language include the description of the unbelievers as deaf, dumb and blind (e.g. Q 2:18; see SEEING AND HEARING; VISION AND BLINDNESS; HEARING AND DEAFNESS; SPEECH), or as having a veil, seal or lock on their hearts (e.g. Q 17:46; 2:7; 47:24).

The classification of parts of the Qurʾān as polemical may require identifying those passages where particular terms are not intended as a straightforward objective description. For example, the term *ʿaduw*, "enemy," would not be considered polemical when used to describe a military opponent, but becomes so when the situation is rather more ambiguous, or when the foremost aim is condemnation, as where particular persons are branded as, for instance, "enemies of God" (e.g. Q 41:28; cf. 58:19, the "party of Satan"; see DEVIL; PARTIES AND FACTIONS). If one applies the same principle to a central religious concept such as "polytheism/polytheist" *(shirk/mushrik),* it becomes apparent that an analysis of polemic in the Qurʾān could have considerable significance for the interpretation of particular terms or concepts.

Polemic against polytheists, unbelievers and hypocrites

The terms "polytheist" and "unbeliever" correspond closely to the qurʾānic terms *mushrik* and *kāfir* (the latter term also incorporating the sense of ingratitude, i.e. in the face of God's favors; see GRATITUDE AND INGRATITUDE). These terms and their cognates, however, sometimes appear to be used interchangeably (e.g. Q 6:1; 40:12), and on occasion both terms have a more comprehensive semantic application. For example, both are at times applied to Christians or Jews (see next section). In these cases, as in subsequent Muslim tradition, the accusation of "polytheism" *(shirk)* or "unbelief" *(kufr),* is directed at self-professed monotheists, the point being not that they are literally to be equated with outright idolators or polytheists but that certain aspects of their belief or practice are seen as compromising the divine oneness. *Kufr* is sometimes closely associated with various types of reprehensible behavior, in fact certain types of behavior may be taken as an indication that the perpetrator is an unbeliever; Izutsu (*Ethical terms,* 113-67) has shown how central this concept is, and how closely related to almost all other negative ethical values or qualities. It is therefore inappropriate to try to define these terms too narrowly or precisely; an *a priori* assumption of absolute precision or consistency in qurʾānic usage would lead to difficulties and apparent contradictions.

For obvious reasons, it is mainly in the Meccan portions of the Qurʾān that the objections raised by Muḥammad's pagan opponents are reported and refuted. The major themes in the qurʾānic argumentation at this stage are: the insistence on the

oneness of God and the corresponding denial of any associates; the affirmation of the last day (see APOCALYPSE), bodily resurrection (q.v.) and the final judgment; and the denial of various accusations made against Muḥammad.

Some of the arguments employed are fairly simple. For example, in the face of the pagans' denial of bodily resurrection, the Qurʾān frequently argues that if God were able to create them in the first instance, then he is capable of bringing them back to life for the purpose of judgment (q.v.; e.g. Q 6:94-5; 17:51; see CREATION; DEATH AND THE DEAD). In support of the oneness of God, the Qurʾān asserts, "if there were in them [i.e. the heavens and the earth] deities other than God, both would have been ruined" (Q 21:22). Other cases provide examples of fairly extended or multifaceted arguments. For example, in the face of demands for a miracle on the part of Muḥammad's detractors, several arguments are employed in defense of Muḥammad's alleged failure to produce one. In the Qurʾān, God declines to appease the critics by effecting miracles for various reasons: because they still would not believe (e.g. Q 6:109); in order to emphasize Muḥammad's human, nondivine status (Q 17:90-3; see IMPECCABILITY); and because the Qurʾān should be sufficient for them (Q 29:50-1). Muslims have traditionally linked this theme with the phenomenon of the "challenge" contained in several qurʾānic passages (e.g. Q 2:23-4; 10:38), which call on Muḥammad's critics to produce something comparable to the Qurʾān. Muslims understood this as implying that the Qurʾān itself constituted Muḥammad's miracle, as later elaborated in the doctrine of qurʾānic inimitability (q.v.; *iʿjāz*).

The Qurʾān reserves some of its harshest strictures for unbelievers and polytheists, especially the latter. For example, *shirk* is described in the Qurʾān as the only sin which cannot be forgiven (Q 4:48, 116; see FORGIVENESS; SIN, MAJOR AND MINOR) and the *mushrikūn* are described as "unclean," and are therefore prohibited from entering the sacred mosque (q.v.) in Mecca (Q 9:28). Unlike Jews and Christians, unbelievers and polytheists appear to have no redeeming features. Frequently, God's curse is pronounced on them and/or allusion is made to their destination in hell (e.g. Q 33:64).

The term *munāfiqūn*, "hypocrites," is almost exclusively Medinan and over time is increasingly used to denote a specific group of people. At Medina these people come to be numbered among Muḥammad's staunchest opponents, along with unbelievers and polytheists; indeed, they are sometimes explicitly paired with one of these categories (e.g. Q 4:140; 48:6), or with "those in whose hearts there is a disease" (Q 8:49; 33:12, 60). As with unbelievers, their destiny in hell is frequently proclaimed (e.g. Q 4:138; 66:9). The terms *nifāq* and *riʾāʾ* are both used to denote the abstract quality of hypocrisy, but by and large the main function of the term *munāfiqūn* appears to be to serve as a condemnatory label to draw attention to a group of people in Medina who are opportunistic and therefore fickle in their support of the Muslims. The Qurʾān is, in effect, warning the Muslims of this as well as warning the hypocrites of the consequences of their actions; actual hypocrisy and dissembling is only one of several reprehensible forms of behavior for which they are criticized in the Qurʾān.

Polemic against Jews and Christians

In the Medinan period the Qurʾān increasingly recognizes the followers of Judaism and Christianity as communities in their own right (see RELIGIOUS PLURALISM AND

THE QUR'ĀN; RELIGION; COMMUNITY AND SOCIETY IN THE QUR'ĀN). This is not the place to speculate on precisely which groups of Christians and Jews (although in the case of the latter the picture is somewhat clearer) may have been present in the Arabian peninsula in Muḥammad's time (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC; PRE-ISLAMIC ARABIA AND THE QUR'ĀN); but the Qur'ān does appear at times to have been addressing particular, possibly heretical, groups of Jews or Christians (e.g. Q 9:30 attributes to Jews the belief that ʿUzayr/Ezra [q.v.] is the son of God, a belief to which no Jewish or other extra-qur'ānic attestation has been found), and at others to reflect the beliefs of particular groups (e.g. the Nestorian emphasis on Jesus' humanity or the Docetists' denial that he was really crucified). Attempts to demonstrate any direct influence of specific groups, however, remain highly speculative.

The qur'ānic material relating to Judaism and Christianity or Jews and Christians is not all polemical, and indeed there are some verses that could be described as conciliatory; but a sizeable proportion of it, probably the majority, is. Certain criticisms are directed at both Jews and Christians, sometimes under the rubric People of the Book (q.v.; *ahl al-kitāb* or *alladhīna ūtū l-kitāb*), a category which denotes primarily but not exclusively Jews and Christians, while others are directed at one to the exclusion of the other. References to the People of the Book generally consist of exhortations (e.g. Q 4:171; 5:15), didactic questions (e.g. Q 3:98, 99), or criticisms of their behavior (e.g. Q 3:19, 69). Although some verses appear to distinguish between good and bad People of the Book (e.g. Q 3:75, 110), the prevailing opinion appears to be that most of them are unrighteous (e.g. Q 5:59; see GOOD AND EVIL; JUSTICE AND INJUSTICE). Yet other verses speak of "those who disbelieve from among the People of the Book" (e.g. Q 2:105; 59:2; 98:1), showing that the categories of *kāfirūn* and People of the Book are not mutually exclusive. There is some ambiguity concerning the question of whether conversion to Islam is expected or demanded of the People of the Book. Their respective scriptures and faiths are at least implicitly affirmed (e.g. Q 5:44, 46-7; 10:94), but at times there seems to be an expectation that People of the Book should believe in the Qur'ān, and verses expressing a desire for this vary from the wistful (e.g. Q 3:110) to the threatening (e.g. Q 4:47). This ambiguity, and the use of terms such as *kufr* and *shirk* in connection with Jews and Christians, has given rise to disagreement among Muslim interpreters as to whether, in fact, Jews and Christians who remain in their respective faiths can attain salvation, despite the apparent confirmation of this in Q 2:62 and Q 5:69. Criticisms which are directed at both Jews and Christians, although not necessarily to the same degree, include distorting, forgetting, misinterpreting or suppressing parts of their scriptures (e.g. Q 2:75, 101; 5:15, 41; see REVISION AND ALTERATION); desiring to lead Muslims astray (e.g. Q 2:109; 3:100); failing to believe in Muḥammad's message (e.g. Q 3:70; 5:81); being religiously complacent or exclusivist (e.g. Q 2:80; 5:18); being divided amongst themselves (e.g. Q 5:14; 98:4); elevating their religious leaders to quasi-divine status (e.g. Q 9:31; see LORD); and failing to follow their own religious teachings properly (e.g. Q 5:47).

In general, the qur'ānic polemic against Jews is harsher in tone and more *ad hominem* than that against Christians. The most sustained passage on the Children of Israel (*banū Isrā'īl*, the most common designation of the Jews) takes up about half of the longest sūra in the Qur'ān (beginning from Q 2:40). Commencing with exhortation,

the passage becomes increasingly condemnatory, recalling the Jews' past (and by implication present) stubbornness, disobedience and ingratitude. Just as stories of the former prophets and their opponents (see PUNISHMENT STORIES) are clearly targeting Muḥammad's contemporaries in their criticisms of those opponents, so this passage dissolves the distance between past and present by directly associating Muḥammad's Jewish contemporaries with the misdeeds of Jews almost two millennia previously. Thus, in a passage generally believed to refer to an event recorded in Deuteronomy 21:1-9 and Numbers 19:1-10, the Qurʾān declares: "Remember when you killed a man and fell into dispute among yourselves about it…. Thenceforth were your hearts hardened: they became like rocks or even harder" (Q 2:72-4; see McAuliffe, Assessing). In one of the more strongly worded passages concerning Jews it is stated that "those of the Children of Israel who disbelieved were cursed… evil indeed were the deeds which they committed… God's wrath is on them, and in torment will they abide forever," and it is concluded that Jews, along with polytheists, are "strongest in enmity to the believers" (Q 5:78-82).

Arguments directed at Christians often concern religious doctrine. The Qurʾān appears to refute the Trinity (e.g. Q 5:73, although strictly speaking the verses in question refute tritheism); the divine sonship of Jesus (e.g. Q 4:171); the divinity of Jesus (e.g. Q 5:17); and the crucifixion (q.v.; Q 4:157-8). Some of these doctrines are declared tantamount to *kufr* or *shirk* (e.g. Q 4:171; 5:17, 72-3), thus blurring the distinction between Christians and polytheists/unbelievers in much the same way that the distinction between People of the Book and unbelievers is blurred in the verses cited above.

Even more than in the case of polemic against unbelievers, it is important to observe the chronology of revelation when assessing passages relating to Jews and Christians. An example of this is the apparent denial of the crucifixion, often cited in Muslim-Christian polemic but in fact revealed in the early Medinan period when Jews, not Christians, were considered to be the main opponents of the Muslims. This denial is therefore to be understood primarily as a reproach to the Jews and a refutation of their claim to have killed Jesus. A few (e.g. Ayoub, Islamic Christology, 116-7; Zaehner, *Sundry times,* 212) conclude that this leaves open the possibility of interpreting the verse as affirming the role of God, while denying that of the Jews, in bringing the crucifixion to pass.

The fact that the Qurʾān contains conciliatory as well as polemical material relating to Jews and Christians raises the hermeneutical question of the relationship between the two types of passages. In view of the fact that the chronological progression in the Qurʾān is generally in the direction of greater hostility towards and criticism of these groups, many of the classical scholars (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) took the later, more confrontational verses as abrogating the earlier, more conciliatory ones (e.g. Q 9:29, among other verses, was generally taken to abrogate Q 2:256; see VERSES). Furthermore, the dividing line between good and bad People of the Book was generally taken to coincide with the dividing line between those who either accept Islam or would do so if they were to hear about it and those who do not or would not. In the modern period (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY), exegetes tend to place rather less emphasis on abrogation, so other approaches emerge. Those who continue to hold an overwhelmingly negative view of Christians and Christianity

may distinguish between an ideal, meta-Christianity posited in the Qurʾān and the actual Christianity with which Muḥammad and other Muslims down to the present have come into contact (see McAuliffe, *Qurʾānic*). Modernists (e.g. Ayoub, Nearest in amity, 162) prefer to take the more positive verses (e.g. Q 2:256) as of universal application while interpreting the negative verses as having limited and temporary application, for example in conditions of warfare (see WAR) or hostility between Muslims and others.

Because of its ongoing relevance throughout history, polemic against Jews and Christians raises another hermeneutical question, namely that of how far or in what respects the qurʾānic material applies to a changed environment. If individual qurʾānic verses respond to the particular beliefs of Muḥammad's Jewish and Christian contacts, as appears to be the case in at least some instances, then the question arises as to how far it is appropriate to apply those verses to later Jewish or Christian groups. Some have suggested that the Qurʾān refutes heretical Christian beliefs (e.g. tritheism, adoptionism, the physical generation of the Son) rather than the orthodox doctrines of the Trinity, Incarnation, etc. In practice, however, the vast majority of Muslim commentators have assumed that the Qurʾān does refute the Trinity, the Incarnation, and the Christian doctrine of divine sonship, especially as these are understood to contradict the central Islamic tenet of the oneness of God.

Post-qurʾānic polemic

The Qurʾān has had an immeasurable impact on subsequent Islamic literature (see LITERATURE AND THE QURʾĀN). It would be impossible to quantify the stylistic influence of the polemical material in the Qurʾān but it is safe to assume that it has been extensive; Muslim polemical writings often echo or reproduce qurʾānic vocabulary and phrases. This section will be confined to religious polemic, where the qurʾānic influence has been most in evidence.

Heresiographical and other types of work incorporate various accusations against those outside the Jewish and Christian traditions, for example charges of atheism *(ilḥād)*, heresy (q.v.)/Manicheanism *(zandaqa)* or materialism *(dahriyya)*. It is Christians who, however, have been the target of the bulk of Muslim polemical literature. This is in part because of the shared border with Christendom and the resulting fact that the Muslims' most significant military opponents were generally Christians, right down to the modern period. Christians also formed the most numerically significant communities under Muslim rule, in the case of many of the central Islamic lands evolving from a majority to a minority over the course of a few centuries. In addition, from the earliest period it was often Christians, such as John of Damascus (d. ca. 132/749), who initiated religious debates, thereby prompting a response from Muslims. Many refutations of Christianity were composed, often under the rubric *al-radd ʿalā l-naṣāra*. There was also a lesser amount of anti-Jewish polemic, and some overlap between the two in that biblical criticism, insofar as it pertained to the Hebrew Bible or the Old Testament, could be directed equally at both communities.

The Muslim polemic, although not devoid of *ad hominem* and, from about the ninth century, rational and philosophical arguments based on Greek (especially Aristotelian) philosophical categories (see PHILOSOPHY AND THE QURʾĀN), was heavily dependent on the Qurʾān, a dependence which accounts for a high degree of consistency in this literature. Thus the main

areas of criticism were scriptural integrity and the related accusation of suppressing predictions of Muḥammad and conveying false doctrine, and the overriding claim was that of abrogation (generally in the sense of Islam abrogating or superseding previous religions, but also applied internally to the biblical text). There was, however, also some knowledge and criticism of empirical Christianity, i.e. the actual practices of various Christian groups and the doctrinal and other differences between them. The polemic is not to be found in any one genre; aside from polemical works proper, treatments of other religions can be found in Qurʾān and ḥadīth commentaries (see ḤADĪTH AND THE QURʾĀN), theological treatises (see THEOLOGY AND THE QURʾĀN), works of *fiqh* (jurisprudence; see LAW AND THE QURʾĀN), heresiography, historical and geographical compendiums (see GEOGRAPHY AND THE QURʾĀN), belles lettres, and poetry.

Not surprisingly, the majority of those who undertook systematic refutations of Christianity were theologians. Among them, Muʿtazilīs (q.v.) were especially prominent (e.g. Abū ʿĪsā al-Warrāq, d. ca. 246/860, al-Jāḥiẓ, d. 255/869 and ʿAbd al-Jabbār, d. 415/1025), and instrumental in introducing more sophisticated, philosophically based arguments. Unfortunately earlier works by some of the founding figures of Muʿtazilism have not survived, for these might have given a clearer picture of the influence of Muslim-Christian controversies on the development of Islamic theology. What is clear is that certain Christian doctrines had a bearing on internal Muslim disputes. There was, for example, a parallel between the Christian concept of the Logos and the Muslim doctrine of the uncreated Qurʾān (see CREATEDNESS OF THE QURʾĀN), and between the hypostases of the Trinity and the question of the independent existence of the attributes of God (see GOD AND HIS ATTRIBUTES). While Muʿtazilī tenets had the effect of distancing Islam from those Christian doctrines, the mainstream Ashʿarī theology, which was formed in reaction to the Muʿtazila, considerably narrowed this distance.

One of the most significant figures for both the anti-Christian and anti-Jewish polemic is the Andalusian Ẓāhirī theologian Ibn Ḥazm (d. 456/1064), whose major work, *Kitāb al-Fiṣal fī l-milal wa-l-ahwāʾ wa-l-niḥal,* has continued to be influential down to the present. This work is notable for being the first Muslim source to incorporate a thorough, systematic treatment of the biblical text. His relatively detailed knowledge of the text (although it is likely that he relied on secondary sources to some extent) enabled him to list alleged contradictions, absurdities, errors, lewdness, and anthropomorphisms (see ANTHROPOMORPHISM) in the Bible. He argued strongly for the view that *taḥrīf* (scriptural corruption; see CORRUPTION) entailed extensive textual alteration, and not just misinterpretation as some other scholars had held. Like others before him, however (notably ʿAlī b. Rabbān al-Ṭabarī; d. ca. 241/855?), in his *Kitāb al-Dīn wa-l-dawla,* he claimed to be able to identify biblical predictions of Muḥammad in the extant text. Despite his considerable knowledge of both the biblical text and Islamic sciences (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY) Ibn Ḥazm lacked philosophical sophistication and, not surprisingly for a Ẓāhirī, had an extremely literalistic approach to scripture. With few exceptions, the writings of later polemicists such as Ibn Taymiyya (d. 728/1328) and Ibn Qayyim al-Jawziyya (d. 751/1350) were largely derivative, often relying heavily on Ibn Ḥazm.

The Muslim anti-Christian polemic was mainly intended for a Muslim audience and (as with the Christian anti-Muslim

polemic) was unlikely to convince the opponent because it relied on internal (i.e. Islamic) categories, in particular the doctrine of *taḥrīf* which presupposed a different understanding of revelation from the Christian one. This is seen most clearly in the qurʾānic assumption that God revealed the gospel (q.v.; *injīl*) to Jesus in the same way that he revealed the Qurʾān to Muḥammad, which posits an Aramaic gospel consisting purely of God's own words.

Contemporary Muslim polemic tends to draw more on sources external to the Qurʾān, in particular higher biblical criticism which can be used to demonstrate that the Bible is not "revealed" in the sense that Muslims generally understand revelation, i.e. the verbatim word of God (q.v.) preserved without any alterations. Two works which have been particularly influential in the modern period are Rahmat Allah Kayranawi's *Izhar ul-haqq,* which emerged from the nineteenth-century Indian Christian-Muslim public debates *(munāẓarāt),* and the twentieth-century Egyptian scholar Muḥammad Abū Zahra's *Muḥāḍarāt fī l-naṣrāniyya*. Despite benefiting from higher criticism, however, the modern polemic is not demonstrably superior to the classical works and indeed often shows an inferior knowledge of empirical Christianity. See also APOLOGETICS.

Political Science

see SOCIAL SCIENCES AND THE QUR'ĀN

Politics and the Qurʾān

This article will discuss the use of the Qurʾān to justify or contest rule. Three areas will be considered: (1) quasi-political themes in the Qurʾān; (2) the politicization of the Qurʾān in early Islam; and (3) the possibility and limitations of human rule alongside or in addition to the Qurʾān as divine communication.

Some preliminaries: As an institution governing a territory, administering its peoples and resources and legislating a socio-political order, the state as organ of rule came into being in early Islam not from qurʾānic directive but from the experience and consensus of the first Muslims (see COMMUNITY AND SOCIETY IN THE QUR'ĀN; LAW AND THE QUR'ĀN). Strong emphasis is given in the Qurʾān to obedience (q.v.) to God and the messenger (q.v.) of God (and, at one place, to those in power, *ūlū l-amr* [Q 4:59], a heavily exploited phrase which early exegetes understood as those with knowledge and intelligence, not political authority, e.g. Mujāhid, *Tafsīr,* i, 163; see KNOWLEDGE AND LEARNING; SCHOLAR; INTELLECT). The Qurʾān makes enough mention of struggle between the followers of Muḥammad and his opponents (see OPPOSITION TO MUḤAMMAD) to suggest that politics was at play in the first attempts to announce its message. Moreover, the Prophet was awarded authority (q.v.) in the form of an oath of allegiance (*bayʿa,* e.g. Q 48:10, 18; see OATHS; CONTRACTS AND ALLIANCES), in which his followers promised to fight for the cause of God (see PATH OR WAY; EXPEDITIONS AND BATTLES) until death (*bayʿat al-riḍwān;* Ibn Isḥāq, *Sīra,* iii, 236) and early writers of history, such as Ibn Saʿd (d. 230/845; *Ṭabaqāt*), do depict the Prophet as a regional hegemon, receiving delegations and tribute in exchange for protection (see CLIENTS AND CLIENTAGE; SĪRA AND THE QUR'ĀN; HISTORY AND THE QUR'ĀN).

Those who succeeded Muḥammad as leaders of the Muslim community worked to consolidate and expand the domain of Islam, e.g. Abū Bakr (r. 11-13/632-4) in the wars of apostasy (q.v.) and ʿUmar b. al-Khaṭṭāb (r. 13-23/634-44) in the conquest of Byzantine and Sasanian lands. It was conquest (q.v.) that led to the formation of a state ruled by a caliph (q.v.) and local governors and administered by magistrates and functionaries (judges and secretaries). None of this, however, can be said to bear a clear connection to qurʾānic inspiration (see REVELATION AND INSPIRATION) or even a loose one in the manner in which the Israelite monarchy was viewed through the words of Deuteronomy 16:18-18:22. The interest of theological literature in the leadership of the Muslim community was limited to sectarian debate (*kalām* or *ʿilm al-firaq;* see Madelung, Imāma; see THEOLOGY AND THE QUR'ĀN; IMĀM; KHARAJĪS; SHĪʿISM AND THE QUR'ĀN); and the collections of prophetic reports (*ḥadīth;* see ḤADĪTH AND THE QUR'ĀN) and law *(fiqh),* while speaking to the moral parameters of Islamic rule (e.g. Bukhārī, *Ṣaḥīḥ,*

Kitāb al-Aḥkām; Muslim, *Ṣaḥīḥ, Kitāb al-Imāra*), say nothing about the concept or details of political organization. The formulation of a theory connecting rule and religion was left to a genre of literature of Greek and Persian provenance known as "mirrors-for-princes," i.e. advice literature, in which it was argued that salvation (q.v.) in the next world was contingent upon socio-political prosperity in this one, mainly for two reasons. First, socio-political chaos was not conducive to performing the religious obligations by which one attained salvation and, secondly, the revealed law — the commands and prohibitions of God that define the Muslim community — could only be enforced by well-established rule, including various organs of governance and bureaus of administration. It was al-Māwardī (d. 450/1058), above all, who articulated this vision of Islamic rule, both its theory and form of governance, in *Tashīl al-nazar wa-taʿjīl al-zafar* ("Raising awareness and hastening victory") and *al-Aḥkām al-sulṭāniyya* ("The laws of Islamic governance"), respectively. It should be mentioned, however, that such connections between governance *(siyāsa)* and revelation *(sharīʿa)* were never above suspicion, playing a role in Sunnī-Shīʿī debate (see Heck, *Construction,* ch. 4).

Quasi-political themes in the Qurʾān

There is no agreement that the Qurʾān even has a political message. For Qamaruddin Khan *(Political concepts)* the qurʾānic message is not political but moral (see ETHICS AND THE QURʾĀN), a summons to submit to the one God and a life of faith (q.v.). He claims that the Qurʾān in no way sanctions one political form (i.e. monarchy, theocracy, democracy, etc.) and that those who derive a political message from the Qurʾān exploit its verses out of context for their own goals. In contrast, for Muḥammad ʿIzzat Darwaza the Qurʾān speaks to all aspects of human life, including the state and its financial, judicial, military and missionary tasks (see INVITATION) — a specifically qurʾānic political program implied, as he sees it, in the reference of Q 57:25 to the book (q.v.) and iron, i.e. divine justice and the coercive force needed to ensure public order (Darwaza, *al-Dustūr al-qurʾānī,* 50 f.; cf. Muqātil, *Tafsīr,* v, 4, 245, who associates iron with warfare; and al-ʿĀmirī, *Iʿlām,* 152, who characterizes both prophecy and human rule as divine endowment *[mawhiba samāwiyya];* see WAR; JUSTICE AND INJUSTICE; PROPHETS AND PROPHETHOOD). To that end, he adduces a number of verses (q.v.) purported to have called for political leadership after the death of the Prophet (Darwaza, *al-Dustūr al-qurʾānī,* 56 f.) and marshals forth in the body of the work an array of verses on the basis of which he constructs a qurʾānic vision of political organization.

Despite the range of opinion about its political content, the Qurʾān is clear about the connection between socio-political prosperity and obedience to the message of God as conveyed by his messengers. Denial of the divine message leads to destruction at the hands of God (e.g. Q 25:37; see PUNISHMENT STORIES). This is the way of God (*sunnat Allāh,* Q 40:85), to bring to naught those who sow corruption (q.v.) on earth (e.g. Q 28:4, 43). By underscoring the demise of former nations *(umam khāliya)* that failed to heed God's messengers (e.g. Q 40:21-2, 82; see GENERATIONS; WARNING; GEOGRAPHY), the Qurʾān signals rhetorically (see RHETORIC AND THE QURʾĀN) to its audience the consequence they will suffer if they fail to respond gratefully to the prophet Muḥammad (see GRATITUDE AND INGRATITUDE). The prophetic mission is God's claim upon a people to live in gratitude and faithfulness, making it a matter of

survival to comply with prophecy once announced (Q 28:58-9). It is no exaggeration to say that the example of former nations has considerably influenced Muslim political consciousness through the centuries (e.g. Māwardī, *Aʿlām,* 65: *wa-qaṣaṣ man ghabara min al-umam wāʿiẓ*), ensuring religion a central place in formulations of political prosperity (e.g. Juwaynī, *Ghiyāth al-umam*).

The terms traditionally used for political governance *(siyāsa)* and political order *(nizām)* are absent from the Qurʾān but all things in heaven and earth are subject to God's administering command (Q 32:5, *yudabbiru l-amra mina l-samāʾi ilā l-arḍi;* cf. Q 10:3, 31; 13:2; see POWER AND IMPOTENCE; COSMOLOGY). Responsibility for living in conformity to God's administration (*tadbīr,* equated with governance *[siyāsa]* in classical Islamic political thought) has been divinely entrusted to humankind, signified in the idea of *khalīfa* — e.g. Q 6:165 and Q 10:14, verses which indicate that this idea, whether understood as successor to former nations or delegate of God on earth, implies a test of fidelity to the will of God (for the different interpretations of this term by the early exegetes, see al-Qāḍī, Khalīfa; for its political appropriation by Umayyad and ʿAbbāsid rulers, see Crone and Hinds, *Caliph,* and al-Qāḍī, Foundation; for an historical overview of the institution of the caliphate, see Sourdel et al., Khalīfa).

This responsibility, now on Muslim shoulders, was foreshadowed in (1) God's plan for Adam to be caliph on earth (Q 2:30; see ADAM AND EVE) and (2) the divine trust *(al-amāna)* accepted by humankind prior to creation (q.v.; Q 33:72, its rejection by the rest of the created order making it the distinctive mark of human beings) in recognition of God as their sovereign lord (q.v.; Q 7:172). Since, however, humankind was destined to be subject to Satan's temptations (see DEVIL; FALL OF MAN), there was need for warning and guidance (see ASTRAY; ERROR; FREEDOM AND PREDESTINATION): Prophecy thus stands at the heart of the proper ordering of human affairs, serving to orient humankind not only to its final destiny in the next world (see ESCHATOLOGY; REWARD AND PUNISHMENT) but to prosperity in this one, as summarized by Muqātil b. Sulaymān (d. 150/767; *Tafsīr,* ii, 42): "When God sends a prophet to humankind and they obey him, the land and its people prosper *(ṣalaḥati l-arḍ wa-ahluhā)*. Disobedience [results in] the corruption of sustenance (q.v.; *fasād al-maʿīsha*) and the destruction of the land's people." A moral society is, after all, a blessing from God (Q 3:104): "That there be [made] of you a nation that calls for the good, commanding the right and forbidding the wrong. Those are the ones who thrive (*al-mufliḥūn;* see VIRTUES AND VICES, COMMANDING AND FORBIDDING)."

This is not to imply that prophets are to exercise rule themselves; Muḥammad is reminded on several occasions that he is merely a bearer of good tidings (see GOOD NEWS) and a warner (e.g. Q 25:56). Rather, prophets are to witness to the rule of God, the main instrument of which is scripture (*kitāb;* see BOOK), along with rule *(ḥukm)* and prophecy (*nubuwwa,* e.g. Q 3:79; 6:89; 45:16). Muqātil (*Tafsīr,* i, 289, 574) understands *ḥukm* as knowledge and understanding, which, by arbitrating human differences (cf. Q 2:213), bring about sociopolitical harmony under divine truth (q.v.) — a qurʾānic idea first embodied tangibly in the Constitution of Medina, which recognizes differing communal norms within one polity (see Zein al-Abdin, Political significance).

All dominion is envisioned as God's (*lillāhi mulku l-samāwati wa-l-arḍi,* e.g. Q 3:189; 5:17-8; less frequently *malakūt,* e.g. Q 6:75, 23:88, 36:83). It is in that sense that

the political program of the Qur'ān is essentially other-worldly or eschatological, i.e. oriented to the final day when all judgment (q.v.) will be truly divine (Q 25:26; see Ḥāmid, *Uṣūl,* 56, for whom the eschatological message of the Meccan verses forms a necessary backdrop to the divinely — i.e. other-worldly — oriented polity of the Medinan ones; see MECCA; MEDINA; CHRONOLOGY AND THE QUR'ĀN). While dominion is God's alone (Q 17:111; 25:2), he distributes it as he wishes (Q 3:26), for instance to Saul (q.v.; Q 2:247) and David (q.v.; Q 2:251). Dominion in human hands cannot, however, be reduced merely to power over others but is conceived as the application of divinely bestowed knowledge (e.g. Q 2:251; 12:101; 85:9) that will lead humankind to the religious and moral life ordained by God and destined to be fully realized on judgment day (Q 22:56; cf. 40:16; see LAST JUDGMENT). Humans may have been entrusted with rule (e.g. Q 5:20; 12:43) but God alone is true king (*al-malik al-ḥaqq,* e.g. Q 20:114; see KINGS AND RULERS).

The qur'ānic depiction of dominion as divine kingship recalls the imagery of the Psalms (q.v.), which are themselves shaped by conceptions of kingship of the ancient Near East. In the Psalms, it is the temple that represents God's heavenly throne as symbol of ultimate authority (e.g. *Ps* 11:4-5). In the Qur'ān, God is the final judge *(ḥakam),* seated on his throne and ruling his creation from its inception (cf. Q 7:54). He strikes those who transgress his order (cf. Q 6:124; see BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT), sets a path to be followed (Q 6:153), ensures the just settlement of dispute (Q 6:57; cf. 5:48), is the enemy of unbelievers (Q 2:98), lord of east and west (Q 2:115, 142), and his rule protects his subjects from the chaotic forces of unbelief (cf. Q 2:286; see BELIEF AND UNBELIEF).

It is in this sense that the prophet Muḥammad acts as emissary *(rasūl)* from the heavenly court, sent to give warning of impending judgment (e.g. Q 10:15) similar to that meted out to former nations. There is thus no break between divine and prophetic authority (e.g. Q 4:80; cf. 4:153), making obedience to the prophetic message *(risāla)* the singular means of avoiding doom. Following that message will result in true rule and prevent strife and corruption in the land, thereby ensuring prosperity rather than the destruction that former nations met as their fate for failing to heed God's messengers (Q 10:13) and choosing instead to follow the command of earthly potentates (Q 11:59). Human beings, custodians of divine communication, are worthy of rule (Q 4:59; cf. 4:83; 27:33): Indeed God uses human rulers to restrain humankind from sowing corruption in the land through mutual aggression (Q 2:251, a theme taken up vigorously in classical Islamic political thought; see Heck, Law) and even allows a human hierarchy regardless of moral standing (cf. Q 6:165). Rule in itself, however, is no guarantee of success, for even the wicked rule over one another (cf. Q 6:129). Humans, as problematic creatures given to strife and factionalism, need recourse to a higher standard to establish socio-political harmony. Although offering no details of political organization, the Qur'ān is quite clear that the processes of rule and arbitration are never to ignore the designs of God.

Thus, human beings, created weak (Q 4:28), must be reminded of their divinely entrusted responsibility, which happens periodically through prophetically established covenants (*mīthāq,* Q 5:7; with the Israelites, Q 2:63, 93; 5:12; with the Christians, Q 5:14; with the prophets, Q 3:81, 33:7; see CHILDREN OF ISRAEL; CHRISTIANS AND CHRISTIANITY; COVENANT). Such covenants are never limited to

monotheistic worship (q.v.) but include socio-moral norms (e.g. Q 2:83, where the covenant with Israel demands honoring one's parents [q.v.] and relatives, care for orphans [q.v.] and the dispossessed *[al-masākīn]* and kindly speech to others; cf. Q 4:154; see POVERTY AND THE POOR). These covenants, accompanied by divine knowledge (e.g. scripture and prophetic wisdom), impose upon their recipients an obligation to carry out God's program, an obligation neglected with grave consequences (Q 3:187; 5:70-1; 7:169). Rejecting covenant results not only in unbelief and infidelity (Q 4:155) but also in a disregard for God's interest in human welfare, ultimately bringing about corruption in the land (*fasād fī l-arḍ,* cf. Q 2:27; 13:25, a phrase denoting the very antithesis of the qur'ānic vision of socio-political prosperity). Human welfare, ordained by God, nevertheless depends on human willingness to bring it about by cooperating with God's revelation.

It will be important to recount briefly the mythic narratives of the Qur'ān (see MYTHS AND LEGENDS IN THE QUR'ĀN), i.e. the stories of former nations, which highlight the clash between godly and human rule — the central political theme of the Qur'ān that provides meaning for Muḥammad's own struggle with the peoples of his day who rejected or did not fully accept his message and who are negatively characterized in various ways: faithless ingrate *(kāfir),* polytheist (*mushrik;* see POLYTHEISM AND ATHEISM), recipient of previous scripture (*ahl al-kitāb,* i.e. "people of the book [q.v.]," usually identified as Jews and Christians; see JEWS AND JUDAISM) and, more generally, hypocrite (*munāfiq;* see HYPOCRITES AND HYPOCRISY), transgressor *(zālim)* and sinner (*fāsiq;* see SIN, MAJOR AND MINOR). They, too, like the former nations, are destined to perish for refusing the message of God conveyed to them by the prophecy of Muḥammad. This is not to discount the rhetorical purpose of such narrative, i.e. a literary technique to encourage acceptance of the recited message. Rather, it is to say that the Qur'ān is not naive about the use of power to shape human society for a godly end *(fī sabīl Allāh).* The former nations' rejection of prophecy justifies struggle *(jihād),* even armed struggle, against the opponents of Muḥammad (see JIHĀD). In turn, the Muslims, whom God has chosen as final successors to former nations, must prosper by struggling for the way of God against those who mock or deny him (see MOCKERY; LIE), making prosperity, i.e. political success, the litmus test of obedience to God.

In other words, socio-political prosperity is a heavy burden, envisioned by the Qur'ān not only as the performance of moral and religious obligations but also as a ritual performance meant to recall and resonate with the mythic narrative of the Qur'ān. The political ritual of Islam — *'ibāda mulkiyya* in the words of al-'Āmirī (d. 381/992; *I'lām,* 148-50) — has been diversely imagined by Muslims: eschatologically (Khārijīs), legally (Sunnīs), hierarchically (Shī'īs), esoterically (Ismā'īlīs), ideally (the vision of philosophers such as al-Fārābī; see PHILOSOPHY AND THE QUR'ĀN) and sociologically (the position of state-aligned intellectuals, e.g. Qudāma b. Ja'far, al-Māwardī, Ibn Khaldūn; see SOCIAL SCIENCES AND THE QUR'ĀN). But, for all, it is the means of sanctifying the Muslim community by recalling God's promise of sustenance and support until the end of time (Māwardī, *Naṣīḥat al-mulūk,* 67), in contrast to the former nations that he brought to ruin — the mythic narrative recorded in the scrolls (q.v.) of previous scripture as a reminder (*dhikrā,* see MEMORY; REMEMBRANCE) to all and heeded by some (*ahl al-dhikr,* Q 16:43;

21:7). The qurʾānic narrative thus makes of politics — the quest for socio-political success — a salvifically driven drama that re-enacts the revealed message. Failure to imagine socio-political prosperity in recollection of the mythic narrative puts divine favor at risk and, for some, may demand acts of heroic sacrifice, i.e. martyrdom (see MARTYRS), by which to restore what is understood to be a relation with God gone awry (for an example of a martyr culture in opposition to the world, see Sharāra, *Dawla,* esp. 291 f.). Alternatively, it may demand a re-reading of the Qurʾān such that political reality be understood in light of qurʾānic narrative. An example of this from the classical period can be found in the work of Abū Ḥayyān al-Tawḥīdī (d. 414/1023; *Imtāʿ,* ii, 33), who at a time of political flux in the Islamic world made the claim on the basis of Q 2:247 that the ruler *(malik),* no less than prophet, is heaven-sent *(mabʿūth),* and that to the great astonishment of the vizier *(kaʾannī lam asmaʿ bi-hādhā qaṭṭ)*. Of the many examples of this in the modern period, one can point to the work of the Syrian sheikh and parliamentarian, Muḥammad al-Ḥabash, who places emphasis on the benefits *(maṣāliḥ)* and prosperity to accrue to Muslims from a greater engagement with the modern world, as a qurʾānic mandate (see Heck, Religious renewal; cf. al-Ḥamd, *al-Siyāsa*).

At play throughout the Qurʾān, the political drama of former nations is more or less coherently narrated across its seventh, eighth and ninth chapters: the first revealed in Mecca, the last two in Medina. Accounts begin in Q 7 (Sūrat al-Aʿrāf, "The Heights") as follows: God alone is protector (Q 7:3), since it is he who arbitrates on judgment day (Q 7:8-9). Unbelievers seek out the protection of demons (*shayāṭīn,* Q 7:27), a theme recalling the fall of Adam and Eve (Q 7:22-4) and the resulting human struggle to resist demonically inspired temptation (Q 7:16-7) and strife (Q 7:24). Those who do sin and transgress God's decrees fail to recognize his exclusive authority (Q 7:33, *an tushrikū bi-llāhi mā lam yunazzil bihi sulṭānan — sulṭān* identified as God's book by Muqātil, *Tafsīr,* ii, 34); they are the nations of jinn (q.v.) and humans occupying hell (Q 7:38, *umam… mina l-jinni wa-l-insi fī l-nār;* see HELL AND HELLFIRE). God as lord of all (Q 7:54) wills that there be no corruption in the land after it has been made good (Q 7:56, *lā tufsidū fī l-arḍi baʿda iṣlāḥihā;* cf. Q 7:85), having sent a series of messengers to various peoples for that purpose (to call them to monotheism *[tawḥīd]* according to Muqātil, *Tafsīr,* ii, 43): Noah (q.v.; Nūḥ), Hūd (q.v.), Ṣāliḥ (q.v.) and Shuʿayb (q.v.). In each case, the worldly leaders of the day (*malaʾ,* a tribal term that Muqātil, *Tafsīr,* ii, 45, 49, identifies with the arrogant, *al-kubarāʾ, alladhīna takabbarū ʿan al-īmān;* see ARROGANCE) reject the purported messenger (Q 7:60, 66, 75, and 88, respectively) for speaking against the beliefs of the community (e.g. *milla* in the case of Shuʿayb, Q 7:88; on such community-identifying terms, see Aḥmed, Key). Each in turn (Q 7:61-2, 67-8, 79 and 93) responds that he is a messenger of God, sent to convey his message and offer counsel (*naṣīḥa*, for the reform of the affairs of the nation in question, e.g. Q 7:85 in the case of Shuʿayb; *ʿulamāʾ* would later claim this role of socio-political counsel, called *nuṣḥ*, e.g. Ibn Taymiyya, *Siyāsa*, 1). The people, led by their arrogant leaders (Muqātil, *Tafsīr*, ii, 45, see this as oppression [q.v.] of the weak *[ḍuʿafāʾ]* by the strong, i.e. preventing them from the benefits of God's message; cf. Q 40:47, where, in hell, the weak ask the arrogant why they misled them), inevitably disavow the messengers of God and are destroyed by his judgment (understood by Muqātil, ibid., 47, as a fitting punishment), which, however, creates the possibility of successor nations (*khulafāʾ*,

Q 7:69, 74, understood by Muqātil, ibid., 43, as successors in punishment *[ʿadhāb]*). Up to this point, however, the settled peoples of the world (*ahl al-qurā;* see CITY) refuse to believe, thus foregoing the material blessings (*barakāt)* that accompany fidelity to God (Q 7:96).

Such narration (*al-qaṣaṣ*, Q 7:176; cf. 7:7; see NARRATIVES), mytho-historical staging for Muḥammad's own prophetic mission, culminates in the account of Moses (q.v.) and Pharaoh (q.v.): the archetypical clash of godly and worldly power. Moses is God's messenger to Pharaoh and his court (*malaʾ*, Q 7:103). Pharaoh takes on the characteristics of God, accusing Moses of sowing corruption in the land and claiming to be the one who subdues the world (cf. Q 7:127): The problem here is not human rule itself but denial of God's ultimate sovereignty. Moses convinces the reluctant Israelites that God will destroy their enemy and make them the latest successors to custodianship of God's message (Q 7:129). Indeed, after the destruction of Pharaoh and his folk, the Israelites do inherit the earth, east and west (suggesting the entire earth, Q 7:137). It is they, finally, who form a community *(umma)* of truth and justice (Q 7:160) and yet they, too, eventually divide into twelve tribes or nations and do wrong (Q 7:159), signaling the judgment to be passed against the Israelites as against former nations (Q 7:168). The religious divisions of humankind in general and the Israelites specifically are attributed by al-Ṭabarī (d. 310/923) to political aspiration *(ṭalab al-riʾāsa)* and the desire of humans to subject one another (*istidhlāl min baʿḍihim li-baʿḍ,* Ṭabarī, *Tafsīr,* i, 650-1, where it is explained that the Muslims, on account of divine guidance *[hidāya],* refrain from these differences and on judgment day will serve as witness against the former nations for rejecting the messengers sent to them; see RELIGIOUS PLURALISM AND THE QUR'ĀN; WITNESSING AND TESTIFYING). The belief that religious divisions are the product of political ambition is echoed in the fourth/tenth-century letters of the Ikhwān al-Ṣafā ("Brethren of Purity"; *Rasāʾil Ikhwān al-Ṣafā,* iii, 151-6; cf. also Māwardī, *Adab al-dīn,* 169-70, where weak rule is shown to be the source of religious innovation and division, and id., *Naṣīḥat al-mulūk,* 70-6, where the ruler is expected to defend creedal orthodoxy against theological innovations understood as breaches of socio-political harmony; see HERESY; INNOVATION).

The turn has now fallen to Muḥammad, as foreshadowed in previous scriptures, who legislates by commanding the right and proscribing the wrong (*al-amr bi-l-maʿrūf wa-l-nahy ʿan al-munkar;* cf. Cook, *Commanding right,* 13-31) and by establishing the lawful *(ḥalāl)* and unlawful (*ḥarām*, see LAWFUL AND UNLAWFUL), making of Muḥammad the messenger to all people from the one God to whom belongs sovereignty over the heavens and the earth (cf. Q 7:157-8). As if to bring the story full circle, the Qurʾān has Muḥammad declare that God alone is his protector (Q 7:196 in echo of Q 7:3; see PROTECTION), presumably in the face of those groups who, as we see in the following two chapters, have set themselves against him.

That the account of Muḥammad's struggles in Q 8 (Sūrat al-Anfāl, "The Spoils") and Q 9 (Sūrat al-Tawba, "Repentance") is to be read as fulfillment of the historical narration of Q 7 is confirmed by Q 9:70, which queries whether the news (q.v.; *nabaʾ*) of former nations had not reached the ears of Muḥammad's opponents. The themes of Q 7 are thus reworked into the context of Muḥammad's own mission, helping to explain the nature of the opposition. There is a call to obey God and his messenger (Q 8:46; cf. 8:26 where people are reminded not to betray the trust *[amāna]* given to them and Q 9:63,

where hell is the judgment upon those who oppose God and his messenger). The enemies of Muḥammad are compared to Pharaoh (Q 8:52). In the end it is God who rules all through his book (cf. Q 8:68, 75). Strife — the seduction of the devil and source of religious division — will be avoided once all opposition has been subdued and all religion has been handed over to God (Q 8:39). Thus is a godly nation born out of struggle with ungodly opposition, both polytheists (i.e. *mushrikūn* or at least those polytheists who have broken a treaty made with Muḥammad [Q 9:3-4, cf. 8:56]; see BREAKING TRUSTS AND CONTRACTS) and recipients of previous scriptures who neither believe nor recognize the lawful and unlawful in their own scriptures (Q 9:29), making them tantamount to *mushrikūn* by associating other lords with God in denial of his singular sovereignty (Q 9:30-1; see IDOLATRY AND IDOLATERS). In other words, failure to heed one's scripture leads to socio-moral breakdown. This new nation is composed of people who believe, command right and forbid wrong, are committed to both prayer (q.v.) and the payment of alms (Q 9:71; see ALMSGIVING), leave their homes (i.e. separate from the wayward) and care both for one another (Q 8:72) and for the weaker members of society (cf. Q 8:41 and 9:60 on the distribution of spoils and alms, respectively, and Q 7:75 and 7:137 on concern for the downtrodden *[mustaḍʿaf];* see BOOTY; OPPRESSED ON EARTH, THE).

It is worth noting the resemblance of such qur'ānic narrative to the biblical oracles against the nations and oracles of restoration (*Ezek* 25:1-32:32 and 33:1-39:29 and *Jer* 25:13-38 and 46:1-51:64), where judgment was passed against the nations, including Israel, for cultic, not political, deviance and hope was offered for a new Israel and even a new temple and cult (*Ezek* 40:1-58:35). Is, then, the qur'ānic concern for unity under God's rule as mediated by the prophet Muḥammad a socio-political concern or a cultic one? Is it for political or cultic reasons that God has sent his final messenger to a nation destined to succeed all previous ones (Q 13:30)? Q 22:67 mentions dispute over ritual (*mansak;* see RITUAL AND THE QUR'ĀN), Q 16:124 and Q 39:3 over the Sabbath (q.v.) and Q 5:45 over bodily injury. Does the rule of God as announced by the Qur'ān include the political or is it more properly limited to ritual *(ʿibādāt),* social affairs (*muʿāmalāt,* e.g. commercial, criminal and family law; see MARRIAGE AND DIVORCE; FAMILY) and morals (*akhlāq)?*

At least one group in early Islam, the Khārijīs, made no separation between the political and the ritual. In a context in which revelation is believed to be operative, differences must be mitigated or removed for the sake of a communal purity that is itself a pre-condition for further revelation. In other words, when a nation fails to carry out the work *(ʿamal)* commanded of them by God, the possibility of further divine communication is jeopardized and previous communication is rendered suspect. Hence, qur'ānic charges of scriptural distortion (see FORGERY; POLEMIC AND POLEMICAL LANGUAGE) against recipients of previous scripture were also accusations of socio-moral impropriety. Parallels to this can be found in the Judeo-Christian tradition: The Israelites had to undergo purification in anticipation of God's manifestation on Mount Sinai (*Exod* 19:1-24:18, especially 19:8-19); and the community at Qumran — for whom prophecy was not at all closed — maintained a strict code of ritual and legal purity as a pre-condition for further divine communication. The Qur'ān, for its part, states that the *mushrikūn* are a pollutant *(najas)* and are not to go near the sacred mosque (q.v.; Q 9:28). Pollution (*rijs,* Q 9:125; see CLEANLINESS AND ABLUTION; RITUAL PURITY) — construed as transgres-

sion of ritual practice, dietary laws (see FOOD AND DRINK), sexual norms (see SEX AND SEXUALITY), etc. — poses a problem for further disclosure of revelation (Q 9:127, *wa-idhā mā unzilat sūratun nazara baʿḍuhum ilā baʿḍin, hal yarākum min aḥadin*…). This suggests that qurʾānic reference to the rule or reign of God has nothing to do with political decision-making but implies rather the unity of communal purpose that the cultic maintenance of God's presence amidst his people entails.

Still, scripture is God's mode of decision-making, which is not limited to the book sent to Muḥammad (see SCRIPTURE AND THE QURʾĀN), but includes both the Torah (q.v.) and Gospel (q.v.; Q 5:44-7). The claim is made by one exegete (Ṭabarī, *Tafsīr,* iii, 243) that these verses were revealed in response to a group of Jews who questioned Muḥammad about two adulterers and thus failed to follow the judgment — stoning (q.v.) — that their own scripture called for (Ṭabarī, *Tafsīr,* iii, 233-5): Those who do not make decisions according to God's revelation are ingrates, transgressors, wicked (Q 5:44, *wa-man lam yaḥkum bi-mā anzala llāhu fa-ūlāʾika humu l-kāfirūn;* Q 5:45 uses *ẓalīmūn* and Q 5:47, *fāsiqūn*).

The political potential of such verses was certainly not lost on al-Ṭabarī (d. 310/923), who narrates a story of a group of Khārijīs who inquire of Abū Mijlaz whether Q 5:44-6 could be applied to the political leaders of the Muslims *(umarāʾ wa-wulāt al-muslimīn),* considered to be in sin simply for their assumption of rule, which in Khārijī opinion belongs only to God. Clearly aware of the Khārijī angle of their inquiry (as was al-Ṭabarī who explains it), Abū Mijlaz responds by saying that Islam (q.v.) is their religion even if they sin and that the verses in question were revealed in reference to Jews, Christians and polytheists. The question is not settled, however, since faithless ingratitude *(kufr)* does not properly apply to these groups, leading al-Ṭabarī to demonstrate that Q 5:44 *(kāfirūn)* applies to lapsed Muslims, while Q 5:45 *(ẓālimūn)* and Q 5:47 *(fāsiqūn)* applies to Jews and Christians, respectively, and that the unbelief into which lapsed Muslims have fallen is not of the kind necessitating excommunication, which would make it licit to take their life (ibid., iii, 237-8; see MURDER) — an argument that has not swayed Islamist groups today from using such verses to justify attacks against Muslim leaders who fail to implement the rule of God to Islamist satisfaction.

It cannot be denied that God alone decrees the final fate of his creatures (Q 40:48) as the most just of judges (Q 11:45) but this capacity is shared by prophets and humans in general, who are called to judge with justice (*al-ʿadl,* e.g. Q 4:58 and 5:95; or *al-qist,* Q 5:42) and truth *(ḥaqq)* without partiality (*hawā,* Q 38:26), as a check against transgression (*baghy,* Q 38:22). Such standards are associated with the scripture itself (*ḥukm al-kitāb,* cf. Q 3:23 and 4:105), which, as the highest standard of arbitration, serves to reconcile differences and to end conflict (e.g. Q 2:213; cf. 3:23 and 45:17), while all quarrels are to be settled by God's final verdict on judgment day (Q 22:68-9). If it is indeed the word of God (q.v.; *kalām Allāh*) that must rule, to prevent strife and ensure prosperity, then the extent to which humans are capable of interpreting the divine will and thus meriting a share in rule remains the central if elusive question for politics and the Qurʾān.

The politicization of the Qurʾān in early Islam

The ideological use of the Qurʾān for political purposes, i.e. its politicization, occurred early. As the word of God, the Qurʾān is the emblem of Islamic legitimacy par excellence and has been used to that end by standing governments and rebels alike, by activists and theorists, and in defense of both hereditary rule and elected

politics. Given its divine origin, scripture acts as an alternative authority, making it an interest of a state with a religious dispensation to supervise the text, as can be seen in both the earliest and more recent periods of Islamic history, e.g. (1) the establishment of a single recension of the qur'ānic text (*muṣḥaf* [q.v.]) by the third caliph, ʿUthmān (r. 23-35/644-56), who outlawed variant versions (see COLLECTION OF THE QUR'ĀN; CODICES OF THE QUR'ĀN; READINGS OF THE QUR'ĀN) to the resentment of the so-called Qur'ān reciters (*qurrā';* see RECITERS OF THE QUR'ĀN), a decision that, according to Sayf b. ʿUmar (d. 180/796), led them to seek his assassination (Sayf b. ʿUmar, *Kitāb al-Ridda,* 49-52); and (2) the decision by ʿAbd al-Ḥamīd II (r. 1876-1909) to make the printing of the Qur'ān (q.v.) an Ottoman state monopoly and to set up a commission under the highest religious office of the state *(shaykh al-islām)* for the inspection of all printed copies. Even states without a religious dispensation may seek to manage the Qur'ān, as seen in the Turkish Republic's interest in promoting a Turkish translation of the Qur'ān with commentary (Albayrak, The notion; see TRANSLATIONS OF THE QUR'ĀN).

The diverse political ends that the Qur'ān has served, from earliest Islam until today, have been possible simply because it is, as the word of God, beyond human control. Can the Qur'ān be subordinated to human interpretation? To what extent can it accommodate human decision-making? Is the Qur'ān itself to determine political rule or is it to be located within a constellation of human conceptions of rule? Is the Qur'ān to shape the political order or is it to be placed at the service of the political order? On the one hand, the qur'ānic announcement of the absolute sovereignty of God has been taken very seriously by some Muslims, especially those with Khārijī leanings. On the other, the absence of any qur'ānic details on political organization has made apparent to most Muslims the need for non-revealed guidance in the realm of politics. The politicization of the Qur'ān, from its beginning, centered upon the possibility of its interpretation and thus subordination to human judgment — a vast topic which here can only be glimpsed in the traces left to us in the chronicle written by the third/ninth-century historian, al-Ṭabarī *(Ta'rīkh).*

The death of the Prophet gave rise to a struggle over the nature of Islamic society and leadership, imagined variously as succession to the Prophet and as delegated agent of God on earth. The extent to which the Muslim community was to be politically organized under central rule was also in question. All parties involved, both recognized caliphs and their opponents, cited qur'ānic verse in support of their cause. In his letter to a group of apostates, the first successor to the Prophet, Abū Bakr, couched in abundant qur'ānic citation his argument that Islam will survive the death of its Prophet (Ṭabarī, *Ta'rīkh,* 1882; trans. x, 55-60), while one of his supporters, Abū Ḥudhayfa, mobilized military enthusiasm against the apostates by calling out to the Muslims as the people of the Qur'ān (ibid., 1945, trans. 121). Later, the widow of the Prophet, ʿĀ'isha (see ʿĀ'ISHA BINT ABĪ BAKR), in a letter to the people of Kūfa, reportedly argued for Medinan hegemony against the emerging center of power in southern Iraq under the leadership of ʿAlī b. Abī Ṭālib (q.v.; r. 35-40/656-61), the cousin and son-in-law of the Prophet and fourth of the rightly-guided caliphs, by calling the people to uphold the book of God against the killers of ʿUthmān, quoting Q 3:102-3 and Q 3:23 on the importance of communal unity (ibid., 3133; trans. xvi, 74-6). In response, ʿAlī is reported to have asserted his adherence to the book (i.e. of God) as arbiter and imām

(ibid., 3141; trans. xvi, 83), unsuccessfully attempting to use a copy of the Qurʾān as a symbol of reconciliation *(iṣlāḥ)* for the divided community (ibid., 3186, 3189; trans. xvi, 126, 129-30).

The real test for the relation of the Qurʾān to Islamic rule came at the battle of Ṣiffīn (q.v.) between the partisans of ʿAlī (see SHĪʿA) and those of Muʿāwiya, founder of the Umayyad dynasty (r. 41-60/661-80) who based his claim to lead the Muslim community on his right to avenge the blood of ʿUthmān as closest kin (see BLOOD MONEY; KINSHIP). In the course of the battle, which had swayed in favor of ʿAlī, the soldiers of Muʿāwiya reportedly raised copies of the Qurʾān *(maṣāḥif)* on the tips of their spears as a symbol of their desire for arbitration (q.v.; Ṭabarī, *Taʾrīkh*, 3329; trans. xvii, 78). ʿAlī hesitated at first, claiming that Muʿāwiya and his followers were without religion and without Qurʾān (here in the indefinite — perhaps alluding to one of many recitations *[qirāʾāt]* of the Qurʾān) and that he had fought them in the first place so that they might adhere to rule by "this book" (*li-yadīnū bi-ḥukm hādhā l-kitāb,* ibid., 3330; trans. xvii, 79). Eventually, a group within his partisans, the vociferous advocates of rule by the Qurʾān later known as Khārijīs, urged him to respond to this offer of judgment by the book of God (ibid., 3332; trans. xvii, 86). While the trick played by Muʿāwiya to get the better of ʿAlī is well-known, the story of the arbitration between the two raised significant issues about the relation of the Qurʾān to Islamic rule.

After calling ʿAlī to submit to the rule of the Qurʾān, these first Khārijīs challenged his claims to personal charismatic authority, especially his attempts to associate himself with the character and prestige of the Prophet (ibid., 3336; trans. xvii, 85; cf. Mubarrad, *Kāmil,* ii, 540; Sayf b. ʿUmar, *Kitāb al-Ridda,* 357), protesting that their oath of allegiance to him did not imply special privilege (cf. 1 *Chron* 21 and 1 *Kings* 10:23-11:13, where David and Solomon, respectively, are rebuked for pursuing lordly status based on worldly power); rather, he was like them in all respects, acting as their recognized leader and not in any way an inspired figure. With the arbitration between ʿAlī and Muʿāwiya exposed as a hoax, this group withdrew from ʿAlī's partisans, accusing him of failing to submit fully to the rule of the Qurʾān and of permitting human judgment over the book of God (Mubarrad, *Kāmil,* ii, 539-40; Ṭabarī, *Taʾrīkh,* 3360-2, esp. 3362, where one Khārijī ends his accusation of ʿAlī with the following: "Our lord is not to be set aside or dispensed with. O God, we take refuge in you from the introduction of things of this world into our religion, a smearing *[idhān]* of the affairs of God and a disgrace *[dhull]* that brings down his wrath upon his people.").

Their position crystallizing in opposition to ʿAlī, whom they attack — on the basis of Q 49:9 — for his failure to repent, the Khārijīs would go on to proclaim a highly pietistic, strongly individualistic and qurʾānically centered religiosity (Ṭabarī, *Taʾrīkh*, 3349; trans. xvii, 99): Considering themselves the only true Muslims for their freedom from sin (i.e. defined as the use of human judgment in the affairs of God; see IMPECCABILITY), they dispensed with — at least in principle — the need for a leader (i.e. human rule; cf. Crone, Statement); authority was for them to be purely consultative among their members (see CONSULTATION), all of whom, it is to be presumed, were entirely faithful to the voice of the Qurʾān, while their oath of allegiance, to God alone, required them to adhere strictly to the principle of commanding the right and forbidding the wrong.

Ibn ʿAbbās (d. ca. 68/686-8), dispatched

by ʿAlī to the Khārijī rebels, was faced with a stubborn refusal to listen to his use of analogical reasoning to justify the arbitration (on the basis of Q 4:35, which calls for arbitration to reconcile a couple in conflict; Ṭabarī, *Ta'rīkh,* 3351; trans. xvii, 100-1; Mubarrad, *Kāmil,* ii, 528-9). The Khārijīs responded by insisting that, while human discretion is permissible where God has delegated authority, it is not for his servants to judge what he has decreed, namely that Muʿāwiya and his party should repent or be killed, a judgment based on Q 9:5 which calls for the killing of those who do not repent of their failure to acknowledge the singular sovereignty of God.

At stake here are essentially two very different notions of qur'ānic interpretation with consequences for political authority. For these first Khārijīs, no human interpretation of the Qur'ān was possible, ensuring its unequivocal if problematic status as final arbiter and leader of human society (see Ibn Abī Shayba, *Muṣannaf,* viii, 729-43, nos. 2, 3, 38-40, 48, where the Prophet is made to predict the coming of the Khārijīs as a people whose engagement with revelation is limited to an oral recitation unmediated by human judgment; see also no. 33, which describes Khārijī insistence that communal differences be decided solely by the rule of the book of God *[ḥukm al-kitāb];* nos. 27 and 51, which explain their defense of divine rule alone as a ploy to do away with human governance [*imra* or *imāra*]; and no. 22, which cites Khārijī neglect of ambiguous [q.v.; *mutashābih*] verses of the Qur'ān as evidence of their rejection of interpretation). For ʿAlī and his partisans, the human being formed the cognitive link between the Qur'ān and communal decision-making, as exemplified in Ibn ʿAbbās' use of analogy and ʿAlī's own argument that the Qur'ān is merely dead script between two covers and that it does not speak but rather that humans speak through it (Ṭabarī, *Ta'rīkh,* 3353; trans. xvii, 103; see SPEECH). For that, he was accused of giving authority over the book of God to humans (ibid., 3361; trans. xvii, 111), an accusation he recognized but defined as a failure of judgment, not sin, while accusing the Khārijīs in turn of disrupting the governance necessary for Muslims to fulfill their pact with God (citing Q 16:91-3) by making of the Qur'ān something it was not intended to be (citing Q 39:65, essentially accusing the Khārijīs of polytheism). Both sides cite the Qur'ān (ibid., 3362; trans. xvii, 113) as proof texts to justify two different conceptions of scripture, one subject to human interpretation and the other effective without it.

The Khārijīs, in a later encounter with Ibn al-Zubayr, accused ʿUthmān of having introduced innovations into the religion and of opposing the rulings of the book (Ṭabarī, *Ta'rīkh,* 516; trans. xx, 99-100), a transgression they identify with ʿUthmān's attempt to create a dynastic rule officiated by his close kin and based on central control of the proceeds of the Islamic conquests. In short, the corruption that the Qur'ān so vehemently denounces is understood by both the representatives of the nascent Islamic state and their Khārijī opponents as disobedience (q.v.) to God, the difference being that for the former disobedience to God included disobedience to properly constituted and divinely endowed human authority.

This first debate over the relation of the Qur'ān to human rule must be seen in the context of changing social conditions, especially the emergence of an increasingly centralized state with control over the material wealth of the community, which meant in the case of early Islam the considerable proceeds of conquest which had turned many of the first Muslims into landowners of vast estates (see Kenney,

Emergence), while depriving others from a share of the spoils of victory according to seniority in the cause of Islam, as had been the case under the Prophet and his first two successors. One report claims that it was ʿAlī's refusal to permit the Muslim fighters to plunder the property of conquered peoples that first provoked Khārijī resentment (Sayf b. ʿUmar, *Kitāb al-Ridda,* 357). Under ʿAlī's policy, conquered lands were to be administered and taxed by state officials and not distributed as tribal booty to Muslim fighters, who were now to receive a salary fixed by the state. It was thus partly the consolidation of Islamic rule in worldly terms that brought about the politicization of the Qurʾān, the strongly eschatological (other worldly) coloring of its verses serving as a platform for opponents of the state to protest its policies: How could there be worldly rule in light of the rule of God as inaugurated and announced by the Qurʾān? It was not merely a question of the qurʾānic narrative of former nations but the presence of the Qurʾān itself in the midst of the believing community. If revelation — God's word and not human effort — was to be the effective agent of grace (q.v.) and guidance, any other rule would be automatically disqualified on the grounds of being worldly: Those whom the rapidly changing social conditions of early Islamic society had marginalized from an increasingly centralizing power and dispossessed of a share in the growing wealth of the Muslim community found a strong ally in the Qurʾān. In short, Khārijī shame at being marginalized in a changing socio-political order came to be associated with qurʾānic condemnations of sinful worldliness and human governance identified as the object of God's wrath, transforming scriptural rhetoric into a political program. Human governance, now defined as godless, is to be attacked in order to ensure avoidance of the historical catastrophe that beset former nations. Social marginalization becomes imagined as religious anxiety over the possibility of suffering the horrifying consequences of human dismissal of the prophetic message. Amidst such developments, the only way to display piety (q.v.) is by attacking the state and those who award it authority, now depicted in eschatological terms as the foes of God (see ENEMIES), as seen in an early Khārijī poem (ʿAbbās, *Shiʿr al-khawārij,* no. 258):

I did not want a share from him, only
aspiring in killing him that I succeed
and relieve the earth of him and those
who wreak havoc and turn from the truth.
Every tyrant *(jabbār)* is stubborn. I consider
him to have abandoned the truth and to
have legislated misguidance *(sannat al-ḍalāl)*. Verily do I sell myself to my lord,
quitting their hollow words, selling my
family and wealth, in the hopes of a place
and possessions in the gardens of eternity
(q.v.; see also GARDEN).

It would not be totally inaccurate to dismiss Khārijī use of the Qurʾān as a means to defend their material interests, as Muʿāwiya did (Ṭabarī, *Taʾrīkh,* 2913, 2930), but it is still important to link their material interests to their conception of revelation and its corresponding view of all worldly goods as sacrificial offering to God (see SACRIFICE). It was not just a matter of control of communal resources but also of the divine consumption of the lands and property of the conquered peoples as preparation for the rule of God signaled by revelation, as suggested by Q 27:91-3, which Sālim b. Dhakwān (*Epistle,* 64; cf. 50) cites in support of fighting against any association *(ishrāk)* of the worldly with the divine. By comparison, this attitude is well illustrated in the book of Joshua, where the voice of God commands the Israelites not

only to conquer the land but to plunder its wealth and kill its inhabitants — men, women and children — as a holocaust offering to the lord (e.g. *Josh* 6:17-21; 8:2, 24-6; 10:28-40; 11:6-14; see also *Num* 21:33-5 and *Deut* 3:1-7). The rule of God is to be prepared by the elimination of all that stands in its way, a mission contingent upon the uncompromised purity of a community consecrated to the sacralizing, sanctifying, all-consumptive and annihilating voice of God as announced by the book of the law of Moses (*Josh* 8:34-45; 23:6-8). The qur'ānically inspired militancy of the early Khārijīs served as an expression of vengeance on the worldly powers of the day, now Muslims and not merely forces hostile to Islam, who were both an affront to the reign of God and a threat to socio-political harmony, as expressed by the proto-Khārijī Ibn Budayl as grounds for fighting Mu'āwiya (Ṭabarī, *Ta'rīkh,* 3289-90, citing Q 9:123-7). Q 4:66-78, a rhetorical foil to encourage listeners to choose the way of God over that of Satan (*ṭāghūt;* see IDOLS AND IMAGES), speaks of fighting (q.v.) and killing as a religious activity (associated with prayer and fasting), a scriptural theme that became a way of life for the early Khārijīs, who passed sleep-deprived nights reciting the Qur'ān and long days in battle until death (Ṭabarī, *Ta'rīkh,* 3286-7), both activities understood as a means of drawing closer to God by lowering the barrier between this world and the next.

Recent studies on the Khārijī phenomenon (see Donner, Piety and eschatology; al-Jomaih, Use of the Qur'ān; Higgins, Qur'ānic exchange; Heck, Eschatological scripturalism) have raised important questions about their conception of revelation, their eschatological point of view and their desire to die in battle against the enemies of God. The reports about them as well as their own point of view as represented in their poetry ('Abbās, *Shi'r al-khawārij*) suggest that their rejection of any mediating barrier between the voice of God and its reception by humans worked to create an inherently antagonistic relation between the divine and the human, in which violence against the world was the only form piety might take and in which one's death in battle against the enemies of God — lethal martyrdom — is considered a fair exchange *(shirā')* for a place in eternity absolved of the sinful impurities of this world. Martyrdom as a pure offering to God in an act of violence — the desire to die in battle — becomes an effective means of winning God's favor by disassociating oneself from the sinful ways of a Muslim community that, having established itself as a worldly power, now falls into the category of former nations that rejected the rule of God.

In pursuit of their Islamic utopia, the Khārijīs separated from what they viewed as a wayward Muslim community (Ṭabarī, *Ta'rīkh,* 518-9; trans. xx, 103-4) and pursued a campaign of terror against those who admitted sin by refusing to condemn 'Uthmān's rule, killing at random men, women and children, even ripping open the wombs of pregnant women (Ṭabarī, *Ta'rīkh,* 755-6; trans. xxi, 125) and crucifying villagers (ibid., 760; trans. 129). Such violence may reflect gang tactics (Khārijī initiates were required to kill *[isti'rād]* as a test of loyalty and, when asked by state authorities to hand over the guilty, claimed collective responsibility — e.g. Ṭabarī, *Ta'rīkh,* 3377; trans. xvii, 127: "All of us were their killers and all of us consider your and their blood to be licit"). Violence (q.v.) does, however, serve to promote protest (e.g. the American and French revolutions). Indiscriminate violence can also serve to define the boundaries of a scripturally based community (cf. the New England Puritans who in 1637 carried out genocide

against the Pequot Indians in order to, in their own words, eradicate their memory from the face of the earth). Whatever the case may be, it would seem that the Khārijī conception of revelation, free of human mediation, motivated them to purify the Muslim community of its sinful turn to human authority and protection (*wilāya,* e.g. ʿUthmān, cf. Ṭabarī, *Taʾrīkh,* 516; trans. xx, 101; or ʿAbd al-Malik, cf. Ṭabarī, *Taʾrīkh,* 821-2, trans. xxi, 199). The Qurʾān had declared that no such protection should be sought in anyone other than God (Q 7:3) and in imitation of the Prophet, the early Khārijī leader, Nāfiʿ b. Azraq, declared that one should seek protection only in God (Ṭabarī, *Taʾrīkh,* 518; trans. xx, 103). Those who did not have a negative opinion of the leaders of the nascent Islamic state stood in sin for seeking protection in human beings. Sin for the Khārijīs, then, meant any positive association with human governance.

It is difficult to make sense of Khārijī activism without assuming an open-ended conception of revelation, in which the word of God continues to command and guide. Indeed, the Qurʾān depicts itself as open-ended (Q 25:32-3, see Madigan, *Qurʾān's self-image*). This does not mean a completely oral definition of the Qurʾān but a scriptural corpus that was not entirely fixed — cf. Khārijī accusations against ʿUthmān of having torn up books of the Qurʾān, a reference to his destruction of versions of the Qurʾān that differed with his official recension, to which ʿAlī responded with the claim that the decision was made after consultation (*shūrā,* a principle of human decision-making based on Q 3:159) among the Companions of the Prophet (q.v.; Ṭabarī, *Taʾrīkh,* 747; trans. xxi, 114). Notwithstanding the theological diversity in early Khārijism, its earliest form illustrates how scriptural rhetoric, originally a gloss on a community's self-understanding of survival amidst hostile forces, is transformed into a historical record of battle and bloodshed on behalf of God — scriptural rhetoric as litmus test of militancy (see Donner, Piety and eschatology, 16; cf. Ṭabarī, *Taʾrīkh,* 517; trans. xx, 102 and Ibn ʿAbd Rabbihi, *ʿIqd,* i, 217-9, esp. 219, which culminates in the report of Mirdās Abū Bilāl al-Khārijī, "There was no sect or innovating group with more penetrating insight than the Khārijīs, nor greater effort *[ijtihād],* nor more reconciled to death. Among them there was one who was stabbed, and the spear went through him, and he continued to make his way toward his killer, saying, 'I have hastened to you, O lord, that you might be pleased'"). This aspect of the Khārijī phenomenon — political re-enactment of scriptural rhetoric — remains current today. For example, Sayyid Quṭb (d. 1966) passionately sought to persuade Muslims to listen to qurʾānic recitation (see RECITATION OF THE QUR'ĀN) as its first audience did and imagine themselves to be faced with the choices the first Muslims faced in meeting the enemies of the Qurʾān (e.g. *Ẓilāl,* i/3, 115-27; cf. Arjomand, Unity and diversity). While such qurʾānic commentary served Quṭb's purposes of associating his enemies, particularly the Egyptian state, with those of the Prophet, his words do show this very important connection between the experience of direct revelation and political empowerment against political injustice, whether real or perceived. Later echoes of the Khārijī mindset include the culture of martyrdom and jihād on the Islamic-Byzantine frontier during the second/eighth and third/ninth centuries (see Bonner, *Aristocratic violence;* Heck, Jihad revisited) and the contemporary phenomenon of self-sacrificial violence, also known as suicide attacks, advocated by contemporary extremist groups that use

terrorist means to achieve their goals.

The interpretation of qur'ānic narrative as primarily a clash between worldly and godly rule first came to play in the assassination of ʿUthmān. Having penetrated the inner confines of his house in Medina, his assassins found him alone with a copy of the Qur'ān as his only defense (Ṭabarī, *Ta'rīkh,* 3023-5; trans. xv, 221-3). They are reported to have refrained from killing him immediately, choosing instead to debate with him about the nature of legitimate rule. For ʿUthmān, rule was legitimate in itself, having been established by God. As for his status as a Muslim ruler, ʿUthmān declares himself a believing Muslim, who, according to Islamic law, may be put to death only in three cases — apostasy, unlawful sexual relations and the killing of an innocent Muslim (see BLOODSHED), none of which ʿUthmān had committed. Most importantly, he argues, rebellion (q.v.) instead of reform — even in the name of correcting innovations made in the rulings of the Qur'ān — jeopardizes the enforcement of the law upon which political order, stability and socio-moral cohesion stand. The rebels, for their part, also couch their argument in legal and scriptural terms, although it is clear that their dissatisfaction lay in their marginalization from power and wealth at a time when the concerns of a centralizing state increasingly trumped the egalitarian ones of Islam (see Marlow, *Hierarchy*). They understood the worldly character of ʿUthmān's reign as a form of injustice, tyranny and the failure to rule competently, which put at risk the well-being of society as a whole and robbed the people of the sound government necessary for peace and prosperity. Quoting Q 5:33-4, which calls for the death of those who sow corruption on earth, the rebels labeled ʿUthmān as a brigand or highway robber (see THEFT) who had disrupted the peace, terrorized the innocent and deprived people of their right to life and unhindered pursuit of their affairs. In short, ʿUthmān represented for them worldly rule as opposed to the godly rule called for by the Qur'ān and followed under the leadership of the Prophet.

Notwithstanding the connection this account has to later legal discussions over the laws of rebellion (*aḥkām al-bughāt;* see Abou El Fadl, *Rebellion*), it does demonstrate the potential of the Qur'ān as a tool of protest against the state, regardless of the actual complaints of the opposition. This is further illustrated in the rebellions of the Umayyad period (41-132/661-750). The reasons behind the revolt of al-Mukhtār (d. 67/687) may have included vengeance (q.v.) for the blood of the family of the Prophet (q.v.; i.e. Ḥusayn's death at Karbala; see also PEOPLE OF THE HOUSE) and defense of the weak (manumitted slaves; see SLAVES AND SLAVERY) but it was announced as a summons to rule by the book of God and sunna (q.v.) of the Prophet (Ṭabarī, *Ta'rīkh,* 607, 609-20, 633; trans. xx, 191, 194, 217), in addition to messianic claims (the Islamic *mahdī* also featured prominently in early rebellions but is not a qur'ānic term). Similarly, the rebellion of Ibn al-Ashʿath (d. 82/701), while motivated by the state's treatment of the army under his command, resorted to the Qur'ān as a cloak of legitimacy. The first oath of allegiance given to Ibn al-Ashʿath by his soldiers is set alongside complaints against incompetent leadership, unfair distribution of spoils, disavowal of the arch-representative of state concerns, al-Ḥajjāj (d. 95/714), and support of Ibn al-Ashʿath's effort to expel him as governor of Iraq (Ṭabarī, *Ta'rīkh,* 1054-5; trans. xxiii, 5-6), but the second one includes a summons to the book of God and sunna of the Prophet, disavowal of the imāms of error and struggle against those who violate what is sacred (ibid., 1058; trans. xxiii, 8).

Finally, although colored by the concerns of a settled and culturally diverse society (see Sharon, *Revolt*), the ʿAbbāsid revolution that brought an end to Umayyad rule was ideologically inspired by an oath of allegiance to the Hāshimī family in terms of fidelity to the book of God and sunna of the Prophet along with the chosen one *(al-riḍā)* from the family of the messenger of God (Ṭabarī, *Taʾrīkh,* 1989, 1993; trans. xxviii, 97, 101).

This invocation of the Qurʾān by rebels against the state encouraged an official response that properly constituted rule was part of God's design for humankind, even apart from the prophetic heritage. To do this, rulers and their ideologues turned primarily to the genre known as "mirrors-for-princes" to account for the existence of the Islamic state. In short, non-qurʾānic arguments were advanced to demonstrate that political rule was a necessary part of the Muslim responsibility to meet the qurʾānic directive to be prosperous in contrast to former nations.

With no clear outline of political organization in the Qurʾān and ḥadīth, early Muslim rulers — Umayyad and ʿAbbāsid alike — were compelled to construct non-qurʾānic arguments for political rule: as divinely determined *(jabr)* and thus worthy of obedience in the case of the Umayyads (see al-Qāḍī, Religious foundation) or as the effective agent of a just *(ʿadl)* and harmonious association *(iʾtilāf)* in the case of the ʿAbbāsids (see Heck, Law). Such non-qurʾānic arguments for rule did, however, draw widely upon qurʾānic material, as well as reports of early Arabo-Islamic history. It was, then, this state-sponsored genre of literature that did much to bring the revealed and non-revealed into a single epistemological framework of Islamic civilization, e.g. al-Māwardī, *Naṣīḥat al-mulūk*, i.e. "advice to rulers." This title echoes the advisory mission of the prophets of Q 7, thereby suggesting that it and similar works offered to the rulers of the day — like prophets to former nations — wisdom (q.v.) that led to prosperity. In his introduction, the author claims that he is right in drawing upon a variety of sources of knowledge, both revealed and non-revealed, even the wisdom of former nations, to show the legitimacy of political rule:

> We are not, however, singular in our use of our own ideas in our book, nor do we rely in anything we say on our own opinion *(hawā)* but justify *(naḥtajj)* what we say by the revealed word of God *(qawl Allāh al-munazzal),* the majestic and exalted, and the reports of his messenger *(aqāwīl rasūlihi)* that narrate his practices *(sunan)* and precedents *(āthār),* and then the ways of kings of old *(siyar al-mulūk al-awwalīn),* past imāms and the rightly-guided caliphs, [along with the wisdom of] ancient philosophers *(al-ḥukamāʾ al-mutaqaddimīn)* of former nations *(al-umam al-khāliya)* and past days, since their words are worthy to be imitated, their traces to be followed and their model to be emulated (Māwardī, *Naṣīḥat al-mulūk*, 46).

Human wisdom, then, could be harnessed for the revealed goal of socio-political prosperity.

Similarly, the Umayyad al-Walīd II (r. 125-6/743-4), in a letter designating his two sons to succeed him, argued that prophecy and rule are two divinely ordained institutions (Ṭabarī, *Taʾrīkh,* 1757-64; trans. xxvi, 106-15), suggesting that the ruling office of caliph is part of God's plan in its own right (comparable in that sense to pre-modern European arguments for a divine right of kings) and drawing out in detail, including qurʾānic citation, the reasons for considering rule a necessary pillar of socio-political prosperity, not least

of which is its function as effective agent of legal order, both religious and public (ibid., 1758; trans. xxvi, 108; for Umayyad use of qurʾānic material in state letters, see al-Qāḍī, Impact of the Qurʾān; cf. Dähne, Qurʾānic wording).

For their part, the ʿAbbāsids drew upon the Sasanian heritage to articulate a theory of political authority *(sulṭān)* and sovereignty (q.v.; *mulk*), understood, along with the Qurʾān, as the basis of legitimate Islamic rule. Long before the appearance of Islam, the Sasanians coined the adage that "there can be no rule without religion (q.v.) and no religion without rule" *(lā mulka illā bi-dīn wa-lā dīna illā bi-mulk)*. It is this fundamental link between religion and rule that informs the testimony of the ʿAbbāsid al-Manṣūr (r. 136-58/754-75) to his son and successor al-Mahdī (r. 158-69/775-85), particularly its emphasis on strong rule as a combination of political authority *(sulṭān)* and holy writ *(qurʾān)*. He says that for the protection of authoritative rule, God has ordered in the Qurʾān double the penalty on those who stir up corruption in the land (quoting Q 5:33), and that sovereignty is the strong rope of God, a firm bond and the unshakeable religion of God (in reference to Q 2:256 and Q 3:103); in short, he encourages his son to protect and defend an Islamic sovereignty as buttressed by the revealed law (Ṭabarī, *Taʾrīkh,* 447; trans. xxix, 153-4). The idea of the essential role of political sovereignty in ordering the affairs of the world so suited the tastes and needs of ʿAbbāsid caliphs that the idea became current that God worked to arrange worldly order by political power *(sulṭān)* even more so than by revelation *(qurʾān,* e.g. Qudāma b. Jaʿfar, *Siyāsa min kitāb al-kharāj,* 56; Māwardī, *Adab al-dīn,* 169: *inna llāh la-yazaʿu bi-l-sulṭān akthar mimmā yazaʿu bi-l-Qurʾān*). That idle and rebellious humans had to be coerced by a strong power to live in political order was considered by the ruling powers through the ʿAbbāsid period and beyond as essential to God's designs of ordering his creation, willingly or not (i.e. either out of longing or fear, Q 21:90), in function of his quality of subduing *(qahhār)* all forces to his will (e.g. Q 12:39; for this connection of God's coercive power to political sovereignty, see Heck, Law). This attempt to link religious and political authority is nowhere more clear than in the chapter of early ʿAbbāsid history known as the Inquisition (q.v.; *al-miḥna*), in which elevation of the human authority of al-Maʾmūn (r. 198-218/813-33) depended on reduction of the Qurʾān to a created, rather than uncreated, status (see Nawas, *al-Maʾmūn;* cf. Cooperson, *Biography,* 24-69; see CREATEDNESS OF THE QURʾĀN).

The possibility of human rule alongside the Qurʾān

The themes discussed in the previous section recur in various ways throughout Islamic history, especially the recognition of the need for non-revealed sources of decision-making in the political arena — i.e. how to understand human judgment *(raʾy)* as an Islamically sanctioned agent of political organization, as well as pre-Islamic local custom *(ʿurf)* in public administration, like methods of tax-collection, that Muslim rulers had left intact (see POLL TAX). It was not only a matter of granting a share in Islamic rule to the human intellect *(ʿaql),* which, in "mirrors-for-princes" works, was seen as the partner of religion in preserving justice and socio-political prosperity, but also of claiming, as works of jurisprudence did, that Islam did not abrogate all pre-Islamic custom (see ABROGATION), which was given a legal value of its own (e.g. *al-sharʿ min qablinā,* a source of law used to justify the claim that the five principles *[panchasila]* at the heart of Indonesian political organiza-

tion not only approximate but actually meet the requirements of Islam's revealed law; see Mujiburrahman, Indonesia), not to mention a panoply of other jurisprudential devices, such as discretion *(istiḥsān)*, that allowed rulers to enact law without insult to the final authority of the Qurʾān.

Explications centered upon the question of human judgment *(raʾy)*. Was it to be permitted in areas concerning public good *(maṣlaḥa)* about which the Qurʾān was silent? At stake was not only the relation of the divine to human society but also that of political to religious authority. Given the Qurʾān's reminder to carry out God's design for creation, the Muslims' centuries-long struggle to formulate rule has had to maneuver between social recognition of the need for and benefit of human rule and scriptural recognition that all rule belongs ultimately to God. While a host of factors are at play in conceptions of rule, specific to Islam is this interplay between the social and scriptural (see Jadʿān, *Miḥna*, esp. 291 f.). The rule of the last Shah of Iran, for example, was contested partly on grounds of his preference for the social (i.e. the Persian heritage of monarchy) over the scriptural (identified in the Iranian case with Shīʿī notions of clerical jurisdiction over public affairs; see Arjomand, Shiʿite jurisprudence; and Calder, Accommodation and revolution). Likewise, in Egypt, Anwar Sadat's alliance with the West clashed violently with increasingly bold notions among Islamists of a sovereignty *(ḥākimiyya)* that belonged to God alone (see Faraj, *Farīḍa*, trans. esp. 1-34).

The tension between the social and scriptural cannot, however, be limited to the post-colonial clash between secular nationalism and religious fundamentalism, since it was recognized very early that political governance cannot stand on the texts of revelation alone. Among the first to treat this question was Ibn al-Muqaffaʿ (d. 139/756) in an epistle to the ʿAbbāsid al-Manṣūr (r. 136-58/754-75). To establish the legal authority of political leadership *(raʾy al-imām)*, Ibn al-Muqaffaʿ (*Risāla*, 120-2), a state official and convert to Islam, had to navigate between two groups: (1) those claiming to be released from obedience to the ruler when it involved disobedience to God (i.e. a political ruling contrary to scripture; *la ṭāʿata lil-makhlūq fī maʿṣiyat al-khāliq*), a position essentially placing sovereign authority *(sulṭān)* in the hands of the people by awarding them the choice to decide which ruler to obey and which of his commands to follow, in the end rendering all equals *(nazāʾir)* in political decision-making with destructive consequences for rule itself (a likely reference to the Khārijī position, resurrected by Sayyid Quṭb, see below); and (2) those advocating complete submission to the ruler in all matters without concern for obedience or disobedience to God, with the claim that the ruler alone is privileged with knowledge of and competence in such things (a position essentially placing the command of the ruler above that of the revealed text, reformulated by Ayatollah Khomeini in contemporary Iran, see below). To resolve these two positions — the first representing the scriptural, the second the social — Ibn al-Muqaffaʿ drew an important distinction which was to echo in Islamic politics through the centuries: that the ruler is not to be obeyed in anything that goes against clear scriptural directives in the Qurʾān and sunna, such as prayer, fasting, pilgrimage (q.v.), penal sanctions *(ḥudūd)* or dietary restrictions but must be obeyed in all his rulings where no scriptural precedent *(athar)* exists.

Although treated extensively by theorists in the classical period, such as Abū Yūsuf (d. 182/798), Qudāma b. Jaʿfar (d. 337/948) and al-Māwardī (d. 450/1058), this question remains a concern today. On the

Sunnī side, Yūsuf al-Qaraḍāwī — a Qatar-based *muftī* with associations to the Muslim Brotherhood — argues, like Ibn al-Muqaffaʿ, that God mercifully did not disclose clear and decisive rulings for all human affairs, an action that would have rendered human intelligence useless (Qaraḍāwī, *Siyāsa,* 72). Indeed, most of Islamic law requires human judgment, while the clear and decisive rulings *(qaṭʿiyya)* of revelation are very limited (Qaraḍāwī, *Siyāsa,* 77). Thus, in matters where no revealed text exists, the governing ruler can apply his judgment *(raʾy al-ḥākim al-siyāsī)* for the sake of the public good *(al-maṣāliḥ al-mursala)*. His argument, an explanation of the fifth of the twenty principles expounded by Ḥasan al-Bannā (d. 1949), the founder of the Muslim Brotherhood, demonstrates that there is an area of life, namely governance, that God has left to humans and that can thus change with circumstance and custom. The result is a division of the world's affairs into religious ones *(al-umūr al-taʿabbudiyya)* that are ruled by the revealed texts and customary ones *(al-umūr al-ʿādiya)* that fall to human judgment. He does, however, part ways with Ibn al-Muqaffaʿ — who justified human judgment alongside revelation by awarding a privileged status to the ruler's intellect *(ʿaql al-imām)* — by binding valid use of human judgment to the consultation *(shūrā)* of religious scholars, whose immersion in the study of revealed law *(al-sharīʿa)* guarantees that the ruler's judgment conforms with its intentions (*maqāṣid,* an important concept in modern Islamic political thought; see Heck, Religious renewal). Thus does al-Qaraḍāwī offer an updated version of traditional Sunnī jurisprudence and its use of analogical reasoning *(qiyās)* to apply revelation to political problems with no textual precedent: Worldly rule, although informed by human judgment, remains subordinate to godly authority.

Strikingly, al-Qaraḍāwī, using Q 4:60-5, views human judgment — illuminated by revealed texts — as the means for reconciling differences among Muslims, whereas in the Qurʾān it was the book above all that arbitrated human differences. He claims, like Ibn al-Muqaffaʿ, to be navigating between two extremes (Qaraḍāwī, *Siyāsa,* 49), those who say the ruler's judgment abrogates divine rulings *(aḥkām sharʿiyya)* and those who refuse to acknowledge any human rule not explicitly designated by a revealed text. Rather, for al-Qaraḍāwī (Qaraḍāwī, *Siyāsa,* 63-7), although different degrees of correct judgment exist, there is a need for human judgment — no matter how much one has memorized textual precedents *(aḥādīth wa-āthār)* — for the sake of governance and justice *(idārat shuʾūn al-bilād wa-tadbīr amr al-ʿibād wa-iqāmat al-ʿadl baynahum)* since Islam is both a religious and political order *(iqāmat al-dīn wa-siyāsat al-dunyā)*.

Similarly, while couching his words in qurʾānic verse, Ayatollah Khomeini, the first supreme leader of the Islamic Republic of Iran, argues for governance by the book as determined by the authority of the Shīʿī jurist (*wilāyat al-faqīh;* see Khomeini, Islamic government). Another leading cleric at the time of the Islamic revolution, Ayatollah Montazeri, drew a distinction, like al-Qaraḍāwī, between religious ruling *(hukumat-i sharʿi)* and the customary ruling *(hukumat-i ʿurfi)* — the difference being that Montazeri judges non-religious rulings to be non-binding without the endorsement of the jurists who represent the hidden but infallible Imām of Twelver Shīʿism (see Arjomand, Shiʿite jurisprudence), while al-Qaraḍāwī ties the validity of such rulings to the intentions of the revealed law. In fulfillment of this the-

ory, the Constitution of the Islamic Republic of Iran, while replete with qurʾānic citation, essentially puts all authority in the hands of the jurists and Khomeini in particular, as spelled out in principles 5 and 107 (see Mayer, Fundamentalist impact; cf. Abū l-Fawāris, *Risāla,* for an early Ismāʿīlī use of Islamic scripture to justify infallible human leadership). In one of his last acts before his death in 1988, Khomeini amended the Constitution to further enhance the authority of the human, even if privileged, judgment of the jurist over all affairs of state and society.

In contrast, elevation of the Qurʾān over human affairs has been promoted in post-colonial times by the Muslim Brotherhood. The Muslim Brotherhood's political thought and activity, since its founding in 1928, ranges from militant fundamentalism to participation in elected politics (for their history, see the pioneering but now limited work of Mitchell, *Society of Muslim Brothers*). Moreover, other, more violent, contemporary extremist groups that use violence to achieve their goals (such as al-Jamāʿa l-Islāmiyya and al-Jihād, which latter merged in 1998 with al-Qāʿida) were inspired partly by Muslim Brotherhood rhetoric and its promotion of a qurʾānically shaped society, as witnessed in the writings of the group's founder, Ḥasan al-Bannā (see *Five tracts*), and its most celebrated figure, Sayyid Quṭb (see Haim, Sayyid Quṭb; Haddad, Qurʾānic justification; Carré, *Mystique,* 342-3 [trans. text on the Islamic economic and political model, ad Q 59:7], 325 [on the *shūrā*]). The writings of these two figures promote a qurʾānically-based divine sovereignty for the sake of a greater egalitarianism which, in the writings of Quṭb, takes a revolutionary form against the perceived tyranny of Nasserist rule (i.e. the pan-Arabist and left-leaning socialist ideology of the Egyptian president Gamal Abdel Nasser, r. 1956-70). The goal was socio-political coherence and identity — especially against post-colonial secularizing/westernizing tendencies in Egypt and the Islamic world — through scriptural adherence.

Drawing upon the work of the Islamist ideologue and founder of the Pakistan-based Jamāʿat-e Islāmī, Abū l-Aʿlā l-Mawdūdī (whose formulation of an Islamic political constitution contributed to the Islamization of Pakistani politics; see, for example, his *First principles,* parts of which became law under Ziyā l-Ḥaqq's military dictatorship in the 1980s; for the legacy of Mawdūdī, see Zaman, *Ulama,* 87-110), Quṭb insisted that sovereignty belongs to God alone (*ʿAdāla,* trans. 105). In general, he does not seek to accommodate human judgment but envisions a fundamental clash between revealed sovereignty *(ḥākimiyya)* and non-revealed rule, which he labels as human ignorance (q.v.; *jāhiliyya;* Quṭb, *ʿAdāla,* trans. 107; see also AGE OF IGNORANCE). Human interpretation of scripture and thus the possibility of human rule must be accordingly reduced; religion *(dīn)* becomes the system *(niẓām)* of rule (Quṭb, *ʿAdāla,* trans. 110). In echo of Q 5:48-50, frequent references are made to God's program *(manhaj)* and way (*shirʿa,* cf. Ṭabarī, *Tafsīr,* iii, 246, for a discussion of the scope of this way, i.e. whether in reference to the many ways revealed by God to different communities or the way of the Muslim community specifically, etc.), the conclusion being that association of Islam with any human system, such as democracy, socialism, monarchy, etc., is entirely unacceptable (Quṭb, *ʿAdāla,* trans. 108, 112). Rulers are only to be obeyed to the extent that they themselves submit to the sovereignty of God and apply his revealed law (Quṭb, *ʿAdāla,* trans. 113-4), departure from

which deprives them of the right to obedience (Quṭb, *ʿAdāla,* trans. 114): "… hearing and obeying is conditional upon following the book of God Almighty." The result is a marked restriction on the employment of human judgment in rule (Quṭb, *ʿAdāla,* trans. 114-5): "… he becomes a ruler only by the absolutely free choice of the Muslims [a reference to Mawdūdī's idea of theo-democracy]… after that his authority derives from his undertaking to enforce the revealed law of God without claiming for himself any right to initiate legislation by an authority of his own." Consultation *(shūrā),* limited to those learned in religion, does, however, remain a principle of Islamic governance (Quṭb, *ʿAdāla,* trans. 116). Also, in echo of Ibn al-Muqaffaʿ, permission is given to the leader whose authority is based on the revealed law of God to make new decrees for the sake of the common good, provided such decrees do not violate a revealed text *(naṣṣ),* e.g. the imposition of taxes not mentioned in the Qurʾān, which, however, are not to be collected for maintaining state institutions but in service of a greater social justice in line with qurʾānic principles (Quṭb, *ʿAdāla,* trans. 119; see TAXATION).

From such pointed rhetoric has emerged a call for jihād against all worldly rule, epitomized in the work of ʿAbd al-Salām Faraj (d. 1982), who was executed with the four assassins of Egypt's president, Anwar Sadat, killed after he had signed a peace treaty with Israel. Faraj's now famous treatise, *al-Farīḍa al-ghāʾiba,* "The neglected duty," begins by quoting Q 57:16, which calls for the submission of believing hearts (see HEART) to divinely revealed truth in contrast to former nations, whose hearts had hardened against the book of God. He claimed that the Egyptian state had come to be ruled by laws of unbelief, a reference to the adoption of western law (see Faraj, *Farīḍa,* trans. 162), making of its rulers apostates deserving of death. What is new here is not the insistence on an Islamic state as a necessary condition for the performance of God's precepts or the identification of Muslim rulers with the pre-Islamic Age of Ignorance but rather the intensely militant rejection of any humanly tinged rule. In the manner of the first Khārijīs, Faraj quotes Q 5:44: "Those who do not rule by what God has revealed are infidels," as prelude to his identification of the Muslim rulers of his day with the Mongols, who ruled without sufficient attention to Islamic law (Faraj, *Farīḍa,* trans. 167-8). There is simply no room for human governance in Faraj's treatise but an insurmountable gap between political rulings *(al-siyāsāt al-mulkiyya)* and qurʾānic rulings (*aḥkām;* Faraj, *Farīḍa,* trans. 49, commenting on Ibn Kathīr's exegesis of Q 5:50).

There is thus, for Faraj, no action — not charity, not participation in elected politics, not the Islamic education of society — that can take precedence over jihād (understood by him solely as armed struggle) against worldly rulers, for the worldly must be subdued, the godly exalted. Given that human governance is a contradiction in terms for this militant brand of Islamism, accommodation is impossible. War, not merely Islam, is the solution, and Faraj devotes the latter half of his work to Ibn Taymiyya's position on jihād. Picking up the theme of Q 9 (Sūrat al-Tawba, "Repentance"), Faraj declares that in the Islamic age, worldly power must be brought to an end not through natural phenomena, as God has done in the case of former nations, but through the armed struggle of belief against unbelief (Faraj, *Farīḍa,* trans. 162, 190). In other words, it has now become the duty of Muslims to act on behalf of God and annihilate those nations that fail to heed his message. Seen in that light, it is hardly surprising that

Sadat's assassins claimed to have killed Pharaoh.

In light of Islamist esteem for the writings of Ibn Taymiyya (d. 728/1328), it is necessary to ask how closely his thought corresponds to Islamist goals today. He does give an elevated status to scripture as guarantor of Muslim identity after the fall of the caliphate to the Mongols in 656/1258; but, unlike Faraj, he was a jurist who worked within the framework of traditional Islamic jurisprudence. As will be outlined, his post-Mongol protest, unlike Faraj's post-colonial one, was not against human rule per se but communal heterodoxy that he viewed as a threat to the unity of a Muslim community bereft of the office of caliph.

In his most famous work, *al-Siyāsa al-shar'iyya,* Ibn Taymiyya recognizes the social dimension of rule, arguing that political office *(wilāya)* is a religious necessity (*Siyāsa,* 172-80) since the social chaos resulting from its absence would prevent people from performing the precepts of the religion. He supports his position philosophically by claiming that only via human congregation *(ijtimā')* can human welfare be attained, since humans are mutually dependent for their survival, and that human congregation most effectively serves the good when it is ordered under and enforced by political rule (Ibn Taymiyya, *Siyāsa,* 172-3). Ibn Taymiyya thus affirms the necessity of human rule even when not in complete conformity to the divine will. His model of public administration, while aspiring to justice as based upon the Qur'ān and sunna (*al-'adl alladhī dalla 'alayhi al-kitāb wa-l-sunna;* Ibn Taymiyya, *Siyāsa,* 13), is not based on scripture alone. The work begins by quoting Q 57:25, which states that God sent down not only the book and balance (see WEIGHTS AND MEASURES), by which humans might act in accordance with the divine will, but also iron as a mighty power for the benefit of humankind, i.e. rule as the effective agent by which human society in its diversity might be made, even coerced, to live in political harmony.

The work's self-stated goal is to explain Q 4:58-9, which calls for justice in arbitrating human affairs and obedience to those holding command *(ūlī l-amri)*. Ibn Taymiyya argues on the basis of qur'ānic citation for a complementary notion of God's guidance, embodied in scripture, and political rule. Hence, although he draws heavily upon the Qur'ān and the sunna, his words are directed to state officials (e.g. provincial governors, tax-collectors, military commanders, state ministers and secretaries, etc.; Ibn Taymiyya, *Siyāsa,* 5). While revelation is meant to shape the socio-political order, the qualifications for election *(ikhtiyār)* to office are ambiguous. They essentially boil down to two criteria (Ibn Taymiyya, *Siyāsa,* 12-4): (1) strength *(quwwa),* meaning effectiveness, e.g. in war, and (2) trust *(amāna),* meaning pious commitment to govern justly in accordance with revelation *(shar')*. Since, however, these two criteria so rarely coexist in a single person, effectiveness may trump pious commitment, depending on the office in question, making it preferable to appoint an effective military commander or judge even if he is personally immoral (*fājir,* Ibn Taymiyya, *Siyāsa,* 14, 18) or does what the Prophet has forbidden (*ya'mal mā yunkiruhu al-nabī,* ibid., 15) — in other words, offends against divine revelation. Ibn Taymiyya cites in support of this examples from the first community of Muslims and a saying of the Prophet (*Siyāsa,* 15), "Indeed God supports this religion with an immoral man."

Ibn Taymiyya's call to jihād is not, then, aimed against impious individuals entrusted with the governance of Muslim society. Constituted authority, even if

straying from Islamic perfection, is validated by its end: social harmony and human welfare. Jihād is directed not at political rule but heterodox Islam, particularly the Nuṣayrī sect. Ibn Taymiyya's concern with Mongol rule must be seen within the context of the ritual pluralism of post-Mongol Islam, which had long existed in Islam but became a more significant concern in the absence of the caliphate. For him, the Mongol invasions were providential (Ibn Taymiyya, *Rasā'il,* 53 f.), a test by which God separates hypocrites from true believers, as he tested the first Muslims by external attack (illustrated in Q 3:152; again, the attempt to relate political developments to qur'ānic narrative). Such external hostility was, he claimed, to be welcomed as part of the divine plan to expose Muslim groups given to ritual innovation *(bid'a),* which posed the greatest threat to the religion, making it necessary to identify not religiously imperfect political authorities but ritually heterodox Muslims, along with infidels *(kuffār),* as legitimate objects of jihād (Ibn Taymiyya, *Siyāsa,* 131; id., *Fiqh al-jihād,* 100). Reading this concern alongside his vision of political rule as described in the previous paragraph, it is possible to conclude that the use of Ibn Taymiyya by radical Islam today grossly distorts his thought, which must be seen as a legal development aiming to articulate the theory of jihād anew in the midst of altered social circumstances where Islamic identity was no longer imagined and guaranteed in terms of political authority but by means of ritual and communal practice. The main thrust behind his work is not eschatological violence against worldly power in witness to the rule of God symbolized by Islamic scripture, nor is it political rebellion against constituted authority in the name of an Islamic rule based exclusively on scripture, but rather the unity of religious and communal identity in the face of its own ritually pluralistic membership (see Heck, Jihad revisited).

The Qur'ān has been drawn upon no less effectively in support of democracy and even secularism (see Esposito and Voll, Islam's democratic essence). New concepts of authority, based upon an individual's encounter with scripture *(ijtihād)* apart from traditional authority, are at play in the modernizing exegesis of such figures as Muḥammad 'Abduh (d. 1905), who was himself aware of the political consequences of his work (see Jomier, La revue "al-'Orwa al-Wothqa"). His tabling of tradition, while meant to spur a legal and religious dynamism necessary to meet the challenges of modernity, widened the scope of qur'ānic interpretation for political ends, opening the door to both fundamentalist and reformist uses of Islamic scripture. The contemporary use of the Qur'ān by fundamentalist Islam having been given above, here the reformist point of view will be illustrated by the writings of three Egyptian thinkers.

Amidst much controversy (Enayat, *Modern political thought,* 62-8), 'Alī 'Abd al-Rāziq (d. 1966) argued in *al-Islām wa-uṣūl al-ḥukm* (135-64, chapter 3 of book 2, entitled *Risāla lā ḥukm, dīn lā dawlā*) that the mission of the Prophet was limited to a message (i.e. to bear good news and to warn, citing several qur'ānic verses to that effect, e.g. Q 17:105; 24:54; 25:56; 33:45-6) and did not include the creation of a polity: Muḥammad may have struggled to defend his message, even using force to do so, but never did he undertake to coerce people into a polity, there being no evidence for such — 'Abd al-Rāziq challenges his audience to find any — between the two covers of the Qur'ān or in the sunna. Since governance is a worldly affair (here 'Abd al-Rāziq inverts traditional arguments for religious supervision of worldly affairs), God has given it to human minds

to manage their worldly affairs according to what they see best in light of their knowledge, interests and tendencies. ʿAbd al-Rāziq certainly recognizes the necessity of government (on the basis of Q 43:32 and Q 5:48) but denies that it is an article of faith or that it is limited to the forms known to Islamic history — caliphate and despotic government in his opinion. Even if the installation of the state is viewed as an act of political wisdom, Islamic ideals can still be guaranteed by the spiritual message of the Prophet and not control of the state (Enayat, *Modern political thought,* 68).

ʿAbd al-Rāziq's ideas came at a chaotic moment for Muslim identity — the collapse of the Ottoman empire and the height of colonial domination along with largely unsuccessful attempts to develop a pan-Islamic institution to deal with Muslim affairs globally. His thought must be seen as an attempt to facilitate an Islamic reconciliation with the strongly modernizing tendencies of his day. In contrast, the writings of Muḥammad Saʿīd al-ʿAshmāwī (b. 1932) are a counter to the increasingly bold fundamentalism of a post-colonial Egypt in search of national identity and civil society. He maintains in *al-Islām al-siyāsi* (175-92), against fundamentalist condemnations of Egyptian rule as apostate, that Egyptian law is in point of fact in full harmony with the principles of the revealed law of Islam. For him, the paucity of legal norms enshrined in the Qurʾān — only 200 of some 6,000 verses have a legal character, he claims — supports the original meaning of *sharīʿa* at the time of qurʾānic revelation as a way and not as a collection of legal details. It has thus been left to the Egyptian state to work out a rule of law, and as a high-ranking judge, al-ʿAshmāwī displays his intimate knowledge of Egyptian law, which, he argues, in no way contradicts the dictates of the Qurʾān. He says at one point that the Islamist position that truly Islamic rule must be limited to the book of God confuses revelation *(al-sharīʿa),* i.e. the qurʾānic way, with law *(fiqh),* which is a process by which jurists and judges apply their own efforts of judgment *(ijtihād)* to legal matters. Indeed, for al-ʿAshmāwī, Islamist exploitation of the Qurʾān for political ends is a danger for Islam and should cease since Egyptian law has not been tainted by any innovation *(bidʿa)* but remains consistent with Islamic revelation.

Finally, Muhammad Khalaf Allāh (d. 1997) presses the qurʾānic theme of consultation (*shūrā,* citing Q 3:159) in *al-Qurʾān wa-l-dawla* (55-79) as the Islamic mode of political decision-making. Drawing on Muḥammad ʿAbduh, Khalaf Allāh insists that those in authority (*ūlū l-amr,* cf. Q 4:59) should be identified with those to whom the Muslim community has entrusted responsibility for making laws and overseeing the governance of society. But this should not be done, however, in the manner of divinely constructed offices held by figures claiming a personal right to rule, but by political officials chosen by the community — and thus removable by the community — who govern not religious but worldly affairs after the manner of the Prophet and his Companions, namely through consultation (a position reminiscent of the Indonesian Nurcholish Madjid's idea that the oneness of God *[tawḥīd]* should actually prevent Muslims from viewing the state in sacred terms; see Madjid, Islamic roots of pluralism). In this light, religious leaders have no inherent right to this legislative role. Their task — as was the Prophet's — is to explain beliefs *(ʿaqāʾid),* worship *(ʿibādāt)* and the norms of social affairs *(muʿāmalāt)* but they, like the Prophet, enjoy no mandate to legislate worldly affairs on the basis of revelation.

Khalaf Allāh, it should be added, is perhaps most known for his employment of literary methodology in scriptural exegesis, by which he argues that the Qur'ān is not a record of historical facts (see INIMITABILITY; HISTORY AND THE QUR'ĀN) but an exhortation to the Islamic faith (see EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY). His entire oeuvre, then, confirms the thesis that Muslim recognition of the role of human (i.e. non-revealed) decision-making in the political organization of society's affairs follows closely upon willingness to allow human interpretation of the Qur'ān. It is thus the possibility and parameters of exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL), as debated across Islamic history from ʿAlī b. Abī Ṭālib to Muḥammad Khalaf Allāh, that stand at the heart of politics and the Qur'ān.

Poll Tax

A tax per head, usually levied on every adult male of a given age. The Arabic term, *jizya,* used for the poll tax levied on non-Muslims, specifically the People of the Book (q.v.) living under Muslim rule (*ahl al-kitāb,* also identified eventually as "protected people," *ahl al-dhimma*), does

have a qurʾānic origin (Q 9:29: … *ḥattā yuʿṭū l-jizyata ʿan yadin wa-hum ṣāghirūn,* i.e. "… until they pay the *jizya* from their wealth [lit. from hand], submissively"). There is no evidence in the Qurʾān, however, of a tax per head *(ʿalā l-raʾs)* as assumed by later jurists (e.g. Mālik, *Muwaṭṭaʾ,* 187-9; Abū ʿUbayd, *Amwāl,* 23-56). The tax per capita as finally established in Islamic law seems to have derived from a Sassanian practice (*khāk bar sar,* Abū ʿUbayd, *Amwāl,* 29, no. 61; cf. Ṭabarī, *Taʾrīkh,* i, 2371; see Lokkegaard, *Islamic taxation,* 128-43; for the adoption of the Byzantine poll tax in Egypt, see al-Dūrī, *Nuzum,* 79) developed by Muslims through the course of the conquests, first being applied to all members of a conquered locale — men, women and children (Abu ʿUbayd, *Amwāl,* 31, no. 66) — and then limited to mature males (*ḥālim,* ibid., 33, no. 72; 39, no. 93; see LAW AND THE QURʾĀN). The poll tax varied according to the terms of the treaty between the Muslims and the local peoples (see Ṭabarī, *Taʾrīkh,* i, 2051; cf. Morony, *Iraq,* 584-8), was assessed according to one's wealth (q.v.; see Cahen, Djizya), was first applied to non-Muslim Arabs and then gradually extended, by the Prophet's example (*sunna,* Abū ʿUbayd, *Amwāl,* 38, no. 88), to non-Arab non-Muslims living in the conquered lands (ibid., 25, no. 53), including Zorastrians (*majūs;* see MAGIANS) as well as Jews (*yahūd;* see JEWS AND JUDAISM) and Christians (*naṣārā;* see CHRISTIANS AND CHRISTIANITY). There also seems to have been a connection, at least initially, between the payment of this tax and socio-professional status, for it is reported that the large Christian tribe (see TRIBES AND CLANS), the Banū Taghlib, refused to pay the *jizya* on the grounds that they were Arabs (q.v.), not farmers; presumably to avoid the humiliation *(ṣaghār)* of being classified with those who work the land, they were granted the right to pay, instead, the Muslim tax *(ṣadaqa),* although at twice the normal rate (ibid., 32; cf. Mālik, *Muwaṭṭaʾ,* 189, who explains the distinction in religious terms: "The Muslim tax was levied on Muslims as a means of purifying them *[taṭhīran lahum]* … and the *jizya* was levied on the People of the Book as a means of subordinating them [*ṣaghāran lahum,* i.e. to Muslim rule]).

It has been demonstrated rather persuasively that the exegetical tradition on Q 9:29 bears no relation to the historical conditions of the verse (see Rubin, Qurʾān and tafsīr; see SĪRA AND THE QURʾĀN); the verse does seem to have been used by later exegetes as a point of departure for elaborating differences — theological and legal — between Muslims and non-Muslims (e.g. Ibn al-Jawzī, *Zād,* 420, for whom the verse is a confirmation of the abrogation of previous religions with the appearance of Muḥammad's religion *[dīn Muḥammad];* see also McAuliffe, Fakhr al-Dīn al-Rāzī; see RELIGIOUS PLURALISM AND THE QURʾĀN). Nevertheless, the rationale generally given for the poll tax — a compensation *(jazāʾ)* in exchange for enjoying the protection *(dhimma)* of Muslim rule — does demonstrate a certain conceptual continuity with the qurʾānic term *jazāʾ* (cf. Ṭabarī, *Taʾrīkh,* i, 2470: … *maʿa l-jazāʾ ʿan aydīhim ʿalā qadri ṭāqatihim,* i.e. "… with compensation from their wealth [lit. from their hands] according to their ability [to pay]"). Claims for continuity, however, between the qurʾānic sense of the term and its later legal and exegetical use rest on the identity of those people specified as being obligated to pay the *jizya,* namely those who have been given the book *(min alladhīna ūtū l-kitāb),* widely assumed to be non-Muslim recipients of God's revelation (i.e. People of the Book) in contrast to those who are without knowledge of God's oneness (*mushrikūn,*

see Rāzī, *Tafsīr,* ad Q 9:30; see POLYTHEISM AND ATHEISM).

Rubin *(Barāʾa)* has concluded that *jizya* at Q 9:29 connotes financial compensation for the loss of income sustained by the rupture of commercial relations with non-Muslim traders who are prohibited, at Q 9:28, from approaching Mecca (q.v.). This does seem to be borne out in Q 9:29 itself, the opening words of which claim that the people obliged to pay the *jizya* do not believe in God or judgment day (*lā yuʾminūna bi-llāh wa-lā bi-l-yawmi l-ākhir;* see LAST JUDGMENT). Book (q.v.; *kitāb*), while connoting divine knowledge (see KNOWLEDGE AND LEARNING) and authority (q.v.), can also serve as a metonymy for treaty, the terms of which were fixed in writing (a *kitāb*) and included some kind of payment of tribute (see CONTRACTS AND ALLIANCES). *Jizya,* in fact, occurs in such a context in Ibn Saʿd's history (*Ṭabaqāt,* i, 257 f.), where the term for the missives *(kutub)* sent by Muḥammad to other groups and rulers connotes both letter and pact. Were, then, the people named in Q 9:29 the so-called People of the Book *(ahl al-kitāb)* or merely tribal groups of varied character which had entered into alliance with the tribal overlordship of Muḥammad and his Muslim partisans while not sharing their monotheistic beliefs? Simonsen (*Studies,* 47-61) argues — on the basis that there is no qurʾānic connection between *dhimma* and *jizya* — that Q 9:29 applies to all non-Muslims dwelling within the reach of Medinan hegemony, whether monotheists or not (see MEDINA).

In favor of the identification of the *jizya*-payers of Q 9:29 with the People of the Book, support can be drawn from the verses subsequent to Q 9:29, which serve a doctrinal polemic against the claim of Jews that Ezra (q.v.; ʿUzayr) is the son of God and that of Christians who say that Jesus (q.v.) is (Q 9:30), and against the undue attribution of divine authority awarded by both groups to their religious leaders (*ittakhadhū aḥbārahum wa-ruhbānahum arbāban min dūni llāh,* Q 9:31). Later exegetes understood Q 9:29 to indicate the failure of Jews and Christians to affirm fully God's oneness (e.g. Muqātil, *Tafsīr,* ii, 166; Zamakhsharī, *Kashshāf,* iii, 32; Ibn al-Jawzī, *Zād,* iii, 419; see POLEMIC AND POLEMICAL LANGUAGE). Moreover, the fact that the concept of the protection *(dhimma)* of God and his Prophet was not limited in the earliest period to the People of the Book, as Simonsen demonstrates, need not negate the more specific application of *jizya* to them apart from the *mushrikūn*. Finally, the usage of *min alladhīna ūtū l-kitāb* elsewhere in the Qurʾān does indeed suggest recipients of previous revelation (e.g. Q 4:47; see REVELATION AND INSPIRATION).

The occasion for the revelation of Q 9:29 (see OCCASIONS OF REVELATION) is thought to have been the Prophet's expedition in 9/30 to Tabūk (Ṭabarī, *Tafsīr,* xiv, 200) in the northwestern region of the Arabian peninsula (cf. Bakhit, Tabūk), conducted in anticipation of a Byzantine-sponsored attack (see EXPEDITIONS AND BATTLES). While the attack never materialized, the Prophet took the opportunity to conclude pacts with tribal groups near the Gulf of ʿAqaba. The use of *jizya* for non-Muslim and specifically Jewish, Christian and Zoroastrian groups only after the expedition to Tabūk seems to be confirmed by the reports of Ibn Saʿd (d. 230/845; cf. Simonsen, *Studies,* 47-61). The suggestion has been made that the appearance of *jizya* was linked to the Medinan policy towards tribes already accustomed to payment of tribute (q.v.) to Byzantine and Sassanian overlords (Schmucker, *Untersuchungen,* 74 f.), and it is in that sense that this tribute became a sign of obeisance (*wa-hum ṣāghirūn,* cf. Q 27:37) to the growing socio-political hegemony of Islam (see COMMUNITY AND

SOCIETY IN THE QUR'ĀN; POLITICS AND THE QUR'ĀN).

Most significantly for our understanding of the Qur'ān, it must be noted that the concept of *jizya* at Q 9:29 does serve a program of Muslim confessional definition vis-à-vis other groups, in both the formative and classical periods of Islam. The qur'ānic occurrence of the verse in a Medinan context (Q 9: Sūrat al-Tawba, "Repentance"), where concerns for the formation of the Muslim polity and corresponding confessional demarcations of religio-political identity were urgent, suggests that the qur'ānic *jizya* can best be understood in terms of a confessional tax levied upon tribal and other groups unwilling to meet the requirements of membership in Islam (it is also used in this sense in the rules of jihād [q.v.], where those refusing the call of Islam are offered the chance to pay the *jizya* in exchange for cessation of hostilities). Such boundaries were embodied in both religious and fiscal terms, and it is in this sense that taxation (q.v.) of other groups served Islam in its definition of such confessional lines. The context in which Q 9:29 occurs is quasi-creedal in coloring (see CREEDS). The exegetes understood it in this way, although they developed its original connotation (see above). In addition, the administrative history of the term also confirms its confessional orientation: While *jizya* was used interchangeably in the earliest period with the term for the land-tax (*kharāj,* e.g. "*jizya* on the land" or "*kharāj* on the head"; see Cahen, Djizya), the two terms became gradually disassociated when ownership of the lands of conquest — through conversion of the tenants to Islam or sale of their land to Muslims — was no longer solely identifiable with non-Muslims (a policy believed to have first been instituted by the Umayyad ʿUmar b. ʿAbd al-ʿAzīz, r. 99-101/717-20; see Gibb, Fiscal rescript).

Polysemy in the Qur'ān

The plurality of senses that words can have. It is the property of words in all natural languages to have more than one meaning, for polysemy is an essential condition of a language's efficiency: a finite set of lexical elements is used to express a potentially infinite set of situations. Arabic words in the Qur'ān also have this property and many words in the Qur'ān have been classified as polysemous in the exegetical tradition (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). In fact, some exegetes suggest that all words in the Qur'ān contain several meanings or levels of meaning (see LANGUAGE AND STYLE OF THE QUR'ĀN; LITERARY STRUCTURES OF THE QUR'ĀN).

The possibility of ambiguity or equivocation is, however, a counterpart of polysemy — although contextual, syntactic and lexical clues in practice reduce this possibility. For example, mutual appropriateness reduces a word's semantic pertinence so that only part of the semantic field of a word is used; the remainder is excluded or repressed. The Qur'ān, however, inhibits this reduction. It is a referential text that often does not provide a great deal of context. This difficulty was alleviated somewhat by biographical materials (*sīra;* see SĪRA AND THE QUR'ĀN), the circumstances of revelation literature (*asbāb al-nuzūl;* see OCCASIONS OF REVELATION) and other narrative texts that offered historical explanations or allusions that emphasized monosemy and, by providing a context frequently missing in the Qur'ān itself, word sense disambiguation. Early works on the *gharīb,* i.e. difficult words such as *hapax legomena,* foreign and dialectal words (see FOREIGN VOCABULARY; DIALECT), also emphasized monosemy by providing mostly simple glosses.

On the whole, the Islamic exegetical tradition embraced polysemy in the Qur'ān. Although the Qur'ān was thought to have a divine origin and Arabic came to be viewed as a divine language, not a "natural" one, polysemy was not considered a defect (see REVELATION AND INSPIRATION; ARABIC LANGUAGE). Rather, polysemy in the Qur'ān became one of its miraculous features (see MIRACLE; INIMITABILITY). The issue was not whether the Qur'ān was polysemous but rather how to express and limit the polysemy. As a result, polysemy has been represented or imposed in several different but overlapping ways throughout the history of reading and interpreting the Qur'ān (see READINGS OF THE QUR'ĀN). The question remains whether the polysemes discovered by the exegetes are deliberate or merely imposed upon the Qur'ān for theological and other reasons (see THEOLOGY AND THE QUR'ĀN).

Wujūh al-Qur'ān

The most obvious works dealing with polysemy are those of *wujūh* (polysemes and homonyms) and *nazā'ir* (synonyms or analogues). *Wujūh* refers to words employed several times in the Qur'ān but with at least two and perhaps as many as forty different meanings (Abdus Sattar, Wujūh, 138). The distinction between homonymy, which refers to words of different origins or roots that coincide phonetically, and polysemy, which refers to words of related origin but whose roots or derived forms

have several discernable senses, is essentially arbitrary. Synchronically, homonymy is a kind of polysemy but even diachronic homonymy can become polysemy and vice versa because the criteria for distinguishing between homonymy and polysemy are themselves somewhat arbitrary. In any case, it is a distinction that those qur'ānic exegetes who discussed *wujūh* did not generally make. *Wujūh* is a branch of the sciences of the Qur'ān (*'ulūm al-Qur'ān;* see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY) and finds sanction in several prophetic ḥadīths (see ḤADĪTH AND THE QUR'ĀN): "The Qur'ān… conveys [many] meanings *(wujūh);* so impute to it the best of its meanings" (Zarkashī, *Burhān,* ii, 163). And, "a jurisprudent's *(faqīh)* jurisprudence is not comprehensive until he sees many *wujūh* in the Qur'ān" (Suyūṭī, *Itqān,* i, 299; see LAW AND THE QUR'ĀN).

Muqātil b. Sulayman (d. 150/767) is credited with authoring the first *wujūh* and *nazā'ir* work (cf. Nwyia, *Exégèse,* 109-16; Gilliot, *Elt,* 118-20). His methodology, largely followed by later authors in this genre, is to provide a gloss or brief definition for each of the meanings *(wujūh)* of a word and then to list other analogous qur'ānic passages *(nazā'ir)* — that is, those in which the word is employed with the same meaning. Important early *wujūh* works are those of Ibn Qutayba (d. 276/889), al-Dāmaghānī (d. 478/1085), and Ibn al-Jawzī (d. 597/1200). Of course, the subject is treated by al-Zarkashī (d. 794/1391) and al-Suyūṭī (d. 911/1505) in their works on the sciences of the Qur'ān. None of these works are systematic examinations of qur'ānic vocabulary. Rather, the words chosen by these exegetes are religiously significant ones. It should also be noted that in these works, the terms *wujūh* and *nazā'ir* are themselves somewhat polysemous (Rippin, Lexicographical texts, 167-71). By the time of al-Zarkashī, the existence of *wujūh* in the Qur'ān had acquired its most important theological implication: it is one "of the miracles *(mu'jizāt)* of the Qur'ān since one word imparts twenty aspects (sing. *wajh*), or more or less; and one does not find that in the speech of mankind" (Zarkashī, *Burhān,* i, 102).

Polysemy in the Qur'ān has, at least at times, been created by the exegetical tradition itself, which even has the Qur'ān "inventing" new meanings for some words. See, for example, the development of the association of "sleep" with *bard,* "cold," in order to "solve intra-qur'ānic and Qur'ān versus dogma conflict" (Rippin, Qur'ān 78/24, 311-20; see DREAMS AND SLEEP; HOT AND COLD). If such is the case, one can legitimately ask whether the exegetes' rich tradition of finding polysemes in the Qur'ān is more a product of the exegetes' ingenuity than a deliberate feature of the Qur'ān. Certainty may well be restricted to those words for which there are other reasons for assuming polysemy, such as the use of puns in the Qur'ān (see HUMOR).

Levels of meaning in the Qur'ān

As a technical term *wujūh* connotes that category of words that are used in different ways in different passages of the Qur'ān, but proved to be an inadequate rubric under which to discuss words, expressions and phrases, which have multiple meanings within a single passage. Several other overlapping rubrics were developed and employed in various ways by Sunnī, Shī'ī and Ṣūfī exegetes (see SHĪ'ĪSM AND THE QUR'ĀN; ṢŪFISM AND THE QUR'ĀN). Generally, all the methods that they developed were based on the premise that the passages of the Qur'ān had several levels of meaning, though the deeper levels should not be allowed to negate the single, literal meaning.

One of the more significant ways of accounting or allowing for polysemy (at least at the level of expressions and phrases as opposed to individual words) was introduced by using the distinction between the *muḥkamāt* and *mutashābihāt* given in Q 3:7. Whether these two words are polysemous in the Qur'ān is uncertain but in the explanations of later exegetes they are certainly understood to be. Some argued, Abū ʿUbayd (d. 224/838) for instance, that they refer to the abrogating and regulative passages, and to the abrogated and non-regulative passages, respectively (see ABROGATION), while others saw them as the clear and unclear passages, respectively (see AMBIGUOUS). Of more immediate significance is that *mutashābihāt* came to mean verses that were polysemous. For instance, al-Jaṣṣāṣ (d. 370/981) states that the *muḥkamāt* permit only one meaning but the *mutashābihāt* may have several. The meanings and aspects *(wujūh)* of the latter must be understood in reference to the former, though not all of them could be known (Jaṣṣāṣ, *Aḥkām,* ii, 3-4).

Tafsīr and *taʾwīl* are another pair of terms employed to convey the notion of several levels of meaning (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). *Tafsīr* came to mean the exegesis that was concrete, exoteric, and/or based on tradition. *Taʾwīl* came to mean exegesis that was abstract, esoteric, and/or based on personal opinion *(raʾy)*. Thus, al-Ṭabarī's (d. 310/923) exegesis is *tafsīr* and al-Qushayrī's (d. 465/1072) *Laṭāʾif al-ishārāt* is *taʾwīl*. The distinction between terms was only theoretical, however, since exegetes such as the Ṣūfī al-Sulamī (d. 412/1021) labeled their works as *tafsīr*s and al-Ṭabarī's work was originally entitled as *taʾwīl* — again the terminology of polysemy is itself polysemous. Also for some exegetes, *tafsīr* permitted only one meaning *(la-yaḥtamilu illā wajhan wāḥidan),* whereas *taʾwīl* allowed more (Suyūṭī, *Itqān,* ii, 381). Thus, *taʾwīl* allowed for unrestricted polysemy. In practice, however, even *tafsīr* was polysemous. Al-Ṭabarī cites a tradition from Ibn ʿAbbās in which he states, "*Tafsīr* has four aspects: an aspect which is known to the Arabs (q.v.) through their speech, a *tafsīr* of which no one can plead ignorance, a *tafsīr* which the learned know, and a *tafsīr* known only to God" (Ṭabarī, *Tafsīr,* i, 57; Eng. trans. i, 34). Furthermore, al-Ṭabarī's *tafsīr,* though based on traditions, often accepts that all the diverse opinions found in the earlier exegetes are correct (cf. Gilliot, *Elt,* 112-33).

The most prominent binary distinction that allowed for polysemy is the one between *ẓāhir* and *bāṭin*. In his discussion of the seven *ḥarf*s, al-Ṭabarī cites a tradition in which Muḥammad says "Each of the *ḥarf*s has an outward meaning *(ẓahr)* and an inward meaning *(baṭn)*. Each of the *ḥarf*s has a border, and each border a lookout" (Ṭabarī, *Tafsīr,* i, 35-6; Eng. trans. i, 16; cf. Gilliot, *Elt,* 112 f.). Generally, *ẓāhir* refers to the exoteric, outer, obvious, or literal meaning and *bāṭin* to the esoteric, inner, concealed, or symbolic meaning. Theoretically, *ẓāhir* had but one meaning and was associated with *tafsīr,* while *bāṭin* could be multivalent and it, along with everything else that was not *ẓāhir,* was subsumed under *taʾwīl*. Shīʿīs and Ṣūfīs placed a great deal of emphasis on *bāṭin*. The Imāmī Shīʿī exegete al-Ṭabāṭabāʾī (d. 1981) expanded the levels of polysemy by suggesting that inner meaning itself could have up to seven inner meanings (Ṭabāṭabāʾī, *Mīzān,* i, 7). The classical formulation, however — which seems to incorporate the tradition from Ibn ʿAbbās and the *ẓāhir-bātin* distinction — recognized that *every* qurʾānic verse had, not two, but four separate meanings. The Ṣūfī Sahl al-Tustarī (d. 283/896) lists *ẓāhir* (literal), *bāṭin* (symbolic), *ḥadd* (prescriptive) and

maṭlaʿ (anagogical). "The *ẓāhir* is the recitation; the *bāṭin* the understanding; the *ḥadd* the permitted and forbidden (q.v.; things in the verses); the *maṭlaʿ* the control of the heart (q.v.) over what is intended by them by way of comprehension from God" (Tustarī, *Tafsīr,* 3; cf. Böwering, Scriptural senses, 350; see INTELLECT; KNOWLEDGE AND LEARNING; RECITATION OF THE QURʾĀN). These four levels of meaning came to be accepted in various forms by Sunnī scholars also. For example, al-Zarkashī states: "The outward interpretations *(ʿibārāt)* are for the general public; they are for the ear. The allusions *(ishārāt)* are for the special ones; they are for the intellect. The subtleties *(laṭāʾif)* are for the friends [of God; see FRIENDS AND FRIENDSHIP]; they are glimpses. And the essences *(ḥaqāʾiq)* are for the prophets (see PROPHETS AND PROPHETHOOD); they are the submission [to God]" (Zarkashī, *Burhān,* ii, 153-4). Similarly, the benefits of hearing the Qurʾān are fourfold and suit the listeners' capabilities. Those who hear it merely from a reciter benefit from the knowledge of its precepts; those who hear as though from the Prophet benefit from his admonitions (see WARNING) and the demonstrations of his miracles so that the heart delights in the subtleties of his oration; and those who hear it as though from Gabriel (q.v.) glimpse hidden things (see HIDDEN AND THE HIDDEN) and promises disclosed in it (to the Prophet); those who hear as though from God are extinguished by it and their attributes effaced — they gain the attributes of truth *(taḥqīq)* through glimpsing the knowledge, source, and truth of certainty (Zarkashī, *Burhān,* ii, 154).

Despite these fourfold levels of meaning, most exegetes essentially recognized only two such levels. Even al-Tustarī, in practice if not in theory, uses the typical literal-allegorical distinction; he combines *ẓāhir* and *ḥadd,* and *bāṭin* and *maṭlaʿ* (Böwering, Sahl al-Tustarī, 841). In any case, none of these various ways of constructing polysemy in the Qurʾān need be considered mutually exclusive. *Muḥkam* versus *mutashābih, tafsīr* versus *taʾwīl, ẓāhir* versus *bāṭin,* in each of these binary oppositions it is theoretically only the latter which is open to multiple (levels of) meanings (Wansbrough, *QS,* 243-4).

Polytheism and Atheism

The worship of many gods; the belief in no god. Although the concept of atheism was unknown to the qurʾānic audience, the human tendency to ascribe divine tendencies to something other than the one, true God was not. The qurʾānic allusions to "polytheism" have been variously understood: idolatry on the part of pre-Islamic

Arabian tribes; the pre-Islamic Arabs' ascription of divine attributes to lesser beings, perhaps even within a monotheistic framework; or, alternatively, a polemical accusation that Jews and Christians had distorted aspects of their earlier revelations. The following is an overview of the qurʾānic attitude towards these two aspects of human denial of God's omnipotence — the ultimate act of ingratitude.

Polytheism

The qurʾānic Arabic term for polytheism is *shirk*. The central dogma affirmed in the Qurʾān is that of monotheism *(tawḥīd),* and *shirk,* as its antithesis, takes the brunt of qurʾānic doctrinal criticism. The Qurʾān's rejection of *shirk* is categorical and absolute (a concise statement is found in the short Q 112). It is the only sin for which, even theoretically, there is no forgiveness (q.v.): "God will not forgive the act of associating [anything] with him, though he might forgive anyone he likes anything other than that" (Q 4:48, 116; see SIN, MAJOR AND MINOR). The Arabic phrase for "anything other than that," *mā dūna dhālika,* also connotes "anything less than that" — again implying that *shirk* is the greatest of all sins, all other sins being "less" than it. The ancient Arabian sage Luqmān (q.v.) is represented in the Qurʾān, in a sūra (Q 31) named after him, as admonishing his son against committing *shirk:* he calls *shirk* "a great wrong indeed" (Q 31:13). The same sūra exhorts one to respect and obey one's parents (q.v.) but forbids one to commit *shirk* should one's parents put pressure on one to do so (Q 31:14-5; see also Q 29:8). *Shirk* nullifies good deeds (q.v.): on the day of judgment (see LAST JUDGMENT) the polytheists (*mushrikūn;* sing. *mushrik*) will discover that any good deeds they might have done have been wiped out (Q 6:88; 39:65).

Definition

The literal meaning of *shirk* is association. As a technical term in the Qurʾān, therefore, *shirk* means to set up associates or partners of God — the one true God — such that they are taken to be equal or comparable to the godhead. This definition would cover the positing of any deities besides God, whether they are one or many in number, whether they are believed to partake of his essence *(shirk fī l-dhāt)* or share his attributes (*shirk fī l-ṣifāt,* see GOD AND HIS ATTRIBUTES) and whether they are held to be equal to or less than him. And it would cover both crass idolatry (see IDOLATRY AND IDOLATERS) and metaphysical dualism. According to the Qurʾān, *shirk* can be both conceptual and practical. Actually, to hold the belief that deities other than God exist and that the universe and its workings cannot be explained until more than one God are taken to exist or possess the attributes that properly belong to him alone — that is, to reject monotheism in principle and affirm polytheism in principle — is conceptual *shirk,* whereas to regard any being or power other than God as being worthy of receiving obedience (q.v.) that is rightfully due only to God and to do so even when one affirms belief in monotheism in principle, would be practical *shirk*.

Forms

A number of pre-Islamic nations come under strong criticism in the Qurʾān for their polytheistic beliefs (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). For example, the nation of Abraham (q.v.) counted heavenly bodies like the sun (q.v.), the moon (q.v.), and the stars (see PLANETS AND STARS) among deities, and these and other deities were represented by statues that were worshipped (see IDOLS AND IMAGES). Q 6:74-81 recounts Abraham's debate with

his polytheistic nation, in which he refuses to accept such heavenly bodies as deities. Another debate of Abraham's, which is followed by his demolition of temple idols, is reported in Q 21:52 f. The pagans of Arabia proudly called themselves the descendents of Abraham and the qurʾānic reference to Abraham's uncompromising opposition to idolatry therefore gave a particular pungency to the qurʾānic criticism of Arabian polytheism. Other nations besides Abraham's that are criticized in the Qurʾān are those of Noah (q.v.; Q 11:26; see also Q 71:23), ʿĀd (q.v.; Q 11:50-5) and Thamūd (q.v.; Q 11:61-2). The Egyptian Pharaoh (q.v.) of Moses' (q.v.) time claimed to be a god (Q 26:29) and so did the king with whom Abraham debated (Q 2:258). According to certain qurʾānic verses (Q 25:43; 45:23), following one's base desires to such an extent that one becomes their slave also amounts to *shirk* (see ABSTINENCE).

The Arabian polytheism of Muḥammad's time is sometimes called henotheism, which is belief in the existence of many deities alongside a supreme God. The Arabs believed that there was a supreme God who had created the universe: "If you were to ask them, 'Who created the heavens and the earth?' they would assuredly say, 'God'" (Q 39:38; see CREATION; NATURE AS SIGNS). The Arabs thought, however, that God could be approached only through a number of lesser deities. "We worship them [other deities] only so that they may bring us close to God" (Q 39:3). "Say, 'Who gives you sustenance (q.v.) from the heavens and the earth (q.v.; see also FOOD AND DRINK; AGRICULTURE AND VEGETATION; HEAVEN AND SKY) — or who has power over hearing and vision (see HEARING AND DEAFNESS; VISION AND BLINDNESS; SEEING AND HEARING; EARS; EYES), and who brings the living from out of the dead and the dead from out of the living (see DEATH AND THE DEAD; RESURRECTION; LIFE), and who administers things?' At this they will say, 'God'" (Q 10:31; see also Q 29:61). A distinctive feature of Arabian *shirk* was angel worship. The Arabs believed that the angels (see ANGEL) were the daughters of God through whom God might be approached and persuaded to bless the devotees; and on the last day (see LAST JUDGMENT), the angels were expected to intercede with God on their devotees' behalf. Q 53:19-20 mentions three such goddesses by name (al-Lāt, al-ʿUzzā, and Manāt; see SATANIC VERSES).

The Qurʾān is critical of the Christian Trinitarian belief (see CHRISTIANS AND CHRISTIANITY; TRINITY): "Those people have certainly committed an act of disbelief who have said, 'God is one member of a trinity'" (Q 5:73; also Q 4:171; for an understanding of the *mushrikūn* of the Qurʾān as Christians who had transgressed the tenets of their religion, see Hawting, *Idea of idolatry,* esp. chaps. 2 and 3; see also IDOLATRY AND IDOLATERS). It seems that some Jews (see JEWS AND JUDAISM), in their exaggerated veneration of Ezra (q.v.), deified the reformer-prophet, and Q 9:30 refers to this. The same verse refers to the deification of Jesus (q.v.) by Christians and the next verse accuses the People of the Book (q.v.) of setting up their scholars (see SCHOLAR) and monks (see MONASTICISM AND MONKS) as "lords (see LORD) besides God." According to qurʾānic commentators, the accusation refers to the fact that the Jews and Christians had, at certain times in their history, come to regard their scholars and monks as a more authoritative source of legislation or guidance (see ASTRAY; ERROR) than the revealed scriptures (see BOOK; SCRIPTURE AND THE QURʾĀN) themselves and this amounted to

shirk, or was seen as a form of *shirk,* since they thereby accorded their scholars and saints the position of legislator that belongs to God (see LAW AND THE QUR'ĀN; JUSTICE AND INJUSTICE). It should be noted, however, that while the Qur'ān accuses the People of the Book of committing certain acts of *shirk,* it does not call them *mushrikūn*. The distinction derives from the fact that the People of the Book in principle reject polytheism and avow monotheism *(tawḥīd)* as their fundamental belief, and the Qur'ān accepts that avowal. It is for this reason that Islamic law treats the People of the Book as a category by itself. Incidentally, many Muslim scholars point out that sometimes Muslims themselves commit acts of *shirk* (saint worship in some Muslim societies is cited as an example; see SAINTS; BELIEF AND UNBELIEF).

Causes

There are, the Qur'ān suggests, several causes of *shirk*. Power — especially absolute power — leads some to think that they are God-like, and they have been accepted as such by those subject to them (see POWER AND IMPOTENCE). The king with whom Abraham debated declared himself to be god "because God had given him kingly power" — that is, instead of being grateful for the gift, he set himself up as a deity because he had, he thought, absolute, god-like power (Q 2:258; see KINGS AND RULERS). Certain phenomena of nature inspire feelings of awe, wonder or admiration, leading people to regard them as deities; examples are the sun, the moon and the stars (Q 6:74-81; see COSMOLOGY). And, as noted above, people may become slaves of their base desires and passions, seeking always to satisfy them; in so doing they commit a kind of *shirk*. No matter what its cause, *shirk* represents the human beings' failure, caused by ignorance (q.v.) or perversity (see REBELLION; DISOBEDIENCE; INSOLENCE AND OBSTINACY), to see the truth, evidenced in all of existence, that there is only one God.

Arguments against shirk

The Qur'ān offers several arguments against *shirk*. First, the stability and order prevailing throughout the universe is proof that it was created and is being administered by one God and that no one has any share in his power (e.g. Q 28:70-2). In Q 27:60-4, which contains a series of arguments against *shirk,* the polytheists are repeatedly asked after every argument: "Is there a god alongside God?" An impartial reflection on the universe leads one to the conclusion that "He is the one who is God *(ilāhun)* in the heavens and God *(ilāhun)* in the earth" (Q 43:84); "Had there been several gods in them [heavens and earth], these would have been disrupted" (Q 21:22). Second, human beings have an instinctive distaste for *shirk,* which is borne out by the fact that at times of crisis they forget the false deities and call upon the one true God for help. Thus, even idolaters, while traveling on the high seas, would, when their ship is overtaken by a storm, call upon the one God, forgetting their other deities. But as soon as they reach the safety of the shore, they start associating other beings with God (Q 29:65; see also Q 7:189-90; 10:22-3; see GRATITUDE AND INGRATITUDE). Third, *shirk* takes away from human dignity. Human beings have been honored by God, who has given them charge of the physical world, and for them to commit shirk would be to disgrace their position in the world. "Do you worship what you sculpture?" — that is, would you worship something you carve out with your own hands? Finally, there is the combined evidence of the prophetic messages throughout human history, for the essential

doctrine preached by all the prophets was that of *tawḥīd* (cf. Q 7:59 [Noah; q.v.]; 7:65 [Hūd; q.v.]; 7:73 [Ṣāliḥ; q.v.]; 7:85 [Shuʿayb; q.v.]). Here it should be pointed out that prophecy in Islam begins with Adam (see PROPHETS AND PROPHETHOOD; ADAM AND EVE). This means that, as prophet, Adam preached monotheism, so that *tawḥīd* is not a later discovery made by the human race but the very first lesson that God taught human beings. Q 7:172-3 recounts the event that took place in pre-existence and according to which God brought forth all human beings who were ever to be born, making them testify that he alone was their lord (see COVENANT).

Atheism

Q 45:24 is sometimes cited as referring to atheism. The verse reads: "And they say, 'This worldly life of ours is all there is — we die and we live, and nothing but time destroys us.' But they have no knowledge of it; they are only speculating." Yet the view that there existed, at the time of the prophet Muḥammad, individuals or groups of people who denied the existence of divinity altogether, is highly implausible. The verse is best interpreted as referring to the pre-Islamic view of the Arabs (q.v.) that the rise and fall of nations is governed not by any definite moral laws, as the Qurʾān maintained, but by the impersonal hand of fate (q.v.; see also DESTINY). In criticizing this view, the verse is affirming, by implication, that societies rise and prosper or decline and perish, strictly in accordance with moral laws laid down by God (see ETHICS AND THE QURʾĀN). Denying the relevance of morality to prosperity and success in the world, the Arabs claimed that the rise and fall of nations was due to the perpetually moving wheel of fortune that first raised a nation to the top and then brought it down. On this view, the Quraysh (q.v.) of Mecca (q.v.) could ward off the qurʾānic criticism that their affluence (which, according to the Qurʾān, was really a gift from God; see GIFT AND GIFT-GIVING; WEALTH) was meant to put them to the test (see TRIAL) and that they were expected to make responsible use of the resources put at their disposal.

But even though Q 45:24 may not be cited to prove the existence of atheists in Arabia, the qurʾānic concept of *tawḥīd* would, by definition, negate atheism: just as the Qurʾān rejects the idea that there can be two or more gods, so it would reject the idea that there is no god; the Islamic declaration of faith (see WITNESS TO FAITH) as cited in several places in the Qurʾān does not stop at *lā ilāha,* "there is no god," but goes on to affirm the existence of one God, *illā llah,* "except God." See also PRE-ISLAMIC ARABIA AND THE QURĀN.

Popular and Talismanic Uses of the Qurʾān

Several terms (*ṭilasm,* pl. *ṭalismāt* or *ṭalāsim; ruqya,* pl. *ruqā; siḥr*) connote this topic and the subject itself includes a wide range of practices all based on the materialization/actualization of the Qurʾān, whether tapping the power inherent in verbal performance or creating physical renderings of divine speech. These materializations and actualizations of the Qurʾān are often designated para-liturgical, that is, those uses of the Qurʾān outside the contexts of formal Islamic rites (*ṣalāt, tajwīd;* see PRAYER; RECITATION OF THE QURʾĀN). They include the range of personal prayer (*duʿāʾ,* see PRAYER FORMULAS); spells, incantations and verbal charms *(ruqya);* physical talismans *(ṭilasm)* and amulets (q.v.; *taʿwīdh*) and other healing applications of the Qurʾān conveyed by using liquids *(maḥw, nushra);* divining *(istikhāra, faʾl)* through interpretation of the qurʾānic text, as well as divining through the incubation of dreams *(ruʾyā)* which are interpreted *(taʿbīr)* using the qurʾānic text (see DREAMS AND SLEEP); and physical representations of qurʾānic contents in calligraphic arts (stone and plaster bas relief, metal engraving, mosaic and inlay of *objets d'art* and decoration of objects in daily use, painted murals, textile embroidery, wall hangings and carpets, poster art and other ephemera; see MATERIAL CULTURE AND THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN; EPIGRAPHY AND THE QURʾĀN). The para-liturgical uses of the Qurʾān are most often applied for protection from disease, accident, or conscious malefic intention; protection and blessing of interior and exterior physical space (especially the domicile or place of business; see HOUSE, DOMESTIC AND DIVINE); success in defensive as well as aggressive warfare (see VICTORY; WAR; FIGHTING); material well-being and accrual of wealth (q.v.); fertility (human, animal, and agricultural); individual, familial, and communal welfare, particularly that of children; and knowledge of the meaning and outcome of specific events or the destiny of a given life within the unfolding of sacred history (see HISTORY AND THE QURʾĀN; FATE; DESTINY; FREEDOM AND PREDESTINATION).

The Qurʾān and spiritual mediation (wasīla) *and intercession* (shafāʿa)

Talismanic and popular uses of the Qurʾān find their meaning within the framework of spiritual mediation in Islam. Spiritual mediation or intercession (q.v.) by God with himself and by the prophet Muḥammad and the *ahl al-bayt,* the "People of (the Prophet's) House" (see PEOPLE OF THE HOUSE; FAMILY OF THE PROPHET), through God's permission (*wasīla,* Q 5:35; 17:57; *shafāʿa,* e.g. Q 2:255; 10:3; 20:109; 21:28; 34:23; 43:86), to improve, ameliorate, and sustain one's circumstances in life is a belief which had currency throughout medieval Islam and continues at the popular level into the modern era (Padwick, *Muslim devotions,* 37-47, 235-44). Muslims having recourse to spiritual mediation operate within a specific context of divine blessing (q.v.; *baraka*), which can be conveyed and absorbed by association with sacred persons (prophets, saints, etc.; see PROPHETS AND PROPHETHOOD; SAINT) and through objects which have absorbed the holiness of persons (clothing, hair and bodily

detritus, personal belongings or objects of ritual use), as well as contact with places of birth, habitation, or death which become objectified in devotion as sanctuaries and sites of pilgrimage (see FESTIVALS AND COMMEMORATIVE DAYS). Popular and talismanic uses of the Qurʾān draw upon both the reifying power of qurʾānic speech (q.v.; its ability to cause and maintain all things in existence; see WORD OF GOD; COSMOLOGY) and the physical transmissibility of qurʾānic *baraka* (O'Connor, Prophetic medicine, 52-3). The verbal and material object which is perhaps the most universally accessible vehicle of divine blessing and amelioration to Muslims, of course, is the Qurʾān itself. It is at the same time a vehicle of worship and of spiritual and material action, encompassing parameters most often inappropriately segregated by scholarship as religion (q.v.) and magic (q.v.).

Magic (siḥr) *and the uses of the Qurʾān: Licit and illicit "magic" in Islam*

Based on qurʾānic references and other early accounts (such as Ibn al-Kalbī's *Kitāb al-Aṣnām,* "Book of idols"), *siḥr,* or "magic/sorcery," in pre-Islamic belief and practice seems to have included invocation of spirits or demons *(jinn),* spirit possession, exorcism of such spirits, soothsaying and divining by arrows and lots and geomantic omens, talismanry, cursing and healing by verbal, gestural, and material action (see SOOTHSAYERS; JINN; INSANITY; DIVINATION; FORETELLING; CURSE; PRE-ISLAMIC ARABIA AND THE QURʾĀN). The range of activities associated with the word *siḥr* in Islamic times include active and practical magic (spells, tying of knots, invocations, talismans, cursing and healing; see ILLNESS AND HEALTH) as well as intuitive systems of extraordinary knowledge (soothsaying, divining, and geomancy; Fahd, *Divination,* 214-45, 363-7). All the activities of *siḥr* were the proper role of the poetesses/poets (*shāʿir/a, shuʿarāʾ;* see POETS AND POETRY) and priestesses/priests *(kāhin/a, kahana)* of the pre-Islamic era and, in the transition to the rise of Islam, came to be circumscribed by its new dispensation (Serjeant, Islam, 216-21). Recast in the mould of Islam, these arts flourished without any marked discontinuity, and only later would be characterized by the fourth/tenth-century proto-Ismāʿīlī authors of the *Rasāʾil Ikhwān al-Ṣafāʾ* as "permitted" or licit magic *(al-siḥr al-ḥalāl),* those arts which served Islam, such as the permission to perform magic accorded by God to various prophetic figures in the Qurʾān (e.g. Solomon's God-given power to command the winds and the armies of the jinn, Q 21:81-2, 34:12-3; see SOLOMON; AIR AND WIND) and "forbidden" or illicit magic *(al-siḥr al-ḥarām),* those arts which opposed Islam, or attempted to operate independently of Islam, such as malefic magic, cursing, and other evils (Bürgel, *The feather,* 28-37; Ikhwān al-Ṣafāʾ, *Rasāʾil,* iv, 327-8, 345).

… This is the licit or permitted magic *(al-siḥr al-ḥalāl)* which is the mission toward God, may he be praised, by means of the truth and the speech of sincerity. And false magic is that which is the opposite, such as the works of the opponents of the prophets and the enemies of the sages… whose laws protected the weak among men and women against the fascination *(siḥr)* of their minds by falsehood.… This is illicit or forbidden magic *(al-siḥr al-ḥarām)* which has no stability in it, nor continuance, and is that which is without proof or trustworthy demonstration… (ibid., iv, 348-9).

Examples of such forbidden practices would be widespread belief in or use of the "evil eye," whether the source is human malice or that of the jinn, and other forms of cursing, as well as preventing malefic

magic, or counter-magic (Q 68:51, Q 113, Q 114; for medieval examples see Ibn Qayyim al-Jawziyya [d. 751/1350], *Ṭibb,* 119-21, 124; Ibn Bisṭām [fl. third/ninth century], *Ṭibb,* 43, 49-53, 161, 177, 185-6; Ṣuyūṭī [d. 911/1505], *Ṭibb,* 164-72; and for the modern Muslim world, see Ibrahim, *Assaulting with words,* chap. 4 [Arabic *siḥr*]; Flueckiger, The vision, 255; Ewing, Malangs, 369; Bowen, Return to sender).

The Qurʾān groups a variety of practices all loosely associated with pre-Islamic or foreign religion (see RELIGIOUS PLURALISM AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC) under the category of magic or "sorcery" (Q 2:102 for "the devils…, who taught sorcery *[siḥr]* to people, which, they said, had been revealed to the angels of Babylon, Hārūt and Mārūt [q.v.]"). Although classical definitions of "magic" in Islam are focused on the qurʾānic proscriptions against the "sorcery" of "knot-tying," "soothsaying," and demonic possession as in the style established by pre-Islamic oracular/gnomic poets and priests, an interrelated group of more or less licit magical and theurgic disciplines were categorized as the "occult sciences" *(al-ʿulūm al-ghaybiyya)* by their practitioners. These magical sciences recoded the Greek or foreign sciences (philosophy, mathematics, celestial mechanics, physical and natural law, and medicine) within an Islamic creationist universe (see PHILOSOPHY AND THE QURʾĀN; SCIENCE AND THE QURʾĀN; MEDICINE AND THE QURʾĀN; KNOWLEDGE AND LEARNING; INTELLECT; CREATION). Included are beliefs in the inherent power of sacred places and objects pre-Islamically expressed in divine images, shrines, altars, and sacred trees, wells, stones, and Islamically expressed in the use of talismans (qurʾānic and other) and the cult of saints (Schimmel, *Mystical dimensions;* Eaton, Political and religious authority; Hoffman, *Ṣūfism;* Ernst, *Eternal garden*). Pre-Islamic star worship (see PLANETS AND STARS) will become the Islamic interpenetration of astrology with many medieval "occult" and physical sciences, such as astrological medicine, the twin disciplines of astronomy-astrology, astrological talismanry and amuletry *(ʿilm al-khawāṣṣ wa-l-ṭalāsim),* astrological alchemy *(al-kīmiyāʾ),* astrologically coded numerology (q.v.) and geomancy (*ʿilm al-jafr* and *ʿilm al-raml;* Nasr, Alchemy; id., *Introduction;* id., Spiritual message; Savage-Smith/Smith, *Islamic geomancy*). Pre-Islamic divination by arrows and animal remains (Q 3:44; 5:90) becomes Islamic divining with the Qurʾān *(istikhāra, faʾl),* dream incubation, and interpretation (*taʿbīr al-ruʾyā;* Donaldson, The Koran; Lamoreaux, *Early Muslim tradition;* Glassé, *Concise encyclopedia,* s.v. Istikhārah). The pre-Islamic poetic/priestly role of spirit possession and mediumship is channeled through Islamic manipulation, conjuring, and exorcism of spirits, angels, and demons *(jinn)* through qurʾānic spells used with material substances, especially physical representations of the Qurʾān and the divine names (*al-asmāʾ al-ḥusnā;* see GOD AND HIS ATTRIBUTES) from the Qurʾān (Ibn Qayyim al-Jawziyya, *Ṭibb;* Ṣuyūṭī, *Ṭibb;* Ibn Bisṭām, *Ṭibb*). Pre-Islamic cursing and malefic action by spells, such as the tying of knots, become Islamic verbal charms *(ruqya)* for healing and protection from the evil eye drawn from qurʾānic contents accompanied by knot-tying and other gestures like spitting and blowing (Ibn Qayyim al-Jawziyya, *Ṭibb;* Ṣuyūṭī, *Ṭibb;* Ibn Bisṭām, *Ṭibb;* also Robson, Magical use).

In the realm of "popular" devotion, the sources for "magic" in Islam strongly overlap with those for talismanic and popular uses of the Qurʾān, since most "licit" magic in Islam centers on magical and material uses of the Qurʾān, particularly in medieval Sunnī and Shīʿī texts (see SHĪʿISM

AND THE QUR'ĀN) on prophetic medicine *(al-ṭibb al-nabawī)* and books of qur'ānic material efficacy (*kutub khawāṣṣ al-Qur'ān,* cf. Ḥājjī Khalīfa, *Kashf,* iii, 180, no. 4814; Ghazālī, *al-Dhahab al-ibrīz*) and popular medieval and modern chapbooks or manuals on qur'ānic devotions, dream divination, prophetic medicine and qur'ānic healing (handbooks of medicines and treatments of illness reported by the Prophet, such as *Luqaṭ al-amān fī l-ṭibb* (or, *Luqaṭ al-manāfiʿ fī l-ṭibb,* "Beneficial selections from medicine") by Ibn al-Jawzī (d. 597/1200), and two works simply entitled *al-Ṭibb al-nabawī* ("Prophetic medicine") by al-Dhahabī (d. 784/1348) and Ibn Qayyim al-Jawziyya (d. 751/1350); and the early Shīʿī compendium, *Ṭibb al-aʾimma* ("Medicine of the Imāms") by Ibn Biṣṭām (ca. third/ninth century; see O'Connor, Prophetic medicine, 48-64; Fahd, Khawāṣṣ). The Qur'ān in Muslim life and practice is, thus, the central arena for observing the permeability of "licit magic" in Islam. As Islam's most religiously authoritative, rigorously liturgical, and legally conservative source (see THEOLOGY AND THE QUR'ĀN; LAW AND THE QUR'ĀN), the Qur'ān also comes down to the present as Islam's most intimately negotiated, vernacularly creative, and magically effective venue of religious action (Primiano, Vernacular religion, 44-51).

Paraliturgical uses of the Qur'ān: Expressions of kufr *or* tawḥīd?

The liturgical and paraliturgical uses of the Qur'ān are not as easily separable. Often, the methods, material, and purposes of the paraliturgical uses of the Qur'ān overlap with those of its liturgical uses. The distinction tends to be made when the physical form of the Qur'ān, or any part of its verbal contents, is used as an object of inherent power, to achieve either superhuman faculties (such as foreknowledge) or to invoke divine mediation as in physical protection (q.v.) and healing. The difference is in the style, context, and intention of performance, as well as the ritualization of objects, rather than in the contents, which are often the same or similar (see RITUAL AND THE QUR'ĀN). The essential qur'ānic justification for the amuletic and talismanic use of the Qur'ān refers to its God-given purpose as a healing and a mercy (q.v.; *shifāʾun wa-raḥmatun,* Q 17:82; cf. Owusu-Ansah, *Islamic talismanic tradition,* 122), and that "no human deed [is] more effective in escaping God's wrath than the recounting of the *dhikr* of God," i.e. divine speech in the Qur'ān (Nana Asmaʾu, Medicine, 118-9; see MEMORY; REMEMBRANCE). Muslim qur'ānic spell- and talisman-makers, although bracketed by ongoing medieval legal debate (Owusu-Ansah, *Islamic talismanic tradition,* 25-40) and modern rationalist dismissal (see CONTEMPORARY CRITICAL PRACTICES AND THE QUR'ĀN), draw upon the range of positive juristic and popular opinion that it "cannot be the act of unbelieving *(kufr),* if the process brings benefit and especially if the content is from the Qur'ān" (El-Tom, Drinking the Koran, 33-4; see BELIEF AND UNBELIEF). The rationalist and reformist orientation of much contemporary public Muslim discourse draws on such staunch late medieval legal authorities as Ibn Taymiyya (d. 728/1328), whose *Kitāb Iqtiḍāʾ al-sirāṭ al-mustaqīm mukhālafat aṣḥāb al-jaḥīm,* "Book of the necessity of the straight path against the people of hell," portrays qur'ānic "intercession" and other paraliturgical uses of the Qur'ān as "human distortions… and deformations of true *tawḥīd*" (Waardenburg, Official and popular religion, 340-2; see PATH OR WAY). A century or so later, al-Ṣuyūṭī wrote his own version of the already established talismanic genre, *al-Ṭibb al-nabawī,* "Prophetic medicine," in which he draws a fine line

between faithful recitation and recitation that lapses into *shirk*, "associating anything with God" (see POLYTHEISM AND ATHEISM).

The *umm al-Qurʾān* ["mother of the Qurʾān," i.e. Sūrat al-Fātiḥa, the opening chapter] is the most useful of all to recite, because it contains glorification of God (q.v.), together with worship of him alone, and calling on him for help. It is said that the exact point at which the cure is actually effected when reciting the *āyāt* is at the words, "Only you do we worship, and only you do we ask for help" (Q 1:5). The Prophet, may God bless him and grant him peace, said, "Combining the recitation of *āyāt* [qurʾānic verses] with charms is *shirk*." The reason for this statement is that in this case, *shirk* is being associated with the recitation of the *āyāt*. And so indeed it is. But when the recitation of *āyāt* is free from *shirk*, then it is *ḥalāl* ["permitted/lawful"] for Muslims to do so (see LAWFUL AND UNLAWFUL). There is nothing to prevent the recitation of *āyāt* over a sick man, provided that there is no *shirk* involved.…
It is probably that this prohibition of something that was known to work was because some people believed that the cure came from the very nature of the words themselves. At a later stage, this prohibition was lifted. When Islam and the search for truth became established in their hearts, then he gave them permission to use such recitation, provided that they understood that it was God who effected the cure — or not… (Ṣuyūṭī, *Ṭibb*, 133).

Despite this juristic dissonance and the fact that talismanic and popular uses of the Qurʾān have declined greatly due to the rise in education and literacy, and the impact of secularism, westernization, and modernization in the post-colonial Muslim world, the need for an affective and immediate experience of God through materializations/actualizations of his speech continues to express itself among Muslims today in a variety of living responses to the qurʾānic text. Contemporary male and female Muslim religious healers (frequently but not exclusively Ṣūfīs, who are both likely to command the written technology of the Qurʾān and knowledge and experience of its talismanic applications; see ṢŪFISM AND THE QURʾĀN; TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY) have used virtually the same sources (qurʾānic verses, the divine names or attributes of God in the Qurʾān, and ḥadīth which support qurʾānic talismanry/spellmaking; see ḤADĪTH AND THE QURʾĀN) to justify popular and talismanic use of the Qurʾān as have those Muslims who disapprove or disavow such activities (Flueckiger, The vision; Bowen, *Muslims through discourse;* El-Tom, Drinking the Koran; Ewing, Malangs of the Punjab; Eaton, Political and religious authority; Hoffman, *Ṣūfism*).

Popular, folk, and vernacular religion and the uses of the Qurʾān

Before addressing specific aspects of the talismanic and popular uses of the Qurʾān, some discussion of method in the study of people's religion is appropriate. Although the use of the term "popular" as in "popular religion" is invoked in the very title of this article, its academic use continues to spark divergent reflections on the nature of religion as a social phenomenon. It usually is the second of a pair of opposite or complementary terms implying a hierarchical and dichotomized view of religion, such as official and popular religion, or normative and popular religion, paralleling other dichotomizations, such as orthodox and heterodox religion (see HERESY), and elite and folk religion. "Official, normative,

orthodox, elite" all yield meanings which place the religion and people who practice it so identified at the center of authority and legitimacy, and their complementary opposites "popular, heterodox, folk" at the margins, without authority or tinged with the flavor of illegitimacy (Waardenburg, Official and popular; Lewis, *Saints and Somalis;* id., The power of the past; Patai, Folk Islam). There is an implicit assumption in both scholarly and popular awareness of religion that there is some central, institutionalized, and validated form which is "real" religion, and then there are all the subversive things that ordinary believers think and do. "Real religion" for scholars has been overwhelmingly re-posited in the texts of religion, particularly those texts said to be divinely revealed, accompanied by the authoritative commentary, legal, and moral literature derived from revealed or inspired religion (see SCRIPTURE AND THE QUR'ĀN; EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). One of the inherent consequences of the tendency of these dichotomous terms to elevate textual/institutional religion and the hierarchy of religious professionals to a centrist, even megalithic, dimension is the corresponding devaluation of the religion of ordinary believers and everyday life. Focus upon the Qur'ān in everyday life, however, tends to break down this dichotomization of religion by seeing the intersection of official and folk or normative and popular, orthodox and heterodox, in the objectification and materialization of the divine speech of the Arabic Qur'ān (see also INIMITABILITY). The function and meaning of the Qur'ān in everyday life and everyday speech (see ARABIC LANGUAGE; LITERATURE AND THE QUR'ĀN; SLOGANS FROM THE QUR'ĀN), as well as its more technical uses in para-liturgical devotions and talismanic practices, render the heart of Islam visible to view, that is, the intimate and personal bond between every individual believer, their immediate community, and the *umma* as a whole, with the substance of divine "healing and mercy," as the Qur'ān describes itself (Q 17:82). The vernacular religious creativity and interpretive negotiations of actual believers in the para-liturgical uses of the Qur'ān, include the *'ulamā'* or Islam's religious hierarchy (Primiano, Vernacular religion, 46; see SCHOLAR). It is medieval and modern Muslim "scholars" who make "elite" materials available to the masses, interpreting primary sources — Qur'ān and the ḥadīth which discuss its uses in everyday life (see EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY) — and channeling them into "popular" devotional literature, like prayer manuals, prophetic medical texts, charm- and talisman-making booklets, as well as editions of the Qur'ān marked with methods for divination and dream interpretation (Donaldson, The Koran, 258; El-Tom, Drinking the Koran, 429; Perho, *The Prophet's medicine;* see MANUSCRIPTS OF THE QUR'ĀN; TEACHING AND PREACHING THE QUR'ĀN).

Literature on popular and talismanic uses of the Qur'ān

Throughout the Islamic middle ages and into the modern era, as the above examples have shown, vernacular qur'ānic healing practices have been widely and fervently espoused in Muslim practice (if not theory) and have generated an extensive body of "how-to" literature. This instructional literature informed and guided local practitioners on the procedures and methods of interpretation of all these qur'ānic arts and included a variety of sub-genres such as encyclopedias of dream interpretation, chapbooks of qur'ānic prayers/spells for magical effect and manuals on the creation of qur'ānic talismans and "erasures." The use of qur'ānic speech

in magical images of power and blessing, as talismans against harm and amulets for sickness, forms part of a range of vernacular expression encompassing a diverse popularly disseminated talismanic literature and practice, leaving an extensive manuscript and print record in recipe books and how-to manuals into the eighteenth and nineteenth centuries which have been reprinted or lithographed up until the present day. Books of instruction, such as the *Majmaʿ al-dawāt,* as well as professional practitioners of these extra-canonical qurʾānic "sciences" were numerous throughout medieval Islam and into the modern era. Special Qurʾāns have been published with marginal notation on methods of divination and apposite verses for magical or talismanic use. Treatises on the preparation and use of qurʾānic talismanry and prophetic medicine interacted with and were influenced by the variety of "occult" works of magical medicine such as ʿAlī b. Sahl al-Ṭabarī's *Firdaws al-ḥikma,* "Paradise of wisdom," one of the earliest works of Arabic medicine, completed in 235/850, as well as the magical cures included in larger works such as Muḥammad b. Zakariyyāʾ al-Rāzī's tenth-century "Book of the magician" *(Kitāb al-Ḥāwī)* and his "Book of natural sciences" *(Maqāla fī mā baʿd al-ṭabīʿa),* as well as the genre of occult medicine, the *kutub al-mujarrabāt,* "books of the tested," that is, magical techniques "tested" by experience, such as the *Mujarrabāt* of Aḥmad al-Dayrabī (d. ca. 1151/1739) and Abū ʿAbdallāh Muḥammad b. Yūsuf al-Sanūsī (d. 895/1490).

This genre of medieval literature and chapbooks *(al-mujarrabāt)* on the paraliturgical uses of the Qurʾān evolved, analyzing the text according to its extraordinary properties *(khawāṣṣ)* and applying those properties to talismanic uses of the divine names and other materials in the Qurʾān (see Fig. IV). A variety of subcategories were established in these texts: *ʿilm al-khawāṣṣ,* for the knowledge derived from the extraordinary qualities inherent in the divine names and other materials in the Qurʾān; *ʿilm al-ruqā,* for qurʾānic spell magic; *ʿilm al-faʾl,* for the reading of omens using the Qurʾān; manipulations of number and letter, known either as *ʿilm al-jafr* or *ʿilm al-ḥurūf,* and applied to the divine names or other words or letters of the Arabic in the Qurʾān; and finally, *ʿilm al-taʿbīr,* or the incubation and interpretation of dreams and visions *(ruʾyā).* Dictionaries and encyclopedias of dream symbolism and poetic expositions of divining through their systematic interpretation were generated from the early Islamic middle ages, such as those ascribed to Ibn Sīrīn (d. 110/728), Ibrāhīm b. ʿAbdallāh al-Kirmānī (fl. late second/eighth cent.), and extant manuscripts of Ibn Qutayba (d. 276/889), and Aḥmad al-Sijistānī (d. 399/1008), as well as late medieval manuals by al-Qayrawānī and al-Dīnawarī (fl. late fifth/eleventh cent.), the Ṣūfī al-Kharkūshī (d. ca. 406/1015), and the philosopher Ibn Sīnā (d. 428/1037). These medieval divining and dream sources were used into modern times (Westermarck, *Ritual and belief,* 46-57; Fahd, *Divination,* 330-67; Lamoreaux, *Early Muslim tradition,* 15-78).

Qurʾānic talisman recipes: The magic square

A specific example of talismanic literature falling under the heading of *ʿilm al-ḥurūf* is that detailing recipes for "magic squares" in which Arabic phrases, words, and letters from the Qurʾān, especially the names or attributes of God, angels (see ANGEL), prophets or their numerological equivalents are placed in a grid of squares, or other geometric shapes (Ibn Biṣṭām, *Ṭibb,* 88-9; Lane, *Manners and customs,* 278-84; Westermarck, *Ritual and belief,* i, 141-7; Doutté, *Magie et religion,* 190 f.; for an example of a talismanic chart containing

such magic squares, see Fig. VI). Magic squares, and other number/letter talismans, were a popular expression of the learned systems of Islamic alchemy (*ʿilm al-mīzān,* or science of "balance," and *mīzān al-ḥurūf/mīzān al-lafẓ,* or "balance of letters/speech," in the alchemical corpus of Jābir b. Ḥayyān; see Kraus, *Jābir,* ii, 117-8, 187-230, 236-69). Magic squares were also a part of Ṣūfī and Shīʿī texts which connect the cosmogonic nature of divine speech and Arabic orthography (see ARABIC SCRIPT) with mystical numerology (*ʿilm al-ḥurūf,* also called *al-sīmiyāʾ,* in Ibn Khaldūn, *Muqaddima,* 422-46; abr. trans. Rosenthal, *The Muqaddimah,* 396 f.; cf. number/letter correspondences in Ikhwān al-Ṣafāʾ, *Rasāʾil,* iv, 304-5). Finally, texts of neo-Pythagorean philosophy and magical talismanry also created systems of mystical numerology and magic square recipes (*ʿilm al-jafr* in Ibn Sīnā, *al-Risāla al-nayruziyya;* see Nasr, *Introduction,* 209-12; and Aḥmad al-Dīn al-Būnī [d. 622/1225], *Shams al-maʿārif wa-laṭāʾif al-ʿawārif*).

Nineteenth-century qurʾānic talismanry manuscripts of the Asante in west Africa (now Ghana), and the Sokoto caliphate (now northwestern Nigeria), incorporate verbal performance, or incantational prayer, along with visual/physical representations of divine speech in magic squares, or "seals/rings" (*khawātim,* sing. *khātim;* Lane, *Manners and customs,* 269-70, 279; Robson, Magical use, 35; Owusu-Ansah, *Islamic talismanic tradition,* 96-8; Nana Asma'u, Medicine, 102-19). The *khātim* serves a variety of purposes and is immediately effective upon the written execution of the square. When inscribed with God's names, these "seals" command effect, whereas with other qurʾānic passages they only supplicate, indicating a hierarchy of power in the different forms of divine speech privileging divine names (*al-asmāʾ al-ḥusnā,* the "beautiful names," as well as the *ism akbar,* the "great" or secret name of God), as most powerful and magically efficacious. Magic squares, employing divine names or other qurʾānic materials, continue as vernacular healing and protection devices into the modern era and are still reported to be present in some contemporary Muslim healing rituals where they are used as both diagnostic tool and talismanic prescription (Flueckiger, The vision, 251, 257-8). Emphasis on number/letter mysticism in recent Ṣūfī devotional texts published in the West continues the medieval legacy of esoteric interpretation (see POLYSEMY) and application of the powers of the divine names and alphabetic components of divine speech. Contemporary manuals of qurʾānic spells or talisman making, and other books of magical healing in the *mujarrabāt* genre are in print and available for consultation by contemporary male and female professional and lay practitioners throughout the Muslim world (Robson, Magical use; Donaldson, The Koran; El-Tom, Drinking the Koran; Hunzaʾi, *Qurʾānic healing;* Flueckiger, The vision; Chisti, *Ṣūfī healing*).

Uses of the Qurʾān in historical and living contexts: Oral uses of the Qurʾān

Qurʾānic talismanry and popular uses of the Qurʾān begin with para-liturgical uses of the spoken and performed Qurʾān such as *tajwīd* (melodic recitation of the Qurʾān), *dhikr* (recitation of divine names and brief qurʾānic phrases), *ruqya* (qurʾānic spell-casting and spoken charm-making), *nushra* (performance of qurʾānic verses or chapters accompanied by spitting and/or blowing of their essence onto the client), and the endemic use of qurʾānic phrases in daily speech. What makes these performances "popular" or "talismanic" is not their contents, but the context and purpose, which is traditionally for protection/prevention of illness or accident, healing,

fertility, and material abundance. In pre-modern Islamic culture, illness, for example, was attributed to physical and metaphysical (spiritual/magical) causation. Regarding the relationship between the "heart" (q.v.) and the body, God's messenger (q.v.) said:

Every disease has a cure… the illnesses of the body and those of the heart are alike.… For every illness of the heart God created, he also created a cure that is its opposite. When someone whose heart is sick recognizes his disease and counters it with it opposite, he will recover, by God's leave" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 14).

Healing is a manifestation of divine mercy and provides a vehicle for repentance and gratitude (see REPENTANCE AND PENANCE; GRATITUDE AND INGRATITUDE). These texts on prophetic medicine define two basic types of illness: those of the body and those of the heart. Bodily illnesses can be treated in practical ways (through cleansing, abstaining from food and drink or purging, or use of curative or restorative herbs/simples) and also in spiritual ways (through interior prayers, invocations of the divine names of God, verbal spells, and physical charms).

Illnesses of the heart, on the other hand, are spiritual, emotional, and mental both in origin and in cure. They are caused by heart sickness, defined as emotional and mental states such as suspicion (q.v.), doubt (see UNCERTAINTY), and loss of faith, or they can be caused by sins of commission (see SIN, MAJOR AND MINOR) such as desire or allurement (Ibn Qayyim al-Jawziyya, *Ṭibb,* 3-13). "Spiritual" illness included what modern western medicine would identify as mental or emotional illness, since in Islamic understanding the ultimate causation of mental or emotional unease (anxiety, depression, stress, doubt, uncertainty) is lapses or weakening in faith and, correspondingly, health and well-being rest upon "spiritual" nourishment (Suyūṭī, *Ṭibb,* 172-7).

The Prophet says: "I dwell with my lord (q.v.), and he gives me my food and drink (q.v.)." The Qurʾān is the largest repository of spiritual nourishment… the stronger one's faith, love for his lord, joy and gratitude to be in his presence — the more ardent and fervent his yearning to meet his lord — the stronger becomes his certitude *(yaqīn),* contentment and satisfaction with his lord's will.… Such renewed spiritual strength compensates immeasurably for the patient's needs (Ibn Qayyim al-Jawziyya, *Ṭibb,* 62).

Ḥadīth literature collected in a genre of medieval texts entitled "prophetic medicine" prescribed using the Qurʾān for the prevention and healing of disease, especially for "spiritual illness." The prophet Muḥammad is said to have recommended: "Make use of two remedies: honey (q.v.) and the Qurʾān," which is "a cure for [the disease of] the hearts" (Q 10:57; cf. Ibn Qayyim al-Jawziyya, *Ṭibb,* 27). Shīʿī medical texts also invoke the power of the Qurʾān in the healing and protection of the faithful. Related from ḥadīth of the sixth imām, Jaʿfar al-Ṣādiq (d. 148/765), who replied regarding a query as to the use of a charm for scorpion and snakebite, as well as the spell *(nushra)* for the insane and enchanted who are in torment:

…there is no objection to the charm and invocation and spell if they are taken from the Qurʾān. Whomsoever the Qurʾān does not cure, God does not cure him. Is there anything more effective in these matters than the Qurʾān [citing Q 17:82; 59:21]?… Ask us, we will teach you and acquaint you

with the verses of the Qurʾān for every illness" (Ibn Bisṭām, *Ṭibb,* 54).

Even physical illness was often categorized as having non-physical causality, such as ascribing the condition of epilepsy to spirit possession which required an exorcism using qurʾānic verses to accomplish "the rehabilitation of one's sanity and the revival of his faith" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 46-7). "Spiritual remedies" are the antidote to spiritual disease, and the "light" (q.v.) of the Qurʾān (Q 24:35) is the "antithesis of darkness (q.v.) and gratitude is the opposite of denial" *(kufr;* ibid., 91; see PAIRS AND PAIRING).

Qurʾānic recitation, or *tajwīd,* in which Muslims "adorn the Qurʾān with their voices" has both informal curative as well as more formal ritual performance contexts. "It is speech and intonation to which God the almighty has added perfume" (Suyūṭī, *Ṭibb,* 127). Support for auditory use of the Qurʾān makes listening to recitation the cure of infants, beasts, and all those distressed in spirit: "So give good news (q.v.) to my servants (see SERVANT) those who listen to the word and then follow the best of it" (Q 39:17-8). Listening to recitation is described in the prophetic medical texts as the "calmer of hearts, food of the spirit. It is one of the most important psychological medicines. It is a source of pleasure, even to some animals" (Suyūṭī, *Ṭibb,* 127). *Dhikr* (recitation of divine names and phrases from the Qurʾān) is recommended as a specific remedy against pre-Islamic sorcery *(siḥr)* by the Prophet as "faith and nearness to his lord is the divine medicine *(dawāʾ ilāhī)* that no disease can resist… invoking the divine attributes *(dhikr)* will sharpen one's hearing and sight and sustain his faculties" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 91-2). The divine attribute whose recitation will guarantee health is reported to be "the absolute living one" (*al-ḥayy al-qayyūm,* cf. Q 2:255; 3:2; 20:111), which the Prophet describes as "the opposite of all ailments and sufferings… therefore, calling upon his attribute, the living controller, will surely cure the illness" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 165). The active performance of reciting whole sūras is considered efficacious as well, and can be classed in the same category as qurʾānic spell-making, since frequent repetition and ritual preparation are involved. Medieval and early modern talismanic texts prescribe sūra recitation for fertility (Q 89), protection from the evil eye and the like (Q 48, 75, 85, 87), providence (Q 56), forgiveness (q.v.) for sins/spiritual healing (Q 62, 81), peaceful sleep (q.v.; Q 92), finding/restoring what is lost/forgotten (Q 93; Nana Asmaʾu, Medicine).

The repetitive chanting of qurʾānic formulae and particularly the divine names becomes a normative institution in Ṣūfī practice throughout the Islamic middle ages and into modern times. Individual Ṣūfī teachers who became founders of Ṣūfī communities often recommended a particular form of *dhikr* practice (silent or voiced, individual or group recitation, usually male-only or female-only groups; see Schimmel, *Mystical dimensions;* Netton, *Ṣūfī ritual;* Raudvere, *Book and roses*). The melodic nature of qurʾānic recitation is amplified in *dhikr* to increase and intensify the emotional impact and transformative nature of its performance and its audition (sometimes including rhythmic music, then known as *samāʿ,* and sometimes with voices alone). It often takes a call/response pattern of group performance, with the Ṣūfī master or a *munshid,* or "song" specialist, leading and the community following either at the Ṣūfī lodge or in private homes (Waugh, *Munshidun of Egypt*). In south Asia, a sub-genre of *dhikr* in the form of devotional "song" is the *qawwālī,* sung in Persian or Urdu interspersed with Arabic

phraseology from the Qurʾān. *Qawwālī* sessions function similarly to *dhikr* sessions, although the group attending may be a lay Muslim audience as well as members of the Ṣūfī community (Qureishi, *Ṣūfī music*). Contemporary Ṣūfī literature, particularly in the West, has a strong emphasis on the textual interpretation of the Qurʾān as a form of spiritual healing. Books on Ṣūfī healing as well as audio tapes of *dhikr* by Ṣūfī communities intended for a broad popular Muslim audience (and potential converts to the mystic path; see MEDIA AND THE QURʾĀN), illustrate the spiritual message of the qurʾānic script and create analogies between the orthography (q.v.) of the Qurʾān when linked to the bodily postures of prayer and *dhikr* practice (Nasr, Spiritual message; Chisti, *Ṣūfī healing;* see also Bawa Muhaiyaddeen on prayer in Banks and Green, *Illuminated prayer*).

Among the spoken uses of the Qurʾān applied to healing is the use of specific short chapters or verses of the Qurʾān as a form of spell *(ruqya)* and charm. For example, the recitation aloud of the Fātiḥa (q.v.), or opening chapter of the Qurʾān, accompanied by "blowing them on the affected person, followed by his spittle upon the victim — God willing, such reading will incur the reaction of evil spirits and cause the elimination of their evil act" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 139; Suyūṭī, *Ṭibb,* 132-3, 180; Robson, Magical use, 38-9). Regarding the basic question of the lawfulness of such uses of the Qurʾān, a Muslim asks the Prophet: "You see all these amulets *(ruqā)* we carry, prayers we recite, medicine we take, and other preventive routines we use for recovering from illness — Do any of them obstruct God's decree?" And the Prophet replied, "They are part of God's decree" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 11). The Prophet is also reported to have similarly recited the Throne Verse (Q 2:255; see THRONE OF GOD) and the two "refuge-taking" chapters (Q 113, 114), and blown into his hands and wiped his face and body so as to physically spread the healing benefit of the sūras over his person for protection (Suyūṭī, *Ṭibb,* 158-9, 180). The phrases of refuge-taking in the final two chapters of the Qurʾān are universally applicable to all purposes of protection whether against accident, illness, acts of nature, demonic powers, the evil eye, spiritual dangers from the lower self *(nafs),* the evil which God has created, and finally from God himself: "I take refuge with thee from thyself" (Padwick, *Muslim devotions,* 83-93). The Prophet recommended further the combination of recitation of qurʾānic prayers as spells *(ruqya)* along with plant/mineral materials to form compound "natural and spiritual cures" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 145-6). The *basmala* (q.v.) which opens every chapter of the Qurʾān but one is also a focus of prayerful invocation: "I beseech thee by virtue of every mystery which thou has set in 'In the Name of God the Merciful, the Compassionate'" (Padwick, *Muslim devotions,* 99; see also Ibn Bisṭām, *Ṭibb,* 6). Ṣūfīs have delved into the components of these qurʾānic phrases and created a system of visualization and meditation which isolates and emphasizes each individual letter and orthographic sign and grammatical function of the written Arabic of the Qurʾān (see GRAMMAR AND THE QURʾĀN). From a collection of prayers on the *basmala* is this interiorization of every element of the phrase, starting with its first letter, by ʿAbd al-Qādir al-Jīlānī: "O God, I ask thee by virtue of the *bāʾ* of thy name, the letter of 'withness,' the conjunction with the greatest Object of Desire, and the finding of all that was lost and by the point beneath the *bāʾ* guiding to the secrets of thy everlastingness and thy pre-eternal and sole Being…" (Padwick, *Muslim devotions,* 100). Belief in their power

and efficacy by generations of Muslims seems to have provoked even magical applications of them, such as the belief in "laying on" the divine names. "Thy names of moral beauty *(al-asmāʾ al-ḥusnā)* to which all things upon which they are laid are subdued" (from *Khulāṣat al-maghnam* of ʿAlī Ḥasan al-ʿAttās); and "All thy names of moral beauty which, falling upon anything cause its body to be subdued" (from Aḥmad b. ʿAlī l-Būnī, *Majmuʿāt al-aḥzāb;* see Padwick, *Muslim devotions,* 106, 109).

Another application of the physical transmissibility of qurʾānic *baraka* is the technique of *nushra,* which involves qurʾānic recitation over water that is then used by the sick person for washing him/herself (Ibn Qayyim al-Jawziyya, *Ṭibb,* 142; Ṣuyūṭī, *Ṭibb,* 172, Robson, Magical use, 34) or it can be recited over food that is then eaten and the qurʾānic virtue is absorbed by the body as well as the soul (Nana Asmaʾu, Medicine, 112-3, 117). Although not necessarily involving oral recitation of the sacred text, yet another method of "imbibing the Qurʾān" is through the use of "magic medicine bowls," vessels on which qurʾānic verses are inscribed and from which the believer drinks to accrue their benefit (see Figs. 1 and 11). *Nushra* relies upon the materialization of the *baraka* of recitation as a physical "residuum" of qurʾānic *baraka*. Although this practice is reported in the context of disapproval, such reports clearly indicate a living practice and can be understood in relation to the Companions of the Prophet (q.v.) who are said in the ḥadīth and *sīra* (hagiographical) literature (see SĪRA AND THE QURʾĀN) to have collected the Prophet's washing water, fingernail and hair clippings, for their traces of *baraka*. The residual *baraka* of this prophetic "wash" and qurʾānic "wash" are clearly connected to the larger phenomenon of qurʾānic erasure *(maḥw)*. The extension of this *baraka* from physical traces of blessing to that conveyed by the verbal articulation (and breath) of qurʾānic recitation is found in its use when accompanied by magical gestures conveying the personal life force or essence of the performer (such as spitting and blowing) which the Qurʾān itself disallows as pre-Islamic/pagan magic. The inclusion within the body of the *sunna* of traditional magical methods regardless of their forbidden status in the Qurʾān is a paradoxical aspect of the "magical" use of the Qurʾān. Through recitation/prayer, the Qurʾān seems to invest the breath of the Prophet physically with its essence or *baraka* which is transmitted via touch. "The messenger used to recite Sūrat al-Ikhlāṣ ["God's oneness"; Q 112]… and then blow into the palms of his hands and wipe his face and whatever parts of his body his hands could reach" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 142; Ibn Biṣṭām, *Ṭibb,* 40). In another report, it is blowing the essence of Sūrat al-Fātiḥa, the opening chapter, which is believed to convey the healing virtue of the whole Qurʾān. Via words, breath, and saliva of the believing lay healer, following the example of the Prophet, this medicinal recitation is an exorcism of evil spirits encompassing both spiritual and physical efficacy:

> If one's faith, soul (q.v.) and spirit (q.v.) are strong, and if he adapts himself to the essence of the opening chapter, and by God's leave, by reciting its holy words and blowing them on the affected person followed by his spittle upon the victim, God willing, such reading will incur the reaction of evil spirits and cause the elimination of their evil act" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 139).

Somewhat later, Ibn al-Qayyim cites a statement from the Prophet that combines the application of saltwater with blowing his "blessed breath" and reciting the

Qurʾān to heal a wound. A contemporary south Indian Muslim woman healer marshals her spiritual "medicine" in exorcising patients possessed by spirits (manifested as loss of speech, rational capacity, deep depression, and immobility, or conversely, unnatural physical strength) using qurʾānic recitation accompanied by "blowing" *duʿāʾ*, or personal prayers, for healing intercession which include qurʾānic formulae, verses, or divine names, over the person and even inside the mouth (Flueckiger, The vision, 259-60).

Uses of the Qurʾān in historical and living contexts: Written uses of the Qurʾān

The divine names, their component parts, and the phrases in which they occur in the Qurʾān become part of a medieval "science of letters," or number/letter mysticism, and a "science of names" (*ʿilm al-ḥurūf, jafr, abjad, sīmiyāʾ;* Massignon, *Essay,* 68-72; Canteins, Hidden sciences, 448-63; Nasr, Spiritual message, 30-4), and, at the same time, objects of devotion as prayerful litanies *(wird),* elements of ritual practice *(dhikr),* and, above all, items in a rich visual field (Nasr, Spiritual message), in Ṣūfī and Shīʿī "calligrammes" such as those employed by the Ḥurūfiyya and Bektāshiyya (Wilson, *Sacred drift,* 6, 66-9, 130; Safadī, *Islamic calligraphy,* 31, 136-7; Dierl, *Geschichte und Lehre,* 1985).

> He who loves God empties his heart of all but him: the *alif* [first letter of the Arabic alphabet, and first letter of the name of God] of Allah pierces his heart and leaves no room for anything else.… One need only "know" this single letter in order to know all that is to be known, for the Divine Name is the key to the Treasury of Divine Mysteries and the path to the Real. It is that Reality by virtue of the essential identity of God and his sanctified Name. That is why in Ṣūfīsm meditation upon the calligraphic form of the Name is used as a spiritual method for realizing the Named (Nasr, Spritual message, 31; see CALLIGRAPHY).

Beyond its ritual and devotional importance, qurʾānic calligraphy spans the formal Islamic arts of qurʾānic manuscript illumination (Lings, *Quranic art;* see ORNAMENTATION AND ILLUMINATION), it defines formal architecture and public buildings as Islamic space (see ART AND ARCHITECTURE AND THE QURʾĀN), and it enters into the diversity of "folk" or vernacular arts. Qurʾānic vernacular art forms include sewing and embroidery, such as the *kiswa,* the house-sized black cloth draped over the Kaʿba that is embroidered in qurʾānic phrases in black and gold, and smaller wall hangings embroidered with divine names or qurʾānic verses that are used in Muslim homes or businesses, as well as such unique regional expressions as the *ḥajj* (see PILGRIMAGE) murals which adorn the outside of Egyptian homes (and some apartments), which developed at the turn of the twentieth century and are found from Cairo to the villages of upper Egypt (Campo, *Other sides,* 139-65, 170-9; Parker and Avon, *Ḥajj paintings*). This use of qurʾānic calligraphy protects the physical space and the members of the household from external evils by framing the entryway, the outside walls which face the street, around windows, and along outside staircases leading to and surrounding the front door (in the case of apartments).

The religious meaning of Muslim space, whether private or public, has been established by the presence and elaboration of traditional qurʾānic calligraphy on the outside, as well as the use of divine names and/or phrases/verses from the Qurʾān in textile wall-hangings, poster art and other ephemera on the inside (Metcalf, *Making Muslim space*). Unlike the Sunnī

mainstream, contemporary Ṣūfī and Muslim sectarian communities in North America have begun to make extensive use of their own new and unique forms of qurʾānic iconography, that is, qurʾānic calligraphy and image-making as doctrinal teaching and meditation tools, a kind of "visual" *dhikr,* which is disseminated through their devotional texts and journals and can be purchased as poster art for home use. Medieval Ṣūfī and Shīʿī "calligrammes" from the Arabic, Persian, and Turkish styles of qurʾānic calligraphy are re-invented and elaborated with a religious use of representational images unknown in earlier Islamic visual arts. A whole new wedding of word and image can be seen in the colorful poster art by Bawa Muhaiyaddeen for his Philadelphia-based Ṣūfī Fellowship, and ʿĪsā Muḥammad for his originally Brooklyn-based African-American Muslim group, the Ansarullah Community, first known as the Ansar Pure Sufis (see Bawa Muhaiyaddeen's "Heartswork" posters and companion commentary texts, published by the Bawa Muhaiyaddeen Fellowship; also poster art published by the Ansarullah in their devotional journal, *The Truth: Nubian bulletin,* and in the founder's extensive commentary literature; see O'Connor, Islamic Jesus; id., Nubian Islamic Hebrews).

Qurʾānic amulets and talismans are written on diverse materials (e.g. leather, parchment, paper); embroidered on cloth (see Fig. v); or engraved, for example, on clay, bone, or stone (see Fig. iii), and selected from verses which address profound needs or desires. Traditional categorizations of qurʾānic verses are found in Arabic talismanic manuals: *āyāt al-ḥifẓ,* "verses of protection," such as the Throne Verse (Q 2:255); *āyāt al-shifāʾ,* "verses of healing," such as Q 1; *futūḥ al-Qurʾān,* "verses of opening or victory," such as the first verse of the sūra of victory (Q 110:1); *āyāt al-ḥarb,* "verses of war or overpowering enemies"; *āyāt al-laṭīf,* "verses of kindness" which protect against enemies; and verses which contain all the letters of the Arabic alphabet (Q 3:148; 48:29) against all fear and sorrow and all disease (Robson, Magical use, 53-6; id., Islamic cures, 34-43; Donaldson, The Koran). Medieval compendia of prophetic medicine, extracted ḥadīth (Sunnī and Shīʿī) advising on healing uses and benefits of written qurʾānic amulets and talismans (Ibn Qayyim al-Jawziyya, *Ṭibb;* Suyūṭī, *Ṭibb;* Ibn Bisṭām, *Ṭibb*) and texts as late as the nineteenth-century include references gleaned and organized from these earlier medieval authorities (Owusu-Ansah, *Islamic talismanic tradition;* Nana Asmaʾu, Medicine).

The metaphor of "qurʾānic tincture" can be used to describe the infusion of qurʾānic contents and methods of discourse throughout not only the religious sciences of qurʾānic study proper but the philosophical and occult sciences as well. The phenomenon of qurʾānic "erasure," an amuletic use of writing all or part of the Qurʾān, is another type of "qurʾānic tincture" of an altogether more medicinal nature found documented in the prophetic medical corpus and texts on qurʾānic magic and healing, as well as manifested in the living practice of religious healers throughout every region of the Muslim world (O'Connor, Prophetic medicine, 56-8). Medieval prophetic medical texts state that "there is no objection to writing qurʾānic verses, washing the contents in water, and giving it to the sick person to drink" (Ibn Qayyim al-Jawziyya, *Ṭibb,* 124; Ibn Bisṭām, *Ṭibb,* 9, 25, 55). The Berti, as a contemporary example of this form of qurʾānic healing, are a modern Muslim people of the northern Sudan, whose leaders or *fakis* (from the Arabic *faqīh,* or learned jurisprudent) perform the traditional Islamic social and educational roles

in a society with little general knowledge of Arabic and incomplete Islamic acculturation (Holy, *Religion and custom;* El-Tom, Drinking the Koran). These social and educational roles are complemented and even subsumed by their functions as healers, diviners, dream interpreters, and providers of amulets based upon qurʾānic magic. It is in this socio-religio-magical milieu that qurʾānic "erasure" has meaning.

"… Another important activity of the *faki* is to write some Koranic verses on both sides of a wooden slate *(loh)* using a pen made of a sharpened millet stalk and ink *(dawai)* made of a fermented paste of soot and gum arabic. The written text is then washed off with water which is drunk by the *faki*'s clients. The water is referred to as *mihai* (from the verb *yamḥa,* to erase) and, following al-Safi [*Native Medicine in the Sudan* 1970:30], I have translated this term as 'erasure'" (El-Tom, Drinking the Koran, 415).

Although the Berti's only partial knowledge of Arabic may produce an "occultation" of the Arabic text of the Qurʾān and encourage an instrumental approach to it by the believer, the process of interpretation of the text through the agency of the *faki* is as much an Islamic one as any found in other more fully acculturated (i.e. Arabized) settings. The interpretation is one which operates relatively innocent of received tradition, however, and returns to the text unencumbered by previously established meanings. The example of an erasure created and prescribed to induce pregnancy in a woman who has not borne children shows a magical qurʾānic application in which human creation of life via the power of divine speech is possible. This fertility erasure is based upon writing a single verse from Q 3, Sūrat Āl ʿImrān, "The Family of ʿImrān," because it invokes the creative act of conception and God's absolute power of realization (see BIOLOGY AS THE CREATION AND STAGES OF LIFE): "It is he who forms you *(yuṣawwirukum)* in the wombs *(al-arḥām)* as he wishes. There is no god but he, the almighty and all-wise" (Q 3:6; El-Tom, Drinking the Koran, 419; cf. Donaldson, The Koran, 266).

Two nineteenth-century collections of Islamic talisman texts in Arabic using the Qurʾān — one group from the Asante on the Guinea coast of west Africa (Owusu-Ansah, *Islamic talismanic tradition*), and another from the daughter of Shaykh Usman dan Fodio, Nana Asmaʾu, writing in what is now northwestern Nigeria — recommend the use of erasure — called here "text water/writing water" — of specific verses in order to call upon their divine powers (Nana Asmaʾu, Medicine). The erasure of the following verses is recommended to the Asante: Q 9:1-2 for travel, Q 19:1-7 for blessing, Q 67:1-2 for sovereignty, Q 48:1-2 for victory, Q 55:1-7 for beneficence (cf. Owusu-Ansah, *Islamic talismanic tradition,* 47-8, 86, 109/note 33). Sūrat Yāʾ Sīn (Q 36) and other specific sūras used in both talismanry and erasure, employ diverse materials for magical writing (stone, clay, iron, silver, copper, cloth, animal bones, particularly shoulder blades and neck vertebrae — used in their own right as a form of divining called scapulomancy) and the liquids for "erasure" (rose water, musk, saffron, ink, honey, mint juice, grape juice, grease; cf. Donaldson, The Koran, 258-63, 266; Robson, Magical use, 40). Nana Asmaʾu surveyed existing manuals of prophetic medicine in her day and created a poetic list of suitable amuletic and talismanic uses, simply entitled "Medicine of the Prophet," including erasure of certain sūras into water (Q 76, 90, 92), the recitation of other sūras over food (Q 105), and the preparation of written

amulets/talismans from others to be worn on the person (Q 53, 77, 90, 101, 108).

These texts and contemporary anthropological accounts of qurʾānic talismanry and erasure report not only drinking the remedy but incorporating it into food — by, for example, inscribing it directly onto unleavened bread — and eating it oneself or giving it to one's animals to eat for fertility, ease in calving, recovery from illness (Owusu-Ansah, *Islamic talismanic tradition,* 79; see Flueckiger, The vision, 251, 257, for feeding a qurʾānic charm written on a chapati to dogs as surrogates for "errant husbands or disobedient children"). Qurʾānic amuletry/talismanry and spell-making were often applied to animal illness and infertility of the herds/flocks. Shīʿī collections of Imāmī medicine directly paralleled Sunnī prophetic medical texts, only being drawn from medical ḥadīth ascribed to the *ahl al-bayt,* the People of the [Prophet's] House, namely the Prophet and his descendants through ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB) and Fāṭima (q.v.). From one such early collection (ca. second/eighth cent.) comes a talisman for the relief in labor and safe delivery for a mare of her foal.

Write this invocation for an old and noble mare at its time of delivery on the parchment of a gazelle and fasten it to her at her groin: "O God, dispeller of grief and remover of sorrow, the merciful and compassionate of this world and the next, have mercy on [the owner of the mare], son of so and so, the owner of the mare, with a mercy which will make him free of mercy from other than you. Dispel his grief and sorrow, relieve his anxiety, keep his mare from harm, and make easy for us its delivery (Ibn Bisṭām, *Ṭibb,* 125).

Such an amulet resonates and paraphrases several qurʾānic contexts which affirm that the popular use of the Qurʾān is not *shirk,* or associating anything with God, since the power to heal comes only from him (cf. e.g. Q 3:49; 5:110; 26:80). With such qurʾānic charms and erasure for the benefit of animals, however, are also found the un-Islamic practices of inscribing qurʾānic words or letters on living animals and sacrificing them as a form of magical transference and expiation, or "scapegoating," often associated with malefic or cursing magic (Owusu-Ansah, *Islamic talismanic tradition,* 58; Flueckiger, Vision; see CONSECRATION OF ANIMALS; SACRIFICE).

Divinatory uses of the Qurʾān: Dream incubation and dream interpretation

Another type of recitation of the qurʾānic text which most jurists have judged as transgressing the legal limits of the Qurʾān is the "reading" of the Qurʾān associated with forms of divination which attempt to "read" the future. The Qurʾān is used in "popular" practice for two types of divination: the incubation of dreams by performing special *rakʿā*s, or additional personal prayers before sleeping while asking for God's guidance in the form of *faʾl,* a sign or omen; and "cutting" the Qurʾān, or *istikhāra,* "asking for the best choice" or "seeking goodness" from God (Lane, *Manners and customs,* 270-1; Westermarck, *Ritual and belief,* ii, 2-3, 46-57; Donaldson, The Koran, 256-7; Fahd, *Divination,* 363-7). Dream interpretation rests on a single qurʾānic proof text, saying that believers will receive "glad tidings *(al-bushrā)* in the life of this world and in the next" (Q 10:64), which the Qurʾān distinguishes as true dreams versus *aḍghāth aḥlām,* or "confused dreams" (Q 21:5 of [jinn-inspired] poets, and Q 12:44 referring to Pharaoh's [q.v.] dreams; Lamoreaux, *Early Muslim tradition,* 107-34). Dream experiences in Islam are modeled on prophetic characters in the Qurʾān, Abraham (q.v.; Ibrāhīm), who re-

ceives the message from God to sacrifice his son, understood to be Ishmael (q.v.; Ismāʿīl; Muslims are spiritual descendents of Ishmael, not Isaac [q.v.]), in a dream (Q 37:102, 105); the prophet Joseph (q.v.; Yūsuf), who possesses the faculty of dream interpretation and knowledge of the "unseen" (*al-ghayb;* see HIDDEN AND THE HIDDEN), "revealed by inspiration" (*wahy;* see REVELATION AND INSPIRATION) by God (Q 12:101-2; also Q 12:6, 21); and Muḥammad, who receives during sleep dreams *(manām)* and visions (q.v.; *ruʾyā*) which are listed as among God's "signs" (q.v.; *āyāt* in Q 30:23; cf. 39:42, 48:27) and what is assumed by some Muslim theologians to be his dream night journey and ascension (q.v.), the *isrāʾ/miʿrāj* (Q 17:1, 60; Fahd, *Divination,* 255-330; Lamoreaux, *Early Muslim tradition,* 108-11). The importance of dreams and visions are, thus, established for Muslims by the qurʾānic prophets, and are enshrined as part of the interpretive tradition of the Qurʾān by the subsequent generations of early Muslim Qurʾān and ḥadīth scholars. From a scholarly point of view, divinatory literature becomes a legitimate form of Qurʾān commentary with ḥadīth collections devoting chapters to the interpretation and meaning of dreams (*taʿbīr al-ruʾyā;* Lamoreaux, *Early Muslim tradition,* 116-7). The popular techniques which mine the Qurʾān for its guidance about hidden truths are founded on the evolution of popular manuals of dream divining and encyclopedias of dream interpretation (see Lamoreaux, *Early Muslim tradition,* 175-81 for his appendix on early Islamic dream manuals) and are called *istikhāra,* "cutting the Qurʾān," and *faʾl,* "divination" or omens. Readers of the Qurʾān, in the sense of divination, are often women, but in urban contexts may be professional "readers" who combine other techniques (e.g. astrology, numerology) with divining the Qurʾān in order to assist believers with the decisions facing them. According to practitioners, "cutting" the Qurʾān allows believers to access the hidden knowledge and guidance inherent in revelation: "And with him are the keys of the secret things; none know them but he: he knows whatever is on the land and in the sea" (Q 6:59). The basics of the technique allow one to open the text of the Qurʾān spontaneously, and "randomly" select a verse by pointing and not looking. The client's query regarding any serious matter — a prospective journey, an upcoming business or employment situation, a health question, the timing of an event, be it a medical or surgical treatment, a marriage, a divorce, a partnership, etc. — guide the "reader's" interpretation of the qurʾānic verse(s). *Faʾl* seems to be similar to *istikhāra* but more detailed, being the reading of whole passage for the purpose of learning the final outcome.

Although medieval texts on the special characteristics *(khawāṣṣ)* of the Qurʾān include brief reference to these divining techniques, the literature on divining mentions that even some Qurʾāns were edited and published with marginal notations which would guide its use for divination and dream interpretation (Donaldson, The Koran, 256-7). Although "fortune-telling" was clearly part of the anti-magic and anti-sorcery statements of the Qurʾān, the focus on dream incubation and dream interpretation associated divination with categories of prophetic and inspired experience. Dream messages could be divinely inspired, but required careful analysis to sift the true guidance from false and misleading images. Popular practitioners of this type of consultative use of the Qurʾān were often, but not exclusively, at least persons with a basic command of Islam's written technology and knowledge of the manuals of popular practice and encyclopedias of dream interpretation drawn

from earlier medieval sources (Nana Asmaʾu, Medicine; Flueckiger, The vision; Bowen, Return to sender).

Popular and talismanic uses of the Qurʾān in the modern Muslim world

Ḥadīth and the devotional prayers of 1400 years of Islamic culture have generated a wide ranging modern popular print literature in diverse Islamic languages grounded in medieval Islamic source texts (primarily in Arabic and Persian) on prophetic medicine *(al-ṭibb al-nabawī)* and qurʾānic "magic," i.e. the instrumental use of the Qurʾān as recitation and written text, performed/embodied in Islam's religious material culture. Examples of qurʾānic instrumentality have been observed since the nineteenth century and through the twentieth by ethnographers, anthropologists, and scholars of prophetic medicine and qurʾānic healing among Middle Eastern Muslims (Doutté, Westermarck, Lane, Robson, Donaldson, and Maghniyya), and throughout the larger Muslim world (Ewing, Hoffman, Owusu-Ansah, Mack and Boyd, Padwick, El-Tom, Holy, Flueckiger, Bowen, Campo, and Hunzāʾī), as well as among immigrant, expatriate, and indigenous Muslims in the West (Metcalf, O'Connor). These include qurʾānic medallions worn on the person engraved with names of God, the Throne Verse (*āyat al-kursī,* Q 2:255) or other particular verses for protection (*āyāt al-ḥifẓ,* or *āyāt al-laṭīf,* verses of divine "kindness" as protection from one's enemies) and success or victory in any endeavor *(futūḥ al-Qurʾān)*. In contemporary Muslim communities, qurʾānic talismans are hung from taxi-cabs' rearview mirrors or a miniature Qurʾān is mounted on the dashboard, or, more often, in the rear window spaces to protect against accident. Posters or woven hangings with qurʾānic verses or names of God are used inside or in storefront windows both for protection/blessing and, in the West, for advertisement to attract Muslim customers. From a younger generation of contemporary Muslims comes a variety of popular and talismanic uses of the Qurʾān, frequently as a legacy of their mothers and grandmothers. A recent example is a highly educated and professionally employed Iranian living in the United States of America whose mother keeps a Qurʾān suspended above the refrigerator so that the food will not spoil. Equally, the protective value of qurʾānic medallions in Muslim belief still holds true even among those who are otherwise highly secularized.

These and untold other examples are continuing testament to contemporary belief in the power of the Qurʾān as divine speech and in its efficacy to create, sustain, and direct the world. The most pervasive influence of the instrumentality of the Qurʾān is its impact on everyday speech (see Piamenta, *Islam in everyday Arabic,* for the impact of qurʾānic expressions on native Arabic speakers, also applicable to the use of Arabic qurʾānic expressions by non-Arabic speakers). Devout Muslims invoke God's name in the *basmala* when entering a room or house, opening a book, starting a trip, upon drinking or eating, before getting into bed, when entering the market or the mosque, in fact, as a blessing on any everyday act of life (Padwick, *Muslim devotions,* 94-6). Equally common is performing the *taṣliya,* or "calling down blessings," on the prophets of Islam, especially Muḥammad and his family, and the Ṣūfī saints and Shīʿī imāms (ibid., 152-72; see IMĀM). Perhaps, greater than any qurʾānic response in daily life is that of giving praise (q.v.; *taḥmīd;* see also LAUDATION) and glory (q.v.) to God *(takbīr)*. Each of these accompanies the ups and downs of daily life as acts of humility and gratitude, keeping believers grounded in their relationship with God as creatures to creator (ibid.,

35-6). Varieties of commonly performed talismanic uses of the Qurʾān stem not from a deviation from the Islamic tradition but arise at the center of its religious authority. Whether as oral performance in spoken invocations, verbal formulae, or supplicatory prayers, or as material representation in medallions, wall plaques, written amulets or their residuum (the "erasures"), the verbal and material images of the Qurʾān have the ability to manifest constantly the protective and providential powers of divine speech. See also SCIENCE AND THE QURʾĀN.

Portents

Anticipatory sign, warning or threat; also, marvel. While the Qurʾān is explicit in its condemnation of any belief that an impersonal fate (q.v.), rather than God, controls human destiny (q.v.; see also FREEDOM AND PREDESTINATION), and does not condone the efforts of soothsayers (q.v.) and other pre-Islamic "fortunetellers" (see DIVINATION; FORETELLING; PRE-ISLAMIC

ARABIA AND THE QUR'ĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC), it is adamant that there are signs that humans must heed. Perhaps the most notable of these exhortations (q.v.) is the warning to heed the "signs of the hour" (*ashrāṭ al-sāʿa;* cf. Q 47:18; see LAST JUDGMENT; ESCHATOLOGY; APOCALYPSE; TIME).

Although it has no root in Arabic, *āyāt* (sing. *āya;* prob. borrowed from Syriac or Aramaic; see Jeffery, *For. vocab.*, 72-3; for biblical uses of the Heb. cognate, cf. Numbers 2:2; Joshua 4:6; Exodus 8:19; Deuteronomy 4:34; Psalms 78:43; I Samuel 10:7; see FOREIGN VOCABULARY) is a multivalent term for "portents" that appears 383 times in the Qurʾān, and may connote "signs" (q.v.), "miracles" (see MIRACLE) and "verses" (q.v.). Such qurʾānic utterances serve to signal the wonders (see MARVELS) or omens God bestows upon the world to demonstrate his power, wisdom (q.v.), judgment (q.v.) or wrath (see ANGER). As natural marvels, such as the rain that sustains life (q.v.; Q 30:24; see also WATER; SUSTENANCE), the fruits of the palm and vine (Q 16:67; see AGRICULTURE AND VEGETATION; DATE PALM), or the ships (q.v.) that appear like mountains on the seas (Q 42:32), portents elicit the awe-provoking magnitude of God's creation (q.v.). These tokens not only appear as cosmic and natural wonders but also as the extraordinary works of prophets and messengers through whom God guides his creation (see COSMOLOGY; PROPHETS AND PROPHETHOOD; MESSENGER; ASTRAY; ERROR). Examples of this type of portent include demonstrations of Moses' (q.v.) white hand and slithering staff (Q 7:106-8; see ROD), and Jesus' (q.v.) enlivening of the clay bird (Q 3:49). The verses *(āyāt)* of the Qurʾān that relay such portents also call humans to recognize God's power and might (see POWER AND IMPOTENCE). Left unnoticed or worse, rejected, these same portents, whether embedded in nature (see NATURE AS SIGNS), prophetic action or revelation itself (see REVELATION AND INSPIRATION), will bring forth terrifying demonstrations of divine wrath (see ANGER) upon those who fail to interpret what the sign truly signifies. The Qurʾān recounts numerous tales of individuals and communities pummeled for their neglect or denial of those clear signs a merciful God bestows upon his creation (see CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES). In turn, the denunciations and punishments themselves serve as portents for those tempted to follow the same course of action. One might say the entire Qurʾān, from a single verse to the broader images it provokes, stands as a sign signifying simultaneously divine glory and wrath. The Qurʾān emphasizes repeatedly the abundance and clarity of divine portents available for those who wish to see them (see SEEING AND HEARING). What is not clear, however, is whether one must "believe" or "understand" already in order to fathom the true meaning of the sign (see BELIEF AND UNBELIEF; KNOWLEDGE AND LEARNING; IGNORANCE; REFLECTION AND DELIBERATION). The portents manifest "for those who understand," or for "those who believe" (Q 13:3; 16:79; 30:21) are presumably the same signs rejected by those who already disbelieve (Q 37:14; 39:63; 41:15), which suggests the signs themselves have demonstrative, rather than persuasive, value.

Possession and Possessions

Ownership, the act of holding something or someone as property; the enjoyment or acquisition of the right to exercise control over something, and the objects thus controlled. In the Qurʾān, the idea of possession is frequently conveyed by the verb *malaka,* "to possess, to have, to own, to exercise sovereignty over," and its nominative derivatives, such as *mulk/malakūt,* "property, dominion, fiefdom," and, by extension, "sovereignty"; *mālik,* "owner, possessor"; and *malik,* "sovereign, ruler, king" (see KINGS AND RULERS). Similar meanings are associated with the word *rabb,* "lord (q.v.), master," that is applied to God throughout the Qurʾān either independently or in conjunction with the object of his sovereignty, e.g. "lord of the heavens (see HEAVEN AND SKY) and lord of the earth (q.v.), lord of the worlds" (Q 45:36; cf. 13:16; 17:102; 18:14; 19:65; 51:23, etc.), "lord of Sirius" (q.v.; Q 53:49), "lord of the mighty [heavenly] throne" (Q 9:129; see THRONE OF GOD), "lord of the east and the west and what is between them" (Q 26:28), "lord of the daybreak" (Q 113:1; see DAWN) and "lord of humankind" (Q 114:1). Also common are constructions with the possessive particle *li/la,* "to [God belongs], his is…" (see e.g. Q 2:255; 5:18; 42:4). As one may expect, in the Qurʾān, possession is essentially the prerogative of God, although he may occasionally grant it to his servants (see SERVANT), be they human beings or angels (e.g. Q 2:258; 3:26; see ANGEL).

Possession is one of the principal manifestations of God's absolute power (see POWER AND IMPOTENCE) over the universe and its inhabitants. In many passages these divine attributes (see GOD AND HIS ATTRIBUTES) go hand in hand and are, to some extent, interchangeable. God's power inevitably implies his uncontested ownership of all created beings and vice versa (see CREATION). While God can bestow possession of a certain property or rank upon individual creatures, as the ultimate ruler of his worldly domain (*mālik al-mulk,* Q 3:26; cf. 36:83; 39:6; 64:1; 67:1), he can also dispossess them at will in order to remind them of the transitory status of worldly possessions and of their true source (Q 3:26; see GRACE; BLESSING). The Qurʾān never tires of throwing these ideas into sharp relief: "lord of the worlds" (Q 1:2); "to him belongs whatsoever is in the heavens and whatsoever is in the earth" (Q 42:4); "glory be to him in whose hand is the dominion of everything" (Q 36:83); "you give the dominion to whom you will and you seize the dominion from whom you will" (Q 3:26), etc. God's sovereignty is not limited to this world. He is the wielder of the judgment day (*mālik yawm al-dīn,* Q 1:4; cf. 25:26; see LAST JUDGMENT) and, according to many exegetes, also of the hereafter (Ṭabarsī, *Majmaʿ,* i, 100; see ESCHATOLOGY; REWARD AND PUNISHMENT).

In several eloquent passages the Qurʾān condemns polytheists for their misguided belief that their deities possess the power to hurt or benefit their worshippers (see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS). Unlike God, who owns life (q.v.), death (see DEATH AND THE DEAD) and the ability to effect the resurrection (q.v.) of decomposed bodies and moldering bones, these pagan deities have no power to give or take life. Nor are they capable of raising human beings from the dead. These are the exclusive prerogatives of God, who has created both the pagan deities and their worshipers. He alone has "no associate" *(sharīk)* in his absolute and uncontestable sovereignty (q.v.) over this

world (Q 25:2-3). He alone is the possessor of the "most beautiful names" (Q 7:180; 17:110; 20:8), whose perfection sets him apart from his imperfect creatures. This message is brought home in a memorable passage from Q 35:13, which presents God as the absolute and undisputed master of reality: "That is God, your lord; to him belongs the dominion/possession *(al-mulk);* and those you call upon, apart from him, possess not so much as the skin of a date-stone!" The same idea is reiterated in Q 4:53: "Have they [the unbelievers] a share in the dominion? [Certainly not!] They can give not a single date-spot to the people!"

While human beings are allowed by God to enjoy their earthly possessions — "heaps of gold (q.v.) and silver, horses of mark, cattle and tillage" and the sensual delights of this world (see ANIMAL LIFE; NATURE AS SIGNS; AGRICULTURE AND VEGETATION) — they are constantly reminded that this life is but a respite granted to them by God, who will eventually become their "fairest resort" (Q 3:13). When the day of reckoning comes, their wealth (q.v.) and relatives will be of no avail to them (see KINSHIP; INTERCESSION); only their obedience (q.v.) or disobedience (q.v.) to God will count. According to Q 16:75, the ungrateful evildoer (see GRATITUDE AND INGRATITUDE; EVIL DEEDS) is like "a servant possessed by his master *(mamlūk),* having no possession of his own *(lā yaqdiru ʿalā shayʾin)*"; the righteous person, on the other hand, is like one "whom we [God] ourselves have provided with a provision fair." In a passage reminiscent of Psalm 37:29, God promises to reward his faithful servants in the hereafter by bequeathing to them "the [entire] land" (usually understood as paradise [q.v.]; cf. Q 39:74).

In this life, human beings are God's "vicegerents *(khalāʾif)* on the earth" (see CALIPH) and their possessions and social ranks (see COMMUNITY AND SOCIETY IN THE QURʾĀN) are a means by which God tests their loyalty (q.v.) to their maker (Q 6:165). Thus, human possession is distinct from that of God by its transience and inconstancy. Ancient Arabian tribes (see TRIBES AND CLANS; ARABS; PRE-ISLAMIC ARABIA AND THE QURʾĀN) were given abundant wealth and splendid palaces, but their ungodly ways and stubborn belief in their self-sufficiency vis-à-vis God brought divine wrath upon them (see ANGER). Following their refusal to amend their ways, God withdrew his favor from the wrongdoers, dispossessed them and wiped them from the face of the earth (see PUNISHMENT STORIES). Their tragic end serves as a reminder to later generations (q.v.) that God's bounty and solicitude for the well-being of his human subjects call for continual gratitude. This idea is eloquently stated in Q 36:71-3: "Have they not seen how we have created for them of what our hands wrought cattle that they own *(lahā mālikūna)?* We have subdued them to them, and some of them they ride and some they eat; other uses they have in them, and beverages (see HIDES AND FLEECE; FOOD AND DRINK). What, will they not be thankful?"

In elaborating on the meaning of the phrase "they own" *(mālikūna),* the Yemeni exegete al-Shawkānī (d. 1250/1839) explains that it means that God has granted humankind full and coercive control *(ḍābiṭūna qāhirūna)* over their domestic animals. This is viewed by the commentator as a sign of God's benevolence toward his human servants, for he could have created the animals wild so that "they would run away from them [the people] and they would have been unable to subdue them." Instead, argues al-Shawkānī, God has made the animals part and parcel of human beings' estate/possession *(ṣārat fī amlākihim),* over which they exercise full

sovereignty (*mulk;* Shawkānī, *Tafsīr,* iv, 382; cf. Ṭabarī, *Tafsīr,* xxiii, 28-9). This idea is reiterated over and over again throughout the Qurʾān, as in e.g. Q 31:20: "Have you not seen that God has subjected to you whatsoever is in the heavens and the earth, and he has lavished upon you his benefits *(niʿamahu),* outward and inward" (cf. Q 2:29; 22:65).

Possession of worldly goods by people entails responsibilities, which are stipulated in the numerous passages of the Qurʾān that constitute the foundation of the legal norms pertaining to property rights under Islam (see LAW AND THE QURʾĀN). The rich are enjoined by God to share their wealth with the poor (see POVERTY AND THE POOR) generously but not to squander it either: "And give the kinsman his right, and the needy, and the traveler (see JOURNEY); and never squander; the squanderers are brothers of the satans" (Q 17:26-7). Wives, "those of weak intellect," and orphans (q.v.) are entitled to their share in the property of their husbands and guardians (see MARRIAGE AND DIVORCE; FAMILY; MAINTENANCE AND UPKEEP; GUARDIANSHIP), who are commanded to treat them equitably (Q 4:4-6; see JUSTICE AND INJUSTICE). In one instance, the injunction to share one's wealth with others appears alongside the two principal articles of the Islamic creed — an eloquent evidence of its importance for the nascent faith: "Believe in God and his messenger (q.v.), and expend what he has made you stewards of; for those of you who have believed and expended is (in store) a great reward" (Q 57:7; cf. 24:33; see BELIEF AND UNBELIEF; JIHĀD). Statements such as this one make it abundantly clear that all worldly possessions held by human beings ultimately belong to and come from God, who lends them to his servants for appointed terms. Therefore, hoarding what is effectively God's property for one's private gain is strongly condemned: "Those who hoard gold and silver and do not expend them in the way of God (see ALMSGIVING; USURY) — to them give the good tidings of a painful chastisement (see CHASTISEMENT AND PUNISHMENT), the day they shall be heated in the fire of *jahannam* (see HELL AND HELLFIRE) and therewith their foreheads and their sides and their backs shall be branded: 'This is what you hoarded for yourselves: therefore taste you now what you were treasuring!'" (Q 9:34-5).

The Qurʾān contains a number of stipulations regarding the proper relations between male and female slaves ("those whom your right hands own") and their masters, in everyday life and at manumission (see SLAVES AND SLAVERY; GENDER; WOMEN AND THE QURʾĀN). Within the household, the masters are commanded to treat their human property kindly (Q 4:3, 25, 36; 16:71; 24:33, 59, etc.; see SOCIAL RELATIONS). At manumission, the owners are enjoined to "contract them [freed slaves] accordingly… and give them of the wealth of God that he has given you" (Q 24:33). Again, the idea is that, in the final account, all wealth and possessions come from God, who lends them temporarily to his servants.

In the later exegetical tradition (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) pertaining to passages that deal with divine sovereignty over the world, one finds a debate over the semantic nuances of *mālik,* "owner, possessor," as opposed to *malik,* "sovereign, king." At issue with medieval commentators was the respective scope of each of these terms. Some (Abū ʿUbayd, d. 224/838, and al-Mubarrad, d. 285/898) argued that the latter was more encompassing *(ablagh),* as the king's *(malik)* writ overrules the sovereignty of any individual owner *(mālik)* within his realm *(mulk)*. Others (al-Zamakhsharī,

d. 538/1144) considered the word "owner" *(mālik)* to be more comprehensive when applied to God, in so far as he can be regarded as the ultimate "owner" of all human beings, be they kings or commoners. Hence, the title "owner" is more comprehensive than "king" when applied to God, while the title "king" is more comprehensive than "owner" when applied to human beings (Ṭabarsī, *Majmaʿ,* i, 97-8). According to al-Shawkānī, each term carries connotations that are unique to it and missing from its counterpart; therefore the dispute around their respective scope is futile. From the viewpoint of the Ashʿarī doctrine (see THEOLOGY AND THE QURʾĀN) of divine attributes, however, the term *mālik,* "owner," when it is applied to God, should be regarded as his attribute of action *(ṣifa li-fiʿlihi)*. The term *malik* ("king, sovereign"), on the other hand, should be seen as an attribute of the divine essence (*ṣifa li-dhātihi;* Shawkānī, *Tafsīr,* i, 71).

In his "rationalist" commentary on the Qurʾān the great Muslim theologian and exegete Fakhr al-Dīn al-Rāzī (d. 606/1210) argues that God's status as the "sovereign" *(malik)* of the universe indicates that he is located outside it, since he cannot be "sovereign of himself." This conclusion, in his view, is corroborated by Q 19:93, according to which "None is there in the heavens and earth, but comes to the all-merciful as a worshipper *(ʿabd)*." If, argues al-Rāzī, everything on earth and in heaven worships God, he of necessity should be located outside and above it, for otherwise he would have been the worshipper of himself, which is logically impossible (cf. Rāzī, *Tafsīr,* xxi, 255-6). For the accusation of the "possession" of humans by malevolent forces, see JINN; INSANITY; OPPOSITION TO MUḤAMMAD.

Post-Enlightenment Academic Study of the Qurʾān

The modern study of the Qurʾān, meaning thereby "the critical dispassionate (i.e. non-polemical) search for knowledge, unconstrained by ecclesiastical institutional priorities" (Rippin, *Qur'an. Style and contents,* xi n. 2), insofar as it is a living tradition of learning and the basis of all contemporary research, cannot be assessed in its entirety in a single entry. Rather, the present entry can merely aim at specifying the major trends of research and the overall development of modern scholarship. The selective bibliography below is limited to writings of a general character, collections of papers and literature dealing specifically with the modern study of the Qurʾān and its methodology.

The study of the Qurʾān has never ceased being a primary concern in the realm of Islamic studies during the past two centuries. Given the outstanding importance of the Qurʾān in Islam, it is likely to remain so in the future. The interest of scholars in the Qurʾān, however, has shifted its center of attention from time to time, depending on the prevailing *Zeitgeist* as well as on the ensuing challenges and results of ongoing research.

Nineteenth century

The academic study of the Qurʾān in the West around the middle of the nineteenth century was largely stimulated and influenced by two German works, G. Weil's *Historisch-kritische Einleitung* (1844[1]) and Th. Nöldeke's *Geschichte des Qorāns* (1860[1]). Both writings, but above all Nöldeke's, set new standards for future research and went beyond the achievements of previous literature. As an illustration of the contemporary state of the art in Europe, suffice to say that, in 1846, Solvet's *Introduction à la lecture du Coran* merely offered to the French public a new translation of G. Sale's *Preliminary discourse* (this discourse was part of Sale's influential book *The Koran commonly called Alcoran of Mohammed… to which is prefixed a preliminary discourse,* which had already been published in London in 1734; see PRE-1800 PREOCCUPATIONS OF QURʾĀNIC STUDIES). The treatise of Sale offers a general overview of the contents of the Qurʾān, the basic tenets of the Muslim faith (q.v.; see also CREEDS) and a rough sketch of pre-Islamic Arabia and the developments of early Islam (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; AGE OF IGNORANCE). In itself, it draws mainly on material contained in E. Pococke's *Specimen historiae arabum* (1650) but more importantly, and in marked difference to the accounts of Weil and Nöldeke, Sale does not yet treat the text of the Qurʾān in its own right nor does he deal in detail with the formal, linguistic and stylistic elements of the text.

G. Weil in his *Historisch-kritische Einleitung,* which is only a short treatise that devotes some forty pages to the Qurʾān as such, took up the Muslim division between Meccan and Medinan sūras (see CHRONOLOGY AND THE QURʾĀN; MECCA; MEDINA) in order to establish a chronological framework of revelation (see REVELATION AND INSPIRATION; OCCASIONS OF REVELATION). In doing so, he became the first to attempt a reassessment of the traditional dating of the sūras and to divide the Meccan material into three further periods, something which was then fully elaborated and improved upon by Nöldeke. Although Weil and Nöldeke considered matters of content while establishing a chronological order of revelation for the Meccan sūras — e.g. similarity of content and terminology in individual sūras was seen as evidence for their mutual correlation and their approximate time of origin — both scholars also stressed the importance of formal and linguistic elements of the qurʾānic text for defining the criteria according to which the three Meccan periods could be distinguished (see e.g. FORM AND STRUCTURE OF THE QURʾĀN; OATHS; RHETORIC AND THE QURʾĀN; EXHORTATIONS). This four-period dating system, consisting of three Meccan periods and the Medinan period, proved influential for decades to come. It considerably influenced the future conceptual analysis of the Meccan segments of the Qurʾān and even led to the re-arrangement of the Meccan sūras in a number of twentieth-century translations of the Qurʾān in western languages (cf. Blachère, *Introduction,* 247 f.) and was also initially adopted for the French translation by R. Blachère. The idea of re-arranging the text of the Qurʾān, including the division of single sūras into unities of differing chronological status, ultimately led to the complex undertaking of R. Bell in his translation of the Qurʾān "with a critical re-arrangement of the Surahs" (1937-9; see also below; see TRANSLATIONS OF THE QURʾĀN).

Of the studies mentioned so far, Nöldeke's *Geschichte des Qorāns (GQ),* since its appearance in a second enlarged edition in the first decades of the twentieth century — considerably augmented by three other scholars — has proven to be the decisive standard text to which all

modern scholars interested in the Qurʾān must refer. It is still a helpful tool today, especially as many of its shortcomings have been detected, discussed and revised. The elaboration of the four-period dating system is presented in the first volume of *GQ*. The second volume, written by Nöldeke's pupil F. Schwally, contains a detailed analysis of the collection of the Qurʾān (q.v.; see also CODICES OF THE QURʾĀN; MUṢḤAF). The third volume, by G. Bergsträsser and O. Pretzl, treats the history of the qurʾānic text and is mainly concerned with variant readings and the later-established "readings" *(qirāʾāt)* known from Islamic tradition (see READINGS OF THE QURʾĀN).

In some sense, the third volume of *GQ* can be considered as the indispensable preliminary to the final task of an edition of the Qurʾān according to the most exacting standards of the philological method, that is, an edition based on ancient manuscripts, the entire available Islamic literature on the subject (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY) and, most importantly, accompanied by a critical apparatus that would list all known variant readings and orthographical peculiarities (cf. Bergsträsser, Plan eines Apparatus Criticus). Nothing, however, has come of this and an edition of the Qurʾān that follows the above-mentioned critical methodology remains a desideratum. The final contribution of research in this direction, pre-dating the publication of the third volume of *GQ* by one year, is Jeffery's *Materials for the history of the text of the Qurʾān* (1937). Since then, individual contributions for the history of the text have been made in a number of articles but no major work has been published which would offer a synthesis of the material. Also, ancient manuscripts of the Qurʾān, going back to the first and second Islamic centuries, and which have become known in the meantime, have not yet been published properly and still await detailed analysis (cf. Puin, Observations). It is noteworthy, however, that in his multi-volume Arabic-German edition of the Qurʾān (Gütersloh 1990 f.) A.Th. Khoury decided to include many variant readings in the commentary, although he made no effort to be comprehensive (the contributions of Antoine Isaac Silvestre de Sacy, the first European to study al-Dānī, and those of Edmund Beck for the study of the variant readings of the Qurʾān should likewise not be overlooked).

Nöldeke's *GQ* and the work of Schwally, Bergsträsser and Pretzl shaped in any case much of the modern study of the Qurʾān in its later developments, directing it mainly towards the study of the formal, stylistic and linguistic aspects of the text, as well as towards the study of the terminology of the Qurʾān and to its semantic and conceptual analysis. Yet many topics of future research were, as seems natural, not yet raised in the *GQ*. It is also important to note that Nöldeke's pioneering work, notwithstanding its undeniable scientific merits, is littered with less-than-sympathetic remarks about what he (as well as other Orientalists of his formation and generation) thought of the scripture to which he devoted his studies, in particular its aesthetic qualities (see Wild, Die schauerliche… Öde). In this respect, his generation stood too much under the spell of ancient literature which pervaded the minds of nineteenth-century European philologists and which made them incapable of truly appreciating texts stemming from different cultural contexts. The nearest Nöldeke came to esteeming the Arabic literary heritage was in his fondness for pre-Islamic poetry, in which he discovered a likeness between the Bedouin (q.v.) worldview and that of the ancient Germanic tribes (see also POETRY AND POETS; ARABS). In many of their judgments on the Qurʾān, however, Nöldeke and his successors come

perilously close to T. Carlyle's famous statement, "it is a toilsome reading as I ever undertook. A wearisome confused jumble, crude, incondite; endless iterations, long-windedness, entanglement (…). Nothing but a sense of duty could carry any European through the Koran" (*On heroes,* 86 f.). The modern study of the Qurʾān during the last part of the twentieth century has contributed much to changing this attitude, yet the works of the nineteenth- and early twentieth-century scholars were chiefly responsible for the fact that only in the recent past did it become widely acknowledged in the West that the Qurʾān could be esteemed as a piece of highly artful literature, possessing considerable and distinctive aesthetical qualities, as well as beauty of expression.

Another shortcoming of the *GQ*, and perhaps the one that most limits its merits from our viewpoint, is the relatively marginal role accorded to Islamic learning and heritage. This is not to be seen as an entirely negative factor, or only as a drawback, because, for one thing, to begin to treat the Qurʾān as a text in its own right and to attempt to judge and evaluate it on its own premises, independently of what the Islamic scholarly tradition had to offer, was a great step forward in the understanding of the Qurʾān. Furthermore, the Arabic literature available to nineteenth- and early twentieth-century scholars was very limited and simply insufficient, if compared to today's wealth of accessible material. Yet this method of setting aside or overriding, if necessary, the data of the Islamic tradition in favor of the intrinsic evidence of the qurʾānic text manifests a major methodological flaw. The reason for that is the eclectic, and therefore often arbitrary, use made of the Islamic tradition. On the one hand, the *GQ* authors often did not follow the Islamic tradition concerning the origin, chronology, order and semantic value of the textual constituents of the Qurʾān but, on the other hand, in trying to establish an independent framework and in attempting a fresh interpretation of the qurʾānic event, they did take the Islamic tradition into account. Within the context of this latter approach, the tradition was especially consulted on two accounts: for the qurʾānic depictions of the historical circumstances of the revelation (viz. the life of the Prophet and the vicissitudes of his community; see SĪRA AND THE QURʾĀN) and for the details found in classical Islamic works elucidating the emergence of the Qurʾān as a document in a historically definable context. Nöldeke himself had become aware of this problem through his acquaintance with the studies by H. Lammens, whose writings emphasize the non-historicity of the Islamic tradition and, consequently, the futility of making use of it at all. Nöldeke thus felt compelled to defend the value of the Islamic tradition in historical matters and stressed that the Medinan period, at least, was "in the clear light of history" ("mit der Übersiedlung nach Jathrib betreten wir hell historischen Boden," Die Tradition, 165). The methodological flaw involved here is, however, undeniable. Disclosing this weakness and its wide-reaching implications was to become a distinctive feature of the modern study of the Qurʾān during the twentieth century.

The latter half of the nineteenth century is marked by an increasing number of treatises produced in the wake of Weil and Nöldeke. Many of those are distinguished by the fact that they adopt the principles of research developed by the German Orientalists but reach different conclusions. This is the case — to name but a few — with the respective writings of W. Muir, A. Rodwell, H. Grimme and H. Hirschfeld. Although these scholars came to different and conflicting conclu-

sions, all (with the debatable exception of Rodwell) certainly enhanced the critical study of the Qurʾān along the lines of philological research. Muir and Rodwell, in their treatises of 1878, each developed a chronological sequence and re-arrangement of the sūras. Muir's re-arrangement distinguishes six different periods, proposing five Meccan periods, which he defined by recourse to the successive stages of Muḥammad's career as a prophet (see PROPHETS AND PROPHETHOOD). Grimme, on the contrary, attempted to order the sūras on the basis of doctrinal characteristics, with only two Meccan periods and one Medinan (cf. Watt-Bell, *Introduction,* 112). Finally, Hirschfeld, in his *New researches into the composition and exegesis of the Qoran* (1902) introduced still another sequence of the qurʾānic passages. This scheme is likewise based on the content of the sūras and their respective messages, which were assigned by Hirschfeld to one of six "modes" (confirmatory, declamatory, narrative, descriptive, legislative, parable).

In contrast to the preceding studies, in which the sūras (q.v.) were largely taken for granted as textual unities and thus as entities of the same origin and chronological status, Rodwell and Hirschfeld also tried to identify single passages within the sūras that belong together thematically and hence also chronologically. This idea was then carried forward and implemented, in varying degrees, by R. Bell and R. Blachère. In Bell's re-arrangement of the sūras, incorporated into his translation of the Qurʾān, he not only tried to break the sūras up into short coherent passages but even into single verses (q.v.) or verse groupings. This was done according to his famous hypothesis that all sūras had undergone various processes of revision and that during the collection of the Qurʾān the leaves or papers that contained the text were partially disordered. He also suggested that something written on the back of these papers was then, by mistake as it were, inserted in the context of a sūra to which it did not belong (see Watt-Bell, *Introduction,* 101-7; also Merrill, Bell's critical analysis; Bell's evidence for his dissections of the single sūras is available in greater detail in his posthumously published *Commentary*). Less radically, Blachère in the first edition of his translation of the Qurʾān (1947-51) adopted, with minor modifications, the chronological scheme of the Meccan sūras as laid down in *GQ* and thus produced his own "reclassement des sourates." This scheme, however, was abolished in the second edition (1956) and Blachère retained the traditional (Islamic) order.

It needs to be emphasized that none of the studies carried out during the second half of the nineteenth century ever reached the influence of Nöldeke's *GQ* in modern scholarship; nor were their results accepted as easily and widely. This is doubtless because Nöldeke's initial periodization and the ensuing evaluation of the qurʾānic text on the basis of his chronology steers the middle course between being too indiscriminate on the one hand and being too sophisticated on the other. Compared to that, Muir's six periods or Hirschfeld's six "modes" seem somewhat over-detailed and thus of difficult application in further research. Another reason for the dominance of Nöldeke's scheme in modern scholarship has been the fact that the second edition of *GQ* appeared only after the publication of the late nineteenth-century treatises and thus already includes the critical discussion or even refutation of rival accounts. What is more, given the hypothetical nature of every such reconstruction of the origin of the Qurʾān, which is based on circumstantial evidence drawn primarily from formal, linguistic and stylistic features, the more detailed the

proposed partition of the qurʾānic text, the more difficult it is to argue for both its accuracy and its ability to do justice to other sorts of reasonable hypotheses. Having proposed a dissection of the qurʾānic text into tiny passages of accidental sequence and thus rendering a meaningful reconstruction of its internal chronology virtually impossible, R. Bell then faced this problem in its most extreme form.

From the present point of view, therefore, the late nineteenth-century and early twentieth-century attempts at rearranging the qurʾānic text do not seem very convincing. The character of most such rearrangements is too hypothetical to be assessed properly. Also, there is essentially no evidence that is extra-qurʾānic but contemporaneous with the period of qurʾānic origins that could validate or refute the proposed hypotheses. We are thus left with the impression that much of what was said in favor of a certain rearrangement of the qurʾānic text often does not appear improbable — but neither is there any compelling evidence for its validity. One final drawback of first establishing a chronological order of the qurʾānic textual material and then attempting its interpretation on the very basis of this scheme has been summarized by A. Rippin (*Qurʾan. Style and contents,* xxii) as follows:

Using the chronological framework produces a systematic picture of the development of semantic information which may then be used to re-date elements which do not fit into the basic scheme. Certainly such a method has its circularity (…), but it is often held out that such a study might prove persuasive if it combined a number of such thematic and semantic elements to produce a single cohesive and coherent pattern; a study of this type, however, has not yet been undertaken.

It is not by accident, therefore, that the majority of studies pertaining to the form and structure of the Qurʾān and to single sūras conducted since the second half of the twentieth century no longer try to establish a fixed chronological order or rearrangement of sūras, on whatever basis. Rather, such studies tend to limit themselves to phenomenological description of the qurʾānic wording (Müller, *Untersuchungen*), re-propose the unity of the Meccan sūras as distinctive and not incidentally composed entities (Neuwirth, *Studien*) or attempt to solve problems of textual coherence by recourse to the vast Islamic literature on the subject (Nagel, *Einschübe;* see TEXTUAL CRITICISM OF THE QURʾĀN).

Before concluding the survey of nineteenth-century scholarship, it must be stressed that the dominant trend in qurʾānic studies, namely the reconstruction of the textual history of the Qurʾān chiefly on the basis of its internal features and with the assistance of the Islamic tradition for its historical context, is less noticeable in works concerned with the history of early Islam, in particular the life of the Prophet. Clearly, the Qurʾān plays a major role in this field too, being the foundational document of the new religion. The best example of such scholarship, one that drew upon the Islamic tradition and the bulk of the exegetical material (as far as it was known at the time and much more than was done in the works reviewed above) is probably A. Sprenger's three-volume biography of Muḥammad (1869). Here, Sprenger went a long way towards combining the qurʾānic data with the lore of tradition. In this, he was much assisted by the sources at his disposition in Indian libraries. Although both form and content of the Qurʾān are not to the fore in Sprenger's study, it nevertheless contains much that directly pertains to the study of

the Qurʾān. Sprenger's study is thus, in this respect, far ahead of other writings of his time but his work was never granted the place in the modern study of the Qurʾān it justly deserves.

The heritage of Western nineteenth-century scholarship on the Qurʾān was to determine the course that modern research took during the first half of the twentieth century. Some lines of continuity and lasting influence have already been mentioned: for example, the quest for the role of Islamic tradition in establishing the external and contextual framework for the historical process of the revelation, or Bell's fragmentation of the qurʾānic text as the ultimate consequence of applying formal and stylistic criteria in detecting coherent, if minute, passages of textual and thematic unity. The main thrust, however, behind nineteenth-century research was towards the philological treatment of the text, its individual constituents and the interest in both the significance and origin of single terms or concepts. It is along these lines that much of the ensuing research evolved.

First half of the twentieth century

Topics dominant in early twentieth century-scholarship were the linguistic aspects of the qurʾānic wording, its variant readings (see READINGS OF THE QURʾĀN) and its foreign (i.e. of non-Arabic origin) vocabulary (see FOREIGN VOCABULARY; LANGUAGE AND STYLE OF THE QURʾĀN), the significance of single qurʾānic terms and concepts, the order and chronology of the textual parts and their integrity (see FORM AND STRUCTURE OF THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN), and the influence of the older monotheistic faiths upon the content and message of the Qurʾān (including the pivotal role of biblical and apocryphal lore; see NARRATIVES; SCRIPTURE AND THE QURʾĀN; JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY).

One topic that aroused the interest of numerous scholars during much of the twentieth century was the significance of the so-called "mysterious letters" (q.v.) which were first dealt with in Nöldeke's *GQ*. Many hypotheses as to their possible meaning were then advanced, starting with O. Loth and leading to the extensive articles by H. Bauer and E. Goossens. Before that, we find the remarks made by H. Hirschfeld in his *New researches,* and further contributions were added by A. Jones, M. Seale and J. Bellamy. It is fair to say, however, that no truly convincing solution to the origin and relevance of the "mysterious letters" has yet been found, although many hypotheses which were advanced do not lack ingenuity and demanded much effort in order to establish them. Interest in this subject abated in recent years and few new hypotheses have been put forward since (cf. Massey, Mystery letters).

Another thread of research which had its origins in the late nineteenth century and was then carried on for many decades in the twentieth century concerns the language used in the Qurʾān and, by implication, the language originally spoken by the Prophet. The subject was raised to prominence by K. Vollers who in his *Volkssprache und Schriftsprache im alten Arabien* argued that the Qurʾān was first recited in colloquial Arabic lacking the case-endings, whereas the known text of the Qurʾān was a result of the work of later philologists trying to purge the wording from all traces of dialect and to generate a text conforming to the rules of classical Arabic, the language used by the ancient poets. This view found some adherents (P. Kahle, G. Lüling) but was more often rejected (e.g. R. Geyer, Th. Nöldeke, F. Schwally). Since then it has been largely agreed upon, following a number of further articles and discussions in monographs exploring the ramifications

of this argument (e.g. R. Blachère [*Histoire*, i, 66-82], C. Rabin, J. Fück *[Arabiya]*), that the original language of the Qurʾān, in accordance with what we find in the standard text, consists more or less of the so-called *koinè* used in inter-tribal communication and ancient poetry, with some traces of the Meccan dialect left in the peculiarities of the qurʾānic orthography (see ORTHOGRAPHY; DIALECTS; ARABIC LANGUAGE; ORALITY AND WRITING IN ARABIA).

Both the detailed study of the "mysterious letters" as well as the quest for the original language of the Qurʾān clearly betray the language-oriented direction of much of modern research after the beginning of the twentieth century. The outcome of both fields of study may seem, especially if one considers the intellectual labor involved, rather disappointing: the "mysterious letters" have remained mysterious, though less unfamiliar, and the present linguistic form of the Qurʾān is widely accepted as being that from the time of its origin onwards. Much more promising, therefore, proved the interest twentieth-century scholars took in the terms used in the Qurʾān. Here a field of study was opened, yet not without having antecedents during the late nineteenth century, which offered the possibility of combining interest in linguistic features with a closer study of the message of the Qurʾān, as both are inevitably linked to each other in the semantic potential of single terms. Among the first writings in this field, preparing the way for further research in the twentieth century, were the Arabic-English glossary of the Qurʾān by J. Penrice (*Dictionary*, 1873) and the analysis of commercial terms used in the Qurʾān and their relation to qurʾānic theology by Ch. Torrey (*Commercial-theological terms*, 1892; see TRADE AND COMMERCE; THEOLOGY AND THE QURʾĀN). The studies which then appeared in the first half of the twentieth century shifted their interest to the etymological background of qurʾānic key-terms, their connections to the use in earlier monotheist religions and the proper names found in the Qurʾān. The most influential and stimulating writings in this regard are the relevant passages in J. Horovitz's *Koranische Untersuchungen* (1926), as well as A. Mingana's "Syriac influence" (1927), K. Ahrens's *Christliches im Qoran* (1930) and A. Jeffery's *Foreign vocabulary* (1938).

Interestingly, the shift in the study of terms and concepts towards their possible origin in Jewish, Christian or Judaeo-Christian usage reflects the growth of an area of study which might be said to be the true novelty of early twentieth-century scholarship on the Qurʾān. Turning away from a purely language-centered approach or the attempt to understand the qurʾānic message intrinsically on the sole basis of its textual constituents and stylistic phenomena, the qurʾānic terms, narrations, legal prescriptions (see COMMANDMENTS; LAW AND THE QURʾĀN), elements of eschatology (q.v.) and theology were now increasingly compared to, and set into relation with, corresponding items in the Jewish and Christian traditions. Although the problem of the exact relationship of emergent Islam and its Prophet with Judaism and Christianity had already been raised by A. Geiger *(Was hat Mohammed)*, A. Sprenger (Moḥammad's Zusammenkunft), and Th. Nöldeke (Hatte Muḥammad christliche Lehrer), no immediate attempt had been made to trace the tokens of Jewish and Christian influence on nascent Islam in the Qurʾān. Beginning with Hirschfeld's *Jüdische Elemente* (1878) and Schapiro's (incomplete) *Haggadische Elemente* (1907), however, this approach soon developed into a major area of study through the monographs by W. Rudolph (1922), H. Speyer (1931), J. Walker (1931) and D. Sidersky

(1933). More importantly still, the field of qurʾānic studies at this point merged with the more generally-oriented and less Qurʾān-centered history of early Islam, a field in which two influential writings had appeared just at that time, namely R. Bell's *The origin of Islam in its Christian environment* (1926) and Ch. Torrey's *The Jewish foundation of Islam* (1933).

Without exaggeration, the research into the supposed Jewish or Christian roots of early Islam and hence of its scripture may be said to be the lasting heritage of early twentieth-century qurʾānic studies, having had by far the most wide-reaching influence until the present day. Although only few would today claim either that Islam came into being in a predominantly Christian environment or that its foundations are predominantly Jewish, the research carried out in order to support these assertions did indeed produce much evidence for the actual relationship between the monotheistic faiths. In addition, the studies generated during the first decades of the twentieth century drew attention to the great amount of biblical lore which we find in the Qurʾān and sharpened our view of how biblical and apocryphal material is adapted and presented in the Qurʾān. With much-reduced claims as to the origin of Islam and its scripture or its historical indebtedness towards Judaism and Christianity, the study of the interrelatedness of the three great monotheistic religions and their scriptures has never stopped, producing many writings in the 1950s (D. Masson, J. Henninger, J. Jomier, A. Katsh) and beyond (K. Cragg, M. Seale, U. Bonanate). This approach was accompanied by research into the connection of the qurʾānic message to Near Eastern realms of a more marginal nature (Qumran, Samaritan Judaism) and to the pre-Islamic pagan Arab religion (see POLYTHEISM AND ATHEISM; PILGRIMAGE; IDOLATRY AND IDOLATERS). In the latter half of the twentieth century, a number of monographs were published concerning various biblical figures — such as Adam (see ADAM AND EVE), Abraham (q.v.) and Mary (q.v.) and, above all, Jesus (q.v.) — as portrayed in the Qurʾān (M. Hayek, H. Michaud, G. Parrinder, H. Räisänen, N. Robinson *[Christ in Islam]*, O. Schumann). The quest for the presence of Jewish and Christian elements in the Qurʾān is likely to continue in the time to come under the aegis of an increasingly active inter-confessional dialogue.

Reviewing the field of Western qurʾānic studies in the first half of the twentieth century, one will become aware of the fact that, with the notable exception of the aforementioned study of Jewish and Christian elements in the Qurʾān and the revised edition of *GQ*, no syntheses or all-encompassing monographs were produced. Rather, scholarship followed different tracks of research which either led to a great number of interconnected articles, as in the case of the mysterious letters or the quest for the original language of the Qurʾān, or to monographs dealing with a particular subject such as the study of the origin and etymology of qurʾānic terms. In this vein, the first half of the twentieth century was chiefly a period of research into problems of limited range and of a fervent collection of data. Putting it somewhat more positively, one could also say that in this time tools for further study were devised in a number of thematically defined fields which, however, all have their bearing on the whole. Another good example of this type of approach is A. Spitaler's *Verszählung des Koran* (1935). Therefore, during this period — despite the waging of two world wars in the geographic center of the academic study of the Qurʾān — time was not lost in modern qurʾānic studies. The 1920s and 1930s can thus be

considered a period of the most intense and prodigious research concerning the Qurʾān, although the majority of its results lay scattered in learned journals, academy transactions, miscellanea and collections of studies. The true amount of what was achieved step by step in this period only became apparent in post-World War II scholarship, after a certain tendency towards the accumulation of the widely-dispersed material had set in among French and British scholars.

Second half of the twentieth century

This period is, at its beginning, distinguished by the publication of three influential general works dealing with the phenomenon of the Qurʾān as a whole, namely R. Blachère's introduction to the first edition of his translation (1947, independently published in 1959), A. Jeffery's *The Qurʾān as scripture* (1952) and R. Bell's *Introduction to the Qurʾān* (1953, rev. ed. by W.M. Watt in 1970: Watt-Bell, *Introduction*). Thus there were now three comprehensive and up-to-date monographs available which, in many respects, brought together the manifold results of scholarship from the earlier half of the twentieth century. At the same time, the gist of *GQ* became known to the non-German speaking world via these writings. For decades to come, the books by Bell, Blachère and Jeffery remained, together with the *GQ*, the standard reference texts for everybody involved in qurʾānic studies.

Curiously, but perhaps not surprisingly, the monographs by Blachère, Bell and Jeffery drew upon much of the earlier twentieth-century research and offer in many ways a synthesis of the previous achievements, yet at the same time their writings also mark the end of a still homogeneous tradition of scholarship. The hallmarks of that tradition were the importance of the philological approach and its relative independence, or isolation, from many other fields of related interest such as anthropology, religious studies, social studies and literary criticism. The biggest contribution to qurʾānic studies had been made, up to that time, only by the methods of biblical and theological studies. It is true that most of the fields like anthropology and religious studies were newcomers to Western scholarship in the twentieth century and could not be expected to be immediately adopted or acknowledged by the modern study of the Qurʾān. Yet up to the present day, Islamic studies generally tends to lag behind the developments in fields of related interest, something which might, in part, be excused by the fact that the rather impenetrable and boundless mass of material of all sorts that confronts the scholars of Islam does not easily permit them to turn their attention towards cognate disciplines. As it is, however, the increasing influence of relevant disciplines and a steadily growing array of new methods, perspectives and approaches has characterized the modern study of the Qurʾān since the second half of the twentieth century.

Another novel feature of post-war qurʾānic studies has been a new interest in the actual content of the qurʾānic text and a changed understanding of how to elucidate the semantics of qurʾānic terms and concepts. Both approaches disentangled themselves, to varying degrees, from similar attempts that were made earlier in the twentieth century and showed their provenance to be the then dominant philological mode of research. As to the first point, i.e. the new examination of the contents of the Qurʾān, one could refer to the writings of T. O'Shaughnessy, whose studies of qurʾānic theology appeared from 1948 onwards. Similarly, a number of scholars set about examining the ethical doctrines of the Qurʾān (M. Draz, S. al-Shamma,

M.D. Rahbar, D. Bakker, I. Zilio-Grandi; see ETHICS AND THE QUR'ĀN), its eschatology (R. Eklund, S. El-Salih, T. O'Shaughnessy) or its inherent anthropology (J. Bouman, T. Izutsu, J. Jomier, S. Wild). Others researched details of communal life and ritual (K. Wagtendonk) as present in the Qur'ān, albeit the first influential study of that kind appears to be R. Robert's *Social laws of the Qur'ān* (1927; see *inter alia* SOCIAL INTERACTIONS; RITUAL AND THE QUR'ĀN; RAMAḌĀN; FASTING). As to the second point, i.e. a changed understanding of the semantics of qur'ānic terms and concepts, it is largely agreed upon that the pioneering works of T. Izutsu brought major progress in the field of semantic studies, especially as his approach takes up methods of modern linguistics. Izutsu aims at analyzing the meaning of terms in context and does not look for a meaning inherent in the terms themselves. In doing so, he superseded the earlier research carried out in the field of semantic studies, although Izutsu's method is only seemingly in direct opposition to the former philological method and its stress on etymology (cf. Rippin, *Qur'an. Style and contents,* xvi f.).

A third, particularly important novelty of twentieth-century qur'ānic studies consists in the discovery of the general contextuality of the qur'ānic wording, that is, the difficulty of drawing a line between the meaning of the text in itself — a concept now considered by many as erroneous in principle — and the creation of its meaning(s) in the process of interpretation and exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL; EXEGESIS OF THE QUR'ĀN: EARLY MODERN AND CONTEMPORARY). The only meaning a text is considered to possess is thus the meaning which is accorded or ascribed to it in the process of actual reception and exegesis. From around the middle of the twentieth century, therefore, scholars in the field of qur'ānic studies tended, hesitantly at first, to develop a contextual view of the Qur'ān. Consequently, less stress was laid on the intrinsic character of the text, the meaning of individual terms and the question of the origin of its material, as had been the case during the first half of the twentieth century. Rather, attention was devoted to the ways in which the Qur'ān was embedded in the wider realm of Islamic learning and the emergence of its meaning(s) from Islamic tradition and the endeavors of the exegetes. This increasingly led scholars to analyze the close ties between the Qur'ān and exegesis, Islamic tradition (see ḤADĪTH AND THE QUR'ĀN), Islamic theology and Arabic philological studies devoted to the terminology and vocabulary of the Qur'ān. This clearly signified a major step forward, with the result that many elements of the qur'ānic wording were understood more thoroughly and in greater detail by making use of the vast quantity of Muslim scholarship dealing with all facets of the text (see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY).

The first immediate outcome of the change of perspective in the modern study of the Qur'ān towards its contextuality and the significance of Muslim exegesis was the growing interest in qur'ānic exegesis. This field, of prime importance as it always was in the culture of Islam, was up to the second half of the twentieth century almost wholly, and inexplicably, missing from the agenda of Western scholars, with the notable exception of I. Goldziher's pioneering *Richtungen der islamischen Koranauslegung* (1920) and some dispersed comments in the writings of early twentieth-century Orientalists. The concentrated and still ongoing effort, however, of a large number of scholars, especially after the work of J. Wansbrough (see below), has resulted in considerably more research being done in the vast field of Muslim exegesis than in

the field of qurʾānic studies proper. But as said before, it would by now be practically impossible to differentiate between the study of the Qurʾān and the study of its exegesis, both being so closely related as to permit no meaningful separation between these two fields of research. On the contrary, one could even argue that, in contrast to the traditional self-perception of modern scholarship, the academic quest for the understanding of the Qurʾān is in itself nothing but a further continuation of Muslim exegesis, which, to a certain extent, uses different means and is stimulated by other guiding principles. The more that becomes known of Muslim exegesis, however, the closer we are brought to admit that there is actually little of what modern qurʾānic scholarship claims as its own achievement that was unknown beforehand or is original to the "modern post-enlightenment academic" approach.

Recognizing the importance of Muslim exegesis for the modern study of the Qurʾān is also part of a larger discussion among scholars. This discussion revolves around the question of what role the Islamic scholarly tradition can, or should, play in the study of the Qurʾān and early Islam in general, one of the chief matters of debate in research of the last quarter of the twentieth century. From late nineteenth-century and early twentieth-century scholarship, the modern study of the Qurʾān inherited an approach that tended to set the Islamic tradition aside or use it only in closely circumscribed areas, such as reconstructing the historical context in which the revelation took place (see above). In contrast to that, later twentieth-century research has shown that in Islamic tradition and learning, all fields are closely interrelated and that it might prove difficult, if not impossible, to single some of its parts out as valuable or historically reliable and others as irrelevant. Rather, as a matter of principle, there is no irrelevant or non-valuable notice which might not further our understanding of the whole. This is not to say that some parts of that tradition may not indeed be more valuable or historically accurate than others but, as most scholars would admit, we are lacking the necessary means to decide in the majority of cases whether this is true of a certain piece of tradition or not.

The growing familiarity of Western scholars with the immense wealth of material stemming from the formative and classical periods of Islam and pertaining more or less directly to the historical context of early Islam and the coming into being of the Qurʾān has also generated another important insight: namely, that only a small part of the available material, if collated and seen together with all relevant bits and pieces, seems to allow a single historical reconstruction which might be considered reasonably more certain than others. M. Cook (*Early Muslim dogma,* 155 f.) has called this the "indefinite tolerance of the source-material for radically different historical interpretations," which is why we "know how to *maintain* rival theories; but we can do little to decide *between* them." The methodologies, however, which are capable of discerning the value, or tendency, of the source material have become more refined in the past years and the study of early Islamic tradition is a vivid topic in recent research. It is here that qurʾānic studies has come into close contact with the study of the life of the Prophet and the history of his community. Given that the Qurʾān as a historical document cannot be understood irrespective of the setting of its genesis, this merging of qurʾānic studies with the quest for the evolution of early Islam is bound to remain an important element of future research.

In some sense, the perceived need to confront the qurʾānic data with everything that

is known from the Islamic tradition about the historical context of revelation in order to elucidate the significance and meaning of the Qurʾān runs parallel to the urge towards incorporating data from the exegetical tradition. For this latter trend aims at the elucidation of the Qurʾān's significance and meaning via the semantic universe created by the Muslim exegetes. Although the implications of the studies of J. Wansbrough, A. Rippin and U. Rubin have still to be worked out fully, their work shows that the exegetical tradition may eventually prove vital for establishing the very textual history of the Qurʾān during the first decades of Islam and for understanding the origin of Islam itself. Both these developments — the turn towards tradition and towards Muslim exegesis — in the modern study of the Qurʾān are ultimately the result of the basic insight within later twentieth-century scholarship, that a non-contextual understanding of the Qurʾān will prove impossible and its attempt futile. One is obliged to add that the opposite attempt has been made — to clarify the material of Islamic tradition and its depiction of early Islam by starting with the qurʾānic data and not vice versa, notably by R. Paret and W.M. Watt. Yet this has merely shown that the "historical" references contained in the Qurʾān and those which might tell us something about the context of its revelation are too limited and ambiguous in meaning to permit a large-scale use of the Qurʾān for the reconstruction of the setting and context of its origination.

Apart from the exegetical tradition and the source material concerning the life of the Prophet and the history of early Islam, later twentieth-century qurʾānic studies also drew attention to the relations between the Qurʾān and the fields of jurisprudence and legal theory (J. Burton, M. Schöller). In this respect, it is hoped that the attitudes of early Muslim legal scholars towards the qurʾānic text and the use they made of it may tell us something about the role of the Qurʾān in early Islamic society and hence allow the formation of an idea of the function(s) it fulfilled in its original setting. This could also bear upon the problem of its presumed time and place of origin, a matter which has been put into question in twentieth-century scholarship (see below). In the same vein, the modern study of the Qurʾān in the second half of the twentieth century returned to the philological study of the Qurʾān, yet with more stress on the aspects of grammar and syntax and less on the semantic properties of the text (A. Ambros, M. Chouémi, Cl. Gilliot [Les citations], F. Leemhuis, W. Reuschel, R. Talmon, C. Versteegh; see GRAMMAR AND THE QURʾĀN; LANGUAGE AND STYLE OF THE QURʾĀN; but cf. also the ground-breaking work of A. Neuwirth, who focuses less on a philological/atomistic approach than on philological analysis of individual sūras as paralleling elements of monotheistic liturgy; cf. FORM AND STRUCTURE OF THE QURʾĀN; RHETORIC AND THE QURʾĀN); a computer-aided analysis of the entire text of the Qurʾān along morphological, grammatical and syntactical features is presently in preparation (cf. Edzard, Perspektiven, 350 f.; see COMPUTERS AND THE QURʾĀN). In returning to the linguistic analysis of the qurʾānic wording, a huge advance was made over the achievements of early twentieth-century scholarship. This is not only because the wealth of relevant Arabic literature now available compares so favorably with that of the earlier part of the twentieth century. Rather, it is chiefly because the vast Arabic grammatical and philological tradition, still largely unexplored and virtually inaccessible to the non-specialist, has now become the object of serious scrutiny. This

thread of research also serves as an important corrective to recent work which, under the weight of theoretical models, new approaches and methodological premises, carries the risk of losing touch with the linguistic side of the Qurʾān whose study is, after all, a basic requirement for its adequate understanding and interpretation.

Unresolved proposals

The last novelty of later twentieth-century qurʾānic studies to mention is the publication of some hypotheses regarding the origin of the Qurʾān which contest the Islamic tradition as well as the results of modern scholarship. The value of these hypotheses, some of which had a greater influence on the academic discussion than others, is still a matter of debate and is likely to remain so. Most scholars of Islam, however, presently concur that none of these hypotheses will eventually prove correct. Yet it must be admitted that, to date, no large-scale refutation of any of them has been produced; nor can all the arguments put forward be dismissed very easily. The positive effect, in any case, of the proposed hypotheses has been one of resuscitating the modern study of the Qurʾān and stimulating increased efforts in that direction. The current state of affairs, perhaps even the very fact of this encyclopedia, is the welcome result of this stimulus.

The first study to challenge the conventional view regarding the origin of the Qurʾān was published in 1974 by G. Lüling as a reworking and enlargement of his Ph.D. dissertation of 1970. He has since repeated and pursued his basic claims in a number of other studies. Put succinctly, he comes to the conclusion that the qurʾānic text consists of different layers which were subjected to several redactions. The basic layer of the text, the so-called "two-sense layer," was originally of Christian provenance and hymnic in character, representing the *"Ur-Qurʾān"* and proclaiming the message of Muḥammad's Judeo-Christian mission. It was then changed, in the processes of redaction, to conform to the later orthodox, post-prophetic Islamic views. Another layer, the so-called "one-sense layer," was of post-prophetic Islamic provenance from the outset and should serve to turn the meaning of the "two-sense layer" towards the later views by being inserted at appropriate places in the text. Much of what is proposed by Lüling is astute and based on broad learning. His general thesis, however, remains unconvincing to most scholars primarily for two serious weaknesses which neither Lüling nor anyone else is likely to remove in the future.

First, Lüling's reconstruction requires the consequent assertion that the entire Islamic tradition pertaining to the history of early Islam is a gigantic fabrication created to cover up a different story. Given what we know and considering the enormous amount of preserved information, this assumption is most unlikely and strains credulity. The second drawback, equally decisive, derives from the fact that in his reconstruction of the text of the presumed *"Ur-Qurʾān"* Lüling not only changed, in many instances, the vocalization of the text but also its consonantal structure, its word sequence and entire words (something to which he resorted to an even greater extent in later writings). Although this was done with great ingenuity, the obvious risk in tampering with a text in order to fit a theory was carefully formulated by G.R. Hawting in his review of another of Lüling's books (rvw. of *Die Wiederentdeckung des Propheten Muhammad,* in *jss* 27 [1982], 111): "It seems to me that the argument is essentially circular and that since there is no way of controlling or checking the recomposed *Ur-Qurʾān,* there is a danger that it will be recomposed to suit one's own pre-

conceptions about what one will find in it." In other words, anyone familiar with how easy it is to change the meaning of an Arabic consonantal text by systematically modifying vocalization and/or consonant markings will admit that this may open the gates of semantic hell, so to speak. Taken to extremes, one could as well replicate the Cairo phone-book as a Ṣūfī chain of mystical succession. Applying such textual modification to the Qurʾān can be done but, in the absence of supporting evidence from contemporary documents, it can neither be confirmed nor falsified. Therefore, the value of Lüling's hypothesis, whatever its merits in matters of detail, depends upon how much weight modern scholarship is willing to concede to conspiracy theories that do not admit of falsification.

In 2000 a study was published with the title *Die syro-aramäische Lesart des Koran. Ein Beitrag zur Entschlüsselung der Koransprache,* whose author writes under the pseudonym Ch. Luxenberg. Similar to Lüling's hypothesis but without recourse to his work, the meaning of many terms and passages of the Qurʾān is here traced back to an original Syriac wording, in the process of which the original meaning of the respective qurʾānic terms and passages, lost or suppressed in the Islamic tradition as we know it, is "rediscovered" (see SYRIAC AND THE QURʾĀN). Although it seems too early to venture a decisive judgment upon this publication which was accorded a methodically rigorous review (cf. Gilliot, Langue et Coran, 381-93), it is clear that Luxenberg's proposal suffers from the same weaknesses as does Lüling's account: the complete silence of the Islamic tradition with respect to his proposed origin of the Qurʾān and his resort to the modification of the consonantal text in both vocalization and consonant marking (for a positive appraisal of Luxenberg's thesis, see Gilliot, Langue et Coran; id., Le Coran. Fruit d'un travail collectif?; cf. also van Reeth, L'évangile du prophète).

With Lüling's 1974 study having remained largely unknown outside the German-speaking academic world, the major watershed in the modern study of the Qurʾān occurred in 1977 when three highly controversial monographs were published, namely J. Burton's *Collection of the Qurʾān,* M. Cook's and P. Crone's *Hagarism,* and J. Wansbrough's *Quranic studies*. These studies all present a novel reading and/or reconstruction of early Islam and the history of its scripture. For the study of the Qurʾān, Burton's and Wansbrough's monographs are of particular importance, especially as the conclusions reached by these two British scholars are diametrically opposed to each other. In Wansbrough's account we are told that the canonical form of the Qurʾān, i.e. the text in its present form, was not established prior to the end of the second/eighth century and does not entirely go back to the time of the Prophet. From Burton's study, on the other hand, it can be inferred that the collection of the canonical text predates the death of the Prophet and was known in this form ever since. Both claims, albeit entirely irreconcilable with each other, contradict the mainstream Islamic tradition which states that the canonical text of the Qurʾān was eventually ratified only during the two decades following the death of the Prophet and up to the caliphate of ʿUthmān (q.v.; r. 23-35/644-56). Together with the strongly original theses of *Hagarism* which was published at the same time, the monographs by Burton and Wansbrough created the first major impetus to qurʾānic studies in many decades.

An important difference between the accounts of Burton and Wansbrough and the aforementioned hypotheses of Lüling and Luxenberg lies in the fact that neither

Burton nor Wansbrough set about modifying the qurʾānic text. Rather, in the case of Burton it is precisely the fact that the Qurʾān contains some difficult and seemingly contradictory passages that are hard to understand which serves as argument against any later redaction (that easily could have done away with all such difficulties; see ABROGATION; AMBIGUOUS; DIFFICULT PASSAGES). In the case of Wansbrough, the belief that the present text of the Qurʾān achieved canonical status during the first Islamic centuries is questioned, yet no attempt is made to question the accuracy of the transmitted text beyond the variant readings current in the Islamic tradition. A greater difficulty faced both Burton and Wansbrough with regard to the Islamic tradition concerning the origin of the Qurʾān, although Burton's hypothesis seems to be easier to reconcile with what the sources tell us than does Wansbrough's. Nevertheless, both negate the historicity of much of the traditional material on Islamic origins and thus constitute variants of conspiracy theories. The early Islamic biographical literature, for example, is called by Wansbrough (*QS,* 140) a "pseudo-historical projection." Yet, both Burton and Wansbrough make valid points, which cannot be side-stepped in research, and there is indeed some evidence in the Islamic tradition which supports their hypotheses. The general, somewhat paradoxical, effect upon many readers of their studies appears to be that much of what Burton and Wansbrough present in order to reach their respective conclusions is admitted by most to be sound and important for the course of future scholarship, yet their conclusions are not.

J. Wansbrough's hypothesis, being more contentious and radical, has received more attention from the scholarly community than Burton's proposal. The consensus reached after an initial analysis of Wansbrough's study praised his method and his recourse to typology and criteria of biblical and literary criticism. His conclusions about the origin of the Qurʾān were, however, received with great skepticism or outright denial. Few were convinced that the generation of the Qurʾān was protracted until the end of the second/eighth century. Indeed, especially considering the evidence of qurʾānic epigraphy from the first two centuries of Islam (see EPIGRAPHY AND THE QURʾĀN; ARCHAEOLOGY AND THE QURʾĀN; ART AND ARCHITECTURE AND THE QURʾĀN), it is hard to see how the history of early Islam could have evolved if its scripture was still in the making and the product of a gradual evolution. His inability to offer an alternative scenario is a weakness of Wansbrough's hypothesis (cf. rvw. of *QS* by A. Neuwirth, in *WI* 23-4 [1984], 540 f.) and in his second treatise — which further expounds his basic proposal — Wansbrough explicitly denies any attempt at historical reconstruction: "My purpose… is not historical reconstruction, but rather, source analysis" (*Sectarian milieu,* ix). For the understanding of the Qurʾān, however, Wansbrough's hypothesis signifies that the text in its present form cannot be traced back to the Prophet or to any single individual. Rather, in this view, the Qurʾān consists of the redaction and collection of material ("logia"), dealing with Islamic "salvation history" (see SALVATION; HISTORY AND THE QURʾĀN) that was first generated in various sectarian communities, and finally accorded canonical status as an authoritative text. Passages or logia which were not included in that canon remained part of the various fields of the Islamic tradition, chiefly prophetic biography *(sīra),* ḥadīth and commentary *(tafsīr)*. Wansbrough maintains that, with virtually no evidence about the details of the presumed redaction and collection at our disposal, every attempt at trying to

establish a chronology of the individual parts of the qurʾānic text, or at reconstructing the *Formgeschichte* of the Qurʾān, is impossible in principle; the actual origins of the qurʾānic data must remain unknown. The stylistic features and the literary form of the qurʾānic text itself are of no help in determining its date of origin and its authenticity (cf. Wansbrough, *QS*, 147). Finally, with the Qurʾān offering almost no material useful for historical purposes, the chronological framework known from the Islamic tradition appears merely as an historical order "introduced into what was essentially literary chaos" (Wansbrough, *QS*, 177).

Notwithstanding the controversial validity of Wansbrough's overall thesis concerning the genesis of the Qurʾān as scripture and its evolution in time, his treatise opened up many ways of research for the first time which then heavily influenced the ensuing efforts of scholarship. He was the first to use the exegetical commentaries of the second/eighth century systematically and to conceive of a typology and terminology in order to better understand what the early Muslim exegetes were actually doing. Or put differently, he pushed the contextual approach to the Qurʾān to its limits, making the notion of "the Qurʾān" as a body of texts which can be interpreted and analyzed within the traditional paths of "historical criticism," almost meaningless. A. Rippin, who in a number of articles defended the merits of Wansbrough's approach, rightly observed of Wansbrough's work that "the theories proffered about the origins of the Qurʾān have tended to overshadow the others" (id., Methodological notes, 39), resulting in an ultimate misconception of his approach and the dismissal of his method and its achievements for the sake of denying the validity of his overall conclusion. Indeed, it might be supposed, and there is some rumor to that effect among contemporary scholars of early Islam, that Wansbrough's hypothesis of a cumulative creation of the Qurʾān and its gradual evolution into scripture in a sectarian setting of broadly Near Eastern monotheistic stamp might still be safeguarded if the period of the Qurʾān's origin is no longer placed in the first Islamic centuries but ante-dated to the time prior to the Prophet's mission (see ḤANĪF). It then would also become compatible with Burton's well-argued hypothesis that the Qurʾān had already reached its present form and structure in the time of the Prophet. To clarify this issue will be a major challenge for the modern study of the Qurʾān in the years to come. In doing so, it will be imperative to work with all the literary sources at one's disposal, yet at the same time avoid the temptation of creating new texts out of those presently known in order to fit one's own theories.

Prospects of further research

Many of the aforementioned research trends as they developed in the second half of the twentieth century will undoubtedly determine the further course of the study of the Qurʾān in the foreseeable future. The seminal works of Burton and, above all, Wansbrough are especially likely to exert ever more influence upon qurʾānic studies and the methods used therein. The contextual approach towards the Qurʾān, placing its study in close connection to the study of the various related fields of Islamic learning (Tradition, exegesis, law, grammar), will probably continue to dominate most academic efforts. There is still much optimism and vigor in qurʾānic studies, and justly so. Illustrative of this is the fact that 1999 witnessed the publication, after some 150 years of modern Western scholarship on the Qurʾān, of the first volume of the first periodical devoted exclusively to qurʾānic matters, *Journal of qur'anic*

studies; it is noteworthy that in the editorial of its first issue, the field of qurʾānic studies is called, albeit somewhat disrespectfully towards the achievements of the past, "an evolving discipline."

Apart from the trends inherited from late twentieth-century scholarship, however, there are a number of areas in qurʾānic studies whose importance has not yet been fully recognized and whose status remains unsatisfactory in the wider realm of the modern study of the Qurʾān. Mention could be made here of the obvious connections of the Qurʾān and the origin of Islam to the pre-Islamic, Arab pagan world and the ties with the non-monotheistic population of south Arabia (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). Although some important work has been done in this field (M. Bravmann, R.B. Serjeant, S. Noja, G.R. Hawting), it seems that not everything of relevance has yet come to light. There is still, one is led to think by the available evidence in Islamic tradition, a slight overstating of the influence of monotheistic religions on the formation of the Qurʾān and early Islam and a possible underestimation of the impact of the indigenous, non-monotheistic Arabic culture. This, of course, is partly inherited from the quest for the origins of Islam as conducted in the first half of the twentieth century, but also stems in part from the weight accorded to the monotheistic background in the more recent works of J. Wansbrough, A. Rippin and others. At any rate, archaeological fieldwork and the data of epigraphy, not yet fully exploited in qurʾānic studies, does yield some distinctive evidence about the impact of the Arab pagan culture upon early Islam. Another field to stimulate research in this direction, also until now insufficiently explored, is the study of Muslim eschatology and the rich imagery pertaining to the nether world as known from the Qurʾān and early tradition. Here, many elements lead the observer towards Arab pagan notions and even to concepts current in ancient Egypt, yet away from the patterns of thought normally considered to be part of the monotheistic groups of the Near East in early Islamic times (cf. PARADISE; GARDEN; HELL AND HELLFIRE).

The last, but not the least, area of qurʾānic studies which possesses considerable potential for further research is the role and place of the Qurʾān in Islam as a token of piety, symbol of faith and liturgical document. Little work has been done so far on the art of qurʾānic recitation (K. Nelson; cf. Sells, *Approaching;* see RECITATION OF THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN; ORALITY) and the related field of Islamic learning as a subject of study in its own right (see TEACHING AND PREACHING THE QURʾĀN). The pioneering study of the recited Qurʾān seen as a "phonetic phenomenon" in its various religious and liturgical uses is, for the time being, N. Kermani's *Gott ist schön. Das ästhetische Erleben des Koran* (1999; the work of A. Neuwirth has also contributed to the understanding of the Qurʾān as a liturgical document; cf. RHETORIC AND THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN). In addition, the role of the qurʾānic text in calligraphy (q.v.; see also MANUSCRIPTS OF THE QURʾĀN) and epigraphy (above all in inscriptions on buildings and tombstones) has never been researched systematically nor has the presence of qurʾānic terms and allusions in Arabic poetry and language (see LITERATURE AND THE QURʾĀN), in particular in Arabic phraseology and daily speech, received proper attention (cf. Piamenta, *Islam in everyday Arabic speech;* see also SLOGANS FROM THE QURʾĀN; MATERIAL CULTURE AND THE QURʾĀN; for some discussion of the impact of the Qurʾān on non-Arabic Islamic literature, see AFRICAN LITERATURE; PERSIAN LITERATURE AND

THE QUR'ĀN; TURKISH LITERATURE AND THE QUR'ĀN; SOUTH ASIAN LITERATURE AND THE QUR'ĀN; SOUTHEAST ASIAN LITERATURE AND THE QUR'ĀN). The degree to which the culture of Islam is being pervaded by the wording of its scripture is remarkable and sets it apart from most other comparable systems of high culture. The more remarkable, then, that this realization has yet to enter the agenda of Western qur'ānic studies. It is hoped that this hitherto neglected area of research within qur'ānic studies, as a part of the wider phenomenology of Islamic culture and religion, will be developed more quickly in the future than it has been in the past.

Poverty and the Poor

The quality or state of being indigent and, often, in need of material assistance in order to survive; those who are indigent. While modern discussion has concentrated on qurʾānic almsgiving (q.v.) and its voluntary or involuntary character (see bibliography below), the broader themes of poverty and the poor reveal the image of a community of believers bound together in a network of generosity and benefaction (see COMMUNITY AND SOCIETY IN THE QURʾĀN).

Feeding the poor (lit. "hungry"; see FAMINE) is a trait of the "companions of the right hand" (Q 90:13-18; see LEFT HAND AND RIGHT HAND) and of the righteous who "give food, though it be dear to them" (Q 76:8). Prescribed for the pilgrimage sacrifice (Q 22:28; see PILGRIMAGE; SACRIFICE), feeding the poor is also a way to expiate sins (Q 5:89, 95; 58:4; see SIN, MAJOR AND MINOR; REPENTANCE AND PENANCE). Medieval lexicography and modern philology have both connected *zakāt* with "purification" *(z-k-y);* and purification (see RITUAL PURITY; CLEANLINESS AND ABLUTION) similarly figures in the qurʾānic requirement for alms (Q 9:103, here *ṣadaqa*). But not only must goods be purified, they must circulate, vertically and downwards (cf. esp. Q 59:7). At Q 30:39, *ribā* (lit. "usury" [q.v.]) refers to some kind of bad circulation, contrasted with a good kind called *zakāt*. The exegetes identified *ribā* here as a gift given in the hope of receiving a greater gift in return, a practice of Arabia before Islam (Ibrāhīm al-Nakhaʿī in Ṭabarī, *Tafsīr,* ad. loc.; cf. Qurṭubī, *Jāmiʿ,* xiv, 36-9 on the ambiguity here between the vocabularies of sale and gift; see TRADE AND COMMERCE; GIFT-GIVING).

The Qurʾān lists the recipients of various benefactions, including alms (Q 9:60,

ṣadaqāt); distribution of spoils (Q 8:41; see BOOTY); presents made at the division of an inheritance (q.v.; Q 4:8); and generosity *tout court* (Q 4:36, *iḥsān;* Q 2:215, *khayr*). Most of the recipients named in these lists are, in effect, types of poor, including orphans (q.v.), sojourners (see JOURNEY), prisoners (q.v.), slaves (see SLAVES AND SLAVERY), debtors (see DEBT) and (aspiring) warriors (see FIGHTING; WAR; EXPEDITIONS AND BATTLES). The most frequently recurring categories, however, are kin (*dhū l-qurbā;* see KINSHIP), the poor *(al-miskīn)* and the wayfarer *(ibn al-sabīl)*. This triad constitutes a spectrum of persons who are known and those who are unknown, with the poor *(miskīn)* as the ambiguous case. By contrast, *faqīr/fuqarāʾ* ("poor, destitute") can refer to the neediness of the human condition, contrasted with God's self-sufficiency (Q 47:38), and to humanity's need for God (Q 35:15). Elsewhere, the *fuqarāʾ* are at the center of the community (*al-fuqarāʾ al-muhājirīn,* Q 59:8; see Décobert, *Le mendiant,* on the *fuqarāʾ* as the "inner" and the *masākīn* as the "outer" poor; see POLYSEMY). Finally, they are deemed the meritorious poor who, because they do not reveal their condition, are worthy recipients of charity (Q 2:271, 273).

In pre-Islamic Arabia there was a belief that the owner of surplus property (q.v.) must give all or part of it away (Bravmann, The surplus; id., *Spiritual background;* see PRE-ISLAMIC ARABIA AND THE QURʾĀN). In the Qurʾān, *faḍl,* usually understood as "grace" (q.v.; see also BLESSING), sometimes retains this sense of surplus wealth (q.v.; e.g. Q 9:28; 24:22; 62:9-10). Where it does, we find exhortations to reciprocate the divine *faḍl* through human generosity. This occurs in the one place where an individual — usually understood as Muḥammad himself — is addressed as "poor" (*ʿāʾilan,* Q 93:8).

Radical conclusions have been drawn from the qurʾānic teachings on poverty. It is the ḥadīth (see ḤADĪTH AND THE QURʾĀN) and the legal literature (see LAW AND THE QURʾĀN) which introduce the notion of a core of wealth which one may not give away. Moreover, the qurʾānic *ḥaqq,* "claim, right, duty," seems, when it comes to donations, to inhere in the object given. So the community of believers consists of "Those upon whose wealth there is a recognized right *(ḥaqq maʿlūm)* for the beggar and the deprived" (Q 70:24-5; cf. 51:19). Poverty and the poor appear intermittently in the "biography of the Prophet" literature (*sīra;* see SĪRA AND THE QURʾĀN) and that on the military exploits of the early Muslims (*maghāzī;* see EXPEDITIONS AND BATTLES), especially regarding the earliest community at Mecca (q.v.) and the military expeditions at the end of Muḥammad's life, when individuals provided arms, mounts and supplies to those who lacked the means to join the fight. Emphasis is placed on these themes in some modern discussions of earliest Islam (i.e. Watt, *Muhammad at Mecca* and *Muhammad at Medina,* and Ibrahim, *Merchant capital*). Finally, it should be added that Islam arose at a time when, as Brown *(Poverty and leadership)* has now shown, poverty had a new significance for the urban, Christian Mediterranean and Near East (see CHRISTIANS AND CHRISTIANITY; CITY; RELIGIOUS PLURALISM AND THE QURʾĀN; ASCETICISM; MONASTICISM AND MONKS).

Power and Impotence

Ability to act or the possession of controlling influence over others; the lack of either of these capacities. In the Qurʾān, the notion of power revolves around two principal foci: (a) the possession of control, authority and influence over others; (b) the capacity to act, to create, to destroy, to fight, to win and to impose one's will. The lack of these qualities results in impotence. These various connotations of the English word "power" are conveyed in the Qurʾān and qurʾānic commentaries by such Arabic terms as *sulṭān, mulk, qahr, ʿizza, nufūdh, quwwa, ghalaba, istiṭāʿa, ṭāqa, baʾs,* and a few others (cf. Dāmaghānī, *Wujūh,* i, 412-6 for *sulṭān;* ii, 206 for *mulk;* ii, 64-5 for *ʿizza;* ii, 161-2 for *quwwa;* ii, 99 for *ghalaba;* i, 101-2 for *istiṭāʿa* and *ṭāqa;* i, 171 for *baʾs*). For those that fall under rubric (a), i.e. the possession of authority over others, see the article AUTHORITY. The present entry will focus primarily on meanings covered under rubric (b) as listed above.

In the qurʾānic text, the ability to give and take life (q.v.; see also DEATH AND THE DEAD), to exert power and control over nature (see NATURE AS SIGNS; CREATION) and human beings, to vanquish one's enemy (see ENEMIES; VICTORY) and to impose one's will on others is attributed primarily to God. As the ultimate wielder of power, he can delegate this ability to those of his creatures whom he chooses, especially to prophets and kings (see PROPHETS AND PROPHETHOOD; KINGS AND RULERS). The enemies of the qurʾānic prophets are routinely humbled and destroyed by God, who unleashes against them the destructive powers of nature (see PUNISHMENT STORIES). The prophets, on the other hand, are miraculously protected by God's superior power against the rage of their adversaries, be they individuals or entire tribes (see e.g. ABRAHAM; MOSES; HŪD; ṢĀLIḤ, etc.). God can "empower" or "enable" *(ʿazzaza, aʿazza, makkana)* certain nations, rulers and kings as a reward for their righteousness (Q 3:26; 7:10; 12:21; 16:6; 36:13; 46:26, etc.; see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). Thus, God gave Alexander the Great "power in the earth and bestowed upon him a way of access to every thing" (Q 18:84; see ALEXANDER). Alexander then used this power to construct a rampart of iron and brass to protect an oppressed people from the depredations of Gog and Magog (q.v.). Likewise, God granted Solomon (q.v.) power over natural forces and the evil ones (*shayāṭīn;* see DEVIL) in order to elevate him above the other worldly rulers of his age (cf. Q 38:34-40). God's bestowal of power on certain rulers, however, may infuse them with false pride (q.v.) and arrogance (q.v.) and eventually lead them to destruction (see e.g. PHARAOH; KORAH; HĀMĀN). Therefore, the Qurʾān repeatedly emphasizes that whatever power these individuals may have possessed was always derivative, ephemeral and subject to withdrawal without notice, as demonstrated by the story of Moses and Pharaoh (Q 2:50; 7:135-6).

In and of themselves, rulers and kings have no power whatsoever. As in the Jewish and Christian exegetical traditions, impotence is a distinguishing feature of the human race, especially those among its representatives who seek to arrogate the rights that belong to God alone, such as

Pharaoh, Nimrod (q.v.), Goliath (q.v.), and so on. When Nimrod claimed the power to give life by copulating with his concubines (q.v.), and to take it away by executing his subjects (see MURDER), Abraham challenged him to bring the sun (q.v.) from the west and "the unbeliever was confounded" (Q 2:258). Likewise, when Pharaoh, in his inordinate arrogance and vain pride attempted to weaken and denigrate the Children of Israel (q.v.), God empowered them *(numakkin lahum fī l-arḍ)* by giving their leader, Moses, the ability to upset Pharaoh's cruel designs (Q 28:3-6).

God and his messengers will always triumph over their misguided opponents, for "Surely, God is all-strong, all-mighty" (Q 58:21) and there is "nothing in the heavens (see HEAVEN AND SKY) or the earth (q.v.) that he is incapable of doing" (*mā kāna llāhu li-yuʿjizahu min shayʾin,* Q 35:44). In addition to God's singular capacity to punish, test and protect his creatures, he alone has the power to provide them with the right guidance (see ASTRAY; ERROR). Neither humans nor jinn (q.v.), even if they were to join forces, are capable of producing "the like of this Qurʾān" (Q 17:88), which God revealed through his Prophet (see INIMITABILITY; PROVOCATION; LANGUAGE AND STYLE OF THE QURʾĀN). At the same time, God's prophets are impotent, like their fellow human beings, unless God decides to empower them. For example, in Q 19:8 Zechariah (q.v.) bemoans his decrepitude and consequent inability to produce a child (cf. also Q 42:49-50, in which God's absolute sovereignty over earthly existence is expressed in his ability to give male and female children [q.v.] to whom he pleases, while rendering other people barren). The idea of God's absolute power over the destinies of his human servants is brought into sharp relief in Q 30:54: "God [is he who] has created you of weakness, then after weakness has appointed strength, then after strength appointed weakness and gray hairs; he creates what he wills, he is the one who wills and has power" (see the commentary of al-Shawkānī, *Tafsīr,* iv, 230-2; see BIOLOGY AS THE CREATION AND STAGES OF LIFE). In Q 3:26-7 we find an illuminating summary of the various manifestations of divine omnipotence: "You give the power to whom you will, and withdraw the power from whom you will; you exalt whom you will and abase whom you will (see OPPRESSED ON EARTH, THE); verily you have power over all things. You cause the night to interpenetrate the day, and the day to interpenetrate the night (see DAY AND NIGHT); you bring forth the living from the dead and the dead from the living; you provide for whom you will without reckoning (see GRACE; BLESSING)." Here, as in many other passages of the Qurʾān (e.g. Q 67:1-3, 15-6, 21, 23; 86:5-12, etc.), God's ability to bestow life and take it away at will is often mentioned alongside his capacity to create natural objects and phenomena for the benefit of humankind. Thus, he makes the crops grow and winds (see AIR AND WIND) blow; he has studded the firmament with stars (see PLANETS AND STARS) to guide travelers (see JOURNEY); he has subdued the sea and made it a source of sustenance (q.v.) and finery for men and women (see METALS AND MINERALS); he has created domestic animals which serve human beings as nourishment (see FOOD AND DRINK; HIDES AND FLEECE) and means of transportation, etc. God's capacity as creator of the universe, giver of life, sustainer of human beings, and eventually their judge (see LAST JUDGMENT; JUSTICE AND INJUSTICE) is used throughout the Qurʾān as an argument against the pagan opponents of the Prophet (see POLYTHEISM AND ATHEISM; OPPOSITION TO MUḤAMMAD): "Have they not considered that God, who created the heavens and earth without

being exhausted by the creation of them, has [the] power to bring the dead to life? Yea, verily over everything he has power" (Q 46:33).

As one of God's critical attributes (see GOD AND HIS ATTRIBUTES), which is reflected in such divine epithets as "the powerful" (*al-qawī,* cf. Gimaret, *Noms divins,* 237-8), "the overpowering" (*al-qahhār,* cf. Gimaret, *Noms divins,* 241-2), "the dominator" (*al-ghālib,* cf. Gimaret, *Noms divins,* 242-3), "the [all-] mighty" (*al-qādir,* cf. Gimaret, *Noms divins,* 235-7), "the great" (*al-ʿazīz,* cf. Gimaret, *Noms divins,* 243-6), etc., power has loomed large in Muslim exegetical tradition since its inception (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL). References to God's exclusive ability to grant power *(al-mulk)* to whomever he wishes (Q 3:26) were construed by some Muslim exegetes as a prediction of the later Muslim conquest of the Byzantine and Sasanian empires (see e.g. Ṭabarī, *Tafsīr,* iii, 222; Ṭabarsī, *Majmaʿ,* iii, 50-1; Qurṭubī, *Jāmiʿ,* iii, 52; cf. Ibn Kathīr, *Tafsīr,* iii, 42; see POLITICS AND THE QURʾĀN; BYZANTINES). In elaborating on this verse, some modern Muslim commentators — for instance, Muḥammad al-Shaʿrāwī (d. 1998), former minister of Pious Endowments of the Republic of Egypt — pointed out that unjust and despotic rulers (see OPPRESSION) were deliberately appointed by God to punish a given Muslim community for abandoning the principles of "true Islam," as well as the inability of its scholars (see SCHOLAR; KNOWLEDGE AND LEARNING) to provide proper guidance to their followers (Shaʿrāwī, *Tafsīr,* xvii, 1404, 1418). According to al-Shaʿrāwī, God's absolute and unrestricted power to provide for whomsoever he wills "without reckoning" (Q 3:27), explains why certain Arab nations were blessed with oil riches, even though they may not have deserved them due to their indolence (ibid., 1418). Such interpretations are readily embraced by certain Islamic parties and movements, which advocate the removal of some contemporary Middle Eastern regimes as morally "corrupt" and, therefore, religiously "illegitimate."

In the classical exegetical tradition, Q 3:26 was sometimes used as an occasion to debunk the Christian doctrine of the divinity of Jesus (q.v.). Thus, according to al-Ṭabarī (d. 310/923), while God indeed empowered Jesus to perform certain miraculous deeds, like raising people from the dead (see MIRACLES), healing various diseases, breathing life into clay birds and predicting future events, he nevertheless withheld from him such a uniquely divine prerogative as the absolute and unrestricted power over the created world, including both its sustenance and the natural phenomena therein, e.g. the ability to change night into day and vice versa (Ṭabarī, *Tafsīr,* iii, 227). In a similar vein, al-Suyūṭī (d. 911/1505; *Durr,* vi, 531) used Q 31:34 to vindicate God's exclusive ability to know things that are concealed from all his creatures (see HIDDEN AND THE HIDDEN), including the prophets, namely, the day and time of the resurrection (q.v.) and final judgment; the ability to foresee the falling of rain, to divine the contents of the womb and to predict the destiny of the human fetus as well as its final resting place (see FORETELLING; DIVINATION; PORTENTS). See also FREEDOM AND PREDESTINATION; FATE.

Praise

To express approbation of, or to glorify (especially God); also, to magnify, as in song. A number of qurʾānic lexemes convey this concept, but with varying nuances; derivatives of the following triliteral roots are the most prominent qurʾānic terms connoting "praise": *ḥ-m-d, sh-k-r, s-b-ḥ, ʾ-w-b* — although, generally, *sh-k-r* denotes thanking or thankfulness, and *s-b-ḥ,* glorification or exaltation, rather than "praise" proper. Occasionally, however, the second verbal form of *s-b-ḥ* is used in conjunction with the verbal noun, *ḥamd,* a combination that may be rendered in English as "to proclaim praise" — i.e. Q 2:30; 40:7. With the exception of *sh-k-r,* God is never the active agent: i.e. God is the object of praise, rather than the one praising. For example, God is the "all-thankful," *shakūr* (Q 35:30 or also *shākir,* Q 2:158) — but the "all-laudable," *ḥamīd* (Q 11:73; but cf. Gimaret, *Noms,* 351-3 and 222-3 for a range of the classical exegetes' understandings of these divine names; see GOD AND HIS ATTRIBUTES). As *sh-k-r* and *s-b-ḥ* have been dealt with elsewhere (see GRATITUDE AND INGRATITUDE and GLORIFICATION OF GOD, respectively), the following discussion shall focus on derivatives of *ḥ-m-d* and the hapax legomenon, *awwiba* (Q 34:10; for the name of the qurʾānic Prophet, which is derived from *ḥ-m-d,* see NAMES OF THE PROPHET).

In the Qurʾān, praise is closely related to other proper human responses to God, such as gratitude and glorification. God is the only one worthy of praise *(ḥamd),* being the lord (q.v.) of the worlds/all existence (*rabb al-ʿālamīn,* Q 39:75) and of the heavens (see HEAVEN AND SKY) and the earth (q.v.; Q 45:36; cf. 3:188, wherein people who want to be praised for things they have not done are promised a painful doom; see REWARD AND PUNISHMENT; HELL AND HELLFIRE; cf. Bravmann, *Spiritual background,* 116-9, for a discussion of the attribution of *ḥamd* to human heroes in early Arabic literature; see PRE-ISLAMIC ARABIA AND THE QURʾĀN). He is the originator *(fāṭir)* of the heavens and earth who uses angels as his messengers (Q 35:1; see MESSENGER; ANGEL; CREATION; COSMOLOGY), and who has not taken a son (Q 17:111; see POLYTHEISM AND ATHEISM). He has revealed the book (q.v.; i.e. the Qurʾān to Muḥammad; Q 18:1; see REVELATION AND INSPIRATION), kept his promise and bequeathed the earth to humankind (Q 39:74; see COVENANT). He saved Noah's (q.v.) people from those who would oppress them (Q 23:28; see OPPRESSION), he preferred David (q.v.) and Solomon (q.v.) over many of his believing servants (Q 27:15), and he takes grief away from those in paradise (q.v.; Q 35:34; see also JOY AND MISERY). God should be praised evening (q.v.) and day (Q 40:55; 30:17; see DAY, TIMES OF; NOON; DAWN), and "when you arise" (Q 52:48). He is praised both in the heavens and on the earth (Q 30:18) and in the hereafter (Q 34:1; see ESCHATOLOGY).

Q 9:112 includes "those who praise [God]" *(al-ḥāmidūn)* in a list of descriptors put in apposition to the believers to whom the good news (q.v.) is to be announced. Also in this list are "the repentant" (*al-tā'ibūn;* see REPENTANCE AND PENANCE), "the worshippers" (see WORSHIP), "those who fast" (see FASTING), "those who bow," "those who prostrate" (see BOWING AND PROSTRATION), "those who command the good and forbid the evil" (see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING) and "those who keep the limits of God" (see BOUNDARIES AND PRECEPTS). And Q 15:98 indicates that to be among those who proclaim God's praise is to be among those who prostrate themselves. Although the manner in which humans should praise God is not specified, the seeming specification of times of praise (morning and evening — although this mention of day and night may also be a figure of speech indicating that there is no time that God should *not* be praised; see PAIRS AND PAIRING) and the indication that bowing or prostration was associated with the proclamation of God's praise evoke Jewish and Christian liturgical practices (cf. i.e. Jammo, *Structure,* 58 f., for an overview of the east Syrian liturgy and its relations to Jewish practices; cf. esp. the "Laḥu Māra," instances of bowing and prostration, and the attribution of singing God's praises to cherubim and servants of God, but the proclamation of his holiness to seraphim; also Codrington, Syrian liturgy, 135-48 indicates that the "praise" of God, esp. Psalm 116, is included in the morning, evening and night recitations of the divine office). Certain qur'ānic passages in which praise of God is evoked are also reminiscent of Jewish and Christian scriptural and/or liturgical formulae: "He is God. There is no god but he. His is the praise in the beginning and the end. And his is the judgment; to him you will return" (Q 28:70); "All in heaven and earth exalt God; his is the kingdom and his is the praise; and he has power over everything" (Q 64:1; see i.e. the aforementioned *Ps* 116: "Praise God all you nations; glorify him, all you peoples…"; cf. *Gal* 1:5; and the final doxology of the Lord's prayer, as contained in the fourth century C.E. *Apostolic Constitutions* "For yours are the kingdom, the power and the glory forever"; cf. *Catechism of the Catholic church,* pt. 4, sect. 2, no. 2760; see also FORM AND STRUCTURE OF THE QUR'ĀN; RHETORIC AND THE QUR'ĀN; PRAYER; PSALMS).

If the object of praise is often God (or, alternatively, the lord, e.g. Q 40:55), those who should be engaged in the act of praise are God's servants (q.v.) — humankind. Like the glorification of God, however, the praise of the lord is not restricted to humans: in fact, there is nothing that does not proclaim his praise (*wa-in min shay'in illā yusabbiḥu bi-ḥamdihi,* Q 17:44) — even thunder (Q 13:13) and the angels (i.e. Q 39:75) do so. In Q 34:10, the mountains and the birds are ordered to praise God *(awwibī)* along with David. Although the exegetical consensus on the signification of *awwiba* is "glorification" (*sabaḥa,* in the sense of "return" — i.e. repeat, respond; cf. Muqātil, *Tafsīr,* iii, 526; Ṭabarī, *Tafsīr,* xx, 356-9; Rāzī, *Tafsīr,* xxv, 246), al-Ṭabarī (d. 310/923) reports a variant reading that is given the understanding of "behave" instead of "praise/repeat" (*Tafsīr,* xx, 357). He also includes a tradition that attributes the word to Abyssinian origins (ibid.; see FOREIGN VOCABULARY). Al-Rāzī (d. 606/1210) reports that a "special movement" may be involved in this action (*Tafsīr,* xxv, 246).

Post-qur'ānic developments

"To God belongs the praise" (*al-ḥamdu lillāhi,* i.e. Q 1:2) is a frequent qur'ānic refrain. Like the *basmala* (q.v.) and the

qurʾānic glorification formula (*subḥān Allāh,* Q 21:22), this *ḥamdala* (see LAUDATION) often appears in Muslim prayer formulas (q.v.), and has entered the common language of Arabic speakers (and non-Arab Muslims; see SLOGANS FROM THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN). Finally, indicative of its centrality to Muslim spirituality, "praise" of God is an important part of the ritual formulations of the Ṣūfī *dhikr* ("remembrance [of God]"; see MEMORY; ṢŪFISM AND THE QURʾĀN; REMEMBRANCE).

Prayer

Islam presents three primary terms for prayer, *ṣalāt* (ritual prayer), *duʿāʾ* (personal supplication) and *dhikr* (mystical recollection; see REMEMBRANCE; MEMORY; ṢŪFISM AND THE QURʾĀN), all of which are rooted in the qurʾānic language. These qurʾānic terms were eventually chosen to designate principal Muslim prayer practices which derive many of their characteristic features from the encounter of Islam with the cultural environment of the Middle East, particularly in the early centuries of its development, as well as that of territories Islam eventually conquered. This article will concentrate upon the concepts and practices of prayer that can be traced in the Qurʾān as read against the background of Muḥammad's biography, while disregarding the analysis of post-qurʾānic developments in the very rich and variegated tradition of prayer in Islam (see PRAYER FORMULAS; RITUAL AND THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN). Muḥammad's proclamation of the Islamic scripture occurred in an environment that was fully familiar with ways of worship rooted in the Arab tribal cult and in some measure aware of normative and sectarian forms of prayer practiced in the organized religions of the Middle East (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC; PRE-ISLAMIC ARABIA AND THE QURʾĀN). In addition to a variety of gnostic, esoteric, magic (q.v.) and mystical rituals, these included organized rites of prayer, whether performed as individual duties or communal liturgies, that were perceptible in the general religious environment in which Muḥammad's own awareness of worship (q.v.) and prayer emerged (see RELIGION; RELIGIOUS PLURALISM AND THE QURʾĀN). These obligatory prayer rites of organized religions included (1) the three daily prayers, recited at dawn (q.v.), in the

afternoon (q.v.) and in the evening (q.v.) by the followers of rabbinic Judaism privately or in assemblies (see JEWS AND JUDAISM); (2) the prayer rhythm of eastern Christian monasticism whose monks observed seven offices each day in their assemblies or churches (see MONASTICISM AND MONKS; CHURCH; SYRIA; ABYSSINIA); (3) the five prayers offered individually at fixed times of the day by the followers of Mazdaean Zoroastrianism (see MAGIANS); and (4) the four times of prayer and prostration (see BOWING AND PROSTRATION) prescribed for the daily ritual of adoration by the ordinary followers of Manicheanism. Marked by fixed times (see DAY, TIMES OF), these forms of prayer had many other characteristic manifestations, such as sacred space for worship (see PROFANE AND SACRED; FORBIDDEN; HOUSE, DOMESTIC AND DIVINE), cosmic orientation of the actual performance of prayer (see QIBLA), purification in preparation for prayer (see CLEANLINESS AND ABLUTION; RITUAL PURITY), solemn recitation of passages from sacred texts or chanting of hymns, invocative or meditative use of prayer formulas, bodily postures of standing and bowing in adoration, and conformity of the repetitive performance of prayer to the natural rhythm described by night and day (see DAY AND NIGHT).

The personal prayer of Muḥammad

Prayer is one of the most central features of the Qurʾān. It forms the core of Muḥammad's experience of God and is the foundation of his qurʾānic proclamation. Prayer was practiced daily by the nascent Muslim community and included recitation and characteristic gestures of standing and bowing in adoration. Eventually developed as a consistent communal ritual, it has come to constitute an essential part of everyday Muslim life throughout the ages. Both as a foundation of the qurʾānic message and an ongoing practice, it encapsulates the personal prayer of Muḥammad at its core. Prior to his prophetic call, the orphan and merchant Muḥammad (see ORPHANS; CARAVAN) shared the religious ideas of his clan (see KINSHIP; TRIBES AND CLANS): his uncle, Abū Lahab ʿAbd al-ʿUzzā, was a staunch adherent of the Arab tribal religion (cf. Q 111:1) and his guardian and protector, Abū Ṭālib, never adopted Islam. Muḥammad himself took part in the pagan rites at the Kaʿba (q.v.; cf. Q 108:2) and sacrificed a white sheep at the shrine of the goddess al-ʿUzzā (Q 53:19-20; cf. Macdonald and Nehmé, al-ʿUzzā, 968; see POLYTHEISM AND ATHEISM). He believed in the world of demons (*jinn*, Q 72:1; 55:15) whom the Arabs (q.v.) of Mecca (q.v.) believed to be God's comrades and next of kin (6:100; 37:158), to whom they offered sacrifices (cf. Q 6:128) and from whom they sought protection (q.v.; Q 72:6; see also JINN; SACRIFICE).

As can be judged from the earliest layers of the qurʾānic proclamation, Muḥammad's personal prayer was based on ecstatic inspiration and visions (q.v.) by night (Q 17:1; cf. 53:1-8; 81:19-25). He had to defend himself against the accusation of being one of the soothsayers (q.v.; sing. *kāhin*) possessed by the alter ego of a demon (Q 52:29; 68:2; 69:42; 7:184; see INSANITY). The utterances of his prayer were cast in rhymed prose (q.v.), marked by abrupt phrases capturing cryptic meanings. He sought refuge from demonical whisperings (Q 114:1-6) and disclaimed being an angel (q.v.), possessing the treasures of God or knowing the unseen (Q 6:50; 11:31; see SECRETS; HIDDEN AND THE HIDDEN; KNOWLEDGE AND LEARNING). He felt inspired by a holy spirit (q.v.; Q 16:102; 26:192-4) and experienced God as speaking to him directly, by revelation (see REVELATION AND INSPIRATION) and

from behind a veil (q.v.), or indirectly through the intermediary of an angel (Q 42:51), identified as Gabriel (q.v.; Q 2:97-8; cf. 66:4). He claimed to have received revelation as did the earth (q.v.; Q 99:5) and the bee (Q 16:68; see ANIMAL LIFE) or the prophets of old (Q 21:7; see PROPHETS AND PROPHETHOOD), such as Noah (q.v.; Q 23:27), Moses (q.v.; Q 20:13) and Joseph (q.v.; Q 12:15). He introduced qurʾānic passages by abstruse oaths (q.v.), following the old Arab custom of invoking idols (see IDOLS AND IMAGES) or natural forces as well as emulating the oracular style *(sajʿ)* of the pre-Islamic soothsayer in the wording of the qurʾānic proclamation (see also POETRY AND POETS).

Muḥammad swore by the name of God, e.g. "By God!" (*tallāhi,* Q 16:63), and, "But no! By your lord!" (*fa-lā wa-rabbika,* Q 4:65; see LORD), and solemnly uttered oaths by the setting of the stars, "But no! I swear *(fa-lā uqsimu)* by the setting of the stars" (Q 56:75; see PLANETS AND STARS). He swore by the powers of nature (see NATURE AS SIGNS), e.g. the heaven and its constellations (*wa-l-samāʾi dhāti l-burūj,* Q 85:1; see HEAVEN AND SKY), the star (*wa-l-najm,* Q 53:1), the sun (q.v.; *wa-l-shams,* Q 91:1) and the moon (q.v.; *wa-l-qamar,* Q 74:32), and invoked particular times of day by oaths, e.g. the daybreak (*wa-l-fajr,* Q 89:1), the night (*wa-l-layl,* Q 92:1), the forenoon (*wa-l-ḍuḥā,* Q 93:1) and the twilight (*wa-l-shafaq,* Q 84:16).

Raised unaware of revealed religion (cf. Q 42:52), he never read the Bible (Q 29:48; see SCRIPTURE AND THE QURʾĀN; GOSPEL; TORAH; PSALMS; BOOK; ILLITERACY; UMMĪ) but came into contact with Jews and Christians (Q 10:94). Through his wife Khadīja (q.v.), he was related to Waraqa b. Nawfal, a man known as a *ḥanīf* (q.v.) and one seeking a more satisfying religion than the old Arab polytheism (cf. Rubin, Ḥanīf, 402-3). Until the breakthrough to his prophetic call, identified by Muslim tradition with the divine command to "recite!" (*iqraʾ,* Q 96:1), received in an experience of retreat *(taḥannuth)* on Mount Ḥirāʾ outside Mecca, Muḥammad's prayer was a personal one (Ibn Hishām, *Sīra,* 151-2; cf. Kister, Al-taḥannuth, 223; Calder, Ḥinth, 213). After a short period of hesitation, however, he began to proclaim in Mecca the religious insights he had forged in the furnace of his personal prayer. Soon a small group of followers, most of them young and of little social standing, accepted his message and formed a nascent community which began to engage in communal prayer. This communal prayer eventually adopted characteristic elements that became constitutive for a prayer ritual, known as *al-ṣalāt*. The transition from Muḥammad's personal prayer practice and the communal prayer of his nascent community to a central and consistent ritual developed in two major stages, separated by the decisive change of the direction of prayer *(qibla)* in Medina (q.v.) in the year 2/624.

Ṣalāt, the common Arabic term for ritual prayer, does not occur in pre-qurʾānic poetry and clearly shows Aramaic influence in its particular qurʾānic orthography (cf. Spitaler, Schreibung, 217; see ARABIC SCRIPT; ORTHOGRAPHY OF THE QURʾĀN) and etymological derivation from the Syriac, *"ṣeloṭā,"* which in its basic meaning denotes the act of bowing (Nöldeke, *GQ*, i, 255; Jeffery, *For. vocab.,* 198-9; see FOREIGN VOCABULARY). In the Qurʾān, the noun *"ṣalāt"* occurs in the singular 78 times (65 times with the definite article, twice in a genitive construction, cf. Q 24:58, and 11 times with a pronoun affixed), while it occurs only 5 times in the plural. In addition, there are 16 occurrences of various forms of the verb *ṣallā* (second verbal form, with the meaning "to perform the *ṣalāt*"), which is derived from the noun,

ṣalāt. A small number of derivatives of the verb *ṣallā* imply forms of prayer observed by pre-Islamic Arabs and hence suggest an Arab usage of both the verb (Q 108:2; 107:4) and the noun (Q 8:35; 9:99) for manifestations of prayers antedating Muḥammad's proclamation of the Qurʾān. These usages and the set way in which the definite noun, *al-ṣalāt,* is employed in the Qurʾān, indicate that the Arabic form of the word was already understood in Muḥammad's environment, and did not originate in the Qurʾān (see ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QURʾĀN).

In some instances the verb is constructed together with *ʿalā* (as in the extra-qurʾānic eulogy, *taṣliya,* commonly used after the Prophet's name) with reference to "blessing" (q.v.) bestowed by God and his angels (Q 33:43, 56). In this sense, "blessing" is understood as God's very own prayer upon his creatures rather than the calling down of God's blessing (cf. Goitein, Prayer, 78; pace Padwick, *Muslim devotions,* 155-7). By an analogous turn of phrase, Muḥammad is told in the Qurʾān, to bless those who have confessed their sins, "pray upon them *(ṣalli ʿalayhim),* your prayers/blessings *(ṣalātaka)* are a comfort for them" (Q 9:103; cf. 2:157). He is, however, ordered, "do not pray over one of them *(lā tuṣalli ʿalā aḥadin minhum)* when he dies" (Q 9:84), with reference to the denial of the funeral prayer *(ṣalāt al-janāza)* for a deceased hypocrite (*munāfiq,* cf. Adang, Hypocrites, 468-72; see DEATH AND THE DEAD; BURIAL; HYPOCRITES AND HYPOCRISY). Finally, prayer received as a divine blessing may be meant in the case of the ancient Arab prophet Shuʿayb (q.v.; Q 11:87; cf. Paret, *Kommentar,* 241).

The Qurʾān makes a unique mention of *muṣallā,* "place of prayer" with reference to "Abraham's station," i.e. the central sanctuary of Mecca (Q 2:125; cf. Paret, *Kommentar,* 29; see PLACE OF ABRAHAM). This term *muṣallā* is applied in the Prophet's biography, however, to the large and open place of prayer in Medina (cf. Wensinck, Muṣallā, 659) where congregational prayers were performed on the two major Muslim festivals, the breaking of the fast *(ʿīd al-fiṭr;* see FASTING; RAMAḌĀN) and the feast of the sacrifice *(ʿīd al-aḍḥā)*. From the early centuries until today, the two public feast-day prayers *(ṣalāt al-ʿīdayn)* have been performed in the Muslim world in the forenoon, beginning after sunrise and ending before the sun reaches the zenith (see FESTIVALS AND COMMEMORATIVE DAYS). This practice, not cited in the Qurʾān, may nevertheless retain a trace of some of the oldest forms of the *ṣalāt* observed by Muḥammad and his early community (cf. Becker, Zur Geschichte, 374-5). The *muṣallā* is also cited in tradition, but not in the Qurʾān, as the place where, during a drought, Muḥammad would offer prayers for rain with his hands raised high to the sky *(ṣalāt al-istisqāʾ),* echoing Noah's promise of plentiful rain (Q 71:10-11) and Moses' plea for water (q.v.; Q 2:60). Further, there is no qurʾānic reference to the particular prayer, also observed in the forenoon, in the case of an eclipse *(kusūf/khusūf)* of the sun or moon, termed *ṣalāt al-kusūf* ("prayer of the eclipse"), though it too appears to reflect some of the older forms of the *ṣalāt*.

Rather than in the Qurʾān itself, the earliest forms of Muḥammad's practice of the *ṣalāt* may be detected in accounts preserved in the traditional, historical and exegetical literature (cf. Rubin, Morning, 41; see ḤADĪTH AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL; SĪRA AND THE QURʾĀN). If some of these fragmentary accounts can be trusted, Muḥammad used to go to the Kaʿba in the morning and, in daylight, performed the prayer of forenoon *(ṣalāt al-ḍuḥā)* some

time after sunrise (cf. Q 91:1: "By the sun and its morning brightness," *wa-l-shamsi wa-ḍuḥāhā*). The Meccans did not object to this practice because they themselves were used to praying near the Kaʿba after sunrise. In addition, it was the custom of the Bedouins (see BEDOUIN), coming to town early in the morning to sell their wares, to extol God *(takbīr)* and bow in prayer *(sujūd)* at the Kaʿba after completing their business in the markets (q.v.). As the sun sank toward the horizon, however, Muḥammad and his companions had to scatter secretly in the ravines on the outskirts of Mecca to pray the afternoon prayer *(ṣalāt al-ʿaṣr)* before sunset (cf. Q 103:1 for the use of *ʿaṣr* in an oath). They were prevented from praying at the Kaʿba possibly because in the time from late afternoon until before sunset the Meccans would perform their rites of circumambulation *(ṭawāf)* at the sanctuary (cf. Muranyi, Zwischen, 101). Another explanation suggests that Muḥammad's performance of the *ʿaṣr* prayer was perceived by the Meccans as an alien practice modeled on the Jewish *minḥāh* (Goldziher, Bedeutung, 294; Rubin, Morning, 54).

The evolution of a communal prayer

Rather than chart the genesis of the *ṣalāt* in relation to the possible chronological sequence of Muḥammad's qurʾānic proclamation — a sketch of which was offered in the article on CHRONOLOGY AND THE QURʾĀN (Böwering, Chronology, 327-8) — the present article will assemble the characteristic elements of the two stages of development, i.e. those before and after the change of the *qibla*. In the first stage, which covers Muḥammad's prophetic career at Mecca as well as the earliest phase of his career in Medina until shortly after the battle of Badr (q.v.), the communal prayer practice of the nascent Muslim community evolves out of Muḥammad's personal prayer. At this stage the communal prayer practice is not yet organized as a full-fledged ritual, but nevertheless includes a number of characteristic liturgical features to which reference is made in scattered statements of the Qurʾān. The *ṣalāt* was performed in the standing position (*qiyām,* e.g. Q 2:238) and included acts of bowing (*rukūʿ,* e.g. Q 2:43) and prostration (*sujūd,* e.g. Q 4:102).

The physical postures of bowing and prostration are frequently mentioned in the Qurʾān (with *sujūd* and its cognates found much more frequently than those of *rukūʿ*). On occasion, they are used in tandem (Q 2:125; 3:43; 9:112; 22:26, 77; 48:29) as well as interchangeably (e.g. *rākiʿan,* Q 38:24, with the act of David's [q.v.] prostration in repentance identified as bowing; and *sujjadan,* Q 2:58 and 7:161, with bowing while entering a gate called a prostration). The faithful followers of Muḥammad are depicted in the Qurʾān as bearing a mark on their faces "from the effect of prostration" (*min athari l-sujūd,* Q 48:29). The precise ritual distinction between two gestures, namely (1) bowing as inclining the head and upper body with the palms of the hands placed at the level of the knees and (2) prostration as falling down on one's knees with the forehead touching the ground, found its specific technical definition only in post-qurʾānic times (cf. Tottoli, Traditions, 371-93). *Sujūd* was known among the peoples of the Middle East in pre-Islamic times as a gesture of respect at royal courts and as an act of adoration in Christian worship. Pre-Islamic poetry cites a few examples of prostration *(sujūd)* before a tribal chief in recognition of his superiority and as an expression of one's submission (cf. Tottoli, Muslim attitudes, 5-34).

The act of prostration hurt the pride (q.v.) of the Arabs (Q 25:60; 7:206; cf. 16:49; 32:15; 68:42-3) because it appeared to them as a humiliating gesture and an alien practice (cf. Kister, Some reports, 3-6).

Muḥammad, however, was uncompromising in commanding his early community to fall down before God in prayer, "O you who believe, bow down and prostrate yourselves *(arkaʿū wa-sjudū)* and worship your lord" (Q 22:77). In the Qurʾān, prostration was depicted as an act of adoration to be given only to God and not to any work of his creation (q.v.), such as the sun or the moon (Q 41:37). On account of this, the angels prostrating before Adam (cf. Schoeck, Adam, 22-6) upon the divine command and Iblīs' refusal to do so (Q 2:34; 7:11-2; 20:116; 17:61; 18:50; 38:71-6; 15:26-33; see ARROGANCE; DEVIL; ADAM AND EVE) created an exegetical dilemma for the commentators on the Qurʾān. It is difficult to establish the angelic adoration of God as a qurʾānic prototype for the human prostration in the *ṣalāt* because the Qurʾān does not make this linkage explicitly. The angels, however, are depicted in the Qurʾān as a heavenly host (Q 37:8; 38:69), "brought near to God" (*muqarrabūn,* Q 83:21, 28; 4:172; 56:11), who stand rank on rank around the divine throne (Q 39:75; 69:17; 89:22; see THRONE OF GOD; RANKS AND ORDERS), which some of them also carry (Q 69:17). They glorify and sanctify God (e.g. Q 2:32) and do not grow weary "glorifying *(yusabbiḥūna)* God night and day and never failing" (Q 21:20; cf. 42:5). It may be possible, however, to perceive in the postures of standing and bowing the physical analogue for the actual words of glorifying God, whether in case of the angelic adoration of God or in the human observance of extolling God's praise *(tasbīḥ, tamḥīd, takbīr)*.

In fact, this exclamatory praise (*subḥāna,* mentioned 41 times in the Qurʾān) is pronounced by the qurʾānic, "Glory be to God!" (*subḥāna llāhi,* Q 12:108; 21:22; 23:91; 27:8; 28:68; 30:17; 52:43; 59:23), or with other designations for God by, "Glory be to my/your/our lord!" (*subḥāna rabbī,* Q 17:93; *subḥāna rabbika,* Q 37:180; *subḥāna rabbinā,* Q 17:108) or with pronouns, eg. Q 2:32 *(subḥānaka)* and Q 2:116 *(subḥānahu)*. The qurʾānic glorification also introduces the verse (Q 17:1) interpreted in the commentary literature as referring to Muḥammad's night-journey and ascension (q.v.), which in the post-qurʾānic tradition serves as a backdrop for the divine institution of the *ṣalāt*. Employed together with, "High be he exalted!" (*taʿālā,* e.g. Q 10:18; 16:1; 30:40; 39:67), the exclamation, "Glory be to him!," stresses God's utter transcendence above creatures and complete dissociation with any partners, in particular when it is linked with the phrases, "above what they associate" (*ʿammā yushrikūna,* Q 52:43; 59:23; cf. Paret, *Kommentar,* 180) and "beyond what they describe" (*ʿammā yaṣifūna,* Q 6:100; 21:22; 23:91 37:159, 180; 43:82). On occasion, the qurʾānic glorification is paired with the laudatory exclamation *(tamḥīd),* "Praise belongs to God!" (*al-ḥamdu lillāhi,* mentioned 24 times in the Qurʾān, e.g. Q 1:2; cf. 15:98 and 39:75). The famous magnification of God *(takbīr)* by the exclamation, "God is great!" (*Allāhu akbar,* originally meaning greater than all demons), however, is not mentioned verbatim in the Qurʾān yet is signaled in Q 17:111 and 74:3. Another exclamation, "Blessed be God!" (*tabāraka llāhu,* Q 7:54; 23:14; 40:64), extols God as the creator and ruler (see KINGS AND RULERS) of the universe (Q 25:61; 43:85; 55:78; 67:1) as well as the benefactor of Muḥammad (Q 25:1, 10). Two qurʾānic glorifications (Q 36:36, 83) effectively illustrate the transition from Muḥammad's personal prayer to the communal prayer of the nascent community, as they express the summons addressed to Muḥammad, "Proclaim your lord's praise!" (*sabbiḥ bi-ḥamdi rabbika,* Q 15:98; 20:130; 40:55; 52:48; 50:39-40; cf. *sabbiḥhu,* Q 76:26), and then directed to his community, "O believers, remember God oft,

and give him glory!" (*sabbiḥūhu,* Q 33:41-2; see also LAUDATION; GLORIFICATION OF GOD; PRAISE; GLORY).

In addition to the angelic glorification of God, two other powerful qurʾānic scenarios are actualized in the *ṣalāt*. The postures of standing and bowing in prayer are linked quite explicitly in the Qurʾān with the fear of judgment (q.v.) in the world to come (see ESCHATOLOGY; REWARD AND PUNISHMENT) and the hope in God's mercy (q.v.) and forgiveness (q.v.; Q 39:9; 25:64-5; 3:16-7). As such, both postures give a bodily expression in prayer to the ultimate account each human being must give before God on judgment day (see LAST JUDGMENT), i.e. standing to receive the final verdict in the presence of the divine majesty and bowing down to seek the divine pardon. It is as if the essential body movements of prayer capture and telescope the ultimate moment of a person's encounter with God. Another scenario calls to mind the natural adoration divinely invested in the creation of the universe. In the Qurʾān, bowing and prostrating in prayer mirror the rhythm of nature built into the cosmos, for "to God bow *(yasjudu)* all who are in the heavens and the earth, willingly or unwillingly, as do their shadows in the mornings and the evenings" (Q 13:15; cf. 16:48-9). The most powerful verse expressing this cosmic prayer is Q 22:18, "Have you not seen how to God bow *(yasjudu)* all who are in the heavens and on the earth, the sun and the moon, the stars and the mountains, the trees (see AGRICULTURE AND VEGETATION) and the beasts?" It is also tempting to see in references to God's face a qurʾānic imagery related to prayer, as for example, in Q 2:115, "wherever you turn, there is the face of God" (q.v.; *wajhu llāh,* cf. Q 55:27; 76:9; 92:20). Although Q 13:22 links those performing the *ṣalāt* with those "seeking the face of their lord" (*ibtighāʾa wajhi rabbihim;* cf. Q 2:272; 30:38-9), a phrase possibly comparable with the *biqqesh pene yhwh* of the Hebrew Bible (cf. Baljon, To seek, 261-5), the expression is employed predominantly with almsgiving *(zakāt)* for God's sake and without expectation of recompense (see GOD AND HIS ATTRIBUTES, esp. 323-4).

The inclusion of Qurʾān recitation as an essential element in the communal prayer (Q 35:29) provides another example of a prayer practice of the Prophet (cf. Q 29:45) to which his followers eventually joined themselves (see RECITATION OF THE QURʾĀN). In the form of the morning prayer, it came to be called "the recital of dawn" (*qurʾān al-fajr,* Q 17:78), "witnessed" (*mashhūdan,* Q 17:78) by the angels (?) in the early morning. Hence the Prophet is cautioned to begin each Qurʾān recitation by protecting himself against the forces of evil (see GOOD AND EVIL), "When you recite the Qurʾān, seek refuge in God against the accursed Satan" (Q 16:98; cf. 113:1-5; 3:36). According to Islamic tradition the Prophet is said to have used this formula frequently when beginning the *ṣalāt* (cf. Goldziher, *Abhandlungen,* i, 7-9). In all likelihood, the opening chapter of the Qurʾān (Sūrat al-Fātiḥa, Q 1:1-7; see FĀTIḤA) was deliberately composed to serve as a fixed and mandatory recitation for the communal prayer (cf. Goitein, Prayer, 82-4). Q 84:20-1 confirms that the Qurʾān recitation was accompanied by acts of prostration, "What ails them who do not believe (see BELIEF AND UNBELIEF), and when the Qurʾān is recited to them they do not bow *(lā yasjudūn)?*" When the Qurʾān is recited, people "fall down on their faces in prostration" (*sujjadan,* Q 17:107), just as the patriarchs "fell down prostrating and weeping" (q.v.; *sujjadan wa-bukiyyan,* Q 19:58) when the signs (q.v.) of the all-merciful (see GOD AND HIS ATTRIBUTES) were recited to them. Muḥammad is commanded, "do not raise your voice in your prayer *(lā tajhar*

bi-ṣalātika), nor be hushed therein, but seek for a way between that" (Q 17:110), while his followers are told, "when the Qurʾān is recited, give ear and be silent" (Q 7:204). An explicit command for the mandatory communal performance of the prayer is stated by the direct summons to Muḥammad, "command your people to observe the *ṣalāt*" (Q 20:132) and "content yourself with those who invoke their lord" (Q 18:28). A group of his followers also join Muḥammad in prayer at night: "your lord knows that you keep vigil nearly two-thirds of the night or a half of it, or a third of it, and a party of those with you" (*ṭāʾifatun min alladhīna maʿaka,* Q 73:20; see VIGILS).

Such nocturnal prayers were a most distinctive mark of the early communal prayer at Mecca. These night vigils formed an essential part of Muḥammad's prayer practice and were adopted by his followers. When he labored to convey or chant a qurʾānic passage (Q 73:1-8), Muḥammad is commanded directly, "Keep vigil in the night!" (*qumi l-layla,* Q 73:2). The observance of prayer at night *(tahajjud),* cited only once in the Qurʾān by this term, is set in the context of the *ṣalāt* (Q 17:78), and explicitly enjoined on Muḥammad: "and as for the night, keep vigil a part of it" (*wa-mina l-layli fa-tahajjad bihi,* Q 17:79), and "bow down before him and glorify him through the long night" (Q 76:26). Reciting the Qurʾān during the night vigil is called "an extra" (*nāfilatan,* Q 17:79) of Muḥammad's prayer practice, a vocabulary later used in Islamic law to define supererogatory prayers (*ṣalāt al-nawāfil;* see LAW AND THE QURʾĀN). Muḥammad is commanded to "proclaim the praise of your lord… in the night and at the setting of the stars" (Q 52:48-9), to pray "nigh of the night" (*zulafan mina l-layl,* Q 11:114), to "proclaim your lord's praise in the watches of the night *(min ānāʾi l-layl),* and at the ends of the day" (*aṭrāfa l-nahār,* Q 20:130), and to "perform the prayer at the sinking of the sun to the darkening of the night" (*li-dulūki l-shamsi ilā ghasaqi l-layl,* Q 17:78). This nocturnal practice is observed by his godfearing followers (see FEAR; PIETY), "who pass the night *(yabītūna li-rabbihim)* prostrate to their lord and standing" (Q 25:64). Similarly, the dwellers of paradise (q.v.), while previously living on earth, kept night vigils: "little of the night would they slumber and into the last hours of the night *(wa-bi-l-asḥār)* would they seek forgiveness" (Q 51:17-8). Traditional accounts, included in the qurʾānic commentary literature, add that the zeal in observing these vigils caused Muḥammad's followers to suffer from swollen feet (cf. Wensinck, Tahadjdjud, 97).

It is possible that the practice of night vigils was adopted from Christian ascetic precedent (cf. Bell, *Origin,* 143; see ASCETICISM) because Q 3:113 states, "some of the People of the Book (q.v.) are a nation upstanding, that recite God's signs in the watches of the night *(ānāʾi l-layl),* bowing themselves." This practice appears to be meant also by Q 24:36-8, probably referring to Christian hermits, as "men whom neither commerce nor trafficking diverts from the remembrance of God" (Q 24:37). Night vigils may also have been intended by the "worship" *(qunūt)* adopted by Muḥammad's followers, "who worship in the watches of the night" *(a-man huwa qānitun ānāʾa l-layl),* bowing and standing (Q 39:9; cf. 20:130; 2:238). It has to be noted, however, that the language of *qunūt* is rooted in pre-Islamic imprecations (cf. Goldziher, Zauberelemente, 323) and interpreted by the traditional commentary literature in a great variety of ways (cf. Bashear, Qunūt, 36-65; see also OBEDIENCE). In the Qurʾān, the language of *qunūt* also expresses the cosmic scenario of prayer: "To him (God) belongs whosoever is in the heavens and the earth; all worship

him" (*kullun lahu qānitūna,* Q 30:26; cf. 2:116; see COSMOLOGY). Furthermore, it is in line with the practice of two biblical characters cited in the Qurʾān, namely Mary (q.v.), "O Mary, worship your lord *(uqnutī li-rabbiki),* and prostrate and bow with those who bow" (Q 3:43), and Abraham (q.v.), "Abraham was a nation worshipping God" (*ummatan qānitan,* Q 16:120). The extra-qurʾānic *sūrat al-qunūt* in ʿUbayy's codex (cf. Nöldeke, *GQ,* ii, 35), however, lacks an explicit reference to both nocturnal prayer and *qunūt,* yet is replete with the vocabulary of prayer.

In the early phases of Muḥammad's prophetic career, the times of prayer are indicated by a rich variety of terms which stand in contrast to the standardized vocabulary for the five daily times of prayer *(mīqāt)* developed in post-qurʾānic Islamic law. In addition to the variable vocabulary for the prayer at night, the prayer times during the day reflect the general plethora of temporal vocabulary employed in the Qurʾān (see TIME). The Qurʾān states explicitly that the communal prayer was performed "at the two ends of the day" (*ṭarafayi l-nahār,* Q 11:114) or "at the ends of the day" (*aṭrāfa l-nahār,* Q 20:130), vaguely meaning morning and evening. But the Qurʾān does not explicitly specify whether these ends actually mean sunrise and sunset or dawn and dusk or possibly the morning just after sunrise and the evening just before sunset. The implication of "the ends of the day" seems to be before sunrise and after sunset, but Q 50:39 clearly says "before sunset" *(qabla l-ghurūb).* In addition, the two times, "in the morning and evening" (Q 6:52; 18:28; 7:205) are expressed by a varying vocabulary for "morning," *ghuduww* (Q 7:205), *ghadāt* (Q 6:52), *bukra* (Q 19:11), *ibkār* (Q 40:55), and for "evening," *ʿashiyy* (Q 40:55), *aṣīl* (Q 76:25), pl. *aṣāl* (Q 7:205). Q 20:130 explains these two "ends" as "before the rising of the sun and before its setting" (Q 20:130), which would mean at dawn and in the evening before sunset. These varying expressions clearly reflect a slowly evolving understanding of the two preferred prayer times at "the two ends of the day." There is no qurʾānic evidence to indicate whether "the two ends of the day" can be synchronized with the above-mentioned traditional accounts about Muḥammad's observance of the *ṣalāt al-ḍuḥā* and the *ṣalāt al-ʿaṣr.* Similarly, the question remains conjectural whether the insistent condemnation by Islamic tradition and law of a *ṣalāt* performed at the precise moments of sunset, sunrise or when the sun stands in the zenith as an ancient Arab cult of sun-worship actually preserves a trace of such an early prayer practice concealed in "the two ends of the day" (cf. Wensinck, Animismus, 232-5).

Much of his inspiration for the performance of prayer Muḥammad drew from the prophets of old, the qurʾānic models of prayer who, from Adam through Noah, Abraham and Israel (q.v.), "fell down prostrate [in prayer], weeping" (Q 19:58). They bade their people to pray, as did e.g. Ishmael (q.v.; Ismāʿīl, Q 19:55), Isaac (q.v.) and Jacob (q.v.; Q 21:73), or called out in the darkness (q.v.) invoking God, as did Jonah (q.v.; Q 21:87). Abraham offers a heart-wrenching prayer to his lord for a pure heart (q.v.), imploring his creator as the one who provides for him (see SUSTENANCE; GRACE), guides and heals him (see ERROR; ASTRAY; ILLNESS AND HEALTH), will make him to die, give him life, forgive his sin and offer him paradise (Q 26:83-9). Beseeching God, he asks that the privilege of performing the prayer be granted to him and his progeny (Q 14:40, cf. 14:37). Moses appeals to his lord to open his breast, unloose the knot upon his tongue and grant him Aaron (q.v.) as a helper to glorify God and remember him

abundantly (Q 20:25-34), while God addresses him directly in solemn terms, "Verily I am God; there is no god but I; therefore serve me and perform the prayer of my remembrance" (*wa-aqimi l-ṣalāta li-dhikrī,* Q 20:14). Both Moses and his brother Aaron are bidden: "Take you, for your people, in Egypt (q.v.) certain houses; and make your houses a direction *(qiblatan)* for men to pray to; and perform the *ṣalāt;* and give good tidings to the believers" (Q 10:87; see GOOD NEWS). The feeble and gray-haired Zechariah (q.v.) begs his lord secretly to grant him a son (Q 19:3-6; 3:38-9), and Jesus (q.v.), God's servant (see SERVANTS) as yet in the cradle and made blessed by God, is enjoined to pray as long as he lives (Q 19:30-1).

The institution of the ritual prayer

In the few years before and after the emigration (q.v.; *hijra*) of Muḥammad and his followers to Medina, the ritual prayer *(ṣalāt)* developed into a central religious discipline of the Prophet's growing community and shows clear signs of becoming a consolidated ritual institution. This understanding may be derived from the direct statement that the *ṣalāt* is enjoined as "a timed prescription" (*kitāban mawqūtan,* Q 4:103), regulated in its performance and standardized in its choice of terms through the set phrases of *ṣalāt al-fajr* and *ṣalāt al-ʿishāʾ* for the morning and evening prayers respectively (Q 24:58), performed "at morn and eventide" (Q 7:204-6). A new time of "the middle prayer" (*al-ṣalāt al-wusṭā,* Q 2:238) is now added in Medina, a time also implied by the "midday heat" (*ẓahīra;* see NOON; HOT AND COLD), though not the midday prayer, in Q 24:58. That this prayer was actually performed at midday may be inferred from Q 30:17-8, which summons Muḥammad's community to give glory to God "when you come to evening and when you come to morning *(ḥīna tumsūna wa-ḥīna tuṣbiḥūna)*… and when you come to noon *(wa-ḥīna tuẓhirūna).*" On the other hand, the middle prayer may have been introduced in emulation of the *minḥāh,* observed by the Jews of Medina in the afternoon as one of their three prayer times (*shaḥarīth,* morning; *minḥāh,* afternoon; and *ʿarbīth,* evening, cf. Mittwoch, Zur Entstehungsgeschichte, 11-2). In general, Western scholarship (see POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN) tends to interpret "the middle prayer" as referring to the noon prayer (*ṣalāt al-ẓuhr,* cf. Houtsma, Iets, 127-34; Paret, *Grenzen,* 31-5; pace Goitein, Prayer, 84-5, the plural *al-ṣalawāt* rather than the dual in Q 2:238 notwithstanding). Qurʾānic commentary, on the other hand, prefers to interpret "the middle prayer" as that of the afternoon *(ṣalāt al-ʿaṣr),* as it occupies the middle position in the eventual five prayer times, that were codified as a religious duty by Islamic law. In any event, the addition of the middle prayer appears to have been accompanied by a decrease in the nocturnal prayer, because a variety of reasons are now given as dispensations from the lengthy night vigils (Q 73:20).

Regularization of the prayer ritual is also presupposed by dispensations for altered ways of performing the prayer, known traditionally as "the prayer of fear" *(ṣalāt al-khawf),* when those facing hostilities from foes alternate bowing in prayer with those standing guard with weapons in hand (Q 4:102; see ENEMIES; FIGHTING; WAR; EXPEDITIONS AND BATTLES). Another feature of the regularization of prayer is the insistence on its punctual performance by "those who carefully observe their prayer" (*ʿalā ṣalātihim yuḥāfiẓūna,* Q 6:92; 70:34; 23:9; cf. 70:22-3) and the reprimand for those who are heedless in performing the *ṣalāt* (cf. Q 107:4-5). Furthermore, the Qurʾān now explicitly makes the *ṣalāt* mandatory also for women, commanding them,

"Perform the prayer!" (*aqimna l-ṣalāta,* Q 33:33), and addressing them, "Remember that which is recited in your houses!" (Q 33:34), and putting them on an equal footing with men in observing this obligation (cf. Q 33:35; see WOMEN AND THE QURʾĀN; GENDER; PATRIARCHY).

Early in the Medinan phase of the qurʾānic proclamation, the giving of the greeting of peace (q.v.; *taslīm*), cited in the second verbal form, "and give the salutation of peace" (*wa-sallimū taslīman,* Q 33:56; cf. 24:27, 61) became the liturgical salutation closing the *ṣalāt*. Already in the Meccan phase, "*salām*" (meaning "safety, salvation, peace, salutation") is mentioned frequently and employed in the greeting, "Peace be upon you!" (*salāmun ʿalaykum,* Q 13:24; 16:32; 39:73), given by the angels to the blessed of paradise (see GARDEN). Abraham exchanges "Peace!" (*salām,* Q 11:69; 51:25) with his guests and, threatened by his father (see ĀZAR), takes leave from him with, "Peace be upon you!" (*salāmun ʿalayka,* Q 19:47) while Moses dismisses Pharaoh (q.v.), "Peace be upon him who follows the right guidance!" (*wa-l-salāmu ʿalā mani ttabaʿa l-hudā,* Q 20:47). Now in Medina, however, Muḥammad follows the precedent of the Jewish *tefillā* (cf. Mittwoch, Zur Entstehungsgeschichte, 18) and includes the utterance of the salutation of peace as an essential feature of the prayer ritual. In addition, the observance of the *ṣalāt* is now frequently connected in consistent language with the giving of the *zakāt* ("alms-due"), a set phrase that occurs about two dozen times in the Medinan sūras (cf. Nanji, Almsgiving, 64-70). The qurʾānic command, addressed to Muḥammad's community, "perform the prayer and give the alms-due" (*wa-aqīmū l-ṣalāta wa-ātū l-zakāt,* Q 4:77, mentioned about two dozen times), clearly demonstrates by its in-tandem use the existence of two consolidated communal institutions, linked together and firmly established, the ritual prayer and the communal tax (see TAXATION).

The regularization of ritual prayer can also be inferred from the preparatory rites which were added during Muḥammad's qurʾānic proclamation at Medina. During this Medinan phase, the Qurʾān records specific instructions about ritual purification through ablutions to be observed in preparation of each ritual prayer (Q 4:43; 5:6) as well as dispensations for travelers (see JOURNEY) who may shorten the *ṣalāt* (Q 4:101) and use sand as a sign of purification in the absence of water (*tayammum,* Q 4:43; 5:6). There is no specific instruction to keep the head covered during prayer, most likely because this was commonly done and implicitly understood. The qurʾānic injunctions to wash the face (q.v.), the hands (q.v.) up to the elbows, the head and the feet (q.v.) up to the ankles, were based on the perception of ritual impurity (see also CONTAMINATION) resulting from sexual defilement (*junuban,* Q 4:43; 5:6; see SEX AND SEXUALITY) or intoxication (*sukārā,* Q 4:43; see INTOXICANTS; WINE). They laid the ground for the detailed rituals of *wuḍūʾ* (minor ablution) and *ghusl* (major ablution) developed in the post-qurʾānic legal literature of Islam (cf. Burton, Qurʾān, 21-58). Behind these stipulations lies the perception that water has the power to drive off demons (cf. Goldziher, Wasser als Dämonen, 27) as well as the solemn qurʾānic assertion that the Qurʾān is a sublime book only to be touched by "the purified" (*al-muṭahharūn,* Q 56:76-9; cf. Jeffery, *Qurʾān,* 13-7).

Another preparatory element of the *ṣalāt* is the public summons to prayer (Q 5:58), instituted by Muḥammad in Medina and expressed in the Qurʾān by derivatives of the verb *nādā* (third verbal form), "to call," foreshadowing the appearance of the word for the distinct muezzin's call *(adhān)* that

came to be the widely-used term for the Muslim call to prayer (actually consisting of two calls, *adhān* from the minaret and *iqāma* in the mosque; see MOSQUE). According to Islamic tradition, the Prophet ordered that the believers be convoked by Bilāl, the first muezzin, and that the summons to prayer be called out rather than sounded by horns, announced by wooden clappers or signaled by lighting a fire. In Medina, the summons to prayer served in particular as an invitation to the prayer on "the day of assembly" (*yawm al-jumuʿati,* Q 62:9) on Friday (see FRIDAY PRAYER), the pre-Islamic market-day, mentioned only once in the Qurʾān (cf. Goitein, Muslim, 111-25; Brockelmann, Iqāmat aṣ-ṣalāt, 314-20). This public prayer is observed on Friday at midday in mosques throughout the Muslim world, although the Friday is not treated as a day of rest like the Sabbath (q.v.). In Muslim thought, God is always active conducting the affairs of the universe and never sits still, not even resting from his work of creation on the seventh day (Q 50:38; cf. Nagel, *Koran,* 172-84). The congregational prayer is preceded by a sermon *(khuṭba),* given in two parts, generally from a pulpit *(minbar/mimbar),* with the preacher standing upright and leaning on a staff or a lance (cf. Becker, Kanzel, 331; Goldziher, Chatib). The absence of any reference to *khuṭba* (and *minbar*) in the Qurʾān, however, does not preclude the possibility that it actually formed an essential part of the congregational prayer in Muḥammad's time, as did the sermon that followed the *ṣalāt* on the morning of the two big feast-days, as well as the special *ṣalāt* in the cases of a drought or an eclipse.

The most crucial institutional development of the *ṣalāt* at Medina, however, was the change of the prayer direction *(qibla)* toward the Kaʿba, the central sanctuary of Mecca, that can be traced to the year 2/624 after the *hijra.* This is the year the battle of Badr took place (Q 3:123), after which Muḥammad began to dissociate himself from the local Jewish tribes. The explicit qurʾānic directive (Q 2:142-50) must be understood against the background of Semitic prayer practices and their specific and particular orientations: the Jews offered their prayers in the direction of Jerusalem (q.v.), the Syriac Christians prayed eastward (see CHRISTIANS AND CHRISTIANITY) and the Essenes turned toward the rising sun. On account of extra-qurʾānic evidence, it is certain that, immediately after the *hijra,* Muḥammad prayed toward Jerusalem in accordance with Jewish custom, but then changed radically. This fact agrees with Q 2:142-3 which records his opponents' rebuke for his having turned in prayer in the opposite direction (Q 2:142; see OPPOSITION TO MUḤAMMAD). The radical change of the *qibla* required Muḥammad's followers in Medina to turn a half-circle and reorient their prayer toward the sanctuary of Mecca, "the holy mosque" (*al-masjid al-ḥarām,* Q 2:144, cf. 2:149, 150), generally identified with the Kaʿba (cf. Hawting, Kaʿba, 75-80). The significance for the institutional reorientation of Islam of changing the *qibla* cannot be underestimated: it visibly symbolizes the shift from a religion confirming the scriptures of the "People of the Book" (i.e. Jews and Christians) to an autonomous and newly directed religion, reconfirming the natural monotheistic religion of Abraham centered on the Kaʿba of Mecca, now both the new and the original focus of Islam.

In Medina, Muḥammad faced the task of uniting Meccan Emigrants *(muhājirūn)* and Medinan Helpers (*anṣār;* see EMIGRANTS AND HELPERS) into one community *(umma),* observing a common prayer ritual and facing in unison in the same direction of

prayer. In the context of his fall-out with the Jews of Medina and his reorientation toward Mecca as the center of the old Arab religion of Abraham, the Meccan sanctuary (the foundations of which were laid by Abraham and Ishmael according to Q 2:127; cf. Firestone, Abraham, 6-11) supplants Jerusalem as the direction of prayer. The fact of this reorientation, however, does not solve the question of what the prayer direction might have been during the Meccan period of the qurʾānic proclamation before the *hijra* (for this complex question, cf. Wensinck, Ḳibla, 82-3). It may have been to the east in imitation of Christian prayer practice or to the Kaʿba itself as noted in the traditional account that Muḥammad did not dare turn his back to the sanctuary in his prayer. More likely, as also noted in the Islamic commentary literature, Jerusalem may have been Muḥammad's prayer direction in Mecca, a direction in agreement with the architectural orientation of the semicircular wall *(ḥaṭīm),* enclosing the space of Ismāʿīl's tomb (lit. "womb," *ḥijr*), which at one time formed an integral part of the Kaʿba (see ARCHAEOLOGY AND THE QURʾĀN; ART AND ARCHITECTURE AND THE QURʾĀN). The institutional reorientation of the direction of prayer in Medina roughly coincides with the time when Muḥammad instituted the fast of the month of Ramaḍān (Q 2:183-5) that replaced the previously adopted Jewish custom of the ʿAshūrāʾ fast observed on the Day of Atonement (cf. Wagtendonk, Fasting, 180-5). It also occurs in the time frame of the battle of Badr, after which the Jewish tribe of the Banū Qaynuqāʿ (q.v.) was expelled from Medina. From this time on, the prayer direction toward the Kaʿba in Mecca has remained a cornerstone of the Muslim ritual performance of the *ṣalāt* and is architecturally indicated in every mosque by the "niche" *(miḥrāb)*. The latter term, however, does not appear in the Qurʾān in this architectural sense (cf. Q 3:37, 39; 19:11; 38:21; pl. *maḥārīb,* Q 34:13).

According to qurʾānic evidence, there is no certainty that Muḥammad and his community observed the duty of the *ṣalāt* five times a day as Muslims do today and have done over the centuries. Neither the number of the five daily prayers nor their exact times of performance had been fixed by the end of the qurʾānic proclamation. In all likelihood, while in Mecca, Muḥammad and his nascent community kept night vigils and performed prayers in the morning and evening. In Medina, a middle prayer was added, while the nocturnal prayers diminished. After a period of uncertainty in the decades after Muḥammad's death, the living tradition and then the literature of Islamic law codified a firm duty of the *ṣalāt* at five specific times of the day. These designated times, known by the technical term *mīqāt* ("appointed time," cf. Wensinck, Mīḳāt, 26-7), came to be specified as the prayer at daybreak *(ṣalāt al-fajr),* at noon when the sun has left the zenith *(ṣalāt al-zuhr),* in the afternoon when the shadows equal their objects *(ṣalāt al-ʿaṣr),* at dusk after sunset *(ṣalāt al-maghrib),* and at nightfall when the twilight has disappeared *(ṣalāt al-ʿishāʾ)*. The *ṣalāt al-witr,* not mentioned in the Qurʾān but frequently attested in Islamic tradition, presupposes the fixation of the five daily *ṣalāt*s and came to be observed as a voluntary prayer between the night prayer and that of daybreak (cf. Monnot, Ṣalāt, 930). The term *mīqāt,* taken from the Qurʾān, appears to indicate that the *ṣalāt* continued to be understood as an encounter with God, prefigured by Moses meeting and conversing with God at "an appointed time" (Q 7:142-3, 155; cf. Speyer, *Erzählungen,* 299-301; 310-11; 335-6; cf. 26:38, meeting with the sorcerers) and

foreshadowing "the appointed time" of the ultimate encounter of each individual with God on judgment day (Q 56:50; 78:17; 44:40). Only once is the term used in the plural, *mawāqīt,* and that for the observation of the new moon (Q 2:189).

The answer to the establishment of five daily observances of the *ṣalāt,* which cannot be found in the Qurʾān, is given in Muslim tradition by two legendary scenarios depicting its divine institution: (1) during the Prophet's ascension to heaven *(al-miʿrāj),* God himself charged Muḥammad to impose five daily prayers on his community, or (2) the angel Gabriel, mentioned in the Qurʾān as the angel of revelation (Q 2:97), came down from heaven five times in one day and, by example, taught Muḥammad the performance of the five daily prayers. The recourse to such legends in Islamic tradition points to both the absence of clear stipulations with regard to the five daily prayers in the Qurʾān and the necessity of establishing an authoritative basis for the divine institution of the mandatory five daily prayers. Western scholarship, on the other hand, has suggested three principal explanations for the fixation of five daily prayers: (1) the five daily prayers are the result of duplications of the evening prayer (into *ṣalāt al-maghrib* and *ṣalāt al-ʿishāʾ*) and the midday prayer (into *ṣalāt al-ẓuhr* and *ṣalāt al-ʿaṣr,* cf. Houtsma, Iets, 127-34). This explanation is particularly reinforced by an Islamic tradition on the authority of ʿAbdallāh b. al-ʿAbbās (d. 68/687-8), arguing in the opposite direction, namely that the Prophet himself combined several *ṣalāt*s in Medina so as not to overburden his community (cf. Wensinck, Ṣalāt, 98); (2) the five daily *ṣalāt*s were patterned on the binding duty of five daily prayers observed in Zoroastrianism (Goldziher, Islamisme, 246; cf. Boyce, *Zoroastrians,* 32-3); (3) the five daily prayers were most likely chosen as a just median between the three services of the Jewish synagogue and the seven "hours" observed by Christian monks (cf. Goitein, Prayer, 84-6). For the post-qurʾānic developments, cf. Wensinck, Ṣalāt, 98; Monnot, Ṣalāt, 926-30.

The language of prayer in the Qurʾān

As stated above, it may be possible to trace two stages of development in the genesis of the *ṣalāt:* (1) from the Meccan phase of the qurʾānic proclamation until the change of the *qibla* in Medina, Muḥammad's personal prayer inspires an evolving communal prayer, which included group prayers in the morning and evening as well as during night vigils; and (2) with the change of the *qibla* in Medina, this communal prayer practice is transformed into a firmly instituted ritual, including three prayer times, morning, evening and a median prayer, as well as stipulations for preparatory and alternate rites. It is much more difficult, however, to coordinate the diverse Arabic terminology for various manifestations of prayer in the Qurʾān. Little research has been done on the semantic fields of *duʿāʾ, dhikr* and *ṣalāt* and their possible interrelatedness in the Qurʾān. It is obvious, however, that the derivatives of the roots for both *duʿāʾ* and *dhikr* are employed more than twice as frequently in the Qurʾān as those for *ṣalāt*. Among these three semantic fields, the vocabulary of *duʿāʾ* appears to represent the earliest layer of prayer language in Arabic as illustrated by the invocation of pre-Islamic deities (which has left more than a dozen traces in the Qurʾān, e.g. Q 4:117; 6:108; 7:194, 197; 10:66, 106; 13:14; 16:20; 19:48; 22:12, 62; 29:43; 31:30; 35:13; 39:38; 40:20, 66; 43:86; 46:5; see IDOLS AND IMAGES; RHETORIC AND THE QURʾĀN) as well as by the frequent occurrence of oaths in the Qurʾān that belong to the stock of Muḥammad's invocation of God (cf. Hawting, Oaths, 561-6).

In its pre-Islamic usage *duʿāʾ* could be employed both negatively and positively. A person could call upon an Arab deity with an invocation that could be directed either for or against someone, and hence could be turned into supplication for a blessing or imprecation for a curse. This double-edged signification is conveyed in the Qurʾān as in Q 17:11, "humanity prays for evil as he prays for good" *(yadʿu l-insānu bi l-sharri duʿāʾahu bi-l-khayr)*. The Qurʾān warns that the invocation of unbelievers, directed to their false gods, goes astray and receives no answer (Q 13:14; 35:13-4), contrary to the invocation of the true God, "who alone is truly called upon" (*lahu daʿwatu l-ḥaqq,* Q 13:14) and says, "I am near to answer the call of the caller, when he calls me" (*ujību daʿwata l-dāʿi idhā daʿānī,* Q 2:186). In the Qurʾān, the *duʿāʾ* becomes the invocation of the one true God to whom one directs both an appeal for divine succor in times of misfortune and a supplication for good fortune (Q 41:49-51). The classical example of this two-sided plea for divine assistance can be found in the first sūra of the Qurʾān (al-Fātiḥa, Q 1:1-7), which begins with the invocation of God's name and ends with the double-edged plea for guidance on the path of divine favor and protection against divine wrath (see PATH OR WAY; ANGER). God is the true hearer of prayer, literally, "the hearer of the invocation" (*samīʿu l-duʿāʾ,* Q 3:38; 14:39; see SEEING AND HEARING) and answers the pleas of the prophets, as in the cases of Abraham, who is granted progeny in his old age (Q 14:39-40; 19:48), and Zechariah, whose secret supplication for a son is answered (Q 19:3-6; 3:38-9).

The phrase for the hearer of prayer, which appears only in the context of these two qurʾānic passages, combines the language of *duʿāʾ* and *ṣalāt* (cf. Q 14:39-40 and 3:38-9): Abraham asks his lord, "make me a performer of the prayer" *(muqīma l-ṣalāt)* and "accept my plea" (*wa-taqabbal duʿāʾī,* Q 14:40), and Zechariah "invoked *(daʿā)* his lord" while he was "standing in prayer" (*qāʾimun yuṣallī,* Q 3:38-9). The intersection of these two semantic fields of prayer in prophetic narratives (q.v.) of the Qurʾān may illustrate the assimilation of *duʿāʾ,* an early Arab way of prayer, with that of *ṣalāt,* the prayer practice adopted by Muḥammad from a tradition rooted in the Aramaic background, despite the fact that *duʿāʾ* and its derivatives are rarely found in sūras (q.v.) judged as belonging to the first Meccan period.

A fusion of *duʿāʾ* and *ṣalāt* with the semantic field of *dhikr* could be reflected in the qurʾānic injunctions to pronounce the prayer in a moderate voice. With regard to *ṣalāt,* Muḥammad is commanded, "do not raise your voice in your prayer *(lā tajhar bi-ṣalātika),* nor be hushed therein, but seek you for a way between that" (Q 17:110). With regard to *duʿāʾ,* his followers are told, "invoke your lord *(udʿū rabbakum),* humbly and secretly" (*khufyatan,* Q 7:55). With regard to *dhikr,* Muḥammad is commanded, "remember your lord *(wa-dhkur rabbaka)* in your soul, humbly and fearfully, without raising the voice" (*dūna l-jahr,* Q 7:205). Another indicator for the blending of these three semantic fields for prayer in the Qurʾān may be detected in the linkage of the roots of *duʿāʾ* and *dhikr* with specific prayer times in the Qurʾān, not unlike in the case of *ṣalāt*. For example, with regard to *duʿāʾ,* Q 6:52 refers to "those who invoke their lord at morning and evening," while with regard to *dhikr,* Q 7:205 records the divine command to Muḥammad to remember God "at morn and eventide." Finally, the close relationship of *ṣalāt* to *dhikr* can be observed in Q 87:15 referring to the prosperous believer as one who "mentions the name of his lord and prays *(dhakara sma rabbihi fa-ṣallā)*"; in Q 20:14 when Moses is asked to "perform the

prayer of my remembrance" *(wa-aqimi l-ṣalāta li-dhikrī);* in Q 5:91 which cautions against Satan desiring "to bar you from the remembrance of God *(dhikr Allāh)* and from the prayer *(al-ṣalāt)*"; and in Q 4:142 including the rebuke for standing lazily in the prayer *(al-ṣalāt)* while "not remembering God *(wa-lā yadhkurūna llāh)* save a little." The license given to those deluged by rain (see WEATHER) or suffering from sickness or prevented from observing the precise hours of prayer in times of war, however, appears to separate the *ṣalāt* from the *dhikr:* "when you have concluded the prayer *(al-ṣalāt),* then remember God *(fa-dhkurū llāh),* standing and sitting and on your sides" (Q 4:103).

In the Qurʾān, the term *dhikr* denotes primarily the act of "recalling God to mind," "reminding oneself of God," "mentioning God's name" or "remembering God" which imply both a vocal mention and a mental memory of the presence of God through recital by the tongue and commemoration in the heart (Q 13:28; 39:23; 57:16, cf. McAuliffe, Heart, 406-9). The recited word of the Qurʾān is linked directly with *dhikr* when the Qurʾān refers to itself as "remembrance, reminder" (*dhikr,* Q 7:63; cf. 3:58; 21: 50; 43:44; 68:52; *dhikrā,* e.g. Q 6:90; *tadhkira,* e.g. Q 20:3; 69:48; 74:49; see NAMES OF THE QURʾĀN), an identification most expressly encapsulated in the oath, "By the Qurʾān, containing the reminder" (*dhī l-dhikr,* Q 38:1). Furthermore, other revealed scriptures also are called *dhikr,* as shown by those possessing them being designated "People of the Remembrance" (*ahl al-dhikr,* Q 16:43; 21:7), in parallel to the standard phrase, *ahl al-kitāb* ("People of the Book"). Underlying the term *dhikr* in the Qurʾān, privileged by the divine promise of reciprocity, "remember me and I will remember you" (Q 2:152), there is the explicit exercise of mentioning or recalling God's name in prayer, vocally or mentally. This can be inferred from many qurʾānic passages, such as "and mention/remember the name of your lord" (Q 73:8; 76:25; cf. 2:114; 22:40; 24:36), "mention/remember your lord when you forget" (Q 18:24), "men and women who mention/remember God oft" (Q 33:35), "the hearts of those who believe are at rest in God's remembrance" (Q 13:28), "O believers, mention/remember God incessantly" (Q 33:41) or "let neither your possessions (see POSSESSION; WEALTH) nor your children (q.v.) divert you from God's remembrance" (Q 63:9).

In conclusion, it may be said that, in comparison to the sacred books of humanity, "there is perhaps no Scripture that is so totally a Book of Prayer as is the Qurʾān" (Roest Crollius, Prayer, 223). The Qurʾān is permeated by a powerful inner dynamic that makes this scripture in its entirety a book of prayer, not only because it contains various prescriptions and descriptions of prayer and includes a great number of prayers, hymns and invocations, but more importantly because it reflects a religious experience of prayer rooted in the heart of the Prophet and reiterated by the tongues of his followers throughout the ages as God's very own speech (q.v.) in matchless Arabic (see WORD OF GOD; INIMITABILITY). Only by listening again and again to the Qurʾān as a recited text, "honey begins to flow from the rock" (ibid., 223). In the experience of the Muslim, God speaks to human beings through the Qurʾān and human beings, reciting the Qurʾān, address themselves to God. Each in its own modality, *dhikr, duʿāʾ* and *ṣalāt,* return the word to God in the thought of recollection, the word of invocation and the action of ritual worship.

Prayer Formulas

Invocations for every circumstance of life, both personal and social. There are numerous expressions of prayer in Islam, prayer being fundamentally one with the faith and the practice of Muslims (cf. Q 17:79-80, among numerous other verses). The life of the believer is immersed in a multitude of invocations, which operate as expressions of sincere faith as well as simple stereotyped formulaic phrases. The life of an observant Muslim can be compared to an extended liturgy, as expressed by the

title of Ibn al-Sunnī's (d. 364/974) *ʿAmal al-yawm wa-l-layla,* "The work [or the liturgy?] of the day and the night," not only because of the five canonical prayers (see PRAYER), but because of the numerous invocations to God for every occasion. Even the ordinary sounds of daily life, such as the braying of a donkey, can prompt a prayer ("I take refuge in God from Satan the outcast," Ibn al-Sunnī, *ʿAmal,* 153). Other examples of the way in which the use of prayer formulas suffuses daily life are the invocation of the name of God (see BASMALA) before conjugal union, as well as in matters of personal hygiene (Ibn al-Sunnī, *ʿAmal,* 13).

A distinction can be made between "traditional," "common" or "canonical" expressions of praise and petition (including the codified, or ritual, formulas), and those which are left to the individual's own initiative. It should be noted that the former category encompasses all those formulas to be found in the Qurʾān, as well as those reported to have come from Muḥammad (or his Companions, etc.; see COMPANIONS OF THE PROPHET). To this category belong prayers (sing. *duʿa*) found in both the sunna (q.v.) and ḥadīth, i.e. the "Book of good manners" in Ibn Abī Shayba's (d. 235/849) *Muṣannaf* or the "Book of work of day and night" in al-Nasāʾī's (d. 303/915) *al-Sunan al-kubrā* (see ḤADĪTH AND THE QURʾĀN), as well as those contained in special collections such as Ibn Abī l-Dunyā's (d. 281/894) *al-Tahajjud wa-qiyām al-layl,* and especially Ibn al-Sunnī's *ʿAmal al-yawm wa-l-layla* (cf. also the Egyptian polymath al-Suyūṭī's [d. 911/1505] *Dāʿī l-falāḥ fī adhkār al-masāʾ wa-l-ṣabāḥ*).

The second grouping, those of the individually formulated *duʿa*s, may also contain material attributed to Muḥammad, but this material is integrated into longer prayers that are freely and spontaneously composed. When compared to Christianity, for example, Islam has relatively few "prayer" books (probably because of the importance of the five daily obligatory ritual prayers), yet some books of this type are well-known. Among them are the so-called "Psalms of Islam" (*al-Ṣaḥīfa al-kāmila al-sajjādiyya,* or *al-Ṣaḥīfa al-sajjādiyya al-ūlā;* Pers. *Zabur-i āl-i Muḥammad*), attributed to the fourth imām (q.v.), Zayn al-ʿĀbidīn ʿAlī b. al-Ḥusayn, also called al-Sajjād (d. bet. 92/710 and 99/717; cf. Sezgin, *GAS,* i, 826-8). These "Psalms" contain supplications such as "asking for the best" *(istikhāra),* the invocation on the beginning of Ramaḍān (q.v.), bidding farewell to Ramaḍān, etc. (see bibliography for details on translations of, and commentaries on, al-Sajjād's work, as well as other popular collections of prayers).

As freely expressed prayers are more common in Ṣūfism (cf. van Ess, Review, 185; see ṢŪFISM AND THE QURʾĀN), a third category of *duʿa* may be added: the Ṣūfī formulations (see below; cf. Gramlich, *Sendschreiben,* 364-71; Ghazālī, *Iḥyāʾ*).

Expressions of praise (q.v.) represent the true meaning of prayer (see also LAUDATION; GLORY; GLORIFICATION OF GOD). Mention can be made of the *ḥamdala,* "Praise be to God" *("al-ḥamdu lillāh"),* which expresses human gratitude for God's favors (see GRACE; BLESSING; GRATITUDE AND INGRATITUDE). This phrase opens the first chapter of the Qurʾān, Sūrat al-Fātiḥa (see FĀTIḤA), and is found about forty times within the Qurʾān. Similarly, the invocation of the name of God, the *basmala,* "In the name of God, the compassionate [forgiving??], the merciful" (*"bismi llāh,"* in its full form, *"bismi llāhi l-raḥmāni l-raḥīm"*), places all human activity under the divine will. This invocation is found at the beginning of each sūra (q.v.) except for one. Furthermore, there is the *takbīr:* "God is great," *("Allāhu akbar"),* which bears witness to the absolute transcendence of God (see

ANTHROPOMORPHISM). One could add mention of the profession of faith: "There is no god but God," (*lā ilāha illā llāh;* see WITNESS TO FAITH), contained particularly in the call to prayer, as well as the *talbiya,* spoken at the time of pilgrimage (q.v.): "Here I am! O God! Here I am! I come to you! There is none beside you! I come to you; to you be all glory, all grace and all power! There is none beside you" *(Labbayka allāhumma labbayka; labbayka lā sharīka laka; labbayka. Inna l-ḥamda wa-l-niʿmata [laka] wa-l-mulka laka, lā sharīka laka").*

Duʿāʾ as prayer of petition — not always considered of great importance by some theologians — is expressed in certain fixed forms, such as in the prayer asking for rain (*ṣalāt al-istisqāʿ,* cf. Q 71:11) or in the prayer for the dead, spoken before burial (q.v.; *ṣalāt ʿalā l-mayyit,* cf. Q 9:84), which adopts the invocation pronounced by the Prophet himself as reported by Abū Hurayra, or, finally, the prayer of fear (*ṣalāt al-khawf,* cf. Q 2:239 and 4:101-3), which was said in the past by Muslim armies as they went into battle against the enemy. Many prayers of petition, however, have different forms, which are left to the individual's own initiative.

In everyday life, there are numerous invocations for every occasion, such as those addressed to a sick person: "May God heal you" *(Allāh yashfīka);* to someone who is doing work: "May God give you strength" (*Allāh yaʿṭīka l-ʿāfiya,* or, in the Maghreb, *Allāh yaʿṭīka l-ṣaḥḥa*); about someone who has died: "May God have mercy upon him" *(Allāh yarḥamuhu);* to a father, about one of his children: "May God keep him for you" *(Allāh ikhallīlak iyyāhu),* etc.

The ritual expressions of prayer are primarily those of the canonical prayer, the *ṣalāt,* where the recitation of the first sūra of the Qurʾān, Sūrat al-Fātiḥa, is of tremendous importance. This constitutes the prayer *par excellence,* recited on all of life's occasions: it is used at events of personal importance, as well as communal ceremonies, like marriages and funerals, or circumcision (q.v.). It is also recited at the initiation of an individual into the Muslim community. Called *umm al-kitāb* ("the mother of the book" or "the standard of the book," depending on the interpretation), commentators have written much on the benefits of its recitation. During this prayer, particularly on Fridays (see FRIDAY PRAYER), numerous classic expressions are repeated, such as "God is great" *(Allāhu akbar)* or "Glory to God" *(subḥāna llāh).* This prayer is recited in accordance with a fixed ritual, which can be shortened when one is on a journey (q.v.; Q 4:101).

One should include here an elaborated form of the *tashahhud,* the profession of faith: "To God salutations, prayers, pious formulas. Peace be upon you, the Prophet, as well as the mercy (q.v.) of God and his blessings. May peace also be upon us and upon the righteous servants of God. I testify that there is no god but the one God, there is none beside him, and I testify that Muḥammed is his servant and his messenger" (*al-taḥiyyāt lillāh wa-l-ṣalawāt wa-l-ṭayyibāt; al-salāmu ʿalayka ayyuhā l-nabī wa-raḥmatu llāhi wa-barakātuhu; al-salāmu ʿalaynā wa-ʿalā ʿibādi llāhi l-ṣāliḥīn; ashhadu anna lā ilāha illā llāha, lā sharīka lahu wa-ashhadu anna Muḥammadan rasūluhu;* see WITNESSING AND TESTIFYING; PROPHETS AND PROPHET- HOOD; MESSENGER).

Like Sūrat al-Fātiḥa, which opens the Qurʾān, the two sūras which close the book, Sūrat al-Falaq ("The Dawn," Q 113) and Sūrat al-Nās ("People," Q 114) are frequently employed. They are called "the two that procure refuge" *(al-muʿawwidhatān)* because they employ the formulas *"aʿūdhu bi-rabbi l-falaq"* ("I seek protection from the lord of the dawn" — or, from the "lord of hell," according to the commentators; see HELL AND HELLFIRE) and *"aʿūdhu bi-rabbi*

l-nās" ("I seek protection from the lord of humankind"). They have given birth to the very frequent formula, "I seek protection (q.v.) from God" *(aʿūdhu bi-llāh),* by which the believer places him- or herself in God's hands when faced with danger. "I entrust myself to God" (*tawwakaltu ʿalā llāh,* cf. Q 11:56) is another closely related formula.

Yet another type of invocation consists of the recitation of the divine names, or attributes, of God (see GOD AND HIS ATTRIBUTES) — some of which are qurʾānic: "the merciful," "the strong," "the powerful," etc. (see POWER AND IMPOTENCE). There are many lists of these names. According to tradition, there are ninety-nine names. The hundredth is said to be the "true name," which people cannot comprehend.

One qurʾānic verse, Q 2:255, has particular importance. Termed "the throne verse" *(āyat al-kursī),* it is very often recited (see THRONE OF GOD). Certain commentators say that it encompasses the name of God that cannot be spoken.

Finally, certain Ṣūfi formulations are used by mystics: *huwa* ("he") and *al-ʿishq* ("love"), to which are added the ceremonies (*dhikr* or *ḥaḍra*) of the litanies whose precise forms may vary among different brotherhoods. One of the most common customs is the continually repeated utterance of the divine name *Allāh,* "God" (see REMEMBRANCE).

Pre-1800 Preoccupations of Qurʾānic Studies

Introduction

The Qurʾān refers in various ways to the teachings of the Christians and Jews, which it partially adopts, partially corrects or completely rejects (see CHRISTIANS AND CHRISTIANITY; JEWS AND JUDAISM; POLEMIC AND POLEMICAL LANGUAGE; DEBATE AND DISPUTATION). Thus it is not surprising that, from the beginning, the Qurʾān also became the object of Christian and Jewish interest. Furthermore, the fact that, for centuries, the polemical debate received the most attention, is not surprising. In the context of the times, this formed an understandable first stage for later attempts at a more scientific-objective treatment of the Qurʾān, attempts which only began in early modern times. Conditions for this later development were, on the one hand, easier access in the west to the original Arabic text of the Qurʾān, and, on the other hand, the development of Arabic philology to the standard of classical studies, which is inseparably linked with the names of Joseph Justus Scaliger (d. 1609) and Thomas Erpenius (d. 1624).

According to the so-called covenant of ʿUmar *(ʿahd ʿUmar),* i.e. that of the second caliph (q.v.), ʿUmar b. al-Khaṭṭāb, non-Muslims were forbidden to teach their children the Qurʾān (cf. Bobzin, *Reformation,* 43 n. 35; see TEACHING AND PREACHING THE QURʾĀN). From this one can draw the conclusion that Muslims were not generally interested in allowing non-Muslims to participate in theological debates on the character of the holy book (see THEOLOGY AND THE QURʾĀN; INIMITABILITY). In any case, as "protected persons" (sing. *dhimmī*) living among Muslims, Christians and Jews must have possessed a certain basic knowledge of the most important teachings of the Qurʾān, not only through their constant contact with Muslims, but also because the Arabic language was deeply influenced by numerous qurʾānic words and idioms (see LITERATURE AND THE QURʾĀN; SLOGANS FROM THE QURʾĀN; EVERYDAY LIFE, THE QURʾĀN IN). Although there is a considerable amount of both Jewish and Christian polemical literature against Islam, it is nevertheless remarkable that the character of the Qurʾān as God's word and revelation (see WORD OF GOD; REVELATION AND INSPIRATION) did not stand at the forefront of theological debates. The questions of the unity of God (see GOD AND HIS ATTRIBUTES), the authenticity of the Jewish-Christian scriptures (see FORGERY; REVISION AND ALTERATION) and the proofs of Muḥammad's prophethood were debated much more frequently (see PROPHETS AND PROPHETHOOD; PROOF; SCRIPTURE AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN). If Jews and Christians wrote in Arabic on subjects of central importance, such as the Qurʾān, they had to express themselves quite carefully in view of potential Muslim sensitivities. Hence, it is not surprising that the number of Arabic treatises by Jewish and Christian authors that deal exclusively with the Qurʾān is relatively low (cf. Steinschneider, *Polemische,* 313-6).

Christian-Arabic studies

Already in the third/ninth century the Nestorian scribe Abū Nūḥ al-Anbārī wrote a 'refutation of the Qurʾān' *(Tafnīd al-Qurʾān),* which, however, is little known (cf. Graf, *GCAL,* ii, 118). Of greatest influence on the attitude of Christians to the Qurʾān was the polemical treatise in defense of Christianity published under the pseudonym ʿAbd al-Masīḥ b. Isḥāq al-Kindī (not to be confused with the famous philosopher Abū Yūsuf al-Kindī, d. after 252/865), which was conceived as a response to the invitation of the Muslim ʿAbdallāh b. Ismāʿīl al-Hāshimī. This so-called "Apology of al-Kindī" (*Risālat ʿAbd al-Masīḥ al-Kindī ilā ʿAbdallāh al-Hāshimī;* cf. Graf, *GCAL,* ii, 135-45) was in all likelihood written in the third/ninth century. It is a matter of debate whether the unknown author was a Jacobite (according to Massignon, al-Kindī; d'Alverny, Deux traductions, 91) or a Nestorian (Graf, ibid.; Troupeau, al-Kindī). Within the scope of his elaborate discussion of Islam the author also addresses the Qurʾān (al-Kindī, *Risāla,* ed. Tien, 128 f.; cf. ibid., ed. Tartar, *Dialogue,* 175 f.); the information about its origin and compilation deviates on some points from the orthodox Islamic view, however, and it does not always seem to be reliable (cf. Nöldeke, *GQ,* iii, 6 f. and 104). Above all, however, the author wants to prove the inauthentic and unoriginal nature of the Qurʾān, arguing that the contents of the Qurʾān were strongly influenced by a certain Christian monk named Sergius, alias Nestorius, who had wished to imitate the Gospels. After his death two Jews, ʿAbdallāh b. Salām and Kaʿb al-Aḥbār, had also added materials from Jewish sources. In any case, the argumentation of the *Risāla* reveals its author's own precise knowledge of the Qurʾān, from which he frequently makes exact quotations.

Al-Kindī's *Risāla* had a significant effect, particularly in the west. It belonged to the Arabic texts on Islam that, in Toledo during a visit to Spain in 1142-3 C.E., the Cluniac abbot Peter the Venerable (d. 1156 C.E.) arranged to be translated into Latin, along with the Qurʾān (cf. Kritzeck, *Peter the Venerable;* Bobzin, *Reformation,* 46 f.); thereby, the *Risāla,* under the title *"Epistula saraceni et rescriptum christiani,"* became a part of the so-called 'Corpus Toletanum.' This Corpus would, for centuries, prove to be for European scholars the most important basis for their knowledge of Islam. One century later, the *Rescriptum christiani* was integrated by Vincent of Beauvais (Vincentius Bellovacensis; d. ca. 1264) into his encyclopedic work *Speculum historiale* (written bet. 1247-59; first ed. Strasbourg 1473); from this source it reached Theodor Bibliander's 1543 edition of the Qurʾān (see below). As an original part of the 'Corpus Toletanum,' the *Risāla* was later used by authors like Dionysius Carthusianus (see below), Nicholas of Cusa (see below) and others.

Another important polemical work, which also deals in some detail with the Qurʾān, is the so-called 'Baḥīrā legend' (cf. Gottheil, Christian; Abel, Baḥīrā). It seems to follow in this respect al-Kindī's *Risāla,* when it recounts a similar tale about a Christian monk called Sergius, who was supposedly the teacher of Muḥammad and, thus, the real inspirer of the Qurʾān (cf. Graf, *GCAL,* ii, 145 f.; see MONASTICISM AND MONKS; INFORMANTS).

Of later authors the Coptic scholar al-Ṣāfī Abū l-Faḍāʾil b. al-ʿAssāl should be mentioned (d. bef. 1260 C.E.; Graf, *GCAL,* ii, 388). Within the scope of an apology for the New Testament scriptures, he also concerns himself with the Qurʾān, which he characterises as a source of revelation (Graf, ibid., 394). In the twelfth/eighteenth century, Ḥannā Maqār, in a polemical

treatise against a Muslim scholar, proceeded with more precision against the Qurʾān (Graf, *GCAL,* iv, 165 f.). From among the Maronites, mention should be made of Yuḥannā al-Ḥawshabī (d. 1632; Graf, *GCAL,* iii, 304 and 345-7; Steinschneider, *Polemische,* 402), who wrote a book *Munāqaḍāt al-Qurʾān* ("On the contradictions of the Qurʾān"), and also Petrus b. Dūmīṭ Makhlūf (d. ca. 1707; Graf, *GCAL,* iii, 378-80), with his work *Miftāḥ al-bīʿa* ("The key of the church"). The Armenian-Catholic theologian Mkrtič al-Kasīḥ working in Aleppo (late seventeenth/early eighteenth century) wrote two treatises which dealt critically with the Qurʾān, namely *al-Nāsikh wa-l-mansūkh fī l-Qurʾān* ("On the abrogating and abrogated verses in the Qurʾān"; Graf, *GCAL,* iv, 83-6) as well as *Ṣidq al-Injīl wa-kidhb al-Qurʾān* ("On the truth of the Gospel and the falsehood of the Qurʾān").

Western theologians also availed themselves of the Arabic language from the seventeenth century onwards: the Franciscan Dominicus Germanus de Silesia (d. 1670; cf. Graf, *GCAL,* ii, 176 f.; Bobzin, Ein oberschlesischer Korangelehrter) in his work, *Antitheses fidei,* printed in Rome in 1638; the Jesuit Jean Amieu (d. 1653), who, from 1635, lived in Syria (Aleppo/Beirut) and wrote a refutation of the Qurʾān (Graf, *GCAL,* iv, 217); or the Capuchin Franciscus of Romontin (d. ca. 1700) who wrote an as yet unprinted refutation of the Qurʾān with the title *Īqān al-ṭarīq al-hādī ilā malakūt al-samawāt* (Graf, *GCAL,* iv, 201) at the request of Pope Innocent IV.

Eastern authors writing in Greek

The text written by the orthodox theologian John of Damascus (d. bef. 754 C.E.) in his *Liber de haeresibus* (although its authenticity is controversial) would become just as influential as al-Kindī's *Risāla,* with its hundredth (or 101st; cf. Sahas, *John of Damascus,* 57) chapter on the "heresy of the Ishmaelites" (*thrēskeia tōn Ismaēlitōn;* cf. Sahas, *John of Damascus*). In the text he also addresses the Qurʾān from which he knows the names of different sūras (like, for example, "The Young Cow" = Q 2, Sūrat al-Baqara; "The Women" = Q 4, Sūrat al-Nisāʾ; "The Table" = Q 5, Sūrat al-Māʾida). Included, however, are also names which are not traditional in Muslim sources: "The Camel (q.v.) of God" (but cf. Q 7:73; 54:27; 91:13). From some of these sūras he mentions certain regulations, e.g. the permission of polygamy with up to 4 wives (Q 4:3; see MARRIAGE AND DIVORCE; PATRIARCHY; WOMEN AND THE QURʾĀN) and the possibility of the dismissal of wives (Q 2:229 f.). Above all, however, John presents the marriage of Muḥammad to Zaynab bt. Jahsh, the wife of his own adoptive son Zayd b. Hāritha, in Q 33:37 f., as an example of his immorality. The reputation of John of Damascus and the wide distribution of his writings ensured that this episode became a steadfast constant of Christian polemical arguments against Islam, in the east (e.g. with al-Kindī), as in the west (e.g. Eulogius, see below), long before the appearance of the first complete Latin Qurʾān translation in the west (see TRANSLATIONS OF THE QURʾĀN).

The work of the Byzantine author Niketas of Byzantium became similarly influential (d. after 886 C.E.; but cf. Sahas, *John of Damascus,* 77 n. 1, where his dates are given as 842-912 C.E.). He wrote one of the oldest Byzantine polemical treatises against the Qurʾān (*Anatropē tēs para tou Arabos Mōamet plastographētheisēs biblou;* ed. J.-P. Migne, *PG,* cv, cols. 669-805; Ger. trans. Förstel, *Schriften zum Islam*). Not on account of his own knowledge of the original Arabic (Khoury, *Théologiens byzantins,* 119 f.), but rather on the basis of a Greek Qurʾān translation already

available to him (Trapp, Gab es eine byzantinische Koranübersetzung?), in the second segment of his book he deals in detail with Q 2 to 18, from which he quotes numerous verses verbatim. The rest of the sūras are treated only summarily. The sūras, the first of which he does not consider to belong in the Qurʾān, he labels *logos, mythos* or *mytharion,* and calls them by their mostly translated, but now and then also simply transcribed, names. Most frequently cited are translated verses which refer to biblical figures, especially, of course, Jesus (q.v.). All together Niketas views the Qurʾān as an "unreasonable, unsystematically thrown together, shoddy piece of work, filled with lies, forgeries, fables and contradictions; his language is neither that of a Prophet, nor does it correspond with the dignity of a religious book or legal code" (Güterbock, *Der Islam,* 26 f.). Especially important is the misinterpretation of *al-ṣamad* (Q 112:2), one of the qurʾānic attributes of God, that Niketas, following the Greek translation of the Qurʾān at his disposal, reproduces as 'entirely compact' (*holosphyros,* variant: *holosphairos,* 'completely round'). He thereby provides the Qurʾān with a materialistic image of God, which is completely foreign to it in principle. This view was taken over by later theologians, as, for example, Euthymios Zigabenos (fl. twelfth century C.E.) in his *Panoplia dogmatikē* (*"Dogmatic panoply,"* Migne, *PG,* cxxx, 1348B), or in the so-called 'abjuration formula' for Muslim converts (Migne, *PG,* cxl, 124-36; cf. Montet, Rituel d'abjuration, 155).

From the time of the Palaiologues (fourteenth/fifteenth century), who deal with the Qurʾān in more detail, later Byzantine authors belong completely to the tradition of Latin authors (see below, Ricoldo).

Western authors writing in Latin

Use of the Qurʾān in Latin began on the Iberian peninsula, not surprisingly because of the strong presence there of Muslims. What is more surprising is that the Spanish Christian theologians in their polemic against the Qurʾān quite evidently fell back on arguments which had their origin in the tradition of eastern Christianity. Thus the author Eulogius of Cordoba (d. 859 C.E.) in his *Liber apologeticus martyrum* (Migne, *PL,* cxv, col. 860) quotes Q 33:37 to criticize Muḥammad's adulterous behaviour (see ADULTERY AND FORNICATION) — in exactly the same way as al-Kindī had already done in his *Risāla* and John of Damascus had done before him. The Jewish apostate Peter Alphonsi (Rabbi Moses Sephardi, d. after 1130 C.E.), who was one of the significant mediators of Arabic science to the occident, in his *Dialogi in quibus impiae Judaeorum opiniones… confutantur* also addressed the teachings of Islam, whose implausibility he tried to demonstrate with some correctly translated qurʾānic citations (Q 2:256; 4:157; 10:99 f., 108 f.; 11:118; 18:29; 29:46; 93:6-8; 109:1-4, 6; cf. Monnot, Citations coraniques).

The most important basic work for the qurʾānic knowledge and qurʾānic criticism of late-medieval authors was made, at the instigation of Peter the Venerable (1142-3 C.E.), by the English scholar Robert of Ketton (or Robert of Chester; more precise dates unknown). This was a quite inexact Latin paraphrase of the Qurʾān. Its influence, through the Basel printed editions of 1543 and 1550, and the translations based on it in Italian (1547), German (1616; 1623[2]) and Dutch (1641), however, extended far into the seventeenth century (cf. Bobzin, *Reformation,* 262 f.). Peter the Venerable himself wrote a shorter *Summa totius haeresis saracenorum,* a longer (now incomplete) treatise *Contra sectam saracenorum* and one *Epistula de translatione sua*

addressed to Bernard of Clairvaux (d. 1153 C.E.), writings which, together with the paraphrase of the Qurʾān and the *Rescriptum christiani* from the *Risāla* of al-Kindī, became part of the so-called 'Corpus Toletanum.' Peter understood the Qurʾān as a 'law' *(lex)* or 'collection of regulations' *(collectaneum praeceptorum),* but held it to be inferior to the Bible, because it was compiled from 'Jewish fables and heretical gossip' *(tam ex fabulis Iudaicis quam ex haereticorum neniis confecta; Summa)*. He maintained that, even if some words seem identical in the Bible and Qurʾān — as, for example, "word," "mind" or "envoy" — nevertheless, as he works out clearly, quite different concepts underlie them. In his argumentation he quotes only relatively rarely directly from the Qurʾān, and occasionally from the *Rescriptum christiani*. The *Annotationes* accompanying the qurʾānic paraphrase, which were only partly reproduced in Bibliander's edition of 1543 (i, 224-30; cf. d'Alverny, Deux traductions, 98 f.), have but recently come to be appreciated as informative pointers to the employment of the Qurʾān and Islamic commentaries by Mozarabic Christians (Burman, *Religious polemic,* 84 f.). They begin with a list of the so-called "beautiful names" of God *(al-asmāʾ al-ḥusnā)* and also contain a clue to the linguistic resemblance of Arabic with Hebrew. For example, the word 'Azoara' for the Arabic *al-sūra* is explained with reference to the Latin *vultus* 'face' (i.e. <Arabic *ṣūra!*) which points to the fact that the difference between the sibilants *s* and *ṣ* probably no longer existed.

Evidently, the anonymous treatise *Liber denudationis sive ostensionis aut patefaciens* (also known under the title of *Contrarietas alfolica;* cf. d'Alverny and Vajda, Marc de Tolède, 124 f.), which exists in a unique manuscript (Paris, BN Lat. 3394), and also follows an Arabic model, should be viewed in connection with the second complete qurʾānic translation by Mark of Toledo (d. after 1234 C.E.; cf. Bobzin, *Reformation,* 55 f.). It contains about 75 explicit Qurʾān citations, which, like the entire book, are translated in a very literal fashion. Furthermore, the sūras are usually designated by their titles and, in addition, different names are also used for the same sūra, as is familiar from the Islamic tradition. Regarding the origin of the Qurʾān, the familiar ḥadīth (cf. Nöldeke, *GQ*, i, 48 n. 3) is cited (see ḤADĪTH AND THE QURʾĀN), namely, that the Qurʾān would be "revealed" to Muḥammad "in seven *aḥruf,* of which every one would be good" (*descendit Alchoranus super me in septem litteris, et quicquid satis est sufficit; Liber denudationis,* chap. 6, par. 1, ed. Burman, *Religious polemic,* 274). The Latin text explains that these seven readings (see READINGS OF THE QURʾĀN) — this is what is meant here by *litterae* — are associated with the names Nafe (Nāfiʿ), Ebou Omar (Abū ʿAmr), Homra (Ḥamza), Elkessar (al-Kisāʾī), Asser (ʿĀṣim), filius Ketir (Ibn Kathīr) and filius Amer (Ibn ʿĀmir), who are also the founders of seven so-called "canonical" readings (see RECITERS OF THE QURʾĀN; RECITATION OF THE QURʾĀN). The text explains that they were not, however, contemporaries of Muḥammad, because during his lifetime only Abdalla filius Messoud (ʿAbdallāh b. Masʿūd), Zeid filius Thabet (Zayd b. Thābit), Othman filius Offan (ʿUthmān b. ʿAffān) and Ebi filius Chab (Ubayy b. Kaʿb) would have been familiar with the Qurʾān. Whether or not filius Abitaleb (ʿAlī b. Abī Ṭālib [q.v.]) was familiar with the Qurʾān, is controversial. Nevertheless, the Qurʾāns of the aforementioned people would have been different, which is why Mereban filius Elhekem (Marwān b. al-Ḥakam, i.e. the fourth Umayyad caliph, active 684-5) had them burned and a new text produced (see COLLECTION OF THE QURʾĀN; CODICES OF THE QURʾĀN; TEXTUAL HISTORY OF THE

QUR'ĀN). It was only after this that the abovementioned seven appeared as readers characterised as *praefecti,* who "contradicted each other so much in their grammar as in their use of idiom" (*contradixerunt sibi in gramatica et idiomatibus propriis, Liber denundationis,* chap. 6, par. 2, ed. Burman, *Religious polemic,* 276). Nevertheless, other accounts are mentioned which indicate that an official codex of the Qur'ān did not yet exist at Muḥammad's death. Only at the instigation of Abū Bakr was all the available material collected and assembled by him to become the Qur'ān that exists today (see MUṢḤAF). The purpose of these reports is to prove the unreliability or inauthenticity of the Qur'ān as a holy book. A chapter about the 'impure' things *(immundita)* also occupies a considerable amount of space, along with (the most extensive part) the chapter on the numerous contradictions to be observed in the Qur'ān. In the treatment of particular passages, the author relies upon a noteworthy knowledge of Islamic commentaries and traditional literature (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). Although the work is extant in only a single manuscript, it had a notable effect and its use by some later authors can be demonstrated (see Ricoldo below).

The mendicant orders of the Dominicans and Franciscans, which arose as a consequence of the Crusades, counted among their tasks the resumption of attempts to convert the Muslims. For this purpose, at the instigation of Raymund of Pennaforte (d. 1275 C.E.), language academies for Arabic came into being in Spain and north Africa (cf. Altaner, Sprachstudien; id., Die fremdsprachliche). A graduate of one of these was Raymond Martin (Ramón Martí; Lat. Raymundus Martini; d. ca. 1284 C.E.; cf. Berthier, Maître), who, in his works *Pugio fidei aduersus Mauros et Iudaeos* and *Explanatio simboli apostolorum,* reveals a detailed knowledge of Arabic source texts including the Qur'ān, as well as the appropriate traditional literature (cf. Cortabarría Beitía, Connaissance; id., Sources arabes; see TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). Whether the so-called *Quadruplex reprobatio* can also be ascribed to him remains a matter of dispute (cf. Daniel, *Islam and the west,* 31; Burman, *Religious polemic,* 205 n. 44; Hernando y Delgado, De Seta Machometi, 356 f.). The so-called language canon of the Council of Vienna (1311/12 C.E.; cf. Altaner, Raymundus Lullus) goes back to the untiring activity of the Catalan Raymond Lull (Ramón Llull; Lat. Raymundus Lullus; d. ca. 1316 C.E.) to which later appeal was repeatedly made, above all for the study of the Arabic Qur'ān text. Lull himself possessed excellent knowledge of Arabic (cf. Brummer, Ramon Lull; Lohr, *Christianus arabicus*), which is revealed in many of his works; his qur'ānic knowledge comes to light especially in his *Disputatio Raymundi christiani et Hamar saraceni,* which was written in 1307 C.E. (cf. Daiber, Der Missionar). Belonging also to the Spanish context but known only in summary form, is the treatise *Sobre la seta Mahometana* by the archbishop of Jaen, Pedro Pascual (d. 1300 C.E.), who was, admittedly, later criticized by John of Segovia (see below) for not being faithful to the text. According to John of Segovia, Pedro reads teachings in the text of the Qur'ān which it does not contain (cf. Cabanelas Rodriguez, *Juan de Segovia,* 139).

To William of Tripoli (fl. second half of the thirteenth century C.E.), a Dominican from Syria, about whose life little is known, has, until now, been attributed the work *De statu sarracenorum* (see Prutz, *Kulturgeschichte* for the text edition), in which there are also reports on the content and creation of the Qur'ān. It has recently been proved that not this, but rather a similar work with the

title *Notitia de Machometo et de libro legis qui dicitur Alcoran et de continentia eius et quid dicat de fide Domini nostri Iesu Christi* was written by him (cf. Engel's comments on his edition of William's work). The creation of the Qurʾān, according to William, occurred thus: 40 years after Muḥammad's death there were only seven of his Companions alive (see COMPANIONS OF THE PROPHET). These individuals then planned to produce a single "teaching" *(doctrina),* to be called the "law of Muḥammad" *(lex Machometi),* similar to the Jews' possessing the Torah of Moses and the Christians, the gospel of Christ. The composition of this work they delegated to 'Hesman filius Effran' (i.e. ʿUthmān b. ʿAffān) from Damascus, which he did "with hidden profundity" *(profunditate obscura)*. Q 1, which is completely and correctly translated, is regarded by William as a "preface" *(prefatio)* and its content as an "expression of thanks and a prayer" (see FĀTIḤA). Q 2 counts as the first chapter, "concerning the cow" *(De vacca);* the shorthand *alif-lām-mīm* in verse 1 represents the word *alam* 'suffering' (see MYSTERIOUS LETTERS; ARABIC LANGUAGE). Special value is placed upon the qurʾānic references to Christ and the virgin Mary (q.v.), that were for the most part cited directly, above all from Q 3 and 19.

One of the most influential medieval works on the Qurʾān was written by the Florentine Dominican Ri(c)coldo da Monte Croce (d. ca. 1320 C.E.), who, between 1288 and 1300, worked as a preacher in the Middle East. His treatise *Contra legem sarracenorum* is based upon excellent knowledge of the Arabic qurʾānic text; nevertheless, he used passages from the *Liber denudationis,* as, for example, with respect to the creation of the qurʾānic text. Here, the above quoted ḥadīth on the seven readings is read as follows: *Descendit Alchoranus super me in VII uiris* [instead of: *litteris*]…, which admittedly fits better with the naming of the readings. Also with some of his almost 70 qurʾānic quotations, Ricoldo follows the text of the *Liber denudationis*. He calls the sūras always by their names, not by their numbers.

One can recognize Ricoldo's work both as a "classic" and as a very systematic summary of all Christian objections to the Qurʾān (cf. Bobzin, Treasury of heresies, 165 f.), which are, in brief: the Qurʾān is nothing but a mixture of older Christian heresies that had already been denounced by earlier church authorities. Because it is predicted by neither the Hebrew Bible nor the New Testament, the Qurʾān cannot be accepted as divine law; for the rest, the Qurʾān refers in some cases specifically to the Bible as an authority. Similarly, the theory of the textual falsification *(taḥrīf)* cannot be accepted (see REVISION AND ALTERATION). Regarding its style (see LANGUAGE AND STYLE OF THE QURʾĀN), the Qurʾān does not correspond with any "holy" writing; above all, its many fantastic stories make it impossible to accept a divine origin for the Qurʾān (see NARRATIVES; MYTHS AND LEGENDS IN THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN). Some ethical concepts would contradict basic philosophical convictions (see ETHICS AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN). Above all, however, the Qurʾān contains numerous internal contradictions, apart from its entirely obvious lack of order (see FORM AND STRUCTURE OF THE QURʾĀN; CHRONOLOGY AND THE QURʾĀN). Furthermore, the Qurʾān was not witnessed by a miracle (q.v.). The Qurʾān goes against reason; this is apparent both in Muḥammad's life, which is branded as immoral, as well as in some blasphemous views on divine topics. The Qurʾān preaches force and allows injustice (see EXPEDITIONS AND BATTLES; WAR; FIGHTING; PATH OR WAY; JIHĀD; JUSTICE AND INJUSTICE; VIOLENCE). The history of the

text of the Qurʾān ultimately proves the uncertainty of the text.

In the year 1385 C.E., Ricoldo's work was translated into Greek by the Byzantine scholar Demetrios Kydones (d. ca. 1398). This translation led to a late blooming of polemic literature against Islam, which is connected with the writings of two emperors (cf. Mazal, Zur geistigen Auseinandersetzung): John VI Kantakuzenos (r. 1347-54 C.E.) composed *Four arguments against the heresy of the Saracens* and *Four speeches against Muḥammad* (printed in Basel in 1543 in Bibliander's qurʾānic volume), and Manuel II Palaiologos (r. 1391-1425 C.E.) composed his *Dialogue with a Persian on the religion of the Christians* (cf. ed. Förstel; Trapp, *Manuel II. Palaiologos*). In both works, the traces of the work of Ricoldo-Kydones are clearly recognizable.

On the basis of the Greek text of Kydones, there followed a Latin retranslation by an otherwise unknown Bartholomaeus Picenus de Monte Arduo. The name of the author appears here, following the Greek model (here 'Ricoldo' became 'Rikardos'), as 'Richardus'. The first imprint of the Latin original appeared in 1500 in Seville under the title *Improbatio Alcorani* (with a Spanish translation *Reprobación del Alcorán* in 1501), again in Toledo in 1502, as well as in Venice in 1607 under the different title of *Propugnaculum fidei*. In many respects defective, the aforementioned Latin retranslation appeared for the first time in Rome in 1506 under the title *Confutatio Alcorani seu legis Saracenorum*. On the basis of this text, Martin Luther (d. 1546) composed his *Verlegung* [= refutation] *des Alcoran Bruder Richardi* (Wittenberg 1542); on the one hand, Luther shortened the text where it appeared too scholastic, on the other hand, he expanded it around some passages connected with the contemporary Turkish threat (cf. Bobzin, *Reformation,* 142 f.). Theodor Bibliander printed in his collection of 1543 (see below) both the Greek version of Kydones and its Latin retranslation: the latter, as it happens, was printed far more frequently than the original text!

The influence of the Turkish wars

The Turkish wars had a very great influence on European qurʾānic studies. The conquest of Constantinople in 1453 C.E. by the Ottoman sultan Mehmet II, which announced the final end of the Byzantine empire, caused, and was preceded by, a lively production of treatises on the "religion of the Turks." At the same time, a key roll fell to the German cardinal Nicholas of Cusa (Nikolaus of Kues; Lat. Nicolaus Cusanus, d. 1464). At the council of Basel (1431-49), he had become acquainted with the Spanish theologian, and later cardinal, John of Segovia (Juan de Segovia; d. ca. 1458), and through him he gained knowledge of the 'Corpus Toletanum.' During a trip to Constantinople on behalf of Pope Eugene IV (in 1437), he had certain passages from an Arabic qurʾānic text explained to him in a Franciscan monastery. He then came across the Latin Qurʾān translation from the 'Corpus Toletanum' in a Dominican convent. With the encouragement of Nicholas, the Carthusian monk Dionysius Rijkel, originally from the Netherlands, (Dionysius Carthusianus, d. 1471), who accompanied him on his trips from 1451 and after, wrote an extensive treatise against the Qurʾān: *Contra Alchoranum et sectam Machometicam* (printed in Cologne in 1533; German trans. Strasbourg 1540). It is based totally upon the writings of the 'Corpus Toletanum' and provides a refutation of various qurʾānic passages, quite schematically organized according to the sūras. Following the end of the Council of Basel (1449), John of Segovia withdrew from all church political activity, and busied himself with the study of Islam. In his treatise *De mittendo gladio*

divini spiritus in corda Saracenorum ("On sending the sword of the divine spirit into the hearts of the Saracens"), he emphasized the importance of a thorough knowledge of the Qurʾān for fruitful disputation with the Muslims that could promote living together in peace. With his studies of the Qurʾān, the imperfection of the old Toledan translation became evident to him (as did that of other writings as, for example, those of Pedro de Pascual). After he moved in 1454 to the monastery of Aiton in Savoy, he succeeded in persuading the Muslim jurist ʿĪsā Dhā Jābir (alias Yça Gidelli) to undertake the journey from his home town Segovia to Aiton. There they worked for four months (winter 1455/56) on a new Qurʾān edition, one which contained a Castilian translation next to the Arabic text (cf. Cabanelas Rodriguez, Juan de Segovia; Wiegers, *Islamic literature*). Of this work, to which Juan added another Latin translation, only the prologue exists today. In it, a convincing criticism of the translation practice of Robert of Ketton is found.

In ca. 1460-1, Nicholas of Cusa himself composed his *Cribratio Alcorani* ("An examination of the Qurʾān"). It is dedicated to Pope Pius II (r. 1458-64), who imposed a crusading policy against the Turks. Nicholas' treatise is to be understood as a counter-programme: although he maintains the heretical nature of Islam, he is more willing to stress what Christianity and Islam have in common, as these clearly appear in the Qurʾān, the foundational document of Islam. For his understanding of the Qurʾān, he depends — along with the writings from the 'Corpus Toletanum' — above all, on the work of Ricoldo. As a consequence, he sticks to apologetic rather than philosophical arguments. Certainly the importance of the work is often overestimated for the 'dialogue' (cf. Flasch, *Nikolaus von Kues,* 544 f.).

The refutation of the Qurʾān by the Italian Petrus de Pennis (second half of the fifteenth century), *Tractatus contra Alcoranum et Mahometum* (Paris BN, Ms lat. 3646) — which relies above all on Ricoldo and Petrus Alphonsi — is still unpublished (cf. Daniel, *Islam and the west,* 76 f.).

A new and successful type of controversial literature was created by the Spanish Franciscan Alfonso de Spina (d. ca. 1491) with his work, *Fortalitium fidei in universos Christiane religionis hostes* ("A fortress of belief in view of all the enemies of the Christian religion"), printed in Strasbourg before 1471. As for Judaism, one chapter of the book is dedicated exclusively to Islam, with a section 'On the state of the teaching and the law of Mohammed' *(De qualitate doctrinae et legis Machometi)*. For his understanding of the Qurʾān, Alfonso, in addition to the work of Ricoldo, depends on Ramón Martís' *Pugio fidei* as well as the writings of John of Segovia. Alfonso's *Fortalitium* was reprinted with extraordinary frequency in the fifteenth century, and must be counted as an important source of qurʾānic knowledge in theological circles — Luther also demonstrably used this work (cf. Bobzin, *Reformation,* 77). In a very similar way to Alfonso de Spina, much later authors continue to explain Islam mainly on the basis of a brief representation of the teaching of the Qurʾān. Authors of works "On the truth of the Christian religion" *(De veritate religionis Christianae),* as those of Juan Luis Vives (d. 1540) or Hugo Grotius (d. 1645), devote a separate book or chapter to the topic of Islam.

From the beginning of the sixteenth century comes the very influential writing of an Aragonese renegade by the name of Juan Andrés (latinised to Johannes Andreas Maurus) about whose life, except the year of his conversion to Christianity (1487), nothing is known. His work appeared in 1515 in Valencia under the title *Libro*

nueuamente imprimido que se llama confusion dela secta mahomatica y del alcoran (Bobzin, Bemerkungen zu Juan Andrés) and was quickly translated into several other European languages (Italian, French, Latin, Dutch, English, German). Evidently, this writing was a kind of preparation for an intended complete Aragonese translation of the Qurʾān. Interlaced into the text are about 70 translated Qurʾān quotations; these were first of all provided in Latin transcription, and then translated. For his interpretation, Juan relies upon well-known authorities such as Azamahxeri (i.e. al-Zamakhsharī, d. 538/1144) and Buhatia (i.e. Ibn ʿAṭiyya al-Andalusī, d. 546/1151). In his view, the Qurʾān was divided into four books *(libros)* by the caliph ʿUthmān: Book 1 contains 5 chapters (*capitulos* or sūras, *cuar,* or *cura*) with Q 2 to 6; Book 2 contains 12 chapters (Q 7 to 18); Book 3 contains 19 chapters (Q 19 to 37). For the first three books Juan names each sūra by name, which deviate occasionally from their familiar titles (thus Q 9 is called *la espada* by Juan, Ar. *Sūrat al-Sayf,* that is, after Q 9:5, the so-called *āyat al-sayf;* cf. Bobzin, Bemerkungen zu Juan Andrés, 544 n. 58; see VERSES). The fourth part comprises 175 chapters, so that altogether there are 211 chapters — the number 175 probably occurred as a result of an old error, understandable from the Roman manner of writing the numbers for 75. Without that, not counting Q 1 as well as Q 113 and 114, the number 111 arises, which is thoroughly compatible with Islamic traditions (for example in Ibn Masʿūd). For the rest, Juan uses (next to the popular prophetic biography *Kitāb al-Shifāʾ fī taʿrīf ḥuqūq al-Muṣṭafā* of the Mālikī judge ʿIyāḍ b. Mūsā, d. 543/1149; see SĪRA AND THE QURʾĀN) a further unspecified *sīra* work *(acear),* quoting from it the first sūras (Q 96:1-5; 74:1-5 and 93:1-3) in a traditional chronology of revelation. Juan offers the oldest Latin attestation of a division of the Qurʾān into four *rubʿ,* used in Andalusian manuscripts and still today in Maghrebian editions, in which, certainly, a few differences are detectable, especially with regard to the end of the third and/or the beginning of the fourth section (today it is usually divided between Q 35 and 36; see MANUSCRIPTS OF THE QURʾĀN; ORNAMENTATION AND ILLUMINATION). Other anti-qurʾānic works printed in Spain do not appear to have had any effect outside Spain, as, for example, B. Bernardo Pérez de Chinchón, *Libro llamado Antialcorano: que quiere dezir contra el Alcoran de Mahoma,* (Valencia 1532), or Lope de Obregón, *Confutacion del Alcoran y secta Mahometana, sacado de sus propios libros, y de la vida del mesmo Mahoma* (Granada 1555; cf. Bunes Ibarra, Evolución).

Qurʾānic studies in the sixteenth century

Similar to the trend of the middle of the fifteenth century, the renewed strengthening of the Ottoman Turks from the time of the accession to government of Sultan Selīm (1512-20) had a more or less direct effect on the interest of scholars of the Orient in the Qurʾān as the "Bible of the Turks." Into this period falls the first Arabic imprint of the complete Qurʾān by the Venetian printer Alessandro de Paganini (ca. 1537/38; cf. Nuovo, Il Corano arabo ritrovato; Bobzin, Jean Bodin; Borrmans, Observations; see PRINTING OF THE QURʾĀN). This Qurʾān edition, which was most likely intended for export to the Ottoman empire, was so riddled with errors that it was unacceptable to Muslim users. That the Pope had it burned is a legend attested to since the start of the seventeenth century (cf. Nallino, Una cinquecentesca edizione). It has been proven, already through the works of older scholars like Johann Michael Lang (see below), Johann Buxtorf IV (d. 1732; *De Alcorani editione Arabica,* in Hase and Lampe, *Bibliotheca* [1722], 271 f.) and Giovanni Bernardo de Rossi (d. 1831; *De Corano ara-*

bico Venetiis Paganini typis impresso, Parma 1805) — that two European scholars possessed a copy of this Qurʾān: Teseo Ambrogio degli Albonesi (d. 1540), whose copy is still extant (Bobzin, *Reformation,* 184), and Guillaume Postel (d. 1581). Postel later dealt in detail with the Qurʾān in his extensive work *De orbis terrae concordia libri IV* (Basel 1544), from which — in a manner noteworthy for the time — remarkably he translated exactly an extensive section from Q 2, as well as numerous further extracts (survey in Bobzin, *Reformation,* 479 f.). In his *Grammatica arabica* (Paris ca. 1539), which had appeared a few years earlier, he had printed Q 1 in still quite clumsy Arabic characters and presented it along with a translation (Bobzin, *Reformation,* 470 f.; Secret, Guillaume Postel). In his polemical work *Alcorani seu legis Mahometi et Evangelistarum concordiae Liber* ("The book of the agreement between the Qurʾān and the law of Mohammed and the Protestant"; Paris 1543), Postel draws a parallel between the origin of Islam and the new "heresy" of the Lutherans.

The south German scholar and diplomat Johann Albrecht von Widmanstetter (Widmanstadius, d. 1557) possessed a small collection of mainly Andalusian Qurʾāns (today housed in Munich, at the Bayerische Staatsbibliothek); his work *Mahometis Abdallae filii theologia dialogo explicata,* which appeared in 1543, contained, next to the well-known text from the 'Corpus Toletanum,' the so-called *Doctrina Machometi* (called by him the *Theologia Mahometis*), also an abridged version of the Toledan Qurʾān translation and some *Notationes,* probably his own, in which, above all, connections were shown between qurʾānic and Jewish teachings (cf. Bobzin, *Reformation,* 349 f.).

A more enduring effect than the works of Postel and Widmanstetter was achieved by the collected volume of the Zurich theologian Theodor Bibliander (1504-64), the *Machumetis Saracenorum principis, eiusque successorum vitae, ac doctrina, ipseque Alcoran* (Basel 1543), published and produced by the Basel printer Johannes Oporinus. Next to the texts of the 'Corpus Toletanum,' this work also contained important polemical treatises *(Confutationes),* like, among others, the *Cribratio Alcorani* of Nicholas of Cusa, the *Confutatio Alcorani* of Ricoldo in the Greek version of Demetrios Kydones as well as in the Latin of Bartholomäus Picenus of Monte Arduo (cf. Bobzin, *Reformation,* 217 f.). Moreover, the book could only appear after violent discussions about whether such a "heretical" book might be printed in a "Christian" city like Basel. A letter that Martin Luther sent to the Council of the City of Basel in December 1542 contributed considerably to this debate (cf. on this dispute Bobzin, *Reformation,* 181-209). As far as the old Toledan translation of Robert of Ketton was concerned, Bibliander had only limited possibilities to correct this text, which he himself described as "very corrupted" (*depravatissimum;* Bibliander, *Machumetis…,* i, 230). Given his less than profound knowledge of Arabic, he was only able to add some marginal corrections or comments in his own *Annotationes* (Bibliander, *Machumetis…,* i, 230 f.); for example, he gave individual Arabic words, usually proper names, using Hebrew script (cf. Bobzin, *Reformation,* 237 f.). For his publishing activities, however, he used an Arabic qurʾānic manuscript, which revealed some marginal glosses and contained the abbreviation system fundamental to the study of editions of the didactic poem, the *Shāṭibiyya* (cf. Nöldeke, *GQ,* iii, 220; cf. Hottinger below).

Qurʾānic studies in the seventeenth century

The increasing professionalism of Arabic studies in the universities meant that increased attention was directed also to qurʾānic studies. In a letter to Etienne Hubert, the great philologist Joseph Justus

Scaliger had already clearly stated that one had to study the Qurʾān in order to learn the grammatical subtleties of Arabic (cf. Bobzin, *Reformation,* 192 n. 230; see GRAMMAR AND THE QURʾĀN). Scaliger's most important student, the Orientalist Thomas Erpenius from Leiden (d. 1624), published accordingly in 1617 the Arabic text of Q 12 (Sūrat Yūsuf, "Joseph") together with two Latin translations — one very literal interlinear translation and one substantially freer (cf. Schnurrer, *Bibliotheca arabica,* no. 368). In the introduction, the old Toledan translation is vehemently criticized: "It is seldom that it expresses faithfully the true sense of the Arabic" *(veram Arabismi sententiam satis raro fideliter exprimens)*. On the other hand, the necessity of a serious study of the Qurʾān based exclusively on the Arabic text is emphasized. Accordingly, in the following period the exertions of a great number of scholars went into the publication, first of all of an Arabic text of the Qurʾān, accompanied where possible with a (mainly Latin) translation. The promise given by Erpenius in his *Historia Josephi patriarchae* to publish a complete Arabic Qurʾān with a newer Latin translation, was not, however, to be fulfilled. On the other hand, he printed in his second Arabic grammar, the *Rudimenta linguae arabicae* (Leiden 1620; cf. Schnurrer, *Bibliotheca arabica,* no. 55), for practice purposes, the text of Q 64 with a Latin translation and grammatical explanations; in a reprint of this grammar in 1656 (*Arabicae linguae tyrocinium;* cf. Schnurrer, *Bibliotheca arabica,* no. 81) Erpenius' successor, Jacob Golius (d. 1667), added two further sūras (Q 31 and 61). In the preface to his *Lexicon arabico-latinum,* which appeared in 1653, and which also draws on the vocabulary of the Qurʾān, Golius promised to publish an Arabic Qurʾān edition (cf. Juynboll, Zeventiende-eeuwsche Beoefenaars, 168 f.) just like his compatriot Ludovicus de Dieu (d. 1642), but neither did so. Rather, it was amateurs who repeatedly tried to produce their own Arabic types and to print at least a part of the Qurʾān. In this context should be mentioned the Breslau physician Petrus Kirsten (d. 1640) and the Zwickau pre-university teacher Johannes Zechendorff (d. 1662). The former printed the text of Q 1 in his *Tria specimina characterum arabicorum* (Breslau 1608; cf. Schnurrer, *Bibliotheca arabica,* no. 45); the latter presented Q 101 and 103, as well as Q 61 and 78 respectively, with literal translations, in two pamphlets (*Suratae unius atque alterius textum…* as well as *Specimen suratarum… ex Alcorani,* both Zwickau around 1638; cf. Schnurrer, *Bibliotheca arabica,* no. 369 f.). Also typical was the Arabic type developed in Altdorf in 1640 by the Orientalist Theodor Hackspan (1607-59) in his work *Fides et leges Mohammaedis exhibitae ex Alkorani manuscripto duplici, praemissis institutionibus arabicis* (Altdorf 1656; cf. Schnurrer, *Bibliotheca arabica,* no. 74); for the brief introduction to the Arabic language contained in this work he relied exclusively on qurʾānic material. Occasionally in the absence of suitable Arabic letter types the Arabic text was also printed in Hebrew characters. That is the case with the bilingual Qurʾān extract that Christian Ravius (d. 1677) brought out in the year 1646 in Amsterdam under the title *Prima tredecim partium Alcorani, Arabico-latini;* here the Arabic text (Q 1 to Q 2:80) is printed in the so-called Raschi-type, to which a transcription in Latin letters was added (cf. Schnurrer, *Bibliotheca arabica,* no. 371). On the other hand, Q 30 and 48 are presented in Hebrew block-writing with a Latin translation by the Augsburg scholar Matthias Friedrich Beck in his *Specimen arabicum* (Augsburg 1688; cf. Schnurrer, *Bibliotheca arabica,* no. 374). Taking up the efforts of Erpenius, Johann Georg Nissel (d. 1662), working in Leiden, published

two sūras of the Qurʾān (Q 14 and 15), that treated biblical subjects: *Historia de Abrahamo et de Gomorra-Sodomitica e versione Alcorani* (Leiden 1658; cf. Schnurrer, *Bibliotheca arabica,* no. 372). The first attempt by Johann Andreas Danz (d. 1727) to publish a complete, bilingual Arabic-Latin Qurʾān, did not get further than Q 2:66 (cf. Schnurrer, *Bibliotheca arabica,* no. 375; Bojer, Einiges über die arabische Druckschriftensammlung, 87).

A temporary climax of early, philologically-oriented Qurʾān studies is represented by two Qurʾān editions, which appeared shortly after each other in Hamburg and Padua in the last decade of the century. The Hamburg head pastor Abraham Hinckelmann (1652-95), who had received an excellent education in Oriental studies in Wittenberg in 1668-72, had control over a remarkable collection of Qurʾān manuscripts that enabled him to publish a reliable text. This came out in 1694 under the title *Al-Coranus s. lex Islamitica Muhammedis, filii Abdallae pseudoprophetae* (cf. Schnurrer, *Bibliotheca arabica,* no. 376): the Arabic text cannot be assigned unambiguously to any specific reading tradition. The verse numbering also does not always agree with the well-known numbering systems. Hinckelmann offered no translation in his edition, but rather only the Arabic text; in his extensive Latin preface he not only explained, very generally, the value of the employment of Arabic literature, but also stressed that all Christian theologians should read the Qurʾān, as a fundamental work, in the original language, thus in Arabic. He justified his renunciation of a translation on the grounds that a large part of the Qurʾān can be understood simply, but that a smaller, difficult to understand part would make disproportionately large philological efforts necessary with, for example, recourse to commentaries and other special literature. The fact that the text beings with the invocation formula 'I.N.J.C.,' *'In Nomine Jesu Christi'* is a curiosity to be considered. An extensive erratalist at the end of the edition indicates that the text is not completely flawless. Above all, however, certain peculiarities of the qurʾānic orthography (q.v.) are not taken into consideration by Hinckelmann. In spite of all its imperfections as seen from our current point of view, herewith for the first time in the western scholarly world people had access to a printed Qurʾān text, which remained the essential basis for qurʾānic study until the appearance of Gustav Flügel's text edition (1834; cf. Braun, Hamburger Koran).

The extensive folio that the Italian priest Ludovico Marracci (d. 1700) brought out in 1698 in Padua, has a completely different character from Hinckelmann's edition. While Hinckelmann pursued primarily philological goals, Marracci's work belongs principally in the category of church polemics against Islam; it nevertheless, at the same time, is notable for its philological qualities. Already in 1691, Marracci had brought out a four volume refutation of the Qurʾān in Rome, under the title *Prodromus in refutationem Alcorani,* which contained numerous Qurʾān quotations in Arabic writing with very precise Latin translations. The four volumes follow in their subject matter the expected format of polemical theology: Muḥammad was not predicted by any prophecy (Book 1), his mission was not attested by any miracle at all (Book 2), the dogmas of the "Islamic sect" do not conform with the divine truth (Book 3), and a comparison of the laws of the Gospel and the Qurʾān proves the falsity of the beliefs of that "sect of the Hagarene" (Book 4). The comprehensive Qurʾān edition of 1698 (*Alcorani textus universus Ex correctioribus Arabum exemplaribus summa fide, atque pulcherrimis characteribus descriptus;* cf. Schnurrer, *Bibliotheca arabica,*

no. 377) contained the complete Arabic qurʾānic text, along with the entire *Prodromus,* a description of the life of Muḥammad and an introduction to the Qurʾān — in addition to a very exact Latin translation. The Arabic text is indeed not printed consecutively, but rather divided into topical sections; the Latin translation also follows it. Then very extensive passages from special Islamic literature are provided in the original and partly in translation. Finally, a detailed refutation of the corresponding Qurʾān section from a Catholic perspective follows. Especially remarkable and indicative is the third section. For the information offered there, Marracci was able to fall back on the collection of Oriental manuscripts in the Vatican Library. The literature in this context used by Marracci is carefully put together by C.A. Nallino, in a detailed study (C.A. Nallino, Le fonte arabi); in addition to scholarly writings on the Qurʾān in the narrower sense, it also comprises theological, juridical and historic works. One can say therefore that Marracci was the first Christian scholar who actually composed a "commentary" to the text of the Qurʾān and to the establishment of its translation; certainly his work stood completely at the service of church polemics. Nevertheless, leaving the theological evaluation aside, it is still of inestimable value today because of the wealth of the information provided. The Arabic text is more exact than that of Hinckelmann's, but Marracci had just as little consideration for the peculiarity of qurʾānic orthography.

In 1721 the Protestant theologian Christian Reineccius (d. 1752) published in Leipzig the Latin text of Marracci in a handy Octavo edition *(Muhammedis filii Abdallae pseudo-prophetae fides islamitica, i.e. al-Coranus)*. He placed an introduction before Marracci's Latin text, in which he informs about the history of the Qurʾān and the system of Islamic belief, as well as its divergences from Christian doctrines. Above all, this edition helped Marracci's translation move beyond the borders of Italy and the Catholic scholarly world, and brought it to a larger audience. Marracci's *Prodromus* had in this respect a further effect, when a Maronite from Aleppo, Yaʿqūb Arūtīn (d. after 1738) translated it into Arabic (cf. Graf, *GCAL,* iii, 432). Beside the predominate effort to produce a text of the Qurʾān, there were also further, primarily theologically motivated, studies of the Qurʾān, which nevertheless profited considerably from the rise of Arabic philology. In this category belongs the work of a contemporary of Erpenius, the Englishman William Bedwell (d. 1632; cf. Hamilton, *William Bedwell*), with the extensive title of *Mohammedis imposturae: That is, a discovery of the manifold forgeries, falshoods, and horrible impieties of the blasphemous seducer Mohammed: With a demonstration of the insufficience of his law, contained in the cursed Alkoran*… (London 1615); one of two supplements to this work contained an *Index assuratarum Muhammedici Alkorani. That is a catalogue of the chapters of the Turkish Alkoran, as they are named in the Arabicke, and knowne to the Musslemans: Together with their severall interpretations.* The Lutheran dean from Marburg, Heinrich Leuchter, wrote an extremely polemical work, offering a pure systematization of the theological doctrines of the Qurʾān entirely on the basis of the Toledan translation published by Bibliander, *Alcoranus Mahometicus. Oder: Türckenglaub auſl defl Mahomets eygenem Buch genannt Alcoran… in ein kurtz Compendium zusammen gebracht* (Frankfurt am Main 1604). Of the Catholics, the work of the Jesuit Michel Nau (d. 1683) could be called exemplary. His work, *Religio Christiana contra Alcoranum per Alcoranum pacifice defensa et probata* (Paris 1680), is based on writings originally composed in Arabic, in which proofs

of the truth of Christianity were drawn from the Qurʾān (*Ithbāt al-Qurʾān li-ṣiḥḥat al-dīn al-masīḥī;* cf. Graf, *GCAL,* iv, 219).

Of great influence on qurʾānic research was the work of the first Oxford Arabist Edward Pococke (d. 1691). In his book *Specimen historiae arabum* (Oxford 1650; repr. 1806) he provided important information on the basis of a textual fragment from the world history of Bar Hebraeus (d. 1286 C.E.), especially on the pre-Islamic history of the Arabs (q.v.; see also AGE OF IGNORANCE; PRE-ISLAMIC ARABIA AND THE QURʾĀN). He thereby cleared the way for an understanding of the Qurʾān based upon the history of religion (cf. Holt, Study). The first to profit from this was George Sale (d. 1736), who added a long *Preliminary discourse* to his 1734 English Qurʾān translation, which appeared in London. In it, Pococke is one of the most cited authors. Beside this, Sale had also intensively used the scholia of Marracci's Qurʾān edition. Much less successful than Pococke was his Arabist colleague at Cambridge, Abraham Wheelocke (d. 1653; cf. Arberry, *Cambridge school,* 9 f.). The printing of a translation and refutation of the Qurʾān prepared by him (ca. 1647/48) never occurred. From letters of Wheelocke to the theologian James Ussher (d. 1656) and to the Orientalist Christian Ravius (see above), it can be surmised 'that it consisted of parts of the Qurʾān translated into both Latin and Greek, together with a commentary consisting of virulent attacks on Islam and its prophet" (Toomer, *Eastern wisedome,* 89).

In 1658, the Zürich theologian and Orientalist Johann Heinrich Hottinger (d. 1667) published in Heidelberg his *Promtuarium; sive, Bibliotheca orientalis;* in this first, still very imperfect attempt at Oriental literary history he goes into great detail on the Qurʾān (pp. 105-62). He goes through it sūra by sūra, listing their names and briefly providing a summary of their contents. He also discusses different readings and addresses the Basel Arabic Qurʾān Codex once used by Bibliander, whose tabular survey of the Qurʾān readings he reproduces, although with many errors (cf. Bobzin, *Reformation,* 242). Then Hottinger provides an overview of Arabic Qurʾān commentators well-known at that time, as well as other special literature concerned with the Qurʾān.

Qurʾānic studies in the eighteenth century

For qurʾānic research, the eighteenth century was much less significant than the preceding one, for, apart from some new Qurʾān translations into different European languages, it made hardly any substantive progress. To be sure, the Dutch theologian and Orientalist Adrian Reland (d. 1718), in his important work *De religione Mohammedica* (Utrecht 1705; Eng.: 1712, Ger.: 1717, Fr.: 1721), had emphasized the importance of the use of the original sources, above all with the Qurʾān. If one studied the Qurʾān, however, this was usually done in translation: both of the extant printed Latin translations or, preferably, the French translation of André du Ryer (first ed., Paris 1647) or the English of George Sale (first ed., London 1734).

In 1701, a much-promising work appeared in Berlin, but it remained truncated: *Tetrapla Alcoranica, sive specimen Alcorani quadrilinguis, Arabici, Persici, Turcici, Latini*. Its author was the Breslau Orientalist Andreas Acoluthus (d. 1704; cf. Bobzin, Die Koranpolyglotte). His intention was, following the patterns of the great polylingual Bibles of Alcalá (1514-17), Antwerp (1569-72), Paris (1629-45) and London (1653-7), also to make the Qurʾān accessible in a polyglot edition. Acoluthus did not, however, get further than the first sūra. Next to the original Arabic text, he printed a Persian and Turkish version in addition to the Latin translation that

belonged with each; this procedure was meaningful, because in this manner it could become clear to the non-linguist readers to what extent the Persian and/or Turkish textual paraphrases represented the original Arabic text. In an extensive treatise which follows the presentation of the text, Acoluthus provides precise details about the origin of the qurʾānic texts. It is noteworthy that the Turkish Qurʾān edition was in the possession of Franz von Mesgnien Meninski (d. 1698), the author of an important Persian-Turkish lexicon (Vienna 1680-7).

Clearly encouraged by the Qurʾān editions of Hinckelmann, Marracci and Acoluthus, the Altdorf Orientalist Johann Michael Lang (d. 1731) composed three texts that he allowed students to defend as disputations at his university. They addressed the problem of the first Qurʾān edition printed in Venice (*De Alcorani prima inter Europaeos editione Arabica;* Altdorf 1703), the various previous attempts to publish the Qurʾān or parts of it (*De speciminibus, conatibus variis atque novissimis successibus doctorum quorundam virorum in edendo Alcorano arabico,* Altdorf 1704) as well as, finally, the previous translations of the Qurʾān (*De Alcorani versionibus variis, tam orientalibus, quam occidentalibus, impressis et hactenus anekdotois,* Altdorf 1704). All three works contain much valuable information that otherwise is accessible today only with great difficulty — above all quotations out of the older literature. That applies also to the work of the Rostock theologian Zacharias Grapius, *Spicilegium Historico-Philologicum Historiam Literariam Alcorani sistens* (Rostock 1701). The *Histoire de l' Alcoran* that the Frenchman François Henri Turpin (d. 1799), author of numerous popular historical works, published in London in 1775 in two volumes, is without any value, as the Göttingen Orientalist Johann David Michaelis (d. 1791) in a contemporary review already correctly commented — it does not even really deserve its title.

As in the preceding century, further sections of the Qurʾān were published, usually in bilingual editions and with more or less detailed explanations. The Leipzig Orientalist Johann Christian Clodius (d. 1745) published Q 22 together with variants from a manuscript of the Qurʾān commentary of al-Bayḍāwī (d. prob. 716/1316-7), along with explanations (*Excerptum Alcoranicum de peregrinatione sacra;* Leipzig 1730; cf. Schnurrer, *Bibliotheca arabica,* no. 380); the Altdorf Orientalist Johann Michael Nagel (d. 1788) published Q 1 (*De prima Alcorani sura;* Altdorf 1743; cf. Schnurrer, *Bibliotheca arabica,* no. 382); the theologian and Orientalist Justus Friedrich Froriep (d. 1800) who, at that time, was working in Leipzig, also published Q 1 as well as Q 2:1-79 (*Corani caput primum et secundi versus priores, arabice et latine cum animadversionibus historicis et philologicis;* Leipzig 1768; cf. Schnurrer, *Bibliotheca arabica,* no. 383). A complete Arabic edition of the Qurʾān with Latin translation and enclosed lexicon was planned by the Helmstedt classical philologist and Orientalist Johann Gottfried Lakemacher (d. 1736). Lacking a publisher, however, it was not realised (cf. Koldewey, *Geschichte,* 114); only one specimen, comprising Q 2:1-14, appeared (cf. Schnurrer, *Bibliotheca arabica,* no. 379).

The fine Arabic Qurʾān edition that was published in 1787 in St. Petersburg is a special document. After the peace of Küçük Kaynarca, which concluded the Russian-Turkish war of 1768-74, numerous formerly Turkish zones fell to Russia. In the context of the religious politics that they owed to the Enlightenment, Empress Catherine II had for her numerous new Muslim subjects their holy book, the Qurʾān, printed in Arabic. In 1786/7, at

imperial expense, a 'Tatar and Turkish Typography' was established in St. Petersburg; a domestic scholar, Mullah Osman Ismail, was responsible for the manufacture of the types. One of the first products of this printing house was the Qurʾān. Through the doctor and writer, Johann Georg v. Zimmermann (d. 1795), who was befriended by Catherine II, a copy of the publication arrived in the Göttingen University library. Its director, the philologist Christian Gottlob Heyne (d. 1812), presented the work immediately in the *Göttingische Anzeigen von gelehrten Sachen* (28 July 1788); therein he pointed especially to the beauty of the Arabic types. To the Arabic text marginal glosses have been added that consist predominantly of reading variants. The imprint was reproduced unchanged in 1790 and 1793 in St. Petersburg (cf. Schnurrer, *Bibliotheca arabica,* no. 384); later, after the transfer of the printing house to Kazan, editions appeared in different formats and with varying presentation (Dorn, Chronologisches Verzeichnis, 371). The original St. Petersburg edition is very rare; in an English book catalogue of 1827, it is stated that: "The whole impression, with the exception of about 20 copies, was sent for distribution into the interior; but owing to the Mahometan prejudices against printed books, could not be got into circulation. — About three years ago, 15 copies were all that were known to be in circulation, or in the Imperial library" (Dorn, Chronologisches Verzeichnis, 372). In any case this Qurʾān edition was the first authentic Muslim printed edition of the Qurʾān. See Figs. I-IV of PRINTING OF THE QURʾĀN for examples from the Qurʾān printings of Hinckelmann, Marracci, St. Petersburg and Kazan.

Pre-Islamic Arabia and the Qurʾān

Definitions

The Qurʾān itself does not contain any concept equivalent to those designated in ancient and modern times by the term Arabia. That name is generally given today to a region understood to be the ancestral home of the Arabic speaking peoples (see ARABS). In the past the term has been applied to different geographical areas at different times, reflecting changing political and administrative divisions as well as changes of climate and settlement patterns. Currently it tends to be used predominantly with reference to the Arabian peninsula *(jazīrat al-ʿarab),* which, geographically, extends north into what is now usually called the Syrian desert. In classical and late antiquity, Arabia was a name given to one or more administrative divisions of the Roman empire situated east and south of Palestine.

The extent to which the Qurʾān has the concept of a pre-Islamic era depends on how the expression *al-jāhiliyya* (see AGE OF

IGNORANCE) is to be understood in it. Outside the Qurʾān the expression *al-jāhiliyya* is often used in Muslim tradition with reference to the way of life of the Arabs who lived in the northern and central Arabian peninsula before Islam (q.v.), a way of life from which they were delivered by the Prophet and the revelation (see REVELATION AND INSPIRATION; PROPHETS AND PROPHETHOOD). *Al-jāhiliyya* thus functions as the conceptual opposite of Islam *(al-islām)* and in many contexts within Muslim tradition it approximates to our usage of the expression, "pre-Islamic Arabia."

In the view of traditional and most modern scholars, the Qurʾān emerged in the first half of the seventh century C.E. in the western central region of the Arabian peninsula known as the Ḥijāz and the text is traditionally understood as containing many references and allusions to, or as presupposing, the practices and beliefs of the pre-Islamic inhabitants of the Ḥijāz and neighboring parts of Arabia such as Najd, Yamāma and Tihāma. To the extent that pre-Islamic Arabia is coterminous with the *jāhiliyya,* therefore, it is understood as the historical background to, and immediate point of reference for, the Qurʾān.

In contemporary usage, however, the expression pre-Islamic Arabia is used to refer to rather more than that covered by the traditional term *al-jāhiliyya*. It would include, for example, the development before Islam of the kingdoms and cultures of the southern, eastern and northern regions and extensions of the peninsula, and the interventions in Arabia by outside kingdoms and empires. Those aspects of pre-Islamic Arabian history are not usually included in traditional accounts of the *jāhiliyya* except for certain events (see below) understood as relating to the life of the Prophet and the rise of Islam.

The jāhiliyya *in Muslim tradition*

The view of the *jāhiliyya* that Muslim tradition presents is rather more complex than one might expect from the name itself, with its connotations of ignorance (q.v.) and barbarism. It is true that the salient features of the traditional reports about the way of life of the Arabs before Islam are their gross idolatry (see IDOLATRY AND IDOLATERS), their violent way of life (see FIGHTING; BLOOD MONEY; WAR), and their lack of sexual morality (see SEX AND SEXUALITY). The tradition is replete with details about the idols of the Arabs (see IDOLS AND IMAGES), their sanctuaries, the tribes who worshipped them, and the families who ministered to them. On the other hand, this idolatry is sometimes presented as not being taken seriously by the Arabs: for example, an idol made of dates and butter might be eaten in a time of famine (q.v.), or another would lose the allegiance of a devotee when he saw it urinated upon by foxes. The tradition also provides much information about the feuds and battles (*ayyām,* lit. "days") of the tribes before Islam and the chaotic and unregulated aspects of sexual relations, including prostitution, abuse of women, and lack of clarity in determining the paternity of children (q.v.). Unwanted female infants are said to have been disposed of by burial while still alive (see INFANTICIDE).

The negative image is, however, moderated by a number of things. The identification of the language of the Qurʾān as a language used in pre-Islamic Arabia (precisely which language is a question to which the tradition and modern scholarship offer variant answers) and the consequent high value put upon *jāhilī* poetry as a key to the understanding of the language is one such thing (see GRAMMAR AND THE QURʾĀN; POETS AND POETRY). Another is the admiration evident for some of the

actions and qualities that represented the ideal of behavior among the pre-Islamic Arabs, summarized in the concept of *muruwwa,* "manliness, virtue": courage (q.v.), generosity, hospitality and support for the weaker members of one's tribe (see KINSHIP; HOSPITALITY AND COURTESY; TRIBES AND CLANS).

Equally important is the idea that Abraham (q.v.) had once introduced true monotheism to the Arabs and, although they had fallen away from it and had become immersed in the corruption of idolatry, remnants of that true monotheism still survived among them (see ḤANĪF). One such remnant was the Kaʿba (q.v.), built by Abraham and his son Ishmael (q.v.). Another was the religion of Abraham himself *(dīn ibrāhīm)* which still survived among certain individuals known in the tradition as *ḥanīf*s. These individuals are portrayed as rejecting the pagan religion into which their fellow Arabs had sunk and as holding on to a non-Christian and non-Jewish form of monotheism which Abraham himself had professed (see CHRISTIANS AND CHRISTIANITY; JEWS AND JUDAISM). This idea is related to Q 3:67, which refers to Abraham as neither a Christian nor a Jew but a *ḥanīf,* a *muslim* (see RELIGIOUS PLURALISM AND THE QURʾĀN).

The Qurʾān and the jāhiliyya

The most important function of pre-Islamic Arabia (in its more limited sense as the locus of the *jāhiliyya*), so far as the traditional understanding of the Qurʾān is concerned, is that it is viewed as the milieu in which the revelation was given. Thus it can be used as an explanatory device for making sense of details and passages in the Qurʾān. There is a certain tension between the idea that the Qurʾān is a revelation relevant for and applicable to all peoples and all times, and the view that at least some of it was revealed with reference to a specific society and time and to particular incidents in which the Prophet was involved (see OCCASIONS OF REVELATION).

In general the text is understood and analysed as composed in a form of the Arabic language existing in the *jāhiliyya:* its rhyming prose (*sajʿ;* see RHYMED PROSE) and certain types of oaths (q.v.) which it contains are said to be related to the language used by the soothsayers (q.v.; *kuhhān*) of the *jāhiliyya* to deliver their oracles (see FORETELLING; DIVINATION); and its vocabulary and grammar is explained by reference to the poetry of the *jāhiliyya,* originally transmitted orally and preserved in much later Islamic literary texts.

The way in which details of the Qurʾān are explained and understood as allusions to the life of the *jāhiliyya* can be illustrated with reference to a wide range of verses. Such material figures frequently in the form of commentary known as *asbāb al-nuzūl* (occasions of revelation), which seeks to explain passages of scripture by situating them in a historical context or by associating them with features of pre-Islamic Arabian life. Many of these "occasions of revelation" reports refer to events in which the Prophet and his Companions were involved (see COMPANIONS OF THE PROPHET).

Qurʾānic allusions to the practice of infanticide (Q 6:137, 140, 151; 16:57-9; 81:8-9) are understood as directed against the custom of the pre-Islamic Arabs of disposing of surplus female children by burying them alive *(waʾd)*. Outside the Qurʾān this practice *(qatl al-mawʾūda)* figures prominently in descriptions of life in the *jāhiliyya*. The difficult verse Q 9:37 (see DIFFICULT PASSAGES), in which the *nasīʾ* is called "an excess of disbelief *(kufr;* see BELIEF AND UNBELIEF)" and which then goes on,

apparently, to attack the practice of certain opponents who interfere with the number of months (q.v.) which God has made sacred (*ḥaram;* see PROFANE AND SACRED) is variously explained outside the Qurʾān as an attack on a custom of the pre-Islamic Arabs (or on the person responsible for putting the custom into practice). The practice involved prolonging certain years by intercalation in order to delay the onset of sacred months (see CALENDAR). The injunction not to approach "the houses from their backs" (Q 2:189) is again the subject of various explanations which have in common, however, the idea that it is an injunction against something which was a practice (religious or sexual) of the Arabs in the *jāhiliyya*.

Certain regulations in the area of marriage and divorce (q.v.), such as the insistence upon a "waiting period" (q.v.; *ʿidda*) before a woman whose sexual relationship with a man has been ended by divorce or death can begin another (Q 65:1 f.), are explained as attempts to reform the sexual immorality and licentiousness of the pre-Islamic Arabs. The limited polygamy which Islamic law allows men (see LAW AND THE QURʾĀN; PATRIARCHY) is understood to relate to Q 4:3, "marry of the women who please you two or three or four." That verse is generally understood as an intended amelioration of the pre-Islamic situation in which there were no limits on the number of women a man might marry, and more precisely as relating to the situation following the battle of Uḥud (see EXPEDITIONS AND BATTLES) in 3/625 when the Muslim community in Medina (q.v.) was faced with a surplus of women over men.

The polytheism and idolatry of the pre-Islamic Arabs is understood to be the referent for the attacks in the Qurʾān against those who practice *shirk*, the sin of associating other things and beings with God as an object of worship (q.v.; see POLYTHEISM AND ATHEISM). The names of the three "daughters of God" (Q 53:19-20) are explained as those of idols or goddesses worshipped in Mecca (q.v.) and elsewhere in the Ḥijāz before Islam, and the many qurʾānic passages that speak against those whom it accuses of practicing *shirk* are regularly understood to be directed against the Meccans or other Arab idolaters. Qurʾānic denigration of the prayer at the sanctuary of "those who disbelieve" as "mere whistling and hand clapping" (Q 8:35) is explained as referring to the way in which the pre-Islamic Arabs behaved when they came to Mecca to visit the Kaʿba (q.v.), and Q 7:31-2 in which people are commanded to "take care of your adornment" *(khudhū zīnatakum)* when at places of worship is explained (in different variants) as referring to a custom of the pre-Islamic association known as the Ḥums which controlled access to the Kaʿba. Various reports say that before Islam the Ḥums made some outsiders circumambulate the Kaʿba while naked. These are just examples of the many ways in which the traditional commentators relate the Qurʾān to the world of pre-Islamic Arabia.

Scholarship and the jāhiliyya

Most modern scholars have accepted the accounts of the *jāhiliyya* as reflections of a real historical situation and have agreed with the traditional scholars that the Qurʾān reflects in many places the society of pre-Islamic Arabia (see COMMUNITY AND SOCIETY IN THE QURʾĀN). Many modern scholars have tried to use some of the traditional information about the *jāhiliyya* to develop theories about the emergence of Islam in pre-Islamic Arabia.

The most influential such theory has been that an evolutionary process had led to the decline of traditional Arab paganism by the time of the Prophet, and that Islam was successful because it met the spiritual and moral needs of Arab, and

especially Meccan, society around the beginning of the seventh century C.E. Reports about the lack of real respect for their idols by the pre-Islamic Arabs, and traditional material understood as evidence of monotheistic tendencies in the paganism of the *jāhiliyya* (such as the material on the *ḥanīf*s), have been interpreted according to evolutionary theories of religion. The moral injunctions of the Qurʾān towards charity (see ALMSGIVING), honesty and protection of the weak (see OPPRESSED ON EARTH, THE; OPPRESSION) are then often understood as reflecting the general and specific moral failings of the pre-Islamic Arabs.

Julius Wellhausen's *Reste arabischen Heidentums,* the first edition of which appeared in 1887, was influential in establishing this evolutionary interpretation, and elements of it have remained visible in works written late in the twentieth century. Sometimes the evolution of the pre-Islamic Arabs from idolatry and paganism to monotheism is presented as a natural development, one through which all societies pass in time; sometimes the influence on the Arabs of various types of monotheism from outside Arabia is mentioned as an explanatory factor; and sometimes the idea is postulated of a primitive Arab form of monotheism which had survived even though the Arabs generally had become polytheists.

The Qurʾān and pre-Islamic Arabia beyond the jāhiliyya

Like the traditional scholars, modern scholarship on the rise of Islam has concentrated on the regions of Arabia associated with the concept of the *jāhiliyya* — in general the central and northwestern parts of the peninsula in the two or three hundred years before the Prophet. That does not include important areas of pre-Islamic Arabian history such as the Nabatean and Palmyrene kingdoms that flourished in the north of Arabia some centuries before Islam (see SYRIA; GEOGRAPHY AND THE QURʾĀN), or the various states, richly attested by inscriptions and archaeological remains, in the south. Since the late nineteenth century knowledge of and scholarship on those areas of pre-Islamic Arabia have increased significantly, and some scholars have sought to relate them to the Qurʾān and emerging Islam.

Muslim tradition itself reports in some detail certain events connected with the Yemen (q.v.) in the century before the Prophet, and because certain passages of the Qurʾān are often understood as alluding to them, they are narrated also in works of qurʾānic commentary (*tafsīr;* see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL).

Prominent among these are accounts of the persecution of Christians by Dhū Nuwās, a Yemeni ruler who had accepted Judaism; the resulting conquest of the Yemen by the Christian state of Abyssinia (q.v.) and the governorship of the region by the Abyssinian general Abraha (q.v.); the collapse of the dam at Maʾrib in the Yemen, which is said to have triggered tribal migrations northwards; and the eventual conquest of the Yemen by the Sasanid Persians, with whom the Muslim conquerors of the region came into contact.

The "men of the elephant" of Q 105:1 are frequently understood as an allusion to an expedition reported in tradition as having been sent against Mecca by the Abyssinian Abraha, an expedition which involved one or more elephants and is recounted in some detail in Muslim literature outside the Qurʾān (see PEOPLE OF THE ELEPHANT). The "people of the ditch" (q.v.; Q 85:4) are often identified as the persecuted Christians of Najrān (q.v.), burned in a trench according to accounts found in Syriac and Arabic. The "violent flood" (*sayl al-ʿarim,* Q 34:16) is often understood to refer to the collapse of the dam at Maʾrib

(see AL-ʿARIM), an event that may be attested in a pre-Islamic inscription from Maʾrib. The traditional interpretations of such passages are not, however, unanimous, and the names of Abraha, Dhū Nuwās and Maʾrib do not occur in the Qurʾān itself.

In addition, the Qurʾān refers to peoples, and the prophets whom God had sent to them, who are understood to have lived in parts of Arabia before Islam: Ṣāliḥ (q.v.) and Thamūd (q.v.), Shuʿayb (q.v.) and Madyan (see MIDIAN), Hūd (q.v.) and ʿĀd (q.v.). Thamūd is known from pre-Islamic sources as the name of a people of northern Arabia.

Modern scholars have used epigraphic and other evidence that may relate to the events reported in Muslim tradition in attempting to establish chronology and motivation (see CHRONOLOGY AND THE QURʾĀN; EPIGRAPHY AND THE QURʾĀN). Divine and personal names found in the inscriptions have been linked with names found in the Qurʾān and Muslim tradition. The best-known example is probably the divine name RḤMNN that has been seen by some scholars as the source of the qurʾānic and Islamic al-Raḥmān (see GOD AND HIS ATTRIBUTES). Since the inscriptions in which RḤMNN occurs are not easily identifiable as Jewish or Christian, some speculation about a "non-denominational form of monotheism" native to pre-Islamic Arabia arose which was linked with the reports about the *ḥanīf*s in the Muslim tradition (see also MUSAYLIMA).

Some of the names found in non-monotheistic inscriptions that have been identified as those of deities have been linked by scholars with the idols or gods whose names are given in the Qurʾān (such as those of the five "gods of the people of Noah [q.v.]" in Q 71:23), and knowledge of south Arabian polytheism has been used to put forward theories about the origins and nature of *jāhilī* polytheism (see SOUTH ARABIA, RELIGION IN PRE-ISLAMIC).

In general, scholars who connect the Qurʾān or Islam with evidence from pre-Islamic Arabia lying beyond the traditional scope of the *jāhiliyya* envisage that Muḥammad had contacts with and was influenced by the religious culture of those regions. For example, it has been suggested, on the basis of a small number of south Arabian inscriptions in which the root *sh-r-k* has been read, that both the qurʾānic word and the concept of *shirk* are derived from south Arabia. In the area of ritual, parallels have been drawn between some south Arabian practices regarding ritual purity (q.v.) and those of Islam. One problem with the attempts to explain qurʾānic and Islamic ideas, institutions and practices in this way is that south Arabia was itself part of the wider world of late antiquity and had contacts with the other Middle Eastern and Mediterranean regions.

How far does the Qurʾān reflect the background of pre-Islamic Arabia?

The relationship between the Qurʾān and pre-Islamic Arabia summarized above — the view that the text was formed in the Ḥijāz and constantly refers to or presupposes features of the life of the pre-Islamic inhabitants of northwestern and central Arabia — is one that depends mainly on Islamic traditional texts other than the Qurʾān itself. Works such as commentaries on the Qurʾān and biographies of the Prophet (see SĪRA AND THE QURʾĀN) provide the reports that are the basis of that view. The scripture itself, with its characteristically allusive style, does not explicitly inform us when or where it originated, nor does it closely specify its addressees or referents (see LANGUAGE AND STYLE OF THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN).

It is clear that the text contains a significant number of references to features of life associated especially with Arabs.

Sometimes that association is a common one as, for example, references to camels (see CAMEL). There are ten references in the text to tribal or nomadic Arabs (*aʿrāb;* see BEDOUIN) and the language of the Prophet and of the Qurʾān itself is called "Arabic" (*ʿarabī;* see ARABIC LANGUAGE; DIALECTS). Furthermore, the names of the "daughters of God" (Allāt, al-ʿUzzā and Manāt: Q 53:19-20), although widely attested in the ancient Middle East and around the Mediterranean, were especially associated with Arabia and the Arabs, and the list of the gods worshipped by the people of Noah (Q 71:23) also contains some names which are attested in inscriptions and graffiti found in various parts of Arabia.

Apart from the name, Muḥammad (q.v.), which occurs four times (Q 3:144; 33:40; 47:2; 48:29) and Aḥmad (Q 61:6; see NAMES OF THE PROPHET), the only Arab personal name (other than Arabic forms of biblical names; see SCRIPTURE AND THE QURʾĀN) is that of Abū Lahab (Q 111:1), whom tradition identifies as a leader of the pagan Meccans (see FAMILY OF THE PROPHET). The tribal name Quraysh (q.v.) is mentioned in Q 106:1 in a context that associates it with the sanctuary.

As for the names of places or institutions associated with Arabia, there are several in the Qurʾān; most of them are attested only once or twice, and several of them are only known outside Islam because they occur in Muslim tradition or are related to Muslim religious practice. Thus al-Ṣafā and al-Marwa (Q 2:158; see ṢAFĀ AND MARWA), ʿArafāt (q.v.; Q 2:198), and al-Kaʿba (Q 5:95, 97) are all associated with the Muslim sanctuary at Mecca *(makka)*. Much more common is *al-masjid al-ḥarām* (fifteen occurrences), the name given in Islam to the mosque (q.v.) at Mecca which contains the Kaʿba (see SACRED PRECINCTS). The name *makka* itself appears once (Q 48:24; *bakka* in Q 3:96 is identified in traditional commentary as an alternative name for it or a part of it). *Yathrib* (Q 33:13) is the only such place name in Arabia certainly attested in pre-Islamic sources (see MEDINA).

In other cases, the Qurʾān refers to features of Arab life known as such mainly from the traditional accounts of the *jāhiliyya*. In two passages (Q 52:29-30; 69:40-2) it is denied that the Prophet is a soothsayer *(kāhin)* or poet *(shāʿir),* two professions which figure large in traditional accounts of pre-Islamic Arabian life. The use of divining arrows *(azlām),* a practice associated in Muslim tradition with pre-Islamic Arabs, is condemned twice (Q 5:3, 90), and in the latter passage it is associated with other vices traditionally seen as characteristic of the *jāhiliyya* — drunkenness (see INTOXICANTS; WINE), gambling (q.v.; *al-maysir*) and idols *(al-anṣāb)*.

There is certainly material in the text of the Qurʾān itself, then, to indicate that it — or significant parts of it — reflects an environment which might indeed be called Arabian, although the elasticity of that term and the presence of Arabs in various parts of the Middle East outside the peninsula before Islam has to be borne in mind. The somewhat denigrating comments in the Qurʾān regarding the *aʿrāb* seem to show that the Bedouin at least were regarded as outsiders.

Some of those things, however, that the tradition shows as characteristically Arab — recourse to soothsayers, gambling and drinking, idolatry — could, of course, apply to many other social groups. Intercalation (connected with the *nasīʾ*) may have been a feature of Arab calendar (q.v.) calculations in the *jāhiliyya,* but if so it was a feature shared by other groups outside Arabia (such as rabbinical Jews). "Killing children," too, is an item of inter-religious polemic that need not refer to a specific practice of the *jāhilī* Arabs.

In one case in particular the information provided in the tradition about the pre-

Islamic Arabs and then used to explain the more allusive references in the Qurʾān actually seems to be at odds with the text. If one takes the material pertaining to idolatry and idolaters (*shirk* and the *mushrikūn*) in the Qurʾān and then compares it with what we are told about the idolatry of the pre-Islamic Arabs, there seems to be a significant disjunction. In the Qurʾān the idolaters appear to be people who would regard themselves as monotheists. From the perspective of the Qurʾān, that view of themselves is unjustified and their claimed monotheism is corrupt; it is thus justified to call them, polemically, idolaters (see POLEMIC AND POLEMICAL LANGUAGE). The imputation of idolatry is an item of intermonotheist polemic widely attested outside the Qurʾān. In the traditional accounts of the *jāhiliyya,* on the other hand, the pre-Islamic Arabs are portrayed as immersed in a form of idolatry of the most literal and base kind, not simply an imperfect type of monotheism. The tradition seems to be attempting to impose an understanding of the religion of the *mushrikūn* that goes beyond the evidence of the Qurʾān itself, and it is possible to ask whether there is some distortion here and elsewhere in the traditional portrait of the *jāhiliyya*.

John Wansbrough suggested that the traditional focus on pre-Islamic Arabia in scholarship on the Qurʾān and early Islam should be understood as reflecting the ideas and preconceptions of the early Muslim scholars who wished to emphasize the connection of Islam with the Ḥijāz and the Arab prophet, Muḥammad (see ḤADĪTH AND THE QURʾĀN; POST-ENLIGHTENMENT ACADEMIC STUDY OF THE QURʾĀN). Wansbrough and others have understood Islam to be the result of more extensive historical developments than the Muslim tradition itself suggests. Many of those developments would have occurred outside Arabia in the century and more following the Arab conquest of the Middle East. In that perspective pre-Islamic Arabia, traditionally understood as the *jāhiliyya,* is of debatable importance for the end result.

Reaching a satisfactory evaluation is complicated by the fact that virtually all of our knowledge of the *jāhiliyya* (as distinct from pre-Islamic Arabia in the broader sense) depends on Muslim tradition found in texts the earliest of which date from more than a century after the death of the Prophet. Even the body of so-called *jāhilī* poetry is known only from those later texts and the question of its authenticity, therefore, has elicited a variety of responses. Furthermore, Wellhausen drew attention to the verbal and conceptual similarity of *jāhiliyya* in Islamic thought and the Greek word *agnoia* in Jewish and Christian usage. Both words have the basic connotation of ignorance in contrast with knowledge of the one, true God (see KNOWLEDGE AND LEARNING; ILLITERACY). Both can be applied generally, without any specific historical reference, or they can be applied to a variety of specific historical situations. In Islamic usage, for example, *jāhiliyya* has been applied to the pre-Islamic history of Iran and to modern secular western society.

Given the limited amount of evidence and its problematic nature, it is possible to continue to question the traditional understanding and presentation of pre-Islamic Arabia as the *jāhiliyya* and the strong connection which the tradition makes between it and the Qurʾān.

Preserved Tablet

According to Q 85:22, the location of the Qurʾān, traditionally understood to be in God's presence. The *lawḥ maḥfūẓ* is often identified with the heavenly book (q.v.) by association with other qurʾānic terms: "mother of the scripture" (*umm al-kitāb,* Q 13:39; 43:4; also 3:7), "hidden writing" (*kitāb maknūn,* Q 56:78). As *umm al-kitāb* it is the source *(aṣl)* not only of the Qurʾān but also of the other scriptures (*kutub;* see BOOK; SCRIPTURE AND THE QURʾĀN). As God's writing it contains all the divine decrees. These images and others associated with God's writing constitute a key element in qurʾānic thought (see INSTRUMENTS; WRITING AND WRITING

MATERIALS; ORALITY AND WRITING IN ARABIA). Taken literally, they are difficult to read as a coherent whole. Alternatively, they can be read, and often are in the Islamic tradition, as complementary, symbolic representations of God's knowledge and will (see KNOWLEDGE AND LEARNING; POWER AND IMPOTENCE; GOD AND HIS ATTRIBUTES). Traditional interpretation of this qurʾānic image owes much to ideas common in Semitic religions.

Although "preserved" is usually read as applying to the tablet, some authorities read the word as referring to the Qurʾān, which is thus simply "preserved on a tablet." Al-Ṭabarī (d. 310/923; *Tafsīr,* ad loc.) comments that there is little difference in meaning since either way the Qurʾān is preserved from alteration and change (see REVISION AND ALTERATION; CORRUPTION; FORGERY), perhaps against the demons (*al-shayāṭīn;* see DEVIL). The tablet is also associated with the isolated letter *"nūn"* of Q 68:1, said by some to be a tablet of light (q.v.). Apart from its importance in qurʾānic sciences (see TRADITIONAL DISCIPLINES OF QURʾĀNIC STUDY) as guarantor of the text's authenticity, the image of the Preserved Tablet plays a significant role in the discussions of theologians, philosophers, and mystics (see THEOLOGY AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN; ṢŪFISM AND THE QURʾĀN).

The tablet figures in two major theological controversies: about predestination (see FREEDOM AND PREDESTINATION), and the createdness or otherwise of the Qurʾān (see CREATEDNESS OF THE QURʾĀN). Traditions found in exegetical works (*tafsīr;* see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) focus particularly on predestination: God examines the tablet every day 360 (or 260) times, every time carrying out what he wills. It contains the characteristics of everything created, and everything about creatures (see CREATION; COSMOLOGY): the length of their lives (see FATE; DEATH AND THE DEAD); their allotted sustenance (q.v.); their actions; the verdict to be pronounced on them (see LAST JUDGMENT); the eventual punishment for their actions (see REWARD AND PUNISHMENT) — all this written by the pen (*al-qalam,* Q 68:1; 96:4), often said to be the first object created, but presumed by some to be pre-existent (see ETERNITY). In this context it becomes difficult to see whether the recording so often mentioned in the Qurʾān is describing human deeds and thoughts or rather determining them. A famous ḥadīth (see ḤADĪTH AND THE QURʾĀN) maintains that the pen is now dry; nothing determined can be changed. Q 13:39 raises a further difficulty: "God erases and confirms what he wills since with him is the *umm al-kitāb*." Al-Ṭabarī (*Tafsīr,* ad loc.) quotes traditions to the effect that there must actually be two books: one God can change as he wills, the other unchanging. On "a blessed night" (Q 44:3) what is written on the tablet for the coming year is said to be transcribed and transmitted to the angels responsible (see ANGEL; DAY AND NIGHT).

The tablet is used in *kalām* principally to support belief in the uncreated Qurʾān. It cannot, however, resolve the issue of whether the heavenly prototype of the Qurʾān was created or is co-eternal with God. The tablet is by consensus above the seventh heaven (see HEAVEN AND SKY). Therefore Ibn Ḥanbal (fl. third/ninth cent.; al-Radd, 111-2) argued, defending the Qurʾān's uncreatedness, that the tablet containing it is not among the things scripture says were created: "the heavens, the earth and all they contain" (e.g. Q 44:38). Others could argue that, since according to some ḥadīth the tablet was created, the Qurʾān must be there by an act of creation (see also WORD OF GOD).

Among the philosophers the images of pen and tablet serve as useful support from the sacred text for the conclusions of reason (see INTELLECT), as well as points of departure for more esoteric speculations (see POLYSEMY). The pen is the first intellect, and the tablet the universal soul receiving impressions from it. For Ibn al-ʿArabī (d. 638/1240), the soul of Muḥammad is that universal soul, capable of receiving impressions directly from the intellect and passing them on.

In the Ṣūfī tradition, the images of pen and tablet are given great play by poets (see LITERATURE AND THE QURʾĀN), though the sense of irrevocable predestination fits ill with those who encourage spiritual development. The tablet is more likely to be viewed as the believer's heart (q.v.) on which God impresses his image.

Pride

Inordinate self-esteem, conceit. Pride is very often denounced by the Qurʾān as a sin (see SIN, MAJOR AND MINOR) because of its similarity to a form of "partnership with God" (*shirk;* see POLYTHEISM AND ATHEISM): Do not the proud deem themselves or aspire to be like God in his greatness? Their *istikbār* looks to be a denial of their humble condition in their will to be equal to the one who alone is "the most high, the most great" (*al-ʿalī l-kabīr,* Q 22:62), "the supreme" (*al-mutakabbir,* Q 59:23). The verb *istakbara* is used forty times in the Qurʾān and its participle, *mustakbir,* six times. Although "pride" is the most common English rendition, there are a variety of translations of the concept. Pride is the sin of all those who refuse to surrender to God *(islām)*. It was also Satan's (see DEVIL) first sin, when he was ordered to prostrate before Adam (see BOWING AND PROSTRATION; ADAM AND EVE): "[The angels] all prostrated except Iblīs (Satan), he refused (see DISOBEDIENCE) and was proud and was one of the disbelievers" (Q 2:34; 38:73-4; see BELIEF AND UNBELIEF; see also FALL OF MAN; INSOLENCE AND OBSTINACY).

Pride is also the sin of those who did not listen to the prophets' message in history (see PROPHETS AND PROPHETHOOD; MESSENGER; HISTORY AND THE QURʾĀN). This was the case of Noah's (q.v.) folk: "And they magnified themselves in pride" (Q 71:7); of Ṣāliḥ's (q.v.) people: "The leaders of those who were arrogant among his people" (Q 7:75) said "Verily, we are disbelievers in that which you believe" (Q 7:76; see BELIEF AND UNBELIEF); of Shuʿayb's (q.v.) relatives: "The chiefs of those who were arrogant" (Q 7:88); and of Hūd's (q.v.) kinsfolk: "As for ʿĀd (q.v.), they were arrogant" (Q 41:15). Pride was especially the sin of Pharaoh (q.v.) and his chiefs: "They

were arrogant in the land" (Q 29:39; see ARROGANCE; OPPRESSION), they "behaved arrogantly and were criminals" (Q 10:75), and "were arrogant and they were people self-exalting" (Q 23:46). Consequently God says: "We sent on them the flood, the locusts, the lice, the frogs, and the blood…, yet they remained arrogant" (Q 7:133; see PLAGUES). Muḥammad himself faced the same difficulties from his adversaries (see OPPOSITION TO MUḤAMMAD): "Indeed they think too highly of themselves and are scornful with great pride" (*ʿataw ʿutuwwan kabīran,* Q 25:21), and even some of his followers were tempted to behave in the same manner (Q 34:31-3; 40:47-8). Pride makes people blind (see VISION AND BLINDNESS) and unable to recognize the signs (q.v.; *āyāt*) of God and to worship their lord (q.v.) righteously: "But as for those who refused his worship (q.v.) and were proud, he will punish them with a painful torment" (Q 4:173; see REWARD AND PUNISHMENT; CHASTISEMENT AND PUNISHMENT). In fact, "Those who reject our signs and treat them with arrogance, they are the dwellers of the fire" (q.v.; Q 7:36; cf. 6:93; 7:40; 40:60; see also HELL AND HELLFIRE).

Ultimately, though, "he [God] likes not the proud" (Q 16:23) and "seals up the heart (q.v.) of every arrogant *(mutakabbir)* tyrant *(jabbār)*" (Q 40:35). As for those who are not proud, God will welcome them with his satisfaction *(riḍwān)* and will accept their worship. All creatures "prostrate to God… and they are not proud" (Q 16:49), especially the angels (see ANGEL), who are always humble in God's presence (Q 7:206; 21:19), and the true believers who "glorify the praises of their lord, and they are not proud" (Q 32:15; see GLORIFICATION OF GOD; LAUDATION). Perhaps for this reason Christians are found to be "the nearest in love to the Muslims… because they are not proud" (Q 5:82; see CHRISTIANS AND CHRISTIANITY). Creatures have to be humble, and only God is "the greatest": He is "the compeller (*al-jabbār;* cf. Heb. *gibbōr;* see Ahrens, Christliches, 19), the supreme *(al-mutakabbir)*" (Q 59:23), "and his [alone] is the majesty (*al-kibriyāʾ;* cf. Ahrens, Christliches, 23, for discussion of this term as possibly derived from Ethiopic) in the heavens and the earth" (Q 45:37; see KINGS AND RULERS; POWER AND IMPOTENCE; GOD AND HIS ATTRIBUTES).

Printing of the Qurʾān

The history of the printed Qurʾān has received little scholarly attention. Political and cultural historians, while often mentioning the introduction of the printing press into Islamic lands, tend to link printing with the modernizing efforts of sultans and shahs. Scholars who concentrate on printing history have followed the same path, albeit with greater depth and nuance. This article summarizes findings in the history of the printing of the complete Arabic Qurʾān produced by means of metal type or lithography. After an enumeration of the earliest imprints, the article discusses the background to printing the Qurʾān in the Muslim world and, within the limits of what is currently known, describes early printing efforts.

The article concludes with remarks on contemporary publishing. The focus is on the history of the printing of that qur'ānic text that is used by the majority of Sunnī Muslims, who are, in turn, the largest Muslim group.

Earliest printings of the Qur'ān

Although by 1543 there existed at least six different printings of the edition by Theodor Buchmann (Bibliander) of Robert of Ketton's Latin translation of the Qur'ān (Bobzin, *Der Koran,* 209 f.), the first complete Arabic Qur'ān said to have been printed by means of movable type appeared in Venice in 1537-8 (but cf. Nallino, Una cinquecentesca edizione, 10, where it is asserted that the printing was somewhere between 1530 and 1537). It was, however, destroyed — according to some accounts, at the order of the Pope (cf. Blachère, *Introduction,* 133; Bobzin, *Der Koran,* 182 f. argues against any ecclesiastical order to destroy this edition) or, according to Nuovo (Il Corano), because there was no market for it in the Middle East, for which it was intended. Others have suggested that the memory of this printing was based on a misunderstanding perpetuated in later sources. A copy of the printing, however, was discovered in Italy in the 1980s, displaying a very faulty text which is what likely led to its destruction (the opening pages of the text are illustrated in Bloom, *Paper before print,* 220; see PRE-1800 PREOCCUPATIONS OF QUR'ĀNIC STUDIES).

The next printing was in Hamburg in 1694 by Abraham Hinckelmann, who provided an introduction in Latin (see Fig. I). This was followed four years later by the Arabic text with Latin translation and a refutation of Islam by Ludovico Marracci (see Fig. II). This is the well-known *Alcorani Textus Universus*. The most widely used Arabic edition, that of Gustav Flügel, first appeared in 1834, followed by printings of 1841, 1855, 1867, 1870, 1881, and 1893 (see Smitskamp, Flügel). This was the edition used by western scholars until the printed text became widely available in editions produced in the Islamic world after World War I.

Numerous early editions were printed in St. Petersburg under the patronage of Catherine II, with printings in 1787, 1789, 1790 (see Fig. III), 1793, 1796 and 1798 (see Rezvan, Qur'ān and its world, VIII/2). In the Volga city of Kazan, the Qur'ān was first printed, according to Sarkīs (*Mu'jam,* ii, 1501), in 1801, or, according to Schnurrer (*Bibliotheca,* 420), in 1803 (see Fig. IV for an example of a Kazan printing of the Qur'ān). The discrepancy may be the result of confusion over the date of the founding of the press by Tsar Pavel I (in 1801) and the actual date of the first imprint. Princeton University Library reports an 1820 imprint produced at Ṭabkhānah-yi Sayyidāt-i Kazān.

From 1842, it was reprinted annually at various presses, including Asiatic Typography and Rahīmjān Sa'īd Ugli. In 1905, a large-format Qur'ān was printed in St. Petersburg for presentation to dignitaries. Although not a typeset production — it was a photographic replication of a manuscript — this monumental work reproduced a large-format Kūfic Qur'ān similar to the one that is said to have belonged to the third caliph, 'Uthmān. In 1911-12, Qur'āns in large and small format were printed in the Crimea. The Qur'ān was printed in London in 1833 and again in 1871 and 1875. Harvard University Library reports lithographed editions in 1845 and 1848 printed in London.

The Qur'ān was frequently printed in India. Bombay imprints include those of 1852, 1865, 1869, 1875, 1881, 1883, 1891 and 1897. The first Calcutta printings appeared in 1856 and 1857. The Bombay edition contained an introduction in

Persian by Muḥammad ʿAlī al-Qāshānī. The printings of Calcutta were produced by William Nassau Lees, ʿAbd al-Ḥayy and Khaddām Ḥusayn, and included the *tafsīr* of al-Zamakhsharī (d. 538/1144; see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL). Sarkīs lists a Lucknow printing of 1850, which would be the first Indian printed Qur'ān. Other Lucknow editions appeared annually from 1865 to 1869, then 1878, 1882, 1883, 1885 and 1890. There are Delhi imprints of 1863, 1876, 1889, and 1892. According to Sarkīs (*Muʿjam,* ii, 1500), other early printings included Talshīr [sic] (1882), the northern city of Bareilly (1886, 1876) and Kanpur (1878, 1882, 1884). An Arabic Qur'ān with English translation by Mirzā Abū Faḍl appeared in Allahabad in 1911. Sarkīs notes numerous printings of the text with the *Tafsīr al-Jalālayn* (ninth/fifteenth cent.). He also mentions that there were many translations into Persian and Bengali printed in cities throughout India including Lucknow, Lahore, Kanpur, Aligar, Sialkot, Bombay and Calcutta (see Sarkīs, *Muʿjam,* ii, 1500). Shcheglova *(Katalog)* mentions Bombay lithographs of 1862, 1886/89 and 1899/1902. These editions included Persian interlinear translations.

In Istanbul, the Qur'ān was printed from metal type in 1872 and lithographically by order of the Ministry of Education in 1873 and 1876 (Sarkīs, *Muʿjam,* ii, 1500). Other Istanbul editions cited by Sarkīs are those of the calligrapher Shakir Zāda (1881; see CALLIGRAPHY) and of the press of Muṣṭafā Efendi Qādirjī. There were Istanbul printings of 1886, 1889, and 1904 by the Baḥriyya and Ḥurriyat presses. The government press (Dār al-Ṭibāʿa al-Āmira) produced the Qur'ān from 1883-1906 (see Fig. v), and Harvard University Library reports an edition of 1888 printed at al-Maṭbaʿa al-ʿUthmāniyya.

Sarkīs (*Muʿjam,* ii, 1499-1500) lists numerous printings in Cairo, beginning with the Būlāq printings of 1864, 1866, 1881, and 1886. He cites other editions, e.g. those of Ḥasan Aḥmad al-Ṭūkhī of 1881 to 1883 and 1885, those of Muḥammad Abū Zayd of 1881 to 1883 and 1890, the press of Sayyid ʿAlī of 1883 and 1884, the imprints of Shaykh Sharaf of 1889 and 1890, and the press of Ḥasan al-Sharīf of 1887. He mentions a lithographed edition of Shaykh Muḥammad Raḍwān printed in 1890. He cites printings by the prolific ʿAbd al-Khāliq Ḥaqqī of 1892, 1895 and 1897 and annually from 1899 until 1904. From this time forward, Qur'āns were continually printed by various publishers, including al-Bābī l-Ḥalabī (e.g. in two volumes, 1925) and the Ḥanafī Press (1936). The text was often accompanied by the popular *tafsīr*s of l-Bayḍāwī (d. prob. 716/1316) or al-Jalālayn. Reproduction of the text with these commentaries remains common through the beginning of the twenty-first century (see Sarkīs, *Muʿjam,* ii, 1499 f.).

There is disagreement over the first printing of the Qur'ān in Iran. Browne *(Press and poetry)* mentions an edition from a press supervised by Mirzā ʿAbd al-Wahhāb as early as 1816/17. He also mentions a lithographed edition printed in Tabrīz in the mid-1820s calligraphed by Mirzā Ḥusayn and printed by Mirzā Asad Allāh. Floor (Čāp) cites a Qur'ān from Shīrāz in 1829. Proudfoot (Lithography), perhaps following Browne, cites a Qur'ān printed in 1828. The Academy of Sciences in St. Petersburg mentions a Tehran printing of 1831 and a Tabrīz Qur'ān of 1833. Marzolph *(Narrative illustration)* states that the latter is a lithograph; it is, in fact, the first lithographed book known to have been produced in Iran. It was published in Tabrīz at the official press. Shūrbajī *(Qāʾima)* cites a Tabrīz imprint of 1843 printed by ʿAbbās Shafīʿ and an Arabic Qur'ān with Persian interlinear translation published in 1850.

Shcheglova *(Katalog)* lists an Arabic text with Persian translation of 1895 corrected and published by ʿAbd al-Bāqī Aḥmad Tafrīshī. The first Moroccan Qurʾān was lithographed in 1879 by al-Ṭayyib al-Azraq, the country's foremost printer of the period. In southeast Asia, a Qurʾān was lithographed in 1848 by Muḥammad Azharī of Palembang and reprinted in 1854.

One must be cautious in approaching any list of printing firsts. Early imprints are difficult to verify from library catalogues or enumerative bibliographies. Abdulrazak *(Kingdom)* demonstrates these difficulties in his examination of the Venice Qurʾān of the 1530s. He suggests that it is not a product of Gutenberg's invention at all, but rather a woodblock print. Likewise, bibliographer and antiquarian R. Smitskamp shows extreme caution in describing works in his catalogues of early Qurʾān imprints, such as the Qurʾān printed in Istanbul in 1850. He calls this edition, "The first Qurʾān to be printed in an Islamic country by way of lithography" (Smitskamp, *Het Oosters antiquarium,* cat. 602, item 547). The copy in hand was multicolored and gilt (see ORNAMENTATION AND ILLUMINATION) and "was executed in a way that can range this Qurʾān on the same level as a manuscript and represents a remarkable sample of early Ottoman lithography." Perhaps it was because of this resemblance to manuscripts that bibliographers have overlooked this edition. Further confusion attaches to this edition because, according to Smitskamp, the date of imprint (1246 A.H.) is incorrect.

Corrections to the record can be made only by close examination of the text. Smitskamp cites numerous other printings unknown to earlier bibliographers, such as the illuminated Qurʾān of 1887 ordered by Sultan ʿAbd al-Ḥamīd II "as gifts to the pious," a Bombay lithograph of 1880 calligraphed by al-Ḥājj Aḥmad b. al-Ḥājj Muḥammad (Smitskamp, *Het Oosters antiquarium,* cat. 591, item 804). He also cites a Teheran lithograph of 1856 (ibid., cat. 591, item 806 = 1273), and an Istanbul lithograph of 1877 (ibid., cat. 627, item 653), but cautions that this date may be mistaken.

The implication of the foregoing bibliographic lists is that the Qurʾān was more extensively printed than has been recognized. By the mid-nineteenth century there were locally printed Qurʾāns in nearly every Islamic region. It has been axiomatic among non-Muslims that there was an abiding aversion among Muslims to printing in general and to the printing of Islamic books and the Qurʾān in particular. Nuovo (Il Corano) puts it most directly, calling it the "well-known aversion *(avversione)* of Islam for the printing press." It is frequently held that the early attempts at printing the Qurʾān in Europe were aesthetically and editorially repugnant to Muslims. Indeed, Muslim authorities thwarted printing of Islamic texts until well into the nineteenth century. On the basis of his study of library holdings, Abdulrazak states, "… it seems that 1818 was a turning point in the history of printing in the Islamic world as increasing numbers of Islamic texts were being published from that date onwards" (Abdulrazak, *Kingdom*). Gdoura *(Le début)* places the date a good deal earlier and more precisely: 1803.

The debate over printing

Historians offer many explanations for the disinclination to use printed books or to adopt the means of producing them (for a recent discussion, see Bloom, *Paper before print*). The locus of the debate was Istanbul, capital of the Ottoman empire, where political and religious elites presented arguments for and against the importation of the press or printed books from Europe. Gdoura *(Le début)* recognizes that since the

later part of the sixteenth century the decision about admitting the printing press into the empire was a political decision that rested with the sultan himself after consultation with secular and religious counselors. An economic reason often cited for the delay in adopting the press was the opposition of scribes and calligraphers, who feared the loss of their livelihood. Little by little, from the sixteenth through the eighteenth centuries, political opposition to the press relaxed. Bāyazīd II (r. 886-918/1481-1512) permitted Jews to print. Murād III (r. 982-1003/1574-95) permitted importation of European printed works in Arabic as long as they did not concern religion. Beginning in 1620, debate raged over the publication of Protestant books in Arabic, a move that was opposed by the Orthodox patriarch, who complained to the sultan, and the sultan intervened to close Greek and Arabic presses. It was nearly a hundred years later that the Hungarian-born convert to Islam, Ibrāhīm Mutafarriqa, finally convinced the sultan and the religious authorities that the printing press might help strengthen the empire vis-à-vis an increasingly threatening Europe. Mutafarriqa's arguments had their effect, and in 1726 the Shaykh al-Islām issued a *fatwā* declaring it legal to print (see MEDIA AND THE QUR'ĀN). The text of the decree read, in part:

If one is versed in the art of correctly printing with metal characters the above mentioned titles… [he] will furnish a means of reducing labor, multiplying copies, lowering costs and making acquisition [of books] easier and cheaper. I decide that this art… should be encouraged without delay, on the understanding that trained and intelligent men be chosen and that works from the press be corrected against the best originals.

The reference to the "above mentioned titles" points to the list of dictionaries, histories, military and geographical texts submitted to the authorities for approval. No religious works were included.

The strictures imposed by the Shaykh al-Islām applied to the Ottoman territories. By virtue of the primacy of the sultan in the Islamic world, the writ ran beyond Ottoman boundaries. When other countries of the region came to consider printing in the nineteenth century, their leaders were conscious of these strictures. As to the more distant Islamic populations, there was little — if any — printing from metal type. Iran, of course, lay beyond the influence of decisions taken in the capital of Sunnī Islam, but its early printing history bears many similarities to that of the Ottoman empire.

In addition to the political, cultural, and economic reasons for the slow introduction of printing, there were local reasons as well. Ṣābāt *(Tārīkh)* argues that the fundamental cause of the delay of printing in Egypt was the political chaos following the withdrawal of Napoleon's forces from Egypt in 1801. It took four years for Muḥammad ʿAlī to emerge above rival Mamlūk factions and to secure power. After consolidating his rule, he turned toward fashioning a modern administration, industrial base and military power. These ambitions led directly to the importation of the press and the recruitment of workers. Importation of machinery and supplies and training of pressmen took fifteen years. The first book was not published until 1822.

Lithographic printings of the Qur'ān in the Islamic world

Widespread printing of the Qur'ān in the Islamic world did not begin until well into the nineteenth century, or until the litho-

graphic printing process became available to Muslims. At that point, there began a florescence of publishing that has continued to the present day. Lithographic printing is based on the repulsion of oil to water applied to a plane surface, such as a flat stone or metal plate. Ink adheres to the image and is repelled from the blank areas. Early Muslim lithographers used stones mined in various parts of Asia or imported from Europe. They copied their text on specially prepared paper from which it was transferred to the stone before being put through the press.

Invented in the late eighteenth century in Germany, lithography was soon employed by European publishers to print maps, drawings and other illustrative material. For Muslim publishers, lithography had three advantages over movable type in printing the Qur'ān. First, it is a much cheaper process, requiring importation of less complex machinery and materials. Second, it eliminated the need for complex type design for the Arabic script and large cases of type to accommodate the hundreds of Arabic letterforms. Finally, and perhaps most important of all, it permitted calligraphic preparation of the qur'ānic text to the point where a well designed and executed lithograph may be mistaken for a manuscript, thus prompting Proudfoot (Lithography) to characterize lithography as "the Islamic technology." Its principal disadvantage is that print runs had to be much smaller than books set in metal type. Yet, because the process was comparatively cheap, frequent new editions were possible, as we have seen in the case of Istanbul, Cairo, India and the Russian empire. And, Muslim printers, whether governmental or private, adopted improvements (developed in Europe), which included photographic and increasingly complex chemical and mechanical techniques. In terms of the quality of book design, it should be noted that — apart from sumptuous presentation copies prepared, for example, for the Ottoman sultan — the average lithographed Qur'ān was rather dull in appearance. Early printers did not use color for either the text or the ornamentation of the frontispiece. The objective of most printing, after all, was to make the scripture affordable, an Everyman's Qur'ān. It has been only recently, from perhaps the latter half of the twentieth century, that lavishly ornamental printed Qur'āns have entered the general book trade (see EVERYDAY LIFE, THE QUR'ĀN IN).

Earliest Egyptian printed Qur'āns

As was often the case wherever printing of the Qur'ān was contemplated, controversy arose. By 1822, planning and equipping the official press at Būlāq was complete and the first books were printed. Initially, these were technical manuals and linguistic aids aimed at furthering the ruler's plans for a modern army, industry and administration. The books were to be used as textbooks in the new curriculum. As need arose, the curriculum expanded to include such subjects as Turkish and Persian literature and European history.

None of the earliest Qur'āns printed in Egypt have survived. Raḍwān *(Tārīkh)*, whose work in the Egyptian archives is the foundation of these remarks (except where noted), dates the first printing of portions of the Qur'ān *(ajzā')* to April 1833. Because no copies of this printing have survived, Raḍwān's history and the brief mention of printing by A.A. Paton in his *A history of the Egyptian revolution* (1863) are the only indications that the edition ever existed. Unfortunately, without copies of this printing, no descriptive bibliography or textual analysis is possible. Certain aspects of the edition, however, are clear. It was printed in tablet

or sheet form and is often referred to as *ajzā' al-Qur'ān,* in distinction to a complete *muṣḥaf*. We do not know whether the text was typeset or lithographed. If the latter, we do not know the calligrapher: if the former, we do not know if specialized type was used for the printing. Most notable by its absence is any mention of a committee of scholars to consult on the preparation and correction of the text, a tradition that goes back to the seventh century recension of ʿUthmān.

In the early years of Egyptian printing, the *ʿulamā'* objected to printing religious books, questioning whether any part of the apparatus employed the skin of dogs. The director of the press was instructed to answer their questions; whether he did so, and how he answered, are not to be found in the sources. Before printing the 1833 edition, Muḥammad ʿAlī asked Shaykh al-Tamīmī, Muftī of Egypt, to put his seal on the printed copy, so that it could be sold or otherwise distributed. The shaykh agreed to this, according to Paton (quoted by Raḍwān, *Tārīkh*).

Muḥammad ʿAlī ignored the core works of the religious curriculum. His disdain for the religious establishment was reciprocated by the religious scholars (*ʿulamā';* see SCHOLAR; KNOWLEDGE AND LEARNING; THEOLOGY AND THE QUR'ĀN). They viewed the press as an innovation *(bidʿa)*. To use metal letters or to apply heavy pressure in printing the name of God (see GOD AND HIS ATTRIBUTES) was reprehensible *(makrūh)*. They declared the use of the press for these purposes forbidden *(muḥarram)*. Further, use of printing equipment was inconsistent with the need for purity *(al-ṭahāra)* in preparing the text (see RITUAL PURITY). Ignoring opposition, Muḥammad ʿAlī authorized the first Egyptian printing of the Qur'ān. It is not clear whether the entire text or only portions of it were ready for distribution in 1833. Ṣābāt *(Tārīkh)* reports that the press operation at this stage did not have more than four correctors *(musaḥḥiḥūn)*. It is doubtful, therefore, whether this edition received the traditional attention of scholars and correctors before printing.

A year earlier (1832), an announcement appeared in the government's official news organ, *al-Waqā'iʿ al-miṣriyya,* announcing preparations to print sufficient copies of certain parts of the Qur'ān for pupils in the government schools. The exact portions of the text selected for printing were not specified. As a result of the solicitation, sixty sheets (*alwāḥ;* sing. *lūḥ*) were printed for distributi n to students, presumably students in the government's schools. Preceding the printing, the *ʿulamā'* were in contact with Muḥammad ʿAlī over the advantages of printing. Although they conceded some ground on this point, they declined to have books associated with religious instruction printed until the reforming Shaykh al-Azhar, Rifāʿa al-Ṭahṭāwī, petitioned the Egyptian ruler, Khedive Saʿīd (r. 1854-63), to print texts used at al-Azhar with government funding.

As was frequently the case with Būlāq imprints, there was a distribution beyond the schools for which they were printed and distributed, free of charge to students. The Qur'ān portions printed in 1833 were no doubt sold to the populace. Although we do not know the size of the print run or the price, we do know that 269 copies were collected in 1853 by order of Khedive ʿAbbās I (r. 1848-54). Acceding to the arguments of the *ʿulamā'* that the 1833 printing contained "some errors," ʿAbbās issued an order in May 1853 to confiscate the printing. The injunction did not have the intended effect, at least not immediately. Exactly one year later, in May 1854, the provincial government in Alexandria had to repeat the order against buying and sell-

ing the flawed edition. The copies were collected in a warehouse of the Ministry of the Interior *(dīwān al-dākhiliyya)*. The order legally to destroy them was difficult to carry out. Copies remained in storage until 1858 when Khedive Saʿīd inquired about providing some of them to students at the military school after they had been corrected. Fifty-two copies were thus distributed. It appears that sometime late in 1857 a project to correct the impounded *maṣāḥif* (see MUṢḤAF) was begun. The task of correcting them fell to a government scribe, Shaykh ʿAbd al-Bāqī l-Jarī (he was also a *ḥāfiẓ,* i.e. someone who had memorized the entire Qurʾān; see REGITERS OF THE QUR'ĀN; RECITATION OF THE QUR'ĀN), who had copied Ibn Khaldūn's (d. 784/1382) history.

From this time onward, the Būlāq Press proceeded to print the Qurʾān without objection from the *ʿulamāʾ* (for an example of a late nineteenth-century Būlāq printing, see Fig. VI). In order to ensure high standards of accuracy, a special department was established for matters pertaining to the Qurʾān *(maṭbaʿat al-muṣḥaf al-sharīf),* the director of which would be independent of the overall administration of the Būlāq Press. Neither the press law of 1859 under Khedive Saʿīd nor the law of 1881 under Khedive Tawfīq made reference to the Qurʾān. One can infer that, by that time, the advantages of printing the Qurʾān were recognized by the entire society. Distribution of the 1833 *muṣḥaf* no doubt suffered from the general weakness of distribution of many of the titles from the government presses. To be sure, copies were distributed to appropriate schools, but beyond this there was no efficient way to get books to the public, even though there were attempts to open government bookshops. Private booksellers thus filled the gap. Such trade was to have stopped after the confiscation order of 1853, so by the 1860s private publishers like al-Bābī l-Ḥalabī began to fill the market with editions of their own.

Other early printings of the Qurʾān

The studies by Proudfoot (Lithography) and Abdulrazak *(Kingdom)* illustrate the importance of lithography in southeast Asia and Morocco respectively. According to Proudfoot, the first Qurʾān printed in southeast Asia was also the first book printed by a native of the region (see SOUTHEAST ASIAN LITERATURE AND THE QUR'ĀN). In 1848, Muḥammad Azharī, a native of Sumatra, produced a lithographed Qurʾān that he reprinted in 1854. On his return home from a sojourn in Mecca, he stopped in Singapore to purchase the necessary equipment and supplies. He also hired an assistant, one Ibrāhīm b. Ḥusayn. Azharī himself copied the text. Inasmuch as there was no official body to vet his work, he established his bona fides in the colophon. He declares that the Qurʾān was printed on a stone press "in the handwriting of the man of God Almighty, Haji [sic] Muḥammad Azhari son of Kemas Haji Abdallah, resident of Pelambang, follower of the Shafiʿi school, of the Ashʿarite conviction…." (cited in Proudfoot, Lithography, 129) Both editions sold well (several hundred copies) and Proudfoot notes that Azharī quickly recovered the cost of his investment.

The case of Morocco adds other insights to the study of the Islamic press. The kingdom of Morocco, while not subject to the sultan in Istanbul, nor necessarily under the writ of the Ḥanafī Shaykh al-Islām in Istanbul, nevertheless followed the Ottomans in matters pertaining to printing. The lithographic press had been introduced in 1864 and was immediately used for religious books, although the Qurʾān was not printed until 1879. Abdulrazak *(Kingdom)* notes that the way was smoothed

for printing because "those scribes who were also scholars were not prevented from copying books for printing. As a matter of fact, those scholars who were able to perform more than one aspect of printing were very attractive to printers and publishers."

Contemporary printings of the Qur'ān

Today, the Qur'ān is produced in a variety of shapes, sizes and degrees of production quality. The foremost printing centers are Cairo and Medina, but Qur'āns are produced in many Islamic countries and in the West. Since the 1920s, the Cairo edition, known as the King Fū'ad or "royal *(amīriyya)* edition," has become the standard edition in Egypt. Many Qur'āns printed elsewhere have been modeled on its calligraphic style, printing conventions and editorial notes contained at the end of the volume. ʿAbd al-Fattāḥ al-Qāḍī (Muṣḥaf) summarizes the history of this printing. He states that, because numerous non-standard editions were filling the market, the authorities at al-Azhar took the matter under consideration at this time. A committee was appointed, headed by Shaykh Muḥammad ʿAlī l-Ḥusaynī, the chief of the Egyptian Qur'ān reciters. Also on the committee were Ḥanafī Nāṣif, chief inspector of Arabic at the Ministry of Education, Muṣṭafā ʿAnānī, a teacher at Madrasat al-Muʿallimīn l-Nāṣiriyya, and Aḥmad al-Iskandarānī, also at the Nāṣiriyya school. These four persons determined to use the ʿUthmānic recension *(rasm),* adopting the recitation conventions of Ḥafṣ *ʿan* ʿĀṣim, also noting whether the passages were Meccan or Medinan (see CHRONOLOGY AND THE QUR'ĀN). They decided on the markings for sūras (see SŪRA), *ajzā',* and other guides to recitation. Al-Qāḍī remarks that, in spite of the editorial attentions of the committee and the officials who reviewed the work, there were "several shortcomings" *(baʿḍ al-hanāt).*

When the first printing (i.e. that of 1924) was sold out, the National Library of Egypt determined to bring out another edition. The Library's director wrote to the Shaykh al-Azhar asking him to set up a committee for this purpose. ʿAbd al-Fattāḥ al-Qāḍī himself was appointed along with Shaykh Muḥammad ʿAlī l-Najjār, Shaykh ʿAlī Muḥammad al-Ḍibāʿ and Shaykh ʿAbd al-Ḥalīm al-Basyūnī. They reviewed the classical literature on all aspects of vocalization and recitation (see GRAMMAR AND THE QUR'ĀN; FORM AND STRUCTURE OF THE QUR'ĀN; LANGUAGE AND STYLE OF THE QUR'ĀN; TRADITIONAL DISCIPLINES OF QUR'ĀNIC STUDY). The result was what al-Qāḍī calls the second printing. The 1924 edition remained the basis of subsequent editions in Egypt.

A particularly well-made example is the printing of 1938 issued by ʿAbd al-Ḥamīd Salīm at al-Maṭbāʿat al-Shams al-Islāmiyya, a private firm. The original committee revised it. The government, too, issued an edition reviewed by the identical committee in 1936 called the Fārūq edition, after the Egyptian king, Fārūq (r. 1936-52). The version was corrected by Shaykh Naṣr al-ʿAdlī, chief corrector at the government *(amīriyya)* press. In addition to the signatures of the five persons involved, the work bears the seal of the Shaykh al-Azhar.

During the 1960s, the Qur'ān Review Section *(qism faḥṣ al-maṣāḥif)* of the al-Azhar administration controlled Qur'ān printing. Formerly, page proofs (Fr. *epreuves,* and thus Ar. *al-barūfāt*) of new editions would be reviewed only once before a permit was issued to print and distribute. Later, it was decided that a review was needed after printing and binding were complete. This change occurred after it was discovered that some copies had been misbound. During 1963, the Section re-

viewed forty-nine Qurʾān proofs written in the familiar Egyptian hand, eleven in Maghribī script (see ARABIC SCRIPT) and two from Brill. During the period from May 2, 1963 to November 20, 1963, the Section issued twenty-two licenses to print new *maṣāḥif* after review of page proofs by a committee appointed by the Section. In the same period, seventeen licenses were issued following review of the printed and bound copies. On the other hand, the Section withheld licenses in nine instances, most of them imported editions. The Section also had responsibility for examining imported *maṣāḥif* and those being exported. For the first eleven months of 1963 the Section reviewed 276,623 copies of the complete Qurʾān or parts of it exported to twenty-eight countries, an average of 25,158 copies per month. In 1967, al-Azhar, in cooperation with the government press, set out to reissue the Qurʾān in a printed rather than lithographed format. The first of these appeared in 1976 and was followed by printings in various sizes, with a total of 200,000 copies. The following year a special press was established specifically for printing the Qurʾān and other religious works. It began operation in 1985 (www.alazhar.org/english/about/quran/htm).

In Saudi Arabia, Qurʾān publishing is centered at the King Fahd Holy Qurʾān Printing Complex. Established in 1985 near Medina, the Complex may be one of the largest printing operations in the world. According to the website (www.quran.net/hadis/Madinah), the press employs 1,500 scholars, artists and technicians. Fourteen million copies of the Qurʾān in Arabic and six other languages have been printed since its founding. They are distributed free to pilgrims, as well as to mosques and other Islamic institutions worldwide. Another website (www.saudinf.com/main/y3694.htm), the information of which is dated February 4, 2002, puts the number of printed copies of the Arabic Qurʾān at 145 million since 1985. The Complex has a capacity of ten million copies per year. It is administered by the Ministry of Islamic Affairs, Endowments, Call, and Guidance. The government is not the only producer of Qurʾāns in Saudi Arabia. The publishing house Dār al-Salām is dedicated to printing the authentic Arabic text, translation and brief commentaries and marginal notes (www. dar-us-salam.com/about_us.htm). It was established in Riyadh in 1986 under the direction of ʿAbd al-Mālik Mujāhid. Besides offices in the United States and Britain, it has branches in Australia, Bangladesh, Malaysia, Pakistan, Qatar and Sri Lanka.

Over the last forty years the Qurʾān has been printed in many places, from Morocco to Indonesia. Iraq's first printing was in 1950. The Directorate of Endowments *(awqāf)* selected as its model a manuscript, which was then photographed at the Survey of Iraq. The original manuscript had been a gift of the mother of the Ottoman sultan ʿAbd al-Azīz to Shaykh Junayd al-Baghdādī in 1861. The manuscript had been copied in 1859 by Ḥāfiẓ Muḥammad Amīn Rushdī. The *awqāf* directorate formed an editorial committee of five to prepare the text for printing. Included in the group was the inspector of the Survey press, Ḥāshim Muḥammad al-Baghdādī. The press' calligrapher copied the text, adding headings for the sūras, "adjusting some of the *āyas*" (*taʿdīl baʿḍ al-āyāt;* see VERSES) and adding an index to the sūras, a common feature in printed Qurʾāns. The committee read the text to ensure conformity with Ḥafṣ and the *rasm* of ʿUthmān. The arrangement of *ajzāʾ, aḥzāb* and sūra titles was modeled on the Istanbul edition copied by Ḥāfiẓ ʿUthmān. The numbering of the sūras was taken from the official Cairo edition. The

committee signed their names at the end of the text, as was customary with large projects. There is rich ornamentation on the first two pages of text. The second edition, based on the first, came out in 1966. It is beautifully printed and bound with the traditional Islamic flap cover. The colophon indicates that the work was directed by the Ministry of Endowments *(dīwān al-awqāf)* and contracted to Marār Trading Company of Baghdad for execution. The committee overseeing the edition was composed of Shaykh ʿAbdallāh al-Shaykhlī, Shaykh Kamāl al-Dīn al-Ṭaʿī, and Nūrī l-Qāḍī, director of Religious Charities at the *dīwān*. The work was printed in Germany by K.G. Lohse of Frankfurt.

The Qurʾāns of India and Pakistan are characteristically individual in appearance and are often the result of personal devotions rather than the product of corporate investment or organized outreach. The Qurʾān of 1964 published in Shillong, East Pakistan embodies these idiosyncrasies. It is an Arabic text with English translation and with running commentary by Khadim Rahmani. In his introduction he says, "This being the first edition and the process of printing being a difficult one, we had to engage a local press for doing the job, so as to maintain a constant vigil and guidance all along the printing. Yet in spite of our best efforts, some printing mistakes cropped up." The same difficulties are noted in *The divine Qurʾān* with Arabic text, translation into English and English commentary by S.M. Abdul Hamid published in Dacca in 1962. The English translation is typewritten and comments are typed footnotes. In his introduction Abdul Hamid laments the poor quality of the paper and printing: "Some of my friends desired better printing and paper. But those who are aware of the difficulties of publishing will admit that in Pakistan [sic] we are to depend on the paper supplied by the local mills, and printing cannot be controlled unless one has got his own press." Like Khadim Rahmani, Abdul Hamid calls on his readers to alert him to printing mistakes. Even the prestigious edition with English translation of Abdullah Yusuf Ali published serially in Lahore beginning in 1937 bears the translator's request for corrections.

Not all contemporary Indian or Pakistani editions are produced as small-scale projects. The *Alifī Qurʾān* printed in Bombay at al-Qurʾān Printers displays all the hallmarks of a well-financed project. The edition derives its name from the fact that each line of text begins with the letter *alif,* the first letter of the Arabic alphabet. It is also distinguished in that the *basmala* (q.v.), the invocation "In the name of God," at the head of each sūra "has been written in 113 different calligraphic styles which have evolved over the fourteen centuries of Islamic era [sic]." As with all major publishing projects, scholars reviewed the calligraphed copy for correctness. As is also customary with commercially printed Qurʾāns, the publisher claims copyright protection. Akber Khan, chairman of the company, is unusually explicit, threatening that "… any person or organization… [who]… attempts to reproduce the *Qurʾān alifī* in any size or form, its whole or part, runs the risk of legal prosecution."

As Lebanon is well-known for its large and sophisticated publishing industry, it is not surprising that the Qurʾān is frequently printed there. The Qurʾāns are handsomely printed and bound and available at modest prices. Editions are often accompanied by the commentaries of al-Bayḍāwī or al-Jalālayn, sometimes both. In the edition published by al-Maktab al-Islāmī (Beirut and Damascus 1984), Shaykh Muḥammad Aḥmad Kanʿān explained and corrected the commentaries as he saw fit. In the Dār al-Maʿārif edition (Beirut

1982), the qur'ānic text and the two commentaries were reviewed by the Qur'ān corrector *(mudaqqiq al-maṣāḥif)* of the Syrian Ministry of Endowments *(awqāf)*, Marwān Suwār. In the edition of Dār al-ʿIlm lil-Malāyīn (Beirut 1984) the commentator and corrector, Muḥammad Aḥmad Kanʿān, whose edition appeared from al-Maktab al-Islāmī in the very same year, wrote a biography of al-Bayḍāwī and an explanation of his *Anwār al-tanzīl*, and describes why he chose to give a précis of the text, while assuring the reader that he has changed little of the original and did so only to "tie concepts together."

Despite the rigid requirements for Qur'ān publishing in the government context, experiments with the text continue in an attempt to make the scripture more universally comprehensible. One such effort appeared in Jakarta in 1973. This state-authorized experiment aligned the Arabic text with a romanized version for Muslims who wished to read the text in Arabic but who did not know the Arabic script or the complexities of the rules of recitation *(tajwīd)*. The volume was produced by the Reading Institute of Religious Affairs in cooperation with the Committee on Publication of the Qur'ān and the publisher Bahrul Ulum. The introduction calls this the first attempt to romanize Arabic for Indonesians. The introduction says, "We hope that the Qur'ān in Latin can become a model for future improved romanization." In a memorandum from the Reading Institute to the printer, the firm of Sumatra in Bandung, the Institute asserts that the transcription is accurate and that the work may by printed for distribution.

Non-Ḥafṣ printings

In the foregoing discussion it is assumed that all the editions cited adhere to the Ḥafṣ reading *(riwāya)*. Occasionally the Qur'ān is available in other readings. There is a 1964 *muṣḥaf* from Algeria in the Warsh *riwāya* and another version from Morocco. A Tunisian edition of the Qālūn *riwāya* was published by al-Dār al-Tūnisiyya lil-Nashr. In the Sudan the Dūrī reading was printed in 1989 by the Department of Religious Affairs and Endowments *(awqāf)*.

Summary

A most thorough examination of the 400-year delay between Gutenberg's Bible and the first Qur'ān printed in Egypt is provided by Proudfoot and Robinson. Both take issue with the commonly held view of Orientalists that it was caused by an innate conservatism among the *ʿulamā'*. They adhere to a more complex and nuanced approach. Most importantly, they highlight the separate historical trajectories of the Ottoman lands and the eastern territories: Iran, India and southeast Asia. In the former, the press was expressly excluded from use until the early eighteenth century. In the latter, where political and religious controls were diffuse, i.e. where the clerical control was weakest, great preachers and teachers such as Sayyid Aḥmad Khān and the Deobandis (q.v.) were — while no less fervent than their coreligionists in western Asia and north Africa — without allegiance to a strong authority. Thus, they were able to exploit printing unhindered by government controls. Robinson points out that print was employed in India to promote Islam not only against the British but, more fundamentally, to strengthen the community in the face of the Hindu majority.

Proudfoot also emphasizes that printing religious texts was a lucrative business in south and southeast Asia and came to be viewed as such in the premier Islamic publishing center, Cairo. He speculates that one of the reasons for the failure of what

he calls early experiments or false starts in printing in Istanbul and Cairo is that the works with the greatest potential for profit were forbidden. Nonetheless, in no case did the press, whether lithographic or typographic, lead to major improvements in the technology of printing. Doubtlessly, lithography ushered in a revolution in Islamic communications, education and self-definition in India, but it was not adapted to the same ends in the central Islamic lands (see TEACHING AND PREACHING THE QUR'ĀN). Moreover, no technical innovations were developed in any Muslim region (see SCIENCE AND THE QUR'ĀN). Every improvement in printing technique was developed in the West and eventually adopted by Muslims to often conservative religious ends. Thus, the basic point that the press was a late arrival in the Muslim world is correct and its use was entirely dependent on imported techniques.

Prisoners

Persons physically detained by judicial authority in an institution for that purpose. The Qurʾān explicitly mentions prisoners *(al-masjūnūn)* only once, in Q 26:29, referring to Moses (q.v.). The noun "prison" *(al-sijn)* and its verbal forms are, however, found in the story of Joseph (q.v.) at Q 12:25 and in eight other places. Both of these narratives (q.v.) refer to the Pharaoh's (q.v.) prison in Egypt (q.v.), which some commentators described as "an underground place where a person was held without seeing or hearing anyone" (*Jalālayn,* 482, ad Q 26:29).

It seems unlikely that Mecca (q.v.) or Medina (q.v.) had any such dungeons during the time of Muḥammad, but some types of detention were known and rudimentary prisons in Medina and Baṣra are mentioned soon after Muḥammad's death. ʿUmar b. al-Khaṭṭāb reportedly had a house bought and turned into a prison in Mecca (Rosenthal, *Freedom,* 37-8; see CALIPH; COMPANIONS OF THE PROPHET); ʿAlī (see ʿALĪ B. ABĪ ṬĀLIB) likewise established a house prison in Baṣra (Schneider, *Imprisonment,* 167).

Generally, imprisonment is not counted as one of the qurʾānic punishments for crimes, even though Q 4:15 instructs that women who commit sexual indecency *(al-fāḥisha)* are to be held *(m-s-k)* in their homes (see ADULTERY AND FORNICATION; CHASTITY). There is a question as to whether such detention is equivalent to imprisonment, but the majority of scholars held that this verse was, in any case, abrogated (see ABROGATION) by Q 24:2, which decrees flogging (q.v.). Similarly, the Qurʾān refers to persons held in shackles *(riqāb, asīr)* but these are usually understood as referring either to slaves or captives (q.v.), not to prisoners (see also SLAVES AND SLAVERY).

The Prophet appears both to have detained someone on suspicion (*ḥabasa al-rajula fī tuhma,* Wensinck, *Concordance,* i, 411b) and also to have had someone bound *(rabaṭa)* to a pillar in the mosque (q.v.; Bukhārī, *Ṣaḥīḥ,* ii, 92 [44, Khusūmāt, 8]; Fr. trans. Houdas, *El-Bokhârî,* ii, 128), but there is no record of real imprisonment. The lack of clear qurʾānic and prophetic precedent has led to an occasional debate as to whether Islamic law sanctions imprisonment at all (Qurṭubī, *Jāmiʿ,* v, 85, ad Q 4:15; see LAW AND THE QURʾĀN; SUNNA).

Until the modern era, it seems that imprisonment was, in fact, little used by judges, usually restricted to a form of coercion (debtors' prisons) or conceived as an alternative or supplementary punishment. Political prisoners, however, appear to have been widely tolerated on the basis that the sultan has ultimate control over the freedom of his subjects (see KINGS AND RULERS; POLITICS AND THE QURʾĀN). The judicial reticence to enforce imprisonment may have its roots in a fundamental presumption of freedom as the natural state of humankind (see FREEDOM AND PREDESTINATION; OPPRESSION; OPPRESSED ON EARTH, THE). Along these lines, it is instructive to note that the Qurʾān describes Joseph's prison, in Q 12:25, with the same epithets usually reserved in the Qurʾān for hell: *ʿadhāb alīm,* a painful chastisement (see HELL AND HELLFIRE; REWARD AND PUNISHMENT). It also equates hell with prison directly in Q 17:8: "We have established hell for the unbelievers as a prison" (*wa-jaʿalnā jahannama lil-kāfirīna ḥaṣīran;* see BELIEF AND UNBELIEF). Al-Rāzī (d. 606/1210; *Tafsīr,* xx, 161, ad Q 17:8) distinguishes the two, emphasizing that while one will eventually be freed from an earthly prison, if only by death, hell "is a barrier *(ḥāṣir)* for people, surrounding them and offering no hope of release."

In contrast to judicial imprisonment, prisoners of war (q.v.) are discussed in Q 47:4, 8:67-9 and elsewhere. Such captives were sometimes pardoned or held for ransom but could also be enslaved or even killed. A minority argued that ransom or pardon were the only licit possibilities (Ibn Rushd, *Bidāya,* i, 382). Most modern interpreters embrace this minority opinion, thereby bringing rules on prisoners of war in line with international norms (Hashmi, Saving, 145).

Profane and Sacred

What pertains to the non-divine realm and to the divine realm, respectively. The English word profane is derived from the Latin expression *pro fanum* describing the area in front of the shrine or persons who came to a temple without being initiated. The Latin *profanus* was used to denote the opposite of *sanctus,* "divine," and *sacer/sacratus,* "dedicated to God," both by Roman as well as Jewish and Christian authors. In everyday English language, "profane" can denote something of lesser value and is sometimes synonymous with temporal, non-religious, and secular. Since the second half of the nineteenth century and especially after Durkheim's 1912 study on the primary forms of religious life, profane has gained importance as a critical term in describing the origins and essential characteristics of religions. Indeed, Durkheim defined as a critical element of any religion the classification of all things as either profane or sacred. Despite the frequent occurrence of profane in modern studies of religion, however, no coherent concept of this term has been developed in scholarly discourse, and several studies on the topic have raised doubts as to whether profane may be viewed as an applicable operative concept of religious studies at all. Also, studies of the religion of Islam and Islamic culture frequently refer to the "profane" without providing a definition. Therefore, before reflecting on the relevance of profane in the context of the Qurʾān, a brief summary of various aspects of the profane as discussed in religious studies is necessary.

Problems of definition

In its original meaning, the word "profane" suggests a distinction between two different kinds of space. Profane, at this semantic level, denotes the space that is not sacred or holy and that encircles a sacred area that is set apart from the profane by a boundary. According to Eliade, a religious person perceives the non-homogeneity of space as the contrast between a well defined sacred place — either an edifice constructed for religious purposes (see SACRED PRECINCTS; HOUSE, DOMESTIC AND DIVINE; KAʿBA; MOSQUE; CHURCH) or a natural phenomenon that is religiously interpreted (see NATURE AS SIGNS; MARVELS; MIRACLES) — and the indefinite, amorphous space around it. Only particular, precious objects and privileged persons are permitted to remain in a sacred place. Outside or in front of the sacred enclosure extends the domain of ordinary objects and persons — the profane space. In some cases, however, one particular place may be regarded as sacred and non-sacred at the same time even by believers of one religion. In addition, religious communities, whose followers are spread over large territories, often believe a variety of places to be sacred (see MECCA; MEDINA; JERUSALEM; GEOGRAPHY). Consequently, the

profane space outside a particular sacred enclosure may contain a number of other sacred places and is therefore not regarded as completely profane.

Although originating from a particular concept of space, the distinction between sacred and profane is not restricted to spatial categories (see SPATIAL RELATIONS). Reference to sacred objects, sacred time (q.v.), sacred states (see RITUAL PURITY), sacred acts (see PRAYER; FASTING; ALMSGIVING; PILGRIMAGE), and sacred personalities (see SAINT) in the context of various religions leads to the conclusion that there must be also profane objects, times, states, acts, and personalities (see EVERYDAY LIFE, THE QUR'ĀN IN; MATERIAL CULTURE AND THE QUR'ĀN; MEDIA AND THE QUR'ĀN). Profane time may be described as the ordinary time of everyday life without the occurrence of any event of religious significance (see HISTORY AND THE QUR'ĀN). Sacred periods are, for example, times of religious feasts during which critical events that occurred at an early point in a religion's history are celebrated and reenacted (see FESTIVALS AND COMMEMORATIVE DAYS). The believer changes from profane to sacred time by practicing particular rites. Also these rites contain elements of sacredness (see RITUAL AND THE QUR'ĀN). They may therefore be regarded as sacred acts and the time of ritual practice can be viewed as sacred time.

Durkheim has pointed to another relationship between time and the profane. He observed that the passing of time may reduce the degree of profaneness and enlarge the degree of sacredness attributed to a religious phenomenon as, with time, the veneration of successive generations of believers in that particular phenomenon grows. Durkheim also mentioned the idea of various degrees of sacredness implicit in this observation in a number of other places in his study on the primary forms of religious life, *Les formes élémentaires de la vie religieuse*.

A profane person is described as someone who belongs to the world outside a sacred space, who illegitimately enters sacred space, or who transgresses the law that protects the sacred ideas and rites of a particular religion. There is a certain ambiguity in the establishment of the sacred in that, on the one hand, it is not arbitrary as when, for example, the significance of a sacred place is grounded in its unique character, a character that no purely human action can confer on it. In other cases, however, space obtains religious meaning precisely because it is chosen on an arbitrary basis. Furthermore, there is no intrinsic reason why a particular phenomenon should be more sacred than another, or even sacred at all. The manifestation of the sacred (hierophany) and the profane (prophanophany) is the result of an intellectual process and is, as such, always artificial and subjective. This leads to a situation where what is sacred to the faithful of one religious tradition may be conceived of as profane by the faithful professing another (see POLEMIC AND POLEMICAL LANGUAGE).

A precise circumscription of the profane in abstract terms is difficult because of its amorphous nature and the existence of various systems of belief and designations of sacredness (see BELIEF AND UNBELIEF; RELIGIOUS PLURALISM AND THE QUR'ĀN). Therefore, the profane is often described in negative terms like non-religious or non-sacred. The sacred, however, is also defined in different ways based on various methodologies. This leads to uncertainty and inconsistency even when describing the profane as the opposite of the sacred. One occasion on which the border between the sacred and the profane becomes identifiable in a particular religion is the act of profanation. "To profane" means to

take something away from the space of a sanctuary, to bring something from the world of the gods or the one God to the human world or, on a more practical level, to ignore sacred orders or laws. An example would be disregarding the observance of sacred periods of time by acting in a manner that is forbidden by the regulations of a particular religion during that sacred period (see MONTHS). This distorted or deviant approach to the sacred, that is, treating it with irreverence or contempt, is conveyed by the root letters *l-ḥ-d* — especially in Q 7:180 and 41:40 (see HERESY; ERROR; ASTRAY), and implies a violation of the sacred, as in blaspheming the names of God or his signs (q.v.; see also CURSE; BLASPHEMY; OATHS; BREAKING TRUSTS AND CONTRACTS). Profanation can be understood as one form of communication between the sacred and the profane.

Another form of communication between the sacred and the profane has been observed in sacrifice (q.v.) with the victim as a medium between the two spheres (see CONSECRATION OF ANIMALS). Interestingly, in Roman texts the Latin verb *profanare* described the act of selling or distributing the meat of the sacrifice to the populace in front of the temple. Inquiries into the nature of profane and sacred often attempt to answer two essential questions, namely what is defined as profane or sacred in a particular religion, and what believers are permitted or forbidden (q.v.) to do with or within the profane or the sacred. Various studies on the sacred have identified exclusiveness (being superior in dignity and power, being a means of communication with gods or the one God, or of access between the human world and divine realities), separateness, otherness, and remoteness from the ordinary as common traits of the "sacred." On the contrary, the "profane" is often characterized as the non-sacred, non-religious, secular, ordinary, and as being of no religious significance, or of lesser value than the "sacred."

The profane, the sacred and the Qurʾān

The existence of the profane as an autonomous phenomenon can only be acknowledged by someone who does not accept the idea of the absolute transcendence of the divine (see GOD AND HIS ATTRIBUTES; ANTHROPOMORPHISM). If divine creation (q.v.) of all things is presupposed, the profane can exist only if sacredness is not attributed to the whole of divine creation. The Qurʾān postulates the role of God as the creator of all things (Q 6:102; 13:16; 39:62; cf. 15:86; 36:81, etc.). Yet because the qurʾānic text may be interpreted as discussing phenomena of the profane on several occasions it can be argued that it does not support the view that everything that is created by God must only be regarded as sacred. Divine origin appears, however, as an important argument for the sacred character of the Qurʾān in the holy book (q.v.) itself (see CREATEDNESS OF THE QURʾĀN; INIMITABILITY). It is stated that the Qurʾān represents those parts of the heavenly book (q.v.) that were sent down to the prophet Muḥammad in the Arabic language (q.v.; cf. Q 12:2; 20:113; 41:3; 42:7; 43:3-4; see also REVELATION AND INSPIRATION). Q 10:37 implies that the character of the qurʾānic text proves its divine origin. Even if humans and jinn (q.v.) would combine their efforts they could not bring forth a text like the Qurʾān (Q 17:88). Those who claim to have received another version of the heavenly book present but a distorted version of it (Q 3:78). God warns those who have broken the Qurʾān into fragments, and thus distorted its meaning, about the consequences of such an act (cf. Q 15:90-2; see CORRUPTION; FORGERY). A person's attitude towards the Qurʾān is a clear indicator of the distinction between believers and unbelievers (see BELIEF AND

UNBELIEF). Also, any doubts regarding the unique character of the Qurʾān and its revelation to Muḥammad (cf. Q 25:4-6) are tantamount to profanation (see OPPOSITION TO MUḤAMMAD). Those who deny the divine origin of the Qurʾān are threatened with severe punishment on the day of resurrection (q.v.; Q 6:27; see also LAST JUDGMENT; REWARD AND PUNISHMENT). Whereas the true believers recite the Qurʾān and follow its commandments (q.v.), the unbelievers dispute the Qurʾān and are therefore hated by God and those who believe in God and Muḥammad as his messenger (cf. Q 29:46; 40:35). Reading the Qurʾān is described as an act of worship (q.v.) and, as such, represents a broader sense of communication with God (Q 3:79; 17:78; 73:20). These and other passages underscore the fact that the Qurʾān may not be regarded as part of, or comparable to, profane writing. It goes without saying that no other scripture is attributed with these exclusive qualities of the Qurʾān (see TORAH; PSALMS; GOSPEL; SCRIPTURE AND THE QURʾĀN; PEOPLE OF THE BOOK; ORALITY AND WRITING IN ARABIA).

The sacred character of the Qurʾān is confirmed by religious practice in the course of history. Reading and reciting the holy book, or parts thereof, is mentioned as a form of communication with God in historiographical sources (see RECITATION OF THE QURʾĀN). For example, we know that representatives of the military elite of the Mamlūk era paid great numbers of religious scholars to recite the Qurʾān in schools, Ṣūfī convents *(khānqāh)* and public places to secure for themselves the blessing (q.v.) of God (*baraka;* see also POPULAR AND TALISMANIC USES OF THE QURʾĀN). Until today, religious cultus in the private sphere includes recitation of qurʾānic passages on many occasions like, for example, during Ramaḍān (q.v.), wedding celebrations and funerals as a form of communication with God. For various reasons, however, the Qurʾān was never a critical element of official liturgical practice in Islam (outside of the ritual prayer; see also FORM AND STRUCTURE OF THE QURʾĀN).

Qurʾānic terminology of sacred and profane

As mentioned above, the word "profane" can be traced back to the linguistic context of classical Roman, Jewish and Christian writers including the Church Fathers. When using "profane" in the description of respective concepts in other religions, one has to take into consideration semantic differences between the terminology of the language of the scholar examining a particular system of belief (meta-language) and, if known, the language of the people whose religion is the object of study (object language). Terms of object language and meta-language usually do not represent identical concepts. Therefore, scholars seeking to develop definitions of the profane, must refer not only to the self-definition of the concept as provided in the language examined, but should also analyze concepts similar in content though without any terminological link, utilizing comparative methods of religious studies, sociology, history, psychology, and other disciplines.

Different forms of the Arabic root *ḥ-r-m* have been understood in western scholarship as conveying the meaning of sacred and, as a result, words of this root occurring in the Qurʾān are often translated as "sacred" in English renditions of the Qurʾān. According to later Islamic tradition, "the sacred mosque" of the Qurʾān (*al-masjid al-ḥarām,* Q 2:144, 149-50, 191, 196; 5:2; 8:34; 9:7, 19, 28; 48:25, 27) denotes the Prophet's mosque in Mecca (q.v.); "the sacred hill" (*al-mashʿar al-ḥarām,* Q 2:198), where, according to tradition, Muḥammad stood and prayed to God, is understood to refer to the hill of Quzaḥ in Muzdalifa;

and "the sacred house" (*al-bayt al-ḥarām,* Q 5:2, 97; cf. 14:37) is identified as the Kaʿba. Later tradition explains the "safe sanctuary" (*ḥaram āmin,* Q 28:57; 29:67) as the area surrounding Mecca, and the *ḥurumāt* are God's sacred ordinances (Q 22:30). English translations of the verb *ḥarrama* can be "to forbid" or "to hallow/to make sacred": in certain passages the latter meaning is regularly preferred (e.g. Q 27:91), although in other places the term is always translated as "to forbid" (Q 2:173, 275; 3:93; 5:72, etc.).

The various forms of the root *ḥ-r-m* highlight the exclusiveness of the sacred in the Qurʾān. The places denoted as *ḥarām* or *ḥaram* may be entered only by believers in a particular state of consecration, *iḥrām* (see RITUAL PURITY). The word *iḥrām* does not occur in the Qurʾān. The nominal form *ḥurum,* however, stands in some qurʾānic passages for a number of believers who have assumed the sacred state (Q 5:1, 95-6). This state of *iḥrām* permits the believer to enter the sacred area and prohibits certain activities that were allowable before he or she assumed the *iḥrām* (sexual intercourse, ointments or perfumes, the wearing of sewn garments, hunting, etc.; see HUNTING AND FISHING; CLOTHING; ODORS AND SMELLS; SEX AND SEXUALITY). Entrance into the sacred areas and places is forbidden to those who are not in a state of *iḥrām*. Consequently, the *iḥrām* has to be assumed by every believer when performing the minor or/and the major pilgrimage *(ʿumra, ḥajj)*.

The fourth form of *ḥ-r-m* is also used to describe the entrance into a sacred period, such as a sacred month, although, again, this usage does not occur in the Qurʾān itself. The phrase, *al-shahr al-ḥarām,* "the sacred month," is mentioned in Q 2:194, 217; 5:2, 97, but the particular month referred to in these verses has not been identified with any certainty. Q 2:5, however, suggests that the month of pilgrimage, Dhū l-Ḥijja, is meant. Q 9:5 speaks of sacred months *(al-ashhur al-ḥurum),* Q 9:36 more precisely of four sacred months. Again, sacredness, as denoted by the word *ḥarām,* is defined by what is forbidden during the exclusive period of the sacred month. Entering the time of prayer also requires the state of *iḥrām*. Ritual purity and a prescribed manner of dressing are necessary preconditions of *iḥrām*. The sacredness of *iḥrām* is also underscored in various commentaries (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) on Q 17:80, where it is said that angels are present during the *iḥrām* that must be assumed before prayer.

Another root used to denote the sacred in the Qurʾān is *q-d-s*. Words of this root may convey the meaning of being far removed from, or free of, evil, impurity, or imperfection (see CLEANLINESS AND ABLUTION; IMPECCABILITY; GOOD AND EVIL). The degree of perfection or purity described by words of the root *q-d-s* is extraordinary. This may have led to an interpretation of *q-d-s* as "sacred" in English translation. The Qurʾān characterizes various phenomena with words derived from this root. In Q 20:12 and 79:16 the valley of Ṭuwā (q.v.), where Moses (q.v.) was informed by God about his prophethood (see PROPHETS AND PROPHETHOOD), is denoted as *muqaddas*. In Q 59:23 and Q 62:1 the term *al-qudus* occurs as an epithet of God. The phrase *rūḥ al-qudus,* "holy spirit" (q.v.), identified in the commentaries as Gabriel (q.v.), mentioned in conjunction with Jesus (q.v.), occurs in Q 2:87, 253, 5:110 and Q 16:102. "The sacred area" *(al-arḍ al-muqaddasa)* in Q 5:21 is understood to signify the Dome of the Rock in Jerusalem and the area surrounding it.

The opposite of *ḥ-r-m* in the sense of to "be, or become forbidden, prohibited, or sacred," is expressed by words derived

from the root *ḥ-l-l*. In some passages, words of the root *ḥ-l-l* denote what is, becomes or is declared permissible, lawful, or free from legal obligation (Q 2:228-30, 275; 3:50; 5:87, etc.; see LAWFUL AND UNLAWFUL). In other passages of the Qurʾān, words of this root may be understood as representing the meaning of profane. Q 5:2 commands the believers to avoid acts of profanation. The phrase used in this passage, *lā tuḥillū,* is often translated as "do not violate or render permissible something." Among that which shall not be profaned is the sacred month — *al-shahr al-ḥarām*. Attacking those who are on their way to the sacred house (understood as the Kaʿba) is also not permitted, and is tantamount to profanation. Leaving the state of *iḥrām* and returning to the profane state is expressed by the phrase *idhā ḥalaltum* in Q 5:2, where it is asserted that hunting is permissible for those who have returned to the profane state. In Q 9:37 the insertion of intercalary months (q.v.) is forbidden. The practice of declaring the month after Dhū l-Ḥijja sacred *(yuḥarrimūnahu)* during one year and, if the intercalary month is inserted, profane *(yuḥillūnahu)* during another year is rejected as a practice of unbelief *(kufr)*. In other Arabic sources, all months except those defined as sacred *(ḥarām, ḥurum)* are described as profane, using the word *ḥill*. Also, in certain cases the verb *aḥalla* may signify leaving the sacred state *(iḥrām)* or entering upon the profane months or the profane territories. When the believer finishes prayer he or she returns to the profane state *(ḥalāl)*. The tenth verbal form of *ḥ-l-l, istaḥalla,* means to deem permissible or lawful and, by extension, to profane or to desecrate something sacred. The term *muḥill* describes, among other things, a man who violates the sacred and commits an act of profanation.

The word *dunyā* (derived from the root *d-n-w,* "be, or become near"), sometimes rendered as "[profane] world" when encountered in modern texts, is found in many qurʾānic verses where it denotes the present world (the nearer dwelling place), as opposed to the hereafter, *al-ākhira* (the last dwelling place; see ESCHATOLOGY). *Dunyā* is often interpreted as signifying everything that befalls humans before death or every activity that is not aimed at the service of God. In both senses, *dunyā* may be taken to express aspects of the profane. When interpreted as the present world, however, *dunyā* may include such activities as rites and entrance into holy areas and sacred periods, all of which are part of a believer's life before the hereafter. *Dunyā*, then, cannot be understood as coterminus with the profane.

The word *ʿādī,* occasionally translated as profane when found in modern Arabic texts, does not occur in the Qurʾān in this sense.

Regulations of profane life in the Qurʾān

In the Qurʾān, phenomena of the sacred are not necessarily described by words derived from the roots *ḥ-r-m,* or *q-d-s*. For example, two places which were of religious significance before the advent of Islam (see PRE-ISLAMIC ARABIA AND THE QURʾĀN), al-Ṣafā and al-Marwa (Q 2:158; see ṢAFĀ AND MARWA), retained their sacred character in Islam but are not characterized as *ḥarām* or *muqaddas* in the Qurʾān. Moreover, if ritual practiced by believers at a particular place or directed towards it marks that place as "sacred," then not only the "sacred mosque," but also all mosques (Q 2:187; 9:17-8) and the *qibla* (q.v.), must be regarded as sacred.

Similarly, not all profane phenomena, as mentioned in the Qurʾān, are described by words derived from the roots *ḥ-l-l* or *d-n-w*. The Qurʾān contains rules that must be observed in profane, everyday life and that are not related to any ritual activity. Some

of these rules, for example, the prohibition of usury (q.v.; Q 3:130) or the regulations of inheritance (q.v.; Q 4:11-2, 176) were later cited and explained in the chapters on worldly matters *(muʿāmalāt)* of the manuals of Islamic jurisprudence (see LAW AND THE QURʾĀN), whereas ritual and religious observances were discussed in the *ʿibādāt* chapters (see FAITH). The distinction between *ʿibādāt* and *muʿāmalāt* may, therefore, be interpreted as expressing the distinction between the sacred and the profane spheres of life in the Qurʾān.

Prohibited Degrees

The various categories of persons a man may not marry. These are most completely laid out in Q 4:22-4, which read:

And marry not women whom your fathers married, except what is past... Prohibited to you are your mothers, daughters, sisters, father's sisters, mother's sisters, brother's daughters, sister's daughters, foster-mothers (see WET NURSING; LACTATION), foster-sisters, your wives' mothers, your step-daughters under your guardianship who are from women to whom you have gone in… wives of your natural sons, two sisters in wedlock at one and the same time… women already married except

those whom your right hands possess. Except for these, all others are lawful…

The Muslim jurists point out four types of impediment to marriage in this passage (see MARRIAGE AND DIVORCE; LAW AND THE QUR'ĀN): consanguinity (mother, daughters, sisters, paternal and maternal aunts, and nieces; see BLOOD AND BLOOD CLOT), fosterage (q.v.; foster-mother, foster-sisters), affinity by marriage (mothers-in-law, step-daughters under certain conditions) and sisterly conjunction (concurrent marriage to two women who are sisters to each other; see SISTERS). They also draw a distinction between temporary and permanent impediments. Also prohibited by this passage are free women married to other men — married female slaves are the exception (see SLAVES AND SLAVERY) — and widows (see WIDOW) of one's father (see also PARENTS; FAMILY; KINSHIP).

All women other than these *(mā warā'a dhālikum)* are, this passage tells us if taken in its literal *(zāhir)* meaning, marriageable (see LAWFUL AND UNLAWFUL; FORBIDDEN). The key phrase *mā warā'a dhālikum,* however, cannot, according to most jurists, be taken literally, since there are definitely other categories of unmarriageable women beyond those mentioned in Q 4:22-4. For example, Q 24:3 makes unchasteness *(zinā)* an impediment to marriage (see ADULTERY AND FORNICATION): the unchaste person may not marry a chaste person and a chaste person may not marry an unchaste person. An unchaste person who wishes to marry has only two options: he or she may only marry another unchaste person or an idolater (see POLYTHEISM AND ATHEISM; IDOLATRY AND IDOLATERS; COMMUNITY AND SOCIETY IN THE QUR'ĀN). As Q 24:26 declares, the (morally) wicked are for their like to marry, and the morally (good) are for their like to marry (see GOOD AND EVIL; ETHICS AND THE QUR'ĀN). In Q 5:5, however, the Qur'ān permits Muslim men to marry women from among those who were recipients of earlier scriptures (see PEOPLE OF THE BOOK; SCRIPTURE AND THE QUR'ĀN). Other additional categories of unmarriageable women are: women who would through the contemplated marriage become fifth wives, women who are in the state of *'idda* (temporarily excluded from marriage following divorce; see WAITING PERIOD), women who are unmarriageable as a result of the prohibition of sexual intercourse during the pilgrimage (q.v.; see also RITUAL PURITY) and women who were previously divorced by the man with whom marriage is contemplated and have not married in the interval (see SEX AND SEXUALITY).

Finally, it should be noted that Muslim jurists in general have treated the terms *ummahāt,* "mothers," in Q 4:22-4 to be inclusive of all degrees *(darajāt)* of maternal ascent (mother, grandmother, etc.) and *banāt,* "daughters," to be inclusive of all degrees in the daughter line of descent (daughter, granddaughter, etc.). A quick glance at later commentaries of the Qur'ān — such as the mammoth and singularly comprehensive commentary of Fakhr al-Dīn al-Rāzī (d. 606/1210; see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) — reveals a large variety of controversial issues pertaining to the subject of prohibited degrees. Al-Rāzī enumerates and discusses well over forty issues pertaining to Q 4:22-4 alone, quite apart from the other qur'ānic passages that have a bearing on this subject. In his treatment of each issue, he lays out the position of the different schools and then advances arguments for his own position in the manner typical of medieval Muslim legal scholasticism (see also THEOLOGY AND THE QUR'ĀN).

Promise see COVENANT

Proof

Clear evidence that brings about the conviction that something is true, as well as its ordered presentation. Several qurʾānic terms are used to refer to the divinely provided evidence for God's existence, unicity, power and guidance, and in particular for the truth (q.v.) of his messengers' claims (see MESSENGER). Among the most common is the adjective *bayyina* (pl. *bayyināt*), "clear, evident, manifest," usually used as a substantive, "clear evidence or proof." Occurring primarily in Meccan passages (cf. Suyūṭī, *Muʿtarak,* i, 460-3; see CHRONOLOGY AND THE QURʾĀN), its range of meanings may be illustrated from those cases where it occurs in conjunction with "sign" (*āya,* see SIGNS): "clear signs" include evidentiary miracles (q.v.; e.g. Q 2:211; 17:101; 28:36), visible reminders of God's guidance and wrath (Q 3:97; 29:35; see ASTRAY; FREEDOM AND PREDESTINATION; ANGER) and especially the verses (q.v.) of a revealed scripture (e.g. Q 24:1). A messenger comes with *bayyināt* (Q 2:87 is the first of many examples), may be said to be [relying] "upon a *bayyina*" (e.g. Q 6:57), or even himself be a *bayyina* (Q 98:1, 4).

It is the nature of *āyāt bayyināt* to be illuminating (Q 57:9) and convincing (cf. Q 2:99): Pharaoh's (q.v.) magicians were prepared to accept torment and martyrdom after the *bayyināt* brought by Moses (q.v.) constrained them to faith (q.v.; Q 20:72-3). While the qurʾānic hope, however, is that human beings may perhaps be reminded by the *āyāt bayyināt* (Q 24:1), the sad reality is that they are regularly met with divisiveness (e.g. Q 2:253), doubt (Q 40:34; see UNCERTAINTY), proud rejection (e.g. Q 29:39; 40:83; see PRIDE; ARROGANCE; LIE; BELIEF AND UNBELIEF), scorn (e.g. Q 5:110; 28:36; 61:6; see MOCKERY) and hostility (e.g. Q 22:72; see OPPOSITION TO MUḤAMMAD; ENEMIES). Some believe but then backslide (e.g. Q 2:209; 3:86). Because the unbelievers "deny the undeniable" (Mir, *Dictionary,* 128) they wrong themselves (e.g. Q 9:70) and will have no claim on God's mercy (q.v.) when cast into the fire (Q 40:49-50; see HELL AND HELLFIRE).

Yet more powerful than the clarity of the *bayyina* is the "brilliant manifestation" of the *burhān* (Gardet, Burhān), which, in Q 4:174, is set in parallel with "a clear light" (q.v.; cf. Ethiopic *berhān* for "light"). A *burhān* may be a vision (Q 12:24 according to many commentators and haggadic parallels; see VISIONS; DREAMS AND SLEEP) or an evidentiary miracle brought by a messenger (Q 28:32). *Mushrikūn,* i.e. those who associate other gods with God — or choose other gods instead (cf. Q 21:24; 27:64; 28:75) — as well as Jews and Christians (Q 2:111; see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY) are challenged to produce a *burhān* for their claims; but anyone who associates other gods with God emphatically has none (Q 23:117).

Other vocabulary covers some of the same ground. Those who claim knowledge of the unseen (see HIDDEN AND THE HIDDEN) are asked to bring a *sulṭān mubīn* (Q 52:38), here an "authoritative proof" (see AUTHORITY). Moses in particular is said to have been sent with "a clear warrant" (*sulṭān mubīn,* e.g. Q 11:96) while God

has not sent down a *sulṭān* warranting idolatry (e.g. Q 3:151; see IDOLATRY AND IDOLATERS). God-given evidences viewed as proofs that ought to give insight to the mind (see INTELLECT) and heart (q.v.) may be called *baṣāʾir* (sing. *baṣīra*). They include the scriptures (Q 7:203; 28:43; see BOOK), signs in the creation (q.v.; Q 6:104; cf. 6:97-9; see NATURE AS SIGNS) and evidentiary miracles (Q 17:101-2).

Thus far this article has emphasized proof as manifest evidence rather than as demonstrative argument. The qurʾānic use of the word *ḥujja* includes the latter, twice referring to a *ḥujja* that comes from or belongs to God: in Q 6:(75-)83 it is the argument for God's unicity *(tawḥīd)* given to Abraham (q.v.; a passage highlighted in al-Ashʿarī's apology for *kalām* reasoning; see THEOLOGY AND THE QURʾĀN; PHILOSOPHY AND THE QURʾĀN); while in Q 6:148-9 God is said to have "the conclusive argument" over against human conjecture *(ẓann)*. Indeed, a human *ḥujja* may turn out to be null and void (Q 42:16). It should also be noted that, in addition to the qurʾānic lexemes connoting "proof," the Qurʾān contains arguments for its own veracity. For example, in his *Muqaddima* (285), Ibn Naqīb (d. 698/1298) deals with the *argumentum a fortiori* (i.e. Q 36:78-9, 81; 21:22). Perhaps the most comprehensive discussion of the diverse qurʾānic "proofs" or "arguments" is provided by Jalāl al-Dīn al-Suyūṭī (d. 911/1505), who lists the various types of rhetorical devices the Qurʾān employs to counter its detractors (cf. Suyūṭī, *Muʿtarak,* i, 456-63; id., *Itqān,* iv, 60-6; see also DEBATE AND DISPUTATION).

Finally, *falsafa* adopted the word *burhān* as the technical term for a methodologically rigorous demonstration leading to certain truth. Thus, in Arabic translation Aristotle's *Posterior analytics* became *Kitāb al-Burhān*. The same title is found in a number of Christian apologetic treatises in Arabic, beginning with that of the Nestorian *mutakallim* ʿAmmār al-Baṣrī (fl. third/ninth cent.) which may be seen as a response to the Qurʾān's challenge: *hātū burhānakum* (Q 2:111; see POLEMIC AND POLEMICAL LANGUAGE; CHRISTIANS AND CHRISTIANITY).

Property

Wealth, goods, things owned. There is no formal, legal concept of property in the Qurʾān, nor is there a technical equivalent to the Latin *res* of Western tradition. There is, however, a general concern with property as is clearly indicated, for example, by the verses outlining the punishment for theft (q.v.; Q 5:38; see also BOUNDARIES AND PRECEPTS; CHASTISEMENT AND PUNISHMENT; LAW AND THE QURʾĀN). Roughly speaking, there are three contexts in which the Qurʾān addresses property: commercial, private and general.

In a commercial context, there are several terms used to designate property, the object generally being "goods,"

"commodities" or "possessions." In Sūrat Yūsuf (Q 12, "Joseph"), the term *biḍāʿa,* "goods," is used to refer to the property allegedly stolen by the brothers of Joseph (q.v.; Q 12:62, 65; see also BROTHERS AND BROTHERHOOD; BENJAMIN). In Sūrat al-Aʿrāf (Q 7, "The Heights"), the Madyanites (see MIDIAN) are warned "not to cheat people out of their property" (*lā tabkhasū l-nāsa ashyāʾahum,* Q 7:85; see CHEATING) — *ashyāʾ* (sing. *shayʾ*) meaning literally "things." The same admonishment is repeated in Q 26:183 (cf. Q 11:85). Also, the term *māl* (pl. *amwāl;* see below) is used in a commercial context in the sense of "countervalue."

In a private context, the verb *malaka,* "to own, possess," is used to denote property ownership (see POSSESSION AND POSSESSIONS). Several verses, for example, Q 4:3, 24, 25, 36, Q 16:71, Q 23:6 and passim, speak of "what your right hands possess" *(mā malakat aymānukum),* the reference being to private ownership of (female) slaves (see SLAVES AND SLAVERY). In Q 24:61 private ownership of real estate is conveyed via the phrase "that whose keys you own/possess" *(mā malaktum mafātīḥahu).*

In a general context, three terms are used to denote property or ownership. The first, *rabb,* "owner, lord," is used extensively to refer to God and his dominion or ownership over the universe (see LORD; KINGS AND RULERS; POWER AND IMPOTENCE). God is, *inter alia,* the "owner of the universe" (*rabb al-ʿālamīna,* Q 1:2; 2:131; 5:28; 6:45, and passim), the "owner of the heavens and the earth" (q.v.; *rabb al-samāwāti wa-l-arḍi,* Q 13:16; 17:102; 18:14; 19:65, and passim; see also HEAVEN AND SKY), "the owner of this [sacred] house" (*rabb hādhā l-bayti,* Q 106:3; see HOUSE, DOMESTIC AND DIVINE; PROFANE AND SACRED). While *rabb* in this sense refers almost exclusively to God, there is at least one instance where exegetes note its application to a human being, namely Potiphar (in Q 12:23; see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL).

Another term used for property in general is *khayr.* The basic meaning of *khayr* being "good," this term imputes an emphatically positive meaning to property and casts it in its most favorable light, i.e. "fortune." Speaking, for example, in the context of inheritance (q.v.), Q 2:180 refers to the property left by the deceased as *khayr.* Other verses mildly chide human beings, however, for over-indulging their (presumably natural) love of property. Q 100:8 refers to humans as "extremely severe in their love of property" *(li-ḥubbi l-khayri la-shadīdun).* And Q 38:32 records the prophet Solomon's (q.v.) penitent self-criticism for having placed his love of property *(ḥubb al-khayr)* over the remembrance (q.v.) of his lord (see also REPENTANCE AND PENANCE).

The term used most extensively, however, for property in general is *māl* and its plural *amwāl.* While this term also carries the meaning of "money" or "cash" in the restricted sense, liquid currency was the exception rather than the norm in first/seventh century Arabia (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; MONEY; NUMISMATICS; for further on this, see Foss, Coinage, for the review of a recent survey of the state of early Islamic coinage). As such, classical lexicographers and exegetes commonly define *māl* as "whatever men possess of *dirham*s, or *dīnār*s, or gold (q.v.), or silver (q.v.), or wheat, or barely or bread, or beasts, or garments or pieces of cloth, or weapons or other things," in short, "anything one possesses" (see ANIMAL LIFE; HIDES AND FLEECE; CLOTHING). On this understanding, *māl* is used in numerous, overlapping contexts, commercial, private and other. Q 2:177 praises those who "give of their property *(al-māl),*" while Q 18:46 informs us that, "property *(al-māl)* and

progeny (see CHILDREN) are the adornments of life" (see GRACE; BLESSING). Q 2:155 affirms that God will "try humanity with… deficits in property *(naqṣ mina l-amwāli),*" while Q 64:15 declares property *(amwāl)* itself to be a "test" (*fitna;* see TRIAL; TRUST AND PATIENCE; POVERTY AND THE POOR; OPPRESSED ON EARTH, THE). Q 34:37 warns that neither property *(amwāl)* nor progeny bring closeness to God. And Q 69:28 records the lamentations of those who thought their property would avail them on the day of reckoning (see LAST JUDGMENT).

Again, these references to property are broad, flexible and grounded in Arabian custom and common usage. They do not constitute a formal doctrine, let alone a legal definition of property. The latter would have to await the legal acumen and jurisprudential imagination of the jurists and legal theorists of the formative period of Islamic law. See also WEALTH.

Prophets

see PROPHETS AND PROPHETHOOD

Prophets and Prophethood

Those individuals who receive divine revelation and their collective vocation. In Arabic (as in Hebrew), the word for "prophet" is *nabī,* plural *nabiyyūn* and *anbiyāʾ.* These forms occur seventy-five times, apart from the term *nubuwwa,* "prophethood," which occurs five times. Much more prevalent, however, is the term *rasūl* (pl. *rusul*) which denotes a "messenger" (q.v.) or "apostle" (of God). Messengers are mentioned more than 300 times. A messenger is also referred to as *mursal,* which, together with its plural form *(mursalūn),* occurs more than thirty times. The form *risāla* (pl. *risālāt*) denotes a prophetic "message" and occurs ten times, mostly in the plural form.

Prophets and messengers

As in the New Testament, in which apostles seem to rank higher than prophets (e.g. 1 *Cor* 12:28-31; cf. *Eph* 3:5; 4:11), in the Qurʾān, too, *rasūl* seems to be somewhat more elevated than *nabī.* This is indicated, to begin with, by the fact that whenever both titles appear together, *rasūl* comes first, which may suggest that a messenger is more important than a prophet. Thus Q 22:52 describes Satan's (see DEVIL) attempts to lead astray (q.v.) any apostle *(rasūl)* or prophet *(nabī)* who was sent before Muḥammad. Muslim commentators say that in this verse *rasūl* stands for a prophet having a message, a book (q.v.), which must be delivered, whereas *nabī* has no such message or book. More specifically, al-Bayḍāwī (d. prob. 716/1316, according to van Ess; cf. Gilliot, Textes, 223-4) says that a *rasūl* is a prophet who establishes a new *sharīʿa* (religious law; see LAW AND THE QURʾĀN), whereas a *nabī* is one who continues an old one. This means, al-Bayḍāwī says, that *rasūl* is more distinguished than *nabī,* and therefore there were more *anbiyāʾ* ("prophets") than *rusul* ("messengers"). Or, he adds, a *rasūl* receives revelation from an angel, whereas a prophet experiences revelation only in dreams (Bayḍāwī, *Anwār,* ad Q 22:52).

The titles *rasūl* and *nabī* may also overlap and even refer to one and the same person,

in which case *rasūl* again comes first. This applies to Moses (q.v.), about whom it is stated that he was "an apostle, a prophet" (*wa-kāna rasūlan nabiyyan,* Q 19:51). The same is stated about Ishmael (q.v.; Q 19:54) as well as about Muḥammad (Q 7:157). The combination of the two in one person is perhaps designed to indicate that this person belongs to the messengers among the prophets.

But not every messenger of God is also a prophet. God is said to have made the angels "messengers *(rusul)* flying (q.v.) on wings, two, and three, and four…" (Q 35:1; see ANGEL). As God's messengers, the angels bring good tidings to Abraham (q.v.) about the birth of Isaac (q.v.) and Jacob (q.v.), and they also destroy the people of Lot (q.v.; e.g. Q 11:69-81). God sends angels to guard people as well as to receive their souls (see SOUL) at the moment of death (cf. Q 6:61; 7:37). Their primary role as God's messengers is to inspect and write down the deeds of every human being (cf. Q 10:21; 43:80; see GOOD DEEDS; EVIL DEEDS).

The Qurʾān is careful to draw a clear line between God's celestial and human messengers. Prophets can only be mortals, because angels, the Qurʾān says (Q 17:95), do not walk about on earth (q.v.) as do its ordinary dwellers — for which reason people cannot grasp their physical presence. Therefore God does not send down angels as his prophets.

Angels do, however, bring down prophetic revelations in their capacity as God's messengers but they do not deliver them directly to the people, only to individual human prophets (see REVELATION AND INSPIRATION). The Qurʾān mentions the "word" *(qawl),* i.e. prophetic message, of one particular "honored messenger" (*rasūl karīm,* Q 69:40; 81:19). Some exegetes have identified this "messenger" with the angel Gabriel (q.v.) whose mission was to reveal the Qurʾān to Muḥammad. But Gabriel's task as God's messenger is not confined to prophetic revelations. He is also said to have been referred to in Q 19:19, in which God's messenger comes to Mary (q.v.) to give her a son (Jesus; q.v.). Even the *rasūl* mentioned in the story of the golden calf (Q 20:96; see CALF OF GOLD) was said to have been Gabriel. Most qurʾānic prophets/messengers are known from the Bible, but there are also some whose origin is somewhat obscure (for details about the individual prophets see Tottoli, *Biblical prophets;* see SCRIPTURE AND THE QURʾĀN).

The status of the prophets

Prophets (including the messengers among them) belong to the highest rank among various virtuous groups of human beings. These groups are listed in Q 4:69, in which their position in paradise (q.v.) is described: "And whoever obeys God and the messenger, these will be [in paradise] with the prophets and the truthful *(al-ṣiddīqūn)* and the martyrs (*al-shuhadāʾ;* see MARTYRS) and the righteous *(al-ṣāliḥīn),* upon whom God has bestowed favors (see GRACE; BLESSING)." As for the prophets, their presence among their respective peoples — for example, among the Children of Israel (q.v.) — is perceived as a sign of God's benefaction *(niʿma)* unto these peoples (Q 5:20).

God started sending prophets after humankind became separated, when the initial state of righteousness was replaced by moral corruption (q.v.; see also FALL OF MAN; GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING). This, at least, is how the exegetes explain Q 2:213 in which it is stated: "The people were [united in] one nation *(umma wāḥida),* then [they became divided, and] God sent the prophets to bear good tidings (see GOOD NEWS) and to warn (see WARNER)…" (see PARTIES AND FACTIONS).

The prophets emerge in succession. The Qurʾān says that they were sent "one after another" (*qaffaynā,* Q 2:87), or "one by one" (*tatrā,* Q 23:44). Moreover, the prophets belong to the same genealogical descent. Thus Q 19:58 reads: "These are the prophets on whom God bestowed favors, of the seed *(dhurriyya)* of Adam (see ADAM AND EVE), and of those whom we carried with Noah (q.v.), and of the seed of Abraham and Israel (q.v.)…." The same idea is conveyed in Q 6:84, in which it is stated about Abraham: "And we gave to him Isaac and Jacob; each did we guide, and Noah we guided before, and of his descendants *(dhurriyyatihi)* David (q.v.) and Solomon (q.v.) and Job (q.v.) and Joseph (q.v.) and Moses and Aaron (q.v.)…."

The fact that the prophets are said to have been "guided" by God means that they represent a divinely chosen pedigree, as is indicated, for example, in Q 3:33-4: "Surely God chose *(iṣṭafā)* Adam and Noah and the house *(āl)* of Abraham and the house *(āl)* of ʿImrān (q.v.) above all beings. [They are] the offspring *(dhurriyyatan)* one of the other…." The chosen prophetic lineage begins here with Adam, which indicates that he, too, is considered a prophet. The house of ʿImrān stands for Moses (the son of the biblical Amram), but can also refer to Jesus, whose mother Mary is considered a member of that house.

The verb *iṣṭafā,* which signifies here divine election (q.v.), recurs in more verses dealing with prophets, as well as with angels. Thus in Q 22:75 it is stated that God chooses *(yaṣṭafī)* messengers *(rusul)* from among the angels and from among the people. The same verb is used to describe election of individual prophets, such as Abraham (Q 2:130), Moses (Q 7:144) and Mary (Q 3:42), as well as of kings (see KINGS AND RULERS), namely Saul (q.v.; Ṭālūt, Q 2:247).

Another verb, *ijtabā,* also denotes divine election of prophets, such as Adam (Q 20:122), Abraham (Q 16:121), Joseph (Q 12:6) and Jonah (q.v.; Q 68:50). Less frequent is the verb *ikhtāra* that denotes the same type of divine election (Q 44:32) and describes the election of Moses (Q 20:13). The latter's election is also conveyed by the verb *iṣṭanaʿa* (Q 20:41).

The divine election of the prophets provides them with abilities not shared by ordinary humans. This pertains mainly to knowledge of the unseen (*ghayb;* see HIDDEN AND THE HIDDEN). Thus in Q 72:26-7 it is stated that God knows the unseen and he does not reveal his secrets to anyone, except to an apostle with whom he is well pleased *(irtaḍā)*. In Q 3:179 we are told again that God does not make people acquainted with the unseen, but he "chooses *(yajtabī)* of his apostles whom he pleases."

The guided and divinely chosen prophets possess moral virtues that render them immune to sin and misbehavior (see IMPECCABILITY). Thus, in Q 3:161 it is stated that it is not attributable to a prophet that he should act unfaithfully *(yaghulla)*. The election of the prophets has made them belong to the righteous *(mina l-ṣāliḥīn),* a fact stated regarding several of them, e.g. Zechariah (q.v.), John (see JOHN THE BAPTIST), Jesus, Elijah (q.v.; Q 6:85) and others. John is described in Q 3:39 as honorable *(sayyid)* and chaste (*ḥaṣūr;* see CHASTITY) and a prophet from among the righteous *(mina l-ṣāliḥīn)*. Some of them are also described as truthful *(ṣiddīq),* as is Abraham (Q 19:41) and Idrīs (q.v.; Q 19:56). Ishmael is described in Q 19:54 as "truthful in his promise" *(ṣādiq al-waʿd)*.

Some prophets possess unique traits that mark their singular status among the rest of the prophets. Abraham is described in Q 4:125 as one whom God took as a friend (*khalīl;* see FRIENDS AND FRIENDSHIP). Moses is described as pure (*mukhlaṣ,*

Q 19:51) and as one whom God brought near in communion (*wa-qarrabnāhu najiyyan,* Q 19:52) and with whom God spoke (*kallama,* Q 4:164). This is the origin of Moses' title, *kalīmu llāh,* by which he is known in Islamic tradition. Tradition also elaborates on Moses' communion *(munājāt)* with God.

Later tradition has provided Muḥammad with a title of his own, namely, *ḥabību llāh* "God's beloved," which together with the previous prophets, completes the unique group of prophets having an intimate relationship with God. In fact, Muslim tradition has elaborated on Muḥammad's honorific titles and produced long lists of them (see NAMES OF THE PROPHET).

The existence of distinguished groups among the prophets is a fact that the Qurʾān declares openly. Q 17:55 states that God has made some of the prophets to excel others and in Q 2:253 the same statement is repeated, alongside names of some of the excelling prophets:

> We have made some of these apostles to excel the others, among them are they to whom God spoke *(kallama),* and some of them he exalted by [many degrees of] rank; and we gave clear arguments (*bayyināt;* see PROOF) to Jesus son of Mary, and strengthened him with the Holy Spirit (q.v.)….

In Q 33:7 some prophets are singled out as those with whom God made a special covenant (q.v.; *mīthāq*): "And when we made a covenant with the prophets and with you [Muḥammad], and with Noah and Abraham and Moses and Jesus son of Mary, and we made with them a firm covenant."

A special group of God's messengers is mentioned in Q 46:35, being called "those endowed with constancy *(ūlū l-ʿazm)*." The Qurʾān says that they have borne patiently (the hardships of their mission; see TRIAL) and Muslim exegetes are not unanimous as to who they were. Some say that they were those who established a law *(sharīʿa)* among their nations, like Noah, Abraham, Moses, and Jesus, as well as Muḥammad. Others hold that they were those who suffered the hardest trials or the deepest remorse (see REPENTANCE AND PENANCE). In the latter case, they include Jacob, Joseph, Job and David, in addition to the five prophets already mentioned. But in spite of divine election, the prophets always remain God's servants (*ʿibād;* e.g. Q 37:171; see SERVANTS), for which reason people are not servants to them but to God (Q 3:79).

Modes of prophetic revelation

Various verbs convey the idea of prophetic revelation, the most frequent being those derived from the root *n-z-l,* namely, *nazzala* and *anzala*. They denote an act of bringing down, which means that the prophetic revelation is perceived as being sent down from heaven (see HEAVEN AND SKY). Occasionally, the revelation itself is described as descending *(nazala, tanazzala),* without specifying the agent that causes it to come down. A common name of the qurʾānic revelation is *tanzīl* (e.g. Q 20:4; 26:192; 32:2, etc.), i.e. a "bringing down." A less common name is *amr,* "affair," which in Q 65:12 is said to have been descending *(yatanazzalu)* through the seven heavens (see NAMES OF THE QURʾĀN). Muslim exegetes explain that the "affair" stands here for divine revelation that is being brought down from heaven to earth.

Revelation originates in God, as is indicated in verses in which God speaks in the first person: "I have sent down [the Qurʾān]" (Q 2:41), and more often: "We have sent down [the Qurʾān]" (e.g. Q 44:3; 76:23; 97:1). But revelation does not come down directly to the prophets. The intermediate agents are the angels. God sends them down with the revelations, as is im-

plied in Q 16:2 : "He sends down *(yunazzilu)* the angels with the spirit (q.v.; *al-rūḥ*) by his commandment on whom he pleases of his servants…." Muslim exegetes hold, however, that only Gabriel is meant here, the angel who was commissioned to bring down prophetic revelations, or the "spirit," to Muḥammad. In Q 16:102 the agent bringing down *(nazzalahu)* the qurʾānic revelation is himself called "the Holy Spirit" *(rūḥu l-qudus),* which is again interpreted as an epithet of Gabriel. The same applies to Q 26:193, in which the revelation is brought down *(nazala bihi)* by the "faithful spirit" *(al-rūḥ al-amīn)*. Similarly, the exegetes say that it is Gabriel who says to the Prophet in Q 19:64: "We do not descend [with revelations] but by the command of your lord (q.v.)."

As far as Muḥammad's own prophetic experience is concerned, the process of sending down revelations ends at the Prophet's heart (q.v.; *ʿalā qalbika*) and Gabriel is mentioned explicitly as the one who brings it down to him (Q 2:97; see MUḤAMMAD). The Qurʾān provides specific, though not entirely coherent, details of the time when the revelation began coming down to Muḥammad. This took place either on a "blessed night" (Q 44:3) or on *laylat al-qadr* (Q 97:1; see NIGHT OF POWER) or during the month of Ramaḍān (q.v.; Q 2:185). The exegetes explain that all passages refer to one and the same night, namely *laylat al-qadr* that falls in Ramaḍān.

There are various terms denoting the actual revelation that is being brought down. Most often it is called "signs" (q.v.; *āyāt*), which commentators on the Qurʾān have identified with the qurʾānic verses (q.v.; e.g. Q 57:9, etc.). Elsewhere, what God sends down is called *sūra* (q.v.; Q 9:86, etc.), a term that came to be identified with the qurʾānic chapters and, most obviously, the term *qurʾān,* too, stands for something which God sends down (Q 76:23). Another locution standing for a whole unit of revelations being sent down is *kitāb,* a "book, scripture" (e.g. Q 7:2; see BOOK). Specific scriptures, namely the Torah (q.v.) and the Gospel (q.v.), are also described as being sent down by God (Q 3:3-4), which implies that all monotheistic scriptures represent the same divine revelation. Metaphorical terms are also used to describe a descending revelation, one of which being the somewhat obscure title *furqān* (Q 3:4; see CRITERION). Some exegetes have explained it in the sense of a scripture distinguishing between truth and falsehood. Light (q.v.; *nūr*) is also a name for the guiding revelation that God has sent down (Q 64:8).

Another widely used verb denoting the act of providing revelation is *awḥā,* with *waḥy* as the noun denoting the revelation itself. The verb means to "prompt, inspire, suggest" but it is not confined to prophetic revelations. Occasionally it simply means to "instruct," or "command," as in Q 8:12 in which God instructs *(yūḥī)* the angels to support the believers. In Q 99:4-5 God instructs *(awḥā)* the earth to tell its story on the day of resurrection (q.v.), and in Q 16:68 he instructs *(awḥā)* the bee to make hives in the mountains (see ANIMAL LIFE; HONEY), etc. Even when prophets are addressed, the verb *awḥā* can be a request to act rather than imparting a text for recitation (see RECITATION OF THE QURʾĀN). Thus in Q 23:27 God instructs *(awḥaynā)* Noah to make the ark (q.v.) and in Q 7:117 God prompts *(awḥaynā)* Moses to cast his rod (q.v.). An act designated as *awḥā* can also be performed by humans. In Q 19:11, for example, Zechariah signals *(awḥā)* to his people that they should glorify God in the morning (q.v.) and evening (q.v.; see also GLORIFICATION OF GOD; DAY, TIMES OF). In most cases, however, *awḥā* stands for an act performed by God himself, as in Q 41:12. Here God reveals *(awḥā)* the "affair" *(amr)* of the seven heavens, i.e.

enjoins his commandment on the heavens. But what God reveals mostly as *waḥy* is the prophetic inspiration itself. This is the case in Q 42:52 in which God reveals *(awḥaynā)* a "spirit" *(rūḥan)* to his prophet. The spirit is interpreted here as standing for the qurʾānic revelation. This accords with Q 53:4-5, in which the Qurʾān is explicitly described as a revelation *(waḥyun)* that is revealed *(yūḥā)*. In Q 35:31 it is the "book" that has been revealed as *waḥy*.

The revelation *(waḥy)* can be a prolonged process, as is the case with the revelation to Muḥammad. He is advised not to make haste before the process is completed (Q 20:114). When the reception of the *waḥy* is completed the Prophet is supposed to recite it in public (Q 29:45). The same process of *waḥy* was experienced also by previous prophets, as stated in Q 4:163: "Surely we have revealed *(awḥaynā)* to you as we revealed to Noah, and the prophets after him, and we revealed to Abraham and Ishmael and Isaac and Jacob and the tribes (see TRIBES AND CLANS), and Jesus and Job and Jonah and Aaron and Solomon…."

The *waḥy* does not always come directly from God to the prophets. An angel acting as God's messenger may deliver the divine *waḥy* to them. This comes out in Q 42:51, in which it is stated: "It is not for any mortal that God should speak to them, except by inspiration *(waḥyan)* or from behind a veil (q.v.; *ḥijāb*), or by sending a messenger *(rasūl),* to reveal *(fa-yūḥiya)* by his permission what he will." As was mentioned above, the exegetes say that the messenger delivering the *waḥy* is Gabriel.

As for the contents of what is being revealed as *waḥy,* in some cases it consists of the sheer idea of monotheism (see GOD AND HIS ATTRIBUTES; POLYTHEISM AND ATHEISM). Thus in Q 21:108 it is stated: "Say: It is only revealed *(yūḥā)* to me that your God is one God." In other cases the *waḥy* revolves around specific legal obligations (see BOUNDARIES AND PRECEPTS). God reveals *(awḥaynā)* to the previous prophets "the doing of good and the keeping up of prayer (q.v.) and the giving of alms" (Q 21:73; see ALMSGIVING). The Qurʾān repeats several times the injunction given to the Prophet to follow *(ittabiʿ)* what has been revealed *(yūḥā)* to him (e.g. Q 10:109; 33:2, etc.).

In Q 17:39 the content of the *waḥy* is defined as "wisdom" (q.v.; *ḥikma*), which seems to refer to moral lessons which must be derived from the history of past generations (q.v.). This is confirmed by the fact that in Q 11:49 the *waḥy* consists of "accounts of the unseen" *(anbāʾ al-ghayb),* i.e. stories of the history of past generations which are now being revealed to the Prophet. The stories deal with sinful nations that God punished and destroyed because they had rejected their prophets (see PUNISHMENT STORIES).

There are also other, less frequent, terms of prophetic revelation, one of which being to "cast" *(alqā),* as in Q 40:15. Here God is said to have cast *(yulqi)* "the inspiration *(rūḥ)* by his command upon whom he pleases of his servants." In Q 28:86 it is the book that has been cast unto the Prophet, while in Q 77:5 some unspecified persons are mentioned who are described as "casting the reminder" *(fa-l-mulqiyāti dhikran)*. The exegetes say that the "reminder" signifies the prophetic inspiration and that those who cast it are the angels who deliver it to God's prophets and messengers.

"To give" *(ātā)* may also signal prophetic revelation, as is the case in Q 2:87, in which God "gives" Moses "the book."

Another verb, *alhama* (from *l-h-m*), also denotes divine inspiration but not specifically prophetic. Thus in Q 91:8 it is indicated that God has inspired *(fa-alhamahā)* the human soul to understand what is right and wrong for it.

Dreams *(ruʾyā)* may also function as pro-

phetic visions (q.v.; see also DREAMS AND SLEEP). Abraham found out by such a dream that he had to sacrifice (q.v.) his son (Q 37:105) and Muḥammad knew from his own dream that he was about to enter Mecca (q.v.) safely (cf. Q 48:27). Another vision of the Prophet, which is mentioned in Q 17:60, was interpreted as referring to his nocturnal journey and ascension (q.v.; *isrāʾ/miʿrāj*).

The Qurʾān is also aware of false revelations that seem prophetic but come from Satan, which means that only a thin line separates genuine divine inspiration from satanic temptation. This is demonstrated in the common vocabulary that the Qurʾān uses for the divine as well as the satanic spheres. Thus satans *(shayāṭīn),* like God, can deliver *waḥy* (Q 6:112, 121) which is deceiving in its varnished outward appearance. But the more common verb denoting satanic inspiration is *waswasa,* to "whisper" (e.g. Q 7:20; 20:120). Satan also casts *(alqā)* his own verses into genuine revelations received by every prophet "but God annuls that which Satan casts" (Q 22:52). Moreover, the satans can be God's messengers but he sends *(arsalnā)* them against the unbelievers (Q 19:83).

The distinction between a true prophet and other persons endowed with unique spiritual powers is also stated very clearly, in passages stressing that Muḥammad's prophetic message is not the words of a "soothsayer" (*kāhin*), nor of a poet (see POETRY AND POETS; SOOTHSAYERS) nor a *majnūm,* i.e. a madman possessed by demons (cf. Q 52:29; 69:41-2; 81:22; see INSANITY).

Imposters are severely denounced. Q 6:93 states: "And who is more unjust than he who forges a lie (q.v.) against God, or says: It has been revealed *(ūḥiya)* to me; while nothing has been revealed to him, and he who says: I can bring down *(sa-unzilu)* the like of what God has brought down *(anzala)*?" The exegetes say that this passage refers to persons like Musaylima (q.v.) and others who pretended to receive revelations similar to those of Muḥammad.

Signs and miracles

God not only provides his messengers with the prophetic inspiration but he also stays with them when they deliver his message, as is formulated in Q 72:27-8: "For surely he makes a guard to march before [his messenger] and after him, so that he may know that they have truly delivered the messages of their lord…." The "guards" accompanying the prophets are said to be the angels and elsewhere it is asserted that God is always aware of what his apostles are doing (Q 23:51). God's presence renders his apostles immune to dangers (Q 27:10) and his help *(naṣr)* is always ensured for them (Q 12:110; cf. 40:51; see PROTECTION; VICTORY).

God also provides his prophets with concrete means designed to increase their power of persuasion. These are called *bayyināt,* i.e. clear "proofs" or "arguments." Occasionally the exegetes interpret this term as "miracles" (see MIRACLES; MARVELS). For example, in Q 2:87 (see also Q 2:253), God provides Jesus with the *bayyināt* and strengthens him with the Holy Spirit. The exegetes say that the latter stands for Gabriel and that the *bayyināt* are miracles which Jesus performed. Such miracles are described in Q 3:49, where Jesus says to the Children of Israel:

I have come to you with a sign *(āya)* from your lord, that I create *(akhluqa)* for you out of dust like the form of a bird, then I breathe into it and it becomes a bird with God's permission, and I heal the blind and the leprous, and bring the dead (see DEATH AND THE DEAD) to life with God's permission, and I shall inform you of what you

eat and what you have stored in your houses….

But miracles do not render the prophets divine, as is stressed especially with respect to Jesus. The Qurʾān insists that he is "only an apostle *(rasūl)* of God and his word *(kalimatuhu)* which he cast *(alqāhā)* unto Mary, and a spirit *(rūḥ)* from him. Believe therefore in God and his apostles, and say not: Three" (Q 4:171; see TRINITY; WORD OF GOD; SPEECH).

Other prophets also brought such *bayyināt* to their own nations, alongside of revealed scriptures, but they were rejected (Q 3:184; 35:25). Muḥammad, too, has brought (unspecified) *bayyināt* to his people but they have discarded them as sheer magic (q.v.; Q 61:6). The term *burhān,* "proof," is also used to signal what Muḥammad has brought to his audience (Q 4:174).

The listeners, however, not only reject the *bayyināt* but demand to receive a "sign" *(āya)* of their own choice (Q 2:118; 21:5, etc.). Often they request, for instance, to see an angel being sent down with Muḥammad (Q 23:24; 25:7, etc.), or a treasure descending upon him (Q 11:12), or a fountain being made to gush forth from the earth for them (Q 17:90). The Qurʾān responds to such demands by asserting that God's messengers can only produce signs with God's permission (Q 40:78) and that they are just mortals (Q 14:11). They may even have wives and children (Q 13:38; see WIVES OF THE PROPHET; FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE). Elsewhere it is stressed that they are merely humans *(rijāl)* receiving revelation (e.g. Q 12:109; 16:43, etc.), and that they eat food and go about in the markets (q.v.; Q 25:20).

But God may at times send a sign *(āya)* in response to a specific request. This was the case with the prophet Ṣāliḥ (q.v.) who was sent as a warner to Thamūd (q.v.). They asked him for a sign, and he produced a she-camel *(nāqa)*. They were ordered to share their water with her at appointed intervals (Q 26:154-5) or, according to another version (Q 11:64), to leave her to pasture on God's earth and not harm her. But Thamūd slaughtered the she-camel (Q 11:65), for which reason God no longer sends signs on demand (Q 17:59).

Nevertheless, Moses, too, brought a sign *(āya)* in response to the demand of Pharaoh (q.v.; Q 7:106; 26:31). The sign was that the rod of Moses was turned into a serpent and his hand became "white to the beholders." The audience denied the double sign as evident magic (Q 7:107-9; 26:31-4). But these two signs were given to Moses in advance, upon his first encounter with God (Q 20:17-23; 27:10-2; 28:31-2). They formed part of nine (not ten, as in the Hebrew Bible) signs which God gave to Moses and they are therefore not just *āyāt* but rather *āyāt bayyināt* (Q 17:101; cf. 28:36) as well as *burhān,* "proof" (Q 28:32). Elsewhere a list of all the signs, i.e. the calamities, is provided (Q 7:130-5; see PLAGUES).

Prophets and scriptures

The core of the prophetic revelation consists in revealed scriptures that are sometimes (e.g. Q 3:184) referred to as *zubur* (sing. *zabūr*) or *ṣuḥuf* (sing. *ṣaḥīfa*). The latter term signifies "scrolls" (q.v.), as, for example, in Q 87:19, in which the scrolls *(ṣuḥuf)* of Abraham and Moses are mentioned.

The most frequent name for a revealed scripture is *kitāb,* namely, something written down, or simply a "book." A *kitāb* is always of high solemnity. It may stand for the written list of deeds which determines the destiny of all people on the day of resurrection (e.g. Q 39:69) or the pre-existent divine book (see HEAVENLY BOOK) in which the pre-ordained law of God has been recorded. This is, at least, how Muslim exegetes explain the locution "book of God" in Q 33:6 (also Q 30:56), which, so

they hold, is identical with the "guarded tablet" (*lawḥ maḥfūẓ;* see PRESERVED TABLET) mentioned in Q 85:22. The Qurʾān is said to have formed part of this tablet (Q 85:21), so that this revealed book is actually a reflection of a celestial text. Another locution which is taken to refer to the original celestial version of the universal book is *umm al-kitāb* mentioned in Q 43:4. Here it is stated that the Qurʾān is in the *umm al-kitāb* "with us, truly elevated, full of wisdom." The exegetes maintain that it is another name for the tablet, the origin of all revealed books.

The divine origin of the qurʾānic revelation comes out in the idea that no one can alter God's words as revealed to Muḥammad: "Recite *(utlu)* what has been revealed *(ūḥiya)* to you of the book of your lord; there is none who can alter his words…" (Q 18:27). God sent down the book to Muḥammad without any "crookedness" (*ʿiwaj,* Q 18:1), so that the revealed Qurʾān has remained faithful to the original message of the divine book (see CORRUPTION; FORGERY; REVISION AND ALTERATION). In other words, the book was sent down to Muḥammad "with the truth *(bi-l-ḥaqq)*" (e.g. Q 39:2). It has also been sent down as a "blessed" *(mubārak)* book (e.g. Q 6:155; 38:29) and as a book "conformable" *(mutashābih)* in its various parts (Q 39:23). Not just the Qurʾān but any other revealed book is of the same divine origin, for which reason the Qurʾān recognizes the authenticity of previous revelations, saying that previous messengers *(rusul),* too, brought their peoples "clear arguments *(bayyināt),* scriptures *(zubur)* and the illuminating book" (*al-kitāb al-munīr,* Q 35:25; see also Q 3:184; 57:25).

Being an essential component of the prophetic message, the term *kitāb* often appears side by side with the term *nubuwwa,* "prophethood," and both are perceived as components of a divine legacy that runs in a genealogical line of a chosen pedigree. Thus in Q 29:27, the prophethood *(nubuwwa)* and the book are said to have remained in the seed *(dhurriyya)* of Abraham, Isaac and Jacob. The same is said of the offspring of Noah and Abraham (Q 57:26). The book is therefore a divine legacy that God has bequeathed *(awrathnā)* to whom he chose of his servants (Q 35:32). Of the previous prophets, Moses in particular is mentioned as one to whom God gave the book (Q 2:87). His book is described as "a light and a guidance to the people" (Q 6:91).

Apart from the term *kitāb,* previous scriptures are also mentioned by their individual titles, such as the Torah *(tawrāt)* of the Israelite prophets (Q 5:44), David's Psalms (q.v.; *zabūr,* Q 4:163; 17:55) and Jesus' Gospel *(injīl)*. About the latter it is stated that it was full of guidance and light (Q 5:46).

The prophets and Muḥammad

The revelation of the book was a new experience for Muḥammad (Q 42:52) and the Arabs (q.v.), too, never had messengers sent to them before him, nor had they any revealed books (cf. Q 34:44). This means that as an Arab, Muḥammad did not have any genealogical relationship to the previous prophets. The gap between him and them was also a chronological one, as is indicated in Q 5:19, in which it is stated that the qurʾānic Prophet emerged "after a cessation *(fatra)* of the [mission of the] apostles *(rusul)*…."

Nevertheless, the Qurʾān quite easily includes Muḥammad in the honorable group of prophets. The most straightforward way to achieve this is simply to declare Muḥammad to be "one of the apostles" (*mina l-mursalīna,* e.g. Q 2:252). This universalized perception of Muḥammad's mission leads to the conclusion that he is actually not the first of the

messengers *(rusul)* on earth (Q 46:9) and that apostles already passed away before him (Q 3:144). This means that Muḥammad is a link in the same chain of prophets to which prophets like Jesus also belong. Before the latter other messengers had already passed away (Q 5:75).

As for Muḥammad's own revealed book, the Qurʾān, it is indeed an Arabic scripture (Q 12:2; 13:37) but is nevertheless perceived as closely related to previous scriptures. Time and again the Qurʾān stresses that Muḥammad's book confirms, or verifies *(muṣaddiq),* what was revealed before it. For example, in Q 3:3-4 we read: "He has sent down to you the book with truth, verifying that which is before it, and he brought down the Torah and the Gospel aforetime…." This means that all scriptures represent identical links in the same successive chain of revelations. This idea recurs in the qurʾānic description of Jesus who is said to have verified the Torah that was revealed before him (Q 5:46). Since the Qurʾān itself verifies the Torah as well as the Gospels, the Jews and the Christians alike, whom the Qurʾān addresses as the "People of the Book" (q.v.), are commanded on their part to believe in the Qurʾān (Q 4:47; see also Q 2:41).

The equality of all scriptures as links in the same successive chain of revelations entails that true believers are only those who believe in all the revealed books, without exception (see BELIEF AND UNBELIEF). This idea, which is encountered already in the New Testament (in *Acts* 24:14 Paul believes in all things which are written in the Torah and in the books of the prophets), is stated explicitly several times. For example, Q 2:136 says:

Say: We believe in God and [in] that which had been sent down to us, and [in] that which was revealed to Abraham and Ishmael and Isaac and Jacob and the tribes, and [in] that which was given to Moses and Jesus, and [in] that which was given to the prophets from their lord, we do not make any distinction between any of them, and to him do we submit.

The same is repeated in several other places in which it is stressed that true righteousness is based on belief in the previous prophets and in their books as well as in the angels and in the last day (e.g. Q 2:177, 285; 4:136; see ESCHATOLOGY; FAITH). At the last judgment (q.v.) people will be asked about their belief in the messengers who had come to them (Q 28:65; 39:71). The previous revelations have remained relevant to the Muslims, as is implied in Q 3:194. Here an Islamic prayer is addressed to God, imploring him to "grant us what you have promised us by your apostles."

The conviction that one should believe in all the revealed books means that one should also believe in Muḥammad's Qurʾān. Therefore those who only believe in some books, like the Jews who denied the Qurʾān, are not true believers and they are denounced in Q 2:85 as it is commonly understood. Moreover, the duty to believe in Muḥammad's own revelation has become the core of the religion of all prophets. This finds expression in the notion that God already commanded all the previous prophets to believe in Muḥammad. In Q 3:81 we read:

And when God made a covenant *(mīthāq)* with the prophets: Surely, the book and the wisdom that I have given you — then an apostle comes to you verifying that which is with you, you must believe in him, and you must aid him. [God] said: "Do you affirm and accept my compact in this [matter]?" The [prophets] said: "We do affirm."

[God] said: "Then bear witness, and I [too] am of the bearers of witness with you."

The exegetes explain that the apostle in whom the prophets are commanded to believe is Muḥammad. The Arabian messenger of God has thus become the peak of the prophetic chain of revelations and this is also demonstrated in his title: "Seal *(khātam)* of the prophets" (Q 33:40).

The prophets were not only required to believe in Muḥammad, but some were also familiar with his titles, which were included in their own revealed scriptures. Thus in Q 7:157 it is stated that Muḥammad was mentioned as a "gentile" (*ummī* [q.v.]; see also ILLITERACY) in the Torah and the Gospel. Jesus, it is said in Q 61:6, announced the appearance of an apostle who would come after him, his name being Aḥmad. This quest for universal legitimacy is found already in the New Testament (*Matt* 2:23), where prophets predict that Jesus will be called the Nazarene.

Since belief in Muḥammad has always been at the core of the religion of the previous prophets, it comes as no surprise that the Israelite prophets to whom the Torah was revealed are described as "those who were Muslims" (*alladhīna aslamū,* Q 5:44). Furthermore, the religion that was enjoined upon the prophets was the same as the one given to the Muslims, a fact stated in Q 42:13: "He has enjoined upon you *(sharaʿa)* for religion what he prescribed to Noah and that which we have revealed to you and that which we enjoined upon Abraham and Moses and Jesus…."

The uniformity of the religion of the prophets, however, is abandoned in several passages in which Abraham's religion is set apart from the rest of the prophets and a direct line is drawn between him and Muḥammad. Such passages seem to have been designed to highlight the Arabian identity of the qurʾānic revelation and to dissociate its message from that of the Jewish and the Christian scriptures. The dissociation is achieved by insisting that Abraham was neither Jew nor Christian but rather a *ḥanīf* (q.v.). As a *ḥanīf* he has become a model for Muḥammad, whom God commands to follow Abraham's religion (Q 2:135; 4:125; 16:123, etc.; see also RELIGIOUS PLURALISM AND THE QURʾĀN).

The scope of the prophetic mission

The prophets are sent each to his own nation *(umma)* or people *(qawm)*. This notion is expressed in verses asserting that each nation has its own prophets sent to it (Q 10:47; 16:36) and that every apostle was only sent "with the language *(lisān)* of his people" (*qawmihi,* Q 14:4; see ARABIC LANGUAGE). Thus Moses, for example, says to his people *(li-qawmihi)* that he is God's messenger to them (Q 61:5). Moreover, some prophets are described as the "brothers" of the peoples to whom they were sent (Q 26:106, 161, etc.; see BROTHER AND BROTHERHOOD). This is again an appropriate precedent for Muḥammad, the Arabian prophet who has brought to his nation an Arabic Qurʾān (e.g. Q 12:2). His Arabic Qurʾān was revealed to him that he may warn "the mother of cities" (*umm al-qurā,* Q 42:7; see also Q 6:92), which is Mecca, according to the exegetes.

But unlike the previous prophets, Muḥammad appears in some other passages as a universal prophet whose mission goes beyond ethnic boundaries. In Q 4:79 he is said to have been sent "to mankind *(lil-nās)* as an apostle," and in Q 21:107 he is sent with mercy "to the worlds *(lil-ʿālamīn)*." His audience includes the jinn (q.v.; Q 46:30), to whom messengers of their own kind were also sent (Q 6:130).

The aims of the prophetic mission

The purpose for which the qurʾānic prophet has been sent is to make God's religion, i.e. Islam, prevail over all religions (Q 9:33; 48:28; 61:9). This may involve waging war (q.v.) on the infidels, as is stated about the preceding prophets in Q 3:146: "And how many a prophet has fought *(qātala),* and with them were many worshippers of the lord; so the [prophets] did not become weak-hearted on account of what befell them in God's way (see PATH OR WAY), nor did they weaken, nor did they abase themselves; and God loves the patient." But in other qurʾānic passages the religious campaign is based on preaching and is focused on the mere idea of monotheism and on the refutation of polytheism *(shirk)*. Several times the previous prophets are described as imploring their respective peoples to "serve nothing *(allā taʿbudū)* but God…" (e.g. Q 41:14). God also tells Muḥammad himself that this was the main mission of the prophets who were sent before him (Q 21:25, etc.), and he himself says to his audience: "I am only a mortal like you; it is revealed to me that your God is one God, therefore follow the right way to him and ask his forgiveness; and woe to the polytheists" (*waylun lil-mushrikīna,* Q 41:6; see also Q 18:110).

On the other hand, the mission of the prophets has also a grimmer aspect, namely, to warn stubborn unbelievers of their fate in hell (see HELL AND HELLFIRE), in case they do not repent (see REPENTANCE AND PENANCE). But the warning usually goes hand in hand with good tidings of paradise for those who believe. Thus Q 6:48, for example, asserts that God's messengers were sent as "announcers of good news and givers of warning *(mubashshirīna wa-mundhirīna),* then whoever believes and acts aright, they shall have no fear (q.v.), nor shall they grieve" (see JOY AND MISERY; see also Q 4:165; 18:56, etc.). The same twofold message was entrusted to Muḥammad (Q 33:45, 48:8).

The messengers are not responsible for the success or failure of their message and the Qurʾān repeatedly asserts that nothing is incumbent upon the apostles except a "plain delivery" (*al-balāgh al-mubīn,* e.g. Q 16:35). Furthermore, the apostles are not even capable of changing the fate awaiting the unbelievers: "It is not [fit] for the Prophet and those who believe that they should ask forgiveness (q.v.) for the polytheists, even though they should be near relatives (see KINSHIP), after it has become clear to them that they are inmates of the flaming fire" (Q 9:113; cf. 9:80, 84; see INTERCESSION).

On the last judgment, believers and unbelievers will realize that the apostles had spoken the truth about their respective fate in paradise or hell (Q 7:43, 53; 36:52). The prophets themselves will be present on the scene of judgment and will act as witnesses (*shuhadāʾ,* sing. *shahīd*) as to who is righteous and who is a sinner (e.g. Q 4:41; 7:6; 16:84, 89; see WITNESSING AND TESTIFYING; SIN, MAJOR AND MINOR). But according to Q 5:109, the messengers will not dare testify and God himself will know what the people were doing.

But mercy (q.v.; *raḥma*) is also a significant component of the prophetic message and emanates mainly from the guidance that is inherent in the revealed book. This is stated in Q 16:89: "We have revealed the book to you explaining clearly everything, and a guidance *(hudan)* and mercy and good news for those who are Muslims." Being the ultimate source of guidance, some prophets are occasionally described as imāms (see IMĀM) who guide the people by God's command (Q 21:73) and their revealed book, too, is called "*imām* and mercy" (Q 11:17; 46:12). Guidance is achieved by the actual teaching of the book and therefore Muḥammad is often

described as a messenger teaching "the book and the wisdom" (e.g. Q 2:129, 151; 3:164).

A prophet is not only a spiritual guide but a judge as well, whose adjudication is based on the revealed book. This was the case among the Jews for whom the prophets judged according to the revealed Torah (Q 5:44; 2:213) and the same is said about Muḥammad to whom God revealed the book "that you may judge between people by means of that which God has taught you" (Q 4:105; see JUDGMENT).

The reception of the prophets

The nations to whom prophets have been sent are expected to receive them with consent and obedience (q.v.). As Q 4:64 puts it: "And we did not send any apostle but that he should be obeyed *(li-yuṭāʿa)* by God's permission…." But the prophets were received with anything but obedience. They were mocked (e.g. Q 15:11; see MOCKERY) and called liars (e.g. Q 3:184; 22:42; 23:44; 35:25), and their message was denied (Q 11:59), and denounced as "medleys of dreams" (*aḍghāthu aḥlām,* Q 21:5). The prophets were rejected mainly on account of their being ordinary human beings (sing. *bashar,* e.g. Q 14:10; 17:94; 36:15; 64:6), and were accused of being mere poets (sing. *shāʿir*), magicians (sing. *sāḥir*) and madmen (sing. *majnūn;* e.g. Q 21:5; 51:52). Some of them were received with skeptical questions (Q 2:108), and above all, their audience expressed devotion to the tradition of the ancestors (Q 43:23).

Prophets have also suffered actual persecution, such as the threat of expulsion (e.g. Q 14:13), and also death at the hands of their own peoples, as was the fate of the Israelite prophets (e.g. Q 2:61, 91). The sufferings of the previous prophets are recounted to reassure Muḥammad that his own distress resembles that of his precursors (see OPPOSITION TO MUḤAMMAD). As stated in Q 41:43: "Nothing is said to you but what was said indeed to the apostles before you…." Not only humankind but also the satans rose as enemies to the prophets. In Q 6:112, God says: "And thus did we make for every prophet an enemy (see ENEMIES), the satans from among humans and jinn…." Satan's enmity is seen in this that he makes rebellion (q.v.) look attractive to nations to whom apostles were sent (Q 16:63). Rejection is met with retribution (see RETALIATION; VENGEANCE). Time and again the Qurʾān describes how nations that disobeyed (see DISOBEDIENCE) their prophets were punished by severe calamities, a motif recurrent mainly in the "punishment stories" (q.v.). Rejection of messengers renders retribution inevitable, as stated in Q 7:94: "And we did not send a prophet in a town but we overtook its people with distress and affliction in order that they might humble themselves." The divine logic that comes out here is that God is enemy to anyone who is "the enemy of God and his angels and his apostles and Gabriel and Michael" (cf. Q 2:98). Retribution is the direct result of the fact that God has promised to protect the prophets (cf. Q 14:47), and is defined as God's way (*sunna,* q.v.) with respect to those who persecute the prophets (Q 17:76-7). Destruction is never arbitrary or unjust, and is only inflicted on towns that have been warned in advance by their prophets (Q 17:15; 28:59). The prophets and their close entourage are always saved from the collective disaster (Q 10:103, etc.).

Stories of prophets

Apart from general declarations about the prophets, the Qurʾān provides stories about individual ones (see NARRATIVES). These stories always form part of the discourse between God and Muḥammad. God tells Muḥammad about them or requests Muḥammad to tell his audience about

them. This literary structure (see LITERARY STRUCTURES OF THE QUR'ĀN) stems from the idea that the prophetic revelation experienced by the previous prophets is the same as that of Muḥammad and that all of them are sent to fulfil the same mission among humankind. Therefore, the allusions to the previous prophets are essentially designed to provide a legitimizing as well as an encouraging precedent for Muḥammad's own prophetic challenge. Many of the stories draw on biblical themes. Some appear in a condensed form, while others, such as those of Abraham, Moses, and Jesus, are given in elaborate detail and even with subtle revisions of the biblical accounts. Elements not known from the Bible appear mainly in the punishment stories.

The Qur'ān itself is aware of the affinity between the stories about the prophets and the biblical literature, for which reason the Jews and the Christians are called upon to confirm the truth of the qur'ānic allusions to the previous prophets. This is at least how Muslim exegetes explain the meaning of Q 16:43 (see also Q 21:7) which says: "And we did not send before you any but humans to whom we sent revelation, so ask the people of the reminder if you do not know." The exegetes say that the "people of the reminder" *(ahl al-dhikr)* are scholars (see SCHOLAR) well versed in the Torah and the Gospel, which means that they know best about the history of the prophets from their own scriptures.

"Reminder" is also the label used for the qur'ānic stories about the prophets which Muḥammad recites to his audience, as with the story of Dhū l-Qarnayn (Q 18:83; see ALEXANDER). Nevertheless, the term is also the name of the entire revelation (Q 16:44, etc.), probably because it alludes quite frequently to stories of past generations. In fact, the injunction *udhkur fī l-kitāb,* "mention in the book," is frequently used in passages prompting the qur'ānic Prophet to remind the audience of stories about previous prophets (Q 19:16, 41, etc.).

Narrative units about prophets, which Muḥammad is expected to recite, are also called *naba'* (pl. *anbā'*), "report, tidings" (see NEWS). For example, the Prophet is instructed to recite *(utlu)* the *naba'* of the two sons of Adam (Q 5:27; see CAIN AND ABEL), the *naba'* of Noah (Q 10:71) and of Abraham (Q 26:69). These units are also being "related" *(naquṣṣu)* to him upon being revealed (Q 7:101; 11:100, 120; 18:13; 20:99). They are also referred to as *anbā' al-ghayb,* "stories of the unseen" because they happened long ago and the Prophet did not witness them in person (Q 3:44, of Mary; Q 11:49, of Noah; Q 12:102, of Joseph). The information labeled as *naba'/anbā'* is imparted to Muḥammad "to strengthen your heart therewith" (Q 11:120) as well as to teach the audience the bitter lesson of disbelief and disobedience which already led ancient towns to destruction (Q 7:101; 9:70; see GEOGRAPHY). But the listeners are not responsive, and they discard the qur'ānic message as "tales *(asāṭīr)* of the ancients" (*al-awwalīna,* Q 16:24).

The list of prophets mentioned in the Qur'ān is not complete, in the sense that some of them were left out on purpose. This is stated in Q 40:78 (see also Q 4:164): "And certainly we sent apostles before you: there are some of them of whom we related *(qaṣaṣnā)* to you and there are others of whom we have not related *(lam naqṣuṣ)* to you…." The exegetes explain that the prophets were too numerous to mention, and according to some, God sent 8,000 prophets, 4,000 of whom were Israelites.

Prophets in extra-qur'ānic sources

The prophets form an essential element in the Islamic perception of the past and they are treated not only in the Qur'ān but also in ḥadīth collections (see ḤADĪTH AND THE

QUR'ĀN) as well as in historiographical works (see HISTORY AND THE QUR'ĀN). Compilers of ḥadīth dedicated special sections (*kitāb*s) to traditions about them, one of the earliest examples being al-Bukhārī's (d. 256/870) *Ṣaḥīḥ,* in which the *kitāb* no. 60 is called: *aḥādīth al-anbiyā',* "Traditions about the prophets." There are also independent collections of traditions about the prophets; perhaps the best known is al-Thaʿlabī's (d. 427/1035) *ʿArāʾis al-majālis* or *Qiṣaṣ al-anbiyā'.*

The interest in the prophets taken by Muslims was focused on the need to define the relationship between Muḥammad and the previous prophets, which signaled the relationship between the Islamic *umma* and the non-Muslim communities (see COMMUNITY AND SOCIETY IN THE QUR'ĀN). Many of the traditions place Muḥammad over and above the rest of the prophets. For example, one tradition states that the lords of the prophets are five and Muḥammad is the lord of the five: Noah, Abraham, Moses, Jesus and Muḥammad. This statement was circulated as a tradition of the Companion Abū Hurayra (Ḥākim, *Mustadrak,* ii, 546; see COMPANIONS OF THE PROPHET). On the other hand, there are also traditions in which the status of the prophets is in no way inferior to that of Muḥammad (cf. Andrae, *Person,* 245 f.; Wensinck, *Muslim creed,* 113 f.). In one of these traditions, Muḥammad prohibits the believers to say that he was better than Moses (Bukhārī, *Ṣaḥīḥ,* iii, 158 [44:1]). Even a less prominent prophet like Jonah was not inferior to Muḥammad, as is indicated in Muḥammad's reported utterance: "No prophet is allowed to say: 'I am better than Jonah the son of Amittai'" (Abū Dāwūd, ii, 521 [39.13]). Such traditions seem to have been designed to retain the qurʾānic idea that one should not make any distinction among God's prophets and messengers.

The historiographical sources also retain the qurʾānic idea that all the prophets represent links in a universal chain of successive revelations. But there is no agreement about where this chain begins. In some traditions, the first person ever to be sent by God to warn his people is Noah (Ṭabarī, *Taʾrīkh,* i, 183-4). Enoch, too, is described as a prophet in traditions identifying him with Idrīs, who is said to have been the first man to whom prophecy was given (Ibn Hishām, i, 3.). Alternately, Enoch/Idrīs is said to have been the first to be sent as a prophet after Adam (Ibn Saʿd, *Ṭabaqāt,* i, 40, 54). In another tradition, Seth is the first prophet after Adam (Ibn Qutayba, *Maʿārif,* 26) and Adam himself, so a tradition tells us on the authority of no other than Muḥammad, was the first prophet God sent (Ibn Saʿd, *Ṭabaqāt,* i, 32, 54). Thus, Adam and Muḥammad became the two ends of the universal chain of prophets. This correlation between them has been noted in a tradition of the Yemenite scholar Wahb b. Munabbih (d. 110/728) on the authority of Ibn ʿAbbās (d. ca. 68/686). Wahb declares that Adam was the first of God's messengers and Muḥammad the last (Ibn Qutayba, *Maʿārif,* 26).

Islamic historiography has understood the prophets as bearers of a successive religious legacy that is being passed on from generation to generation in a hereditary line. The earliest description of the transmission of the prophetic legacy from generation to generation is found in passages quoted by al-Ṭabarī (d. 310/923) in his famous *History (Taʾrīkh al-rusul wa-l-mulūk)* from Ibn Isḥāq (d. 150/768). The latter was one of the first systematic biographers of Muḥammad (see SĪRA AND THE QUR'ĀN). Most of Ibn Isḥāq's material about the prophets is derived from Jewish sources whom Ibn Isḥāq often calls "people of the first book" *(ahl al-kitāb al-awwal),*

i.e. the Torah (e.g. Ṭabarī, *Taʾrīkh,* i, 139-40). Ibn Isḥāq describes how the various prophets, beginning with Adam, bequeathed their religious legacy and administrative authority (q.v.) to their descendants. They appointed them to be their heirs *(waṣī)* and put them in charge of their subjects. The legacy included revealed scriptures *(ṣaḥīfa),* which were handed down from generation to generation. Each bearer was considered as God's chosen leader upon earth, and defended the sacred legacy against change and corruption. Such perception of the role of the antediluvian ancestors is discernible already in Flavius' *Antiquities* (for details see Rubin, Prophets and progenitors).

Ibn Isḥāq describes the course of the legacy till Noah, but does not delineate an uninterrupted hereditary legacy during the generations between Noah and Abraham. The reason seems to be that Abraham is regarded as opening a new era, being a believer born to pagan ancestors who could not act as bearers of any legacy of righteousness. Al-Ṭabarī himself has recorded traditions from other sources that mention the transmission of the legacy through later generations of Israelite prophets. They describe, for example, the transition of the *waṣiyya* from Jacob to Joseph and from Joseph to Judah his brother (Ṭabarī, *Taʾrīkh,* i, 413). A detailed description of a successive authority running along the generations since Adam, and continued through the Israelites, is provided by the Shīʿī author al-Yaʿqūbī (d. 283/897; see SHĪʿISM AND THE QURʾĀN). His *Taʾrīkh* abounds with quotations from the Bible and other Jewish and Christian sources, and they form the axis around which his account of pre-Islamic history revolves. Some further traditions focus on individual links in the universal chain, for example, David and Solomon, who constituted the first links in the house of David. A tradition recorded in the *Mustadrak* by al-Ḥākim al-Naysābūrī (d. 405/1014) relates that God chose David to be his prophet and messenger and he gathered for him light and wisdom and revealed to him the *zabūr* (the Psalms), adding it to the scriptures already revealed to previous prophets. When David was about to die, God commanded him to bequeath the light of God *(nūr Allāh),* as well as the hidden and the revealed knowledge (see KNOWLEDGE AND LEARNING), to his son Solomon, and so he did (Ḥākim, *Mustadrak,* ii, 587).

Muslims paid special attention to the relationship between the last Israelite prophet, namely Jesus, and Muḥammad. Chronologically speaking, Jesus was the closest Israelite prophet to Muḥammad and this temporal closeness was understood in Islam as a blood relationship. This is the intent of a tradition transmitted by one of the Prophet's Companions, Abū Hurayra (d. 57/677), in which Muḥammad declares: "I am the closest person *(awlā l-nās)* to Jesus the son of Mary in this world and in the world to come." When asked how this could be, the Prophet went on, explaining: "The prophets are brothers born to fellow-wives *(ʿallāt)*, i.e. their mothers are various and their religion is the same. There is no prophet between me and him" (Ibn Ḥibbān, *Ṣaḥīḥ,* xiv, no. 6194). The prophets are likened here to sons of the same father by various mothers. The father stands for the one unchanging religion of God that unites them all and this makes them brothers in the same religion. Among them Jesus and Muḥammad are the closest pair. Their various mothers, so it was explained by some Muslim scholars, represent their various types of *sharīʿa,* i.e. the distinctive religious laws which differ from one monotheistic community to the other (Ibn Ḥajar, *Fatḥ al-bārī,* vi, 354).

Just as Muḥammad was said to have been the closest person to Jesus, he was also presented as the closest one to Moses. This comes out in traditions recounting the history of the ʿĀshūrāʾ day (see FASTING; ATONEMENT). In some of these traditions a relationship between this day and the Jewish Day of Atonement is implied. It is related that when Muḥammad came to Medina after his emigration *(hijra)* from Mecca, he found out that the Jews of that city used to fast on the day of ʿĀshūrāʾ. He asked them to tell him the reason for that and they told him that this day was a holiday because on it God delivered the Children of Israel from their enemies and therefore Moses had fasted on this day. Then Muḥammad said to the Jews: "I am more worthy of Moses than you are" *(anā aḥaqqu bi-Mūsā minkum)* and thereupon he started to fast on the day of ʿĀshūrāʾ and ordered the Muslims to follow suit (e.g. Bukhārī, *Ṣaḥīḥ,* iii, 57 [30.69]). This means that the Islamic *umma* rather than the Jews are the most authentic bearers of the legacy of Moses.

In further traditions the concept of the unchanging divine legacy that transmigrates through the generations from Adam to Muḥammad has been combined with the idea of Muḥammad's pre-existence (for which see Rubin, Pre-existence). The successive legacy has been identified with Muḥammad's own pre-existent entity. The prophets have thus become mere vessels carrying the pre-existent Muḥammad. Traditions reflecting this notion can easily be identified by recourse to the commentaries on Q 26:219. This verse deals with the Prophet's movement *(taqallub)* among those who prostrate themselves (*al-sājidīn,* see BOWING AND PROSTRATION). A tradition of Ibn ʿAbbās as recorded by Ibn Saʿd (d. 230/845) says that the Qurʾān speaks here about the transmigration of Muḥammad "from prophet to prophet and from prophet to prophet, till God brought him forth as a prophet" (Ibn Saʿd, *Ṭabaqāt,* i, 25; cf. Rubin, Pre-existence, 80 with note 78).

Shīʿīs, Umayyads and prophets

The notion of a universal chain of prophets bearing a successive divine legacy was adapted to the specific needs of various groups who vied for predominance in Islamic society (see POLITICS AND THE QURʾĀN). Each group tried to gain for its leaders recognition as Muḥammad's exclusive heirs, from whom they inherited the universal legacy that had reached him from the previous prophets. Among these groups the best known are the Shīʿīs. They have developed the doctrine according to which the line of transmission was continued after Muḥammad through their own imāms. The latter were described as legatees of the prophets and as bearers of a divine light that they had inherited from the prophets. This doctrine was designed to establish the status of the Shīʿī imāms as agents of divine inspiration and guidance (for details see Rubin, Prophets and progenitors).

The Umayyad caliphs (see CALIPH), too, considered themselves links in a chosen pedigree originating in the biblical prophets. Their views on this claim are revealed in a letter sent to the garrison cities on behalf of the Umayyad caliph Walīd II (r. bet. 125-6/743-4) concerning the designation of his successors (for details see Crone and Hinds, *God's caliph,* 26-8; Rubin, Prophets and caliphs).

Qurʾānic prophets and modern scholarship

Modern scholars have tried to detect an evolution in the qurʾānic prophetology, which they reconstructed according to the assumed chronology of revelation (see CHRONOLOGY AND THE QURʾĀN; OCCASIONS OF REVELATION; POST-ENLIGHTENMENT

ACADEMIC STUDY OF THE QUR'ĀN). The "punishment stories," for example, have been explained as reflecting Muḥammad's situation in Mecca, before the *hijra,* the emigration (q.v.) to Medina (q.v.), when he suffered rejection. The description in these stories of the rejection of previous prophets was interpreted as designed to encourage Muḥammad during this difficult period (Tottoli, *Biblical prophets,* 7). The idea of one religion common to all prophets as well as the notion of the religion of Abraham, was explained as stemming from the polemical encounter with the Jews of Medina (Tottoli, *Biblical prophets,* 8-9; see JEWS AND JUDAISM). The usage of the terms *rasūl* and *nabī* was also connected with Muḥammad's life and it was argued that Muḥammad began to use *nabī* as his own epithet only during the later Medinan period (Tottoli, *Biblical prophets,* 74-5). In view, however, of doubts expressed by some scholars who have been of the opinion that not all parts of the scripture stem from Muḥammad's own time, the history of the link between the qur'ānic prophetology and Muḥammad's personal experience is no longer clear.

Prostration see BOWING AND PROSTRATION

Protection

Shielding from injury or destruction. The Qurʾān uses a variety of different Arabic words for "protection," with meanings that can shade into "defense," "security," "guarding," or "preservation." Numerous verses refer to God protecting the faithful (see BELIEF AND UNBELIEF), to the absence of protection for evil-doers (see EVIL DEEDS) against God's wrath (see ANGER), or to people protecting themselves or others from a variety of evils (see GOOD AND EVIL). The Arabic roots under consideration here are *ʿ-w-dh, ḥ-f-ẓ, ʿ-ṣ-m, w-q-y, w-l-y* (see CLIENTS AND CLIENTAGE), *m-n-ʿ, j-w-r, ʾ-m-n* and *h-y-m-n.*

Five of the ninety-nine beautiful names of God (see GOD AND HIS ATTRIBUTES) come under the broad meaning of "protector": *al-muʾmin,* "author of safety and security" (Q 59:23; cf. Ṭabarī, *Tafsīr;* Ṭūsī, *Tibyān;* Bayḍāwī, *Anwār;* Zamakhsharī, *Kashshāf,* ad loc.; Rāzī, *Lawāmiʿ,* 189; see also Gimaret, *Noms,* 359-61 for further glosses of this name); *al-muhaymin,* "protector and guardian" (Q 59:23; cf. 5:48, where the same word is applied to the book revealed to Muḥammad; see Gimaret, *Noms,* 361-3); *ḥafīẓ,* "preserver" (Q 11:57; 34:21; 42:6; see Gimaret, *Noms,* 270-1); *al-walī,* "patron" (Q 42:28; cf. Gimaret, *Noms,* 323-6; Nwyia, *Exégèse,* 114-5); and *māniʿ,* "he who repels those things detrimental to his creation" (q.v.; cf. Gimaret, *Noms,* 335-6). This last-mentioned is one of the ninety-nine names that are not explicitly recorded in the Qurʾān itself (all English renderings are per Stade's translations of al-Ghazālī).

God is the only protector and protects everything (cf. Q 2:286; 3:150; 6:51, 62; 8:40; 11:57; 13:11; 18:44, and many more), while he himself has no need of a protector (Q 23:88). God protects the heavens from every satan (Q 15:17; 37:7; cf. 21:32; see DEVIL) and protects the believers (Q 46:31-2; 47:11), while the righteous will be in a position of security, protected from hell (Q 44:51, among others; see HELL AND HELLFIRE). God has protected the Qurʾān from corruption (Q 15:9); the Qurʾān is in a guarded tablet (Q 85:22; see PRESERVED TABLET) and itself guards earlier revelations (Q 5:48; see REVELATION AND INSPIRATION). God set guardians over people or souls (Q 6:61; 82:10; 86:4; see GUARDIANSHIP), protected Moses (q.v.) from the people of Pharoah (q.v.; Q 40:45), guarded the devils who worked for Solomon (q.v.; Q 21:82), and will protect Muḥammad against unbelievers (Q 5:67; see OPPOSITION TO MUḤAMMAD). God also provided humankind with shirts to protect them from the heat (see HOT AND COLD; CLOTHING) and coats of mail to protect them in battle (Q 16:81; see INSTRUMENTS; FIGHTING).

While God protects the believers, for the unbelievers there is no protector from God and his wrath, both in this world and on the day of judgment (Q 13:34, 37; 21:43; 40:21, 33; 67:28; 72:22, among others; see LAST JUDGMENT; REWARD AND PUNISHMENT). Noah's (q.v.) rebellious son sought protection in vain from the flood on a mountain (Q 11:43), while fortresses did not protect the Jewish tribe (see JEWS AND JUDAISM) of Banū l-Naḍīr (see NAḌĪR, BANŪ AL-) after the battle of Uḥud (q.v.; cf.

Q 59:2). The Qurʾān tells of people who erroneously sought protection in jinn (q.v.; Q 72:6) and people of the towns who rejected the prophets but who nonetheless mistakenly believed themselves secure from God's wrath (Q 7:98-9; see PUNISHMENT STORIES; PROPHETS AND PROPHETHOOD).

People need protection against their own inner weaknesses as well as against others. People who sought protection against their own weaknesses include Noah, who sought protection from asking God for something of which he had no knowledge (Q 11:47; see KNOWLEDGE AND LEARNING), Joseph (q.v.), who sought protection from being unjust (Q 12:79; see JUSTICE AND INJUSTICE) and Moses (q.v.), who sought protection from being ignorant (Q 2:67; see IGNORANCE). People can also be protected from their own avarice (q.v.; Q 59:9; 64:16). People who sought protection from God against Satan and others include Joseph, who sought protection from the sexual temptations of the Egyptian's wife (Q 12:23) and Moses, who sought protection from the arrogant people (Q 40:27; see ARROGANCE; PRIDE). Mary's (q.v.) mother sought protection for Mary and her offspring (Q 3:36), while Mary sought protection from sexual defilement (cf. Q 19:18; see SEX AND SEXUALITY). The Qurʾān enjoins Muḥammad to seek protection from the suggestions of Satan (cf. Q 7:200; 23:97-8; 41:36) and a variety of evils (Q 113:1-2; 114:1-4) and to seek protection with God from the accursed Satan when beginning to recite the Qurʾān (Q 16:98), a practice that, in general, Muslims to this day have followed (see RECITATION OF THE QURʾĀN; RITUAL AND THE QURʾĀN).

The Qurʾān also provides examples of how people are responsible for protecting themselves. The faithful are to guard their prayers (Q 2:238; see PRAYER) and oaths (q.v.; Q 5:89), while women are to protect their modesty (q.v.; Q 4:34). People also can guard others in the course of ordinary social relations, as when Joseph's brothers pledged to protect Joseph and Benjamin (q.v.; Q 12:11-2, 63, 65; see BROTHER AND BROTHERHOOD). At a time when Muḥammad may be defeated by his opponents, hypocrites (see HYPOCRITES AND HYPOCRISY) may claim to have protected the unbelievers from the believers (Q 4:141), while Muḥammad can grant protection to idolators who seek it from him (Q 9:6; see IDOLATRY AND IDOLATERS; COMMUNITY AND SOCIETY IN THE QURʾĀN). The Qurʾān also emphasizes that Muḥammad was sent as a messenger, not as a guardian (Q 4:80, among others). Nor are sinners guardians of the righteous (Q 83:33; see SIN, MAJOR AND MINOR).

Provision see SUSTENANCE

Provocation

An arousal of anger by words or deeds. Provocation consists of manifesting disdain for individuals or their values and is always characterized by a certain degree of unfairness. Instead of attempting to come to terms with a contentious issue between conflicting parties, an act of provocation aims at stirring up the opponents' emotions and leading them to an ill-considered reaction. In order for an action to qualify

as a provocation, at least one of two conditions must be met: an underlying intention to provoke and a consequent feeling of anger. If both conditions are fulfilled, the provocation is successful; if only the first, it is a failure; if only the second, the provocation is unintentional. It follows, then, that merely describing a particular behavior or citing a potentially provocative statement does not suffice to identify an act as a provocation. Additional information about the thoughts and emotions of the parties involved is needed. It is necessary to keep these initial considerations in mind, as we turn to the question of provocation in the Qurʾān.

Provoking opponents

Many qurʾānic passages evoke an atmosphere of polemics (see POLEMIC AND POLEMICAL LANGUAGE) with reference to both the behavior and the utterances of the adversaries of God's messengers (see MESSENGER; OPPOSITION TO MUḤAMMAD) and of the believers (see BELIEF AND UNBELIEF). Except in the case of Pharaoh (q.v.) and the enigmatic Abū Lahab (q.v.) in Q 111, these adversaries are not identified by proper names (see ENEMIES; OPPOSITION TO MUḤAMMAD). Rather, there are several general designations for oppositional groups. The opponents of the pre-Islamic prophets are mostly referred to with ethnic names like ʿĀd (q.v.), Thamūd (q.v.), "Children of Israel" (q.v.), or "people of Noah (q.v.)." The adversaries of the actual qurʾānic preaching, however, are mainly labeled in terms of religion, as the "People of the Book" (q.v.; *ahl al-kitāb*), Jews and Christians (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY), hypocrites (*munāfiqūn;* see HYPOCRITES AND HYPOCRISY), disbelievers *(kāfirūn)* and idolaters (*mushrikūn;* see IDOLATRY AND IDOLATERS; POLYTHEISM AND ATHEISM). But for the most part, the adversaries' identities are veiled in anonymity. Nevertheless, they are vividly present in the text in the rich vocabulary used to describe their words and deeds. They "dispute" (*jādala,* e.g. Q 6:25; 22:68; see DEBATE AND DISPUTATION), "oppose" (*ḥādda,* e.g. Q 9:63; 58:5), "make a breach" (*shāqqa,* e.g. Q 4:115; 8:13), "transgress" (*iʿtadā,* e.g. Q 3:112; 5:78), "turn away" (*aʿraḍa,* e.g. Q 18:57; 54:2), "revile" (*sabba,* Q 6:108), "defame" (*lamaza,* e.g. Q 9:58, 79), "contrive" (*kāda,* e.g. Q 7:195; 77:39), "plot" (*makara*, e.g. Q 6:123; 35:10), "forge a lie [against God]" (*iftarā l-kadhiba,* e.g. Q 29:68; 61:7), "lie" (*kadhaba,* e.g. Q 2:10; 39:32); "cry lies" (*kadhdhaba,* e.g. Q 35:25; 83:12), "grow arrogant" (*istakbara,* e.g. Q 6:93; 37:35), "mock" (*istahzaʾa,* e.g. Q 9:65; 2:14), "deride" (*sakhira,* e.g. Q 6:10; 9:79), "laugh" (*ḍaḥika,* e.g. Q 23:110; 83:29), "chatter" (*khāḍa,* e.g. Q 6:68; 9:69), "play" (*laʿiba,* e.g. Q 9:65; 43:83), etc. It is further asserted in the Qurʾān that both the earlier and the contemporary adversaries share the same hostile attitude, as can be seen in verses like Q 6:10: "Messengers indeed were mocked at before you" (cf. Q 6:34, 148; 10:39; 13:32; 22:42; 34:34; 35:4, 25; 2:108, etc.; see MOCKERY).

As strife is considered to be demon-inspired (e.g. Q 6:121; 7:200; 17:53; see DEVIL; CORRUPTION), the Prophet and the believers are repeatedly exhorted not to get involved in polemical disputes with their opponents. Instead, they are ordered to turn away from their enemies (e.g. Q 6:68; 28:55), to "repel with that which is fairer" (Q 41:34; cf. 13:22; 28:54; 17:53) and to "dispute with them in the better way" (Q 16:125; cf. 29:46). The adversaries, however, must bear the consequences of their behavior. This holds true in the case of the divine punishment of wicked peoples in former times (e.g. Q 36:30-1; 40:4-5; see PUNISHMENT STORIES; GENERATIONS), as well as of the condemnation of the sinners at the end of days (e.g. Q 45:34-5; 70:42-4;

see SIN, MAJOR AND MINOR; REWARD AND PUNISHMENT).

Two concepts describe the relation between behavior and consequences. On the one hand, there seems to be a *talio*-like automatism installed by God (see RETALIATION). This is indicated by formulations like: "They shall be encompassed *(ḥāqa)* by that at which they mocked" (Q 11:8; cf. 6:10; 16:34, etc.; see also Q 2:81; 3:117; 30:9; 83:14), and by passages assuring that just as the adversaries deride, plot, contrive and mock, so does God (e.g. Q 2:14-5; 9:79; 27:50-1; 52:42). On the other hand, since their behavior is said to arouse God's "wrath" (*ghaḍab,* e.g. Q 16:106; 42:16; see ANGER) and "hate" (*maqt,* e.g. Q 35:39; 40:35), this behavior is, in the first place, clearly understood as a provocation of God (cf. Q 6:33: "It is not you they cry lies to, but the evildoers — it is the signs of God that they deny"). Thus, the punishments inflicted upon the opponents appear as God's reaction to this provocation, as his "revenge" (*intiqām,* e.g. Q 3:4; 14:47; see VENGEANCE). The integration of the notion of God's wrath into a pattern of disobedience (q.v.) and retribution is familiar in the biblical tradition, too (e.g. *Num* 11:1; *Deut* 1:34; *Rom* 2:5; *Rev* 16:1). R. Otto (*Das Heilige,* 21 f.) explained it as a rationalization of the *mysterium tremendum,* the basic experience of the awe-inspiring god (cf. Q 8:12; 33:26; 39:23). Nevertheless, the anthropopathism inherent in this notion was to become a challenge for later Muslim scholars, who debated particularly about the nature of God's wrath and its compatibility with his mercy (q.v.; cf. the qurʾānic commentaries ad Q 1:7).

The polemic passages

The opponents are not only characterized by the above-mentioned vocabulary, they are also described as uttering criticism, challenges, invectives and the like, directed against the messenger and his message. These citations appear in direct discourse, introduced by the verb "to say" *(qāla)*. The opponents' utterances are then followed by or imbedded in statements that contain the appropriate answers, retorts, warnings (see WARNER), etc. If the opponents cited belong to the past, it is usually the messengers who were sent to them at the time who reply (e.g. Noah at Q 7:59 f.; Hūd [q.v.] at Q 7:65 f.). For the polemics directed at Muḥammad, however, the answering statements either have no introduction, in which case the heavenly voice speaks directly without a mediator (e.g. Q 44:14; 51:52; 68:15-6), or they are introduced by the imperative "say" *(qul)*.

This imperative, which occurs more than 300 times, is one of the most puzzling features of the qurʾānic style (see LANGUAGE AND STYLE OF THE QURʾĀN; RHETORIC AND THE QURʾĀN; LITERARY STRUCTURES OF THE QURʾĀN). It can be argued, however, that its main function is to introduce the figure of a prophet into a text whose fundamental literary character seems rather to preclude this (see NARRATIVES). That is to say, the Qurʾān basically belongs to the genre of anonymous religious literature. It is not an historical account of the life and times of a prophet; there is no biographical framework providing information about the circumstances of the revelation (see OCCASIONS OF REVELATION). Not even the title of the scripture, namely *al-qurʾān al-karīm* or *qurʾān karīm,* bears any attribution to its recipient (see NAMES OF THE QURʾĀN). Furthermore, aside from the polemical passages, God is referred to throughout in either the first person (mostly plural, sometimes singular, e.g. Q 2:40-1; 13:32; 22:48; 32:13) or in the third person. This implies that it is either he, or some angelic messenger (see ANGEL), speaking (the latter is the case even in the first person plural at Q 19:64; perhaps also

Q 30:35; 37:164-6). This literary form carries a strong claim of authority, as it suggests simultaneously a divine origin and a genuine transmission of the text. Any human recipient is reduced thereby to a mere mouthpiece who remains hidden behind the message — an effect which finds its precise expression in the Islamic dogma of revelation (see CREEDS; THEOLOGY AND THE QUR'ĀN). Seen against this background, the imperative "say" can be considered a literary device used to root the idea of a divinely-inspired prophet in a document that is otherwise characterized as an unmediated revelation.

The formal nucleus of the polemic passages is the pattern "(they) say: … say (you): …" (*qālū/yaqūlūna … qul*, e.g. Q 2:80; 10:20; 17:49-51). This pattern is frequently modified by adding further answers and comments (e.g. Q 3:73-4; 6:148-51; 34:22), as well as by rearranging its elements into *qul … yaqūlūna* (e.g. Q 23:84 f; cf. 29:63). The polemical passages thus formed deal mainly with two issues: questions of belief on the one hand, and the legitimacy of the prophet on the other (see LIE; INFORMANTS; IMPECCABILITY). Doctrinal issues that are defended against the adversaries' contentions and denials include such themes as the notion of true monotheism, God's omnipotence and omniscience (see POWER AND IMPOTENCE) and the truth of eschatological events (see ESCHATOLOGY) — the bodily resurrection (q.v.), the last judgment (q.v.) and the eternal punishment in hell (see HELL AND HELLFIRE) or the reward in paradise (q.v.; e.g. Q 2:80; 4:78; 5:17; 10:18, 48-51; 11:7-8; 13:5; 17:49-52; 21:3-4; 27:67-72; 34:3; 36:78-9; 39:38). Refutation of the teachings of the Jews and Christians, the "People of the Book" (cf. i.e. Q 2:80, 94, 111; 5:18-9; 10:68-9, etc.), belongs to this category as well.

In respect to the legitimacy of the Prophet, the polemical passages discuss criteria of credibility and conceptions of pseudo-prophecy (see MUSAYLIMA). Most prominent is the opponents' call for signs (q.v.; *āyāt*, sing. *āya*): "The unbelievers say, 'Why has a sign not been sent down upon him from his lord?'" (Q 13:7; cf. 2:118; 6:37, 109; 10:20; 13:27, etc.). Verses like Q 6:124 ("They said, 'We will not believe until we are given the like of what God's messengers were given'"; cf. Q 21:5) or the short list in Q 17:90-3 show that "signs" can be understood to mean miracles (q.v.). The unbelievers demand that revelation (see REVELATION AND INSPIRATION), too, should be accompanied by miracles like theophany (q.v.; Q 2:118; 17:92), the appearance of angels (e.g. Q 23:24; 25:21), the Prophet's ascension (q.v.) to heaven (Q 17:93; cf. 6:35; 52:38) or the sending down of "a book (q.v.) on parchment" (Q 6:7; cf. 74:52). In addition, they accuse the Prophet of forging his message (*iftarā[hu];* e.g. Q 10:38; 11:13; 34:8; 42:24; cf. 52:33; see FORGERY) and call him "a man possessed" (*majnūn*, e.g. Q 15:6; 37:36; 44:14; see INSANITY; JINN), "a soothsayer" (*kāhin*, cf. Q 69:42; see SOOTHSAYERS), "a sorcerer" (*sāḥir*, Q 10:2; 38:4; cf. 6:7; 11:7; see MAGIC) or "a poet" (*shā'ir*, e.g. Q 21:5; 37:36; 52:30; see POETRY AND POETS) — all of these being prominent characterizations of pseudo-prophecy and unreliable inspiration.

It is through answering these false conceptions and demands that the qur'ānic prophetology is formulated. It is asserted in the Qur'ān that God's messengers and prophets are human beings (Q 17:93; 18:110; 41:6; cf. 6:50; 11:12, 31; see PROPHETS AND PROPHETHOOD) who all along have been mocked (see above; this is also demonstrated overtly by the literary form of the polemical passages themselves). They receive revelation by means of *waḥy* — a kind of non-verbal communication that they then have to translate

into human language (e.g. Q 18:110; 21:45; the only exception is Moses [q.v.], to whom God spoke directly: Q 4:164; cf. 42:51; see also WORD OF GOD). They do not need miracles to justify their message (cf. Q 13:27; 29:50). It suffices to point to God's signs *(āyāt)* in nature and history, which can be interpreted as proofs for God's sole power, his care for humankind, the resurrection and the reality of the divine judgment (e.g. Q 10:31 f.; 27:59-60, 65 f.; 29:20; 30:42).

From a literary viewpoint, the polemical passages are not the prophetic message proper. They appear instead as meta-level reflections upon such a message and its reception. Yet, they hardly represent reports of historical disputes. Inasmuch as their actors are veiled by anonymity and since most of the topics dealt with can be traced back to the tradition of religious polemical literature, they should rather be considered constructed dialogues. One of their purposes seems to be, then, that they characterize the qurʾānic Prophet and establish the relation between him and his prophetic predecessors and the other, that they contribute to the formulation of a Muslim identity as distinct from rival religions (see RELIGIOUS PLURALISM AND THE QURʾĀN; ISLAM).

The qurʾānic challenge

Among the passages of provocation and polemic are several verses where the heavenly voice — either directly (e.g. Q 10:68; 28:75; 37:156-7; 68:37) or via the Prophet (e.g. Q 27:64; 34:27; 35:40; 46:4) — challenges the adversaries to justify their beliefs and practices, e.g. the Jewish rules concerning food (Q 3:93; see FOOD AND DRINK; BOUNDARIES AND PRECEPTS; LAWFUL AND UNLAWFUL) or the Jewish and Christian claim of entering paradise exclusively (Q 2:111; cf. 2:94). More often, however, a justification for idolatry *(shirk)* is demanded (e.g. Q 6:148 f.; 7:194-5; 10:68; 21:24; 27:64). The opponents are exhorted to present those venerated beside God ("Say: 'Show me those you have joined to him as associates *[shurakāʾ]!*'," Q 34:27; cf. 7:195; 68:41) or to bring their "witnesses" (*shuhadāʾ*, Q 2:23; see WITNESSING AND TESTIFYING), "proof" (q.v.; *burhān*, Q 2:111; 21:24; 27:64; 28:75), "authority" (q.v.; *sulṭān*, Q 10:68; 37:156), "knowledge" (*ʿilm*, Q 6:148) or "oaths" (q.v.) from God (*aymān*, Q 68:39). But the demand most revealing of the qurʾānic notion of authority and legitimacy is the challenge to the adversaries to prove their contentions with a "book" *(kitāb):* "Bring your book, if you are truthful!" (Q 37:157; cf. 46:4; 35:40; 68:37). And in Q 3:93, the Children of Israel (q.v.) are called upon to bring the Torah (q.v.) and to recite from it, in order to justify their restrictions on food.

Still another group of verses falls under this same heading, the so-called "challenge" *(taḥaddī)* verses. These verses issue a challenge *(taḥaddin)* to the opponents who reject the prophetic message to bring — as counterevidence, so to speak — "a sūra like it" (*fa-ʾtū bi-sūratin mithlihi*, Q 10:38; cf. 2:23; see SŪRAS), "ten sūras the like of it" (*bi-ʿashri suwarin mithlihi*, Q 11:13) or "a discourse like it" (*bi-ḥadīthin mithlihi*, Q 52:34), and they are exhorted to call their "witnesses apart from God" (*wa-dʿū shuhadāʾakum min dūni llāhi*, Q 2:23; cf. 10:38; 11:13). Furthermore, in Q 17:88 it is assured: "Say: 'If men and jinn banded together to produce the like of this *qurʾān (bi-mithli hādhā l-qurʾāni)*, they would never produce its like, not though they backed one another.'" These passages are reminiscent of Isaiah 43:9: "Let all the nations be gathered together, and let the people be assembled: who among them can declare this, and show us former things? Let them bring forth their witnesses, that they may be justified: or let them hear, and say: It is

truth" (cf. *Isa* 41:21 f.; 44:6 f.). In both the Qurʾān and (Deutero-) Isaiah, the foreign gods have no reality; they are mere names and handmade idols (*Isa* 44:9 f.; Q 7:71; 12:40; 16:20-1, etc.). Underscoring the basic metaphysical difference between God and the rival gods, however, both passages highlight God's well-attested activity, past and present. Now, from the qurʾānic point of view, this activity is demonstrated first of all in God's signs *(āyāt)* in nature and history (see NATURE AS SIGNS; HISTORY AND THE QURʾĀN). And since the terms *ḥadīth* (see ḤADĪTH AND THE QURʾĀN), *sūra* and *qurʾān* should be understood here as revelation texts referring to these signs (cf. Radscheit, *Koranische Herausforderung,* 94 f.), it becomes clear why the idolaters cannot meet the qurʾānic challenge: it is not possible to bring a revelation that argues by means of the *āyāt* for the existence of gods beside God.

It is well known that Muslim exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) interpret the *taḥaddī*-verses primarily in the light of the doctrine of the inimitability (q.v.; *iʿjāz*) of the Qurʾān. The beginnings of this doctrine can hardly be dated before the third/ninth century and presuppose several stages of theological and cultural development. The prerequisite developments include the final codification of the qurʾānic texts (see CODICES OF THE QURʾĀN; COLLECTION OF THE QURʾĀN), the sharpening and polishing of a unique Islamic prophetology vis-à-vis Judaism and Christianity, and the emergence of the *shuʿūbiyya,* the cultural conflict between Arabs (q.v.) and non-Arabs, especially Persians. According to the *iʿjāz*-doctrine, the Qurʾān in itself — by virtue of its inimitability — is the miracle that legitimizes the prophetic mission of Muḥammad and corresponds in this regard to the miracles that were given to Moses and to Jesus (q.v.). The question about how the Qurʾān must be considered a miracle — because of its contents or because of style — has remained controversial, and therefore productive of a profusion of interpretations, up to this day (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY). Yet there has always been a broad consensus as to how to prove the miraculous nature of the Qurʾān.

The core argument is that an imitation *(muʿāraḍa)* of the Qurʾān has never actually appeared, although every good reason existed to create one (see PARODY OF THE QURʾĀN). In this respect the *taḥaddī*-verses are of paramount importance. The heathen Arabs were a people described as defining themselves by their eloquence and rhetorical ability on the one hand, and by their pride and belligerent character on the other. It is inconceivable that such a people never tried to imitate the Qurʾān, although Muḥammad provoked them time and again with the *taḥaddī*-verses, goading them to the utmost degree, foretelling their inability to meet the challenge and threatening them with physical annihilation. It was the ingenious Iraqi scholar Abū ʿUthmān al-Jāḥiẓ (d. 255/869) of the Muʿtazila (see MUʿTAZILĪS), who, in his treatise *Ḥujaj al-nubuwwa,* "Arguments for the prophecy [of Muḥammad]," expressed this idea so convincingly that most subsequent theologians have followed him. And since — according to al-Jāḥiẓ — Muḥammad intended to provoke the Arabs and since they, as a result, became angry, the qurʾānic challenge must be considered a successful provocation.

Psalms

The title of a book of religious songs and poems of praise and prayer poems in the Hebrew Bible to which, according to most interpretations, reference is made in the Qurʾān. It is called *Tehillim* in rabbinical Hebrew (lit. "songs of praise") with the connotation in post-exilitic Bible books of "songs of Temple worship"; *psalmos* is Greek for "a song sung to a harp." One of the common words for this kind of composition found in the book of Psalms itself is *mizmōr,* which is related to the Arabic *mizmār,* "single-pipe woodwind instrument resembling the oboe," and *mazmūr,* "psalm." The Hebrew psalms were not all composed at the same time but — because they exist in Greek translation — they must date back to at least the second half of the second century B.C.E. The so-called Davidic psalms constituted the very first stage in the compilation of the Hebrew book of Psalms.

Although the various versions of the book of Psalms consist of 149, 150 or 151 psalms, 150 seems to be the ideal number because the Greek version contains an additional psalm which is considered supernumerary, that is, Psalm 151 which is also marked as apocryphal. The book of Psalms is divided into five chapters or books, each comprising a number of psalms. Each of the first four books is marked off by a doxology or formulaic expression of praise to God, for instance, "Blessed is the Lord, from eternity to eternity," "Blessed be the Lord into eternity," or "Amen and amen."

There are several genres to be distinguished in the Psalms: the leading one is the hymn. Some psalms specifically extol God's royal role in the universe, his city, and his Torah (q.v.). About one third of the Psalter is devoted to laments in which the speaker may be either the individual or the community (faced with national oppression or misfortune) making a strong plea for divine help. Those songs in which one is sure of God's help are called "psalms of confidence." There is also the genre of thanksgiving. The "royal psalms," in which the center of attention is the anointed one (Messiah) of God, the earthly king of Israel, and which contain no direct reference to a reigning monarch, constitute a separate class. Another genre derives from wisdom literature; psalms of this type may be reflective or sententious. The contents are often linked to particular situations such as repentance for the sins of the poet, or thanksgiving to the lord for liberating the poet from his enemies (see GRATITUDE AND INGRATITUDE).

The mixing of genres to be found in the Psalms is paralleled in the Qurʾān, which is not a homogeneous collection but a combination of many genres whose sūras (q.v.) are often mixed compositions (see FORM AND STRUCTURE OF THE QURʾĀN). A comparison of the two holy books — the Hebrew Psalms and the Arabic Qurʾān — makes us aware of the complex composition of these sacred scriptures: individual genres such as hymns, wisdom

sentences, prophecies and poetry are combined, each genre having its own style, vocabulary and formal language (see LANGUAGE AND STYLE OF THE QUR'ĀN). Some sense of this similarity is captured in the Qur'ān, where the *zabūr,* "the book of Psalms granted by God to David" (Q 4:163; 17:55), is recognized as a holy scripture preceding the Qur'ān (see SCRIPTURE AND THE QUR'ĀN).

Legendary authors of psalms were the kings David (q.v.) and, to a lesser extent, Solomon (q.v.), and sometimes the situation of the poet in the psalms can be linked to events that took place during David's lifetime. The book of Psalms was considered as "the writings of David." Musical-recitative accompaniment is attributed to Davidic innovation (2 *Chron* 23:18). According to the Talmud, the Psalms were inspired (Pes. 117a) and music helped to supply the inspiration: "A harp was suspended above the bed of David. When midnight came the north wind blew on it and it produced music of its own accord. Immediately David arose and occupied himself with the Torah.… Until midnight he occupied himself with the Torah; and from then with songs and praises." In Islamic literature, the tradition that David devoted himself to the Torah is also mentioned by al-Ṭabarī (d. 310/923; *Ta'rīkh,* i, 567; Eng. trans. *History,* iii, 147).

In the Qur'ān, the ḥadīth (see ḤADĪTH AND THE QUR'ĀN), the "tales of the prophets" (*qiṣaṣ al-anbiyā';* see PROPHETS AND PROPHETHOOD; NARRATIVES) and Arabic historical writings, the prophet David is considered a famous musician. He is mentioned in several places in the Qur'ān. In Q 21:105 the word *zabūr* is used again by God: "We have written in the *zabūr*… that my righteous servants shall inherit the earth," which verse is reminiscent of a Hebrew psalm (*Ps* 37:9, 11, 29: "they who shall inherit the earth"). God gave David the rule of the kingdom (see KINGS AND RULERS), knowledge (*'ilm;* see KNOWLEDGE AND LEARNING) and wisdom (q.v.; *ḥikma*), and the ability to do justice (*ḥukm,* esp. Q 21:78 f.; cf. 38:20-4, 26; see JUSTICE AND INJUSTICE). God made the birds and mountains his servants, so that they unite in his praise (Q 21:79; 34:10; 38:18 f.). There is no mention of the wrong David did to Uriah in order to win Bathsheba's affection, but some qur'ānic verses show that the king feels himself to be guilty. His prayer for forgiveness (q.v.) is heard (Q 38:24 f.).

The ḥadīth (accounts of Muḥammad's deeds and sayings) stress David's zeal in prayer (q.v.) and especially in fasting (q.v.) and his readiness to do penance (see REPENTANCE AND PENANCE). Another favorite theme is David's gift in singing psalms. His voice has magical power over not only humans but also over wild beasts and inanimate nature (see MAGIC). In other Islamic literature, such as that of Qur'ān commentators, historians and compilers of the "tales of the prophets," the works of the two historians al-Ya'qūbī (d. ca. 292/905) and al-Ṭabarī are especially important. Even though both probably based their works upon texts derived from the same sources (cf. Tha'labī-Brinner, *Lives,* 462-81), the works of these two men are strikingly independent of each other.

Al-Ya'qūbī has a long passage about David (cf. Ebied and Wickham, Al-Ya'ḳūbī's account, 87-91 for an Eng. trans. of al-Ya'qūbī's text on David). He is portrayed as the successor to Saul (q.v.) and as subduing the Philistines. The affair with Bathsheba and the prophet Nathan's words of reproach to David are mentioned, the child he had with Bathsheba being the later king, Solomon. The family affairs with his brothers are described more or less according to the Bible, such as the revolt

by his son Absalom, who is killed by Yoab. Contrary to the biblical version, in al-Yaʿqūbī's text Barzillay marched against David and when God saved David from his hands, David recited a psalm. This psalm is reported in Arabic and is very similar to Psalm 18, in which he thanks God for having saved him from his enemies. There then follows an Arabic rendition of Psalm 1, which begins "Blessed are the ones who do not follow the path of the sinners." Other laudatory psalms are quoted in Arabic, reflecting, respectively, Psalms 148, 149 and 150. Then the apocryphal Psalm 151 is also quoted in Arabic. This psalm is conceived as highly autobiographical: in it David tells us that he was the youngest among his brethren, herded the sheep of his father and cut flutes from reed. But God sent his angels and took him away from his sheep and from his brethren and destined him to fight Goliath (q.v.). David killed this worshipper of idols (see IDOLATRY AND IDOLATERS) by cutting off his head with his own sword. After this passage, al-Yaʿqūbī deals with David's old age and Solomon, David's successor.

Al-Ṭabarī collects the comments of early qurʾānic exegetes (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) in his *Tafsīr* (his exegetical work), including definitions of terms such as *zabūr* (with the plural *zubur*), which vary depending on the verse. In his commentary on Q 21:105, he records a variety of meanings for *zabūr:* "all the books of the prophets that God brought down to them" (Saʿīd b. Jubayr, Ibn Zayd; see BOOK), "the books revealed to the prophets after Moses" (q.v.; Ibn ʿAbbās, al-Ḍaḥḥāk) and "a specific book revealed to David" (ʿĀmir, al-Shaʿbī). In his commentary on Q 3:184, *al-zubur* is a generic term for a book based on pre-Islamic poetic evidence (see POETRY AND POETS; PRE-ISLAMIC ARABIA AND THE QURʾĀN). Commenting on Q 4:163, he writes "the Arabs (q.v.) say *zabūr dāwūd* (David), and because of that the rest of the peoples know his book."

Al-Ṭabarī includes a section on Saul, David and Solomon in his *Taʾrīkh,* i.e. his history of the world. In this work, he explains David's connection with the Psalms thus:

When the Israelites gathered around David, God revealed the Psalms to him, and taught him ironworking, making it supple for him. He also ordered the mountains and the birds to sing praise with him when he sang. According to what they have mentioned, God did not give anyone in his creation a voice like his. So when David recited the Psalms, wild beasts would gaze at him with delight, until they were lined up, intently listening upon hearing his voice. The demons invented flutes, lutes and cymbals with only his voice as a model. David was extremely diligent, constant in worship (q.v.) and wept much (*Taʾrīkh,* i, 562; Eng. trans. *History,* iii, 143; see WEEPING).

Al-Ṭabarī incorporates Qurʾān as well as ḥadīth passages into his *Taʾrīkh;* among them is Q 38:17-8, in which God describes David to Muḥammad, saying: "And remember our servant David, possessor of might. Lo! We subdued the hills to sing the praises with him at nightfall and sunrise." Al-Ṭabarī adds, "It has also been mentioned to us that David would stay up at night and fast half of the time. And according to what has been mentioned, four thousand men guarded him every day and night." Just as Abraham (q.v.) was put to the test with the sacrifice (q.v.) of his son, and Jacob (q.v.) was tested with his grief over his son Joseph (q.v.), David wanted to be tested. But he did not withstand the temptation when confronted with the seductive beauty of Bathsheba, who

was married to Uriah (Ahriya). Although in the Qurʾān there is no mention of the Bathsheba story, al-Ṭabarī quotes Q 38:24 when speaking about David's repentance for marrying Bathsheba and getting rid of her husband Uriah: "He fell down prostrate (see BOWING AND PROSTRATION) and he repented." All these items of course refer to David as the singer of psalms in praise of God as well as of penitential ones. (See also Hasson, David; according to other Muslim traditions Bathseba was only engaged to Uriah, not married to him.)

At an early stage, the book of Psalms was available in Arabic translation, as we have learned from the translations of al-Yaʿqūbī. A fragment of a Christian Arabic translation of the Psalms (containing *Ps* 78: 20-31, 51-61 in Greek majuscule writing from the second/eighth century) was identified in Damascus by B. Violet (Ein zweisprachiges Psalmfragment).

In Jewish and Christian circles, the *Tafsīr* (= translation into Arabic with commentary) by Saʿadyā Gaon alias Saʿd b. Yūsuf al-Fayyūmī (d. 331/942) was especially famous, but members of the Karaite sect such as Japheth b. Eli (Abū ʿAlī Ḥasan b. ʿAlī al-Baṣrī; fourth/tenth century) are also worth mentioning. In Spain, interest in the Psalms reached its apogee with Ibn Ḥazm's (384-456/994-1064) "Book on religions" *(al-Fiṣal fī l-milal)*. Already in third/ninth century Muslim Spain, Ḥafṣ al-Qūṭī translated the Psalter into Arabic *rajaz* verse, probably not directly from Arabic but from a Latin version of Jerome (347-420 C.E.). By that time there were already two prose translations of the Psalms in al-Andalus. Ibn Ḥazm in his *Fiṣal* criticized very much the contents of a number of psalms, such as Psalm 2:7, which has a statement about God's son (see EZRA; JESUS; POLEMIC AND POLEMICAL LANGUAGE). He also dealt with about ten other psalms, e.g. *Ps* 81:6 and 44:7 (cf. Ljamai, *Ibn Ḥazm,* 115-8). This is a sign of the immense popularity of the Psalms, which is also reflected in the style of some poems by poets from the east as well as the west of the Islamic world, such as Abū l-ʿAtāhiya (130-211/748-826) and Ibn Khafāja (450-533/1058-1139). The Andalusian poet Ibn Khafāja says in one of his poems (*Dīwān,* no. 162): "Happy is the one who stands in the fear of the lord (q.v.) while darkness (q.v.) sets up its cupola of darkness," which clearly echoes Psalm 1:1. In modern times the Urdu poet Iqbāl (1877-1938) has composed a Psalter, but the poems are not really reminiscent of Davidic psalms (see also LITERATURE AND THE QURʾĀN; see esp. NATURE AS SIGNS; PRAISE for discussion of "psalmodic" qurʾānic passages).

Punishment Stories

The Qur'ān contains many stories, overwhelmingly from the Meccan period (see CHRONOLOGY AND THE QUR'ĀN), which describe God's destruction of unbelieving communities in the generations before Muḥammad (see BELIEF AND UNBELIEF). A key feature of these stories, at least in their more developed forms, is the encounter between a messenger (q.v.) and the particular community to which he is sent to preach God's message. The messenger typically encounters opposition and ridicule but finally God intervenes to destroy the unbelievers. It is to be noted that these stories depict a punishment inflicted by God in this world rather than in the afterlife (see CHASTISEMENT AND PUNISHMENT; REWARD AND PUNISHMENT). This article gives a survey of the relevant qur'ānic material and also suggests how these stories illuminate the context in which Muḥammad was preaching (see OCCASIONS OF REVELATION).

Early Meccan period

From this period there are a number of passages which are so brief that they can scarcely be described as punishment stories, but which nevertheless point ahead to the more developed narratives (q.v.) to be considered below (see FORM AND STRUCTURE OF THE QUR'ĀN). These early Meccan passages give short, allusive accounts of the destruction by God of unbelieving communities of the past, along with occasional references to messengers sent by God. The relevant passages, in chronological order, are: 105; 91:11-5; 85:17-20; 73:15-6; 79:15-26; 89:6-14; 53:50-4; 69:4-12; 51:24-46. (See for an analysis of these passages Marshall, *God,* 39-52.)

Middle and late Meccan periods

Many of the typical features of the punishment stories from these periods are present in the following account of the preaching of the messenger Shu'ayb (q.v.) to the "men of the thicket" (see PEOPLE OF THE THICKET), their rejection of his message and their consequent punishment by God.

The men of the thicket cried lies to the envoys when Shu'ayb said to them: "Will you not be godfearing? I am for you a faithful messenger, so fear God and obey me (see FEAR; OBEDIENCE). I ask of you no wage for this; my wage falls only upon the lord (q.v.) of all being. Fill up the measure,

and be not cheaters, and weigh with the straight balance, and diminish not the goods of the people (see ECONOMICS; WEIGHTS AND MEASURES; MEASUREMENT; JUSTICE AND INJUSTICE), and do not mischief in the earth, working corruption (q.v.). Fear him who created you (see CREATION), and the generations (q.v.) of the ancients." They said: "You are merely one of those that are bewitched (see INSANITY); you are nothing but a mortal, like us; indeed, we think that you are one of the liars (see LIE). Then drop down on us lumps from heaven, if you are one of the truthful." He said, "My lord knows very well what you are doing." But they cried him lies; then there seized them the punishment of the day of shadow; assuredly it was the punishment of a dreadful day. Surely in that is a sign, yet most of them are not believers. Surely your lord, he is the all-mighty, the all-compassionate (Q 26:176-91).

This is the last of seven stories, which together form a long narrative chain constituting virtually the whole of sūra 26. Of these seven, the final five, focusing in turn on the messengers Noah (q.v.), Hūd (q.v.), Ṣāliḥ (q.v.), Lot (q.v.) and Shuʿayb, have many similarities in both form and content and are linked by a number of repeated phrases.

These five stories begin with a brief statement of the unbelieving response of a particular people to God's messenger, who is typically one of their kin. The first word of each story is the verb *kadhdhabat,* denoting the unbelievers' denial of the truth (q.v.) of the messengers' words. This repetition emphatically introduces the phenomenon of unbelief as the burden of these stories. The opening is followed by an account of the messenger's preaching, which calls his people to be god-fearing and to acknowledge his own authority (q.v.) and trustworthiness. In most cases the messenger also criticizes forms of immorality or social injustice displayed by the community in question (see VIRTUES AND VICES, COMMANDING AND FORBIDDING; ETHICS AND THE QURʾĀN). This prompts a scornful, unbelieving response that might also include a threat of violence towards the messenger who, in some cases, now prays for God to deliver him and his followers or household. Then, in a variety of ways, God intervenes to destroy the unbelievers. Each passage concludes with a reminder to the Meccan listeners that this story is a "sign" *(āya),* a call to respond in humility to the mighty but merciful God; there is also, however, a note of resigned recognition that "most of them are not believers."

God sends a messenger; the messenger is rejected; the unbelievers are punished. This basic narrative pattern underlies the great majority of the many punishment stories that occur in the middle and late Meccan periods, although there is also significant variety among them. The same essential story about the five messengers mentioned above occurs especially frequently, but there are also many stories involving other messengers, particularly Abraham (q.v.) and Moses (q.v.; the latter occasionally linked to Aaron [q.v.]). The stories about Abraham are not punishment stories in the full sense, as they contain no reference to his people being destroyed, but Abraham sometimes features in the stories of the punishment of Lot's people, as at Q 11:69-83. Some punishment stories refer to unnamed messengers (e.g. Q 23:31-41). Mention should also be made of Jonah (q.v.), the only messenger whose people repent (see REPENTANCE AND PENANCE) in response to his preaching and who therefore escape punishment (Q 37:139-48; 10:98). In addition to the peoples of the messengers already mentioned, the Qurʾān also refers to other punished

peoples, such as al-Rass (q.v.) and Tubbaʿ (q.v.; Q 50:12, 14), about whom nothing further is said. There is also a story about the punishment of the people of Sheba (q.v.; 34:15-21), which is unusual in not including any mention of a messenger. The nature of the punishment inflicted by God is in some cases made explicit (e.g. the flood which destroyed Noah's [q.v.] people; the drowning of Pharaoh's [q.v.] army; stones being rained from heaven on Lot's people); but in many cases it is left unspecific (e.g. Q 26:189, in the story quoted above, refers to "the punishment of the day of shadow").

It is difficult to overstate the significance of the punishment stories in the middle and late Meccan periods, where they constitute a very considerable proportion of the qurʾānic text. The following list includes a number of passages (e.g. especially Q 11:25-99 and Q 7:59-137, as well as Q 26:8-191, mentioned above) in which several narratives are linked to form a chain of punishment stories, suggesting that human history has been a sequence of such encounters between God's messengers and unbelievers (see HISTORY AND THE QURʾĀN): Q 54:9-42; 37:71-148; 71; 44:17-33; 50:12-4; 20:9-99; 26:8-191; 15:51-84; 38:12-5; 36:13-32; 43:46-56; 23:23-49; 27:7-58; 25:35-40; 17:101-3; 18:32-43; 41:13-8; 11:25-99; 14:5-14; 40:5-6; 40:23-46; 28:3-43; 28:76-82; 29:14-40; 10:71-92; 34:15-21; 7:59-137; 46:21-7 (a brief summary of the contents of each of these passages is provided at Marshall, *God*, 71-3).

In addition to this list of narrative passages there are also many brief and generalized references to God's acts of punishment in the world. Typical in this regard are the refrain "How many a generation we destroyed..." (e.g. Q 6:6; 10:13-4; 17:17; 19:74; 50:36) and variants on "Have they not journeyed in the land and beheld how was the end of those that were before them?" (Q 35:44; cf. 6:11; 12:109; 30:42; 40:21-2, 82-4; see GEOGRAPHY). Similar passages occur at Q 43:23-5; 67:18; 21:6-15; 18:55-9; 32:26; 39:25; 7:4-5; 6:42-5. The combination of extended punishment stories and these widely scattered brief references to God's acts of punishment in this world ensure that this theme thoroughly pervades the qurʾānic material of these periods.

The Medinan period

It is therefore very striking, and a point little commented on, that in Medinan passages there are no developed punishment stories and only very few brief references to God's past acts of punishment. Q 22:42-9 and 64:5-6 are examples of early Medinan passages which echo the themes and threats of the Meccan punishment stories (on the dating and significance of Q 22:39-49 see Marshall, *God*, 119-24); isolated later Medinan examples can be found at passages such as Q 3:10-1, Q 9:70, and Q 47:10. Comment will be offered below on the absence of punishment stories in Medinan passages after the abundance of them in Meccan passages.

The significance of the punishment stories

The point is widely recognized that the punishment stories provide a window onto the situation of Muḥammad at Mecca (q.v.). These stories reflect both the wider context in which Muḥammad was preaching and also something of his own experience of being rejected by the unbelievers in Mecca (Marshall, *God*, x, 29-30 and 36-7; see OPPOSITION TO MUḤAMMAD).

Working from this assumption, it is possible to explore the functions these stories served. Their primary purpose was to warn of a punishment from God that would fall upon the Meccan unbelievers if they did not repent and accept Muḥammad's message. Thus, if the unbelievers

reject his message, Muḥammad is bidden to tell them: "I warn you of a thunderbolt like to the thunderbolt of ʿĀd (q.v.) and Thamūd" (q.v.; Q 41:13). What had happened to unbelieving communities in the past could happen to the Meccans in the present if they persisted in their rejection of Muḥammad's message (Marshall, *God,* 54-7).

In addition to exercising this warning function, the punishment stories also served to encourage Muḥammad and his followers to persevere in the face of hostile unbelief. This is implicit throughout the stories as they depict the final vindication of God's messengers and their followers (e.g. especially the sequence of stories at Q 37:71-148) and is made explicit in the qurʾānic comment on the stories in sūra 11: "And all that we relate to you [Muḥammad] of the tidings of the messengers is that whereby we strengthen your heart" (q.v.; Q 11:120; see NEWS).

There is further interest in the punishment stories, however, in that they also give some fascinating insights into Muḥammad's experience in Mecca. The observation of Horovitz (*KU,* 18) that "Muḥammad's feelings and experiences repeatedly come to expression in the speeches of the earlier messengers of God and their opponents" is perhaps best illustrated in the story of Noah at Q 11:25-49, with its memorable account of Noah's anguish over his unbelieving son (Marshall, *God,* 97-105; note the striking comments of Quṭb, *Taṣwīr,* 58). On this passage Newby (Drowned son, 29) comments: "the compassion of Noah tells us of Muḥammad's concern for those who would not heed his message."

This approach to the punishment stories, emphasizing their relevance to and reflection of Muḥammad's actual context in Mecca, can also be extended to offer a possible explanation for their disappearance after the emigration (q.v.; *hijra*) from Mecca to Medina (q.v.). In the Medinan passages the theme of the punishment of unbelievers in this world by God undergoes significant developments. With the onset of military conflict between Muḥammad's community and the Meccan unbelievers, as well as other opponents, the Qurʾān gradually unfolds a new paradigm (see FIGHTING; WAR; EXPEDITIONS AND BATTLES). In the Meccan period the punishment stories had reflected the expectation that God would intervene suddenly to destroy the unbelievers directly, without human mediation (Marshall, *God,* 66-8). In Medina, however, it is recognized that it is through the believers and in the course of a military campaign that the divine punishment will be inflicted on the unbelievers (key Medinan passages articulating this transition are Q 8, Q 47:4 and Q 9:14; see Marshall, *God,* 134-44, 153-7). Therefore, whereas in Mecca the punishment stories functioned with purposes specific to that context, after the *hijra* — and particularly after the battle of Badr (q.v.) — the changed context of Muḥammad and his community mean that these stories had in a sense been outgrown. The messengers who had so regularly been invoked as forerunners of Muḥammad in the Meccan context were not so relevant in the very different circumstances of Medina (Marshall, *God,* 158-60).

It should also be noted that narrative as a whole — not just the particular case of the punishment stories — is a rare phenomenon in Medinan passages in comparison with Meccan passages. It can be argued that this is another reflection of the difference between the two contexts. In Mecca the abundant use of narrative, with its indirect way of commenting on Muḥammad's circumstances, seems to reflect, at least in part, a situation of weakness and lack of authority. Medina, in

contrast, is a context of growing power and authority for Muḥammad and his community (see POLITICS AND THE QUR'ĀN), and there is here a tendency to comment much more directly on events, without recourse to the medium of narrative (Marshall, *God,* 161-4). This interpretation sheds further interesting light on the way in which the Meccan punishment stories functioned in context within the life of a struggling and vulnerable community.

Qaynuqāʿ (Banū)

One of the Jewish tribes of Medina (q.v.), generally considered part of the triad that also includes the Banū l-Naḍīr (see NAḌĪR [BANŪ AL-]) and the Banū Qurayẓa (q.v.). A so-called "market of the Banū Qaynuqāʿ" in Medina was known in pre-Islamic times, and various sources state that the Qaynuqāʿ were famous as goldsmiths but — in contrast to the other Jewish tribes — they possessed no arable land. Their quarter, al-Quff, close to the center of Medina, housed a Jewish assembly-place (see JEWS AND JUDAISM; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). The most prominent members of the Qaynuqāʿ were Finḥāṣ al-Yahūdī, Shaʾs b. Qays and, above all, ʿAbdallāh b. Salām; several of ʿAbdallāh's descendants are quoted in later chains of transmission in ḥadīth (see ḤADĪTH AND THE QURʾĀN). In early *sīra* accounts (accounts that belong to the biography of the Prophet; see SĪRA AND THE QURʾĀN) most of the Medinan Jews known by name are ascribed to the Qaynuqāʿ, although this tribe was, if compared with those of al-Naḍīr and Qurayẓa, of minor importance, and allegedly left Medina only two or three years after the Prophet's arrival. In Islamic legal sources (see LAW AND THE QURʾĀN) the Qaynuqāʿ are said, on the authority of al-Shāfiʿī (d. 204/820) and al-Awzāʿī (d. 157/774), to have participated in Muslim raids (see EXPEDITIONS AND BATTLES) and even to have received a share in the booty (q.v.). The most important event concerning the Qaynuqāʿ in mainstream Islamic tradition is, however, their siege and ensuing expulsion from Medina by the Muslims.

According to Islamic tradition, this conflict was either the result of the refusal of the Qaynuqāʿ to accept Islam or the breaking of a non-aggression treaty which they had concluded with the Prophet (see BREAKING TRUSTS AND CONTRACTS; CONTRACTS AND ALLIANCES); according to reports told by Ibn Hishām (d. 218/834) and al-Wāqidī (d. 207/822), however, and ultimately adopted in most later sources, a member of the Qaynuqāʿ had mocked a Muslim woman in their market (see MARKETS), and that led eventually to the siege of their quarter after the battle of

Badr (q.v.). For a fortnight in 2/624 — or in year 3, according to al-Ṭabarī (d. 310/923) — the Qaynuqāʿ were besieged by the Muslims, and after their surrender they were expelled to the Syrian town of Adhriʿāt. The Prophet is believed to have intended a harsher fate for them but the hypocrite (see HYPOCRITES AND HYPOCRISY) ʿAbdallāh b. Ubayy successfully interceded with him on their behalf. The Jews were allowed to leave Medina but their weapons were taken by the Muslims and a part thereof was distributed among the Prophet's Companions (see COMPANIONS OF THE PROPHET).

In the case of the Qaynuqāʿ it is very difficult to assess the reliability of the Islamic tradition. Ibn Isḥāq's (d. 150/767) account is mainly constructed from exegetical material concerning verses Q 3:12 f. and Q 5:51-6 and does not mention the expulsion of the Qaynuqāʿ, let alone an exact date for this event. In addition, a number of exegetical authorities state that the later expulsion of the Jewish al-Naḍīr was "the first expulsion of Jews from Medina," a claim which obviously belies the Qaynuqāʿ episode as found in the later "orthodox" version. This "orthodox" version largely depends on the account by al-Wāqidī, whose conflation of reports and sources seems in this case to be more extensive than usual. Apart from the incident in the market of the Qaynuqāʿ, he stresses the treachery of the Qaynuqāʿ and repeatedly refers to Q 8:58 in this context: "And if you fear treachery any way at the hands of a people, dissolve it with them equally; surely God loves not the treacherous" — a verse generally applied to the Jewish Banū Qurayẓa. Modern research suggests, thus, that the episode of the conflict with the Qaynuqāʿ is somewhat intrusive in the *sīra* tradition and probably a result of the conversion of exegetical material into history, backed by an interest in its legal and chronological implications (see CHRONOLOGY AND THE QUR'ĀN; HISTORY AND THE QUR'ĀN). In any case, important early *sīra* authorities such as Ibn Shihāb al-Zuhrī (d. 124/742) and Mūsā b. ʿUqba (d. 141/758) do not seem to have known of the expulsion of the Qaynuqāʿ, and the account of Ibn Isḥāq remains inconclusive. The qurʾānic verses adduced in support of the Qaynuqāʿ episode are too vague to allow for firmer conclusions.

Qibla

A direction one faces in order to pray (see PRAYER). Q 2:142-50 is concerned with the Muslims' *qibla* and appears to say the following: There is about to be a change of *qibla*. Foolish people will make an issue of the change and they should be answered with an affirmation of God's absolute sovereignty (q.v.; see also POWER AND IMPOTENCE). God has made the believers neither Jews nor Christians (see BELIEF AND UNBELIEF; JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY) but an example to all, just as the messenger (q.v.) is an example to the believers. The former *qibla* was instituted only as a test, to see who would follow the messenger's example and who would turn away. It was a hard test but not for those whom God guided (see ASTRAY; ERROR; FREEDOM AND PREDESTINATION). To reward their faith (q.v.) and in response to the messenger's own silent appeal, God will now institute a *qibla* to the messenger's liking. He and the faithful, wherever they may be, should now turn their faces toward 'the sacred place of worship' *(al-masjid al-ḥarām)*. Both Jews and Christians know that this is the true *qibla* but no matter what proof of this the messenger might bring them they will never follow his *qibla*. They cannot even agree on a *qibla* between themselves. They do as they please but the messenger knows better. In fact they know better, too, but one group of them deliberately conceals the truth. The faithful should turn their faces toward the sacred place of worship so that none but the perverse will have any argument against them. They should not fear such people but only God who has chosen to bestow on them his favor.

The change of qibla *in Muslim tradition*

Traditional Muslim exegesis (see EXEGESIS OF THE QUR'ĀN: CLASSICAL AND MEDIEVAL) has provided this passage with a quasi-historical setting in Medina (q.v.). It is commonly reported that when he first arrived in Medina the prophet Muḥammad prayed towards Jerusalem (q.v.) or at least towards Syria (q.v.). This is usually simply stated without any explanation. Occasionally it is noted that Jerusalem was the *qibla* of the Jews and one report implies that Muḥammad himself chose this direction in order that the Jews might believe in him and follow him (Ṭabarī, *Tafsīr,* iii, 138). This should not be taken at face value. The purpose of the report is to claim the change of *qibla* as evidence for the theory of abrogation (q.v.; *naskh*), which proposes that qur'ānic rulings were sometimes abrogated by later rulings. The report faces the difficulty that whereas the Qur'ān provides an abrogating ruling — the new *qibla* — it does not easily yield an abrogated ruling, as the theory requires. There is no instruction anywhere in the Qur'ān to pray towards either Jerusalem or Syria. The problem is solved with Q 2:115, "To God belong the east and the west. Wherever you turn, there is the face of God (q.v.)." It was evidently on the basis of this permissive ruling that Muḥammad himself chose to pray towards Jerusalem and appealing to the Jews provides a plausible motive for him to do so. A superficially similar report says contrarily that God ordered Muḥammad to pray towards Jerusalem. This pleased the Jews of Medina, though the report does not presume to know that this was God's motive. Muḥammad, we now learn, would have preferred what is here referred to as the *qibla* of Abraham (q.v.), with the obvious implication that Mecca

(q.v.) — and not Jerusalem — was the true focus of the Abrahamic cult. The Jews' initial pleasure is mentioned only to prepare for their subsequent displeasure when the change is made. The point of this report is not now *naskh* but a simple appropriation of the Abrahamic legacy (Ṭabarī, *Tafsīr,* iii, 138-9; this and the preceding report are conflated at ibid., ii, 527; see also ḤANĪF). In both reports the circumstantial detail is plainly subordinate to the main point, but on such slight foundations rests the well-established notion that Muḥammad tried to reconcile the Jews of Medina before their perverse ingratitude for his prophetic attentions compelled him to take stronger measures (see PROPHETS AND PROPHETHOOD; GRATITUDE AND INGRATITUDE; OPPOSITION TO MUḤAMMAD).

It is variously reported that the change of *qibla* came when Muḥammad had been in Medina for two, nine, ten, thirteen, sixteen or seventeen months (Ibn Isḥāq, *Sīra,* i, 550, 606; Mālik, *Muwaṭṭaʾ,* i, 196; Ibn Māja, *Sunan,* i, 322; Ṭabarī, *Tafsīr,* iii, 132-7; id., *Taʾrīkh,* i, 1279-81). Most reports of the actual occurrence turn out to be stereotyped vehicles for another theoretical point. The change of *qibla* by the Prophet himself is not observed directly but reported by a single individual, usually anonymously, who happens to pass by a group of other Muslims in the middle of their prayer. He tells them that the Prophet has now been told to pray towards the Kaʿba (q.v.) or that he has seen him do so, and they immediately turn around and do the same (Mālik, *Muwaṭṭaʾ,* i, 195; Shāfiʿī, *Risāla,* 406-8; Bukhārī, *Ṣaḥīḥ,* i, 110-1, vi, 25; Muslim, *Ṣaḥīḥ,* i, 374-5; Ṭabarī, *Tafsīr,* iii, 133-4). The point is to prove for later generations the reliability of *khabar al-wāḥid,* a report of the Prophet's sunna (q.v.) attributed to only one of his Companions (see COMPANIONS OF THE PROPHET). It quite deliberately shows the Prophet's own Companions unhesitatingly changing their practice in the most important religious duty for all Muslims on the evidence of just one of their number. His anonymity supports the point, as it cannot now be argued that a particular Companion was regarded as exceptionally trustworthy. Any Companion would have done and so, we must conclude, does any one Companion whom later generations know through chains of transmitters of ḥadīth (*isnāds*) as the sole witness to a particular ruling of the Prophet (see LAW AND THE QURʾĀN; ḤADĪTH AND THE QURʾĀN). There is a report in which Muḥammad himself is observed praying two prostrations (*rakʿas*; see BOWING AND PROSTRATION) of the midday prayer (see NOON) towards Jerusalem and then suddenly turning around towards the Kaʿba before completing the prayer (Ṭabarī, *Tafsīr,* iii, 135). This seems more likely to derive from the forgoing reports than vice versa.

That "the sacred place of worship" is indeed the Kaʿba in Mecca is unquestioned and frequently stated. The foolish people who will question the change are identified as the Jews (several of whom are named in one report) or as the People of the Book (q.v.) or as the hypocrites (see HYPOCRITES AND HYPOCRISY). The Jews are said to have wanted to seduce Muḥammad away from his religion or were disappointed at losing the satisfaction of seeing him follow their own practice and the hope that he might turn out to be a Jewish prophet after all. The hypocrites just wanted to scoff (Ibn Isḥāq, *Sīra* i, 550; Ṭabarī, *Tafsīr,* iii, 132, 134, 138-40, 157-8; see MOCKERY).

As John Burton has pointed out, there is nothing in the Qurʾān either to prove or to disprove that the former *qibla* referred to in Q 2:142-3 was Jerusalem (Burton, *Sources,* 179). He might have added, though he does not, that there is nothing in it either to

prove or disprove that the latter *qibla,* the "sacred place of worship" referred to in Q 2:144, was the Kaʿba in Mecca. The historical and geographical referents of Q 2:142-50 are known only from Muslim exegesis and it is clear that the exegetes' purpose in examining this passage was not the disinterested satisfaction of historical curiosity (see HISTORY AND THE QURʾĀN). The preoccupation with abrogation is pervasive. Al-Ṭabarī (d. 310/923) coolly twists the meaning of Q 2:143 so that not the former *qibla* itself but the change of *qibla,* the apparently arbitrary phenomenon of abrogation, becomes the test of faith for the believers. This enables him to consider an issue that, for those who assert the reality of the phenomenon of *naskh,* is theoretically interesting: namely, whether those believers who lived and died under the abrogated ruling will be rewarded in the same way as those who survived to obey the new one (Ṭabarī, *Tafsīr,* iii, 163-70). Why some should have found it hard to pray towards Jerusalem, if that was indeed the former *qibla,* is not a question he raises.

For all that, it seems clear from the text that Q 2:142-50 is a residue of the process by which Islam asserted its independence as the one true religion (q.v.) from its Jewish and Christian antecedents (see RELIGIOUS PLURALISM AND THE QURʾĀN). This becomes clearer still when the passage is examined, as Burton (*Sources,* 171-3, 179-83) has shown, in its larger context. Q 2 as a whole is intensely polemical, with sustained attacks on the authenticity of the Jewish religion and in particular the Jewish claim of continuing adherence to God's covenant (q.v.) with Abraham. It stakes Islam's own claim to the covenant through Ishmael (q.v.) and prepares the ground for Q 2:142-50 with an account of Abraham's foundation, with Ishmael's help, of a sanctuary as a place of prayer and ritual (Q 2:125-8; see RITUAL AND THE QURʾĀN). This Abrahamic sanctuary is referred to only as "the house" or "my (God's) house" but is easily identified with "the sacred place of worship" *(al-masjid al-ḥarām)* of Q 2:142-50 or the *qibla* of Abraham as the exegetes call it (see HOUSE, DOMESTIC AND DIVINE). At Q 3:96 this sanctuary is said to have been at Bakka, which everyone has been taught is an old name for Mecca. Even if that might be doubted, the polemical context at both Q 3:96 and Q 2:125-8 makes almost inescapable the implication that, wherever it was, the Qurʾān's Abrahamic sanctuary was definitely not in Jerusalem. To that extent the exegetes' identification of the abrogated *qibla* with Jerusalem makes obvious sense of the text.

The fundamental issue behind the polemic of Q 2 is the problem of changing the law within a monotheistic intellectual tradition which insists that the law is God's law and that God's law is immutable. The problem and some of its solutions are older than the Qurʾān but the solution seen in Q 2:142-50 is the most typically qurʾānic one. The new *qibla* is not an innovation (q.v.) but a restoration. If it differs from the practice of Jews and Christians, it is the latter who have arbitrarily departed from what they themselves know, but will never admit, is the truth. The heat of qurʾānic polemic against the Jews in Q 2 is a smokescreen for this sleight of hand (see POLEMIC AND POLEMICAL LANGUAGE). Whereas for early Christianity the crux issue with Judaism was the Sabbath (q.v.), for early Islam it was evidently the *qibla*. Once the crux is overcome (in Q 2:142-50), the way is open for the rush of new legislation that follows in the remainder of the sūra.

The early qibla *in history*

Whether the early Muslims ever did pray towards Jerusalem we shall probably never

know. In 1977 Patricia Crone and Michael Cook proposed that they did once pray towards a sanctuary somewhere in northwestern Arabia. Their evidence, reviewed in detail by Robert Hoyland in 1997, is firstly that two Umayyad mosques in Iraq, one at Wāsiṭ and one at Iskāf Banī Junayd, are known from modern archeological investigation to have been oriented in a westerly direction much further north than that of Mecca. Secondly, there are reports in Muslim literary sources that the first mosque built in Egypt was oriented in an easterly direction that was also further north than that of Mecca. In addition, Jacob of Edessa, a seventh century C.E. Syrian Christian writer, says that Jews and Muslims in Egypt prayed to the east and in Babylonia to the west (Crone and Cook, *Hagarism,* 23-4; Hoyland, *Seeing Islam,* 560-73; see MOSQUE).

Put together, these fragments of evidence are suggestive — but if each fragment is considered separately none is very persuasive. The archeological evidence tells us nothing of the early mosque builders' intentions unless we know how accurate their technical means of putting their intentions into effect were. As David King (Ḳibla, 87-8) has argued, it is likely that the earliest mosque builders adopted a local convention rather than a scientifically exact direction for the Kaʿba. In the case of the mosque of Iskāf Banī Junayd, the archeological report of its misorientation observes, "the error seems to have been aggravated by the fact that the line of the Nahrawan (Canal) clearly influenced and dictated that of the mosque in large degree" (Creswell, *Short account,* 268). Muslim literary reports that the first mosque in Egypt was orientated too far to the north put it down to a personal idiosyncrasy of the Muslim commander and conqueror of Egypt ʿAmr b. al-ʿĀṣ, who oversaw its construction. They note that other worshippers in the mosque used to turn themselves off to the south until the mosque itself was finally rebuilt and realigned (see also SCIENCE AND THE QURʾĀN).

Literary evidence also needs to be judged against the possibility that the writer is working with a simplified and schematic mental map. Jacob of Edessa's point about Muslims is that they do not pray everywhere in the same geographical direction. They pray towards the Kaʿba, so that in Egypt they pray to the east, in Babylonia to the west, from south of the Kaʿba to the north, and in Syria to the south. Does this really help us to locate the Kaʿba? It is equally likely that Jacob himself, for the sake of simplicity, reported only approximately what he had actually observed or that Muslims in all those parts of the world prayed in any case only approximately in the direction of Mecca. In the end, it may not be significant where exactly their approximate direction happened to lie.

Quraysh

Name of a tribe in Mecca (q.v.) to which Muḥammad belonged (for the meaning of the name, see Watt, Ḳuraysh). It is mentioned only once in the Qurʾān (Q 106:1), in a chapter dealing with their winter and summer caravans (see CARAVAN). The exegetes quote detailed traditions about their pre-Islamic commercial system which acquired international dimensions, their trade caravans being said to have reached as far as Byzantium in the north (see BYZANTINES), Persia in the east, Abyssinia (q.v.) in the west and Yemen (q.v.) in the south. The qurʾānic chapter itself requests the Quraysh to remember that their prosperity and security (see WEALTH) comes from God; therefore they must worship him alone (see ILĀF).

Blessed by God

Sūra 105, "The Elephant," is also closely associated with the Quraysh (see PEOPLE OF THE ELEPHANT), and mainly with the origin of their elevated status among the Arabs (q.v.). The exegetes adduce traditions relating that the sūra (q.v.) describes the defeat of an Abyssinian army under the command of Abraha (q.v.), that came from the Yemen to destroy the Kaʿba (q.v.). God sent upon them birds in flocks that smote them with stones of baked clay, and caused them to become like straw eaten up. Tradition has it that "When God turned back the Abyssinians from Mecca and executed his vengeance (q.v.) upon them, the Arabs held the Quraysh in great honor, saying, 'They are the people of God: God fought for them and thwarted the attack of their enemies'" (Ibn Isḥāq-Guillaume, 28). The key figure in these traditions on the Meccan side is ʿAbd al-Muṭṭalib, Muḥammad's grandfather, who is said to have negotiated with Abraha on behalf of the Quraysh.

Reference to God's bounty, which was the origin of the security and prosperity enjoyed by the Quraysh in their sacred territory (*ḥaram;* see SACRED PRECINCTS; PROFANE AND SACRED), is made in some further verses, which urge the Meccans to be aware that God is their only benefactor and not to reject the message of the Qurʾān (cf. Q 28:57; 29:67; see BELIEF AND UNBELIEF). In Q 14:37 the prosperity bestowed on the people of Mecca originates in their being offspring of Abraham (q.v.). Here this patriarch asks God to bless his offspring who dwell near God's sacred "house" (see HOUSE, DOMESTIC AND DIVINE), the Kaʿba, to "make the hearts of [some] people yearn towards them and provide them with fruits." This is supposed to make them grateful to God (see GRATITUDE AND INGRATITUDE).

Their genealogical descent goes back to Abraham as well as to Ishmael (q.v.), which is implied in the fact that, in Q 2:127-8, both patriarchs are engaged in the building of the "house" while asking God to raise from their offspring a nation submitting to him *(umma muslima)*.

Their noble descent from Ishmael who is regarded the ancestor of the northern Arabs implies pride in their Arabian origin. This is reflected also in the exegesis on Q 14:4 which says that "God did not send any apostle (see MESSENGER) but with the language of his people" (see ARABIC LANGUAGE; LANGUAGE AND STYLE OF THE QURʾĀN). Traditions adduced by the

exegetes for this verse assert that the Qurʾān was revealed in the language of the Quraysh (see DIALECTS).

Muḥammad's opponents

But in most verses interpreted as referring to the Quraysh, they act as Muḥammad's opponents (see OPPOSITION TO MUḤAMMAD). Their enmity to Muḥammad has been read by Muslim exegetes into endless passages which cannot be fully detailed here. Only some characteristic examples will be mentioned.

To begin with, their religious tenets are ridiculed in passages blaming them for believing that God has daughters who function as goddesses (see GOD AND HIS ATTRIBUTES; POLYTHEISM AND ATHEISM; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). The Qurʾān asserts the absurdity of this tenet by pointing out that no man wishes daughters for himself (see CHILDREN; GENDER; INFANTICIDE), so how can they attribute daughters to God? This idea is clearly stated in Q 53:19-23, in which the names of the goddesses are also provided. One of these goddesses is al-ʿUzzā, and Muslim exegetes have associated with her worship a prominent leader of the Quraysh, namely Abū Lahab (q.v.), Muḥammad's own uncle. Some traditions say that he was especially devoted to this deity, for which reason God has cursed him as well as his wife in Q 111 (see CURSE).

The ritual practices of the Meccans, as performed in the vicinity of the Kaʿba, are deplored in Q 8:35: "And their prayer before the house is nothing but whistling and clapping of hands…." Even the fact that the Quraysh were guardians of the sacred mosque, i.e. the Kaʿba and its surroundings, was no excuse for them in the eyes of God. On the contrary: in Q 9:19 God asserts that the providing of drink to the pilgrims and the guarding of the sacred mosque cannot substitute for believing in God.

Muslim traditions relate that the Quraysh belonged to a confederation of tribes who called themselves the Ḥums, i.e. "religiously zealous"; they reportedly adopted certain ritual rules which distinguished them from the rest of the Arab tribes (Kister, Mecca and Tamīm). Muslim exegetes have pointed out some verses in which the Quraysh and their confederates of the Ḥums are supposedly urged to give up their particular principles. For example, in Q 2:199, God requests that the rite of the *ifāḍa* (going in crowds from one place to another) be performed from where "the people" use to perform it. The exegetes say that here the Quraysh are requested to act like all the rest of the people during pilgrimage (q.v.), and come to ʿArafāt (q.v.) — a station of the pilgrimage which the Quraysh reportedly did not recognize as a sacred precinct — and start the *ifāḍa* from there.

In Q 2:189 the believers are requested to abandon the habit of entering the houses from behind them, rather than through their front doors. This, too, according to some exegetes, is designed to make the Quraysh abandon a special ritual act observed by the Ḥums during the time of pilgrimage. They reportedly considered it of great piety (q.v.) to remain under the open sky and not to enter the doors of their houses during the days of the pilgrimage.

Unsuccessful attempts at conversion

The leaders of the Quraysh are said to have refused to abandon their old religious tradition, and their reaction is provided most clearly in Q 38:4-7. Here they accuse the Prophet of being a conjurer and an impostor (see SOOTHSAYERS; MAGIC; LIE), and say to each other that they should cling to their deities and reject Muḥammad's monotheistic ideas. They point out

that such ideas were never heard of in their own old religion. Various other passages were explained as representing the reaction of the leaders of the Quraysh to Muḥammad's message (cf. Rubin, *The eye,* 151). In some of them they accuse him of plagiarism, assert their refusal to accept his message, and challenge him to prove his case through miracles (e.g. Q 16:103; 17:90-3; 25:7-8; 41:5; see MIRACLES; PROOF).

Nevertheless, Muḥammad is said to have tried to convert some of his closest relatives among the leaders of the Quraysh, and especially his uncle Abū Ṭālib, father of ʿAlī (see FAMILY OF THE PROPHET; ʿALĪ B. ABĪ ṬĀLIB). Such attempts were read by the exegetes into several qurʾānic passages. For example, some traditions say that the Prophet asked Abū Ṭālib, who was on his deathbed, to utter the *shahāda* (see WITNESS TO FAITH) but the latter refused, saying that he adhered to the religion of the old ancestors. Some versions relate that at this point Q 28:56 was revealed, which says that the qurʾānic Prophet cannot guide whom he likes (see GUIDANCE; FREEDOM AND PREDESTINATION). Q 9:113 is also said to have been revealed on the same occasion. It says that it is not for the qurʾānic Prophet and the believers to ask pardon for the polytheists (Rubin, *The eye,* 153; see FORGIVENESS; INTERCESSION). Moreover, in Q 6:108 the believers are requested not to abuse the idols worshipped by the polytheists (see IDOLS AND IMAGES), lest the latter should abuse God in return. The exegetes say that this verse was revealed as a result of the stubborn reaction of the leaders of the Quraysh, and their threat to abuse Muḥammad's God, in case he did not stop harassing them (ibid., 154; see also SATANIC VERSES).

Opposition and persecution

The Qurʾān also accuses the unbelievers of active persecution of the Prophet, and the exegetes explain that these accusations pertain to the hostile actions of the Quraysh that were carried out against Muḥammad in Mecca itself, before the emigration (q.v.; *hijra*), as well as in Medina (q.v.), after the *hijra*.

Persecution in Mecca, according to the exegetes, began as soon as Muḥammad started preaching in public. This he reportedly was requested to do in Q 26:214, in which God tells him to warn his nearest relations. The exegetes adduce for this verse traditions describing how Muḥammad summoned the clan of Hāshim of the Quraysh, and how they rejected his message. Their opposition was led by Muḥammad's uncle Abū Lahab (see Rubin, *The eye,* 127-38). Another prominent opponent in Mecca was Abū Jahl of the clan of Makhzūm, and his persecution of the Prophet was read into Q 96:9-19. Here a scene is described in which an unbeliever prevents a "servant" from praying. Most traditions maintain that the servant is Muḥammad, and the unbeliever is Abū Jahl who threatened to tread on the Prophet if he performed prostration (see BOWING AND PROSTRATION; PRAYER; RITUAL AND THE QURʾĀN). God instructs his servant not to obey him and to prostrate himself before God. A plan to assassinate the Prophet is pointed out by the exegetes in the commentary on Q 8:30: "And when those who disbelieved devised plans against you that they might confine you or slay you or drive you away…." This was taken to refer to a council held by Quraysh in which they discussed various options in order to eliminate the Prophet, and finally they agreed upon killing him while he was asleep in his bed. Muḥammad found out about it, and this was the immediate reason for his *hijra* to Medina.

The exegetes also point out verses in which reference is made to God's vengeance upon Muḥammad's adversaries

from among the Quraysh. For example, in Q 15:95 God, speaking to the Prophet, promises to eliminate "those who scoff." The exegetes hold that this refers to a group of leaders from the Quraysh, on each of whom God brought death through a certain misfortune.

Collective punishment of the Quraysh is referred to, according to the exegetes, in Q 16:112 in which God sets forth a parable about a town safe and secure, a town whose means of subsistence came in abundance from every quarter; but it became ungrateful to God's favors, and therefore God made it taste the utmost degree of hunger and fear (see PARABLES). This has been taken as referring to a seven-year drought that God inflicted upon the Quraysh at the behest of the persecuted Prophet. The exegetes have associated this hunger with some further qurʾānic passages (Q 23:64, 75-7; 44:10-6).

Among the verses interpreted as referring to the acts of the Quraysh against Muḥammad after the *hijra,* are those in which the unbelievers are accused of preventing the believers from entering Mecca and the sacred mosque (Q 2:217; 8:34; 22:25; 48:25). In the traditions, this conduct is associated especially with the events of the year 6/628, when the Prophet left Medina with the believers and approached Mecca with a view of performing the lesser pilgrimage. The Quraysh stopped him at the outskirts of the town, near Ḥudaybiya, and the negotiations that followed reportedly ended up with the well-known pact of Ḥudaybiya (q.v.).

Also noteworthy are the verses to which the exegetes linked the military clashes between the Quraysh and the Prophet (see EXPEDITIONS AND BATTLES; FIGHTING; WAR). In some cases the link is obvious, as with the battle of Badr (q.v.; 2/624), which is mentioned in a passage describing angels assisting the fighting believers (Q 3:123-8; see ANGEL). Additional passages were linked to Badr by means of commentary, mainly Q 8:1-19 in which the division of spoils (see BOOTY) is discussed, and the help of angels smiting the unbelievers is described yet again. Various passages predicating divine punishment for the unbelievers (as in Q 18:55; 44:16, etc.) were also interpreted as referring to the defeat of the Quraysh at Badr (see CHASTISEMENT AND PUNISHMENT; PUNISHMENT STORIES).

The Battle of the Ditch (5/626-7), in which Medina was besieged by the Quraysh and their allies, is alluded to, according to the exegetes, in Q 33:9-27. Here the Qurʾān describes hosts of confederates *(aḥzāb)* coming against the believers, whom God defeats by means of winds (see AIR AND WIND) and unseen legions (of angels; see RANKS AND ORDERS).

The conquest of Mecca (8/630) which marked Muḥammad's final victory over the Quraysh is celebrated, according to the exegetes, in Q 110:1-3. Some have also associated Q 48:1 with this event: "Surely we have given you a clear victory (q.v.; *fatḥ*)," but others maintain that the latter passage refers to the affair of Ḥudaybiya.

Believers

The Qurʾān also refers to groups among the Quraysh who eventually became believers by embracing Islam, and some exegetes say that those who were first to do so are mentioned in Q 56:10, which speaks about those who were "foremost" (*al-sābiqūn;* cf. also Q 9:100; 59:10).

Another group is referred to as *al-mustaḍʿafūn,* "the weak" (see OPPRESSION; OPPRESSED ON EARTH, THE). They are mentioned in Q 4:75, in which the believers are requested to fight for the sake of the weak among the men and women and children. These weak say: "Our lord! Let us go out of this town, whose people are oppressors, and give us from you a guardian and

give us from you a helper." The exegetes explain that these are some oppressed Muslims, converts from the Quraysh, who could not get out of Mecca and perform the *hijra* to Medina.

The most prominent group of Muslims among the Quraysh is the *muhājirūn,* the "emigrants" (see EMIGRANTS AND HELPERS). They are mentioned in numerous passages, for example in Q 59:8, in which the "poor emigrants who were driven out of their homes and their possessions" are promised a share in the spoils.

Outside the Qurʾān, one finds numerous traditions praising the Quraysh, and their circulation was no doubt triggered by the fact that the caliphs of the Islamic state were all from the Quraysh (the four "righteous" caliphs, the Umayyads and the ʿAbbāsids; see CALIPH). Therefore these traditions were designed to provide the legitimate basis for the authority of the Qurashī caliphs, as well as to defy claims of other ambitious groups from within the Quraysh themselves (e.g. Shīʿīs), or of south Arabian descent, not to speak of the aspirations of non-Arab members of Islamic society (see COMMUNITY AND SOCIETY IN THE QURʾĀN; POLITICS AND THE QURʾĀN).

Qurayẓa (Banū al-)

One of the Jewish tribes of Medina and traditionally part of the triad that also includes the Banū Qaynuqāʿ (q.v.) and the Banū l-Naḍīr (see NAḌĪR [BANŪ AL-]). Although the origin of the Qurayẓa, like that of the other Medinan Jews, and their coming to Medina (q.v.) are not known with certainty, the sources provide some information concerning their role in pre-Islamic times. Thus, members of the Qurayẓa allegedly persuaded the Yemenite ruler Asʿad Abū Qarib not to attack Medina and caused him to convert to Judaism (see JEWS AND JUDAISM; YEMEN; PRE-ISLAMIC ARABIA AND THE QURʾĀN; SOUTH ARABIA, RELIGION IN PRE-ISLAMIC). Other reports state that in pre-Islamic Medina, the Qurayẓa were in constant conflict with their fellow tribe of the Banū l-Naḍīr (cf. Q 2:84 f.), yet both are often called "brothers" and commonly referred

to as the "two Israelite tribes" *(al-sibṭān)* or the "two priest clans" *(al-kāhinān)*. In pre-Islamic poetry (see POETRY AND POETS), the Qurayẓa are variously mentioned, and the poems of their own members were, as it seems, collected in a (now lost) *Kitāb Banī Qurayẓa* (see Āmidī, *Muʾtalif,* 211). The area inhabitated by the Qurayẓa — and their sub-clans such as the Banū Kaʿb b. Qurayẓa and the Banū ʿAmr b. Qurayẓa — on the outer fringes of Medina, most notably the Wādī Mahzūr, can be assessed from geographical accounts, and a Medinan cemetery as well as a later mosque, built upon their land, were known by their name. Some details in the story of Salmān al-Fārisī suggest that the Qurayẓa had parental ties with the Jews of Wādī l-Qurā in the northern Ḥijāz.

The conflict of the Muslims with the Qurayẓa after the "Battle of the Ditch" in 5/627 is the most conspicuous story of the Prophet's dealing with the Medinan Jews in the prophetic biography tradition *(sīra;* see SĪRA AND THE QURʾĀN). The Muslim attack and siege of the Qurayẓa was a response to their open, probably active support of the Meccan pagans and their allies during that battle (see MECCA; POLYTHEISM AND ATHEISM; HYPOCRITES AND HYPOCRISY). After bloody fighting the Jews surrendered and the male members of the Qurayẓa were executed, the women and children taken captive and sold into slavery (see CAPTIVES; SLAVES AND SLAVERY); and the booty (q.v.) gained — money, weapons and land — were distributed among the Muslim fighters, according to most sources. The execution itself, during which between 400 and 900 men were killed, is largely undisputed in the Islamic sources and has aroused much dismay in the western perception of early Islam. It is not the Prophet himself, however, who is portrayed as having pronounced the condemnation but rather his Companion, Saʿd b. Muʿādh (see COMPANIONS OF THE PROPHET), who was fatally wounded by an arrow in the battle before this event took place. The qurʾānic passage commonly associated with these events is Q 33:26 f. (see EXPEDITIONS AND BATTLES; FIGHTING; BLOODSHED):

> And he brought down those of the People of the Book (q.v.) who supported them from their fortresses and cast terror in their hearts; some you slew, some you made captive. And he bequeathed upon you their lands, their habitations, and their possessions, and a land that you never trod; God is powerful over everything.

Rayḥāna l-Quraẓiyya, of uncertain parentage but most probably belonging to the Banū ʿAmr b. Qurayẓa, was captured after the Banū Qurayẓa episode. She then either became the Prophet's concubine or, according to many reports, was married to him and later divorced; she eventually died before the Prophet (see WIVES OF THE PROPHET; CONCUBINES). The Islamic tradition knows a number of descendants from the Qurayẓa by name, most famous among them being the traditionist Muḥammad b. Kaʿb al-Quraẓī, who was born a Muslim and died in Medina in 120/738 or some years before (see ḤADĪTH AND THE QURʾĀN). Others include his father Kaʿb b. Asad b. Sulaym and his brother Isḥāq, as well as ʿAṭiyya al-Quraẓī, al-Zubayr (?) b. ʿAbd al-Raḥmān b. al-Zabīr, ʿAlī b. Rifāʿa and the progeny of Abū Malik al-Quraẓī. This suggests that, in contrast to what is reported in the Islamic tradition, several male persons of the Qurayẓa did survive the conflict in Medina, probably because of their young age at the time.

Races

Persons or animals or plants connected by common descent. This concept emerges in the Qurʾān mainly in relationship with the glory (q.v.) of God who in his might was able to create a multitude of species upon earth (see CREATION; POWER AND IMPOTENCE). Thus in Q 36:36: "Glory be to him who created pairs of all things, of what the earth grows, and of their own kind and of what they do not know" (see GLORIFICATION OF GOD). The phrase "of what they do not know" is taken to refer to species unknown to humans. Similarly, in Q 20:53 God is praised (see PRAISE) for producing from the earth many species of various plants (see AGRICULTURE AND VEGETATION; GRASSES). Especially clear is Q 35:27-8, in which all colors of fruits and of men and beasts and cattle are adduced as signaling God's creative powers (see ANIMAL LIFE; NATURE AS SIGNS). In Q 30:22, the signs of God are manifest not only in the creation of humankind in many colors but also in the various languages that were given to them (see FOREIGN VOCABULARY; DIALECTS; PRE-ISLAMIC ARABIA AND THE QURʾĀN).

Apart from humans, the Qurʾān is also familiar with another species of intelligent creatures, namely the jinn (q.v.), i.e. demons (see DEVIL). God has created them of a flame of fire (q.v.; Q 15:27; 55:15) and they, like humans, are considered a "nation" (*umma,* as is the case in Q 7:38; 41:25; 46:18). Fire was also the origin of the creation of Iblīs (Q 38:74-6), who in Q 18:50 is considered one of the jinn, and has offspring. Some exegetes, however, take the allusion to his offspring in a metaphorical sense (see METAPHOR; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL).

In the celestial sphere, God has created the angelic species and in Q 35:1 God is praised for having made the angels "messengers [flying] on wings, two, and three, and four" (see ANGEL; FLYING). As for humans, God has subdivided them into peoples *(shuʿūb)* and tribes *(qabāʾil),* but their ethnic affiliation has no bearing on their moral status before God (see KINSHIP; TRIBES AND CLANS; ETHICS AND THE QURʾĀN; COMMUNITY AND SOCIETY IN THE QURʾĀN). They were thus divided only for the sake of identification, while the most

honorable of them with God is the one most pious among them (Q 49:13; see PIETY). This particular statement was later adduced by the *shuʿūbiyya* in support of their struggle for equality between Arab and non-Arab races within Islamic society (see Enderwitz, Shuʿūbiyya).

Therefore, from the viewpoint of faith (q.v.), the Qurʾān considers all peoples as "one nation" *(umma wāḥida)*. This was the initial state of humankind till they began to differ and thereupon God sent prophets to guide them (Q 2:213; 10:19; see PROPHETS AND PROPHETHOOD; ASTRAY; ERROR). If God had pleased, he would have left all people in the state of "one nation" but he decided to try them and to guide only whomever he chose to (Q 5:48; 11:118; 16:93; 42:8; see TRIAL; FREEDOM AND PREDESTINATION). For this reason, Muḥammad's own scope of mission is not confined to one ethnic group but rather encompasses all humankind (Q 34:28) as well as the jinn (Q 46:29). Muslim tradition has elaborated on this idea, stating that Muḥammad was the only prophet who was not sent just to his own people but rather "to all red and black." The latter expression was explained as referring to the jinn and the humans, respectively (cf. Goldziher, *Introduction,* 28, with note 34).

On the other hand, the Qurʾān does acknowledge genealogical descent as indicating excellence but this is confined mainly to prophets. The Qurʾān sees in them a chosen pedigree as indicated in Q 3:33-4. Here God is said to have chosen Adam (see ADAM AND EVE) and Noah (q.v.) and the descendants of Abraham (q.v.) and the descendants of ʿImrān (q.v.) above the nations, they being offspring one of the other (see ELECTION; CHILDREN OF ISRAEL).

As for the offspring of Abraham, the Qurʾān identifies them as the inhabitants of Mecca (q.v.) — i.e. the Quraysh (q.v.) — which is implied, for example, in Q 2:127-8: Here Abraham as well as Ishmael (q.v.) are engaged in the building of the "house," the Kaʿba (q.v.; see also HOUSE, DOMESTIC AND DIVINE), and ask God to raise from their offspring a nation submitting to him (*umma muslima;* see BELIEF AND UNBELIEF; OBEDIENCE; ISLAM). The presence of Ishmael was taken as indicating that by *umma muslima* only Arabs (q.v.) were meant (see Suyūṭī, *Durr,* ad Q 2:128). More accurately, Ishmael is regarded mainly as the ancestor of the northern Arabs, including the Quraysh.

In fact, Arabian consciousness is manifest also in verses noting that the Qurʾān was revealed in Arabic (see ARABIC LANGUAGE). This is stated with evident pride, while stressing that it is not *aʿjamī,* i.e. "non-Arab" or "foreign" (e.g. Q 16:103). This is part of the general idea that "God did not send any apostle but with the language of his people" (Q 14:4). Traditions adduced by the exegetes for this verse assert that the Qurʾān was revealed in the language of Quraysh.

Ramaḍān

The ninth month of the Islamic calendar, during which Muslims fast from sunrise to sunset and commemorate the revelation of the Qurʾān to Muḥammad. To understand Ramaḍān as a crucial scriptural and ritual issue in a major world religion, it is useful to look at its emergence and liturgical enactments from a comparative perspective (see SCRIPTURE AND THE QURʾĀN; RITUAL AND THE QURʾĀN). It is obvious that, in phenomenological terms, three historically interrelated festivals — Pesach (Passover), Easter and Ramaḍān — display a close relation to acts of violence (q.v.) in that each celebrates a community's salvation from a threat of annihilation (see JEWS AND JUDAISM; CHRISTIANS AND CHRISTIANITY; CHILDREN OF ISRAEL; PEOPLE OF THE BOOK). Although this experience of violence played a foundational role in the identity formation of the respective communities, the feasts that commemorate the events are enacted in all three communities by rites of fulfillment: communal meals preceded by ascetic practices (see ASCETICISM) or fasting, performances that contribute substantially to affirming the coherence of the community (Neuwirth, Three religious feasts). To elucidate the interrelation between the celebrations, a brief historical survey of the three feasts and their etiologies will be given, followed by an evaluation of the qurʾānic evidence about fasting (i.e. prior to the establishment of the fast of Ramaḍān), its rulings and successive stages of development, as well as the role played by earlier religious structures in shaping it. In order to shed light on the religious meaning of Ramaḍān that emerged in the early community, we will then look into the complex etiology of that institution, focusing on its commemorative character (see FESTIVALS AND COMMEMORATIVE DAYS). The final section of this article presents some reflections on the impact of Ramaḍān on the perception of salvation history (see HISTORY AND THE QURʾĀN).

Predecessors, interrelations

Passover (Heb. *pesaḥ*), a spring festival corresponding to the pre-Islamic *ʿumra* (see PILGRIMAGE), constitutes a merger of two originally independent feasts (cf. *Encyclopaedia Judaica,* xiii, 169 f.). One was *pesaḥ,* originally not a pilgrimage feast but a domestic ceremony celebrated by transient breeders of sheep or goats (and, later, by the Israelites) to secure protection for the flocks before leaving the desert winter pasture for cultivated regions. This consisted of the slaughtering and eating of the paschal animal on the fourteenth day of the first month of the year, and the rite of touching the lintel and the doorposts of the house — or formerly the tent — with blood from the paschal animal. The oldest literary record of this domestic ceremony, which appears in the context of the last plague, the killing of the Egyptian firstborn (Exodus 12:21), already presupposes the Passover, i.e. the notion of the divine "overleaping" (Heb. *pesaḥ*) of the houses marked by the apotropaeic staining with blood. This historicization has determined the character of the Passover: it became the feast commemorating the exodus of the Israelites from Egypt. The other feast that was incorporated into the Jewish Passover is the seven-day "feast of unleavened bread" *(ḥagg ha-maṣṣōt),* which was celebrated in the same month as the slaughter and eating of the paschal animal and was, unlike the Passover, probably taken over from the Canaanites. It was a seasonal fes-

tival connected with a pilgrimage, and celebrated to consecrate the first parts of the harvest. Unleavened bread has been identified as a symbol of the interruption between two cycles of harvest — leavens from the grain of the old harvest not being allowed to enter into the first bread made from the new harvest (Rendtorff, Entwicklung). It was integrated into the feast of deliverance from Egyptian bondage by re-interpreting the motive for the preparation of unleavened bread as the hastened exodus of the people who had no time left for them to prepare proper bread.

Violence, divinely inflicted "in history" on the enemy (for the interpretation of similar themes in the qurʾānic milieu, see JIHĀD; FIGHTING; ENEMIES; PUNISHMENT STORIES; CHASTISEMENT AND PUNISHMENT), is thus, through the ritual act of spilling blood, connected with the primordial custom of sacrificing in a seasonal framework. Though etiologically justified as a measure to induce a stubborn enemy of the Israelites to allow them to leave the land, it retains its cosmic imagery serving to mark the renewal of a particular time of the year. *Pesaḥ* thus developed from its ritual beginnings as part of the seasonal cycle and became a feast commemorating an event significant for salvation history.

Easter is already closely linked to Passover externally in terms of timing, being the commemoration of an event that took place in the Passover week. Insofar as Easter claims Passover as its temporal and ceremonial backdrop, the Jewish festival confers on the later feast important traits bearing ritual and symbolic significance: a vicarious sacrifice, a commemorative meal and the remembrance of an event of deliverance. But Easter — which was celebrated in the early church on the date of Passover — also raises the additional claim of being the new Passover. Through a mythic re-interpretation, it has become the Passover par excellence: Deliverance from servitude in history is eclipsed by deliverance from the servitude of the fear of death; the sacrificial lamb to be slaughtered is replaced by the Son of God who was sacrificed, a connection established early in Christian sources like the Gospel of John and a large corpus of hymns. The notion of the sacrificial lamb's vicarious suffering of death merges with the idea of a father sacrificing his beloved son — prefigured in Abraham's (q.v.) sacrifice (q.v.).

The relation between Passover and Ramaḍān is less obvious. No line of genetic relationship can be drawn with certainty, nor has a mythicization of the earlier feast taken place in the later; the relation is rather one of analogy. Both feasts share a number of basic notions leading back into the earliest historical layers of the festivals. Ramaḍān, the Muslim month of fasting commemorating the revelation of the Qurʾān (see REVELATION AND INSPIRATION), is, like Passover, grafted on a seasonal festival, the *jāhilī* (see AGE OF IGNORANCE; PRE-ISLAMIC ARABIA AND THE QURʾĀN) pilgrimage of the *ʿumra*, which, prior to Islam, took place in the month of Rajab (Wellhausen, *Reste,* revised by Wagtendonk, *Fasting in the Koran;* see also FASTING; MONTHS; SEASONS). The *ʿumra* was a festival of spring thanksgiving, the time of slaughtering sacrificial animals (*atāʾir;* see SACRIFICE; CONSECRATION OF ANIMALS) and the first born of the flocks and herds, somewhat like *pesaḥ;* still it is difficult to determine any genetic link between the festivals. The ritual practices of the *ʿumra* survived into early Islam, but — being perceived as obsolete — were abolished by the caliphs Abū Bakr and ʿUmar (Kister, Rajab; see CALIPH), the *ʿumra* as such having been integrated into the *ḥajj* already by the Prophet. Also like *pesaḥ* — which culminates in a particular night of the seven-day festival — the

climax of the month of the *ʿumra* was a particular night, presumably that which the Qurʾān calls *laylat al-qadr,* the "night of decision" (see NIGHT OF POWER). Prepared for by a period of abstention and devotion (*ʿukūf* and *wuqūf;* see ABSTINENCE; PIETY; PRAYER; VIGILS), this night appears to have marked a kind of New Year, the opening of a new cycle of events, similar to the notion underlying the *ḥagg ha-maṣṣōt* which opened a new harvest cycle, and like the New Year, was associated with the sacrifice of a *pesaḥ* lamb (*Exod* 12:3; see below for the connection between qurʾānic [pre-Ramaḍān] fasting and Yom Kippur, the Jewish "day of atonement"; see also ATONEMENT). It may likewise be compared with the Easter vigil which, since the early days of the church, has presented itself as a cosmic and spiritual New Year, declaring the spiritual renewal of creation and the moral new beginning of humankind. The *laylat al-qadr* as well as the fasting period that preceded it were transferred from Rajab into Ramaḍān, once Ramaḍān was identified as the month in which a religiously momentous experience of the community took place. Thus, the pre-Islamic seasonal festival with its ascetic preparations preceding sacrifice was reshaped to become a new salvation-historical scriptural festival with diverse procedures of commemoration. The development re-enacts the emergence of Passover, a feast of scriptural memory, out of a previous seasonal feast involving sacrifice. It mirrors at the same time Christianity's sublimation of sacrifice through its substitution by a commemorative rite.

The qurʾānic evidence: Rulings and developments of pre-Ramaḍān fasting (Q 2:183-6)

It was the precedent of the fast practiced by the Jews in Medina (q.v.) that triggered the process of the introduction of fasting into the ritual rulings of the early Muslim community. Though fasting had been ranked prominently in Rajab before Islam, this had not been sanctioned by a qurʾānic ruling. We know nothing certain about the ascetic rites upheld by the adherents of Muḥammad in Mecca (q.v.). The particular rhetorical style and the explicit reference to the monotheistic forebears in Q 2:183 mark the verse about the first Islamic fast as a text belonging to the Medinan period (see CHRONOLOGY AND THE QURʾĀN; FORM AND STRUCTURE OF THE QURʾĀN). Fasting was raised to the rank of a monotheistic duty: "Oh believers, fasting is prescribed for you as it was for those before you; perchance you will guard yourselves [against evil]" (Q 2:183).

It is not known whether this ruling was implemented immediately with the emigration (q.v.; *hijra*) of Muḥammad from Mecca to Medina, whose cardinal event — the arrival of the Prophet and his Companions (see COMPANIONS OF THE PROPHET) in Medina — is reported to have coincided with the Jewish Yom Kippur, a day of fasting which falls on the tenth of the first month of the Jewish calendar, Tishri (*Lev* 16:29). A well-known tradition going back to Ibn ʿAbbās (d. 68/686-8; see ḤADĪTH AND THE QURʾĀN) presents the earliest Islamic fast as a Yom Kippur fast: At the arrival of the Prophet in Medina, the Medinan Jews, who were celebrating the Day of Atonement, Yom Kippur (Aramaic *ʿāsōrā,* Arabic *ʿāshūrāʾ*), with their strict observation of the highly demanding rites — fasting over a twenty-four hour period, liturgical recitations (Elbogen, *Jewish liturgy,* 124 f.) — attracted the attention of the newly arrived Muslims. Asked about the meaning of their celebration, they mentioned the Israelites' deliverance from Pharaoh (q.v.). This Mosaic etiology must have been significant to the Muslim newcomers, who perceived themselves as continuing the Mosaic tradition

(see Neuwirth, Erzählen). Muḥammad is reported to have said: "We have a better right to Moses (q.v.) than they have" (Ṭabarī, *Taʾrikh,* iii, 1281; id., *History,* vii, 26; Muslim, *Ṣaḥīḥ,* ii, 1330, 149-50; but not found in Ṭabarī's *Tafsīr*) and to have imposed the fast on his community. The fasting of ʿĀshūrāʾ is, however, not always identified in Islamic tradition with the one imposed in Q 2:183, but is in some ḥadīths rather remembered as one "ordered" by the Prophet *(yaʾmurunā bi-ṣiyāmihi)* because the Jews — in general, or of Khaybar, or the Jews and the Christians — were keeping it. There is even a tradition stressing Muḥammad's view that "God had not prescribed it" for the Muslims (*lam yaktubi llāhu ʿalaykum ṣiyāmahu;* Muslim, *Ṣaḥīḥ,* ii, 153). The fasting of ʿĀshūrāʾ, thus, was one of the diverse Jewish rites that were introduced during the emergence of the community, but were given up during the later Medinan period. Indeed, it became the object of polemics once the community wished to distance itself from its monotheistic counterparts (see POLEMIC AND POLEMICAL LANGUAGE; RELIGIOUS PLURALISM AND THE QURʾĀN).

The Mosaic reference that is said to have so immediately appealed to the Muslim newcomers' religious consciousness is not without implications. It is true that the etiology for the Jewish fast is not exactly the historical one. But, as Wagtendonk *(Fasting)* has emphasized, Mosaic memories do play a role in the service of the feast, particularly the second giving of the tablets of the law to Moses. Goitein (Ramadan) has also drawn attention to the striking fact that the qurʾānic section on the Ramaḍān rulings (Q 2:183-7) includes an unambiguous reference to one of the most prominent liturgical elements of the Yom Kippur penitential litanies (*selīḥōt;* Elbogen, *Jewish liturgy,* 180-2), particular prayers that frequently end in the plea, *anēnū,* "answer us" (cf. Psalm 20:10). The qurʾānic version reads: "When my servants question you about me, [tell them that] I am near. I answer the prayer of the suppliant when he calls to me; therefore let them answer my call and put their trust in me, that they may be rightly guided" (Q 2:186; see ASTRAY; ERROR). This verse does not smoothly connect with its immediate halakhic context but it strikingly switches from the section's prevalent addressee — a group of receivers or listeners *(antum)* — to addressing the Prophet. The Prophet is instructed to remind his followers *(ʿibād)* of the closeness and faithfulness of the divine sender, which sounds like an indirect exhortation to utter prayers, perhaps like those of the Jewish service, where penitential litanies *(selīḥōt)* are recited. These litanies are built on the so-called "thirteen attributes" (i.e. divine attributes, like "lord, merciful, compassionate," etc.) that were revealed to Moses when he received the second set of tablets (cf. *Exod* 34:6-7): "The lord, the lord, God, merciful and gracious, long-suffering and abundant in goodness and truth, keeping mercy for thousands, forgiving sin and transgression, seeking the iniquity of the fathers on the children and upon the children's children until the third and fourth generation." Early on, Jewish tradition interpreted that event in terms of a divine instruction to Moses on how to perform the penitential prayer: "God showed Moses the order of prayer. He said to him, 'Whenever Israel sins, let them perform this rite before me and I shall forgive them'; 'There is a covenant that the Thirteen Attributes do not return unanswered'" (*Babylonian Talmud,* Rosh Hashana 17b). This Talmudic conception explains how the "thirteen attributes" became the nucleus of all prayers for atonement; to this day, they serve as a refrain constantly repeated in all the *selīḥōt* (cf. Elbogen, *Jewish liturgy,* 177 f.). When viewed from this

intertextual perspective, the qurʾānic verse about the attitude to be adopted during the fast and which paraphrases two of the "thirteen attributes" (Q 2:186), refers to the very heart of the Yom Kippur liturgy (cf. Neuwirth, Meccan texts). It is noteworthy that Ṣūfī exegesis of Q 2:186 further elaborates the aspect of the divine attributes in the verse (see e.g. Sulamī, *Ziyādāt,* 16; see GOD AND HIS ATTRIBUTES; ṢŪFISM AND THE QURʾĀN; EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL).

Thus, the first form of religiously imposed fasting in Islam was originally a custom shared with the Jews. The Islamic assimilation of the Jewish ritual remained, however, limited. The central performance in the Jewish service of the fast, the communal confession of sins, seems not to have been introduced into the Islamic sphere with the acceptance of the ʿĀshūrāʾ fast (see SIN, MAJOR AND MINOR; VIRTUES AND VICES, COMMANDING AND FORBIDDING). A genuine ceremony devoted principally to communal confession has never developed in Sunnī Islam nor is there a fixed form of individual confession such as Christianity has cherished over the ages and which in modern time has translated into new kinds of secular self-inquiring (see Hahn, Zur Soziologie). The fast of ʿĀshūrāʾ, however, was never completely abolished: the tenth of Muḥarram, which corresponds to the date of the Jewish Yom Kippur, was retained as a voluntary fast day in Sunnī Islam (Muslim, *Ṣaḥīḥ,* ii, 147-9). It was only in the Shīʿī tradition, however, that ʿĀshūrāʾ recovered, in the course of time, its original character as a ceremony of repentance (see REPENTANCE AND PENANCE) and atonement. The tenth of Muḥarram became a festival commemorating the martyrdom that the grandson of the Prophet, al-Ḥusayn b. ʿAlī, suffered at Karbalāʾ in 61/680 (see MARTYRS; SHĪʿISM AND THE QURʾĀN; ʿALĪ B. ABĪ ṬĀLIB; FAMILY OF THE PROPHET; PEOPLE OF THE HOUSE). As Gerald Hawting (The tawwābūn) has shown, the proto-Shīʿī group of the *tawwābūn,* "penitents" — in whose thinking atonement and expiation were prominent, and who in 65/685 revolted against the Umayyads in order to expunge their guilt for forsaking Ḥusayn — may, when they sacrificed themselves, have been under the spell of the solemn atmosphere of the prominent day in the Jewish calendar.

The earliest qurʾānic injunction maintains that fasting was to be observed for several — probably ten — days (*ayyām maʿdūdāt,* Q 2:184) but the month is not made explicit. The concept of "counted days" *(ayyām maʿdūdāt)* appears Arabian. A reference to a sacred time-period, again presumably "ten," is found in a very early qurʾānic text (Q 89:2 *wa-layālin ʿashrin,* "By the ten nights"), which is usually understood as referring to the first ten days of the *ḥajj* (see PILGRIMAGE). It is thus likely that in Q 2:184 an existing Arabian religious period was revived. Wagtendonk *(Fasting)* argues that the *iʿtikāf* period in Rajab "was chosen for the fast of the 'counted days' because the Night of Destiny *(laylat al-qadr)* with which the revelation of the Qurʾān was connected, occurred during it." That night, originally falling on the twenty-seventh of Rajab, had been celebrated in an early sūra (Q 97) as a unique night excelling over other time periods (see DAY AND NIGHT; DAY, TIMES OF), a night when communication between heaven (see HEAVEN AND SKY) and earth (q.v.) moves easily; it is presented as the night of revelation par excellence:

Behold we sent it down in the night of decision
And what shall teach you what is the night of decision?

The night of decision is better than a thousand months,
In it the angels (see ANGEL) and the spirit (q.v.; see also HOLY SPIRIT) descend
By the leave of their lord (q.v.), upon every command
Peace it is, till the rising of dawn (q.v.; Q 97:1-5)

This particular night, characterized as a "blessed night" *(layla mubāraka),* is further referred to in a later Meccan sūra (Q 44:3-6), where it is described as a time in which "every wise precept is made plain, distinct" (*fīhā yufraqu kullu amrin ḥakīm,* Q 44:4). The two texts are the exclusive qurʾānic testimonies for the temporal setting of revelation within the calendar (q.v.) of the year. The Qurʾān alludes to the affinity between sacred time (q.v.) and revelation; the particular night is a time when the borderlines between the heavenly and earthly domains are permeable (Q 97:4; cf. al-Miṣrī, *Ramaḍān;* Ṭūqān, *Riḥla,* 18-9; id., *Mountainous journey,* 16-21). It is also a time of divine separating or distinguishing *(yufraqu)* between good and evil (q.v.), and is thus closely related to Yom Kippur, when the divine decision is made concerning the fate (q.v.; see also DESTINY) of individuals for the following year (Q 44:4). The Qurʾān itself can, as such, be regarded as a divine intervention (*furqān,* Q 17:106; see CRITERION; NAMES OF THE QURʾĀN), although it is not explicitly labeled *furqān* before the Medinan period (Q 25:1; 3:4). The noun *furqān,* etymologically an Aramaic loan word from *purqānā,* "salvation" (see FOREIGN VOCABULARY), is not yet a synonym for revelation in the Meccan sūras; rather, it is used in one Meccan sūra (Q 21:48) to denote an historical event, the salvation of the Children of Israel by the separation of the Red Sea (cf. Q 2:50).

If Rajab was the month in which the initial Islamic practice of fasting took place, then the etiology of this fast has to be related to both the momentous aura of the *laylat al-qadr* as a time of divine decrees and to the event of the qurʾānic revelation (Q 97:1; cf. 44:3). This complex etiology was to be transferred to the fasting of Ramaḍān in due time.

The imposition of the "counted days" fast is followed immediately by an alleviating amendment:

Fast a certain number of days,
But if any one of you is ill or on a journey let him fast a similar number of days
And for those that can afford it there is a ransom
The feeding of a poor man (see POVERTY AND THE POOR).
He that does good of his own accord shall be well rewarded (see REWARD AND PUNISHMENT)
But to fast is better for you,
If you but knew it (Q 2:184).

The ruling is made easy: not only are sick persons and travelers (see ILLNESS AND HEALTH; JOURNEY) exempted from keeping the fast but those unable to sustain the fast may ransom themselves with a charitable deed *(fidya)*. In Wagtendonk's (Fasting, 182) view, the text betrays "the same uncertainty as that which accompanied the change of *qibla* (q.v.)."

Rulings and developments concerning Ramaḍān

The text then switches abruptly to the introduction of Ramaḍān (Q 2:185) as a full month of fasting. The verse that replaces the earlier, less demanding ruling of the "counted days" has been understood in the Muslim tradition (Ṭabarī, *Tafsīr,* iii, 420) as an abrogation (q.v.) of the previous institution (see for the problematics, Radtke, *Offenbarung*). The text also puts forward a new etiology for the fast, alluding to both the sending down of the Qurʾān (as in

Q 97:1; here, however, designated *furqān;* cf. its indirect classification as such in Q 17:106) and an experience of deliverance (a notion equally conveyed by the term *furqān*), although the Qurʾān does not explicitly name the particular historical event: "The month of Ramaḍān in which the *qurʾān* was sent down as a guidance for humankind and proofs of the guidance and of the *furqān*" (Q 2:185).

Although some commentators (Ṭabarī, *Tafsīr,* iii, 415-7), followed by Goitein (Ramadan), hold that the implementation of a whole month of fasting is no more than the extension of the already prescribed fasting, Wagtendonk seems right in considering that the emphatic mention of Ramaḍān in the verse suggests an innovation. Moreover, the double excellence attributed to the month is new, consisting of the event of the revelation, *furqān,* and simultaneously of the occurrence of the guidance and the salvation (again, *furqān*). The homonymous use of that word is striking; as Wagtendonk has realized, "we see here the subordination of the *furqān* to the Qurʾān instead of the juxtaposition of book and *furqān* or the identification of both found elsewhere. It is as if the notion of *furqān* was essential but, at the same time, the priority of the sending down of the revelation had to be maintained by all means" (Fasting, 183). The complex use made of the word *furqān* presents an enigma that is not solvable based on the section that deals with fasting alone.

Again, instructions are given about the performance of the fast, which no longer permit the *fidya:*

Whosoever of you is present in that month,
let him fast.
But he who is ill or on a journey shall fast
a similar number of days.
God desires your well being, not your
discomfort.
He desires you to fast the whole month
so that you may magnify him for giving
you his guidance
and render thanks to him (Q 2:185; see GLORIFICATION OF GOD; LAUDATION; GRATITUDE AND INGRATITUDE).

The extended length of the new commandment of fasting is counter-balanced by alleviation:

It is lawful for you (see LAWFUL AND UNLAWFUL) to go to your wives on the night of the fast;
they are a comfort to you as you are to them.
God knew that you were deceiving yourselves
and he has turned in mercy (q.v.) towards you and relieved you.
Therefore you may now go to them
and seek what God has ordained for you (see CHASTITY; SEX AND SEXUALITY).
Eat and drink until you can tell the white thread
from the black one in the light of dawn.
Then resume the fast till nightfall
and do not approach them,
when you stay at your prayers in the mosques (see MOSQUE).
These are the bounds set by God (see BOUNDARIES AND PRECEPTS).
Do not come near them.
Thus he makes known his revelations to humankind
that they may guard themselves against evil (Q 2:187).

The amendment in Q 2:187 clearly comes to rectify the first fasting rulings which must have been extremely severe, extending over full day and night periods and imposing strict sexual abstention. They must have proved difficult to observe and thus had to be alleviated. Strikingly, the ruling to start the fast at daybreak (Q 2:187)

clearly reveals its Jewish origin. Its demand that believers start to fast once they can distinguish the white thread from the black thread reflects a Jewish practice in determining the time of the beginning of the fast: by using the black and white threads of the prayer shawl of the male worshiper as a criterion. The reference to the prayer shawl, a characteristic liturgical requisite of Jewish worship, which has no reasonable place in non-Jewish imagination and remains unmentioned in qurʾānic commentary, can only be understood as reflecting information provided by Jews on the matter of when exactly fasting should begin.

Ramaḍān — the month of an event of salvation in history

In order to solve the enigma of the etiology for the Ramaḍān fast, Wagtendonk *(Fasting)* has proposed drawing on Q 8:41 f., where the word *furqān* is used to refer to the victory in the battle of Badr (q.v.) on 17 Ramaḍān 2/623. The qurʾānic text that commemorates this battle (Q 8:41-4; see EXPEDITIONS AND BATTLES) is prefaced by a recapitulation of the history preceding the decisive new development and an exhortation to remember it (see EXHORTATIONS). It is at once a reckoning with the Meccan foes, whose persecution of the community that could have led to its annihilation is recorded. Against that, the believers (see BELIEF AND UNBELIEF) are reassured of the long expected "deliverance" *(furqān)* that has been finally granted. This text is strongly text-referential and summarizes the predicament described in the sūras of the Meccan period, while also recalling biblical records. Q 8:29, moreover, paraphrases, as Wagtendonk *(Fasting)* has observed, a particular biblical text related to Passover: "Have no fear, stand firm and you will see what YHWH will do to save you today" (*Exod* 14:13; the Hebrew *yeshūʾah* corresponds to Aramaic *purqānā;* Arabic *furqān*). The section as a whole reminds one strongly of a similarly retrospective summary of divine support granted to the Israelites, particularly their salvation through their exodus (*Deut* 26:5-9, a text which is part of the Pesach Haggada and thus is recited in the framework of the Passover celebration). Although it is impossible to ascertain that *Deut* 26:5-9 was part of the Passover ceremony at the time and place of the emergence of the Qurʾān, it should be adduced here since it conveys, typologically, a recollection of salvation from tribulation strikingly similar to that of Q 8:26-46:

A wandering Aramaean was my father, and he went down into Egypt, and sojourned there few in number. And he became there a nation, great, mighty and populous. And the Egyptians dealt ill with us and afflicted us and laid upon us hard bondage. And we cried unto the lord, the God of our fathers and the lord heard our voice, and saw our afflictions and our toil and our oppression. And the lord brought us forth out of Egypt with a mighty hand and with an outstretched arm and with great terribleness, and with signs and with wonders.

The idea that a divine act of salvation has to be remembered is the dominant idea of the biblical story of the Israelite exodus; its liturgical re-enactments have woven a dense meta-text of memory recalling the divine salvation of the Israelites throughout their entire history (see Yerushalmi, *Zakhor*). The notion of a miraculous deliverance, which is central to the Jewish Passover story, also prevails in the qurʾānic story of the victory at Badr that brought about a divine decision *(f-r-q)*. The term *furqān* has thus, in this context, acquired new meaning. Used in earlier qurʾānic

texts to denote divine revelation — received by Muḥammad (paraphrased in Q 17:106) — as well as divine salvation from threatening foes in history — as experienced by Moses during the Exodus (Q 2:53), it has now come to denote the deliverance of the Muslim community in their contemporary history (see OPPOSITION TO MUḤAMMAD). Q 8:44 conveys this understanding: the event of Badr is perceived as a grave worldly trial, displaying a strong eschatological awareness. The remembrance of the *furqān,* the deliverance or salvation, has become an article of faith (q.v.; Q 8:41). It is the miraculous deliverance from the fear inflicted by overwhelming enemies understood as achieved not by a victorious army but by divine intervention that is a reminder of the equally miraculous escape of the people of Moses during their exodus from Egypt (q.v.).

Liturgical enactments

Jan Assmann (Der zweidimensionale Mensch) has emphasized that people are "destined to live in two worlds. Life cannot be limited to everyday life. Feasts are needed to counterbalance daily routine. They have to provide spaces where the other that is excluded from the daily routine can occur. The other, however, does not occur by itself, but has to be staged, it has to be enacted." The enactments of Passover — synagogue services and a ritual meal, the *seder* ceremony — and Easter — church services and the mystical meal of the Eucharist — rely on scriptural texts that have been preserved in a mythicized form, and those events are commemorated at the feast. The scriptural readings not only form a sequence of accounts communicated roughly in the chronological order of the events they relate, but are also bound to particular times held sacred by the listeners. Yerushalmi (*Zakhor,* 42) has stressed that two temporalities are involved: "The historical events… remain unique and irreversible. Psychologically, however, those events are experienced cyclically, repetitively, and to that extent at least, atemporally." The events thus "occur" each time the congregation assembles, history being dramatized. There is "a synchronic reading and experiencing in the cult which is yielded by a metaphorization or symbolization of the events of history, so that they never lose their actuality for all generations" (Lacocque, Apocalyptic symbolism, 6-15).

In Islam, in contrast, there is no special qurʾānic reading for Ramaḍān to be recited in the service of the *ʿīd al-fiṭr* (the feast that concludes the month of fasting), or in the *laylat al-qadr* (celebrated on the twenty-seventh of Ramaḍān), or during the many religious gatherings in the mosque or at home (that take place particularly during the last ten days of the month, the *iʿtikāf* period). This striking fact is not a historical coincidence and can be explained by a tendency inherent in the texts themselves: a strong, generally-held reservation about a mythic reading of biblical or contemporary events (see Neuwirth, Qurʾān, crisis and memory). Neither the rulings about fasting (Q 2:183-7) nor the story of the battle of Badr (Q 8:41-4) presents a mythopoeic version of the events, shaped dramatically enough to turn the event into a cosmic turning point (see MYTHS AND LEGENDS IN THE QURʾĀN) — save perhaps the short qurʾānic text about *laylat al-qadr* (Q 97:1-5), which dwells on an already given cosmic event. The historical events are overshadowed by the single fact of election (q.v.), manifest in revelation itself. Thus, the Qurʾān in its entirety *(khātima)* is supposed to be recited during Ramaḍān — according to tradition, it is for this very reason that the corpus has

been divided into thirty equally long parts (*juzʾ*, pl. *ajzāʾ*) and seven portions (*manzila*, pl. *manāzil*), permitting it to be recited on a daily or a weekly basis (see MANUSCRIPTS OF THE QURʾĀN; CODICES OF THE QURʾĀN). This Islamic option implies that the function of salvation history is viewed differently: Whereas the two older religions review the process of their salvation history as a narrative running parallel to their real experienced history, Islam does not focus on the narrative of its emergence but commemorates exclusively one event: the revelation of the Qurʾān to Muḥammad. The fact that the Qurʾān is recited by the individual believer, who thus passes God's "personal" words over his lips and reproduces them through his voice, is in itself a "representation" of Muḥammad's receiving the words. The presence of the divine speaker, or the transcendent "author," of the text could hardly be imagined as ever being closer to the senses than during this kind of commemoration. One might duly speak of a re-enactment of the "first divine communication," a text perceived as superhuman being recited in a "supernatural" performance. Qurʾān recitation and frequent prayer, particularly the *tarāwīḥ* practice — forty continuously performed sequences of *ṣalāt* — translate the pious feeling of the gates of heaven being opened during Ramāḍan into practice. Communication is sought not only with the living but also with the dead (for *ziyārat al-maqābir,* see Nabhan, *Das Fest;* for the *ruʾyat al-hilāl* and other cosmic determinations of time, see Lech, *Geschichte des islamischen Kultus;* see DEATH AND THE DEAD; BURIAL). The alternating of fasting and feasting, the particular prominence given to the family meal in which the single days of fasting culminate, strongly enhances social coherence. Like the *seder* meal held on Passover and the Eucharist given after the Easter vigil, the *iftār* meal concluding the day of fasting affirms the overcoming of crisis and turns the memory of suffering (q.v.) into fulfillment.

Ranks and Orders

Arrangement of heavenly or earthly beings in military or other formation. *Ṣaff,* plural *ṣufūf,* literally "rank, row or line, company of men standing in a rank, row or line" (Lane, 1693, col. 3), is a term used in several different contexts and with various significations. The purely literal meaning, a very early understanding, referred to "straight lines and rows" of Muslim believers when offering obligatory prayers (see PRAYER; RITUAL AND THE QURʾĀN; COMMUNITY AND SOCIETY IN THE QURʾĀN). Over time, the additional meaning of "ranks and orders" acquired a certain sense of hierarchy, be it material (military) or spiritual, individual or communal, male or female (see GENDER). In this meaning, a sense of superiority and preferential treatment accorded by God to certain individuals or communities became a common understanding (see ELECTION; FREEDOM AND PREDESTINATION).

The Qurʾān mentions *ṣaff* six times. The predominant context in which the term is used (four out of the six occurrences) is apocalyptic in nature (see APOCALYPSE). In this context, human beings will be marshaled before their lord in "rows" to settle accounts when angels (see ANGEL), the spirit (q.v.; see also HOLY SPIRIT; GABRIEL) and other celestial beings will also be standing in "rows," obediently (see OBEDIENCE), in the presence of God on that last day (see LAST JUDGMENT). One sūra, however, Q 61 (Sūrat al-Ṣaff, which takes its name from Q 61:4, "God loves those who fight in his way in ranks [rows], as though they were a building well-compacted"), is generally translated into English as "The Battle Array." The last reference to *ṣaff* occurs as a challenge posed by Moses (q.v.) when he challenges Pharaoh's (q.v.) magicians (Q 20:64; see MAGIC) to muster all their (magic) forces together and act in a "concerted" *(ṣaff)* manner.

Based on the above contexts, *ṣaff* historically came to acquire three, perhaps four, distinct meanings: religious, military, social (particularly in the north African context) and spiritual. Religious: *ṣaff* as rows meant the lines of worshippers assembled in the mosque (q.v.) or elsewhere for the prescribed worship (q.v.; *ṣalāt*). The two related terms strengthening this religious connotation are *ṣāffāt* and its masculine plural *ṣāffūna.* Both these terms appear in Sūrat al-Ṣāffāt (Q 37, "Those Ranged in Ranks") where the former is interpreted as angels and the latter as "those beings who declare the glory of their lord (q.v.)," i.e. "angels" (see GLORIFICATION OF GOD). *Ṣāffāt* occurs three times in the Qurʾān and *ṣāffūna* once (Rippin, Ṣāffāt). Military: history records that in the engagements of the

Arabs (q.v.) with the imperial Sāsānid army in Iraq (q.v.) in the 630s C.E., the Arabs drew themselves into *ṣufūf* or ranks. "The Prophet is said to have straightened, with an arrow held in his hand, the *ṣufūf* of the Muslims before the battle of Badr (q.v.) in 2/624" (Bosworth, Ṣaff, 794). Thus, Q 61:4 was interpreted to mean the rank formation, *ṣaff,* in battle. Social organization in north Africa: *ṣaff* denotes in certain parts of the Maghrib, chiefly Algeria, southern Tunisia and Libya, a league, alliance, faction or party (Bosworth, Ṣaff). Spiritual: many mystics (Ṣūfīs) and some Shīʿī groups believe that, with immense spiritual discipline and meditation, one would be accorded the status of *al-ṣāffūna* (Q 37:165), those of a (higher) rank and order or those beings who declare the glory of God, i.e. the angels (Ibn al-ʿArabī, *Tafsīr,* ii, 335; see SHĪʿISM AND THE QURʾĀN; ṢŪFISM AND THE QURʾĀN). Jalāl al-Dīn Rūmī (d. 672/1273) furnishes one such example, claiming a high status for the deserving Ṣūfī by quoting this particular verse in one of his poems (Rūmī, *Dīwān,* poem no. 1948).

Ṣaff *in the commentary and ḥadīth literature*

Liturgical and eschatological contexts

A sample of this literature reveals several traditions emphasizing the need to form straight rows when performing obligatory prayers. The manner in which the prophetic traditions are organized in the various commentaries on the Qurʾān (*tafāsīr,* sing. *tafsīr;* see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) points to an attempt to link the mode of worship of the angels in the heavens with the Muslim worshippers on earth. Angels worship God standing in "rows" (in obedience and discipline) and Muslims should do the same. Several prophetic traditions (especially those that describe Muḥammad's "heavenly ascent," the *miʿrāj;* see ASCENSION) exhort believers to emulate or mirror this mode of worship. It is worth noting here that Muslim tradition attributes the divine command to offer "five" obligatory prayers daily as having been received by Muḥammad during his "heavenly ascent" where he also witnessed angels offering prayers continually. In addition, there is an attempt to synchronize the times of the believers' worship with that of the angels based on another prophetic tradition: "If anyone of you says *āmīn* [during the prayer at the end of the recitation of Sūrat al-Fātiḥa; see FĀTIḤA] and the angels in heaven say the same, and the sayings of the two coincide, all his past sins will be forgiven" (Ḥilālī and Khān, *Qurʾān,* vi, 479; see FORGIVENESS; SIN, MAJOR AND MINOR).

Ibn Kathīr (d. 774/1373; *Tafsīr,* 807, col. 1) links three instances of the word *ṣaff* (those of Q 18:48, Q 78:38 and Q 89:22) in his explanation of the word in an eschatological context. He says, "it seems that the intention here is that all created beings will stand in the presence of God in 'one row' as he says in Q 78:38 and he speaks the truth. It is possible that they would stand in rows after rows as he says in Q 89:22." The commentary ordinarily published under the name of Ibn al-ʿArabī (d. 543/1148; *Tafsīr,* i, 765; actual author is ʿAbd al-Razzāq al-Qāshānī [d. 731/1330]) and the works of several other commentators add to this explanation by clarifying that the rows will be formed such that none will be able to "hide" or "veil" another during this time of resurrection (q.v.) when facing the lord (see INTERCESSION; FACE OF GOD). The emphases on personal responsibility and accountability are a clear objective here.

Hierarchy and egalitarianism

Several modern Muslim thinkers and commentators (see EXEGESIS OF THE QURʾĀN: EARLY MODERN AND CONTEMPORARY) offer the *ṣaff* formation in prayer as proof of

Islam's egalitarianism (see JUSTICE AND INJUSTICE; OPPRESSION). It is clearly evident that the prince or the ruler of the land prays in the same row with his humble subjects, together acknowledging the "createdness" of all beings (see CREATION; KINGS AND RULERS). Non-Muslim observers have often singled out the *ṣaff* formation of Muslims in prayers as one of the most remarkable and poignant aspects of the Islamic prayer ritual. Early and classical commentators do not, however, connect the *ṣaff* formation with any notions of egalitarianism. Ironically, in these works, *ṣaff* seems to have been used to draw distinctions as opposed to emphasizing egalitarianism.

Ibn Kathīr (*Tafsīr,* 1129, col. 1) records a sound tradition (see ḤADĪTH AND THE QUR'ĀN) attesting to the fact that "men and women used to pray together until Q 37:164-5 were revealed, 'There is not one of us but has his known position, we are those who glorify God." Most commentators agree that the speaker in Q 37:164 is the angel, especially based on the following three verses (Q 37:165-7), which are commonly understood as having been spoken by angels. Nevertheless, this verse was interpreted as a divine command to segregate genders during obligatory prayers (*maqām ma'lūm,* "known position," interpreted by most commentators as *maqāmahu wa-martabatahu,* "his place and status/rank," except al-Kāshānī [*Tafsīr,* ii, 1208] who interprets it as "limits set by God not to be transgressed"; see BOUNDARIES AND PRECEPTS). Therefore, "at the time of its revelation," Ibn Kathīr informs us, "men came forward and women moved behind. Hence, Q 37:165, "We are those who declare the glory of God," means that we stand in rows (in accordance with our special status, rank, or place) in obedience, as was said in Q 37:1, "Those [angels] standing in rows."

Another tradition records how orderly rows were commissioned and institutionalized. Abū Nadra said, "'Umar used to approach people facing them, when *ṣalāt* was established, saying, 'Stand in rows, straighten your lines out, God the exalted wishes from you the manner of the angels,' quoting Q 37:165, and continued, 'so and so, you go back, so and so, you come forward.' Only then would he give the *takbīr*" (i.e. say *Allāhu akbar* to start the prayer; Ibn Kathīr, *Tafsīr,* 1129, col. 2).

Thus, in classical times *ṣaff* came to be understood as a hierarchical term whence superiority and preference. The meaning moved to a metaphorical and symbolic plane, whether to connote physically imitating the angelic "mode of worship" or to claim higher rank based on superior spiritual achievements. The following prophetic tradition is often cited for justification: "We [members of my community] have been bestowed superiority over others in three ways: our ranks and rows are made like the ranks and rows of the angels, earth is made a *masjid* (place of worship; see BOWING AND PROSTRATION) for us (i.e. a Muslim can pray anywhere on earth), and finally, its soil is made pure, in case of non-availability of water" (to be used for ablutions before prayer instead of water; Ibn Kathīr, *Tafsīr,* 1129, col. 2; see CLEANLINESS AND ABLUTION).

Ransom see CAPTIVES

Raqīm

Name mentioned at the beginning of the qurʾānic version of the story of the Seven Sleepers (see MEN OF THE CAVE), where the Qurʾān states: "Or do you think the Men of the Cave and al-Raqīm were among our signs (q.v.) a wonder?" (Q 18:9).

The isolated mention in this passage with no other specification or occurrences of the term prompted an abundance of exegetical explanations and interpretations. One tradition mentioned in some commentaries attests that al-Raqīm was one of the four words in the Qurʾān that Ibn ʿAbbās (d. ca. 68/688; see COMPANIONS OF THE PROPHET; ḤADĪTH AND THE QURʾĀN) could not satisfactorily explain and had thus to rely upon the explanation of Kaʿb al-Aḥbār. Following the meaning of the root *r-q-m,* i.e. "to write," commentaries suggest that the word could mean "a writing," a written tablet. Thus, al-Raqīm was a tablet, i.e. a stone, iron or lead tablet (Farrāʾ, *Maʿānī,* ii, 134) hanging at the entrance of the cave (q.v.) where the sleepers stayed and in which their story, names or genealogies were written. According to a report quoted by Muqātil b. Sulaymān (d. 150/767; *Tafsīr,* ii, 574), al-Raqīm was a writing *(kitāb)* inscribed on a tablet by two men named Mātūs and Asṭūs, two who were secretly believers in God at the time of Decius. The major commentaries also include other interpretations, such as al-Raqīm as the name of a village, a mountain or a valley. One further explanation states that al-Raqīm could have been the name of the dog (q.v.) of the sleepers. This is also suggested by a verse of the pre-Islamic poet Umayya b. Abī l-Ṣalt, cited, for instance, by Abū Ḥayyān in his commentary (*Baḥr,* vii, 142). The presence of the dog is, in fact, mentioned in the qurʾānic text — "And their dog stretching its paws on the threshold" (Q 18:18) and "And their dog" (Q 18:22) — though the commentaries on these passages usually state that its name was Qiṭmīr (see as early as Muqātil, *Tafsīr,* ii, 578). According to a report going back to the Prophet, such as in al-Thaʿlabī's (d. 427/1035) *tafsīr* (*Kashf,* vi, 145-6; but see an earlier reference in Ibn Abī Ḥātim al-Rāzī, *Tafsīr,* vii, 2347), al-Raqīm is a reference to the vicissitudes of three men who escaped and found refuge in a cave. This story had already been recorded in early *ḥadīth* collections such as Ibn Ḥanbal's (d. 241/845) *Musnad* (no. 18445; other references in Suyūṭī, *Durr,* 363-5) and its identification with al-Raqīm is suggested in later sources (see Hérnandez Juberías, *La península,* 139 f.) and, above all, the commentaries on Q 18 (see for example Bayḍāwī, *Tafsīr,* ii, 5: *aṣḥāb al-raqīm*).

The meaning of the word has attracted the attention of western scholars. Horovitz (*KU,* 95) — who reviewed the various interpretations of al-Raqīm — was among those to underline the difficulties in arriving at a satisfactory understanding of the term. Torrey (Three difficult passages), whose understanding Horovitz rejected, had in fact maintained that al-Raqīm could have been a misreading of the name Decius in Hebrew. This interpretation was further dismissed by Jeffery, who added the observation that, although this misreading looks easy in Hebrew characters, it is not so obvious in Syriac and that, following Horovitz, it does not explain the article of the Arabic term. According to Jeffery, "the probabilities are that it is a place-name" (Jeffery, *For. vocab.,* 144). A more recent explanation by Bellamy (Raqīm or ruqūd) suggests that at this point the qurʾānic text must be corrupt: he maintained that the qurʾānic lexeme is a corruption of *al-ruqūd,*

"sleepers," quoted in Q 18:18. Western translations of the Qurʾān mention the term as a name or, in some cases, translate it as "inscription" (cf. Paret, *Der Koran*).

Rass

Term mentioned twice in the Qurʾān in connection with the expression *aṣḥāb al-rass,* "the people of al-Rass": "We have prepared for the evildoers a painful chastisement. And ʿĀd (q.v.), Thamūd (q.v.) and the people of al-Rass, and between that, many generations" (Q 25:37-8); "The people of Noah (q.v.) and the people of al-Rass, and Thamūd and Pharaoh (q.v.), and ʿĀd and the brothers of Lot (q.v.) cried lies before them…" (Q 50:12). Although there are no other elements that help clarify who the people of al-Rass were, the fact that they are mentioned alongside other ancient peoples who were punished suggests that they, too, could have been one of these peoples (see PUNISHMENT STORIES).

Commentators (see EXEGESIS OF THE QURʾĀN: CLASSICAL AND MEDIEVAL) as well as later traditions (see ḤADĪTH AND THE QURʾĀN) are at a loss when attempting to identify this people and the location of the place referred to as al-Rass. According to some interpretations, al-Rass is the proper name of a village, or a region between Najrān (q.v.), Yemen (q.v.) and Ḥaḍramawt, or a town of the Yamāma or the name of a river (see PRE-ISLAMIC ARABIA AND THE QURʾĀN; GEOGRAPHY AND THE QURʾĀN). Some other explanations rely upon the meaning of the term *rass* as anything having been excavated, such as a pit, a well or a tomb (Ṭabarī, *Tafsīr,* xix, 14). The explanation of *al-rass* as meaning "the well" is by far the favorite of the exegetes, and so these people are very frequently identified as "the people of the well" (Farrāʾ, *Maʿānī,* ii, 268 makes this connection already in the early Islamic period). Additional (sometimes contradictory) reports attempt to elucidate whether the well was near Madyan (see MIDIAN), in Antioch or in Azerbaijan, and provide narratives that furnish the background setting of the story. So it is said that these people of al-Rass were one of the two peoples to whom Shuʿayb (q.v.) was sent (see PEOPLE OF THE THICKET), but, since they refused him, were then punished. It is also thought they may have been people to whom a prophet descending from Jacob (q.v.) was sent (see PROPHETS AND PROPHETHOOD; WARNING).

An alternative account is that they were people who received the mission of two different prophets and killed both of them. Their description as "the people of the well" is explained by recounting that it was into this well that they threw a prophet, killing him. Some reports identify the prophet who unsuccessfully tried to summon them as Ḥanẓala b. Ṣafwān and specify that their evil behavior led to their destruction (see GOOD AND EVIL; VIRTUES AND VICES, COMMANDING AND FORBIDDING; EVIL DEEDS). Following a saying of the Prophet (not mentioned in the major collections) according to which the first to enter paradise will be a black servant (see SLAVES AND SLAVERY; SERVANT), another exegetical explanation identifies this servant as a pious man who tried to save a prophet who had been thrown into a well by his people, who were thereafter known as "the people of the well." Other reports state that the "people of the well" were indeed the people of Yā-Sīn, i.e. Antioch, whose story is mentioned in Q 36:13-29 (see the early account in Muqātil, *Tafsīr,* iii, 235) and that the prophet thrown into the well was Ḥabīb al-Najjār. Further interpretations are added in most of the later sources: they were of the remnants of the Thamūd, or they were indeed the People of the Ditch (q.v.; Q 85:4), or they were idolatrous people who used to worship the stone pine (*ṣanawbar,* see Thaʿlabī, *Tafsīr,* viii, 135-8) or they were punished through the prodigious bird called *ʿanqāʾ.*

Among recent western interpretations of the meaning of *"al-rass,"* Bellamy has proposed that the written form *"al-rass"* could simply be a misspelling of the name Idrīs (q.v.; see also ORTHOGRAPHY; ARABIC SCRIPT). The few qurʾānic passages, however, do not contain any narrative setting or other elements that might help clarify the exact identification of *"al-rass."* Though the context suggests that reference is made to a people who, in the qurʾānic vision of history (see HISTORY AND THE QUR'ĀN), had received a prophet and then were punished for rejecting his teachings, these people cannot be identified.
